AMERICAN POULTRY JOURNAL

For More Eggs Feed Red Comb Meat Mash

BE guided by the experience of America's leading poultry experts. They will tell you Red Comb is the best feed for producing healthy hens and increasing egg profits.

Your flock is your big present-day opportunity. With one meatless day a week and people the country over earnestly seeking to use as little meat as possible on other days, eggs and market fowl are in great demand and well paid for.

Feed your flock for *greatest results*. Don't experiment—follow the advice of poultrymen who are making *big* money. Use Red Comb, the *scientific* feed, made of the most carefully selected ingredients that money can buy. Proper feeding, for poultry success, is especially necessary in winter. *Sturdy, healthy, vigorous hens are the only steady, natural, money-making layers*. Remember, ice water and corn won't make winter eggs. It costs less to feed Red Comb than to buy the ingredients and mix them yourself.

Red Comb Meat Mash

the great egg producer, is made of oat-meal, oil-meal, corn-meal, meat scrap, wheat bran, wheat middlings, alfalfa-meal, and *not over 5 per cent shell and 1 per cent charcoal*. These ingredients, the best earth can produce, are mixed scientifically by experts. They form a correctly balanced ration that will give growing health to your flock. Red Comb Meat Mash produces natural layers; it helps the hen by giving it in correct proportions egg-making food.

Feed Red Comb. An increased egg yield and a more vigorous flock are the sure results. See your feed man today, and insist upon Red Comb. There is a Red Comb Feed for every poultry use.

HALES & EDWARDS CO.

(Formerly Edwards & Loomis Co.)

Dept. B, 327 So. LaSalle St., Chicago, Ill.

Also Manufacturers of the famous line of Red Horn Dairy Feeds.

STANDARD *of the* WORLD

Cyphers Incubator Company

Incubators — Brooders — Hovers

BUFFALO - U. S. A. - NEW YORK

10 x 10 PORTABLE

ALL PURPOSE HOUSE. Can be made in units. Just right for brooders or brooder stove. Equally good for growing stock or laying hens. Also makes a nice camp, playhouse or woodshed. Made 3/4 in. matched white pine lumber. Weight 1,000 lbs.

Write for our free booklet, showing 30 different sets of portable poultry houses. Prices much lower than you can build for.

E. C. YOUNG CO. 6 Depot Street RANDOLPH, MASS.

\$1.00 Buys More Meat Feed Now Compared to the Cost of Grain

Grain prices have gone up 200 to 300 per cent. Meat feed prices have gone up only 40 per cent. While meat feed was always the most economical considering the nourishment it furnished, it is now even more economical compared to grain because it has advanced relatively little in price.

is a pure, sweet, greaseless, odorless, concentrate of fresh meat, cooked and prepared for every day feeding for all kinds of poultry. It contains 50 per cent more nourishment than the best meat scrap on the market (75 per cent protein guaranteed) and is thoroughly digestible. A small measure in the ration supplies all the necessary protein and makes the whole ration more nourishing. Write for our free book entitled "Feeding Secrets of Famous Poultrymen." Please give your dealers' name.

Get Into the **BABY CHICK BUSINESS**—
WITH A
Schwalge Sectional Incubator

Made in all sizes—at reasonable prices

Hatching chickens by the "Schwalge" method is so easy that it will pay you to buy one of our sectional machines even if you would only use it as a side issue to your regular business. You can start with one section and add to it as your business grows. Another section can be added, without interruption, while the first one is incubating.

The Schwalge Sectional Incubator has many special features that makes it superior to other machines. The proper supply of oxygen, moisture and ventilation is provided for in a most ingenious manner. Our heating system, and the proper method of distribution and regulating same, are very effective and can be left alone without varying one degree in 24 hours in the different sections.

BABY CHICKS HATCHED IN OUR MACHINES are full of "pep," as lively as crickets and are able to stand shipment to any part of the country. Our machines come nearer to duplicating nature's methods of incubation than any other machine on the market and for that reason the chicks hatched are remarkably strong, vigorous and husky, able to withstand the critical period of the first week. The operating expense is unusually small and the results are unusually satisfactory. The expenditure for labor is very little—and the satisfaction that the large number of chicks hatched will live and grow is worth hundreds of dollars to poultry breeders. **SEND FOR PROOF TODAY.** Our large catalog is free. It explains everything you want to know about our machines. Write today for your copy and get into a business in which the demand far exceeds the supply.

THE SCHWALGE-SMITH CO. Box 200 ELMHURST, ILLINOIS

Orpingtons

**BUFF
BLACK

I have the quality. Some birds in each color good enough to win at Chicago or New York. I happen to know. Have bred them right 17 years. Have furnished more Orpington winners past 10 years than any other breeder in America. Have sold 56 first prize state fair winners past fall. My personal attention is given every order and letter. Satisfaction guaranteed always. Our interests are mutual. This month I have practical birds, Standard breeders and the highest possible quality exhibition specimens bred, grown and trained to perfection. Get my special offer to purchasers of best cockerels. Write your exact wants, or wire if necessary. Depend on the assurances above mentioned—they are true.

Why Are Aldrich White Orpingtons the Best?

First Cockerel
Chicago Coliseum, 1917

Ask any ten men who are familiar with White Orpingtons, "Which is the best strain in America today?" and nine out of ten will tell you, "The Aldrich Strain." Why has the Aldrich Strain come to be so universally recognized as the best strain of White Orpingtons? Surely there must be some substantial reason. That reputation didn't just happen. We propose to tell you some of these reasons.

To establish the Aldrich Strain of White Orpingtons, the Aldrich Poultry Farm originally spent over \$25,000 for foundation stock alone, paying as high as \$1,000 for a single male and \$500 for a female. As much more was spent in equipping one of the most up-to-date poultry farms in America, and the most expert help possible to secure was employed for several years at great expense to properly mate and rear the birds, until finally the winnings made by Aldrich White Orpingtons in all America's best shows, including Chicago Coliseum and Madison Square Garden, proved their superiority over all others in the show-room, while in the national laying contests for the past four years they have proven their high egg-laying qualities and earned the name of being the

Combination Strain of Quality

Many thousands of dollars were spent in advertising the merits of the Aldrich Strain White Orpingtons, until now it is by far the best known and most popular strain in America, and those breeding and advertising the Aldrich Strain have a demand for their surplus stock and eggs at remunerative prices, with the lowest advertising expense.

When you are ready to purchase, consider the above facts and buy your stock or eggs from a strain so popular and well known that you can sell your stock at a profit.

Our large list of satisfied customers is ample proof of the quality of stock we are supplying them. No birds at under \$10 each or eggs under \$15 a setting until March. If you desire stock or eggs at lower prices, secure them from our customers advertising Aldrich Strain White Orpingtons. Catalog free, if you mention A. P. J.

Don't Use Bird Shot

Don't scatter your advertising appropriation among a multitude of non-paying publications

Be a Big Gun

in the *result getter*, the paper that reaches all the buyers worth reaching—the American Poultry Journal

PREPAREDNESS

Now is the time to start getting ready for next fall and winter

Increase Your Egg Yield 100%

during the molting season and next winter, when eggs are high, by putting into operation the principles laid down in George G. Newell's book,

A REVOLUTION IN EGG PRODUCTION

This book is not a collection of clippings and theories like so many poultry books, but contains the result of common-sense ideas which have been put to test and found practical. They do just what we say they will do — increase the average egg yield 100%. Cloth bound, 112 pages, handsomely illustrated, postpaid, price \$1.00.

American Poultry Journal Pub. Co., 542 S. Dearborn St., Chicago, Ill.

A REVOLUTION
in
 EGG PRODUCTION

GEORGE C NEWELL

Mother named OLD TRUSTY after a faithful dog we once had. You could always trust him.

We make Old Trusty with or without the metal cover. Send for our catalog and take your choice. Think of how good Old Trusty must be to have over three-quarters of a million owners.

Neighbor's Successes Made Him Write Us

Buxton, Iowa, Oct. 1, 1917
Please mail me your catalog and other printed matter. Quite a few poultry raisers in this section are having phenomenal success with your product, has influenced me to investigate.

Yours truly,
Henry U. Mease.

Get a "No-Risk" This Year Hatcher

Year after year of big hatches has proved that you can depend upon Old Trusty. And Old Trusty is the hatcher you want this year. When users write, "I couldn't succeed without Old Trusty" and "I have used Old Trusty for ten years, and have had good luck every year" and "I always do better with Old Trusty"—isn't it a pretty sure sign that Old Trusty is all we claim it to be?

You haven't time for experiments this year. Eggs are worth big prices and poultry is selling high. You want a chick for every hatchable egg.

Extra Chicks Mean Extra Profits—Get Them With OLD TRUSTY

If you don't use Old Trusty where else can you get as good results? Where else can you find a hatcher invented by a practical engineer and poultry raiser? Or backed by 26 years' experience?

Or a hatcher built by workers who have been making the same machine for 10, or 15 years or more? Some of our men have been with us ever since we started in business.

Where else can you find a hatcher made and sold in such big quantities that you get the very limit in value at the lowest possible price? In short, where can you get an incubator equal to Old Trusty construction, even at any price? Don't risk experiments this year, Reader. You can't afford it. The world wants the produce—you want the profits. Get Old Trusty and make money—a sure income.

The Handy Thermometer Holder
Fastened to the inside of door. In view the instant you open the door. Saves time and stooping. Included on all Old Trustys but not shown on illustration above through an oversight of the artist.

Big Oil Drawer
Slides in under the machine. Holds 5 to 6 quarts. Instantly removed, but does not require removing for filling. Beats getting under incubator to fill and clean lamps, don't you think?

Father made our first incubators in spare time while working at the mill. Old Trusty sales have since built up the largest incubator and brooder factory in the world.

Started in 1891 and still growing every year.

M.M. Johnson
Inventor of
Old Trusty

Write for Our Catalog

Old Trusty Incubators

Big Plans for our 1918 Customers

Write and let me tell you what they are. I want you to make a big success as an Old Trusty customer this year. Send me your name and address and let me tell you our plans. I have some good money-making ideas that you can use no matter how big or how little your poultry operations are.

Also let me send you our latest book—FREE. This 108 page book is a real Johnson production, and I think it bears acquaintance well if you would judge by the thousands of poultry raisers who send for it year after year. You see we write and print our own books, this being our latest annual catalog published for our 26th year in business.

Like Old Trusty, it's the result of our own experience in raising poultry and while I don't crack it up as a "cure-all" for every branch of poultry raising, it covers more subjects on making poultry profits than any book I know of. Send for a copy. It will help you—and we are glad to send it free. Mail the coupon or a postal for a copy today.

Winter Laid Eggs

Huntley, Mont., April 6, 1917.
We think the OLD TRUSTY has no equal and would not want to part with our machine. We have 80 hens that have laid all winter. We have sold \$109.50 worth of eggs, besides setting our incubators. One neighbor says he thinks that hens will lay enough more eggs to make up for not laying in the winter, but we get as many eggs now as he does, after having our hens lay all winter when eggs are the highest price.
Yours, A. L. HAGERMAN

Not cheapest nor highest, but best

Byrn Mawr, Pa., Feb. 24, 1917
I bought a 100 egg OLD TRUSTY incubator in Dec. 1916. I find that it is not the cheapest nor the highest-priced incubator, but it is the best. I have tried several makes, but never had any kind that kept the temperature right on the mark regardless of the weather like the OLD TRUSTY. I run it out in an old shed and the outside temperature is never two days alike. I consider it a great pleasure to run OLD TRUSTY. Yours, HARRISON EDSALL.

Old Trusty Comes Ready for Business

We build Old Trusty complete here at the factory (the largest incubator and brooder factory in the world) and ship it ready for business the minute you take the crate off and screw the legs on. It's already crated and stored in our warehouse (either St. Joseph, Mo., or Clay Center) awaiting your name and address on the tag, so you see we can insure quick shipment. And remember—**We Pay the Freight or Express**—shipping the quickest and best way according to your instructions or the routing of our experts who have had years of experience in shipping Old Trustys. Write today for our new book and get our money-making plans for 1918 customers. Yours very truly, H. H. JOHNSON, "Incubator Man."

M. M. JOHNSON COMPANY
Clay Center, Nebraska

We make Old Trusty in two models, with or without the metal cover.

Remember Old Trusty comes completely built—you do not have to build it when it arrives.

Shells out the Chicks

Mail the Coupon—or a Postal

today for a copy of our new book of poultry "know how." Most folks say it is the most interesting incubator catalog and book of poultry raising ever put out, but I am willing for you to be the judge. It contains scores of pictures of big Old Trusty hatches and deals with profitable poultry raising. Send today. The coupon is for your convenience, but a postal card is just as good. Might as well write your name and address now and

100 Hens on Every Farm 100 Eggs from Every Hen

—Will Double the Supply of Poultry and Eggs in the United States and Increase the Amount of Available Food 1,500,000 Tons

ONE hundred hens and several hundred chickens on the average farm, rightly managed, can get nearly all their living in spring, summer and fall "from the land." In feeding themselves they will utilize all waste grain, and consume great quantities of weeds, weed seeds and destructive insects.

One hundred hens and a few hundred chicks can turn a lot of farm waste

into good food. Incidentally the poultry will leave on the land valuable fertilizer at the rate of two or three tons for every hundred birds.

One hundred hens on every farm, and one hundred eggs from every hen, mean more poultry and eggs for consumption on the farms, more to sell, more to substitute for red meat, and more power to our arms and the allies.

For Information How to Help Your Farm and Help the Nation by Raising More Poultry,

Perfect Hatches Mean More This Season Than Ever Before

"Tyco's" Cup

This will be the biggest poultry season in history — the demand will be enormous. The best hatcher made is the only one that can properly meet this demand, because biggest hatches will be necessary. — Bigger profits will be made than ever before. Are you going to get your share? You cannot afford to let this opportunity, to help your country and make big money, pass. Read what Federal Food Administrator, Herbert Hoover, has to say:

Hoover's Message

We are short of red meat. Our soldiers and our allies require more than ever before. We are advocating in every household, every restaurant and hotel in the country the substitution of poultry for red meat. Increased production of poultry can be effected much faster than beef, pork or mutton. We must have a quick response. There is a great waste of poultry feeds from every household and every farm. It requires little labor. Cannot the poultry raisers of the country help us by providing the increased supply we need?—Herbert Hoover, Fed. Food Admr.

**Jim Rohan
Pres.**

Think what a demand this will create for poultry and eggs. Now, I want to go into partnership with every man, woman, boy and girl who can hear the call in Hoover's message. I want to prove to you that I can help you

help Uncle Sam win the war and make a big profit for yourself. You need no experience — a small plot of ground is enough—and it will pay you a big income. Write me today and I will send you

My New Big Poultry Book **Free "Hatching Facts"**

The most valuable book on chicken raising published—filled with facts, proofs, and information, and hundreds of letters and photographs from users of my Hatching Outfits, which tell, in their own words, of their remarkable success.—(Over 650,000 satisfied users) It also tells about my

\$8.95 Champion 140-Egg **Belle City Incubator**

The incubator that regulates and ventilates itself—equipped with patented thermometer holder—round cornered, non-leakable, copper tank—big safety lamp and deep chick nursery. The incubator with the Fibre Board double-walled construction, that has led the field for over 12 years. The choice of America's most successful chicken raisers—the kind used by Uncle Sam and leading Agricultural Colleges. You cannot get a better hatcher at any price. When ordered with my \$5.25 World Famous Belle City 140-Chick Brooder (illustrated below)

the only double-walled, hot-water brooder made, guaranteed to raise the healthiest chicks—both cost only \$12.95. Remember, I Prepay All Freight East of the Rockies and allow it that far if you live beyond. Satisfaction Guaranteed—1, 2, 3 Months' Home Test. You can order from this advertisement and feel perfectly safe—or write today for my Free Catalog, "Hatching Facts"—you will find it the best guide to success in poultry raising. With it comes my Partnership Plan and full particulars of my

\$1000 Cash Prizes

to those who purchase early. Conditions easy to get a big share the first season you own a Champion Belle City Hatching Outfit. With this outfit and my guide book for setting up and operating you are sure of success. Get your order in early—don't delay—the demand is great. Mr. Hoover says: "Act quick!" Write me today and get full particulars. Jim Rohan, Pres.

CAUTION: Any Bone Cutter claiming to be MANN'S without F. W. MANN CO. cast on its surface, is an imitation. The genuine MANN'S is made only in Milford.

Make Hens Lay

WE publish a book which gives the secret that all fowl raisers are most interested in—the secret of making hens lay when eggs are high as well as when they're cheap. The quick and easy way. Goes into the why of the subject. Makes you master of the poultry and egg business. Opens up a new line of thought on the best feed for poultry—the ideal egg-producing food, viz., ground raw bones with the meat and gristle that adheres to them.

MANN'S LATEST MODEL BONE CUTTER

prepares raw, green bone and gristle into a fine mash, four times richer in protein (the egg-making, body-building element) than corn. It supplies the animal food that chickens must have. Easily digested. Saves grain feed. Fowls relish it. Makes them grow, keeps them well, makes hens lay.

We Sell This Machine On Ten Days' Trial

No money down. Try it and note the improvement in the egg yield. If you like it, then buy it. If not, send it back at our expense. Send today for the book and read it. It is free. It will make you want the machine and the machine will add greatly to your profits.

A FREE
BOOK
FOR YOU
ON
MAKING
HENS LAY

Secrets of Expert Exhibitors and Easy Lessons in Judging

By FRANK HECK

A BOOK that is new in character and the most valuable and interesting production ever published for breeders of exhibition fowls. No other book or similar publication comes within gunshot of it. It is in a class by itself. The time has gone by when a breeder can pick up birds right out of the yards and win with them without special preparation. This is true even in the smaller shows. There are always at least a few hustling, enterprising breeders in nearly every locality who are keenly alive to the financial profit and the honors accruing from winning over all competitors. These breeders use all legitimate methods for putting their birds in show condition.

Faking and Legitimate Preparation Both Laid Bare

Faking is certainly wrong and it should not be practiced, but even in legitimate show preparation what chance have you to win over one or more honest competitors who may have a copy of this book and thereby possess the knowledge which enables them to fix up their birds in scores of ways that are not known to you. Consider also the immense advantage you would have in being able to detect such forms of faking as can be discovered in cases where there may possibly be a dishonest exhibitor in the class.

All the methods, drugs, chemicals and various modes of preparing birds for the show room are fully explained

You need the book to protect yourself against the dishonest fakir and you need it to put yourself on an equal footing with your honest competitors. It will save you dollars in useless entry fees, and it will show you how to win the coveted prizes and honors which your rivals would otherwise receive. The price of the book is..... **\$2.00** and it is worth the price. Have you ever bought a poultry book on general topics or disclosing some system or so-called secrets, and upon receipt of it had your expectations drop with a dull thud of disappointment? Well! this is not that kind of a book. **Don't put off sending your order. You need the book now. Address**

AMERICAN POULTRY JOURNAL PUB. CO., 542 South Dearborn Street, CHICAGO, ILLINOIS

Stop Hatching Weak Chicks

With Cheap Incubators

Remember it is not how many you hatch that counts, but how many you raise.

Chicks that hatch out weak and wobbly, and live but a few days, mean nothing to you except trouble and loss. They make one sick of the poultry business.

Most of the chicks you lose in the first two weeks die because they did not hatch out with enough vitality or strength for a good start.

(31)

Sizes
60-egg to 2000-egg
Prices—\$10.50 up.

QUEEN Incubators

HATCH CHICKS that LIVE and GROW

The Queen is accurately regulated—taking care of a temperature variation of 70 degrees without danger.

It is built of genuine California Redwood—very scarce in these days of imitation and cheap substitution.

Redwood **does not absorb the odor** from the hatching eggs. Cheaper woods, and pasteboard lining in iron and tin machines, **retain the odors**, to weaken and kill the hatching chicks.

Don't Buy ANY Incubator Until You Check It Up with the Queen

Some Machines are made of galvanized iron, or tin, or cardboard, or other cheap material that gets hot or cold quickly, absorbs odors, moisture, etc., and is liable to kill or weaken the chicks after the first few hatches.

The Queen is made of California Redwood, the best material ever discovered for incubators. Of course it costs more.

Some Machines have only one real wall and consequently are not properly insulated.

The Queen has double Redwood walls, the space between being filled with corrugated strawboard, making perfect insulation.

Some Machines regulate only when temperature is uniform and everything runs right.

The Queen Regulator is a wonder. It will take care of a heat variation of 70 degrees.

Start Your Chicks with a Queen Constitution

and they will make money for you. The Queen is not a cheap incubator, compared with many of the cheaply constructed machines on the market, but it is **cheap in the long run**. It will be turning out high percentage hatches years after the cheap machines have been junked. Sold by dealers. Catalog sent free on request.

QUEEN INCUBATOR CO., Lincoln, Nebraska

Not a Single Complaint

Queen Incubator Co., Lincoln, Neb. -

Gentlemen:—During the many years you have been advertising Queen Incubators in the columns of American Poultry Journal, we have not, to the best of our recollection, received a single complaint from one of your customers. *American Poultry Journal*.

Not Even an Expression of Dissatisfaction

Western Poultry Journal, Cedar Rapids, Ia., writes: "In all these years that the Queen Incubator has been advertised in Western Poultry Journal, we have as yet to receive the first expression of dissatisfaction from any of our subscribers. We think this is a splendid recommendation, not only for promptness and business ability, but for the quality of Queen Incubators."

The Best—East or West

John Bowen of the Colorado Poultry Fanciers Association, wrote: "Last season the writer installed a Queen as an experiment, and found that it hatched 18 per cent better than Eastern made machines and 11 per cent better than any machine built in the West. All of the machines were run under exactly the same conditions."

Let Us Surprise You with Our Low Prices on Our Standard Hot Water Incubators

J. S. GILCREST
President
Life Member American
Poultry Association

You know what beef, pork and mutton costs. The world is crying for more poultry and we must help, you and I. I wish I could talk to every reader personally and tell you in 5 minutes' time just what good profits you can make with a "Successful" and show you how much you can do for yourself as well as others.

I want to put in my 25 years' experience and a "Successful" right in your hands. You cannot go

wrong and you should make big profits this year because it is the big year for the poultry raisers. Send for our catalog and let me show you the difference between just raising poultry and making a big income with chickens.

Write for Catalog—Mail Coupon Below— or a Postal Will Do

And learn how I have been working for you. My part is holding down the price of the "Successful," cutting out frills, premiums, putting into your hands the best hatcher ever made at the lowest possible price. Your part is making the hatches and you can make them with bigger profits than ever this year, and you'll see that from my catalog. Write today and get my 1918 offer on the 25-year famous

"SUCCESSFUL"

The Best of Six Makes

Ithaca, Mich., May 13th, 1916

I have six incubators in operation and all of different makes, but I like the "Successful" the best of all. It is so easy to run, and the chickens hatched in your machine seem to be much stronger. Your ventilation system has the right principle.

Mrs. Daniel Buerge

In Use Over Fifteen Years

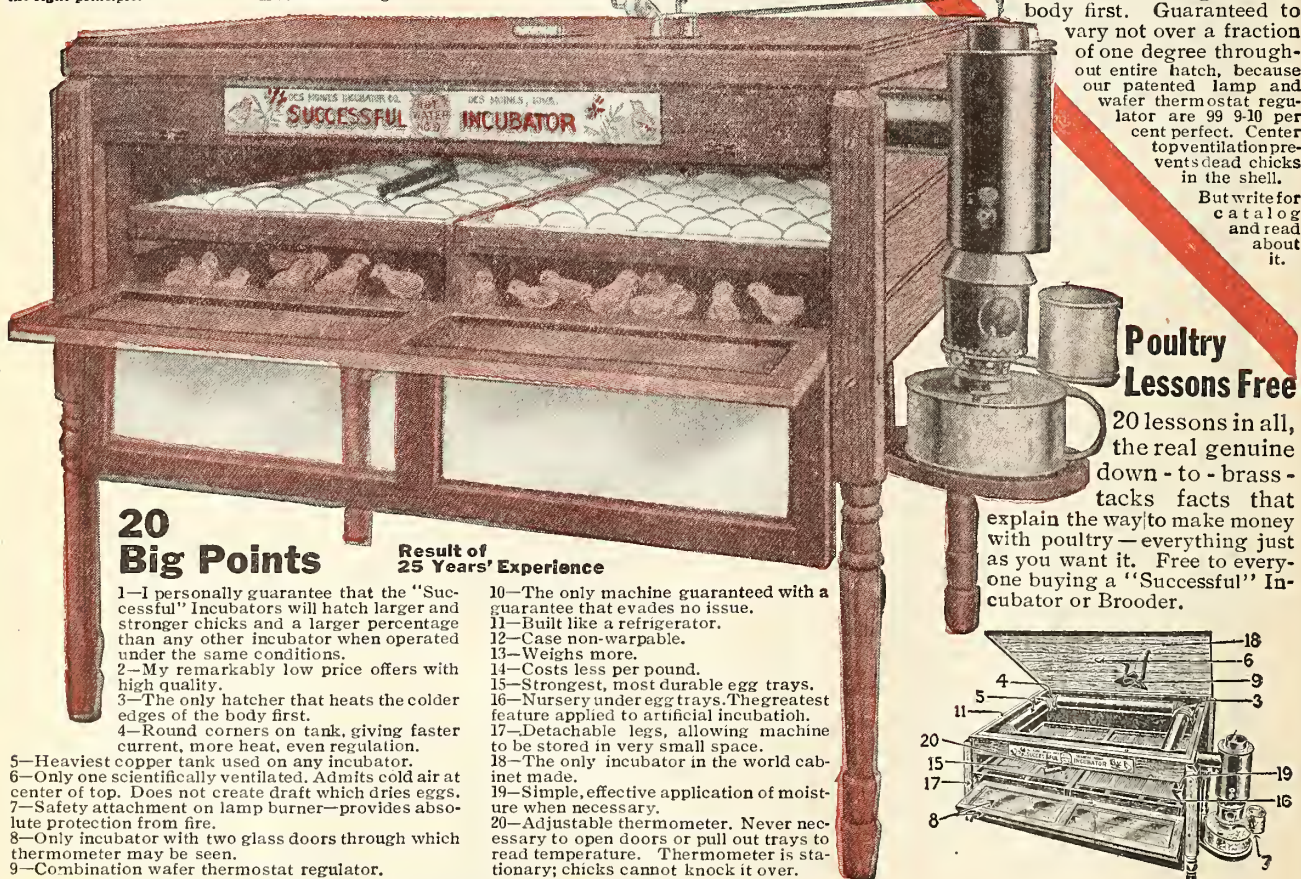

Fennville, Mich. I have used one of your Successful incubators for over fifteen years and it works fine yet. I bought my first machine of you in 1897. Enclosed find order for another No. 9 Successful, 240-egg capacity.

Yours very truly, Mrs. M. A. Green, R. R. No. 2.

Read the list of 20 big points. Here is the only incubator in the world that's really cabinet made so far as I know.

The only hatcher that heats around colder edges of the body first. Guaranteed to vary not over a fraction of one degree throughout entire hatch, because our patented lamp and wafer thermostat regulator are 99.9-10 per cent perfect. Center top ventilation prevents dead chicks in the shell.

But write for catalog and read about it.

Poultry Lessons Free

20 lessons in all, the real genuine down-to-brass-tacks facts that explain the way to make money with poultry—everything just as you want it. Free to everyone buying a "Successful" Incubator or Brooder.

20 Big Points

- 1—I personally guarantee that the "Successful" incubators will hatch larger and stronger chicks and a larger percentage than any other incubator when operated under the same conditions.
- 2—My remarkably low price offers with high quality.
- 3—The only hatcher that heats the colder edges of the body first.
- 4—Round corners on tank, giving faster current, more heat, even regulation.
- 5—Heaviest copper tank used on any incubator.
- 6—Only one scientifically ventilated. Admits cold air at center of top. Does not create draft which dries eggs.
- 7—Safety attachment on lamp burner—provides absolute protection from fire.
- 8—Only incubator with two glass doors through which thermometer may be seen.
- 9—Combination wafer thermostat regulator.

Result of 25 Years' Experience

- 10—The only machine guaranteed with a guarantee that evades no issue.
- 11—Built like a refrigerator.
- 12—Case non-warpable.
- 13—Weights more.
- 14—Costs less per pound.
- 15—Strongest, most durable egg trays.
- 16—Nursery under egg trays. The greatest feature applied to artificial incubation.
- 17—Detachable legs, allowing machine to be stored in very small space.
- 18—The only incubator in the world cabinet made.
- 19—Simple, effective application of moisture when necessary.
- 20—Adjustable thermometer. Never necessary to open doors or pull out trays to read temperature. Thermometer is stationary; chicks cannot knock it over.

If interested in hatching in big numbers, state hatching capacity desired and write for special proposition

Raise Your Chicks Into Money-making Birds with a "Successful" Brooder

Save your chicks—save every one—don't lose valuable chicks when the world is crying for poultry, when prices are higher than ever before in history, when each chick is worth more than ever before. The "Successful" Brooder means safety, assured profits because it pays for itself many times in the chicks it saves. Don't take chances on a cheap box or cheap brooder to raise chicks this year. Science and my 25 years of experience built the "Successful" and I know what it will mean to you. I know I have the brooder you need, I know chicks must have a lot of sunshine, yet be warm and comfy while they are growing. They must be protected from wind and draughts, be on a good warm floor.

A "Successful" Brooder answers this need—it will pull the chicks through and my big book, sent free on request, tells you why the "Successful" Brooder pays for itself in saving chicks.

INCUBATORS AND BROODERS

GUARANTEE—

The Strongest, Most Liberal Ever Offered On An Incubator

So strong is my confidence in these machines that I offer you the "Successful" Incubators and Brooders under the following most liberal guarantee. This is the strongest guarantee under which any machine of this kind has ever been sold, viz: You may try the machine ordered, two, three or four times and, if after that test you are not perfectly convinced our machine is as represented or entirely satisfactory, you have the privilege of returning it, on request of shipping instructions, and we will cheerfully refund the money.

The Greatest Incubator and Brooder Feat Ever Recorded

Lancaster, Mo., Sept. 22, 1917
Gentlemen: The 30 Successful Incubators I have now in operation have produced over 30,000 chicks for me the past season. These incubators have produced excellent hatches, in some cases as high as 95% of the chicks not hatched. I have actually raised better than 95% of the early chicks I put in Successful Brooders. This is certainly a most remarkable result, and speaks volumes for your machines.
K. I. Miller.

Write for Big FREE Book Today

Just sign your name or write me on a post card. Big poultry catalog is free. Booklet on Feeding of Chicks, etc., 10 cents. Remember, here is a machine that has stood the test of 25 years and has helped to make many of the biggest money makers in the poultry business. I offer with it no premiums, no sensational claims, no fancy frills, nothing but a pure quality hatcher or brooder at the lowest price possible. That, Reader, is what gets the chicks and that's what I believe you are interested in. **Send for Our Catalog.**

Owen Farms Sale of Fine Breeders For January and February

Have made inventory and am offering you carefully mated pens of choice line-bred breeders in all my vari-

eties at the lowest prices similar birds have ever sold for. Line-bred birds from Owen Farms' best stock that have been bred right and are properly **mated to produce fine chicks for you.**

Buff Orpington
1st Madison Square Garden

White Wyandotte
1st Chicago Coliseum

S. C. R. I. Red
1st Madison Square Garden

OWEN FARMS

**Buff and White Orpingtons
White Plymouth Rocks
S. C. White Leghorns
White Wyandottes
S. C. R. I. Reds**

are the Standard of excellence all breeders strive to equal.

Have culled very hard this year. Marketed a larger percentage than usual and sold many birds in large lots for utility purposes. This present offer will move these birds quickly. You can order directly from this ad with absolute assurance of satisfaction, as my birds are all sold on approval, subject to return after a 48-hour rest and the full return of your money if you are not absolutely satisfied.

Special Offer on Mated Pens

100 carefully mated pens at \$25, \$35, \$50 and \$75 per pen. Headed by cock or cockerel and containing hens or pullets as you wish.
Single males at \$10, \$15, \$25 and \$35 each.
Single females at \$5, \$7.50, \$10 and \$15 each.
Trios and larger pens at proportionate rates.

When sending your order be sure to state the variety you wish. Your money will be promptly returned should all birds in your variety be sold.

White Plymouth Rock
1st Madison Square Garden

White Leghorn
1st Madison Square Garden

White Orpington
1st Madison Square Garden

417 Owen Farms birds have won the Blue at Madison Square Garden, New York. **Thousands** of Owen Farms birds have won the Blue all over the continent. In buying these fine breeding birds you are securing line-bred descendants of these winners.

Act quickly and you will have a grand foundation pen at very much less than real value. Remember, your success means mine. Mr. Davey and the writer will do our utmost to insure your success.

The Big Drive to Increase Production

Uncle Sam Wants "Every Poultry Keeper to Produce All the Poultry and Eggs He Can Raise at a Profit."

By Prince T. Woods, M. D.

DURING the coming year a "big drive" for increased production of poultry and eggs will be conducted by the United States Department of Agriculture and the State Agricultural Colleges, with the co-operation of the press, and thru placing many extension poultry husbandmen in the field to give advice and instruction, as well as promote interest in raising poultry.

The propaganda as set forth in advertisements and bulletins calls for: "More back-yard flocks. Larger general farm flocks. Closer selection of Standard poultry for meat and eggs. Not every poultry keeper can greatly increase production from his own flock, but by interesting and aiding others everyone indirectly can add more than double his usual contribution to supplies of poultry and eggs the coming year. The nation expects every poultry keeper to produce *all the poultry and eggs he can raise at a profit*, and then do all in his power to persuade his neighbors to keep poultry and to *help them to make their poultry pay*."

An article by Clarence Dubose, of the United States Department of Agriculture, contains the following:

"The humble hen can play a prominent part in preventing the progress of the Prussian peril. The quickest and cheapest way of adding to our meat supplies is to increase poultry and egg production. To double this production next year will give us 6,500,000,000 pounds of meat food in the form of poultry and eggs. By having this amount of poultry food for domestic consumption we will eat less pork and beef and can send almost that many pounds of meat to Europe to feed our soldiers, the armies of the Allies, and the destitute civilians. "We cannot increase any of the meat animals as rapidly or economically as poultry.

"The United States Department of Agriculture wishes every farmer to understand the importance of doubling our poultry production next year. It is a vital part of the general food production campaign, and that campaign must be carried out in all its details to insure victory in this war. The chief poultry increase must be made on the general farms of the country—on *every* farm in the country. It must be made as a by-product of general farming. The farmer must get his flock to such size, in proportion to his farm, that all the waste and scraps and land available for chickens to run on will be used and the fowls kept up from these sources and a reasonable amount of other feed. *The Department does not suggest that extensive poultry enterprises be taken up by the general farmer. In fact, it warns against that very thing.* But it urges every farmer to keep just as many hens and produce just as many chickens and eggs as he can economically and as a by-product of his general farming.

"Most of the attention required by farm flocks can be given by the women and children of the household. The question of labor is not a puzzling and uncertain problem in the poultry production program. If the farmer increases his flock to a size suitable to fit in as a by-product of his general farming he will find that it will not require extra help.

"Because of these facts—that poultry, as a by-product of general farming, finds much of its feed in waste and requires

no extra labor—the farmer will produce meat food at the very lowest cost. Home consumption of this will cut down his living expenses and enable him to sell more of the animal meat he produces. He will be making more money himself and at the same time he will be helping Uncle Sam win the biggest war the world has ever known."

No one will question the need of greatly increased production of poultry and eggs during the coming 1918 season. Some, however, may well raise the question as to how this increase is to be brought about and at the same time insure a "fair and just profit" to the producer. With the 1917 experience still fresh in mind, many poultry keepers will say: "I would like to increase production, but how can I do it unless assured that I will not again be the victim of grain speculators and also of price-smashing attacks on poultry produce made by both press and local officials?"

As one correspondent points out, there is great need of "educating the consumer" to pay fair and just prices. There is great need of enlightening newspaper editors and to educate them to give the poultry keepers a square deal. The value of eggs and poultry meat requires more publicity. It should be shown that prices to date for poultry produce have been cheap as compared with other foods; that at no time have the prices of poultry and eggs been maintained sufficiently high *thruout the whole year* to insure a "fair and just profit" to producers, since the war started grain, feed and supply prices skyward. If poultry keepers are shown a reasonably certain opportunity to make "fair and just profits" during 1918, there will be no difficulty in securing an ample increase in production and an abundance of poultry recruits in the ranks of beginners and back-lotters.

While it is true that we must look to the farms for our greatest increase in the production of poultry, particularly to the farms in grain-growing sections, and that on such farms during the summer season poultry can be kept and raised at lower cost than elsewhere, it is hardly fair and just to put the added work up to the already overburdened women of the farm or the children, when we already have overmuch child labor on farms. No greater demands should be made upon the farm wife and mother, or her children, than upon other women and children. As another of our readers writes us, "the overworked farm woman, or the growing child upon the farm, should not be called upon to make undue sacrifices in order to produce food to sell at less than production costs to many pampered urban dwellers, who lead a parasitic life." The production of poultry on farms can be increased, should be increased, can be made a pleasurable part of the outdoor work of boys and girls on farms, but it should not be produced and consumed *at their expense*.

We are heartily in favor of boys' and girls' poultry clubs. Such clubs, properly conducted, can do a great deal to increase interest in poultry and to increase production. But in such work all instructors should be cautioned to avoid infla-

tion of the poultry business by stories of big profits, or thru misleading figures representing alleged "profits" when in reality only return above feed cost is meant. Teach the boys and girls common-sense methods of cost accounting in keeping the records of their flocks. Have them take account of all overhead costs, labor costs at a fair price, as well as feed and supply costs. Make the boys' and girls' poultry bookkeeping mean something. Make their poultry work a real business conducted in a businesslike manner. Teach them to figure costs just as any efficient cost accountant in a bakery or manufacturing business would do the work. We are well aware that probably not more than a very small percentage of instructors, or Federal and State poultry agents, know how to go about figuring costs, but we firmly believe that it is one of the first things they should learn. Why not give them a good substantial short course in cost accounting before they take the field?

In November we wrote Ralph Searle, of the International Poultry Federation, in part as follows:

"The most important thing is to avoid the mistakes of the past few years. There has been a tendency on the part of some state stations, and even on the part of Federal poultry department, to work for increased production of poultry and eggs by inflating the business. This has been a serious mistake and has worked untold harm. Tales of big profits told the public are certain to hurt the business and to react against poultrymen. Here in the East we are suffering severely from effects of inflation."

In his reply Mr. Searle said:

"The closing paragraph of your letter, with reference to the immeasurable damage that has been done to the poultry industry by inflation and by a species of misrepresentation on the part of some as to the possibilities of the poultry business, ought to be framed in the home of every poultryman. We have got to get down to bedrock and use the brand of wisdom ordinarily designated as 'horse-sense' before the poultry industry will come into its own."

At the present writing there are still vague promises of grain prices "40 percent to 50 percent lower" by the first or fifteenth of January, tho how this is to come about does not appear. In New York, recently, Mr. Hoover told his audience that "the cost of corn is dropping every day," altho here in the East corn has been steadily climbing and made a new high price record for corn, both new and old, on the very day that

the speech was delivered. In fact, grain and feed prices had been stiffening and climbing for some weeks, while transportation conditions continued to go from bad to worse; it taking in some instances nearly four months to get a carload of grain from Chicago to point of destination in Massachusetts.

The President's message to Congress indicates that the Food Administration will soon have greater powers for price-fixing; just what these will be or how extensive in scope can only be known when the results are announced. History goes to prove that price-fixing is seldom an unmixed blessing and that it often has disastrous effects. Thus far price-fixing has seemed to interfere with both production and distribution rather than give aid to consumers. In the present uncertainty we can only "cut our garment to our cloth" and make the best of it.

Greater poultry and egg production is urged and needed; therefore everyone of us should keep and raise as much poultry as he can afford to keep properly. Or, as Uncle Sam says, "The nation expects every poultry keeper to produce all the poultry and eggs he can raise at a profit." If you cannot raise poultry products at a profit you are not expected to do the work. If 1917 conditions should continue, that would mean a mighty short crop of poultry and poultry products in 1918. We would not wish to see any such cutting down of poultry flocks, and therefore we urge that, whether conditions mend or not, each person able to keep or raise poultry should at least have a family flock, and as many more fowls and chickens, or ducks and geese, as he can afford to maintain in a manner that will insure their being productive. If the flock does nothing more, it will at least supply home-grown food at first cost, and thereby conserve the national supply of other foods that must be shipped overseas.

During a part of April and thru the spring and summer until well after fall harvest, most farms, where a few acres of range are available, can carry fair-sized flocks of growing chicks at small expense as compared with the man who has restricted range or small yard room, but it must not be assumed that they can be grown without grain and mash. While farm flocks ranging as scavengers will pick up a good

deal of feed that would otherwise be wasted, they must be well fed if they are expected to be worth raising. Spring chicks can be hatched and reared under hens with the least expenditure for equipment and labor. Early chicks call for a greater expenditure in incubators, brooders, or other equipment, and more attention to feeds and feeding until the range affords supplementary food of sufficient quantity and quality to be worth considering. Much time can be saved by the purchase of baby chicks to be grown under hens or in inexpensive brooders. The Government warns against "extensive poultry enterprises," while at the same time urging increased production, raising all that can be raised "at a profit." That warning is worth heeding. Keep the farm poultry operations within the bounds of a "farm by-product," keeping only as many fowls and raising as many chicks as can be well kept and well fed within the means of the owner and without imposing hardship on the family. It may be well even to forget the "at a profit" part of the transaction for the present, and make the slogan "produce all the poultry and eggs that can be produced without loss."

The back-lotter can play an important part in "poultry keeping as a war measure" and he can get a lot of pleasure out of the work, as well as a supply of the best sort of wholesome food for the family. An inexpensive portable house and a roll or two of wire netting will convert almost any back yard into a war time poultry plant. Anyone skillful with a saw and hammer can soon convert a few big packing boxes and a roll or so of roofing into a very good and inexpensive poultry house. As the back-yard venture is to be largely for pleasure, as well as family food supply, it will be best to take up some good popular Standardbred variety of fowl. Standardbreds are more beautiful and satisfactory to look at and work with than mongrels, they cost no more to keep, are generally more productive, with a more uniform product, and the first cost need not strain anyone's pocket-book overmuch.

Some back-lotters will have room to grow chickens, either home-hatched or purchased day-old, and can do the work with hens or inexpensive brooders. Others will have to be content with adult stock. Everyone can and should help. Those who wish to mix their own rations can get along very comfortably with a scratch feed made of corn and oats, mixed bushel for bushel—with regular feeds of sprouted oats—and

a good dry mash made about as follows: cut clover or alfalfa, 5 pounds; wheat bran, white middlings, corn meal, ground oats and gluten feed, 10 pounds each; beef scraps and fish meal, 5 pounds of each. If there should be any quantity of table scraps—which there should not in these war times—these can be mixed with the mash and the whole fed as a moist mash, or small quantities of table scraps may be fed daily as they are removed from the table. Don't try to "swill feed" poultry, it is poor practice and the results are unsatisfactory. Most back-lotters will find it more convenient to use one of the many good ready-mixed scratch grains and mash mixtures offered by reliable dealers.

Do not attempt to maintain the farm flock or the back yard flock on scratch grain alone, as many poultry keepers do, it is too expensive. Laying hens or growing chicks should have about an equal weight of both scratch grain and mash mixture for best results and this is the most economical method of feeding. "Quantity of Feed Required by Poultry" was discussed in December issue of AMERICAN POULTRY JOURNAL in an article by that name.

Almost any back yard can be made to accommodate very comfortably a family flock of from 15 to 30 layers. The first cost of these birds need not be great. The cost of maintaining a back-yard flock need not break anybody's bank. The returns in eggs and meat, as well as pleasure from having a useful hobby, will satisfy the back-lotter. It is not like undertaking a commercial egg farm or market poultry plant that must be made to pay a fair profit above all expenses in order to keep the owner in business. Small family flocks are almost always more productive than large commercial flocks. Keep a back-yard flock as a war measure and help win the war. *Don't expect someone else to grow all your food, grow some for yourself.*

Do your bit in helping to increase poultry production in 1918. It may help prevent a famine. It will certainly give you something worth while and helpful to do. It will help supply the home with wholesome food. We ask you to produce all you can without loss. Just bear in mind that Uncle Sam's Department of Agriculture does not ask quite that much when it says: "*The nation expects every poultry keeper to produce all the poultry and eggs he can raise at a profit, and then do all in his power to persuade his neighbors to keep poultry and to help them to make their poultry pay.*"

Direct Sales from Producer to Consumer

Food Production Must Be Increased and Food Producer Must Receive First Consideration. First Prize Article American Poultry Journal Monthly Contest.

By Bertha M. Tyson, Rising Sun, Maryland

EVERY day we read in the city dailies of the necessity of the producer and consumer getting together in order to help lower the cost of living. Much that is said on this subject goes wide of the mark, since it is usually the consumer's point of view, and in that the producer gets small consideration.

To assist in straightening out the present-day food problems, we must first go to the root of the matter. Until the producers of food are properly paid for the great work which they annually perform, no other work in the world can be properly regulated or adjusted, for food production is the oldest, most honorable and most important work in the world—the one work upon which all else depends. Every producer of food, no matter in how small a quantity, every consumer of food, and especially every individual who handles or distributes food should be vitally interested in this subject. Upon it depends not alone the future of our own country, but of the entire world. Food production must be increased and carried to its highest point of efficiency. To accomplish this the food producer must receive first consideration. At this time of food shortage, those who are able to economically produce food, *those who have demonstrated their ability in the science of food production should be given every encouragement by the whole people.* Attacks on the farmers and food producers by ill-advised newspaper writers, magazine editors and

public speakers should be considered treasonable at this time and dealt with accordingly. The circulation of bulletins, circulars and printed addresses by various officials, in which production costs are tabulated *in part* and given as production costs should everywhere and by all people be discouraged. An honest treatise on food production costs will leave out no item of the expense necessary in the production of that food. The cost will, of course, differ in widely separated localities, but transportation usually evens up the matter in the ultimate cost to the consumer.

The middleman is a necessity in handling most kinds of food, but there is no reason why the producer of poultry products and the consumer should not get together and deal direct. The proposition rests almost wholly with the consumer. If he expects to get good food for next to nothing just because he is dealing with the producer, if he expects credit or fails to pay for value received, it is a waste of time and money to attempt to deal with him.

For a number of years I have been dealing direct with consumers in Philadelphia and New York, sending both dressed poultry and eggs by parcel post, and have found the plan a good one. In each of these cities I deal thru a friend who receives the shipments, sells the goods in his own locality, collecting cash for same. For instance, a dozen families in an apartment house or city neighborhood each

decide to have a roasting chicken for Sunday dinner. The distributor sends a card on Monday or Tuesday that the chickens are wanted on Saturday morning. The birds are then dressed and thoroly chilled Friday morning and shipped that afternoon to New York or Philadelphia, as the case might be, arriving at the distributor's Saturday morning. In this way I have realized double what I would have gotten thru the regular buyers and collectors. I have had many letters from customers in these cities, saying they had never before known the taste of a freshly killed, properly dressed chicken or fowl. When it becomes necessary to notify them that my stock is exhausted and that I will have to discontinue shipping for the season, they have with one accord written to be sure to let them know when I will again be able to supply them with fresh killed poultry. I have sold turkeys, guineas, ducks and chickens of various ages, following this plan, and found it far preferable to any which I have heretofore tried.

The parcel post charge is about half of that of express, if shipped in quantity, but it does not pay to ship one fowl alone or one dozen of eggs. Three dozen eggs should be the minimum for a shipment. I have seldom shipped less than a 12-dozen case at one time, tho in some cases three to five dozen were shipped to special customers.

Poultry products of all kinds must, of course, sell considerably higher this year than ever before if the consumer wishes to continue to have poultry and eggs on his table. The statements by some officials that farm poultry costs no more to produce than formerly, and that grain farmers are coining money on their poultry, is one that should be flatly refuted.

I have lived on large grain farms practically all my life, farms where goodly fields of wheat, corn, oats, rye, buckwheat, millet, clover and alfalfa are grown in quantity. Unless we can get equal value for our poultry products, to produce which we must freely feed these grains, the farmer cannot continue to raise poultry for market, since the grain brings larger returns with a great curtailment of labor. Farm women have plenty of work to do and are today the most efficient food conservers in the Nation. They must not be expected to raise poultry that women with few cares, surrounded by all manner of conveniences and luxuries, may be supplied with low cost foodstuffs. The situation is one that requires *education of the consumer*. Every producer of foodstuffs should consider himself a committee of one in this great and important work of educating the consumers. The latter must be brought to understand that food does not fall from the heavens and the producer must have the privilege of stating the price for which it is to be sold.

In making direct sales to consumers of poultry products, there is one difficulty which is commonly met—that of payment in advance. When one has a central distributor and cash collector at time of purchase this is easily overcome. Otherwise it should be understood that cash must be sent with order. As it is impossible to foretell the exact weight of poultry until dressed, the best plan is for the purchaser to send a stated amount monthly for which he is to be supplied with a given number of pounds of poultry. In each shipment the weight and total price should be stated. In all cases, the distributor should be recompensed properly in cash or poultry products.

Raise Ducks for Quickly Grown Meat

Stick to Tried and True Formulas of Veteran Breeders. Well-Fed Ducklings Will Weigh Six Pounds in from Nine to Ten Weeks. Second Prize Article American Poultry Journal Monthly Contest. *By Mrs. H. E. Hoak, Ligonier, Ind.*

JUST now when we are admonished on every hand to produce and save more wheat and meat that the war may be won, we are all anxious to do our bit. The Department of Agriculture in a recent statement says that "the cheapest and quickest way of adding to our meat supply is to increase our poultry and egg products; to double this production next year (1918) will give us 6,500,000,000 pounds of food in the form of poultry and eggs."

In considering the possibilities of the poultry industry, the heavy egg production and quick maturing qualities of the duck should not be overlooked. Ducks will lay more eggs than chickens and will, if properly fed and handled, weigh six pounds each at nine to ten weeks of age.

Unlike chickens, ducks may be housed in very inexpensive houses. One Indiana woman who a few years ago sold over \$1,100 worth of ducks in a year, housed them in rail pens covered with straw at a cost of less than \$10 for the entire flock. However, their pens must be well bedded with clean dry straw, as a duck with cold feet will not lay. A well drained location should be chosen for duck pens, as low, damp ground soon becomes unsanitary.

After many years experience in raising ducks for both the utility and fancy trade, we favor the Buff Orpington. Properly fed, they weigh nearly as heavy as the Pekin, while in a laying contest conducted a few years ago in Australia they even surpassed the celebrated Indian Runners. In this contest of six varieties, nineteen pens competing, the Buff Orpingtons led all others by producing 1,326 eggs, averaging 32.5 ounces per dozen.

In duck raising, as in all other branches of the poultry industry, it is wisest to start with a small number of birds or eggs, learning as you proceed, rather than to plunge in to "make or break," which to the beginner usually means break. A large well matured drake mated to five to seven thrifty ducks will produce sixty to one hundred ducks, which is about as many as the small poultryman or farmer's wife can care for successfully.

Unless the brooding quarters are warm, ducks should not be hatched too early, as the loss from chilling and cramps will offset the gains from an early market.

A ration consisting of two parts bran, two parts middlings, three parts corn meal, two parts alfalfa meal, one part beef scrap, will be found an excellent feed for laying ducks, and if the grains can be mixed to a crumbly mass with skim milk instead of water, the beef scraps may be omitted with just as good results, at much less cost.

First prize S. C. Brown Leghorn cockerel, Chicago Coliseum, 1916. Owned by W. B. Warnock, Geneseo, Ill.

The eggs require four weeks to incubate, and while hens will, no doubt, hatch a larger percent, the incubator must be used if a large quantity is to be incubated. Another advantage in using the incubator is that the birds are all of one age. Otherwise the different ages must be placed in separate pens or the older ones will trample the younger, causing great loss. They require a lower temperature than chicken eggs, starting the eggs at 102 degrees and gradually increasing from week to week until it reaches 103 degrees the fourth week. The eggs require more moisture than hens' eggs and should be sprinkled daily with water at about 110 degrees. Indeed, it is said that at the Rankin duck ranch enough water was used that the moisture ran down inside the doors. However, too much moisture will result in a duck so large that it will smother in the shell. If the machine is of a type in which ventilation is furnished thru the heater, no airing of the eggs will be required. Treated as above, I was once able to produce 149 healthy ducks from 200 eggs that had been shipped over 200 miles.

In feeding young ducks, it is always safer to stick to the tried and true formulas of veteran breeders than to take any chances by substituting the grains at hand. Young ducks seldom thrive on whole grains of any kind, and leg weakness, the worst foe of successful duck raising, is sure to result from improperly balanced rations. The methods of feeding used by many of the Long Island duck breeders and probably originated by the late James Rankin, veteran duck breeder of America, are very exact, changes being made from week to week to suit varying ages and conditions. Mr. Rankin raised over 20,000 ducks annually for over twenty years, and it is doubtful if his methods could be improved upon.

We start the ducklings on stale bread soaked in milk, squeezed dry, sprinkled with fine sand, feeding every two hours the first two days what they will eat up clean in five minutes. The third day we start them on their regular ration of bran, middlings and corn meal, each one part, and ten percent beef scrap. If we have skim milk we substitute it for the scrap, mixing the feed to a crumbly mash. We also sprinkle the feed with sand, or later, fine gravel. Be sure their drinking pans are deep enough to allow the water to

Champion Rose Comb White Leghorn male at Greater Chicago Show, January, 1917. Owned by Mrs. H. C. Rogers, Riverside Farm, Oshkosh, Wis.

S. C. Brown Ancona, exhibited at the Chicago Coliseum Show, December, 1917, by the originator, I. H. Murray, 11337 Longwood Drive, Chicago, Ill.

cover their bills or they will smother from food entering the nostrils, also see that the pans are filled before feeding.

I know of no disease that attacks ducks other than chills (which develop cramps), head lice and leg weakness. If eggs are hatched under hens, it is safest to grease each little head very lightly when removing from the nest, with lard, to kill the large head lice, which are sure to prove fatal if let live. As to leg weakness, our experience last year warrants cautioning to be careful in feeding. Our flock consisted of only sixty ducks, and as the men were very busy with other farm work, rather than ask them to go to mill, we fed them a half-and-half mixture of ground wheat and corn which we had on hand. Also as we needed our skim milk badly for the pigs, it was omitted from the ration, water being used instead. The result was that at six weeks of age leg weakness developed that threatened to destroy the entire flock. It was necessary to act quickly if we were to save them. Nine of the worst affected ones were placed in an eight by ten foot pen that they might have very little chance to exercise. One of these was so weak that I had to poke the food down its neck with my finger. By the next feeding time he had so nearly recovered that I could not tell which one it was. The remainder of the flock was placed in a fifty-by-fifty-foot pen and fed one-third corn meal, two-thirds bran. As we are not near a poultry supply house where we can obtain meat meal, short of three or four days, I mixed the feed with skim milk. I was careful that the drinking pans were filled before each feed and provided plenty of coarse gravel for grit. The result was I lost only one duck after beginning treatment and four weeks later they were as thrifty a flock as I ever owned, fully feathered and a beautiful sight. This year I was careful to see that I had the feeds for a properly balanced ration before hatching my ducks.

It is probable that one hundred pounds of duck meat can be produced about as cheaply as one hundred pounds of pork and will sell for nearly twice as much. Good breeding ducks find ready sale at from \$2 to \$5 each. The country dweller cannot do better than raise a flock of ducks the coming season to supply meat and eggs for his home table.

Scientific Breeding of Barred Rocks

Temperamental Mating Conducive to Prolificacy. Gradual Drawing Together of the Sexes in Color a Delusion.

By Fred W. Proctor, North Brookfield, Mass.

I HAVE been reading the returns from the annual egg-laying contest which recently closed at Storrs, Connecticut, where a pen of Barred Plymouth Rocks takes first position with a record of 2,119 eggs; a hen of the same variety wins in the singles with 277 to her credit, and the entire string of Barred Rocks, 9 pens or 90 hens, lead in breed average, being 169.2 per hen. Of the eight other breeds or varieties contesting, only two pens (White Leghorns, with pen records of 2,090 and 2,022) reached the 2,000 mark.

The usual disproportionate number of pens of the several breeds represented in these contests renders them anything but conclusive as a test of laying capacity. But the fact that the nine pens of Barred Rocks contesting at Storrs were pitted against some five times their number of White Leghorns, affording the latter breed a five-fold opportunity to reach leading place, greatly augments the significance of this win over fowls so generally accredited to be the great egg machines.

In none of these contests has consideration been taken of

Imperial "Ringlet" Barred Rock pullet in first prize pen at Madison Square Garden, New York, 1917. Owned, bred and exhibited by E. B. Thompson, Amenia, N. Y.

comparative output at the season of highest value, a factor which would still further preponderate in the Barred Rock's favor; nor of the comparative value of flesh, both of these being essential for getting at the actual economic merits of the several breeds. Furthermore, the custom of feeding up to the full limit of the hen's appetite is not unfavorable to best results with Leghorns, but ill adapted to the heavier breeds. It is apparent that in these laying contests the Barred Rocks have been working under serious handicaps, and results, however gratifying, inadequately demonstrate economic worth.

For the Barred Rocks to win such prominence as layers challenges attention, and we are led to ask how it is that this breed can achieve laying victories over breeds whose specialty is eggs. As compared with other American breeds, the

Plymouth Rock displays no striking differences in physical makeup. And among the several Rock varieties, the Barred Rock differs mainly in point of color. It would naturally be anticipated that owing to the intricacies of the Barred plumage and necessity for close selection to maintain color, this breed would take subordinate rank as an egg producer. Let us see if we can discover in the peculiarities of the Barred plumage a plausible cause for supremacy in laying capacity.

I am a consistent believer that color of plumage, generally dismissed as a mere matter of fancy, is closely associated with economic worth, both as to quality of flesh and laying capacity. The Barred Rock excels in both these particulars. But without pausing to discuss this matter, let us pass on to the topic of Barred color in its relation to manner of mating. I propose to show that from the peculiarities of its plumage, and more particularly the natural laws of color peculiar to the breed and methods of mating essential to foster same, the Barred Rock surpasses other breeds in vigor. And vigor, we all know, is the prime foundation of prolific laying.

Let us digress at this point long enough to consider a law of nature pertaining to sex mating which calls for some elements of dissimilarity in parents as a prerequisite of vigorous offspring. This law is of universal application to all phases of life. In the vegetable kingdom are displayed various schemes to accomplish cross-fertilization in order to procure a union of dissimilar characters. In animal life the principle is exemplified in the enhanced attraction between and resultant mating of individuals differing in temperament. The color of skin and hair, and in the case of birds the color of plumage, are distinguishing marks of temperament. The careful observer of the habits of our domestic fowls will not fail to have noted this proclivity, in the determined efforts of a vigorous male to mate outside his domestic circle where the temptation offers in the form of plumage color dissimilar to his own.

The importance of observing this law of temperamental mating in our breeding, wherever practical, is manifest. With most colorations this is out of the question, as color conformance in the parents is essential to maintain color in the offspring. Our Barred Rocks stand by themselves in this respect, as their proper mating calls for a considerable difference in the proportion of pigmentary secretion for the two sexes, amounting to a ratio of one to three, as estimated for various matings, as presenting the respective proportions of color in the plumage of the male and female when mated for best results. This constitutes a true temperamental mating, calculated to promote vigor. It is needless to say that the well known vigor of the Barred Rock, adapting it to the most trying climates, bears out this point of view.

In practical breeding the temperamental principle gains in the frequent use of matings in which the range of color considerably exceeds that possessed by the male and female having identical parentage. The ideal Barred color comprises a degree of contrast—the "snappy" effect, professionally speaking, which proceeds from matings having extraordinary color variance as to the male and female. Confining reference to the light variety, this practice has led to a distinction as to the degree of color in matings which affects two types of families. First the regulation light exhibition female, having bars of equal width, and her breeding mate very much narrower as to dark bar. But as in practical breeding it was found that the more dependable dam of the exhibition female is several shades darker, such are conserved in special matings known as "foundation" stock, corresponding to the breeding females of the dark variety. Many of our winning light males, as well as pullets, are the product of these dark females; and the use of the very light male upon these "foundation" females favors the "snappy" effect. The breeder not wise to the use of two distinct matings for producing exhibition stock is technically known as a "kindergartner."

It has often been said in disparagement of the fancier's

work that breeding to feather impairs vigor. In the case of the Barred Rock, the fancier's discriminating pains to mate opposed traits of color should logically conserve vigor, and accomplished results bear out this presumption.

To denote this two-family system of breeding, I use the term gradational mating, which applies also to the plan of grading up the light variety with improved character of barring first worked out in the dark variety. This crossing of the dark variety carries the temperamental idea a step farther and supplies to the breed at the same time the invigorating influence of fresh blood, for the dark variety is conceded to be the fruit of outcrossing with one or more breeds. A type of barring narrower and more regular distinguishes the dark variety—characteristics which were engrafted upon the light; and the dark in turn found distinct advantage in improved contrast derived from the light. This work of the fancier's, done with the end of improved color in view, could not have been improved upon by breeders actuated by practical aims alone. The gradational method, impossible with breeds of other colors, serves to freshen the blood continuously. The effect of the mixing of the two varieties has been to bring a darker tendency of the light variety into vogue. The winning dark males are of a lighter tone of color, and with this lessened distinctness of color as an argument, we are asked to accept the dictum of a small group of breeders that amalgamation of the light and dark varieties is both possible and advantageous.

Certain delusions regarding the nature of Barred color have persisted from the early days of this breed down to the

present time. First, was the old tradition that the male's lighter color was due to the influence of early crosses upon which the breed was founded—a view which will not stand

Feathers taken from fluff of Imperial "Ringlet" pullet shown on opposite page.

the test of careful investigation. This sex difference of color is not peculiar to the Barred Rock alone, but has been the common heritage of all breeds of Dominique color. The natural outgrowth of such misconception is the assumption that such sex distinctness of color may yield to some course of breeding until the male and female shall breed true to one uniform color type. So utterly absurd is this delusion that it would seem a waste of effort to combat the same, were it not that such is being put forth as an argument favoring the merging of the lights and darks into one variety.

In opposition to this scheme I would urge the prospective detriment to the breed. The Barred Rock's wonderful advance toward color perfection and marvelous utilitarian worth have been made possible only by a system of breeding which calls for the bringing together of heterogeneous elements. And a plan which involved the mating of stock identical in color and blood, were such a thing practical, would prove a calamity. However, we do not take this thing seriously. The Barred Rocks will inevitably continue to be bred as heretofore, as all experienced breeders well know, and this movement is calculated to centralize power to win prizes in the hands of the few to the detriment of the many.

I have dwelt upon the practical advantage of two color types of Barred Rocks. Fancy considerations also urge the continuance of this plan. The history of the breed is one of successive changes of interest as development in beauty progressed. The original male's color was comparatively crude, so that the early Standard called for no suggestion of barring, and interest centered in the female, whose color was prescribed as having "well defined" barring. The dark family was a later production, whose males only were at first featured, the females in turn sharing attention. Last and most important of all in possibilities for the future, the light male is entering upon a phase of development which promises to make it the breed's most strikingly beautiful representative.

The development of two varieties of Barred Rocks was a breeding necessity and their admission to the show room follows a popular demand that breeding stock, not alone a finished product in many cases unfitted for breeding, should be publicly shown. Two fully recognized varieties are required in order that the breed may be kept growing. It would be impolitic to abandon conditions under which Barred Rocks have lately won an unprecedented increase in popular interest. They must be permitted to develop along natural lines unhampered. It is of economic importance that the Barred Rock take its merited place among practical breeders, winning back the large degree of favor it once enjoyed and lost thru discouragement incident to uncertain ideals, and mystery as to details of mating, now largely remedied.

United States Government Exhibit at Chicago Coliseum Show, December, 1917.

U. S. Government Poultry Campaign

THE Government poultry campaign to stimulate increased poultry production was officially staged and brought before the attention of the public at the recent Kansas City and Chicago Coliseum Poultry Shows, in the form of an exhibit illustrating the fundamental principles of poultry work.

While this exhibit is practically the same as been shown at the Madison Square Garden Poultry Show for two years, at the same time an effort was made to couple with it the various phases of emergency poultry work that the Government is carrying on by means of placards and lectures by those in charge.

Heretofore the purpose of the exhibit has been to acquaint the public with the work that is being done at the Government poultry farm. In view of the present poultry situation, however, an added effort was made at these two shows to interest city and suburban people in poultry keeping and to acquaint them with the fundamental principles of this subject, so that their beginning in this work could be accomplished with a minimum of mistakes. Great interest was manifested by the visiting public and poultrymen thruout this section of the country. Thousands of Government publications were distributed without charge to those who expressed their desire for information on this subject and several thousand people registered their names and addresses, with a view to securing additional information on some particular phase of poultry work.

Briefly, the poultry exhibit proper consisted of the following:

A model of the Government poultry breeding house was shown, illustrating the method of construction and equipment. This house was divided into pens 14 feet deep and 6 feet wide. The small size of these pens is convenient to accommodate breeding pens where the matings are small. Should this style of house be used for layers exclusively, most of the partitions would be removed.

Several models were shown of the style of colony house and colony growing house, both of which have been used for several years at the Government farm. As the name would imply, these houses can be moved from place to place, giving the growing stock and layers the advantage of ample range and green food thruout the spring and summer months.

The model that probably attracted more attention than any other was that of a house suitable for back-yard poultry keeping. This house can be constructed to suit practically any conditions that might present themselves to the amateur and is so arranged as to involve but little cost for construction.

It was to be regretted that the back-yard poultry bulletin, which is now on the press, was not available at either of these shows for distribution. However, parties desiring this publication may obtain it as soon as issued by applying to the Federal Department of Agriculture at Washington, D. C.

Two dry mash hoppers were shown in model. The first is a large hopper for use on range for growing chickens. It is large enough to allow at least twenty chickens to eat at one time and holds from three to four bags of dry mash. It is so constructed that the feed is absolutely protected from rain and the waste is reduced to a minimum. The value of such a hopper is obvious, for it permits the birds to eat whenever they want to, thus insuring constant and rapid growth.

The other was an inside hopper designed for use in feeding dry mash to laying hens.

The fattening battery shown in miniature is composed of a series of coops built in such a way that the chickens can be confined in them and easily fed and cared for. In this way the chickens can be fattened for market in a short time. Such a battery can well be used on many farms where broilers are to be sent to market.

While these houses and other equipments are not presented in any sense as the best or the only good types, they are shown as those that have been in actual use for some time at the Government poultry farm with good results.

At the egg candling table, fresh eggs, both fertile and infertile, which had been subjected to incubation temperature for various periods were shown, first as they appeared before the candle and then broken out into a saucer. It was of special interest to observe the development of the blood vessels and beating of the hearts of the fertile eggs which had been broken out. This exhibit showed clearly the superior keeping qualities of the infertile over the fertile egg, as no chick development could take place in the former.

The exhibit of several dozens of hens' eggs graded according to size, color and cleanliness, offered an opportunity to compare eggs of different color and size and also to compare those of uniform color with those of a mixed variety. The influence which these factors have on the attractive appearance of eggs was very noticeable.

Many birds and varieties of chickens and water fowls were shown in a large collection of colored pictures hung on the wall in the back of the exhibit. These enlarged colored bromides were supplemented by transparencies which were illuminated by means of electric lights showing additional poultry plants thruout the country.

The feather cards or charts on which feathers from the

different parts of fine chickens had been mounted were of great value in showing the distinctive colors and markings of different breeds and varieties of poultry.

To impress upon the public the important factors and phases of poultry work, placards and signs were placed in and around the exhibit, calling attention to the importance of immediate action on the part of the public and poultrymen to take such steps as will insure an increased production in poultry and eggs.

The wording of some of these placards was as follows: "Hatch early. Early hatched pullets produce fall and winter eggs. Produce more poultry. It is imperative that poultry and egg production be increased."

"Preserve eggs when cheap for winter use."

"Ask the Government's poultrymen how you can assist to increase poultry and egg production."

"When hatching is complete, produce infertile eggs."

"Don't market early hatch pullets."

"City poultrymen, keep two laying hens for each member in your family. You should keep a pen of fowls in your back yard."

In Kansas City, a supper was given to the Government representatives and some of the prominent poultrymen, by G. D. Kenyon, of Kansas City, who is one of the directors of the show. The supper was given in the rooms of the Old Colony Club at the Muhlbach Hotel.

Interesting talks were given by Harry M. Lamon, senior animal husbandryman in charge of the Government poultry work; J. W. Kinghorne, who is the district representative in charge of the emergency poultry campaign in the Middle West; Prof. W. A. Lippincott, in charge of the poultry work at Kansas Agricultural College; Prof. H. L. Kempton, of the University of Missouri; C. T. Patterson, director of the Missouri Poultry Experiment Station at Mountain Grove; Judge Drevenstedt, of Schenectady, N. Y.; R. H. Wilkins, who is in charge of the Government campaign in Kansas City

district, and E. M. Clendening, secretary of the Kansas City Chamber of Commerce.

Later in the same evening, Harry M. Lamon made a very strong appeal to the poultrymen of the Middle West to support in every possible way the Government's effort to stimulate poultry production as a source of food. Mr. Lamon said in part, "It is very imperative that you, as poultrymen, should interest others in this great work, but, like charity, this interest should start at home, and you as the foundation of the poultry industry in this country should interest yourselves to take a new interest in your business and thus set an example to others as to the importance of this vital industry."

At the Coliseum Poultry Show in Chicago, two meetings were held—on Wednesday and Saturday nights respectively. At the meeting held Wednesday night, December 5, Mr. Lamon repeated his appeal to poultrymen along the lines mentioned above.

In addition to this a very interesting talk was given by Geo. M. Rommel, of the Department of Agriculture, explaining in detail to the poultrymen present what they might expect in regard to the grain situation. He brought to their attention the fact that there was an increased production of over one billion bushels of the six important grain crops in this country and that as soon as these crops begin to move, it could reasonably be expected that feed prices would be correspondingly lowered.

President E. E. Richards, of the American Poultry Association, and Grant M. Curtis, of Quincy, Ill., both made very interesting talks at the meeting held Saturday night, December 8, as to the important part that the poultrymen of this country can play as producers of valuable food for our own country, our Allies and our armies in the East.

J. W. Kinghorne, who was in charge of the Government poultry exhibit at Chicago, expressed his great appreciation to the officials of the Coliseum Show for the support and interest taken by them and for the prominent place given to the Government exhibit.

CHICAGO COLISEUM POULTRY SHOW

Ninth Annual Exhibition, December 4-9, 1917. Pronounced
a Success from Every Viewpoint.

By Theo. Hewes

IN MAKING this report of the 9th annual exhibition of the Great Mid-West Poultry and Pet Stock Association, I will ask that the readers of the AMERICAN POULTRY JOURNAL have just a little patience, as with the immense work in connection with the management of the show, and at this writing with my office piled up with mail that should have prompt attention, there may be some important items that are overlooked. In fact, I had no intention of writing up the show, but was drafted by Mr. Bell at the last moment and will try in the right way to give the readers some idea of this, one of America's greatest poultry and pet stock exhibitions.

Any association that has the courage to go ahead in the face of present conditions and put on and carry thru successfully a show where expenses run close to ten thousand dollars is entitled to the patronage of the best breeders of poultry and pet stock, and it seems that these men realized their responsibility and gave to the Coliseum Show this year one of the largest exhibits.

The pet stock fanciers did their part nobly and put on what was considered by expert pet stock showmen to have been the greatest exhibit, not alone in number but in quality, that has ever been held in America. This exhibit attracted a wonderful amount of attention, in fact sufficient attention to warrant the Coliseum management in considering it one of the permanent fixtures at future exhibits, and the breeders were more than pleased with the treatment received, not alone from the management but the sales of high priced animals exceeded that of any exhibit they have ever held.

The poultry entries totaled a trifle less than in 1916, but the pet stock entries, this being a new feature of the Coliseum Show, more than made up for the shortage. The classes that did not draw up to expectations were the ones where large cash prizes were offered by specialty clubs. In fact, it would seem that you can over-advertise any special feature in the poultry exhibition and by offering too much cash you scare out the little fellow, who, believing all of the big breeders of the country would come, and some of the big breeders falling down at the last minute, does not give the show as many entries as we have when no special effort is made to bring them out.

This is of itself an argument following the suggestion made by W. W. Henderson, of Bridgeton, Mo., that all cash prizes should be eliminated from the national shows and that the only prizes that should be offered are the ribbons and such specials as are offered by the breeders themselves.

The Coliseum has been noted for the past nine years as one of America's greatest sale shows and from what we learned from the breeders who are making the leading shows in the country, it seems we are safe in making the statement that it exceeds any other show on the American continent, not alone in the number of sales made but in the prices received for really high class specimens. We have what is known as the sales card. This is an ordinary shipping tag printed on red cardboard and when sales are made requiring transfer of the stock to different routes of shipping, tags are attached to the cages for the information of the superintendent and his assistants, and it is a fact that the last day of the show many of the classes looked like a crazy quilt, as about every bird in the class had changed ownership and required a different shipment out.

In studying the sales at this show one cannot help but note the whim of the buyers. One year one breed or variety will have a big run, perhaps the next year there will be but few sales in that class and some other breed or variety will take

the prominent position, but the two breeds that hold, that can always be depended upon to require a lot of red sale tags, are the Barred Plymouth Rocks and the Rhode Island Reds. The Barred Plymouth Rocks, we believe, lead over all other varieties, but this year there was a switch to the old-time Light Brahma, and one exhibitor of this variety told me that during the first five days of the show he had sold in stock and eggs more than \$300 worth.

The White Wyandottes, usually one of the best sellers in the Coliseum, did not seem to be in as great demand as in former years. The show this year being held on the same dates as the International Stock Show undoubtedly helped in the sale of birds to a very great extent, as we found quite a few stockmen among the buyers and they were willing to pay what good birds were worth, and in several instances the shipments were made in connection with other live-stock that had been purchased at the yards. The management of the Coliseum realizes the importance of this date, not alone to itself but to the breeders as well. The same dates will be reserved for 1918, and breeders are advised at this early date that the Coliseum Show for 1918 will be held during the first full week in December.

The attendance for the first four days exceeded that of former years, but on the night of the fourth day a blizzard, one of the severest that has blown over the lake region for a number of years, struck Chicago. The mercury dropped below zero, and the Saturday and Sunday attendance was not nearly up to former years, in fact was so much below the average the last two days that it more than overcame the increase for the first four days, but regardless of these conditions, the association is in good shape financially, and is going ahead to build up a greater exhibition for the coming season.

In a report of this kind it would not be fair to attempt to describe one breed more than another; in other words, to give preference to any one variety, but we believe the Barred Rock fanciers thruout the United States are entitled to know some things and are perhaps more interested in the result of this show than that of any one class.

As it had been advertised there would be a new club organized, taking in all varieties of Plymouth Rocks under one head, this club was organized and was given the title of International Plymouth Rock Club, and the cups and specials that were offered were without question the best that have ever been offered at any national show. When the breeders got together and realized the importance of the move, that by the organization of this specialty club the smaller or weaker Plymouth Rock Clubs could be taken care of by the parent body, we found a willingness on the part of all to co-operate and it was decided that the next annual meeting of the International Plymouth Rock Club should be held at the Coliseum, and now that all are working in harmony and everybody interested in the several varieties of this popular breed is striving to make *America's greatest production* more popular, we would not be at all surprised to see at least one thousand Plymouth Rocks in the Coliseum in 1918.

At the exhibition just closed, there were 300 single entries and 42 pens shown in the Plymouth Rock class, the Barred Rocks leading in number, followed closely by the Whites. This was unquestionably one of the greatest White Rock shows ever held in the Coliseum, and an immense demand was created for high class stock of this variety. With the members present joining their forces with the International Plymouth Rock Club, and some of the prominent members being appointed to executive positions in the new club, we may look for the greatest boom on (Continued on Page 84)

The New Year

With the coming of another New Year full of hope and promise we can think of no better wish than the fulfillment of the prophecy contained in that paragraph of President Wilson's message which reads:

"The thought of the plain people here and everywhere thruout the world, the people who enjoy no privilege and have very simple and unsophisticated standards of right and wrong, is the air all governments must henceforth breathe if they would live."

While everywhere the hope lives that 1918 may bring peace to the world, our President makes it plain that the price of peace is "full, impartial justice—justice done at every point and to every nation that the final settlement must affect, our enemies as well as our friends." He clearly states that "Our present and immediate task is to win the war, and nothing shall turn us aside from it until it is accomplished. Every power and resource we possess, whether of men, of money or of materials, is being devoted and will continue to be devoted to that purpose until it is achieved. * * * We shall regard the war only as won when the German people say to us, thru properly accredited representatives, that they are ready to agree to a settlement based upon justice and the reparation of the wrongs their rulers have done." When this is accomplished "We shall be free to base peace on generosity and justice, to the exclusion of all selfish claims to advantage even on the part of the victors."

Surely no fair-minded person can dissent from such a declaration of purpose to see simple justice done. There is no expression of selfish ambition, "The cause is just and holy, the settlement must be of like motive and equality. For this we

can fight, but for nothing less noble or less worthy of our traditions."

There is much hope and promise in that message. If the coming year, 1918, can see the fulfillment of this promise of a generous, just, and lasting peace it will prove a Happy New Year indeed.

Let the thought be father of the deed, and may the New Year bring Comfort, Health and Happiness to All.

The Need of Team Work

There is one thing above all else that the poultry industry stands in great need of today and that is unity of purpose and efficient team work.

We do not wish to criticise any individual or organization. These are strenuous times and all of us are bound to make mistakes, we make our share.

The poultry business today, with its various organizations and entire lack of real efficient co-operative organization, its lack of consistency and unity of purpose, reminds one of a hen with her head newly severed from the body—flopping around a whole lot and making a deal of fuss, but headed for no place in particular except oblivion.

The American Poultry Association, which claims to represent the industry, is divided within itself. There are faction fights and overmuch criticism and no team work or co-operation. The President of the American Poultry Association, attacked on all sides and apparently endeavoring to please everybody, seems to be the embodiment of that popular song, "I don't know where I'm going but I'm on my way."

At Milwaukee meeting a committee was appointed to represent the American Poultry Association at Washington—in reality a reappointment of the committee that went to Washington in the spring and did such good work that it was in-

strumental in securing a substantial appropriation to be devoted to increasing the production of Standardbred poultry. So far as we know this committee has never been discharged, but it appears to have been overlooked, and we find other committees being appointed to represent the American Poultry Association in the National capital. In these war times it would seem to be a mistake to have too many little committees running to Washington with our poultry troubles.

Men in responsible positions in the Government have their hands pretty full at the present time. For quite a while it has seemed as if the Food Administration and the Department of Agriculture were pulling in opposite directions, but now evidence is not wanting that they are beginning to get together. There can be no doubt that it would be a wise measure to have both under one efficient head, since food production and food prices must necessarily go hand in hand. Now these busy men, engaged in work that is of vital importance in the winning of the biggest war of all time, have no time to be pestered with many little committees of poultrymen all representing different interests and presenting different arguments.

It is not reasonable to expect Government officials to have patience with, or give consideration to the claims of, a disorganized lot of producers making all sorts of contradictory claims. For example, one poultry commissioner in his appeal for aid and relief for poultrymen justly points out that clause in the American Poultry Association's petition to Mr. Hoover, which reads, "At the present prices of poultry feeds * * * * as compared with prices now obtainable for market poultry and eggs the poultry and egg producer cannot get back the cost of feed used, let alone the cost of labor and legitimate profit." There can be no question about the truth of that appeal for relief, but how must it seem to the busy Government official when another commissioner from the same state presents a booklet filled with figures to show "poultry profits," and still another commissioner, from adjoining territory, pipes up with the story that the poultryman's profits in 1917 were \$1.98½ greater per hen than in 1907 and that in 1907 the profits per hen were \$1.06½ per year. Of course these figures are not based on actual facts, not prepared according to any sane rule of cost accounting, and are very misleading; but the busy official hasn't time to bother with that. If you send him two men to plead the cause of poultry and one man says, "We must have relief, we can't get back the cost of feed," and the other in the next breath begins to brag about "big profits," you cannot expect the official to have patience. You will only have yourselves to blame if he says, "You can't blow hot and cold with the same mouth," and orders you kicked out of the office.

Neither can we hope for relief when a leading fancier and big show manager declaims to the public that, "for the life of him he cannot see why eggs are so high in price and that he can produce eggs for 12 cents a dozen." Of course he can't do it, but the public accepts his word and wonders that such profiteers as poultrymen are permitted to exist, in these days when everyone should be doing his bit. The public believes your story when you brag of low costs and big profits, for it does not think any man would be fool enough to tell such things if untrue; but it does not believe the really true tales of actual high costs of production, because the pub-

lic does not want to believe anything which means that it may have to pay higher prices for food.

The poultry situation is serious. The need of more poultry and eggs is very great. We can get more by presenting the plain truth and by avoiding brag and bluster. We must get together and find out among ourselves what the real facts are; we must throw overboard the profiteers who exploit poultrymen solely for selfish profit; we must decide among ourselves what our real aims and objects are; we must learn about the different production costs under different conditions—and they vary considerably—we must decide what we want of and for the poultry industry. We must organize our now disorganized factions and endeavor to secure unity of purpose, team work for the good of all by each and every member of the fraternity. If we present a united front, consistent claims, and stick to the truth, we will get due recognition. But so long as we remain divided among ourselves and disorganized, "blowing hot and cold with the same mouth," we will continue to flop around and make a fuss and muss like the decapitated hen, but shall get nowhere except oblivion.

Everybody Must Work

One of the good things that has come into being during these strenuous times of world war is the growth of the sentiment against the slackers and parasites in our civil life. The time seems near at hand when every able-bodied citizen, rich or poor, must find employment in some useful, helpful work.

Maryland has already put into action a compulsory labor law of far-reaching scope, which requires every adult male, who is physically fit, to register and state the nature of his employment. He cannot remain an idler, whether he be a poor loafer or a rich man living upon the unearned increment of realties and investments. He must be employed and do his daily share in the work of the world. In another southern state, the mayor of one of the largest cities has announced that he will tolerate no slackers and parasites among the civilian population, everybody must work and useful employment will be found for every able-bodied citizen.

The leaven is working and the great democratic principle will grow, develop, and thrive like the proverbial green bay tree. Our President has stated that we are at war to "make the world safe for democracy" and in his December message to Congress made it very plain that we are fighting for peace with justice for all people of all nations, and that we seek no more than security and freedom for all peoples; privilege and dominion for none.

It is not to be supposed that a Nation, with such a lofty purpose in war, and high sense of justice and instinctive judgment as to the right of plain men everywhere, will tolerate less justice and democracy at home than it seeks to establish abroad. While seeking to make the world safe from a selfish and cruel government which is striving to increase its own wealth and power at any cost, we certainly cannot tolerate at home individuals or monopolies that show similar greed for wealth and power at the expense of the plain people.

There is no democracy in permitting the idle few to continue in idleness, to wax fat and to profit in wealth and power, through the labor of the great mass of plain men and women who struggle with poverty and hardships to feed and clothe these idlers and to produce wealth that they may feast and strut.

First prize Buttercup pullet at Chicago Coliseum Show, December, 1917. Owned by O. B. Disenroth, Lawrence, Mich.

First prize White Orpington cockerel, Chicago Coliseum, December, 1917. Owned by Aldrich Poultry Farm, 5092 N. High St., Columbus, Ohio.

Everybody must work. Everybody must do his bit to help America win the war. When everybody is put to work at whatever task he or she proves most useful, when the good of the community becomes greater than the benefit of the individual, when we learn to know the value of justice, peace, and fellowship among all peoples, when creative and productive labor is compensated at its true value, then we shall enter upon an era of peace and good will that will be as near freedom and democracy as we are likely to get in this world.

The world war has been called the world's travail, let us hope that the birth will be an epoch of simple justice for all peoples everywhere.

Cheaper Grain?—We Hope So.

EVERY mail brings us letters from poultry keepers who anxiously ask our opinion concerning the probability of a drop in the prices of corn and poultry feeds and how soon lower prices may be expected. If we had any inside information concerning the future in the grain market, we would gladly give it to our readers; but, frankly, we are guessing like everybody else and quite as much in the dark.

One Eastern fancier writes us that he is still holding on to his breeders and getting ready to hatch and sell baby chicks this season, but that he is "sinking about \$20 per week in the game and don't know which will last longest, my credit or my courage." There are plenty of breeders who are in the same boat, and all are carrying on in hope of better conditions early in the new year. The Food Administration practically

promises a drop in corn prices soon after the new year, which should reduce prices of poultry feeds. This assurance is repeated in a letter from Mr. Priebe, which is published herewith.

In our opinion, old corn will continue high in price, owing to scarcity. Some of this old corn will be necessary for the manufacture of chick food. New corn does not make as good food for baby chicks. The old corn will be doubly necessary because only small amounts of wheat can be used and possibly the use of wheat may be forbidden. There does not seem to be any reason to look for lower prices on oats. Altho the crop is a large one, the demand is heavy and large quantities of oats will be needed for feeding army horses. Oats will be used more freely by poultrymen this year and this will tend to increase the demand and keep the price firm.

The hope for lower priced poultry grains is in the big new corn crop. Competent observers believe that the crop has been somewhat overestimated and that a large percent will prove to be soft corn. The corn crop is only just beginning to really move in the market and the first shipments proved to be rather poor stuff, much of which was turned over to the kilns to be dried before put on the retail market. It seems probable that we may be able to get fair quality feeding corn at from \$1.60 to \$1.80 per bushel within a few weeks, unless the demand should prove unusually great. There is, of course, always the possibility that the Government may step in and fix the price of corn, but at present the outlook is that corn will take the usual course and that

"supply and demand" will regulate the price.

The first week in December our Eastern markets quoted corn in carlots to ship from Chicago at \$2.08 per bushel for new No. 3 kiln-dried corn. On December 6 the press dispatches from Washington contained the following:

An absolute embargo upon carload shipments of corn and oats into Eastern territory, effective at the close of business next Saturday night, was issued today by the Railroads Car Service Commission, at the request of the food administration.

The administration says there is a plentiful supply of these products in the East for domestic consumption and the embargo is designed to divert a large volume of the traffic in supplies for the allies to Gulf and South Atlantic ports, relieve congestion on Eastern roads and permit the return of cars belonging to Western lines.

The immediate effect of this embargo was to lower Chicago prices on corn. Prices of new corn which were at \$2.08 and \$2.05 per bushel before the embargo was laid, immediately, on the day that the embargo became effective, dropped to \$1.90 and \$1.96 per bushel. Cash corn in Chicago on December 8, was quoted at \$1.70 per bushel for No. 4 white and \$1.65 per bushel for No. 4 yellow. In same market, corn for January delivery was quoted at \$1.20 and \$1.21¼. The market was reported unsettled and uncertain, early trading showing fluctuating prices and later a positive drop in prices as soon as it became evident that the embargo would be enforced.

The Eastern situation is a difficult one. Altho Washington officials say that there is a plentiful supply of corn and oats in our local Eastern markets, grain dealers say that there is great scarcity and there are no offerings of corn. We find it difficult to get a sup-

This Pony FREE

Pollyanna

Pollyanna is a beautiful 3-year-old black Shetland Pony, about 42 inches tall. She weighs about 300 pounds and is worth pretty nearly her weight in gold. Of the 500 Ponies we have given away to Boys and Girls, we think Pollyanna is one of the prettiest.

You may have seen lots of Ponies in Circus Parades, but we don't believe you ever saw one prettier than Pollyanna, and we are going to give her to you, or to some other Boy or Girl, who sends in his or her name.

Hitched up to her cute little Pony Buggy, Pollyanna will pull you and all your boy and girl friends that can pile in. Then, when you are tired of driving, you can throw on the Saddle and Bridle we give with Pollyanna and go scampering around the country.

Can you think of anything you would rather have than Pollyanna?

Read this page carefully and then send in your name and address at once.

We shall give YOU, or some other Boy or Girl, this Shetland Pony, with complete Buggy, Harness, etc., just as it looks in this picture.

This is Pollyanna

If You Want to Own Pollyanna
or Any One of the Other
Ponies we are giving away

The Outfit

Best of all, we send free with Pollyanna the complete Pony Outfit just as you see it in the picture.

Besides the Pony, the Pony Buggy, and the Harness, we also send a Saddle and Bridle, which will make you the most complete outfit money can buy.

The Pony Buggy is the most comfortable riding and easiest pulling we could buy. We have given away so many that we know what kind most boys and girls like.

The handsome nickel-trimmed harness looks just fine on Pollyanna, and the Saddle and Bridle are made to order for her.

No child, no matter how rich his parents may be, owns a nicer Pony and Outfit than this one, and we shall send it free with all charges paid to some Boy or Girl.

This is surely the best chance you ever had to get a Shetland Pony, and if you think you would like to have it, send your name and address right away. Some Boy or Girl is sure to get it.

Send Your Name TODAY

As soon as we hear from you we shall write you all about Pollyanna and the other Ponies we are giving away, and tell you how to win one of them. Don't let anyone tell you that you can't win a Pony, because our plan of giving Ponies is different from all others.

We make it easy for children to get Ponies. We use them to advertise our big magazine, the Farmer's Wife. We have already given ponies to more than 500 Boys and Girls, all over the country. Some of these children who received free Ponies were only 6 or 7 years old, so you know we must have made it easy for them to win. Just send your name and address and see.

We Have Given Away Over 500 Ponies

(100)

Here are the names of 30 of the Ponies we have Given Away and the Children Who Won Them:

Bob, John Corn, Pulaski County, Ark.
Sweetheart, Lillias Howe, Nevada Co., Cal.
Pansy, Evelyn Cutler, Windham Co., Conn.
Turk, Alvin Johnson, Bond Co., Ill.
Beauty, Bertram Eldridge, Stark Co., Ill.
Roine, Clarence Busick, Adams Co., Ind.
Bonnie, Amyle Kafer, Carroll Co., Iowa.
Pat, Flossie Meredith, Jasper Co., Iowa.
Jerry, Cleta Johnson, Douglas Co., Kansas.
Toots, Isabelle Whitecraft, Baltimore Co., Md.
Clipper, Adelaide Stever, Bristol Co., Mass.
Snap, Jennie Nadeau, Iona Co., Michigan.
Larry, Wilford Schaffer, Grant Co., Minn.
Duke, Dorothy Eagle, Jackson Co., Mo.
Cozy, Charles Young, Cascade Co., Mont.

Hector, Verna Beerhohm, Cuming Co., Neb.
Hammer, Arthur Wallace, Burlington Co., New Jersey.
Dolly, George Adams, Cayuga Co., N. Y.
Tip, Chester McKee, Wayne Co., N. Y.
Winkle, Myrtle Holbrook, Wilkes Co., N. C.
Judge, Louis Schmidt, Morton Co., N. D.
Flo, Lloyd Thomas, Allen Co., Ohio.
Kip, Anna Miller, Logan Co., Ohio.
Flasher, Clarence Morgret, Cambria Co., Pa.
Pert, Georgia Spencer, Warren Co., Pa.
Dapple, Ernest Heckert, York Co., Pa.
Sunshine, Eva Huddleson, Beadle Co., S. D.
Lady, Marion Jones, Franklin Co., Tenn.
Wizard, John Kenyon, Fairfax Co., Va.
Jingo, Pearl Kerr, Grant Co., Wis.

