During the recent floods in the Pacific Coast section, L. D. Heater, a salesman for the Columbia Phonograph Co., of Portland, Ore., was held up on his trip by the rising water, which formed a lake and isolated several towns where customers of his were located. That fact did not feaze Mr. Heater, however, who procured a rowboat and visited the various small towns by that means, capturing several good orders thereby.

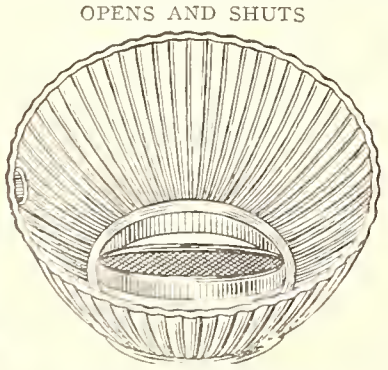
C. H. Wilson, general sales manager of the company, has had a dozen full-size photographs executed of the resolutions adopted by the Edison jobbers, during the historical entertainment in July last, and presented specifically to Thomas A. Edison, W. E. Gilmore, C. H. Wilson and F. K. Dolbeer. They are intended as presentation copies to the various heads of departments at the Edison plant in Orange, N. J.

According to the reports wafted across the big pond, R. G. Smyth, who handles the gramophone goods in Ireland and Scotland, is one of the most popular talking machine men in these historic abodes of the Gael.

The Elmira Arms Co., of Elmira, N. Y., are using space in the local papers to call attention to the very fine liue of Edisou records, which they are displaying. The series of concerts being given on Wednesday evenings in this connection, are largely attended.

A taper tone arm horn has lately been brought out by a Cleveland, O., inventor for the Edison machines. An effort is being made to have the National Phonograph Co. adopt it officially. Also there are other horns of different construction that are candidates for the same honor.

OPENS AND SHUTS



GOES IN THE HORN

The Mello-Tone Attachment

Makes a Musical Instrument of a Talking Machine or Phonograph and is adapted to either the Cylinder or Disc Machine. ¶ Can be regulated while record is being played—from full volume with shuttle open to mellow tone when closed. ¶ Does away with the scratch and blast of the record and eliminates the metallic sound of the metal horn. ¶ Sample, with terms and prices to dealers. **Retail, $1.00 Each.**

MELLO-TONE CO., = Springfield, Mass.

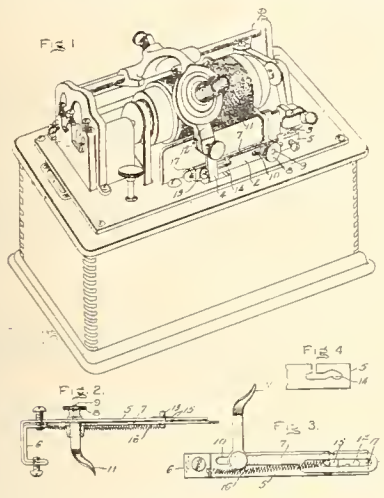
LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Specially prepared for The Talking Machine World.)

Washingtou, D. C., May 6, 1907.

STOP MECHANISM FOR PHONOGRAPHS. Charles Otzen, Schenectady, N. Y. Patent No. 849,852.

This invention relates to an automatic stop mechanism for phonographs whereby the motor is brought to a state of rest at a predetermined point of travel of the reproducer. By its use the relative movement betweeu the reproducer and record may be arrested automatically and without thought upon the part of the operator before the end of the record is reached, thereby preventing unuecessary unwinding of the motor

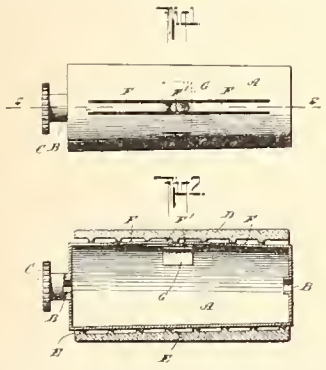


spring and the reproducer from ridiug off of the record onto the cylinder drum and causing injury to the stylus of the reproducer.

Referring to the accompanying drawings, which form a part of this specification, Fig. 1 is a perspective view of a phonograph to which is attached an automatic stop mechanism. Fig. 2 is a plan view of the stop mechanism. Fig. 3 is a rear elevation of the same, and Fig. 4 is a partial rear detail of the stop mechanism carrier or support, showing the shouldered slot which receives the starting lever button.

MANDREL FOR TALKING MACHINES. Henry Koch, Rahway, N. J., assignor to the Regina Co., same place. Patent No. 849,404.

This invention relates to mandrels for supporting cylindrical talking machine records, and has

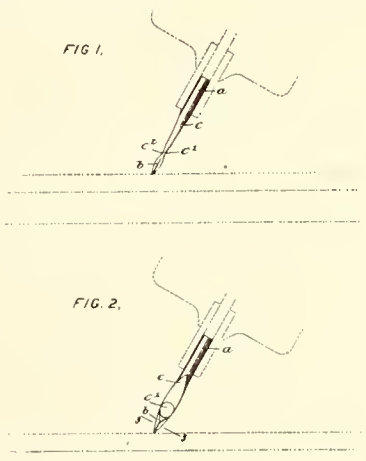


for its object to provide such mandrels with means for preventing the cracking or destruction of such records when they are left in positiou on said mandrels for any length of time. Reference is to be had to the accompanying drawiugs, in which Fig. 1 is an outside view of my improved mandrel, aud Fig. 2 is a section thereof on line 2 2 of Fig. 1, showing the record in position.

NEEDLE FOR GRAPHOPHONES AND THE LIKE. Fred Petmecky, Austin, Tex., assignor to H. E. Thompson, New York, N. Y. Patent No. 849,425.

This invention relates to improvements in needles or styluses for graphophones and machines of that character, the principal objects being to provide for modifying the tone produced and to provide for increasing the durability of the needle. The first of these objects is attained by modifying the form of the body of the needle in such a manner as to permit vibrations in a certain manner, and the latter is provided for by producing a point of a new form, which, when used on one side, will cause a sharpened point to appear on the other, thus permitting the needle to be reversed after each operation aud leaving a sharpened point ready for the uext operation.

When using needles of an oval cross-section on disc machiues, the surface which comes in contact with the record is worn off in a short time, and a new needle has to be substituted for practically every record which is to be operated upon. If the expedient of turning the needle over is employed, it is found that the wear of the record on the point has produced burs upon the

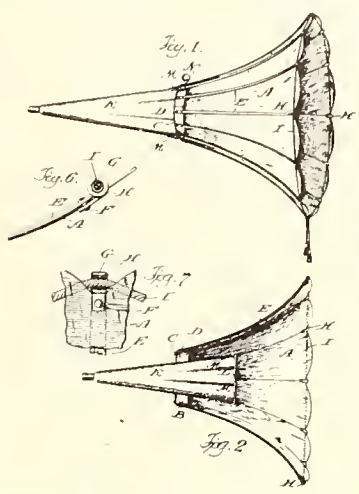


other side, which prevent its being used in that manner. Needles are also usually made with a practically uniform cross-section from the shank to the point. This does not permit sufficient vibration. In order to produce a fine tone, it has been discovered that it is desirable to reduce the cross-section of the needle in a position just above the point, so that while the point itself is rigid it is supported by a flexible section of the shank, and consequently it is capable of a certain degree of motion. While a flattened shank has been employed for an unknown purpose, the inventor claims to be the first to produce a needle or stylus of this character having a flattened portion located in exactly this position.

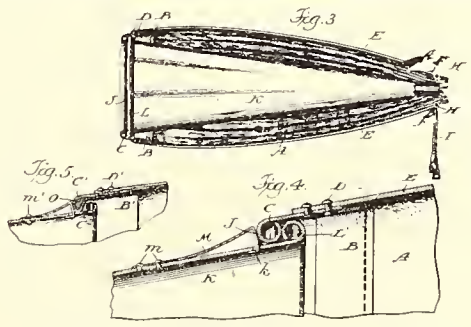
Fig. 1 is a side elevation of a stylus constructed in accordance with the principle of this invention, showing how it is used to produce a loud tone. Fig. 2 is a similar view showing how the needle is used to produce a soft tone. Fig. 3 is a sectional view on the line 3 3 of Fig. 2. Fig. 4 is an elevation of the needle as it appears after the point is worn by use. Fig. 5 is a similar view, showing the needle when reversed and ready to commence operations again.

FOLDING HORN. Otto Kraus, New York, N. Y. Patent No. 850,375.

This invention relates to improved amplifying horns for phonograph or similar instruments, and all other sound-distributing devices, and the construction of the device is such that the horn may be instantly folded by the release of said cord.



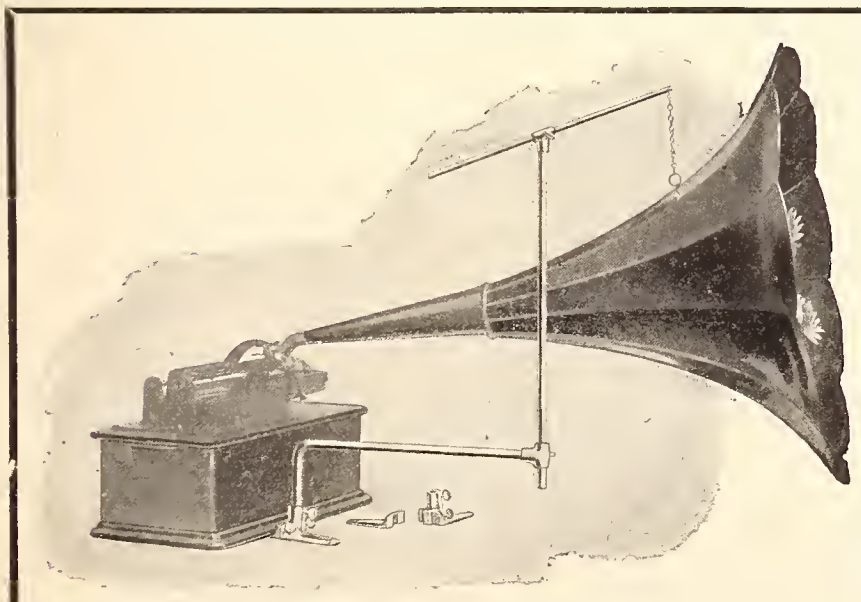
There are other important features in connection with this invention, which, besides those alluded to, are clearly set forth in the subsequent detailed description. Figure 1 is a perspective view of the horn, showing same in its open or expanded position. Fig. 2 is a longitudinal section of the horn when expanded, showing the reduced and couical-shaped portion disconnected from the collapsible part of the horn. Fig. 3 is a longitudinal section of the horn when folded. Fig. 4 is a longitudinal section showing the connecting device of the two main sections of the horn on an enlarged scale. Fig. 5 is a modification showing



how the flexible fabric of the horn may be fastened to the metallic sleeve. Fig. 6 is a detailed view showing part of a spring and its eyelet with the fabric and the cord in section. Fig. 7 is a detailed and partial sectional view of the parts described in Fig. 6.

PHONOGRAM. Walter C. Runce, Camden, N. J., assignor to International Royal Phone Co., Boston, Mass. Patent No. 850,256.

This invention relates to phonograms in which the sound-record is impressed on a flexible record film which is distended and supported on a detachable sleeve adapted to engage the ordinary graphophone mandrel. One object is to so construct the sleeve that it will be self-sustaining and capable of uniform radial expansion. Another object is to reduce the weight and facilitate the storage and transportation of the record



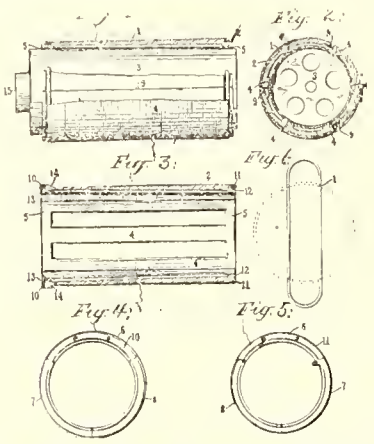
THE PARDELL CRANE

¶ This crane has advantages offered by no other on the market.
¶ Widest latitude of adjustment.
¶ Perfect rigidity insured as one section of the base is permanently secured to the machine.
¶ Will not mar the cabinet in the slightest degree.
¶ Can be used on any make of machine.

SPECIAL DISCOUNT FOR JOBBERS AND DEALERS

The Pardee-Ellenberger Co., NEW HAVEN, CONN.

film and to eliminate breakage thereof. Another object is to provide mechanism by which the record surface will run concentrically with the mandrel shaft and true with respect to the reproducer. These objects are attained in the manner shown in the accompanying drawings, in which Fig. 1 is a view, partly in section, of improved phonogram on a mandrel; Fig. 2, a sectional view of the structure of Fig. 1; Fig. 3, a

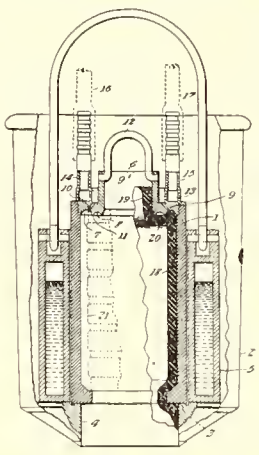


sectional view of a modification of the structure of Fig. 1; Figs. 4 and 5, views of the ends of the structure of Fig. 3, and Fig. 6 is an edge view of the improved record film, indicating the manner in which it may be collapsed for storage.

Production of Phonographic Sound Records. William F. Nehr, West Orange, N. J., assignor to New Jersey Patent Co., same place. Patent No. 850,957.

This invention relates to the molding of phonographic sound records, and more particularly to a molding process described and claimed in United States Letters Patent No. 683,615, dated October 1, 1901, to Miller and Aylsworth, wherein a tubular mold is caused to descend into a bath of molten material, which fills the same and congeals upon its interior in a coating or layer which adheres to the same while the mold is lifted out of the bath, after which the record may be finished upon its interior surface and removed from the mold by radial contraction or shrinkage. Heretofore in producing records according to this process it has not been possible to mold the upper end of the record to the shape desired in the finished article, the practice being to form a rough end, which must afterward be removed in any suitable manner, as by a cutter or trimmer of any suitable description.

This invention has for its object the provision of a process whereby such upper end may be molded into a form suitable for the finished article—that is, a surface which will present a smooth and polished appearance, and which will be free from depressions, elevations, discolorations and all forms of roughness or irregularity. With this end in view the inventor has made a large number of experiments to obtain a mold-cap which, when placed upon a tubular coreless mold, will be capable of molding the upper end of the sound record in the manner referred to for an indefinite number of operations. From these experiments it has been determined that the mold-cap should have a concave surface, the outer edge of which during molding operation adjoins and forms a continuation of the bore of the mold. Preferably the body of the mold should extend above at least the lower part of said concave surface, so that when the cap is removed from the mold the molded end of the record, or that portion which forms the end after the reaming operation, will be protected by the mold against accidental injury during the handling of the same prior to the removal of the finished article from the mold. It is also determined that the said concave surface may be of such form as to entrap a portion of the air contained in the bore of the mold as the same descends into the molten material, in which case the air is permitted to escape through air-holes extending through the body of the mold-cap.



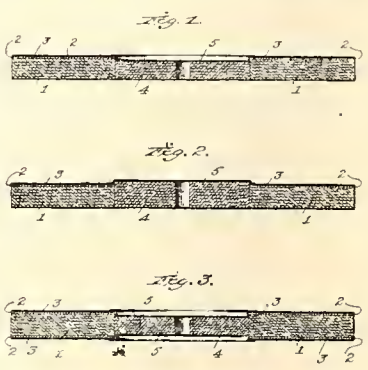
Good results have been obtained by providing a second groove concentric with the first groove and separated therefrom by a partition which tapers to a comparatively sharp edge. It is also discovered that the concave surface should be perfectly smooth and highly polished, and proferably nickel-plated and also that the mold-cap should be kept cool during the molding operation, as by providing the same with a water-jacket.

Reference is hereby made to the accompanying drawing, which is a vertical section showing a mold supported in a mold carrier and surrounded by a water-jacket in the usual manner and provided with a cap constructed in accordance with this invention.

Gramophone Record Tablet. Joseph Sanders, Washington, D. C. Patent No. 850,494.

This invention has reference to improvements in gramophone record tablets, one of the objects of the improvement being to cheapen the manufacture of such tablets by saving a considerable percentage of the costly gramophone record material which is used in the manufacture of the same.

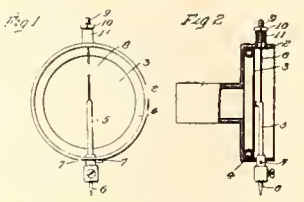
Gramophone record tablets are universally made in disc form, with a spiral record groove impressed either in one or on both sides of the tablet, and it has generally been the practice to either depress or elevate the central portion of the tablet, which contains no record groove, and to secure to that central portion a label bearing the name of the manufacturer, a legend descriptive of the piece of music, song or speech that is recorded on the tablet and perchance also other information for the user. This label, which is ordinarily a disc of paper having a distinctive color or print, usually extends over the edge of the depressed or elevated blank center of the record tablet. Heretofore such record tablets were made of a solid body of record material, which is very expensive, and the depression or elevation in the blank center was produced in the act of impressing the record groove. When the tablet was made with a depressed center, a thin disc of steel or other metal was placed in the center of the record matrix and of a thickness corresponding to the depth of the depression which the tablet was to have. When the tablet was made with a raised blank center, the central part of the matrix was turned out to the requisite depth. In both cases, but particularly when the center was made depressed, every part of the tablet had to be subjected to the same uniform pressure, and this pressure must, in the nature of the case, be very great, amounting to as much as two thousand pounds per square inch. Now the depressed or elevated portion of the tablet represents about one-fifth of the total area of the tablet, and one of the objects of the invention is to save the pressure which heretofore was expended upon this blank part of the tablet.



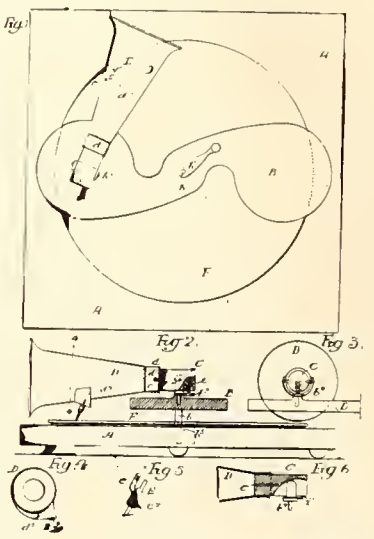
Figs. 1, 2, 3 represent cross-sections of record-tablets constructed in accordance with this invention, the vertical scale of the drawings being largely very exaggerated for the sake of clearness of illustration.

Sound-Box. Edward D. Gleason, Philadelphia, Pa., assignor to the Victor Talking Machine Co., Camden, N. J. Patent No. 850,883.

This invention relates to sound-boxes, more particularly to that class of the same in which the stylus is tensioned on its bearings. The object is to provide the stylus lever with an elastic connection or mounting whereby a certain amount of tension will always be imparted to the diaphragm, and better results in reproduction will be attained than when such elastic connection or mounting is not provided. In the accompanying drawings, Fig. 1 is a front view of sound box and Fig. 2 is a sectional view of the same.



Talking Machine. Edward T. Palmer, Philadelphia, Pa., assignor of one-half to Louis I. Matthews, same place. Patent No. 851,311.



One object of this invention is to provide a sound recording and reproducing machine in which the stylus and its supporting member shall be revolubly supported relatively to a stationary record, which may be of the ordinary disc type. It is further desired to provide a de-

vice commonly known as a "talking machine," especially designed for use with records of the disc form, which shall have but few parts and these of a relatively simple and inexpensive nature, and which will not easily get out of order.

Fig. 1 is a plan view of the machine made in accordance with this invention; Fig. 2 is a side elevation, partly in section, of the device shown in Fig. 1; Fig. 3 is an end view; Fig. 4 is a sectional view on the line 4—4, Fig. 2; Fig. 5 is a perspective view of the stylus, and Figs. 6 and 7 are views of a modification.

TALKER AS SIDE LINE.

Well Known Dubuque Firm Issues Clever Booklet Setting Forth the Advantages of the Talking Machine as a Business Getter and Profit Maker.

There is a firm of talking machine jobbers out in Iowa who have gotten out a very clever little booklet, entitled "The Talking Machine as a Side Line, and How to Make It Pay." This concern is Harger & Blish, who are widely known as progressive and enterprising talking machine men. They have built up a splendid business throughout their section of the country, and this book contains a lot of information which is valuable to dealers. It tells of the possibilities of the talking machine, how to handle it and all about its profits. Here is an excerpt taken from its pages, showing the "advantages of selling on the instalment plan":

1st. It is the means of selling higher priced outfits.

2d. It is the quickest way of getting machines out to the trade and securing an immediate demand for records.

3d. The profits from this premature demand will guarantee to dealers the cost of the machine. Any loss that they might sustain on the original outfit would be paid back by the demand it has created for records.

4th. It is the means of appealing not only to the *classes* but to the *masses*. In other words, to those who *would not*, or *could not* purchase goods on a cash basis.

5th. It is the means of advertising and reaping substantial results therefrom.

6th. Ninety per cent. of the trade prefer to buy on the instalment plan, and ninety per cent. of the novelties are offered on this basis.

7th. On the instalment plan the machine is the dealers' until paid for, and on an open account it is the consumer's when delivered.

8th. References that would justify you shipping on the instalment plan would also receive your consideration on an open account.

9th. On the instalment plan the consumer agrees to pay at a specified time, on an open account he pays when he chooses, and he usually chooses to pay none too soon.

10th. The whole thing is summoned down to the point where it is clearly shown that *risks are on the purchaser* and *not on* the *amount purchased*, and on the instalment system the protection for the dealer is as great as the benefits are for the consumer.

TEN COMMERCIAL OUTFITS

Purchased by the Bureau of Forestry from the Columbia Phonograph Co.—Various Government Bureaus to be Equipped With Commercial Outfits Owing to a Shortage of Stenographers in the Government Service.

A letter received this week by J. W. Binder, the manager of the commercial department of the Columbia Phonograph Co., from the Bureau of Forestry, announces that they have decided to put in ten commercial outfits. This is the first of a series of orders that will be given Mr. Binder to equip the various government bureaus. At the present time the Interstate Commerce Commission is using forty-three commercial machines, sending them with operators to all parts of the country. There is at the present time a great shortage of stenographers in the government service, and for that reason it has been decided to purchase a large number of these commercial machines.

W. J. De Jough, formerly agent for the Columbia Phonograph Co. in Janesville, Wis., pleaded guilty to the charge of embezzling $300 and was sentenced to one year in the State Prison. He claimed to have at one time been a soldier of fortune and blamed his troubles on a woman—an old story.

RECORD BULLETINS FOR JUNE, 1907.

Keeps Talking Machines "Well"

The "insides" of talking machines are liable to get out of order—same as folks' insides. It "oil" depends on the oil. "3-in-One" Oil keeps all kinds of talking machines "well" and their owners happy. Maybe other oils will do the same—maybe they won't. There's no "maybe" about "3-in-One"—twelve years of success and growth proves its superiority.

"3-in-One" is "good medicine" for every talking machine part. Lubricates the action points; brightens and prevents rust on the metal surfaces; keeps disc and cylinder records free from dust particles, thus assuring perfect tone and harmony.

Where do you come in? Quick, easy sales and 50 and 100 per cent. profit—that's where. Your jobber can supply you with "3-in-One"—place a trial order to-day. FREE sample bottle and the "3-in-One" Book sent on request. Write to:

G. W. COLE COMPANY, Sole Makers of "3-in-One"

42 Broadway **New York City.**

REGISTERED. 3 IN TRADE MARK.

GRAND OPERA RECORDS

Made by the Universal Talking Machine Mfg. Co. to be Sold at the Same Price as the American Records—The Company Have Just Issued a Very Complete Foreign Catalogue.

The Universal Talking Machine Manufacturing Co., Newark, N. J., have sent the trade a list of their foreign and grand opera records. Beginning with April 1 they are selling these records to the dealer at the same price as the American records: Ten-inch, 40 cents each; 12-inch, 60 cents each. The 10-inch records list at 75 cents. 12-inch records list at $1.25. The company will issue new supplements from time to time. The first complete opera will be "Aida." They expect to have the opera complete about May 15. Their latest foreign catalog—taper arm machines, "Premier," $30; "Corona," $40; "Monarch," $50; "Majestic," $60; "Royal," $75, and disc records in Spanish, French and Portuguese—has also just been issued.

MEASURING WITH A MICROSCOPE.

It certainly is an odd statement to say that the microscope is better than the ear for measuring sounds, but it is true. It will interest our readers to know that, in determining the pitch of very high tones one of the Government investigators at Washington has found that the ear cannot be depended on, and he has therefore turned to the microscope for aid.

Sound is a phenomenon of vibration, and the pitch of any musical note can be determined if the sound wave corresponding to it is in any manner rendered measurable.

The Washington scientist has solved the problem in this way: He covers a plate with a thin layer composed of a mixture of olive oil and stearine, the surface of which is slightly ridged by rubbing it delicately with the finger. To a high-pitched tuning fork a short hair is attached, and a similar hair is fastened to another vibrating body, such as a rod, whose pitch is known. The ends of these hairs trail across the prepared plate, as it is passed rapidly over them, and thus mark upon its surface a double series of wave lines corresponding to the periods of vibration of the fork and the rod. The microscope is then called into action in order to compare the length and depth of the waves, and thus determine the musical pitch of the vibrating fork with an accuracy not attainable by the ear alone.

STEAD AND PRESIDENT ROOSEVELT.

William T. Stead thus opens a new career to Mr. Roosevelt: "I found the President an engaging personality, but what struck me most was that the President would be the best man of any I ever met to talk into a graphophone. You can just imagine him sitting there with the talking machine before him, articulating every word distinctly. And it is his mission to talk through that machine to all the world, expressing the feelings, sentiments, thoughts and ideals of the American people, of whom he is perfectly typical in his energy and his ideals." Commenting on this the New York World says: "A graphophone report of the conversation between Mr. Roosevelt and Mr. Harriman at that celebrated interview, 'expressing the feelings, sentiments, thoughts and ideals of the American people,' would be well worth the price of the cylinders."

RECENTLY INCORPORATED.

The Telegraphone Distributing Co., of New York, was incorporated last week at Albany, with a capital of $5,000. Directors: L. J. Herschburg, Isidore Miner and Hyman Epstein, of New York.

The Victor Distributing & Export Co. are doing a splendid business. General Manager Williams is breaking the record in opening new fields, and J. S. Beckman, sales manager, has closed a number of excellent deals.

With the Makers and Sellers of Automatic Specialties

REVIEW OF TRADE CONDITIONS.

Penny Arcade and Nickelodian Managers in Trouble With Municipal Authorities—Cheaper Resorts Bring About Action—Will be Helpful to Legitimate Trade in the End Although It Has Caused a Temporary Disturbance—Heavy Demand for All Kinds of Automatic Machines—Foreign Trade Steadily Growing—Musical Instruments Great Trade Attractors—Advertising as an Asset.

Penny arcade and nickelodian managers are having a strenuous time with the municipal authorities in this city as represented by the police, health and fire departments. For some time past there has been a strained condition of affairs, and this has finally led to an open rupture between the parties concerned, the Commissioner of Police claiming that the so-called penny arcade and the moving picture theatres are a menace to the public, morally and otherwise. In a general order sent out from headquarters recently, Commissioner Bingham instructed all the captains to forward reports on the various places in their district, and it will be difficult for many of these places to get new licenses for the coming year.

In some ways this move on the part of the Commissioner is a good thing, both for the city and the men interested in these enterprises, for it is certain that anything that will prevent managers from allowing suggestive or obscene pictures to be shown in the machines, and that will force them to keep their places in a sanitary condition will only put the arcade and nickel theatre on a firmer and more substantial footing.

At the same time we do not agree with Mr. Bingham "that these places under any conditions are a menace to the public." There are flaws in the claims of both parties; each has shot beyond the mark, but we believe that things will finally adjust themselves satisfactorily. It is a fact that while some of the arcades in this city are run in a highly satisfactory manner, others, in order to boom trade, have had recourse to attractions verging strongly on the questionable, the greatest liberties being taken in getting up flashy show cards on the machines, wording and illustrating them in a manner that is a disgrace to the trade, and most certainly should be stopped. In the matter of keeping the places in a sanitary condition, however, we do not think there is much cause for complaint, excepting a possible few on the lower East Side. Taken as a whole, the arcade is far ahead of most of the theatres in this respect, all of them being on the street and well ventilated, and as to any possible infringement of the fire department laws, the idea is absurd.

It must be admitted that the nickelodian, or moving picture theatres, are not so immune from the last two charges; on the whole, the average nickel theatre is neither well ventilated nor are there enough precautions taken to insure the safety of patrons in case of fire; many of the places not even boasting an exit, the public being forced to use the narrow front door coming and departing. Now, these are grave faults, and the commissioners are justified in compelling such places to rectify the error. A little perseverance will make things right all around, however, and we believe that arcade and nickelodian managers need have little fear of annihilation provided they work along right lines.

Business has continued to be of the highest order during the past month; in fact, there has been a marked improvement all along the line. Whether this is due to the thinning out of the parlors or the free advertising through publicity in the daily papers is hard to say; at any rate, as long as the pennies and nickels keep flowing their way at the present rate, arcade and theatre managers won't mind the house cleaning being carried on by Commissioner Bingham.

Notwithstanding the black eye that is generally given the Chicago police by the newspapers, it may be remembered that they were the first to draw the line on arcades and nickelodians. The clouds have cleared away, however, in that city and business has resumed its tranquil march; therefore we believe more good than harm has been done, and look forward to a busy and successful season.

Manufacturers report a heavy demand for machines of all types, and a number of them have been so handicapped with the inrush of orders that they have been forced to cease work on a number of new models being gotten ready for the market.

Our foreign trade has increased to an enormous extent, and a tremendous field is open for this trade among the Latin-speaking races. Slot machines, especially the musical and moving picture types, are most popular, those of American manufacture being universally used, notwithstanding that they are by far the most expensive. In price America cannot begin to compete with foreign countries, on account of the tariff, which keeps raw material at such a high premium; but this is more than offset by the quality of the product, and no industry is more dependent on the wearing abilities of its goods and the perfection of the workmanship involved.

Of all the slot-controlled devices on the market that are made use of in the modern arcades, none is more conspicuous than the automatic piano. In all the large places this popular instrument is the magnet used to attract the attention of passersby. No music is more generally loved than that from a good piano, none more repellant than that from a crippled one. Not another instrument is submitted to such hard knocks and a constant grinding test. Hence the arcade man should first look for a good instrument, with a clear, pure tone, and then one that is built to best withstand the great wear put upon it.

We are making a stroug effort to interest the slot machine and novelty men in our paper. Each month there will be found interesting features, so that it will pay to be a regular subscriber to The World. We have at great expense just obtained the most complete and only authentic list of slot machine men in Mexico, Cuba, and throughout South America. This will be of inestimable value to manufacturers of specialties who advertise in The World, on account of the great demand for these devices in the above countries. In our advertising pages will be found a large number of excellent features. Possibly you are the inventor or manufacturer of some such specialty. In that case we can find a market for your wares. Place your invention before the proper persons. You can do this in hut one way, and that is to advertise in a publication like The World, which will reach the purchasers of such devices.

ANOTHER AUTOMATIC VIOLIN.

The Invention of Prof. Wauters, of Binghamton, N. Y.—Has Great Musical Possibilities Judging from the Description.

Prof. J. Wauters, a Belgian, residing in Binghamton, N. Y., is credited with inventing an automatic violin that has proven very successful and is being put on the market by a company in that city.

The automatic violin may be briefly described as follows: There are four bows, one for each string. Each bow is controlled by its own independent mechanism, while the "fingers" which "stop" the strings are likewise independent of each other.

As is known each string on a violin has a com-

"Earning Capacity"

We hear a great deal nowadays about the earning capacity of various men who are more or less in the public eye. But let us get away from the discussion of men, and talk about the earning capacity of mechanical creations that never tire, that make dollars when you sleep, and keep a steadily flowing river of coin coming your way.

That is the kind of an instrument which we would like to discuss with you. Its name? Well it belongs to the popular and ever growing Regina family. We call it the **Sublima Piano, "Junior."** Our customers term it absolutely the best earner that they have yet put into operation.

We cannot tell you of its many qualities on a single page. The illustration shown here however will give you a fair idea of its external appearance. But its mechanism is what will interest you most.

It is built on a new principle, entirely our own, of course, and it gives the best results that we have ever found. That is saying a great deal, because the Regina creations have been pleasingly successful. We may tell you however some things that it does not contain. **It does not contain the first sign of any pneumatics, bellows or tubes,** and when you stop to think of it, by this plan we have eliminated nearly 100 per cent. of the causes which have previously retarded the popularity of electric pianos. We cannot describe to you the beauty of its tone quality, but the Sublima has a tone sustaining device that outclasses any creation on the market. When you hear it you will notice at once that it possesses the tone of an Orchestrion. It is this tone sustaining device, and the absence of pneumatic bellows and tubes that has given the Sublima its wonderful popularity.

The light and soft effects are controlled automatically by a separate series of perforations in the paper rolls. It gets away too from the mechanical effects so noticeable in other instruments. When you hear the Sublima play classical music you will be charmed. You'll become a "Sublimist."

REGINA SUBLIMA

We started in to tell you about its earning capacity, and if you will write us we will be glad to tell you how many dollars the Sublima has earned in some localities. It can be easily shown in talking machine parlors, where it will make a decided feature of attraction, and there is much local trade to be won through its agency in every city and hamlet throughout the land.

THE REGINA CO.

General Offices and Factory: RAHWAY, NEW JERSEY

New York Headquarters: Cor. B'way and 17th St. **Western Branch: 259 Wabash Ave., Chicago, Ill.**

Distributors of Victor Talking Machines and Edison Phonographs

pass of two octaves. The range of a violin is from G below the staff to E altissimo, or almost four octaves. Skilled players on perfect instruments can give a range of four octaves, although in actual composition little use is made of tones in the extreme high register, except in certain difficult chromatic passages.

Professor Wauters' invention makes it possible to use each of the four strings as an independent violin of two octaves. For instance, the famous Bach G string solo can be played on its proper string and the treble part of the piano accompaniment can be given to the A and D strings, with ornamental trills and harmonic effects on the E string. The A and E strings can be made to carry the intermezzo from Cavalleria Rusticana in the Key of F major, and a 'cello-like accompaniment can be given to the G and D strings. The great concertos of Beethoven and Mendelssohn can be readily played, as the automatic violin treats all technical difficulties alike. One string can sound a smooth flowing legato theme, while the others carry an accompaniment in flying staccato arrepeggios, a feat impossible to human players. By an ingenious arrangement, which cannot yet be explained in detail, the tremolo or "shake" is produced at will.

The automatic violin will play from music rolls like an automatic piano. These rolls will be cheap and will contain a device for controlling the expression and tempo.

The mechanism controlling the bows and "fingers" includes means for producing pizzicato, legato, marcato, springing bow, harmonics, arpeggios, shakes with an accompanying part, broad, firm strokes, like those the player uses to make syncopations, chromatic runs, octave passages, simple and flying staccato, etc. Chords on four and three strings, which can be produced by a player in the imperfect manner only, will be played with perfect effect on the automatic violin.

Any violin can be played on the automatic violin. For commercial purposes a high grade of German violins will be supplied—instruments with a smooth, rich, orchestral quality of tone which are well made.

INDIANAPOLIS TRADE NOTES.

Penny Arcades Survive "Crusade"—Sutherland Opens New Place—Big Daily Income—New Concern in Terra Haute—Success of the Manhattan Amusement Co.—Other Items.

(Special to The Talking Machine World.)

Indianapolis, Ind., May 9, 1907.

The penny arcades and five-cent theaters in this city have been "crusaded" in the last month, and have come through the ordeal with flying colors. The ministers of the city agitated the question of the nature of pictures which should be shown in these places, and one of the afternoon papers took it up and printed columns and columns telling of the scenes of crime which were depicted in these places.

Finally after considerable agitation, the police and the juvenile court officers made an investigation. Policemen and officers from the court visited all of the amusement places, but they found nothing which they regarded as vicious. In one or two instances the police suggested that certain pictures be abandoned, but, on the whole, the report was most favorable.

C. L. Sutherland, proprietor of the Bijou Dream Theater, who has started a new place on Washington street, is meeting with great success. The first five days at his new place brought an average daily business of $125, and the first Saturday $250, according to the statement of one of the managers of the place. Last week the Teddy Bears were shown, and children flocked to the place by the hundreds.

The National Amusement Co. will open their new vaudeville place at Terre Haute about the middle of May. A nickel theater and a penny arcade will be run in connection with the vaudeville house.

"The Exhibit," another South Illinois street arcade, has been showing scenes of the White-Thaw tragedy. A view of the scene of the crime is given. The police looked at this series of pictures, according to the statement of the manager, and said that it was all right. "The Exhibit" has recently installed a weight-guessing machine. If the customer guesses his weight correctly he gets his penny back. The machine is a winner.

The Manhattan Amusement Co., which has a five-cent theater on West Washington street, near the Park Theater, is meeting with great success. The company has a large and commodious room, and when the crowds file away from the Park Theater in the afternoon and at night business is usually good. The attraction last week in the way of moving pictures was "Miss Smith's Boarding School." This company uses a Twentieth Century Columbia machine to attract its crowds. A. B. V. Barton is manager of the place.

A barber shop on South Illinois street is surrounded on three sides by penny arcades and five-cent theaters. With all of the phonographs and automatic pianos the barbers do not lack for music. They enjoyed it pretty well until recently on one Saturday night when the arcade ran in an orchestra with a drum. The barbers had to close the doors then on account of one nervous artist of the razor who couldn't stand for the mixture of sacred hymns and ragtime.

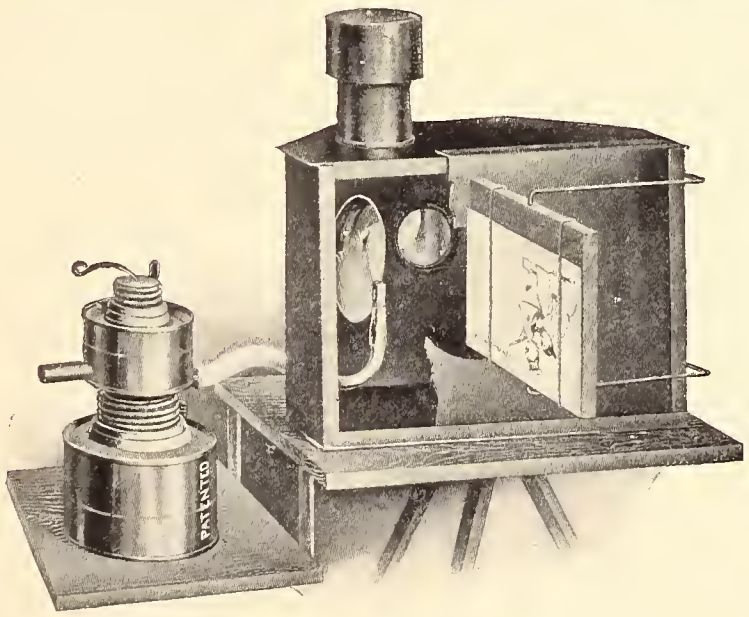
Percy Jones, a young colored man of good education, who was employed by the National Amusement Co., recently pleaded guilty in criminal court to the charge of grand larceny, and was sentenced to the reformatory. Percy had been sent to the bank two or three times, and he always returned with the money. All checks were signed with a stamp, and red line beneath bearing the name of the manager. Percy studied the stamp and imitated the signature. The manager of the place decided to guard the rubber stamp more carefully, and when Percy tried to manufacture a stamp just like it, he failed and was haled to court.

The Automatic Music Co., Binghamton, N. Y., have purchased a factory site on lower Main street, that city. Officials of the company say they will hold the property in order to be able to erect a new plant to accommodate their growing business when that move is necessary.

The MYSTIC REFLECTOR

A POST CARD PROJECTOR

RETAILS AT $5.00



SELLS AT SIGHT

This wonderful machine projects upon a sheet SOUVENIR POST CARDS, PHOTOGRAPHS, MAGAZINE PICTURES, Etc., in their Original Colors. No glass slides required.

AN ILLUSTRATED SONG MACHINE.

Sold only through jobbers. Samples sent dealers upon receipt of $3.00.

A WONDERFUL SELLER.

CHURCH SUPPLY CO., Dept. T. M. 10 BARCLAY STREET NEW YORK

We Make Pennies Grow

If you deposit your savings in a bank, you may earn 3 per cent. or possibly 4 per cent. Invest them in a Penny Arcade and your investment will net you 150 per cent. to 300 per cent. per annum.

LET US PROVE IT TO YOU.

Let us show you how you can gain an independent income by an investment of $600 and upward.

We will start you, assist you in every way in making your establishment a profitable one, and give you the benefit of our 20 years' experience both as operators and manufacturers.

WE WILL SEE THAT YOU MAKE A SUCCESS, for *your success* will mean *our success.*

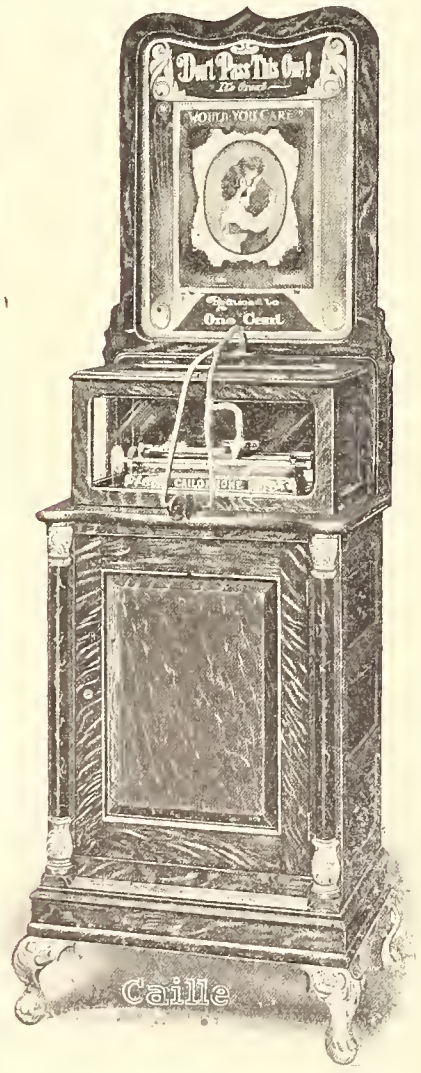
Given a fair location, and that is easily found in any town with a population of upward of 5,000, your investment will be returned to you in four or five months, after which all receipts are CLEAR PROFIT.

Just now is the *time to start* and take advantage of the spring and summer season.

Your town certainly should have an ARCADE. If there already is one in operation, YOU start another better one and show that you are up to the minute and a hustler.

If you are now operating an ARCADE, improve the same by adding CAILLE MACHINES and CUT DOWN REPAIR BILLS.

No machines like CAILLE MACHINES for showing big receipts!!



The public prefer Caille Machines, as they always work and always work correctly. They never are out of order.

No scales like CAILLE SCALES, and we make 5 different styles, all of them absolute leaders.

But we also make the famous CAILOSCOPE and have recently patented the CAILOPHONE, both of which machines outdistance anything on the market.

In fact we make *257 Varieties*, all of them "*Caille Quality*," which means excellence in every detail of construction, mechanism and appearance.

A postal Card will bring you our handsomely illustrated Catalogue for 1907, showing the largest line of coin controlled machines manufactured in the largest plant in the World devoted exclusively to the construction of automatic devices.

MAN'S HEART IN MOTION ON SCREEN.

Breathing Lungs, Too—Pictures Taken Now With the X-Rays and Cinematograph.

By employing the X-rays and the cinematograph in combination, moving pictures are now taken of the living lungs as they rise and fall in breathing, and of the heart as it pumps blood through the body.

The moving pictures are taken as well of the heart and lung actions of a sick man or woman as of a healthy one, so it will be possible for a lecturer to throw on a screen before his class an actual reproduction of the lesson in the lungs or of the faulty movement of the heart-valves in the patient who lives before him.

The invention is being busily experimented with in one of the great hospitals for consumptives. A resident physician there says they hope for very valuable results from the moving pictures in diagnosing doubtful cases of lung or heart disease.

Far more surely than the doctor's eye, even aided by the X-rays, or his ear, with the stethoscope, will the moving pictures tell precisely what ails a patient.

VALUE OF PROPER LIGHTING.

One of the most serious problems before arcade and nickelodian managers is that of proper lighting. Electricity is, of course, the form most generally in use but it is the lamp that is of the most vital importance. The first consideration is the candle-power, then color of light, whether yellow or white. For attractiveness the latter has been found to be the most suitable, as it makes a more striking effect at night, and that is the keynote of success in this line of business.

The Felix Hamburger Co., of this city, have made a strong bid for this class of work, also that of the talking machiue and piano trade.

For general use their "Liliput" is the best. This admirable little lamp, of three amperes, which is about twice the size of the ordinary incandescent type, and which gives the light of twenty, is in much demand. The next size, called the "Economy Lamp," five amperes, is well adapted for large stores. The "Flaming Arc," 12 amperes, and 5,000 candle-power, is generally used by arcade men for the outside of their places, and makes a most striking effect. This strong, white light, illuminating the whole surroundings, and against the snow-white plastic front of the parlor is a great trade stimulator.

POPE ALMOST SEES AMERICA.

Delighted With a Bioscope Exhibition by a Vatican Engineer.

The Pope, his sisters, Cardinal Merry del Val and several other prelates, were present the other day at an entertainment given by Engineer Vannucci, an employe of the Vatican, who, by means of a bioscope, showed views of the principal cities of the United States, especially Washington and New York, explaining each picture briefly. The Pope thanked Signor Vannucci warmly, saying he felt that he had almost realized his wish to visit the New World.

TRADE NOTES AND COMMENTS.

Mystic Reflector a Big Winner—New York Vitak Co.'s New Quarters—Some Recent Novelties—"Platol" for the Trade—Kinetoscope at Jamestown—Suit Against Hearst—Other Items of General Interest.

The Mystic Reflector, manufactured by the Church Supply Co., of this city, serves the same purpose as a high-grade stereopticon or magic lantern, but must not be confused with one, as it requires no glass slides. Any opaque pictures or reading matter such as souvenir postal cards, photographs, magazine pictures, etc., can be projected upon a sheet in original colors to a diameter of from 5 to 8 feet, according to distance.

It is equipped with a patented safety calcium-carbide lamp which can be operated in any home at no greater cost than an ordinary kerosene lamp. It is also furnished with a 40-candle-power reflector back incandescent electric light when desired. Of course the electric lamp can be used only where incandescent current is available. The idea of projecting pictures by reflection is a very old scientific fact, but it has never before been developed to the simplicity of construction, or to the perfection of result that is accomplished by the Mystic Reflector. Heretofore there has never been manufactured a portable light of sufficient power to project with distinctness and clearness. In view of these facts we believe the Mystic Reflector will prove immensely popular wherever shown, especially among amateur photographers and souvenir post card collectors.

Delightful evening entertainments can be given. In connection with a vocalist or a phonograph the Mystic Reflector can be used for illustrating songs. Each guest's photograph can be projected to several times life size. Appropriate quotations or advertising cards can be shown. Comic sections from newspapers and magazines can be collected. Every home contains many suitable pictures. A child in a few days can collect enough interesting views to entertain the household. Young people can give shows for their own pecuniary benefit or for "sweet charity's sake."

It can be used for enlarging pictures. Any boy or girl can draw life-size portraits of the family by projecting photographs on paper and then following the outline with crayon or pencil. The Mystic Reflector is within the means of everyone; is strongly built of metal; has no complicated parts, and talking machine dealers will find it a big seller.

The Card Printer Co., 79 East 130th street, this city, have just issued a new catalogue, showing the working of their now famous card printer slot machine, and giving a very lucid description of it and its possibilities, and we feel assured that the talking machine and slot machine trade will find it of much interest.

The New York Vitak Co. have removed to 180 Lafayette street, this city, where they will have their office and factory under one roof. This step was taken on account of their fast increasing business, which compelled them to get into larger quarters in order to keep up with the demand for the Vitak moving picture machines. This company have been having some trouble in getting lenses for their new $35 machines, but

expect to have them ready for the market some time in July.

Two decided novelties just out in the line of slot machines are the "Automatic Riding Horse" and "The Automatic See-Saw." The former is portable and can be operated at all seasons in stores. The horses are artistically carved from the best material. The whole is very strongly built, and will carry the heaviest persons. "The Automatic See-Saw" has made quite a hit also. Everybody enjoys a ride on one; even grown-ups are ready to drop their pennies in it, and for the moment forget worldly cares and hie back to childhood days. Of course, it is a wide departure from the paths followed by manufacturers hitherto, but we believe that this is wholly in their favor.

A new wood finish called "Four in One," recently placed on the market, is certainly one of the finest products ever produced. To test its value for the talking machine or piano trade, The World's representative obtained a bottle of the polish and took it home to use on the mahogany case of a piano, which was in bad condition from the dust, which had settled on it and worked its way into the finish. The stuff worked like magic, and inside of two hours the piano could not be distinguished from one that had just left the factory. What it will do for a piano it will do for a talking machine or cabinet, and we believe the talking machine trade will find it a valuable article to handle.

The G. L. Steinreich Co. with this issue of The World are offering the talking machine trade one of their new specialties, namely "Platol." This preparation is for the cleaning and replating of polished nickel, silver and aluminum articles, such as the plates of cylinder talking machines, horns, horn cranes, etc. Platol, as its name implies, and as we have just stated, not only cleans the metal, but instead of scouring off the surface, it puts a new one on, and one that is genuine silver. It is not difficult to see what a boon this article will be to the talking machine man. For shop-worn, dirty or rusty stock it is just the thing, and the dealer will find it an easy article to dispose of, especially to the feminine sex, not for their "talkers" alone, but for the table silver, etc.

In the congested quarters of the city, where the poor live, the nickel theatres have proven a great educator. These people can't afford to pay the entrance fee to the large playhouses, and flock to the cheaper theater for their amusement. We firmly believe that if the kinetoscope managers would only get together and bar all films suggestive or criminal, they would eliminate the sole objectionable feature made to some of these places. They would then deserve the backing of every right-thinking man or woman. Nor would this plan be inappropriate in respect to the "penny arcade."

The Kinetoscope Co., the moving picture department of the Edison Works, Orange, N. J., will have a special building at the Jamestown Exposition, and it is probable the entire line of phonographs will be exhibited. The company will also have an establishment of their own in the upper part of New York City, where, in addition to the kinetoscope, their complete phonographic product will be exploited.

Suit has been brought against W. R. Hearst, as candidate for Governor of the Independence League and the Democratic party in New York, by John T. Owens, New York City, for the cost of six phonographs used last fall in the campaign, to reproduce some of the Hearst speeches. Some six weeks after the campaign had closed, Owens says he sent a bill to the League for the machines. No attention was paid to it, nor to others which followed. Personal letters to Mr. Hearst had the effect of bringing a reply stating that there was an error in the bill. Owens thereupon placed the account in the hands of a lawyer for collection.

Michael Glynn, proprietor of a penny arcade at 977 Third avenue, Baltimore, Md., was recently arrested upon the formal complaint of over a hundred neighbors for playing one tune ("Poor John") almost continuously upon a large talking machine in front of his place. Just before going with the officer who served the warrant, Mr. Glynn placed a new record on the machine and during his enforced absence his neighbors were regaled with the tones of "I Don't Know Where I'm Going, but I'm on My Way." The court's decision in his case is not announced.

Youngstown, O., is the latest town to jump on the much-abused and defenceless talking machine, the city council having authorized the Mayor and City Solicitor to prepare legislation to that effect. Permits will not be issued to shows with talking machine attachments.

The matter of dealing in commercial talking machines has been a branch of the business neglected by all except the manufacturers, and it has been left for Henry P. Roberts, for several years in charge of the retail department of the Columbia Phonograph Co.'s commercial branch, to enter the field as an independent dealer. Mr. Roberts, in addition to being familiar with every detail of the selling end is also an inventor of no mean ability.

Don't judge by appearances. Looking down from a ten-story building there's little or no difference between a six-foot man and his four-foot-six companion. The man with a choker collar and an ascot tie may be minus a shirt. The business with the swellest stationery may have the leanest bank account.

First Pugilist—I cannot fight any man who has never made a record. When you have done so, I will talk further on the subject.

Second Pugilist (who owns a talking machine) at once looks in the directory for the address of the nearest talking machine laboratory.

The regularly monthly phonograph recitals and concerts have attracted crowds at the talking machine department of the O. K. Houck Piano Co., St. Louis.

TYPE E

THE MUTOSCOPE

For Summer Parks, Penny Arcades, etc., has proved itself to be the greatest money earner of all coin-operated machines. In fact it has made the "Penny Vaudeville" what it is to-day. The privilege of free exchange of pictures keeping them fresh and up-to-date, make it always attractive. Our New Type E Mutoscope, besides being handsomer in design, possesses many improvements in mechanism over former models.

The Peerless "Wedge"

The "Peerless Wedge" will enter any field and open up a profitable business for you. It will make **you** say "give me the Peerless Line in preference to any other line I carry." It **may** make you say, as did another of our customers—"in the last **16** weeks of last year I cleared **$16,000.00** on Peerless Coin-Operated Pianos alone." Do you think that is too strong? Look on the other side of the wedge.

We know of one firm that is now earning **$5,000.00** per month, in addition to their other lines, on the sale of our Peerless Coin-Operated Pianos. Another claims a profit on last year's Peerless business of **$42,900.00.** Is this a line you have overlooked, or are you afraid to handle an automatic piano of the highest grade? Ask us how it is done—we don't mind telling **YOU** about it.

Style "44" (Without Keys)

The Wedge was the earliest mechanical principle discovered

The Peerless embraces the latest mechanical principles, and is built to stand as much hard usage as the Wedge

RECORDS

If you *knew* what we could *tell* you about the Columbia Record itself and more especially about the way its sale is going to be pushed—you would get the whole story the first minute you could.

Columbia Records afford you the surest kind of steady profit from the first day you handle them. No man who owns a talking machine is ever content with any other after he has heard them.

It sounds like advertising talk until you realize that

1. We own the original patents covering the making of modern talking machine records.
2. We use materials that no other manufacturer can duplicate.
3. We employ processes that we absolutely control.
4. We operate the largest talking machine factory in the world.
5. Columbia Records are beyond comparison in their repertory as well as in their quality.

No claims without a reason behind them! There's *more* profit, *surer* profit and *steadier* profit in Columbia Records. Get the proof of that! Write to us—or see your jobber—or get in touch with our nearest store.

Columbia Records fit all makes of talking machines and greatly improve the tone quality of any machine.

AND NOVELTY NEWS

Published Each Month by Edward Lyman Bill at 1 Madison Avenue, New York, June 15, 1907

OUR new "Art-Tone" Flower Horns are so constructed that they cannot be bent or crushed, either in everyday use or in transportation. They are expertly made from the finest materials that can be procured. The seams are constructed—without solder—from four thicknesses of metal, thereby making all joints of unusual strength. The patented ferrule is reinforced by three thicknesses of metal—without solder—thereby overcoming all the defects of the ordinary ferrule.

It is just this great strength in construction, linked with the purity of tone-reproduction, the richness of designs, and the permanence of finish, that has earned for "Art-Tone" Horns, the trade title: "The finest line of Flower Horns ever produced."

Vol. 3. No. 6. New York, June 15, 1907. Price Ten Cents

SOME POINTERS ON SALESMANSHIP.

Some of the Qualities Essential to Success in the Selling of Talking Machines as in Any Other Specialty—Some Facts Straight from the Shoulder Which Are Worth Noting by the Men Who Desire to Reach the Top—A Few Pertinent "Don'ts" That Are Worth Memorizing and Better Still, Observing by the Younger Element of the Talking Machine Trade.

"If you strike a thorn or rose,
Keep a-goin';
If it hail or if it snows,
Keep a-goin';
'Taint no use to set and whine
When the fish ain't on your line—
Bait your hook and keep a-tryin'—
Keep a-goin'."

It may have been overlooked that the mere retail salesman may be a good salesman. But he can be if he isn't. He can be as much better than the average as the best paid commercial traveling man is better than the cheapest "drummer" types. But he must learn how, after which, through growing tact, knowledge, and capacity in his work, the field may open wide to his ambitions. "Be an honest salesman," is my advice to all beginners, says F. Oliver Quinn. There is no other road to the broadest, most lasting success. To be honest in the full sense is not as easy as it might appear, either.

You are not honest with your employer if you are in the position of trying to sell his goods without knowing how to do it. You are not honest with your customer if you haven't knowledge of the goods you are handling. Through your ignorance of things which he expects you to know you may swindle him egregiously.

SALESMEN A MAINSPRING OF BUSINESS.

The salesmanship represented in a retail house is the mainspring of the business. Nothing would move in the place were it not for the salesman. The duty of the salesman is to sell goods, primarily. But in selling these goods he is in the position of trying to make a profit for his house, and in doing so to send a pleased customer home who will come back again. That still broader opportunity is open, too, which will bring that customer back, asking that the man who waited on him the last time shall attend to him again!

What is it which will prompt such an inquiry? The salesmanship of the salesman—nothing more. What is this salesmanship? Everything that the salesman may learn and feel and know, tempered by personality, judgment, tact, and diplomacy. Some pointed "Don'ts" may lead to the end of your ambition—for without this ambition you might as well quit:

SUGGESTIONS FOR RETAIL CLERKS.

Don't forget loyalty to your employer.

Don't get "sore" and take it out of customers.

Don't be familiar.

Don't let a customer stand without attention; show him at least that you know he is waiting.

Don't use slang in addressing customers.

Don't be content merely with obeying literal rules.

Don't forget that your salary depends upon your sales.

Don t growl at taking a short luncheon on a busy day.

Don't talk about bad luck.

Don't forget that the old customer is one of the most valuable.

Don't misrepresent your goods.

Don't dodge the "cranky" customer; he can teach you.

Don't try to bully the office boy.

Don't think no one else can fill your place.

Don't forget to push your goods.

All these things anticipate that your honesty as a salesman is your chief capital on which to work. If you can't believe in these goods, find another job where you can believe in them. Your lack of faith in the goods you sell will undermine you.

Having the goods in which you believe, stand by them. Learn all you can about them—about their manufacture, their quality, fit, lasting nature, and pleasing possession. Having this pride in those things which you sell, you can't help showing it both to employer and customer in your handling of them, replacing them neatly and keeping things ship-shape. Your manner in speaking of them will carry conviction to the extent that you know about them.

Out of this condition you will hear your customer asking, "Now, what do you think as between this and this?" When you hear that question it is a tribute to your salesmanship. Store these things in your recollections—they are invaluable as a stimulus to confidence.

But beware of overconfidence. There's something wrong with you when you begin to feel that you are it. It is a weakness in yourself and unfair to your fellows. It begets a feeling finally that your chances lie in your ability to overshadow others.

Cultivate the ability to remember faces and to call the customer by his right name. Remember his address if you can. These may seem small things, but they are vital; human nature never will be above the implied compliment.

Your tactfulness will come of your own education at yourself in dealing with all kinds of people. You will have learned more when you can send the cranky person home, satisfied, than you can have learned of scores of easily pleased customers.

GIVE BUYER WHAT HE WANTS.

There is a distinction to be made here and a difference to be recognized when you meet the purchaser who knows exactly what he wants. Sell him that thing he insists upon having. There is nothing inconsistent with honesty in doing so. If you have had a chance to express yourself as you feel, it will have been in favor of something else; you need no argument in letting the person have the thing he insists upon buying. If he should return with a possible complaint, it will be well if you have had a chance to say something when the sale was made. Recall your speech, tactfully, and your next sale will be likely be goods of your own choice.

Keep track of the advertising matter of your store. Nothing is more irritating to a customer than to call for an advertised line and discover that you never heard of it. Concentration is one of your greatest assets. Be a part of the organization which is furnishing you employment and opportunity. Remember, too, that the store gives you the employment; you must find your own opportunity. You can be a half-salesman, with a great deal less effort than is required in becoming a whole one. You can get out of a position a great deal easier than you can get into it.

HAVE COURAGE AND PATIENCE.

"Courage," says Emerson, "perseverance, patience, are the great fortune finders. If a man has these qualities he will find himself too liberally endowed to be overlooked by her."

"Sitting under a cherry tree with one's mouth open won't catch much," said Moody.

The main object of becoming a salesman is to look for wider opportunities in business. Your salary may not be large, but you are learning. In the old world the salesman must come with lineage and tried honesty of purpose and serve his long apprenticeship to trade almost without compensation. Your opportunity, to the extent that you grasp it, is worth more than money. Search for ideas and use them; try them out as you find opportunity. Do these things better than you have been expected to do them. Never mind whether you are watched and rewarded on the moment.

Your opportunity and your reward will come when you are an employer or a manager of a business with which you are familiar and in which you have a pride and confidence.

INCREASED 500 PER CENT.

The Wonderful Growth of the Trade in Commercial Talking Machines—Advantages of These Machines Apparent.

The growth in popularity of the commercial talking machine among business men is surpassing all expectations, and it is safe to say that the sales during the past twelve months have increased 500 per cent. It is a well-known fact that the ordinary stenographer in a business office does not take on an average of more than ninety words a minute. Nearly every man who dictates can think faster than the stenographer can write short-hand, so he has to hold back. In dictating to a talking machine there is no time wasted, nor interruption to his thought, because the machine goes right ahead at any pace he can set. The reporters of debates in the House of Congress have for years read their shorthand notes into commercial "talkers," from which they are written out on typewriters. Court reporters have also been using the machines in this way for years with great success. Commercial talking machines cost less than typewriters of standard makes, and it is not impossible that the tremendous increase in their sale in the last year is the beginning of a business campaign which will make them almost as common as typewriters.

The talking machine is just 30 years old. Although it was generally regarded as a musical toy but a few short years ago, the nations of the world are spending millions and millions of dollars for it each year. But the manufacturers believe its possibilities as a time saver in business will soon make it one of the great factors in our commercial life, instead of a contrivance merely for amusement. They are backing up their judgment by making enormous investments in enlarging the capacity of their plants, and the truth of their predictions will soon be established.

SCHMELZER SPRUNG A JOKE.

Herman F. Schmelzer, of the Schmelzer Arms Co., Victor distributors, Kansas City, Mo., is known to be somewhat of a practical joker, and upon the recent trip to Texas of the Kansas City Commercial Club, of which he is a member, he further added to his reputation. The party had retired to their berths on the first night out, when the soft tones of a woman's voice floated upon the still air. "My Name is Mamie," it announced. The bachelor boys landed in the aisle as one man, the married ones roused up with joyous smiles, thought of their wives and of how fast news travels, and discreetly kept in their berths, although allowing their heads to project into the aisle with dangerous disregard for their necks. Joy reigned supreme until a search for "Mamie" discovered her in the person of a Victor machine secreted in an empty upper berth. Mr. Schmelzer, upon being taxed with the "crime," owned up and everybody "smiled."

NEW STUNT IN VAUDEVILLE.

In the new musical comedy, "Fascinating Flora," now running in New York, a big hit is made by one of the cast, who sings a duet with Caruso, the latter's voice being reproduced with the aid of a talking machine.

LONG DISTANCE PHONOGRAPHY.

Some of the Many Enjoyments to be Had by the Use of the Transmitophone—Sound Can be Produced from a Phonograph in Any Number of Places and Any Distance from the Machine—Opens a New Field of Activity to the Many Interested.

While many improvements have been made in the talking machine for the past few years whereby this instrument has achieved a new position in the commercial and musical worlds, there are few inventions so effective in enlarging the usefulness of the phonograph as the "transmitophone" recently evolved by the International Telephone Manufacturing Co., Chicago.

The phonograph heretofore has been what might be called a one-unit machine—that is, an instrument from which the sound can be produced in one place only at any one time. The distance which the sound can be heard has been enlarged heretofore only by increasing the volume of the sound at the instrument. With the use of the transmitophone, the sound can be reproduced from one phonograph in any number of places and any distance from the machine. The equipment consists of an especially powerful telephone transmitter with the necessary auxiliary apparatus and a rigidly constructed telephone receiver with an attachment for the mounting of a megaphone.

The greatest difficulty in the development of this equipment in the past has been to produce a transmitter that would continue to operate with more than two or three batteries in series with the instrument, which is the greatest amount required in telephone work on the longest lines, and also to build a receiver which would not lose its adjustment from such powerful usage as is necessary to throw the sound over a broad area.

The transmitter employed in the transmitophone is so designed and constructed that it will withstand the heavy current from 18 batteries connected in series with the primary circuit of the induction coil. This amount of current is necessary to produce a vibration of the receiver diaphragms strong enough to throw the sound through a megaphone so it can be heard by a large audience. The transmitter is attached directly to the reproducer of the phonograph.

The transmitter induction coil and the sound-regulating switch and necessary terminal binding posts are mounted in a neat oak case, which also contains the required batteries. The battery case contains ten cells of dry battery of 1½ volts each, which are connected to the sound-regulating switch so the transmitter may be supplied with 6, 9, 12 or 15 volts.

The entire equipment is so arranged that it can be very readily installed by placing the transmitter on the reproducer of the phonograph and running a pair of insulated wires from the line-binding posts on the battery case where the sound is to be reproduced, and connecting the transmitter reproducer to which is attached the megaphone, as shown in accompanying illustration, where it is placed up in the trees in a park. Then when the phonograph is started, the sound-regulating switch is turned on the proper point to secure the best results for the space in which the sound is given. Any number of transmitophone reproducers can be placed in series with one phonograph, and any distance apart, in different towns, if desired.

For nickel theatres or places of amusement where it is desired to have music outside of the door as well as in the hall, one phonograph may be placed in the ticket clerk's office, where the records can readily be changed and each record reproduced in the hall and outside or any distance down the street, if desired. In a large dance hall or a skating rink a phonograph can be operated at the ticket office or any convenient place, and the music reproduced in several different places of the hall so it can plainly be heard by all.

In homes the phonograph can be operated by a maid from her room and the music reproduced in any number of the rooms or in the lawn, or up in the trees if desired. With this arrangement any number of families in a neighborhood can form a club and have one phonograph, and each family have a transmitophone reproducer, which can be connected by a switch so that the phonograph circuit may be switched

HEARING MUSIC IN THE PARK.

off or on at will. This brings the highest grade of phonograph within the means of any circle of neighbors.

The combination of the transmitophone with the phonograph has so enlarged the possibilities of the equipment that it has created a field almost without limit.

FIND "THE WORLD" IS INVALUABLE.

The Maritime Phonograph Co., of St. John, N. B., in the course of a recent communication enclosing subscription states: "We learned to value this publication at our store in Fredericton, and need it all the more in this city, where we are opening a wholesale and retail talking machine store, we being jobbers for the Columbia Phonograph Co. for the Maritime Provinces. We find your publication invaluable for the trade pointers it gives and the up-to-date information it gives on all things pertaining to the trade."

McGREAL CELEBRATES REMOVAL

To Their Handsome New Building in Milwaukee—Growth of This Business a Tribute to the Enterprise and Ability of the Gentlemen Controlling Its Destinies.

(Special to The Talking Machine World.)

Milwaukee, Wis., June 10, 1907.

McGreal Bros. celebrated their removal into their fine new headquarters building at 172 176 Third street last month with page advertisements in the various Milwaukee dailies. These advertisements were excellently conceived and executed. The one on the writer's desk is headed by a design showing "the magical growth of a great business." A Hindoo magician, sitting cross-legged on the ground, is just raising a cloth under which is seen the original Grand avenue store. Again he is shown jubilating over the old Third street store, and finally his calm Oriental countenance fairly radiates triumphal gladness as the big new structure which McGreal Bros. now occupy, breaks into view. At the bottom of the advertisement are two cuts, one on either side of the signature, one showing the face of L. E. McGreal in the horn of a Victor, while the genial face of his brother appears in the horn of an Edison phonograph.

A reader in one of the Milwaukee dailies gives the following succinct history of the firm:

"Almost coincident with the removal of McGreal Bros. to larger quarters in the Ogden block, Third street, near Grand avenue, comes the announcement that the firm will open a wholesale and retail department on May 20 in Cincinnati. The remarkable success of McGreal Bros. in Milwaukee has been a source of general comment throughout the trade.

"McGreal Bros. came to Milwaukee from New York five years ago. They had wide experience and thorough knowledge of their business, but little actual capital at the start. But they brought to their business such progressive and up-to-date methods that soon their first store, 411 Graud avenue, was found inadequate to the needs of the business, so they moved to 173 Third street in 1904, and now, three years later, the firm have found themselves confronted with the same embarrassment—lack of room, so McGreal Bros. have again moved into larger quarters, and in addition have found it to their advantage to invade the Cincinnati field."

ATTENTION!

NEW ENGLAND DEALERS

EDISON PHONOGRAPHS AND VICTOR MACHINES

ONE SHIPMENT—ONE EXPRESSAGE

THERE'S AN ADVANTAGE! Try the Eastern's Policy of Service.

THE EASTERN TALKING MACHINE CO.

177 TREMONT ST., BOSTON, MASS.

Distributors of EDISON and VICTOR MACHINES, Records and all Supplies

Eastern Agents for HERZOG DISK and CYLINDER RECORD CABINETS

Why do you sell the Victor?

—a queer question to ask a successful dealer, isn't it? But people always ask the man who is making money hand-over-fist how he does it.

Mighty few *Victor* dealers have time to stop and answer, when we are piling good business upon them with our $150,000 *increased* advertising, which reaches 56,000,000 people every month who know the reputation of the

Victor
and the
Victor Records

But if you did have time to tell anybody about the "good thing" you have you could join with an army of other *Victor* dealers and say:

"I know the *Victor* people will stand by me They have always stood by me and everyone else. My profit is large and it is sure. The quality is sure. The demand is sure. Don't ask me such a foolish question as 'Why do I sell the *Victor?*'"

Victor Talking Machine Company
Camden, N. J.

Here's a good idea:—Place standing monthly orders for new records with your distributor, and push this feature. (It keeps your customers calling at least monthly—they look for them.)

TRADE HAPPENINGS IN PHILADELPHIA.

Business Satisfactory Although Not Equal to a Year Ago—Philadelphia Jobbers Form Club—Increasing Call for Red Seal Records—Weyman's New Quarters—Heppe & Son Push Jobbing Business—L. J. Gerson Says That Bad Weather Has Not Damaged Business as Some Supposed—Lewis Co. in Larger Quarters—Keen Co.'s New Cabinet—"Phono-Vita" a New Oil for Talkers—Emil Bauer Returns—Harbach's Fine Line—Columbia Co. Expansion.

(Special to The Talking Machine World.)

Philadelphia, Pa., June 10, 1907.

Reports from the various headquarters for talking machines in this city show that on the whole the month of May was most satisfactory—certainly it has been the banner month for 1907, and in many cases it ran ahead of the corresponding month in 1906. The average trade, however, for this year does not come up to that of last, a decided falling off being felt all through this territory. This should not convey the impression that things are at a standstill in the Quaker City, for such is not the case. The talking machine business was never on a firmer basis, only there has been no big booms to spur things on. As one jobber put it: "We are down to rock bottom, but we know just about where we stand. Each one of us have our own steady line of customers whom we can count on, and we don't have to wonder each month where we are coming out or what accounts are good and what are not."

A fraternal spirit exists between the jobbers of this city, and this feeling should help toward the future advance and success of the "talker" business here. Of course, all of them belong to the Eastern Jobbers' Association, but in order to promote a more intimate friendly relationship and keep each other better posted on local affairs, a sort of a Philadelphia Jobbers' Club was formed recently, and about the fifth of every month they get together at Green's Hotel, Eighth and Chestnut, and, after enjoying a spread, talks on business matters such as credits, etc., are indulged in. In this way they keep each cognizant of the general condition of affairs.

Louis Buehn & Bro., 45 North Ninth street, report business somewhat ahead of April, wholesale trade being very satisfactory. In speaking of the existing conditions, Mr. Buehn said: "Of course, we make a specialty of wholesaling and do not try to cater to the retail trade, and while dealers are not stocking up heavily just now on account of summer coming on, we find little cause for complaint. No, trade on the whole this year has not come up to 1906 with us, but I think this is due mostly to two reasons: general outside conditions, and the fact that we have dropped from our list a number of dealers who could not or would not live up to the 90 day arrangement but would let their accounts run four, five and six months. We are not after that kind of trade." Edmund E. Buehn, the junior partner, and R. G. Dungan, have left to cover the trade in this territory.

May business with the Penn Phonograph Co., this city, has been of a high order, especially in Victor goods. There has been a large call for Red Seal records, and several auxetophones were disposed of. This company report a good outlook for fall trade. They have just added post cards as a side line to their business, and hope to make it a paying investment. J. B. Miller, who has quite a reputation as a practical joker, had the tables turned on him recently. Mr. M. generally makes it a point to keep his desk well stocked with various kinds of lemons to hand his friends, and while chatting to The World representative rummaged through the drawers for a smoke, but if his intention was to soothe his nerves or ease his conscience after having turned down the said representative on a little advertising venture for the summer months, it was defeated, for no sooner had he touched a match to the Perfecto (?) than it disappeared in smoke, leaving J. B. a rather surprised, a little dirtier but much wiser man.

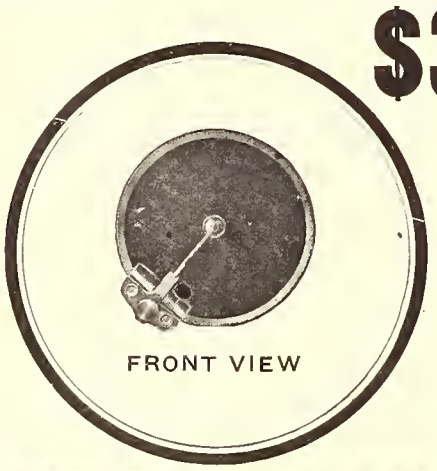
Edison and Victor lines are making a good showing at H. A. Weyman & Son's, notwithstanding their broken up condition on account of moving into their handsome new quarters, 1011 Chestnut street. This end of the business is under the able management of Wm. H. Doerr, who hopes to accomplish great things this fall, for in the new building the entire half of the ground floor and basement will be turned over to talking machines. The whole is being fitted up in the most modern manner with soundproof rooms and all the latest improvements.

Wm. O. Ziegler, the manager of the Disc Talking Machine Co., reports trade fairly brisk, and waxed enthusiastic over the last list of Zon-o-phone records, which he says are making a hit. He says they are the best ever.

C. J. Heppe & Son are well pleased with business, present and prospective. This company are pushing rapidly to the front in jobbing circles, and dealers are beginning to get on to the fact that when they want something and want it in a hurry, C. J. Heppe & Sons are not found behindhand in giving it to them. This company, beside handling talking machines, are manufacturers of mandolins, guitars and player pianos. Dealers who find summer trade slack would do well to drop them a line about these, as they go well with the "talker" business, and there's lots of coin to be taken in.

Business with the Musical Echo Co. is somewhat ahead of April. L. J. Gerson, in talking with The World man, attributed this increase to the bad weather, claiming that people being kept indoors on account of rain, etc., made use of their machines to pass away the time, and incidentally orders for new records poured in. This company have recently established a mail order department and are now doing a large business in the rural sections throughout the East. They were recently the recipients of two

$3.00 $3.00



TRUE- -TONE

NOTE THE NEW PRICE, $3.00 EACH, DISCOUNTS: JOBBERS 50%, DEALERS 40%

We have made this price on the TRUE TONE so that EVERY USER OF A DISK TALKING MACHINE WILL BE ABLE TO PURCHASE ONE.

There is a good margin of profit in the TRUE TONE for both JOBBER and DEALER and IT WILL PAY YOU TO HANDLE IT.

The TRUE TONE IS NOT AN EXPERIMENT but a box which has been on the market for some time and given only FIRST-CLASS SATISFACTION. A great deal of time and money has been spent in its perfection.

IT IS SIMPLE IN CONSTRUCTION—HAS A 2-INCH DIAPHRAGM—LESS SCRATCH—MELLOW TONE
IT WEARS NEEDLES AND RECORDS LESS—DIAPHRAGM IS METAL SPECIALLY TREATED

GET IN LINE—ORDER TO-DAY—NO TIME LIKE THE PRESENT

AMERICAN TALKING MACHINE COMPANY

Largest Talking Machine House in the City

carloads of machines and records from the Edison company's factory at Orange, N. J. An expert window dresser has also been added to their staff, and they expect to sort of stir things up a little on Chestnut street.

On account of their fast increasing business, the Lewis Talking Machine Co. have been forced to remove to larger quarters at 33 South Ninth street. Here they will occupy the entire grouud floor and basement, and will be in a hetter condition to handle orders promptly. The Lewis Co. are having an enormous demand for Petmecky needles, for which they are sole agents in this territory, and they can't get Marconi records fast enough to supply the call.

The Keen Co., 132 North Eighth street, have heen delayed somewhat in getting out their new disc record cabinet, and owing to the incorporation of some new improvements, they will postpone their official announcement in The World regarding this device until next month. This cabinet somewhat resembles a sheet music filing cahinet in appearance, and consists of sixty drawers holding six records each. The records are placed in a horizontal position, being one upou the other, thus eliminating all chance of warping, and when the drawers are closed the cabinet is dust proof, insuring a clean stock. When pulled out, the front end of each drawer drops down, which facilitates the rapid handling of records. Each draw bears a label marked with the numbers corresponding to the records it contains. The whole is finished in black or red cloth, with brass fittings, making it a very attractive office fixture.

The Western Talking Machine Co. report Edison business for May ahead of last month in both wholesale and retail departments.

A new oil is now heing placed on the market by L. Mendel, one of the oldest oil specialists in the country, called "Phono-Vita." As its name implies, this oil is made especially for talking machines, and as such will at once attract the notice of this trade. "Phono-Vita" is strictly a lubricant and is guaranteed in every way. Mr. Mendel is preparing to push this new product, and he is startiug right. He will, under no consideration, sell except through the jobher, and all dealers desiring to haudle this oil must place their orders through them. A good margin of profit is assured both.

Emil Bauer, of the Bauer Co., 726 Girard avenue, has just returned from a western trip, after experiencing a lot of had weather hut good business. The demand for the S. S. Stewart hanjos and Bauer mandolins and guitars proved exceptionally large for this time of year. Mr. Bauer booked enough orders to keep them rushed until fall. The talking machine trade is fast being educated to the musical merchandise line, and dealers everywhere are laying in a stock to help out during the summer months when the "talker" business is slow. Banjos, especially, are proving top notchers this year, and the call keeps on increasing.

Harbach & Co., 809 Filbert street, are undoubtedly one of the largest and oldest manufacturing agents for anything and everything in motion picture machines, films, stereopticous or magic lanterns, slides and supplies in the East. Moving picture theatre or talking machine men who are interested in such things would do well to drop them a line for their complete line of catalogs, for this company handle innumerahle specialties that will prove big sellers in this trade.

Manager John A. Gouldrup, of the Philadelphia office of the Columbia Phonograph Co., is especially surprised with the fine showing made by the wholesale department. This he attributes to the efforts of Harry P. Van Steenbergh, the popular road representative for this office. This gentleman has only been identified with the Columbia for a few months, but he is fast making a record for himself (no pun meant) that is the envy of many men of more experience.

Arthur Tero, manager of the Columbia Phonograph Co.'s Toronto branch was a recent visitor.

The Keen Co.'s hranch at 40 North Eighth street, was burned out on the night of the third. The loss is covered by insurance.

ELECTRIC SELF-PLAYING VIOLIN.

Patent Granted to Harry K. Sandell and Assigned to Mills Novelty Co. Contains Many Novel and Interesting Claims.

(Special to The Talking Machine World.)

Washington, D. C., June 5, 1907.

Henry K. Sandell secured an important patent (No. 855,021) on May 28 for an electric self-playing violin, which relates primarily to improvements of self-playing musical stringed instruments forming the suhject of United States letters patent No. 807,871, dated Dec. 19, 1905, and the object is to enable the electric violin to be played iu a mauner to resemble more closely the human playing thereof.

The mechanical control of the violin, as illustrated in this patent, is a most marvelous piece of work, and one of the more important adjuncts of the instrument is a device for producing, at proper intervals, the vibrating effect which the human player produces by vibrating his fingers against the string which is under depression.

One of the twelve claims covering this remarkable instrument, which, by the way, is assigned by the inventor to the Mills Novelty Co., of Chicago, is as follows:

"In an electric self-playing stringed instrument, the combination with a casing supporting the parts of a circuit having branches, a motor, an electrical contact-roller in said circuit, contact-fingers co-operating with said roller, and means for feeding a perforated music-sheet across said roller and contact-fingers; sounding devices for the strings of the instrument, each including an electro magnet having an oscillatory armature, and each comprising a rotably mounted oscillatory shaft connected with said armature and a sounder on said shaft adapted to sound a string; a series of fingering-devices for each string, each including an electro-magnet and adapted to finger a string when its magnet is energized; said fingering-device maguets beiug included in branches of which each branch includes one only of said fingeriug-device magnets and the common parts of each said series including a sounding device magnet, whereby each of said fingering-device magnets in a series thereof is included in electric series with a sounding device magnet; lugs on the armatures of said sounding-device magnets; means for regulating the extent of depression of said armatures, comprising a rocker-plate supported to extend in the path of said lugs and an electro-magnet in a branch of said circuit having an oscillatory armature connected with said plate to rock it; a speed-changing device for the sounder-shafts, comprising a pair of electro-magnets included in hranches of said circuit, a pivotal armature extending over the poles of said pair of magnets, a rotable shaft geared to said motor and carrying a friction-disk on one end, an oscillatory hearing in which the last named shaft is journaled, a connection between the oscillatory end of said disk-carrying shaft and said pivotal armature, a vertical rotary shaft carrying on its lower end a friction-wheel engaging said disk and geared at its upper end with said sounder-shafts to drive them, and a connection between the armature of said pressure-regulating magnet and said pivotal armature."

A FEW "SHOULDS" FOR DEALERS

Contributed by One of the Craft Who Recently Sprung Some "Whys."

Editor of Talking Machine Word:

Dear Sir—Thanking you for puhlishing my last letter of "Whys," I will bother you with a few "shoulds":

A dealer should wear a perpetual smile.

(Frowns hurt his business.)

A clerk should not worry to find out when the boss is going to raise.

(It will pay him better to give the boss a square deal.)

A salesman should let his customers have the best of a dispute as much as possible.

(They like it, and it pays.)

Everybody in the business should have patience.

(Without it you're lost.)

You should remember that the talker has a great future.

(Never mind what Mr. Sorehead tells you.)

Every one should be up to date on what they are selling.

(If you don't know what the other fellow is doing you're not up to date.)

We all should thank the editor for having such a good medium as The Talking Machine World to keep us posted on the other fellow's doings.

June 7, 1907. A READER.

PREDICTIONS THIRTY YEARS AGO.

When Edison invented the phonograph in 1877 there were many remarkable predictions for his crude machine which amused the "wizard." For instance, it was claimed that the phonograph could be fitted with a horn which would throw the sound very far, and that a machine mounted on the Statue of Liberty in New York harbor could be used for warning signals to mariners.

To Dealers in Northern Ohio, Northern Indiana and Michigan

We earnestly solicit your trade on the straight, solid basis of giving you a prompt, money-saving service.

There are many advantages in business apart from price. It is these particular advantages we offer you, combined with every benefit and possibility in low price.

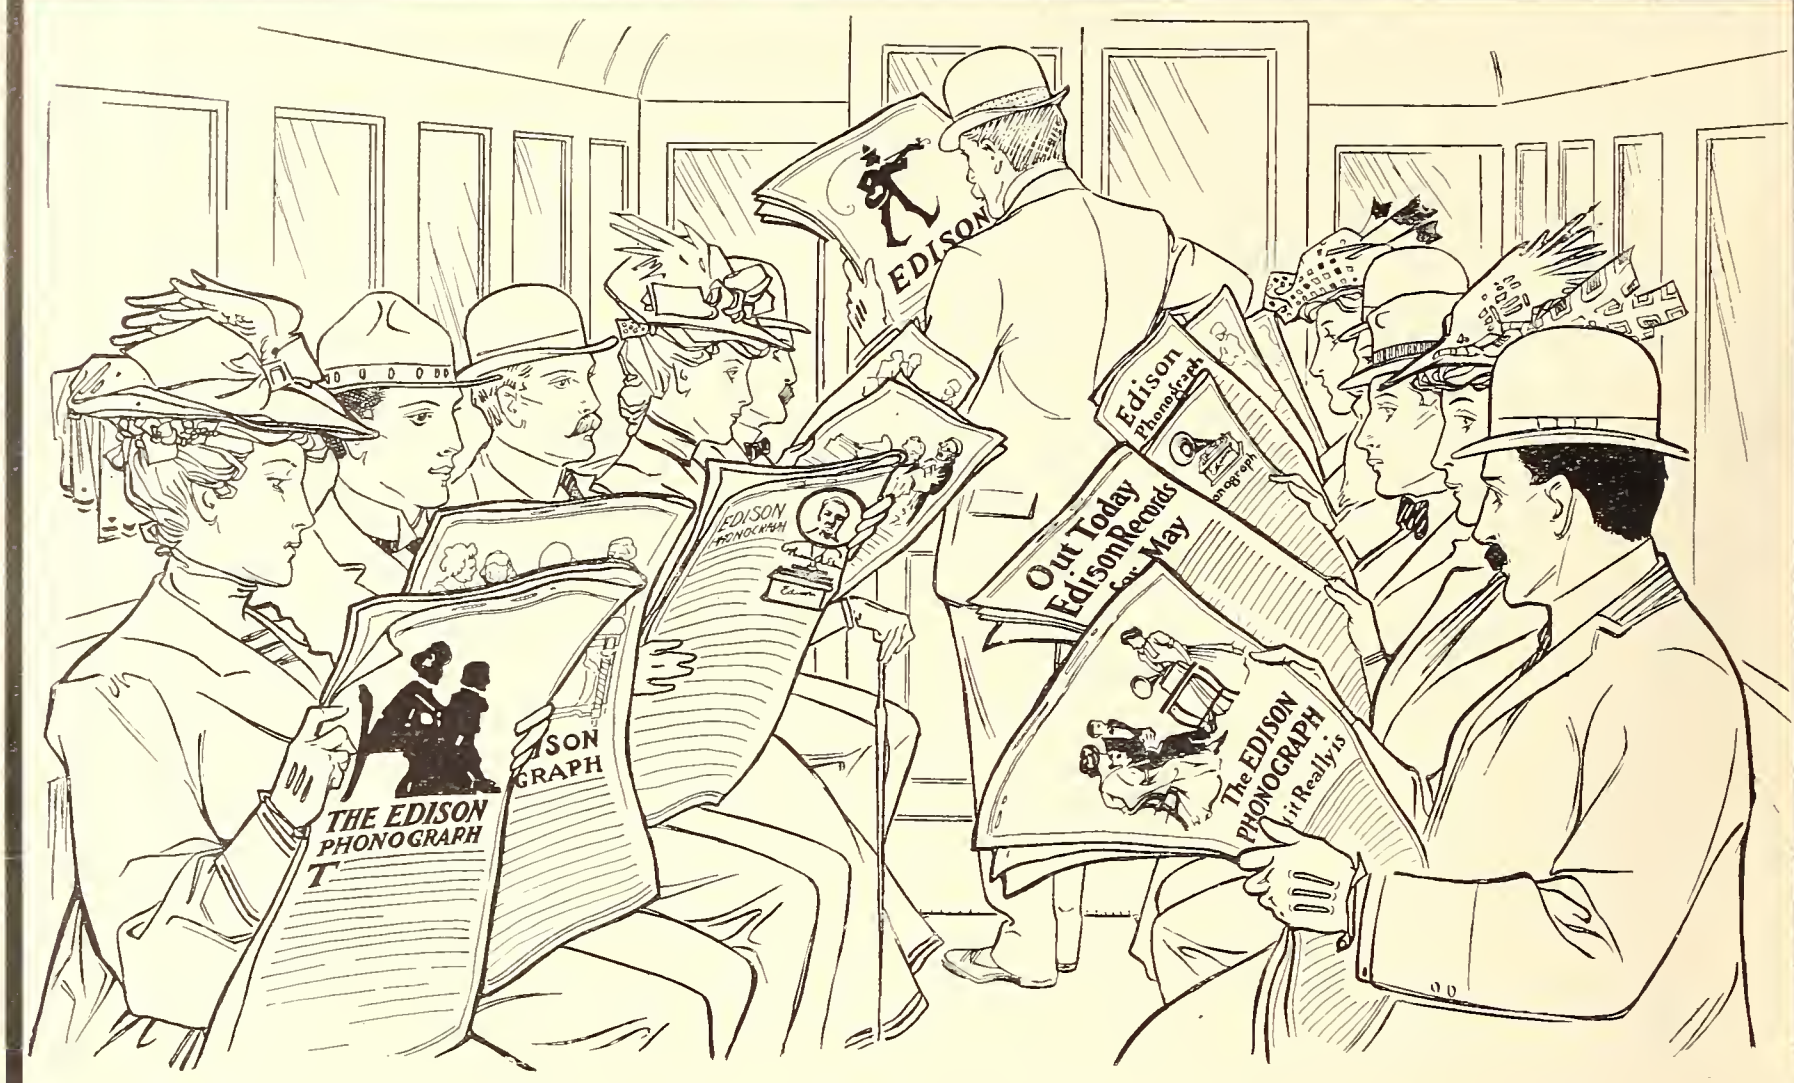
There is nothing of the "haphazard" or "trust-to-luck" in our business methods. We carry in every line the largest volume of stock between New York and Chicago, and so are instantly able to fill your orders the hour they are received.

We are never out of goods when you want them. Then the question of quality and value which comes from large practical experience and is a safeguard to you and your trade—this we place at the service of our customers.

You are just as anxious to increase your trade and profits as we can be. Now, be fair to yourself and test our claims. Ask for anything in Phonographs and accessories, and see how promptly we will supply the demand.

Edison Jobbers

AMERICAN PHONOGRAPH CO.
106 Woodward Avenue
Detroit, Mich.



EDISON PHONOGRAPHS

Are Continually Before the People

THE instrument for you to push is the one that is being pushed the strongest by the manufacturer. The Edison Phonograph advertising covers the country like a blanket. It reaches as far as the magazines and newspapers penetrate and is teaching people not only to want an instrument but also to want an Edison.

YOUR territory is alive with possible Edison Phonograph buyers and you cannot satisfy them with any other kind. The Edison name is the one they know best and believe in, and the perfect reproductions, convenient, clear-toned Records of all that is good in music and unending enjoyment afforded by the Edison Phonograph make an appeal that cannot be met with anything else in the field of mechanical musical instruments.

DO not work against this favorable condition; work with it. Give the Edison a fair chance and you will see the money.

THERE is a jobber near you who can supply you with all types of Edison Phonographs and the new Records as they come out. Write us for his name and any other information you may need.

National Phonograph Co., 59 Lakeside Avenue, Orange, N. J.

COLUMBIA STORE AT DAVENPORT.

One of the Enterprising Establishments Controlled by the Great New York Institution—Manager Herriman's Success.

(Special to The Talking Machine World.)

Chicago, Ill., June 3, 1907.

The accompanying photograph shows the Columbia phonograph store at Davenport, Iowa. The gentleman on the seat of the demonstrating rig is Robert White, who recently joined Manager Herriman's force at Davenport. Mr. White was formerly of St. Paul. He is doing some ex-

cellent work in his new position, using original and novel ideas.

A. D. Herriman, the manager of the Davenport store, has been half a dozen years in the talker business. He commenced when in the cigar and tobacco retail business in Chicago by handling a line of Columbia goods as a side line. He finally sold his store and went with Rothschild & Co. in charge of talking machines and small goods. Three years later he resigned and went with Siegel-Cooper in a like capacity. From there he went to the Columbia Phonograph Co. as manager of the retail sales at 88 Wabash, and in October of last year opened up the Davenport office for them. The business of Davenport has prospered greatly under Mr. Herriman's careful management.

Last month Billy Golden, famous both as a vaudeville artist and record maker, struck Davenport and made a much prized souvenir record of "Turkey in the Straw" for the Columbia manager.

INVENTS WIRELESS TELEPHONE.

Los Angeles Man Says He Will be Able to Talk from Coast to Coast.

(Special to The Talking Machine World.)

Los Angeles, Cal., June 8, 1907.

Fred Harvey Brown, of Long Beach, says he has invented a new wireless telephone, which he calls the Harmonie telephone. He says he will be able to transmit verbal messages from coast to coast. Brown, who has grown old in the invention of electric devices, says that a phonograph is attached to a microphone, and that wires lead from it to an induction coil. From this the sound of the phonograph is led to a coil of wire placed vertically and from which the vibrations are transmitted to the air.

A person wearing another induction coil in his hatband or under the coat, with an ordinary telephone receiver attached, Brown says, may wander at will in the vicinity of the Brown residence and near clearly the sounds of the phonograph.

The result would be the same, according to Mr. Brown's claims, as if a person had talked into the microphone. A person in Los Angeles, he says, can hear another talking in San Francisco.

TALKER IN ART POTTERY.

It is said that a new style of talking machine, named the "De Luxe," will shortly be put on the English market. The new machine has no horn, the sound issuing from an artistic piece of art pottery, arranged with regard to the law of acoustics. The new machine is designed especially for the drawing rooms of the wealthy, and may be run either by clockwork or an electric motor.

VICTOR EMPLOYES HELP Y. M. C. A.

The employes of the Victor Talking Machine Co.'s factory came to the assistance of the Camden (N. J.) Y. M. C. A. in a very handsome manner recently, contributing the sum of $1,400 to the building fund of the association. The gift was announced by Albert W. Atkinson, who stated that "the best boys in the establishment were those from the Y. M. C. A." When the collecting of subscriptions was started practically every man and boy had a share in it. The employes' contribution was in addition to a substantial one made by the officers of the company.

HANDLING ADVERTISED ARTICLES.

Dealers are more and more coming to realize the benefits to be derived from handling established, staple, thoroughly advertised articles. An article generally advertised and for which a dealer will make a push locally results in selling not only the advertised article, with its accompanying profit, but in bringing a large number of people into the dealer's store who are not regular customers, and a proportion of whom he can sell other seasonable lines of goods and make regular customers of.

What every dealer should be interested in is increasing his number of customers, which means people who think of him and visit him when in want of any of the articles that he is known to carry rather than visiting him occasionally and dividing their trade with his competitor. The dealer who handles unadvertised and unknown articles has to sell them through his own efforts and loses the benefit of a large expenditure which is made by the maker. See the point?

"NEEDLES IZ AZ NEEDLES DUZ"

A Dealer writes us "Send on receipt another lot of 10,000 Petmeckys. Every 'Crank' in town is now using them."

DO YOU KNOW

that from the rank and file of the army of "Cranks" come the ***connoisseurs.*** Their appreciation and approval of anything puts that thing at the ***very*** top.

Show us a dealer whose store is the headquarters for such people and we will show you the ***leading*** man in his business in the town.

THE "TALKER'S" POWER.

War Clouds Gather and Disperse at Will of Talking Machine—A True Story from the City of Brotherly Love Which Demonstrates the Influence of the Talking Machine.

(Special to The Talking Machine World.)

Philadelphia, June 10, 1907.

Frank Osmun, the genial dispatcher of tales and also the head salesman for the Penn Phonograph Co., of Philadelphia, is responsible for the following narrative, which is all the more entertaining because it is true in every particular:

"One of our customers, Frank Kane, residiug at No. 323 North 52d street, is the proud owner of a Victor talking machine, and a few days ago he decided to lay in his winter's supply of coal, this season of the year being the most advantageous from a financial standpoint.

"When the wagon arrived it was in charge of a gentleman of color by the name of Rastus Johnson, and a child of sunny Italy, known as Ignacio Guissepi. The unloading began with the usual amount of energy, but as soon as Mr. Kane started his machine—he having some friends to entertain—there was a lull for a moment, then operations were resumed, but with only one-half the noise and dust. Interested, he went to the window, and the scene that met his gaze was most inspiring—Signor Guissepi had thrown aside his shovel and was gliding in the maze of a melancholy dance to an air from Il Trovatore, which was issuing from the brass horn of the Victor. Rastus kept on with his work, paying no heed to the enthusiastic outburst of his fellow-workman, his face bearing a look of intense loathing. He evidently had no use for the Dago or his antics.

When the selection was finished and the dancing had ceased, Mr. Kane had an inspiration. He decided to make an international experiment. Slipping a red-hot rag-time air upon the machine, he turned the horn toward the open window, and awaited developments. When the first introductory bars of the tune smote the atmosphere, Rastus hesitated. As the record got down to business there came a blurred vision of a shovel before the eyes of Mr. Kane, as it flew from its owner's tingling fingers, and with a chuckle of delight, the colored man began a dance of the levee. One of those twisting, whirling hoe-downs it was, peculiar to the 'down-south negro.' Faster and faster flew his feet, his battered cap bounding from his head, his one suspender flying from his writhing shoulder. In the very midst of his wild exhilaration, he was rudely brought back to the common things of life by a huge lump of coal which assaulted him most cruelly between the ribs.

"You foola da nig, me no unloada no more! Getta da shove'!"

A look of keen disgust and anger overspread the features of "Mistah Johnsing." "Yuh didn't t'ink ob dat, Dago, when yuh war a-hoppin' rouu' heah like a pullet wid huh head off, did yuh, huh?"

"Getta a da shove'—getta da shove'!" reiterated Ignacio.

Mr. Kane held his breath. Was there to be war? Slipping a record of a sweet love song, rendered by a golden-voiced soprano, upon the turntable, he prayed that he might be the means of calling the dove of peace back to this would-be battlefield and seeing its silken wings hover once more over the heads of these wrathy sons of toil. As "Annie Laurie," in all its quaint and delicate refinement, flowed out upon the summer air, the prospective belligerents absorbed its soothing influence, and with mingled sighs of relief resumed their labor.

Hostilities had been averted through the power of the "talker." Nuf sed.

HOWARD TAYLOR MIDDLETON.

SUCCESS OF WIRELESS 'PHONE.

The Delaware, Lackawanna & Western Railway electrical department have been experimenting with the wireless telephone system which has been installed at the New York-Hoboken terminal. Dr. De Forest, the iuventor and developer, has been in charge, and is delighted with the success achieved. The system has been installed at three points—the high bell tower on the Lackawanna's new depot in Hoboken, the entrance to the railroad's tunuel through the Heights, and at No. 90 West street, New York, the local depot. The company expect to install wireless telephones on their new ferryboats when the system is working well, and this is expected to be of great assistance in fogs and in emergencies. It is reported that those making the experiments talked across the Hudson.

TALKING MACHINE RECORDING.

Some Laws of Sound as Defined by the Great Acousticians Helmholtz and Tyndall and Their Relevance in the Talking Machine Laboratory.

Two of the greatest authorities of sound are admittedly the great German scientist, Professor Helmholtz, and Professor Tyndall, who devoted a great deal of time to the study of acoustics, his treatise on the subject being recognized, as a matter of fact, as a staudard text book, says the Phono Trader. Now both these scientists agree that sound travels at a given speed according to temperature—this becomes purely a mathematical equation. By sound is meant all sounds. There is no differentiation between a high and a low note. That is a question of frequency of vibration, and has absolutely nothing to do with velocity.

At a mean temperature sound travels at the rate of 1,125 feet per second; at a temperature of zero centigrade it is 1,093 feet per second, and the velocity increases with the increase of temperature, the increase being about 2 feet for every degree centigrade. It is independent of the density of the air and pressure at the same temperature.

It is the same, with the same temperature, with all sounds, whether they be strong or weak, deep or acute. Therefore the tune played by a band at a distance is heard without alteration, except intensity, which could not be the case if some sounds traveled more rapidly than others.

In talking machine recording, when a band is grouped round the horn, it naturally follows that some instruments strike the diaphragm before the others, but the time equivalent is so minute that it is not perceptible to the human ear.

The great law—"the intensity of sound is iuversely as the square of the distance from the sonorous body from the ear"—is exemplified most emphatically in talking machines, because when the sounds are not "in focus" the results of the recording are poor, weak, lacking quality and unsatisfactory to our still more sensitive hearing system.

GERMANY'S NEW RATES ON TALKERS.

The new commercial agreement between the United States and Germany, which goes into force July 1, following the recent proclamation of the President, gives Germany the advantages of section 3 of the Dingley tariff law, in return for which the United States gets the benefit of the present German conventional rates.

Among the forty classes of articles on which Germany makes substantial reductions we find talkiug machines, which were formerly listed at 60 marks, are reduced to 40 marks per 100 kilos; music boxes without cases, formerly 25 marks, now 20 marks per 100 kilos (parts of music boxes also come under the former ruling); apparatus for mechanical repetition of musical pieces, 25 marks per 100 kilos.

RARE LOT OF ADVERTISING SENSE.

A rare lot of solid advertising sense was crowded into a little space by that expert who said: "The successful advertiser is not the man who makes assertions only, but the one who gives explicit and substantial reasons for the claim that he makes." That's it. Any one can generalize, throw out glittering allurements that mean nothing, and use much space in words that mean nothing when simmered down. But a man who makes a plain business proposition, persuades the reading world that he means to do as he says, and has something worth looking into. If he gives facts and figures, his figures and his facts speak for themselves. As the man above quoted adds: "In retail advertising there is often too much of the big drum and too little of useful information. Tell your public one solid fact aud you have done better than if you had reeled off columns of cheap rhetoric about low prices and high quality, and all the other well-worn stock-in-trade lingo of the old-fashioned advertiser."

The Louisville, Ky., store of the Columbia Phonograph Co., Morris Silverstein, manager, has been moved to new and sumptuous quarters at 311 Fourth avenue, where three floors are occupied. The store was formerly located in the Parr block.

A New Adjunct in the Trade

BEST in quality
MOST in quantity
LEAST in price
and a
EASY SELLER
Why?
BECAUSE it is made Exclusively for
TALKING MACHINES
Including such machines which are built with spring valves and wheels—
Music Boxes
Moving Picture Machines, &c.

PHONO - VITA

This wonderful oil, the result of careful study by an authority in matters of oil compositions, rightly bases his experience on the fact that lubricants must be of such consistency as to be congenial to the character of the machine. Now as to Talking Machines, which are built with valve springs and wheels, a particular kind of oil is required, one possessing sufficient viscosity to be lasting, but not too thin to endanger the graphite packing by penetration.

PHONO-VITA is made just right

It's for Talking Machines

PHONO-VITA is a Rust Preventative. Can also be used with profit to restore and retain the polish on the wood and enamel work. Put up in a full two-ounce bottle, encased in a carton, to be sold at 10 cents. I am selling to Jobbers only, and at a good margin.

I desire to give notice to the public that I have obtained the right to use a design of a Talking Machine as a Trade Mark for lubricating oils and greases under the New Trade Mark Law of Feb. 20, 1905. Warning is given that anybody using such a design in any manner or form on bottles or advertising matter will be prosecuted by law.

I respectfully solicit correspondence from all parts of the country with a view of obtaining exclusive agencies. Address

L. MENDEL
314 North Fifth St., Philadelphia, Pa.

WILKINS AN ENTHUSIAST

Regarding the Edison Phonograph the Merits of Which He Has Been Acquainted With for the Past Fifteen Years—Has Placed Some Orders in Europe for Sterling and White Records—Likes The World.

W. H. Wilkins, the talking machine dealer of Claremont, N. H., has favored The World with a photograph of his very handsome phonograph room and art studio at 48 Tremont Square, that city. It is attractively equipped, showing a fine line of phonographs, records and supplies. In this connection Mr. Wilkins says: "I carry only Edison machines; have been in the business about fifteen months, but have owned an Edison phonograph for over fifteen years. They were put on sale fifteen years ago last September, and I bought oue six weeks after that. I traveled with it almost continuously for three years, shipped it thousands of miles, and uever paid out but 75 cents for a pair of feed nuts, which wore out. I had arrive on April 6 the first consignment of the famous 'Sterling' records made by the Russell Hunting Record Co., of London, England, and have another invoice larger than the first due to arrive any day. Have also an order in for a sample lot of the 'White' records, also made in London. Both of these firms I got in touch with through their ad. in your indispensable publication. I am satisfied with a combination like the Edison phonograph and The Talking Machine World."

PHONOGRAPH RECORD SECURED

Of the Dead Language of Hindu Scholars Made in Ceylon—Dr. Moszkowski's Find—Weddas Who Are the Aborigines of the Island Speak the Ancient Tongue.

The talking machine is proving a great boon to those scientists who are laboring to save the fast-dying dialects of certain races throughout the world. Dr. Moszkowski, of Berlin, who is a member of the expedition which recently journeyed to Java has sent an interesting report of his study of the native Wedda or Vadda tribe on the Island of Ceylon.

The Weddas are the aborigines of the island, which was known to the Greek as Taprobane and to scholars as Serendib—a corruption of the Sanskrit Sinhaladnpa. The Weddas are probably the only people in the world who have preserved ancient Sauskrit as a spoken language. According to the great Hindu epic, the "Ramayana," the Weddas were conquered by the hero Rama and his followers, who captured the Wedda King, Rawana. The natives rallied, however, and the successors of Rama were finally annihilated. Then, in 543 B. C., came Vijaya, an Indian Prince, who was accepted by the Weddas as sovereign and established the institution of caste. To Vijaya and his descendants is due the considerable culture of the islanders first recorded by the Portuguese adventurer, Almeida, when he landed at Colombo in 1505.

With the exception of the Weddas, who are still a forest tribe, the Rodiyas, an outcast tribe, which has a language of its own, about 7,000 Europeans and 14,000 or so of European descent, nearly 70 per cent. of the population speak Sinhalese, which is an Aryan language nearly allied to Pali, a dialect and later form of Sanskrit. The remaining 30 per cent. speak Tamil, a Dravidian language used by those of Arab descent.

Dr. Moszkowski spent several weeks in the forest home of the Weddas and obtained several kinematographic records of their home life, and, what is far more important, some phonographic records of their language.

The Weddas still make their living by hunting and fishing, live in the most primitive fashion, and eschew all Occidental customs and domestic as well as agricultural utensils. The doctor became a great friend of their chief, and excited much interest by trying to pronounce the literary language of the early Hindu scholars after its silence—save among the Weddas—of twenty-two centuries.

C. L. Dailey has opened a new talking machine store in Cohoes, N. Y., handling Edison goods exclusively. Mr. Dailey was formerly agent for this line at South Valley.

THE PHONOMETER

(PATENT APPLIED FOR)

The Only Talking Machine Speed Meter

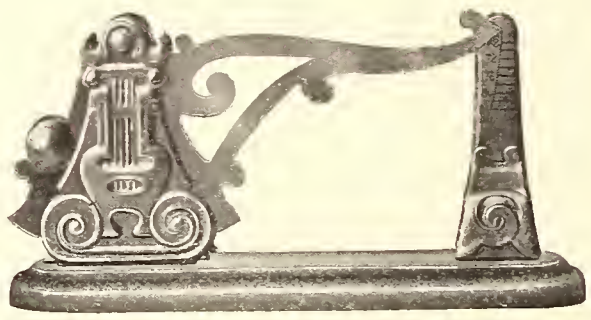
Instantaneous in Action. Permanently Effective. Absolutely Accurate.
FOR USE ON ALL DISC MACHINES

REASONS WHY ALL DISTRIBUTORS AND DEALERS SHOULD HANDLE THIS NEW AND BIG SELLING NOVELTY

I. BECAUSE it is **absolutely accurate.**

II. BECAUSE it indicates the speed of all disc machines **instantly.**

III. BECAUSE by its use each and every record can be reproduced at the correct speed, and all musical records (vocal or instrumental) **reproduced in the same musical key (or pitch)** that the artists originally sang or played the selections.



RETAIL, ONE DOLLAR.

IV. BECAUSE the **voices** of Caruso, Melba and all the other vocal artists, speaking records of celebrities, the tone qualities of solo instruments, etc., **cannot be faithfully reproduced** from records and thus bring forth the individuality of the artists or instruments, the tone quality and life-like realism required, **if the machine is not accurately and properly regulated.**

V. BECAUSE you can sell a **Phonometer** to every machine or record customer upon demonstration.

VI. BECAUSE it becomes an **absolute necessity!**

VII. BECAUSE **the Phonometer** is for sale by and receiving the highest endorsements of the following Distributors of Disc Machines:

BLACKMAN TALKING MACHINE CO., 97 Chambers St., New York.
DOUGLAS PHONOGRAPH CO., 89 Chambers St., New York.

THE TALKING MACHINE IN THE ALEUTIAN ISLANDS.

L. C. Dillman the Wealthy Capitalist Favors the World With Some Interesting Photographs of How the People of That Far Northwestern Country Enjoy the Talking Machine—Some Interesting Ethnological Deductions as to the Ancestry of the People of This Country.

(Special to The Talking Machine World.)

Chicago, Ill., June 10, 1907.

L. C. Dillman, a wealthy capitalist of Seattle, Wash., and the president of several companies conducting explorations of copper properties in Alaska and the Aleutian Islands brought to Chicago last month the decidedly interesting photographs here reproduced. The photographs were taken at Dutch Harbor in the Aleutian Islands several years ago by Lieutenant Crisp, of the United States revenue cutter, "Manning," and were presented by him to Mr. Dillman. They represent the Aleut Indians listening to an old style straight arm Victor talking machine, which formed one of the prized possessions of the ship's crew. In the first photograph the machine is playing a laughing song. Every one is enjoying it in the orthodox way with the exception of the young woman standing immediately before the horn, and who is engaged in a severe intellectual effort to figure it all out. She rejected absolutely Lieutenant Crisp's efforts to make the matter clear to her, and insisted that the music was made by the sailors in the ship in the harbor and was transmitted to the horn by means of wires. The fair (?) cynic is the daughter of the chief of the Aleuts—the fat gentleman standing at the extreme right of the picture.

The second photograph is still more interesting because of the interesting ethnogolical question it suggests. When this photo was taken the Victor was playing a Chinese piece of music which the Aleutians immediately claimed to recognize as one of their native airs. This is taken to indicate that the natives of the islands are descendants of the Chinese or Japanese, a theory that seems to be further strengthened by a scrutiny of their faces.

The absence of native attire is accounted for by the fact that the United States life-saving stations receive cast-off clothing from various societies for the benefit of the victims of wrecks and are allowed to distribute any surplus they may have to the natives.

(Copyright, 1905, L. C. Dillman.)

ALEUTIAN ISLANDERS LISTENING TO THE TALKING MACHINE. PLAYING A LAUGHING SONG.

(Copyright, 1905, L. C. Dillman.)

ALEUTIAN ISLANDERS LISTENING TO THE TALKING MACHINE.
Playing a Chinese record claimed by the Aleutians to be one of their native airs. This would indicate that the Aleuts are descendants of the Chinese or Japanese.

CELEBRATE 50TH ANNIVERSARY.

The J. F. Schmelzer & Sons' Arms Co., the prominent talking machine jobbers of Kansas City, Mo., recently celebrated their fiftieth anniversary as a firm having started business in Leavenworth, Kan., in 1857.

STEWART

You can handle banjos easily and add to your income. Talking machine men will find them big sellers.

THE BAUER CO., 726-730 Girard Avenue Philadelphia, Pa.

Up against it

The dealer who tries to fill the wants of his customers, and hasn't the help of his jobber, is up against it. His only salvation is in a new jobber whom he can count on to work with him. He must give up his old jobber, or keep on giving up his customers.

With the right kind of a jobber, it's easy for you not only to hold your present customers, but to add many new ones. Our service helps you to do it. Whatever makes money for you, makes money for us. So you see we have an object in shipping all orders the same day they are received.

It pays us to be prompt, because it pays you to be prompt. Your customers know you can quickly give them whatever they want, and you find yourself selling them more goods all the time—and buying those goods from us. That's where we come in. Promptness is our hobby and we ride it to perfection.

Try us and see. Isn't there something you need right now in the way of Victor talking-machines and records, disc cabinets, fiber cases, English needles, trumpet horns or other accessories.

Write anyway for our latest catalogue.

The Victor Distributing and Export Company

77 Chambers Street New York

ABOUT ZON-O-PHONE RECORDS

¶ If the Zon-o-phone records had not been better than those ordinarily sold they would not have advanced so rapidly in popularity.

¶ We realized that a quality record would win out and because the Zon-o-phone is made in a faultless manner is one of the reasons why it has grown steadily in trade esteem.

¶ Even a careless listener can detect the difference between Zon-o-phone Records and any other records on the market.

¶ Another point for the dealers' consideration is the fact that our monthly list of records contains the latest and the best in the musical world.

¶ If you have Zon-o-phone records in stock you can rest assured that your record business will steadily increase. It can't be otherwise.

¶ All talking machine men have found that out through a trial order of Zon-o-phone records and machines.

¶ Another point worth considering is that Zon-o-phone tapering arm instruments are big sellers. They are priced at $20.00 to $75.00 retail and have demonstrated their trade selling qualities.

THE UNIVERSAL TALKING MACHINE CO.

FACTORY AND GENERAL OFFICE:

Camp and Mulberry Streets, NEWARK, N. J.

WITH THE TRADE IN INDIANAPOLIS, IND.

The Kipp-Link Phonograph Co. to Move to New Location Where They Have 7,000 Square Feet of Floor Space—Columbia Phonograph Co. Made Handsome Display on Memorial Day When President Roosevelt Visited the City—Records Made by Cal Stewart—G. W. Craig Well Pleased With Business Outlook—Frank Lesley's Clever Publicity Scheme—Arcade People Very Busy—Amusing Story of How The Phonograph Beat Teddy.

(Special to The Talking Machine World.)

Indianapolis, Ind., June 9, 1907.

The Kipp-Link Phonograph Co., who have been in business here for one year, announce that they will move to a new location within a short time on Washington street, in the main business district of the city. The company in their new location will have about 7,000 square feet of floor space, and will have a special department devoted to the commercial phonograph. The company will make a special display of this line, as the use of the phonograph in commercial life in Indianapolis and in the entire State, for that matter, is growing rapidly.

The Kipp-Link Co. have had remarkable success since they started in business one year ago. They handle Edison and Victor machines, and devote most of their attention to the wholesale work in Edison phonographs. The company sell machines at retail, but place the stress on the wholesale department. The company hope to be in their new place between July 1 and 15. Their present location on North Illinois street, is well arranged, but the space is not sufficient.

The company have just sent out a number of circular letters advertising their "can't-be-beat" service. This letter bears the Edison jobbing business particularly, and in an interesting way comments on the vicissitudes of the first year in business, also extending appreciation to the customers for their patronage and kindnesses.

B. Feinberg, of the Western Talking Machine & Supply Co., Madison street, Chicago, was a business caller at the Kipp-Link Co.'s store recently. He is well pleased with the business in this State, and says that prospects are good.

The Columbia Phonograph Co.'s display windows were beautifully decorated in the national colors for Memorial Day, when President Roosevelt delivered an address at the unveiling of the Lawton monument before 100,000 people. The Columbia Co. here are now receiving advertising material from the main office. This advertising matter is sent out under the direction of George P. Metzger, who has started a movement in aggressive publicity. Mr. Devine, of the Columbia branch here, is well pleased with the material which he has received so far.

Mr. and Mrs. Cal Stewart, who make the original "Uncle Josh" records, were in the city recently, and while here were at the Columbia Phonograph Co.'s store and made a number of records for the patrons of the Columbia Co. Among those for whom records were made was Mrs. Hugh J. McGowan, wife of the well-known traction magnate of this city. Mrs. McGowan is one of the regular customers of the Columbia Co.

Colonel Wood, who is the architect for the new Grand Opera House, which is to be erected here this summer, is a customer of the Columbia Phonograph Co. He has a machine in his room in the Denison Hotel, and since he has been here he has been a good purchaser of records. The record which he prizes most highly is Gounod's "Ave Maria," sung by Giannia Russ.

George W. Lyle, general manager of the Columbia Phonograph Co., spent a day in Indianapolis recently. While here he received a telegram stating that the business of the company for the month just ended was the greatest in their history.

George W. Mays, who sells the Edison machine, has taken his big wagon off the road temporarily, owing to the illness of his driver and salesman. The wagon was very sucessful while it was out. The plan was to take machines from house to house in counties in the central part of the State.

G. W. Craig, who does a jobbing business all over the State and in adjoining States in Edison machines, is well pleased with the outlook for the season. His business for the last month exceeded by several hundred dollars the business of the corresponding month for last year. Mr. Craig has received unsolicited orders from points in Illinois and Ohio, including some from Cleveland and from towns in the very shadow of Chicago.

A. B. Wahl, who handles the Edison phonograph, says that business locally has been a little quiet for the last month. Wholesale business, however, has been good. Prospects out in the State seem to be good, he says.

E. E. Hill, who handles Edison machines at retail on Massachusetts avenue, says that business is better than it was at this time last year. There was a lull in March, but this has been overcome and prospects are good now, he says.

Frank Lesley, who handles Edisons and discs, started a little novel advertising at his place the other day. He put in the display windows a number of rolling pictures, illustrating the new records. The continuous performance giving the names of the new records and illustrating them, attracted quite a great deal of attention. Mr. Lesley has also had painted on all of the company's delivery wagons pictures of the Edison machine.

Five-cent theaters and the penny arcades have been having a fair business for the last month. Several big days in Indianapolis have brought patrons, but on other days the cold weather has interfered somewhat with business.

The Vaudette, managed by Gillingham & Zepp, is making some improvements. The interior of the room is being redecorated, and when completed will present a handsome appearance. They are fixing up for the summer. This place is situated on Illinois street, and has been enjoying a good business for the last month.

The National Amusement Co. have had moving pictures of the Thaw trial on exhibition for the last month, and the pictures still prove to be winners. They don't get old as rapidly as the company had expected.

Arlie Overton has been employed as a ticket taker at the Manhattan five-cent theater on West Washington street. This company have been making a hit with the series of pictures entitled "Black Beauty."

Mike Guthrie, who is starting a new five-cent theater on West Washington street, mixed up wtih the police recently, and was extensively written up in the dailies of the city. Mike went down to get the chairs for his new place, and, as the story goes, he was somewhat vexed when he was told that they were not ready. He mixed with the man in the office, and about this time the police were called. At the same time Mike received word tbat his wife had been overcome in a crowd in one of the big stores on Washington street. He told the police that he didn't have time to be arrested, that he had to go and look after his wife. The officers, however, sent a man to take care of Mrs. Guthrie, and then took Mike in charge.

"Phonograph Beats Teddy," was the rather attractive headline which was run over a "story" in one of the dailies the day after President Roosevelt was here. An old man, according to the story, was standing near the Bijou five-cent theater on Washington street, near the scene of the unveiling of the Lawton monument. The crowd was dense and he couldn't get within hearing distance of the President, though he wanted to very much. About this time the phonograph in the lobby of the Bijou started up on "Marching Through Georgia." It captivated the old man. He was a veteran of the Civil War. "That's the kind of music," he said. "I guess I just won't worry about hearin' the President. I'll stand right here and listen to that. That's the kind of music I like. I don't want any of yer highfalutin' music. And I believe I'll take one of them talking machines home with me when I go, too."

DEVINEAU SELF-SUPPORTING HORNS.

Arrangements have been completed whereby the Devineau self-supporting horns will be placed upon the market in the near future. It is understood that this company will have ample manufacturing facilities to create horns in large quantities. They propose to do business directly with the jobbers and not to arrange with any parties to handle their entire output. The horns manufactured by this company can be used on all cylinder machines.

Some very excellent recitals are being given at Warner's Music Store, Madison, Wis., and celebrated grand opera artists being heard through the medium of the Victor talking machine. The programs are gotten up in regular concert style, and admirably diversified.

NEW YORK, JUNE 15, 1907.

PRICE cutting has always had a tendency to demoralize business conditions in any industry in which the practice has been indulged. The talking machine indnstry has been free from these demoralizing effects, consequently dealers have known full well that no competitors could undersell them on the same brand of instruments. As a result of price maintenance, the talking machine industry has not only maintained a solid front, but it has advanced tremendonsly as an industry in which good bnsiness principles have prevailed. It is to be regretted that the same conditions do not exist in talking machine accessories, particularly the manufacture of horns. Price cutting and slashing have been rampant in this department for some months past, and as a resnlt it has somewhat demoralized settled trade conditions.

THE chief violators of good bnsiness principles are the itinerant horn makers, who are hardly important enough to be dignified by the term, manufacturers. Having learned the business of horn making, they manufacture a few horns and peddle them out to some jobbers at all sorts of prices. If some of them make fair day's wages they are well satisfied. This class of horns has no guarantee behind them, and presumably will not stand the wear like the horns created by reputable business houses whose products have gained a fair reputation in the trade on account of the actual merit they possess. It pays in all lines of merchandise to buy only of reputable people, and the same principle should be kept well to the forefront in the talking machine industry.

THERE is no denying the fact that general trade during the month of May was injured materially by nnseasonable weather and by crop reports which were not encouraging. These conditions caused the deferring of many pnrchases, probably talking machines among them. But this indnstry will not suffer on this account to anything like the same extent as some other branches, snch as dry goods, clothing and mannfactures of goods which are quickly ont of date on account of changing style conditions.

JUNE thus far has given encouragement to the various trades, and the warm weather has brightened up business in all lines. There is still a good deal of difficulty in getting orders executed promptly by manufactnrers in many leading lines, and even in the field of specialties, like talking machines, many mannfacturers are largely behind in their orders. There is, however, less complaint on this score than there has been for some time, and in most lines merchants who use a reasonable foresight are able to keep their stocks in excellent condition. Talking machine jobbers have made fair provision for a large business, and while trade in some sections of the country is running a trifle slow, yet on the whole the business shows a decided improvement over a year ago.

MANY new specialties are coming out which give added interest to the business, and all of these specialties in the talking machine line cost more money. The people do not hesitate to pay for high-priced talking machines. The jobbers find that they are quick sellers, and the dealers in turn are clamoring for talking machines of the higher grades, and the new specialties therefore are in great demand. The high cost of material and labor has not as yet materially affected the price of commodities in this indnstry, but the manufacturers who replenish their stock and materials are required to pay higher prices than what was paid for them. They have been working up during the past few months and, without doubt, if this condition prevails, a revision of present quotations will be necessary. There is an enormous advance in brass and all metals, and it is presumed that the advance to the retail trade must follow as a natural sequence.

COLLECTIONS have been a trifle slow during the past thirty days, but from week to week trade has moved on with wonderful steadiness and force, and the slackening tendency, all things considered, is not of noteworthy moment. The stimulating effects of Secretary Cortelyou's policy has relieved the money market, and there is a general feeling of stability, but with prices all over the world tending upward, the demand for capital is rapidly increasing, and the rate of interest is high and will remain high until bnsiness receives a check and the price level ceases to rise. The decline in security prices, and the curtailing of improvements by railroads and mannfacturing concerns may bring some relief, but the real remedy must come through an appreciable decline in the world's price level or a tremendous increase in the world's supply of metallic money. Since 1900 prices have gone np 20 per cent, and production is estimated to have increased abont 30 per cent. The consequent increase in the demands of the money market is equal to the prodnct of these two increases. No matter how much money there is in circnlation, or how fast its volume is increasing the rise in commodity prices, the demand is sure to overtake the supply.

IT is impossible to reply individually to the thonsands of complimentary letters which we have received anent The Talking Machine World and its policy of independence and fairness to the varied interests which it represents. The World has endeavored faithfully to live up to its early declaration of principles, and it is pleasing to receive from advertisers such letters as the following, which is from the Church Supply Co., 10 Barclay street, New York. The president of that company says: "We take pleasure in advising you that the results obtained from our advertisements in yonr paper excel those of any other trade paper we have ever used." An explanation of this is easy when we turn to the subscription end of the business and note how rapidly it is expanding, and what is more, being closely read by dealers in every land. Here is a letter taken at random, written by W. S. Branch, Orlando, Fla., who says: "I have spent an hour this morning reading The World. It was time well spent. I answered seven ads., and ordered goods from two of them. Many a jonrnal seems to have no excnse for its existence; yours, however, fills a long felt want." With thonsands of subscribers who read The World ciosely, it is small wonder indeed that our advertisers are reaping such splendid retnrns.

MANY a valuable half hour is stolen from the busy man by the existence of a cnstomer soliciting advertisements for the annual ball or picnic of the Fire Fighters' Amalgamated Union, who are preparing a grand souvenir in connection therewith and offering pages at ridicnlously low rates. It is a pretty hard proposition to turn down these varions schemes, many of which amount to thinly disguised blackmail; but it is better to say no than yes, becanse when you go into one the principle is established and you are asked why this distinction? and without general patronage you beget the enmity of the entire body when reported. There is only one way out of such a proposition, and that is to firmly and clearly declare yonr position to be based on a fixed rule—that is, never appear in spasmodic pnblications. Tell Mr. Jones, or Mr. Smith, or whoever the solicitor is, that you are not discriminating against his church, or society, or club, but that while you would like to appear in his valuable special yon dare not open the way for others whom you mnst refuse and thns offend. There are many advertising schemes which should be religiously avoided. Every bnsiness man can spend his money in regular medinms, or in special forms of advertising which is issued from his own business establishment, and with his own stamp thereon. This itinerant advertising is not the most profitable in the world, and it should be carefully avoided. Systematic and regnlar publicity in recognized channels is the kind that will bring the largest returns.

PRESIDENT ELIOT of Harvard said recently: "Everybody knows some form of activity which gives him satisfaction. Perhaps it is riding a horse, or rowing a boat, or tramping all day through woods or along beaches with a gun on the shoulder, or climbing a mountain, or wrestling with the handles of the plunging, staggering plow, or tugging at a boat's tiller when the breeze is fresh, or getting in hay before the shower. There is real pleasure and exhilaration in bodily exertion, particularly with companionship and competition. There is pleasnre in mere strnggle, so it be not hopeless, and in overcoming resistance, obstacles and hardships. When to the pleasnre of exertion is added the satisfaction of producing a new value, and the further satisfaction of earning a livelihood through that new valne, we have the common pleasurable conditions of productive labor."

FEELING OF ESPRIT-DE-CORPS

Among the Sales Force in the Talking Machine Business Always Proves Helpful—Pays to Get the Salespeople Together and Explain the Policies and Plans of the Men at the Head of the Business.

One of the most effective methods adopted by modern storekeepers for the education and encouragement of the help and the establishment of a feeling of esprit-de-corps is the practice of calling the salespeople together at regular intervals and having them addressed by some one in authority, whether member of firm, superintendent or assistant superintendent. These "talks" deal with all the many details of the clerk's relation to the store, the means by which he or she can become more valuable and the kind of work by which advancement can be gained.

There are a great many salespeople who mean well enough, but don't exactly know how and what to do for their own advancement. So a number of firms have decided to have little friendly talks with them and explain just what is desired and expected.

To start with, it must be understood that there are just three classes of people in every store The first will listen to and profit by advice. The second will listen and think that they will profit by it, but keep putting off and putting off until too late. The third will say, "Bosh! We know it all and will not listen." The first will advance, the second will stay still and the third will lose their positions.

Take ten new people and put them behind the same counter. In ten weeks one will be looked up to by the other nine. Why? Simply because that one is the worker, the interested party—the first one in in the morning and the last one out at night.

You never see such a clerk turn, in answer to a customer's inquiry, and ask, "Do we keep the so and so record?" He knows his stock, and keeps it in condition.

He knows more than his stock. He does not send a customer on a "goose chase" all over town to find an article that is right at his hand. He keeps an eye open so that dishonest people cannot get away with goods. He is polite to customers and can keep four or five interested at a time, until he can wait upon them.

He learns his customers' names and calls them by them. Nothing pleases a person more than to be remembered and to have names remembered also.

The delivery department will have no trouble in making out his addresses. The charge clerks will not make wrong charges because they could not decipher his writing. You will never find him neglecting work to watch the hands go around the clock.

If a customer asks to see some machines or records, don't say, "What price, madam?" but show her three prices and then find out the price she is interested in. It would embarrass some people that were proud but in moderate circumstances to answer a question of the kind. Always aim to put your customer at ease and the hard part of the work is done. Never say, "Here comes Mrs. Jones; she is horrid and awful hard to wait upon. Now, Mrs. Smith will come right in and buy in half the time. A cash boy could wait on Mrs. S., but it takes a salesman to wait upon Mrs. Jones."

There is nothing as contagious as interest. If you are interested everybody around you becomes interested and in a very short time you move up a rung, until you hold a paying and prosperous position.

MARRIED BY TALKING MACHINE.

In the papers almost every day we find accounts of talking machines being found in some new and novel role. Especially in church work has this proven true, the "talkers" delivering sermons, reproducing funeral services and taking the place of a choir. The latest is reported by the Nasche Vremya, a European publication. It seems that M. Saratoff and the well-known actress, Mlle. Sabalok, quarreled with the priest, and as a consequence, after consulting a magistrate as to the legality of the proceeding, got married by talking machine. The service was duly recited by a fully qualified priest of Kharkoff into the machine, which was then sent by stage coach to Dubovo, where it arrived just a few minutes before the hour fixed for the ceremony. The service commenced with the rendering of a wedding hymn by the choir, and the talking machine, which had been placed on a pedestal at the altar, then asked the customary questions, to which the usual answers were given, and the happy pair left the church man and wife, married by the talking machine.

NEW IDEA IN SOUND-PROOF ROOMS.

Attendant Can Change Records Without Entering Rooms—A San Francisco Idea Worth Adopting in Eastern Centers.

An excellent system in connection with talking machine demonstrating has been put in effect by Byron Mauzy and Sherman, Clay & Co., of San Francisco. Both have had constructed glass sound-proof booths similar to those adopted by many jobbers and dealers in the East, but the distinctive feature is a window in each booth through which an attendant can change the records and look after the machine without interfering in any way with the customer or salesman. Mr. Mauzy, for instance, has a boy specially detailed to patrol the passageway between the booths and look out for the machines. According to all reports the plan would be a good one to adopt by many dealers, who have a large trade and who have sound-proof booths already installed.

ANTI-ARCADE MOVEMENT IN BERLIN.

A despatch from Berlin states that the police of that city are emulating the example of the police of New York and trying to make life unpleasant for the exhibitors of moving pictures. The argument over there is that the physicians state that the moving pictures are injurious to the eyes and that the quivering movements of the films are most harmful. It is estimated that there are over 200 kinematograph or moving picture theatres in Berlin and the suburbs.

LARGEST PRIVATE COLLECTION

Of Records in This Country, Perhaps, Is Owned by W. A. Hall of Cincinnati.

W. A. Hall, general manager of a large cooperage company in Cincinnati, O., has the largest private collection of talking machine records in that city, if not in the whole country. Mr. Hall has one of the most expensive styles of Victor talking machines, to which he has given an entire room in his residence and he spends the greater part of his leisure listening to his favorite selections. Almost the entire lot of records were purchased from the Rudolph Wurlitzer Co., and it is said that the size of some of Mr. Hall's orders would put to shame many regular dealers. The collection is of comparatively recent origin, and constant additions are rapidly increasing its size and likewise the fame of its owner.

HOW TO PHOTOGRAPH WINDOWS.

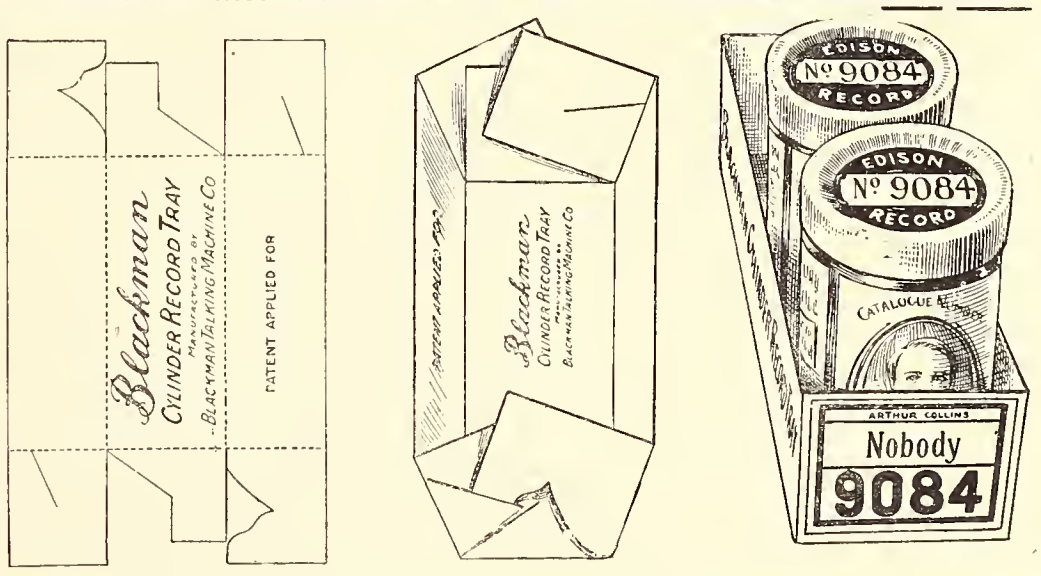
Excellent results in the way of photographs of windows are obtained by taking the photograph at night, the light employed being the incandescent electric lamps inside the window. An exposure of from 15 to 25 minutes is necessary. No interference is caused with the movement of passers-by, as people in motion do not affect the picture. Care should be taken, however, that no one stands between the window and the camera. The passers-by must be kept moving. They will in most cases move along when requested. If fair words do not do the trick—well, the dealer and photographer together ought to be able to use arguments sufficiently forcible.

This mode of photographing not only produces clear, sharp outlines, but avoids the reflections which ruin many a window photograph.

THE BLACKMAN CYLINDER RECORD TRAY

(PATENT APPLIED FOR)

A RECORD TRAY WITH RECORD LABEL FOR LESS THAN ONE CENT



We ship them flat and they can be FOLDED into a STRONG TRAY in a few seconds, as shown above. This tray, with the RAPKE Record LABEL, makes a HANDSOME looking stock and a SYSTEM that you can't beat. Full particulars on request.

TRADE HAPPENINGS IN ENGLAND.

Business Outlook Good—Melba's New Role Warburton Complimented—Manager Dorian Returns—British Sonogram Co.'s New Records—Edison Bell Competition for Names—Interesting Contributions to the Discussion on the Price Maintenance Crusade—Important Suggestions Put Forth by H. M. Lemoine of the National Phonograph Co. and H. R. Howard, Sales Manager of the Imperial Records—Rauth's New Line of Horns—The Patents Bill—Pathe Freres' New Records—President Gilmore a Visitor—Some National Phonograph Charges Probable—An Important Court Ruling—Melba Autographs for Charity—Other Items of Interest.

World Office, 69 Basinghall Street,
London, E. C., June 5, 1907.

The home trade continues quiet—not so much in the provinces as in London—but it is gratifying to observe the many little preparations which is evidence of an early start for the coming season. There is hardly one firm of importance who, if not already instituted, has in view some improvements and alterations, either in the goods or facilities of quicker output. All of which is a sure indication of the now generally recoguized stability of the English talking machine trade. Another satisfactory feature is the iucreased export business of this year as against last. British firms find it pays to cultivate colonial and foreign business, and in consequence they are all at the present time expending considerable energy in this direction. Profits are never so large as we would like them to be, but there are hopes for the future if all talking machine men labor for tariff reform—our colonial preference should then result in at least a 10 per cent. betterment. Still, foreign business is worth seeking now; it can be made to pay well, only discrimination must be exercised in the choice of goods offered. The Eastern countries offer splendid opportunities just now, where dealers are doing a large business in talking machines and records, owing to the fact that other musical instruments—such as pianos and organs—soon go to pieces in the hot air and humid atmosphere generally so prevalent in those far-away lands.

Mme. Melba Laid Corner-stone.

Mme. Melba appeared at a special matinee May 13 before au immeuse audieuce assembled—not at Covent Gardeu—but in the green fields close by the Great Western Railway at Hayes, Middlesex. The occasion was the laying by the great singer of the corner-stone of the new gramophoue factory, which, with adjoining property, will cover eleven acres, and employ more than 500 work people. If Mme. Melba's little speech had been set to music she would gladly have sang it, but in the absence of a "score," Mr. Taverner, agent-general for Victoria, returned thanks on her behalf to Mr. Trevor Williams, chairman of the Gramophone & Typewriter Co., for his address of welcome. As a British singer, Mr. Taverner said, Mme. Melba was particularly interested in any undertaking that added to the list of British iudustries, and on that account she was delighted to perform the little ceremony. Hearty cheers were raised for the new undertaking, and the great singer, as she proceeded to the platform and well and truly laid the stone, after first placing underneath "for luck" coins of the realm and four gramophone records of her own voice. The trowel used was of solid gold, which afterward was presented to Mme. Melba, who stated in conversation that from the beginning the gramophone always held the greatest possible interest for her. "And I am really proud of the fact that the company have frequently taken up suggestions I have put forward in regard to the making of gramophone records. One thing I am even more proud of, and that is the record in which I accompanied my own voice on the piano in the 'Matinata.'" The gramophone industry is making extraordinary strides in England and the company is in the most prosperous condition. The Queen has recently given her warrant to the company, and some wonderful records are now in circulatiou.

An Irishman Who Has Won His Spurs.

The fact that a native of Ireland has recently been elected vice-president of the American Graphophone Co., has pleased a good many admirers of the Emerald Isle on this side of "the big pond." The gentleman so honored is Frederick J. Warburton. Born in Parsonstown, Kings County, he was educated at the school in that town, of which his father was "master," and afterward finished off at Ennis College, County Clare. His business career began in America. He became interested in typesetting and typecasting machinery in the early days of that industry, and was among the supporters of Mergenthaler throughout his linotype inventions. Mr. Warburtou became treasurer of the existing Linotype Co. in 1889, and has continued in that capacity with the several companies which have succeeded the original one. He became a shareholder of the American Graphophone Co. early in its history, and has always been an enthusiast in regard to the development and improvement of sound-recording and reproducing instruments. Mr. Warburton is a director of a number of other business organizations, among them the Columbia Phonograph Co.

Some Changes in the 'Phono Rialto.

City Road—otherwise Phonoland High Street—will see some probable changes in the near future. The British Sonogram Co. will move there from Christopher street; the Beka Record Co., from Red Cross street; the General Phonograph Co., from Euston Buildings, and of course, the Russell Hunting Co., in their new palatial quarters, which will also house the Odeon branch from Hamsell street.

Frank Dorian Back from the States.

Frank Dorian, European general manager of the Columbia Phonograph Co., who has been in the States on his annual visit, has just returned. He will doubtless bring news of the new models of graphophones his company are expecting to introduce to the British trade.

"Sovereign" Double Sided Unbreakable Disc.

The British Sonogram Co. announced in an attractive circular their first list of 80 records (160 titles), which contains a varied selection of standard songs and descriptive pieces. Among the artists are such well-known names as Mr. Peter Dawson, Leonard Russell, Ian Colquhoun, Pete Hampton, Alf. Gordon, Mme. Paula, W. S. Webber, H. Williams, S. Bragell, etc., and band selections by the Scots Guards, Garde Republicaine, British Imperial, Irish Guards, and others. There are also Xylophone, clarionet, cornet, piano and piccolo solos. The beginning of June will see the issue of a supplementary list, which will contain all the latest selections by the best talent obtainable. The retail price is 2 shillings for a ten-inch, unbreakable, double-sided record. The Sonogram standard disc machine retails at £5, its specifications are as per announcement elsewhere. The business policy of the company is to supply certain shareholders (privileged or ten-share dealers) direct or through factors, on special

terms. All dealers who are not privileged shareholders must get their supplies through factors.

The excellence of the goods put out by the British Sonogram Co. will undoubtedly ensure a steady demand, which all wise dealers will provide for. Orders have already been received for over one million and a half records. The company's adv. elsewhere in these columns will give all particulars.

Famous Violinist Heard.

Mr. Scott Skinner, the Strathspey King of the violin, whose recorded work is alone obtainable on "Odeon" and "Sterling" records, was a prominent feature of the Scottish concert at the Queen's Hall, given by the Caelic Society in honor of the Colonial Premiers.

Dictaphone Grows in Popularity.

Mr. Pike, who is in charge of the Columbia's dictaphone department, is pushing the office instrument vigorously among city business men. A firm of insurance brokers in Cornhill—Messrs. Mutzenbecher, Stahl & Sonkson—are among the latest to install these instruments. The use of them made by one of the members of the firm illustrates one of the peculiar advantages of this new method of saving labor and expense in correspondence. He has had an instrument installed in his home in the country, so that if there should be a press of work on certain days, he is not compelled to remain in the city to finish, but dictates his letters or other matter in the quiet and comfort of his own home. The cylinders are taken to the office the following morning where they are transcribed, and the letters are then posted.

Price of "White" Phono Disc Record.

The General Phonograph Co. report that the price of the "White" phono disc record is fixed at 2 shillings and 6 pence. The first list comprising about 25 titles, will be ready in June. "We are receiving good orders from abroad," said Mr. White; "but the home trade—more especially in London needs stimulating."

A Popular Member of the Trade.

Many will recognize the subject of our illustration—W. H. Glendinning (Gilbert Kimpton & Co.), whose business energy is monopolized by the Imperial records, the ever-increasing demand

W. H. GLENDINNING.

for which is sufficient tribute of his careful supervision during the few months these records have been in circulation. His recent trip to the Leeds & Catlin corporation was productive of good results. Arrangements for floating a big company this side is nearing completion, and at an early date recording rooms will be opened up in London, after which a vigorous and systematic campaign is contemplated in support of dealers handling the "Imperial" record.

Here Is a Cheery Report.

"Our shipping business shows a continual increase, and we were one of the first to capture a fair proportion of the shipping trade," said Mr. Nottingham, of the American Talking Machine Co. "As a good export line, and in preparation for the home season, we are taking up a series of nine specially constructed disc machines, varying, of course, in price, but not in quality. They are of the highest grade type, with tone arms, good class motors—strength according to price; latest designs in flower horns, decorated and plain polished cases in oak or mahogany, and the prices, although not yet fixed will be a revelation. We shall construct a special line of cabinets to harmonize with the style and case of each machine."

Some Magnificent Selections.

The British Zonophone June issues include some magnificent selections of a unique character.

Firms at the Ironmongery Exhibition.

The Ironmongery Exhibition will be held July 9 to 19th, at the Agricultural Hall, Islington. Only two talking machine firms are allowed to exhibit, and the British Sonogram Co. inform me they are one of them. Mr. Mellerio says that he will be pleased to supply complimentary tickets to dealers upon request.

German Disc Firm Open Local Recording Rooms

Two German disc firms are opening London recording rooms, notably for the "Homophon" and the "Lyrophone" records.

New Machines for Next Season.

does not turn with the motor and machines can be wound whilst record is being played.

Diaphragm accounted on eccentric bar, cannot be dropped suddenly and injure record or diaphragm.

Noiseless mounted on pat. Compressed Rubber Cushions.

Patented in England and America. Patents dated 1906 and 1907. One machine is as good as another. They are in two sizes. The "Elf" and "Imp", having the same upper works and slightly different cabinets. The "Era" and "Don" are in external appearance the same. All the machines vary in the motors, which differ only in the number of coils and the necessary alteration in the mechanism to run the specified number of records.

The above illustration shows the motor for the ERA. The external difference would show only that the ELF has ONE coil—IMP, TWO—ERA, THREE and DON, FIVE.

THESE PHONOGRAPHS are undoubtedly the simplest, most durable and best in the market. The Belt has only the Mandrel to turn. The Diaphragm and Trumpet are carried direct by the motor. So the reproductions are perfectly steady and every one will do all we claim for it—and more.

Good profits. **Send for our trade terms, also for the list of our celebrated Edison Bell Records to**

FROM OUR LONDON HEADQUARTERS—(Continued).

reserve, that it is on the cards, the National Phonograph Co. will probably open up a London factory within the near future.

Hawkins Files Petition in Bankruptcy.

F. W. Hawkins, trading as the Phonograph Exchange Co., of Norwich, Ipswich and London, has filed his petition in bankruptcy. A statement of affairs shows unsecured liabilities amounting to £615 10s. 8d., and assets, after deducting £14 6s. 11d. for preferential claims, estimated to realize £39 14s. 7d., or a deficiency of £575 16s. 1d. The debtor started business in 1903, with a capital of £40, as a talking machine dealer and manufacturer of the "Star" record. In March, 1906, a Mr. Farrish was taken into partnership on an introduction of £300, but proving unsuccesful, the partnership was dissolved after a few months. Their debtor resorted to money lenders to meet the pressing claim of his creditors, and eventually was forced to file his petition. No resolutions being passed, the estate was left in the official receiver's bands to be dealt with in the usual way.

Edison Bell Competition a Success.

The Edison-Bell competition for names best suited to their four new phonographs resulted in about 4,000 suggestions being received, from which the names "Elf," "Imp," "Era" and "Don" were selected. The company offered 76 prizes, which was later very generously increased to no less than 90, much to the satisfaction of all. One competitor from New Jersey claims as a "square deal" that he should have "grace" for time, the judges thought so, too, and admitted his coupon to consideration. The time allowed unfortunately excluded colonials from competing. In the following Manager Hough hastens to meet those persons—charitably disposed, of course—who find a difficulty in chaining down their opinions. Here it is:

The Names—Elf, Imp, Era, and Don.

"Yes! yes! I know all about it; several friendly critics and quidnuncs have already designated the new names as 'Rotten' (very rude), and it may save a lot of heart burning desire to rush to the post, to acknowledge that I think perhaps they are right. But, after all, any article, however inferior, may have a high sounding name given to it. The name makes the article no better, but it frequently helps goods of inferior foreign manufacture to wheedle their way into British confidence. These names, short, crisp and imaginative, may stick on the mind and memory quicker than superlatives which are so commonly used—and—he who says they are 'rotten' is already advertised—our object is thus effected."

These four new phonographs are fully described in our advertising columns, and from an inspection it is clear they embody many new ideas, and improvements generally that will ensure for them a heavy demand. Already large orders have been received and their reception by the trade, said Mr. Hough, has been a source of much gratification to us.

Selling Records by Telephone.

The custom of shopping by telephone is not confined to America. Some of our large stores, notably Whiteley's, Army and Navy, Harrod's, Maple's, Gamages, and others, make a special feature of ringing-up and advising their customers of new goods, and book their daily orders at the same time. Although the custom of selling "records" by telephone is not general, yet in some establishments it is not uncommon, and the future promises to see a great advancement in business propulsion along these lines. There are many dealers who would find it profitable to act upon this, more especially in the case of a customer who lives a mile or so away—it's just one of those little attentions that is appreciated, Mr. Dealer—and it pays!

How Prisons Are Made Attractive.

One of the latest efforts in the direction of amusing prisoners is to give them humorous, scientific and historical entertainment lectures illustrated by limelight views, with music by the gramophone. It is claimed that this is also the most hopeful method of reformation—stoney-hearted devils moved by the soft strains, say, of that beautiful refrain, "Live Anyhow Until I die." Can you imagine it and still remain away?

The Showroom as an Aid to Business.

The American Talking Machine Co. have under consideration a proposal to increase their showroom, and it came about in this way: "Until we came to Tabernacle street," said Mr. Nottingham, "I never fully realized what the commercial value of a nice, clean show of all machines, etc., meant to this business. We started by just exhibiting representative models of the best machines, and it proved so popular that the idea had to be extended so that space had to be found to include practically everything in relation to talking machines and records. To make such a show effective we shall need more space. Our present showroom is not large enough to carry all without overcrowding, and it will be necessary to expand in order that a customer can inspect and order under the best possible conditions, a clean and comfortable showroom is undoubtedly a necessity to every business."

Selections by Victorien Sardou.

The issue of a supplementary list of Fonotipia records by Messrs. Sterling & Hunting is always a noteworthy event, and when, as in the present case, it brings in its train some great and rare treat, there is an especial reason for congratulation. The great French dramatist, Victorien Sardou, is introduced to this country on this list. He is represented by three single-sided records of extracts from his own works. As no man can understand the true interpretation of a work better than the author, it will be seen that Sardou's records possess a value all their own. Indeed, they constitute a precious legacy for all posterity. M. Sardou is a self-confessed admirer of Fonotipia records, and expressed great delight, upon his introduction to them, at hearing a record by Bonci. Some fine selections by the Royal Italian Marine Band are also included in this list.

Price-Maintenance Crusade.

The correspondence under this heading in our last few issues has evoked general approbation from the trade, and inasmuch as it has awakened strong opinions from both manufacturers and factors, it is only to be trusted that some practical results will follow, and combined support given to any active movement in the suppression of what seems to be universally recognized as an "evil." The many views expressed in these columns have mostly been in favor of putting a stop to price cutting, but as there are two sides to every question, I shall in all probability present next month opinions from the dealer's point of view. Some very pertinent expressions are as follows:

H. R. Howard Advocates Central Exchange.

H. R. Howard, sales manager Imperial Records (Gilbert, Kempton & Co.), writes The Talking Machine World as follows: "I note with pleasure you are calling attention through the columns of your valuable paper to the pernicious practice of cutting the fixed retail prices of records. To every one interested in the talking machine business, it is apparent that price maintenance is the essence of a well organized concern, and is absolutely necessary to keep up that spirit of friendliness between manufacturer and dealer, and for this reason alone should be rigidly enforced. Few dealers of importance care to cut the price, and, as a rule, it is only the undesirable shopkeeper who wishes to take advantage of his more honorable competitors and stoops to this method of drawing customers to his shop.

"In my opinion, it would be to the advantage of all manufacturers if a central exchange or some such similar institution, could be established, so that a shopkeeper who was found cutting the price of any recognized, standard record, would at once have his supply stopped, not only by the affected house, but by all others. My firm take most stringent steps to prevent Imperial records being undersold, and I am glad to say that we

receive the loyal support of our dealers, almost without exception.

"When a dealer is satisfied that there is little or no chance of the particular line or lines of records he handles being cut up in regard to prices, he gives the manufacturer his full support, and the confidence, instilled by a rigorous campaign against the unscrupulous methods practiced by the 'unpopular minority' is at ouce healthy and invigorating to the talking machine industry generally."

H. M. Lemoine Says Small Dealer is to Blame.

H. M. Lemoine, assistant manager of the National Phonograph Co., also writes as follows: "I have read with interest the expressions of opinion by gentlemen well known in the talking machine business in your recent issue on this subject. While I do not take the least exception to anything that has been said regarding the importance of price maintenance, and the various suggestions as to the suppression of what is undoubtedly a serious menace to the trade, I cannot help feeliug that the most effective way of dealing with the question has not been touched upon in the opinions you have published.

"Granted that the maintenance of prices is beneficial to trade, and that strong legal action is necessary to suppress price cutting where it exists, I am of opinion that the best way to combat this evil is to prevent the goods, on which it is sought to maiutain prices, getting into the hands of persons who have neither the qualifications nor morals to eutitle them to dealers' privileges.

"So far as my own experience goes I have hardly ever found a firm of standing, who, having entered into a price maintenance agreement, have shown any desire or inclination to violate its conditions. It is the little man, and generally the uuqualified man, who has no facilities for handliug and displaying talking machines and records, and who is probably not entitled to the credit he obtains from his factor, who is responsible for the price cutting. In most cases he has nothing to lose, even though legal action is takeu and judgment goes against him. The goods in his possession are often uot paid for, and his resources are practically nil.

"I believe that price cutting can only be entirely eliminated by the continued and increasing carefulness of those who actually supply the retailer. It is almost an impossibility for manufacturers or those who are not dealing direct with shopkeepers, to put au end to it, however elaborate or expensive their protective schemes may be. The National Phonograph Co. Ltd., thanks to the loyalty aud co-operation of their factors, receive very few complaints of price cutting. Every signatory of an Edison agreement is visited by a representative of the company. Yet in spite of all ordinary care on the part of our factors our representatives often find, among those on whom they call, many who are wholly without claim to trade terms. In almost every case price cutting is traceable to this class of dealer.

"Sometimes a plausible tale and a fictitious trade card will achieve the desired object, or a letter-head and order form of apparent respectability may disarm the suspicions of the recipient and obtain for the sender a trade quotation. Goods obtained under such circumstances are generally fouud offered for sale from a private house where the expenses of trading are non-existent, and the purchaser, recognizing this fact, is ready to sell at lesser prices than those quoted by larger firms in his vicinity, whose expenses are, of course, much higher than his own, or it may be that, failing to find an immediate market, and feeling safe in his obscurity, he sells the goods at a small profit to some dealer who thus obtains without restriction the articles which, if procured through legitimate channels, it would have been necessary for him to sign an agreement to obtain."

The Discodeon as a Seller.

The "Discodeon," we are iuformed by the Odeon Co., continues to advauce in popularity, and the trade speaks very highly of its selling possibilities. With the summer weather upon us there is every need for an instrument that is strong enough for use in the open, and yet sufficiently elegant to adorn a drawing room. The "Discodeon" is claimed to be essentially the instrument to fulfil these requirements.

An Invitation Worth Accepting.

If there are any dealers who are not receiving a copy of the "Sterling Record," that clever little house organ of the Sterling and Odeon companies, they are iuvited to send a post card to that effect to the Russell Huuting Co., 81 City road, E. C. Even those dealers who do not handle those records are cordially invited to apply, for the little magazine treats of matters interesting to all.

Words Fraught With Meaning

TO YOU

Our catalogue is not the most expensive, but it is the most COMPREHENSIVE, and therefore the one of most use to you.

It contains illustrations and full particulars of every machine, record and accessory of merit now on the British market.

We buy in enormous quantities, therefore you can be sure of having the best prices.

Records by Violinist Kubelik.

The appearance after two years' abseuce of the "magician of the violin," Kubelik, at the Queen's Hall on May 29, gives point to the announcement of the publication of a new double-sided Fonotipia record by this artist. All admirers of Kubelik will appreciate this item of news. By the way, there is a Fonotipia record by Kubelik of "God Save the King" in the 13¾-inch size (16 shillings) that deserves to be better known.

Russell Hunting Co.'s Good Report.

The following makes good reading, and is in direct opposition to the general feeling of pessimism which prevails in a large circle of the trade; "A good advance in the volume of business has been shown each month since the inception of this company, and while February was the slowest month this last season, April sales altogether show an increase of more than double the same time of last year"—Vide report from the Russell Hunting Record Co.

The "Catch of the Season."

is the title giveu to the latest style flower horn, with elbow, put on the market by Mr. Rauth. This horu is shaded in three colors, with gold lines, is suitable for all tone arm machines, and is also made for phonographs. A beautifully finished Puck reproducer is in course of manufacture by Mr. Rauth, who will be pleased to forward particulars of this and other cheap liues upon request.

Recent Gramophone Records.

First upon the latest list of gramophone records comes Mme. Melba, who, with characteristic purity of tone and delicacy, renders the lovely "Aubade" from "Le Roi d'Ys." Signor Caruso is represented by the famous sobbing scene from "Pagliacci," a passage full of the most poignant emotion. Then come records by Mme. Emma Eames, Signora Celestina Boninsigna, Signor Battistini and Titta Ruffo, and Mme. Donalda, the celebrated Canadian prima donna. A complete set of "Elijah" records, by well-known artists, is issued at an inclusive price. There are also many other popular vocal and orchestral pieces in this list, notably "Gilt-Edged Bertie," sung by Mr. Harry Lauder, an amusing recitation by Mr. G. P. Huntley, and a characteristic "Russian Kossack,' by the Victor orchestra.

Mme. Melba Recovers from Her Cold.

Mme. Melba, ou arrival at Cherbourg from her recent American trip, caught a somewhat severe cold, from which she was unable to free herself until, on the advice of her doctor, she very reluctantly canceled all engagements, to recuperate for a few days at Hindhead. Happily the great prima donna is now quite herself again.

Preference vs. the Open Door!

When the Colonial Premiers visited Manchester recently the procession passed through Market street and in front of the Columbia Phonograph Co.'s shop there. The manager, Mr. Crossman, had the shop front tastefully decorated with flags, and from the open doorway used a sound-magnifying "Premier" graphophone to play various selections to the crowds before the procession came along. As the procession passed the premises, he put on the record, "God Save the King." Considerable interest was taken in the incident by the distinguished visitors, many of them saluting the national anthem.

Distance a Voice Could be Heard.

"An inquiry was recently made in London as to the greatest distance at which a man's voice could be heard, leaving, of course, the telephone out of consideration. The reply was most interesting, and was as follows: Eighteen miles is the longest distance on record at which a man's voice has been heard. This occurred in the Grand Canyon of the Colorado, where one man shouting the uame 'Bob' at one end his voice was plainly heard at the other end, which is eighteen miles away. Lieutenant Foster, on Peary's third Arctic expedition, found that he could converse with a man across the harbor of Port Bowen, a distance of 6,696 feet, or about one mile and a quarter; and Sir John Franklin said that he conversed with ease at a distance of more than a mile. Dr. Young records that at Gibraltar the human voice has been heard at a distance of ten miles.

"Sound has remarkable force in water. Colladon, by experiments made in the Lake of Geneva, estimated that a bell submerged in the sea might be heard a distance of more than sixty miles. Franklin says that he heard the striking together of two stones in the water half a mile away. Over water or a surface of ice sound is propagated with great clearness and strength. Dr. Hutton relates that on a quiet part of the Thames near Chelsea he could hear a person read distinctly at the distance of 140 feet, while on the land the same could only be heard 76 feet. Professor Tyndall, when on Mont Blanc, found the report of a pistol shot no louder than the pop of a champagne bottle. Persons in a balloon can hear voices from the earth a long time after they themselves are inaudible to people below."

Many Good Numbers Listed.

The Favorite Record Co.'s last supplementary list includes among magnificent violin, piano and clarionet solos, while there is a goodly number of songs in German and operatic selections. Mr. Vischer, the London manager, reports that Mr. A. M. Newman, the founder of the Favorite Co., Hanover, has dissolved his connection with the firm, and although his many friends will be sorry to hear of this, it is not unlikely that we shall again welcome Mr. Newman in another sphere not outside the talking machine industry.

Saint-Saens Compliments Mme. Destinn.

The celebrated composer, Saint-Saens, pays a delightful testimony to Mme. Emmy Destinn, who has been starring in the name-part of "Salome" in Paris, and who is now at Covent Garden. Saint-Saens said: "Miss Destinn is an admirable Salome, whose success is certain." And so it

proved. Mme. Destinn is, of course, the same artist who has made such magnificent "Odeon" records.

Barnett Samuel's Extensive Line.

As one of the largest factors in England, Messrs. Barnett Samuel & Sons, of Worship street, London, are in the position to supply the trade in any country with practically everything in the musical merchandise and talking machine goods. They handle extensive lines in records, machines, flower and other style horns, and accessories, all at moderate prices. Their catalog covers illustration and complete details of talking machine and other goods of interest, and on receipt of trade evidence the company will gladly mail a copy free to all applicants.

An Improved Edison "Gem."

An improved Edison "Gem" is shortly to be put on the market. The exact improvements are not yet ready for publicity, but particulars will be announced in the near future.

Decision of Interest to Employers.

A matter of interest to employers was decided in the courts awhile back, when Cook's Athletic Co., Ltd., of Beech street, sued Mr. S. Goodrich, phono dealer, of Bolton, for 8s. 9d., goods supplied. Defendant had paid the plaintiff's traveler. Plaintiff's solicitor said the traveler had no authority to accept the money. They were fighting the case on principle. The judge: As a rule, people pay travelers at their own risk; but this case is not quite an ordinary one, because the traveler agreed that the money was to be paid "on journey," and that was done. The traveler had power to make contracts. For their own protection the plaintiffs should state on their invoices that all payments must be made at the London office. Judgment was entered for the defendant, with costs.

An Interesting Number.

The Edison Phonograph Monthly for June contains some very interesting items, principally one on the "follow-up" system, which gives some admirable pointers to retail shopkeepers who desire to back things up a bit during the summer months.

Melba Autographs for Charity.

Mme. Melba has announced that owing to the numerous requests for her autograph she has decided to regulate the demand in the interests of charity, and in future her autograph will only be forwarded when the application is accompanied by half a crown. The proceeds will be handed over to a charitable institution for the poor. Such quantities of letters are sent that Mme. Melba finds it impossible to cope even with her own private correspondence.

The Patents Bill.

"Patent Law' was the subject discussed at the May day dinner of the Imperial Industries Club, held at the Ritz Hotel. The discussion centered round Mr. Lloyd-George's patents bill, upon the conduct of which through the Commons Sir George Hayter Chubb, who presided, complimented the president of the Board of Trade. Sir Joseph Lawrence warmly commended the bill, as did also Mr. J. M. Astbury, M. P., Sir John Bamford Slack, and others. The principles of the bill were hotly contested by Mr. A. J. Walter, K. C., who declared compulsory working to be perfect in theory, but in practice utterly unworkable.

The Corrupt Practices Bill.

All ye who in the habit are
Of tipping right and left,
Beware, lest of your liberty
You sometimes be bereft;
No golden coin will needful be
To land you in a prison;
"Threepence" may be as sure as when
One "takes what isn't his'n."

Pathe Freres Phonograph-Cut Disc Record.

Messrs. Pathé Fréres strongly advertise their phonograph-cut disc record, which continues as popular as ever. Two new records by Mme. Albani are announced on the 11-inch disc. They are Handel's "Largo" and "L'ete."

Wm. E. Gilmore a Visitor.

William E. Gilmore, president of the National Phonograph Co., arrived here on the "Baltic" May 18. He intends making an extensive visit to all the European branches of the company, and will not return to America until toward the end of July. There are some probable changes in view, notably the return of Mr. Schermerhorn to Orange, N. J., and the transference of Thomas Graf, manager of the Berlin branch, to London, where he will take the reins under the title of managing director. We would wish Mr. Gilmore abundance of fine weather on his voyages, and trust that he will not on his return again experience the annoyance of a twenty-four hours' wait, as in the case of his journey here when the "Baltic" stuck just outside New York Harbor.

A Legal Case of General Importance.

Gramophone & Typewriter, Ltd., recently obtained an injunction against John Barker & Co., Ltd., to restrain the defendants until the trial of the action from selling, advertising for sale, offering for sale, disposing or dealing with any gramophones supplied by them at prices less than those advertised from time to time in their catalog, in breach of an agreement of February 23, 1903. It was explained that plaintiffs were manufacturers of gramophones, and would not supply except on the terms of a written contract which was for their own benefit and that of the dealers. The contract stipulated that the dealer should not sell at less than the full retail prices. In the present case the defendants had purchased the stock of Messrs. Pointing, who had entered into this agreement with the plaintiffs and were advertising them for disposal at a great reduction. The stock included gramophones, and the defendants were advertising the Melba instrument, the retail price of which was 25 guineas, for 14 guineas, and the Monarch, which was priced retail at £5 10s., for £3 3s. The circular stated that all gramophones were offered at "less than half the usual price." The defendants claimed that they were not bound by any agreement entered into by another company, that in any case the selling of second-hand instruments such as they had purchased at a reduced price did not interfere with the contract and that the entire agreement was void and in restraint of trade.

Apparently Mr. Justice Warrington was not much impressed by the defendants' argument and granted the injunction. The justice would not venture an open opinion, however, stating that it was a matter for discussion at the trial.

BEKA RECORD EXPANSION.

Arrange for Trade Enlargement in India—Increase Entire Line of Foreign Records.

(Special to The Talking Machine World.)

Berlin, Germany, May 30, 1907.

The Beka Record, Ltd., this city, are steadily adding to their repertoire of foreign records, and it is only necessary to study their publicity appearing in The World to realize that the requirements of the people of practically every part of the world can be satisfied by this firm.

Mr. Loewe, general manager and director of the company, recently returned from a trip to India, where he made such arrangements as will insure a wide development of the business future in that country. India is proving quite a center for talking machines and records, and the Beka is in immense demand at that point. There is hardly a country throughout the new, or old, world that the Beka record is not known. The go-ahead policy of this company in providing appropriate literature and illustrations to suit the requirements of their customers, have enabled them to win a clientele that is steadily being augmented.

The first Beka expert has been in India since the first of January, and during that time has taken about 1,000 new records, among which are quite a number in dialects, which have hitherto never been reproduced on discs. One of the curiosities in the record line is one from Mr. Surendarnath Bonnerjee, the so-called uncrowned king of Bengal, and one of the most popular men in India, who has made a few records for this company.

The latest records being placed on the market by the Beka Record, Ltd., are admirable in every respect. The selections from the leading operas are most complete, and the high quality of the rendition has won general appreciation. They have now on their list a notable army of artists who are making records for them in various centers; in fact, they are scouring the world to the end that their international catalog be one of the most complete in existence. Original records have been made in all the principal European countries, and the list of selections covers all tastes from classical to comic. Any members of the American trade who desire to secure something entirely unique should write the Beka Co. for their latest international catalog. It is a veritable marvel in its scope. The requirements of practically every nationality can be supplied through this company.

TRADE NEWS FROM "THE CITY OF CULTURE."

Improvements to be Made in Talking Machine Department of the Oliver Ditson Co.—C. E. Osgood Co. Take on the Columbia Goods—Eastern Talking Machine Co. Re-arrange Rooms —Can Carry 150,000 Records on Hand—Tray System of the Boston Cycle & Sundry Co. Popular—H. F. Tosi Married—Business With Steinert—T. F. Murray a Visitor.

(Special to The Talking Machine World.)

Boston, Mass., June 12, 1907.

Of chief interest among the talking machine dealers of Boston are the changes and improvements to be made in the talking machine department at the Oliver Ditson Co. in the near future. Manager Winkelman, of this department, has proven himself not only an astute department manager, but a fine salesman, with the result that he has been getting rid of $15,000 worth of goods every month, in a tiny cubby-hole of a room that would hardly be big enough for a progressive man's private office. The death of John C. Haynes, president of the company, and the consequent reorganization, makes it possible to give Manager Winkelman more room and better facilities. It is planned now to move his department from the fifth to the second floor, and to give him the entire floor to use for the sale of talking machines—all Victors, by the way, for the Ditson house handles only the Victor. This is a tribute not only to the wise management on the part of Mr. Winkelman, but also to the wise forethought of General Manager Charles Bobzin, of the company, who recognizes that the talking machine department of the Ditson Co. is one of the best money producers in the building, and he is willing to give it all the growing space it needs.

Growth is also a watchword at the C. E. Osgood Co., where the talking machine department has developed from a tiny affair, that was not expected to live to grow up, into a fine, husky, strong department that shows a big profit every month. Improvements have been made in this department quite frequently of late. Business is reported to be excellent, considering the backwardness of the season. Mr. Royer, the manager, has just taken on the Columbia goods, and is planning to push them both in jobbing and at retail.

Enlargement of record space is the order of the day at the Eastern Talking Machine Co.'s store. Wholesale Manager Chamberlain has, by a rearrangement of rooms, increased his facilities so that he can keep on hand at all times 150,000 records. Mr. Freeman, of the sales force, has adopted quite a nice idea for keeping disc records perfect, and insuring customers that they are getting records just as they come from the factory. He secures small gummed labels and pastes these over the edges of the envelopes containing the disc records as they are taken out of the boxes from the factory. He has also arranged a lot of dust-proof boxes for the Melba records, so that these can be kept in condition.

The Boston Cycle & Supply Co. have just installed a new Lamson carrier system in their offices. Manager C. G. Andrew, of the talking machine department, states that their business for the month of May was much larger than for any previous May. He has secured a new shipment of mottled horns, on which he has a big sale. The tray systems are big sellers also, as well as the Lynn carrying cases. Mr. Andrews has just returned from a ten days' fishing trip in Nova Scotia with M. J. Harrison, of the Bowdoin Square Phonograph Co. He reports that he had great luck and a jolly good time.

Humbert F. Tosi, of the Cosmopolitan Music Store, was married on June 9 to Miss Louisa Ardizzoni, a member of the San Carlo Grand Opera Co., which played in Boston early in May. The young couple will go to Italy on their honeymoon, and both will join the opera company there. Mr. Tosi will retain his interest in the Cosmopolitan store here, however.

Business on the Victor Victrolas and other talking machines has greatly improved at the warerooms of M. Steinert & Sons since Manager Cornell had the first floor divided into a display room and a business office. The new room is light and airy, yet can be enclosed in glass whenever a customer is inside, and the display of Victrolas there is quite imposing.

All the talking machine trade is still discussing the result of the bowling season between the men from the various warerooms. That is, all but the fellows at the Eastern Talking Machine Co. They are still wondering when they will wake up. And the boys at the Columbia Phonograph Co. have little to say. They do say, as the Rube books put it, that those lads at Steinert's are certainly fine bowlers, and the Steinert lads content themselves by saying that they had nothing but a scrub team. Still, eight consecutive games is something worth winning.

John B. Varick, of Manchester, N. H., was in town recently, and announced that the John B. Varick Co. had been formed, to do a general jobbing business in Edison goods.

T. F. Murray, general representative of the Columbia Phonograph Co., was in town this week, full of enthusiasm over his success and over the prospects for the season's business. He says that he found business with the Maine jobbers very good indeed, and that in Portland recently there was formed the Marconi Phonograph Co., the first concern in the country to take advantage of the association of the great inventor with the Columbia people. This company handles the Columbia goods, of course.

The American Graphophone Co. have declared their quarterly dividend of 1¼ per cent. on comman stock, payable June 15.

RECORDS OF ROOSEVELT'S VOICE.

A World Subscriber Wants to Know Why Manufacturers Cannot Secure Records of the President's Voice—There Would be an Immense Sale, and the President's Views Still Further Propagated.

An enterprising talking machine dealer writes to The World as follows: "I could sell thousands of records of the voice of President Roosevelt in this section, if I could get them. Why couldn't some of our leading manufacturers of records get the President to make an address which could be used in the school exercises, or in the home—one of those virile "square deal" utterances that have made the President such a tremendous power for righteousness in the nation?"

We turn over this suggestion of our esteemed subscriber to the consideration of the record manufacturers, and feel sure that if it is possible to get the President in an amiable humor that he will be captured, unless he should desire to place himself in the category of European monarchs, who claim that nothing relating to them may be exploited for commercial purposes.

There is still another phase of the matter, and that is the competition that would exist between the different companies should the President deign to make a distinction between them. We are not quite sure as to whether the proposition has ever been made to President Roosevelt, but we feel certain that at least for some charitable purpose he will be "delighted" to express himself through the medium of the talking machine.

The Knight Mercantile Co., Zonophone jobbers of 211 North Twelfth street, St. Louis, Mo., have been compelled to install an extensive new set of disc record racks, which permit of the records being stored much closer together. This house carry many thousands of records and do a heavy jobbing business throughout the Southwest.

Recommended as Best By those Who Know Best

Every dealer who would like to add to his business a feature that will increase it from 10 to 30 per cent. should give his consideration to the following recommendation.

"The undersigned E. E. and Minister Plenipotentiary of His Majesty, the King of Spain, to the United States, has much pleasure in stating that the words for the study of the Spanish language as prepared by the International Correspondence Schools, of Scranton, Pa., which I have carefully listened to, are the most perfect rendering of the pure Castilian pronunciation. I consider them invaluable to the student of our language, and cannot too much praise their efficiency and convenience." EMILIO DE OJEDA.

This official endorsement is the highest possible recommendation for the efficiency and accuracy of the I. C. S. Spanish Course, and plainly tells the characteristics of

I.C.S. LANGUAGE SYSTEM
WITH
Thomas A. Edison
PHONOGRAPH

This system of language instruction is in use at the U. S. Government War College at Washington, and the phonograph system has been lately adopted by the University of Chicago, and everywhere it is being recognized as the coming method of language instruction. Phonograph dealers all over the country have been very successful in handling the language feature in connection with their other business. There is no reason why *you* cannot do the same—there is no reason why *you* should not do it next month, only because of your own indifference and negligence to write *now* asking for further particulars. Don't you think it worth while to find out more about such a feasible means of increasing your business?

Write us a postal to-day.

PETMECKY

Patentee and Manufacturer Improved Petmecky Needles

New York Life Building
NEW YORK

TWO NEW HORNLESS MACHINES

Will Soon be Placed on the Market by the H. Schroder Hornless Phonograph Co., of New York—Many New Principles Embodied in These Creations It Is Claimed.

The H. Schroder Hornless Phonograph Co., 387 East 158th street, New York, are preparing to place on the market two new talking machines—a disc and cylinder—which will possess a number of new and unique features that are bound to at once attract the attentiou of the trade. Both of these machines are constructed without horns and are made on many absolutely new principles, thus insuring against any possible infringements on those of any other make. Oue of the most marked improvements is that of tonal reproduction, all scratching, and harsh, discordant sounds being eliminated. Another desirable feature is that of saving on shipping, as these instruments are built in a most compact manuer, and can be packed for transportatiou most economically.

The Schroder Co. intend to devote their entire time to manufacturing, and will appoint a number of large firms as sole agents, who in turn will establish jobbers in various parts of the country for the purpose of pushing their line among the dealers. These machines will not resemble the Victor Victrola made by the Victor Co., or another machine of German manufacture, as erroneously stated in a previous issue.

CRITICIZE MME. MELBA'S MOTIVES.

The New York Press is not as gallant as it usually is when speaking of Mme. Melba, and actually believes that "her love of art" and "scientific interest in talking machines" is based upon mercenary considerations. It also proceeds to tread on Brother Jonathan's coat tails. Here is what our Manhattan contemporary says: "One of the funniest things about the English is their seriousness. Melba, the Australian singer, whose vogue was enhanced tremendously by circulation of talking machine records of her songs, made a great parade of her patriotism in a Middlesex town, in England, the other day, when she laid the cornerstone of a factory destined for the manufacture of such devices. It was all proper enough, of course, for the cantatrice to have genuine interest in anything that had served to advertise her so extensively, but precisely why the British Lion had to roar over the occasion does not appear to the practical American mind. Melba didn't deliver her address. It was spoken for her by an agent of the talking machine company. But he was there to utter her sentiments, it seemed, and one of his first remarks was that the diva, "as a British singer," was "particularly interested" in any undertaking that added to the list of British industries. Melba herself, when the ceremony was at an end, told the reporters she had always taken "the greatest scientific interest" in talking machines. Dear, dear! Why couldn't she be candid enough to say it was a commercial interest? No one in this country would think the less of her for it, whatever might be said in the land of ponderous shams."

AN OLD-TIME EDISON MAN

Is A. O. Petit President and Founder of the Edisonia Co., of Newark—Long Connected With the Trade and Has Built Up a Successful Business.

Albert O. Petit, president and founder of the Edisonia Co., of Newark, N. J., is a man of wide experience in the talking machine industry, having become interested in that line as early as 1887, when the industry was in its infancy. His first connection was with Professors Bell and

ALBERT O. PETIT.

Tainter in the year named. A year or so later he joined the Edison forces, as he says, at a time when the site of the present enormous plant of the National Phonograph Co. "reminded one of the Everglades of Florida." Since that time Mr. Petit has worked under every manager of the works up to and including Mr. Gilmore. He rapidly rose to fill many positions of importance that threw him in direct contact with Mr. Edison, with whom he became very friendly. Upon his leaving the employ of the National Phonograph Co. to organize the Edisonia Co., Mr. Edison presented him with his signed photograph as a mark of esteem. When the Edisonia Co. took possession of their handsome new building a few months ago Mr. Edison presented Mr. Petit with a gold-plated phonograph mounted on a handsome pedestal, bearing a plate inscribed as follows: "Presented to Albert O. Petit by Thomas A. Edison, February 25, 1907." Mr. Petit is a French-Canadian by birth, and came to the States when about ten years old.

DR. O'NEILL'S IMPRESSIONS

Of a Recent Trip Through South and West—The Enterprise of Certain Houses—Leaves Shortly for the Orient on Extended Trip.

Dr. E. F. O'Neill, the popular traveler for the Victor Talking Machine Co., will leave early in July for China, making his first stop at Shanghai. He will remain in the Orient about two years, covering China, Japan and the Philippines thoroughly, as he has a thousand Chinese Victor records at his disposal, to which more will be added at short intervals, he should be able to close some deals. Dr. O'Neill is very enthusiastic regarding his new venture, and his ten years of experience in the talking machine business will prove of inestimable value to him.

In regard to the tour of the South and West, from which he has but recently returned, Dr. O'Neill had much to report. He was much impressed with the West as a field for the "talker," stating that it filled in a large measure the position occupied by the vaudeville and other low-priced show houses of the East.

Speakiug of the various houses he called on, Dr. O'Neill mentioned Thomas Goggan & Bro., who have four stores in Texas—in Galveston, San Antonio, Waco and Dallas—and the Waco Talking Machine Co., both houses exploiting the Victor line in no uncertain manner. As the center of the Western talking machine trade, however, he considers Oklahoma City as having that honor. Armstrong, Byrd & Co., Durham & Co., and Frederickson & Kroh are all located in that city, carry heavy stocks, and do an enormous business.

Philip Werlein, Ltd., the New Orleans house, have increased their Victor business to such an extent that they have been compelled to install several new demonstrating rooms for that line.

As examples of rapid growth, the Doctor cited two instances as coming directly under his notice: Taylor Bros., of Houston, Tex., who simply installed talking machines as a side line to their jewelry business only a few years ago, are now forced to open a separate store solely for the purpose of handling their business in the Edison and Victor lines. The other case was that of the Silverstone Talking Machine Co., of St. Louis, who are Edison jobbers. Starting only three years ago they now are among the leading talking machine houses in the Middle West, doing a very heavy business that taxes their constantly increased facilities.

It is proof, not of weakness but of wisdom, to seek advice from those more experienced than oneself.

Western Jobbers!

Are you aware of the fact that we are shipping promptly to our Western warehouse a sufficient quantity of horns of every description to satisfy your wants?

The warehouse is under the direct management of the Western Talking Machine & Supply Co., 6 East Madison Street, Chicago, Ill.—"Nuf Ced."

We are also making prompt factory shipments to our Eastern jobbers.

Don't fail to write us concerning our line of "Wood Finish" Horns.

195-197 WABASH AVENUE, E. P. VAN HARLINGEN, MANAGER.

A Great Assemblage Expected in Chicago for the Conventions of the Talking Machine Jobbers, Piano Dealers and the Piano Manufacturers—Jobbers Eligible as Associate Members of the National Piano Dealers' Association—No Diminution in Activity in the Talking Machine Trade West—Messrs. Baer and Eckland East—Alterations in the Columbia Warerooms—Feinberg's Successful Trip—Babson Bros.' Great Stockroom—Talking Machine Co. Adding to Their Line of Customers—C. E. Goodwin's Plans Succeeding—Reynolds With Lyons—A New Coin Operating Talking Machine—Other Items.

(Special to The Talking Machine World.)

World Office, 195 Wabash avenue,
Chicago, Ill., June 10, 1907.

The week of June 17 will be a great one for the talking machine as well as the piano trade. The National Piano Dealers' Association, which convenes at the Auditorium on Wednesday, the 19th, has in the neighborhood of 800 members, and it is safe to say that from one-half to two-thirds are talking machine dealers as well. It is equally safe to say that the balance of them are seriously considering the addition of talkers as a result of the success of their brethren and of the strong educational work in this line accomplished by the Talking Machine World and The Music Trade Review. The National Piano Manufacturers' Association commences its sessions Monday, and winds up on Wednesday, when the dealers begin. A number of the manufacturers have their own retail stores, and handle talking machines in addition,and, in some instances, on a very large scale.

The Central States Talking Machine Jobbers' Association, as every reader of The World knows, meets at the Annex on Monday and Tuesday, the 17th and 18th. There is every prospect that it will be the largest convention in the association's brief but prosperous history. It would be surprising if this meeting did not witness the acquisition of a large number of new members. Many talking machine jobbers who are not now members of the Central States Association will be in Chicago that week because they are piano dealers and therefore members of the Dealers' Association. This will be an excellent time for the Central States Association to get these people in line, and they will unquestionably make the most of their opportunity.

It may be news to the talking machine people that even if they are not piano dealers they are eligible as associate members of the National Piano Dealers' Association, as they are classed as members of the music trade. The associate membership fee is $3 per year, and entitles them to all privileges, except that of voting. All members of the Talking Machine Jobbers' Association therefore can get into the whirl of business and pleasure which will characterize the meeting of the piano dealers. If they handle pianos they can get in as active members—if they do not as associate members.

Secretary Putnam, President J. P. Byrne or Chairman of Membership Committee Platt P. Gibbs, of the National Piano Dealers' Association will all be in easy reach over at the Auditorium proper, and any of them will be able to fix up applicants for membership.

There has been so far no diminution in activity in the Western talking machine trade other than that inevitable to the season. Jobbers both here and through the West are united in reporting that May business showed a large increase over the corresponding month of last year, while June is making a similar record. Trade, it is true, has been tapering off somewhat since about the middle of May, but this has not been as noticeable as usual, and the present volume of business speaks eloquently of the remarkable prosperity of the talker trade.

A concern which has accomplished large things in the talking machine business is the firm of C. Koehring & Bro., of Indianapolis. A year and a half ago they became Victor jobbers, and have a large trade through Indiana. They not only do a prosperous retail business on both Victor and Edison goods at their main store, but also at a retail branch they opened a few months ago in Indianapolis, and which is devoted to talking machines exclusively.

General Manager Arthur D. Geissler and Sales Manager Virginius Moody, of the Talking Machine Co., loomed up in a forceful way as leaders of the forlorn hope on Saturday, June 1. The occasion was a ball game between picked teams from Babson Bros. and the Talking Machine Co. Both Geissler and Moody made home runs, but their hard work failed to conquer, the high average of brawn and muscle of the countryites from the wind-swept prairies of Douglass Park. Besides, the Babson Bros. and George Nisbett disdaining the dust and carnage of actual conflict sat in the grand stand and rooted, encouraging their men to nobler efforts. The score was 22 to 11 in favor of the Babsons, and if darkness had not intervened it might have been—different. Flushed with victory the Babsonians are out with a challenge to Lyon & Healy.

T. J. Rochford & Co., with offices in the Republic Building, this city, expect to make electric

coin-controlled pianos as well as regular pianos in a new factory they are building at Tipton, Ind., and which they expect to have ready for occupancy in the early fall.

C. F. Baer, manager of the Chicago office of the Columbia Phonograph Co., and O. W. Eckland, manager of the instalment department, accompanied by their wives, left on a three weeks' trip, which will include visits to a number of the Columbia Co.'s branches, to the headquarters in New York, and to the Jamestown Exposition. From Chicago they went direct to Detroit, and from thence to Buffalo, Pittsburg, Albany, down the Hudson to New York, and thence to Bridgeport, Boston, Philadelphia and Washington. After a stay at Jamestown they will return to Chicago via Cincinnati. Both men are hard workers, and the trip will give them a needed rest as well as result in an interchange of ideas and experiences with other Columbia managers that can but be of benefit to all concerned.

The extended changes and alterations which have been made in the Columbia warerooms and offices at 88 Wabash avenue have now been completed to the great joy of the force who have been compelled to work in a veritable carpenter's bedlam for the past six weeks. The offices, with the exception of that of the commercial department, have all been moved to the entrosol floor, which extends around the south side and rear of the store. District Manager Fuhri is unobtrusively located in the southeast corner of the double decker, from whence he works the wires that keep him in touch with the extensive Western and Central Western territory over which he has control. The Northwest corner is occupied by O. W. Eckland, and the instalment department is in a private office between the two. E. C. Plume, Western wholesale manager, holds forth. The south gallery is occupied by the counting room and collection departments, and here are the desks of Manager C. F. Baer and Assistant Manager George Cass.

Downstairs the retail department floor has been rearranged, the disc record stock occupying an imposing extension along the north wall within instant reach of the sales force. Floor Manager Walthau is delighted with the new arrangement which gives him space for an imposing show of cabinets. The Chicago office has just issued catalogs of both disc and cylinder records, arranged alphabetically by title and intended primarily for dealers' use.

R. Kean Cameron, Retail Manager John Ottos, capable assistant at the Rudolph Wurlitzer Co., is again back at his desk after a five weeks' illness. His sister, Miss Ida May Cameron, is winning additional laurels as a singer. She appeared in recital at Crerar Hall, and has a number of engagements for appearances at association gatherings during the summer.

C. M. Le Roux, who since the Cable Company discontinued their wholesale talking machine department, has had charge of the retail, has resigned. He's a wholesale man by virtue of long inclination and long training, and feels that his efforts can be expended to the best advantage in that branch of the business. Up to the present time he has not made any further connection but has several good offers under consideration

F. K. Dolbeer, of the National Phonograph Co., made a flying visit to Chicago on the 7th.

The Crescent Talking Machine Co., who moved to 40 Michigan avenue last month, have now ready for the market the Sheppy automatic brake for disc machines, the invention of Frederick Sheppy. It eliminates the thumb brake entirely. Start the machine going and you can sit down, listen to the music and smoke your cigar in peace as the machine is stopped automatically and instantly upon the expiration of the record. Furthermore the turntable is started automatically when a record is placed on the machine.

B. Feinberg, of Dillbahner & Feinberg, proprietors of the Western Talking Machine & Supply Co., returned from his Eastern trip the latter part of last month loaded not only with memos of goods purchased, but also with orders from jobbers, whom he visited on the way home. He will give the road the good-bye until after the Central States Talking Machine Jobbers' convention. The plan of carrying stock of all kinds of talking machine supplies in Chicago for the benefit of the Western jobbing trade has proved such a convenience to the company's customers that they have been compelled to secure additional storage facilities in the building in which they are located, 6 East Madison street, securing ample room in the basement for that purpose. During convention week they will have on exhibition at their warerooms several new novelties in the supply line including the Ideal folding horn manufactured by the Ideal Fastener Co.

Loring L. Leeds, of the Leeds & Catlin Co., was here the latter part of last week. He reported trade as excellent and that Central Western jobbers on the whole were looking for a larger volume of business in 1907 than in 1906.

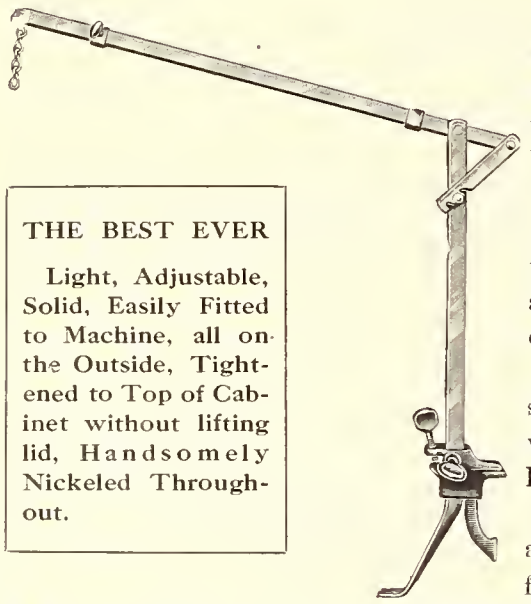
Walter Gray, manager of the San Francisco office, and George W. Lyle, general manager of the Columbia Phonograph Co., were recent visitors at 88 Wabash.

The offices of the Western commercial department, the battery department and the moving picture department of the National Phonograph Co., remain at the old number, 304 Wabash avenue, the quarters having been rearranged and decorated since the fire in the building six weeks ago. A. V. Chandler, the National's city representative, continues his rounds among the jobbers as usual, and is always ready to welcome out-of-town visitors.

Babson Bros. are now thoroughly settled in their fine new building at Marshall Boulevard and 19th street, and which has been described in detail in The Review. Everything is convenient. The immense record stockroom, which covers the entire fifth floor, has a system of record bins devised by George M. Nisbett, wholesale manager, with a total capacity of 600,000 Edison records. The cut illustration given in this connection shows the manner in which these bins are arranged. There is plenty of room, and two people can work back to back with perfect comfort between the bins. The lighting facilities are unsurpassed. There are windows on all sides, and the immense skylight above running along the entire length of the floor make the spaces

The Simplex Crane

(PATENTED)



THE BEST EVER

Light, Adjustable, Solid, Easily Fitted to Machine, all on the Outside, Tightened to Top of Cabinet without lifting lid, Handsomely Nickeled Throughout.

This is certainly the happiest idea so far evolved for holding a horn to any Cylinder Machine, and is aptly named "SIMPLEX," for it is surely simplicity itself. The Crane is attached to the Machine top by an ingeniously devised screw operated clutch, in such a way that the more weight on the outer arm of the Crane, the harder and more firm is the lock fastened to the machine, insuring absolute safety from fall and damage to the horn or machine.

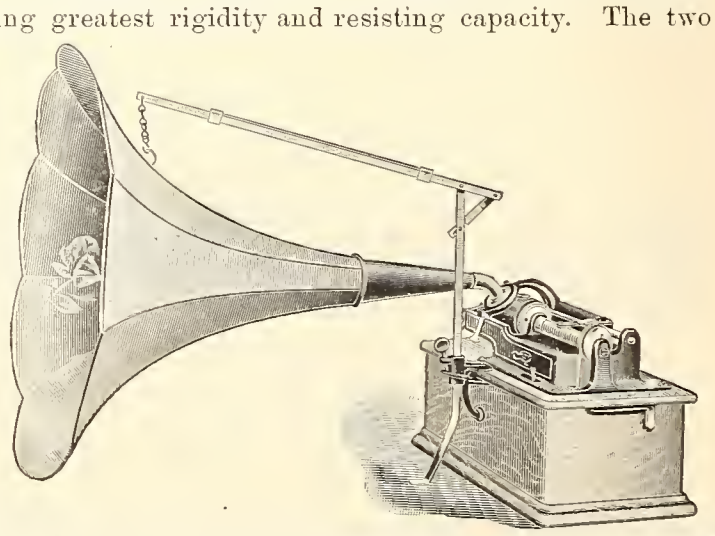
The angle of elevation is gauged by a lever on the back of the Crane, in which are three notches. This lever locks of its own weight, without the use of any spring or screw, and thus assures permanent freedom from worn threads, broken springs and all that sort of tantalizing annoyance.

