# AN EXPLANATION, AN INVITATION AND A FEW SUGGESTIONS 

- A little more than twenty-five years ago Charles Avery established the Swan River Nursery near the town of Patchogue, on Long Island, some 50 miles from New York City, on the Montauk division of the Long Island Railroad. The location was happily chosen, first because of the climatic conditions, and second because of the soil in which the trees were to be grown.

Atmospheric conditions, as well as soil conditions, have much to do with the successful development of nursery stork. Trees and shrubs demand a certain amcunt of moisture in the air as well as in the soil. The peculiar salty atmosphere in this location has a tendency to keep in check many of the insects and fungus diseases which injure nursery stock in other and less favored sections of the country.

Our nurseries are only a short distance from the center of the town of Patchogue; in fact it is only a brief walk from the railroad station to our office. We shall be pleased to have custumers and prospective purchasers visit the nursery at any time and make a personal selection of the trees and shrubs which they desire to possess WE WOULD ALSO MAKE THIS INVITATION SUFFICIENTLY BROAD TO INCLUDE ALL OF -OUR FRIENDS WHETHER THEY CONTEMPLATE PURCHASING OR NOT. We believe that only through such visits will it be possible for you to obtain a knowledge of the ideals which are constantly before us in the production of the shade trecs, evergreens, shrubs, and roses that are found here. If visitors advise us a day or two in advance of their call, we will be glad to meet them at the station and place an aufomobile at their disposal for the time that they are with us

We devote all of our time to this business, and all details of growing, filling orders, packing and shipping, are given personal supervision. Most visitors are interested in all the various nursery operations, but one of particular interest is in the digging and packing of evergreens. All of the trees measuring six feet or more in height, are dug with a ball of earth weighing two or three hundred pounds, which is wrapped in canvas and the entire tree and ball securely packed. This method is quite laborious, but it insures the life of the tree after shipping and transplanting, provided the specimen is given proper attention after this latter operation.

There are many other points of interest about the nursery which will be pointed out on the tour of inspection.

## CONDITIONS OF SALE

The prices in this list cancel all prices in previous lists.
One to five plants OF ONE KIND will be furnished at the each price.

Five to forty plants OF ONE KIND will be furnished at the ten price, when ten prices are given.

Forty to two hundred and fifty plants OF ONE KIND will be furnished at the one hundred price, when one hundred prices are given.

Delivery. No extra charges will be made for delivery to the freight offices or express offices at Patchogue. Whenever packing is necessary to save plants from being injured we only make a small charge for this to cover the cost of doing it up in a bale or box.

We operate motor trucks of different sizes and therefore can offer unlimited delivery service on Long Island and nearby points, making only a charge to cover the actual cost of such service; this of course depending on the size of the order, size of the truck load, and whether a special trip is required. Where possible we combine orders and proportionate the charges among the persons served; this makes the service much cheaper and infinitely better than the old method of shipping by freight. The motor truck is a great time-saver, for trees that are dug to-day can be delivered and planted to-morrow; it likewise removes much of the danger from damage in transit, and if trees are handled by motor truck the element of safety plays so large a part that it will amply pay the cost of the delivery service.

If desired, we will send experienced men to plant the trees and shrubs, charging for such service the actual cost only. This is really the most economical method, for an inexperienced planter is likely to lose much of the stock he received.

Terms of Payment. Our terms are net cash, 30 days from date of shipment. To persons of known responsibility we will extend a reasonable credit, but unknown correspondents should furnish satisfactory references.

Guarantee. We warrant our stock to be true to variety named, and will replace any that may prove otherwise or refund the original price, but beyond that, we assume no responsibility. We guarantee our trees and plants to be in good condition when shipped, but we do not guarantee that such stock will live and grow, as it is obviously impossible to control the aftercare or the weather conditions which may surround transplanted stock.

Evergreens over six feet high are dug with a ball of earth and burlaped: with reasonable care all such trees should live and thrive, although as before mentioned, it will be impossible for us to guarantee the growth of the trees after they leave our nursery.

Complaints. We will gladly rectify mistakes in filling orders, provided we are notified immediately on receipt of the goods.

## PLANTING SEASON.

Deciduous Trees and Ornamental Shrubs.. Either Spring or Fall is usually considered a favorable time for moving trees and shrubs of this class. The digging season in the Spring begins about March 20 , when the frost is nearly out of the ground, and continues till about May 20. Many trees and shrubs can be moved much later in the season by stripping off the foliage or digging them with a ball of earth. In the Fall we commence shipping about the middle of October, continuing until hard freezing of the ground in December.

Evergreens. Can be moved in the Spring from March until the middle of June, because they are dug with ball of earth. August, September and October are also excellent months for moving evergreens.

Respectfully yours,

## SWAN RIVER NURSERY

## PATCHOGUE, L. I., N. Y.

GRACE A. AVERY, Owner
HUMPHREY R. AVERY, Mgr.

## LANDSCAPE SERVICE

If anyone contemplating planting will communicate with us, we will be glad to call on them and make suggestions as to the varieties of plants to use, without obligating them whatsoever.

We will also make a study of any estate, large or small, and present plans on its proposed layout.

A Pleasing Effect Obtained by an Evergreen Border.

## EVERGREENS AND CONIFERS

Evergreens are used in many ways, some of which are as follows: Specimens on a lawn, foundation plantings around houses, wind breaks, hedges and as screens for objectionable objects.

Our Evergreens are thrifty, well rooted and have been several times transplanted.

All Evergreens will be balled and burlaped without charge.
We recommend planting during April, May and June, August, September and October.

## EVERGREEN SHRUBS

In winter, when the landscape is almost shorn of its beauty, the bright, glossy foliage of evergreen shrubs make a brave display, and is, on this account, doubly valuable.

A deep, cool, moist subsoil with proper drainage is the ideal soil, and a shaded position is often preferable.

## DECIDUOUS TREES

Nothing can be planted which will grow so well and with sot little attention and care as trees. The initial cost is small and paid for many times over by the beauty, pleasure and satisfaction which they bring.

Our collection includes trees adapted for all locations, climates and soils.

elegantissima Thurlow's Weeping Willow

## DECIDUOUS SHRUBS

Hardy, flowering shrubs develop more quickly than any class of trees, and are, therefore, indispensable for filling a new lawn where it is desirable to get something to make a show as quickly as possible.

It is our aim to produce everything in flowering shrubbery that is useful, hardy, and worthy of cultivation.

## ALTHAEA. Rose of Sharon

Extra strong plants ..... 2.50
Conover's Cclossal, Palmetto
SPRAYING
For general results we recommend spraying fruit trees afollows:
First, spray with lime sulphur solution during the winter.
Second, spray with Pyrox after the blossoms fall.
Third, spray with Pyrox two weeks later.
This will control the most prevalent insects and fungus diseases attacking fruit trees on Long Island.
RHUBARB Each ..... Per 10