We haven't room to print the names of all of the 500 children who have won Ponies, but we shall send you the names of several hundred of them, with pictures showing many of them playing with the Ponies we sent them. All you need do is to send your name and address at once. Fill out and mail the corner on the left, or just write your name, address and age on a Postal Card and send to us. Do it today. Address

THE PONY KING, 610 Webb Bldg., St. Paul, Minn.

Pony Pictures Free

When you send in your name, we shall tell you how to get a Free Pony and also send you some Pony Pictures showing the Ponies we are giving away. Write your name below or send it on a postal card.

ply of corn and oats for our poultry at any price, and cannot tell at present what effect the embargo will have on our local supply. It takes anywhere from weeks to months to get carload shipments of grain into the East from Chicago under present conditions.

We are not advising readers to do anything that we would be unwilling to do ourselves. We have a considerable flock of breeders and layers. Having carried them thus far, we are going to try to hold on a little longer. We may have to dispose of a few more of them if the local scarcity of grain and the high prices continue. There is no doubt but that there is very urgent need of more poultry and more eggs. As long as we can "stick it out" we shall en-

deavor to hold on to the best of our flock. At present writing we are feeding about 400 head of adult and young stock. We do not know how much truth there may be in the promised relief from high grain prices. Mr. Hoover, in his speech in New York City, on December 5, said that "The cost of corn is dropping every day." He also told his audience that because of the lowered price of corn, one might expect milk, eggs and poultry prices to be lower soon—tho that is rather cold comfort for the producer who has been feeding high cost feeds for the past year. The date set for the lower prices to become effective is "January 1 and thereafter," so we have not long to wait for the "proof of the pudding."

We wrote the Food Administration asking for information on the grain and feed situation. Herewith is the reply from W. F. Priebe, given in full:

Washington, D. C., December 6, 1917.
Editor American Poultry Journal:
This will acknowledge receipt of your letter of December 4 on the question of feed for poultry.

The undersigned is responsible for the statement that we believe poultry feed will be from 40 to 50 percent lower by January 1st and thereafter. Will state that nothing has developed that has changed our opinion that new corn will sell for about one-half the price of old, and as corn is the fundamental, it will, no doubt, have its influence on other grains that enter into the make-up of poultry feeds.

Up to the present our advices are that owing to the mild weather, corn has not dried as rapidly as in former years and while some has reached the Chicago market, it has been very damp and we notice sales of No. 3 corn at \$1.80, while No. 2 corn for January delivery is selling for about \$1.20.

The railroad situation is, of course, bad. It is affecting all lines of business, but the greatest minds of the country are here working on the transportation problems and we have confidence enough in the executive ability of the American people to solve any and all troubles and believe this situation will be adjusted and bring relief to all engaged in the business.

In the meantime it is the duty of all patriotic citizens to be patient and have confidence in those holding responsible positions in the government.

Yours very truly,
United States Food Administration,
By W. F. Priebe.

Co-Operation in New Jersey.

THE Passaic Poultry, Pigeon and Pet Stock Association, Passaic, N. J., reports that the co-operative plan of organization is proving a mighty good thing for poultrymen, that it has a membership of 110, and new members coming in rapidly.

This association has membership in the State Association and thru it enjoys the benefits of co-operative buying of feeds and supplies as perfected by the Co-operative Committee of the State Association. Membership in the Passaic organization, which only costs \$2.25 the first year and \$1.25 per year thereafter, entitles one to all benefits.

The co-operative buying of feeds enables members to get guaranteed grain and feeds at practically carlot prices, thus eliminating middlemen's profits. Members are asked to buy a five weeks supply at one time and to order on certain specified dates.

Payments for feed must be made within five days after bills are rendered, otherwise an extra charge must be added of 5 cents per bag, and a penalty of 6 percent will be made to cover bank charges. A cash rebate is allowed on bags returned in good condition. Feeds are delivered in Passaic for the additional sum of 10 cents per bag, and in Paterson at 15 cents per bag. Where feeds must be reshipped, a nominal charge of 3 cents per bag for the transfer is made.

The success of the system depends

Get Eggs

DR. HESS POULTRY PAN-A-CE-A

This is money-making time. Eggs are high—you want eggs to sell. Get your hens in top-notch laying condition. Feed Pan-a-ce-a to give them good health and good feeling. It contains ingredients which act on the dormant egg organs—lives them up and makes them active. It does give hens the *laying disposition*. That's why you should feed Pan-a-ce-a regularly during the winter months. Pan-a-ce-a has stood the test of nearly 25 years. Dealers are authorized to return your money if it does not do what we claim. Packages, 25c, 60c and \$1.25. 25-lb. pail, \$2.50; 100-lb. drum, \$9.00. Except in the far West and Canada.

290 EGGS IN ONE YEAR

MAPLESIDE Bred-to-Lay Barred Plymouth Rocks

Regardless of what some may say who perhaps have never produced a phenomenal layer worth while, Mapleside produced the phenomenal layer Liberty Lass, record 268 eggs in one year. She was also a phenomenal breeder—30 percent of her eggs hatched. She also possessed phenomenal prepotency, manifested generation after generation; twenty of her daughters laid 4,064 eggs in one year (one went 250); ten first granddaughters laid 2,123 eggs in one year (one went 249). Her son sired the six pullets that averaged 242 eggs each in one year (one went 261). One of her great-granddaughters so far laid 266 eggs in 10 months and 29 days, with no signs of quitting. Her blood and breeding permeates my entire flock. My catalog tells the rest; it's free. Stock, Eggs and Chix with phenomenal laying trait at right prices.

O. F. MITTENDORFF Box F LINCOLN, ILLINOIS

upon prompt cash payments by members for supplies purchased, therefore the penalty for delayed payments.

The system is similar to that employed by the Old Colony Co-operative Poultry Exchange of Massachusetts, except that the latter is an independent county organization, not yet associated with a state organization, has no membership fee, but every member is a shareholder buying one or more shares at \$5 per share. The Old Colony Exchange employs a buyer or sales manager, who buys grain at carlot prices and superintends shipments and deliveries. The exchange makes a small profit on the grain to pay operating expenses. The directors of the exchange govern it and sign notes at the bank for loans required to pay the sight draft on each car shipment. Small extra charges are made for local deliveries. Prompt cash payment for grain is required so that the exchange can promptly take up its loans at the bank. The directors carry a checking account sufficient for the current business of the exchange and all checks are drawn by the treasurer of the organization.

The co-operative plan or organization seems destined to grow rapidly and may help to solve many of the poultry keepers' problems, particularly the buying of feed and the sale of poultry produce.

Breed Articles Wanted.

MR. FANCIER-BREEDER, are you "doing your bit" for your favorite breed or variety? It does not look like it.

If your breed does not get more publicity and thereby increase the demand for it, who is to blame? As one old-time fancier puts it, "This is no time to sit back on your haunches, bay at the moon, and be sorry for yourself."

We want more breed articles—real breed articles—that tell about the merits of the variety, how to mate and breed to get results, what the small chicks look like and their appearance at various stages of growth, how to feed and care for the birds to get best results in Standardbred quality. We believe that in these times fanciers—real fanciers—should have sufficient interest in their favorites and in the fancy to contribute such articles free. We have repeatedly asked for such articles, written to fancier friends and asked for them, but since the war started the fancier-breeder seems to have crept into his shell to hibernate. This is no time to quit and wait for more propitious times. Never before were entertaining hobbies more greatly needed to take our minds for a time out of the stress of everyday affairs.

Smith's White Leghorns

Win Three Firsts at the Chicago Coliseum, Dec., '17

In the Hands of My Customers, with birds direct from me and with birds hatched from eggs I sold last spring, my strain of White Leghorns, at the Chicago Coliseum Show, Dec., 1917, won:

- Two Places on Young Pens—Including First
- Two Places on Old Pens—Including Second
- One Place on Cocks
- Three Places on Hens—Including First
- Four Places on Cockerels—Including Second
- Three Places on Pullets—Including First

My customers tell me that they get more quality for their money from me than elsewhere. In addition to my own remarkable winnings at this and other of America's greater shows, my strain, in the hands of my customers, wins at the Chicago Coliseum, 1917. My matings for 1918 will be even better than in 1917, and my 1917 matings produced many of the winners at the Coliseum.

A word to the wise is sufficient

Eugene Smith, 317 Galena Boulevard, Aurora, Ill.

About the only time, nowadays, that we can secure breed articles is when some wide-awake fancier-breeder comes to the front with a prize article contest offer.

We will gladly give more space to good interesting and instructive breed articles, and we believe that the fanciers should be willing to contribute such gladly for the good of the cause. What do you think?

Be Careful With New Corn.

WE WISH to warn our readers to be careful in the use of the new 1917 corn for poultry feeding. Much of the corn that is coming onto the market is soft and of low grade. A great deal of it is moldy. The molds affecting corn are very dangerous to both poultry and horses. Some corn molds will quickly cause disease and death in both adult fowls and young chicks. Try out your new corn on a very few birds before using it for the whole flock. Be sure that all the corn is equal to the sample tested.

The new corn crop is a very great disappointment, so far as early shipments are concerned. Much of it is "soft," full of moisture, due quite as much to an unfavorable growing season as to the early frosts, and this corn even when kiln-dried is pretty poor quality poultry food. A good deal of the kiln-dried corn is chaffy and of low feeding value. There are only very light offerings of No. 2 and No. 3 grades of corn which are most desirable for poultry feeding. Most of the early offerings of corn are No. 4, No. 5 and lower grades, pretty poor stuff at best. *Wallace's Farmer*, Des Moines, Iowa, leading agricultural authority of the corn belt, makes the following editorial comment on the new 1917 corn:

"The condition of our corn is even worse than the most pessimistic anticipated. Beginning early last summer *Wallace's Farmer* commenced to issue warnings against overestimating the corn crop. Our estimate right along has been about four bushels to the acre below the government estimate; but it begins to appear now that even our estimates are somewhat high, considering the amount of soft corn.

"In many parts of Iowa corn which was cribbed has molded and heated badly, and is being hauled out, spread out on the ground, and sorted by the women and young folks. In some cases it is not good enough to even bother to sort it, and is being spread out on the fields. * * * *"

"The combined judgment of dealers in grains all over the country, as expressed in the prices on the Chicago Board of Trade, sooner or later reflects the true situation. These prices are not truly indicative this year, however, because for some months there has been an arbitrary limitation on the price of both December and May corn.

"We make no prediction as to future prices of corn. Extraordinary influences are at work, and prices will be determined not alone by the amount of this year's corn crop. As to the latter, we venture the statement that there is not as much sound corn in the country this year as there was last year. * * *"

"We tried to point out the danger of losing our heads and upsetting our established system of agriculture. In the most vigorous way we knew, we tried to get the attention of our people to what was going on with our live stock industry. Unfortunately, we made very little apparent progress until the time for satisfactory action had passed. The packers were permitted, and possibly with the assistance of the Government, to beat down prices on live stock until they were wholly out of their proper relation to prices of grains. The result was inevitable. Live stock was rushed to market. Some of the people who should have known better looked wise and said there was nothing alarming in the situation.

"Now we are paying the penalty. From 25 to 30 percent of our corn is too soft to save to the hot weather next summer. The only satisfactory use that can be made of it is as feed for live stock, and we have not enough stock to eat it. Had a steady hand been at the helm last spring and summer, and had fair prices been maintained for live stock, and had the desirability of maintaining our live stock supply been presented in an understandable and convincing way, we would have been in much better shape to fight a successful battle against hunger and possible famine.

"The necessity of feeding this soft corn has impelled farmers thruout the corn belt to reach out for live stock wherever they can get it. Very likely the result will be a heavy run of hogs and cattle during January and February and possibly into March, and a correspondingly light run next summer. There will not be enough sound corn carried over to maintain our average live stock supply between the time this soft corn is fed out and the time another crop is harvested. The officers of both our Food Administration and the Department of Agriculture should take careful note of this situation and make their plans accordingly.

"There has been a great deal of talk of the need of increasing our production to feed both our own armies and the armies of our allies. *Wallace's Farmer* believes that the need of production is even greater than our leaders have been telling us; and that unless they exercise the greatest wisdom there may be almost a world famine within the next eighteen months."

We hope our readers will read the above carefully. Editor *Wallace* is no alarmist and he is a very clear thinking American patriot. What he says of the live stock and corn situation applies to poultry keeping as well. Much poultry has been slaughtered that might have been saved, chiefly because poultry and egg prices were out of their proper relation to the prices of grain and feeds.

The heavy selling of poultry accompanied by "price smashing" thru the summer and fall, together with increasing cost of feeds, discouraged many poultry keepers and drove others out of business. Take the country as a whole and the total poultry is about 50 percent below normal, while in New England it is probably 75 percent below normal. The large percentage of soft corn and the amount of spoiled and moldy corn is a serious menace to successful poultry feeding during the 1918 season. A big campaign is being conducted to increase the production of poultry, but there seem to be too many advisers who are pulling in different directions, and not sufficient attention is being given to the serious nature of the grain situation.

We can, with proper feed and under favorable conditions, greatly increase the supply of poultry during the coming summer. The increase can only be brought about by making it possible for poultrymen to pay expenses. We do not believe that the average poultryman will ask or expect a profit. All he will ask is an opportunity to serve the Nation without loss. If he works to increase food production, as it is very necessary that he should, he is certainly entitled to a living and the return of all operating costs. If he can pay expenses and get a living for himself and family, he will produce an abundance of poultry meat and a good supply of pullets to lay eggs next fall and winter. He does not ask more than "simple justice." If he cannot get a living out of his business, he cannot produce. The backlotter may be able to keep a flock for pleasure, as a hobby, and as a home supply, and pay the expenses out of money earned at other work; the farmer may be able to keep a fair-sized flock as a farm by-product, but the poultryman must get expenses plus a living or he cannot stay in business. He does not ask what the packer demands and gets—9 percent profit on every dollar of capital above all operating expenses—he merely asks expenses and a fair and just living wage and he should get it.

The famine danger is a very grave one. The corn situation is a difficult problem for poultry keepers to solve. Fowls cannot be kept or chickens grown with spoiled or moldy corn. Some of the soft and moldy corn may possibly be

Regal Dorcas White Wyandottes

Profit or Loss

These are strenuous times for the Poultryman and to make your Fowls show a profit requires more careful management than ever before.

Regal Dorcas White Wyandottes, with generations of vigor, prepotency and heavy egg production back of them, are showing a good profit in the hands of thousands of poultry keepers all over America. One customer, who kept the Regal strain and one other leading strain in his yards, writes me that from his advertisement in the poultry journals he received twelve times as many inquiries for birds of the Regal strain as he did for the other strain. He therefore decided to keep nothing but the Regal strain. I have had scores of letters from customers with similar experiences, proving that the Regal strain today leads all others in popularity.

If you find difficulty in selling your surplus stock and if your birds are not showing a profit, why not give the Regals a trial? They have been a profitable investment for others and they will be for you.

5000 Cocks, Hens, Cockerels and Pullets For Sale 5000

SPECIAL—500 beautiful exhibition cockerels and pullets ready now to win the blue ribbon for you. 300 well matured cockerels from my heavy laying Dorcas line, \$8.00, \$10.00, \$15.00, \$20.00 and \$25.00 each. Dorcas pullets, \$4.00 and \$5.00 each. Breeding pens (male and four females) \$20.00, \$25.00, \$35.00 and \$50.00. Vigorous utility cockerels, \$4.00 and \$5.00. Order at once and get first selection.

Send one dime for the Regal White Wyandotte Book, telling all about the Regal strain. **FREE**—My catalog and mating list is free if you will send me your name.

salvaged by washing it and then thoroly boiling it before feeding the corn to adult stock; but this spoiled corn cannot be fed to small chicks. Oats seem a good sound crop and these will help out. Crushed oats make excellent food for young chickens of all ages.

The poultry business and poultry keepers are not in need of "stimulation" at this time. Inflation of the business at this time may well nigh prove fatal. What we need is practical help from practical men who keep and feed poultry and know what they are talking about. The right sort of publicity in stimulating demand for poultry and eggs—education of the consumer to use more poultry products and to be willing to pay a fair price for same, education of the consumer to make the best use of poultry products and not to waste valuable poultry fats and soup-stock parts. Show that poultry and eggs, even at top prices for 1917, are economical, nutritious, wholesome foods, and in comparison with other meat foods are big value for the money.

Give the poultry keeper a square deal. Cut out a lot of the "get-rich-quick bunk talk" and put it up to wholesale and retail dealers in poultry feeds to keep the poultry keepers supplied with grains and feeds at fair and just prices. There has been a lot of gouging during the past year by someone between the producer of grain and the poultryman; we do not know who has been to blame, but that sort of profiteering ought to be cut out. When local stocks of grain and feeds jump from 20 cents to 40 cents a bag within less than two weeks, while at the same time there is no such fluctuation in better quality of same grains in the big wholesale markets, it indicates something rotten somewhere and our food officials ought to apply the curb, instead of sitting back and telling us that they have no control over anything but "human food."

We must have greater production of poultry and eggs during the coming year. It may help avert serious famine conditions before the close of 1918. The only way to get this needed increase in production is to deal fairly and justly with the producers.

Attention, Rose Comb Red Breeders!

BREEDERS of Rose Comb Rhode Island Reds are herewith offered an opportunity to contest for three attractive prizes and at the same time help boost their favorite variety. We want articles on "Rose Comb Rhode Island Reds—Why I Breed Them," telling of the merits of the variety; how to overcome any shortcomings they may have; how

Palmer's Barred Rocks

AGAIN PROVE THEMSELVES

CHAMPIONS SUPREME at the CHICAGO COLISEUM 1917 SHOW

Winning more points for best display than our three closest competitors combined. A record never equaled by any exhibitor at this show. They were also winners for best display at the 1916 show and have been the leading winners for the past twenty-five years, winning more first regular and special ribbons during that time than any three competitors combined. We not only breed practically all our own winners, but furnish winners or show birds to some of the leading breeders to be found all over America. If you want to get some of the best Barred rocks produced, why go to some other breeder and get them indirectly? Write us and get them direct from the firm that is producing them. Mating list ready about January 25, giving prices of our eggs and complete list of our winners.

THAT the claims of the manufacturers of the MAGIC EGG TESTER were true eight years ago, true ever since, true to-day and henceforth. Large Poultry Farms, Hatcheries and individual poultrymen using this Tester for years now verify those claims. They say more than that. They declare there can be no great success without it. Used on eggs before they are set or incubated. Rejects at once unhatchable eggs and shows which eggs gives best layers and best breeding stock, any variety. This Tester needs no light nor expense to use and lasts a life-time. A twelve year old boy can test 200 eggs per hour. Only \$2.00 each and a trial of one year given. Cost refunded if not satisfied. Such a chance to both save and make money comes to a poultry raiser but once in a life-time. Grab it now. Sell your weak eggs. Feed is high, but to use weak eggs adds twice its cost. Stop it by ordering a Magic Egg Tester. Sent at once. Parcel post insured. MAGIC EGG TESTER WORKS, DEPT. B BUFFALO, N. Y., ALSO BRIDGEBURG, CAN.

TO OUR READERS,

Our subscribers are our friends and we use every effort to protect them in every way. We believe that every advertisement in this issue is signed by trustworthy people, and to prove our faith we will make good to our subscribers any loss sustained by virtue of their having purchased fowls or goods from one of our display advertisers.

All we ask is, that in ordering the fowls or goods, you mention to the advertiser that you saw the ad in American Poultry Journal; also that the purchase be made during the month or months in which the ad is inserted, and in case of loss notify us of the fraudulent misrepresentation of the advertiser, giving us full particulars as soon as it occurs. In all cases in writing to advertisers say, "I saw your ad in American Poultry Journal."

to get best results in breeding, both for exhibition quality and utility values; in short, the story of your Reds from shell to showroom, and as a source of food supply. You do not have to be an experienced writer, a good honest letter telling all the facts about your Reds, and information that you believe will help beginners to be successful with them, a plain story of your personal experience will fill the bill.

Hubert Meyer, of Riverview Poultry Farm, Klondike, Mo., offers three prizes for this contest, the articles to be written for AMERICAN POULTRY JOURNAL. He says:

"I will give the following prizes for best article on 'Rose Comb Rhode Island Reds—Why I Breed Them,' you to be the judge, and winning articles to be published in American Poultry Journal.

"First Prize. One pair pedigreed R. C. Rhode Island Reds. The cockerel hatched from an egg from my 'World's Champion Pen 59'—this pen holds the highest official record. The pullet hatched from an egg of hen with a record of 230 eggs in one year. Value of pair, \$35.

"Second Prize. Pedigreed R. C. Red cockerel from 'World's Champion Pen 59.' Value of cockerel, \$20.

"Third Prize. One sitting of eggs from 'World's Champion Pen 59.'"

Articles for this contest may contain from 1,000 to 1,500 words and must be written on one side of paper only. The author's full name and post office address must be stated on first page of manuscript. All articles submitted become the property of AMERICAN POULTRY JOURNAL and none will be returned.

Articles should be addressed to Dr. Prince T. Woods, Lock Box 4, Silver Lake, Massachusetts, and marked "R. I. Red Contest." All articles must reach us not later than February 5, 1918. Winners of contest will be announced in March AMERICAN POULTRY JOURNAL, and prize articles will be published as early as possible.

Here is your opportunity to win one of the three attractive prizes offered and do a good turn for the beautiful and prolific R. C. Reds. Do not delay. Begin your article now.

If you are in need of a book on any subject pertaining to the poultry business, consult the list on page 4. The volumes listed therein are authentic.

**DR. WOODS' NOTES
AND COMMENT**

Hope.

Hope, like the gleaming taper's light,
Adorns and cheers our way;
And still, as darker grows the night,
Emits a brighter ray.
Goldsmith.

We wish a Happy New Year to all our readers and friends. May you all find good cheer in Hope, happiness in Health, and in all your worthy undertakings may you prosper.

Are you explaining the great food value of eggs in your local and newspaper advertising? Are you doing your bit to increase consumption of poultry products? If not, why not? There is plenty of good material for publicity work along these lines in the files of American Poultry Journal for 1917. Make use of the suggestions made therein and help increase the demand for new-laid eggs and for poultry meat. Poultry and eggs ought to be the staple meat food diet of the Nation during 1918.

Two ounces of corn starch, eight ounces of cream of tartar and four ounces of baking soda, are said to make a very good baking powder, and will cost about the same as a good ready-mixed baking powder. These materials are all right in their place, but they have no place as an "egg substitute," even if the manufacturers do advertise "eggless recipes" and claim that baking powder will take the place of eggs in cakes, muffins, pies, and other cookery. There is no "egg substitute" that is fit to take the place of eggs in the human dietary. Use more eggs in cookery, use more eggs—raw, boiled, fried, poached, scrambled, as omelets, as souffles—in the daily menu for the family. There are many, many ways in which eggs can be prepared as food and all are good. Convenience, food value, cleanliness, wholesomeness, and palatability, combined with ease and thoroughness of digestion, considered—when compared with meats at present prices—good, full-meated, well-fed, new-laid eggs would be cheap at ten cents each.

Good sound eggs would be appreciated by the boys in the trenches, they consider eggs worth real money and are even willing to take chances with eggs of "doubtful character." A Massachusetts boy, writing from "somewhere in France," says: "Now and then I get a little extra food and last week I bought two dozen eggs at \$2 a dozen. The first dozen, the less said concerning them the better, and the second I purchased from a Frenchman."

Our former Secretary of State asks: "Whither are we drifting?" The boys in the cantonments and "somewhere in France" sing "I don't know where I'm going but I'm on my way." The whole world seeks the answer. No one can tell how far or where the sparks may fly when a forest fire gets to racing before a gale, but the United States has good material for an abundance of efficient forest rangers. We must win, we can't lose.

JEFFERSON BARRACKS, Mo., February 12, 1917—Dear Sir: Please advise me of price on a few day-old chicks. I have a nice bunch of stock raised from the trio I purchased from you last year and wish to keep on improving same. Yours truly, T. A. D.

COOPERSTOWN, N. Y., March 26, 1917—Dear Sir: I am in the market for 200 eggs of White Rocks and as we have had stock from you before which has been very satisfactory, am writing to ask if you can quote me on this amount and advise me earliest possible date you could ship. Yours very truly, E. A. S.

HOQUIAM, WASHINGTON, April 20, 1917—Dear Sir: The 12 Grade A eggs which I purchased from you have proven 100 percent fertile. They are all full of vigor and vitality and it is a pleasure to possess such specimens of beautifully developed chicks. Your careful packing and excellent egg boxes have proved their value in transmitting shipments even this great distance—a chick in every egg—is truly wonderful. Yours truly, G. K.

COVINGTON, KY., April 18, 1917—Dear Sir: Recognizing the quality of your birds, the truthfulness of your statements, common sense dictates to me that I must come to you for a cock bird to improve this year's mating. I feel the utmost confidence in your judgment and know that when I send you \$15 for a good utility bird that I can rest assured that I will receive a bird of superior merit. I have had the opportunity of observing the performance of your birds under very trying circumstances, and the manner in which they shelled out the big white eggs was truly remarkable. This is the stock I am looking for. Trusting I shall receive the bird in good time, I remain, very respectfully, P. G. W.

PRESTON, ONTARIO, CANADA, April 3, 1917—Dear Mr. Poorman: 65 eggs from a flock of 12 White Rocks for one week is not a bad week's work, is it? Well, that is the way my birds are shelling them out and I am proud of my few hens. My little boy came in the house the other day and said, "Daddy, Poorman's chickens are the poor man's friend," and he is right. Will want some more chicks and will forward cash when you inform me of prices. Respectfully yours, W. E. P.

LAKEWOOD, OHIO—Dear Sir: Two years ago I bought twenty-four White Wyandotte chicks of your 50c quality. They have done so well that I desire to have two dozen more. Book the order at once and advise me when you can make delivery. Very truly yours, C. R.

With my Strains and your careful attention, the above results will be YOURS.

JOHN G. POORMAN, Box 100, Tinley Park, Ill., U. S. A.

I had 58 Leghorns entered; 45 were placed. If you wish exhibition stock or hatching eggs from the very best matings, write me today. I have the stock in quality and in quantity. I guarantee to satisfy my customers. I quote rock-bottom prices. Where else can you buy S. C. White Leghorns of an established strain that win year after year, both in the show-room and in egg-laying contests? Write me your wants today; I will guarantee to fill them.

Experts on My Great Victory

"I have photographed the best specimens of S. C. White Leghorns exhibited at the Coliseum Show for more than ten years, and I feel that I am entirely competent to speak of the quality of the Leghorns that have been exhibited there during that period. This year the class was stronger than at any time in the past. The specimens exhibited by Frank E. Hering—about 60 in number—were easily the best that have ever been exhibited at the Coliseum. His entries were uniformly strong. He has developed a type with splendid station and fine Leghorn lines that delight the eye of the true Leghorn breeder and fancier. Among Leghorn breeders, Mr. Hering must be assigned one of the foremost places."—Louis Stahmer, Artist of the American Poultry Journal.

"I have been a judge in one or another of the Leghorn varieties at the Coliseum, Chicago, for the last seven years. I consider the S. C. White Leghorn class of 1917 the very strongest that has ever been exhibited at the Coliseum. Frank E. Hering has won the Sweepstakes Championship for the third successive year. This year he had seven entries in each of the single classes and six pens. It is the simple truth to say that his Leghorns are considerably stronger in every class this year than ever before, and that is a mighty strong assertion. Mr. Hering has earned the right to be considered in the select class of the very foremost breeders of S. C. White Leghorns in the country."—Herman Rikhoff, A. P. A. Judge.

- One hundred eggs for . . . 25.00

My Guarantee

I will guarantee eleven fertile eggs out of every fifteen. Shipments are all carefully packed so as to provide against breakage as well as against extremes of weather. I ship to remote points of the country with excellent results.

WRITE FOR FREE MATING LIST TODAY

FRANK E. HERING

Desk B

South Bend, Indiana

A 1917 Chicago Coliseum Blue Ribbon Winner

Dr. Charles McCarthy, of the Food Administration, is quoted in the Chicago Tribune of November 22 as reporting that in drouth-stricken Texas losses have already reached \$400,000,000. Thousands of cattle have starved and most of the sheep in Western Texas are dead or dying. Two million will die unless relief is rushed immediately on a huge scale. Perhaps three-fourths of these two million head of cattle might be saved by quick work.

The losses are largely breeding cows and heifers, needed to produce steers. It is said that the Food Administration was advised concerning these drouth conditions last summer, that the Texas drouth situation was discussed in September at a meeting of the Live Stock Industry Committee at which members of the Department of Agriculture were present. The delay in going to the relief of stricken Texas is not explained. The S. O. S. call for immediate relief in late November, when the losses already reached a tremendous figure, makes things look as if somebody had made a serious blunder. For months now we have heard the incessant urge to conserve red meat, we have had meatless days, we have been urged to produce and consume more poultry products that red meat might be saved. All this time "red meat" has been starving on the hoof in Western Texas, in New Mexico, and in Colorado. Some conservation! If we had shortage before, these losses must mean still greater shortage of necessary red meat. It will certainly be put up to poultrymen to produce a quickly raised substitute; more poultry and more eggs will be needed.

* * *

It is time now to make ready for hatching early chicks. Well brooded in comfortable quarters, February and March hatched chicks make wonderfully rapid growth. Better overhaul the incubating and brooding equipment and see that everything is in readiness for an early start this season.

* * *

If intending to buy incubators and brooders, if your order is not already placed, do not delay longer. Transportation facilities are in bad shape and steadily growing worse. As spring approaches, with embargoes on certain classes of freight and food and munitions having the right of way, freight and express deliveries are likely to be subject to long and troublesome delays. Orders for new equipment should be placed at once.

* * *

Buy baby chicks now. Book your order well ahead of desired date of delivery. It is the only safe way to avoid disappointment. The demand is likely to be greater than the supply.

* * *

We have not bought any charcoal for our poultry for a long time. In clearing up the woodland we have had many brush fires, which supplies a good deal of excellent charcoal, and, as we always burn wood for heating the farm house, we have an abundance of charcoal that can be used for the fowls. Now and then, in extreme cold weather, we burn a little hard coal in the kitchen range overnight, chiefly to keep the water from freezing. The coal ashes are always saved for the poultry. We do not know how much real food value they get out of hard coal ashes, but evidently they find mineral matter that they crave. They will scratch over the ashes and eagerly eat such bits as appeal to them.

* * *

While our birds were hustling for a living on woodland range this summer, they had access to a swampy stretch of black peat land along the pond. A small brook from the spring runs thru the bog. All of the soil about here is fairly rich in iron and this bog soil appears to be especially so. In fact in revolutionary times bog iron was dredged from the bottom of both pond and lake, and at the old anchor forge—from which the pond gets its name—this iron was converted into anchors and chains for the warships and other shipping. There are a number of tons of old iron slag about the place now; big, heavy, clinker-like masses from the ancient iron furnace. All summer, when our fowls were on short rations and big range, we noticed that they would eagerly eat large quantities of the black bog soil. All the birds on the place eat more or less of it when they have access to the lowland, but never before have we seen such eager

STARKS' White Plymouth Rocks Are Winners and Workers

White Rocks strongly appeal to fanciers because of their exquisite beauty; to utility poultrymen because of their demonstrated ability as year-round producers of big, brown eggs and market poultry of superior grade. During our many years of work in developing the Majestic Strain we have kept beauty and business in balance, not sacrificing one for the other. Consequently this perfected strain gives satisfaction under all conditions.

Majestic White Rocks of both sexes win in the show room in the hottest of competition, East and West. They are true Rock type, not yellow-legged Orpingtons. Our champion cock at the last Greater Chicago Show and champion hen at the Chicago Coliseum Show were sensations. In the East we have made notable winnings at the Great Allentown Fair, New York State Fair, etc.

Our last exhibit was at the last Great Hagerstown Fair, the blue ribbon fall show of the country. On an entry of only five hens we won first, second, third, fourth and fifth. A clean sweep.

Majestic White Rocks are just as good for business, too. Bred in the rigorous climate of Northern Wisconsin, they possess unusual hardiness and vigor. Trim and active, close-plumaged, red of eye and yellow of shank, they are a delight to the experienced egg farmer. When dressed for market, their plump, meaty carcasses, free from unsightly pin-feathers and with "yellow trimmings" command top prices.

We will supply you with stock of this character—under an absolute guarantee of satisfaction—at most moderate prices. Every order, regardless of size, receives careful attention and we invariably give big value.

Our new catalog is ready. Better write for copy today.

STARKS FARM

M. L. STARKS, Proprietor
GUY DAILY, Manager

Box 100, STARKS, WIS.

Don't Let George Do It All!

Flag waving won't win battles. All the oratory in the world won't feed a cockroach. Action is needed. Soldiers and workers must be fed, and England's experience has taught that poultry and eggs are two of the most valuable supplies for the hospitals. YOU MOST HELP! There is no room for the drone in these strenuous times. There cannot be an overproduction of poultry next year, and the nation

calls upon you to "do your bit" in the way of increasing the supply, which is all the more reason why you should use added care in the selection of your stock.

Our Baby Chicks Are Guaranteed Extra Strong

which means a great deal. It means that they are able to withstand the dangers of shipping and the perils of chickenhood after they have reached their destination. They are hatched from vigorous bred-to-lay Utility Stock by our Fresh Air Method of Incubation.

COMPETITION WINNERS

The five Champion Wyandotte hens that won First Prize and three Silver cups, in The North American Egg Laying Competition, 1916-1917, under government supervision. This pen produced 1165 eggs, having the following high individual records; 294-267-221-220 eggs. Our Champion Wyandotte of the World, "Liberty Belle," won first prize and cup, laid 294 eggs. Her sister laid 267 eggs and won third prize and cup, 500 hens competing. Another proof of our success in breeding 200-egg layers.

consumption of soil. That it was good for them, or at least did not hurt them any, is attested by the wonderfully fine condition in which they came thru a rapid molt and the excellence of their fall egg yield—an egg yield by yearling fowl that could not be bettered by early hatched pullets.

It is customary for small grain dealers, in this part of the country, to fix a price on their supply of grain when it is received and to maintain that price until a new lot arrives. This sometimes results in a wide and singular difference in prices. There are two dealers in the same town, another four miles away and another about six miles distant from the town. We got their prices on whole corn on December 6, and these prices are interesting, to say the least. Of the two in the same town, one charges \$5.14 per cwt., the other \$4.80 per cwt.; the other dealers get still higher prices of \$5.20 and \$5.25 respectively. A difference in price of 45 cents a bag on whole corn in a district, which is practically the same town so far as area is concerned, is some difference. There is ample opportunity for work by an effective co-operative organization of poultry keepers.

There is hope ahead! Congressman Alvan T. Fuller, of Massachusetts, introducing a bill making salaries of members of Congress subject to the war tax on incomes, said:

"No congressman who votes war taxes upon the people and then takes unto himself immunity therefrom is fit to sit in a hog caucus at the stock yards, and he ought to be driven from public life."

The war tax bill as originally passed exempted such salaries from taxation and it is stated that the bill was so worded that "probably nine-tenths of the members did not know the bill they were passing contained special favoritism to themselves."

Poultrymen in the East are suffering from the raids of a pest comparatively new to this section. Large numbers of goshawks, a large and particularly audacious hen hawk, have appeared in New England and are preying upon poultry. A Bolton, Mass., fancier reports:

"This week my son shot a goshawk less than a hundred feet from the house, among trees, where no hawk has ever before troubled my chickens; just as it was flying off with a full-grown pullet in its talons. The hawk measured two feet from the end of its bill to the tip of its tail and had a wing spread of three feet and eight inches."

A number of these goshawks put in an appearance in the woods about the Anchorage Farm recently and have created a great deal of disturbance among a flock of White Rock pullets running in a pine grove. As yet we have not lost any of the pullets, neither have we been successful in shooting one of these bold and clever birds of prey. These hawks are larger, stronger and more vicious and daring than any we have seen in this section for some time. Gunners have been urged to make war on this pest.

Never before in our experience have we had better results from yearling hens than during November and December, 1917. The birds came thru the molt quickly as clean and bright as pullets. The egg yield has been fine. The yearling hens are equaling the pullets in egg production and surpassing them in size and quality of the product. The eggs are large, full-meated, heavy and handsome. Six dozen just as they came from the nests weighed exactly twelve pounds net, an average of 32 ounces to the dozen. We attribute these excellent results in part to whole corn, oats and mash feeding and partly to the way we made them work for a living on woodland range last summer, as described on pages 1143-45 December American Poultry Journal. There is no difficulty in securing good production. The big problem, when one's flock is not sufficiently large to make it pay to ship direct to the large city twice a week, is to sell the eggs without too great selling cost. Consumers simply will not buy eggs in quantity when the price is around 75 cents a dozen.

Some enterprising "expert" has recommended that fowls be given unrestricted range in order to save feed, and that where the owner has not land enough of his own, he let his flock have the range of the immediate neighborhood. That "expert" never kept hens himself in any part of the country that we have lived in or he would know better. Foraging hens are likely to create more neighborhood disturbance than all the rest of the disagreements put together. The courts are forever settling neighborhood rows started by some enterprising biddy, who went foraging in the neighbor's garden when she had plenty of work to attend to at home. One has trouble enough keeping the fowls and chickens on the farm from making raids on the home garden, berry patch and flower beds, without inviting

a riot by turning a town flock loose on the neighbors. Then, too, there would be small comfort in having your fine Standardbred hen flirting around the corner with some gay cockerel of another variety, or some mongrel cock from a stable dunghill. Keep the birds yarded or on restricted range. Do not let your fowls, or other animals, annoy the neighbors. There will be plenty of neurasthenic folks to complain of crowing cocks and cackling hens, without turning the flock loose to hunt for trouble.

The request has been made that no more wheat be used for poultry feeding. "Only damaged wheat will be available for poultry feed" besides the "coarser grains." Without meaning to be disagreeable about the "I told you so," we called attention to this some months ago in reporting the poultry situation in England, where the feeding of all wheat, except "tail corn" and frosted wheat, is prohibited by law. We pointed out then that, in this country, we appeared to be following pretty closely the British rules for food production and control, even to the point of making similar mistakes. In most sections of the country going without wheat for poultry feed will not be any great hardship. There should be plenty of other grain and some wheat screenings and damaged wheat that is not too badly damaged for poultry feeding.

With corn and oats and a reasonable allowance of wheat bran and middlings, we will be able to do very well if the price does not hold too high. Most of us have been doing without wheat for poultry feeding for quite a long time. A little is very welcome for small chick feeding, but it is not absolutely necessary. Fine cracked corn, crushed oats and a supply of bran, middlings and fish meal will make a very good small chick ration. Where corn cannot be had, buckwheat will help out, tho it is not a corn substitute—in fact, we do not know of any good corn substitute. Adult fowls will get along very comfortably on a scratch grain mixture of corn and oats, bushel for bushel, and a good mash containing a fair amount of protein. The chief drawback to corn, as an all around feed, is its low protein content and its tendency to produce fat. Feeding plenty of greens, vegetables, and with bran, middlings and fish meal in the mash, enough to boost the protein content of the ration, one can get very satisfactory results with corn. We had much rather do without wheat than do without corn for poultry feeding.

Animal food for poultry feeding promises to be a difficult problem. For about a dozen years now, beef scrap has been gradually growing more difficult to obtain in good quality and sufficient quantity. There appears to be a shortage of good material for making scrap. Whatever the reason may be for shortage, it is not easy to buy and is high in price. Small packages for back-lot use are more easily obtainable than large quantities for big flocks. There was promise of a better and bigger supply of fish scrap and fish meal, but really good fish scrap or meal continues to be rather short in supply. There is an abundance of waste fish, but there seems to be a lack of profitable opportunity to turn this fish into manufactured material of which fish scrap and fish meal are the by-products. If a good fish meal or fine fish scrap of wholesome quality could be manufactured to retail to poultrymen at not over \$50 per ton it would prove a most welcome source of animal protein for poultry feeding.

In response to requests for good mash mixtures to be used when corn and oats are the only hard grains fed, we give the following:

- No. 1.
- Coarse wheat bran.....100 lbs.
 - White flour middlings.....100 lbs.
 - Corn meal100 lbs.
 - Ground oats100 lbs.
 - Gluten feed100 lbs.
 - Beef scraps (fine)..... 50 lbs.
 - Fish meal 50 lbs.
 - Cut alfalfa or clover..... 50 lbs.
- No. 2.
- Wheat bran100 lbs.
 - Flour middlings100 lbs.
 - Corn meal100 lbs.
 - Ground oats100 lbs.
 - Fish meal 70 lbs.

With either mash a good daily allowance of green food, vegetables, or sprouted oats should be fed. With the No. 1 mash the fowls consume considerably less green food than when fed No. 2 mash. If a good quality of fish meal is used there is no danger of tainting the eggs. Growing chicks one month old or older will do well on either mash. We usually feed such mashes dry to adult stock, but they may be fed either dry or moist.

Several new customers have commented on the large size, full meatedness, fine quality

A BILLION EXTRA CHICKS NEEDED

U. S. Government asks every farmer to have flock of at least 100 hens. Present average is only 40 hens. 60 more hens per farm means 1,000,000,000 extra chicks needed.

Greatest Money-Making Opportunity in History of Poultry Industry

The U. S. Department of Agriculture appeals for 2½ times the usual volume of poultry products to help make up for the big shortage in beef and pork. The demand for chicks next Spring will be simply enormous, for the 1,000,000,000 chicks to meet the Government's program will be that many more than usual! Why not do your share? Help the farmers get the chicks!

Blue Hen Mammoth Incubators

1. Hatch as high as 87% and 90% of all eggs set.
2. Turn all the eggs in from 5 to 10 seconds.
3. Require only 1/10 of the usual time and work.
4. Give you big capacity in a small space.
5. Double automatic heat regulation.
6. Seven other big, money-making features.

Write for New Free Book, "Hatching and Selling Day Old Chicks"

Let us send you our fine new catalog, telling all about Day Old Chick business, and how little time and work it takes a Blue Hen operator to secure big profit-making hatches, if you will send a little sketch of your cellar, indicating what capacity mammoth you are interested in—we will send you some helpful suggestions along with the catalog.

MORAIN FARM, Poultry Dept. R. R. 16, Dayton, Ohio

and taste of eggs obtained at our farm and remarked on the rich colored "upstanding" yolks. There is a reason. Our hens are all healthy, vigorous stock, well housed and well fed. All eggs are sold twice a week and are therefore "new-laid." We sell direct to consumers only the selected and graded eggs of uniform size and color. All eggs produced are not of "selected" grade, tho we have very few "cull" eggs. All off-shape eggs, soiled eggs, checks, or small eggs are disposed of to trade that calls for lower priced eggs. We never wash an egg that is to be sold, it renders the egg likely to spoil quickly. Heavy feeding with plenty of good grain and mash is the only way first quality, heavy, full meated eggs can be produced. Eggs from hens that are fed on swill, too much "table waste," overmuch vegetable food and moist sloppy mash, are apt to be in the same class with so-called "grass eggs" from hens that are farm and dung heap scavengers. Such eggs are watery and have flabby yolks that flatten, wrinkle and break easily. An egg with a flabby yolk does not stand transportation well and it does not store or keep well. It is also lacking in food value when compared with the well-fed, full-meated egg. One good, large egg from a well-fed hen is equal to two small or watery eggs. If you doubt it, ask any experienced baker.

We find that when eggs get above 50 cents a dozen there is a great deal of difficulty in dealing direct with the consumer. Most consumers will not buy a sufficient number of eggs at one time. They want to run a charge account and have the eggs delivered. They are very apt to call for only three to six eggs at one time and seldom take more than one dozen. When the price gets above 70 cents a dozen they are more exacting in their demands and orders are less frequent and less regular. Where producer must make delivery by parcel post we do not believe he can afford to ship less than three or four dozen eggs at one time. He must charge enough to cover the added cost of packing and delivery. In supplying customers in nearby towns it is better to ship at least 12 to 15 dozen at one time to some responsible person who will distribute them in his neighborhood. House to house delivery is expensive and should not be attempted unless customers are willing to pay for the service. The summer time automobile trade is the most satisfactory, the customer takes the eggs at the farm and seldom quibbles about the price if the eggs are well selected, neatly packed in cartons, and present an attractive appearance. Selling to small retailers, especially when prices are near top mark, is seldom satisfactory, as a half case or full case usually loads them up with all they can sell for a couple of weeks. Consumers have yet to learn the real value of new-laid eggs of quality and to appreciate the service rendered by practical egg farmers. Summer residents and automobilists are the least exacting in their demands and make the most satisfactory customers. Shipping to city retailers calls for regular shipments and it is best to ship at least two cases—60 dozen—at one time. Two cases will travel almost as cheaply as one. It is always well to candle selected eggs—using an electric light, a small flash light will serve—as now and then, even the best of fowls may produce an egg stained white or with noticeable blood clots; consumers do not understand the natural cause of such defects and assume that the egg is old or spoiled. Even if you have supplied the finest quality of eggs to a customer for a year or more, one such egg is sufficient to upst his confidence in your product and deflect his trade to some other producer. If he bought the eggs at a retail grocery he might not give the matter a second thought. That is a peculiar trait of human nature, which must be reckoned with when producer deals direct with the consumer. Many things may be forgiven a retail dealer, but the producer is an object of suspicion, seldom forgiven, and not permitted to explain. Therefore be sure of your product before you label it "selected" quality.

Not so very long ago one of our esteemed contemporaries was burning up its pages with sizzling condemnation of the baby chick industry and spilling much good ink in ridicule of and attacks upon our campaign for "un-retouched photographs" of Standardbred fowl. We are pleased to note that the December issue of this same publication is loaded to the guards with boosts for the baby chick business and the International Baby Chick Association, as well as having many of its pages attractively illustrated with reproductions from "un-retouched photographs," many of which were made by American Poultry Journal's staff artist. Everything must stand its trial in the court of Time, and Time's verdict is for truth and right.

The new campaign now being so vigorously pushed against wet-chilled, ice-packed, so-called "water soaked" poultry, may seem all

right, but is it? What will be the natural result if poulterers are forbidden to chill dressed poultry in ice water, or to ship it packed in ice? Most dressed poultry from the farm, and from the poultry plant, is dressed, chilled and shipped in mild or warm weather. It should be plain enough to anyone that the individual poultryman cannot afford to build and maintain a refrigerating plant with a dry chilling room, nor can he, as a rule, get refrigerator car service for the shipment of his product to market.

The poultryman, except in very cold weather, chills his dressed poultry as quickly as possible in ice water, then hangs it up to dry and ships it dry for short distance shipments. In extremely hot weather, or for long shipments in mild weather, the poultry must be packed in ice, unless refrigerator car service is available, which is seldom.

If the campaign against wet-chilled, ice-packed poultry is carried to the point of prohibiting such methods—as now seems likely—the obvious result is that the poultryman will have to sell his fowls alive to the large poultry killing and dressing establishments. Here he will lose heavily from shrinkage, short weight, and other tricks of the trade. Most of these big poultry killing and dressing establishments figure a margin of from 10 cents to 15 cents a pound live weight to cover their expenses and insure their profits. If they buy fowls at say 15 cents per pound net live weight, they get from 25 cents to 30 cents a pound for such fowls when dressed. Live poultry is seldom weighed immediately on arrival, nor is it fed, but if it arrives in the morning is allowed to sit around until late afternoon before weighing. As the fowls have been on the road for several hours at least, this usually means that the birds are starved for from 12 to 24 hours before weighing. It is on such weights that the returns to the shipper or poultryman are made and the loss from shrinkage is considerable. The gain or advantage is all on the side of the big dressing establishment. The loss all comes out of the poultryman. Forbidding wet-chilling and ice packing will act solely against the poultryman and shipper. Instead of being able to get all the money there is in his poultry meat by selling at dressed poultry prices, he will have to sell his poultry alive for whatever he can get, which will usually be from 10 to 15 cents a pound less than he would receive for the dressed product.

Dressed poultry has been ice-water chilled for many years, and, when properly killed and dry picked, the results have always been good. It has been claimed that water-chilled poultry will not keep as long in storage as dry chilled and that it "soaks up water." To most of us poultry seems to "keep" in storage plenty long enough. As to "soaking up water," anyone who has seen big vats of frozen poultry thawing out in water, before being put on sale, will believe that there is more danger of "water soaking" here.

We have wet-chilled poultry, whenever we had any to prepare for market, ever since 1884, and we have never seen any bad results from the practice. We always wet-chill our dressed poultry in mild weather, and usually in very cold weather, as it is difficult to dry chill poultry properly under farm conditions, without freezing it. We do not care for or want our poultry meat frozen. As soon as the fowls are dry picked—care having been taken not to break the skin—the feet are washed clean, the blood is removed from mouth and throat, head washed clean, and the carcass is placed in a tub or barrel of ice water to chill quickly. When thoroughly chilled the dressed fowl is hung in a cool place to dry. Shipments or deliveries are made dry, unless the haul is one that will last more than three or four hours. For long distance shipments in warm or hot weather we take the dressed poultry directly from the ice water and pack it in clean barrels of cracked pure ice.

Properly dressed poultry wet chilled and then hung to dry, does not water soak. The carcass does not take up the ice water used for chilling. There is nothing unclean or unsanitary about the process when the work is properly done. In fact dry-picked, dry-chilled poultry is far less clean than the properly wet-chilled. Sold for consumption as "fresh-killed" meat, or for reasonable storage, as it should be sold, there cannot be any valid objection to it.

To test the alleged "water soaked" bogey, we dry picked and dry chilled several chickens in November and December, and at the same time we wet-chilled others. We weighed them before chilling and after. The shrinkage in the wet-chilled was in precisely the same proportion as that of the dry-chilled poultry so far as we could see. The wet-chilled carcasses did not "soak up" a sufficient amount of water to move the balance arm on a nicely adjusted standard scale.

This campaign against "wet-chilled" poultry will bear watching and investigation by poultrymen. It is all in the favor of the big killing and dressing establishments and wholly against the best interests of individual poul-

Are You Going To Take Advantage Of It?

The U. S. Government asks that the output of the poultry industry be doubled for 1918 and that everybody eat eggs and poultry to help relieve the big shortage of beef and pork. This will mean the biggest demand for poultry products that the world has ever known!

To hatch and raise your share of the enormous quantity of additional poultry required, you will probably need additional equipment.

Before you buy any new Incubators or Brooders, let us send you our free booklet

"Making Poultry Pay"

This book not only shows how strong and durable Blue Hen Incubators are made—the heavy insulation—the thick outside case with dovetail construction—why the Blue Hen is an all season hatcher—and all about Blue Hen Portable Hovers.

It also contains many helpful suggestions for making money with poultry, and explains why

Four Sizes

80, 160, 260
and
440 Eggs

the demand for poultry products will grow—enormously—year after year for years to come.

Don't Lose the Chicks!

Hatching chicks is only the first step. Next you will want good brooders.

For a flock of 50 to 100 chicks use a Blue Hen Portable Hover, for larger flocks, a Blue Hen Coal Brooder.

Blue Hen Incubators and Brooders have proved a money making combination for others! Why not for you, too? Don't wait till the last minute. Mail the coupon today.

WORLD'S BEST

Single Comb Black Minorcas

T. A. FAULDS, Prop., LONDON, ONT.

Always please their customers. Please read the following testimonial. I send the good ones on the long trip as well as the short:

Mr. T. A. Faulds, London, Ont. Goven, Sask., Jan. 19, 1917.
Dear Sir: The birds are doing fine under the circumstances. They have been at four shows since December 8th, and that is hard on them. Following is a complete list of my wins with the birds I got from you: Moose Jaw, Dec. 1916, 1st cock, 1st hen, 1st cockerel, 1st pullet; Goven, Sask., 1st cock, 1st hen, 2nd pullet, cockerel got frosted a little and was not shown; Saskatoon Provincial Show, 1st cock, 1st hen, 4th pullet, cockerel not shown; Strasburg, Sask., 1st hen, 2nd cockerel, 1st pullet. The cockerel got set back on account of being frosted.
Yours very truly,
J. H. WADE.

Price of the Above Four Birds was \$50.00

T. A. FAULDS : LONDON, ONTARIO, CANADA

Single Comb Black and Buff Orpingtons

won at the late Chicago Coliseum Show on Blacks 2nd cock, 5th hen, 4th cockerel, 3rd pullet and 2nd pen. Also won at the Iowa State Show on both Blacks and Buffs 6 firsts, 2 seconds and 1 fourth on singles and pens. If you want Orpingtons that win at the big shows and have the laying qualities, write me your wants. I have a grand lot of stock for sale.

O. M. BROWN Box G SLATER, IOWA

Stop Losing Chicks!

The loss of chicks thru poor brooding equipment every year is enormous. With poultry and eggs at top-notch prices—and going higher—can you afford to take any chances—to risk big chick losses this season?

U.S. Government is calling upon you to raise more poultry. Don't let faulty brooder equipment rob you of profits and patriotism. Get the Blue Hen and *Raise the Chicks*.

Big Blue Hen Colony Brooder

Will Raise and Save Your Chicks

Plenty of heat for coldest weather. Fire can't burn up too high nor down too low. Curtain arrangement—exclusive Blue Hen feature—gives chicks fresh air but prevents floor draft. Broods 100 to 1000 chicks—requires only a few minutes time a day. Many other features.

trymen and small shippers who dress their poultry for market.

John W. Dwinell, of Danvers, Mass., is feeding the following war mash to his Rhode Island Reds and says the hens eat it greedily:

	Per 100 lbs.
300 lbs. Schumacher stock feed.....	\$2.90
100 lbs. gluten feed.....	2.65
100 lbs. Canada bran (white).....	2.35
50 lbs. of A. A. C. Co. beef scraps.....	5.00

This mixture costs him a little over \$2.90 per 100 lbs. By adding 25 pounds of fine charcoal and 12 quarts of dried beet pulp, the mash costs a little less than \$3 per 100 pounds. The mash he had been using cost \$3.75 per 100 pounds and he believes that the new mash is giving just as good results at an attractive saving. Mr. Dwinell asks for a formula for a good cheap scratch grain mixture. We have not found anything better than the one we have been using for some time: Ten bushels of whole corn mixed with ten bushels of heavy oats. This is a mixture containing 560 pounds of corn and 320 pounds of oats. At early December prices of \$2.57 per bushel for corn and 90 cents per bushel for oats, this scratch grain cost us about \$3.96 per 100 pounds. We believe that fine cut clover or alfalfa meal would be better than dried beet pulp in the mash mixture given above.

A Maryland fancier writes us: "It may be all right to work the plan for forced layers, but for my breeders I think it best to let nature take its course in order to obtain hatchability in eggs later on. Out of 300 hens for breeders I got only 8 eggs yesterday (December 7). I would not dare to force them. By the way corn is advancing some here. It was \$5.50, but now is \$6. Last year corn opened at \$3, but this year at \$6. "Do your bit and I'll do mine" is all fine to write about, but I am wondering how it is going to work out for all concerned. Personally I am looking forward to a good season. Experiment stations say it takes from about 20 to 25 pounds less feed to keep a hen than I have ever found. Mine eat nearer 100 pounds of grain and mash than the 55 to 74 pounds mentioned in station reports."

Wallace's Farmer says editorially, in issue of December 7:

"At a meeting of the agricultural college and experiment station representatives at Washington recently, both Secretary of Agriculture Houston and Food Administrator Hoover made addresses. Reading through the lines it seems that these two departments of the Government are getting closer together in the work of production and distribution.

"This is greatly to be desired. There ought to be the closest co-ordination. In fact, it seems to us that they should be under one head, if such a head could be found big enough to do the business. Production and prices are inseparable. It is an absurd and hopeless situation when one arm of the Government is fixing prices of farm products and another arm undertaking to stimulate production, and the two are working independently.

"Agricultural conditions are becoming more and more serious. The terrible disappointment of this year's corn crop has greatly aggravated the situation. It is time for the people who are in control to get together and map out a systematic plan for increasing production by assuring the farmer that he will get what President Wilson has defined as a just price for the things he produces."

I firmly believe that greatly increased poultry and egg production is a very vital national necessity during the coming 1918 season. There is abundant evidence to show that the world may have to face a serious meat shortage, possibly other food shortage, amounting to famine, within the coming 1918-1919 winter season. It is important that every citizen,

WANTED

2,000 Ancona Pullets

Must be good, vigorous stock, suitable for egg farm. *Sheppard Strain preferred*. Will buy in large or small lots. Please state how many you can supply and price. Also size, quality and age and whether rose or single comb.

Eggs for Hatching

from the most carefully selected matings. Our breeding pens this season are made up with the finest lot of stock that we have ever owned. For size, strength, vigor and laying qualities, together with the true Leghorn type, they are unequaled. Place your order early and get in line with the most profitable era ever known in the poultry business. Send for free catalog, giving prices and complete description of the stock, together with testimonials from satisfied customers in all sections of the country. Address

C. H. WYCKOFF & SON

AURORA, CAYUGA CO., NEW YORK

who can do so, should "do his bit" to increase food production and particularly to increase the production of poultry for meat, and pullets for egg production.

But I am not in sympathy with those who believe that this increase should be brought about by "appeals to the selfish interests of producers" thru the circulation of juggled figures representing alleged profits, or other methods of inflation. I am getting rather fed up on all this "patriotism at a profit" and "production as a patriotic duty" talk, while several groups of selfish interests continue to exploit poultry keepers and the poultry business to fatten their profits. It has been rightly said that no individual, or big business, should be permitted to take advantage of the war to pile up big profits and get rich out of the world's difficulties.

Our boys are giving their bodies and their lives for the country and for the welfare of the world. They receive their food and clothes and a very modest wage. Certainly all other citizens, and our various business houses, should be willing to "do their bit" and keep within the "fair and just profit" which our President has several times mentioned. We believe that most of our citizens are doing their bit and trying to keep up with the mighty team work required of all of us; but unfortunately all hogs are not confined to sties and stock yards. Speculators and other profiteering pirates have been busier than bees ever since we got into the war.

The poultryman does not need any appeal to his patriotism, but he does need relief from the pirates who prey upon him and he should get a square deal from the public. I know many poultrymen who are carrying their poultry at a heavy loss and who will endeavor to keep up production in 1918. They have plenty of patriotism, courage and patience, but unfortunately these desirable qualities are not legal tender for payment of grain bills or taking up loans at the bank. These poultrymen will increase production, will continue "soldiers of the second line" if they are permitted to do so by circumstances, all they ask is a soldier's pay—a living plus their actual expenses. Most of these men will say "We do not ask any real 'net profits' during the war, we ask no more than a guarantee of production costs and a living wage."

If I handed you a bag of coin

you would jump at it mighty quick. You should be just as anxious to take advantage of the money-making possibilities of

SUNNYSIDE BIRDS

They make money for me and they will do the same for you.

Brown and White Leghorns, Reds Barred and White Rocks, White Wyandottes

Box A, FORT WAYNE, INDIANA, U. S. A.

FIRST PRIZE & COLOR SPECIAL S. C. RED COCKEREL NEW YORK STATE FAIR 1917 BRED AND OWNED BY OWEN FARMS VINEYARD HAVEN MASS.

Fifth prize White Orpington hen at Chicago Coliseum Show, December, 1917. Owned by Frank W. Jacobs, Anderson, Ind.

My Hens Lay Fine Now.

All of us poultrymen with years of experience behind us know very well in order to make our flocks pay the biggest profits thru the market egg channel we must make them lay plenty during the winter months, when one dozen eggs bring as much as two or three dozen in spring and summer.

You and I also realize that to do this successfully it is necessary that we feed our hens other foodstuff than just corn and wheat, keep them comfortably housed and provide them with sufficient drinking water.

I have fed all kinds of grain in different ways and gave them all the care I knew how, including different kinds of green food, such as cabbage, potatoes,

mangels, beets, etc., but nothing that I have ever tried produced such good returns as the feeding of sprouted oats. Sprouted oats seem to be more relished than any other green food and I am also convinced that it contains to a greater extent the elements to keep the hens in good condition and make them lay than any other addition to the grain rations an egg-making feed, but are not liked very well by the hens. Raw oats are also often the cause of hens getting crop bound. Now with the help of my sprouting machine I can easily convert this hard-to-digest egg feed into the finest and juiciest green feed imaginable. When sprouted it goes farther, is a positive health regulator, is cheaply produced, I had provided for my hens.

Oats in a raw condition are good for

requires little time and what is most important, the sprouts absorb the nutritious elements in oats. Since feeding sprouted oats there are no more disappointing egg-gathering expeditions to my hen house, and I hope that these lines will induce other poultrymen to get in line and give their hens what they need and I am sure no more complaints will be heard as to unproductive hens.

Efficiency Day-Old Chicks

The kind that grow and pay. Many varieties to select from at appealing prices. Send for catalogue.

Conservation Scratch

The New Wheatless Feed for Chickens

Conserve the Nation's Wheat Supply and Increase Poultry Production

CONSERVATION Scratch is practical and patriotic. It saves the wheat and gives your fowls a feed that has all the food value of a wheat feed. It is nourishing, wholesome and energizing.

Contains Everything But Wheat

Conservation Scratch is not an experiment nor a "slapped together" makeshift. It is the tested and successful result of close study by poultry feed experts—a scientifically balanced combination of corn, kafir corn, milo maize, barley, oats, buckwheat and sunflower seed. It contains everything but wheat, and the best poultry feed authorities everywhere unanimously declare that it is rich in egg and meat-producing qualities. Chickens like it—thrive on it—produce on it.

Thousands of practical and experienced poultry raisers are feeding *Conservation Scratch* and saving money. They are getting splendid results with it and increasing their yields and their profits. *Conservation Scratch* is the solution of a big feeding problem and the answer to the demand for the right kind of a wheatless feed.

Big Profits in Eggs and Poultry

The nation needs more eggs and more poultry. It is looking to the poultry raisers of America to offset the serious shortage of beef, pork and mutton by increased egg and poultry production. There are big profits—big inducements to poultry raisers who keep good stock and feed judiciously. They can render a great service to the country—to all the world, and make big money. *Conservation Scratch* will help. Order

Conservation Scratch at once. It means wheatless days for the chickens, but not eggless days nor under-nourished fowls. Conserve the wheat, but help keep egg and poultry production up to the maximum by feeding *Conservation Scratch*. Order from your dealer today. If he cannot supply you immediately, write us and we will see that you get *Conservation Scratch* in any quantity you wish.

Chas. A. Krause Milling Co. Milwaukee, Wis., U. S. A.

Krause Mash is another famous Krause feed. Use it for your mash feed. It contains all the necessary elements for an effective mash—promotes rapid growth, helps increase egg production, aids in securing maximum number of fertile eggs. Other Krause poultry feeds are *Krause Scratch*, *Blue Top Scratch*, *Cream City Scratch* and *Krause Chick Feed*.

Horticulture for Poultry Keepers
Conducted by Thos. F. Rigg, Iowa Falls, Iowa.

ALL materials used in spraying fruit trees and vines will cost much more next spring than they did last. In fact, they are far higher in price now than they were early this season. Prices are going up every day. I have bought all my supplies for next season and figure I have saved considerable money by so doing. Arsenate of lead and sulphur are especially active in advance in prices. "A penny saved is a penny earned," and it is "good business" to buy these materials now.

The year just closed has been a banner year for the fruit growers, and I figure 1918 will be even better, so far as prices are concerned. I have never been a boomer as to prices of apples. I have held, and do so now, that it is better for the producer of apples to get a fair price rather than a very high price. The people are willing to pay a fair price for apples and if they can so buy them they will consume a large amount of this fruit; whereas if the price is exceedingly high, it means a short consumption. The reason why the apple market is not consistent and why the markets are not properly supplied, is that the growers are not properly organized. But to cover this would require more space than is assigned me in these columns. The selling end is the big end of apple production and successful orcharding.

At this writing eggs are selling at 50c a dozen, retail, in our town. This is the highest price they have ever sold for here and our farmers are wishing now they had not sold so many of their hens. At this price there is big profit in eggs to farmers here in the corn belt. The price of hens has dropped to 12 cents a pound, owing, in part, to the fact that farmers and townspeople are flooding the markets with this class of poultry.

I have read your article in American Poultry Journal in regard to the use of nitrate of soda as a fertilizer. I have some soft maple shade trees which I planted some twenty years ago. Among them there was one which showed very little signs of life. I put a two-foot six-inch tile on each side of it to give it plenty of water, but it eventually died. It was in the same kind of soil, yellow clay, as the others, about sixteen feet on either side of it. I also used water in which horse manure had been soaked to fill up the six inch pipe, but it did not seem to do any good. Four years ago I had another tree of same kind planted in its place, but it is not doing any better. In spring it makes a few leaves, but by the latter part of August they are almost all gone. As I have some nitrate of soda on hand, I thought perhaps I would dose it with some soda. What would you advise?
Illinois. Jacob Schenck.

It looks as tho there was something not suited to the growth of these trees where the two have refused to grow. The fact that trees of the same kind do well near this spot would indicate this. Make a very thoro examination of the soil next spring. If you find anything wrong, take out a lot of the dirt and fill the hole with good loam. Nitrate of soda, properly applied, is very beneficial. Do not put this around trees or on any

crop, before growth starts. Wait until growth has started. Then use the nitrate very sparingly. I cannot tell you just how much to use, because I do not know the size of your tree, but think you should not use over half a pound of soda to each tree. Scatter the soda on the ground covered by the roots. This will be what the spread of each tree shows. Put the soda on ground just before a rain if possible. Do not use it in exceedingly dry weather.

Would like your advice as to how to care for an asparagus bed from planting roots to cutting. I have a large bed of asparagus on this farm and have never had any experience with the growth and the care of it. Some say to manure it liberally now.
Michigan. Ralph De Moat.

It is best to make a trench about two feet deep and fill in about six inches of well rotted stable manure. Set the plants in same, covering crowns about two inches. As they grow gradually fill the trench. Then thoro and very heavily cover the bed with stable manure, taking care not to cover the stalks of the asparagus. Each season mulch very heavily with coarse stable manure, never letting the litter get so low that the ground will show in the bed. It is essential that the bed be very heavily fertilized just after cutting is stopped. It is then that the asparagus needs the fertilizer most. It needs it in order to make growth that will give you the big shoots for cutting the next

season. Of course, you should mulch now if you have not already done so. This is the best way to handle a home garden asparagus bed. Of course, where it is raised by the acre cultivation is necessary. If you will handle your bed of grass this way, you will surpass your neighbors in the production of this splendid vegetable.

* * *

I cannot resist the temptation to pay my respect to some of the fellows who are now so prominently on the firing line. These fellows have for years been knocking the American Poultry Association and have succeeded in driving from the association many fanciers and causing some old-time fanciers to look upon the association as something of no avail to them and in whose circle they can find nothing congenial. These fierce fighters for the cause of more poultry have certainly had a change of heart and their actions bear all the marks of the ill-directed and poorly aimed fire of the raw recruit. For years

FIRST PULLETT NATIONAL W.W. CLUB PILETT-BUFFALO
FIRST PULLETT and CHAMPION FEMALE - GRAND
CENTRAL PALACE - NY 1915 - Seed and raised by

F. B. Williams, Naugatuck, Conn., is proprietor of West Mountain Poultry Yards.

they wandered in the wilderness of sin, and opposition to the association when it was directed by the fanciers who organized and sustained it. Now they are shouting the gospel of the new order of things with the same fervor that the sinner displays in his first kneeling at the altar. So runs the world. It is only a question of time before a man's sin finds him out. It was ever thus.

"Solomon and David led merry, merry lives;

They had many, many concubines, and many, many wives;

But as old age crept upon them, they had many, many qualms—

So Solomon wrote the Proverbs and David wrote the Psalms."

* * *

My advice to Iowa planters not to plant apple trees on Doucin stock, commercially, has been challenged by a number of writers. I submitted the question to Prof. Beach, of the Iowa State College. Here is his reply:

I have your inquiry of November 12 regarding the comparative value of Doucin and standard stocks for the apple for planting in

**Feed the
YEAR-ROUND
EGG
MAKER**

Blatchford's
"FILL
THE BASKET"
EGG MASH.

THE acute egg famine which faces the nation must be met. Winter eggs have already been contracted for at 75c and \$1.00 per dozen. Every egg that can be produced, must be produced, without either forcing or fattening the birds, so they can enter the breeding season filled with rugged health and vigor—thus giving chicks that will live.

Lay the foundation now! Feed Blatchford's "Fill the Basket" Egg Mash. It contains a higher percentage of nourishment to turn into eggs than any other feed you can obtain.

It does not force—it helps!

BLATCHFORD CALF MEAL COMPANY
WAUKEGAN Dept. A ILLINOIS

Free!

A 50-gallon barrel of Scalecide free to any any one who will suggest a *fairer* guarantee than that given below.

"SCALECIDE"

As proof of our confidence and to strengthen yours, we will make the following proposition to any fruit grower of average honesty and veracity:

Divide your orchard in half, no matter how large or small. Spray one-half with "SCALECIDE", and the other with Lime-Sulfur for three years, everything else being equal. If at the end of that time, three disinterested fruit growers say that the part sprayed with "SCALECIDE" is not in every way better than that sprayed with Lime-Sulfur, we will return you the money you paid us for the "SCALECIDE".

Send for new free booklet, "Fruits in Fall Spraying".

LOUIS H. PERRY Route No. 8 CLAY, N. Y.

Iowa. In reply will say that neither the Doucin nor the Paradise Dwarf apple stock is sufficiently hardy to be reliable in any part of Iowa. That is not saying that trees grafted on these stocks cannot be grown in Iowa. We have planted a large number of them in our orchards here at the Iowa Experiment Station at Ames and some of them have persisted. A very large percentage of them, however, has gone out within a comparatively few years after planting. Those which remained have probably become established or partly established on their own roots; that is, roots sent out from the scion above the stock. If one wishes to use the Doucin stock or the Paradise stock for trees to be planted in the dooryard or garden, and will be sure to "pet" them by mulching the ground to the depth of not less than a foot every winter, extending the mulch out beyond the spread of the branches, doubtless such dwarf apple trees could be grown with a good degree of satisfaction in any part of Iowa, provided that the top is of some hardy variety as Wealthy, Yellow Transparent or Duchess of Oldenburg. If this plan is followed, care should be taken to protect the trunk from injury by mice and rabbits.

S. A. Beach.

I hope all prospective planters will be guided by the advice given by Prof. Beach.

* * *

Have noted your statements about Royal Purple raspberry, but frankly doubt if it excels Columbian in productiveness under average conditions. Green's Nursery Company notes an instance where Columbian produced from 1,350 feet of row, 6 bushels. This is at about the rate of one and one-half quarts per foot of row. Please give address of nursery propagating Royal Purple. I get many catalogs, but never saw it listed in any of them. An old fruit grower at Maquoketa, Iowa, where I was reared, writes he has tried out 30 varieties of plums and considers Terry the handsomest and best of all, altho he regards gold as very good. You should know something about plums. Iowa and Minnesota are great plum states. I have bought all varieties of plums coming into Chicago market and consider York State Prune best for canning.

Illinois. W. V. Smith.

I have stated that on our grounds Royal Purple raspberry will year in year out outyield the Columbian. For us it is the better berry in every way. My advice is and has been for growers (except those in the far North) to try out the variety. I have discarded all other varieties. Theory has no place in my fields. It is production I am seeking and this I demand of every tree or bush on my place.

Terry is a good plum, but not for one moment would any authority put it in the same class with Omaha, America, Endicott, Wyant and a number of others. It may be the best of all for some growers, however.

* * *

On your recommendation as given to others, I am going to try Royal Purple raspberry in the spring. The first two years we had the Columbian we thought they were all that could be desired, but since then have had much trouble with winter killing. Would like an answer to following questions:

1. What can one do to make tips of Columbians root? Have had some covered since September 1 and at present, November 13, not half have rooted. They are covered with a little dirt and stone to hold in place, about six inches from tip of cane.
 2. Do you know anything of the Herbert Red raspberry? I have two catalogs that claim they are better than Cuthbert.
- New York. E. B. Cass.

I have found it best to lay down canes of the Columbian in the fall, covering the cane the entire length with about four to six inches of dirt. First break half way thru the cane just below each

DISEASES OF POULTRY

By D. V. Salmon. 252 pages; 72 illustrations. Every poultryman needs this book. The cause, symptoms, care and remedies for each disease fowls are subject to are given. Price 50c. American Poultry Journal Pub. Co., 542 S. Dearborn St., Chicago, Illinois

fruit bud. This bruising of the cane causes it to send out shoots at the bruised points. I used to be very successful in so doing.

The Herbert raspberry is not nearly so good as the Cuthbert. The Herbert seems to very notional in its likes and dislikes. In some soils it does fairly well. I suppose there are conditions under which it might be the best berry. I advise you to stick to the Royal Purple and the Cuthbert.

* * *

I have an offer to buy a farm of 80 acres, with 10 acres in bearing apples, in Manistee County, Michigan. Not having much experience, thought you would be good enough to advise me what to do. Would it be profitable for me to buy the place and hire an experienced man to run same for me? What does an acre of apples average and is there much care involved in it? The farm is in the Michigan fruit belt. Poultry would have the run of the orchard. Do you consider it unsafe on account of the spraying of trees.

New York. Josephine Engerie.

Judging the proposition from the information contained in your letter, I am frank to say that I do not believe it would be advisable for you to buy this farm. Your letter indicates that you know nothing about apple production or general farming, and apple growing is indeed a business which takes lots of hard work and a knowledge of the how-to-do-it. You would find it rather difficult, in fact very difficult, to secure the services of a man who would be a good orchardist and an experienced seller. Of course such men can be secured, but no one with ten acres of orchard can afford to pay for such service. I want to give you the advice asked without wounding you and hope you will accept my findings in this spirit. Apple orchards yield all the way up to \$1,000 net profit an acre. It depends entirely upon the grower. A net profit of \$100 per acre is low for a properly conducted orchard in the best fruit sections of the country.

I have never had any trouble with the poisonous spray injuring poultry while occupying orchard. Of course, if the work is carelessly done, there is danger of chicks and adult fowls getting enough to poison them and perhaps kill them.

* * *

Twig blight has been long regarded as one of the most to be dreaded infections to which fruit trees are subject. We read with pleasure these encouraging words from Horace Roberts, New Jersey. "I have," he says, "observed twig blight for years; it seems to me that it is something nearly every tree has to go thru with, like measles in children. After the tree has had the disease it seems to acquire immunity for a period of years. I know that some people will take issue with me about these statements, but I have had the twig blight in my orchards for years past and it has never done much real injury." — American Fruit Grower.

I do not want to be understood as accepting the theory advanced by Horace Roberts. However, my experience with a Rankin apple tree on my home grounds sustains his theory. For several years this tree was annually damaged by twig blight. Of course, I sprayed it thoroly and this held the blight somewhat in

Feed

SUCRENE
for More Winter Eggs

With proper housing and ordinary care, hens will lay in winter—provided they are supplied with correctly balanced egg-making nourishment.

In *Sucrene Poultry Mash* and *Sucrene Scratch Feed* we offer poultrymen, at moderate cost, the nutrients hens require for maximum egg production and body maintenance, winter and summer.

We know these feeds to increase the egg yield of hens, through many test feeds in our own experimental poultry yards. We make no claims you can not verify in your own experience.

Here Is What You Get for Your Money

SUCRENE POULTRY MASH is composed of meat scraps, alfalfa meal, and palm kernel meal, high in digestible protein; corn feed meal, wheat bran, corn distillers' dried grains, linseed meal, calcium carbonate and a little salt. Guaranteed analysis: 18% protein, 3½% fat, 50% carbohydrates, 12% fibre.

SUCRENE SCRATCH FEED contains corn, wheat, kaffir, sunflower seed, buckwheat, barley and oats. Guaranteed analysis: 10% protein, 2½% fat, 65% carbohydrates, 5% fibre.

Variety — Quality — Economy — Results

These are the four points of merit in *Sucrene Poultry Feeds* which have made them the most popular feeds in the market today in their line.

Give your hens a chance to prove that *Sucrene Feeds* enable them to give you more winter eggs than on any feed you ever fed.

Order a 100 lb. sack of each feed from your dealer. At the present price of eggs you'll find it the most profitable investment you ever made. If your dealer does not handle these feeds write us his name and we will see that you are supplied.

Fill out and mail us the coupon for valuable literature on poultry feeding.

check. Two years ago the tree showed no blight and yielded an immense crop of fruit. Again this last year there was no sign of blight, the tree giving me a satisfactory crop of fruit.

* * *

In answer to A. H. Bullock, Utah: The Stark Early Elberta peach was originated by Prof. Dean Sumner, of Kaysville, Utah. I advise you to consult Prof. Sumner.

UTAH LEGHORNS

It is no longer necessary to send East for the best in

S. C. White Leghorns

We have the best that money can buy right here in Utah. I have four 300-egg hens in one pen this year. I'll tell you what you do—

Send Me \$5 each for one or more cock-erels from my 200-egg hens, and if you don't think they are the best value you ever saw, return them. I also have

Show and Utility Stock

\$3.50 to \$25, and can please anyone. They win and they lay. Eggs, Baby Chicks and Eight-Week Old Pullets in Season. If you don't want to order from this ad, write me your wants and send for catalog.

EDWIN BRICKERT, BEAVER, UTAH

Capt. Ede is a better peach than the old Elberta. It is now hardy and as good or better in fruit, and more handsome.

I cannot advise you in regard to the planting of apricots. Consult your state authorities.

Senator ought to be a very profitable apple for you to plant. Senator, Delicious and Jonathan would be a good combination for you. Try out a few of the Golden Delicious. It is a better apple so far as quality is concerned than the grand old Grimes Golden.

Unless you have an established local market do not plant heavily of crab apples. The Florence and Excelsior would probably be best for your planting.

* * *

On the 26th of November I went out in the woods and uncovered some wild crab apples which had been covered with oak leaves since the trees shed their foliage last fall. In the woods stands a wild crab apple tree, so situated that the wind deposits large quantities of leaves about it each fall. And every fall as late as possible I go to this tree and get some of the thoroly ripened crab apples. You will, no doubt, say you could not eat the wild crab apple. Did you ever eat one which had been thus thoroly

ripened in accordance with the way which I think the Lord intended crab apples to be ripened? No? Well, then you are no judge as to the quality of the fruit. It is truly delicious to eat out of hand, or made into sauce. I am very fond of them and have been searching for years for a tree which bears large fruit. So far I have not found it. I would like to transplant such a tree in my home yard and cultivate, prune and spray it, and see what I could make out of it.

* * *

I am greatly interested in the development of the new and better sorts of potatoes. Next season I shall plant from twenty to thirty varieties or, rather, old kinds and seedlings. There is a lot of pleasure in this kind of work and it is of service to the whole people too, or will be if I can develop even one better variety than we now have. The potato is sure to be a more profitable crop each year. I do not believe we know very much about potato culture, even tho the world has been raising these vegetables for so long a time. If any of my readers in the far North or in our northern states have a strain of any variety that is especially productive and of good quality, I shall deem it a favor if they

YOU TAKE NO RISK IN BUYING AN

Ironclad
THE IRON COVERED INCUBATOR

If you are going to buy an Incubator this year, it will save you time and money to order an Ironclad first. Why not own an Ironclad outfit when for only \$12.50 we guarantee to deliver safely, all freight charges paid (east of the Rockies) both of these famous reliable machines, fully equipped, set up ready for use.

We Give 30 Days' Trial Ten-Year Guarantee—Money Back If Not Satisfied

You have nothing to risk. We will send machines—let you use them 30 days—urge you to compare them in quality of material, hatching ability, workmanship and price—and if you don't find them satisfactory, send them back—we'll pay the freight charges and return your money. You are absolutely safe. We have to do as we advertise. If we didn't the publishers of this paper would not carry our advertising.

Both for **\$12.50** Freight Paid East of Rockies

150 EGG INCUBATOR CHICK BROODER

When an incubator is constructed of material of this kind it gives you the strongest and most durable incubator that can be made—a machine that will not warp or shrink, or open up at the seams, as every joint is lapped over with our galvanized iron covering—giving you a machine that will last a life time. Don't class this big, galvanized iron covered dependable hatcher with cheaply constructed machines. Ironclads are not covered with cheap thin metal and painted, like some do to cover up poor quality of material. Ironclads are shipped in their natural color—you can see exactly what you are getting. Don't buy any incubator until you know what it is made of. Note these Ironclad Specifications: Genuine California Redwood, triple walls, asbestos lining, galvanized iron covering. Galvanized iron legs, large egg tray, extra deep chick nursery—hot water top heat, copper tanks and boilers, self regulator, Tyco's Thermometer, glass in door, complete book of directions, and many other special features fully explained in free catalog. Write for it today or order direct from this advertisement and save time.

will send me one potato by mail that I may put it in my experimental plot next season.

* * *

As is their custom, my Gravenstein apple trees kept up growth until exceeding late in the fall, thereby making wood which did not mature and which will winterkill. I am going to cut out these trees.

* * *

Can you recommend a good periodical devoted to gardening? I greatly enjoy you writing in American Poultry Journal and consider it altogether the best paper published and have taken it for a number of years. Could not get along without it. Your department is an acquisition to the Journal.

Thos. E. Winslow.

Lidcombe, Sydney, New South Wales.

I want to thank Mr. Winslow for his kind words and for the encouragement he gives to all those who are working so faithfully to make AMERICAN POULTRY JOURNAL what Mr. Winslow says it is: "The best Poultry Journal." I have received no letter I value more than this and will take genuine pleasure in complying with Mr. Winslow's request to send him copies of American gardening magazines.

* * *

I am in receipt of a long letter from Lloyd R. Mayor, Ohio, in which I am taken to task for saying a good word for the Black Ben apple. I stand squarely by what I have said in favor of this great big, beautiful and not high quality apple. The tree is an immense bearer, the apples are large and beautiful. I think the variety will give more apples to the tree every year than any other variety. The fruit will keep better than most kinds. As an apple to send into the South for winter use it has all others beaten. As a fruitstand seller it's in a class by itself. It can be sold at a big profit to the grower for considerably less money than can the better quality sorts. There are thousands of people who can afford to buy Black Ben who cannot afford to pay high prices for extra quality apples. Why should they not be supplied with apples? The Black Ben has its place in commercial apple growing and any man who denounces it has but little idea of the condition of the apple market, the needs and wants of the people, and certainly little regard for the great number of good people who count it a privilege to buy their apples.

* * *

One of our groccrymen last week received a car load of Baldwin apples from a New York grower. I saw a barrel out of this lot opened by a neighbor and such a motley collection that barrel contained! I never saw such an assortment of apples in one package. Little ones, scabby ones, bruised ones, and the most of them I would consider practically worthless. If the apple grading law of New York is not observed any more than the shipper of this lot of apples observes it, it is certainly a farce.

* * *

I want to thank Ramson W. Hull, of Delaware County, New York, for his very kind letter. It does me good to receive such letters and to thus be told that my efforts to make this department in AMERICAN POULTRY JOURNAL interesting and instructive are appreciated by so many of my readers.

* * *

May every reader of the AMERICAN POULTRY JOURNAL be healthy, happy and prosperous during 1918!

Expert Opinion

as well as that of poultrymen everywhere—the man who keeps a few hens in his back yard right on up to the commercial raiser who has thousands in his flock—is so favorable that over 49% of our shipments in 1917 went to people who had already used and knew all about

It is a finely powdered, snow-white, mineral pigment combined with a germicide neither poisonous nor caustic but many times stronger than pure carbolic acid. It kills lice, mites, fly eggs, etc., and the germs of disease that affect poultry and livestock. It is packed in different sized packages, does not spoil by standing, and is ready to use as soon as mixed with cold water. It can be applied with either a brush or sprayer. Will not blister, flake or peel off. Has no disagreeable odor. One gallon treats 250 square feet.

Paints Snow White & Disinfects at Same Time

Questions and Answers

Conducted by
Prince T. Woods, M. D.

Questions about poultry are answered in this department free for all readers of American Poultry Journal. Where answers are desired by mail, a stamp for reply is requested. Address all query letters to the managing editor, Dr. Prince T. Woods, Lock Box 4, Silver Lake, Mass.

Toe Nails Lost by Frosting.

Q. I have a R. C. White Leghorn cock, bought of —, and so far as I can see he is all right except all of his toe nails but one on his right foot are missing. The remaining nail turns up and points to the right. I paid \$3.50 for this bird and the breeder claims he shipped me a good bird, and that the toe nails were lost last winter by foot being frosted. Did he send me a good bird or has he sent me a cull?

Spokane, Wash. **T. B. H.**
A. If you bought the bird for breeding and he has nothing else the matter with him, do not think you should complain. It is not uncommon for cock birds to lose toe nails thru frostbite. Unless the foot is seriously injured so as to interfere with service, the bird should breed all right. Of course you cannot expect to buy best value in breeding quality at that figure.

Lice.

Q. Please give a good remedy for lice on chickens. I have a flock of 700 White Leghorns.

Monterey, Cal. **S. A. R.**
A. Send to Poultry Investigations, United States Department of Agriculture, and ask for bulletin on poultry lice and mites. Dusting with Persian pyrethrum powder or with flowers of sulphur is effective, but would be some job with so large a flock. Better supply dust

COCK, winning first shape and color special National Club Meet Albany, N. Y. 1913
WEST MOUNTAIN POULTRY YARDS-Naugatuck, Conn.

baths in sheltered location near each poultry house, and keep the "dust" a trifle moist. Use crude petroleum on roosts and droppings boards, also for spraying cracks in wood work and to sprinkle on floors. One pound of naphthalene flakes (crude) dissolved in a gallon of kerosene makes a good lice-killing spray for use on roosts and drop boards. The kerosene will not quite dissolve all of the flakes.

Wants to Keep One Breed Only.

Q. I want to know how to pick out one breed and raise only one breed. I like every Standard breed and would like to have them all if I was able. I had a pen of four hens and a cock each of five breeds—five pens in all—and they cost me \$25 a pen. I have raised some of all and I like one just as well as the other. All are good. I went to a poultry show and liked every breed and variety I saw there. I have no liking for mixed stock or dunghills. I did not want to sell one pen, so I sold all five breeds and am going to start again. If you can help me to pick out just one breed I will be very much pleased. I like poultry. I could work around with them from morning until night and never get tired of studying them and caring for my fowls.
 Little Rock, Ark. **G. W. M.**

A. We can sympathize with you. That is real genuine "hen fever" all right. But, pick one breed? We haven't been able to do it ourselves yet. We did decide to breed Black Langshans exclusively a while ago, but we couldn't make up our minds to turn down the White Plymouth Rocks and so we still have both. We do not know what five breeds you tried—you did not say. Why not put the names of those five breeds, each on a separate slip and place them in a hat—then blindfold yourself and draw one slip to decide the choice of a breed. You can't go wrong, for you like them all. Our reason for keeping two breeds, however, is not so much that we are not willing to make a choice between the two, as the fact that each of the breeds possesses qualities which the other lacks and so gives us a most desirable all the year around poultry supply. For maximum results as a successful fancier, from a show room and commercial point of view, we believe it is better to specialize with one breed.

Feeding Formulas.

Q. Are the following scratch feed and mash mixed in proper proportions?

Scratch feed: 100 lbs. wheat, 50 lbs. cracked corn, 60 pounds of whole oats.

Mash: 100 pounds bran, 50 pounds each white middlings, corn chop and beef scraps; 25 pounds gluten meal.

Hchester, Md. **F. H. K.**

A. The mash is an excellent one. Do not think there is enough corn in the scratch feed, even for normal times. Believe that wheat in any such proportions will be forbidden. Would make that scratch mixture of corn and oats, bushel for bushel. If you can

MANKATO INCUBATOR

6 Big New Features

HERE is the dependable, time-tested, quality Mankato Incubator—the old standby of thousands of successful poultry raisers. Large Oil Tank—one filling to batch. Heavier, perfectly insulated case construction. New, Double-Sure End Regulator—clear table top. Double Heating System—Hot Water and Hot Air, better than ever with more heat radiating surface. Wonderful new Automatic Ventilating System. No adjusting, a chick life saver. Made by experts of 28 years' experience.

Write Today for Our New Catalog

telling all about this wonder of a machine, the outgrowth of experience on our own poultry farm. Mankato Incubators have been rigidly tried out and users are enthusiastic. But, get our book and find out for yourself what a really wonderful machine this is. Send for this big 1913 illustrated free book today.

THE BELGIAN HARE GUIDE

is acknowledged the best and most reliable BOOK published on the Rabbit Industry. Over 75000 sold in the last eight years. Price 25c including sample copy of our paper containing Rabbit Department. **INLAND POULTRY JOURNAL, 205 Cord Bldg., Indianapolis, Ind.**

get low grade wheat, below present milling quality but good enough for poultry feeding, add about 30 pounds to each two bushels of the corn and oats mixture. Be cautious about feeding damaged wheat—much of it is pretty poor stuff and unfit for poultry feeding.

Sound Wheat.

Q. Corn here is full of moisture and very moldy. Can get very good wheat. Would you feed wheat freely?

J. C. Omaha, Neb.
A. All sound wheat is needed for the manufacture of flour and other food for human beings. The announcement has been made that all of American wheat beyond our needs for home consumption until the next crop is harvested has been sold to our Allies and much of it shipped. Sound wheat should not be fed to poultry or other animals. Before you use wheat for poultry feeding, have the nearest County Agent or other food administration official pass upon its quality and decide whether or not it is fit for milling purposes or may be used for poultry and stock feeding. It is absolutely necessary to conserve all good wheat for human food.

Poultry and Corn Equivalents.

Q. I note that the minimum price of hogs is fixed on a basis of corn equivalents, allowing that 100 pounds of hog on the hoof is about equal to or calls for the equivalent of thirteen bushels of corn. That places the production cost of one pound of pork at about 7.28 pounds of corn. Can you give me an estimate of poultry and corn equivalents, figuring feed alone and also feed plus all labor and overhead expense? Would like to see this figured out for a laying hen, for eggs and for poultry meat.

C. T. Baltimore, Maryland.
A. Of course the quantity of feed required, the labor, and the overhead expenses all vary with the locality and the conditions under which fowls are kept. We believe that the following estimates will prove approximately correct as average equivalents. All feed required for one laying hen per year is about equal to 100 pounds of corn. The total costs of maintaining one layer per year, all feed, labor and overhead expenses, will about equal 150 pounds of corn. The average feed cost of a dozen eggs, counting the entire year, will be about 10 pounds of corn. The average total cost of the dozen eggs, counting all expenses of the year, will be about 15 pounds of corn. The feed cost in the production of an eight-pound roasting chicken will be about 64 pounds of corn. The total production costs, including all expenses, for producing the eight-pound chicken will about equal 100 pounds of corn. That would place the feed cost alone of one pound of chicken meat as equal to about 8 pounds of corn, and the total cost of producing a pound of chicken meat, including all expenses, about equal to 12.5 pounds of corn.

Single Mating.

Q. Am an amateur fancier, I have several breeds, and must confess that I have had much trouble in producing chicks which resemble the parent stock. Our space is too small to undertake double mating—a thing I do not even wish to try—and I will appreciate it very much if you will tell me which, in your opinion, of American and Mediterranean type of fowl, not including, of course, the black and white varieties, most nearly reproduce themselves from a single mating.

W. C. M. Birmingham, Ala.
A. A good many breeders of parti-colored varieties claim that their favorites can be bred to perfection by single mating, i. e., mating Standard males with Standard females. Frankly, we do not know of any Standard parti-colored variety in which this can be done or actually is done. We have heard a lot about single matings—and in the sense that the breeders do not keep two distinct families, one for pullet mating and one for cockerel mating, which is the true double mating plan, they may be technically single matings—but we have never yet visited a fancier's yards where there were not almost as many different matings as there were breeding pens. Some matings of extremes types and others conforming more closely to the Standard types,

but no actual mating of exhibition quality male with exhibition quality female.