The length of the horn determines the stretch of the top-arm which is made long or short by means of snug fitting clips and a steel thread-lock. A short length of good weight chain completes this unusually capable, handsome, durable, easily operated horn support.

The construction is of $\frac{3}{8}$ by $\frac{3}{16}$ inch cold drawn charcoal steel, and the extension arm operates laterally, thus attaining greatest rigidity and resisting capacity. The two feet are flat and perfectly smooth. A heavy coating of best nickel-plate, electrically applied, then handsomely burnished to a mirror gloss, is the finish used throughout.

The Lip-lock, or clutch which fastens the Crane to the Machine, in order to assure perfect safety from defects, is NOT CAST, but made of MALLEABLE IRON, treated to a thick lacquer of Baked Japan, very elastic, yet very glossy.

Closest inspection and examination of this very modern, simple, up-to-date Crane are cordially invited. The wholesale figure and the customer's price offer an attractive proposition to all dealers.



Retail Price, $1.25 Each

Chicago Stand Co. *Manufacturers*

260 Wabash Avenue, CHICAGO

between the bins as light as any place in the building. The fourth floor is devoted to general stock, the third to machine stock, the second to executive offices and the first to packing, shipping and repair departments. Not only in the interior arrangement but in the surroundings has the climax of convenience reached. The building faces Douglass Park, and the employes therefore get the advantage of fresh air and a delectable outlook, while the Douglass Park cars of the Metropolitan Elevated bring visitors from the loop in twenty minutes. They alight at the California station, and are within a block of the building. After a tour of inspection of the whole 60,000 square feet, "without doubt the largest space in the world devoted solely to the sale of phonographs and records," they can be taken to the big Catholic hospital next door and revived and tenderly cared for. Convenient any way you look at it.

VIEW IN PART OF BABSON BROS. GREAT RECORD STOCK ROOM.

The Talking Machine Co. are more than pleased with their new quarters at 142 Wabash avenue, where they occupy the entire floor of the big building. Manager Geissler reports the creation of a large number of Victor dealers within the last two or three weeks. Their system of making selections for dealers from the experiences of the large local buyers has proved a big success. May showed a remarkable improvement over the corresponding month of last year.

C. E. Goodwin, of Lyon & Healy, has been for some time quietly putting into effect a plan for enabling the country talking machine dealers to do an instalment business by arranging for them to pay Lyon & Healy on the instalment plan. It is having the effect of creating talking machine dealers among merchants of limited capital, but who, by virtue of energy and ability, are likely to become marked figures in the talking machine business of their respective sections.

The Rudolph Wurlitzer Co. have now occupied their new wholesale department stockrooms at 336 Wabash, where they have three times the capacity formerly. The offices of the wholesale department remain as heretofore in the Wurlitzer Building, 260 Wabash.

The many customers and friends of James I. Lyons, the well-known and long-established talking machine jobber, will be interested in learning that he has again secured the services of Joseph S. Reynolds, who was his right-hand man during the first year and a half of his career as a talking machine jobber, and had previously been with him for many years. Mr. Reynolds comes back

to the house of Lyons, after an absence of six years, which, however, has been spent in the talking machine busiuess. He will theu have immediate charge of the sales, credits, correspondence, etc., giving Mr. Lyons a chance to devote more time to the general management of the business. This means, of course, that the wholesale talkiug machine busíness will be pushed harder than ever, along conservative lines. Mr. Lyons is distributer of both the Edison and Zonophone goods, and as ever carries one of the most complete stocks of supplies of all kinds in the West. He has recently added an exceptionally strong line of disc and cylinder cabiuets. He still continues the manufacture of artificial limbs with pneumatic feet, and has recently moved his factory to the building in which his talking machine business is conducted, No. 192-194 East Vau Buren street.

The Mills Novelty Co. have just put on the market a new automatic coin-operated phonograph, wouud by a single pressure of the foot, thus doing away with the necessity for electric current or troublesome hand winding. It is arranged with either the slot attachment or a push button for home use and a horn may be substituted for the ear tubes if desired.

The reproducer on this machine is one of its unique and novel features. When the machine is put in operation, the hollow arm is slowly and automatically let down, allowing the pin to make contact with the record at just the proper place. When record is finished this arm automatically lifts and returns to starting point. An adjustable screw and lever governs the arm, allowing reproducer to come in contact with record only from the beginning to the end of the piece, thus making it practically impossible to damage a valuable record by scratching.

This automatic shut-off, the ease with which records can be changed by lifting one off and substituting another; the foot treadle arrangement, which makes it possible for independent operators to put it out as a purely automatic coin-operated machine, and the fact that the machine will take a 10-inch record, all contrive to make tnis new product of the big Mills plant a most interesting machine.

TALKING MACHINE IN THE SCHOOL.

An Article Illustrating Its Wonderful Power for Good to the Young American.

The time will come—and let us hope that it is not far distant—when the school houses of our laud will find the talking machine as important a part of their equipment as the blackboard is to-day.

Did you ever stop to consider, Mr. Dealer, what the talking machine will do for the "Young America" who is striding along the path of knowledge in the public school? The amount of benefit to be derived from its use is so great that it is difficult to determine just where it can do the most good. Probably the elocution class will reap the richest harvest by having the voices of brilliant recitationists at their disposal. The boys and girls who attend our institutions of learning are very bright juveniles, and, therefore, clever mimics. When a recitation or reading is given to the class as their lesson for the following day, and then played for them upon a talking machine, they immediately grasp the correct idea, and when the time comes for them to declaim, they do it with expression, remembering the phonographic rendition of the night before, and profiting by it to a marked degree.

The great men of the world are coming forward one by one, Emperor William being the first, and having records made of their voices for the benefit of humanity at large, and this is a great aid to the school. The history lesson can be made so much more interesting if it deals with a great man whose voice is at the beck and call of the scholars.

Suppose our great President of the United States, Theodore Roosevelt, were to have one of his stirring speeches, delivered in his characteristic style, engraved upon a disc or cylinder, and duplicates of the same distributed among the schools; would it not have a patriotic effect; would it not instill into the hearts of the children a more real and lasting impression of the man, the statesman, and the author, than a mere book could give? It is time for our great men to come forward and present their voices to the world, for in so doing, they will not only improve the youthful minds of the present generation, but those whose lives may reach into the

far distant future. It is possible in this progressive age of talking machines to have stored away in the libraries of our schools not only the written word of famous personages, but perfect reproductions of their voices as well, and you are the man, Mr. Dealer, to insist that this thing be done, for thereby you will add materially to your business by bringing to the front the educational powers of the machines you sell, and also place before the mothers and fathers of our country something they cannot fail to appreciate; that is, an inspirer of intellectual understanding in the braius of their offsprings.

HOWARD TAYLOR MIDDLETON.

KIBBEY HAS CONCERTOPHONE.

Adds Another Big Seller to His Splendid Line of Specialties.

(Special to The Talking Machine World.)

Chicago, Ill., June 10, 1907.

H. C. Kibby & Co., coin-operated specialties, Republic Building, have secured a notable addition to their line in the Concertophone, manufactured by the Skelly Manufacturing Co., of this city, and for which Kibby & Co. are now exclusive sales agents. As readers of The World know, coin-controlled graphophones are remarkably loud and clear. The customer has the choice of his records. It is operated by spring motor, and automatically rejects slugs.

Kibby & Co. are also making a strong push on the Lavery phrenometer, a cut of which appears in their advertisement in this issue. This remarkable device scientifically measures, delineates, prints and delivers on a sheet of paper the degree of development of every faculty of the brain. Kibby & Co. state that it is more scientifically accurate in its readings than any professor of phrenology, because it gives accurate and positive measurements, while man relies on touch or observation. No two persons can, by any chance, receive similar readings unless their bumps are actually alike, something which probably never occurs. The phrenometer is not a slot machine, but requires only a moment's attention by the owner in order to adjust it on the customer's head. The returns to the owner of a phrenometer are large, and its unit is so unique as to create a craze for having your head read by the machine as soon as it is introduced in a town or locality. Kibby & Co. invite every one during convention week to call at their warerooms and receive a reading free of charge.

STEVENS' MEXICAN TRIP.

Has Interesting Chat With the World Regarding Conditions in the Land of the Montezumas.

Visitors to the neighboring republic of Mexico return to the United States enthusiastic over almost everything they see and hear while in that country of alleged romance and great business possibilities. Walter Stevens, manager of the National Phonograph Co.'s foreign department is no exception. He started on the trip April 22, going via Chicago and St. Louis, and reported for duty at the New York offices June 3, looking as if he had a most enjoyable journey, from which substantial results will follow. When The World asked Mr. Stevens what his opinion was of talking machine affairs in Mexico, he said:

"Most of the time while away I spent in the City of Mexico, making side trips, the most important of which was to Vera Cruz, a seaport of importance on the Gulf of Mexico, and where my special object was to study the customs regulations.

"The headquarters of the Edison business in the republic is the Mexican National Phonograph Co., City of Mexico, D. F., that has been established two years. Rafael Cabanas is the resident manager, and a most capable man he is from every point of view. He is a thorough talking machine man, having been an assistant in this office a couple of years before assuming the management of the Mexican Co., which is a distinct and separate organization, like all our foreign houses, from the parent company here. Senor Cabanos is as much an American as a Mexican, and was educated in the States, though he has always claimed Mexico as his home. He speaks English fluently, and has more the appearance of a New Yorker than a Mexican.

"All the Edison Mexican business goes through his hands. Jobbers and dealers are established in the same manner as with us, the jobbers carrying stocks and supplying the retail trade. Should I receive an inquiry from Mexico about the Edison line I should forward it at once to the Mexican National Phonograph Co., as the National Co. does not sell direct to the Mexican trade at large. The sale of Edison phonographs and records in the republic is very large, and the demand is simply tremendous. In saying this I do not mean to decry the business that the other talking machine companies are handling, and which is also expanding. In fact, I believe Mexico is one of the coming countries of the world for the talking machine.

"Musically, Mexico is a critical country, and the people are unmerciful in their criticisms. Many of the band and orchestra leaders are composers. Passionately fond of music, the best and highest grade of records is none too good, and therefore the Edison grand opera records are in great demand. English records, of course, do not sell, excepting to the Americans, of which there is a large colony, and

EDISON HEADQUARTERS IN MEXICO.

they buy liberally. The National Phonograph Co. now have a corps of recording experts in Mexico, taking a large number of special Mexican records—bands, orchestras, vocals, recitations, etc. The company's Mexican list includes 300 selections, which will be increased to 500 when the new ones now in hand are added.

The demand is for the better grade of machines, and so-called cheap goods have no footing whatever. Since the launching of the Mexican National Phonograph Co. they have done a splendid business, and the increase has been phenomenal, so much so that Senor Cabanas has been unable to visit the States, as he ardently desires; cannot spare the time. Yes, this was my first trip, and I hope to make others as the necessity arises, to keep in touch with things across the southern border.

"General business conditions are very favorable for all lines, and a great deal of American capital is being invested in various enterprises. One, however, must have a thorough knowledge of Spanish and English in order to successfully carry on business; that is, handling goods of American manufacture. Mexico is a very old country, as you know, and the people have conventional forms and laws hundreds of years old

that are hard to get away from. In brief, they must be observed and respected if you expect to make any headway.

"One great disadvantage is the inability to obtain sufficient help. This throws a lot of detail work on the shoulders of the principal that is wearing and burdensome. The climate of the City of Mexico is delightful—bracing and invigorating—being seven or eight thousand feet up in the mountains above sea level. The display of wealth is noticeable, the streets are crowded with automobiles, carriages and other fashionable vehicles, even more so than in New York. The principal street is Calle San Francisco, the Broadway of the capital. Stores are seldom for rent, and should one become vacant many applicants are on hand, and the hustler captures the prize at an exorbitant figure."

COMMERCIAL GRAPHOPHONE NEWS.

In the commercial department of the Columbia Phonograph Co., General, under the capable and progressive management of J. W. Binder, they are beginning to see daylight. That is to say, the factory is catching up on orders for the commercial graphophone, heretofore behind from 600 to 1,000 machines. The month of May eclipsed all previous records on sales. To render the work of the department more effective the selling force has been augmented by Mr. Binder, as follows:

C. H. Smith, formerly connected with the commercial system of the National Phonograph Co., commencing with June 1, has taken the uptown New York territory. This runs on the east side of Broadway, from Canal street up.

In Cincinnati, O., Charles H. Johnson, formerly with the Remington Typewriter Co., will have full charge of the commercial department, dating from June 15.

The Seattle, Wash., office will be under the management of George S. Murray, recently principal of the State Normal School at Emporia, Kan. His appointment went into effect on the 1st.

On June 15 John Magner, an old talking machine man, and lately assistant manager of the Columbia store under F. E. Winchell in Boston, Mass., goes to St. Louis to assume the management of the commercial end of the house.

NEW JERSEY DEALERS ORGANIZE.

Fourteen talking machine dealers of Jersey City, Hoboken, and other towns in North Jersey recently formed the Hudson County Talking Machine Dealers' Protective Association, with R. C. Woerner, of 162 First street, Hoboken, president, and H. Jaffee, of 122 Washington street, secretary. The aim of the association is to promote the general welfare of the business and regulate injurious competition. The members complain against the establishing of additional dealers in crowded fields. The instance is cited where three furniture houses in Hoboken took on talking machines, the initial stock in each case being three machines and 250 records. The matter is to be brought to the attention of the leading manufacturers.

Those belonging to the association, club together in buying their talker sundries, and thereby get the lowest discounts.

The members all took a day off June 12, and visited the immense plant of the National Phonograph Co. at Orange, N. J., where they were taken in charge by representatives of the company and given an insight into the wonders of phonograph building. They were extended every courtesy while in Orange.

VITAK CO. WORTH WATCHING.

The Vitak Co., 180 Lafayette street, New York City, promises to have something on the market very soon that will revolutionize the moving picture machine. At this writing they did not care to give out any details, but in view of their past accomplishments their future moves will be well worth watching.

DOUGLAS CO.'S NEWARK QUARTERS.

The Douglas Phonograph Co., New York, have leased a building at New and Halsey streets, Newark, N. J., to which they will remove their branch house from 20 New street, about July 1 The premises are to be remodeled, larger plate glass windows added and a new ceiling and fixtures put in, the alterations costing in the neighborhood of $6,000. The company's business has increased at a rapid rate in that hustling city. A new manager will also take hold at the new place.

A NEW RAPKE LABEL.

A Victor disc record label has been devised by the Victor H. Rapke Co., New York; in fact, is now ready for delivery. The title, number and artist's name are displayed in clear, bold type, and the label is destined to become as well known and indispensable as the Rapke label for the Edison cylinder records. The Rapke collapsible cylinder record tray for two, three and four records is also another of the company's latest winners.

JAMES LANDAY DUE JULY 1.

James Landay, of Landay Bros., New York, who has been in Europe since April 24, is expected about July 1, and Max says he will bring back with him a few things of import to the trade. Last week the firm sold a complete Victor outfit, with mahogany horn, to Mrs. W. B. Leeds, one of New York's leading society ladies, who ordered it shipped to her summer home at Newport, R. I. The Victor No. 6, equipped with a mahogany horn, makes a fine appearance. It also comes in oak.

The Syracuse Wire Works, in their advertisement elsewhere, call attention to a somewhat new departure of rack, using as it does the envelopes for carrying the records. The rack is the No. 2A, and contains a light board beneath each opening to hold up the envelope and prevent same from buckling, acting as a shelf. The advance in the cost of this board in connection with the disc racks, is comparatively slight. This can be used on all their disc racks, regardless whether they are stock sizes or specials, the extra cost being merely nominal.

An effort will be made to organize the talking machine dealers in Greater New York. Max Mandel, proprietor of the Guarantee Phonograph Co., 283 Washington street, Brooklyn, N. Y., is taking the initiative, and would be pleased to hear from the trade on the matter.

BARGAIN IN FOREIGN RECORDS.

For sale at a bargain several thousand Italian, Hebrew, Spanish and Hawaiian ten-inch disc records. Address "Foreign Records," care Talking Machine World, 195 Wabash Avenue, Chicago.

TALKING MACHINE REPAIRER WANTED.

WANTED—An experienced talking machine repairer by a large Western jobber. None but a thoroughly competent man need apply. References required. Address, "Ability," Talking Machine World, 1 Madison Avenue, New York.

ANDREWS BUYS OUT LOUD

And Now Has Big Jobbing Stock in Buffalo.

(Special to The Talking Machine World.)

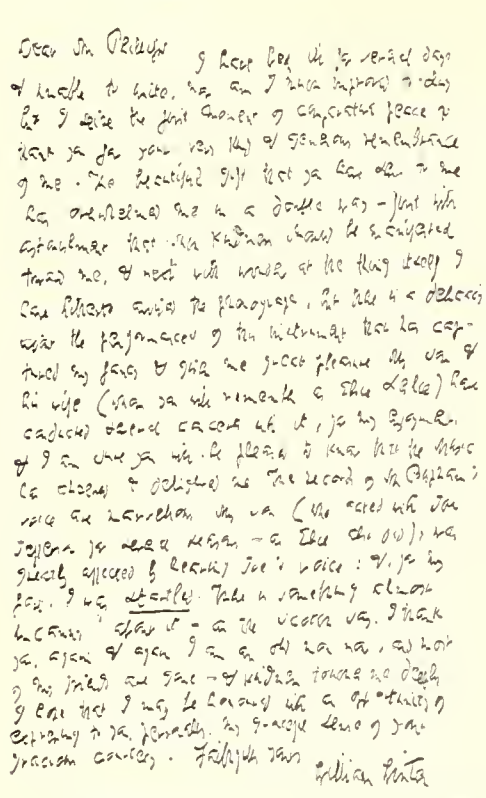
Buffalo, N. Y., Juue 12, 1907.

W. D. Andrews, of Syracuse, N. Y., president of the Eastern Talking Machine Jobbers' Association, who has made a great success of the talking machine business throughout Central and Northern New York, opened a jobbing house in Buffalo, N. Y., on September 1, 1906, under the management of his brother, C. N. Andrews. They have just purchased from Robert L. Loud, the Victor jobbing part of his business, which makes Mr. Andrews the only Victor jobber in Western New York.

The store is situated corner Seneca and Wells streets, opposite the Hotel Broezel, and convenient for out of town dealers, who are always welcome to make it their headquarters while in town. Mr. Andrews caters exclusively to the wholesale trade. He carries a complete stock in Edison, Victor and Columbia lines and gives his patrons the best of service.

INTERESTING LETTER FROM WM. WINTER

William Winter, the veteran dramatic critic of the Tribune, was recently made the recipient of a Columbia graphophone and an assortment of disc records, among which were two by the late Joseph Jefferson. Mr. Winter's letter of acknowledgment, addressed to Mr. Phillips, of the Columbia Phouograph Co., is as follows:



New Brighton, Staten Islaud, May 31, 1907.

[Dear Mr. Phillips: I have been ill for several days and unable to write, nor am I much improved to-day, but I seize the first moment of comparative peace to thank you for your very kind and generous remembrance of me. The beautiful gift that you have sent to me has overwhelmed me in a double way—first with astonishmeut that such kindness should be manifested toward me, and next with wouder at the thing itself. I have hitherto avoided the phonograph, but there is a delicacy abont the performance of this instrument that has captivated my fancy and given me much pleasure. My son and his wife (whom yon will remember as Elsie Leslie) have conducted several coucerts with it for my entertainment and I am sure you will be pleased to know that the music has cheered and delighted me. The records of Mr. Bispham's voice are marvelons. My son (who acted with Joe Jefferson for several seasons—as Elsie also did) was greatly affected by hearing Joe's voice and for my part I was *startled*. There is something almost uncanny about it—as the Scotch say. I thank you, again and again. I am an old man now and most of my friends are gone—and kindness touches me deeply. I hope I may be honored with an opportunity of expressing to you, persoually, my grateful thanks of your gracious courtesy. Faithfully yours,

WILLIAM WINTER.]

RECENT LEGAL DECISIONS.

The American Graphophone Co. Denied Injunction Against the Leeds & Catlin Co.—They Were, However, Granted Preliminary Injunction Against International Record Co.

The second motion for a preliminary injunction in the case of the American Graphophone Co. against the Leeds & Catlin Co., New York, argued before Judge Lacomhe, United States Circuit Court, Southern District of New York, April 24, was again denied. The decision was handed down June 11, the complainants petitioning for au enjoining order against the alleged employment by the defendants of the Jones patent process of duplicating disc records. The motion was denied without leave to renew. The suit now goes to a hearing on the merits before the same court.

On the same day, Judge Lacombe granted a preliminary injunction in the case of the American Graphophoue Co. against the International Record Co., Auburn, N. Y., that was argued at the same time. The court, in his decisiou, said: "The infringement seems to be quite satisfactorily made out." This case will also take the same course as the one mentioned above.

SUIT BROUGHT IN MEXICO

Against the S. Espinosa Co. by Certain Composers for Selling Records of Their Compositions—Will Act as Columbia Jobbers.

On June 5 the arrangemeut of the Columbia Phonograph Co., General, with the S. Espiuosa Phonograph Co., City of Mexico, whereby the latter were the exclusive agents for the Columbia products in the Republic, was terminated. They will, however, continue as jobbers.

Monday's mail to Mr. Burns brought the news that recently a suit was instituted against the S. Espinosa Phouograph Co., by Mexican composers and music publishers for selling records of their compositions. As Mexico has no copyright statute, the common law rights of the alleged owners of the music have been invoked, it is thought, pretty much along the lines of the litigation undertaken by the John Church Co. years ago against the Columbia Co., the latter coming off victorious. Mr. Burns is inclined to the opinion that with the hazy precedents of Spanish adjudication the complainants will find it difficult to establish a case.

SECURE MORE ROOM.

The Victor Distributing & Export Co. Lease Extra Loft for Storage of Stock.

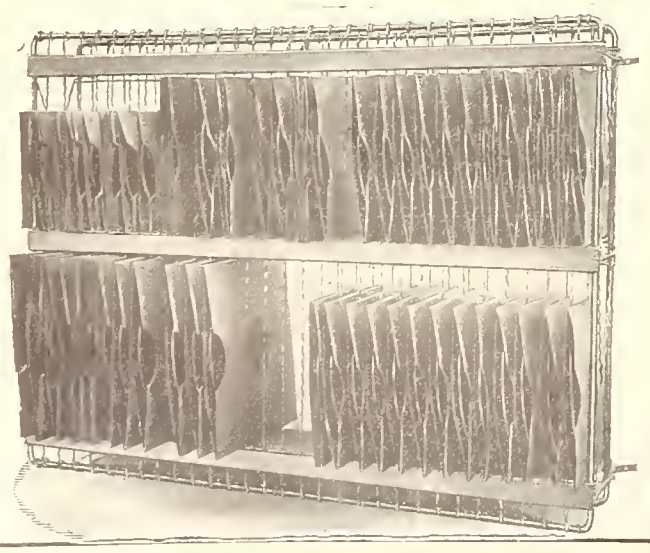
Replying to an inquiry respecting the situation and the outlook for the business of his company, J. T. Williams, general manager of the Victor Distributing and Export Co., 77 Chambers street, New York, said to The World recently: "We have taken an extra loft in the neighborhood for the storage of stock, which is now reaching us from the factory in better quantity than for some time. We could use still more, but suppose we must he satisfied with what we can get. Our new warehouse is not as commodious as we would like, but room on Chambers street is scarce. The local trade is rather unsatisfactory, it fluctuates; but out of the city it is good."

THE "WORLD" IN MEXICO.

"Usually I do not throw bouquets," said Walter Stevens, manager of the National Phonograph Co.'s export department, "but when I was in Mexico I heard the Talking Machine World so warmly praised that it is no more than right that The World should hear the story. In Torreon, Coah., is one of the most enthusiastic phouograph men you ever met in your life—hustling jobbers 'de los fonografos Edison.' They are in the drug business—the Warner Drug Co. is their name. They have a mezzauine floor in the store, where the Edison stock is exploited. A machiue is kept going constantly—not missing a minute from the opening to the close of the day. A mau stands in front, decked out in a uuiform, handing printed matter—a great variety from day to day—to passers-by, all relating to talking machines.

"One of the partners is a physician, and Mr. Warner is the enthusiast, and the doctor told me that any one coming in to have a prescription filled would be approached on the phonograph proposition by Mr. Warner before leaving. His assistant is a good second, and when the Talking Machiue World arrives they both go through it page by page, from cover to cover, never missing a line. Then they pass the paper along to the clerks, so that each in turn can get posted on the latest discoveries and the newest developments in machines, records, supplies and general requisites. I picked up The World to look it over, and Mr. Warner at once remarked 'That is a great paper, the best ever, and we read it not only with pleasure but profit as well. It caunot be beat; the paper keeps us in close touch." Then, as he concluded his narrative, Mr. Stevens picked up the May issue lying on his desk, and as he turned the pages, he remarked, "The World is certainly a great paper."

ANOTHER PROOF OF SYRACUSE WIRE RECORD RACK SUPREMACY

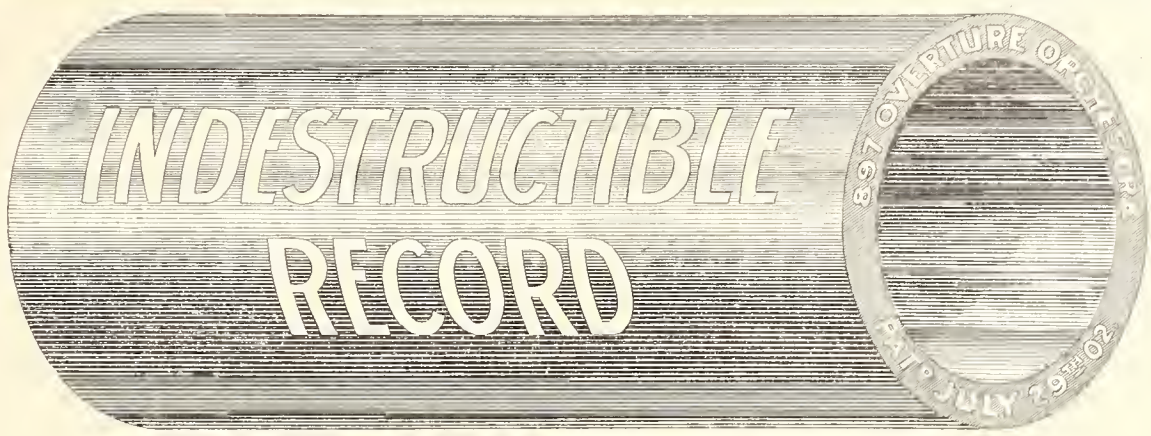


This illustration shows our new method of protecting Disc Records from dust and dirt, enabling you to file the records in the rack in envelope covering. This rack is the same as our No. 2 A with the addition of the envelope system.

As shown in view, a small additional outlay for wood shelving and the envelope covering insure the records cleanliness and safety. The top row is for 8 and 10 inch records; the bottom row accommodates 10 and 12 inch records. The shelving, at merely nominal cost, can be attached to all sizes of our Disc Record Racks.

If you have our Catalog compare this Rack with our 2 A Rack.
If you have no Catalog write for one and for further information.

SYRACUSE WIRE WORKS Foremost Makers of WIRE RECORD RACKS **SYRACUSE, N. Y.**



INDESTRUCTIBLE—That is the name by which our records are designated.

You can't destroy them through ordinary use.

They are absolutely unbreakable, and they never become scratchy or unmusical.

We give up no space to announcements, and we give twenty-five per cent. more music than any other.

The music is of the highest grade.

You will neglect your business interests if you fail to investigate the INDESTRUCTIBLE records.

They can be sent by mail without breaking, and your complaints about cracked records will end.

Our catalogue will be ready in August, and our price will be thirty-five cents per record, with usual discount to jobbers and dealers.

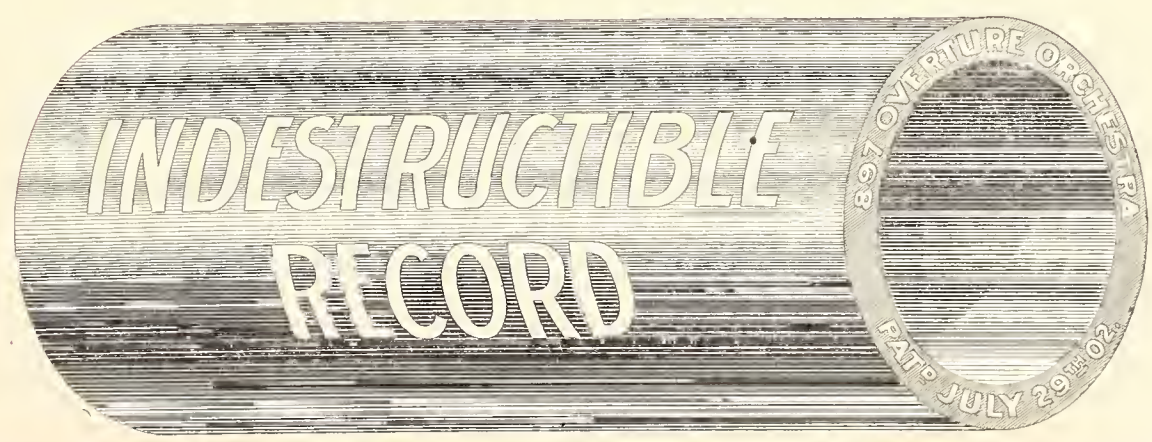
Our manufacturing facilities are unsurpassed.

Our monthly bulletin will contain only the best and latest music.

Every statement which we make we are in position to prove to the satisfaction of every talking machine man in this country.

The Indestructible Phonograph Record Co.

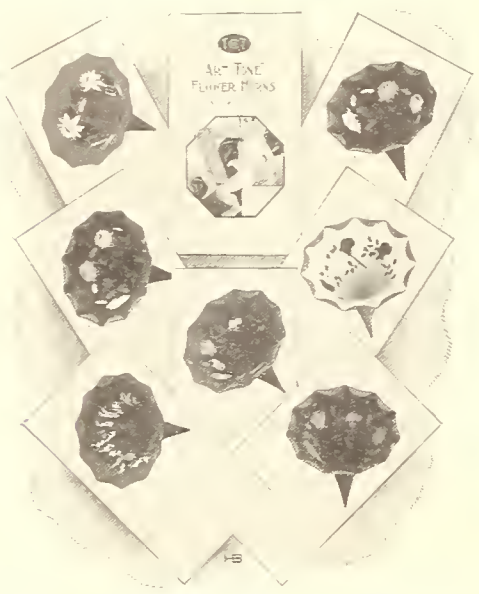
226 HAMILTON ST., ALBANY, N. Y.



"ART TONE" FLORAL HORNS.

A Line of Decorated Horns Which Will Appeal to a Critical Trade—Clever Descriptive Brochure in Colors Just Issued.

There is an unmistakable demand existing in every part of the country for a better grade of horns. This call is insistent and especially accentuated in decorated horns, and those concerns who have catered to customers along this line have been well pleased with the results. The Tea Tray Co., of Newark, N. J., pioneers in the talking machine accessory trade, after elaborate and expensive tests, have brought out a line of horns which they have very appropriately designated "Art Tone" floral horns. The dignity and beauty of these horns appeal at once to the best



class of trade. "Art Tone" horns are constructed of the finest materials that can be procured for the purpose intended. They are put together by experts and are fashioned carefully and expertly into a shape that is at once strikingly handsome and graceful. They are then carefully tested for soundness and strength, after which they are ready for the art department. Here is where "Art Tone" Floral Horns receive the greatest attention. They are hand-painted in a series of superb floral designs by a corps of expert artists. There are no transfers or decalcomanias used in any part or portion of the decoration. It has been estimated by the makers that it requires over five hundred touches of the artist's brush to bring one of these "Art Tone" Horns up to the maker's ideal. Here, again, the manufacturers show great concern. They are not satisfied that the "Art Tone" Horn should merely look well, but they make absolutely sure that they will wear well. These horns, after being decorated, have their colors "baked on" by a special process that makes the finish almost indestructible.

It is gratifying to the manufacturers to know that this new product has met with such strong indorsement from the trade. Scores of congratulatory letters have been received praising their work and expressing the opinion that "Art Tone" horns are bound to appeal to the most exacting class of buyers. The Tea Tray Co. have just issued in connection with this "Art Tone" product a new brochure which is charmingly illustrated in four colors and will be sent to any address free for the asking. The little illustration shown herewith is a reproduction of the cover, which is also printed in colors. The booklet is a very pleasing contribution to talking machine trade literature.

DENHAM CO.'S EXCHANGE PROPOSITION.

With the object of taking off the market all old and antiquated models of the small imported machines generally known as Lyra phonographs, the Denham Co. have made to the trade an offer which will undoubtedly induce a very large number of phonograph dealers to exchange old stock for new. The Denham Co. offer to accept from June 15 to July 31, inclusive, Lyra phonographs of any style and any make, no matter how old or out of date, in exchange for the company's latest model (known as the No. 6 model), on the same "5-to-1" basis, on which one of the leading manufacturers of records accept old records in exchange for new. Five of the new and up-to-date No. 6 models will be supplied at the price of four to every dealer who has sent into the Denham Co. a Lyra phonograph of any description. One hundred old Lyra phonographs pays for 100 brand-new ones, provided, of course, that 400 of the brand-new ones are ordered in addition at the time the hundred old machines are sent in. The price of the Denham Lyra, which was recently materially reduced, is not affected by this exchange proposition.

It is expected that the trade will avail themselves of this opportunity of getting rid of old stock without loss. On the other hand, the Denham Co. feel that this move will result in making the Lyra more popular than ever. There is no denying that when the Lyra phonograph business was in its infancy very large numbers of poorly constructed machines were put on the market, and that this has acted as a hindrance, with some dealers, to placing orders for the new and improved Denham machines.

The Denham Co. say that the more of the "old junk" that they can get off the market between now and the end of July the better pleased they will be, for it will mean a greatly increased market for the fall trade, which will make for the expense involved in accepting old machines in payment for new at present. "If we can persuade the trade to handle Denham No. 6 Lyras exclusively," said Mr. Denham the other day, "it will be a good long time before we will feel called upon to renew our exchange proposition."

The Pathe Freres Co. was incorporated in New Jersey this week with a capital of $1,000,000, for the purpose of doing a storage business.

E. D. Easton, president of the American Graphophone Co., accompanied by his family, left for Europe June 12.

W. P. Thompson, representing Pathe Freres, of London, passed through New York on Wednesday on his way to Canada on a business trip for his house.

Mr. Talking Machine Dealer

If you are located in New England—

We Can Save You Money.

Our facilities permit us to ship goods on first Express after order is received. We **wholesale exclusively**—consequently everything is shipped in original packages as received from the factory—no played-out records, no second-hand machines.

We manufacture a number of talking machine accessories among which are our famous Tray Outfits. (If you are not using this system for carrying records in stock it will pay you to write us.)

GOOD REPORTS FROM CINCINNATI.

Chat With Mr. Dittrich of the Wurlitzer Co.—Columbia Report—Van Co. Doing Well—Co-operation Necessary—Groene Co.'s Large Line—Device to Frighten Burglars—Ilsen & Co. in New Quarters—Smith & Nixon and the Reginaphone—McGreal's New Store.

(Special to The Talking Machine World.)

Cincinnati, O., June 9, 1907.

Cincinnati, as an entirety, has had an exceptionally good month in everything pertaining to talking machines and accompanying lines. Almost without exception every house in the city reports record-breaking business during the month just closed, and can see nothing to prevent its continuing, with further increase. All of which is very gratifying.

Mr. Dittrich, of the Rudolph Wurlitzer Co., was extremely enthusiastic, and declared that May, 1907, was the greatest month they ever had, except, of course, last December with the holiday demands, which naturally gives that month first place. "For example," he says, "the sales of the 'Victrola' are enormous, the supply entirely inadequate, and the demand is such that it is impossible to retain even a sample a great part of the time. The concerts giveu by Wurlitzers in Steinway Hall, on the Victor Auxetophone, are popular and effective. The Victor exchange proposition has proved its merits and has been a great stimulant to trade.

The Columbia Phonograph Co. report a rushing business, every department showing a wonderful increase over the business of last year. The retail and commercial business has outgrown present quarters, and plans are being perfected to take care of the great demand for Columbia goods at this store. The best goods, the best service, and courteous attention to every wish of the trade, does the trick.

The Van Phonograph Co., incorporated, and conducted by J. Salm—of the Salm Talking Machine Co., 639 Vine street—has launched out into a very prosperous business at 1225 Vine street. The territory heretofore has seemed to have few inducements to offer this line of trade, but the very gratifying results of the initial four weeks of this concern show conclusively that as much depends upon persistent business push as upon location. The machines handled are the Edison, Victor and Zonophone. If the present is an earnest of the future to any extent, the success of the new coucern is assured.

The persistency and comparative ease with which some characters take unfair advantage of credit concerns, to the detriment of dealers and patrons alike, calls for some concerted action on the part of talking machine dealers to prevent persons with neither desire nor ability to meet their payments from working their game upon more thau one dealer. Replevin suits are expensive and undesirable, while the experience serves only the one dealer involved. Co-operation on the part of credit dealers would stop the practice.

The Groene Music Publishing Co., at Race and the Arcade, are doing a fine and constantly increasing business in Edison, Victor and Zonophone machines and records, of which they carry a complete stock in seven lines. Mr. Groene is justly proud of this department of their business, and expresses his belief that the improvements recently made in the leading machines, the "degree of perfection" to which the record has been brought, insure a consideration by the public of the importance of the talking machine never dreamed of by its best friends a few years ago. Mr. Groene related au incident to the point: A musical friend who was impatiently awaiting the appearance of Caruso, the famous tenor, at Music Hall, decided to familiarize himself as much as possible with the wonders of that voice. He obtained the records of everything "Caruso," and finally went to hear the singer. His disappointment was genuine, and he assured Mr. Groene the next morning that the talker had left no worlds for the original to conquer. In fact, he'd rather hear the talking machine, whose records are made under the most favorable conditions, than to listen to the original, surrounded by the uncertain and often disagreeable accompaniments of a crowded auditorium.

It is not generally known, for obvious reasons, but one of our prosperous downtown merchants, residing in the East End, who has an abnormal antipathy for burglars, has arranged a device to thwart any designs they might have on him or his, which, so far as he is concerned, is original. In addition to the regulation electric connections with doors and windows, and an automatic station house call, he has arranged a talking machine of abnormal sound-making capacity in an appropriate spot on the first floor. Upon the slightest provocation on the part of a trespasser the said meddler's ears will be assailed, from some uncanny source, by something along these lines: "No!" (in an angry man's voice) "I will not shoot 'im in the foot; I'll shoot to kill, and I can do it." In a woman's loud but steady treble: "But think of his wife and—little ones." "He can thank nobody but himself—he ought to be home with 'em." Whereupon the burglar is supposed to take at one time a tumble and his departure. The thing will "work," no doubt; in fact, it has; for on one occasion when he was detained down town "on business," and had 'phoned his wife not to look for him, the possibly confused condition that prompted him to go home later resulted in numerous shocks to his jaded nerves and explanations hard to make to an over-inquisitive neighborhood and a patrol crew devoid of all sentiment or sympathy. Our genius confided this much for the benefit of those who would enlarge the talking machine's sphere of usefulness, that the record for this purpose was by himself and wife, immediately after she had gotten a new hat and he had received the bill for it. He says that the tones of such records of any man's voice will surprise that man when he hears it again, under certain uncertain conditions.

After thirty years in their former location, 25-27 W. Sixth street, Ilsen & Co. are now located in their new quarters at 615 Vine street, which they feel has numerous advantages over the old place, among them being greatly added wall

Central States Edison Dealers

¶ AM ready to look after your Phonograph needs from my Cincinnati wholesale place. My stock from beginning to end is new and fresh and my aim shall be to give dealers not only good service, but aid them in every way to make money with the line by giving them every assistance possible, and ten years' experience, first as road salesman for the National Phonograph Co., and four years of jobbing Edison goods exclusively in Milwaukee, should fit me for the successful work of middleman.

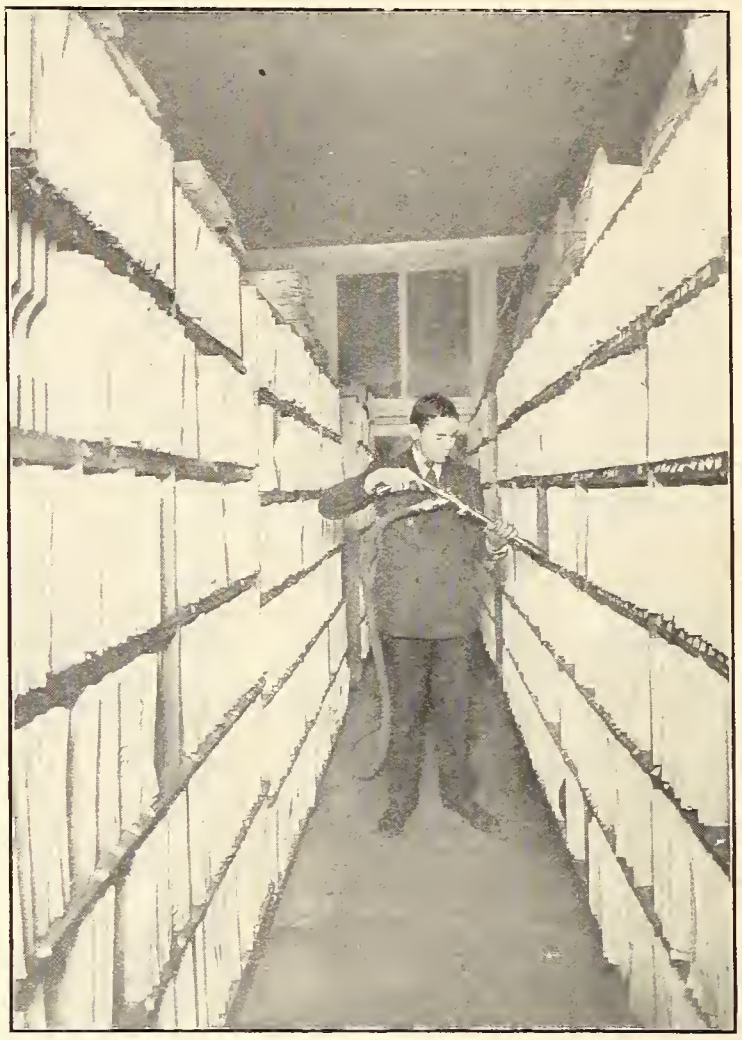
Removing Grit with Pneumatic Brush.



Daily Cleaning of Shelves.

VITAL IMPORTANCE

Do you know that the GRIT, which gathers in a Record groove chokes the reproduction, eliminates the finer notes entirely, shortens the life of the record by one-half, cuts your profit by damaging your stock and losing Machine Sales ?

Pneumatically Cleaned Records in Envelopes

Our entire stock is cleaned by subjecting the surface of each Record to the action of a Pneumatic Brush, which has a suction power of twenty-five (25) pounds, cleaning out the minute grooves, which no cloth can reach. After being cleaned the Record is placed in an envelope and reaches the Dealer in perfect condition.

WE STAND IN A CLASS BY OURSELVES. THE ONLY JOBBERS IN THE UNITED STATES WITH PNEUMATIC CLEANING APPARATUS

When you consider the immense value that clean, bright salable stock has, when compared with the damaged article—ordinarily carried by Distributors, and the complete shipments that we make, you will feel that you are getting 50% more for your money than when you buy from other sources.

It will pay you to buy from us, no matter where you are located. Send us your orders for Machines and Records.

Our Stock of Victor, Edison and Zonophone Machines and Records is the Largest in the West

THE RUDOLPH WURLITZER CO.

CINCINNATI CHICACO

space, so necessary for the accommodation of the large stocks of records and music which they carry.

The Smith & Nixon Piano Co., 10-12 East Fourth street, are handling the Reginaphone in a manner characteristic of the house, resulting in great difficulty in keeping the available supply in excess of the demand for these machines.

Lawrence McGreal, formerly member of the firm of McGreal Bros., of Milwaukee, and present sole proprietor, has opened an exclusive phonograph store at 29 East Fifth street, this city. A jobber of the Edison, he will retail the Edison and Victor machines with a complete line of records for each. "The goods," practical experience, business sagacity, and the judicious use of printers' ink, are the combination employed to win.

NEWARK TINWARE AND METAL WORKS.

A number of new designs of flower horns have been brought out during the past six months by the Newark Tinware & Metal Works, Newark, N. J., but their latest, the wood-finish sheet-metal horn, has won especial praise for its many excellent qualities of design, finish and acoustic worth. It is gotten up in oak and mahogany finish in different shades to match cabinets of talking machines. It is needless to say that horns of this kind do much to lend an harmonious effect to the talker, and make it a more æsthetic proposition. They are very proud of the prominent jobbers who handle their line, and always make it a point to make shipments promptly. They cordially invite visitors to New York to run over to their works.

To repeated requests that he make some records of his voice to be preserved by his admirers Thos. A. Edison has always turned a deaf ear. It is to be hoped that he will change his mind before long, so that the whole world may hear through the medium of the talking machine, the voice of the man who played such an important role in its creation.

NEWS FROM ALL POINTS OF THE COMPASS.

That tremendous sign at the junction of Broadway and Fifth avenue, New York, running the full width of the building on the roof, and ten or fifteen feet high, with "It Looks Good to Me—Edison Phonograph," and a reproduction of the listening old man and woman bent over the horn, is one of the most striking objects in that conspicuous neighborhood. Coming up Broadway no one can escape the bold lettering or the significance of its meaning.

Tom Murray, an attache of the Columbia Phonograph Co.'s traveling force in the wholesale department, with territory stretching from Cincinnati, O., to Bangor, Me., dropped into the New York headquarters early in the month. He added the Osgood Co., Boston, Mass., to the jobbing list, and laid the foundation for a number of excellent prospects in the same branch. Tom will make one more trip West before returning to his chateau for the summer vacation.

J. W. Scott, who covers New England for the National Phonograph Co., bagged a $10,000 order in Manchester, N. H., recently. The goods have already been shipped to the happy Edison jobber.

Justice De Witt, proprietor of the Byrnes Phonograph Co., with three stores in New York City, is reaping the benefit of a strong business gained by up-to-date methods and adequate stock. He handles Victor, Edison, Columbia and Zonophone lines, and has special facilities for high-grade repairing. He also handles the Edison kinetoscope and films.

J. Victor Castaran, of Castaran Hermanos, Buenos Ayres, A. R., S. A., is regarded as one of the best informed men in the business in the Republic. As an active mercantile man in New York for five years, he absorbed the great American spirit of progressiveness, and is putting it in practice down in the wonderfully expanding Argentines. The firm handle the Zonophone line, with which they have scored a remarkable success.

Landay Bros., Victor distributers, New York, have started a campaign of daily newspaper advertising that is to be commended. The ads. are prepared by a specialist under the expert supervision of this highly successful firm, and are changed regularly. The style of display and crisp letter-press attract more than usual attention.

The following firms were added to the list of Edison jobbers during May: John B. Varick Co., Manchester, N. H., who placed an initial order of $10,000; McGreal Bros., Cincinnati, O. (branch). These firms were placed on the suspended list: J. Raymond Smith, San Francisco, Cal.; Guy Furniture Co., Worcester, Mass.; E. & J. Tierney, Bay City, Mich.

The J. Frank Walker Music Co., Joplin, Mo., have sold out to the J. W. Jenkins' Sons Music Co., Kansas City, and the latter will hereafter conduct a branch talking machine store there under the management of J. O. Adams. The building in Joplin will be remodeled and a passenger elevator installed. Four men will travel out of the Joplin jobbing branch.

J. G. Piper, manager of the Magruder Talking Machine Co., Nashville, Tenn., has opened a branch house for that company in Grand Rapids, Mich. Mr. Piper will remain in Grand Rapids for about two months and will visit his old home near that city.

Koehler & Hinrichs, Edison and Victor job-

NEW EXCHANGE PROPOSITION

From June 15th to July 31st, inclusive, ***we will accept "Lyra" Phonographs of any make or any model*** (no matter how old or out-of-date) ***in exchange for our Improved No. 6 Lyra,*** which is our latest 1907 model and is the best Lyra Phonograph ever manufactured.

A splendid opportunity to make room on your shelves for the Denham No. 6 Lyra and to get rid, ***without loss,*** of all antiquated, out-of-date and inferior types.

We stake the reputation of the Lyra Phonograph on our new No. 6 Lyra. We wish to clear the market of all inferior models. Therefore ***full credit*** will be accorded for ***every*** Lyra Phonograph sent in to us up to and including July 31st, whether purchased from us or not.

Write TO-DAY for full particulars.

Have you seen our new large-sized Denham Grand Opera Reproducer—the one with the curved neck and indestructible dome?

Have you seen our new dome or cap, with sapphire-colored reproducing point, and so constructed that the reproducing point can neither fall out nor be pushed in?

THE EDWIN A. DENHAM COMPANY, Incorporated

Main Offices: 498-500 BROADWAY, NEW YORK Telephone { 7721 / 7722 } Spring

bers, St. Paul, Minn., are enlarging their stock rooms so as to carry 100,000 records.

J. F. Schmelzer & Sons Arms Co., Victor and Edison jobbers, Kansas City, Mo., observed the semi-centennial anniversary of the establishment of their business on April 30. When they began in Leavenworth the talking machine had never been heard of, and the telegraph was just coming into commercial use.

Previous to the arrival in Belfast, Ireland, of the Zancigs, the wonderful telepathists, T. Edens Osborne, the well-known and progressive talking machine factor of that city, gave talking machine demonstrations of their performance, the actual voices of the Zancigs being reproduced clearly and distinctly. The demonstrations were unique and attracted a great deal of attention, being given for ten days.

The commercial department of the National Phonograph Co. has recently opened three new branch offices. These are located at Newark, Cleveland and Washington, D. C. The Newark office is located at 321 Union Building, and is in charge of N. R. Compton, formerly connected with the New York branch. The Cleveland office is located at 511 Schofield Building, and is in charge of J. O. Hanna. The Washington branch is in charge of C. T. Wilber, also connected with E. F. Droop & Sons Co., 925 Pennsylvania avenue, N. W.

Unless something unexpected occurs within the next month, there will be no exhibition of Edison Phonographs at the Jamestown Exposition. C. B. Haynes & Co., Edison jobbers at Richmond, who expected to have an exhibit of Edison goods at the Exposition, was compelled by circumstances to abandon the plan. None will be made by this company direct.—Edison Phonograph Monthly.

A new five-story concrete factory building will be erected on property recently acquired by the Edison companies in Orange, N. J., and which completes their ownership of the entire block. The structures under way are being pushed rapidly to completion.

The National Phonograph Co. have made arrangements whereby they will allow twenty-five per cent. discount on all commercial outfits purchased by schools or will rent same at the rate of $20 yearly. The special contract provides, however, that the outfits must be used solely for instruction purposes. The offer comes in response to the demand among teachers for phonographic dictation outfits to assist students in increasing their speed in both stenography and typewriting.

It looks as though Star disc records have come on the market to stay, acording to the reports of increasing business received from Hawthorne & Sheble Manufacturing Co. This phenomenal success can be summed up in a few words, making popular selection, rejecting everything that has not a clear, natural tone, and using the best selected material to insure perfect wearing qualities.

In a fire which destroyed three buildings on North Eighth street recently the Northeastern Phonograph Co. suffered the loss of their entire stock. The blaze began in a pile of rubbish in the basement of the phonograph store.

Nahum Stetson, secretary of Steinway & Sons, one of the world-famous firms in that line, has a Victor talking machine in his private office in Steinway Hall, New York, for his personal entertainment and diversion.

C. H. Rose, informs us that contrary to the report recently published he has not bought out the talking machine department of Kohler & Chase in Seattle, Wash., that department being still owned by the latter firm. H. P. Rothermel is the manager, and an excellent business is done in both the wholesale and retail ends. Mr. Rose has, however, purchased the Kohler & Chase stock of small goods and sheet music, and conducts the business as sole proprietor in their quarters at 710 Pike street. When the new "Temple of Music," now being built for the firm, is completed Mr. Rose will have a liberal space on the ground floor, and will greatly increase his line.

SYSTEM AND THE SALE OF RECORDS.

How many dealers and jobbers realize the importance of using the best system for carrying a stock of cylinder records? The tray system; whereby the Rapke label with number and title is plainly shown on the front of each tray, acts as a wall catalog, enabling record customers to point out the record wanted, and the boxes themselves act as a silent salesman. Dealers who have adopted this system have almost immediately doubled their record sales, and there is no chance of the customer becoming discouraged by a long hunt for a certain record wanted, which after considerable delay is reported as not in stock.

The up-to-date dealer sells records just as cheap and therefore gets the business. The Blackman Talking Machine Co. are selling a folding tray for cylinder records, which are shipped flat anywhere at very little expense and at prices whereby a complete record tray with Rapke label costs the dealer less than one cent. Jobbers are offered very liberal discounts, and through a special arrangement the Blackman Co. is enabled to sell jobbers the Rapke labels at the regular jobbing discount. Dealers can obtain these goods from their jobbers, but either jobbers and dealers will receive free samples of the tray and label upon request, as per the Blackman Co.'s advertisement in this issue.

The National Phonograph Co. are constantly adding to their catalog of foreign records, a list recently sent out containing 90 German, 45 French, and 14 Italian selections.

TALKERS IN THE SOUTHWEST.

The Musical Critic of a Los Angeles Paper Dilates on the Growing Popularity of the Talking Machine in That Section of the Country —Notable Personalities Who Are Talker Enthusiasts—Some of Their Favorites.

The editor of the musical department of the Los Angeles (Cal.) Sunday Times is greatly impressed with the musical possibilities of the talking machine, and the growth of sales in the leading makes of machines and records. In a recent issue of that paper appeared the following article regarding those popular music makers:

Southern California now beats the world for "canned music"—the music which Sousa complains about, and which he patronizes so faithfully, both to the continued edification of his many admirers and his own financial profit.

The talking machine trade, which represents all grades of music, from such perpetrations as "Dearie" to Wagnerian music drama, has grown in this city to gigantic proportions.

A prominent dealer said yesterday that without exception, the enthusiasm of the Southwest over "records" was not equaled in any other part of the United States. Trade journals are taking it up. Eastern manufacturers are paying their best attention to Southern California business.

Several weeks ago a single house in this city received one shipment amounting to five carloads.

Not long ago a single consignment of records here amounted to 450,000 records.

The purchase of new records by patrons, not counting the introduction of new customers, amounts in the big local music stores to many hundreds of dollars each day.

These facts are significant, and are as novel in the musical field as was the sudden rise and enormous gain in popularity of the automobile in the realm of outdoor pastimes.

A remarkable epidemic of talking machine fever has developed among men who are locally prominent.

Fred Eaton, for example, has toted an investment of half a thousand dollars to Inyo, and with it he has suddenly become a convert to fine art. His personal favorites are the stars of the Metropolitan opera company, though he says he has taken "a little foolish stuff" to amuse a certain coterie of his country auditors.

Arthur Letts has turned into a Caruso crank. His beautiful machine plays nothing else, practically, and every preserved specimen of the great Italian tenor's voice has found a niche in his private musical laboratory.

Howard Huntington has turned impresario, and gives talking machine concerts at the Jonathan Club. Recently he had an audience of 200 men at one of his "affairs." His list of records is declared to be selected with a connoisseur's taste.

Nat Goodwin has developed a fad for classical music. His contraction of the disease came during his recent visit to Los Angeles, and he also has an unusually good bunch of records.

Colonel G. Wiley Wells, of Santa Monica, who is confined to his house by invalidism a great deal of the time, is credited with possessing the most valuable collection of all, valued at several thousand dollars, and representing practically every high-class record that has been turned out by the leading companies.

Mrs. T. S. C. Lowe is another enthusiast, and has in her collection more than 1,500 choice records.

Dr. H. Bert Ellis is a devotee of the "old-time" music, and has an unusually good representation of this, besides possessing a very good grand opera repertoire.

William Richardson, one of the best-known salesmen, tells of many queer tastes. A prominent physician here bought a $200 machine for nothing, but records in Russian and ancient Hebrew. Later he came back mysteriously for fifty blank discs—presumably to try his own tongue in these strange pronunciations.

A pretty young woman, just a debutante, owns an extensive set of Chinese records—and nothing else.

One musician has a fine list of men's voices and instrumental numbers, but will not listen to a woman's voice in any machine.

Another man buys nothing but women's voices.

One retired capitalist will never depend upon his own judgment in buying records for use in his own library. His specimens are all selected by other people.

And so the diversion goes.

RECORD REPRODUCTION PERFECTED

By Means of the Phonometer, the Latest Contribution to the Development of the Talking Machine, Commands Attention.

With the growth of the talking machine business many and invaluable are the inventions and improvements made for the development and enhancement of sound reproduction. Few, indeed, besides the experts possibly, give but passing attention to the speed of the machine. There is a fixed number of revolutions of the disc that develops the actual quality and pitch of the voice or instrument recorded. It is seldom, however, so it is claimed, that the regulation speed is maintained. As any arrangement or device possible to invent that operates on the governor; or, in other words, the present speed indicators and regulators used cannot remain accurate, it is claimed, the wearing of the parts through friction, etc., naturally causes the device to become inaccurate. To remedy this defect is the object of the Phonometer, a device illustrated and described on another page of The World. This speed meter, the first and only one of its kind, made on the principle of centrifugal force, and therefore accurate, when attached, instantly indicates the number of revolutions per minute that the machine is running, and the connection on the dial of the machine can be made accordingly before playing the record. This little instrument is spoken of as indispensable if the true individuality, lifelike realism and peculiar quality of the record is to be had. The Phonometer goes a great way toward making records more salable through the perfect attainment in voice reproduction, and should become an invaluable article to every dealer and talking machine enthusiast. It is manufactured by the Phonographic Music Co., 39 South Ninth street, Brooklyn, N. Y.

James S. Boyd, the Columbia Phonograph Co.'s agent in Janesville, Wis., claims to have been presented by various corporations, including the Standard Oil Co. and the Southern Pacific Railroad, and is endeavoring to interest government officials in his cause.

In "The Spoilers," now playing on the road, the villain, pursuing the heroine to a dance hall, hisses:

"To the Victor belongs"——

"Yes," interrupted the comedian, "to the Victor belongs his master's voice—and they've got it copyrighted."

The Frog Book

"RANIDAE" gives you the practical knowledge how to breed, feed and raise Frogs. The book is interesting and tells you of a new industry that returns large profits. Price, postpaid, 25 cents (Coin).

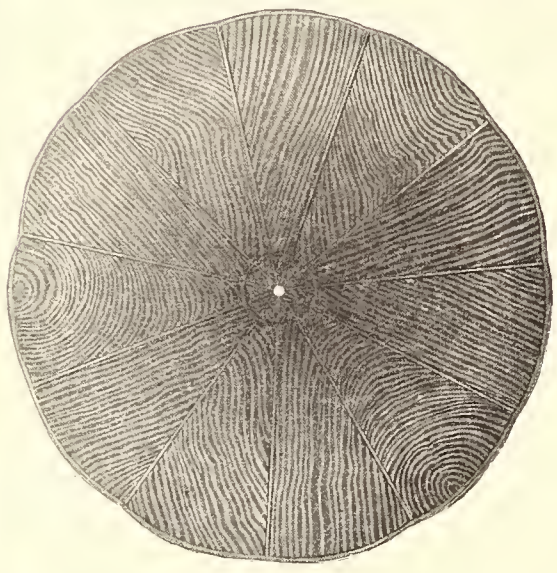
Horns Which Bear

THE STANDARD TRADE MARK

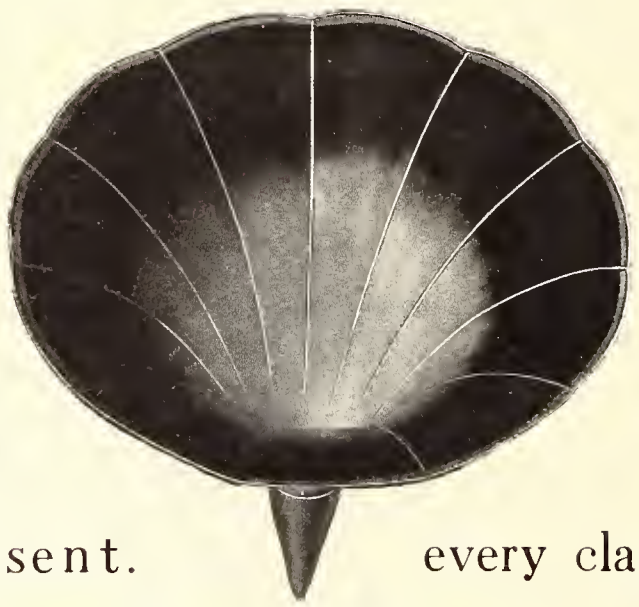
TRADE STANDARD MARK

Have Proven Most Satisfactory In Every Respect



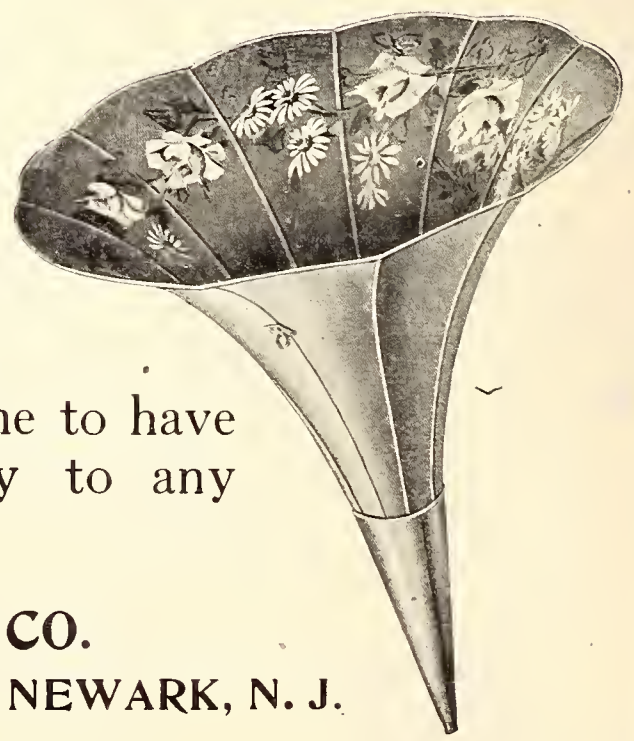
Dealers and jobbers who have sold them have not hesitated to express themselves in terms of warmest satisfaction regarding the results obtained from the Standard products. We have made the manufacture of horns for many years the object of study and careful experiment and we know of nothing higher in workmanship and material obtainable in any product.

It is the grade that counts. With the Standard there is no fading, cracking or flaking off. Our new wood finish horns are perfect reproductions of the various fancy woods which they represent.



They have proven excellent sellers. You will be convinced upon examination that the Standard horns are unsurpassed in appearance. They are exquisitely finished, and will live up to every claim made for them.

It has been our aim to protect jobbers to the fullest extent. We are always producing something new and novel in the horn line. Watch our announcement next month for something entirely original in the horn line. We issue a brochure in which our various horns are reproduced in colors. It is a very handy little volume to have at hand and we will gladly mail a copy to any dealer free for the asking.



STANDARD METAL MFG. CO.

Factory Address, Jefferson, Chestnut and Melbourne Streets NEWARK, N. J.

Office and Salesroom at 10 Warren Street, NEW YORK, N. Y.

During the Convention in Chicago our Mr. W. A. Lawrence will make his headquarters, at the Auditorium Annex, and will have a new horn which has never been on the market to offer to the trade. It will pay dealers to step in and look it over.

TRADE NOTES FROM PACIFIC COAST.

Kohler & Chase Activity—Bacigalupi Pleased With Edison Records—Columbia Co. Doing Well With the Marconi Records—A Talk-o-Phone—Eilers Suit—Street Car Strike Has Hurt Business Somewhat—Mauzy's New Demonstrating Rooms—Other Items.

(Special to The Talking Machine World.)

San Francisco, Cal., June 5, 1907.

Kohler & Chase uow have the arraugement and fixtures of their talking machiue room about completed, and the department is keeping busier than was expected. Many records are still being sold to people who were given old Peerless machines last year, on conditiou that they should buy $35 worth of records. This deal, they say, is paying for itself handsomely.

Peter Bacigalupi has just received his Edisou records for June, which have been forty-one days en route. They are a particularly good lot, and the demand for them is good, but collectious are fouud to be rather slow at present.

The new Victor records have also arrived, and are being advertised by Sherman, Clay & Co., and Clark, Wise & Co. R. A. Wise says that talking machines are the most profitable part of the business at present.

The Columbia agency is doing a big business in Marcoui records, which have already gained great popularity in this city, though the uumber of selections is limited, and the stock is short. These Marconi records are also taking a good hold in Portland, where the Eilers brauch at Spokane, Wash., is having difficulty with the Talk-o-phene Co. Charles H. Calder, of the latter company, has brought suit against the Eilers house for $1,680.70, alleged to be due on shipments of talk-o-phones.

George A. Heidinger, manager of Eilers piano house, said last night: "The Talk-o-phone Co. has not lived up to its coutract, and when it does we are willing and ready to settle. Until that time we propose to fight. This is an old case and we have beaten them in San Francisco and Portland, and we will beat them here. It is a case that in no way interests the public."

The street car strike has hurt the talking machine business materially in some of the stores, but at others it has not been felt to a very great extent. During the first few days after the strike began little or no business was doue, but during the past week there has been a considerable revival at some of the stores where business is now declared to be almost normal. The sales of records seem to have been hurt less than the sales of machines. This is probably due to the advent of a number of new things in records.

The new store of the T. S. McKinley Co., at Reno, Nev., has been provided with suitable talking machine quarters and a good stock of Victor, Columbia and Edison machines is being put in.

Byron Mauzy has just completed the installation of four glass trying-out rooms for his talking machine department. These are of the latest sound proof pattern and have put the Mauzy talking machine department on a par with the best in the West. Manager E. H. Youse, of this department, reports that the Allen horn for talking machines contiuues to meet with great favor and the demand calls for larger importations.

Kohler & Chase have been enlarging and improving the talking machine department at their Oakland branch store until it is now up to the requirements of their growing trade. This week the iustallation of a lot of new racks was completed.

DETROIT JOBBERS WILL ATTEND.

Annual Meeting of the Central States Talking Machine Jobbers' Associatiou to be Held in Chicago—Columbia Business Ahead of Last Year—Other Notes of Interest.

(Special to The Talking Machine World.)

Detroit, Mich., June 10, 1907.

E. Percy Ashton, manager of the American Phonograph Co.'s store in this city, who is secretary of the Ceutral Talking Machine Jobbers' Associatiou, says that he expects that about sixty to seventy-five jobbers in Central United States will attend the annual meetiug of the association at the Auditorium Hotel, in Chicago, on June 17 and 18. Mr. Ashton said that mauy important thiugs would be considered by the association, the nature of which he declined to divulge, however, as at the last convention a press committee was appoiuted to have charge of all publicity. The association expects to extend its scope so that talking machine jobbers from the Rocky Mountains east to Buffalo may be taken in as members. The American Phonograph Co.'s store, Manager Ashtou says, is doing a good business, and the outlook for the summer is excelleut.

The Columbia Phonograph Co.'s Detroit stores have received shipments of the new toue arm cylinder talking machines, which are a vast improvement over the old statiouary arm machine. The manager of the Woodward avenue store says the May business in Detroit was 10 per cent. ahead of the corresponding month that year.

Grinnell Bros. will be represented at the Central Talking Machine Jobbers' Association in Chicago, probably by C. A. Grinnell.

DEVELOPING SUMMER TRADE.

Some Excellent Remarks by Editor McChesney.

Though the appended is written to exploit the phonograph, and is taken from Edison Phonograph Monthly, the sound advice of Editor McChesney applies to every line of talkiug machine, as well as the incidental essentials:

"There was a time when the phonograph was looked upon as a winter entertainer, to be used when the evenings were long and people had to stay indoors. This is still perfectly true, but it is just as much an entertainer in 'the good old summer time' when the evenings are warm and too fine to waste iu sleep, and the dealer who believes this, and talks his belief to his customers, will find no falling off in his sales during what is supposed to be the dull season of the months. People take vacations to find amusement and rest; and as the amused holiday seeker is the rested one, the Edison phonograph and records cannot be left behind. From what other source can the family at some lonely lake shore or mountain resort obtain dance music or songs with choruses at an instaut's notice?

"Dealers should not regard the good record customer as lost because he or she happens to be staying at a distance. The owner of an Edison phonograph is certain to acquire the Edison record appetite and it must be gratified as much in summer as in winter. Seud the monthly list of records to your customers and see that they carry away a good stock of them before they go. They will be bought from some dealer somewhere, and, as the popular song has it, 'it might as well be you.' Every night of the summer the voice of the phonograph is heard making melody for all sorts and conditious of men. It is certain that the sale of records does not stop in summer, and if it does not, some enterprising man is makiug money, while his fellows are waiting for winter profits."

LAWRENCE McGREAL NOW SOLE OWNER.

(Special to The Talking Machine World.)

Milwaukee, Wis., June 8, 1907.

On May 14, Lawrence McGreal bought out the interest of his brother, H. J. McGreal, in the firm of McGreal Bros., Milwaukee, together with goodwill, etc. It is understood that for some time Mr. McGreal will continue to use the name McGreal Bros., at Milwaukee, but eventually adopt his own instead.

Lawreuce McGreal is an old-time talking machine man, having been identified with this business for about ten years, first as manager of the talking machine department of Conroy Co., of St. Louis, and for four years previous to opening at Milwaukee, western salesman for the National Phonograph Co. Mr. McGreal recently opened a wholesale and retail branch at Cincinnati, O.

Charles P. Young & Co., a firm of law reporters, who have been using Columbia commercial graphophones in their work for some time past, have done away with typewritten copy entirely, the linotype operators putting the matter in type direct from the machine.

THE ACME DIAFRAM

combines all the qualities required of the perfect one without the objectionable features.

NO { Blast, Rattle, Wear, Squeak } MORE { Volume, Range, Natural, Sweetness } EMBODYING { Depth of Tone, Indestructibility, Clearness, Uniformity }

Will fit either the Columbia or Edison reproducer, and give a volume and naturalness of tone never before attained. Has proven a repeater from the start. *Price 25 cts. or $1.00 per dozen.*

Will furnish dealers free sample if requested on business letterhead.

PUCCINI STILL DISCUSSING

The Copyright Question—Says He Is Writing an Opera That Will Deal With the Life of Marie Antoinette.

(Special to The Talking Machine World.)

London, England, June 7, 1907.

Giacoma Puccini, the well-known operatic composer who has been spending a short vacation in this city, states that he is writing an opera which he expects to finish next year, dealing with certain incidents in the life of Marie Antoinette. The subject is a good one, and doubtless will afford inspiration to this remarkable writer. In speaking with the reporters here he dwelt upon the reproductions of his music by talking machine record manufacturers pretty much along the same lines as in his talk which appeared in The Talking Machine World prior to his departure from New York for Europe. These views, by the way, were successfully refuted by Messrs. Cromelin, of the Columbia Co., and Pettit, of the Victor Co.

In the course of his remarks, Signor Puccini said: "My music has been played and recorded on paper and plates, but I have not benefited a sou. Now, if I were to make a copy of one of these films bearing a record of my music, for which, mark you, I have given no permission for transcription, I could be sued for damages. This is rather a humorous view of the injustice of the copyright laws which I consider very unfair to musicians who have to make a living from the products of their brains. You can hear selections from 'Madame Butterfly' and 'La Boheme' on these instruments, but I, who composed the works, do not receive a penny from their reproduction."

BLACKMAN GIVING AWAY FREE SAMPLES.

Almost every jobber and hundreds of dealers are handling the Blackman Talking Machine Co.'s line of "Place" Automatic Record Brushes. It is the desire of this company, however, to have dealers and jobbers sell them, and in order that they may first become acquainted with the merits of same, they are making a special offer, as per their advertisement in this issue, whereby dealers or jobbers who fill in and return the coupon will receive a sample brush, free of charge This is a very liberal offer and the trade should take advantage of it.

F. K. DOLBEER TO ADDRESS

The National Piano Dealers' Association During Its Convention in Chicago—Will Read a Paper on "The One Price System"—Also Attended Convention of Credit Men.

On June 6 F. K. Dolbeer, manager of the National Phonograph Co.'s credit department, left New York to attend the 12th annual meeting of

F. K. DOLBEER.

the National Association of Credit Men, held in Chicago, June 12, 13 and 14, at the Auditorium Hotel. Mr. Dolbeer went as a delegate from the New York association. After spending a few days in Iowa subsequently he returned to Chicago to attend the convention of the National Piano Manufacturers' Association and the National Piano Dealers' Association, June 19 and 20, when he will make an address before the meeting of the dealers on the "One Price System in Kindred Lines; Its Benefits to the Manufacturer, Dealer and the Body Politic."

OFFICIATED AT HIS WIFE'S BIER.

Preached the Sermon, Read the Scriptures and Offered Prayer.

(Special to The Talking Machine World)

Omaha, Neb., June 10, 1907.

William T. Leaman, a wealthy retired carriage manufacturer of Omaha, preached the sermon, read the Scriptures and offered prayer at the funeral of his wife at his country home, six miles east of Council Bluffs, to-day, while a phonograph sang "Nearer, My God, to Thee," "One Sweetly Solemn Thought" and "I Shall Meet Him Face to Face."

The service at the bier of his dead wife was conducted entirely by Mr. Leaman, with the help of the phonograph, neither minister nor singer being permitted to assist. The husband's sermon was an impressive eulogy and a biography of his dead wife.

Howard Wurlitzer, of the Rudolph Wurlitzer Co., Cincinnati, O., who has been abroad with his wife, returned via the "Deutschland," of the Hamburg-American Line Thursday, May 23.

An official memorandum has been gazetted that the National Phonograph Co. will increase their traveling force fully twenty men, making thirty as the total. No appointments have yet been made.

Be Sure and See the Announcement of the

VITAK

in Next Month's Issue of the Talking Machine World

PRACTICAL SUGGESTIONS AND COMMENTS.

RECORD USED SEVEN THOUSAND TIMES.

A subscriber to The World in the Lone Star State writes as follows: "It may interest you to know that I have a customer in this city who has used an X P record for over 7,000 times, and he claims that it is still satisfactory after four years of use. Of course he has taken the greatest care of his records; kept them under cover, and always dusted them before using. Moreover, he is somewhat of an enthusiast, and believes not only in getting the best effects possible out of the records, but in keeping the machine in first-class condition."

This is certainly an excellent showing, and furnishes ample proof that where care is taken of records, whether disc or cylinder, they will last much longer than the average person supposes. The trouble is that the majority of users of talking machines do not become interested enough in them, and expect both machine and record to last without care or consideration. The result is a poor running machine, and a reproduction that does much to injure the reputation of the talking machine and the business, as a whole. We would be glad to learn if any dealer can report a record as long in use as that mentioned by our Texan friend.

VOCAL EXPRESSION AND CHARACTER.

A talking machine expert connected with one of the leading laboratories in a chat with the editor of this department the other day had something interesting to say upon character as revealed by people's voices. When asked which vocal expression was the surest guide to character, he replied promptly, "the laugh," and added: "It is as absolutely impossible for a bad man or woman to laugh the laugh of a good one as it would be to assume an entirely similar facial appearance. Laughs may be cultivated, but so delicate is the ear in the perception of tones that a false note, which is always present, is instantly detected. The voice and manner of the honest man can be counterfeited by the rogue with perfect success, but the moment he laughs any decently educated ear detects the counterfeit. Those who do not laugh naturally and pleasautly, and without producing a discord or a false note, should never be trusted, no matter what their position or how much evidence there may be in the favor of their assumed honesty. Such a person will infallibly betray the moment that betrayal is easy and profitable."

PIANO AND HARP RECORDS.

F. C. Walsh writes: "Recently I have had quite a few calls from customers for harp records, and also for piano records. Do you know if any of them are listed?"

It would be best to write the National Phonograph Co. and the Columbia Phonograph Co. for specific numbers of their piano and harp records. Off-hand we may say that the Columbia Co. some time ago listed a very excellent violin and harp duet made on a ten-inch disc record, while the National Phonograph Co. have some piano records that are admirable, notably one to which we referred before, "Believe Me, If All These Endearing Young Charms," that beautiful Irish air of Moore's, which has won admirers the world over. It is splendidly played, the melody being well sustained despite some intricate variations.

MOTORS SHOULD BE WATCHED.

The motors in talking machines should be carefully watched, because among the first things to show signs of wear is the little pinion that works in the gear attached to the drum or spring. This matter, by the way, was referred to in part very clearly in the London department of last month's World, in the course of a contribution by Philip Neale. It is a well-knowu fact that this small cog wheel gets the full pressure of the spring and communicates it to the other gears and pinions that form the motor. Usually it is made of brass, but even then the cogs wear down after a time. First they wear thin, then they become little more than knife edges, until no longer able to withstand the severe pressure of the spring they "strip" or bend over flat and the motor "races" like a propeller out of water. The first intermediate pinion should be watched more closely than any other part of the motor. The teeth and the axle should be kept well lubricated, and its life be lengthened. As Mr. Neale says, a faulty governor is more often responsible for an irregular motor than any other cause. If the records are not being reproduced in proper time and pitch, it is always best to examine the governor, as it is the all-important factor, inasmuch as it exercises complete control of the main spring, and the duties of the main spring are to drive the motor or moving parts. To dealers having trouble in this connection it would be very well to study Mr. Neale's article, as he dilates most interestingly on the especial functions of the governor and the danger of loose pinions.

ADJUSTMENT OF SOUND BOX.

Many of the complaints regarding records wearing quickly will be obviated if the sound-box be looked after. Invariably when records wear out too rapidly, the trouble is that the sound-box is too heavy. It ploughs into the sound-wave channels, and ruins the records. It is best that the sound-box should give only a light pressure on the needle. Moreover, it will be found that it gives forth a sound quite as loud as if a heavy sound-box had been used, thus adding to the durability of the record, and the pleasure it gives the user. There is no question that the lighter the weight on the needle the longer must the record wear, and to achieve this without diminishing the volume of sound, the needle arm springs would require to be finely tempered and adjusted.

Whenever complaints are made to dealers regarding the wearing out of records, it will be well, in case the dealer is not competent to pass judgment upon the trouble, to communicate with the manufacturers, who will be willing to suggest

HERM. SCHRODER, Pres.
C. WIESAND, Vice-Pres.
L. JOSEPH, Sec.
M. VON DER OSTEN, Treas.
HUGO SCHRODER, Supt.

An Opportunity is herewith offered to the Talking Machine Trade to Invest in the Stock of a Corporation which will Revolutionize the Phonograph Business.

Mr. Schroder's invention does away entirely and absolutely with the horn.

The New Phonograph consists of the usual cabinet. With the exception of the sound arm the entire instrument will be made of wood. As a result, the brassy sound now heard in even the most expensive Phonographs is entirely eliminated. The human voice and musical sounds from the new instrument are heard with remarkable clearness and purity.

Owing to the absence of a horn the disc will be covered, this eliminates the scratching sound, now so plainly heard.

The Company intends to build two machines, one disc, the other cylinder.

The disc and cylinder records now supplied by dealers can be used on these instruments. Owing to the construction, the machines can be packed for transportation much more economically than the present one. With all these advantages there is no doubt that Schroder's HORNLESS will be preferred by the public.

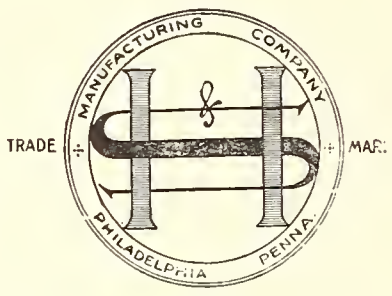
The Company is incorporated for $500,000, and starts in business absolutely untrammeled and free from debt. A limited amount of stock is herewith offered to this trade at par, $100 per share.

TALKING MACHINE MEN are earnestly requested to investigate this proposition, and to come and listen to the new machines if possible.

THE H. SCHRODER HORNLESS PHONOGRAPH MFG. CO., New York City

WHEN you purchase Horns, Cranes, Horn Stands, Cases or any other Talking Machine Supplies, be sure they bear this trade mark.

It refers to goods manufactured by
HAWTHORNE & SHEBLE MFG. CO.



It Means High Standard of Quality.

STAR DISC RECORDS

Represent the same High Standard of quality as we have always employed in our product.

We believe that every dealer purchasing a sample dozen Star Records will stock the records at once.

THE SELECTIONS ARE CHOICE. THE TONE IS CLEAR AND NATURAL.

THE WEARING QUALITIES ARE UNEXCELLED.

Hawthorne & Sheble Mfg. Co.

PHILADELPHIA, PENNA.

a remedy for the trouble. It is obvious that it is to the interest of manufacturers of both machines and records that their products should be absolntely satisfactory, inasmuch as it adds to the prestige of their wares. It means a larger sale for themselves and for the dealers, hence the importance of noting reasonable complaints and transmitting them to headquarters. Of course there will always be complaints made by "cranks" which must be received conrteously, but they should require little further consideration.

REGARDING SPEED REGULATION.

In answer to several inquiries from widely separated sections of the country regarding speed regulation of talking machines, we may say that we have in previous issues of The World given several suggestions as to how speed may be regulated. They are worth looking up. The latest improvement in this connection, however, is the phonometer, which is referred to elsewhere in this issne. The manufacturers properly claim that the voices, or at least the individual characteristics of the singers, cannot be faithfully reproduced unless the talking machine on which the records are reproduced are regulated exactly as when the singer made the record. This, it is claimed, the phonometer will accomplish. The device has been highly praised by those who have examined it.

PLAYING FOR TELEPHONE TRANSMISSION.

In the West, particularly among the farmers, some evenings are very enjoyably passed by attaching the talking machine to the telephone and giving an impromptu concert for the benefit of the neighbors. A writer in The New Phonogram explains how he arranged the phonograph for telephone transmission as follows: "I made a horn out of very heavy cardboard, thirty-one inches long, with a twelve-inch bell, which I fasten, or, rather, let rest in the mouthpiece of the telephone transmitter. I support the same by means of strings fastened from each side of bell to the top of the telephone. By this means I can adjust the position of the horn to suit that of the horn on the phonograph. I find that the distance (as regards the clearness and loudness of the selection played, as heard at the other end of telephone line) between the bells of the two horns, which, of course, point toward each other, depends on the strength of battery of telephone, and, in fact, the efficiency of the telephone in general. In my case I place the horns from three to four feet apart for very best results, although the selection can be heard by those at the other end of the line perfectly plain when I place the phonograph across the room, about 20 feet away, but still pointing the horns at each other."

THE MATTER OF NEEDLES.

In this department, in the issue of April 15, reference was made to the needle question, and it was impressed on dealers that they should advise their customers not to use a cheap needle more than once. Some pertinent remarks in this connection followed, winding up with the statement that damage was impossible when a certain make of needle was used. It is only necessary to read the context to comprehend that the latter sentence was absolutely uncalled for, inasmuch as the arguments adduced were so contradictory as to make it clear that the writer's intention was not properly expressed. J. Newcomb Blackman, of the Blackman Talking Machine Co., has called our attention to the matter, for which we thank him. In this counection we may say that it has not at any time been the policy of this paper to recommend the use of any particular brand of goods. We believe in a square deal to all, and endeavor to practice what we preach. There are times, however, when the "Knights of the Quill" makes mistakes like other mortals, notwithstanding their efforts to walk the straight and narrow path of righteousness.

ODD EXPERIMENTS WITH PHONOGRAPH.

J. B. Horn, Edgerton, Kan., has derived added pleasure from the possession of a phonograph by a series of experiments, which he relates as follows: "By means of a thread running from the starting lever of my Edison to a door or a rocking chair, I have often surprised callers who themselves started the machine to running at very unexpected times. I once had a vocal record break so that about one-half of it at the end where the bore is largest remained intact. This can be reversed end for end on the mandrel and played backward with ludicrous results. One day, with the aid of a friend's machine, I played this selection backward and recorded it thus on a blank. Then I turned the newly recorded cylinder and reproduced the song forward perfectly. The achievement, however, seemingly most wonderful, especially when one does not know how they were made, is a duet and a quartet each sung by a single individual. I made these by having a friend first sing the selection with piano accompaniment. The other parts were added as the recorder was successively run over the cylinder while the performer sang in unison with the previously recorded tones. In both these records the singer's voice (or voices) is so natural that his friends recognize every tone as his in every part. Many other interesting and entertaining experiments might be carried on. Those mentioned are but a few of the most interesting of many I have attempted."

THE TALKER AS HISTORIAN.

In Future We Can Hear the Views of Great Personages and What They Said—If We Could Only be Able to Hear the Voices of the Mighty Ancient!

The arrival in this country of phonographic records of the voice of the German Emperor, to be preserved at the Congressional Library and at Harvard University, calls attention to the possibilities of the phonograph as a historical witness, says the Louisville Journal. If they had such things as phonographs when Demosthenes lived, we of the twentieth century should be able now to hear the voice of the mighty ancient whose oratory has come down to us as tradition. We could compare him with the orators of our time and discover for ourselves whether he was, after all, so great. Think what a queer sensation we should feel to hear the voice of Julius Cæsar addressing the Romans; to hear the Emperor Nero playing a solo upon his lute or reciting one of his verses; to hear the voice of St. John preaching in the wilderness; to hear William Shakespeare speaking Hamlet's soliloquy or Abraham Lincoln delivering his Gettysburg address.

Hereafter, however, it will be the privilege of mankind to hear the voices of men after they are dead. When they themselves have turned to dust, Theodore Roosevelt, Emperor William, Edward VII., Marcella Sembrich, Enrico Caruso, Mark Twain and others of the great constellation of to-day will give their messages of politics or song or philosophy to the races of earth.

SPACIOUS "TALKER" DEPARTMENT.

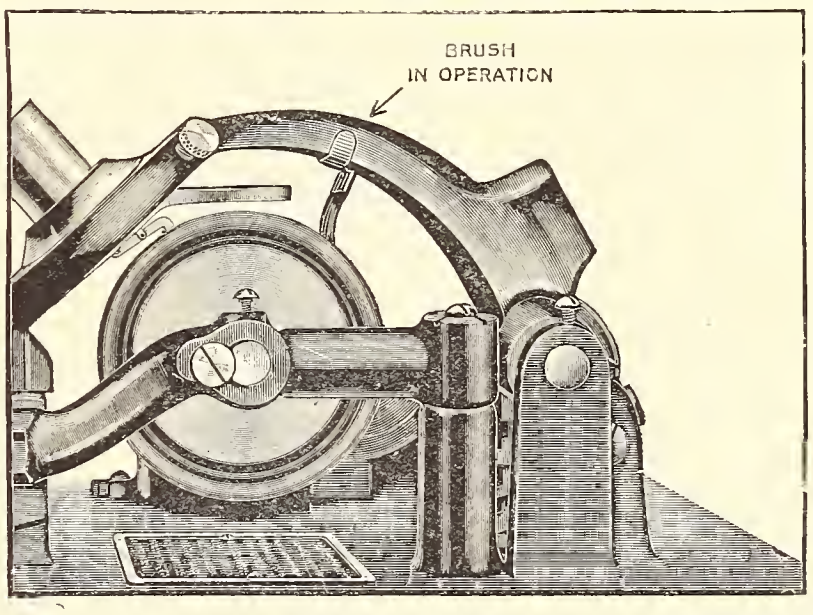
A Feature of the New Ditson Building—Three Large Demonstrating Rooms and a Recital Hall—Fine Record Equipment—Will Carry Large Stock.

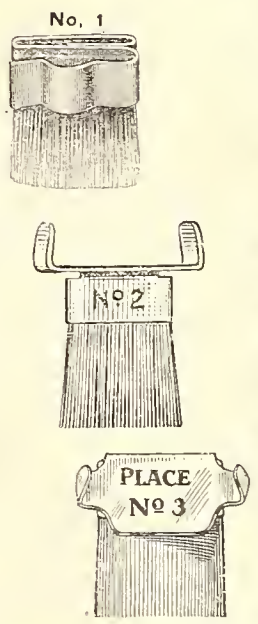
The talking machine department of Chas. H. Ditson & Co., New York, expanded many fold over the space allotted it in their old place, will be on a scale in point of furnishing and floor room quite new in the East. Three large demonstrating rooms, running the width of the building and facing 34th street, are finished in solid mahogany. Each one of these compartments are about 25 feet deep, making a good sized recital hall in themselves. Racks for disc records are on the side walls, each compartment holding a single, new record for the buyer. The regular stock is contained in rooms to the rear. The company have been placing orders with the Victor Talking Machine Co., Camden, N. J., for some time, anticipating their wants, so that they are fully prepared to supply any demand immediately from the premises.

The Victor Talking Machine Co. have asked estimates for the erection of two additional stories to their new laboratory and office building in Camden, N. J., which at present is only four stories high. The addition will conform with the style of the rest of the building.

THE "PLACE" AUTOMATIC RECORD BRUSH

PATENTED SEPT. 25TH AND OCT. 2ND, 1906
PRICE 15 CENTS EACH





CAN BE USED ON ALL PHONOGRAPHS

Removes lint and dust from record automatically. Saves Sapphire from wearing flat and prevents rasping sounds. Insures a perfect playing Record. It is equally as efficient when recording. It is too cheap to be without.

No 1 fits Triumph. No 2 Standard and Home. No. 3, Gem.

Big Profits for Dealers and Jobbers, also Free Advertising Matter

EDISON DISCUSSES FUTURE.

Speaks of the Union of the Phonograph With the Kinetoscope—Defines the Difference Between Discovery and Invention.

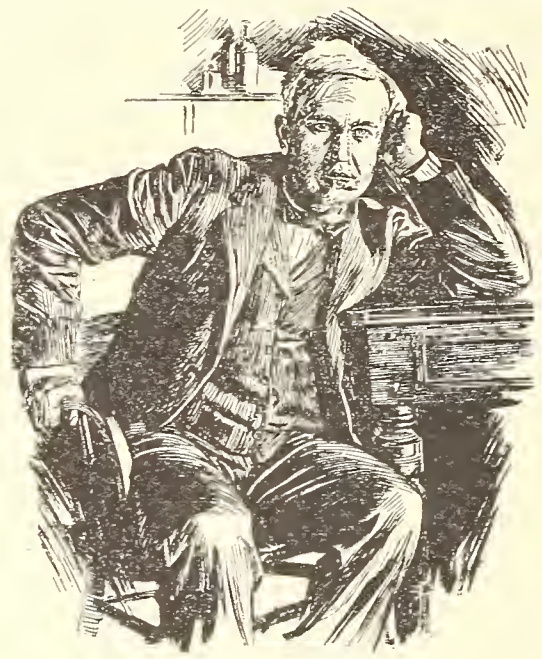
In the course of an interesting chat with Thomas A. Edison recently he expressed himself enthusiastically about wireless telegraphy, and said: "It is not more than about four years old, and yet by means of it we are able to communicate with ships for a distance of 1,500 miles. It is entirely conceivable, considering such a rapid development in so short a space of time, that in half a century it will be possible to communicate with a vessel wherever it may be, from the furthest region of the Pacific to the most remote waters that surround either pole."

Then turning his thoughts to his old-time favorite, he said: "As for the phonograph, taking it in connection with the kinetoscope, I believe that it will be perfected to such an extent in another fifty years that people in New York will be able to attend an entire theatrical performance or listen to an opera from beginning to end, where there is not an actor or a singer present—and yet every gesture, every syllable, every note, will be there with the most perfect illusion that art could demand.

"But all this has to do with inventions—and inventions form a past chapter in my life. I have turned the leaf down there, I have done with that set of experiences from now on. * * * In my forty-five years' work as an inventor I have run across many queer things that seemed to lead off into undiscovered worlds of thought. Now I am going back to pick up the threads that I left on the way, and see where they will take me. There is no end of possibilities for the man who starts out on this road and who is entirely indifferent to the monetary value of his work. I calculate that we know one-seven-billionth of 1 per cent. about anything—so I have given myself a good margin to work on. I am going to give nature a show, and if I don't strike something now it won't be my fault.

"There is a great difference between discovery and invention. The latter is generally attained by a process of pure cold reasoning from ascertained laws of science. A discovery, on the other hand, is often the result of pure accident.

"I have taken out, I suppose, about a thousand patents, representing various inventions, during



THOMAS A. EDISON.

my career as an inventor. I don't expect to take out another patent in this new field of discovery that I have chosen—but it may be that I will find things that will bring the necessity of patents to many an inventor who comes after me.

"Science has some tremendous problems before it that, for the benefit of the human race, must be solved in the near future."

Mr. Edison states that the coal supply of the United States, according to the best authorities, will be exhausted within a hundred years, and the problem of providing a substitute is destined to engage his attention in the near future. He is evidently seeking to solve this wonderful problem of trying to find a new fuel, and it is an investigator, a lover of pure science, not an inventor who is needed to fathom it.

"PLATOL" IS A WINNER.

All Who Have Tested This Specialty Find That It Is All the Manufacturers Claim It is.

Nothing that has heretofore been placed on the market has been so entirely revolutionary or so extremely useful as "Platol," an article for which one will have constant and repeated demand. "Platol" is a guaranteed silver plating compound that replates and cleans in one operation. It is made in two forms, No. 1 for soft metals, silver, brass, bronze and copper, and all articles which generally have these metals for a foundation, such as talking machine horns, musical instruments, sign plates, automobile and carriage fittings, spoons, forks, etc.; No. 2, for hard metals, iron, steel, white metal alloys and all articles which generally have these metals for a foundation, such as horn cranes, the plates and other metal parts of a talking machine, etc. This new preparation is meeting with a large demand, and many of the largest jobbers in the country are preparing to push it. That it will not only be a big seller from a retail standpoint, but will prove a boon to the dealer in keeping his stock in shipshape order, is conceded by all who have tried this remarkable article. The Steinreich Manufacturing & Import Co. deserve congratulations for having placed a preparation so valuable on this market.

THE KAISER AND THE PHONOGRAPH.

Br-r—kek-kek-br-r-r-r-r—Monologue by His Imperial Majesty Wilhelm, German Emperor and King of Prussia, entitled, "Your Master's Voice." International Phonograph Co., New York, Paris and Berlin. Br-r-r—kek-kek—Br-r-r-r-r—

Eternity—or, as it better clinks
In dulcet German, Zeit und Ewigkeit—
Receive the Voice of one who never shrinks
From the white calcium's glare, however bright.
Absorb, ye pliant wax, Our Voice! (The "Our"
Refers to Him who jointly shares with me—
While trivial nations tremble at Our power—
Dominion over German land and sea.)
Imperial Cæsar's voice, like Cæsar's clay,
Is gone beyond recall; no replica
Was handed down the ages. Stilled for aye
The tones of Hannibal, of Attila,
For want of phonographs—which, I regret,
Are not among things "made in Germany."
But Germans, happily, need not forget,
While hearing holds a place, the Voice of Me.
As Kubla Khan in Xanadu could hear
Ancestral voices prophesying war,
Turn but a crank—your Kaiser speaks—give ear!
His Voice shall rouse you as it roused of yore.
Receive, Posterity, Our awful Voice!
Sons of the Fatherland, rejoice, rejoice!—Puck.

NOT TO PLAY TALKERS ON SUNDAYS.

(Special to The Talking Machine World.)

Kansas City, Kan., June 6, 1907.

Since the closing of the saloons in this city recently three of them have been converted into nickel theaters, with loud "talker" out in front and all the usual "fixings" to the great indignation of the crusading ministers of the city. Not long ago a delegation of preachers called upon Chief Bowden in a body and entered a protest against the moving picture shows and the graphophones that accompany them.

Chief Bowden explained that it was not within his jurisdiction to put the shows out of business, and as far as he knew he had no right to stop the playing of a graphophone within the city limits. After a lengthy debate a compromise was perfected, temporarily at least, whereby the management of the three show houses are to stop the playing of their graphophones on Sunday.

The Hawthorne & Sheble Manufacturing Co., of Philadelphia, are now manufacturing two hundred different style and size horns for talking machines. With such an assortment to select from a dealer should be able to satisfy the most particular customer.

NEWS OF THE MONTH FROM THE SAINTLY CITY.

Despite Unfavorable Weather Conditions Dealers Report an Increase of from 30 to 35 Per Cent. as Compared With a Year Ago—Columbia Phonograph Co. Lease Large Warehouse—Manager Long of the St. Louis Talking Machine Co. Makes Splendid Report—Notable Sales Recorded—Silverstone Talking Machine Co. Expansion—Good Call for Reginaphones at Thiebes-Stierlin Co.'s—Recent Visitors to tthe City—P. E. Conroy's Cheering Report.

(Special to The Talking Machine World.)

St. Louis, Mo., June 8, 1907.

With weather conditions that have been decidedly abominable for the last month the talking machine business is in an extremely good condition, and every house that is pushing its trade in an aggressive way reports splendid results, which show an increase of from 30 to 35 per cent. for the month of May over a year ago. The demand for the high-class line of goods is far the best, and the sales of records is very large.

P. E. Conroy, president of the Conroy Piano Co., and the father of the talking machine business in this city, states that business in their talking machine department of the month of May, both retail and jobbing, has been very good, and that more people in other lines of business are taking on the talking machine as a side line than ever before.

T. P. Clancy, manager of the Columbia Phonograph Co., reports that their trade shows about a 35 per cent. increase for the month of May over the same month a year ago. This firm has leased the second floor of 1001 Olive street for their warehouse purposes, which contains 5,000 square feet. They report a big demand for their Twentieth Century machines, and also for their new Marconi records. Mr. Clancy returned recently from a several days' trip to Chicago.

C. W. Long, manager of the St. Louis Talking Machine Co., states "that the month of May was a very large one for us, being about 40 per cent. ahead of the same period last year." This concern has adopted a new method of getting the monthly records to the dealers, and it has scored a great success. They have invited each dealer to name the maximum quantity of records he can use, and the highest amount of any one high-class selection he might have sale for. They also make a selection of records and send to him instead of sending him a standing order of one each.

George W. McElhiney, who, with a party of friends, passed through St. Louis one day recently on his private car "Kymyami,' en route to San Luis Potosi, telegraphed ahead to the St. Louis Talking Machine Co. for one of the Victor latest improved Victrolas and a large selection of grand opera records. The sale amounted to about $400.

C. W. Long, manager of the St. Louis Talking Machine Co., recently returned from a several days' trip to Chicago.

On Sunday, June 2, the St. Louis Talking Machine Co.'s baseball club won from the Ellendale baseball, one of the prominent semi-professional teams in this territory, by a score of 9 to 6. The winners have now played seven games so far, and in each contest they have proved to be victors.

The Silverstone Talking Machine Co. report a large volume of activity with a big increase in trade for the month of May over that of the same month a year ago. They have just put in two more record bins, which give them a capacity for 50,000. Max Stein has accepted a position with this firm as traveling salesman, and will represent through Illinois and Missouri. Mr. Carr, formerly with the Columbia Phonograph Co., has accepted a position as floor salesman with the Silverstone Talking Machine Co. Marks Silverstone, president of the company, recently returned from a business trip through Illinois.

S. R. Brewer, manager of the talking machine department of the Thiebes-Stierlin Music Co., reports business very good for May, and that they have had a very large demand for the Reginaphone machine.

J. P. Booker, manager of the talking machine department of the O. K. Houck Piano Co., reports trade very good, and a very nice increase since they got into their new parlors.

Among the visiting talking machine dealers who recently called at the St. Louis Talking Machine Co. quarter were: Charles Tate, Flora News Co., Flora, Ill.; Mr. Krug and Mr. White, of the Krug-White Jewelry Co., Staunton, Ill.; John W. Strain, Charleston, Mo.; William Dorsett, Alton, Ill.; H. D. Carter, Astoria, Ill.; Mr. Mendenhall and Mr. Matthews, of the Olney Music Co., Hannibal, Mo.; Mr. Parks, of Parks Music House Co., Louisana, Mo.; Mr. Young, of Parks Music House Co., Hannibal, Mo.

D. S. Ramsdell, formerly local manager of the St. Louis Talking Machine Co. here, is reported to be doing very well in the photography trade in Chicago.

SIGNED CONTRACTS TO SING.

Noted Artists Will Make Records for the National Phonograph Co.

Billy Murray, Byran G. Harlan, Steve Porter and Spencer (Len) & Jones (Ada) have signed contracts to sing and recite for the National Phonograph Co., though this arrangement does not bar them from being on the artists' lists of the other recording laboratories. The step was taken to prevent this "bunch of talent" from being tied up by any other company to the exclusion of themselves. Messrs. Murray, Collins, Harlan and Porter form a quartet doing independent work at club banquets and similar entertainments and occasions. Their dates are closed for the season, to be resumed again in the fall.

GERMANY'S OUTPUT OF "TALKERS."

It has been estimated that the total production of talking machines of all makes in Germany during 1906 averaged 250,000 machines per month, while about 1,500,000 records were turned out. This estimate includes talkers for both the domestic and export trade.

Reg. U. S. Pat. Off.

The expressions of complete satisfaction from those who are now using our new method of getting their monthly records (naming the quantity they can use, and the number of one selection they would have sale for, providing it was strictly first class, and allowing us to do the rest) convinces us that this method is far in advance of any other yet tried, and in asking you as a special favor to allow us to ship your next monthly supply by this method, we do so feeling positive that you will be fully satisfied and that your record sales will improve and increase in a way that will astonish you. In calling your attention again to the fact that we are exclusively wholesale at our new location, we do so, with the idea of impressing upon you the fact that the three qualities, which you require of your jobber are those that we have studied most carefully, namely, filling orders completely, because our stock is complete, shipping facilities perfect, and promptness guaranteed.

Is your name on our list for specialties? If not, drop us a postal to-day.

ITALIANS GOOD CUSTOMERS

Of the Talking Machine Dealer—Always Buy Expensive Records—Sooner Hear the Talker Than Eat.

Italian laborers, the man with the hoe and the shovel, the industrious cleaners of city streets, are buying thousands of dollars' worth of talking machines, records and other music supplies, and are thereby enriching dealers in every large city where they congregate; in fact, it has become a truism that they are in many cases the dealers' best customers, apparently spending every spare cent of their meager, hard-earned wages in costly records.

"You would be surprised to know that some of these fellows, whom you would think had scarcely a cent and could barely afford to pay their living expenses, buy more records than some of our millionaires," said a well-known dealer recently. "Why, there is one man who comes in here regularly every week—he works on the street sweeping gang—and buys an opera record. And you know these come high. I am almost ashamed to take the man's money, for I feel he ought to give it to his family. He tells me he would rather hear music than eat, and judging from the money he blows in on his talking machine, it must be so. He is only one of the hundreds throughout the two cities. These Italians spend thousands of dollars a year in records; in fact, they spend $10 to the other customers' one. Why, some of our millionaires who have talkers and music boxes that cost hundreds of dollars, are not in their class at all when it comes to blowing in money."

The Italian demands the best and highest class of music, barring Wagner, for it is proverbial that the Italian has not a veneration for the great German composer. "Lohengrin" and "Tristan" grate on his delicately attuned nerves, and he sees nothing to enthuse over or worship in the Nibelungen, as his more profound Teuton and English brother does. Neither does he go in much for ragtime or the more light, popular melodies. But he is in his element when he has Verdi or Mascagni, and to him there is nothing so fine or fascinating as "Il Trovatore" or "Cavalleria Rusticana." He buys records that contain the gems of these operas, and after his day's work in the ditch is over, he goes to his humble abode and while he dines on macaroni, spaghetti or bologna, soothes his ear with the delightful airs of the Italian masters of the divine art.

Many of these Italians have method in their madness in spending all their savings for records and machines. Thus many of them invite their friends and others to the house, and explain that for 5 cents the latest records of a favorite opera will be put on the talker. If there are 20 guests present the owner of the much-prized machine takes in $1. Often 10 cents a head is collected for the whole evening's entertainment. In this ingenious way the white wing and the man behind the pick adds to his worldly wealth and pays for his expensive machine, and its more expensive pile of records.

JUDGE TOWNSEND'S DEATH.

Passing of a Great Jurist and Expert on "Talker" Cases—Judge Wallace's Retirement Marks the Departure of Another 'Phono Expert.

The death of Judge W. K. Townseud, of the United States Circuit Court of Appeals, second circuit, which occurred Saturday, June 1, at his home in New Haven, Conn., chronicles the departure from the bench of a jurist whose name is familiar to the trade from his various decisions in the apparently endless litigation over talking machine devices. Next to Judge Lacombe, Judge Townsend has heard more arguments on patents of this kind than any other Federal justice in the country. He was a well-known writer on legal subjects, and his work, "History of American Law of Patents, Trade-Marks, Copyright," etc., is considered an authority. Judge Townsend was also professor of the law of contracts at Yale University.

Judge Wallace's retirement last month, the presiding justice of the Circuit Court of Appeals bench, also removes another well-known figure in talking machine patent adjudication. His recent dissenting opinion in the case of the Leeds & Catlin Co. against the Victor Talking Machine Co. was the means of taking this celebrated action to the United States Supreme Court for the final decree.

MULLEN WITH McGREAL.

The Well-Known Talking Machine Man Takes Charge of McGreal Bros.' New Wholesale Branch at Cincinnati.

McGreal Bros., the well-known Edison and Victor jobbers of Milwaukee, have secured the services of W. A. Mullen as manager of their new wholesale branch they are opening at Cincinnati.

W. A. MULLEN.

Mr. Mullen, whose pleasant features are reproduced in this connection, is a talking machine man of experience and accomplishment. Part of his road experience was with the Universal Talking Machine Co., for whom he traveled for several years.

On June 1 he severed his connection with the National Phonograph Co., regretfully resigning his position as manager of detached Western districts for their commercial department in order to go with McGreal Bros. The latter chose Mr. Mullen from among ten applicants for the Cincinnati position, in itself a tribute to his ability and his impression-making power. He will devote most of his time during the first three or four months to lining up dealers in the territory to be covered by McGreal Bros.' Cincinnati house.

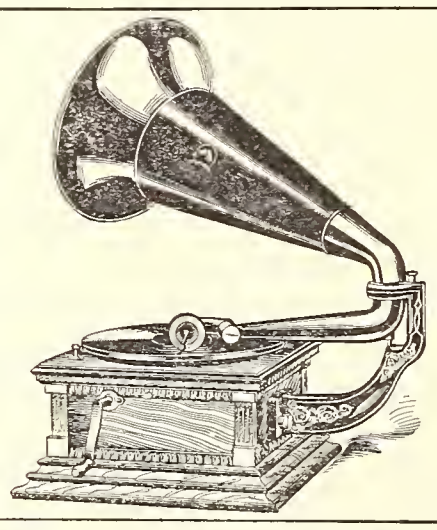
ROBERTS' NEW SPECIALTIES.

A Cylinder Record Basket and a Flexible Tube Holder, Which Are Worthy of Attention.

H. P. Roberts, dealer in commercial talking machines, at 320 Broadway, has just placed two specialties on the market, which are destined to win a large measure of favor. The first is a cylinder record basket to take the place of the old wood rack, which is cumbersome, and which has many drawbacks. The Roberts basket is just what the trade has been looking for, and as an office requisite will fill a long-felt want. The basket holds six cylinder cartons and is made of strong wire (tinned). It is compact, strong, durable and takes up one-third less space on a desk than the old wooden rack, besides matching the wire letter baskets now in general use. Another feature, each cylinder is kept in a cotton lined carton and protects them from any injury while being carried from one department to another. The second specialty referred to is Roberts' flexible tube holder, and it has the following points of merit that should appeal to every dealer. It supports the mouthpiece of the speaking tube in any position desired, leaving the hands free for handliug papers during dictation. The carriage of the talking machine is free to move without reference to the position of the mouthpiece of the speaking tube, which remains stationary, and when dictation is finished the tube may be pushed back and out of the way, or may be instantly removed from the machine. The vision of the dictator is furthermore not obscured as where a horn is used, and the holder being flexible allows of the tube's adjustment to suit the convenience of the dictator.

The holder also removes all strain from the carriage of the machine, insuring perfect records and prolonging the life of the mechanism.

The New Jersey Sheet Metal Co., Newark, N. J., are making quite a hit with their new "Ajax" horn. This is constructed in seventeen pieces of carefully selected, rust-proof sheet metal, thus giving it surprising strength and eliminating all danger in shipping and handling. "The Ajax" is finished in light enamel and Japan colors, baked in special ovens, and is fade-proof. Herman Ringel, one of the partners, has just returned from an extensive western trip, having called upon all the leading jobbers through that territory. He booked many large orders and reports business exceptionally brisk.



Mr. Dealer:

If you want always to get the goods, send your orders to a house of exclusive

Victor Jobbers.

LEEDS & CATLIN COMPANY - - New York

AN IMPORTANT DECISION

Just Handed Down Which Has a Direct Bearing on Repaired or Second-Hand Patented Machines—Establishes Precedent.

A suit recently decided by the United States Circuit Court of Appeals, second district, relative to the sale of repaired or second-hand patented machines at less than the contract price, will interest talking machine distributers, jobbers and dealers. The case is that of the National Cash Register Co., Dayton, O., against Grobert & Bauman, New York City, who repair and sell second-hand cash registers. These second-hand dealers have been buying second-hand machines and have repaired and altered them to suit the needs of their customers. In making the changes complained of the Circuit Court of Appeals has decided that these second-hand dealers have infringed the patent rights of the National Cash Register Co.

This is a very important decision not only to this company, but also to manufacturers whose talking machines fall into the hands of second-hand dealers. This decision clearly establishes a new and very important principle of patent law. Under this opinion it is not only an infringement for second-hand dealers to reconstruct patented machines, but it is also an infringement to use them.

MR. REYNOLDS ENTERTAINS AD-MEN'S CLUB.

(Special to The Talking Machine World.)

Springfield, Ill., June 9, 1907.

At a meeting of the Ad. Men's Club, held in this city recently for the purpose of planning a celebration in honor of Lincoln's one hundredth birthday anniversary on February 12, 1908, O. A. Reynolds entertained the club members with an excellent talking machine concert. An interesting and varied program was rendered, and the beauty of the music called forth words of praise from all present. A very neatly printed program was distributed by Mr. Reynolds, having on the flyleaf an excellent reproduction of the famous Edison picture, showing an old couple enjoying the music of a phonograph.

DENHOLM & McKAY CO.'S

Talking Machine Department in Worcester One of the Finest in the State.

(Special to The Talking Machine World.)

Worcester, Mass., June 12, 1907.

The Denholm & McKay Co. here have just completed one of the handsomest talking machine departments in the State. For the past year there has been continuous and steady development of this department, which is under the management of Mr. Gorham. Mr. Gorham has shown in his management the good effect of a policy of geniality, courtesy and good generalship, in all of which he is past master. He is one of the pioneer talking machine men in New England and is probably the only man in the country who can boast of being able to call by name any record in the Columbia catalog by the mere mention of its number. The Denholm & McKay Co. carry a complete line of Columbia disc and cylinder goods, and in the new department they will carry all lines.

TAKING CLERKS INTO CONFIDENCE.

How the Manager of the Talking Machine Department Stimulated the Interest of His Employes by Treating Them as Thinking Beings—An Example Worth Following.

The manager of the talking machine department of a prominent music house recently gave us some facts to which he attributed the success of his department, and which are well worth the attention not only of managers, but of merchants generally. This buyer stated that, on taking charge of his department he found the clerks lacking to a woful degree alike in interest in its success or failure and in knowledge of the merchandise. He determined to change all this. To a certain extent he took the clerks into his confidence, asking their advice and opinion before ordering stock, and giving them pointers about the value and character of the line. In a word, he got down from the high stool which his predecessor had occupied, and while placing himself nearer the clerks' level raised them to a higher one by treating them as reasoning and thinking beings. The result was a great increase in their sales and efficiency.

This is an example which may well be followed by department manager and merchant alike. In far too many cases the former holds himself aloof from the salespeople as if he belonged to a superior caste, whereas by mixing with them he would stimulate and encourage them, and would in turn obtain from them ideas tending greatly to his own success. The merchant who buys all or a portion of his own stock pursues a similar policy, though actuated by different motives. He fears to "let his clerks know too much" lest they give private information to his competitor. But he may rest assured that his competitor, if he wants this kind of knowledge, will obtain it in one way or another, while the risk of its being imparted is of far less importance to himself than is an efficient and ambitious staff.

J. E. SMITH WITH CHAS. H. DITSON & CO.

J. E. Smith, formerly with H. R. Eisenbrandt's Sons, Baltimore, Md., an experienced man, has been appointed sales manager of Charles H. Ditson & Co.'s greatly enlarged and handsomely equipped talking machine department, under the supervision of the Chesterfieldian H. L. Hunt.

EASTERN ASSOCIATION MEETS JULY 22.

By an oversight the Philadelphia convention of the Eastern Talking Machine Jobbers' Association, in April, named July 29 for their annual meeting, when the election for officers will be held. The date has been officially changed to a week earlier, namely, Monday, July 22, in New York City. Secretary Jacot will notify the members at the regular time.

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York for the Past Month.

(Special to The Talking Machine World.)

Washington, D. C., June 8, 1907.

The figures showing the exports of talking machines for the past four weeks from the port of New York will doubtless prove of interest to manufacturers and dealers in this and foreign countries:

MAY 14.

Berlin, 124 pkgs., $954; Bombay, 5 pkgs., $780; 72 pkgs., $2,222; Buenos Ayres, 3 pkgs., $513; 427 pkgs., $8,026; Callao, 2 pkgs., $106; Calcutta, 4 pkgs., $196; Colon, 4 pkgs., $400; Genoa, 25 pkgs., $298; Hamburg, 3 pkgs., $501; Havana, 15 pkgs., $696; 9 pkgs., $852; 23 pkgs., $1,575; Havre, 9 pkgs., $300; Laguaira, 9 pkgs., $985; Limon, 4 pkgs., $193; Liverpool, 1 pkg., $100; London, 2 pkgs., $256; 94 pkgs., $4,029; Manchester, 6 pkgs., $236; Manila, 6 pkgs., $399; St. Petersburg, 35 pkgs., $1,880; Valparaiso, 3 pkgs., $183; 6 pkgs., $477; 1 pkg., $243; Vera Cruz, 15 pkgs., $582; 50 pkgs., $679; Vienna, 10 pkgs., $593.

MAY 21.

Auckland, 2 pkgs., $313; Berlin, 212 pkgs., $1,221; Calcutta, 8 pkgs., $456; Colon, 8 pkgs., $120; Havana, 24 pkgs., $1,990; London, 57 pkgs., $2,957; 5 pkgs., $284; 2 pkgs., $114; Montevideo, 2 pkgs., $300; Rio de Janeiro, 17 pkgs., $1,907; Santiago, 7 pkgs., $139; Tampico, 7 pkgs., $252; Vienna, 12 pkgs., $194.

MAY 28.

Alexandria, 4 pkgs., $104; Berlin, 24 pkgs., $1,641; 101 pkgs., $460; Bristol, 29 pkgs., $163; Callao, 6 pkgs., $2,904; Guayaquil, 7 pkgs., $531; Havana, 6 pkgs., $603; 45 pkgs., $993; Havre, 53 pkgs., $875; La Guaira, 9 pkgs., $1,278; London, 45 pkgs., $1,945; 522 pkgs., $9,530; Manchester, 11 pkgs., $458; Savanilla, 4 pkgs., $126; Valparaiso, 6 pkgs., $859; 4 pkgs., $139; Vienna, 7 pkgs., $261.

JUNE 4.

Bombay, 33 pkgs., $531; Colon, 9 pkgs., $233; Havana, 13 pkgs., $493; 3 pkgs., $100; Havre, 154 pkgs., $801; 18 pkgs., $630; Iquitos, 3 pkgs., $207; Nassau, 4 pkgs., $108; Para, 6 pkgs., $335; Savanilla, 5 pkgs., $463; Vera Cruz, 121 pkgs., $3,059.

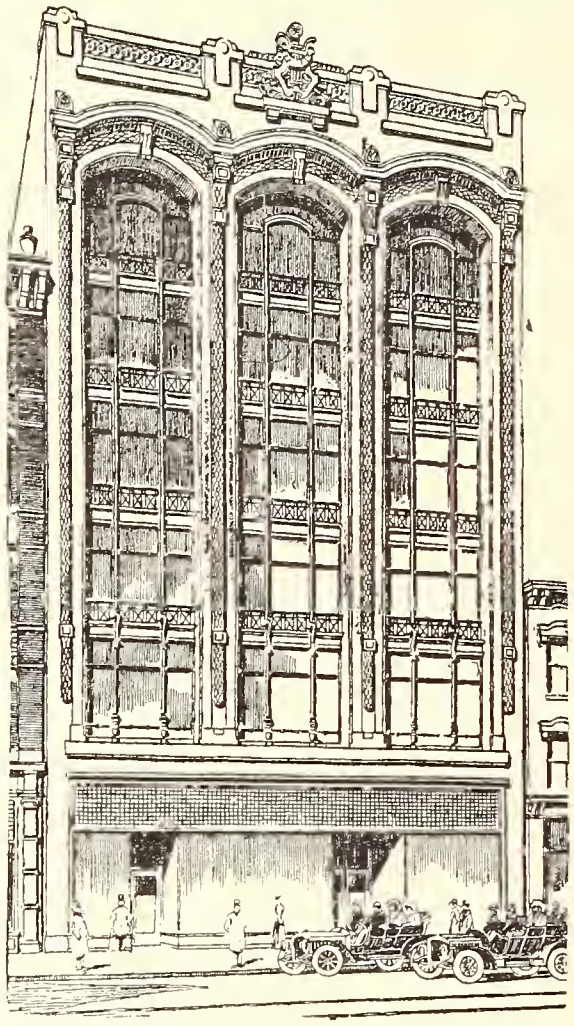
GRINNELL BROS.' NEW BUILDING

Will be One of the Finest Structures Devoted in Part to Talking Machines in the West.

(Special to The Talking Machine World.)

Detroit, Mich., June 10, 1907.

The excavating for the foundations of the new Grinnell Bros. building on Woodward avenue, near Clifford street, is practically completed, and contracts for the building itself have been let. The structure will be one of the handsomest in the city, ideally located for business, and will cost in the neighborhood of $150,000. The real estate



THE NEW GRINNELL BUILDING.

is valued at $300,000. The building will be 60 by 100 feet, six stories high, and the front will be almost entirely of plate glass.

The Woodward avenue front will present a striking appearance. A white-glazed terra cotta will be used in combination with green metal window frames and plate glass. The stories will be of unusual height, to make the building the more imposing.

The construction will be of steel and fireproof concrete, and among the many up-to date features to be incorporated is a handsome recital hall.

A high basement will accommodate additional showroom space. The interior will be fitted up in a thoroughly artistic manner. A careful study is being made of the music stores throughout the country to insure the most up to date and attractive establishment of the kind in the country.

The elevator, cleaning and ventilating system will be of the most modern type. The building is expected to be finished in ten months.

As is well known, Grinnell Bros. are successful jobbers of both the Edison and Victor lines.

A. E. LOBLEY A RECENT VISITOR.

A. E. Lobley, Auxetophone expert and traveling repairman for the Victor Talking Machine Co., Camden, N. J., who was in New York recently, is now in the New England territory. Later he will visit the Western trade and then go South. Mr. Lobley is quietly observing for the company how the jobbing trade looks after the repair end of their business, and especially how the Victor Auxetophone is being handled from a mechanical point of view. He is ready to offer his expert advice and assistance whenever solicited by Victor dealers and distributers. It will probably be August before Mr. Lobley reaches the factory again.

SHOWED HOW HE VALUED THE MACHINE.

When an article is so precious that the struggle for its possession leads to murder, that is the final test of value, and a talking machine has passed the test of blood. On the northwest side of Chicago recently two men quarreled over the possession of a "talker." Michael Casey was the owner of a "Master's Voice" machine. His brother John came to call on him. For a while the brothers listened to Caruso and Scotti, and the Italian operas, until John, deciding to take the instrument home with him, arose to go. "You will leave that talking machine here," shouted the other. Hot words followed, and Michael, seizing a razor, slashed his brother's throat. The murderer was captured a few minutes later, as, blood-stained and disheveled, he was attempting to board a street car in Grand avenue.

PETITIONED INTO BANKRUPTCY.

The Winchell Co., dealers in small musical instruments and talking machines, who made an assignment last October for the benefit of their creditors to James M. Linscott, have been petitioned into voluntary bankruptcy at the instance of Nelson C. Rand, whose claim is for $574 rent due on lease executed by the petitioner to the Winchell Co. for $2,300 a year last October.

Howard Guey has bought out the business of H. E. Damon, dealer in Edison phonographs in Shushan, N. Y.

Some Facts Worth Considering

THE talking machine man frequently asks, "How can I increase my business?" The answer is easy. Place on a side line which takes but little space, which is attractive, and a standard in its particular line. Take the **Black Diamond Strings,** for instance. Steel and wound. New process. They are the finest manufactured. They are used by all of the prominent artists, and you will have a trade coming your way when it is known that you handle the "Black Diamond." Music dealers all over America, and all over the world for that matter, know full well the value of this product.

National Musical String Co.
New Brunswick, N. J.

HOW TO PRESERVE YOUR Talking Machine Worlds

For some time past we have received numerous requests from subscribers for binders to hold the files of the paper, so that they would be convenient for reference purposes.

To supply this demand we have had a number of "Common Sense Binders" made, which will accommodate the Talking Machine World readers.

If you wish your Worlds filed always within reach, order a binder.

These binders are full cloth, with the title of the publication on the front in gold.

These will be supplied to subscribers, delivered to any part of the country for $1.25.

EPOCH-MAKING ROMANCE.

Introduction, Engagement and Courtship of a Los Angeles Girl by Phonograph.

What do you say to introductions, engagements and courtship, all by talking machine? "Her Lover's Voice" should be the title of this romance, for until weeks after she had learned to love him his voice was the only loved feature she could have recognized.

All this time they were three thousand miles apart—on opposite sides of the North American continent. She had never seen him, nor he her. Her photograph had never met his gaze, nor hers his. Up to the minute that she first heard "Her Lover's Voice" she didn't know that he existed.

That moment deserves to go down in the history of epoch-making romances, says a writer in the American. To her home in Los Angeles, Cal., came an express package from Washington, D. C. She opened the package and found a phonograph record—nothing else, nothing even to show who had sent it.

"I wonder who it is from?" she said, inspecting it from all points of view, as women frequently inspect envelopes addressed in a strange handwriting, oblivious for the moment to the obvious expedient of inquiring of the contents.

It suddenly occurred to her that phonograph records were to be interpreted through the medium of the phonograph mechanism, so she promptly put this one to the test.

"Gr-r-r, sc-r-ratch, sque-e-k, rattle," and then, in clear, familiar tones:

"Dear Idella—Permit me to present to you Mr. Seth Cabell Halsey, a nephew of United States Senator Daniel, of Virginia. He's a dear friend of ours, and awfully nice. Ever yours, Maud."

Then a pause, and then, in manly, resonant tones:

"I am happy to meet you, Miss Dotter."

With these manly tones ringing in her ears, Miss Idella Dotter went right out and talked into a phonograph:

"Dear Maud—If Mr. Seth Cabell Halsey is within hearing, this is for him: Very pleased to make your acquaintance, Mr. Halsey."

"Marked confidential," there followed a lot of questions about the owner of the manly tones, etc., etc. And when the record was ready, Miss Dotter sent it by express to Miss Maud Hunter, Washington, D. C.

That was the beginning. Mr. Halsey confided to Miss Hunter that Miss Dotter had the sweetest voice that had ever fallen on his ears. Sentiments of the same sort he also confided to a phonograph record, which he expressed to Miss Dotter's address in Los Angeles.

Miss Dotter, in a record addressed to Mr. Halsey, made admissions of a similar character. This launched a rapid fire phonograph correspondence, supplemented by another through the mails which facilitated an exchange of photographs.

But it was one of Mr. Halsey's phonograph records which contained his proposal of marriage. After due reflection, stimulated favorably by a frequent hearing of Mr. Halsey's phonograph love-making, Miss Dotter forwarded by phonograph the sweet-voiced "yes" that was little more than a whisper. Four days later she received a telegram from Mr. Halsey:

"Leave to-morrow for Los Angeles."

For Miss Idella Dotter the "law of compensation," so long dormant, was at last in full operation. On the very day that her lover's telegram came announcing his departure from Washington to join her in Los Angeles, the contest by relatives of the will of her mother leaving her $100,000, was decided in her favor. After four years of dutiful self-sacrifice her reward, full and complete, was at hand.

There is as yet no formal announcement of the engagement of Miss Idella Dotter and Mr. Seth Cabell Halsey. In view of the startling novelty of a courtship by phonograph, the young woman has preferred to defer that detail until they have had opportunity for a little good old-fashioned courting.

THE NEW YORK PHONOGRAPH CO.

Elect Officers at Tarrytown on June 4—No Decision in Case Recently Argued.

The annual meeting and election of officers of the New York Phonograph Co. was held at Tarrytown, N. Y., their legal home office, June 4, resulting in the retention of the present staff. It will be remembered this is the concern who are now suing S. Davega, New York City, and several hundred other Edison jobbers and dealers in the state to enforce an alleged contract with the National Phonograph Co. relative to territorial selling rights. This case was argued before Judge Keogh, Supreme Court, special term, Westchester county, May 18, at the rooms of the New York City Bar Association. Decision was reserved and is now looked for daily. Judge E. M. Hatch and C. L. Buckingham appeared for the defense, and S. F. Heyman and State Senator Cohalan for the complainants. Progress was therefore reported to the N. Y. P. Co. on this case at the foregoing meeting.

A HANDSOME "MEGA" BOOKLET.

E. A. & A. G. Schoettel, makers of fibre specialties, Maspeth, Queens County, N. Y., are sending out a very pretty folder containing illustrations and descriptions of their Mega flower horn in crimson, magenta, old rose, violet, royal blue, and a decorated flower Mega in the same color. The fact that the illustrations are virtually facsimiles of the horns themselves makes this folder of especial interest to dealers, particularly to outside men who reach customers on the road.

MARCONI PHONOGRAPH CO. FORMED.

The Marconi Phonograph Co., Portland, Me., have incorporated, with a capital of $10,000 for the purpose of engaging in the manufacture and sale of talking machines. Incorporators: President, W. P. Carr, treasurer; J. W. Dunn; clerk, W. E. Chapman, all of Portland, Me.

FAVORABLE REPORTS FROM CLEVELAND.

Regarding the Business for the Past Four Weeks—The Gaumont Chronophone Exhibited—Wm. McArthur a Visitor—The Eclipse Music Co. "At Home" in Their New Quarters—Roberts, Gulley and Buescher Report a Big Call for Red Seal Records—The Usefulness and Importance of the Commercial Graphophone Discussed by Manager Jones.

(Special to The Talking Machine World.)

Cleveland, O., June 9, 1907.

Notwithstanding the unusual, unseasonable, disagreeable weather throughout the entire month of May the talking machine business was good, and generally compared favorably with that of the same month a year ago. Trade has been satisfactory, and a growing demaud for higher grade instruments and records is a noticeable fact. The June records are highly spoken of both by dealers and customers.

It is quite natural to blame something or some one if a man or boy goes wrong. Moving picture shows are blamed by the father of a sixteen-year-old boy for his alleged downfall. The father sent him to the bank with $250, since which time he has neither seen nor heard of him. The mother of another boy, thirteen years old, has reported him missing, with $60, alleging that he was a frequenter of the moviug picture theaters.

The Gaumont chronophone, of which much had been written and expected, has had its premier in America at the Family Theater. The little playhouse has been beautifully decorated aud fitted up for the accommodation of patrons who wish to witness its uuique performances. The simultaneous operation of moving pictures and the talking machine is marvelous. After witnessing the chronophone one is impressed with the belief that the day is not far distant when complete automatic records of great operatic and dramatic performances will be available. The theater is proving an immense attraction.

William McArdle, representative of the Hawthorne & Sheble Manufacturing Co., Philadelphia, was a visitor to the city May 30, leaving here June 1 for Detroit. He secured several good orders for horns and talking machine supplies.

The Eclipse Musical Co. are getting settled in their new quarters in the Erie Building. Moving the stock from the old place, putting in place thousands of shelves, and placing the new stock comiug in by the carload, was quite an undertaking, but order is coming out of the chaotic conditions, and there will be a place for everything and everything in its place. The company now have in a large stock of machines, cabinets, records and horns; in fact, an entire line of talking machine supplies. Mr. Towell, president, said the wholesale business during the past month had been very satisfactory.

The Columbia Phonograph Co. report business as exceptionally good for this time of the year. Mr. Probeck, manager, said the May trade was fine, better than tbe month a year ago. Records and the better grade of machines, he stated, were selling well, and that the prospects were excellent.

"Business is good, and May has averaged up with any month this year," said W. J. Roberts, Jr. "During the past week we made sales of two Victrolas, which was pretty good, considering the unfavorable weather. My fiscal year closed June 6, and I am well satisfied with results, which surpassed expectations. Judging the future by the past, my second year's business will prove all that one could hope for. The June records, especially Red Seal, are selling well, and everybody is pleased with them."

Collister & Sayle are giving more attention to bicycle and sporting goods than to the talking machine trade. Except in the sale of records they said business was rather dull, as usual, at this season. They handle the Victor machines and records.

Trade during the past month was reported fairly good by Hugh Gulley. "Sales of machines," said Mr. Gulley, "have been rather slow, but the large increase in sales of Red Seal records has more than made up for the falling off in sales of machines. The backward season has undoubtedly affected trade, but when the weather gets settled I look for a good summer's trade."

W. H. Buescher & Son are very busy in both the Victor and Edison departments of their store, though Mr. Buescher stated business was a little quiet, as is usual at this season of the year. Sales of machines, he said, were averaging well, and that there was a big demand for the new Victor Red Seal records.

Flesheim & Smith report an excellent demand for Zonophones, and say trade continues very fair, considering the season and unpropitious weather. "We are selling a good many machines," said Mr. Smith, "and the sales of records is large and constantly iucreasing, and what is especially gratifying to us is that purchasers are all pleased with the Zonophone."

Discussing the usefulness of the commercial graphophone, H. E. Jones, manager of that department of the Columbia Phonograph Co., said: "The commercial graphophone continues to forge ahead. During last month a number of additional business houses tried out and purchased our equipment and system of handling correspondence, and it is the universal experience that those houses and business men who try the machines very soon come around to the point of wondering how they have for so many years got along without this convenient time-saving method. May produced the largest month's business since the establishment of this department, over a year ago, and the present outlook for Juue is quite favorable for outdoing even this remarkable record. If it were not for that conservatism which is so universally fouud among established business houses, which makes them cling persistently to old methods, as against those that are possible, the commercial graphophone would hardly require the services of a salesman to successfully introduce it. However, most of the enterprising, progressive business houses in this locality are investigating and adopting the system, satisfied it is the modern way of transacting business."

It is rumored that a wedding, the parties to which are identified with the talking machine trade, is soon to take place, and is the result of a rather romantic meeting. The young people are well known in musical circles, and the gentleman claims he has an unbroken record of records.

MUSIC PUBLISHERS HELPED

Through the Use of Talking Machines by the General Public—Publications Become Popularized, Hence Are Big Sellers.

"The talking machine trade is greatly helping our business," said a large publisher and importer of sheet music to The Talking Machine World recently. "The owners of these instruments are continually hearing new songs and compositions which they desire to own, and reproduce on their pianos. They go to the nearest dealer and buy it if he has it, which ofttimes he has not. Some of the selections called for are very hard to find on the American market, and it is not unusual for us to import some piece of music to which a phonograph owner has taken a special fancy. I now secure all the catalogs and monthly bulletins published by the various companies, and if we do not carry them in stock locate them so as to be able to secure them at the shortest possible notice. The talking machine is doing more to create a love for music than any instrument ever invented, and I know of several professional singers who have them so that they can study the methods of the great singers secured to make the records."

ECKHARDT TO ATTEND CONVENTION.

The Wholesale Manager of the Columbia Co. Will Attend Jobbers Reunion at Chicago—Messrs. Lyle and Eckhardt to Europe.

General Manager Lyle and W. L. Eckhardt, of the wholesale end of the Columbia Phonograph Co., General, who was to have gone to Europe June 25, were obliged to defer his trip until later, owing to the departure of President Easton on the 12th. Mr. Eckhardt will be present in Chicago at the meeting of the Central States Talking Machine Jobbers' Association on the 17th and 18th inst., and will also stay over for the conventions of piano manufacturers and dealers the latter part of the same week. At the Columbia store, 88 Wabash avenue, there will be displayed during this streuuous period the company's piano and upright hornless cabinet machines, and also the new tone horn cylinder machiue.

The following are late additions to the jobbing list: Southern Vitascope Co., Atlanta, Ga.; Osgood Co., Boston, Mass.

Though the National Phonograph Co. have a number of crack salesmen in the Middle West. J. W. Scott, who travels New England, is said to top them all in the number of new Edison dealers created.

THE WALLACE BARNES COMPANY

BRISTOL, CONN.

JOKE WAS ON JONES.

A Humorous Incident in Connection With an Outing of a Party of San Francisco's Smart Set—A Story Worth Reading as It Is Now Going the Rounds of the Pacific Coast Clubs.

An amusing incident took place recently on one of the houseboats anchored off Belvedere, a town situated on the Bay of San Francisco. The owner of the ark, a wealthy member of San Francisco's smart set, had invited a number of his male cronies to participate in a jinks to be held on board.

The night selected for the jinks was ideal in every respect. The moon shone over the waters in splashes of silver, and the houseboat rose and fell on the bosom of the tide with a gentle swaying motion that was soothing to the tired senses.

It was a typical gathering of congenial spirits—artists, musicians and men-about-town. Some had won local prominence in the realm of song and story. Others were there who lead a more prosaic existence; models in the community, of dignity and prudence. They, however, like their fellows, dearly love a good time; away from the vulgar gaze of an unappreciative public, forgetful of the cares that infest the day. Clubmen all, with that dash of bohemianism in their make-up that keeps one ever young.

Such a man was Jones, for so we will call him—a portly bachelor of mature age, with a "heart as big as a mountain." He was a prince of good fellows, and on this occasion entered heartily into the spirit of the hour, gamboling about the deck with all the abandon of a youth of twenty.

It was a revelous night, not soon to be forgotten. At two bells the fun was at its height. At four it still continued. Song followed story and story song, punctuated anon by the popping of corks and the sizz of sparkling Cliquot. There were cold bottles galore and hot birds a-plenty. Baptiste was an admirable chef. He certainly was a wonder.

The gray of the approaching morning was tipping the Berkeley Hills as the host, calling his friends around him, thus addressed them:

"Gentlemen, as many of you are aware, it has been my custom for years, on occasions such as the present, to retain some memento that may be preserved for all time and be to me in the winter of my life a pleasant reminder of many happy hours spent in old Bohemia. Here is a phonograph that has been a faithful companion at many jolly gatherings, voicing the songs and stories of absent friends, several of whom have passed to 'The Great Beyond.' In the seclusion of my abode, I often turn to it for consolation, and it never fails me. Upon the virgin surface of this cylinder, which I hold in my hand, no sound has ever left its impression. Its waxen face, responding to the vibrant pulse of life, will record the very thought expressed in song that has brought us all together. And now, gentlemen, that I may secure a reminder of this pleasant hour, I call upon one whom we love and admire, one whose heart never falters at the call of good fellowship, to breathe forth the melody of his voice into this horn that ope's to receive it even as does the flower it portrays extends its graceful petals at morn to drink in the crystal dew. A toast to Brother Jones, for he's a jolly good fellow."

Although the response was somewhat inarticulate, the vehemence with which it was given left no doubt of Jones' popularity. He was then escorted with due solemnity to the phonograph.

"Boys, you overpower me with the ardor of your greeting. I am indeed too full for utterance. I am no nightingale, as you know, but I will do my best to sing one verse of that good old song, dear to the hearts of true Bohemians—'Auld Lang Syne.'"

Amid a silence broken only by the whirr of the revolving cylinder, Jones placed his mouth close to the horn, and commenced to sing. So earnest was he in his effort to record every word of the song, that he almost snapped his vocal cords asunder while his face assumed a ruddier hue. For a while he seemed threatened with convulsions.

When he had finished the silence that ensued was painful in the extreme. Not one of his hearers lifted his voice in approval, not one clapped hands in applause. The whirring, scratching, grind of the cylinder was all that broke the solemn stillness. For a moment he paused, then turning to his audience with embarrassment and chagrin plainly stamped upon his countenance, he started to move away. Suddenly from the bowels of the phonograph a deep, sepulchral voice, burdened with pain and remorse, and embodying in its tone the agony of the lost, groaned forth in anguish: "Is that the best you can do? Oh, Lord! That's rotten!"

Amid the yells that greeted this sally it is said Jones fainted. The renewed sounds of popping corks, however, quickly revived him.

And now the story is going the rounds of the clubs. It was too good to keep. Jones was the victim, but he took his medicine like a little major. He has already arranged for dinners for the crowd at the "Poodle Dog." How could he do otherwise? The joke was on him, but he swears he'll get even, and who would blame him. Would you? EUGENE J. DAVIS.

J. N. BLACKMAN'S NEW AUTOMOBILE.

J. Newcomb Blackman, the popular president of the Blackman Talking Machine Co., is nothing if not progressive. Always an admirer of the "benzine buggy," he has recently purchased a brand-new touring car, in which to visit the trade in the vicinity of New York. It is said that the car has such speed that it takes two men to watch it pass—one to say, "Here it comes," and the other, "There it goes." However, it enables Mr. Blackman to avoid the uncertain and comfortless railroad trains and combine the pleasures of motoring with the more serious business of capturing the dealers' orders. Following the lead of other business houses the Blackman Co. will close up shop at 1 p. m. on Saturdays during the summer months.

VICTOR SOUVENIR PIN.

The Victor Talking Machine Co. are distributing, through their dealers, a neat souvenir pin with the picture of the Victor dog in the well-known "master's voice" pose. The face of the pin is of celluloid, and the picture is reproduced in colors.

W. A. Lawrence, of the Standard Metal Manufacturing Co., 10 Warren street, New York, will be in Chicago during the Jobbers' Convention, making his headquarters at the Auditorium Annex. It is said that he has something entirely new in horns to offer the trade.

TO REVIEW LITIGATION.

United States Supreme Court Grant Request of Leeds & Catlin Co. in Suit of Victor Talking Machine Co., to Pass Upon Rulings of Lower Courts Anent the Validity of the Berliner Patent.

(Special to The Talking Machine World.)

Washington, D. C., May 28, 1907.

Before adjourning until Oct. 14, the United States Supreme Court to-day granted the writs of certiorari, submitted by Leeds & Catlin Co., New York, through their attorney, Louis Hicks, on May 13. The motions, on which argument may be heard, as they now have a standing in the court, before the close of the year, are to review the validity of the Berliner patent, as adjudicated by the United States Circuit Court of Appeals, second circuit, and also the contempt of court order originally granted by Judge Lacombe in the Circuit Court and subsequently sustained by the Court of Appeals, Judge Wallace, the presiding justice, dissenting, and in which they were fined $1,000 for violating an injunction. The Victor Talking Machine Company, Camden, N. J., the owners of the Berliner patent, are the defendants in error, and are represented by Horace Pettit, Philadelphia, Pa. The foregoing action of the highest court in the land is regarded by their counsel as a distinct victory for the Leeds & Catlin Co., plaintiffs in error. At any rate, it represents the final step in the bitterly contested litigation that is fraught with interest to the entire trade.

MR. MILLER WILL TAKE REST CURE.

H. K. Miller, who for some time past has been representative for the National Phonograph Co. on the Pacific Coast, has been compelled to retire from business on account of nervous breakdown. He will retire for the summer to some small town in New York state where he can get close to nature and will not consider a business proposition for some months.

At an auction sale of securities held in New York recently two bonds of the Edison United Phonograph Co., having a face value of $36,000, were sold for $100.

SOME STRIKING PUBLICITY

Originated by the Chattanooga Phonograph Co. During the Elks Carnival Recently Held in That City—Wide Notice Attracted.

(Special to The Talking Machine World.)

Chattanooga, Tenn., June 7, 1907

The Chattanooga Phonograph Co., 929 Market street, took advantage of the Elks' carnival recently held in this city to advertise the Columbia graphophones in an original and striking manner. In the parade they were represented by a handsome trap bearing a mahogany graphophone with a big flower horn and drawn by four white horses. F. H. Atlee, president of the company, was in charge of the turnout, and saw that the music of the latest and finest records was dispersed to the crowds. The newspaper advertising of the company during the carnival called attention that the B. P. O. E. of the Elks also stood for the Best Talker On Earth! and that is the Columbia Graphophone.

Although starting business only six months ago the hustling proclivities of the staff have forced the company on to success and the future is full of promise.

DOUGLAS BASEBALL CLUB

Cutting a Swath on The Diamond This Season.

Owing to the deep interest taken in the Douglas Baseball Club, representing the Douglas Phonograph Co., 89 Chambers street, New York, by Charles V. Henkel, president of the company, and the liberal manner in which the firm has treated the club, and through the untiring efforts of Charles Kelly, their manager, who is at the head of the shipping department, the team this season made its appearance in brand new uniforms of Yale gray with maroon trimmings and with coats of the same shade, but with bright red trimming.

The following is the schedule of games played and booked up to the present time: April 7, at Dexter Park, Douglas Baseball Club, 9; Highland, A. C., 2. April 14, at Dexter Park, Douglas Baseball Club, 5; Highland A. C., 5 (ten innings). April 21, at Ridgewood, Douglas Baseball Club vs. Seminole, forfeited. April 28, at Hicksville, L. I., Douglas Baseball Club, 9; Hicksville A. C., 6. May 5, at Marion, N. J., Douglas Baseball Club, 7; Marion Field Club, 10. May 12, at Cedarhurst, Douglas B. B. Club, 7; Cedarhurst F. C., 4. The following games are to be played: May 19, Hawthorne A. C., at Flatbush, L. I.; May 26, Hicksville A. C., at Hicksville, L. I.; May 30, Cold Spring A. C., at Cold Spring Harbor, L. I.; June 1, Parkway A. A., at Orange, N. J.; June 2, Colonial A. C., at Flatbush, L. I.; June 8, Greenport A. C., at Greenport, L. I.; June 23, Independent F. C., at East Rutherford, N. J.; June 29, Northport A. C., at Northport, L. I.; June 30, Manhasset A. C., at Manhasset, L. I.; July 4, Cedarhurst F. C., at Cedarhurst, L. I.; July 6, Seminole A. C., at Springfield, L. I.; July 7, Hatters' A. C., at Peekskill, N. Y.; July 13, Oyster Bay A. C., at Oyster Bay, L. I.; July 21, Hicksville A. C., at Hicksville, L. I.; August 10, Village Club, at Sayville, L. I.; August 24, Seminole A. C. at Springfield, L. I.; September 2, a. m. and p. m., Silver Lake A. A., at Silver Lake, N. J.

An interesting feature of the Douglas games is that they print a very neat folder for the score card, showing the batting order of both teams, giving the teams at whose ground they play a notice thereon of their next game; also an advertising notice of their nearest dealer to the place they play; likewise showing a large cut of the interior of their store at 89 Chambers street. These cards are distributed at all grounds wherever the Douglas team play their interesting games.

The ever popular John Kaiser, the sales manager of the house, is now a converted rooter for the team. It seems he owns a deed for a plot in a cemetery at Hicksville, and when he learned the boys were to open up the season there, and knowing the reputation of the strong Hicksville bunch, whenever the opportunity arose, he flourished the deed for the plot and vowed he was going to bury the boys up there if they lost; but

THE DOUGLAS BASEBALL TEAM.

at the end of the game, with the final score of 9 to 6 in favor of the Douglas boys, "Poor John's" manly form could be seen down the road making a straight line for the hotel with the Hicksville deed in one hand, and wiping his lips with his other hand in "anticipation." Since then "Our John" swears by the "Douglas bunch."

The club have a few more dates open and would be pleased to hear from all strong uniformed out-of-town teams, particularly in the music trade. For any information regarding games, etc., communicate with **Charles Kelly, manager, 89 Chambers street, New York City.**

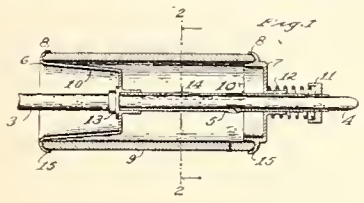
LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Specially prepared for The Talking Machine World.)

Washington, D. C., June 7, 1907.

PHONOGRAPH RECORD HOLDER. Thomas V. Skelly, Chicago, Ill. Patent No. 854,002.

The main objects of this invention are to provide an improved holder for the record cylinders of phonographs and other devices for recording and reproducing vibrations; to provide a holder which will permit the record to be freely handled without touching the recording surface, and which will serve as a protector for the record when it is removed from the machine; to provide a holder of this class on which a record may be permanently mounted and which may be readily slipped upon the record supporting mandrel

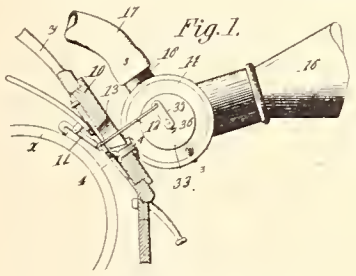


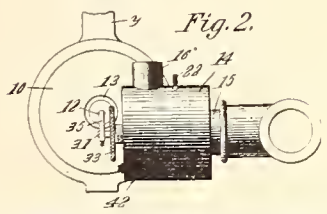
of the machine and will then serve as a drum for supporting the record in the machine; and to provide a holder which will permit the record to freely contract or expand through temperature changes without danger of breakage either when the record is on the machine or when it is removed therefrom, thus avoiding the cause of most of the breakage of phonograph records. Phonograph records are usually broken through being forced too tightly upon the supporting drum, or from contraction when chilled while on the drum or from accidental blows during the handling of the records. These objects are accomplished by the device shown in the accompanying drawings, in which

Fig. 1 is a longitudinal section of a phonograph record holder constructed according to this invention, and showing a cylindrical record in position thereon. Fig. 2 is a transverse section of the same on the line 2—2 of Fig. 1.

SOUND-WAVE INTENSIFIER. Harlie Ogden Putt, Millbury, O. Patent No. 852,615.

This invention relates to sound reproducing apparatus, and has for its principal object to provide means whereby comparatively weak sound waves may be magnified, the invention being applicable to sound reproducing machines of the phonograph, graphophone or gramophone type,





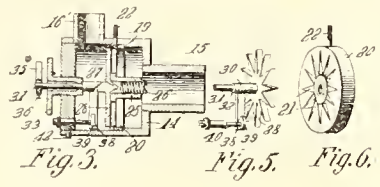
as well as to different forms of sound transmitting devices, such, for instance, of megaphones, speaking trumpets and the like.

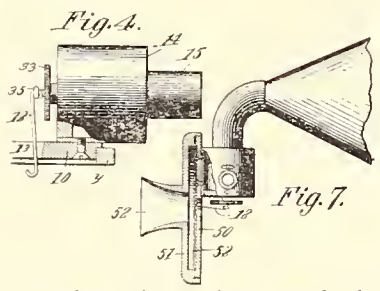
A further object of the invention is to provide a mechanism whereby the comparatively feeble vibratory movement of a reproducing stylus or diaphragm may be employed to control the flow of a fluid under pressure in such manner that the fluid will follow precisely the movements of the stylus or diaphragm and produce sound waves of much greater intensity than would be possible where the reproducing means acts directly on atmospheric air at normal pressure.

A still further object of the invention is to provide a mechanism in which the flow of a body of fluid under pressure is controlled through the action of a sound wave record or directly by a diaphragm or other body receiving motion from sound waves.

A still further object of the invention is to provide a sound wave magnifying apparatus in which numerous short blasts of a fluid under pressure may be directed against the atmospheric air, the duration and intensity of the blast being under the control of the reproducing stylus of a phonograph or like machine, or under the control of a diaphragm or other body that is operated by sound waves.

In the accompanying drawings Fig. 1 is an elevation, partly in section, of a sound reproducing and magnifying apparatus constructed in accordance with the invention, showing the application of the same to a cylindrical record sound reproducing machine. Fig. 2 is a front elevation of the same. Fig. 3 is a sectional elevation of the device on the line 3—3 of Fig. 1. Fig. 4 is an elevation of the device, partly in section on the line 4—4 of Fig. 1. Fig. 5 is a detail perspective view of the valve which is actuated by the reproducing stylus. Fig. 6 is a similar view of the



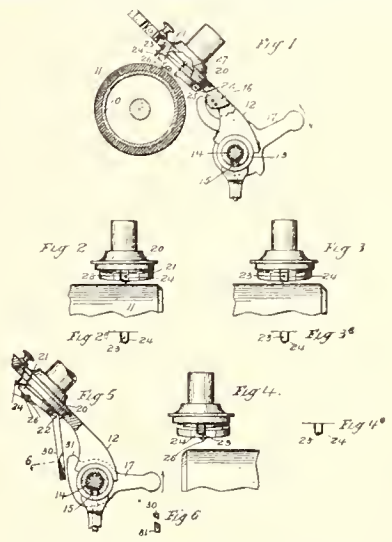


valve seat. Fig. 7 is a view, partly in section, illustrating the application of the invention to a megaphone or trumpet.

Similar numerals of reference are employed to indicate corresponding parts throughout the several figures of the drawings.

PHONOGRAPH. William W. Rosenfield, New York, N. Y. Patent No. 849,086.

This invention relates to improvements in phonograph reproducers. It is well known that in phonographs in which the reproducing point is moved laterally of the record by means of a feed-screw or other means other than the record groove itself, as in the common type of cylinder machines, difficulty has been encountered herctofore by reason of the existence of more or less lost motion in the driving means or connections by which the reproducer is given its movement laterally of the record groove or longitudinally of the record mandrel. In such machines the connection between the reproducing point and the diaphragm of the reproducer is usually such as to permit some lateral movement of the reproducing point independently of and relatively to the diaphragm, so that the reproducing point may automatically adjust its position with relation to the record groove, and in order



to avoid any difficulty due to irregularity of the record surface the reproducing point in a well-known type of reproducers is carried by a lever connected with the diaphragm and pivotally mounted on a weighted or spring-pressed member or device which is capable of moving toward and from the diaphragm and acts as a retarding device, the inertia of which will not be overcome by quick vibrations corresponding to the sound-waves to be reproduced, but which will be moved by and take up the slower movements of the reproducing point due to irregularities in the record surface. Such retarding device is also usually mounted so as to be capable of some lateral movement relatively to the diaphragm, being usually pivoted at one side of the diaphragm and its lateral movement, which is then a swinging movement about its pivot, limited by means of a pin extending into a loop at the other side of the diaphragm, which loop also forms a supporting means for the retarding device when the reproducer is moved to carry the reproducing point

Mr. Dealer.

Have you ever been caught short on your Edison Records and found that your Jobber could not help you out?

Have you ever lost a sale in consequence? Then you can appreciate the value of doing business with a Jobber who can fill your orders promptly.

ECLIPSE PHONOGRAPH CO.

203 Washington Street **HOBOKEN, N. J.**

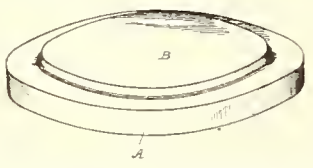
off the record. By reason of the lost motion above referred to in the means for feeding the reproducer over the record in starting the machine after the reproducing point has been brought into engagement with the record the rotation of the record cylinder will cause the reproducing point to be moved forward somewhat before the forward movement of the carrier begins, and in making such independent lateral movement the reproducing point will cause a corresponding movement of the retarding device relatively to the diaphragm. Such independent lateral movement of the reproducing point and of the retarding device will be more or less according to the amount of lost motion in the reproducer driving means and according to the position of the driving devices and connections before starting and will always be a relatively small amount; but any such movement whereby the reproducing point is moved out of its normal position relatively to the diaphragm is undesirable, aud frequently such movement will be sufficient to cause the pin on the retarding device to come into engagement with the side of the supporting loop, thus interfering with the free movement of the retarding device.

The object of the present invention is to avoid the above difficulty due to lateral movement of the reproducing point and of the retarding device relatively to the diaphragm in starting, and this difficulty is avoided in accordance with the invention by providing means whereby the reproducing point and retarding device, when such device is used, is shifted slightly backward relatively to the diaphragm when the reproducing point is off the record, so that when the reproducing point is brought into engagement witb the record while in this slightly shifted position the prelimiuary iudependent movement of the reproducing point above referred to will merely result in moving it back to its normal position relatively to the diaphragm. For this purpose, in the construction above referred to, in which a pivoted retarding device is employed which is supported at one side of the diaphragm by means of a pin extending into a loop or other means for limiting the lateral swinging movement of the retarding device and for supporting the same when the reproducing point is off the record, the supporting portion of the loop is inclined, so that when the retarding device is supported thereby it will be thrown slightly backward from its normal position. Fig. 1 is a sectional view through the record maudrel and feed shaft of a well-known form of phonograph, and showing the reproducer carrier with a reproducer in position, the reproducer being partly broken away. Fig. 2 is a view of the reproducer and a portion of the record cylinder, looking in the direction of the arrow, 2, of Fig. 1. Figs 3 and 4 are views similar to Fig. 2. showing the reproducer in different positions. Figs. 2a, 3a and 4a are detail views corresponding to Figs. 2, 3 and 4, and illustrating a construction not embodying the present invention. Fig. 5 is a side view, partly in section, showing an application of the invention to a slightly different form of phonograph from that shown in Fig. 1. Fig. 6 is a detail section on line 6 of Fig. 5.

COMPOSITION OF MATTER FOR SOUND RECORDS. George K. Cheney, New York, N. Y., assignor by mesne assignments, to Victor Talking Machine Co., Camden, N. J. Patent No. 854,801.

This invention relates generally to sound record tablets and is more specifically designed to produce a composition of matter for use as a recording surface or record tablet for talking machines. For this purpose, it is desirable that such a material should be perfectly amorphous and sufficiently hard and tough to permit ordinary handling and resist changes in temperature. At the same time, it must not be too brittle, as this property tends to cause it to crack, chip and break unevenly under the action of the cutting stylus, which results in mutilating the record and gives rise to harsh unpleasant sounds on reproduction. The material should furthermore be of such texture and possess sufficient coherence to permit a sharp, cleau cut to be made in the surface thereof and the shavings as formed to be readily removed without any tendency to become sticky and adhere to the record, recorder, etc.

A composition is obtained possessing the various essential properties and characteristics above pointed out, by combining equal parts of ozocerite and paraffin. Such a composition is found to be tough and smooth in texture. The shaving formed by the recording point is continuous and does not break into bits and stick to the surface of the record or clog the point of the stylus. The record groove is clean cut and the walls or surface thereof are smooth and entirely free of inequalities.

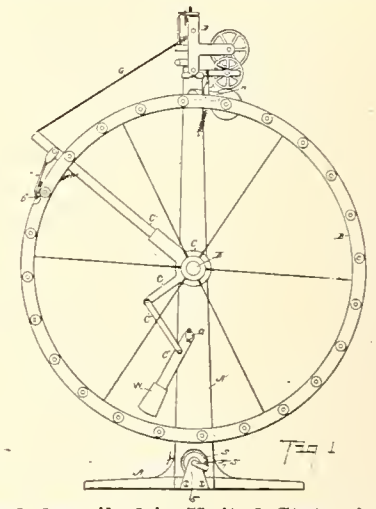


The accompanying drawing illustrates a common form of record tablet, such as is ordinarily employed in practice. The tablet may be formed throughout of the composition or the body A, thereof may be of a different material and coated to a suitable depth with the composition to form a record surface B.

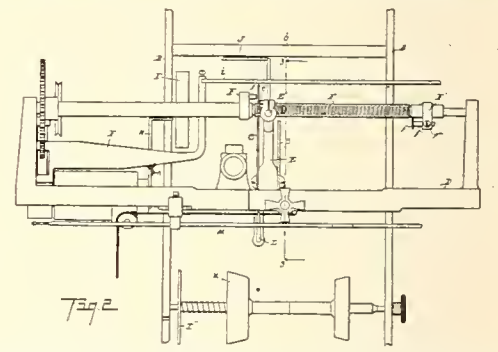
In carrying out this invention the inventor has taken ozocerite and paraffin in suitable proportions, preferably about equal parts, and reduce or concentrate the same by the application of heat. As the material melts, the temperature is gradually increased, until the boiling point is reached and it is thereafter raised to 350 or 400 degs. Fahr., and continued for an hour or more, or until, on test, it exhibits the required degree of hardness, toughness, etc. It is then poured into molds conforming to the desired shape of the record blanks or tablets and allowed to cool and harden. Upon being removed from the molds the surface B of the blank is trued up to receive the sound record.

PHONOGRAPH. Corneil Ridderhof, Grand Rapids, Mich., assignor to Multiphonograph Co., Winona, Minn. Patent No. 848,687.

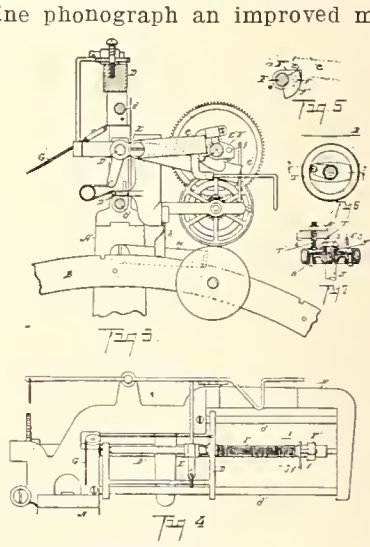
This invention relates particularly to improvements in magazine phonographs such as is illus-



trated and described in United States letters patents issued to Cyrus C. Shigley, May 5, 1903, No. 727,002, and October 25, 1904, No. 773,164, and is



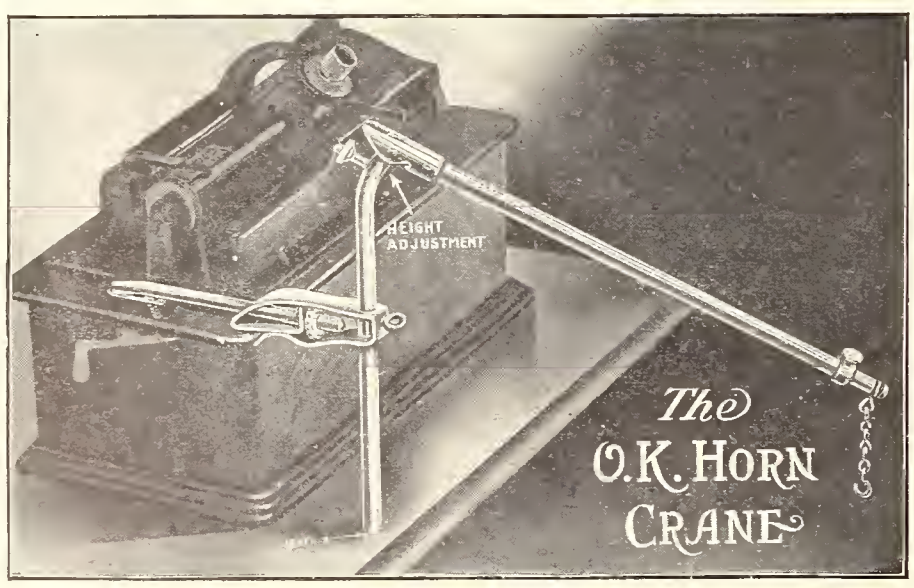
a modification and an improvement thereon. The objects of this invention are, first, to provide in a magazine phonograph an improved means for



automatically bringing the records into proper position for the reproduction thereof; second, to provide in a phonograph improved means for bringing the reproducer into and out of engagement with the record rolls.

TALKING MACHINE. Thomas Kraemer and Horace Sheble, of Philadelphia, Pa., assignors to Hawthorne & Sheble Manufacturing Co., same place. Patent No. 852,725.

The object of our invention is to provide simple and effective means for so mounting and controlling the hollow arm carrying the sound-box of a disc record talking machine, that said arm can be swung in any desired direction without restraint because of pressure exerted upon a pivotal portion of the arm by the amplifying horn used in connection with the machine, and can be caused to follow the spiral groove of the



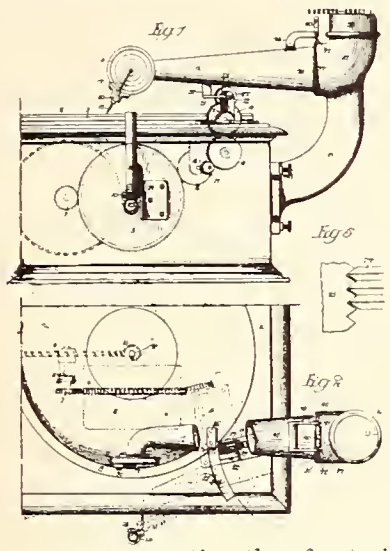
(Patented March 12, 1907.)

For Edison and Columbia Machines
Ask Your Jobber

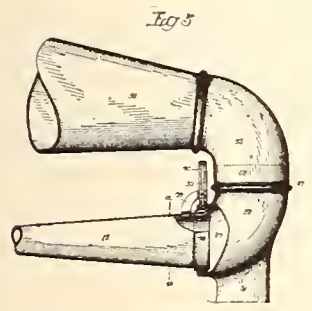
THE IDEAL FASTENER CO., 143 Liberty Street NEW YORK CITY

record without wear upon the walls of said groove.

In the accompanying drawing Fig. 1 is a side elevation of sufficient of the motor box of a disc record talking machine and of the sound-box



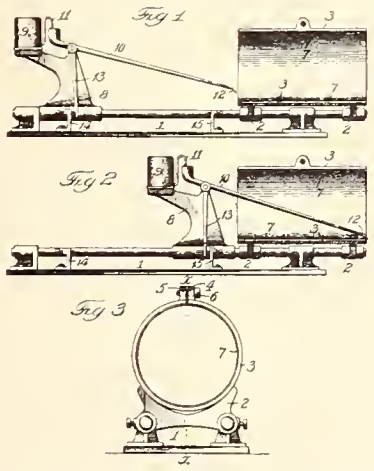
carrying arm and mounting therefor to illustrate the present invention; Fig. 2 is a plan view of the same with part of the sound-box carrying arm broken away, parts of some of the convolutions of the spiral groove of the record being also shown; Fig. 3 is a view, partly in elevation and partly in vertical section, of the mounting for the sound-box carrying arm, this view showing also part of the amplifying horn and its mounting; Fig. 4 is a transverse section on the line a—a, Fig. 3, and Fig. 5 is an enlarged view of part of the device.



Manufacture of Cylindrical Phonograph Record Blanks. Virian M. Harris, Chicago, Ill. Patent No. 854,886.

This invention relates to means for forming cylindrical phonograph record blanks from sheets of celluloid, and has for its object to provide a simple and efficient structural arrangement and combination of parts whereby the sheet of material bent into a cylindrical form is securely held and united by a longitudinally extending cemented seam to form a cylindrical blank equal in all respects to the drawn tubes or cylinders heretofore used in the manufacture of phonograph records.

In the accompanying drawings Fig. 1 is a longitudinal sectional elevation, on line x—x, Fig.

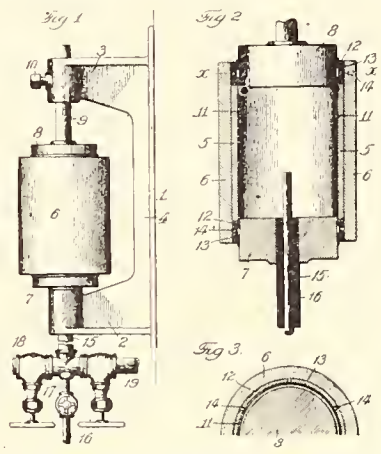


3, of an apparatus embodying the present invention, and showing the parts in the position in which the carriage has completed an active stroke. Fig. 2 is a similar view showing the parts in the position for the commencement of an active stroke. Fig. 3 is an enlarged end elevation.

Molding Phonograph Records. Varian M. Harris, Chicago, Ill. Patent No. 854,887.

This invention relates to that class of molding apparatus for cylindrical phonograph records, in which a blank cylinder of celluloid or the like is expanded by elastic fluid pressure and in the presence of heat into the interior of a properly formed cylindrical matrix; and the present improvement has for its object to provide a simple and efficient structural formation and combination of parts whereby a very effective sealing is attained at the respective ends of the cylindrical blank during the molding operation, all as will hereinafter more fully appear.

In the acompanying drawings Fig. 1 is a side elevation illustrating the general arrangement of



parts of the present molding apparatus. Fig. 2 is an enlarged central detail section of the mold portion, having the present invention applied. Fig. 3 is a detail transverse section of the same, on line x—x, Fig. 2.

Talking Machine Attachment. Charles M. Miller, Alameda, Cal. Patent No. 855,116.

This invention relates to an attachment for talking machines, in which the records are of the disc class, and it is intended to protect the discs from injury after the finish of the piece.

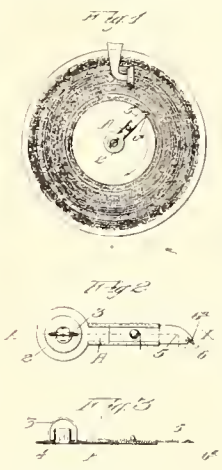


Fig. 1 is a partial plan view of a machine showing the attachment of this device. Fig. 2 is a plan view of same. Fig. 3 is a section on line X—X of Fig. 2.

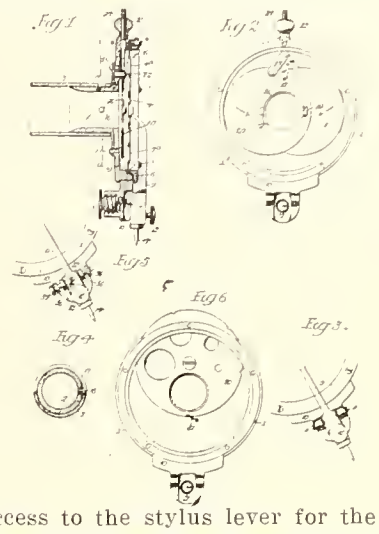
In the operation of machines of this class, the disc having the record upon it is revolved beneath a point which is held with relation to the disc so as to follow the lines of the record. It is necessary to attend to the machine and lift the arm which carries the point out of contact with the disc as soon as possible after the finish of the piece that is being played, otherwise the points will sometimes jump and be thrown back on to the lines of the record so as to injure it.

Sound-Box for Talking Machine. Edwin H. Mobley, Rutledge, Pa. Patent No. 855,326.

The object of this invention is to so construct a sound-box for talking machines as to insure a good reproduction of the record, to vary the area of outlet from the chamber beneath the diaphragm to accord with the character of the record which is being reproduced, and to permit



ready access to the stylus lever for the purpose of removing and replacing the stylus. This object is attained in the manner hereinafter set forth, reference being had to the accompanying drawing, in which Fig. 1 is a transverse section of a sound box for talking machines constructed in accordance with the invention; Fig. 2 is a front view of the same with the diaphragm and stylus lever removed; Fig. 3 is a front view of the stylus lever mounting; Fig. 4 is a transverse section on the line a—a, Fig. 1; Fig. 5 is a view illustrating a special form of stylus lever mounting, and Fig. 6 is a view illustrating a modification of one of the features of the invention.

A dispatch from Paris says that war has been declared upon the cinematograph by the Author's Society. All animated views and picture machines are included in this war. They declare the abuse is bad enough in Paris, but that it is worse in the provinces. The society claims that legitimate tours are ruined by the cinematograph, which is flickering away in all quarters, reproducing operas, melodramas, fairy plays, and even comedies, all drawn from regular theater successes. This causes great harm to the authors and actors. Directors of the leading theaters and the Author's Society are now studying to find some means to fight with their illuminated enemy.

FRED. SHERTON ASSUMES CONTROL.

Fred Shenton, of Pittsburg, Pa., has assumed control of the Fort Wayne Phonograph Co., Fort Wayne, Ind., having purchased that business from H. D. Sims. On July 1 Mr. Shenton will add considerably to the size of his showroom, taking in the adjoining store now occupied by a piano company.

William Faust has opened a talking machine store in Doylestown, Pa.

THE PHONOGRAPH DISCUSSED

By the Celebrated Jarr Family—Mrs. Jarr Has Much to Say With Her Neighbor Mrs. Rangle on the Merits of the Phonograph—A Discussion Which Will Interest the Readers of The World.

"The Jarr Family's Daily Jars" is an attractive feature of that department of the Evening World, controlled by that funnyologist, Roy L. McCardell. Lately the Jarr family have been cultivating æsthetic tastes, and their aspirations and jealousies are interestingly pictured by Mr. McCardell, as follows:

"I hear you have a phonograph," said Mrs. Rangle, who had dropped in for a friendly call during which she intended to say a few things that maybe Mrs. Jarr would feel.

"Yes; since Melba and Caruso and all the grand opera stars are singing in them, really, one must have them," said Mrs. Jarr in a grandiose manner; "but such song records are so dear that many people of modest means (this was a "dig" at Mrs. Rangle) cannot afford them."

"Oh, that is simply done to attempt to dignify the squeaky things," said Mrs. Rangle, whose tightened lips acknowledged the stroke. "I do not say that they are not amusing, but"——

"Let me put on one of the Caruso songs," said Mrs. Jarr, "they cost $5 apiece, and we are getting several dozen. They are just grand."

"You won't mind if I say 'No' frankly, will you, my dear?" asked Mrs. Rangle. "The fact is, I go to the opera so much—a costly pleasure, but then I want the real thing or nothing—that it seems a desecration to me to hear those grand voices sounding tinny.

"I'd prefer to be in the next block," said Mrs. Rangle, acidly.

"Oh, you are prejudiced, my dear," said Mrs. Jarr.

"I'll admit I am," said Mrs. Rangle. "I never hear one of the screechy things but what I think of those penny arcade places filled with all sorts of impossible people."

"Of course I never frequent such places," said Mrs. Jarr; "but you should not let the fact that you have heard those prejudice you. Why, dear Mrs. Rangle, you might as well say you couldn't appreciate a pipe organ obligato because you have listened so much to street organs!" (In her own mind Mrs. Jarr thought this a crusher for the envious thing.)

"I hear the horrid things as I hurry past those penny amusement places," said Mrs. Rangle, biting her lips, "and I feel—but, no, I shouldn't say it."

"Oh, go ahead, dear, say it. You are so provincial, my dear, that really you are amusing," said Mrs. Jarr, wondering where she'd get the knife next, but prepared to meet it heroically without a sign.

"Well," said Mrs. Rangle, tugging at her gloves, "I was going to say that I come from one of the fine old Southern families, and anything vulgar"——

"Now don't mind me," interrupted Mrs. Jarr quickly, "if one is raised to like vulgar things, why, they can be excused, if not forgiven, you know."

"It wasn't my own vulgar taste I was deprecating," said Mrs. Rangle, warming up. "I have none, except that I am impulsive and condescending and make friends of people I should keep at a distance."

"Never mind that, dear," said Mrs. Jarr, with a bitter smile, "I will show you who to avoid. But, as the subject must be embarrassing to you, we'll change the subject. As I was saying before, the best people, the most cultured people—royalty, in fact—have phonographs. Let me put on the sextet from 'Lucia' for you—now, where is that record?"

"We intend getting a pianola," said Mrs. Rangle. "Of course you can get ten of those talking machines for what a pianola costs, but then you have somethiug worth while, you know."

"But, my dear," said Mrs. Jarr, "I must tell you that a pianola doesn't make music of itself. And since your piano was taken away—I mean since you sent it away"——

"We are going to get a baby grand," said Mrs. Rangle, hoarsely. "I believe in real, not canned music!"

Then they drifted from the dangerous ground, as women will, kissed each other good-bye, begged for more calls and "come agains," and parted with mutual satisfaction at having given as good as was sent them.

The visitor being gone, Mrs. Jarr started up the phonograph, and the children's higher art in music aspiratious were greatly encouraged by the strains of "My Marriuccia, She Take a Steamboat" and "I'm All Iu, Down and Out!"

MAY MANUFACTURE IN NASHVILLE.

The Multiplex Phonograph Co., which was organized in Nashville, Tenn., recently, is considering a plan to erect a factory in Nashville and manufacture its iustruments here. The article was patented by H. E. Markel, who organized the company. It is said that several local financiers have promised to put up the money, and it may be that the company will get into shape to do business by the coming fall.

Sid D. Thompson, a jeweler of Shepherd, Mich., has put in a full line of Edisou phonographs and records, and is advertising the fact quite liberally.

This Show Case and 50 per cent. Cash Profits are yours

Hohner Harmonica Display

SHOW CASE and HARMONICA ASSORTMENT

This offer consists of an excellent assortment of the best selling HOHNER Harmonicas, to retail at prices ranging from 25c. to $1.00, and a first-class show case, made of the best material and perfect in every respect. The assortment is made up of seventeen different styles, with not a dead seller among them. Each style comes in a separate package which is labeled to show at what price its contents can be retailed for and contains an assortment of keys. The case is made of solid quarter-sawed oak, plate glass, and is specially designed for displaying Harmonicas. The instruments appear on an elevated platform, under which there is room to store a small stock. With every case a number of price-tickets are given which can be placed on each instrument to display its retail value.

THIS IS WHAT YOU RECEIVE:

4 dozen Assorted Harmonicas, to retail at 25c. each	$12.00
2½ dozen Assorted Harmonicas, to retail at 35c. each	10.50
2 dozen Assorted Harmonicas, to retail at 50c. each	12.00
½ dozen Assorted Harmonicas, to retail at 75c. each	4.50
½ dozen Assorted Harmonicas, to retail at $1.00 each	6.00
Total retail value of Harmonicas	$45.00
Value of Show Case, at least	12.00
Total Value	$57.00

Your Gain A Show Case which will last indefinitely 50 per cent. Cash Profit on your investment.

Size of case: 20¾ inches wide, 24¼ inches long, 14 inches high.

With the Makers and Sellers of Automatic Specialties

REVIEW OF TRADE CONDITIONS.

Unfavorable Weather Has Interfered With Business—Some Remarks on the Attacks Made on the Conductors of Automatic Parlors—Supervision All Right, But They Cannot be Eliminated—Foreign Trade Steadily Increasing—What the Automatic Piano Men Have Accomplished—How Big Profits Are Made—Ample Proof of the Money-Making Qualities of Automatic Specialties.

Since early in March arcade and nickelodian managers have been looking forward to the warm and balmy days of spring which always bring a harvest of pennies to their pockets, but the unfavorable and unseasonable weather which has prevailed for the past few months, has kept New Yorkers in anything but good humor, and hindered the realization of their expectations. Coupled with the above discouraging condition of affairs, the proprietors of these amusement enterprises have been forced to take issue with the legal authorities, who, for a number of real and imaginary reasons, have been trying, by their exactions, to injure if not kill this industry. This, however, has proved to be a difficult undertaking, and though a number of the smaller places in this city have been refused new licenses and therefore were compelled to shut up, the agitation is having little if any effect on the general trade. In the city of New York alone, according to statistics, there are some four hundred of these amusement places in operation. These attractive resorts have caught the fancy of the multitude. They may be supervised or restricted to certain lines, but they will never be stamped out. In truth, they have come to stay. And why should these theaters, if properly conducted, be frowned upon?

* * * *

It is true that some unprincipled operators give the public what they like—what, if the truth were told so many—we regret to say—prefer, and with the movement to kill this despicable practice we are in sympathy with the authorities. But they do not stop here, for they know only too well that while they can, and should, prohibit the showing of obscene and suggestive pictures, this alone does not give them grounds for closing up decent, well conducted places. They therefore have trumped up other charges, such as the breaking of health and fire laws, the allowing of children under a certain age to enter, etc. Just at the present time the child question seems to be attracting the most notice, and moralists are, like the soothsayer and his ides, going about crying out against what they call the "wholesale corruptor of public morals." We may ask in what way do the arcades or nickelodians harm a child, providing that all objectionable pictures are removed? Is music, or moving pictures, or any of the other amusements to be found in these places degenerating? If so, indeed, the paths of righteousness are dull and unattractive. No; the fault cannot be laid at the doors of these places, but rather at those of the mothers who for various reasons take too little interest in their young and let them wander without protection through the streets.

* * * *

Foreign trade has increased wonderfully during the past month. Europe, Australia and South America have caught the fever, and there is an enormous demand for machines of American manufacture. The talking machine trade is fast taking up agencies for the various slot machines manufactured in this country. The first device to tempt them was undoubtedly the automatic piano. This was due to the progressiveness of the manufacturers who never let an opportunity pass by to impress on the trade the easy money to be made by their use. They didn t go fishing for business with one publicity worm, but carried on an extensive advertising campaign. Their argument was money, their proof, facts. They knew that they were after a trade comprised greatly of shrewd business men, and that talk alone would not go, they therefore made use of a liberal amount of space to show in detail where and how the talking machine man cou'd handle profitably their instruments as a side line and they have been rewarded.

* * * *

There is, however, another and important side of this business that the talking machine people have overlooked, namely, that of operating. Here is where the real money is made. No matter where one may be located, in a city the size of Chicago, or in a small town in Texas, there always will be found locations where these devices can be placed to advantage. For general outdoor use the soda, chocolate, chewing gum and weighing machines have proven the best money getters. Any place where people pass or gather, these silent salesmen will always give a good account of themselves. Vending machines are comparatively cheap. There is absolutely nothing to get out of order, as the mechanism is very simple, the only real expenditure being for gum, candy, etc. But inasmuch as the profit made on each sale is from 300 to 800 per cent. (according to the quality of your machine) there is little fault to be found. For inside locations, such as cafes, dance halls, pavilions or other public places, the automatic piano, talking machines, harps, banjos, orchestrions, card printers, drink machines, etc., are preferable. These, unlike the outdoor devices, can often be constructed to operate with a nickel instead of pennies, for, for some reason, machines on the street never pay on the five-cent basis.

* * * *

Now, in every walk in life, there is always a percentage of doubting Thomases, and in order that these gentlemen may not think we are overenthusiastic we would suggest that they go out of their way some time just to watch a collector at work removing the week's earnings from some of these machines, and if this doesn't change their opinions—well, their chance of ever getting wise to a good thing is pretty slim. For the sake of demonstrating the extent of the operating business in this city we will quote from an article that appeared in this paper about a year ago: "The firm that has the concession for the elevated and subway station slot machines in New York City, operates four or five thousand of them, and in order to keep these supplied, it has twenty-five enormous machines going all the time, which wrap from fifteen to eighteen thousand pieces of gum and chocolate a day. A corps of men are kept constantly at work filling the machines. Every day they are refilled and examined to see that they are in working order, for when a penny gets lodged in a machine and refuses to bring forth the desired piece of gum, the owner of the penny begins to have a feeling against slot machines in general as snares and delusions. The companies know this, and on that account look out carefully for disorders in their instruments. The newest improvement in these machines provides that the penny will drop right through if the wares have given out." There is plenty of money to be made in this automatic field by men who understand the requirements of the business—men who can feel the public pulse, so to speak. It is no calling for sluggards or men who are not always up and doing.

THE AUTOMATIC ORCHESTRA

Is Found at Lyon & Healy's in the Shape of an Orchestra Which is a Marvelous Creation and Destined to Win Wide Popularity—The Band Organ Also Supplies a Brass Band of Any Size Required, While the Other Line of Automatic Creations Shown by This House Give an Idea of Their Development.

(Special to The Talking Machine World.)

World Office, 195 Wabash avenue,
Chicago, Ill., June 8, 1907.

Perhaps no American firm is better qualified than Lyon & Healy to report on the present status of mechanical instruments. A Talking Machine World man, after looking through the new Lyon & Healy catalog of automatic and mechanical instruments, concluded to make a visit of inspection to this department of the Chicago firm.

His visit, first of all, gave him the impression that there is a large and growing demand for such instruments as nickel-in-the-slot pianos, military band organs and orchestrions. Heretofore, the dealers' attention has been chiefly directed to the self-playing piano, and this instrument is now being pushed successfully in every section of the country. The band organ and orchestrion are newer propositions, but are receiving due attention at the hands of a great many dealers. The band organs represent brass bands of any complement desired, from the smallest to those of the fullest instrumentation, the music

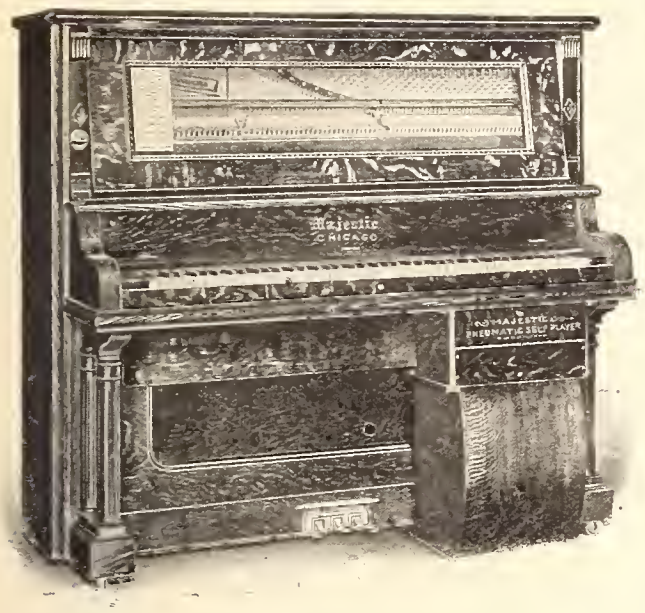
Automatic Drink Machine Co.

415 Broadway, NEW YORK CITY

being produced by a pinned cylinder, each of which carries eight tunes. New tunes may be secured at low cost. They are used chiefly by merry-go-rounds, skating rinks, dance halls, fair entertainments, traveling shows and various kinds of amusement resorts.

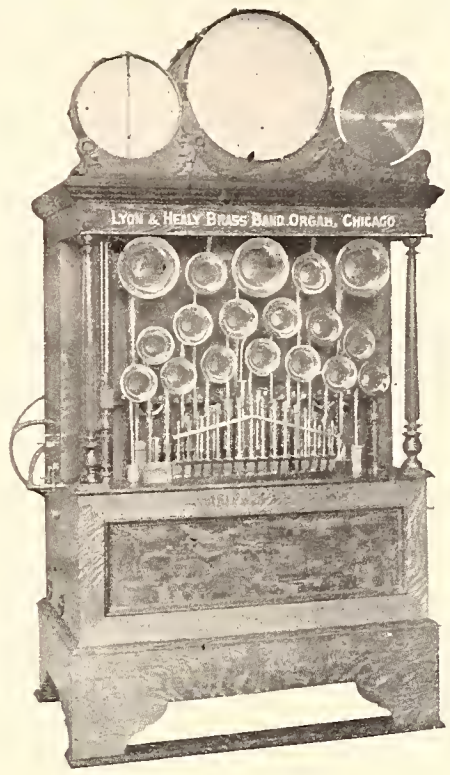
The orchestrions consist of several distinctly different types. Some represent a full brass band and others a band in accompaniment with a piano. The most widely-used type of orchestrion, however, is the concert instrument which represents an orchestra. They are played by means of perforated paper rolls, and are especially adapted to restaurants, cafes, hotel dining-rooms, skating



MAJESTIC AUTOMATIC PIANO.

rinks, dance halls, excursion boats, private residences, etc.

The usual plan of selling both band organs and orchestrions is a very favorable one from the dealer's standpoint, as he is only asked to find a purchaser and is thus able to earn a nice commission for his trouble without having to carry the account of the purchaser. Fourteen different models of band organs and orchestrions were heard and the instrumentation of each was ex-



BRASS BAND ORGAN.

cellent. There was none of the confusion of trumpets, piccolos, bases, trombones and various other instruments, but each group of instruments sounded clearly and distinctly from the rest; in fact, the bringing out of the tone of the individual instruments was accomplished with remarkable precision, while the most difficult numbers requiring skilful blending of units, were handled in splendid style. So much for the orchestrion and band organ which seem to offer the dealer excellent opportunity for turning an occasional sale.

Messrs. Lyon & Healy state that a large part of their business in nickel-in-the-slot pianos is being done by operators who make a practice of placing a number of self-players on the commission basis. A great many dealers have been so successful in this practice that it has grown to be one of the best paying departments in their business. The idea is to secure self-players in lots of from five to fifteen, and distribute them among desirable restaurants, cafes, etc., sharing the returns with the proprietor. Occasionally a cafe will not ask a commission even, as the playing of the instrument naturally causes a large increase in their sales. However, when the commission arrangement is entered into, the allowance to the resort varies from 10 to 20 per cent.

A great many proprietors who accept self-players on this basis quickly realize the value of the instruments as money makers, and purchase them outright, their reason for not doing so in the first place being that they prefer to know positively that the self-player will pay them, which it invariably does.

As a matter of fact, the initial cash payment is often all the purchaser is ever required to invest, because of the large amount taken in by the instrument from the very start.

A DRAWBACK ALLOWED

By the Treasury Department in Connection With the Exportation of Combined Projecting Moving-Picture Machines.

(Special to The Talking Machine World.)

Washington, D. C., May 31, 1907.

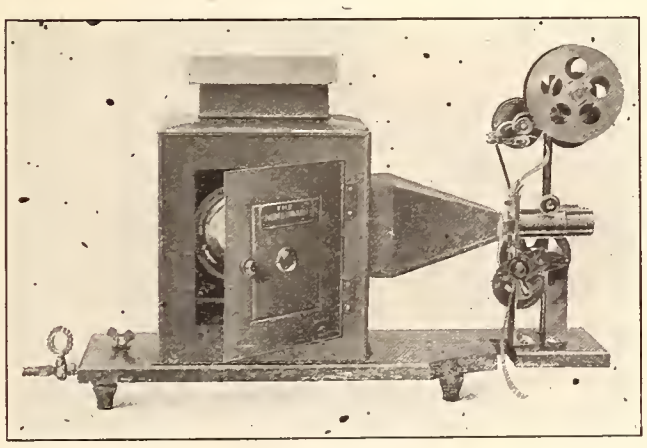
Replying to an inquiry of the Selig Polyscope Co., Chicago, Ill., for drawback on the exportation of a combination moving-picture made with the use of imported mounted lenses, the Treasury Department, on May 7, addressed the subjoined letter of instructions to the Collector at that port:

"On the exportation of combined projecting moving-picture and stereopticon machines manufactured by the Selig Polyscope Co., of Chicago, Ill., with the use of imported mounted lenses, a drawback will be allowed equal in amount to the duty paid on the lenses so used, less the legal deduction of 1 per cent. The preliminary entry must show the marks and numbers of the shipping packages and the contents of each package separately and in the aggregate.

THE PROBLEM SOLVED AT LAST!

A PERFECT MOVING PICTURE MACHINE FOR THE HOME

AN INSTANTANEOUS SUCCESS



The IKONOGRAPH

It can be operated by a child.

The IKONOGRAPH is to the eye what the talking machine is to the ear. **It is not a toy,** but a practical machine, giving results in every way comparable with those of any high priced moving picture machine.

You Sell Phonographs, Why Not Moving Picture Machines?

Of Highest Educational Value, and In Demand for Church, Sunday School, Lodge and Home Entertainments.

IKONOGRAPH COMMERCIAL CO. 36 East 23d Street NEW YORK

We Make Pennies Grow

If you deposit your savings in a bank, you may earn 3 per cent. or possibly 4 per cent. Invest them in a Penny Arcade and your investment will net you 150 per cent. to 300 per cent. per annum.

LET US PROVE IT TO YOU.

Let us show you how you can gain an independent income by an investment of $600 and upward.

We will start you, assist you in every way in making your establishment a profitable one, and give you the benefit of our 20 years' experience both as operators and manufacturers.

WE WILL SEE THAT YOU MAKE A SUCCESS, for *your success* will mean *our success.*

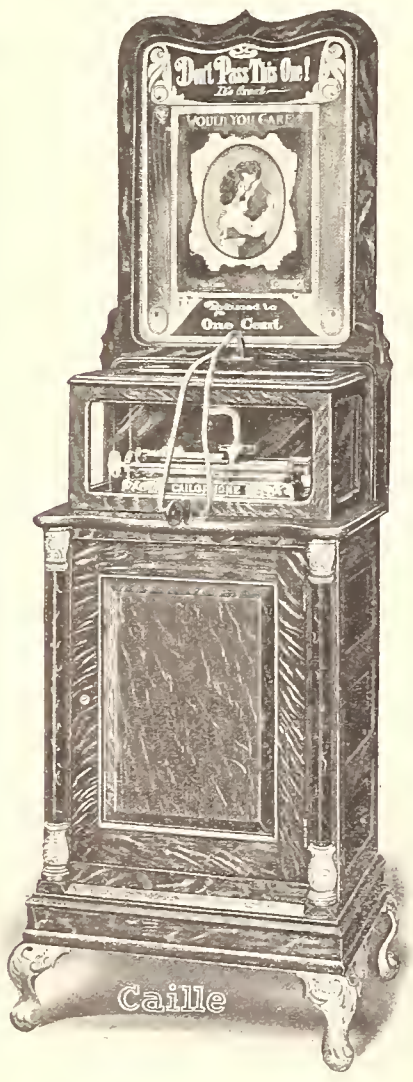
Given a fair location, and that is easily found in any town with a population of upward of 5,000, your investment will be returned to you in four or five months, after which all receipts are CLEAR PROFIT.

Just now is the *time to start* and take advantage of the spring and summer season.

Your town certainly should have an ARCADE. If there already is one in operation, YOU start another better one and show that you are up to the minute and a hustler.

