SASS IRISES—1936

The Superiority of Sass Irises has been thoroughly demonstrated by numerous awards to them culminating in the Dykes Medal for 1932 to Mr. H. P. Sass' Rameses.

The points of superiority that distinguish Sass Irises are, first of all, color. Other distinguishing qualities are complete hardiness, vigor of growth, freedom of bloom and texture. Grown under the rigorous conditions of Nebraska's hot sun and drying winds, an iris must be of the firmest texture to withstand them. Many fine Irises which are lacking in substance cannot be grown under Nebraska conditions. A Sass Iris will always stand up under any weather conditions.

The Sass Brothers are the leading breeders of intermediate irises and have developed this early blooming class into a range of color, size and quality of bloom that rivals the tall bearded class. They have also worked extensively and have developed qualities of Dwarf Irises of the highest quality and have now in process of development a series of Fall Blooming Irises.

Iris grow easier and multiply faster than any other perennial. Plant them in a sunny location that has good drainage. The bulb or rhizome should be planted just under the surface, not too deep. The roots should be spread out and the soil packed around them.

The best time to plant iris is in July and August, although they can be transplanted at any time of the year when the ground is not frozen.

NEW TYPE OF IRISES

These are hybrids between the Oncocyclus hybrids and Dwarf Bearded hybrids. The following are offered:

BALROUDOUR (Jacob Sass, 1933)—S. pallid soft bluish violet. F, deep olive buff with olive yellow blotch at end of beard. An exquisit color combination, reversing the usual combination of bronze standards and blue toned falls. Two flowered stems 12 to 18 inches tall. Vigorous grower**25c**