Mating fowls is an art. Even the best mating, no matter how well it may nick, will not produce all good progeny. One of the prime essentials is to know the breeding back of each breeding bird. Surface indications are not dependable. Knowing the breeding back of both male and female and knowing also the defects and good points of each, it is possible to balance up a mating, offsetting weakness in one parent by strength in the same section or quality in the other parent, so that the majority of the progeny will have the desired characteristics. Each and every mating will be a problem in itself, and that is more than half the fun of breeding Standardbred poultry. For best results close inbreeding and a knowledge of the blood lines back of the breeding birds is essential to enable one to mate fowls properly. For this reason it should be obvious that printed rules for mating breeding stock are necessarily more or less unsatisfactory. The old established part-colored breeds will breed more true to type and color than the newer ones, because closely inbred for a much longer period. Our poultry Standard is man-made according to man's ideas of perfection and of the development of fads and fashion. We have no natural standard for poultry. If Nature's rules were followed we would not be trying to make males

and females to conform so closely to one pattern. Much of the pleasure in breeding Standardbred poultry is to be found in matching one's skill and knowledge of the blood lines of the birds, when making up the matings, against the unknown hereditary influences. It is a fascinating game. Sometimes you get surprisingly good results and sometimes Nature hands you the unexpected. The closer the blood lines, when matings are well balanced to offset weakness with strength, if there is abundant health and vigor, the better the results and the greater the uniformity of the progeny.

If You Did Not Get Your Answer.

If you failed to get a reply to your inquiry dated before December 11, your letter or our answer must have been lost. On night of December 11 the postoffice at Silver Lake, Mass., including the general store, was totally destroyed by fire. Nothing was saved. A considerable amount of mail matter was destroyed, including the last mail which arrived for the night and outgoing mail which was to leave on the first morning mail train. We have no way of knowing how much of our mail matter was destroyed. We mailed a number of letters after the last mail out and did not get the last mail in.

House and Feeding Questions.

Q. (1) I have a shed 5 ft. long, 4 ft. wide, 5 ft. high in front and 4 ft. high in rear. Faces south. Has a glass window 16x20 in. and a duck window (soaked in linseed oil) 20x30 in. The roost is in the rear, 14 in. from roof and 11 in. from rear wall, and 7 in. from droppings board. Three nests under this board. Floor space all available. Can I keep six White Leghorns in this shed? These pullets seem to be healthy and doing well. I keep Red Comb meat mash before them all ways. Have plenty of cabbages and turnips. Also sprouted oats.

A. (1) Six pullets should be quite comfortable in such quarters if you keep the house clean and well aired. The roost is a little close to the rear wall. Do not like to have it so close that the birds' tail feathers touch the wall.

Q. (2) Can you tell me how much commercial scratch feed they should receive morning and evening?

A. (2) It is best to feed according to the appetites of your birds. You will find that it will require about six or seven ounces of scratch grain at each of the two daily feedings. This when they have mash constantly before them.

Q. (3) Are there sufficient heat-producing

WHY TAKE CHANCES?

Find Out What An Incubator Is Made of Before You Buy

Send for Our Free Catalog and We Will Send You a Sample of the Materials We Use in Our Incubators and Brooders.

It pays to investigate the kind of materials used in an incubator, before you buy. Then you will know how they are made and what they are made of; which machine is best and which will

last the longest and give the most value for your money. You will know what you are going to get before you pay for it. It will also save you disappointment, time and trouble. That's why we want to send you a sample of the material we use in our machines. Year after year, these unbeatable Wisconsin have proven their superiority over all others regardless of price. The reason is plain. It is because they are made of the best materials and by skilled workmen. We know before they leave our factory they will give the best of satisfaction. Here is the proof—read the letters below. We get hundreds like them. Remember, you take no chances in buying a Wisconsin outfit. We give you

30 DAYS' TRIAL — 10 YEAR GUARANTEE — MONEY BACK IF NOT SATISFIED

Maysville, Ky. Wis. Inc. Co., Racine, Wis. Dear Sirs: I received my incubator and was very much pleased with it on account of excellent luck. I set 180 eggs and hatched 175 chicks. My neighbors think it is a great machine and probably will buy one like it. Mrs. H. Reeves.

Pine Level, N. C. Wis. Inc. Co., Racine, Wis. Dear Sirs: I like your incubator fine getting about 98 per cent hatchings. We would not buy without it for twice what it cost. Yours truly, J. D. Thompson

130 Egg Incubator Chick Brooder

BOTH \$12 Freight Paid East of Rockies

Walkerton, Ont., Can. Wis. Inc. Co., Racine, Wis. Dear Sirs: Your machine did splendid work. I hatched on an average of 90 per cent. We highly recommend it for duck eggs as we got 80 strong ducklings out of 60 eggs. Yours truly, E. J. Griedel, Box 102

Baraboo, Wis. Wis. Inc. Co., Racine, Wis. Dear Sirs: We are well pleased with incubator as we got 133 good healthy chicks from 139 eggs. Your customer, Gust Weiland.

WISCONSIN INCUBATORS HAVE DOUBLE WALLS

I build the outer walls of my incubators of genuine California Redwood—costing four times as much as materials some manufacturers use—and the inner wall is of insulating board with dead air space between the walls—hot water heat, double glass doors, COPPER tanks and boiler, self-regulating. Roomy nursery under egg tray. Incubator is finished in its natural color showing the high grade California Redwood lumber used—not painted to cover up inferior material. Both machines shipped complete with thermometers, lamps, egg tester and book of directions, all set up ready for use when you get them. Freight paid East of the Rockies. I am undoubtedly making the readers of this paper the most remarkable offer on incubators and brooders ever made. I have been advertising in this paper for years. The publishers know me and know I do just as I agree. You take no risk in ordering a Wisconsin outfit direct from this ad, or write for free catalog today.

Wisconsin Incubator Co. Box 44 Racine, Wis.

Order Direct From This Advertisement

You can send in your order direct if you wish to save time. Remember, you can have 30 days trial with the understanding that if you are not perfectly satisfied, simply write me—send the goods back and I'll not only return your money, but pay the freight charges besides. Thos. J. Collier, Mgr.

elements in these commercial feeds to keep the hens warm in this climate?

A. (3) Usually. We would prefer a scratch grain containing a fair amount of corn, say about 50 percent, to one composed largely of low grade wheat.

Q. (4) Can I breed these pullets to a cock bird next spring? They were hatched June 28.

A. (4) Yes.
Q. (5) The shed is almost air-tight, except for what filters thru the oiled duck. Should more ventilation be provided? There is frost on the window in the morning, but it goes after I open the door on sunny days.

Negaunee, Mich. B. S.
A. (5) The house is a little tight, but with so small a flock it may not matter in your climate. Would air the house well daily by keeping the door open. If you can arrange that oiled duck window with hinges at the top to swing out like an awning you can get better ventilation and will have less frost. In so small a house it is always difficult to get ventilation and keep out the storms at the same time. If you make that duck window to open about six inches at the bottom and protect the opening on sides and bottom with coarse cotton cloth, that is coarse enough weave to let in air but keep out snow, we believe that you will solve the ventilation problem.

Poultry on Homestead Claim.

Q. (1) I am starting on a homestead and want some advice about poultry. In another year I want to keep about one hundred hens as a side line from farming. One writer says "do not keep more than 25 hens in a flock." If I was to have 100 hens and keep them in separate small flocks, would have to fence them in. In this part of the country fencing and building material is so high that I would not be able to do this. Is it advisable for me to follow this plan of small flocks? If I have two nice coops and let the hens run at large, will it be as well? In the summer months I do not have to feed the fowls grain. They may pick up a few grains if fed, but will leave nearly all, as they get plenty on range. Do farmers who raise wheat, oats, barley and corn, have to feed the poultry the different grain mixtures you use in the East? I know we raise some of the feeds you do, but not all.

A. (1) It is not necessary for you to yard your birds in small flocks. A 20x20 ft. open-front house will give ample accommodations for a flock of from 100 to 150 fowls. We have found that such flocks running on ample range lay just as well, and often better than smaller flocks. We get fine fertility from such flock units by allowing a number of males to run with the hens. We usually use five males with 100 females, putting all males—which have been raised together—into the flock at the same time. If you have several smaller houses that you can use, house a flock

EASY WAY TO GET EGGS

FEED OCULUM—SAMPLE (240 FEEDS) 10c—GUARANTEED

Experts Like Hawkins and Fishel Call it a "Miracle Worker"

I fed "OCULUM" to 48 Leghorns 21 days; eggs jumped from 8 to 42 a day. "OCULUM" doubled my egg yield in 23 days.

FERRIS WHITE LEGHORNS

Ferris Leghorns Lay Winter Eggs

For eighteen years Ferris White Leghorns have been bred to lay more eggs at all seasons than ordinary hens, and to lay particularly well in winter when eggs are highest. We do not breed from hens that are not good winter layers. We can't afford to, for with one of the largest poultry farms in the country we must have winter eggs to make it pay.

Thousands of poultry keepers in all parts of the country are having unusual success with Ferris stock; hundreds of customers in Canada also, and we have made successful shipments to Scotland, Japan, Australia, Nicaragua, Alaska, Philippine Islands, Bermuda, Cuba and Mexico. We guarantee safe arrival anywhere.

ALL STOCK IS SHIPPED ON APPROVAL. You can return within three days any birds not satisfactory and money will be refunded. We replace free any that die or get out of condition within 30 days. We also ship C. O. D. if desired.

We are now shipping eggs at the prices quoted below. All infertiles replaced free. Chicks after March first. Safe arrival guaranteed. Orders booked now.

We have three grades of laying stock. Stock from our heaviest laying strain, with trapnested records of 230 to 264 eggs, will cost as follows:

EARLY HATCHED COCKERELS—\$10.00 each, \$9.00 each for 10 or more. Yearling hens or early pullets, \$5.00 each; 1 male, 2 females, \$20.00; 1 male, 4 females, \$30.00; 1 male, 8 females, \$45.00; 1 male, 12 females, \$60.00; 7 males, 100 females, \$428.00. **EGGS**—\$5.00 for 15, \$25.00 for 100, \$200.00 for 1,000. **CHICKS**—10 for \$6.00, 100 for \$50.00, 1,000 for \$400.00.

STOCK FROM 200 TO 230-EGG STRAIN—the kind we recommend for breeding and laying where large flocks are required. Early hatched cockerels \$6.00 each, \$5.00 each for 10 or more. Early pullets or yearling hens, \$3.00 each; 4 females, 1 male, \$18.00; 12 females, 1 male, \$40.00; 100 females, 7 males, \$285.00; 100 females without males, \$250.00. **EGGS**—\$2.75 per setting, \$15.00 per 100, \$125.00 per 1,000. **CHICKS**—10 for \$4.50, 100 for \$35.00, 1,000 for \$275.00.

UTILITY STOCK FOR LAYING AND BREEDING. Not bred from trapnested stock, but from stock that we can guarantee to be better than the average. Cockerels \$4.00 each, \$3.50 each for 10 or more. Hens \$2.00 each, \$175.00 per 100. Four hens, 1 cockerel, \$12.00; 12 hens, 1 cockerel, \$27.50. **EGGS**—15 for \$2.25, 100 for \$11.00, 1,000 for \$100. **CHICKS**—10 for \$3.00, 100 for \$24.00, 1,000 for \$220.00.

This Free 40-Page Catalog

gives more information than is possible in this ad. Contains photos showing 35 acres of White Leghorns; describes our methods of feed and care; how we improve laying qualities; list of winnings at 20 big shows; many letters from customers; prices of exhibition, breeding and laying stock, eggs for hatching and day-old chicks. Even if you are not now in the market for stock we will be glad to send you a copy. Mail postal now while you have the matter in mind.

GEORGE B. FERRIS, 905 Union Ave., GRAND RAPIDS, MICH.

in each until the birds know their home, then let all the flocks have the run of the place. Keep only one variety. In raising chicks, keep the hens confined in brood coops and let the chicks range. Feed adult stock in summer only when range supply is not sufficient.

Q. (2) I see that chopped clover is highly recommended for winter feeding. We do not raise any clover here. Will alfalfa do as well?

Dubois, Idaho.

A. (2). Yes.

G. W. C.

House Plans.

Q. Where can I get plans for building and information about open-front poultry houses? I am a new subscriber and see reference to such houses but no plans or advice on building.

Dubois, Idaho.

A. See book lists in this issue. Our book department at Chicago office can supply book "Open-Air Poultry Houses for All Climates," describing the best types of open-front houses and giving building instructions. The price is 75 cents per copy postpaid for a cloth-bound book having 86 pages, well illustrated.

Golden Wyandottes with White in Wing.

Q. (1) Are Golden Wyandottes supposed to have white wing tips? I have purchased stock of a prominent breeder and all had white tips and sometimes nearly an entire feather white. I have also purchased eggs of three other breeders and the stock is all the same way. I have a friend who purchased stock of a reliable breeder and his birds have white wing tips. The males have these white tips more frequently than the females. I can't find anything in the Standard that would lead me to think they should have this white, but I cannot get any stock that does not show it.

A. (1) The white is a defect and a very troublesome one. It takes a long time to breed out this tendency to outcropping of white in wings. Only persistent effort and the use of all possible strength of color in the breeding stock will eliminate it.

Q. (2) Where can I get a book on pheasant breeding?

Brooklyn, Iowa.

W. F. A.

A. (2) Write to Poultry Investigations, United States Department of Agriculture, Washington, D. C.

Feeding Leghorns.

Q. I have 200 S. C. White Leghorns, mostly pullets, and I wish to know how to use following feeds. I have plenty of corn and oats, a few bushels of wheat. Can get bran, shorts, corn meal, beef scraps, oil meal and alfalfa meal. How shall I mix dry mash? I have an oat sprouter. Should the sprouts take the place of one of the regular feeds? Have a lot of small potatoes. How should these be mixed to make a wet mash three times a week? What should the morning feed be and how much?

Rantoul, Kas.

A. D.

A. Better save the wheat. If it is not good enough for making flour or wheat meal for home use, it will help feed the young chickens next spring.

Mix the corn and oats, bushel for bushel, and feed twice a day in litter, morning and afternoon. A little under an ounce per hen at each feeding is about right. Feed according to appetite. If they want more or less, feed accordingly. The sprouted oats will be an excellent addition to the ration and may be fed all they will clean up at noon. When feeding the sprouted oats freely you will find that they do not require quite as much hard grain. The potatoes should be boiled soft, jackets and all, and then made into a crumbly mash with the dry mash mixture. Give in place of one feed of hard grain what they will clean up quickly. Make the dry mash mixture of 100 lbs. each of bran, shorts, corn meal; 75 lbs. beef scraps, 25 lbs. oil meal. Do not think you will need the alfalfa which you indicate is difficult to get.

Poultry and Squabs for a Living.

Q. (1) Can I make any money on 10 acres of land in the poultry and squab business? Want to keep White Leghorns and pigeons.

Aluminum, numbered to suit, with large raised figures. Postpaid 100-60c, 50-35c, 25-20c, 12-15c. Initials extra, 10c per letter per 100; 50 or less 5c. More than one initial with cut figures. Circular free giving price on Small Chick, Superior, Riveted and Pigeon Bands. Sample for stamp.

T. CADWALLADER Box 802 Salem, Ohio

Hens Will Serve You Well If Served Sprouted Oats

Get the Facts About Our Grain Sprouter. Learn What It Has Done for Your Brother Poultry Raisers and What We Guarantee It for You

MAKE three bushels of fresh, green, tempting feed from one bushel of oats, wheat or rye. Turn loafing hens into money-making egg producers—have eggs to sell when prices are highest—get fertile eggs for spring hatching—all at a big saving in feed cost. Every poultry raiser should have a "Successful" Sprouter. Saves its cost in a few days' feeding and then keeps on saving money and doubling up your profits for a lifetime service.

Just what's needed in fall and winter to keep hens laying and needed again in the spring to make chicks grow into lively profit-producing birds. Write at once for complete 1918 offer. Sold on trial and pays for itself before trial runs out.

"SUCCESSFUL" Grain Sprouter Practically All Steel—Made in Sections

Double steel walls—metal trays. There is nothing else like the "Successful" Sprouter. It's a brand new idea. Cannot be compared to wooden sprouters. It is warp proof—shrink proof—swell proof—nothing in it to rot—food cannot mold.

Made with glass doors. Each section a separate compartment. Start with just enough sections for your needs and add more as you need them.

Here is a money maker that proves its worth right at the

Test seed corn and start your plants the easiest and surest way with this Des Moines Grain Sprouter.

20 lbs. raw (3 pecks) oats as shown above makes 70 lbs. of sprouted oats as shown below in the "Successful" Sprouter

This in one week's time—the best green egg-making feed obtainable.

SPROUTED OATS

Read These Letters From Owners

"Successful" Sprouter Best of All
Jamestown, N. Y., Sept. 12, 1917.
Dear Sirs: In reply to your letter of recent date will say that I have no objection to your publishing the letter I wrote you some time ago. I have used a number of different makes of Sprouters but the one I will use from now on will be the one THAT'S BEST, THE DES MOINES "SUCCESSFUL" OAT SPROUTER. As the results obtained from your Oat Sprouter it must be that your Incubator is in the same class.
Oscar R. Weborg, Prop.
Chautauqua County Poul. Yards.

All Hens Commenced to Lay
Watkins, N. Y., April 20, 1917.
Gentlemen: I enclose name here with whom I am sure you can sell one of your sprouters. I like my sprouter very much. Sprouted oats is all I feed my hens at noon and they are certainly doing fine. Just as soon as I commenced to feed them the sprouted oats they all commenced to lay and have kept it up all through the cold weather. I certainly am well pleased with it. I can keep them on a third less feed. Very truly yours, Mrs. D. Sitor.

start. It has increased egg yields 50 per cent—in some localities more. Takes only 15 minutes a day of your time. Sprouts oats in 24 hours and then grows an inch of crisp green sprouts every day. One feeding of sprouted oats at noon each day is all that's needed to increase the egg yield. And at the same time you cut your feed cost one-third and settle your green feed problem once and for all. Write for full details.

Write Your Name in the Coupon or on a Postal and Mail Today for Circular and 1918 Offer

We could show you scores of more letters like these, but why not show you the "Successful" Sprouter itself and let you see how it can save money and make money for you every day you use it. Famous booklet, "Proper Care and Feeding of Little Chicks, Ducks, Geese and Turkeys," 10 cents.

JAS. W. HOUCK CO., Box 20, Tiffin, O.

A. (1) We would not advise a beginner under present conditions to invest his money in such a venture. To make squab raising profitable it is necessary to have plenty of first quality grain at reasonable prices. At the present time such quality grain is not available for the purpose. Unless squab-breeding pigeons are fed on sound grain, the young do not thrive and losses are frequent.

Q. (2) How many hens could I raise the feed for on ten acres of medium land?

A. (2) Each hen will require very nearly 45 pounds of hard grain and 47 pounds of mash mixture per year. Average yields of grain per acre in your state are: Corn, 34 bushels; oats, 33 bushels; barley, 29 bushels; wheat, 16 bushels; rye, 17 bushels; buckwheat, 18 bushels. Figure it out for yourself. There are 56 pounds of shelled corn in a bushel; 32 pounds of oats; 48 pounds of barley; 60 pounds of wheat; 56 pounds of rye; 52 pounds of buckwheat, in your state—42 for United States standard.

Q. (3) I have good railroad service to ship squabs and eggs to Chicago. Is it best to sell thru commission men or direct to hospitals and hotels?

A. (3) To hospitals and hotels if you have a regular supply and can get the trade.

Q. (4) Would it be advisable to raise squabs over a hen house?

A. (4) No.
Q. (5) Which is the best way to build a cheap and satisfactory poultry house for farm use?

A. (5) See book "Open-Air Poultry Houses for All Climates," obtainable of our book department at 75 cents per copy postpaid.

Q. (6) Do you know anything about the Ford tractors to work the land?

A. (6) Have not yet seen one in use. Believe the first output was all for export. There are many kinds of tractors and where land is suitable they do excellent work. A ten-acre farm could hardly support one, unless you could get outside work for the tractor.

Q. (7) Would it be best to keep a horse? Arlington Heights, Ill.

A. H. A. (7) You will probably need one. Much depends upon how you are situated. We have a 30-acre farm and find it much more economical to hire such horse labor as we need. We get ample manure from our poultry and two cows. For getting to and from market and

for getting about we find an automobile much more economical than a horse.

Feeding Problems in Montana.

Q. Will you please give me the food values on potatoes and other vegetables as compared with grain and feed? We can get 100 lbs. of each of following as stated: Potatoes, \$2.65; rutabagas, \$2.25; Hubbard squash, \$3; carrots, \$2.25; pumpkins, \$1.50; cabbage, \$2.75. Grain as follows: Wheat, \$4.25; oats, \$3.65; cracked corn, \$5; whole corn, \$4.85; shorts, \$3; bran, \$2.75; gluten, \$4.60; ground oats, \$3.80.

We receive 75 cents a dozen for eggs; 30 cents a pound for springers; 25 cents a pound for hens. There is not much left even when hens are in full lay, not counting your time anything. Alfalfa is \$1.65 per 100 lbs. and straw 75 cents a bale.

Butte, Mont.

J. C.

A. Cheer up. It might be a lot worse. Would not use any of the vegetables for poultry feeding at prices stated, unless it be the pumpkin, they are more useful as human food and are too high in price to feed to fowls. Boiled pumpkin will be a good addition to the mash, say about 15 per cent. Cut alfalfa will be relished by the birds. Would not feed wheat of sound quality, it is needed for flour making. Would feed for hard grain a mixture of equal parts of whole corn and oats. For mash mix equal weights of bran, shorts, ground oats and corn meal. If you cannot get beef scraps or fish meal at reasonable prices, try to buy sheep and hog plucks—heart, lungs, etc.—of the butcher. Boil this meat until it can be readily cut or broken up into small pieces. Use meat and the liquor for mixing mashes. You are getting easier prices than we are in the East and selling your produce at much the same prices as we received on same date.

Feeding Oats.

In November American Poultry Journal, page 1079, Mr. Beale states that he would like to know how to get fowls to eat oats. I always have a hopper containing whole oats where the birds can help themselves at will, but, like Mr. Beale's birds, they do not eat the oats if they can find anything else. I also keep a hopper of ground oats for them to

YOU CAN'T BLAME THE HEN

when she refuses to sit on a lousy nest, with lice torturing her and sucking her life blood—she must get out or die. No matter how clean the nest, it is absolutely essential that you dust the sitter and make sure that she is free from lice. Many lice remedies also kill the hen, spoil the eggs, and injure the baby chicks, but you are safe when you use

"Too Lousy
For Me"

THE OLD RELIABLE

Lambert's Death to Lice

30 YEARS THE UNIVERSAL FAVORITE

Successful breeders everywhere will tell you that there is nothing equal to Lambert's for sitting hens. Its use will insure a good hatch, (if eggs are hatchable) and start the youngsters clean and comfortable.

Sold by Poultry Supply Dealers and Druggists everywhere at 100 oz. \$1.00; 48 oz. 50c; 15 oz. 25c. Large trial sample of Powder or Head-Lice Ointment, with booklet by D. J. Lambert, 10c. Send today.

THE KLEIN-LAMBERT CO., Mfrs., 601 Traders Bldg., Chicago

feed on when they like, and they eat considerable this way. My hopper is a long trough, and covered with 1½-inch poultry netting, which rests on top of the oats. This is the best hopper I have used. My main stunt in feeding oats is to soak them over night and feed them in the morning. I fill a 12-quart pail nearly full of oats, put in a handful of air-slaked lime and stir it up; then cover with hot water, let it stay on the stove until morning. This gives a good bucket full of feed. My 150 birds will clean this up in half an hour.

I also fill a five-gallon can with a mixture of ground oats, bran and shorts, put in a big handful of meat scrap and what skim milk we have, then enough water to make a mash. This for noon feeding. Have barley and wheat in automatic hoppers.

Menan, Idaho. Y. H.

Buttermilk for Chickens.

Q. Is good fresh creamery buttermilk worth from 8 to 10 cents a gallon for feeding poultry? Will it take the place of beef scrap and fish meal? How much is needed for 120 hens? Eau Claire, Wis. W. M.

A. Buttermilk is excellent for poultry feeding. It should be worth the price named. It will not wholly substitute for beef scrap and fish meal, but will reduce the quantity required by quite one-half. Use the buttermilk to mix the mash. The quantity required daily will vary. You can probably make good use of one or two gallons a day. Try it out and see how much is required to make a moist crumbly mash, with your mash mixture, about what the birds will clean up in 15 to 20 minutes.

Wants to Get Fertile Eggs.

Q. Will some reader advise me about penning hens to get fertile eggs? I never tried it. One of my neighbors did and failed entirely. Do not know the cause. I have two good males and over 200 hens to choose from. I want the eggs to be fertile and to get as many as I can. How large a yard is needed? What should be fed to keep them healthy? Spring Hill, Kas. C. D. M.

A. Provide a separate house, or pen, and yard for each of your male birds. Allow each male not over 15 of the best females you can select for mates. Give each pen a good-sized yard, say about 12x150 feet. Feed one of the good mashes recommended in this journal and give scratch grain of corn and oats. You will find feeding questions answered several times in this issue, in this department and in others. Keep the birds busy by supplying them straw litter to scratch in. Scatter part of their hard grain in the litter.

Weak-Kneed Cockerels.

Q. I have two White Rock cockerels, which were hatched in April. They grew very rapidly as chicks and developed large frames but not much flesh. They are a little weak in the knees and knock-kneed. Have been giving them pills of: iron sulph., 1 grain; sulph. quinine, 1 grain; strychnine, 1 grain; phosph. lime, 5 grains. Also have been applying alcohol to the legs and giving them massage. One has straightened out in legs, but still eats squatting on his haunches; the other is much better, but still weak in one leg. These birds are from a \$10 sitting and I want to save them. Both have fine type, good head and comb.

Can you recommend any other treatment which I could use to bring them around and put on muscle? Would you hesitate to breed them? They are fine birds otherwise and I do not think it is in the breeding, but the way they were raised. They were incubator hatched and brooder reared and fed on Cornell ration.

Ridgewood, N. J. R. L.

A. We would not want to breed such birds and think it is a waste of time and money to doctor them so long. The fault was in the feeding and management during growth. They did not get enough mineral food and good greens and did not rough it enough. It is too late now to try to put into them what they did not get during the most important stages of growth. You can, of course, continue the treatment for a few weeks longer, and feed sprouted oats, crushed oats, fish meal mash, and try to make them exercise in litter for part of their grain. We have no doubt but

Takes all the Gamble from the Hatch

You *don't speculate* when you set a Buckeye.

You *know* you are going to get the best hatch possible from your eggs.

And you don't have to "run" it. It runs itself. Works without watching. Hatches with mechanical exactness. Produces guaranteed results.

All you have to do is to turn the eggs at the proper intervals and keep the lamp trimmed and filled. Leave the rest to the

BUCKEYE

THE PERFECT INCUBATOR

Whether you are starting in the poultry business or enlarging the plant you have, you want to be sure of your ground at every step. You can't afford to experiment. You don't need to. We have done all the experimenting for you. The Buckeye Incubator is standardized—perfected. It will hatch more chicks and better chicks than any other incubator, the first time you use it. You can't ask any more than that.

A Guaranty That Guarantees

The Buckeye is guaranteed to hatch more chicks, and stronger chicks, than any other incubator. To operate satisfactorily in any temperature down to freezing. To require no artificial moisture, and no attention to the incubator from the time a hatch is started until it is finished. Perfect construction of all mechanical parts is also guaranteed; any Buckeye or part thereof that does not fulfill our guarantee will be replaced without question any time within 40 days.

The Buckeye is endorsed by all agricultural colleges and experiment stations. Over half a million are in use in all parts of the country. They are found in the plants of the big breeders and market poultrymen and in the hands of the beginners.

What these users, big and little, know and say about success with Buckeye equipment is embodied in our new catalog. It is a wonderful story of the growth of small businesses and expansion of big plants told by Buckeye owners in their own words.

WRITE FOR THE CATALOG. Describes and illustrates seven sizes of incubators—65 to 600 egg capacity. The one you need is among them. This catalog tells why the Buckeye is best, why it is build up to a standard and not down to a price, why we can give it our sweeping guarantee. Every statement is backed by the most convincing lot of testimonials ever assembled. Write for this book today. It will help turn your losses into profits. A post card will do.

Over 6000 dealers enthusiastically endorse and recommend the Buckeye. One of them is near you. He will be glad to show you a Buckeye in operation, and to point out its superiority. If you don't know him we will tell you where he is.

Takes all the Risk out of Chick Raising

Ends the frightful chick mortality that is the despair of the poultryman; raises three chicks where one grew before; pushes the little fellows to maturity in profitable time—and with a quarter of the labor and half the cost.

Successful brooding is assured, and your chicken problem is instantly solved by the use of the

STANDARD Colony Brooder

The most practical and economical brooder ever invented. Broods 100 to 1000 chicks at a cost of less than six cents a day. Burns soft or hard coal. Self-feeding, self-regulating and everlasting. Burns 24 hours from one filling. Reduces the cost of installation and operation to less than a fourth.

Simplicity is the striking feature of Standard construc-

tion. Just a solid cast iron stove, a galvanized steel hover, and the apparatus for automatic feeding and heat regulation. It has no curtains or wooden walls to harbor vermin and dirt. No corners where chicks may be crowded and killed. Easy to keep clean. Provides perfect ventilation without drafts. Broods a few chicks or a thousand equally well

Write Your Own Guaranty

You know what you want a brooder to do for you. Add your demands to our claims. Write it all down. We'll sign it. And if the Standard Colony Brooder you buy does not meet all your requirements and our claims, we will return your money without argument.

The Standard has won the endorsement of all agricultural colleges and experiment stations. In actual use by more than 30,000 breeders, it gives universal satisfaction. The tremendous increase of sales is largely due to repeat orders and recommendation to others by Standard users. Nearly 6000 dealers sell them under our unqualified money-back guaranty, and not one Standard has ever been returned.

WRITE FOR OUR CATALOG. It gives the reasons for Buckeye success, tells how the Standard Colony Brooder is made, how it has proved wonderfully efficient and obtained remarkable results for itself. Every statement is proved by the unusual array of convincing testimonials. Write for this book today. A post card will do.

See the Buckeye dealer. There are 6000 of them throughout this country and Canada—one near you. This dealer will be glad to show you the Standard Colony Brooder in operation and explain its superiority to you. If you don't know him, write to us for his name.

Why Poultry Pays and How to Make It Pay

By Morgan Bates. A "straight from the shoulder" talk on raising poultry from the money-making point of view. It gives the beginner sound advice about starting in. Covers all subjects. Price 50c. AMERICAN POULTRY JOURNAL PUB. CO., 542 South Dearborn Street Chicago, Illinois

that in time you might get those birds into pretty fair shape, but the cost to you in time, money and trouble would buy you two fine strong cockerels from almost any reliable breeder.

"Facts About White Diarrhoea."

Q. Where can I obtain copy of "Facts About White Diarrhoea" by Dr. Woods? Kalamazoo, Mich.

A. It is out of print. Revision is published in book entitled "How to Raise Chicks," cloth bound, 75 cents a copy postpaid, to be obtained of American Poultry Journal book department.

Breeding Related Stock.

Q. (1) I would like to know if I could safely breed a male bird to his full sisters? The males are winners. All are healthy.

A. (1) Yes, if the birds are well matured, healthy, vigorous and do not possess similar faults.

Q. (2) Would such a mating be all right to produce show birds? The cockerel is good in head, comb, breast and saddle, but not very long legged. The pullets are large, with nice full breast and good body. Would it be better to get a cockerel that is not related to the pullets?

Harmony, Minn.

A. L.

A. (2) You have to breed related stock in order to get show birds. Crossing an unrelated male on those pullets would upset things so that it would take you two or three seasons of close inbreeding to get back again. From your description believe that you will get good results by mating the birds described.

Disease of Brain and Nervous System.

Q. I have a Buff Wyandotte cockerel that acts very strangely. He turns his head sideways when he eats and when anything startles him will turn his head upside down and put the back of it on the ground. This will last for a minute or two and then he will straighten up and go to eating as if nothing was the matter. At other times he seems to lose entire control of himself and will run backward and flounder on the ground for a short time, then lie there a while, get up and go about seemingly perfectly well. He eats heartily. His comb is red and he looks healthy. His eyes are clear and even when his head is upside down he will sing and look around. When he is on a box or other elevation and he tries to get down, the spell will come on him and he will fall down. Can you tell me what is the trouble? Do you think him unfit for food?

Shelby, Mich.

B. G. J.

A. The trouble is disease of the brain and nervous system. Possibly, as in epilepsy in human beings, overeating, and intestinal irritation from other causes, may aggravate attacks and increase their frequency. It is not uncommon where birds are bred from stock that is carelessly inbred, and where both parents have similar faults of the nervous system. Inbreeding of diseased stock predisposes to this trouble. In some cases various parasites are a contributory cause to such nervous troubles; parasites which find lodgment in the nervous system. There is no cure. It will be best to kill the bird and

burn the carcass. Such birds should not be bred nor should they be eaten.

Weight of R. I. Red Baby Chicks.

Q. What should be the weight of Rhode Island Red baby chicks? I bought fifty last spring. One-half of them did not average over three-fourths of an ounce each in weight when four or five days old. All died but four cockerels and nine pullets. All are runts and average about three to three and one-half pounds each. Never saw such small chicks in my life. They did not get chilled after I got them. Weather was excellent when they were shipped, about 60 to 70 degrees. Some were pasted up when they arrived. I gave them good care and fed them well. Raised a flock of 50 chicks before this and did not lose one.

St. Louis, Mo.

J. S.

A. The chicks ought to weigh from one and one-half to two ounces each when newly hatched and about the same at four days old. They might shrink a little during shipment, particularly if mishandled and overheated during transportation. They should not weigh as little as you report. Sometimes when the entire incubator lot appears all right, a part of the chicks will fail to develop properly from no apparent and recognizable cause; while the balance of the same hatch prove all right. We believe that if you had taken this matter up with the seller soon after the chicks arrived he would have made an adjustment if facts were fairly presented. It is rather late to enter a complaint now. Sometimes such results occur in an incubator run of eggs from immature pullets, and often the cause is some mishap during incubation which has passed unnoticed and remains unexplained.

Toulouse Geese.

Q. (1) How many Toulouse geese may be mated with one gander for good results?

A. (1) Not more than three or four females to a male.

Q. (2) How much sprouted oats should be fed to fowls and when is it best to feed it?

A. (2) What they will clean up quickly once a day. Feed at noon. Feed the oat sprouts, roots and all, when sprouts are about an inch and a half long.

Q. (3) How should flowers of sulphur be fed?

Bates, S. D.

J. W. B.

A. (3) One tablespoonful in each quart of mash every two weeks, generally in spring of year.

Parks' Bred-to-Lay and-Do-Lay Barred Plymouth Rocks

1918

Are an ASSET to the Poultry Industry these STRENUOUS FOOD TIMES

Breeders as a whole have become awakened to the fact that it's now a Patriotic Duty to breed for increased egg production. We're receiving orders from all over the world and from American breeders whose birds have won the Blue at Madison Square Garden, the Chicago Coliseum Show, etc., showing that they all recognize Parks' Strain as the *Daddy Laying Strain of Them All*, with their over 29 years of careful selection, trapnesting and pedigreeing for eggs and beauty combined.

They out-laid the 2600 birds in the five Missouri Laying Contests, won the three Silver Cups hand running for Winter Month Laying, and best of all, reports show that they actually do lay, and lay well in all parts of the world under a great variety of different feeding, climate and housing methods, proving that their laying qualities are bred in the bone. Birds of such breeding, however, are not produced by the thousands. Foundation stock is our aim, not over 10 birds to a customer.

Big, Husky, Healthy, Farm Raised, Pedigreed Cockerels

that transmit the lay to their offspring \$5 up. Cockerel and stock circular free. Large 40 page catalog 10c.

We are builders, and each one
Should cut and carve as best he can.
Every life is but a stone,
Every one shall hew his own.
Make or mar shall every man.

Anon.

WE SAT before the blazing logs in the dusk of a chilly autumn evening talking of days present and past. The light from the fire lit up the characteristic features of the grand old man of true, principle and honorably lived years, now nearing four score. Moonbeams filtering thru groves of tall locusts and eastern windows made strange fantastic pictures on walls and paneling. There was a lull in the day's activity an hour or so before the serving of the evening meal which tended to give to thought and conversation a certain reverence and feeling.

We had talked of the war and the khaki-clad grandsons, of the leveling influence of armies and training camps. "There is one lesson with which they must all come in contact," said my companion, "and one which the world sadly needs—a just consideration for others."

"Not many years ago," he continued, "I sold a fine farm to a man with two sons. The sons were both married—fine, broad-shouldered specimens of manhood. There appeared to be a good spirit of co-operation between the father, his sons, and their families, and as they had decided to work together in their undertaking, I looked upon the venture as one of more than ordinary interest and ultimate success."

"In the course of the next few years I met the father occasionally and felt at a loss to understand the apparent vein of discouragement which even a short conversation with him disclosed. He was not exactly complaining, but he showed plainly a condition of mind which bespoke worry. Perhaps six or seven years passed when one bitter cold evening in the middle of winter, a horse and buggy rumbled over the frozen ground to our side door and one of the sons appeared from within. After he had removed his greatcoat and rubbed his frost-tinged fingers a bit, he told me his errand. His father was sick in bed, quite sick—perhaps his last illness, and he and his brother were not quite satisfied with the way their business was going. They each felt that the other was getting a little the better part of the bargain. Their father had tried to settle the difficulty, but they could not come to terms. One of them had arranged to bring suit against the other for damages and let the courts settle the matter, when the old father, as a last appeal, asked that they call in two level-headed men who understood the original plan by which they were to conduct the business and see if they could not render such advice as would be fair for all concerned."

"The next morning was very cold and I drove the ten or twelve miles out to the farm in question, with a trustee of the village church who had been chosen as the other adviser. We discussed the matter as we drove along, agreeing perfectly in the one important point of the question which we were being asked to settle. We both realized that we could not settle something upon which they were unwilling to compromise."

"At the house, everything was as pleasant as the two wives could make it. They were both fine women who could see good even while overlooking a great deal of bad. They served us an extra good dinner, roast chicken,

vegetables of various kinds, cranberry sauce and pumpkin pie, with hot coffee, and after we had talked a bit with them all after dinner, we sat around the chunk stove and took up the matter for which we had been called together. They had asked me to be spokesman and I attempted it, tho a bit unwillingly. So I told the two brothers, that we could only advise them to each give up a little in what they considered due them, and in this way reach a peaceable settlement of the matter. I told them that in the end they would have to do this anyway, even tho they went to law and attempted to fight it out in the courts.

The final settlement would be between them and each would have to show a willingness to consider the rights of the other.

"We all talked it over for some time, told some stories, and laughed over it and they finally agreed with us that they would overlook their differences and begin over again by each of them trying to show a more just consideration for the rights of the other."

"Before going away I went upstairs to see the father, who greeted me with a look of anxious inquiry on his face. When I told him the decision which his sons had made, his face lit up as tho a great burden had been taken from his shoulders. He told me he had spent his entire life bringing up these two sons and he felt as he was about to relinquish it that his life had been a failure if they could not be brought to feel the justice of consideration each for the other."

"Yes, we need a truer spirit of co-operation in this world," concluded the sage adviser, "and a deeper sense of justice in the rights of others."

I had not been in the old town more than once or twice in many months, and on those

Meet The Big Demand for Baby Chicks

"Am so well pleased with Reliable Incubators and Brooders that I'm enclosing draft for 35 more 300-egg size and 25 hovers. Sold 65,000 chicks this spring; have 15,000 more hatching. Many of them sold." —Mrs. Clara Colwell, Smith Center, Kansas.

The American Poultry Association calls upon poultry raisers to increase their products. "If we can produce ten times a hundred million pounds more than in 1916 all the better; there's a demand for all we can produce."

J. W. MYERS, Pres. America's Largest Incubator Factory

Today's Urgent National Demand

offers professional poultry raisers and beginners, too, an unusual opportunity to combine patriotism with profit, in a greatly increased production of poultry. Even in ordinary times the demand for day-old chicks greatly exceeds the supply—advance orders are the rule. The nation calls. Are you ready to respond? Whether you wish to hatch chicks to sell or to raise, it's important to get an early start. Insure a successful early spring hatch with

STANDARD RELIABLE INCUBATOR

The Reliable has held first place in the incubator world for 36 years. Its leadership is more firmly established today than ever, because its distinctively superior hatching features have never been successfully imitated. It's the

Built of thoroughly seasoned redwood, top and bottom tongued and grooved; has double walls and top heavily insulated; double glass doors; roomy chick nursery; strong legs. May be equipped with patent turning tray, if desired.

ONLY Incubator With Enclosed Double Heating System—Insures Winter Hatching

The Reliable utilizes both the hot air from the lamp and the heat from large copper hot-water tank extending full length of egg chamber—a double safeguard against chilling—saves half the fuel. Patent heat regulator, tested by U. S. Government standard, automatic supply of moisture and ventilation, highest quality construction throughout, make the Reliable as nearly failure-proof and trouble-proof as an incubator can be built. Successful in any climate or altitude. Shipped ready to start all but attaching legs, which come detached to make compact package to save freight cost.

Brings you this high quality 60-egg Reliable Special Incubator. Built with same care and has same perfect regulating system as Standard Reliable. Double walls, outer wall of thoroughly seasoned wood; mahogany finished, hot air heated. Guaranteed to hatch any egg the hen can hatch. A real bargain—good work for years. I'm responsible and stand behind it. Order Now! Send cash or P.O. order.

REMEMBER: Reliable Incubators are exactly as represented in every detail. Every machine backs every claim made for it.

Built in any capacity desired, hot air or hot water, from 80-eggs to 2,000-eggs. Sold at lowest price consistent with highest quality.

Reliable Brooders are necessary to poultry success. They save the chicks.

Write for my illustrated 100-page poultry book.

J. W. MYERS, Pres.

Reliable Incubator & Brooder Co. Dept. A-1 Quincy, Ill.

Enclosed find \$5 (cash, money order, check) for which please send me one Reliable Special Incubator, money to be returned to me if machine is not as represented. Send Free Poultry Book and prices on Standard Reliable Incubators and Brooders. (A-1)

Purina Chicken Chowder makes eggs

Ralston Purina Co., 801 Gratiot Street, St. Louis, Mo.

occasions had missed the sunny countenance of Mary, the proprietress of the fruit stand, who in the years I had known her, had lent an air of hospitality and good cheer to the town. All the old residents, the summer people and even the occasional visitor knew her, and the acquaintanceship was so pleasing that anyone walking on the opposite side of the street would be sure to cross over in order to pass the time of day with Mary. Unless one was too overburdened with bundles he would buy fruit or vegetables or at least a bag of peanuts from the true daughter of sunny Italy who always saw good in the weather, the times, or the neighbors, as the case might be. If we were having an abominable spell of weather, Mary would say, "Wasn't it jes' nice las' week?" or, "It's clearin' now. We're goin' hav' plenta gude weather by an' by."

The car slowed down as we neared the church and then came to a standstill. The motorman had sounded his gong and the conductor was out on the street endeavoring to see a way thru the crowded line of carriages and automobiles which filled the street. As he re-entered the car, in reply to the looks of inquiry directed toward him by impatient passengers, he said, "They are saying a mass in there, this morning for the repose of Mary's soul."

There was a strange hush in the car. No one seemed worried about being behind time at the office or too late for the train. The impatience of a few minutes before seemed to have vanished. Soon the gongs sounded and we moved on down the long street that leads to the town square and by the little fruit stand with its closed door and drawn curtains. I kept thinking of Mary, as I had talked with her many times, of the lights of true living which she had revealed to me.

Once I had brought her news of the actor neighbor who had been stranded and ill in the big metropolis and she asked for the address at once to send him "jes a little money." She told me how on many occasions he had asked her for a loan of five or ten dollars when out of an engagement, or after having been ill, how she had loaned him the money without security, how sometimes it would be months before she would hear from him and then one day a letter would come from New York, or Chicago, or London, or Paris, with the money enclosed and "a nic' letter tellin' how it had jes' saved him, and so it jes' makes me glad to have it help him."

More than a quarter of a century ago Mary set up a peanut stand in the public square. Unlike Elbert Hubbard's peanut vender she had the courage to exercise initiative and so added popcorn, fruits and vegetables to her list of wares as the business grew, and in the course of time sent out carts and wagons thru-out the surrounding countryside.

Mary was a born optimist, an honest and able financier, and an artist in the truest sense of the word—since she turned life itself into an art. Hers was not a separate thread of life but a closely woven fabric in which the common needs, tribulations and possibilities of humanity were firmly interwoven. Hers was a vision of the close relationships which bind all humanity together—a unifying influence which grappled friend or acquaintance "with hooks of steel" in the common bond of human relationship. An uncrowned queen, radiating an unequalled force in the subtle and far-reaching influence for world betterment, the life of Mary will go on in ever widening circles until it becomes a part of the lives of all people, for Mary, having looked below the surface, saw life, felt its strong pulse, knew its depth of feeling, and was glad in the joy of living life.

WAR TIME RECEIPTS BY AMERICAN POULTRY JOURNAL READERS.

INDIAN PUDDING.

Mix four tablespoonfuls of Indian meal with cold milk and add to one pint of boiling milk in a double boiler. Add also three tablespoonfuls of minute tapioca. Cook until it begins to thicken and add one pint of cold milk, two beaten eggs, one-half cup of molasses, a little salt and cinnamon. Allow to come to a scald, then pour into a pudding dish and bake slowly for several hours. After cooking an hour or so in the oven, add a cup of cold milk and a cup of seeded raisins. Serve hot.

* * *

GINGER BREAD.

Add one teaspoonful of baking soda to one cup of molasses and stir in one-half teaspoonful of salt and one teaspoonful of ginger. Add also four tablespoonfuls of melted chicken fat, a cup of ground bread or cracker crumbs, one-half cup sour milk or cream, one beaten egg and sufficient flour to thicken. Bake in a moderate oven.

* * *

FILLING FOR DATE PIE.

Press one and one-half cups cooked dates thru a sieve, add two beaten eggs, a little salt and nutmeg, one pint of fresh milk and two tablespoonfuls of sugar. Line deep pie plates with plain paste, pour in the filling and bake in a moderate oven.

* * *

RYE MEAL MUFFINS.

Rye meal is considered much better than rye flour for making muffins. To one and one-half cups of the meal, add one-half cup white flour, one teaspoonful of salt, one and one-half teaspoonfuls of baking powder, two eggs, two tablespoonfuls molasses and sufficient milk to make a stiff batter. Bake in hot oven.

* * *

WAR CAKE.

Add one teaspoonful of soda to one cup of molasses. Beat in two eggs and one-half cup of sour cream or milk. Add also a teaspoonful each of ground cinnamon and ground cloves, and one-half cup of melted chicken fat. If there is any cooked oatmeal left from breakfast, add it to the cake mixture and sift in sufficient flour to make a stiff dough. Add a little salt and one cup of seeded and chopped raisins and bake in a slow oven.

IS THE MALE HALF OF THE FLOCK?

By CHAS. A. SIMMONDS, Camp Point, Ill.

THE influence which a breeding animal will have upon the uniformity and individual characteristics of its progeny depends largely upon the way in which it was bred. The proof of this statement is to be seen in the farm flocks and herds where a pen-bred and quite frequently line-bred male is mated with cross-bred females. The progeny of such a mating will nearly always exhibit the family characteristics of the sire much more than those of the dam. This is especially true where the male is of an old line-bred breed as Jersey or Angus cattle or Suffolk swine.

Considering that improvement in established flocks is generally attempted by the purchase of a fine male rather than a female, that this male is nearly always the result of line-breeding and the females to which he is mated the products of out-breeding, which makes the male prepotent over the females, it is not strange that some should regard the male as more than half the flock.

Thos. Shaw, professor of animal husbandry in the University of Minnesota, in his volume on "Animal Breeding," says: "The oft-repeated statement 'the male is half the flock,' does not tell the whole truth, for he may be much more."

Dean Davenport, professor of ther-matology in the University of Illinois, writes: "It has become a proverb that the sire is more than half the herd, but he is far more than that."

Another in scholastic authority opines that the sire is "three-quarters of the herd."

While from one point of view there is some warrant for these dicta, it is to be hoped that this progressive apotheosis of the sire may stop short of utter elimination of the dam. Mindful of the fact that matings are made up of individuals, let us ask, What are the respective parts of sire and dam in propagation?

That Athena sprang "full-grown and full-armed" from the brain of Zeus is a myth of Greek scripture. This experience of Father Zeus seems to have been unique.

None of the other greater gods of the Hellenic holy writ is rumored to have attempted to repeat the stunt of the "Father of Gods and Men." However, more was to be expected of Zeus than of the others, for he was the only one of the six children of Cronus and Rhea who enjoyed the inestimable privilege of being fostermothered by a dandy milch-goat, Amalthea. Wherefore the mystic record runs to the effect that the brain-iest of the Great Gods of Greece were of the Cult of the Goat, Olympian capro-philes.

Trespassing no farther upon Greek theology, what has modern genetics to say in answer to the query: Is there a living animal that has been sired with-out being dammed?

If not, then: Is there a living animal that has dispensed with the sire and has only a dam? Thos. Shaw says Yes, in these words: "When the queen bee is unimpregnated the eggs she lays pro-duce drones." Now, the drone bee is the male bee, a prospective sire, and evi-dently a cheaper article than a prospec-tive dam, for his make-up is less ex-pensive; he doesn't need a sire.

SHOW STOCK

First Hen, Boston, 1917

First Cock, Palace, 1916

When we started breeding Silver Campines we said: "We will breed

The Handsomest Fowl in the World"

We will give them the best money can buy in houses, yards and range, and feed and breed them according to the most scientific methods. We will develop them to the pin-nacle of perfection in standard requirements, breed the highest egg-laying qualities into them, coupled with stamina and vigor, and we have succeeded. The results are

Get Your Share of This \$600,000,000

THE United States alone is this year expected to produce \$600,000,000.00 worth of poultry and eggs *more* than last year. Herbert Hoover, Chief of Food Bureau, together with the United States Secretary of Agriculture, calls upon the farmers and home owners to go in for poultry raising *in earnest!* They assure *you* that you will get high prices for your poultry and eggs. The demand far exceeds the supply—and will for years to come. Why, New York City alone *needs—uses* over Two Billion Eggs per year! And the biggest egg-producing state in America yields less than $\frac{3}{4}$ of what this one city consumes. All America—all the world is ready—*willing—eager* to pay you top prices for all the poultry and eggs you can raise. Hoover declares we *need* to raise *One Hundred Million Pounds* more of poultry in 1918—and, remember chickens are the quickest meat crop that can be produced. All the waste stuff around any home—any farm—can be used to keep down the feed-cost of chicken raising! Read on—and learn how you can get *started right* towards getting your share of this Six Hundred Million Dollars.

What has genetics to say about the genesis of our domestic fowls? If I am rightly informed, something like this: At the time of mating the sire furnishes a cell called a gamete; the dam donates a cell also called a gamete. These gametes fuse, and the product of their fusion is called a zygote. This zygote abides within the egg and during the twenty-one days of incubation the evolving zygote builds itself up from the material stored in the eggs. The material in the egg was drawn from the blood of the dam and thus mother's blood becomes the chick blood and "the life of the "flesh is in the blood."

What comment should be made, in view of these facts, upon the monotonous and unceasing clamor for the deification of the sire. It seems quite possible for superscience to overlap itself, like vaulting ambition. Anything that ignores or belittles the dam is not science but nescience. Read what Wm. Youatt, the great English veterinarian, wrote more than two-thirds of a century ago: "The Arabs have found out that which the English breeder should never forget, that the female is more concerned than the male in the excellence of the produce; and the genealogies of their horses are always reckoned from the mother's."

Line-breeding from the dam is, of necessity, slower than line-breeding from the sire, but it may be surer. Look well to the sire, but do not forget that the dam is of greater importance. It is the dam that furnishes the chick with its nourishment the first twenty-three days of its existence, besides furnishing a gamete which constitutes one-half the zygote. Anyone who has observed closely the contents of eggs knows that some are quite firm when broken, the yolks do not easily break and the white stands firmly around the yolk; while others are very watery, the yolks easily break and the white runs all over the bottom of the pan in which the egg is broken. Now these watery eggs may be good enough to hatch fairly well, but the chicks hatched will lack vitality and will not make the rapid growth or develop into the fine shaped, brilliant colored specimens that those hatched from the more solid or "meatier" eggs will.

The production of eggs to hatch the strongest chicks depends largely upon the vitality of the breeding hens and the feed and care they have received previous to and during the breeding season.

Either large vigorous hens or vigorous early hatched pullets that began laying in the fall are suitable for breeding. If the pullets were hatched so early that they began laying late in summer and molted in the fall they will be the same as hens. These breeding females should

Turn Spare Time Into Money This Winter

Great Combination Offer

With every order for 100 or more chicks we are selling a Standard coal-burning colony brooder at cost. Our object is to enable you to raise baby chicks during your spare time this winter, thus allowing you to have pullets and fryns in the spring. Remember, the price of poultry is advancing all the time, and "a bird in the hand is worth two in the bush." Our catalog explains all about it. Write for it today. We hatch eight popular varieties, many of them from prize winners. Our Ringlet Barred Rocks won three firsts on five entries this fall.

Prices quoted for January and February delivery:

	Lots of 100	Lots of 50	Lots of 25
R. and S. C. R. I. Reds	\$14.00	\$7.25	3.75
Barred Rocks (The Real Ringlets)	14.00	7.25	3.75
White Rocks	16.00	8.25	4.25
White Wyandottes	16.00	8.25	4.25

Four other popular varieties.

Fine R. I. Red Cockerels

Lusty specimens, full of vigor, at \$3 to \$5 each.

THORNWOOD POULTRY YARDS AND HATCHERIES, Dept. 123, CRANDALL, INDIANA

1st Buff Orpington Hen Indianapolis, 1917

No, I did not sell my Buff Orpingtons

on the market because feed prices advanced.

I have the best lot of young birds I ever raised, bred from hens like the one illustrated in this ad and sired by my first Indianapolis cock.

Other Breeders May Have Better Birds, But These Look Good to Me.

I have a lot of March and April hatched cockerels you can have your pick for \$10.00, \$15.00, \$20.00 and \$25.00. No more, no less. You can order direct from this advertisement. Your money back if not satisfied.

No, this price does not govern in females. Eggs are now selling at 50 cents per dozen and they will sell for \$1.00 this winter, so I am not crazy to sell females from the greatest winter layers that wear feathers.

Yes, I won at the Indiana State Fair, 1917: Five ribbons in the strongest class of Buff Orpingtons ever caged in this State. At the February show I won 1st cock; 1st and 2d hen; 2d cockerel; 1st old and 2d young pens. The young males I am offering in this advertisement were bred from these winners.

"Just shove your money under the door" and I will send you birds worth a little more than you pay for them. DO IT NOW!

not be forced to lay thru the winter; if they are their eggs cannot be expected to produce strong chicks in the spring. In a natural state fowls have a rest from egg production thru the winter. The severe weather and a diet of dried grains and berries is not conducive to egg-production nor suited to the rearing of young. In the spring when the fowls are making their nests the tender sprouts have started and "the early bird catches the worm," thus securing ideal food for egg production. "Close to Nature" methods of managing breeding stock are found to produce the largest hatches of the largest, strongest chicks. Where the breeding stock must be kept in close quarters, it is necessary to supply substitutes for the fresh green foods, bugs and worms, that they would obtain on the range in spring; while their eggs are being set they require plenty of protein and mineral foods.

Getting back to the question of the relative importance of sire and dam, remember that one of the first things you should ask for in a prospective sire is, the proof that he came from a fine mother, grandmothers and great-grandmothers. To be a prepotent breeder, a fowl must be the product of intelligent line-breeding. If it has superior individual merit and is from a long line of ancestors possessing like characteristics it may be safely depended upon to stamp these characteristics upon its progeny. If a line-bred male is mated to females of a different strain but also line-bred the progeny will quite likely be lacking in uniformity, because the dam possessed different characteristics from those of the sire and both dam and sire were equally prepotent. But if, as is more often the case, a line-bred male is mated to out-bred females the progeny will closely resemble the sire. In the latter case one might conclude that the "male was more than half the flock." But it was not the male's sex but his breeding that gave him such a decided advantage in determining the character of his progeny. A line-bred female, if mated to an out-bred male, would have been equally prepotent.

Many of our leading strains of poultry are the products of line-breeding from the dam. Notable examples are the Barred Rock hen "Fluffy Ruffles" and the old Macomber hen, Rhode Island Red. Most of the winning strains of pullet-line Barred Rocks at the present day are "Fluffy Ruffles" descendants, and the leading strains of Reds boast of a large portion of the blood of the old Macomber hen.

If you would produce a famous strain trapnest your special matings or use individual matings, set each hen's eggs separately, find the females that are producing quality and when you are blessed with a paragon, line-breed her.

Poultry and Grain in England.

HOW acute the poultry and grain situation is in England may be seen from the following "warning" and editorial comment on same which we have clipped from *The Poultry World*, London, Eng., for November 2, 1917.

It is also apparent from the comment of the British poultry press that English poulterers are opposed to the importation of eggs and desire that grain and poultry feeds be imported instead. The Government officials argue that it is cheaper and more economical of freight space to import eggs. There seems to be, however, an increasing demand for "American cracked corn" and "maize" (whole corn), in Britain and if ships can be had to carry it, before the weather becomes unfit, big shipments of kiln-dried corn are not unlikely.

Here are the clippings, the reader can form his own opinion:

WARNING TO GRAIN USERS.

The Departmental Attitude Towards Poultry Keepers.

We have received the following from the Ministry of Food for publication: Under the Wheat, Rye and Rice Restriction Order and the Barley Restriction Order the use for the feeding of animals and poultry of wheat and barley which are fit for manufacture into flour for human food is prohibited. In spite of this prohibition reports are received by the Food Controller from all parts of the country that animals and poultry are being fed on these grains. It has been suggested that this infringement is not caused by any wilful unpatriotic action, but arises from ignorance of the meaning of the orders. Farmers and other users of grain are therefore warned that all wheat and barley which can be used for the manufacture of flour for human food is required, and must in the national interest be reserved for that purpose. The feeding of animals or poultry with such grains is a summary offense against the law, and is punishable by fine and imprisonment. The fact that wheat or barley is out of condition does not necessarily mean that it is unfit for milling. Such grain should not be used as feed for animals until it has been offered for sale to every available miller, dealer and malster or owner of kilns. Arrangements have been made which it is hoped will lead to a market being available for such grains in any way fit for the manufacture of flour for human consumption.

It is essential in the national interest that the Grain Orders issued by the Food Controller should be implicitly obeyed and any person infringing them will be vigorously prosecuted.

Warning is also hereby given to owners of grist mills that it is a summary offense for them to aid or abet any person in the infringement of the Grain Orders, and that it is their duty in the national interest to report to the Food Controller without delay every case in which they are asked to prepare for animal consumption grain which could be used for the purpose of human consumption.

Ministry of Food, Palace Chambers, Westminster, S. W. 1.

October 27th, 1917.

The Official Attitude.

In another column we print a warning issued by the Ministry of Food to grain users. It is a typical example of the official attitude towards poultry keeping. There is no valid reason why poultry should be singled out for special mention. Since the restrictions were placed on poultry food no class of grain users have carried out the official orders more loyally than poultry keepers, and we can but suppose that this new warning is issued with the intention of still further reducing our stock of poultry. The effect of a warning of this kind on the mind of the general reader is that poultry keeping must be against the national interest, and probably he will dispose of his flocks under the impression that he is helping the country. The food, almost all unfit for human consumption, used by the poultry keeper is rapidly and economically converted into eggs and chickens, and we who are engaged upon such work, suggest to the Government that their attention be turned to the millions of unproductive stock which at present are living on the best our land can give them. There need be no shortage of food for poultry or for mankind were the unproductive stock eliminated. As far back as April 20th we warned the Government what

Harrysbourg Colony Hover

Only Successful Blue Flame Oil Burning Hover on the Market

Burner absolutely wickless, burns like natural gas thruout the season without any attention in the way of cleaning. No ashes—no smoke—no soot.

Holds perfect temperature in mild and in cold weather: produces more heat from oil consumed than any other oil burner, burning 40 to 65 hours on six quarts of oil.

This burner, in connection with our ventilating system, produces wonderful results. Its use means strong, healthy chicks. The following letter from a large farm in Missouri explains the performance of this hover in few words:

Brandsville, Mo., October 29, 1917.

Gentlemen—Regarding your Blue Flame Hover, we are very much pleased with the results. It fills the need of a stove which will stay with the chicks all the way thru. A coal stove is with them upon retiring at night, but falls down before morning, while a stove of your type is right on the job every minute.

Haight Orchard and Developing Co.,
P. D. Farrington, Poultry Dept. Mgr.

Hover is made in two sizes: 40-inch canopy for brooding 100 to 300 chicks; large 50-inch canopy for brooding 100 to 600 chicks. Thirty-day guarantee. Send for catalog.

Change Your Coal Brooder Into a Perfect Blue Flame Oil Burner

Seventy-five percent of orders last year were from poultrymen dissatisfied with the coal brooder stove. Use our Blue Flame Burner with all connections ready to be installed in any coal brooder. Plenty of heat for a 32-inch canopy. Guaranteed to give perfect satisfaction or money refunded. Cut in this ad shows device connected to a coal brooder stove. Send for catalog.

How to Raise Chicks

128 pages, profusely illustrated. An a to z manual for everyone who keeps fowls. Written by Prince T. Woods, a man who knows how and how to teach others. Cloth bound, price 75c.

American Poultry Journal Pub. Co., 542 S. Dearborn St., Chicago, Illinois.

its destructive policy towards poultry keeping would lead to. We said then that in the winter of 1917 the price of eggs would be 6d. each. How true was our prediction may be seen in London markets today. Now that the public are beginning to cry out against the price of eggs it may be that the departments concerned will discover that poultry keeping is not a hobby but an industry of national importance.

A PLEA FOR THE SMALL FLOCK.

By M. B. TAUBENHAUS,
College Station, Texas.

With our present war conditions and the high cost of living, the back-yard poultry flock is naturally attracting due attention. The writer feels that it is not untimely to present some figures which might be of general interest. These figures represent a forty-five weeks' egg record of a small flock of fifty White Leghorns, composed of equal numbers of hens and pullets. The following statements are self-explanatory:

Total feed consumed, including sprouted oats for greed food.... 3,276 lbs.
Total number of eggs produced.... 6,982
Total number of eggs in dozens.... 581 11-12
Average price of eggs per dozen.... .34
Total cash received for eggs..... \$ 188.29½
Price of feed an average of 3c a pound, total for 3,276 lbs..... 98.28

Profit..... \$ 90.01½

To obtain a clear idea of the full history of the above flock, the following figures are further presented:

Date Month.	No. of birds in the pen.	Amt. of feed consumed in pounds.	No. of dozens of eggs laid.	Price of eggs.	Cash for eggs each month
December 17 to December 31, 1916.....	50	186	34 6-12	\$.45	\$15.52½
December 31 to January 28, 1917.....	50	314	56 7-12	.40	22.63
January 28 to February 25, 1917.....	50	353½	70 6-12	.30	21.15
February 25 to March 25, 1917.....	50	344	80 3-12	.30	24.07½
March 25 to April 29, 1917.....	50	391½	102 6-12	.30	30.75
April 29 to May 27, 1917.....	49	325	72 3-12	.30	21.67½
May 27 to June 24, 1917.....	48	279	51 6-12	.30	15.45
June 24 to July 29, 1917.....	47	327½	58 7-12	.30	17.57½
July 29 to August 26, 1917.....	46	220	28 11-12	.30	8.67½
August 26 to September 23, 1917.....	45	258½	20 4-12	.40	8.13
September 23 to October 21, 1917.....	45	277	5 11-12	.45	2.66
	Average 48	Total 3,276	Total dozens 581 11-12	Av. price per dozen \$.34	Total cash \$188.29½
		Total feed consumed, 3,276 lbs. at 3 per lb.....		\$98.28	
		Cash for eggs, \$188.29½—\$98.28.....		90.01½	
		Thus the profit is.....		90.01½	

From the above figures it is seen that a small flock of fifty or an average of forty-eight birds, if properly cared for, may yield a profit of \$90 in spite of the high cost of feed. The labor here represents the profit. To care for a flock of fifty birds should not require but one hour a day in which all odd moments are utilized.

Does it not pay to utilize a spare hour per day to care for a small flock of chickens in the back yard, especially now, as it is believed that hen can help whip the Kaiser? This work might well be done by the women or children on the farm, in which place, too, the birds have every advantage over the commercial plant. Another point worth mentioning is the fact that a flock of pullets will almost double in value on the second and third years as breeders and yet be profitable egg producers also.

It may be further stated that the reason the feed bill in this table is brought down to three cents a pound, is found in the use of sprouted oats. The latter is nutritious and takes up a large portion of the bulk in the daily ration. Sprouted oats in this case not only reduces the feed bill, but also increases the egg yield.

Clay Center, Neb., Dec. 5, 1917.
Editor American Poultry Journal,
Chicago, Ill.

Dear Sir:
As customary, we are forwarding a copy of our 1918 Old Trusty catalog to you by this mail. We are looking forward to a bouncing season. We note with enthusiasm the publicity that is being given to the poultry business. I do not believe, however, that people generally realize the poultry opportunity before them.

Looking back, we have been quite a long while in Clay Center, dealing with poultry raisers, and the poultry situation is brighter than ever before.

The United States hasn't been exporting eggs to any great extent, but exports in eggs

have increased three, four or five times in the last three years. During the Civil War the demands for certain food products were just enough to supply the food needs. Prices of wheat, for instance, were higher in '67, two years after the war closed, than any period during the war, so I think it will be in this case. Prices of poultry, farmers feel, are temporary, but I look for poultry to continue higher, and the demand to increase, not only during the war but for years afterward. The war has done this to the European countries: It has consumed all food supply in the nations at war, not only drawn on the surplus but taken the growing stock. This is true of the nearby neutral countries as well. Exports have increased in the last few months in the United States and from the South American countries, and this will continue. There has been a decrease in poultry raising the last couple of years. No question about that. There has been an increase in the demand. Some farmers are getting hold of the situation and will profit in a big way. After the war is closed, shipping will be less risky. Not only will the people in the warring countries have to be fed as they are being fed during the war, but the consumption will be greater and there will be other markets for brood stock that will go to replenish the waste that has taken place during the early years of the war.

There is no getting away from the fact that poultry will continue to be high priced all thru the war and for years afterward. Farmers who have sold their poultry because it was high, feeling that the high price was temporary, have made a mistake. They ought to raise all the poultry they possibly can and keep marketing stuff that has matured and isn't going to produce. Take the fat hens that are

taking on flesh instead of laying eggs, they should be marketed. The surplus roosters should be marketed during the holidays. The laying hen, no matter how high feed goes, cannot be an expense to her owner.

*Very truly yours,
H. H. Johnson.

SELECTING AN IDEAL VARIETY

By W. W. COLE.

MY SELECTION of the Barred Plymouth Rocks for my favorite variety is based on a purely esthetic emotion—an appeal to my sense of beauty and the satisfying of an ideal in precision and symmetry. So the selection of a variety is an easy matter with me, as I find in the Barred Plymouth Rocks what I find in no other variety. My personal selection of this breed is by no means a case of "love at first sight" of any breed that came along, for I had handled the barn-yard variety, and had raised Brahmas, Brown and White Leghorns, White Rocks, Rhode Island Reds and I had criticised these varieties as a fancier with a view to finding the truly beautiful. I also had been very fond of color and variety in the garden and by the wayside—and had made a study of the laws of botany and horticulture. The rose, the pansy, and the sweet pea especially, appealed to my sense of beauty.

First, the beauty of my variety appeals to me because it is different and distinct. The Barred Rock is not a mere patch of white or black or brown. For here is variety in unity and unity in variety. Immediately I saw in my selection a chance to look again and find more of the beauty. I did not see all the beauty at a glance. I looked again and saw shade and color, size and symmetry. The males were distinct, being a lighter shade; while the females were darker and yet of the same general plan or design. The males are different from the females; still there was symmetry or idealistic relation. The fact that the plumage was not all black, neither all white, contributed a restfulness to my eye and I seemed satisfied with the general appearance of color and shade and design. The beauty seemed wholesome and substantial—a beauty that would endure and not fade away by the destroying agency of sun or shower. The plumage of my variety, therefore, is a most happy medium between extremes—and in consequence is wholesome, enduring and ideal. See this bird in the park, in the coop, in the show room, or on the lawn, and you see an all-round beautiful specimen.

More specifically, the beauty of my variety I discover in the mathematical precision of the barring of feather, as tho it were the handiwork of the real artist. The barring is by no means a mere smattering of white and black in "hit or miss" fashion. My eye caught the regularity of the plan of coloring—alternating bars of black and white, chasing one another clear off to the end of feather—a real

THE THOROUGHbred POULTRY YARDS DEPT. S EVANSVILLE, INDIANA

Give the Unhatched Chick a chance for its Life

UP TO HATCHING TIME, a chick breathes through innumerable blood-vessels in the inner membrane just within the shell. The life-sustaining air goes in and the poisonous carbon dioxide exhaled passes out through the pores of the shell.

Very often during incubation these pores are partially closed, also the shell is likely to become hard and tough. This is a double handicap.

Even under normal conditions the margin between strength of chick and strength of shell is dangerously close. Partly smother or suffocate the chick and its chance to hatch becomes much less. If, at the same time, the shell hardens, the weakened chick cannot break its way out.

Thus the common occurrence of dead-in-the-shell chicks.

EGG-O-HATCH

applied to eggs during incubation, furnishes free oxygen to the chick, absorbs the carbon dioxide and disintegrates or rots the shell—so that at hatching time you have a strong, virile chick and an easily broken shell instead of a weakened chick and a hard, leathery shell. This means a better hatch and the stronger chicks are easier to raise.

Egg-O-Hatch has been proven practical in every way by repeated tests in which it was applied to only part of the eggs in an incubator and by thousands of poultry raisers who use it regularly. Last season many reported 100% hatches of unusually strong chicks. One got 100% three times in succession. Read what some of them say:

BEST IN FIVE YEARS

Egg-O-Hatch received and used and all came out and living today but three eggs; they were cracked. This is my best hatch in five years. J. W. OLDS, 721 S. Austin St., Sherman, Texas.

HATCHED EVERY ONE

Egg-O-Hatch certainly is a wonder. I used it and had the greatest success. Every hatchable egg hatched and not a cripple chick among them. Signed: MRS. JAS. BAKER, Wheatland, Ind., R. R. No. 22, Box No. 48.

15% BETTER RESULTS

I have used the Egg-O-Hatch and received a 15 per cent better hatch on the eggs treated than on the eggs not treated. MRS. W. H. ALDERSON, Moberly, Mo.

97% IN FREEZING ROOM

I have given Egg-O-Hatch a trial and from 61 eggs I hatched 59 strong chicks, 97 per cent. Some nights it was so cold that it froze ice in the room where I had my incubator setting. MRS. G. SHIFF, Bellevue, Idaho.

MUCH BETTER RESULTS

Out of my 120-egg machine I usually got from 75 to 80 nice chicks. By using Egg-O-Hatch I got 93 live chicks out of 101 eggs. The rest were "test outs." Signed: MRS. FRANK MEURET, Venus, Neb., R. R. No. 1.

Egg-O-Hatch comes in powder form. It is mixed with water and applied to eggs by dipping, sprinkling or spraying. Applied three times—10th, 14th and 17th days. It is made only by the Geo. H. Lee Co., manufacturer of Lee's Egg Maker, Germozone, Egg-O-Latum, Lee's Lice Killer and other preparations. Note above offer free books.

View of Unhatched Chick, showing blood-vessels used as temporary lungs.

Free Booklet "ALL ABOUT EGGS" free on request or, for 5c to cover mailing, Lee's complete poultry library of 5 booklets.

25% BEFORE; NOW 80 TO 85%

Your Egg-O-Hatch, in what experience I have had with it, has done everything you claimed for it—not only were the hatches much larger, but the chicks much stronger. I am raising turkeys this year and already have 300 splendid young turks with 200 more eggs setting. Might add, since received your Egg-O-Hatch, I have not set a hen, but every egg in incubators as I find that my incubators bring larger hatches than the hens since using your product Egg-O-Hatch. Before using it, my hatches were about 25 per cent, where now they are from 80 to 85 per cent. I cannot too highly endorse it. MRS. GUY H. PRICE, Sequim, Wash. Box No. 26.

100% THREE TIMES

I take pleasure in writing you about Egg-O-Hatch. I ran my incubator three times and will say Egg-O-Hatch makes it easy for the chick to come out of the shell. Not one chick left in the shell three hatchings. I will always use and recommend it. Yours truly, H. J. STRICKER, Omaha, Nebraska.

100% WITH; 50% WITHOUT

I used Egg-O-Hatch and it sure did fine. I tried it in my big 250-egg incubator just on one side. There were half a dozen get out of the shell on the side that I did not dip. But on the side I dipped every chick got out and not a cripple in the 125. MRS. CHAS. WORKMAN, Haigler, Neb.

Egg-O-Hatch will give you bigger hatches, no matter what kind of incubator used, and all the chicks will be stronger and easier to raise. Get a jar NOW from any dealer handling Lee products or send to us.

542 South Dearborn Street Chicago, Illinois

work of fancy and artistic design. This I discovered to be the general scheme thruout the entire system of plumage, and not only from tip to tip but to the skin as well. This was added reason for my admiration. And still again I saw evenness of shade from tip to tip. This was true of both sexes. But another thing appealed to my sense of sight. The males were always slightly lighter in shade and color than the females. This is an advantage, for just so soon as the young put on their feathery coating of real plumage the slight difference of shade enables the owner to determine the sex of the fledglings. But all this barring and shade and evenness of color of plumage is the result of careful selection and continual attention to the law of the family—for the Barred Rock variety is in reality the Barred Rock family, so that any variation from the idea of the family line would show in a white or black or red feather and thus destroy the symmetry and the beauty. Here, then, is the real beauty in the law of heredity, so that like produces like, and the type and style of the family are carefully conserved in mating by appropriate selection.

This is considered the great difficulty in breeding this variety true to Standard, but it appealed to me and I saw something somewhat difficult but worth while. The law of heredity that regulates color and shade and type obtains in poultry just as in botany or horticulture. And the poultryman who will take the trouble to observe some of these simple laws can regulate to an exact precision the production of light or dark shades or the wide and narrow bars.

In this way the beauty and symmetry

of this good breed can be readily conserved and even improved. For example, in the propagation of flowers—a cross between a bright red and a white blossom will almost invariably produce a pink or variegated blossom. Let this law be observed in the mating of this variety and the difficulties of breeding true to Standard will be mostly overcome. For example, the males are a slight shade lighter than the females. This is found to be so because the light bars across the feathers of the male are a little wider than the dark bars—the facts and the principle being reversed on the females, causing the females to present a darker shade. For fancy purposes the difficulties may be overcome by a proper selection in mating; mating a male having a wide, light bar with a female having a narrow light bar.

To me this is more than theory, for I just go to the park and look at my cockerels and pullets which are the result of my careful and scientific selection in mating and there I find the ideals of color and shade and type and symmetry and the beauty of the Barred Rock family. I pick up a much prized specimen and look at the comb and wattles and beak and shank and I am lost in admiration of this beautiful variety. I have no regrets. I covet no other variety. These are ideal. I am satisfied with my selection. They meet my requirements of fancy. They prove their beauty. This is my choice—aristocratic—imperial—the grand old bird.

S. C. REDS of the best bloods obtainable, combined with intelligent mating resulting from years of experience. We satisfy for half what big advertisers, but not better breeders, would ask. Remember when buying show birds for the coming winter shows. 500 youngsters growing on free range. R. I. Armstrong, 378 14th Ave., Columbus, O.

Shoemaker Poultry Farm

Freeport Illinois

Established Over 28 Years

Don't endanger your success

by using a poor incubator. Your incubator will be the keystone of your season's efforts. If it fails you or does not give the maximum of efficiency you lose at least several weeks' time, or maybe the whole season. Incubators will be hard to get on short notice this spring, due to manufacturing and shipping difficulties, so prepare now.

GLOBE Incubators and Brooders

are not just "good enough." They are the best machines on the market today and we are willing to prove it. We use the most modern machinery, our workmen are the best that money can employ and no machine leaves the factory until it passes the most rigid examinations, for our good name is back of every one of them. Our motto is: "How good we can build them—not how cheap." The remarkable hatches which our customers obtain is positive proof that you can afford to buy but one incubator and that is the GLOBE.

Genuine success cannot be achieved in incubator work unless that work is completed by using a really good brooder. Compared with an incubator, a brooder is rather a simple apparatus, but nevertheless the work it has to do demands that it be thoroly well made. Globe brooders are made with the same painstaking care as Globe incubators.

Poultry Almanac For 1918

It is a textbook of information. Tells about and shows pictures of the different varieties, incubators, brooders; poultry ills and how to cure them, what and how to feed, how to build poultry houses, etc. Write for it today, inclosing 15 cts.

We Breed 48 Varieties of Poultry

and can supply your wants. Our old customers come back year after year, which proves we give satisfaction. We believe in always giving them a bit more than they pay for. Order your breeders early, so as to make sure of receiving them for the coming season.

Send for our Poultry Almanac—all about Fowls and Incubators—Price 15c.

BLACK LANGSHANS AND WHITE PLYMOUTH ROCKS.

Happy Combination for Beauty, Eggs and Meat on the Farm.

By PRINCE T. WOODS, M. D.

RATHER more than a year ago I stated that one breed was enough for me and that I expected to breed Black Langshans exclusively. Previous to that I had been carrying a number of popular varieties, among them White Plymouth Rocks. Breeding several breeds on the same farm is more or less of a nuisance. Yet if one is fond of fowls, it is hard to let go of a breed after once taking it up. Every breed and variety has its little peculiarities and its special appeal for favor.

It was rather a hard pull to let some of the breeds go. During the past half dozen years I had had some nine varieties or more, and giving up the White and Buff Wyandottes, which I had bred many years, was the hardest pull of all. Firmly believing that one variety or breed is enough for anyone, I fully determined to keep but one, but when it came to parting with the White Rocks it couldn't be done. Just as I made up my mind last spring that I would drop them, much as I liked them, came a long time order for hatchery eggs that was too good to lose. The Rocks stayed and a number of selected eggs found their way under hens. Result, I raised about an equal number of White Rocks and Black Langshans and for the present that combination will probably stick to the farm.

The lordly Blacks and the beautiful Whites make an attractive combination. We get beauty in both and an abundance of eggs and meat. Hawks do not fool around much with growing Black Langshans, they look too much like crows. The black chicks and white chicks running together are safer than white chicks would be running alone. The Black Langshan hen makes a wonderful mother and is wicked fighter, willing to attack any varmint, furred or feathered, that may attack growing chicks.

There is a wide difference in these two breeds in the chick development. The same amount of feed that only grows a rangy frame on a Langshan will make a fine plump broiler, fryer, or small roaster of a Plymouth Rock. While the Langshan can be utilized for the table at the small roaster stage, it is never at its best until large roaster or turkey size. Long after the Rock chick has passed the soft-meated stage and "gone hard" the Langshan will remain soft-meated and as tender as young turkey. Even two-year-old males make good table meat. Thus the Rocks and the lordly Blacks make a fine combination which insures prime poultry meat continuously throuthout the season.

While the Langshan eats more during its period of growth than a Rock, and

takes much longer to come to full maturity, it eats less food than the Rock after full maturity is reached. The pullets come into laying in from two weeks to a month after the Rocks, as a rule, tho some of both breeds will start laying at about the same age. Both breeds lay large rich-colored eggs and plenty of them, the Blacks averaging greater uniformity and depth of color. We believe these breeds about equal in egg production and both not to be surpassed by the much-advertised Leghorn "egg-machines." They lay well in fall and winter and also in summer if fed for egg production. As foragers they are about equals, but in nervous activity and flight the Langshan, tho heavier, puts it all over the Rock. The White Rock is always tame and docile even tho one does not keep in close contact with them, but the Langshan quickly reverts to a nervous wildness unless one constantly makes friends with them. Tho as tame as pets, put them on wild woodland range for a week or so and they will be like a flock of wild turkeys, easily approached but by no means tame.

It is natural to compare the Langshan with the turkey, as it has many points of similarity with that great American bird, more than any other variety of gallinaceous fowl, I think. There is little difficulty in breeding the Black Langshan true to type and color, there are few culls—far less than with the Rocks. Now and there is a sport, and this season we got one big black—or almost maltese—silky plumaged male out of our Blacks. He is all Langshan in size and shape, but all Silky in plumage. We hope to locate his dam, or his granddam, and mate him back to her and see what will come of it. All out birds are closely inbred and the Blacks have had no new blood of a foreign strain for a long time.

POPULARITY OF THE WHITE LEGHORN.

By H. S. CARTER.

A WHITE Leghorn, to me, is always a bird to admire, and what poultryman, no matter what he breeds, can say aught but this? Their bright, snappy eyes, sprightly carriage, pure white plumage, yellow legs, and, above all, their general air of alertness and inquisitiveness are bound to attract attention in any yard or show coop.

Some there are who object to the difficulty of fencing in the high flyers, but my experience has proved that when Leghorns are contented, a four-foot fence is as good as an eight-foot one; and, after all, the contented hen is the one that produces.

While on the subject of production, what breed, considered as a whole, has the enviable record of a White Leghorn? Notice the laying contests. Many

Manufactured by the Originator

Fred Page! B22 Rockford, Ill.

individuals may excel them, but what breed has the average for all the birds entered? How often do you hear the remark, "They lay almost as good as White Leghorns?" Every one concedes this; and to prove that so-called "utility" White Leghorns are bound to fall short of their name unless they are bred for beauty as well, beauty meaning show qualities, is the object of this article.

In the beginning, let's get that word "utility" properly located. The dictionary says it means useful, but to some breeders it means culls, birds that fall short of being show specimens; generally the short dumpy body, high tail and over-size comb.

A Leghorn of good type is narrow. It follows, that to gain room inside, they should have added length and depth. Did you ever notice that the low-tailed bird is usually long in body and the high-tailed bird the opposite? This means that the show bird has more room for the vital organs that produce the eggs, the aim of all poultrymen.

The principal howl from those who decry the show Leghorn is that the show hen has no egg record posted on her coop; however, such absence does not prove that she is incapable. The show season comes about the middle of her laying year, and any exhibitor knows that a hen to be at her best should be just ready but not quite laying; nor does he want her to lay in the show coop, as they sometimes contract the bad habit of egg eating.

What of her sisters at home? They are of the same blood line, but because of some minor inferiority were left at home. Maybe in less competition they could have won too, but they were allowed to follow their natural inclinations and begin laying in the fall and make the records.

Getting back to those high tails. Did you ever try to breed away from it? I have. I bought foundation stock of the so-called utility kind. High tails, red ear lobes, scanty plumage and all the commoner defects. And as layers, they were only about average for the breed. Remember, I had never heard of the Standard of Perfection and the word "utility" caught my eye. But after I had them, I naturally wanted to know what a Leghorn should be. I had heard of poultry shows, and to find out what constituted a show bird, I consulted the editor of a poultry journal published in my home town. He handed me the Standard, opened at the Leghorn illustration. I immediately shelled out the price and made a run for my yard, and I wasn't long in finding out that my "utility" birds were not Standard birds. That started me to thinking. From butchering an occasional chicken for the table I knew the location of the egg organs. I saw that my Leghorns were deficient right on top of those very organs, the feathering being very scanty, particularly on the male. Feathers are for protection, and protection there

ADJUSTABLE CLINCH BANDS

None better made 25-30c; 50-50c; 100-50c; 200-51.40; 500-53; 1,000-55. Numbered as desired. Also colored

Celluloid Ringlets

same price as Clinch Bands. Six samples assorted 6 cents. These celluloid bands are different from some, in that they are of good size, fully large enough for the breed intended.

MRS. E. B. MARTIN

P. O. Box N

DOWNEY, CALIFORNIA

means more eggs in cold weather, so I set about to get more feathers on the back. I began a hunt for a male that had lots of feathers there. But growing feathers there is not a matter of one season.

Absolutely disregarding egg production or trapnesting, I did exactly what the fancier is accused of, breeding for feathers. I had those feathers only in mind, year after year, and I kept getting more and more. To my astonishment, I awoke to the fact that I was getting better tail carriage. That is, more to the Standard angle and that in protecting my "utility" birds where they most needed it I had made a show bird. Stranger still, in fact of all the yowls to the contrary from our non-showing friends, I was getting as many eggs, per hen average, as when I started five years before.

And right here is the burden of my story. More feathers on the back mean protection for the egg producing organs and lower tail carriage; lower tails mean longer bodies and consequently more room for those same organs. Therefore the show bird is the "utility" bird within the dictionary meaning of the word; i. e., "useful."

So here's to the *White Leghorn*. They come nearer in popularity than any other to being the national bird and this brings me to what I have always considered the best quotation in reference to them—the author may have had them in mind at the time—"A thing of beauty and a joy forever."

OPERATING AN ARTIFICIAL HATCHER.

Some Vital Points to Bear in Mind.

IN JANUARY, when the pullets are laying well; when the poultry shows are at full blast; when your yearling males are being sold off, and when you are about to enter upon another year of successful poultry raising, a few facts in regard to running your incubators, which have been covered with dust for the past few months, must be recalled, for January, February, March and April are the months in which you produce your next December's winners.

For the benefit of those who have had but a limited amount of experience in the handling of artificial hatchers, a few paragraphs may prove to be of practical help and inspiration and will probably save considerable time and expense.

Before purchasing your incubator, have a dry cellar ready. If this is not available, any room that is dry, well ventilated and free from drafts will answer the purpose if it is conveniently located for the attendant. Inconvenience will soon lead to carelessness.

In purchasing your machine, try to

buy one just a trifle larger than you really need at the present time; you will not regret it. It will not be necessary to completely fill it with eggs this year, but do so next year. With every incubator is an instruction book, for the one purpose of protecting the purchaser from failure. So by all means do not discard your instruction book. Many persons have ruined a hatch that could have been saved merely by carefully reading the accompanying directions. Do not attempt to remove or try to assemble any parts before you have studied thoroly every word of these.

After setting up the machine and before you are ready to put in the eggs, keep the machine running steadily at the desired temperature, 102½ degrees, for several hours. Put in your eggs when a constant temperature is attained. Never, under any circumstances, put eggs on top of each other and do not add any eggs to the machine during the incubation of the first eggs. Failure is certain if these last two points are disregarded.

Attend to your lamp regularly every morning, first turning your eggs. If done in reverse order, grease or oil of some kind invariably gets onto the eggs, stopping the growth of the germ. Consequently the egg will not hatch.

After the end of the seventh or eighth day, test the eggs. Dispose of the infertile eggs and the dead germs. Test them on the fourteenth day in the same manner. Usually the instruction book also gives full and complete directions for testing eggs.

The main point to bear in mind is regular attendance. Turn and cool your eggs at the same hour each day. Fill your lamp, clean and trim the wick each morning.

These points constitute the foundation of success with artificial hatchers, so by all means follow them and read your direction book carefully, and you will be on the road to success.

GALLOWAY'S HELP

for Poultrymen

When feed is high and labor is scarce — save money with Galloway's

ENGINES — FEED MILLS — CORN SHELLERS

You can make up for high cost of feed and labor by doing your work with a Galloway Engine. Let it pump your water, run your feed mill and shell your corn. These are times that call for greatest economy and Galloway power is one sure way to economize.

Galloway Engines mean economy in the work they do and the way I sell them, because they are—

Sold direct from factory at low prices

Get My New 1918 Proposition
Selling direct from factory is the most economical way of distribution. Everybody knows that, as there is no waste between the maker and consumer. That's my plan, which saves you big money. Read my New 1918 Book. Get the latest engine facts. Learn how Galloway saves you money on the best engine built.

ENGINES

Light Work Models, 1¼ to 6 H. P.

Galloway Engines are for all kinds of light work — pumping, running corn sheller, feed mill, or saw rig. Portable and stationary. Made of superior materials by skilled workmen; every part standardized and interchangeable. Uses any fuel. Develops way above rated horsepower. Large, heavy, counterbalanced flywheels. Make - and - break ignition; never misses fire. Easily started. No cranking. Frost-proof and fool-proof. A Galloway is the kind of engine you want and demand.

Feed Mills — Corn Shellers

at a New Money-Saving Price

I make two sizes of feed mills—8-inch and 10-in. burrs. Work perfectly, grind fine, with regular flow. Big capacities. My Corn Shellers are self-feed—handle any corn—run easily, with big capacity. Strong, durable and wonderfully simple.

Get This Book

Read about Galloway Engines and other Galloway implements that sell direct. You need Galloway Engines now more than ever. Prices will never be lower. Don't wait. We ship from near-by points to save you freight. Send coupon today for FREE book. Use the coupon.

Big Winter Eggs Out of Clover. How? Ask Me.

CO-OPERATE OR QUIT BUSINESS.

By RALPH SEARLE, Topeka, Kansas; Chairman Executive Committee, International Poultry Federation.

THE above caption is not a threat. It's merely a terse statement of the alternatives that confront the poultry producers of this country and Canada at the present time. With each passing month the situation in the poultry world has been becoming more acute, conditions more unsettled, the problems facing each individual poultryman more perplexing. More and more it has been rendered apparent that "the old order changeth." The world is being reborn. Established precedent is no longer a safe guide. Changing conditions are demanding new methods in every line of human activity. And the poultry industry is no exception to the rule.

Several months ago it became apparent to a number of men who have spent the best years of their lives in studying the problems and conditions affecting the poultry industry, that the present crisis could not only be met thru an organization that could quickly be extended to reach every man, woman and child engaged in the production of poultry. It was seen that co-operative effort must take the place of individual effort, especially in the purchasing and selling end of the business. The old motto, "Every man for himself, and the devil take the hindmost!" must be supplanted by the motto, "One for all, and all for one." "United we stand, divided we fall," was never more true than in the present emergency.

With these facts in mind, the first step was taken last fall at Kansas City, in the organization of The International Poultry Federation, an organization to be composed of specialty clubs representing each recognized variety of poultry. The organization of twenty-five of these clubs, representing twenty-five of the most popular varieties of poultry, is now well along toward completion. Each of these clubs is being chartered as a "corporation not for profit," with a capital stock of \$5,000, shares of stock being \$1 each. Only breeders who can present a "clean bill of health" are permitted to purchase stock, the reliability of each stockholder being guaranteed in the form of a \$100 surety bond. All stockholders, of course, are life members without further payment of dues. Annual members are also being accepted in each of the clubs, the fee being \$1 per year, which also includes membership in The International Poultry Federation. The president of each club is

SPROUTED OATS—WINTER EGGS

The Vapor-Bath Sprouts produced by the Close-To-Nature machines possess an efficiency for prolific egg-production not found in sprouts grown the old way or in many so-called grain sprouters. A sweet, succulent, tender, edible, palatable sprout is grown in the Close-To-Nature Vapor-Bath machines.

Sprouted Oats From One Bushel Of Grain

CLOSE-TO-NATURE GRAIN SPROUTERS

Cut down the feed bill and run up the egg yield. Change high priced dry grain into low priced green feed. Make one bushel into three or four. The Close-To-Nature vapor-bath sprouters produce the succulent sprouts, the vegetable milk and the grape sugar that contribute to prolific egg production. The originators of the grain sprouter business and the largest sprouter manufacturers in the U. S., offer three kinds and many sizes from 1/4 bu. to 8 bu., for a few hens to 1,000.