If you are now operating an ARCADE, improve the same by adding CAILLE MACHINES and CUT DOWN REPAIR BILLS.

No machines like CAILLE MACHINES for showing big receipts!!



The public prefer Caille Machines, as they always work and always work correctly. They never are out of order.

No scales like CAILLE SCALES, and we make 5 different styles, all of them absolute leaders.

But we also make the famous CAILOSCOPE and have recently patented the CAILOPHONE, both of which machines outdistance anything on the market.

In fact we make *257 Varieties*, all of them "*Caille Quality*," which means excellence in every detail of construction, mechanism and appearance.

A postal Card will bring you our handsomely illustrated Catalogue for 1907, showing the largest line of coin controlled machines manufactured in the largest plant in the World devoted exclusively to the construction of automatic devices.

"The drawback entry must show the total number of projecting moving-picture and stereopticon machines exported, and the number, kinds and sizes of imported mounted lenses contained therein, describing the same as they are described in the import invoice or invoices, and, in addition to the usual averments, that the merchandise was manufactured of materials and in the manner set forth in the manufacturer's sworn statement, dated March 15, 1907, transmitted herewith for filing in your office. In liquidation, the imported mounted lenses of various kinds and sizes which may by taken as the bases for the allowance of drawback entry, provided it shall not exceed two mounted lenses for each complete machine."

MOVING PICTURE SHOWS IN MUNCIE.

(Special to The Talking Machine World.)

Muncie, Ind., June 4, 1907.

As in many other cities at the present time the moving picture shows in Muncie are having their own troubles with the neighbors. In response to a petition signed by a number of merchants the city council attempted to frame up an ordinance prohibiting the use of loud-talking machines in front of the theaters. The ordinance was, however, laid over for a month, for, although some of the councilmen were in favor of putting the taboo on the machines, other members believing the owners of the theaters to be fair minded business men, insisted that the proprietors be given a chance.

The visit of the committee to the proprietors the other day met with approval, for all of the owners agreed to muffle the machines during the afternoon, while most business houses and offices are open.

Even though considerable complaint has been made against the music that issues from the talking machines, there are many who enjoyed it. Some said the noise did not bother any more than a passing street car. Clerks in various establishments said it broke the monotony of the working hours and are sorry that the machines are not allowed to play as of old.

A RIVAL OF THE PHONOGRAPH.

The strong hold which the moving pictures have taken on the minds of all classes of the public has been acknowledged for some time past, and has lent no little stimulant to the active mind of the inventor, intent upon producing a machine which should satisfy this demand in a practical manner, eliminating the prohibitive cost and complication of the best machines of the day.

The Ikonograph Commercial Co., at 36 East 23d street, New York, have recently put upon the market its "Ikonograph," a machine which has effectively solved the problem. It is so simple that even a child can operate it, and as its weight is but five pounds, may be easily transported. It is the ideal home entertainer.

"What the phonograph is to the ear the Ikonograph is to the eye," aptly characterizes the machine. Its reproductions are as clear in effect as those of the most expensive machines, and without the flickering so annoying to the eyes. It is "fool proof," fireproof and accident proof.

The necesasry light is furnished either by an electric light, connected by a flexible cord to an electric fixture, or by a gas light connected by a rubber tube to a gas fixture, or by a safe and simple self-sustaining acetylene gas lamp. Either method produces most satisfactory results.

For professional use in theaters or large halls the same machine with an oxy-hydrogen light or electric arc light produces a picture 12 by 18 feet in size, which in clearness of definition and absence of flickering equals those of the most expensive machines.

For the use of the family at home, the merchant with goods to advertise, the teacher with lectures on geography, history or literature to illustrate, the enterprising young man looking for a clean and profitable business, no extended arguments to demonstrate the wide possibilities of the Ikonograph are needed.

The low retail cost of $40 for the machine complete and ready for operation brings it well within the reach of all.

Picture films in lengths of from 15 to 150 feet are supplied in great variety of subjects at a cost approximating that of disc records. Once the merits of this machine are illustrated, the demand will unquestionably be very great, and should prove an extremely profitable adjunct to the stock of talking machine dealers throughout the world.

ARCADE MEN INCORPORATE

To Fight the Crusade Being Waged Against Them by the Municipal Authorities—Demand a Square Deal and Will Fight for It.

The activity of the authorities against the moving picture shows, the "nickel arcades," "penny vaudeville" and "dime varieties" has caused the owners of these enterprises to combine for common defence. A certificate of incorporation of "the Moving Picture Exhibitors' Association" was filed by their counsel, Florence J. Sullivan, in the County Clerk's office to-day.

"There are about 350 of these places, generally in ordinary stores, now running in Greater New York," said Mr. Sullivan. "They are nearly all nickel and penny exhibitions, and they represent an aggregate investment of nearly $7,000,000. They employ 3,000 persons—cashiers, 'barkers,' lecturers, cleaners, ushers and the like, and it goes without saying that a wholesale condemnation of these exhibitions is wrong. The raid of the authorities upon them, manifesting itself in the attempt to arbitrarily revoke the licenses of sixty of them without a hearing, must be met. That is why this association was formed."

The moving picture show people suspect that the men who run the more pretentious amusements of the city, the theaters, roof gardens and the like, are back of the crusade against them.

LYON & HEALY'S NEW CATALOG

Just Issued, and Devoted Exclusively to Automatic and Mechanical Musical Instruments, Is an Admirable Publication in Every Way.

That Messrs. Lyon & Healy, of Chicago, are decidedly "au fait" in the matter of catalog making, is fully evidenced by their new catalog of automatic and mechanical musical instruments just to hand. It is noteworthy alike for its artistic appearance as well as for the completeness of the line of goods exploited and the interesting manner in which they are illustrated and described. The volume consists of 32 9 by 12 inch pages, printed on pure white enamel paper, with an attractive cover of gray deckle edge stock printed in two colors, with embossed title. The instruments shown include about everything that is employed for "public music" in such places as amusement parks, skating riuks, cafes, soda fountains, tent shows, excursion boats, dance halls and carnivals, merry-go-rounds, fair entertainments and other public places where people "most do congregate for amusement and recreation."

The completeuess of the line is well described in the introcuction, which says: "There is no character of place to which the public would be attracted that we cannot equip with satisfactory music." Then follows full-page illustrations and descriptions of the instruments, beginning with the Lyon & Healy pianette, an inexpensive 39-note nickel-in the-slot piano, which uses a spring motor for power and for which no electric current is needed.

A 44-note self-playing piano comes next, then a full-size self-player. After these a varied line of popular military band organs (six different models of varying instrumentation), for which the claim is made that "their instrumentation stands unapproached by that of any similar instruments." There is a wide price range from $350 to $1,500 on these popular sellers.

Piano orchestrions are next. These are handsome appearing instruments which represent a band in accompaniment with a piano and are played by means of music rolls. There are also special skating rink orchestrions which replace a full brass band, and Lyon & Healy are general distributers for these famous instruments made by M. Welte & Sons, as well as for their beautiful pneumatic concert orchestrions which use a perforated paper roll and afford a perfect imitation of a full orchestra. The last are being adopted by restaurants, cafes, candy kitchens, hotels and such places.

Altogether the catalog is an extremely useful thing for the music dealer to have on his shelves, for while the demand for this class of instruments is not so common as that for pianos and talking machines, a good deal of business is to be picked up in every city and town, and a catalog like this one is the next best thing to having the goods to show; in fact, it may be the means of landing many a sale that otherwise would get by. Messrs. Lyon & Healy state that they will be glad to send their handsome catalog to dealers who are interested enough to ask for a copy.

MOVING PICTURES AN INFLUENCE

In Causing a Feeling of Unrest Among the Natives of India With Their Government.

The unrest of the uative population of India, marifested recently in disorders, has occasioned much uneasiness in England. The trouble had its origin in the attempt of the Hindoos to boycott British goods. While the present ferment is in a sense a manifestation of perennial unrest, the cause of many explosions in the past, it has its particular sentimental genesis, and this is the success of Japan over Russia. It is the first cousin of "The Orient for the Orientals," "China for the Chinese," and similar catch-phrase doctrines.

Dense as the mass in India is, the victory of Japan has penetrated its inner consciousness; in fact, many pains were taken to see that it did. Within the last year the whole East has been plastered with cheap motion picture shows, almost invariably managed by itinerant Japanese.

A Chinese or Indian coolie cannot be reached by literature, as a rule, except indirectly; but he is absolutely open to impressions from pictures which show the white race he has so long respected and feared beaten at war by a dark-skinned brother.

In this way has the message which Japan's victory carries to the East been communicated to the masses in China and India. One of these exhibitions was stopped in Singapore, and while the police gave as their reason some alleged obscenities, the real reason was the pseudo-political character of some of the pictures. The government is considering the propriety of expurgating some of these shows.

While the present disorder in India can hardly be taken as seriously presaging another mutiny, the government regards the situation as one calling for tact coupled with firmness. Prominent British officials in India have not felt at ease for several months past, nor will they until the agitation entirely subsides.

ARCADE MEN SECURE INJUNCTION.

McCahn & Weissman, who conduct a moving picture business at 555 Eighth avenue, have obtained from Justice Davis in the Supreme Court an ex-parte injunction restraining Police Commissioner Bingham, Captain Stephen O'Brien and the police generally from entering the premises in question without a warrant or other legal process or from interfering in any way with their business.

Gustavus A. Rogers, counsel for the plaintiff, said that Captain O'Brien had threatened to close up the place. Rogers also got a similar injunction for William Fox, whose place of business is 1498 Third avenue.

Assemblyman Prentice's bill, which was designed to put out of business the arcade and moving picture places in New York City, was killed by the Senate on June 4. The fate is a deserved one, as the bill was entirely unnecessary.

TYPE E

THE MUTOSCOPE

For Summer Parks, Penny Arcades, etc., has proved itself to be the greatest money earner of all coin-operated machines. In fact it has made the "Penny Vaudeville" what it is to-day. The privilege of free exchange of pictures keeping them fresh and up-to-date, make it always attractive. Our New Type E Mutoscope, besides being handsomer in design, possesses many improvements in mechanism over former models.

Four Points of Perfection 4

that are found in

"TEA TRAY" HORN CRANES

SIMPLICITY

"Tea Tray" Cranes are the simplest and most practical in construction that can be devised. They have no complicated or unhandy mechanism to adjust; no clumsy or awkward parts to detract from or to mar the appearance of the machine or cabinet. Every part is so simple in operation that it assures quick, easy and secure adjustment. These cranes are adapted for use on all kinds of Phonographs and cylinder Graphophones.

STRENGTH

"Tea Tray" Cranes have no parts to become bent, broken or lost. The greatest strength is given where the greatest strain comes, thereby assuring a perfectly rigid and firm adjustment.

DURABILITY

"Tea Tray" Cranes are constructed of the best materials, conscientiously put together by expert mechanics so as to give the best and longest service possible.

BEAUTY

"Tea Tray" Cranes have a "quality" appearance. They are finished throughout with a heavy coating of the best nickel plate which is burnished to a high, brilliant mirror finish.

Write for Handsome Catalog

THE TEA TRAY CO. OF NEWARK, N. J.

FOUNDED 1867.

Entered as second-class matter May 2, 1905, at the post office at New York, N. Y., under the act of Congress of March 3, 1879.

Mr. Talking Machine Dealer:

Did you ever stop to think how many **more** machines you could sell if the manufacturers would reduce the **retail** price on the **best style** of machine to **$25.00?** Isn't it a fact that you could sell two or three times as many as you do now?

Wouldn't you **act quickly** if you were offered a first class talking machine (we don't mean a toy) that you could sell at retail for $25 on the same margin of profit you are making now? If your answer to these questions is "YES," then the only reason you are not handling Reginaphones is that you do not understand our proposition.

THIS IS WHAT WE OFFER:—A talking machine attachment of the highest grade, that is giving universal satisfaction, and that is equipped with all improvements, including tapering tone arm, at a price which enables you to sell the **complete instrument,** the "Reginaphone," at an advance of $25 above the price of the "Regina" alone —and you still make your usual percentage of profit.

How can we do it? Well, for one reason, because the same **motor** and the same **case** answer for both the music box and the talking machine.

The Reginaphone is **as good** in tone quality as any talking machine costing $100 or more and **superior** mechanically because of the **long running Regina motor.**

We have several styles of Reginaphones but only **one type, one size** and **one grade** of talking machine attachment. It is of the highest grade and is the same on all Reginaphones.

If you have any doubt whatever about the Reginaphone being a satisfactory talking machine and also a satisfactory music box, a demonstration will convince you. To show our confidence in Reginaphones, we will, for a limited time, send a sample on approval for ten days to any responsible dealer and pay the return charges if not purchased.

We want to hear from the "show me" dealers.

The Talking Machine World

Vol. 3. No. 7. New York, July 15, 1907. Price Ten Cents

ADVERTISING POINTERS FOR THE DEALERS.

How Much Should be Spent for Publicity—Most Successful Merchants Spend from 2 to 5 Per Cent. of Total Sales—Newspapers the Best Mediums—Program and Souvenirs Issued by Churches, Lodges, as Well as the Usual Fakes and Schemes Which Are Before Every Dealer, Should be Avoided as They do Not Pay—Apportioning the Publicity Fund.

How much money should a dealer spend in advertising and what mediums should he use? These questions are very much like asking "How much ought I to eat and where ought I to get it?" Yet these very questions more or less bother nearly every advertiser in the world. The answer, of course, is that circumstances and conditions alter cases. The exact volume of a dealer's advertising expenditure ought to depeud upon the possibilities of trade in his locality; upon the competition he has; upon the correctness of his store methods; upon the values he offers to his customers, and perhaps to a certain extent upon his personal popularity if he live in a town or small city; and last, but not least, upon the character of the advertising he does—whether it is good or indifferent.

* * * *

So, then, the question of how much to spend depends on so many circumstances that it is unsafe to lay down any kind of a rule. Many successful advertisers follow the practice of increasing their advertising as their profits increase, independent of what competition they may experience. The experience of the big department stores in our large cities goes to show that the more money they spend in publicity the greater the business that comes to them and the bigger the additions they have to make to their establishments.

* * * *

Indeed, it is safe to say that without the modern newspaper press these great establishments could not exist. It is advertising, then, conducted in the moderu way, that has built up these great businesses, and what advertising has done in the past it can do again. It appears to us that a dealer or jobber, if he must err at all, should err on the side of a too liberal advertising expenditure. But he must do it right. Quality of advertising is of more consequence than quantity.

* * * *

One of the most successful merchants in the Union spends aoout 3 per cent. of his total sales; another well-known dealer spends 2 per cent., and others all the way up to 5 per cent. But the amount should never exceed this percentage for the average retail business. It is also of the greatest importance that a dealer should place his announcements in the right mediums, and this brings us to the second of the two questions heading this article.

* * * *

Of course, very few advertisers have to search for mediums. It is usually the mediums that search for the advertiser. Indeed, the multiplicity of advertising mediums looking for advertisers is almost bewildering to the novice. And the larger the town or city the larger the number. In a large city like New York no sooner does a new advertiser put out his modest announcement, perhaps in one newspaper only, than he is almost overwhelmed with advertising solicitors of all kinds. Many of these solicitors represent good mediums and mediums suitable to our advertiser's purpose, but the majority will probably be fakirs and schemers of all kinds. And this is also probably true to a certain extent of nearly every community in the country.

* * * *

In addition to the fakes and schemes, the advertiser, if he is not careful, will find himself the victim of promoters of all sorts of programs and souvenirs, advertising promoted by churches, Sunday-schools, lodges, societies and what not. The pressure to use some of these mediums is so great that the merchant often succumbs from mere weariness of the flesh, knowing in his heart that he is throwing his money away, so far as advertising is concerned, and that he is probably throwing it away entirely. The mediums that most press themselves upon him are pretty sure to be the least good. It is a nervy as well as a wise merchant who has sufficient backbone to stick to his guns when he is under the fire of two or three pairs of pretty eyes and bewitching smiles. And the owners of the pretty eyes and the bewitching smiles want his advertisement so very much, and it will only cost him $5 or $10, or whatever it is, and the committee are so sure, too, that all the church members will see his advertisement and appreciate his kindness, and so on and so on. A man who advertises out of kindness is on the wrong track. Such expenditures, if he persists in making them, should not be charged to advertising account, but to charity; indeed, they should not be looked upon as for advertising purposes at all.

* * * *

When a merchant has to face the probable loss of trade a refusal would cause his best place is doubtless to make a donation in money or its equivalent in goods to the church or lodge or other society that solicits him, and keep his advertisements out of the medium suggested for his use. Every time his advertisement appears in one of these mediums it is an encouragement to others to swoop down on him.

* * * *

Assuming, then, that a merchant has sufficient experience and knowledge to teach him the incomparable value of the newspaper press for advertising purposes, the question remains as to how he shall apportion the amount he has appropriated for his advertising department. If located in a town that has, say, five daily papers, morning and evening, two or perhaps three of these five will probably be good and the balance not of much account. If the place have three papers, one will probably be a first-rate medium, one fairly good and one of but little or no use. In cases like these it is the best plan to pick out the best paper (or perhaps the two best papers, if there are three of them) and put three-fourths of one's advertising appropriation in it or them. Spreading the advertising around among a number of papers when one or two will do the business is the rock on which many an adventure makes shipwreck.

MUSIC FROM ELECTRICITY

The Experiments of Dr. Dupont of Special Interest Following the Labors of Dr. Cahill Who Gave Us the Telharmonium.

A successful attempt, as is well known, has recently been made to produce music immediately from electricity by means of the telharmonium of Dr. Cahill, without the aid of any musical instrument. In this connection it will be interesting to learn that a French scientist, Dr. M. Dupont, a short time ago succeeded in converting music into electricity by reproducing in the shape of an alternating current the series of vibrations corresponding with a series of musical sounds. This alternating current affords a picture of the sound vibrations that constitute a musical performance, and is able to produce physiological effects similar to the hearing of music. The alternating current in question is made up of periods, the frequency of which corresponds with the number of vibrations of the sound—that is, with the pitch—a high sound yielding a rapidly vibrating current and a low one a current with long periods. The ratios between the various phases of the current periods are identical with the ratios between the sound intervals. The alternating current corresponding with a scale thus comprises a series of periods, the number and ratios of which are equivalent to the frequency and ratios of the sounds of the scale.

In reproducing these musical currents, Dr. Dupont uses a phonograph, to which a microphone is fitted. After recording a musical scale on the phonograph cylinder, the apparatus is made to work, when the microphone will yield an alternating current as above described. The microphone circuit comprises the primary of an induction coil without its interrupter. By means of this transformer the alternating currents obtained are controlled at will before being applied to the organism.

If in the place of a scale a piece of music be chosen, the alternating current, on passing through the human body, will produce the physiological effects of that piece. After some practice it will doubtless be possible to tell a piece of music by the corresponding currents traversing the tissues of the body in the same way as by hearing it. This process might prove especially valuable in the case of deaf mutes.

Dr. Dupont has undertaken exteusive researches on the physiological effects produced by these rythmical currents on the nervous system. A writer in the Scientific American says it is hoped to ascertain the kind of current corresponding with each given condition of the mind, so as to be able at will to exert an exciting or calming action.

In this connection it should be remembered that Dr. Leduc some years ago investigated the calming and anesthetizing effects of rapidly intermittent direct currents of low intensity.

TALKERS TO REPLACE ORCHESTRAS.

Poor Orchestras in Theatres a Nuisance—Managers Talking of Replacing With High Priced Talking Machines.

It is predicted in some quarters that before many years the orchestras in many local theatres will be done away with and their places taken by powerful talking machines. This move will be due largely to the fact that in the majority of cases the ochestra music is of rather poor quality and annoying to those of the audience who appreciate good music. Managers say the playing of the orchestra between the acts is seldom listened to, and that they have so much trouble with the players that they favor dropping them entirely. This would hardly be so favored by the public, however. It has grown so accustomed to expecting music during the waits, even though it does not listen attentively, that it would be sure to rebel at its total discontinuance, so good talking machines have been suggested as a substitute for indifferent orchestras.

SHE HAD A TALKING MACHINE!

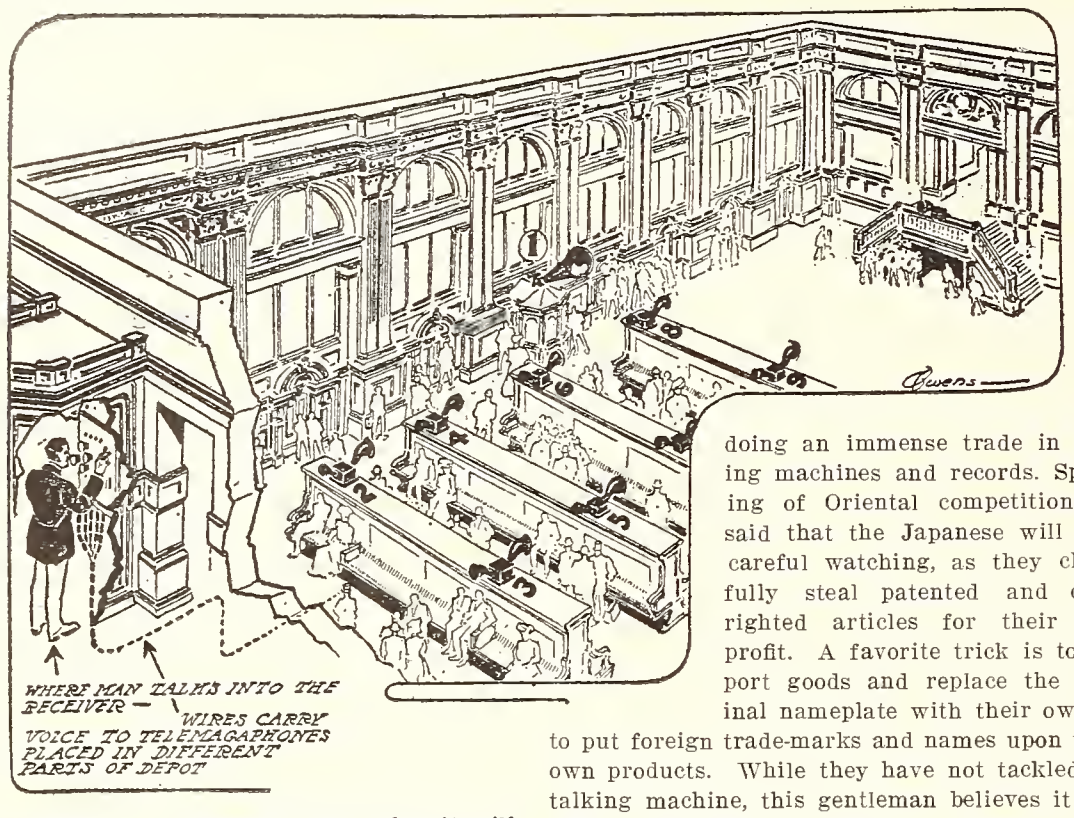
The pride with which many people regard their talking machines is well illustrated in a story told by a salesman for a prominent piano house. It seems he was putting in all his fine work in an effort to land a prospect, the lady of the house in this instance, being much annoyed by another woman, a neighbor, who was continually chiming in and offering arguments and suggestions. Finally, she said, "Why, yes, Mrs. Blank, you certainly ought to get a piano." The exasperated salesman immediately turned around aud asked, "Have you got a piano yourself madam?" to which she replied, drawing herself up and assuming a proud and haughty air: "No, indeed; I've got a talking machine!"

NOW THE TELMAGAPHONE.

Tried With Decided Success at the Grand Central Depot for Making Announcement—An Old Talking Machine Idea.

The telmagaphone was tried recently at the Grand Central Station. It is owned by the American Callaphone Co., and is an instrument for magnifying and distributing sounds injected into the main tube. Mounted on the benches in the station were open-mouthed tubes resembling the horn of a talking machine. These are connected with a main instrument, into which the sounds to be distributed are spoken.

The Grand Central Station people are testing



the new device. Its backers believe that it will solve, among other problems, that of announcing trains so that everybody will hear and understand the announcements. The announcer stands in a little box in the concourse. He makes his announcements into a small receiver, and what he says is repeated through mouthpieces in the waiting room, the restaurant, the barber shop, and wherever else they have been installed. The announcement may be repeated by all the mouthpieces at once, or singly, according to the desire of the announcer. The announcements are not loud; they are intended to be in the tone of ordinary conversation only.

The American Callaphone Co. also own the detectophone, which works on the opposite principle. It is a collector of sounds for the ear of whoever is listening at the main instrument. The management says that a small receiver of the detectophone may be laid in a drawer of a desk in an office and a conversation carried on in that office will be repeated to one who is listening at the detectophone. This is designed for use against blackmailers, and in general to reproduce remarks to unseen witnesses.

AN INTERNATIONAL MIX-UP.

The employment of music on talking machines by two retail fruit dealers at 47th and Halsted Sts., Chicago, nearly led to the wrecking of the stores of Pete Gapolis, a Greek, and George Bosinger, a German, whose places of business adjoin at 845 and 847 West 47th street the other day. Both gentlemen, who have for a month employed mechanical musical devices to get trade, narrowly escaped rough usage by a mob of Irish residents who resented the use of their national airs and promptly wrecked the machines. All went well until a few days ago. The fruit venders were allowed to annoy the neighborhood with such classics as "The Bird on Nellie's Hat," "There's a Rainbow in the Sky." In a moment of weakness the Greek inserted a record of "The Boyne Water." In a moment there was an angry crowd in the street, and in two minutes both the Greek's talking machine and that of his rival were out of business.

The police stopped the riot, and now, while there is still war between the fruiterers, there is peace in the neighborhood and talking machines are barred for all time.

JAPANESE WILL BEAR WATCHING.

Visitor from the Orient Says They Cheerfully Steal Patents and Copyrighted Articles—May Soon be Making Talkers and Records.

A recent visitor to The World sanctum was a gentleman who controls a large music trade business in three of the largest cities in China, doing an immense trade in talking machines and records. Speaking of Oriental competition, he said that the Japanese will bear careful watching, as they cheerfully steal patented and copyrighted articles for their own profit. A favorite trick is to import goods and replace the original nameplate with their own or to put foreign trade-marks and names upon their own products. While they have not tackled the talking machine, this gentleman believes it will not be long before they will be attracted by its possibilities and follow their usual course.

THE BARBER SHOULD FOLLOW SUIT.

A cigar and newsdealer in one of New York's busiest hotels has adopted a new scheme for alleviating at least one of the annoyances of the summer season. He became so much exasperated by strangers informing him in interrogative accents regarding the state of the weather, and bombarding him with such sentences as: "Nice day, ain't it?" "Going to rain, d'yer think?" "Ever felt anything like this tarnation heat?" that he had cards printed containing a series of stereotyped answers, and placed them in plain view. This plan did not remain long effective, so he finally purchased a large electrical operated model of the ever useful talking machines, which he placed on the counter. He filled a record with replies relative to the weather, state of crops, policy of the Government, ability of Governor Hughes and other topics of the day, which are reeled off in a bunch upon the pressing of a button at his desk. The dealer says that since the new system has been working he feels like a "ringer" for the Sphinx.

NOVEL STENOGRAPHIC MACHINE.

The greatest drawback inherent in shorthand writing machines has been the fact that the records were obtained in conventional signs of figures, and that a considerable training was required to master them. This inconvenience is avoided in the machine invented a short time ago by Bivort, of Paris, and to which the name of "stenophile" has been given.

This is based on the use of plain printing types, the alphabet being so ingeniously combined that a syllable, and in some cases even two or three syllables, may be printed at a time by simultaneously striking several keys, says the Scientific American. Some letters of related sound have, however, been combined, as, for instance, D T, thus reducing to twenty the number of keys contained in Bivort's keyboard. Phonetic spelling is obviously employed to facilitate the use of the machine, which can be adapted to most of the European languages by exchanging the type-supporting carriage.

As the names of the types are written plainly on each, the handling of the machine does not entail any apprenticeship worth mentioning, a few days' training being sufficient to write fifty words per minute, while the normal speed of 125 to 150 words is attained after less than two months. Speeds of 200 words and upward are obviously quite practicable.

FRED BABSON A HUSTLER.

Fred Babson, of Babson Bros., the big Chicago jobbers, made a record breaking trip to New York recently when he arrived on a fast train one morning, visited the offices of the National Phonograph Co., called upon several friends and caught the Twentieth Century Limited for Chicago that same afternoon, his whole trip occupying less than forty-eight hours.

ATTENTION!

NEW ENGLAND DEALERS

If you handle both EDISON and VICTOR, we can offer you an advantage no other New England jobbing house can—One Source of Supply for both

EDISON PHONOGRAPHS AND VICTOR MACHINES

ONE SHIPMENT—ONE EXPRESSAGE

THERE'S AN ADVANTAGE! Try the Eastern's Policy of Service.

THE EASTERN TALKING MACHINE CO.

Distributors of EDISON and VICTOR MACHINES, Records and all Supplies

Eastern Agents for HERZOG DISK and CYLINDER RECORD CABINETS

Your share
You deserve what you get

The biggest and most successful *Victor* dealers got big and successful by advertising—to get the local benefit of our advertising. Some are now spending as much as $1000 to $3000 a month, and making it pay big.

How about you? Are you *getting* your share? Are you *doing* your share?

You can grow as they grow. They go beyond their natural territory. Do you ever get a quarter of what's *in* your territory?

Our orders are five times greater than they were this time last year. That means two things: 1. The public is demanding more *Victors*. 2. The dealers are waking up.

How about you?

TRADE HAPPENINGS IN PHILADELPHIA.

Business Viewed Broadly May be Termed Satisfactory—Firmness in Prices Has Proven to be the Trade's Salvation—Why Dealers Should Brace Up—Commercial Graphophones in Great Demand—Penn Co. Have Ikonograph Agency—Lewis Co. in New Quarters—Phono-Vita Oil in Demand—Musical Echo Co.'s Handsome Window Display—Heppe's Concerts for Elks' Convention—The Excelsior Drum Works—Weiss Wants Novelties—The News of the Month in Detail—Columbia Display at the Convention of Penn Shorthand Reporters.

(Special to The Talking Machine World.)

Philadelphia, Pa., July 9, 1907.

Taken on a whole the talking machine business in this city for the month of June was very satisfactory. We say "taken on the whole," because trade was very uneveu, one day being excellent and the next poor. Taking into consideration the time of year and the fact that the figures show that last month was ahead, even if slightly, of June, 1906, affords grounds for being somewhat optimistic iu regard to the outlook for July and August. Collections have dropped considerably below the level, and jobbers in this locality are kept hustling in order to bring accounts up to date. This state of affairs has been undoubtedly brought about through the upward trend of prices on all commercial products, and the tightness in the money market.

In perhaps no other city in this country has the firmness in prices on talking machines and records proven so great a salvation to the small dealer as in Philadelphia. For there is a great tendency showu, especially among the women of this city, and they are invariably the largest retail purchasers, when they wish to buy auything they jump on a car and come into the department and other stores located in the section bordered by Broad and Eighth, Chestnut and Arch streets. This aversion to local trading has done more than anything else toward demoralizing suburban trade. The wholesale system of price cutting carried on by the big stores has undoubtedly brought this about, and though this cannot be carried iuto the "talker" line except in supplies, such as horns, horn cranes, etc., the habit of buying centrally has become so strong that the small dealer finds he must fight hard to overcome it. While there are a large number of dealers scattered throughout the city jobbers find local wholesale trade far from what it should be.

There is but one way in which this condition of affairs can be alleviated, namely, jobbers should lay as much stress as possible on the necessity of dealers carrying a full line of records, and machines for no two words hurt a dealer's business so much as "all out." Another thing, dealers should make every effort to keep their stores attractive and neglect no opportunity for publicity. Windows should always be kept clean and well lighted, and care should be taken in their dressing. This latter art is not cultivated to any extent, and we believe it would pay jobbers to employ a man to go around and assist their dealers iu getting up showy and tasteful displays.

Reports given out at the Columbia headquarters on Chestnut street, show a slight falling off in both wholesale and retail departments for the month of June; that is, business as not quite up to May. This company are laying a great deal of stress on their commercial department, and these machines are rapidly leaping into popularity among the large business houses. They have arranged to display these machines at the convention of the Penn Shorthand Reporters, and hope to book some good orders. Walter L. Eckhardt was a recent visitor here on his way back from Chicago.

The "talker" business for June has been very satisfactory with the Penn Phonograph Co., and was on a par with the corresponding month in 1906. This company have just obtained the jobbing rights for the Ikonograph moving picture machines and films. Their line of post cards are going well, and prove a good filler for the summer months.

The Lewis Talkiug Machine Co. are now well established in their handsome new quarters at 33 South Niuth street. Here they occupy the main floor and basement, having a floor space of 3,600 square feet, and are in a better position to haudle their increasing business. Mr. Lewis reports trade as good for this time of the year, but rather jerky.

L. Mendel, the manufacturer of "Phono Vita," is pushing this oil, which is made, as its name implies, especially for talking machines, rapidly to the front. "Phono Vita" is not only a lubricant but is a rust preventive, and can also be used to restore and retain the polish on wood and enamel work. By adding powdered chalk users will also find it a first-class polisher for the metal parts of machines, etc. It is put up in full two-ounce bottles to retail at 10 cents, and jobbers and dealers are allowed a good margin of profit. Mr. Mendel has obtained the exclusive right to use the design of a talking machine as a trade-mark for lubricating oils and grease under the new trade-mark law of February 20, 1905. This is a very important feature as purchsers will naturally turn to this oil, being attracted by the design.

The Musical Echo Co., 1217 Chestnut street, experienced a brisk retail trade during the past month. Wholesale, however, was rather quiet. This they lay to the fact that at this time of year dealers work off their accumulated surplus, and only order such things as are called for. This company are doing some of the most artistic window dressing in this trade, and for their purpose have secured the services of an expert. A recent display that attracted especial notice was a vacation window filled with sporting and outing goods, with wax figures attractively ar-

The unscrupulous man will buy repair parts because they are cheap and not even consider quality.

When you buy our repair parts, you are buying the very best and the very cheapest repair parts made.

We particularly call your attention to our **sapphires, belts,** and **needles.**

We have the entire output of the best belt manufacturer in the country.

We are the sole agents for the famous **Schwabacher Needle Factory** the largest and best needle manufacturer in Europe.

Send for sample and catalogue.

Cuando Ud. compra nuestras partes de refaccion, este Ud. seguro que compra las mejores en todo respecto y las mas baratas.

Muy particularmente llamamos su atencion a nuestros **safiros, bandas,** y **agujas.**

Tenemos la produccion completa de los manufactureros de bandas de este pais.

Somos los unicos agentes de la famosa **fabrica de agujas Schwabacher,** la mas grande y mejor en Europa.

Pidase muestra y catalogo.

THE TALKING MACHINE SUPPLY CO.

A. P. PETIT, General Manager. 400 Fifth Avenue, New York, U. S. A.

ranged. They have also made plans to obtain the winning car in the Glidden touring race, and will display this in their window with the Victor as "The two winners."

C. J. Heppe & Son, of this city, report business for June as a little better than the corresponding month in last year, but not quite up to May. During the Elks' convention to be held here through the week of July 15 they will give Auxetophone concerts, a feature of which will be the use of a pipe organ and Pianola as accompanists. While this has been done before with the ordinary piano, an instrument operated strictly automatically, has never been tried. Beautifully printed invitations will be sent out.

"As good as could be expected for this time of year" is what Adolf Weiss, of the Western Talking Machine Co. said of trade during the past month. In speaking of the outlook for the coming fall he laid stress on the necessity for something radically new in "talkers" to stir up a new interest in the trade.

For years it has been the custom with the Bauer Co., manufacturers of banjos, mandolins, guitars and other kindred instruments to shut down during the first two weeks in July in order to take stock, but this year they are compelled to cut this down to one week on account of the large number of orders which they are behind hand in filling. The call for these instruments in the talking machine field has had much to do with this state of affairs, for dealers are finding small goods a big paying side line.

The Excelsior Drum Works, 1109-1111 Locust street, this city, are working overtime in order to keep up to the large demand for their excellent product. Drums always have and always will be a good standard article, and one for which there is a demand. Talking machine men will find that they can handle them in connection with their regular line with much profit to themselves.

Weyman & Son are now established in their new quarters on Chestnut street, and extend a hearty invitation to the trade to visit them when in the city.

In speaking of the time allowed dealers by L. Buehn & Bro., in last month's World, the types stated 90 days, when it should have been 30 days. The error was obviously typographical, and is now set right. This company have been appointed jobbers for Pennsylvania by the Ikonograph Co., of New York, and will carry a complete line of these moving picture machines and films.

James W. Cooper Co., manufacturers of record cabinets, are experiencing a large demand for their goods. They are working on a complete new line, a catalog of which has just been issued.

A general announcement is being made by the Hawthorne & Sheble Manufacturing Co., of this city, that the Star line of records is a licensed product, and the trade guaranteed protection from action or damages due to patent litigation.

TEXAS PHONOGRAPH CO. EXPANSION.

The Texas Phonograph Co., of Houston, Tex., who, as recorded in The World from time to time, have built up a splendid business under the presidency of H. M. Holleman, continue to branch out. In addition to their large store on Capital avenue, they utilize the entire second floor of the Mitchell Building for their wholesale department. They are jobbers for the Edison, Victor and Zonophone in Texas, and handle a tremendous line of horns, cranes and talking machine accessories. Last week they opened a new retail branch at 612 Main street, which is operated under the name of the Texas Piano & Phonograph Co. Here, in addition to talking machines, they are carrying a full line of pianos—instruments by some of the leading makers of the United States. They also handle piano players and other requirements found in a first-class piano store. The piano branch is under the management of E. I. Conkling, the secretary of the company, who has been identified with the piano business in Houston for many years. The success of this company is a tribute to tireless and intelligent activity.

ADVERTISING SIGNS

Will Greatly Facilitate the Sale of Records During the Summer Months—Advantageously Placed and Attractively Made, They Offer Snappy Publicity to Thousands Daily.

Do you not own a lot somewhere, Mr. Dealer, out iu the suburbs—a little piece of real estate you have purchased for speculation, or upon which at some time in the zenith of your prosperity you hope to build a summer home? If you have such a diminutive property or know a man who has, you should get busy at once and have a sign prepared and displayed there.

As the warm weather approaches and the

trains, trolleys and automobiles pass on their way to and from the metropolis, their passengers will be sure to see your sign, and if it appeals to them they will absorb its good points and eventually become your customers.

Suppose the latest comic opera has just finished a long run at the Criterion Theatre, and Mr. Suburbanite, who has been striving all winter to take his family to hear it, has failed to do so because of business cares.

He is a very energetic man and consequently considers business before pleasure always, which, by the way, is a very bad thing to do, as it sooner or later means a nervous breakdown which in time often ends in suicide or the madhouse. However, that is Mr. Suburbanite's business and not ours.

What interests us most is the fact that he gazes from his car window at a sign painted just outside the railroad company's right of way, and is immediately seized with an inspiration. He slaps his knee with much satisfaction; his family shall not miss the show after all. He goes the very next day and purchases the twenty records that comprise the complete operatic score, together with a machine of good quality upon which to play them.

When that outfit arrives in Cedar Crest and Mrs. Suburbanite and all the little Suburbanites realize what is coming to them in the way of a good musical treat, there will surely be "something doing" in the enjoyment line.

Advertising signs have brought millions of dollars into the coffers of innumerable companies who depend upon the demand of the public for something new and good, and there is no reason, Mr. Dealer, why you should not reap a share of the harvest of shekels through the same channel.

If you cannot gain access to an advantageous site without cost, it will pay you to rent from some one about to build. The few feet of ground you will occupy with your sign should not in any way interfere with the construction of the house, and even if carried on for a few weeks only will prove of very great advantage.

This method of advertising is of greater benefit to the jobber than to the small retailer, but any one in the "talker" trade, whether he be great or small, who has the facilities for sign display, should take advantage of them, as he cannot but be benefited at a very modest financial outlay.

HOWARD TAYLOR MIDDLETON.

PATHE FRERES IN CANADA.

Big Montreal House Receives Agency for Province of Quebec.

Walter P. Thompson, representative of Pathe Freres, London, England, left New York on the 3d inst. on his return trip to Europe. While here Mr. Thompson closed a very important business contract with Hurteau & Co., of Montreal, Canada, by which arrangement this concern have secured the agency for the Pathe products for the entire Province of Quebec.

RATHER RASH PROMISE.

The following example of a Liverpool tradesman's style of advertising is given by Music, of London, with the comment that he at least makes a rather rash promise. The advertisement reads as follows: "The King and Queen of Spain have the two chief ingredients to complete happiness, viz., a baby and a genuine gramophone, with records by Patti, Melba, Caruso, etc. I can supply you with the same."

A New Adjunct in the Trade

BEST in quality
MOST in quantity
LEAST in price
and an
EASY SELLER
Why?
BECAUSE it is made Exclusively for
TALKING MACHINES
Including such machines which are built with spring valves and wheels—
Music Boxes
Moving Picture Machines, &c.

PHONO - VITA

This wonderful oil, the result of careful study by an authority in matters of oil compositions, rightly bases his experience on the fact that lubricants must be of such consistency as to be congenial to the character of the machine. Now as to Talking Machines, which are built with valve springs and wheels, a particular kind of oil is required, one possessing sufficient viscosity to be lasting, but not too thin to endanger the graphite packing by penetration.

PHONO-VITA is made just right

It's for Talking Machines

PHONO-VITA is a Rust Preventative. Can also be used with profit to restore and retain the polish on the wood and enamel work. Put up in a full two-ounce bottle, encased in a carton, to be sold at 10 cents.

I desire to give notice to the public that I have obtained the right to use a design of a Talking Machine as a Trade Mark for lubricating oils and greases under the New Trade Mark Law of Feb. 20, 1905. Warning is given that anybody using such a design in any manner or form on bottles or advertising matter will be prosecuted by law.

I respectfully solicit correspondence from all parts of the country with a view of obtaining exclusive agencies. Address

L. MENDEL
314 North Fifth St., Philadelphia, Pa.

Do You Carry the Instrument She Wants?

Do you carry the instrument that all thinking, discriminating people want—the one that stands first in its reproducing powers, its sweet, clear records and its mechanical excellence? In other words, do you carry

Edison Phonographs

Don't mistake the demand for Edison Phonographs for a demand for talking machines generally. Put your time and energy back of the Phonograph, the one that Edison himself has perfected and the one that needs no arguments or explanations to sell it.

Our advertising is sending people to you for Edison Phonographs and Edison Records. Do not work against it for when you do you are working against your own best interests.

If you do not carry Edison Phonographs and Edison Gold Moulded Records you are missing the best trade. Write us for information and prices and the name of a nearby Edison jobber.

National Phonograph Co., 59 Lakeside Ave., Orange, N. J.

DO NICKELODEONS HURT TRADE?

H. C. Faber Says the Abuse of the Records in the Machines Which They Use Disgust the Public With Talking Machines Generally.

Monongah, W. Va., June 24, 1907.

Editor Talking Machine World, New York:

Dear Sir—The saying, be sure and hit a man in a right way if you want to down him, comes to light now as we all have a kick coming in some way or another. I have reference to rate cutters or price butchers in our line of the trade, i. e., "talkers," or as one fellow calls it, canned music.

As soon as a jobber, distributor or dealer cuts price on a record or machine his name is Dennis with his superiors, etc. That's all well and good. We have to be and act honest to get good legitimate trade, and to try and hold same. Now, why not change the thing around some so as to help us poor underlings some. I have reference to the numerous Nickelodeons that are strung all over the country.

For instance, I had four or five prospective customers, and they all wanted to purchase a "talker." Well, along comes the 5-cent fellow with his machine and a few records, and sets up and calls it a high-class entertainment, and a lot of other rot. He plays the same thing over and over, and the public get tired of it, and condemn the talker in every way that lies in their power by referring to Mr. Five-Cent Man making a nuisance of it. And that did the job for them, as they would not tolerate such a thing in their homes at any price or as a gift. All the talk that you can give them don't amount to a fiddler's damn.

I had occasion to go to a nearby town about a month ago, and, as I got off of the "keers" I heard a record played in one of the above-named institutions. The record proved to be a new one, and was played only a few times. It sounded good enough. Last week I made another trip to the same town, and as sure as sin I heard that same record played again, but what a change had come over the thing! Not one-third of it was plain enough to be uuderstood, and they called it a form of amusement. I only hope that the owners of such outfits will have to take the same pieces with them to the lower regions when they go and have to listen to them for about two or three centuries. While these places may amuse for a while, they soon get to be a public nuisance, and the sooner they are put out the better for all coucerned. They buy a few records, and the whole public hear them, and then won't buy from the dealer simply because they have heard them and can hear them again for nothing by simply standing out on the sidewalk and listening, etc. With these thiugs put away, more homes would have a talker and keep the young ones at home instead of letting them roam the streets with any one and anybody and getting the germs of future deviltry sowed into their innocent brains. Yours for a halt,

H. C. Faber.

DEVELOPMENT OF SALESMANSHIP.

The Foundation Stones on Which Salesmanship Rests Are Intelligence, Integrity and a Knowledge of the Goods Shown.

I do not believe there is any man but who can develop into a first-class salesman. The foundation stones on which salesmanship rests are intelligence, integrity and the knowledge of goods which you are showing, and any one of those three qualities can be developed. I have always thought that the man who went after his customer with some kind of system was far more successful than he who struck him haphazard. The good salesman, in my mind, is not only a good talker, but a good listener. It is necessary that you, when selling an article to your customer, should know as well when to stop talking as when to talk. You know there is nothing that flatters a man more than to induce him to talk. The personal pronoun "I" is agreeable to you, but not to the other fellow. If you can get your customer to asking questions about the articles you are attempting to sell him, you have put him on the defensive and you have that double advantage over him. Whenever I had a customer come into my store to purchase an article, it is obvious that he or she intended to when they came in, and I did not succeed in selling them, I analyzed the entire conversation. The fault was mine; I was willing to admit it. You have got to admit it yourself; it is your own fault if you do not make a sale. I went all over the talk and endeavored to find out where the weak spot in my argument was, and if I found it I corrected it. We kept prospects of every prospective sale. We had cards with a space for the name, address of party, the article that they came in to see, the price we quoted them and any other information. This was in the event of their not buying. These cards were all properly made out and placed upon my desk, and in about a day or two I usually wrote the party something like this: "When you were in the store yesterday to look at that stove, we neglected to call your attention to one of the most important parts, etc." We had three letters to follow this one to our customers.

If you find a dealer who is not satisfied with his vocation to-day, it is very often caused by reason of his still continuing the schemes which he has used for the past year or so. You know there is but very little difference between a grave and a rut. The only difference is in the length and depth, and you might just as well be in one as the other, in my opinion. I always told the men in my store that there was only two times when I expected them to hustle for business. One was when business was good and one when business was dull. George Ellington.

The Charles Wild Music House, Baraboo, Wis., recently gave an Auxetophone concert to a crowded house in the A. O. U. W. The selections ranged from grand opera to ragtime, and provoked much enthusiasm among the listeners. The concert was a great success, and received long and favorable comments in the local papers.

MANY A MAN

is prejudiced by a first statement about anything. Dozens of dealers have written us that "some needle man" has told them the Petmecky Multitone Self-Sharpening needle was no good—but after giving Petmecky samples a thorough trial have sent us large orders, and many say they will keep no other needle in stock. The tone tells, and the supremacy of this marvelous little needle is due to its purity of tone. To compare the Petmecky to any other needle is drawing a comparison between the electric light and the old tallow-dip.

If you know of a better needle than the Petmecky don't buy Petmecky's, for we will concede that you want your store to rank as one of the best in your city—and it will never be so if you handle goods you cannot guarantee.

A one cent postal will bring you Petmecky Samples and needle booklet telling you all about needles. It is really surprising how few people know of the great importance of the little needle.

CAREFULLY NOTE OUR ADDRESS

PETMECKY COMPANY

New York Life Bldg. KANSAS CITY, MO.

?

¶ Do you like this issue of the World?

¶ Is it not worth something to you in your business?

¶ Do you receive it regularly?

¶ If not, why not?

¶ The fault is your own, for we've done our part in supplying you with a sample copy.

¶ Subscribe for it.

¶ That's the only way to get it.

¶ It is worth ten times the annual cost to you, whether your store is in Houston, Hong Kong or Hindoostan. We have subscribers in all these places, and they say "Yes."

¶ Be progressive and read the World. Your competitor takes it and he knows its value.

¶ It costs one dollar yearly in the United States and Mexico; all other countries, one dollar and twenty-five cents.

¶ Don't delay sending in your order; not soon, but NOW! We can handle anything in checks, postal orders, stamps, and, of course, cash.

NEW YORK, JULY 15, 1907.

NATURALLY trade during the summer mouths is somewhat depressed, as the warm weather has a teudency to reduce vitality. But, as a matter of fact, have we not fallen into the habit of saying trade is dull in the summer weather, and cousequently slow up in our efforts, thus aiding materially the dulness? Why not turn about and change the business tactics a trifle, and instil salesmen with the idea that there should be no slowing up in summer, that all energies should be bent toward increasing the business when the usual period of alleged stagnancy comes around?

THERE are so many features which can be introduced in the talkiug machine business to help it along during the summer months that it would pay to place added energy upon the selling end of the business, and by so doing beneficial results would be accomplished. Open air concerts could be given in the various parks throughout the country, thus advertising the talking machines to hundreds of thousands of people whose attention perhaps would not otherwise be drawn to their wonderful powers of entertainment. Then they could be used at lawn parties and on porches. We know of plenty of yachtsmen who consider it just as necessary to their equipment to have a "talker" aboard as to have a stock of liquids to be used in case of seasickness. In camps, too, the "talker" has won a fair position, so that a good camping outfit requires a "talker" iu the same way that it does an antidote for snake bites.

TALK business—advertise—that is the way to produce results, but to sit down and say that just because it is summer there should be no business is simply aiding trade stagnancy. No use for that! It is a good time to stir up the minds of your old customers, and sell them new records. The big record concerns are turning out a line of records each month that is simply bewildering. If dealers keep up the line of publicity which they should, their record business would be enormous during the summer months.

IT is a good thing to spend money for postage. Get out plenty of booklets showing what you are doing, what you have got to sell. Don't be afraid of spending a penny for advertising if it is midsummer. Get out good literature. When there is auy reasonable excuse for a booklet, it will pay if it is properly distributed; but make it attractive. Cheap printing may possibly do sometimes, but the chances are that the expensive work will pay very much better in proportion.

ONE of tne strange things in advertising and in printing is that a man will start out with the intention of having the best that he can get, but he will begin to lop off here and there, taking five dollars off the first price, and, of course, out of the quality, and as a result, when he gets through it is like taking the edge off a knife. A dull knife will cut some things, but it will not cut as keenly, quickly, smoothly and as thoroughly as will a sharp one. Advertising ought to have a sharp edge in order to cut through the greatest resistance.

IT is the last few dollars that are spent on advertising that will give it value. It is the last kind of power that lifts a weight. If it takes a strain of one thousand pounds to break a chain, nine hundred and ninety-nine pounds won't do any good. You can spend nine hundred and ninety-nine pounds on it and leave off just where you start. If you want to break that chain you will have to spend that nine hundred and ninety-nine pounds over again and add the other pound to do it after all.

IT may be the same about money that you spend for advertising. It is the last bit that counts. If a dealer thinks that it is advisable to get out any sort of printed matter he ought to spend money enough to get it nicely printed on good paper, and try and make it of such a character as will ensure preservation for a time at least. We have had some literature that has been sent in to this office which amounted to mere dodgers, and when these were thrown into the yard or doorway they are generally more of a nuisance than anything else, and their distribution hurts more than it helps business along.

THE proper distribution of advertising matter costs money. Sufficient money should be spent to do the job in an attractive form. There is plenty to do in every trade, and there is a whole lot to do in the talking machine trade—not only to try and capture the trade of to-day, but to lay plans to bag business in the largest kind of manner for the early fall. Fortunately a more cheerful tone has been imparted to trade by the encouraging reports from the great agricultural States. Much more optimistic views are now apparent than existed a few weeks ago in regard to the prospects for the harvest. This induces a more hopeful feeling. The crops, after all, may be fair, and certainly will command good prices, thus laying a basis for continued prosperity in the farming communities which will naturally contribute ultimately to the commercial and industrial interests of the couutry at large.

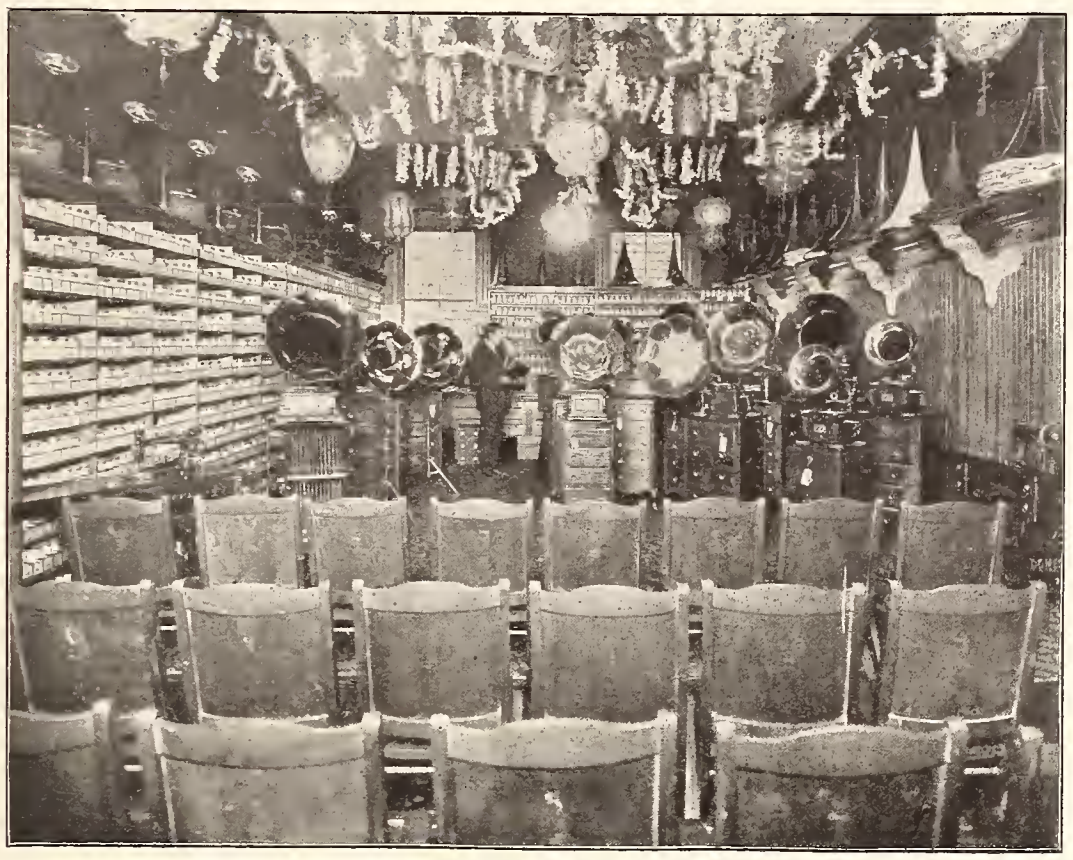
THERE is a big trade in talking machines in the agricultural regions throughout the great West, and there is no doubt that the talk about crops, and the apprehension of more or less shortage in yield, together with their influence tended to check somewhat the courage of the trade during the last two months. It has held up capital, and has prevented it from entering in upon new ventures. Even in the talking machine trade there has been evidence of more conservative purchasing on the part of merchants generally.

PRICES in some lines are very steadily upheld, and in a good many trades the present cost of material and of manufacture would justify higher prices. Manufacturers, however, are generally reluctant to make advances at this juncture, realizing that high prices are something of a menace to the market, and tend to discourage enterprise and investment. On the whole, the first half of the year closed with a very good record, aud many manufacturers have agreed that their business was not only up to last year, but in some cases has largely surpassed it. In fact, we know of one talking machine company—one of the greatest producing houses in the world—whose business shows an increase of 50 per cent. over that of the preceding months of last year. Think of it! Fifty per ceut. advance! And still we find men talking dull times. Men who spend their time crying dull times are the ones usually who are neglecting opportunities. The times are all right. It is the men, the methods. That is what counts in winning the elusive trade dollar.

FROM private sources of information we learn that important developments may come about within the near future which will interest the eutire talking machine industry of this country. Iuventive minds have been at work upon new projects which, when announced, will help to create new conditions. There is no industry in the world, save, perhaps, that of electricity, wherein more brilliant minds are seeking developments and improvements than in this particular industry, and as a result of this concentrated inventive energy new principles will be evolved. It is true that some of these contemplated ventures may infringe upon patents held by the older companies, but all those matters will probably be threshed out in the courts. Any poaching upon the patent preserves of corporations, or individuals is likely to be fought with vigor, and it looks as if we would have some warm times still to come in the legal department of the industry. Anyway, the talking machine trade is going ahead. It can't help it, because there is a power behind it which is pushing it steadily on.

IT is believed that there will be some interestiug developments in the horn manufacturing department of the industry. The making of horns has grown to be an important adjunct to the talkiug machine business, and there are a number of manufacturers who to-day are turning out products of a character which shows material advance over the product of three years ago. Innovations, too, are in order in this field, for, according to our patent reports, there are a number of new creatious in this particular line which will be manufactured in quantities to suit trade demands in the early fall, and then there is talk of combinations. One thing is certain, the legitimate horn trade has suffered on account of itinerant competition, which comes through men who cannot be classed as legitimate manufacturers.

ENTERPRISING NEW ENGLAND JOBBERS OF TALKING MACHINES.



The view of the talking machine department of the Household Furnishing Co., New Bedford, Mass., shows a decidedly effective arrangement of the floor stock. The space occupied is 40 x 75 feet, and takes on the appearance of a miniature recital hall. This portion of the company's store is beautifully decorated a la Japanese, and the brilliant color effects are pleasingly and tastefully distributed. They carry the Columbia and Edison lines, and are not only the sole jobbers in their section of the State, but are hustlers of the aggressive type. Walter H. Bassett, the president and general manager, is a model business man.

ADVERTISING BY TELEGRAPHY.

How a Wideawake Talking Machine Man Aroused Curiosity, Got a Crowd Together, Pleased Them and Made Some Sales.

Advertisers have adopted almost every possible means of placing their goods before the public in such a manner that they will buy. They have used signs, space in publications, canvassers, personal letters, premiums and countless other means. But not one of them, so far as I know, has yet developed the practicability of the telegram as an advertisement.

Advertising by telegraph would be a novel and certain method of making sales. It would not be expensive, and would bring better results than the methods now employed. In selling goods, the advertiser realizes that the absolute attention of the possible buyer is the thing most to be desired, and this is what a telegram gets. A telegram is not thrown aside and forgotten, as is an advertisement of any other kind, even a personal letter.

Think, for a moment, what passes through your mind when you receive a telegram! First, you think of an accident, then of an important business proposition—bad luck, good news, or most anything; but the main idea is that you do think. While your trembling fingers are tearing off the corner of that envelope you are thinking of it, intently, exclusively—all other things are out of your mind. The telegram receives your absolute attention.

Now, anything to which you give your absolute attention leaves an indelible impression on your mind for days. Thus the telegram answers the greatest need of the advertiser.

Furthermore, the excitement of curiosity has been found a most profitable means of advertising. What could excite your curiosity more than to receive the following telegram while spending a quiet evening at home?

"Jones—Do you like good music? Is there any at home? PHINNEY."

You would look at it fifty times and laugh, and puzzle and wonder what on earth it meant.

Then, the next night, if you were to receive another at about the same time:

"Jones—Home could be happier; some doctors prescribe music for health. PHINNEY."

You would show it to your friends the next day. You would tell them about the other one, and puzzle your head over it continually. Mystery excites curiosity, curiosity commands attention; the advertiser knows all this, and he pays for attention.

The next night you receive another message at the same time:

"Jones—Will call at eight to-morrow night to explain and entertain. Invite your friends.

"PHINNEY."

That begins to sound interesting.

The next day you invite a few friends for the surprise, you think about it, you excite your friends' curiosity, too.

That night your friends come, everybody is expectant. The bell rings, and in walks a gentleman with a talking machine.

"I am representing the Phinney Phonograph Co.," he explains simply, and sets about to entertain the company.

Everybody is delighted, the novelty is appreciated, the mystery is solved, a most enjoyable evening is spent, and the chances, says the Saturday Evening Post, are that a sale or two will be made.

TO MAKE REPEATING ATTACHMENTS.

H. E. Markle, of Nashville, Tenn., is preparing a plant for the manufacture of repeating attachments for cylinder and disc talking machines. He will also make other novelties.

The National Phonograph Co. have purchased two lots 25 x 130 and 30 x 133, adjoining their factory buildings in Orange, N. J., and now own the entire block bounded by Valley road, Lakeside avenue, Golden street and Watchung avenue. A five-story concrete building will be erected on the site at an early date.

Sign your Declaration of Independence

Cut yourself loose from the jobber who holds you back by his poor service. Make yourself free from delays that vex you and disgruntle your customers. Get rid of every obstacle that stands in the way of progress and money-making.

We're ready to help you help yourself. We have everything that any dealer needs, and always have it when it's wanted. The very newest specialties and all kinds of accessories such as record cabinets, trumpet horns, fiber cases and English needles, as well as Victor talkingmachines and records. A stock so large and so complete that all shipments are made the same day the orders reach us.

That's a regular thing with us, and it's worth a good deal to you. It saves you worries and disappointments. It gives you the confidence of your customers; they know you're almost sure to have what they want, or that you'll get it for them and tell them the exact day they can have it—and live up to your word.

A nice way to do business! Take the preliminary steps to-day by sending for our latest catalogue.

PRACTICAL SUGGESTIONS AND COMMENTS.

EXPERIENCE IN MAKING RECORDS.

A prominent singer in the West who is averse to having his name published, states in a communication that in a visit to one of the leading music trade establishments in Chicago he picked up a copy of The Talking Machine World, and, as a result, became much interested in the development of the talking machine, and particularly in the making of records. He says: "I have a tenor voice of unusual excellence, at least all my friends tell me so—one that is certainly as good as many I have heard on the records, and believing there was quite an opening, applied to several companies for a trial as a singer of operatic, classical or popular songs. At the laboratories of two of the leading concerns I was received very kindly, and while they admitted my voice was one of great breadth and purity, yet they stated that it lacked the essential 'something' which insures the making of a successful record. Now, what I want to know, was this a polite way of 'turning me down?'"

No, we do not believe so. We know of several singers who stand in the front rank in the concert field who have been unable to make good records, and this is also true of even the very great operatic artists. It is difficult, even under favorable conditions, to make a perfect talking machine record, and when the singer is inexperienced in the work the expert's difficulties are appreciably increased. As a usual thing the new singer sings his song in the same manner that he is accustomed to on the stage, and, the result, when heard on the record, is anything but satisfactory to either the singer or manufacturer.

SPECIAL QUALITY OF VOICE REQUIRED.

It requires a special quality of voice and much experience in the making of records to turn out a product that will prove an enduring success. That is why so few new singers are employed in the making of records. They have not the patience to learn the tricks of the trade and cannot understand why their voice, which is claimed by the critics as being of unusual excellence, should not reproduce as well as the voice of Caruso or of Melba. The fact is, the singers regularly making records have only learned after long experience. Compare the Caruso or Melba records of to-day with those they first made, and the difference is quite marked. The experienced record singers understand how to accent sounds and syllables difficult to record. They minimize those that are explosive and apt to cause trouble to the diaphragm. They take care of full chest tones and shrill head tones. They lean forward into the horn when singing low, soft notes, and draw away during the vigorous passages. Altogether apart from these essentials, there must be a voice, as stated before, of individual character to make a first-class record. If it were as easy to make records as our friend thinks, why there would be no art in it; they could he made at home just as well as at a laboratory. But it must not be overlooked that the making of a high-class record is a profession that requires great care, skill and patience.

DEVICE TO CHANGE PITCH OR KEY.

A simple device which controls the revolutions of the talking machine, whereby the pitch or key in which the song or musical composition can be changed, as desired, has been patented by Theodore Zoebl, of Chicago. The inventor, who is a musician, and not a scientist, has worked out a perfect principle of vibrations, and by the use of a screw and a small lever with a pin stole which drops into indentations made on a circular plane marked according to the different keys, he is able to increase or decrease the motion of the machinery of the instrument and thereby change the pitch of the voice or instrument in the record. With this device the user of the talking machine can enjoy the singer's voice in any key, the transition from two sharps to three flats being made with accuracy by the simple turn of a screw.

MAKING DISC RECORDS AT HOME.

In reply to an inquiry from a subscriber, asking if there was not a machine made with which one could make disc records at home, we have to say that the Landaphone Co., of New York, have about perfected a machine which they will shortly place on the market, and which will enable the amateur to make his own disc records. Full details of this device will be announced by the manufacturers at a very early date.

MATTER OF HEARING TUBES AND HORNS.

Notwithstanding the wonderful improvements made in horns and their great value as tone augmenters, by reason of their construction along acoustic lines, yet every talking machine enthusiast should make hearing tubes a part of his equipment when using the talker. For the purpose of general entertainment nothing can equal the horn; in fact, it is indispensable. For obtaining the maximum of individual enjoyment from a record hearing tubes are absolutely unrivaled. Every user can enjoy records even in the dead of night without the risk of annoying neighbors, and the full value of the tone quality is enjoyed to a very great degree. Indeed, so full and perfect is the rendering as heard through the tubes that it seems as though one were actually in the presence of the singer or the band. As a matter of fact, dealers who are particular in serving special customers make it a point to test all the records by use of hearing tubes. They are thus able to discern the flaws and imperfections of the record. There are very few talking machine "cranks" who do not employ the rubber tubes for their own personal use, although admitting that the horn is the thing when entertaining a larger company. By the way, a tremendous development has been made in the perfection of the horn. It is not merely a device to guide the sound from the machine, but it is so perfected constructively that it augments the tone, and in many instances helps its quality materially. Of course, this applies only to the best class of horns—those which are well made and fit correctly.

MAKING RECORDS AT HOME.

F. S. Bach, a subscriber and dealer, writes The World as follows: "Within the past six months a numher of my customers have asked me to give them pointers upon how to make records at home in a satisfactory way. While I have given them all the aid I possibly could, yet it seems to me that if you printed some directions in this connection which would be helpful to dealers in giving pointers to their customers it would be greatly appreciated. Can you help us?"

This is one of several letters received within a recent date, in which a similar suggestion has heen made regarding giving pointers on the making of records at home. We may say in this connection that either in the August or September issue of The World we hope to publish an article giving the required information.

HOT SHOT FOR CERTAIN CUSTOMERS.

In view of the many idiotic complaints that dealers have to suffer from customers, a writer in the Talking Machine News recently suggested drawing up a card of simple instruction for customers, something in this line:

1. Customers are requested to bring their repairs to us before they have tried to do them personally with a coke hammer.

2. After 211 reproductions a record is apt to get slightly worn. It is not advisable when using one such to tie the meat weight to the reproducer.

3. When using a disc record for a dish mat, it is advisable to cover it with a cloth, as a hot pie dish is likely to spoil the cut for the needle.

4. It is usually advisahle to wind the spring in the proper direction. Turning it backward will not make it run longer.

5. When fitting the horn on to a machine it is better to let the ruhber connection be joined to the reproducer tuhe. Lack of this causes a loss of sound from the horn and an increased collection of expletive sound waves from the exhihitor.

6. Records should not be kept in any place where the temperature exceeds 370 degrees.

7. Machines are better lifted from a table to the floor. Throwing them down is apt to dent the cover.

And there are dozens of others that any dealer can add at his leisure.

DON'T BE AFRAID TO IMPART.

Don't be afraid to impart what you know to others, when it is something that may help them without hurting you. Pointers that are kept to one's self get rusty like the gold pieces that a miser stows away in a dark crevice. Gold was brought into the honest daylight and minted for the express purpose that it should circulate for the benefit of all—and the same is true about the facts that men dig from the mines of experience.

To Dealers in Northern Ohio, Northern Indiana and Michigan

We earnestly solicit your trade on the straight, solid basis of giving you a prompt, money-saving service.

There are many advantages in business apart from price. It is these particular advantages we offer you, combined with every benefit and possibility in low price.

There is nothing of the "haphazard" or "trust-to-luck" in our business methods. We carry in every line the largest volume of stock between New York and Chicago, and so are instantly able to fill your orders the hour they are received.

We are never out of goods when you want them. Then the question of quality and value which comes from large practical experience and is a safeguard to you and your trade—this we place at the service of our customers.

You are just as anxious to increase your trade and profits as we can be. Now, be fair to yourself and test our claims. Ask for anything in Phonographs and accessories, and see how promptly we will supply the demand.

Edison Jobbers

AMERICAN PHONOGRAPH CO.

Detroit, Mich.

A GLANCE INTO THE PAST.

Some Interesting Correspondence Which Emphasizes the Tremendous Growth of the Talking Machine Business During the Past Eighteen Years.

The following memo. addressed to Mr. Edison just eighteen years ago, and preserved accidentally among some old correspondence, will bring very vividly to mind the phenomenal growth of the business of manufacturing Edison phonographs and records since May, 1889. At that time Edison records were being made in Mr. Edison's own laboratory by his own assistants. Mr. Batchelor, writer of the memorandum, was then superintendent of the Edison Phonograph Works, which manufactured Edison phonographs: "Memo. to Mr. Edison:

"We have had enormous orders for musical cylinders, some of them dating as far as two months back. Can you not make some arrangements so that we can have our orders filled up there, as in many cases it prevents shipments of goods until we get them? We have now with you orders for one-half dozen for Nebraska, one dozen for Washington, two dozen for Nashville, Tenn., all dated back to March 28; five dozen for North American of April 1, one dozen for Japan, May 8; one-half dozen for Ohio, May 13, and a few yesterday for Dakota. If you can give Wangemann orders to furnish us what we want it will help us considerably in getting off our shipments more promptly.

"CHARLES BATCHELOR."

To this Mr. Edison replied a few days later, as follows:

"We are making about 50 per day, and I am rigging up to furnish 300 daily. Please send orders (written) to laboratory. We will book them, fill the orders by sending them to Phonograph Co. and make charges, so that we will not be out of pocket. E."

As we have manufactured as many as 110,000 records in a single day recently, it follows that for every one produced when this memo. was written, 2,200 have since been turned out in the same space of time! And it is just as impossible for us to put a limitation on the future sales of Edison phonographs and records as it was for those pioneers in 1889, who thought their orders were enormous.—Edison Phonograph Monthly.

"THE MILL ON SPRING STREET."

"The Mill on Spring Street" is the odd and withal romantic title by which James W. Mill designates his talking machine store on Spring street, Elgin, Ill. To further carry out the idea of the name, Mr. Mill has placed in his window a large papier-mache mill, the eight-foot wheel of which is operated by an electric motor, and a monogram, embodying the same idea, appears on all his stationery and in his advertising matter. Mr. Mill purchased the business from the Victor Talking Machine Co., and has a large and growing trade in the Victor, Edison and Columbia lines.

MR. PHILLIPS DINES P. V. DE GRAW.

An elaborate dinner was given P. V. De Graw, Fourth Assistant Postmaster-General, by Walter P. Phillips, of the Columbia Phonograph Co., at the Algonquin, Bridgeport, Conn. Among the guests were: J. W. Binder, of the Columbia commercial department; Thomas H. McDonald, factory manager, and W. H. Marigold, postmaster at Bridgeport. Mr. De Graw formerly had charge of the Philadelphia office of the Columbia Co.

E. L. Hinton, connected with the S. Mutrie Co., who control establishments in Shanghai and three other cities in China, was in New York recently, and besides calling on The Talking Machine World, visited the Victor Distributing & Export Co., his firm handling the Victor goods exclusively. A large assortment of Chinese records is carried, which is being rapidly increased.

Charles Eabold, formerly with the Clark Music Co., Syracuse, N. Y., has been made manager of the Victor talking machine department for the Andrew J. Speich Co., 414 South Salina street, that city.

THE PHONOMETER

(PATENT APPLIED FOR)

The Only Talking Machine Speed Meter

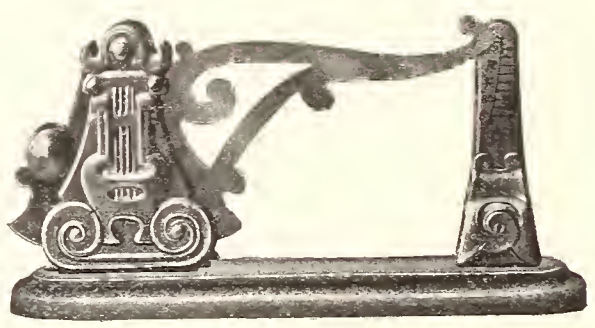
Instantaneous in Action. Permanently Effective. Absolutely Accurate.
FOR USE ON ALL DISC MACHINES

REASONS WHY ALL DISTRIBUTORS AND DEALERS SHOULD HANDLE THIS NEW AND BIG SELLING NOVELTY

I. BECAUSE it is **absolutely accurate.**

II. BECAUSE it indicates the speed of all disc machines **instantly.**

III. BECAUSE by its use each and every record can be reproduced at the correct speed, and all musical records (vocal or instrumental) **reproduced in the same musical key (or pitch)** that the artists originally sang or played the selections.



RETAIL, ONE DOLLAR.

IV. BECAUSE the **voices** of Caruso, Melba and all the other vocal artists, speaking records of celebrities, the tone qualities of solo instruments, etc., **cannot be faithfully reproduced** from records and thus bring forth the individuality of the artists or instruments, the tone quality and life-like realism required, **if the machine is not accurately and properly regulated.**

V. BECAUSE you can sell a **Phonometer** to every machine or record customer upon demonstration.

VI. BECAUSE it becomes an **absolute necessity!**

VII. BECAUSE **the Phonometer** is for sale by and receiving the highest endorsements of the following Distributors of Disc Machines:

BLACKMAN TALKING MACHINE CO., 97 Chambers St., New York.
DOUGLAS PHONOGRAPH CO., 89 Chambers St., New York.

TRADE NOTES FROM INDIANAPOLIS.

Talkers for Summer Camps—Novel Method of Testing One's Sanity—Lesley Doing Well With Instalment Sales—20th Century Columbia in Great Demand—President Easton's Pamphlet Appreciated—Sixteen Thousand Edison Records for the Craig Co.—Kipp-Link Co. to Move Next Month—Some Arcade News.

(Special to The Talking Machine World.)

Indianapolis, Ind., July 7, 1907.

Talking machine men are happy because talking machines are in great demand. Hot weather and outdoor amusements do not seem to cut down the sales perceptibly, and the dealers are hoping that this state of affairs will continue.

The Columbia Phonograph Co., Thomas Devine manager, is profiting from the summer season, and is selling many Columbia graphophones to those who have summer camps along White River north of the city. These campers delight in furnishing music for those who go up and down the river in canoes and launches. Among the campers is the Hon. S. K. Ruick, former member of the Indiana House of Representatives, who has a very pretty camp, his tents being decorated with the flags of all of the colleges. Other flags are suspended between the trees. Mr. Ruick has a Columbia graphophone.

In the trial of George Rhodius, the Indianapolis millionaire said to have been kidnapped and wedded, a talking machine was used. The trial attracted a great deal of attention, and the object was to determine the sanity of Rhodius, and whether his wife should have charge of his property, or whether a guardian should be appointed. The talking machine was brought into use to determine whether or not Rhodius could distinguish between the different selections of music, and whether or not he had any appreciation of music. When the machine was started he called for one classical selection after another. A guardian was appointed, however. The trial of Rhodius so far has cost about $20,000, and it has not ended yet.

Albert E. Sterne, a noted alienist in charge of Sterne's sanatorium, is steppiug along with the times. He has a Columbia B. D. graphophone at his sanatorium. It is held that music is good for patients whose minds are affected, different selections being adapted to different kinds of mental diseases. Mr. Sterne, who is abreast of the times along this line, has one of the largest private sanatoriums in Indianapolis.

Edward E. Hill, who sells Edison machines on Massachusetts avenue, says that his business is keeping up far better than he had expected for the summer season.

Frank Lesley, who sells Edison machines and disc machines of different kinds, has started something new. Recently he inserted an advertisement iu a daily announcing that for a certain length of time he would sell phonographs dollar down and dollar a week. That night his store was crowded, and as he had employed no extra clerks he had some difficulty in taking care of the business. He is selling standard Edisons on these terms, and the business is continuing with excellent sales. He believes the plan is a success. He says he has no trouble in collecting the instalments.

Thomas W. Devine, of the Columbia Co., says that the Twentieth Century Columbia is still in great demand for the five-cent vaudeville houses. This is not caused so much, he says, from the fact that new houses are being started, because almost every town in the State is supplied. It is due to the fact that the theater managers began by putting in smaller machines. It was a good while before they came to believe that they could not do without the large machine, but they are about all convinced now, and Mr. Devine is selling the large Columbia machines so rapidly that he can scarcely keep one in the store for a trade sample.

Senator Beveridge, who will be wedded in Paris soon, has rented a beautiful place on Washington Boulevard. The place is elegantly furnished, and is surrounded by huge forest trees, though it is in the edge of the city. One possession which Senator Beveridge prizes highly is a talking machine.

Employes of the Columbia Co. here have received copies of a little pamphlet written by Edward D. Easton, head of the Columbia Co. In this pamphlet Mr. Easton advises his employes to save their money. "Do not try to get rich quick," he says, "but always save something." The employes here are well pleased with the suggestion coming from their "Big Chief."

The Craig Co., who handle Edisou machines, have ordered 16,000 stock records. Mr. Craig believes that as there are more talking machines among the people of the country now than ever before, there will be a great demand for records. Acting on this theory he has ordered extensively. Mr. Craig says that his June business this year was 25 per cent. better than it was last year. The outlook for future business, he says, is excellent.

The Kipp-Liuk Co., who handle Edison and Victor machines, will be ready to move into their new place of business on Washington street within the next mouth. This will be a much more desirable location especially for the retail business, and will be as close to the tractiou and terminal station as is the present location. The Kipp-Link Co. are having a good jobbing business now.

Business is a little slack just now among the five-cent vaudeville houses and penny arcades. However, it is not what would be called dull, and dealers are not complaining. One dealer estimates that on an average the year round the people of Indianapolis spend about $300 a day at the five-cent theaters. There are now eight five-cent theaters here.

Manager Sutherland, of the Bijou and the Bijou Dream theaters, is well pleased with the hot weather business, as he calls it.

The Vaudette Theater, which was redecorated recently, will put up a number of new and attractive signs within a short time. This company are enjoying a good business despite the hot weather.

The five-cent theaters received quite a boost recently when all of them were visited one night by the eutire membership of the Adscript Club. The Adscript Club is a unique organization among the advertising men of the city. The Adscript Club is always doing "stunts." They held a meeting and decided that the best "stunt" would be to visit all of the five-cent theaters of the city. Not oue was omitted. They went into each and sang songs about themselves, and the song invariably was, "They Walked Right in and Walked Right Out," etc.

PLEASURES OF LIFE IN SALEM.

Because he played "I Like Your Style" on his talking machine with the horn of the instrument directed out of the window toward his neighbor's house, George E. Symond, of Salem, was thrashed by Frank H. Wayland a couple of weeks ago, and in the District Court the latter was found guilty and fined $50 for assault and battery. This was the climax, according to Wayland, of some social differences. A civil suit, it is understood, will be brought by Symonds to recover damages for personal injuries sustained.

During the centennial celebration recently held in Orange, N. J., and referred to briefly last month, the plant of the National Phonograph Co. closed down for a day, and the company had four elaborate floats in the parade, displaying their various styles of machines. One float held an enormous phonograph, in which was concealed the Edison Military Band. An immense norn lent volume to the music.

THE Playrite TRADE MARK DIAPHRAGM

"The Name Tells What They Do"

RECORDS PLAY RIGHT

WITH THIS DIAPHRAGM

PRODUCES FULL VOLUME

Playrite TRADE MARK DIAPHRAGM "THE NAME TELLS WHAT THEY DO"

THE TONE IS NATURAL

A NEEDED IMPROVEMENT.

¶ Great improvements have been made in Talking Machine Records, resulting in more volume and better tone.

You cannot get the full benefit of these improvements unless the **Throat** of your Talking Machine is perfect. It it therefore important to improve the **Throat** of the Talking Machine as much as possible. The **Throat** is the **Diaphragm.**

THE IMPROVEMENT ACCOMPLISHED.

¶ After careful experiments a specially prepared Fibre Diaphragm has been produced that gives the desired Volume and Tone combined.

THE "PLAYRITE" DIAPHRAGM.

¶ Records Play Right when this fibre diaphragm is fitted in the speaker, and it is therefore known as the "Playrite" diaphragm for "The Name Tells What They Do."

¶ The Playrite TRADE MARK Diaphragm **Plays Right**, for it produces a **Loud, Clear, Natural Tone** without blasting or smothering the lighter tones. Vocal Records sound like the natural voice, and Instrumental Records have that round, mellow tone that has been sought.

¶ To hear a Record played with the "Playrite" diaphragm means you will want one in your speaker, and that you will get all the music on the Record hereafter.

ANY DEALER CAN SUPPLY IT.

¶ Any competent dealer can fit the "Playrite" Diaphragm in a speaker, and satisfaction is guaranteed or money refunded.

Each "Playrite" Diaphragm has a crosshead riveted to it, and therefore does away with loose crossheads. **"Playrite" Diaphragm** complete with crosshead, 25c. each.

The "PLAYRITE" Diaphragm is made in two sizes to fit Phonograph Reproducers and Victor Exhibition Sound Boxes. State which size is wanted. Other sizes will be ready soon.

PRICES ARE RESTRICTED. 25c. each with crosshead attached.

FREE SAMPLE To Dealers or Jobbers who write on business letter head and specify what machines they handle.

(Special to The Talking Machine World.)

London, England, July 6, 1907.

The talking machine trade in the United Kingdom is still anything but satisfactory, and while there are strong manifestations of good things ahead with the manufacturers and factors, the blowing up of business must be laid at the door of the retailer, who is unfortunately a very hard-headed man to move. He will not do his share to revive things, and so long as the warm weather lasts is content to abide in the general belief that it is waste of energy to try and make a deal. The stability of the trade cannot be assured while this condition lasts, and it is only necessary to point out that the shopkeeper who pushes any goods spasmodically will never gain a substantial good will, no matter where he be located. Apart from all this the very unsettled weather condition of late is perhaps partly responsible for this trade depression; but with the new moon we shall expect a better state of things. A strong feature worth noting this year is the extraordinary advance of disc record sales. Several new records of merit have appeared in the past few months, and the consequent competition increase has resulted in additional and effective publicity, which has brought about a wider and more persistent call for flat records, without lessening the average cylinder sales.

A Rather Peculiar Happening.

Charles Liddaman recently sued Henry Marsh for damages for injuries to a talking machine, and compensation while the machine was held by the defendant. Plaintiff was a waiter, and added to his income by playing a talking machine at street corners and concerts. He estimated that he took at least four pounds a week in this way, and so abandoned the apron and hired a horse and trolley from the defendant on which to carry the instrument from place to place. As his payments for the horse and trolley were in arrears, Marsh one day interrupted a performance by jumping on the trolley and driving away with the machine, accessories and certain moneys which the plaintiff had collected. On plaintiff personally applying for the return of his goods defendant told him to clear out, using forcible language. The Magistrate—"What did yo udo?" Witness—"I was glad to go." (Laughter.) "Did you go again?" "Yes; next day, with my wife." The Magistrate—"Eh! that was better." In cross-examination, plaintiff said he owed defendant 30 shillings, and on the night of the seizure there was 30 shillings in coppers on the trolley, and had defendant waited he could have been paid there and then. On hospital Saturday plaintiff gathered money for certain hospitals. His instrument was a big one, and it was his intention to visit country villages, where such a thing had never been seen before. Defendant gave the jury his candid opinion upon plantiff's business. It was better than selling cabbages, cauliflowers or 'taters (laughter). It was much better than work, and he was going to try it. In cross-examination defendant persisted in answering questions by asking others. Counsel—"You must not ask me questions." Defendant—"What am I to do here—stand and do nothing?" Counsel—"No; answer my questions." Defendant—"Well, I will say 'yes' to everything you say" (laughter). As the goods had been returned judgment was entered for plaintiff with £6 damages.

Price Maintenance.

We present some further view hereunder upon the above question. Publicity in our columns does not necessarily mean that we indorse any one opinion, but we present both sides of the question, believing that in this way only will the way be paved for united action.

Henry Seymour writes The World as follows on this subject: "The subject of price maintenance is one which, among certain manufacturers and dealers, has occupied pre-eminent attention during the last year or two in England, with not very fruitful results. It is a pity that these gentlemen have sought to remedy the alleged evil of 'cutting' without reference to the fundamental principles of political economy. This absurd war against competition in the interest of monopoly prices would only operate, if successful, in the restraint of trade and consequent diminished returns. It would defeat its own object.

"I contend that it is no part of a manufacturer's business to stipulate the dealer's selling price of goods, and it is little short of an outrage to visit penalties upon him for any breach of such stipulation. The payment of money for goods purchased in the open market carries with it the right of the purchaser 'to do what he likes with his own.' But this right, based on traditional common sense, appears to have no place in the political economy of the talking machine.

"The inconsistency of the idea is so apparent also. The competition among manufacturers is to go on unimpeded, the result of which is the 'cutting' of the dealers' profits. The fact of the whole matter is that the fullest possible competition among distributive dealers is always an advantage to the manufacturer, who is mainly interested in increasing his output, and the cheaper the goods are offered to the public the greater will be the demand for them."

Price Not Yet Decided Upon.

The General Phonograph Co. ask me to correct a misstatement in our last issue, wherein the price of their "phono disc record" was given as two shillings and sixpence. Mr. White writes that the price has not yet been fully decided upon.

Mr. Edison's Philosophy.

Mr. Edison's philosophy is as simple as the multiplication table. Be you weary, disappointed, grief-stricken, discouraged, disgusted, broken or busted, find relief and solace in work. Whatever your trouble, work. It is not a new philosophy, but it is more impressively stated by Mr. Edison than by any of those who have expounded it before him.

Good Argument for Australia.

Sir William Lyns (Minister of State for Trade and Customs of the Commonwealth of Australia) before a general meeting of members of the London Chamber of Commerce of the 15th of May, stated: "Many persons in England have an utterly erroneous idea of the effect of the present Australian tariff, and in supporting the refusal of any consideration of the colonial preference

proposals more than one had stated that Australia blocked British goods by an exorbitant tariff. Yet, what is the fact? Russia has a tariff of 131 per cent. against British goods; the United States, 73 per cent.; Canada, 17 per cent. (even with the preference), while Australia's actual tariff was only 6 per cent. (narcotics and stimulants are excluded from the above). Let the people of the United Kingdom say they prefer to trade with the foreigner who taxes them 130 per cent. to the brother who only taxes them 6 per cent."

Columbia Display in Sydney.

At the Sydney Royal Show recently held in the capital of New South Wales, a splendid display was made by the Columbia Phonograph Co.'s Australasian manager, Charles Wortley. Indeed so striking was the arrangement of all types of disc and cylinder graphophones and the instrument for correspondence—the dictaphone—that the big Sydney six-penny illustrated weekly, "Town and Country," published a special photograph and description of it.

An Improved Reproducer.

Messrs. Simpson & Co., of Shoreditch, advise me that for the coming season they will shortly have ready an improved reproducer and other accessories of quality at competitive prices.

President Easton a Motorist.

President E. D. Easton, of the Columbia Phonograph Co., is an enthusiastic motorist. When in Europe this month on his annual tour of inspection he proposes making at least two extended motor tours, one in Italy and the other in England.

A Few Columbia Notes.

The Columbia's Vienna manager, Mr. R. E. Thallmayer, visited London headquarters last month. Another visitor to London was Paul H. Cromelin, vice-president of the Columbia Phonograph Co., New York.

The highlands of Scotland have enticed the Columbia's jovial London manager, James P. Bradt, away from business for a fortnight.

The staff and friends, numbering 42, of the Scottish branch of the Columbia Phonograph Co., sojourned on Victoria day to Whittlefield for their first picnic. They spent a very enjoyable outing with sports, boating, etc., till 5 o'clock, when they adjourned for tea and engaged in dancing to music supplied by their handsome "Regal" graphophone.

From the Russell Hunting Co.

Mr. Mauson reports that they have fixed the first week in July definite for removal to their new premises at 13, 15 and 17 City Road, but it will be fully a month before they get straight, as some alterations have had to be made at the last moment on account of recent developments in the business. Average trade is good. So many music warehouses now handle records, and such a number of dealers now devote themselves entirely to the talking machine trade that the falling off of business during the summer months, which has been such a trial in former years, has largely been done away with. Orders from the colonies and foreign countries are coming in bigger than ever this year, so that there is not an idle moment either in the office or factory. For the autumn they are preparing some novelties which will startle the trade, and altogether it is expected next winter will show an immense expansion in "Sterling" record business. At the time of my call Louis Sterling was away on the continent in the interests of his company's ever increasing business there.

Barnett Samuel & Sons Are Busy.

Unlike the quiet state of trade in London the report from Messrs. Barnett Samuel & Sons was in the nature of a pleasant contrast. This firm, with their world-wide reputation, are at the present time making stronger efforts than ever in support of their English and foreign dealers. In this respect they have recently introduced several new lines, which will provide a good incentive to increased trade for those customers of theirs, who have shown the necessary forethought to take these products up. I may say that the new brass and aluminum spun horns are of an unique pattern, and which are claimed to throw out the sounds in a more mellow yet none the less distinct manner. Other new lines include improved disc machines, a series of beautifully gotten up albums for disc records and dulcephone needles, which are of English manufacture, etc., etc. The coming season is expected to outrival all others, and in order to insure prompt dispatch they will increase their facilities for handling all orders received.

Pathe Freres' Success.

One of the principal features in the trade this year has been the introduction of quite a number of new disc records. One of the best successes in this direction has been the popularity of the Pathe Freres products. But with this firm "success" should be written in capital letters, for they are still ahead of the times in the introduction of a new 8½-inch disc record, double sided, at the extraordinary low figure of 1s. 6d. In conversation Mr. Courant stated that the decision to fix this low price had been well thought out, and they had more than good reason to believe that it will prove a great boon to the trade and the public alike. Messrs. Pathe Freres' representative is now out on an extensive selling trip in Canada, and his reports and orders to date are very satisfactory. He is not expected back yet a while, as, of late, the Canadian trade has shown such a marked increase that it will be necessary for a systematic working of the ground. Among other items of interest mentioned by Mr. Courant was the ever increasing demand for band and orchestral selections, and more especially were they kept busy in supplying topical pieces.

Telephone That Talks.

K. M. Twiner, of New York, is the inventor of a wonderful little instrument which was recently on view at the Savoy Hotel. It has the sin-

POINTS.—No Ratchet and Pawl—No Feed Nut—Feed Screw. ***Shaft*** driven direct by motor without belt. ***Right Hand Wind, Key Always Fixed,*** and machine can be wound whilst playing. ***Diaphragm*** on eccentric shaft, cannot be dropped suddenly. ***Noiseless,*** being mounted on compressed rubber cushions.

THESE PHONOGRAPHS are undoubtedly the simplest, most durable and best in the market. The belt has only the Mandrel to turn. The Diaphragm and Trumpet are carried direct by the motor. So the reproductions are perfectly steady, and every one will do all we claim for it—and more.

"ELF" better than any ***"Gem"***
"IMP" better than any ***"Standard"***
"ERA" better than ***"Home"***
"DON" beats ***"Triumph"*** hollow

THE "RECORD" SITUATION:

The Edison Bell Records have at last brought ***all*** down to one level price in Great Britain and Colonies.

In Great Britain, ***the Free Market,***

EDISON BELL, 1/- EDISON, 1/- ALL OTHERS, 1/-

"How are the mighty fallen!!!"

What price in the Tariff-Ridden United States?

No reason why Records should be made in the States and sold at home for 35 cents, and carriage paid, warehoused and distributed in England for 24 cents.

ANY HOW—If there is a dealer or factor in the United States with pluck enough to handle ***Edison Bell Products*** we'll help him to pay duties and sell better Records—particularly for a large number of British residents—and better Phonographs than America knows.

You experts, just consider—America and America's great man have not improved the Phonograph one iota in twelve years.

STILL AT THE OLD ADDRESS:

EDISON BELL, 39 Charing Cross Road, London

Representatives: AYERS, HENRY & CO., 27 Swanston St., Melbourne; Queen Victoria Market Bldg., Sydney; Queen St., Perth, W. A.; 232 Albert St., Brisbane, Queensland; 24 Fort Street, Auckland, N. Z.

gular property of catching and transmitting every whisper within a radius of fifteen feet, and at the same time can make its own voice heard over a considerably greater distance. To illustrate the uses of the instrument, which he calls a "dictograph," Mr. Twiner connected it with a telephone wire communicating with an operator in another room. Having moved one of ten switches to call the attention of the operator he stood as far from the instrument as the size of the room would allow, and began to talk in ordinary tones. To every question he asked the instrument, a small box about 11 inches long and 5 deep, replied loudly and clearly. He dictated a business letter, and then asked for it to be repeated. The letter came back word for word with almost startling rapidity. By means of the "dictograph" a busy man, sitting in his office, can talk to any number of managers or clerks in turn, or, by depressing all the switches, to the whole of them together. He has no need to hold a receiver in his hands. He can whisper at a distance of fifteen feet with his back turned to the instrument and his words will be heard quite plainly at the other end of the wire even if that end is a hundred miles away.

Robert Barr and a Gramophone Scheme.

There was a curiously mixed story of gramophones and literature in the action of "Keesing vs. the Idler." The action arose out of a scheme instituted by the "Idler" for the supply of gramophones, acting with the makers of the instruments. Plaintiff, Mr. J. Keesing, was engaged to work the scheme, and he was to receive twenty pounds per week and commission. The scheme was to supply gramophones to the public on the instalment plan, but it failed, said plaintiff, because the defendants had not largely advertised it, as they had agreed to do. As plaintiff was dismissed he claimed three hundred and sixty pounds. Robert Barr, in his evidence, said he was part proprietor of the "Idler." Both the gramophone scheme and the man to work it were introduced to him. Keesing is the most remarkable man in England," said Mr. Barr, smiling. "In fifteen minutes' walking along the street he had got me so that I wanted to have him in my employment, and would give anything for him. He showed me his scheme, and I saw he knew his business down to the ground." (Laughter.) Mr. Barr complained of some advertisements as being too flamboyant and there was a quarrel. Eventually witness had to terminate the engagement, no good having resulted from it, he offering to pay Keesing forty pounds and twenty pounds for his fare to America. Subsequently plaintiff offered to accept the sum of three hundred and sixty pounds, and to stop any action from the gramophone people who were prepared to deliver 5,000 of the machines, and to enforce their contract. Witness refused, and told plaintiff to leave the office. In the end the jury found for one hundred pounds for plaintiff, but judgment was entered for the defendants, as they had paid one hundred and fifty pounds into court.

New Prices on Genuine Edison Records.

J. R. Schermerhorn, chairman of directors of the National Phonograph Co., Ltd., has sent out the following announcement to Edison factors:

"We have pleasure in informing you that we have now completed an arrangement whereby we shall be able hereafter to produce and supply our patent standard genuine Edison records at such a price as will permit of their being sold to the public at 1 shilling each instead of at the price hitherto stipulated, viz., 1s. 6d. The prices for genuine Edison phonographs will remain unaltered.

"In accordance with the terms of our agreement, we hereby give you notice that at the expiration of 60 days from June 10, 1907 (that is, on and after August 8, 1907), our price for records will be reduced, and that the retail price for our records from that date will be 1s. each.

"We desire to obviate as far as possible the inconvenience that will thus arise by making a gratuitous allowance to all of our factors in the form of a credit or rebate of 2d. (twopence) each upon the net quantity of Edison records that they have purchased from us from December 1, 1906, to June 8, 1907, inclusive, and this sum, or credit, will be allocated toward the future purchases to be made from us, whether for phonographs or records, during only the next five months ending October 31, 1907.

"Owing to congestion at our works it will be necessary for factors desiring to avail themselves of this gratuitous allowance to place orders well in advance of the end of October so as to ensure shipment within the period above mentioned.

"All records ordered or delivered from this date will be invoiced at the new reduced rates as indicated below, although the reduced selling price to the public must not come into effect before August 8, 1907.

"In order to facilitate business between factors and dealers we are announcing to the dealers that our factors will be permitted by us to allow, as a portion of the rebate we are gratuitously extending to them, a credit of one penny each upon all records purchased by their dealers from them from March 1, 1907, to June 8, 1907, inclusive.

"This allowance which will be borne by the factors must be in the form of a credit in the factor's books, which will be placed to the accounts of the dealers toward their future purchases of the goods of the National Phonograph Co., Ltd.

"The directors trust that by reason of this gratuitous allowance made alike to our factors and dealers, the very friendly relations hitherto subsisting between the trade and the National Phonograph Co., Ltd., will be maintained, and that the business transactions may be increasingly and mutually satisfactory.

"New prices to factors and dealers effective June 10, 1907: Factors, 6d. each; dealers, 8d. each."

Hope Bros. Enterprise.

Hope Bros., of Cheapside, attracted a great deal of attentiou recently during the visit of Prince Fushimi. While the Japanese dignitary, with the Prince of Wales, was going to Guildhall to lunch with the Lord Mayor, Hope Bros. placed an auxetophone in one of the first floor windows, and when the Prince of Wales passed greeted him with the strains of "God Bless the Prince of Wales," as played by the Coldstream Guards' band. The Prince and members of his suite were highly pleased with the compliment. When Prince Fushimi went by the auxetophone played the national anthem of Japan, the record being made by a well-known Geisha band, and as he passed the Prince saluted.

Gen. Booth Extols the Far East.

Gen. Booth, who has just returned from an extensive world trip, makes some very pertinent remarks anent the advance of the Eastern nations. He states: "The Western world must look to Japan as a new and powerful competitor in trade and commerce. She is no longer trammeled by old ideas as to the degrading character of trade. It is only a question of time when her industries will be tutored with the most expert direction and packed with the finest machinery taken from all the nations of the world. I do not see what can prevent her from producing the finest articles at the cheapest possible price."

Japanese Tariff on Records.

It will also be interesting to note the following Japanese customs decision which came into force recently. On phonographic records (as parts of phonographic instruments) (No. 446 of tariff) a duty of 50 per cent. ad valorem will be levied.

Talking Machine Men's Outing.

Saturday, June 22, saw the staff outings of the Gramophone & Typewriter Co., Ltd., and the Edison Bell Co.'s factory employes. The former went to Brighton and the latter to Hastings. The weather was not particularly promising at the

start, but on arrival it was found His Majesty the sun was shining brilliantly. After dinner the respective holiday makers sought the various attractions of each town, and the return journey about 8 o'clock marked the close of a very happy and successful outing.

Issue Two New Machines.

I notice that the British Zonophone Co. have just issued two new machines. The "Zono Champion," which is really the Victor model gramophone, and the "Gibson No. II.," which is fitted with the exhibition sound-box. Both are licensed for sale by the Gramophone & Typewriter Co.

British Sonogram Co.'s Exhibits.

In their advertisement this month the British Sonogram Co. draw special attention to the fact that they are exhibiting at the Ironmongers' exhibition which will be held at the Agricultural Hall, July 9, to the 19th. Mr. Mellerio stated in the course of a short chat with The World's representative that they are one of only two firms exhibiting, and their stall will display effectively their latest style of machines and records. This perhaps is rather an exceptional form of publicity for talking machine manufacturers, but there is not the slightest doubt of its value, as these are products which need only introduction to find favor in many and varied quarters. Certainly it would be hard to find an industry or profession to which the talking machine is not a valuable fillip. The British Sonogram Co. evidently mean business, for no time has been lost in securing a building which will afford the best possible facilities for coping with the large demand their goods have created. Lofty and commodious premises at 77 City Road have been in the hands of workmen for some time past, and before these lines appear the company will have been comfortably settled therein. I hope next month to be in a position to print an illustration, and to tell our readers more about this capitally adapted warehouse.

New Records by Tom Childs.

Gilbert, Kimpton & Co. announce a series of new records by the celebrated vocalist, Tom Child. This artist is too well known to need further tribute here, and it therefore is no matter for surprise to learn that his records have met with much favor generally. I learn also from Sales Manager Howard that the demand for Ian Colquhoun records has exceeded their most sanguine anticipations. We may expect shortly to hear of some remarkable developments in connection with this company.

Edison Bell's Offer to the Trade.

Edison Bell have issued an announcement to the trade in which they state: "We will give every dealer two records for every eight Edison records he has bought between March 1 aud June 10, 1907. This is better than one penny, and the dealer may choose his own records from our catalog. We have no stale stock to unload. This is not charity or a gratuity, it is business. There is one condition the dealer who accepts this offer must not accept any other concession on account of the same records. He will be at perfect liberty to trade where he likes and in whatever goods he pleases, and he may have his concession records either direct from us or from his own factor, at his convenience. Transaction to be completed by July 15. Our desire is that he will in future push Edison Bell products. The Edison Bell may be relied on to act and deal fairly and squarely with their customers under all circumstances. This circular withdraws the one C No. 113 issued in error offering 'One in Seven.' The old address, Edison Bell, 39 Charing Cross Road, London."

The Edison Gem Machine.

The reported alteration in the Edison Gem machine amounts to an improvement in the interior machinery, and as far as the outward appearance is concerned remains the same.

Gilbert, Kimpton & Co. Publicity.

Gilbert, Kimpton & Co. are issuing neat bills for display in their dealers' windows. The particular artist's photo appears thereon together with a list of selections made for Imperial records.

Mark Twain's Views.

Mark Twain stated on his arrival in London that he had not yet spoken into a gramophone. We are, however, in hopes of his doing so before that funeral of his comes off!

Fr. Rauth's New Lines.

Fr. Rauth has introduced some very cheap lines to this market of late, and one that calls for special mention is a splendid line of disc talker. The motor of this machine is wonderfully strong, and is cased in an attractive wood.

Words Fraught With Meaning

TO YOU

Our catalogue is not the most expensive, but it is the most COMPREHENSIVE, and therefore the one of most use to you.

It contains illustrations and full particulars of every machine, record and accessory of merit now on the British market.

We buy in enormous quantities, therefore you can be sure of having the best prices.

An artistic flower horn is fitted, and the machiue, as a whole, presents splendid value at the low price of $5.

Handsome Lindstrom Catalog.

A new catalog is to hand from Carl Lindstrom, Berlin. It is most expensively gotten up on fine art paper, and contaius illustrations of the various machines, motors and sound boxes manufactured by this up-to-date firm. The whole is printed in four languages, which conveys some idea of Messrs. Carl Lindstrom's world-wide connections. In conversation with Mr. Ruhl (London agent) I learned that this company is expanding all the time, even during the so-called quiet season they employ no less than two hundred and fifty hands, so that their trade all the year round must be enormous. A splendid season is expected next, and the company are now making all necessary arrangements to fully cope with the situation.

Latest Theatre Novelty.

Early-door patrons of several London theaters are now being treated to gramophone performances from the stage, and needless to say it is much appreciated.

Printing the Speed of Records.

Sterling & Hunting Ltd., announce that in deference to the wishes of a large number of requests they will in future print the speeds at which "Odeon" records should be run on the records themselves, wherever possible, and in all future supplements. The speeds appear for the first time on the July list of "Odeon" records.

The "Sterling Recorder."

The July number of the "Sterling Recorder," the educative little house organ of the Russell Hunting Record Co., contains an article by Frank Arthur, one of the English artistes at Covent Garden, on "My Impressions of the Gala Performance at Covent Garden," which describes the function from the standpoint of the stage instead of from the stalls. Another article is on "How to Become a Successful Salesman."

Kubelik's Tour of the United States.

Kubelik, records of whose work are exclusive to the "Fouotipia" list, has been booked, it is said, for over one hundred engagements in the United States. This master of the violin starts his English provincial tour at Weymouth on August 3.

An Important Event in Phonoland.

It will doubtless come as a complete surprise to the trade to know that The General Phonograph Co., Ltd., manufacturers of the now famous White gold moulded record, have acquired the stock, plant and business of Neophone, Ltd., which concern were the first to place upon the market the now well-established phonograph cut disc record.

As previously announced in The World The General Phonograph Co., Ltd., have been for several months engaged in the perfection of a disc record with phonograph cut by means of the gold moulding process. These efforts have been crowned with success and The General are now producing a gold moulded phonograph cut disc which has all the volume and depth of tone of any disc record, while all the beauties of the musical qualities of the gold moulded cylinders are preserved. This system will now be applied to the well-established Neophone product. The General Phonograph Co. announce that the office and recording staffs will be transferred to No. 1 Worship street, City Road, E. C., at an early date, and that all business in connection with the manufacture of the White gold moulded cylinder record and the new Neophone gold moulded disc will be transacted at this address. In addition to the large and varied stock of sapphire disc machines now carried The General Co. will offer three new types of machines, embodying the latest and most up-to-date improvements.

A Good Suggestion.

As it is becoming the practice—and a very good idea, too—with dealers to devote an evening each month to a concert, at which the month's "Odeou" records form the program, those who are willing to do this are invited to communicate with Sterling & Hunting, Ltd., 14 Hamsell street, E. C., and arrangements will be made for the supply of quantities of an attractive circular letter, bearing the dealer's name and address for sending out as invitations to these "Odeon" recitals.

EMERALD ISLE JOTTINGS.

Inclement and Unseasonable Weather Has Injured the Talking Machine Trade in the North of Ireland—Yankees Have Not a Monopoly of Original Ideas as Instanced in Selling Records by 'Phone—The Gaumont-Chrono-Megaphone Heard—The Auxetophone Demonstration at Ulster Hall—Columbia 12-inch Discs Admired—Operas Heard Through the Talker—R. G. Smith a Visitor—Other Items from the Little Green Isle.

(Special to The Talking Machine World.)

Belfast, Ireland, June 30, 1907.

The continued spell of inclement and unseasonable weather in Ireland has militated considerably against sales of "talkers," especially for out-of-door functions; indeed, it looks as though there will be no summer in this year of grace—A. D. 1907—and that "the clerk of the weather" has abdicated in favor of Jupiter Pluvius and Aeolus, who conjointly hold their sway over the elements.

Adverting to an article in last impression of The Talking Machine World (page 53), entitled "Playing for Telephone Transmission," it may be mentioned that the local jobber, T. Edens Osborne, has been using the telephone for many years in giving his customers opportunities of having the latest disc aud cylinder selections as they arrive each month from manufacturers: furthermore, he often entertains friends in a similar manner, even when separated from him by distances of twenty-five miles and upward,

FROM OUR LONDON HEADQUARTERS—(Continued).

and has been assured that selections, and especially those rendered by the Auxetophone, are clearly and distinctly transmitted by telephone.

During the week ending June 22 the habitues of the Belfast Empire Theatre had the advantage of enjoying a most unique exhibition of the Gaumont Chrono-Megaphone—a combination of disc "talker" and cinematograph. The selections were of Harry Lauder's songs exclusively, and as the living picture of this popular artist synchronized absolutely with the talking machine, the audiences were quite carried away by the combination of light and sound. Judging from the loud applause with which each item was greeted, it was concluded that Lauder could not have been better received had he been there in propriâ personâ.

An interesting demonstration of the Auxetophone took place at Ulster Hall, Belfast, on June 19. No charge was made for admission, the general public and over four hundred delegates of the Young Men's Christian Associations from all parts of the world were present. The meeting was held under the auspices of the British Conference of Young Men's Christian Associations, and the arrangements for the Auxetophone concert were entrusted to Mr. Osborne by D. A. Black, the Belfast secretary of the Young Men's Christian Association. The Auxetophone was never heard to better advantage, the immense cosmopolitan gathering were most enthusiastic; indeed, the programme of Gramophone masterpieces had to be curtailed on account of some of the selections—especially songs by Mesdames Melba and Patti—having called forth encores.

The new issue of twelve-inch Columbia discs (which are sold at 4s. each) are excellent, and have proven quick sellers, and it is hoped that the manufacturers will eschew all common-type or comic selections and only issue high-class operatic and classical music.

The Gramophone Co. (London) deserve great credit for their enterprise in placing so many complete sets of important records on the market. For example, "The Mikado," "Messiah," "Il Trovatore," "Elijah" and quite recently the "Yeoman of the Guard." Some of these discs are of very exceptional merit.

The Irish and Scotch representative of The Gramophone Co. (R. G. Smyth) is now touring in Ireland in the interest of his principals on a magnificent motor car and looked as elated as did Achilles when dragging the dead body of Hector around the walls of Troy, when in this city.

The Edison grand opera records are rapidly gaining popularity; undoubtedly they are the most delightful and perfect cylinder records extant.

CONCERT FOR THE LEGISLATURE.

J. Wilson Gibson, who opened a talking machine store in Columbia, S. C., about six months ago, gave a Victor concert at the closing session of the South Carolina Legislature, which fact was duly entered upon the minutes of the day.

JAMES B. LANDAY RETURNS

From His European Trip and Chats Interestingly of Conditions in Europe as Compared With Those Existing in This Country.

On the 6th inst., James B. Landay, of Landay Bros., Victor distributers exclusively, New York, in from a trip to Europe on the American liner "St. Louis," was met at the pier on landing by his brother, Max, of the firm, and A. P. Petit, general manager of the Talking Machine Supply Co. Monday following he was back "on the job" at their Fifth avenue store looking and feeling as if every moment of his journey had been one of enjoyment and doubtless of profit as well, the combination trip yielding both. Going over, on the "New Amsterdam," and coming back, Mr. Landay took a prominent part in the ship's concert for the benefit jointly of the widows' fund of American and British seamen, realizing handsome amounts in both instances through the instrumentality of the Victor machine and red seal and popular records. He was aided by a number of artists, who will appear next season at the Metropolitan Opera House, New York. The Victor repertoire, under the skilful operation of Mr. Landay, evoked thunders of applause.

JAMES B. LANDAY.

Chatting informally of conditions abroad, Mr. Landay said to The World: "One of the most surprising things is the vast difference between the European, or rather the English and American dealer. Why, we are in clover over here as compared to them. Our goods are protected as to price and other phases of the business, while in Great Britain and on the Continent everything is wide open, and as a choice give me the American plan. A dealer abroad is compelled to carry a dozen different makes of records and as many if not more of machines—a sample lot of each as it were. When I told our dealer in London that we had a stock of over $50,000 in records alone, he fairly gasped. The cheap machines and records are ruining the business over there, reducing it to a piker's basis.

"I took a lot of Victor records with me, and in comparing them with the famous Gramophone product they were not in it. This is generally admitted in England, their claim is that the superiority of the Victor records is due to the water here. How's that for an explanation? The people in Europe have not got the money, and this means cheapness all around. The long credits also have a tendency to weaken the trade. Were the American business system introduced in Europe there would soon be a vast difference in the mercantile standing of the talking machine manufacturers, distributers and dealers. I visited Berlin, Leipzig, Rotterdam, The Hague, Paris and London, and had a most enjoyable time. Of talking machine goods? That will come later." Then "Jim" detached his boutonniere and took a leisurely survey of its hidden beauty at close range.

NEW MACHINE FOR CUTTING MUSIC ROLLS

(Special to The Talking Machine World.)

Chicago, Ill., July 10, 1907.

The Kibbey Mfg. Co., of this city, who recently incorporated with a capital of $300,000, will shortly begin the manufacture of perforated music rolls, utilizing a new and wonderful machine which has recently been exhibited in the offices of H. C. Kibbey & Co. in this city. It may be attached to any piano of conventional type, doing the cutting cleanly and accurately, while the pianist is rendering the selection, so that all that remains to be done to prepare the roll for the market is to roll it on its spindle.

H. C. Kibbey, the moving spirit of the enterprise, is building up a business of immense proportions, having organized three separate concerns to handle different portions of the business. H. C. Kibbey & Co., the parent organization, to act as sales agents; the Kibbey Manufacturing Co. to manufacture perforated music rolls by the new process, and probably the Concertophone and Guardian Coin Detector, two other Kibbey specialties, and the Commercial Trust Co. to finance the business. Several prominent and influential business men are back of the latter venture.

INCORPORATED.

The Colonial Phonograph Co., New York City, have been incorporated with a capital of $10,000, to manufacture talking machines. Incorporators: Anthony Perrolta and Henry Cinzlo.

FIRE DAMAGES RECORD STOCK.

The record stock of the Fulton Music Co., Waterbury, Conn., dealers in talking machines, was damaged by water to the extent of $3,000 last week, due to a fire which destroyed the adjoining building.

DECISION HAS BEEN APPEALED.

The Suit Decided in Favor of the New York Phonograph Co. Will be Taken to Higher Court—Appeal Stays Present Action—National Phonograph Co. Say Dealers Need Not be Alarmed—Latest Phase of Case Celebre.

Judge Keogh, Supreme Court, Special Term, Westchester County, N. Y., on June 25, gave judgment for the plaintiffs in the suit of the New York Phonograph Co. against S. B. Davega, Edison jobber and dealer, the nominal defendant, as a test case brought against every one in New York State handling the product of the National Phonograph Co. This is another step reached in the famous litigation originally instituted against the National Phonograph Co., Edison Phonograph Works, Thomas A. Edison and others for alleged infringement of contract. The suit has been in the courts a number of years, the United States Circuit Court, New York, upholding the agreement in part, this opinion being subsequently sustained on review by the United States Court of Appeals. About a year ago the case was transferred to the Supreme Court of Westchester County, New York, Judge Keogh hearing argument on various motions, which have been reported in The World from time to time. In the present instance the New York Phonograph Co. directly sued S. B. Davega, who was agreed upon by both sides to figure as the defendant. Judge Keogh's brief decision follows:

"The opinion and judgments of the United States Courts rendered in causes growing out of the same transactions as are set forth in the complaint in this action, and on nearly all the vital questions presented for decision in this case, compel a judgment in favor of the plaintiff."

Referring to the above memorandum the National Phonograph Co. said to The World, after the decision became known: "Steps will be taken immediately to carry the decision up for review to the Appellate Division of the Supreme Court, and then to the Court of Appeals. These appeals will act as a stay or arrest of judgment until passed upon by the final tribunal. The dealers have no reason whatever to be alarmed."

Steps were at once taken by the defense to stay the judgment pending an appeal, and Judge Keogh, after hearing elaborate arguments by the attorneys for and against, on July 3 granted the motion, under stipulated conditions, which were readily accepted. Responding to The World's inquiry for authoritative information on the last move in this cause celebre, counsel for the defense said: "Last week we appeared before Judge Keogh and argued for an arrest of judgment pending the adjudication of the case. The court suspended the order, providing we would file a bond for $150,000 and an undertaking accepting liability for all damages that may be assessed on an accounting should we lose, which is altogether improbable. We have complied with the requirements of the court order, and will be prepared to argue the case in the Appellate Division of the New York Supreme Court. By the time the hearing comes on in the Court of Appeals, probably a couple of years will elapse, and all proceedings will be suspended during that period. The distorted and misleading reports published in the New York daily papers of recent date and elsewhere, are veritable poppycock from beginning to end, a fact the trade know only too well. Their object is only too obvious, the very absurdity of the statements defeating their purpose with those acquainted with the situation. When the decree, now being prepared, is signed by Judge Keogh the order for the stay will be included."

ACTIVITY IN WHEELING, W. VA.

Leading Concerns Make Good Reports—Bard Bros. Publicity.

(Special to The Talking Machine World.)

Wheeling, W. Va., July 8, 1907.

If talking machines are not popular with the people of this city, then some of the trade boomers here are making a great bluff in filling up their stores with customers. During the hot days of the past week there were times that one would have thought that the winter was here, with its crowds of record and machine customers.

Bard Bros. have had on for some time a trade stimulator that seems to have all the good points that any plan of this kind could have, and incidently none of the objectional ones that so often cut deeply into the profits of what looks to be a winning game. In grocery stores all over the city you will see that this enterprising firm have enlisted their aid in this campaign, each grocer is trying to give it more publicity than his competitor.

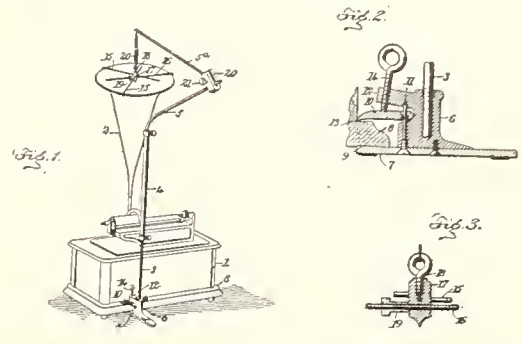
Bard Bros. advertising department is to be congratulated on the working out of a business producer of this magnitude. It might be well to mention in this connection that there has been so many inquiries from dealers relative to the workings of this plan, that they have decided to advertise it, and send full instructions for the putting on of this plan, for a small sum. Their ad appears in the advertising columns.

The talking machine departments of the C. A. House Music Store and the F. W. Baumer Piano Co. keep right after this end of their business. The local office of the Columbia Phonograph Co. are keeping their crops of solicitors hustling for business. H. R. Bruder, formerly with the Universal Talking Machine Mfg. Co., now representing Powers & Henry Co. in this territory, has booked a number of very good orders here. Mr. Tyler, of Tyler & Davis, Parkersburg, was a visitor during the middle of June. Abner C. Thomas, of Sisterville, W. Va., is advertising and selling machines on the payment plan with splendid results.

VICTOR H. RAPKE'S INVENTION.

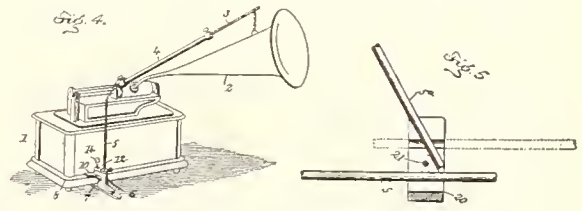
Granted Patent on Improved Horn Support Which Possesses Much Merit.

Victor H. Rapke, of the Victor H. Rapke Co., was granted patent No. 855,978 on June 4th for an improved horn support, which relates particularly to supporting devices for phonograph horns,



the object being to provide in the construction of the support, a novel and simple clamping device that may be readily engaged with a molding of the machine casing, and further, to provide a supporting rod so constructed that the horn may be supported verticaliy or horizontally, or, in other words, a universal or interchangeable supporting rod.

Reference is to be had to the accompanying



drawings in which Fig. 1 is a perspective view showing a horn supporting device embodying Mr. Rapke's invention; Fig. 2 is a sectional view of the clamping member; Fig. 3 is a sectional detail showing the adjusting means for the horn engaging spider; Fig. 4 is a perspective view showing the rod as arranged for supporting the horn in substantially horizontal position; and Fig. 5 is a sectional detail indicating a clamping device that may be used.

NEW YORK JOBBERS TO MEET.

Will Hold Annual Meeting at the Hotel Astor July 22, 23—Officers to be Elected—A Great Business and Social Program Outlined.

At an informal gathering of New York jobbers on July 8, at the Jacot Music Box Co., the question of arranging a program for the social entertainment of the members attending the annual meeting of the Eastern Talking Machine Jobbers' Association, in New York, on July 22 and 23, was discussed, and the following committee appointed to assume charge and settle the details: A. H. Jacot, of Jacot Music Box Co.; C. V. Henkel, of Douglas Phonograph Co.; J. Newcomb Blackman, of Blackman Talking Machine Co.; S. B. Davega and Benj. Switky. The committee met at Mr. Davega's store on the subsequent Wednesday and perfected their plans, which are appended:

The meetings of the association will be held at the Hotel Astor, Broadway and Forty-fourth street. The first session will be held in the afternoon of the 22d, from 2 to 6 o'clock, and will be taken up with the election of officers, completion of unfinished business and the reports of committees. After adjournment, and at 7 o'clock, a banquet will be given by the local jobbers in the Yacht Room of the hotel, and later the association will repair in a body to the roof garden to enjoy the evening concert.

Tuesday, the 23d, the session will be resumed at 10 a. m., when new business will be the first in regular order. The association would also be pleased to hear suggestions in an informal way from the representatives of the various manufacturers. The choice of the next meeting place will also be determined, and possibly the new agreement to be formulated by the National Phonograph Co. discussed. As W. E. Gilmore, president of the latter company, is expected back from Europe about the 18th, he will be invited to address the association and meet the members.

Luncheon will be served in the hotel at the close of the convention, about noon, the association being the guests of the Tea Tray Co., of Newark, N. J., and possibly a few congratulatory remarks in happy vein will be made by General Manager Beecroft. In the afternoon the committee have arranged to escort the members to Coney Island, on one of the Iron Steamboat Co.'s fast steamers, at the invitation of the Herzog Art Furniture Co., Saginaw, Mich., who will also provide an informal shore dinner at 6:30 p. m., possibly at Dreamland, overlooking the ocean. Then the wonders of Luna Park, Dreamland and other entertainment features on the island will be explored and enjoyed, the party returning to New York late at night via the steamboat.

In arranging this program of social festivities in connection with the meeting, the New York jobbers disavow any intention of establishing a precedent. It is realized that in the smaller cities, where conventions are likely to be held in the future, the reduced number of members could not afford this expense. They recognize, however, that, this being the annual meeting and the membership being stronger in New York than elsewhere, they wish to make the attendance of out-of-town jobbers as inviting and enjoyable as possible. It is said a resolution will be introduced at the meeting prohibiting lavish entertainments, excepting such as the manufacturing companies may wish to give, and that each member should defray his own expenses in the future.

The board of directors particularly desire that each member should appoint himself a committee of one to obtain the application of all jobbers in his immediate vicinity or section. They can realize the importance of doing this on account of the credit reports, the value of which rests upon the free exchange of ledger information from diversified sources and covering the entire territory. The board also request members to come to New York prepared to stay throughout the meetings on both days, as work of importance to every one concerned will be transacted.

The nominating committee, consisting of Messrs. Barnhill, Philadelphia; Petit, Newark, and Henkel, New York, who are required by the constitution to name a board of directors twenty days in advance of the annual election, at a meeting recently selected the following: W. D. Andrews, Syracuse, N. Y.; J. Newcomb Blackman, Blackman Talking Machine Co., and A. H. Jacot, Jacot Music Box Co., New York; E. F. Taft, Eastern Talking Machine Co., Boston, Mass.; Louis Buehn, Buehn Bros., Philadelphia, Pa. The executive officers are to be chosen from the board.

THOS. P. CLANCY VISITING EAST.

When Thomas P. Clancy, manager of the Columbia Phonograph Co.'s store in St. Louis, Mo., was in New York early in the month he had to be shown a few things. After visiting personal friends he went to Bridgeport, Conn., July 5, to look over the company's factory, and was entertained royally. The following day he called upon Vic Emerson at the laboratory, and then started West, intending to stop over in Rochester, N. Y., his native place. When an attache of another company was asked what he had done with Clancy he promptly said: "I would be ashamed to say what has become of him." Since Mr. Clancy has assumed charge in St. Louis he is reported as having done a really wonderful Columbia business, his personality and aggressive methods, coupled with his vast and exact knowledge of the trade, being great winners.

RETURN FROM MEXICAN VISIT.

Last month G. J. Werner and F. C. Burt, who were in the City of Mexico three months making records for the National Phonograph Co., returned after making two hundred for the foreign list. These include band selections, songs, trios, duets, quartets and recitations. The instrumental music by the Police Band—Mexico's premier organization—will be as popular here as in Mexico. This fine band will shortly tour the principal cities in the United States.

(Special to The Talking Machine World.)

World Office, 195 Wabash Ave.,
Chicago, Ill., July 6, 1907.

While jobbers generally report that June showed quite a material falling off in business as compared with May, a state of affairs always to be expected, the decrease was not as great as usual and June made a material advance over the volume of business of the same month a year ago, according to most of the jobbers interviewed. The general disposition is to look for a good, healthy, normal business the balance of the year, but hardly of the boom character of the trade of the summer of 1906. Shipments are certainly easier to obtain than last year. Local retail trade kept up very nicely in June until the last week, when it fell off abruptly. Present business is just about of the character usually expected at this season.

James R. Milne, one of the most widely known talking machine salesmen in the country, died in Chicago on June 15. He had not been in good health for some time, but his death was probably due directly to internal injuries resulting from a fall a few weeks previous. He had been connected with the talking machine trade for ten or twelve years, and in that time had visited every town of importance in the country, and had made many deals that were at the time the talk of the trade. He was born in 1873, in London, Ont., and received a good education, studied law, and for several years was a practising attorney in his native city. Coming to this country, he went with the Columbia Phonograph Co., about ten years ago, and after a service of some six years he went with the Victor Co., for whom he traveled as direct factory representative for several years. He subsequently went with the Talking Machine Co., of Chicago, but at the time of his death was with the Boyd-Harrison Co. He leaves a mother, two sisters and a brother, all residing at Austin. The burial was at his old home in Canada. Few men enjoyed a wider acquaintance in the trade the country over or were more popular, especially among the older element of the trade.

D. P. Mitchell, manager of the export department of the Victor Co., was in Chicago from Thursday of last week until the first of last. His mission was to post up the Victor Co.'s two new Oriental missionaries, E. F. (Doc.) O'Neill and O. L. Stratton. "Doc.'s" experience in the talking machine trade covers over a decade, and the Celestial who manages to escape his brilliant line of talk must be astute indeed. Mr. Stratton has of late been connected with the Clayton F. Summy Co., of this city, but formerly had long experience in the Orient. Messrs. O'Neill and Stratton left on the Fourth for San Francisco, and will sail on the 9th for Shanghai. They will probably remain in the far East for two years or more, covering thoroughly China, Japan and the Philippine Islands.

A. D. Geissler, manager of the Talking Machine Co., left on June 22 for a visit to San Francisco, his former home, whence Mrs. Geissler and their infant son preceded him earlier in the month. He expected to return about the first of August. Mr. Geissler leaves behind him a capable organization in charge of men amply able to carry out his plans in his absence.

The demand for Victor Victrolas still greatly exceeds the supply. The various Chicago distributors and large retailers are trying to console themselves with the company's promise that their new cabinet plant will relieve the situation in the course of a few weeks. Owing to their restricted quarters the Healy Music Co. are not able to do much local talking machine business since the fire, but are pushing the mail order catalog and stronger than ever.

C. M. LeRoux, formerly of The Cable Company's talking machine department, is now on the road for the Talking Machine Co. His initial trip is taking him through Southern Michigan.

C. W. Noyes, secretary of the Hawthorne & Sheble Mfg. Co., is on a trip including Missouri River and Central Western jobbing centers. Mr.

BABSON BROTHERS

"THE PEOPLE WITH THE GOODS"

G. M. NISBETT, Mgr. Wholesale

19th St., Marshall Boul. & California Ave., Chicago, Ills.

Tilt, Mr. Noyes's assistant in caring for the Western trade, is uow on a visit to headquarters at Philadelphia. A visitor at the Chicago office last week was Theo. F. Bentel, of Pittsburg, who with Mrs. Beutel was on his return from a pleasure trip to the Pacific Coast.

George D. Ornstein, sales manager of the Victor Co., is expected in Chicago in a few days.

C. F. Baer, manager, and O. W. Eckland, instalment manager of the Chicago office of the Columbia Phonograph Co., returned last month from their trip, which included the Columbia factory, the principal Eastern branch houses and the Jamestown Exposition. "We enjoyed ourselves hugely," remarked Mr. Baer, "and besides we learned many things at the factory and by contact with other Columbia managers which we no doubt will adopt here. This rubbing together of men in charge of various departments of a great service is always of benefit to all concerned." Since his return Mr. Eckland has been indulging his penchant for organization and social events to his heart's content. Last Saturday night he was the king bee of a moonlight excursion on the uew lake steamer Pere Marquette, participated in by all the employees of the Chicago office. On Wednesday night at a dinner given to the installment salesmen at the College Inn at the White City, the Columbia Booster Club was organized. Its object will be to get not only the members but their families acquainted and plans were started for a picnic to be pulled off some time in August.

H. L. Willson, formerly manager of the Cbicago office of the Columbia Phonograph Co., but now of the executive office in New York, visited his former associates on Wednesday, Thursday and Friday of last week. Thursday evening he was tendered a dinner at Vogelsangs, which was attended by the executive force of the Chicago office and the various sub-office managers. District Superintendant Fuhri presided and proved an indefatigable toastmaster, calling upon everybody present to talk.

Considerable interest was displayed during convention week by the two new hornless cabinet graphophones exhibited at the Chicago office of the Columbia Phonograph Co. The upright cabinet grand is in the form of a miniature piano of solid mahogany, piano finish. The turn table is reached from the front without lifting the top, on which an ornament can be placed and left without disturbing it. The tone is carried from the tone arm through a metal extension and issues through an invisible wire screen which is apparently simply a part of the ornamental design adorning the upper part of the cabinet. The other type is known as the upright graphophone. The cabinet is along more conventional lines than the former. It has a full concealed horn, the tone issuing from the top of the cabinet instead of the front, as in the case of the piano-shaped cabinet. In both cases there is space for the storage of 120 disc records. Each type is equipped with a six-spring motor, running about twelve cabinets at a winding.

W. S. Brind, of H. C. Kibbey & Co., spent last week in Springfield, Ill., in camp with the Illinois National Guard, of which he is a member.

James Leonard, the successful dealer at Geneva Lake, Wis., has with his brother opened a store at Beloit, Wis., where a complete line of Edison goods and musical merchandise will be handled. Charles Leonard will manage the Beloit store. The opening stock order was of large dimensions, and there was active competition for It. It was finally captured by James I. Lyons, who is proud of the fact that he was able to ship from stock every record ordered.

Chicago is certainly building up a fine reputation as a center of inventive activity in the talking machine line. One of the latest aspirants for fame and fortune is Theodore Zoebel, a musician, of 820 Monticello avenue, who has patented a device by which he claims the operator of a machine can determine at will the key in which the record is to be played. He is said to be negotiating with the various companies with a view to awarding to one of them the exclusive rights to his invention.

In the needle field there are several aspirants for revolutionizing the tone reproduction so far as the needle can be responsible therefor. Fred D. Hall, a wealthy real estate dealer in the First National Bank Building, is about to place on the market a needle on which he has been experimenting for years, and which seems to overcome the objections which have hedged about previous attempts to produce a practical wooden needle. Mr. Hall's needle is triangular in shape, thus giving a support to the point which is not furnished in a round-pointed wooden needle. Of equal importance is the wood used—a special bamboo, chemically treated to give it endurance. The triaugular-shaped groove of the record has the effect Mr. Hall claims of bringing out a full, sweet quality of tone, and even incidental music such as the distant tones of a flute in an orchestral selection which would not be heard otherwise. If the records listened to are to be taken as evidence, it certainly does approach remarkably near to the scratchless ideal, and the tone is sufficiently loud for anything but public hall exhibition purposes. The needles can positively be depended upon to play two records, the inventor claims, and with a clip which will be sold to the consumer he can repoint them. The saving of the record is of course one of the strongest points made in favor of the needle.

Another needle which the patentee has been working on for some time, and which he now claims to have brought to the point of a commercial proposition, is the Nonmetallic, the invention of S. Levin, of the talking machine firm of Leviu & Larson, Highland Park, Ill. These needles are made of turkey quills and are spear-shaped. Elimination of scratch and saving of record, and soft, mellow tone are the claims made for it. It is also claimed that each needle will play from twenty to thirty records, and that its susceptibility to dampness can be overcome by holding it over a gas jet when its playing qualities will be restored. Tbe Levin Nonmetallic Needle Co. is the style under which Mr. Levin proposes to manufacture his needles.

The Western Talking Machine and Supply Co., Dillbahner & Feinberg, proprietors, have just issued a handsome catalogue describing the various lines of talking machine supplies they represent, and which they carry in stock in Chicago. The catalogue is handsomely illustrated in colors.

The Babson Bros. and the Talking Machine Co.'s baseball teams are fighting a hot series of games, the laurels so far going to the former. The second game of the series was played at Washtenaw avenue and Twenty-second street on June 22. The score stood 21 to 8 in favor of Babson Bros.

The many friends of George Tresch, manager of James I. Lyons's retail store at 73 Fifth avenue, will regret to learn of his father's death. Mr. Tresch, Sr., was an old-time resident of Chicago and the pioneer in what is now one of the most thickly settled portions of the city.

During the conventions of the Central States Jobbers' Association, the National Piano Dealers' Association, and the National Piano Manufacturers' Association, there were quite a few exhibits made by talking machine men in the Auditorium Hotel, where the conventions were held.

The Hawthorne-Sheble Manufacturing Co. had room 756 in the Auditorium, and made a magnificent display of supplies, besides demonstrating the new Star talking machines and records. Both Mr. Hawthorne aud C. W. Noyes were in attendance.

W. A. Lawrence, representing the Standard Metal Manufacturing Co., Newark, showed their full line of horns, but the principal feature was their new Lilly scolloped horn, which has the advantage of a perfectly flat outer edge, making buckling an impossibility.

Clement Beecroft, of the Tea Tray Co., had a display at room 570, in the Annex, showing their full line of Art-Tone flower horns and a new crane, No. 570, embodying entirely new features, and which will be ready for fall delivery.

Thomas P. Johnson, formerly with the Victor Co., but who is now visiting Western jobbers in the interests of the Zonophone Co., spent the week among the jobbers and dealers, leaving for a trip through the Southwest. While here he established Benjamin Allen & Co. and A. C. McClurg & Co. as Zonophone jobbers.

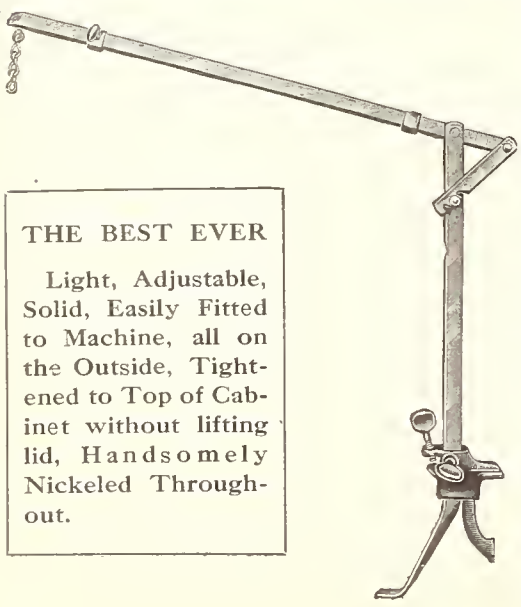
Victor Rapke, of New York, was on hand early convention week with one of his new improved collapsible horns. It is safe to say that not a jobber, piano dealer or manufacturer failed to see that horn. If they did Victor was not at fault.

Manager Furber, of the Regina Co., was here, and with Mr. Blumberg, their western representative, met many of the dealers at their room in the Auditorium, where they had an elaborate display of Regina instruments.

Several of the talking machine men not already members of the Piano Dealers' Association by virtue of being in that line as well, took advantage of the suggestion iu last month's World and joined as associate members.

Willard, Henly & Norris have rented a corner room at Fourth and Main streets, Harris, Ky., where they are now conducting a first-class moving picture show.

THE SIMPLEX CRANE PATENTED



THE BEST EVER

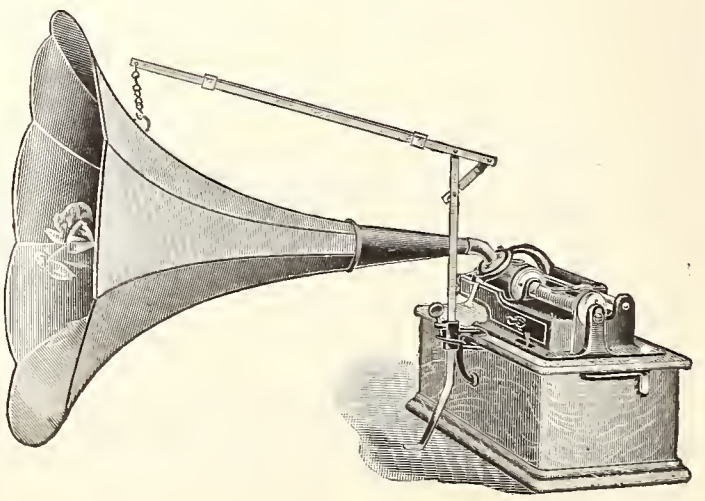
Light, Adjustable, Solid, Easily Fitted to Machine, all on the Outside, Tightened to Top of Cabinet without lifting lid, Handsomely Nickeled Throughout.

The Crane is attached to the Machine top by an ingeniously devised screw operated clutch, in such a way that the more weight on the outer arm of the Crane, the harder and more firm is the lock fastened to the machine, insuring absolute safety from fall and damage to the horn or machine.

The devices for fixing angle of elevation and for adjusting top arm to length of horn are perfect in simplicity and convenience.

Extension arm operates laterally, thus attaining greater rigidity and resisting capacity.

A quick seller; a money maker for the dealer.



CHICAGO STAND COMPANY

260 Wabash Avenue, Chicago

GETTING THE ORDER OUT TO-DAY.

A Glimpse Behind the Scenes to Show How the Talking Machine Jobber Hustles to "Deliver the Goods" on Time and as Ordered.

(Special to The Review.)

Chicago, Ill., July 8, 1907.

The talking machine jobber is a hustler. Never lose sight of the fact. If he were not a natural hustler he would never be a talking machine jobber at all, but would choose some other line of business, where the going was not so swift.

The Chicago representative of The World was seized with a sudden desire, upon talking the matter of service over the other day with a well-known dealer, to get an intimate inside view of a large jobbing establishment on their busy day. Here was a chance to frame up a new article on a subject that would interest every dealer. Accordingly he arranged to put in a couple of mornings at Lyon & Healy's on Victor and Edison order-filling days. This large establishment has for its motto, "Get the order out to-day," and some time ago published an interesting booklet shaped like a clock, which was intended to foster their reputation in this particular.

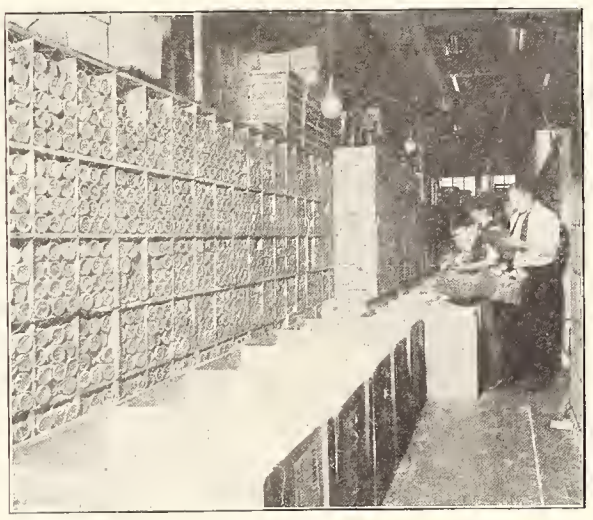
Manager C. E. Goodwin explained that he has a trained-to-the-minute force of thirty-three men, most of whom have been with him for some time, and whose sole business is "getting the order out to-day." His system of order filling is one to which much time and thought have been devoted to make it as nearly perfect as may be.

The earliest at which new Edison records may be started to the dealer is 8 a. m. of the 27th of the preceding month, and for the Victor records the limit is the morning of the 28th, or one day later than for the Edisons.

The Lyon & Healy rule is to have the records packed and ready at 8 o'clock on the mornings of the 27th and the 28th, respectively. This calls for energetic measures, as the records reach the jobber only a day or so before that time. Night work, lots of it, is needed to get all orders out on time. In taking up the record orders, the straight orders (orders for the new records

LYON & HEALY'S ON VICTOR ORDER-FILLING DAY.

only) are sorted out and filled first. The mixed orders calling for both new and stock records are held over until the last, and taken care of by two men working together, as they are the most difficult to fill and require greater care. On straight orders, an order is given to each order filler and he works on it alone, using a basket or tray for the records, each of which is examined closely for cracks and imperfections. He checks the items off as they are added and finally turns the complete order over to an inspector, who checks it back. Victor records are next passed to the wrapping counter, where they are again called back, after which they are carefully put in separate envelopes and placed on a truck



SCENE AT LYON & HEALY'S ON EDISON ORDER-FILLING DAY.

for the shipping department, where they are packed and made ready for shipping. Edison records are sent direct to the packer after being checked as they do not require wrapping. They are called back in the same way. When a record happens to turn up missing there is no delay in the shipping department, as the order filler's name is stamped on the order and he is at once called upon to rectify the error.

When an order calls for machines, horns or cabinets, a careful draw-off is made and the records stop at the next floor long enough to have these added. The complete order then proceeds to the shipping department. All repairs are enclosed in individual envelopes, which are sealed and labeled to show contents. Advertising matter is put in with the monthly record order, or sent in advance as preferred.

A feature which contributes greatly to the speed with which record orders are filled is the convenient systematic arrangement of the record stock. Compartments are numbered consecutively to correspond with the numbers of records, and it is the work of only an instant to secure those wanted. All orders are filled with new, unused records.

Lyon & Healy have an original plan for increasing the efficiency of their order filling department. An individual record is kept which shows the amount of goods handled, time occupied and errors made. The "score" is kept on a large blackboard in the department and cash prizes are awarded for all-around efficiency. Since this plan was inaugurated some time ago there has been a large increase in the numbers of orders gotten out daily, and, best of all, a remarkable decrease in the number of errors. Manager Goodwin stated that Lyon & Healy do not claim to be infallible. However, an examination of the interesting score-board indicates that they are headed in that direction.

It would hardly be fair to this firm, to whose courtesy your representative is indebted, to close this article without a word on the subject of their record stock. Their stockman, by the way, is quite a character. He is called "Lightning Tom" by his confreres, and earned this suggestive title by his active application of the Chicago slogan, "do it now." "Lightning Tom" was born and bred in the talking machine business—been at it all his life—and his employers are ready to back him against the whole field. Nothing delights him so much as to talk records, unless it is to shed his coat and get in the game or order day. He has the good sellers at his fingers' ends, and can tell you within one or two of his stock on almost every popular record in the Victor and Edison catalogs. With the exception of a few records that it is impossible to secure from the factories it is a very rare thing for "Lightning Tom" to be caught short.

A dispatch from Toulon, France, says a parish priest in the Department of Var has utilized the phonograph in a novel fashion. Having at his disposal nobody to serve as an altar boy to make the necessary responses in the celebration of the mass, he uses a phonograph, into which he has previously spoken the sacramental words, and which is timed to make responses at the proper moments.

CENTRAL STATES JOBBERS MEET

In Convention in Chicago and Transact Much Important Business—National Association May be Organized—Entertained at Many Dinners—Members Who Were Present.

(Special to The Talking Machine World.)
World Office, 195 Wabash Avenue,
Chicago, Ill., July 5, 1907.

The Central States Jobbers' Association held a meeting at the Auditorium Annex Monday and Tuesday, June 17 and 18. The executive committee met on Sunday and lined up for the work of the association. The movement for the formation of a National Association was given a marked impetus at this convention. The Central States jobbers realize thoroughly that more effective work can be done along the various lines the Central States and Eastern associations are working, and for the advancement and stability of the business by one united organization.

To this end a resolution was passed empowering the executive committee to take steps looking toward the holding of a joint meeting with the Eastern States Jobbers' Association, probably in Buffalo, in September, when it is hoped that a strong national organization can be perfected.

There was a great deal of business before the convention of a strictly executive nature, and the sessions did not come to an end until noon. The meeting was a very notable one in point of the number of new members admitted. They were as follows: Fetterly Piano Co., Dayton, O.; J. W. Jenkins' Sons, Kansas City, Mo.; Conroy Piano Co., St. Louis; French & Bassett, Duluth; O. K. Houck Piano Co., Memphis, St. Louis, etc.; Koehler & Hendricks, St. Paul; Piano Player Co., Omaha, Neb., and J. F. Schmelzer & Sons Co., Kansas City. The last three applications came in by mail and were approved, while the former were all represented at the meeting.

Following is a list of those attending the convention: President E. P. Ashton, American Phonograph Co., Detroit; Secretary Perry B. Whitsit, Perry B. Whitsit Co., Columbus, O.; F. Edward Dohse, Niehaus & Dohse, Dayton, O.; John A. Strausberg, Grinnell Bros., Detroit; Rudolph Wurlitzer, Rudolph Wurlitzer Co., Cincinnati, O.; John Fintze, Ball-Fintze Co., Cincinnati; W. C. and M. V. De Foreest, Sharon, Pa.; Mr. Towell, Eclipse Music Co., Cleveland, O.; C. V. Henkel, Douglas Phonograph Co., New York; H. H. Blish, Harger & Blish, Dubuque, Ia.; W. E. Kipp and E. A. Link, Kipp-Link Phonograph Co., Indianapolis, Ind.; Lawrence H. Lucker, Minnesota Phonograph Co., Minneapolis, Minn.; Lawrence McGreal, Milwaukee and Cincinnati; C. E. Goodwin and L. C. Wiswall, Lyon & Healy, Chicago; E. H. Uhl and Fred Siemon, Rudolph Wurlitzer Co., Cincinnati, O.; J. I. Lyons, Chicago; John A. Fetterly, Fetterly Piano Co., Dayton, O.; Burton J. Pierce, J. W. Jenkins' Sons Co., Kansas City, Mo.; P. E. Conroy, Conroy Piano Co., St. Louis; A. L. Miles, French & Bassett, Duluth, Minn.; O. K. Houck, O. K. Houck Piano Co., Memphis.

Walter L. Eckhardt, general wholesale manager of the Columbia Phonograph Co., and E. C. Plume, wholesale, invited the jobbers and others to dine with them after the close of the convention Tuesday. They were both on hand to escort the guests to the Chicago Athletic Club, where a bountiful repast was served. Those in attendance were the Messrs. Pierce, of Kansas City; Walter Kipp, F. G. Link, A. V. Chandler, J. Lentz, C. E. Goodman, C. E. Towle, Victor Rapke, Mr. Strausberg, L. H. Lucker, C. V. Henkel, F. A. Lawrence, W. L. Eckhardt, E. C. Plume, W. C. Fuhri, C. E. Dohse, P. B. Whitsit, P. A. Conroy, H. H. Black, P. E. McGreal, G. W. Montgomery, W. C. and C. E. DeForeest, and L. A. Miles

After dinner most of the talking machine men were taken to the ball game in autos by A. L. Grundman, with the Herzog Art Furniture Co.

Speaking of this affair later, Mr. Eckhardt said to The World: "I had only one hour in which to arrange for the luncheon and issue the invitations, and it came out just as planned. The entire association, excepting those accompanied by their wives, were on hand, and it was an occasion for the display of special good-fellowship. W. C. De Foreest, of Sharon, Pa., said grace in a manner befitting the event in its significance. We had a jolly good time, and it was a genuine pleasure to meet so many old friends." The luncheon was on for a couple of hours, and Mr. Eckhardt presided. Speeches were tabooed, but the incidental and informal remarks were applauded to the echo and greatly relished. Shop talk was absolutely barred.

An informal dinner was tendered the visiting talking machine jobbers and supply men by F. K. Dolbeer, credit manager of the National Phonograph Company, at the Chicago Athletic Club. When the guests had seated themselves at the beautifully decorated table in the banquet hall of the club, Mr. Dolbeer arose from his place at the head of the table and simply announced that the dinner was to be purely informal; that it was, in fact, accidental was arising from the coincidence that both he and the guests happened to be in the city at the same time. There was no speechmaking, no discussion of trade topics, but there was a most enjoyable time.

At the conclusion of the dinner a hearty vote of thanks was tendered Mr. Dolbeer for his hospitality. Those present were: F. Edward Dohse, of Niehaus & Dohse, Dayton, O.; E. P. Ashton, American Phonograph Co., Detroit; John A. Strausberg, Grinnell Bros., Detroit; Rudolph Wurlitzer, Jr., Rudolph Wurlitzer Co., Cincinnati; Perry B. Whitsit, Perry B. Whitsit Co., Columbus, O.; W. C. and M. V. De Foreest, W. C. De Foreest & Son, Sharon, Pa.; O. K. Houck, O. K. Houck Piano Co., Memphis, Tenn.; C. V. Henkel, Douglas Phonograph Co., New York; Victor H. Rapke, New York; Lawrence H. Lucker, Minneapolis Phonograph Co., Minneapolis, Minn.; H. H. Blish, Harger & Blish, Dubuque, Ia.; Laurence McGreal, Milwaukee; C. E. Goodwin, Lyon & Healy, Chicago; E. H. Uhl, Rudolph Wurlitzer Co., Chicago; John A. Fetterly, Dayton, O.; Burton G. Pierce, J. W. Jenkins' Sons' Music Co., Kansas City, Mo.; P. E. Conroy, Conroy Piano Co., St. Louis, Mo.; A. L. Miles, French & Bassett, Duluth, Minn.; W. E. Kipp and E. A. Link, Kipp-Link Phonograph Co., Indianapolis; L. C. Wiswell, Lyon & Healy; Clement Beecroft, Tea Tray Co., Newark, N. J.; W. A. Lawrence, Standard Metal Co., Newark, N. J.; James I. Lyons, Chicago; G. M. Nisbett, Babson Bros., Chicago; A. J. Grundman, Herzog Art Furniture Co., Saginaw, Mich.; A. V. Chandler, National Phonograph Co., Chicago.

WHAT HAVE YOU GOT

In the Talking Machine Line? We want any quantity of cylinder and disc machines, records, horns, stands, cabinets, carrying cases, etc. Must be cheap. State full particulars. A. B. C., Talking Machine World, 1 Madison Ave., New York.

FOR SALE

Old established Jobbing and Retail Talking Machine business in city of 400,000 with lease of fine store in heart of retail district, first class stock. Purchaser can have whole business or retail alone. Favorable terms to responsible buyer. Address Opportunity, care Talking Machine World, 1 Madison Ave., New York.

TO YOU, MR. MERCHANT

Let me write your ads. Publicity is the keynote of success. Thousands of active merchants owe their success to advertising. Why not number among them? I will write you a fair size sample copy for $1.00. If you don't like it—don't pay for it. Where do you lose? You know my business—what's yours? Address H. B. Kirsch, 173 Howard St., Newark, N. J.

A Midsummer Talk With You, Mr. Dealer.

Don't you know that a little harder emphasis placed on the selling end of the business will produce good results even in the "good old summer time"?

Don't you know that if your stock is kept up to the highest point of efficiency and if you have fresh, bright goods to display you will not be complaining about dull times?

Now, we are the largest exclusive talking machine concern in the world. A good statement to make, but one we can substantiate in every particular.

Just at present we are offering some very attractive bargains to capture summer trade. These include disc and cylinder record cabinets, horns and carrying cases. They are all new and thoroughly up-to-date, but these summer offerings are at prices which will interest you.

We have also some slightly damaged goods. The damage in some cases is hardly discernible and you can get them at a tremendous cut in price. We can help you to make business right through the summer. If you will only compare our quality and prices with others you will not wonder why we have grown to be the most complete establishment in the world for talking machines and accessories of all kinds. There is no such stock of Edison phonographs and records in the United States as we carry in our salesrooms.

We have imported some special lines of German disc machine needles. They are beautiful goods. Just send for samples and you will be using these needles. Lose no time in taking up a business proposition with us and you will be surprised to see how readily your dollars multiply through a DOUGLAS business connection.

TRADE NOTES FROM BOSTON.

Good Demand for High Grade Machines and Outfits—To Celebrate Old Home Week—A Clever Filing Case—War Relics on Display—Manager Andrews Latest Invention—Oliver Ditson Co.'s New Department.

(Special to The Talking Machine World.)

Boston, Mass., July 8, 1907.

A big June business and a bigger July so far this month—this is the condition among the local talking machine men here this summer. Vacationists have made the usual raids upon the stocks of records, and there is a very good demand for high-grade machines and new outfits.

The new plan of the Columbia Phonograph Co.—of opening a number of branch stores in different sections of the city—is proving a success from the very start. From these stores a systematic house-to-house canvass is made in each section, and a big increase in the gross business is thus secured. "The month of June," said Retail Manager Blakeborough, "was unusually brisk. Mail orders have begun to come in from all over New England for the Marconi and the Bonci records, and we are preparing for a big business on them."

At the Eastern Talking Machine Co.'s store business is reported exceptionally good, on both the Victor and the Edison lines. On every package and letter sent out from this store is placed one of the Old Home Week stickers, showing the historic Faneuil Hall and the delectable pot of beans, and containing the printed invitation to everybody to "Come Back Home" on the week of July 29.

Assistant Manager A. W. Chamberlain, at the Eastern Talking Machine Co., has put upon the market a filing case for carrying disc records that will prove a great convenience to every user of a disc machine. It is a black pasteboard box, fitted with index sheets, and is dust-proof. The boxes come in three sizes, holding twelve or twenty-four ten-inch records, and twelve twelve-inch records. By this box a person can carry easily a dozen records in his hand without fear of injury and with great convenience. It is a valuable addition to the list of talking machine sundries.

J. L. Gately, salesman at the Eastern Talking Machine Co., has loaned to the company for window display his fine collection of war relics from the Philippine Islands, and these, with red, white and blue decorations, made a very attractive Fourth of July exhibit in the windows. C. P. Trent, of the Eastern Co., spent his vacation at Narragansett Pier.

Manager Andrews, of the Boston Cycle and Sundries Co., has perfected a new carrying case for disc records. These will be in three styles, for fifty ten-inch, thirty-five twelve-inch and fifty twelve-inch records. These are made in a first-class manner, flannel lined, covered in black leather board and are very durable and convenient. Business was reported to be "bully" at the Boston Cycle Co. this month.

C. E. Osgood Co. reports a big increase in the jobbing branch of its business, and a general widening of its sphere of influence. A tendency toward higher priced goods is noted among the Osgood customers.

At Oliver Ditson's everyone is happy in the thought that in about another month they will probably have one of the best talking machine stores in the country. Plans are now well under way for the removal of this department from its little quarters on the seventh floor to the second, where it will have the entire floor to itself. General Manager Bobzin, of the Ditson stores, is a firm believer in the future of the Victor talking machine as a business proposition, and it is because of his belief that he is making such broad plans for the growth of this department. One factor in the growth of the talking machine department is the liberality of Mr. Bobzin in the matter of advertising. No talking machine store in the city is better advertised than Ditson's, and the words "Voice Cameras"—a Bobzin coinage—are always associated with the Ditson store where the Victor line is exclusively handled.

To work in a talking machine store is evidently not conducive to race suicide. At least it is not so in the case of Frank Skelton, recently secretary of the Winchell Co., and later with the Columbia Co., for Mrs. Skelton this week presented him with a second pair of twin girls. Frank says he is planning to have the nucleus of a ladies' orchestra in his own family.

REGINA SPECIALTIES SELL.

The products of the Regina Co., Rahway, N. J., are rapidly getting a firm hold in the talking machine industry. Dealers find them to be quick sellers and money makers. The Reginaphone, which is a combination of talking machine and music box, is an admirably constructed instrument which possesses those features of novelty and merit that impress customers who are always looking for something new. In addition, the Regina Co. make Reginapianos, chime clocks, sublima pianos and other specialties which must interest the talking machine men desirous of handling a line of reliable, quick-selling products. It will pay to become Reginawise and write to their office at Rahway, N. J., for information.

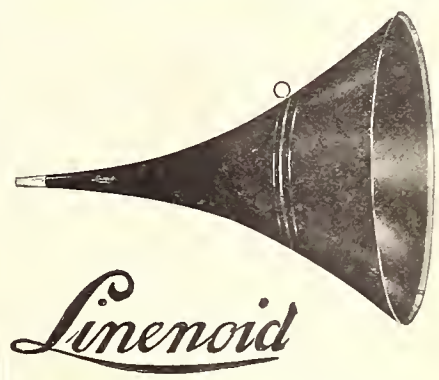
The Chicago Stand Co. was incorporated with the secretary of the State of Illinois this week with a capital of $5,000 for the purpose of manufacturing phonograph devices. Incorporators: S. B. Werner, E. K. Reynolds and Lucy A. Falkenberg.

Brown Bros., recent additions to the trade in Cleveland, O., handling the Columbia line as jobbers, are also wholesale and retail dealers in furniture, carpets, stoves and crockery.

Down at Halifax, N. S., the Empire Theater is doing an excellent business with moving pictures and illustrated songs by Miles Bros. This theater will seat about 1,500 people.

LINENOID PHONOGRAPH HORNS

If you want music rather than noise, try the Linenoid.



LINENOID is a material made of pure linen. Linenoid Horns are made from it without seam or joint. Owing to the construction as well as the material used the tone produced is richer, clearer and more natural than can be had from any other horn on the market.

The Linenoid looks just as well as it sounds. It is finished in brilliant colors—Vermilion, Ultramarine Blue, Rich Dark Green. Treated inside with a soft shade of Turquoise Blue and Black. Gold stripe both inside and out on all colors.

The "Concerto," 32 x 22, retails at $7.00. The "Exhibition," 48 x 22, retails at $12.00. The "Exhibition Grand," 56 x 24, retails at $15.00. Liberal discount to all dealers.

THE "PIANINO"

The "Perfect" Nickel-in-Slot Electric Piano.

GREATEST MONEY-MAKER ON EARTH

A few Points for

DEALERS

to Remember

1st—It is no trouble to sell the Pianino if you can show it.

2d—It is so far ahead of all Electric Pianos that there is really no comparison.

3d—It is the simplest, yet the most perfect of all Electric Pianos.

4th—The Music is played with such accuracy and expression that it is a pleasure to hear it—consequently the nickels keep pouring in.

5th—The Music is produced by perforated Music Rolls, which are only 5½ inches wide, which are inexpensive and easily handled.

6th—The Pianino automatically rewinds itself, therefore requires no attention.

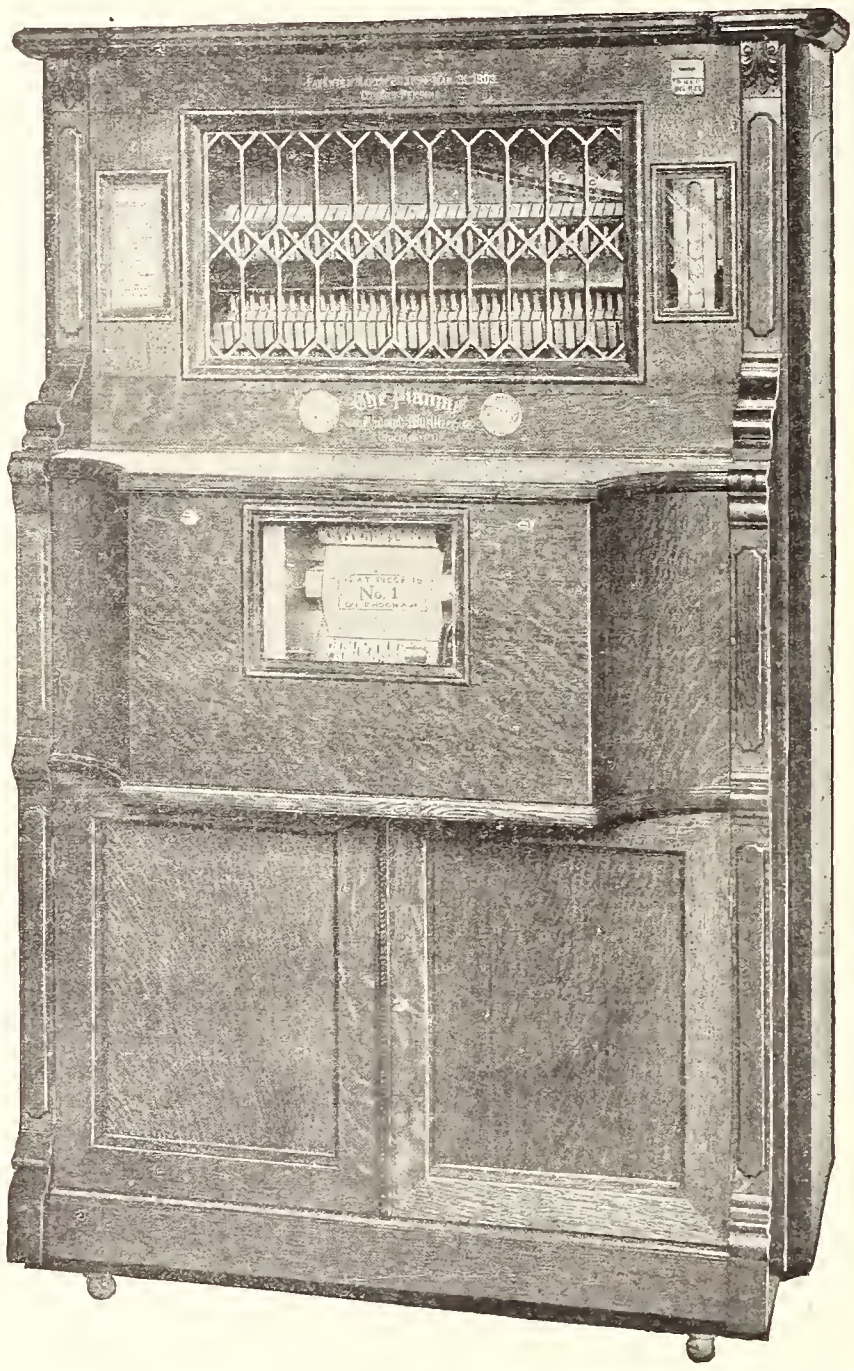
PRICES

STYLE No. 1, including one roll of music upon which there are six pieces of music, with direct current motor.

$500

STYLE No. 2, the same as No. 1, excepting that the motor is alternating current.

$550



The Pianino

is the product of many years' experience in building Automatic Electric Pianos, and is presented to the public as the acme of perfection. The Pianino is the only Electric Piano playing from perforated music rolls which is an absolute success. The music is played with such accuracy and expression that it is almost impossible to believe that the instrument is played mechanically and not by expert human hands. The Pianino is the only Electric Piano fitted with an automatic rewinding device, which, when the end of the roll is reached, automatically rewinds itself in thirty seconds. The pianino therefore requires no attention, which makes it valuable for all public places of amusement. Another important feature not found on any other automatic piano is the regulating device, whereby the time can be changed to any desired tempo. The perforated paper music rolls are only 5½ inches wide; contain six pieces each, and play from fifteen to twenty minutes. As a money-maker the Pianino heads the list.

TRADE HAPPENINGS IN CLEVELAND.

Ideal Horn Will Soon be on the Market—W. J. Roberts Fine Display—Auxetophone in the Gillsy Hotel—Boats Equipped With Graphophones—Bailey Co.'s Extensive Business—Collister & Sayle's New Quarters—Gulley Reports 50 Per Cent.—Fleischmann's "Square Deal Quick Lunch Machine"—Prof. Miller's Analysis of Tone—Mr. Bourgeois a Benedict—Talking Machines Can be Used on Park Lakes—Other Items of Interest.

(Special to The Talking Machine World.)

Cleveland, O., July 10, 1903.

The close of the first six months' business of the year, June 30, evidenced that trade in talking machine circles has been exceptionally good. Indications of summer dulness are noted here and there, but on the whole unusual activity is prevalent, and there is every prospect that the year's volume of business will largely exceed that of last year.

A call at the office of Mr. Devineau found him a very busy man, with scarcely time for a few moments' chat. He is busy with matters pertaining to his biophone attachment, and stated that the Devineau Biophone Co. would be ready to place on the market the attachment to play discs on all cylinder machines by August 1. Mr. Devineau stated that the Ideal horn would also be on the market August 1. Speaking of the merits of this horn, and the proposed plan of its sale, Mr. Devineau said he entirely and heartily agreed with the editorial in the June number of the Talking Machine World on the subject of price cutting, and that the Devineau Manufacturing Co. would place their Ideal Self-Supporting Horn on sale exclusively under the contract plan, and that all manufacturers, jobbers and dealers ought to adopt, indorse and urge the plan.

The Hallet & Davis Piano Co. are giving a series of phonograph concerts once a week, in their recital hall in the Arcade. The concerts are open to the public and large crowds assemble to hear the latest records. One night is devoted to Edison and the next to Victor records. The company report an excellent trade in machines and records.

One of the busy marts of trade is the store of W. J. Roberts, Jr. It is attractive inside, and he has fitted up a handsome window display, which arrests the attention of all passersby. The Victor department, in the basement, is meeting with much favor, and is said to be the coolest and most comfortable salesroom devoted to the talking machine business in the city. He has installed a rack holding 2,000 records, exclusively for Red Seal records, which he is making a distinguishing feature of the business. Mr. Roberts has added the Marconi records to his line and is enjoying good sales for them. Sales for two weeks previous to July 2, it was stated, averaged nearly the amount of business in same period during the holidays of last winter. "Our June business," said Mr. Roberts, "showed an increase of 75 per cent. over the same month last year."

Flesheim & Smith report trade dull, as is usual at this season. They carry a full line of Zonophones and records.

A feature of the new Gillsy Hotel, just opened to the public, and a magnificently appointed hostelry, is the installation of a beautiful Victor Auxetophone in the grill room, which will supplement the orchestra. The machine is from the store of W. H. Buescher & Son, who have made sales of several of these and Victrolas. Mr. Buescher stated business was exceedingly good for this season. They have a full list of July records and are making good sales.

"Our June trade averaged well up to the high water mark of the season and was very satisfactory," said Mr. Robbins, of Robbins & Emerson, No. 145 The Arcade. "We have sold a number of machines and are having a good many inquiries. The July list of records are selling well and giving satisfaction." The company have just added to the talking machine business a line of small musical instruments, such as mandolins, guitars, violins, strings, etc.

In an interview with G. J. Probeck, manager of the Columbia Phonograph Co., just as he was starting on a two weeks' vacation in the Rocky Mountains, he said: "Our business is keeping up nicely. A surprisingly large number of boats on the Great Lakes are being equipped with graphophones, as a means of furnishing musical entertainment to the passengers. The officers seem to think the machines possess distinct advantages over the ordinary orchestra. First and foremost, they are cheaper, and even with the highest-priced equipment, the cost is less than an orchestra for rendering similarly good music for one month. In addition the machines have the distinct advantage of uniformity and reliability. The quality and character of the music is only limited by the choice of records selected; sometimes it is very difficult, if not impossible, to secure an orchestra worthy the name. The compactness and portability of the machines is another advantage not possessed by an orchestra, and as the repertoire of the machine is unlimited, it possesses an advantage in this particular over the average orchestra or band.

H. C. Burrell, owner of the steamer Frontenac, plying between Cleveland and Detroit, recently purchased a graphophone and outfit at a cost of over $100. From any possible point of view it would seem that every advantage lay with the machine, as compared to an orchestra, for boat uses, and the captains who are thus equipping their boats will unquestionably find that the soundness of their judgment will be borne out very thoroughly by the results obtained.

T. F. Murray, representative of the Columbia Phonograph Co., New York, on his way home, was a recent visitor to the city for a few days.

The Bailey Co. are doing an extensive business in talking machines and records. L. Goodman, who has the management of this department, said business had fallen off a little in the last week or two, owing to the warm weather, but that July records were selling rapidly. "In addition to the Victor and Edison," said Mr. Goodman, "we have taken on the Zonophone; also the International Correspondence School of Instruction in foreign languages. We have the exclusive jobbing agency for the Zonophone and the I. C. S. We have just received a shipment of Victrolas, for which there is a large demand. Mr. Ornstein, sales manager of the Victor Talking Machine Co., Camden, N. J., told me the other day that the Bailey Co. held the record of doing the largest first six months' retail business of any store in the United States. We feel very proud of the blue ribbon."

Collister & Sayle, who have for a number of years been located at 232 Superior avenue, N. E., have moved to 224-30 Superior avenue, N. W. Their present location gives them double the floor space occupied in their old quarters, and in some respects is more desirable. The larger portion of their storeroom is devoted to the bicycle and sporting goods trade, but they have allotted ample space to the talking machine department, greatly enlarging it and otherwise making it more attractive than heretofore. They entirely remodeled their present quarters before moving, putting in a plate glass front, new ceiling, shelving and fixtures.

Mr. Towell, president of the Eclipse Musical Co., stated that everything was moving along smoothly and satisfactorily in their new quarters. Business, he said, continued good, the volume of trade quite as large as he anticipated during the past month.

"Fifty per cent. increase in business in June isn't so bad," said Hugh Gulley, No. 924 Prospect avenue. "Trade has been very satisfactory. Sales of machines are increasing, and the out-

NEWARK, NEW JERSEY

These two cover the

The "talking machine" business divides itself naturally into two more or less distinct and separate parts—*machines* and *records*.

If there's one thing better proved than another, it is that a prospective purchaser who takes enough interest in what his money buys to make one fair comparison, will go out of the store owning a Columbia Graphophone almost every time.

The quality's *there*, unmistakably. As a wonderfully complete and resourceful *musical* instrument, the Columbia Graphophone practically sells itself. No buyer who can appreciate mechanical perfection, who can recognize ideal simplicity, or who wants a rigid guarantee, ever needs any argument after he has seen the outside and the inside of a Columbia Graphophone.

The key to the b and record busine

rade-marks whole field

The immensely increased sale of Columbia Records during the past year has put the best guesses of our most sanguine guessers far behind the figures.

Best sort of a good reason behind it—*quality!*

We are making wide public proclamation that Columbia Disc and Cylinder Records will fit any machine and double its value to its owner—and it's a *fact.*

We are making it as plain as we know how that if the owner of a "talking machine" will put that claim to the test just once we'll have his business after that—and we *will.*

The dealer who misses the business that is coming in under the Columbia trade-marks is missing a liberal and *growing* share of a mighty good thing.

look is promising. I am selling a good many records, and the July lists are especially popular. This is usually considered a dull season, but trade is keeping up and there has been little sluggishness so far."

Brown Bros., No. 2040-4 Ontario street, furniture dealers, have become jobbers of a complete line of Columbia goods. The location is an excellent one for the trade.

"That's fine; it's the best one of the lot; so lifelike," Otis Snowden, moving picture machine operator, had often declared to the other workers at an East Ninth street theatre. "The Lovesick Soldiers" it was entitled. There was the regulation blue, brass buttons galore, a good-looking private, pretty country girl, and a wicked sergeant. Through difficulties and troubles the soldier followed his sweetheart in spite of his superior officer. It was noble, inspiring, and Snowden, thinking of those halcyon days when he was second lieutenant of the high school cadets, would start that film time and again. You could almost hear the bugle call as he rushed it through. But one day this roll of films disappeared. So did Snowden. He had secured another situation. A few days afterward he was arrested, and is now whiling away the hours making brushes in the workhouse. A young man should never let the ideal supersede the real. When he does there is trouble.

George M. Fleischmann, No. 1392 East 89th street, who has been in the catering business for a number of years, has invented a machine which now renders it needless for the business man, who has but a few moments for luncheon, to seek a restaurant on stormy days. Instead, he may, by dropping a dime into a slot machine, just outside his office door, secure a first-class lunch. The first machine has been put in operation and others are to follow as fast as they can be manufactured. Fleischmann's "Square Deal Lunch Machine," as it is called, is a little larger than the Victrola talking machine, pyramid shaped at the top, showing the bill of fare which the machine contains. Below are twenty-four glass compartments, twelve on each side, through which the hungry purchaser may see the lunch which he wishes to buy. The bill of fare is divided into twenty-four paragraphs, each paragraph corresponding to the complete lunch which may be found in the compartments. For instance, if you decide on a chicken sandwich, you find upon consulting the bill of fare that it may be obtained from compartment five. At the side of each compartment is a button. You press the button opposite compartment five and drop in your dime. Instantly the glass door opens and you reach in and get your lunch. The door closes automatically. Fleischmann says that his machine will be a boon to all classes. A lunch complete will consist of several articles—sandwiches, doughnuts, pie, fruit and other dainties. "I can afford," said Fleischmann, "to give a lunch to patrons for ten cents that would cost at least 15 or 20 cents in a restaurant. This will prove acceptable and advantageous, especially to clerks and shop girls. It is my intention to place these machines in all public places, railroad depots, steamships, parks, and several in buildings where numbers are employed. The demand is going to be great, and I am afraid I will not be able to turn the machines out fast enough."

As soon as he has received from abroad an infinitely fine machine for analyzing sound waves, Prof. Dayton C. Miller, head of the new Rockefeller physical laboratory at Case School of Applied Science, will undertake to determine what distinguishes the tone of one musical instrument from that of auother. If he solves the problem, the possibilities resulting from his discovery are bewildering. Knowing the scientific formula for each and every variety of musical tone, it will then be possible to combine sound waves so as to make new and extraordinary musical instruments of undreamed of beauty. "The peculiar quality which distinguishes a flute tone, for example," says Professor Miller, "is undeniably in the sound wave itself. If we can analyze the wave and determine its distinctive characteristic we shall have a unit to work with. When we have analyzed many instruments we shall then be able to produce at will as many combinations of them as seem desirable." Success of the professor will be of interest to the thousands of lovers of talking machine music.

The chief of park policemen has issued instructions to his men not to interfere with the use of talking machines on the park lakes. Several days ago the use of a graphophone in a privately owned canoe was stopped by a park policeman. The owner naturally protested to the department. "There's nothing nicer than music ou the lakes," declaimed the chief. "Music and moonlight are the prime essentials of fine boating. A little innocent monologue interspersed, just to break the monotony won't hurt. Graphophones aren't half bad. Let them alone."

In the June issue of The World mention was made of a rumored wedding. It referred to the marriage of Cleo S. Bourgeois, assistant manager of the Cleveland office of the Columbia Phonograph Co., and Miss Anna M. Varnes, and was the culmination of a pretty romance which had its origin in talking machine circles, Miss Varnes being a former employe of the Columbia Co., where the acquaintance began, and where amid the smart strains of music Cupid successfully aimed his arrows. After the wedding, which was solemnized at the home of the bride's parents, the happy couple departed for their honeymoon trip on a yachting trip up the lakes. Previous to Mr. Bourgeois leaving the store to go on his vacation the employes and management clubbed together and purchased a beautiful piece of cut glass, which was presented to him by H. E. Jones, of the commercial department, accompanied by an appropriate and appreciative little speech. Mr. Bourgeois has had an extensive experience in the talking machine business, commencing about ten years ago, when he was employed by Mr. Probeck, then proprietor of the Cleveland Graphophone Co. From office boy Mr. Bourgeois worked his way up to manager of the flourishing little concern, and with the merging of the company into the Columbia Phonograph Co., was given his present position. Mr. and Mrs. Bourgeois will be at home to their many friends after July 15, at 1401 East 24th street.

OF A PERSONAL NATURE.

June 5 John Kaiser, sales manager of the Douglas Phonograph Co., 89 Chambers street, New York, started on a fortnight's vacation, going to New Paltz, N. Y., with his family. Under the shadows of the Shawangunk Mountains Mr. Kaiser expects to add materially to his physical assets, although he is always the picture of health and the embodiment of good nature and genial toleration for the weaknesses of humanity.

Senor Dayas, of the Cuban Electrical Supply Co., Havana, Cuba, Victor distributers, was in New York early in the month, calling on Arthur P. Petit, general manager of the Talking Machine Supply Co., among others in the trade, and with whom he left a nice order. "A. P.," by-the-by, was on a vacation at Springfield, Mass., the first week of the month.

F. M. Prescott, the retired talking machine magnate, whose name is a synonym for business courage, skill, acumen and enterprise in every country of Europe, has settled down as a producer of fancy fowl on his farm at Summit, N. J. They say it is a scene worth going to see when F. M., with a bucket of nourishment in each hand, starts out for the chicken runways at feeding time. Mr. Prescott is serene and happy; and as he has "made his pile," who shall say him nay?

Joseph Saucier, a baritone of Montreal, Can., was recently in New York for the purpose of making several dozen records for the Columbia Phonograph Co. It is said his recording is wonderfully perfect.

Recommended as Best By those Who Know Best

Every dealer who would like to add to his business a feature that will increase it from 10 to 30 per cent. should give his consideration to the following recommendation.

"The undersigned E. E. and Minister Plenipotentiary of His Majesty, the King of Spain, to the United States, has much pleasure in stating that the words for the study of the Spanish language as prepared by the International Correspondence Schools, of Scranton, Pa., which I have carefully listened to, are the most perfect rendering of the pure Castilian pronunciation. I consider them invaluable to the student of our language, and cannot too much praise their efficiency and convenience." EMILIO DE OJEDA.

This official endorsement is the highest possible recommendation for the efficiency and accuracy of the I. C. S. Spanish Course, and plainly tells the characteristics of

I.C.S. LANGUAGE SYSTEM
WITH
Thomas A. Edison
PHONOGRAPH

This system of language instruction is in use at the U. S. Government War College at Washington, and the phonograph system has been lately adopted by the University of Chicago, and everywhere it is being recognized as the coming method of language instruction. Phonograph dealers all over the country have been very successful in handling the language feature in connection with their other business. There is no reason why *you* cannot do the same—there is no reason why *you* should not do it next month, only because of your own indifference and negligence to write *now* asking for further particulars. Don't you think it worth while to find out more about such a feasible means of increasing your business ?

HISTORY OF AN ENTERPRISE.

Hawthorne & Sheble Progress—Some Interesting Statements Concerning the Early History of This Great Manufacturing House—Had Faith in the Future of the Talking Machine Business—Operate Four Factories.

Philadelphia, Pa., July 1, 1907.

Editor The Talking Machine World:

Dear Sir:—In a recent interview which we had with you some surprise was expressed at the volume and extent of the business we were handling, and you stated to us that you believed the trade generally hardly appreciated just what amount of business we were doing, as well as the various ramifications thereof, and suggested that they undoubtedly would be interested in hearing all about it. Under the circumstances, therefore, we concluded to write you and advise you in detail just what we are doing.

Our advent in the manufacturing business originally started some fifteen years ago in manufacturing horns, and our first plant was confined to one small room where about thirty people were employed. At that time we introduced what were known as full spun brass horns, which horns were made with all parts brazed so that no seams were apparent. The results obtained in reproducing with such horns were very satisfactory, as they were constructed on approved acoustic lines similar to band instruments. Our business on these horns grew to an appreciable extent, and to take care of the increasing volume we moved into larger quarters, where about seventy-five hands were employed. At this time we added carrying cases and horn stands to our line of manufacture, producing them in numerous styles and varieties.

In those days dealers in talking machines were very few, and jobbers were practically an unknown quantity. Our faith in the growth of the talking machine business was always a supreme factor, and with the introduction of cheaper types of machines we brought out what were known as the spun bell or hammered brass horns, which were manufactured in a much cheaper manner than the full spun horns, and enabled us to make prices to conform with the prevailing prices on the machines. This move assisted largely in the rapid growth of the talking machine business, as up to this time it had been the general custom to use hearing tubes with the machines on account of the expense of the full spun horns. Hearing tubes had never proved popular with the average user, and the entertaining possibilities of the talking machine were largely increased through the general adoption of the horns in question.

About this time we started to bring out different types of horn cranes so as to dispense with the awkward floor stands, and a series of developments along this line produced our present well-known cranes. As a matter of experiment we introduced the spun bell horns with the black enamel bodies, and somewhat to our surprise these horns met with popular favor from the start, and our business on them increased to such an extent as to warrant the seeking of larger quarters, so we moved to a more modern factory at Oxford and Mascher streets, where we increased our force of employes to about one hundred and fifty.

We have always aimed to run an experimental department in connection with our business, so as to endeavor to exhaust every new idea that might suggest itself in our line, and in the regular course of development we brought out our well-known line of silk finish horns, the principle of which is to absorb counter vibration in the metal body of a horn and improve the tone quality. The popularity which these horns met with has never waned, and we believe to-day they stand supreme as the best horns manufactured where tone qualities are concerned.

During this period of development we were constantly adding different talking machine specialties to our line and improving the quality of our product, as our purpose has been never to rest satisfied where there was a possibility of improvement. During the course of our experiments we have constructed many horns of similar shapes to the present flower horns, and when we started their introduction, their popularity was at once established, and the demand of such a nature as to necessitate our making numerous varieties, and largely increasing our facilities.

About this time we became interested in the subject of machine construction, and during the course of experiments developed many new features which we covered by Letters Patent, storing them away until the proper time should come for our placing our own line of machines on the market. Our experiments in machine construction have been very exhaustive, and very trying, as our purpose has been not to attempt to market the product until we were perfectly sure we had something we could feel proud of.

In place therefore of attempting to market a machine while it was going through the experimental stages, we tested out all of our principles, and to-day our line of Star talking machines "speak for themselves" figuratively and literally. Their favorable reception by the talking machine trade has satisfied us that our policy in this connection was a wise one. We have also developed a new machine of the cylinder type which we term the Illustraphone. This machine is operated by a coin and combines a talking machine with a series of views illustrating the subject matter of the record. While the ideas involved in the construction of such a machine are not new, our method of operation and the characteristic views we employ certainly mark a new departure in coin operated machines.

In the natural course of the development and growth of our business, we have successfully added to our manufacturing facilities until our equipment to-day stands as follows:

Factory No. 1, located at Howard and Jefferson streets, Philadelphia. This factory contains about 80,000 square feet of floor surface, and is equipped throughout with the latest improved machinery in which many thousands of dollars have been invested. Here is where the Star talking machines are manufactured, as well as the Illustraphone. Our equipment enables us to make everything pertaining to the machines excepting the cabinets, and the rows of automatic machinery are extremely interesting to any one of a mechanical turn of mind. We also manufacture our line of popular priced flower horns, horn cranes and stands in this plant.

Factory No. 2 is located at Mascher and Oxford streets, Philadelphia, where we have about 25,000 square feet of surface. This plant is devoted to manufacturing spun bell horns, as well as all our finer grades of flower horns. Gradually we find the trade is drifting toward fine horns, and the sale on our line of artistic flower horns has increased to such an extent as to necessitate large increases in the manufacturing facilities.

Factory No. 3 is located at Howard avenue and Spruce street, Bridgeport, Conn. Here we have about 20,000 square feet of floor surface, and the plant is equipped throughout in a thoroughly modern manner. We use this factory principally in manufacturing horns and sundry articles to meet the requirements of one of our largest customers, but we also attend to various details in the manufacture of our Star disc records at this factory.

Factory No. 4 is located at 1109 to 1121 North Front street, Philadelphia, where we have about 25,000 square feet of floor surface. This plant is a recent addition. It is fitted up as a complete iron foundry, as we are now making all our own castings, of which we use several tons daily. We also have an additional machine shop located in this plant.

Laboratory located at 241 West Twenty-third street, New York. This laboratory is equipped throughout in a thoroughly modern and up-to date manner for the purpose of record recording. No expense has been spared to make it the best that money can buy. It is presided over by well-known recording engineers. Our number of employes is rapidly approaching the thousand mark, and our output on all lines rapidly increasing.

We believe to-day the talking machine business is in better condition for growth and further development than ever before, and our faith in such development is evident by the increases we have already made and contemplate making in the future. We do not write you this letter in an egotistical spirit, but simply with a desire to show you just what ground we cover in the talking machine industry, and we furthermore wish to assure you that we are always most happy to take any of our friends over our various plants and show them just how the product is manufactured. Yours truly,

HAWTHORNE & SHEBLE MFG. CO.
Per Horace Sheble, Vice-President.

Don't fail to write us concerning our line of

Wood Finish Horns

in Mahogany and Oak. Our

HAND DECORATED FLOWER HORNS

are still in favor with the trade.

If you are looking for a line of Horns that always sell, Mr. Dealer, don't fail to write your jobber. If he can't supply you, drop us a line and we will put you in touch with one who can.

NEWARK TINWARE & METAL WORKS

28-30-32 DIVISION PLACE - - - NEWARK, N. J.

RECORDS WHICH POSSESS MUSICAL EXCELLENCE

WE have told you about the indestructible qualities of our records. It is impossible to break them through ordinary use. This quality at once gives them a unique position in the trade, but it is not alone on their unbreakable qualities that our records will command trade support. They possess musical excellence which surpasses any record now on the market.

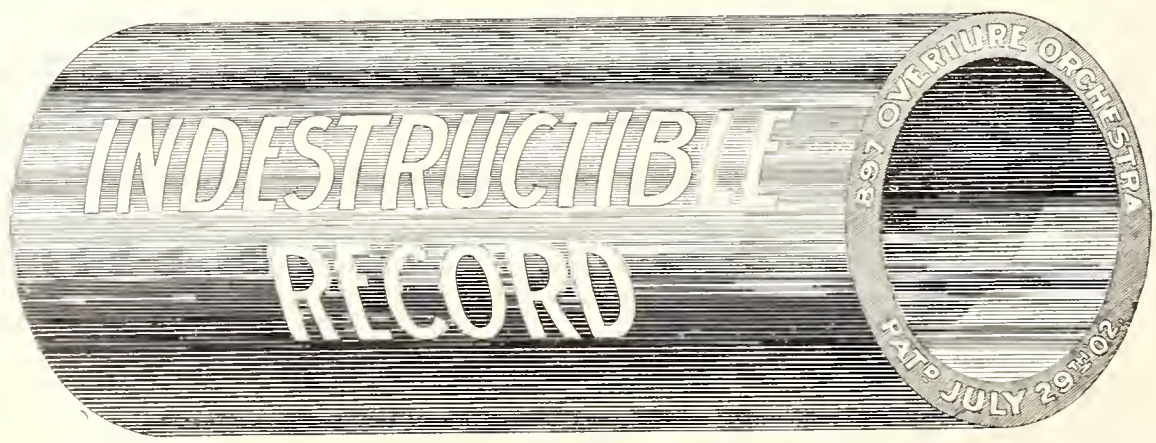
When you hear the INDESTRUCTIBLE you will be at once charmed not only with the volume of tone, but with the true musical quality which it contains. It is the **tonal quality** as well as the **indestructible quality** which will make our records at once a strong favorite with the talking machine trade of this country.

We employ the best musical talent and have special features for reproduction of sound, which are entirely our own. Just figure for one moment the value of a record which is perfect musically, and which has the sweetness of tone which will interest people wherever exhibited and at the same time being unbreakable. Don't you think you could sell these records, particularly when the retail price will be 35 cents?

Our catalogue will be ready next month, and you will see that it embraces a line of music which will appeal to every variety of taste.

The Indestructible Phonographic Record Co.

226 to 236 Hamilton Street, Albany, N. Y.



GENERAL PHONOGRAPH SUPPLY CO.

Incorporated Recently at Albany With a Capital of $25,000—Has a Broad Charter for the Purpose of Manufacturing and Vending Talking Machines, Musical Instruments of Every Description and All Kinds of Supplies—C. V. Henkel, E. B. Jordan and J. Burckhardt Incorporators—Business to be Conducted on a Large Scale.

The General Phonograph Supply Co., of New York has been incorporated at Albany, with a capital of $25,000. The incorporators are: C. V. Henkel, presideut and general manager of the Douglas Phonograph Co., New York City; Edward B. Jordan, Jr., the well-known manufacturer of talking machine cabinets, Brooklyn, N. Y., and J. Burckhardt.

The purpose of the company is officially described below:

"To purchase or acquire, manufacture, use, vend and trade in phonographs, graphophones, talking machines and sound-reproducing machines of every description, and all kinds of mechanical and musical instruments or machines and musical instruments of every description; sound-reproducing records and tune sheets for use on talking machines; cabinets, horns, stands and merchandise supplies and appurtenances used with, for or on any musical or sound-reproducing machine or instrument; also pianos, organs and other musical instruments; sheet or other printed music; cabinets, stools, chairs, covers and musical supplies and any and all appurtenances connected therewith; to carry on the business of manufacturers, dealers in and exporters of said sound-reproducing machines and all musical instruments of every nature and description; and also any and every article or thing which may now or hereafter be conveniently manufactured, sold or dealt in in connection therewith or otherwise; to manufacture, buy, sell, deal in and deal with any and all kinds of machinery, materials, supplies, implements, articles, appliances, substances and fabrics incidental to or entering into the manufacture of the same or any part thereof, or to effectuate the objects and powers set forth in this certificate or any of them."

When Mr. Henkel was seeu by The World he said: "This business is entirely distinct and separate from the Douglas Phonograph Co., and is solely an enterprise of my own in connection with Mr. Jordan. Our lines will be manufactured under patents issued to me for a number of improved talking machine specialties, which will surprise the trade. We expect to carry on business on a large scale, and be factors of importance in the trade. We will have more to say about the General Phonograph Supply Co. later on."

SOME OF "CHAT'S" PHILOSOPHY.

The July issue of "Chat," published by the Tea Tray Co., of Newark, N. J., is one of the best numbers yet produced. The cover depicts "Chat" having a glorious time celebrating the National holiday, while inside its covers can be found much of interest sandwiched in with some timely data regarding the horns, cranes and other specialties made by this house, as well as a lot of clever sayings, some of which we take the liberty of quoting herewith:

"About the time you've made up your mind that you're 'some pumpkins' an unfeeling and unappreciative world sets you down as 'small potatoes.'"

"A lot of people would die for want of breath if they had to remember to wind up their lungs."

"If a mau, by experimenting, discovers a new gas he's called a genius. If he blows off his head, he's called a blamed fool."

"Every customer should have a reason for comiug again."

"Vast knowledge is not as essential as knowing a little, but knowing that well."

"Weeds cease to be weeds just as soou as a use is found for them."

"Lots of Horus are not as good as they are painted."

"It is wise to permit people to impose on you occasionally. By giving them the idea that you are 'easy' it may be the means of getting them up close enough to knock them in the head."

"All things may come to him who waits, but the undertaker will be in the parade."

"It isn't always the biggest automobile that has the loudest 'honk.'"

"If you can't get wise, get gumption."

"Saith the man with the full stomach to his thin brother: People eat too much."

"If a man falls down it is an accident; if he falls up he wants the credit for it himself."

"There are a lot of people who can not tell whether a thing is beautiful until they know the price of it."