The Double Quick

nomical and efficient sprouter ever put on the market.

a member of the board of directors of the federation. Each club will advertise co-operatively, the slogan being, "Buy From Bonded Breeders!"

The next step, and the most important one, in mobilizing the industry and putting it on a safe basis, is now being taken. It consists in inaugurating a nation-wide system of co-operative marketing of poultry and eggs, and the co-operative purchasing of poultry feeds and supplies. A strictly co-operative organization is being perfected, to be known as The National Poultry Exchange. The fact that so many local attempts at co-operative marketing have ended in failure, has been due to the fact that they had no one at the terminal markets to take the final step between producer and consumer who was interested in seeing co-operative marketing succeed. In fact the contrary was true, with the result that returns were unsatisfactory, and the local experiment in co-operative marketing ended in the verdict that there was "nothing to it." The National Poultry Exchange is being organized for the purpose of surmounting this serious obstacle to successful co-operative marketing. It will be the central organization thru which the local co-operative organizations will operate. Offices will be opened in the leading terminal markets, to which local organizations will consign their products for final disposal. Each local organization will purchase one share of stock (\$100) in The National Poultry Exchange. All stock will bear a fixed dividend of 8 per cent per year. Profits in excess of this amount will be divided among the local organizations holding stock, in proportion to the amount of business which each such organization has done with the exchange during the year.

Each of the specialty clubs affiliated with The International Poultry Federation is investing one-tenth of the membership fees received in stock in The National Poultry Exchange. This will not only provide funds for starting the work of the exchange, but will provide a gradually increasing source of revenue for each of the clubs, virtually amounting to an endowment fund.

Altho the first announcements of the preliminary organization of The National Poultry Exchange were sent out less than sixty days ago, letters are being received from all parts of the country pledging co-operation in this important movement. Local poultry show associations are taking steps to organize on a co-operative basis, and are conducting vigorous campaigns among the poultry producers of their various communities. There is every reason to believe that several hundred such organizations will market their poultry and eggs thru The National Poultry Exchange during the coming season.

The writer, or any member of the executive committee, will be glad to furnish model constitutions to local co-operative organizations, and in every other way assist in the formation of efficient, business-building organizations for poultrymen anywhere—except Germany

I want to show you how to make Money with Poultry
T. E. Quisenberry

What Others Say.

I can now save enough on feeds to pay for the entire course. F. M. LILL, LaGrange, Ill.

I would not take the price of the whole course for the lessons on breeding and mating. F. L. NOYER, American Fork, Utah.

I could have saved about \$400 had I taken your course before I started. FRANK SAWYER, North Woburn, Mass.

The knowledge I have gained from the disease lesson is worth the price of the course. GEORGE W. MORRIS, Russellville, Ky.

I have been in the building business for 30 years but your lesson on Poultry House construction is the best I have ever seen. E. M. WIGGIN, Kansas City, Kas.

Your lesson on baby chicks is just what we have been looking for. Last year we lost 650 chicks out of 1600. This is the result of just one of your lessons. GEO. M. JONES, Escondido, Calif.

IT is my earnest desire to put a real—useful—practical poultry education before every man and woman who is interested in poultry raising. I want to see more and better poultry raised—I want to see more people making money with chickens—I want to eliminate the losses and disappointments that so many poultrymen experience—I want to help you solve your poultry problems—and I can do it.

A Complete Poultry Education

I have made it possible for you to obtain right in your own home, during spare time, a complete—thorough—and practical a knowledge of poultry husbandry such as you could get nowhere else except at an agricultural college.

In a course of lessons taught by mail, I have completely covered the science of poultry husbandry and made it so plain and simple that anybody can understand it. I give you knowledge it has taken me a lifetime to acquire.

I show you how I make hens pay a big profit each year. I show you how I got 2,354 eggs from ten hens in a year. I show you how to feed for a big egg and meat production, how to select a site for your poultry plant and how to build your houses (right here I save you many times the price of the course)—how to get winter eggs and spring broilers—how to incubate and raise baby chicks—how to mate and breed—how to avoid and treat poultry diseases—how to show and win at poultry shows—how to dress and market poultry for the biggest profits. In other words there is no phase of poultry culture that you are not taught thoroughly. Hundreds of our students tell us that each lesson is worth the price of the whole course.

You cannot afford to be without these lessons. They pay for themselves many times each season in increased egg yield—in preventing losses from disease—in knowledge. The broadest guarantee it is possible to write covers this course. If you are not satisfied you do not pay.

Get Our Free Book Today

Our Free Book "Dollars and Sense in the Poultry Business," fully explains how we can help you to make more money and save money raising chickens. It explains in detail just what our lessons teach you and what they can do for you. (Continued from Page 27)

this breed that we have had in recent years.

Up until the opening of this show the exhibitions that had been held in the largest cities have not been up to standard, either in the number of entries or in paid admissions. In fact, many came to Chicago rather discouraged with the outlook and feeling that with the high price of feed it might be well to give up the business entirely, but when they stepped into the Coliseum and saw this immense exhibit and the enthusiasm of the breeders and everyone hustling to

put the thing over big, they themselves became enthused with the business and went home carrying the good news to all parts of the country that the big show in Chicago was a grand success, and regardless of conditions the management here was able to put it over and that they had personally seen sales of many specimens at high prices and advised the boys at home to put their shoulders to the wheel and put it over as the Government expects them to put it over. As one editor expressed to the writer, "If your show had been a failure this year, or not up to what you would have considered the standard of former years, it would perhaps have had a more damaging effect on the poultry

A National Proclamation

The Greatest Incubator

BARGAIN

Ever Offered

For years we have manufactured the good old reliable National Incubator. For years we have successfully started thousands in the profitable poultry business, and during all these years we have longed to build a bigger, better, simpler machine to sell at a price everyone can afford. At last we have accomplished our desire. Our 1918 National with all the latest features and improvements is a revelation to the poultry world. Think of it—165 Egg National Incubator for only \$10.00, freight prepaid—On 40 Days Trial—Backed by Our Money Back Guarantee. Your hard-earned dollars cannot buy greater hatching value. You cannot equal this exceptional offer anywhere. Take no chances. The National is simple, compact, durable, economical—and remember, it is

Built on "Uncle Sam's" Specifications

as outlined by the U. S. Dept. of Agriculture in Farmers Bulletin No. 236. We want to prove to you that the old reliable National Incubators are the best built, best equipped and most durable machines made for the money. Here's how we built the National. Hot water heating plant—Double wall—Dead air space between—Double glass doors—Special high grade cold rolled copper tank—Asbestos lining—Famous National regulator and boiler—Self Regulating—Self Ventilating—Safety lamp—Tested thermometer—Metal case (which makes it sanitary, air tight and non-shrinkable). No extras to buy. Not a cheap tin covered machine. Easy to operate. Will not warp or shrink. Pays for itself many times in one season. With proper care will last a lifetime.

165 Egg National Incubator

The National Brooder Better Than The Hen

Protects the tender chicks from all harm. Keeps proper temperature—properly ventilated—strong—durable. Sent prepaid east of the rockies.

165 Egg Incubator Both \$12.50
165 Chick Brooder

ONLY \$10
Freight Paid East of the Rockies

We have built thousands of incubators, but never have we offered such amazing value. The National contains every modern operating convenience. We guarantee it to be faultless and will replace any defective part for five years. It is the greatest incubator value ever offered. To prove it to you we will send it for

40 Days Trial

12 Year Guarantee

What Users Say—

The Incubator you kindly sent the Agricultural class of the Garretville High School proved a wonderful success. The simplicity of putting the parts together; the ease of regulation; are virtues which speak for themselves. We recommend your machine to anyone. G. H. S. Agricultural Class, Ohio.
Please ship at once 165 egg machine. My other one is O.K. Got fine chicks my first hatch. Harry Neff, W. Va.
I find everything just as you advertised it. Mrs. M. G. Potter, Mich.

Why Take Chances

Safety Lamp

Cannot explode or ignite—reliable, unbreakable. Produces steady blaze without smoke or fume. A sputtering, flaring, unreliable lamp will spoil your hatch and may cause fire.

To save time you can order direct from this advertisement. You risk nothing. Try the National for 40 days—compare with your neighbor—put it to the greatest of all tests—THE HATCH. If you are not satisfied it is the greatest incubator bargain you ever saw return it at our expense—we will promptly refund your money. We know you will not return it after your first big hatch of strong healthy chicks. You are absolutely safe. We deal fair and above board—no red tape. The publisher of this paper knows we will stand back of our word.

FREE 1918 Poultry Book

No matter whether you hatch 10 or 10,000 chicks you need this great book. It is far more than a catalog. Tells all about the care of eggs and chicks. All about this great hatcher and the men behind it. Worth dollars to every poultry raiser. Just the thing for beginners. Don't fail to get it when a postal will bring it. Send postal today.

SEND ORDER DIRECT

This is the Greatest Incubator Opportunity You Will Ever Have

Use it the year around. Its perfect construction, simplicity, wonderful heating plant and metal covering combine to give it the greatest hatching value. This big metal covered machine is not to be classed with cheaply built machines. With proper care it will give you years and years of faithful service. Comes to you set up ready to run with egg tester and book of instructions. Order now and save time—start hatches early—early chicks bring the most money. Send postal money order, bank draft or certified check for \$10, (\$12.50 for both incubator and brooder. Machines will be shipped day order is received so don't delay.

NATIONAL INCUBATOR COMPANY
Box 160 Racine, Wisconsin

OUR MONEY BACK Guarantee Protects You

Take no chances, the hatching season is too short. This dependable Hatcher is the largest, simplest and best machine on the market for the money. Money cannot buy greater hatching value. You cannot fully appreciate this wonderful machine until you have tried it. The National gets big hatches when days mean dollars. Order this dependable hatcher today or send for big book and read what users say.

breeders of the Mid-West than any one thing that could happen to the business, but when they came here and saw that you had put over something big in the face of opposition and discouragement, they are going home now and many have already promised to come back stronger next year than ever before."

I sometimes wonder, in handling exhibitions of this kind, if the exhibitors generally understand the immense amount of work there is connected with the show business, and that the little carelessness in entries and waiting until the last minute to make entries, then after having them on the books for two or three days, they want to enter a cock for a cockerel or a hen for a pullet and one or two birds added that they did not know they were going to show at the time they made up their entries, greatly adds to the work of the management. If you could really know what this means to the busy officers of the shows, we know you would make them correctly in the first place.

Another matter of importance to the exhibitors: Why will you insist on sending high class exhibition specimens to the Coliseum and the Madison Square Garden Shows in dilapidated broken-up shipping coops? In some instances it was necessary to rebuild the coops the birds were sent in to send them home. One exhibit was shipped in an old worn-out paper crate, and when we tried to coop them on their return trip the whole bottom came out of it. I actually hope to see the day when all paper coops will be tabooed and we believe that it will be necessary for the officers of the big shows to state in their printed matter they will not accept birds in these kinds of crates. If the paper manufacturers cannot make a coop that will stand up for the wear and tear of these shipments then they should substitute something that will stand up, but when one considers that the breeders have spent five or six months trying to produce a few specimens fit to go into these big shows and have probably invested all the money they can afford to invest in order that they may establish for themselves a record and then deliberately send them to the exhibition in coops where the chances are ten to one they will not arrive in the proper condition to be exhibited, it does seem that the "penny-wise, pound-foolish" fellow is abroad in our land and should be lassoed and made to apologize to the chickens themselves.

This is the first time that the Coliseum management had attempted to put on the Government exhibits. The same show was displayed here that was displayed at Madison Square Garden, New York, but we do not believe it attracted the attention that it does attract in New York, nor do we believe it is of special benefit for the Government that it be displayed in the Coliseum or in any city of the size of Chicago. If it is going to be displayed it should be displayed in cities where the local papers can be brought to realize the immensity of the business and will give to the reading public some information that will call special attention more than the straight advertising that the association carries. We really believe it would have been a better investment from the dollar and cents standpoint of the management and really better for the Government itself

45 PER CENT in NOVEMBER

Our pen of S. C. REDS led the first four weeks of the North American Egg-Laying Contest (official Delaware) with a production of 45%, against 28% for the next highest Reds and 13% for the 100 pens of all breeds. Four of our five pullets laid respectively 46%, 50%, 54% and 57%—remarkable results for November. We breed hens for egg-laying type as dairy-meat bred cows for milk. You could not buy a \$2,000 Holstein bull for \$75. The best is the cheapist. If you have Reds or Leghorns we can improve your stock.
R. I. Red hatching eggs, from 250 to 280 egg-type hens, \$5 for 15, \$25 for 100. Eggs from 200 to 250 egg-type hens, \$3 for 15, \$15 for 100. Eggs from 150 to 200 egg-type hens, \$10 for 100.

OUR SINGLE COMB WHITE LEGHORNS

are the product of long and correct breeding. They are true egg machines with the stamina to stand up under the strain.
Leghorn hatching eggs, from 250 to 280 egg-type hens mated to a son of LADY BURG-LANTINE (314-egg official champion), \$5 for 15, \$25 for 100. Eggs from 200 to 250 egg-type hens mated to grandsons of Lady Engantine, \$3 for 15, \$15 for 100. Eggs from 150 to 200 egg-type hens, \$10 for 100. Catalog on request. Hatching eggs sent safely last year to California, Oregon, Florida and Brazil.

All stock strictly standard bred. First come, first served. Order now.

if this exhibit had been displayed at Milwaukee, rather than at the Coliseum. The Milwaukee papers would really have given us prominent position and would have played it up as it should have been played up, while the Chicago papers, what little notice they did give us, was so short and so badly displayed that but few people, aside from the real breeders themselves, had any knowledge that such an exhibit was in the Coliseum building.

While on this subject, it is no more than fair to call attention to this one fact, that these exhibits, when placed in a poultry show, no matter where, should be at the expense of the Government itself that we maintain by direct taxation and not at the expense of the association. Many shows have asked for information in regard to this Government exhibit and I would say for the benefit of the associations that all of the expenses in connection with the transportation and the expenses of the Government employees have to be paid by the show. Figuring the distance between Washington and Chicago, the exhibit at the Coliseum will cost the association between \$250 and \$300.

This year the Coliseum Show put on, for the first time, a new style coop card, giving the names and addresses of all exhibitors before the birds were caged. We heard so many favorable comments on this, and there was such an absence of chronic kicking on the part of the exhibitors, that we believe it is one of the best moves we have ever made and I am convinced that it is only a matter of time before every show in the country will follow our lead in this important matter.

With the sixteen judges working in the poultry department and five in the pet stock department, we did not have a single kick in the office on any awards that were made and we believe that much of this is due to the fact that every breeder and every judge knew just exactly whose birds he was handling and the exhibitors knew whose birds were winning, and that every one was having an equal chance, the little with the big, and the big with the little.

The concession feature in the Coliseum has become one of the important parts of this exhibit and the management is particularly proud of it. We have here what we believe to be the most representative men in the poultry feed and supply business in America, who come regularly to this show, taking good liberal space and putting up the most attractive exhibits to be found anywhere in the country. This is one show that does not tolerate the faker of any kind and the nine years that this exhibit has been under its present management this one feature of the show has been kept absolutely clean. No top men, spy-glass venders, opticians or fortune tellers are allowed to work in the building, and this year we went one step farther and eliminated the bar that has been run in the basement or the grill room of the building, demanding when we signed up our lease that the bar be closed for the week of the poultry show.

For the first time two immense poultry exhibits were displayed in addition to the regular entries. U. R. Fishel, of Hope, Indiana, and J. C. Fishel & Sons, of Hope, Indiana, taking space 20x20, and bringing in a lot of high class sales birds in addition to their regular show

Get Big Hatches— then Raise the Chicks

America must produce more poultry and eggs, hence American poultrymen should apply "efficiency" to their business. They must stop loss or waste of hatching eggs, baby chicks and labor.

This means they must use the most efficient incubators and brooders even if compelled to discard present wasteful equipment and replace with the time-saving, results-insuring type. Newtown equipment will not disappoint you. The

Newtown Giant Incubator

*"hatches the most chicks, the best chicks,
with least labor and at lowest cost."*

These are straight facts! Ask Newtown owners. The Newtown Giant is at once highly efficient and most convenient, automatic in operation, fitted with exclusive features which save labor and worry and insure uniformly fine results. Newtown hatches are famous for the number, size and vigor of the chicks produced.

Learn all about this great machine. Write for the *Newtown Incubator Catalog*, stating the size of machine which interests you. Newtowns range from 600 to 24,000 egg capacity.

When it comes to brooding, the

Newtown Colony Brooder

*"grows the most chicks, the best chicks,
with least labor and at lowest cost."*

More facts! The Newtown is the original coal-burning colony brooder, the most popular and successful type of brooder ever produced. Like all good things, it has been imitated but never equalled. *First in the field, it still leads.*

Convenient, economical of fuel and labor, safe, durable, self-feeding and self-regulating, it is the brooder for those who wish to grow the sturdiest chicks and lots of them.

The Newtown Colony Brooder is made in several sizes. Advise us the number of chicks you wish to grow and we will send our brooder catalog free.

FEEDING FOR EGG PRODUCTION

This is the Title of a small book we have just issued, written by H. L. KEMPSTER. By following this feeding system you can be sure of the best egg yield. It has plain tables for feeding and tells exactly

HOW AND WHAT TO FEED FOR BEST RESULTS.

Whether you keep ten hens or ten hundred, you cannot afford to feed them **HIGH PRICED FEED** unless they lay regularly, and this book tells you how to feed. A food that has material for **100 yolks** and only **25 whites** will mean that the hen can lay but **25 eggs** on that feed. The over-supply of yolks in that feed cannot be used and goes toward making fat rather than eggs.

This Book not for sale, but given Free with 6 mos. trial subscription to **POULTRY KEEPER** at 25c. **POULTRY KEEPER** is the most helpful of Poultry magazines. It is practical. It is published for those who want to make **Poultry Pay**. It is chock full of money saving suggestions.

Write Today Send 25c for Six Months trial subscription to **POULTRY KEEPER** and receive a copy of "Feeding for Egg Production" by return mail **FREE**.

Address **POULTRY KEEPER, Dept. 33 QUINCY, ILL.**

At Chicago Coliseum, December, 1917

the leading exhibition of poultry west of New York,

U. R. Fishel's White Ply. Rocks

made a winning never equaled by a breeder of this variety, and is positive proof that there is but one HEADQUARTERS for White Plymouth Rocks and that is FISHELTON FARMS, Hope, Indiana.

FIRST PRIZE

Cock—1st, 3rd, 5th, 6th.
Hen—1st, 2nd, 3rd, 5th, 7th.
Cockerel—1st, 2nd, 3rd, 4th.
Pullet—1st, 2nd, 3rd, 4th, 6th.
Pen Chicks—1st, 3rd.
Pen Fowls—1st, 2nd.

On 24 Entries Won 22 Prizes

All first prizes, all seconds but two, all thirds but one. Silver cup for best display. Champion cock, hen, cockerel and pullet. Best shaped male. Best colored male. Best shaped female. Best colored female.

The above winnings, together with our winnings three years in succession at the Coliseum Show, also our winnings at SIX INTERNATIONAL WORLD'S FAIRS, twelve State Fairs, Hagerstown, Md., Cincinnati, Atlanta, etc., is

A Record Unequaled by Any White Rock Breeder

Not only do the FISHEL WHITE PLYMOUTH ROCKS win prizes but they PRODUCE EGGS, in fact there is no better WAR TIME poultry than Fishel's White Plymouth Rocks.

Selected Breeders. Male birds that will stamp FISHEL QUALITY on your flock. Females that carry blood lines and egg-yielding qualities no other White Rock breeder can give you.

Utility Fowls, the best war time poultry possible. Back-yard flocks or flocks of any number at interesting prices. Write me your wants, please.

EGGS FOR HATCHING—BABY CHICKS

U. R. FISHEL Box A HOPE, INDIANA

string. We believe this feature proved a good investment to the Messrs. Fishels and was one of the big attractions of the show.

Below we are printing the list of awards, so we do not consider it necessary to make mention of individual birds or classes. The competition was strong in every variety, from cocks to pullets, and it goes without saying that a winning at the Coliseum means that the exhibitors have as good birds or pet stock as can be found in this country.

COLISEUM AWARDS.

Get High-Priced Winter Eggs

Prove it at My Expense

The Collins Oat Sprouter doubles the egg yield, cuts the feed bill 50%, makes hens healthy. Heavy galvanized iron throughout. Pans lift off separately, exact perforations to prevent mold. No dirt, no trouble, simply set beside stove, furnace, or in sunny window. Water top pan. In a few days you will have fine growth of green for your hens. You cannot afford to keep chickens with grain so high without a Collins Oat Sprouter. Even with metal and labor so high we sell you

8 pans, 11x15 inches, Popular Size, for only **\$4.00**
5 pans, 11x15 inches, Back-yard Size, **\$3.00**
8 pans, 11x32 inches, Big Breeders, **\$8.00**

Delivery charges paid. West of Mississippi River add 50c; West of Rockies add \$1. "I like the Sprouter fine; it makes the hens sing."—Miss Ada Bird, Ringoes, N. J.

Collins Exerciser and Feeder 50c

No more wasting of high priced grain; no lazy, overfat, non-laying hens if you own and use a Collins Labor-Reducing, Time-Saving Exerciser and Feeder. No waste; reduces feed cost; makes for better hens. Increases egg yield; improves fertility.

rat and bird proof; makes for better hens. None better made.

This Helps Win the War and you get more eggs at less cost. Just cut a five-inch hole in the bottom of an old wooden or metal pail (leave the new metal for the Government). Attach the feeder; the cup forms a funnel, and you have for 50c a feeder and exerciser that would ordinarily cost from \$1 to \$3. Strong, well put together, of heavy galvanized iron with steel rod. Only 50c when ordered with Sprouter. Separately, add 10c for parcel post.

"The Feeder and Exerciser I ordered of you is all right. I have three different kinds but yours is the cheapest and best."—Clarence Lester, Centralia, Ill.

Yes, of course, I have circulars, but don't write for them. I want you to see and use my Sprouter or Exerciser and Feeder. So if interested as either poultryman or agent, order a Sprouter or Exerciser, and Feeder or both, use 10 days, if not the grandest thing you've ever used in the poultry line, return and I will refund money.

DEALERS: ORDER SAMPLES TODAY!

W. H. COLLINS, Manufacturer and Inventor 20-G Harrison Street NEW YORK, N. Y.

Lady Laymany
480 Eggs in
2 years

Help Win the War with Yesterlaid!

Profit is so strongly fixed in the blood of Yesterlaid Range Raised Laying Leghorns that it does not require expert skill to succeed with them. They lay enough eggs to pay their cost of raising before average pullets begin to lay. Their big, white eggs are guaranteed to be 100 per cent fertile, and always give big hatches.

Yesterlaid Hens are Money Hens

Every Yesterlaid breeding pen carries the blood of hens that have laid 443 to 480 eggs in two years. The individuals in these pens are the result of more than a decade of diligent, painstaking study and breeding experience. *They are pure line-bred Yesterlaid*s; they have never been outcrossed with foreign blood. They rank high as show birds and *breed true* generation after generation.

Yesterlaid prices are very reasonable — Cockerels, \$5.00, Cocks, \$10.00. Eggs—\$3.00 for 13—\$5.00 for 26—\$15.00 for 100—\$140.00 for 1000. Baby chicks 30 cents each.

Valuable literature giving further details of how this wonderful strain of Leghorns has been developed, how it is fed and housed, will gladly be mailed to you free on request.

Buff Orpingtons

Buff Minorcas

The Strains of Quality

VICTORY!—VICTORY!
Triumphant, Sweeping, Conclusive

Greatest win ever made in Buff Orpingtona or Buff Minorcas in a National Show, Chicago Coliseum, December 4 to 9, 1917

Buff Orpingtons

1st and 2nd cock; 1st and 2nd hen; 1st, 3rd and 4th cockerel; 2nd and 5th pullet; 1st and 4th old pen; 2nd, 3rd, 4th and 6th young pen; silver cup for best shaped and best colored male; silver cup for best shaped and best colored female; silver cup for best display.

Buff Minorcas

1st cock; 1st, 2nd, 3rd, 4th and 5th hen; 1st, 3rd, 4th and 5th cockerel; 1st, 3rd, 3rd and 4th pullet; 1st and 2nd old pen; 1st and 2nd young pen.

Walhalla Poultry Farm for several years has been developing a strain possessing exceptional utility and exhibition quality. We have established a large flock in each variety, and it enables us to sell excellent layers, high-class breeders and exhibition birds at a very reasonable price.

We recently purchased the entire flock of Buff Orpingtons from the well known Rawnsley-Shields Poultry Farm, Columbus, Ohio, who have made sensational winnings at Madison Square Garden and Chicago Coliseum for years, which, added to our high bred flock, represents one of the greatest, if not the greatest, flock of Buff Orpingtons in America.

Prepare yourself. Buy while prices are so low and get YOUR STOCK before the best have been selected.

The ideal natural condition under which our birds are raised and the rugged northern climate makes them vigorous and hardy, and as breeders they cannot be beaten.

Cocks or Cockerels, from.....\$5.00 up to \$50.00
Hens or Pullets, from..... 3.00 up to 25.00

Pens, old or young, mated with the utmost care to give the very best results, from \$15.00 up to \$100.00.

EGGS for HATCHING

Special Matings\$15.00 per 15; \$25.00 per 30
Exhibition Matings 10.00 per 15; 18.00 per 30
Quality Matings 5.00 per 15; 8.00 per 30

You run no risk buying from Walhalla Poultry Farm, as ALL OUR STOCK IS SHIPPED ON APPROVAL. You can return any bird not satisfactory and your money will be refunded.

Write for our detailed price list, which is full of great bargains.

Owner Poultry Manager

NOTICE—As we expect to specialize only in two varieties—Buff Orpingtons and Buff Minorcas—we are offering our entire flock of Speckled Sussex and S. C. Black Minorcas for sale, including all prize winners. We have established a very fine flock in both of these varieties, which have been line-bred for years, and we have a very fine line of breeding and exhibition birds in both of these varieties and will sell the very best quality at a most reasonable price. Here is your chance to get real breeders and prize winners at reduced prices. ORDER EARLY before the best have been selected. Early purchasers will get our best values.

Baby Chicks

will help to cut the high cost of living. Chicks of six leading varieties. A special combination offer on chicks and brooder. NOTICE: We have a branch Hatchery located in Kansas to take care of Western orders. Send for catalog and book your orders. Huber's Reliable Hatchery 317 West Fremont Street, Fostoria, Ohio

**Brood
Your
Chicks**

**Simplex
Brooder
Stove**

**30 Days
FREE**

Use the new 1918 Simplex Brooder

Stove on your own hatch for thirty days free. Raise 20 to 50 per cent more chicks at 1-5 the cost, 1-10 the work and 1-4 the operating expense. Small and large broods. Three sizes of stoves. Try our stove under all conditions and if you are not delighted send it back and we will cheerfully refund your money.

Turn Losses Into Profits

This wonderful brooder will raise 50 per cent more of your chicks than you have been able to raise under the old fashion methods. No more deaths from white diarrhoea and poor ventilation. It turns the losses from dead chicks into big profits for you. The Simplex stove pays for itself by the extra money it makes for you. The Simplex Brooder Stove burns kerosene oil, natural or manufactured gas, automatically regulated to insure an even temperature with the least possible attention.

Free Brooder Book

Write today for valuable free brooder book and catalog. It tells how to "increase your profits by decreasing mortality." Tells how to save chicks you have been losing each year through disease and faulty brooding. How to make more money. Also catalog and details of 30 days trial free. No obligations. Write now.

HOW TO BECOME A SUCCESSFUL BREEDER.

CHAS. A. SIMMONDS,
Camp Point, Ill.

It is the ambition of every fancier to become a successful breeder, to be able to so mate his birds each year that the progeny will be a little better than the parent stock. While it is a pleasure to win on a bird purchased to show, the pleasure of winning with a bird one has owned and cared for from the shell to the show room is much greater, especially if one also owned and mated the bird's parents.

The fancier who cannot after several years of effort become a successful breeder is very apt to lose his interest in the fancy entirely. For this reason the successful breeder should endeavor to help his customers in every way possible to succeed. If your customer is successful in breeding the birds you sell him he will be very likely to remain your permanent customer, buying every year a few high-class birds or eggs. If he fails with your strain he can hardly be expected to remain your customer even though he remains in the business.

The breeder who mates his pens the first of January can hatch chicks any time after the first week in February, which is early enough to grow State Fair winners, if the chicks have the proper care. In fact the pullets hatched early in February will quite likely be gone by for showing at even the earliest fairs. Still it is a good plan to hatch a large number in February, as the cockerels make fine show birds and the pullets excellent breeders.

Each different breed and each strain of the breed has its own peculiar breeding tendencies, which one should understand to mate for best results. There are other rules, however, which can be followed successfully in breeding any variety.

In selecting the birds for a mating it is very important to consider carefully the breeding that is back of them. Assuming that a fancier would only set eggs from his very best stock and thus have good blood back of his entire flock, the question remains as to how best to blend the different blood lines to produce the best progeny. In this there is no rule that will give best results in all cases. Generally it is best to mate birds of the same strain, but not closely related; frequently it is best to inbreed and in exceptional cases it may be necessary to use a bird of a foreign strain.

Upon the question of inbreeding, many hold that if accompanied by proper selection inbreeding can be practiced continuously without affecting the size or vigor of the strain. Others claim that inbreeding always results in loss of size, vigor and fertility. The fact is the results depend not so much upon the system of breeding (whether inbreeding, line-breeding or out-breeding) as it does upon the strain and the individuals bred.

With a newly founded breed or strain after several generations of crossing or out-breeding has been practiced it is possible to inbreed with good results to an extent that would almost result in the extinction of an old strain. Close inbreeding is seldom necessary except to concentrate and perpetuate the blood of some exceptionally fine individual or one extra good in some point in which the balance of the strain is weak, until its excellence can be transmitted to and per-

manently fixed in the entire strain.

The result of out-breeding or crossing different strains is generally to bring out the characters of the more distant rather than the immediate ancestors. After crossing breeds or widely different strains of the same breed, it is always necessary to inbreed for several generations following to produce high-class birds in large number or with much uniformity. The crossing of different lines of blood having a common ancestry and having been bred along similar lines is not fraught with the same danger. Such crossing secures "new blood," but not "foreign blood," and is largely practiced by the most successful breeders who either carry several blood lines themselves or frequently buy a bird from some breeder handling the same strain and breeding along similar lines.

If one has a flock of uniformly high-class birds he can select males and females that are not closely related and mate them together with reference to their good points and defects, so as to produce in a majority of the progeny the good points possessed by both ancestors in common, and in a small number of the progeny the good points possessed by either sire or dam alone. Of course much depends upon whether the characters in question are dominant or recessive and upon whether the birds bred are pure in their characters or not. But where a certain desirable character is possessed by only one bird in the strain, or where one bird greatly excels the balance of the strain it is best to inbreed this bird to concentrate his or her tendency towards producing the desired point that it may be permanently fixed as a dominant character in the strain. Inbreeding for this purpose would of course consist first of all in the mating of mother to son or father to daughter, thus producing progeny three-fourths the blood of the one ancestor. Whenever a mating of this kind is made one should be very careful not to mate together birds possessing the same defects or lacking in vigor as the bad as well as the good qualities are intensified by inbreeding.

To become a successful breeder one needs to study his fowls continuously. I generally know about how I will mate my pens long before the matings are put together, as I have been studying how they would mate best since they were a few months old. I thus avoid mating any birds that are slow to mature and can give preference to any that I know to have been the most rapid growers in their brood. A bird that was weak and slow to mature will sometimes develop into an excellent bird at maturity, but is sure to be lacking in vigor and to transmit its slow-growing tendencies upon its progeny.

When making the final selection of breeders it is necessary to pay close attention to the individual merits of the birds. No bird that is seriously defective in body shape or lacking in vitality should be permitted to enter the breeding pen, no matter how fine is its breeding.

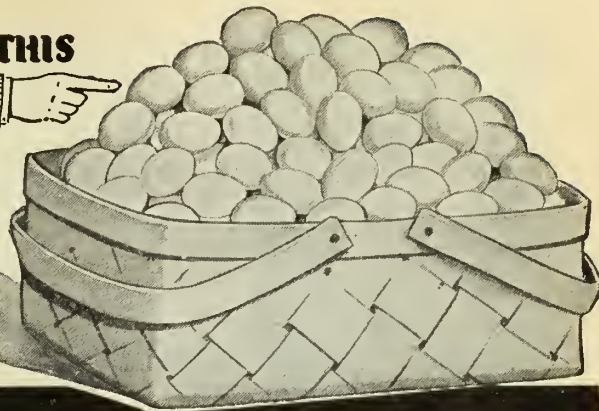

In selecting the male to head the pen shape should receive first consideration. Not only should the male show a profile having the outlines demanded by the Standard, but he should also exhibit those points which always accompany the most vigorous constitutions, such as a broad back, full breast, legs wide apart at the hock joints, well furnished saddle and tail and a rather large, broad

WHICH

THIS or THIS

Do You WANT

Why You Don't Get Eggs in the Winter

The one great mistake most poultry raisers make is in the idea that scratch feeds make eggs, and this accounts for their failure to get eggs in the winter time.

Scratch feeds do not make hens lay. Just so long as you make scratch feed the bulk of your hens' ration, you will fail to get eggs. Scratch feed is for the hen's bodily maintenance — to make her exercise, *scratch*—to satisfy her while

on the roost and *not to make eggs*. The feed that will make hens lay abundantly must be a soft feed, finely ground and correctly balanced—a feed composed of materials like hens pick up in the Spring — when their egg production is highest.

FUL-O-PEP DRY MASH

is that kind of a feed—compounded along nature's lines—made solely to make hens lay. It is a combination of green foods, animal foods and several other valuable ingredients which come as near nature's egg making materials as it is possible for expert feed knowledge, science and experience to produce.

To get more eggs feed **FUL-O-PEP DRY MASH**—all your hens will eat—keep it where they can get it **ALL** the time and feed **FUL-O-PEP SCRATCH FEED** about an hour before they go to roost—then, you'll get **EGGS**—and lots of them. *We guarantee it.*

Sold by leading dealers. If yours can't supply you, write to us.

John Silliman - Ironton, Ohio

masculine head. Next to shape consider color and head points and last of all size. In size a male of Standard weight or over is to be preferred, but if of a large line, but a little small because late hatched, he should not be rejected. The female has much more influence on the size of the progeny than the male.

Always select a male that is active, hunting food for and ready to protect his mates against any intruder. The best breeding males will often go hungry as long as their mates can be induced to eat the food in sight. Unless such birds eat enough grain from the feeders when their mates are in the yards, they should be given a feed away from the hens once a day.

In selecting the females, size and vigor are the most important. In the larger varieties it is impossible to get the females too large for breeding, provided they are not too fat and have the true breed type. It has often been said that the male has more influence upon the progeny than the males. To some extent at least this can be explained by the fact that the male is frequently more closely line-bred than the females and is therefore a more prepotent breeder in general. I find it pays to have both sides of the mating of the highest quality possible as that is the only way to get uniformly high-class progeny. The most successful breeders are as careful in selecting each female that goes into a mating as the male that heads it.

To become a successful breeder one must keep accurate pedigrees of his birds. This enables him to mate his birds with reference to their blood lines, prepotency and individual breeding tendencies, besides affording an opportunity to study out the application of the various laws of heredity to his particular breed and strain.

The best method is to trap-nest and thus keep accurate individual pedigrees of all chicks raised from the best matings. When this is not convenient the pens must be limited to as many females of the same blood as match in individual and hereditary qualities. A cockerel or young cock should not be mated with less than eight or ten females, but the pen may be divided into two or three smaller pens changing the male once a day.

The trouble with many beginners is they fail to give the birds proper attention after mating and thus fail to secure as high a percentage of fertility in the eggs, or as much vigor in the chicks as there should be to raise many high class birds.

In feeding the breeding stock I recommend automatic feeders. If it is not set too loose the birds will have to work for all the grain they get. A good mixture for automatic feeding is equal parts by measure, cracked corn, wheat, oats and barley. I have used the mixture without the barley, but find it a valuable addition, as it is very rich in egg making material and the birds relish it. The animal food, roughage and condiments that the fowls require are most readily supplied by feeding a mash. The following formula has given me fine results in feeding several English and American varieties.

Six measures each, wheat, bran and corn meal, three measures each ground oats, alfalfa meal, and beef scraps, one measure oil meal and one measure of two-thirds chick size charcoal and one-third salt. Good results can be obtained by feeding either a damp mash once a

day or by feeding the mash dry from hoppers kept open all day. I use a combination of both systems as the damp mash affords a convenient way of feeding the cooked vegetables and table scraps I like to feed as a change, while the dry mash is sufficient on Sunday, shipping days or any time it is not convenient to feed the wet mash. I like to feed a damp mash at least twice a week.

Fresh, green food is a very important part of the ration for breeding fowls. In winter when they cannot get fresh grass in the yards they should be given a liberal feed once a day. Sprouted oats, cabbage, onions, sweet apples or raw potatoes, make good green food.

Good foundation stock, careful study of pedigrees and individual birds when mating, and most of all an enthusiasm and love for the work that is strong in summer as well as during the show season, with proper care of the chicks from the shell to the show-room, will not fail to bring success.

Shall We Raise More Poultry?

It is probably safe to say that poultry raisers generally are in full sympathy with the U. S. Government official demand that the poultry industry be enlarged and pushed with greater energy. This urgent request and the pledge of the American Poultry Association to produce one million pounds more poultry in 1917 than was produced in 1916, is sure to bring results—not only so far as the 7,500 members of the association are concerned, but also in starting thousands of new poultry yards, large and small. "There is a demand—a big demand—for all we can produce, no matter what the amount," says Bulletin No. 1 of the association.

The comparatively little capital required to start, the absence of hard labor, and the promise of quick, adequate returns under reasonable care in management, are features which attract many to the poultry business.

Perhaps the biggest problem which confronts poultry raisers is the high price of feed. This may not be counterbalanced by the higher market prices of poultry products, if the increased supply is at all adequate to the demand.

But this problem can be met, in large measure, by more scientific feeding—by care in the selection of feeds which can be relied upon to produce results. Here is where the manufacturers of the standard mixed feeds come to the rescue. True, as some feeders have complained, some of the mixed feeds on the market are lacking in nutritive value—especially in protein, which is one of the chief requisites to poultry growth and egg production. But there are some really excellent ready mixed rations to be had and poultrymen everywhere are coming to recognize the value of these ready-mixed feeds that are prepared in a scientific manner.

Several of the feed manufacturers have their own experimental poultry yards and stock farms, where all their products are constantly undergoing test feeds, under the direction of experts, to make sure that they produce in practice all the results claimed for them in theory.

GET READY FOR BIG BUSINESS.

Indications Are That Season of 1918 Will be the Most Profitable One Poultrymen Have Experienced for Years.—Seasonable Things Which Demand Attention.—Good Start Made in First Month of American Egg-Laying Contest.

By T. E. QUISENBERRY,
Leavenworth, Kansas.

My advice is to get ready for a big poultry business in the spring of 1918. With corn, corn meal, dairy chops and other poultry feed on the decline and with eggs and poultry prices advancing to a reasonable figure, compared to the cost of production, I feel certain that the time is at hand when poultry and eggs are going to be in demand for hatching, breeding and market purposes, and at profitable prices. At no time in the past few years has it seemed to me that poultrymen would go into the season with a greater assurance of success and a reasonable profit than just now.

The Government is sending out a large force of men to help educate the public and to encourage production. It insists upon every back yard and every general farm being used to the limit for this purpose. The U. S. De-

partment of Agriculture says that no kind of live stock can be produced so rapidly or economically as poultry and eggs. The Food Administrators say that poultry feeds will be from 25 per cent to 40 per cent lower than they were last fall. These facts should interest and encourage every one interested in any branch of the industry.

Begin now to get ready for a good season's business. Don't wait until the hatching season is on, but get out your old incubator and clean it up. See that the parts are all there, that the tank don't leak and that the burner and everything is clean and in first class condition. If you are going to need a new incubator you may not be able to get one if you wait until the last minute. There is going to be a big demand, so place your order now.

Take a final look at the breeding birds. See that they are all in good health and lay eggs with firm shells. Cull out those which lay small sized and off-colored eggs. Every poultryman should have his breeders all selected and mated by January first. Don't breed from the whole flock, if you have a large number from which to select, but pick out your choicest females and mate with your choicest males. That is the only way to make real progress.

See that the water in the drinking pan does not remain frozen. Plenty of water is just as important in producing winter eggs as is the right kind of feed.

If you are going to need a male to head your pen or will need eggs for hatching you had better place your order now. The demand is going to far exceed the supply. The earlier you place your order the better selection you will get.

THE BREEDERS' CONTEST

In this contest there are 17 varieties of poultry represented, each variety being represented by an equal number of pens. The birds are of high quality and Standard bred and entered by the best breeders in America who are trying to combine utility and beauty. They have made a somewhat better start than last year. The five leading pens for November are as follows:

Pen No.	Eggs
43—Illinois, White Wyandottes	99
9—Ohio, S. C. Buff Leghorns.....	86
48—Ohio, Light Sussex	74
45—Connecticut, White Wyandottes	59
23—Indiana, Barred Rocks	59

Six pullets in the contest laid more than one dollar's worth of eggs in November. If all poultrymen would see that their birds were mature and ready to lay by November each year their success would be more nearly assured.

The best individual records are as follows:

	Eggs
Illinois, White Wyandotte, No. 435.....	23
South Dakota, Silver Wyandotte, No. 385..	22
Indiana, Barred Plymouth Rocks, No. 233..	20
Indiana, Barred Plymouth Rocks, No. 235..	20
Illinois, Silver Wyandotte, No. 395.....	20
Illinois, White Wyandotte, No. 434.....	20

THE LEGHORN CONTEST

In their contest the birds are all housed in one large fool-proof laying house. They are handled just as a commercial flock would be handled and an accurate record is kept of the sort of feed, labor, etc., and the receipts from eggs. Every bird has access to the entire house and all are under exactly the same conditions. At the end of the year we will be able to tell you just how much profit can be expected from 500 Leghorn pullets kept in such a

Order Your Single Comb White Leghorn DAY-OLD CHICKS NOW!

There is no other farm in the Eastern States as well equipped to fill your order for any quantity of chicks of the right kind and at the right price as the Lord Farms. For years and years we have been furnishing larger quantities of pure American bred S. C. W. Leghorn chicks than any other breeder. We have again increased our stock one-third and are better prepared than ever to furnish the trade with the highest class utility Leghorns. For the past five years, before the seasons were over, we have been obliged to turn down two orders out of every three we have received, so don't delay another day in getting your order placed for February, March and April deliveries.

The most important thing for you to decide this season is where to place your order for chicks. Your next year's profit depends on buying from the RIGHT FARM.

Our object for years has been to standardize the baby chicken business and put out a uniform quality of goods. The profit in the poultry business is made from uniform good quality of stock rather than from high individual records. No other farm in America, we believe, has delivered, one order after another, such a high standard of Leghorn chicks as the Lord Farms. There is no expense spared in securing high class breeders. Trapnesting is not the panacea for all the poultryman's troubles in breeding—it is only one necessary part of the business. We probably trap-nested more birds than any other breeder in the eastern or middle states last year, but this is only one part of securing good breeders. Stamina and vitality are just as important as high records, in fact more so to the buyers of baby chicks.

Our stock is of good size, and lay good sized eggs that bring top market prices. Chicks from our plant have always been easy to raise. A 1,000-page catalog would be too small for the testimonials we have received corroborating this statement.

A poor man cannot afford to take chances; a rich man knows better than to take chances. Place your order with a reliable, responsible poultry farm. Write at once for prices and literature.

LORD FARMS, Inc.
Box 240-M Methuen, Mass.

Trap-Nested American Bred S. C. W. Leghorn Cockerels

We are in better shape than ever before to furnish the trade with high class 200-egg or better bred cockerels. These birds are all Standard weight or over, of good type and color, with several generations of 200-egg or better blood back of them on both sides of their breeding. No one now-a-days can afford to breed from chance matings when for a very few dollars they can secure such stock as we now offer.

A \$5.00 Bill

will buy a good, vigorous, white, early hatched, fully developed cockerel, Standard weight or over, that is positively bred from a hen that has laid from 200 to 225 eggs, and on the male side from a cock bred from a hen of still higher egg record.

\$10.00 will buy a cockerel bred from a hen with a record of 225 to 265 eggs, and on the male side with ancestry tracing back to 288 eggs.

A few of the very choicest males we have bred this year that have both the highest records and show qualities, only \$15.00.

\$5.00 cockerels are just the kind for utility breeding. They will improve the looks and laying qualities of your future chicks, and by breeding from this kind of birds every year you can avoid the big expense of trapnesting.

10% discount in lots of six or more
15% discount in lots of twelve or more
20% discount in lots of twenty-four or more

Now is the time to get your birds mated up. Remember that all our stock is sold subject to approval; your money back every time if not satisfied.

LORD FARMS, Inc.

Box 240-M Methuen, Mass.

house and fed upon feeds at prevailing prices.

These birds come from thirty-one states and Canada, and some were imported from England and Australia, but entered by parties in this country. The five highest pens were as follows, each pen consisting of five pullets:

Pen No.	Eggs
67—Hollywood Farm, Hollywood, Wash.	88
70—Washington	81
110—Pennsylvania	86
66—Dr. R. Schmidt, Hannibal, Mo.	63
107—Missouri	57

Many of these birds were hatched too early, were laying some time before being sent here and are now in full molt. Several pullets in this contest laid 20 eggs or more during the month. They are as follows:

Pullet No.	Eggs
662—Dr. R. Schmidt, Hannibal, Mo.	24
1045—Illinois	22
751—Kansas	23
672—Hollywood Farm, Hollywood, Wash.	22
1246—Wisconsin	20

THE YEARLING HEN CONTEST

We also are trying out the yearling hens here for the first time. Most of these are held over from the previous contest. We have 24 pens being tested for their second year. This makes about 1,000 birds in all engaged in our present competition. The hens have been molting and are just beginning to lay. The five best pens for the month are as follows:

Pen No.	Eggs
1—White Plymouth Rocks, Illinois	36
43—R. I. Whites, Texas	35
37—White Wyandottes, Arkansas	34
10—Silver Wyandottes, South Dakota	34
45—R. I. Whites, New Jersey	32

The best individual hen for the month was a Silver Wyandotte from South Dakota, which laid 19 eggs.

Seventh Annual International Egg-Laying Contest.

The seventh annual egg-laying contest at Storrs was officially started on the morning of November 1st, when the first egg was laid by White Rock pullet No. 153 from Belmont, Mass. As in the previous competitions there are 100 pens of 10 birds each. These 1,000 hens are distributed geographically as follows: Connecticut, 270; Massachusetts, 170; New York, 150; New Jersey, 100; New Hampshire, 70; Pennsylvania, 60; Rhode Island, 40; Canada and England, 30 each; Oregon, 20; and 10 each from Vermont, Maryland, Ohio, Illinois, Missouri and Washington. Classified by breeds there are 430 White Leghorns, 170 Rhode Island Reds, 130 Barred Rocks, 100 White Wyandottes, 60 Buff Wyandottes, 40 White Rocks, 20 Blue Andalusians and 10 each of Buff Rocks, Buttercups, Russian Orloffs and White Orpingtons.

The yield for November for all pens was 5,179 eggs. Altho this is some 400 less than for November of last year, the fact is not believed by the management to be of any particular significance, inasmuch as the general appearance and condition of the birds seem to be excellent.

This is not only the opinion of those at the college immediately in charge of the contest, but it expresses the opinion of Judge W. H. Card, Manchester, Conn., and Dr. N. W. Sanborn, Holden, Mass., who were engaged to go to Storrs at

the time of the opening in order to make sure that the new competition got the best possible start. Cook & Porter's Buff Wyandottes from East Hampton, Mass., have been awarded the blue ribbon or first prize for the first month with a production of 153 eggs. A pen of White Leghorns entered by J. Frank Dubois of East Lynn, Mass., won the second prize ribbon for the month with a yield of 145 eggs. The Agricultural College pen of "Oregons" from Corvallis, Orc., the third prize for the month by laying 140 eggs.

The nine leading individuals to date are as follows:

Breed	No. Eggs
R. I. Red, No. 352, Massachusetts	25
R. I. Red, No. 424, Massachusetts	25
Barred Rock, No. 112, New York	24
White Wyandotte, No. 195, Rhode Island	24
R. I. Red, No. 429, Massachusetts	24
R. I. Red, No. 483, Massachusetts	23
White Leghorn, No. 701, England	23
R. I. Red, No. 421, Massachusetts	22
R. I. Red, No. 485, Massachusetts	22

In view of unprecedented grain prices, government regulations regarding the use of wheat, and the uncertainties of transportation, the management of the contest has been obliged to modify the rations from time to time. The feed formulas now in effect are those recently adopted in conference by representatives from the Agricultural Colleges of New York, New Jersey, Massachusetts and Connecticut, and are as follows:

Scratch Grain.	
250 lbs.	Cracked Corn.
100 lbs.	Barley.
100 lbs.	Heavy Oats.
50 lbs.	Feed Wheat.
Dry Mash.	
100 lbs.	Wheat Bran.
100 lbs.	Standard Middlings.
100 lbs.	Hominy or Corn Meal.
100 lbs.	Gluten Feed
100 lbs.	Ground or Crushed Oats.
100 lbs.	Beef Scrap.

These rations were designed to particularly meet eastern conditions. The scratch feed is composed of the four chief grains that are available for poultry. It should, however, be distinctly understood that the first three grains in the ration can and ought to be varied in amounts according to local conditions and prevailing prices. Not only this but a little of some other grain, especially home grown grains, might at times well be added. No mention is made of wheat because it is taken for granted that all poultrymen are today conforming with the government's request that no scratch mixture contain more than ten per cent of wheat.

The subjoined table shows the average grain and mash consumption in each pen of the four principal breeds, the number of eggs and also the average for all pens.

	Grain	Mash	Eggs
Plymouth Rocks	18.2	52.1	44
Wyandottes	19.2	54.4	51
Rhode Island Reds	20.1	54.3	32
Leghorns	17.9	44.1	65
All 1000	18.6	49.0	52

First Pullet, Chicago Coliseum

You STILL have a chance to obtain some of Halbach's Supreme White Plymouth Rocks

Altho we have made tremendous sales last month, we can offer a fine lot of birds just coming into pink of condition. They have such extraordinary quality that we do not hesitate to sell them with the strongest guarantee you could ask for. They are, in fact, so good, and the price we ask for them so reasonable, that we know you will be delighted with the value received. Remember that no strain of White Plymouth Rocks but our own ever won the grand championship three years in succession at the Chicago Coliseum Show. Isn't this sufficient proof that we have the best?

They Will Win for You

as well as they do for us. Hundreds of fanciers thruout the country are unanimous in their praise about the quality of our White Rocks. "Your strain is the best" is the popular verdict of our customers. Their show record and ours proves that Halbach's Strain of White Rocks is the greatest first prize winning strain ever produced.

IMPROVE YOUR FLOCK WITH ONE OR MORE OF OUR BIRDS

We have bred White Plymouth Rocks for years with but one object in view: to produce the best. We have succeeded and now offer the result of our skill to you. Our birds have true Standard type and color requirements. Winter egg production is one of their strong breeding factors and commands them for this purpose. Halbach's White Rocks reproduce their qualities in their offspring in a surprising degree.

SEND FOR OUR CATALOG IT TELLS ALL ABOUT OUR STOCK, FARM, FEEDING AND HOUSING.

It is a veritable textbook on the breed and will enable you to make a success with White Rocks. It is well worth the 20 cents we ask for it. We guarantee satisfaction or money back. Write us today for full information; we can furnish your wants at a most reasonable price.

VINELAND CONTEST WINNINGS.

The First Year's Performance of the Birds at the Vineland International Egg Laying and Breeding Contest Has Proven Exceptionally Gratifying

All poultry breeders will be especially interested in a few brief statements covering the more important records and exceptional performances which were made in the Vineland International Egg Laying and Breeding Contests during its first year.

Of particular interest and importance is the pen making the highest score. This was pen 88, Single Comb White Leghorns, bred and owned by J. Percy Van Zandt of Blawenburg, N. J. Mr. Van Zandt's pen took the lead during the first month of the contest, and held it to the finish. This pen laid 2,212 eggs, or an average of 221 eggs per bird, which is a 60.6% production. Truly a wonderful performance. Eight birds in this pen averaged over 200 eggs each, the highest single record in the pen being 264 eggs. Mr. Van Zandt's winning was not due so much to one or two especially productive hens, but rather to a well-balanced pen of individuals, all of which produced remarkably well. Mr. Van Zandt is an extensive breeder of White Leghorns, and has been carefully breeding for a number of years for increased production. He is a graduate of the Short Courses at the New Jersey Agricultural College, and has been applying modern methods in breeding.

The honor of having second high

pen belongs to P. G. Platt of Wallingford, Pa. This pen, number 76, composed of Single Comb White Leghorns, produced during the year 2,173 eggs, and during the last six weeks of the contest gave Mr. Van Zandt's leading pen a very close run for first honors. This second high pen laid an average per cent production during the year of 59.7%. Two hens in Mr. Platt's pen were characterized by extremely long cycles, they having each laid on 46 consecutive days. Mr. Platt is to be congratulated upon the success of his pen, for it is a just reward for many years of faithful and consistent breeding toward increased and more efficient egg production.

The third high pen honors go to pen number 89, owned by Shurts and Voegtlen, of Lebanon, New Jersey, with a production of 2,115 eggs, or an average of over 211 eggs per bird. This pen has produced consistently from the beginning of the contest, and has given the leaders a close fight for honors. This third high pen is composed of consistent producers, as well as Mr. Platt's pen, which won second honors, both contained 7 birds which laid over 200 eggs during the year.

The fourth high pen was won by number 62, a pen of Single Comb White Leghorns owned by Holliston Hill Poultry Farm, Holliston, Mass., with a production of 2,114 eggs, or only one egg behind third place. This pen is of special interest because it contains hen No. 622 which was the second highest hen in the contest, she having laid 290 eggs.

Fifth honors go to number 43, owned by Will Barron of Bartle near

Preston, England. This pen produced 2,053 eggs, and showed wonderful persistency of production throughout the contest.

These first five pens, as previously enumerated, are the only ones which laid over 2,000 eggs, and the fact that they are all Single Comb White Leghorns speaks well for the egg producing ability of this popular Mediterranean breed. The high pens in the other varieties represented at the contest are as follows:

The Barred Plymouth Rock honor goes to pen number 1, owned by Garret W. Buck, of Colts Neck, N. J., this pen having produced 1,956 eggs. Mr. Buck's pen is characterized by three individual hens which produced in extreme cycles of production. One bird, hen number 7, having made two exceptionally long runs of 34 and 37 eggs each. Mr. Buck's hen number 9 has the honor of standing fifth individual hen in the contest, with a production of 278 eggs, and his hen number 7 stands sixth in line, with a production of 272 eggs. Mr. Buck is a large potato farmer in Monmouth County. He devotes considerable time and attention to the breeding of his Plymouth Rocks which are exceptionally vigorous and healthy, due to their being raised under free-range farm conditions.

White Plymouth Rock honors go to pen number 10 owned by Holliston Hill Poultry Farm with a production of 1,985 eggs. To this pen should go one of the greatest honors of the entire contest, due to the fact that hen No. 6 laid 301 eggs during the 365 days. This hen is a remarkably fine specimen of the breed, and shows

How to Raise Chicks

By Prince T. Woods, M. D.
Managing Editor American Poultry Journal

A guide to success in this, the most difficult, poultry problem. The results of years of practical experience and study. Written in plain language by a man who knows how, and how to teach others.

This book will save many dollars

for any poultryman, but it is indispensable to the beginner.

It has ten chapters: Chapter I—Selecting and Mating Breeding Stock. Chapter II—Food, Vegetable, Animal and Mineral. Chapter III—Fowls and Food. Chapter IV—Care and Management of Breeders. Chapter V—Eggs for Hatching. Chapter VI—Incubation, Natural and Artificial. Chapter VII—Brooding with Hens and with Brooders. Chapter VIII—Chick Foods and Feeding Chicks. Chapter IX—Growing Chicks. Chapter X—Facts About White Diarrhoea. What white diarrhoea is. Symptoms of disease. Causes. Is there more than one form? Has germ of specific disease been found? Infection. Prevention. Treatment. Formula for a simple remedy which has proved effective in many cases in many climates for years.

Don't go through years of costly and discouraging experiments to learn the facts taught in this book. One chick saved will pay for it. Learn how to feed, how to avoid and prevent disease, how to make your own brooders and chick foods—**how to turn loss into profit.**

88 pages, 35 illustrations from photographs and pen drawings, printed on good paper, handsomely bound in cloth, price 75c postpaid.

American Poultry Journal Pub. Co., 542 So. Dearborn St., Chicago, Ill.

wonderful vitality and vigor. Holliston Hill Poultry Farm should receive special credit for having bred this wonderful pen of White Plymouth Rocks which stands sixth in the contest, and it contains the only hen which laid over 300 eggs. This farm should receive special mention for having bred fourth high pen in the contest, which was Single Comb White Leghorns, and which contained the second highest individual hen in the contest with a production of 290 eggs.

The high honor in Columbian Plymouth Rocks was won by Mr. J. M. Jones of Hornerstown, N. J., the breeder of the famous hen, "Columbian Queen" which laid 284 eggs, in a previous contest. Mr. Jones' pen number 17 laid 1,854 eggs, and he is to be especially congratulated on account of the fact that his hen 179 succeeded in laying 288 eggs. This hen also has the distinction of being third highest hen in the entire contest.

White Wyandotte honors were won by pen 22 owned by Lusscroft Farm, Sussex, N. J., with a production of 1,761 eggs.

Columbian Wyandotte honors were won by pen 27 with a production of 1,513 eggs. This pen is owned by Lake Farm, Slocum, R. I.

Buff Wyandotte honors were won by pen 30 with a production of 1,591 eggs, owned by Clark and Howland, West Paulet, Vt.

Rhode Island Reds succeeded in making a remarkable showing, the high honors going to pen 39 with a production of 1,966 eggs. This pen is owned by Underhill Brothers of Lakewood, N. J. These young men should be given great credit for the excellent performance made by birds of their own breeding.

Single Comb Buff Leghorns were led by pen 95, which laid 1,448 eggs. This pen was owned by H. G. Richardson, of Etra, N. J.; while the Single Comb Black Leghorn honors go to pen 99 with a production of 1,758 eggs. This pen is owned by Fred C. Nixon, Quakertown, N. J.

BREED AVERAGES.

Of especial interest to the various followers of the different breeds of poultry will be the relative production made by the various varieties. The Single Comb Black Leghorns claim the highest honors with an average production per bird of 175 eggs. Mr. Nixon, the owner of pen 99, thereby receives the Grand Sweepstakes Breed Prize of \$150, for the pen making the highest production in the breed having the highest average. The Single Comb White Leghorns come next with an average production per bird of 171.5 eggs, with the highest honors going to Van Zandt's pen number 88, he winning the second Grand Breed Prize of \$100, awarded to the pen making the highest production in the breed having the second highest average. Barred Plymouth Rocks claim third distinction by having averaged 157.9 eggs per bird. Mr. Buck's pen number 1 winning the third Grand Breed Prize for the pen making the greatest production in the breed having the third highest average.

Next in order of performance come the Columbian Plymouth Rocks with an average of 153.4 eggs, followed in

turn by the White Plymouth Rocks with a production of 151.8 eggs, with White Wyandottes giving them a close run with 151.3 eggs. Rhode Island Reds also won the distinction of being close to the other popular American breeds by making an average production of 150.5 eggs per bird. The Columbian Wyandottes follow with an average production of 141.6 eggs, with Single Comb Buff Leghorns averaging 133 eggs per bird, and the Buff Wyandottes 125.6 eggs per bird.

SUMMARY OF THE ENTIRE CONTEST.

The first year of the Vineland International Egg Laying and Breeding Contest closed on October 31st with a production of 161,875 eggs, or an average production for the year of 161.9 eggs per bird, which is a production of 44.4%. The Black and White Leghorns were the only variety to exceed the average production of the contest, the Black Leghorns making 48% and the White Leghorns making 46.9% for the year.

What is of still greater interest is the fact that the Leghorn breed has the distinction of leading in percent of production during nine months of the year, namely: November, January, February, March, April, May, June,

July and August. This distinction in December went to the White Wyandottes with the Black and White Leghorns following in second and third place. In September the Plymouth Rocks, and in October the Columbian Wyandottes led in percent production.

The Vineland International Egg Laying and Breeding Contest is operated along entirely different lines, and with broader objects in view than any previous contest. The yearling hens which have just completed their first year's performance will be kept right on at the contest during their second year, and trap nested the same as for the pullet year. A weekly and monthly report of the performance of these two-year-old birds will be issued the same as for the pullet production. Males will be mated with each pen during the coming spring and eggs will be hatched and the progeny carefully reared during the coming summer. On November 1st next, ten daughters from each of the 100 pens will replace their parents, and will be trap-nested and tested during their pullet year, which will complete the third year of the contest.

The contest is located at Vineland, New Jersey, in the center of one of the most intensely egg producing

American Poultry Journal Publishing Co. 542 S. Dearborn St. Chicago, Ill.

communities in the world, and under ideal climatic and soil conditions. The contest is open to visitors at all times, and a visit offers poultrymen not only an opportunity to study the contest methods, but to visit poultrymen in the Vineland District as well. The coming spring months will be an especially appropriate time to study the contest, for in addition to the one hundred laying pens containing the yearling hens, there will be in the neighborhood of 8,000 young stock being reared on the contest grounds. All records of the contest are available at a nominal subscription price. For all information and details address Prof. H. R. Lewis, Supervisor, New Brunswick, New Jersey.

BUYING A FARM FOR POULTRY WORK.

By PLUMMER McCULLOUGH.

BUY OR RENT—WHICH?

The season of year will soon be here again—in fact is perhaps here already—when people will be thinking of buying a farm for their future home. Many people who have been raised and brought up on a farm still do not own a farm of their own and others who have been raised on a farm have gone to the city to make their fortune and some of them are getting tired of city life and want to get back on a farm where they can be their own boss—where they can keep

a few cows, pigs, and last but not least where they can keep poultry and raise chickens. Not only are the country-bred people wanting to get out into the country to raise poultry but many people who have been raised in the city are getting the "back to the land" fever and are wanting to buy farms, and in many cases at least these people plan to go into the poultry "business." Just what branch of the poultry business they expect to go into I don't know and neither do they or at least the majority of them do not. The most of them know nothing about poultry at all and do not know how to care for even a few fowls successfully. Nearly all of this class of people whom I have come in contact with are wanting to buy a farm. Now just whether a person is doing a wise thing by putting his life's savings into a farm or not, when he knows nothing about farming is in my opinion very doubtful. The city man who feels he *must* go out on a farm and try his hand at the poultry business especially if he has never had any former experience in farming or raising poultry, would in my opinion be better off if he would rent a farm for a year or two before he thought of buying. In fact I would not even do this without trying my hand at caring for a few fowls on a town lot to be sure I liked the business and could be successful in keeping a few fowls. In fact I think the best way for anyone to go into the poultry business is to build up gradually and not jump into the swim too deep at first. It is much safer to feel your way slowly, which has been proven time and time again. For this reason I believe that for the city man who has had no farm experience it would be better to rent a farm for a year or two first, and if he did not like farm life he could then go back to the city or to his former occupation which is not so easily done if a farm is bought. Many times the city man pays too much for a farm in the first place and then if he gets sick of it and wants to get rid of it he will have to either lose a lot of money on it or else have it on his hands. If he rents a year or two first he can then have a little better idea of farm values and many other things that go with farming and poultry keeping. To the man who has lived on a farm for several years and wishes now to buy a farm we will have to give different advice of course. If a person really intends to live on a farm most of his life and expects to make poultry keeping his main occupation I believe that the best thing he can do is to buy a farm—providing he has anything to buy with. I don't believe it is wise to buy a farm and go in debt for the whole thing or nearly so. As a rule it is best to have enough money to make a good sized payment and if it is possible to make a cash payment so much the better. It is true that a mortgage is not such an awful thing—but at the same time it is more pleasant to be free from debt or nearly so.

Poultry Books at a Cut Price

A complete list of poultry books that everybody interested in poultry should have. This list is made up to supply the wants of all poultrymen, and covers about every phase of the industry; in fact, it makes almost a complete poultry library, and by taking them all at a cut price, you will be well equipped to make a success of this business. The books tell you how to line-breed, feed for egg production, reduce your feed bill, mate to produce exhibition birds, prevent and cure diseases, mix a balanced ration, build poultry houses, poultry appliances, etc. Following illustrations show books.

AMERICAN POULTRY JOURNAL PUB. CO., 542 South Dearborn Street, CHICAGO, ILLINOIS

THE RIGHT SIZED FARM TO BUY.

Now having fully decided to buy a farm it will be well to give a little attention as to what kind of a farm will be needed for your poultry work. Many people get the idea that any old kind of a farm will do for turning into a poultry farm but such is not the case. As far as the size of the farm is concerned it will depend all together on who is wanting the farm and what he is wanting it for, as to what size he

What's a CAPON and Why?

A BOOK that explains everything you will ever want to know about CAPONS. 50 pictures from life show each step in the operation. List of Capon dealers' addresses. Tells how to prevent "slips;" where to get the best and cheapest caponizing tools. Capons are immense eating. Big profits realized. Get wise. This book tells how. Regular 50-cent copy, prepaid to your address (a short time only), for a dime in coin or stamps. GEORGE BEUOY, R. R. No. 7, CEDAR VALE, KANSAS

will want. If a man has a good sized family with some growing boys coming on to give him help, he can use a moderately large farm, but the man who has no help and expects to do all the work himself will not want so large a farm. However, I do not think that it pays to buy too small a farm. It is true that the ten, fifteen and twenty-acre farm will accommodate a lot of layers—perhaps as many or more than one man can care for, but I would prefer a farm of forty to fifty acres—or even sixty acres would not be out of the way. I would want enough land to keep a few cows—a team and also enough to raise at least a part of my grain feed for my fowls. True it is that you can buy your feed and many plants are doing so successfully, but it is mighty handy to have a corn crib of your own to go to when shelled corn is selling at \$1.25 per bushel, wheat at \$1.75, buckwheat at nearly \$1.25 and other feed correspondingly high. When a man has the feed raised on his own farm he will not feel the high cost of it and he is not nearly so liable to “skimp” in order to save feed bills—as he is when he has to go down in his pocket for every bite his fowls eat.

While the feed that you raise is worth money it does not cost you near so much as a rule in dollars and cents as the feed you have to buy.

The writer has been through the mill and if I was buying a farm again I would buy one large enough to raise as much of my grain feed as possible, and in order to do this he will need from forty to sixty acres according to the fertility of the land, etc.—I believe that it will pay as a rule to buy a good farm—that is a farm in a good state of

cultivation and a farm that can and will produce good crops if given the chance. This is especially true if a person goes in debt for a part of the farm, for if a person buys a farm that is badly run out and has to make a living, try to build up the farm, improve the buildings, and pay off a mortgage at the same time he has a real job on his hands I assure you, for I know this from experience. If a person can pay cash down for a farm he can sometimes buy a farm that is run down a little and by a little careful work and fixing up the buildings such a farm can often be purchased for much less money than a farm in good condition, but unless a person has the capital to pay cash for such a farm he will find it an uphill job to pay for a farm and try to build it up at the same time and I believe greater progress can be made by getting a farm that is in tip-top shape to start with.

HOW MANY IMPROVEMENTS TO BUY?

Well, the average person will not want to buy a farm with elaborate buildings. He will want a comfortable dwelling house—one in a good state of repair or one that can be put in good shape without much expense. He will also want a good comfortable barn with which to stable his stock and the necessary outbuildings. On the average farm you cannot expect much in the way of poultry buildings. Usually you will find one poultry house on the average farm but as a rule that is all, and unless you happen to strike a farm with more poultry buildings on you will need to build your poultry houses up with your poultry business—that is increase your buildings as you increase your stock and your business. Now whether it will pay

the average person to buy a farm with any more extensive improvements than those mentioned above will depend greatly upon the buyer's pocketbook. It will pay to buy a farm in good enough repair and state of cultivation to be able to get results at once—the first season. When you put in a crop you will want to have some assurance that you will get a crop back. Indeed if a person is well enough fixed financially he will need many more improvements on a farm that he is buying, but most of the farm buyers are poor people and therefore must be satisfied to go slow and have very common buildings and surroundings at least for a time. This I believe is what the average farm buyer will want to do—or at least he will have to do this because his pocketbook will not allow him to have every improvement he wants no matter how bad he needs it.

We hear about many hilly farms being very successful poultry farms and as far as a place to keep the poultry on is concerned such land is O. K. Poultry will do all right on hilly land but if you want land for farming purposes in connection with poultry work you will not want much real hilly land to plow and cultivate. At least you won't if you have a very bad temper, as such work on hilly fields will get one out of patience. On the other hand you do not want too wet a farm for successful poultry raising. A moderately well-drained farm will be found most suitable for everything that goes to make up a poultry farm. One thing you do want if you possibly can get it and that is running water. A good spring will be worth many a dollar to you in your poultry work to say nothing of the

AT LAST A REAL

Safety Hatching-Egg Carrier

Note how each egg is carried in its own compartment, protected by air cushions at the top and at the bottom.

FANCIERS SAY IT'S THE BEST CARRIER EVER INVENTED

U. R. Fishel, the well-known White Rock breeder of Hope, Ind., who probably ships more eggs than any other fancier in America, is going to use them this coming season. J. C. Fishel of Hope, Ind., the White Wyandotte breeder, will also use them. Eugene Smith of Aurora, Ill., breeder of White Leghorns, has placed his order. C. R. Baker, Abilene, Kansas, has also placed his order. Russel F. Palmer of American School of Poultry Husbandry, Leavenworth, Kansas, says it's the best thing for the purpose, and what the fanciers have long been looking for. Artist Stahmer says: "The fact that I have taken the agency for your carrier to represent you at the poultry shows this season is sufficient proof that I consider your carrier the most perfect and safest ever placed before poultry fanciers of America."

Heat Proof Shock Proof Chill Proof Fool Proof

Don't waste your time shipping valuable hatching eggs the old-fashioned way when you can buy Arminger's Safety Hatching-Egg Carrier. The best thing ever invented for the purpose. All eggs are protected by air

cushions and suspended in individual compartments, thus preventing all of the eggs from getting soiled in case one of them should be broken. The carrier is constructed in such a manner that accidents of this kind can seldom happen. Made from non-conductive material and prevents eggs from getting overheated on account of being placed near steam pipes and likewise prevents them from being chilled if exposed to cold.

They cost no more than others but are years ahead of them in safety

Write for circular giving complete instructions for packing and prices.

Elmer L. Arminger, 216 S. Water St., Chicago, Ill.

value of a spring for live stock of other kinds. Buy a farm with running water if possible. It may cost a little more but it is well worth it.

BUY CONVENIENT TO SOME GOOD SHIPPING POINT OR MARKET.

While it is possible to get over roads pretty fast now with autos, etc., it will be best to buy within easy reach of some good shipping point so when you have anything to sell you will be able to ship it if you wish to and if you are only from one to two miles from an express office you can go to the express office and back in a short time, where if you bought a farm six, eight or ten miles from any shipping point it will take a great deal of your time running to and from the express office.

If possible buy within reach of good markets. Most any one can do this now provided you are handy to a shipping point. If your local town does not have an extra good market outlet for

your poultry and eggs or whatever you have to sell, you can ship it to markets that do pay top prices.

In short, a good well-drained farm of from fifty to sixty acres—that is in a good state of cultivation, with moderately good buildings, running spring water, handy to some good market or shipping point will make a very suitable poultry farm.

But whatever you do don't buy a farm before you know whether you want it or not. Be sure you want to farm and raise poultry before you invest all your life's savings into one. And the only sure way to find out whether you like it or not, is to try it a year or so first before buying.

The man who buys a farm without any former experience in farming and starts to go into the "poultry business" with no knowledge of either farming or poultry, is about as sure to make a splendid failure of both as it is possible to make.

PLAIN TALK FOR PLAIN POULTRY PEOPLE.

An Article Which Everyone Interested in the Welfare of the Poultry Industry Should Read.

Everyone interested in the welfare of the poultry industry, everyone who wishes to see the poultry business of this country prosper, should read the article by E. R. Johnson, in December *Pacific Poultryman* entitled "Poultry Season at Present." Because we think so well of it we are reproducing it herewith.

POULTRY SEASON AT PRESENT PRICE OF EGGS AND POULTRY FAR TOO LOW.

By E. R. Johnson

A short time ago President Wilson issued a proclamation stating that it would be necessary to control some twenty different commodities, including poultry and eggs, and while the proclamation did not specifically state that the prices paid to the producer for poultry and eggs would be regulated, still there seems to be no doubt that something in this direction will ultimately be undertaken. In fixing the prices of eggs and poultry, the producer will in all probability have an opportunity to present his case, and at that time it is up to the poultrymen and their organizations to see that the prices set will enable them to continue in the business and furnish the country with an adequate supply of poultry and eggs.

While it is a difficult matter to say just what price should be set, yet all people will admit that those who devote their time, capital and energies to produce a food so vitally necessary to the welfare of the nation as are eggs and poultry, are entitled to a just price for their products. President Wilson said that a "just" price is "a price which will sustain the industries concerned in a high state of efficiency, provide a living for those who conduct them, enable them to pay good wages, and make possible the expansion of their enterprises, which will from time to time become necessary as the stupendous undertakings of this great war develop."

Will the poultry organizations and experiment stations be ready to submit data and evidence showing the actual cost of producing eggs and poultry under conditions existing at the place where these commodities are produced, or will this industry be dependent upon the benevolence of those whose duty it is to keep prices at the lowest possible level? In view of the numberless feeding experiments and contests held under all possible conditions, there should be no lack of available figures on any phase of the subject. And it is to be hoped that the persons who shall represent the poultrymen in the final conference shall have the proper perspective of conditions as they really exist and that the poultrymen will be spared the calamity of being represented by "swivel chair" poultry experts who insist that eggs can be produced around ten to fifteen cents per dozen.

This section of the country seems to have been laboring under the delusion that the poultry industry would be served best by concealing the real conditions, and its people sought by every possible means to controvert facts and figures to indicate profits that did not exist and to delude themselves into believing that the industry was on a satisfactory and prosperous basis. The editors of some papers have even devoted considerable space to an effort to convince poultry keepers that even under war conditions, English poultry keepers were enjoying a profitable business under satisfactory conditions. But Edward Brown, the English authority on poultry matters, recently said, "The man who can be optimistic with regards to the poultry industry in the face of present conditions requires examination by a mental specialist."

The eastern section of this country long ago woke up to the fact that conditions were far from satisfactory and the sooner this section will face facts without evasion the sooner satisfactory conditions will be brought about. Most papers have been printing articles affirming that profits are being made on poultry even with present prices of grain, and much has been written in this very paper purporting to show that under present ratio of feed and egg prices greater profits are realized than under normal conditions. But all of these have been based solely on the cost of feeding at the time the hens were laying and did not take into consideration that it would cost twice as much to raise the pullets or carry the hens through the moult and that every phase of the business was conducted at

FIRST PRIZE ROSE COMB HEN CHICAGO COLISEUM SHOW 1915 BREED EXHIBITED BY LONGFIELD POULTRY FARM BLUFFTON IND.

BEST DISPLAY AT THE CHICAGO COLISEUM SHOW, on

Rose Comb Reds

has been won for

Five Successive Years by Longfield REDS

A record, to the best of our knowledge, never duplicated by any R. C. Red breeder at any National Show. Twenty of the first premiums at this great Red show in the past seven years have been won by us. Another record.

LONGFIELD REDS, the strain that comes back and wins year after year where the competition is strongest. Write for catalog, giving winnings in detail and our interesting guarantee of 15 chicks from each setting of our best eggs. A grand lot of birds for sale. Priced very reasonable.

Longfield Poultry Farm, Box 321 Bluffton, Ind.

"SUNLIGHT" POULTRY FARM S. C. W. LEGHORNS

I want your Chick and Egg Business for this year

Place your order NOW if you want to get the special early dates. The demand for my Leghorns far exceeds my output from year to year. The majority of my customers place such reliance on my chicks and eggs that the demand for them has proven beyond my capacity. I invite you especially to place your order now, and just see for one season what "Sunlight S. C. Leghorns" will do for you. I don't claim them to be world beaters, but just the kind of hens that average to make a good all around profit at the end of the year. I have never tried to get business in the past by exaggerated advertising. I could easily claim my birds to be a 250-egg strain, as lots of others do. My chicks are the cheapest to buy at any price, because they are so easily raised. Really 90 percent of my customers raise 90 percent of the chicks I ship, which proves the vitality and stamina in my stock. Remember, I don't simply run a "hatchery" here. Every chick and egg shipped from here are from my stock here on the farm. Breeding stock for sale. Write me for prices and state your wants plainly today. Catalog free.

SUNLIGHT POULTRY FARM

Box 200

LYNCHBURG, OHIO

EVERY month a few more advertisers find that it is more profitable to carry a larger space in the American Poultry Journal only, than to scatter their advertising appropriation among many non-paying publications.

American Poultry Journal reaches all the buyers worth reaching.

double the usual expense. But Prince T. Woods, in the American Poultry Journal, says that "with grain and feeds at present prices we should be getting from 50 to 60 cents a pound for best quality dressed poultry and \$1.25 a dozen for selected new laid eggs," and a writer in a large agricultural paper stated that in view of increased prices of feeds, September eggs should bring 86 cents a dozen and said "frankly, even 86 cents is insufficient."

Since the purpose of the proclamation was to establish conditions that would promote increased production it brings up the question of what means should be employed in stimulating the poultry industry. Some misguided individuals seem to believe that hens can be legislated into laying and that poultrymen can be forced to increase production by unnatural means. Others seem to believe that gaudy posters and broadcast spreading of literature will effect the desired result. It is clearly evident that the most effective and desirable method of increasing production in any line, whether it be ships or wheat, is to offer prices which will provide satisfactory remuneration for those engaged in the business of production. Given a "just" price we believe it would be unnecessary to urge the poultrymen to produce more, and if the just price is not forthcoming, no amount of posters and pleading will avail.

It is unfortunate that the very persons who are paid by the people to look after the interests of the poultry industry were most active in promoting conditions detrimental to the very industry they were supposed to aid. Experiment stations seem to have been vying with each other to see whose statements of egg production cost would be the lowest, until a recent article set forth that during a certain month, 48 ounces of feed produced a dozen eggs weighing, we suppose, 25 ounces, and that 7.3 cents worth of feed produced a dozen eggs, and that the average feed cost of producing a dozen eggs the year around was 14 cents. The most unfortunate part of the matter lies in the extensive publicity secured by these wizards in all kinds of papers, which added proof to the already existing belief of the public that they were forced to pay uncalled-for prices for eggs. Considerable space has been devoted to fervent exhortations to educate the consumer, but we have yet to see any effort made by any experiment station to impress on the public the necessity of paying at least a reasonable price for these articles. Feeble efforts by the producers to secure recognition of the justice of their claims have been ignored by the public, for did they not have the word of the state's expert that eggs could be produced for a mere fraction of what they were forced to pay? Other interests displayed full-page advertisements picturing in glowing terms the conditions and cited the state's expert to show that "\$2 per hen per year profit" was as certain as the rising sun. So the public is not educated, and the disproportionate ratio of feed and egg prices dislocated the industry at the very time when it was most important that it should have been encouraged and expanded.

ARE THESE SPORTS?

By PLUMMER McCULLOUGH.

We have a neighbor who breeds in a small way some Single Comb Black Minorcas, in which we are very much interested. Indeed we have helped him to mate up breeding pens, as he wished to breed from only the best in his flock. About a year ago he had a Black Minorca hen that when she started to moult she decided to grow white feathers instead of black, and about half of her new feathers came in white or partly white, making her a sort of mottled appearance. Now I was very much interested in this hen and wanted to see how she moulted out the past fall and just yesterday I had the opportunity of seeing her since her second moult and she is now practically white, having only a few partly black or flecked feathers in her. Now this hen is a genuine Black Minorca as far as breeding goes and while not of real high quality she is undoubtedly all Minorca.

Now this neighbor could not understand about this hen moulting out white when she was originally black and neither could I, and we have been think-

ing considerable about her the past year.

Last spring this neighbor wanted to buy a good Black Minorca Cockerel to mate up with his best hens and pullets, and as I get to see quite a few of them at the shows and fall fairs, I told him of a couple of cockerels that were exhibited at the Grov City poultry show, held last January. He wrote the man who exhibited them and succeeded in buying the first prize cockerel which I considered quite a good exhibition cockerel for a small local show. His bird arrived O. K. and he succeeded in raising quite a nice lot of young stock from him.

A week or two ago he told me he would like to have me come over and see this male bird (now a cock bird) as he said he was turning white like the hen first mentioned. I went over yesterday and true as I live that bird is almost half white since he moulted this past fall. Nearly half of his new feathers are white or partly white. Fully half of his main tail feathers are pure white and he is very much mottled all over. In fact he looks more like a very light Ancona, as far as color goes than a Minorca. From all the young stock raised from this cock he does not have one that shows any white and neither does he have any white sports bred from this male bird.

I have known of Black Minorcas throwing white sports, same as Silver Wyandottes do sometimes but I never knew of them being solid black in their first year and then turning white when they moult. Just whether this male bird mentioned above will get all white when

he moults next fall again is uncertain, but I would not be surprised if he did as the hen mentioned was no whiter than he was before her second moult. Perhaps this is nothing new to Minorca breeders but it is new to me and I would be pleased to hear from others as to whether they have any birds that turn white or not. The above birds are only a short distance away from where we live and we know these facts to be true and we could obtain a photo of them if necessary. We always called whites from blacks sports in other cases but what shall we call these, sports too? Perhaps freaks would be better. Let us hear from others.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—I cannot express in words with what pleasure I look upon your hearty co-operation in the encouragement of "back-yard poultry keeping." It seems to me that, during this time when everyone has been asked to help in increasing our food supply, in a large city like New York, a law should be passed by which the people of this city should be allowed to keep poultry in their back-yards, and if the authorities think this plan might prove to be a disease spreader, why not appoint health department officers to inspect the small back-yard establishments?

I would be very much obliged to you if you would publish this letter in your journal, and, if it is within your power, use your influence to aid in its adoption as a law.

Hoping you will favor me, I remain a faithful reader.

Incubator Instructions.

The temperature of a laying hen's body is 98 degrees. The temperature of a setting hen's body is 103 to 105 and I have known them to register 106. A setting hen has a fever of from 5 to 7 degrees. It is this fever that makes them want to set. This fever stays with them to a greater or less degree until the chicks are weaned or her setting notions have been broken up. Little chicks discover the lower temperature days before the hen quits them and become uneasy. This can be verified by any experienced poultry raiser.

In operating incubators the tendency is toward warming the eggs up too fast. It should take two days instead of two hours. The rule when operating incubators is to run the heat up to 105 in empty machines, set the regulator and let her go Gallagher. The cool eggs run the temperature down, it also holds the damper down and the heat of tank gets greater and greater. It would be foolish to surmise that the hen gets hotter and hotter.

The contents of an egg is one of the best known non-conductors of heat or cold and in order to warm eggs clear

through to 103 degrees without injury to the side next the heat, it should take two days instead of two hours, as stated. It is my conviction that it is the rule to warm the eggs up too fast.

My conviction drawn from experience is that 102 for the first week, 103 for the second week and 104 for the third week is the correct temperature, and if occasionally the heat gets a little too high that it is the proper time to turn and air the eggs. A little too high would mean 105 degrees, which sometimes occurs with the very best regulators.

The setting hen turns and airs the eggs more than we credit her for. We draw our conclusions too much from casual notice. When we enter the room where she sets, she settles down on the eggs and gets mad. The entrance of a cat or dog has the same effect. Any unusual noise will cause her to settle down and to stay that way so long as she is uneasy but when everything is safe she is an entirely different hen. She is continually working with the eggs, has a number of notions to move, stir and turn them.

She turns them with her beak, with her feet and hocks and very often she settles down on them and shakes her

whole body. She not only does this during the day but thru the night. To verify this all you need to do is to mark the eggs late in the evening and look at the marks early in the morning. The hen not only goes thru all these motions mentioned but she settles down with her head in different directions, her whole aim seeming to be to keep the eggs warm and moving.

Reader, no matter the kind of incubator, the mere turning the eggs half over once each day would be a weak mimicry of the hen. The sooner the old superstitions about eggs are put in the background and we get right down to aping the hen in dealing with the artificial method, the sooner incubators will be used on every farm and by every poultry raiser.

Winter Eggs.

Make the conditions as near as possible to summer conditions, by taking the chill off their drinking water, supplying cut clover and beef scraps, both fed dry in hoppers, with plenty of shells and grit, and you will have eggs, no matter what the breed is.

Partridge Rocks

America's Best Exhibition and Breeding Strain
The most beautiful variety in the world, and the best general purpose fowl. Our birds have the size, the shape and the plumage. We have won 46 of the 52 first prizes competed for at America's greatest shows, including Madison Square Garden, for six years.

BREEDERS AND SHOW BIRDS FOR SALE

We can furnish winners for any show, or furnish you with vigorous, high class breeders. **Hatching Eggs.** Send a stamp for our Partridge Rock catalog, and book your hatching egg order.

BIRD BROTHERS

Send a stamp for either Partridge Rock or Turkey Catalog.

Bronze Turkeys

WORLD'S CHAMPION "Goldbank" STRAIN

Our Bronze turkeys are better in vigor, size, shape, plumage and egg-laying qualities. They are the world's leading prize-winners. They have won 57 of the 69 firsts, all best display specials and 148 other regular prizes at 17 great shows. We have raised ten generations of Madison Square winners.

EGGS, SHOW AND BREEDING STOCK

We can furnish either show winners or large, vigorous breeders that will produce both size and heavy egg-laying qualities. We have mated up three grand flocks. Send a stamp for turkey catalog.

OHIO A. P. A. COMMITTEE MEETS.

Reported by Herbert H. Knapp

The Ohio Booster Committee appointed by President Richards met Thanksgiving Day in the Chittenden Hotel at Columbus. The committee met in special session to confer with Prof. F. S. Jacoby and Prof. Milligan C. Kilpatrick, poultry investigators and instructors in the Ohio State University. The following members were present: J. E. Gault, C. E. Cram, Len Lanus, Hugo B. Hark, Frank S. Smith, Chas. McClave and Herbert H. Knapp. Luther Stream and O. W. Aldrich also met with the committee. J. E. Gault, president of the Ohio Breeders' Association and chairman of the committee, opened the session by calling upon Prof. M. C. Kilpatrick at whose instigation the meeting was called. The burden of Prof. Kilpatrick's remarks was to the effect that the Ohio State Department was ready to help carry out any campaign of education that could be suggested by the committee for the betterment of the poultry industry of the State of Ohio. He further stated that two more field men would be added to the efficient force already at the command of the department. He also advocated earlier hatching and discouraged the hatching of chicks after June 1. Very earnest remarks were made by Prof. Jacoby whose thoroughness in poultry work is well known. Prof. Jacoby has made a special study of the mammoth hatchery interests of Ohio which leads all other states in this fast-growing and popular industry. He recognizes the fact that where one of these hatcheries operates, from seventy-five to two hundred poultry breeders are keeping pure bred flocks to supply the eggs. It is estimated that there are over one thousand such flocks in the state; these flocks in turn have supplied their neighbors with standard bred stock until now Ohio without doubt leads in the number of separate flocks of birds of this quality. California and some Eastern states that produce large quantities of market eggs may surpass Ohio in the number of White Leghorns. It was agreed that the best work that can be done in Ohio is to teach breeders to produce more early hatching eggs that the large hatcheries may be enabled to get out more early chicks—to this end the state field men from the university will hold special institutes during the coming winter to teach breeders the best possible methods of procedure to obtain

the ends desired. Other speakers offered valuable suggestions and it was agreed by all present that no member of the committee should let an opportunity pass to encourage the raising of more and better poultry in Ohio. The meeting adjourned to meet Friday, January 11, at the Cleveland Poultry Breeders' Show.

Rochester, N. Y., Show.

The Flower City Show is making an especial effort this year to awaken renewed interest in poultry raising, to which end we are asking for the co-operation of all breeders, as if our efforts are to be successful, it is imperative that we have the support of representative poultrymen. Renewed confidence—that's what this country's poultry industry is in its most urgent need of, and the Flower City Show is working this year as never before to restore that confidence which is sadly lacking. The poultry breeders can assist materially by showing their birds, and even tho it may not fit in just right with other plans and takes some extra effort to prepare for such a showing, this is the year of all years, for the breeders to rally to the cause and help to create a better feeling in the poultry industry; the cause justifies the extra effort. We announce our determination to co-operate with our Government to the very fullest extent and therefore will comply with and support in every particular, the recommendations of Herbert C. Hoover, supervisor of the United States Food Administration. Preparations are under way also, to have Government poultry expert in attendance, to lecture on subjects of vital importance to the industry at this particular time. Our show is to be held the same week and in connection with the big corn and grain show, which will bring hundreds of farmers to Rochester who are naturally deeply interested in live stock feeding; and this should give the government workers an excellent opportunity to drive home to those who should listen, Mr. Hoover's very urgent message, "We must have quick response in poultry products." As to our judges—we have engaged Newton Cosh, Charles Nixon, Richard Oke, James Glasgow, Wm. H. Anderson, A. J. Braun, Howard Young and A. Samuels; the last two mentioned being pigeon judges. A number of specialty club meetings are to be held in connection with the Flower City Show, among them being the following: National

meeting of the Partridge Wyandotte Club; State meeting of the United Ancona Club; New York State meeting of Barred Rock Club; Business meeting of Modern Game and Game Bantam Club; State meeting of the S. C. White Orpington Club. While early indications point to a splendid show, there is a tendency among breeders to "let the other fellow do it." Many of them do not seem to appreciate the importance of the appeal that has been made to poultrymen, nor do they seem to realize its seriousness. We are determined, further, that the strength that characterized our last season's show will be even more conspicuous in our coming show. Our classes will speak for themselves, and in a striking manner.

A Rally to the Fancier.

The Annual State Show of the New Jersey State Poultry Association will be conducted by the State Show Committee on January 23-25, 1918, at Trenton, N. J. Previous state shows have had large entries and been well attended. Owing to the conditions of the times it is apparent that there will be but very few poultry shows held this winter, and it ought to mean that there will be well filled classes of exhibition poultry in those which are held. Winners of the State Show will be classed as New Jersey State Champions, and every fancier in New Jersey ought to rally at this time to make a successful showing of standard bred poultry. There is no doubt that thoughts of utility classes prevail more at this time than exhibition classes and a creditable showing should be made of standard bred exhibition breeds in order to bring about a comparison that will tend to elevate and bring our farm flocks to a higher standard. Sentiment should take a part as well. This is an exhibition where every patriotic New Jersey fancier ought to make an entry. It is likewise the official A. P. A. show and the gold and silver medals of the national body will be competed for. It is hoped that the old line fanciers will rally at this meeting, and the success of the exhibition will depend greatly upon the efforts of those who desire to popularize their breeds. For full particulars address Carroll H. Hoagland, Ledgewood, N. J.

Pittsburgh Entries Close January 9.

What will probably be the largest patriotic gathering of poultrymen ever held in Pennsylvania will be the gathering of the fanciers called by the War Poultry Association, during the week of the Poultry Show, January 21st to 26th, at Motor Square Garden. In addition to the above the following clubs will hold their meetings during the Pittsburgh Show: American Light Brahma Club, American Single Comb Brown Leghorn Association, American Single Comb Black Minorca Club, and United Ancona Club. The following

An Accident in S. C. W. Leghorns

During the very cold weather of December 10-15, which was accompanied by an icy gale, several windows were broken in one of my cockerel houses and over 100 of my choicest birds had their combs nipped by the frost. As it usually happens, these birds were of the best matings. Many birds out of this lot have been sold for as high as \$75 each. As these birds are unfit now for exhibition purposes, I am compelled to sell them at prices that are extremely reasonable for the quality. The frosted condition of the comb will not affect the breeding value of the birds and fanciers have the opportunity of a lifetime to improve their flocks. The Hillview Strain of White Leghorns is noted for its wonderful Standard type. Artist Stahmer's statement should convince any one that these birds are bargains.

I have examined the cockerels referred to in this ad. and would say they are a bargain at the prices which are asked for them. Every bird in the lot is a Leghorn in every sense of the word. Their fine head points, beautiful back and tail will improve many flocks deficient in these sections. The frosted condition of their combs will not hurt them in the least for breeding purposes. Fanciers have an unusual opportunity to obtain some very fine birds at reasonable prices. I can cheerfully recommend them.

Louis A. Stahmer, Artist.

Our birds have just won at the great All-Leghorn Show, Columbus, Ohio, 3 firsts, 3 seconds, 1 third, 1 fourth, 2 fifths, special for best display, best male and female headpoints and best bird in the entire show, proving conclusively that they have the shape and general characteristics that satisfy the most particular judges. Send your order today for one or more of these fine cockerels that have been touched by the frost. We will sell them quickly at the prices we ask for them.

Pigeon Clubs will also hold their meet with us; The International Magpie Club, American Nun Club. During the show there will be several innovations such as gift classes, which will be auctioned off Friday night of the show week. Exhibitors and stockholders are invited to donate birds for this class. Ribbons will be awarded but no entry fee charged. The birds will be sold at auction to the highest bidder and proceeds will go to the association. There will be a crowing contest on Tuesday and Thursday nights, finals being on Friday night. Inquiries for premium lists are being received, and the Secretary, J. Leonard Pfeuffer, 502 Commonwealth Bldg., will gladly forward one for the asking.

Wisconsin Poultry Association.

Catalogs are out announcing the fourteenth annual convention and show of the Wisconsin Poultry Association, which will be held at the university live stock pavilion, January 7-11, 1918. In addition to the usual number of regular prizes offered by the association and specials given by commercial concerns, the annual race for the state cups given by prominent breeders and exhibitors of Wisconsin will be more keen than ever. Bronze medals will be granted to exhibitors whose birds take show championships. George Hackett, North Freedom, will judge Barred and White Rocks, White and Buff Wyandottes, R. C. Reds, Brown Leghorns, White and Black Orpingtons, and Black Langshans, George Wells, Oshkosh, another well known "weigher of points," will scan the Buff and Partridge Rocks, Partridge, Golden and Silver Wyandottes, White and Buff Leghorns, Buff Orpingtons and Light Brahmas.—Charles Love, Waukesha, Wis., Sec'y.

The fifth annual show of the Cannon Valley Poultry Association will be held in Fairbault, Minn., on February 5, 6, 7 and 8, 1918. G. W. Hackett has been secured as judge. Entries close February 1.—E. D. Roth, Sec'y., Fairbault, Minn.

The Connecticut Valley Poultry Association, Bellows Falls, Vt., will hold its annual show January 3rd, 1917.—R. K. Thayer, Secretary.

The Central Minnesota Poultry Association will hold its seventh annual exhibit at St. Cloud, Minn., January 10-14, 1918. Judge Geo. W. Hackett will place the awards.—A. H. Goedert, Secretary, St. Cloud, Minn.

The Northeastern Poultry and Pet Stock Association will hold its ninth annual show at Green Bay, Wis., Jan. 15-20, 1918. Geo. Northrup, Judge. M. J. Rahn, Sec., Green Bay, Wis.

Central Wisconsin Poultry Association will hold its seventh annual show January 9-13, 1918, at Wausau, Wis. Jas. A. Tucker, Judge. R. E. Hochtrit, Sec., Wausau, Wis.

Muskegon and East Shore Poultry Fanciers' Association will hold its annual show January 22-25, 1918, at Muskegon Heights, Mich. W. M. Wise, Judge. H. S. Nabel, Sec.

The Mettowee Valley Poultry, Pigeon and Pet Stock Association will hold its third show at Granville, N. Y., January 22-25, 1918.—D. B. Braymer, Sec'y. John D. Jaquins, Judge.

The Ohio Valley Poultry Association Co., Inc., of Marietta, Ohio, will hold its twelfth annual show January 14-19, 1918. Judge J. E. Gault will judge by comparison.—T. N. Fenn.

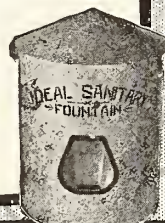

The American Buff Plymouth Rock Club elected the following officers: President, Thos. B. Elliott, St. Louis, Mo.; Secretary-Treasurer, D. P. North, Waverly, N. Y. Executive Committee—C. R. Baker, Abilene, Kan.; C. H. Barnes, Kalamazoo, Mich.; John Bowden, Ridgerton, Ontario, Canada. Election Commissioner, C. A. Morton, St. Louis, Mo.

Increase the Egg Yield

Because the Ideal Sanitary Fountain keeps water at the right temperature in zero or the hottest weather, it conserves the health of the hens and greatly increases the egg yield.

The Ideal is made of galvanized iron and built to last a lifetime. See your dealer. Write us for complete information.

Rockford Poultry Supply Co.
Lock Box J. A. 201
Rockford, Illinois

The final plans of the 24th Annual Illinois State Show, to be held at Peoria, Ill., January 18th to 22nd, 1918, will show that no other state show held in Illinois offered more inducements to breeders of fancy poultry. First Peoria with its surrounding suburbs has a population of close to a million to draw from, and as no admittance will be charged, greater crowds than ever visited a poultry show in this state are assured. With the hearty co-operation of the Commerce Club and the daily newspapers of Peoria no show will be better advertised and breeders are overlooking a mighty good bet when they fail to show here. Sales no doubt will be enormous and we will have the full Government exhibit with Harry Lamon, F. L. Platt and Mr. Klinghorne in charge of same. Now, breeders, this is the time to show here and come in person and do all you can to get everybody to raise poultry. On Sunday, January 20, will be held our annual meeting and every breeder is requested to attend if possible. Ways and means will be taken then to get an appropriation from the state that will help every poultry association in Illinois, and the associations are invited to send a representative to this meeting. Seven clubs have their annual meeting during the show and all visiting exhibitors will be banqueted free Monday evening, January 21, which will be a treat for everyone. With higher cash prizes than any show in the state, official catalogs distributed free to everybody, cash special on best displays and also on shape and color in every variety, it is beyond question the best opportunity breeders of poultry have had in a long time. Put your shoulder to the wheel, come and make your presence felt, it will do a world of good for the poultry industry. Catalog is ready, write A. D. Smith, Quincy, Ill., for copy.

COLISEUM WINNERS

Greenan's

White Wyandottes

At the Chicago Coliseum, Dec., '17

In competition with some of the best birds in the country, with 8 birds entered, I won 7 prizes, as follows:

2d and 7th Cock	2d and 6th Pullet
1st and 3rd Hen	6th Cockerel

Exhibition Stock for Sale
I can also supply your wants in high-class breeders—cocks, cockerels, hens and pullets.

EGGS FOR HATCHING
If you want to raise some winners for next season, get my mating list. The winnings above show I have the stock, and have been winning for the past 15 years. Send today for catalog.

JOHN B. GREENAN
Deckerville - Michigan

Strawberries

EVERBEARING AND OTHER KINDS

Also Headquarters for Raspberries, Blackberries, Currants, Gooseberries, Grapes, Asparagus, Fruit Trees, Roses, Shrubs, Seed Potatoes, Eggs for Hatching, Crates, Baskets, etc. 35 years experience. Catalog free. Write today, address L. J. Farmer, Box 836, Pulaak, N. Y.

BROODER

For \$2.96, including heater, you can build the simplest, most efficient, and most satisfactory brooder ever made. Wind-proof; fire-proof; rat-proof; fool-proof. Can be built by anyone in an hour, with saw and hammer. Plans 10c.

I PUTNAM, Route 105 ELMIRA, N. Y.

\$2.96

The Holmes County Poultry Breeders' Association will hold its third annual exhibit, January 14 to 19, 1918, at Millersburg, Ohio. One hundred dollars in cash has been offered as special prizes. The Ohio State University will have an exhibit of poultry appliances, etc., and a special booth will be arranged to feature the American Poultry Association and its work, thus bringing its many good points direct to the farmer and exhibitor who attend this show. Premium list is now ready for mailing and can be secured by addressing the Secretary, O. A. Engel, Millersburg, Ohio.

The Buttercup Club meet at Oxford, N. Y., brought out a record class—18 cocks, 27 hens, 41 cockerels, 44 pullets and 23 pens. There were 17 exhibitors. At the annual meeting the following officers were elected: Wm. Friesse, president; J. L. Thomas, vice-president; C. J. Lieteer, secretary; Arthur D. Loper, treasurer.

The Ozaukee County Poultry Association will hold its annual show at Cedarburg, Wis., January 11-13, 1918.—Jas. E. Greenwald, Judge. Fred W. Hilgen, Sec'y, Cedarburg, Wis.

S. C. Brown Leghorn Cockerels

bred from my Chicago, Indianapolis, Milwaukee and Columbus winners at \$3.00, \$5.00, \$8.00 and \$10.00 each, according to quality. These cockerels will not only win but will improve the laying qualities of any flock if properly mated to females. Order from this advertisement or write for particulars.

Cycle

50-egg Hatcher, \$7

Brooder-Hatcher, \$9

The Sure and Easy Way of Hatching Chicks

and plenty of them—big, strong, vigorous chicks that are ready to live and easy to raise. The practical machine for the busy farmer or the business man with a backyard flock. Requires no special place to operate it—any room from cellar to attic—and two or three minutes a day is all the attention required.

No machine will hatch a larger percentage of chicks, or better, sturdier chicks. Cycle chicks are fully equal to hen-hatched chicks in every way, and it so closely follows the natural principles of hatching that it hatches every hatchable egg—hens, ducks, geese or turkeys. It is built to give a lifetime of satisfactory service; all metal, beautiful aluminum bronze finish, fireproof, and will not warp, swell, shrink or crack. Retains the natural moisture of the eggs, so no supplied moisture is required. Heat is automatically regulated and an abundance of warm, fresh air is supplied to every egg. The lamp is our long-burning safety pattern and two to three quarts of oil will run a full hatch.

Don't be disappointed—buy a genuine Cycle. You can get cheaper machines, but no better. It is a good investment you will never regret, because it is the sure and easy way of hatching chicks.

Light in weight and can be shipped by parcel post, express or freight. Prompt shipments, and machines are fully guaranteed.

Send for our new free catalog. It will give you many new ideas about poultry keeping and help you avoid war time mistakes. Tells why the CYCLE is the best machine for you and describes and gives prices of the Philo System Ready-Built Coops, supplies and the Philo Business-Hen strain of White Orpingtons. Write for your copy today.

Ration for Laying Hens.

Standard Poultry War Ration adopted by Connecticut, Massachusetts, New Jersey and Cornell.

The Government has recently issued a regulation prohibiting the use of more than 10% of any grade of wheat in rations for feeding poultry. To meet this requirement and at the same time observe the fundamentals for poultry rations, representatives from the poultry departments of several eastern colleges adopted the following ration:

GRAIN:

- 500 lbs. cr. corn, with a variation of 400-600 lbs.
 - 100 lbs. feed wheat, with no variation.
 - 200 lbs. barley, with variation of 100-300 lbs.
 - 200 lbs. heavy oats, with variation of 100-300 lbs.
- The scratch grain to contain not less than 10% protein, 68% carbohydrates

and 4% fat, and not more than 5% fiber.

MASH:

- 100 lbs. wheat bran.
- 100 lbs. wheat middlings.
- 100 lbs. corn meal, corn feed meal or hominy.
- 100 lbs. gluten feed.
- 100 lbs. ground heavy oats.
- 100 lbs. meat scrap.

The mash must contain not less than 20% protein, 58% carbohydrates and 5% fat and not more than 7% fiber.

Meat scrap should be fed as long as it is obtainable or skim milk or butter-milk used as a substitute.

FEEDING METHODS AND PRACTICE.

Amount: *Feed according to the appetite of the birds; no definite rule can be given.* Feed scantily of grain in the morning and give all the grain they will eat in the afternoon in time to find it before dark. There should be no grain in the litter at noon; when found, it

indicates feeding too much in the morning.

The mash is fed dry in hoppers open all day.

In general, feed by weight about equal parts of grain and mash.

Litter: Induce exercise by feeding all grain in dry, clean, straw litter, 6 to 8 inches deep. The common straws, in their order of desirability, are wheat, oat, barley, rye and buckwheat; shredded or cut corn stalks; shavings or leaves may be used where straw is not available. All feed and litter should be strictly sweet, clean and free from mustiness, mold or decay. Serious losses frequently occur from these sources due to the spores which may develop into fungus molds in the lungs or intestines.

Green Feed: A green range of alfalfa, clover or grass furnishes the ideal condition. When not available, feed mangel beets, cabbage, sprouted oats, or green clover at noon in such amounts as they will clean up before night. This will require about 25 to 30 lbs. per week for 100 hens. Decayed or frozen green feeds are a common source of digestive disorders. Apples, potatoes and corn silage will not replace mangels or cabbage, but apples in particular may be of value as a supplement.

Grit and Oyster Shell: Hard, sharp grit is necessary for grinding feed; oyster shell to supply lime for egg shells; neither will replace the other.

Water: 1 dozen eggs contains about 1 pint of water. Clean, fresh, pure water should be kept constantly before the hens and should be renewed at least once daily.

Moist Mash: Recommended only to hasten the development of late hatched pullets or to help in keeping up egg production of hens in late summer, especially those hens which are not to be used for breeders the following spring.

Breeds: This ration is recommended for all breeds but it is to be varied as to the method of feeding. In the case of heavier varieties, feed more scantily of grain in the morning and so encourage exercise.

Substitutes and Additions: *All substitutes or changes in the ration should be made gradually.*

Shrunken or feed wheat is recommended in place of milling wheat because the latter is high in price and needed for human consumption. In nutrient value, feed wheat is between milling wheat and wheat screenings.

Wheat screenings are often loaded with weed seeds and dirt, but good screenings may be used if the price is low enough.

Mustiness in feed wheat, wheat screenings or any feed may be detected by chewing a sample. Musty feeds are dangerous. (See Litter.)

Buttermilk or skimmed milk may be used in place of meat scrap, allowing about 12 to 14 quarts per 100 hens per day.

Green-cut bone is a very stimulating feed and should be used with care. It is not safe to feed unless it is fresh. If fed in amounts of about one-half ounce per hen per day, it may be used to replace half of the meat scrap.

Clover chaff, either dry or steamed, is relished by the hens and may be advantageously used to add variety to the ration

S. C. BLACK ORPINGTONS

Preventing Colds.

Colds in fowls are one of the most serious drawbacks to the poultry man. And it is a stern fact that most all flocks are more or less troubled with it. The buying of fowls for breeding purposes, or eggs for hatching is the way a good many flocks become infested with it, as many of the fowls bought for breeding have had in their past life a severe attack of cold and have been doctored up, and their offspring, unless extra precaution is taken, are sure to have colds, also many of the eggs bought for hatching have been laid by hens that in the fall of their first year have had a cold, and have been placed by their owners in the breeding pen, and by so doing many more flocks have been subject to the disease, and when once in a flock, whether introduced by buying stock or eggs, or by neglect of the poultry man, it is hard to get rid of. In the first place the saying that "an ounce of prevention is worth a pound of cure" is worthy of everyone's careful consideration, therefore I say be very careful that the fowls or eggs you buy are from parent stock that have not had a cold. But colds are not always bought. They are just as often got by our own neglect. If we have a perfectly healthy flock to start with, by a little neglect on our part we can soon have many cases of cold in our flock. But whether obtained by buying stock or eggs, or by neglect, it can be got rid of by using much care and a little medicine.

Don't make hothouse plants out of your poultry at any time of the year. What I mean by hothouse plants is, not to keep them in too warm and close quarters where they can't get sunshine, exercise and plenty of fresh air, as these are necessary to good health and a strong constitution. Have the roosting coop just warm enough that the fowls' combs won't freeze, and have a place where they can go in on cold snowy days just warm enough that with the exercise they get by scratching in the litter for their grain they can keep comfortable. Don't raise the young stock in small coops where they sweat and steam all night and in the morning when they are let out they stand around and chill and take cold. This is the greatest preventive for cold, in my estimation.

I have seen persons have a hen with a brood of twenty-five chicks in a coop two feet square. This won't do. The brood must not be too large. Twenty chicks is a great plenty with one hen and the coop must be large enough so they have plenty of room and fresh air, and as the chicks grow give them a larger coop. Some broods are kept in too small a coop till late in the fall, till the chicks have grown to such size that they must pile on top of each other to get in the coop, and they sweat and steam all night, and come out on the cold frosty ground in the morning and take cold.

Profitable Egg Producing.

An experiment made at the New York State College of Agriculture, at Cornell University, provides some interesting and very valuable information on the production of eggs, through the use of different rations of feed with and without meat scrap and crushed oyster shells. This experiment was not conducted in the form of an egg laying contest, but was worked out for the pur-

SECRETS of EXPERT EXHIBITORS

And Easy Lessons in Judging

By FRANK HECK

A BOOK that is new in character and the most valuable and interesting production ever published for breeders of exhibition fowls. No other book or similar publication comes within gunshot of it. It is in a class by itself.

The time has gone by when a breeder can pick up birds right out of the yards and win with them without special preparation. This is true even in the smaller shows. There are always at least a few hustling, enterprising breeders in nearly every locality who are keenly alive to the financial profit and the honors accruing from winning over all competitors. These breeders use all legitimate methods for putting their birds in show condition.

Faking and Legitimate Preparation, Both Laid Bare

Faking is certainly wrong and it should not be practiced, but even in legitimate show preparation what chance have you to win over one or more honest competitors who may have a copy of this book and thereby possess the knowledge which enables them to fix up their birds in scores of ways that are not known to you. Consider also the immense advantage you would have in being able to detect such forms of faking as can be discovered in cases where there may possibly be a dishonest exhibitor in the class.

All the methods, drugs, chemicals and various modes of preparing birds for the show room are fully explained.

You need the book to protect yourself against the dishonest fakir and you need it to put yourself on an equal footing with your honest competitors. It will save you dollars in useless entry fees, and it will show you how to win the coveted prizes and honors which your rivals would otherwise receive. The price of the book is

\$200

and it is worth the price. Have you ever bought a poultry book on general topics or disclosing some system or so-called secrets, and upon receipt of it had your expectations drop with a dull thud of disappointment? Well! this is not that kind of a book. *Don't put off sending your order. You need the book now. Address*

- Complete Detailed Instruction for Washing and Chemically Bleaching White Birds.
- How Black or Gray Specks in White Plumage Are Hidden.

The above subjects are only a portion of the contents. There are many other equally interesting, important and valuable secrets, many of them being alone worth the price of the book. There are many seemingly "little" things that are of great importance and that you would never think of.

The Easy Lessons in Judging are also a feature of the book and will teach you the principles of scoring fowls.

pose of determining the egg producing value of the use of various combinations of chicken feeds, which the following record of the test will show:— 10 Leghorn hens composed the flock of each pen, and the experiment was run for 20 weeks. Pen 61 was fed the regular Cornell grain ration of cracked corn, wheat and oats and a mash feed of the following proportions:—Corn meal, 300 pounds; wheat midds, 300 pounds; wheat bran, 150 pounds; alfalfa meal, 50 pounds; oil meal, 50 pounds; meat scrap, 250 pounds; salt, 1 pound. This pen was also furnished oyster shell as well as grit and charcoal. During the 20 week period of the test, 313.54 pounds of food were consumed, costing \$4.51, yielding 508 eggs, valued at \$15.50, showing a profit of \$10.99 over the cost of the feed.

In this test, another pen, with the same number and breed of hens, and running the same length of time, was fed only the Cornell ration, with both meat scrap and oyster shell excluded. The consumption of food by flock of this pen, was 294.26 pounds, costing \$4.80; 137 eggs were produced, valued at \$4.45, showing a profit of only 37c over the cost of the feed.

This experiment shows rather strikingly the value of the use of meat and oyster shell in the ration of a laying hen, as the two pens fed no meat or shell were the two poorest producing pens of the test and the two which made the least profit over feed.

A Little Friendly Advice.

Friend "Dad":

As I have promised you a setting of eggs to give you a little start in the Standard-bred poultry game, I think a resume of my experiences will not come amiss.

To make some comparisons I will hark back to the time when you and I had just reached our majority and were so imbued with the trotting horse bug that we hardly had time for anything else. How we used to haunt the old fair ground at home and listen to the wonderful tales of speed that were dished up there. How we schemed to buy those two colts of "Shorty" Crenshaw, and what world beaters they were going to be. How we used to visit our mutual friend, Old Ben, and listen to the wonderful qualities of "Black Bell." "The fastest mare that ever wore a halter," to hear him tell it, and how we watched "Black Bell" go down to defeat in the 30 trot at the county fair, not only defeated but was way back at the 7/8 pole when the winner went under the wire in the fast time of 2:40, but Old Ben never for a minute lost faith in his mare, he had read the "excuse book" and had an alibi.

Black Bell or her ancestors did not have the blood in their veins to make 2:10 trotters. It is the same in the chicken game. We have 2:10ers in the chicken game too, that is hens that lay two-hundred-and-ten eggs or more a year, but if they do not have the blood back of them, it is useless to expect 2:10ers in your flock.

While I still love the trotter, my finances would not allow me to ever hope to own or breed a 2:10 trotter, therefore I looked around, and always having more or less to do at home with mother's flock of just chickens, when I moved to Clinton our next door neighbor who had the chicken fever

Rose Comb Rhode Island Reds

Ten years of scientific breeding for eggs and beauty has created us a valuable and an ideal strain. They are record egg producers, dark, even glowing red color. Perfect in carriage, type and size. Cocks or cockerels on approval, \$8 to \$16. Archibald's Poultry and Fruit Farm, R. D. 3, Clyde, Ohio

right, soon had me inoculated to the extent that I ordered a pen (four pullets and a cockerel) of White Wyandottes, of a noted breeder, not show birds, just utility stock, at a price that I thought a lot of money for chickens, at that time. I was doomed to disappointment in this purchase, in that, I will always think, the cockerel was a capon. I have often regretted that I was unable to find this out, for the reason I was taken sick and went to the hospital and when I was better my wife had sold the flock.

For the next two years I did not work to any great extent as I was regaining my health. My mother at this time had ten S. C. Brown Leghorn pullets and a cockerel, of a strain that was in the front rank at that time. I had not lost faith in my chosen breed and bought ten White Wyandotte pullets and a cockerel of a breeder in Illinois, utility stock of a laying strain. I immediately made over the trotter's stall into a coop for my coming hens, also built a yard, keeping the two breeds separate. The reputation of the Leghorns as layers was beyond reproach, but as events turned out, their colors were lowered by the Wyandottes. These two flocks were fed exactly alike, in that when we fed one flock the feed was divided equally. An

\$3 profit per hen per year

is what I made last year with 400 hens and pullets because we have bred the "lay" into our

S. C. W. "Lay"ghorns

Our stock has been highly praised by prominent poultry authorities. We have more birds than we will need in our breeding pens for the coming season, so in order to move the surplus quickly we are offering breeding hens with records of 160 to 200 eggs at \$3 each. Higher record birds a matter of correspondence, also a few cockerels for sale. Write me your wants. I have the stock and can please you.

EMORY H. BARTLETT Box 19 ENFIELD, MASS.

accurate record was kept of the two flocks and the Wyandottes not only laid more eggs than the Leghorns, but the eggs weighed more to the dozen. Right here, let me say eggs should be sold by weight instead of by the dozen.

Mother saw the good qualities of my birds and disposed of the Leghorns. The Wyandotte qualities did not stop at filling the egg basket, but when we wanted chicken for dinner we did not have to kill two or three to make a meal, and one of the nice plump Wyandottes was sufficient.

Now, Dad, the essential feature of the chicken business, like all other business, is to get a foundation not only of stock, but of knowledge, therefore now is the time for you, a beginner, to subscribe for a poultry journal and read and digest all the good things that appear each month. I have been a subscriber for several in the last few years and at this time have sifted them down to one. This one I will recommend to you. It is the AMERICAN POULTRY JOURNAL, printed at Chicago. I like it the best for the reason it is a Western paper, carrying the ads of breeders that are not very far away, should a person in this country see fit to buy eggs or stock. As an advertising medium it goes into all sections of this as well as foreign countries.

You will make no mistake in subscribing for this journal, as you get the news first-hand.

Before you are in need of a coop to keep your chicks in, I will write you how I house mine, also how I handle both old and young birds, how and what I feed, and care in general.

Lastly, I want to impress on your mind most emphatically that if the birds you raise from these eggs do not suit you in any way, do not mix the strain or you will undo what it has taken one of the most prominent White Wyandotte breeders years to accomplish.

I do not mean myself when I say "one of the most prominent White

Wyandotte breeders"—I mean the man of whom I bought my foundation stock. I hope to be prominent, some day, in the poultry world.
E. S. HOLM.

Why Incubator Chicks Die in the Shell.

There seem to be wide and varied opinions as to why chicks die in the shell. Many claim, which is true in a sense, that the germ is weak, caused by too close inbreeding. It is true also that we find weak germs at times when the parent stock is not related.

Too close confinement, with little or no exercise, or improper feeding will also cause chicks to die in the shell, the germ not being strong enough to withstand the various changes during incubation.

The writer is fully convinced after many careful demonstrations that while the above causes are partially true, the main cause is improper ventilation, so that chicks suffocate from insufficient air. The ventilation of almost all makes of incubators remains practically the same from the beginning to the end of the hatch, and while this ventilation may be just right at some stage of the hatch, it certainly is not right all the way thru. If the proper amount of air passes thru at the beginning of the hatch, the ventilators being of a given and stationary size, then as the chick grows it must have a greater amount of air, and if it is not forthcoming suffocation follows.

The system of ventilation in incubators of today is such as to cause a draft, drying the eggs too fast, causing the membrane of lining beneath the shell of the egg to become tough, so much so that at hatching time the chick is unable to break thru, many even dying in the shell after being pipped, whereas if this membrane should be kept soft and brittle, as when fresh laid, the chick would easily have picked its way out.

"A Chick in the Hand is Worth Three in the Shell"

You can buy Chicks this season from the ORIGINAL

SCRANTON S. C. REDS

In response to popular demand and in line with our desire to give our customers fullest measure of satisfaction, we shall offer for the season of 1918 day-old chicks, as well as eggs from twenty superb matings—a real line-bred flock—winners in America's leading shows—producing each year outstanding quality in type, color, size, vigor and laying ability.

CHICKS—\$12 to \$35 per twenty-five, \$20 to \$60 per fifty, \$35 to \$75 per hundred. Ready to start growing lustily and become richly colored exhibition and useful Reds.

EGGS—\$3, \$5 and \$10 per fifteen, \$6, \$8 and \$18 per thirty, \$10, \$15 and \$30 per fifty, \$18 and \$25 per hundred. Everyone guaranteed new-laid and fertile, clears replaced, and if you wish to do your own hatching the surest promise of your ultimate satisfaction.

Our "Red Quills," the original Scranton S. C. Reds, are generally conceded to be the strain that most nearly approaches the desired combination of type, color, size, quick growth and laying ability. A prominent eastern fancier and pioneer breeder of Reds said of them: "It is the one truly line-bred strain in America." Why not stamp these qualities and the ability to reproduce them on your flock? Get your winners the way the other fellow gets his. Take advantage of the world-wide fame of these original Scranton Reds to get your share of the best sales.

Send today for baby chick and egg circular. Better still, get your order booked now direct from this ad and insure prompt and early delivery.

Remember, only the best wins. There is but one best. Get the "Red Quills" original Scranton S. C. Reds and be convinced.

Use these Appliances and Get the Big Profits

Getting maximum profits from poultry is largely a matter of using up-to-date appliances and keeping your fowls happy. I've proved that to my own satisfaction and also to the satisfaction of wise poultrymen everywhere. No odds whether you are a poultry fancier or a commercial poultryman, this rule holds good.

Look at the poultry appliances shown here. Every one of them will help send your profits shooting toward the top-mark. If any one of them doesn't do the job better than any other you've ever tried, shoot it back and I'll refund your money. That's the way I like to be done by and therefore I always do the same by my brother poultrymen.

I've a book on poultry that is worth dollars in your pocket because it hands out such valuable information. Send for it. Ask for my "Poultryman's Text Book." It's sent free.

Andrews Sanitary Brood Koop

Removable false bottom, beneath which, if a pan of Andrews Disinfectant is placed, absolute freedom from lice and mites is secured. Removable top. Designed for one hen and brood.

Just What You Will Need This Winter

This is the FAULTLESS Automatic Feeder

All you have to do is to fill the can of this feeder with wheat, corn, oats or any other kind of feed, either mixed or separate. When the chickens are hungry they peck at the cross bar; this causes some feed to drop to the ground where the chickens can pick it up. No feed spoils or is eaten by rats or sparrows. **You can save enough feed in one month to pay for these feeders.** Besides the saving of feed, you save work.

Here Are Our Low Prices

This feeder holds $\frac{1}{2}$ bushel of feed. It is made of heavy rust-proof material. It weighs six pounds packed for shipping. **Order by No. 153.**

And What is More, we will send you two 8-quart feeders, same style as above, both for \$2.50. These two feeders weigh nine pounds and will not be sold singly. **Order by No. 152.**

Here is the Feeder for Your Low Coop

Or for Your Baby Chicks

It holds five quarts, will feed any kind of feed, either mixed or separate. It is built on the principle of the large **FAULTLESS Feeder** and is furnished complete with bracket, which can be attached to the wall or side of a coop at proper height. This feeder is beautifully painted and with ordinary care it will last forever. It is guaranteed to feed your stock perfectly from the time the chicks are able to eat until ready for the axe. We sell this feeder for \$1.00. It weighs $3\frac{1}{2}$ pounds when packed. Get one today and feed your chickens right. **Order by No. 151.**

We carry a full line of poultry appliances and remedies. We also manufacture the well known Simplex Genuine Feather Brooders and Hovers—both heated and fireless. Send for our CATALOG; it will interest you.

SIMPLEX SUPPLY HOUSE, Pontiax Bldg., CHICAGO, ILLINOIS

FEED COST OF PRODUCING EGGS.

What Records of Cost at the Government Poultry Farm Show for Leghorn and General-Purpose Breeds.

THE cost of feed for producing eggs with pullets and yearling hens, both from Leghorns and from general-purpose breeds, in the experiments on the United States Department of Agriculture farm, Beltsville, Md., during the past year, even with the high price of grains, has been considerably lower than the price received for near-by fresh eggs.

Leghorn pullets ate an average of 4.8 pounds of feed in producing a dozen eggs. The feed costs on an average 12.9 cents per dozen eggs produced by the flock. The cost of feed per dozen eggs varied from 9.2 cents in July to 41.4 cents in November, when, during the moulting season, the flock continued to eat, but, of course, produced fewest eggs. The number of pounds and the cost of the feed consumed per dozen eggs for each four-week period during the year were as follows, beginning December first: Pounds of feed: 5.3, 6.6, 5.4, 4.7, 3.3, 3.0, 3.0, 3.2, 4.9, 4.8, 8.6, 10.9, and 18.4; cost of feed: 12.0, 16.4, 13.7, 13.5, 10.3, 10.0, 10.0, 10.0, 9.2, 9.2, 16.8, 22.4, and 41.4 cents.

Leghorn yearling hens ate on an average 5.5 pounds of feed per dozen eggs produced. The average cost of feed per dozen eggs produced by the flock was 14 cents. The cost of feed per dozen eggs varied from 7.3 cents in July to 266.3 (\$2,663) in November (moulting period). The number of pounds and the cost of the feed consumed per dozen eggs produced by the flock for each four-week period beginning December first were as follows: Pounds of feed: 20.3, 10.0, 5.8, 5.1, 3.6, 3.3, 3.4, 3.9, 5.3, 7.1, 30.8, and 118.7; cost of feed: 45.9, 24.8, 14.7, 14.7, 11.1, 11.0, 10.6, 7.3, 10.1, 13.9, 64.3, and 266.3 cents.

GENERAL PURPOSE BREEDS.

The general-purpose breeds ate considerably more feed than the Leghorns, the pullets consuming an average of 6.7 pounds of feed and the yearling hens 9.6 pounds in the production of a dozen eggs. The feed cost averaged 16.75 cents per dozen eggs for the pullets, varying from 11.7 to 28.9 cents; and for the yearlings averaged 24.5 cents, ranging from 13.9 to 81.3 cents. The number of pounds and the cost of the feed consumed by the pullets in producing a dozen eggs for each four-week period beginning November first were as follows: Pounds of feed: 10.9, 7.4, 10.9, 5.5, 5.8, 4.6, 4.4, 4.7, 4.7, 6.3, 6.9, 9.2, and 14.1; cost of feed: 24.4, 16.8, 27.1, 14.0, 16.6, 14.3, 14.7, 15.6, 14.7, 11.7, 13.2, 17.9, and 28.9.

For the general-purpose yearling hens, the amounts per dozen eggs were as follows: Pounds of feed: 34.6, 32.9, 32.7, 12.6, 8.5, 5.7, 5.3, 6.1, 6.4, 7.5, 7.6, 10.0, and 21.0; cost of feed: 77.7, 74.5, 81.3, 32.0, 24.5, 17.7, 17.7, 20.3, 20.0, 13.9, 14.5, 19.5, and 43.1 cents.

The average cost of the mash and of the scratch mixture per 100 pounds for each month, beginning in July, 1916, was as follows: Mash: \$1.82, 1.85, 1.88, 2.02, 2.19, 2.24, 2.33, 2.42, 2.70, 2.96, 2.98, and 2.84; scratch mixture: \$1.90, 1.98, 2.03, 2.09, 2.30, 2.29, 2.64, 2.66, 3.05, 3.25, 3.68, and 3.41. The cost of the feed

Smith Standard BABY CHICKS

America must grow more poultry this year. We will help by producing nearly

2,000,000 Chicks in 1918

Big, strong, vigorous chicks of unusual utility value and priced extremely low, quality considered. The great volume of business we do makes low prices possible. Our marvelous

Incubator Holds Forty Tons of Eggs

or 666,000, at once! Largest in America—best system of incubation ever devised. The air in the huge egg-chambers is completely renewed every three minutes and moisture furnished by live steam.

We ship any number of chicks. These breeds:

Jacobs' S. C. White Orpingtons

Have won from year to year at Indianapolis, Indiana State Fair and Chicago Coliseum. 1918 Mating List now ready and an looking egg orders.

Frank W. Jacobs - 2027 W. Nichol Ave. - Anderson, Indiana

3 years—36 issues—of American Poultry Journal for \$1

used in producing eggs can be figured from the amount of feed required to make a dozen eggs at different periods throught the year, or feed prices may be compared with those used in this work.

(NOTE—The above figures are interesting, tho not conclusive, they give results with test flocks. With other flocks and under different conditions the results might be very different. It should be remembered that these cost figures represent only the cost of feed consumed by a given flock, of hens or pullets, while producing a dozen eggs. They do not show the actual cost of producing a dozen eggs and do not include any other expenses outside of bare feed cost. They are based on feed prices prior to and including November, 1916. Since that time we have experienced an increase in feed prices above the highest figures quoted, amounting to over 38 per cent. It is interesting to note in the feed cost given for November (the moulting period in this case) that one flock consumed \$2.663 worth of feed for every dozen eggs produced. From personal observation at the government farm we should say that the overhead and labor actually included in the actual care of these experimental flocks—and the capital invested in houses, fowls, and equipment—is not materially greater than that on the average poultry plant for the same size flocks. Therefore it is unfortunate that our government experts do not conduct their experiments according to accepted business methods of cost accounting and give us the results in actual net cost of producing a dozen eggs at different periods, including all expenses.—Editor A. P. J.)

Some Facts in Breeding for Eggs.

That the heaviest and most consistent layers are the early layers.

That April and May hatched chicks are to be preferred.

That my heaviest layers produce the strongest and quickest growing youngsters.

That heavy laying hens produce 80 percent more chicks than ordinary layers, their eggs being universally fertile.

That egg production combined with fancy points demands terrific culling.

That 200 egg daughters of 200 egg hens are but the products of breeding and trap nests.

That a 95 point pullet has laid 192 eggs in 10 months and was bred from a 228 egg hen.

That a 96 point cockerel, special for whitest bird in a show of 1,000 entries, is the son of the same 228 egg hen.

That the highest scoring hen I ever owned never laid an egg for 18 months.

Common Sense Brings Results

These days when you are sure of high prices for poultry products it does not pay to take chances with your feed.

High Prices for eggs, for instance, do not always exist—but they are here now and you want them.

Common Sense Is a Guaranteed Poultry Feed

Common Sense Egg Mash and Scratch Feed combine nutritious, health and egg building proteins, fats, carbohydrates, etc. in just the right proportions or balance to give maximum results. Your hens, on Common Sense Scratch Feed and Egg Mash, are healthier and lay more often. We guarantee these results. If you don't get them we buy back the feed you have left and pay freight charges both ways. Fair enough?

Common Sense Prices

(Subject to change without notice. Refund allowed on market decline.)

Common Sense Scratch Feed

\$4.55 per 100 pounds ton lots.
\$4.60 per 100 pounds in 1000 pound lots.
\$4.65 per 100 pounds in less than 1000 pound lots.

Common Sense Egg Mash

\$3.25 per 100 pounds in ton lots.
\$3.30 per 100 pounds in 1000 pound lots.
\$3.35 per 100 pounds in less than 1000 pound lots.

WINNINGS of A. P. J. ADVERTISERS

This column is open to all American Poultry Journal display advertisers and is compiled from information furnished by the advertiser. Complete winnings of all exhibitors at the larger poultry shows as New York, Chicago, Boston, etc., are published in the issue following the show dates, together with a report of the show by an American Poultry Journal representative.

Hillview Farm, Lincoln, Mo., reports the following winnings on its S. C. White Leghorns at the National Leghorn Show, Columbus, Ohio, November 28 to December 3, 1917: 1-2 cocks, 1-5 hens, 5 cockerel, 1-2-3 pullets, 2 old pen, 1 young pen, cup for best bird in show, best female head in show, best male head in show, best S. C. White Leghorn pullet, best display S. C. White Leghorns.

R. M. Seward, Lewistown, Ill., reports the following winnings on his Buff Orpingtons: At Lewistown, Ill., 1 pen, 1-3 hens, 3 pullet, 2 cock. At Monticello, Ill., 1-2 cockerels, 2 pen, 2 hen. At Atlantic, Ill., 1 pen, 1 cock, 1-2 hens, 2 cockerel, 2 pullet. At Delavan, 1 pen, 1-2 cockerels, 1 pullet, 1-2 hens. At Springfield, 1-2 pens, 3 hen.

A. & E. Tarbox, Yorkville, Ill., report the following: At Illinois State Fair, Springfield, September 7-15, 1917—Silver Wyandottes, 1 cock, 1 hen, 1 pullet, 4 cockerel, 1 old pen, 1 young pen. Speckled Sussex, 1 cock, 1 hen, 1 cockerel, 1 pullet. Red Sussex, 1 cock, 1 hen, 1 chl, 1 pullet. Iowa State Fair, Des Moines, August 22-31, 1917—Silver Wyandottes, 1 cock, 2 hen, 2 old pen, 1 young pen. Speckled Sussex, 1 cock, 2 hen, 1 chl, 1 pullet, 1 old pen, 1 young pen. Red Sussex, 1 cock, 1 hen, 1 cockerel, 1 pullet, 1 young pen. Wis-

consin State Fair, Milwaukee, September 10-15, 1917—Silver Wyandottes, 1 cock, 2 hen, 1 cockerel, 1 pullet, 1 old pen, 1 young pen. Speckled Sussex, 1 cock, 1 hen, 1 cockerel, 1 pullet. Red Sussex, 1 cock, 1 hen, 1 cockerel, 1 pullet. Texas State Fair, Dallas, October 13-28, 1917. Speckled Sussex, 1 cock, 1 hen, 1 cockerel, 1 pullet. Red Sussex, 1 cock, 1 hen, 1 cockerel, 1 pullet.

Wilburtha Poultry Farms, Trenton Junction, N. J., report the following winnings: At Wilmington, Del., on White Leghorns, 1 cock, 1 hen, 1 pullet, 1 cockerel. Governor's cup for best bird in show. On White Plymouth Rocks, 1 cock, 1 hen, 1 cockerel. On Rhode Island Reds, 2-3 cock, 1-2-3 cockerel, 3-4 pullet, 1 pen, best display.

H. R. Stevens, Hymera, Ind., reports the following winnings on his White Wyandottes at the Terre Haute Show, December, 1917: 1 cock, 1 hen, 1-2-3-4-5 cockerel, 1-2 pullet.

U. R. Fishel, Hope, Ind., reports the following winnings on his White Plymouth Rocks at the Chicago Coliseum Show, December, 1917: 1-3-5-6 cocks, 1-2-3-5 hens, 1-2-3-4 cockerels, 1-2-4 pullets, 1-2 old pens, 1-3 young pens, grant silver cup for best exhibit.

FORCING EGG PRODUCTION

Feeding Green Cut Bone.

The feeding of green cut bone, wheat and table scraps is all right as far as it goes, but will never produce eggs unless other conditions are right. Are your houses properly cleaned and ventilated? Are your fowls free from lice? Do you feed plenty of green food? Do your fowls have plenty of exercise and sunlight? Do you supply them with fresh water at the proper temperature? Have they access to grit and oyster shells? All these things must be taken into consideration if you would fill the egg basket in the winter time.

Fresh water, with the chill taken from it at all times, grit, charcoal, and oyster shell must be before the fowls constantly.

Good, clean grain, such as wheat, buckwheat, millet, corn, Canada fieldpeas, sunflower seed, oats and barley, bran, middlings, meat scraps, alfalfa, cabbage, beets, turnips; these are the feeds we use with results, and results is what all the egg farmers are striving for. Feed right, with the proper strain and housing, and no one need fail to get winter eggs and plenty of them.

Quality White Plymouth Rocks

Strong and vigorous chicks that will do their bit. Do your bit by sending us your order and help win the war. 25 for \$5, 50 for \$10, 100 for \$19. Chicks and eggs from exhibition pens, also several fine cockerels for sale. Orders booked for future delivery for 25 percent of order. Give us your order now and you will not be disappointed by not being able to get them later, as the supply will be short this season.

A. E. MARTZ Buff Orpington Specialist and Judge **Box A, ARCADIA, IND.**

Catarrh.

Catarrh is usually brought about by exposure to drafts or being allowed to roost in poorly ventilated quarters. Wash out the mouth and nostrils twice a day with boric acid solution of the strength of fifteen grains to the ounce of water or creoline solution (one per cent). The following remedy will be very beneficial: Gentian root, 4 drams, ginger, 4 drams; sulphate of iron, 2 drams; hyposulphite of sodium, 1 dram; salicylate of sodium, 1 dram. These substances to be pulverized and then thoroughly mixed. Give three or four grains a day to each fowl. For further information about this disease see "Diseases of Poultry." Price 50c. For sale by us.

Mating.

Mate your pens with the perfect bird described in the American Standard of Perfection as your model. If your hens are too long in the back, etc., try to use a male especially strong in these sections and vice versa. But you cannot perfect all sections, for there never was a perfect bird. As tested breeders are the ones to be trusted, it is well to keep a record of your birds and see what kind of stock each bird throws; see who was the sire and dam of that good layer, etc. Birds in their second season are generally regarded as of the proper breeding age, for from birds of this age come the strong, fast maturing and vigorous young stock.

Illustrate Your Printed Matter

ABOVE IS ONE OF THE MANY HANDSOME ILLUSTRATIONS SHOWN IN THE

American Poultry Journal Cut Catalog

which contains many hundreds of cuts suitable for advertisements, letterheads, envelopes, catalogs, mating lists, in fact any and all classes of printing. Tone up and lend distinction to your printed matter by the use of one or more of these illustrations. *Send today for a free copy. We do not do job printing.* We sell electrotypes (reproductions) of these illustrations which can be used by your own printer.

You Can Get Twice As Many Eggs From the Same Flock and the Same Grain When You Feed MILKOLINE MIXTURE

THAT'S why the big poultry raisers and the big egg producing companies have for four years used, and continue to use **Milkoline**. Experiments made at Missouri University, extending over a year, absolutely prove the above statement—in fact, the following table shows that we could almost say three times as many eggs from the same flock and the same grain.

Young Pigs and Hogs
thrive on **Milkoline**. It is the best possible tonic. A long-felt want for the hog raiser as well as the poultryman. Keeps young pigs and hogs toned up so that they can resist disease, take on weight quickly and develop rapidly.

What Milk Did For One Flock

<i>Fed without Skim Milk.</i>	<i>Fed with Skim Milk.</i>
25 hens	25 hens
1373 eggs	3275 eggs
1095 pounds grain	957 pounds grain
409 pounds mash diet	446 pounds mash with skim milk added
<i>Cost per dozen 22½c.</i>	<i>Cost per dozen 10½c</i>

Breeding and Laying Birds
This is the month when breeding and laying birds must be in the very best of condition to produce the maximum number of eggs. They need a food ration that continually builds up the system. For early baby chicks nothing better than **Milkoline**. Where **Milkoline** is fed White Diarrhoea is unknown.

In this feeding test \$3.90 worth of Sour Skim Milk saved 2,149 lbs. of grain and mash and 11 Months' time in producing 3,275 Eggs. Many other tests prove this as an average result. **Milkoline, mixed 1 Gallon to 50 Gallons of water, gives even better results.**

30c Worth of Milkoline Saves 100 lbs. of Grain

In figuring 30c worth of Milkoline to save 100 lbs. of grain, twice as much Milkoline is allowed, compared with the Sour Skim Milk in the above named test. Milkoline is made from pure, fresh buttermilk, modified and condensed for cheap shipping and easy handling. It is improved in feeding value by added vegetable oils for proper balance of protein and carbohydrates. Milkoline with its added acidity is a wonderful aid to the digestion and eliminates disease germs, thereby allowing hens to derive full nutriment from every ounce of feed. Milkoline has a stimulating effect on organs of egg production.

Ask Your Dealer for MILKOLINE *If he does not handle it, do not delay ordering direct from us. We will deliver it to you, all charges prepaid upon receipt of price. Booklet free for asking. Money-back guarantee.*

E. B. Thompson's Imperial Ringlet Barred Plymouth Rocks

The Imperial "Ringlets" are recognized throughout the World as the leaders of all the Barred Rocks.

One of the Great Imperial "Ringlet" Males.
Observe the Wonderful Shape, Color and Barring.

Their record at America's Imperial Show, Madison Square Garden, New York, for 29 years stands without parallel.

At the last 1917 Garden show they won every First Prize offered. At the last three shows, 1915, 1916, 1917, they won 14 First Prizes out of 15 offered—First Prize Pullet and Champion Female the last three successive years—every prize and ribbon offered on cockerels, viz: 1st, 2d, 3d, 4th and 5th the last four years in succession and under three different judges—every bird bred on my farm.

Grand Winning Show Birds

The finest that all America has ever produced are now on my farm ready to win Blue Ribbons and Silver Cups for you in any competition in the world in Cocks, Cockerels, Hens, Pullets and Pens. They are elegant in size and shape; fine heads; rich, clear blue color, with that sharp, clean-cut narrow "Ringlet" barring to the skin that wins under all judges. Prices reasonable.

Prizes and Silver Cups

have been won by my customers on the Imperial "Ringlets" in more than a thousand show rooms throughout the civilized world—you can win the same laurels. I will sell you grand exhibition birds for any show and breeders of this richest First Prize New York Blood in elegant single birds, trios or pens mated to produce prize winners.

If you want the best in Barred Rocks you must have my Imperial "Ringlets"
—my customers are my first thought and nothing is too good for them.

Richly illustrated catalog upon request; it is full of pictures of New York winners from life.

EGGS from the finest exhibition matings in the world, \$15 per setting; four settings, \$45; 100 eggs, \$80.

Report of Madison Square Garden Show

With Buttermilk

Save All Your Baby Chicks!

IMPROPER feeding is the chief cause of the high death rate among baby chicks. Millions are lost every season from this one cause. The tender, growing digestive organs can't handle the food they eat without proper help.

You need not lose your chicks. Save them right at the start—make them lusty, record egg producers and top-notch market birds. Red Comb Chick Mash with Buttermilk is a scientific baby chick feed, compounded by the most expert feed specialist to *save the baby chicks*. It produces not only growing vigor and health by supplying the necessary protein but helps the chicks digest this protein. *Buttermilk promotes the digestibility of the protein.* The lactic acid in the buttermilk helps the food to produce the rich, healthy blood which overcomes the disease germs.

Red Comb Chick Mash with Buttermilk

costs less than any ordinary buttermilk chick feed. And it is *better*. Red Comb analyzes 50% more protein and 50% more fat than *any* ordinary buttermilk feeds. The buttermilk in Red Comb Chick Mash is in highly concentrated form. It takes *more than 10 lbs.* of the richest liquid buttermilk to make *1 lb.* of our health-giving concentrate. Red Comb Chick Mash with Buttermilk is a scientific ration for baby chicks that puts growing health and vigor into the chick at the start. That's the time your flock needs every precaution and every attention. It's up to you to determine their profit-making qualities. You can start them towards the big-laying class, good

breeders and real profit-makers, or by the lack of attention see them die off, grow slowly, and if they live, develop into small, puny, sickly birds that eat up profits and produce nothing.

Begin Feeding for Profits at Once

Send us the coupon right now—start feeding your baby chicks Red Comb Chick Mash with Buttermilk, just as quickly as possible. Do as the big poultry breeders and poultry experts do. Save your baby chicks and make them profit makers.

Save Money—Mail Coupon NOW!

Red Comb Chick Mash with Buttermilk costs less and produces more. And it is prepared of only the finest ingredients. Don't delay another day but send in the coupon now—start your flock right this year. Do as thousands of other poultry raisers are

doing. Feed scientifically because it produces not only biggest profits but gives you a strong, healthy, vigorous flock that you can rightfully be proud of. Red Comb costs less but we absolutely guarantee it to do more. If your nearest Red Comb dealer cannot supply you with Red Comb Chick Mash with Buttermilk, mail order to us and we will see that you get your feed at once.

Incubators — Brooders — Hovers

BUFFALO - U. S. A. - NEW YORK

Blue Hen Lamp Incubators **Five Sizes** From 65-440 Eggs

Prices \$12⁷⁵ up

Write for our Special
"Get Acquainted Offer"

Good, big hatches of vigorous, lively chicks—that's what you must have nowadays, and that's what you get with a Blue Hen.

Here Are 6 Reasons Why

1. Built to hold **HEAT IN** and keep **COLD OUT**. Could be built cheaper but not better.
2. **Heavy double walls—thick insulation.** Outer wall one inch; insulation 1 to 2 in. thick.
3. **Dovetail, lockjoint construction.** Boards locked together—can't pull apart.
4. **Even temperature egg chamber.** No currents; no cold corners; no drafts.
5. **Regulates and ventilates itself.** Without attention on your part.
6. **Ample fresh air and moisture.** No moisture pans nor sand trays.

Some Other Big Features

Refrigerator style doors with double glass—don't stick or lose heat; Nursery under egg trays—place to dry off chicks; Powerful Heater; Fireproof Lamp Case; Most beautiful Incubator finish on the market.

Big Money-Making Hatches—and Good for 20 Years

Here's what the U. S. Government asks of the Poultry Industry:

1. That poultry output be doubled.
2. That every farm have 100 hens.
3. That poultry be raised in every backyard.

Greatest Money-Making Opportunity in History of the Poultry Industry

In purchasing new equipment you'll need to furnish your share of this big increase in poultry products—here are two good questions to ask yourself before deciding which kind to buy:

1. "What results can I expect from it?"
2. "How many years can I use it?"

Our new book "**Making Poultry Pay**" answers these two questions and any others you might ask about Blue Hen Lamp Incubators.

Sold Under Money-Back Guarantee.
Before you buy any Incubator "**Making Poultry Pay**"

Blue Hen Mammoth Incubators

If you are considering installing a Mammoth Incubator, let us send you our separate Mammoth catalog. Tells all about Day-Old Chick business and Blue Hen Mammoth Incubators from 800 egg up to 44,000 egg capacity. If you will tell us what capacity Mammoth you have in mind, we will send some helpful suggestions along with the catalog. We can make prompt shipment.

WATSON MANUFACTURING COMPANY

When You Put in a Blue Hen[®]

Blue Hen Brooders

For Flocks of 100 to 1000 Chicks

Easy to buy - Easy to set up - Easy to operate

Plenty of heat for coldest weather. Fire can't burn up too high—nor down too low. Automatic control—both top and bottom drafts. Curtain arrangement—exclusive Blue Hen feature—gives chicks fresh air but prevents drafts; doesn't overheat brooder house.

No. 43

Capacity
350 Chicks

No. 44

Capacity
350-500

No. 45

Capacity
500-1000

\$17.50

\$21.50

\$25.00

Prices Slightly Higher West of Mississippi River

Curtain and thermometer furnished as part of regular equipment on Nos. 44 and 45. No. 43 has neither curtain nor thermometer.

A Word About Capacity

The Hover on the No. 43 is 42 inches outside diameter; on No. 44, 56 inches and on No. 45, 64 inches. No Brooders—unless they have larger hovers than that—will accommodate more than the number of chicks indicated.

Big Size

Big Value

Money-Back Guarantee

Big, powerful heater—burns hard or soft coal or gas. Brisk, lively fire—firepot slopes *outward*, preventing coal from "bridging." Requires practically no attention, except putting on coal and shaking ashes morning and night. Any one who can run an ordinary coal stove, can operate a Blue Hen Brooder.

Brooder Book FREE

Don't buy *any* Brooder until you first get the facts about the Blue Hen. Send for Brooder book today.

Blue Hen Portable Hovers For Flocks of 50 to 100 Chicks

Just What You Need for Flocks of Less Than 100 Chicks

More Room Inside Hover for Chicks Heat with 10% to 30% Less Oil

TWO SIZES

1. Heater is *outside* of the Hover—giving more room *inside* for chicks.
2. No loss of heat in filling or trimming lamp. Easy to get at.
3. All the heat utilized and radiated down inside Hover.
4. Self-ventilating. Chicks get plenty of warm, fresh air.
5. More heat with less fuel. Large heating drum.
6. Double curtain adjustable to weather and size of chicks.
7. Heater and Hover carefully insulated to hold heat in.
8. Easily moved about—weight complete, only 20 pounds.

- No. 16 for 50 chicks, 16 in. diameter. \$ 9.00
- No. 24 for 100 chicks, 24 in. diameter. 12.00

\$1.00 Buys More Meat Feed Now Compared to the Cost of Grain

Grain prices have gone up 200 to 300 per cent. Meat feed prices have gone up only 40 per cent. While meat feed was always the most economical considering the nourishment it furnished, it is now even more economical compared to grain because it has advanced relatively little in price.

DARLING'S MEAT CRISPS

is a pure, sweet, greaseless, odorless, concentrate of fresh meat, cooked and prepared for every day feeding for all kinds of poultry. It contains 50 per cent more nourishment than the best meat scrap on the market (75 per cent protein guaranteed) and is thoroughly digestible. A small measure in the ration supplies all the necessary protein and makes the whole ration more nourishing. Write for our free book entitled "Feeding Secrets of Famous Poultrymen." Please give your dealers' name. **DARLING & CO., Dept 2 CHICAGO, ILL.**

The Best Wh. Orpington Cockerel of 1917

First Cockerel
Chicago Coliseum, 1917

This superb bird, Blue Ribbon winner at Chicago Coliseum, Dec. 1917, and whose photo by Stahmer, appears on page 30 of the January American Poultry Journal, was in the All-Star Exhibit sent by Aldrich Poultry Farm to the Madison Sq. Garden Show. With 200 entries of other exhibitors from the west, these beautiful birds were caught in the terrific storm which swept New York State Xmas week, and only part of them arrived the day the show closed and, of course, too late for the judging.

But **YOU** know

Aldrich has the Best White Orpingtons in America

Send for new mating list

ALDRICH POULTRY FARM 5083 N. High St. COLUMBUS, OHIO

\$600,000,000.00

Let Us Help YOUR

T HIS Land of Liberty must now feed the world. A tremendous increase in poultry and egg production is imperative! 1918 is bound to be the greatest year for profits for poultry raisers that America has ever seen!

The U.S. Food Bureau and Dept. of Agriculture declare there will be a *need* for and *top prices* for \$600,000,000.00 worth more of poultry and eggs than were produced in 1917. *One hundred million more* pounds of poultry will find a ready market at big prices. *Billions and billions more eggs* than were produced in 1917 will be gladly bought at high prices by America and Europe. Get busy. Learn how to increase your flock at least expense. Investigate the 1918 X-RAY INCUBATOR.

1918 X-RAY

We Prepay Express to Prac-

Sent the safest, swiftest way! Sent *at our expense!* So that you *won't* have to wait for weeks—*won't* lose time—*won't* lose the profit that early hatches always bring—*won't* lose fertile eggs through spoilage! This means that you will get *your* X-Ray Incubator *when you want it*—when you are in need of it *in a hurry!* And when you get it, you get all the

20 HATCH-INCREASING BETTERMENTS

that are combined in this 1918 X-Ray. Chief among these features are:

The Handy Height feature achieved by deep lid that retains heat—enables egg tray to come back to hatching heat quicker—and saves oil.

The X-Ray Quick Cooling Egg Tray—makes it easy to turn eggs—built high in frame, protected by new deep lid—*built of heavy galvanized wire mesh.*

The X-Ray Nursery Tray—provides absolutely sanitary conditions—great convenience in removing chicks—provides ideal place

for "drying out" new-born chicks—whole tray easily removed and "kept clean as a whistle."

The Instantaneous Egg Tester—reveals egg fertility (or the lack of it) at a glance—no trouble—least disturbance to eggs—all accomplished by simply attaching the Patented X-Ray Testing Device (furnished FREE with every X-Ray Incubator) to the lamp.

The X-Ray Gas Arrestor—simple, yet marvelously perfect—positively prevents entrance of gas or fumes from lamp into egg chamber.

1918 X-Ray Brooders, Too

Protect *all* the little chicks. Save them all. Give them the right start. Learn what a wonder the 1918 X-Ray Brooder is as a chick saver and raiser. Made with Famous X-Ray Duplex Heater, that guarantees uniform warmth and prevents chicks crowding together for warmth and thus injuring themselves. Also has celebrated X-Ray Gas Arrestor that prevents lamp fumes entering chick chamber and affecting chicks—and Canopy over Exercising Room that protects chicks from both excessive sunlight and draughts.

X-Ray Incubator Company

Express Pre-

Hen Money You to Get Share!

Poultry is selling at prices that are "sky high."

Eggs are retailing at 5 cents each in many places. 75 cents per dozen for fresh eggs has been paid in many large cities. And the prices won't—can't come down much this year. The demand is too much larger than the supply. New York City alone uses annually Over Half a Billion More Eggs than the greatest egg producing state in America yielded in 1917! Here's your chance! Double—treble—yes, quadruple the size of your flocks. And here's the easiest, surest, most economical way to increase your flocks—get a

INCUBATOR tically All Points

The lamp's flame is scientifically adjusted by the X-Ray Automatic Trip. The instant there's too much or not enough heat, the flame is automatically decreased or increased as needed. The lamp produces just enough heat at all times and all it produces is used. Used properly— evenly distributed throughout the entire hatching chamber. No wasted heat, no "cooked" eggs—none chilled.

The X-Ray Duplex Central Heating Plant, directly underneath, furnishes natural, moist mother hen heat. The X-Ray Hinged Glass Top, so that you can look down into the egg chamber without opening the machine. These, coupled with all the other exclusive features, assure good hatches—sturdier chicks—less work for you—less expense to you! Think of them all! Compare all of them with the detail of other incubators.

Get This Book That Will Help You Get Your Share

This handsome volume will post you on the easiest, surest, quickest, most economical way to increase your flocks, to get the best and the earliest hatches, to fatten your poultry profits. You absolutely *need* to read this book, whether you intend to buy an X-Ray Incubator or Brooder or not. It will so post you on *modern* incubator features and *values* that no one can fool you on incubator merits or worth.

Send your name and address on the coupon—or a post card—today for 1918 X-Ray Book, No. 10B

Make Hens Lay

WE publish a book which gives the secret that all fowl raisers are most interested in—the secret of making hens lay when eggs are high as well as when they're cheap. The quick and easy way. Goes into the why of the subject. Makes you master of the poultry and egg business. Opens up a new line of thought on the best feed for poultry—the ideal egg-producing food, viz., ground raw bones with the meat and gristle that adheres to them.

MANN'S LATEST MODEL BONE CUTTER

prepares raw, green bone and gristle into a fine mash, four times richer in protein (the egg-making, body-building element) than corn. It supplies the animal food that chickens must have. Easily digested. Saves grain feed. Fowls relish it. Makes them grow, keeps them well, makes hens lay.

We Sell This Machine On Ten Days' Trial

No money down. Try it and note the improvement in the egg yield. If you like it, then buy it. If not, send it back at our expense. Send today for the book and read it. It is free. It will make you want the machine and the machine will add greatly to your profits.

Biggest Hatches Strongest Chicks

That's What You Want — That's What "Tyco's" Cup
You Will Get With My Champion Belle
City Hatching Outfit — And I Can Prove It.

The whole story is in my big book—"Hatching Facts", in colors, sent Free. It gives short cuts to success in raising poultry and you will want to start one of these wonderful Guaranteed

Hatching Outfits making money for you. It is a matter of good business and good patriotism to raise all the poultry you can this year. And besides you can make extra big profits by using my

\$8⁹⁵ 140-Egg Champion Belle City Incubator

Freight Prepaid East of Rockies

The incubator that regulates and ventilates itself — equipped with patented thermometer holder — round cornered, and non-leakable, copper tank — big safety lamp and deep nursery. — The incubator with the Fibre Board double-walled construction, that has led the field for over 12 years. The kind used by Uncle Sam — leading Agricultural Colleges and over 650,000 of America's most successful Poultry Raisers. My \$5.25 World Famous Hot - Water, Double - Walled,

big, roomy, 140 - Chick Belle City Brooder (Illustrated below) is guaranteed to raise the chicks, and makes your Hatching Outfit complete. When ordered with Incubator — both cost only \$12.95. Freight Prepaid East of Rockies and allowed that far if you live beyond. You cannot get a better Hatching Outfit at any price. If you are in a hurry and wish shipment to come by express, I will prepay amount of freight towards the express charges, and it will cost but little more.

Read how money is made — what pleasure folks have raising poultry the Belle City way — Letters and actual photographs prove every statement

A Trusted Servant
My success is due to the perfect working of the Belle City Machines. You have done something to help every working person interested in poultry, to make money. — My 140-Egg Champion Belle City Incubator are trusted servants and produce unequalled results.
H. W. Norberry, Mass.

Boy of 16 Makes \$350
It's easy work and lots of fun raising poultry with a 140-Egg Champion Belle City Hatching Outfit. I am only 16 years old, and made \$350 clear last season. Most incubator men forget about the boys and girls, but you give them a great opportunity to make money.
Dale Schaffer, Ohio

Women Handle With Ease
This year I am using nine of your perfect incubators, because I find them absolutely self-regulating—an incubator a woman can handle with ease—with deep nursery to keep chicks comfortable, with a device to keep thermometer where you place it — that hatches turkeys as well as chicks.
Mrs. Pearl Sarver, Mo.

"I Wish my
Daddy had a

What Do You Get Let Me Tell You What 26 Years' Experience Says You SHOULD Get

H. H. JOHNSON, "The Incubator Man"

WITH eggs worth close to a nickel apiece—with the world calling for more poultry, and paying top notch prices—and with your time worth many times the price of the incubator, I don't think you want to experiment this year, neighbor. You cannot afford to take chances. First of all you want a dependable machine. You want a chick from every hatchable egg. Next, you want a simple machine, easy to operate, easy to understand, economical of oil, and next you want long service.

You want a "Pure-Bred" Hatcher. Old Trusty answers that call. How? Just ask one of our 750,000 customers. They are everywhere. Note the illustrations. But remember these are only a few of Old Trusty's many features. Heretofore I've never said much in our ads about how Old Trusty was built. With three quarters of a million pleased owners boosting for it, I didn't think it necessary. It is the accepted "pure-bred" of hatchers—holds the unbeatable record for big average hatches year after year, which means biggest profits for owners.

Send For This A B C of Poultry Raising

and let me show you how well Old Trusty answers your poultry questions this year. In Old Trusty you get the result of 26 years' experience in making and selling incubators.

Think of how good an incubator must be to have enabled us to build up the largest exclusive incubator and brooder business in the world—and to have over three quarters of a million pleased customers in all parts of the country. Our book tells all about it. Also gives you some of our experience in raising poultry. While this is our catalog, it's really more of a book for poultry raisers. It's a 108-page book, and 100 of the pages deal with profitable ways of raising poultry. Not a special fancy business with high sounding titles, you understand, but simple, every day facts that father, mother and myself and our 750,000 customers picked up in actual experience.

Send today for a copy—FREE.

Big Oil Tank

Drawer shape—easy to slide in and out. Removed instantly but does not require moving to be filled. Holds about 6 quarts. Saves work of filling so often.

Handy Thermometer Holder

Thermometer in place—and instantly in view the minute you open the door. Saves time and stooping. Also prevents thermometer from getting lost.

Strong Egg Trays Well Braced—Self Supporting

I don't know what could do more mischief than a wobbly egg tray. OLD TRUSTY trays are built by careful workers. The frames are extra strong and smoothed on the edges to slide in and out easily. Self supporting when drawn out. Maybe this is not an important point, but it shows the care used in building Old Trusty.

In An Incubator?

Old Trusty

We Pay the Freight or Express. Quick shipment from factory or St. Joseph, Mo., warehouse.

M. M. JOHNSON
Inventor of Old Trusty

Old Trusty Comes Completely Built

We don't expect you to fiddle away your time all day to build your incubator after it arrives. Old Trusty is built complete here at the factory and is shipped in a strong crate that prevents damage to your machine while in transit. Ready for business the minute you take the crate off and screw the legs on. A five-minute job.

Not Cheapest Nor Highest

Bryn Mawr, Pa., Feb. 24, 1917. I bought a 100-egg Old Trusty Incubator in December, 1916. I find that it is not the cheapest nor the highest priced incubator but it is the best. I have tried several makes, but never had any kind that kept the temperature right on the mark regardless of the weather like Old Trusty. I run it out in an old shed and the outside temperature is never two days alike. I consider it a great pleasure to run Old Trusty.
Yours, Harrison Edsall.

Send Today and Get Our Book

and learn why Old Trusty means so much to you this year. Old Trusty is built with the right "know-how." Was invented by a practical engineer and poultry raiser and is built by workers of long experience. Some of them have been with us ever since father started the business. There are reasons for Old Trusty being different, and this difference in construction makes the difference in your profits. Triple wall case with heavy dented insulation and galvanized metal cover over clear seasoned redwood. And we don't forget it has a top and bottom when putting in the insulation. The tank is of pure copper. Even though we now spend almost three times as much for this material we still use it. The heavy gauge, too. Double joints locked and carefully soldered. Can't spring a leak and ruin your hatch. Copper tanks mean long service. That's why customers who bought Old Trustys fifteen years ago are still using them. The big drawer-shaped oil tank saves refilling so often. The handy thermometer saves breaking eggs—always keeps

the thermometer in one place, and in view the minute you open the door. The tray support prevents dropping the tray. But these are really little points in Old Trusty. They are conveniences. Old Trusty's good points are in its construction. *Every* part is as good as its best part.

Mail a Postal if it's more convenient than the coupon. Get our A B C of profitable poultry raising. I have big plans for our 1918 customers. Good money-making ideas that you can use no matter what kind of poultry you raise. Send and learn about them.

Owen Farms 1918 Matings

In Single Comb Rhode Island Reds, Buff and White Orpingtons White Plymouth Rocks, S. C. White Leghorns, White Wyandottes

are far and away the finest ever put together on Owen Farms. For two years we have been accumulating superb breeding females, and mated with the strongest males ever on one farm, they will produce the best birds of the year.

OWEN FARMS' RECORDS

are known to everyone of you. My catalog and mating list present them in a straightforward way without exaggeration or misleading statements. These interesting silent salesmen are yours for the asking. The preeminence of Owen Farms birds has been proven at *Madison Square Garden, New York; Boston; New York Palace Show; Chicago Coliseum; Pittsburgh; Cleveland; Minneapolis; New York State Fair and the leading shows of the South.*

You want line-bred birds that have been bred for beauty and utility. You will find them here in the richest quality and superb layers. In the trapnests of customers Owen Farms' females have averaged close to the 200-egg mark and individuals have gone as high as 278 eggs in twelve months. One pullet laying 265 eggs in 290 consecutive days. Unfortunately this pullet was accidentally killed on the 290th day after laying that morning.

Free range normal growing for years; perfect health, size and bone; careful selection for vigor and egg capacity have made Owen Farms flocks the best paying birds when fed for egg production. Hundreds have discarded all other strains, because Owen Farms birds have laid best.

LATEST OWEN FARMS' WINNINGS

At *Minneapolis*, in the fine class of 450 Reds at the Annual Club Meetings, I won Best Display, Champion Male and Champion Female, both combs competing. In Single Comb classes won 2-3-6 cock, 1-2-5 hen, 3 cockerel, 1-3-6 pullet, 1-3 young pen, 3 old pen and scored most points for 3 best cocks, 3 best hens, 3 best pullets and 3 best pens. A great winning in a fine class after 6 days en route in the shipping coops.

At *Boston*, only Leghorns shown, made the best Leghorn winning of the year in the largest and best class ever at Boston: 1-3-5 cock, 1-4 hen, 1-2-5 cockerel, 1-5 pullet, 1st old pen, 1st young pen and every special.

Breeding Stock

Part of fine pens offered in the January ad. remain unsold. Your opportunity to buy a choice line-bred breeding pen at a fraction of real value.

\$25.00, \$35.00, \$50.00 and \$75.00 per pen

Eggs for Hatching

From the Finest Line-Bred Matings in America

My Mating List Tells the Story

Many thousand Owen Farms' customers have become my friends and boosters thru correspondence with me and the absolute satisfaction they have obtained from stock and eggs purchased here. This advertisement is not needed to bring my old customers back to me whenever they are in need. It is an invitation to you who have never experienced Owen Farms satisfaction to write me frankly and fully your exact requirements, receive my printed matter and to make your purchase here where your success is a matter of personal pride with Mr. Davey and myself. My latch string is always out. If you can visit the wonderful Owen Farms, do so. You will never regret the time nor the expense. If you cannot come, write.

Care of Early Hatches and Early Broods

Practical Pointers on Successful Incubating and Brooding. Where and How to Locate the Incubator. How to Maintain Temperatures, Care of Eggs and Baby Chicks. *By Maurice H. Decker, La Porte, Ind.*

EARLY hatches should prove the rule rather than the exception this season, for even the earliest chickens that will reach the market when egg and broiler prices are at their best will prove sufficiently risky propositions from the viewpoint of profit when the cost of their rearing in feed and time is figured up, unless corn, our most important grain for growing fowls, should drop to a more reasonable and normal price. In any event, February and March hatches will be the most profitable, for the pullets will have ample time to acquire full growth and normal development in time to begin laying during September and the cockerels should reach at least a two-pound weight for the April market, the most favorable month for broilers both in price and demand. Incubators are the only dependable means for hatching out chicks during these months, and provided they are properly managed and the breeding stock is healthy and active, the chicks will prove as strong and as easy to raise as will those hatched by hens.

In purchasing an incubator pay more attention to substantial, time-tried features and regard as less important all new and novel details which in many cases are but talking or advertising points only, designed to catch your eye or fancy; for, as has been said many times before, no new discoveries of importance have been made in the art of incubation since it was practiced in old Egypt in the time of Pharaoh. Ample ventilation, an even temperature and an absence of noise and vibration are features to be considered when a location for the incubator is

selected. A well ventilated cellar, free from drafts, without artificial heat, in which the temperature ranges from 45 to 60 degrees, constitutes an ideal location. Undesirable locations are sheds or buildings that afford insufficient shelter, cellars

which contain vegetables or furnaces or which are so damp as to be musty, a kitchen or living-room which during the day is warm and at night cold, or that contains steam or odors, or where vibration is occasioned by much walking over the floors or by the slamming of doors. Muslin windows or screens are the best means for ventilation of cellars or rooms in which incubators are placed. Enough ventilation should be provided to keep the air free from all lamp odor and fumes at all times.

Occasionally early hatched chicks cost more to rear than those hatched later in the spring, but this extra cost, aside from the extra fuel which in itself is a small matter, is usually caused by losses in brooding, due to inadequate brooders and a lack of enough heat. Provided the chicks are well sheltered during the extra cold days and have a steady supply of brooder heat, they will eat better and grow faster than those hatched out later during warm weather. The early eggs should hatch the best and have always done so for us, for, being the first laid by the breeding flock, contain and are able to impart to the chicks that vitality and vigor that makes them easy to raise in any season or weather. February and March eggs at our farm run as high as 98 percent fertile with hatches from small 100-egg incubators running as high as 90 chicks from 100 eggs, while in April and May, when the strength and vitality

VALENTINE THOMPSON
Amenia, N. Y.

was born in March, 1892. He is the son of E. B. Thompson, the well known breeder and originator of the "Imperial Ringlet" Barred Plymouth Rocks. It is but natural that constant association with first-class Plymouth Rocks should make him what he is—an expert judge and breeder of this variety. He is all that and more. At the big Madison Square Garden Show, New York, he was in charge of their entire exhibit and handled the valuable show birds with skill such as only long experience could produce. Valentine Thompson is an earnest student of poultry and one of the most competent men in the production of Barred Plymouth Rocks.

of the breeds have been diminished by steady laying, the fertility drops down to 90 to 95 percent, with hatches averaging about 75 percent from both large and small machines. Unless we give the breeders a week's rest from laying in May, the June eggs give us only about 50 percent hatches. We buy a quantity of hatching eggs early each year to hatch and raise into market poultry and we always endeavor to get the first eggs laid by each flock if we can. Many people hold the opinion that a hen should lay a month or so, beginning with January or February, before her eggs will hatch well; but we will take a chance upon the first month's yield even of pullets laying for the first time, provided the eggs are of average size and well shaped. Eggs that are shipped or transported some

First prize Golden Wyandotte hen at Greater Chicago Show, January, 1917. Owned by Ira C. Keller, Prospect, Ohio.

distance before they are incubated during cold weather will, of course, run considerably lower in results than those gathered fresh from the nests into the incubators, for there are many opportunities for them to become overheated or chilled, or both. This is the main reason breeders' guarantees of fertility run lower early in the season than they do in April or May.

Another secret of successful early hatching is to have either enough hens at work laying or sufficiently small incubators, or incubators with small separate compartments, so the eggs may be set as fast as they are gathered. Last March our hatches from eggs not over 48 hours old ran as high as 90 percent, as before stated, while those eggs a week to ten days old did no better than 80 percent. As some authorities have declared, the chicks over and above a 50-percent hatch are those that pay the profit, an extra five or ten chicks from each hundred eggs is a matter well worth working for. We have one 100-egg incubator that has been in our cellar five years, that cost us \$9 and which has never yet hatched out less than 80 chicks for us, three and four times a season. This machine is of light construction but we cover it up with clean grain sacks in cold weather, set it with eggs seldom over 24 hours old, and we can always figure our chicks before they are hatched. Small hatches like this are not difficult to brood in the colony brooders. Provided

no flocks are over seven days older than the others, three different hatches can be put in one room, keeping them separated for a few days with two-foot netting until the youngest are about ten days old. This little extra trouble will be amply repaid by the extra chicks hatched from the extra fresh eggs and by the ease and certainty with which each young chick will have a chance to learn to eat promptly, something pretty difficult in large flocks of the same age. A few savings in incubation and brooding of 5 to 10 percent in each operation will do much toward taking the uncertainty out of the poultry business. If a man could reckon with raising a fixed percentage of his flocks each year, he could soon learn where he stood in regard to the costs of production. It's the losses of chicks dead in the shell and hatched and partially brooded and half-raised chicks that takes the heaviest toll from our profits. We have had many hatches that would have been much more profitable if the eggs had been sold at market prices and not put in incubators, and doubtless all others have had the same experience.

When putting the eggs in the incubator trays, do not fill them fuller than will allow them to be turned easily and conveniently. Fill them up snug but do not overcrowd. We have crowded them in, stood the eggs on end, in fact, to permit an overcapacity of 15 percent, but it has never paid. On the other hand we have run 50 eggs in a 250-egg machine and 100 eggs in a 360-egg incubator with equally bad results. We have started 50 eggs in a 250-egg machine at the same time we set a larger incubator and a week later transferred them to this larger machine to take the places of those tested out, but the transferred eggs never have hatched as well as the others. The cubic air space, ventilation capacity and moisture supply of each incubator seem to have been accurately figured out to best suit the number of eggs it is rated to contain, and the best results invariably follow when these capacities are adhered to.

We have dipped our eggs in a weak solution of cresol disinfectant, but they hatched no better or the chicks did not appear any stronger than those hatched from eggs kept clean by clean nests and careful handling. We wipe off all eggs carefully with a clean cloth to remove any dust and occasionally wash one that is badly soiled, but the best results with the least trouble have been obtained by giving the hens a chance to keep the eggs clean from the start. A quantity of cinders or straw spread upon the ground before the hen door of the poultry house will help by keeping the fowls' feet cleaner in muddy weather. If dropping boards are used, have the roosts so adjusted that there is not enough room for the hens to run under them or they will scratch over the droppings with the result that many eggs become badly soiled. Allow none of the hens to roost in the nests and change the litter often. If some of the pullets acquire a mania for scratching in the nests, as they do in the floor litter, hang strips of burlap over the front of the nests to darken them.

Another point that helps in keeping up the average of a hatch to a profitable figure is that the eggs of one class of breeds, such as the Asiatics or Mediterranean fowls, hatch better by themselves than if mixed up in the same incubator. Rock and Red eggs or Leghorn and Ancona eggs will hatch better together than will Rocks and Leghorns or Reds and Leghorns. Leghorn eggs hatch nearly 24 hours earlier than do those of the heavy breeds, and these early chicks will be needing plenty of ventilation and an opportunity to be drying off when the others demand a closed machine and an abundance of moisture. This can be offset to some extent by starting the Rock or Red eggs in the incubator about twelve hours earlier than the others. Although the Leghorns hatch more than twelve ours earlier, our experience has been that any greater difference in the time of starting the eggs will still result in an irregular hatch.

Some incubators will, no doubt, prove hard to heat up to the proper temperature for early hatches and still harder to maintain at 102½ degrees the first few days after the eggs are in place. If the temperature drags along at a low figure the first week, the eggs will hatch late and there will be a greater percentage of dead germs and chicks dead in the shell. If one's cellar is very cold it may be necessary to run a small oil heater for a few days, in addition to wrapping up the

incubators in heavy pieces of cloth, such as carpets or rugs. After the germs begin to develop the eggs will hold heat more readily and give off a little warmth themselves and the supplementary heat can soon be dispensed with. If you bundle up the incubator to conserve the heat, be careful that none of the wrappings interfere with the regulator or are liable to come in contact with the lamp or the heater. Most of the heat that is radiated by incubators escapes through the top of the machine and through the glass door in the front. Put the heaviest pads upon the top and hang a heavy cloth over the door. After covering the top of the incubator it is an easy matter to discover if any heat was actually escaping through the top. If the wood under the covering gets warm you may be sure you are effecting a material saving in oil and heat. Don't attempt to heat up the incubator unless the regulator damper is shut down tightly and do not raise it until the desired temperature is reached. Quite a few people set the regulator before the temperature rises or leave it set from the last hatch of the year before and then try to warm up the machine to 102 or 103 degrees. Large incubators in cold cellars will sometimes require three to four days, running before they are thoroly warmed thru. If the damper fits loosely over the top of the heater lay a small weight upon it to hold it down heat tight, but do not neglect to remove the weight before the temperature rises to the desired point. In all cases never put eggs into the incubator until it has reached the proper temperature and maintained it evenly for at least two days.

Eggs will need little cooling early in the season when the incubator is placed in a cold room or cellar, at least during the first two weeks of the hatch. We seldom attempt any cooling at this time with early settings other than the eggs receive when they are turned or tested. The last week they are cooled once or twice a day, depending upon the temperature of the room. We have discovered that it is safest to do little cooling in cold weather, but a whole lot of it when the weather becomes warm or hot. Care must be taken that the eggs are not chilled in turning or testing. Never let them remain out long enough to feel cold when touched to the eyelid. If possible try to maintain the proper incubation temperature without turning up the lamp to its maximum height. This will leave a reserve capacity for heat that may be necessary on extra cold days or nights.

Moisture is probably the most difficult problem to solve connected with incubation. In non-moisture hot-air incubators it will not be necessary to supply additional moisture early in the season if the machine is in an unheated cellar. If, however, difficulty is experienced in getting the chicks out of the shells, the eggs should be sprayed with warm water after the first one is pipped. This is a hard question to regulate, as the conditions in cases are seldom similar. Poultrymen should experiment a little and discover if added moisture will improve the percentage of their hatches and the quality of their chicks. In our ten years' experience with non-moisture hot-air incubators we have never once obtained what we consider a satisfactory hatch without the use of some moisture at the time of exclusion. Late in the season we find it necessary to pull the trays of hatching eggs out sometimes as many as three times and soak them well, chicks and all, with warm water.

After years of experience with every form of brooder equipment, with the single exception of the long, hot-water-pipe-heated brooder houses, I regard the coal-burning colony brooder stove installed in a well-built, 10x20 or 12x24 foot, double-floored, well-lighted and well-ventilated building divided into a scratching room and a stove compartment of equal size as the most efficient and economical, both of fuel and labor, brooding device for cold weather. Such a combination affords plenty of room where the chicks can scratch, exercise and eat in shelter upon the many dark, cold and rainy days of spring, in a cooler atmosphere than that of the brooding room and yet with plenty of heat close at hand to which they can run at the first evidence of chilling. This style of brooder requires less money invested than any other type of similar capacity, as the building can quickly be converted into a laying house, the only idle equipment being the brooder stove itself. I believe the careful poultryman, by running his chicks in flocks of not over 350 in a 12x24-foot,

brooder, can raise as great a percentage and as good quality chickens and more cheaply than can be done by any other method. We have made some very good mortality records and fast growing records with our coal brooders that have made our experience with 50-chick lamp-heated brooders look sick by comparison. Last season our best record was 294 chicks raised to an average of three pounds from 300 baby chicks and two of those lost were killed by being stepped upon. The long cold springs we have had the past three years makes it hardly possible to brood more than one hatch with one brooder each season. The chicks need the heat so long a time there is no chance of weaning them in time to put in another flock. The economy of the coal brooder allows this to be done with but a very small brooding charge per chick, much less than any other style of brooder we know of.

Our management of these brooders is described in detail in the reprint of the article in the October issue, but a few points we have learned by experience since are given below. First, there is one fault that certainly does not come under

First pen S. C. White Leghorn cockerel, St. Louis, January, 1918. Owned by Eugene Smith, 317 Galena Boulevard, Aurora, Ill.

the list of those of the small, dark, circular hover. The litter, dust, etc., in the coal-burning brooder room does in time become too dry. We believe our chicks do better when we keep a pan of water sitting under the stove to evaporate and aid in keeping the atmosphere at its natural humidity. Of course, this is only possible when the stove is set up on legs. We understand one firm is experimenting with a stove which has arrangements such as hot-air furnaces for heating dwellings have for keeping the air humid. If your stove is not set on legs, shallow pails of water hung by wires from the under side of the metal hover close up enough so the chicks cannot jump into them will solve the problem.

If the room is to be divided into two or more spaces for flocks of different ages about one stove, be sure no sharp corners are formed by the dividing partition of wire netting, at least up close to the stove. Hard coal bids fair to be pretty scarce this season, so poultrymen will probably have to run their stoves on soft coal, coke or a mixture of two or all of these fuels. Some hard coal should be used if possible, for it holds fire much better than does coke or soft coal.

Do not wait longer before buying breeding stock. Buy now while you still have an opportunity to secure good selection and to get your birds in time to raise some early chickens. AMERICAN POULTRY JOURNAL advertisers are ready to serve you. Send your order in today.

Get Ready! Your Chance Will Come!

Comment Concerning T. E. Quisenberry and the Correspondence Courses of the American School of Poultry Husbandry. *By Prince T. Woods, M. D.*

WE HAVE received many inquiries from readers concerning the advisability of taking a correspondence course in poultry husbandry. In each case we have endeavored to make our reply fit the particular case of the individual asking the question. In the majority of cases we have said, "You can benefit by such a course; it has practical value, but whether you get much or little out of it will depend largely upon yourself and the sincerity of the effort you put into it. Try it, but make a real business of it, not simply a pastime. Be sure that you put real work into it and do not side-step your opportunities. Do not imagine that securing a diploma is the goal you are striving for. The diploma is meaningless unless you have, by diligent study and practical application, built within yourself a substantial foundation for future work out of the lessons the course provides."

Study, well-chosen reading, all efforts to improve one's self, to prepare for the opportunities which may come, always are worth while. Abraham Lincoln said: "I will study and get ready, and maybe my chance will come." The chance always comes if you get ready for it. Dean I. T. Talbot, a leading educator in his day, always addressed the entering classes at the university on the importance of putting whole-souled effort into study and into practical application of the lessons. At impressive points in his discourse he would thunder out, in a voice that vibrated to the innermost depths of his students, his favorite slogan, "Your success depends upon three things — *Concentration! Application! Work!!!*" The first time we heard it, it merely startled and provoked a smile. The second time it began to convey a meaning. With each repetition the meaning became more plain and the conviction grew that in those three words, so forcibly expressed, lies the real secret of all success in life. With that simple "call to arms" in the workaday world, Dean Talbot, by the magic of his personality, changed many a heedless boy or girl into a thoughtful man or woman and helped them to get a firm foothold on the first rung of the ladder of success.

Do we consider a correspondence course in poultry husbandry practical and worth while? We do. Its value to you, friend reader, will be worth just as much as you make it worth by "*Concentration! Application! Work!!!*" Get ready! Your chance will come!

Comparatively few people are so situated that they can take time and money to attend a school or college, even for a short course. Such opportunities usually come at an age when one is not sufficiently mature to appreciate their full value and take advantage of them. Many a man or woman would give much for just another chance at school work, with their more mature appreciation of the opportunities neglected in earlier days. Appropriate to this, Dr. Metcalf said, "Young men *think* old men fools, and old men *know* young men to be so."

Present occupation, age, location, do not bar anyone from taking a correspondence course of study. The expense of such courses is generally quite small in comparison to the value. The books and lessons are supplied. The subjects covered carry one thru location, house building, choice of a variety, feeding, mating and breeding, hatching and rearing, prevention of diseases, marketing—an opportunity for practical study of poultry husbandry from rearing to salesmanship. One can study at home and continue with the

regular work of earning one's living. The lessons can be studied while engaged in the practical application of same in farm or back-lot poultry keeping. If one is interested in poultry, wishes to improve spare time by a study of poultry husbandry, the correspondence plan offers to city man or woman, the farmers and farmers' wives, to boys and girls, an opportunity worth while.

Thomas E. Quisenberry is president and dean of the American School of Poultry Husbandry, Leavenworth, Kansas. We have known him for some time. He is an enthusiast and an untiring worker, a valuable asset to the poultry industry. He possesses imagination, executive and managerial ability, and is decidedly an aggressive hustler. The mistakes he makes are the common mistakes of the enthusiast and the promoter. He is practical, his success proves it; but he sees the possibilities of the poultry business far more clearly than the fundamental economic principles, upon which the foundation of the future success of poultry husbandry must be based to insure security. He did good and practical work as director of the Missouri Poultry Experiment Station at Mountain Grove, and has met with remarkable success in his new correspondence school, started a little more than three years ago, in which he has surrounded himself with capable and efficient helpers. The school has enrolled students in every state in the Union and in sixteen foreign countries.

The school owns twenty acres of land within the city limits of Leavenworth. Here the school is conducted, has an administration building containing various offices, laboratory, printing plant, incubator rooms, etc. Ten acres of the plant are devoted to range. On the balance are located buildings and yards for breeding pens of Standard-breds, special experimental flocks and three laying contests. There is an American Breeders' Contest including some seventeen varieties of Standard-bred fowls from some of the most widely advertised strains.

An effort is being made to demonstrate that exhibition quality and beauty can be successfully combined with good egg production. Each pen consists of five pullets and one reserve. An American Leghorn Contest is being conducted with 500 specimens representing thirty-one different states, Canada, Australia and England. These Leghorns are housed in a long laying house. Records are being kept of all the feed, labor, etc., and it is believed that these records will show what may be expected of such a flock under present-day conditions. We hope that when the records are made public that full details of all labor, overhead, and other expenses, will be clearly stated in the manner that such accounts are rendered in any well-regulated business. There is also a yearling hen contest, which should present some interesting data. Twenty-five pens of fowls are represented in this contest. Besides the contest flocks there are numerous breeding pens.

We are informed that every hen and pullet on the plant is trapnested and every baby chick is pedigreed. The incubating equipment consists of a mammoth Candee, a mammoth Newtown, and several small incubators. About 2,000 chickens are reared each season.

With this article we reproduce views of the school plant which tell their own story. Students are offered their choice of three regular courses of study, the third being a combination of the first two, and also a special short course. In

T. E. QUISENBERRY,
President American School of Poultry Husbandry, Box 206, Leavenworth, Kan.

December, 1917, Mr. Quisenberry issued a special bulletin for students, entitled "Solving the Poultry Feeding Problem," an interesting booklet designed to render aid in reducing production costs under war-time conditions.

We trust that this answers the many readers who have asked us for personal information concerning this school and its correspondence courses, and the many others who

may be moved to inquire. As to the value of any course of study, bear in mind that depends largely upon the use you make of it.

Say, as Lincoln said, "I will study and get ready, and maybe my chance will come." Do not forget that "Your success depends upon three things—Concentration! Application!! Work!!!"

STARTING WITH A WAR-TIME FLOCK

Suggestions for Beginners Who Take Up Back-Lot Poultry Keeping As a Source of Food Supply.

By Prince T. Woods, M. D.

THE "big drive" to increase poultry production on farms and in back-yards now being conducted by the United States Department of Agriculture in co-operation with the State Agricultural Colleges, in which work a federal appropriation of nearly \$150,000 will be expended, is certain to cause a large number of beginners to start with a war-time flock. Back-lot war flocks are likely to become as much the fashion as were the home gardens of 1917, if the stimulating inoculation with the virus of "hen fever" takes as generally as the county agents are expected to make it.