"A man is a failure if he doesn't know when to cash in his experience."

"It's the bum shooter who blames the gun."

RODKINSON RETURNS TO EUROPE.

N. M. Rodkinson, managing director of the Gramophone & Typewriters, Ltd., Berlin and St. Petersburg, who has been passing some time in this country, will sail for Europe to-day on the "Amerika."

Mr. Rodkinson, although young in years, has had a varied and interesting career. He was for a while engaged in journalism in New York City, but he thought that the talking machine business afforded an easier and quicker route to fame and success thau journalism, so a few years ago he allied himself with the famous English concern which controls subsidiary corporations iu continental Europe.

Mr. Rodkinsou is au energetic, forceful man and, while he directs the big enterprises in Berlin and St. Petersburg, he also handles their far Eastern trade, and last year he spent some time in India erecting a factory in that country, and he expects to reach Calcutta some time during December. Notwithstanding his activity he finds time to run over to London every two months to meet with the directors of the parent concern.

Central States Edison Dealers

¶ AM ready to look after your Phonograph needs from my Cincinnati wholesale place. My stock from beginning to end is new and fresh and my aim shall be to give dealers not only good service, but aid them in every way to make money with the line by giving them every assistance possible, and ten years' experience, first as road salesman for the National Phonograph Co., and four years of jobbing Edison goods exclusively in Milwaukee, should fit me for the successful work of middleman.

NEWS OF THE MONTH FROM THE SAINTLY CITY.

Jobbing Trade in St. Louis Quite Satisfactory for This Season—Manager Long Well Pleased With the Outlook—His Recent Letter to the Trade—Conroy Co.'s Nice Jobbing Trade—Recent Visitors to the City—Talking Machine Used in Important Capacities in This City—One of the Catholic Churches Has Created Quite Some Attention—Reproductions of the Finest Operatic and Sacred Music Heard—Other Items of Interest.

(Special to The Talking Machine World.)

St. Louis, Mo., July 7, 1907.

The jobbing trade for the past month has been quite satisfactory, and shows an increase for the same period last year. The retail demand shows a falling off, but it is better than for the same period last year. The dealers are only looking for a moderate state of activity for the next few weeks, but they expect a heavy fall trade.

Manager Long, of the St. Louis Talking Machine Co., reports their trade to be very good, and especially so on records. The following is a copy of a letter recently sent to the trade throughout this territory by this concern, and which has brought very favorable results:

"The large summer gardens and amusement companies are making strenuous efforts to obtain famous bands, high-class vaudeville numbers and good comedies for their open-air entertainment parks, and that this sort of thing is popular, is demonstrated by the crowded condition met with in all high-class amusement places. However, there are thousands who are too far away from this sort of entertainment to take advantage of it; therefore, why not educate them to have their open-air concerts at home. They are gifted as man never dreamed of being gifted a few years ago by having that great medium of entertainment—the Victor talking machine —at their disposal, with its complete list of records by the famous bands, orchestras and artists of the world.

"Create, if possible, a custom of having your talking machine users play the machines in their front yards (vanity). It starts the neighbors talking about the wonderful reproductions of the Victor (gossip). It starts the users buying more records, so as to give his neighbors the chance of hearing up-to-date selections (pride). It creates a desire on the part of the man in the next block to also be able to entertain his freinds (envy). It sells more talking machines for you (profit), and if you favor us with your business it sells more for us (more profit)."

A new booster for the Victor line arrived at the residence of E. S. True, accountant for the St. Louis Talking Machine Co., on June 29, in the person of a 10-pound boy.

C. L. Byars, formerly in charge of the talking machine department of the Hollenberg Music Co., Little Rock, Ark., is now located with the St. Louis Talking Machine Co.

The Conroy Piano Co. report a nice jobbing trade for the last month, and that their retail business has been fair.

Marks Silverstone, president of the Silverstone Talking Machine Co., reports that their jobbing trade for the past month has been good, and shows a very large increase over the same period a year ago. He reports the sale of several very costly outfits to prominent people.

The Koerber-Brenner Music Co. state that their talking machine business for the last month has been very good, and they are looking for a very large trade. Mr. Brenner is spending three weeks in the east on business and pleasure.

D. K. Myers, local jobber in Zonophones, reports a large trade for the last month, and that he has been having an exceptionally large record trade.

James H. Wales, traveler for the Victor Talking Machine Co., was a recent visitor.

W. N. Hollingsworth, an enterprising dealer of Evansville, Ind., was a recent visitor here and reported trade very good with him.

S. R. Brewer, manager of the talking machine department of the Thiebes-Stierlin Music Co., will leave on August 1 for a month's sojourn in the East. H. L. Brewer, of this same department, is home from a two weeks' vacation which was spent in Ohio.

The Columbia Phonograph Co. report trade as good with them. T. P. Clancy, manager of this concern, has just returned from a ten-day trip to the eastern factories and other points.

R. J. Keith has been appointed traveling representative for the St. Louis Talking Machine Co. through the States of Missouri and Arkansas and is doing a nice business.

The following visitors were recent callers on the St. Louis Talking Machine Co.: J. D. Sims, Monarch, Ark.; St. Joe Isaacs, Amarillo, Tex.; Mr. Mendenhall, Hannibal, Mo.; Mr. Krug, Krug-White Jewelry Co., Staunton, Ill.; J. T. Keith, Summerfield, Ill.

Two of the largest talking machines in St. Louis, Mo., are said to be unique both as regards location and in the fact that neither uses English records. One is in the vestibule of a handsome Roman Catholic Church, and the other is the only ornament of a two-by-four Chinese laundry. Both play records that are the only ones of their kind in existence, and both attract a crowd whenever they are set going.

The first is the huge machine in the vestibule of the Italian Catholic Church of St. Charles' Borromeo. This instrument carries the largest records and the largest horn made, and can easily be heard two blocks away if the church doors are open. The records used are all in the Italian language, or in Latin, and are reproductions of the best work of the finest living singers in opera and sacred music. Some of them are the only records ever made of certain compositions, and are therefore very valuable. Only very high-class music is played on this phonograph, its owner, Rev. Father Spigardi, believing that good music has a strong religious influence over those who love music.

The other talking machine is remarkable for its inharmonious sounds. It also is a large machine, and is well constructed, but its records are exclusively Chinese. There are Chinese songs, Chinese speeches, Chinese dialogues, and last and worst of all, Chinese band music. When this last is turned upon the calmness of the

night (the instrument is never wound up during the day) the neighborhood finds it difficult to determine whether it is a riot, an iron foundry or only the conglomerate sounds of the ever-to-be-remembered Pike. The Celestial who rejoices in the possession of these ear-splitting records is very proud of them, and sits for an hour at a time playing the same awful "piece" over and over again.

"Him velly fine piece," he will assure any one who stops to listen. "Him all same one band. Him made Chinee tleayta. You sabe Chinee tleayta? You wait. I show you one piece, two piece, tlee piece," and with great hospitality he will offer his visitor a stool to sit upon and then proceed to play over his entire repertoire, seven records, his yellow face beaming with satisfaction and pride and his keen little slant eyes watching the effect of each "piece" upon his guest. "Him velly fine fonny-gla," he always says by way of a grand finale to his concert. "You come bimeby some time I show you one dozen piece." But the visitor never makes a second call.

The Chinese "talker" is about the largest article of furniture in a tiny uptown Chinese laundry, and takes up all the visible space not occupied by ironing tables and stove. The Chinaman who owns it does not seem to understand what is wanted when he is asked where he got the records, and always says, "No sabe," when questioned, but that they are genuine Chinese records no one who ever heard a group of Celestials chatter among themselves can doubt for a moment.

A CLEVER LISTENER.

"At the French restaurant on Fifth avenue in which the opera singers gather during the season," said The Sun recently, "the impresario of a talking machine was discussing with several guests the propriety of his having a certain singer make a record. He finally decided that he would, and made a memorandum to have his secretary communicate with the singer the next day. Then the subject was dropped.

"Later that day this singer received a call from one of the guests at the same table. He wanted to know if the man would like to sing in the talking machine, what his terms would be and how much he would give if the caller managed it. The singer was delighted, and the caller told him he might arrange it.

"I will start right in now," he said, 'and maybe you will get a letter from the company tomorrow. Don't say anything about my having been here. They prefer to do all this sort of thing themselves."

"It was not until he had paid this agent 10 per cent. on the amount he received that the baritone learned how little he owed him."

A CHAT WITH MARKS SILVERSTONE.

The Well Known Talking Machine Jobber of St. Louis Discourses on a Number of Topics of Interest to the Trade at Large.

(Special to The Talking Machine World.)

St. Louis, Mo., July 8, 1907.

One of the progressive talking machine men in the Southwest is Marks Silverstone, of the Silverstone Talking Machine Co., 1010 Olive street, this city. He entered the business some

MARKS SILVERSTONE.

three years ago, taking up the talking machine as a side line, which at the time was considered a hazardous undertaking on account of the proximity of six other talking machine concerns. With his usual foresight, however, he saw a future for the business, and casting adrift his other interests, devoted his entire time to it. His sucess as a talking machine man within a period of three years has proven that his intuition regarding the business did not mislead him. He says: "The fascination of the business is so intense, and the interest so great that specializing almost makes of a man a human talking machine."

Mr. Silverstone's experience ranges over a period of twenty years, and he claims that no other business produces greater results for the amount of energy expended; that in it there is no room for drones, as the successful dealer must be always as industrious as the bee, must watch trade interests, record stock and keep in touch with new ideas.

In his younger days Mr. Silverstone learned the watchmaker's art, and the knowledge gained therefrom has proven so successful in the talking machine line that he may be termed an expert. He says that the mechanical end of the talking machine line is sadly neglected by the dealer, who imagines by sending the machine to the jobber he has solved the difficulty. The dealer should send for the parts and make his own repairs. The knowledge and experience gained would make many a machine sale that would be lost through ignorance of how to overcome machine difficulties.

The instalment feature, he says, combines profit with a wonderful knowledge of human nature, bathos and pathos intermingled daily. Within a few days he experienced the following: "A young couple wished to purchase a talking machine. They had recently lost their first born, and were buying a talking machine to cheer them.

"Another young woman reported that her husband deserted her, and had taken away the talking machine. It was suggested to her that she may have talked too much, which was at first denied, but afterward admitted.

"Another couple had separated twice, and in each instance the talking machine was the central figure around which they figuratively fought. In the first separation the wife gained possession and continued the payments. At the second separation the husband gained possession, and continued the payments."

Thus to-day the talking machine plays an important part in the lives of men, furnishing its quota of comedy and tragedy.

Mr. Silverstone, in his ad. in this issue, states that broken records are an unpleasant feature of the talking machine business. There is an exception in his case, for he has broken the record, so that two months after becoming a jobber, he had to enlarge his record bins to double their capacity. Immediately after becoming an Edison jobber Mr. Silverstone took a business trip through Illinois and adjacent vicinity. He says that meeting the dealer personally, grasping him by the hand and showing a personal interest in his business, will do more to make and hold a dealer's business than anything else. Let a dealer know and feel that in your estimation he is not a mere machine, that he is striving for the same goal, "success," that you are, and by giving close attention to his little wants, which are in his eyes important, you will not only make a good customer but a friend. Mr. Silverstone further says that one of the greatest schools in the world is for the jobber to have had a dealer's experience, as by no other means can a jobber see the disadvantages and disagreeable conditions with which a dealer has to contend.

ECLIPSE CO. REPORT PROGRESS.

Doing a Very Satisfactory Business in Their Various Specialties.

The Eclipse Phonograph Co., 203 Washington avenue, Hoboken, N. J., report business very good for this time of year and somewhat ahead of 1906. This company are doing a big trade in specialties, and carry one of the most extensive lines of cabinets in the East. Beside their own line the Herzog is fully represented. They have just taken the jobbing agency of the Ikonograph moving picture machine for their territory.

The Petmecky Co., New York Life Building, Kansas City, Mo., proprietor of the marvelous Petmecky multitone self-sharpening talking machine needle, report remarkably increasing sales monthly. From England alone over 200 orders were received the last week of June.

"I calculate," says Edison, "that we know one seven-billionth of one per cent. about anything."

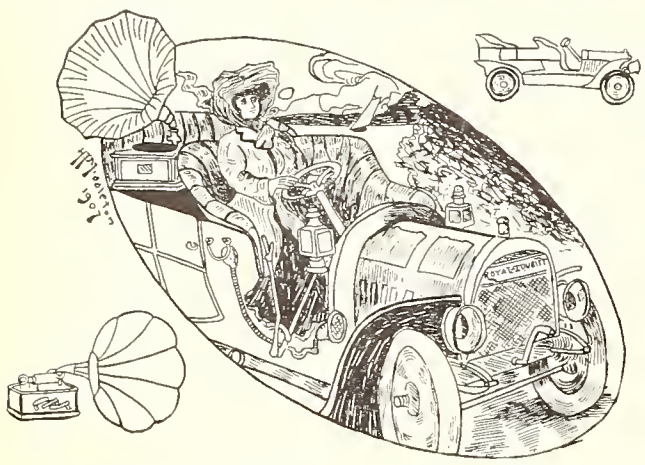
TALKER AND BUBBLE WAGON.

Talking Machine Dealers Should Realize the Importance of Interesting the Fraternity of Automobilists in Their Goods—The Reasons Follow:

"The automobile is the king of vehicles. It has plunged through the ranks of popularity until now, the season of 1907, sees the silken pennant of supremacy fluttering gayly in the breeze from its brass socket beside the gracefully modeled hood."

The flowery statement quoted above means a great deal to the talking machine dealer, because the man who owns an "auto" is financially able to indulge in a "talker," and will do so lavishly if he is assured beyond question of its true worth as a part of his road equipment. It is up to the dealer, therefore, to furnish that assurance somewhat in this manner:

Mr. Automan—You are a god of speed. You eat up the miles in a way that would give George



(of cherry-tree fame) a chronic attack of brainstorm were he here to see you skidding on a curve. The mania for fast motion possesses you, you say, and that there is nothing else about your trips which appeals to you. It is for that reason that I make bold to address you as follows:

Mr. Scorcher is, as his name implies, a lover of speed, but when he is out on a day's run in his royal tourist car and lunch time draws near, he slows up his four-cycle engine to a dignified pace and looks about for a pleasant camping ground. Of course, one can eat in an "auto," but it is much nicer, is it not? to spread your snowy cloth beneath a wide-spreading tree beside a bubbling brook, and from your wicker hamper extract the innumerable dainties that make up your rustic repast. Mr. Scorcher thinks so any way, and he is an authority.

While the viands last he is happy. He chats with his friends in a manner that proclaims him a wit of the very first water, and all the world seems to absorb his great content. Even the birds caroling amid the foliage overhead seem to echo his satisfaction and to agree with him that it is good to be alive. But after the dishes are packed away and the cigars lighted there drifts upon him a desire for something that is missing.

Scorcher is a city-bred chap, and being accustomed to dine at the club or café, he has learned to appreciate the soothing influence of a good orchestra. Yes, that is it, he misses the music.

"Hang it, girls!" he cries in disgust to the feminine portion of his party (like all true men, Scorcher loves the ladies), "a luncheon without music is like a devil cart without a spark plug. Can't one of you give us a song?" "Delighted, I'm sure," answered the charming Mrs. Victor Winton, and, searching in the tonneau, she brings forth a talking machine. Placing it upon a moss-covered stump, she inserts a record of a drowsy coon lullaby. As the first sweet notes of the tenor inside the horn come to his ears he sits up and takes notice. By the time the record is finished his cigar is out and he does not know it. That's a sign he's interested; all right, isn't it? Then a waltz by a string orchestra follows the lullaby. It is the kind Scorcher has heard so frequently in his favorite restaurant. He recognizes it and receives it with open arms.

By the time the concert is over he has taken down in his leather-covered note-book the name of the machine and the address of the dealer, and has also determined to have the mechanician at the garage construct a special compartment in his machine for the reception of a "talker."

After installing your phonographic outfit, Mr. Automan, you will find that on a level road, with a quiet motor and resilient tires, you may enjoy a concert while en route if you so desire.

The talking machine is like the automobile; it has improved wonderfully, and is now an instrument of great merit, capable of adapting itself to all circumstances.

I have all the leading makes at my well-equipped "talker" shop, and my salesmen are courteous gentlemen, whose delight lies in giving my customers the attention they deserve. Awaiting a call from you, I am, yours for recreation,

JOHN JONES.

23 Broad Street, City.

HOWARD TAYLOR MIDDLETON.

SPLENDID VACATION IDEA.

Regarding the advantages of the Edison commercial system during "vacation time," the National Phonograph Co. have sent out a pertinent circular for general distribution, in part as follows—an Edison idea for arranging office vacations:

"Business doesn't stop this summer, although the 'Call of the Wild' appeals to all of us. The fellow that writes you the letters is attending to business and must have a prompt and intelligent reply. How can we all let up on this strenuous life this summer and still keep up the correspondence? Vacations must be apportioned to employes aud we know from experience that most of them will be taken ou the hour without much sympathy for the manager who must 'keep the pot boiling.' See how voice writing on the Edison business phonograph will help you; here is a stenography that any one writes and every one reads. The result is a freedom from routine and an independent action between the dictator and transcriber that just fits in with the warm weather requirements. Country homes, week-ends and holidays now are possible, for when the dictator does get down to work, letters are answered in one reading and at a rate of speed beyond your stenographer. Your stenographers will appreciate voice writing if they understand the situation; have them co-operate in a central transcribing department to facilitate the mail. In such a department a senior has charge and directs the work; the phonograph cylinder may be written by any one so that the division of labor insures promptness and good hours; three girls in this way will often do the work of four to allow one a vacation, but if substitutes are necessary the head transcriber instructs them without bothering the dictators."

GOOD CALL FOR MELLO-TONES.

The Mello-Tone Co., 40 Harrison avenue, Springfield, Mass., are having quite a demand for their mello-tone attachments which modify and regulate the volume of sound on any style or size talking machine. The inventors claim that it not only mellows the tone, but brings out clear and distinct all there is on the record. It does away with the scratching, rasping noises and eliminates the metallic sound of the horn. It, moreover, can be regulated while the machine is playing from full volume to soft, mellow tone as desired. The manufacturers report a growing demand for these specialties in all parts of the country.

Last month the National Phonograph Co. consigned to their Australian house one of the largest single shipments of goods sent from New York on the steamship "Itzchoe." Eight thousand cases of machines and records made up the lot, valued at more than $123,000.

The Kipp-Link Phonograph Co., Edison jobbers, Indianapolis, Ind., have moved to larger quarters on Washington street, from 217 North Illinois street, where 7,000 square feet of floor space have been secured.

TIMELY TALKS ON TIMELY TOPICS

Music writers, composers and publishers, in their brazen and defiant attitude on the proposed revision of the copyright laws, appear to lose sight of any equity whatever contended for by the record manufacturers. The fact has been established, it is alleged, by the testimony presented at the hearings on the bill before Congress during its last session, that certain agreements or contracts had been entered into or executed whereby a species of monopoly would be created between the owners of copyright music and the reproducers of those publications for mechanical instruments. Now the main point dwelt upon by the talking machine trade is the fear that an open field will not be maintained should the bill in its present form be enacted. That is to say, one company might tie up the publishers or writers of popular music, for example, and exclude everybody else.

Should such an arrangement be consummated, which seems hardly probable, let alone possible, it must be admitted this would simply be a vicissitude of business. At present the record makers can help themselves to any and all kinds of music that suits their fancy or appeals to their purpose. Whether the United States Supreme Court will differ with the lower courts in their interpretation of the word "writings" as applied to musical compositions remains to be seen. At any rate, as many in the trade take it, the record manufacturers cannot afford to permit a bill to pass, without the strongest kind of a fight, which may prove successful, that might in any way hamper, if not jeopardize, business interests of vast importance, possibly cripple the production of their record output irretrievably. Were the talking machine trade allowed to reproduce copyright music without restriction they would be perfectly satisfied and withdraw their opposition. Also, if some method could be devised whereby either the writers or owners of copyrights would be prohibited from entering into exclusive compacts—a manifest legal impossibility—then perhaps the record people might complain. As it stands at present, a battle royal to the finish may be put down as a certainty unless the music contingent recedes and exempts the reproductive rights. There is an even chance that the talking machine trade will carry their banner to the front when Congress convenes and win out.

Much is heard of the duplex record abroad, and though several attempts have been made to introduce a like article here, no great success has crowned these efforts, according to the keenest observers. The inducement of two for one, as exemplified on the double-face disc, apparently does not appeal either to the trade or the public here. An expert, whose special business is to originate successful selling methods and invent new and effective ways of marketing goods, has had his eye on the duplex for some time as a trade winner. A careful canvass of the situation, however, and several tentative trials, convinced him, he says, of the futility of the scheme. Just why, no one pretends to explain, as one side is equally as good as the other when the reproductive results are considered.

Preparations are now being completed for placing on the market a disc record with an undulating or vertical line, as distinguished from the lateral or zig-zag sound wave. With the up-and-down cut, as it sometimes is called, a sapphire reproducing point or needle is used, lasting several years without changing. A celebrated firm of French record manufacturers have a record of this kind, but little, if anything, is known of it in this part of the world. The line on these records traverses from the center to the circumference, a distinct advantage, it is held. Whether true or not, reports say a son of the famous Emil Berliner holds a patent on this manner of running the sound wave, and in that event other developments may be looked for.

Admitting there are almost an endless variety of horns—about 150 kinds, it is averred—conditions are in an acute stage, according to current reports. The margin realized by the jobber for handling some lines of these goods is ridiculously small, because they are sold too close by the manufacturers. That is his own affair, to be sure. At the same time there is neither common—let alone business—seuse in cutting the heart out of prices in order to secure orders. The jobber may imagine he is on the ground floor, when, as a matter of fact, they are about all on the same footing, a plight only too quickly ascertained when a sale is being made to the dealer.

Without entering into any argument as to the merits or demerits of any particular horn, The World would like to see a more stable and satisfactory market for this very essential part of the talking machine. To be sure, the so-called hornless machine has a sound-amplifying device, though "submerged," as it were, along the lines of the separate horn. That, however, is another story. The striving to improve horn construction—in an exceedingly active state—has doubtless relegated the old-timers to a back seat in the estimation of the trade. Nevertheless these antiques continue to cut a figure mostly in slicing the selling price of the newer models. In truth, the price of horns is altogether too low, so much so that a device of an improved type, alleged to give superior reproductive results, and often does, if costing above the fixed price of the average goods, is not welcomed. It is damned with faint praise, no matter what may be its merits, in order to pound down the price. This is discouraging to the originator and manufacturer, and no credit to the trade.

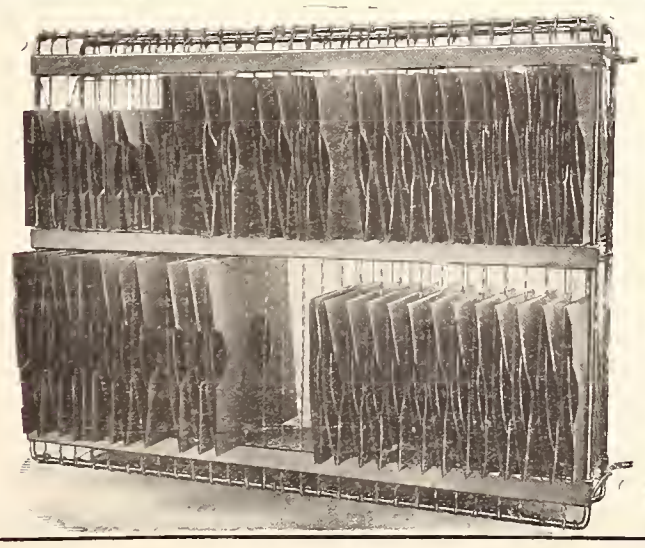
A cheap horn is far from being always the best. Strips of metal slapped together any old way, and decorated in "pot-boiler" style—not "baked on" fortunately—do not always fill the bill as a sound amplifyer, the accompanying rattle and vibration inseparable from such contrivances ruining the record and generally all future sales. From monstrosities of this kind the trade should be delivered, for it is this description of horn that is the basic cause of the present demoralization, and the sooner this is recognized and acted upon, primarily by the jobbers, the better for all concerned; and the manufacturer who is marketing a horn constructed on true acoustic principles, property made and tastefully finished, will then come into his own.

The sales manager had laid out the Pacific Coast territory for the new traveler to include California, Oregon and Washington. When he reached Chicago on his way West a letter was received from the house adding Nevada, Idaho and Montana. On arriving in San Francisco another document was awaiting from the sales department, instructing the road man to also cover Arizona, New Mexico, northwest Texas and Alaska! The Alaska assignment flabbergasted the company's representative, and in telling the story he said: "My territory kept expanding as I neared my destination, evidently the chap making out my scope of usefulness not having the slightest idea of the immense distances to be traveled in the far West. When Alaska was tacked on, however, I was all in. Sorry now I did not make the trip to Alaska. I would have been gone four months!"

Fitting up a retail store or a talking machine department requires tact and judgment. The luxury of the equipment is becoming more pronounced and elaborate, according to the class of trade handled. Sound-proof booths, beautiful record cabinets, etc., are necessities, to say nothing of the decorations, solo schemes and what not to complete a harmonious ensemble. The latest suggestion is for cabinets or cases of the library order, with sliding and glass doors for records. The idea came from a party who has the reputation of fitting up more costly interiors for talking machine stores than possibly any other one in the country. "If a hatter can go to the expeuse of having special dust-proof cases for his merchandise," observed this expert, "why should not the dealer in our line take as much care of his records, that sell for high prices also? Think of the swell appearance such a layout would have! The next place I am called upon to design will have sliding glass door cases or upright cabinets, with the usual record racks. Why not?" That's so, why not?

The "big four" are casting covetous eyes on the furniture trade, believing, and rightfully, it is an outlet for talking machine goods that will bear cultivation. It is argued the furniture people are inured to the instalment system of selling goods; in fact, are credited with the discovery of this method of doing business. Therefore, they should be right in line for the development of a new field of exploitation, and the machine and record makers are not letting any grass grow under their feet getting after the furniture

ANOTHER PROOF OF SYRACUSE WIRE RECORD RACK SUPREMACY



This illustration shows our new method of protecting Disc Records from dust and dirt, enabling you to file the records in the rack in envelope covering. This rack is the same as our No. 2 A with the addition of the envelope system.

As shown in view, a small additional outlay for wood shelving and the envelope covering insure the records cleanliness and safety. The top row is for 8 and 10-inch records; the bottom row accommodates 10 and 12-inch records. The shelving, at merely nominal cost, can be attached to all sizes of our Disc Record Racks.

If you have our Catalog compare this Rack with our 2 A Rack.
If you have no Catalog write for one and for further information.

A large advertisement, giving complete descriptive list of August Records, will be published in leading daily newspapers all over the United States on July 28th, our "Simultaneous Opening Day." (Particulars by mail later.)

Get ready to follow this up, and remember that the dealer who has the complete list of Victor Records has a big advantage over less enterprising competitors. He not only sells more records to his own customers, but gains new customers who can't get what they want at other dealers.

Victor Talking Machine Company

Camden, N. J., U. S. A.

crowd. When a furniture house has tested the proposition they have burned their ships behind them, so to speak, and march on to signal success, adding materially to their income.

Interesting experiments have been made within the past few months, specifically for court evidence, relative to the control of the needle or reproducing point on so-called mechanical feed machines. In the standard disc machine it is held the groove or line absolutely controls the reproducer, an essential feature of a patented invention. Experts have declared that it is a mechanical impossibility to supersede or overcome the action of the free-swinging stylus. It has been shown, according to the representative of the experimenters, that in a groove or channel a half inch wide; for example, this free-swinging point wobbles helplessly, and fails to record sound, while with the alleged mechanical feed device in demonstration the needle can be controlled so that the recorded sound was reproduced regularly and repeatedly. These observations are here made in no controversial spirit, nor are they calling in question any patent adjudications; only mentioning what has been accomplished in the development of a machine along other lines.

Exporters of talking machines will doubtless be pleased over the concessions made in the new German tariff, that went into effect July 1. A reduction of twenty marks—from 60 to 40—per 100 kilos is now the rate on machines, "including electrical appliances in connection therewith" (about $4.60 on 220 pounds). On records five marks, 30 to 25 (about $1.15) for the same weight. During the course of a year large quantities of American-made goods in these lines are sent to Germany, finding ready sale at comforting prices.

With the Victor Talking Machine Co. having a $6 record, the quartet from "Rigoletto," and Caruso as the star singer. Another manufacturing company are following suit with a quartet 14-inch record of the same music, and a prominent tenor as premier. The Victor record has been one of its most notable successes.

Theodore H. Price is one of the most energetic as well as loquacious men in the cotton market of to-day. Believing in the efficacy of creating sentiment, he has recently issued hundreds upon hundreds of pamphlets and circulars, and has delivered several speeches upon prevailing cotton conditions and alleged market abuses.

Following in the footsteps of "Tom" Lawson, Mr. Price has endeavored to give the widest possible publicity to his views on the cotton situation, and in the carrying out of this plan has employed a large number of special stenographers and clerks. In order to further facilitate speed in the promotion of publicity, Mr. Price has resorted to the phonograph, into which he dictates his "copy" for the corps of stenographers.

BRIEFLETS.

Last week Loring Leeds was in Baltimore, Washington and Philadelphia for the Leeds & Catlin Co. An official of the company told The World that they were selling double the records they did a year ago, the "demand coming from all parts of the globe—South Africa, Russia, India, China, Japan, Philippine Islands, Mexico, South and Central America, England, France, every State in the Union—thanks to The Talking Machine World."

President and General Manager Gilmore, of the National Phonograph Co., is expected home from Europe on July 17 or 18, having sailed from Southampton, England, via the White Star line, on the 11th.

One of the popular men in the Northwest is H. P. Rothermel, manager of the Seattle, Wash.,

H. P. ROTHERMEL.

wholesale talking machine branch of Kohler & Chase, whose portrait appears herewith.

Fred Matthews, who is the manager of the Indestructible Record Co.'s recording laboratory in Brooklyn, N. Y., is spoken of as one of the best recorders in the business. He has had many years' experience in England, and came here especially to accept this position.

Among the callers at the New York offices of the National Phonograph Co. were: J. MacFarquahar, of S. Kann, Sons & Co., Washington, D. C.; T. W. Barnhill, of the Penn Phonograph Co., Philadelphia, Pa.; C. H. Rundell, of the Southern California Music Co., Los Angeles, Cal.

In order to more conveniently handle their continually increasing talking machine business, Siegel-Cooper Co. have had two new sound-proof rooms built in which to demonstrate the Edison phonographs.

Petmecky, manufacturer of disc needles, New York Life Building, New York, advises us of spleudid returns from World advertising, and states that they are ready to fill all orders promptly upon the very day they are received.

The Automatic Violin Operating Co., New York, have been incorporated with a capital stock of $25,000. Directors: H. A. Nieman, E. M. Maloney and A. A. Kelley, all of New York.

The talking machine dealers of Greater New York will hold a meeting on the evening of July 19 at 310 Grand street, New York, when a number of important matters will be discussed. Dealers cordially invited to attend.

EDISON HORN ANNOUNCEMENT.

Further Information Will be Issued by the National Phonograph Co. at an Early Date—A Chat With C. H. Wilson, Sales Manager.

While having the matter under consideration for months the National Phonograph Co. on July 8 determined upon the type of horn they propose adopting in conuection with the phonograph, and therefore issued the following brief notification: "To jobbers only: A change in horn equipment, as supplied with phonographs, also change in list prices of complete phonograph outfits, will be made September 16. Full information will be furnished you within the next few days."

C. H. Wilson, general sales manager of the company, under whose signature the above circular letter was issued, when seen by The World said: "There is very little to be added beyond the details and particulars, which will probably be ready and in the hands of the trade early next week. The horn will be solid metal, and not collapsible, and has been adopted after most careful consideration and experiment, so as to obtain the best possible reproducing results. We are satisfied this object has been attained, and the trade will be thoroughly satisfied with our judgment and selection. The price of machines will be advanced—every type—to conform with the additional price of material, which every one knows has been going up steadily for over a year, and the increased cost of manufacture. Of course the new price will include the horn equipment. There will be no reduction whatever in the price of records. Such change as has been made abroad, going into effect August 1, is for the export trade only, and to meet certain conditions."

It was also the belief in jobbing circles that a new agreement on behalf of the company would likewise be ready for signing by themselves and the dealers, to go into effect also on September 16.

TRADE NOTES FROM CINCINNATI.

June a Good Month—Wurlitzer's New Departure—McGreal's Tone Record—Howard Becomes Manager—An Odd Law Suit—Columbia Co.'s Good Report—Other Items.

(Special to The Talking Machine World.)

Cincinnati, O., July 10, 1907.

The general consensus of reports from dealers here is that June was a remarkably good month for the trade. The usual "slack" time is not in sight and nobody feels inclined to hunt for it. The calendar seems, in fact, to be all topsy-turvy, for some dealers say the month's business has started out more like the holiday than the midsummer article. May these good conditions continue and become "chronically epidemic."

The house of Wurlitzer has inaugurated a decidedly new departure, which, Mr. Dietrich informs me, had been under consideration for some time, but has now about reached completion. It consists of the complete separation of the "Red Seal" trade from the ordinary. A very elaborate room has been prepared with this end in view, and nothing will be handled here but the high-class Auxetophone and Victrola machines, with the "Red Seal" records exclusively. The advantages are apparent. Mr. Dietrich prophesies that the new Tapering ('phone) Arm for Edison machines will supplant the crane with suspended horn as promptly and completely as it did when applied to the disc machines.

Saturday, July 6th, completed the first month's business for Lawrence McGreal, at 29 East Fifth street. The class and amount of business done are very gratifying and far beyond his most sanguine expectations The sales during the month consisted largely of the Edison products, which tends to an extent to refute the claim sometimes made, that Cincinnati is strictly a Victor field.

Mr. McGreal is now fully confirmed in the wisdom of locating upon the very spot his store occupies. It is decidedly "central." It is impossible for anybody to "see" Cincinnati and not take a look at Fountain Square; incidentally, it would be equally difficult to take even a cursory pike at the mountain and remain in ignorance of the whereabouts of McGreal. The pacific assistance of location does not, however, cause him to modify his more strenuous accelerator of business—his habit of "going after it."

The many Eastern and other friends of George R. Howard will be pleased to learn that he has assumed the management of the talking machine department of the Groene Music Publishing Co. at Race and Arcade. This concern is doing a fine and constantly increasing business in Edison, Victor and Zonophone machines, the month just past being a "record breaker" for June, and record sales justify them in carrying seven complete lines.

Proceedings have been instituted in the squires court against the owner of a very elongated Dachshund by the occupant of an adjoining flat, who is a stenographer. The complainant charged that the dog was an intolerable nuisance; that the barking and baying of this brute imperiled the nerves and sanity of the entire neighborhood, and that she, from the proximity of her domicile, was especially aggrieved. Mr. Schuhnagel, the dog's owner, maintained that his pet was not a disturbing element, and that, as far as vocal efforts were concerned, the dog had long since waived his inherent canine rights in this direction. He had been christened "Spinks" by admiring friends in recognition of his confirmed reticence. Notwithstanding all this, the plaintiff declared that for twenty minutes of the evening before, at least one ear-piercing yelp per second had emanated from the adjoining flat, and she produced an allegedly verbatim stenographic report to clinch it. This, however, seemed to have little weight in her favor; whereupon, a phonograph was produced, a record adjusted, and the nocturnal disturbance was reproduced with exactness and much feeling. The court seemed satisfied, and "Spinks" much bewildered—"e'en at the sound himself had made." Identification and the genuineness of the record were established by means of a section of "wurst" that "Spinks" begged for, but couldn't reach. Judgment was rendered promptly in favor of the plaintiff, much to the disgust of Mr. Schuhnagel and his protege.

The Columbia Phonograph Co. report the largest June business in the history of their experience. Their large and beautifully furnished store, all through June, was crowded with pleased buyers, who have recognized the desirable qualities of the Columbia graphophones and records. Indeed, their place looked like December times. They are only a "three-year-old," but are certainly "going some."

The Van Phonograph Co. report remarkably good business and increased sales both in machines and records.

C. B. HAYNES & CO.'S NEW QUARTERS.

C. B. Haynes & Co., the large Edison jobbers and dealers of Richmond, Va., have moved into their new quarters at 603 East Main street and are now well situated to handle their continually increasing business. Their new quarters consist of three floors 24x106 feet. The ground floor is fitted up with two sound-proof testing booths and is devoted to retail trade exclusively. It has one of the most attractive show windows in the city. The second floor is given over to the wholesale stock of Edison records, with racks to hold 75,000 records. The third floor is used for storing machines and the receiving and shipping departments are also located on this floor. An electric elevator service has also been installed. C. B. Haynes & Co. now have one of the finest talking machine stores in the South.

J. L. Adrien's name, as secretary, has disappeared from the office door of the Atlantic Phonograph Co., 1 Madison avenue, New York. It is said he is no longer connected with the million-dollar concern, which succeeded the Talkophone Co., of Toledo, O.

When John P. Kelsey vacated the position as manager of the Bettini Phonograph Co., New York, June 22, M. Grunlick, who formerly occupied that post, resumed charge of the business.

Mr. Talking Machine Dealer

If you are located in New England—

We Can Save You Money.

Our facilities permit us to ship goods on first Express after order is received. We **wholesale exclusively**—consequently everything is shipped in original packages as received from the factory—no played-out records, no second-hand machines.

We manufacture a number of talking machine accessories among which are our famous Tray Outfits. (If you are not using this system for carrying records in stock it will pay you to write us.)

The **Lynn Record Cases and Peg Boxes** are another of our products.

We also manufacture the **Wentworth and No. 10 Horn Stands.**

Special Lines and Special Prices on Flower Horns.

We solicit a trial order.

Boston Cycle & Sundry Co.,

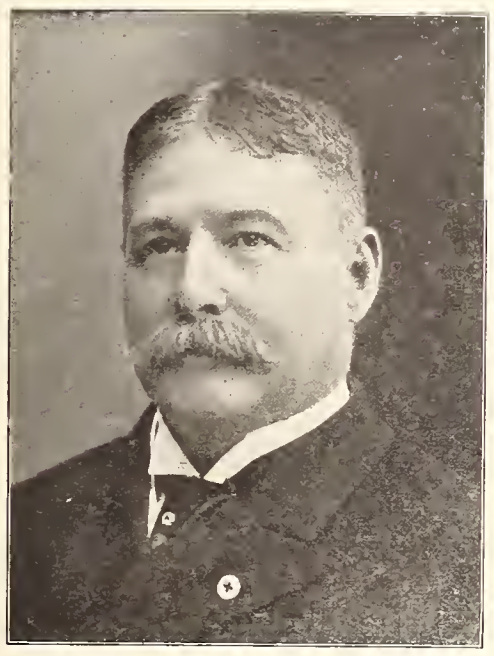
J. M. Linscott, Manager

48 Hanover Street, Boston, Mass.

WALTER P. PHILLIPS HONORED

On the Occasion of His Birthday—One of the Most Popular of Men, With Hosts of Friends in the Newspaper World.

With always a pleasant word for everybody on every occasion, Walter P. Phillips, editor of the Columbia Record and manager of the printing department of the Columbia Phonograph Co., general, was given a "dose of his own medicine" on the occasion of his birthday, on June 14. Then the entire staff took the greatest pleasure in offering their congratulations, and he was agreeably surprised further on the receipt of a large number of telegrams and letters from friends in all parts of the country—for Mr.



WALTER P. PHILLIPS.

Phillips is a veteran in the newspaper world—felicitating him on the recurrance of his natal day. Among the most highly prized of these was an autograph letter from William Winter, the Nestor of dramatic critics, of the New York Tribune, an old and greatly appreciated friend. At his home in Bridgeport, Conn., the family made merry, with calls from social intimates and his colleagues—the heads of departments—at the plant. It was a gala time, indeed, the drawing-room being filled with flowers, and the presents, evidences of personal friendship and esteem, were not lacking. Altogether it was a red-letter day for the genial Mr. Phillips, who was literally overwhelmed with good wishes, to which The World begs to add that he may have many happy returns.

THE TALKER IN THE CHURCH.

Its Use in Divine Service Becoming Much More General—How It May be Placed to Best Advantage—Its Aid in Delving into the Science of Acoustics.

To a man of inquiring mind the interest in a talking machine does not end with the reproduction of the records. No more effective means for delving into the science of acoustics can be obtained than a good talker, for unlike the human voice it will reproduce a sound with almost the same pitch and volume, many times or sufficiently often to conduct interesting experiments.

A New York gentleman, for instance, took his "talker" with him on a trip to the rural districts of New England. While there he obtained permission from the sexton of an old church to place his machine in the pulpit, which was raised several feet above the floor, and provided with a sounding board, a feature frequently seen in old churches. With the horn of the talking machine pointing directly toward the center of the sounding-board wonderful effects were obtained. Voices, soft and ofttimes weak would resound through the edifice with surprising strength. Where instrumental records, especially those of full brass band selections were played, the metallic effect was entirely done away with, and it seemed as though the music was produced by a powerful orchestra of wood instruments. It was found, however, that the echo interfered somewhat with the distinctness of the music, but a dozen wires stretched from the edge of the sounding-board to the gallery rail remedied that trouble. Other experiments of similar nature gave the gentleman mentioned an excellent idea of sound and its different effects, the talker placed in different portions of the church producing results that were surprising, the effects all being due to the acoustical properties of that edifice, the pitch of the records always being the same.

A visit to a nearby range of hills at a later date gave the same gentleman an excellent opportunity to study the science of acoustics in the open air, and upon his return to New York he said that his talker had proved more interesting to him during the summer than a whole library of books would have been.

UNIVERSALIZING THE DRAMA.

What the Moving Picture Has Accomplished and Its Helpful Influence.

Speaking of the moving picture theatres, the Boston Transcript, in a recent issue, said: "Intellectually, these theatres have achieved the feat of universalizing the drama. Its little biograph plays can be understood by all natiouali: ties. From them our Chinamen, our Greeks and our newly arrived Russian Jews receive instructive interpretations of American life. The Rose speaks all languages, says Emerson. So does the biograph. At the same time it speaks none, which is certainly a blessing. The great obstacle to acting is speech. It enables actors to walk through their parts; also, by mumbling and mouthing, to conceal their thoughts. Before the biograph, however, they've got to act with both hands and both feet and be quick about it. Competition, as afforded by the moving figures at the theatre, will yet force the performers in our patrician playhouses to wake up and tend to business. The mental setback we commonly get at the theatre has been seriously underestimated; remove it, by making the play intelligible, and we shall shoot ahead amazingly."

NEW EDISON MACHINE CATALOG.

A new machine catalog will be mailed to the entire trade some time this month by the National Phonograph Co., Orange, N. J. It is bound in a new cover, which will be used on their machine catalog for about a year. A number of important changes have been made in this catalog. Because of the united demand, the concert, opera and oratorio phonographs (all playing concert records) have been omitted. No further effort will be made to sell these types in this country. For the same reason the model B reproducer has been dropped.

An alternating current phonograph will be listed for the first time. It will be known as the Alva, which is designed and constructed to meet the demand for an electric machine that can be operated by alternating current now so generally used in most cities for store and household purposes. Minor changes have been made in the descriptions of gem, standard, home, triumph and Balmoral machines. The description of the model C reproducer has been materially changed. New matter has been written for the model D reproducer. The model D repeating attachment for the concert, opera and oratorio machine is omitted. Three separate supplements of their new French, German and Italian records have been sent out this month.

WILL OPEN DEPOT IN LONDON

For the Full Line of Goods Handled by the Hawthorne & Sheble Mfg. Co.

William McArdle, the genial salesman of the Hawthorne & Sheble Manufacturing Co., sailed from Philadelphia for England on June 21, via the Red Star Line, accompanied by Mrs. McArdle. "Mac" expects to open a depot in London for the Hawthorne & Sheble Manufacturing Co.'s line, and will remain in Europe for some time. Members of the firm and many friends were at the wharf to say farewell to Mr. and Mrs. McArdle. This is their first trip abroad.

The adjustable tone arm Star line of disc talking machines offered by a well-known manufacturer is the latest addition to the talking machine list. Many months of careful experimentation and devotion to trade requirements have been given to bring the line up to the right requirements and high standard demanded by the manufacturer. Many novel features combined with utility recommand them to both the dealer and the jobber.

Hargen & Blish, Dubuque, Ia., have become Edisou jobbers. The following have been suspended: H. Meyer, Peoria, Ill.; Frank R. Powell, Wichita, Kan.; J. H. Tragresser, Lancaster, Pa.

Taylor Bros., Houston, Texas, have taken an entire building at 1007 Capitol street, where they have fitted up a fine establishment, the interior being well arranged and handsomely decorated.

Mr. Dealer!

We desire to call your attention to two of our big sellers.

MARCONI VELVET-TONE RECORDS

Embody the golden points of tonal perfection, faithfulness to the original, and durability which record makers have dreamed of for years and only now attained. **Marconi Records** weigh only two ounces and can be shipped by mail, freight or express at the smallest cost. **They are unbreakable** and will not suffer by rough handling. All scratching sounds are eliminated.

THE PETMECKY

Multitone Self Sharpening Talking Machine Needles are universally acknowledged the Best on the Market. We are the agents for them in this territory—with a supply of **Marconi Records** and **Petmecky Needles** in your stock room, Mr. Dealer, you can defy competition.

Write us immediately for Special Prices.

LEWIS TALKING MACHINE CO., 33 South Ninth Street PHILADELPHIA, PA.

DOLBEER DISCUSSES THE ONE PRICE SYSTEM.

The Head of the Credit Department of the National Phonograph Co. Presents a Paper of Great Merit to the Convention of the National Piano Dealers' Association Held in Chicago Recently —Won Very High Praise Because of Its Lucidity and Helpfulness.

One of the most interesting papers read at the recent convention of the National Piano Dealers' Association held at the Auditorium, Chicago, was that on "The One-Price System," by F. K. Dolbeer, chief of the credit department of the National Phonograph Co. He said:

The historian of the future in casting about for a proper name to apply to the present era, will, no doubt, hesitate between the "Age of the Big Stick" and the "Age of the Square Deal." Business men were never more keenly alive to the fact that, after all, the Golden Rule can be as effectively applied to the regulation of commercial affairs as to the purely personal matters. Business dishonesty and sharp dealing, however legal they may be, incur the same condemnation and the same penalties as personal dishonesty. Mere temporary advantage may sometimes be gained, but permanent development can never be attained unless it is based on mutual confidence and respect. The written statute is becoming less the boundary line circumscribing and defining the area in which men of business may safely operate. Good faith, the square deal, mutual confidence and business honesty are the corner stones on which the fabric of success must now be reared. These statements are, of course, axiomatic, but they can never be too frequently brought home to the man of business fighting the battle of fierce competition in the strenuous life of modern America.

The one-price system inaugurated by the National Phonograph Co. in connection with the sale of Edison phonographs and Edison records is a good example of what may be successfully accomplished as a result of entire confidence between the manufacturer, the dealer and the public. That system was established between nine and ten years ago, and it has not only met with cordial public approval, but has received the judicial endorsement of many of the federal courts located in various sections of this country. The scheme is based primarily on the proposition that a patentee possesses the constitutional right to impose any reasonable restrictions in connection with the sale of patented articles. Legally speaking, the sale may be coupled with a license imposing any proper terms as to the use or resale of the patented article. A violation of such terms and conditions constitutes a violation of the license and amounts to an infringement of the patent.

The National Phonograph Co., therefore, in effect says to its dealers or jobbers: "Here is a patented article which we manufacture. We will sell it to you upon the express condition that you shall sell it to the public for a fixed price, and if it is sold for less than that price the license under the patent which we now give you is terminated and we will then proceed against you for infringing the patent."

I am glad to say that in only comparatively few cases—probably not more than fifty all told —have we found it necessary to exact the penalty imposed for the infringement of our patents under this agreement; but, when that has been necessary, the federal courts have never refused to take jurisdiction, which they have over all patent suits, nor to enjoin the delinquent dealer from further infringing acts. With that dealer the company has no further business relations (except in special cases where he may be again restored to good standing) and he is thenceforth cut off from further handling our goods.

It is not, in my opinion, because of the absolute protection which the patent laws of this country afford patentees that dealers are in the enormous majority of cases loyal and faithful in their relations to the company. It is because the dealers find that under this system they become more prosperous and can conduct their business more safely than under a system of destructive price-cutting.

To the manufacturer such a system is desirable, because the demand created is more uniform and less liable to fluctuation than under the old system. It enables the manufacturer during any slack periods (for instance, during the summer) to count with certainty ou a subsequent return of the more favorable conditions. The manufacturer, therefore, has no fear of stocking up for the anticipated future demand and of keeping his employes aud his factory busy. Continuous

F. K. DOLBEER.

employment means a better class of employes, higher skill in manufacture and a superior class of goods.

To the small dealer, the one-price system is superior to the old, as he has exactly the same advantage in the market as his more wealthy rival. To the large dealer the system insures stability and entire safety in laying in a stock of appropriate size. Destructive competition is done away with. A fair and reasonable profit in every case is assured and the only business rivalry is in ability to sell, the attractiveness with which the goods may be displayed and the ingenuity with which they may be brought to the public attention. Last of all, to the public the one-price system is beneficial, as it means:

First—That the goods bought have been developed to the highest state of perfection, because of the stability of manufacturing conditions.

Second—That the price is a reasonable one, because we have to compete with other goods in the same general line.

Third—That wherever the goods may be bought, the purchaser may be assured as to their quality, and he need have no fear that by spending three or four hours in the search he might have obtained a better price.

This, then, is the one-price system as practiced by the National Phonograph Co., and which I believe might be universally adopted in all specialized lines of manufacture. In fact, it is not unlikely that such manufacturers not adopting a similar scheme may find themselves in the position told in the old story. A teacher was explaining to her scholars that all naughty children went to the "bad place," and pointed out in glowing colors the horrors and generally unsatisfactory character of the latter. Her statements were received with the proper seriousness by the assembled youngsters. She then asked: "What kind of children go to the "good place?" The question met with absolute silence. Finally one of the small boys timidly raised his hand. "Well, Johnny," said the teacher, "What kind of children go to the "good place?" "Dead ones," replied Johnny.

SHORT ESSAY ON ENERGY.

Energy harnessed is the master producer; undirected—the feeder of scrap heaps. The thousand horse-power engine would never reach its destination without the guiding hand on the throttle; the trip hammer only crushes its base if no lever controls it; the over-charged wire burns out its contact.

For power without the throttle restraint—force without the directing purpose—is worse than inertia. It is waste. The greater the undirected power the more complete the final ruin.

Energy has developed continents, created industries, built businesses, made the power of men—but only when controlled, guided, directed, says System. Harness your energy with common sense. Guide it with system. That is the formula for getting results.

The Richmond, Va., branch store of the McGruder Talking Machine Co., with headquarters in Nashville, Tenn., has been sold to O. D. Haynes, of the former city.

To All Talking Machine Dealers

YOU buy Screws, Studs, etc., for repair work.

Why Not Try Us for Prices

THE WALLACE BARNES COMPANY

BRISTOL, CONN.

BUSY TIMES IN BALTIMORE.

June Made an Excellent Record With the Leading Jobbers and Dealers—Unfavorable Weather Did Not Injure Business as in Other Lines—Droop & Sons' Large Sales.

(Special to The Talking Machine World.)

Baltimore, Md., July 6, 1907.

June was an exceedingly busy month for those engaged in the talking machine business in this city, mainly because of the cold and freaky weather that prevailed during the better part of the month. This is the general report of the trade from all of those who handle this particular line of instruments. The sales were far better than expected and considerably above those for the same month of 1906. From all indications the business will continue good during the summer, as many talking machines are being bought by those who have or are about to occupy their country homes. They are regarded as more preferable to the pianos, as they do not require as much exertion on the part of the manipulators during the warm days and evenings of July and August. Comfort is the principal thing that folks seek in the summer, and those who have become admirers of the talking machines argue that there is more comfort and pleasure in sitting by and listening to the machine make the music than being compelled to hammer away upon the keys of pianos. The result of this increasing popularity of the talking machines is that the jobbers have their hands full to keep up with the rush of orders.

Among the real busy people in this trade are Messrs. Sanders & Stayman. G. Wright Nicols, manager for the firm, stated that the house has done an excellent business since the members of the firm added the talking machines to their stock. From the first day that the machines were put on sale they proved a success from the dealers' standpoint, and the number of those disposed of has increased gradually each week. The firm have fully decided to make the machines a permaneut fixture in their stock and have fitted up a special department in their spacious salesrooms for the sale of the talking machines.

Manager George A. Justin, of the Columbia Phonograph Co., says that the firm have been doing a most excellent business with talking machines ever since the first of the year. The trade for this period has been far above expectations and away above the average sales of previous years. The sale of high-grade records has been large. The most noticeable feature of the trade, however, has been the great demand for the Marconi Velvet-tone records, a great number of which have been sold during the month.

E. F. Droop & Sons report large sales in the same line of the trade, while they have disposed of a great number of the talking machines. Their business has been perfectly satisfactory, especially in so far as the sales of the Victors are concerned. This firm are well established in their new quarters on North Howard street, between Lexington and Saratoga streets. This is the building that was occupied until a couple of months ago by the Columbia people.

IT IS THE MAN BEHIND THE PLAN

That Makes Business a Success—The Combination of Both Is Necessary in Order to Win Out.

We are prone to give credit to the plan as being the thing that makes a successful business. It is not the plan, it is the man behind the plan that is responsible for the success. The man who has a well-defined ideal, who hews to the line, who eliminates all deterrent influences, who concentrates his energy on his ideal, who bends his efforts toward the one thing is pretty sure to accomplish his purpose.

We often see a man make a marked success in a field that others have considered barren. Take a small town, for instance, where there are many retail stores. The people of the town will tell the prospective merchant that the town is already overcrowded with stores, that none of the stores seem to be making more than a bare living, and that it would be impossible for another store to make a success, on account of the already overcrowded conditions, yet the right man comes along and starts a store in that town and makes a marked success.

If the plan were the making of success, all an enterprising business man would have to do would be to pick out some plan which was successful and then imitate it. The great ocean of business has many derelicts on it as a result of copying plans. It is a part of the law of compensation that the man who originates a plan and carries it to successful conclusion has a patent on his business. This patent is his individuality and good business equipment. The man who steals his plan physically is unable to steal the mental end.

Since men have recorded facts in the shape of history, we find that men have made successes of plans and businesses that have been discarded by their predecessors as played-out plans.

Two banks may start side by side with exactly the same office furniture and exactly the same business operations. They use the same kind of money; they make loans on lands or on securities. The operations of these two banks may be as closely identical as possible, yet within ten years one bank will have considerable surplus and the other may be out of business.

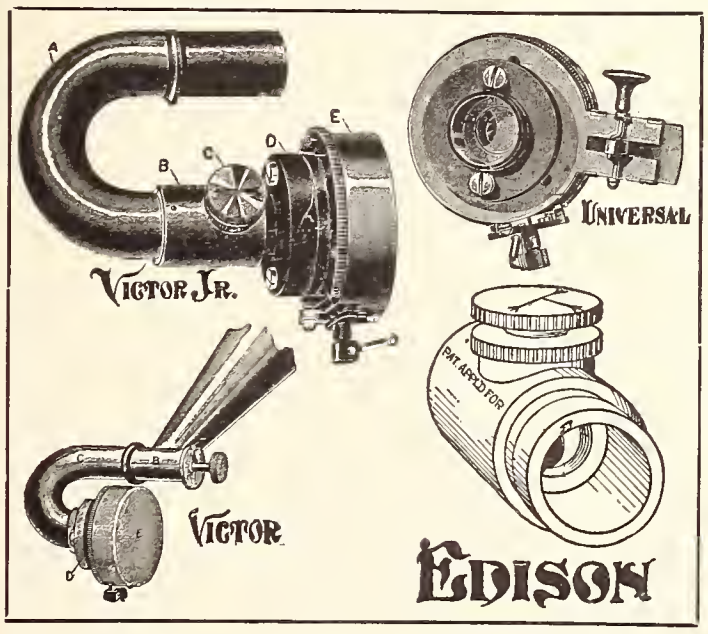
If the plan were the measure of success, as Dollars and Sense aptly says, these two banks should fare equally well, but the fact that they differed so materially is in itself evidence that the success is determined by the individuals and not the plan.

The illustration of a bank may be carried into other lines, merchandising, manufacturing or railroading.

H. N. McMennimen is now general manager of the Disk Talking Machine Co., sole agents for the Zonophone line in Philadelphia, Pa. The gentleman is one of the best known men in the business, having a connection running back fully sixteen years, and has traveled the country from end to end.

TONE REGULATORS

will increase your Talking Machine Sales. Don't take our word—try it.



The "Victor" Tone Regulator, - - $3.00
For all Victor Tapering Arm Machines

The "Victor, Jr.," Tone Regulator, 1.00
For all Victor Talking Machines

The "Universal" Tone Regulator, - 1.00
For Victor, Columbia or Zonophone Talking Machines

The "Edison" Tone Regulator, - - .75
For the Edison Machines

DISCOUNT TO DEALERS THE SAME AS ON VICTOR MACHINES.

We would advise dealers to have at least one of each style attached to machines. Aside from the sale of Tone Regulators, you will find, that it will be the means of selling a great many machines to people who would otherwise not purchase.

ALL OUR RECORDS IN SEALED ENVELOPES

We are the only distributors carrying a complete line of Victor Records in sealed Envelopes, which is a guarantee that the Record has not been used and is in Perfect condition.

CINCINNATI **THE RUDOLPH WURLITZER CO.,** CHICAGO

YOU WILL FIND IT PROFITABLE to handle our line of Musical Instruments and supplies in connection with your Talking Machine Business.
Our large 500-page Catalogue free for the asking.

TRADE NOTES FROM THE PACIFIC.

Kohler & Chase Well Pleased With the First Shipment of Star Machines Just Received from the Hawthorne & Sheble Co.—Columbia Business Active—Bacigalupi Reports Good Demand for Mechanical Players and Orchestrions—R. C. Avery in Business Again—Knight-Campbell Publicity.

(Special to The Talking Machine World.)

San Francisco, Cal., July 5, 1907.

Kohler & Chase have just received a shipment of their new talking machines, the "Star," made by Hawthorne & Sheble Mfg. Co. They say that this new machine is bound to gain great popularity, as the great simplicity, the improved sound-box, which is designed to eliminate the common scratchy noise, and the easily adjusted tone modifier, are strong attractions. Though the stock has just come in, the announcement was well responded to, and a great deal of interest has been aroused.

Business with the Columbia Phonograph Co., Manager Gray says, is keeping up better than was expected, as last month was the best this year, and June, so far, has been as good. J. L. Clancy, the Oaklaud man, has been taking in more business this month than ever before in the history of the store. A. Mc. Dowell, the Columbia agent in Petaluma, and R. D. Logan, of the Logan Cycle Co., Salinas, who handle the Columbia goods, visited the San Francisco headquarters this week.

Peter Bacigalupi finds that the talking machine business is slow, in comparison to that in large mechanical players and orchestrions, which are in great demand among the new saloons. There is, however, a profitable business with saloons for all dealers who have Auxetophones and Victrolas in stock.

Robert C. Avery, of Redlands, Cal., who recently sold his talking machine and small goods departments to A. J. Caldwell, has repurchased them and consolidated the business.

The Knight Campbell Music Co., of Denver, Colo., is advertising their talking machine department in the towns of Northern New Mexico.

Some Facts Worth Considering

THE talking machine man frequently asks, "How can I increase my business?" The answer is easy. Place on a side line which takes but little space, which is attractive, and a standard in its particular line. Take the **Black Diamond Strings,** for instance. Steel and wound. New process. They are the finest manufactured. They are used by all of the prominent artists, and you will have a trade coming your way when it is known that you handle the "Black Diamond." Music dealers all over America, and all over the world for that matter, know full well the value of this product.

National Musical String Co.
New Brunswick, N. J.

OPPORTUNITIES OFFERED

To the "Live" Man in the Talking Machine Field—No Gold Mine, But a Good Reward Will Come to the Man Who Employs Originality and Industry in His Work.

The talking machine business is not always the high road to wealth, despite the assertions of many, but it furnishes wonderful opportunities which, if grasped, mean success. And the opportunity is about 90 per cent. of the game, the improvement of it being up to the man who seizes it more or less firmly. The talking machine business requires just as much brains and energy as any other and more than some, and those who engage in it on the theory that a heavy trade will be of mushroom growth and spring up in a night are sure to meet failure, or at least a considerable jolt before very long.

The traveling men for the big manufacturers and jobbers constantly tell of instances where records and machines have been blamed for poor business, when the dealer had only himself to blame. A Canadian contemporary, for instance, tells of an energetic piano man who installed a line of well-known machines. The nature of his business kept him out of his store most of the time, and as he was not in love with the talking machine department to commence with, its fate was placed in the hands of a woman clerk. She had numerous complaints for the traveler and her greatest was that the records got so dusty she disliked handling them. The dear girl was so afraid they would soil her fingers and, of course, to keep them dusted was out of her line for she was no parlor maid. The incident is a sufficient indication of the character of a person that should be religiously kept out of the talking machine department or any other department, for that matter. The clerk referred to above apparently had no thought of the depreciating effect of dust upon the records.

In the same connection is mentioned the case of a traveler for one of the leading talking machine companies who happened into the store of one of his most unsatisfactory customers just in time to hear the concluding straius of one of their favorite records. The indistinctness of it so jarred upon him that he thought the dealer had stocked a job lot of second-hand records. The dealer at once made use of his opportunity and commenced venting his spleen on the innocent representative of the house because the customer went out without purchasing, remarking as he went, "I don't want to hear such rotten records as that." It took the traveler about five minutes to convince the dealer that the poor work of the record was due to dust on it; a demonstration on the machine after the record had been thoroughly dusted showed the dealer at once where the fault lay. Before the traveler was in the store ten minutes he confessed that he did not think dust affected the records at all and never dusted them. And this man lives in the twentieth century.

PICTURE OF ENTIRE SPEECH.

Photographs of single vowel sounds or musical notes have been made for a considerable time, but with the improved recording system of K. Marbe, a German investigator into the psychology of language, we may obtain a continuous picture of an entire speech.

Using Kouig's gas flame, which oscillates in height with the vibrations of the gas container, he registers the sound motion in smoke instead of by photography. The gas is passed through a tube into a capsule closed by a membrane and having a suitable burner tube, the capsule is placed on a box with the membrane over a circular aperture and vibrations are set up by a tuning fork at one side of the box or by a telephone membrane. A strip of paper is slowly wound from one roll to another just above the flame. While there is no vibration, the paper is smoked a uniform gray color, but when the tuning fork or telephone membrane is made to act the flame is rapidly oscillated and the smoked record is broken up into a series of little tongues pointing in the direction of the tape's motion.

The tongues vary in size and shape. Each vowel spoken into the telephone gives a characteristic series of vibrations and words produce varying combinations.

A NEW FIBRE DIAPHRAGM.

Dealers and jobbers, who have had difficulty in getting a satisfactory reproduction from reproducers or sound boxes, will be interested in the "Playrite" diaphragm, which has just been put on the market by the Blackman Talking Machine Co., whose advertisement appears in this issue. Mr. Blackman says he has produced a diaphragm that "plays right," and he, therefore, considers it quite proper to call it the 'playrite" for "the name tells what it does." Free samples are furnished to dealers and jobbers, as is customary with this company when advertising new specialties.

REMOVE TO NEW QUARTERS.

The New Jersey Sheet Metal Co., of Newark, N. J., who have outgrown their old quarters on Crawford street, have taken possession of their new building which they recently purchased at 31-35 Vesey street, where they are occupying two floors, 25x100, with two extensions, one 25x35 and another 25x20. They have two lots adjoining for storage and such enlargement as may be required.

This company, whose line of horns and horn cranes are widely known, have been steadily developing their business, and their new quarters are equipped with all the latest machinery to meet the demands of their business. They are prepared to place on the market a new horn which will be known as the Tulip. Mr. Ringel of the company left last week for a two weeks' trip.

The Santa Fe Watch Co., of Topeka, Kan., have been making a display of the auxetophone in that city recently, and it created quite a sensation. The local papers devoted considerable space to the company and to their exhibit.

NYOIL FOR PHONOGRAPHS

We have for 40 years been producers of Delicate Oils for Watches, Clocks and Chronometers, and we offer NYOIL as the most delicate and effective article ever produced for the use of Phonographs.

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York.

(Special to The Talking Machine World.)

Washington, D. C., July 5, 1907.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past five weeks from the port of New York:

JUNE 10.

Berlin, 30 pkgs., $736; Bombay 3 pkgs., $120; Cartagena, 4 pkgs., $159; Cienfuegos, 13 pkgs., $335; Geneva, 17 pkgs., $374; Havana, 59 pkgs., $4,368; 8 pkgs., $221; Havre, 13 pkgs., $560; London, 319 pkgs., $5,402; Macoris, 2 pkgs., $117; Milan, 7 pkgs., $112; Montevideo, 4 pkgs., $225; Naples, 122 pkgs., $3,072; Nuevitas, 5 pkgs., $129; Para, 19 pkgs., $1,001; Puerto Cabello, 8 pkgs., $212; St. Johns, 9 pkgs., $212; Sydney, 5 pkgs., $227; Valparaiso, 19 pkgs., $1,674; Vera Cruz, 3 pkgs., $302; Vienna, 9 pkgs., $207; Warsaw, 3 pkgs., $102.

JUNE 17.

Adelaide, 7,980 pkgs., $105,692; Alexandria, 12 pkgs., $445; Berlin, 35 pkgs., $1,364; 202 pkgs., $920; Colon, 4 pkgs., $138; Corinto, 12 pkgs., $305; Havana, 30 pkgs., $2,798; 5 pkgs., $232; Havre, 12 pkgs., $894; 19 pkgs., $826; La Paz, 9 pkgs., $210; Limon, 1 pkg., $100; London, 227 pkgs., $5,687; 301 pkgs., $3,894; Montevideo, 34 pkgs., $3,162; Rio de Janeiro, 4 pkgs., $110; St. Petersburg, 25 pkgs., $292; Valparaiso, 5 pkgs., $384; Vienna, 11 pkgs., $150.

JUNE 24.

Bombay, 19 pkgs., $580; Brussels, 128 pkgs., $7,146; 4 pkgs., $183; Hamburg, 3 pkgs., $129; Havana, 21 pkgs., $367; Iquique, 1 pkg., $124; La Guayra, 5 pkgs., $409; London, 435 pkgs., $2,756; 1,319 pkgs., $4,363; 17 pkgs., $875; Melbourne, 4 pkgs., $104; Mazatlan, 2 pkgs., $200; Natal, 4 pkgs., $196; Panama, 7 pkgs., $345; Puerto Plata, 2 pkgs., $195; St. Petersburg, 2 pkgs., $446; Santos, 25 pkgs., $617; Valparaiso, 2 pkgs., $100; Wellington, 8 pkgs., $193.

JULY 1.

Alexandria, 3 pkgs., $268; Auckland, 9 pkgs., $219; Buenos Ayres, 103 pkgs., $4,360; Calcutta, 4 pkgs., $145; Cristobal, 14 pkgs., $2,010; Genoa, 27 pkgs., $433; Hamburg, 36 pkgs., $108; Havana, 6 pkgs., $422; 73 pkgs., $2,469; Havre, 5 pkgs., $148; 11 pkgs., $570; Liverpool, 3 pkgs., $268; London, 1,586 pkgs., $11,662; 7 pkgs., $573; Manchester, 3 pkgs., $781; Melbourne, 2 pkgs., $119; Milan, 18 pkgs., $781; Montevideo, 3 pkgs., $186; Para, 2 pkgs., $242; Progreso, 8 pkgs., $260; Santiago, 1 pkg., $116; Savanilla, 5 pkgs., $313; St. Petersburg, 7 pkgs., $170; Sydney, 1,490 pkgs., $24,194; 189 pkgs., $6,472; Tampico, 9 pkgs., $647; Trinidad, 13 pkgs., $174; Valparaiso, 50 pkgs., $410; Vera Cruz, 20 pkgs., $743.

JULY 8.

Alagoa Bay, 7 pkgs., $196; 3 pkgs., $194; Auckland. 24 pkgs., $405; Berlin, 146 pkgs., $1,701; Buenos Ayres, 3 pkgs., $668; Callao, 2 pkgs., $151; Cienfuegos, 4 pkgs., $172; Cristobal, 3 pkgs., $266; Guayaquil, 5 pkgs., $225; Hamburg, 23 pkgs., $963; Havana, 12 pkgs., $720; 31 pkgs., $1,810; Manila, 2 pkgs., $56; Rio de Janeiro, 4 pkgs., $4,096; 2 pkgs., $144; Singapore, 1 pkg., $115; Sydney, 46 pkgs., $2,194; Yokohama, 27 pkgs., $1,443.

RANGE OF THE HUMAN VOICE.

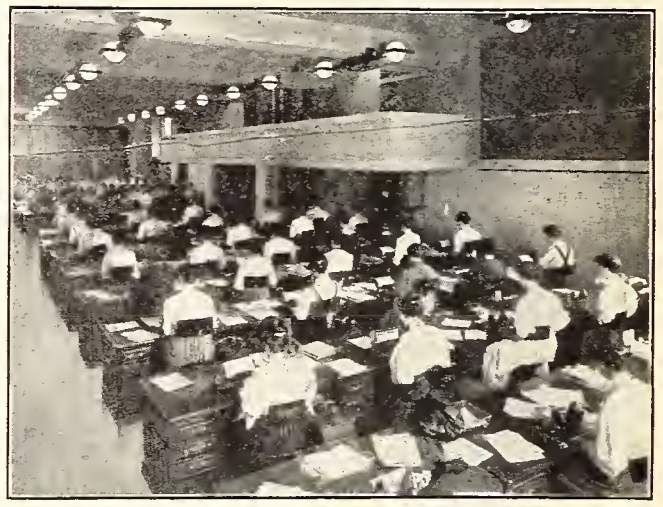
In discussing the range of the human voice Professor W. Le Conte Stevens, a member of the American Association, stated that "the lowest recorded tone of the voice is that of a basso named Fischer, who lived during the sixteenth century, and who sounded Fo, about 43 vibrations per second." Mr. Stevens himself, without possessing a bass voice, has sounded as low as Ao, 53 1-3 vibrations per second, when his vocal cords were thickened by an attack of catarrh. This, however, is under abnormal conditions. "The highest note hitherto recorded in the books was attained in singing by Lucrezia Ajugari, called 'La Bastardella.' At Parma in 1770 she sang for Mozart several passages of extraordinarily high pitch, one of which included C6, 2,048 vibrations per second. She trilled in D5, 1,152 vibrations, and was able to sing as low as G2, 192 vibrations, having thus a range of nearly 4½ octaves. Ajugari's upper limit has been attained by Ellen Beach Yaw, of Rochester. Mr. Stevens has often estimated, by comparisons with a tuning-fork, the pitch of a child's squeal, while at play, which has been repeatedly found to be in excess of 2,500 vibrations per second, in one case as high as G6, about 3,072 vibrations. The total range between these extremes is in excess of six octaves."

SOL BLOOM DISCHARGED.

The creditors accepting the composition offered by Sol. Bloom, Victor distributor, New York, the corporation was discharged in the court of bankruptcy by Judge Hough, and the petitions were dismissed.

USE COMMERCIAL GRAPHOPHONES.

The finest installation of commercial graphophones in the country is in the establishment of Larkin Co., the soap manufacturers of Buffalo, N. Y., a view of their transcribing department being herewith presented. The company erected



COMMERCIAL GRAPHOPHONES AT LARKINS.

a special office building, and have now 85 commercial graphophones in daily use.

G. A. STANLEY COMING HOME.

G. A. Stanley, of Stanley & Parsall, Victor distributers, with one of the widest and most compact salesrooms in New York City, who has been in Europe for about six weeks, is expected back next week on the Cunard Line, sailing from Liverpool, Eng. The demonstrating booths and fittings of S. & P.'s place are of solid mahogany.

W. P. BAKER APPOINTED ASSISTANT.

The business of the advertising department of the Columbia Phonograph Co., General, under the clever management of George P. Metzger, has grown so rapidly that it has been necessary to have an assistant. W. P. Baker, another bright graduate of the Hampton Co., referred to as the leading advertising agency of New York, will be Mr. Metzger's lieutenant. Mr. Metzger was chief of the literary department of the Hampton Advertising Co. previous to occupying his present post, where he is rendering brilliant service.

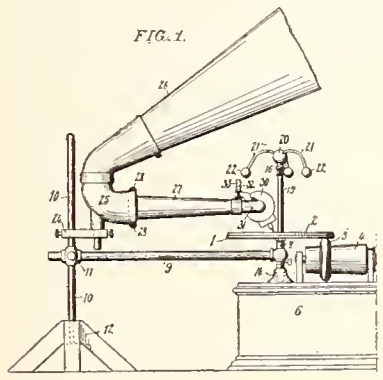
LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Specially prepared for The Talking Machine World.)

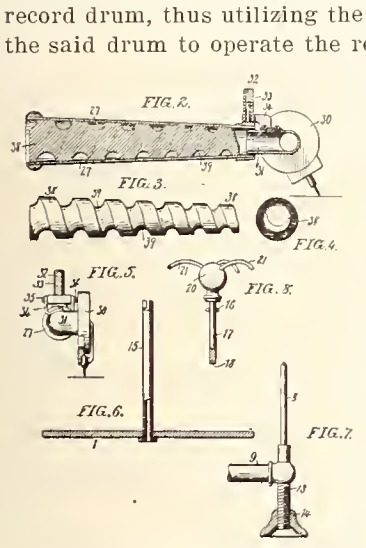
Washington, D. C., July 6, 1907.

TALKING MACHINE. David Kline, Philadelphia, Pa. Patent No. 858,077.

This invention relates to improvements in talking machines, and the object is to provide a construction for pivotally connecting the sound-box and the sound conveying arm, so that the weight of the latter will not come on the record disc, and the sound-box will be free to rise and fall without lifting the weight of the sound conveying arm. A further object of this invention is to



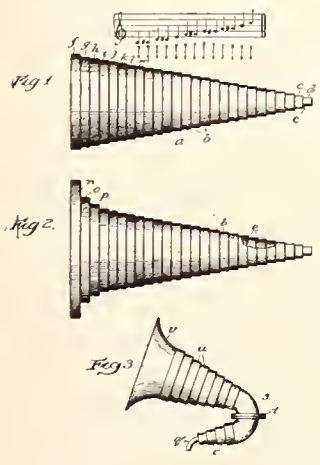
provide a core having au anuular spiral recess formed in its surface, which core is adapted to be inserted in the sound conveying arm to lengthen the distance of the passageway through which the sound travels in coming from the sound-box. A still further object of the invention is to construct a stand for supporting the parts of the talking machine, so that the same may be readily attached to a phonograph having a cylindrical record drum, thus utilizing the means for driving the said drum to operate the record disc. A still further object of the invention is to improve the manner of mouuting the record disc.



Referriug to the Drawings.—Fig. 1 is a side elevation of a talking machine embodying the invention; Fig. 2 is a longitudinal section view through the sound conveying arm; Fig. 3 is a side view of the core detached; Fig. 4 is an end view of Fig. 3; Fig. 5 is an end view of Fig. 2, showing the manner of mounting the sound-box; Fig. 6 is a side view of the record disc table, partly in section; Fig. 7 is a side view of the pivot post, detached, upon which the record disc table is mounted; Fig. 8 is a side view of the means used to secure the record disc upon said pivot post.

HARMONIC HORN. Reuben J. Smith, Waukegan, Ill. Patent No. 857,765.

The object of this invention is to produce a



horn for use upou phonographs and, otherwise, which shall not only be sonorous in its action, so as to retain the life-like and resonant qualities of sounds amplified thereby, but shall, by preference, be so constructed as to harmonize with and respond sympathetically to musical sounds transmitted thereto, so that in use each musical tone may be amplified while retaining the quality and timber of the original. The inventor claims to have discovered that a horn, when made of metal or other resonant material in the form of a series of connected hollow cylinders, varied in diameter, not only possesses a marked resonant quality throughout its length, but that the several sections are capable of producing sounds of varying pitch corresponding to the variations in diameter, thus rendering it possible to construct a hor adapted to respond to the notes of a musical scale. He has also found in practice that such a horn, even when made iu regular diametrical gradations, serves to greatly improve the tone of the instrument.

In the drawings, Fig. 1, is a side elevation of a horn embodying the features of this invention, accompanied by a musical scale. Fig. 2 is a similar view showing a modification thereof, and Fig. 3 is a side elevation of a curved horn swiveled at the curve upon a vertical axis.

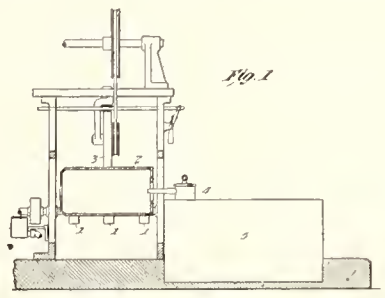
COMPOSITION FOR PHONOGRAPH RECORDS. Jonas W. Aylsworth, East Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 855,552.

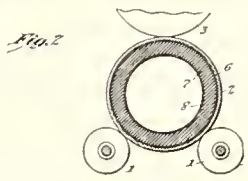
This invention relates to an improved duplicate phonograph record and process and apparatus for makiug the same, said record comprising a very smooth, hard, amorphous surface layer and an inner layer welded thereto of much cheaper material, having the same coefficient of expansion, so as to form a composite structure. To this end the invention consists of a composition of asphalt and stearin pitch, preferably in the proportion of about 80 parts by weight of asphalt and 20 parts by weight of the stearin pitch. Any hard asphalt, such as Syrian asphalt or gilsonite, may be used, being preferably melted and strained, although the material may be used in the crude state. If desired the asphalt may be made more fluid, so as to facilitate its casting within the surfacing layer by the addition of from 5 to 15 per cent. of stearic acid. Stearin pitch, as is well known, is a black tarry residue, obtained in the manufacture of stearic acid and resembling ozocerite. The stearin pitch may be melted and added to the melted asphalt, or two ingredients may be added together in solid form in the desired proportions and then melted and stirred until intimately associated.

Reference is hereby made to the accompanying drawing, which shows a conventional record tablet with the names of the ingredients of the improved composition applied thereto.

PROCESS FOR MAKING PHONOGRAPH BLANKS. Jonas W. Aylsworth, East Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 855,557.

This invention relates to an improved process for manufacturing blank record tablets for use on phonographs and allied talking machines in





which cylindrical blanks are employed, and the object is to provide a process by which the blanks may be manufactured economically and wherein the recording surface will be of a uniformly perfect character.

PROCESS FOR MAKING DUPLICATE PHONOGRAPH RECORDS. Jonas W. Alysworth, East Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 855,554.

In an application for Letters Patent, filed May 11th, 1906, Serial No. 316,250, is described an improved process and apparatus for making duplicate phonograph records, wherein a heated mold is rotated at a high speed, and molten material is introduced therein, so as to be forcibly distributed uniformly over the bore of the mold by reasou of centrifugal force developed any air or gas bubbles being forced radially inward so as to make a very perfect molded surface, and the mold being subsequently cooled while still being rotated, so as to set and harden the molten material. Iu the making of duplicate phonograph records by the process and apparatus described in said application, the inventor contemplates using molds of the type now employed, which are about ¼ of an inch in thickness, and presenting a mass of metal somewhat greater than that contained iu the desired duplicate records. Consequently, if it were attempted to make duplicate records from cold molds of this type, the molten material introduced within the mold will be quickly chilled on

Mr. Dealer.

ECLIPSE PHONOGRAPH CO.

203 Washington Street **HOBOKEN, N. J.**

the record surface, resulting in the formation of air bubbles and preventing the uniform distributiou of the material, as takes place when the mold is heated to permit the molten material to maintain its fluid condition while it is being distributed.

The present application relates to an improved process by which duplicate phonograph records can be produced in cold molds, and to this end the invention consists in making use of a mold having very thin walls, and in introducing therein the molten material at a high temperature, whereby the heat imparted to the mold will raise the temperature thereof to or above the melting point of the material, so that the latter will retain its fluid condition and will permit all air and gas bubbles to be driven radially inward as with the process described in my said application.

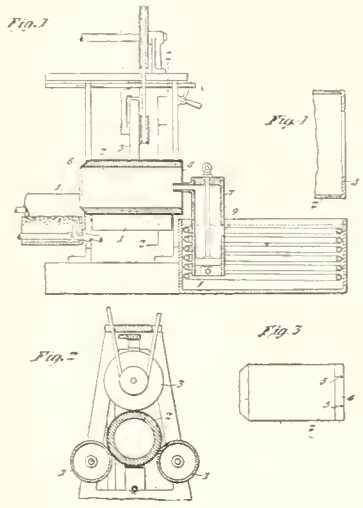

Fig. 1 is a longitudinal sectional view through a part of an apparatus similar to that disclosed in said apparatus, showing a single mold, and means for introducing charges of molten material therein; Fig. 2, a section on the line 2—2 of Fig. 1; Fig. 3, a side elevation of the mold, and Fig. 4, an enlarged detail view of the end of the mold.

Process of Making Duplicate Sound Records. Jonas W. Aylsworth, East Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 855,555.

This invention relates to an improved process for making duplicate sound records of celluloid, pyroxylin, collodion, cellulose and other suitable materials not capable of being rendered molten so as to be cast, but dissolving readily in solvents, and in that condition being readily manipulated. The inventor is aware that duplicate sound records have been made of celluloid and similar materials by the application of heat and pressure, but with such process it has been found impossible to obtain a smooth surface, so that the records are rough and scratchy. Furthermore, the material in being pressed into engagement with the record surface becomes merely distorted, so as to conform with more or less exactitude with the irregularities thereof, and there is therefore always a tendency for the material to revert to its original condition, thereby resulting in a gradual weakening of the record surface. It has also been proposed to make records of pyroxyliu or similar materials by dipping a mold or matrix in a solution of the material to form a film from which the solvent is allowed to evaporate, but such a film is manifestly excessively thin, and hence difficult to handle and to properly support. Obviously, if it were attempted to build up a record of greater thickness by repeating the dipping operations, the outer films would be likely to peel off, while during manufacture the film or films already deposited within the matrix would be dissolved more or less by the solvent, so that the operation would be necessarily slow and expensive.

This invention relates to an improved method by which records can be made up of the materials under consideration in a very cheap and effective manner by an operation strictly analogous to a true casting process, so that there will be no tendency of the record surface to become changed in use, while at the same time the record surface will be smooth and brilliant, and furthermore, the record will be perfectly homogeneous throughout and of any desired thickness.

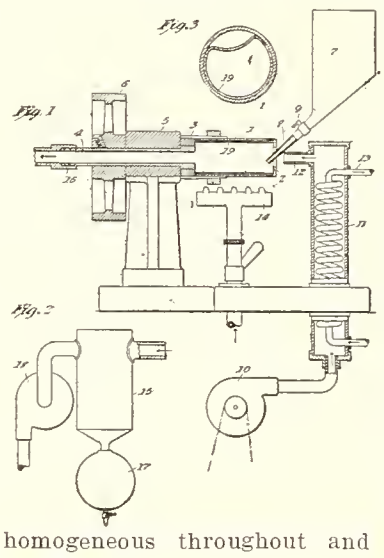

Fig. 1 is a diagramatic view of a portion of a suitable apparatus for carrying the process into effect; Fig. 2, a similar view, showing the condenser and suctiou fan, and Fig. 3, a cross-sectional view through the matrix, illustrating one way of removing the finished record.

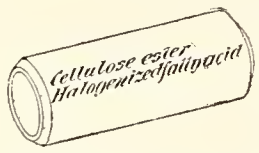
Duplicate Sound Record. Jonas W. Aylsworth, East Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 855,556.

This invention relates to an improved duplicate sound record, made of a tough, permanent material, capable of receiving and retaining an absolutely accurate copy of a matrix, having no ingredient which will evaporate to affect the record surface (as is the case with camphor in celluloid), which will be practically non-inflammable and which will be sufficiently flexible to permit of its being collapsed when it is desired to remove the same from the matrix. Duplicate sound records have heretofore been made of celluloid, but owing to the slow evaporation of the camphor these records become minutely pitted in time, so as to present a rough and scratchy surface.

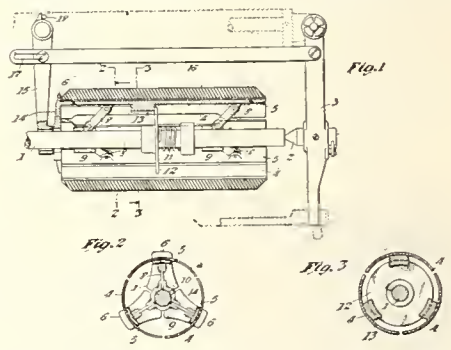


In an application filed on even date herewith the inventor describes an improved composition of a celluloid-like nature, said composition being based on the discovery that a halogenized fatty acid or derivative thereof, such as chlorinated stearic acid, acts as a solid solvent for pyroxylin or other cellulose esters, such as the esters of the acetic series, the compound being manufactured by the employment of a common solvent, such as acetone, which, upon evaporation, results in a celluloid-like composition having desirable properties of toughness, flexibility and non-inflammability, and being practically permanent, since the solid solvent does not evaporate, as in the case with camphor in celluloid.

The present invention relates to the production of a duplicate sound record of this improved material. The advantages of such a sound record are great toughness and smoothness of the record surface, absolute permanency thereof and substantial non-inflammability.

Reference is hereby made to the accompanying drawing, which shows a conventional record tablet with the names of the ingredients of the improved composition applied thereto.

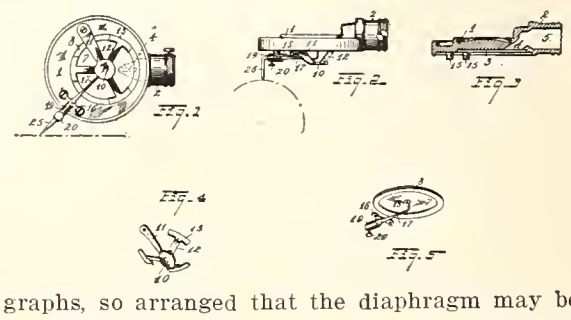
Phonograph. Jonas W. Aylsworth, East Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 855,604.

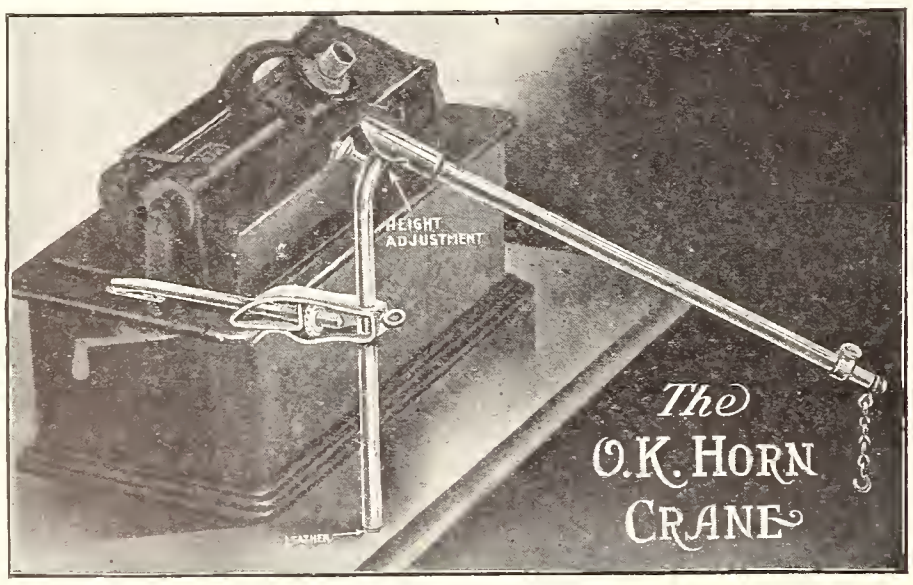


This invention relates to a new and improved mandrel for phonographs, adapted to receive and securely hold cylindrical records having perfectly cylindrical bores, and consists of a mandrel formed of a plurality of sections, outwarly movable, so as to engage the record and securely hold the same, means being preferably provided to coutract the mandrel sections when the ordinary phonograph end-gate is opened for the purpose of permitting the record to be taken off. Fig. 1 is a longitudinal sectional view, showing a part of the phonograph with the present improvements thereon, and Fig. 2, a cross-sectional view on the line 2—2 of Fig. 1; Fig. 3 is a similar section on tne line 3—3 of Fig. 1.

Phonograph Reproducer. Louis Devineau, Cleveland, O. Patent No. 856,038.

One of the objects of this invention is to provide a very simple and cheap reproducer for phonographs, so arranged that the diaphragm may be easily put in place and is effectively held, but may be removed whenever desired. Another object is to so construct the reproducer that it may be used either with the disc records or cylinder records, as desired, merely by changing the needle. In the drawing Fig. 1 is a side elevation of the reproducer, in the position as used with a disc record. Fig. 2 is an edge view of the reproducer, the position being that used with a cylinder record. Fig. 3 is a section through the





(Patented March 12, 1907.)

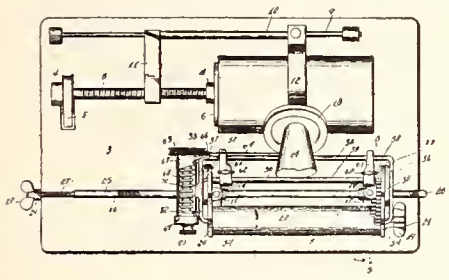
sound-box. Fig. 4 is a perspective of the spider which holds the disc in place. Fig. 5 is a perspective of the disc with its vibrating member. Fig. 6 is a cross-section through the disc, showing its connection with the vibrating member.

PHONOGRAPH ATTACHMENT. Christian L. Holm, Spokane, Wash. Patent No. 858,184.

This invention relates to improvements in mechanisms for repeating the records on phonographs, and the object is to provide a mechanism of simple and compact construction, which may

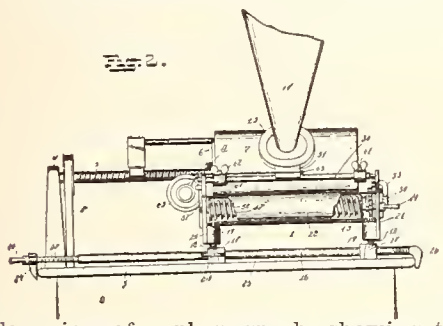
Fig. 1.



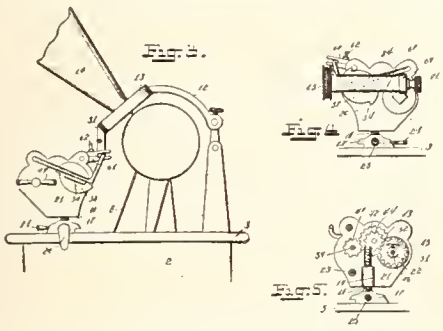
be quickly adjusted for use upon various kinds and sizes of machines for repeating a record in full or in part as many times as may be desired.

In the accompanying drawings Fig. 1 is a

Fig. 2.



top plan view of a phonograph, showing the invention mounted thereon, parts being broken away to more clearly illustrate the construction; Fig. 2 is a front elevation, with parts broken

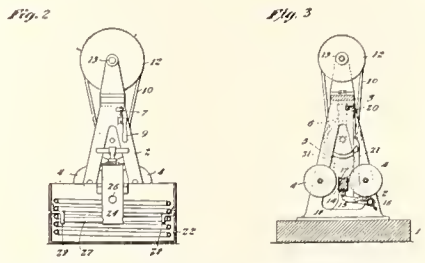


away; Fig. 3 is an end elevation; Fig. 4 is an elevation of the opposite end of the attachment or mechanism, and Fig. 5 is a vertical transverse sectional view taken on the plane indicated by the line 5—5 in Fig. 1.

PROCESS OF MAKING DUPLICATE PHONOGRAPH RECORDS. Jonas W. Aylsworth, East Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 855,605.

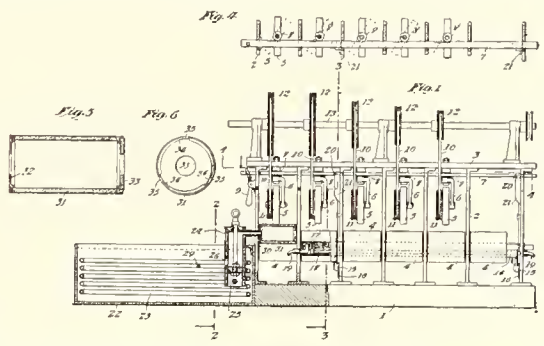
This invention relates to an improved process for making duplicate phonograph records at a low cost, of superior quality, and whereby the percentage of imperfect records or "discards" obtained in actual manufacture will be very largely reduced. In the present development of the phonographic art it is possible to make matrices or molds which for all practical purposes are mathematically exact negative copies of the original master records, and several processes have been suggested and commercially used for obtaining duplicates from these matrices or molds. In a practical duplicating process it is important that the temperatures used should not be too high, since the material from which the records are made contains considerable quantities of free stearic acid, which in the presence of a high temperature attacks and roughens the surface of the mold, even when the latter is protected by a non-oxidizing film of gold or nickel. These molds are very expensive and the slightest roughening is manifested in the reproduction from a record obtained from the same. Hence, it is important that the temperatures should be kept iu the neighborhood of the melting point of the material, or at best, only a few degrees above the same, in order that the life of the molds may be prolonged as much as possible. In working with the material at relatively low temperatures another difficulty is encountered—namely, the formation of air and gas bubbles, which appear on

Fig. 2 Fig. 3



the surface of the record. These bubbles are sometimes caused by the trapping of air in the mold, even when great care is taken to avoid the difficulty, and some are caused by the decomposition of the material in its original manufacture, or when scrap material is remelted. The low temperature at which the material is worked makes it more or less viscid, and hence the bubbles do not have the opportunity of freely escaping, but move sluggishly through the mass.

By the present invention the inventor is enabled to produce duplicate records in a highly efficient and economical manner, the material being maintained in a molten state at not necessarily more than a few degrees above the melting

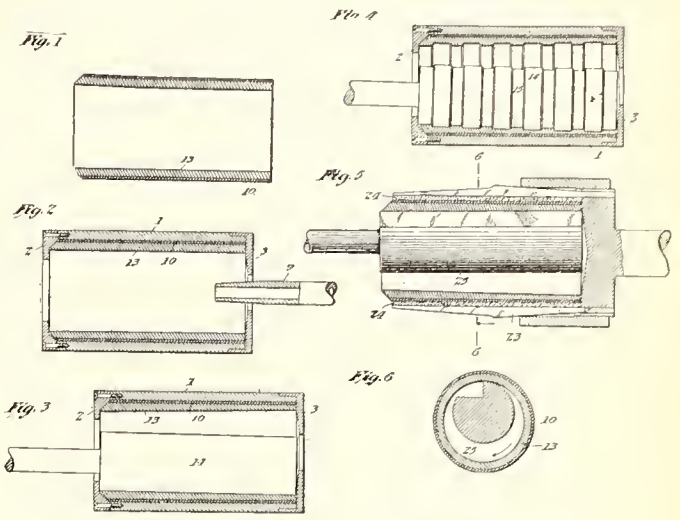


point, so as to prevent it from attacking and corroding the mold, while at the same time the operation is such that air and gas bubbles are effectively prevented from appearing on the record surface.

To this end the invention consists in making duplicate records by centrifugal force, the mold being rotated at a sufficiently high speed and the molten material being introduced therein, so as to be forced outwardly and distributed evenly around the entire bore of the mold, the mold being heated to about the temperature of the molten material so that when the molten material is introduced therein it will not chill on the mold, but will retain its fluid state, thereby permitting its complete and uniform distribution to be effected and allowing all bubbles to be displaced and forced into or through the body of material.

PROCESS OF MAKING DUPLICATE SOUND RECORDS. Jonas W. Aylsworth, East Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 855,606.

This invention relates to an improved process for the manufacture of duplicate phonograph records, being particularly adapted for the production of an improved record which is claimed in another application, but which may be employed for the manufacture of records of other types. The improved record referred to is a composite cylindrical structure having an outer layer of a tough, smooth, amorphous material, in which the record surface is formed and from which a smooth and brilliant reproduction can be obtained and a main body or support therefor composed of a very cheap and tough material unsuitable itself for receiving a record surface, the two



layers being welded together, so as to constitute practically a single homogeneous structure.

The improved process is one in which the material in a molten state or in solid or powdered form is introduced into a rapidly rotating mold, the outer layer being first formed by the centrifugal force developed, and when the material thereof is sufficiently set, but preferably while still slightly plastic, the material to constitute the inner or main layer is introduced so as to be intimately welded to the outer layer.

The process also contemplates the carrying on of operations by which the interior of the record may be suitably developed to fit the supporting mandrels of talking machines of the phonograph type, although if an expanding mandrel is employed as disclosed in the application of Aylsworth and Dyer, filed May 8, 1906, Serial No. 315,716, no separate finishing operation is necessary, since, when the records are removed from the molds, after being chilled therein, they will,

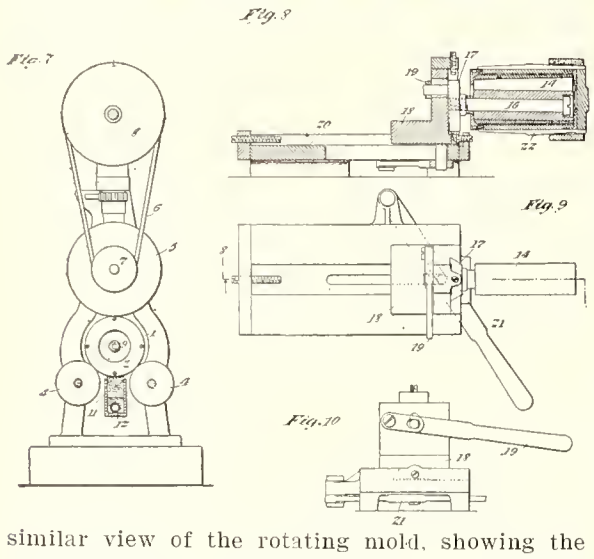
as an inherent result of the process, be formed with perfectly smooth cylindrical bores.

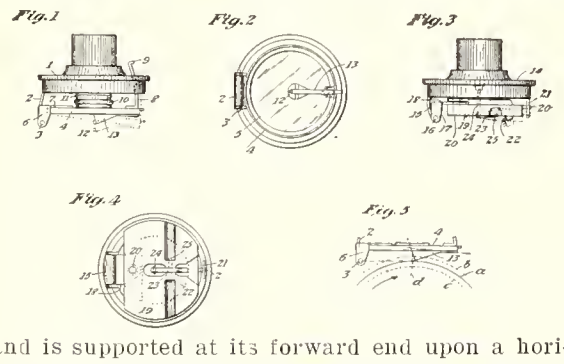
Fig. 1 is a longitudinal sectional view of the improved duplicate phonograph record; Fig. 2, a



similar view of the rotating mold, showing the formation of the record thereon; Fig. 3, a similar view illustrating the operation of tapering the bore of the record when desired, while still in a plastic condition within the mold; Fig. 4, a similar view illustrating the operation of forming the record on its bore with a series of concentric ribs; Fig. 5, a siuilar view, showing the reaming of the record, while cold, to taper its bore; Fig. 6, a section on the line 6—6 of Fig. 5; Fig. 7, au end view partly in section, showing convenient apparatus for rotating and cooling the mold; Fig. 8, a longitudinal sectioual view of the apparatus used for finishing the bore of the record, while in a more or less plastic state within the mold, the section beiug taken on the line 8—8 of Fig. 9; Fig. 9, a plan view of the same, with the mold and record removed, and Fig. 10, an end view.

Phonograph Recorder and Reproducer. Edward L. Aiken, East Orauge, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 855,828.

This inveutiou relates to phonographic recorders and reproducers, aud more particularly to that type in which the recording or reproducing stylus is carried by a floating weight, as first disclosed in Edison Patent No. 430,278, dated June 17, 1890. In the use of a recorder or reproducer of this type with an Edison phonograph the body is rigidly held in a traveling carrier arm, which is sleeved at its rear on a fixed rod

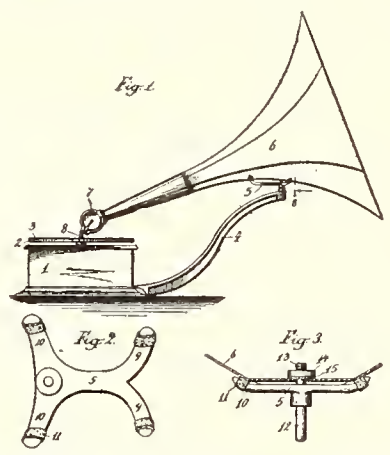


and is supported at its forward end upon a horizontal guide or straight edge, the parts being so arranged that the stylus will assume an operative position upon the surface of the record or blank when the body is properly placed in the carrier arm. The record or blank used with such an instrument is in the form of a hollow cylinder, which is carried on a rotating mandrel, and is of such diameter that the stylus will rest thereon and support the floating weight, as is well known. In using blanks of this character, where the record is only desired for use a short time, it is the practice to shave the record by means of a suitable shaving knife, thereby forming a smooth cylindrical surface suitable for the formation of another record, so that the same blank may be used again and again. Each shaving operation, of course, reduces the radius of the blank a distance which is equal at least to the depth of the record groove, and it has been customary to use in this manner blanks, the radius of which varies as much as nine sixty-fourths of an inch. Since the floating weight must be supported by the surface of the blank and since the body of the recorder or reproducer occupies a fixed position with respect to the axis of the mandrel, it is obvious that the floating weight must turn upon its pivotal support in order to permit the stylus to operate upon blanks or records of different size. This movement of the floating weight being pivotal, it is obvious that the angle which the cutting stylus makes with the record surface at the point of contact will vary with differeut positions of the weight. It is undesirable, however, that this angle should vary greatly because the cutting operation requires that the stylus be held at a definite angle with respect to the record surface in order to produce the best results, and this angle cannot be varied much without detracting from the quality of the record. Reproducing styluses are also frequently designed to operate only at or very close to a given angle, and are usually held by a lever whose angle cannot vary much.

Figs. 1 and 2 are a side elevation and bottom plan view, respectively, of a phonographic recorder embodying this iuvention. Figs. 3 and 4 are similar views of a phouographic reproducer. Fig. 5 is a diagrammatic view illustrating the positions assumed by the stylus when operating upon blanks of different diameters.

Talking Machine. Horace Sheble, Philadelphia, Pa., assignor to the Hawthorne & Sheble Manufacturing Co., same place. Patent No. 855,674.

The object of this invention is to effect certain improvements in the construction of talking machines with respect particularly to the horn-supporting devices, to the end that an apparatus is provided in which the horn is held securely against displacement and in which the horn-sup-



porting devices are of comparatively small size, so as not to detract from the appearance of the machine.

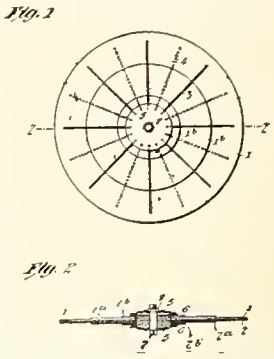
The preferred embodiment of the invention is illustrated in the accompanying drawings, in which Fig. 1 is an elevation of a talking machine constructed in accordance with the iuveution; Fig. 2 is a plan view of the horn-supporting cradle, and Fig. 3 is a section on the line 3—3 of Fig. 1.

Diaphragm for Talking Machines. Thomas A. Edison, Llewellyn Park, Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 855,562.

This invention relates to improvements in diaphragms for talking machines, both for recording and reproducing, and the object is to provide an improved diaphragm that will be readily responsive to vibrations of comparatively great amplitude.

With diaphragms as now made in the form of a continuous disc (or a series of discs of decreasiug diameters) clamped rigidly at its edge, the extent of the amplitude to which the diaphragm is capable of vibrating is necessarily very limited, since the material of which it is formed is not only flexed as the diaphragm vibrates on either side of the medial line, but uudergoes stretching and contraction as it moves away from or toward the medial line. This limited capacity of the diaphragm to partake of any considerable degree of amplitude, limits in a measure the loudness of the reproduction. If it were attempted to remedy this defect by increasing the diameter of the diaphragm or materially reducing its thickness, the reproduction would not be increased, but would become more or less flabby or hollow.

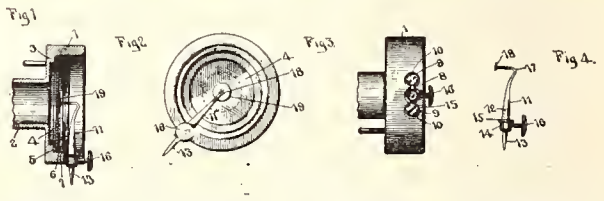
Another difficulty encountered with diaphragms as now constructed is that the resistance to the vibrating effect is not uniform as the diaphragm moves to either side of the medial line, but enormously increases with the amplitude, so that even if such diaphragms were capable of vibrating considerably the power available to operate them without incurring undue wear on the record surface. To effect a materially increased amplitude, Mr. Edison proposes the making of a diaphragm in which these two difficulties are very largely removed, since the diaphragm will be capable of being vibrated to a much greater amplitude than is now possible, while the resistance to the vibration does not materially or objectionably increase within reasonable limits on either side of the medial line.



To this end the invention comprises a duplex diaphragm made of at least two discs, each of which is radially slotted, so that each disc will constitute a series of reeds, and the slots of the discs being staggered so that a continuous surface will be presented for actuating the sound waves. Said discs are preferably cemented together by means of an elastic cement, such as a solution of gum rubber, in order to preveut undue resistance in vibrating. If two discs as above described were alone used, each of the reeds would be flexed throughout substantially its entire length, whereas the best results are obtained if the flexure is substantially limited to the base of each reed, so that each reed will substantially vibrate the whole. To secure this effect the inveutor preferably forms each section of the duplex diaphragm of a series of discs, say three in number, of gradually reduced diameter, whereby the vibration will be practically limited to the thinnest or outer portion. Having constructed a diaphragm of two discs or series of discs as explained, the central opening formed therein is closed by a pair of light corrugated discs seated on rubber gaskets and with which connection is made to the recording or reproducing stylus. Fig. 1 is a plan view of the improved diaphragm, aud Fig. 2 is a sectional view on the line 2—2 of Fig. 1.

Sound-Box for Talking Machines. Louis P. Valiquet, New York, N. Y., assignor to the Victor Talking Machine Co., Camden, N. J. Patent No. 855,736.

The object of this invention is to provide such a construction in sound-boxes that the stylus bar may be adjusted and formed so as to have the correct characteristics of elasticity, shape and size in relation to the diaphragm. A further object is to provide such a stylus bar that the tendency to lateral movement of its end where it connects with the diaphragm is entirely obviated and the sound waves thereby discharge at in more



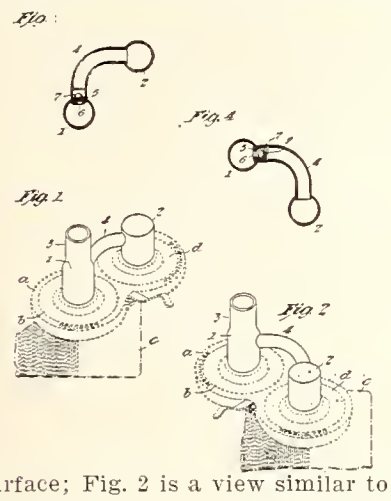
exactly perpendicular direction upou the diaphragm of the sound-box. Briefly, the invention consists in providing a stylus bar, the end of which is bent inwardly to form the connection between the end of the stylus bar and the diaphragm, the parts being integral and capable of being filed or reduced so as to vary their size, shape and elasticity.

Fig. 1 is a vertical sectional view of a sound-box, said section being takeu substautially on a plane passing through the axis of the stylus bar; Fig. 2, a front elevation of the sound-box; Fig. 3, a side view of the sound-box on the side thereof through which the stylus bar projects, and Fig. 4, an elevation of the stylus bar detached from the sound-box.

Phonograph. Nelson C. Durand, East Orange, N. J., and Edward L. Aiken, Orange, N. J., assignors to New Jersey Patent Co., West Orange, N. J. Patent No. 855,622.

This invention relates to phonographs, and more particularly to the sound-conducting tube or tubes, by which the sound waves are conveyed to the diaphragm of the recorder and from the diaphragm of the reproducer, and has been particularly designed for application to phonographs in which the recorder and reproducer are carried in a spectacle frame, as shown, for instance, in Edison Patent No. 386,974, dated July 31, 1888.

Fig. 1 is a front elevation showing in full lines a coupling embodying this invention and applied to the recorder and reproducer of a spectacle frame, the latter being shown in dotted lines and being in a position in which the recorder is in operatic position with respect to the

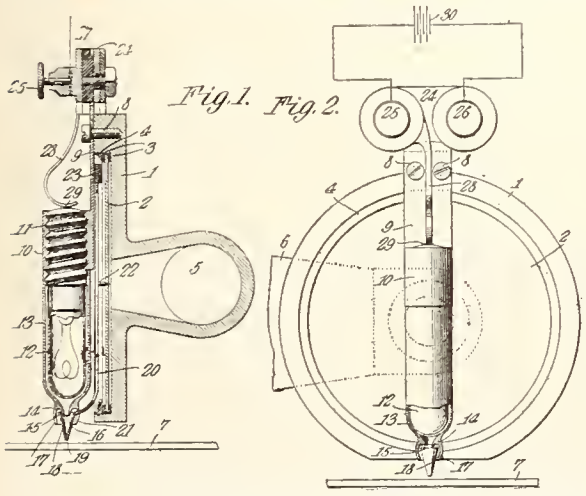


record surface; Fig. 2 is a view similar to Fig. 1, except that the spectacle frame occupies a position in which the reproducer is operatively situated with respect to the record surface; Fig. 3 is a section of the improved coupling taken on a plane parallel to the plane of the spectacle frame, the parts being in the position shown in Fig. 1; Fig. 4 is a view similar to Fig. 3 of the parts when occupying the position shown in Fig. 2.

Means for Recording Sounds. Wayne Lawrence Stillwell, Millersburg, O. Patent No. 856,553.

This invention has reference to improvements in a means for recording sounds, and its object is to produce a photographic record in the form of a sinuous line of even width representing sound waves, the record being of the type known as a gramophone record, being distinguished from the bead-like photographic records of the graphophone type.

The invention consists essentially of a recording sound-box carrying a light producing unit at-

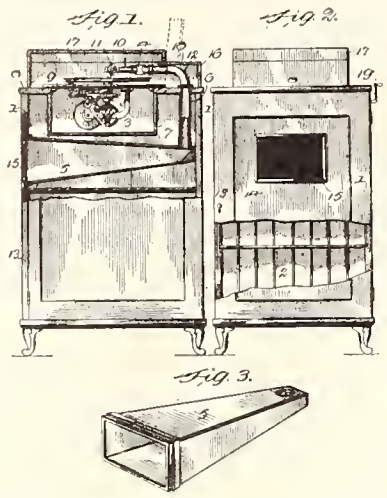


tached to the diaphragm of the sound-box, with a light directing means maintained at a constant distance from the photographic film and capable of being vibrated with the diaphragm to direct a light beam of constant width and intensity upon a photographic film so as to produce thereon a sinuous line of even width representing sound waves, along which line the sensitive emulsion is affected by the light.

Fig. 1 is a vertical cross section through a sound-box equipped with the invention, and Fig. 2 is a face view, partly in section, of the same.

Talking Machine. Eldridge R. Johnson, Merion, Pa., assignor to Victor Talking Machine Co., Camden, N. J. Patent No. 856,704.

The object of this invention is to provide a casing or cabinet for talking machines and to arrange the parts thereof in such a manner that there will be no objectionable projections or parts extending from the body of the casing of the machines which would otherwise be liable to become injured or disarranged, and also to arrange said parts in such a manner that the operative mechanism of the talking machine may be entirely inclosed, thereby making the appearance of the apparatus much more pleasing, and



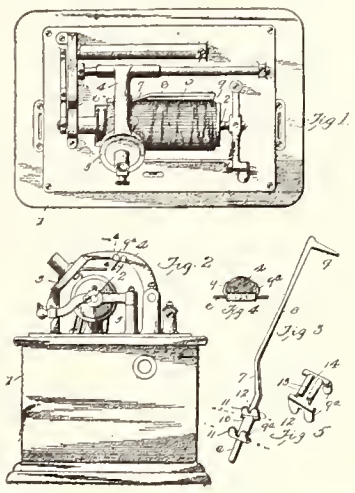
improving the quality and permitting the modification of the sounds produced thereby.

Fig. 1 represents the improved talking machine and cabinet therefor, shown in section at its upper portion; Fig. 2 is a front elevation thereof, showing the lower portion of the front of the casing broken away, and Fig. 3 is a detail perspective view of the sound amplifying portion of the sound conducting tube.

Phonograph Attachment. Walbridge G. Horton, Brattleboro, Vt. Patent No. 856,873.

This invention has particular reference to a device for attachment to the ordinary and well-known type of cylinder record talking machine, the object of the invention being first to provide a device or more properly a gauge, by means of which the operator of the machine may readily determine the proper point at which to place the reproducer needle upon the record so that the proper reproduction of the entire record is always assured, including the announcement at the beginning of the record; second, to provide such an attachment which may be quickly and easily applied to or detached from any of the well-known and standard type of talking machines, and, third, to provide a gauge attachment which is adjustable to suit different conditions, and which will be compact and out of the way, and will not interfere in any way with the working of the machine.

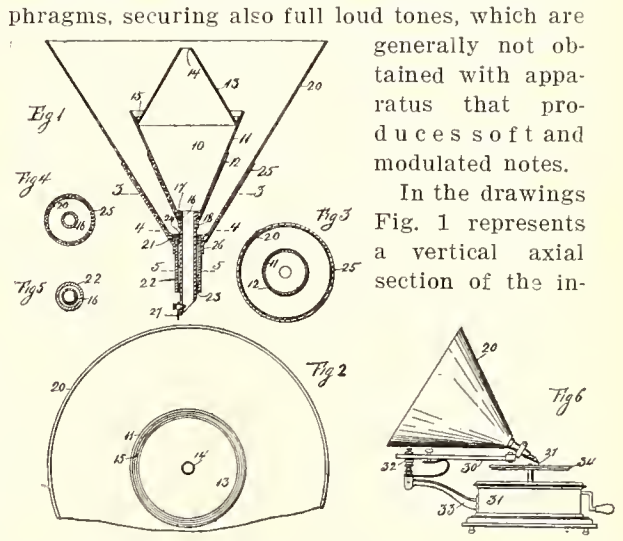
Fig. 1 is a top plan view of a talking machine having the improvements applied thereto. Fig. 2 is an end elevation of the same; Fig. 3 is a detailed perspective view of the attachment removed from the machine; Fig. 4 is a sectional



view of the reproducer arm taken on line 4—4 of Fig. 2, with the gauge support in position thereon, and Fig. 5 is a detail perspective view of the clasp or means for supporting the gauge finger.

Sound-Producing Device. William C. Smith, Paterson, N. J. Patent No. 857,209.

This invention relates to a sound producing device which is specially applicable to talking machines and the like. Its organization comprises means for producing sound without the metallic effects of ordinary horns and vibrating diaphragms, securing also full loud tones, which are generally not obtained with apparatus that produces soft and modulated notes.



In the drawings Fig. 1 represents a vertical axial section of the invention, Fig. 2 is a partial top plan view of Fig. 1, Fig. 3 is a section of Fig. 1 on the line 3, 3, Fig. 4 shows a section of Fig. 1 on the line 4, 4, Fig. 5 represents a section of Fig. 1 on the line 5, 5, and Fig. 6 shows a talking machine with the invention connected therewith.

INDESTRUCTIBLE RECORDS

Are Destined to Win a Wide Popularity When Placed on the Market This Fall.

The Indestructible Phonograph Record Co., of 226 Hamilton street, Albany, N. Y., are busily engaged in making a stock of their records to be put on the market at the time their first catalogue appears in August. The records made by this company are practically indestructible in that they can be shipped anywhere by mail without breaking, are not liable to damage while on the dealers' shelves, and, what is equally important, they give clearer reproductions and never become worn and scratchy. A large factory is occupied by the company in Albany, N. Y., with facilities for meeting heavy demands, and recording laboratories under the control of a competent musical director are maintained in Brooklyn, N. Y. The records are moderate in price and it is expected that their debut will make quite a stir in the trade.

UDELL'S GREAT LINE OF CABINETS.

Suitable for Sheet Music and Talking Machine Records—Styles and Prices to Suit All Demands.

A music cabinet in connection with a piano and a record cabinet with the talking machine are as necessary as the music and records themselves for, besides lending an air of neatness to the music room or parlor, it protects the contents from tearing or breaking, and from the clouds of dust so much in evidence in cities. The Udell Works, Indianapolis, turn out an extensive line of cabinets for sheet music, and both cylinder and disc talking machine records. Numerous sizes are offered in a variety of finishes. The different styles of cases render it an easy matter to choose something in harmony with the instrument and the other furniture of the room. The booklets and prices furnished by the Udell Works should prove of interest to every piano, music and talking machine dealer.

TRADE ASSOCIATIONS DISCUSSED

By J. Newcomb Blackman, Proprietor of the Blackman Talking Machine Co. and Vice-President of the Eastern Talking Machine Jobbers' Association, Who Explains Their Benefits to Both the Jobber and Manufacturer—Next Meeting in New York.

In an informal chat recently with J. Newcomb Blackman on associations and their value to the trade, he said: "Most trades have formed an association of jobbers or dealers, and where properly formed and managed great improvements in trade conditions have resulted. The talking machine business is not an exception, and for many reasons needs organization among jobbers. Jobbers and dealers are protected, to a large extent, by the restrictions placed upon them by the manufacturers through the agreements under which machines and records are sold, but this does not prevent practices that are injurious to all concerned. The manufacturer gives the jobber and dealer an opportunity to make a good profit, but he often wastes a large part of it through poor judgment in soliciting and handling business. A very large part of the jobber's profit is wasted each year in bad debts, which could be saved if the credit department was handled as carefully as the sales department. The dealer, who has no reputation at stake, does not hesitate to get his full limit of credit from as many jobbers as possible, and competes with responsible dealers in an unfair manner until, through having violated agreements and having obtained his limit of credit, he is suspended and eventually fails.

"This practice not only cuts deeply into the profits of jobbers, who are involved by having given credit, but has robbed the loyal dealers, who do not dare follow such competition, of considerable business which they should have had, thus injuring the general trade. Although it is customary in the Eastern Talking Machine Jobbers' Association, as well as others, to have credit information on file that protects members from the above practice, the dealers cannot fail to realize that it is really a protection for them, as organization on the part of jobbers, from whom dealers get their goods, will separate the good from the bad, and protect the loyal dealers who uphold prices, pay their bills and work for the improvement in the trade against the competition of the other class, who compete unfairly and tend to ruin the trade.

"Any organization among jobbers should be for the purpose of improving trade conditions, and as the jobber depends on the dealer for his revenue, he must try and improve the dealer's conditions. Such improvement, of course, is shared by the factories in increased sales and greater confidence by the trade handling their goods. Organization, providing a system of stopping leaks in the profits of the jobber and dealer, will make the net profit much larger than it is at the present time, for it will stop many unnecessary losses. Restrictions, governing the prices and conditions under which talking machines are sold, have proved the salvation of the business, but the jobber and dealer should do his share by not attempting to touch the very boundary line of violation.

"The present Jobbers' Associations, both Eastern and Western, represent many of the largest jobbers in the country, and manufacturers have shown their willingness to listen to any plan for improvement of trade conditions when representing the combined opinion of their largest jobbers. I think both dealers and jobbers will agree that they are working under a more satisfactory plan with the factories at the present time, and that improvement each year has been shown by the manufacturer. The trade now buys records, confident that they will get their full profit, and that their surplus stock will be taken off their hands through exchange propositions.

"I feel that the two Jobbers' Associations have brought about any improvement much sooner than if the suggestions were not offered as a body. An opinion quickly obtained on any given subject, representing all jobbers, is of great value to the manufacturers, for it comes from those who are in the field of action and know the conditions.

"The Eastern Talking Machine Jobbers' Association now has a membership of 63 of the largest jobbers in the East, and at the annual meeting to be held in New York at the Hotel Astor on the 22d of July a large number of new applications will be acted on. Any talking machine jobber who has his own, as well as the general interest of the trade at heart, should attend this meeting, if he is not a member, should send in his application for membership at once.

"The annual election of officers will be held at this meeting, and out-of-town jobbers will have an opportunity to combine entertainment with business. Any Eastern jobber desiring information or an application blank from the Eastern Association is referred to Mr. A. H. Jacot, secretary, 39 Union Square, New York City. We are living in an age of organization, and any jobber who wants to increase his business and help improve trade conditions should help co-operate with his fellow jobber and the manufacturers by organization for the best possible results."

This Show Case and 50 per cent. Cash Profits are yours

Hohner Harmonica Display

SHOW CASE and HARMONICA ASSORTMENT

This offer consists of an excellent assortment of the best selling HOHNER Harmonicas, to retail at prices ranging from 25c. to $1.00, and a first-class show case, made of the best material and perfect in every respect. The assortment is made up of seventeen different styles, with not a dead seller among them. Each style comes in a separate package which is labeled to show at what price its contents can be retailed for and contains an assortment of keys. The case is made of solid quarter-sawed oak, plate glass, and is specially designed for displaying Harmonicas. The instruments appear on an elevated platform, under which there is room to store a small stock. With every case a number of price-tickets are given which can be placed on each instrument to display its retail value.

THIS IS WHAT YOU RECEIVE:

4 dozen Assorted Harmonicas, to retail at 25c. each	$12.00
2½ dozen Assorted Harmonicas, to retail at 35c. each	10.50
2 dozen Assorted Harmonicas, to retail at 50c. each	12.00
½ dozen Assorted Harmonicas, to retail at 75c. each	4.50
¼ dozen Assorted Harmonicas, to retail at $1.00 each	6.00
Total retail value of Harmonicas	$45.00
Value of Show Case, at least	12.00
Total Value	$57.00

Your Gain A Show Case which will last indefinitely 50 per cent. Cash Profit on your investment.

Size of case: 20¾ inches wide, 24¼ inches long, 14 inches high.

MOVING PICTURE AND AUTOMATIC MACHINES

THE MOVING PICTURE DEVELOPMENT.

Surprising Growth of This Enterprise—Immoral Pictures Will Not be Permitted—The Educational Influence of the Shows.

Moving pictures to-day have won a strong position as entertainers, and a good many who have been prone to look upon the business as of temporary duration have been surprised at its wonderful development. In all of the smaller towns over the country talking machine dealers and business men are becoming interested in moving picture theaters, and, as a result, there is tremendous activity all along the line. The firms who supply these specialties are extremely busy, and a great difficulty is experienced in having orders filled with anything like promptitude.

Associations are being formed to protect the legitimate business from those who would degrade the profession by presenting immoral pictures to the public. All of those things which savor of lewdness will be eliminated from every moving picture theater in the land. The moving pictures are to-day great entertainers, not only for the young folks but for the older ones as well. It is hardly possible to find a city in the land where there is one of these theaters iustalled which is not largely patronized by children; therefore, the subjects must be perfectly moral, and as such are great educators. Splendid pictures are shown of points of historical interest in every part of the world. Even the Arctic Circle has been invaded by the moving picture machine. There are to-day expeditions being formed to visit almost unexplored sections of the world to obtain photographs of animals as they move and live for the moving picture machine.

It is surprising when we come to investigate the amount of money which has already been put into this enterprise and the powerful effect which it is having upon the people of this country. It will be possible after a little while to see not only all parts of the world brought to our doors in realistic form, but plays will be put on in the various towns so that the people may listen to the music of splendid orchestras through the agency of the talking machine and witness speechless plays through the cinematograph which may in time revolutionize the whole theatrical business. It may be that plays will not be sent to the smaller towns in the future, and even on the stages in our larger cities entertainments will be supplied through the moving picture machines with talking machine accompaniments. The age is a wonderful one, but in no respect has there been more startling changes than in the reproduction and transmission of sound. Now the moving picture machine can bring the world to our doors and give us the latest dramas at a trivial cost. It is in every respect a machine age. After Dr. Cahill's invention we can turn on music in our homes just the same as we do gas and electricity, simply by turning a little button and listen to the latest operatic productions. Wonderful indeed is the advance which we are making into the sound realm.

The Card Printer

Prints your name on five cards for one cent. It is the best slot machine ever produced.

MANUFACTURED BY

The Card Printer Co.

79 East 130th Street NEW YORK

ILLUSTRAPHONES FOR AUSTRALIA.

Interest Manifested in This Machine in All Parts of the World.

(Special to The Talking Machine World.)

Philadelphia, Pa., July 8, 1907.

Coin-in-the-slot devices of every variety are meeting with extensive sale all over the world, the supply not keeping up with the demand. The Hawthorne & Sheble Manufacturing Co., of this city, have completed an order for a carload of Illustraphones, "illustrated song machines," for shipment to Australia. Penny arcades are springing up in all countries and a demand is being created for records in all languages, suitable to coin-in-the-slot talking machines. The above concern have recently received inquiries for their device from India, South America, Great Britain, Russia and other countries.

They have established an extensive photographic plant in charge of a competent expert for the purpose of making stereoscopic pictures of the latest song hits. All views shown by this concern are copyrighted, and a large variety of scenes and models of experience, are used in producing their pictures.

The Hawthorne & Sheble Manufacturing Co. are sparing uo effort to bring their product up to the high standard established by this concern.

VALUE OF THE AUTOMATIC PIANO.

In every business there are always good and bad times. Since the beginning of the "talker" business in this country dealers have invariably looked on the summer months as the time when trade reaches its low mark, and they must needs look for a paying side line to keep the ball rolling. This they have found in the automatic coin-operating piano. These mechanical instruments have leaped into sudden popularity, and are now in demand everywhere amusements of any kind are found. With the coming of the first warm wave parks, pavilions, candy kitchens, cafes, etc., commence their season of prosperity. Now, in these places, where the public gather to while away the time, music is in great demand, and proprietors who hope to hold their trade, know that they must furnish it. Hitherto it has been necessary to hire talent at their own expense. But this is now a thing of the past. All they have to do is to instal one of these pianos, and the public does the rest. Not only do they pay to hear each air, but by so doing they pay for the instrument and incideutally the owner reaps a rich profit.

Looks like a pretty good proposition, doesn't it? Well, the talking machine trade seem to think so, for dealers in all parts of the country are snapping up agency rights, and during the hot weather are doing a ripping good business. One of the oldest and most reliable instruments on the market to-day is the well-known "Peerless," manufactured by Roth & Engelhardt, of this city. This piano from the start has held its position in the front rank, and though far from the cheapest in price has always repaid purchasers for their coufidence. No device on the market necessitates more care in every detail than these pianos, for the terrible strain they are subjected to in arcades, etc., where they are kept working away ten to fifteen hours a day is sure to ruin one of inferior manufacture, therefore it pays to be open-handed at the start and not stand on a difference of a few dollars. If you find things rather dull, Mr. Dealer, why don't you get wise and put in a line of these self-playing instruments. There is a good margin of profit in it for you, and you'll find a big field open for their exploitation if you only look around.

IKONOGRAPHS IN DEMAND.

Leading Talking Machine Jobbers Take the Agency for This Moving Picture Machine—Their August List of Films.

The Ikonograph Commercial Co. have made wonderful progress during the past month, and have annexed many of the largest jobbers in the country, who will handle their machines on a jobbing basis. This company are doing business on the same plan as the large talking machine manufacturers, namely, selling only through jobbers, and standing firm on price regulation. One decision reached deserves especial notice. They will not sell to department stores. This will protect the small "talker" man and give him a better opportunity to make good. They will issue monthly lists of films. For instance, the subjects for August are as follows:

		Length.	Price.
1.	The Funny Story	20 ft.	$1.50
2.	Skating	20 "	2.00
3.	The Dude and the Mine Explosion	38 "	3.50
4.	Lady Acrobats	26 "	2.50
5.	What the Blind Man Saw	15 "	1.50
6.	Thick Elephant.	15 "	1.50
7.	Shooting the Chutes	15 "	1.50
8.	French Dancing Girls.	20 "	2.00
9.	The Lung Test	25 "	2.00
10.	Breaking Up Housekeeping	25 "	2.50
11.	Profesosr Killem	32 "	3.00
12.	Reading a Letter	20 "	2.00
13.	Herald Square	18 "	2.00
14.	Boot Black	30 "	3.00
15.	The Human Trolley	16 "	1.50
16.	Darktown Café	37 "	3.50
17.	Washington Flyer	20 "	2.00
18.	Coon Kisses	15 "	1.50
19.	Grand Entree of Barnum & Bailey's Circus.	69 "	7.00
20.	Cake Walk	15 "	1.50
21.	Street Circus Parade	30 "	3.00
22.	5th Ave., 42d St., New York	15 "	1.50
23.	Baby's Bath	41 "	4.00
24.	A Policeman and the Cook	30 "	3.00
25.	Scenic Railway	23 "	2.25
26.	Miniature Railway	10 "	1.00
27.	Water Fall.	10 "	1.00
28.	Coast Scene	26 "	2.50
29.	Clown's Head.	15 "	1.50
30.	Conversation, Two Circur Clowns	20 "	2.00

ANXIOUSLY AWAITING DECISION.

Two hundred proprietors of moving picture shows in New York, representing, it is said, an aggregate investment of some $8,000,000, are anxiously awaiting a decision from Judge Blanchard, of the Supreme Court, on an application made by Nicola Seraphine, as president of the Moving Picture Exhibitors' Association, for the issuance of an injunction restraining Mayor McClellan from interfering with the licenses of moving picture shows. The proceedings bearing upon the above were referred to in last month's World at length.

Atlanta Moving Picture Machine and Film Renting Supply Co. is the title of a newly incorporated concern of Georgia. The capital stock is $3,500. The incorporators are N. C. Williams, Sr., F. J. Williams, Jr., and F. J. Kyle, all of Atlanta.

Robert J. Armstrong has opened a nickel show at St. Johns, Newfoundland.

We Supply the Wants Of Moving Picture Theatres

Gayety Theatre Building

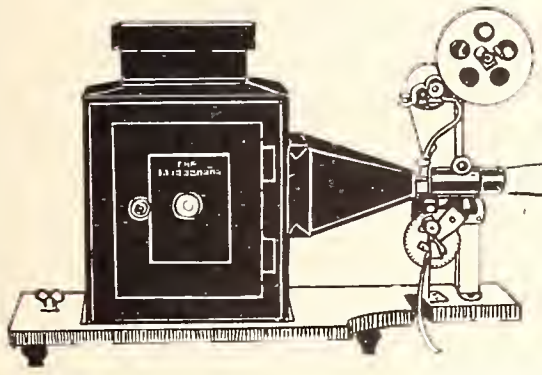
14th and Locust Sts., St. Louis, Mo.

A WINNER!!

EVERY JOBBER WHO HAS SEEN THE

IKONOGRAPH

HAS SIGNED A CONTRACT AND PLACED HIS ORDER "IMMEDIATE"



EVERY SHOT A BULL'S-EYE

ISN'T THIS A REMARKABLE RECORD???

DOESN'T IT PROVE THE IKONOGRAPH TO BE WHAT WE CLAIM FOR IT???

A Perfect Moving Picture Machine

FOR THE HOME, WHICH A CHILD CAN OPERATE.

THE DEMAND IS *HERE—NOW—TO-DAY.* CAN YOU AFFORD TO WAIT???

OUR POLICY is broad and permanent. We sign contracts with representative firms who agree to visit the trade, and we aid them in every possible way to develop the business. We do not sell direct to dealers. The price is fixed and will be maintained.

A SUGGESTION.—Have a frame made, 18 inches by 2 feet 6 inches in size; stretch a piece of white muslin over it and hang in your window in the evening. Place our Ikonograph so that the picture will just focus on this screen, and then have a policeman handy to keep the crowd moving. You will need him—we have tried it and know.

Retail Price $40.00

WITH MOVING PICTURE MEN.

The Marvelous Growth of the Nickelodian or Moving Picture Theater—Production of Machines for Home Use—Why the Talking Machine Man Is Used to Exploit the Device——Moving Picture Camera Next—Big Future for This Industry Without Question.

In this broad country of ours there is hardly a human being who has not seen moving pictures in some form—at election time, at the theater or church lectures—aud we may safely say that the majority of these people enjoyed this fascinating mystifying inventiou. One of the strongest proofs of the popularity of motion pictures is the marvelous growth of the Nickelodian industry. In almost a night, as it were, these little moving picture theaters have sprung up in every town and city in the land. And no sooner are the doors opened than each and every one are packed to its capacity. Not one night, but every night, rain or shine, the public digs down deep into its pockets for money to pour into the laps of the waiting operators. Now it stands to reason that if the public is willing to go out evenings and push and shove for the sake of sitting for a half hour in a close, stuffy room to watch one of these performances, it will greet with joy the knowledge that for a nominal price they can have the same enjoyment in their homes.

* * * *

Clever inventors have been trying for years to solve the problem of producing a motion picture machine which should be at once inexpensive, simple, safe and effective in the hands of any amateur. At last perseverance along these lines has won out, and to-day there are concerns in this country that are prepared to market their product with others who will be ready inside of three or four months.

* * * *

We take some pride in the fact that we were the first journal to foresee the great prospect for this new industry, and after having made a thorough study of the subject we may here predict a future for this business never equaled by any other amusement device save by the talking machine; in fact, these two go hand in hand, for what the talking machine is to the ear the motion picture machiue is to the eye. Both are inventions that have and will add a hundred-fold to the enjoyment of an evening at home. What could be more entertaining than a motion picture of youug people gliding through the graceful steps of the miuuet to the strains of music from a talking machine, or listening to a record, made by some popular or operatic singer, and be able to see the whole illustrated with striking faithfulness to life enhanced by stage settings, etc., or perhaps listen to an opera and have the whole pass before you on the canvas. All of this is possible; in fact, a certainty, and there are a hundred other fascinating and instructive ideas which come to mind in this connection.

* * * *

A compliment has been paid this trade by these new companies on account of the fact that without hesitation they turned to the talking machine men to exploit this new device. There are two salient reasons for this decision: Firstly, because of the close associatiou of the "talkers" and motion picture devices. In both cases the sale of a machine is but the beginning of the business to be derived from each customer, for these companies, like the manufacturers of talking machines, will each month issue new lists of films, and like the records, subjects for pictures are inexhaustible. Secondly, this trade is a new one founded on the most modern methods, and comprised for the most part of young, bright and energetic men who are not in the habit of sitting quietly down and letting the "talkers" sell themselves, but are always busy hatching out new schemes for their exploitation.

* * * *

Probably the gravest difficulty to be overcome in order to place this new device withiu the reach of the home lover was the large cost of films. Hitherto on accouut of the Eastman trust these ran about 15 to 16 cents to the foot, and as each film ran up into the hundreds of feet it can be easily seen that this carried the price far beyond the means of private parties. With the new machines, however, this has been greatly reduced, the pictures being made to retail at about 10 cents a foot, which still offers both jobber and dealer a large margin of profit, these subjects running from five feet upward (about three times the number of pictures to the foot), most of them under twenty feet, being of the endless variety that can be run indefinitely.

* * * *

Another valuable addition will be ready in this line before many months, namely, a moving picture camera at a popular price. This will be the starting of one of the most fascinating pastimes known to science—the ability to picture life as it really is. For traveling, hunting, etc., it will absolutely eclipse photography in any other form, for there is as much difference between a common photograph and a motion picture film as between an Egyptian mummy and a body filled with virile life and beauty. This will, of course, mean more coin for talkiug machine men, and blank films will be in great demand. Doubtless a large number of our readers were skeptical in regard to the feasibility of turning out a motion picture machine that would have a great demand among the public at large. but even we, who are thoroughly conversant with existing conditions, were surprised at the instantaneous indorsement given this machine by some of the largest talking machine jobbers in the East after having seen what the machines would do. We firmly believe that before another year rolls by a large percentage of this trade will be enjoying a good fat revenue from their sale.

* * * *

The more one studies the proposition the better it seems; from an advertising standpoint nothing can compare with it. Dealers or jobbers who are located on prominent thoroughfares can keep public interest at a white heat by erecting a canvas in their windows and every night, have an employe operate a machine inside the darkened store, and throw the pictures on the sheet. This will never fail to attract a crowd; theu insert some slides made for the purpose, reading something like this: "We see that you have enjoyed watching our moving pictures. How would you like to be able to owu an outfit yourself, etc., etc. Come in and let us show you how this may be doue, or don't fail to investigate our easy payment plan." There are no end of possibilities for publicity, and not only will it mean trade in this line, but it will boom your "talker" trade also.

HARBACK & CO.'S EXTENSIVE LINE.

(Special to The Talking Machine World)

Philadelphia, Pa., July 7, 1907.

Harbach & Co., the big motion picture machine agents at 809 Filbert street, report business of a high order for the past mouth. This company is one of the most progressive in the trade, and make a specialty of carrying a large stock in everything, and they have a large number of specialties which are big sellers. Talking machine men who are desirous of laying in a stock of supplies, such as oxygen, ether, limes, carbon, carrying cases, etc., etc., will find them headquarters. They also have a complete list of song slides, which are always up to date.

HERE AND THERE IN THE TRADE.

Arthur Caille Opens Palatial Quarters in Chicago—Fighting Attacks of Municipal Authorities—Councilman Gill Opposed to Restrictions—The Ethiopian's Views—New Field for Biograph—Other News.

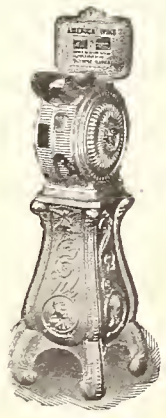
Arthur Caille, of the well-known firm of Caille Bros. Co., of Detroit, has opened a most elaborate moving picture theater on State street, near Jackson Boulevard, Chicago. It is called "The Lyric," and it is said $15,000 has been spent in decorative effects. Mr. Caille, who is a very progressive man, and one of the members of the great slot machine manufacturers of Detroit, is looking about to find a proper location for the opening of a beautiful theater in New York. This firm already have an Eastern branch in our city, and with the well-known progressiveness of the members of the Caille corporation it is probable that we shall see them actively engaged in the moving picture theater enterprise of New York.

Moving picture people in New York have been considerably exercised over the revoking of licenses in this city, aud the Moving Picture Exhibitors' Association has had several meetings, and are interested in improving the exhibitions in every possible way by suppressing anything that may be criticised. They have appointed a committee to take up the subject with the Mayor personally. This association includes the various boroughs of New York, and no one can become a member unless he signs a written agreement to obey the laws and ordinances and to avoid lewd and wholesome exhibitions. This association has an office at 229 Broadway. Nicola Seraphine is president and Chester Martin, secretary.

John T. West has obtained a concession from the Auburn & Syracuse Railroad Co. to locate a moviug picture show on the company's property at Lakeside Park, Auburn. The show will be conducted in a tent with black lining for day performances.

Councilman Hi Gill, of Seattle, Wash., objects to the recently enacted ordinance covering licenses for amusements, and wants a new one passed. His objection is to the section of the ordinance requiring licenses for picture machines, weighing machines and other devices that take nickels and pennies out of the pockets of Seattle citizens. In the ordinance as passed was a provision that these machines should pay a license of $5 a year where they were operated by a nickel and $1 a year when a penuy would start them going. Mr. G. wants to have this section eliminated. He maintains that the provision taxing these devices was smuggled through the council, and that it is grossly unfair.

"Strange thing that moving pictures do not appeal to the masses of negroes," said an amusement man the other day. "Of course, a moviug picture show exclusively for negroes has not yet been tried, but I speak from the experience of good show men." In large towns,



TYPE E

THE MUTOSCOPE

For Summer Parks, Penny Arcades, etc., has proved itself to be the greatest money earner of all coin-operated machines. In fact it has made the "Penny Vaudeville" what it is to-day. The privilege of free exchange of pictures keeping them fresh and up-to-date, make it always attractive. Our New Type E Mutoscope, besides being handsomer in design, possesses many improvements in mechanism over former models.

Write for Particulars

AMERICAN MUTOSCOPE & BIOGRAPH CO., 11 East 14th Street NEW YORK CITY

PACIFIC COAST BRANCH, 116 North Broadway, LOS ANGELES, CAL.

THE GREATEST EVER!

MANUFACTURED BY
HAWTHORNE & SHEBLE MFG. CO.,
HOWARD & JEFFERSON STS., PHILADELPHIA. PA., U.S.A.

Drop us a postal card and we will tell you all about it

We Make Pennies Grow

If you deposit your savings in a bank, you may earn 3 per cent. or possibly 4 per cent. Invest them in a Penny Arcade and your investment will net you 150 per cent. to 300 per cent. per annum.

LET US PROVE IT TO YOU.

Let us show you how you can gain an independent income by an investment of $600 and upward.

We will start you, assist you in every way in making your establishment a profitable one, and give you the benefit of our 20 years' experience both as operators and manufacturers.

WE WILL SEE THAT YOU MAKE A SUCCESS, for *your success* will mean *our success.*

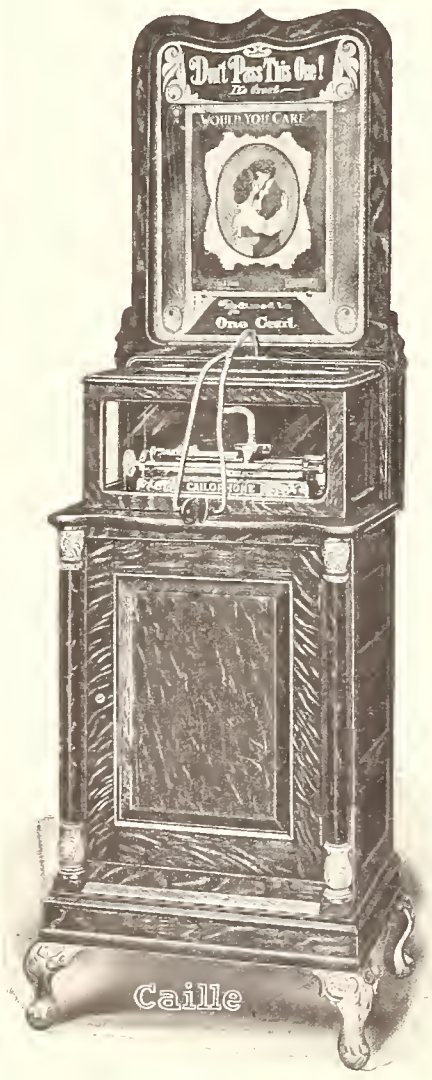
Given a fair location, and that is easily found in any town with a population of upward of 5,000, your investment will be returned to you in four or five months, after which all receipts are CLEAR PROFIT.

Just now is the *time to start* and take advantage of the spring and summer season.

Your town certainly should have an ARCADE. If there already is one in operation, YOU start another better one and show that you are up to the minute and a hustler.

If you are now operating an ARCADE, improve the same by adding CAILLE MACHINES and CUT DOWN REPAIR BILLS.

No machines like CAILLE MACHINES for showing big receipts!!



The public prefer Caille Machines, as they always work and always work correctly. They never are out of order.

No scales like CAILLE SCALES, and we make 5 different styles, all of them absolute leaders.

But we also make the famous CAILOSCOPE and have recently patented the CAILOPHONE, both of which machines outdistance anything on the market.

In fact we make *257 Varieties*, all of them "*Caille Quality*," which means excellence in every detail of construction, mechanism and appearance.

A postal Card will bring you our handsomely illustrated Catalogue for 1907, showing the largest line of coin controlled machines manufactured in the largest plant in the World devoted exclusively to the construction of automatic devices.

where such shows for white people pay handsomely, negro attractions of this character have been started and gone under. "I have analyzed the cause and found it to be due to the fact that the average negro wants to see a show with an abundance of noise, something like a plantation minstrel, with lots of singing and dancing and horseplay.

"He doesn't seem to grasp the idea of moving pictures, and one of these reasons, too, is the fact that the persons in the pictures are white. "When a negro goes to a show it pleases him most to see black faces in the performance. But no pictures are made with Senegambian faces. The amusement business has to be figured down to a very fine point, and closely studied, or else a fellow will sink his wad quickly. "

The great and increasing popularity of the biograph offers unlimited inducements and opportunities for inventors to extend the scope of this interesting novelty. A New York man, recognizing also the demand for post cards, has devised a card embodying a miniature biograph. The card has a compartment in the center. Fitting closely in this compartment is a pack of thin cards, one edge of the cards being bound and hinged to the base card. Printed on the cards is some interesting scene, each successive card showing the next view of the moving. To show the scene the cards are raised, with the thumb in a position to release each card successively. There being no complicated parts in this novelty, the cost of manufacture is said to be low enough to admit of practical use.

Inasmuch as The World reaches a great many people who are interested in moving pictures, it has been decided to open a special department so that moving pictures may be broadly treated. Many of the talking machine men are interested in moving picture plans, and it is possible that this new department of The World will cause a good many of our readers to carefully investigate the possibilities which lie in the moving picture business.

The Kentucky and Indiana Amusement Co. is the title of a recently incorporated concern in the West. The incorporators are J. P. Kemp, E. Bradfute, L. C. Field and J. Kallison. The capital stock is $2,000, and they propose to operate moving picture shows.

Charles Cassassa has opened up an electric theater at 255 Main street, Danbury, Conn. It is believed that Mr. Cassassa will make a decided success out of this enterprise, for it gives to Danbury a kind of amusement which presumably will be very popular, as there is a large factory population in that city.

Moving pictures are now being exhibited in India, according to reports by agitators, as a means of encouraging the revolution idea among the natives. The pictures portray some of the scenes wherein the Japanese troops are putting the Russians to rout. The moral is that the East Indians can do the same with the English when the proper time arrives.

There is a tendency in all cities now to impose stricter regulations upon moving picture theaters. In Camden, N. J., they are now taxed. What next?

The Crystal Theater, Riverside, Sioux City, was opened up last month and an excellent program of moving pictures and illustrated songs is given.

Joseph Ridger has erected a building at 718 South Broad street, Philadelphia, for a moving picture dealer.

Lamb & McAuley, of Fort Smith, Ark., opened a moving picture theater in the Creekmore Building, of that city, last month.

Lawton & Joyce, of Marquette, Mich., will open up a moving picture theater at Green Bay. This will make five houses under this management.

HOW MOVING PICTURES ARE MADE.

Interesting Posing for Illustrated Songs—Special Figures Desired—Some Interesting Facts Concerning the Making of Pictures—How Young Women and Men Are Selected for This Kind of Work—Easy to Find Handsome Figures for Reproduction.

In response to one advertisement recently printed calling for "handsome young men to pose for pictures" there appeared young men to the number of five. Of these two could not have been by any stretch of the imagination considered handsome. The other three were well dressed, and, generally speaking, sightly appearing young men, though one of them was far enough from handsome to put him out of consideration, while of the other two neither was really handsome, though what with their other favoring qualifications both would answer for the purposes required. And so out of a bunch of five young men there were found just two who, though not coming up to the highest standard, would do.

What they were wanted for was to pose for pictures to be reproduced on lantern slides to be used on the stage with illustrated songs. For an illustrated song there are usually required seventeen slides. As to its words, the song is likely to consist of two verses, with a chorus repeated after each verse, thus giving the song as sung four sections.

One of the lantern slides used with the song shows a reproduction of the title page of its sheet music, and this picture is first thrown on the screen; and then as the singer sings it the pictures in illustration of the words are shown.

Most of the illustrated songs are love songs, says a writer in the New York Sun, and so of the men required for the illustration of such songs the greater number must be young. It is easy to say what would be the ideal requirements of a man who would make a complete satisfactory picture of a lover.

He must be of good stature, anyway, and then he would need to be of good figure and bearing, a fine, manly, courageous young man, and withal handsome. As such a combination is tolerably hard to find in one young man, the lantern slide people have more or less difficulty in finding really suitable subjects. In search of them they advertise in the newspapers, and have recourse to theatrical agencies, where they may find actors engaged in minor parts or other young men who meet the requirements and are willing to pose.

Occasionally, from one or another of these sources, they get precisely what they want; more often, as happens in so many other pursuits, they must be satisfied to get as near to it as they can.

The young man who finds himself selected to pose for a series of pictures for an illustrated song may be taken to be photographed a little distance into the country or perhaps to the seashore, there to be posed and pictured, for many of the song pictures are shown with a nature background, and it is sought to make this true to the song. If a city background were required the subject would be posed and photographed in city streets.

For some songs a figure in uniform may be required, as the man in the song might be a letter carrier, or perhaps a military officer. If uniforms are required they are supplied by the lantern supply people who make and supply the pictures, and they pay all expenses where the figure is posed and the pictures taken out of the city.

For this work of posing for illustrated song pictures the pay is $4 a day, which may not seem like very large pay, but it isn't so bad when it is considered that the hours are short and the work easy; and really it is likely to be so much velvet for those who can fill the requirements and who have the time for it.

Frequently there may be required for one series of pictures more than one day's sittings, perhaps a day and a half, or it might be two days, making the work at the price paid fairly remunerative. It cannot, however, be followed as an occupation, but only as occasional work.

For if there were shown in the pictures displayed with illustrated songs always the same figures and faces, the eye would quickly discover that sameness and it would destroy the illusion; the pictures must be made for and belong to one song only, and so not only must new pictures be made, but different figures must be posed for every song.

The lantern slide makers keep a catalogue of all the subjects that have posed for them, and in this catalogue are jotted down not only names and addresses, but such personal characteristics as might serve as a guide in the selection of subjects to be called upon to pose in the future as occasion might require, but commonly, to avoid repetition in the pictures, once in, say, six months, would be as often as subjects would be called upon, and so posing for pictures for illustrated songs is an occasional employment only.

Women are posed for pictures for illustrated songs as men, and, of course, handsome women are far more numerous than handsome men; but still it is not so easy as it might seem it would be to find handsome young women exactly suited to the requirements of this work. The young women required are found among artists' models, and sometimes, as in the case of young men, through theatrical agencies.

One might think that among the artists' models a sufficient number of subjects might be found without trouble, but among these one might be especially admirable and in demand among artists because of her beautiful eyes, and another because of her beautiful mouth, but for song pictures the subject must fill a sort of all-around requirement.

Still, it is easier to find handsome young women for song pictures than it is to find handsome young men, and in this work the young women may find somewhat more frequent employment, for their pictures may be used on the title pages of sheet music, and young women may be often pictured than young men in song pictures because of the greater variety that may be imparted to such pictures by women's more varied attire.

THE BIOSCOPE IN SUNNY ITALY.

How the People of Verona Are Entertained by Moving Pictures—The People Rapturously Applaud Reproductions on the Bioscope and Grow Wildly Enthusiastic in a Performance Which Lasts an Hour or Two.

It is fete day in Verona, and it is lovely to feel feted. (If this appears as "fetid" I shall cable a curse.) Naturally, my idea of fete is concerned with special matinees at the theaters and gala evening performances, and the real American idea of fete. And that is precisely where I go to pieces here. For, if the 61,000 good people (including, of course, the usual sprinkling of bad ones) in this garrison town want to go to the theater, all they have to do is to don their "glad rags" and hie them to the Teatro Ristori.

Well, say you, what's the matter with the Teatro Ristori? Wasn't Ristori the most illustrious of Italian actresses, and isn't it nice to think that a theater should be named after her? To which I reply: Even so. But the beautiful Teatro Ristori—and it is, indeed, a very handsome, modern playhouse—is given over entirely to—you'll

never guess—the American bioscope, the king of cinematographs! Imagine the population of a big town, with shoals of naughty soldiers in its midst, being compelled on a general holiday to rush for its drammer to the bioscope!

Bills all over the town announce this great dramatic event at the Ristori, and the bills were so long and contained such a lot of promise, says Alan Dale in the New York American, that I felt bound to sample the entertainment that was to begin punctually at 2 o'clock. We are accustomed to just a dash of biograph in our Keithian-Proctor entertainments, and as a mere incidental figure. But here was drama in Italy beginning and ending in speechless motion-pictures.

Soldiers and children were allowed to enter at half-price rates, the military mind in Italy evidently being considered as non-adult. Ordinary mortals had to buy the usual "ingresso," and pay extra for any seat they might elect to occupy. It was funny to see the big Teatro Ristori filled with people anxious to sit through biographic drama, all studying programs a yard long, and quite as iuterested as we should be at the first production of a new play.

The various sets of pictures, in fact, were treated as dramas, and thoroughly explained on the program. For instance, the first picture was announced as a "grandly impressive social drama," called "The Romance of a Derelict," in eight parts. Each part, of course, was a picture, and it was labeled on the program as we label events in melodrama. Like this: "In Search of Fortune!" "Fido, the Loving Dog!" "Help from a Beautiful Lady!" "A Perilous Misadventure!" "Kidnapping the Child!" "Flight!" "The Dog Follows!" "Arrest!" "Recompense!"

The guileless Veronese applauded rapturously when the "loving" Fido, having jumped into the river after the kidnapped child, swam with it to the shore, deposited it at the feet of its tortured mommer, aud was recompensed by wholesale endearments. We, in our superior way, should have sniffed contemptuously at the igenuous prettiness of the thing. Even as bioscope, it wouldn't have suited us. We should have clamored for something more movingly moving-picture. Even the soldiers went into raptures over this "Romance of a Derelict," and the little Veronese children had the time of their lives.

The clicking biograph then proceeded, in its nervous, clicky way that always gives me a toothache. There was a colored fantasia in thirty parts, called "The Daughter of the Devil," actually set to music by the "maestro," Virgilio Virgili. There was also a "grand drama," called "The Daughter of the Rustic," with music by the extremely celebrated Gianni of Venice, guaranteed (on the program) to arouse the utmost enthusiasm on the part of the audience.

Honestly, all this appealed to me quite strenuously. It seemed to be such a simple and rational form of entertainment. We use our bioscopes for flavoring purposes, and here was a whole meal of it. I suppose I enjoyed it unduly because there was nothing to "criticise." No bad actors eating scenery, no ridiculous ladies emitting heroics. Moreover, the pictures were extremely good. They were shown upon a very big stage. They didn't quiver and wriggle and jim-jam about as some of our hasty moving pictures do. They were perfectly dignified.

Simple, simple Veronese! They were also treated to a tour of the Grand Canal of Venice, and they took it quite kindly. Venice is scarcely a hundred miles from here, but I imagine that most of the people in the Teatro Ristori had never been there. They were scarcely "traveled" folk—and I don't blame them, for getting around in Italy is not what one might call a cinch.

This entertainment lasted for about two hours, and it was as varied as its cinematographic limitations would allow it to be. Between each picture-drama there was a short interval, during which the lights were turned up, and the audience circulated. Attached to the theater was a café and smoking room, where light drinks could be sipped and cigarettes puffed. Behind the times? Oh, of course. Terribly behind the times—lamentably behind the times! But what's the dif, as long as you amuse yourself, and amuse yourself without hustle and strife, and turmoil and excitement?

I speak as though I should like to be "up against" this sort of thing for the rest of my natural. Of course I shouldu't. I cau quite see that it is sensible and intelligent and restful, but the germ of livelier happenings has been hopelessly embedded in my system. Still, I admire it all very much. The good people of Verona ask little for their good times and are satisfied with what they get. We ask much, and more, and most, and are rarely satisfied. The best isn't good enough for us—pampered children of a lurried civilization! The simplest is perfectly satisfactory to these nice, easy, lazy, iudolent Veronese kidlets.

Shows come to this town during the winter season, both to the Teatro Ristori and to the Filarmonico, but the demand for theatrical entertainment is not very keen—not nearly as keen as it is in an American city of one-quarter the size of Verona. This was a pleasant fete day for me. In the afternoon there was a band, and a very good one, in the Piazza Vittore Emanuele, with its cafés and its ancient amphitheater, and its charming outlook, and then this great bioscopic excitement in the evening.

I didn't exude any sigh for—Coney Island or roof garden!

A satisfied customer is the best advertisement a merchant can have, and he thoroughly appreciates that fact.

If ability and willingness to satisfy customers is the mark of a progressive dealer, the wide-awake retailer is many long laps ahead of a lot of manufacturers in certain respects.

The retailer endeavors to anticipate his customers' wishes. He is forever on the lookout for the best possible means of attracting trade. He is willing to go out of his way and put himself to no little trouble and inconvenience in order to please a customer, though she may be only a transient and he may never have seen her before.

The penny arcades in the various cities have been criticised by some as aiding immorality. The Moving Picture Society in New York are very anxious to suppress anything which tends toward lowering the public morals.

Moving picture shows are springing up in almost every town in the United States, and it is the intention of The World to chronicle from time to time all news of the character which directly interests our readers.

Evolution of the PEERLESS Coin-Operated Piano

These Pictures show how the PEERLESS COIN-OPERATED PIANO will turn into MONEY

There is no medium on earth to compare with these instruments as real money getters for every one who handles or owns them.

One PEERLESS took in a little over ONE THOUSAND DOLLARS from the 27th of June until the 27th of November last year—five dull months. Of course, this particular Piano was equipped with a 25 cent slot, but that only goes to show the high appreciation of the public — PEERLESS quality always brings a high rate of profit.

The PEERLESS COIN-OPERATED PIANOS do not stop running when ONE BARREL is filled with MONEY, they keep right on working while you rest.

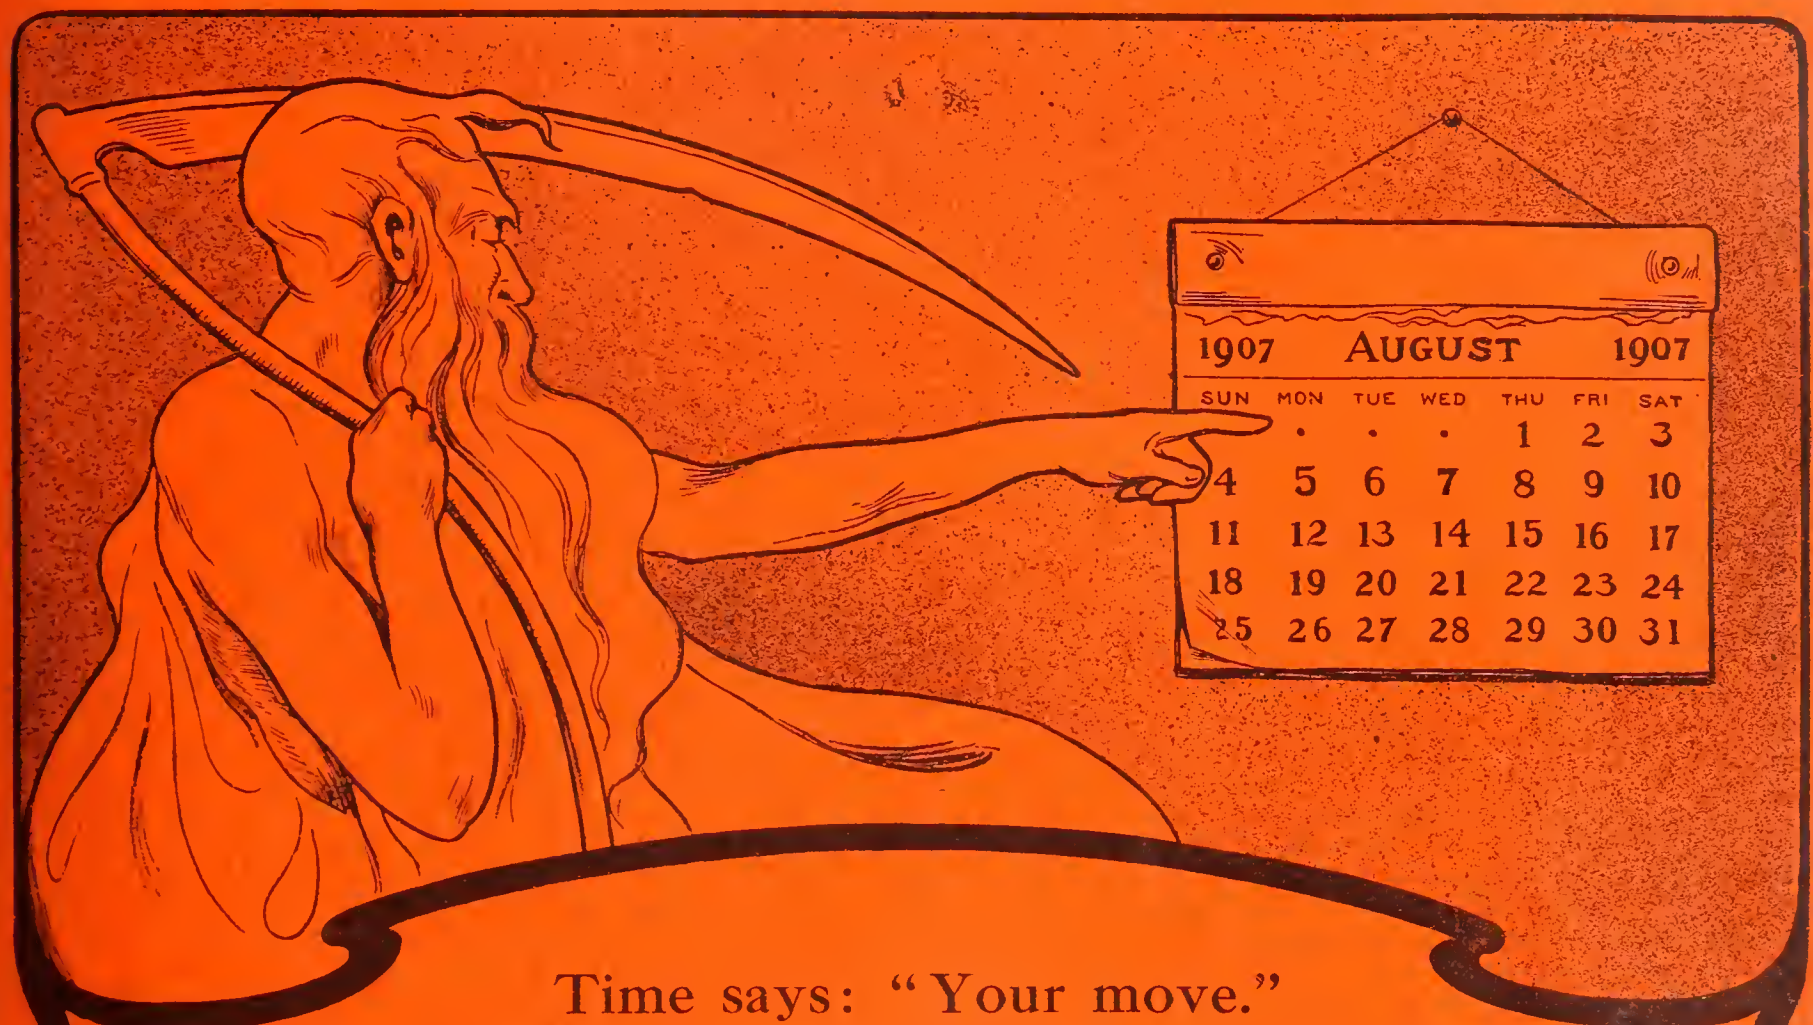
The TALKING MACHINE WORLD

AND NOVELTY NEWS

Published Each Month by Edward Lyman Bill at 1 Madison Avenue, New York, August 15, 1907



Time says: "Your move."

IN accord with the policy of the Talking Machine World not to permit the use of the front cover to any one advertiser for a longer continuous period than one year, we take our place on the inside next month.

We wish to extend our hearty appreciation of the interest shown in our cover announcements in the past, and our every effort shall be to warrant this interest in the future.

Meanwhile, you can depend upon The Tea Tray Company working hand in hand with its friends, and our constant aim, both in methods and manufacture, shall be—progress.

We intend to keep our patrons fully informed, and our policy of acting in perfect accord with the best interests of all our customers shall be maintained.

THE TEA TRAY COMPANY OF NEWARK, N. J.

FOUNDED 1867

Entered as second-class matter May 2, 1905, at the post office at New York, N. Y., under the act of Congress of March 3, 1879.

The Age of Combinations

The present time has been characterized by many as the age of combinations and certainly there are all kinds of combinations which affect directly the conditions in the various industries.

The best kind of combination however that we can name is the combination of the **Regina music box and the up-to-date talking machine.** It is the kind of a combination that will help you make dollars Mr. Talking Machine Dealer—easy dollars, too.

Don't you think that your customers would be interested in buying this music box, which of course is the Regina together with a talking machine attachment of the highest grade, particularly when the combination can be sold at an advance of only $25.00 above the price of the Regina music box?

Of course you believe that you can find customers—plenty of them—as most progressive talking machine men do, and the part that is specially attractive about this is that you can make your usual percentage of profit. You have with the REGINAPHONE, and that is the name of this combination, the quality standard. You have the best mechanism that can be created. You can't surpass the talking machine in its equipment throughout, with any hundred dollar outfit on the market. We might go further and say any talking machine costing more than one hundred dollars, for we have special points of excellence among which we might mention the long running Regina motor. We have all the improvements including the tapering tone arm and perfect mechanism, all encased in a most attractive cabinet. We make them in several case styles to please a variety of tastes, but we use one grade talking machine attachment in all of them and that is the best.

Get ready for your fall trade by investigating the REGINAPHONE. Investigate now—the quicker you do, the sooner the dollars will be coming your way.

GETTING A "FORWARD MARCH" ON THINGS.

There Is No Profit in the Past—The Age Is a Progressive One and the Talking Machine Men Are Moving to the Front of the Procession—The Spirit of Getting Close to Your People—The Value of Co-operation—Let the Public Know You Are in Business and Keep Up-to-Date.

Now, right about face and try to get a "forward march" on things! Let the dead past bury its dead. Forget it! Ancient history is a good name for the bygones, and just let it go at that. Don't stop to chew over old occurrences of the last six months and hem and haw over what might have been accomplished if this fellow had done his share, or grumble and growl and get yourself into a stew over the dead and unprofitable past.

That's it. There is no profit in the past. You cannot make money on what has been, except as a guide to what must be in the future. Recognize the mistakes or successes of the past and utilize them to the best advantage in the coming days. But right here let us tell you that it is a good thing in business not to do a thing twice over. Something new every time is the story—not wild, woolly and unreasonable, but simply different, progressive, more up to date, higher and beyond what you have done before, but always within the reach of your pocketbook and the appreciation of your customers. The procession is moving. It's marching onward. The world stands not still for a moment. The mercantile world is getting up higher-pressure steam for a swifter spurt, and every sense is keenly alert to the necessities and possibilities of the future, not of the past.

Now, talking about things is all right. It is a good thing to have counsel on all matters. What is that old story? "One to originate, many to cogitate and only one to execute." There you have it. Take the suggestion of one, call your forces together and talk about it, and then give it to one man to put into execution, placing the others under him. Now, we do not know what this thing is that you ought to do in your business. You ought to know that. Every man ought to know his own business best. But do not make a mistake. Every man does not think about the brightest things that his business is capable of by himself. Don't you ever think it. None of the big merchants made their successes by their own wit and intelligence, but they were smart enough to appreciate and put into execution the ideas of the numerous people whom they drew into co-operation with them. Get on to that, please. Don't get stuck on yourself and think you know it all, even if fortune did favor you by leaving you a business or putting you in a big town in a good spot where trade could not be kept out of your doors except by planting a gatling gun inside of it. No man ever got rich on his own effort. That goes without saying—that is, in business. He might do it in literature, but even then he had to have a publishing concern behind him. But in the talking machine business the money is made by an accumulation of energies—doing things, and not talking about them.

Mr. Dealer, do you know that the greatest and best advertisement in the world is the spirit emanating from yourself, passing through your salespeople to the customer, that bids them welcome and makes them come again? It costs little, it earns a return at once and makes business a pleasure instead of a trial. Your best education comes from your customers. Do you know that? Your salespeople, awakening their interest, immediately draw from the customers suggestions, criticisms and expressions of interest which, when conveyed promptly to yourself, can be turned to profit and to enormous advantage in the year's accumulation. If you are not on good terms with your salespeople and your salespeople are indifferent to your customers, it is easy to understand that you hear nothing of all this, and that your education in business is consequently suffering serious and vital interference. The source of supply of the true knowledge of affairs is cut off from you. You shut off the light which would lead you to success. You cut away the leading strings that would guide you safely into prosperity and profit.

Every store and shop, however small and wherever situated, can be harmoniously conducted. All elements that clash had best be gotton rid of. In the end the business must suffer unless these things are removed. The wrong kind of goods, the wrong kind of people, the wrong kind of store, the wrong kind of anything must be changed, and can be changed. Have nothing which clashes. Put nothing in the way of calm, pleasant relationship. From the top of the sources of supply—the producer—through your own hands into those of the customer, everything should move smoothly aud cheerfully. Long faces are ill faces in the mercantile world. The martyr, the growler, the kicker, the hot-tempered, quarrelsome, nagging natures will find themselves in the rear rank or left out of the procession entirely. If it be the leader himself, woe betide him. Bad enough for the subsidiary ones to be out of tune, but when the man who is supposed to give the keynote bright and clear for the work of his institution is off the key, what sort of a tune do you think the band will play?

It is not enough nowadays to tell people you are handling talking machines, records and accessories; you must keep your goods before the public, and window display is one of tbe best ways to do this. Let the public know you are in business and what kind of goods you carry. They do not all know it. Even if they do, they sometimes forget it. One of the main things in dressing a window is simplicity. This is necessary, especially in small towns or in small stores. The main thing is to get the people into the store, and how to do this is the question. It is often best to divide your window in three or four parts and have it appear distinctive. Do not put too many goods of the same kind in a window, for a few machines well displayed is better than a lot of them crowded or thrown in. Your location has a great deal to do with window display. If you are on the main street, then you have a good start, but if you are not well located then you must do something to bring the people to you. Plan out to this end. Try and fix it so they will come; that is the main thing. If you are on the main street, it is very simple. After you get the people to the store you must have something in the window that will hold their attention, and the next thing is to get them into the store. It is no trouble to sell them after you get them inside. If you want to test the worth of your window, go outside. Count the exact number of people who pass in a certain time, say for ten minutes; notice the number that glance at the window, the number that stop and look at the window, and the number who go into the store. Many dealers pay too much attention to the buying part of the business and not enough to the selling. Don't forget people like to read prices. Keep you store up to date. If anything new comes out, get them and see how they take. Put new things in the window and show them off. Even a weather bulletin or something of the kind in the window is a good thing. Many things can be used in a window to attract people that are inexpensive.

TELEGRAPHONE PROGRESS.

World Correspondent Much Impressed With Latest Developments Toward Perfection.

(Special to The Talking Machine World.)

Wheeling, W. Va., Aug. 4, 1907.

The writer had the pleasure of visiting the laboratory and factory of the American Telegraphone Co. the other day, and it was a most enlightening experience, especially to one interested in the future of the talking machine business.

As most of the readers know, the Telegraphone differs in the fundamental principles from all other sound-recording devices. While many of the expert talking machine men of the country have seen the original machine and have claimed that it could never be made a commercial possibility, yet the men who are now working on it have done many of those things that were put down as being impossible. The fact is that the last machines that have come through the factory are marvels when compared with the machines that were shown to the public about two years ago. The machine that will be offered for sale within a short time is a spring-driven, metallic disc machine, intended mainly for office use. The recording is done with an electric magnet and corrections may be inserted at will. This is made possible by the simplicity of the obliterating magnet, which will erase one word while another is being substituted. Of course, what is true of one word is true of the whole of the disc.

There is a force of thirty-one men working on the perfecting and construction of these machines. One is impressed with the class of men employed; there is little doubt but that they are all experts in their respective lines, or men of the Carnegie type that almost do the impossible.

Morgan O. Hart, who was instrumental in the writer's visit to his company's works, demonstrated very clearly that those in charge of the production are bound to obliterate all the great weaknesses as well as a great many of the minor ones before the public is asked to pass opiniou on the new talker. It looks as though the day is not far distant when one may hear an entire opera without a single break, or perchance we will see on a screen a great actor in his masterpiece while his lines are being reproduced from a thread of wire, that if needs be, may be almost unmeasurable. Who can tell?

Advertising is not a condiment to add spice to the business body, but a wholesome food to nourish it.

WHERE GENEROSITY PAYS.

Willingness to Donate Machine and Services to Charitable Affairs Make Friends for the Dealer or Jobber—Publicity That Is Helpful in a Mutual Way.

Few persons outside the dealers directly interested pause to think of the vast amount of charitable work in which the talking machine has been engaged. Hardly any church fair or concert but owes a considerable portion of its entertainment to the offices of a talker in many instances supplied and manipulated by the local dealer free of charge.

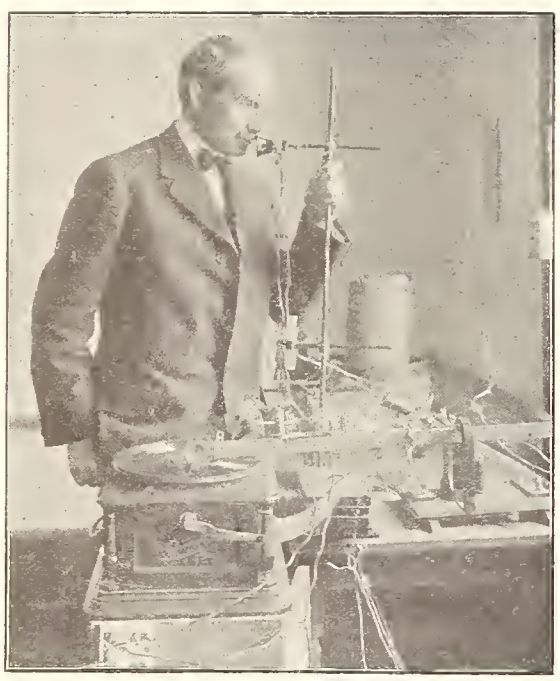
Both the organization giving the entertainment and dealer profit by this plan. The former because a larger crowd is attracted and they are saved the expense of fitting up or hiring considerable extra talent, and the latter because many customers are won at such affairs who under ordinary circumstances would not hear the perfect work of the machine or be sufficiently interested to investigate. Many dealers realizing the benefits arising from this form of publicity take pains to make known their willingness to lend their machine and services to such enterprises gratis.

TELEPHONY WITHOUT WIRES.

Dr. Lee De Forest Gives Practical Test of His New Scheme Across the North River—Marvelous Possibilities of the Future—Music Transmitted by Wireless 'Phone.

Wireless telephony has taken its premier hop, skip and a jump across the North River, for Dr. Lee De Forest is now completing the installation of a plant in the Delaware & Lackawanna terminal at Hoboken, which will have communication with a station to be established in the new West street building at the foot of Cedar street.

This distance of two miles, Dr. De Forest does not hesitate to say, will be an easy matter, for sounds that he prodnced in his laboratory at Fourth avenue and 19th street in April, and referred to in The Talking Machine World, were heard aboard the steamship "Bermudian" in the Narrows, a distance of twelve miles. The music of a graphophone played in the laboratory was not only heard at the Brooklyn Navy Yard,



DR. DE FOREST SENDING A MESSAGE.

where a receiver has been installed, bnt it was so lond that it drowned ont the wireless telegraph signals. The purely experimental stage was passed some time ago, aud the definite operations now under way are important as recognizing the feasibility and valne of wireless telephony for practical nse.

The next move will be to equip North River ferryboats with the system, and by proving its efficiency to extend it in time to the general marine service. The fact that no operator is needed, thns eliminating a large item of expense, leads Dr. De Forest to believe that vessels equipped with wireless telephony will nltimately outnumber ships with wireless telegraphy ten to oue.

"TALK ACROSS ATLANTIC."

"I consider wireless telephony more valuable as a commercial proposition than wireless telegraphy," says Dr. De Forest. "Although the distance between the first stations on opposite sides of the Hudson is only two miles, I believe it would be possible even now to talk with Sandy Hook. Before the end of the year we will be able to talk fifty miles, in five years' time 500 miles, and in ten or fifteen years across the Atlantic."

Dr. De Forest, who doesn't look a bit like his name, by the way, is keen, quick, as practical as he is thin, and thirty-four years of age. Convinced that wireless electricity was "the coming thing," he gave the subject special study while at Yale, and in 1902 applied for the first patent on his inventions, but did not begin experimenting with wireless telephony until last December. He has already made a name for himself with wireless telegraphy, but he dropped this some time ago to devote himself entirely to the perfection of his later inventions. It is interesting to note in this connection that the wireless telephone receiver is just the same as the receiver used at a wireless telegraph station.

"In the transmitter," said Dr. De Forest, "I employ an ordinary carbon microphone, such as is on every telephone in the city, and connect it with the wires which conduct the electric cnrrents from the transmitter and antenna wires to earth. Thns every change in resistance between the carbon granules affects the strength of the high-frequency currents going into the earth, and in this way also the strength of the electric waves which are radiated outwardly from the anteuna wires.

THEORY OF THE SYSTEM.

"The fundamental lays are the same as those which hold in radio-telegraphy, only it is necessary, in order to have the ether waves reproduce the sonnd waves of the voice, that the number of sparks generated per second shall be so great that the sonnd of the spark itself becomes inaudible. Each spark produces an impulse at the receiver exactly like itself in nature, only greatly redneed in strength. Now, if these impulses follow each other too rapidly to be heard, the listening ear at the receiver hears no individnal impulse, but it can throngh the telephone detect changes in the local current which are cansed by changes in the intensity of the spark impulses at the transmitting station. And if the strength of the spark impulses is directly governed by the voice of one speaking into the transmitter, it is clear that the listener will be made aware of every inflection or shade of sound at the transmitter.

"The minute currents which represent human speech pass through the heated gases of a delicate little receiver called the 'audion,' and are translated into regular telephone currents which, acting npon an ordinary telephone receiver, will give rise to the sound pulsations of the air. Every inflection of the voice, every little peculiarity of sound, each note of a piano, the timbre of each instrnment of an orchestra, will be instantly transported and reproduced with perfect fidelity. The ether waves which represent the sonnd vibrations may have passed over miles of city or wastes of sea, or through the walls of hundreds of buildings. Nothing will retard or obstruct them.

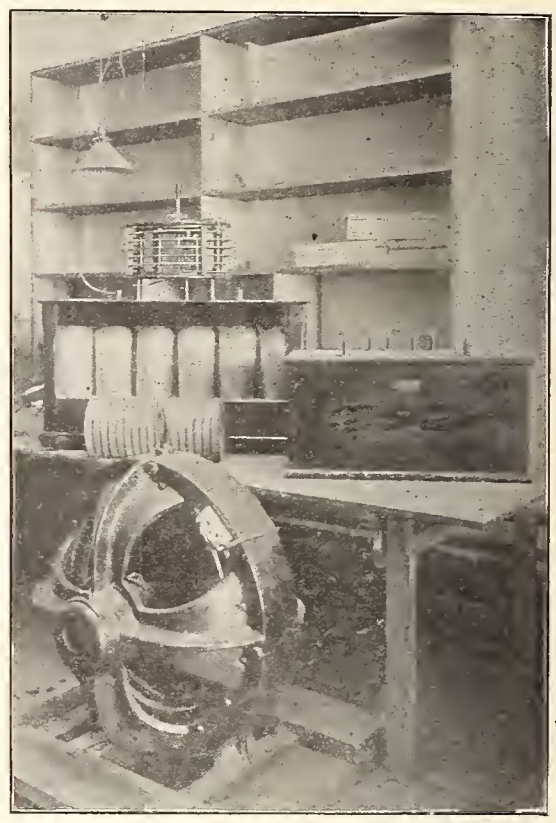
MECHANISM IS SIMPLE.

"And yet the mechanism which makes this possible is very small and simple. It is but a step from the wireless telegraph transmitter with its noisy, irregular spark and Morse sending key to the radio-telephone transmitter with its regular spark and its telephone-microphone, into which any one, however unskilled, may talk. The 'audion,' with its incandescent gaseons medinm, has a keener ear for electric sonnds and translates them with a finer exactness than any other form of wireless responder known to the world."

To "keep the line open," as it were, the person speaking must press a button in the instrnment and then take the finger from the bntton to hear the reply. In this respect the De Forest invention is similar to the telephone nsed in London.

"Is the voice distorted?" was asked.

"Not in the least," said Dr. De Forest. "There may be a frying sound if communication is imperfect, such as is heard in any telephone when



GENERATING PLANT FOR THE WIRELESS TELEPHONE.

it is not working properly, but the tone of the voice is never changed."

Connection between one instrument and another is secured by moving a key on the receiver. This is called "tnning," and the moment an instrument is properly "tuned" the little incandescent lamp begins to burn. One mnst know where to turn, just as it is uecessary with the ordinary telephone to give "central" the nnmber desired. Because of the "tuning," wireless telephones wonld not be practicable for a large city, for the reason that general interference wonld cause them to get out of "tune." Dr. De Forest said that the system could be operated snccessfully in rnral communities, however, and that it

NEW ENGLAND DEALERS

If you handle both EDISON and VICTOR, we can offer you an advantage no other New England jobbing house can—One Source of Supply for both

EDISON PHONOGRAPHS AND VICTOR MACHINES

ONE SHIPMENT—ONE EXPRESSAGE

THERE'S AN ADVANTAGE! Try the Eastern's Policy of Service.

THE EASTERN TALKING MACHINE CO.

177 TREMONT ST., BOSTON, MASS.

Distributors of EDISON and VICTOR MACHINES, Records and all Supplies

Eastern Agents for HERZOG DISK and CYLINDER RECORD CABINETS

$500

The Victor Auxetophone is contained in a handsome mahogany cabinet (Louis XV. style). It is simple, finely made, and a beautiful piece of furniture.

A special type of air compressor, run by a silent electric motor, applies the pneumatic power at a point where it magnifies only the musical sound-waves. All mechanical sounds are submerged and disappear.

$500

Right Now

is the time for you to make big money on the

Victor Auxetophone

Everything is ripe and ready for quick and profitable sales

Summer homes, country clubs, lawn parties, public parks, excursions, hotels, large restaurants, pleasure resorts—they all need a Victor Auxetophone and need it now.

Right in your territory to-day you can sell a Victor Auxetophone easier and quicker than any other instrument of half the price.

Nothing else you can offer wakes up such instant enthusiasm. This splendid instrument combines the perfect Victor tone-quality with the big, rich, powerful sound-volume of the grandest pipe-organ, and plays any Victor record loud enough to fill any hall, church or theatre, or "all outdoors," if desired.

The Victor Auxetophone sells itself at a hearing.

And the sale is followed by a large sale of high-class records which doubles your profit with no more effort.

Write to your best prospects to come and hear the Victor Auxetophone; or offer to take it to them. If you haven't one to exhibit, write for it to-day.

Don't delay. You can't lose on it. The Victor Auxetophone, with its pure, grand quality and magnificent tone-volume is the best salesman, the finest advertising, the strongest attraction you could possibly have in your store.

It not only sells itself, but sells all the other Victors and Victor goods, to the amount of many times its price.

You couldn't make a more profitable investment.

No need of a dull summer for you. No need of a small profit hard and slow. Take a big one easy and quick.

Push the Victor Auxetophone. Take our word that it will pay you big. Push it hard. Push it now.

might not be impossible for small towns. "But it will be best of all," he adds, "for communication from ship to ship, from shore to shore, and between islands."

The inventor has in mind one use for wireless telephouy in New York that will appeal to music lovers. With the permission of the management of an opera house he could carry an opera performance up through the roof, he said, and send it hot off the griddle to people with wireless receivers in their homes. In this way a person could hear all the operas for the trifling expense of $2 a month. But Dr. De Forest hasn't mentioned this to Conried or Hammerstein as yet.

TALKING MACHINES IN SAMOA.

In a report upon the music trade in Samoa Consul George Heimrod, of Apia, states that there are six talking machines in that section imported by H. J. Moors, an American merchant. The Consul's report is as follows:

"Importations of pianos for the last ten years have not exceeded fifty, and of these perhaps six, expressly built for the tropics, are in condition to form accordant musical sounds. The manufacture, with the exception of two American pianos, is of German and English origin. The instruments were either imported directly or through an agent from the colonies, who makes regular yearly visits to the islands of Tonga, Samoa and Fiji with the view of tuning and selling pianos. Of other musical instruments I find two organs, oue piano player and six phonographs. The latter have been introduced by H. J. Moore, an American merchant in Apia."

PERMISSION TO BUILD SHOW WINDOWS.

After several weeks of experience with the red tape of city government, Lawrence McGreal, the well-known Edison and Victor jobber of Milwaukee, Wis., finally obtained permission from the Common Council in an ordinance taking up several typewritten sheets, to build show windows in the uew buildiug, 172-176 Third street. The new windows will afford the firm excellent opportunities for displaying their extensive line to advantage.

DOUGLAS CO.'S NEWARK HEADQUARTERS.

The Douglas Phonograph Co. have removed their Newark, N. J., store to the new quarters at the corner of New and Halsey streets, and things are being rapidly straightened out after the mix-up due to the moving.

The new quarters are well located, nicely decorated and well-lighted, both naturally and artificially, over 150 incandescent lamps being placed in the ceiling of the main floor. The first floor is devoted to the Edison machines and records, and the second floor to the Victor line. The building is well equipped in every respect.

VICTOR TRADE-MARK.

Time and time again the origin of the Victor trade-mark, "His Master's Voice," has been discussed in these columns, but the subject is again reopened through the daily press by H. S. Berliner, who recently wrote a Washington paper as follows:

"Mr. William Barry Owen, the veteran manager of the company in England, which purchased the picture, writes as follows concerning 'His Master's Voice':

"'A man (Mr. Francis Bearaud) came into my office in London and said he had made a picture with a sentimental idea attached to it—of his own dog listening to a phonograph—and that as he needed to sell it he would offer it to the company. "How much?" I asked. "Two hundred and fifty pounds," he said. "Too much; I will give you fifty pounds for catalog work, and if I decide in thirty days to take the world copyright and all your interest I will pay you another fifty pounds." This occurred on a Thursday, and on Saturday I paid him the second fifty pounds and sent him to my attorneys to make out papers. This is the entire history.'"

"H. S. Berliner."

BIG ORDER FOR BLANK RECORDS.

An order for 10,000 blank records monthly was recently received by the Columbia Phonograph Co. from Sears, Roebuck & Co., the great Chicago mail order house, who use three hundred graphophones in handling their correspondence. This is an instance of how large business houses can profit by the use of the commercial talking machine system.

Charles Eabold, for some time manager of the talkiug machine department for George W. Clark, Syracuse, N. Y., now holds a similar position with the Andrew J. Speich Co., of that city, who handle the Victor line.

C. L. Reimer, the talking machine dealer of Asbury Park, N. J., has added Columbia graphophones to his other lines, and reports a steadily increasing business.

SPECIAL DESIGNS WILL HAVE CALL.

How the Change in the Equipment of Edison Phonographs Will Affect the Horn and Crane Business—The Situation Analyzed.

The announcement recently made by the National Phonograph Co., whereby they intend to equip all phonographs with large horns, has made many figure how such a move would affect the sale of these articles as independent transactions. Chatting with a leading member of the industry a few days ago on this subject, he said:

"At first glance it would seem that the market for independent sales would be very materially affected, and that giving a customer a large horn with a machine would make such transactions impossible. A close study of the situation, however, will undoubtedly warrant a different conclusion. People purchasing talking machines have for a number of years past been accustomed to employing their own fancy as to the style horn they will use, and the various horn manufacturers have largely catered to this fancy in producing endless varieties and styles of horns, many of which possessing distinct virtues, so as to please any and all purchasers. One manufacturer alone claims to produce over two hundred different styles and sizes of horus for talking machines.

"The horn is the most conspicuous part of a talking machine, the eye naturally centers on it, and whereas dealers and jobbers have frequently felt it was a hardship to be obliged to carry so many different style horns, at the same time they must not forget the fact that through having these different styles the fancy of each individual has been catered to, with the result of largely increasing machine sales.

"Up to the present time it has been found impossible to make one style, size, and finish of horn that would suit all purchasers, and these same conditions are bound to exist under the new equipment. Undoubtedly the sale of cheaply constructed horns will be largely affected, but the market for high priced and artistic looking horns should if anything be larger. The public will be educated to the advantages derived from the large size horns when they purchase their machines, and the opportunity to sell a high priced, better appearing or better tone horn will certainly be increased. It is my opinion that progressive jobbers and dealers will still find a good market for their high grade horns, and that public demand will undoubtedly require the sale as a separate transaction of horns different from those furnished with the original outfit. Again, the opportunity to make the stock more attractive would be entirely lost with the dealer if he fails to vary his stock with different horns and cranes."

PAYS TO BE ATTENTIVE.

An Illustration in This Connection That Should be Noted by Talking Machine Men.

There is a lesson in this story related by Hayward Cleveland, of the Columbia Phonograph Co., for every dealer and salesman in the talking machine business, and the moral should be noted:

"One day some years ago, at our uptown store, a postal card was received from a small town in upper New York, asking for 'catalogs of your machines and records,' no other word except the inquirer's name. The mailing clerk sent the matter asked for in an unsealed envelope, postage one cent. No letter accompanied. In a few days there came by registered mail twelve crisp five-dollar bills, four ones and 50 cents in postage, $64.50 in all, and an order for an AB graphophone, records and supplies! No merit attached to us. We did not neglect, nor did we cultivate. The lesson was not lost. The moral was: 'Pay heed to the most trivial inquiry or request.'