One of the first questions that will occur to the beginner is "How shall I start?" In normal years the start might easily be made in the spring in any one of three ways, or a combination of all three, with breeding stock, with eggs for hatching, with baby chicks. This is not a normal year. Flocks have been greatly reduced by the unfavorable conditions of 1917. There was exceptionally heavy selling off of fowls and pullets last summer, fall and early winter. This does not mean that breeding stock cannot be had, but there is a scarcity of good breeding stock, both young and old. Breeders are offering a limited supply of breeding birds at reasonable prices, the quality of the stock and the season considered. Hens and pullets of utility quality for layers are not plentiful. It is easy to say "start with pullets," but if there should be any general movement in that direction it would be exceedingly difficult to get the pullets. Buyers must expect to pay higher prices than were usual in more normal times.

Breeders who have carried any considerable stock of fowls thru the 1917-18 fall and winter season did so in most cases because they had reasonable expectations of custom to take their output. A good many booked orders ahead for hatching eggs or arranged to supply near-by hatcheries. Eggs for hatching from the popular varieties are to be secured from breeders who advertise in this magazine, but the buyer should

place his order as early as possible to avoid disappointment and should expect to pay a fair price for eggs. Hatching egg orders for spring delivery should be booked this month. The beginner who decides to start with hatching eggs may not be able to secure a broody hen to do the work of incubating and rearing. There are a number of good small incubators and standard sized brooders that can be depended upon to do good work if operated carefully according to manufacturer's directions.

Baby chicks will be offered in considerable numbers this season. The big hatcheries contracted for their hatching eggs early and are reasonably sure of a good supply. The demand seems certain to be heavy. A good many breeders have taken up the baby chick end of the business and will dispose of a large part of their product as newly hatched chicks rather than as hatching eggs. Some will supply customers with brood hens and broods in limited numbers at a fair price. Baby chicks travel very nicely for any distance within 72 hours express journey from the hatchery. Allowance will have to be made for present-day transportation difficulties and delays. The hatchery men are making an earnest effort to secure preferred shipment and prompt delivery on all orders for baby chicks or eggs for hatching.

In starting with baby chicks, when a brood hen is not supplied, it is necessary to have dependable brooding equipment. The individual brooders with rated standard capacity of 100 chicks are small enough to buy and are most economically operated with a brood of not over 50 chicks. We do not advise buying less than 25 baby chicks at one time. Many back-lotters will find it just as easy and more economical to start with a brood of 50 chicks. Where flocks of from 200 to 400 chicks are to be reared, the coal-burning brooder stove operated in a building about 12x12 feet gives very satisfactory results. Portable buildings may be purchased for this purpose at reasonable cost and may be used for housing the flock after the brood is grown. All shippers of baby chicks send out advance notice of when shipment may be expected and most of them supply directions for brooding and care of the chicks.

When ordering either hatching eggs or baby chicks, the beginner must make sure that he is ready for his order when delivery is made. The incubator or the broody hens must be in readiness to receive the eggs soon after their arrival. In the case of the incubator it should be thoroly warmed up and carefully regulated—running it empty for a few days to make sure it is properly adjusted—before eggs are trusted to it. Brooders must be warm and ready when chicks arrive. Brooding equipment must be warmed up and regulated and run thru at least two nights to make sure that it can be depended upon to keep the chicks comfortable. Where baby chicks are to be given to broody hens, the hens should have been sitting for several days on nest eggs. The hen should be fed before she receives the chicks. It is best to place the chicks under her after dark; but if necessary to give them to her by daylight, the nest should be darkened and, if possible, the room in which nest is should also be dark. Care must be taken in giving incubator-hatched chicks to a broody hen or the hen may refuse to mother them. There are many details of poultry keeping with which the beginner should make himself familiar when starting with poultry—too many to be included in a monthly article—and we recommend that each beginner secure and study "How to Raise Chicks," which

may be obtained of the AMERICAN POULTRY JOURNAL book department. This book tells plainly in a practical manner how to select and manage breeding fowls, what you want to know about foods and feeding, how to get hatchable eggs, how to hatch with hens, how to hatch with incubators, how to test eggs, how to brood and raise chicks, helps to successful poultry keeping adapted to needs of beginners.

Many beginners ask, "What breed shall I select?" With so many good ones to choose from, it is not possible for us to recommend any particular one. All of the popular varieties are good; all are capable of excellent egg production; all will furnish good meat for the family table, altho some make best table poultry as young chickens*, others are good at any age†, while others do not spend to good advantage as table poultry until nearly full grown°. The smaller, active varieties, like the Leghorns, Campines and Anconas, are naturally included in the first class*; the Plymouth Rocks, Rhode Island Reds, Wyandottes, Javas, Dominiques, Orpingtons and Sussex in the second class†; and the Langshans, Brahmans and Cochins in the third class°. Black fowl or the darker parti-colored varieties usually make the best appearance on city and town lots in soft-coal districts where the air is sooty. White varieties or the ermine-clothed Brahmans and Columbians make the most attractive picture on green grass ranges, and any of the popular Standard-breds will look well and do well on the farm. Where Leghorns or other high flyers are kept, high fences are necessary or the run must be wire covered. Most of the heavier breeds can be kept easily inside of a 4-ft. wire fence.

Housing the family flock of adult layers need not be a difficult or expensive problem. Usually anyone with a little ability to use carpenter's tools can build a small poultry house cheaply from second-hand lumber or box boards. Good portable houses for use on rented land can be purchased at reasonable cost. The size of the house required will depend upon the size of the flock, but it is not wise to use too small a house. An open-front house 6 feet wide by 10 feet deep will accommodate from 6 to 12 layers. We would not want a smaller house for laying and breeding stock. The 8-ft. by 14-ft. house gives very comfortable quarters for from 15 to 25 birds in one flock; while the 10-ft. by 16-ft. house is a very convenient size for flocks of all sizes up to 40 hens. For 100 layers or breeders in one flock, we use a 20-ft. by 20-ft. open-front house, and when we have plenty of house room we have used this size building for flocks of from 50 to 80. When crowded for house room we have successfully wintered 150 Leghorns in a 20 x 20 open-front house.

"How large a flock do I need to supply the family table with eggs? With poultry meat, also?" To answer that question one would have to know the size of the family and its normal consumption of poultry and eggs. We would not advise anyone to keep less than ten laying hens or pullets. Such a flock would furnish only a scant supply of eggs for a small

family. While small flocks generally show better average egg production than large flocks, we have to consider the general average for all hens when figuring our expectations. It is the safest way to avoid disappointment. The average annual egg yield per hen for the entire United States is under rather than over 7 dozen eggs per hen. Even on well conducted egg farms a recent canvass showed an average of only 97 eggs per hen per year in a good poultry state. It is an excellent flock that will yield an average of 10 dozen eggs per hen a year, and a particularly good flock that can be depended upon to shell out 144 eggs per hen in 12 months. Some flocks will better this yield, but the owner earns and is entitled to the increase. If the beginner wishes to count his eggs before they are laid, he will be wise not to count over 10 dozen eggs a year for each hen, and he will make a safer estimate if he figures on a basis of 100 eggs per hen.

For a small family flock of layers we would prefer fifteen or one dozen hens rather than a flock of ten. Personally we would not keep less than 25 to 30 layers and would prefer 50. We like to have plenty of eggs, some broilers and fryers and roasting chickens and fowls for the home table. With our little family of four we would not know how to get along with less than 30 layers and the raising of at least 150 chickens each season. We have always carried much larger flocks than these and have come to depend so much upon our home supply of eggs and poultry to take the place of meat from the butcher, that we should find difficulty in doing without a good-sized home flock. However, unless conditions mend very materially, and soon, we do not intend to conduct our poultry plant during the coming season even at 25 percent of its capacity, for the production of market poultry and eggs for sale to others. We have had quite enough of producing food to sell to consumers for less than it cost us, and until consumers show willingness to pay us a fair and just price we will be obliged to go slow. Manufacturers, tradesmen, merchants, butchers, bakers and candlestick-makers are not expected to produce and sell at a loss or to "go busted" supporting the rest of the public; so, we cannot see why it should be expected of the food producer. We are very glad to do what we can to produce such part of our own food supply as we are able to grow or raise, but in order to pay the production costs and to buy such other necessaries as must be secured, we are entitled to and must have a just profit to pay for our work of production when producing for others. We know that there are many of our readers who can remember when the family on the farm had to subsist on the skim milk that the butter might be sold, when most things marketable had to be sold to pay the bills

Close-up view of brooder house used on Uncle Sam's poultry farm, Beltsville, Maryland. Door is open, showing hover of the coal-burning brooder stove. Feeding boards and drinking fountain are shown in foreground. Directions for building this house can be secured from Poultry Investigations, Bureau of Animal Industry, United States Department of Agriculture, Washington, D. C.

and the family got along somehow on whatever was left, when every member of the family had to do his or her bit without pay, in order to make ends meet—which they frequently did not. It was small wonder that the children would not stay on the farm. There are not many girls or boys nowadays who are willing to milk 15 cows before breakfast and callus their hands at hard labor, without payment, so that the milk can be sold at less than the cost of the feed the cows consume. Present and coming generations are bound to be wise enough to demand justice and get it. Those who would eat will have to produce food for themselves, pay a fair profit over production costs for purchased supplies, or experience an uncomfortable touch of the "belly pinch." And it looks very much as if we would get a sample of the latter, in spite of the best that can be done, before we wake up to the situation and find a remedy.

"What should I feed the layers?" There is not a great deal of choice at the present time. Commercial ready-mixed

Champion Black Orpington hen at Great Heart of America Show, Kansas City, Mo., 1917. Owned by Dr. G. H. Humphrey, Woodbine, Ia.

scratch feeds and mashes prepared by reliable manufacturers will usually fill the bill for back-lotters who do not find it convenient to prepare their own mixtures. We are using a mixture of whole corn and whole oats, bushel for bushel, for our hard or scratch grain ration. We feed liberally, giving at one meal all they will clean up thru the day, and at the same time consume about an equal quantity by weight of mash (weight dry). With smaller flocks than we now have, if we had time for it, we would probably divide up the hard grain into two daily feedings, morning and night, giving the mash at noon. Commercial ready-mixed mashes containing a fair percentage of fish meal generally give excellent results. If the mash is fed moist, such table scraps as are available may be used in it. There should not be many table scraps nowadays. We doubt if the table scraps from our family in one year would keep three husky hens from starvation. Sprouted oats may be fed daily with excellent results. Occasional feeds of boiled or scalded oats give variety to the ration and are relished by the fowls. A good home-mixed mash may be prepared as follows: 10 pounds each of wheat

bran, flour middlings, corn meal, ground oats, and 7 pounds of either fish meal or fine ground beef scrap. This mash may be fed moist or dry. If waste vegetables are obtainable, same may be boiled soft and then mixed with the mash.

"What shall I feed the baby chicks?" This is going to prove a problem the present season. We do not believe that much, if any, of the new corn is going to be safe to feed to small chicks. Some of the most dependable manufacturers of chick foods put in a good stock of old corn to be used in their food mixtures for small and growing chicks. We would not want chick food made from kiln-dried new corn. If we can get good, sound oats and barley with some old corn and a small amount of fairly sound wheat, we shall grind this at home into chick food size, and use it and the resulting meal for small chick feeding. The meal from this grinding we shall mix with a mash mixture similar to that advised for adult stock, using equal parts of this meal from the chick food and of the mash mixture. For first feed we shall use cracker crumbs or stale bread crumbs rubbed up with hard-boiled infertile eggs—or fresh eggs if we have no infertile ones. The eggs should be well boiled. We will also feed small quantities of cooked cracked rice occasionally as variety food. Small amounts of rolled oats will be fed until the chicks are well started on the home-ground chick food. As soon as the chicks begin to get busy scratching in the litter, they should have a little box of sprouted oats daily to scratch in. Remove any wilted and withered sprouted oats which may remain at close of day and give a fresh supply each morning. Keep clean water before the chicks in a sanitary fountain that they cannot upset or fall into. Keep fine grit and fine oyster shells as well as chick size granulated charcoal before them.

"What is best litter for the brooder?" We prefer good bright cut clover or clean hay-mow chaff. Cut alfalfa will answer. We first sand the brooder floor with dry sand, then litter it with clover or chaff.

"What is the proper temperature for the hover?" The brooding temperature must always be a matter of judgment on the part of the operator. All brooder directions give a table of temperatures. Individual brooders lose heat rapidly in cold weather. Coal-heated stove brooders are usually operated in buildings which have thin walls and a good deal of heat is lost thru necessary ventilation. We believe that the best guide to temperature is the comfort of the chicks. It should not be less than 95 degrees under the hover before the chicks are put in. In severe February and March weather it is often necessary to let the hover temperature run up to 100 or even 110 degrees in order to have the chicks comfortable and active. So long as they can get away from the heated hover into the cooler part of the brooder, chicks will be safe enough. At night the heat should be sufficient to keep them close to the outer rim of the hover or with heads outside. If they bunch and huddle together they are not warm enough.

In training or "hover breaking" baby chicks it must be remembered that the little fellows have everything to learn and it is up to the operator to be patient. Tuck them under the hover often at first. Do not leave them long at a time until they learn to run back to the hover to warm up. A little care and patience at the start will break them in very quickly. Keep them quite close to the hover at first, as they learn to take care of themselves give them greater liberty but not too much at a time nor for too long at a time. Usually by the third or fourth day they will be ready to have still greater freedom and to learn to use a cooler exercise room or scratching shed. Frequent feedings are necessary the first day or two; after that four feedings a day will be sufficient.

A good dry mash to keep before small chicks may be made of coarse corn meal, bran, middlings, crushed oats, mixed with about 5 percent fine fish meal.

Many people who never before operated an incubator or brooder will use such dependable modern hatching and rearing equipment this season. Hatch and raise chickens the easiest, cleanest and most convenient way. Beginners report fine success with first attempt at artificial hatching and rearing. Join the army of food producers who will help win the war with quickly grown chickens.

MADISON SQUARE GARDEN POULTRY SHOW

By Prince T. Woods, M. D.

THE twenty-ninth annual exhibition of the New York Poultry and Pigeon Association was held in Madison Square Garden, New York City, December 28, 1917, to January 1, 1918, inclusive. The Garden Show is recognized as "America's Leading Show." Naturally, there has been much speculation as to how it would be affected by the war. Now that the great exhibition is a matter of history, we believe that it will be conceded that it was not so hard hit by war as by the unusually severe cold weather and by transportation difficulties.

It was a good big show. The cataloged poultry entries were several hundred less than last year, and, owing to difficulties of transportation, there were some empty cages due to non-arrival of the birds. Extreme cold weather thruout show week, the fuel shortage resulting in a cold exhibition hall and colder hotels, the upset condition of all kinds of transportation, all had their effect on attendance and the gate receipts were considerably below normal. Opening day was one of the best days of the show. In spite of the short attendance, or because those who would brave such weather conditions to attend a show must indeed possess a great interest in Standard-bred poultry, breeders and manufacturers exhibiting reported good business and some excellent sales.

Quality of exhibits was decidedly mixed. In some classes the quality was uncommonly good; in others there was a considerable falling off, and in some the birds below first place did not show the quality or contrast that might naturally be expected.

The United States Department of Agriculture had its usual educational exhibit in charge of Harry M. Lamon. No poultry exhibit was made by the Government farms this year, the exhibit being confined to models of poultry houses, poultry portraits, charts, transparencies, eggs at various stages of incubation and chick embryos shown at different ages. State experiment stations had the usual exhibits in the lecture hall. The poultry institute conducted by representatives of both Federal and State Government poultry husbandry departments included lectures both afternoon and evening, which were well attended. Besides illustrating and explaining various phases of poultry work, much attention was given to the stimulation of greater poultry production on farms and in back yards. Attention was called to the meat shortage, both in the United States and abroad. Increased production of poultry was urged as a patriotic duty rather than as a source of profit, that more poultry means more eggs and poultry meat, a vitally necessary food supply which is greatly needed during the coming year, and that poultry can be brought to maturity and made productive much more quickly than any other kind of live stock. Stress was put upon the great need of more eggs and more poultry meat to save beef and pork, which are required for our fighting forces and our allies.

There were less poultry journal booths than common at the Garden. Exhibits by manufacturers and dealers in feeds, poultry equipment, brooders, incubators, portable houses, etc., were about as usual.

The poultry judges were:

Barred Plymouth Rocks were strong classes, showing remarkable uniformity and great strength of color, barring and

FIRST PRIZE WHITE PLYMOUTH ROCK HEN
MADISON SQUARE GARDEN N.Y. 1917-18. Bred & Owned By
WILBURTHA POLTRY FARMS TRENTON JUNCTION N.J.

Standard type—or perhaps we should say type and uniformity rather in advance of Standard requirements. Most of the specimens were lusty, healthy, vigorous birds, with that beautiful finish which can only be secured by careful breeding and rearing combined with skilled conditioning and grooming. In these classes there were many fine specimens, both in and out of the ribbons. Classes included 16 cocks, 13 hens, 36 cockerels, 13 pullets, 6 pens. Cockerel classes larger than last year, other classes slightly smaller except pens, which were same in number.

White Plymouth Rock classes showed excellent quality with competition strong and prizes well divided. Classes included 11 cocks, 12 hens, 18 cockerels, 19 pullets, 4 pens. About half as many specimens shown as at last Garden exhibit.

Silver Penciled Plymouth Rocks, only one cock and one hen shown. Partridge Plymouth Rocks, quality good in the blue and red ribbons; 3 cocks, 6 hens, 8 cockerels, 4 pullets, 1 pen.

Buff Plymouth Rocks were good classes with some fine color and type shown. Prizes well divided among the exhib-

itors. Classes included 12 cocks, 13 hens, 11 cockerels, 13 pullets, 3 pens. This variety about held its own with last year's exhibit.

Columbian Plymouth Rocks included 2 cocks, 2 hens, 4 cockerels, 2 pullets. R. C. Barred Plymouth Rocks, 1 cock, 2 hens, 2 cockerels, 4 pullets.

Silver Wyandottes made a good showing with type and quality excellent in hen, cockerel and pullet classes; 1 cock, 4 hens, 3 cockerels, 6 pullets. Golden Wyandottes, small classes.

White Wyandottes showed well filled classes with fine type and quality. Classes included 18 cocks, 14 hens, 22 cockerels, 21 pullets, 7 pens. Prizes well divided among exhibitors. Total of classes only a few specimens short of last year.

Black Wyandottes included 1 cock, 3 hens, 2 cockerels, 3 pullets, 1 pen. Barred Wyandottes, 2 cocks, 2 hens, 4 cockerels, 3 pullets, 2 pens. Silver Penciled Wyandottes, quality excellent in the blue ribbons; 3 cocks, 2 hens, 2 cockerels, 3 pullets.

Buff Wyandottes well represented by 6 cocks, 5 hens, 5

too common, especially in males. A few of the young females showed pinched tails and greater effort to secure tails well spread at base would be followed by improvement in appearance and perhaps in practical values as well. Classes included 32 cocks, 22 hens, 50 cockerels, 36 pullets, 10 pens. Prizes well divided.

R. C. Rhode Island Reds were strong classes of fine quality. The same criticism which applies in the Single Comb variety will apply here. Taking the classes as a whole, the color does not run quite as uniform and there were a number of birds with hackle too light or too dark for body color. Birds in the blue showed remarkable color and good type. Classes included 17 cocks, 11 hens, 19 cockerels, 19 pullets, 7 pens. Prizes well divided among exhibitors.

Light Brahmas were remarkable classes. This fine old variety has come back stronger than ever. In type, size and quality the majority of the specimens in all classes were excellent and the prizes were pretty well distributed. Some of the cockerels shown were wonderful in size of frame and breadth and depth of body, altho not fat nor in full flesh. If Uncle Sam is looking for beef substitutes he should not overlook the prolific and hardy Light Brahma—we do not know of any other breed that will give an equal amount of soft-meated flesh within six months from the shell in return for skilled feeding. Classes included 16 cocks, 16 hens, 15 cockerels, 18 pullets, 11 pens. More than twice as many birds shown as at last Garden show. In a display cage a Light Brahma hen, "Mollie Wellington," was shown with statement that she has a record of 325 eggs in 365 days. She came across the continent from Los Angeles, California, to make her bow to Garden Show visitors. She is a fairly good utility Brahma in appearance, tho not quite the equal in quality of the famous Hartnest Farm Light Brahma record layer of the late 'Nineties. No poultry show seems to be complete nowadays without its phenomenal layer of some variety and it is apparent that 300-eggers may occur in any breed. We do not dispute the records, tho we believe that such remarkable freak layers are few and far between. The only thing about the craze for record breaking which surprises us is that some enterprising poultry enthusiast does not come forward with a hen that lays every day in the year and adds an extra egg or two on Sundays and holidays. Meanwhile, when we consider that recent investigations in Connecticut disclosed that the average annual egg yield on forty-two leading poultry farms was only 97 eggs per hen, the good old 10-dozen and 12-dozen eggs per year hens look very good to us.

Dark Brahmas showed 2 cocks, 2 hens, 4 cockerels, 4 pullets, 1 pen. Quality good. Buff Cochins included 2 cocks, 3 hens, 2 cockerels, 2 pullets, 1 pen. Quality good, Partridge Cochins, 1 cockerel, 1 pullet.

Black Langshans made an excellent showing. Type and color fine. We were glad to note among these real thorobreds that very few specimens showed any trace of white tipping in flights. As a whole, the color was good and solid thruout. Classes included 8 cocks, 8 hens, 7 cockerels, 6 pullets, 1 pen. Numbers about the same as last year. These fine birds were shown at a great disadvantage in the ordinary cages; they do not show off to advantage in such cramped quarters.

S. C. Brown Leghorns made a strong showing and were fine in type and color in all classes. Classes included 8 cocks, 12 hens, 20 cockerels, 15 pullets, 6 pens. In numbers more than last year.

S. C. White Leghorns as good or better than the Garden's best and a fine strong exhibit thru all classes. Some splendid birds in the ribbons and some wonderfully good ones unplaced. Classes included 26 cocks, 29 hens, 36 cockerels, 31 pullets, 12 pens. Not as many birds shown as last year, but quality superior as a whole.

S. C. Buff Leghorns good strong classes. Quality as a whole quite good; color not sufficiently uniform, too much tendency to beefy combs and pinched tails. We have seen better type and color at the Garden in past seasons. Classes included 9 cocks, 12 hens, 14 cockerels, 11 pullets, 4 pens.

S. C. Black Leghorns good in quality and color, with fine yellow legs in leading winners. Cockerel classes larger than last year; 2 cocks, 5 hens, 9 cockerels, 4 pullets, 2 pens. S. C. Silver Leghorns, 2 hens, 2 chl., 2 pl. (Continued on Page 227)

UNRETOUCHED FROM LIFE 1916,
BRED AND OWNED BY C. N. MYERS, HANOVER, PA.

cockerels, 5 pullets, 3 pens. A larger exhibit than last year. Partridge Wyandottes, 4 cocks, 5 hens, 4 cockerels, 4 pullets, 3 pens, totaling more specimens than last year's exhibit.

Columbian Wyandottes were strong classes showing good quality; 10 cocks, 7 hens, 13 cockerels, 10 pullets, 5 pens. A stronger exhibit than last year; competition keen and prizes well divided.

Black Javas, only one hen shown. The friends of this fine old variety should get busy and show more often. It is a pity to let so excellent a breed and one of the progenitors of some of our most popular fowls go into the discard.

Dominiques were represented by 4 cocks, 3 hens, 2 cockerels and 1 pullet. This fine old breed is still much in favor with those who want a farm or back-yard flock fowl which possesses a good combination of beauty and practical qualities. It seems to be holding its own in spite of the newer rose combed barred varieties.

S. C. Rhode Island Reds were stronger and better classes than last year, both in numbers and in quality. The tendency toward dark color—rather too dark, we think—still continues. In all classes there were splendid birds, both in and out of the ribbons. While in most sections improvement and progress is shown, there appears evidence of carelessness in the matter of deformed wings, the defect being altogether

The Fancier and His Place in the Sun

The Work Which the Fancier Has Done May Appear Trifling to Some, But About Everything Worth While Has Been Acquired by the Same Devotion to An Ideal. First Prize Article in Monthly Contest.

By E. H. Johns

IT IS NOT an infrequent occurrence in this workaday world to find real genius unheralded. I have thought of this frequently while in attendance at some of our big poultry shows. Who among us can gaze at the pen after pen of wonderfully feathered birds, the countless specimens of marvelous grace and beauty displayed in our various breeds of poultry and not wonder at the skill of man who has so perfected them? Last year, while standing in front of a pen of beautiful Barred Rocks, a man beside me remarked, "I wouldn't think those bars *could* be so even and perfect, unless a man did it himself—painted 'em right on."

The remark set me to thinking. In the first place I liked the speaker's admiration and enthusiasm in regard to the pen of fowls, but I liked equally well the thought which his admiration aroused, for certainly those bars were even, and nearly, if not quite, perfect, because a man "did it himself."

We have but to look at the cuts of poultry which were made and published as representing or idealizing the various breeds twenty or thirty years ago to appreciate what man has done to improve poultry, for we cannot doubt that the extent to which poultry has advanced in both beauty and utility is the direct result of man's painstaking and work.

There are those who laugh when the fancier "gets started on his hobby"—the perfecting of his breed. They say he is more or less one-sided, he is prejudiced, bigoted, and when you talk to him about other breeds he does not half hear what you say. His mind is filled with his own Light Brahmas, his White Leghorns or his Barred Rocks, as the case may be, and the perfecting of this breed he keeps continually in mind. He is not viewing it in the light of today but in its perfection of ten years hence. We, the poor, uninspired mortals who see the beauty of the specimen before us are scarcely aware of its slight imperfections, but not so the true fancier, since he carries ever before him the ideal toward which he is working, and nothing short of it will satisfy him. He is not doing this work on a dollar and cents basis. He is simply responding to the call from his inmost heart for the creation of the beautiful. Other lines of work may be more lucrative or demand less of his time, but that of breeding fine fowls calls him, and he focuses his best efforts upon the work.

Some may ask, "Is it worth while?" Or, "Isn't the process a narrowing one? Does it lead anywhere?" We shall not have to think on the matter at any great length to discover that but for just such enthusiasts as the breeder of fine fowls we should never have advanced a step forward in any undertaking. Not so very many years ago, a hen was a hen, and it did not matter if she was all colors mottled together, misshapen and unproductive; she was just a dunghill fowl, not much good to her owner but convenient to have when wild birds were not plentiful. We owe the present array of beautiful breeds of fowls and their increased productiveness to the innumerable and untiring efforts of a legion of small seekers, most of whom no doubt appear narrow-minded and overenthusiastic to the uninitiated. The work of perfecting the barring on a bird's wing or the graceful outline of an exhibition bird's carriage may appear a trifling and insignificant thing in itself, but about everything worth while has been acquired thus.

At one of the big shows a year ago I met an old man who had been breeding pigeons practically all his life. Perfecting a breed of pigeons had become the passion of his years and the success which had responded to his efforts but urged him on in renewed endeavor. It was interesting to watch him as he took one after another of his wonderfully beautiful birds from the coops and pointed out how perfection had been bred into the strain. "The whole thing," he said, "is in giving your best attention to the work. Of course, there must exist an undying interest in the undertaking or the attention will waver and you will not accomplish anything."

"And you call this the secret of your success in breeding fine show specimens that you were interested in and that you gave your best attention to the work?" I asked him.

"Breeding fine birds is just like any other trade or profession. If you are interested in anything you can learn how to do it, no matter how difficult it may appear. The breeder of the best birds is the man who has best focused his attention on the work. If my competitor's birds win over mine in the show-room, I know that his attention to the science of breeding has been more concentrated than mine. He has given more vital thought and effort to his work than I and he has won the honors. I have known this to happen time and time again and I believe it to be an unfailing law."

"Then you believe a man has been unsuccessful in the show-room as a result of insufficient interest?"

"Whenever my birds have failed to win in the show-room—

"Dorothea." A 10-lb. S. C. Black Minorca hen of exceptional type. Owned by Chas. G. Pape, Ft. Wayne, Ind.

and they have a good many times—I have looked upon my competitor not as the owner of better birds but possessed of a better faculty to give his undivided attention to breeding good birds, and I have gone home to my flock with a renewed interest in the possibilities of breeding fine fowls. With the force within him of a good, lively interest, almost any man can exceed accepted limits in his line of work. In the breeding of birds I believe the field to be limitless, because the interest of the true fanciers remains unflagging."

Here, then, is the secret of the marvel which fanciers have performed in perfecting breeds of fowls to their present state of beauty and economic worth. It is the old story of great oaks growing from little acorns. In the fall the seed falls to the ground; at springtime it sprouts, and little by little and most imperceptibly it grows. To the onlooker it appears to be a very trifling thing, hardly worth his attention, but thru the long years by virtue of its continuity, its destiny is wrought. Behold the glory of the mighty oak—the king of the forest! Long live the fancier!

Advancement of Poultry Interests

Inquiring Minds of Practical Men Are Bent Upon the Progress of the Industry. Second Prize Article in Monthly Contest. *By H. E. Noyst*

THERE is nothing more interesting in the history of any good which has been brought about than the fact that it comes as a result of expressed incredulity of existing beliefs. The only advance which has been made in any science or walk of life has been made by this method. The sole reason for the present wobbly foundation of the poultry industry is that we have taken the "say so" of those in authoritative places and neglected to conduct a little private experimentation on our own farms. We have allowed those who produce poultry at public expense to assume the authority of telling us the cost of producing poultry. The hope of the present situation is that producers in all sections of the country are beginning to question the "official figures" by comparing them with actual figures on their books.

The average human being finds it a great deal easier to believe what is told him than to sit down and figure it out for himself, because for many centuries his ancestors did so. In those days no one questioned the authority of those higher up. If it was announced that the moon was made of green cheese, the admiring populace nodded their heads in accord, saying, "Why, certainly; of course, it must be made of green cheese, for when the moon is full, is it not the exact shape of a round cheese?" Then and there, the question of the composition of the moon was decided until the human race produced a man with sufficient initiative to question the truth of such a statement. Other minds saw the wisdom of his incredulity and as they went about reasoning the matter

Liberty Colony Brooder Equipment made by H. M. Sheer Co., Quincy, Ill.

out, they found the only foundation for the belief was that someone in an authoritative position had made the announcement after having noted a greenish cast to the moon on a certain semi-cloudy evening, just after having cut into a round cheese which was slightly tinged with greenish mold. The incredulous man appearing on the scene, a few generations later, smashed the green cheese theory to bits by a little common sense reasoning. No doubt, in those days it was uncommon sense reasoning, tho today the reasoning sense should be common in all walks of life. The knowledge, however, probably did not become well diffused in those days for some time, because, of course, those in authority did not wish to have their decisions on important matters so lightly set aside, but in the end the incredulous man won out and established the fact that the moon was not made of green cheese.

During the past year I have been reminded of this incident a good many times while reading various poultry publications and bulletins. Many of those in authority have been telling us how cheaply we can feed poultry and what huge profits we can make producing poultry and eggs, under present conditions. I read the same things in the daily papers in regard to milk production. The authorities take up the matter, investigate it and finally end by saying the moon is made of green cheese. There are a great many ways in which this statement can be made. A governor might say it one way, an inspector another, and an experimenter another, but

when we investigate these statements carefully in the light of reason, we find them all to mean that "*we have always had cheap milk and cheap eggs and cheap poultry, and we don't want a change.*" An official says that away back in his boyhood on the farm, his parents used to sell eggs for 10 cents a dozen—and just see where their son is today, a politician ranking high in that calling! The incredulous man likewise recalls his boyhood, how they drank the skim milk in order to save the cream to make butter to sell for 20 cents a pound; and he reasons rightfully that in doing so they were taking needed nourishment from themselves that others might buy food at a low price. He starts a doubt as to the wisdom of this plan. He has known what it means to be fed on skim milk, salt pork and specked potatoes in order that people in authoritative places should have cream, the best meats and vegetables, without paying much for the privilege, and he becomes instrumental in determining the cause. By this means individual experience is gleaned from various sources and the "say-sos" which have been handed around as facts are discovered to be no more than the good or bad guesses of influential persons.

I have read a number of articles from time to time in which figures were given to show immense profits in poultry raising. These figures were no doubt accepted as truth by those unacquainted with facts. They may continue to entice the unwary into the field of poultry culture for a time, but it should not be supposed that a method so plainly defeating its own ends can continue to exist. So long as these flowery statements as to immense profits were made and doubt was seldom expressed as to their veracity, the prospect for the continuance of the method was well and good. But when doubt is beginning to make itself heard on all sides, and the spirit of inquiry, as to the basic facts of these statements, bobs up its head at every corner, we may rest assured that the truth of the matter has even now been brought to light and will presently be blazoned to the world. For, in the natural order of things, following inquiry comes discovery, and immediately a fallacy is corrected the work of construction may be begun. That we are well on the way in reconstructing the poultry industry, there should exist little doubt, for while the past year has looked dark to many poultrymen, the light is beginning to break and may be observed in the written and spoken word of those in authority. For progress in poultry culture springs from the force for betterment exercised by the producer. Daily he works out his problems and in time the advances which he makes are adopted by experimenters and become widely diffused. During the past few years poultry producers in widely separated sections of the world have demanded the necessity of sane cost accounting in poultry keeping as an important step toward placing the business upon a sound basis. This is undoubtedly the most progressive step which has been taken by poultrymen for many years. When it has been put in actual operation during coming years, poultry production will be increased because it is an honest business in which a man may earn a living—and not on the slogan of the past which says to raise poultry because it is needed for food. The hope of the future lies in the fact that on every side poultrymen are working out actual problems and forming their opinions accordingly, which, regardless of their apparent insignificance, will ultimately govern the future status of the poultry industry. No amount of paid influence can stay this progress. It is as inevitable as the coming of morning, since it is the result of inquiring minds of practical men bent upon the progress of the industry. With the producer on the right road to progress, the long line of experts and experimenters, whom he supports, must follow.

The problem which confronts poultry producers is more than half solved. If we can but consider today's misfortunes in the light of the ultimate results which they will bring about, we will regard present-day losses as a fortunate circumstance.

Notary Public.

The Busy Season Begins

Now that the big shows are over, the breeding pens ready for business, the early hatches started, the busy season for poultrymen has indeed begun in earnest.

We believe that it is going to prove a very busy season indeed, with good business for those with sufficient initiative and energy to go after it in the right way. Vigorous, aggressive business methods, truthful advertising, and a square deal with satisfaction for all customers, should be the rule.

Remember that the rule of the big mail-order houses, and the most successful big department stores, is that "the customer is always right," no matter how unreasonable he may seem to be. That rule works out best in the end. Most people are honest. If they were not, the jails couldn't hold the crush that would overrun them. Satisfy the customer first, last and all the time. Even if he is "trickey" and has tried to take advantage of you, you lose nothing by "making good" with him, and you may shame him into being the greatest "booster" for you that ever happened in his home town.

This is going to be a year of big expenses and heavy taxes. The Government is going to need money and more money. The Red Cross, and other worth while causes, are going to call on you for still larger contributions. You must do your bit. You can only do your bit by doing business and still more business, business to the limit of your capacity, business at a profit. The more profits you can show in the business the more you can do to help win the war.

It is all well enough to talk about thrift and economy. Both are good in their place and both are now necessary to a

degree. But we must buy and sell, we must keep spending, keep money in circulation, keep business going to the utmost limit of our ability. If business stops everything else will have to stop, for there will be nothing to go on with. Thrift and economy are good if practiced with practical common sense, but we cannot afford to confuse them with parsimony. This is no time for "cheese paring methods" and "stocking bank hoarding." We must be good producers, good buyers, good spenders, in order to keep business up to concert pitch.

Be careful how you list things as non-essentials and attempt cutting them out. Every business hinges on every other business, all our individual interests overlap and intimately concern one another. The sooner we learn that we are all one big family, dependent upon each other's success, the better it will be for us all. Things that were non-essential in grandfather's day, or even in dad's day, are necessities today, often vital necessities in every-day work and business. Go slow in condemning non-essentials. Money is one of the things most needed to win this war. We think we are spending big sums now, but when we really get started we are going to open our eyes—wide! No legitimate business is non-essential if it can make money. Food and money are the sinews of war—quite as important as man power. Do not forget that!

Will Make New Fanciers

Uncle Sam has started recruiting stations thruout the country that are certain to bring new "rookies" into the poultry fancy, who will make new fanciers. Of course our Uncle Samuel's extension poultry husbandmen and county agents, who are recruiting back-lotters and farm-

ers into the ranks to "raise more poultry," are seeking chiefly to increase food production, to get maximum results with needed quick-grown food in the shortest possible time, but *they are recommending Standardbred poultry.*

Every time a flock of Standardbred poultry is placed in a back-yard or on the farm it helps the Standardbred poultry industry. Once you get a man or woman inoculated with the real "hen fever"—and it certainly is very contagious—there you have a potential fancier. Develop the prospect in the right way, help the beginner to succeed, and you have added strength to the foundation of the poultry industry. The new recruit may not qualify or he may quit, but in most cases with proper encouragement he will "come back." Once well bitten with the "hen fever bug" there is no cure. Sow a little of the seed of real-fancier-interest in any fertile mind and the plant will thrive and flourish while life lasts. You cannot kill it. It may fade and seem to pass for a time, but it crops out again stronger than ever. We can count many friends who are still with us, or who have passed beyond, whose enthusiasm in poultry is one of life-long interest. If the whole fraternity could only get together, develop unity of purpose and effort in efficient co-operation for the good of all, put just a share of the enthusiasm of each into common sense team work for the safe and sane development of the Standardbred poultry industry, poultry would "go over the top" to the greatest success and progressive accomplishment, taking its proper place in the productive world on a firm and lasting foundation.

Much will depend upon how we meet and treat the beginners, the new recruits who are fanciers in the making. Let us not forget the good old-time fancier-breeders of the early 'eighties, their kindly and helpful interest in novices, their efforts to help beginners to succeed both as breeders and exhibitors. We are greatly in need of more of that same kindly and helpful interest today. These are busy and strenuous times, everybody is speeding up, and the cry is ever "more speed," but we need to take time for others, to give a little more thought for others, and to lend a helping hand.

Real Fanciers and Others

We particularly enjoy the big poultry shows. One learns much at these big exhibits besides the progress of the fashions in Standardbred poultry.

The recent Madison Square Garden Show was no exception to the rule. In spite of the unfavorable war and weather conditions under which it was held, one could not help gaining renewed interest and belief in the progress which must come in the poultry breeding of the future.

One had ample opportunity this year to study the various exhibitors and their methods, more time than usual because of the light attendance and the freedom from big crowds. It was a fine opportunity to observe and compare the real fanciers with the other kind. The uncommonly cold weather and the chilly exhibition hall added to our opportunity for sizing up men and methods as well as their birds.

Most of us have been too ready to accept the often expressed opinion that some of the big breeders are not fanciers but are really commercial poultrymen who place the dollar sign above all else. That

opinion needs revision. There have often been unpleasant remarks about men who win on their exhibits season after season, and some have doubted the judges. Were not these remarks and doubts prompted more by envy and jealousy than any sound reasoning? We believe so.

We followed closely several of the consistent winners and noted their methods, listened to their discussion of their birds. One could not doubt such sincere enthusiasm and engrossment in the birds of their fancy. You could not get them away from the subject of their "chickens" and their plans for progressive development. They sought out minute defects that would pass unnoticed even by an ordinarily skilled observer. This was true not only of some big breeders, "master breeders" if you please, but clung like a mantle to the shoulders of many of the younger fanciers who were still new to the pleasurable excitement of making a good win at the big show.

Actions speak louder than words and this occasion was no exception. These men, big breeders and little breeders, proved their right to the title of fancier by the way they cared for their exhibits in that cold and uncomfortable exhibition hall. Before the judging all exhibits received abundant care and attention, but afterward—that told the story. The real fanciers continued the care and attention throughout the whole show; they carried it up to the time of closing, and afterward made sure that their birds were properly and comfortably prepared for shipment home and safely started on the way. And some of these big exhibitors and little exhibitors, who have been criticised as "commercial," qualified then and there as real fanciers, whose interest in their birds is not wholly concerned with the advertising value of the winnings.

But, we are sorry to say, there were others—men who like to class themselves as fanciers but who failed in the test and did not qualify. When the coveted prizes failed to come their way they lost interest in their birds, the cages were neglected and left to the mercy of the show attendants, there was none of that solicitude for the fowls when night closed the show, little care and consideration for the birds when the show was over and the poor things, who were not to blame for their failure to get inside the most coveted ribbons, were hustled unceremoniously into their shipping coops and left to the tender mercies of the expressmen with little or no kindly care and preparation for the difficult and unpleasant home journey.

There are many things which may be noted and learned at the big shows, and not the least of these is the difference in men and the wide difference between real fanciers and the other kind.

Egg Famine Predicted

Press dispatches dated January 2, 1918, contained a statement said to have been issued that night by W. S. Priebe, head of the poultry and eggs division of the Federal Food Administration, to the effect that an egg famine threatens the United States.

This statement declared that from September 1 to January 1, 85 percent of the supply of cold storage eggs was consumed and that the other 15 percent will soon be gone, with no relief in sight, as the supply cannot meet the demand. Cold weather added to the difficulty. Another explanation of the

shortage was a statement to the effect that "the cost of feed for each hen has jumped over 100 percent."

The following is given as Mr. Priebe's advice as best way to meet this situation: "We have got to cut down egg consumption or else suffer a fast approaching famine. The people in the cities should do like the country folk, not buy eggs when the price is out of reach. When eggs are scarce the country folk only serve them once a week and then on Sunday morning. The people must have eggs and there is no relief in sight."

We certainly do not agree with Mr. Priebe's plan to ward off an egg famine by cutting down consumption. If people stop buying eggs now because prices are higher than in normal times, altho present egg prices barely pay cost of feed consumed, now that the egg flow

is making the usual January increase, and in some cases do not pay back the cost of feed, then we will indeed have a most serious egg famine. The only way to prevent an egg famine is to stimulate consumption, to encourage people to eat more eggs, to substitute eggs for meat where possible, for eggs at present prices are cheaper than meat and better food value for the money. Stimulate the demand for eggs to get increased production. It is not true in our section that "country folk" are eating less eggs; we believe that more eggs are being eaten at or close to point of production this winter than usual, for those who produce eggs realize that eggs are about as cheap food as can be found in the market at present prices.

Mr. Priebe's view is quite a natural one for a man with his experience and

TO OUR READERS.

Our subscribers are our friends and we use every effort to protect them in every way. We believe that every advertisement in this issue is signed by trustworthy people, and to prove our faith we will make good to our subscribers any loss sustained by virtue of their having purchased fowls or goods from one of our display advertisers.

All we ask is, that in ordering the fowls or goods, you mention to the advertiser that you saw the ad in American Poultry Journal; also that the purchase be made during the month or months in which the ad is inserted, and in case of loss notify us of the fraudulent misrepresentation of the advertiser, giving us full particulars as soon as it occurs. In all cases in writing to advertisers say, "I saw your ad in American Poultry Journal."

training. Before he took a responsible and thankless job at one dollar a year with the Food Administration, his business was buying eggs and poultry as cheaply as possible and selling them at a profit. A legitimate and necessary business, but not exactly in sympathetic understanding with the poultry producer's difficulties. He is president and manager of the firm of W. F. Priebe & Co., Chicago, dealers in poultry and eggs, middlemen, with a big string of poultry packing houses in Missouri, Iowa and Illinois. This concern handles millions of pounds of poultry and millions of dozens of eggs annually. Very naturally they exert a bearish influence on the egg market at this season of the year, for later on they will want to get eggs into cold storage at as low a price as possible in order to keep up the profits in their business. No concern representing "big business," such as these packers conduct, is feeling any great patriotic itch to do business at a loss, no matter what may be expected of the men who really produce the eggs and poultry.

When any man leaves his big business interests to volunteer in a responsible and much criticised government job, that means much hard work and only a dollar a year compensation, it is a safe bet that he is either very sincere and enthusiastically patriotic, or he sees an opportunity to protect and benefit the particular business in which he is vitally interested. Possibly a little of both, but in the latter case alone it is a very natural and human instinct. Self preservation is a natural law and are we not told, "Where our treasure is, there is out heart also?"

Eastern cold storage dealers do not agree with Mr. Priebe's view of the situation. They call attention to the fact that cold storage eggs in the East are more plentiful than usual, that Government figures for December 15 show

A description of my

Single Comb White Leghorns

Extra Special Matings, Pens 1 to 5

The choicest matings, I believe, in all America. Each and every individual in these five matings has been critically selected and carefully mated to produce the highest possible excellence attainable. These matings have produced the majority of the many winners furnished my numerous customers during the past season and the winners in my own hands at the great National All Leghorn Show, November, 1917, and are practically, with but few exceptions, exactly the same birds I had mated in these pens last season. These are the pens that will produce my champions for the coming season; they will produce that long, wide back, with low well-spread tail, neat five-point combs, pure white almond small lobes, pearly, absolutely white plumage—**and size**; all of the females in these matings weigh from 4 1/2 to 5 1/2 pounds each. The males are great big, husky, vigorous fellows and have the best disposition I ever saw in a White Leghorn. If your flock needs improvement in size, in type, in color, and especially in head points, it will be to your entire advantage to place your order for a few matings of these eggs. Egg records range 245 to 292. Eggs—\$15 per setting of fifteen. Chix—\$2 each.

I have other quality matings at \$10 and \$5 per setting, and special utility egg matings at \$2.50 per setting. For a complete description of my many winnings in the show room, as well as the egg laying contests, write for my beautifully illustrated catalog, which is now ready for distribution. Do it today, right after you finish reading this ad., so you will not forget about it.

an increase in holdings of storage eggs of more than 20 percent over holdings of same date a year ago. In Boston the holdings of cold storage eggs are stated as more than double those of last year on same dates. While new-laid eggs are holding at prices from 30 percent to 40 percent higher than same January dates in 1917, the market is fairly firm and demand and supply are about equal. Altho there is undoubtedly a very considerable shortage of hens and pullets, receipts of fresh eggs are improving somewhat. Mr. Priebe's advice to consumers to use fewer eggs is considered unnecessary here from the marketman's viewpoint. From the producer's point of view, the Food Administration should do all in its power to increase the consumption of eggs and poultry and so encourage producers. A falling off in demand at this time, when incubators are being started up to hatch chicks for early pullets, is certain to discourage producers and to result in decreased production in 1918. If our production meets further discouragement then we may indeed look for an egg famine before the close of the present year.

It is most unfortunate that, with the Department of Agriculture making extraordinary effort to stimulate and increase production of poultry and eggs, the Food Administration should do anything which may result in discouraging production. Production and prices are very closely related. It is a great pity that our national work on production and prices is not under one efficient authoritative head, instead of having one department to promote production without regard to prices and another department devoted to an effort to make prices lower to consumers. We are going to learn something by experience, but we may have to pay a very costly price for the lesson.

Union or Sectionalism, Which?

Most of the troubles in this world come from misunderstandings. The better we know one another, the better we understand one another and the conditions under which each lives, the less likely we are to develop bitter differences. Human nature is pretty much the same wherever found, even the uncivilized savage is a pretty good fellow when you get to know and understand him. Every man is a champion for his particular locality; the Boston man looks upon his favorite city as the source of everything that is desirable—at least he appears to do so when traveling in other parts—the St. Louis man feels and acts the same way about his own town. We are all of us prone to develop very easily

more than a trace of sectionalism. If we did not use a common language we might easily go to much greater lengths.

In the beginning the whole earth was of one language, but when imagination and ambition led to the attempt to build the Tower of Babel, "whose top may reach

into heaven," a confusion of tongues was placed upon the people preventing the work, because they could no longer understand one another and they were scattered abroad upon the face of all the earth. Even at that early date it was recognized that a people with one lan-

guage is one people and that they may not be restrained from whatever they have imagined to do. Different languages, a confusion of tongues, is a mighty power to divide and scatter peoples and cause misunderstandings.

Do we want a united or a divided America? There would seem to be but one answer to that question. In this time of unprecedented national peril we certainly need the strength of unity, to be in fact and thought a united people.

Our law makers appear to have made a great mistake, probably unwittingly, but nevertheless a grave error which may lead to splitting up America into "half a dozen sections weak with the ills and evils of sectionalism." Divide the people in this way and shortly we will have confusion, misunderstandings, and another Babel. The present revenue bill, now up for reconsideration, carried with it an unfortunate bit of postal legislation, which divides the country up into "zones" and increases the average carrying charge upon magazines and periodicals from 50 to 900 percent. This will destroy a large part of the periodicals of the country. Readers will lose many magazines which have kept them informed on national matters, kept them in touch with other readers in various parts of the country, helped in their work, and created better understanding and greater unity of our whole people. The new law is virtually a fine upon the reader, penalizing him for living at a distance from a great publishing center. If the "zone" system law prevails it will result in splitting the country up into sections, each developing sectional ideas. We, who now through our magazines and periodicals are one big national family, will be divided and scattered because of less opportunity for mutual intercourse through nation-binding periodicals which serve us all alike and disseminate helpful ideas among us all.

Do we want a united America, strong in the strength of unity and like interests, understanding and working cooperatively with one another, "One for All and All for One?" If so, we should not let our post office department be used as a tax gathering contrivance when it was designed to give equal service to all at the same rate. Put a tax upon "profits" even if it must take all profits beyond the cost of keeping busi-

Regal Dorcas White Wyandottes

Profit or Loss

These are strenuous times for the Poultryman and to make your Fowls show a profit requires more careful management than ever before.

Regal Dorcas White Wyandottes, with generations of vigor, prepotency and heavy egg production back of them, are showing a good profit in the hands of thousands of poultry keepers all over America. One customer, who kept the Regal strain and one other leading strain in his yards, writes me that from his advertisement in the poultry journals he received twelve times as many inquiries for birds of the Regal strain as he did for the other strain. He therefore decided to keep nothing but the Regal strain. I have had scores of letters from customers with similar experiences, proving that the Regal strain today leads all others in popularity.

If you find difficulty in selling your surplus stock and if your birds are not showing a profit, why not give the Regals a trial? They have been a profitable investment for others and they will be for you.

5000 Cocks, Hens, Cockerels and Pullets For Sale 5000

SPECIAL—500 beautiful exhibition cockerels and pullets ready now to win the blue ribbon for you. 300 well matured cockerels from my heavy laying Dorcas line, \$8.00, \$10.00, \$15.00, \$20.00 and \$25.00 each. Dorcas pullets, \$4.00 and \$5.00 each. Breeding pens (male and four females) \$20.00, \$25.00, \$35.00 and \$50.00. Vigorous utility cockerels, \$4.00 and \$5.00. Order at once and get first selection.

Send one dime for the Regal White Wyandotte Book, telling all about the Regal strain. **FREE**—My catalog and mating list is free if you will send me your name.

Port Dover, Ontario, Canada

First Prize Cock at Madison Square Garden, December, 1916

ness going, but do not deprive the people of the clean publications which have helped to educate them, bring about better understanding of one another, developed unity and national strength. If you want a united America, an America undivided and strong in the strength of unity, then use your influence with congressmen and senators to that end.

Modern peoples are bound together by ideas, by fundamental ideas held in common by all, by the exchange of thought, ideas, and experience, so that distantly placed people may understand, appreciate and sympathize with each other. With all its faults the press of today is the greatest instrument and medium for the dissemination of ideas which bind us together and make us a united people. The press has made it possible for the "under dog" to get a chance in the world, it has been a great leveler of caste and classes. Without the help of our educational press we might be confined in the prison of sectionalism or even stuck fast in the ancient mire of medieval feudalism.

We cannot afford to economize in our reading matter. We should read more rather than less, in order that we may better understand one another and make greater progress in the world. One of the greatest educational factors of the present time, the thing that beyond all else will help to cement all peoples together in a bond of unity and understanding, is the broadcasting of helpful publications and the exchange of ideas and experiences therein. Read more. Write more often for publication. Exchange experiences and ideas with your fellow workers. Do your bit to promote and develop your own trade publications. A united people, of one language, may not be restrained from whatever they have undertaken to do.

Easier Grain Prices.

LAST November and again in December, W. F. Priebe, of the United States Food Administration, publicly expressed the belief that "poultry feed will be from 40 percent to 50 percent lower by January 1 and thereafter." This statement was amplified to convey the impression that at present time—January 10, 1918—poultry feeds would be selling

More Eggs—More Profits

Two years ago it cost about 18c to produce a dozen eggs that sold for 40c. Now it costs about 30c to produce a dozen eggs that sell for 65 to 70c.

Figure it out yourself. Does it pay to be a poultry raiser today? The answer is—it pays just about double what it ever did before.

Common Sense Scratch Feed and Egg Mash Are Guaranteed to Increase Egg Yields

They contain the proteins, carbohydrates, fats, etc. of which eggs are made. Just "pick-up" feeds or feeds mixed without regard to food balance do not give maximum results. They cannot for they do not contain the stuff from which eggs come.

A guarantee of better results goes with every bag of Common Sense Feed. If you don't get the better results we buy back the feed and pay all charges for transportation.

OUR NEW POULTRYMAN'S ACCOUNT BOOK will help you keep a daily record of your flock for one year. Price 25c American Poultry Journal, 542 S. Dearborn St., Chicago.

Yes, Parks' Bred-To-Lay Barred Plymouth Rocks Have Been Bred for Eggs Since 1889

That's why they are conceded to be America's Oldest Laying Strain. They easily out-layed the 2600 birds in the five Missouri Laying Contests, officially making them America's Greatest Layers, as these contests were made up of the best layers from 37 states and eight foreign countries. Also **Winners of the Three Silver Cups for Heaviest Winter Laying**—December, January and February. After all it's really the winter laying that counts. The sparrows lay in summer. You've read our advertisements longer than any other bred-to-lay breeders. That hundreds with broader laying claims than ours should come and go seems strange. Yes, Parks' Rocks are now being fed by the third generation of Joes. High normal laying is our stronghold. A flock of 128 averaged 208 eggs in a year. In phenomenal laying they have records up to 290 eggs and the greatest sworn continuous laying record of 148 eggs in 148 days was made by a Parks' Rock. Heavy laying is bred in the strain and the name Joe in the family.

We've Got the Utility and Standard Qualities in the One Nest

At Johnstown, Pa., Jan. 8-12, we won: 1st utility pen, 1st heaviest brown eggs, 2nd best brown eggs, 1st and 2nd exhibition hens, 2nd and 3rd cocks (82 Barred Rocks competing.) They are at Washington, D. C., Jan. 15-19 and Rochester, N. Y., Jan. 25-29. Watch their winnings in both Utility and Exhibition Classes.

CHOICE COCKERELS and BREEDERS—Shipped the new way, insuring prompt delivery.
EGGS FOR HATCHING—Scientifically packed, guaranteed safe delivery.
DAY-OLD CHICKS—Shipped at your risk. Where possible we advise buying eggs.

ALTOONA, PA.

at about half the prices asked in the late summer and early fall of 1917.

We are still waiting for the fulfillment of this prophecy. Corn is somewhat easier in price, but the quality is

much inferior to the old corn. On January 9 there was further talk of lifting the maximum price limit of \$1.28 placed on corn futures by Chicago Board of Trade some time ago. No one can pre-

dict with any certainty what future grain prices will be, but unless price-fixing interferes, which is quite possible under present conditions, we cannot look for any great change. We had hoped that we would have less price fixing rather than more of it. The fixing of maximum prices always has a discouraging effect and a tendency to make it difficult to secure supplies. The plan has not seemed to work well in Britain and we are told that right now the food and feed shortage in both England and France is the worst it has been since the war began. There is strong probability that there will be compulsory rationing of the people. Lower prices will not do us any good in this country if the price fixing makes it difficult or impossible to secure supplies, as well as having a discouraging effect upon production.

While the corn situation in the mid-west corn belt is disappointing, the news from southern states is encouraging, for several sections there report good harvests and unusual grain production. Crop reports dated the last of December give following returns in brief:

Illinois—Considerably more soft corn than at first believed. Soft corn bringing \$1.15 per bushel. Good sound corn selling as high as \$2.18 per bushel.

Indiana—From 30 percent to 50 percent of corn soft. New Corn \$1.25 per bushel. Old corn \$2.25 per bushel.

Ohio—A large part of corn crop unhusked. A good deal of soft corn in all sections.

Kansas—A large percentage of soft corn.

Oklahoma—Shortage of feedstuffs.

Mississippi—Corn fair and bringing good prices.

Missouri—Crop reported equal to average in southern half of state. A good deal of corn still in the field. Considerable soft corn in northern part of state which is being shipped out at \$1 per bushel.

Michigan—New corn poor, difficulty experienced in securing corn good enough for seed.

Alabama—Good corn crop reported, price \$1.55 per bushel.

Maryland—Good corn crop.

Wisconsin—Much poor corn.

Nebraska—Corn crop poor and much not yet harvested.

Minnesota—Very little of corn matured sufficiently to keep. Soft corn being shipped in from Iowa for stock feeding.

Iowa—Ninety percent of corn crop harvested. Very large percentage of soft corn. Much spoiled and moldy. Very little corn that can be carried over into warm weather.

and your careful attention will mean your success. I am offering you Stock, Eggs and Baby Chicks from the same stock that has proven entirely satisfactory to thousands of my customers in this and many foreign countries.

My 18 Years

of practical poultry experience has been incorporated into my bred-to-lay strains in such a manner that brings forth unsolicited hundreds of repeat orders from customers of many years standing. My catalog contains descriptions of my plant by representatives of the leading poultry publications, reports from many of my customers, and also my methods of breeding, care, and management. It is fully illustrated, and very instructive, and will prove to you that my prices on eggs at 15c and 30c each, baby chicks at 25c and 50c each, and breeding and laying stock at \$2.50 and up, are very reasonable.

Start right, by writing for my instructive catalog today. — It has helped others and will undoubtedly help you.

JOHN G. POORMAN, Box 100, Tinley Park, Ill., U. S. A.

WYCKOFF'S S. C. WHITE LEGHORNS

Acknowledged Everywhere the World's Greatest Laying Strain—Unequaled in Standard Qualities

Remember that we are the originators and for 35 years specialty breeders of the justly celebrated WYCKOFF Strain of S. C. White Leghorns, the most profitable strain of poultry in America today. Place your orders at headquarters and make no mistake.

Eggs for Hatching

from the most carefully selected matings. Our breeding pens this season are made up with the finest lot of stock that we have ever owned. For size, strength, vigor and laying qualities, together with the true Leghorn type, they are unequalled. Place your order early and get in line with the most profitable era ever known in the poultry business. Send for free catalog, giving prices and complete description of the stock, together with testimonials from satisfied customers in all sections of the country. Address

C. H. WYCKOFF & SON

AURORA, CAYUGA CO., NEW YORK

South Dakota—Considerable poor and soft corn. Crop not in as bad condition as at first believed.

Shortage of farm labor is reported everywhere and much talk of seeding down to grass and less acreage in crops.

January 9, Chicago cash corn prices were \$1.65 for No. 4 corn and from \$1.40 to \$1.55 per bushel for lower grades. Oats were from 80c to 82c per bushel. These being wholesale car lot quotations. Wholesale price in eastern markets on corn to ship from west was \$2.05 per bushel; oats 95c per bushel.

On January 10, at Anchorage Farm, whole corn—new kiln dried No. 4—cost us \$2.26 per bushel; oats \$1 per bushel; middlings \$2.56 per 100-lb. bag; dry mash \$4.46 per 100-lb. bag. Our flocks shelling out eggs in fine shape, just about broke even on cost of feed consumed with eggs wholesaling at 70c per dozen, this being record for week ending on date named.

From the above it appears that Mr. Priebe as a grain price prophet has not helped us very much. Maybe the good is coming later, but we cannot see where in lower prices are going to help much in face of present conditions and world-wide shortage. High prices are necessary to bring about increased production which is greatly needed. There appears to be good and sufficient reason for high prices on grains as well as for other necessities. Instead of complaining it would be better to face the situation and make the best of it.

Corn is a bit easier, as the crop begins to move more rapidly in the market the prices may fall somewhat lower. But corn is not "cheaper" and it is not likely to be half last fall's price unless the price is so fixed arbitrarily. Soft corn at \$1.15 to \$1.50 per bushel, or new kiln-dried corn of No. 4 and No. 5 grades at from \$1.65 to \$1.90 per bushel, or same corn at \$2.26 per bushel—the price to eastern poultrymen—is not really cheaper than old corn has been when food value, keeping qualities and safety in feeding is considered.

From all present indications the poultryman may assume that conditions the coming season will remain much the same as during the latter part of 1917. We will have to plan our 1918 poultry raising and keeping to meet these conditions as best we can. Prices for poultry and eggs should not drop much below those prevailing at present, unless there is interference thru price-fixing. No one can tell how spring egg production may affect prices, how far-reaching the present attempts to lessen consumption may prove, how much the shortage of hens and the demand for hatching eggs will cut down the available supply of market eggs. But it is certain that in our Atlantic and Pacific coast markets, all markets far removed from the big grain producing sections, eggs should not sell for less than 70c per dozen at wholesale thruout the coming spring and summer if the poultryman is to have a square deal from the buying public.

Every effort should be made to stim-

ulate greater consumption of all poultry products. Poultry and eggs are the best of our nourishing food and are cheap food as food prices go in these days. Particularly are they low priced foods when war time production costs are considered.

How to Raise Chicks

128 pages, profusely illustrated. An a to z manual for everyone who keeps fowls. Written by Prince T. Woods, a man who knows how and how to teach others. Cloth bound, price 75c. American Poultry Journal Pub. Co., 542 S. Dearborn St., Chicago, Illinois.

TRAP-NESTED 200 EGG STRAIN

HABANA, CUBA, November 2, 1917—Dear Sir: I beg to advise you that on the 27th ult. birds arrived in great condition and that I am very pleased with them. If I succeed in raising strong livable chicks from them, especially the Leghorns, I will send you a much larger order. Yours very truly, F. P. A.

GLEN ELDER, Kans., November 5, 1917—Dear Sir: We are very well pleased with the pullets and cockerel we purchased from you last winter, and we would like your prices for this season. Very respectfully, D. C. T.

ALLENVILLE, WIS., December 5, 1917—Dear Sir: Received the cock bird in first-class shape. He is a very fine bird in almost every way, but, as you say, he is in the molt and so does not look as nice as a bird in full plumage, but he is a strong, rugged fellow and has a nice head and shape and is not a little dumpy bird like most breeders are trying to get, or as they say, "cobby." When they breed such, they breed right against the egg type, which I can see you haven't, as he has a fine long and broad back, which is what I am going to try and breed into my flock. Yours respectfully, F. H. G.

TOFIELD, ALTA, CANADA, December 22, 1917—Dear Sir: I received my Grade A breeding yard of Buff Orpingtons in O. K. condition after a ten-day trip and arrived at 40 degrees below zero. I am very well pleased with this shipment and especially my 273-egg cockerel. He is a fine type of bird and a live one. Thanking you for your kind treatment and selection, I am, yours truly, E. M. H.

HERRIN, ILL., January 1, 1918—Dear Sir: I would be pleased to receive your 1918 catalog. I raised all of the baby chicks I bought of you last year and they surely are a fine looking flock. The pullets started to lay at six months and the cold weather don't stop them. They are on the job every day. I plan on getting some of your baby chicks this year. Respectfully, R. A. W.

SYRACUSE, N. Y., August 12, 1917—Dear Sir: It is a pleasure to report on the 50 Buff Orpington chicks received from you May 10. They are all alive and every one in fine vigorous condition, not fat, but growing nicely. I have never had as fine a flock, without a loss or a runt. In my estimation, a great ad. for the Poorman Strain. Wishing you and my 50 continued success, I am, very truly yours, J. S. E.

MANCHESTER, N. H., September 29, 1917—Dear Sir: Kindly send catalog and price list to me. I am anxious to secure some White Orpington pullets or perhaps White Leghorns. Have always had your breeds and I am thoroly satisfied. Yours truly, M. J. D.

With my Strains and your careful attention, the above results will be YOURS.

JOHN G. POORMAN, Box 100, Tinley Park, Ill., U. S. A.

System Spells Success

Know your birds. Be able to tell the breeding and age of every bird in your flock at a glance. Trapnest your layers and weed out the unprofitable ones and success is bound to follow.

BOURNE LEG BANDS

ARE EASY TO USE. They are made with large numbers printed on colored celluloid held in an aluminum band. Numbers easily read from a distance. Numbers from 1 to 100 have double numbers on a band, from 101 to 300 have single numbers on a band, printed on white, red, green, cerise, blue, yellow and pink celluloid. Numbers from 301 to 1,000 may be obtained on white only. Band will withstand weather and water. Sizes for all breeds, also for pigeons.

Plan Your Garden Now.

THE spring and summer season of 1918 promises to be a busy one. We have the big drive to raise more poultry on farms and back yards. The keep a pig drive. The raise a calf drive. The raise more sheep drive. The meatless, wheatless, eatless, wearless, economy drives. The saving and loan drives. The corn and wheat drives. The big drive which must "go over the top" to win in Europe. The Red Cross and W. M. C. A. drives. The "can all you can" drives and many others. And the second year of the big have a family garden drive. Everybody will have ample opportunity for work, and everybody should and must work. There are many who would be benefited by getting acquainted with the 16-hour day.

Most poultrymen have a garden every year. All who can should have a garden. The time to plan a garden is now. Seed catalogs are now available. Did you get yours? Garden seeds of best and most desirable varieties are quite scarce. Orders should be placed early and in many cases it may be wise to make provision for second choice in case old favorites are not available. On these cold and blustery evenings there is a lot of satisfaction to be had planning the home garden for the coming season, while snug and warm by the family fire-side.

Plan a garden for the poultry as well as for the family. If you have room grow some grain for the poultry too. Corn, oats and wheat may be planted where location is favorable, tho corn is usually the most dependable. In New England we believe that Rhode Island white flint corn and Canada Cap yellow flint corn are two of the most reliable varieties. Mangels, stock carrots, cabbages, and pumpkins are all good crops to grow for poultry. Back-lotters will find Swiss chard and lettuce easily grown summer greens for both family and poultry. Where flocks are yarded, growing oats under a wire screen in the poultry yard supplies continuous growth of quickly produced green stuff. Waste from the garden is always acceptable to the poultry and even the weeds may be put to good use if delivered to the fowls.

We saved a good deal of our own seed last year, including peas, beans, squash, etc. We like the old reliable Notts' Excelsior peas and make successive plantings about two weeks apart. We use Silver Skin and Yellow Globe onion sets, and in our soil get better results with sets than with seed. Of course we have an asparagus bed, rhubarb, everbearing strawberries, blackberries and raspberries. If we did not have these we would set some out in the spring. It is a good plan to start a new strawberry patch anyway. We have had to dig up and burn all our currants and gooseberries; the authorities require it. Currants and gooseberries harbor the parasite of pine blister rust, a dangerous disease which threatens the growing white pine—so much as we like these small fruits they must go, as the white pine is much more valuable.

We always like to have a few radishes of the earliest sorts, not so much for the food value as because they are an agreeable relish and one of the quickest and earliest returns of the season. A hot bed and cold frame are very satisfactory means for securing early sup-

From Egg to Egg Basket

It's not the chicks you hatch but the chicks you raise that bring the profit

We have eliminated the "problem" in feeding. *First:* Blatchford's Milk Mash will push your little chicks forward with a sturdy, natural growth and you will avoid all loss from bowel trouble, leg weakness or white diarrhea.

Blatchford's

Milk Mash
saves the
baby chicks

Blatchford's Milk Mash

—composed of milk, milk substitutes, meat and grains, prepared for easy digestion—should be every chick's first feed. Keep it constantly before them until they are three months old, as it grows, matures or fattens

Then: by following at once with

Blatchford's "Fill the Basket" Egg Mash

the feeding system remains unbroken, and there is no "problem" to solve as to what the "next" feed shall be.

AN EXTRAORDINARY CATALOG

We have issued a beautiful catalog giving the full description and history of this remarkable breed of fowl. No expense was spared in its production, and it is well worth many times the price, 15 cents.

plies and for starting lettuce, cabbage, spinach and tomato plants. Tomato plants can be very satisfactorily started in pots or boxes in the kitchen window.

For bush beans we like the Rustless Wax and the Stringless Green Pod and Dwarf Horticultural. Edmand's Early and Detroit Dark Red are excellent beets. The Danvers carrot always gives us a good crop. The mammoth White Belgian makes a fine stock carrot for poultry. Golden Bantam and Country Gentleman are our main reliance for sweet corn. Big Boston, Wayhead and Deacon lettuce can be counted upon for an all season supply, the first being best for early forcing and the last the surest in hot weather. The Offenham Market parsnip has never failed to give us a good crop. The summer Crookneck for early and the Hubbard squash for fall and winter generally make good with us and this is not good squash country as a rule. We like the Tenderloin tomato for home use because of its color and flavor, and the Dwarf Stone has done well for us. One of the finest yields we ever had was with the Ponderosa tomato, which is a very fine variety. For early table turnips we like both the White and Yellow Globe, while the Golden Neckless Rutabaga makes a fine sort for winter use. Early Rose and Green Mountain are our choice for potatoes.

There are a host of good things to be found in your seed catalog if you will only make a study of it. Melons make a splendid crop where conditions are favorable and the poultry will feast on the rinds after the family has had the best of the flesh. It is a lot more satisfactory to make your own selection of the seeds you need and can make good use of, than to buy the ready-made "collections" which contain more or less seeds not suited to your particular garden.

Plan your garden now and get your seed order in early.

Read the Advertisements.

IT WILL pay you to read the advertisements in this magazine. Read carefully. You will find many attractive offerings. You will find a surprising variety of good things offered at very reasonable prices. Reading the ads. will answer many questions which you frequently write to the editor about.

We know that many of our readers read AMERICAN POULTRY JOURNAL from "cover to cover, ads. and all," for they tell us so and their letters prove it. But there may be a few readers who do not realize what a big general mail-order market is opened to them in our advertising columns. There are advertisers who want to buy and those who want to exchange or trade, those who offer a wide variety of merchandise, as well as

fine Standardbred poultry, eggs, and chicks for sale.

When you write advertisers, be sure to state "I saw your ad. in AMERICAN POULTRY JOURNAL." It helps you, it helps them and it will help us. You can buy anything from a fence post to an automobile from AMERICAN POULTRY JOURNAL advertisers, as well as the best of Standardbred poultry, eggs for hatching, and baby chicks, together with all necessary feeds and poultry equipment. You can sell anything on earth that is of use to civilized people thru the right sort of advertising in AMERICAN POULTRY JOURNAL. Our readers are good buyers and represent all walks in life on this continent. AMERICAN POULTRY JOURNAL is also a fine business getter in foreign lands, not only in Britain and Europe, but in the newer markets of South American, South Africa, Australia and New Zealand.

Incubators and Brooders.

Do not delay longer in your selection of incubators and brooders for this season's work. The time is short. The earlier you place your order, the less time it will take for delivery of your goods. Later in the season transportation will be much more congested than it is now.

Send today for incubator catalog. You will find that exceptionally good values are being offered in machines and equipment. Many of the manufacturers have made their catalogs unusually interesting and full of useful poultry information. Consult the advertising columns and write today for catalog, if you have not already done so. Don't wait. Do it now!

Make your selection of machines and equipment without unnecessary delay. Get your order in early, as soon as possible, so that there will be opportunity to get the incubators and brooders to you in good season. You will need incubators and brooders this season—or an incubator and brooder—in your work of helping Uncle Sam to increase poultry production. Do not put off ordering until some more convenient time or until near the time when you expect to use the machines. Freight deliveries take time, even express deliveries are not as speedy in the rush season as at other times. Get your order in promptly ahead of the rush.

The United States Department of Agriculture and the State Agricultural Colleges urge greatly increased production of poultry and eggs. The use of incubators and brooders will be absolutely necessary if this greatly increased production is to be accomplished. The

United States needs more eggs and poultry to save beef and pork. Uncle Sam asks everybody to do their bit to "raise more poultry to help win the war." He says: "More poultry means more eggs, and more eggs and poultry meat means a greater food supply. Poultry can be raised at a lower cost and brought to maturity quicker than any other kind of live stock."

Will you do your bit for Uncle Sam? Uncle Sam means "all of us," a united people with a unity of interests. We all need food, the Nation needs more food. Everybody must do his or her bit. More poultry means more food. Incubators and brooders help to get more poultry, which means more food. Get busy on that incubator and brooder order—now!

Back-lotters and war flock poultry keepers will find ready-mixed feeds both convenient and economical. The offerings are many. Feed manufacturers made the best of their opportunity to make up their stock of feeds before the sound old corn was all gone. This insures a better quality of feed. Sound old grain is best. Dependable, commercial ready-mixed feeds from reliable manufacturers will prove safer and better for feeding than new soft corn.

**E. B. Thompson's
Imperial "Ringlet"
Barred Plymouth Rocks**

are recognized throughout the world as the leaders of all Barred Rocks. Their record at Madison Square Garden, New York, 1918, is without a parallel. (See back cover page for this achievement).

You Want Eggs to Produce the Silver Cup and Blue Ribbon Winners for Next Season's Shows

No other Barred Rock eggs have ever produced the supreme high quality birds as my Imperial "Ringlets." Hundreds of old customers order eggs every year — these eggs have brought them rich rewards in Silver Cups and First Prizes, and proved the foundation for many a money-making business.

My Imperial "Ringlet" Eggs will Put You in Position to Win at Next Season's Shows

You may raise a single chick worth hundreds of dollars, hundreds of my customers have done this.

My Matings are Unequaled in All America

No such magnificent color and barring can be found on any other living birds. In my Imperial "Ringlet" eggs you get the best First Prize Sweepstakes Madison Square Garden winning blood, which you must have to win in the strongest competition. I want to help every customer get First Prize Winners—they know they get the finest eggs in America and consider it a privilege. You will share with me and have an equal chance of producing the finest First Prize Birds of the year.

MY EGGS ARE THE BEST MONEY CAN BUY—THEY PRODUCE FIRST PRIZE BIRDS

Mr. E. B. Thompson,

DR. WOODS' NOTES AND COMMENT

Such dupes are men to custom, and so prone To reverence what is ancient, and can plead A course of long observance for its use, That even servitude, the worst of ills, Because deliver'd down from sire to son, Is kept and guarded as a sacred thing! —Cowper.

If the consumer demands more and more service, greater service, as is particularly the case in food production and distribution, how is he going to get that service unless he is willing to pay a fair and just price for it?

Increased production of food is going to be one of the most important problems of 1918. Everyone can do his bit by producing a part of the food needed for home supply in a well-managed garden and with a well-kept family flock of poultry. But this back-lot gardening and poultry keeping will only be a "drop in the bucket" in comparison with the great food supply needed to feed the hungry world. All branches of farming, live stock production and poultry growing on a large commercial scale, need to be encouraged and made profitable in order to secure the necessary increased production. Unfortunately the concentration of effort on the policy of comparatively low prices to the consumer has resulted in discouraging the producer, made some lines of production decidedly unprofitable, and resulted in much seeding down of land which should be cultivated, and in the reduction of live stock and poultry. We cannot hope for increased production of foodstuffs if we continue a policy which threatens the producers with bankruptcy. Low prices on various commodities will not help any if we are unable to secure a supply. It would be far better to pay higher war-prices cheerfully and get at least a fair supply of what is needed, even if the high cost does compel the greatest economy in the use of such supplies. Having had a brief experience with inefficiency which comes of trying to get "the cart before the horses," would it not be better to wake up now and get our team properly hitched, so that we may start our wagon in the direction of success, peace, plenty and prosperity, with some hope of getting there?

PAPE'S S. C. Black Minorcas

are a real factor in the conservation of food, producing profitable results everywhere. They are natural winter layers of large, white eggs; pullets laying at the average age of 5 1/2 months; cockerels as capons readily weigh 10 to 12 pounds and make a most delicious table fowl. Winning Championship Honors for 25 years at America's leading shows insures their exhibition quality. Am offering at popular prices,

EGGS THAT WILL HATCH CHICKS THAT WILL THRIVE

layers, breeders, males that will improve any flock. Mating list with suggestions on "Securing Winter Eggs" free. Please state requirements.

I had 58 Leghorns entered; 45 were placed. If you wish exhibition stock or hatching eggs from the very best matings, write me today. I have the stock in quality and in quantity. I guarantee to satisfy my customers. I quote rock-bottom prices. Where else can you buy S. C. White Leghorns of an established strain that win year after year, both in the show-room and in egg-laying contests? Write me your wants today; I will guarantee to fill them.

Experts on My Great Victory

"I have photographed the best specimens of S. C. White Leghorns exhibited at the Coliseum Show for more than ten years, and I feel that I am entirely competent to speak of the quality of the Leghorns that have been exhibited there during that period. This year the class was stronger than at any time in the past. The specimens exhibited by Frank E. Hering—about 60 in number—were easily the best that have ever been exhibited at the Coliseum. His entries were uniformly strong. He has developed a type with splendid station and fine Leghorn lines that delight the eye of the true Leghorn breeder and fancier. Among Leghorn breeders, Mr. Hering must be assigned one of the foremost places."—Louis Stahmer, Artist of the American Poultry Journal.

"I have been a judge in one or another of the Leghorn varieties at the Coliseum, Chicago, for the last seven years. I consider the S. C. White Leghorn class of 1917 the very strongest that has ever been exhibited at the Coliseum. Frank E. Hering has won the Sweepstakes Championship for the third successive year. This year he had seven entries in each of the single classes and six pens. It is the simple truth to say that his Leghorns are considerably stronger in every class this year than ever before, and that is a mighty strong assertion. Mr. Hering has earned the right to be considered in the select class of the very foremost breeders of S. C. White Leghorns in the country."—Herman Rikhoff, A. P. A. Judge.

BUY MY LEGHORNS AND WIN IN THE SHOW-ROOM

1,000 head of young stock are now on my 15-acre poultry plant awaiting the pleasure of my customers. Every one of these Leghorns is from a pen headed by a Blue Ribbon Coliseum winner. The foremost judges in the country pronounce my 1918 matings the equal of any they have ever seen. My guarantee to satisfy you is given with every sale. Drop me a line today.

1918 - Hatching Eggs - 1918

Eggs from the finest exhibition S. C. White Leghorn matings:

- Per sitting of 15 eggs . . . \$10.00
- Three sittings for . . . 25.00
- One hundred eggs for . . . 50.00

In case eggs from special pens are designated, add 25% additional.

Eggs from other pens, headed by Coliseum Winners—but not Blue Ribbon Males:

growth and will help out the summer and fall meat supply. February and March hatched pullets are dependable egg producers. Produce your share.

* * *

Frank L. Platt, newly fledged U. S. expert and extension poultry husbandman, tells the people of Illinois: "We want to increase the number of back-lot poultry keepers. *Two laying hens for every member of the family will mean a home supply of the city and town man.*"

Those hens which friend Platt has in his mind must be uncommonly productive; sort of theoretical hens laying theoretical eggs, as it were, but we are afraid that such visionary eggs would not be very filling as a home supply. We have four in our family, two adults and two children. We use an average of five eggs for breakfast every morning, total egg consumption in our family averages from eight to ten eggs daily the year 'round. We also average to consume three chickens a week thruout the year. How long would "two laying hens for every member of the family mean a home supply" for us? That would be a flock of only eight hens, which, even tho better than the average, could scarcely be expected to average above 3 eggs per day thru the year.

* * *

We believe that every family of two people, favorably situated, should keep a back-lot flock of not less than ten hens; fifteen would be better. Families where there are two growing children will need a home flock of from 25 to 30 fowls. Fifty birds, where plenty of room for them is available, make a good comfortable family flock that can be economically kept as a source of family food supply. Eggs and poultry make good food for everybody, particularly desirable for the growing youngsters. Increased consumption of poultry meat and eggs should be encouraged. There is very grave danger of a world-wide food shortage. Every family, having land available for the purpose, should produce a part of its required food by keeping a family flock of poultry and having a home garden. Now is the time to plan for both.

* * *

You, friend Reader, can help by securing a few recruits to family flock poultry keeping. But be careful how you go about it. Get the beginner started right. Do not encourage him to go into the work in expectation of big results or of making "profits." If you start him with that line of "great expectations" he is almost certain to be disappointed, may sour on poultry and put in a good deal of time talking against poultry keeping, with the result that he keeps a good many other people from attempting poultry keeping. We have never paid sufficient attention to getting beginners started right. They have been loaded up with matched—not mated—stock that would not breed true. They have been lectured

WINNERS

Below you will find a list of our winnings at the last Madison Square Garden Show. Our birds have taken the cream of the prizes for years at all leading shows.

LAYERS

In the American Laying Contest, 51 pens being entered, our pen of pullets is second. We have bred for years for heavy egg type.

STARKS WHITE ROCKS

Unquestionably the best beauty-business strain of the greatest all-purpose fowls ever produced. A broad claim, but fully substantiated by the facts. Starks White Rocks are uniformly excellent in exhibition qualities; equally good at the nest and on the block. We have kept show and utility qualities in balance, never sacrificing one for the other. Hence these beautiful Rocks are truly

WINNERS and WORKERS

STARKS "GARDEN KING"
1st Cock, Madison Square Garden, 1917-18

This season we exhibited at two big Eastern shows: Hagerstown Fair, the leading fall show, and Madison Square Garden, the premier fanciers' show of America. At Hagerstown we won, on five entries, First, Second, Third, Fourth and Fifth hens; a clean sweep of the class. At the Garden our birds captured these prizes: Cock—First, Third, Fifth. Cockerel—Second, Fourth. Hen—Second, Third, Fifth. Pullet—Third. Pen—Third. **This is the greatest White Rock winning ever made at the Garden by a Western exhibitor.** The above, in addition to leading prizes formerly won at Chicago, Cleveland, Syracuse, Indianapolis and other well known shows, prove that Starks White Rocks are winners.

STARKS "WISCONSIN BELLE"
Certified Record 240 Eggs in Pullet Year

The hen shown above is a typical specimen of a remarkable family of heavy layers owned by Starks Farm. The other hens in the same pen made pullet-year egg records as follows: 247, 247, 246, 244, 244, 241, 240 and 239 eggs. The male that heads this pen is the son of a 240-egg hen and was sired by the son of a 226-egg hen. This notable group of show-quality, heavy-laying White Rocks probably cannot be duplicated elsewhere. While we have pens mated especially to produce show specimens of highest quality, we wish to particularly emphasize the fact that our birds are all above the average as egg producers.

Starks White Rocks are remarkably uniform in color, size and conformation. They have the true Rock shape, pure white plumage, rich yellow legs and beaks and red eyes. Further, they possess abounding vigor and vitality because they are bred in "the north country," a region of bracing summers and dry, cold winters. Altho distinctly superior in all the desirable qualities demanded alike by fanciers and utility poultrymen, Starks White Rocks are priced moderately. We still have a number of desirable breeders for sale. Write your wants and we will promptly send quotations. Hatching eggs will be supplied in season. We suggest early booking of egg orders.

Write now for complete catalog. It's free.

What's a **CAPON** and Why?

A BOOK that explains everything you will ever want to know about CAPONS. 50 pictures from life show each step in the operation. List of Capon dealers' addresses. Tells how to prevent "sings" where to get the best and cheapest caponizing tools. Capons are immense eaters. Big profits realized. Get wise. This book tells how. Regular 50-cent copy, prepaid to your address (a short time only), for a dime in coin or stamps. **GEORGE BEUOY, R. R. No. 7, CEDAR VALE, KANSAS**

so much about "new blood" and about "breeding unrelated stock" that they have been constantly mating unrelated stock with most discouraging results—when every experienced breeder knows that it is only by skillful inbreeding of well mated birds that quality specimens can be produced. The beginner gets "hen fever" and goes into the new undertaking full of hope and enthusiasm. We cannot afford to neglect our opportunity to help him toward success. It is mighty poor policy to load him up with everything he will buy, whether he needs it or not, and then look around for "a new sucker." A successful beginner means a substantial addition to poultrydom and a steady customer for those who give him a square deal. He will bring in more recruits to develop the poultry industry. A discouraged and disappointed beginner may result in far-reaching injury to the business even tho his failure was apparently a very small matter. Help the beginner. Get him started right. Help him to become successful and to be an asset in a great co-operative federation of poultry keepers.

* * *

The periodical agitation against open-front or open-air poultry houses has bobbed up once more. Frightful tales are being told of the sufferings of fowls in cold houses and of birds "dropping dead from the roosts." Some of these opponents of the open-front poultry houses have very vivid imaginations, but evidently have had very little poultry experience. Representatives of the S. P. C. A. have investigated open-front poultry houses and found that even in

(Continued on Page 241)

Shoemaker Poultry Farm

Freeport Illinois

Established Over 28 Years

Don't endanger your success

by using a poor incubator. Your incubator will be the keystone of your season's efforts. If it fails you or does not give the maximum of efficiency you lose at least several weeks' time, or maybe the whole season. Incubators will be hard to get on short notice this spring, due to manufacturing and shipping difficulties, so prepare now.

Globe Incubators and Brooders

are not just "good enough." They are the best machines on the market today and we are willing to prove it. They are not mail order house machines, but are built to last and give satisfaction for a generation. No machine leaves the factory until it passes the most rigid examinations, for our good name is back of every one of them. Our motto is: "How good we can build them—not how cheap." The remarkable hatches which our customers obtain is positive proof that you can afford to buy but one incubator and that is the **GLOBE**.

Genuine success cannot be achieved in incubator work unless the work is completed by using a really good brooder. Compared with an incubator, a brooder is rather a simple apparatus, but nevertheless the work it has to do demands that it be thoroughly well made. Globe brooders are made with the same painstaking care as Globe incubators.

HATCHING EGGS

Book orders now for hatching eggs for spring delivery

WHAT CAN BE DONE FOR OUR SMALL POULTRY SHOWS?

By A. J. KYLE, Short Falls, N. H.

I AM WRITING this because I am interested in poultry and the future of the poultry business. It means a great deal to me, and if all the time and work I have put into the breeding of Barred Plymouth Rocks has been wasted I want to find it out now, before I go any deeper into it.

When a small boy, I had chicken-pox, and it must have struck in, for I have had hen fever ever since. I breed Barred Rocks because I like them best and think they are the one best breed. If I liked some other breed better I should breed it and call them the best. Our egg-laying contests have proved beyond a doubt that it's the strain, and not the breed, that makes for success or failure.

Now, after all these years of work and after success beyond my expectations, I read, and am told by men who ought to and do know more than I about the poultry business, that what I want

CASWELL SWELL
Registered Airedale dog, property of P. H. Sprague, Ave. I, Maywood, Ill.

to do, also what I have done, cannot, and never will, be done. I am always open to conviction, but I am hard to convince, I guess, for in spite of all I read and hear, I am going to continue as I have in the past, and when the time comes, if it ever does, that I have to give up and acknowledge that I was wrong, I will do so with as good grace as I can, but before that time comes I am going to try to get a few more breeders to go under with me.

Page after page is printed in our poultry magazines about double mating. More space is taken up by breeders arguing for and against splitting up the Barred Rocks into two separate breeds, light and dark, but never a word is said against the most pernicious system of double mating that has ever existed—the bred-to-lay and the exhibition mating. Is there any good reason why the fancier should not breed for eggs as well as feathers? None at all. Is there any reason in the world why the so-called utility breeder should not breed for standard points as well as high egg production? I think not.

When the breeders of this country make their strains both layers and lookers, the poultry business will have taken the biggest stride in its whole history.

There has recently come into my possession a copy of Geo. P. Burnham's book, "The History of the Hen Fever," published in 1855. It is a remarkable book in its way, and teaches a lesson that we well may profit by at the present time. It covers a period in the poultry business that few of us know any-

DR HESS POULTRY PAN-A-CE-A

Get winter eggs. Make your hens lay better. Dr. Hess Poultry Pan-a-ce-a has a direct action on the egg organs. It tones them up, makes more of the feed go toward egg-making. Feed it regularly to condition pullets and hens, to make them feel well and to give them a real laying disposition. Do this and keep your hens right on at steady laying all through the winter. Dr. Hess Poultry Pan-a-ce-a will do this for you under straight-out guarantee. If you find it does not, the dealer is authorized to refund your money. Packages 25c, 60c and \$1.25. 25-lb. pail, \$2.50; 100-lb. drum, \$9.00. Except in the far West and Canada.

BOX A

PLAINFIELD, ILL.

A pair of bred-to-lay S. C. R. I. Reds on the farm of John G. Poorman, Box 100, Tinley Park, Ill.

thing about, from 1849 to 1855. Mr. Burnham attributes the failure of the poultry business at that time to the fact that chickens *did not pay*, and ate their heads off. From that time on breeding was carried on by a few fanciers who loved the birds. Grain was cheap, and they could afford to keep them just to show the one object was to breed a bird that would beat the other fellow at the show or to sell them to some other breeder for this purpose. During this period, and long before, there was the farmer who "kept hens." It is hard to tell just why he kept them, for they were classed as a nuisance and seldom paid their keep. As a rule they were a cross of every known breed, and some unknown ones for good measure.

Then, thanks to the fanciers who originated the new breeds and standardized them, came the poultry magazines, poultry associations, and, thanks to them, the departments of poultry husbandry at our state colleges. The farmers did not ask for them, I am sure. Next came the egg-laying contests, and with them the bred-to-lay breeder, and for the first time systematic breeding for increased egg production to any extent, tho a few breeders had started some time before this to trapnest and breed for eggs. Unfortunately, it was not the fanciers who did this, and the public as well as many of our experimental stations jumped at the conclusion that show birds could not be bred to lay and bred-to-lay birds could not

be bred to show. In 1914 came the war and the price of grain began to soar, the small fancier in our towns and villages sold his birds or ate them, for he could not afford to keep birds that did not pay their way. The true fancier who loved the birds for their beauty will never keep the bred-to-lay stock that the average breeder sells. The result is, his house is empty, and many of the smaller shows have had to be discontinued, and all of them have had coops to spare that had the courage to run shows this season; but you ask how about the thousands that have started a small flock of bred-to-lay birds to help out the high cost of living?

They are very enthusiastic at first, but the profit on ten or twenty hens

MAPLESIDE Bred-to-Lay Barred Plymouth Rocks

Regardless of what some may say who perhaps have never produced a phenomenal layer worth while, Mapleside produced the phenomenal layer Liberty Lass, record 268 eggs in one year. She was also a phenomenal breeder—90 percent of her eggs hatched. She also possessed phenomenal precocity, manifested generation after generation; twenty of her daughters laid 4,064 eggs in one year (one went 250); ten first granddaughters laid 2,123 eggs in one year (one went 249). Her son sired the six pullets that averaged 242 eggs each in one year (one went 261). One of her great-granddaughters so far laid 266 eggs in 10 months and 29 days, with no signs of quitting. Her blood and breeding permeates my entire flock. My catalog tells the rest; it's free.

Write your wants fully to

HAROLD TOMPKINS - Box A - CONCORD, MASSACHUSETTS

is not enough to hold them long; they soon tire of the care and confinement and sell out. If they had the added incentive of being able to show their birds and win at the local show, they would stay and become true fanciers, for when we can combine both pleasure and profit, too, they will not tire of them.

Our colleges and farm papers are advising that we keep only pure-bred flocks. That is good as far as it goes, but what we want is standard-bred flocks.

Some of the shows are introducing the utility class. This may get them a few more birds, but otherwise does more harm than good. If there is any way that a judge can tell the number of eggs that a pullet will lay or that a hen has laid, it should be in the Standard of Perfection, and with 365 eggs as perfection, the birds should be cut and scored for this as well as for plumage, shape, etc.

After many years of trapnesting I can state that almost without exception our biggest layers have been standard weight and shape. I was told a short time ago that the poultry shows would have to go. If they do, it is our fault. The same party said the fancier had had his day. If he has, it is his fault.