"The other day a besmeared envelope, with an illegible misspelled superscription was received. Inside was a single sheet of plain paper, on which was scrawled the following: "Will you Send To Blaks To W. A. Stonefaller, Greenwich, Conn.?' That was all. The whole almost deserved being ignored. A note was dispatched, politely asking for 25 cents payment in advance. By return mail there came that amount in postage, accompanied by the engraved visiting card of a Madison avenue customer of ours (same surname) with this written thereon: 'Two blank cylinders for the little $10 graphophone.' It developed that the first note had been sent by the infant son of a millionaire capitalist, whose country address we did not know.

"Moral—Pay heed, for 'you never can tell' who is at the other end of the line!"

CLEVER WINDOW DISPLAY

Made by the Regina Company in New York —Reginaphones and Sublimas Featured.

The Regina Co., 17th street and Union Square, have arranged a most pleasing window exhibit which is attracting most favorable attention. In the foreground is a sprinkling of Reginaphones which are adapted to any size music boxes on the market and a number of cabinet instruments in mahogany, Vernis Martin and dainty decorated floral panels. In the second window is a "Sublima," which tells on the revolving perforated roll an interesting story of how it was perfected, facts relative to its mechanism and tone, the number of times it played, the number of instruments of its kind that had been sold, etc., etc., all of which invites and holds the attention of passers-by. The company are very busy at the Rahway factory, and the orders received by mail and from road salesmen would indicate that dealers are placing orders early with the anticipation that fall trade is to be good.

AT LAST!

A New Reproducer For Cylinder Machines Three Times As Loud As Any In Existence

**LOUD ENOUGH FOR CONCERT HALLS OR FOR DANCING,
OR CAN BE MODIFIED TO A WHISPER IF DESIRED**

The only reproducer in the world having an adjustable weight tension by which the pressure on the record can be increased or decreased instantly, thus enabling the operator to play the old wax records or the new moulded kind with equal safety to the record in regard to wear. The most natural tone reproducer on the market. Makes any old record good and a good record perfect. Will sell twice more records for the dealer than the regular reproducer and will not wear the record half as much.

An Entirely New Principle Sold with the distinct understanding that if not exactly as represented can be returned and money will be cheerfully refunded. Indorsed by all who have heard it, including several of the leading Edison jobbers, as the very best reproducer on the market. Gives a volnme of sonnd hitherto unheard of in any detachable reproducer.

Guaranteed For One Year We absolutely guarantee this Reproducer to be much louder, more natural in tone, less liable to get out of order than any other Reproducer on the market to-day, besides having our patent system of weight pressure adjustability. Failing which the money will be cheerfully refunded and the Reproducer will cost yon nothing. Patents applied for in U. S. and all Foreign Countries.

REFERENCES: First National Bank, Lincoln, Neb.; Columbia National Bank, Lincoln, Neb.; First Trust & Savings Bank, Lincoln, Neb. || **Price ($10.00) Ten Dollars**

Special Offer This Month Only To All Interested Upon receipt of five dollars in cash, Postal or Express money order or Draft and one old Edison Model C, or one old Columbia Spring Contact Reproducer and this ad., we will ship sample reproducer to any part of the World with the distinct understanding that if not entirely satisfactory money will be immediately refunded. If no old reproducer is sent, send $8.00 instead of $5.00, an allowance of $3.00 being made on old reproducer. No order will be noticed unless accompanied by full amount of order. Please specify if EDISON or COLUMBIA reproducer is desired.

Undoubtedly a Record Breaker, but will not wear the Record. A Decade in Advance of Anything Known for the Reproduction of Sound.

Usual discount to jobbers and dealers on initial order of not less than six and three respectively.

TEXAS ANTI-TRUST LAWS

Are Causing Consternation Among All Classes of Merchants—Will Talking Machine Contracts be Effected?—Drastic Amendments.

(Special to The Talking Machine World.)

Austin, Texas, August 10, 1907.

The several amendments to the previously stringent Texas anti-trust laws enacted by the Legislature recently closed, has created consternation among all classes of merchants, as its provisions absolutely prohibit any one from acting as agent, jobber or retailing any goods manufactured by a trust, or entering into any agreement to reduce, advance or alter a price on any article or commodity. The minimum penalty is two years' imprisonment in the State penitentiary.

Several legal authorities consulted have stated tbat hardly a merchant in the State is exempt from some violation of the law as it now stands, and when effective every one will be in jeopardy, as county attorneys and district attorneys are given a bonus of $100 for every suit won under its provisions, and many prosecutions are anticipated. The Legislature may be called into special session to modify some of its terms. For instance, one section imposes as a special tax of 50 per cent. on gross sales of pistols and firearms, and all hardware dealers are closing out their stock at less than cost.

Whether or not it affects the talking machine contracts is not known, but the attorneys of at least one factory have taken up the matter, and their attorney is now collecting the best legal opinions in the State. It is thought the paragraph relation to restraint of trade will require the elimination of any contract in writing not to sell to dealers who may be suspended or undesirable on account of price cutting or other violation of the patent provisions and license under which the goods are sold.

Doubtless the intent of the law was to curb the larger trusts, and already a fine of over $1,000,000 has been assessed against the Waters-Pierce Oil Co. necessitating a receiver, and it is rumored action will be next begun against agents and jobbers of the American Tobacco Co. In the meantime, every county attorney in the State is "sitting up and taking notice" of the available cases where he can obtain bonuses. One of the provisions of the law is that all cases must be brought in the Travis County Court, in which Austin, the capital, is located, and it will cause endless trouble to merchants cited to appear as witnesses or defendants.

Another bill enacted imposes a 2 per cent. gross tax on most all commercial houses, in addition to the already heavy taxes in Texas. At least one phonograph jobbing house has been seeking a location just beyond the Texas line from which point they could supply their Texas customers, but attorneys say this will not avoid the law, as each retail dealer will then be equally guilty, and there would be a chance for some enterprising county attorney to bring a wholesale indictment against, say, two hundred dealers, and if convicted would receive a hundred dollars each bonus, a fee not to be scorned or tried for.

There is no talking machine jobber in this city, but they are located at nearly all other larger cities in Texas, and representatives of two of them with their attorneys have been here consulting the general attorney of the State as to bis construction of the act, but they were not interviewed by your correspondent, and this information is gathered from newspaper reports that have gone forth from here by correspondents of large dailies who are in close touch with these matters.

PETMECKY

Multitone, Self-Sharpening Talking Machine Needles

are guaranteed to play any disc record with less or no harm to the record than any other metal needle ever made. Moreover, they will produce a purer, sweeter tone than any other needle. A dealer writes: "Samples received; my first order for 10,000 needles tells you what I think of them. I wonder how anyone will use any but the Petmecky on his finest records." We have hundreds of just such unsolicited testimonials —yours, too, if you will but try them. Kindly write us for samples, booklet, prices, etc.

HANDLING TALKING MACHINES SOLELY.

Frank J. McArdle, proprietor of the Omaha Piano Player Co., Omaha, Neb., who was obliged to give up his quarters in the department store of O'Donohue-Redmond-Norwich Co., owing to the failure of that company, has decided to discontinue his piano and player business, and will devote his entire attention to talking machines. He will carry a full stock of Victor machines and about 12,000 records on the second floor of the old Boston store.

INCORPORATED THIS WEEK.

The Ideal Fastener Co., 143 Liberty street, New York, was incorporated with the Secretary of State at Albany on July 27 for the purpose of manufacturing horn supports for talking machines; capital, $15,000. Directors: Charles Newman, L. M. Walstein and Otto Crane, New York.

NEW YORK, AUGUST 15, 1907.

THE meeting of the Eastern Talking Machine Jobbers' Association in New York last month, which is reported extensively elsewhere in this issue, was an event of great importance to the talking machine trade. It surprised the promoters. In fact, the officers of the association did not believe that the meeting would be such a pronounced success. There were many things discussed in a business way which certainly will have an effect in shaping the future of the industry. The social functions were pleasing and made a most delightful feature of the meeting. The talking machine men are active. There will be another meeting in Buffalo next month, which will be practically a joint session with the Central States Jobbers' Association, following their meeting held in Chicago in June. Now the result of all the gatherings of the talking machine men, to our minds, will mean a national organization rather than two or three sectional ones. It was informally discussed at the recent gathering. Why not, gentlemen of the talking machine trade, form a national talking machine association? You could have committees appointed of gentlemen who reside in the East and West, and through them any special information could be reported to a central body, so that the workings of the association would be in complete harmony, and yet there would be a greater strength in the whole than if the talking machine trade were split into factions East, West, North and South. By uniting the interests the trade can be best served, and there are many things which are constantly coming up which demand action on the part of those directly interested in maintaining the welfare of the trade. We recommend to the talking machine men who meet in Buffalo next month to immediately start the wheels in motion for the formation of a national association.

OUR readers should understand that this publication, which is devoted solely to the interests of the talking machine trade, will strive earnestly for the establishment of a national association, and we shall be pleased to work hand in hand with the talking machine men to promote its growth. The interests of this trade are steadily growing, and with an expanding industry it is but natural that there are problems constantly developing, all of which may not be of easy solution. A national talking machine jobbers' association will undoubtedly make for the advancement of trade interests, and can accomplish much more than the isolated individual. Local lines are being steadily eliminated, and the interests of the talking machine men in all sections of the country are identical.

NO matter whether a man may be doing business in Maine or California, it is necessary that trade conditions surrounding him be of the same uniform character and should be guarded with the same caution.

The editor of this publication called the piano manufacturers together in 1888 and presided at the first national gatheriug of piano men in this country. That meeting was the origiu of the association movement in the music trades. He next advocated the formation of a piano dealers' association, and this was formed at precisely the time and place suggested by him. This organization has now hundreds of members, and has been instrumental in helping to eliminate from the music trade certain evils which had crept in. The talking machine business is in its infancy, as far as development goes, so before any evils have developed it may be well to guard against them. By all means, let us have a talking machine jobbers' national association, and let the inceptive move be made in the early fall.

THERE is no denying the fact that the condition of the horn market has been, and is even to-day, somewhat unsettled. For weeks, before the Edison move was definitely announced, there was a marked feeling of unrest, for it was conceded that if such a great producing concern as the National Phonograph Co., with its extensive business ramifications, should enter into the manufacture of horns, it would have an immediate effect upon the market. Edison men would, of course, be compelled to buy the Edison outfits, and that would cut out just that much outside horn business. The affiliations of the National Co. are so close to their factors in various sections of the country that their entree into the horn field was looked upon as being a move which would unsettle trade conditions as applied to horns for some time. Then again it was stated upon excellent authority that this company had secured options on a number of plants, and this also caused a good deal of speculation as to the outcome of the proposed move.

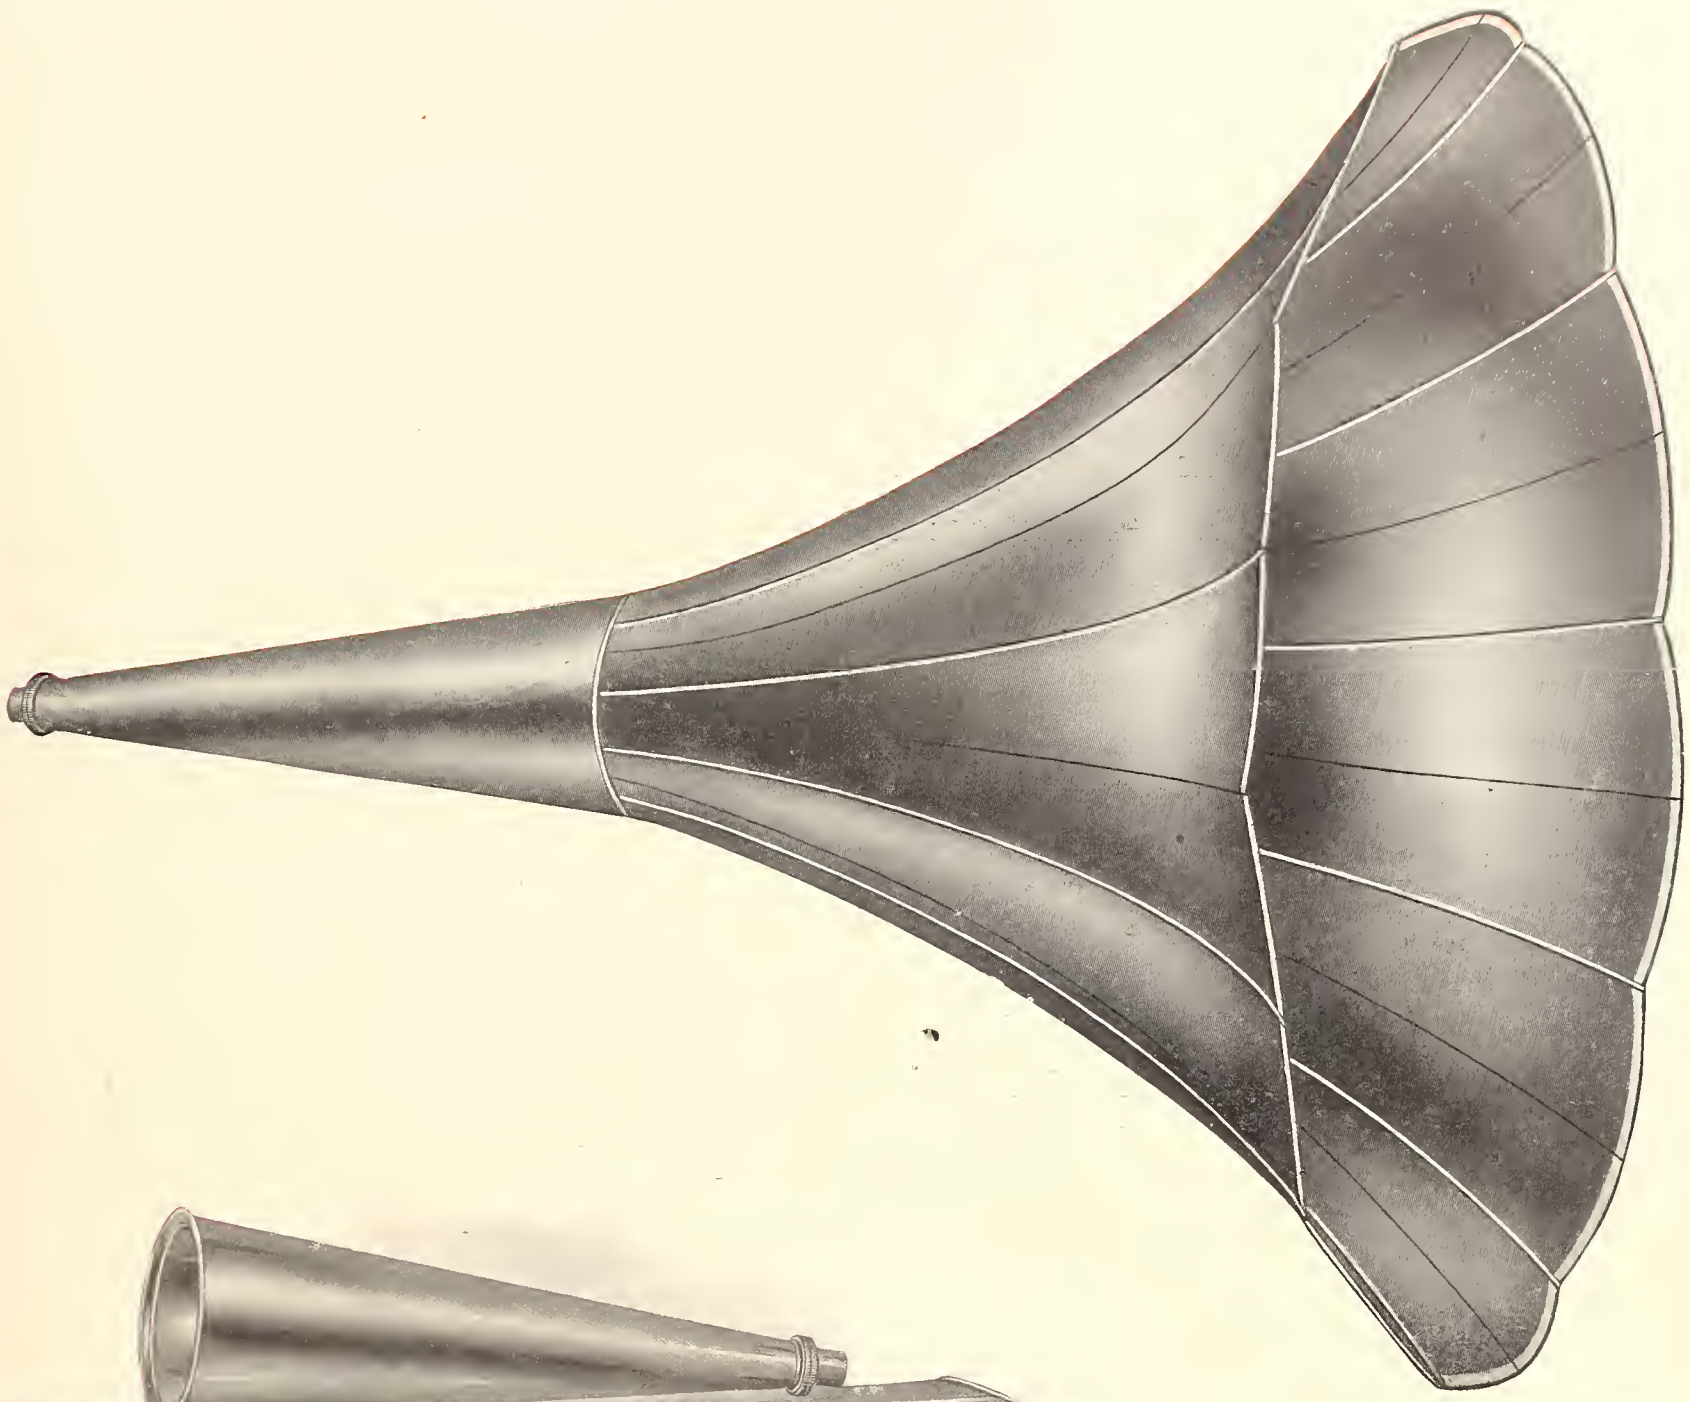
THE announcement, however, has been made, and the Natioual Phonograph Co. will have a complete horn equipment ready by the 15th of next month. Some of the manufacturers and some of the big jobbers are hit heavily by this move. There is no reason, however, to suppose that the horn business is going to the demnition bowwows simply because the National Co. adds another department to its present extensive line, and enters the arena as horn manufacturers. Horns will be made and sold in larger quantities than ever, and there is no particular occasion for any one to lose their heads over the present condition. Special horns will be created to reach a select trade, as seen by special announcements in this issue of The World. Then there are many people who already own machines and will desire new horns for them. We shall all be doing business, gentlemen, we hope, for some time to come.

A SUBSCRIBER asks us: "What do you consider the greatest essential in the selling of talking machines at retail?" We should say tactfulness, for without that the salesman is lost. It is a mistake sometimes to tire customers by running records which do not in the slightest interest them. A salesman should use sufficient tact to size up his customer, so that he would know just what kind of music would appeal to him. We have seen some salesmen put on rag-time music for some men whose tastes did not run in that line; we have also seen them show off high-class operatic music to people who had no more conception of the beauties of musical orchestration than they had of the mysteries hidden in the monuments of Egypt. It is easy to find out from the dress, the appearance, or the language of each individual caller what music appeals to him without seeming to put the question direct, and then give him something which he likes, but not enough to tire. Don't let a record run until its close, but just a little, enough to whet the appetite, and then put on something more and show the variety. Then the customer begins to be interested in a talking machine; he begins to realize something of its development. Tactfulness by all means as a salesmanship essential. Study it and salesmen will learn how to handle their trade more successfully, and in the end they, too, will be making bigger salaries.

A NUMBER of World readers have asked us for an opinion as to the final result of the suits brought against the National Phonograph Co. by the New York Phonograph Co. It seems as if we should not be called upon to again explain the attitude of this paper, and that is, our absolute refusal to be dragged into any of the legal complications which seems to be inseparable from the talking machine business. The courts presumably are fairly able to handle matters which may be legally brought before them, and it is not within the province of a trade newspaper to try cases in its columns. The officers of the National Phonograph Co. do not seem in the slightest disconcerted over the recent developments, and our acquaintance with them teaches us that they are quite competent to conduct their affairs in the future as in the past without any special admonition from us. The World could republish a lot of the matter which has been circulated through the columns of the daily papers, which is well calculated to arouse fear on the part of some of the Edison New York agents, but we do not propose to express an opinion as to the ultimate outcome of this long-fought series of legal battles and expound our beliefs as to what effect it may have upon the business of the Edison agents within the borders of the Empire State. We assume that the Edison people know their business, and we are sure of one thing, and that is that we shall attend as nearly as possible to our own affairs and not meddle with that which belongs exclusively to the courts.

IN a few weeks it will be time to buckle on the armor for the battle for fall trade. Are you ready?

THE SEARCHLIGHT FOLDING HORN



Patent No. 771441
Oct. 4, 1904

Patent No. 12442
Jan. 30, 1906

THE ONLY PRACTICAL, COLLAPSIBLE HORN IN THE WORLD

Style—Gun Metal Finish—Gold Striped.

For all Edison and Victor Machines except Victor 1.

Size, 23 x 28 Cylinder; 23 x 21 Disc. Boxed, 3½ x 7 x 20 Inches.

"A Startling Novelty"

THE SEARCHLIGHT FOLDING HORN

The Searchlight Folding Horn
A masterpiece in every respect.
Opened it resembles a solid flower horn,
Folded you can carry it in your pocket.

THE Bell is self-sustaining and *one piece*, ready for use in ten seconds by unfolding the bell and attaching the funnel.

No clamps, rods or braces. Never out of order.

No experience required to fold or unfold it. A child can work it.

Small enough to send with the box containing the talking machine. No expense in packing.

Light enough to be sent by mail as merchandise.

AN EPOCH-MAKING HORN!

Send to Your Jobbers for Samples *Send Now*

MANUFACTURED BY THE
SEARCHLIGHT HORN COMPANY
753-755 Lexington Avenue Borough of Brooklyn, New York

VALUE OF ANSWERING LETTERS.

Prompt Attention to Communications Makes Friends for the House and Acts as a Stimulator to Your Business.

Talking machine men need hardly be told that the first requisite to success in business is promptness in answering inquiries of all kinds, even though not seemingly important. The dereliction of some concerns on this point is appalling. Rarely a week passes but we hear tales of people who have written firms on business matters and failed to receive any sort of acknowledgment.

People come to know us through our letters and we are forced to rest under the judgment our letters have evoked. If we have occasion to write but once, great care should be taken as there will be no opportunity to remove any unfortunate impression it gives. If there are letters to follow them, a wrong impression created by the first letter may be eradicated by later editions.

A business man wants a customer to know and believe he is being treated fairly and with courtesy; that his continued business is valuable, and that a strong desire to retain it is evidenced by the writer.

One of the strongest points in favor of writing polite, thoughtful and considerate letters is that it develops into a habit and the writer becomes thoroughly imbued with the spirit that pervades them and soon finds as great satisfaction in writing them as the other does in receiving them.

Subordinates take their cue from the one "higher up," and they can do much to make or mar the fortunes of the man they serve, and because of that great care should be taken to keep harmony and courtesy at the helm.

WILL DISPLACE THE "BARKER."

The Officials of the Iowa State Fair Adopt a New Idea That Will be Welcomed.

It is the intention of the officials of the Iowa State Fair to use a number of talking machines in connection with the Bureau of Information to displace the usual barker. Machines will be placed at various points on the grounds to direct visitors to cars, the various special exhibitions and other general features.

Visitors to the fair will hear such speeches issuing from the talkers, as—

"Take the fair grounds cars for the big fair at the south door to the courthouse. Beware of the bunco man!"

"The airship goes up on the south side to-day. Don't buy tickets; it is a free exhibition."

"Beware of pickpockets!"

Of course the talking machines will be in charge of men who can give more detailed information when desired.

DISCOVERS A PAYING BUSINESS.

Elwood Ayres, a wandering piano dealer of Missonri, who creates interest in his instruments by concerts given in country school houses, some time ago discovered that a moving picture show would largely increase his audiences, and forthwith purchased an outfit, accompanying the pictures with appropriate piano or organ selections. One of the films portrayed a Chicago slaughter house where pigs were being killed, and music suitable for the scene, was not to be produced on either of his two instruments in an effective manner. Mr. Ayres, however, was not balked at that, but immediately installed a talking machine, which reproduced the voices of the pigs squealing in frightened and grewsome tones in a very natural manner. Increased audiences quickly testified to the success of his scheme.

STEWART

You can handle banjos easily and add to your income. Talking machine men will find them big sellers.

THE BAUER CO., 726-730 Girard Avenue Philadelphia, Pa.

TRADE NOTES FROM BELFAST.

Strikes of Dock Laborers and Carters Have Disturbed Business—Delay in Getting American and English Shipments—Some Comments on Reduction in Price of Records—Other News.

(Special to The Talking Machine World.)

Belfast, Ireland, July 24, 1907.

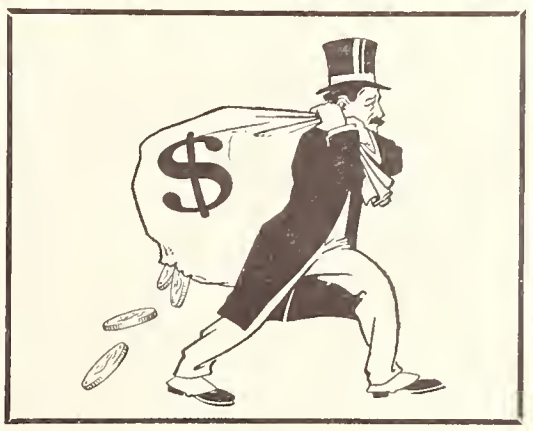
All departments of trade in Belfast have been seriously affected for several weeks past by the combined strikes of dock laborers and carters, and business has accordingly been quite paralyzed. For example, the largest jobber here has not yet obtained delivery of a big consignment of Edison records despatched to him on July 6 by the National Phonograph Co., Ltd., London.

Three of the large shipping companies have been under the necessity of engaging several hundreds of laborers from England to load and discharge cross-channel cargoes. After the day's work is over these men embark on three special steamers which lie each night in Belfast Lough, about five miles from the port. With commendable consideration, two of the said companies hired, some weeks ago from Mr. Osborne, Monarch Senior gramophones, and purchased almost 100 records, with which the laborers are entertained while the boats are at anchor, thus distracting their thoughts, minimizing homesickness and dispelling ennui. Needless to say the men appreciate heartily the thoughtfulness of their employers.

The somewhat drastic reduction in price of Edison gold moulded records from 1s. 6d. to 1s., which will come into operation on August 8, has given rise to adverse criticism and newspaper correspondence, much of which is inane if not scurrilous. In the case of one trade journal, an article appeared in which it was actually suggested that the National Phonograph Co. should be "punished" for what the writer described as a "hardship," although he confessed he had not read the company's agreements and was not only reasoning without data but endeavoring to extinguish an "ignis fatuus" of his own creation. Your humble Belfast scribe considers that both jobbers and dealers should be grateful to the National Phonograph Co. (1) for making the reduction during the dull or "off" season when stocks are low, (2) for allowing a rebate of 1d. per record on all purchases from March 1 till June 8, (3) for agreeing to supply jobbers with the records from June 10 till August 8 at the reduced trade price, thus enabling said jobbers to acquire an abnormal profit during term of notice (60 days), and (4) for reducing retail price, which shonld result in an immense output of the goods during ensuing winter.

The Gramophone Co. deserve the thanks of all their dealers for having, at the request of Mme. Melba, agreed to reduce the price of 12-in. records by that famous prima donna from 21s. to 12s. 6d. Other expensive gramophone records have also been reduced, but dealers will not suffer in the slightest from said reductions, as the Gramophone Co. have very generously agreed to supply records free of charge against the difference in price of those held in stock by their customers on July 18. In doing so they are acting in harmony with their usual thoughtful policy, which for many years has not only kept them in close touch with their dealers but created for them an enviable reputation in the talking machine industry.

Owing to the connection of Marconi with the talking machine trade it is interesting to note that an official of the Marconi company is quoted as saying that a radiograph service will be begnn between Ireland and Canada in September. The commercial rate will be 10 cents and the press rate 5 cents a word between Clifton and Glace Bay. Immediately after this service is started, the power at the wireless station at Cape Cod will be increased and a service will be opened thence to Poldhu.



How we save you money without cutting prices

We can't sell you Victor goods at a less price than any other jobber—we're all on the same basis there, and must all maintain the regular Victor prices. But we can save you money in lots of other ways. All brought about by the promptness of our service.

We ship all orders the same day they are received. That saves money for you all around. Saves the money you usually spend in telegraphing to your jobber to hurry your order. Saves the money you lose because customers get tired of waiting for their goods. Saves shipping charges, because having the goods in stock we can send them by freight so that you'll get them in plenty of time, where another jobber would have to hustle around for the goods first and then send them by express.

You save not only money, but time, trouble and worry by ordering from us your Victor talking machines and records, record cabinets, trumpet horns, fiber cases, English needles, and accessories and specialties of every sort.

Save time by writing now for our catalogue. Then you'll have it when you get ready for your next order.

PRACTICAL SUGGESTIONS AND COMMENTS.

REPRODUCER FOR CYLINDER MACHINES.

A new reproducer for cylinder machines has just been placed on the market by the Maestrophone Phonograph Co., of Lincoln, Neb. This reproducer is something decidedly new, and the results obtained are said to be marvelous. A special feature envolved is an adjustable weight tensiou by which the pressure on the record can be increased or diminished, thus enabling the operator to play the old wax records or the new moulded kind with equal safety to the record in regard to wear.

A. C. Mestraud, the inventor of this reproducer, is an old talking machine expert, well and favorably known in this trade, having for years been connected with it in various capacities. For some months The World has known of several important patents granted this gentleman, and that the only thing he needed was capital to push them. This came from an unexpected quarter—in the form of a legacy, and we congratulate not only Mr. Mestraud, but the talking machine trade in general, inasmuch as they will shortly benefit largely from these various inventions, which we can safely state will win no small share of attention and consideration.

PLAYING RECORDS BACKWARD.

The Ocala (Fla.) Banner of recent date contained the following story: "Dr. J. Van Hood, of Ocala, has just brought into successful operation an experiment that should be of considerable interest to the scientific world. For some time the doctor has wondered how words would sound if uttered backward. By experimenting with his own voice and others, he realized the utter impossibility of any one pronouncing backward. Some people, to whom he mentioned the matter, confused it with spelling backward, but it takes little reflection to see that it is a very different thing.

"Dr. Hood finally decided that if he could have a phonographic record run through a phonograph backward he would attain his desired result. This seemed impossible, owing to the records being larger at one end than another, but a jeweler of Ocala, after some experiments, bored out a record so it could be put on a cylinder last end first, and to Dr. Hood's greatest satisfaction and every one else's surprise, the apparatus worked successfully. A great many people have heard this record work in the last few days. The sounds it makes are utterly strange, not to say ludicrous, yet can be recognized closely enough to be understood. The experiment is causing great interest here, and seems well worth the notice of the scientific as well as the curious."

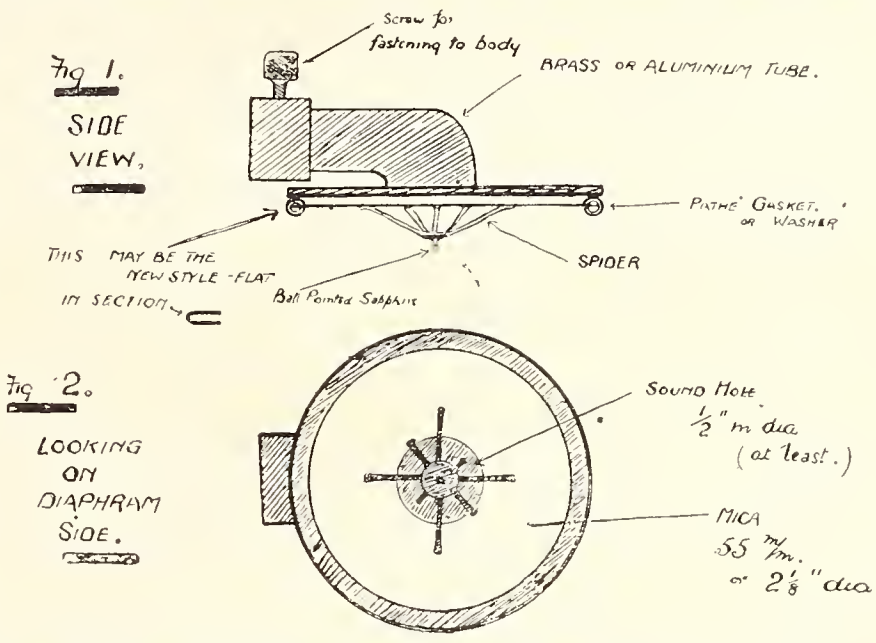
PACETTI EXPLAINS ANTIQUITY OF IDEA.

The foregoing having caught the eye of G. J. Pacetti, the well-known talking machine dealer of St. Augustine, Fla., when reproduced in his local paper, he wrote the editor as follows: "An article in yesterday's Record taken from the Ocala Banner says that an Ocala man has just discovered that the human voice can be reproduced on the phonograph backward. It seems to me that the gentleman is a little late with his discovery as tne playing of phonograph records backward is as old, almost, as the playing of the phonograph itself. Nine years ago I reproduced phonograph records backward. Any oue, with the help of a pocket knife, can in five minutes adjust a cylinder record to the phonograph and play it backward. A vocal record in English will, when reproduced backward, sound as though it was recorded in a foreign language. There are hundreds of phonograph owners who have among their collections of records a few that they can play backward for their own amusement."

IMPROVED REPRODUCER.

John White, the talking machine expert, of London, has favored The World with the following contribution on reproducers, which will doubtless interest our American as well as our English and colonial subscribers. He says:

"That there is a reproducer on the market that will play any or every record to perfection will be denied on all sides by experts and experimenters alike. The type I illustrate I have used for some time and hesitated before claiming what I now do for it. That it will play any make of record and better still give an extremely full volume, without the slightest overtone or sign of a blast, is certain. The machine is or was a Lambertphone. The type is the Excelsior. The reproducer is of the usual floating type, measuring in diameter 2¼ inches. It had originally a weight of 3 or more ounces, and a heavy screw-ring to jam the gaskets on either side of the diaphragm. That ring I took out, also the plain rubber gaskets, and then machined and filed away the outer portion with the screw-threads for the ring, leaving the surface as plain and flat as the diaphragm itself.



"This reduced the weight to two and half ounces and rendered necessary a gasket of the Pathe type, namely, the split tubular ring. Having secured a fine piece of mica 2⅛ inches in diameter, I slipped the gasket on to it, not without some trouble, as the gasket was so tight, measuring 1 inch diameter without stretching any. However, I managed it by getting it on to a piece of tough cardboard the same diameter and then transferring it by taking the mica and plucking the rubber ring over the edge of same a bit at a time. Then withdrawing the cardboard I smoothed the edges into a snug fit. This ring and mica diaphragm I cemented to the surface of the lightened reproducer and let it dry carefully, then tested for air spaces round the edge. These spaces I cemented up by running the cement round it and giving it an assured hold. I next hunted up all the best types of domes and "spiders" that I had in my possession. I found the ⅝-inch ordinary dome had a muffled effect on playing a record. After boring four holes, 1-16 of an inch in size round the dome, I found it improved, though not quite so much of an improvement as I wanted.

"Smaller domes I tried and gave up as they were useless to distribute the vibrations. The actual spider I use now measures 1 inch in diameter across the outside claws (four in number), and two claws ½ inch across, with the remaining two ¼ inch between their feet. This spider I fitted with a ball pointed sapphire of good quality, and as I said before I am astonisned at the results. There is nothing extraordinary about the reproducer, which is of the Matthews type, and one can easily make their own as good by following these instructions given beforehand. One point about the Matthews reproducer makes me glad. The vibrations, or sound waves, to be more correct, pass through a parallel tube into the trumpet through a hole of the same diameter as the tube, i. e., half an inch. In other soundboxes or reproducers this point is neglected, and I say emphatically they are wrong as this one proves. The giant tone it gives out is not from the diaphragm alone. It comes from the combination of all the parts and lets the user of the phonograph enjoy his records as he ought. In the Edison Model C the hole is too small, and when enlarged even slightly the difference can be noticed when playing a record.

"This idea cau be adapted to other reproducers by taking the old shell to pieces, that is to say, taking out the diaphragm and stripping the surface off with a file. A better way is to purchase the Matthews reproducer or make one out of a

NO SIR-E-E

We are not hustling to sell Horns and Cranes—not trying to "load up" our trade with these goods—though we've too many in stock.

We're Stuck with Horns and Cranes—but we're taking our medicine ourselves—not trying to pass it on to the trade.

September 16th next, every Phonograph will be equipped with Horn and Crane, so don't load up with Horns and Cranes at any price—but make every effort to close out what you have on hand.

Send us your orders, for you can depend on fair treatment and prompt attention every time.

American Phonograph Co.
106 WOODWARD AVENUE, DETROIT, MICH.

square of brass and a brass tube, as can easily be done. A piece of brass 3 inches square by 1-16 inch thick can be bought for 15 cents or thereabouts. Then brass tubing is not dear for the quantity required, about 3 inches, say, of ½ inch tube, will be ample. Cut the brass into a circle 2¼ inches in diameter, and bore a hole in the center, measuring the same as the outside diameter of your brass tube, say, ½ inch. The next step is to cut the tube at an angle of 45 degs. so as to get a bend on the reproducer tube when completed.

"Some of the model engineers who are also readers of the paper will be able to bend a tube into the right angle and cut off what they require, though others may not find this easy. In that case it will be best to apply to a house making a specialty of supplies.

"Those who make it themselves will require to cut and solder the parts together, making a shell when completed like Fig. 4. The means of connecting reproducer to machine can be either a short rubber tube or the connector off the original reproducer for the time being. In conjunction with a large brass or flower horn this will be found to give the most surprising volume.

ELECTRIC AUTOMOBILE "TALKER" HORN.

A new English electric automobile horn is made of a combination of an electric buzzer, with the ordinary automobile horn. The Talking Machine News describes it as follows:

"A brass cylindrical case contains a steel vibrating disc, held at its periphery by two flanges and two electro-magnets, and the rapid vibration of the disc caused by the magnetization and demagnetization of the magnets yields a sound which is magnified in volume and effectiveness by the horn. The current is provided by an eight-volt accumulator. The signal can be maintained as long as is necessary or desired, the blast louder and more continuous than that of the ordinary wind horn, and with the switch on the steering wheel the driver can give his warning without removing his hand from the wheel."

A RECORD CLEANER AND PRESERVATIVE.

The Record Food Co., Kansas City, Mo., have recently placed upon the market their new record cleaner and preservative, suitable for all styles of records which have proven very successful.

Besides cleaning, Record Food also lubricates and enables one needle to play from two to six of the largest disc records, doing away with scratching, and producing the highest quality of tone. It is put up in 16-oz. jars and tins, sufficient for from 400 to 500 records.

Record Food is the result of extensive experimenting by members of the company, all of whom are talking machine enthusiasts and have used the preparation in its various forms for several years until it was brought to perfection.

A number of surprises in an inventive way are "on the stocks." More anon.

GOGGAN & BRO. IN NEW QUARTERS.

Thomas Goggan & Bro., Dallas, Tex., have removed to their new three story building on Elm street, which has been fitted up in a handsome manner. The main floor is devoted exclusively to Victor talking machine parlors, the firm being distributors for that line. A complete cooling system is a feature of the new quarters and aids business in the hot weather.

PROGRESSIVE DETROIT JOBBERS.

The American Phonograph Co., 106 Woodward avenue, Detroit, Mich., are said to be among the oldest talking machine retailers in the country, having been in the business for over ten years. They have very handsome quarters for displaying both the Edison and Victor lines, with a number of soundproof booths for demonstrating purposes.

SOL BLOOM OPENS ON 34TH STREET.

Sol Bloom has leased the premises at 40 West 34th street and is making alterations to the property that will make it one of the finest stores of its class in the city.

The Victor Distributing & Export Co. have placed a new disc record case on the market, which is made of heavy jute manila paper and fully protects the records.

THE PHONOMETER

(PATENT APPLIED FOR)

The Only Talking Machine Speed Meter

Instantaneous in Action. Permanently Effective. Absolutely Accurate.

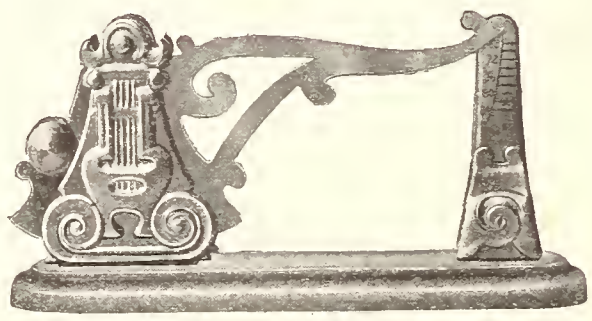
FOR USE ON ALL DISC MACHINES

REASONS WHY ALL DISTRIBUTORS AND DEALERS SHOULD HANDLE THIS NEW AND BIG SELLING NOVELTY

I. BECAUSE it is **absolutely accurate.**

II. BECAUSE it indicates the speed of all disc machines **instantly.**

III. BECAUSE by its use each and every record can be reproduced at the correct speed, and all musical records (vocal or instrumental) **reproduced in the same musical key (or pitch)** that the artists originally sang or played the selections.



RETAIL, ONE DOLLAR.

IV. BECAUSE the **voices** of Caruso, Melba and all the other vocal artists, speaking records of celebrities, the tone qualities of solo instruments, etc., **cannot be faithfully reproduced** from records and thus bring forth the individuality of the artists or instruments, the tone quality and life-like realism required, **if the machine is not accurately and properly regulated.**

V. BECAUSE you can sell a **Phonometer** to every machine or record customer upon demonstration.

VI. BECAUSE it becomes an **absolute necessity!**

VII. BECAUSE **the Phonometer** is for sale by and receiving the highest endorsements of the following Distributors of Disc Machines:

BIRDS AS MUSICIANS.

Also a Chat on the Subject of Recording Aboriginal Music by Means of the Talking Machine—Some Interesting Points.

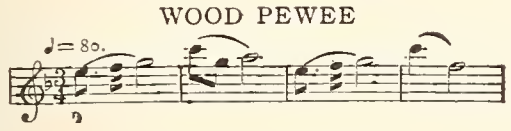
There was a very readable article published in Harper's Monthly Magazine for April, 1907, entitled "Music of Man and Bird," in which the author, Mr. Henry Oldys, explains most interestingly that birds are musicians.

For instance, he declares that he has heard a fragment from the Toreador's Song in Carmen flung across the fields to his ears by a meadowlark.

MEADOWLARK

The wood pewee and song sparrow are also composers of legitimate music, according to Mr.

WOOD PEWEE



SONG SPARROW

Oldys, and the fact that this important discovery has been made opens up a vista of rare enjoyment to talking machine enthusiasts.

Why not delve deeper into this absorbing subject and perhaps add other feathered vocalists to the musical fraternity?

Is there not a sunny window in your home where a bird may be enticed to warble out his thanks for the crumbs spread upon the sill so lavishly? Most assuredly there must be, and to record the melody that swells from his throbbing throat is not nearly so difficult as you think.

Move your talking machine to the window and use a horn with a flaring bell of large circumference in order that the recording zone may extend over as great an area as possible. That done, you have only to adjust a recorder, the diaphragm of which has been chosen with care to give best results in recording whistling. Then insert a blank upon the mandrel, attach a cord to the starting lever, and slipping back out of sight, await the coming of the "talent." When the concert is under way, pull gently on the cord, and the talking machine will do the rest.

Mr. Oldys was forced to write down the music as fast as it came to him from the trees and thickets, and there is, therefore, a slight suspicion of doubt as to accuracy, but the talking machine stands ready to eliminate that doubt, and to prove conclusively whether or not birds are real musicians.

My phonograph is going to engage in this fascinating game this summer, and I will be glad to report as to my success or failure. In the meantime, Mr. Dealer, ask your customers to enter the field while on their vacations. It will mean the sale of blanks and recording horns, etc., for you, and at the same time will add a zest to your patrons' phonographic appetites.

There is another point brought out in Mr. Oldys' article that should be of vital interest to the talking machine trade because it establishes the fact that the "talker" is of priceless value to scientists in procuring exact examples of pure aboriginal music.

He says in part: "It is gratifying to know that the French are at present systematically obtaining phonographic records of aboriginal music—a method originally employed by Dr. J. Walter Fewkes, of our own country, in his ethnological study of the Zuni Indians. This means, although not absolutely faultless, is in many respects more satisfactory than one dependent on the accuracy of the observer. Were both methods used as independent checks on each other, the resultant records, if agreeing, would have the highest degree of scientific value.

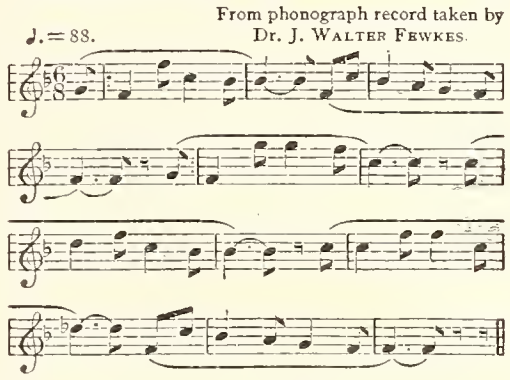
The element of doubt in the case of phonographic records arises mainly from the mechanical imperfections of the instrument, the more or less constrained poise of the performer, and, when a song is recorded the singer's lack of experience necessary to insure a faithful reproduction. I have listened to phonographic records, secured by Dr. Fewkes, of songs sung by Hopi (popularly known as Moki) Indians which were practically impossible of transcription because of the almost constant blare of the instrument due to the singer's mouth being too close to the mouthpiece. On the other hand, however, a song by a Winnebago Indian girl, recorded at the same time, came out very clearly:

This is not the whole song, but enough is quoted to show the general character of the music, which is quite comparable with ours. It is possible that it derives resemblance from influences due to the singer's having received her education among the whites.

Finally I may add that I have frequently lis-

WINNEBAGO INDIAN LOVE-SONG

From phonograph record taken by Dr. J. Walter Fewkes.



tened to a cylinder record of the singing of a native song by an Eskimo. This record was made on one of Lieutenant Peary's expeditions, and is now in the possession of Mr. R. J. Meigs, of Washington, D. C."

As the mechanical imperfections spoken of

above are now extinct, we may expect even greater strides on the part of the talking machine through the intricate paths of science.

Howard Taylor Middleton.

WEEKLY TALKING MACHINE RECITALS.

The Olney Music Co., St. Joseph, Mo., have arranged for weekly talking machine concerts in connection with the settlement work of the Free Kindergarten and Day Nursery of that city. At the first concert held a fortnight ago a large crowd listened with evident pleasure to the music.

A deaf and dumb mendicant in Berlin recently discarded the signs and pathetic letter for the much more up-to-date "talker." He has the list of his afflictions and the woes of his family recorded on a cylinder, and when the lady of the house opens the door in response to his knock she is greeted with a burst of eloquence from the talking machine. It is said the results pay handsomely.

THE Playrite TRADE MARK DIAPHRAGM

"The Name Tells What They Do"

RECORDS PLAY RIGHT

WITH THIS DIAPHRAGM

PRODUCES FULL VOLUME

Playrite TRADE MARK DIAPHRAGM "THE NAME TELLS WHAT THEY DO"

THE TONE IS NATURAL

A NEEDED IMPROVEMENT.

¶ Great improvements have been made in Talking Machine Records, resulting in more volume and better tone.

You cannot get the full benefit of these improvements unless the **Throat** of your Talking Machine is perfect. It it therefore important to improve the **Throat** of the Talking Machine as much as possible. The **Throat** is the **Diaphragm.**

THE IMPROVEMENT ACCOMPLISHED.

¶ After careful experiments a specially prepared Fibre Diaphragm has been produced that gives the desired Volume and Tone combined.

THE "PLAYRITE" DIAPHRAGM.

¶ Records Play Right when this fibre diaphragm is fitted in the speaker, and it is therefore known as the "Playrite" diaphragm for "The Name Tells What They Do."

¶ The Playrite TRADE MARK Diaphragm **Plays Right,** for it produces a **Loud, Clear, Natural Tone** without blasting or smothering the lighter tones. Vocal Records sound like the natural voice, and Instrumental Records have that round, mellow tone that has been sought.

¶ To hear a Record played with the "Playrite" diaphragm means you will want one in your speaker, and that you will get all the music on the Record hereafter.

ANY DEALER CAN SUPPLY IT.

¶ Any competent dealer can fit the "Playrite" Diaphragm in a speaker, and satisfaction is guaranteed or money refunded.

Each "Playrite" Diaphragm has a crosshead riveted to it, and therefore does away with loose crossheads. **"Playrite" Diaphragm** complete with crosshead, 25c. each.

The "PLAYRITE" Diaphragm is made in two sizes to fit Phonograph Reproducers and Victor Exhibition Sound Boxes. State which size is wanted. Other sizes will be ready soon.

PRICES ARE RESTRICTED. 25c. each with crosshead attached.

FREE SAMPLE To Dealers or Jobbers who write on business letter head and specify what machines they handle.

TRADE NOTES FROM INDIANAPOLIS.

Horn Question Discussed—Kipp-Lisk Co.'s New Home—Talkers for Concerts and Lawn Parties—Penny Arcades Doing a Good Business—Increasing Call for Commercial Graphophones—Talker Concerts a Success.

(Special to The Talking Machine World.)

Indianapolis, Ind., Aug. 1, 1907.

The announcement of the National Phonograph Co. that all their machines will in future be supplied with horns is causing a good deal of discussion among the Edison dealers of this city. The fact that the company will supply machines in this way means that all horns now on hand will be in the nature of a white elephant to be disposed of by the jobbers. It is known that some of the Edison dealers here now have a good supply of horns on hand. Others, however, are not so heavily stocked.

The new order also, it is said, will cause a great deal of extra work in the way of crating. Every time a machine goes out a horn will have to go with it, and this will mean much extra work. A. B. Wahl said that he canceled his order for horns in good time and was not caught by the new methods of the company. It is not known here yet whether or not the company will make any further arrangements for the convenience of the jobbers.

The Kipp-Link Co., extensive dealers in all kinds of talking machines, will soon be ready to move into their new home on Washington street. The building is now undergoing a thorough remodeling and will be ready within a few days. When completed this will be one of the best locations for a talking machine house in the city. The stock of the Kipp-Link Co. will be greatly increased, and both the jobbing and retail business will be carefully looked after.

Charles Craig, of the Indiana Phonograph Co., an extensive jobber in the Edison line, has been away from his place of business several days on account of illness. His sickness is said, however, not to be serious. It was reported at Mr. Craig's store that the retail business has increased rapidly during the last few weeks and has grown ahead of the jobbing business.

One way of accounting for the increase in the retail business is the great number of talking machines that are being used on canoes this season. Talking machines on canoes are something new in Indianapolis, but the resorters are taking to the custom readily, and almost every canoe on the river about Broad Ripple will soon be supplied with music it seems.

The Columbia Phonograph Co. are having a great run on furnishing machines for lawn fete entertainments. The Star, an Indianapolis paper, conducts a summer mission for sick children near Fairview park. Hundreds of lawn fetes are given for this enterprise each summer by the best people of the city, and the Columbia machine has come to be greatly in demand for such entertainments. A Columbia machine is shipped out to be used at these entertainments four or five times a week.

George Hall, who lives on North Pennsylvania street, has a Twentieth Century Columbia machine which he has allowed to be used at a number of lawn fetes. Mr. Hall is a great favorite with the young people, and when they ask him for the use of his machine it is forthcoming.

Mr. Williams, manager of the Columbia Phonograph branch at Terre Haute, was in the city on a business visit a few days last week. He said that business is unusually good at Terre Haute considering the season.

The Columbia Co. are having a good demand for their commercial graphophones. The custom of using them in business establishments is growing by leaps and bounds, and the trade of the Columbia Co. is greatly increased along this line. The branch here sells all of the office machines that it can get in stock.

The mayor of Noblesville, a city a few miles from Indianapolis, has caused consternation among the people of his city by closing up all places of amusement on Sunday. The mayor's orders are iron bound, and he will not even allow the most harmless amusement resort to remain open on that day. Meanwhile the amusement seeking people of the city are going to other cities on Sunday and the traction cars are crowded.

Never before in the history of Indianapolis has the business of penny arcades and five-cent vaudevilles been so good during the summer season as it is at present. Every place in the city is having a good business. One five-cent vaudeville man estimates that the summer season this year is cutting the business down only about 20 per cent. This is regarded as an unusually small cut, considering the great number of people who flock to the parks and summer gardens in the heated season.

The Bijou Dream Theatre is making a hit now with two sets of pictures, "Genevieve of Barbant," and "Chasing a Motorist." The house is drawing good crowds daily.

The Dreamland Amusement Co. is having a good business here, and reports that the outlook at Terre Haute is encouraging. O. L. Burton, manager of the company here, says that Terre Haute is one of the best amusement cities for its size in the Middle West. He was located at Terre Haute for several weeks after the arcade and vaudeville was started there by his company.

Frank Zepp, of the Vaudette, is planning to take a two weeks' vacation soon. He has not decided just yet how he will spend the time.

The talker concerts that are being given at Fairview by C. Koehring & Bros. are proving to be a great hit. These concerts are given with an auxetophone. This is a talking machine which is arranged in such a way that it gives out a great volume of sound. The music may be heard all over the park, and the concerts are drawing immense crowds to this pleasure resort, which is one of the most popular in the city.

MME. MELBA ENTHUSIASTIC OVER "TALKER."

Referring to her interview with Mme. Melba, Miss Mabell Wagnalls, the eminent pianist, author and musical critic, daughter of the publisher of The Literary Digest, The Circle and the Standard Dictionary, in her interesting book, "Stars of the Opera," writes as follows: "When asked her opinion of the new and wonderful records of her voice, Mme. Melba spoke with enthusiasm, 'They are, indeed, a remarkable achievement. I am looking, however, for still greater improvements, and am keenly interested in every new development.' A matter of 'keen interest' it must indeed be to every prima donna of to-day, this amazing magic trumpet that can record the subtle individual quality of a singer's voice and give it gloriously forth again when desired. By means of this weird invention the present vintage of fine voices can be bottled up like rare wine and poured out in future years. More wonderful still, like the 'widow's cruse,' this trumpet never grows empty; from its uptilted mouth the flow of song will stream on continuously, if so desired and directed. It is enough to make poor Jenny Lind and other long silent singers turn restlessly in their graves; they died too soon to profit by the powers of this recording trumpet, which surely has no rival save the one that Gabriel blows."

HERE'S AN ORCHESTRA THAT WON'T BOOSE.

H. C. Burrell, a Cleveland, O., shipowner who was much troubled by the orchestras on his boats, the members of which would get drunk and strike at frequent intervals, has tried the experiment of placing a large talking machine on one of his steamers, the Frontenac, plying between Cleveland, Lorain, Sandusky and Detroit. The $150 Columbia outfit, in charge of a cabin boy, gives better results than any orchestra he has previously had in his employ.

The extent of the talking machine system of language instruction may be realized when it is stated that among the many leading educational institutions using this system are the United States Military Academy at West Point, the Naval Academy at Annapolis and Yale University.

WILL SPEND $150,000 MORE.

Victor Talking Machine Co. Announce Big Increase in Advertising Appropriation—Most Vigorous Campaign to Carry on the Victor Development in a Most Emphatic Way.

Uuder date of July 26 the Victor Talking Machine Co. have issued a circular letter to Victor dealers annouucing that "another additional and special advertising appropriation, has just been made by our board of directors, of $150,000 in addition to our already huge advertising appropriations for this season. We believe that our Victor dealers throughout America will hail with joy the inauguration of this new idea of advertising so broadly over the entire couutry monthly the 'New Victor Records' and the 'Simnltaneous Opening Day' feature.

"We have studied the newspaper situation throughont America thoroughly, and feel that we have selected the leading uewspapers iu every city where a Victor distribntor is located, and that these newspapers, with their enormous general and out-of-town circulation will reach, with their iufinence for business, practically every hamlet in America. The combined daily readers of these papers, we are iuformed, is about 10,000,000 people.

"We hand you herewith the advertisement exactly as it will appear—design, size and wordiug—on the 29th day of this month (the 28th, this month, being Sunday) in all of the newspapers mentioned on the enclosed list.

"We would, were it possible, cheerfnlly insert in this advertisement the names of our various distributors and dealers in these cities, but on consideration yon will agree that this is not practical, there being in some cities altogether too mauy dealers to permit of this. It would not be fair to insert distributors' names and omit dealers, or vice versa.

"We have secnred the very best space in all these papers, and will not permit the insertion of other talking machine ads. on our page or surrounding our ad., but have no objection to auy enterprisiug Victor dealers placing an exclusive Victor advertisement on that page on the 28th day of each month if they choose, but the advertisement cannot contain auy refereuce to other talking machiues or other talking machine goods.

"Wise and euterprising advertisers will take advantage of this hint—that is one of the best ways of gettiug the full benefit of this advertising. We are spending all this money, and making all this effort, to send Victor business right to your store, and the more enterprisiug Victor dealers are eutitled to their greater share.

"On or about the 20th of each month the copy of the advertisement as it will appear iu these newspapers on the 28th will be mailed to all Victor dealers throughout America as a remiuder for them to arrange for their snpplemental advertising if they so choose.

The next new advertising idea and decision is the most far-reaching and influential that could be selected in any of the periodicals of the country.

"We have coutracted for an entire page in each issue of the Ladies' Home Jourual. An inside page in the Ladies' Home Journal costs $4,000 per insertion. Our outside pages in this same Journal cost $6,000 per insertion. The Ladies' Home Journal, according to the investigations of our own advertising department, has over 1,250,000 snbscribers. According to investigations made at a great expense, and for its own informatiou, the Ladies' Home Journal people discovered that they have at present about five readers for each Jonrnal printed. This means that onr monthly ad. cannot help but be seen by 7,250,000 of the best class of bnyers.

"This page ad. will be devoted to a monthly 'selected list of Victor records,' our idea being to rejuvenate and keep going the trade on truly excellent records, which perhaps have fallen off in their sale somewhat on account of inattention. A copy of this ad. will also be sent you each month, quite in advance of the appearance of the Journal, so as to give yon time to order any of these records that yon may not have in stock from your distributor.

"In addition to the above two new ideas, we also call your attention to the fact that we are spending an enormous sum this year in excess of any other year for regular magazine advertising. Furthermore, we are using many more back covers and colors in the principal mouthly and weekly publications, like the Ladies' Home Journal, Saturday Eveuing Post and Collier's Weekly.

"We are also developing more trade iu the farming districts. We have beguu a strong advertising campaign in the agricultural papers throughout the country. This space will be largely increased, begiuuing with the September issues. This campaign in the farming districts, through the agricultural papers, is aimed especially to develop instalment sales for Victor dealers. Within a few weeks you will receive from our advertising department the first advertisements or numbers of our educational campaign, for the instalmeut plan among dealers. We trust that all Victor dealers will find these instalment articles of great interest.

"Every Victor dealer throughout America shonld appreciate, by the above statements, the enormous confidence the Victor Co. feels in the coutinued growth aud prosperity of the talking machine business. Without a full and strong belief that these huge fortunes that are expended continuously in advertising will return agaiu iu the shape of largely increased bnsiness for us all, they would have better beeu expended in dividends to the present stockholders.

"Go after the Victor business in your neighbornood. Let yonr neighbors know that you sell Victors. If yon were exclusive agent for 'Royal Baking Powder' or 'Worcestershire Sauce' you wonld have to hang out a sign announciug the fact to sell much of it."

Is it any wonder talking machines are attracting widespread attention when there is such a propelling power behind them?

THE PATENT SYSTEM

Discussed by Thomas A. Edison—Says He Has Made Money Not by Inventions But by Manufacturing—His Advice to Young Inventors Worthy of Consideration.

Thomas A. Edisou is uot a great admirer of our patent system. He says that he has lost money on every one of his inventions, considering them purely as inventions, and has made his fortune by mauufacturing. Mr. Edison advises the young inventor not to attempt to get a patent, but to keep his invention a secret and mauufacture it himself. In this connection he said in a talk some time ago: "No sooner does an inventor make known some important mechanical discovery by applying for a patent than a pirate comes along and steals it. Years pass before the case comes to trial, and iu the meantime the practice of the courts gives the pirate the benefit of the doubt. Many patents are decided iu the inventor's favor only when the patent is about to expire, and has therefore become almost worthless. This is all wrong. The courts shonld give the man who first secures a patent or first makes applicatiou for it the benefit of the doubt uutil the question of priority has been finally passed upon and settled. As it is now the pirate staves off the trial from year to year and the poor inventor is robbed of his due, but if the change I mention was made, patent cases would be speedily brought to trial, and iu most instances justice done to all. When it is made, as it is sure to be sooner or later, there will be a rush of invention and discovery in this country such as we have never seen. Under the present conditions, however, not the big but the small inventions, a new toy for children, an improved lamp-burner, and the like, are the ones that are making the most money. Their iusignificauce protects them agaiust the pirate, who fails to discover that there is money to be made by stealing them. Still, my advice to a young inventor wonld be to study the expeusive operations of all large factories—every operation, yon know is expensive in proportion to the nuuber of men required—and try to devise a machine with which fewer men could do the work. The wealth of the moderu world has been made by labor-saving machiuery. The eud has not yet been reached in this field, and it is still possible for a young iuventor to devise a machine for some operation essential to the manufacture of steel which would save the labor of a number of men. Then if he went into the manufacture of that one product on his own account, he could hold his own with all the other mauufacturers aud undersell them as long as he kept his machine a secret. There is no better method by which the inventor in these days can get the full benefit of his invention."

MAGNIFYING CHOIR LEADER'S VOICE.

In the old village of Braybrook iu Northamptonshire is a monster trumpet 5 feet 6 inches in length, and having a bell-shaped end 2 feet 1 inch in diameter.

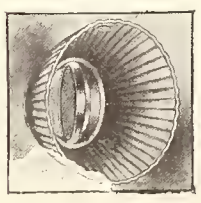
The trumpet is made np of ten rings, which in turn are made up of smaller parts. The nse of this trumpet—only four of the kind are known to exist at the present day—was to magnify the voice of the leader in the choir and to summon the people to the church service.

At the present time neither the choir nor the service is in need of this extraordinary "musical instrument," but the vicar of the church takes care of the ancient relic and is fond of showing it to all visitors.

HOW PROF. DUTTON MANAGED IT.

Recently Prof. Edward C. Dutton, professor of criminal law at the Washington College of Law, Washiugtou, D. C., had an invitation to deliver an address at two different points on the same evening. Oue of these addresses was a response to a toast by the freshman class of his college, and being unable to be in two places at the same time, he called at the Columbia Phouograph Co.'s store and dictated his response to a half-foot cylinder. A "Twentieth Century" graphophoue was sent to the banquet held by the freshmau class and Professor Dutton's toast was given just as though he were present. The machine was concealed by a large American flag, in one corner of the room, and when the toastmaster called upon Professor Dutton for his response, everyone looked greatly surprised, for he was not present in persou. Immediately, however, his voice spoke out from behiud the flag, just as natnrally as life. The astonishment was greater, however, at the end of the toast, when the American flag was withdrawn and instead of Professor Dutton being revealed, there stood the machine. The enthusiasm aroused by this was intense, and the "donbting Thomases" were amazed.

John Scott, salesman in the striug instrument department of C. H. Ditson & Co., 8-10-12 East 34th street, is enjoying life at Atlantic City, N. J. He will remain there three weeks and expects to return in fine fettle for a stirring fall business campaign. Louis Fricke, in the talking machine department of the same house, is spending his vacation at Easton, Pa. He claims to be au expert fishermau. His friends state that they are from Missouri and insist that they be shown sworn evidence.



MELLO-TONE

Attachment makes a *Perfect Musical Instrument* of a *Talking Machine* or *Phonograph.* Produces tones natural. Eliminates all metallic sounds and blasts. Regulates and mellows the tone. Can be adjusted while machine is playing. Is quite ornamental.

MANUFACTURING Co.

CLEVELAND, O.
2095 E. 36TH ST.

New York August 13, 1907.

Mr. Dealer,
Everywhere, U. S. A.

Dear Mr. Dealer,

Replying to your favor of the 12th inst. we take great pleasure in giving you herewith the desired information concerning our new patented horn "The Ideal".

It can be instantly attached to the reproducer of any Edison or Columbia machine without the aid of crane, support or similar device for it is absolutely self supporting.

The balancing point of the horn being directly above the axis of the mandrel causes the friction to be reduced to a minimum.

The weight of the horn (only a few ounces) is equally divided, thus eliminating the heavy pressure on the feeder of the machine.

"The Ideal" is made entirely of aluminum with a twenty inch bell; all superfluous weight is removed bringing the total down to only a few ounces. Though extremely light, it is durable and strong.

The tone is exceedingly wholesome, loud and distinct.

Made in one size, one style and one shade which overcomes the necessity of carrying in stock large quantities of various styles, sizes, etc.

The inner and outer surfaces are satin finished which imparts a beautiful, dull, silvery shade.

The horn comprises two parts, the elbow and the bell, a feature that makes it easy to ship.

As we anticipate a tremendous demand for "The Ideal" we urgently request you to place your order at the earliest possible date to insure its delivery by Sept. 15th.

Yours respectfully,

Devineau Manufacturing Co.

...e Ideal" not being sold by us directly to dealers, kindly ask ...ber for a copy of our Retail Dealers' agreement for price list, ...unt. terms, etc.

TRADE HAPPENINGS IN CLEVELAND.

Business Termed Phenomenal for This Season of the Year—Italians Among Best Patrons of Talking Machine Houses—Orders for Wurlitzer—Improvements in Devineau Biophone—Auxetophone for Theatre—Multograph Co. Increase Capital—Neff to Represent National Co.—H. E. Jones Chats on the Growing Appreciation of the Commercial Graphophone in Business.

(Special to The Talking Machine World.)

Cleveland, O., August 10, 1907.

Trade in talking machine circles is considered somewhat phenomenal in this usually acclaimed "dull season." While business quieted down a little in July it was hardly noticeable by most dealers, and with some a notable increase over previous months is reported. Generally speaking, talking machine dealers have no reason to complain of present conditions.

The dealers are all well stocked, covering the entire field of talking machines and supplies, and are preparing for an expected good fall trade. Dealers are doing more advertising locally, and it is evident they intend to secure all the benefit they can from the extended publicity of the manufacturers in their efforts to interest people in their products.

The Italian population of Cleveland is large and constantly increasing, and comprises among its number some of the leading business men. They are among the best patrons talking machine dealers have, some of whom specially cater for their patronage, which is considered very desirable. They are liberal purchasers of the best in records.

W. C. Broadwell, representative of the Rudolph Wurlitzer Co., Cincinnati, whose territory takes in Michigan and the northern parts of Ohio and Indiana, is spending a few days in the city, and has taken a number of orders. He says he found business very good for this season of the year in all the localities he has visited. He recently sold two piano orchestrions to the Cedar Point Amusement Co., costing $7,000. The company use them in the dancing pavilion. He also made a sale of one to Drake & Wallis proprietors of the resort at St. Joseph, Mich.

Mr. Devineau states that he has been delayed in placing his Biophone on the market from the fact that he had to make some important changes. A new tone arm has been added, which wonderfully improves the sound, and the attachment has been so fixed that the Devineau self-supporting horn, the "Ideal," can also be placed on the biophone attachment. Mr. Devineau is giving the finishing touches to the "Ideal," which can be adjusted to all Edison and Columbia cylinder, and all Victor and Columbia disc machines, thus the biophone attachment making the "Ideal" a universal horn.

Mr. H. B. McNutty, of the Eclipse Musical Co., just returned from a brief trip as far east as Buffalo, says he found the talking machine business good all along the line, and returned with several good sized orders. Since embarking in the exclusive wholesale trade, Mr. McNutty states their business has increased by leaps and bounds, surpassing their most sanguine expectations.

W. J. Roberts, Jr., reports trade exceptionally good, his business during June and July being larger than in the same months a year ago. Besides sales of a good many of the various grades of machines he has sold a number of Victrolas, and could have disposed of a number more if it were possible to obtain them from the manufactory.

W. H. Buescher & Son recently sold an Auxetophone to the Family Theater, where it is doing duty as an entire orchestra, giving satisfaction to the mauagement and audiences. "Trade," said Mr. Buescher, Jr., "is good—fine! There is a general demand for machines, especially Victrolas. The August records, both of Victor and Edison, are selling well. We are having no dull season this year."

The Bailey Co. report the talking machine trade is good and that they are doing a fine business. Sales of machines are made daily, and they have sold several Victrolas, and are having inquiries for Auxetophones. The management stated they were doing well with Tonophones, and having a large and constant demand for records. The company have the Star machine on sale, and claim it is a fine instrument. The company anticipate a good fall trade.

"Business," said Mr. Bourgeois, assistant manager of the Columbia Phonograph Co., "has picked up wonderfully within the last two weeks, both in sales of machines and records. We sold six high priced machines last Saturday, and a large number of August records." Mr. Probeck has returned from his vacation trip West, much rested and in improved health.

"With the exception of last December, I did the best month's business in July of any since I started in business," said Hugh Gulley. "My sales were of high priced machines and Red Seal records. I am having inquiries right along for the best grades of machines and records, and August has opened up in the most encouraging manner, and gives promise of the most satisfactory results."

At the music store of H. E. McMillen trade in the talking machine line was reported grand and improving. The manager stated they were daily making sales of machines, and the demand for records excellent.

The Gottdiner & Wicht Co., Nos. 645-649 Pearl street, dealers in Victor and Edison machines, report the usual midsummer dulness. "We are selling some machines," said Mr. Gottdiner, "and are having a very good call for records. Business is just about as usual at this season."

L. Hartwell, of the West Side Phonograph and Talkiug Machine Store, said business was very good, that he was selling some machines and a good many records. The great majority of Mr. Hartwell's trade is German and Hungarian, and is very reliable. Mr. Hartwell is desirous of going West and is offering his store for sale.

The American Multigraph Co. have raised its capital stock from $250,000 to $5,000,000. For each share the stockholders have, twenty have been apportioned.

E. A. Neff, who for some time has been with the well-known firm of Ball-Fintze, Newark, O., large jobbers of talking machines, has left their employ, and will hereafter represent the National Phonograph Co., of Orange, N. J. Mr. Neff has an extended acquaintance throughout this section, and is well liked by the fraternity of talking machine men. The National have secured a valuable acquisition to their force of representatives and a number of dealers here expressed the hope that Mr. Neff would be assigned to his old stamping ground.

W. W. Young, representative of the "Mellotone" Co., of Springfield, Mass., was a recent visitor to Cleveland, and secured several orders for the attachment. Dealers say it is a valuable improvement, as it eliminates some objectionable features.

"Like everything new," said H. E. Jones, manager of the commercial graphophone department of the Columbia Phonograph Co., "which has to be actually tried before it is possible to demonstrate its superiority over older methods, business men are more or less reluctant to install the machines in their offices, even on a trial basis, fearing, through lack of knowledge of the ease and convenience with which the machines are operated by beginners, that the installation of the graphophone will interfere with the regular progress of their office affairs. In most cases where this feeling of reluctance withholds the concerns from trying out the machines, and they are, unlike the Roman emperor, fully and finally persuaded, to the point of installing them, they swing to the opposite extreme, and more enthusiastically approve the system than those others who are in a more receptive mood when approached by the salesman. It is a very agreeable fact also that the opposition, almost universal upon the part of the typist, to the primary introduction of the machines, is very soon changed by use of them to the most thorough satisfaction. It often occurs that the typist, who is sometimes almost hysterical at the idea of having to use the machines, will, after a few weeks' use, decide that it is much easier and more comfortable for her than to transcribe from notes. It is difficult to say just what brings this about, but it is undoubtedly due to the fact that they discover that the machine eliminates entirely the serious eyestrain incident to transcribing from notes, caused by the constant shifting of the eye from the notebook to the typewriter; and also that the graphophone saves so much time for them as to enable them to avoid entirely the necessity for overtime work, such as is almost universal in a busy office where stenography only is used."

"Are there are other uses to which the graphophone may be put, Mr. Jones, other than office work and letter writing?"

"Yes; one of the most unique uses to which it

JOBBERS!—DEALERS!

If you are overstocked on perfect goods which you think will not sell readily and want to unload quickly—write us—No quantity too large.

POWERS & HENRY CO.

101 Sixth Street PITTSBURG, PA.

has been put in this city was mentioned in the April issue of the Talking Machine World, although the practical results of this use of the machine were not then known. One of the concerns using the commercial graphophone has utilized one of their recording machines to make a series of records of a most unbearable racket occasioned by some machinery in an adjoining building. This unusual, unnecessary noise was such as to seriously interfere with the dispatch of business where the graphophone was in use. Well, the records made of this disturbance have been submitted to the firm's attorney, with the result that it is his opinion they will form adequate grounds upon which to bring suit for an abatement of the nuisance. This adds one more to the manifold advantages of having the commercial graphophone in the office. The little machine has demonstrated its ability to be about everything else heretofore, and now in this queer case adds the additional accomplishment of being a truthful, reliable and forcible witness in court."

THREE ORACLES OF SUCCESS.

Expressions of Opinion from Men in Three Different Branches of the "Talker" Industry.

The World man buttonholed three talking machine men in his trade rounds the past week, and got them on the subject of success in life. No. 1 was a manufacturer who said:

"One should learn to do the best he can when at work, and lay aside all worry as to results, when that work is faithfully done. A man soon learns another thing. That is, to first find a want, and then provide something to fill the same; and then to open your hand and show the people what you have—to advertise it. I have also learned that it pays to make an article first class in all respects. To hold the thing up in all lights and points of examination, and to ask: 'How can that be improved?' When you see where, go on and improve it. Spend money generously in labor-saving machinery and tools to produce it."

No. 2, a dealer, said: "I have been a talking machine dealer for many years now, and nothing else. Such success as I have gained I hold due to the fact that I have done the one thing, and have tried to do it as well as my limitations would allow."

No. 3 was a jobber, who has made his mark in the talking machine field. He expressed himself as follows: "A young man to be successful in business must possess a certain ability for that business, and we will also take it for granted that he has a fair amount of industry. But the thing that will give him the best service and insure continuous success is an unswerving honesty and a record for truthfulness that can never be doubted. Prosperity based upon dishonesty is uncertain, and this fact applies with special force in the mercantile world. Without these characteristics a man may succeed to a certain extent, but it will be something that adds neither to his credit nor his happiness."

WANTS NATIONAL ASSOCIATION.

Walter L. Eckhardt Chats Interestingly on the Growth of the Central and Eastern Jobbers Associations—Many Callers at Columbia Offices—Some Interesting Statistics.

In a chat with The World recently Walter L. Eckhardt, manager of the wholesale department of the Columbia Phonograph Co. made some interesting remarks, in which he said:

"After participating in the festivities of the two recent meetings of the Central States Jobbers' Association and the Eastern Talking Machine and Jobbers' Association, the former held in Chicago on June 17 and 18 and the latter in New York on July 22 and 23, I feel that the talking machine and graphophone merchants, jobbers, dealers and manufacturers are to he congratulated for bringing about the promising condition in which the industry is at present. On all sides there is a definite indication of prosperity due to the one priced system upon which graphophones and other talking machines are to-day sold.

"It has been announced that the two associations are to assemble in a joint meeting on September 11 and 12, and I sincerely trust that this meeting will result in the formation of a national association, which will no doubt promote the organization of a Southern and Western association. Four independent organizations governed by the national association would result, I feel confident, in the promotion of the best interests of all concerned in the talking machine industry.

"During the recent New York meeting it was a genuine pleasure to note the good fellowship and friendly spirit existing between competitive jobbers, which is, in my opinion, the best possible indication of fair and broad competition.

"Many members of the Eastern Talking Machine and Jobbers' Association visited our offices and were very much interested in the new Columbia products, the new Symphony grand graphophone, the upright grand graphophone and the new tapering arm cylinder machines. It was freely prophesied that these would obtain great popular favor.

"The orders now on hand and the arrears are both exceedingly large for this season of the year, and I would suggest to all intending buyers to anticipate their wants as far as possible in advance, as it is quite evident that the supply during the coming season will be oversold before the season is actually upon us."

In the course of Mr. Eckhardt's many years' experiences he has gathered some interesting statistics. He states that 75 per cent. of the talking machine men are under thirty-five years of age, 10 per cent. are below forty-five years of age, thus leaving but 15 per cent. for the "Oslerized" class.

The Milner Music Co., who have started in business in Cincinnati, O., will handle both the Victor and Edison lines. They are occupying tne former Ilsen & Co. store on Sixth street. Raymond Strief, formerly with the Rudolph Wurlitzer Co., is secretary and treasurer of the new concern.

Talking Machine Repair Parts

are necessary in your business. It is possible that so far you have been unable to obtain satisfactory results in your repair work due to cheap and inferior parts.

Every Talking Machine Jobber in the United States knows that our parts are the Very Best Made.

Las agujas se empacan en sobres, puestas en cajas de lata, elegantemente decoradas.

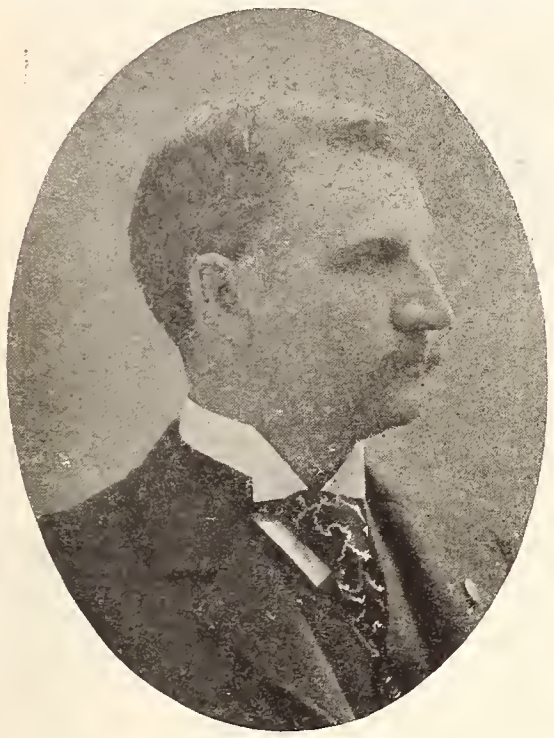
THE TALKING MACHINE SUPPLY CO.

A. P. PETIT, General Manager. 400 Fifth Avenue, New York, U. S. A.

ANNUAL MEETING OF THE EASTERN TALKING MACHINE JOBBERS ASSOCIATION

The Most Successful Meeting Ever Held Was That at the Hotel Astor on July 22d and 23d—New Officers Elected—Many Matters of Importance Transacted—Banquet Tendered by the Greater New York Members Greatly Enjoyed—Members Later Guests of the Tea Tray Co. at Luncheon and of the Herzog Art Furniture Co. at a Delightful Outing to Coney Island.

The annual meeting of the Eastern Talking Machine Jobbers' Association, which took place at the Hotel Astor, New York, July 22d and 23d, was one of the most successful yet, held, especially from the point of attendance and the many important matters discussed and acted upon that is sure to redound to the best interest of the trade at large.



W. D. ANDREWS, PRESIDENT.

MONDAY'S SESSION.

The first session was held Monday afternoon at 2 o'clock, President W. D. Andrews presiding: After roll call, to which 35 members responded, the minutes of the previous meeting were read and approved. J. F. Bowers, as a representative of the Central States Talking Machine Jobbers' Association, was hereupon extended the courtesy of temporary membership, and took an active part in the discussions.

Reports of the Officers.

Addresses were then made by all the officers of the association, who referred to the hearty co-operation of the members, all of which worked for the upbuilding of the organization. Treasurer Davega's report was most gratifying, for it showed that the association had only spent one-half of the amount received during the fiscal year, leaving a good balance in the treasury.

Secretary Jacot urged that the members send in their credit reports more promptly, and pointed out their importance as a help to all the members in extending credits. He also asked that each member act as a committee of one in securing new members. He added that over thirty new members had been added to the membership roll during the year, and thanked the members for their co-operation on this score.

Directors and Officers Elected.

The nominating committee appointed at the last meeting submitted the following for directors as provided by the by-laws from which four officers were to be elected. W. D. Andrews, J. Newcomb Blackman, Louis B. Buehn, A. H. Jacot and E. F. Taft.

A resolution was hereupon offered: That the by-laws be amended giving the nominating committee power to select names for offices to be filled, which was adopted. The committee then retired, and later submitted the following nominations: President, W. D. Andrews; vice-president, J. N. Blackman; secretary, A. H. Jacot; treasurer, Louis Buehn. For directors: W. D. Andrews, J. N. Blackman, A. H. Jacot, Louis Buehn and E. F. Taft (five in all). The ticket was elected unanimously. S. B. Davega and W. O. Pardee, the retiring officers, were tendered a vote of thanks for their excellent service.

Reports of special committees were then read,

LOUIS BUEHN, TREASURER.

but action on certain far-reaching matters was deferred until the joint meeting, which is to be held September 9 and 10.

Letters from the Manufacturers.

Letters received from the Victor, Edison and Columbia companies relative to the difference in price of instruments sold for cash or on the instalment plan; the issue of the number of new records each month, the number of records catalogs should contain, and number to be cut out during the year, also the matter of regulating the time that jobbers are to extend dealers a cash discount of two per cent., were then read by the secretary, but no definite action was taken. It was deemed wise to take the matter up at the joint meeting to be held at Buffalo. Meanwhile the committees appointed will have received full reports from the manufacturers, and the members will be able to discuss the matter more fully.

J. NEWCOMB BLACKMAN, VICE-PRESIDENT.

Messrs. C. V. Henkel, Benjamin Switky and S. B. Davega were appointed a committee to wait upon the manufacturers and submit reports to the members at the earliest possible moment. After receiving these reports the members will be in a better position to handle the subjects intelligently, and take such action as they deem wise in the premises.

A. H. JACOT, SECRETARY.

The following were elected to membership, making a total of 64: Cressey & Allen, Portland, Me., and Arthur F. Ferriss, of Utica, N. Y.

Next Meeting to be Held in Buffalo.

It was voted to hold the next meeting at Buffalo, N. Y., September 9 and 10, and C. N. Andrews, of Buffalo; C. L. Neal, of Neal, Clark & Neal, of Buffalo, and C. V. Henkel, of New York, were appointed a committee to complete all necessary arrangements as to hotel accommodations, etc.

Resolution Regarding Entertainment.

Vice-President Blackman offered the following

GET THE BEST

RECORD FOOD

Improves, preserves and sells Records. No catch-penny fad or fancy to sell once and cast aside, but an item of merit and practical use based on a natural law of mechanics. Nothing like it. No complicated mixing or problematical quantity. The customer sees what he gets and common sense shows him it will do the work.

One jar, ready for use, covers 500 Records.

A Steady, Sure Seller
It Sells Itself and Records Too
Others Sell It, Do You?

Put up in large opal (white), screw-top jars.
Write us for terms and get it for fall trade.

RECORD FOOD CO.
KANSAS CITY, MO.

IT HAS STOOD THE TEST

resolution, which was adopted unanimously:

"Whereas, Members in cities where meetings of this association have been held have provided entertainment for the visiting members at considerable expense, and,

"Whereas, The expense of such entertainment has been distributed among a number of members; and,

"Whereas, A continuance of this practice would establish a precedent and be an expensive burden to be shouldered by members where meetings are held, and only a few could contribute; therefore, be it

"Resolved, That the best interests of the association will be served by discontinuing this practice and requesting all members to refrain from furnishing entertainment, unless the expense is borne pro rata by each one participating."

This was unanimously adopted.

Other Matters of Interest Discussed.

Several important resolutions offered were tabled for final action at the Buffalo meeting. Meanwhile the members are requested to weigh them carefully and offer suggestions, which will be incorporated in resolutions which are to be drafted by the committee specially appointed for this work. The committee appointed follows: J. N. Blackman, C. V. Henkel and A. H. Jacot.

In connection with the appointment of this committee it is suggested that members who may be diffident about expressing their views before the meetings, write them out and send them to J. Newcomb Blackman, 97 Chambers street, New York, the chairman. The committee will gladly welcome ideas in this form, and if they embody anything of practical value, it will be embodied in a formal resolution for the action of the Buffalo convention. Members are requested to jot down ideas as they occur to them from time to time, and give the committee the benefit of their consideration in concrete form.

Vice-President Blackman made a motion that as the secretary was obliged to expend certain sums which could not be incorporated in an incidental expense account that he be allowed $100 per annum to meet same. Adopted.

Regarding Special Business.

A member asked if the Victor Talking Machine Co. had taken any action relative to the grievance filed regarding their providing special envelopes to obviate breakage of records. It was pointed out that the jobbers had lost considerable through the breakage of records, and that the company had had ample time to rectify same.

Secretary Jacot explained that the Victor people had taken the matter under advisement, and had promised to give the subject early attention, but to date nothing had been done.

Secretary Jacot was instructed to communicate with the company again, and draw their attention to the great loss sustained, also to the patience displayed, a year having elapsed since the association made its request for reforms noted.

Issuing Sample Records in Advance.

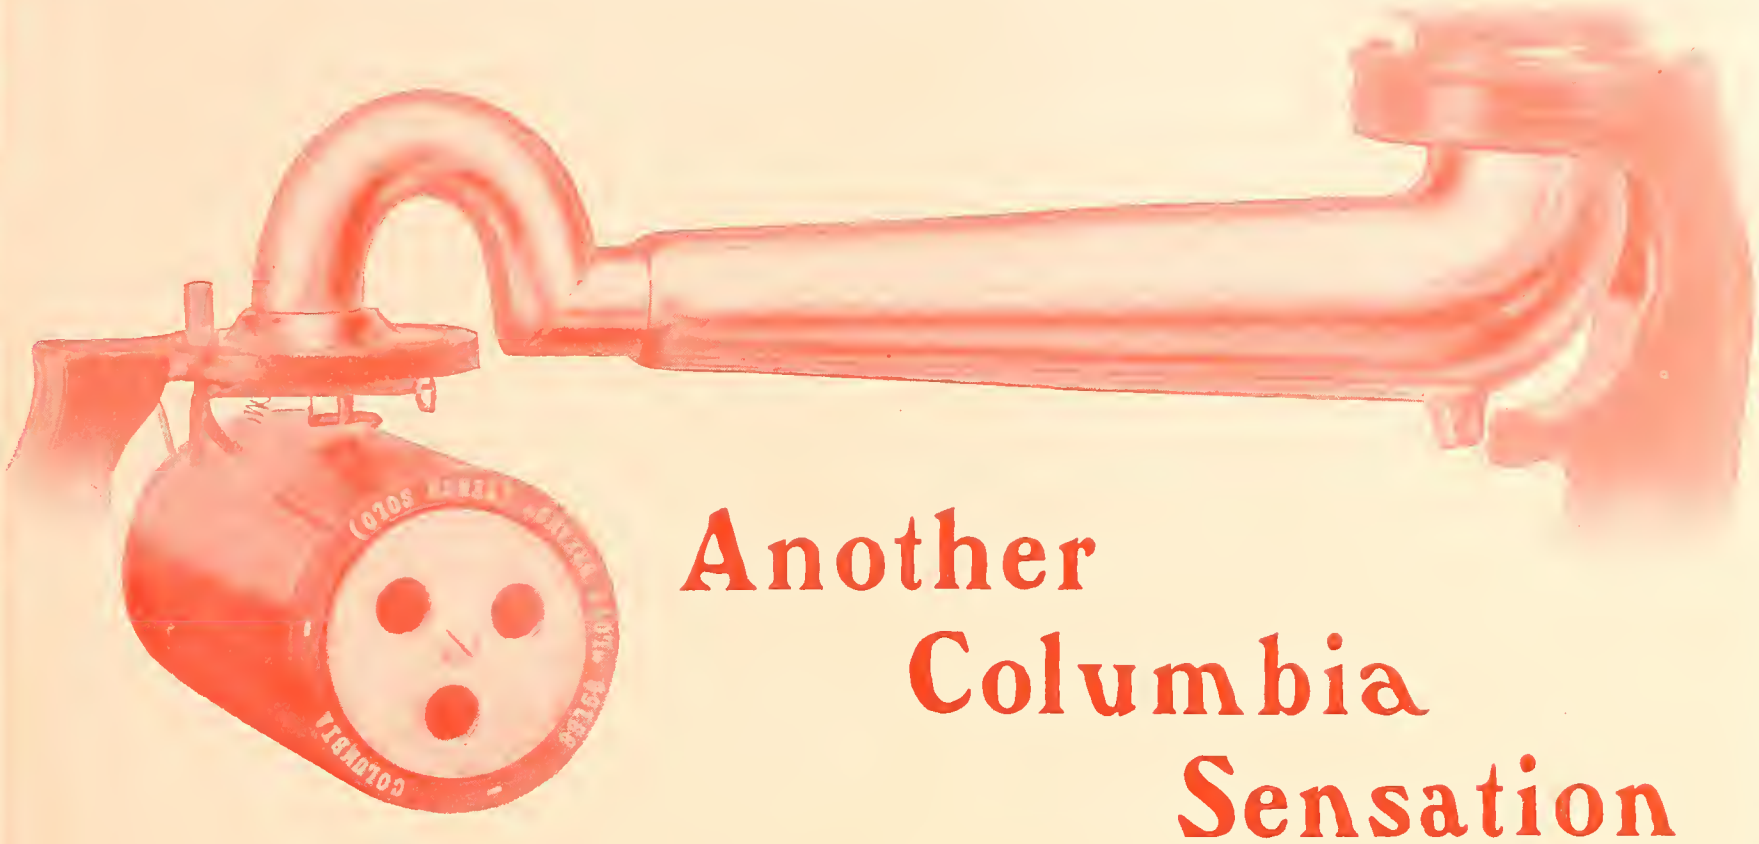
The matter of issuing sample records two months in advance was next discussed. Many of the jobbers complained that the dealers would not place orders for October records in July. It was pointed out that the National Phonograph Co. claimed it was necessary to submit samples two months in advance in order to manufacture the records and make prompt shipments. No action was taken. The meeting then adjourned to Tuesday morning.

THE BANQUET MONDAY NIGHT.

After the meeting was adjourned the members and guests repaired to the yacht room adjoining the banquet hall, where refreshments were served. During this interval the members were introduced to the guests of the evening. At the appointed hour, 7.30 o'clock, President Andrews and the other officers led the way to the Nimrod room, where the banquet, tendered by the Greater New York members, was served. The following sat around the festive board:

W. D. Andrews, Syracuse, N. Y.; C. N. Andrews, Buffalo, N. Y.; S. B. Davega, L. Kaiser; J. N.

The Banquet of the Eastern Talking-Machine Jobbers' Association at the Hotel Astor, Monday Evening.



Another Columbia Sensation

This is decidedly the greatest improvement in the evolution of cylinder "talking machines."

The musical world remembers the instant success that came to the Columbia *Disc* Graphophone when first equipped with our Aluminum Tone Arm.

We have now adapted it to the Columbia Cylinder Graphophone.

It is a scientific fact that aluminum metal has the remarkable quality, when used as a sound conveyer, of wholly eliminating all false vibrations and producing a soft, full, perfectly natural tone, impossible to obtain from any other metal. The Aluminum Tone Arm on this new model does away entirely with any of the hollow horn-tone that is unavoidable in the ordinary construction.

This model BQ machine is very compact, and very similar in general appearance to the Columbia Disc Graphophones, the horn swinging *over*, rather than away from the cabinet, occupying hardly more space than the cabinet itself, and wholly dispensing with the awkward, unsightly horn crane, horn stand, and rubber tube connection.

The motors are noiseless in operation, and the cabinets are beautifully designed, made of the finest selected oak and hand polished.

Every machine is equipped with the Lyric Tone Reproducer.

Model BQ.—A New Cylinder Graphophone selling at $30 retail, equipped with the famous Columbia Aluminum Tone Arm and Handsome Flower Horn.

President and Guests Toasted.

After cigars C. H. Wilson, sales manager of the National Phonograph Co., proposed a toast to the visiting guests, which was drunk standing. This was followed by a toast to the new president, who, in acknowledging it, emphasized his need of the co-operation of every member in furthering the interests of the association. He next called upon Albert S. Marten, president of the Tea Tray Co.

Mr. Marten's Remarks.

Mr. Marten spoke most appreciatively of the honor bestowed on him as guest of the association, and added: "I see about me the most prominent men identified with the talking machine business and its allied industries, and feel that the work you are doing through co-operation must surely be for the best interest of all concerned; in fact it is remarkable what your association has accomplished through concerted action, and I feel that every manufacturer must surely appreciate it and cannot fail to work hand in hand with you, for the upbuilding and strengthening of the business in which we are all so vitally interested. As I look about me I note many who have worked their way up from the foot of tne ladder and have become a power in their several lines. For instance, there is Vice-President Blackman, who I well remember carried a horn in one hand and a standard machine in the other, and from a very small beginning has become one of the leaders in his line. The growth of our industry is marvelous and I know your association has done much to bring the business to such a high standard. Thanking you again for the honor conferred and hoping to be present at the next banquet I will close by inviting you all to be our guests at luncheon here Tuesday."

Vice-President Blackman Heard From.

Vice-President Blackman, who was next called upon, said in part: "What Mr. Marten said is true, for I did go around with a machine and a few records, and that was the beginning of my success in this special line and calling. I naturally had to overcome many obstacles, but success rewarded my efforts. As to association work we need the co-operation of every jobber in the country, for in unity there is strength. We want competent and fair jobbers. We want the manufacturers to be fair with us and co-operate with us to elevate the business in every point, and that means fair competition. We aim as an association to bring the jobber and manufacturer in closer touch with each other, to meet on these festive occasions as good fellows, and in every instance to work in unison for the success of every branch of the industry. Our organization is growing, and the trade now realizes that through its good offices we have corrected many trade evils and abuses. We aim to promote the interest of every manufacturer, jobber and dealer, and last and most important to elevate the business to the highest standard."

C. H. Wilson's Remarks.

C. H. Wilson, sales manager of the National Phonograph Co., on being called upon, said he was more than pleased to come in touch with so many representative men in the talking machine world, and added that W. E. Gilmore, president of the National Phonograph Co., who had arrived from Europe on Saturday, would have been delighted to attend the banquet and given a little talk on trade topics, had not pressure of business kept him away.

JOBBERS SNAPPED WHILE ON THE BOAT TO CONEY ISLAND.

"I assure you," contiuued Mr. Wilson, "that whatever steps your association takes, we believe is for the best interests of the trade at large. The jobbers and manufacturers should meet every issue squarely, and leave no stone unturned to have the business reach the highest standard possible in the mercantile world. The holding of these meetings and the discussion of the many problems of the trade is, I believe, conducive of much good, as they bring about harmony, which is a most important factor in every line of business. One important issue, I think, that should be taken up by your organization is the amalgamation of interests—to combine all the jobbers' associations under one separate head in a national association. By concerted ac-

To the Talking Machine Trade of Western New York

BUFFALO, N. Y., July 31, 1907.

I wish to inform you that I have just purchased the Edison jobbing stock and good will of Mr. Robert L. Loud, of this city. Having formerly purchased of him the Victor line, it removes Mr. Loud from the wholesale Talking Machine business entirely.

I only take from Mr. Loud's stock such goods as are in their original packages, and of the very latest pattern and style. He keeping the retail stock.

As I will continue in the future as in the past to cater to the wholesale trade exclusively, I ask for a continuance of your trade.

Mr. E. Burley who has represented this house in the past, is no longer in my employ. But a representative will call on you as usual.

Thanking you for all past as well as future favors, I remain,

Yours truly,

W. D. ANDREWS

TALKING MACHINES AND SUPPLIES

Seneca Street, Corner of Wells
Opposite Broezel Hotel

BUFFALO, N. Y.

tion you would be in the position to outline policies that would surely redound to the interest of every jobber and dealer in the country and accomplish much good."

J. F. Bowers of Lyon & Healy Speaks.

President Andrews then introduced J. F. Bowers, of Lyon & Healy, Chicago, and representative of the Central States Talking Machine Jobbers' Association, with some very happy remarks. Mr. Bowers, who spoke in a humorous vein, kept his auditors interested by citing stories that had a direct bearing on every point he wished to emphasize. He said in part: "I am a rank outsider, but, nevertheless, am pleased to be present at this sumptuous feast and listen to the various arguments which were presented by the previous speakers. This gathering brings to my mind a similar banquet held in this city some time ago when we took up the subject of the copyright law. Around the festive board were John Kendrick Bangs (a second Mark Twain), Bronson Howard, Victor Herbert, T. P. O'Connor, a member of Parliament, and other brilliant minds, none, of course, more brilliant than the toastmaster, for I was the toastmaster. (Laughter.) We discussed the subject of the copyright law pro and con, complimented Mr. O'Connor on his achievements in England, and by co-operation secured national recognition. The Music Publishers' Association has accomplished great good by banding together for one common end. Mr. Wilson's remark on amalgamation rings true. We need co-operation. There is a lack of affiliation between the Central and Eastern associations. A national association is what is needed. Let us get together and I know we will become a great power for good. I am a great believer in organization. Lyon & Healy are members of a number of local associations, and have been greatly benefited thereby. There should be a national association, and I think the hour is near at hand for its consummation. Let us get together and work to this end."

C. V. Henkel on Association Growth.

C. V. Henkel, of the Douglas Phonograph Co., outlined the growth of the association, and what good had been accomplished in a little over a year. He also argued strenuously for amalgamation, and spoke of the increase in membership and how it proved conclusively that the jobbers were being won over one by one by simply "being shown" what could be done and, above all, that they were studying their best interests by becoming affiliated and not attempting to fight the battle single handed. "We are not organized to intimidate the manufacturers," he added, "but to work hand in hand for the best interests of all concerned."

Other Gentlemen Who Spoke.

Other speakers were William Pelzer, of the legal department of the National Phonograph Co., who spoke on the one-price system and the laws affecting contracts in various States; W. A. Lawrence, of the Standard Metal Co.; J. A. MacNabb, of the Zonophone Co.; John Herzog and M. A. Carpell, of the Herzog Art Furniture Co.; J. B. Furber, of the Regina Co.; Pat. Powers, of Buffalo, and Walter L. Eckhardt, of the wholesale department of the Columbia Phonograph Co.

TALKING MACHINE JOBBERS IN THE ORIENT (CONEY ISLAND).

President Andrews asked for a rising vote of thanks to the jobbers of Greater New York for their sumptuous banquet and entertainment. Mr. Wilson also asked for a vote of thanks from the guests to the local association for being so ably entertained.

The members and guests then repaired to the roof garden, where a delightful hour was spent.

TUESDAY'S SESSION.

There was a goodly attendance at Tuesday morning's session when the following members were elected as a nominating committee for next year: John Miller, of the Penn Phonograph Co., Philadelphia; C. G. Andrews, of the Boston Cycle & Sundry Co., of Boston; C. V. Henkel, of New York; S. B. Davega, of New York, and A. O. Petit, of the Edisonia Co., Newark, N. J.

Protection in the Selling of Supplies.

Vice-President Blackman offered the following resolution:

"Whereas, The practice of most talking machine companies of selling their product through jobbers and affording the jobber protection has been approved by the trade in general and resulted in a healthy growth; and,

"Whereas, Horns and horn cranes have been sold by many manufacturers direct to dealers and without any protection to the jobber, and it has resulted in supplies being sold and made a part of the talking machine outfits, which were not up to the standard of quality maintained by representative manufacturers of machines, and has tended to cheapen and lower the standard of talking machine outfits in general, thus injuring a great industry; therefore, be it

"Resolved, That the members of this association are requested to support only such manufacturers of horns or other supplies, whose product is of standard quality and whose policy is that of following the talking machine manufacturers in protecting the jobber; and be it further

"Resolved, That the secretary send a copy of this resolution to manufacturers of horns and supplies, obtaining, if possible, their reply and their co-operation." It was unanimously adopted.

Subsequently Mr. Blackman suggested that

Recommended as Best By those Who Know Best

Every dealer who would like to add to his business a feature that will increase it from 10 to 30 per cent. should give his consideration to the following recommendation.

"The undersigned E. E. and Minister Plenipotentiary of His Majesty, the King of Spain, to the United States, has much pleasure in stating that the words for the study of the Spanish language as prepared by the International Correspondence Schools, of Scranton, Pa., which I have carefully listened to, are the most perfect rendering of the pure Castilian pronunciation. I consider them invaluable to the student of our language, and cannot too much praise their efficiency and convenience." EMILIO DE OJEDA.

This official endorsement is the highest possible recommendation for the efficiency and accuracy of the I. C. S. Spanish Course, and plainly tells the characteristics of

I.C.S. LANGUAGE SYSTEM
WITH
Thomas A. Edison
PHONOGRAPH

This system of language instruction is in use at the U. S. Government War College at Washington, and the phonograph system has been lately adopted by the University of Chicago, and everywhere it is being recognized as the coming method of language instruction. Phonograph dealers all over the country have been very successful in handling the language feature in connection with their other business. There is no reason why *you* cannot do the same—there is no reason why *you* should not do it next month, only because of your own indifference and negligence to write *now* asking for further particulars. Don't you think it worth while to find out more about such a feasible means of increasing your business ?

Write us a postal to-day.

INTERNATIONAL CORRESPONDENCE SCHOOLS, SCRANTON, PA.

any member send in the name of such manufacturers whom they desired to have a copy of the above resolutions, and it would be promptly forwarded. He would also impress upon the members to report the uames of the manufacturers who are not supporting the association, so that proper, suitable steps be taken to have the party fully understand the situation.

Keeping Tabs on Credits.

Vice-President Blackman submitted a most excellent card system fcr keeping tab on credits, and the majority of the members will adopt same forthwith.

Secretary Jacot Thanked.

C. V. Henkel offered a resolution which is to be engrossed and framed, and finally presented to Secretary Jacot, embodying the thanks of the

ANOTHER GROUP TAKEN ON THE PIER IN CONEY ISLAND.

association for his efficient work and good offices. It was pointed out that Secretary Jacot had worked most arduously and was deserving of the highest praise for work admirably performed.

Albert S. Marten Speaks.

After an executive session, several manufacturers and their representatives were asked to address the meeting. Albert S. Marten, president of the Tea Tray Co., spoke upon several topics of interest, and assured the association of the hearty co-operation of his concern in all matters affecting their interests.

Topham Complains of Trade Abuses.

A communication was received from James F. Topham, of Washington, D. C., calling attention to certain trade abuses; in fact, complained on the very score embraced in the foregoing resolution. Secretary Jacot was instructed to send Mr. Topham a copy of the resolution, and advise him of the association's action.

C. H. Wilson's Remarks.

C. H. Wilson, representing the National Phonograph Co., the next speaker outlined why his company had adopted a new horn and staud. He incidentally explained that they had learned that the cutting of prices could be traced direct to the handling of miscellaneous horns, and that the dealers were complaining bitterly on this score. He also noted that the jobbers were obliged to carry a large stock, and if his company supplied them it would eliminate price cutting to no small degree, and, moreover, the jobbers and dealers would make a greater percentage of profit. He also stated that his company wished to go on record as being iu hearty sympathy with the aims and objects of the association, and willing to do all in their power to advance its interests.

National Co.'s New Agreement.

Mr. Wilson was then asked several questions relative to the company's new agreement, which is to be issued Sept. 16 next. It was pointed out that the jobbers were in favor of a differential price schedule, which would allow a cash discount. This would cut off ruinous competition and protect the small dealer to no small degree.

The following members spoke on this important subject at considerable length: President Andrews, J. B. Furber, Secretary Jacot, Vice-President Blackman, S. B. Davega, Pat Powers and I. Davega.

The following committee was appointed to take the matter up at once with the manufacturers: Messrs. Furber, Buehn, Henkel, Pardee and Blackman.

Differential Price Discussed.

Tuesday's session was in great part devoted to the discussion of the differential price on goods sold for cash or on instalments. It was the consensus of opinion that the manufacturing companies should allow a proper discount as between the two sales, in conformity with the general practice in every line of business. The fact was pointed out that as it now stands that when a customer finds he cannot obtain better terms in buying for cash or on eight months' time, he will invariably take advantage of the latter, to the detriment and perhaps damage of the transaction. Further, it was held the one-price system placed the jobber and dealer on the same footing, but the present method of selling was driving jobbers into the retail business. This would be remedied were a differential schedule adopted by the companies and embodied in their agreements, a concession the trade were clearly entitled to by all known mercantile rules and usages. Mauy telling points were made by Messrs. Andrews, Blackmau and others. On August 7 the committee couferred ou this question with President Gilmore, at the New York offices of the National Phonograph Co., when their views were presented in detail. Mr. Gilmore listened attentively, asked a number of questions, and said he would take the matter under advisement, and promised an early reply. C. H. Wilson, manager of sales; F. K.

Edison Phonograph Money

The money spent for Edison Phonographs and Records in a single year runs far into the millions. You can get your share only by pushing Edison goods. It is not a question of a talking machine, merely. People are learning to discriminate, and the sweet-toned Edison with its wonderful powers of perfect reproduction makes the strongest bid for popular favor.

The demand for Edison Phonographs and Records is now the greatest in its history and is increasing, as our advertising prompts more people to investigate and the Edison itself influences them to buy.

If you carry Edison goods, put your best selling machinery behind them. It will pay you. If you are without Edison goods, write us for terms and the name of a nearby jobber who can supply you.

NATIONAL PHONOGRAPH CO., 59 Lakeside Ave., Orange, N. J.

concerned. I believe that this industry will move on to greater and grander accomplishments. The talking machine has ceased to be regarded as a toy, and it is playing its part as a great educational force on the world's stage. It is not only used as an entertainer, but it is used in educational institutions, and it is found as a companion of the business man in his office. I believe that its future is assured, and I know that with the men whom we have behind the guns greater victories will be accomplished. It is an industry which should be maintained on a high plane, and I believe that you gentlemen will all be interested in keeping it there, and I assure you, to the utmost of my ability, that my trade paper organization shall be pledged to its advance. Everything which we can do consistently shall be done to promote the legitimate interests of this trade, and I say confidently that its future advance will be just as miraculous as its development within the past half dozen years."

There is some difference of opinion as to which of the four machines is the best, but the opinion is unanimous regarding Herzog Cabinets.

SOUVENIR GIVEN OUT BY THE HERZOG ART FURNITURE CO.

THE TRIP TO CONEY ISLAND.

Immediately after the conclusion of the luncheon, given by the Tea Tray Co. to the visiting talking machine delegates, M. A. Carpell, New York representative of the Herzog Art Furniture Co., Saginaw, Mich., took the entire delegates in charge, acting in the capacity of host. Mr. Carpell proved himself a pastmaster in the art of entertaining, and from the time that the seventy-five delegates boarded the steamer for Coney Island until the close of the dinner, his effervescing good nature was everywhere manifest in making Tuesday afternoon and evening a red letter period in the memory of the talking machine men.

Mr. Carpell bought up a large portion of Coney

M. A. CARPELL.

Island, which he presented to the visiting delegates, who took temporary possession of the seashore domain of Manhattan. In his purchase Mr. Carpell included all of the shows at Coney Island, and in order to acquaint the delegates with the beauty and variety of his possessions he piloted them personally through every show known to Coney Island habitants. Mr. Carpell owned Dreamland on Tuesday afternoon and evening, and none disputed his authority. After the chutes had been shot, and the various shows had been carefully examined, and the dark corners of Dreamland explored Mr. Carpell invited the delegates to a sumptuous repast, and behind mountains of steamed clams and other appetizing accessories a couple of delightful hours were passed as a finale to the talking machine men's gathering in this city.

At the head of the table sat John Herzog, treasurer and general manager of the Herzog Co. Mr. Herzog contributed greatly to the evening's entertainment by some very clever and witty remarks at the close of the dinner. He spoke of his pleasant experiences in the talking machine trade, and gave an enjoyable and reminiscent talk. He said among other things that he regretted that the president of his company, John L. Jackson, was unable to be present, but that he took great delight in meeting the talking machine men of the East.

In response to a call from the chair, James F. Bowers, of Lyon & Healy, Chicago, gave an interesting and entertaining address, which was enthusiastically received by the banqueters. Among those present were: John H. B. Conger, W. A. Laurence, J. F. Bowers, F. H. Silliman, W. O. Pardee, W. D. Griffen, V. H. Rapke, W. L. Eckhardt, C. V. Henkel, A. H. Jacot, C. N. Andrews, William Bohn, John W. Blackmau, Lipman Kaiser, A. W. Barklow, Alfred Weiss, Adolf Weiss, W. D. Wilmot, A. P. Petit, E. C. Plume, William C. Finch, Benjamin Switky, R. H. Morris, John Kaiser, Ed. E. Buehn, F. B. Werner, G. T. Williams, J. D. Beekman, A. O. Petit, O. C. Neal, L. H. Stewart, L. Rose, C. G. Price, H. S. Price, J. Rose, S. B. Davega, J. Newcomb Blackman, John Herzog, Carl E. Ackerman, W. D. Andrews, Fred H. Thompson, Thos. Frost, M. A. Carpell, Louis Jay Gerson, Henry E. Marschalk, H. L. Ellenberger, T. F. Murray, Herbert T. Lewis, R. B. Caldwell, J. B. Furber, J. A. MacNabb, A. Hanz, P. A. Powers, I. Davega, Jr.

Thus closed one of the most enjoyable reunions of the talking machine jobbers ever held. Indeed, it would be hard to speak of any former occasion, excepting the Edison entertainment, given by the National Phonograph Co., July last, to which it could be compared, according to the statements of a number of the participants. That event—never to be forgotten—was more elaborate and on a greater scale, but it was generally believed no more cordial feeling of good fellowship could have prevailed.

A Chat With Mr. Carpell.

Later when Mr. Carpell, the sales manager of the Herzog Art Furniture Co., was asked about his impressions of the association, he said: "The difference between the personnel of the Eastern Talking Machine Jobbers' Association and other bodies in different lines I do business with is marked; in fact, it is striking. The questions they have handled were treated in such an open and broad way, that such an association must be beneficial, conducted as it is in such an admirable manner. As regards the members, I could not help but observe that they are high-minded and act accordingly; their heart and soul is in their business and it is conducted on live lines. In our dealings with the talking machine trade we have found more satisfaction than with many of the furniture people I could name. In brief, we were all greatly pleased and delighted."

FRED G. LOEFFLER'S GOOD BUSINESS.

Fred G. Loeffler, the talking machine dealer of 260 Bergenline avenue, Union, N. J., and who also conducts a store in Jersey City, is doing an excellent business in both popular and operatic selections. He caters especially to a large mailing list, and he says his chief trouble does not consist in getting orders but in getting enough of the popular records to fill orders. He claims to have lost several sales of the "Rigoletto" quartet, the most expensive record he carries, through his inability to get a sufficient supply from the jobbers.

AUXETOPHONE CONCERTS IN THE PARKS.

With the object of advertising his business, E. R. Kern, of the Kern Music Co., Jersey City, N. J., offered to give free Auxetophone concerts in the parks during the balance of the summer on the evenings upon which there is no concert by the municipal band. The electric light company, however, wanted $100 for furnishing light during concert evenings, which somewhat delayed the acceptance of Mr. Kern's offer by the city. The Kern Music Co. do a great deal of newspaper and street car and other forms of advertising and always keep before the public.

It is now about time to get in line for the fall campaign.

Some Facts Worth Considering

THE talking machine man frequently asks, "How can I increase my business?" The answer is easy. Place on a side line which takes but little space, which is attractive, and a standard in its particular line. Take the **Black Diamond Strings,** for instance. Steel and wound. New process. They are the finest manufactured. They are used by all of the prominent artists, and you will have a trade coming your way when it is known that you handle the "Black Diamond." Music dealers all over America, and all over the world for that matter, know full well the value of this product.

(Special to The Talking Machine World.)
World Office, 69 Basinghall Street,
London, E. C., Eng., August 6, 1907.

One can summarize business conditions during the last few weeks from many standpoints. The "man in the street" would say it was distinctly bad as far as sales are concerned, while from the manufacturer's point of view the talking machine industry is most prosperous. This may read rather illogical, but the answer is supplied by the dealer who says: "It is not us who are doing the business, as the home trade is distinctly quiet all round with everybody outside the factors and manufacturers, whose factories are kept busily engaged supplying the wants of our colonies and other countries, where, of course, business is in full swing," and from my own observation this is the general state of things today.

The weather fortunately keeps pretty fine, but owing to the sudden changes we do not see as many machines on the lawns or up the river as we would wish, still this summer shows a distinct advance in the number and variety of machines in evidence on the punts and houseboats. Holiday making is in full swing during July and August, particularly, and with so many leading men in the trade and others now on their vacation it is not surprising that business must and does suffer to an appreciable extent.

Then, again, one must not lose sight of the adverse influence of the railway men's agitation, and threatened strikes in other quarters, while the bad weather we experienced up to a few weeks ago has had a most disastrous effect upon the crops throughout the land. Thus the feeling of insecurity these things engender, makes the spending class hold on tight to what little surplus they are able to save from their earnings, which, under better conditions, they would spend. There are, however, good prospects for an excellent fall trade. The leading firms are preparing for it in many ways, and when home orders come along they will all be ready to handle them with promptness and efficiency.

Hawthorne & Sheble Co. in London.

The Hawthorne & Sheble Manufacturing Co., of Philadelphia, are represented in London in the person of William McArdle, who is located at 10 Christopher street, Finsbury, one of the most convenient centers for talking machine men to get at. I found him in a spacious room surrounded by a variety of horns, machines, records and accessories, which, upon inspection, proved to be equal if not better than the best upon this market. I have not the space to enter into a detailed description, but Mr. McArdle will be pleased to convey particulars, or, better still, will give practical demonstration to such as are interested enough to make an appointment with him. He will fix up an agency with a good wholesale distributing firm in London, and also in the principal continental centers, which will be worked from this city. Mac is in splendid trim, and has requested me to convey his respects to the "boys" across the water.

Mr. Beecroft Also a Visitor.

Clement Beecroft, of the Tea Tray Co., is also over here on business for his house.

President Johnson Returns in September.

Another visitor is Eldridge R. Johnson, president of the Victor Talking Machine Co., who has been here for some time. He expects to return about September, but the date is not definitely decided upon. It may not be generally known that just previous to his sailing Mr. Johnson met with a very nasty accident. Out driving one day the horse bolted, with the result that the occupants of the trap were precipitated into the roadway. "At the time," said Mr. Johnson, "I thought it had only resulted in a sprained ankle, but on arrival here I sought medical advice, and under the X rays it was discovered that several bones of the foot were dislocated, while the leg bone was broken." I am glad to say that Mr. Johnson is now well on the road to recovery, and is able to transact business as usual. Mr. Johnson is not here on business. He makes it a practice to spend the summer in England, chiefly because the climate is more beneficial to his wife's health. This is only possible since he has brought his business to such a system as to be able to conduct it equally as well from London. "I have found trade generally good," continued Mr. Johnson, "but it lacks the stability prevalent in American circles."

Mr. Geissler, general manager of the selling department of the Victor Co., is yet another visitor this month, but he does not stop long this time.

From the Mouth Direct to the Type.

A novel experiment in journalism is being conducted by the editor of the Automobile Owner. He dictates his descriptive articles, news items and other matter to the Columbia Phonograph Co.'s "Dictaphone," and sends the cylinders direct to the composing room, where they reproduce his spoken words to the compositors. These clever "graduates of the case" set up type, not from copy, but from dictation. In describing this new method, the editor says: "A great part of the editorial portion of this paper has been produced without a word having been put on paper. Our innovation has been brought about by the use of the 'Dictaphone.' For some time past we have been using these machines in connection with the typewriter, the matter being dictated directly into the wax cylinders at odd moments, and then handed on to the typist to transcribe. In this way it is found we can keep our typist continually employed, and save the time occupied in dictation. This saving is approximately about two hours in three.

"This success suggested to us the possibility of applying the 'Dictaphone' to the linotype machine, and we approached the Columbia Phonograph Co. to co-operate with us in carrying out the undertaking. There was some difficulty at first in accustoming the lino operators to the sound of the voice, but it soon passed, and during the last month we have had Columbia 'Dictaphones' connected to three of the linotype machines at the works of our printers. These

Conscience in Business.

Shut out conscience from your methods, and you may make money; but you will certainly make enemies and lose friends, and possibly look around some day for a hand to shake and a heart to sympathize with you in some difficulty or other. Go straight to your creditors when in difficulty, explain your situation aud possibilities. Do not fear to "face the music," for the open course is the best always.

Trade Satisfactory With Ruhl.

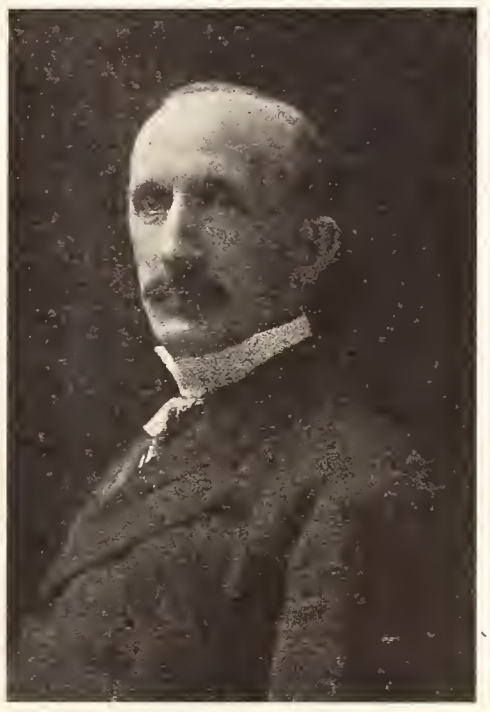
"Trade this month," said Mr. O. Ruhl, "has been most satisfactory. So far we show a 50 per cent. advance over sales in July last year for the Lindstrom machines, while the Beka record business is expanding all the time. Mr. Ruhl recently paid a visit to Newcastle, which, he says, was of a most satisfactory nature, and business generally up north was excellent.

Factory Quarters for National Phonograph Co.

The rumor announced in our June issue as to the probability of the National Phonograph Co. opening factories in London, is now a rumor no longer, for I am informed by Mr. Lemoine that commodious premises have been secured at Willesden for the purpose of manufacturing records, and which, it is expected, will be in full working order in a month or so. Edison factors and dealers will join us in congratulating the National Co. upon this, their latest, acquisition, which means that the trade may calculate upon a much improved service and quicker delivery facilities. In connection with the above, we hope it will enlighten our contemporary, who sits in a glass house and throws stones!

Interesting Interview With President Easton.

Just before his departure from these shores I was fortunate enough to secure a short chat with E. D. Easton, the Columbia Phonograph Co.'s courteous and strenuous president, who sailed with his family on July 31 for New York after a visit to all the branches of the company at Berlin, St. Petersburg, Vienna, Milan, Paris, and, of course, London. It has been Mr. Easton's custom for a number of years to combine with his annual holiday a tour of inspection of the continental branches. Not only does this give him the opportunity of keeping closely in touch with the needs and condition of each office, but his presence is a decided inspiration and encouragement to the managers. Mr. Easton was much



PRESIDENT E. D. EASTON.

impressed with the handsome appearance of the new Paris shop on the boulevard and its splendid prospects for retail business and while he did not reach London in time to visit the Business Exhibition at Olympia, he was naturally much pleased with the splendid results achieved by his company at the commercial stand there, and I was glad to learn that this branch of the business had made very great strides in America. While on this side of the Atlantic word came to him that the company's business for June had exceeded the previous June very considerably. Mr. Easton said that he expected it, for the business was never better than at present, and their manufacturing facilities were strained to the utmost—unfulfilled orders being more than double even this time last year. Asked as to the comparative volume of trade at the various centers, Mr. Easton stated that he had found the growth of business fairly uniform, the only difference being in the continuity of progress all the year round. "The talking machine trade is only in its infancy; yet, at least in America, we have reached that stage of stability which means business—and good business, too—each month throughout the twelve. As an instance, I may say our June sales this year were much greater than January, which is a state of things, I think, we should all like to see more universal." With this agreement I made my adieu, but not before I had been regaled with the following amusing story, which very forcibly illustrates a contrast, and at the same time shows a lesson in consideration:

"The police regulations in America are anything but pleasant to motorists who transgress the laws of the country, and it is no uncommon thing for a chauffeur to be placed under arrest on some petty charge and detained for a whole day before being released on recognizances. I am thankful to say," continued President Easton, "that I have so far escaped such an unpleasant experience, although I have been an ardent motorist for years, but in face of these expectations a little adventure I had in Switzerland was in the nature of an agreeable contrast—if amusing. It came about in this way: You know that I combine business with pleasure while upon my annual tour, and this time we spent ten days in beautiful Switzerland. Hiring an automobile, we

THE GENERAL PHONOGRAPH COMPANY, Ltd.,

1 Worship Street, City Road LONDON, E. C., ENGLAND

FROM OUR LONDON HEADQUARTERS—(Continued.)

one day found ourselves in a high part of the country where it appears motor cars were not allowed during certain hours. I can hardly say we were arrested, but any way, we found ourselves in the care of the law, and were treated most courteously. The trouble now was how to get away. We were told it would be necessary to hire a team of horses to draw the car away, deposit 100 francs, and last, but uot least, walk ahead in front of the horses out of the restricted area. And this is how we eventually met the obligations of the Swiss law." Said I, "It would have been a grand illustration to present to The World readers." "Yes," answered Mr. Easton, "but as cameras were scarce, you will have to do your best with the pen."

A Point for Salesmen.

Cultivate a cheerful manner. A cheery smile and bright speech is half-way toward making a sale; a sullen look and a surly tongue are sure guides to failure. Optimism is ever the ace of trumps in business and out of it.

Chappell & Co. After Pirates.

Outside all the police stations, and on the principal boardings in and around London are notices announcing a reward of £50 which will be paid by Messrs. Chappell & Co. for information leading to the conviction of persons guilty of printing pirated copies of the "Merry Widow" waltz.

Russell Hunting's Discovery.

I am authorized to announce that Russell Hunting, of Michael Casey fame, recently made a most important discovery bearing upon the recording art. It would, of course, be premature to say more at present, as the matter has only just got beyond the experimental stage, but suffice it to say that it will bring the reproduction of voice and music more nearer natural perfection than at present.

Walter P. Thompson Back from Canada.

Walter P. Thompson, representing Pathe Freres, has returned from his extensive Canadian trip, where he reports having done a large business. Messrs. Pathe Freres are now offering an 11-inch double-sided disc at four shillings.

Red Label Record Prices Reduced.

The Gramophone & Typewriter Co., Ltd., announce a reduction in the price of their Red Label records. As the reductiou amounts in some cases to more than 33 per cent., dealers handling these products will certainly not be the losers, since the sales and the profits must increase proportionately. Mme. Melba herself requested the company to sell her records at 12s. 6d. instead of one guinea, as so many unknown friends could not afford the latter price. A further list of records by Mme. Melba is now ready.

"Paris in London" Syndicate Plans.

The "Paris in London" syndicate, who have secured the long vacant Aldwych-Strand site, have in view the erection of a building costing £500,000, and which will contain a theatre, a concert hall, a restaurant, and, among other departments, galleries in which there will be a permanent exhibition of arts and manufactures. This means a series of industrial exhibitions which will encircle the interior of the building. Other notable features include the establishment of a French club and the running of a purely French theatre, wherein French plays in the lighter vein will be staged exclusively.

Melograph Record Co. Incorporated.

With a capital of £5,000, in £1 shares, the Melograph Record Co. was registered without articles on July 11 to adopt an agreement with Ernest Hesse & Co., of Berlin, to carry on the business of phonograph record manufacturers. Registered office, Lyceum Chambers, 97 Hanover street, Liverpool.

Duty on Australian Catalogs.

The duty on catalogs sent to Australia may now be prepaid in London at the rate of 3d. per pound. Duty stamps are issued from the Commonwealth office, 72 Victoria street, Londou, S. W.

An Improved Record Box.

The Russell Hunting Record Co. have issued an improved record box. The old label which has proved so popular, and which it would be hard to equal for effectiveness, has been retained, but the change consists in deeper caps, top and bottom, firmly gummed, flush with the body of the box. Thus there are no cap edges protruding, which in the case of the old boxes was so often the cause of records being broken by falling through. "The 'Merry Widow' opera has been so much in demand," said Mr. Manson, "that we have included no less thau four more selections in our August list." And, by the way, the first one I notice is "The Vilja Song," sung (under the title "Miss") by Mabel Manson, the wife of the genial manager of this company. Their new premises are giving much satisfaction, but it has been found necessary to take additional floor space in the building adjoining.

Reduction in Price of Edison Records.

The forthcoming reduction in price of the Edison gold-moulded record from 1s. 6d. to 1s. naturally caused somewhat of a sensation in the trade, but we think it a move of good policy on the part of the National company, and feel sure all dealers will recognize it in the same light, as it means more trade and consequently better returns in the future. The company recognize that a certain amount of inconvenience will ensue, and have therefore made a generous provision for rebate on purchases between March 1 and June 8, iuclusive. Those who have not received particulars of this should write to the National Company in London. Chatting with Mr. Lemoine upon the matter, I am told that the reduction has met with general approval.

A Test Case.

Application was made at Bow street, under the Musical Copyright Act, 1902, and a summons was granted against a hawker to show cause why a talking machine disc and a perforated music roll, which he had offered for sale, should not be destroyed.

Music Trades Exhibition in Manchester.

A musical instrument trades exhibition is to be held at Manchester. It opens September 9 at the St. James Hall.

Edison Bell's Comprehensive List.

The Edison Bell August list of records contains a most comprehensive variety of selections, and is one of the finest issued this year.

American Talking Machine Co. Notes.

Business was going apace at the American Talking Machiue Co. and at the time of my call there were distinct preparations for increased trade during this next season. A new catalog with buyers' index or trade tally will be issued in good time.

Cook's Athletic Co. Changes.

We have received a communication to the effect that Cook's Athletic Co. (1907), Ltd., has acquired the business of Cook's Athletic Co., Ltd., and is continuing same at the old address under entirely new management.

General Phonograph Co. Plans.

Last month I made reference to the fact that the General Phonograph Co. had taken over the business of Neophone, Ltd. All business, including that of the "White" gold-moulded cylinder record, will in future be carried on from No. 1 Worship street, City Road. Here it was that I found Mr. White with his staff of experts around him, all doing their share in producing what is claimed will be one of the best phonograph cut discs now on the market. It is intended to apply the gold-moulded process—White's system—to the well-established Neophone product, and it will be manifest to all that this combination means a record of excellence, and one that all enterprising dealers everywhere should handle. Terms and particulars will be supplied on application to the General Phonograph Co. at above address.

Fr. Rauth's Northern Trip.

Fr. Rauth recently made a round trip up north, and reports things as fairly satisfactory for the time of year. His very adaptable needle box is again offered in this month's advertisement.

Homophone Double-Sided Discs.

The August issue of Homophone double-sided discs contains the first new English repertoire.

New Series of Flower Horns.

Felix Heilbronn, of Willibold, Twier & Co., showed me a fine new series of Frankonia flower horns, brass and steel embossed, and in all colors. They report good business both in these and disc machines.

British Sonogram Co. Make Records.

By the courtesy of Mr. Mellerio I was enabled to hear about a dozen new titles comprising sentimental and coon songs, violin and pianoforte solos, just recorded under their improved system. One can speak very highly of these records on account of their natural musical qualities, apart from their distinct pronunciation; the violin solos are exceptionally sweet. These issues will comprise No. 2 list, which will be forwarded to dealers upon request.

Pathe Freres New Machine Catalog.

Pathe Freres state that they are well satisfied with the reception accorded their new 8½-inch double sided disc at 1s. 6d. I may say that these records are every bit as well recorded as the larger discs, while the tone volume and purity is excellent. A new machine catalog is in course of preparation, and will be ready shortly, as also a larger catalog covering over 2,000 selections on the 8½-inch and 11-inch records.

Recent Odeon Agencies.

We are informed that several important agencies have been arranged by the Odeon Co. Messrs. Ashton & Mitchell's Royal Agency have opened a showroom at 33 Old Bond street, W., devoted exclusively to Odeon and Fonotipia records. They are also arranging to open showrooms at their branches at 35 Sloane street, and 16 Gloucester road, S. W. Another important agency appointed is that of the Musetta Piano Player Co., 83 New Oxford street, W. C.

Records of Herr Kandt's Band.

During July a special issue of Odeon records was made, the series, consisting of six double-sized records by Herr Kandt's Band, under the direction of Herr Julian Kandt. Kandt's Band is one of the most famous and popular organizations of its kind. Among the numerous engagements it has fulfilled have been "Command Performances" before the King and Queen, His Majesty having on several occasions complimented Herr Kandt upon the perfect ensemble and refinement of his band. The band has also performed before the King and Queen of Spain, the Prince and Princess of Wales, etc., etc.

Barnett Samuel & Sons Offer.

In their advertisement (elsewhere in this issue) Barnett Samuel & Sons offer to send absolutely free to all tradesmen a (reduced size) sample of their record album, which is the only British-made album on this market. They are made in no less than six sizes and styles, and are very strongly put together, as the sample will demonstrate. Another new line issued by this firm is a patent divided needle box, to hold 200, put up in fancy tins printed in colors. It is a very neat little box, and contains a needle and waste receptacle all in one. Mr. Balcombe states that a new illustrated catalog is now in course of preparation, and is expected to be published early in September.

Columbia Co. Hold Their Outing.

On Saturday, July 6, the employes of the London factory, of the Columbia Phonograph Co., held their first outing at Halliford-on-Thames. The party enjoyed a delightful ride by brakes through the beautiful Thames Valley, and on arrival at their destination spent the time in boating and sports. After dinner various members of the party contributed to the program of songs and instrumental music. Mr. A. Gladden occupied the chair. The toasts were "Our Manager" and "Success to the Firm."

Latest Addition to List of Factors.

Constantine Craies & Co. are a new firm to enter the rapidly swelling list of factors. Those principally interested are Mr. C. Craies, late managing director of Neophone, Ltd., and Mr. Sidney T. Aldridge, late assistant manager of the same company, and also of the Gramophone and Zonophone companies, as export manager. I was permitted a view of the premises which were then being fitted up to carry large stocks of records and machines. There is ample accommodation, and I was informed by Mr. Aldridge of their intention to factor and carry a representative stock of all classes of machines, accessories and records, apart from which they are themselves manufacturing a splendid series of disc

Words Fraught With Meaning

TO YOU

Our catalogue is not the most expensive, but it is the most COMPREHENSIVE, and therefore the one of most use to you.

It contains illustrations and full particulars of every machine, record and accessory of merit now on the British market.

machines with inlaid Sheraton cases, and carrying a patent tone arm, which, with slight adjustment, will allow of both the phonograph cut and Berliner type of records being played.

New Columbia Catalog Coming.

The Columbia Co. state that a new catalog, covering all their machines and records, will be ready in the near future.

Enlightenment Still Necessary.

Every now and then one is astonished at the amount of misapprehension that exists with reference to the talking machine, even on the part of those who are supposed to know better. A recent incident of this kind occurred to one of the travelers of the Cardiff branch of the Columbia Co. He went to answer in person a letter received from a customer and happened to meet the lady at the lodge gates as she was coming out of her park for a drive in her motor car. She was exceedingly affable to the salesman, but the thing which made him stare with astonishment was her request, as she handed him a disc record to whistle the tune for her. Apparently she had a hazy notion that by looking at the engraving of the sound lines the salesman could read off the music as one does the printed sheet.

Lyon & Co. Preparing for Coming Season.

A. Lyon & Co., the city road factors, are busily preparing for the coming season, which they mean shall be a good one. Business was said to be satisfactory for the time of year.

Latest Imperial Records.

The August list of Imperial records includes a splendid variety of selections. At least one new artist, Albert Campbell, is listed, while I notice also the return of an old supporter.

Wilfred Samuel's Trip to Berlin.

Wilfred Samuel, of Barnett Samuel & Sons, paid a business visit to Berlin last month, which, it is understood, was of a satisfactory nature.

Received Highest Award.

At the talking machine contest at Epsom on July 17 the Odeon Co. received the highest award in the trade class for their needle disc records. The records which carried off the honors, were tne "Tancredi Overture" (grand opera, 13¾ in., Cat. No. 7201), and Mr. Lloyd Chandos' "Nirvana" (Cat. No. 606). Great surprise was evinced by these members of the trade present at the purity and volume of these delightful records and the honor was unanimously voted as fair and equitable. The instrument used was the "Exhibition" Discodeon.

Increased Postage to New Zealand.

On and after July 25 there will be an increase in the postage charged on parcels for New Zealand exceeding four feet in length and girth combined. The postage on parcels not exceeding that size will remain unaltered. A copy of the new regulations may be seen at any British post office.

The "Talker" in Morocco.

Did Kaid Maclean have a presentiment of his capture? He is said to have ordered only recently before he fell into Raisuli's hands a Columbia graphophone which had been sent out to him from London. The imagination pictures captor and captive dancing a merry fling to the waltz from "The Merry Widow," for if this music charms the continent, and takes all London by storm, may it not be expected to prove equally seductive in the wild hill country of Morocco? Still, if Raisuli continues to exhibit the storm qualities of a lion heart, there is some satisfaction in the thought that the Kaid may be deriving solace from the graphophone's companionship, forgetting his discomforts and minimizing the dreariness of confinement, while the barbarian amuses himself perplexing the Powers.

To Make Records in a Few Weeks Time.

I am informed by Mr. Fischer, of the Favorite Record Co., that he expects recording to commence in London in a few weeks' time.

British Sonogram Co.'s Announcement.

The British Sonogram Co. announce that No. 2 list of records will be ready about the first week in August, and a few days after they will have on the market ten or twelve new up to date "Sovereign" records made under an improved system. Recording was in full swing at the time of my call, "and while, said Mr. Mellerio, "machine deliveries are a little behindhand, we have excellent prospects for the season in sight.

Bonci Appearance With Melba.

The appearance of Signor Bonci with Mme. Melba at Covent Garden goes to show what strides the talking machine is making, and the manner in which the makers of high-class records are raising the level of this type of musical instrument. Signor Bonci is under contract with the Fonotipia Co. to make Fonotipia records, and it is interesting to note that Victorian Sardou, the famous dramatist, was recently persuaded to make records of extracts from his own works after hearing Bonci's record of "La Donna e Mobile." Messrs. Sterling & Hunting state that Signor Bonci's appearance has led to an enormous demand for his Fonotipia records, notably that of the famous "Rigoletto" quartet ("Bella figlia dell amore"), with Bonci as the Duke, as he played at Covent Garden. This record is a 13¾-inch size, and sells at 25 shillings.

Some Clever Advertising Work.

By the way, a brilliant piece of advertising work was achieved in connection with Signor Bonci's first appearance at Covent Garden on Saturday, July 13. Spaces were booked in three important dailies for the following Monday, and special arrangements made therewith for the receipt of "copy" at a very late hour. Accordingly Mr. Louis Sterling and a member of the staff of Sterling & Hunting, Ltd., witnessed the performance at Covent Garden, jumped into a waiting motor and were driven rapidly to the offices of the Daily Mail. Here the "copy," describing Bonci's reception, was prepared and handed in. The other two offices have arranged for the copy to be delivered on Sunday, and this was done.

THE POPULAR RECORD is now the **"SOVEREIGN"** Double-sided, Unbreakable Disc Record

(WILL NOT WEAR OUT)

THE BEST RECORD FOR THE SUMMER TRADE **THE BEST RECORD FOR THE SHIPPING TRADE**

THE BEST RECORD FOR THE MILLION

LIST No. 2. (50 Records = 100 Titles, mostly Bands and Instrumental Titles) is now ready.

LIST No. 3 of about 10 or 12 Double Sided Records (making 20 or 24 Titles) from The Sonogram's own new and up-to-date recording process, is in course of preparation and will be ready about August 15.

The "*Sovereign*" is the Record *most suitable* for use in *Tropical countries*, as the process of manufacture enables it to withstand the heat better than any other record in existence.

FROM OUR LONDON HEADQUARTERS—(Continued).

The result was that almost side by side with the press criticisms of "Rigoletto" on the Monday there appeared in the advertisements of "Fonotipia" records an account of Bonci's debut, and a list of his records from that opera. Thus was an advertisement treated as news and advantage taken of the interest in Bonci's appearance.

Graphophone for the "White City."

At Manchester's new pleasure ground, the "White City,' a Columbia sound-magnifying Premier graphophone has been supplied to provide the mysterious music of mermaids, etc., on the "Mystic River."

Zonophone Stand Much Admired.

The Zonophone stand was the center of attraction for talking machine men and others at the Ironmongers' Exhibition held last month at the Agricultural Hall. The "boom" was felt even there, for good business was reported every day.

Talker Popular in Every Walk of Life.

Where is the talking machine not to be found? A correspondent points out that it is in evidence at the hospital, in the prison, the home, fetes, bazaars, churches, at political meetings, on yachts, in schools, at places of amusement, on the lawn; in fact, everywhere, and under many other circumstances, not the least of which is the street corner nuisance who endeavors to get music from worn-out records, and extract coppers from the pockets of the unwary as the perambulating policeman disappears from view.

Provides Music for the Soldiers.

In addition to the twenty-five guineas subscribed to the building fund of the Union Jack Club, the Gramophone & Typewriter Co. generously presented gramophones and records to provide music, which will enable the soldiers to pass away many pleasant hours.

Business Exhibition a Success.

The Business Exhibition held at Olympia, July 4-13, was the first of its kind to be held in this country. Its purpose was to bring together for the benefit of business men all those devices and inventions which have for their end efficiency and economy. It afforded opportunities to investigate those things calculated to make the conduct of business simpler, safer and more expeditious. Thousands visited the exhibition, some solely for the purpose of reporting on one particular invention only, and needless to say the large number of orders booked will keep the exhibitors busy for many a day to come. It was altogether an undoubted success, and should be held at least once a year.

The Dictaphone the Central Interest.

The only firm in the talking machine trade who secured a stall was the Columbia Phonograph Co., and their report is given hereunder:

One of the most interesting exhibits at the business show was the Columbia Phonograph Co.'s "Dictaphone." There were usually more people about this stand than any other in the big building. Its position was very prominent in the main aisle, close to the entrance. It occupied an entire block in the ground plan, so that it was surrounded on all four sides by aisles. Counters were built along the sides, covered with red upholstery, leaving the center for comfortable chairs, tables and the manager's desk. Along the counters were placed Dictaphones, both electrically driven and the spring motor varieties, and interspersed were the transcribing machines and typewriters for the typists' use.

A large force of experienced salesmen was on hand to demonstrate the advantages of the Dictaphone. They would dictate letters into the machine before their audience, pass the cylinder over to the typist, who transcribed the matter right away, and then show the letter to those interested. It was this public practical demonstration of the convenience and time-saving features of the instrument that attracted and fascinated the crowds and made it difficult at times for some of the people to get near enough to see and hear all that was going on.

A lot of educational work was necessary. A great majority of those who saw the Dictaphone at work had crude or wholly erroneous notions about it. Not once nor twice, but several times the demonstrators were asked if the dictated letter came out typewritten at the other end, indicating that the questioners thought that without any human intervention matter spoken into the cylinders could be reproduced at once to the eye in typewritten form. Other questioners inquired whether if a foreign language were spoken into the machine it would reproduce it. Still others had the idea that the dictator was speaking through a speaking tube directly to the typist who was writing down all he said at the very moment he said it.

Yet it was evident from the outset that the Dictaphone was attracting a great deal of serious attention from keen business men. The saving of all the time in taking down stenographic notes was at once apparent to them, and the economy this effected. Other advantages, its convenience and the saving of the high-priced men's time were appreciated after a little consideration and explanation. The daily papers, both in London and the provinces, gave generous notices to the Dictaphone, which were responsible for the visits of heads of firms from all over the country to Olympia, with the sole object of seeing it in operation and examining into its merits. The secretary of a huge manufacturing enterprise in Loughboro spent over an hour at the stand. He went into every detail of this new method of correspondence, and was immensely impressed. He stated that he had been sent to London by his firm to examine and report on the Dictaphone. He came direct to Olympia from the train, immediately hunted up the Columbia stand, and without visiting any other exhibit in the building, left for the Midlands as soon as he had become acquainted with the advantages of the machine. His was not an isolated case. Several other visitors stated that they had come to the exhibition from Hull, or Durham, or Liverpool, or Hunstanton, particularly to see the Dictaphone. Several heads of London firms made appointments for their typists to visit the stand and try their hands at transcribing. Not only was there this interest on the part of visitors, but many of the exhibitors themselves stated that the Dictaphone stand was the drawing card of the show.

Sales of several outfits were made during the exhibition, trial orders for many more were obtained, while the introduction secured to large commercial and manufacturing enterprises, business offices and professional and literary men are sufficient to keep the Dictaphone department busy for several months to come. It is, therefore, almost superfluous to add that the Columbia Phonograph Co. are highly gratified with the results of their exhibit.

British Mail Boats Fastest in Future.

The Government returns issued recently show the number of days, hours and minutes occupied in the transit of the mails between Great Britain and New York. In the matter of speed the German boats are ahead of the British, as the following figures of the last four voyages from New York made in 1906 by the Lucania, the Campania and the Kronprinz Wilhelm, exemplify:

Lucania.			Campania.			Kronprinz Wilhelm.		
d.	h.	m.	d.	h.	m.	d.	h.	m.
6	2	58	6	1	0	5	16	15
5	18	23	6	2	15	5	16	40
5	20	27	5	23	32	5	19	32
5	20	23	5	25	0	5	15	23

The German boats land their mails at Plymouth, whereas the Cunarders land at Queenstown. The new Cunarders, the Lusitania and Mauretania, are, however, expected to cover the distance between Sandy Hook and Queenstown in four days, sixteen hours, and the journey to Liverpool in about five days, so that the restoration of British supremacy is assured.

The Sheffield Choir in a New Role.

The world-famous Sheffield Choir, having achieved practically all that is humanly possible in the way of proving what a trained body of choristers can do, and having demonstrated that ability alike in London, Leeds and numerous other English musical centers, and in Dusseldorf, Cologne, Frankfort and other Rhineland cities during their last year's triumphal tour of Germany, are now essaying a somewhat more difficult role. Their series of triumphs recently brought them under the notice of one of the largest firms in the talking machine industry, and the suggestion was made that the Choir

FROM OUR LONDON AND BERLIN HEADQUARTERS.

should make a series of disc records with the company in question. Dr. Coward, the popular conductor of the Sheffield Choir, fell in with the idea, once he was convinced that the scheme was practicable and that there was a greater chance of success with this particular company than had been evidenced by the efforts of record making companies previously. This was not a matter of great difficulty, for certain improvements had been effected of late which had a bearing upon the previous difficulty of making successful chorus records, and this, together with the fact that such artists as Mesdames Destinn and Hempel, of Covent Garden; Mr. Watkin Mills, Mr. Lloyd Chandos, Mr. Harry Dearth and the like had associated themselves with these records, proved in a convincing manner to Dr. Coward that the reputation of his fine chorus would be perfectly safe in being connected with Odeon records.

Accordingly the Odeon Co. sent down a special recording staff, equipped with the necessary apparatus, and supervised by its recording engineer, Mr. Arthur H. Brooks, to make, with the Sheffield Choir, a series of oratorio and other records. A hall at Messrs. Wilson, Peck & Co.'s Beethoven House, was specially arranged for the purpose, and here on Saturday (July 13) the selected members of the Choir, chosen among themselves by popular vote, and under the baton of their gifted conductor, Dr. Coward, assembled to give of their best for the delight of those musical people who, perhaps unable to gratify their love by performing their own vocal or instrumental music, rely upon the talking machine to supply their need.

The records made on Saturday include selections from the "Messiah," "Elijah" and "John Gilpin," as well as a number of unaccompanied part songs. When the operations (conducted in semi-privacy, of course, for there are numerous secrets jealously guarded by the experts) were concluded, the recording chief stated that the records from his point of view were very successful, though the necessary tests could only be made in London.

The Odeon Co. have been the recipients of flattering letters from the M.P.'s for the Sheffield divisions concerning this stroke of enterprise.

They also ask us to state that in addition to the splendid work which Dr. Coward has done toward making the records a success, they desire to acknowledge the indefatigable efforts of the secretary of the Sheffield Choir, A. S. Burrows, by whom most of the arrangements on behalf of the Choir were made. The Choir will visit Canada in the near future.

Revising Their List of Dealers.

Messrs. Sterling & Hunting, Ltd., state that they are revising their list of the dealers who stock "Odeon" records with a view to referring to dealers' inquiries from their localities. Dealers who are willing to execute such business when it is handed to them in this way should get their names on this list, and should send a postcard marked "Register of Dealers" to the company at 14 Hamsell street, E. C.

Odeon Records for August.

The complete catalog of Odeon records dated August has several points of interest. In the first place it is one of the most artistic productions it has ever been our pleasure to see. The cover is printed in two colors, black superimposed upon a dainty blue, and the design used is a fine piece of pen and ink work by Penryn Stanlaws. We congratulate the Odeon Co. upon securing this fine picture. Another feature of the catalog is the inclusion of an index, with numerous cross references to titles and instrumental solos, etc., which is a distinct innovation and one sure to be appreciated. Last of all we notice that the list of "Standard" (7½ inch) Odeon records has been eliminated, with a view, we understand, to publication in a separate form.

Neophone Co. Expansion.

I have had a further interview with Dr. Michaelis, the inventor of the sapphire disc records, and he informed me that (as I pointed out in my last letter) the General Phonograph Co., Ltd., had purchased the business and rights of Neophone, Ltd., and that they are actively preparing a comprehensive catalog of new gold-moulded Neophone records to be ready in time for the coming season, and, as a matter of fact the first issue has already taken place, and we have listened with much pleasure and enjoyment to the perfect orchestration of their latest products. The whole of the foreign business in Neophone will continue to be effected as heretofore by the International Neophone Co., Ltd., whose general manager if Dr. Michaelis. This company is dividing into districts the countries under their jurisdiction, viz., all foreign countries (except Germany), and are appointing a sole agent for each division. Their product is now so well-known and appreciated that American dealers will, no doubt, quickly put themselves into communication with the International Neophone Co., Ltd., whose offices are No. 2 Tabernacle street, but before long the International Neophone Co., Ltd., propose to complete their arrangements for the formation of an American Neophone Co. Dr. Michaelis, with Mr. O. H. Waetzig, technical manager and head recording expert, is preparing to go over and commence his propaganda of the original sapphire disc talker, the Neophone.

TRADE NEWS FROM GERMANY.

Talking Machine Business Expanding—Foreign Trade Is Especially Active—Beka Records for the World—Tone Arm Action—Dr. Moskowski's Visit—Some Figures Regarding Export of Disc Records and Machines—New Factory in Hanover—Dealers to Establish Fixed Prices—Exhibitors at Leipzig Fair.

(Special to The Talking Machine World.)

Berlin, Germany, August 2, 1907.

Business in this country is very brisk, the season considered, and there is a steady increase in the output of talking machines and records to meet domestic and export demands. The foreign trade is proving to be an important feature of the business of talking machine manufacturers, and exports are now being made to all parts of the world. Another pleasant development worth noting is the steady betterment noticeable in machines and records. It is true we have plenty of poor stuff—in fact, too much of it—but purchasers are evidently becoming more critical, and this is reflected in the demands by factors and dealers for a better grade of goods.

* * * *

There is an enormous demand for Beka records made in this city, and the manufacturers are now putting out a catalog, both international and domestic, that must prove amazing to those who have not kept closely in touch with the growth of this enterprise. This concern now control master records of practically every country "under the sun," and their excellence is paid tribute to by the large purchases in the great cosmopolitan centers of the world. In fact, the Beka people now control the largest and most comprehensive repertoire which has ever been compiled. Members of the trade desiring something very special should look up their advertisement in the London department and keep in touch with this great institution.

* * * *

The tone arm action of the Carl Lindstrom and the Odeon Co. against the German Gramophone Co., Ltd., has been decided in favor of the plaintiffs, and the German company's patent cancelled. The German Gramophone Co., Ltd., are going to take the case to the higher courts.

* * * *

The immense strides Germany has taken in the manufacture of disc talking machine rec-

ords may be realized when it is stated that though ouly about four years have elapsed since disc records were made in this country in marketable quantities, the following is the amount of export business from January to May, 1907, from German disc factories. The figures given are per 100 kilos (220.46 pounds): Belgium, 188; France, 727; Great Britain, 3,702; Holland, 186; Austria-Hungary, 565; European Russia, 339; Switzerland, 271; European Turkey, 94; Egypt, 282; Britisn India, 632.

In the matter of machines the following figures are given by the German press as being the amount of export busiuess in that line from January to May of this year: Belgium, 18,800 kilos; Denmark, 15,200 kilos; France, 43,000 kilos; Great Britain, 87,000 kilos; Italy, 14,800 kilos; Holland, 10,200 kilos; Austria-Hungary, 69,800 kilos; Roumania, 9,300 kilos; Russia, 113,600 kilos; Sweden, 12,000 kilos; Switzerland, 5,900 kilos; Turkey, 6,500 kilos; Egypt, 3,100 kilos; Argentina, 9,500 kilos; Brazil, 7,000 kilos; United States, 38,400 kilos. It will be seen that Russia offers the best market for German talking machines, with England second and Austria-Hungary third, though the latter country is Germany's political ally.

* * * *

A new factory has been established in Hanover, Germany, for the manufacture of disc records under the title of the International Gramophone Co., m. b. H. It is stated that the Deutsche Grammophon, A. G., have applied for an injunction against the new company to restrain them from continuing to use the name first adopted.

* * * *

The Society of German Dealers of Talking Machines has commenced its task of undertaking to establish fixed retail prices for all German talking machine articles. Despite strenuous opposition it is believed the society will succeed.

* * * *

The Deutsche Telephon Werke of this city will not exhibit at the Leipzig autumn fair this time, but they invite all customers and visitors to call at their showrooms at Berlin Zeughofstrasse, where the company will exhibit their latest types of machines, which include many novelties that most prove of world-wide interest.

* * * *

Americau manufacturers and jobbers cannot fail to be interested in the Hymnophone, Ernst Holzweissig's talking machine, an announcement regarding which appears elsewhere. It contains many individual features that must command consideration.

HORN SITUATION DISCUSSED

By Horace Sheble, of the Hawthorne & Sheble Mfg. Co.—Change in Edison Equipment Will Help Demand for Better Grade Horns.

(Special to The Talking Machine World.)

Philadelphia, Pa., August 9, 1907.

In a recent interview with Horace Sheble, of the Hawthorne & Sheble Manufacturing Co., he was asked the question as to how their company figured the change in equipment proposed by the National Phonograph Co. would affect the sale of horns and cranes as independent transactions, and he replied:

"In the old days talking machines were all equipped with hearing tubes, and their sale was extremely limited. With the advent of the small horn the sale increased, the public realizing the benefit to be derived from dispensing with the objectionable hearing tubes. Many customers, however, desired to secure a better reproduction than could be obtained through using the small horn, which demand started experimenting in all quarters to produce a more effective article, the results of which experimenting evolved the present numerous styles on the market.

"The varieties thus secured have undoubtedly assisted very materially in the development of the talking machine industry, as the public differ in their ideas as to appearances as well as to results obtained, and by catering to this fancy as well as varying the equipment, the progressive dealer has been able to affect many sales that were otherwise impossible.

"Undoubtedly the change in equipment as proposed will affect the sale of certain style horns, but it will by no means usurp the horn market as applied to Edison phonographs. The public to-day is just as discriminating as it was last year, and what will suit one customer will not appeal to another, so that the progressive dealer will always find a good market for horns different from what is furnished with the original outfit. The move to sell large horns on machines as part of the equipment is not a new one, as it has already been employed by several machine manufacturers, but we have found a steadily increasing demand for horns of different design to be used on such machines.

"During the past two years we have noticed a much larger market for better grade horns, which fact has been demonstrated to our satisfaction by the enormous sale on our line of "Artistic" flower horns. We look for this demand to increase. The crane situation is in somewhat the same condition. Cheaply constructed cranes for Edison phonographs will be forced off the market, but cranes of different designs, which are equally as good or better than those furnished with the machine, will undoubtedly meet with a ready sale.

"We welcome the change of equipment as an assistance in educating the public to the advantages of using a large horn. The sale of horns other than similar styles to those originally furnished we believe will increase."

At the request of a large number of distributors, the Victor Talking Machine Co. have decided to mail two hangers aud advance copies of the regular and folder supplements from Camden on such a date as will insure there being in the hands of Victor dealers on the 28th of each month.

PACIFIC COAST HAPPENINGS.

Star Talking Machine in Great Favor—W. S. Gray's Good Columbia Work—Splendid Outlook for Good Fall Business—Some Recent Victor Visitors—Other Live News.

(Special to The Talking Machine World.)

San Francisco, Cal., August 6, 1907.

Kohler & Chase are now distributing pamphlets, issued by the Hawthorne & Sheble Manufacturing Co., makers of the Star talking machine, giving a full description of all parts of the machine, and the various models. There is a good Star business at the Oakland store now. Bernard S. Goldsmith, of the talking machine department, says that Edison goods are also doing well there, as the tapering arm attachment, which does away with the horn projecting in front, and produces a much fuller and sweeter tone, makes the Edison machine more attractive than ever. The scratchless Star records are also attracting a lot of business. Mr. Goldsmith, speaking of the outlook of the talking machine trade, says he believes that it will be the greatest part of the music trade on the Coast in a few years.

The Columbia Phonograph Co. have another new display this week. One of the windows is filled with little tents, over each of which is displayed the flag of some nation, in which, according to the inscription, the Columbia graphophone is admired. W. S. Gray, of the Columbia Co., has been sending out letters to many families in San Fraucisco, calling their attention to the Columbia Sterling disc graphcphone, and inviting everybody to the daily free concerts given at the Van Ness aveuue store.

Clark Wise is holding a bargain sale of talking machines this week, offering $25 machiues, which were somewhat damaged by rough handling on the cars, for $9.85 each.

The Eilers Music Co.'s Fillmore street store has now a full stock of Victor goods on hand, and sales are starting off very satisfactorily.

Mr. Ornstein, mauager of the sales department of the Victor Talking Machine Co., left for the North last week. Arthur Geissler, of the same company, was in San Francisco on a visit last week.

KELSEY WITH RAPKE.

J. P. Kelsey, well known in the talking machine trade, has been engaged as manager by Victor H. Rapke, and will locate at the Victor H. Rapke Co.'s factory, 530 East 72d street.

Business Shows a Healthy Increase Over Last Year—The Victor Co. Help Dealers—Henry Babson Married—C. W. Noyes' Successful Trip—C. E. Goodwin Visiting Yellowstone Park—Chicago Case Co. Increase Capacity—J. W. Mills Spreading Out—Edison Men Gather at Grand Rapids—The Columbia Boost Club—Arthur D. Geissler Returns from Vacation Spent on Pacific Coast—Reports Progress in This Territory—Movements of Regina Men—Improvements in Local Establishment of National Phonograph Co.—All the News of the Month.

(Special to The Talking Machine World.)

Chicago, Ill., July 9, 1907.

Both jobbers and retailers report business as keeping up remarkably well. July, as a whole, is generally reported as having been quite up to June, and in some cases a moderate increase in sales is reported. In most cases business is reported as showing a healthy increase over last year.

The remarkable efforts of the Victor Co. to assist dealers through the medium of advertisements in local dailies are the subject of favorable comment in the trade. The big 600-line advertisement announcements of the August bulletin which appeared in the Tribune, Record, Herald, News and American on Monday, July 29, are said by dealers to have had a distinct effect on sales. When one considers that these and similar announcements appeared in the leading papers of all the principal cities of the country, and that similar advertising will be done each month, in addition to greatly extended magazine publicity and a vigorous campaign in agricultural papers for the benefit of the country dealers, the finish of that extra $150,000 advertising appropriation can be readily seen.

Quietly and with no announcement of his going, but with quickened step and a new light gleaming in his eyes, did Henry Babson hie himself westward the latter part of July. His destination, though he breathed it not, was Seward, Neb., the old Babson home, and where all of the Babson boys spent the early part of their lives. It was to claim one of the fairest daughters of Seward that Mr. Babson turned homeward, and on the morning of August 2 he was married to Miss Laura Davis. They are spending their honeymoon in the mountains of Colorado and will return and be at home to their friends in Chicago's beautiful suburb of Riverside about September 1. To none of his friends, even those who entertained "suspicions," would Mr. Babson admit the object of his visit to Nebraska, and even his brothers insisted that he only owned up at the last moment when the fact that his absence would be so prolonged seemed to make explanations necessary. Both Frederick K. and Gus Babson have beautiful homes at Riverside, and another Babson residence will be erected there in the near future.

C. W. Noyes, secretary and Western representative of the Hawthorne & Sheble Mfg. Co., returned the latter part of last month from a trip among Central Western jobbers and will leave about the middle of August for the Pacific coast. "During the past month," said Mr. Noyes, "I have seen most of the jobbers from the Missouri river east to Pittsburg, and in all but one or two instances they report themselves as highly pleased with the volume of trade this summer. July equaled, and in the majority of cases exceeded, that of a year ago. No one looks for anything but an excellent business this fall, and the number of concerns who are arranging for larger quarters and are making extensive improvements to their premises speaks eloquently of the general prosperity." While in Detroit, Mr. Noyes spent Sunday with Charles M. Daniel (Niel Morret), composer of "Hiawatha," "Silver Heels," "Moonlight," "Cherry," etc. In speaking of the new copyright bill, which failed to pass the last session of Congress, Mr. Noyes stated that the failure was due to the fact that the fight for the bill was made by the publishers instead of by the composers, who were more vitally interested in its passage and whose arguments would have the most weight with the lawmakers. Mr. Daniels claimed to speak by the book when he said that the case would be reopened and that the composers would have a full hearing and would see that their claims were strongly and fully presented.

E. E. Forbes, of the E. E. Forbes Piano Co., Birmingham, Ala., and Memphis, Tenn., was a Chicago visitor last month.

E. C. Plume, Western wholesale manager for the Columbia Phonograph Co., returned the first of the month from New York, where he attended the various festivities attendant upon the Eastern Talking Machine Jobbers' Association. Incidentally he closed a deal with a local house which will not only do an immense mail order business in Columbia graphophones from Chicago but will also handle the company's full line exclusively at its numerous retail stores throughout the Central West and East. The contract involves something like a quarter of a million dollars, it is understood, and the initial order indicates that the company mean business with a big B.

Special Notice to Dealers

We spend **Ten Times** as much in Advertising Edison Phonographs and Records as any other Jobber.

As a Result **WE HAVE** Inquiries to refer and **WE DO** refer them **DAILY** to dealers **WHO BUY OF US.**

GET IN LINE

Remember that Jobbers who do not advertise cannot have many inquiries to refer.

BABSON BROTHERS

"THE PEOPLE WITH THE GOODS"

G. M. NISBETT, Mgr. Wholesale

19th St., Marshall Boul. & California Ave., Chicago, Ills.

Mr. Young, representing the Mello-Tone Co., Springfield, Mass., was a recent visitor to Chicago and secured a nice volume of business from local jobbers on the Mello-tone horu attachment.

C. E. Goodwiu, manager of the talking machine department of Lyon & Healy, left the middle of last month for the Yellowstone. After thoroughly exploring aud enjoying the wonders of Uncle Sam's wouderful little corner on Nature's wonders, he proceeded to Portland, where he is now visiting his pareuts. He is expected back about the middle of August. Assistant Manager L. C. Wiswell is in charge in Mr. Goodwin's absence. "We are having a good healthy summer business," he said, "and July ran considerably ahead of last year." The department has just issued revised lists of the best selling Victor aud Edison records, the Victor list includiug 300 names and the Edison 250. These lists have proved of real value to dealers, and they are carefully revised from time to time.

George M. Nisbett, wholesale manager for Babson Bros., left ou the 4th, accompanied by his wife and a party of friends for Minocqua for a stay of several weeks. Mr. Nisbett is a mighty fisherman, and also is a camera fiend of high degree. He has been experimenting this summer with a special trick camera of his own devising, and if he doesn't convince his friends on his return that he broke all Waltonian records at Minocqua the pictures will not be to blame.

Gus Babsou, of Babson Bros., is spending his vacation at Mackinac Islaud.

The Chicago Case Co. have greatly increased capacity in their new factory at 241 South Jefferson street, and have taken advantage of the comparatively dull months to accumulate a big stock of record cases wrapped and ready for shipment, so as to be prepared for instant satisfaction of the demands of the fall trade. They make five styles of cylinder and six styles of disc record cases of varying capacities and of superior and durable construction.

James W. Mill, the enterprisiug talking machine dealer of Elgin, Ill., is spreading out. On July 22 he moved from his former store, which he had made famous in Elgin as the "Mill on Spring street," to a new and more central location at 166 Chicago street. This store was formerly occupied by the W. W. Kimball Co., the agency for whose piauos Mr. Mill has taken. The store has been remodeled throughout, and has an excellent show window which Mr. Mill will know how to take advantage of. Mr. Mill carries the Edison, Victor and Columbia lines, and is preparing to add the Zonophone in the fall. In addition to talkiug machines and pianos, a specialty will be made of small goods, and the sheet music stock will be increased.

Two of the retail stores of James I. Lyons have been moved to larger quarters in anticipatiou of an increased fall trade. The Lincolu Avenue Phonograph Exchange, Chicago, managed by Elmer A. Fearn, is now at 1049 Lincoln avenue, while the Aurora Phonograph Exchange, at Aurora, Ill., now occupies a fine store at 113 Fox street, in charge of Walter A. Stephens.

E. H. Uhl, manager of the Chicago house of Rudolph Wurlitzer Co., reports au excelleut business this summer iu their automatic instrument department. They are just setting up on the third floor of the Wurlitzer building one of their latest band organs, an immeuse iustrument especially adapted for roller skating rinks and all places where an uuusual volume of sound is necessitated. The iustrument sells at $5,500. They are also showing the Wurlitzer orchestrians, which are becomiug exceedingly popular for high-grade restauraut use. Mr. Uhl, by the way, is building himself a haudsome home on the North Side.

That was quite a gathering of Edison missionaries over at Grand Rapids last month. For a fortnight they lingered in the Michigan town, talked over matters pertaining to the furtherance of the compauy's iuterests, and mingled with the visiting furniture dealers. There were preseut J. W. Scott, who represents the National Phonograph Co. iu New England, and the western traveling contingent, consisting of W. P. Hope, M. G. Kreusch, F. L. Fritschie, A. H. Kloehr, A. V. Chandler, H. A. Turner, and George A. Ranner. A. C. Ireton, superintendent of salesmen, came from the factory to meet the men. The object of the gathering was two-fold. Heretofore the western men have all gone East each year, before taking their vacations, for a chat at headquarters. This year it was decided to have the meeting, so far as the western travelers were concerned, in the West, and gathering at Graud Rapids at the time of the midsummer furniture exposition enabled the boys to meet the furniture dealers from all over the country, familiarize themselves with the opportunities for selliug phonographs in furniture stores, and avail themselves of the experience of dealers who are successfully conducting talking machine departments. A fine exhibit of Edison goods was made in the Klingman building, where the furuiture exposition was held. From Grand Rapids the men all went ou their vacations, and are now again in their respective territories.

C. W. Barues, manager of the commercial departmeut of the National Co., who looks after the interests of the business phonograph in Chicago, has returned from a trip to the factory at Orange.

A. V. Chandler, Chicago city representative for the National Phonograph Co., is fitting up a model phonograph store on the sixth floor of 304 Wabash aveuue. It is separated from the commercial departmeut by sound-proof partitions. Here a complete line of Edison phonographs will be carried, together with a record stock arranged ou modern shelving, with the latest type trays equipped with Rapke labels, the whole arrangement being devised to show the visiting dealers how to handle phonographs and records to the best advantage.

F. J. McArdle, proprietor of the Piano Player Co. and the American Talking Machine Co., at Omaha, Neb., has discontinued the player business and will devote his entire attention to the talking machine business in the future.

W. W. Parsou, manager of the commercial department of the Columbia Phouograph Co.'s local branch, is having a busy summer. He says that they are having difficulty in getting machines from the factory to supply the demand from Chicago's great commercial institutions for commercial dictation graphophones.

The Columbia Graphophone Club was duly launched the latter part of July, with a charter membership of fifty, a fine list of officers, and an ambitious program. That iuveterate organizer, O. W. Eckland, of the instalment department, started it under the guise of the Columbia Boost Club a few weeks ago, with the intention of confining it to the instalment salesmen, but the idea grew and grew, and is still growing. The membership of the club is to be open to anyone connected in auy way with the sale of graphophones. It is hoped eventually to have branch orgauizations in every city that boasts a Columbia store and where ten or more members can be secured, the officers of the various clubs to form a uational executive body. Ultimately it is expected that some sort of a sick benefit will be established by the club. The Chicago organization will hold its meetings on the first Monday of each month, the meetings being devoted to the discussion of topics dear to the heart of every graphophoneite and to planning social events calculated to promote good-fellowship among the members, and at the same time do a little legitimate Columbia boosting. Among the events already planned for the uear future are a trolley ride to one of the municipal parks and a moonlight excursion on the lake. The officers for the first year are: President, O. W. Eckland; vice-president, C. F. Baer; treasurer, O. M. Kiess; secretary, James Flanigan; executive committee, W. W. Parsons, chairman; E. C. Fuhri, T. F. McCarty, George Riemenschneider, Frank Cass.

Victor E. Green, one of the hustling Columbia crew managers, won the prize of a round-trip ticket offered to crew or store manager securing the largest business during June and July. A. Libben, manager of the Ashland avenue store, and A. Weiss, manager of the Halstead street store, were both close seconds.

George Ornstein, manager of the traveliug department of the Victor Talking Machine Co., was in Chicago for a few days early in the month on his return to the factory from a trip to the coast. He reported business on the coast as uuusually excellent this summer, and that far western Victor distributors are looking for an unusually good fall and holiday trade.

B. Feiuberg, of Dillbahner & Feinberg, proprietors of the Westeru Talking Machine & Supply Co., returned the first of the month from a three weeks' sojouru at St. Joseph, Mich., where he took the baths. After Mr. Dillbahuer has returned from a week's wrangle with the wriggly denizens of the Michigau lakes, Mr. Feinberg will start on a trip among the central western jobbers singiug the "everything in the supply line, f. o. b. Chicago" slogan.

Arthur D. Geissler, manager of the Talking Machine Co., returned to-day from a six weeks' trip to the coast, bronzed, healthy and happy, notwithstanding the fact that a log which turned

up at the other end of a long dive from the wharf at Santa Barbara caused various aud sundry injuries to the Geissler countenance, which barely escaped leaving their record forever. A photograph taken some days afterward on the beach would hardly be recognized by friends of the popular talking machine man, but thanks to skilled care the classic features have again assumed their classic repose and beauty. "Barring the log, I had a delightful trip," said Mr. Geissler. "'Frisco is still having a fine talking machine trade, and the dealers all look for a big business the balance of the year. Of course, I called on all my old friends—Peter Bacigalupi, Byron Mauzy, Clark Wise & Co., Benjamin Curtaz & Sons, and others, and found them, as usual and in spite of everything, doing a fine business in their old-time, aggressive way, calculated to make eastern dealers who know nothing of the liberal buying policy of the public out on the coast open their eyes with astonishment. I spent a good deal of time at Sauta Barbara and Santa Catalina with an old college chum of mine, and dropped in on the Los Angeles trade, of course. The George J. Birkel Co., the Bartlett Music Co., and the Southern California Music Co. are all going after the trade vigorously, and are getting it. The way the latter concern advertises its talking machine business is a caution. Their advertising bills must be something enormous, but they find it pays to go after things in a large way. Reverting to 'Frisco and environs, there are a couple of news items I might give you. Mr. Smith, formerly manager of Wiley B. Allen's Oakland business, is putting in a large branch department at Kohler & Chase's Seattle store. The Oakland Graphophone Co., at Oaklaud, and one of the most active concerns across the bay, have grown wonderfully with the impetus given to Oakland the last year, and ranks right up with their brethren in 'Frisco in volume of business.

"On the way home I stopped at Denver—a big Victor town, by the way. The Knight-Locke Piano Co. is whooping things up along large lines, aud genial John Pass of the John Pass Music Co., is certainly making things hum as usual. Colorado Springs is a great Victor town. The wealthy retired miners there are devotees of the talking machine, and the Knight-Locke branch have a great trade on Victor 5s and 6s, on Victor Victrolas, and the entire line of Red Seal Records. Salt Lake City is another western town that is distinctly in line. I saw Carstenson & Anson and the Clayton Music Co., who are having a fine Victor business and pushing it for all they are worth.

"I find things have been moving along nicely in my absence. From all the reports I got while away regarding conditions in the West leads me to think that we are going to have a business of fine, large proportions this fall. There certainly are no indications of any let-up in the talking machine business.

W. F. Standke, manager of the Memphis, Tenn., branch of the Columbia Phonograph Co., was in the city the other day on his way to the wilds of northern Michigan for a brief vacation.

H. W. Wheeler, in charge of the St. Paul office of the Columbia Phonograph Co., and F. J. Weyel, manager of the commercial graphophone department for both Minneapolis and St. Paul, were in the city the other day. They were on their return from a visit to the factories, various of the eastern Columbia branches, and the Jamestown Exposition. While East they met O. J. Junge, formerly with the Columbia's Chicago office, but who is now in business for himself at Lincoln, Neb., as a jobber of Columbia goods.

George Cass, assistant manager of the Chicago office of the Columbia Phonograph Co., has just returned from his vacation, spent among the Michigau lakes.

John Otto, retail talking machine manager at Rudolph Wurlitzer Co., has become a suburbanite, haviug bought himself a home in Irving Park. The retail department is doing some effective work in the way of circulars describiug the best of the Victor records each month, the work of L. Keau Cameron.

W. A. Lawrence, representing the Staudard Metal Mfg. Co., Newark, N. J., was a recent Chicago visitor.

L. C. Wiswell, assistant manager of the talking machine department of Lyon & Healy's, is deelighted. It's a boy, and a ten and a half pounder.

W. H. Bagshaw and brother, of the great talking machine needle manufacturing house of W. H. Bagshaw, Lowell, Mass., were in the city recently on a general western trip.

J. Blumberg, western manager for the Regina Company, is spending his vacation with his family at Ottawa Beach. Secretary L. T. Gibson,

The "WURLITZER HARP"

A Refined Musical Instrument, operated by Electricity and Perforated Paper Rolls

A Few Points for

DEALERS

to Remember

1st. It is the most refined of all Musical Instruments.

2nd. It is no trouble to sell the "Wurlitzer Harp" if you can show and demonstrate it to your customers.

3rd. It is the only Instrument of its kind; being thoroughly protected by patents, it is impossible to imitate it.

4th. The soft, sweet music of the "Wurlitzer Harp" makes it especially desirable for high class, refined public places.

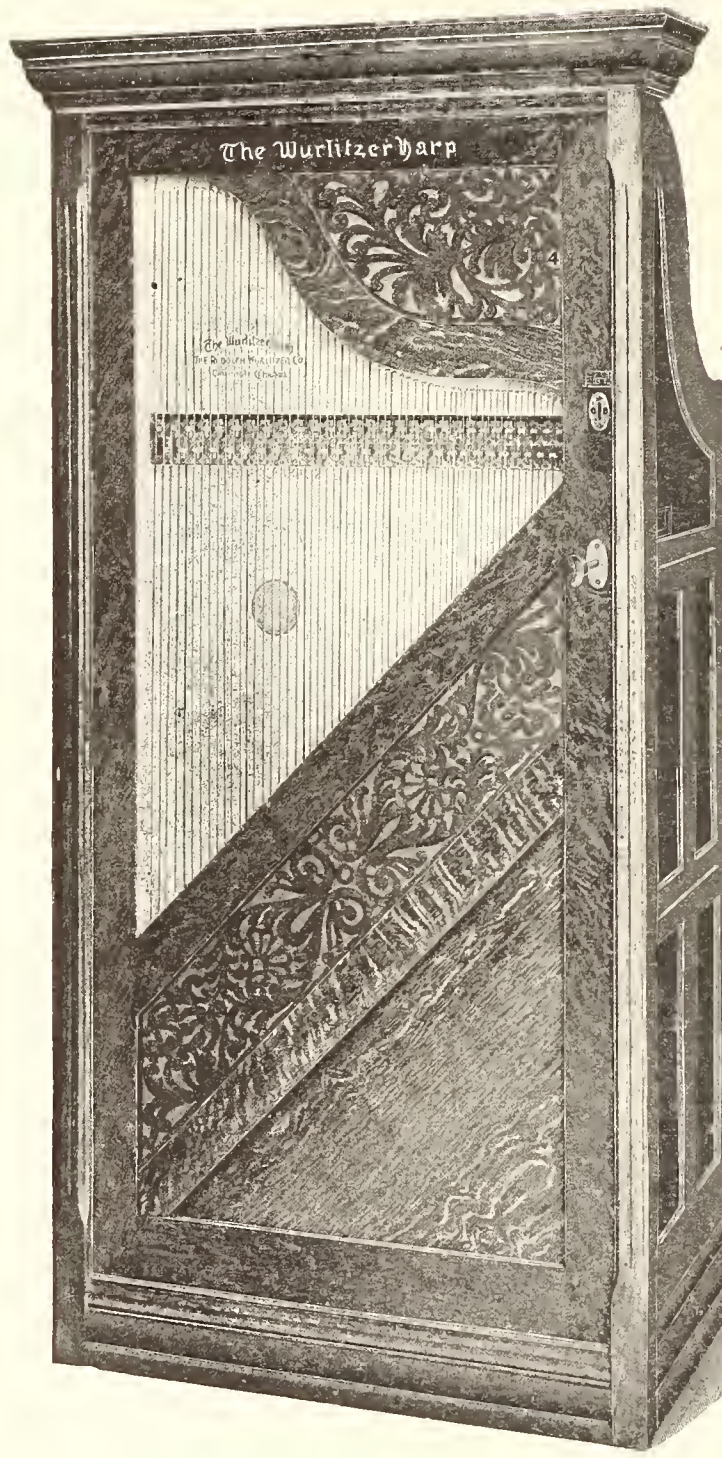
5th. The Harp automatically rewinds itself and therefore requires no attention.

PRICES:

Including Direct Current Motor and one Roll of Music, $500.

Furnished with Alternating Current Motor and one Roll of Music, $550.

Sold for cash or on the Easy Payment Plan.



THE

Wurlitzer Harp

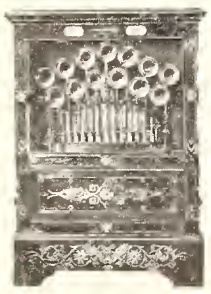
This beautiful instrument is conceded by every one who has seen and heard it to be the most wonderful as well as the sweetest musical instrument ever produced.

The Harp contains sixty strings which are picked by automatic fingers (almost human in their operation), and produces a volume of soft, sweet music equal to several Italian Harps picked by band. The face of the instrument is covered by a large harp-shaped plate glass, showing the interior lit up by electric lights and the wonderful little fingers picking the strings. This feature gives the instrument an exceedingly attractive appearance.

Like all of our automatic instruments, the Harp is operated by electricity and perforated paper music rolls; it is simple in construction and requires little more attention than the ordinary electric piano. The music rolls contain six selections each, and are operated by our automatic rewinding device, the same as in the Pianino. It also has a coin-detector slot which prevents the use of spurious coins to operate it. Yale locks are used throughout.

The case is beautifully figured quarter-sawed or weathered oak, with rich moulding, panels and scroll work, finished in every detail to conform with the beautiful instrument it incloses and will prove an ornament in any place.

As a money maker in fine hotels, cafés, restaurants, cigar and drug stores the harp has proven itself to be the King of them all; its soft, sweet music making it exceptionally popular in places where other instruments would be too loud.



MILITARY BAND ORGAN

Operated by pinned cylinders and intended for carousels, tent shows, etc.

Prices, $200 up.

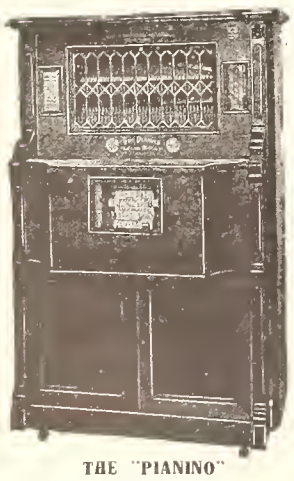
THE PIANORCHESTRA

Has established the fact that perfect music can be rendered by mechanical means. The Pianorchestra is certainly a wonderful instrument.

16 Styles.

Prices, $1,200 to $5,000.

GREATEST LINE OF AUTOMATIC MUSICAL INSTRUMENTS IN THE WORLD

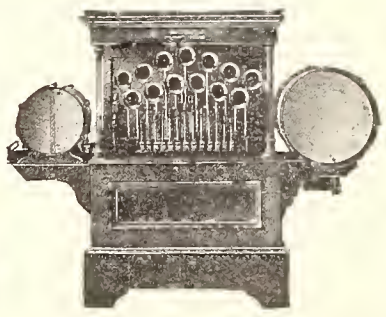


THE "PIANINO"

The latest edition to our line of Electric Pianos. This is a 44-Note Piano with Nickel-in-slot attachment. A great money-maker.

THE TONOPHONE

King of Electric Pianos. Operated by Electricity. All the latest music.

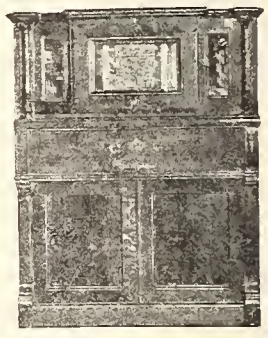


MILITARY BAND ORGAN

Operated with perforated Paper Rolls, and designed for Amusement Parks, Roller Skating Rinks and Dancing Pavilions.

THE WURLITZER PLAYER-PIANO

The only Perfect Player-Piano playing the entire keyboard. Can be played by hand or by Electricity with Perforated Paper Rolls.



THE MANDOLIN QUARTETTE

The most fascinating musical instrument on the market. This is a combination instrument, producing the wonderful music of four mandolins with piano accompaniment.

LIBERAL INDUCEMENTS

and exclusive agency in unoccupied territory. Beautiful Illustrated Catalog free upon request.

THE RUDOLPH WURLITZER CO.

CINCINNATI MANUFACTURERS CHICAGO

of the company, is here in his absence, and has no particular complaint to make of Chicago as a summer resort. Business is keeping up remarkably well on our entire line this summer, said Mr. Gibson. The new Reginaphones have met with exceptional favor with the trade. The Sublima pianos are taxing our factory capacity to the utmost.

BABSON BROS. BASE BALL TEAM.

Among the talking machine dealers who called on Babson Bros. the last week or two and inspected their new building out at Douglass Park were W. H. Jennish, Waterloo, Ia.; Otis Bigelow, Dowagiac, Mich.; Tom Bonfield, Hammond, Ind.

TRADE NOTES FROM BOSTON.

Look for Good Fall Business—Old Home Week Not Helpful to Business—C. J. Sylvester Manager of the Osgood Store—Leading Firms Make Encouraging Reports.

(Special to The Talking Machine World.)

Boston, Mass., August 10, 1907.

Summer business with the talking machine dealers has not been any better than they hoped for. Everybody is looking for a spurt as soon as the September records come. The recent issue of grand opera records has acted as an impetus on high class trade, but most of the "common people" regard the price as too high.

A good example for retail dealers to follow is seen at the warerooms of the Columbia Phonograph Co. here, where Manager Blakeborough has placed on a convenient counter by themselves all of the slow moving records, with placards calling attention to them as bargains at slightly reduced prices. This acts as an incentive to buyers to at least look them over, and as there are a great number of really good things that move slowly they are secured at a bargain.

Old Home Week here was very unsatisfactory from a business point of view, for none of the talking machine warerooms did any business at all. Most of them had kept their salesmen away from their vacatious for the week, when they might just as well have let them all go away for a rest and shut up shop.

C. J. Sylvester, who has until recently been with the Leland store at Worcester, has been appointed manager of the talking machine department of the C. S. Osgood Co., vice Herbert Royer, who resigned to go on the road for the Victor Co. The Osgood Co. have recently taken the jobbing agency for the Columbia goods, and have rearranged their warerooms.

At the Eastern Talking Machine Co. everybody is waiting for the new Edison equipments to arrive. Business is reported fairly good here. Wholesale Manager Chamberlain is about to take a two weeks' vacation. His new idea in a record carrying case has proven to be a good thing, and he is selling a lot of them.

The Boston Cycle & Sundry Co. are booming the sale of their patented carrying cases for disc and tubular records, and also their trays for the keeping of records on the shelves in warerooms.

"We are waiting, only waiting," is the refrain at the Oliver Ditson Co., where Manager Winkleman is planning for moving his talking machine department down three floors, and having the entire second floor of the Ditson building for it. Workmen are still hustling, getting the floor into shape, but it will be another fortnight before the department is in its new quarters.

GOOD REPORTS FROM BALTIMORE.

Summer Trade Makes Good Showing—Call Is for Expensive Machines and Records—Excellent Month With Edison Goods—Columbia Co. Also Make Encouraging Reports—All the Leading Houses Most Optimistic Regarding the Outlook for Fall Business.

(Special to The Talking Machine World.)

Baltimore, Md., August 10, 1907.

The popularity of the talking machine in this city is becoming more pronounced each month, judging from the manner in which business keeps up during the warm weather. The sales, according to the statements of those engaged in the business, were exceedingly large during the month of July, and the business, as a whole, during that month, was larger than any recorded for the same month of preceding years. The dealers are inclined to believe that the popularity of these machines at summer resorts, both at the seaside and in the mountains, was responsible for the heavy run of business during July on account of so many people going away to these places to spend the hot days. From the showing in the trade during the first week of August the dealers feel confident that there will be no let up in the sales, but are rather inclined to predict that the business will even surpass that of July.

While the sales of machines have been numerous, the demand for high grade and operatic records has been the greatest reason for the excellent condition of the summer business. These records have been more in demand than the ordinary ones, although the desire of owners of talking machines to have the latest popular airs to play on their instruments has been such as to make the sale of these records quite large. The operatic records, however, are the ones that took the premium for the largest sales during the past month, the demand for these being way above the average for other months.

George A. Gustin, manager of the Columbia Phonograph Co., West Lexington street, was one of those who announced that the business of his company has kept up in great shape, especially in the jobbing department. A large number of the Columbia phonographs were sold during the month, and the indications are that the good business will continue all during the warm weather. Records of popular selections were sold right along, and there seems to be no abatement in the demand.

The E. F. Droop & Sons Co. on North Howard street also experienced an excellent month with the Edison machine, while the sale of high-grade records by the company was up to the top notch. The members of the company look for the trade to continue good during the remainder of the summer, while they are making preparations for a heavy fall trade, when they expect business to take a big boom after vacation days are over.

The same encouraging reports in regard to the trade come from members of the firm of H. R. Eisenbrandt & Sons, Charles and Lexington streets. One of the members of the firm stated recently that "the demand for the Victors becomes greater each week, while the sale of high grade records is always on the increase." Their business was excellent during July, and like the heads of the other houses, the statement is made that the operatic records take the lead in the number of sales. Business in the jobbing department is also fine.

DEVINEAU'S IDEAL HORN.

An All Aluminum Product Which Weighs Only a Few Ounces and Requires No Support.

Talking machine jobbers and dealers will be interested in the "Ideal" horn, which is shown in another portion of this paper. This new invention possesses many individual characteristics, which will appeal at once in a favorable way to users of talking machines. The "Ideal" is handsomely finished, made of aluminum, requires no stand or support, and can be used with all Columbia and Edison machines.

It is interesting to note in this connection that there are many inventive minds which are working along the development of horns, and as a result new and original ideas along these lines will be constantly appearing. It is the "special" horn which to-day will attract attention.

This item, taken from the Capitol of Des Moines, Ia., shows how the good work is going on: "W. H. Jayne has installed in his office at the court house the most complete set of electrical phonographic appliances to be found in the county. Mr. Jayne is court reporter for Judge Howe, and he is kept so busy that he has decided to do transcript and court reporting at the same time, and thus save many hours. In leisure moments he will now dictate testimony for transcripts into the phonographs, start it going into the ear of his typewriter and hie himself back to the courtroom, there to resume the arduous labors of taking the evidence of witnesses right off the bat. The new machinery is very expensive, and is attracting great interest among the court house attendants.

NEWS OF THE MONTH FROM THE SAINTLY CITY.

Trade for Summer Good With Healthy Outlook for the Fall—St. Louis Talking Machine Co.'s Report—Conroy's Big Edison Trade—Knight's Record Club a Success—Silverstone's Good Trip—Jobbers and Dealers Should Get Together—Columbia Co.'s Summer Business—Star Disc Machine Handled by Silverstone Co.—Some Recent Visitors—Invention of Some Moment by a Member of the Trade—Other News of General Trade Interest.

(Special to The Talking Machine World.)

St. Louis, Mo., August 6, 1907.

The jobbing trade for the past month has been very good, and gives promise of a large fall business. The retail trade is reported to have furnished a clever surprise by being much better than expected. High class outfits are in good demand, and the demand for records has been very satisfactory.

C. W. Long, manager of the St. Louis Talking Machine Co., reports the jobbing trade to be very satisfactory, and that their record sales have been very heavy. Manager Owens, manager of this company's retail department, reports an excellent trade, and that their record trade is of the best.

Manager T. P. Clancy, of the Columbia Phonograph Co., states that their summer's business is furnishing a great surprise in its large volume, and that the outlook for the fall trade could not be better. Mr. Clancy recently purchased the famous local horse Red Leaf, who is supposed to be one of the finest runabout horses in the West.

W. C. Fuhri, department manager of the Columbia Phonograph Co., with headquarters in Chicago, spent two days here recently.

Eug. Ketterer, manager of the talking machine department of the Conroy Piano Co., states that their jobbing trade on Edisons has been away beyond expectations, and that their retail trade for July furnished a very pleasant surprise.

D. K. Myers, jobber of Zonophones, reports trade very good, and extremely satisfactory for this season of the year.

The West End Talking Machine Co. is the name of a newly organized concern, who opened for business at 3839 Finney avenue, August 1. They will handle Zonophone and Edison machines and records.

John Magner, formerly assistant manager of the Boston, Mass., office of the Columbia Phonograph Co., has accepted a position with the local office of the same concern as manager of the commercial department.

A. A. Knight, the well-known jobber, reports trade good. He recently organized a record club for which he charges $1 for a membership, and with the return of one dozen records and the payment of 50 cents he furnishes another dozen records. He states that the club is quite a success.

Mr. Knight states that some time ago an individual called on him, and during the conversation stated that his wife had left him, and being quite lonesome he wanted to buy a talking machine and a supply of records. Mr. Knight sold him an outfit, and for some time after that this party proved to be an excellent customer for records. After a while he was missed, and Mr. Knight looked him up. When he found him he told Mr. Knight that his wife had returned to him, and that he had sold his talking machine and outfit.

By the closing of the O. K. Houck Piano Co.'s store here on September 1 they will also go out of the talking machine business. J. P. Booker, who has been the manager of their talking machine department, is no longer with them.

Marks Silverstone, president of the Silverstone Talking Machine Co., returned recently from an extensive trip through southwest Missouri. He reports that the section through which he traveled appeared to be very prosperous, particularly the mining section, of which Joplin, Mo., is the principal city.

A prominent jobber and dealer who is in the habit of making trips through this territory now and then, tells me that he thinks the jobbers should meet the dealers personally, and that he is making these trips for the sole desire of getting in touch with them. He states that it promotes good feeling, and gives the jobber an opportunity of giving the dealer the benefit of his experience by advising them how to increase their business. He also stated that upon his advice two dealers who handled the talking machine business as a side line, have decided to go in the business exclusively.

One of this jobber's suggestions to all dealers is to have the number and name of record together. He says it will be the means of selling more goods, particularly where the dealer carries only a limited stock.

The customer glancing over the stock will invariably select some records on account of the title being prominent.

The Silverstone Talking Machine Co. have been recently appointed jobbers for the Star disc machine.

Charles A. Tate, Flora, Ill., and W. S. Bell, of the Bell Bros. Music Co., Lawrence, Kan., talking machine dealers, were recent visitors at the St. Louis Talking Machine Co.

The St. Louis Talking Machine Co. are just putting on the market a handsome new cypress rack 7 feet 3 inches high and 6 feet long. It is for the purpose of holding disc records, and it promises to be a very valuable feature for all dealers. It will hold 2,500 records and is built in a most staple manner. The shelves are braced by a method that absolutely prevents them from warping or collapsing. The rack was patented by C. W. Long, local manager of the St. Louis Talking Machine Co., who sold the rights to the St. Louis Talking Machine Co. The patent was applied for on May 10, 1907, and granted on July 8, 1907.

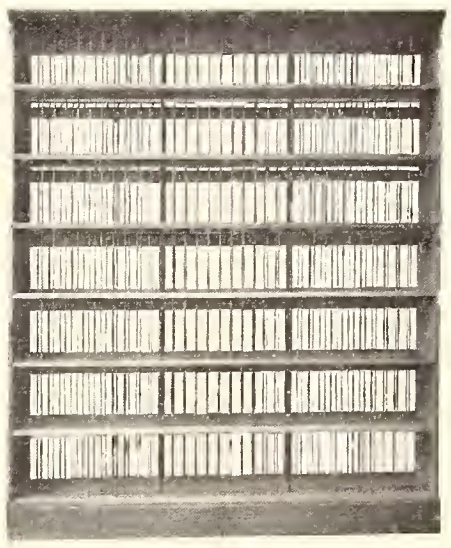
Wm. S. Byrd, traveler for the Columbia Phonograph Co., is home from a successful ten days' trip through Illinois.