I believe in trapnesting as the only sure way of breeding for increased egg production for the large breeder. For the small breeder it is, of course, cheaper, and, as a rule, better, to buy males, hatching eggs or chicks. There are too many exceptions to the many methods of picking the best layer. We have trapnested all our birds for years because we think it pays. It enabled us to breed Pen No. 6 at the last egg-laying contest at Storrs. This pen won the contest with an average of over 211 eggs. The sire of this pen was a sweep-stake winner as best parti-colored bird in the show at one of the largest shows in the state. Own sisters to the Storrs pen were in our winning pen at the state club meet last year. At a recent contest a White Rock laid 304 eggs, and scored well over 90, and yet we are told it cannot be done.

I have heard many men say, "I don't care what my hens look like as long as they lay," and in two minutes he will be trying to show you some hen that he thinks has extra good color. In spite of what he says, he likes the show bird, and if the show birds would lay as well as the others he would have them, for every breeder is a fancier at heart.

Get a good strain of the breed you want and breed them for eggs, and feathers, too. Don't lose sight of one in trying to get the other, for they are both important in their way.

When you buy a bird ask for the egg record back of it, but ask for more than that, ask for shape and color. When there is a demand for layers and look-

ers combined, they will be bred, and when they are we will do away with the so-called utility class and double the size of our shows, as well as the attendance.

With exhibition birds bred to lay we will have the biggest and healthiest poultry boom we have ever had, and one

that will grow and grow, for if they lay everyone can afford them, and if they win everyone will want them.

Fine feathers make fine birds, and with eggs to pay the grain bill there will be no excuse for not keeping a few birds and doing your bit to help win the war.

Harrysbourg Colony Hover

Only Successful Blue Flame Oil Burning Hover on the Market

Burner absolutely wickless, burns like natural gas thruout the season without any attention in the way of cleaning. No ashes—no smoke—no soot.

Holds perfect temperature in mild and in cold weather; produces more heat from oil consumed than any other oil burner, burning 40 to 65 hours on six quarts of oil.

This burner, in connection with our ventilating system, produces wonderful results. Its use means strong, healthy chicks. The following letter from a large farm in Missouri explains the performance of this hover in few words:

Brandsville, Mo., October 29, 1917.

Gentlemen—Regarding your Blue Flame Hover, we are very much pleased with the results. It fills the need of a stove which will stay with the chicks all the way thru. A coal stove is with them upon retiring at night, but falls down before morning, while a stove of your type is right on the job every minute.

Haight Orchard and Developing Co.,
P. D. Farrington, Poultry Dept. Mgr.

Harrison, Ohio, October 2, 1917.

Gentlemen—In reply to yours of September 28th, will say that your new hover is a good one. The burner is indeed a perfect burner for this purpose, and it is a great heater.

Fraternally yours,
W. W. Brackenridge.

Redonda Beach, Cal., December 26, 1917.

Dear Sirs—The three burners you sent me for my coal brooders arrived and were at once put into action. I admit I was a trifle skeptical owing to the poor work of some of the local outfits, but I am perfectly satisfied. You have the right burner for the purpose. They certainly work fine. I shall be glad to show them to any prospective buyers who may care to investigate. Thank you for the prompt shipment. Very truly yours,

E. G. Panter.

Hover is made in two sizes: 40-inch canopy for brooding 100 to 300 chicks; large 50-inch canopy for brooding 100 to 600 chicks. Thirty-day guarantee. Send for catalog.

Change Your Coal Brooder Into a Perfect Blue Flame Oil Burner

Seventy-five percent of orders last year were from poultrymen dissatisfied with the coal brooder stove. Use our Blue Flame Burner with all connections ready to be installed in any coal brooder. Plenty of heat for a 52-inch canopy. Guaranteed to give perfect satisfaction or money refunded. Cut in this ad shows device connected to a coal brooder stove. Send for catalog.

Mention the American Poultry Journal when writing to advertisers.

UNCLE SAM SAYS "RAISE MORE POULTRY PRODUCE MORE EGGS"

"Keep more backyard flocks
and larger general farm flocks"

"The quickest and cheapest way of adding to our meat supply is to increase poultry and egg production. We cannot increase any of the meat animals as rapidly or economically as poultry. The United States Department of Agriculture wishes every farmer to understand the importance of doubling our poultry production this year."

The American School of Poultry Husbandry offers you

a complete poultry education for the price of a small incubator or two sittings of eggs. Now is the time to make your back lot profitable, to increase the cash income from your farm or reap a harvest in the poultry business. *Start today but start right!*

It is our earnest desire to enable every man or woman who is interested in poultry keeping to secure a real, useful, practical poultry education. We wish to see more and better poultry raised—to see more people make money with chickens—we desire to eliminate the loss and disappointments that so many poultrymen experience—we want to help you solve your poultry problems—and we can do it.

Nowhere Else in the World Can You Secure So Much Poultry Knowledge At Such Slight Cost

WHY SUFFER LOSS AND FAILURE It is no longer necessary to blunder along and learn practical poultry husbandry in the expensive school of experience. We have made it possible for you to obtain, right in your own home, during spare time, complete, thorough and practical knowledge of poultry husbandry, such as you could get nowhere else except at an Agricultural College. The cost is slight and absolute satisfaction guaranteed.

In a course of lessons taught by mail, we completely cover the science of poultry husbandry and make it so plain and simple that any one can understand and apply it. This course contains the knowledge gained through over 30 years of actual experience by Professor Quisenberry and other poultry experts, and from the results of official investigations and experiments which have cost the United States Government and State Experiment Stations practically \$1,000,000. This great course is now being used by thousands of successful poultrymen in every State in the Union and in fourteen foreign countries.

Graduate Makes Money On City Lot

Would \$50 to \$500 or more profit from a side line, conducted in your spare time, be an object to you? You can easily make that amount from hens without interfering with your regular work, provided you possess the necessary knowledge of the business.

Read the experience of Mr. Clunie. Note the illustration of his neat and attractive backyard plant, built according to our instructions. Among our students are hundreds of backyard poultry raisers who are cutting down the high cost of living by producing much of the meat and all of the eggs required for their family and a surplus for sale at good prices to their less progressive neighbors.

Russell Clunie of Wisconsin writes: "I am more than satisfied with the course and with the instruction and help given me. I am at present getting more eggs and better eggs than any one around here. Also have reduced my feed bill 10 to 15% as a result of the knowledge obtained from your lessons. I now have 100 pullets, some six months old, that have been laying for a month. Some of my White Wyandottes started to lay at 4½ months. I also have 30 hens averaging a 50% egg yield or over in October. I certainly have enjoyed taking my course and am sorry that it is now finished."

"Dollars And Sense In The Poultry Business"

is the title of our Free Book which fully explains how we can help you make more money raising chickens. It discusses the poultry industry in detail, contains many interesting pictures and tells just what our lessons will teach you and what we can do for you. Our new bulletin entitled "How To Solve The Poultry Feeding Problem," contains many practical, money-saving hints. These publications are free, but we will appreciate 10c to cover mailing cost. Write for them today.

We Teach the Quisenberry Way

AMERICAN SCHOOL OF POULTRY HUSBANDRY

Box 206

Leavenworth, Kansas

T. E. QUISENBERRY SAYS "I CAN SHOW YOU HOW TO

GET
MORE EGGS
AND RAISE

MORE CHICKS"

Thousands of people are making a good portion of their livelihood from poultry. Thousands of other people reduce their living expenses 25 per cent. or more from chickens. There are many sound reasons for the popularity of poultry raising on either a large or small scale. First, there is good money in chickens. Second, they may be kept on a limited space of ground. Third, they reduce the cost of living. Fourth, they furnish the most profitable side line a person can pursue. But if you are to succeed you must know how.

The first few dollars which you spend should be spent in learning the business. Our Practical Course in Poultry Husbandry will teach you more in thirty days than you would learn in two years by experimenting for yourself. We show you how to easily and cheaply construct the necessary coops or houses; how to feed and to save on your feed bill; how to select your best laying hens and get rid of the drones; how to manage your poultry so as to make the most out of it on a limited area; how to avoid disease and cure most diseases; how to make money from broilers; how to get fertile eggs and avoid death in shell; how to caponize; how to make two pounds of gain on young chickens where ordinary poultrymen get one; how to use the waste space in your backyard for a healthful occupation that brings happiness and good money; just how to insure your success in any branch of the poultry business. *We guarantee to satisfy you or return your money.* In addition to the books and lessons we give each student five years' free personal help. This alone is worth more than the price of the course.

These Lessons And Our Personal Help Are Your Protection Against Failure And Your Guarantee Of Success With Poultry

OUR GUARANTEE—Money Back If Not Satisfied Every student who enrolls in the American School of Poultry Husbandry must be satisfied. Whether you pay cash in advance or enroll on the installment plan, if upon completion of the course you are not *entirely satisfied*, both with the course and the assistance given you, we will make an effort to satisfy you in every way or your money will be promptly and cheerfully refunded.

If we didn't think we could help you; if we were not positive that we could save you from financial loss and perhaps save you from sinking a lot of money in the poultry business; if we did not feel that we could help you to avoid mistakes and teach you a lot of things that you should know we would not want your money. We have nothing to misrepresent. We would like to have you on our "roll of honor" as one of our progressive and wide-awake students, but if we did not feel and know that we could help and benefit you we would not want you to enroll. There are thousands of people who cannot attend or avail themselves of the advantages of an Agricultural College to one who can do so. It is not necessary for you to give up a good position or to sacrifice your income and your present business to take this course.

Special Low Cash Prices This Month

(This is One-Half of Regular Price if the Coupon below is Used)

- Short Practical Course (12 Books, 21 Lessons) \$15.00
- Complete " " (23 Books, 38 Lessons) 25.00
- " Judging " (7 Books, 18 Lessons) 20.00
- Complete Practical and Judging Courses (25 Books, 48 Lessons) . . . 35.00

These are the reduced cash prices. A slight additional cost if taken on the installment plan. On receipt of cash or first installment of \$5.00, lessons will be sent. These prices also include five years' free personal help by T. E. Quisenberry and a corps of poultry experts.

These lessons pay for themselves many times each season. If you are not satisfied you do not pay. We urge every one to take the full and complete practical course, for that is the one which

Farmer's Wife Makes \$1,782.91

gives you a complete and thorough knowledge of the poultry business and makes your success more certain. However, you will be pleased with either of the courses.

Mrs. GEO. RUSSELL, a Missouri farmer's wife, who raises and handles her chickens the "Quisenberry Way," states that: "Last year I kept 365 Brown Leghorns 'The Quisenberry Way' and the cash sales from my flock were \$1,782.91 and I now have 200 head additional stock besides." Geo. HATCH of California says: "Following your teachings I turned \$275 worth of feed into \$667 worth of eggs last month."

Hundreds of other farmers, farmers' wives and commercial poultrymen are succeeding with our methods. WHY TAKE CHANCES?

Get This Bulletin on Poultry Feeding FREE! It presents the solution of the feeding problem, the most serious question before poultrymen today. It will enable you to save from 50c to \$1.50 per hundred on your feed. Our book—"Dollars and Sense in the Poultry Business"—contains 72 pages of poultry facts and attractive pictures.

Every poultry keeper should secure these inspiring, helpful books. Valuable alike to fancier and utility breeder, "back-yarder" and professional poultry farmer. They point the road to success. The books are free but we will appreciate 10c in stamps to pay mailing costs.

And help win the war by raising chickens in a

Liberty Colony Brooder

Build it yourself. Easy! Requires a few feet of lumber, a few joints of stovepipe. We send complete plans and all equipment. Gives you a brooder 44 inches square with all space under canopy available for brooding purposes. Has capacity of average coal-heated brooder. Uses Sol-Hot Oil Lamp and stovepipe hot air system.

Writes: "Have your Colony Brooder running. 410 chicks under it. It's a splendid Brooder. Work is less than with coal stoves." Equipment consisting of Sol-Hot Lamp, Regulator and Thermometer, \$5.00.

SOL-HOT WICKLESS BLUE FLAME OIL GAS LAMP

Burns coal oil but by combining about 95% air with 5% vapor from this inexpensive oil, produces a perfect blue and Sol-Hot flame. New automatic oil filter enables it to burn low grade oil perfectly. Visible oil feed gives absolute flame regulation and prevents flaring or creeping of flame. Equipped with safety shut-off and automatic flame control. Leaves no residue, smoke or soot. No wicks to trim—no danger. Made in three sizes. Will increase the efficiency of any standard incubator or brooder. Write for booklet describing it.

Liberty Hatcher

is made in two sizes, 70-egg and 100-egg capacity. Nest type. Eggs held in circular rows by inclined rings in deep hatching tray. Chicks drop into nursery beneath as they hatch. Combined damper and flame regulation and construction of egg chamber give uniform heat and save fuel. Surplus heat and foul gases escape automatically. Has standard first class equipment. Durable built-in heating system welded by electricity. Costs little—takes little space. Try for one hatching. If not satisfied, return and money will be refunded.

Write for literature on Liberty Hatcher, Liberty Colony Brooder, Sol-Hot Lamp, Regulators, Lamps, Tanks, Heaters, etc. Free plans for building your own incubators and brooders.

Why We Breed S. C. W. Leghorns.

WE BREED S. C. W. Leghorns because they have given us greater returns for the care, attention and feed given them than other breeds have done.

What I am about to tell you, many others have told. However, the merits of this most popular breed should be constantly placed before our readers.

At one time the writer bred White Wyandottes, but soon discovered that they were not the kind wanted. They were not as lively as we cared to have them, consumed a considerable quantity of feed for the return in eggs, and as soon as warmer weather set in, they became broody. Consequently no eggs and no money coming in.

While I kept Wyandottes, my mother kept Barred Rocks.

She cared for them as well as she does now for White Leghorns, but the results were not satisfactory. They, like the Wyandottes, were not active enough, would not work for their feed, which would have given the exercise needed for them to produce eggs in sufficient quantity.

Let me say right here that eggs are the surest source of profit in poultry. I believe I am safe in saying that there are many more egg-farms paying a profit than there are farms whose business is to produce poultry meat. In this connection I also believe that nine-tenths of these egg-farms are stocked with S. C. W. Leghorns. Why? Because they pay best. And in this connection let me refer you to page 97 of the January, 1918, issue of AMERICAN POULTRY JOURNAL, where you will find a report from the egg-laying contest at Storrs, showing the quantity of feed consumed, together with the number of eggs produced. There you will find the Leghorns consumed less feed and produced more eggs than the other varieties.

As a table fowl, I find them a splendid variety. Their meat being of elegant flavor and of fine grain. While they are not as heavy as the meat breeds, one can practically raise two Leghorns to one of the heavier for the same cost. In other words, if one does not satisfy your appetite, kill two.

The S. C. W. Leghorn has given me greater satisfaction from the time the egg was placed for incubation until I parted with the old fowl.

Leghorn eggs run very high in fertility, hatch well, and the chicks are easily raised.

The young cockerels make excellent broilers and bring a good price in the market. They will pay handsome returns when sold at a weight from one to one and one-half pounds. These broilers will usually pay the cost of all hatching eggs and feed until the pullets are from three to four months of age.

While we find the White Leghorns excel as a utility fowl, they have no superiors as an exhibition bird.

Show me, gentle reader, where there is a fowl whose appearance in the show room, or otherwise, is more pleasing than that of the S. C. W. Leghorn.

Breed S. C. W. Leghorns and possess that thing of beauty and a joy forever.

The

S. C. W. Leghorn

will save the poultry business of America

*The Only Breed to
Make a Profit in 1917*

Copyright 1917 by F. W. Lord

WE ARE better prepared than ever to furnish the trade with more high quality S. C. W. Leghorn day-old chicks than ever before. We have increased our breeders over 50 percent, and at the present time are building four mammoth brooder houses at a cost of over \$10,000 to take care of the increased W. Leghorn business we believe is coming. We recommend you to follow our example because eggs will be scarcer than ever until long after the present war is over. There will be good profits in Leghorns this year. Grain will be lower and eggs will be higher. If you made any kind of a profit last year you are bound to beat it this year. This is no time for cold feet in the poultry business.

We are selling chicks this year as low as 16½¢ in thousand lots. Our next grade is 19¢, and our A grade is only 22¢, the finest utility mating, we believe, in America at the price.

We now have a hatching capacity of over 100,000 eggs at one time, and large farms that wish to purchase in 1,000 to 10,000 lots will find that we have every facility for handling such orders promptly.

Our strain of Leghorns is known in every state and county, and practically every town east of the Mississippi River. Go where you will and you will find the Lord Farms Leghorns. Scores of plants thru the Eastern states that are now doing a good W. Leghorn business themselves get their start from our stock. We believe there is no other plant in America selling baby chicks whose customers have received better satisfaction from the stock they have purchased. From a small beginning we have steadily grown to our present size, and this has been accomplished entirely by good service to the trade. Our idea from the start has been to deliver uniform shipments of the highest class utility Leghorns.

Don't forget that your profits for the coming season depend to a great extent on where you place your order for chicks.

Our catalog, mating and price list
mailed immediately upon request.

In the spring of last year we moved to a place in a small city in another state. There was a small henhouse, about 6x8 feet, on the place, with a yard about 15x25 feet. As I didn't know how well the former tenants had 100-percent hatch from the Reds, but not so good from the Rocks, a lack of vitality, I think, in that particular batch of eggs. We did not lose a Red on the way to maturity, but several of the Rocks died.

You Can't Go Wrong If You Buy A Newtown Colony Brooder

- Coal-Burning
- Self-Feeding
- Self-Regulating
- Efficient
- Economical
- Durable
- Safe

The first successful coal-burning colony brooder. Imitated but never equalled.

The modern coal-burning colony brooder is the most satisfactory brooding equipment ever produced. And the Newtown is acknowledged to be *the most efficient brooder of this type.* In all parts of the world, under all conditions, the Newtown *"raises the most chicks, the best chicks, with least labor and at lowest cost."* Ask any Newtown owner!

The Newtown was the first successful coal-burning colony brooder on the market. The first Newtown was a wonderful brooder, but through years of experience we have improved it in various details until today it is scientifically and mechanically perfect—the *one perfect brooder.*

Made in five sizes, for any number of chicks to 1000. Carefully constructed of superior materials, built to last for years. Burns coal, either hard or soft. (Gas burner can be furnished.) Fuel self-feeding. Self-regulating. Freely ventilated. Safe. Easy to install. Requires no special building. Simple in operation. Efficient to the highest degree. **GUARANTEED.**

Not the cheapest brooder in price or construction. But priced moderately and greatest value for the money. Tell us about how many chicks you plan to grow this year and we will mail brooder catalog free.

The Newtown Giant Incubator, like the Newtown Colony Brooder, is the choice of the most successful poultry raisers. Built in many sizes, 600 to 24,000 egg capacity. Let us know which size interests you and we will promptly forward full information regarding it.

I made individual coops or boxes for each hen and her brood, staking the hen within reach of her box and allowing the young chicks the freedom of the yard until half grown or large enough to be of some damage to our garden. We brought these chicks along on wheat, bran and middlings and on such chick food as we could find in the town. The pullets came into laying about the first of December. We had not intended keeping any cockerels, so used them on the table. We now had the six hens, six nice White Rock pullets and fifteen Red pullets, twenty-seven in all; but from broodiness or colds, thru the winter there were probably not more than twenty-five layers at any one time.

We kept a careful record of receipts and expenses from the time we bought the six hens to the 10th of the following May, when we left the place and had to sell our little flock.

The following is the egg record—for the summer, of course—only from the hens until the pullets commenced laying (June missing): July, 36; August, 98; September, 101; October, 53; November, 39; December, 60; January, 183; February, 277; March, 506; April, 507; to May 10th, 200; total, 2,060. The daily lay in the best months was from 12 to 22, the last number being laid on one of the coldest days of the winter. Our method of feeding was about as follows: In the morning, a mixture of whole oats (the oats soaked over night), wheat and a little corn; at noon only the table scraps, unless these were scant, when a little moistened bran and middlings were added; at night, corn, wheat and a little sunflower seed.

For green stuff, we fed lawn clippings, kale, cabbage, beet leaves, mangels, etc. Fowls are very fond of the large leaves of kale. Grit, oyster shell and charcoal were before them all the time, in a home-made feeder, with the proper compartments. Also, we saved the shells of all eggs used and, when perfectly dry, pounded them up and fed to the flock with the oyster shell. I also made a feeder in which we aimed to keep heavy bran all the time, but they ate it so fast that I sometimes let them go without.

Always—morning, noon and night—I saw to it that they had fresh water, given in a box made water tight by a coating of cement. This matter of water is of as much importance to poultry as feed. Watch a flock after feeding and you will see that this is so. But ask some poultry keepers and they will tell you sometimes their hens get water and sometimes they do not. But

S.C.W. Leghorn and White Rock

EGGS for HATCHING AND BABY CHICKS

from America's greatest layers. Trapnest records of 200 to 264 eggs guaranteed. This is not a hatchery, but a real poultry farm and we own and know every fowl and the record and condition of it. Vigor, vitality, full count, safe arrival and absolute satisfaction guaranteed. 40,000 chix for 1918. Orders being booked every day for April, May, June and July deliveries. EGG CANDLERS We carry a complete line at all prices from 35c to \$7.50. Be sure to send for catalog describing them.	THERMOMETERS For any make of incubator or brooder. Price 85c each. Also thermometers with electric light attachments and others that ring bell if temperature gets too high.	
EGG STAMP Name and address with dates \$1.75. Without dates \$1.35.	LICE KILLING NEST EGG Place in nests and rid your fowls of lice. 75 cents per dozen.	
Celluloid Leg Bands For Chicks, 10c doz., 50c per 100. For Hens, 15c doz., 75c per 100. Catalog describes 14 kinds of bands.	TOE PUNCH For marking little chicks. As illustrated for only 25 cents. Several other styles at low prices.	
WATER FOUNTAIN For Chicks Used in connection with an ordinary Mason Jar. Price 15c each, \$1.50 per doz.	<h2 style="margin: 0;">Satisfaction or Money Back</h2> <p style="margin: 0;">If you are not fully satisfied with any articles you buy from us you can return them at our expense and we will refund your money. We carry only the best quality goods—the kind we can recommend and guarantee. We buy in carload lots, sell for cash, and quote lowest prices. Prompt shipment is one of our features, all orders being filled within 24 hours. Eighteen years of steadily increasing business assure you careful attention to all orders you send us.</p>	
Feeding Troughs For Feed, Wet Mash or Water. Three sizes — 12, 18 and 24 inches long. Lowest prices.	NESTS Metal or wood. Several kinds at lowest prices. See catalog for particulars.	
FEED HOPPERS We have so many kinds of hoppers and grit and shell boxes that there isn't space to list them here.	TRAP NEST (front) Fastens to orange crate or other box. Price 50c each, \$5.50 doz. Wood and metal trap nests—all kinds.	
HOPPER with Rain Guard For outdoor use. 20 quart capacity. Price \$3.50.	ROOSTING OUTFITS Equip your poultry house with these outfits. Several styles. Also lice proof roosts.	
Crockery Fountains Never wear out. Sizes from one quart at 35c to two gallon at 60c.	CLOVER CUTTERS Root Cutters, Cut Sprouters. Every modern method of supplying your fowls with green food.	
Thermos Fountains Keep water cool in summer and warm in winter. Three sizes. Catalog gives particulars.	GRINDING MILLS Grind your oyster shell, grain, etc., in one of these mills. Price only \$3.75.	
Round CHICK FEEDER A great feed saver as the chicks cannot get into it. Large size, 35c each, \$4.00 per doz. Small size, 20c each, \$2.25 per doz.	FEED MIXERS Several styles — both hand and power. Properly mized mash gives best results.	
AUTOMATIC FEEDERS If you do not have time to feed your birds regularly, you need these feeders. Several sizes and kinds from \$1.65 up.	FEED COOKERS Several different kinds, from the cauldron cooker as illustrated, at \$13.50 to steam cookers at \$15.	
DISINFECTANTS and Lice Destroyers Get our prices before you buy. We have several kinds. Our Carbolineum Lice Killer at \$1.35 a gallon will keep mites away an entire year with one application.	BONE CUTTERS Fresh cut bone is better and cheaper than meat scrap. One of these cutters will soon pay for itself.	

Get Your Copy of This Free Catalog

No matter what you may need in the line of poultry supplies we have it. The items listed above are only a few of the several hundred articles that are described in the catalog. Our prices are low, and we guarantee everything you buy to give complete satisfaction. If you order anything that is not just what you want you can return it at our expense and get your money back. We also ship C. O. D. if desired. Send for your copy of the catalog now — you are sure to need some of the articles described.

GEORGE B. FERRIS, 605 Shirley St., Grand Rapids, Mich.

Eggs and Broilers are the reasons why you raise chickens. To get the most of either you must have strong, healthy, vigorous birds in your flock. Healthy birds come from healthy chicks—not from chicks whose vitality is sapped by lice and mites and contagious disease germs. Nothing—not even feeding—contributes more to success with poultry than clean, sanitary, living quarters. The houses may be built of old packing cases or of finest matched lumber and according to most modern plans, but they must be kept clean and sanitary, and free from lice, mites, and disease germs in order to get satisfactory results.

You can make your houses sanitary—free from lice and mites—and prevent the germs of contagious diseases—such as white diarrhea, roup, etc.—from getting a start and spreading through your flock, and at the same operation you can paint the houses a clear, snow-white, making them lighter, brighter and more attractive looking. Follow the example of thousands of poultrymen and many U. S. Experiment Stations, large dairy and stock farms, and use

CARBOLA

The Disinfecting White Paint

Carbola comes in powder form and there is a size package to suit your needs. Just mix the powder in a pail with cold water and it is ready to use—no waiting, straining or bother. One pound with a gallon of water covers about 250 square feet. You can put it on with a whitewash brush or a spray pump, to wood, brick, stone or cement or over whitewash. It will not clog the sprayer, nor blister, flake or peel off. Has no disagreeable odor and is harmless to the smallest chick. The dry powder is unexcelled as a lice powder.

Carbola Dries A Clear Snow White
Use Carbola to disinfect your incubators and all your poultry buildings, stables, dairies and piggeries. It makes work easier and gives better results. Give it a trial and save time, money and labor. Money back if it is not what we claim.

10 lbs. (10 gals.) \$1 and postage 20 lbs. (20 gals.) \$2 delivered
50 lbs. (50 gals.) \$4 delivered
Trial package to cover 250 sq. ft., and booklet.
The Disinfectant that Paints—For 25c postpaid.
Carbola is sold by hardware, seed, paint and drug stores. If your dealer has none send his name and your order direct.
Carbola Chemical Co. Inc. Dept. I 7 East 42nd St. New York

Harrington
Delaware

March 4, 1917.

Carbola Chemical Co.,
New York City

Gentleman:

Enclosed find check and my order for Carbola.

Because of lack of room I am forced to use my brooder houses in winter for layers. It doesn't worry me though because I put on Carbola every spring. I would hate to raise young chicks without it

Yours very truly,
P. MORTIMER BROWN

the hens get even with them by laying fewer eggs.

You will notice but little variety in the grains we fed, as we had to feed just what we could get. We could get no kafir, and most all winter no corn, just what we needed for cold weather.

In the following account I charged ourselves at the market rate for all cockerels and eggs we used on the table. Thus:

Cockerels and cull pullets used..	\$17.90
Eggs used.....	33.90
Eggs sold.....	15.45
The flock of 27 sold.....	27.00

Total income of the venture... \$94.25

We paid out from beginning to end, including the six hens as a starter, for occasional remedies, 95c; for wire to enlarge yard, feed for chicks and mature stock, \$50.63, leaving us to the good \$43.62. And the labor was really an asset in pleasure. A. W. BEALE, Manhattan, Kans.

Types of Incubators.

THAT every poultryman or woman should own and operate at least one incubator is a certainty. The nation needs the additional meat supply and every right-minded poultry keeper will surely recognize the need for all the incubator capacity he can use. The question of what kind of an incubator to use is one which puzzles many and a helpful explanation of the various types and kinds of incubators will probably be welcome. For convenience, incubators are classed as "mammoth" machines and small machines. The mammoth incubators run in sizes from 1,200-egg upward as high as 10,000 or 20,000-egg capacity and sometimes higher. They are usually sectional in construction, heated by hot water and using one coal-burning heater for the source of fuel. Gas or oil is used as fuel in some types and there are various distinctive features peculiar to the kind or make of incubator in question. The use of mammoth incubators is practically confined to the larger poultry breeding plants and those making a specialty of hatching in very large quantities.

The so-called small incubators range in size from 30 or 40-egg capacity up to 200, 300, 400 and even 600 or 800-egg capacity. The machines holding over 400 eggs or thereabouts are frequently called semi- or baby-mammoth sizes, because of their relative size. The small machines are commonly called as "hot water" or "hot air" types, which refers to the manner in which the egg chamber is heated. The "hot water" incubators depend upon the principle of radiation to distribute the heat, somewhat on the order of the hot water systems in homes. A metal tank or pipe system, usually made of copper, is built in fixed position into the incubator and is filled with water heated by a lamp attached to the machine. The heat radiates to the eggs on the tray in the egg-chamber, keeping them at the required temperature during the hatch. In the "hot air" type of incubator there are some variations in the exact principle of heating. In some makes warm air is introduced into the egg chamber and diffuses over the eggs, in others the heated air does not enter directly into the egg chamber, but is confined first to a metal tank from which

"SUNLIGHT" POULTRY FARM S-C-W-LEGHORNS

I Want Your Chick and Egg Business this Year

Place your order NOW if you want to get the special early dates. The demand for my Leghorns far exceeds my output from year to year. The majority of my customers place such reliance on my chicks and eggs that the demand for them has proven beyond my capacity. I invite you especially to place your order now, and just see for one season what

"Sunlight" S. C. W. Leghorns

will do for you. I don't claim them to be world beaters, but just the kind of hens that average to make a good all around profit at the end of the year. I have never tried to get business in the past by exaggerated advertising. I could easily claim my birds to be a 250-egg strain, as lots of others do. My chicks are the cheapest to buy at any price, because they are so easily raised. Really 90 percent of my customers raise 90 percent of the chicks I ship, which proves the vitality and stamina in my stock. Remember, I don't simply run a "hatchery" here. Every chick and egg shipped from here are from my stock here on the farm. Breeding stock for sale. Write me for prices and state your wants plainly today. Catalog free.

SUNLIGHT POULTRY FARM, Box 200, Lynchburg, O.

Here is the Feeder and the Fountain

for which every poultryman has been looking. It combines all the good qualities of the ordinary Mason jar fountain and feeder with the good qualities of the best baby chick feeders on the market. The bottom of the feed pan slopes from the center to the edges, thereby insuring a free flow of feed from the jar to the edge of the pan, where the chicks can reach it thru the openings. The small openings prevent dirt from getting into the pan—prevent the chicks from getting into the feed or water and prevent them from crowding too close around the feeder, thereby giving the weaker chicks an equal chance with the stronger ones. This overcomes every objection to the ordinary open pan Mason jar feeder and fountain. It fits any Mason jar.

2 for 35c

3 for 50c

The top of the pan can be removed in a second to clean or fill. It is the most inexpensive, most practical and most sanitary feeding and watering device on the market and is fully covered by U. S. letters of patent. If ordered from this ad we will send them postpaid to any address in the United States. **SIMPLEX SUPPLY HOUSE 1300 Pontiac Bldg. CHICAGO, ILLINOIS** Send for our complete Catalog of Poultry Supplies and find out about our marvelous Feather Brooders; also Automatic Grain Feeders and Non-Freezing Water Fountains.

Barred Plymouth Rocks Large and Prolific LAYING STRAIN

STANDARD RELIABLE

Incubators and Brooders

Only Incubator With Enclosed Double Heating System

Poultrymen: It Will Pay You to Study This Illustration

If you contemplate getting into the big "Poultry Drive" this year by increasing your hatching capacity, or if you are about to start in the business, it will pay you to give a few minutes' attention to the cross section view of the Standard Reliable Incubator case shown above.

This illustration shows in detail the Reliable system of automatic moisture supply and ventilation; also the enclosed double heating system, one of the important exclusive features that distinguish the Standard Reliable over all other incubators and make it the

J. W. MYERS, Pres.
America's Largest
Incubator Factory.
40 Years' Practical Experience
in Poultry Raising.

NOTE—In this advertisement and in my catalog, Reliable Incubators and Brooders are described exactly as they are built. No claims are made for them which are not confirmed in every detail by the machines themselves.

Fuel Economy is an important item in these days of high cost, especially if you are using a number of machines. The Reliable has a record of saving half the fuel at every hatch, because it utilizes the heat from the lamp more completely.

Cold Weather Hatching is made doubly sure, for the Reliable double system of heating always supplies ample heat and is a double safeguard against chilling in case of sudden changes in outside temperature.

Patent Heat Regulator, with thermometer tested by U.S. Government standard; automatic moisture supply and ventilation, are the most perfect that science and skill can produce—make the Reliable practically trouble proof and failure proof.

Solid, Heavy Construction Insures Life-Time Service

Built by specialists in incubator construction, who take pride in every detail of their work. Case of air dried redwood, finely finished; top and bottom tongued and grooved; double walls and top heavily insulated; double glass doors, strong legs; has roomy chick nursery with removable inner floor for easy cleaning.

All sizes and styles to suit your needs or preferences—from 80 eggs to 2,000; hot water or hot air. Shipped ready to start, except attaching legs, which are detached to make more compact package and save freight charges.

Large output and up-to-date manufacturing facilities enable me to place the Reliable on the market at an attractive price.

New 100-page Poultry Book FREE on request. The coupon or a post card brings it to you. J. W. MYERS, Pres.

RELIABLE INCUBATOR & BROODER CO.
Dept. A-1 Quincy, Ill.

Most Successful and Economical Hatching Machine in the World

Note that *all heat from the lamp* passes directly into and through the machine. It radiates from hot air pipes and at the same time heats the water in copper tank, both extending full length of egg chamber.

The hot air system alone would maintain hatching temperature, if necessary; and the large body of hot water would prevent chilling should the hot air system temporarily fail through neglect.

\$5 brings you this high quality 60-egg Reliable Special Incubator. Built with same care and has same perfect regulating system as the Standard Reliable. Double walls, outer wall of thoroughly seasoned wood; mahogany finished, hot air heated. Guaranteed to hatch any egg the hen can hatch.

A real bargain—good work for years. I'm responsible and stand behind it. Order now! Send cash or P. O. order.

Enclosed find \$5 (cash, money order, check) for which please send me one Reliable Special Incubator, money to be returned to me if machine is not as represented. Send Free Poultry Book and prices on Standard Reliable Incubators and Brooders. (A-1)

RELIABLE BROODERS

pay for themselves in saving young chicks. Hover chicks better than the hen—keep them dry and free from vermin. Built in all sizes, for outdoor or indoor use.

Get High-Priced Winter Eggs

Prove it at My Expense

The Collins Oat Sprouter doubles the egg yield, cuts the feed bill 50%, makes hens healthy. Heavy galvanized iron throughout. Pans lift off separately, exact perforations to prevent mold. No dirt, no trouble, simply set beside stove, furnace, or in sunny window. Water top pan. In a few days you will have fine growth of green for your hens. You cannot afford to keep chickens with grain so high without a Collins Oat Sprouter. Even with metal and labor so high we sell you

8 pans, 11x15 inches, Popular Size, for only **\$4.00**
 5 pans, 11x15 inches, Back-yard Size, \$3.00
 8 pans, 11x32 inches, Big Breeders, \$8.00

Delivery charges paid. West of Mississippi River add 50c; West of Rockies add \$1.
 "I like the Sprouter fine; it makes the hens sing."—Miss Ada Bird, Ringoes, N. J.

Collins Exerciser and Feeder 50c

No more wasting of high priced grain; no lazy, overfat, non-laying hens if you own and use a Collins Labor-Reducing, Time-Saving Exerciser and Feeder. No waster; reduces feed cost;

rat and bird proof; makes for better hens. Increases egg yield; improves fertility. None better made.

This Helps Win the War and you get more eggs at less cost. Just cut a five-inch hole in the bottom of an old wooden or metal pail (leave the new metal for the Government). Attach the feeder; the cup forms a funnel, and you have for 50c a feeder and exerciser that would ordinarily cost from \$1 to \$3. Strong, well put together, of heavy galvanized iron with steel rod. Only 50c when ordered with Sprouter. Separately, add 10c for parcel post.

"The Feeder and Exerciser I ordered of you is all right. I have three different kinds but yours is the cheapest and best."—Clarence Lester, Centralia, Ill.

Yes, of course, I have circulars, but don't write for them. I want you to see and use my Sprouter or Exerciser and Feeder. So if interested as either poultryman or agent, order a Sprouter or Exerciser, and Feeder or both, use 10 days, if not the grandest thing you've ever used in the poultry line, return and I will refund money.

PIERCE & CUSHION - Wellington, Ohio

heat radiates to the eggs, and in still others a combination is employed.

There are several modifications of these heating principles in the different kinds of dependable incubators sold on the market. The advantages claimed by each manufacturer are carefully described in their catalogs and it is always best to thoroly study the literature to be familiar with them and make an intelligent choice.

The source of heat is commonly an oil-burning lamp. Some electric incubators are on the market and giving good satisfaction, but they are less common and can be used only where electricity is available.

Various manufacturers locate the lamp differently in their incubators. Some attach the lamp and heater on the side of the machine, some locate it under the machine near one end, and others place it in the center beneath the egg chamber. There are reasons for doing so in each case, according to the distinctive type of incubator.

You will find both round and rectangular shapes in different incubators sold today, each distinctive in design and obtainable in various sizes. Some machines are all-metal, some are metal covered over wood, and others are all-wood in construction. Some also are made of material similar to the pulp wall board used as a substitute for lath and plaster in building construction.

The big majority of incubators are completely assembled before leaving the factory, with the exception of the legs, the lamp bracket and lamp, and the regulator. These are carefully placed inside the machine and the whole carefully crated for shipment. It is possible, on the other hand, for one to buy the plans and separate parts and build his own incubator if he chooses. Such opportunities are offered, and appeal to many who like to do such work. On a third hand, some incubators are assembled only in part, shipped crated to the customer knocked-down flat, and have to be put together before they can be used.

Incubators are sold everywhere in the country thru local dealers or direct by mail, according to the selling plan of the manufacturer. Inquiry with any of the responsible advertisers will give you explicit information on their product and their methods.

Next to your choice of a good hatcher, the decision as to the best size suitable for your needs is of greatest importance. Do not make the mistake of buying too large an incubator for your needs. It is generally conceded that two smaller machines, for instance of 150-egg capacity each, are more preferable than one 300-egg size, unless the larger one can be filled with eggs not more than a week or ten days old when put into the machine. The fresher the eggs, the more even and satisfactory will be the hatch. Determine the egg capacity you need by the egg supply you will have and equip yourself accordingly.

SANITARY CHICKEN COOP CO. GREENFIELD Box A INDIANA

Why I Breed Single Comb Brown Leghorns.

HAVING bred this variety for more than a quarter of a century, I should be able to give a very good reason why I have bred them so long. If I were breeding Brown Leghorns simply for the dollars I could make out of them, I might choose some larger and meatier breed, but there must be more than profit in a chicken to satisfy me. I find pleasure, recreation and a field for all the skill and ingenuity of which I am capable of exercising. To breed high-class Brown Leghorns, such as are shown at our best exhibitions, good enough to win, requires a skill and perseverance that will tax to the utmost anyone who undertakes the job. If first-class exhibition Brown Leghorns were more easily produced, I have no doubt there would be more breeders. On the other hand, if every one who calls themselves a fancier were capable of producing good exhibition birds in large numbers, they would be so plentiful that they would become cheap, from a commercial standpoint. Last season I purchased some eggs said to be from a strain with a very heavy egg production, when they grew up they did not prove to be much better layers than my own. They seemed to mature quicker, but they are much smaller. The males have large combs and high tails, with color apparently between the light and dark Brown Leghorn, while the females are just Leghorns, so far as color is concerned. I confess that the few eggs they might lay more than my exhibition-bred stock, if they laid any more, would be a very trifling recompense to me for the many other points in which they fail. The high-class Brown Leghorn male has a perfection of color possessed by few other varieties. A careful examination will show every feather, from the top of the head to the base of the tail, distinctly striped with a lustrous black and every feather laced with rich brilliant red; the two colors being as sharply defined as if drawn with the genius of an artist. The striping and lacing varying in shape and width in each section, but always holding that sharply defined margin. This is one of the nice points in breeding Brown Leghorn males. Too many of them are bred with the colors running into each other, losing their brilliancy and beauty. This color a breeder can produce, but it takes a fancier to produce the first-named color. In the female we find entirely different color problems. A correctly colored Brown Leghorn female is a thing of rare beauty and is as hard to secure and hold as the color of any other variety. To secure a back and wings one even shade of velvety brown, finely stippled and free from shafting or brick on wing bows, and at the same time have a neck with a clean black stripe, with well defined golden edges, will test the ability and skill of the most capable fancier. Not only does their color appeal to me, but their shape seems to me the correct thing in a fowl. A Leghorn is strictly a bird of curves when bred according to Standard requirements, and as fancier's fowl has no superior. As egg producers, when properly housed and cared for, they are highly profitable, producing a larger number of eggs in proportion to feed consumed than most other breeds,

Buff Orpingtons

Buff Minorcas

The Strains of Quality

WHY You Should Buy from US

The most important questions for the buyer to consider when purchasing breeding stock, eggs for hatching or baby chicks are: "What blood lines and breeding are behind the stock I am purchasing?" Have they been carefully bred so that they will transmit their own good points to their progeny? The way to answer correctly these questions is to buy foundation stock from an established strain that is beyond the experimental stage. Our birds have the breeding and blood lines in them that make certain their producing qualities.

We believe our strains have the right to be called an established one. The birds in our original flocks were superior specimens selected from leading flocks of their day. With each succeeding year we have more closely amalgamated the blood lines and have made noticeable improvement in the more important points of the breeds. We have flocks that are noted for birds of superb type and color. During these years the utility qualities have not been neglected. High flock averages are obtained, with the heaviest egg yield during the cold winter months when eggs are the highest in price.

OUR WINNINGS IN 1917

BUFF ORPINGTONS — Michigan State Fair: 3 Firsts, 2 Seconds, 2 Thirds, 2 Fourth, 2 Fifth.
Chicago Coliseum: 4 Firsts, 4 Seconds, 2 Thirds, 3 Fourth, 1 Fifth, and 5 Silver cups.

BUFF MINORCAS — Michigan State Fair: 3 Firsts, 4 Seconds, 4 Thirds, 3 Fourth, 2 Fifth.
Chicago Coliseum: 6 Firsts, 4 Seconds, 3 Thirds, 2 Fourth, 2 Fifth.

We especially call your attention to the phenomenal records made by our two varieties during the past fall and winter show season. Our birds also have won great victories at Madison Square Garden, N. Y., New York State Fair, Hagerstown, St. Louis and Buffalo. Nothing to approach it has been accomplished by any other exhibitor. Something for your serious consideration before placing your egg, baby chick and stock order. The ideal natural conditions under which our birds are raised and the rugged northern climate makes them vigorous and hardy and as breeders they cannot be beaten. Such birds will insure a high percentage fertility in the eggs and baby chicks hatched from such eggs are full of "pep," as lively as crickets and are able to stand shipment to any part of the country. Book your order for eggs and baby chicks well ahead of desired date of delivery. It is the only safe way to avoid disappointment. The demand is likely to be greater than the supply.

Flock Treatment

I have personally counted more than 2,000 dead lice under a row of ten hens, on a roost board painted the night before with Lee's Lice Killer.

Lousy hens will not lay, but they will lay when rid of the vermin.

Flock treatment is the modern method of handling chicken troubles, whether lice, mites, roup, colds, bowel complaint or other ailment. Life is too short to doctor each individual case.

LEE'S LICE KILLER has for twenty years stood alone in its easy effectiveness for ridding chickens of their insect pests, lice and mites. Painted or sprayed on roosts, it does triple duty: gets the mites on the roosts, the lice on the bodies of the chickens roosting over them and the leg parasite causing scaly leg.

GERMOZONE does more than triple duty in flock treatment. It purifies the water and the food in the crop. It prevents the drinking contagion from sick to well birds. It keeps the bowels regular—and regular bowels mean health. It counteracts musty or spoiled food. It is a remedy for colds, roup, canker, chicken pox, bowel complaint.

Then there's **LEE'S EGG MAKER**, a finisher as well as a starter in flock treatment for egg production, and **EGG-O-HATCH**, the great chick strengthener and shell weakener, which makes 20% better incubator or hen hatches and chicks that are easier to raise.

All of these are on sale by dealers at most towns and in every state in the United States and in Canada. If not at your town, write for agency prices.

Poultry Library FREE

MY POULTRY LIBRARY of five books describes all of the Lee products and tells you how to handle chickens in the easiest, most effective and profitable way; how to diagnose instantly their troubles before they really show sick; how to see and understand the watery eye, the dirty beak, discolored comb, condition of the droppings, etc. Geo. Engelson of Brooklyn, N. Y., says: "The books are worth \$25.00." Mrs. Frank Gable, Havre, Mont., says: "The best I ever saw, because so much real information and so few ads." Jackson Bennett, Libertyville, Ill., says: "Been in the poultry game for years, but there are profit pointers in your books I never dreamed of."

This Poultry Library (Five Books) is free at dealers or mailed by us for 5c stamps. Don't put it off, but write right now.

GEO. H. LEE CO., 302 Lee Building, OMAHA, NEB.

and no one can make a mistake who undertakes their breeding when for eggs or high-class exhibition specimen. Unfortunately, since war was declared and feed went soaring, a good many breeders have got "cold feet," and either cut down to the very lowest number or quit altogether. This applies to other varieties as well as the Leghorns. I cannot help but think that after the clouds of war have rolled away the fellow who stuck by his favorite breed will find himself in on the ground floor and will reap a just reward. My advice is, cull unmercifully, breed from only the cream of the flock, raise fewer but better birds, and if in doubt as to a breed, choose Single Comb Brown Leghorns for both pleasure and profit.

W. G. WARNOCK,

Geneseo, Ill.

The Black Breasted Red Game Bantam.

IT IS my desire, as a breeder of Black Breasted Red Game Bantams, to say just a few words to the novice or anyone who may contemplate the breeding of these little beauties. Being in one sense of the word a novice myself, I would not direct this article to the old-timer, so to speak. I will, therefore, give my reasons why the Black Red appeals to me above all others.

Living, as I did, in closely inhabited quarters, space would not permit my raising a larger variety. I therefore purchased a trio of Game Bantams. The first year I raised twelve youngsters and exhibited a cockerel and pullet at our annual fair. On this entry I won first cockerel and third pullet and championship for best male. This win as a starter gave me all the courage necessary and I decided to come back stronger another year.

I found these little birds very easy to raise, stand confinement well, and require but little grain. I use small coops four by four, two feet high in back and four feet high in front. I have small wire runs eight feet long, the same width as a house. By changing the ground every two weeks it does not have a chance to get contaminated. This plan works out very nicely and the birds thrive exceedingly well. I found the Games very prolific as layers.

The hens very seldom become broody and I dare say that in all the years I have been breeding Games I haven't used more than half a dozen hens for hatching purposes. I have better success with large hens. In this way I can put twenty to twenty-two eggs under one hen and thereby get a good clutch off at once. I usually try to set four or five large hens at once, getting all my chicks off at one time. Being all of the same age, I find they grow much better and get along without fighting.

Great care must be taken when the chicks are small when one is using big hens, as they are very liable to step on them. The first two weeks feed consists of yolk of egg and small crumbs. Many advocate the no-water plan for Bantams, but I have always had good success by keeping small tins of water in front of them. I occasionally give them a little milk. After the first few weeks of eggs and bread crumbs I start them on a good commercial scratch feed; this they quickly learn to pick up and my experience has taught me that hard

You Needn't Board Our Leghorns Free All Winter—THEY LAY EGGS

"The Proof of the Pudding is in the Eating"

Best day's laying in WINTER by 400 pullets, 324 eggs; another lot of 200 hens paid \$1,124 profit. They will lay as well for you. TESTED 10 YEARS. grains can't be beaten for raising Games. As our present Standard calls for hard, bony birds, the results cannot be obtained by using soft wet mash. A little attention the first few weeks and all outdoors can't kill them.

To make show birds of Games they must be handled a great deal. I usually start by feeding the birds from my hand; this they quickly learn to do and by so doing much is accomplished toward getting the confidence of the bird. I have a set of exhibition coops which I use for training purposes. Each bird is put in these coops a week at a time and taught to stand erect by the use of a judge's stick. This work requires a great deal of patience on the part of the trainer, who should never become exasperated, for by so doing much of his labor is lost. When the birds are about four months old, the male birds are dubbed, which means cutting off the combs. In doing this I usually get my younger brother to help me, he holding the bird while I do the cutting. The birds heal up quickly and are soon ready for the fall fairs and winter shows. I am a firm believer in poultry shows and show my birds at all the shows in this section. I usually make it a point to attend all shows where I exhibit and see to it that birds have the proper attention.

A few years have passed since I first commenced raising Bantams; I have moved to much larger quarters and taken up the raising of larger varieties, but I shall always find room for my string of Game Bantams and hope to see a steady growth of the Bantam business.

JAMES K. WYLIE.

What Do You Want an Incubator to do for You?

You want a strong healthy chick from every fertile egg.

You want an incubator that is simple and easy to operate, one that is well built so that it will last for years and one that requires the smallest amount of oil to heat it.

The Ideal is just such an Incubator

An incubator that is self-regulating, self-ventilating, heated with a hot water copper tubular tank, the best safety metal lamp; tested thermometer; egg tester; thermometer holder; strong egg trays; deep chick nursery, and complete operating instructions.

Incubators made of best seasoned lumber, double constructions, double glass door, high legs and well finished.

OUR GOVERNMENT — UNCLE SAM—calls upon you and all of us, to

raise more poultry and more eggs to help reduce the food shortage—to help feed our boys—your boys—so that they will be well fed—because food will win.

Will you help Uncle Sam win the war? Will you help yourself? Just think of the big profits you can make raising poultry—think of the high prices paid now for poultry and eggs—and poultry and eggs are worth these high prices, no matter if you sell on the market or use them on your own table.

OUR PRICES ARE PATRIOTIC

To show you that we are patriotic; to show you that we are willing to do our share to help win the war, we have cut our prices and our profits to the last penny. Write for special circular and patriotic prices; write today and get full information.

J. W. MILLER CO., 710 Race Street, ROCKFORD, ILLINOIS

Stop Losing Good Profits Use Andrews Poultry Appliances

Andrews Baby Chick Carrier

It's absolutely unnecessary for you to sacrifice chicks and profits in shipping. Here's the most sensible chick carrier ever invented. Your chicks reach their destination the same as they left you. Built in compartments and thoroughly ventilated. Shipped flat. Put together in a twinkling with brass hands. Top and bottom all one piece. Ship all your chicks this Spring in my Baby Chick Carriers. Prices as follows on dozen lots. No order accepted on less than one dozen carriers of a size.

25 size - \$1.20 50 size - \$1.70
100 size - \$2.90

New Andrews Egg Carriers

Some egg carrier. I've a stack of letters from these poultrymen who label my egg carrier the best that ever hit the market.

Every egg has four corrugated cushions protecting it on the ends and three on the sides. Box reaches you flat—quickly assembled. Made from tough fibre board. Costs less than most egg carriers. Give them a tryout and you'll sign them up for permanent use. Can be used over and over. The ultimate in economy and safety. Here's how they are priced on dozen lots. No order accepted for less than one dozen carriers of a size.

Commercial
1 dozen size, \$.60 4 dozen size, \$1.55
2 dozen size, .95 5 dozen size, 1.85
3 dozen size, 1.25 10 dozen size, 3.60

Hatching
15 egg size, \$1.10 50 egg size, \$2.60
30 egg size, 1.95 100 egg size, 4.90

Andrews Poultry Remedies

Andrews' Disinfectant and Dip, Andrews' Deathmite, Andrews' Poultry Medicine, and Andrews' Obaco—absolutely the most reliable remedies on the market. Mr. Andrews says: "I would prefer to part with all the equipment at Premier Farm here giving up Obaco, the Miracle Medicine. It's worth its weight in gold. It has saved the lives of my finest birds. No poultryman should ever be without it."

ORDER DIRECT FROM ME AND SAVE MONEY

Let me send you information on my different appliances. I sell and make everything a poultryman needs—shipping coops, trap-nests, vermin-proof roosts and brood coops, etc. Let me prove it. I prepay freight, not express or parcel post, on shipments of 100 pounds or \$10.00 in value. If you want goods shipped parcel post please include postage. Drop me a card today.

THE O. B. ANDREWS COMPANY, Box A, Chattanooga, Tenn.

The International Baby Chick Assn.

THE International Baby Chick Association held an important meeting at Madison Square Garden during the New York show. President Herbert H.

Knapp reported that the probable output of baby chicks for 1918 would exceed twenty million. He looks for an excellent season and says that the demand is good, advance orders being booked rapidly.

Members were decidedly optimistic concerning the baby chick business and many reported that they had made satisfactory arrangements to secure a sufficient supply of hatching eggs from good Standardbred stock to take care of the needs of their customers. Transportation, fuel and feed problems were discussed and a committee appointed to take special charge of the interests of the hatcheries and their customers for the duration of the war. A substantial appropriation for conducting the work was made and filled by vote and voluntary subscription of members.

The following resolutions were unanimously adopted:

To the United States Food Administration, The Director General of Railroads, The Management of all Express Companies and Transportation Lines:

The International Baby Chick Association, in convention at Madison Square Garden, New York City, December 31, 1917, representing chick hatcheries having a seasonal output of twenty million baby chicks, submits the following resolution and petition asking for preferred shipment and speedy delivery of all shipments of baby chicks:

Whereas, The United States Department of Agriculture is conducting a vigorous campaign for greatly increased production of poultry and eggs during 1918, to give a greater national food supply and to conserve red meat for use of our fighting forces and our allies, and,

Whereas, Our national supply of breeding fowls and pullets is at least 50 percent below normal, which means that there will be a great shortage of breeding stock and eggs for hatching, and,

Whereas, The quickest and most effective way to secure increased production of poultry — increased meat supply and more pullets to produce eggs — is thru strong and hardy baby chicks, hatched, sold and shipped in large numbers by experienced men skilled in the art of incubation, be it

Resolved, That we, the International Baby Chick Association, representing baby chick hatcheries, having secured a seasonal output approximating twenty million baby chicks for 1918, do hereby petition and urge that all express and transportation companies and their agents be advised and instructed to place all shipments of baby chicks and eggs for hatching upon the preferred shipment list and to rush all such shipments thru to destination by the shortest route, observing all possible care to insure safe as well as speedy delivery.

With the hearty co-operation of the express and transportation companies in the prompt and efficient handling of shipments of baby chicks and eggs for hatching, we believe it will be possible, during the coming 1918 season, to secure the greatly increased production of both poultry and eggs which are so vitally necessary to the national food supply.

Respectfully submitted,

International Baby Chick Association,
By Herbert H. Knapp, President.

President Knapp made the following report on the fuel shortage as affecting operators of hatcheries and coal-burning brooding equipment:

As the season for hatching and rearing chicks drew near, poultrymen thruout the country became alarmed on account of the coal shortage, as modern equipment consists largely of mammoth incubators and brooder stoves which require anthracite coal as fuel. Intercession by the Baby Chick Association brought the following encouraging reply from the United States Fuel Administration:

"Herbert H. Knapp,
President International Baby Chick Association,
Shelby, Ohio.

Dear Sir: Referring to your letter of December 14, the Administration begs to advise you that if it is notified of requirements of chestnut coal in connection where such fuel is needed for operation of incubators and brooders in connection with the hatching and raising of chickens, we will arrange to have such coal promptly supplied to the dealer in the community where it is needed.

Arrangements should be made, however, to notify the Administration as early as possible of needs which may actually exist.

Very truly yours,
U. S. Fuel Administration.
Washington, D. C."

Keeler's Vigorous White Wyandottes

= The Aristocrat of the White Wyandotte World =
WINNERS OF 5 FIRSTS, CHICAGO

Special for February and March.—500 large, vigorous, fully developed cockerels bred from my 1st, 2nd and 4th cocks; 1st, 2nd, 3rd and 4th cockerels, Chicago. Price, \$5.00, \$8.00, \$10.00, \$15.00 and \$25.00 each. Exceptionally fine specimens, \$35.00 and \$50.00 each. Also Cocks, Trios and Pens of

THE WORLD'S GREATEST STRAIN

Before you buy a single White Wyandotte send for my new, large, 64-page, instructive catalog and mating list giving the full history of my birds. A winning and breeding record of 24 years will convince you that I not only have birds that will win in any show-room but also fill the egg basket, some of my birds laying as high as 273 eggs a year. My prize-winning females are selected from among these layers. Here is the proof:

Box 18, Luselund, Sask., Canada, January 3, 1918.
Chas. V. Keeler, Esq.,
Winamac, Ind.

Dear Sir—I trust you will mail me a 1918 mating list. Am figuring on placing another order for eggs with you this spring. The birds I got from the eggs last spring are certainly dandies. Have had 15 of your pullets in a Woods' open-front (single wall) house all winter. Got 270 eggs in December from them. Two days of last month 50 degrees below zero, or average temperature for the month 28 degrees below zero. A steady cold month, with three blizzards. I am going to buy your eggs again this year. Wishing you every success during the coming year.
Yours truly,
(Signed) E. T. Hughes.

Eggs Eggs Eggs Eggs Eggs

The pens that will produce the 1918-19 winners and layers mated December 15th. I am in a position to furnish you eggs from the sixteen best matings in America. The best birds reared during the past three years are mated in these pens. My 1918 catalog and mating list of America's FINEST WHITE WYANDOTTES ready now. Send for YOUR COPY today. Eggs, \$5.00 per 15; \$9.00 per 30; \$14.00 per 50; \$25.00 per 100. A limited number will be spared from special matings at \$10.00 and \$15.00 per 15. State wants plainly and address.

CHAS. V. KEELER

R. F. D. 11, WINAMAC, IND.

The 1918 CHICK-ECONOMY COMBINATION

- 1 Chick Feeder (without jar) 15c
- 1 Chick Fountain (without jar) 15c
- Head Lice Ointment 15c
- White Diarrhea Remedy 30c
- 50 New Coil Leg Bands 50c
- 50 Key-Ring-O Bands 50c
- Value \$1.75
- Our Advertising Offer 1.22
- You save 30% or 53c

Every year we get out a Key-Ring-O Combination to advertise and introduce this celebrated leg band. This year's offer is one for safety and economy. You must raise your chicks this year safely and economically. For safety we include a regular 15c tube of Conkey's Head Lice Ointment and a regular 30c package of Pratt's White Diarrhea Remedy. Then you get a Drinking Fountain and a Chick Feeder—the latest style out, and a good one. Then we include 50 New Coil Chick Bands that will last for years and enable you to mark each chick easily and quickly. And then in addition to the above you get a coupon that we will exchange (after you know just what colors and size you want) for 50 of the celebrated Key-Ring-O Leg Bands any size or color.

Surely you will agree that this year's KEY-RING-O COMBINATION gives you SAFETY and ECONOMY when we tell you that the entire outfit will be mailed postage paid for only \$1.22 and if you can duplicate this combination elsewhere for \$1.75, you may return it to us and we will immediately return your money, together with all postage you have paid. Isn't that fair? This is our method of advertising and you get the standard line of goods at our expense. However, we reserve the right to return money when our supply is sold out. Last year we returned 2527 orders that came too late.

C. H. GORDINIER, Dept. J, TROY, N. Y.

America's Best Wyandottes

SILVER GOLDEN WHITE

Winners of over 400 premiums at Madison Square Garden, New York, and Chicago. Six firsts at the Greater Chicago Show last month. They won thousands of premiums at all the leading shows for our customers. We have 500 head of very choice exhibition and breeding birds at bargain prices, line-bred for 32 years. They have the size, shape and color. Can fit you out with almost anything you may want in this line. Also Golden Sebrights. Large illustrated circular.

IRA C. KELLER, Brookside Farm - Box 75, Prospect, Ohio

The Poultry Situation in Canada.

THE Ottawa (Ontario) Poultry Association held its regular meeting on Thursday, December 20, 1917, in the Y. M. C. A. Hall. This meeting was the first of a series of monthly lectures to be held in conjunction with the Y. M. C. A. The lecturer for the evening was Lewis N. Clark, of Port Hope, Ontario.

Mr. Clark, in opening his address, stated he would like to change the subject from "Producing Eggs in War-Time" to the query, "Can We Produce Eggs in War-Time?" The answer he found was that eggs could be produced, but only under difficulties, owing to the high prices of feed. But it was necessary that poultrymen everywhere should produce, for if production stopped it would mean that not only would the people of Canada suffer, but there would be no eggs or poultry to be sent overseas and it would be difficult to revive the industry after the war.

It would be necessary, however, to introduce the same efficiency into the poultry business, as the present war had rendered necessary in all other lines and this would be done by adopting methods which would give a higher production of eggs per hen per year.

At the present time it costs 26 cents a month to feed a hen, but even at this high cost Mr. Clark figured that a 14 or 16 percent production would meet expenses with eggs selling at 75 cents per dozen, and as any good poultryman should be able to produce considerably more than this, there would still be a

reasonable profit to the producer. One point on which Mr. Clark laid emphasis was that, despite the high price of feed, the hen's rations should not be cut down or the quality of the feed lessened, as this would result in a falling off in the egg supply.

While he did not share the gloomy reports which were prevalent in the United States, that unless poultrymen got as high as \$1.25 per dozen for eggs they would have to go out of business, Mr. Clark admitted that the feed situation was a serious one, particularly in regard to wheat, even the poorer grades of which were being milled at the present time.

In reply to a question, Mr. Clark did not place much value on barley as a substitute for wheat, tho it might be useful when used with wheat. To meet to some extent the deficiency in wheat, Mr. Clark is feeding more gluten meal, a by-product of the corn starch factories. Mr. Clark urged poultrymen to form a central committee which should stand behind the poultry division of the live stock branch in its efforts to see that some action was taken to supply poultrymen with feed. In conclusion, he gave an interesting account of an electric light plant he had put in on his farm and the increased egg production he had obtained by the use of electric lights in the laying pens. With the lights he had been able to get yearling hens to lay considerably in advance of the usual time, and the effect generally was very gratifying. In one instance, where he discontinued the lights for a time, a house of some six hundred pul-

lets dropped within a week from 300 eggs per day down to six or seven.

At the close of his address Mr. Clark was bombarded with a series of questions on poultry topics, all of which he was quick to answer.

Dr. Barnes, the president of the association, stated at the conclusion of the meeting that exhibitors at the Winter Poultry Show and others would be asked to donate fowls, which would be auctioned and the proceeds turned over to Dr. Robertson to be used to help Belgian farmers to restock after the war.

WALTER A. RUSH,
Ottawa, Ont., Can.

Horticulture for Poultry Keepers

Conducted by Thos. F. Rigg, Iowa Falls, Iowa.

CLAY H. STARK, writing from "Somewhere in France" to his father, E. W. Stark, tells of the condition of the orchards over there, and the need of greater apple production in this country. He says:

I am anxious to tell you all about the fruit-growing conditions here in Europe, because I know how it will affect all of those who are growing fruit over in America. I can't begin to express in words the utter devastation of the orchards over here. You know Europe used to grow very fine fruit and a great deal of it, but since the war began, thousands of thousands of acres of fine orchards have been utterly destroyed. An immense number of orchards have been destroyed and those which have not been destroyed have been so neglected that they have been practically ruined. You know what this means to American farmers and fruit growers. It means that they have got to supply Europe with fruit for years and years to come. American fruit has a great reputation throughout Europe and they will pay almost any price for it, but the big question with them is to get enough fruit for their needs. If the war should stop tomorrow, American fruit would be in big demand for twenty or thirty years to come, and even

longer. It will take fully that time to even begin to replace the orchards that have been destroyed over here. Tell everybody that America must grow many times more fruit than is produced now, not only for use of the increasing population of America, but also for Europe, South America and the entire world.

My advice to all farmers and other land owners who have land suitable to the production of apples is to plant apple trees. Never before has there been such a favorable time for the establishment of apple orchards. The demand even now in this country for such quality apples as Northern Spy, Delicious and McIntosh Red is far greater than the supply. In fact, there has never been a time, even when the market was glutted with the poorer sorts, that properly grown, graded and packed apples of the choice varieties did not bring a very profitable price. Now is the accepted time to put out an apple orchard.

According to a report made by the Iowa Agricultural College, the orchard lands of Iowa gave a net return of \$107.51 per acre for a period covering ten years. The general average of all orchards investigated (within the state) showed the Iowa orchards were yielding year after year returns equal to 6 percent on a valuation of \$1,186.50 per acre. E. P. Spencer of Fremont sold his crop of apples from 80 acres so that he cleared \$20,000 in 1917. This is a pretty good showing for apple lands in a state where few orchards are cared for as they should be.

* * *

Again allow me to urge you to place your order for garden seeds and fertilizers early. Do it now!

* * *

I am an interested reader of the American Poultry Journal and enjoy your horticultural talks. Will you please give me a little information about Florida thru your department in the Journal, as I understand you spend your winters there?

I am 43 years old and own a 50-acre farm 22 miles from Rochester, N. Y., and am working to make poultry my main line. My wife has been an invalid for over five years with nervous prostration and unable to do anything. Have been advised by several to take her to St. Petersburg, Florida, to see if the climate would not benefit her. What do you know about that part of the state? Is there any good farm land in that section and could it be bought reasonably? Would it be a good place to go into the poultry business? I had thought of renting my farm and taking my wife and her mother there for six months or a year, to see if it made any improvement in my wife's health. If so, I could then sell my farm and make Florida our home as I have no love for our cold winter months. Do you think I could get something to do there to help meet expenses? Have had quite a bit of experience besides farming.

Roy H. Milliman.

There is some good land in the vicinity of St. Petersburg. This land is not as good as the land east and north-east of that city. In the highlands (so-called) in the vicinity of Dade City there are many fine farms, and here is to be found some of the best land in the state. I advise you to investigate this. However, it seems to me you could do better by going farther south in the state, so far as climate is concerned. But there are no better lands in all Florida than the central highlands. For general farming these lands are certainly the best in the state. Of course, the fruit raiser there takes more chances on being knocked out of a crop by frost than he would if he were operating farther south in the state.

I want to urge you as strongly as I know how to give up the idea of going into poultry in a commercial way in Florida. Do not allow yourself to be misled by the stories of poultry profits which you have evidently been reading. You are wise in your resolve not to sell your New York farm. Go to Florida and look over the situation. Do not let it be known that you are thinking of buying land. If you do, the land agents and sharks will so pester you that you will soon be a nervous wreck. Just keep your eyes and ears open and accept only proved facts.

I am sure you can get employment of some kind during the winter. Good land in the highlands can be bought from \$35 to \$50 per acre. This for unimproved land. On your way to Florida stop off and investigate the farm and fruit lands in the Piedmont Valley of Virginia. God-blessed, sun-kissed Virginia is a glorious place in which to live, to prosper and be well and happy.

WRITE FOR OUR BIG NEW FREE STRAWBERRY BOOK

Tells How

You Can Make \$500 to \$1200 per Acre Growing STRAWBERRIES THE "KELLOGG WAY"

JUST write your name and address on the coupon below, or a postal card, and we will send you FREE and POSTPAID, our handsome, new, 64-page book "Great Crops of Strawberries and How to Grow Them." This big book has been written by a man who has made strawberries his life study. It gives complete information on preparing the soil, setting the plants and caring for the strawberries so that they will bring you big yields and quick profits right from the start. It not only tells how "Kellogg Pedigree Plants" grown the "Kellogg Way" will make more money for you per acre than any crop you can grow, but it also tells the actual experiences of others and how they have made \$500 to \$1200 and more per acre from Kellogg Pedigree Plants. Here are a few examples:

- J. A. Johansen of Neb., made \$670 from 3/4 of an acre.
- G. M. Hawley of Cal., sold \$3000 worth of berries from 2 acres.
- Henry Clute of New York, realized \$888.17 from 1 acre.
- Z. Chandler of Oregon, made \$4390.50 in 5 years from less than 1 acre of Kellogg Strawberries.

This valuable book also tells how to make one acre of strawberries do the work of two—how to grow two big crops of berries from the same land the same year. It pictures and fully describes the leading standard and everbearing varieties and tells how to grow, pick, pack, ship and market the berries. It costs you nothing. Just fill out and mail coupon below—it will be sent to you Free and Postpaid. It also tells all about the wonderful

KELLOGG'S

EVERBEARING STRAWBERRIES

KELLOGG STRAWBERRIES
Paid for My \$4000 Home

Mr. E. D. Andrews of Lansing, Mich., whose picture is shown above, writes this letter:
Gentlemen: A few years ago I started growing Kellogg strawberries with no experience and with a very small capital. In a few years the profits from only two acres of Kellogg Pedigree Plants had fully paid for my \$4000 home.
Yours very truly,
E. D. ANDREWS.
Let Strawberries Buy Your Home

These big and quick money-makers produce two big crops each year. A big profit in the Spring and a bigger profit in the Fall. Heavy frost does not affect their fruiting. Just think of picking big, sweet, luscious berries fresh from the vines from June until snow flies. The Fall berries are in great demand at high prices. Read what these customers say:
"I make \$1200 to \$1500 per acre every year from Kellogg Everbearing Strawberries. Your book has been worth its weight in gold to me." W. L. FORBES, Vermont.

"I picked an average of two quarts from each Kellogg Everbearing the first season and sold the berries at 30c per quart."
MRS. DORA SNOW, Neb.

W. R. Randall, of Illinois, made at the rate of \$1900 per acre.
O. J. Osborne, Utah, made \$33.70 profit and also supplied his family with strawberries from 50 Kellogg Everbearers.

You can make these same big profits. Get our Free Book and learn how.

Kellogg Strawberry Gardens

Why pay big prices for ordinary berries? Grow Kellogg's delicious strawberries and pick them fresh from the vines from June to November, and have canned berries, preserves and jam throughout the winter. A Kellogg Strawberry Garden will do more to help you cut the high cost of living than anything else you can grow. Our new book pictures and fully describes the Kellogg Gardens—we have a garden exactly suited to your needs and climate. It also explains how to grow strawberries and vegetables on the same piece of ground at the same time. You owe it to your family and yourself to write for this book today and learn how to get your own strawberries free and make a big cash profit besides.

30 Strawberry Recipes

for the making and preserving of delicious strawberry dainties for both summer and winter use are given in this book. Every woman will be interested in these recipes which contain many new novel strawberry dishes.

Cash Prizes for Boys and Girls

Every year we offer Big Cash Prizes for the best strawberry gardens grown by boys and girls. Our free book tells the boys and girls how to win one of these cash prizes and make a big cash profit besides.

JUST FILL OUT THE COUPON BELOW

Now is the time to write for this handsomely illustrated strawberry book and learn how easy, delightful and exceedingly profitable it is to grow strawberries the Kellogg Way. Write your name and address in the coupon and we will send you your copy Free and Postpaid by return mail.

POMONA NURSERIES 133 Granger Ave., Dansville, N. Y.

Are you eating baked apples for breakfast? If not, you are missing one of the joys of living.

* * *

I have been a reader of American Poultry Journal for a good many years and find your notes very interesting. Can you please give me some information in regard to the Royal Purple raspberry? Do you think it will do well in this locality? Do the old vines take root and form new plants the same as the black raspberry or black cap? Will you please send the name and address of some reliable nursery from which I can procure the Royal Purple raspberry plants?
Iowa. L. H. DeFratesc.

The Royal Purple Raspberry will certainly do well for you and is suited to your climatic conditions. L. J. Farmer, Box 836, Pulaski, N. Y., can supply you with these plants. Renewal is made from the root, the same as with the black cap raspberry. Of course, canes can be laid down in either spring or fall and new plants thus secured.

* * *

In answer to P. A. Hornsby, Indiana: I do not think it would be wise for you to make a large planting of pear trees. You will find, upon looking up the facts, that the pear blight is too prevalent in orchards of pears in your state to make their commercial planting advisable. Why do you not plant an apple orchard? There is sure profit in an orchard of Delicious, Stayman Winesap and such varieties in your state. According to your letter you have an ideal orchard site, both in exposure of land and character of soil.

* * *

Judge Adam Thompson, of Missouri, who used to produce Indian Games (now Cornish) so good that he could not keep them, has just sold the last of his big crop of apples, and at a figure which is most pleasing. Mr. Thompson has one of the best and most profitable orchards in Missouri. He is adding to his acreage each year.

* * *

Could you advise me what variety of currants and gooseberries to plant on my place for commercial purposes? The land is rather sandy. Good clover can be grown on the land. If possible, give me the address of a reliable nursery where the varieties you advise may be purchased. Is the Klondike strawberry a good commercial variety? Would like your advice as to a reliable book on horticulture, also a magazine.
Illinois. Herbert E. Hess.

In currants, plant Red Cross, Diploma and Fay. The Oregon Champion is worth all other gooseberries put together. The American Fruit Grower, Chicago, is a good fruit paper. The Nursery Book you will find helpful. You can get it of any bookseller.

* * *

Away back in 1804 a tree bearing beautiful yellow apples was found growing wild in a piece of woodland in West Virginia. The apple was so beautiful and of such high quality that it soon became famous in its home circle. Then New Orleans traders found it out and bought up all of these apples which they could find and took them home. A Mr. Grimes, on whose land the seedling was found, top-worked a number of trees and in the course of a few years nurserymen were top-working trees to this new apple. Since that day this apple, now known as Grimes' Golden, has been considered the best of all yellow apples and has commanded a high price in all markets. West Virginia, it seems, was not sat-

SMYTH'S 70 INCUBATOR AND NURSERY. ALL STEEL BODY ON 30 \$ DAYS 3-98

FREE TRIAL HOLDS FULL 70 EGGS

ished in having done her "bit" in the way of giving the world the magnificent Grimes Golden apple. She now comes forward and hands us another gem, one of the rarest in all appledom. The story of this new apple is as interesting as that of the former offering of West Virginia.

A. H. MULLINS

The farm of A. H. Mullins, West Virginia, is not unlike most of the farms in the mountain section of the state. It has its apple orchards of seedlings, some good, some bad, many worthless almost. But it was on this farm that nature matured a seedling tree which is destined to play a very big part in the apple production of the world. Away up on a hillside, on a part of the Mullins farm unfit for field work and rarely visited by the owner, sprang up an apple tree. It grew unaided by man, and fought alone the battle of existence. No doubt it was assailed by the numerous bugs and insects which usually attack the apple tree. But nature did not plant this tree in that lonely spot and fail to give it strength to ward off enemies. And so the seasons came and went and the little tree in time grew to maturity. One day Mr. Mullins had occasion to visit the hillside. At that time the tree was bending its branches to the ground under a load of glorious yellow fruit. Can you see the picture? I can. And I can imagine pretty clearly the thrill of rapture which must have gone thru this quiet farmer as he gazed on the wonderful sight. What was it he beheld? A tree of glorified Grimes Golden? No, for even glorified Grimes Golden could not present such an array of beauty. The apples were fifty percent larger than Grimes' Golden, round and slightly conical. Mr. Mullins picked one and when he bit into it, then and there experienced the "great taste." He found the flesh a rich creamy yellow with a faint tint of orange color. The apple was juicy, with an exquisite aromatic flavor, as delicious as a fine pear.

Mr. Mullins realized that here was a very fine apple and one which the world ought to have and would demand when

Grow your own Vegetables

Gardening logically goes with poultry-raising. Planet Jr tools make gardening easy, resultful, and profitable. They are scientific tools invented by a practical farmer and manufacturer. They make every minute, every ounce of energy, every foot of soil yield its utmost. They enable you to save time, labor, money, and get bigger, better crops.

Planet Jr. Garden Tools

No. 25 Planet Jr Combined Hill and Drill Seeder, Double and Single Wheel Hoe, Cultivator and Plow sows all garden seeds from the smallest up to peas and beans, in hills or in drills, rolls down and marks next row at one passage, and enables you to cultivate up to two acres a day all through the season. A double and single Wheel Hoe in one. Straddles crops till 20 inches high, then works between them. Steel frame and 14-inch steel wheels. A splendid combination for the family garden, onion grower, or large gardener.

No. 17 Planet Jr. is the highest type of single-wheel hoe made. It is a hand-machine whose light durable construction enables a man, woman, or boy to do the cultivation in a garden or plow up the scratching yard in the easiest, quickest and best way. We make 24 styles — various prices.

New 72-Page Catalog, Free!

Illustrates Planet Jrs in action and describes over 55 tools, including Seeders, Wheel Hoes, Horse-Hoes, Harrows, Orchard-Ect, and Pivot Wheel Riding Cultivators. Write for it today!

RHODES DOUBLE CUT PRUNING SHEAR

Patented

RHODES MFG. CO.,
537 S. DIVISION AVE., GRAND RAPIDS, MICH.

THE only pruner made that cuts from both sides of the limb and does not bruise the bark. Made in all styles and sizes. All shears delivered free to your door. Write for circular and prices.

it became known. He was not an orchardist or a nurseryman, and within himself had no way to thoroly propagate and send out for trial trees of the new variety. So he sent a sample of the fruit to Stark Bros. Nursery and Orchard Company and they at once made an inspection of the original tree. They secured scions and buds therefrom and sent out into all parts of the country young trees for trial.

I have them growing on my place. They have withstood 33 degrees below zero without injury. Many of the trees sent out have fruited in all apple-growing sections of the United States. The report is one and the same—tree hardy, a splendid grower, fruit of superior quality and in abundance. I asked Mr. Mullins for a photograph of himself, for I wished to present to the readers of the AMERICAN POULTRY JOURNAL the likeness of the man whom Nature chose as an instrument to send forth this glorious apple. I had hard work in inducing this sturdy mountaineer to sit for a picture. However, he reluctantly did so, and I am glad. When Delicious was first offered the public I strongly advised all planters to plunge on this variety. Many of the wise ones did so and reaped a rich harvest before the doubters and the weaklings got into the game. I now advise the planting of this new apple. Golden Delicious, extensively. It will be a big money-maker for the men who get in on the ground floor.

* * *

I sold a consignment of apples a few days ago for \$7 a barrel. They were good apples and there is a good profit in raising them at this price.

* * *

Like many others, I turn to you when in need of advice. I live in a suburb of Montreal, but would like to move south. The only farming I have ever done has been in the poultry line, but I would like to go in for some other branches, especially orcharding. I am eighteen years of age, strong, and in perfect health and willing to work. I have had a good education, including five years of college, altho that does not advance me in agricultural knowledge; still it would be a help in anything I may undertake. Would like to know which state you think would be best. Would like to find a climate where the winters are short but healthy, of course, and where it is good for orcharding. I want to get work, something in the line of orcharding, so that later on I would have sufficient knowledge to run an orchard of my own. Would it be possible to get employment before leaving here? Do you know anything of the Strout Farm Agency?
F. Clement.

I do not consider myself competent to pick out the most favorable location for my correspondent. In the South, I think Virginia and North Carolina the most favorable states for the production of apples, peaches and grapes. I think this young man should find no trouble in securing a place on a fruit farm in either of these states. Just how he can get in touch with fruit growers down there is not so plain. Perhaps an advertisement in AMERICAN POULTRY JOURNAL and one or two leading fruit journals would bring the desired results. Personally I know nothing of the Strout Farm Agency.

* * *

Would like some information on currants, gooseberries and raspberries. We have recently moved to the country, where we have some of the above named varieties which have been greatly neglected. Would like to know when and how to prune. The currants and gooseberries are in great clusters and notice that the leaves and fruits were on the tip ends

of the canes and the bushes in general seem very unhealthy. I wish to move the raspberries from their present location, as they are along the garden fence, where it is difficult to cultivate. The vines are one solid mass and I want to know how to cut them back. Also, when can I expect fruit on them after moving them? When is the best time to move rhubarb?
A. K. Wagner.
Vermont.

The proper time to prune currant and gooseberry bushes is in the fall after the leaves have dropped. They can be pruned in the spring before growth starts. Cut out all but four or five branches, leaving only two-year-old wood. If you will pinch back the ends of growing branches in July and August you will cause the branch to be set with fruit buds all along the length of the branch. If this is not done, the fruit will be borne on the extreme end of each branch. Of course, you will thus have but little fruit to each bush. I would not replant the currant and gooseberry bushes, as you say they are very unhealthy. Dig them out and burn them, roots and tops. You may be able to get some good plants out of the row of raspberries. I am of the opinion you would do better to discard them, also, and make a new planting of Royal Purple (purple) and Cumberland (black). However, if you decide to draw on this old bed for new plants, select as strong young plants as you can find. Cut them back to a few inches above the roots. You can safely transplant them next spring just before growth starts. Be sure not to plant them too deep. You should get fruit in a limited amount from these transplanted vines the third year. The best time to transplant rhubarb is in the fall, but you can successfully transplant it next spring, and I advise you to do so.

* * *

There is a good reason for corn being high in price out here in the heart of the corn-producing section. In this vicinity there is scarcely any hard, well-matured corn. It was caught by the fall frost and is even too soft to crib. Thousands of southwestern cattle are being brought here and are being fed this soft corn. It was the only thing to do, tho it is a rather risky venture.

* * *

For some time I have had it in mind to plant a commercial apple orchard but as I know very little about it and have not much money to waste, I am seeking your advice.

Have read somewhat about the state of Montana, in which claims are made that the Missoula Valley is a good place to grow apples. Would the difference in the price of the land here in Pennsylvania and there, considering the final result, make it advisable to buy there? Would poultry do well there? Would you advise to plant Northern Spies, Baldwins or Wealthy trees for the main crop? There are no large orchards here, but do not see why they could not be made to pay.

Please recommend a book that covers the care of trees and the subject complete. Peaches do not do well in this locality. Have not had a good crop for about six years. Only two or three peaches to a tree. Can you tell why this is? I know of one orchard that was set out six years ago and has never had a peach on it yet.

Have wanted for some time to get out and get next to the earth. Have two young boys whom I would like to see good farmers, for I do think there is no better work than to be a tiller of the soil.
T. E. Lyon.
Pennsylvania.

I cannot imagine why a man in Pennsylvania should look elsewhere for land upon which to establish an apple orchard. It is like leaving the Garden of Eden to roam in the wilderness. Why, man, Pennsylvania contains some of the finest apple land to be found anywhere in the world. The soil is

A NEW Golden Profit-Maker

THE golden reward of a century's search. Queen of all yellow apples. The greatest fruit development since Stark Delicious—master of all red apples, was given to fruit lovers by Stark Bro's Nurseries.

Fruit men have long longed for a yellow apple combining delicious flavor, great size and young bearing, late keeping and hardy tree characteristics. "Golden Delicious" is the answer—the apple of which Col. G. B. Brackett, U. S. Pomologist, Washington, said:—"Here is an apple that has an even better flavor than Grimes Golden!" Jos. Gerardi, the fruit expert, declares: "I foresee

Golden Delicious

the first choice of our orchards." "The tree is as hardy as Wealthy or Stark Delicious," asserts Silas Wilson, owner, of the famous 800 acre Wilson Orchards. The branch shown at left, is a "topgraft" inserted 18 months before photo was taken. In 18 months that graft grew and bore this fine crop of extra large golden fruit! Nothing equal is recorded in all our 102 years of history!

This apple will be planted now by foresighted fruit growers. It will prove a "treat" to every family who plants even a few "Golden Delicious" trees. Learn more about it—and all Stark Bro's Improved Varieties of Fruits. Write for

Hatch EVERY Hatchable Egg -

Bill User Says:--

"A good strong chick from every hatchable egg is my motto, and I make good on it with a Buckeye every time I start a hatch.

"I never really got results except with the Buckeye. I have experimented a lot, and paid well in valuable time and good eggs for the education. But with the Buckeye I never had to 'run' it. I just set it, tended the lamp and turned the eggs every so often. The Buckeye did the rest and the first hatch was just like I'm getting now—a big, strong chick from every hatchable egg."

It's business right from the start with the

BUCKEYE

THE PERFECT INCUBATOR

The beginner stays in the business when he starts with a Buckeye. He has no experimenting to do; no period of training to pass through and pay for. We have done the experimenting and taken all the gamble out of the business. Our guaranty goes behind the first hatch.

The Buckeye is built up to a standard, not down to a price. Its superiority is not seriously questioned in the poultry world by those who know. Tested in hundreds of poultry plants, big and little, it never fails to give a perfect hatch. Every Buckeye is guaranteed to do it.

More than half a million are in use, bringing success to beginners and big operators. The tremendous and increasing growth of sales is the result of universal satisfaction. The beginners grow and the big poultrymen expand by using more Buckeyes, and all recommend them to their neighbors.

The Buckeye Guarantee

The Buckeye is guaranteed always to give a perfect hatch of the largest and strongest chicks. To operate satisfactorily in any temperature down to freezing. To require no artificial moisture, and no attention to the regulator from the time the hatch is started until it is finished. The perfect construction of all its mechanical parts is also guaranteed, and any incubator or part thereof that does not fulfill our guarantee in every particular will be replaced without question any time within 40 days.

Get Our New Catalog

It gives all the reasons for Buckeye superiority and success; why we are able to place behind it our unqualified guaranty. In this catalog every Buckeye claim is backed by the most remarkable lot of testimonials ever printed. Write a card for it today.

See our dealer. Over 6000 dealers enthusiastically recommend the Buckeye. The one nearest you will gladly show you the machine in operation. Let us send you his name.

and Raise
EVERY
Raisable
Chick!

Mrs. User Says:-

"I don't worry any more about brooder losses. There is no such thing as 'failure' in our business since we installed the Standard Brooder. Some sort of an accident is the only thing that keeps us from raising every chick that is hatched right—and with Buckeye hatches that means all of them. Even an accident is next to impossible with a Standard. There's nothing about it to catch fire and burn up the brood; no corners where chicks can be crowded and killed. It's fire-proof and fool-proof. Broods a few or a thousand chicks with equal safety and comfort—and raises them all."

It isn't possible to beat the record of the

STANDARD
Colony Brooder

Among more than 30,000 users of Standard Colony Brooders satisfaction is universal. Not one failure has been recorded. Users are so enthusiastic over their success with the Standard that its fame and its sales are spread automatically. Nothing like it has ever been offered to poultrymen, and as it is completely covered by patents, it can be bought only from us and our agents. We are so sure that it is the best brooder ever invented, so certain that it will satisfy you, that we will let you

Write Your Own Money-Back Guarantee

You know what you want a brooder to do for you. Read every claim we make on this page. Add all other requirements you think necessary. We'll sign it. And if the Standard does not fulfill all our claims and your demands the first time you use it, we'll return your money without argument.

The Standard is the simplest and most economical brooder. Burns hard or soft coal. Costs less than six cents a day. Fire lasts 24 hours from one filling. Installation and operation expense cut to less than half. Labor to less than a quarter. Self-feeding; self-regulating, everlasting.

It is the most sanitary brooder

and easiest to keep clean. No wooden walls or curtains to harbor vermin and dirt. Nothing to it but a smooth, solid cast-iron stove, a galvanized steel hover and the automatic apparatus for feeding and regulation. Broods 100 to 1000 chicks with equal security.

The Standard is endorsed by all agricultural colleges and experiment stations. It is sold by over 6000 dealers, who are always glad to show it.

Why Poultry Pays and How to Make It Pay

By Morgan Bates, A "straight from the shoulder" talk on raising poultry from the money-making point of view. It gives the beginner sound advice about starting in. Covers all subjects. Price 50c.

AMERICAN POULTRY JOURNAL PUB. CO.
542 South Dearborn Street Chicago, Illinois

right, the land has air drainage, the climate is ideal for the production of beautiful apples of the best quality, and a grower there is at the door of the best markets in the country. In a word, there the conditions are ideal for the profitable production of apples. Land there can be bought as cheap or cheaper than in the boom fruit districts of the West. I strongly advise my correspondents to remain in Pennsylvania. I advise you to plant Delicious, Stayman Wine-sap and Wealthy in Pennsylvania. Also plant Golden Delicious. These are all varieties which have proved best for your state. The Golden Delicious has not been largely planted anywhere as yet, but I think the men who get in now with their planting of this variety will reap a rich harvest. The Nursery Book is one which you should buy and study carefully.

* * *

If you have not pruned the grape vines, do so this month. If you wait much later there is danger of the vines bleeding to death when pruned.

* * *

Would like your opinion of the land in Manistee County, Michigan, as fruit land, in particular that section along the Manistee River about eight miles in from Lake Michigan. Are the soil and climatic conditions right for fruit production? Which is better, rolling land or that nearly level? What varieties of apples, peaches, cherries and plums would do best there, and which of these fruits would be the most profitable for that section, it being about eight miles from Manistee, the best shipping point? How does the Upper Peninsula compare with this section as a fruit country? How about Wisconsin? Which section has the most productive land, Wisconsin, the Upper Peninsula or Lower Michigan? A Subscriber.

The lands along the river of which you speak are good for fruit, but by no means the best in the state. The best fruit lands are nearer the lake. Climatic conditions near the lake (Michigan) are ideal for fruit production. As a rule, rolling land is better than level land for fruit raising, because the air and water drainage is better. The Upper Peninsula is the best part of the state for the production of cherries.

There are some very good fruit lands in Wisconsin. The apple industry is developed to a greater extent in Door County than in any other county of Wisconsin. There are more farming lands in the lower portion of Michigan, of course. Wisconsin, as a whole, is more of a corn, hay and dairy country than a fruit country, altho fruit is grown in practically every county of the state.

For the location which you first designate, the McIntosh Red, Delicious, Northern Spy and Wealthy are the best apples. In cherries, plant Montmorency, sour, and Lambert and Black Tartarian, sweet. In plums, plant Omaha, Endicott, Gold and America. The peach is best grown some south of your described situation. Early Elbert, Elberta, J. H. Hale and Kummel are best for your planting.

Questions and Answers
 Conducted by
 Prince T. Woods, M. D.

Questions about poultry are answered in this department free for all readers of American Poultry Journal. Where answers are desired by mail, a stamp for reply is requested. Address all query letters to the managing editor, Dr. Prince T. Woods, Lock Box 4, Silver Lake, Mass.

Brooder—Mating—Scoring.

Q. (1) Would a brooder 4x6 feet, with a window at top, covered with heavy muslin, be suitable for raising small chickens?

A. (1) The description does not indicate a satisfactory brooder. Would not experiment with the home-made sort unless you have plans of one which has proved practical and successful. There are plenty of good brooders offered at reasonable prices.

Q. (2) Where can I secure information on mating and scoring S. C. Buff Orpingtons?

A. (2) Apply to the breeder from whom you bought your stock for advice on mating. He knows more about the strain than anyone else. If you want your birds scored send them to the nearest score card show.

Q. (3) How many chickens could I house, comfortably in a house 4x6 ft., allowing them to run with their mothers?

Indiana. H. W.

A. (3) Divide the house into two or three compartments by partitions. Allow fifteen to twenty chicks to one hen in each compartment.

You did not sign your name to your letter nor did you give your home and town address. We have made an exception in your case, but ordinarily we do not answer letters unless signature and address of the correspondent is given. Sign the full name and give complete address.

Music or Poultry—Which?

Q. (1) I am a reader of the American Poultry Journal, which I buy at the newsstands. Have a notion to start with poultry next spring in Erie County, Penn., with a 200-egg incubator, brooder, bone grinder, etc. Have fair buildings for the purpose. Which variety will do better, Anconas or White Leghorns? Can you recommend any particular laying strain as best?