Reg. U. S. Pat. Off.

PATENTED JULY 8th, 1907

"The St. Louis Record Rack"

Built of wood, with iron rods, every shelf braced, smooth finish, ready to paint or stain to match your fixtures, and shipped knocked down.



Made in Sections

of 6 feet long by 7 feet 3 inches high, each section holding 245 to 2,500 records.

Cleanest, strongest, and best appearing rack on the market.

Made in three styles—All 10 inch; 10 and 12 inch; or 8, 10 and 12 inch.

Price, $18 per Section

Quotations made on special sizes.

TIMELY TALKS ON TIMELY TOPICS.

Fortunately for the trade the courts are in recess during the summer, and they are therefore spared the trouble of speculating "what will be done next" when a decision from somewhere is handed down. The past year has been particularly fruitful of litigation either over talking machine patents or agreements or contracts, neither of which have conduced to the comfort of those immediately or prospectively affected. Some curious situations have been created, but it is safe to say these will be pretty well cleaned up before another year rolls around.

It should be remembered that a few cases, over which a great hullabaloo has been created, do not affect the trade the slightest. The daily newspapers note these suits involve millions, so to speak, and that is sufficient for the majority of them to go off on a tangent, publishing sensational and highly colored stories which the jobbers aud dealers should take cum grano salis. The trade may rest assured that if any legal proceedings are under way in the courts The World will keep them fully informed as to their meaning and intent when a judicial opinion is delivered. To prejudge cases is purely idle speculation, and is neither profitable or satisfactory.

The export business of American manufacturers of not only machines and records is growing with amazing rapidity, but makers of horns, cranes, cabinets and the general line of requisites and the minor devices classified as general improvements are also feeling the impetus of a strong demand from foreign countries. It is universally conceded that American-made goods "have the call," as it were, wherever talking machines are known, and their supremacy is not likely to be superseded. In referring to this question not loug ago the manager of the foreign department of a prominent concern said to The World: "While the trade here is extremely interesting in its development, it cannot compare with that of the foreign business, in which something new is constantly coming up. New countries, new people and new conditions present entirely fresh phases at every turn. Of the magnitude of this trade, as an illustration, I may say that in the Argentine Republic alone the Victor Talking Machine Co. and the Columbia Phonograph Co. have yearly sales totaling fully $300,000 each, and this has been secured in a comparatively short time. The buyers place orders on a most liberal scale, and one of them will purchase more goods at one time than a half dozen of the largest jobbers in the United States. This may sound like boasting, but it is true, nevertheless."

"An important factor in the foreigu trade," continued the expert, "is the record repertory. You must have the native records, or you might as well retire from the field. It is not all skittles and beer recording abroad, and in my experience it does not pay to send recorders from this country. I would rather pay $10,000 to bring talent to the United States than spend $5,000 in any foreign country. Recorders who work at home, with every facility ready at hand, obtainiug splendid results day in and day out, when they go abroad and have to contend with wholly different conditions most always fail. Our compauy have had skilled men in China for a year and a half, and we have got no records yet. It is purely a gamble, evidently."

"Attention must also be given to the character and tone of the records. In warm climates, where the houses are open—in fact, many with no roofs to mention—the loud, brilliant record only will command a sale. What would be eminently satisfactory here would be neglected there. Then the disc record, which is not affected by climatic conditions, is the one that can be carried in stock without injury or deterioration, on account of the composition or material used. For example, I have known that of 100,000 cylinder records in Cuba 40,000 were useless inside of a year. This drawback, however, has now been largely overcome, and cylinder records are gaining ground right along."

The annual meeting of the Eastern Talking Machine Jobbers' Association, the proceedings of which are reported elsewhere, was a notable gathering from more than one point of view. The charge that this body was not representative must be revised, in face of the number and standing of firms who were in attendance or have qualified as members. While the sessions were executive it is known that the discussions were on subjects of direct and lasting import to every jobber who desires to see the business placed on a profitable basis, in which a high standard of mercantile probity will be maintained. The exchange of credit information has proven invaluable to every member, and the contention that the manufacturing companies should differentiate between cash and instalment sales as to price will doubtless bear good fruit.

Efforts were also made, in a suggestive form to be sure, that a difference should be drawn between jobbers who actually sell the dealer and those who are listed as such because they comply with the placing of the minimum initial order, but are exclusive retailers nevertheless. The association would like to persuade the manufacturers this practice is neither fair nor equitable, and should like them to define a jobber as one who has at least one traveling salesman out in the trade. Perhaps their views in this respect may prevail eventually, but the manufacturers are not disposed to make the concession just at present.

The Eastern Association, however, is on a high plane of efficiency, and the energetic spirits who rescued the organization from its former moribund condition, into which it lapsed through errors of judgment, are to be congratulated. The Central States Jobbers' Association have also been greatly strengthened, and the joint meeting of the two bodies in Buffalo, N. Y., next month is looked forward to as marking a new era in the history of the trade. Whether the organizations will become amalgamated as a national association, or the present status be maintained, with representatives possessing delegated powers from each, also remains to be determined. The opinions of several well-known figures in the trade are printed in this issue of The World, and they are worthy careful reading.

Within a day after William E. Gilmore, president of the National Phonograph Co., met the special committee of the Eastern Talking Machine Jobbers' Association, he addressed every Edison jobber in the country requesting their individual opinion concerning a concession of a 5 per cent. discount on cash sales on phonographs only, the part payment or instalment transactions to remain in statu quo. President Gilmore stated in his circular letter of the 8th inst. that he, with other officers of the company and the chiefs of departments, had conferred with the committee, and therefore he was desirous of having a consensus of views irrespective of the association. Replies are requested to be returned by August 19, with a possible plan of embodying the results of the canvass in the forthcoming new agreement about due from the company. The jobbers on receipt of the communication immediately commenced to get their dealers interested by personal visits and through special letters, explaining the situation, at the same time requesting their prompt acceptance and co-operation. It is now plain that if the Edison jobbers and dealers are sincere in seeking this advantage they should not neglect to file their indorsement or otherwise at once. The National Phonograph Co. have been the first of the manufacturers to take up this momentous question for settlement, and they are therefore entitled to a free, full and caudid expression of opinion regarding it from all in interest.

Owing to the enormous mail received by the Columbia Phonograph Co., sometimes reaching the total of 180,000 letters daily, a special room has been built onto the postoffice at Bridgeport, Conn., for the sole purpose of handling the mail of that concern.

H. C. Grove, manager of the Washington, D. C., branch of the Columbia Phonograph Co., has been elected a member of the Washington Chamber of Commerce.

The Jersey City, N. J., stores of the Columbia Phonograph Co., under Manager R. H. Hicks, have built up a very fine business, June being a record month in the matter of sales. Sixteen canvassers are kept in the field in that city.

Better to have fifty things down in your "want book" and decide not to order them, than to fail to put down one that you really need.

TRADE HAPPENINGS IN PHILADELPHIA.

Business for the Month a Pleasant Surprise—The Horn Situation Comes in for Much Discussion—Opinion Is That It Will Put an End to Price Cutting—Victor Co. Publicity Highly Praised for Its Help to Dealers—Jobbers Reunion Still Discussed—New Columbia Jobbers—Additional Factories for Victor Co. at Camden—Musical Echo Co. News—Disc Talking Machine Co.'s Advertising Campaign—Other Items Worth Recording.

(Special to The Talking Machine World.)

Philadelphia, Pa., August 10, 1907.

Business in "talkers" for the month of July in this city proved to be a pleasant surprise, the only poor week being that of the Elks' convention, when, except for some possible publicity from concerts, etc., the men in this business might as well have closed shop (at least the retail end). There was such an improvement in trade the latter part of the month it brought accounts considerably ahead of last year's booking. August came in with a swing, as far as the retail end of the business is concerned, and nearly all the jobbers are most optimistic in regard to the outlook. Wholesale trade is, of course, quiet, and will probably continue so until at least the first of September. Collections for some reason or another continue below the satisfactory mark, though not dangerously so.

Just at present there are a number of subjects that are occupying a good deal of the attention of the jobbers here, one of the most important being the new move of the National Phonograph Co. in adopting a standard horn and crane to be sold with each machine of their manufacture, in regard to which the feeling is varied as it is uncertain. This, however, is the natural result of any sudden change of policy, everyone being vitally interested in the pros and cons of the case. A member of the trade, in speaking of the situation, said: "On the whole I believe it to be a good thing. Of course, it has come very suddenly—too much so, I believe, for the public to swallow easily—especially to the tune of $5. You see, the horn manufacturers have educated the public's taste to the fancy, bright-colored articles, and if the Edison people are going to restrict themselves and us to the common black horn, I think there will be trouble, at least at first. One thing I'm glad of, however—it will eliminate price-cutting and drive out the shysters."

Another remarked: "It wholly depends on how the thing is handled whether or not it will be viewed with entire favor. Just at present it has some of the dealers—I might say, many of them—worried as to how they will be able to dispose of their present stock of flower horns; others, especially in the poorer sections, kick on the increase in price. Personally, I am glad of the move, but think that the National Co. should crate each horn separately, instead of nesting them, as has been the custom of the horn manufacturers. In their case, with so many different styles, it was impracticable, but with the National Co. it would be a great saving in time and labor, and would insure the dealer or customer a bright, clean article, free from dust and scratches that are liable where horns are kept in stock. Then, again, in the matter of actual expense, to recrate each horn separately would cost the jobber at least 25 cents, and when this, with the time and labor considered, amounts to a good slice of what little profit there is in it, I think that if the National Co. would adopt this method of shipping, they would be fully repaid for their extra outlay."

"Mighty glad of it," was the verdict of a third. "It's going to stop all this cutting that has been the ruination of the supply business and put out of business all those cheap manufacturers who turned out their stuff in some attic and then peddled it around among the dealers—horns poorly made, that never gave any satisfaction, and only caused a lot of bad blood between customers who got stung and the dealers, and what is more, it will cut out the necessity of carrying such an enormous stock of all kinds of horns. Of course things may be a little unsettled at first, but after all, it's a little thing, and I don't think it will affect us much one way or another, only it will change the manner of sales somewhat, though a good many outside horns will continue to be sold, notwithstanding."

Not a jobber in this city who is handling the Victor Co.'s line but is congratulating that company on their latest flyer in the advertising field. As referred to elsewhere in The World, the Victor Talking Machine Co. have started to use each month a liberal amount of space in the leading daily papers in all the large cities throughout the country, and on Monday, July 29, the Inquirer, North American, Record and Bulletin came out with a 600-line advertisement in the form of the new August list of records. No names were given, but the North American's man saw a good chance for extra business, and before the paper went to press he had every Victor jobber in the city occupying space of some kind below the ad. From reports given out this one move of the Camden company has increased business marvelously. To quote Mr. Marschalk, of the Musical Echo Co.: "It has made the retail end of the business resemble December rather than August." At any rate, there is no question but that its effect on the trade in general will be decidedly stimulating and it will force many to advertise and adopt advanced methods that would have set back and let well enough alone.

Notwithstanding the fact that several weeks have now passed since the meeting of the Eastern Jobbers' Association in New York, one of the chief topics of conversation is the royal good time given the jobbers of this city on that trip, and many of the amusing incidents that hap-

Mr. Talking Machine Dealer

If you are located in New England—

We Can Save You Money.

Our facilities permit us to ship goods on first Express after order is received. We **wholesale exclusively**—consequently everything is shipped in original packages as received from the factory—no played-out records, no second-hand machines.

We manufacture a number of talking machine accessories among which are our famous Tray Outfits. (If you are not using this system for carrying records in stock it will pay you to write us.)

The **Lynn Record Cases and Peg Boxes** are another of our products.

We also manufacture the **Wentworth and No. 10 Horn Stands.**

Special Lines and Special Prices on Flower Horns.

We solicit a trial order.

Boston Cycle & Sundry Co.,

J. M. Linscott, Manager

48 Hanover Street, Boston, Mass.

pened either at the banquet or while guests of the Tea Tray Co., or that prince of hosts, Mr. Carpell, of the Herzog Furniture Co., are retold over and over again. All are now looking forward to the big meeting which is to be held at Buffalo next month, and all are much in favor of the proposed plan for a national association. Many of the jobbers will add a social feature to the trip by taking their wives along to enjoy the beauties of Niagara.

Business during the month of July was very satisfactory with the Columbia Co., both wholesale and retail departments doing well. This company are enjoying an immense demand for Bonci records. During the Elks' convention here a special record was brought out that took wonderfully, namely, "Hello, Willie," a take-off on the famous "Hello, Bill" of this society. The words were written by a local member and put to the tune of "Arrah Wanna." It was sung by the well-known baritone, J. W. Myers, who also being an Elk, put his whole heart and soul into the rendition. The Columbia Co. are pushing the wholesale end of their business for all it is worth and the following list of new dealers will prove that little grass is allowed to grow under their feet: Wm. Groff, Millheim, Pa.; W. C Jones, Hamonton, N. J.; McCurdy Bros., Philadelphia, Pa.; Moon & Miller, Hazelton, Pa.; Ernst B. Spring, Philadelphia, Pa.; George L. Anderson, Avondale, Pa.; Bennage Bros., Louisberg, Pa.; D. K. Bishop, Millroy, Pa.; Howard C. Bullock, Canton, Pa.; A. C. Beeman, Elkland, Pa.; Alex. Demacock, Bethlehem, Pa.; R. H. English, Wellsbro, Pa.; Gettysburg Department Store, Gettysburg, Pa.; Philip Gould, Olive Beach, N. J.

Plans have been completed and bids received for the erection of two additional factories and a power plant for the Victor Talking Machine Co. in Camden at a cost of $200,000.

The two additional factories will be erected at Second and Cooper streets, and the power plant to be installed will have a capacity of 4,000 horsepower. One of the new buildings will measure 92 by 174 feet, with one story and basement and provisions for five additional stories to be erected later. The other new building will be six stories high and will measure 80 by 173 feet. Both buildings will be built of brick with stone trimmings to match the present building. The column, floor and roof construction will be of reinforced concrete with slag roof covering. A triple window construction will be employed for obtaining the maximum amount of light. The power house will have a 4,000-horse-power plant installed.

The Musical Echo Co. report increased business for July and so far for August, as compared with last year. In fact, the retail business has taken a remarkable spurt, much of which Mr. Marschalk attributes to the extensive daily paper advertising now being carried on by the Victor Co. Louis J. Gerson has been away for some days on account of the serious illness of his wife, who has just undergone an operation for appendicitis, but is now thought out of danger.

Louis Buehn & Bro. report business very fair for this time of year. This company are as usual pushing the wholesale end of their business and devote their whole time to their dealers' wants, in consequence of which their list is not only a live one, but a growing one.

C. J. Heppe & Son are doing a thriving business at the old stand and report trade extremely good in Edison goods.

C. P. Bartholomes, chief inspector of the Columbia Phonograph Co., was a recent visitor in this city.

H. W. Weyman has now taken on his shoulders the troubles of a commuter and runs down to Atlantic City every evening for a dip in the briny. Mr. W. reports everything moving smoothly.

H. B. Herr, a dealer of Lancaster, Pa., was entirely burned out July 4. He has secured new quarters and will be open for business on or before August 15. The loss was covered by insurance.

The Penn Phonograph Co. report that orders have been booked away ahead for phonographs and films.

Herbert T. Lewis, of the Lewis Talking Machine Co., spoke very optimistically of the outlook in Columbia lines for this month and the fall, and said: "Yes, business is picking up fast with us this month, and the only trouble I'm having just at present is getting any Marconi stuff. While in New York recently I saw the new Columbia taper arm cylinder machine, and you can quote me as saying that I think without a doubt that it is the coming thing in this end of the business and will make a big hit." Chas. A. Swain, Cape May, N. J.; John Kirschneck, Media, Pa., and Samuel Brown Co., Philadelphia, Pa., have just been appointed Columbia dealers by this company.

F. H. Reiff, the enterprising Edison, Victor and Zonophone dealer of York, Pa., was a recent visitor and left several nice orders with some of the jobbers before leaving town.

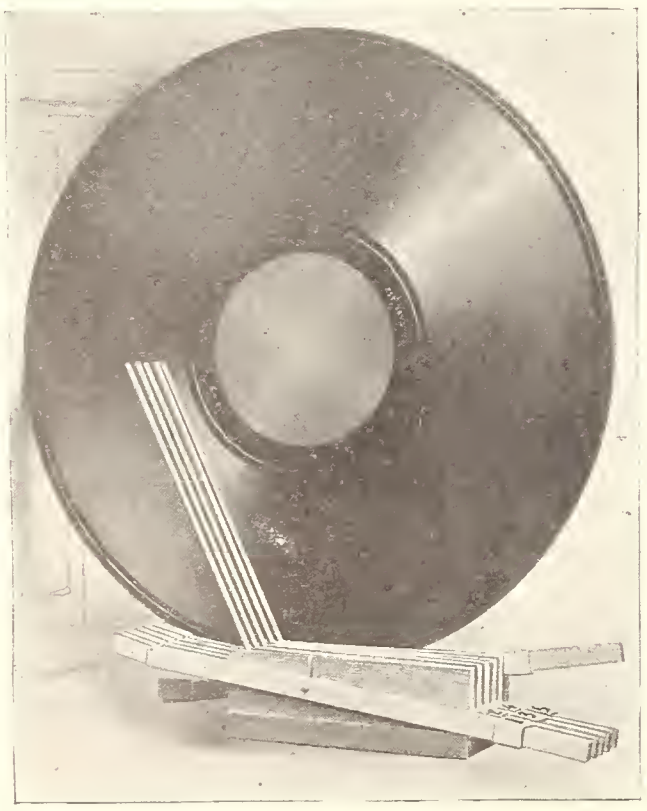
The Disc Talking Machine Co., jobbers in Zonophone machines and records, located at 13 North 9th street, report a pronounced increase in business during the past four weeks. H. N. McMenimen, lately sales manager for the Universal Talking Machine Co., holds the position of general manager with Harry K. Smith, formerly connected with the Berliner Gramophone Co., as an able assistant. This company are carrying on an extensive advertising campaign in the dailies, and a new follow-up system inaugurated by Mr. M. is showing excellent results in the wholesale department.

THE REGISTER RECORD HOLDER.

A Very Clever Device for Holding and Finding Record—A Time Saver to the Busy Man.

It is seldom that we find a long-felt want so admirably filled as in the case of the Register Record Holder. It is about to be put on the market here, and we understand it has already

No More "Time Lost" in Finding "What's Wanted"



Any Disc INSTANTLY FOUND and INSTANTLY REPLACED Where it Belongs!!

PRACTICAL! COMPACT! CHEAP!

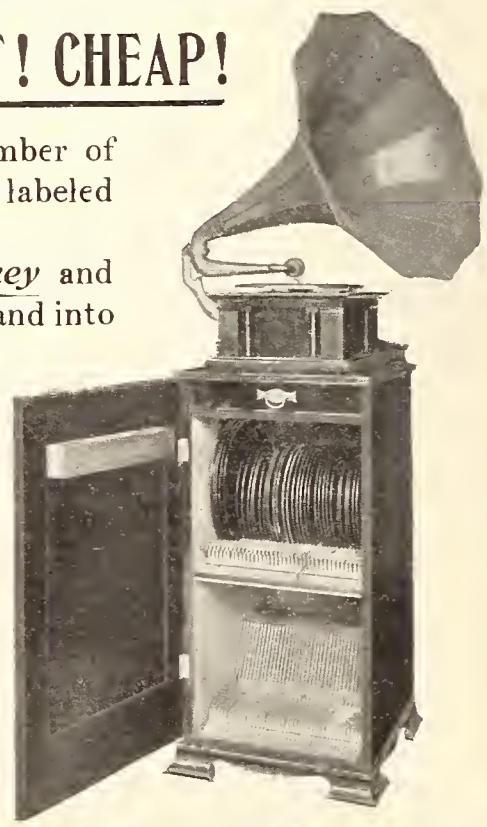
This device consists of a number of thin keys, each one numbered or labeled with the title of the disc it holds.

You have but to ***press the key*** and the mechanism rolls it slowly out and into your hand. The particular key remains depressed and open till disc is replaced.

No Talking Machine outfit is ***now complete*** without a cabinet or pedestal fitted with the

Automatic Disc Holder

Very few people ***had*** any use for cabinets, but



Now There's a Reason. Holders Fit Any Cabinet! Any Discs Fit Holders!

AUTOMATIC DISC HOLDER CO. - - 332 BROADWAY, N. Y.

been taken up by the Gramophone & Typewriter, Ltd., Pathe Freres, in Londou, and all the priucipal jobbers in Europe.

The device consists of a number of thin keys, each oue numbered or labeled with the title of the disc it holds, and pivoted at about its center in a small grooved block. In use the disc is placed in the front of groove and given a slight push. It rolls in and its weight depresses the back and correspondingly raises the front of the numbered finger, as shown in cut. It will thus be seen that on depressing the desired key in the front the disc will roll forward gently and out into the hand—but this is not all. The key of the empty groove will naturally remain depressed until the disc is replaced, thus insuring at all times that each record is put into its proper space. The facility with which any disc may be selected prevents the tendency, so general in other devices, of taking out three or four discs at a time to avoid the trouble of again searchiug for the ones that may be subsequently wanted. The whole arrangement is compact, neat and admirably carried out.

A cabinet as shown in cut (holding eight dozen records) will, we think, when geuerally known, be considered an almost essential part of a talking machine outfit.

The patentee, who is temporarily in New York, and whose office is 332 Broadway, is, we understand, desirous of making arrangements with manufacturers, jobbers aud dealers for the sale of this device. It is sold by the yard, each yard holding eight dozen records in sections of six keys each. The Register record holder fits discs of any diameter, and can be used with any size cabinet or pedestal.

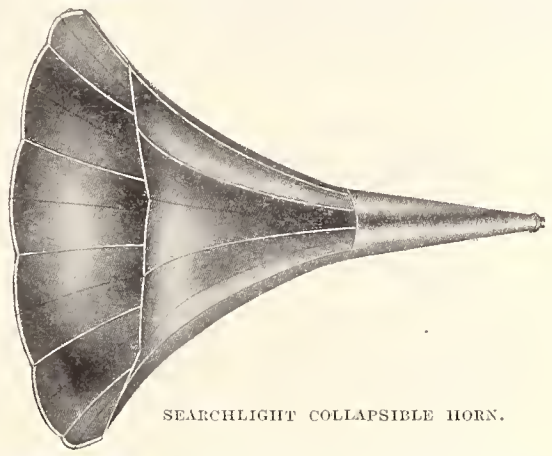
This matter is well worth the attention of every live dealer. It is inexpensive and undoubtedly one of the most practical devices of its kind that has yet appeared.

The Victor Talking Machine Co. will soon have ready a number of Mexican records, including numbers by noted bands and vocalists.

A NEW COLLAPSIBLE HORN.

Which Will Interest the Trade, Can be Reduced to Almost Pocket Size Quickly—Has Splendid Reproductive Powers.

The illustrations which are shown on a neighboriug page, and which are reproduced here in



SEARCHLIGHT COLLAPSIBLE HORN.

smaller form, of the new horn recently placed upon the market, will be of interest to talking machiue men everywhere. We refer to the new collapsible horu put forth by the Searchlight Horn Co.

The fact that this horn can be so quickly reduced to occupy but a small space makes it at once a desirable product for talking machine

SEARCHLIGHT COLLAPSIBLE HORN CLOSED.

dealers. Recently this new Searchlight product was subjected to rigid tests, and experts who were present did not hesitate to pronounce it a most admirable horn, not only from the fact that its novel form permitted it to be reduced in so short a time to almost pocket size, but the fact that it possesses marvelous reproductive powers. The tonal quality of this new folding horn elicited the warmest admiration and approval from those present. Some of the gentlemen had claimed that it was impossible to have a collapsible horn which was a good reproducer of sound, but those gentlemen who were skeptical at first admitted later when the tests were applied that this new claimant for horn patronage was a wonderful creation in every respect.

While the illustrations shown give a fair idea of this uew collapsible horn, yet it should be seen and heard to be fully appreciated.

One feature of this horn that appeals to seller and user is that the bell is self-sustaining and in one piece and can be made into a solid flower horn and ready for use, or collapsed for packing, within 10 seconds. It is made entirely of metal.

NEW VICTOR VICTROLA DESIGN

The Victor Talking Machine Co., Camden, N. J., have their new cabinet working plant now finished, and in excellent running order. One of the first products of this department of the great factory is a new model of the Victor Victrola, the first sample of which was received in New York by the Regina Co. The design differs materially in point of elegance and finish from the first of these notable machines, which has proven one of the best instruments of the Victor line ever manufactured by the Victor Talking Machine Co., of Camden, N. J.

Eddie Merritt, the Douglas Phonograph Co.'s only "ambassador of commerce" at present, leaves for his vacation next Saturday, the 17th. Mr. Merritt is one of the road cracks, and has rolled up a record in sales for the past year. The Douglas Co.'s interests are always in good hands when Eddie is on the job.

Announcement Extraordinary

On September 1st we will move our wholesale Edison and Victor Talking Machine Department to our new building at

The Indestructible Phonographic Record Co.

ALBANY, NEW YORK, U. S. A.

COLUMBIA PHONOGRAPH CO.'S BOOTH AT THE JAMESTOWN EXPOSITION.

One of the handsomest displays made by any manufacturer at the Jamestown Exposition is that of the Columbia Phonograph Co., who are located at the northeast corner of the Manufacturers' and Liberal Arts Building. As may be seen from the illustration herewith, the structure is a most imposing one, and is attracting unusual attention from all who visit the Exposition grounds. In this handsome booth are displayed all the latest Columbia products, including the improved commercial graphophone, which is so much in vogue with the great corporations, and the latest improved records, as well as many novelties which are now being introduced by the Columbia Phonograph Co. At the St. Louis and Portland expositions their display attracted considerable attention, and it is safe to say that this interest is being more than duplicated at Jamestown, where the gentlemen in charge are most attentive and courteous to all who call. The increasing interest in the exposition will bring lots of people to Jamestown the coming fall, and it is safe to say that no exhibit will win or deserve more consideration than that made by the Columbia Phonograph Co.

KEEPING SHOP BY MACHINE.

Showing How the Talking Machine Idea Has Been Adopted Into Commerce.

Near Amsterdam a tourist who does not know a word of Dutch recently saw in a shop window the announcement, "English spoken." He entered the shop. "English, sir?" asked a youth behind the counter.

Then he picked up a cylinder, placed it in a graphophone and the instrument duly sung out—but in German: "Sir (or madam), the proprietor, who speaks German, will be telephoned for and will return to the establishment in less than five minutes. Will you please be seated?"

Being familiar with German, the tourist seated himself. In came the proprietor, who, it turned out, spoke excellent English. The stranger asked why the graphophone did not talk English. The explanation was: "It's my stupid assistant! I have a cylinder on which is recorded the message in English; he used the wrong one.

"There is no excuse for him," continued the annoyed proprietor. "My English cylinder is tinted red at the ends and the German one blue. Lucky for me, sir, that you know German, else I might have lost an esteemed patron."

Quality Horns Count

TRADE STANDARD MARK

and every Standard horn that is put forth has passed the most rigid examination, and purchasers will have the satisfaction of knowing that the grade of the STANDARD is **unsurpassed** in finish, and in quality.

Our horns are exquisitely designed and made so that they will meet every requirement of the horn trade. The styles are original and there is an individuality about the Standard which commands trade.

STANDARD METAL MFG. CO.

Factory address, Jefferson, Chestnut and Melbourne Sts. - NEWARK, N. J.
Offices and Salesrooms, 10 Warren Street - - NEW YORK, N. Y.

COMING SEASON WILL BREAK RECORD.

The most conservative minded man in the trade cannot but admit that the coming season is going to break the record set up last year. He has only to note the always increasing growth to reflect that the orders he placed with his jobber last year at this time will not meet the demand which is at hand. We on our part, says the National Phonograph Co., are receiving orders from the longest headed men in the business far in advance of last season. Taking these as typical of what are to come, we feel that despite the great extension of our factories, the increased staff of workers and the high pressure kept up during the summer, we shall yet have to work overtime.

ADVANTAGES OF KEEN ATTACHMENT.

In another part of The World will be found an interesting announcement from the Keen Phonograph Co., of Philadelphia in which they are exploiting the Keen attachment, which is described as "the missing link to the phonograph." The manufacturers sum up these advantages as follows: (1) A clearer sound is secured. (2) The horn doesn't rest its weight on the sound reproducer (which nine times out of ten is the trouble experienced by phonograph users). (3) The horn can be turned to any angle. (4) Everything is more compact. (5) The improvement in appearance is marked. It is only necessary to study the points of this invention to appreciate its great advantages.

COLUMBIA RECORD IN NEW DRESS.

The "Columbia Record" for August appears in an entirely new form—quarto size, with an illustrated cover in colors, in keeping with the magazine idea of the day. Under the editorship of George P. Metzger, chief of the advertising department, the new "Record" supersedes the monthly publication so long identified with the interests of the Columbia Phonograph Co., General. In sending forth the revised and greatly altered edition, the manager adds these few pointed and pertinent words:

"Yes, the 'Columbia Record' has put on a new uniform, and its aims and purposes have been chirked up a bit, too. Hereafter the 'Columbia Record' will be devoted to the interests of Columbia dealers exclusively. It is not meant for the consumer. Consider this issue merely as a fair start—and then every month look for improvement, and take hold and help. If you see a knothole, stick a plug in it and sing out good and plenty. We'll take your suggestions with thanks and your kicks with meekness."

TRANSACT BIG HORN BUSINESS.

B. Schuyler Morris, general sales manager for the New Jersey Horn Mfg. Co., 271 Broadway, New York, is well pleased with the reception that is being accorded to their "Tulip" horns. At the factory in Newark, N. J., they have a capacity of 3,000 horns a week, and report that at the present time orders are being received from every point of the United States. The factory is in charge of Mr. Maurer, a practical man, who has been connected with the horn manufacturing business for the past fifteen years, and who makes a specialty of designing new styles. This company also manufacture a full line of Morning Glory horns of all sizes, suitable for the trade. Mr. Morris has inaugurated a very lively campaign in the interest of his house, and the claims made for his horns as to tonal excellence, durability and workmanship are worth investigation.

On August 1 William McArdle, the minister abroad for the Hawthorne & Sheble Manufacturing Co., Philadelphia, Pa., went to Paris, France, from London, England. He briefly writes: "H. & S. on top."

A CHAT WITH C. V. HENKEL

On the Future of the Jobbers Association—The Formation of a National Association Interestingly Discussed by This Gentleman.

Following the late meeting of the Eastern Talking Machine Jobbers' Association in New York more or less talk was heard of the object and purpose of the national organization, proposed to be consummated at Buffalo, N. Y., September 9-10. Among others deeply interested in this project is C. V. Henkel, president and general manager of the Douglas Phonograph Co., and one of the committeemeu appointed to complete the arrangements for the convention, who talked with The World as follows:

"When oue gets right down to formulating a plan for organizing a National Association of Talking Machine Jobbers it is more or less of a problem. The question as it preseuts itself to me is: First, shall the national body supersede the sectional associations altogether? or, second, shall the present organizations be preserved? Better still, should still other associations—west, north, south and east—be formed, with each sending delegates to the national gatherings. As it now stands there may be strictly local associations, in Philadelphia for example, that in no way interfere with the Eastern Talking Machiue Jobbers' Associatiou.

"At present a lot of tiue is lost," coutinued Mr. Henkel, "in passing on questions of the utmost importance to the entire jobbiug trade. Personally, I would prefer one body at present, as the local associations are not strong enough to send enough delegations, in point of members, to take up and dispose of questions to the satisfaction of the trade at large. It may be that not only city, but State associations may follow in the course of time. You know there is always more or less criticism where business of this kind is left in the hauds of a few. Another thing, it has been said that our association is not representative, and a national organization would remove this objection effectually. Besides the value of the exchauge of credit information is greatly enhanced when a wider scope is given its operation, as it would be with a natioual association. Iu fact, a national association properly organized could afford to establish a separate and distinct bureau for this purpose, and place at its head a competent man who could conduct its affairs expertly and along up-to-date lines.

"One of the greatest helps created by these associations is the fraternal spirit that has been developed by the social functions incidental to the meetings. To my mind this does as much practical good as is accomplished by the business meetings. Just what will be done at Buffalo I am unable to say just now, but the trade may rest assured that the greatest good to the greatest number will be the guiding policy of the committee in charge of the arrangements, of which I have the honor to be a member."

GOOD REPORTS FROM CINCINNATI.

Summer Trade Shows Increase Over Last Year—Wurlitzer Co. Secure More Room—Reginaphone to Ireland—McGreal's Good Business—Expansion With Columbia Co.

(Special to The Talking Machine World.)

Cincinnati, O., August 8, 1907.

The trade in this vicinity, in the main, did not finish the month of July at the remarkable pace set in the early part of the month. Although everybody reports a good healthy increase over the same period of last year, the increase is not in proportion with that of May and June over the same months of last year. There is nothing to indicate, however, that a single condition stands in the way of making the fall and winter business of 1907 the greatest by far in the history of the industry.

The house of Wurlitzer has again found it necessary to reach out for more room. They have secured 15,000 feet of floor space in the large building located at 126 East Fourth street, directly opposite the main store, where the wholesale end of the talkiug machine department will have added facilities and advantages heretofore impossible, as this department had outgrown its former quarters. One of the floors will be devoted to Victor, Edison and Zonophone machines, while auother will be used for records. An up-to-date shipping room and a salesroom conveniently arranged and equipped, are the result of the acquisition of this much-needed floor space, and incidentally, a source of great satisfaction to Mr. Dietrich, of the house of Wurlitzer, as well as its patrons.

Mr. Bruce, of the Smith & Nixon Piano Co., who has charge of the sales department of the Reginaphone, reports good business in machines and records. They have just filled an order for a large Reginaphone for the Rev. Father Powers, of Queenstown, County Cork, Ireland.

Lawrence McGreal, 29 East Fifth street, reports a very satisfactory run of business for the month just past. The sale of high-class records is exceptionally good, the Edison leading in machine sales. Altogether, there is nothing to indicate that Mr. McGreal has been in Cincinnati but two months except the calendar. The present and the outlook are roseate.

The Columbia Phonograph Co. report the best July business they have ever experienced; the sales showing great increase, both in their retail and wholesale departments over any previous July. The "Symphony Grand Graphophone" was put on exhibition recently, and it is creating the greatest interest among the better class of trade, who simply stand in admiring amazement at its wonderful tones and beautiful construction. It is put up in the style of an upright mahogany grand piano, is made to hold a large number of ten and twelve-inch disc records, and the horn is hidden from view. The sales promise to be beyond the supply.

The Van Phonograph Co., Mr. Salm says, has no fault to find with July's business, as it was in excess of the July of '06, both in record and machine sales.

John Arnold, of the Arnold Music & Phonograph Co., says they are having a wonderfully good trade in Victor records, especially.

SYMPHONY GRAND GRAPHOPHONE

Recently Placed on the Market Is Being Caught Up by Purchasers—Mrs. Gates Selects One and Her Friends Order More—Will be a Big Seller the Coming Fall and Winter.

The symphony grand graphophone is the latest high grade product of the Columbia Phonograph Co., Geueral. The first machine coming through the factory was placed in the window of the company's 23d street store, New York, last week, and was snapped up by Mrs. John W. Gates, wife of the Western financial magnate, who bets a million at a clip, within fifteen minutes of its first appearance on the floor. On removing the machine to the Waldorf-Astoria Hotel in less than an hour after delivery a couple of ladies from the famous hostelry came in the store and each wanted a symphony grand also, and immediately, they were so pleased with the one sent Mrs. Gates. This instrumeut stands about as high as the ordinary upright piano, is hornless, of beautiful design and finish, comes in mahogany and sells for $200. The company believe they have one of the handsomest machines ever put on the market, and are arranging to push its manufacture as rapidly as possible, as the symphony grand graphophone has been put down as one of the biggest sellers ever.

GEN. BRESLER'S GOOD WORK.

Among the guests of the Long Beach Hotel at the time of the recent fire that destroyed that resort was Gen. A. L. Bresler, export manager for Caille Bros., the large manufacturers of slot machines, with offices at 32 Union Square, East, New York. By hard work Gen. Bresler saved about one-third of his baggage, and after the fire had charge of a temporary police force, formed by swearing in a number of deputies, who preserved order and prevented the looting of the property of the guests.

Central States Edison Dealers

I AM ready to look after your Phonograph needs from my Cincinnati wholesale place. My stock from beginning to end is new and fresh and my aim shall be to give dealers not only good service, but aid them in every way to make money with the line by giving them every assistance possible, and ten years' experience, first as road salesman for the National Phonograph Co., and four years of jobbing Edison goods exclusively in Milwaukee, should fit me for the successful work of middleman.

ANENT DIFFERENTIAL PRICES.

Henry E. Marschalk Says That the Trade Is on the Threshold of a Solution of One of the Greatest Trouble-Breeders With Which the Talking Machine Business Is Afflicted—Lack of Differentiation as Between Cash and Instalment Sales.

(Special to The Talking Machine World.)

Philadelphia, Pa., August 12, 1907.

Henry E. Marschalk, of the Musical Echo Co., the prominent talking machine jobbers, at 1217 Chestnut street, this city, in a chat this week with The World he said:

" 'Necessity is the mother of invention.' This old familiar phrase may be appropriately applied to the present-day talking machine situation, more especially as it relates to the instalment bugaboo. At last our brains have begun to gyrate, and it would appear that we are upon the threshold of a solution of one of the greatest trouble-breeders with which the talking machine business is afflicted, namely, the lack of differentiation as between cash and instalment sales. The element of rascality is sometimes present, as it may seem; but more failures may be traced directly to the instalment business than to any other source.

"Long and assiduously have manufacturers and jobbers flaunted the slogan, 'Go after the instalment business; increase your retail sales,' and the sentiment found fruitful echo in the dealer—large and small. It looked dazzling at the start, and the 10 per cent. above list prices, which everybody charged, added the necessary rose-colored hue to these boomerang sales to induce redoubled effort to 'get more.' Everybody made remarkable strides (especially the manufacturers); business increased with wonderful rapidity, and when our sales sheets (not our cash sheets) were gone over and showed gains of from 50 to 200 and 300 per cent., certainly we had good cause to sing praises of our phenomenal prosperity; but we reckoned without our host. The big fellow had not then begun to lop off that extra 10 per cent., and the little fellow had not then lost his inducement for cash. The big fellow did lop it off, and the little fellow did lose his inducement, and then—trouble. That is where we stand to-day—face to face with trouble, and lots of it. The little dealer who had been 'going right along with the gang,' making great leaps and bounds in his sales and, at the start, getting a fair share of cash business—enough to bolster up the instalment end—began to realize that the big fellow was rapidly killing his chance for cash sales, and that the alternative confronted him either to quit the job or meet competition. The average American is not a quitter and, above all, is an optimist, so it was in order to figure that either Providence or good luck, or perhaps even hard work, would make this instalment business self-supporting. Then began a race for more instalment sales with the prospect for cash business practically eliminated. Some of them, miraculous as it may seem, have held together in one way or another; but the great majority are, to use the vernacular of the day, "up against it." They have either failed already and ruined their credit standing by a trip through the bankruptcy court, or some poor jobber is nursing them along, hoping against hope.

"Who stands under this burden? Is it the manufacturer? Emphatically no! It is the poor jobber. He is the follow, alas! who has been supplying the small dealer, while the latter has been wrecking himself on the instalment shoals, perhaps unconsciously, but with a degree of certainty which is appalling. He it is who hustles his check off to the manufacturers on the 10th and 15th of each month. He it is who paralyzes his profit and loss account with these bad debts—debts directly due to an incorrect condition of trade—i. e., lack of differentiality in prices, above referred to. He it is who sucks the lemon, while the more luscious and palatable fruit goes in another direction.

"So we have 'necessity' as the 'mother of invention.' We must needs rejuvenate the cash business, for under present conditions who but an ass or a rich man would buy for cash when he can make one of these 'unfeelable' weekly or monthly investments at no added cost? Thus, also, we have our brain gyrations—a hash of intellect in some wise head—and, behold! a result—a suggestion that we allow 5 per cent. discount for spot cash! How simple, yet how effective! May blessings be upon this head, may blessings be upon the other heads which gave impetus to the thought, and may blessings be upon the heads of the manufacturers for quickly grasping the thought and embodying it in their contracts, for surely they will do so."

AMERICAN TEN INCH RECORDS

We have about 5,000 new ten-inch American Records. Chicago selections, 18c. each in thousand lots. Address, "Blue Records" Talking Machine World, 1 Madison Ave., New York.

WILL SELL BUSINESS.

FOR SALE.—Thriving piano, phonograph, bicycle and sporting goods business, established 30 years, in live town, 50 miles from New York. Valuable agencies. One side line pays rent and clerk hire without any investment. Fullest investigation. Fine store, fresh stock, inventory about $5,000. Half cash; balance secured. Address "PIANOS," care Talking Machine World, 1 Madison Avenue, New York.

FOR SALE.

200 brass and black and gold regular and flower horns at 25 per cent. off jobbers' cost; new wholesale stock. List of sizes on application. Robert L. Loud, Buffalo, N. Y.

S. B. DAVEGA EXPANSION.

Lease 126 University Place Which Will be Connected With 32 E. 14th Street—New Quarters Will be Devoted to Wholesale.

S. B. Davega, the enterprising talking machine jobber at 32 East 14th street, this city, has leased spacious quarters at 126 University Place, which will be occupied on September 1. These premises will be connected with his present establishment and will be devoted exclusively to the wholesale trade. This will give Mr. Davega one of the most central establishments in the city, as well as facilities that will enable him to cater to the demands of his growing trade.

NEW EDISON CATALOGS.

Copies of the numerical and alphabetical catalog of records, form No. 1,120, have been mailed the trade. This includes in one cover the catalogs which have heretofore appeared separately, and supersedes numerical catalog No. 1,020, and alphabetical catalog No. 1,025. It contains all domestic and foreign records listed to and including July, 1907, and will be current for six months. The domestic, grand opera and foreign lists are first given in numerical order, followed by the domestic list in alphabetical form. This combined form will be a permanent feature. Jobbers will please bear in mind that copies have been mailed to all dealers and that it will not be necessary to supply them with other copies except upon request.

Copies of a new edition of the machine catalog, form No. 1,135, were mailed to the trade during July. Although this catalog is bound in a new cover, it is only intended for use until the new equipment becomes effective on September 16. At that time an entirely new catalog will be printed, covering all the changes in equipment and prices.

W. D. ANDREWS BIG PURCHASE.

W. D. Andrews, the prominent talking machine jobber of western New York, and president of the Eastern Talking Machine Jobbers' Association, recently purchased the entire stock of Edison machines carried by Robt. L. Loud, of Buffalo. Having purchased the stock of Victor machines from the same party a month ago, this gives Mr. Andrews a magnificent line of machines, which are being shown to advantage at his warerooms on Seneca street, corner of Wells, where he is splendidly located to carry on a great jobbing trade.

Turn Waste Into Profit

That waste space in your store is rich soil. A good side line will make it yield big profits.

Musical Instruments is the logical side line for talking machine dealers.

There's more money to be made out of musical instruments than any other line you could add to your talking machine business.

And they pull well together—that's the beauty of it!

Musical instruments require little space and less time. Odd corners in store and windows, tops of show cases and counters are excellent places to display them.

Durro Violins
Lester & Monarch Accordeons
Duss Band Harmonicas
and Durro Strings

in fact all our specialties are the best known instruments and admittedly the best sellers on the market.

Our prices are just as unique as our goods—none so attractive. That means you can make business *come to you* instead of you going after it.

Musical instruments will bring you a class of individuals with musical ideals who still have the notion that talking machines are mere mechanical play-toys. You thus can have within earshot people you could not reach otherwise and convince them to the contrary.

This is the best proposition ever made to you. Grasp it! Write for Catalog and special prices. But act quickly, because your competitor around the corner may be reading this.

Buegeleisen & Jacobson

113-115 University Place
NEW YORK

Sole Importers of the Famous DURRO VIOLIN

"TALKERS" GREATLY IN VOGUE

In the Twin Cities—The Leading Jobbers and Dealers Well Pleased With General Conditions—Latest Trade Happenings.

(Special to The Talking Machine World.)

Minneapolis and St. Paul, Aug. 5, 1907.

Talking machines are in greater vogue in the Twin Cities than ever before in the history of these devices in Minnesota. Notwithstanding the dulness that comes with the heated period all the houses are doing an exceptional business. Particularly flattering reports are given by the Victor dealers, but all report a trade far in excess of what was done a year ago.

A. M. Magoon, who handles the talking machine department for the New England Furniture Co., says that the trade is unusually strong for this season of the year. The Edison trade continues to hold its own very nicely and is a considerable factor. There has been a very decided increase in the demand for grand opera records.

J. H. Wheeler, a jobber in the Columbia goods, says that the country trade is unusually strong for this season of the year.

T. C. Hough, the pioneer talking machine man in the Twin Cities, finds himself and his office force unusually busy for this time of the year. The machines have found a field, and the trade appears to be as well established as any other line of business in the country.

The Minnesota Phonograph Co., of which L. H. Lucker is proprietor, with headquarters in Minneapolis, is steadily enlarging their trade in Victor and Edison machines and records, and they are well pleased with the business outlook.

EDISON MONTHLY'S NEW DRESS.

With the new form of the Edison Phonograph Monthly for August, Editor McChesney says: "At the age of four and a half years the Edison Phonograph Monthly has assumed a new and more becoming dress. The new cover, with its colored stock and two colors of ink, will be changed each month, and it is hoped that its attractive appearance will be appreciated by the trade. It will be noticed that the advance list and comments are combined, and that the publishers' names are incorporated with them, instead of occupying a separate space, as heretofore." This last announcement should be particularly pleasing to the music publishers who have long contended that if their names only were connected with their publication the cup of happiness would be overflowing and they would rest content, despite the lack of royalty fees.

COLUMBIA'S NEW HOME.

Their Great Retail Headquarters Out of the Hands of the Decorators at Last—Handsomely Fitted Up—Attractive Window Displays That Merit Special Praise.

After weeks of unavoidable delay the Columbia Phonograph Co.'s new establishment at 35-37 West 23d street, New York, is practically to rights, and we may add that it is one of the handsomest and best equipped in Greater New York. The color scheme throughout is forest green, with light green side walls decorated with silver, bronze and gold panels and medallions, the latter having the monogram C. P. emblazoned in their center.

The display windows are in quarter-sawed green-tinted oak, with leaded glass and prism panels above a paneled wainscoting, and matches the general interior decoration to a nicety. The mezzanine floor, which forms a crescent in the rear of the store, is of quartered oak and of the same tint as the display windows and soundproof booths erected underneath. The floors are also to be covered with dark green linoleum to harmonize with the decorations as noted. Leading up to the mezzanine floor is a stairway with a mirrored background, which, together with mirrored doors which lead to the rear private offices, telephone exchange booth, stock room, etc., and situated directly underneath the balcony, gives an exaggerated depth to the main or store floor. Two electroliers in bronze on each side of the balustrade, and many electric light globes distributed every few feet along the balcony railing, sheds a subdued light and gives a touch that is most pleasing to the eye. The mezzanine floor is set apart to the bookkeeping and minor departments, and this gives the entire store floor for the display of machines, cabinets, horns and miscellaneous stock.

Since the display windows were completed, H. P. Godwin, the display advertising manager, has arranged several most attractive exhibits, and they are attracting much favorable attention. This week the arrangement is most effective. In the west window is a graphophone suspended from a birch standard, and the sign post reads, "A strong guarantee holds your machine up to the mark and insures free repairs for one year." The certificate printed from an engraved plate seemingly holds the links of the suspended chains together and literally carries out the argument so tersely told. A sprinkling of graphophones makes a pleasing background. In the east window, and at right angles, are two large machines with notes issuing from the horns. The notes are caught up with black thread, and a close inspection is necessary to solve the optical illusion. The sign between the instruments reads, "There is music in the air; also in our records." A choice display of disc and cylinder cabinets in all the popular woods and finishes completes the picture.

DEALERS ON SUSPENDED LIST.

The following dealers have been placed on the suspended list since July by the National Phonograph Co.: George Swinehart & Son, Cooksville, Ill.; Bullock & Lyman, Cushing, and John J. Carpenter, Medeville, Ia.; C. H. Cobb, Gardner, and H. M. Burnham, Oldtown, Mass.; H. C. Ingalls & Co., Dover, N. H.; Italo-Americano Phono. Co. (R. Guard & Co.), New York City; Ben Hart, Fargo, N. D.; Clarence D. Baird Music Concern, Alexandria, Tenn.; Daynes Romney Music Co., Salt Lake City, Utah; W. Reichenstein, Norfolk, Va.; G. H. Stewart, Walworth, Wis.

WITHDREW APPLICATION FOR COMMISSION.

Before Justice Mills, in the special term of the Supreme Court held August 3 in the chambers in Mount Vernon, N. Y., an application on behalf of the New York Phonograph Co. was made for an open commission to take evidence from witnesses outside of the State. The application was later withdrawn. It was reported that the real purpose of the appointment of the commission was to obtain Thomas A. Edison as a witness.

INVESTIGATORS WERE DISTURBED.

During the recent telephone investigation in Boston, Mass., a morning session of the hearing was broken up by the antics of a talking machine in the neighborhood, which butted in with all too appropriate songs at the critical points in the testimony. While the investigators were inquiring just what a certain high salaried "advisor" did for the telephone company, the strains of "He Walked Right in, Then Turned Around and Walked Right Out Again" issued from the horn of the machine. After this personal thrust, officers suppressed the talker for the balance of the hearing.

H. M. Holleman, president of the Texas Phonograph Co., Houston, Tex., expects to attend the joint meeting of the talking machine jobbers to be held in Buffalo next month, and from there will visit the New York markets for the purpose of buying stock. This company now operate three stores in Houston and supply over two hundred dealers.

The Schmelzer Arms Co., Kansas City, are sending out an attractive series of advertising postals calling attention to special records in the Victor list for August, made by May Irwin and Alice Lloyd, the former making four and the latter three records each out of the list. The matter is printed on the back of a regular post card.

A PLAN WORTH $$$$

MR. RETAIL DEALER: Get the business coming your way early this fall. Plan No. 14 will do it. **IT'S ORIGINAL.** Making **BIG MONEY** for all that are using it.

SELLS standard makes of **MACHINES** at **FULL PRICE.** Equally successful in large cities or small towns. No extra stock required. UNIQUE GERMAN IDEA.

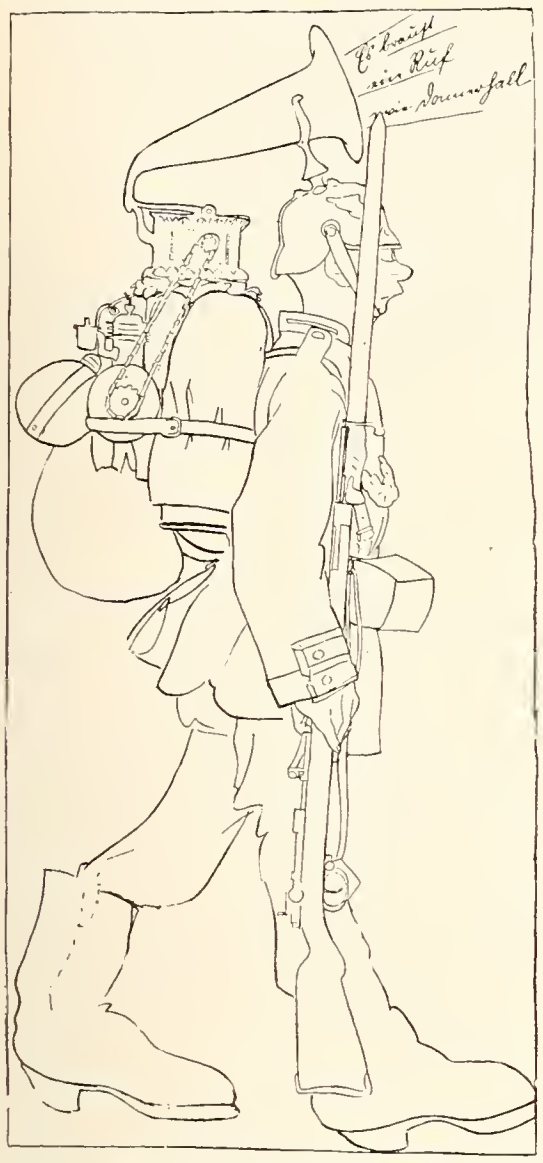
How the Talking Machine May be Utilized in Military Circles for Drilling or Cheering the Men on to Victory.

The ever useful talking machine has been suggested to fill still another sphere in German military circles, with what definite object has not been stated. According to the suggestion, the regulation talking machine is carried on top of the knapsack as shown in the accompanying illus-



tration taken from a German paper, the horn being carried forward over the soldier's head.

Whether the device is intended to lighten the march despite the additional weight of the machine, to enable the infantrymen to raise the cry, "Hoch der Kaiser" automatically, or to raise the yells of conflict while still saving the soldiers' breath is not stated. An army corps all equipped with talkers spouting out the German battle hymn or the music of Wagner should strike terror into the heart of even the bravest enemy, especially those who have attended an amateur saengerfest in times of peace.

WM. E. GILMORE AT THE HELM.

On July 19, William E. Gilmore, president of the National Phonograph Co., got in from his European trip aboard the "Celtic" of the White Star line. He had been away since May 8. Mrs. Gilmore and J. R. Schermerhorn, assistant general manager, and his wife, returned with Mr. Gilmore.

TALKERS ON THE MISSISSIPPI.

What would the old-time pilots of the romantic days of the Mississippi think if they could return to earth, take their places in the pilot houses and hear the strains of a talking machine issue from the cabin. The steamer New Camelia, of the river fleet plying between New Orleans and Lake Pontchartrain, is the latest vessel to be equipped with a Victor machine and a bountiful supply of grand opera records, and it is said the passengers express themselves as being delighted with the voices of the grand opera stars which go to fill the leisure hours of the trip.

HERE AND THERE IN THE TRADE.

On August 10 George P. Metzger, manager advertising department of the Columbia Phonograph Co., General, started on a week's vacation, which he enjoyed aboard his yacht in Long Island Sound waters, with headquarters at Port Jefferson, N. Y.

During the past month the following jobbers registered at the New York offices of the National Phonograph Co.: J. F. Bowers, of Lyon & Healy, Chicago; C. B. Haynes, of C. B. Haynes & Co., Richmond, Va.; C. Davidson, of Perry B. Whitsit & Co., Columbus, O.; C. N. Andrews, Syracuse, N. Y.; E. Percy Ashton, of the American Phonograph Co., Detroit, Mich.; W. E. Henry, of the Powers & Henry Co., Pittsburg, Pa.; T. H. Towell, Eclipse Music Co., Cleveland, O.; H. Shields, of the Denver Dry Goods Co., Denver, Col.; John N. Willys, of the Elmira Arms Co., Elmira, N. Y.; T. Lamaze, of the I. C. S., Scranton, Pa.

Frederick D. Wood has been appointed music director of the Leeds & Catlin Co. He was formerly a band and orchestra leader in London, Eng., and has been identified with recording work for a number of years. Recently he held the same position with the now defunct American Record Co. The Leeds & Catlin Co. have now completed samples of their new mechanical feed machines, and on Tuesday an order was placed for the first consignment. It is a popular price machine, with complete horn equipment.

On the 12th R. E. Caldwell, manager of sales of the Blackman Talking Machine Co., New York, returned from his annual fortnightly vacation, the charms of Saratoga Springs claiming his attention.

George McGrath, at one time a well-known traveling salesman in the shipping department of the Douglas Phonograph Co., New York, died on the 11th inst. at Rahway, N. J., of pneumonia, after a brief illness. The company sent a handsome floral tribute in memory of a faithful employe.

Robert L. Loud, of Buffalo, who recently closed out his talking machine business, announces elsewhere the sale of his horn stock at a discount that is worth considering.

The striking popularity of the commercial graphophone with corporations having much correspondence is well illustrated by the order just received from Sears, Roebuck & Co., Chicago, calling for 1,000 blank records to be delivered every month for the use of the 300 graphophones employed by the company. When you realize that each record has a capacity of eight average letters and that it can be shaved at least 100 times, thus in reality giving each record a capacity of 800 letters, some idea can be gathered as to the immense amount of correspondence handled by that firm.

J. T. Williams, general manager of the Victor Distributing & Export Co., 77 Chambers street, New York, who has been spending the past fortnight with his family at Asbury Park, N. J., returns to business Monday.

Edward N. Burns, third vice-president of the American Graphophone Co. and manager of the Columbia Phonograph Co.'s export department, returned Monday from a special trip to Cuba.

Miss Gertrude Gannon has been made manager of the new Cincinnati, O., branch of Lawrence McGreal. She has been employed by McGreal Bros. for a number of years and has a thorough knowledge of the business.

PRESIDENT EASTON BACK FROM EUROPE.

Edward D. Easton, president of the Columbia Phonograph Co., General, returned from Europe on the "Adriatic," of the White Star line, August 7. Paul H. Cromelin, vice-president of the company, who had preceded Mr. Easton abroad, came back on the same vessel. They were accompanied by their wives and others.

J. A. BERST RETURNS FROM EUROPE.

J. A. Berst, manager of the American branch of Pathe Freres, the famous French manufacturers of talking machines, records, the cinematograph system of moving pictures, etc., 42 East 23d street, New York, returned from his six weeks' trip to Paris last month. Mr. Berst reports business in his special line in the French capital unusually strong, the capacity of the great factories being pushed to the utmost.

The Blackman Talking Machine Co. have recently put on the market a new concealed horn cabinet suitable for any tapering arm disc machine. The bell of the horn is against a perforated panel in the side of the cabinet, and the sound issues from it in full volume.

In the July issue of "The Voice of the Victor" there is a very interesting article on Caruso, which is humorously illustrated. There are a number of other valuable pointers of interest.

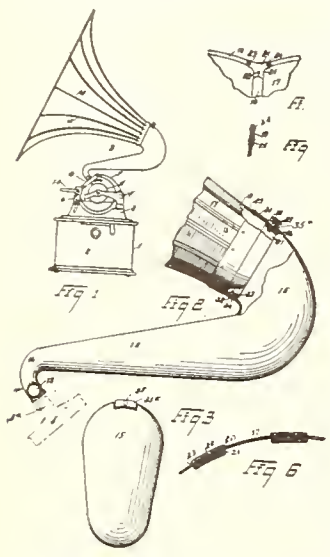
LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Specially prepared for The Talking Machine World.)

Washington, D. C., August 6, 1907.

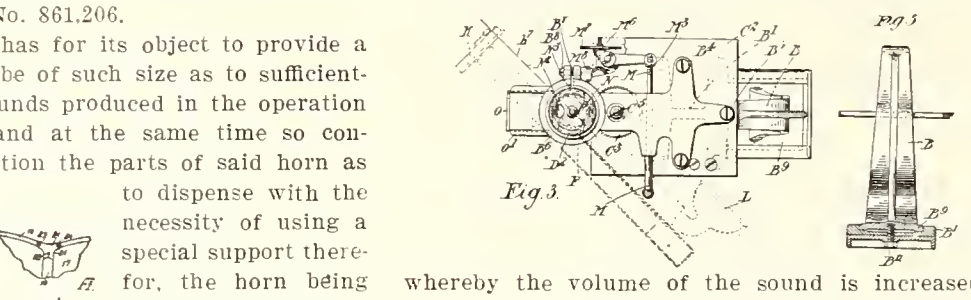
PHONOGRAPHIC HORN. Louis Devineau, Cleveland, O. Patent No. 861,206.

This invention has for its object to provide a horn which shall be of such size as to sufficiently amplify the sounds produced in the operation of phonographs and at the same time so construct and proportion the parts of said horn as to dispense with the necessity of using a special support therefor, the horn being carried and supported entirely by the tubular portion of the reproducer. A further object of the invention is to relieve the bearings on which the carriage traverses from undue friction. A still further object of the invention is to produce a horn of this type which is extremely light and attractive in appearance, and which may be conveniently assembled and disassembled. Fig. 1 represents a side elevation of a phonograph of standard construction having the horn applied thereto; Fig. 2 represents an enlarged detail, partly in elevation and partly in section, of the horn, a portion of the reproducer being shown in dotted lines; Fig. 3 represents an end elevation of the elbow of the horn, and Figs. 4, 5 and 6 represent details of the bell of the horn.

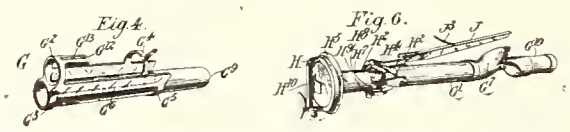


SOUND-REPRODUCING MACHINE. Frederick Myers, London, England. Patent No. 860,878.

This invention is for improvements in or relating to sound-reproducing machines and has particular reference to those in which disc records are employed. According to this invention, the record, instead of being carried upon a table rotated by the motor, as heretofore, is supported upon a stationary table, while the sound-box travels in a circular path over the face of the record. One advantage of a machine constructed in this manner is that it is found to operate efficiently even when tilted considerably out of the normal level, whereas machines having a rotating record are rendered irregular in action or even inoperative under similar conditions. The sound-box is driven by the motor but is also free to move laterally in a straight line and preferably in a path strictly radial to the record for the purpose of following the spiral groove therein in the well-known manner. In disc machines at present on the market, the sound-box is carried on a pivoted arm and therefore cannot move in a straight line whether such line be radial or otherwise, but traverses a path constituting an arc struck from the pivot of the arm. A further feature of this invention consists in utilizing the movement of the sound-box to provide a forced draft through the intake of the trumpet whereby the volume of the sound is increased and the quality improved.



In the accompanying drawings Fig. 1 is a central vertical section of the machine viewed from the front; Fig. 2 is a side elevation of the same viewed from the right of Fig. 1; Fig. 3 is a plan of the machine; Fig. 4 is a perspective view of a detail; Fig. 5 is a rear elevation of the supporting bracket, and Fig. 6 is a perspective view of the sound-box and adjacent parts.

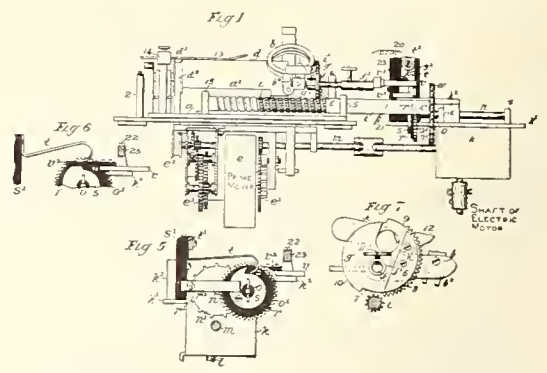


AUTOMATIC PHONOGRAPH. William W. Rosenfield, New York. Patent No. 859,114.

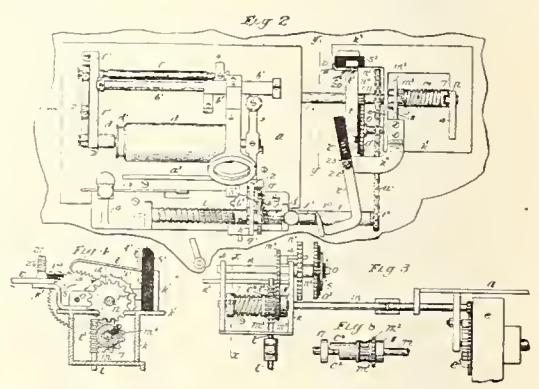
This invention relates to automatically operated phonographs, and more particularly to means for raising the reproducer from the record and for returning the parts to normal or starting position.

In accordance with the present invention, the return mechanism of the phonograph is actuated by a motor other than that by which the phonograph is given its reproducing movements, such additional motor being preferably an electric motor. By providing such additional motor for operating the return mechanism, the motor by which the phonograph is given its reproducing movements is relieved of the work of actuating the return mechanism and a much quicker return may be obtained than would otherwise be possible with such motors as are ordinarily used for operating the phonograph.

The invention has been made in connection with and in some of its features is especially adapted for use with phonographs provided with means for automatically rewinding the motor by which the phonograph is given its reproducing movements, and more particularly phonographs of this class in which the phonograph is actuated by a spring motor which is automatically rewound by an electric motor. When the present invention is applied to such phonograph the automatic return mechanism may be actuated by the electric rewinding motor, the spring motor being thus relieved of the work of actuating the return mechanism. The invention is not, however, to be limited in all its features to a construction in which the return mechanism is actuated by the rewinding motor, since obviously a special motor might be provided for actuating the return mechanism, and when such special motor is provided the invention might be applied to a phonograph not having a rewinding motor as well as to one having a rewinding motor.



A full understanding of the invention can best be given by a detailed description of a preferred construction embodying the various features thereof, and such a description will now be given in connection with the accompanying drawings which show the invention as applied to a spring motor actuated phonograph.



In said drawings, Fig. 1 is an elevation. Fig. 2 is a plan of a spring motor actuated phonograph of known construction provided with an automatic return mechanism and with rewinding means constructed in accordance with the present invention. Fig. 3 is a view of parts of the operating mechanism looking from the back of Figs. 1 and 2. Fig. 4 is a view, partly in section

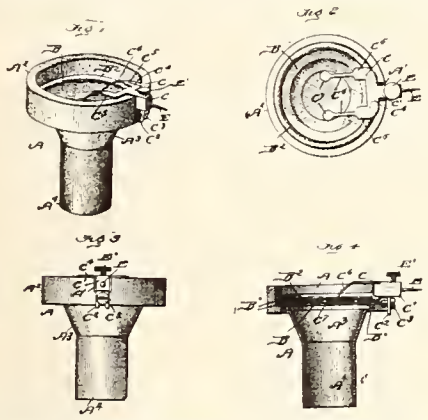
ECLIPSE PHONOGRAPH CO.

203 Washington Street **HOBOKEN, N. J.**

on line x—x of Fig. 3. Fig. 5 is a view, partly in section on line y—y of Fig. 2, looking toward the right. Fig. 6 is a view of parts shown in Fig. 5, but in a different position. Fig. 7 is an enlarged view of parts of the automatic return mechanism, looking toward the left in Figs. 1 and 2. Fig. 8 is a detail view of the friction coupling interposed between the electric motor and the spring motor, the friction spring of such coupling being removed.

GRAPHOPHONE SOUND-BOX. John F. Murray, Lindsay, O. Patent No. 860,604.

This invention relates in a reproducer or sound-box having a peculiar shape, and having a double armed stylus lever, and needle adapted for use

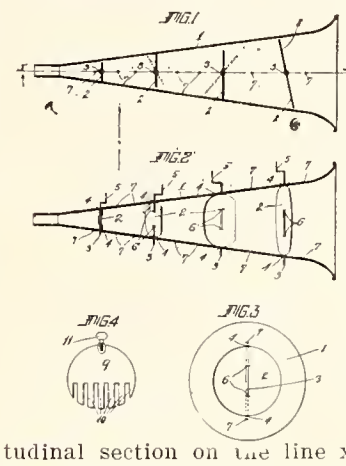


with the hard disc records. The object of the invention is to obtain a clear, distinct and natural tone. Fig. 1 is a perspective view of the improved attachment. Fig. 2 is a plan view. Fig. 3 is a side elevation. Fig. 4 is a vertical or longitudinal section.

PHONOGRAPH HORN. Henry B. Seaman, New Brighton, N. Y. Patent No. 858,763.

This invention has for its object the provision of a horn which shall be free from the raucous noises characteristic of many horns constructed at the present day. Many efforts have been made to do away with the detrimental quality above mentioned, the most recent attempt to accomplish this being what is known as the "Morning Glory" horn, but it has been discovered that the raucous quality proceeds not so much from the shape of the horn as from the uninterrupted reflection of the sounds from the sides of the horn, which in the human throat is prevented by tonsils, teeth, etc.

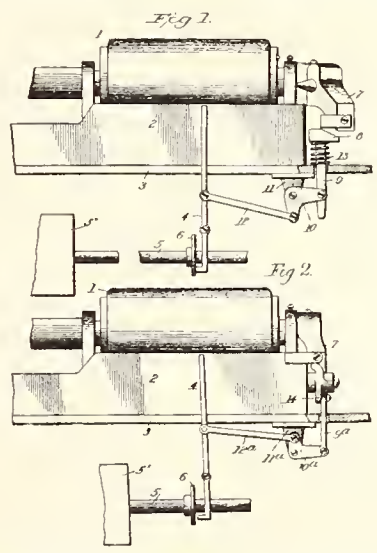
Accordingly baffling means have been devised to interrupt the sound waves in their progress from the reproducing device through a phonograph horn, and these means may take, conveniently, the form of a plate or gate of which it is preferable to provide several within the horn, arranging them also preferably so that they will be adjustable at the will of the operator. By this means a tortuous passage is provided for the sound waves, considerably modifying the quality of the tone transmitted by the horn, and also enabling its volume to be controlled by the operator readily.



In the drawings, Fig. 1 is a longitudinal sectional view of a phonograph horn, in the construction of which the improvements have been embodied; Fig. 2 is a vertical longitudinal section on the line x—x, Fig. 1; Fig. 3 is a front elevation looking from right to left on Fig. 2, and Fig. 4 shows a modified form of baffle member.

STARTING AND STOPPING MECHANISM FOR PHONOGRAPHS. Clarence H. Wilkes and Howard Lyle, Little Falls, N. Y. Patent No. 860,110.

This invention relates to starting and stopping mechanisms for phonographs. It has for an object to provide a means connected to the starting lever and operated automatically either by

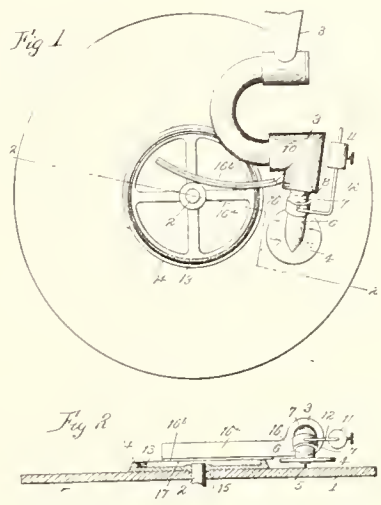


the closing and the opening of the gate or by the shifting of the lock for the gate. In the drawings Fig. 1 is a front elevation of one embodiment of the invention, and Fig. 2 is a front elevation of another embodiment of this invention.

TALKING MACHINE. William Rabe and Carl Kamrath, of New York, N. Y., assignors to Landay Bros., New York. Patent No. 859,180.

This invention relates particularly to machines of the flat record type and consists in means for adapting such machines to the making and reproducing of "home" records, and to that end they are here shown, and are preferably constructed so as to be applicable to the ordinary machines now in use, and intended for use only in reproducing commercially made records.

The object has been to produce a mechanism simple and cheap in construction, convenient and certain to operate, of great amplitude of movement so as to be applicable to records of various



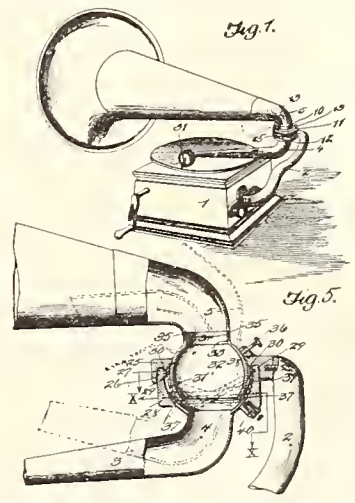
sizes, accurately adjustable to the work to be done and smooth and noiseless in action.

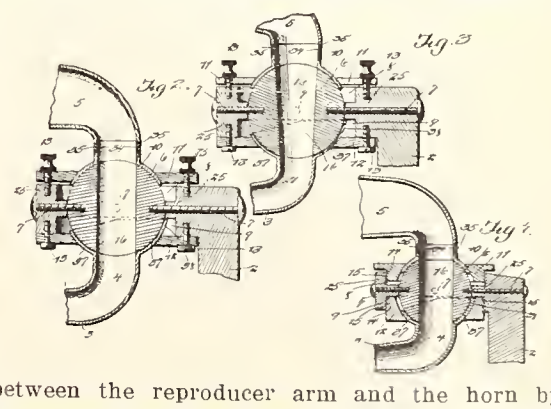
In the accompanying drawings, the mechanism is shown arranged for the production of records of the graphophone type, wherein the sound waves are recorded and reproduced by vertical movements of the stylus, but it is not intended to limit the scope of the invention to that use.

In said drawiugs, Fig. 1 is a plan view of the improved mechanism with so much of the parts of an ordinary talking machine as is necessary to an understanding of the same. Fig. 2 is a vertical, sectional elevation thereof taken on the planes indicated by the dotted lines 2—2, Fig. 1.

SOUND-CONVEYING TUBE FOR TALKING MACHINES. Robert A. Boswell, Washington, D. C. Patent No. 859,165.

This invention relates to sound-conveying tubes for talking machines, particularly talking machines of the disc type, and has for its object to provide a simple, inexpensive and efficient construction of the joiut or connection between the reproducer arm and the delivery or amplifying horn of such sound conveying tubes, by which the necessary movements of both the reproducer arm and the horn, both horizontal and vertical, may all be effected from substantially the same point of center. A further object of the invention is to provide a construction of joint or connection





between the reproducer arm and the horn by which these parts may have freedom of movement independent of each other, so that whatever may be the position of the horn the free end of the reproducer arm may move freely as may be required to permit the stylus to follow the record

The O. K. *and* UNIVERSAL
Horn Cranes

for Edison and Columbia Machines.
Wait for

THE IDEAL FOLDING HORN

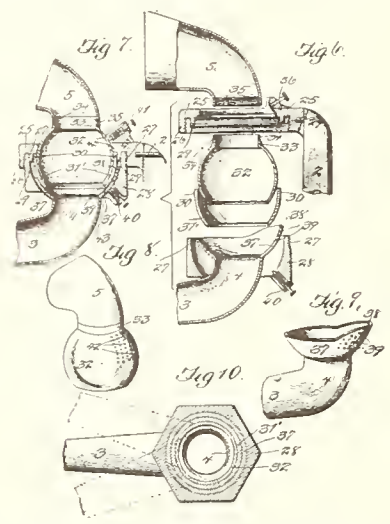
the greatest novelty of the year.

The Ideal Fastener Co.

143 Liberty Street,
New York City.

groove. A further object of the invention is to provide means by which the horn may be held in any position in which it may be placed so as to direct the sound in any desired direction and to provide means by which the free end of the reproducer arm may be held in raised position when it is desired to lift it from the record to permit the record to be removed and a new one placed in position. A further object of the invention is to provide means by which the free end of the reproducer arm will be prevented from sagging if swung to one side of the record.

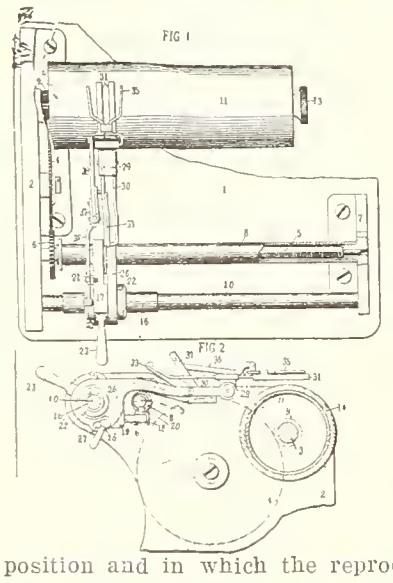
Referring to the drawings, Fig. 1 is a perspective view of a talking machine having the invention applied thereto; Fig. 2 is a vertical sectional view through the joint between the reproducer arm and the horn; Fig. 3 is a view similar



to Fig. 2, but showing a slightly modified form of joint; Fig. 4 is a view similar to Fig. 2, but showing a further modification; Fig. 5 is a view similar to Fig. 2, showing a further modification; Fig. 6 is a detail sectional view of the construction shown in Fig. 5, but showing the parts in position to be assembled; Fig. 7 is a view similar to Fig. 2, showing a construction similar to that shown in Figs. 5 and 6, but with slight modifications; Fig. 8 is a detail perspective view of the joint end of the horn shown in Fig. 7; Fig. 9 is a detail perspective view of joint end of the reproducer arm shown in Figs. 5, 6 and 7, and Fig. 10 is a horizontal sectional view on line x—x of Fig. 5.

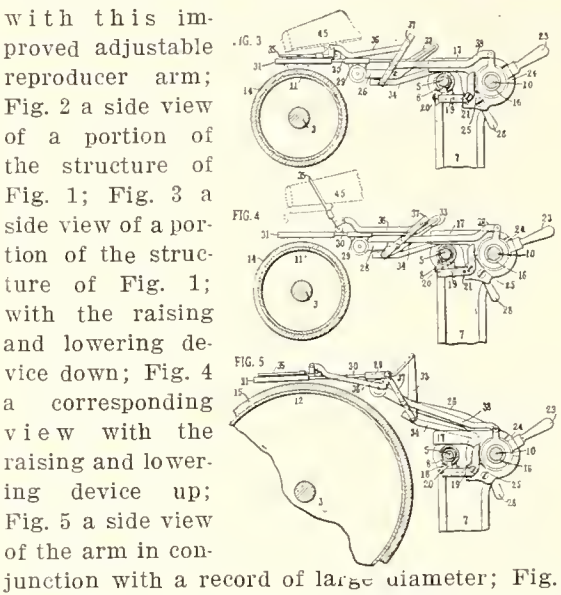
ADJUSTABLE REPRODUCER ARM FOR TALKING MACHINES. Walter C. Runge, Camden, N. J., assignor to International Royal Phone Co., Boston, Mass. Patent No. 860,332.

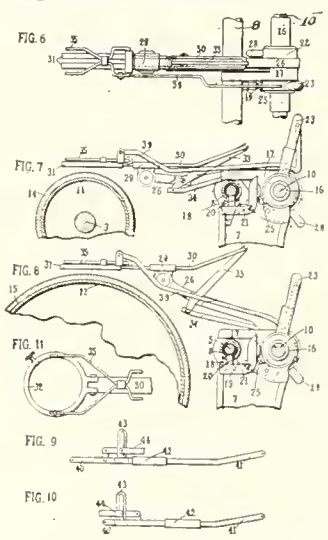
This invention relates to reproducer arms for talking machines using different mandrels of various diameters on a mandrel shaft having



a fixed position and in which the reproducer is shifted with respect to the sound record by adjusting the arm instead of shifting the mandrel shaft as in previous machines. One of the objects is to provide mechanism by means of which the reproducer can be shifted with respect to the mandrel shaft so that records and mandrels of different diameters may be used on the same machine. Another object is to provide means whereby the reproducer stylus will be automatically placed in proper position on records of various diameters. Another object is to provide means for placing the reproducer into or out of operative engagement with the record regardless of the diameter of the latter or the position of the arm. Another object is to provide means for guiding a reproducing trumpet along the record in such manner that it will be free to move universally under irregularities in the record, but will hold the stylus firmly in the sound groove.

Fig. 1 is a top view of a graphophone provided with this improved adjustable reproducer arm; Fig. 2 a side view of a portion of the structure of Fig. 1; Fig. 3 a side view of a portion of the structure of Fig. 1; with the raising and lowering device down; Fig. 4 a corresponding view with the raising and lowering device up; Fig. 5 a side view of the arm in conjunction with a record of large diameter; Fig. 6 a top view of a slight modification of the arm





in conjunction with a record of small diameter; Fig. 7 a side view of the structure of Fig. 6; Fig. 8 a side view of the structure of Figs. 6 and 7 in conjunction with a record of large diameter; Figs. 9 and 10 detail views of a form of manually operated lever system; Fig. 11 a detail view of a sound-box holder mounted on the arm in place of the trumpet yoke.

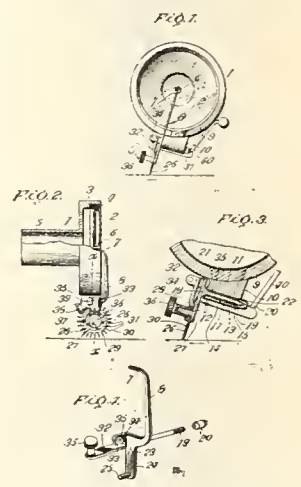
SOUND-BOX FOR TALKING MACHINES. Minard A. Possons, Cleveland, O. Patent No. 857,483.

This invention relates to improvements in sound boxes for talking machines, and is for use in connection with that class of machines in which a disc record is used and a metal stylus. It is well known that in the machines which use a disc record and a metal stylus, that are now so generally used, that the needles or stylus are intended to be used but once, and that after such use the needle is removed and another unused one substituted therefor.

One object of the present invention is to avoid the necessity of removing the stylus from its support as is required in the machines now in use, by providing an improved stylus formed from sheet metal and having a plurality of closely arranged reproducing points which can be cheaply constructed, and a new reproducing point brought into operative position by a slight rotary movement of the disc.

Another object is to so construct the stylus that it is rigid in the lateral direction of the sound waves formed upon the disc record to prevent any possible loss in the transference of the delicate variations thereof to the sounder disc, but which is flexible in a direction at right angles to these sound waves so that it will yield to the roughness and unevenness of the bottom of the sound wave groove, which is found, in practice, to very materially soften the tone and to avoid the well-known grinding and grating sound very common to these instruments.

Another object of the present invention is to support this disc-like stylus with its plurality of reproducing points with the plane of its flat surface extending across the disc record, or radial thereto, and the axis thereof at right angles to said direction, which causes the lateral irregularities of the sound waves to act upon the stylus in a direction parallel with the flat plane or surface of the disc, and therefore offering a rigid unyielding stylus in that direction, but which will yield in the direction at right angles thereto for the purpose stated in the preceding paragraph.



Another object of the present invention relates to an improved oscillatable support for the stylus and in the manner of connecting the stylus bar with the sound disc, as well as other details of specific construction of the stylus itself.

In the accompanying drawings Fig. 1 is an end view of the improved sound box, Fig. 2 is an edge elevation of Fig. 1 partly shown in section; Fig. 3 is an enlarged sectional view taken longitudinal the oscillating support for the stylus. Fig. 4 is an enlarged detached view in perspective of the stylus carrying member.

EDISON CIRCULAR TO THE TRADE.

Notice of Change in Horn Equipment and List Prices of Edison Phonographs, to Take Effect September 16, 1907.

The following communication was sent out to the talking machine trade on July 22 by the National Phonograph Co.:

"Beginning September 16, 1907, all Edison phonographs will be equipped with a horn support and solid metal polygonal shaped horn, somewhat different from any now on the market. The horns will be finished in black, with gilded decoration, and present a very neat, as well as attractive appearance. They will also produce better and more satisfactory results phonographically. The sizes of horns for different machines follow: Gem, 19 inches long, 11-inch bell; Standard, 30 inches long, 19-inch bell; Home, 32 inches long, 21½-inch bell; Triumph, Balmoral, Conqueror and Alva, 33 inches long, 24-inch bell.

"It is a well-known and established fact that for several years the price of all material, as well as labor, used in the construction of mechanical and musical instruments has constantly increased, and although we have heretofore considered raising the prices of phonographs to meet this increase in cost of manufacture, we have withheld doing so up to the present time. Now, however, that we are going to supply, at a further increase in cost, a larger horn and horn support, we are compelled to do so, and, beginning September 16, 1907, list prices of the different types of Edison phonographs, including horn and horn support, will be as follows: Gem, $12.50; Standard, $25; Home, $35; Triumph, $55; Balmoral, $70; Conqueror, $85; Alva, $85. Discounts to jobbers and dealers will remain the same as at present. No changes will be made in equipment or prices of slot machines of any style.

"Jobbers and dealers having a stock of machines on hand September 16 must equip them with the new horn and horn support, and sell them at the increased prices. To enable them to do this we will supply the horn and horn support separately from machines, at the increase made in price of outfits, these prices being subject to regular machine discounts, i. e., horn and horn support for Gem machine, at $2.50 each, list; horn and horn support for Standard, Home, Triumph, Balmoral, Conqueror or Alva, at $5 each, list. Dealers should order from their jobbers, and the jobbers from us.

"It is impossible to tell just when we will be able to begin shipping machines with the new equipment, but whenever it is, it must be distinctly understood that such outfits must not be sold to users until on or after September 16. There will be no objection, however, to a jobber supplying them to dealers prior to that time, provided it is understood and agreed to that they cannot be put on sale until that time. To take care of requirements up to September 16 we will continue filling orders with the present equipment, unless instructed otherwise.

"Within the next two or three weeks we hope to be in position to supply sample outfits complete, to such jobbers as may desire them, or to show them what the new horn and crane will be. If you desire samples sent you, please place your order immediately, plainly specifying thereon: 'One each Gem, Standard, Home and Triumph machines equipped with new style horn and horn support, or should you not want all of these different styles, specify just which particular types you do want.

"In order to include the foregoing changes, and to embody other minor changes, a new agreement will also be issued to take effect September 16, 1907. Jobbers' copies of these agreements will be forwarded to jobbers at the earliest possible date, and they should be signed and returned to us not later than September 16. New agreements will also be forwarded to dealers, either direct or through their jobbers, and should be signed and returned immediately to either the jobber or us direct, as the case may require.

"To provide against delay in supplying extra horns and supports for machines on hand, we would thank dealers to notify their jobbers, and jobbers to notify us on August 15, as to the approximate number of each style they will require on September 16, and would suggest your placing orders for them as soon after August 15 as possible.

TALKING MACHINE SAVES LIVES

Of a Picnic Party During a Recent Outing—Honored as a "Hero."

A large talking machine equipped with a very loud reproducer and big brass horn was the means of saving the lives of a picnic party of ten on a recent holiday. Five young couples had started early in the day for a launch trip on Long Island Sound, and in addition to a generous supply of edibles and drinkables had brought along the "talker" and a number of choice records to enliven the idle hours.

All went well until, while returning at sunset, a heavy and sudden fog blotted out everything except within a few yards of the boat and rendered the shore line and passing craft invisible. The situation was especially dangerous owing to the fact that one of the many sound steamers leaving the city late in the afternoon might bear down and run into them before a move could be made toward safety. Those in the launch who realized the danger and their helplessness had resigned themselves to the worst, when one bright mind suggested the use of a talker as a fog horn. A record of a full band selection was placed on the mandrel and hardly had the machine started to play when shouts and the tinkling of engine-room bells were heard and a big passenger steamer swept by not ten yards away, with propellers churning up great seas in an effort to arrest her progress with full speed astern, and the rail lined with anxious faces. Only the sound of the talking machine had given the pilot warning of the proximity of the launch and enabled him to sheer off in time to avoid a collision. As it was, the steamer's wash almost swamped the little craft.

The picnic party reached shore safely, although the hour was late and all suffered from a bad case of nerves, but the talker was hailed as a guardian angel and holds a place in the heart of the owner that could not be filled with the possession of a half dozen automobiles.

WALZ'S BIG TALKER TRADE.

The El Paso Dealer Says Sales Are Running Away Ahead of Last Year.

W. G. Walz, of the W. G. Walz Co., dealers in pianos, organs and talking machines, El Paso, Texas, was among recent trade visitors. Mr. Walz incidentally called at the National Phonograph Co.'s headquarters in Union Square and talked shop with several heads of departments. He stated that his sales of talkers ran away ahead of last year, and that he looked for a rousing business this fall, as prosperity was in full swing throughout the entire State, and that every industry was booming.

This Show Case and 50 per cent. Cash Profits are yours

Hohner Harmonica Display

SHOW CASE and HARMONICA ASSORTMENT

This offer consists of an excellent assortment of the best selling HOHNER Harmonicas, to retail at prices ranging from 25c. to $1.00, and a first-class show case, made of the best material and perfect in every respect. The assortment is made up of seventeen different styles, with not a dead seller among them. Each style comes in a separate package which is labeled to show at what price its contents can be retailed for and contains an assortment of keys. The case is made of solid quarter-sawed oak, plate glass, and is specially designed for displaying Harmonicas. The instruments appear on an elevated platform, under which there is room to store a small stock. With every case a number of price-tickets are given which can be placed on each instrument to display its retail value.

THIS IS WHAT YOU RECEIVE:

4 dozen Assorted Harmonicas, to retail at 25c. each	$12.00
2½ dozen Assorted Harmonicas, to retail at 35c. each	10.50
2 dozen Assorted Harmonicas, to retail at 50c. each	12.00
½ dozen Assorted Harmonicas, to retail at 75c. each	4.50
½ dozen Assorted Harmonicas, to retail at $1.00 each	6.00
Total retail value of Harmonicas	$45.00
Value of Show Case, at least	12.00
Total Value	$57.00

Your Gain A Show Case which will last indefinitely 50 per cent. Cash Profit on your investment.

Size of case: 20¾ inches wide, 24¼ inches long, 14 inches high.

MOVING PICTURE AND AUTOMATIC MACHINES

WHAT HAS BEEN ACCOMPLISHED

In Bringing the Moving Picture and Its Commercial Possibilities to the Attention of the Talking Machine Trade—Facts in This Connection That Are Well Worth Thinking Over.

Nearly a year has passed since The Talking Machine World first brought the moving picture machine to the attention of this trade as an article of great commercial possibilities. At that time it was only its use in the 5-cent theaters that we referred to. We saw these places of amusement spring up one after another until not a prominent thoroughfare in our city was left unoccupied. At first it was supposed that this was but another craze which had taken hold of the American public, and which would soon die out, but one only has to visit the Nickelodian of to-day to realize that these places are here to stay. Most important of all, however, they awakened the brains of inventors to the immense field open to the man who could invent a motion machine suitable for home use. This, as our readers know, is no longer a dream, a longed-for attainment, but a settled question. Like in every other phase of life when necessity calls human brains respond, if not to the letter at least with a practicable substitute.

With our large facilities for gathering news from all parts of the globe we have been keeping our finger on the pulse of this trade, and on the appearance of this new aspirant for trade favor were promptly on the ground in the interests of the talking machine trade, for we realized the importance of pushing the motion picture machine along with the "talker." Hence we have opened this department in the interest of these devices, and to keep the manufacturer, jobber and dealer acquainted with the condition of affairs. To-day, at least a score of the largest jobbers in this country have taken up the moving picture machine, and are pushing them in their territory, with the aid of their road men, with such good results that when asked by The World what he thought of the possibilities one jobber said: "Why, I have already sold my entire first order and have not received the first shipment yet."

This certainly is an encouraging start, but one must remember that this is but the beginning, for after the sale of the machines come films, an endless list, with fresh subjects coming out each month. In many ways there are advantages in this business over the talker; for instance, in shipping films to dealers or customers, the saving in freight charges will be enormous. Dealers won't have to worry, either, about how large a percentage of broken records the month's report will show, for films are put up in little round fireproof metal boxes, which eliminate all chances of damage. The supply end of this new business is very large, and an endless number of lights, lenses, rewinds, tanks for gas, wire, etc., etc., for all of which there will be a goodly demand, which means an extra profit for jobber and dealer.

Like in every phase of business any radically new invention is looked upon skeptically at the start. This in most cases arises from ignorance of the article or subject involved. One of the first points to be brought to light was the exorbitant cost of films. This was a perfectly natural conclusion to arrive at when it is remembered that the only pictures which came under their notice were those used by professionals and manufactured by the old-established houses in this line. Films of this character, of course, are beyond the purse of private parties, costing, as they do, from 14 to 16 cents a foot, many of the subjects running up to the 1,000 foot mark. The new companies knew that to give an exact reproduction of these large pictures and market them at a reasonable figure was impossible, so they began to study the problem before them with the following results: Firstly, for home use, it was unnecessary to throw a picture more than a half or third the size used in theaters. It was therefore decided that a smaller film would be desirable, for the saving in cost would be material. Secondly, by reducing the picture the flicker so noticeable in many of the larger would be reduced, if not wholly eliminated, and, thirdly, by just so much as the film picture was reduced the number of pictures to the foot would increase. For example, a 50-foot film, with pictures measuring one-half inch, would do the same work that a huudred-foot film picture measuring one inch.

Of course, it would only be possible to carry this proportion out to a limited point, for if the picture was too small you would lose both scope and much detail. Our readers must not think, however, that because a film happens to be half the size of a regular it can be retailed at 7 or 8 cents a foot instead of 14 or 16, for this is not the case. It is true that there is a good deal saved on the raw material, but one must take into consideration that each picture is retouched separately, and if the number is doubled to the foot the cost of this process is in proportion increased, therefore, when the new companies turn out a subject to retail at 10 cents a foot, with a liberal discount to jobbers and dealers, they have performed what not so long ago was thought impossible. Of course, as this business progresses it is certain that a process will be found whereby the cost will be still more reduced. Even at the 10-cent rate, however, the manufacturers had to turn out subjects that would not exceed $1.50 for the benefit of those who could not afford a longer film. But 10 or 15 feet are run off too quickly to give any satisfaction, so these pictures are joined together into what is called an endless film, and as the subjects for the most part are such that one cannot tell just where each begins or finishes, such as a bathing scene, railroad trains, a prize fight, etc., very good results are obtained.

As time goes on and the "talker" trade becomes more familiar with this business, many ideas now in embyro will be developed to push the film business. The same thing is true in this as in that of the phonograph field. The money will be made mostly from the pictures. One thing undoubtedly will be brought about, namely, an exchange system, whereby owners of machines buying a certain number of films outright will be allowed to exchange them for a uominal charge—enough to cover wear and give a fair margin of profit to the dealer. Dealers should also get their customers to form clubs if possible, thereby lessening the individual expenditure. This will also spread the craze, for members will invite outsiders to their entertainments, and these in turn are likely to club in or buy an outfit for their own use. These social gatherings will do much toward arousing new interest in talkers, for the two go hand in hand and the retailer who has his eyes open ought certainly to reap a harvest.

WILL IT BE AN "ARCADE" MERGER?

A. L. Erlanger Who Recently Completed a Great Vaudeville Combine Sees Big Money in the Nickel Moving Picture Theatres—Makes Friends With His Doughty Antagonist Impresario Hammerstein.

Oscar Hammerstein was sitting on the steps of the Victoria Theater recently talking about some of the things he was going to do in opera this year. Most of the people who came along stared at him, for the fame of the new impresario has gone far, but he did not pay any attention, except to say: "I guess they wonder why I have so little dignity."

Down the street came another man at whom all the wise ones stared as he came along. His name is often upon the lips of theatrical people, and it had figured in the newspapers of the day as the head of a great world merger of theaters. This other man was Abraham L. Erlanger.

Now, among the traditions of the Rialto are several which deal with the feuds of Oscar Hammerstein and Abraham Erlanger, and at present the Hammerstein vaudeville interests and the Erlanger vaudeville interests are clashing in serious fashion. It has been a long time since the two had met and talked. But for all that Mr. Erlanger walked across to the stoop where Mr. Hammerstein was sitting. He held out his hand and Mr. Hammerstein shook it.

"Tell me about that merger," said Mr. Hammerstein.

Mr. Erlanger just smiled.

"Tell me, honestly, is there anything you are going to keep your fingers out of?" persisted Mr. Hammerstein.

"Well, I might have some fun with a circus," said Mr. Erlanger.

"How about the five-cent phonograph places?" asked Mr. Hammerstein.

"There's money in them," smiled the head of the theatrical syndicate. "I've talked that over."

"I suppose you'll have a string of opera houses next," said Mr. Hammerstein.

"No, I guess I'll keep out of that," reflected Mr. Erlanger. Then he smiled.

"But, say, you seem to have got in pretty well on that, didn't you? Saw the country was coming that way. There's money in it."

Mr. Hammerstein started to retort, but Mr. Erlanger stopped him. "Now, don't you try to tell me you are in it for art or I'll go away," he said. "What's your subscription? And, by the way, how would you like us to do your booking? You needn't come over to our office at all. I'd come over here and we'd sit out on the front stoop and fix the whole thing up."

"There, didn't I tell you," said Mr. Hammerstein. "You can't keep out of it. You'll be merging grand opera yet. When you take that, will you let me keep this theater a while?"

"Oh, I'm thinking of selling seats good for

The Card Printer

Prints your name on five cards for one cent. It is the best slot machine ever produced.

MANUFACTURED BY

The Card Printer Co.

MOTION PICTURE

Machines, Films and General Supplies

Sole Agents for

POWER'S CAMERAGRAPH

EDISON'S KINETOSCOPES

The largest and only exclusive store of its kind in the city.

THE SWAAB CO.

330 Spruce Street PHILADELPHIA, PA.

We Make Pennies Grow

If you deposit your savings in a bank, you may earn 3 per cent. or possibly 4 per cent. Invest them in a Penny Arcade and your investment will net you 150 per cent. to 300 per cent. per annum.

LET US PROVE IT TO YOU.

Let us show you how you can gain an independent income by an investment of $600 and upward.

We will start you, assist you in every way in making your establishment a profitable one, and give you the benefit of our 20 years' experience both as operators and manufacturers.

WE WILL SEE THAT YOU MAKE A SUCCESS, for *your success* will mean *our success*.

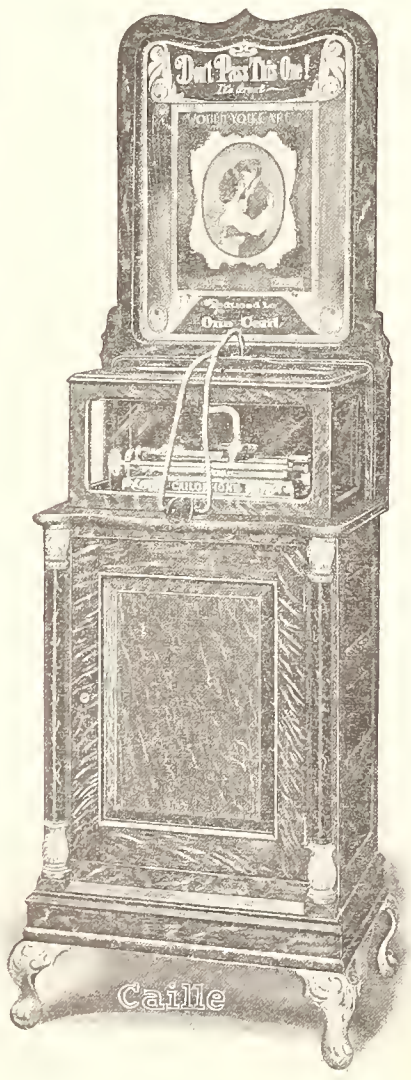
Given a fair location, and that is easily found in any town with a population of upward of 5,000, your investment will be returned to you in four or five months, after which all receipts are CLEAR PROFIT.

Just now is the *time to start* and take advantage of the spring and summer season.

Your town certainly should have an ARCADE. If there already is one in operation, YOU start another better one and show that you are up to the minute and a hustler.

If you are now operating an ARCADE, improve the same by adding CAILLE MACHINES and CUT DOWN REPAIR BILLS.

No machines like CAILLE MACHINES for showing big receipts!!



The public prefer Caille Machines, as they always work and always work correctly. They never are out of order.

No scales like CAILLE SCALES, and we make 5 different styles, all of them absolute leaders.

But we also make the famous CAILOSCOPE and have recently patented the CAILOPHONE, both of which machines outdistance anything on the market.

In fact we make *257 Varieties*, all of them "*Caille Quality*," which means excellence in every detail of construction, mechanism and appearance.

A postal Card will bring you our handsomely illustrated Catalogue for 1907, showing the largest line of coin controlled machines manufactured in the largest plant in the World devoted exclusively to the construction of automatic devices.

both the New York and Victoria," smiled Mr. Erlanger. "Want to go in on it?"

"Don't look at me in that money-making way," protested Mr. Hammerstein.

"Well, I haven't done any busiuess for five minutes, and I'm lonesome," said Mr. Erlanger. "You'd better think over that opera and vaudeville business. By the way, that's a fine tie you have on."

"Got it in Paris," said Mr. Hammerstein.

Then they talked of Paris, and Mr. Erlanger went away smiling. The wise theatrical people began speculating what new combination was in the air, but this was just what they had said.

CINEMATOGRAPHS IN SPAIN.

Demand for Films Is Quite Active—Orders Placed Largely With France, England and Germany—Chances for American Firms.

(Special to The Talking Machine World.)

Washington, D. C., Aug. 4, 1907.

Consul-General B. H. Ridgely reports to the Department of Commerce and Labor that Barcelona is becoming a center for cinematographic shows and a thriving business is being done in films, which are principally imported from France and England, some also coming from Germany, with occasional purchases from American firms. He adds: "It is impossible to state the number of films sold her, but Barcelona is the best market for them in Spain, Madrid being the next best. All the leading French and English makers have local agents. The length of the films sold varies from 44 to 110 yards. They are delivered at 2 pesetas (38 cents) per meter (39.37 inches). The subjects preferred depend somewhat on the class of entertainment for which they are required. The cinematograph, which claims to have the most select patronage, prefers scenes from nature. There are 30 or 40 cinematographic shows in and around Barcelona. All sorts of moving pictures representing life in America would be popular in Spain. Any American firm furnishing films of this sort would probably find it profitable to send an agent to Barcelona."

THE AUTOMATON WAS HUMAN.

C. W. Solomon Tells How He Had Been Duped Into Becoming Part Owner of Automatic Checker Player.

Chagrined because he had beeu duped iuto becoming part owner of an automatic checker player, which he afterward found contaiued a small boy, Charles W. Saloman, of New York, recently told some more interesting details of his negotiations with one Morris J. Mansfield, "inventor" of the apparatus, who was charged with swiudling and arrested.

In bewailing the fact that he had been cleverly duped, Saloman told how he had been approached by the owner of the wonderful piece of mechanism, and had taken the bait. The "machine" worked to perfection, and a fortune seemed in store for the purchaser until the boy was discovered in the interior.

"Why, I was ready to form a stock company, with $1,000,000 capital, to show the figure all over the country," said Saloman. "I had scores of friends who were crazy to buy the stock. Mansfield told me the figure was an exact duplicate of the famous one in the Eden Musee, and it looked so to me when I investigated.

"The contrivance was a wonder even without the boy in it, but it was useless without Mansfield to operate it. It ran by clockwork, not electricity, as Mansfield alleged. The batteries shown to the public connect with wires that did not run anywhere. The clockwork simply bent the automaton forward every time it said 'check' in playing chess or checkers.

"That fifteen-year-old son of Mansfield who was in the machine was a marvel at playing chess or checkers when he is outside of the figure. His father, I have since learned, has taught all of his four children, almost from infancy, to play the games.

"Why, the night before the figure was placed on exhibition, my brother-in-law opened $150 worth of wine—real champagne, too—and christened the figure Hassan Paska, saying we would get back the money for the wine the uext week. Oh, I dou't hesitate to say we thought we had a good thing with millions in it. Even after I exposed Mansfield's trick he wanted me to stand for it and allow him to take it around couutry fairs, where he said he could win $5 a game betting on checkers. The 'fake' cost me $150, but think what it cost Leopold!"

TRADE ITEMS.

The average life of a moving picture film is between 1,000 and 1,200 times exhibited. Of course, care in handling and the machine, whether good or bad, prolongs or lessens its wearing quality.

At a meeting of the directors of the American Mutoscope & Biograph Co., held July 17, the position of general manager (held so long by Mr. George Van Guysling, the vice-president of the company) was abolished. Mr. Van Guysling, who has but recently recovered from a severe attack of nervous prostration, has been granted a two months' vacation, and has gone South.

Edward E. Warren, an usher in the Hathaway Theater, New Bedford, Mass., was arraigned before Justice Stetson on July 16, for having violated the laws of that State, by operating a moving picture machine in the theater without having a license. The fine in such cases is not less than $5 and not more than $500, but at the suggestion of his counsel the court allowed the case to be "put on file," as the proceedings were sufficient to warn the management of all theaters that the laws of the State must be respected.

We learn that rigid laws to decrease the fire risk now said to be caused by conditions around the various moving picture shows in Birmingham, Ala., will most probably be adopted by the city council at an early date.

Mayor W. P. Ball, of New Orleans, La., is carrying on a strenuous campaign to stamp out the use of suggestive or criminal pictures in the nicelodians in this city. He has been joined in this work by the Protestant Ministers.

The slot machine business has beeu quiet. The export business aloue has kept up to the mark, and large shipments to foreigu countries go out on every steamer. The American manufacturer still holds his owu at the top of the list abroad, and our machines are always given the preference. Much of the slackness in the States is credited to the widespread craze for moving pictures, and there is little doubt that a good deal of coin is being sidetracked by these uickelodians.

The Giant Bean Shoot is one of the newest slot machines on the market. This device is 7 feet 6 inches high, made of hardwood, oak finish, with a red background, which makes it a very attractive ornament. When in use a ball is discharged from a gun, throwing out while ascending from one to five signals, and when blown to the limit (600) will ring the bell at the top. It retails for $25, and is a money maker.

The Marvelous Automatic Palm Reader continues to hold the public interested, and is conceded one of the greatest money makers ever produced in this country.

GRINDS OUT HARD COIN.

Easy Money Found in the Coin Operating Machines and Moving Picture Business—The Picture Business Should be Kept Clean—Talking Machine Men Should be Alive to the Dollar Making Power of the New Device.

The value of coin-operatiug machines should be apparent to every dealer, aud there are plenty who are making modest fortunes annually out of these automatically operated devices. They are silent, tireless workers. Chatting with one of the leading meu in the trade the other day he said:

"I have been much pleased with the coin-in-the-slot devices which I have handled. We have been doing a big jobbing business all over this country, and in some others as well, and it seems to me that talking machine men are not alive to the opportunities of this business, for they overlook its possibilities.

"I was interested in an article which appeared in The World of last month relating to moving picture developments, and I agree with the sentiment expressed in that article that moving pictures have won a splendid position, and like the talking machine business it is only in its infancy as far as development is concerned. Of course, there have been a few men in the business who helped to degrade it, and in some of the leading towns there has been a lot of obscene and impure scenes depicted which should be kept away from the young, for they have a tendency to drag down the business. Any man who presents immoral pictures to the public ought to be kicked out of the moving picture trade. The business should be kept clean, and it can be maintained there if only decent men take up the business. It is a charming business in many ways and if run properly it can be made into a big paying enterprise."

When one stops to think of films, moving pictures, etc., a big business vista is opened, and if we investigate, to the extent of obtaining statistics as to the amount of money which is spent annually in supporting the various moving picture theaters over the land, it would be surprising; and when we look into the automatic machine business we will find that results there are just as astonishing. Mechanical instruments of all kinds have leaped into popularity, and are now producing big business for dealers in all parts of the country. This line embraces almost everything from pianos down to the smallest known product. With the countless parks and places of amusement which are open during the summer mouths it should be extremely easy for every man to secure a fair amouut of business. If the pages of this publication are consulted it will be found that there are a number of money making devices which are exploited in our columns.

LEWIS M. SWAAB'S SUCCESS.

Lewis M. Swaab, of 338 Spruce street, Philadelphia, Pa., who is sole agent for Power's Cameragraph and also handles the Edison kinetoscope in that city, started business in the back parlor of his residence only three years ago, devoting himself exclusively to the motion picture business. The business has prospered until at the present time he occupies the entire floor, together with an exteusion in the rear, one of the largest moving picture stores in the city, and is looking for larger quarters nearer the heart of the city. He has discontinued his second-hand

business, and handles only new goods, though he does a large renting business. He credits honest dealing as being the basis of his success. Mr. Swaab states that he contemplates engaging in the manufacture of machines and films in order to supply his trade.

TRADE NEWS FROM CLEVELAND.

Owing to the Commendable Efforts of the Proprietors Picture Shows Are More Popular—Automatic Vending Co. the Latest—Recent News.

(Special to The Talking Machine World.)

Cleveland, O., August 8, 1907.

As a result of recent agitation against alleged objectionable moving picture shows in Cleveland there has been a marked improvement in the character of the films now shown. The change is due to the commendable efforts of the proprietors themselves. At the time objection was made to some of the exhibits, they formed an organization and appointed a committee, Mr. C. M. Christian, chairman, to have supervision and visit all moving picture shows regularly, and report any infringements of propriety. "We can't afford to get the women, the churches, the Y. M. C. A. and the City Hall down on us," said the proprietor of one of the popular resorts, "so we're going to be good."

The Automatic Vending Co. of Cleveland was recently incorporated in this state for the purpose of operating the "Universal Salesman or Penny Department Store." It is a penny slot machine exhibiting in a dust and waterproof show case samples of the goods, enabling the purchaser to select from a large number and variety such articles as he wishes. The machines are furnished by the Universal Salesman Co. of Detroit.

A firm at Massillon, O., are offering for rent a film of the Elks' parade at Philadelphia, 720 feet in length. It has not yet been put on exhibition in Cleveland.

"The American," claimed to be the first motion picture theatre in Cleveland, and the largest between New York and San Francisco, is a popular resort, and doing a good business. The company have been using films of their own make for some time, and are now installing a plant to increase the capacity and produce all kinds of films on a more extended scale. Mr. Wm. Bullock, the manager, says they antedate the Gaumant chronophone by two years, having given a demonstration at that time called "Retribution." The American use a Columbia electric disc machine with Marconi records.

Summer resorts are attracting the crowds and has had the effect of decreasing the patronage of the moving picture theatres and penny arcades, although they are all doing a paying business. "The Marlo," adjoining the talking machine store of W. H. Buescher & Son, is popular and well patronized. Tony's electric theatre, at 410 Lorain street, was the first moving picture show established on the West Side and has been doing well. The manager stated business was a little quiet at present, owing to the numerous summer resort attractions. Mr. Long uses a twentieth century machine, and gives six changes a week.

I. R. B. Arnold, proprietor of the Stereopticon Exchange, 45 Sheriff street, reports business fairly good in stereopticons, slides, acetylene and calcium light, electric outfit and films. Mr. Arnold says trade will be fine next fall and winter.

The Great Penny Arcade, 2043 W. 25th street, was put out of business the other day. One would suppose such a place would be the last a burglar would have designs on, but when Elmer Masetacs, the proprietor, opened the place he discovered thieves had broken in during the night and robbed him of the entire outfit, entailing a loss of $500.

OMAHA AUTHORITIES' RADICAL STEP.

(Special to The Talking Machine World.)

Omaha, Neb., Aug. 6, 1907.

It is probable that slot machine players of all kinds in use in public places in the city will be put out of business by the action of the Fire and Police Commissioners of Omaha. Ordinances of the City Council require a license for each machine which vends music or merchandise, but no attempt has ever been made to force payment so long as the machines did not become a nuisance. Now, however, as the result of a crusade against slot machines in cigar stores, saloons and other places for gambling and other purposes, the ban has to be put on anything provided with a slot for the reception of coins or checks by enforcing the ordinance, its provisions requiring a license rather too high to be paid with profit. It is hoped, however, that a distinction will be made between these places and well-conducted amusement resorts.

NEW PLACES JUST OPENED.

Nicolet—Harry Metz, 187 Passaic street, Passaic, N. J.

Opera House—Manager McDonald, Chicago, Ill.

Mr. Lawler, South Ohio street, between Main and Second, Sedalia, Mo.

C. H. Lucas, Black Block, Plain City, O.

Nickelodian—Cary Block, Plain City, O.

Spokane, Wash., has a new moving picture theater which opened last month. It is termed "The Scenic." This company has exclusive right to use the viascope. W. H. Bell, of Chicago, has charge of the moving picture machine department.

The Westminster Theater, of Providence, R. I., is open for the summer season. The views shown will be strictly up to date.

The new theater is open at Muscatine, Ia., at 112 West Second street. This will be managed by John Gordon, of Sioux City, Ia., who calls his new theater The Unique. Illustrated songs will be one of Mr. Gordon's specialties.

Charleston (S. C.) proposes to give the best of fire protection to all of the moving picture patrons in that city. A new ordinance has recently been passed which makes an offender liable to a fine of $100 and imprisonment for violating the ordinance.

George Behrens and Clinton Spencer, of Muskegon, Mich., have opened a Nickelodeon at Big Rapids, Mich.

Fred E. Fink and H. H. Niemeyer are managing a new moving picture theater at Portage, Wis.

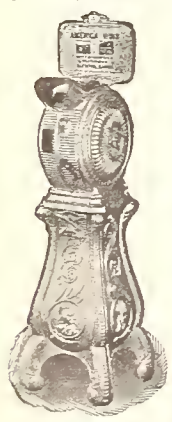
MARVELS OF SOUND REPRODUCTION.

Harry Burgess, under the auspices of the Victor Co., recently delivered a most interesting lecture in London upon the "Marvels of Sound Reproduction; or Romance of Sound." To an audience of nearly eight hundred, Mr. Burgess described the first talking machine and its development up to the time the present marvelous instruments were produced. Selections played upon the different machines did much to illustrate the real progress made in the field, as where the first records when reproduced or the early machines were devoid of expression and enabled the listener to hear only about one word in three, the latest Caruso record rivaled the great tenor himself in perfect rendition. Stereopticon views also tended to better acquaint the audience with the subject of the lecture.

The first coin in the slot machine dates back to Egypt's halcyon days. It was an automatic receptacle which sold holy water and was placed at the doors of the temples in which the Egyptians worshipped daily. A tiny coin was dropped into the basin and immediately a certain amount of water was ejected.

An entire building, at 1012 Chestnut street, Philadelphia, Pa., has been leased by H. A. Weymann & Sons, who has removed from 925 Market street, which has proven too small for their growing business. They are Victor and Edison distributers.

The Lavery Phrenologist is making a great sensation in this city. It is proving itself not only a mystifier, but a money maker.



TYPE E

THE MUTOSCOPE

For Summer Parks, Penny Arcades, etc., has proved itself to be the greatest money earner of all coin-operated machines. In fact it has made the "Penny Vaudeville" what it is to-day. The privilege of free exchange of pictures keeping them fresh and up-to-date, make it always attractive. Our New Type E Mutoscope, besides being handsomer in design, possesses many improvements in mechanism over former models.

Business and Weather

Some dealers figure that business is affected by weather, particularly hot weather, to such an extent that they do not place the same energy on the selling end of the business which they should. Now, the dealers who listened to our little World "talk" recently profited thereby. They wrote us regarding Summer specialties and they found that we had something new to offer, and as a result July and August trade was materially strengthened. They have made money. All dealers do through a Douglas connection.

Make September and October record breakers. Fall is here and business will reach enormous proportions. The calamity howlers are retired and the prosperity shouters have the floor.

A concern like ours, carrying, as we do, the largest stock of talking machines and accessories which can be found in any one establishment in the world, must naturally be accumulating some bargains. There are always some goods which are a trifle shopworn. There are always some changes in styles. In fact, there is hardly a month in the year when we have not specialties in the way of bargains to offer the regular trade, and yet, while liberal discounts are made from our list price for these goods, the average person could not distinguish where the slightest damage existed, and as a result dealers have been making big money through us. We ransack the world for something new and novel in the talking machine line, and of course we have the old American standards with a lot of smaller specialties from Europe, which are thoroughly up-to-date and good sellers.

Be wise, Mr. Dealer, and continue this conversation with us. You will be the gainer and be in readiness for the Fall business.

Vol. 3. No. 9. New York, September 15, 1907. Price Ten Cents

IMPORTANCE OF INSURING.

Wide-Awake Talking Machine Men Should Never Overlook This Phase of Their Business—A Well Insured Firm Is Better Rated by Credit Men—Some Reflections on This Timely Topic—A Credit Man Supplements It With Some Views Worth Noting.

Words are hardly strong enough to urge the retail merchant to a sense of his duty to insure mercantile stock to the best advantage. In fact, we consider a merchant, without ample insurance to cover as much as possible of the losses which are likely to occur iu any business, as a cart without a horse.

Take the difference between the merchant who insures and the merchant who does not. The merchant who insures his stock tells the agencies so in his report; he makes a proud boast of it in speaking of his business, and if he has at any time been unfortunate enough to burn out, he reverts to the fact that he was able to collect his insurance and go right along in business, as soon as he could procure another store. The merchant who does not insure is worried about his store night and day. If the fire bell rings, he is up and out in all kinds of weather for fear it may be his store, or adjoining property, a fire in which he would also suffer. He cannot be satisfied with existing circumstances, as can the man who is insured, and the very fact that he is not insured, and the fact that he does not appear insured, in the agencies' report, is a damper to the credit man whenever he turns his attention to the case. In fact, if the man who does not insure knew to what extent his credit was injured by his own neglect to subserve his best interests he would certainly change his tactics.

Without giving any definite figures, it is safe to say that three-fourths of the retail merchants of the United States are insured, and the passing of the back number merchant who does not insure is a matter of but a short time. Some wholesale houses go as far as to forbid their travelers selling a man who is not insured, to a reasonable extent.

Why!

First.—Because it is good business foresight for self-protection.

Second.—Because debtor is in duty bound to take all reasonable precaution to protect creditors' interests, and the creditor has an interest to the extent of credit granted in all of debtors' assets, and insurance on merchandise up to a large per cent. of its value is of vital importance as one of the means to reduce to a minimum possible loss in assets.

Speaking with a well-known credit man the other day on this subject, he said: "Of the many property statements coming under my observation, I feel safe in stating that there is not one in fifty which shows the trader carrying sufficient fire insurance. I had occasion only a day or two ago to ask a merchant for a property statement, which disclosed the fact that on a stock valued at $14,000 he carried only $5,000 insurance; aside from his stock of merchandise, his other available assets amounted to less than $1,200, while his liabilities footed up to $6,700. This party considers himself a first-class merchant, and among his creditors are some of the most prominent jobbing houses in the country, and yet should fire overtake him, he would not ouly lose the entire equity in his business, but would be unable to pay his debts. This case would indicate that even the better class of country merchants frequently carry inadequate insurance, and that jobbers extending large lines of credit are not paying attention to this very important feature of the credit risk.

"A few weeks ago we had occasion to ask a merchant who desired to open an account with us for a property statement. It was furnished promptly, and from it we learned that he was carrying only $500 insurance on a stock valued at $2,500. In acknowledging receipt of his statement we informed him that before we would care to extend any considerable liue we would waut him to increase his insurance, and earnestly urged that he do so for his own protectiou, whether he concluded to buy from us or not. Two weeks later we received a letter from him, from which I quote: 'Your advice to me to increase my fire insurance has proven wise. I increased my iusurance $1,000, and intended, before the other policy expired in November, to increase still further. On the moruing of September 25 my store with ten others was destroyed by fire. I will have enough money to pay all my debts, and hope to start again.' This was a small dealer, and had it not been for our suggestion he would be a bankrupt to-day."

This incident illustrates the necessity of requiring merchants to carry fire insurance as an essential to credit.

MRS. EDDY'S "ARTIFICIAL SINGER"

Entertains Masters Who Recently Visited Her With Selections on the Talking Machine.

During the recent visit to the home of Mrs. Eddy, the founder of Christian Science, of the three Masters appointed by the Superior Court to decide upon Mrs. Eddy's mental condition, she entertained her guests with an unexpected but welcome concert. Mrs. Eddy had been asked if she were fond of music, and she told of having an "artificial singer up here in my house." This proved to be a talking machine. Pulling the bell cord at her side Mrs. Eddy summoned an attendant and ordered that Mr. Frye be sent to her. As he glided into the library and bowed low in response to her introduction to the Masters he received the instructions of the aged woman to "show them my artificial siuger." Guided by Frye the Masters passed into the adjoining room, Mrs. Eddy's bedroom, and seated themselves in front of the talking machine and were entertained by leadiug singers and instrumentalists. The records showed that Mrs. Eddy has a keen, discriminating appreciation of the best in music.

QUALITIES THAT SPELL SUCCESS.

Defined by a Man Who Knows the Ropes—Three Essentials Cleverly and Clearly Explained for the Benefit of Our Readers.

Chatting the other day with one of the brightest minds in the music trade industry—a man who has made his way to the top, and whose establishment now handles talkiug machines with success—he said informally:

"I take it that the qualities which should distinguish the successful man in the talking machine industry as iu all others, are: First, an intuitive knowledge of human nature; second, a genius for organization, and, third, the capacity of inspiring his subordinates. The great manager who will succeed is not merely a specialist, excepting so far as it is his special function to understand the human machine. You may find men who will become famous as specialists in many brauches of life, especially in professions. Great talent in one line will atone for the lack of many other qualities.

"But in the business career there must, I think, be au all-roundness to secure success. The decisions a business man is called upon to make every day, sometimes every hour, are momentous and involve many interests. His judgment needs to be sure upon a wide range of subjects.

"I do not believe any one man can make a great success of a business nowadays. I am sure I never could have done so without my employes, I should call them my partners, of whom I had thirty-two, the brightest and cleverest young fellows in the world. I have often said that if I had to lose all the capital I had in the works or lose my partners, I should let all my capital go and start again without a dollar, but with the organization intact.

"No man will make a great business who wants to do it all himself, or to get all the credit of doing it. The spirit is fatal and the sure proof of a small mind.

"As long as a successful man remains a captain of industry his business must be conducted on business lines, but the wisest policy that an employer can pursue toward his men is to show by his actions that he has a heart. In cases of accident, distress or any trouble, the firm should show that its heart has beeu touched and that it can be generous and beuevolent. The firm that has a reputation of taking the best care of its men has the best chance of success, because the best men, which is the same thing as the wisest men, who agaiu are the ablest, will gravitate to that firm and stay with it. Nothing pays so well in business as geuerous treatment. Indeed, the firm which sees that its men make the highest earnings is certaiu to be the most successful.

WIRELESS TELEPHONY.

First Actual Application of This Principle Was Made at Put-In-Bay During the Week of July 15 to 20—Carried for Four Miles.

The first actual application of wireless telephony to practical work anywhere in the world, says the American Telephone Journal, was made in Put-in-Bay, on Lake Erie, during the week July 15 to 20, in reporting the regatta of the Interlake Association.

A wireless telephoue outfit was installed on board the yacht Thelma while a shore station was equipped in Put-in-Bay.

The distances which were attained even exceeded the hopes of those in charge of the apparatus. The Thelma followed the competing yachts or motor boats around the course through most of the races and accounts of occurrences during the races were telephoned to the shore station exactly as the events occurred.

Not only was speech transmitted but a number of interesting experiments were conducted; singing, whistling and talking machine music or dialogues were interpolated with the news reports. People on the yacht and ashore were surprised at the clearness and fidelity of the reproductions. Friends recognized one another's voices without difficulty.

The scratching of the talking machine needle over the disc after the record had been played through, even the tapping on the mouthpiece of the microphone transmitter with a pencil, was distinctly heard at a distance of three miles from shore. The greatest distance at which the reports from the yachts were heard and recorded was four miles.

HOW SOUSA WAS CAUGHT.

Sousa was recently badly caught by a prominent singer in an argument regarding the application of the copyright law to phonograph records. The singer's view caught the band leader by surprise, and he could only gasp for breath, unable to reply. It was, in brief:

"That, as the record is canned music, its regulation falls properly under the Pure Food Law and the copyright bill has no business with it."

INCORPORATED IN ILLINOIS.

The Hawthorne & Sheble Mfg. Co., of Philadelphia, Pa., was recently incorporated under the laws of Illinois, with a capital stock of $75,000, for the purpose of manufacturing talking machines and their supplies.

TRADE NOTES FROM INDIANAPOLIS.

Kipp-Link Co.'s Handsome New Quarters—Columbia Co.'s Novel Window Display—Chas. Craig on the Edison Move—Success of Nickel Arcades—Other Notes of Interest.

(Special to The Talking Machine World.)

Indianapolis, Ind., Sept. 7, 1907.

The Kipp-Link Co. have just about completed fitting up their rooms on East Washington street between Meridian and Delaware. The rooms when completed will be about the most convenient for the talkiug machine business in the Central West. The locatiou is excellent and the arrangement on the inside is superb. Special advantages are offered for showing goods to retail dealers. There are iudividual rooms with a window opening out into a hallway where are stored the records. The demonstrator stands in this hallway and the arrangement is such that he can show records to three customers at the same time. Meanwhile the many individual rooms offer seclusion for the customers. Then there are other general salesrooms and an office room. Farther down on West street is the wholesale department of the store, i. e., the rooms where the records are kept in quantities. There is room for more than 10,000 records and the floor space is 135,000 square feet.

The Kipp-Link Co. made the move from their old place on North Illinois street to the new place without losing one minute of their advertised "Can't-Be-Beat Service." The company devote practically all of their attention to the wholesale business and advertise it as the "Can't-Be-Beat Service." The company handle Edison machines and a number of other brands.

Thomas Devine, of the Columbia Co., showed a novel window advertisement last week. It was a light ball which rolled around in the reflector of a lamp turned upside down. Evidently there was no power to move the ball, and yet it kept rolling around constantly. The device was extremely simple, and yet it attracted a deal of attention. The power that moved the ball was furnished by two small electric fans concealed in the window.

Charles Craig, of the Indiana Phonograph Co., who handle Edisou machines, fears that the new rule of the Edison Co. providing that horns be furnished with machines will not prove highly satisfactory. The only thing Mr. Craig fears is that the black horn furnished will not always be satisfactory, and that it will be hard to sell. He counts on the future by his experience in the past. He has found that there has been a great demand for highly-colored horns, and he believes that it will continue. Mr. Craig has just given his order for fall stock. He ordered 1,500 machines and 20,000 records. He says that the retail business has been unusually good, and he believes that both the retail and wholesale business will improve within the next few months

Thomas Devine, of the Columbia Co., made a business trip to Martinsville last week.

The reputation of a five-cent theatre is being well demonstrated here by the Bijou and the Bijou Dream, both under the same management. The Bijou has been established for two or three years. Recently the Bijou Dream was established about three blocks away on the same street. The Bijou Dream has a much better location, being in the midst of the shopping district. Notwithstanding, the Bijou does the best business.

The Dreamland Arcade, on South Illinois street, has put in 20 new Edison machines and mutoscopes. The machines have been arranged in the front part of the building, and the office has been removed to the rear. The Dreamland had good crowds during the K. of P. encampment.

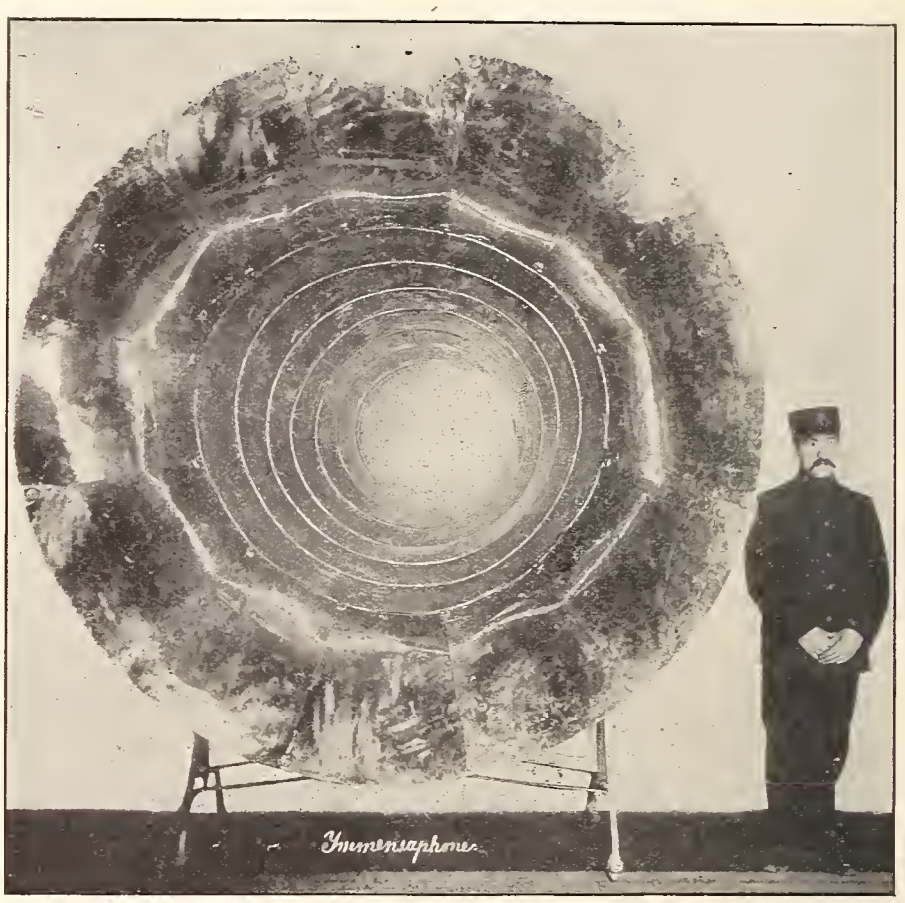
Frank Zepp, of the Vaudette, has just returned from a two weeks' vacation at Atlantic City and New York. He says his company had an unusually good business during the K. of P. Encampment, especially on the day when the parade was given on the principal streets of the city.

Fred Oeser has just come from Philadelphia to care for a number of automatic instruments kept in different pleasure resorts here by the R. Wurlitzer Co., of Cincinnati. Mr. Oeser says he has simplified the working of the pianos greatly by taking out the cut-off boxes and placing a belt instead to do the work. Mr. Oeser cares for 53 machines here for his company.

A REMARKABLE CREATION

Is the Immensaphone, Made by the C. G. Conn Co., for Lasky, Rolfe & Co.

Perhaps the largest horn ever made is the Immensaphone, illustrated herewith. It has a diameter of twelve feet and a length of about thirty-five, and was built in the great band and orchestral instrument factory of the C. G. Conn Co., Elkhart, Ind., for Lasky, Rolfe & Co., the vaudeville syudicate of New York. It has the effect of an immense phonograph, and has made a great hit under the name in vaudeville. Eight musicians with band instruments are located at the small end, and they, of course, are practically the living human record, producing music in the mouth of the horn that when amplified at the bell produces a volume of sound almost equal to Sousa's band. The instrument is so large that it was necessary to be built in sections to facilitate transportation.



THE IMMENSAPHONE.

HE BORROWS THE GOOD IDEAS.

There is a talking machine dealer in Illinois who looks over several newspapers daily, and whenever he sees an advertisement that he thinks is taking and progressive he cuts it out and pastes it in a scrap book. It makes no difference what line of goods it may treat of, if he sees how it can be adapted to the talking machine trade. Then when he comes to write up his own ads., he has a wealth of suggestions and experience to lean on, that never fails him in his dullest hour of need.

A new building, 60 by 100 feet, six stories, is being erected in Detroit, Mich., to cost $150,000, for Grinnell Bros. It will be ready for occupancy by December, and is to be of reinforced concrete, and fireproof throughout. They have branches in Adrian, Bay City, Escanaba, Flint, Hancock, Petoskey, Pontiac, Port Huron, Saginaw, Sault Ste. Marie and Traverse City, Mich.

"Pulling even"

Mr. Victor Dealer, you are piling up Victor sales for 1907 to an immense figure. You are pulling a mighty strong oar on your side of the boat, and we want you to know that we are bending our backs to pull even with you at every stroke.

We are using every means that enterprise and money can command to make the Victor not only the best, but the *best selling* of all musical instruments.

We are securing the greatest artists; making perfect records; and doing the best kind of advertising—and plenty of it.

We have fourteen new Melba records; six fine concerted numbers by Caruso, Sembrich, Eames, Scotti, Homer, Plancon, Abott and de Gorgorza; we have such new artists as Geraldine Farrar, Ancona, Alice Nielson, and Constantino, three times as many names added to our Red Seal list as in any previous year. In the popular-record class we have enlisted May Irwin, the queen of fun-makers who could never before be induced to sing for any talking machine; Vesta Victoria, Alice Lloyd, and many others.

We are spending hundreds of thousands of dollars *more* than last year in advertising. Besides a large increase in our regular magazine advertising we are pushing three special new campaigns—in the newspapers; in the agricultural papers; and full pages every month in the *Ladies' Home Journal*, with its five million monthly readers throughout America.

Keep up your splendid stroke, Mr. Dealer. We are pulling with you!

Victor Talking Machine Company

Camden, N. J., U. S. A.

Here is your opportunity

MR. DEALER: Our special newspaper advertising in the principal cities of the country has already immensely increased the demand for records.

Place a standing order with your distributor for all the new Victor records every month. Then you are sure to have what your customers ask for.

RULES FOR SALES FORCE.

A List of "Don'ts" for Talking Machine Employes to Remember—Ideas Rather Generally Adopted by Progressive Stores.

Every well organized establishment finds it necessary to suggest or enforce certain store rules which usually cover specific points of deportment and relate to laws which employes must not violate. Many stores supplement these rules by suggesting to clerks how they can make themselves more valuable to the business by extra attention to the finer points. The list of "don'ts" below is one of the methods of doing this, and although we have covered this subject pretty fully heretofore in The World, the topic is always a "live" one:

Don't make a practice of coming late to business. It's more to your interest to come a few minutes early.

Don't dress dowdily, gaudily or dudishly; but cleanly, neatly and nicely.

Don't wait upon customers with your hands dirty or your finger nails in mourning.

Don't manicure your nails during business hours.

Don't forget it doesn't cost a cent to be a mannerly man or a womanly woman.

Don't address a customer as "lady"—madam is the proper term—or say "gents."

Don't leave your department except in the interest of the business.

Don't allow dirt or disorder in your stock. Keep store as a good housekeeper would keep house.

Don't dust your goods or counters aisleward while customers are passing.

Don't allow a customer to look in vain for somebody to wait upon her while you are engaged in talking to your fellow clerk about last evening's experiences.

Don't get excited in times of rush or any other time; it shows the customer that you are inexperienced and unaccustomed to an active business.

Don't chase customers. Wait till they stop and show that they are interested in goods or some department, then approach them in a business-like manner.

Don't greet your customer with a beer, tobacco or onion breath. It hastens them to move on to more fragrant surroundings.

Don't chew gum or tobacco.

Don't be disloyal to your employer.

Don't indulge in gossip.

Don't be discourteous to customers. It's a fault which cannot be excused.

Don't stand and stare at customers or make remarks or criticisms in regard to the style or color of their dress.

Don't laugh loudly or use slang phrases.

Don't congregate and visit.

Don't stand in a listless manner while customers are examining goods; be attentive and show an interest in your employer's business.

Don't forget that being absent from your department, in the basement or elsewhere, decreases the amount of your sales.

Don't always show the cheapest goods first. Sales are sometimes lost that way.

Don't fail to remember that it is your interest as well as your employer's for you to take short lunch hours on busy days.

Don't make out a sales check without fully itemizing it, and write plainly.

Don't take an address for goods to be sent a C.O.D. order or a charge without being positive that you take it correctly.

Don't forget that no sales means no profit, or that upon the amount of your sales, to a great extent, depends the amount of your salary.

Don't misrepresent goods. You can sell more without. "A pleased customer, always a customer."

Don't fail to know what goods are in your stock, and where to find them quickly.

Don't underestimate the real worth of a customer to your employer. Sometimes a good customer indirectly pays your salary.

Don't permit a customer to leave a department dissatisfied or offended before sending for some one in higher authority.

Don't be so persistent in your efforts to make a sale that you make yourself objectionable to your customer.

Don't argue or contend with business associates in the presence of customers.

Don't permit envy or unfriendliness to exist between you and other employes. Best results are obtained by concerted action.

Don't disregard instructions from those holding superior positions.

Don't think all customers are honest or give might-be thieves a chance to steal.

Don't write notes or read papers, books or letters during business hours.

Don't be an eye servant. Be a faithful co-worker in sight or out of sight.

Don't expect an increased salary from any source but faithful and valuable service.

Don't let false pride hinder you from doing honest labor.

Don't think you are not appreciated if you are worthy. When business justifies it you'll share in the benefit.

Don't say "I was not hired to do that." It might cost you your situation and reference to obtain another.

Don't delude yourself by thinking you are deluding your employer if he does not constantly call your attention to your business faults.

Don't lose sight of the fact that your record is as much to you as your salary—sometimes more.

Don't misuse privileges. There is some one who appreciates fair treatment waiting for your situation.

Don't be afraid of making suggestions for the betterment of the business. If heard from it is a sign that you are using your eyes and ears to advantage.

Don't promenade the aisles arm in arm. This is a habit employes occasionally fall into when meeting by chance on store business errands.

Don't ask, after a customer is through making a purchase, "Is that all?" The customer may think her purchase is considered too small; but ask, "Is there anything else you wish?" or "Is there anything else I can show you?"

Don't send a customer to any part of the store for goods called for unless you are sure they will be found in the place as directed.

Don't "hum" or "whistle" in a department or at a desk; it annoys customers and aggravates your business associates.

Don't say of goods asked for and not in stock that same are not made; you might be mistaken.

Don't disparage other stores or people connected with same. Keep silent rather than make any uncomplimentary remarks of business neighbors.

Don't allow yourself to become irritable because some customers occasionally detain you a few minutes after doors close.

Don't promise "special delivery" without first consulting proper authority.

Don't tell a customer that goods on display in windows are not for sale.

Don't entertain those who seek social visits; social visits from friends are not proper during business hours.

Don't accept a position unless you are perfectly willing and anxious to follow the rules of the store in every detail pleasantly and efficiently.

Don't try to substitute anything for tact, push and principle.

WHEN TRYING THE RECORDS.

The following list of "don'ts" was compiled by a successful talking machine man for the benefit of his staff, says the Canadian Music Trades Journal, and is passed on to our readers with a recommendation to read and remember:

Don't slam a door.

Don't walk with your heels striking the floor hard.

Don't walk between the machine and the persons listening to it, unless unavoidable.

Don't start another machine until the first stops.

Don't talk or laugh; if you do you may as well stop the record. Your customer came to hear the record, not you.

Don't get mad when they tell you they know more about the goods than you; they do—not, but don't get mad.

Don't let your customer wait; play some records for him.

Don't stop a machine until you raise the needle from the record.

Don't allow a machine to run down while playing.

Don't allow customers to enter the record department.

Don't play a two-verse song record through when we're busy; stop it after the first verse. Certain records cannot be treated like this, but many can. Use your own judgment.

Don't think you haven't time; make it.

Don't put your hands on a horn or on a mahogany cabinet.

Don't let your customer if you can prevent him.

Don't hesitate to ask what you don't know.

Don't forget the don'ts.

The battle for fall trade is now on.

THE CABINET QUESTION

¶ Did you ever stop to consider, Mr. Dealer, that the sale of a Cabinet means, as a rule, the sale of as many records as that particular Cabinet holds? Just figure it out and see if it does not pay to push Cabinets.

¶ We have a large variety of Cabinets, both as to style and size, and our prices are right. A postal will put you next to our catalog.

THE PARDEE-ELLENBERGER CO.

96-104 State Street, NEW HAVEN, CONN.

This list, with the regular Victor border design, will appear in space of 600 lines, in leading daily newspapers all over the country on September 28—the simultaneous opening day throughout America for the sale of October Victor Records.

This newspaper advertising reaches millions of people and benefits dealers everywhere. It's to your advantage to have the complete list so that you can take care of every customer.

You know every Victor Record is a perfect record; has the unequaled Victor tone quality. And every Victor Record you sell means a pleased customer, and helps you build a steady, profitable record business.

So make an effort to get all this desirable trade that's in your neighborhood.

Victor Talking Machine Company

Camden, N. J., U. S. A.

AN INDUSTRIAL LEADER

Is Albert S. Marten, President of the Tea Tray Co.—Something of the Career of a Forceful, Energetic Business Man Who Has Developed an Important Industry.

Frequent comment has been made in these columns regarding the almost phenomenal development of the talking machine industry during the past few years. This trade has been indeed fortunate in having associated with it men of keen intelligence whose business judgment convinced them of the great future which lay in the talking machine and allied trades.

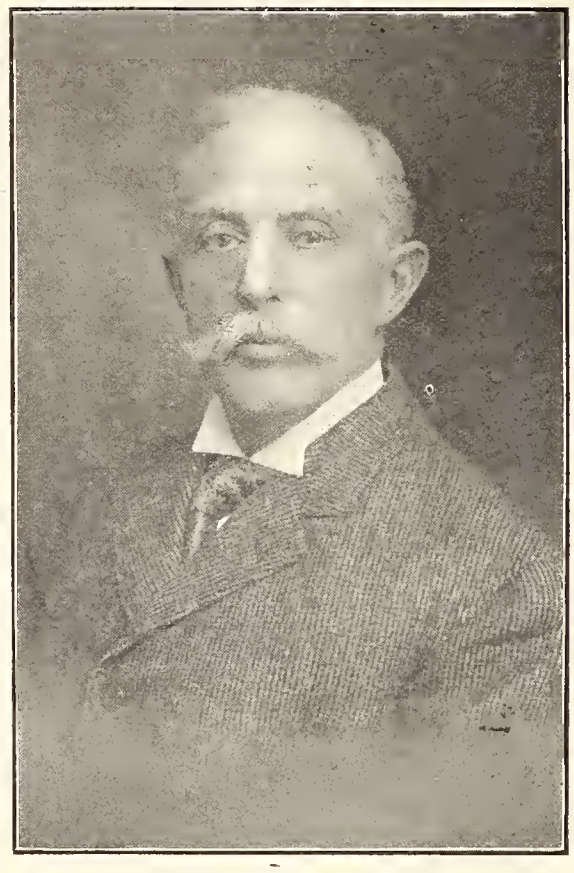
Prominent among these business leaders is Albert S. Marten, president of the Tea Tray Co., of Newark, N. J. The company of which Mr. Marten is head, manufacture the celebrated Art-Tone horns, and none who have not personally inspected the Tea Tray plant can have a fair conception of the magnitude of this business, which has been developed in a few years to the million dollar class.

The demand for the products of this concern comes from all parts of the world, and the recent large orders which have been taken on render imperative an increase of their already vast plant.

Inasmnch as this company is closely allied with the talking machine trade the personality of the man who has built it will be of interest to World readers.

Albert S. Marten, who came from good old English ancestry, first saw the light of day in New York in the month of June, 1845. He takes his bouyancy from his natal month, for Mr. Marten is always an optimist. He takes pleasure in his bnsiness, in his clubs, in his home and in meeting his friends. His years and his honors rest lightly upon him.

After completing his education in the public schools of New York he entered the employ of a silk merchant and later entered the Ninth National Bank, where he remained for some time. Shortly after the termination of the Civil War he became interested in the firm of A. & S. Baker & Co., large importers and dealers in foreign fruits. In 1875 Mr. Marten and his associates formed the firm of Matthew Dean & Co., which afterward became a great factor in the fruit trade. On account of ill health Mr. Marten retired from active duties, but a man of his temperament could not long remain out of the harness.



ALBERT S. MARTEN.

After he had recuperated in 1892 his attention was called to the business possibilities of the Tea Tray Co., of Newark, and as a result he purchased the entire interests and formed a corporation, retaining the original name with himself as president and John H. B. Conger, son of the founder, as secretary. Since that time talking machine men are more or less familiar with the accomplishments of Mr. Marten.

Aside, however, from the manufacture of horns this company conduct a large business in fire extinguishers and hold patents controlling important inventions in this indnstry.

They also hold valuable working patents for a large line of electrical goods, known all over the world as "Marten Specialties."

While Mr. Marten gives the closest attention to business he also finds time to participate in many ontside affairs and lend his help and advice to many organizations.

He serves on the directorate of the East Orange Library, is secretary and trustee of the Board of Trustees of the Calvary M. E. Church, holds membership in the Arsdale Golf Clnb, the East Orange Historical Society, Municipal Art League, Philadelphia Trades Leagne, Board of Trade of Newark, National Association of Mannfacturers of the United States, British Fire Prevention Committee of London, is a member of the National Board of Fire Underwriters of the Hardware Club of New York City, Golf and Forest Field Club of Newark, and a member of the Republican Clnb of East Orange. In politics he has always been a staunch Republican.

Mr. Marten is one of those men who believes in putting his whole heart into everything that he does, whether business, club or home life. He has a beautifnl residence in East Orange, where with his charming wife and two daughters he enjoys the refining inflnence of an ideal home.

TO PLAY THE WEDDING MARCH.

So numerons have been the marriage ceremonies held in the office of the Recorder of Deeds in Kansas City, Mo., where the licenses are issued, that it has been snggested by the clerks that a talking machine be purchased together with records of the popular wedding marches, in order to lend enchantment to the scene.

DID YOU HEAR IT YET?

No! Well, Get Busy. It's Worth Your While

FOR CYLINDER TALKING MACHINES

The Maestrophone Reproducer is the Limit. Deep, Vibrant Tone, Loud, Clear and Natural

Entire obliteration of that execrable, tin-panny effect. No rasping vibrations

NOTHING BUT A NATURAL, CLEAR, LOUD, RICH, FULL AND MELLOW TONE

Thrice louder than any detachable reproducer on the market to-day

Through samples sent out last month we received orders for exactly nine times as many from all points of the compass. Here is an illustration from one of the largest jobbers in the North-west:

THE MAESTROPHONE PHONOGRAPH CO., Lincoln, Nebraska.

Gentlemen:—Your sample reproducer received. Inclosed please find $ ——, for which send me one dozen MAESTROPHONE reproducers as good as sample, which we find to be very satisfactory and superior to any we have tried. T. M. P. C. (*Name and address sent upon request.*)

This is one out of about fifty satisfied customers. Get in line and send in your order. You will sell more records in a week than you do in two with the regular reproducer.

PRICE, $10.00 (TEN DOLLARS) **An allowance of $3.00 will be made on all Model C or Columbia Spring Contact Reproducers sent in**

All orders MUST be accompanied by full amount of remittance. Please do not waste your time and ours by asking to have Reproducers sent on consignment or approval. Money will be cheerfully refunded if you are not satisfied upon receipt of Reproducers.

REFERENCES { First National Bank; Columbia National Bank; National Bank of Commerce; First Trust and Savings Bank } LINCOLN, NEBRASKA.

Regular discount to jobbers and dealers on initial order of six or three respectively, accompanied by remittance.

THE MAESTROPHONE PHONOGRAPH COMPANY **BURLINGTON BLOCK LINCOLN, NEBRASKA**

NEWS FROM THE GOLDEN GATE.

Trade Conditions Certainly Improving—Dealers Look for Splendid Fall Trade—New Needle Introduced—Marconi Records in Demand—Sherman-Clay Activity in Oakland—Columbia "Ginger Meetings."

(Special to The Talking Machine World.)

San Francisco, Cal., Sept. 4, 1907.

Among other changes which Kohler & Chase are making in their small-goods department the San Francisco jobbing business in talking machines has been put in charge of A. C. Neale, who has formerly managed only the local retail department in talking machines, band instruments, etc. The house will continue its wholesale trade in its lines of talking machines throughout the State, in about the usual manner.

Byron Mauzy is selling a good many small Edison machines, and is making a feature of them in his window display.

Clark Wise states that his trade in Victor machines has been above the average since the beginning of July, and there has been an especially strong demand for the improved Victor lines.

J. R. Smith, at 2126 Sutter street, is now carrying a full line of talking machines.

The Pacific Wholesale Co., who have located at 12 Commercial street, are introducing a new needle, called the "Exhibition," the use of which, it is claimed, will preserve a record three times as long as where ordinary needles are used. The company have been sending out sample packages.

W. J. Reynard has been made manager of a talking machine store recently established by the Southern California Music Co., at Santa Barbara, Cal.

The Marconi records handled by the Columbia Phonograph Co., have been a great success all along the coast, and it has so far been impossible to keep up with the demand of the retailers in various sections. Goods are now being shipped direct to the retailer, as it takes too much time to send them through the San Francisco office. The Columbia records are also meeting with an increased demand. The coast people are waiting for the new type C. T., which has uot yet been seen here. It is expected to create a sensation in San Francisco, as it is said to be the finest thing yet gotten up in the way of a talking machine. There is no horn, but the sound is transmitted through sound-chambers, by which the volume is increased, and all the ordinarily objectionable features of the talking machine eliminated.

Byron Mauzy is still taking large orders for the Allen papier mache horn, and numerous shipments are going forward. The sale of high-class Victor machines is increasing.

Fred Sherman, of Sherman, Clay & Co.'s Oakland branch, says that the talking machine business there is always good, and has come forward especially well since that department was fitted up, and the separate trying-out rooms were installed. The opening of a large popular theater in Oakland in the near future will, it is thought, cause a great improvement iu the talking machine business, and particularly in the sale of the latest records, as it will increase the vogue of new popular music.

The Columbia Phonograph Co. held one of their monthly "ginger meetings" last Thursday night, and practically every salesman in the neighborhood of San Francisco was present. Mr. Gray says that a great benefit is derived from these meetings, as tne men get better acquainted and have the benefit of each other's experience. The greatest gaiu is from the practice sales, which enable the men to meet emergencies.

The store of Bacigalupi & Cruells, on Mission street, is now owned entirely by Emilio Cruells, P. Bacigalupi & Son having sold out their interest. This store has been selling a great many Edison machines lately, and the records are in great demand. P. Bacigalupi & Son's retail store on Fillmore street also shows a great improvement this week.

THE "TALKER" AIRS ITS VIEWS.

(Special to The Talking Machine World.)

Des Moines, Iowa, Sept. 5, 1907.

A clever practical joker fixed up a deal with a talking machine which threw into consternation the District Court in Des Moines, Iowa, the other day. Recently the talker was introduced in court procedure here. Anticipating that the voluminous testimony of an equity case would be needed in another trial Court Reporter William H. Jayne had the evidence fired into a record, and when court opened the other morning the machine was set in motion.

"Courts are the abomiuation of the earth and lawyers are the emissaries of the devil," drawled tne talking machine, while Judge Howe, Court Reporter Jayne, officials and operator looked at each other in blank amazement. "With the courts abolished and all laws repealed America would be free indeed and liberty would come into her own," it continued.

By this time Reporter Jayne had grabbed the machine and the wanton desecration of the temple of justice ceased.

PATHE FRERES NEW WAREROOMS.

The American branch of Pathé Frères, the celebrated manufacturers of talking machines, records and moving pictures, under the capable and progressive management of J. A. Berst, on the 1st removed from 42 East 23d street to 41 West 25th street, New York. Their new offices and salesrooms, greatly augmented as to space and conveniences, are in the Mitchell Building, where they will occupy the entire fourth floor.

Clement Beecroft, manager of sales of the Tea Tray Co., has returned from a combined pleasure and business trip abroad in time to attend the Jobbers' Conventiou at Buffalo. Mr. Beecroft's many friends will be grieved to hear that Mrs. Beecroft has been very seriously ill, but is slowly improving.

THE

Petmecky Company

Will Pay To Any One

$500.00 REWARD

if it cannot from its letter files produce 10 or MORE testimonials *for every claim we make* for the Petmecky Multitone Talking Machine Needle than any other needle made.

Just One Unsolicited Testimonial

Cainesville, Mo., Aug. 9, 1907.

Petmecky Co., Kansas City, Mo.:

Gentlemen—Enclosed we hand you order for 10 M. needles. This is our second order. After using 5,000 of them we unhesitatingly say they are the "stuff." Our competitors "knock" your needles fiercely, but we go on selling them, *and are selling more records than both of our competitors combined.* Send needles by first mail; we don't want to be without them.

H. C. McDaniel & Co.

Hundreds of dealers use the Petmecky *and nothing but the Petmecky* in demonstrating. DO YOU?

Kindly write us for samples, Needle Booklet and prices.

Carefully note our address,

Suite: 506 New York Life Building

KANSAS CITY, MO., U. S. A.

?

¶ Do you like this issue of the World?

¶ Is it not worth something to you in your business?

¶ Do you receive it regularly?

¶ If not, why not?

¶ The fault is your own, for we've done our part in supplying you with a sample copy.

¶ Subscribe for it.

¶ That's the only way to get it.

¶ It is worth ten times the annual cost to you, whether your store is in Houston, Hong Kong or Hindoostan. We have subscribers in all these places, and they say "Yes."

¶ Be progressive and read the World. Your competitor takes it and he knows its value.

¶ It costs one dollar yearly in the United States and Mexico; all other countries, one dollar and twenty-five cents.

¶ Don't delay sending in your order; not soon, but NOW! We can handle anything in checks, postal orders, stamps, and cash, at your risk.

Long Distance Telephones—Numbers 1745 and 1761 Gramercy. Cable Address: "Elbill," New York.

NEW YORK, SEPTEMBER 15, 1907.

GENERAL talking machine trade for the past month has held up wonderfully well. Somewhat unsettled plans have prevailed in the horn department of the industry, but they will soon have become adjusted to the new conditions. Special horns are in demand. The talking machine men view the trade outlook confidently. Tne great producing houses are far behind in their orders on many lines of goods, particularly the higher priced machines. In the record department there is still inability to produce certain kinds of records iu the quantity desired by the trade.

There is nothing in the business horizon, as we view it, that should disturb the plans or peace of talking machine men in the slightest. Whether the country is approaching a period of business depression is a subject which is interesting the minds of business men all over the country, but it is not considered that the depression will, by any means, if it comes, be of long standing. There will be no sudden drop, because as a matter of fact, business institutions for a long time past have been conducting their affairs on a more conservative basis than formerly; credits have beeu scanned more closely, and the business concerus of the country are on a sounder basis than they were two years ago. Evidence of this is seen in the few failures which have occurred notwithstandiug the fact that the money market has been greatly pinched recently.

BUSINESS institutions are on a sounder and healthier foundation than before for years, and there is no doubt that men are exercising more care in the adjustment of credits, and it is right that they should. The situation demands that, but it does not pay to be over-conservative. If we can forget about Wall street and the big financiers and go ahead and conduct our business, and make our plans as we think the general conditions which surround us demand, we will come out all right.

The policy of the Government towards corporations has necessarily affected the stock market, and the business community is still closely watching the effect of the sentiments upon the people which Taft and Roosevelt uttered from the platform last month. They wish to know whether the pronunciamentos sent forth will be favorable or unfavorable to the country's trade.

IT is difficult to tell whether this condition is to be taken to indicate that a new view of the executive prerogative has actually come into vogue or that a supersensitiveness of executive influence has actually taken hold of business. At least, it is significant.

In the iron trade the plants are all running under higher pressure, and will do so the balance of this year in order to fill orders now on the books. Skilled labor in all trades is generally employed at splendidly remunerative wages, and the latest crop reports certainly should be encouraging to the business men in every sectiou.

THE parcels post question will be reopened at the coming session of Congress. The advocates of such an extension of Governmental conveyance to their busines have too much to gain to discontinue their efforts to persuade members of Congress that the establishment of a parcels post is one of the most trying needs of the times.

It was generally believed in days past when this subject was brought up for legislation, that the great catalogue houses were behind the move, simply because they could, with Government assistance, undersell the country merchants in remote localities. They were helped in this when they could deliver a parcel two thousand miles away at the same cost which they could deliver to a nearby town.

This proposed legislation would not affect the talking machine trade particularly, for Attorney General Meyer proposes placing a ten-pound limit on the parcels; that, however, would enable horns to be shipped by mail, but talking machines, save the smaller types and records, would be excluded.

COPYRIGHT legislation will come up again before Congress at the next session, and this industry will be represented by able advocates who will endeavor to convince legislators that the talking machine is an educator in the broadest sense, and that no legislation should be acted upon which will curtail the production of records by creating conditions whereby the retail purchasers will have to pay increased prices for records.

The hearing before the last committee would seem to prove conclusively that talking machines have been au aid to the composers in making their compositions known to thousands of people who otherwise would never have heard of them had it not been for the agency of the talking machine. In fact it has been clearly proven by documentary evidence that many of the music publishers were only too anxious to have their new compositions known to the world through the talking machine. They considered it the best kiud of advertising they could have.

AT the copyright hearings in Washington last December many commuuications were read from music publishers in which they showed the strongest kiud of iuterest in having the talking machine men put new compositions on talking machine records so that they could get the advertising value from that source.

The quickest way to get a composition before the people is through the mediumship of the talking machine. Statistics show that it has stimulated the sale of sheet music rather than injured it.

The effect of the new copyright law in Italy is obvious. One or two of the great music publishing houses absolutely control the situation.

It is not probable that Congress will pass an international musical copyright bill which will be detrimental to American manufacturers. The talking machine men have put vast sums in their manufacturing plants, and it is not very likely that they will be placed in a position where they will have to make terms with a few of the leading publishers of Europe, or else reduce their catalog list very materially; for it is noticed that siuce the passage of the new law in Italy companies outside have had to cut off many names from their monthly bulletins.

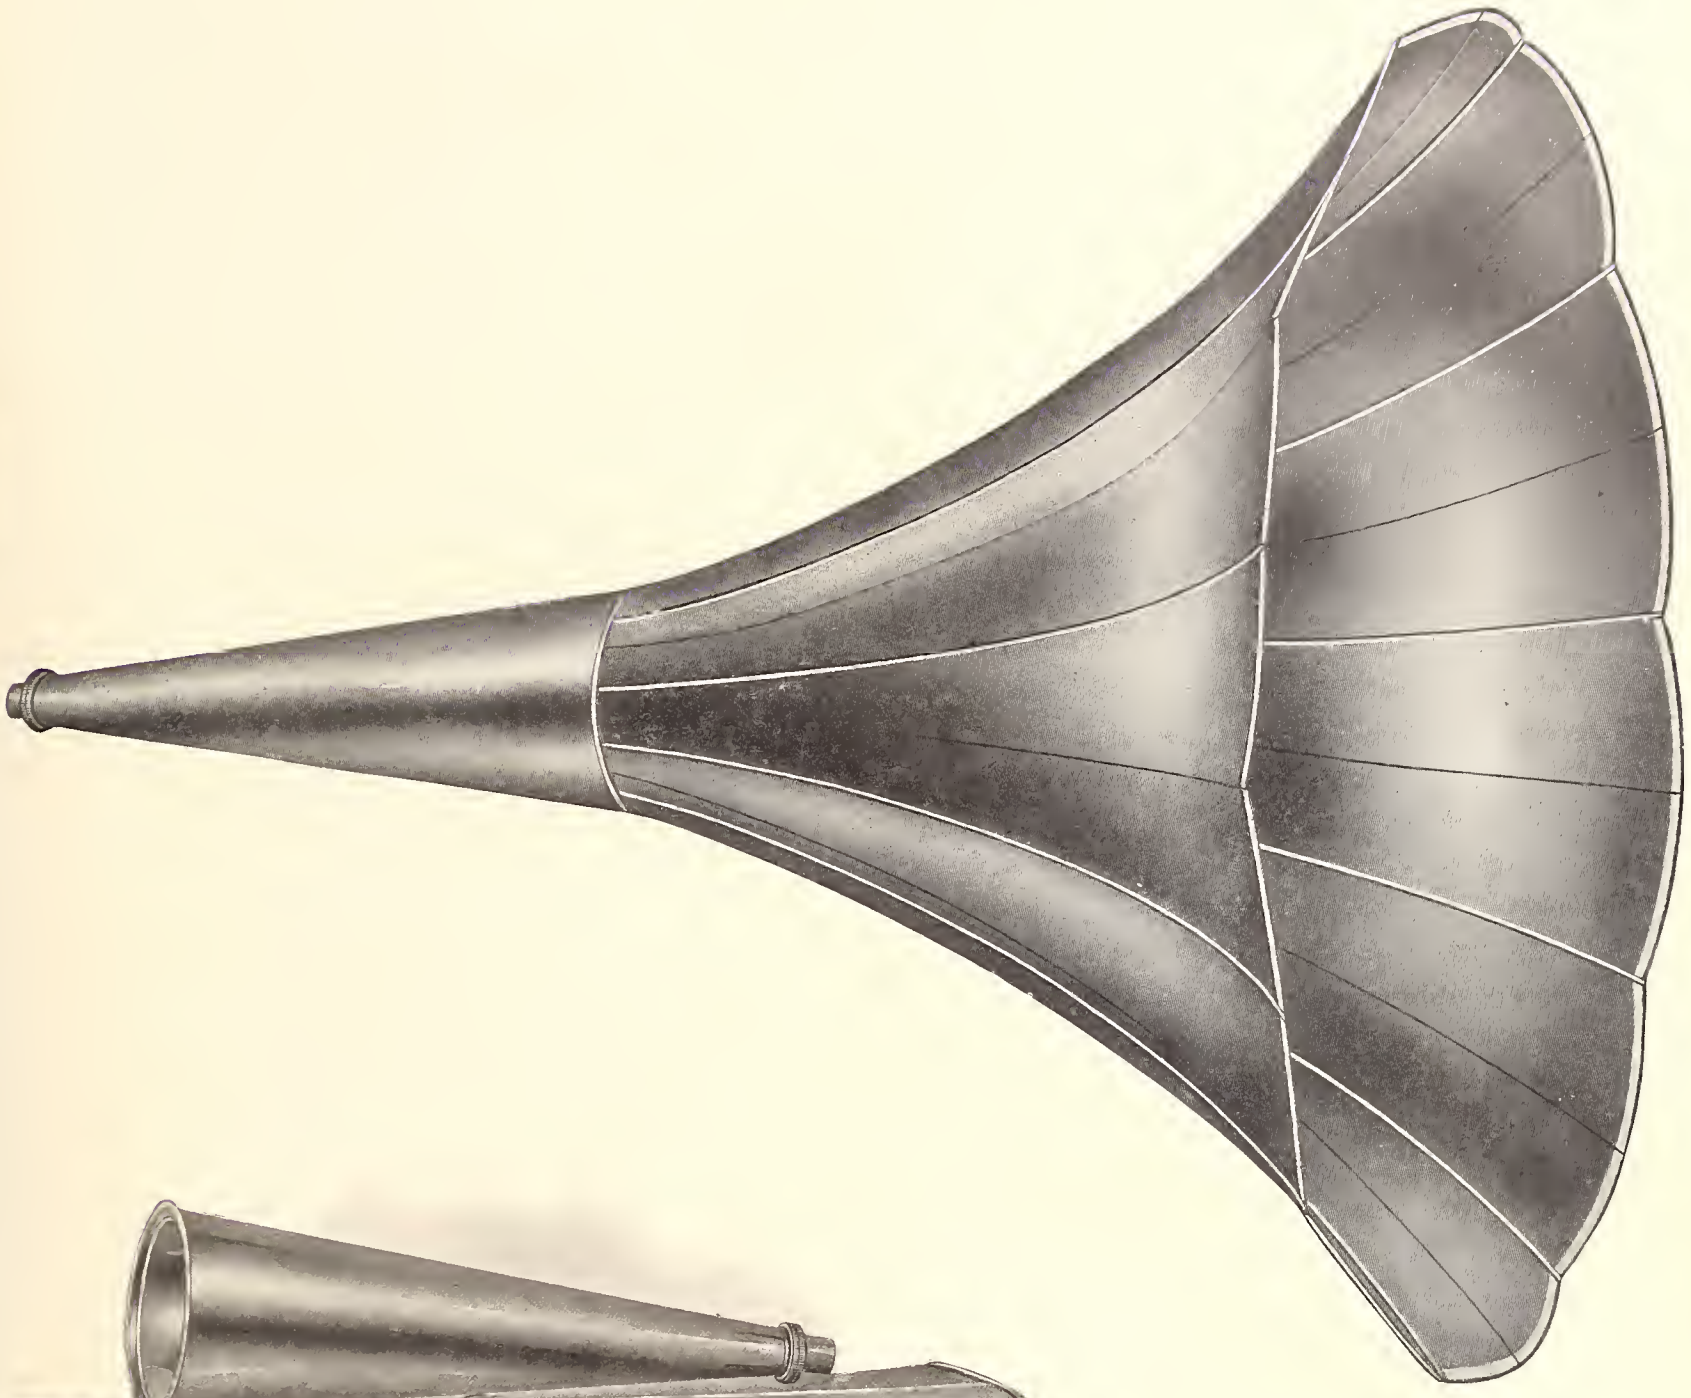
Two important court decisions rendered in Hungary and in Belgium on copyright appear in the news department of The World. These decisions serve to show that the European countries are taking a reasonable view of the true position of the talking machines to the people.

DR. LEE DE FOREST, the eminent inventor of wireless telegraphy and telephony, writes The Talking Machine World: "We are giving daily graphophone concerts between our two stations in Toledo by wireless so that anyone who wishes can hear grand opera or rag time by the etheric route. The articulation is perfect." What wonderful possibilities lie in the future for the transmission of sound! Dr. De Forest does not hesitate to say, that in five years we will be able to talk by wireless telephony five hundred miles, and in ten or fifteen years' time across the Atlantic. Indeed in the language of the Virginia preacher, "the world do move."

THE suggestions made in the last World anent the formation of a National talking machine association have been widely and favorably commented on. The move is a popular one, and from present indications before the last form of Tne World shall have gone to press a National organization will have become an established fact, for at this time of writing indications now point to the formation of a National organization at Buffalo. The move is in the right direction, and when the talking machine organization is perfected, as it should be, along National lines, it will be helpful to the general interests of the trade.

THE differential prices between cash and instalmeut sales has been the subject of considerable trade discussion during the past month. The National Phonograph Co. have taken up this subject with their jobbers in response to a request made by a committee of the Eastern Jobbers' Asscciation. They addressed a letter to all their jobbers, requesting that they get the opinion of as many dealers as soon as possible. At this time of writing we learn that after careful deliberation the National Phonograph Co., through President Gilmore, have notified the jobbers in conveution at Buffalo, as well as the trade at large, that they were of the opinion that it was for the "best interest of all our jobbers and dealers that a discount for cash or otherwise should not be permitted on retail sales of Edison phonographs, parts, records, or blanks."

THE SEARCHLIGHT FOLDING HORN



Patent No. 771441
Oct. 4, 1904

Patent No. 12442
Jan. 30, 1906

THE ONLY PRACTICAL, COLLAPSIBLE HORN IN THE WORLD

Style—Gun Metal Finish—Gold Striped.

For all Edison and Victor Machines except Victor 1.

Size, 23 x 28 Cylinder; 23 x 21 Disc. Boxed, 3½ x 7 x 20 Inches.

"Your mill will never grind with the waters that have passed."

Mr. DEALER:

You have at least one hundred old customers who are looking for a horn that won't be in the way when not in use—that can be taken apart in ten seconds and put in a drawer or on a shelf—that can be carried in the pocket when visiting friends.

Be progressive.

TALKERS FOUND EVERYWHERE.

Howard Taylor Middleton Writes an Interesting Letter Regarding a Trip to Northern New York and Canada, and Was Pleased to Find Talking Machines Practically at Every Point Visited This Summer.

Howard Taylor Middleton, whose name is familiar through his contributions to The World, recently spent his vacation in Canada with a friend. His letter to the managing editor recounting his experiences is so "newsy" that we have taken the liberty of quoting it in part:

"My dear Mr. Spillane—I had such a delightful trip to Canada that I have decided to tell you a little about it. It was a revelation to me as far as talking machines are concerned too as you will learn later. Mr. Mountain and I left Philadelphia on Friday morning, August 2, and at 11 o'clock that night we boarded the steamer Kingston, at Charlotte, on Lake Ontario, and journeyed to Prescott through the Thousand Islands of the St. Lawrence River, and many other places of great interest and beauty. It was while passing through these islands on which the palatial homes of New York's millionaires looked down at us, that I realized for the first time in my life the wonderful perfection of the talking machine. Many and many a time we heard sweet orchestra music, and the golden tones of some renowned vocalist wafted across the still waters to our ears from a cottage veranda. A lady sitting near us called my attention to the fact, and asked wonderingly: 'Can you tell me please, how all these people can afford to have bands, orchestras, and skilled singers always on hand? I cannot understand it; it must cost them a fortune.' 'It is very easily explained,' I answered smiling, 'the music you are enjoying so much comes from the horns of talking machines.' 'Oh! pardon me, but you really are joking, are you not? I do not think it possible to obtain such perfect melody from a squeaky talking machine.' Such was her opinion of talking machines, and after a half hour's explanation I converted her to the belief that they were the only real musical instrument nowadays; the only machines that would give with the strength and melody of the original, the endless number of instruments which comprise the great bands and orchestras of the world, and also the vibrant tones of the opera singers who bring thousands of people to hear them every night during the opera season in the large cities here and abroad. She was so enthusiastic when we arrived at Prescott that she was going to Ottawa especially for the purpose of procuring an expensive outfit.

"Another triumph for the talking machine was the fact that the pilot of the steamer had one, a Columbia graphophone, in the pilot house. As soon as I found this out, I determined to interview him on the subject. As I endeavored to pass by the sign, 'No Admittance,' I was halted by a lookout. 'Cawn't you read, young man?' he asked sarcastically. 'Yes, I think so,' I replied, 'at least, that is what I was sent to school for, but the fact is I want to interview your pilot upon a very important matter relative to the influence that talking machine there has upon him while on duty. Will you hand him my card, please?' He did as I asked, and then the pilot's mellow baritone floated out to me from the interior of the pilot house: 'Let the gentleman come in, Jim.' I accepted the invitation with alacrity and was soon chatting gaily with one of the most interesting men I have ever had the pleasure of interviewing. He told me most emphatically that he considered the talking machine one of the most wonderful things on earth. 'The eighth wonder of the world,' he called it. 'When the night comes on and there is nothing to do but gaze out over the black waters and keep the old girl on her track, I tell you, sir, that machine there comes in nice to keep my thoughts where they belong, that is, on the cheerful side of life. I have quite a stock of records in my chest, and am constantly adding to them. Yes, the talking machine is fine, and you can say that for me with a capital F.'

"When I reached Ottawa I found the 'talker' right on the job there, too. All the hotels, wine shops, as they call the saloons, and all places of amusement used them exclusively, and judging from the crowds around, they were a great success.

"We arrived at our destination, Fort Coulonge, on Saturday evening, and were met there by friends of ours from Montreal, by the name of Scott, and from that time on during our stay of one week, we had a time never to be forgotten by either of us, for it was full of pleasure. We canoed up the Ottawa River to a little island right in the heart of the Canadian wilds, and after a good supper turned in. In the morning we went fishing for catfish, and I caught several, one weighing eighteen pounds (this is a true fish story), and several other fish, including black bass, eels, pickerel and gold fish. The country around Fort Coulonge, which, by the way, is an old French and Indian village which was quite noted during the war in Canada, is a hunter's paradise. It is so wild that it has not been visited very extensively as yet, and deer, bear and water fowl abound in great profusion. One morning we arose at 3 o'clock to go after deer, and were fortunate in seeing a large doe for a moment as she emerged from the 'bush' as they call the woods up there.

"Even in this wilderness we encountered an old Irishman, Sullivan, by name, who had a talking machine, and often of an evening as we paddled down the river in a birch bark canoe, we could hear the silvery notes of an Irish love song drifting out from the open door of his cabin on the shore."

IN THE MEXICAN CAPITAL.

C. F. Lightner Secures Records of the Police Band and Other Musical Organizations in Mexico, as Well as Records of Noted Singers in the Land of the Montezumas.

(Special to The Talking Machine World.)

Mexico City, Mex., Sept. 1, 1907.

After getting records from the police band and other musical organizations of Mexico which rank among the highest in the world, and also obtaining records from the famous singers of this city, Charles Ferrie Lightner, of the Victor Talking Machine Co., and his wife left last week for New York.

Just before leaving Mr. Lightner was presented with an autograph photo of Capt. Presa, leader of the Police Band, which he prizes highly.

The Police Band played more than twenty selections, which will become known all over the world, spreading the fame of this city's famous musical organization into remote corners where it has not been heard of.

Esperanza Pastor, the well-known singer and comedienne of the Principal Co., sang a number of solos for the talking machine. Other well-known Mexican voices gave their best efforts into the recorder.

Mr. Lightner and wife have been to Mexico several times before and are well known in the city. They will have but a short stay in New York, leaving there Sept. 5 for Brazil and Argentine, the coming trip making their ninth into those countries. They will return to Mexico next year.

THE POINT OF VIEW.

"My dear," murmured the sick man to his wife, "I am nearing the golden streets. I hear strains of sweetest music, unearthly in its beauty, I——"

"John," said the wife, "what you hear is a phonograph in the next flat."

"So it is. Darn those people, anyhow. No consideration for their neighbors. Go and tell 'em to stop that infernal racket at once."

"When will my goods be shipped"

How many times have you written or telegraphed some message like that to your jobber before you succeeded in getting the goods you ordered?

You never need to resort to such measures with us. It is a question that is already answered and settled once for all.

We ship all goods the very same day the orders are received. That's promptness for you! It's the right way to run a business, and you ought to encourage it for your own good.

Think what a grip it gives you on your trade when you don't need to keep your customers waiting! How much more confidence you have in yourself when you know you can get goods right when you want them!

That's the kind of service our customers enjoy—all the time. To them our large and varied assortment of Victor talking-machines and records, record cabinets, fibre cases, English needles, trumpet horns and other accessories is just like a big reserve stock of their own. They can send to us at any time with the certainty of getting just what they want.

How about your jobber—is he alive to your interests? If you have your whole heart in your business, you can't stand for a half-hearted jobber!

Better write to-day for our latest catalogue.

The Victor Distributing and Export Company

77 Chambers Street New York

STEWART

You can handle banjos easily and add to your income. Talking machine men will find them big sellers.

THE BAUER CO., 726-730 Girard Avenue Philadelphia, Pa.

Something Out of the Ordinary

That's what adds a selling force to any kind of business.

Get out of the rut! Sell something different than every other dealer in the same line offers to the public.

We have the article. It's name is

The REGINAPHONE

Have you seen it? If not, lose no time in looking into its merits, for it makes easy dollars for the talking machine dealer.

In many families there are differences of opinion on the question of entertainment. One member of the family wants a music box. Another member wants a talking machine. To such a family you can easily sell a Reginaphone, which is a music box ***and*** a talking machine.

Getting right down to brass tacks, so to speak, can you not sell a beautiful music box and talking machine combined at a very small advance above the price of the regular Regina Music Box?

Of course you can, and you can sell a good many of them if you put them out in your store where they can be seen.

You don't want to hide them under the bushel of indifference and expect them to sell, but put forth such a novelty as The Reginaphone properly, and it will turn trade to your store; it will make your establishment talked about, and best of all, you will be selling a money-making product.

As far as the talking machine mechanism which accompanies The Reginaphone is concerned, it cannot be surpassed by any outfit on the market. And then we have special points of excellence found in no other product.

THE REGINA CO.

Main Office and Factory, Rahway, N. J.

BRANCHES:

Broadway & 17th Street, New York **259 Wabash Avenue, Chicago**

Manufacturers of Regina Music Boxes, Reginaphones, Reginapianos, Regina Chime Clocks and Regina Sublima Pianos.
Distributors of Victor Talking Machines and Edison Phonographs.

THE HOUSE OF PATHE-FRERES.

The Big French House with Branches Covering the Globe.

The great French house of Pathé Fréres maintains offices in the principal cities throughout the world. It is surprising, when we review the history of this marvelous institution, how wonderfully it has developed within the past ten

M. PATHE.

years. The Pathé Fréres talking machine products are known the world over.

M. Pathé, one of the celebrated brothers who visited America last year, was much impressed with what he saw on this side of the Atlantic. This concern now have made arrangements for a special representation in French Canada, and it is possible that further developments of Pathé Fréres may render it necessary to erect factories on this side of the water to take care of the growing trade in Pathé specialties here.

An illustration which will give an idea of the vastness of the Pathé business is seen in the statement that over four thousand people are employed in the Pathé factories. We are advised that every department is extremely busy, and that a new complete catalog is expected off the press at any moment. This will contain over twenty thousand titles—certainly a remarkable international repertoire.

Each of the brothers Pathé is a practical man, and their inventive skill and business ability is splendidly illustrated in the world-wide business which they have developed during a very brief period. Aside from manufacturing and selling talking machines and discs, it should be understood that Pathé Fréres have an immense business in moving pictures. In this country the business is under the direction of J. A. Berst, who has offices at 41 West 25th street, New York, and who is an able representative of the great international house.

CARUSO CALLED TO MUSICAL SLEUTH.

Hoagland, of the Keen Ears, Struck Song Trail and Found Stolen Phonograph.

"'Tis Caruso's voice, none other," whispered Detective Elmer Hoagland, of the Brownsville Station, Saturday night. "You are not mistaken," said Detective Collins, joyfully. "Listen, I cannot be mistaken. It is the 'Siciliana' from Cavalleria Rusticana Caruso is singing."

Hoagland and Collins stood in front of the house at No. 1882 Dean street, Brooklyn. They were wearied by a day's unsuccessful search for a burglar who had entered Mrs. Clara Young's ice cream parlor at No. 2006 Atlantic avenue. She reported later to Captain Reynolds, of the Brownsville Station, the loss of a phonograph and records valued at $300. "You've been bragging about your musical ear," said Captain Reynolds to Hoagland, "and you're just the man for this case."

Hoagland asked for Collins' assistance and started out to prove that a musical ear is an asset to a good sleuth. They visited pawn shops without result, and then made a tour of homes throughout the neighborhood. Windows were open and dozens of phonographs were going. Hoagland listened to scores of musical samples and shook his head. The clue on which he pinned his hopes was furnished by Mrs. Young. She said three of the stolen records were of Caruso in his famous songs. Collins had listened to "Love Me and the World Is Mine," "My Dear" and other popular songs until he was sick of his job. Hoagland's enthusiasm was undimmed. He analyzed carefully everything that floated on the night air. Collins nearly jumped out of his shoes when Hoagland caught him by the shoulder in front of the Dean street house and announced: "That's it!"

They traced the music to Mrs. Mary Corcoran's apartment on the second floor, introduced themselves as building inspectors, and Hoagland entered the parlor where the phonograph was going. He saw the number was 4,721, the same as the stolen instrument. Mrs. Corcoran said her son, James Mulvey, aged nineteen, brought the instrument home at 5 a. m., having purchased it at a nearby second-hand store. Collins went to the store and was told that no phonograph had been sold. The instrument was taken to the station, and Hoagland is looking for Mulvey.

A VALUABLE COLLECTION OF RECORDS.

One of the most valuable and interesting collections of talking machine records in Great Britain is owned by a resident of London. In the collection are several records by the late Lord Tennyson, among them the "Charge of the Light Brigade," an address by W. E. Gladstone, and records by Henry Morton Stanley, the explorer, and P. T. Barnum, the famous showman. There is also included one in French by Prince Louis Napoleon, who met an untimely death in the Zulu war. One of the most highly prized records is by Florence Nightingale. It was made in 1890, at the time an exhibition was held for the survivors of the Balaklava, and contains the following words: "God bless my gallant comrades of Balaklava and bring them safe to shore. —Florence Nightingale."

NEW CLEVELAND DEALERS.

Two new talking machine agencies were added to the already long list in Cleveland, Ohio, early this month. One is in the large furniture store of Brown Bros. and is in charge of J. E. Archer, while the other is in the furniture store of Nathan & Skale, located quite near the Brown establishment. The former concern have installed the Columbia line, and the latter the Victor. With fifteen important agencies already in the field and with about fifty smaller ones trying to get business it would seem as though the two new agencies would find considerable to attend to this fall and winter.

A HELP TO RECORD PURCHASERS.

In order to enable talking machine owners to more readily pick out their favorite grand opera selections or the records of their favorite artists the Victor Talking Machine Co. recently issued a very convenient list of operatic records alphabetically arranged. The title of the opera is given, as well as the English translation of both it and the selection, the number and price are stated, and an index of the entire list of operas and singers is included in the catalog.

The object of the catalog is to still further increase the sale of Red Seal by making the assortment of those records readily accessible to the intending purchaser. As the Victor Co. say in a circular letter, "Red Seal records and operatic selections impress Victor 'Quality' on all who hear them."

This Then

will inform you that our new issue of photographs of the Talking Machine artists, will be ready on October 1st. These are neatly framed and each packed in a separate mailing box, protecting them and making them convenient for handling.

Dealers will find these framed goods ready sellers, also very attractive for window or store decorative purposes. We will mail you a sample of either framed or unframed, on receipt of price; unframed 35c. each, framed 50c. each.

VALUE OF KNOWING GOODS.

A Story Showing How It Paid to Bring the Merits of Talking Machines to the Attention of Friends—Many Are Still Skeptical as to the Musical Qualities of the Talker.

One day I was talking with a gentleman who is a member of a music firm, says a correspondent of the August Circle. During the conversation he said: "The trouble with the talking machine business is that the people do not realize the marvelous strides that have been made in improving them. Most people have heard the old-style machine, which was uneven in tone and very indistinct, and so hardly a single person will bother to listen to an up-to-date one."

That evening I got to thinking about what he had said. The next morning I went to him with a proposition. I was to take a machine and about a dozen records by way of an outfit. A commission was to be paid me on every machine I sold.

I started to work, my idea being "hearing is believing." I went first to my friends and made appointments to bring my machine to their homes some evening. Of course, I assured them that they would be under no obligations to buy. Out of ten persons upon whom I called I sold to seven.

My plans worked better than I had anticipated. I then interested another young man, and soon had him doing the same kind of work. I paid him a regular salary. Later I had four young fellows working for me, and was doing a land-office business.

I did not stop there, but turned my thoughts to the country. Farmers living away from a city have very few amusements. I knew a talking machine would just please them. So I hired a man to drive out into the country and stop at the farmhouses. We did even better than we did in the cities, selling on the average to eight out of every ten upon whom he called. I was working for a firm in the daytime, and did all this work in the evening. Soon I was putting quite a good deal of money in the bank. There is a good field open to bright young men who have a little "hustle" in them, and who make themselves familiar with the improvements in the goods which they handle.

THE FAMOUS DOG FIGHT RECORD

Brought Into Evidence for the Edification of a Section of Waterbury.

(Special to The Talking Machine World.)

Waterbury, Conn., Sept. 5, 1907.

This city has recently enjoyed all the noise of conflict usually attending a dog fight, but with the assurance that nobody's pet canine was having his ear chewed off or being otherwise mutilated.

The children of Mr. Atwood were playing with Rod Tuttle's poodle dog one Sunday.

"I wish you would keep your poodle away from my children. I'm afraid it will bite them," said Mr. Atwood to Mr. Tuttle, his neighbor.

"No well-bred dog ever bit anything," retorted Mr. Tuttle, tartly.

This answer nettled Mr. Atwood. One word led to another and Atwood, furious, parted from Tuttle, exclaimed "I'll show you whether a well-bred dog ever bit anything!"

Hurrying home, he started his phonograph with the record of a dog fight which he happened to have. Yelps, growls, barks, snarls, squeals of dogs, and shouts of men, "Eat him up, Buster!" "Sic him, Tige!" emerged from Edson Atwood's house in the direction of the Tuttle's residence, as a warning that dogs, in the past, have been known to bite. For hours the neighborhood sounded like a kennel, a dog-pit or Constantinople with its hordes of hungry mongrels. On one occasion a crowd of boys and young men, encouraged by the sleepless inhabitants, stoned Mr. Atwood's house. He chased them, but caught nobody.

Atwood thereupon bought four horse-pistols. Then he consulted a lawyer as to how to protect his children, his home and his phonograph. The lawyer told him he could carry the pistols if he did not conceal them. Mr. Atwood therefore promenades the main street, four pistols in his belt, in Western style, as seen in melodrama and magazine pictures.

And the musical dog fight goes on.

THE PHONOMETER

(PATENT APPLIED FOR)

The Only Talking Machine Speed Meter

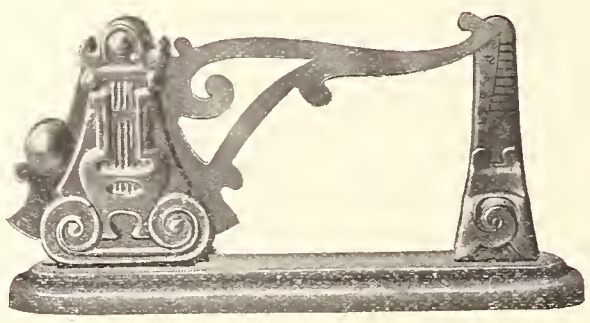
Instantaneous in Action. Permanently Effective. Absolutely Accurate.
FOR USE ON ALL DISC MACHINES

REASONS WHY ALL DISTRIBUTORS AND DEALERS SHOULD HANDLE THIS NEW AND BIG SELLING NOVELTY

I. BECAUSE it is **absolutely accurate.**

II. BECAUSE it indicates the speed of all disc machines **instantly.**

III. BECAUSE by its use each and every record can be reproduced at the correct speed, and all musical records (vocal or instrumental) **reproduced in the same musical key (or pitch)** that the artists originally sang or played the selections.



RETAIL, ONE DOLLAR.

IV. BECAUSE the **voices** of Caruso, Melba and all the other vocal artists, speaking records of celebrities, the tone qualities of solo instruments, etc., **cannot be faithfully reproduced** from records and thus bring forth the individuality of the artists or instruments, the tone quality and life-like realism required, **if the machine is not accurately and properly regulated.**

V. BECAUSE you can sell a **Phonometer** to every machine or record customer upon demonstration.

VI. BECAUSE it becomes an **absolute necessity!**

VII. BECAUSE **the Phonometer** is for sale by and receiving the highest endorsements of the following Distributors of Disc Machines:

BLACKMAN TALKING MACHINE CO., 97 Chambers St., New York.

VICTOR CO.'S GREAT PLANT.

The World Representative Visits the Splendidly Equipped Plant of the Victor Talking Machine Co. and Records His Impressions for the Benefit of Readers of This Publication—Structures That Tell of the Tremendous Progress of the Talking Machine Business.

(Special to The Talking Machine World.)

Philadelphia, Pa., Sept. 10, 1907.

The manufacturer in any industry plays much the same part, to that industry, as is played by the human heart to the body as a whole. The first turning of its wheels means the creating of a new mercantile force, which grows and expands just so fast as this organ acquires perfection in its work; in other words the manufacturer is the creator; on his shoulders to a great extent rests the future of the business; on his resources depends its advancement.

Having for some years been connected in one way or another with the talking machine trade, principally as a representative of the World, and therefore vitally interested in all things pertaining to it, it was with great pleasure that I could accept the cordial invitation from H. C. Howard, advertising manager of the Victor Talking Machine Co., to inspect their factories at Camden, N. J., and it will be my effort as far as possible to convey to World readers at least a general idea of this enormous plant, the only or rather the most feasible way being to write of it as I saw it.

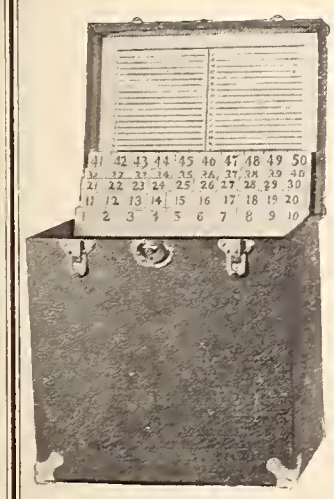
Arriving in Camden about 8.30 a. m. I went directly to see the author of the invitation, but caught him over ears in work on the great daily paper advertising uow being done by this company; however I was delivered into the hands of a worthy substitute, namely, Howard J. Shartle, who, much like the hotel clerk, gets paid to catch all the complaints that are coming in for inability to keep abreast of Victor orders.

RECENT ADDITION TO THE PLANT OF THE VICTOR TALKING MACHINE CO.

RECENT ADDITION TO THE PLANT OF THE VICTOR TALKING MACHINE CO.

The first building that you enter and in which are now the executive offices, is what is called the office and record pressing building; this measures 70 by 225 feet, and is a four-story structure. The front section is devoted exclusively to the offices as follows: First floor, executive; second, export and patent departments and show rooms; third, bookkeeping, accouuting and purchasing departments; fourth, drafting and experimental work. The pressiug plant, or to be more explicit (for the benefit of those who may not understand the trade vernacular) the record manufacturing plant, occupies the rear half of the building; on the first floor the raw material is brought in and put into large kettles where it is mixed, then rolled out into long strips and cut into squares in sizes necessary for the 12-inch, 10-inch or 7-inch records. These blocks or squares are then sent to the second or third floor where they are pressed, the rough edges trimmed, and the labels put on. The fourth floor is used for renickeling the matrices and the inspection of the finished records; each record passes through the hands of a number of experts who examine them for scratches or other imperfections, and one out of every 100 is played over, which insures the dealer and jobber a perfect stock.

Directly in back of this building lies the hydraulic engiue room. The machiues placed here use 3,000 gallons of water a minute in operating the hydraulic presses; the water is taken wholly



SOMETHING NEW IN RECORD CASES

The "Knickerbocker" Pegless

Made to carry cylinder records in cartons, thus furnishing double protection from dust and accident. When desired case can be used as suitcase or satchel; made in 12-24-36-48-72 and 96 record sizes. We also make cases with pegs and for disc records. The Knickerbocker "Made Right" Record Cases have character. They are easy to sell and stay sold.

Ask for Catalogue.

THE KNICKERBOCKER CASE CO., La Salle Ave. & Michigan St., CHICAGO, ILL.

from artesian wells of which there are thirty right on the place.

Opposite the engine room is the fire or boiler room which contains six huge boilers. Passing through this plant we come to the factory building, probably the most interesting of all, at least to those of a mechauical turn. This measures 75 by 180, five stories iu height. This structure is built in two sections with a broad areaway between and connected only by enclosed bridges at each floor. This, of couse, insures the best of light and air to all the workmen. This department is under the direct management of L. Lambert, who, for twenty-five years, was promiueutly connected with the famous Brown & Sharpe Mfg. Co., of Providence, R. I., and therefore peculiarly well adapted to take charge and push this end of the Victor business. Section One—on the first floor, is what is called the punch press aud annealing room. Here is where many of the small parts are turned out; one particularly interesting process is that of making the elbows. This work is all done with hydraulic expanding and bending machines. Thus these elbows are made in one piece, which is a marked improvement over the old method. Floor one, section two, is devoted to the stock room for rough product and small parts, such as screws, nuts, etc. The system in vogue in this department is absolutely perfect; everything is wrapped in packages of 100 and 1,000, so that when a rush order comes in there is no lost time or waste material. The stock is kept tab of by a card system which is a great labor saver, and no matter how busy they may be there is not the slightest hitch. The machine aud tool room occupies the second floor, section one. All the jigs, fixtures, reamers, taps, etc., for the manufacture of the Victor are made here and keep sixty men busy twelve hours in the day. The gear cutting and milling is done on the same floor in section two. The third floor is devoted to drilling and the makiug of screws, spindles, windiug keys, washers, rivets, etc.; fourth floor, section one, to buffing and polishing, getting the parts ready to be plated, oxidized and lacquered; section two, the assembly room, where all parts are put together. To give some idea of the output it might be well to state here that it has been estimated that one machine for every minute in the year goes out of this room. On the fifth floor, first section, is one of, if not the largest plating plant in the United States. In the gold-plating department there are three tanks, each one of which holds one thousand dollars' worth of gold chloride. The copper, nickel and oxidizing are also done on this floor. The second section, fifth floor, is devoted to the manufacture of Auxetophones. In passing through this building your representative was somewhat surprised to find a number of the Victor roadmen in overalls working on the lathes, etc., in the various departments, and was informed that every one of the gentlemen is compelled to go through each department so tnat when he goes out he knows what he is talking about. However, this is but another of the Victor company's advanced methods to which they owe, to a marked degree, their phenomenal success. Another thing that forces itself upon the visitor is the enthusiasm shown by every employe to do his best with the one idea in view—the improvement and success of the Victor.

A new office building is now nearing completion just across from the factory. This is a six-story structure, measuring 80 by 100, and will be, when finished, one of the finest private buildings of its kind in the country.

The new fire-proof factory building which is now under way will be situated to the rear of the old one; this will be six stories high, 180 by 150, and will be fitted out with all the latest appliances.

On our arrival at the new cabinet factory, which is located on Delaware avenue and Cooper street, we were taken in charge by E. T. Kiefer, the superintendent. This gentleman formerly held that position with the Pooley Furniture Co., until the Victor decided they needed him to insure buyers of Victrolas a perfect product of the cabinet-maker's art. This building is 100 by 60, four stories, but has been found too confined for their work, and a larger building will shortly be put up, and when completed the cabinets for all the machines will be made at home. A new kiln dry building is also being planned. The new fireproof shipping and assembly building on the corner of Front and Linden streets was the next and last to be visited. This is a four-story building 200 by 250. On the first floor is the packing and export shipping department; Auxetophone and Victrolas are also assembled here and tested. The receiving and record stock room occupy the second. Here all orders are filled, checked and wrapped. Third floor, shipping department and stock room. Fourth, motors are put in the cabinets and tested, and sound boxes assembled.

The entire inspection occupied over four hours and this scarcely more than a superficial one. However, it left a deep and lasting impression, one that made the visitor realize to the fullest extent the gigantic strides made by this industry in the past few years.

If there is a dealer or jobber in this country who for a moment doubts the future of the talking machine business let him not hesitate to pay a visit to this plant where over two thousand human beings are working night and day in order, not only to keep up to the demand for the present product, but the demand of the future. It is the best medicine that he could take for business weak heartedness, and the cure is absolute.

OUTDOES "HIS MASTER'S VOICE."

The dog is usually considered the most sagacious of animals, and not without reason. An instance is related of a dog which apparently recognized his master's portrait, not to mention "his master's voice." The dog's owner was sitting for his picture and not being satisfied with the artist's work wanted certain alterations made. The artist refused to make them, but offered to let the dog act as arbitrator. "You bring your dog in, and if he doesn't prove it is a good portrait by licking it, I'll paint another without charge."

Accordingly the animal was called in, and on seeing the portrait, at once ran up to it and licked it affectionately. This was proof so positive that the painter was paid his price without further argument. It may be added that he had previously rubbed bacon on the picture; but it would be presumptuous to say that really affected the result.

TALKING MACHINES DOES HIS WORK.

A road builder in one of the country districts of England, who was instrumental in having a fine roadway built where none had been before, but was at the same time badly needed, when about to leave for America dictated into a talking machine all the details of the work for the benefit of his enthusiastic fellow townsmen, even going so far as to name the exact number of tons of broken bottles and old shoes used in its construction. How many road builders on this side of the water would be honored by having their farewell words or a description of their work treasured on a talking machine for the benefit of posterity. Yea, republics were ever ungrateful.

EDWARD N. BURNS AT THE HELM.

Edward N. Burns, a vice-president of the American Graphophone Co., and manager of the export department of the Columbia Phonograph Co., who had been vacationizing in the Thousand Islands for two weeks, returned to New York Wednesday, as brown as a berry and feeling like a two-year-old. Mr. Burns is one of the most popular men in the trade, his intimate knowledge of the business being of vast assistance to his company associates.

Recommended as Best By those Who Know Best

Every dealer who would like to add to his business a feature that will increase it from 10 to 30 per cent. should give his consideration to the following recommendation.

"The undersigned E. E. and Minister Plenipotentiary of His Majesty, the King of Spain, to the United States, has much pleasure in stating that the words for the study of the Spanish language as prepared by the International Correspondence Schools, of Scranton, Pa., which I have carefully listened to, are the most perfect rendering of the pure Castilian pronunciation. I consider them invaluable to the student of our language, and cannot too much praise their efficiency and convenience." EMILIO DE OJEDA.

This official endorsement is the highest possible recommendation for the efficiency and accuracy of the I. C. S. Spanish Course, and plainly tells the characteristics of

I.C.S. LANGUAGE SYSTEM
WITH
Thomas A. Edison
PHONOGRAPH

This system of language instruction is in use at the U. S. Government War College at Washington, and the phonograph system has been lately adopted by the University of Chicago, and everywhere it is being recognized as the coming method of language instruction. Phonograph dealers all over the country have been very successful in handling the language feature in connection with their other business. There is no reason why *you* cannot do the same—there is no reason why *you* should not do it next month, only because of your own indifference and negligence to write *now* asking for further particulars. Don't you think it worth while to find out more about such a feasible means of increasing your business ?

TRADE HAPPENINGS IN PHILADELPHIA.

Business for August Makes Favorable Showing—Attendants at Buffalo—Chas. Bobzin Visits Ditson Headquarters—Louis Buehn & Bro. Make Important Changes in Their Quarters—Weiss Very Optimistic—Penn Co. Report—New Symphony Columbia Grand—Stewart Banjo Sells Well—Failure of the Lewis Talking Machine—The Excelsior Drums as a Side Line—Swaabs Display of Moving Picture Specialties—The News of the Month.

(Special to The Talking Machine World.)

Philadelphia, Pa., Sept. 7, 1907.

August business in "talkers" was very much of a pleasant surprise; in nearly every case it not only ran far ahead of July, but the books show an increase over last year's account for that period. The opening days of September, it is true, were not as good as was expected, but if indications do not lie this slump will be more than made up shortly. All the jobbers are having calls for dealers' contract blanks, and while this in itself is not unusual the fast-increasing number of applicants shows a healthy condition of affairs.

Every one is looking forward to the meeting at Buffalo on the 9th and 10th, and all are unanimously in favor of the proposed national association. As one jobber said: "There is no doubt but that the time is now ripe for such a movement. For a long while we have all felt the need of getting together to discuss conditions and make plans, and it was this feeling that gave birth to the present Eastern Association. But this business is growing. It has become one of national importance, and we no longer can get the best results from a local body if we are to protect ourselves and the industry. We must have some way of getting all the jobbers in the States together, so that when important matters come up that affect us all we will be able to move as one man to solve it. To me a national organization seems most necessary. Concerted action is often necessary, and I for one will do my level best to forward the enterprise."

Charles Bobzin, the well-known talking machine man of Boston, was a recent visitor to this city, and while here made things hum at the Ditson store, 1654 Chestnut street. A new manager, W. C. Holzbaur, has been put in charge and the whole building put in the hands of carpenters and decorators to be remodeled. A complete line of Victor machines and records has also been added which will be pushed to the limit. The Ditson Co. are finely located between 16th and 17th streets, and as their patronage is wholly high class they ought to make a big Red Seal showing, as the expression goes. But this is not all by any means that C. B. accomplished. Before leaving town he added the name of J. P. Drew, the well-known small goods man, on Tenth and Walnut streets, to the already long list of Ditson dealers. Mr. Drew will handle the Victor line extensively, and when called on by The World man was ears over in work preparing for his new baby.

If you happen down in the neighborhood of 45 North Ninth street, do not be surprised if you don't at first recognize the home of Louis Buehn & Bro., the well-known talking machine jobbers of this city. Since last month this company have devoted a good deal of their spare time to renovating and remodeling the place. Booths have been erected and the whole establishment shifted around. Nothing has been overdone, and we must congratulate them on their taste. The changes are most practical and sensible, and that's what a jobber should first of all consider. On account of their increased business a third floor has been added, which will be devoted exclusively to wholesale stock. This company are doing a large cabinet business and have just gotten in several carloads of new styles. New should be written in capitals, for this line is certainly a winner. Dealers should not fail to write for their catalog of these goods, an advertisement of which will be found in this issue.

Did any one see Ed. Buehn, the popular road man and partner, in the Shriners' parade on the 4th? Well, he was there—put off his trip to be present. You see he has just been admitted to that mystic circle, so you can't blame him. However, he's off on the road now putting the dealers through the third degree and initiating them into the way to push the Edison and Victor lines in the Buehn way.

Adolf Weiss, of the Western Talking Machine Co., has just returned from his vacation and is now busily engaged in preparing for fall trade. He spoke very optimistically of the outlook, his one complaint being that on account of his recent absence he finds it impossible to go on to Buffalo to the convention. He says all the boys have his best wishes for the successful culmination of the event.

Business has been very brisk at the Weyman's building on Chestnut street, and every one is in a happy frame of mind. Fall trade has begun to come in and a number of big advance orders taken. J. Ford and Norbert Whitley, the travelers for this house, are now on the road with the October Victor and November Edison lists booking orders.

T. W. Barnhill, of the Penn Phonograph Co., is spending his vacation at Atlantic City, where he will remain a week and then go to his old home for the second. The Penn Co. report August business considerably ahead of last year's, with an outlook ahead far brighter than has been experienced for the past six months. Their wholesale department is rapidly growing and absorbs the greatest part of their attention. Their new line of phonographs have arrived in good condition and have proven most satisfactory.

R. L. Gibson, the talking machine expert, in company with Bently Reinhart, of the Victor, is now making daily trips in the former's automobile to Mr. Gibson's summer residence at Ocean City. Who says there's no money in selling talkers?

The new symphony grand is making a great sensation at the Columbia headquarters on Chestnut street, and dealers all over are flocking to see, hear and wonder over this new product from Bridgeport. There is no doubt but that this machine is the high-water mark of this company's line and ought to make a big difference in fall reports. The B Q tone arm, standless, is also attracting a good deal of attention in the window and will prove a good seller. Manager Goldthrop was very enthusiastic over the prospects and reports trade conditions excellent for this time of year. Harry P. Van Steenburgh is on his vacation in Toronto at his wife's home and expects to make things fly when he gets back on the road.

The Musical Echo Co. continue doing a big business in Victors. Retail trade has been most satisfactory, and while the wholesale has not been breaking records it is yet early for this department to get fully under way.

Fred Geisberg, of the Gramophone-Typewriter Co., Ltd., of London, and one of the original record makers, was a recent visitor, but he had absorbed so much of the English manners since taking up life across the pond that his old friends hardly recognized him at first, but before leaving kinder made him feel homesick for the old sod.

N. J. Elwell, manager of the talking machine department of C. J. Heppe & Sons, is spending his vacation at Delaware Water Gap.

The Disc Talking Machine Co., the Zonophone distributors of this city, report business far beyond all expectations. This line has been little pushed in this State, but in the hands of this concern is fast winning a place for itself in the hearts of the public. W. L. Ziegler has just come in from a most successful trip through this territory, having added a number of very prominent names to their list.

"Phono Vitas," the now famous oil for talking machines, is meeting with a large demand in this trade. This oil is especially made for this purpose, and is without question one of the finest products ever placed on this market.

Emil Bauer, of the Bauer Co., the well-known manufacturers of the S. S. Stewart banjos, mandolins and guitars, has just returned from his vacation which he spent at Ocean City and Boston, where he went during Old Home week. Mr. B. is looking strong and husky and well prepared to handle his fast-increasing business. His line of instruments has grown immensely popular in this trade, as dealers find them an excellent side line to handle in connection with the talking machine.

Lewis M. Swaab, sole agent for the Powers moving picture machines in this city, reports business for August 25 per cent. ahead of any month in his experience. In speaking of the outlook he said: "Of course I am somewhat of an optimist but if indications have anything to do with things, this winter will prove the banner season in this business; there is no let up in public interest, the manufacturers are doing nobly in the matter of new improvements, and as if each was a stimulus the motion picture is still growing in popularity, if such a thing can be conceived." Mr. Swaab has everything about that is worth while under his roof, and parties who are contemplating a flyer in his line should not fail to write for his new catalogs.

The Excelsior Drum Works, 1111 Locust street, are running to the limit in order to keep up with their growing business. In fact A. G. Soistman, the president, is now looking for much larger quarters elsewhere in order to get things out on time. This company's drums are one of the finest products ever placed on the market, and talking machine dealers who are handling them say they are great sellers.

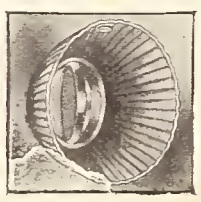
The failure of the Lewis Talking Machine Co., Columbia jobbers in this city (referred to elsewhere), has occasioned much regret, because through the closing of this establishment the trade loses, temporarily at least, one of its most genial members in the person of Herbert Lewis. He has connected himself in an important way with the Helas Electric Co., of this city. His many friends will wish him the best of success in his new field.

MUSIC FOR THE SODA FOUNTAINS.

According to a humorist in the New York World ice cream and soda water would taste much sweeter if appropriate music was played while it was being disposed of, and makes the following suggestions as to records in harmony with various flavors as for instance with chocolate—"Way Down Upon the Suwanee River;" strawberry, a Caruso number; pistachio, "The Wearing of the Green;" lemon, "No Wedding Bells for Me."

A fortune is predicted for the man who instals a "talker" and a suitable line of records in his "palace of frozen dainties" and then studies the tastes of his customers.

L. Mazor, the Zonophone jobber of Baltimore, Md., was in New York recently, visiting the Universal Talking Machine Mfg. Co.'s plant in Newark, N. J., and the recording laboratory in New York.



MELLO-TONE

Attachment a great improvement for the *Talking Machine* or *Phonograph.* Produces tones natural. Eliminates all metallic sounds and blasts. Regulates and mellows the tone. Can be adjusted while machine is playing. Goes in the horn, opens and shuts.

TRADE HAPPENINGS IN CLEVELAND.

An Optimistic Feeling Prevails—Gaumont Chronophone Co. in New Quarters—Towell Secures Big Orders—Roberts' Splendid Business Report—Victor Advertising Bringing Results—New Columbia Specialties—May Co. Enlarge Their Department—Nathan & Skall Recent Dealers—Coblitz Bros. Make Specialty of Foreign Records—News of the Month.

(Special to The Talking Machine World.)

Cleveland, O., Sept. 10, 1907.

The talking machine business in Cleveland continues good and is daily improving. There is an optimistic feeling prevailing among the trade generally that bodes a good, healthy fall business, in fact, it has already set in with many of the dealers. The difficulty heretofore experienced in procuring goods promptly from the manufacturers has been to a great extent eliminated, and the dealers are filling up and enlarging their stocks more extensively than ever before. A large per cent. of increase in sales over a year ago is noted by the dealers. The demand for records is constantly increasing, and is best for the higher-class goods in both machines and records. An evidence of prosperity in the talking machine trade is the enlargement and improvements now under way in a number of stores.

The Gaumont Chronophone Co. have moved their headquarters to the factory building at 312 High street, where fine offices have been fitted up for a permanent home. The building is a five-story brick and the upper stories will be utilized as the company's workshop. They are now prepared to transact business, and Mr. Faetkenhauer is now in the East making arrangements to place the machines in the principal cities.

W. H. Hug, representative of the National Phonograph Co., 10 Fifth avenue, New York, was a caller on the talking machine dealers recently. He stated that, considering the season, trade was exceptionally good in the territory he had visited.

Mr. Towell, of the Eclipse Musical Co., has just returned from a trip down the state. He says he found business unusually good—50 per cent. better than it was a year ago this time. "I never saw dealers more enthusiastic," said he, "in regard to present conditions and the prospects of a fine fall trade. Business with us is splendid—busy all the time. On one day we received orders for five Victrolas, and already had fifteen orders booked." The company had just made a $3,000 sale of goods to a city firm newly engaging in the talking machine business.

"Indications are," said W. J. Roberts, "that this year will be exceptionally good in the talking machine business, eclipsing all others. There is an increasing call for catalogs, and people are looking and making inquiries about machines for future delivery. Trade is good all around, and especially so for Red Seal records—one cannot stock up too well with these records. I take a little pride in having sold four Victrolas in one family, who are highly pleased with their purchases. I think the change in the Edison equipment will be a little difficult at first, but will put things on a better basis in the future—price cutting will practically be eliminated. Some plan, however, should be thought out that will permit the dealer to allow a fair price for the Edison horn in case the customer wishes to purchase a higher priced one. It will be quite a difficult proposition to explain intelligently to a customer that he must keep the horn he buys with the machine and then buy another which better suits his fancy. He may say, 'this or nothing,' and the dealer be out a sale."

Evidence that the volume of trade is positively and steadily increasing as the season advances, is the statement of W. H. Buescher, of Buescher & Son. They have installed a large new rack for the exclusive use of Red Seal records, and are making other improvements, greatly increasing their facilities. He said good results were already in evidence from the advertising of the Victor Talking Machine Co. in The Talking Machine World, the magazines and the home papers. He anticipates a large fall trade.

The conditions of trade were reported excellent with the Columbia Phonograph Co. "During August, sales of a large number of machines were made," said Mr. Bourgeois, assistant manager, "and the September records were all sold out the first week, while the second order is fast disappearing. The sample of the new Columbia Symphony Grand graphophone is attracting much attention, and deservedly so, because of its beautiful design and natural tone. We claim it is the greatest achievement in the annals of the talking machine art. The new Columbia aluminum tone arm cylinder machine is receiving its share of praise, and we expect to do the biggest business of any year yet, with the many additions to our graphophone line. Sales of Marconi records are fine, considering that as yet they have been given no publicity. We don't dare to advertise them yet, as the factory would be swamped with orders they couldn't fill."

Mr. Robbins, of Robbins & Emerson, stated that business in August had been surprisingly good. "We made a number of good sales of machines during the month, including two Victor Victrolas. There is good, increasing demand for records, especially for the Red Seal, and Edison records are selling well. We are now showing the new style Victrola, which is much finer than the old one." Mr. Robbins predicts business in the talking machine line will be unusually good during the fall and winter.

"Trade is excellent," said Hugh Gulley. "Our August business nearly equaled that of July, which was exceptionally large for the season. Prospects are bright for the coming fall trade." Mr. Gulley is increasing his facilities by installing new racks and shelving, and has one of the most attractive window displays in the city.

The Haliet & Davis Piano Co. report business in the talking machine department rather dull, but expect a large fall and winter trade. They carry a stock of Edison and Victor goods.

Phil H. Dorn, manager of the talking machine department of Collister & Sayle, 224-30 Superior avenue, said: "Business is very good and has vastly improved since moving into our new quarters. The outlook for a good fall trade is of the most encouraging character. We carry a full line of all the various machines and records of the Victor Talking Machine Co." The company have fitted up attractive demonstrating rooms with ample space for the display of machines, and racks with a capacity of 75,000 disc records.

The May Co. have enlarged their talking machine department to five times its former size, and are preparing to still further enlarge. Mr. Earl J. Howland, in charge of this special department, said: "Business is very good for this season of the year—50 per cent. better than it was a year ago—and is gradually increasing. In addition to our demonstrating rooms we utilize two large rooms for concerts and will soon add additional soundproof booths for demonstrating purposes." The company are distributors of the Victor and Columbia goods and carry a complete line of machines, ranging in price from $10 to $500. They claim to carry the largest stock and variety of records in the city.

Nathan & Skall, furniture dealers, No. 2034 Ontario street, have started a talking machine department and are fully launched in the business. They purchased a complete stock of Victor and Edison goods from the Eclipse Musical Co., and have placed an experienced man in charge. They are centrally located and will unquestionably command a good trade.

Coblitz Bros., No. 5529 Woodland avenue, dealers in Edison and Victor goods, make a specialty of Hungarian, Bohemian and Jewish records, and cary a full line of English. Mr. Coblitz said business was fairly good and was showing signs of increased activity. He predicts a large fall trade.

Happiness usually prevails in the neighborhood where talking machines are in evidence, but occasionally the reverse is true. Mrs. Julia Schmidt complained to the police prosecutor that Mrs. Hecker, who lives uext door, stuck her phonograph horn right up against her window and played a tune called "Sauerkraut" six times in succession. "You understand," said Mrs. Schmidt, "we are Germans and the Heckers are Irish." Other neighbors made complaint. The prosecutor says he can do nothing as "there is no law on the subject." Mrs. Hecker says they have no reason to feel the way they do. "The phonograph is a good one," she claims, "and I have heard but one complaint about any of our pieces. That is called 'The Whole Damm Family.' All the rest of our records are select and proper. They are also tuneful and edifying. Take for instance, 'Blessed Assurance.' That's a fine hymn. Of course, it's old, but I must say if some of the neighbors would listen to it it might do them some good. 'Blessed Assurance' is a good deal better than some of the assurance these neighbors have, complaining about a nice, unoffending phonograph."

SEARCHLIGHT FOLDING HORN

Continues to Attract Trade Attention—Dealers and Purchasers Speak Highly of It.

The Searchlight folding horn which was illustrated in The World of last month and is shown again in the present issue, has created a great deal of comment in trade circles. A well-known member of the trade who examined this product last week was enthusiastic concerning its merits and he did not hesitate to say that he desired a number of the horns shipped to him at once. He unhesitatingly predicted for it a big future. The fact that when collapsed it takes up such a slight amount of space is a tremendous point in its favor.

List of Zon=o=phone Records for October:

Zon-o-phone Concert Band.

S51. Arion Carnival March.
An inspiring record of this old time favorite dedicated to the Arion Singing Society of New York City.

S52. Colonial Guard—March and Two-Step.
A bright military quickstep with a tuba solo effectively introduced.

S53. Kings of Rags—Two-Step Oddity.
A grotesque bundle of ragtime. The clever instrumentation of this number produces some odd ragtime effects.

S54. Sunbeam Dance—Schottische.
A bright, sparkling dance number, with bells and clogs.

S55 Turkish Patrol.
This renowned characteristic record is made indeed realistic by the use of the Turkish drum and cymbal throughout the number.

Hagers' Orchestra.

S56. Dill Pickles—Two-Step.
A catchy pickled ragtime perfectly recorded for dancing.

S57. Jolly Widow—Waltz (Die Lustige Wittwe).
A beautifully rendered waltz made up of the popular melodies from the immense European success, "The Jolly Widow."

S58. Spring Song (Mendelssohn).
Undoubtedly the most artistic interpretation of this classic ever produced.

S59. "Tattooed Man" (Waltz).
This number from Victor Herbert's latest success, "The Tattooed Man," contains the following song hits, "The Floral Wedding," "Boys Will Be Boys and Girls Will Be Girls," "Omar Khayyam" (Bell Solo), "The Land of Dreams," and "Nobody Loves Me."

S60. Yankee Tourist—Two-Step.
The melodious strains of "The Glad Hand Girl" (Bell Solo), "Wouldn't You Like to Have Me for a Sweetheart" "Irish Lads," "Come and Have a Smile With Me," from this successful production, make a charming record.

Accordion Solo by J. J. Kimmel.

S61. Cakewalk.
To the admirers of this artist's solos, this will add another selection, as beautifully rendered as its predecessors.

Vocal Selections with Orchestra Accompaniment.

S62. All My Girls—Ed. M. Favor.
Humorous song from the "Blue Moon," in which numerous Christian names of the fair sex are cleverly arranged. Sung with all the swing and spirit that Favor puts into songs of this character.

S63. Hallooning—Harry Tally.
Pleasing and attractive song from the musical comedy, "Fascinating Flora," in which Adele Ritchie has been starring.

S64. Blest Be the Tie—Sacred—Mr. Frank C. Stanley.
An excellent rendition of this beloved undenominational hymn of Christian fellowship sung to the tune "Dennis," with organ accompaniment.

S65. Herman and Minnie—Descriptive—Ada Jones and Len Spencer.
Clever German character sketch illustrating the versatility of these genial entertainers. The selection opens with a verse of the song "Herman," by Miss Jones, upon the conclusion of which, "Herman" (Mr. Spencer) arrives in his auto, concluding with clever repartee and singing.

S66. I'm Tying the Leaves So They Won't Come Down—Byron C. Harlan.
A sentimental child song, words by E. S. S. Huntington, music by Fred. Helf. It tells in a pathetic manner the story of a little lad and his small girl playmate, who, being ill, the doctor says will pass away when the leaves come down, and the lad's endeavor to keep them from falling.

S67. Irish Section Gang—Descriptive—Peerless Quartette.
Bright humorous selection of wit and melody. Opening with the sounds of the busy pick, followed by singing and repartee, concluding with the "gang's" departure on a train at "quitting time," singing the chorus of "Drill, Ye Tarriers, Drill," their voices dying away in the distance as the train moves off.

S68. Jack and Jill—Ada Jones.
Dainty song from Geo. M. Cohan's "Fifty Miles From Boston." Clear, distinct and musical.

S69. On An Old Fashioned Buggy Ride—Billy Murray.
Late song by Williams and Van Alstyne, depicting the advantages of the old fashioned horse and buggy, over the up-to-date auto, subway or trolley, for lovemaking.

S70. Many's the Time—Collins and Harlan.
Bright descriptive song possessing a catchy refrain. Words by Ed. Rose, music by Fred. Fischer, writers of "If the Man in the Moon Were a Coon," and other successes.

S71. Rambler Minstrels No. 5.
Another of these always welcome minstrel records. Opens with the chorus of "It's Always the Same in Dixie," by entire company, followed by witty jokes, concluding with a verse of the song, "I Know Dat I'll Be Happy 'Til I Die," by Mr. Collins, the quartette assisting in the chorus.

S72. Scene at a Dogfight—Len Spencer and Alf Holt.
One of the most realisitc descriptive records imaginable. Mr. Spencer as the announcer or "master of ceremonies," is all that could be desired, while the barking and whining of the dogs are cleverly imitated by Mr. Holt.

S73. Take Me Back to New York Town—Harry Tally.
The universal desire of all native New Yorkers, when on a foreign shore, to return to their home city, is set to music by the successful composer, Harry Von Tilzer.

S74. The Handsome Brave Life Saver—Billy Murray.
An amusing song from the pen of Albert Gumble, the rendition of which is clear, bright, and tuneful.

S75. Yield Not to Temptation—Metropolitan Trio.
An old-time hymn, known and sung by Christian people the world over, and still popular in our churches to-day. This rendition is excellent, the voices blending perfectly.

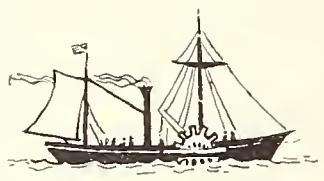
IT is a far cry from the crude talking machine of years ago to the splendid product of 1907, but there were men even in those early days who saw with prophetic vision the wonderful possibilities of the developed graphophone as an entertainer, educator and aid as well to the business man. They did not hesitate to bend their energies to its development and to aid its commercial success in every consistent manner. As a result of conceutrated energy we have to-day a splendid industry, the growth of which, within a brief period, has been without parallel in any other trade in modern times. Talking machines, to use the generic term which is now applied to all sound reproducers, have long outgrown the inconsequential position which they occupied in by-gone days. They are now royally welcomed in the palaces of millionaires as well as in the humble homes of the common people throughout the land, and they play no uuimportant part in our daily lives. They are used in scores of different ways so that they have become closely identified with many of the entertainment and educational forces of our day. We have had associated with the industry inventive talent and business ability of the highest order.



The marvelous growth of the talking machine business has surprised even those who have kept in close touch with its astonishing progress. The development of the imperfect instrument of by-gone days to the splendid creation of to-day, which is conceded to be a marvel, is almost as great a step as from the crude steamboat of Fulton to the superb floating palaces which now ply the Hudson during the summer months.

The talking machine industry is rich in inventive minds. It has in it men of splendid business ability. Its history shows that, and one of the greatest institutions which has always been to the forefront in inventive skill and progressive business methods is the Columbia Phonograph Co. It would be difficult to locate a man in any sphere of life who has given evidence of the possession of greater executive or financial ability than Edward D. Easton, the president of the Columbia Phonograph Co.

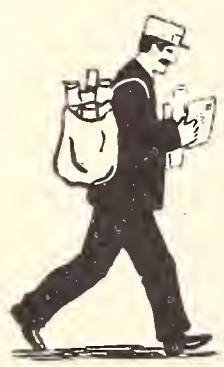
From time to time we have emphasized the special creations and improvements with which this progressive company, whose ramifications now encircle the globe, has beeu ideutified. Their latest triumph, the Marconi velvet-tone records, are announced officially in our advertising columns to-day. These records are truly wonderful, and as one well-known trade expert remarked recently after listening to them, commenting on their marvelous quality, "The Marconi record is not a mere invention; it is revolution."

Extravagant words, apparently, and yet all the members of the trade will be specially interested in products for which seemingly large claims are made. They will analyze the merits of the product on these claims, and see on what basis they are fouuded. And the manufacturers of these new records invite such criticism.

In the first place, it must be conceded that the playing of the ordinary disc record is accompanied by a scratching sound, which at times is annoying, and with some records it becomes so dominant that it seriously iuterferes with the pleasure of listening to the melody which the machine may be playing.

The Marconi velvet-tone record is noiseless, or practically so, for the friction is reduced to such a point that it is hardly noticeable.

Another very important feature that the Marconi velvet-tone record possesses is that constant change of needles is unnecessary, for in using them a gold needle is applied which it is not uecessary to change while using twelve or fifteen records.

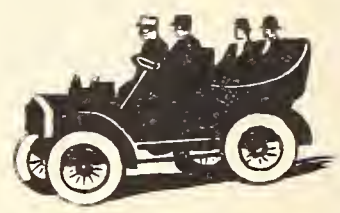


Still another point which is strong in its favor is its feathery lightness. It might properly be called a featherweight record. The term is fitting, for the record is much lighter than any now on the market. The extreme lightness, of course, adds to its desirability, and it costs less to send by mail. It is also very flexible, therefore, when it is shipped by post there is no possibility that it will reach its destination in a broken condition, as frequently happens now in shipping records by mail.

This new Marconi velvet-tone record is one of the most remarkable creations of recent times in the talking machine busiuess. The records are put up attractively, the label being specially artistic, and in the opinion of experts who have tested them they will occupy the center of the trade stage for some time to come.

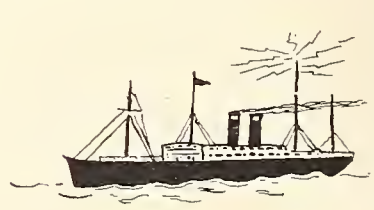
As a compliment to Signor Marconi, of wireless telegraph fame, they are named in his honor, being the first great advauce in the art of recordiug sound since his connection with the Columbia Phonograph Co. as consulting physicist, and as has been aptly said, they are "wonderful as wireless."

The designation "Velvet-Tone" has been given them because of their velvety reproduction of sound, making it possible for the graphophone to reproduce the actual tones of the voice, instrumeut or orchestra in all their beauty, with every suggestion of mechanical reproduction removed. An appropriate uame for truly a remarkable product.



When Marconi was last in America he made a personal tour of the great Columbia factories at Bridgeport, Conn., and expressed himself iu enthusiastic terms regarding the perfect system which prevailed there. The Columbia organization is not only perfect in the business and commercial departments, but the directing heads realize that a product must be right in every respect in order to command the approval of the critics of our day, therefore a perfect system has been inaugurated and betterments constantly made wherever possible in the creative end of the Columbia business.

Through Marconi's clever inventions distances have been annihilated; the shores of the old world have been brought within speaking distance of our own and ships at sea can converse qnite as easily as pedestrians on Broadway. The currents of air through Marcoui's magic have been harnessed for the transmission of sound in such a way that new conditions have beeu created on land aud sea, and now that this souud wizard has turned his attention toward sound development through the agency of the graphophone we may be prepared for many expausive moves, some of which may prove startling through their departure from established customs.



TRADE NOTES FROM BOSTON.

The Oliver Ditson Co.'s New Department Devoted to Talking Machines Much Admired —Eastern Company's Improvements—Manager Andrews Expects Big Fall Trade—Business Unusually Good—News of the Month.

(Special to The Talking Machine World.)

Boston, Mass., Sept. 10, 1907.

The chief feature of the talking machine trade here this month is the fine new department which the Oliver Ditson Co. have given to Manager Winkelman for the Victor talking machines. It is now the finest department in the city. In place of the tiny little room heretofore used, on the back part of the sixth floor of the Ditson building, the entire second floor is given over to it. Everything is new there, and it is unusually attractive. The fittings are in oak and there is plenty of room for all the display needed.

Four large exhibition rooms are fitted up on the Tremont street end of the building. There is a fine elevator service, and every conceivable thing that would be of value in such a department has been provided. The Victor machines are exclusively handled and the business done is enormous. General Manager Charles Bobzin is a firm believer in the worth of the Victor and is doing all he can to push its sale.

At the Eastern Talking Machine Co. they are planning to increase their facilities for caring for the increased trade which has developed this year. An electric passenger elevator is being installed and the third floor of the building has been opened as an additional salesroom. A large business on the Edison and Victor goods is reported. They are having a clearance sale of horns.

Wholesale Manager A. W. Chamberlain has been on a fishing trip to Bailey's Island, Me., with his bride.

At the Columbia Phonograph Co. the new $200 machine is on exhibition, and has attracted much attention. It has started a lively competition with the firms handling the Victrola, and it is generally believed that it will create a good trade on the high grade machines. Manager Blakesborough reports an excellent business as a result of the establishment of smaller branch stores throughout this section.

Manager Andrews, of the Boston Cycle and Sundry Co., says: "I think this is going to be a record breaker for the talking machine business. I find that jobbers throughout the country feel the same way. There is a good undertone, the dealers feel more confident, and the public is anxious to buy higher grade machines, and the higher priced records. We are having an unusually good trade on our tray systems and our carrying cases."

Since the change in retail managers, the business at the C. E. Osgood Co. has developed quite a little, and the new department, for handling the Columbia goods, is assuming very creditable proportions.

In my letter last month reference was made to a special display of records "at slightly reduced prices" at the Columbia warerooms. It seems this was a misunderstanding in some way. These records are not sold at reduced prices but merely placed on the counter and brought before the public with the object of moving slow moving records.

Business since the first of September, at all the jobbers and retailers, has been unusually good. In fact, there seems to be the beginning of a "boom" in sight, and the trade expects a very busy winter.

Some Facts Worth Considering

THE talking machine man frequently asks, "How can I increase my business?" The answer is easy. Place on a side line which takes but little space, which is attractive, and a standard in its particular line. Take the **Black Diamond Strings,** for instance. Steel and wound. New process. They are the finest manufactured. They are used by all of the prominent artists, and you will have a trade coming your way when it is known that you handle the "Black Diamond." Music dealers all over America, and all over the world for that matter, know full well the value of this product.

National Musical String Co.
New Brunswick, N. J.

LEWIS TALKING MACHINE CO. AFFAIRS.

(Special to The Talking Machine World.)

Philadelphia, Pa., Sept. 6, 1907.

The attorney for the assignee of the Lewis Talking Machine Co., under date of August 27, in requesting creditors to accept a composition of 50 per cent. in settlement in full for their claims, made the following statement:

"On behalf of George Hansel and Hert T. Lewis, trading as the Lewis Talking Machine Co., I make the following statement of affairs and offer of composition: Liabilities, $11,785.47, of which $5,785.47 is for merchandise and $6,000 for borrowed money. Assets, stock on hand, $5,500; accounts, $1,500; instalment accounts, $400. The stock was appraised to sell at $1,500, while the accounts would realize $1,400 more, making the total assets, $2,900. There is also a lease with a rental of $150 a month, which has eleven months yet to expire. The original capital was loaned through Mr. Hansel, one of the partners. For the past year the gross amount of business done was between $23,000 and $22,000, with expenses of $6,000. The books show, as well as the statements of the partners, that Mr. Hansel never has drawn anything from the business; while Mr. Lewis has drawn a salary of $7.50 a week for the last two years. All the capital was put back in the stock, as shown by the books and the amount of merchandise on hand.

"The Lewis Talking Machine Co. are compelled to discontinue business owing to the condition of facts above stated, and desire to offer their creditors a settlement of 50 per cent. cash payable immediately. It will be readily seen by the creditors that this offer is double what could be realized out of the assets through bankruptcy proceedings. The failure is due to lack of ready cash capital and to much expense. The matter has been carefully investigated by the largest creditors, among whom are the Columbia Phonograph Co., Penn Phonograph Co., and the Hawthorne & Sheble Co. They already agree that this is by far the best settlement that could be obtained and have expressed their willingness to accept it."

THE UNIVERSAL ADVERTISEMENT.

The omission of the full-page advertisement of the Universal Talking Machine Co. from The World of last month was not intentional but occurred through some unaccountable error in the makeup of the publication. The Universal concern believe in publicity and supplied copy as usual, and therefore the absence of their advertisement was not intended.

"Space-saving and time-saving are two of the world's great problems."

THE MONARCH

(Space-Saving and Time-Saving)

REVOLVING WIRE RACK FOR CYLINDER RECORDS

The "Multum in parvo" of the phonographic world.....Holds 1,000 Records in a space 33 inches square and places every one of the thousand so that you may reach them without moving.

STORE WINDOW ADVERTISING

Is the Most Valuable of the Many Forms of Advertising, According to Geo. P. Metzger, the Well Known Advertising Specialist—An Interesting Chat on This Subject.

George P. Metzger, advertising manager of the Columbia Phonograph Co., was recently asked by a Talking Machine World reporter what he considered the best advertising medium—magazines, newspapers, billboards or car-cards. Mr. Metzger thought a moment and said: "Well, that's a rather hard question. Each of the above mediums is a cog in the great wheel of publicity. All are valuable. There is one form of advertising, however, you have not mentioned, and for the talking machine dealer is probably more valuable than any of the above. I am referring to the dealer's own store-window. Although most dealers don't seem to realize it, probably his strongest business-getting asset is his store-window.

"A store window not worked for all it is worth is just like good money stored away in an old sock instead of being made to earn interest.

"The largest part of a talking machine dealer's rent is paid for the purpose of providing a convenient and attractive and inviting entrance to his salesroom. The plate-glass window is meant to stop the passerby, and next to drag him inside the store—or at least so impress him that whenever he gets to the point of thinking "talking machines" or records, be will unfailingly be reminded of that attractive window he saw the other day—or rather of what that window told him.

"For a store window to be utilized to the best advantage, it must not only stand to be seen—it must say something.

"There isu't a talking machine dealer anywhere in this big land of ours, who wouldn't quickly appreciate the value of a good big billboard, brightly painted and illuminated, seeable every day and night in the year, but a store window is worth a dozen billboards if it is only used to proper advantage. It's right where the goods are sold. Any impression it makes on the passerby can be immediately cashed in. Any suggestion it carries to him can be instantly acted on. It not only presents exactly the same opportunity for printed argument as the billboard, but it can point to the open door. The impression made can be immediately realized into sales.

"The retail dealer in any town, in any line, who appreciates the full value of his window, and acts upon it best and first—other things being equal—will sink his competitors out of sight seven miles below the horizon. Window-glass salesmanship certainly fits the "talking machine" business. We surely have something to say. It's maybe a bit difficult to make a mere window full of graphophones and records look new and different every few days, but they can be made to look bright and clean and attractive and wantable. Any good printed window matter can be made to do the rest.

"Talking machine dealers should take hold of the window display idea good and hard. Get the people inside the store and three-quarters of the work is done—a sale is almost made. The passerby who has been stopped and persuaded to step inside the store has taken the first deliberate step towards buying—and the first step is always the hardest."

PAYS TO USE FOREIGN RECORDS

When Giving Recitals, Owing to the Cosmopolitan Element Which So Largely Prevails in the Population of All Our Cities.

For some years now, enterprising dealers have found that one of the best ways to sell records is by giving phonograph concerts at which the new montbly lists are played over. In many towns this reunion is looked upon as one of the pleasantest evenings of the month, and sales of records are easily traced to it. In this connection the editor of The Edison Phonograph Monthly very pertinently says: "Dealers who adopt this plan should never fail to play one or two of our foreign records with the usual monthly list. People who hear them played are loud in their praises, and it would undoubtedly tend to popularize them if a few were played whenever an opportunity occurred. In a country like this, wbere so many races are blended, there should be a big market for foreign selections if they were pushed. These foreign records are all exceptionally good, being, indeed, the best-recorded and most popular in the countries from which they come. There is a great deal of variety among them. Some of the German and French and grand opera, and some in the lighter vein of the cafe chantant. They are made by artists well known in tbeir respective countries and deserve recognition as such, not only by French, German or Swedes, as the case may be, but by all Edison phonograph owners who appreciate good vocal records."

The advance list of Edison grand opera records, supplement No. 8 for November, which will reach jobbers on October 28, is as follows: 55. Steuermannslied (' The Helmsman's Song"), "Der Fliegende Hollander," Wagner; 56, L'Ultima Rosa d'Estate ("The Last Rose of Summer"), "Martha," Flotow; 57, Quand 'ero Paggio ("When I was a Page"), "Falstaff," Verdi; 58, So Anch 'Lo La Virtu Magica ("The Magic Virtue I Also Know"), "Don Pasquale," Donizetti; 59, Alto La! ("Halt, there"), "Carmen," Bizet.

NO SIR-E-E

We are not hustling to sell Horns and Cranes—not trying to "load up" our trade with these goods—though we've too many in stock.

We're Stuck with Horns and Cranes—but we're taking our medicine ourselves—not trying to pass it on to the trade.

September 16th next, every Phonograph will be equipped with Horn and Crane, so don't load up with Horns and Cranes at any price—but make every effort to close out what you have on hand.

We want your ***continued*** business—we're not after a trifling temporary profit—we try to deserve your trade by working for your interest—keeping you posted.

Send us your orders, for you can depend on fair treatment and prompt attention every time.

American Phonograph Co.

106 WOODWARD AVENUE, DETROIT, MICH.

HOME TAPERING ARM ZONOPHONE.

In addition to the deservedly high reputation enjoyed by the Zonophone records of the Universal Talking Machine Mfg. Co., Camp and Mulberry streets, Newark, N. J., their machines are of equally good repute in the estimation of the trade. One of their latest products and an unusually quick seller is the home tapering arm Zonophone, which, with the morning glory horn, as herewith illustrated, sells for $21 list. The horn is 16 inches long, with a 16-inch bell, and

HOME TAPERING ARM ZON-O-PHONE MACHINE.

the sound box, instead of the "Universal," is the "Zonophone," a superior box in every way. This machine is the lowest price standard machine in the market, and considering its superior quality, is a line the trade will find most satisfactory to handle. The motor plays one large record with one winding, and it can be wound while running. The cabinet is 12½ inches long, 12½ inches wide, 7 inches high. The tapering arm attachment is complete. Any size record can be used on this instrument, as it has a quick turntable. Two hundred needles, with a two-part box for new and worn needles, go with the machine.

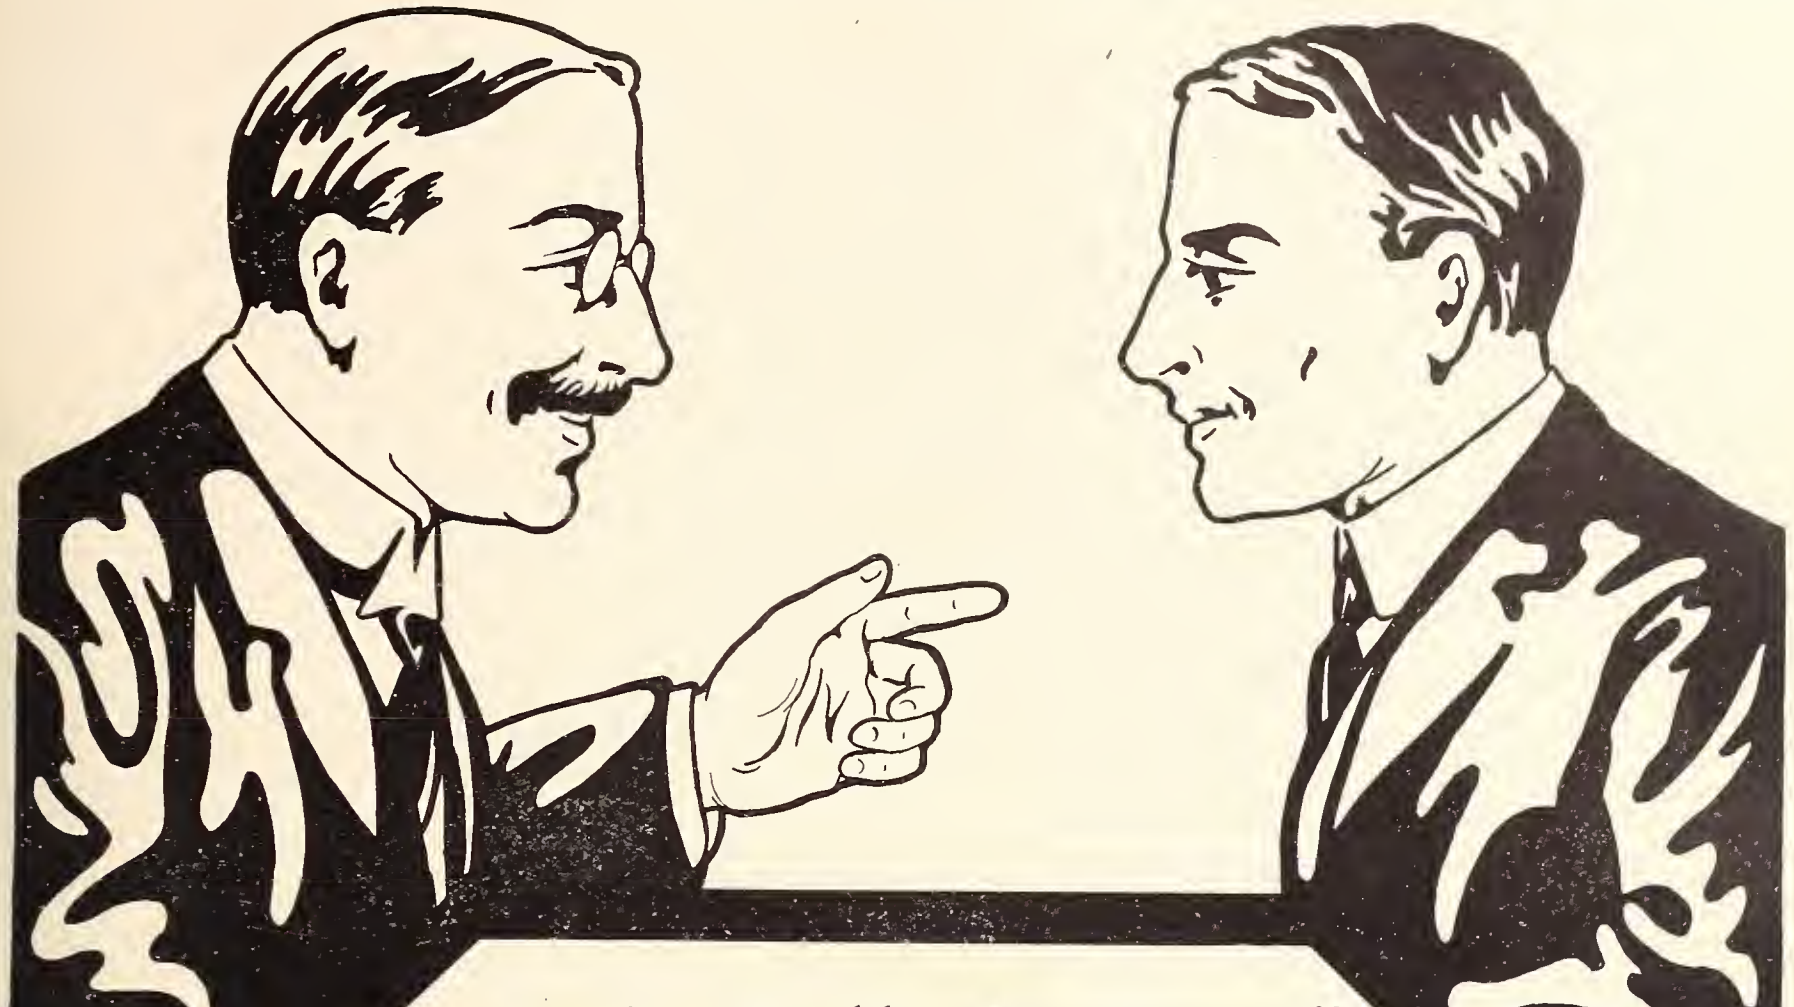
While referring to the cut of the home tapering arm Zonophone, the advertising sent out by

the Universal Talking Machine Mfg. Co. is notable in many ways. One of the happiest pictorial postals takes advantage of the prevailing popularity of the Teddy bear. As the accompanying sketch indicates, the bear before the Zonophone is "de-lighted," and that tells the story. This is the first time this idea has been used in the talking machine trade, and is original with B. G. Royal, tbe president of this enterprising company.

The Montenegro-Riehm Music Co., Louisville, Ky., who are doing a great business in Edison goods exclusively, have decorated their store in a very striking manner, a sort of an educational object scheme. The walls have been stenciled with figures showing the various parts of a piano from sounding-board to keys. The colors are pink, green, silver and gold.

With the removal of the O. K. Houck Piano Co. from St. Louis, Mo., there will be one less Victor and Edison jobber in that city.

The Auxetophone shown at the last Leipzig Fair continues to attract much favorable attention by reason of its superb reproduction.



"Let's Talk It Over"

Do you realize just how much the Horn and Crane affects the sale of your Talking Machines?

You appreciate, of course, that these parts are the most *conspicuous* ones on a machine. It is natural, then, that your customers' eyes should center entirely upon *them*. Isn't it?

What is the result? If the Horn and Crane are cheaply constructed, they cheapen the looks of the whole Machine. By so doing, your machine sales are harder to make—your price is harder to get.

Isn't it wiser to show your customers a Horn or Crane that will give your Machines a handsome, high grade appearance? A machine so equipped will practically sell itself—and at *your* price.

Have you seen our "Art-Tone" Flower Horns? Something brand new. The best trade have conceded them to be the handsomest looking, clearest sounding and best wearing Flower Horns ever produced.

You'll like our new Horn Crane, too. Its action is as simple as the lift of your finger, with a hold as strong as a vise. Highly finished, too.

Ask your jobber to show you samples. If he can't, write to us. We'll see that you're given the best attention. Just depend on that.

Write for Handsome Booklets.

THE TEA TRAY COMPANY
OF NEWARK, N. J.

FOUNDED 1867.

WILL NOT GRANT RATE.

The National Phonograph Co. Refuse to Grant Differential Price Asked by the Jobbers' Association—Formal Letter Issued on Monday.

The differential rate or price asked to be considered favorably on the part of the National Phonograph Co. by the Central States and the Eastern Talking Machine Jobbers' Associations, has been refused. The following circular letter furnishes the reason why the company declines to make the concession:

Orange, N. J., Sept. 7, 1907.

To the Trade:—

With further reference to the matter of the proposed allowance of a 5 per cent. discount for cash on Edison machines sold at retail, we wish to state that this proposition has received our most careful consideration, and we are of the opinion that for the best interests of all our jobbers and dealers, a discount for cash, or otherwise, should not be permitted on retail sales of Edison phonographs, or parts, records or blanks.

The success of this company and the consequent success of the business of our jobbers and dealers as a whole, has been due to the establishment and maintenance of the one-price system, and it is our opinion that any deviation from, or variation of, the one-price system would in the end prove prejudicial to the interests, not only of this company, but equally so to the business of our jobbers and dealers.

We have, therefore, decided, without any equivocation whatever, that under no circumstances will we permit the allowance of a discount on retail sales of goods manufactured or sold by this company.

Yours very truly,
W. E. GILMORE, President.

EFFECT OF DIRT ON RECORDS.

It is known that a perfect reproduction cannot be obtained, unless there is nothing to interfere with the proper frictional contact between the needle or reproducer sapphire and the sound waves on a cylinder or disc record. Dirt in the record grooves prevents the needle or sapphire point from correctly following the engravings and in turn causes a defective vibration and reproduction.

The frictional contact also causes the dirt to cut and ruin the sound waves, reducing the life of the record considerably and causing the record to become scratchy after a few reproductions.

J. N. Blackman, proprietor of the Blackman Talking Machine Co., is confident that the best way to guard against injury through dirt and dust on records is to use the "Place" record brushes, and as a proof of his confidence in their merit he is furnishing free samples to all dealers and jobbers upon request, and intends to send out samples in the near future to all dealers on his mailing list.

The advertisement of the Blackman Co. in this issue sets forth their claims regarding their line of record brushes and should interest the trade.

A. P. PETIT TOURING THE TRADE.

Returning from a very successful trip through New York State September 3, where he found business among the jobbers in fine shape, A. P. Petit, general manager of the Talking Machiue Supply Co., 400 Fifth avenue, New York, started again on the 8th for a more protracted visit to the trade. He called on the Canadian jobbers first, then attended the Buffalo convention, and subsequently saw the representative houses throughout the Middle West. Later he expects to go to Mexico, aud will sail from New Orleans for Cuba. Mr. Petit will not return before the middle of November. The company are doing an extensive needle business, and the manner of their packing in decorated small tin boxes, lithographed, is unique, attractive aud original. They handle ten different styles. Samples inquired for are submitted the trade in neat, glazed envelopes of diminutive size, the description appearing in gold on a marcon ground. Each style of needle has a distinct package, the color effect being striking and effective. Their other lines are handled and shipped with equal care and attention to detail. General Manager Petit has built up an extensive business for the Talking Machine Supply Co., a tribute to his hustling proclivities, original methods and thorough knowledge of the trade and its needs.

ROUND THE GLOBE.

The World "Pulls" Business from All Parts of Earth.

We are in constant receipt of letters from advertisers in all parts of the world who write enthusiastically of the business getting powers of this publication. No matter whether a man manufactures regular or special products the results are the same. The World is building business for every worthy creation advertising in its columns.

Here is an excerpt from a communication from the H. Schröder Hornless Phonograph Mfg. Co.: "We greatly appreciate your publication. One news item which you published regarding our product brought us requests from all over the world. We take great delight in informing you about this for the benefit to us is incalculable. No doubt you are glad to hear that The Talking Machine World is the best medium for all classes of dealers in musical instruments."

VICTOR OUTFITS FOR MUSIC ROOMS.

When W. & J. Sloane, the well-known house furnishing and carpet house, of New York, were recently asked to estimate on the cost of refitting a residence on Fifth avenue, among other pieces of furniture specified to be made as an essential item was a Victor outfit with rosewood cabinet and gold-plated parts, to correspond and harmonize with the neighboring articles in the beautiful music room. It is a straw that shows which way the wind blows, and it behooves manufacturers and dealers to take notice.

Mr. Talking Machine Dealer

If you are located in New England—

We Can Save You Money.

Our facilities permit us to ship goods on first Express after order is received. We **wholesale exclusively**—consequently everything is shipped in original packages as received from the factory—no played-out records, no second-hand machines.

We manufacture a number of talking machine accessories among which are our famous Tray Outfits. (If you are not using this system for carrying records in stock it will pay you to write us.)

The **Lynn Record Cases and Peg Boxes** are another of our products.

We also manufacture the **Wentworth and No. 10 Horn Stands.**

Special Lines and Special Prices on Flower Horns.

We solicit a trial order.

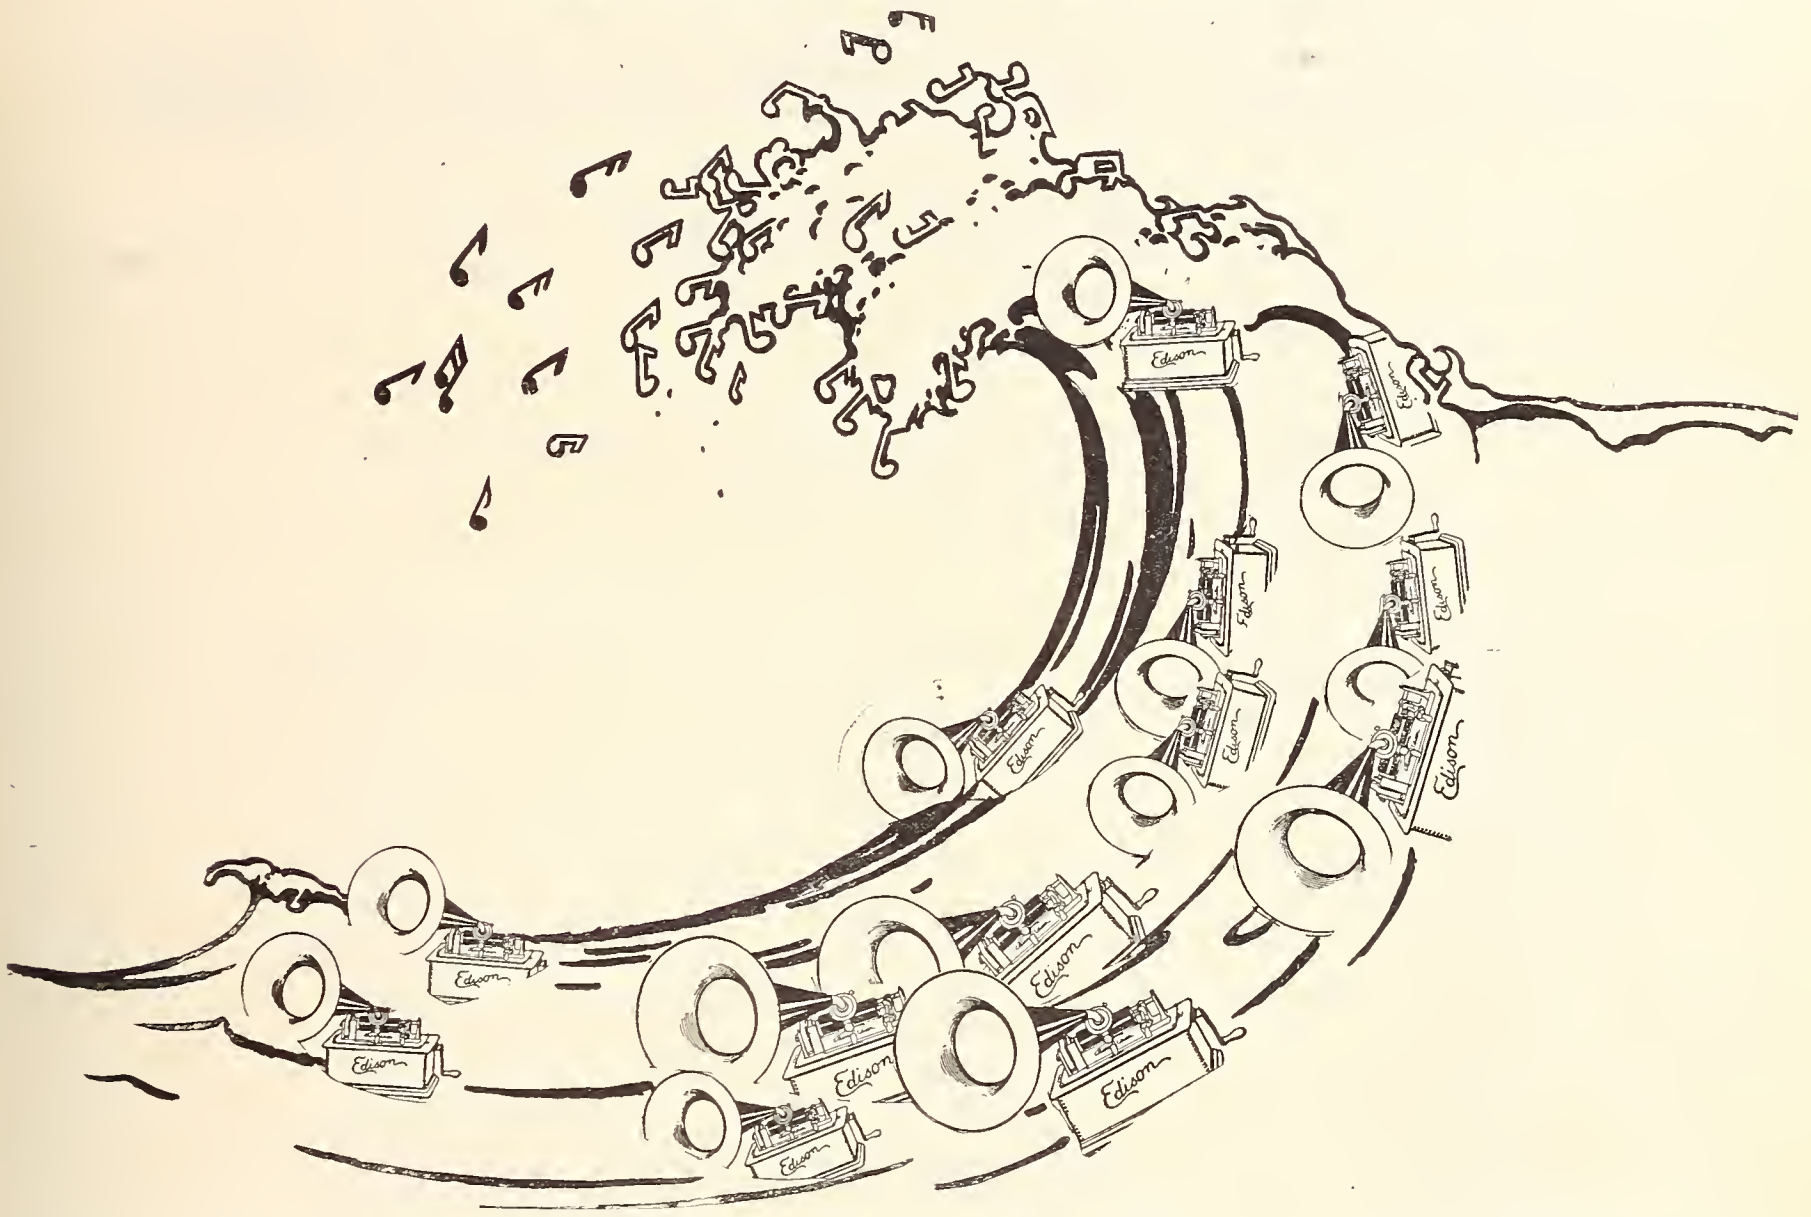
48 Hanover Street, Boston, Mass.

A Tremendous Wave of Interest



in the Edison Phonograph is sweeping over the country. Its popularity is greater than that of any other talking machine. This is because the Edison provides the widest range of entertainment in the most satisfying way. Its improved Reproducer with its indestructible sapphire point, its clear, rich, musical tone, its convenient cylindrical Records, and its high-grade mechanical construction make it the choice of discriminating buyers everywhere. If you handle the

Edison Phonograph

put it to the front and let the people hear it. Use our display cards and other printed matter liberally and thus get the benefit of the advertising we are doing in the magazines and newspapers. If the Edison is not represented in your store do not waste your time, energy and money trying to compete with it—put in a stock and protect your own interests. We furnish full information on request, together with the name of a jobber who can supply you.

Exhibitors at Recent Business Exhibition—Talker to Stimulate Channel Swimmers—Sterling and Hunting in Their New Quarters—Patent Law to be Amended—The News of the Month in Detail.

(Special to The Talking Machine World.)

69 Basinghall Street, London, E. C.

Trade is settling down to a more satisfactory condition, and at the time of writing, while many leading men are still on their holidays, there is nndoubtedly greater stability apparent in all circles. The dealer is the best index to this happier state. He is preparing for the fall trade. It is not so general as one would wish, bnt my observations and inquiries all point to a strong advance movement among the much abused cycle-man who may be seen cleaning up his talking machine and getting out his records with a view to making the best window display he can. Manufactnrers are specially bnsy just now, and the factors are spending their spare time in drawing up lists and catalogs galore. In this direction the coming season will see a considerable advance over last. A liberal publicity scheme is the best and easiest road to success. The man that seeks for his customers will make sure progress, while he who expects customers to seek for him is certain to see not only disappointment but a dwindling bank balance. Then be wise in time and advertise.

The rapidity with which disc records have grown in pnblic favor is simply marvelous; yet it is far from surprising when one reviews things. Many claim that the reproduction of a disc is far superior to the average cylinder record. Be that as it may, there is certainly a tremendous increase in the number of adherents in support of this claim. Price is another consideration. In some cases discs are cheaper than cylinders, and yet play an eqnal if not greater length of time. In conversation, a large mannfactnrer of both records stated that even this week had shown a sudden and great call in the direction of double-sided discs not only in England but all over the continent. It is so remarkable that only this style record will appear in his list for this month. Cylinder sales are good. There is, however, a decided advance in the sales of disc machines, and this must to some extent explain the very busy condition of most disc record factories.

Edison Bell October Records.

Edison Bell's up-to-date dealers' parcel of October records will be ready about the 12th of September. The list contains some very fine selections, notably a 'cello solo of Van Biene's "Broken Melody" by Senor Arnold Foldesy, also "Ave Maria," by Mme. Jourelli, Madrigal from "The Mikado," by the Meister Glee Singers, and many others of equal merit.

Pathé Freres Report.

Messrs. Pathé Freres state that the demand for their new 8½-inch, double-sided disc is excellent, and as they become more widely known there is not a doubt but that the sales will increase accordingly. The price is 1s. 6d.; that covers two splendid selections, well recorded, and which play from two to three minutes each. Machine sales are satisfactory, all things considered.

Living Pictures of Bird Life.

Messrs. Richard and Cherry Kearton have eclipsed their natural history photographs by some unique cinematograph films of bird life, which were recently exhibited at the Institute of Journalists, London. They included records of the home life of such shy and wary birds as the sparrowhawk and merlin and illustrations innumerable of chaffinches, whitethroats, skylarks and pipits, who were shown on their nests feeding and brooding their yonng. "We have," said Mr. Kearton to The World's representative, "been engaged for the last three or four years upon these living picture stndies. As you may imagine, the difficulties have been enormous. In many cases we have been obliged to bring the lens within two or three feet of the nests without frightening away the birds. Our chief trouble has been the noise of the machine. We have partly obviated this by placing it in a felt-lined box. Before essaying a film we have had to accnstom the birds to our presence in this way; we have a small tent, painted green and covered with twigs, in which the bioscope is concealed. The lens protrudes through a tiny hole. This disguised tent we bring, day by day, nearer the nest until we obtain the right position. We are now endeavoring to obtain phonographic records of the singing of birds, placing machines for the purpose in the boughs of trees. But so far, the hiss of the mechanism has made the birds pause in their songs to listen to the strange sound. We cannot work this as in the case of the cinematograph, but in time we hope to obtain a more silent machine."

Edison Bell New Phonographs.

There is a good deal of interest centered just now around the Cheapside store of the Edison Bell Phonograph Co., where a most attractive window display holds the attention of passersby. It consists of an exhibition of the twelve new phonographs issued as prizes in connection with the recent competition for naming these machines. A card attached to each prize announces the winner's name. The idea will no doubt produce good results from a publicity point of view. By the way, I am informed that the first consignment of the new phonographs has been received from the factory, and deliveries will now proceed apace. As a sign of the great interest taken in these instruments, over 3,000 sample orders have been placed by traders in the United Kingdom alone, while several hundred are on order from the colonies and other foreign conntries.

A Correction.

In the course of conversation, Mr. Hough, managing director of the Edison Bell Co., complained of a very regrettable mistake which crept into his advertisement in our July issne. The last paragraph, instead of reading "America and America's Great Man," according to Mr. Hough's copy, should have read "America and America's Great Men." We won't blame the printer, but in expressing regret for the mistake we trust that no wrong impression has been created.

Premier Mfg. Co. Registered.

The Premier Mfg. Co., Ltd. (offices 81 City Road, London) was registered July 30, with a capital of £10,000, in £1 shares, to carry on the business of phonograph, gramophone and record manufacturers, etc., and to adopt an agreement between C. R. Johnstone, W. I. Forse, J. Baker and G. C. Hallett, of the one part, and the Premier Mfg. Co., Ltd., of the other part. There was no initial public issue.

To whom all inquiries should be addressed

FROM OUR LONDON HEADQUARTERS—(Continued).

False Report About Edison's Health.

A cable just to hand in London announces that Mr. Edison is suffering from nervous collapse, his condition being somewhat serious. The news has occasioned many expressions of sympathy from members of the English trade, which, without doubt, one and all will echo the wide world o'er. Our united wish is for his speedy recovery.—[We are pleased to say there is no foundation for this cable report. Mr. Edison is enjoying splendid health.—Editor Talking Machine World.]

An Edison Bell Announcement.

As a result of the reduction in price of Edison records to one shilling, Edison Bell have issued an important circular announcing a reduction in price in favor of their "up-to-date" dealers, to take place from the first week in September. At the same time a warning is issued as to the cutting of prices. Among other reasons against this practice, it is pointed out that records, for instance, by Lionel Brough, will probably never be repeated, in consequence of the state of health of this grand old comedian, and as the public want the record that pleases them, there is not the slightest need for a salesman of any capacity losing the legitimate profit the public are ready and willing to pay. In future, prices will be strictly enforced, even to the point of legal action against all offenders brought to the notice of the Edison Bell Phonograph Co.

Sterling Record Wins Prize.

Intimation is just to hand that at an important competition in vocal records held at Bedlington last week, the Sterling Special Record, No. 877, "Ora Pro Nobis," by Alan Turner, won the first prize. The marvelous tone of the record, and the musicianly singing of Mr. Turner quite captivated all present. This is but one of their many successes under competition, and we must congratulate the Russell Hunting Co. on possessing such an excellent recording expert as Russell Hunting, to whom all credit is due.

Zonophone Factors in New Quarters.

Messrs. Lockwood, factors of the popular Zonophone record, announce that they have vacated 88 Chiswell street in favor of larger and more convenient quarters at 48 Moorfields, E. C.

Praise for Columbia Record.

The Columbia Record for August is to hand. It is brimful of interesting matter for Columbia dealers, who should see that they are on the list.

The New Australian Tariff.

The new Australian tariff gives an approximate average of 10 per cent. in favor of Great Britain. It is computed that the annual value of this preference will reach to a total of £1,500,000 at least.

Canadian Imports to Great Britain.

In the last twelve months Canadian imports from Great Britain increased by £4,000,000, while exports decreased by £1,000,000. Imports from the United States increased £8,000,000. The total trade of Canada was £128,000,000.

First and Final Dividend.

The first and final dividend of 2s. 10d. in the pound has been paid by the official receiver on behalf of the British Phonograph Industries, Ltd.

The New Klingsor Cabinet Disc Machine.

The new Klingsor cabinet disc machine, as advertised elsewhere in these columns, is a distinct novelty in many ways. It is not a hornless machine, but is fitted with a specially shaped funnel which extends from the tone arm upwards through the cabinet and is therefore not visible, excepting from the mouth when viewed with the doors open (see illustration). The particular feature of the machine, however, lies in an ingenious soundboard arrangement over which is fixed a steel frame carrying pianoforte strings which stretch across the mouth of the horn. The sound waves are thus thrown directly on the wires, with the result that the reproduction is "musically strengthened" and all metallic tone eliminated. There can be no doubt that the "Klingsor" instrument will be as great a commercial as it is a scientific success. H. Lange's successors, 21 Little Portland street, London, are the sole representatives for the United Kingdom and colonies. In conversation, Mr. Maurice, managing director, stated that they are experiencing a very gratifying demand for their invention, which he hopes to personally introduce to America shortly. He will visit New York either in October or November.

Charged With Forcible Entry.

George Wilson was charged at Bow street police court with forcibly entering the premises of Pastimes, Limited, Strand. Prisoner stated that he had nothing belonging to Pastimes. It was his intention to get into the jeweler's shop next door. He will now have to postpone his desire for a few weeks!

Stimulators to Lovers of Aquatics.

Quite a number of would-be Channel swimmers have made recent attempts to cross the twenty-one miles of water between Dover and Calais, and while these enthusiasts resemble one another in the intensity of their desire to get across, the means by which they hope to ease the monotony of the passage differs considerably. Wolffe, for instance, declares that he never swims better than when he has the shrill strains of the bagpipes in his ears. Burgess, on the other hand, takes a gramophone with him to beguile the tedium of his swim. He finds that classical music goes well with his famous overarm stroke. The four members of the city police force who intend to do their Channel swim on the relay system, will, it is rumored, be spurred on to further effort by short sharp blasts on constabulary whistles. Holbein takes no music with him but he likes to be talked to occasionally. Other swimmers like to be told funny stories when they are in the water, and it is suggested that a "cross channel Limerick competition" should be organized. Thinking out bright fifth

lines would surely keep the swimmers from worrying about their distance from the shore.

New Sovereign Factors.

Cooper Bros., of Goswell Road, are now factoring the now well-known "Sovereign" record.

Simpson & Co. to Move to Larger Quarters.

Messrs. Simpson & Co., the Shoreditch factors, will be moviug to larger premises at No. 1 New Inn Yard, Gt. Eastern street, in the near future.

Sterling "Special" Records.

The seventeenth list of Sterling "Special" records, issued for the month of August, contains over forty selections of vocal, descriptive and band pieces. Their high staudard of reproduction is well maintained.

Leading Men Away on Vacation.

Many leading men in the talking machine industry were away on holiday during the last week in August, notably Mr. Sterling, of the Russell Hunting Co.; Mr. Frauk Dorian, Columbia Co., and Mr. John Nottingham, of the American Talking Machine Co.

General Phonograph Co.'s New Styles.

The General Phonograph Co. have issued a new machine styled the "White" Leader Phonograph. It plays three records with one winding, and retails at three guineas, with liberal discount to the trade. A handy and practical machine, which will create a good demand.

British Sonogram Co.'s Repertoire.

The British Sonogram Co. have uow a fresh and up-to-date repertoire of selections recorded under their improved system. The lists will be forwarded with full particulars of machines and prices upon application.

Edison-Bell vs. National Co. Litigation.

The case of the Edison-Bell Consolidated Phonograph Co., Ltd., v. the National Phonograph Co., Ltd., tried some time back, on a point of alleged libel, resulted in a win for the E.-B. Co., plaintiffs, with an enquiry as to damages. When the matter came up before the official referee, defendants moved for the production of the plaiutiffs' books and papers, or in the alternative for an affidavit of documents. The latter was ordered by Justice Neville, and it is this that the plaintiffs appealed against. The question revolved round the safeguarding of traders' books against rivals who it was alleged, could do irreparable damage by seeing the customers' names, etc. Lord Justice Kennedy said that as damages were claimed, defeudants are eutitled to find out what the damages are based upon, and that is these books. There was much argument between both counsels and the judge, which culminated in the appeal beiug dismissed. Lord Justice Kennedy said there ought not to be discovery which might be injurious except where the justice of the case required it. Iu this case there would be a right not to make a discovery of parts which the plaintiffs could honestly swear did not relate to matters in the action. Clearly it would be something like a denial of justice, if, because it might be inconvenient to the plaintiffs that the names of some customers and their addresses be exposed, the claim could not be tested by the defendants.

Amending the Companies Act.

A bill has been passed into law for the amendment of the Companies Act, which, by affording fuller information concerniug public companies and by other provisions, will secure a greater degree of protection to creditors, shareholders, and the public generally.

To Amend Patent Law.

The existing law relating to patents and designs is to be amended with a view specially to restraining the abuse of monopolies and to strengthening the provisions in regard to the revocation of British patents which are worked abroad, but which are not adequately worked in this country.

The Odeon Co.'s New Catalog.

The Odeon Co. have just issued a very handy size catalog coveriug the complete issue of all records up to August this year. A special feature is the index, under which any style of record can be instantly found. The Odeon Co. draw special atteution to their ever-increasing list of world-renowned artistes, many of whom have appeared at Covent Garden.

Musical Flower Garden the Latest.

One of the many striking novelties secured for the Mammoth Fun City, which opens at Olympia next Christmas Eve, is stated to be nothing less than a musical flower garden, with picturesque flowerbeds and rose bushes giving forth uot only fragrance but sweet sounds.

British Made Edison Records.

British-made records will shortly be on sale from the National Phonograph Co.'s new factory at Willesden, which will be hard pushed to supply the enormously increased call for the Edison records at one shilling.

Japan's Trade "Boom."

According to a recent Consular report Japan's trade in 1906 showed a very great change in the balance of imports and exports, the former decreasing by £7,120,711, and the latter increasing by £10,435,090. Of the total foreign trade of £86,009,190, an increase of £3,314,379 over 1905, the British Empire's share was £24,713,178, a decrease of nearly £3,000,000. Japan brought into force a very high protective tariff in October, 1906.

Prince Welcomed by Phonograph.

The phonograph played an important part in the welcome home of Prince Borghese at an entertainment provided by the Parisians in his honor.

Taxes on Catalogs.

Considerable inconvenience and loss has been caused to British manufacturers on account of the recently imposed taxes levied by some British colonies on catalogs received through the post. Confusion has arisen both in regard to the nature of the packages to be taxed and the methods of collecting the taxes. In some cases, says the Music Trades Review, there exist no

The "KLINGSOR" Cabinet Disc Machine

No. 165.

The novelty and advantage over all other Talking Machines lies in the following points in construction: (1) No unsightly Horns; (2) a handsome upright Cabinet and Machine combined; (3) perfect running, and complete lack of scrape and noise, as well as the following principal features:

The combination and use of the stringed piano wires and double sound board. By this scientific invention the instrument loses all harsh and metallic tone, and the sound waves being thrown on the wires, the volume is doubled without the usual corresponding harshness. There can be no doubt that this "KLINGSOR" Machine will be as great a commercial as it is a scientific success.

The Cabinet can be delivered in any wood and made to any size or design, to fit any space.

reasonable facilities for paying the duties before the packages are posted, and this has resulted in a very large number of catalogs being undelivered and returned or destroyed, with consequent loss of business to British firms. We are informed that during the past few months the Manufacturers' Association of Great Britain have received several hundreds of inquiries from members and others in regard to the matter, and that that body are now making representations with a view to inducing some of the colonial Governments to adopt more convenient methods of collecting these taxes. Meanwhile, the Manufacturers' Association have prepared a memorandum respecting tariff duties for the guidance of manufacturers, from which the following information on the subject is taken.

In agreement with the Customs Union Convention of 1906, there is a common tariff for the Cape of Good Hope, Natal, Orange River Colony, the Transvaal, and Southern Rhodesia, under which the duty on catalogs, price lists, etc., has been fixed at the rate of 25 per cent. ad valorem, or 2d. per pound, whichever may be the greater, except when the packets are less than eight ounces in weight, in which case they enter free. The tax is collected as a surcharge, there being no arrangements at present for paying it in Great Britain, and the best method to adopt when forwarding catalogs through the post is to remit the duty on each packet to the Postmaster-General in the capital town in each colony, and mark the package "Duty paid to the Postmaster-General." As, however, English stamps will not be accepted in payment of duty, a postal or money order must be remitted.

The Australian colonies have one common tariff, under which catalogs, price lists, etc., are charged with a duty at the rate of 3d. per pound. The duty is waived on all packages sent through the post which do not exceed four pounds in weight. On packages heavier than four pounds duty should be remitted by postal or money order to the Deputy Postmaster-General of the State to which catalogs, etc., are addressed, and each package marked as above mentioned. If this is not done, the duty will be collected as a surcharge.

The duty on catalogs sent through the post to Canada is 5d. per pound, and those requiring to prepay the duty can do so at any district post office in Great Britain.

There is no tariff duty on catalogs sent by British firms (other than printers) to New Zealand, excepting on leaflets and circulars sent out in quantity for distribution.

Where a large number of catalogs are required to be distributed in any particular colony, the Manufacturers' Association recommend that catalogs should be forwarded in bulk to an agent on the spot, who should be requested to pay the duty and repost them locally.

Series of Odeon Talking Machine Concerts.

The talking machine has always "played" an important part in the cause of charity, but never before to such an extent as that assured by the Sterling & Hunting Co. scheme of concerts, the whole proceeds of which are to be devoted towards the cost of building a country home where the slum cripples of London may find rest and sympathy. Lord Mayor Treloar is doing a grand work, but there is a good many thousands of pounds sterling yet to be gotten before the realization of his scheme is assured. Messrs. Sterling & Hunting, at great cost to themselves, have very generously arranged and inaugurated these concerts at some of the best of London halls, and it only remains for men of the talking machine trade to support the movement by publishing the news far and wide, so that the talking machine user and others may be influenced to buy tickets for such a praiseworthy cause. This is the preliminary announcement:

The Right Hon. the Lord Mayor has given his patronage to a series of twenty concerts to be held in as many halls in the Metropolitan area, promoted by the proprietors of Odeon records. The Odeon Co. will defray all expenses, and the proceeds will be handed to the Lord Mayor for his Cripples' Fund. The following letter has been received from the Lord Mayor: "Dear Sirs, the Lord Mayor will be pleased to give his patronage to the concerts you propose organizing on behalf of his fund, it being understood that all the expenses are generously borne by your firm and the proceeds given to the Lord Mayor's Cripples' Fund. I should like you to convey to the directors of your company the grateful thanks of the Lord Mayor for their most generous help. Believe me, yours very truly (signed) Ernest Flower."

AMERICAN TALKING MACHINE CO.
31 Tabernacle St., London, Eng.

PHILIP NEALE,
PHONO. EXPERT,
5 Chalk Farm Rd. LONDON, N. W.

Talking Machines of every description repaired. Special terms to the trade. City address and price list on receipt of postal. No job too small—no job too large.

FROM OUR LONDON HEADQUARTERS—(Continued.)

The programme of these concerts will be composed of Odeon and Fonotipia records of familiar English songs and music by popular artistes. The first concert will be given at Holborn Town Hall, on Friday, September 6. The prices of admission will be 6d. and 1s. Blocks of ten tickets will shortly be on sale throughout London, and it is hoped that those who have not yet contributed to the Cripples' Fund will take this opportunity of doing so by purchasing tickets, either singly or in blocks.

Inquiries concerning these concerts, or for tickets should be addressed to the Hon. Sec., Concert Committee, 13, 15 and 17 City Road.

A special appeal will be made by the Lord Mayor through the medium of a Sterling cylinder and Odeon disc record, to make which necessitated a special journey of the recording staff to Harrogate, where his Lordship was staying, and these two records will shortly be on sale to the public. With the object of still further increasing the amount which we shall hand to the Lord Mayor, said Mr. H. C. Ridout, the honorable secretary, we have determined that the whole of the proceeds from the sale of the "Sterling" appeal record, together with half that from the Odeon record, shall also go to the cripples, and, moreover, as a further aid, we shall distribute bills announcing a Limerick competition, which will close October 7. The entrance fee is sixpence, half of the total amount received will go to the Lord Mayor, while the other half will be divided among those competitors whose line is judged among the winners. Here is the Limerick, the last line to which you must supply:

Said the Lord Mayor, Sir William Treloar,
Of money I want a lot more
For my poor crippled ones,
London's Daughters and Sons.

* * * * * * * *

Such is a brief outline of the scheme; that there will be interesting developments we are sure, yet no more than the enterprise deserves. It would be hard to calculate the inestimable benefits to the trade generally these series of concerts will bring about. There is a good deal of prejudice to overcome among certain classes of the public who—no doubt, through ignorance—still look upon the talking machine as just a musical toy. They will be converted this time for sure. Odeon records themselves will be a great factor toward this end, and in conjunction with the great support accorded the movement by the general press throughout the land, it must undoubtedly bring the most skeptical to regard talking machines in future as real musical instruments.

Russian Authorities Suspicious.

The foregoing depicts the talking machine in the best possible role, yet we have a very strong contrast in the report from Warsaw, Russia. The large number of murders and other violent acts, together with the volume of seditious literature which is in constant circulation, must have produced a distinct attack of nerves among the Russian police force, so much so that they have again cast suspicious eyes toward the Columbia store in that city. Another search was recently made for alleged prohibitive records—which, of course, were not to be found. The Columbia's Warsaw manager reports that no particular damages was done, but they were naturally greatly inconvenienced by the amount of trouble occasioned through the store being turned upside down, so to speak, by the very systematic search the police subjected them to. Many of our readers will no doubt remember that it was only a few months back the manager at this particular Columbia branch was placed in prison a whole day while the police searched the premises. They found nothing incriminating, and therefore he was released.

A Striking Poster.

The "Odeon" Co. have just issued for the use of their dealers a striking poster embodying the reproduction of a "sketch" page photographic study of Madame Emmy Destinn. It is an unusually dramatic study, as indeed befits an artiste whom the Sketch described as "our greatest dramatic soprano." These showcards are printed in red and black and mounted for hanging. Dealers who will exhibit them—and they are exceptionally attractive—should apply for copies. They may also be obtained without the hangers for posting on outdoor boards, etc.

In Their New Quarters.

Messrs. Sterling & Hunting, Ltd., announce that after many vexatious delays, they are immediately taking possession of their new premises, 13, 15 and 17 City Road, Finsbury Square. Thus the two great allied companies owning the "Sterling" Cylinder Records ("the record that's half an inch longer") and the "Odeon" Double-Sided Disc Records, will at last be housed in the same block of buildings.

Odeon Three-to-One Exchange.

Dealers are particularly requested to note that the "Odeon" Three-to-One Exchange offer definitely expires on September 15, 1907. This exchanges only applies to new unscratched and unbruised records, which may have accumulated through overordering.

International Linguaphone Co.'s Exhibit.

Percival Dennis, manager of the International Linguaphone Co., Ltd., 13 City Road, has written the editor of this department under date of August 27, as follows: "Dear Sir—We notice in this month's issue of The Talking Machine World that a certain phonograph company is mentioned as being the only firm in the talking machine trade who had a stall at the recent Business Exhibition at Olympia. We beg to point out that our company also exhibited, and demonstrations were given before crowded audiences constantly during the whole run of the exhibition. The novel method of teaching languages by means of the phonograph seemed to appeal to most of the cosmopolitan people who visited the

FROM OUR LONDON HEADQUARTERS.

show; in fact it was stated by several to be one of the most interesting exhibits there. We shall be greatly obliged if you will draw attention in your next issue to this omission in your report. It is possible that the error occurred owing to the fact that our stand was not taken until after the official catalogue was printed. You will see in the report of the exhibition in this month's Organizer, under the heading of 'An Automatic Tutor,' they say: 'The Linguaphone is in brief the phonograph applied to the teaching of modern languages, and for those students working without an instructor it offers a good method of acquiring a correct pronunciation. The lessons as given by the instrument are certainly most clear and distinct.' It may interest your readers to learn that we are shortly issuing an outfit of English speaking records, to enable the French, German, Italian and Spanish public to learn English at home instead of being put to the heavy expense of journeying to this country in order to acquire a thorough knowledge of the language. The records will be made in the same manner as the present 'Linguaphoue' records, viz.: by the well-known 'Sterling' Gold Moulded process, which alone insures a continuance of the great success that has resulted since the company was formed, a little over a year ago."

Some Notes from Germany.

The German Cronophon Co., Ltd., have been entered in the Darmstadt Commercial Register. The company propose to manufacture and sell music automatons, etc., and is privileged to acquire similar enterprises or patents, also to participate in like concerns or to act as agents for them. The capital is 40,000 marks, and the business managers are George Herwich and Heinrich Moeller, both of Darmstadt.

The German Bardeon Co., Ltd., a Berlin concern, have been incorporated and entered in the register of the Berlin Chamber of Commerce, with the purpose of manufacturing and selling phonographs. The business managers are Heinrich Aulhorn, of Magdeburg, and George Schoenwald, of Berlin.

The "Merry Widow" Waltz.

The entire Continent of Europe having become the victim of the strains of the "Merry Widow" waltz, it is now pretty evident that Great Britain has succumbed also. Indeed, the critics of this new musical play at Daly's Theater describe it as the greatest hit of the piece. One in particular stated it as having "set the seal of unqualified success upon the proceedings," and in referring to the wonder-working waltz, said: "It is a melody, langorous, ravashing, delicious, once heard never to be forgotten." Almost simultaneous with these flattering criticisms comes the announcement that the "Odeon" Co. have issued a special set of "Merry Widow" records, headed, of course, by the much-demanded "Merry Widow" waltz (Ballsirenen, to give it its native name), and including the most important orchestral selections from the play. We are informed that the demand is already phenomenal, though arrangements have been made for great sales.

The International Neophone Co. Expert.

O. H. Waetzig, whose photo we produce herewith, is well known in the phonograph trade, especially on the Continent. He is at home in nearly all the big capitals in Europe, where he

O. H. WAETZIG.

has held important positions. He is a valuable man for the International Neophone Co., Ltd., not alone through his capacities, but also being an excellent linguist, speaking three or four continental languages fluently.

"ROBINSON'S" The Talkeries
213 Deansgate
Established 1904 MANCHESTER, ENG.

NORTH OF ENGLAND NOTES.

Central Conditions in the North of England Interestingly Presented for the Benefit of Our Readers in That Section of Great Britain.

(Special to The Talking Machine World.)

Manchester, Sept. 3, 1907.

Owing to the cotton boom work has been very plentiful in the North for some considerable time past, prosperity in the mills and other industries (such as engineering, electrical, etc.), for which Lancashire and other centers are famous, has greatly helped the talking machine business during the past summer season. Speaking generally wages have ruled higher all round, money has been fairly plentiful, so that there has hardly been what is genera'ly known as a "slack" time.

The future is looked forward to with every sign of continued prosperity, and dealers are getting in their stocks for 1907-8 season, feeling assured that the trade will be larger than ever.

Disc goods sales are increasing; in some shops phonos are not so much in demand, buyers perhaps appreciating more than they did the disc principle of reproducing, compactness of storage, etc., besides the comparatively low prices at which a number of very good disc machines can be now purchased. So far as we have seen, the new styles, except for a leaning to greater solidity in construction, are not recognized by any very special patterns or radical alterations from last year. Here and there is a small novelty, but nothing very startling.

The aim of all manufacturers appear to be to effect improvements in the motors and mechanism in all small details towards making them more reliable and regular; also to run a larger number of records than before. This is an absolute necessity, some of the 12 in. requiring a running movement of 3 to 4 minutes, and others larger still, 5 minutes or over.

In machine cases and cabinets makers are also offering better construction and higher finish than in earlier models. Flower horns appear to be on the wane, the original brass horns taking their place once more. This may, however, be again altered later on by the placing upon the market of a new collapsible folding flower horn. The sizes of the larger patterns have always created a difficulty for purposes of transit. We may now hope that compactness will be a "talking point," and a "selling point" to the successful salesman, besides "a beneficial transit point" to later on purchasers.

In disc records several new ones now appeal to the public. Those that have already grown into popularity, such as Odeons, Zonos, etc., have no remarks from us, the sales still increasing, other records such as the "Favorite" are rapidly gaining in favor with all classes of buyers for two distinct reasons, viz.: the price is very popular for a first-class "composition" record, as well as to the fact that the very highest class music is offered to connoisseurs besides songs, duets, trios, etc. Pathé and Beka "Meister" records 12 in. are also forging ahead and good business is expected with them also this season.

A magnetized needle is the latest novelty to tempt the public, the inventor claiming that through its magnetic attraction all particles of steel (as worn through the friction upon the record) are taken up en route, leaving the sound wave on the record perfectly clean, we shall, however refer to this again later.

Regarding prices in some cases these have been advanced owing to increased cost of materials, wages, etc. Against this, however, manufacturers having not had to spend so much this year (as they did last) upon experiments, and there being no radical alterations, some have quoted loss, believing that popular prices within the reach of all will mean a larger trade.

In cylinder records, Edison, Edison-Bell and Sterling will rule, the first named more particularly because they have been reduced to the popular price of one shilling (the same as the others) and which will tempt the public to buy more freely. Competition, however, will be keen, but there is room enough for all.

Holidays will be nearly over by the time this is in print and sales will begin in real earnest. Several of the merchants of Cottonopolis were in London recently picking up their most desirable line for later trading.

AN OPPORTUNITY

For Health and Wealth in the Great Southwest

The Southwest is to-day the most fertile talking machine field. Houston, the largest city in Texas, enjoys very low water rates and is the natural distributing point. Here the Texas Phonograph Co. has developed a large and profitable business, which possible future competition cannot take away owing to its advantageous location. Lines handled are Edison, Victor and Zonophone; also recently acquired exclusive agency for Aeolian, Weber, Everett, A. B. Chase and other pianos.

Owing to purely personal reasons requiring my family to move North I desire to sell all or a substantial interest to a competent talking machine man. It presents an opportunity for some one to step into a prosperous going business of over $100,000 per year upon exceptionally favorable terms. Address H. M. HOLLEMAN, Care Broadway Central Hotel, New York City.

Home address, Houston, Tex., after Sept. 20.

FOR SALE

Seven hundred Lyra machines. will sell below manufacturer's cost. All in original packages. Address X, Talking Machine World, 1 Madison avenue, New York.

TALKING MACHINE JOBBERS' NATIONAL ASSOCIATION

Now an Established Fact—National Organization of Talking Machine Men Springs Into Life at Buffalo—The Eastern and Western Jobbers' Association Merge Into a National Body—James F. Bowers Chosen President—A Strong List of Officers—Members of the Executive Committee—Great Interest Manifested in the Association—Members Propose to Put Their Shoulder to the Wheel and Make the New Association a Power in the Trade—Some Interesting Speeches Made at the Banquet Which Was a Great Success in Every Way.

(Special to The Talking Machine World.)

Buffalo, N. Y., Sept. 9, 1907.

The talking machine men from various sections of the country began coming into this city Sunday, and by Monday morning in the lobby of the Iroquois Hotel could be seen a number of prominent jobbers from the East and West, who are identified with trade interests in a large way. The assembling of these gentlemen marks an epoch in the history of the talking machine business in this country.

Monday's Session.

At 10 o'clock the Eastern Talking Machine Jobbers' Association was called to order by President Andrews, and a number of matters were discussed and the usual business routine followed prescribed by the by-laws.

W. D. ANDREWS, VICE-PRESIDENT.

In an adjoining room in the Iroquois Hotel the jobbers of the Central States held their meeting with President Ashton in the chair.

The main topic discussed at the meetiugs, aside from the regular routine business, was the advisability of forming a National Association. This was the uppermost thought in the minds of the talking machine men noticeable at both meetings. It was decided to have a combined session of the two organizations Monday afternoon, at which time matters were discussed informally in relation to talking machine interests and the necessity of forming a National Association.

Committees were elected to draft a constitution and by-laws to be presented for consideration at a joint session of the Eastern and Western jobbers on Tuesday morning.

A number of trade matters in connection with the association were also discussed, but one dominant note of the meetings of two associations was the desire to crystallize the entire talking machine interests into a National Association.

Tuesday was therefore an important day iu the history of the talking machine affairs of this country, because it was the time when the National Association sprung into existence, and which is destined to become a great factor in the talking machine affairs of this country.

Tuesday's Meetings.

The Nominating Committee which was chosen on Monday consisted of Messrs. W. E. Henry, L. McGreal, C. E. Goodwin, W. D. Andrews and J. A. Strassberger.

The committee selected Monday to draft a constitution and by-laws to submit for the consideration of the members on Tuesday consisted of the following: Messrs. J. F. Bowers, J. N. Blackman, C. W. Hickok, E. P. Ashton, P. B. Whitsit, C. V. Henkel, E. H. Uhl, A. H. Jacot and E. J. Heffelman. These gentlemen devoted considerable time during Monday evening to the preparation of by-laws, which were presented

J. F. BOWERS, PRESIDENT.

for the approval of the members on Tuesday morning.

OFFICERS OF NATIONAL ASSOCIATION ELECTED.

At 10:30 James F. Bowers, who had been chosen temporary chairman, called the meeting to order and, after the report of the nominating committee, the election of officers of a National Association followed, the followiug gentlemen being chosen to fill official positions for the ensuing year: James F. Bowers, president; W. D. Andrews, vice-president; Perry B. Whitsit, secretary; Louis Buehn, treasurer.

The following executive committee was also elected: L. McGreal, C. V. Henkel, C. W. Hickok, W. E. Henry and E. H. Uhl.

The constitution and by-laws were then read, and each article taken up and considered carefully and finally adopted. Very slight changes were made in the original draft presented for the consideration of the association.

It was decided to hold the annual meeting in September, at which time the annual election of officers will take place.

It was concluded, after discussion, to place the annual dues at $15, payable semi-annually.

STATE ASSOCIATIONS MERGE.

At about 1:30 a recess was taken until 3 o'clock, when the first meeting of the new organization, designated as "The Talking Machine Jobbers' National Association," assembled. During the interim there had been a meeting of the Eastern Jobbers' Association and the Central States' Association, at which time it was voted to merge into the national organization, so that to-day the talking machine men of the country control a national organization which is already well on its way toward great power, with a substantial membership and officers who are well fitted to carry on splendid work in the promotion of the Association's interests during the next year.

LOUIS BUEHN, TREASURER.

James F. Bowers, the new president, is a splendid organizer, a skilled parliamentarian, and will unquestionably do excellent work in behalf of the organization. He will be backed by a fine coterie of men, who are enthusiastic association supporters, and there seems to be no reason why this national organization should not become a tremendous power in the maintenance of the talking machine interests on a high plane.

Much important business was transacted by the new body before its adjournment, but this, of course, was not open to the press.

BANQUET TENDERED BY HAWTHORNE & SHEBLE MFG. CO.

Tuesday night the visiting talking machine men were tendered a banquet by Hawthorne, Sheble & Co., the well-known Philadelphia manufacturers. This was given in the Iroquois. Ellsworth A. Hawthorne and Horace Sheble were both present and cordially greeted their guests as they assembled in the beautifully decorated hall.

Ellsworth A. Hawthorne called the guests to order at 8.55 o'clock, stating that the firm of Hawthorne & Sheble Co. fully appreciated the distinguished honor it had this evening of being the first ones to entertain the members of the National Talking Machine Jobbers' Association, and introduced Mr. E. P. Ashton, who said:

MR. ASHTON'S SPEECH.

What the Jobbers Associations Have Accomplished.

"Mr. Toastmaster and Gentlemen—As you all know my subject is 'Organization of Associations.' In 1902, I believe, Mr. McGreal, of Milwaukee, was the originator or conceiver of the thought of a talking machine association. He called a meeting in the Victoria Hotel in Chicago. I believe there was only one meeting. The officers elected and the ideas which came to the members were such that no association could live and adopt them, either the officers or the suggestions. In 1904 I was in Columbus and took this matter up with Mr. Whitsit. We had several conversations on the subject, and I had supposed that it was lost, but it seems that Mr. Ball and Mr. Whitset continued. In November, 1905, a meeting was called in Columbus, looking toward the organization of an association, and a meeting was called in Cincinnati to perfect a temporary organization and elect temporary officers. We started out to get nineteen members. The next meeting was called in Pittsburg, because we found that our members wouldn't come to us and we had to go to them. We had made up our minds that we were going to make a success of this association business. That meeting in Pittsburg also was called for the sake of taking up the subject of excessive freight on advance records. We were informed that it takes at least nine months to a year to accomplish what we asked, but we were assured that we would be given attention. It took thirty days. The next meeting was in Cleveland, in June of 1905, where we went also to get members and took up the subject of regulating if possible the prices to dealers on supplies. The next meeting was in Detroit for the selection and election of permanent officers. The next meeting was in Indianapolis to take in as we went west the Indiana jobbers and to further thresh out the subject of supplies. The next meeting was in Chicago in February. We went there to get members and to further thresh out this subject of regulating prices if possible to the dealers on supplies. The next meeting was held in Chicago because we wanted to get members west of the Mississippi and to take up the subject of mail-order business, and at that time the National Piano Association met in Chicago, and a great number of the talking machine men would be there, and in order to save expenses we went back. This meeting was called in Buffalo to meet the Eastern States Jobbers' Association. I cannot give you any of their history because I don't know it, but they were organized, I am told, something like a year and a half ago. I believe they had about the same experience we had. We came here to them and to see if it was possible to form a national organization. What result we have attained you are to judge. I think we have organized an association officered by the best men we have got in the talking machine business in this country, and that this association will be heard from one end of this country to the other. Gentlemen, I thank you." (Applause.)

HORACE SHEBLE'S REMARKS.

"The Jobbers' Associations from a Manufacturer's Viewpoint."

Co-operation of interests is old in its conception, but only in comparatively recent years have we seen its practical application so universally observed.

A mighty force seems to be at work somewhere impelling men on to greater achievements, and a prime factor that is regulating and controlling this impulse seems to lie in aggregation of interests, wherein unity of ideas has achieved a greater and broader scope than could possibly be secured through divided efforts.

GROUP OF TALKING MACHINE MEN SNAPPED IN FRONT OF SOLDIERS' MONUMENT DURING CONVENTION DAYS.

An association such as you gentlemen have conceived and successfully carried on presents many phases for argument for and against its usefulness. It can be made a pronounced success, or it can result in dismal failure, either end being accomplished largely through the purposes for which such an association is designed, the methods pursued in carrying it on and the interest and loyalty displayed by your members.

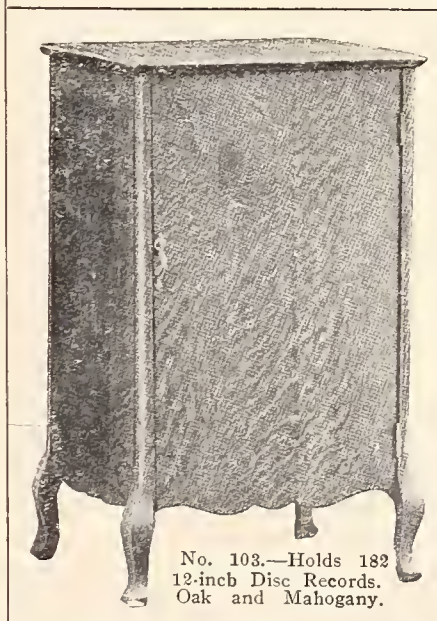
The most important thing a manufacturer has to consider after solving the intricacies involved in the construction of his product is to find a market for his goods, and in no line of manufacture is this problem more difficult than in the sale of talking machines and supplies therefor. Such goods being of a specialty nature require a different method of handling than those involved in what might be termed the staple lines. They require a thorough mechanical knowledge of the principles involved in their construction, attractive and appropriate surroundings to enable them to be advantageously displayed and a fund of energy and enthusiasm to assist in educating the public up to their advantages.

It is a somewhat difficult matter for a manufacturer to solve these problems alone; he needs assistance, and naturally looks to outside sources in order to obtain same.

A jobber certainly is the most rational means for a manufacturer to employ in order to assist in the proper distribution of his product. He (the jobber) represents in himself a community of interests. He, through his familiarity with the line, acquires the proper mechanical knowledge. The community of interests which he controls within his dealers supplies him with new ideas, as well as instils him with the proper energy and enthusiasm to properly conduct his end of the business. The manufacturer supplies the gun and the powder, and sometimes shows the target as well, but the jobber is the one who fires the gun, and the manufacturer must depend on him to hit the mark.

OUR UNEQUALLED LINE OF TALKING MACHINE

RECORD CABINETS



No. 103.—Holds 182 12-inch Disc Records. Oak and Mahogany.

EVERY DEALER should be sure and see this new line before placing his order for fall delivery. In interior and exterior design, in quality of workmanship and finish, in practical and everlasting utility, they surpass any other cabinets on the market.

DISC CABINETS

No. 100 holds 252 12-inch (each division holds 2 records back to back), Oak and Mahogany.

No. 247—Sectional Cabinet—holds 385 12-inch, Golden Oak. This has been a great success from the start, especially popular with those having a large library of records.

Don't Fail To Write Us About It

No. 101 holds 120 12-inch, Golden Oak.
No. 102 holds 180 12-inch, Oak and Mahogany.
No. 104 holds 252 12-inch, Beveled Front, Oak and Mahogany.

Catalogues and Prices sent for the asking

LOUIS BUEHN & BRO., 45 North 9th Street PHILADELPHIA, PA.

The forming of jobbers' associations may be viewed by the manufacturers from two standpoints, namely: Will such associations result in a larger volume of business and a safer business financially, or will such associations rise as a menace to the manufacturer?

The first can be solved through the purpose of the association, if they are faithfully adhered to. United effort brings forth interchange of ideas. No one man knows everything, consequently we can all receive direct benefit through learning and profiting by the experience of others. The best of us have times when our enthusiasm lags and we grow rusty. Constant association with others in the same line of business is stimulating; we are benefited, even though we are hardly conscious of it. In no way can a jobbers' association be more beneficial than through a properly conducted credit system. The jobbers are to a large extent supplying the capital for conducting the selling end of the talking machine business. They carry the multitude of small dealers, and to enable them to do so must carry a large stock of goods. Interchange of ideas on credits will undoubtedly strengthen the jobbers financially, and by so doing benefit both themselves and the manufacturers.

Relative to the second view that a manufacturer might take of such associations, no fair-minded one could draw such conclusions unless the jobbers, by their united actions, would give just cause.

It is the old problem of labor unions. In their conception they are Utopian; in their honesty of purpose to better their condition as a world factor they are to be commended. But when they attack personal rights or liberty of action in others they must be condemned.

There is no good reason why the relationship between the manufacturers and your associations should not be close ones. Each should depend on the other. You depend on the manufacturer to produce an attractive and salable article; he depends on you through your dealers, honesty of purpose and general enthusiasm, to find a consumer's market for his product. Your field lies largely in finding that market.

Frequently a jobber cannot understand why a manufacturer will not change his method of construction or selling plan so as to conform to the individual jobber's ideas, but he fails to remember that a manufacturer stands in the light of a composite picture, each individual idea is photographed, and while the original impression may be hard to recognize in the developed picture, still it is there, and, through the composite ideas comes close to the average.

The manufacturer can have but one idea in mind, namely—the most advantageous way of marketing his product. It is up to you, gentlemen, to assist him in the forming and carrying out of such plans. As individuals, your ideas and opinions undoubtedly differ, but as an association your composite ideas will have the rough edges worn off of them and their value be materially increased.

Let the jobbers and the manufacturers move hand in hand, each recognizing that every question has more than one side; that the manufacturer, as producer, must have the right to form the broad lines on which his product shall be marketed; that the jobber, as the selling factor, must have the right to suggest changes to such selling plans as his experience may show him are advisable. Suggestions which come to a manufacturer from individuals have much weight, as they are a single opinion, frequently with a selfish motive in view; but suggestions coming from your associations, which have been formulated after weighing from all standpoints, and contain some part of each individual's opinion, cannot help but leave their impression, and whereas a manufacturer may not always openly endorse your association's suggestions, still the impression has been made, and the manufacturer's opinion and future policy undoubtedly influenced.

I, therefore, in closing, would propose you drink a toast, namely—"May the policy of your associations and of the talking machine manufacturers, be so united in the future that the bond between the producing and selling factors will grow with hoary age."

TALKING MACHINE JOBBERS IN CONVENTION AT BUFFALO.

W. D. ANDREW'S SPEECH.

"The Future Aims of the Jobbers' Associations."

"Our Host and Mr. Toastmaster and Gentlemen—In arranging the program this evening you have assigned me to speak of associations. I am thankful to say that the word 'associations' has passed into history, and we now have an association. (Applause.) Let us hope that there never will be cause or occasion to use the plural again. In union there is strength, and let us always be united as one jobbers' association. By the amalgamation of the two associations it is possible now for every jobber in the United States to become one of us, and by so doing receive the benefit of our best thoughts, our best suggestions, and our best efforts as they are gradually worked out for the improvement of the business. At the same time he has an opportunity to give us his best thoughts and suggestions. All of these things help to make the jobber more liberal and not so narrow-minded. If we did not have these meetings occasionally we would become so narrow-minded that we would think there was no jobber on earth except ourselves; we wouldn't recognize a competitor; we wouldn't consider that they knew how to do business. But by meeting in this way and coming in contact with each other it broadens our views, it reduces our partiality, we are not jealous of our competitor, we are glad to come shoulder to shoulder with him and recognize the fact that he is capable of doing business and that he is doing business, and that we are doing business in the same territory and with the same people. Let us also work for the future of our association on very liberal lines. You will find that very few people like to be dictated to. Let us make all of our rules and by-laws optional so far as possible. Let us go to the manufacturers with suggestions, with requests and not with arbitrary demands. You will find that it is much easier to obtain what we wish from the manufacturers by suggestions and by plain arguments—that it is for their interest to grant our demands and our requests. If you say to a manufacturer that he must do so and so you will not get your request nearly as quick as though you offer him arguments that it is for his interest as well as our own that he grant us our request. The future aims of the association have been so thoroughly discussed in our meetings that I think further remarks in that line are unnecessary." (Applause.)

C. V. HENKEL'S REMARKS.

"The Advertising of Talking Machines."

"Mark Twain said," Mr. Toastmaster, "that a man can talk longer and argue more on a subject that he knows absolutely nothing about, and that is exactly my position. If there is one thing that I know less about than a great many others, it is advertising. I explained my plight to a friend who told me of a fellow down the street who would write me a beautiful speech, and I immediately made arrangements with that man but I made a mistake of a day, telling him to have it ready for me Wednesday morning and here it is Tuesday night. (Laughter.) However, I will try and not disappoint you. I will tell you as little as I know about advertising.

"Advertising, it seems to me, as far as it concerns the talking machine industry, is divided into three classes: the advertising done by the manufacturer, the advertising done by the jobber and the advertising done by the dealer. No one present can deny that the manufacturer is very

liberal in the matter of advertising but I don't think any of us will agree that he is any too liberal. We would like to see him spend all his income in advertising, because we would profit all the more by his doing so. This question is: What method of advertising the manufacturer can employ to the best interest of the jobber and the dealer? The manufacturers are spending thousands of dollars in magazine advertising, they have commenced to spend a considerable amount of money in newspaper advertising, local advertising. That I take it is what we want."

Mr. Henkel thought that the practice of advertising on the same page or in the same paper on the day that the manufacturer advertised the list of monthly records should be discouraged, for the reason that the advertisement is placed there for the benefit of the trade at large and not for the prosperous individual who has the money to pay the newspapers the cost of such publicity.

He stated that the advertising of talking machines from a jobber's standpoint is a very serious proposition. "I am not speaking now as a jobber advertising in a retail way, but advertising the fact that he is prepared to supply the necessary requirements for the dealer to do business. His mediums are limited to trade papers of which we have only one representing the talking machine interests. One of his mediums is circularizing. But the best advertising medium he has is the fact that he carries a large stock, that he can fill the orders of his dealers promptly and deliver them at least 100 per cent. of their orders.

"Advertising talking machines from a dealer's standpoint is also a serious proposition, the larger the jobbers the more they can advertise. The small dealer, however, is limited, and the best advertising that he has is his place of business, a neat store to attract people, a complete stock, and I want to say that that is the greatest medium that the manufacturer has. He spends thousands of dollars with magazines and newspapers but the best-paying advertisement are the jobbers and dealers who carry his goods and represent in a very thorough manner the article which he manufactures.

"Advertising, gentlemen, from a talking machine standpoint is keeping eternally at it. We all know who is President of the United States to-day. We can't forget that he exists. Can any of you gentlemen tell me who was the Democratic candidate for vice-president at the last election? How many? Raise your hands? Four—four out of sixty. There was the best advertised man in the United States and we all forget him to-day. It shows that advertising amounts to nothing unless we keep at it and keep at it and that is what we want to do, and we have got to keep the factories at it." (Applause.)

MR. BOWER'S SPEECH.

"The Relation of the Talking Machine to the Music Houses."

"The gathering in the City of Buffalo to-day, gentlemen, of the members of this trade I think is the beginning of a history-making era or epoch. The sectional lines which have, as it were, divided the trade for some time are wiped out. We have most excellent authority for saying

"'East is east and west is west,
And never the twain shall meet
Till earth and sky stand presently
At God's great judgment seat.

"'But there is neither east nor west,
Border, nor breed, nor birth,
When two strong men stand face to face
Though they come from the ends of the earth.'

"It is more than two strong men who have stood face to face, Mr. Toastmaster and gentlemen. It is a gathering of men from the East and from the West, who have stood face to face, and in the further language of the poet, 'They have looked each other between the eyes and there

SNAPPED AT THE BANQUET AT THE IROQUOIS.

tney have found no fault.' They have agreed on the formation of a national association. That is the subject I would like to talk about. I am the bulliest talker on the national association that you ever heard, but they have put me down on a tombstone proposition, and I am not good on tombstones. I wanted to trade with Whitsit and he said, 'No, I have troubles of my own.' (Laughter.)

"About the best illustration that I can give you, gentlemen, of the relation of the talking machine to the music house is embraced in the history of the talking machine in my own house. I think, with a few exceptions, it will apply or very readily can apply. A matter of nine years ago or so a very prepossessing, handsome, rosy-cheeked fellow by the name of Goodwin (applause) came into our place with a fake, with a confidence game. He called it a talking machine. There was very little hospitality extended the machine in the house. The hospitality did extend to Goodwin, as any of you who know the man can readily understand, and if you knew him as well as I do you could more deeply appreciate the fact. Goodwin came in the house and brought the machine with him, and so little did we think of it that instead of placing Mr. Goodwin on a salary we placed him on a commission. Practically what he got out of the machine he was to have. We had no confidence whatever in it, and not a great deal of respect for it. The man, after his manner, stuck and he told our people that he would make us like it. He began in a small way. I think he had a man or two with him, in a little corner of the house. The business attracted no attention whatever and secured but very little sympathy. That was nine years ago, gentlemen, roundly. If the business for the remainder of the year continues as it has up to the first of September we will do in talking machines in my own house over half-

(Continued on page 44d.)

Hook on!

Just write, "Send me the Record"

And you'll be on the subscription list.

And glad you did it.

No cost.

If this little business magazine cost you $3 a year you wouldn't wait three minutes before getting your name on the mailing list—and it would be worth the money at that.

Don't let the fact that it's free to you keep you off the list.

The new "Columbia Record" is a monthly "talking machine" for talking machine dealers.

Issued with a reason behind it and a message inside of it.

For you.

And every other dealer in "talking machines."

No matter which make you handle. What's that got to do with it?

Full up with selling-helps for you and your salesmen.

Suggestions for your windows and things like that.

Going to get better right along.

But never mind about that now.

Main thing is to get your name on the mailing list and argue afterward.

You can't lose anyhow.

Edward Lyman Bill says it's fine, and he comes pretty near knowing.

Address your letter "Columbia Phonograph Co., Tribune Building, New York."

Well, done it yet?
Name and address, please!

IMPORTANT A

This is the first announcement of the new talking-machine records that are sure to revolutionize the entire industry.

MARCONI
VELVET-TONE RECORDS

"Wonderful as Wireless"

They Fit Any Disc Machine

They fit any disc machine and they double its value to the owner.

No Scratching Sound

Made of a patented material, they have so velvety a surface that the annoyance of the usual scratching sound is entirely eliminated. Hear one played and you'll have the ***proof.***

Have Double the Life

They have double the life of any other record. They can be played hundreds of times without appreciable sign of wear or loss of tone.

One Needle Without Changing

Their surface is so fine that the same needle can be used over and over again with perfect results.

Flexible, Unbreakable

They will stand bending, dropping, knocking about and exposure to extremes of climate without suffering injury.

COLUMBIA GRAPHOPHONE

COLUMBIA PHONOGRAPH CO., G

NNOUNCEMENT!

The marvelous melody of Marconi Velvet-Tone Records is scarcely less remarkable than their unique wear-resisting qualities.

Marconi Velvet-Tone Records realize for the first time what record makers have striven for years to attain—***a perfect tone-image.***

N'L, Tribune Building, New York

COLUMBIA RECORDS

(Continued from page 44a.)

a million dollars. I call that, in the artless Japanese language of the West, going some.

The talking machine has become, or should become, a vital, living and important factor in every music house in the United States, that music house being a piano house or of the character of a general music house. It is a tremendous adjunct to the trade. It is a splendid bringer. If it did nothing else it would pay for itself in the number of people that it will bring to the house, where the ordinary advertisement and the ordinary inducements of trade will fail. It will bring them for curiosity, and we know that curiosity is a great incentive among our people, if nothing else. It can be made, and should be made in every music house in the United States, a profit-bearing part of the business. It may seem strange to you to say that in the space of time that I have mentioned that last year the talking machine department in the business of my house—and it is considerable and very respectable—was second in standing to the profits of the principal part of our business, which is the piano department.

I believe that every music house and every piano house in the United States should be identified with and participate in the talking machine business and its profits. The time has gone by when the talking machine can be poohpoohed or belittled or sneered at. It is to-day one of the greatest civilizers and one of the greatest educators, especially in the line of music, in our country. It has created in many cases and awakened a love for music where none existed. It is a capital entertainer in the household. It is a source of delight and satisfaction to both the young and the old. Its limitations cannot be defined. I believe to-day that the industry is substantially and practically in its infancy. I think the developments that await it are prodigious, are tremendous, both in scope and extent.

It is no small undertaking, Mr. Toastmaster, for a body of men such as sit around your table and are your guests and the partakers of your hospitality, to launch or put upon the ways an organization such as we have perfected in the last two days, and if there be any shortcomings, if I am not sparkling and bright, as I usually am (Put that down; who is writing?) attribute it to the fact that I am not quite in form.

However, I am more than glad to comply with the request made of me to speak of the text in question, and if I have been able to convince or illuminate or, as it were, elucidate anything for the benefit or guidance or information of the gentlemen about the table, or the public in general as to the value, utility and the importance of the talking machine and its absolute necessity as a part and parcel of the trade outfit of the music house, I am more than repaid for my labors. (Applause.)

H.E MARSCHALK ON "INSTALMENT SALES"

Henry E. Marschalk, of the Musical Echo Co., Philadelphia, was unable to be present and his paper was read by Mr. Buehn:

Mr. Toastmaster and Gentlemen:—Our generous host has asked me to respond to the toast, "Instalment Sales." Feeling remiss to deny to any such honorable gentlemen a request of this nature, and at the same time experiencing a sense of delight for such a splendid compliment, fully cognizant of my own weak ability to do justice to the subject, yet wiling to brave an attempt that both ends might be accomplished, I gladly offer you this my effort.

I fully expected to be with you at this most important joint meeting of the two associations, and my forced absence is a matter of sincere regret to me. There were many weighty questions to be considered, and I had hoped to lend my feeble assistance. Doubtless these matters have been disposed of with the wisdom of a Solomon, and with equity to both interested of a caliber equal to that rare form of justice recently meted out by our respected Judge Landis when he ordered that the Standard Oil octopus should disgorge itself of the infinitesimal sum of twenty-nine millions. (God bless Judge Landis! and may the price of kerosene not be raised 2 cents a gallon!).

Gentlemen, ere this epistle verbally trickles from the lips of some kind reader—not overlooking to thank him for his generosity and to compliment him for his nerve in the undertaking thereof—may it be that a new organization has found being—a National Association of Talking Machine Jobbers! Hurrah for the National Association! May its life be long and its deeds be good! May it always prove a panacea for the few ills which now exist, or may arise from time to time to afflict us in this our chosen pursuit!

Now, gentlemen, to my subject, for I realize that you have spent two strenuous days, and long-winded speeches, whether delivered personally or through an intermediary, such as this, will be more welcome for their absence. Yet I hesitate to embark upon a subject which I realize has been thoroughly gone over by you during the convention, the official part of which has just closed. I fear that my remarks may seem hollow and discordant and not ring in harmony with the already expressed consensus of opinion. In anticipation of such a condition I crave your indulgence accordingly.

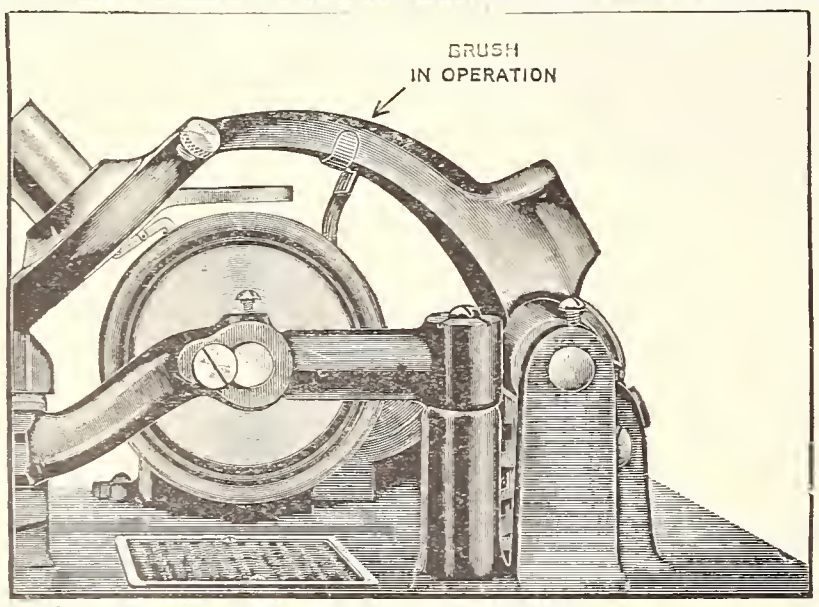
From my viewpoint the instalment business is "bad for the best of us and worse for the rest of us," and the aim of our national, as well as individual, associations should be in the direction of minimizing it to the least possible degree. It is cancerous in its nature, and once it takes hold, unless its victim be blessed with a strong constitution and a stronger pocketbook, it is merely a matter of time when its deadly work will be apparent. With our weaker brother it runs him into debt; with our stronger brother it yields him no profit.

Our department store neighbor—the evil genius who enjoys jobbing discounts that he may ply his nefarious trade, whom we jobbers should be selling and enjoying our legitimate profit therefrom, whom we may charge, without fear of contradiction, with the making of this

THE PLACE AUTOMATIC RECORD BRUSHES

For EDISON PHONOGRAPHS and VICTOR TALKING MACHINES

Patented Sept. 25 and Oct. 2, 1906, and Sept. 10, 1907.



No. 1

bad condition, the realization of which is responsible for the present agitation for something to ameliorate it—will tell you if you ask, and he chooses, that his talking machine instalment business is run at no profit, and perhaps at a loss, but that the greater number of customers who are by this means drawn to his store, and who might not otherwise come, spend so much real cash at their counters that this lack of profit, and possible, if not probable, loss, is more than offset.

Gentlemen, stop for a moment and think what this means. Our own cherished business which we look to for a livelihood, so demoralized and held in such contempt that it becomes a toy of a department store—a mere advertising scheme. I say, gentlemen, that jobbing discounts should be withdrawn from department stores; that they should be put on a dealer's basis. Then, perhaps, our business would be held in better respect.

Doubtless the manufacturers would look upon such an idea as this with absolute horror, for surely these department store checks look good on the fifteenth of the month; their credit is usually beyond question, and their output of talking machines great. But, when we consider the ultimate life and continued prosperity of the trade, is it not reasonable that something should be sacrificed to insure this end, even though the weight of such a sacrifice should fall on the manufacturer? The latter gentleman who sits back in his well-upholstered armchair in his comfortable office, who expands his chest and says: "See, gentlemen, see what a mass of wonderful advertising we are doing for you; see what marvelous goods we are delivering to you. Why, veritably, gentlemen, you should feel honored that you are permitted to hand us your money." He is short-sighted, to put it modestly, and he doesn't look beyond his nose. It would appear that his idea of the certainty and solidity of the talking machine business success and its continuance consists in four purposes of his own, to wit—do lots of advertising, make good goods, have a big output and get the money. This does not contemplate our end of the story, however, and we as a National Association of Jobbers, should aim to convince him of this fact.

To recur to my subject of instalments, I contend that it is cardinally essential to make a differentiation between cash and instalment sales. More should be charged for the latter. Whether this is brought about by adding to the established list prices or by making a discount therefrom is a point which can be given over to considerable discussion, and probably has. What we want and must have is a difference in price as between the two classes of sales. As to how to get this I submit it to wiser heads than mine.

Gentlemen, I thank you for your attention (taking it for granted that the reader of this gentle note has had your attention), but before closing there is just one little thing—a little bronze star—which I want to bring to your notice. Perhaps when you looked into this little star, which you found at your plate, you thought of it only as a souvenir. That is just what I did when our host handed me one a day or two since, here in Philadelphia, when he learned that I would not be able to attend the convention. But as I write this message my thoughts travel on, and I begin to think what this little star, or trade-mark, symbolizes. Then the idea comes to me, "Is this not a Star in the East? is this not something for the wise men to follow and see what it holds within itself?" Finis.

THEO. F. BENTEL ON "CREDITS."

The subject of credits is one that I think should have been consigned to better hands than mine. However, there is no subject that has had more serious thought (its scope being limitless); it is the vital part of every man's business. Especially is this true when I look back a few years ago, when I first took up the sale of talking machines (some ten or more years), when my credit was good and my bank account not equaled by my ambitions.

While I will refer briefly to my credit experience, since it has become my pleasure to become associated in the manufacturing business, yet I will first briefly, by your permission, refer to my experience as a fellow-jobber.

The merchant who has a good credit can buy more satisfactorily to himself and his business than the merchant who has no credit, but has money in the bank.

Let me illustrate: The man with credit can order goods through the various aveuues and get prompt and better service than the merchant who has the money and must deal with everybody who comes from Missouri. There are a few ways I found in which I could improve my credit, and one of these was to always keep in miud, when placing orders, that the goods must be paid for, as pay-day always comes.

Having first decided that my credit must not be impaired under any circumstances, the two combiued caused me to think twice at all times, not only in the purchase of the goods, but also in their sale later on.

On the latter I would like to say a few words: Be your own judge as to the conduct of your business, and after having decided as to your policy, stick to it. If that policy be to sell only to responsible dealers who pay their bills according to your terms of settlement, stick to it. Don't allow yourself to be swayed from that stick-to-it policy simply because if you don't sell him on his terms somebody else will. Better let the other fellow sell him; your profit and loss will be in a more healthy coudition and on the right side of the ledger, rather than have sold him in violatiou of your stock-to-it policy.

Again, very often the desire and aubitiou to increase the volume of your business and not lose a sale causes many a merchant to sway from this course. When he does what is the result? His credit with somebody must be strained. In fact, there is much more than could be said on this same subject, but before closing I cannot refrain from referring to my short experience in charge of the credit department of a manufacturing company, and what struck me more especially in this short experience is the fact that I find that no jobber has strained his credit with us. I thank you for your kind indulgence.

B. J. PIERCE'S REMARKS.

Burton Jenkins Pierce, responding to the toast, "The Growth of the Talking Machine Business by One Who Knows," stated that the experience of his house was something similar to that of Mr. Bowers; that they had adopted the talking machine business only after considerable misgivings and many inquiries, as it seemed entirely foreign to their regular business, but that this year they hoped to do a half million dollars worth of business. "I think there is a wonderful future for the talking machine business, and it is going to continue so as long as the American home is going to want something that will entertain it, and what is there that is going to take its place?"

EDWARD LYMAN BILL ON "THE PRESS."

Edward Lyman Bill was then introduced aud spoke in part as follows:

Speaking of the power of the press, I recollect when I was a young man I had charge of a paper in an inland town and it was my boast that every want ad. that was written for that paper would draw forth an answer. Many of my friends wrote strange and curious advertisements but my statement still lived true. There was no advertisement written but that drew forth a response. Finally a young merchant in that town offered to make a bet with me for a dinner for thirteen—there was a thirteen club in that town—that he could write au advertisement that wouldn't draw. I accepted the bet, and the next day an advertisement appeared in the paper something like this: "Homely woman wanted, a first-class maid, the homlier the better; no good looking person need apply. Inquire at the office.' The next night when I was in my room the managing editor came in in a terrific rage. 'Great heavens! shades of Ben Franklin!' he said, 'look in the business office.' I went in there and looked. Well, I nearly fainted. There was a round dozen of the homeliest women ever collected together on God's footstool. They were redhaired, loose-jawed, had protruding teeth and leathern skins. I immediately called up the man who wrote the advertisement, brought him down and introduced him as the author of the advertisement. When he got through with that bunch of misfit Venuses he was a sight. He told them that they were not ugly enough. That only enraged them—they were positively proud of their ugliness, and they never had a chance to turn it to golden opportuuity before. He paid the dinner, but the memory of that bunch of divine errors seriously interfered with his appetite. (Applause.)

"Gentlemen, the press, if honestly and fairly conducted, is a power for the good, and I thank God that I represent the industrial press of this country, the press which does not flaunt the evils of man, the press which does not show the dirtiness of the divorce courts, it does not show the soiled linen of our various under walks of life, but it represents the thoughts, the intelligence, the inventive skill of man. Therefore, gentlemen, I am proud to say that I am a member of the industrial press which stands with you as business men for the promotion of the best interests of man's industrial efforts. (Applause.) The press may be a power for evil as well, if in the hands of designing or unscrupulous men. By a distortion of facts it may work irreparable injury to legitimate interests. But the press is always responsive. Treat it in kind and it will respond in kind. And I say this to you, gentlemen: your actious toward the press have been so broad, so fair, so genuine, so full of that spirit of camaraderie that I need not tell you to be fair in your treatment, because you have already manifested that in every action. The press all over this broad land, and all over the civilized world exerts a power and it will grow and increase in strength as loug as it works for the advancement, the upbuilding of those things

which are high, noble, which are honest and which are true. I am much interested, gentlemen, in the industrial press; my life work is devoted to that particular branch of journalism. I cut out the daily press because I saw a future—I saw better opportunities in the trade press than are afforded in regular journalism, and I feel that young men who are growing up will do well to study the growth of the industrial press of this country and its influence upon the manufacturing interests of America.

"You have been listening to good speeches, to the eloquence of my friend, Mr. Bowers, whom you have so wisely selected as your president, a man who, like England's Iron Duke, stands four-square to all the winds that blow. I compliment you upon the selection of your officers and the selection of such men must mean the welfare and advancement of your organization.

"Look at this beautiful banquet table. This is a sight, gentlemen, unparalleled in the annals of the talking machine industry, and these men have been brought together here to enjoy the hospitality of our friends, to be at these business meetings for one purpose. If I am a student of events, of the trend of thought, there has been one dominating influence—to perfect a national organization; and I congratulate you upon the successful launching of that organization, and I know that it will grow and develop; I know that it will become country-wide in its influence, and let me hope, gentlemen, that the column in the east may rest upon the rockbound coast of New England, and over this country spread the broad arch, and on the western shores of California may rest the other, and these blocks be fastened with the cement of fraternal esteem, and let me write the words over that arch, 'Esto perpetua.' (Applause.)

"Wonderful, indeed, are the workings of Fate, wonderful indeed are the workings of men. I was interested in listening to Mr. Ashton, who told of the little convention germ, the nucleus of this organization, how the first efforts were made. I thought of the patience, the industry, the intelligence displayed, to weave this organization into a successful whole, and I believe that you all have been dominated by one influence and that is to make this trade better and broader and more influential in its upward trend. I believe that selfish elements have been eliminated, as they should be, and I believe that you stand together shoulder to shoulder for common good, and that in your march as comrades you will touch elbows for the good of the talking machine trade. (Applause.) I predict, gentlemen, that this organization will grow; it will become a most potent power for trade weal. I believe it will be influential in expanding this industry; I am one of those men who believe the talking machine trade is but in its infancy. We have spoken of its entertaining features, and they are many. It is doing much to-day to educate our young children in a love for music, in all of that which ennobles and beautifies and adorns our homes. It goes further than that. It has become a business companion, an educational factor, and will continue to be more and more prominent. I have the honor to be a member of the board of education in my home city, and I have requested that we introduce the talking machine as a language instructor in our schools, and I believe the time will come when the talking machine will be in common use as an educator in our institutions of learning, thus playing a dual part in our lives, not only of being an entertainer but of being an instructor and an educator as well. To all of this, gentlemen, the press—the press which represents the talking machine industry—is pledged for its advancement. We cannot advance unless you advance. I feel that our interests are identical; they are closely interwoven, thread by thread and fibre by fibre until they are inseparable, and I promise that all of my efforts shall be bent towards the advancement of that industry which I love and which I honor, and of that organization of which I am proud and happy to say I am an honorary member. I consider there is no higher title that I could bear, gentlemen, than to say that I am an honorary member of the first National Talking Machine Association." (Applause.)

MR. WHITSIT ON "GOOD FELLOWSHIP."

Mr. Whitsit then referred to the general feeling of good fellowship which had existed, and proposed three cheers "For one of the best of good fellows, Mr. Hawthorne," which were lustily given.

Mr. Bowers then read John Boyle O'Reilly's "I'd Rather Live in Bohemia Than Any Other Land."

J. N. BLACKMAN ON "ASSOCIATIONS."

"Our Host, Mr. Toastmaster, Fellow Jobbers, our Representatives who are with us—and they are all with us—This is a star occasion in more than one way. Someone said it was a star of the East. He didn't go far enough. It is a star of the West, star of the North, star of the South—practically it is a new star entirely.

"To get to the subject of the national association the toastmaster has probably known me from the time I started in the talking machine business, a very young man. I am still a young man. I remember the Hawthorne & Sheble Mfg. Co. when they were not only jobbers but horn manufacturers, and they have been through the time when jobbers were looked upon as an experiment. I started in business with another man. I have had considerable ups and downs; in fact I have been up and down all the time, and it is getting very monotonous, and yet it is a habit. There is one point I want to bring out and that is that a national association at this time is not premature, it is ripe. Do you know why the first talking machine jobbers' association that was formed in 1902 did not succeed? For the very reason that this association would not have succeeded if we hadn't gone about it very cautiously, if we hadn't had all the precedents. We tried to do too much. We went from absolutely nothing into what we thought was absolutely something great and we went right back to absolutely nothing. Now it took us several years to recover. I think we have recovered. Then we found that in union there was strength, but nobody had courage enough to start the union, but it came to a point in New York City, where we poor jobbers were held up, we couldn't get any goods and the outside fellows were getting them, and the result was we called a meeting and took the bull by the horns and formed an association in the East. Other associations were formed in different parts of the country. There has been some difference of opinion as to how we shall now proceed but I don't think there is any difference of opinion but that we wanted a national association and we have it. Now we have it after careful thought, we have it properly laid out, we have the benefit of the past mistakes, we have the benefit of the past successes. Now, are we going to make use of them? I say yes. I think everybody will say yes."

Mr. Blackman dwelt at some length upon the great benefits to be derived from association and pledged his best efforts in every way to further the good of the newly formed organization.

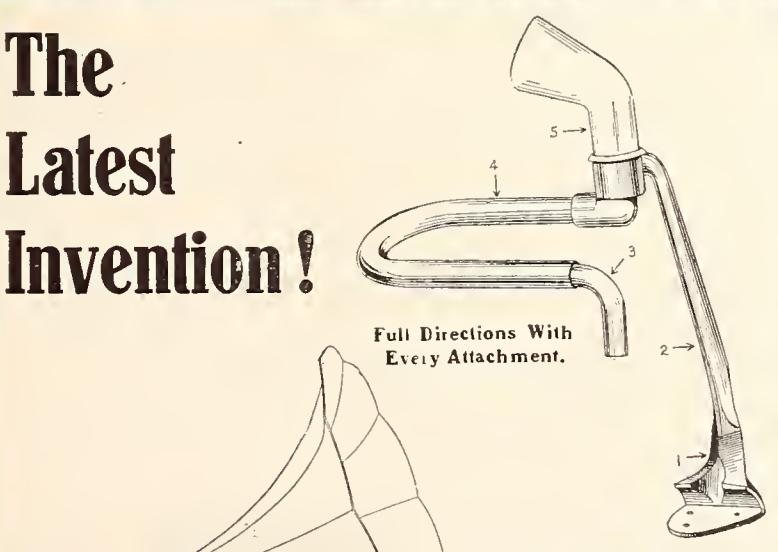
H. M. HOLLEMAN ON "MAIL ORDERS."

Mr. Holleman, speaking of the mail-order business, stated that it is a serious problem, both interesting and fascinating, because it obliterates all territorial bounds, which is not the case in any other line of business, even extending to foreign countries. The first requisite of the mail-order business is the proper article; the next is the proper way of handling it. In the first place, after you have secured your article it has been demonstrated that it is best to get thoroughly prepared for your proposition, issue your literature, formulate your follow-up letter, at least three of them, and complete all arrangements before you ever put your first advertisement in the paper, because after your orders begin to come in you are not prepared then to write your second or third appeal to that party, you have changed the complexion of the proposition entirely if you attempt to do. The last thing to do is to formulate an advertisement and get the best advertisement you can and then, when the ads. bring in the results, then follow them up with this system; follow your system and keep hammering at it and success will crown your efforts every time.

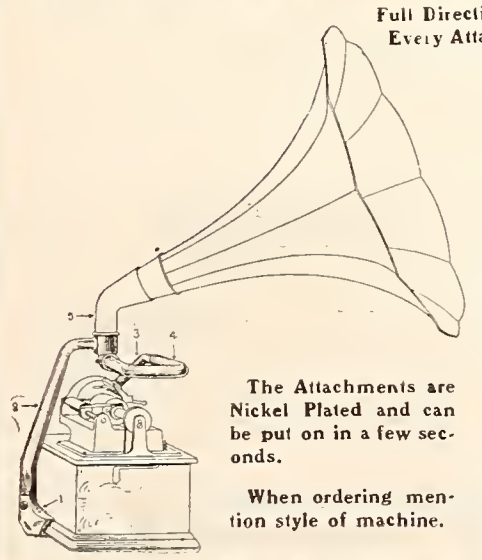
MR. LYLE'S INTERESTING TALK.

George W. Lyle being called upon by the Toastmaster, said: "Mr. Toastmaster and friends—I notice that my name is not on the menu, no toast has been assigned to me. You have already heard the valedictory and I am certain you don't care to hear to-night much from me, and I am certain I have sense enough to appreciate that. There are one or two matters I would like to refer to. The first is that as a representative of one of the manufacturers we have been watching the growth of the jobbers' association. We have not been surprised at seeing the formation of a national association. That is certainly right and proper, and in the order of the day that these combinations should be formed. I

The Latest Invention!



Full Directions With Every Attachment.



The Attachments are Nickel Plated and can be put on in a few seconds.

When ordering mention style of machine.

THE KEEN Attachment

CAN BE USED ON ALL CYLINDER MACHINES

It improves the sound, softens the reproductions. The attachment enables the user to turn horn in any direction. Saves much annoyance and produces better results than the old way. Every talking machine man will see the advantage of this new invention. Don't delay investigation, you can increase your sales with it.

Invented by a pioneer talking machine man, whose practical experience has taught him the value of this attachment. RETAIL PRICE, $7.50. Liberal discount to the legitimate trade.

Keen Phonograph Co., Manufacturers

2443 Kensington Avenue - - - Philadelphia, Pa.

know, however, that you must realize with us that the forming of your association is but a very small part of the work before you. It would be very easy to fritter away the time of the association on very small matters. It will also be very easy for this association to take up large matters and secure about what they want from the manufacturers providiug their wants are reasonable. As I sat here this evening I jotted down two or three matters that seemed to me would be naturally interesting to this association and to the manufacturers. One is, a suitable margin of profit in handling talking machiues. That is certainly interesting to the jobber and is interesting to the manufacturer, because if a jobber has no profit in handling the line it is not to be pre umed that he will handle the line for a very long time, putting his money into it. Another question that seems to me to be interesting would be the question of the amount of competition a jobber should have in his own given territory. That is, what service should the jobber have, what rights should he have in certain territory for the handling of the goods which he purchases and sells. Another is, some arrangement by right for the return of surplus stock which accumulates on a jobber's hands because of a monthly list of records—how could that matter be disposed of?

"As representing one of the manufacturers I want to say—consider these matters, consider them fairly, come to us with your suggestions and see how near we can come to meeting your wishes. That is, I think, a fair statement of the feeling, speaking for one company.

"In a lighter vein I want to say that I was interested in Mr Bowers' statement in reference to the introduction of talking machines at Lyon & Healy's. I want to make one or two corrections, however. I want to state that Mr. Bowers did not go quite back to the start, as the question of consigning goods is a question that interested jobbers a good deal, and I suppose interested manufacturers. I want to say that at the time Lyon & Healy put in their goods I was fortunate enough to be the manager of the Columbia Phonograph Co.'s Chicago store, and I want Mr. Bowers to hear that there would never have been a talking machine in the house of Lyon & Healy if the goods had not been consigned—at least, I won't say never would have been a talking machine; there never would have been a talking machine at that time—the house of Lyon & Healy refusing to put them in until the goods had been consigned on six months' trial, Mr. Gregory stating to me that the talking machines belonged to saloons and other places of that description and not to musical houses. That was but nine years ago, and you know the growth of the business since then. And on the subject of the growth of the business I thought it might be interesting to hear one comparison which we made inadvertently in our office the other day. We had closed the business for the month of August. In looking over the figures we found that the increased business of August, 1907, over August, 1906—which was the largest August we had had up to that time—was greater than the total first six years of the American Graphophone Co.'s entire manufacture aud selling of goods. That is, the growth in one month was more than the six years' total business. Now I believe that the business is still in its infancy. We want to co-operate with this associatiou in any reasonable requirements or suggestions, and I bring you the good will of the American Graphophone Co. for this new organization." (Applause.)

Hearty Thanks to Hosts.

Mr. Bowers: "I want to say to the members of this association, for fear it may be overlooked, and while the thought occurs to me, I would like to put it to you. I will ask the association to go on record in a matter of its appreciation of the hospitality shown us by our host of the evening, aud to thank them in the name of the association for their splendid hospitality and for their kindliness and consideration in winding up the first session of our organization with such a highly enjoyable, highly interesting and highly creditable affair as this dinner. I am reminded of the beautiful lines of Miles O'Reilly—I am very fond of the Irish poets. Perhaps you have discovered that. O'Reilly says:

"'There are bonds of all sorts in this world of ours,
Ties of friendship and fetters of flowers,
And true lovers' knots, I ween.
The boy and the girl are bound by a kiss,
But we've a strouger bond, old friend, than this—
We've drunk from the same canteen.'

"And, gentlemen of the association, from the same canteen which has passed around the festal board in the form of this beautiful crystal I beg to pledge on behalf of our national association the health, the wealth, and the future prosperity of the Hawthorne-Sheble Co., and I will ask the association to drink the toast standing."

(The toast was druuk stauding.)

The Toastmaster: "In response to Mr. Bowers all that I can say in reply is, you know where our heart lies.

"Gentlemen, in closing I would refer you to the back of the menu card where you will find a verse of that familiar song, 'Auld Lang Syne,' and we will close by singing this verse standing, gentlemen."

Whereupon the guests rose and sang, afterwards dispersing.

Gentlemen Present.

The Central States jobbers present were: Mr. Dohse, Niehause & Dohse, Dayton, O.; President E. P. Ashton, American Phonograph Co., Detroit, Mich.; Mr. Strausberger, Grinnell Bros., Detroit, Mich.; Mr. Hayes, Jr., Hayes Music Co., Toledo, O.; Mr. Ball, Ball, Fintze Co., Newark, O.; Secretary Perry B. Whitsit and Mr. Drake, Perry B. Whitsit Co., Columbus, O.; Mr. Towell, Eclipse Musical Co., Cleveland, O.; E. J. Heffelman, Klein & Heffelman Co., Canton, O.; W. H. Buescher, W. H. Buescher & Co., Cleveland, O.; L. McGreal, McGreal Bros., Milwaukee, Wis.; Mr. Hickok, Whitney Currier Co., Toledo, O.; J. F. Bowers and C. E. Goodwin, Lyon & Healy, Chicago, Ill.; E. H. Uhl, Rudolph Wurlitzer Co., Chicago, Ill.; B. J. Pierce, J. W. Jenkins' Sons Music Co., Kansas City, Mo.

Eastern jobbers present were: W. D. Andrews, Syracuse, N. Y.; C. N. Andrews, Buffalo, N. Y.; J. N. Blackman, Blackman Talking Machine Co.; A. H. Jacot, Jacot Music Co.; C. V. Henkel, Douglas Phonograph Co.; Victor H. Rapke; James Landay, Landay Bros.; A. P. Petit, Talking Machine Supply Co.; C. B. Warner, Kirtland Bros.; Mr. Wilbur, Regina Co., all of New York; Clinton G. Price, H. S. Price, Price Phonograph Co., Newark, N. J.; C. L. Neal, Neal, Clark & Neal Co., Buffalo, N. Y.; Pat. Powers and W. E. Henry, Powers & Henry Co., Pittsburg, Pa.; Louis Buehn, E. Buehn, Louis Buehn & Bro., Philadelphia, Pa.; Theo. F. Bentel, Theodore F. Bentel Co., Pittsburg, Pa.; W. H. Ross, Portland, Me.; Mr. Crew, Elmira Arms Co., Elmira, N. Y.

Others in attendance were: E. A. Hawthorne, Horace Sheble and Theo. F. Bentel, of the Hawthorne & Sheble Mfg. Co., Philadelphia, Pa.; H. W. and W. Topham, and R. I. Bagley, of James S. Topham, Washington, D. C.; Chas. F. Rubens and C. F. Jones, of the Ikonograph Co., New York; R. T. Brady, Chicago Stand Co., Chicago, Ill.; Clement Beecroft, Tea Tray Co., Newark, N. J.; E. L. Bill, Geo. W. Lyle, Columbia Phonograph Co., New York; B. Feinberg, Western Talking Machine Supply Co., Chicago, Ill.

CONVENTION AFTERMATH.

The banquet tendered to the jobbers of the National Talking Machine Association at the Hotel Iroquois on Tuesday night, by the Hawthorne & Sheble Co., of Philadelphia, was a most pronounced success. When the hall on the second floor, where the dinner was served, was thrown open at a little before seven, the guests were greeted with one of the most beautiful sights imaginable, the two rows of snow-white cloth, shaped something like a U, being sumptuously laid, and heaps of jack roses and white asters set off with maiden hair ferns, added a brightening appearance to the room. Music was furnished by an orchestra which kept things going. Each diner found at his place a paper weight in the form of a bronze star (symbolic of the Star record), on which in raised letters were: "Buffalo, Sept. 10, 1907." The Hawthorne & Sheble Co. are to be heartily congratulated on the fine way things were managed. Nothing was overlooked to make the evening one of rare enjoyment.

* * * *

Many of the visiting jobbers added a social feature to the convention and brought their better halves along. The ladies, during business hours, visited various points of interest in the vicinity.

JOBBERS GET BUSY AND ORDER NOW SO AS TO AVOID THE RUSH

NEWARK TINWARE AND METAL WORKS, 28-32 DIVISION PLACE NEWARK, N. J.

However, on the night of the jobbers' banquet nothing had been planned (that is, so they thought), but then they forgot that the H. & S. people were handling affairs, and when the hour drew nigh it was found that they were far from being left out, but were to have a special banquet served to them in Parlor A, adjoining the association dining room. Those present were: Mmes. Towell, Ball, Ashton, Blackman, Drake, Buehn, Dohse, McGreal, Andrews, Henry, Henkel and Miss Henkel. A photograph of the diners appears herewith.

* * * *

Geo. W. Lyle, general manager of the Columbia Phonograph Co., was one of the distinguished visitors, and received a royal welcome, not more on account of the house which he represented than for his own genial self. A few remarks made by him at the banquet, and which appear in this number, will be read with interest by all who were not present.

THE BANQUET TO THE LADIES OF THE PARTY.

* * * *

C. V. Henkel, president of the Douglas Phonograph Co., of New York, was appointed chairman of the press committee. The other members are: W. E. Henry, of Powers & Henry, Pittsburg, Pa., and Laurance McGreal, of McGreal Bros., Milwaukee, Wis. The committee on resolutions will be appointed by the chair.

* * * *

Theo. F. Bentel, on account of his having given up his jobbing interests to take the position of treasurer of the Hawthorne & Sheble Co., passed in his resignation to the association on Monday.

* * * *

H. M. Holleman, of the Texas Phonograph Co., was the sole representative of the Lone Star State, but his sunny nature and witty remarks made him a worthy representative.

* * * *

The Ikonograph Commercial Co., of this city, was represented by Robert F. Rubens, the president, and Chas. Francis Jones, an old talking machine man. Both were given a hearty welcome, and their machine got a great send off.

* * * *

James S. Topham, the well-known talking machine carrying case manufacturer, of Washington, D. C., had a portion of his line on display at the Hotel Iroquois. He gave out a very handsome souvenir in the form of a real seal leather pocketbook, which was highly appreciated. H. W. and W. Topham, the sons, were present, assisted by R. I. Bagley.

* * * *

The Chicago Stand Co. was represented by R. T. Brady, who before leaving voted the jobbers one and all "jolly good fellows."

* * * *

B. Feinberg, of the Western Talking Machine & Supply Co., of Chicago, was present, and did much to keep the ball of gaiety rolling.

* * * *

The Tea Tray Co., of Newark, N. J., was represented by that prince of salesmen, Clement Beecroft.

B. J. Pierce, of the J. W. Jenkins Music Co., Kansas City, distinguished himself early during the banquet by striking up that well-known hit, "Harrigan," accompanied by the orchestra. Mr. Pierce has a splendid baritone voice and delivery that reminded many of us of the happy college days gone by. He was ably assisted by J. N. Blackman and Louis Buehn. The trio had to respond to demands, and sang many other popular songs, all present joining in the choruses with a will.

* * * *

Just as the banquet was closing "the man from Texas," H. M. Holleman, arose and asked permission to read the following graceful toast written by the ladies:

"Here's a toast to all who are here
No matter where you are from.
May you live as long as you like,
And have all you like as long as you live.
May each of your records be a 'Star.'"

After the applause died down, Mr. Hawthorne, raising his glass, replied: "Here's to the ladies—God bless them all." The toast having been drunk the jobbers repaired to the lobby below, and breaking up into groups discussed the happening of the greatest day in the history of the trade. The day that witnessed the joining of all hands in a national organization for the one purpose—the advancement of the talking machine industry.

* * * *

The preamble and resolution adopted by the Eastern Talking Machine Jobbers' Association, at their meeting in New York, July 22 and 23, handsomely engrossed and indorsed in an elegant gold frame, was presented to A. H. Jacot, of the Jacot Music Box Co., whose ability as the secretary was eulogized in fitting form. C. V. Henkel, of the committee having the matter in charge, and under whose supervision the engrossment, etc., was executed, in the absence of both Messrs. Stanley and Furber, made a few appropriate remarks in handing the testimonials to Mr. Jacot, who briefly expressed his thanks for the association's kind appreciation of the services he had willingly and gladly given.

BLOOMINGDALE'S WINDOW DISPLAY.

Bloomingdale Bros., of Third avenue and 59th street, having decided to add to their talking machine department, arranged with the Columbia Phonograph Co. for an attractive exhibit to exploit their fall campaign. This work will be done by Harold Godwin, who is a genius in this particular line of work and, judging from the following prospectus, the exhibit will be one of the most artistic yet attempted. The firm of Bloomingdale Bros. will set apart one of their main windows facing Third avenue for the display, and same is to be completed for Saturday, September 21.

The arrangement of the window will be as follows: Across the entire width there will be strung a scale of notes measuring 3½ feet high, with the price of each graphophone emblazoned in the center of the note over which it is suspended. In other words, the scale of prices runs up as designated by each separate note. A large panel which is set upon an easel reads: "Our scale of prices range from low notes to high notes—$ notes we mean—money value in every case." Another panel emphasizes the advertiser's slogan, "Prices Talk." In addition to the number of graphophones referred to, cylinder and disc cabinets will be grouped and thus form a pleasing background. Potted palms and artificial flowers will be added to give a touch of color to the advertising picture.

Mr. Godwin never fails to arrange an exhibit that is bound to arrest the attention of passersby, and the above exhibit will prove no exception to the rule.

LOUIS F. GEISSLER'S RETURN.

Louis F. Geissler, general manager of the Victor Talking Machine Co., arrives from Europe on Monday.

Mr. Dealer!

Now is the proper time to order for your fall and winter trade.

RAPKE'S SPECIALTIES

are indispensable in any Talking Machine store.

TRADE NOTES FROM CINCINNATI.

(Special to The Talking Machine World.)

Cincinnati, O., Sept. 8, 1907.

While nothing phenomenal has transpired in the local field during the month of August, the month was a good one. Business has been steady and prosperous and greatly in excess of August, 1906.

Mr. Dittrich, of Wurlitzer's, has had a very busy month. Advance orders from jobbers have been pouring in with the Edison Improved as a headliner. The wholesale department, with its recently added facilities, has been extremely busy and shows that their immense floor space, with up-to-date system in every detail, is their assurance of being able to fully cope with the exceptionally heavy fall business which is already felt.

The Milner Music Co. is an example of what can be done in the face of most adverse conditions. Several weeks ago they opened their store on West Sixth street, without waiting for their fixtures, which were nearly completed but would cause some delay and inactivity were they to wait for them. An elegant business from the start was the result; but they were necessarily handicapped in their service. The fixtures were at least ready and their installation begun, when, on the night of August 22, a great fire visited the part of the city which included the concern furnishing their fixtures, and the Milner Music Co. were just where they started so far as their elaborate fixtures were concerned, but they are still in the field and doing a remarkably fine business, literally "in spite of Fate." It would seem that for such intrepid spirits there can be "no such word as fail."

Lawrence McGreal, East Fifth street, reports a lively August in the Edison products, and September looks good to him.

B. Feinberg, of the Western Talking Machine & Supply Co., and John P. Oldham, with Philip Werlein, Ltd., of New Orleans, were doing missionary work among the jobbers of Cincinnati last week.

NATIONAL PHONO. CO. CHANGES.

C. H. Wilson, formerly general manager of sales, has assumed the position of assistant general manager of the National Phonograph Co., with offices located at Orange, N. J., and F. K. Dolbeer will assume the position of general manager of sales, with offices at the new office building, 10 Fifth avenue, New York. For the present Mr. Dolbeer will also continue as manager of the credit department.

BINDER'S BIRTHDAY CELEBRATED.

J. W. Binder, manager of the Columbia Phonograph Co.'s general commercial department, was forty-one years of age recently, and to be exact the event occurred on August 21; and he was the recipient of congratulations from all quarters, and on his return from lunch on the day in question, he was called into the General Manager's office for a conference, and while there he was called to the long distance telephone in his own office on a specially urgent call.

He rushed down the corridor and bounced into his office, to find the blinds down and on the table in the middle of the room a huge birthday cake containing 41 candles all burning brilliantly.

Mr. Binder is pretty even in his disposition, and it takes a great deal to flush him, but the cake and the crowd of his associates which filled the office "got him." In response to demands for a speech, he could only smile and say "thank you very much."

The affair was a very pleasant one, and illustrates the splendid esprit du corps which is so characteristic of the Columbia Phonograph Co., and which is responsible largely for the magnificent strides which that concern is making in all its branches.

Mr. Binder, by the way, delivered a lecture before the Society of Incorporated Accountants of New York, on Wednesday last, on the "Commercial Graphophone in Business," which proved a revelation and an education to the members.

T. A. EDISON NOT IN ILL HEALTH.

The report that the health of Thomas A. Edison, the world-famous character, who has been in Ohio for several weeks visiting family relatives, is in jeopardy, is a canard pure and simple. Though sixty years of age, physically the eminent discoverer and inventor of the phonograph is as sound as a dollar, with many years before him of enjoyment and usefulness. To be sure, he is not giving so much of his time at the works in Orange, N. J., taking life less strenuously than in former years; but he is nevertheless keenly interested in the vast interests with which his name is inseparably connected, an imperishable monument to his genius and indefatigable industry. It is a pleasure to record these facts, and still more pleasing to know they are absolutely true in every particular.

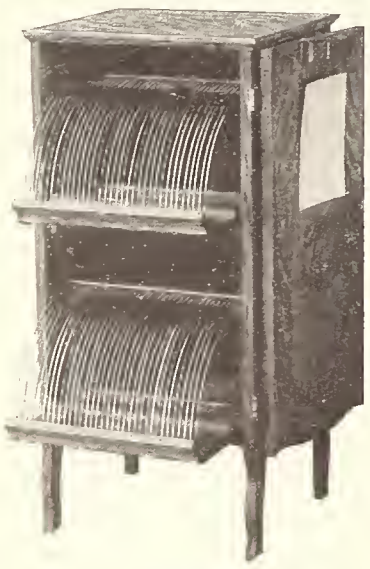
While speaking of Mr. Edison, it is gratifying to have the courts once more reiterate the opinion that a man's name and picture, when used as a trade-mark, is his own exclusive property.

The Devineau Mfg. Co., 36 East Twenty-third street, New York, are pushing very actively and successfully their new Ideal horn, some interesting facts regarding which appear in a supplement in another part of this publication. The great quantity of orders received daily have surpassed the most sanguine expectations of the manufacturers, thus confirming the individual merits and practical use of this ingenious invention.

A dispatch has just been received from the London office of the Columbia Phonograph Co. stating that Mr. Winston Churchill, Member of Parliament, and Under Secretary of the Colonies, has ordered a commercial graphophone outfit.

The concealed horn cabinet of the Herzog Art Furniture Co., Saginaw, Mich., known as the "De Luxe," has, for commercial reasons, been re-christened the "Teddy" cabinet, by which name it will be hereafter known.

Are You From Missouri on the Record Cabinet Question



No. 72, Open

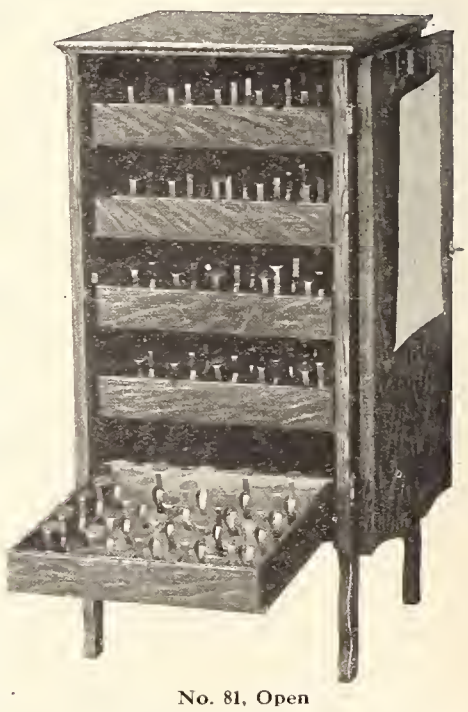
?

If so, we are ready to show you.

Our Fall Line is an Eye Opener.

It contains more practical and salable cabinets, than any line you ever had.

Our method of taking care of the Records is beyond argument.



No. 81, Open

We have not tried to see how cheap a line we could make (anyone can make cheap cabinets), but how good, and yet not make them too expensive for the average buyer; as a result we have nineteen styles of Disc and Cylinder Cabinets that have the largest number of talking points you have ever seen. Get some samples and look them over. ¶ We prefer to have you order through your jobber, but if he isn't ready, send us your orders and we will fill direct from factory *same day received.*

BE SURE THAT YOU GET OUR NEW CATALOGUE, JUST OFF THE PRESS

CENSUS FIGURES RELATING TO TALKING MACHINES AND SUPPLIES.

Government Report for 1905 Contains a Number of Facts Which Although Not Entirely Accurate Are Worth Recording Because of Their Source.

(Special to The Talking Machine World.)

Washington, D. C., Sept. 7, 1907.

For the first time in the history of the talking machine industry the Bureau of the Census has embodied in its bulletin on musical instruments and materials just issued (census, 1905), figures relating to talking machines and supplies. In the census of 1900 refereuce was made to the industry in connection with the special report "on electrical apparatus and supplies," inasmuch, mark you, "as this apparatus was invented and largely perfected by electricians, or those particularly interested in electricity." As a matter of fact the only portion of the instrument that is electrical in operation is the motor which is sometimes arranged for attachment to the incandescent light wire for the purpose of running commercial machines. For the reason, therefore, that this class of instruments may not properly be considered as electrical apparatus and as it is now considerably used in reproducing music and its introduction to the public is largely through the medium of music dealers, the statistics are presented with the report on the manufacture of musical instruments and materials. The figures given are not included with the combined statistics on musical instrument manufacture, but are presented in separate form and include not only the manufacture of the finished instrument but also "phonograph and graphophone supplies and disc and cylinder records," when the same were manufactured by establishments classified under this head.

A feature of this report which strikes one as odd is that the entire output of talking machines is classified either as "phonographs" or "graphophones," hence the question arises where do the talking machines, made, say, by the Victor Talking Machine Co., come in?

It is a matter of trade history that Government reports, particularly relating to special trades, are not entirely accurate, and it goes without saying that this latest report of the Census Bureau does not escape criticism. Manufacturers are not always inclined to give the facts relating to their business. The figures, such as they are, may prove interesting to our readers, particularly as they are issued with the authority of the Government of the United States, hence they appear herewith.

The following Table 21 is a comparative summary of statistics for the United States, showing the per cent. of iucrease during the five-year period, 1900 and 1905.

	1905	1900	Per cent of increase.
Number of establishments	14	11	27.3
Capital	$8,740,618	$3,348,282	161.0
Salaried officials, clerks, etc., number	537	144	272.9
Salaries	$666,489	$179,145	272.0
Wage-earners, average number	3,397	1,267	168.1
Total wages	$1,683,903	$608,490	176.7
Men 16 years and over	3,025	1,114	171.5
Wages	$1,564,625	$565,076	176.9
Women 16 years and over	364	146	149.3
Wages	$117,859	$42,914	174.6
Children under 16 years	8	7	14.3
Wages	$1,419	$500	183.8
Miscellaneous expenses	$1,653,762	$215,401	667.8
Cost of materials used	$4,161,136	$827,529	402.8
Value of products	$10,237,075	$2,246,274	355.7

The editor of this census report then proceeds: "There was an increase of but three establishments in the five years intervening between the two censuses, and, as these three establishments reported a very small product, the large increase in production has occurred without any corresponding increase in the number of establishments reporting. This concentration of manufacture in a few large companies is due to the possession of patents which enables them to retain the rights to sole production.

"Table 21 shows that in 1900 the capital invested was 49.1 per cent. larger than the value of products reported, while in 1905 the value of products was considerably larger, being 17.1 per cent. more than the capital. This results naturally from the fact that at the last census the industry was in its infancy, and costly experiments were constantly being made which required the expenditure of large sums of money with, in some instances, comparatively little return. Experiments are still being made and expensive laboratories are maintained in the principal factories, where new materials are tested and other improvements are designed and worked out by experts; but in the main the production of phonographs and graphophones is past the experimental stage and their commercial position is assured. Thus at the census of 1905 the productive power of the capital invested was utilized much more completely than in 1900, and the alteration in the relation of capital to products at the two periods resulted.

"The item of miscellaneous expense is apparently a very important factor in the cost of production of phonographs and graphophones. At the census of 1905 the amount expended for this item nearly equaled the expenditure for labor. This is due to the cost of extensive advertising and the large amounts expended to secure records of famous bands and professional soloists, items which are included in the total of miscellaneous expense.

"The principal centers of the industry are Camden and Orange, N. J.; Bridgeport, Conn.; Toledo, Ohio, and New York City.

"Table 22 is a summary of products of establishments mauufacturing phonographs, graphophones, disc or cylinder records and phonograph and graphophone supplies, as reported at the censuses of 1900 and 1905, showing the per cent. each item is of the total for each census and also the per cent. of increase during the five-year period.

"The total value of phonographs and graphophones manufactured in 1905 was but 29 per cent. of the total product reported for the indus-

SUPERIOR SERVICE

and anticipating the needs of the dealer at all times, coupled with the desire to assist in every way possible, has brought to our establishment a long list of loyal clients, and in order to meet the increasing demands of our customers we have leased the four-story building located at 126 *University Place*, which adjoins our present establishment, 32 East 14th street, in the rear. Our new building will be devoted entirely to wholesale interests, where we will carry an immense stock of

Edison Phonographs **Victor Talking Machines**
Edison Records **Victor Records**

Herzog Art Furniture Co.'s Complete Line of Cabinets, as well as innumerable quick-sellers and profit-making novelties of which we name a few of the prominent ones.

Pennants, College Flags, Yacht Pennants

Transparent Window Display Signs { *Edison* / *Victor* / *Columbia*
(In Colors)

Ingersoll Watches ***Gillette Razors and Blades***
Pocket and Flash Light Electrical Novelties ***Roller and Ice Skates***

Another feature that will appeal to you—all Victor Red Seal records are placed in envelopes as they are received, insuring perfect condition.

We have prepared a special list of the very best Edison records, which include domestic, vocal and instrumental, as well as a few foreign instrumental records. A word in behalf of the Edison foreign instrumental records: They are seldom asked for. You, Mr. Dealer, seldom give them a thought. Try them once, and with our assistance and a slight effort on your part to place them before critical patrons will meet with excellent results, and it will be surprising the amount of enthusiasm created by these records, which will prove as agreeable as it will profitable.

By all means join our list of satisfied customers.

try at that census, while the value of disc and cylinder records manufactured represented 45.7 per cent. of the same total. In 1900 the proportions were reversed, the value of finished instruments manufactured amounting to 55.2 per cent. of the total, and the value reported for disc and cylinder records to but 24 per cent. of the total. This change in the relative importance of the two branches of the industry was not due to any falliug off in the production of phonegraphs and graphophones, which increased largely during the five years, but to the far greater increase in the production of disc and cylinder records.

TABLE 22.—*Phonographs and graphophones—products, by kind and value, with per cent of total and per cent of increase: 1905 and 1900.*

KIND.	1905		1900		Per cent of increase.
	Value.	Per cent of total.	Value.	Per cent of total.	
Total	$10,237,075	100.0	$2,246,274	100.0	355.7
Phonographs and graphophones	2,966,343	29.0	1,240,503	55.2	139 1
Disk and cylinder records	4,678,547	45.7	539,370	24.0	767 4
All other products	2,592,185	25.3	466,401	20.8	455.8

As the machines themselves become more widely distributed, the manufacture of disc and cylinder records is sure to continue to increase at the same extraordinary rate. Every phonograph and graphophone sold creates a demand for records that results in sales which ordinarily far exceed in value the initial cost of the machine itself.

"The value reported for this industry includes in some instances a product which cannot be classed under either the finished instrument or disc and cylinder records. For instance, a large establishment in Philadelphia reports the exclusive manufacture of talking machine supplies, the value of which is included in Table 22 under the head of 'all other products,' and items of this nature are probably duplicated to a certain extent in the values reported for phonographs and graphophones by establishments manufacturing the finished product. In these latter establishments, under the heading materials used, there is reported a large expenditure for materials such as horns, cylinder cases, etc., which are reported as finished products of plants producing such supplies, aud thus their values are included twice in the aggregate for the industry. It is impossible to measure the extent of this duplication, but its presence should be noted when the value reported for the industry is under consideration.

"In addition to phonograph and graphophone supplies there is also included in 'all other products' a number of miscellaneous articles not related to the industry—for instance, billiard balls and game markers, composition novelties, electrical specialties, numbering machines, etc.—reported by establishments whose principal product is phonographs, graphophones, records and supplies. This value, however, is of little consequence in comparison with the grand total.

"The history of the phonograph and graphophone can be found in the special report on electrical apparatus and supplies, and therefore minute details will not be given in this report. Briefly stated, the principal features of the instrument are the motor, the recording and reproducing mechanism and the record, which is flat or cylindrical according to the type of machine.

"Electricity is sometimes used as motive power, especially for office dictation instruments, but the large majority of phonographs and graphophones manufactured are operated by clockwork with a tandem spring wind. The motor is arranged to turn the mandrel holding the record, and there is a delicately adjusted 'governor' arranged to regulate the speed, thus retarding or accelerating the action as required.

"In making a record the sound waves received in the horn of the instrument and transmitted through the sound passage agitate the sensitive mica or glass diaphragm, which is about one one-hundred and fiftieth of an inch in thickness from an inch and one-fourth to two inches in diameter. A small cutting chisel or point is attached to the diaphragm for the purpose of recording these vibrations on a blank wax record. This original or master record is then electrotyped for permanent use and duplicate records are made from an exact gold-plated copper mold negative.

"The reproduction of sound from records is practically a reversal of the process of making. The reproducer point for use on cylinder records is a sapphire ball, and the sound markings are in the form of engravings about one one-thousandth of an inch in depth; whereas in a disc machine a metal reproduction needle is used and the markings are delicate zigzag lines about 100 to the inch. The stylus, resting on a revolving cylinder record, is moved rapidly up and down, agitating a horizontal diaphragm, while the needle of a disc machine is moved from left to right and vice versa, agitating a diaphragm attached to the needle obliquely with the record. This vibration produces the sound passage—sound waves which are practically identical with those originally communicated to the master record. The size and construction of the horn are important to successful results, inasmuch as it prevents the sound waves from becoming scattered. In commercial use, in teaching languages, and in all instances where there is but one listener, tubes are used in place of the horn.

"Table 23 is a detailed summary for this industry at the census of 1905."

TABLE 23.—PHONOGRAPHS AND GRAPHOPHONES—DETAILED SUMMARY, BY STATES: 1905.

BERLINER CO.'S PUBLICITY CAMPAIGN.

The Berliner Gram-o-phone Co., Toronto, Ont., have planned an extensive Victor advertising campaign the coming season in a way that will cause the results to revert to the dealers through Canada. On September 2 a 600 line ad. appeared in 37 daily papers throughout the Dominion, giving a list of the new Victors for the month. Each month in future the latest list will appear, and the dealer who is careful to keep his stock up to date will assuredly gain through the Berliner Co.'s progressive policy.

A New Adjunct in the Trade

BEST in quality
MOST in quantity
LEAST in price
and an
EASY SELLER

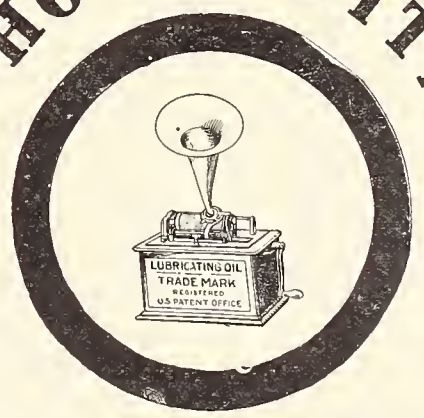
Why?

BECAUSE it is made Exclusively for TALKING MACHINES

Including such machines which are built with spring valves and wheels—

Music Boxes
Moving Picture Machines, &c.

PHONO - VITA



This wonderful oil, the result of careful study by an authority in matters of oil compositions, rightly bases his experience on the fact that lubricants must be of such consistency as to be congenial to the character of the machine. Now as to Talking Machines, which are built with valve springs and wheels, a particular kind of oil is required, one possessing sufficient viscosity to be lasting, but not too thin to endanger the graphite packing by penetration.

PHONO-VITA is made just right

It's for Talking Machines

PHONO-VITA is a Rust Preventative. Can also be used with profit to restore and retain the polish on the wood and enamel work. Put up in a full two-ounce bottle, encased in a carton, to be sold at 10 cents.

I desire to give notice to the public that I have obtained the right to use a design of a Talking Machine as a Trade Mark for lubricating oils and greases under the New Trade Mark Law of Feb. 20, 1905. Warning is given that anybody using such a design in any manner or form on bottles or advertising matter will be prosecuted by law.

I respectfully solicit correspondence from all parts of the country with a view of obtaining exclusive agencies. Address

L. MENDEL

314 North Fifth St., Philadelphia, Pa.

CANADIAN NATIONAL EXHIBITION.

The Display of Talking Machines Not as Large as Expected—Edisons and Columbias in Evidence as Well as Supplies.

(Special to The Talking Machine World.)

Toronto, Out., Sept. 10, 1907.

A noticeable feature in the Canadian National Exhibition held in this city was the prominence given the various exhibits of talking machines, the growth of this department being most remarkable. Regarded a few years ago as a curiosity and their use a fad, they have developed until at the present time they are commercial necessities and receive due consideration as such.

Owing to their inability to obtain sufficient space, the Berliner Gram-o-phone Co. could not make as an extensive exhibit as they had planued, but nevertheless succeeded in making an excellent showing with their line, including the Victor talking machiue and Auxetophone, the Berliner Co. having the Victor agency iu Canada.

A comprehensive line of Edison machines was shown by the R. S. Williams & Sons Co., of Toronto and Winnipeg, who are Canadian distributors for the National Phonograph Co., and have an exhibit at the fair each year.

The Columbia Phonograph Co.'s booth was ideally located in the Process Building, being at the juucture of several passages, a great crowd thus continually passiug the exhibit. A. H. Tero, general manager of the Columbia Co.'s interests in Canada, gave his personal attention to the exhibit, spending several hours each day at the fair.

One of the novelties of the fair was the "needleless" disc phonograph, shown by A. W. Bennett, Canadian representative for that line. Two models were shown, one retailing at $25 and the other at $50.

On the whole, the exhibit of talkiug machiues and accessories was very satisfactory and was of such a character and scope as to impress the visitor with the immeuse scope of the industry within the last demi-decade.

HANDSOME WINDOW DISPLAY.

Made by the G. S. Brown Music House of Santa Barbara on a Recent Patriotic Occasion.

In connection herewith we illustrate a very handsome window display arrauged for the Guernsey S. Brown Music House, Santa Barbara, Cal., on the occasiou of a recent national celebration. The fact that the Santa Barbara Elks had charge of the affair made the decorating difficult, as out of courtesy to that fraternity, purple was used in connection with the national tri-color. However, the problem was neatly solved in this instance by using the national colors on the sides and striping the boat in purple.

The waves were made of cloth, with crumpled paper uuderneath, and tacked to the boat all along the bottom. The boat was hinged in the center and ou frout end back of the cloth was arranged an eccentric, which moved the boat up and down as if on the water.

The cloth and papers being tacked to the bottom made the moving waves which gave away when one end was down and lifted on the end which went up.

The name on the boat caused quite a bit of comment.

The picture was taken at night, with total of sixty-four candle power light, and gave the camera an exposure of thirty minutes.

The readers of The World might get something from the idea which is exceedingly clever in all its details.

MERVIN E. LYLE TO BALTIMORE.

Mervin E. Lyle, who since September, 1906, has been J. W. Binder's assistant in the General Commercial Department of the Columbia Phonograph Co., will soon be transferred to the Baltimore office. He will be assistant there to Mr. Gustin, and it is expected that Mr. Lyle will be even more valuable in his new position than he has been in the past. Mr. Lyle has been with the Columbia Phonograph Co. for the past four years and has constantly advanced in the service of the company.

NEWS OF THE MONTH FROM THE SAINTLY CITY.

Favorable Trade Reports for the Month—St. Louis Talking Machine Co.'s Handsome Quarters—Manager Clancy's Report—Conroy Business Opens With Rush—Meyers Jobbing Trade Excellent—May, Stern & Co. and the Val Reis Piano Co. to Open Talking Machine Department—Marks Silverstone's Pamphlet "Phonographic Advice" Has Made a Hit.

(Special to The Talking Machine World.)

St. Louis, Mo., Sept. 6, 1907.

Trade reports from all the local jobbers for the month of August are all quite favorable and show a very good increase over July and for the same month last year. The retailers, while

NEW HOME OF THE ST. LOUIS TALKING MACHINE CO.

reporting their trade somewhat quiet, all state that trade is satisfactory for the season of the year. All are making preparations for a large fall and winter trade.

Manager C. W. Long, of the St. Louis Talking Machine Co., reports a very healthy increase

WHOLESALE RECEPTION ROOM SHOWING ACCOUNTING DEPT.

in both their wholesale and retail departments. He returned recently from a week's business trip through a part of his territory, and was highly elated with the outlook for fall and winter business. He states that the country is in a very prosperous condition and the dealers all alive to the possibilities of a large trade coming to them. Some of the visitors to the St. Louis Talking Machine Co. during the past month were: J. Bersch, Waterloo, Ill.; J. T. Shumate, Searcy, Ark.; Mr. Ellison, Hickman, Ky.; Sam Bentley, Raymond, Ill.; K. Cowley, Amory, Miss., and W. Spath, St. Marys, Mo.

The St. Louis Talking Machine Co. are now fully settled in their magnificent wholesale location, occupying the entire sixth floor of the Mills Building, 6,000 square feet of floor space which they are devoting exclusively to the distribution of the Victor line. The pictures herewith will give some idea of the thoroughness with which they have equipped themselves to handle business.

Manager T. P. Clancy, of the Columbia Phonograph Co., reports trade very good, with every indication of a record-breaking fall and winter business. They have received a stock of Symphony Grand graphophones, which sell at $200 each, and they are making a pronounced hit. Mr. Clancy states that for the past two months they have been giving a series of twelve free concerts for the St. Louis Society for the Relief and Prevention of Tuberculosis, which were attended by very large audiences, one numbering 7,500 persons, and that they have given a number of other free concerts and that they are now beginning to reap the benefit of this free advertising by a nice increase in trade.

MANAGER'S OFFICE.

John Magner, manager of the Commercial department of this company, states that their trade on this line of equipment is very good. He sold

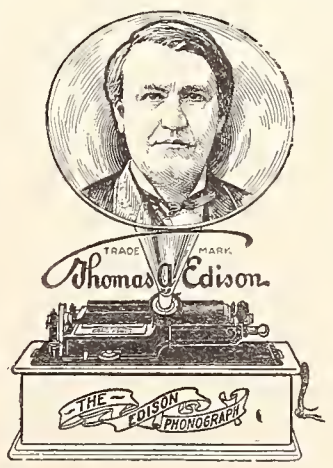
We carry the largest stock west of New York and we invite your orders, which will receive immediate attention and quick delivery.

CONROY PIANO CO.
1100 Olive Street ST. LOUIS, MO.



a very fine commercial equipment to J. Robert Botman, a wealthy lumberman of Belize, British Honduras, who wrote acknowledging its receipt and his great satisfaction with it.

The office of the Columbia Phonograph Co., on the balcony in their store, has been extended, giving them twice the space they formerly had, and an extra sound room has been made.

Manager Ketterer, of the talking machine department of the Conroy Piano Co., states that their fall business has opened with quite a rush and that they expect it to exceed any previous year by a large margin. They are preparing to carry the largest stock of Edison phonographs and records in their history. They are adding more record bins, and when completed they will have a record capacity of 45,000.

H. M. Holleman, president of the Texas Piano & Phonograph Co., Houston, Tex., stopped here for a visit on his way to the Buffalo convention of the Middle States and Eastern Jobbers' Association.

D. K. Myers, the well-known Zon-o-phone jobber, states that the fall jobbing trade is opening very nicely and that they are getting a large number of volunteer orders and are looking for an immense fall and winter trade. His record trade is very heavy. All his traveling men left on Sept. 1 to cover their territories through the better part of five states.

A. A. Knapp reports that his trade for August was quite active. He has been selling and renting a number of high-class outfits to summer outing parties. His record business has been excellent, and he states that he filled a large order for Zon-o-phone records for a party about to sail for Europe.

May, Stern & Co., one of our large time-payment furniture houses here, will open a talking machine department of quite large dimensions on their seventh floor annex about September 15. Miss Sadie Rosenblatt, formerly with the Marks Silverstone Talking Machine Co., will have charge of it. They will handle the Columbia Phonograph Co.'s goods exclusively to start with.

The Val Reis Piano Co. are making arrangements to enter the talking machine business in a very aggressive manner.

S. R. Brewer, manager of the Thiebes-Stierlin Music Co. talking machine department, returned recently from a three weeks' visit to New York and Atlantic City.

J. F. Geo. Gunter, assistant to Mr. Brewer, is home from a week's trip to Put-in-Bay, Ohio.

The Koerber-Brenner Music Co. report having had an active trade during August, and anticipate a large business from now on.

SILVERSTONE TALKING MACHINE CO., 1010 Olive Street ST. LOUIS, MO.

Henry B. Myers, of the traveling staff of the Victor Talking Machine Co., spent several days here recently on his way West.

The Thiebes-Stierlin Music Co. recently had a very attractive window display of Reginaphone and Victor goods.

The Grand Leader, probably our leading department store, has made arrangements to open a talking machine department. They will carry the Victor and Edison.

The Parks Music House, of Louisiana, Mo., have found it necessary to materially enlarge their talking machine department, and are reporting excellent results with the Victor Victrola. They have also enlarged the same department at their Hannibal, Mo., branch.

The Olney Music Co., of St. Joseph, Mo., have just opened one of the handsomest piano and talking machine stores in the state at Hannibal, Mo.

Marks Silverstone, president of the Silverstone Talking Machine Co., reports trade moving along nicely, and that all indications point to a very large fall business.

Max Stein, who is now traveling for this concern, is now on a three weeks' trip through Illinois, and is doing a nice business.

Marks Silverstone, president of the Silverstone Talking Machine Co., of this city, has gotten out a very clever pamphlet entitled "Phonographic Advice," which he is distributing to the trade free and will send to any dealer who will write his firm for one. It is full of good wholesome advice as to how a machine should be taken care of, how it can be kept in good order, and some very staple suggestions in general. The pamphlet has made a decided hit with the trade, and as Mr. Silverstone is quite a talking machine specialist it is of great value to the entire trade.

MAESTROPHONE CO.S NEW REPRODUCER.

As we predicted in last month's World, the new reproducer manufactured by the Maestrophone Phonograph Co., of Lincoln, Neb., is winning high praise wherever it has been heard. In fact, so fast are the orders pouring in for this new invention of A. C. Mestraud that they have been compelled to double their factory force. Speaking with a member of the trade regarding this device he said: "There is no question but that this reproducer will revolutionize many ideas heretofore held by inventors of these devices, and that it will have an enormous sale is a foregone conclusion. And why not, after all the important parts of a talking machine, as every one knows, are the reproducer and the record, and any one who improves on either is putting this business just so much nearer the mark of perfection." Jobbers and dealers should be ready for the fall demand with these reproducers, and at the same time should get a line on some of the new things this company will shortly bring out.

BE SURE TO ENTER ALL ORDERS.

One of the things that should be at hand in every progressive talking machine store is a book in which to enter all orders that could not be filled owing to the fact that the record or machine part was not in stock. When orders are being placed with the jobber or factory the book should be referred to and all parts not in stock when asked for ordered immediately if only in small quantity, while if a record is asked for twice, stock it. Even if part of such stock does remain on the shelves for an indefinite time it means customers simply from the fact that people like to trade where they can obtain goods at once without waiting for factory delays or being referred to another store.

The ZON-O-PHONE RECORD is the BEST RECORD MADE

GREAT OPERATIC STARS SECURED BY COLUMBIA CO.

During the Recent Trip of Paul H. Cromelin to Europe He Consummated Arrangements Whereby the Columbia Co. Will Control Some of the Most Distinguished Stars in the Operatic Firmament—Special Deal Made With Fonotipia Co. of Milan—The Copyright Situation in Europe Interestingly Analyzed by Mr. Cromelin—Some Decisions of Great Moment.

When Paul H. Cromelin, vice-president of the Columbia Phonograph Co., General, went to Europe early in June it was for the express purpose of entering into arrangements whereby his company could enlarge and expand their operatic repertory,and secure the great singers abroad to make records in the future for them, covering a period of years. He has been eminently successful in both quests, and in an interview with The World shortly after his arrival, he said:

"As you know, the Fonotipia Co., of Milan, Italy, with branches in London and elsewhere, control most of the great artists of the modern Italian school, and the Columbia Phonograph Co. have concluded arrangements whereby we will have the exclusive manufacturing and selling rights for the United States and Canada of their records. We have imported the Bonci records, as is well known, but with the heavy duty and the royalty charges we would be placed at a disadvantage. A great many of the singers whose services we will hereafter control have been paid tremendous sums, one of them commanding 70,000 francs ($14,000) for an exclusive contract. To be sure, all of the artists engaged are not known here, but not a few have been engaged for the coming operatic season either by Hammerstein or at the Metropolitan Opera House, New York. The entire contingent are famous in every European country, and their voices are marvels in point of range and beauty of culture. I was simply astonished when I had the opportunity of hearing them for the first time.

"The list will include the following lyric and dramatic tenors: Alessandro Bonci, Giuseppi Borgatte, Leon Escalais, Edourdo Garbin, Mario Gilon, Enzo Leliva, Gino Martinez-Patti, Jose Palet, Piero Schaivazzi, Ernest Van Dyke, Guido Vaccari, Francisco Vignas, Giovanni Zenatello, Elvino Ventura, Carlo Duni and Giuseppi Anseloni, who has made his great reputation in Russia recently. These embrace the greatest tenors of the Latin school.

"The baritones will be Mario Sammarco, Ramon Blanchart, Francesco Maria Bonini, Ferruccio Coraditti, Giuseppe De Lucca, Eugenio Giraldoni, Antonio Magini Coletti, Victor Mursi, Giuseppi Vacinni and Ricardo Stracciari. Basses—Adamo Didur and Oresteo Luppi. Sopranos—Regina Pacini, Maria Barrientos, Giannina Russ, Regina Pinkert, Teresa Arkel, Eugenia Burzio, Emme Corelli, Georgini Caprile, Esperanza, Clasenti, Maria de Macchi, Elesa Petri and Amelia Talexio. Mezzo Sopranos—Teresina Terraris, Nini-Trascani. Contralto, Armida Parsi-Pettinella. Kubelik, the great violinist, who stands second to none in the world, has also been engaged. These artists are 'tied-up" with the Fonotipia Co., and as before said, the Columbia Co. will make the records here, and they will be put on sale during the coming season.

"Then we made a deal with the International Talking Machine Co., who are the manufacturers of the celebrated Odeon records," continued Mr. Cromelin, "whereby the Columbia Co. will manufacture the voice reproductions of the famous artists largely of the French and German schools, controlled by them. It is perhaps needless to repeat all their names, suffice it many of them have already been heard in opera here. For examples, Emmi Destin, Lili Lehmann, Elize Elizza, Frieda Hempel and many others familiarly known all over Europe in the field of grand opera. In short, the Columbia Phonograph Co. will have not only the most extensive repertory in high-class music, but the best the world affords, and practically all that could be demanded by even the most exacting. These records will be made in discs only, principally in eleven-inch size.

DEVELOPMENTS IN THE COPYRIGHT SITUATION.

"The copyright situation? Oh, yes, I gave that matter considerable attention also," replied Mr. Cromelin to a direct inquiry. "And I am more firmly of the opinion than ever that we will win. Three important events have taken place in Europe in relation to the matter since Congress adjourned. "A.—The Gramophone & Typewriter Co., Ltd., of London, Eng., the defendants in the Italian litigation, have taken an appeal to the Supreme Court. You will recall that when Congress adjourned it was uncertain whether they would appeal from the decision which nad been given in favor of the publishers.

"B.—The Supreme Court (Court of Cassation) of Belgium has decided that mechanical reproductions do not come under the domain of copyright. The first decision, or the one in the lower court, was in favor of the manufacturers. This is the first case that has been finally passed upon by the highest court in any country, and as the plaintiffs were Italians, the defendants, a French concern, and the trial in Belgium the matter could be viewed broadly and the sweeping decision in favor of the talking machine manufacturers is both important and significant in view of pending legislation in our Congress.

"C.—The case in the lower court of Hungary resulted in favor of the music publishers, but it was taken up on appeal to what is equivalent to our United States Supreme Court—the court of final resort. In the opinion recently handed down the court of first instance is reversed, a retrial is ordered and additional expert testimony is instructed to be taken as to whether talking machine records should be included in the domain of copyright. The matter will be more carefully examined, as the court did not believe that the matter had been sufficiently considered in the first instance.

"The French case is still on appeal to the Court

Reciprocity

Give us your trade---We will give you success.

Why send your orders to a distributor who can give you nothing in return—no service, no ideas, no prospects. Every dealer is within easy reach of one of our two Talking Machine Depots. Write us to-day and ask us what we can do for you in particular.

The greatest stock in the United States lies in our warerooms awaiting your demands.

We can submit business methods and advertising schemes to you that will result to your profit. As the best known Music House in America we receive an enormous number of inquiries for Talking Machine Goods—We refer all inquiries to the local dealer.

Write us to-day. You have nothing to lose and everything to gain.

of Cassation, which will be final. The decision in the lower courts in France is regarded by all concerned as most absurd. That is, music with words is prohibited, while music alone is free. There has never been any restriction on the use of music in the manufacture of perforated rolls for piano players in France. It will be interesting to recall that in the laws of Austria enacted during 1895, section 36, of the act dealing with copyright, reads as follows: 'The manufacture and public use of instruments for the mechanical reproduction of musical works shall be no infringement of copyright in music.' Nothing could be more specific. England in 1906 took the same position, Germany also in 1901, and with the precedents established by these countries and the decision in the courts, it is not likely that our representatives in Congress are going to pass an international musical copyright bill which will place American manufacturers of musical mechanical players in a less favored position than those abroad and at the mercy of a few European publishing houses, who will be the greatest beneficiaries should such a law be enacted."

AMERICA EXPORTS NEEDLES.

Petmecky, 346 Broadway, New York, advises us that shipments of the improved multiphone needles are being made to New Zealand, Australia, Mexico, and all parts of the United Kingdom. Their perfected machine for the making of the improved Petmecky needle now does the work with one operator which formerly required the services of half a dozen men. By this method Petmecky keeps up to the increased demand for needles.

OPEN QUARTERS IN NEWPORT, R. I.

The handsomely fitted-up branch house of Landay Bros., New York, at Newport, R. I., on Bellevue avenue, adjoining the Casino, has been closed for the season. While open during the sojourn of the "400"—about three months—the place was under the management of Henry Stern, and a notable business was transacted. Victor outfits were sold to many of the ultra-fashionable families, who have become enthusiasts, of the most pronounced type, over the pleasures to be derived from the musical possibilities of the latest developments in sound reproduction. An incident of more than ordinary interest occurred the week he returned to headquarters. Joseph Harriman and Mrs. Reginald Vanderbilt were in the store listening to the latest "Red Seals," and then the Victor Auxetophone was inquired about. The machine was started up with dance music records, and in a minute Mr. Harriman and Mrs. Vanderbilt were doing a cakewalk and a buck-and-wing, much to the edification of a great crowd of the "hoi-polloi" which had gathered in the street outside. Before the couple departed they left behind an order that would make the average dealer's mouth water for a month.

S. DAVEGA'S PROPOSITION.

In order that the Victor dealers may receive some benefit from generous advertising done by the Victor Talking Machine Co., Camden, N. J., S. Davega, 32 East Fourteenth street, New York, offer the following proposition to their trade: "We shall insert each dealer's name and address in a space alongside, or on bottom of the Victor 'ad.,' under the heading that the new records can be heard at your store. It is our intention to insert these announcements in the most popular papers only—The Evening Journal and World. The cost of your name and address in these announcements will be $1 for each paper. Mr. Davega adds that this will place the dealer's name before more than one million readers, letting them know he sells Victor goods. The names will be placed alphabetically. The response to this unique offer, Mr. Davega informs The World, has been generous beyond expectation. His new store extension, with an ell at 126 University place, has been fitted up in a suitable way for carrying on more conveniently their wholesale business. The floor is especially well lighted and the entire facilities afforded will doubtless lead to a large expansion of trade. L. Kaiser, the veteran salesman, expert and traveler, is the manager of the talking machine department, both wholesale and retail.

"THE COLUMBIA RECORD."

A Business Periodical of Value and Interest.

"The Columbia Record" is a chatty, wide-awake publication issued by the Columbia Phonograph Co. The present issue is replete with bright, witty sayings, helpful hints to dealers and a lot of good suggestions which are well worth reading. It's mighty good trade literature.

VISITORS FROM DENVER.

Last month C. Owens, general manager, and H. Shields, in charge of the talking machine department of the Denver (Col.) Dry Goods Co., were in New York, and called upon A. P. Petit, general manager of the Talking Machine Supply Co., to talk over the Victor proposition. Subsequently they were at the Victor Co.'s plant in Camden, N. J., closed the deal, and are now another addition to the long list of Victor distributors.

SOME LOS ANGELES TRADE NOTES.

(Special to The Talking Machine World.)

Los Angeles, Cal., Sept. 9, 1907.

The talking machine business in this city, according to all reports and appearances, is in a flourishing condition. Dealers say that the summer business was very satisfactory, and with bright prospects for a busy fall and winter. New stores are opening up at short intervals, and the older ones are constantly expanding.

The latest concern to enter the field is the Talking Machine Co., recently incorporated under the laws of California for $25,000. The moving spirits are Harry E. Deane, formerly with the R. S. Williams Co., Toronto, Can., for several years since Edison phonograph representative on the Pacific Coast and with much valuable experience in that field; Sibley S. Pease, formerly with the retail talking machine department of the Bartlett Music Co., and Lewis B. Graves, who was also connected with the Bartlett house. The new company have handsome quarters at 535 South Broadway, with several separate testing rooms, a large concert hall and an up-to-date record storing system. During the initial week a surprising amount of business was done, the principal sale being of a $200 Victor outfit to a prominent physician. Concerts are given on Wednesday and Saturday evenings.

TRADE HAPPENINGS IN BALTIMORE.

Business Rather Slow the Past Month Owing to So Many People Being Out of Town—Look for an Unusually Active Winter Trade—Dealers Are All Preparing to This End and a Lively Campaign Will be Inaugurated.

(Special to The Talking Machine World.)

Baltimore, Md., Sept. 9, 1907.

Busiuess in the talking machine line in this city has beeu rather slow during the last month. This has been attributed by the dealers to the fact that so many people have been away from the city to spend the warm weather at the seashore or in the mountains. The dealers are not worrying, however, for many of them have taken advantage of the quietness in trade and enjoyed trips of recreation and pleasure so as to be in good trim for the rush of trade which is expected within the next few weeks. Baltimoreans are beginning to return to the city, and after resting for a little while the shopping season will soon be as lively as ever, which means that the talking machine handlers will get their share of business. All of the dealers express the opinion that this winter will be one of the most successful in the way of sales of talking machines that they have had since this particular style of musical instrument was placed on the market. Everybody seems to enjoy them, and the easy manner in which new records can be procured at such reasouable rates encourages a great many to adopt this style of music for amusement in preference to mandolins, banjos and other string instruments, which require so much practice before real music can be played by the performer.

Joseph Grottendick, manager for E. F. Droop & Sons, 231 North Howard street, says that while business was rather slow during the summer it has been picking up steadily since the first day of the present month. This firm expect to have a large winter and fall trade and are making preparations for such anticipations. The wholesale department of the firm has done a good business during the entire summer with the Edison machines for which the firm have the agencies.

Messrs. Sanders & Stayman say that business in the talking machine line has been fine and promises to be better when the cool weather sets in permanently. The firm are preparing to make another addition to their talking machine department, according to Manager G. Wright Nicols. The firm have sold many high-grade machines during the summer.

The firm of H. R. Eisenbrandt & Sons, who have the agency for the Victor talking machine, have had an excellent trade all during the sum mer and are jubilant over the prospects for a heavy fall trade. The Victors have proved very popular in this city, much to the gratification of the local agents who have exerted untiring efforts to make them a success.

BROWN WITH LEEDS & CATLIN.

The Former General Manager of the Talk-o-Phone Co. in San Francisco Now Sales Manager of the Leeds & Catlin Co.—Some Changes in the Staff of the Peerless Talking Machine Co. of San Francisco—Mr. Brown Enthusiastic About the General Trade Outlook—Condemns Price Cutting.

Charles E. Brown, formerly general manager of the Talk-O-Phoue Co., of San Francisco, also president of the Peerless Talkiug Machine Co., who are retailers of phonographs on the Pacific coast, has joined the ranks of the talking machine meu in New York and is now sales manager for the Leeds & Catlin Co., manufacturers of Sun records. He is calling upon the trade personally and thoroughly familiarizing himself with the situation in the eastern states, and anticipates a very large and coustantly increasing trade. As Mr. Brown has brought with him his western ideas of business, there will be a square deal for all and favoritism for none.

Since the San Francisco fire the general office of the Peerless Talking Machine Co. has been transferred to Spokane, Wash., under the control of Charles H. Carder, secretary of the company. This company is a growing one and interested in a number of talking machine departments in prominent music houses on the Pacific Coast and anticipates largely increasing its interests.

Ou the 1st of July Charles Freese purchased an interest in the Peerless Talking Machine Co. ano was elected treasurer of the company. Mr. Freese for the past seventeen years has been connected with The Spokesman-Review, the leading newspaper of Spokane, and severs his connection with The Review on October 1 to take an active interest in the Peerless Talking Machine Co. and act as its treasurer. Mr. Carder remains secretary of the company and moves to San Francisco, there to reopeu the Peerless business. Mr. Brown remains president of the company, but as he is compelled to remain east, owing to his duties with the Leeds & Catlin Co., he no longer takes an active part in the management of the Peerless Co., which he founded.

Mr. Brown is very enthusiastic in regard to the talking machine situation. He believes that the phonographic business on the Pacific Coast is much ahead of that of the eastern states, as the competition is more keen and the dealers are more aggressive to secure business. In his opinion, the talking machine business has not even started, as its future will be so great that in a few years' time, to look back to what we now have, we will realize that the business of to-day was just a feeler and that this industry is going to be one of the greatest and most lasting businesses ever established. He is a firm believer in the stopping of price cutting and unfair business tactics, and claims that the more amiable relations that are established among the dealers the greater the tendency will be to rapidly multiply the busiuess.

The trade-mark of the General Phonograph Supply Co., New York, of which C. V. Henkel, of the Douglas Phonograph Co., is president, is a neat design illustrative of an old geometrical problem that has caused many a headache in its solving.

To You, Mr. Jobber

We will be ready for Fall trade with a complete line of Standard Horns. The same quality, standard and finish will not only be upheld, but improvements will be made so that our product will be second to none on the market. Our reputation for reliable horns is well known, and we propose to add to that by creating the finest horns that can be located anywhere.

TRADE STANDARD MARK

You will make no mistake by making a Standard alliance. Place your order now and you can be sure of prompt shipment. We make a specialty of filling orders. Be on the Standard side and you'll be all right.

JOBBER VS. DEALER.

Where, Mr. Talking-Machine Dealer, does *your* Jobber stand?

Is he *for* you or *against* you?

Is he in reality a big dealer doing a big mail order business, or does he *refer all retail inquiries coming from your town back to you to take care of?*

Does he help you carry your installment paper?
Where does he stand in the fight for a *uniform advance in prices on all installment sales?*

We think we are right in our stand for the *protection of the dealer* in these important matters. What do you think?

You can get your full share of the fall trade by sending your orders to the jobber who is working for the *protection of the small dealer first, last and all the time.*

Get ready for fall business now.

We have the largest stock of Victor and Edison goods in the history of the trade. New Edison equipment now ready.

Help us in this fight for the small dealer.

Lyon & Healy

CHICAGO. CHICAGO.

FROM OUR CHICAGO HEADQUARTERS

195-197 WABASH AVENUE, E. P. VAN HARLINGEN, MANAGER.

Past Month Makes Satisfactory Showing—Dealers Placing Liberal Orders Early—Cylinder Talking Machine Alarm Clock—National Phonograph Co. in Twin Cities—Trade With Country Dealers—"Talker" as a Connubial Peacemaker—Kreiling & Co.'s Shipments to Foreign Countries—Knickerbocker Case Co.'s Attractive Line—Feinberg to Buffalo—Commercial Machine's Varied Uses—Recent Visitors to Talking Machine Co.—"Red Mill" Record Publicity—Goodwin Returns from Western Trip—Lewis' Clever Cabinet—Barry & Hall Fibre Needle Co. News—Chicago Stand Co.'s New Taper Arm Attachment—Other Items of Interest.

(Special to The Talking Machine World.)

World Office, 195 Wabash avenue,
Chicago, Ill., Sept. 8, 1907.

While August is never expected to be unusually active in talking machine circles the past month has made a very satisfactory showing with both retailers and jobbers. Record sales have been good—machines comparatively slow, a natural summer condition. The latter part of the month trade began to show quite a distinct picking up. Jobbers generally report a moderate increase over the corresponding month last year. Everybody is anticipating a big fall and winter trade, and it is safe to say that never were stocks in the hands of local jobbers so large and complete. This simply in preparation for a big season's business, and made possible by the increased capacities of the factories. Following the increasing tendency of the past few years born of bitter experience, talking machine dealers are coming more and more to place liberal stock orders in the early fall and not delay placing their requirements until the approach of the holidays, when under any conditions the congestion is bound to be frightful and cause annoying delays and consequent loss of sales on the part of the dealers.

John A. Wozencraft, a Chicago man, has invented a cylinder talking machine alarm clock, which, it is said, solves a multitude of problems which have bothered humanity. Standard cylinder records are used and the mechanism is so adjusted that all one has to do is to place a record on the machine, wind the clock, and at the indicated moment you will be awakened either by the strains of entrancing music, a good humorous selection, or by a special call on the home-made record. Other possibilities claimed for the device are the announcing of the time of day musically—hours, quarters or half hours—the calling of trains at railroad stations by setting the device to go off at the proper time, and by proper wire connection the inmates of a house will be awakened when the midnight marauder is fooling with door or window.

E. C. Barnes, Western manager of the commercial department of the National Phonograph Co., was recently in Minneapolis, where he made arrangements for the establishing of an office from which the business phonograph wants of the Twin Cities will be looked after. He also visited Duluth, where C. E. Ellis, of Miller, Davis & Co., is getting the largest concerns in the city to adopt the Edison system.

W. C. Fuhri, district superintendent of the Columbia Phonograph Co., is snatching his vacation in sections. He went to Denver on business recently and spent a couple of days at Pike's Peak. In a few days he will go to Duluth and after looking after the Columbia interests there will endeavor another few days' outing. The large territory under Mr. Fuhri's direction makes it almost impossible for him to isolate himself from business for any length of time.

With a better organization than ever before James I. Lyons is pushing his jobbing business vigorously. A number of desirable new dealers have been started by him within the last two months.

J. Foster Davis, sales manager of the language outfit department of the International Correspondence Schools in the city, is visiting the wholesale trade. He is en route to the coast.

Theo. Bentel spent a few days in Chicago last week.

Loring Leeds, of the Leeds & Catlin Co., was a Chicago visitor last week.

L. C. Wiswell, assistant manager of the talking machine department at Lyon & Healy's, spent the bulk of his vacation visiting the Jamestown Exposition and the Edison and Victor factories.

Trade during the summer seems to have been decidedly good with country dealers, especially those who sought trade earnestly. A dealer from an adjoining small Illinois city was in town the latter part of August. Business had never been better with him in August, he declared, and only the day before his arrival he had sold five Victors and a couple of Edisons.

The talking machine has added to its other triumphs that of connubial peacemaker. A. D. Herriman, manager of the Columbia store at Davenport, Iowa, sends in a clipping describing an occurrence at Iowa City, Iowa, which he says actually took place while his crew was working in that vicinity. An aged couple separated seemingly forever as their friends could not heal the breach between them. The old gentleman sought solace in a graphophone. His wife, wandering near, heard the instrument and crossed the lawn to listen to it. Friends urged her to

Special Notice to Dealers

We spend **Ten Times** as much in Advertising Edison Phonographs and Records as any other Jobber.

As a Result **WE HAVE** Inquiries to refer and **WE DO** refer them **DAILY** to dealers **WHO BUY OF US.**

GET IN LINE

Remember that Jobbers who do not advertise cannot have many inquiries to refer.

BABSON BROTHERS

"THE PEOPLE WITH THE GOODS"

G. M. NISBETT, Mgr. Wholesale

19th St., Marshall Boul. & California Ave., Chicago, Ills.

euter the house in order to hear the music more clearly. After much persuasion she consented and a reconciliatiou was effected. Then, the story goes, the husbaud went downtown and bought a new record, "Home, Sweet Home."

Kreiling & Co., manufacturers of the "Tiz-It" all metal horn connection for cyliuder machines, report a growing demand for their specialty, which is now handled extensively by jobbers throughout the country. Through the medium of their advertiseuent in The World, Mr. Kreiling has recently made shipments to Sydney, Australia; Cape Colony, South Africa; Mexico and Cuba, and iuquiries have been received the past week from Bombay, India, aud various European countries.

J. H. Harding, Western manager for the Kinetoscope department of the National Phonograph Co., is spending his vacation at the Jamestowu Expositiou. On his return he will put in several days at the factory at Orange.

O. M. Kiess, wholesale credit man of the Chicago office of the Columbia Co., spent his vacation in Penusylvauia, enjoying the scenes of his former home aud the companionship of old friends.

The Knickerbocker Case Co., Chicago, make a complete and attractive line of both disc and cylinder record cases. A recent introduction of theirs is the "Knickerbocker pegless," a handsome cylinder record case without the usual pegs for the records. This allows the placing of the cartons in the case, thus furuishing double protection to the records. Furthermore it can be used as a suit case or for other purposes if desired. The pegless cases take the same number of records as those with pegs, and are made in sizes accommodating 12, 24, 36, 48, 72 and 96 records.

B. Feinberg, of the Westeru Talking Machine and Supply Co., left last Sunday on a trip among the jobbers between here and Buffalo. After mingling with the jobbers there he will go to New York to buy goods. Mr. Feinberg declares that Western jobbers buying supplies through his concern direct from Chicago warehouse, have been able to snap their fingers at the telegraph strike, as they have uot been obliged to wire for prompt shipment.

The superintendent of one of Chicago's greatest industries uses his dictation machine uot only for correspondence purposes, but for his confidential reports to his superiors of personal injury cases and the numerous physical disagreements which arise from time to time among individuals of the thousands of workmen of various nationalities employed by the concern. He dictates the results of his examination of the parties involved immediately after the occurrence, and when the parties to the unpleasantness, in the excitement of the moment, are more likely to blurt out the truth than when they have had time to frame up their answers according to the dictation of policy considerations. In many instances these reports are such as to make it inadvisable to trust them to paper, and the superintendent's verbatim reports are listeued to in secrecy by the officers or legal advisers of the company, who can either take personal notes from the records, which can then be shaved or preserved uuder lock aud key, without their contents reaching the ears or eyes of clerks or steuographers.

Among the recent visitors at the Talking Machine Co., were T. T. Bergh, of the Bergh Piano Co., LaCrosse, Wis.; G. W. French, Iouia, Mich.; B. G. Foot, Waterford, Wis.; E. Cohn, Michigan City, Ind.; M. J. Kramer, Crown Point, Ind., and A. P. Curtin, Helena, Mont. The reproduction of the almost historic letterhead of the company iu their advertisement recalls the large number of men prominent in the trade who have been connected with the concern since its inception, aud among whom may be named Leon F. Douglass, Henry B., F. K., and Gus Babson, Mr. Dennison, uow chief of the experimental department of the Victor Co.; E. K. Smith, manager of the Victor Co.'s shipping department; J. R. Ramsdell and others. Manager A. D. Geissler reports that business in August showed a decidedly gratifying increase over August of last year. Roy Keith, one of Mr. Geissler's "finds," is making himself extremely popular with the Michigan dealers whom he is now visiting.

William F. Standke, who has successfully managed the Memphis, Tenn., branch of the Columbia Phonograph Co., has been promoted to the management of the Denver office, while Thomas F. Elfert, who has been connected with the New Orleans office, succeeds Mr. Standke at Memphis.

W. W. Parsous, mauager of the commercial graphophone department of the Chicago office of the Columbia Phouograph Co., has returned from his annual fish at Manitowish, Wis. He declares that he caught a single muskalonge that furnished the piece de resistance for supper for the seventy-two guests at the hotel.

J. W. Bentley now has charge of the Columbia sub-office at South Chicago.

The coming of The Red Mill to the Grand Opera House was signalized by the timely display of records of the hits of the sprightly musical comedy in practically every talking machiue window in the loop, as all the companies issue Red Mill records. At the Columbia headquarters Manager E. B. Walthau and his assistants on the retail floor laid themselves out on the Red Mill question and made a "solid" display in the big main window. In the center of the background is an immense red mill, especially made of cardboard for the purpose. It is ten feet high, the fan is kept revolving by means of an electric motor, and the windows (transpareucies) are lighted up from behind with iucandescent lights. Advertising matter furuished by the Red Mill management in the way of small cut-outs of the mill aud large ones of Montgomery aud Stone in characteristic attitudes, are liberally used. The floor is strewn with excelsior dyed green, to represent grass, and here and there are scattered the fourteen disc and cylinder Columbia Red Mill records, which are listed ou large show cards on either side of the window. A suitable background is furnished by a large fan-shaped frame on which different colored ribands are stretched.

C. E. Goodwin, manager of the talking machine department of Lyon & Healy, returned the middle of last month from his vacation which included the tour of the Yellowstone, a sojourn with his parents at Portland, aud brief stays at Seattle aud Vancouver. The people on the coast are excellent talking machine buyers, and accordiug to Mr. Goodwin's belief more machines and records are sold in proportion to the population there than elsewhere. One reason for this can be found in the fact that the average Westeru storekeeper is quicker to take up new things than the more conservative Eastern merchants, many of whom have ingrained prejudices against side lines to overcome. Furthermore practically everybody makes a good wage on the coast, and the proportion of real music lovers is high. You hear less popular and rag time music at the theatres and resorts than you do further East, and the demand for high-grade records is remarkably strong. All the dealers Mr. Goodwin visited have up-to-date and complete stocks, and are doing a fine business.

L. L. Lewis, mauager of the language department at Lyon & Healy, has designed a cabinet for linguistic aspirants via the phonographic route. It has the appearance when closed of a high-grade music cabiuet. The machine is set in the top of the cabinet and is covered when uot iu use by a neat hood, which appears to be an integral part of the cabinet. A sliding shelf furnishes a place for the text book. There are drawers for the language records and all accessories. These drawers are doubly dust proof, as they are protected by doors covering the entire front of the cabinet. The cabinet is eighteen inches square and thirty inches high to the desk.

The wooden needle invented by D. E. Hall and manufactured by the Barry & Hall Fibre Needle Co., of this city, has been placed on sale at retail in Chicago. To use the full sized needle it is necessary to have a triangular openiug punched in the needle arm, but to introduce the needle to machine owners small samples which can be used in any needle arm are furnished.

George M. Nisbett, manager of the wholesale department of Babsou Bros., returned from his vacation spent at Minocqua, Wis., the latter part of last month and left immediately for a central western trip among the dealers of the Central West.

F. O. Siemon, in charge of the wholesale talking machine department at the Rudolph Wurlitzer Co., has been spending his vacation over in Michigan, and according to his associates his piscatorial exploits have been mighty.

E. H. Uhl, mauager of the Chicago house of the Rudolph Wurlitzer Co., and J. F. Bowers and C. E. Goodwiu, of Lyon & Healy, will attend the jobbers' couvention at Buffalo.

The Chicago Stand Co., of this city, have ready for the market their uew taper-arm attachment for cylinder machines—the Phon-Arm. It is made in two styles, one for the Edison standard machine and the other adapted for the Edison Home or Triumph. The attachment does away with cranes or stands entirely. With it can be used any disc horn or the Edison horn simply by cutting the horn off to fit the elbow of the attachment. Furthermore it is almost in-

CASH AND INSTALMENT PRICES.

An Interesting Chat with C. E. Goodwin, Manager of the Talking Machine Department of Lyon & Healy—The Situation Must Be Settled in a Manner Agreeable to All Concerned.

(Special to The Talking Machine World.)

Chicago, Ill., Sept. 6, 1907.

"I am not surprised that the question of establishing both a cash and an instalment price on talking machines should come up before the jobbers in their convention," remarked C. E. Goodwin, manager of the talking machine department of Lyon & Healy, in the course of a chat. "It is only a matter of time when this must be settled. The manufacturers should look at the situation squarely, and should aim to be consistent in all their arbitrary arrangements of price. They have absolute power in such matters, and we

C. E. GOODWIN.

must look to them for an equitable schedule that will cover the points involved in this discussion of differential rates.

"It is perfectly natural that the jobbers should be divided in their opinious as to a proper readjustment. There is that class of people who have conducted their business on legitimate lines following a precedent of accepted custom, and there is that influential class, who, taking advantage of the fact that only listed prices are laid down for them, have snapped their fingers in the faces of those who proceed in the usual way, and have made their instalment prices without asking anything extra in the way of interest or a small advance for carrying the paper. The talking machine manufacturers never anticipated that a few jobbers, backed by unlimited capital, would take advantage of their competitors in this small way. They hoped that custom in such matters would prevail, and never thought that a departure from it would be an issue. This opening left to waive interest, or not ask a small advance, has been taken advantage of to such an extent that it has left a number of jobbers and dealers without a cash argument. They can't afford to charge more than the other fellow for doing an instalment business, and they are absolutely helpless when their customers ask, 'Well, how much for cash?' It does not argue that because some houses do not seem to want a cash business they should be allowed to upset the generally accepted policy on all instalment business the world over, and I hope the manufacturers who can control the situation will amend their contracts leaving their established prices as the cash price, and insist upon a moderate, usual, legitimate advance that will cover a part of the expense for making the sale of a talking machine 'on any instalment plan.'

"You can't go much farther than to ask the

CHICAGO

usual rate of interest, a custom established long before talking machines were thought of, though perhaps it would be better to leave out the word 'iuterest' and make a flat rate amounting to about what the regular iuterest would be on the usual extension of time, and let that go as the universal instalment price everywhere. We ought to be able to compromise on such a plan as this.

"It is not necessary for the manufacturers to go into detail or outline any instalment plan for the dealers. The whole situation is covered by simply making two prices—one for cash and another where 'sold on any instalment plan.' Some dealers would give longer time than others, but the question of extra long time on talking machines is righting itself, and I think all of the legitimate dealers who favor my plan are not inclined to overdo this matter of extending time.

"Some jobbers seem to be of the impression that if an instalment price was set upon each machine by the manufacturers, the dealers would attempt to evade it. What could be more foolish? Who is going to conduct an instalment business on any scheme that waives a lien on the machine until it is paid for? Such contracts are always carefully worded and these sales the manufacturers would have a better line on where the question of price-cutting came up than they can possibly have on any cash business.

"I feel positive that all jobbers and dealers would welcome a slight advance on their instalment sales, and if the manufacturers will only lay down their iron hand in the matter of setting the cash price and the price 'on any instalment sale,' they will quickly dispose of a very irritable matter.

"The small dealer needs this advance even if some of the large jobbers think they don't."

Chicago has 116 five-cent theatres, eighteen ten-cent vaudeville houses, and about a score of the penny arcades. In New York the five-cent theatres are multiplying amazingly in all sections of the city. But the police here are making things interesting to a large number.

HOW PENNY ARCADES PAY.

Can Be Started on a Fairly Small Capital and Results are Surprisingly Gratifying—Some of the Essential Points to Be Considered by Those Who Enter This Business.

(Special to The Talking Machine World.)

Chicago, Ill., Sept. 9, 1907.

A five-cent theatre can be started for $500. There is one on State street, near Thirty-first, that was put in operation for that sum; but there is another one on State street, near Monroe, that required an outlay of $35,000. The man near Thirty-first street, after paying out his last dollar for a lantern, was compelled to sign a mortgage on his fixtures before his landlord would give him a lease. The owners of the establishment near Monroe street have a dozen others, equally pretentious, in some of the largest cities of the couutry. At Coney Island, the birthplace of the five-cent theatre, they have a palace that was built especially for their business, at a cost of $60,000.

Between these extremes are five-cent theatres of varying costs. The first thing to be considered by those who plan an amusement place of this nature is rent. Usually it is necessary to sign a lease for at least one year, and, as the business is considered objectionable by landlords, the rent is higher than for other enterprises. After the rent is paid it is necessary in many cases to make alterations in the building, and these have to be paid for by the owner of the theatre. Seats have to be bought, and no small amount of lumber is required for the stage.

The largest item of expense is that of the front. If the theatre is to catch the crowds, especially when there is so much competition, there must be an attractive front. In some of the more pretentious downtown establishments of this nature the front is of the finest mosaic, with pictures painted by a recognized artist. In one of the Madison street theatres the front entrance is decorated with two huge paintings, each of which cost $500. Always there must be extensive arrangements for light, and a sign, fairly scintillant with electric bulbs, must extend out over the sidewalk where it can be seen for blocks. Lighting fixtures, including a sign, cannot be had for much less than $200.

Every five-cent theatre has a lantern with which to show its moving pictures. The lantern costs $100 at the least estimate, and the films, which are rented, come at $50 a week for each hundred. The films are prepared by firms which make a specialty of that business, and, as their pictures are syndicated, they never are sold. Most of the pictures come from London and Paris, New York and other points.

For the illustrated sougs there must be one or more singers, and these are not easily found for less than $10 a week each. Also there must be a piano and a man to play it. Two ticket sellers and one "barker" are necessary to look after the business of the front end, and one man is required to operate the lantern. Even in the cheapest of these theatres it is hard to get along without a salary roll of five or six men and women.

To offset this expense there must be a large patronage, and that this patronage is available has been proved by the theatre on State street, near Monroe. Sig Faller, its manager, said to a reported of a local paper that the average attendauce there is 4,000, with perhaps 6,000 on Saturday. In this establishment there are three floors, with a shooting gallery in the basement, a penny arcade on the first floor, and the theatre proper on the secoud floor. As a means of getting the people to visit the second floor Mr. Faller built a flight of steps with water running underneath them. The steps are of glass, and the water dashing below makes it appear to the visitors of the place that they are walking up over a waterfall. Thousands who would not waste the time to go up in an elevator or climb an ordinary flight of stairs willingly go up this novel waterfall stairway. "There's tricks in all

THE SNORE ANALYZED.

Harry St. John Middleton Is of the Opinion That Some of Our Talking Machine Experts Should Augment the Literature of the Language of Sleep: and Suggests the Use of Talking Machine Records in This Connection.

Almost every one has experienced that condition of sleep when a person is partially awake, is conscious of all that is going on in the room, can tell the time and figure out the pattern on the wall paper, but at the same time is powerless to move. In other words, the brain is only sufficiently asleep to hold us partially captive. Harry St. John Middleton, of Providence, R. I., elaborates on this condition in a semi-humorous vein, presenting some suggestions worth noting. He adds: "In this sort of trance the hearing is intensified. A whisper swells into a roar and the dropping of a small object on the floor produces a sound to the super-sensitive ear like a clap of thunder. We were in this condition a few nights ago when we became aware of something similar to a tornado sweeping across the plain of our tympanum. It was a fully developed and inimitable human snore. Our ear was so close to the snorer's lips that they almost touched it, and listening there to that human whirlwind was a revelation to us.

"We discovered three qualities in this particular combination of lung, nasal, throat and brain phenomenon. There was a rushing noise as of a mighty wind, the sound as of waves beating on distant shores (the sound of the circulation of the blood?) and words—ordinary, every-day, even commonplace, slangy words, disconnected sometimes, but indicating, nevertheless, that the sleeper was voicing some former experiences, to wit: 'A dollar and a half,' 'three of 'em,' 'a straight,' 'take the pot,' 'broke.'

There was nothing astonishing about this, for it is a well-known fact that many people talk in their sleep. But it was the manner of delivery, the words coming as if from an immeasurable distance, in the faintest of whispers drifting to our auditory nerve on the wings of that snore! It was startling, producing in our mind even a feeling of uncanniness in that still midnight hour.

"Then a stranger thing happened. Almost unconsciously a thought came into our mind, a simple word. Instantly it was echoed back in that snore! (Fact.) Once, twice, thrice we thought of words and the sleeper repeated them after us as plainly as if they had been shouted from the housetop. If that was not a genuine case of 'thought transference' we would like to know what it was.

Now it is said that Mr. Edison, the wizard of electricity and, incidentally of the phonograph, has retired from active work, but we humbly think that if he would emerge from the seclusion that his retirement affords and connect a megaphone with a large-sized and healthy snore and said megaphone with one of his famous 'records' that the results would astonish the world.

"The following are historical words: 'Put your faith in no man; bind him down with a constitution,' but what would a 'constitution' be compared with the knowledge that it would be possible to connect the human snore, the language of sleep—and dependent sayeth that no man ever lied in his sleep—with an Edison 'record'?—a 'record' that would trumpet a man's true inner self to the entire world forever? What a powerful weapon such a 'record' would be in the hands of the just against the machinations of ward-heeling politicians, boodlers, insurance grafters, loan sharks, real estate fakirs and little-souled men of all kinds, hypocrites, bank breakers and thieves in mind and in fact.

"Figuratively speaking such a 'record' hanging over the heads of men would be of incalculable benefit to the world in general—husbands would quit going out nights for fear that their better halfs would place their exploits on 'record'; lawyers would begin to speak the truth and physicians would begin to admit squarely that they couldn't cure disease—for the testimony of their sleeping hours would run counter to their confusion to their waking intention, and also prepare men in general to meet any of their day-forged deceits, in short, men would have to do right or go to the wall. Think of it, Mr. Edison."

TO VISIT ENGLAND NEXT YEAR.

Thomas A. Edison Looks Forward With Great Pleasure to His Trip to the Old Country in 1908—May Call on King Edward.

Mr. Edison, the inventor, is a staunch admirer of King Edward of England, says Tid-Bits, and to an interviewer recently he stated that one of the greatest pleasures he looks forward to when he visits England in 1908 will be his possible meeting with the British sovereign. Mr. Edison well recollects the visit of King Edward to the States, now nearly half a century ago. "And no wonder," he humorously remarked, "for on that day I managed to get the biggest black eye I ever had in my life. It happened in this way: I was at school at the time in Detroit, and there was bitter rivalry between our establishment and another school in the neighborhood. Well, the Prince of Wales was to pay Detroit a visit, and all the schools were to take part in the general welcome. We were therefore lined up, commanded to 'quick march,' and were nearing the scene of festivities when our rivals loomed in sight. We met, and an instant later the fight was on. I felt that things were coming my may, and I was not wrong, for suddenly I received a terrific blow in my left optic which put it entirely out of business. When I recovered myself our assailants had vanished, order was restored, and we proceeded on our way. Yes, I saw the Prince all right, though it was out of one eye only."

GOD DOESN'T PLAY FAVORITES

Although Some People Seem to Think So—Conservation of Energy Is the Secret.

Have you ever noticed that one man will work hard all day and yet appear fresh and vigorous at night and another will do about the same amount of work and show up a fit candidate for a pine overcoat? And do you know the reason for it? No, brother, God doesn't play favorites, we've all about the same amount of energy. It's all in the way we use it. Figure to yourself that you have just as much energy to work with in the same way that you have so much money to work with. Now, if you spend all your money, all your energy on one job, where are you at?

Conservation of energy is the secret. You start in a day and find that something is going wrong, your nerves tighten up, your brain is at its highest tension before you know it, and if you do not relax, and that right quickly, you will join the innumerable caravan which moves to Mount Clemens. Relaxation is by no means loafing, far from it. But it is letting your brain and muscles do their work without whipsawing them all the time for greater speed. Save the bursts of energy against the time when they are really needed.

All the things you do through the day are not of such moment as to require concentration; in reality, fewer things than you realize require it. You can dictate a letter just as well and as easily if you sit back and relax a bit as if you used the same amount of energy as you would in driving a fire engine up the avenue. The thing doesn't require it, and yet we all make the same errors of judgment. Do your work a little more easily and you will be fresher at night. Success gained at the cost of our ability to enjoy life is as poor a swap as one could make.

VICTOR D. & E. CO. SUMMER RECORDS.

Second Bi-Monthly Edition Issued to Dealers.

The second bi-monthly list of "Choice Selected Records for the Summer Trade" has been issued by the Victor Export & Distributing Co., that practically gives the Victor dealer two record days a month. The list includes 37 twelve-inch and a dozen eight-inch records of steady sellers, possibly neglected in the attention given the new monthly bulletin and taken from the Victor Talking Machine Co.'s general catalog.

VESTA VICTORIA AND THE VICTOR.

The Victor Talking Machine Co. have signed Vesta Victoria, the popular English vaudeville singer, to sing exclusively for their company. Miss Victoria is a serio-comic of great talent, and is said to be the highest salaried vaudeville artiste in the country. The records she has already made have proven very successful, both as regards artistic worth and sales qualities.

SOME COLUMBIA VISITORS.

Among the Columbia phonograph managers who have visited the executive office during the past month are Messrs. Regan, of New Orleans; Souders, of Dallas; Silverstein, of Louisville; Griffith, of Birmingham; McMurty, of Pittsburg; Nichols, of Cincinnati, and Johns, of Detroit.

Record and Machine Cases

We manufacture a full line of cases for Cylinder and Disc Records, Machine Cases and Horn Cases. Carrying goods in stock, we can make prompt shipment. Our quality is the best, and prices right. Ask for our catalogue.

CHICAGO CASE MFG. CO.

241-247 S. JEFFERSON ST. CHICAGO, ILL.

PRACTICAL SUGGESTIONS AND COMMENTS.

REGARDING SOUND BOXES.

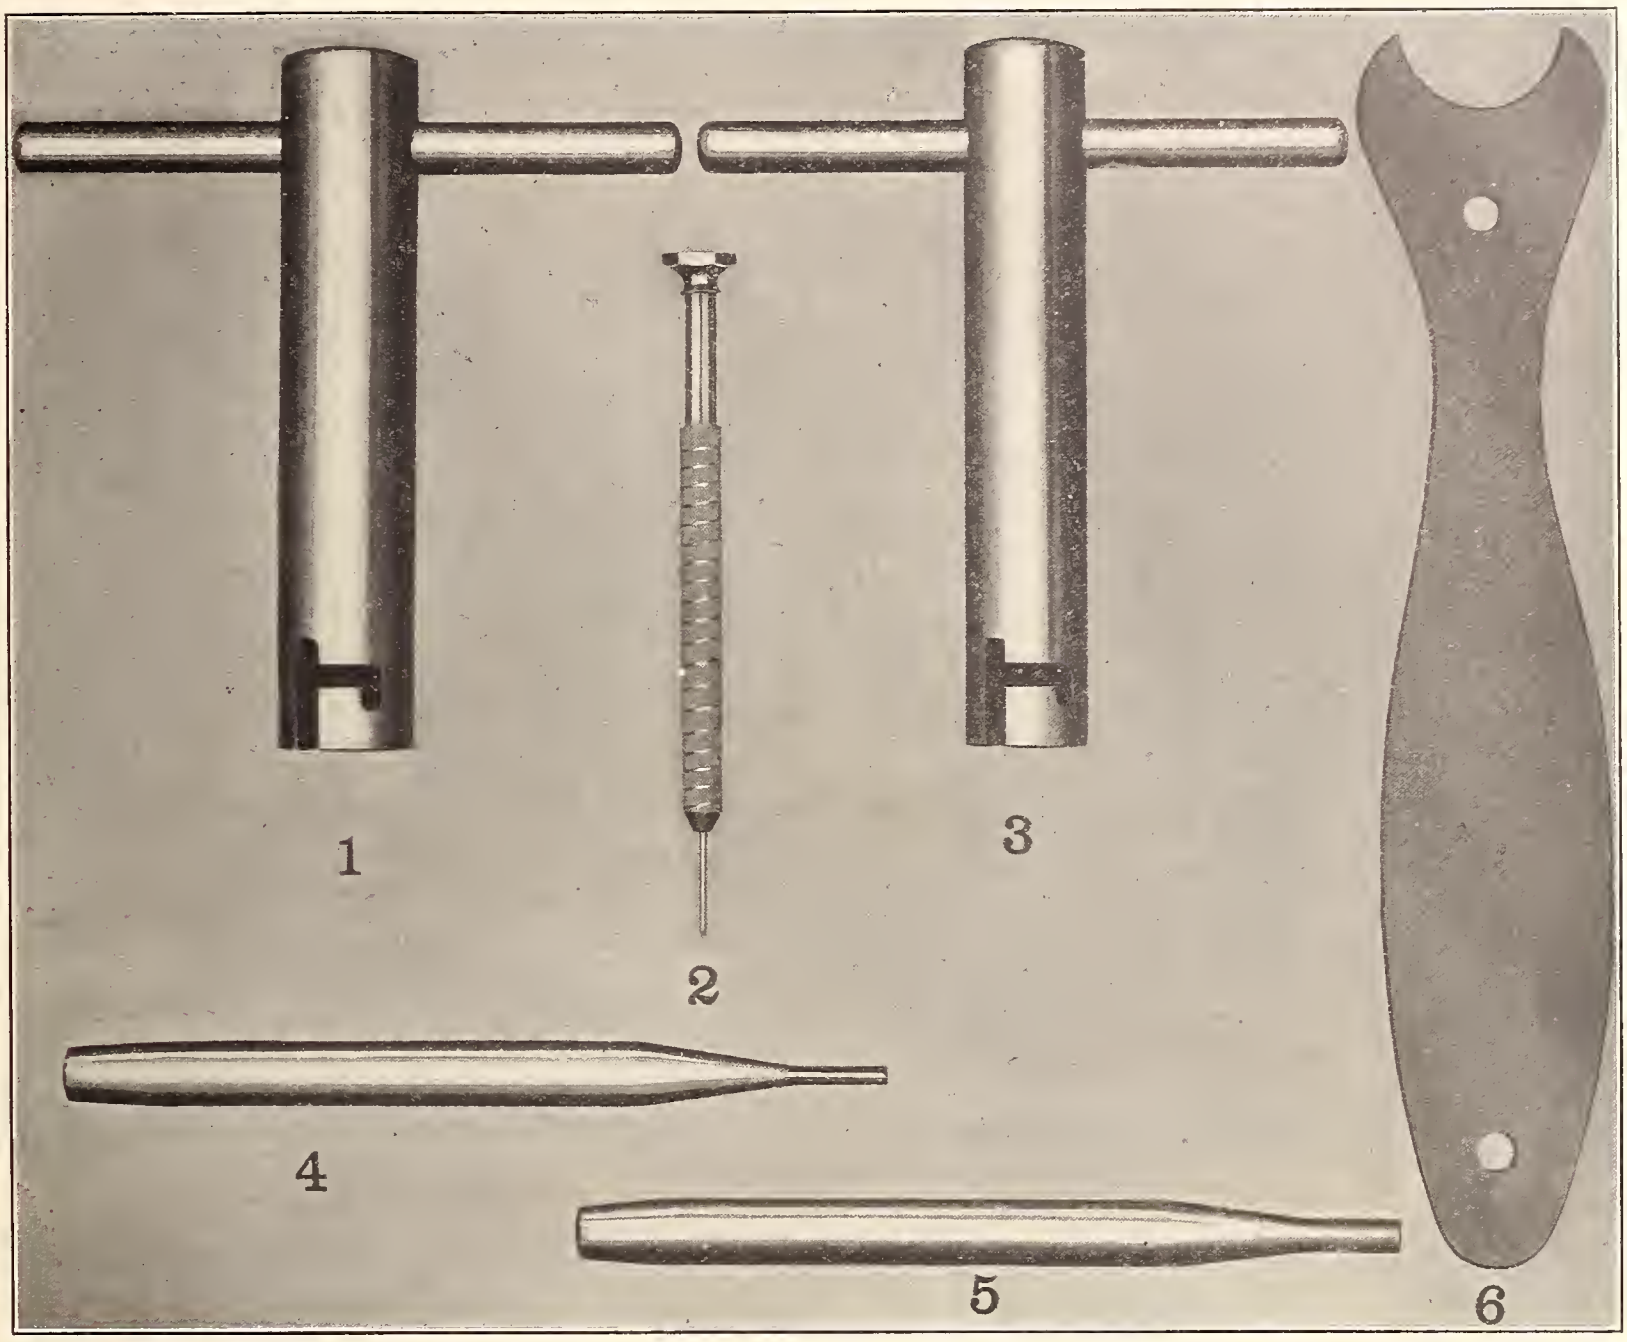
In the course of some remarks on sound boxes Die Spechmaschine gives the following rules for a good mechanism: "The diaphragm must be placed symmetrically between the india rubber couch; the needle-holder must be fastened exactly in the midst of the mica. The latter may not have too deep a tension; it ought to lie level after fastening of the needle-holder. A tension too great upward is as ruinous as no tension. Without sufficient tension the mica is inclined to creep to the inner site, in which situation it is unfit for reproducing, as the sound produced by the mica cannot be fixed, and consequently disagreeable secondary sounds are produced. All screws for tension and fastening must be so placed that they do not take up the vibration of the sound box and clatter. Those who will observe these rules will even by little knowledge of sound boxes find out how to improve a defective sound box and how to make it ready for sale."

GRAPHITE FOR PHONOGRAPH SPRINGS.

Since many dealers sell phonographs as a side line, they do not become familiar with the mechanical construction of the machines and cannot furnish information frequently asked by their customers. One of the things not understood by such dealers is the method of putting graphite in the springs, and yet it is one that many phonograph owners want to know about, says the Edison Phonograph Monthly. The proper way to put graphite in the springs of the phonograph is to allow the machine to run down, remove it from the cabinet, stand it on end and sift dry powdered graphite into the spring barrel through the holes in the end of the same. About two to four teaspoonfuls will be enough, according to the type of machine. Then put plenty of oil on the spring, wind the machine up and allow it to run down two or three times so as to distribute the graphite through all the leaves of the spring. This applies to the Standard, Home and Triumph. The Gem has no spring barrel, and to graphite this spring it is only necessary to remove the base board by taking out the four screws at the bottom, turn the machine upside down and sift graphite directly on the leaves of the spring and then put in oil.

HANDY REPAIR TOOLS.

The Victor Talking Machine Co. are offering to dealers and distributers at actual manufacturing cost a number of repair tools for Victor machines which, in the hands of any mechanic, will greatly facilitate the work in the repair



To All Talking Machine Dealers

THE WALLACE BARNES COMPANY

BRISTOL, CONN.

department. They have taken this step in response to numerous requests. The tools shown in the illustration are as follows: Nos. 1, ⅜-inch turntable spindle socket wrench; 2, sound box diaphragm piercer; 3, 5-6-inch turntable spindle socket wrench; 4, 3-32-inch pin drift; 5, 5-32-inch pin drift; 6, turntable spindle worm wheel; spanner wrench. The Victor Co., moreover, state that numerous requests have reached them for some small device to be used in taking apart Victor concert sound boxes. As there is a very satisfactory device for this purpose on the market they have not listed a tool of this nature.

SIR J. G. T. SINCLAIR'S DISCOVERY.

Sir J. G. Tollemache Sinclair, the eminent philanthropist who, as noted in previous issues of The World, has donated a number of talking machines to public institutions in Great Britain, has recently announced the discovery made by a marble polisher which he with three assistants has verified. It is to place a thin slab of Sicilian marble under the Gramophone, about an inch wider than the instrument and about half an inch thick. He adds: "Mine was not squared or moulded and cost me 3 shillings. I have tabulated below the results of an experiment with four of my recitation records, in increasing the volume of sound emitted, by sending three persons up the stairs in the case of each record, with instructions to stop on the last step upon which they could hear the words of the record distinctly. I tried this method alternately with the phonograph disc instrument on the wooden table without the marble, and then with it, taking care to shut all windows and doors except the door of the sitting-room and turning the mouth of the trumpet toward the staircase and preventing all noise:

Title of Record	Steps without marble slab.	Steps with marble slab.
(1) Macbeth	40	50
(2) The Lord's Prayer	34	50
(3) Salvation in all Churches	28	35
(4) Song of the Shirt	39	53

"We all thought besides that the tone was clearer and more like that of a bell. Obviously this discovery is of the utmost importance to all manufacturers of disc and cylinder phonographic instruments, for it adds to the loudness of each of them from 25 to 50 per cent., and I think it would be expedient always to include a marble slab in the outfit, so that the records should be heard to the best advantage. This should lead to a large extension of sales both of instruments and records, as the former would render a phonograph at about two-thirds the price about equal in power to one at the full price, while one at the full price would become from 25 to 50 per cent. louder than before."

PLAYING RECORDS BACKWARD.

A. Scott Haynes, the well-known talking machine dealer of Owensboro, Ky., writes The World as follows: "I noticed an article in the August 15 issue of The Talking Machine World headed, 'Playing Records Backwards.' I have an improvement to suggest. About two years ago I had a desire to know what the English language would sound like if literally spoken backward. Knowing that I could not sound the words backward I realized that if I could play a record backward I would have my wishes gratified. For the benefit of your readers who would like to try the experiment I would suggest they take off the belt that runs the mandril and put on a good cross belt, which can be made of an ordinary string. They can then play any record backward without injury. The reproducer, to be sure, will have to be started at the close of the selection."

SOFTENING TONES OF NOISY RECORDS.

Richard Welford, of Newcastle-on-Tyne, Eng., states that during the past five or six years he has tried various expedients to soften the strident tones of noisy records, and adds: "I mean such tones as create a resonance or vibration through which one word runs into the next and articulation is lost in a humming noise. My latest experiment is a success, and I ask you to publish it for the benefit of my fellow-readers. I made an inverted cone of foolscap by twisting it around the hand, as a grocer makes his tea and sugar papers, and pasted down the overlap. When it was dry I cut off the projecting lip at the broad end and the twist at the bottom. Thus was produced a hollow cone 5 inches diameter at the one end and an inch at the other. Into the small end I put a lump of cotton wool about the size of a tennis ball, but pressed in no more than was necessary to make it stay. The weight of the whole is under one-quarter of an ounce. When a record needs muffling this cone is dropped into the horn, but not pushed too tightly home, and the effect is excellent. I can now hear words that I never could catch before. My records, it should be added, are all cylinders."

ENLARGE THEIR QUARTERS.

The Nebraska Cycle Co., Omaha, Neb., jobbers of Edison and Victor, and one of the largest talking machine houses in the West, have enlarged their quarters by the addition of the store at 319 South Fifteenth street, next to their present location at 321 and 323 South Fifteenth street. The office space has been enlarged to accommodate an increased staff of stenographers and clerks, and the basements of the three stores have been turned into a storage room for records and machines. This house now carry 15,000 Victor records and 75,000 Edison records.

In an effort to rid the premises of fleas which had been making life unbearable for the salesmen, the manager of the Columbia Phonograph Co.'s store in the McVey Building, Wilmington, Del., recently was the means of having the local fire department answer a false alarm. The manager burned a quantity of tobacco stems in the basement of the store in order to suffocate the insects, and the dense smoke issuing from windows and ventilators in consequence caused a citizen to turn in an alarm.

The Auxetophone shown at the last Leipzig Fair continues to attract much favorable attention by reason of its superb reproduction.

REPRODUCTION OF COMPOSITIONS.

The Two Sides of the Copyright Question Discussed by a London Paper.

Commenting ou the action brought by Mr. Newman against the National Phonograph Co., Ltd., of London, for infringement of copyright, tnrough the reproduction of a composition of his on talking machine records, and which, as reported by our London correspondent in this paper, was decided in favor of the defendants, because "sounds mechanically produced did not come within the copyright act," Music, of London, pertinently says: "The remedy which the talking machine firms would have in the event of a combined movement on the part of publishers and singers to alter the law and make it obligatory for the former to pay the latter royalties, would be to publish the music they pay their attaches to play or sing themselves. If they did this, we fancy they would prove rather formidable opponents of the publishers, some of whom look rather sulkily at their present immunity from paying anything for the use of a song or piece. There is, of course, more than one way of looking at the thing; but while certain publishers are very much against the use of their copyrights for talking machine purposes other publishers will tell you that their reproduction by clever artists has greatly stimulated their sale. The talking machine firms—that is, the leading ones—pay so liberally for services rendered that they would have no difficulty in obtaining MSS. from composers, and it is conceivable that if they became their own publishers, with the exceptional facilities they command, they would make the business pay very well indeed. This is a matter they will no doubt give their consideration, irrespective of any future attempt on the part of singer or publisher to injunct them from doing what they have been accustomed to do under the protection of the law. At the recent trade meeting held in Leipsic, one gentleman said he thought that the rolls, talking machines and records, were getting 'the tarred end of the copyright stick.' Things must be bad in Germany if that is the case. Up to now both branches of the trade in Great Britain are quite safe."

TO TEACH TELEGRAPHY.

By Means of the Graphophone—The System as Tested Found Efficient.

Following closely upon the wonderful success of the commercial graphophone the Columbia Phonograph Co. have announced that they will shortly introduce a system of teaching telegraphy by means of the graphophone. The system, as tested, is said to be very efficient and will enable many who were unable to secure proper ear training, to recognize the sounds of the keys through constant repetition with a uniform touch and sound for each letter, something not obtainable where a number of operators afforded means of practice. It will save the poorer student the expenses of having a good operator to "send" to him for practice. The Western Union officials are much impressed with the possibilities of the scheme and J. C. Barclay, assistant general manager of the company, endorsed the new system as follows:

WESTERN UNION TELEGRAPH CO.,
New York.

Office of the
Assistant General Manager.

August 14, 1907.

Electric Novelty & Talking Machine Co.,
Bridgeport, Conn.

Gentlemen—I have heard with pleasure and genuine astonishment the graphophone telegraph record lessons that you are about to place on the market, and am sending this voluntary and hearty endorsement with the hope that it may be of benefit in putting these telegraph lessons in the hands of the young people of the country.

During my long experience with telegraph and electrical matters, I have never found any system of teaching telegraphy. It is within the reach of all—simple, rapid and absolutely perfect—and you have my best wishes for its deserved success.

Very truly yours,
(Signed) J. C. BARCLAY,
Ass't Gen'l Manager.

HOW PREJUDICE WAS CONQUERED.

Ernest Werninck Relates an Interesting Story Showing What a Persevering Salesman Can Accomplish When He Knows His Business.

Talking machine salesmen, like men in any other line, frequently have most amusing and often tragic experiences. The following story is told by Ernest Werninck, of the Scranton, Pa., store of the Columbia Phonograph Co., and illustrates what a persevering salesman can accomplish:

"We had a case of an old fellow who is known to have a good banking account, but who up to the time of this incident only had a very poor type of ancient make disc machine. Our outside salesman was carryiug at the time a $50 cylinder machine, and was finding it difficult to canvass the old gentleman who gave as his chief reason for not making the deal that the salesman did not have a certain cylinder record with him, which the old man had on the disc. 'No, sir,' he said, 'you can't play me anything like this; so I don't want your machine,' and he would immediately put on the 'disc record.'

"He had done this twice and was starting it again for the third time when the salesman slipped on a P. Blank, screwed on the recorder, and took what turned out to be a very fine record. 'Yes, sir,' he said this time, 'I have got the same record.' He played it through. The old man was interested and good natured. The salesman told him the trick. The old fellow chuckled and got more interested. The salesman showed him how it was done. The old fellow wanted to do it too. He did it. The old fellow also signed a check and gave up his manufacturers of mechanical instruments and method which even approaches in merit your beloved disc machine."

REPAIR PARTS
for all
Talking Machines

We manufacture more parts than any other concern, and we sell more, because every part is carefully made.

You take no chances in ordering our repair parts.

Sole agents for

The Schwabacher Needle Fabrik.

The Largest Needle House in the World.

THE TALKING MACHINE SUPPLY CO.

A. P. PETIT, General Manager. 400 Fifth Avenue, New York, U. S. A.

A SOMEWHAT PERSONAL TALK

With Those of Our Readers Who Find Fault With Their Town—The Value of Optimism—Pay to be a "Discoverer."

What's your opinion of your town, Mr. Talking Machine Dealer? Live men make live towns. Not that all the live men are to be found in those places. Sometimes a few are met with in the slow-going, sleepy places, but as a rule they try to escape and usually they succeed. Why did they not stay and infuse life into the sleepy spot, and make it the better by their presence? Maybe it's live towns that make live men.

Wherever you may be situated, don't "throw stones" at the place that provides you "all the comforts of home." Don't despise it because it does not happen to be metropolitan. Others are contented, and it is therefore to be presumed are successful in their calling. Why not you? Does the fault rest entirely in the town, or nine-tenths of it in yourself?

Patriotism, like charity, should begin at home. Perhaps you are a country merchant ambitious for a big store in some "live" town. Some of your acquaintances are well-to-do merchants in such places. But you know that when they started, years ago, they had a pretty hard struggle, and the live, big town of to-day, where they do business, was not half the size or importance that yours is. They "grew up" with the place. Both prospered together. Why not do likewise?

Is there no snap to your town? What's the reason? Why was the place started? How are the people employed? What are its resources? What are its advantages? Perhaps you have never given the subject a thought. Your town may be like a multitude of other places that have jumped in one bound from obscurity to renown—just waiting for a discoverer; some one to say: "Just the spot the world has been waiting for!"

Every one knows it then, and the inhabitants wonder they never saw before what has been so plainly before their eyes. Of course, the discoverer gets all the profit and glory. New people flock in, and those who have waited so long and patiently to be discovered are overwhelmed and more than ever lost in obscurity.

Don't try to keep it down. Push it along. Investigate. Find out what is needed. Then get the other merchants interested. Let outsiders see that you mean business, and they will be interested. In a short time new life will be infused into your one-time sleepy town, and it will grow rapidly. During all this you will be looked upon as the leading spirit, and your talking machine business will grow even faster than the town.

That is much better than running the place down and yourself with it. The chronic grumbler never makes friends and rarely has any.

TALKING MACHINES ARE ABUSED

By Many Users With the Result That They Create a False Impression as to Their Merits Among Prospective Purchasers—Magistrate House's Severe Criticism.

Talking machines properly used are everywhere acknowledged to afford excellent means of entertainment, for poor and rich alike, the former enjoying the records at fifty cents or less quite as much as the wealthy enjoy the high priced grand opera records reproduced on machines costing a hundred dollars or more. But even the greatest pleasures indulged in too often and indiscriminately lose their charm. And where neighbors appreciate the music of a "talker" played at intervals, at proper hours, and with the records changed to avoid annoying monotony the thing has been frequently overdone with the result that the machine has become a nuisance and in some cases the courts have been called upon to stop or at least curb its performances.

As an example of how talking machines affect those who are compelled to be unwilling listeners to their reproductions we quote the rather extreme and drastic arraignment of the talker, by Magistrate House, of New York, while on the bench in a local police court recently: "It's too bad the Legislature isn't in session. If it was, I know a lot of influential citizens who would go to Albany to ask relief from what I consider a great nuisance. Talk about Balaklava. Why, up my way there are phonographs to the right of us, phonographs to the left of us, phonographs in front of us volleying and thundering. And the warmer the night the more phonographs you hear."

A FEW "WORLD" TABLOIDS

Worth Considering and Swallowing if Advance in Business Is Desired.

"If you hold a dime close to the eye and a dollar a little way from the dime, you cannot see the dollar because the dime so completely obscures your vision. So it is with the dealer who is shortsighted enough to permit a few cents difference in the price of an article to so obscure his vision that he cannot see the increased profits just the other side. Remove the obstruction to your vision. Get a clear prospectus. Better goods mean better prices and more satisfaction. And all these mean more business."

"All climates are alike to the man who is satisfied with the one he has."

"A carelessly arranged window means a carelessly kept store. See that the valuable advertising eye-catcher—the show window—is the best that you can make it, always."

"Fortune does not seem to care who embraces it so long as it is not a coward."

"It requires less ability to maintain a reputation than to acquire it."

"When everybody else admits that they are wrong and that you are right, the millennium will be in full bloom."

"Let vacation mean victory—in the afterhustle."

"'Feathers' are good for the sleepy and for Indians, but they are best when thrust into the cap of achievement."

THE CHEAPEST ADVERTISING

Is Provided by the Trade Journal Because It Reaches People Desired.

There is no exaggeration in the claim that the trade journal provides the cheapest and most effective means of introducing an article. Every day experience makes it good, as the Fourth Estate aptly says; but this is not to say that the average merchant who is well stocked is going to buy immediately because he has seen an advertisement which interests him, nor that he will do more, as a first step, if he needs goods of the class advertised, than to submit the usual inquiries for samples or further information, which, if found satisfactory, will justify his taking up with a new thing.

The desirability of keeping an advertisement continuously before the trade is obvious. Goods already well known are kept to the front in this way, and perhaps the most liberal advertisers in trade journals are manufacturers who have nothing new to offer, but appreciate the importance of competition, and who will not permit competition to obscure, by their own neglect of advertising, the merits of the goods they offer.

To establish the sale of a new article, though aided by the intelligent recognition of novelty and improvement on the part of the retail merchant, surely calls for patience and liberality in dealing with the organs devoted to trade announcements, but which is justified by results, as the success of well conducted trade journals made abundantly manifest.

And as a class of publications, taught by their own interests, trade journals do excellent service to their advertisers by their fair and moderate presentation of information in their reading columns. In short, they do everything but show the goods offered for sale in the store of the retailer, and at a reasonable price charged exclusively for the advertisements.

Well conducted trade papers preserve their independence; they haven't a line of reading space for sale. They make no pretensions to do more than we have stated, but they do it well, with results to all concerned which are remunerative, provided what is offered is meritorious and a reasonable persistency maintained in placing it before the trade. Fits The World doesn't it?

The gramophone is put to quite a novel use by a Dutch merchant in his retail establishment in Amsterdam. Wishing to attract the tourist trade, he exhibits in his window the signs "English spoken," "German spoken." This merchant himself speaks English and German fluently, but his assistants can converse only in the language of their native country. Wherefore, when the proprietor is in another part of the store and a tourist enters, an assistant enquires "English, sir?" or "German, sir?" If the visitor answers "English," by means of a cylinder put into the machine, the visitor is then addressed in English, as follows: "Sir (or Madam), the proprietor, who speaks English, will be telephoned for, and will be here in a few minutes. Please be seated?"

JOBBERS!—DEALERS!

If you are overstocked on perfect goods which you think will not sell readily and want to unload quickly—write us—No quantity too large.

POWERS & HENRY CO.

101 Sixth Street PITTSBURG, PA.

THE MAN WHO DOES IT ALL

And Wants to Do It All the Time Must Throw the Burden on Others in Time or He Will Rue the Day—Make Your Employes Grow.

Many a man forms habits in the early years of a business which later prove fetters on his growth. In starting a small store the owner must do it all. His helpers are few and inefficient. He finds that only the things he does himself are well done.

Eager to make the store a success he works long hours, is everywhere and does everything, attends to buying, selling, window trimming, stockkeeping, advertising, bookkeeping. When the time comes that the business demands more help, the fact that he finds he can do each of these things better than any one he can hire, seems proof that he must continue to do it all.

Up to a certain point this is all right, but beyond that point the head must learn to do things through others or he stops the growth of his own business.

Organization is simply using others to multiply one's own efforts—not that he may take it easier, but that he may accomplish more. In a proper organization the man at the center of things can, with moderate effort, achieve more than a do-it-all man can by straining himself to the utmost.

The penalty of taking all responsibility on your own shoulders—of requiring people to refer every petty detail to you—is that your employes remain business boys in place of becoming business men. They do not grow. When you want to put responsibility on them, you cannot because you have taught them to lean on you.

The responsible head of any business must, of course, keep in touch with all parts of that business, so nothing can go more than a little wrong without his knowing it. But "keeping in touch" does not mean doing all the details yourself or having a finger in every transaction. Train your people properly, accustom the tried and true ones to responsibility, and you will not only be able to keep in touch, but will get very much more power out of the machine than if you had persisted in doing it all.

It is pitiful to see a big business, as oue sometimes will, in charge of a really able man who has tarried too long in the do-it-all stage, who has failed to broaden with the business and who still insists that not one step be taken without his personal O. K.

Such a concern can prosper only by the man at the head of it putting into the business an amount of nervous energy which would have carried it twice as far had he supplemented himself by proper organization.

Some day the limit of his ability to stretch will be reached. Then disaster to the business or to him.

If you are ambitious to make your business really great, be careful you don't form the do-it-all habit.

COPYRIGHT QUESTION AGAIN.

Its Bearing on Music and Musical Reproduction Discussed at the International Conference in Berne—Puccini and Mascagni Greatly Irritated, According to Cable Reports.

Before the adjournment of the international conference of literary and artistic ownership last Saturday, which had been held at Berne, Switzerland, it voted that at the next convention, at Berlin, Germany, in 1908, they would recommend that record manufacturers should be required to pay the owners of copyright music a royalty for its use.

The confereuce was particularly anxious that publishers and composers should be protected against manufacturers of mechanical musical instruments, who avail themselves of an article in the convention of 1886, which allows manufacturers of street organs and musical boxes the free employment of the works of composers.

A publisher of Milan, Italy, said that the Victor Talking Machine Co., Camden, N. J., paid $15,000 to the tenor Tamagno (deceased) and $50,000 to Mme. Melba to sing. This company, according to the Milan man, pays its shareholders 25 per cent. dividends.

Another cable despatch says that Giacoma Puccini, the world-famous composer of "Madam Butterfly," "La Boheme," etc., who has for a long time been greatly irritated because of the liberties taken with his operas by certain European talking machine and moving picture companies in entertainments in the big cities of the United States, on Saturday last decided to take drastic action.

This resolve is based on the outcome of the joint appeal which he made to the body of jurisconsults of Milan, Italy, representing the interests of the Society of Italian Authors and Composers. The consults advise that exhibitions similar to those to which Puccini objects constitute a real and grievous infringement of the authors' copyright law. It is believed that Mascagni, composer of "Cavalleria Rusticana," will act in accord with Puccini.

A GROUP OF EDISON PHONOGRAPH MEN.

Standing, from left to right—H. A. Turner, Geo. A. Renner, M. G. Kreusch, J. W. Scott. Sitting, from left to right—A. V. Chandler, A. H. Kloehr, F. L. Fritchey, W. P. Hope.

The accompanying photo group are the western salesmen of the National Phonograph Co., attending the recent Furniture Exposition at Grand Rapids, Mich., for the use of which The World is indebted to the courtesy of the Edison Phonograph Monthly. The Edison exhibit was installed by and in charge of B. R Barklow, assisted by A. C. Ireton, assistant manager of sales. While Mr. Ireton was in Grand Rapids they were brought together and were given the benefit of the experience of J. W. Scott, the company's veteran New England salesman, who has made a great success of selling Edison goods to furniture instalment houses. "Scotty" proved his ability as an instructor and also further established his reputation as a raconteur.

TALKER USED INSTEAD OF CLERGYMAN.

Owing to the fact that there was no minister to be found to officiate at the funeral of J. O. Elgin, who died in Fergus Falls, Minn., the only parson in the vicinity being out of town, it was found necessary to fall back on a talking machine to take the place of the reverend gentleman as far as possible.

In the town a number of records were found containing passages from the Scriptures and sermons of famous divines, and with the reproduction of sacred songs, both in solo and by chorus, a most impressive service was conducted, according to the report of the local paper.

A SCHOOL OF WINDOW DRESSING.

Although the Viennese shop windows are generally considered to be the most artistically arranged of any capital in Europe, the tradesmen complain of the increased difficulty they experience in getting first-class artists for this work. A special window dressing school is now to be established, in which young men and women may obtain a thorough technical training in this branch of shopkeeping.

The General Phonograph Supply Co., New York, will make announcement of their lines next month.

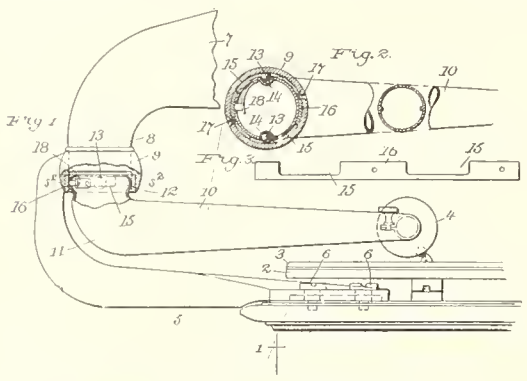
LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Special to The Talking Machine World.)

Washington, D. C., Sept. 8, 1907.

TALKING MACHINE. Henry B. Babson and Andrew Haug, New York, N. Y., assiguors to Universal Talking Machiue Co., same place. Patent No. 863,135.

This invention relates generally to talking machiues and particularly to supporting means for the sound reproducer thereof. An important feature of this invention consists in mounting the sound reproducer in suspended relation on ball or roller bearings so arranged as to permit free movemeut thereof only in planes at right angles to each other. In the present embodiment of the inventiou the reproducer is preferably mounted upon ball-bearings and is free to move vertically

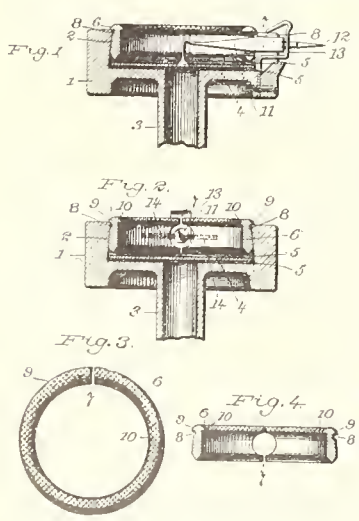


aud horizontally in accordance with the requirements of the type of machine to which it is applied.

The accompanyiug drawings will serve to illustrate mechanism suitable for carrying this invention into effect. In the drawings: Figure 1 is a view in side elevation, partly in section, illustrating the application of our invention to a well-known type of talking machine. Fig. 2 is a horizontal sectional view thereof, on the line s^2, s^2, of Fig. 1, and Fig. 3 is a detail view of the stamped out blank which is shown in Fig. 2, formed up to serve as a removable ring section of the horn supporting bracket.

SOUND REPRODUCER. Andrew Haug, New York, N. Y., assignor to the Universal Talking Machiue Co., same place. Patent No. 863,174.

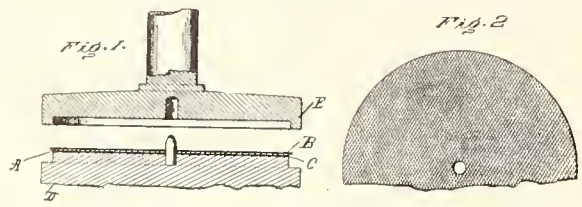
This invention relates generally to talking machines and particularly to the construction of the sound box or reproducer used in connection therewith. An important feature of the invention consists in providing for assembling the various parts of the reproducer from the front of the casing and in so simplifying the construction as to enable the average user to remove parts, make any necessary adjustment or repair and reassemble the same in a ready aud convenient manner without requiring the aid of a skilled workman.



In the drawings—Figure 1 is a sectional view of the reproducer. Fig. 2 is a similar view, taken at right angles to the plane of Fig. 1. Fig. 3 is a detail plan view of the split spring ring which locks the diaphragm in the casing, and Fig. 4 is a sectional view thereof.

TALKING MACHINE RECORD. Thomas H. Macdonald, Bridgeport, Conn., assignor to American Graphophone Co., same place. Patent No. 862,407.

This invention has reference to the production of sound-records of disc form impressed in celluloid. This material has long been recognized as having desirable properties for use as a sound-recording material, but it has not heretofore been employed commercially for the manufacture of disc records. The reasons for this are mainly that celluloid is too expensive to be employed iu a sheet of sufficient thickness to give the desired rigidity, and although it has long been known that celluloid unites readily under heat and pressure with paper or cardboard, either with or without sizing, such compound disc quickly warps to such an extent as to spoil the appearance and usefulness of the sound-record.



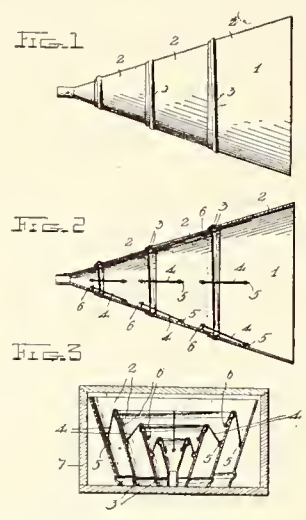
It has been discovered that a commercially successful celluloid record can be made by enclosing a cardboard sheet between two sheets of celluloid which are of the same thickness and quality. The uniformity of thickness and quality of the celluloid sheets is essential to prevent warping.

In carrying out the invention a sheet of cardboard is placed between two thin sheets of celluloid, one of these sheets being slightly larger in diameter than the other sheet and the cardboard disc. The three sheets are placed in the press and compressed between the heated matrix and die in the usual way, thereby impressing a sound-record in the surface of oue of the celluloid sheets. The act of compression unites the three sheets into a coherent disc, and at the same time the projecting margin of the wider celluloid disc is drawn over the edge of the cardboard and against the edge of the other celluloid disc. The heat and pressure of the hydraulic press seal the edges of the two celluloid sheets together. The disc is removed from the press and the slight surplus material is then removed in a rapidly revolving lathe. The result is a sound-record composed of a cardboard disc hermetically sealed between two sheets of celluloid. It is preferred that the under disc of celluloid should have a roughened surface, such as produced by the use of a die whose surface is covered by fine lines close together and crossing at right angles.

In the accompanying drawings, Figure 1 is a cross-section illustrating the record in process of formation, the thickness of the several sheets being very much exaggerated. Fig. 2 is a plan view of part of the underside of a finished record showing the roughened surface.

PHONOGRAPH HORN. Henry Gross, New York, N. Y., assignor of one-half to Frank Shiller, same place. Patent No. 861,648.

This invention relates to improvements in collapsible phonograph horns, and the object is to provide a phonograph horn formed of collapsible telescopic sections provided with means for holding the sections against disengagement at all points when extended and against longitudinal movement in both directions.



In the accompanying drawings, Fig. 1 is a side view of the horn with the parts arranged in position for use. Fig. 2 is a longitudinal sectional view of the horn with the parts in the position shown in Fig. 1, and Fig. 3 is a sectional view through the horn, showing the same collapsed and arranged in the box or case for convenient transportation.

PHONOGRAPH, GRAPHOPHONE, ETC. Charles George Garrard, London, England, assignor to Edison-Bell Consolidated Phonograph Co., Ltd., same place. Patent No. 861,827.

This invention relates to phonographs, graphophones and the like, and particularly to the driving mechanism thereof with the object of effecting certaiu improvements therein. It has hitherto been the practice to traverse the stylus upon the blank or record by providing the arm which carries the stylus with a half nut adapted to engage the feeding screw, whereby the revolution of the latter causes the half nut to travel from end to end thereof in the well-known manner. The employment of a half nut, however, is found to be objectionable on account of the excessive amount of friction set up between it and the feeding screw, and the object of the present invention is to substitute for the half nut a revoluble device which will engage the threads of the positively driven feeding screw and revolve while traveling thereover, thereby lessening the friction between the two parts. A convenient means for effecting this purpose is to mount in any convenient position upon the stylus-carrying arm and by any suitable means a revoluble disc or discs having its, or their, peripheral edge, or edges, shaped or formed so as to engage readily with the threads upon the feeding screw, whereby when the latter is revolved

The O. K. Crane.

THE IDEAL FOLDING HORN

the greatest novelty of the year.

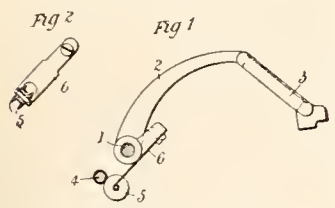
The Ideal Fastener Co.

143 Liberty Street, New York City.

the disc or discs will also revolve and at the same time travel lengthwise of the feeding screw carrying the arm and stylus with it in the well-understood manner.

In place of the disc or discs a roller having one or more grooves of a pitch corresponding to that of the screw, may be used, or any other revoluble attachment to the arms may be employed having a like purpose and effect.

In the accompanying drawings Fig. 1 is an end elevation of so much of a phonograph as is necessary to illustrate the present invention, and Fig. 2 is a detached view of one form of revoluble device adapted to engage with the feeding screw.



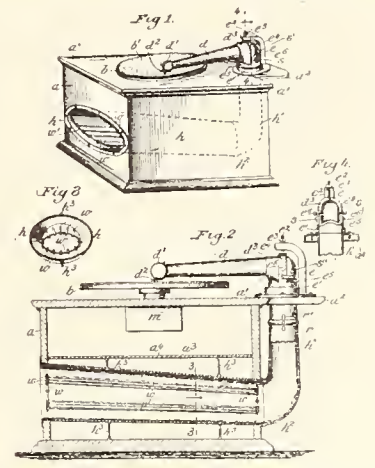
In said drawings 1 is the plain shaft pivotally carrying the stylus arm 2, in which is the usual diaphragm 3, carrying the stylus, while 4 is the positively driven feeding screw with which is adapted to engage a pair of discs 5, rotatably mounted on arm 6, which is secured to arm 2. As seen a pair of discs are employed, but it is obvious that a single or several discs may be employed or a roller having one or more grooves of a pitch corresponding to the thread of the leading screw may be equally well employed.

GRAMOPHONE. Hermann Schroder, Newark, N. J., assignor to H. Schroder Hornless Phonograph Manufacturing Co., New York. Patent No. 864,758.

This invention contemplates certain new and useful improvements in that type of talking machine or gramophone, in which the megaphone instead of being arranged separately and detachably above the supporting casing of the sound record, is arranged in a permanent position within the casing so as to be more conveniently shipped with the casing, to require no adjustment and to avoid any damage to a record which is liable to occur with the megaphone detachably supported above it.

The object of this invention is to provide an improved construction of talking machine of this type, the horn or megaphone of which is provided with means designed to increase the clearness and mellowness of the reproduced sound and which is composed of comparatively few and simple parts that are not liable to get out of order, but that will operate efficiently so as to allow the sound-box at the end of the tapering arm which carries it to follow easily the grooves or depressions in the sound disc or record while the megaphone is permanently mounted without movement, in a sound-box within the casing of the machine and is effectively connected to the tapering arm carrying the sound-box, in such a manner as to interfere in no wise with the free movement thereof in a lateral direction to reproduce the record and also to interfere in no wise with the proper limited movement of the said arm in a vertical direction for the purpose of removing one disc and replacing it by another.

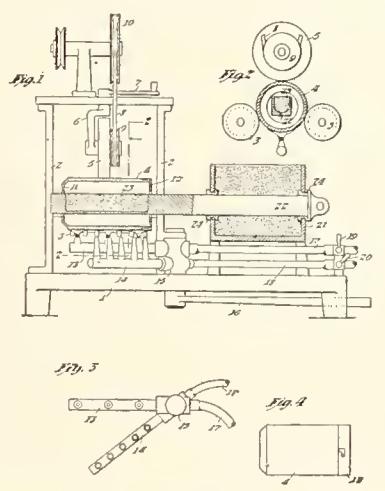
Fig. 1 is a perspective view of the improved gramophone; Fig. 2 is a vertical longitudinal



sectional view of the same upon a slightly larger scale; Fig. 3 is a detail transverse sectional view, the section being taken approximately on the line 3—3 of Fig. 2 and looking in the direction of the dart, and Fig. 4 is a detail vertical sectional view on the line 4—4 of Fig. 1, looking in the direction of the dart.

PROCESS OF MAKING DUPLICATE PHONOGRAPH RECORDS. Jonas W. Aylsworth, East Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 855,553.

In an application for letters patent filed May 11, 1906, Serial No. 316,250, is described an improved process and apparatus for making duplicate phonograph records, in which a heated mold is rapidly rotated and a charge of molten material is supplied to the mold, so as to be distributed uniformly over the bore thereof while in a fluid condition, thereby driving any air or gas bubbles inwardly, after which the mold is rapidly cooled while being still rotated so as to cause the material to set and harden.

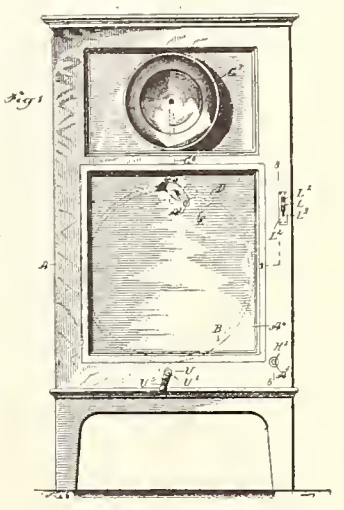


In carrying the invention into effect, a hot mold is rotated at high speed and a fusible material introduced therein in the solid state, preferably in the form of powder or small granules, whereby the fusible material will be uniformly distributed over the bore of the mold by the centrifugal force developed and will be melted by the heat of the mold, so as to become fluid and take a very perfect impression from the record surface, at the same time displacing any air or gas bubbles and forcing the same inwardly after which the mold will be cooled, so as to chill or set the material while the mold is being continuously rotated.

Figure 1, is a longitudinal sectional view of the preferred apparatus for carrying the method into effect, Fig. 2, a sectional view on the line 2—2 of Fig. 1, Fig. 3, a plan view, showing the heating and cooling mechanism, and Fig. 4, an elevation of the complete mold.

MAGAZINE PHONOGRAPH. Allison A. Pratt, New York, N. Y., assignor to Patent Holding Co., same place. Patent No. 864,686.

The object of the invention is to provide a new and improved magazine phonograph arranged to carry a large number of record rolls to enable the user to select any one of the record rolls desired to be played, to provide a simple mechanism for accurately bringing the selected record roll in playing position, to automatically start the machine, and to automatically stop the same at the end of the piece.



A practical embodiment of the invention is represented in the accompanying drawings, in which Fig. 1 is a front elevation of the improvement; Fig. 2 is an enlarged front elevation of the improvement, parts being in section and the casing being removed; Fig. 3 is an enlarged transverse section of the improvement, the parts being in playing position; Fig. 4 is a sectional side elevation of the driving gear for the record rolls and the feed screw for the carriage carrying the reproducer mechanism; Fig. 5 is a rear sectional side elevation of the reproducer mechanism, on the line 5—5 of Fig. 3; Fig. 6 is a cross section of the same, showing the parts at rest; Fig. 7 is a rear sectional side elevation of the same; Fig. 8 is an enlarged transverse section

This Show Case and 50 per cent. Cash Profits are yours

Hohner Harmonica Display

SHOW CASE and HARMONICA ASSORTMENT

This offer consists of an excellent assortment of the best selling HOHNER Harmonicas, to retail at prices ranging from 25c. to $1.00, and a first-class show case, made of tbe best material and perfect in every respect. The assortment is made up of seventeen different styles, with not a dead seller among them. Each style comes in a separate package which is labeled to show at what price its contents can be retailed for and contains an assortment of keys. The case is made of solid quarter-sawed oak, plate glass, and is specially designed for displaying Harmonicas. The instruments appear on an elevated platform, under which there is room to store a small stock. With every case a number of price-tickets are given whicb can be placed on each instrument to display its retail value.

THIS IS WHAT YOU RECEIVE:

4 dozen Assorted Harmonicas, to retail at 25c. each	$12.00
2½ dozen Assorted Harmonicas, to retail at 35c. each	10.50
2 dozen Assorted Harmonicas, to retail at 50c. each	12.00
½ dozen Assorted Harmonicas, to retail at 75c. each	4.50
½ dozen Assorted Harmonicas, to retail at $1.00 each	6.00
Total retail value of Harmonicas	$45.00
Value of Sbow Case, at least	12.00
Total Value	$57.00

Your Gain A Show Case which will last indefinitely 50 per cent. Cash Profit on your investment.

Size of case: 20¾ inches wide, 24¼ inches long, 14 inches bigb.

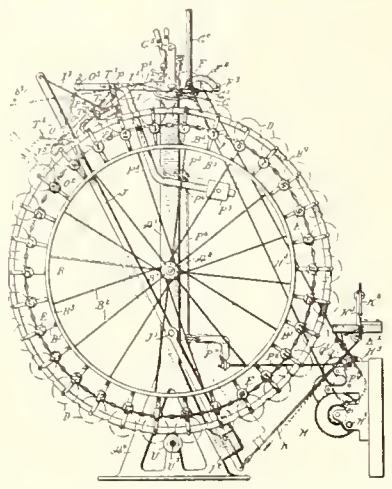
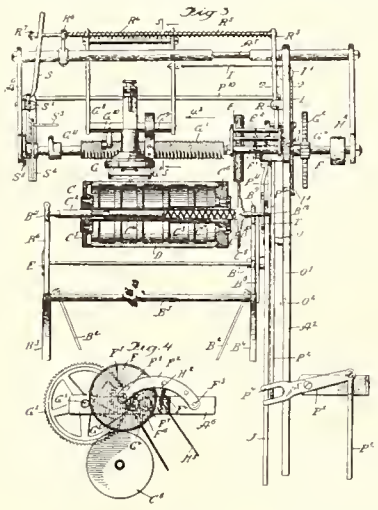
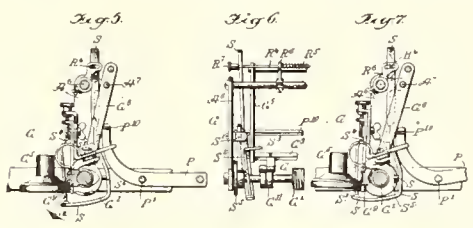
of the improvement, on the line 8—8 of Fig. 1, showing more particularly the motor and a coin-controlled mechanism employed in connection with the improvement; Fig. 9 is an enlarged plan



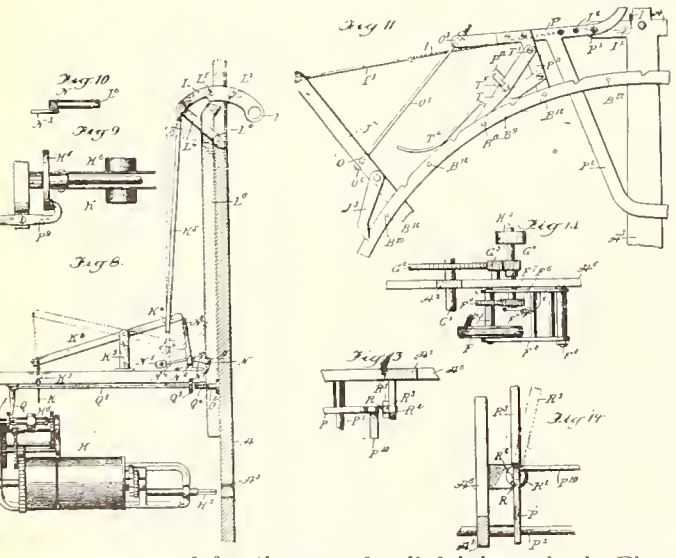
view of the stopping mechani m for the motor: Fig. 10 is an enlarged sectional plan view of the coin-controlled mechanism, the section being on the line 10—10 of Fig. 8; Fig. 11 is an enlarged side



elevation, showing the mechanism for turning the magazine wheel, for returning the carriage of the reproducer mechanism and for actuating



the starting and stopping lever; Fig. 12 is a plan view of the driving gear for the carriage feed



screw and for the record roll driving wheel; Fig. 13 is an enlarged sectional plan view of part of the tripping device for the starting and stopping lever, and Fig. 14 is a cross section of the same.

HOW EDISON SECURED "S" SOUND.

In a column headed, "Rungs in the Ladder of Success," the New York Commercial narrates one of the difficulties encountered by Thomas A. Edison in inventing and perfecting talking machines, as follows: "For a long time Edison's phonograph refused to say 'specia'—it dropped the 's' and said 'pecia.' To produce that single sound he needed something delicate enough to receive impressions not more than a millionth part of an inch in depth, and yet rigid enough to carry the needle up and down, exactly reproducing the vibrations which had made the impressions. The scientists told him there was no such substance in existence. 'Then we must produce it,' insisted Edison. They declared it could not be done, because the qualities which he demanded were inconsistent and exclusive of each other. He declared it could be done, because it must be done, and he did it—but Edison worked eighteen hours a day for seven months to secure that single sound. That is the story of success since the world began. Difficulties yield to enthusiasm."

RETAIL PRICES FOR HORNS

Fixed by the Tea Tray Co. Who Issue Price List to Their Jobbers and Ask Their Support in This Important Move.

That eminent firm of horn manufacturers, the Tea Tray Co., of Newark, N. J., are using every possible means to perfect their product. Never content with what they have accomplished they are ever striving for improvement. They have appointed a corps of inspectors for every department of the factory. It is the duty of the men comprising this corps to give the closest scrutiny to every detail of manufacture. Every point is studied, and even down to the shipping department important improvements have been made, and evidence of the painstaking care in this particular department may be seen in the fact that letters are constantly being received from various leading jobbers throughout the country, commenting the Tea Tray Co. for the originality which they manifest in packing their goods for shipment, and the splendid condition in which they are received.

The Tea Tray Co. propose to establish retail prices at which their horns may be offered to the public. This concern say in a recent notice addressed to the jobbers:

"We have every reason to believe that the jobber will support a manufacturer who supplies goods of quality and sells under the protective policy, and we shall endeavor by every reasonable method to protect buyers, and hope the trade will do all they can to interest their purchasers, as we think, in the right direction. We therefore submit the following price list for your consideration.

"We believe the continued success of the talking machine business depends on maintaining fixed prices. We therefore believe all jobbers who co-operate with us in this respect will meet with merited success. If the jobbers will work in accord with us in maintaining prices against unfair competition who heretofore have been in the habit of handling anything regardless of price and quality, we will support them with a superior quality of goods and prices which will afford them a profit."

SOMETHING NEW.

There is an extremely lively interest in inexpensive phonographs just now, and a good article of this kind will sell without difficulty. The Rex talking machine, made by the Church Supply Co., New York, is designed to fill the enormous demand for a practical screw-feed machine that will play in a most satisfactory way and sell at a price that places it within the reach of every home. This machine is American made, entirely original and unique in design, and constructed in a most substantial manner. It is equipped with a most essential feature, namely, a screw feed of 100 threads per inch, assuring uniform playing and long life for records. No matter how uneven the surface upon which it rests, the Rex will play every note and the reproducer cannot skid. The diaphragm and spider of the reproducer are made of one piece, so that all trouble of detached spiders is obviated. Another most important feature is the fact that the horn and reproducer are stationary. The motor is strongly built and accurately assembled. Makers of the Rex have been building low-priced talking machines for a number of years, and experience has taught them the weak points, so in offering this new machine they have something which is very fine.

INVENTS MUSICAL AUTO HORN.

A young inventor in Washington, Ga., recently conceived the idea of a musical auto horn along the lines of a talking machine, using brass discs. On the rim of each disc was recorded a bar of some popular air and at the trial of the device success seemed assured. So much discord resulted, however, when two automobiles passed each other that the citizens of the town were given bad cases of nerves, causing the police to suppress the invention.

The Liberty Moving Picture & Manufacturing Co., New York, was recently incorporated with a capital stock of $15,000. Directors: C. E. Doll, H. M. Jones and B. T. O'Neill, all of New York.

SUIT OF DOUGLAS CO. VS. VICTOR CO.

Two Suits Entered in Different Branches of Circuit Court—Testimony Taken in Trenton—Trial in September—J. E. Helm Examined.

Testimony was taken August 20, at Trenton, N. J., before Henry D. Oliphant, stated examiner of the United States Circuit Court in the matter of the suits instituted by the Douglas Phonograph Co., New York, against the Victor Talking Machine Co., Camden, N. J. Harry Cobb Kennedy, of Philadelphia, appeared as counsel for the defendant corporation and Herbert J. Knight for the Douglas Co., the complainants. Two suits have been entered in the cause, one in the equity and the other in the law branch of the court, and by special direction of United States Judge Lanning the testimony taken will be used in the joint trial of the suits, which are to be heard before Judges Lanning and Cross during the September term of court. John E. Helm, president of the plaintiff company, is about to visit Europe, and his testimony is taken in anticipation of the trial taking place in his absence.

Mr. Helm was examined for four hours on the terms and conditions of the original contract, and declared repeatedly that by its terms the Douglas Co. had a perpetual right to sell the goods of the defendant while fulfilling the conditions with respect to the number sold. Asked by Mr. Kennedy if the contract did not forbid the sale by the Douglas Co. of other phonographs, records or talking machines. Mr. Helm testified positively that no allusion whatever was contained in the contract with reference to competitive goods, the only thing required being that a specified number of the talking machines should be sold each month in each contract covered by the Douglas agreement.

Mr. Helm furnished figures in response to Mr. Knight's questions, showing that the sales of Victor machines had exceeded the specified requirement from the first month, the aggregate at times being twenty times the number, it was alleged.

THE HOLDING OF TRADE

And Not the Drawing of Crowds Should be the Main Desideratum of Dealers—Values Must be Predominant So as to Make Your Visitors Customers for All Time.

No special cleverness is needed to draw a crowd at any time. Depends a little, though, on what you do with the crowd when you get it. "The public," said Barnum, "like to be fooled." P. T. was long-headed enough, though, to know that the fooling part of his proposition was merely a gentle "jolly," as we put it nowadays. What odds if he did build a glitter around his efforts that made things look their finest? The frills which our farmer friends admired on the lithographed walls were harmless accessories for creating interest in the "greatest show on earth."

When they got inside the tent there were, of course, many things lacking which they counted on seeing, but they came away feeling that it wasn't a bad show after all, and simply because no stone was left unturned that would bring forth features for the spectators' amusement.

Now, inasmuch as Barnum found it advisable to keep faith with the public, of how much greater importance is it for you, Mr. Dealer, to see that when buyers come to your store there'll be honest values, quick, courteous attention and, above all, have them leave with a feeling that their trade was appreciated? When you take in tow a special selling event, try your level best to spread the thing everywhere. Don't shiver and wonder if you hadn't better call the affair off when the crowd comes in response to your invitation, but get busy and demonstrate to them that it is not alone possible for you to handle their trade during the rush, but also at any other time.

But above all, cultivate the confidence of your trade and steer clear of ambiguous statements in your advertising. When you say you will give a certain value at a certain time see that it's real.

Easy enough getting business, Mr. Talking Machine Dealer. The trouble you have is to hold on and add to it. Got to keep adding to it, you know, else lapse of time, if nothing else, will wipe out every customer you now have. Strange, then, isn't it, that you don't pay more attention to keeping within the fold every buyer that comes your way? A looker-on naturally thinks that every customer is a gold mine—not the paper kind, either, but one which yields pay dirt from the start. Some may cost so much to work that there's little profit left, but you can't strike rich leads all the time.

Now about the holding of trade. The insurance man, of course, gives his prospective policy holder all kinds of attention—makes him feel somewhat like a millionaire and a general good fellow all round. But when the deal is closed he seeks a new client. The one of yesterday becomes unproductive—ready to be labeled "Finished" and put on the shelf to mature at his own sweet will.

But the merchandiser, he's different. Has got to keep on the best side of every one and all the time; rarely ever comes a period in the customers' living history that you can write them down "impossibles." There's always a way to draw forth the dollars, providing you've values to offer. Values, did we say? Aye, but there's something else—courtesy.

Take an interest in their shopping comfort, and, above all things, you should err on the side of giving more than is really expected, rather than fall the least bit short. A combination like this will stand the hardest test that can be put upon a business. If any of these features be lacking we'll not say that you can't succeed, but we're safe in assuming that the success won't be as marked as it might be.

Our motoring friends in the "talker" field will be interested to know that the "honk, honk" of the automobile horn may be put to wider use, according to an announcement from Berlin. It appears that the Prussian railway authorities have been experimenting with a view to securing the most practicable means of warning engineers of danger. In many cases the men at the throttle run by the usual signals, owing to their attention being distracted by other duties. The officials have been testing various devices, and have hit upon the "auto" horn. The horns, sounded by a rubber bulb, exactly as on a motor car, will be placed in twos or threes beside the track some distance from the signal stations and sounded in order to remind the engineer that he is approaching such a station and therefore to look out for indications that the line is open or closed. The whole apparatus is worked by electricity, and is said to be effective. So the automobile may be called the parent of a life-saving scheme.

Central States Edison Dealers

¶ AM ready to look after your Phonograph needs from my Cincinnati wholesale place. My stock from beginning to end is new and fresh and my aim shall be to give dealers not only good service, but aid them in every way to make money with the line by giving them every assistance possible, and ten years' experience, first as road salesman for the National Phonograph Co., and four years of jobbing Edison goods exclusively in Milwaukee, should fit me for the successful work of middleman.

MOVING PICTURE AND AUTOMATIC MACHINES

BUCKLE ON YOUR ARMOR

And Get Busy for an Active Fall Trade—Valuable Pointers on How Talking Machine Men May Expand Their Interests—How the Moving Picture Machine Trade Grows.

Nothing in the history of the moving picture business will equal the great boom that will strike the country, starting with the first cool weather. Are you prepared, Mr. Talking Machine Man, to get some of this business? If not, why not? Are you not yet awake to the possibilities in store for those who are in it? The field is as broad as you wish to make it. True, the five-cent theatres are becoming very uumerous, a great many of the desirable locations having been taken up, but there will always be room for the man who is progressive—the man who will fit up a place in an attractive but sensible manner, and who will run a good, clean, up-to-date show—in other words, a man who will cater to the honest, respectable class, and who will always endeavor to give a "square deal." The motion picture theatre offers a chance to the small investor, as well as the large one. The cost ranges from $500 to $60,000. Between these extremes are five-cent theatres of varying costs. The first thing to be considered is rent. Usually it is necessary to sign a lease for at least a year, and as the business is considered objectionable by many landlords, the rent is higher than for other enterprises. After the rent is paid it is necessary in most cases to make alterations in the building, and these of course must be paid by the owner of the theatre. Seats have to be bought, and a good deal of lumber for the stage. (The small places dispense with this, using only a sheet, the piano or talking machine, if music is given, being on the floor.) The largest item of expense is that of the front. If the theatre is to catch the crowds, especially when there is so much competition, this must be showy. In some of the more pretentious establishments of this nature the front is of the finest mosaic, with pictures painted by recognized artists. However, most of the places use stucco or plaster, which at night is very attractive. There always must be good arrangements for light, whether it be simply the arc or a shower of electric bulbs. This cannot be had, including a sign, for much less than $200. A moving-picture machine is of course necessary; these cost from $50 to $200, though they can be rented, the same as the films. Naturally these differ somewhat in cost in various localities, the condition of the films whether old or new, make a great deal of difference. (But we will say here, don't take the old stuff and think you're saving money; nine cases out of ten your customers have seen the same thing before, and if you would increase your patronage you must give them something new.) The average rental is $50 for two reels and three changes per week; $30 for one reel, three changes. For illustrated songs there must be one or more singers and these are not easily found under $10 each. A piano is necessary and some one to play it and one or two ticket sellers aud a "barker." An operator is of course required for the machine. This man above all things should know his business. On his shoulders not alone depends the success of the show, but the safety of your patrons. An inexperienced man can also lose you a lot of money on damaged films. For illustrated songs in a small place a good talking machine can be used, thereby saving considerable in the matter of salaries. The same thing or an automatic piano can be substituted for the "barker." It might also be well to caution prospective investors when building a theatre to be sure and consult the legal authorities, so that they will be able to conform to the letter of the fire, health and civil laws, so as to avoid future litigatiou, which reminds us that these officials are still carrying on a strenuous campaign against the five-cent theatres and penny arcades throughout the country. The following article, which appeared in a recent copy of the Moving Picture World, hits the nail ou the head, and only too truly portrays evils that are overlooked.

"Regulation of the five-cent theatre is rapidly becoming a moral necessity. Suppression would work an injustice, both to those who have their money invested in the nickelodeons and to that large portion of the public that seeks cheap entertainment. Regulation, however, would serve the ends of public morality and at the same time protect the rights of the proprietors and their patrons. But there are other influences as well as the nickel theatres that demand regulation. For instance, there is the comic Sunday supplement. Some of the picture stories presented in these gaudy creations are just as demoralizing to the young as moving pictures of the more reprehensible type. They doubtless do more damage than the latter because they find their way into the home through the medium of papers which seek to prove their moral tone by pointing the finger of shocked righteousness at the five-cent theatre's offerings.

"Some of these funny supplement picture stories teach disrespect of elders by telling of the pranks of lads whose mischievousness contains a touch of viciousness, iu which they get the better of those they should houor and venerate. Others make light of theft, lying, grafting, brawling and good order. Surely these comic supplements need regulation as much as do the moving pictures.

"So also do the Sunday supplement's stories of grafters and thieves in which the cleverness of wrongdoers is exaggerated and their dishonesty and criminality are made to appear smart, insidious suggestions and the calm overlooking of moral standards by institutions that are supposed to be protectors of society are fully as debasing as the worst of the moving pictures."

* * * *

But here we are devoting too much space to only one branch of this enormous busiuess and there are many others of fully as vital interest to this trade, namely, its commercial possibilities. As we have before stated it is in this phase of this new industry that the talking machine man should shine, for no other class is so well adapted to push the sale of machines and films among the public. There is still another field open to agents, however, and one that is scarcely as yet recognized, namely, public institutions such as schools, hospitals, colleges, churches, etc. or what might be called the "educational branch." Of course special films will have to be made for all these various subjects, such as geography, history, surgical science, methods and processes of manufacture, social conditions, etc., etc., but this work is now being pushed by manufacturers and talking machine men will find this a big thing for them. But it might be well to deal a little more fully with this subject, for the benefit of those who are ignorant of all but the amusement features of the business, which, after all, if not the smallest financially, is most interesting from a scientific standpoint. For it is not the former but the latter that will make the moving picture one of the greatest boons to humanity as a whole that has ever been conceived by the brain of man.

"How to effectively teach geography," to quote the Brooklyn "Times," has long been a problem which has vexed schoolmasters. Various methods have beeu tried, but all admit that little can be done with the subject. At present a map sometimes spherical, generally flat, is set before the pupils and they are supposed to understand the length of the Mississippi River and the magnitude of Mount Everett by looking at it." Ask these teachers what they think is the only way to get any accurate knowledge of the subject aud they will naturally answer: "By traveling, of course." But every one can't afford this pleasant luxury, and there is but one substitute, the moving-picture machine. This idea has been brought up before the educational boards in mauy cities, and is still the subject of serious discussion, many of the superintendents being prejudiced because of their inability to associate the moving picture with anything serious. However, this is wearing off, and it's only a matter of a short time before this modern method will be adopted. As to how the plan would work it might be well to imagiue a class or number of classes assembled in a school auditorium with the reader as a guest. The teacher is standing before a large white screen, pointer in hand. He announces: 'To-day we will take a trip up the beautiful historic Hudson." The room is then darkened and a click is heard as the operator turns on the machine. We find ourselves down the lower bay, with its great ships coming from and going to all parts of the globe. Up the bay the trip is taken, and soon we are off the Battery, flanked as it is by the towering walls of many skyscrapers. As we proceed we see the tops of the Flatiron and Times buildings, then Riverside Drive and Grant's Tomb. Here the teacher deviates a moment to dwell on the man who fought so valiantly for the old flag. Continuing the trip we are soon enraptured by the beautiful Palisades. Then follow Yonkers, Tarrytown, Stony Point, Irvington and West Point, all of which have historical incidents connected with them, which are brought into the lecture. The river now has grown narrow and on either side towering walls rise from the water's edge to heights of from 1,200 to 1,600 feet. Here the scenery is of great beauty and grandeur. This is Newburgh only fifty-nine miles from New York, and thus we continue up as far as the river is navigable, namely, to Troy. This picture lesson would take about one hour. At its end the lights are turned up and the teacher holds a cross examination. Is there any doubt about the advantages with this system of study over that of the old dried and cut method? This is but a sample, of course, but in the same manner one could study the whole globe

The Card Printer

Prints your name on five cards for one cent. It is the best slot machine ever produced.

MANUFACTURED BY

The Card Printer Co.

79 East 130th Street NEW YORK

MOTION PICTURE

Machines, Films and General Supplies

Sole Agents for

POWER'S CAMERAGRAPH

EDISON'S KINETOSCOPES

The largest and only exclusive store of its kind in the city.

THE SWAAB CO.

330 Spruce Street PHILADELPHIA, PA.

We Make Pennies Grow

If you deposit your savings in a bank, you may earn 3 per cent. or possibly 4 per cent. Invest them in a Penny Arcade and your investment will net you 150 per cent. to 300 per cent. per annum.

LET US PROVE IT TO YOU.

Let us show you how you can gain an independent income by an investment of $600 and upward.

We will start you, assist you in every way in making your establishment a profitable one, and give you the benefit of our 20 years' experience both as operators and manufacturers.

WE WILL SEE THAT YOU MAKE A SUCCESS, for *your success* will mean *our success*.

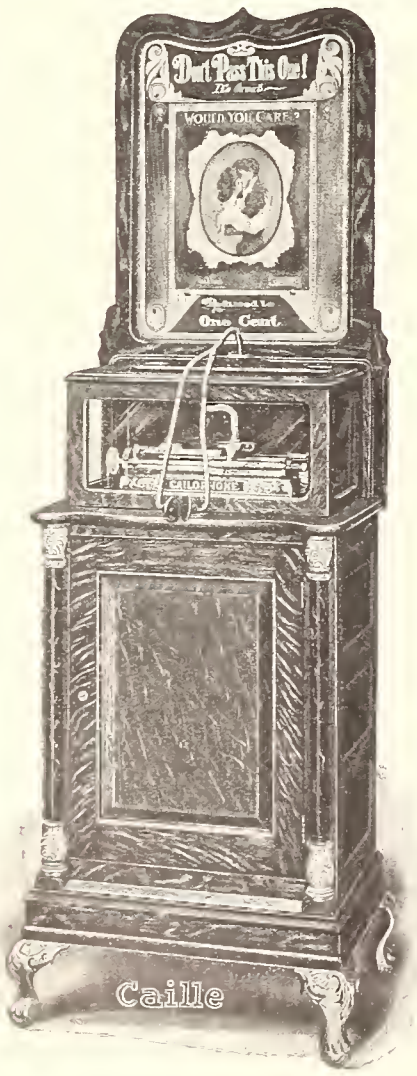
Given a fair location, and that is easily found in any town with a population of upward of 5,000, your investment will be returned to you in four or five months, after which all receipts are CLEAR PROFIT.

Just now is the *time to start* and take advantage of the spring and summer season.

Your town certainly should have an ARCADE. If there already is one in operation, YOU start another better one and show that you are up to the minute and a hustler.

If you are now operating an ARCADE, improve the same by adding CAILLE MACHINES and CUT DOWN REPAIR BILLS.

No machines like CAILLE MACHINES for showing big receipts!!



The public prefer Caille Machines, as they always work and always work correctly. They never are out of order.

No scales like CAILLE SCALES, and we make 5 different styles, all of them absolute leaders.

But we also make the famous CAILOSCOPE and have recently patented the CAILOPHONE, both of which machines outdistance anything on the market.

In fact we make *257 Varieties*, all of them "*Caille Quality*," which means excellence in every detail of construction, mechanism and appearance.

A postal Card will bring you our handsomely illustrated Catalogue for 1907, showing the largest line of coin controlled machines manufactured in the largest plant in the World devoted exclusively to the construction of automatic devices.

and derive a comprehensive knowledge of it, unobtainable except by travel. History can be treated in much the same manner. With the assistance of special electric light installations a knowledge of methods and processes of manufacture which were once a sealed book is now within reach of everyone. Likewise, surgical science is of no country, and pictures speak a universal language. One of the most important parts of the training of a doctor is the witnessing of operations. The moving picture now renders it possible to reproduce endlessly, under circumstances which permit of most close and leisurely study, scenes which formerly could only be witnessed in the operating rooms of our hospitals, and in the case of a rare operation by some great surgeon, only by a fortunate few. And thus we could continue endlessly, but believe the foregoing will give food enough for serious thought on the part of our readers. Enough to open their eyes to the possibilities ahead of them. Enough to rouse them to the point of grasping this opportunity which now lies before them. For opportunity waits for no man, and he who would succeed must take heed.

TRADE NOTES FROM CHICAGO.

The Immense Growth of Arcades—National Player Co. Make Electric Pianos—Northrup's Piano Harp—Cremona Electric Coin Controlled Piano Will Be Soon Ready.

(Special to The Talking Machine World.)
Chicago, Ill., Sept. 9, 1907.

A recent census taken of moving picture theatres, that is, places where moving pictures were the principal attraction, and exclusive of summer gardens, regular vaudeville houses, etc., revealed the fact that there were 108 such theatres in the city, the admission in most instances being five cents and in some cases a dime. Probably to-day there are not quite so many, as most of these in the outlying districts of the city are closed, the people ignoring them on account of the greater attractions at the parks. But with the coming of cooler weather they will open up in greater number than ever. Down town the moving picture and automatic parlors seem to be as busy as ever, Chicago's immense summer army of transient amusement seekers serving to keep the catch-penny propositions busy day and night.

A Reform five-cent theatre has recently been opened in connection with Hull House by Miss Jane Adams, the founder and president of the famous institution. From the lists of subjects presented to Miss Adams she was able to select any number of series of a distinctly educational and helpful nature. She is an enthusiast regarding the nickel theatre when rightly managed.

The Mills Novelty Co., of this city, will shortly place on the market a new moving picture machine which it is declared will embody unique and meritorious features.

Perry & Hopson have opened the Electric Theatre at Glasgow, Kan.

The Unique is the name of a new moving picture theatre at Bloomfield, Ind.

The Variety is a new nickel theatre at Rockford, Ill. Changes its program, which consists of moving pictures and a vaudeville bill, three times a week.

The Bijou Theatre, Kalamazoo, Mich., will give up vaudeville and confine itself to moving picture shows.

J. S. Baughar will open a moving picture theatre at Valley City, N. D.

Charles E. Kohl, of Kohl & Castle, will, within a few months, erect a high-class vaudeville theatre on the west side of State street, between Jackson Boulevard and Van Buren street.

Thomas Dunk, formerly of Chicago, but now of the Puritan Mfg. Co., manufacturers of slot machines, Detroit, Mich., was a Chicago visitor the other day. He was exploiting, among other devices, a new cigar-vending machine.

Lyon & Healy have recently taken the agency for the military band organs and orchestrions of M. Welte & Sons. Three of the band organs have just been installed at Riverside Park, on the northwest side, said to be the largest amusement park in the world. The attractions boasting these "30-instrument effect" instruments are Big Otto's Wild Animal Show, the Aztec Show, and the Rheingold Ring. Manager W. H. Wade, of Lyon & Healy's automatic department, is particularly proud of the fact that he has just sold one of the largest sized Welte orchestrions in the fine States Restaurant in the basement of the Republic building, where it takes the place of a full-fledged orchestra.

The National Piano Player Co., organized by F. W. Farwell to manufacture electric pianos, have leased quarters at Oregon, Ill., and will soon have their piano ready for the market. The company will be incorporated according to present plans, with a capital stock of $50,000, with $25,000 paid up at the start. The officers will be F. W. Farwell, president and treasurer; C. E. Merrill, vice-president, and W. E. Cleveland, secretary.

Henry Northrup, the piano dealer at 63d street and Lexington avenue, and the inventor of a "piano harp," which is operated by a keyboard, is arranging to adapt the idea to coin-controlled purposes. His first automatic harp is now being made in a local player-piano factory. The automatic harp will have a range of four octaves, and the cabinet will be 6 feet in height. Mr. Northrup expects to form a company for the manufacture and marketing of the instrument.

The Marquette Piano Co., manufacturers of Marquette player-pianos and interior actions have added a new department to their business in the manufacture of the "Cremona" electric coin-controlled piano, the invention of the company's experts. The instrument has some distinctive features of great merit. Aside from the coin slot there is no exterior evidence that it is other than an ordinary piano, as the entire player mechanism, including electric motor and music roll, is confined to the space between the plate and bottom panel of the piano. The spindle on which the music roll is wound will carry a roll 250 feet long, on which twelve different selections are cut. It would require half an hour to play these ten selections without intermission between the numbers. When the last selection is played the roll automatically rewinds and is in position to start the first piece again with the insertion of the coin. Or the roll can be removed on its spindle and another inserted. The company have a number of Cremona electric pianos in work on orders.

STOCK TRADING CAUGHT BY CAMERA.

Curb brokers in Broad street are making wagers on who will show up most strongly in a series of moving pictures that Arthur Hewitt, a photographer of 125 Fifth avenue, has taken of them at their work. Three hundred yards of film were exposed at the close of the trading one day recently, when the stock slump was at its height and the brokers were most frantic in their buying and selling.

The camera was in the office of F. E. Warner & Co., at 39 Broad street, directly opposite the curb market, and stocks were for a few moments almost forgotten, so eager were the brokers to get in the picture. In a rush for the center, J. B. Sherman—as it happens, one of Warner & Co.'s curb representatives—was thrown high in the air in the scrimmage, and odds of ten to one are being laid that his representation will be the chief of the aggregation. The fun lasted nearly five minutes.

The films will be duplicated and later shown in machines on the theatrical circuits here and abroad, illustrating American energy.

FROM HERE AND THERE.

The Cameraphone Co.'s Invention—Prof. Starr's Tribute to the Moving Picture Machine—Peerless Earnings—Other Items of Interest.

As we predicted in a recent issue of the "World," the synchronization of the moving picture and talking machine for public or private use is not far off. As if in justification of which article comes the new invention of the Cameraphone Co. This device enables the owner to give a complete performance, which, while mechanical, yet is true to life. The talking machine furnishes a selection by some artist, or a whole troupe. The moving pictures furnish the rest—stage settings and all. The new machine was given a trial recently by Mr. Hammerstein, who was highly elated over the results, and will most likely make use of it when the theatrical season opens.

Boston has really done something quite shocking. For the first time in its history moving pictures were used in illustrating a lecture on "Glimpses of the Past, Boston and Ye Old Homestead," in one of its churches. Truly the cinematograph is winning its way into the public's heart.

These extracts taken from an article written by Prof. Frederic Starr will be read with interest by all thoughtful people. He says in part: "Henceforth I shall use the picture machine in all my travels and reproduce the negatives for the benefit of my listeners. The moving-picture machine ultimately will take its place in the schools and universities and rank with the text-book. I believe that for exhaustiveness of detail the text-book cannot compare with the moving picture. Even the words of a skilled lecturer do not altogether convey the complete detail that can be found in the moving picture and the listener gets the benefit of words of the lecturer as well as the ideas that may be formed in the mind by watching and studying the views. There are bound to be some minor details that cannot be dwelt on by the speaker, yet they may be discerned by his hearers and are wrapped in the mind so well that to forget them is almost an impossibility. I do not think there has been an invention in fifty years that for practical educational value can be compared with the moving pictures." Professor Starr is widely known as an educator—being Professor of Anthropology at the University of Chicago—and his conclusions as to the value of moving pictures should receive careful consideration from our own educators. He has left for the Congo region, where he will study the natives and their country and will obtain motion picture views to show his students the people and country as it actually is.

From San Antonio, Tex., we hear a protest has been received by the city electrician from the operators of moving-picture machines in nickel theatres. The owners of the small theatres have been forced to comply with the electrical code of the Texas Fire Prevention Association, and the operators claim that the new regulations work a hardship upon them. According to the regulations, the booth containing the picture machines must be lined with sheet iron or metal and only the opening to permit the projection of the pictures on the screen is permitted. Thus the operators are enclosed in a metal-lined booth, without ventilation, and during the hot weather the atmosphere is unbearable. "If they force us to keep the door of our booth closed I for one

USE OUR FILMS THEY ARE THE ACME OF PERFECTION

You expect maximum results from your show, don't you? Then let us supply your Film service. Our prices are right. Our subjects always the best (we don't handle any other kind). Adopting our service means increased profits. Does away with all worry about repeaters or poor service. Courtesy and honest treatment alike to one and all has placed us in the lead of Film Renters of America.

All standard machines and accessories in stock. Can make prompt deliveries. Better order now before the rush of the season commences. We have the best shipping facilities in the country. Our motto: Orders filled in a minute.

O. T. CRAWFORD FILM EXCHANGE COMPANY. Gayety Theatre Building, ST. LOUIS, MO

will quit my job," said one of the operators. "The heat from the arc lamp raises the temperature to an unbearable degree and the metal-lined walls reflect the heat. It is like being in a red-hot iron coffin without a breath of fresh air. During the busy days we have no opportunity to leave our booths for many hours. The shows are only ten or fifteen minutes apart aud the intervals are spent in winding our films aud preparing for the next show."

Were the proofs not forthcoming in every instance stories of the wonderful profit-winning properties of the Peerless coiu-operated piano would often be beyond belief. Still another testimonial as to the earning power of the Peerless has been received by the Peerless Piano Player Co. from the Ulmer Furniture Co., of Iudependence, Kans., and reads as follows:

"We note in one of the recent trade papers that you made particular note of a Peerless coin-operated piano having taken in over $1,000 in nickels from June 27 to November 27, a period of five months. We can beat this a mile. We sold one of the Peerless coin-operated pianos on the second of this month (August), and on the twentieth our customers told us that they had taken in $270. This is a period less than three weeks and shows an average of over $13.50 per day for every day of that time."

The fact that a piauo can be played almost continuously for ten or twelve hours a day and still be in good condition at the end of the year certainly speaks well for the workmanship and materials entering into its construction.

The Pathe Freres Co. have removed to larger quarters at 41 West Twenty-fifth street, this city.

NEWS ITEMS FROM CLEVELAND.

(Special to The Talking Machine World.)

Clevelaud, O., Sept. 6, 1907.

A recent order of the chief of police of this city prohibits the playing of talking machines, pianos or other musical instruments in the red light district. The chief evidently does not believe the old adage, "music hath charms to soothe the savage breast," applies to the modern rough-house habitat, and so the music has been stilled. His action has been far-reachiug in its effect, as hundreds of instruments had been purchased on the instalment plan, and there is commotion in the ranks of the talking machine and piano dealers, whose peripatetic customers' business having been thus interfered with, they refuse to make further payments or to return the instruments.

The parade of the Elks at Philadelphia last July was the headliner attraction at the Dreamland Theater last week. It proved attractive, and the proprietor, L. H. Becht, gathered in many extra nickels.

The Marlow Arcade aud Picture Show, one of the popular resorts of the city, have installed a Victor Auxetophone and the management are highly pleased with it. Using the best films to be obtained, three changes a week are made and always some new attraction is presented. The company claim business is much better than it was a year ago, interest in the exhibits not only keeping up, but improving.

The "Electric Theater," at 7707 Woodland avenue, is located in the vicinity of a large foreign population and caters largely to that class. It is doing a good business. The program for last week was: "Valtozik Minden Nap," "A Cuynjtogatak," "Rosez Emlokertek," "A Tutomany Aldozata" and other minor attractions, all for one admision of 5 cents.

A SOURCE OF GOOD OR EVIL.

The moving picture shows can be either a source of much good or of great evil. Moving pictures with good moral impressions can be made to interest and make nickels for the proprietor as well as vicious vile pictures. To place before audiences of men, women and children such scenes as that of a tramp robbing and mercilessly beating a young lady on a lonely road, followed up with the capture and dragging of the perpetrator by a rope around his neck is very repulsive to the finer sense of man, says the Capital, Guthrie, Okla. In fact, it is revolting to that degree that it should be suppressed. Talk about the evil influence of the blood curdling novels of the day! They only teach those who reach out for them. The moving picture is seen by all classes; many of whom expect to see elevation in the entertainment, and not base depravity of the character here mentioned. If the moving picture shows would continue in favor they will not place on exhibition such brutal, blood-curdling pictures as here mentioned. They are not helpful to any business.

MINIATURE CINEMATOGRAPHS.

By a ruling of the Board of Appraisers on July 31, the protests of the importers were sustained, in which they claimed that so-called cinematographs classified as manufactures of metal under paragraph 193 of the tariff act, were claimed to be dutiable as toys under paragraph 418. Judge Fischer, in writing the opinion, expressed himself as follows: "These articles are metal tubes about 3½ inches in length and one-half inch in diameter. They contain at one end a miniature picture to be seen through a magnifying glass therein mounted. The tube is to contain water with a plunger arrangement intended to be released by pressing a knob while the picture is shown, when the water thus ejected is squirted directly at the party handling the toy. It is used undoubtedly to create amusement among children. We find from the testimony in this case and the sample before us that these articles are mere playthings and that they are in fact toys, bought and sold as toys, and so known commercially."

RECENTLY INCORPORATED.

The Nicholas Power Co. have just been incorporated with a capitalization of $250,000.

TYPE E

THE MUTOSCOPE

For Summer Parks, Penny Arcades, etc., has proved itself to be the greatest money earner of all coin-operated machines. In fact it has made the "Penny Vaudeville" what it is to-day. The privilege of free exchange of pictures keeping them fresh and up-to-date, make it always attractive. Our New Type E Mutoscope, besides being handsomer in design, possesses many improvements in mechanism over former models.

"BQ"

The New Cylinder Tone Arm Graphophone

A new Cylinder Machine with the famous Columbia Aluminum Tone Arm and a Flower Horn.

Compact and convenient. No rubber tubing, no horn crane, no horn stand. Retails at $30.

This is decidedly the greatest improvement in the evolution of cylinder "talking machines."

The musical world remembers the instant success that came to the Columbia *Disc* Graphophone when first equipped with our Aluminum Tone Arm.

We have now adapted it to the Columbia Cylinder Graphophone

It is a scientific fact that aluminum metal has the remarkable quality, when used as a sound conveyer, of wholly eliminating all false vibrations and producing a soft, full, perfectly natural tone, impossible to obtain from any other metal. The Aluminum Tone Arm on this new model does away entirely with any of the hollow horn tone that is unavoidable in the ordinary construction.

This model BQ machine is very compact, and very similar in general appearance to the Columbia Disc Graphophones, the horn swinging *over*, rather than away from the cabinet, occupying hardly more space than the cabinet itself, and wholly dispensing with the awkward, unsightly horn crane, horn stand, and rubber tube connection.

The motors are noiseless in operation, and the cabinets are beautifully designed, made of the finest selected oak and hand polished.

Every machine is equipped with the Lyric Tone Reproducer.

COLUMBIA PHONOGRAPH CO., Gen'l

Tribune Building, New York

Dealers Wanted Wherever We Are Not Now Represented.

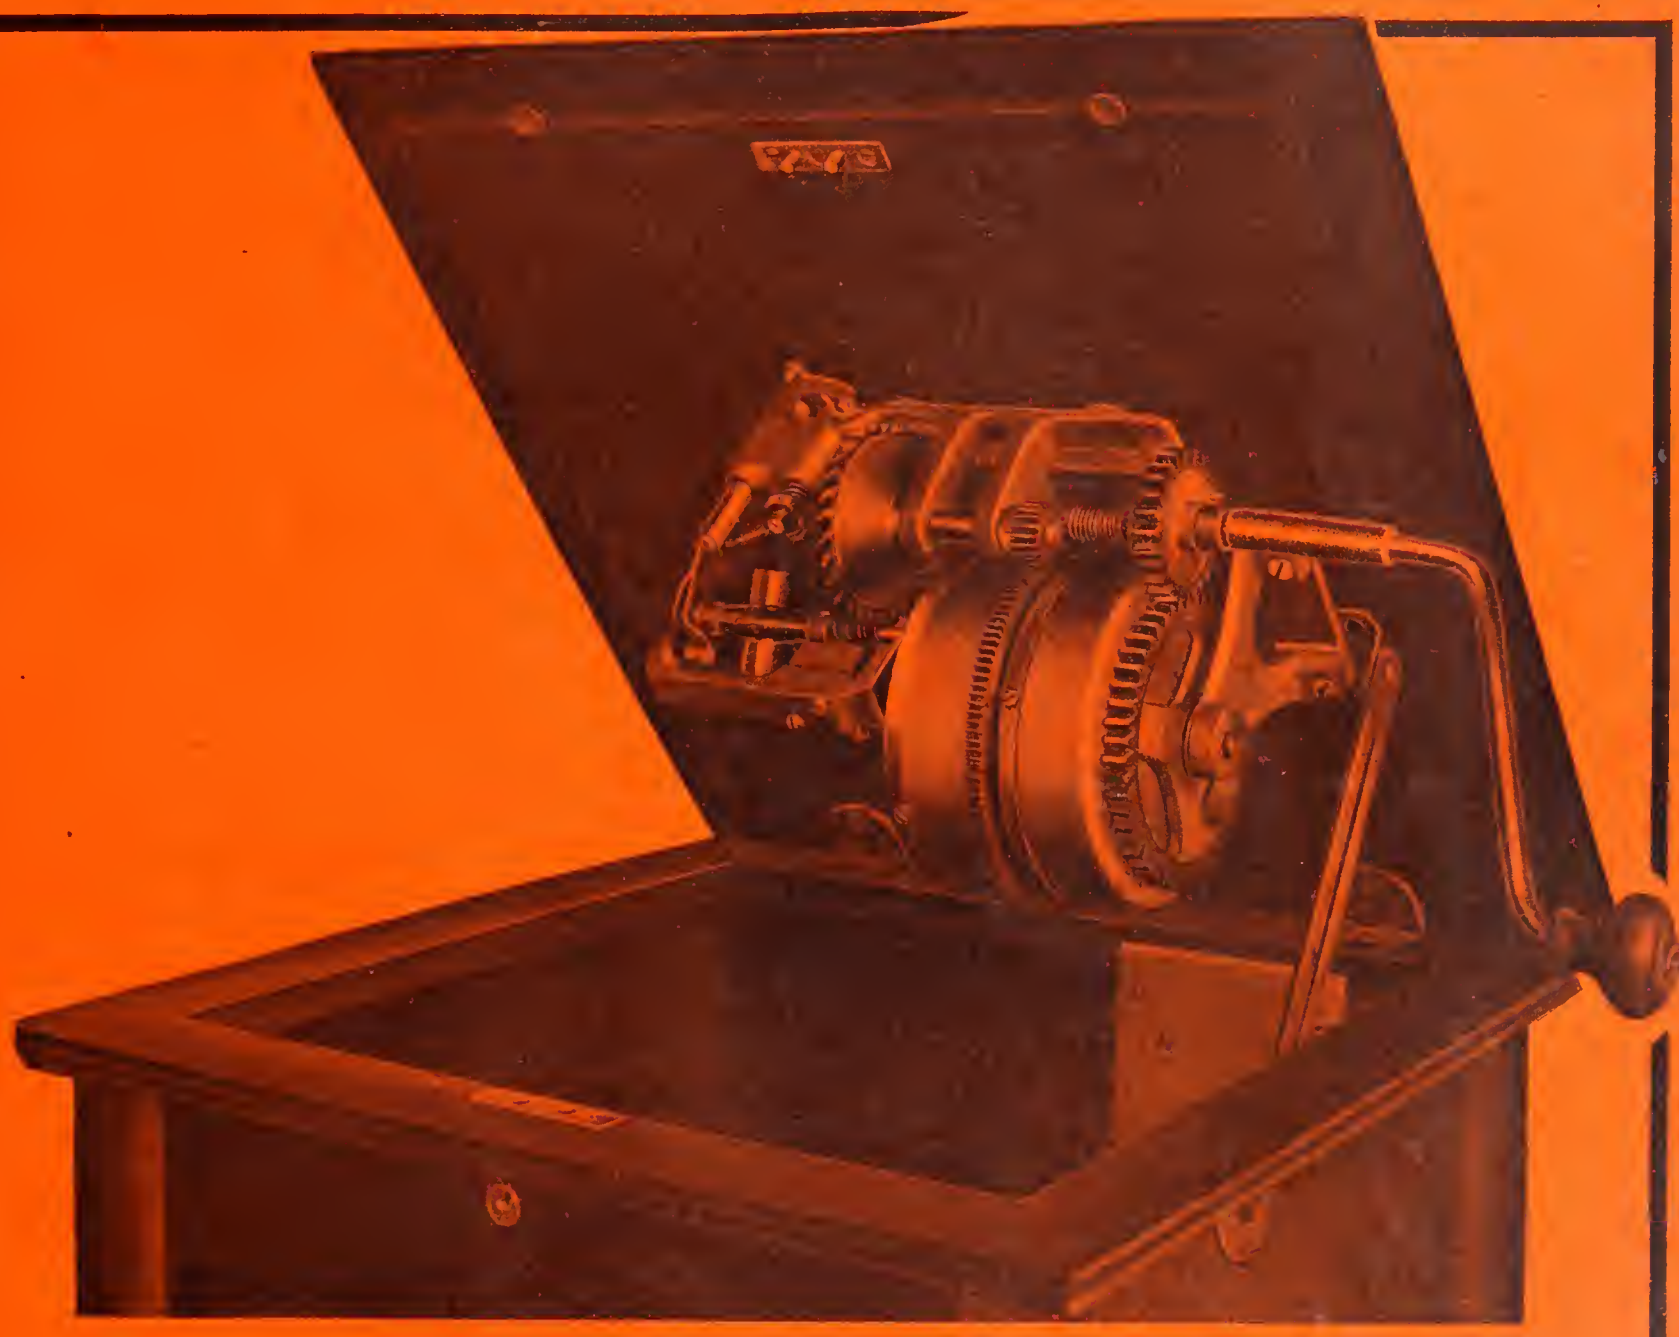
We shall ***continue*** to supply our regular cylinder machines to dealers (types BK, BE, BF and BG) as heretofore, prices unchanged. Dealers and retail customers are not required to purchase horn and crane equipment unless they so desire.

We have always believed that when a dealer is progressive enough to buy special equipment for Columbia Machines in order to secure for himself better profits, it is up to us to take hold and help.

VOL. III. No. 10. EIGHTY-EIGHT PAGES SINGLE COPIES, 10 CENTS PER YEAR, ONE DOLLAR

The TALKING MACHINE AND NOVELTY NEWS WORLD

Published Each Month by Edward Lyman Bill at 1 Madison Avenue, New York, October 15, 1907



The Star Talking Machine

has the only absolutely noiseless spring motor, running or winding, now on the market.

Precise workmanship eliminates rattling and friction. A spring clutch does away with the clicking ratchet and pawl.

Two types—one spring barrel and two spring barrels.

This motor is one of the features that make the STAR the coming talking machine.

Keep your eye on it.

Record Cabinet Bargains

Nos 100 201—210

If you know what the value of a Cabinet is, you will place your order for these offerings at once. To those dealers who don't know we guarantee that they can make no mistake in taking advantage of this opportunity.

No. 100 Cylinder $11.50
Golden Quarter Sawed Oak Only.
Finished and polished on all sides.
Capacity 120 Records—4 shelves, 30 pegs each.
Height 32 in., width 18 in., depth 20 in.

No. 201 Disc $11.50
Genuine Mahogany Only.
Finished and polished on all sides.
Capacity 150 Records, 75-10 in. and 75-12 in. Records.
Height 32 in., width 18 in., depth 16 in.

No. 210 Disc $13.50
Golden Quarter Sawed Oak Only.
Finished and polished on all sides.
Capacity 150 Records. 2 Rows 10 or 12 inch.
Height 34 in., width 18 in., depth 16 in.

No. 221 Disc $16.50
Genuine Mahogany Only.
Finished and polished on all sides.
Capacity 225 Records, 150-10 in. and 75-12 in.
Height 39 in., width 17 in., depth 16 in.

No. 260 Disc $25.00
Mission Quartered Oak Only.
Finished and polished on all sides.
Capacity 225 Records, 150-10 in. and 75-12 in.
Height 46 in., extra height for motor.

This is a Combination Cabinet. The Machine and Record Cabinet in one Design, Mission Style. A desirable cabinet for a Den, Living or other room finished or furnished in Mission Style.

Nos. 221 and 260

The above Cabinets are all New Regular Stock Goods. We are enabled to offer these extremely low prices due to our having large quantities made during the Summer when our manufacturer wanted work.

These low prices are merely temporary, as we shall advance them when the Fall Season opens.

HOW TO STIMULATE BUSINESS

During the Winter Months—Talking Machines Should be Used in the Schools Either in Recitals or Else to Illustrate Lectures—Will Pay to Get After the School Boards—Some Serious Attention Should be Given to the Public Concerts in the Warerooms—No Better Way of Working Up Prospects Than This—An Enlivening Talk for Observant Readers.

In many cities and towns throughout the country, during the past summer, the talking machine has been heard in the public parks with the greatest success. Indeed, the talking machine has aroused tremendous enthusiasm when used in a public way, and by this means vast audiences have become acquainted with the great vocal and operatic artists as well as the great bands of the world. A tremendous impetus has been given to the talking machine business in this way, and it is something which should be encouraged.

There can be no question but many of the bands heard in public places in several of our cities are anything but satisfactory. Their repertoire is a limited one, and the players are not always competent. On the other hand, the talking machine is never found wanting, either in ability or repertoire, and this brings to mind the fact that local dealers should make it a point to keep in close touch with the municipal authorities of their city and endeavor to get them to give a series of talking machine concerts in the school buildings during the winter months.

In the free lecture course outlined by the Board of Education of New York City the coming winter among the subjects to be discussed at the two thousand lectures scheduled to be given, are many on music and musical reproduction. One of the lecturers will talk on "How to Listen to Music," and will illustrate his subject by means of one of the self-playing pianos.

There is no reason why the talking machine should not be employed in some such capacity, say in a lecture on vocal development, or the songs of different countries, thus instead of employing a singer to illustrate the lecture they could utilize a talking machine. There are great possibilities in this field, if the local talking machine men are up and doing, and emphasize the fact that the talking machine is no longer a toy, but a musical instrument of merit, and, more than that, an educational factor that must be considered. In many of the public lectures nowadays the moving picture machine is employed to give "life" and interest to the speakers' remarks, and the talking machine can be utilized in a like capacity.

Apart from the use of the talking machine in public places there can be no question but one of the most effective means of advertising and selling records is for dealers to give public concerts in their warerooms. This was done last season with very excellent success by many of the leading dealers, and should be repeated now that the fall season has opened up. The affair should be handled in a thoroughly up-to-date manner; well printed invitations should be sent out to a selected list of people, and the fact made clear that they will not be solicited to buy. The program might be included with the invitation, and it would not be a bad plan for the dealer at the end of the concert to make some remarks upon the progress of the talking machine and the remarkable development made in perfecting records.

There is no better way of working up "prospects" than this—no better way of bringing to the attention of the public the marvelous advance made in the perfection of the talking machine. Now is the time to start the ball rolling. We are virtually at the opening of the fall and winter season, a time when the business should boom, and it needs on the part of all a strong pull, and a pull together in order to win out.

HUTCHESON LIKES THE "TALKER."

The Great Pianist Tells How He Enjoyed Himself in His Summer Camp.

A musical visitor at the summer home at Cape Cod, Mass., of Ernest Hutcheson, the great concert pianist, on the staff of the celebrated Steinway artists, speaks kindly of the beautiful entertainment afforded the guests all through the season by the talking machiue, in the following appreciative strain: "It is quite possible to live one's life beautifully and artistically among the primitive surroundings of a summer camp as under the more artificial conditions of city life. The pianist's camp is one of a group of six, of which the households are friends, bound together by the frecmasonry of art and all intent on living the 'simple life' in its strictest sense. Mr. Hutcheson's piano is in a building by itself far off in the woods. During his hours of practice he has the piano to himself, but at other times it is the rendezvous of the colony, and many are the impromptu concerts, Mr. Hutcheson presiding at the piano with his shirt sleeves rolled back and smoking incessantly, his audience grouped about him, mostly sitting on cushions on the floor. Melba, Caruso and the other great operatic stars also assist frequently at the impromptu concerts, through the medium of a Victor talking machine, and the effect of their voices in the open woods is quite bewitching."

A WONDERFUL MACHINE

Is the New Automatic Typewriter Which It Is Claimed Will do Almost Everything But Flirt With the Good-Looking Office Staff.

A most interesting piece of mechanism is promised to be exhibited at the National Business Shows to be held in Chicago and New York, which, if it performs all that is claimed for it, will make the dainty, or often sour-visaged, feminine typist an unnecessary factor in the business office. The new machine is said to be able to write letters at the rate of 1,000 words a minute, continuously, and still do the work correctly, and may be operated in two ways. If it is desired to make a number of copies of the same letter with different names and addresses, it will perform this work, producing in each case an original letter in one, two or three colors, fill in the name aud address, and add the signature.

Not the least wonderful part of the invention is that a business man desiring to dictate, may use this automatic typewriter by talking his letters into a talking machine, transfer the record to the machine, turn on the electric current and go home. The next morning the letters will all be done, and the machine will automatically stop when all the letters are written.

It will also address envelopes or wrappers and count them as well. It will write forwards or backwards, and if desired the lines may be justified like type, which at the present time is impossible on ordinary typewriters. With the general introduction of this machine, wives of business men will breathe easier, for the machine is warranted not to flirt.

TALKER ENTERTAINS FAMOUS MEN.

At the dinner given by E. L. Doheny, the great magnate of Los Angeles, Cal., to Ambassador Enrique C. Creel, of Mexico, a talking machine was employed during the dinner in addition to the music of two orchestras. The machine was concealed under one of the tables, and the voices of some of the famous singers were heard between the numbers given by the orchestras. The effect was most novel, and came in for no small degree of admiration from the large assemblage of noted people who were in attendance.

THREE OBJECTS IN ADVERTISING

Which Are Worthy of the Especial Attention of Talking Machine Jobbers and Dealers.

Three objects involved in advertising are worthy of close attention: First, to familiarize the people with the name of the individual or firm; second, to acquaint them with the class, quality, and style of goods; and third, to bring customers. The firm wants to impress upon the people its individuality. The advertisement is an introductiou; it brings the people and the firm together; this unfolds the personality of the firm to them, and soon they associate the name of the firm's personality. The association of name and personality is a strong factor in commanding trade. The name ought, therefore, to appear uniformly in the same style of type. The uame is the distinctive mark of individuality, and hence, for effectiveness, kaleidoscope changes should be avoided. Sameness in form becomes indelibly stamped upon the miud, and gradually coalesces with the personality of the firm. It is not presumed that personality changes, and hence the name associated with it should appear in the same form and dress in the advertisements. The body of the advertisement contemplates the second object, and demands careful study in its details in order to make it attractive and effective. Kind and quality of goods, style and prices, are to be displayed in a manner to appeal to the eye, and gain the attention of the readers. The important facts want to be emphasized, not always by underscoring words or printing them in larger type, but by arranging the sentences so as to bring the attention to the prominent fact in a natural manner. The marking of many words to make them prominent often blurs the appearance of the body of the advertisement, and weakens the economy of attention. The merchant may have many kinds of goods that he would like displayed in the body of his advertisement, and the method to be employed will depend greatly upon the amount of space at his disposal. The third object of advertising needs but little comment. It should, however, not be forgotten that the general neatness of a store is a silent advertisement, and customers are never slow to notice those things. Neatness and a strong personality bring customers and hold them.

A man who never advertises is much like the man without a home. No one knows where to find him. He is an advertiseless man, selfish and lonely; the homeless mau, morose and melancholy; one longs for the angel spirit of business to enliven the dreary abode of his shelf-walled tomb; the other follows his shadow from morn till night in search of peaceful rest; both are playing hopefully with time and waiting for something to turn up to enliveu their drooping spirits. The advertiseless man has his just reward; the homeless man deserves the pity of the benevolent; the condition of the first is his own making; that of the second came upon him through circumstances beyond his control.

To be equal to and ready for any responsibility, to be self-poised and confideut yet reverent, mindful of established ordinances, obedient to the right, earnest to resist evil; to be diligent in business, patient under its exactions, generous but not wasteful; to be quick to acknowledge error, prompt to repay obligations, chaste in thought and upright in deed, ever courteous; in a word, to be alike noble in soul and in bearing—this is to be God's gentleman.

HOW TO APPROACH THE ENGLISH MARKET.

Some Valuable Pointers for Manufacturers and Exporters and How to Secure Business in England and Hold It—The Best Market in the World if Properly Approached—The Kind of Salesmen Who Sell—Importance of Carefully Packing and Shipping on Time—Some Important Hints Given by a Friend Which Are Worth Considering.

The manufacturers of talking machine supplies in this country are building up au excellent trade with Great Britain and her colonies, and it is a business worth developing. Without indulging in "preaching" we may say that it will be well to avoid the pitfalls into which so many American manufacturers have fallen through not shipping goods on desired dates and uot packing properly. Some remarks of B. Olney Hough, editor of the American Exporter, on the British market, and from the British viewpoint, are worth quoting in this connection. He says:

"I have already referred to the fact that this country is far and away the best customer that the United States has on her books. That she takes one-third of everything we sell outside of our own country, and yet the surface of trade here has barely been scratched by American effort. The volume of business possible here is staggering, were an adequate, intelligent and honest effort made to get it. Let us take it for granted that every American manufacturer who seeks an outlet for his goods here is prepared to give the business ouce obtained honest and serious attention, is prepared to keep his promises, to deliver equal to sample and generally to study the requirements of the market and adapt himself to them. What then?

"This—he must understand that this is not a cross-roads town in Oklahoma that he is drumming for trade. The New York manufacturer puts a branch office in Chicago. Does he realize that one goes from London to Edinburgh in eight hours and that within these limits is a population and a 'buying capacity' ten times greater than in a similar radius out of Chicago? This is the biggest market in all the world. How will he approach it, how handle it?

"Now an Englishman is not an American. Let that be well understood. His habits of thought, his attitude toward things, his procedure is radically different from ours in many respects. If you are going to do business here, you will do it with Englisbmen, not with Americans, and if you seek success in it you will have to adapt your ways of doing business to meet the English idea.

"The trouble to-day with a great deal of American commerce in these islands lies in the lack of system, method, organization which has atteuded and still attends American enterprise here. So many of our manufacturers seem contented and happy if they can only secure a couple or half a dozen orders a year from scattered merchants here and there, up and down this great market. Advertising is most assuredly a necessary adjunct to any successful business of to-day. But the object of our manufacturers should be to get all the possible business. To this end a more personal effort and campaign is essential. The advertising should be supplemented and backed up by aggressive measures, aimed to bring into line all those possible customers who have only incidentally been impressed by the advertisement as it has month by month come under their notice. And the English market justifies aggressiveness, a proper organization for its cultivation, if the manufacturer has good grounds for believing that his goods can be sold here.

"It cannot be gainsaid that emphatically the best way to work British markets is to send your own salesman here, just as you would to New York, to Chicago, or to Kansas City. But with this difference. To make a success of British trade it is necessary first that the salesman be of quality and characteristics adapted to the market and the people among whom he must work, and secondly, that he must be a fixture here. He should be located here permanently, not only because the market is big enough to warrant it, but because the permanent presence here at a known address of the right sort of a direct factory representative contributes immensely to inspire confidence.

"If beyond the means of a manufacturer to support such an agent of his own, then the next best thing is the agent with a combination of lines. Or, perhaps, affiliation with some of the established agencies uow existing in London, who may be found worthy of confidence after investigation. But in any case it must be well understood tbat both by law and by custom here and in Europe generally an agent is not only a salesman. The courts assume that the agent who is empowered to book au order is similarly responsible as the representative of his principal in all other matters which may affect that principal as between buyer and seller. It thus becomes necessary to exercise due caution in selecting a man of general ability, conservative, careful and honest. Aud, equally if not more important, if an American is sent over here he must be chosen for the market. The best American salesman on your staff will make an utter failure here if he is a "blow-hard" or a "bluffer." My experience is that half the American salesmen sent over here are failures. In the course of my present visit here I have heard the usual American "drummer" commented upon in most caustic language three times in the course of a single day. The man to make a success here must be one who is quiet and gentlemanly in his bearing, who will iuspire customers here as "solid" and reliable, who will not seem to exaggerate. I may illustrate one peculiarity of the British merchant in this respect by a story told me the other day by the man who controls the English advertising for a certain big American company whose breakfast food preparations are as well known here as they are at home. It seems that when this company first endeavored to introduce its cereal into this market one of the salesmen sent over was of the "bluffer" type. In the course of business he met two very large and important jobbers who could be neither persuaded nor cajoled into buying the goods. 'Very well, we'll see,' cried the Yankee drummer. 'We'll make you stock these goods, yes make you.' These two jobbers haven't forgotten it yet. To this day neither one of them will carry a box of this cereal in their stocks, though so universal is now the demand that they probably lose money by their attitude. But—no Yankee drummer can 'make' them do anything.

"Another instance. A certain New York commission house was represented here for a time by a young man who recently was called home owing to some changes in tbe business and wbo left behind him a most enviable reputation. The English merchants like him, he could always get past the barriers of the little "enquiry" window that makes access to most English offices a difficult operation. His quiet affability, his gentlemanly manners, commended him everywhere and I have heard several merchants express regret at his departure. His successor is of another type. He has begun his career here by 'blowing' himself. Spends money extravagantly and at once started in to tell the Londoners that their busses and their trains were 'rotten,' and in the course of three months has earned general dislike for himself. His end in this market is easily guessed—uuless he experiences a sudden change of heart, but even then it will take him years to live down the reputation he has earned in so brief a time.

"The manufacturer must not only select the right sort of an agent in the first instance, but he must be prepared to entrust him with the collection of his invoices and with such a consignment of stock goods as may be desirable. The trade of the manufacturer wbo wishes only to sell for cash with order or cash against documents will be seriously handicapped in this country—and needlessly handicapped, for credits are as a rule better here than they are at home. With ordinary care there is no excuse for making bad debts here, providing a competent man is on the ground to oversee the business. Not only are credits good, but payments are reasonably prompt. In the hardware business, for example, the rule here is 30 days less 2½ per cent. The factory representative can make reasonably prompt collectious and, more than that, can get the trade of that large class of merchants wbo will not buy subject to draft, and can adjust himself to the idiosyncrasies of those others who pay only on the last day of each month. A small or a suitable stock of goods here, if carefully selected is one of the surest roads to success. Comparatively few British merchants in any line like to give large orders or anticipate their requirements to the extent and by the time necessary for ordinary import orders. Usual orders placed with their home manufacturers are small individually. To appeal to them, then, for big orders to be imported at some distant date is a distinct handicap to business with us. Again, tbe agent with a stock of goods here is in position to adjust his prices to the market, to make delivered prices (always the surest in-

You don't need to lose a sale

You know how easy it is to sell the *Victor*, but still there are times when you miss a sale. There is "a *Victor* for every purse," but people don't always have the ready money. They often ask the price of a *Victor* and then walk out of your store without buying—and you have lost a sale.

But you don't need to lose it. There is a way to get this trade—sell on easy terms.

People who look upon $22 or $30 as a good bit to pay in cash for a *Victor*, don't mind it at all if they can pay at the rate of $1 or $2 a week. And many customers who do pay cash would be glad to buy on easy terms, and would buy a higher-priced *Victor* if they didn't need to pay all the money in one lump.

By selling the *Victor* on the easy-payment plan you can sell from five to ten times as many *Victors* as you do on a cash basis. More than that you can increase your record business to even greater proportions. Every week when a customer comes to make a payment, you have an opportunity to sell some new records—and all this record business is cash.

There is a lot to the instalment business, and the best and quickest way to get familiar with the subject is to read our book "How to sell Victors on instalments." Send for it to-day—it contains facts that you ought to know.

centive to trade) and to include in such prices, in English currency, such allowance for cash discount, petties and extras as the exigencies of the situation may require. The manufacturer who quotes his goods by letter from America feels bound to name his rock-bottom price because he has little idea of what his competitors may be doing. And if he is doing business with a jobbing house here the extent of the jobber's interest in his line depends too frequently on how much more cheaply he can buy the goods than he can any other.

"Another characteristic of the British trader must be remembered. He is slow and cautious about making a change. He wants to be sure of a thing. His first orders are quite certain to be small. He must thoroughly satisfy himself that equally as good a grade of stuff is being used as in his old line, that the goods will wear well, that the results obtained will justify his continuance with the line. British trade is slow of development, but when once started and when he is handled right, the British customer is the best in the world. But let the manufacturer beware who attempts to defend himself against justified claims. He is finished once and for all with the customer on whom he attempts to impose. There is but one thing to do with customers here when a shipment of goods arrives 'wrong.' Acknowledge the fact gracefully, with regrets, and pocket the loss and the lesson. An American agent whom I know here had trouble with his factory over a certain shipment of preserved fruit. The customer complained. The agent tasted the stuff and promptly agreed it was spoiled. The agent has fastened that customer to himself for just so long as he cares to supply him. But it took the agent two months of letter writing to 'square' himself with the factory whose interest he was serving no less than his own—for there's a new profit of $1,000 a year in the trade of this one customer. In brief, treat the Englishman fairly and justly and you gain a permanent and a profitable customer. Be ignorant or short-sighted enough to try to impose upon him and he promptly cries to the four winds of heaven that Americans are frauds.

"I have given so much space in this letter to finding fault with American ways of conducting business over here that I feel that I must qualify the impression produced by presenting also the reverse of the picture. Off hand I can name a score or two of prominent American manufacturers who are working this market right, handling their English customers right and profiting accordingly. We Americans may be immensely proud of our conquest of the British markets for a number of our lines. The pity is that more of our manufacturers are content to have the field practically untilled and are treating their scattered, occasional customers in a way that bodes ill for their future here."

Gomer Griffiths and Carl Glover have opened the "Talking Machine Store" at 103 South Howard street, Akron, O., and claim it to be the only exclusive talking machine store in the city. They handle the Edison and Victor lines.

SKETCH OF INTERIOR OF LANDAY BROS. ELEGANT QUARTERS

The accompanying photograph pictures the interior of Landay Bros.' very elegant establishment at 400 Fifth avenue, New York. The view is that of the series of demonstrating booths, to the right on entering the store, which has ample room for exhibiting a splendid line of Victor goods. Expensive rugs and a brilliant-hued carpet cover the floor, while works of art and rare pictures and photographs of the world's prominent singers adorn the walls. The recital hall, a circular apartment, richly furnished, is in the rear, together with the business offices of this very successful firm, who have spared no expense in fitting up one of the city's show places.

IS THE ARCADE DETRIMENTAL?

A Talking Machine Dealer Does Not Regard the Growth of the Penny Arcades With Pleasure—Explains How They Hurt His Business—How to Check the Tendency.

There is a talking machine dealer in this city who regards the growth of the penny arcades that have sprung up throughout the country as detrimental to the retail trade, and in a talk with The World said: "I have found that there is a certain class of people who formerly purchased a considerable number of records now patronize these resorts, listening to the latest selections and finding a lot of amusement in going from one machine to another. After they have heard a selection four or five times they grow tired of it, and take up with something else. Instead of making them patrons of the dealers in records, they figure that they can hear all they want for a few cents, and have the fun of mingling with the crowd besides. The various other forms of amusement also found in these resorts serve as an attraction, but when the matter is carefully considered it is an extremely selfish manner of catering to one's love of phonographic music. When the owner of a machine purchases a record and takes it home there are others beside themselves to enjoy it, while in the other case the patron of the arcade spends the money only on themselves. Of course there is no way to check the tendency, except for the dealers to do a little missionary work among those who have strayed from the fold."

PHONOGRAPH ON GOSPEL WAGON.

Mission Superintendent Sends Sacred Songs from a Morning Glory Horn.

(Special to The Talking Machine World.)
Morristown, N. J., Oct. 3, 1907.

To help out the Sunday service of the Gospel wagon attachment of the Market Street Mission, which tours the town every Sunday, Mission Superintendent Thomas B. Ironsides hit upon the use of a phonograph, and to-day sacred songs pealed from a large morning glory horn. It worked well. Local soloists, who usually do all the necessary singing, simply looked on while the audience drew close to the wagon to catch every word. The superintendent says that hereafter the Gospel wagon will carry the phonograph along on all the mission meetings.

The Italian-American Phonograph Co., of New York, was incorporated last week with the Secretary of the State of New York with a capital of $1,000. The directors are: J. G. Eggo, Wm. Zopff, A. W. Barkelew, of New York.

THE UTICA AUTOMATIC STOPPER

¶ This splendid device is for the Edison Home Phonograph. It stops the machine when the record is finished. The Automatic Stopper is sure to be in large demand among users of the Edison. The retail price is 25 cents. ¶ Place your order through your jobber; if unable to get them of your jobber, write us. We will furnish a sample to any dealer in the United States or Canada on receipt of 15 cents.

You ought to have every one of these records. We are advertising them in the principal daily newspapers throughout America on October 28, and telling millions of readers that they can be had at all dealers.

Don't take chances of disappointing a single customer. Have the records asked for and you not only make a liberal profit, but increase your prestige as a progressive up-to-date dealer.

All Victor Records are of the highest musical quality and give the utmost satisfaction. Sell the people what they want and they'll come back regularly every month for the newest Victor Records.

Victor Talking Machine Company

Camden, N. J., U. S. A.

Berliner Gramophone Company, of Montreal, Canadian Distributors.

BELLAMY WAS A PROPHET

Not a Dreamer, When He Wrote "Looking Backward"—His Prediction About Music for Year 2000 Realized in 1907.

When Edward Bellamy wrote his famous book, "Looking Backward," people laughed at the improbability of the pictures portrayed therein ever coming true. While he referred to events in the year 2000, yet in this year of grace 1907, the advance made in the perfection of the talking machine, as well as that of electrical music, such as the telharmonic system invented by Dr. Cahill, almost startlingly verifies Bellamy's predictions. Here is an extract from his book written nearly a quarter of a century ago:

"'Please look at to-day's music,' she said, handing me a card, 'and tell me what you prefer.' The card bore the date of September 12, 2000, and contained the longest program of music I had ever seen. It was as various as it was long, including a most extraordinary range of vocal and instrumental duets, quartets and various orchestral combinations.

"I remained bewildered at that prodigious list until Edith's pink finger tip indicated a particular section of it, where several selections were bracketed, with the words '5 p. m.' against them, then I observed that this prodigious program was an all-day one, divided into twenty-four sections answering to the hours.

"I indicated an organ piece as my selection. She, crossing the room, merely touched one or two little screws and at once the room was filled with the music of a grand organ anthem; filled, not flooded, for by some means the volume of melody had been graduated to the size of the apartment.

"Such music, perfectly rendered, I had never expected to hear. As she spoke the sound of violins filled the room with the witchery of a summer night. When this had ceased, she said: 'There are a number of music rooms in the city, perfectly adapted acoustically to the different sorts of music. These halls are connected by telephone with all the homes in the city whose people care to pay the small fee, and there is none, you may be sure, that do not. The corps of musicians attached to each hall is so large that, although no individual performer, or group of performers, has more than a brief part, each day's program lasts through the twenty-four hours.

"'There are on that card for to-day distinct programs of four of these concerts, each of a different order of music from the others, and any one of the four pieces now going on that you prefer you can hear by pressing the button which will connect your house wire with the hall where it is being rendered. All of our bedchambers have a telephone attachment at the head of the bed by which a person who may be sleepless can command music at pleasure of the sort suited to the mood. Father will show you about the adjustment before you go to bed to-night, and with the receiver at your ear I am quite sure that you will be able to snap your fingers at all sorts of uncanny feelings if they trouble you again.'"

As referred to before in these columns, the Telharmonic Co. of New York are arranging to provide people with music at their homes by wire direct from a central station. This is synthetic music, "built up," so to speak, to reproduce all the various instruments of an orchestra with most marvelous color possibilities. With De Forest sending music from the talking machine by wireless and the transmission of music from the same instrument by 'phone to various points, one can get an idea of the tremendous progress of the age we are living in. Whether Bellamy was endowed with prophetic powers, or merely a dreamer, at all events there is much in his fanciful volume that is now within the bounds of practicability. Thus the world moves.

FOSDICK'S TALKING MACHINE LINE.

The Toronto Gram-o-phone Co., formerly a branch of the Berliner Gram-o-phone Co., and recently purchased by W. R. Fosdick, for some time a representative of that concern in Ontario, have been appointed jobbers of Victor and Berliner goods, and in future will handle those lines exclusively.

REGARDING PRICE CUTTING.

Dealers Must Co-operate With the Victor Company in Maintaining the Prices on Victor Machines and Records.

Under date of July 29 the trade were notified of the summary action taken by the Victor Co. in suspending a number of dealers in New York City. A report that certain dealers were violating the selling conditions on Victor talking machines reached the company, who after investigating the situation, placed the names of these dealers on the suspended list, at the same time notifying the trade that they were not to be supplied with Victor products, except at list price, or upon written consent of the Victor Talking Machine Co.

The matter of price cutting will be closely investigated whenever it is brought to the company's attention, and any dealer will be summarily dealt with whenever the company receives conclusive evidence of breach of sales conditions. This is not intended, nor should it be construed, as a threat. The Victor Co. have demonstrated that the success of all dealers is dependent on the maintenance of contract prices. Dealers should co-operate heartily with the company in furthering this policy. The Victor Co.'s position in this matter is beyond question, the Federal courts having sustained them in their action, and Victor dealers will either maintain the prices fixed by the company, or suffer consequences. In no other way can the business of thousands of Victor dealers be protected, nor the dignity of the Victor Co. be maintained.—The Voice of the Victor.

The C. C. Harvey Co., the well-known Boston piano house, have installed the Edison commercial phonograph system in their various departments.

To You, Mr. Jobber

We are now ready for Fall trade with a complete line of Standard Horns. The same quality, standard and finish are not only up-held, but improvements have been made so that our product is second to none on the market. Our reputation for reliable horns is well known, and we propose to add to that by creating the finest horns that can be located anywhere.

TRADE STANDARD MARK

You will make no mistake by making a Standard alliance. Place your order now and you can be sure of prompt shipment. We make a specialty of filling orders. Be on the Standard side and you'll be all right.

BROAD-GAUGE STORE METHODS

Are the Only Kind That Win Favor in the Talking Machine or Any Other Business That Desires to Succeed—A Somewhat Personal Talk With World Readers.

The broadest-gauge store methods are the only kind now that win the public favor. The time was when proprietors felt they could stand at the shop door and cross-examine every customer who did not purchase.

The evolution of things has brought forth better conditions, but some hard-shell old-timers still keep a grip on this relic of an effete age. They are practically scuttling the ship, though. Now, Mr. Dealer, if you are one of this misguided class, "break away." There is danger every time you force your attention on a customer with a view to finding out whether he or she has bought or not.

Of course, there is the proper kind of concern which a dealer may feel in his customers, but it requires skilful diplomacy to practice it. Not a suggestion of anxiety must be apparent, but the inquiry may be in the nature of a cordial character, more as a greeting rather than a desire to know whether a purchase has been made or not.

There is another disagreeable feature which occasionally crops up, and one which calls for rapid change. We mean the habit of showing your temper before customers. We know you do not like to do it, and each time you "fall down" you resolve not to do it again, but sure as fate, next day a clerk makes some blunder, off you go just like a firecracker.

What is the matter with your equilibrium any way? Surely you who can take hold of apparently serious problems, and never let go until you've made them come your way, can throttle this desire to splutter just when it is likely to do most harm.

Customers do not like to witness contests where the proprietor appears in the light of an overbearing, domineering character, and the clerk as a poor wretch who dare not say a word for fear of consequences. That is just the way these spasmodic dressings down appear on the surface. The proprietor is put in a false light every time.

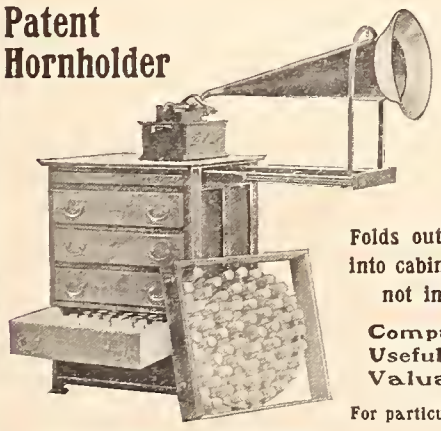
When you feel tempted to do some loud talking because a mistake has been made, ask yourself: "Who's going to get the worst of it?" You will probably decide to wait and have it out with the offending clerk at the proper time and place.

THE JOKE WAS ON THE LAWYER.

A joke was recently put up on a number of leading lawyers of Pottsville, Pa., who will not know until they see this in print, why they have been vainly looking for a prospective client, says a writer in the New Phonogram. The lawyers one by one were called up by telephone and informed that the person who was talking at the other end of the line was a German who had trouble with his wife and he wished to bring divorce proceedings and would place his case with the attorney. The lawyers in every case procured pencil and paper and prepared to take down notes. The jokers at the other end of the line then placed a phonograph near the receiver with a record on it which recited some of the trials of Joseph Jefferson in the play "Rip Van Winkle," when he was telling the audience how badly his wife treated him. The phonograph spun the matter right off and pretty soon the lawyer at the other end shouted that the speaker was going too fast. The phonograph was then shut off for a few seconds and then turned on again. The jokers played with each lawyer for several minutes and had no end of fun out of their eagerness to grab a fee.

Phonograph Record Cabinets

Patent Hornholder



Folds out of sight into cabinet when not in use.

Quartered Oak. Holds 305 Records.

SYRACUSE CABINET CO., Syracuse, N.Y.

YANKEE "PUSH" IN THE SOUTH SEAS.

Naval Officer Makes Interesting Discovery on a Pacific Coast Trip—The Phonograph Employed as a Promoter.

Another of many uses to which the talking machine is applied has just materialized. It appears that while one of the naval vessels of the United States was patrolling that part of the Pacific Ocean known as the South Seas, some time last spring, it chanced upon a sailing vessel, which an officer from the war ship at once boarded. The stranger proved to be a craft commanded by a New Englander who for some years had been engaged in recruiting Kanakas for the plantations of Queensland, Australia. The naval officer noticed that there was on board an instrument that is not usually considered essential for purposes of navigation—a phonograph—and asked why the talking machine should have been included in the ship's outfit.

He was told that before the vessel left Queensland the captain had visited some of the sugar plantations where South Sea Islanders were employed, taking with him a camera and phonograph. Here he went into the business of photographing groups of islanders on the plantations, also taking individual pictures of well-known men from the New Hebrides and the Solomon Group. Edison's invention was then brought into service, the best-known among the islanders being asked to speak into the phonograph anything they would like to tell their friends at home. In this way large numbers were induced to give an account of the sort of life the Kanakas were having on the plantations, and to tell any other news likely to interest the old folks at home in Malikolo, Ambrym, San Christoval, Malaita, and other islands. When he had secured a good supply of these messages, the ingenious master sailed for the islands, and at last advice was making good use of his material. Many of the photographs had been transferred to glass for use with the limelight, and with the pictures and the phonograph he was able to give exhibitions of life on a plantation that changed the doubts of the natives into an enthusiastic desire to emigrate.

At the limelight show the captain would produce a full-size picture of an absent friend, a native well known on the island, and to the amazement of his dusky audience would make him speak words of greeting from his plantation home in Bundaberg, a thousand miles away. Whatever misgivings had been felt before the phonograph was produced were at once dispelled when the limelight picture of their friend addressed them in their own tongue and in the voice they had known so well when he dwelt among them. The Yankee captain certainly displayed the National traits of enterprise in this transaction.

$20,000 WORTH OF TALKERS FOR DYER & BRO.

(Special to The Talking Machine World.)
St. Paul, Minn., Sept. 30, 1907.

W. J. Dyer & Bro., of this city, have several consignments of talking machines on the road, aggregating in value $20,000. Practically the entire lot will go out at once on orders which have been accumulating since the Fair week.

?

¶ Do you like this issue of the World?

¶ Is it not worth something to you in your business?

¶ Do you receive it regularly?

¶ If not, why not?

¶ The fault is your own, for we've done our part in supplying you with a sample copy.

¶ Subscribe for it.

¶ That's the only way to get it.

¶ It is worth ten times the annual cost to you, whether your store is in Houston, Hong Kong or Hindoostan. We have subscribers in all these places, and they say "Yes."

¶ Be progressive and read the World. Your competitor takes it and he knows its value.

¶ It costs one dollar yearly in the United States and Mexico; all other countries, one dollar and twenty-five cents.

¶ Don't delay sending in your order; not soon, but NOW! We can handle anything in checks, postal orders, stamps, and cash, at your risk.

SUBSCRIPTION (including postage), United States, Mexico, One Dollar per year; all other countries, $1.25. England and her colonies, five shillings.

ADVERTISEMENTS, $2.00 per inch, single column, per insertion. On quarterly or yearly contracts a special discount is allowed. Advertising Pages, $60.00; special position, $75.00.

REMITTANCES should be made payable to Edward Lyman Bill. Currency received at sender's risk.

☞IMPORTANT.—Advertisements or changes should reach this office by the first of each month. Advertisements arriving too late for insertion in the current issue will, in the absence of instructions, be inserted in the succeeding issue.

Long Distance Telephones—Numbers 4677 and 4678 Gramercy. Cable Address: "Elbill," New York.

NEW YORK, OCTOBER 15, 1907.

ACCORDING to the horoscope cast by the business prophets the outlook for business for the remainder of the year is far brighter than last season, and a personal survey of the trade situation in the great cities of the middle West causes us to believe that the talking machine trade in that section will reach enormous proportions during the present year. The crops after all were but little damaged by the frost, and while reduced somewhat in bulk will bring the farmers high prices, and as a result there will be larger demands for those pleasing accessories of home life. In this the talking machine must be considered a strong factor, and we predict the largest trade in the agricultural region that the talking machine industry has ever known. The farmers have money—a good deal of it, and they could stand a shortage or even loss of crop one year and still have a good purchasing power left.

THE truth of the above statement is borne out by the savings bank reports. The farmers are interested more than ever before in talking machines. They have read the advertisements in the magazines of great circulation, and during the long winter evenings the talking machine will form for them a wonderful entertainer. They will buy high-priced machines, and it seems to us as if the trade situation was particularly pleasing at the present time. Manufacturers are carrying on vigorous advertising campaigns; perhaps the most strenuous they have ever conducted, and the result of this will be an added interest in talking machines. The increased advertising appropriation in some cases has brought about added publicity, and as long as manufacturers maintain such an aggressive and forceful policy it will result in keeping the talking machine well to the forefront in the minds of the public.

THE wonderful development in the Southern States along agricultural lines has led to much attention being directed toward Southern conditions from an advertising standpoint. It is doubtful whether any other section of the country will more richly repay aggressive advertisers, at this time. Advertisers interested in the exploitation of their goods in the South, should recognize the fact that this section differs in a number of points from any other, making it necessary to study closely Southern conditions in order to secure the largest returns. To reach the agricultural South the religious publications are the best mediums. Of course the daily papers cover the cities in good form, but there will be a good many talking machines sold in the agricultural regions, and the best way to reach the people is through the religious publications. These papers go everywhere where there is a church, and reach every post-office in the South. Talking machine men will, we believe, find these mediums to be among the most profitable to reach the retail purchasers of talking machines in the South.

THE exploitation of new records in the daily papers throughout the land, and in beautifully prepared brochures, is unquestionably stimulating an accentuated demand for the records which are thus advertised. The plan of issuing bulletins containing announcements of new records each month, which is a fixed principle in the policy of the large producing houses, has a tendency to concentrate a big record trade in the period immediately following the announcement of the new lists, and the record business is a very important part of the talking machine trade. In fact the sales of records mount up into colossal figures. As the new records appear every jobber and every dealer in turn orders some from every list. A man is not up-to-date unless he does this, because if a customer comes into his store and asks for something appearing on a new record list, and he does not happen to have it on hand, he is immediately viewed as being a non-progressive merchant.

BUT has not the effect of sending forth these huge monthly bulletins a tendency to get the salesmen out of the habit of pushing the old records? Is it not the trend of the times with most of the talking machine stores throughout the land to place a decided emphasis on the new records, forgetting that there are vast stocks of old records which are not being moved as rapidly as they should? Manufacturers are spending great sums of money monthly in producing and advertising splendid lists of the latest musical compositions—compositions which are popular in the music halls and with the people, but does not the trade require a special waking up to the fact that added emphasis should be placed on the regular stock? And that gives rise to the question, are the bulletins issued too frequently? Would the plan of issuing quarterly bulletins—and of course some few specialties during the interim in order to present the popular pieces—be a wise one to adopt? Now these are questions which interest the entire trade, and it might be worth while to discuss the record situation broadly in the columns of The World.

READERS of The World are familiar with the results of the Buffalo Convention as a comprehensive report covering all the details of the meeting at Buffalo appeared in our last issue. Since that time the future of the National organization has been a topic of live discussion among talking machine men. The World has had an opportunity to discuss the future association plans with the officers in the several cities of the Union since the formation of the National organization at Buffalo. It should be understood that no time is being lost by the men who compose the official staff of the new association. These men are rapidly getting things in shape and they propose inaugurating a campaign that shall have for its ultimate object the bringing in upon the membership roll the name of every jobber in the country.

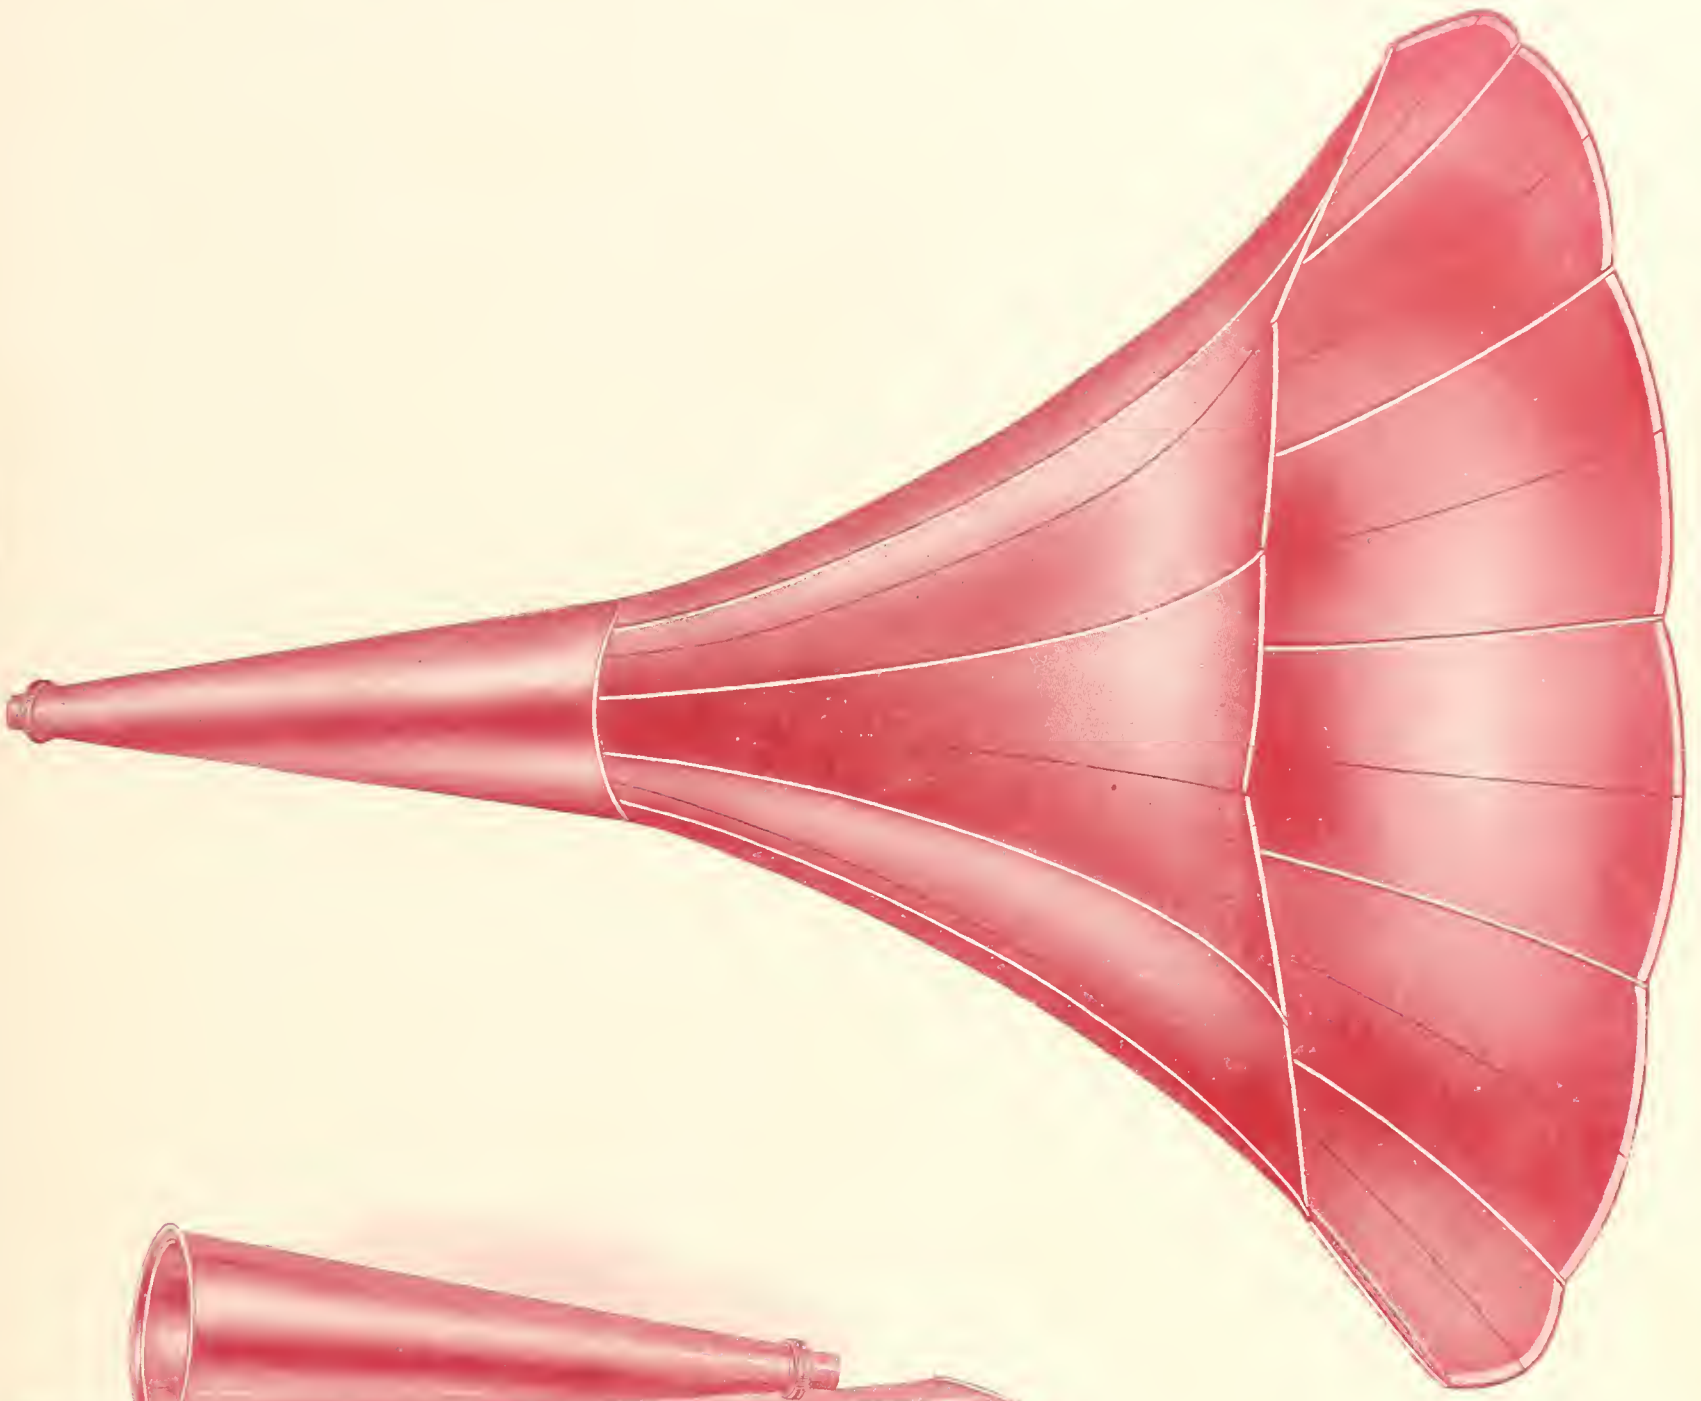
THE leading officers have remarked to The World that they propose to spare no pains in pushing the work of the association steadily on. By the consolidation of the Eastern Talking Machine Jobbers' Association and the Central States Talking Machine Jobbers' Association the National association will commence business with a membership closely approximating one hundred, so it will be seen that it starts in with good numerical strength. The officers feel enthusiastic and they propose to carry on an active campaign of education showing the jobbers that it will be to their interests to become members of the association, so that it will be strengthened in every possible way.

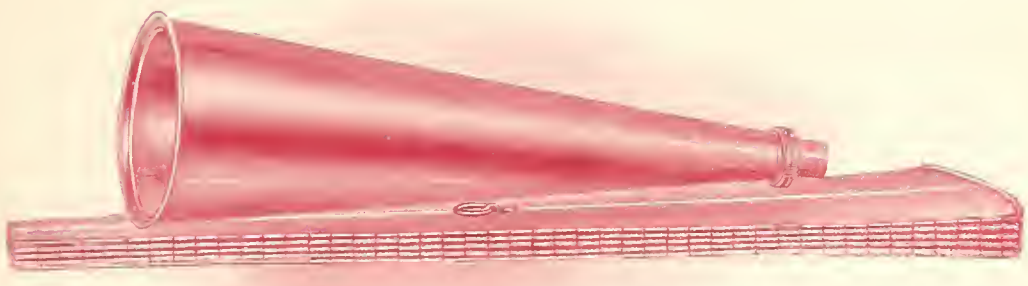
PRESIDENT BOWERS said to The World recently: "It is needless to say that every question that comes before us will be considered fully in its bearing both on the different branches of the trade and the public. We have reason to be proud of our industry, the remarkable advancement it has made not only from a scientific but from a commercial standpoint—the clean high-grade lines on which it is conducted. We shall undoubtedly be able to do much towards the further education of the public as regarding the intrinsic merit and artistic value of the talking machine, and its potency as an educational factor. I want to emphasize the fact that this association will at no time play favorites. The smallest member of the trade is just as welcome as the largest and will receive equal attention and consideration."

ACTING in accordance with the authority conferred at Buffalo, steps have been taken for the incorporation of the association. After investigation it was found that the laws of Illinois are particularly favorable for an organization of this nature and it will be incorporated in that State. There is in preparation, and will be added to the by-laws, a section devoted to the work of a credit bureau to be established by the association. It would seem that from the interest manifested in the new organization it would move on speedily to a position of tremendous power in the talking machine industry.

THE association idea is gaining ground steadily in all lines, and in this industry many jobbers who have hitherto remained outside the association breastworks will undoubtedly swing into line under the National banner. The interests of all talking machine men are practically the same no matter in what section of the country business may be carried on, and therefore with a National organization it will be much easier to accomplish trade betterments and hold the talking machine industry up to a high and dignified plane than by several local establishments. The trade has now an opportunity to get together for mutual advancement.

THE SEARCHLIGHT FOLDING HORN





Patent No. 771441
Oct. 4, 1904

Patent No. 12442
Jan. 30, 1906

THE ONLY PRACTICAL, COLLAPSIBLE HORN IN THE WORLD

Style—Red (Baked Japan)—Gold Striped.

For all Edison and Victor Machines except Victor 1.—For all Columbia Machines

Size, 23 x 28 Cylinder; 23 x 21 Disc. Boxed, 3½ x 7 x 20 Inches.

THE ENTERPRISING DEALER WANTS TO KEEP HIS CUSTOMERS INTERESTED.

The most interesting and novel product in the talking machine line to-day is the

SEARCHLIGHT FOLDING HORN

A MECHANICAL WONDER—PERFECT IN CONSTRUCTION

It is a Horn that attracts attention and will sell on sight. So simple a child can put it together in less than a minute's time.

It opens like an accordeon.

Does not require crating and can be folded so that a horn can be carried in a side pocket.

SAMPLES IN YOUR WINDOW WILL ADVERTISE YOUR BUSINESS.
SEND TO YOUR JOBBER. IF YOUR NEAREST JOBBER DOES NOT HAVE OUR FULL LINE, WRITE OR TELEGRAPH TO US.

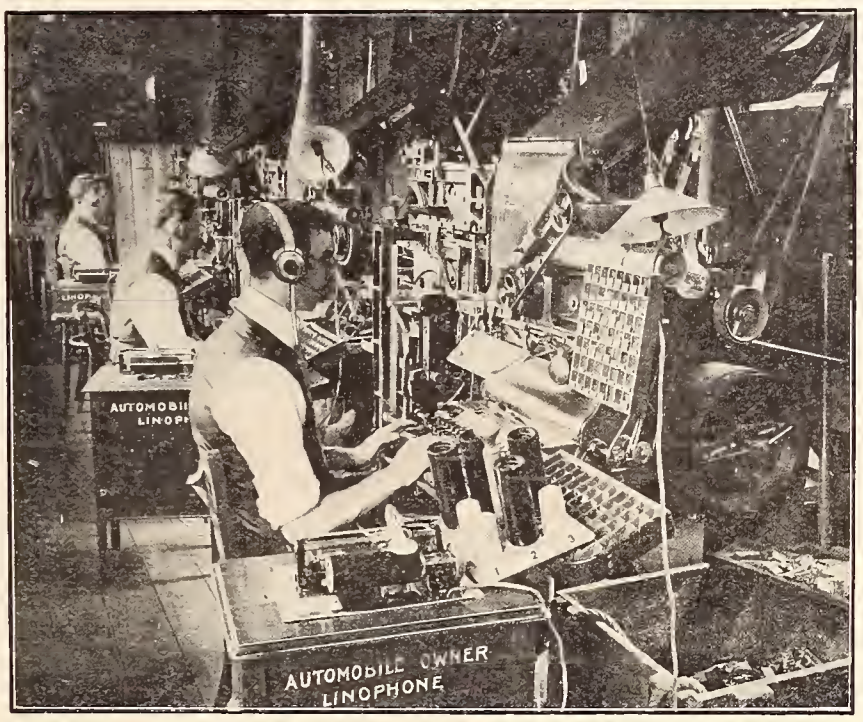
SEARCHLIGHT HORN CO., 755 Lexington Ave., Brooklyn, N.Y.

THE LINOPHONE HAS ARRIVED.

The Remarkable Combination of the Commercial Graphophone and the Linotype—Being Used in England With Great Success—The Process of Co-operation Described.

In a recent issue of The World our London correspondent made reference to the Linophone, a combination of the commercial graphophone and the linotype. This device is being used in the mechanical department of the Automobile Owner, of England, and commenting upon its value the owner said:

"A great part of the editorial portion of this paper has been produced without a word having been put on paper. To the best of our knowledge



no printed matter has ever been set, certainly not in this country, that has not first been written. Our innovation has been brought about by the use of graphophones. For some time past we have been using these machines in connection with the typewriter, the matter being dictated directly into the wax cylinders at odd moments and then handed on to the typist to transcribe. In this way it is found we can keep our typists continually employed and save the time occupied in dictation. This saving is approximately about two hours in three.

"This success suggested to us the possibility of applying the graphophone to the linotype machine, and we approached the Columbia Phonograph Co. to co-operate with us in carrying out the undertaking. There was some slight difficulty at first in accustoming the operators to the sound of the voice, but it soon passed, and during the last month we have had Columbia graphophones connected directly to three of the linotype machines at the works of our printers, Messrs. Polsue, Ltd. These notes and certain other portions of the paper are the results.

"For the sake of those of our readers who are not acquainted with the system, we may explain that the graphophones are driven off the ordinary electric-lighting circuit. The words are spoken through a short speaking tube into the recorder of the machine, the recorder having a cutting sapphire blade which produces the vibration upon specially long wax cylinders. Each cylinder will take about one thousand words on the surface, and can be shaved approximately eighty times. The cost of the cylinder is eighteenpence —not very expensive for its capacity of eighty thousand words! In fact, it is considerably cheaper than paper if the latter is to be used for fairly bold writing. The machines have a pneumatic device attached, by means of which the cylinder only travels while the operator is actually speaking, so that there is no waste." We publish an illustration of the new device through the courtesy of the editor of Graphonotes.

HEARD HIMSELF AS OTHERS HEAR THEM.

According to a story now going the rounds of the trade, on one occasion Caruso, the tenor, had been singing for some hours into a talking machine.

"The talking machine," he said, "is a wonderful thing. It almost realizes the wish of the Scottish poet, the wish that we might see ourselves as others see us. We can now, at least, hear ourselves, a thing impossible before.

"The talking machine teaches us many valuable lessons. When I was in the army, before I realized the capabilities of my voice, I played a flute. A talking machine salesman brought a talking machine to my quarters, and tried to sell it to me on the instalment plan. I was undecided.

"Finally the man took out a blank cylinder. 'See,' he said, rather reluctantly, 'here is a blank cylinder. You may make a record on it, then we will run it off, and you shall hear yourself. It is a costly favor I am doing you, but it will show you what a fine instrument this is.'

"I was delighted. 'I'll get my flute,' I said. 'I'll play a flute solo.' Well, I played my best into the machine. It seemed to me that I had never combined before such feeling with such accuracy. I was more than pleased with myself.

"Then the man put in the cylinder, and the music began to issue forth. I frowned. 'Is that me?' I said.

"'Yes, sir,' said the man.

"'Really me, just as I played?'

"'Precisely, sir, precisely. And now,' said he, 'do you want to buy the talking machine?'

"'No,' said I, 'I want to sell the flute.'"

REGINA CO.'S EXPANSIVE PLANS.

Sales of Regina instruments during September were more than 100 per cent. in excess of the sales during September, 1906.

During October, November and December, Regina advertising will reach 5,000,000 readers. Full pages have been engaged in the following magazines: Ladies' Home Journal, Woman's Home Companion, Delineator, Saturday Evening Post, McClure's, Everybody's, Review of Reviews, World's Work, American, Country Life, and others. This widespread publicity cannot fail to be of great benefit to all dealers handling Regina instruments.

Talking machine dealers are rapidly learning the merits of the Reginaphone and the sales of this popular instrument are increasing by leaps and bounds. The Regina Company are offering to send a sample on ten days' approval to any responsible dealer who has not examined it.

A dispatch has just been received from the London office of the Columbia Phonograph Co. stating that Winston Churchill, member of Parliament, and under Secretary of the Colonies, has ordered a commercial graphophone outfit.

What it means to have a good jobber.

More customers, more sales, more good-will, more money.

No worry, no trouble, no disappointments, no drawbacks.

It certainly is worth while to have the right kind of a jobber; one who works hand in hand with you and always looks after your interests; who has what you want when you want it, and sends it to you the same day the order is received.

That description fits us to a T, and we have the kind of a stock that goes with it. Everything that's newest and best in specialties, besides a complete line of Victor talking machines and records, record cabinets, trumpet horns, fiber cases, English needles and all other accessories.

Your business is bound to run along more smoothly when you get such service as we give. It enables you to take the best care of your customers, and gains many new customers for you.

Send us your order and you can be sure there will be no delays of any kind in making shipment. No disappointments for you, or for your customers.

Write to-day for our latest catalogue and get familiar with our line of goods.

The Victor Distributing and Export Company

77 Chambers Street New York

Two Tunes

A man whose musical education had been neglected, said he knew but two tunes. One was "The Star Spangled Banner" and the other wasn't.

People—musical and otherwise—know but two kinds of talking machines. One is the Edison Phonograph and the other isn't.

The Edison Phonograph

makes itself known. Its perfect reproducing powers, its sweet, musical tones, its long-running motor, its indestructible sapphire point, and its eminent record makers put it far in advance of all other instruments.

Don't tie up your capital, take up your space or spend your energy on a line that "isn't." The call is for Edisons; the money is in Edisons. Stock up and get busy. This is the season.

If you do not carry Edison Phonographs and Records, write us for full information and the name of a nearby jobber who can supply you.

NATIONAL PHONOGRAPH COMPANY

59 Lakeside Avenue

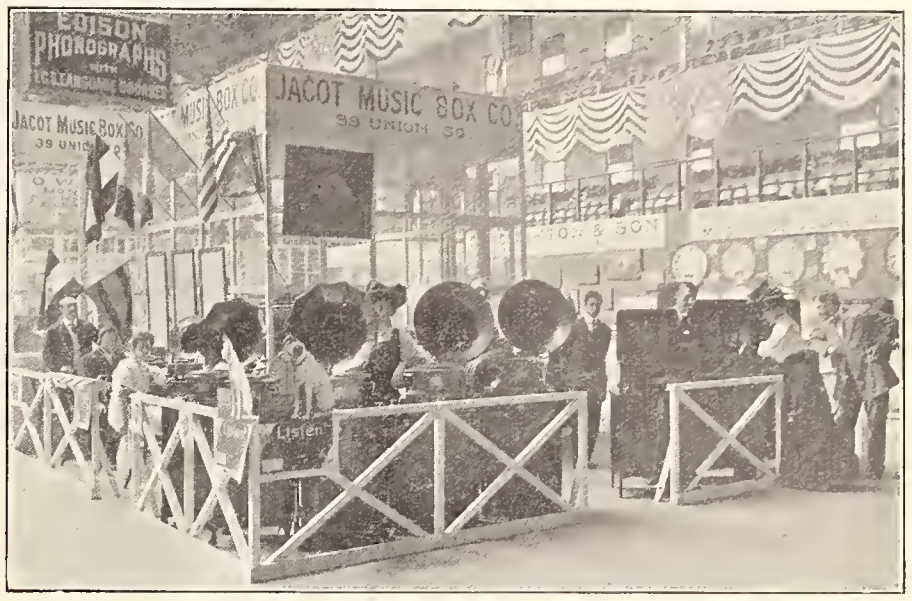
ORANGE, N. J.

SOME EXHIBITORS AT NATIONAL MUSIC SHOW.

Handsome Displays of Talking Machines, Music Boxes and Regina and Hohner Specialties Which Were Much Admired by Visitors to Madison Square Garden.

Among the exhibitors of talking machines at the National Music Show, recently held in this city, were the Jacot Music Box Co., and the Regina Co. The former concern had a fine showing of Victor talking machines, Edison phonographs, and the I. C. S. system of language instruction, for which they are the New York representatives, and the Miraphone, their own combination of the Mira music box and the talking machine. At a well-attended concert given by the Jacot Music Box Co., one evening during the show, the famous Caruso, Caruso and Scotti and Melba red seal records were played, the auxetophone being used, and called forth great admiration and applause.

REGINA CO.'S FINE DISPLAY OF TALKING MACHINES.



JACOT MUSIC BOX CO.'S EXHIBIT OF VICTOR AND EDISON MACHINES.

M. HOHNER'S HANDSOME BOOTH.

At the Regina Co.'s booth were exhibited the complete Victor and Edison lines and the Reginaphone, a combination talking machine and music box. The exhibit in connection with the player pianos and various musical novelties made by that firm was very attractive in every way. One feature of the exhibit was a very unique working sign advertising the Victor machines and records. At various times the well-known dog would appear surrounded by an unintelligible jumble of letters, which would gradually arrange themselves to spell the names of Caruso, Plancon, and other grand opera stars who make Victor records. This sign was always surrounded by a mystified crowd.

The exhibit of harmonicas and accordeons made by M. Hohner proved of interest to the talking machine trade from the fact that many dealers find it a profitable side line to handle. Occupying very little room the harmonica line has proven a great money maker. At the Hohner exhibit every effort was made to illustrate the value of those instruments in a musical sense, through the medium of concerts, recitals, etc., and the efforts were in every way successful.

The show afforded the talking machine exhibitors an exceptional opportunity for bringing their machines and records to the attention of the public, while they were interested in and inspecting what was best in music, and according to reports results at the last show were very satisfactory. It is believed that several more talking machine people will be represented at the next show.

SIGNOR MARCONI ARRIVES.

Signor Marconi, of wireless telegraph fame, and who is connected with the Columbia Phonograph Co., as consulting physicist, arrived at St. John, N. B., from London two weeks ago. He went through to Sydney, C. B.

In an interview this week Marconi stated that he expected to have wireless communication with Europe within three weeks. He stated that messages would be sent from Glace, being received on the other side of the Atlantic at Clifden, Ireland, where one of the most powerful plants in the world has been established. Connecting with the wireless station Mr. Marconi stated that the Government lines in Great Britain would handle the messages for land transmission, agreeable with the contract which his company have with the British Government. On this side he hoped to make connections with the Canadian Pacific and Western Union Co. for the use of their wires for land transmission.

C. M. Child, of the Victor Talking Machine Co., was one of the passengers on the great turbiner Lusitania, on that ship's wonderful maiden trip. Mr. Child was abroad for some time making arrangements with prominent opera singers to sing for his company, and he has been very successful.

Why Sign Contracts