A. (1) We do not think that there is any choice between the two breeds. Both are good. Would select the one which appeals to you most. We cannot recommend any strain.

Q. (2) We raise some grain at home. At present I travel with an orchestra as a musician at a salary of \$37 to \$39 per week. Nowadays my expenses are high, reaching \$20 to \$25 per week. What would you do, stick with the music or start with poultry?

Spartanburg, S. C. J. M.

A. (2) Stick with the orchestra. A salaried job is much safer for you than attempting to make your living with poultry under present conditions.

Early or Late Molt?

Q. I have some hens that molt early and a few that molt late. Those which molt

now. We do not consider that it has been proved that early molting hens lay less than late molting hens. If the hens are equally healthy, vigorous and desirable in quality, there is not much choice. Personally, we prefer to have the majority of our hens clean up the molt nicely before cold weather. There are some breeders who believe that hens which have been laying heavily in fall and winter cannot be depended upon for good fertility and strong chicks in the spring. This view needs more or less modification. Much depends upon the condition of the fowls and the way they are handled. We have had very satisfactory results when breeding in the spring from these fall and winter layers. We like to have a few selected, choice brooders start their laying string a short time before we require the eggs for hatching, but we believe it would be difficult to prove that their chicks are any better than those of fall layers possessing equal constitutional vigor and good condition. The chief difficulty is keeping hens in condition which have been in heavy lay for a considerable period. When a hen is laying heavily, she is very apt to do one of two things; lay herself out of condition or take on an excess of internal fat. If you can hit the happy mean between extremes, keep her in condition, and have her take a brief rest now and then, you can get

Harrysbourg oil burning colony hover. Manufactured by Harrysbourg Poultry Farm, Dunkirk, N. Y.

early begin laying in November and lay while eggs are at good prices. The late molting ones are not laying now. Which do you consider the best laying hens? The early molting ones that lay high-priced winter eggs or the late molting ones which lay more eggs and cheaper ones?

Port Tampa City, Fla. N. B. R.

A. We know that advocating the late molter as a heavy layer is a popular fad just

good hatchable eggs the year round. It is not safe to pin your faith too closely to the results of "official tests." It is exceedingly difficult to find an experimenter who is without bias, and a biased experimenter or investigator cannot help finding what he is looking for. He may be honest enough and sincere in his effort, but his mental slant and prejudice lead him astray.

Four First Prize and Champion Males, Chicago, 1917

U. R. Fishel's White Plymouth Rocks

have for over a quarter of a century proven to be the best in poultry. Not only do they win more prizes but they produce more eggs and meat. Mr. H. P. Schwab, one of the best Plymouth Rock Judges in America, in commenting on the Plymouth Rocks at the recent Chicago Show, says:

"The Standard demands were outdone

for such very superior quality cannot be described in mere words. Any description of Mr. Fishel's birds would be unjust to them, etc."

Never was such a tribute paid to White Plymouth Rocks by such a noted judge. Do you want the best in White Plymouth Rocks? You want the best for eggs and meat, I know.

Special Sale Breeding Males, \$5, \$7, \$10, \$15 and \$20 Birds that will put type, vigor and egg-producing qualities in your flock.

Selected Breeding Pens properly mated, Utility Flocks that will produce eggs and meat. Write your wants, please. Mating list free. EGGS FOR HATCHING BABY CHICKS U. R. FISHEL, Box A, HOPE, INDIANA

Rhode Island Reds.

Q. (1) What do you think of Rhode Island Reds? Are they good layers?

A. (1) They are excellent fowl. As layers they are equal to the best.

Q. (2) Will they hold their color? I have heard that in two or three generations they will degenerate into mongrels.

A. (2) Some fade more than others with age. If your birds are properly mated, bred and cared for, you need not worry about color. The Reds have as fine a foundation as any American variety. Any breed will degenerate if you do not use skill in breeding and give them care. Use mated stock from a reliable breeder. Do not breed unrelated stock; by reckless introduction of "new blood" or crossing strains you can make a mess of things in a single season. Do not believe all you hear; there are a great many people who "know" a lot of things that are not so.

Q. (3) In using the "pelvic bone test" on Leghorn pullets, how wide should they be apart? Can then be too wide apart?

A. (3) We would not pin our faith too closely to any test. Pick birds that are well set up, vigorous, good clear eyes, good head and comb. Avoid over-long heads and long

"Masterpiece." First prize Buff Orpington cock, Illinois State Fair, 1916. Owned by R. M. Seward, Lewistown, Ill.

beaks, knock knees, deformities and decidedly pinched tails. If the pelvic bones are not rigidly set so that it is difficult to get one's finger between them, we should not worry. Flexibility of the pelvic bones, good depth between pelvic bones and end of breast bone, with good curve of abdomen, are considered good indications of laying capacity. If birds are laying you should be able to place two or three fingers between the pelvic bones. It does not matter how wide apart they may be.

We saw an amusing exhibition of "system" selection this winter. The expert was prognosticating the laying capacity of a number of hens and pullets and making quite a hit. Then the man who was passing him the birds slyly slipped him a nice cockerel without being detected. If the expert had deigned to look closely at the bird in his arms he could not have missed the saddle plumage, tho the sickles were missing. However, he did not look, and gave the bird a record as only a fair or very ordinary layer. Then he asked for confirmation of his opinion by a bystander, who said he wouldn't want to say that the bird would ever lay eggs but he might fertilize some. In the laugh which followed the expert joined as heartily as his audience.

Sprouting Oats.

Q. (1) What temperature should be maintained when sprouting oats? My sprouter is lamp heated.

A. (1) We prefer an unheated sprouter which can be used in a room where the temperature range is from 60 to 75 degrees. Believe this gives better results than a constant temperature. With so small a sprouter as you have, you can operate it in the kitchen without using the lamp. Same temperature range will be all right if you heat the sprouter. If it varies between 50 degrees at night and 80 degrees in middle of day, there will be no harm done.

Q. (2) How often and during what period should oats be stirred?

A. (2) Until they begin to put out rootlets, turn them over twice a day. After the sprouts and roots are well started do not stir, as it will break the fine rootlets and spoil a part of your mat of oats.

A National Proclamation

The Greatest Incubator

BARGAIN

Ever Offered

For years we have manufactured the good old reliable National Incubator. For years we have successfully started thousands in the profitable poultry business, and during all these years we have longed to build a bigger, better, simpler machine to sell at a price everyone can afford. At last we have accomplished our desire. Our 1918 National with all the latest features and improvements is a revelation to the poultry world. Think of it—165 Egg National Incubator for only \$10.00, freight prepaid—On 40 Days Trial—Backed by Our Money Back Guarantee. Your hard-earned dollars cannot buy greater hatching value. You cannot equal this exceptional offer anywhere. Take no chances. The National is simple, compact, durable, economical—and remember, it is

Built on "Uncle Sam's" Specifications

as outlined by the U. S. Dept. of Agriculture in Farmers Bulletin No. 236. We want to prove to you that the old reliable National Incubators are the best built, best equipped and most durable machines made for the money. Here's how we built the National. Hot water heating plant—Double wall—Dead air space between—Double glass doors—Special high grade cold rolled copper tank—Asbestos lining—Famous National regulator and boiler—Self Regulating—Self Ventilating—Safety lamp—Tested thermometer—Metal case (which makes it sanitary, air tight and non-shrinkable). No extras to buy. Not a cheap tin covered machine. Easy to operate. Will not warp or shrink. Pays for itself many times in one season. With proper care will last a lifetime.

165 Egg National Incubator

The National Brooder
Better Than The Hen
 Protects the tender chicks from all harm. Keeps proper temperature—properly ventilated—strong—durable. Sent prepaid east of the rockies.
 165 Egg Incubator Both \$12.50
 165 Chick Brooder

ONLY \$10
 Freight Paid East of the Rockies

We have built thousands of incubators, but never have we offered such amazing value. The National contains every modern operating convenience. We guarantee it to be faultless and will replace any defective part for five years. It is the greatest incubator value ever offered. To prove it to you we will send it for

40 Days Trial

12 Year Guarantee

What Users Say—

The Incubator you kindly sent the Agricultural class of the Garretville High School proved a wonderful success. The simplicity of putting the parts together; the ease of regulation; are virtues which speak for themselves. We recommend your machine to anyone. G. H. S. Agricultural Class, Ohio.
 Pleasurship at once 165 egg machine. My other one is O.K. Got fine chicks my first hatch. Harry Neff, W. Va.
 I find everything just as you advertised it. Mrs. M. G. Potter, Mich.

Why Take Chances

Safety Lamp

Cannot explode or ignite—reliable, unbreakable. Produces steady blaze without smoke or fume. A sputtering, fluming, unreliable lamp will spoil your hatch and may cause fire.

To save time you can order direct from this advertisement. You risk nothing. Try the National for 40 days—compare with your neighbor—put it to the greatest of all tests—THE HATCH. If you are not satisfied it is the greatest incubator bargain you ever saw return it at our expense—we will promptly refund your money. We know you will not return it after your first big hatch of strong healthy chicks. You are absolutely safe. We deal fair and above board—no red tape. The publisher of this paper knows we will stand back of our word.

FREE

1917 Poultry Book

No matter whether you hatch 10 or 10,000 chicks you need this great book. It is far more than a catalog. Tells all about the care of eggs and chicks. Breeders—Utility Stock
Eggs for Hatching

Write me your wants and send for mating list. I have the quality, the prices are right, and I can please anyone.

H. R. STEVENS HYMERA, IND.

Q. (3) How often should the oats be moistened?

A. (3) Morning and evening, unless the sprouter moistens them automatically.

Q. (4) How deep should the oat tray be?

A. (4) Two to three inches.

Q. (5) The sprouting compartment of my sprouter is 15 inches from top to bottom and has a glass door 6 x 13 inches. How many trays can I use?

Houston, Tex. M. W. C.
A. (5) Three. We judge that your sprouter is home-made and that you have put a lot of work into it. All you really need is an upright rack capable of holding a drip pan at the bottom and as many trays as you can conveniently arrange one above the other, spaced about two inches apart. You can buy one ready made cheaper than you can build one.

Dark Cornish.

Q. (1) I raise Dark Cornish and some of the young stock have dark toe nails, some of them having nails almost black. What is the cause of this?

A. (1) You have probably been breeding from richly pigmented birds having a good deal of horn color in the shanks and toes.

Q. (2) Have a young male that had a slight cold. He seems to be over that now, but has more or less bubbles and foam in his eyes. What is the cause?

Lacrosse, Kans. W. H.
A. (2) He still has the "cold." Put him into open front quarters. Wash out nostrils and eyes with warm water, dry and apply a little vaseline to eyes and face, and rub some into nostrils and cleft in roof of mouth. Feed him liberally.

Kafir Corn.

Q. (1) Where can I obtain kafir corn?
A. (1) For seed, of your seedsman. For feed, of your feed and supply dealer. You may find more or less difficulty in getting a supply under present conditions.

Q. (2) Is the red or the white the best to feed?

A. (2) Do not think it makes much difference. Feed what you can get.

Q. (3) Tell values of buckwheat, barley, rye, sunflower seed and kafir corn. How should they be fed in a ration with corn, oats, wheat for grain, and wheat bran, middlings, alfalfa and Darling's meat crisps as a mash?

A. (3) We believe it is not necessary to waste much time figuring the chemical balance of the ration. The fowls will unbalance your hard grain mixture as soon as you feed it to them. Place your main reliance in corn and oats. Give kafir for variety, and now and then a little sunflower seed for "cake and pie." Following is table of values asked:

Buckwheat	12.6	8.7	2.0	10.0
Wheat	10.5	1.8	1.8	11.9
Corn	10.9	1.9	1.5	10.4
Oats	11.0	9.5	3.0	11.8
Buckwheat	12.6	8.7	2.0	10.0
Barley	10.9	2.7	2.4	12.4
Rye	11.6	1.7	1.9	10.6
Kafir	9.3	1.4	1.5	9.9
Sunflower	8.0	28.5	3.0	13.0

Feed	Starches	Fats	Nutrient in.	Ratio	1 Oz.	Calories
Wheat	71.9	2.1	1:6.3	102	
Corn	70.3	5.0	1:7.9	106	
Oats	59.7	5.0	1:6.1	96	
Buckwheat	64.5	2.2	1:7	83	
Barley	69.8	1.8	1:6	100	
Rye	72.5	1.7	1:7.2	100	
Kafir	74.9	3.0	1:8.3	106	
Sunflower	23.9	23.6	1:6.3	105	

Q. (4) Please give information about Lakenvelders.

A. (4) The Lakenvelder is a fowl of Dutch origin, having type like the Leghorn. Hackles and tails are black, body white. When well bred they are a strikingly beautiful fowl. Excellent layers of white-shelled eggs.

Q. (5) Buttercups?

A. (5) Buttercups are a medium-sized breed of somewhat Mediterranean type. Comb is peculiar to breed and is cup-shaped, surrounded by numerous points, upright and diverging from crown, like petals of a flower. Cock has dark red or bay plumage with black tail and flights; shanks willow. Female is golden buff, penciled or spangled with black; breast plain buff, often spangled with black. Reputed to be excellent layers.

Q. (6) Yokohamas?

A. (6) The Yokohamas, or long-tailed Phoenix fowl of Japan, are an ornamental fowl of considerable beauty and are bred and handled to develop wonderful growth of sickle

feathers. Seldom seen except in yards of those who specialize in rare varieties.

Q. (7) Wild Mallard ducks? I expect to keep R. I. Whites.

Newman, Ill. A. R. A. (7) The Rhode Island Whites are stated to be a very excellent variety. Wild Mallards are very beautiful ducks with plumage similar to the Standard Rouen. You will find color pictures of them in almost any good bird book. You would find Lewis Wright's "New Book of Poultry" very interesting, also Harrison Weir's "Our Poultry and All About Them."

Jar from Trains Affect on Hatching.

Q. Will the jar from passing trains affect the hatching of eggs in incubators in basement 25 feet from railroad tracks? Could jar be reduced by placing incubators on raised platform?

Pekin, Ill. J. F. J. A. One of the first successful baby chick hatcheries in New England had its incubator cellar located quite as near to railroad tracks on a main line. The jar from passing trains would cause the regulator arms and discs to rattle and some machines had rubber-pad shock absorbers, made of old hose, attached to the feet. We used to buy baby chicks there a good many years ago, before the land became too valuable to be used for a poultry plant. We recall that the proprietor claimed to have excellent hatches and he certainly sold chicks at a low price. If the jar in your basement is heavy, you could undoubtedly make a shock-absorbing platform on which to place the machine. A platform supported by lengths of old garden hose placed horizontally and sufficiently close together, or pieces of old automobiles shoes, would probably serve. If you take up enough of the jar so that regulation is not interfered with, that will probably be sufficient. Keep the platform quite close to the floor.

Stag—States for Egg Business.

Q. (1) What is a "stag"?
A. (1) Breeders of games apply the name "stag" to a young male bird. Market buyers refer to cockerels which have been running with pullets or hens, and which have thereby "hardened" and "lost the bloom of their flesh," as "stags."

Q. (2) Is it a fact that hens sometimes do not molt for four or five years, or even one year, as related in an "experience" column?

A. (2) We do not know. We do know that some hens are apparently in a continuous state of molt and never seem to molt like others. Their change of plumage is very gradual and seldom noticeable. Also some fowls seem to retain certain feathers for a long time unless removed by design or accident. This is not uncommon in sickles which in some males grow to extraordinary length.

Q. (3) Is the Hogan system of determining layers reliable? Why is there so little about this system in the papers?

A. (3) It has many features that are capable of practical application. No system is infallible. It is advertised and sold as a "secret system" under copyright.

Q. (4) Does Detroit egg market pay most for white or brown eggs?

A. (4) We do not know, but doubt if much difference is made. Do not mix eggs of white and brown shells in same carton or case. They sell to better advantage when all are of like color.

Q. (5) In market quotations one sometimes sees it stated that eggs from certain states bring lower prices than eggs from other states. Why this discrimination? What states are effected?

A. (5) It is wholly a matter of grade and quality. If the eggs from a certain section are not grading up to quality they bring lower prices. In warm weather, long haul shipments, not refrigerated, and shipments from southern points, do not hold up in quality and the price suffers accordingly. Much of the trouble is due to attempting to market eggs which have been fertilized—many of them held-up country store collections and infrequently-gathered farm eggs—a little heat being sufficient to spoil large quantities. Shipments from sections known to be lax in methods of handling and caring for eggs are likely to be viewed with suspicion. Newspaper market quotations are usually strictly wholesale, and retail dealers have to pay higher prices on small lots. The actual retail price—that paid by the consumer—is higher by several cents a dozen.

Q. (6) Which state is the best for poultry and egg business, Missouri, Kansas, or Colorado?

Holland, Mich.

P. J. M.

1896

WILLIAMS' WHITE YANDOTTES

1918

Champions of 1916-17-18

Winning the lion's share at America's greatest quality shows, Hagerstown, 1916, and the Garden, 1916-17-18, in competition with the kings of the East and from Canada and the Mid-West. At the National Club meet at the Garden, 1917-18, in the keenest quality competition yet seen, I won 1-3 pen, 5 cock, 1-2 hen, 2 cockerel, 1 pullet, best display. At the above three greatest of quality shows I bred, raised and exhibited 26 out of a possible 32 first prize birds, also 7 seconds, 3 of them where I lost first. I won the coveted 1st pen and best display in each show, and the president's cup at the Garden. I have bred winners for New York shows 15 successive years.

My Specialty is Show Birds and Breeding Stock

Good trios and pens mated by a specialist from his own line-bred flock are the best, safest and most satisfactory investment.

My free catalogue tells why, and gives you my broad guarantee

500 choice breeding birds at \$5 to \$50 each

Keeping Eggs for Hatching.

Q. (1) How long can I keep eggs for hatching? I have a 60-egg incubator and only seven hens.

A. (1) The fresher the eggs are when incubated, the better. Never hold them over three weeks. It would be better not to keep them longer than two weeks. Keep the eggs in a place where the temperature does not fall below 40 degrees and does not go above 60 degrees. Higher temperatures may spoil the eggs. Lower temperatures may chill them.

Q. (2) I have White Wyandottes. Do you think them as good as any other breed? Do you think I could make more money with some other breed?

A. (2) You will undoubtedly find the White Wyandottes entirely satisfactory. They are an excellent fowl.

Q. (3) How big a house and yard will I need to keep 50 hens?

A. B.
A. (3) Open front house 14 ft. wide by 16 ft. will serve. Allow from 65 to 75 sq. ft. of yard room per fowl.

No Male—Tile House.

Q. (1) Will a flock of hens get along all right, as far as laying is concerned, without a cock? Eggs not wanted for hatching.

A. (1) Yes.
Q. (2) I have a chicken coop made of tile and covered with cement, floor and all. Do you think it will be too damp? I keep hay litter on the floor. House faces east and has a row of windows running the full length of front, 9 ft. by 12 in., close to roof.

A. (2) We would not care for a house of that sort. It is likely to prove damp unless plenty of ventilation is supplied. A part of front should be open. With an east frontage and windows as described it will get very little sunlight. Would be better if house faced south.

Q. (3) How many fowls can be kept in a house 7 x 9 ft. and a yard 14 x 9 ft.?

A. (3) Not over 10 or 12.
Q. (4) Are the Hamburgs as good layers as the Leghorns?

A. (4) They are good layers and lay a rather small egg. Would not want to keep Hamburgs in a house such as you describe. Why don't you get a good portable house of desirable type?

Q. (5) I would like to keep two breeds. What breeds do you recommend?
Shenandoah, Pa. M. V. M.

A. (5) Do not try to keep two breeds when you have such limited accommodations. You do not need two breeds if you are keeping fowls for eggs only. Any of the popular breeds should suit. Why not try Leghorns since you fancy them? They stand confinement well.

Automatic Feeders.

Q. (1) I am a beginner. Can you tell me which is the best automatic feeder? I have been stung on some poultry equipment of small capacity that could only be used by those who have time to fool away.

A. (1) There are several good automatic feeders. We would not undertake to say which one is best. We have used the Gillette, the Norwich and the Simplex. Do not get too small a feeder. We prefer the 16-qt. size. The 8-qt. feeder is rather small but quite convenient for small flocks. The 32-qt. feeder is satisfactory with large flocks of adult fowls.

Q. (2) Are automatic feeders practical?

A. (2) We consider them so and use them. The simpler the feeder, if easy to operate and feed supply can be controlled, the better.

Abnormal Yolk—Worms.

Q. (1) A Barred Rock pullet laid an egg which was all yolk. Contents like lumpy mustard. Had a little odor, but not offensive. Has not laid since. Others hatched at same time have not begun to lay. Is this the result of something abnormal in pullet and will she prove any good as a layer?

Dr. Globe Says:

COCKS BROS. Box 284 ATTLEBORO, MASS.

Mention the American Poultry Journal when writing to advertisers.

A. (1) Do not believe the pullet will ever be of value as a layer. Abnormal egg may have been result of injury or disease, or both.

Q. (2) Discovered round intestinal worms in droppings about a month ago. Have not found any more. There are 100 hens in this flock. Used medicine in drinking water. Would you recommend any further treatment?

Morristown, N. Y. E. D.
A. (2) Tincture of Cina in the drinking water, one teaspoonful to each quart of water, is useful when worms are noticed. Chopped or crushed onions, or garlic, are good to use in the mash as follow-up treatment. Give them raw, all that the birds will eat freely.

Spoiled Corn.

Q. (1) Can you tell me how to feed corn which is poor and usually moldy?

A. (1) Moldy corn is not fit for poultry feed. It is almost certain to cause sickness and losses.

Q. (2) Do you think that drying the corn in the oven would help, even if it is moldy, and that it would be all right to feed poultry? Would boiling help?

A. (2) You might wash the corn, then dry it as proposed and try a little of it. Moldy corn is dangerous. If the mold shows in the heart of the grain, do not attempt to feed it. Boiling will make soft corn safer to feed. We certainly would be exceedingly careful about feeding moldy corn or grain that has heated in the crib. We are getting many inquiries of this sort. The condition of the 1917 corn crop is very discouraging, but we have to make the best of a difficult situation. You will find an editorial on this subject in January issue, pages 34-35.

Q. (3) I have a number of cockerels. Would it be best to sell them at present prices or to hold them longer for a higher price?

A. (3) If they are in marketable condition and you do not need them for home food supply, would certainly market them now. The longer you keep them the less you will get out of them.

Q. (4) I do not shell corn to feed it to poultry; feed it on the cob. I drive long nails, about 6 inches long, thru the side of the chicken house so that the points project inside the house—or use them in boards to be fastened up in house—and the cobs are placed on these nails, butt end toward the board. It certainly works fine. As poultry exercisers, cobs of corn used this way make the best I have seen. When I take off the cob I put a fresh ear of corn on the nail. I place these corn exercisers about 15 inches from the floor. It saves shelling corn and keeps the hens busy.

DeKalb, Ill. L. E. N.
A. (4) Your plan of feeding corn on the cob is interesting. When we have or can get ear corn we always feed it on the cob to adult stock. Just toss the husked corn ears into the litter and let the hens do the rest. They will get plenty of exercise out of corn on the cob any way you feed it.

Wants Experience in Caponizing.

Q. (1) Where can I get practical experience in caponizing?

A. (2) Get a book of instructions, a set of instruments, and practice on your own cockerels. You can get instruction at your state college of agriculture.

Q. (2) I am anxious to learn more about poultry. I raised a dozen Leghorns and Wyandottes with good results up to two years ago, following advice in state and federal government bulletins. I also worked on a gentleman's place and took full charge of 200 White Rocks. Hatched and reared 300 chickens. Please suggest what to do in order to follow up this line. I wrote to a dozen or more commercial plants but got no answer.

New York City. M. O.
A. (2) Why not take a poultry course at Cornell University, Ithaca, N. Y.? Or try a correspondence school course in poultry. Correspondence schools state that they are able to find positions for their students. We do not know of any poultry plant that would, at the present time, take a man who is seeking experience. You will find poultry books advertised in this magazine.

Calories in Ration.

Q. I feed my flock a scratch grain of corn, oats, buckwheat and kafir corn, and a mash of bran, middlings, corn meal, ground oats, alfalfa and beef scrap, all equal parts by weight. Please tell me how many calories this ration contains.

Topeka, Kan. J. C. B.

NATURAL HEN INCUBATOR CO., 1349 Constance Street, Dept. 4 Los Angeles, Cal.

sonally, we think it a waste of time to figure the calories in a poultry ration. Too much importance is given to the calorie, which is only one factor in determining food values. Ease of digestion, palatability, rapidity of digestion, completeness of absorption, are all much more important factors in food value than the number of calories contained. An ounce of coal would show a very much greater number of calories than an ounce of food, yet you would not want to feed coal to your fowls, nor would you expect it to nourish them. Food faddists and cranks are enjoying themselves at present, but if you should eat at the same table with one of them you might learn that they seldom practice what they preach to others. Your scratch grain will average about 98 calories to the ounce; the mash about 105 calories to the ounce.

A YEAR'S RECORD WITH A FLOCK OF 273 BIRDS.

By H. A. A. REUBUSH, Penn Laird, Va.

DURING the past year I have kept an itemized account of receipts and expenditures of our flock of fowls, which consisted of 85 White Leghorn hens, 68 White Leghorn pullets of our own raising, 102 Barred Plymouth Rock and Rhode Island Red pullets and 8 guineas. In the flock we also had 10 cockerels, making a total of 273 birds.

These birds were housed in four open-front houses and during good weather they had about two acres of orchard range. They were in good health during the entire year and we only lost one or two birds. They were fed mostly wheat screenings and corn; the screenings in the morning, with sometimes a warm mash of shorts and bran, and the corn in the evening. In the winter we fed them beets and cabbage and sowed a patch of rye for them. Oyster shells were kept before them at all times.

We purchased the wheat screenings last year for \$1.35, \$1.50 and \$2.50 per hundred pounds; for corn we paid \$1.05 and \$1.15 per barrel; shorts cost us \$1.80 to \$2.60 per hundred and bran was purchased for \$1.80 to \$2.00 per hundred.

The year's account begins October 1, 1916, and ends October 1, 1917, and is as follows: The White Leghorn hens, Barred Rock and Rhode Island pullets were sold July 21, 1917.

Expenditures.

102 pullets (B. P. R. and R. I. R.)	\$ 43.26
11 cockerels	10.18
8 guineas	3.20
8413 lbs. wheat screenings	130.54
1848 lbs. shorts and bran	42.28
25 lbs. beef scrap	1.02
164 lbs. starting food	9.24
200 lbs. cracked corn	5.00
300 lbs. oyster shell	2.05
60 barrels corn (on the cob)	64.61
Louse killer, poultry powder, etc.	5.38
Eggs for hatching	4.42

Total expenditure\$321.18

Receipts.

Eggs sold	\$366.24
Hens sold	66.52
Broilers sold	25.90
Guineas sold	3.20
87 pullets and cockerels on hand—	
169 lbs. at 25c.	42.25
9 lbs. broilers at 23c per lb. sold	2.07

Total receipts\$506.18

Expenditures 321.18

Balance\$185.00

This year wheat screenings are selling for \$2.25 to \$2.70 per hundred pounds, while corn is \$2 to \$2.50 per barrel; shorts, \$2.50 and \$2.60, and bran, \$2 to \$2.25 per hundred. Therefore to feed the same flock this year will cost about \$100 more than last. This year we are feeding beef scrap in addition to the grain ration and I will be pleased to submit an itemized account of the year's work with our flock of White Leghorns next October for use in American Poultry Journal.

[We have asked a good many times thru the columns of American Poultry Journal for itemized accounts covering a year's work with large or small flocks and we are pleased to publish Mr. Reubush's interesting statements regarding his work with poultry during the past year. We believe that the publication of such accounts will do much to assist producers in solving the very serious problems which they are now facing. In fact, the mere keeping of accurate accounts in connection with poultry work will aid in placing the industry upon a better business basis.—Ed.]

Ponies Given Away

We have given away 450 Ponies to Boys and Girls—all over America.

Now we are going to give away 5 more Ponies—some of them with Buggy, Harness, Saddle, Bridle and Blanket—to five more Boys or Girls.

If you want one of these Ponies, send your name today. We shall write you all about them and tell you how to win one.

Don't let anyone tell you that you cannot win a Pony, because our plan of giving ponies is different from all others.

We make it easy for children to get Ponies. Some of the children who have already received Ponies were only 6 or 7 years old, so you know we must have made it easy for them to win.

Free Pony Pictures—Write your name and address, also your age, in the corner below or write on a Postal Card and mail it to us. We shall then send you the free Pony Pictures and tell you how to get one of the Ponies. Don't wait—do it today.

Write Your Name in the Coupon

THE PONY KING, 610 Webb Bldg., St. Paul, Minn.

Parents: Your child stands the same good chance as any other child to get a Free Pony. Send in the child's name. Remember, five ponies are to be given away.

More Poultry More Eggs— the Crying Need of the World

In all our 25 years of experience, we have never known of a time when a strictly first-class incubator meant more to you than the "Successful" does now. You are not experimenting when you get a "Successful" incubator.

Answer the Call via the "SUCCESSFUL" Route

30,000 Chicks - 95% Hatches

Lancaster, Mo., Sept. 22nd, 1917.
Gentlemen:—The forty Successful incubators I have now in operation have produced over 30,000 chicks for me the past season. These incubators have produced excellent hatches. In some cases as high as 95% hatches. Of the chicks not sold I have actually raised better than 95% of the early chicks I put in Successful Brooders. This certainly is a most remarkable result, and speaks volumes for your machines.
K. I. MILLER.

PRODUCE more meat—help feed the world—make good profits yourself. That's my argument to you this year, reader, and I am backing it up with a machine that has stood the test of 25 years and has helped to make many of the *biggest money makers* in the poultry business. I offer with it no premiums, no sensational claims, no fancy frills, nothing but a pure quality hatcher at the lowest price possible.

Write for Catalog—Mail the Coupon and let me prove my offer with a money-back guarantee. Take two or three hatches at my risk. I'll let you be the judge. Write today.

"SUCCESSFUL" Incubators and Brooders

Read the 20 points of construction. Here is the only incubator in the world that's *really* cabinet made so far as I know. The only hatcher that beats around the colder edges of the body first. Guaranteed to vary not over a fraction of one degree throughout the entire hatch—because our patented lamp and wafer thermostat regulator are 99.9-10 per cent perfect. Center top ventilation prevents dead chicks in the shell. But write for catalog and read all about it.

Poultry Lessons FREE

20 lessons in all, the real genuine down-to-brass-tacks facts that explain the way to make money with poultry—everything just as you want it. Free to everyone buying a "Successful" incubator or brooder.

Famous little booklet, "Proper Care and Feeding of Chicks, Ducks and Turkeys," sent for 10c. Big poultry catalog is FREE. Write for it today. We also have high-grade poultry—stocks and eggs of all the leading varieties—land and water fowls.

J. S. GILCREST, Pres. and Gen. Mgr.
DES MOINES INCUBATOR COMPANY
1 Second Street Des Moines, Iowa

Save the Chicks in a **SUCCESSFUL** Brooder built beyond comparison with the deep boxes usually offered. Raised floor, glass drop door top, rain proof with a self-regulating heating system.

If Interested in Hatching Chicks in Large Numbers, Write for Special Proposition

Fresh Green Feed Makes Hens Lay

Turn loafing hens into layers. One husbel oats, wheat or rye makes three husbels of tempting, crisp green feed in the

"SUCCESSFUL" ALL-STEEL SECTIONAL GRAIN SPROUTER

Answers the feed problem—takes care of young chicks too, makes them grow. Made entirely of steel—double walls—fireproof—cannot warp, sbrink or swell. Lasts a lifetime.

20 Big Points

- 1—I personally guarantee that the "Successful" incubator will hatch larger and stronger chicks and a larger percentage than any other incubator when operated under the same conditions.
- 2—My remarkably low price offers with high quality.
- 3—The only hatcher that heats the colder edges of the body first.
- 4—Round corners on tank, giving faster current, more heat, even regulation.
- 5—Heaviest copper tank used on any incubator.
- 6—Only one scientifically ventilated. Admits cold air at center of top. Does not create draft which dries out eggs.
- 7—Safety attachment on lamp burner—provides absolute protection from fire.
- 8—Only incubator with two glass doors—through which thermometer may be seen.
- 9—Combination wafer thermostat regulator.
- 10—The only machine guaranteed with a guaranty that guarantees and evades no issue.
- 11—Built like a refrigerator.
- 12—Case non-warpable.
- 13—Weighs more.
- 14—Costs less per pound.
- 15—Strongest, most durable egg trays.
- 16—Nursery under egg trays. The greatest feature applied to artificial incubation.
- 17—Detachable legs, allowing machine to be stored in very small space.
- 18—The only incubator in the world cabinet made.
- 19—Simple, effective application of moisture when necessary.
- 20—Adjustable thermometer. Never necessary to open doors or pull out the trays to read temperature. Thermometer is stationary; chicks cannot knock it over.

25 Years' Experience

No man is born into the world whose work is not born with him; there is always work and tools to work withal, for those who will; And blessed are the horny hands of toil!
—James Russell Lowell.

* * *

PERHAPS in no other way can we so clearly see good coming out of the crisis thru which we are passing than in the casting off of trivial things which is now becoming apparent in many walks of life. Everywhere men and women are getting nearer the real things of life and allowing the frivolities to go by default. They are awakening to the fact that they can get along without pink teas or the house heated thruout when only a few rooms are needed. In some cases families have been adopting a co-operative method of getting together during the winter months and thus saving human energy, money and coal—three essentials for the successful prosecution of the war.

It has not been an uncommon idea with many of us that in order to properly represent ourselves, we must have an up-to-date setting—a surrounding of mahogany furniture, perfectly appointed homes and the latest cut in wearing apparel, not realizing that what man seeks is man rather than his fine house or luxurious motor car. That we have felt

the need of so much surplus in the way of accessories bespeaks the lack which we feel in ourselves. A short visit in the shack of a fisherman or a stop at the one room cabin of a mountaineer would bring home to most of us a lesson in

the beauty and value of simple living, and awaken us to the fact that the greater part of our lives are given over to the slavery of material possessions. I have known such hospitality in a two-room shanty as would put to shame the millionaire amid his surrounding of luxury. An old planter once remarked, after having eaten at a fashionable hotel, a roast chicken, in which many condiments and fancy fixings had been used, "No doubt it was very good that way, but I'm too fond of the taste of real chicken to want to have it disguised by other things."

Roller tray incubator. Manufactured by Roller Tray Incubator Co. Nutley, N. J.

In the homes of the unpretentious we get the real flavor of whole-hearted hospitality which is not dependent upon draperies, rare china or works of art, but the heart throbs of the host. Where the walls are plain unpainted boards, the dinner served on the kitchen table, the cups undecorated and perhaps not quite enough of them to go around among the unexpected guests, the wholesome characteristics of the members of the household are viewed in bold relief against the simplicity of their surroundings. That we all admire, and in our hearts feel the need of a simpler way of living

BABY CHICKS AND HATCHING EGGS

FROM TRAPNESTED, BRED-TO-LAY

Barred Plymouth
Rocks

Single Comb White
Leghorns

ACKNOWLEDGED AS THE WORLD'S BEST LAYERS

REMEMBER! Your year's work depends on the kind of stock you buy. The high prices of feed have made it necessary to feed only birds that will really lay eggs. Therefore, buy eggs and chicks from hens which have proven their laying qualities by the trapnest.

RED FEATHER FARM, F. W. C. ALMY, Prop.

Box 100, TIV. 4 CORNS., RHODE ISLAND

than that we follow, is apparent by the eagerness with which we return to it when opportunity offers. Who has not relished cooking meals over a fire in the open and eating it without knives, forks or the usual table accessories? Why does not long to get into the forest and live like a savage off the fish he catches for breakfast and the game he bags for dinner?

The simpler we live the more of worth we glean from living. The wise but simple-minded cottager learns that as much of life can be lived in his isolated home as in the millionaire colony, and more satisfaction extracted from it. He fritters none of life in waiting for a time to come when he shall "begin" to live. He knows that each following day will be very like today and takes his daily tablets of joy in the sunrise, the fogs, or the rain, in his daily tasks and associations. He learns to trust men and finds them true. The neighbor, farm hand, traveler or tramp who stops at his door finds ready welcome and from them each and all he gathers bit by bit a knowledge of life, a love of mankind. When the waves of tribulation break over him, he faces the storm and finds it not so bad as believed by those housed in safe shelters. His life is plain and true and lived without frills. His interest lies in the common days that come to him and from which he draws all of worth which they will give, finding a deeper solace in his few joys than those burdened with possessions.

Most of us go rushing thru the day's work with a feeling of distaste for it, in the hope of beginning to enjoy we know not what. There is need of a truer appreciation of life which idealizes the every day functions of living and makes beauty of them. Every necessary work, no matter how menial, is an art, and every man and woman who finds joy in the work of shop or field is an artist, who elevates to the height of genius that which is regarded by the average person merely as a necessary task.

After all, the best things in the world are those which anyone can have for the asking. They are not native to any special locality or favored walk in life. The travail thru which the world is now passing may help to give us all a truer insight into what is really worth while.

* * *

We drove up to the back door of the farm house one cold evening in late autumn. The mother looked tired and overburdened with her manifold duties and the head of the house was hard at work in the stable finishing his task of milking 32 cows. The wind was raw and cold that evening, coming as it did from the bay to the eastward. The children shivered and rubbed numbed fingers as they finished filling the huge boxes with wood for the night.

We sat down to late supper of "boiled-dinner" hash, at a long table by the kitchen range, with no apparent evidence of flagging appetites. On the table were a variety of home-grown foods—fruits and vegetables and delicious bread made from home-grown and home-ground grain. After supper the mother began the task of getting the children to bed, while the father labored over the week's accounts, which showed a deficit of a little more than four dollars between the selling price of the milk and the market price of the grain fed the cows. It had varied, he said,

THE NEW WASHINGTON HATCHERY

Can furnish pure bred Chicks of the finest quality

We ship big, strong, healthy baby chicks that LIVE. Hatched from healthy, vigorous, heavy-laying strains of utility and exhibition stock. All our birds are raised on free range, under most natural, sanitary conditions. Eleven years' experience in hatching and shipping chicks. Shipments guaranteed. Book your orders for early delivery. Be sure and get our 1918 catalog—FREE.

THE NEW WASHINGTON HATCHERY, Dept. C, New Washington, Ohio

RILEY'S WHITE WYANDOTTES

Won Best Display at the Chicago Coliseum Poultry Show, Dec. 1916

This, added to my record of six firsts, three seconds, two thirds at the Ohio State Fair the year before, proves their quality as breeders. They are bred-to-lay with the same care they are bred to win.

My 1918 Matings

are better and stronger than ever before. They include my 1st and 2nd cocks, 1st pen cockerel, 2nd pen cock at Chicago and my other winning males and females. Will sell you eggs from every pen I own. Eggs for hatching, \$3, \$5 and \$10 per 15. From \$5 and \$10 matings I guarantee 100 percent fertility, a chick in every egg, replacing every infertile egg returned to me. Some strong, sturdy, selected cockerels, exceptional quality for the price at \$5, \$7.50 and \$10. Write your wants and for catalog; it will pay you.

H. J. RILEY Box A BRYAN, OHIO

Guaranteed Extra Strong

BABY CHICKS

Poultry is not barred from the menu on meatless days, therefore the demand will be greater than ever. England's experience has taught that poultry and eggs are invaluable as food in these strenuous times. Help supply the demand by ordering of our vigorous, bred-to-lay, utility stock. Write for booklet containing prices and description.

FIRST MINORCA COCKEREL CHICAGO COLISEUM SHOW DECEMBER 4th TO 9th 1917 - SHOWN BY McARTNEY FARMS BOX 375 GARDENA, CALIF.

and been tucked into bed and the clatter of the household subsided into the quiet of night, with only an even ticking of the great clock in the corner, the cheerful crackle of the fire and the song of the steaming teakettle on the range, when the insistence of tired Nature made herself felt and sleep was inevitable. The host expressed his disgust at recalcitrant lids which refused to stay open even tho his interest in the conversation was keen.

By ten o'clock we were all comfortably in bed and the long, low howl of the wind as it swept thru the trees and about the house searching crevice or keyhole in which to gain entrance, clattering at the blinds, beating against the chimneys, crashing limbs from creaking trees, whistled its weird warning of the long, cold winter about to follow in its wake.

A moment's quiet under the soft, healing influence of sleep, and again we are brought to consciousness by the clang and impatience of an alarm clock in a distant corner of the house. Following it are the unmistakable sounds of suppressed noises incident to early rising, the workings of a pump handle, the rattle of fire building, the opening and closing of an outer door, the sound of animated footsteps over frozen ground going toward the stable, a moment's flickering reflection on the wall from a lighted lantern—then darkness and quiet except for the never ceasing battling of the winds. Wrapped in a blanket we get out on the cold floor and take a look out at the darkness in an effort to gauge the time. Darkness everywhere. As yet no gleam of light to the east to herald the coming of day—just a round canopy of cold, forbidding sky pierced by innumerable shivering stars. Crawling back into the grateful warmth of a comfortable bed, we welcome its solace more than at bedtime.

Presently, the sun, an hour or two

from week to week, but for the last few months had shown a steadily decreasing loss notwithstanding the fact that his herd was favored by access to excellent pasturage up to the late cold snap.

At length the day's chores for the family were done, the toil of the long day was over, and we gathered about the fire to talk of other days. Scarcely had the last child said his evening prayer

Change failure to success! Tycos Thermometers are absolutely dependable. Each one severely tested before leaving the factory. You'll hatch out more chicks every time. YESTERLAIDS ARE MONEY HENS

Profit is fixed in the blood of Yesterlaid Leghorns. It does not require expert care to make a success with them. A Yesterlaid customer from Massachusetts writes: "Eight of my Yesterlaid hens laid more than 200 eggs this year; here are their trapnest records: 200, 207, 216, 216, 219, 227, 230 and 232. Entire flock laying well. Eggs 73 cents wholesale, pullet eggs included."

Yesterlaid Single Comb White Leghorns are far superior to the average hen. They lay better in winter and cost less to feed. You can raise three Yesterlaid hens at the cost of two ordinary chickens, because they are vigorous, thrifty and quick-growing. Yesterlaid pullets lay enough eggs to pay their cost of raising before pullets from average hens begin to lay. They are big chalk-white eggs, hatch like popping corn and hand down superior vigor of the parents to the chicks.

Yesterlaid hens are supreme among Leghorns. This is evidenced by their constantly growing popularity, by reports from great numbers of pleased customers, and by the fact that twenty-four State Institutions and Experiment Stations have bought Yesterlaid hens.

Constitutional Vigor Insures Success

Careful, purposeful, selective breeding for vigor is the keynote of Yesterlaid's wonderful success. Buy Yesterlaid hens on the merits of vigor alone and you are sure to get what you want. Not a single female is used in Yesterlaid breeding flocks unless it is the unanimous verdict of Yesterlaid skillful specialists that she is perfectly fitted to reproduce her kind. These specialists are aided in their personal judgment of a breeding hen by the carefully kept records of the daily and yearly performance of the in-

dividuals, and of the flocks of Yesterlaid layers. Every Yesterlaid breeding pen carries the blood of hens that have laid 445 to 480 eggs in two years. The individuals in these pens are the result of more than a decade of diligent, painstaking study and breeding experience. They are pure line-bred Yesterlaid hens. They have never been out-crossed with English or other foreign blood. They rank high as show birds and breed true, generation after generation.

Yesterlaid prices are very reasonable — Cockerels, \$5.00, Cocks, \$10.00. Eggs — \$3.00 for 13 — \$5.00 for 26 — \$15.00 for 100 — \$140.00 for 1000. Baby chicks 30 cents each.

Valuable literature giving further details of how this wonderful strain of Leghorns has been developed — how it is fed and housed, will be gladly mailed to you free on request.

Yesterlaid Egg Farms Co. - Dept. 5 - Pacific, Mo.

Hatch Your Chicks "Nature's Way"

The hen sitting on her nest hatching eggs in "Nature's way" supplies a certain amount of humidity with her warm body and distributes a uniformity of heat over the nest with her feathers.

These two things, humidity and even heat distribution, are two of the most important essentials to the production of strong, vigorous, "Chicks that Live." Almost any machine will hatch eggs, but what percentage of chicks live? That's the rub—the chicks that live tell the value of the incubator.

The successful incubator must be built so as to scientifically follow "Nature's way" and properly supply these two important essentials in artificial incubation.

PRAIRIE STATE INCUBATORS

solved this problem years ago with the moistened sand trays and eddy current system of heat distribution.

That's why Prairie State machines are recognized as the most successful and dependable hatchers in the world. They are used in the majority of State Universities and Experiment Stations and are the choice of experts and successful poultrymen everywhere.

Let us send you our new Free catalog, giving complete information about the many superior features of the Prairie State Incubators and Poultry Equipment. Sizes 60 to 390 egg capacity. A postal brings book by return mail. Write for a copy today. (4)

at low prepaid prices. A postcard will bring you our 1918 catalog. Goshen Poultry Farms, R-12, Goshen, Ind.

high, touches our pillow with his penetrating and bestirring energy and we quickly get into cold clothing and hurry to the warm, moist atmosphere of the kitchen. The last child is being bundled off to school, buckwheat cakes are browning on a great old fashioned griddle and soon we are doing them justice. A motor truck filled with milk cans rumbles up to the back door and the man of the house comes in bringing a breath of the freezing temperature, beating his arms and stamping his feet to restore circulation.

We must make excuses for being so late to breakfast, but the host will have none of it and sits down beside us to stow away a great plateful of light luscious buckwheat cakes that melt in the mouth. As we urge more upon him, he laughingly replies, "This is my second breakfast. I had my first shift of cakes and coffee at six, before taking the milk to the early train."

After breakfast the mother goes to assist in the work of cleaning and sterilizing milk cans and dairy equipment—a task which requires a most careful and accurate knowledge of sanitation—while we luxuriate in wielding the dish-mop in steaming hot water. Five-year-old Richard scampers about the great kitchen chasing the cat. When the mother comes in there is the work of preparing the hearty midday meal. Vegetables dried and canned are brought from the well-filled cellar, chicken put up in a crystal jar last summer is opened ready for reheating. We repair to the cellar to see from whence come these stores. Row upon row of vegetables—corn, peas, beans of various kinds, tomatoes, beets, pickles; fruits from the earliest bearing to the last late picked quinces, in jellies, jams, marmalades, sauces, butters, preserves and whole canned. In another compartment lay great mounds of potatoes, beets, carrots, citrons and pumpkins. While on the south hillside from the house stretches a long, low mound, where one might dig out, on a thawing day, crisp, tender cabbages, like buried treasure.

When the dinner is over, there is no let-up in the day's activity. The men return to the fields where thousands of bushels of golden corn remain to be husked, where acres of brown buckwheat unharvested waves back and forth in the chilling breeze, gold tinged and beautiful, and as restless as the incoming tides of the ocean. On thru the day skilled hands, modern machinery and efficient minds work on the problem of conservation. The harvest is fair but the laborers are few.

Thus, by the never ending labor, the unflinching courage, the un baffled determination of the brave countrymen and women who wrest sustenance from the soil, the people of the cities are fed, clothed and have their being. Will there come a time in the not distant future when they will be willing to pay the price?

* * *

SPLIT PEA SOUP.

Wash one-half cup split peas and soak them in one pint of cold water over night. In the morning drain off the water and add one quart and a half of cold water, an onion and a piece of bacon rind of ham bone. Allow to cook slowly until the peas are soft. Season with salt, pepper and a liberal sprinkling

Get Ready For The "Big Batch"

Quantity production lowers the cost of production. That's why in recent years there is a demand for a brooding device which will rear chicks in "big batches" of from 100 to 1,000 or more at a time. To be worth its cost, a brooding device of this kind must be just as efficient as the small brooder and at the same time easily portable so as to be moved from place to place.

Taking all these conditions into consideration; after two years of careful research and extensive experimenting, we produced in 1914 the

PRAIRIE STATE STOVE BROODERS

Characteristic of this company, Prairie State STOVE BROODERS were not placed on the market until they had been THOROUGHLY TESTED under the most trying conditions and found to give complete satisfaction at all times. They are substantially built of cast iron because lighter material will not stand the wear. Burn anthracite coal, the best fuel for keeping an even fire. The flat construction of the canopy and the triple action regulator of our own exclusive design, give an even heat distribution that cannot be equaled by any other design of stove brooder. Adaptable to any style poultry house. Safe, sure and economical. Cost from 7 to 14c a day to operate. Built in 3 sizes. The PRAIRIE STATE is

of sage. Put the soup thru a strainer and thicken slightly with butter and flour if too thin. This makes a rich nourishing soup and may be made in quantity and kept for some time in a cool place.

* * *
CREOLE SOUP.

Put the contents of a pint jar of canned corn thru a food chopper and add to it a pint of water, a small onion and a bit of parsley and cook in a double boiler for half an hour. Strain and add one quart of hot milk. Thicken by adding two tablespoons of butter and the same amount of flour mixed together. Stir until smooth, season with salt and pepper, and add half a cup of cream just before serving.

* * *
CREAM OF ONION SOUP.

Put one tablespoon of butter in a double cooker and when hot add one cup of finely chopped onion. Continue cooking until the onion begins to be soft, then add a cup of broth made from bits of meat or the carcass of a fowl and two cups of milk. Season with salt and pepper and thicken slightly with butter and flour. Serve hot.

* * *
WAR TIME PUDDING.

Add one teaspoon soda to one cup sour cream and stir well. Pour into mixing bowl together with one cup molasses, one teaspoon cinnamon, a little grated nutmeg, one-half teaspoon salt, one cup chopped raisins, and one cup of bread crumbs. Sift in sufficient flour to make a soft dough and pour into steamer. Steam about three hours and

serve with cream or a good cream sauce.

* * *
DUTCH APPLE PIE.

Peel and slice good cooking apples into an earthenware dish. Sprinkle with sugar and add a few currants and seeded raisins. Add also the juice of

a lemon and a bit of the grated rind, a little ground clove and cinnamon and moisten with cold water. Cook in the earthen dish until soft. Line a deep pie plate with crust and fill with the cooked apple and cover top with rich crust. Bake brown and serve warm.

"THE DOUBLE PURPOSE GRIT"

To Make Your Hens Lay More Eggs

See that they are given a "balanced diet". The easiest way to do this is to mix

pearl Grit
Teeth and Tonic for Hens

with their feed. Then they will have all the essential egg-making elements.

Pearl Grit enriches the food while grinding it and making it easy to digest. Its silicon, lime, and carbohydrates are needed to form the white of the egg and the shell.

If your dealer does not handle Pearl Grit—the Double Purpose Grit—write direct.

Our pamphlet tells how to feed for egg production and how to treat common diseases of poultry. Send for it. It is free.

THE OHIO MARBLE COMPANY
74 Cleveland St., Piqua, Ohio

SUCRENE

The Low Cost Feed that Turns to Eggs

Sucrene fed hens work while others loaf. They are red-combed, healthy, vigorous, eager to make their daily contribution to the egg basket.

Sucrene Poultry Feeds Scientifically Correct

They are prepared according to formulas carefully worked out by our chemists, and proven to produce the desired results in our own experimental poultry yards.

Sucrene Poultry Mash is rich in meat scraps, palm kernel meal and alfalfa meal, the extra strong protein feeds. These feeds, combined with corn feed meal, corn distillers' dried grains, wheat bran, linseed meal, calcium carbonate and salt, supply the variety of nutrients for egg making and body building.

Sucrene Poultry Mash has a guaranteed analysis: 18% protein, 3 1/2% fat, 50% carbohydrates, 12% fibre. Also carries the necessary mineral matter.

Sucrene Scratch Feed is a combination of clean, sound grains—an economical, fully efficient cereal supplement to Sucrene Poultry Mash for growing or full grown poultry. For baby chicks Sucrene Chick Feed takes its place.

FOR WINTER EGGS Keep **Sucrene Poultry Mash** before your hens all the time, in hoppers to prevent waste. Supplement it twice a day with **Sucrene Scratch Feed**, the most practical combination of clean, sound grains obtainable in a balanced cereal ration—all food—no waste.

Sucrene Poultry Feeds are economical, even when grain prices are much lower, for they are correctly balanced feeds which can always be depended upon for highest results—every sack guaranteed of uniform quality.

Order a trial sack of Sucrene Poultry Mash and Sucrene Scratch Feed from your dealer. If he does not handle these feeds write us his name and we will see that you are promptly supplied. Fill out and mail us the coupon for full information, or write us a postal.

Recent Inventions for Poultrymen
By Lester B. Sargent, Patent Attorney, Washington, D.C.

A CHICKEN STOVE lamp has been invented by Israel Putnam, of Elmira, N. Y., which will burn for a long period without attention. It is used for preventing the drinking water from freezing. It has a centrally positioned tube extending into the oil reservoir, the wick being supported by a wire in spaced relation to the tube, so that an air space is left around the wick, from the mouth of the wick down to the level of the oil. The tube is

Chicken Stove Lamp, patented December 11, 1917, by Israel Putnam, of Elmira, N. Y. Patent No. 1,249,668.

sealed at its lower end, but has a small opening thru it. Were the tube not closed at the bottom there would be a fire danger as soon as the oil reached as low a level as the bottom of the tube. The moisture that the flame generates and that accumulates within the tube can flow down to the bottom of the reservoir and collect on the bottom, where its freezing will not interfere with the normal flow of the oil and the proper operation of the lamp when it is used where it is extremely cold. Patent No. 1,249,668.

A new insecticide poultry roost has been invented by Mitchell E. Ryther and F. E. Hillery of Comanche, Okla. The principle of the roost is tubular, with spaced openings for the escape of fumes of the vermin-extermimating liquid which it contains. Its ends are flattened and of inverted L-shape to fit over the side bars on which the roosts are mounted. Patent No. 1,249,202.

A front for poultry coops invented by Joseph E. Wayne, of Huntersburg, Ind., has spaced vertical stationary bars on a fixed frame, and a plurality of movable bars on another frame adapted to be swung transversely. The connections between the movable bars of the two frames enable them to be swung as a unit transversely while per-

mitting independent movement of the movable frame. The advantage of this arrangement is that a coop may be adjusted to accommodate either large or small fowls by shifting the gratings as described. Patent No. 1,248,220.

Alice B. Bond, of Visalia, California, has invented a new heating and ventilating system for incubators and brooders. An electric lamp is used as the

Front for Poultry Coops, patented November 27, 1917, by Joseph E. Wayne, Huntersburg, Ind. Patent No. 1,248,220.

YOUNG'S STRAIN

Single Comb White Leghorns

FIRST PRIZE COCKEREL, BOSTON, 1915
BRED AND OWNED BY D. W. YOUNG, MONROE, N. Y.

∴ I HAVE NO OTHER BREEDS ∴

Add another phenomenal win at the Madison Square Garden Show, January 1st, 1918:

- 1-2-3 Cocks 1-4-5 Hens 1-3 Pens
 - 1-2-3-4 Cockerels 2-3 Pullets
- AND EVERY SPECIAL PRIZE OFFERED

The one strain that has made good. This is the eighteenth consecutive year that I have won best display and nothing less than 3 firsts and from that to every 1st, 2nd, 3rd, 4th and 5th. This is a record never accomplished by any other breed or breeder in the world. Young's Strain has outclassed itself in quality this season. My birds have never been so superb or shown such perfect health and form. They have won 1st prizes in every state in the Union and in every country in North and South America. This strain is acknowledged thruout the world as being the standard for all the Leghorns and the leaders of heavy layers. They have always been bred and selected for heavy laying alone and the show specimens have been chosen from the layers. This is the only original line-bred strain of utility and exhibition Leghorns in America today. Why not come to headquarters and get the best? Hundreds of grand cockerels that will improve your flock for utility and exhibition purposes for sale at reasonable prices.

FERRIS WHITE LEGHORNS

FERRIS WHITE LEGHORNS FOR EGGS

Compare them with ordinary hens and you will understand why so many thousands of poultry keepers breed Ferris White Leghorns. Trapped for 18 years they have records as high as 264 eggs per year and their laying qualities are so well established that they will produce good results for you wherever you are located. All stock is bred for size, health and profit, and raised on free range with every care to produce perfect development. Thirty-five acres are devoted exclusively to White Leghorns and we raise thousands.

PRICES OF BREEDING STOCK

	From 230 to 264 Egg Stock	From 200 to 230 Egg Stock	From Good Utility Stock
1 cockerel	\$ 10.00	\$ 6.00	\$ 4.00
1 male, 4 females.....	30.00	18.00	12.00
1 male, 12 females.....	60.00	40.00	27.50
100 females	365.00	250.00	175.00

Now is the best time to buy. Shipment can be made in cold weather with perfect safety. Hundreds of choice cockerels, pullets and hens. See catalog for complete descriptions.

ALL STOCK IS SHIPPED ON APPROVAL. You can return within three days any birds not satisfactory and money will be refunded. (We will ship C. O. D. if you want to see the birds before paying for them. Send only \$1.50 for a pen of five, and 20 cents each for larger numbers to guarantee express charges.) We insure all stock for 30 days. Any birds that die or get out of condition will be replaced free of charge. Their breeding value is also guaranteed. Any male that does not produce fertile eggs, any hen that does not lay hatchable, good-shaped eggs will be replaced free.

PRICES OF 8-WEEK-OLD PULLETS AND COCKERELS

	From 230 to 264 Egg Strain	From 200 to 230 Egg Strain	From Good Utility Stock
1 cockerel, 4 pullets...	\$ 15.00	\$ 10.00	\$ 8.75
1 cockerel, 10 pullets...	30.00	20.00	16.25
50 pullets	110.00	80.00	65.00
100 pullets	200.00	150.00	125.00

We are now booking orders for 8-week-old chicks. At this age the pullets weigh 3/4 lb., and the cockerels about 1 lb., and we guarantee safe arrival anywhere in the United States or Canada. Catalog gives full particulars.

EGGS FOR HATCHING — PRICES FOR FEBRUARY, MARCH AND APRIL

	From 230 to 264 Egg Strain	From 200 to 230 Egg Strain	From Good Utility Stock
15 eggs	\$ 5.00	\$ 2.75	\$ 2.25
30 eggs	9.00	5.00	4.00
50 eggs	13.00	8.00	6.00
100 eggs	25.00	15.00	11.00
500 eggs	110.00	65.00	52.50
1000 eggs	200.00	125.00	100.00

We replace all infertile eggs free of charge, or if you get less than a 60 percent hatch we will replace one-half the eggs that do not hatch. We guarantee safe arrival anywhere in the United States or Canada.

DAY-OLD CHICKS — MARCH AND APRIL PRICES

	From 230 to 264 Egg Strain	From 200 to 230 Egg Strain	From Good Utility Stock
10 chicks.....	\$ 6.00	\$ 4.50	\$ 3.00
25 chicks.....	13.50	9.50	6.50
50 chicks.....	26.00	18.00	12.50
100 chicks.....	50.00	35.00	24.00
500 chicks.....	220.00	145.00	115.00
1000 chicks.....	400.00	275.00	220.00

We guarantee safe arrival anywhere east of the Rocky Mountains. See catalog for full descriptions. Our first hatch comes off March 5th. Our incubator capacity is 47,000 eggs, or over 10,000 chicks a week; but we advise placing orders as far in advance as possible, as we expect an unusually large demand.

1918 CATALOG IS FREE

Send for your copy today. It describes fully the stock, eggs and chicks quoted above. Contains photos showing 35 acres of White Leghorns; describes our methods of feed and care; how we improve laying qualities; list of winnings at 20 big shows; many letters from customers; prices of exhibition, breeding and laying stock, eggs for hatching and day-old chicks.

GEORGE B. FERRIS

Ferris Leghorn Farm 905 Union Ave., Grand Rapids, Mich.

Save the Babies

Don't hatch eggs or buy baby chicks until you are properly prepared to raise them

SUCCESSFUL HATCHES are of less value than total failures if the chicks do not live to maturity, as a failure in the hatch is far cheaper than a gradual diminishing of the brood thru leg-weakness, bowel trouble, diarrhoea, smothering, chilling or of any other affliction.

It is safe to say that 90% of these troubles are due to improper brooding.

Not only artificially hatched but also hen hatched chicks require proper care. Nature gave the hen feathers to protect her chicks but neglected to give the sense necessary to keep her from leading her brood into damp grass or sometimes deserting them.

Simplex Feather Brooders & Hovers

Combine Nature's Gift with Common Sense

They embody the use of natural feathers which have been thoroly cleansed, renovated and fumigated. The brooders are made in both artificially heated and fireless construction. The hovers are suitable to be placed in any old brooder and are just the thing for breeders having heated brooder houses. They are inexpensive, light, sanitary, easy to handle and easy to clean.

You will not only raise more chicks, but your chicks will be stronger and larger than chicks raised in the average heated brooder if you use Simplex Perfection Feather Brooders or Hovers.

Chicks cannot crowd in these feather brooders. They cannot chill or smother. They just seem as contented between the feathers as a cat behind a kitchen stove.

Don't take our word for it, but ask the folks who use them.

Simplex Feather Hovers are being used on some of the most successful poultry farms in the country since 1910.

SEND FOR OUR CATALOG. It will tell you all about these wonderful chick raisers, as well as our automatic baby chick feeder and other poultry appliances. Send today—it's free.

SIMPLEX SUPPLY HOUSE

Pontiax Building

the heating drum at the center of the radiator, and a pair of communicating mechanically operated valves, one of which is in the radiator and the other in the heat discharge pipe, each, of course, being controlled by the thermostat. The heat and moist temperature required for proper incubation is evenly maintained, and the accumulation of foul air prevented by this arrangement. Patent No. 1,247,496.

An incubating and chicken raising apparatus (United States Patent 1,227,377) and a heating apparatus (United States Patent 1,244,061) for use in this incu-

Incubating and Chicken Raising Apparatus, patented May 22, 1917, by Leonard Bond, Glossop, England. Patent No. 1,227,377.

Photograph showing the Bond Incubating and Chicken Raising Apparatus.

bator, have been protected in this country by Leonard Bond of Glossop, England. The incubator has a nursery chamber with an outside run. The incubator is heated by hot water. Air ventilating inlets are provided at the lower part of each chamber, and a moisture pan is kept in the incubating chamber to furnish the necessary moisture. The hot water pipes are arranged in the upper part of the incubating chambers. The inventor has found that a convoluted pipe does not give off the practically uniform heat thruout its entire length, that has been claimed for it. In this new heating apparatus a more uniform degree of heat is obtained by the use of pipes that extend directly around the incubator and which are connected with each other, the water flowing across the incubator through the inner pipe and back through the outer

Armstrong's Single Comb Reds

Winners at Columbus, Dayton, Springfield and Ohio State Fair. If you want the best from an old established strain without paying inflated prices, send for our mating list describing these birds. Do it now. The price will suit you. R. T. ARMSTRONG, 378 14th Avenue, Columbus, Ohio

surrounding pipes. By providing this more direct passage the water does not have time to cool too much before it is returned to the tank to be reheated. It is claimed for the machine that it reduces the cost of hatching to the minimum. One thermometer regulates both the incubator and the brooder. Either gas or oil may be used as fuel. The device really comprises three machines in one—an incubator, a hot air brooder and a cool brooder, without an increase in the manufacturing cost.

Fowl Catcher, patented June 26, 1917, by Edward Bender. Patent No. 1,231,116.

One way of catching a skittish hen which perhaps has suspicions of the chopping block is to employ the fowl catcher patented by Edward Bender. This unusual device has two cup-shaped scoops carried at the end of pivoted arms which are hingedly attached to a long bar, which is slidably mounted within the handle and which has a grip at its outer end so that the pursuer may swing the scoops over biddy from some distance before she is aware of what is about to take place. Patent No. 1,231,116.

A poultry roost has been invented by Benjamin T. Bouma, of Lindville, Ohio, which has longitudinal channels containing strips of absorbent material extending the length of the roosts to absorb a vermin disinfectant and to retain it for a considerable period. Patent No. 1,236,705.

INCUBATION.

By CHAS. WEEKS, Palo Alto, Cal.

INCUBATION is as old as history. The ancient Egyptians knew how to hatch eggs by using artificial heat and the secret of incubation was handed down from father to son. The general public was ignorant of the laws of incubation and brought all the eggs to men who were professionals in incubation. The secret was guarded very carefully. So long did the Egyptians hatch eggs artificially that the little brown Egyptian hen lost her instinct to sit on eggs and to this day the Egyptian hen is a non-sitter.

The Chinese have also practiced incubation for ages. Their methods are very crude as compared to the modern self-regulating machines. They have

large thick-walled ovens in which they build a fire similar to the old bake oven of our forefathers. When the walls are well heated the fire is taken out and the temperature allowed to cool down to the correct degree. The attendant crawls into the oven thru the low, narrow door and places the eggs around the floors of the oven in

are wrapped up and taken out while another fire is kindled and the heat brought back up to the right point.

Today we have the modern self-regulating machine that makes it possible for anyone to hatch eggs. The instructions for operating and adjusting the machine come with each incubator and it is needless to take space for further directions. The best place to run an incubator is in a cellar or basement in which the temperature may be kept very regular. Do not attempt to run the machine in a room that is hot in the day and cool at night.

EDWIN BRICKERT, BEAVER, UTAH

Poultry houses on Weeks Poultry Ranch, Palo Alto, California, one of the most intensive systems in the world.

baskets. They have no thermometers and tell the right temperature by long practice. The caretaker turns the eggs in this large oven, enduring the 103 degrees of heat while he works. When the temperature falls too low the eggs

Incubation is simply a mechanical process and the machine that is nicely adjusted and keeps an even temperature and ventilates without a draft will hatch good eggs if the attendant will do his part.

The first requisite in successful incubation is a good egg. The best incubators made will not succeed in hatching eggs from inferior stock. Too many poultrymen make the mistake of hatching eggs from immature hens. The hens intended for breeders should be selected from the earliest maturing pullets from the first hatches after the molting season.

Poultrymen are learning by costly experience that "any old egg" will not do for the incubator. If you have an egg with strong vitality and generations of hens behind that egg that have a superabundance of energy, then more than half of the incubator troubles are over, and I might add that nine-tenths of the brooder troubles are also over.

The egg should be placed in the machine as soon after laying as possible. The sooner the better. It is possible to hatch chicks from eggs one week, two weeks or three weeks old, but the older the egg the less chance of hatching a strong, sturdy chick. The germ in the egg grows weaker as the egg ages, and the food elements which are to nourish the germ become stale and unfit for food.

The yolk of the egg is enclosed in the body of the developing chick and is connected with its digestive system by a small duct which allows the yolk to be absorbed into the alimentary canal

IDYLWILD BABY CHICKS

S. C. White Leghorns

From Our Trap-nested, Pedigreed, High Record Stock

If you want a dyed-in-the-wool flock of layers, we earnestly solicit your order. Our stock is from the best blood lines of high record laying stock in the world, and size and constitution have not been sacrificed in breeding for eggs.

We do not compete with slip-shod hatcheries and breeders of ordinary stock. Our pleasure is in giving you full value for your money. We try to do more. Fifty chicks will furnish you flock headers for another year, improve your egg yield and give you some females for layers or breeders as you wish. It's a pleasure to raise Idylwild Chicks, for they have a way of living and growing. They dig in and work from the time they are hatched. Our business is mutual. You want some really good stock—we have it. Let's get together. One dollar invested in proven stock is worth five spent haphazardly. In buying chicks you are adopting the easiest and cheapest way to start a flock and produce good breeders. Remember that you can house, feed and care for three Idylwild Leghorns for the same money that you can take care of two ordinary chickens. The poultry business is on the verge of a big boom. Are you going to prepare to get your share?

EGGS FOR HATCHING

We also sell eggs for hatching in case you do not want baby chicks. Our eggs, stock and chicks are securely packed in the best method and will reach you safely. We guarantee 90 percent fertility on our hatching eggs.

Send for our handsome catalog and mating list.

Carbo Steel Post Co. Department F Chicago Heights, Ill.

and thus the chick is nourished for the first three days after leaving the shell. If this yolk is overheated in incubation it is hardened so that it cannot be assimilated and the chick dies in from six to ten days from the poison of this decaying yolk. If the egg is kept too long before incubation the yolk decomposes and the chick is doomed to an early death from poison. Chicks from immature stock have not the vitality to digest even a good yolk, much less the chick feeds.

Place the eggs on the tray with small end down, leaning them so that the large end is the higher, keeping them in this position during the incubation period.

After the machine is warmed up and regulated to 102 degrees or thereabouts, place the eggs in and do not turn for three days. Then they can be turned twice each day, being careful to get them into the machine quickly up to the seventh day. After the first week let them air a little at first and increase the time of airing up to the time they begin to pip. At no time let them cool below 80 degrees and only once each day. I have had excellent hatches turning the eggs once each day but I think results warrant turning twice per day. The eggs should be tested on the seventh day and all the infertile ones taken out. Some test on the fourth or fifth day, but it is hard on the tender germ to remain out of the machine.

The temperature should be kept between 102 and 103 degrees and the steadier the better the hatch and stronger the chicks. Good eggs can very easily be spoiled by irregular temperatures. It requires exactness to incubate successfully. No careless person will ever succeed in incubation. The incubator should be placed in a basement or cellar where the outside temperature is very even. Never under any circumstances allow the temperature to go above 103 degrees, for every time it does the vitality of the chicks is weakened. One of the greatest faults with our modern machines is that they are slow in bringing the temperature back to 103 degrees after eggs have been aired. The temperature should rise quickly to 103 degrees after eggs are placed in the machines.

It cannot be impressed too strongly upon the amateur that an even, steady temperature brings best results. I do not believe in cooling the eggs until the germ is chilled, for this daily chilling of the germ is bound to weaken it. A slight airing may be beneficial and the cooling of the shell and the heating again may cause a contraction and relaxation of the fibrous tissues of the shell until the chick is more easily able to break thru because the shell becomes more brittle by this action. I know that it has been advocated that plenty of cooling enables the chick to hatch easier, but then if the after life of the chick is harmed by too much cooling it would be better that it never came out. There is still considerable difference of opinion in the matter of cooling eggs, some saying that extra cooling enables chicks to hatch easier and also makes them sturdy, but when we stop to consider that in no other instance is the foetal life of the germ allowed to vary in temperature during development, it seems

unreasonable. Wild birds exchange places in keeping the eggs warm continually. Also pigeons alternate their work during incubation period, not allowing eggs to get cool. The hen under domestication has no mate to help her out and is forced to do the incubation alone while her polygamous husband takes care of the harem. This necessitates that the hen either starve or go off the nest at periods for food, taking a chance that the tiny germ will stand the exposure until her return. The germ may suffer some from this exposure and on the other hand may also get used to this periodical cooling until it becomes a law in its development. Evolution is a wonderful thing and adaptation plays a great part in the unfolding of life.

The question of moisture is also a problem in artificial incubation. The egg contains enough moisture to carry it through the incubation period if we could get our mechanical heating devices so perfected that the egg would have practically the same conditions that it does under the hen. But it is hard to adjust the ventilation so as to get enough air and yet not dry the egg too much. An egg loses weight in the open air very fast. The ideal incubator would have an egress for the carbon-dioxide thrown off by the egg and yet have no draft. These conditions are hard to adjust. The egg wants a dead air space for incubation and yet have some way to get rid of the gases thrown off. In most of our artificial incubation moisture is supplied especially at hatching time. There should be enough moisture at hatching time to collect on the glass in front of the machine.

Incubation is, perhaps, the most unpoetic and monotonous work on the poultry ranch, yet it has its fascination at the hatching period when the chicks begin to kick out. It requires very patient, methodical work, with extreme care in regulating temperatures. Filling the lamps, trimming the wicks, cleaning the burners, regulating the flame is detail work that requires care. Turning the eggs carefully twice every day is a light task but takes time and it is a routine that leaves the mind free for thought. Your hands do the work while the mind is at liberty solving the many daily problems.

To sum up incubation, place only good, uniform eggs from mature stock in the machines, little end lowest. The temperature should be regulated to about 102 when eggs are placed in the machine, and run steadily between 102 and 103 degrees during the whole period.

Turn the eggs twice daily after third day and air slightly after first week, increasing time as germ grows older but never let them cool below 80 degrees. On the eighteenth day put moisture in the moisture pan. This should be steaming water so that the humidity is brought up in the machine.

A steady temperature is the prime factor in bringing out a good hatch. Eggs from sturdy stock of mature age with males and females unrelated will give best results. As the success of the egg farmer depends upon the vitality and laying qualities of the pullets, it is imperative that these conditions be adhered to.

Motto: "Quality and Bred-to-Lay"

"The Maples" Poultry Yards

Breeders of the

Sanborn Barred Plymouth Rocks

De Luxe Strain

OUR well known New England private fancier yards are devoted wholly to the breeding of Barred Plymouth Rocks of quality as well as the development of the consistent 300-egg hen. For the first time during our twelve years of experimental breeding, we offer to the public an opportunity of obtaining a limited supply of choice eggs of our "De Luxe Strain" for hatching purposes.

EGGS from our best matings, \$10.00 per setting; two settings, \$18.00; four settings, \$32.00. No more than four settings at this time to any one person.

"The Maples" Poultry Yards R. F. D. Concord Junction, Mass.

Hayward's White Rocks

Are fashion plates of White Rockdom. They are strong, vigorous birds raised under ideal conditions. Their high quality is attested by winning Champion male and Best Display at Boston in 1916, and again in 1917, in extra strong competition.

Every winner was bred and raised by me. Volumes could not tell a more convincing story of superior merit. If you want the best, you will obtain it in the Hayward Strain. Stock and eggs for sale at reasonable prices. Complete satisfaction guaranteed.

American Laying Contest Winners!

Brookside Wh. Wyandottes

Our pen No. 74 won first prize for highest egg production in the American Laying Contest at Leavenworth, Kan., which closed Oct. 31. They produced 1000 eggs, an average of 200 eggs per hen. Three of the hens scored 94, 93½ and 92½, showing that they combine beauty and utility. Hatching Eggs at very reasonable prices. Send for Catalog.

R. C. Brown Leghorns good quality; 3 cocks, 4 hens, 6 cockerels, 5 pullets, 1 pen.

S. C. Black Minorcas made excellent classes. Some specimens were a trifle coarse and some lacking in breast and knock-kneed. This fine old breed needs attention from some real fancier who will build up health and vigor points and work for improvement in breast and body as well as for finer head points. Classes included 6 cocks, 10 hens, 12 cockerels, 9 pullets, 4 pens. S. C. White Minorcas, 1 cock, 1 hen. S. C. Buff Minorcas, 3 cocks, 7 hens, 3 cockerels, 3 pullets. Moraine Farms entries in this

class were held up by transportation delay and did not arrive in time to be judged. R. C. Black Minorcas, 2 cocks, 2 hens, 4 cockerels, 2 pullets, 1 pen. R. C. White Minorcas, one in each class, except pen.

Blue Andalusians made an excellent showing; 3 cocks, 8 hens, 6 cockerels, 7 pullets, 2 pens. Prizes well distributed.

S. C. Anconas splendid classes and quality good; 12 cocks, 13 hens, 18 cockerels, 16 pullets, 5 pens. Altho the majority of the birds came from Ohio and Canada, they arrived in good season and were in fine condition. R. C. Anconas, 4 cocks, 4 hens, 4 cockerels, 5 pullets, 2 pens.

S. C. Buff Orpingtons were strong classes and showed 18 cocks, 18 hens, 21 cockerels, 16 pullets, 10 pens. Type and color good, with some fine birds in the ribbons.

S. C. Black Orpingtons made a good showing with 7 cocks, 8 hens, 8 cockerels, 8 pullets, 2 pens.

S. C. White Orpingtons a splendid exhibit of fine birds; 11 cocks, 12 hens, 17 cockerels, 12 pullets, 5 pens.

S. C. Blue Orpingtons, 3 cocks, 2 hens, 4 cockerels, 3 pullets. R. C. Buff Orpingtons, small classes. R. C. White Orpingtons, 2 cocks, 4 hens, 2 cockerels, 4 pullets, 2 pens.

Silver Grey Dorkings, good substantial old-timers down in excellent type and quality; 3 cocks, 4 hens, 3 cockerels, 4 pullets, 1 pen.

Dark Cornish, 10 cocks, 7 hens, 9 cockerels, 7 pullets, 4 pens. White Cornish, 2 cocks, 4 hens, 5 cockerels, 2 pullets, 1 pen. White Laced Red Cornish, 1 pen.

- 1-2-3-4 Pullet

My recent winnings at these two largest shows in America are conclusive proof that my strain has everything desired in this beautiful breed. Prominent judges who have examined my birds at these shows say that the markings are almost as perfect as they have been bred and shown by any exhibitor. The type to which I have been breeding my strain is recognized as correct and approaches very closely the Standard of Perfection. I have also improved the egg production and have individual records well over the 200 mark. As they have been bred that way for years, it stands to reason that this quality is inherited by the progeny and therefore I claim that the name of "Superior" which I have selected for my strain is a well fitting one.

Stock and Eggs for Hatching

from the finest matings in the country are now offered to those desiring fowls that are "profit producers." I have just added the entire flock of Columbian Wyandottes of the Wilburtha Farms, Trenton Junction, N. J. All their winners are in my yards. This magnificent strain added to my own gives me the largest and best flock of Columbian Wyandottes in the country.

The Quality is Exceptionally Good
The Prices I Ask Extremely Reasonable

But the result of years of experience as a breeder along scientific lines is the unparalleled
WINNING AT MADISON SQUARE GARDEN, 1918

By the Famous

EVERLAY Brown LEGHORNS

Cocks—First; Second; Fifth.

Hens—Second.

Cockerels—First; Second; Third; Fourth; Fifth.

Pullets—Third; Fourth.

Pens—First; Fifth.

Best Display: More points than all other exhibitors combined in largest classes shown in years by the most representative breeders in the United States and Canada.

Last year defeated best North, South, East, West, winning three champion males, Chicago, Boston, New Orleans. Two champion females, Chicago, New Orleans. Two champion pens, Chicago, Columbus. Three firsts on cockerel same week, Chicago, Boston, Columbus. 23 females in winning same week, Boston, Chicago, Columbus. 14 males in winning same week, Chicago, Boston, Columbus. The EVERLAY Strain is America's foremost winning, laying strain, winning more championships, specials and regular prizes during the past 15 years, at more large shows, under more different judges, than any strain on the continent.

Show Birds Can Lay — Layers Can Win!

Mannsville, N. Y., January 15, 1918. Last year I purchased 50 eggs from you, hatched 34 chicks, 17 of which were pullets. They commenced to lay early in November. We have had very severe winter weather since December, still the pullets are laying splendidly every day.

G. R. Husted.

Cockerels—A few choice cockerels, birds that will stamp EVERLAY quality and ability on your flock, priced reasonable. Write your wants, please. Eggs from selected matings or in hundred lots shipped securely anywhere. Mating list.

H. V. TORMOHLEN

Box 2, PORTLAND, INDIANA

Day-Old Chicks

The purchase of day-old chicks is the best way to start a flock. You can purchase them all at once and have no trouble with a lot of broods of different ages. Our chicks are

Hatched from the Best Utility Stock

and they are strong and healthy—they stand the rigors of shipment and are full of "pep" when you take them out of the box. We specialize in S. C. White Leghorns, S. C. Brown Leghorns, Barred Rocks, R. C. R. I. Reds and Broiler Chicks, also a few trapnested S. C. White Leghorn Chix from 200-Egg Hens.

D. L. WARNER

LITTLE YORK, ILL.

Speckled Sussex were excellent classes. Judging was delayed on account of non-arrival of a large part of exhibit. Moraine Farms birds shipped on Christmas day from Ohio did not arrive until the third day of the show and so were not judged. Classes included 9 cocks, 9 hens, 9 cockerels, 11 pullets, 6 pens. Other Sussex classes were small and some entries failed to arrive.

White Crested Black Polish classes were good and included 5 cocks, 6 hens, 6 cockerels, 7 pullets, 3 pens. Non-bearded Silver Polish, one in each class except pen.

Silver Spangled Hamburgs, 5 cocks, 6 hens, 6 cockerels, 5 pullets. Golden Penciled Hamburgs, 3 hens, 3 pullets. Silver Penciled Hamburgs, 1 cock, 1 hen.

Mottled Houdans good classes, excellent quality; 13 cocks, 8 hens, 9 cockerels, 10 pullets, 3 pens. White Houdans 3 cocks, 6 hens, 2 cockerels, 3 pullets, 4 pens. White Faverolles, 3 cocks, 6 hens, 1 cockerel, 1 pullet. Salmon Faverolles, one bird in each class except pen.

Silver Campines, a fine exhibit with quality of the best; 8 cocks, 9 hens, 15 cockerels, 11 pullets, 7 pens. A better and larger showing than last year. Golden Campines, 2 hens, 6 cockerels, 6 pullets.

Sicilian Buttercups made a strong showing; 5 cocks, 7 hens, 7 cockerels, 9 pullets, 4 pens. Lakenvelders, 4 cocks, 4 hens, 3 cockerels, 3 pullets, 1 pen.

Among the odd varieties were Russian Orloffs, one cockerel and one pullet of fair quality, which attracted a good deal of attention.

The turkey and water fowl exhibits were good, tho not as large as usual.

Following is complete list of awards:

Barred Plymouth Rocks—E. B. Thompson, Amenia, N. Y., 1-2-3-4-5 cock, 1-2-3-5 hen, 1-2-3-4-5 ckl, 1-2-3-4-5 pl, 1-2-3-4-5 pen. C. N. Myers, Hanover, Pa., 4 hen.

Day Old Chicks

From pure bred, healthy, vigorous stock. Excellent for starting a pure bred flock or for improving the strain of an old flock. Send for our circular and pick out just the kind you want. We ship only strong, healthy, vigorous chicks of pure strain and true to name of breed. We also furnish eggs for hatching and guarantee safe delivery of both eggs and chicks.

Send for our circular and prices. Department LA 699

Montgomery Ward Co.

Satisfaction Guaranteed or Your Money Back

CHICAGO KANSAS CITY NEW YORK

\$17 per 100 Baby Chicks \$17 per 100

Properly hatched, absolutely healthy, thoroughbred Single Comb White Leghorn Chicks. From heavy laying, range raised hens that are guaranteed to be in perfect health. Scientifically mated to highly bred, thoroughly developed males, having heavy laying ancestors. 1200 hens are mated for day-old chick business. Eggs, \$7.50 per 100, \$3.00 per 30, \$2.00 per 15. Our sales of table eggs from our farm during the year 1917 in St. Louis alone exceeded 24,000 dozen.

MCCORMICK POULTRY YARDS COFFEYTON, MO.

Jacobs' S. C. White Orpingtons

Have won from year to year at Indianapolis, Indiana State Fair and Chicago Coliseum. 1918 Mating List now ready and am booking egg orders.

Cycle

Sure and Easy Way of Hatching Chicks

and plenty of them—Big, Strong, vigorous chicks, ready to live and easy to raise

New Improved Hatchers Over Half a Million now in Successful Use \$7 and \$9

These points found in the Cycle will appeal to you—they are vital to success. First, the heated air is applied on top of the eggs only as under the hen. Second, no direct air passes thru the hatcher to carry off the natural moisture in the egg. Third, being circular with the lamp in the center, the radiation is equal throughout the machine. Fourth, the heat is brought close to the eggs with no waste of heated air space. The eggs are turned and cooled similar to Nature's way.

Don't be disappointed—buy a genuine Cycle. You can get cheaper machines but no better. The CYCLE is a good investment you will never regret, because it is the SURE and EASY way of hatching chicks.

Send for our new free catalog. It will give you many new ideas about poultry keeping and help you avoid wartime mistakes. Tells why the CYCLE is the best for you, and describes and prices the Philo System Ready-Built Coops, Supplies, and the Philo Business-Hen strain of White Orpingtons. Write for free copy today.

CYCLE HATCHER CO. - 1837 Lake Street - ELMIRA, N. Y.

CYCLE MACHINES BRING RESULTS

READ THESE LETTERS

"I have been using your machines and have been very successful with them, and when it comes to brooding the chicks your Brooder-Hatcher is certainly the best article I know of."
H. G. PEER, Syracuse, N. Y."

"For the past eight years I have been running from one to three of your Cycle Hatchers and think they are the best incubator and the least trouble of any made."
MRS. C. C. REDGRAVE, Lakeland, Fla."

— AT LAST A REAL —

Safety Hatching-Egg Carrier

Note how each egg is carried in its own compartment, protected by air cushions at the top and at the bottom.

**Heat Proof
Shock Proof
Chill Proof
Fool Proof**

Don't waste your time shipping valuable hatching eggs the old-fashioned way when you can buy **Arminger's Safety Hatching-Egg Carrier**. The best thing ever invented for the purpose. All eggs are protected by air

cushions and suspended in individual compartments, thus preventing all of the eggs from getting soiled in case one of them should be broken. The carrier is constructed in such a manner that accidents of this kind can seldom happen. Made from non-conductive material and prevents eggs from getting overheated on account of being placed near steam pipes and likewise prevents them from being chilled if exposed to cold.

FANCIERS SAY IT'S THE BEST CARRIER EVER INVENTED

U. R. Fishel, the well-known White Rock breeder of Hope, Ind., who probably ships more eggs than any other fancier in America, is going to use them this coming season. J. C. Fishel of Hope, Ind., the White Wyandotte breeder, will also use them. Eugene Smith of Aurora, Ill., breeder of White Leghorns, has placed his order. C.R. Baker, Abilene, Kansas, has also placed his order. Russel F. Palmer of American School of Poultry Husbandry, Leavenworth, Kansas, says it's the best thing for the purpose, and what the fanciers have long been looking for. Artist Stahmer says: "The fact that I have taken the agency for your carrier to represent you at the poultry shows this season is sufficient proof that I consider your carrier the most perfect and safest ever placed before poultry fanciers of America."

They cost no more than others but are years ahead of them in safety

Write for circular giving complete instructions for packing and prices.

1st Hen, New York State Fair

1st Cockerel, Palace, '16

White Rock Supremacy

Wilburtha supremacy in this grand breed was clearly proven at the last Madison Square Garden Show where our White Rocks won 1st and 2d pen, 2d and 4th cock, 1st and 4th hen, 1st, 3d and 5th cockerel, 1st, 2d, 4th and 5th pullet. This is one of the greatest victories ever won in the show room. And every bird in this remarkable string was bred, hatched, raised and conditioned on Wilburtha Poultry Farms.

We now specialize exclusively on three great utility breeds:

**WHITE PLYMOUTH ROCKS S. C. WHITE LEGHORNS
S. C. RHODE ISLAND REDS**

Champion Cock, Palace

Our White Leghorns and Reds are bred to the same high standard of quality as our Rocks. We will gladly quote you on Breeding Birds for foundation stock of any of these breeds.

Sold On A Money-Back Guarantee

When you buy a Eureka Brooder you run absolutely no risk. My guarantee is honest, with no strings attached to it. You can try this brooder 30 days. If after that time you are not entirely satisfied with it, return it to me—at my expense—and I will refund the purchase price without a quibble. I also pay the freight both ways. Can anything be more fair than that?

The Eureka Colony Brooder

Price \$17.50 and \$21.50

is a brooder that I have absolute confidence in. I am a large manufacturer of stoves and make every part that goes into it. I eliminate useless expense. This brooder has a corrugated fire pot, is self regulating and is made of solid cast iron, burns hard coal or natural gas as desired. I honestly believe it will raise more chicks and better chicks at a lower cost and with less labor than any other brooder on the market. I have testimonials from many users of the Eureka Colony Brooder and will gladly send them, together with full information about the brooder, if you write today requesting same. Don't forget my honest offer, 30 days' free trial without costing you a penny. Write now for descriptive literature. AGENTS WANTED EVERYWHERE.

DON'T KILL or sell your laying hens

Use the Potter System and pick out the layers from the loafers and diseased hens. Keep only healthy laying hens. The Potter System is a secret and the greatest discovery of the century in the poultry world on the subject of Egg Producing Hens. Used by over 50,000 satisfied poultry keepers who are saving dollars every year. Our new 100-page Potter System book, "Don't Kill the Laying Hen," contains the secret and knowledge about laying and non-laying hens. It's a revelation to poultry keepers, and you will learn how you can use the Potter System on your flock, keep less hens, get more eggs and make more money using it. Write today, sending two red stamps to cover postage on our large catalog and circular telling all about Potter Poultry Products made for Particular Poultry People. If you are particular and want to make more money on your flock, you will write us today.

DON'T BUILD You can buy better, cheaper, more complete ready (factory) made henhouses, roosting and nesting fixtures, coops, etc., from Potter & Co., because they buy lumber in carloads, cut and fit all parts perfectly by automatic machinery and deliver the house, coop or fixture you need in convenient sections all ready to set up.

No. 5, Style "D" Potter portable open front fresh air, scratch shed house, equipped with No. 17, Style "A" 5-foot 3-perch complete henhouse outfit for 30 hens. Price of complete house, \$39.50.

Potter Poultry Houses and Fixtures— Portable, Sanitary, Inexpensive

Have been on the market for over ten years and are used and recommended by thousands of poultry keepers who want the best and buy the best in poultry houses and equipment. You start right when you buy a Potter portable with complete outfit of roosts, drop board and nests. A clean, sanitary house means healthy hens and lots of eggs. The fresh air sanitary house shown here is only one of the twenty styles of houses and coops we make ranging in price from \$3.50 up and everything we make is absolutely guaranteed.

No. 19, Style "A," 6-foot 3-perch, complete henhouse outfit for 36 hens. This same style made in 12 sizes.

Send for Our Big Catalog

Contains 132 pages and over 150 illustrations showing Potter portable houses, coops, henhouse outfits, feed hoppers, brooders, hovers, feeds, etc.—in fact everything the poultry keeper needs to insure the greatest success. Catalog mailed for two red stamps to cover postage. Write for it today and save money.

In justice to Aldrich Poultry Farm, Columbus, Ohio, Moraine Farms, Dayton, Ohio, and Huston & Hofius, South Charleston, Ohio, all of whom had birds entered at the Madison Square Garden show, it should be stated that none of the birds from these farms arrived at the Garden in time to be judged, therefore were not in competition. It should also be stated that when the birds did arrive they were in a badly frozen condition. The birds of Huston & Hofius, we understand, never did reach the Garden.

Do you breed S. C. W. Leghorns?

Would you like to have a fine catalog of your own, handsomely illustrated in colors, but find the cost too much? If so, send for a sample and prices of my special catalog for S. C. White Leghorn breeders. Catalogs in colors from \$7.00 up. THOS. NASH, 542 S. Dearborn St., CHICAGO, ILL.

YOU TAKE NO RISK IN BUYING AN

Ironclad THE IRON COVERED INCUBATOR

If you are going to buy an Incubator this year, it will save you time and money to order an Ironclad first. Why not own an Ironclad outfit when for only \$12.50 we guarantee to deliver safely, all freight charges paid (east of the Rockies) both of these famous reliable machines, fully equipped, set up ready for use.

We Give 30 Days' Trial Ten-Year Guarantee—Money Back If Not Satisfied

You have nothing to risk. We will send machines—let you use them 30 days—urge you to compare them in quality of material, hatching ability, workmanship and price—and if you don't find them satisfactory, send them back—we'll pay the freight charges and return your money. You are absolutely safe. We have to do as we advertise. If we didn't the publishers of this paper would not carry our advertising.

Both for \$12.50 Freight Paid East of Rockies

This Book Sent FREE

It tells how Ironclads are made. A valuable book for poultry raisers.

150 EGG INCUBATOR CHICK BROODER

When an incubator is constructed of material of this kind it gives you the strongest and most durable incubator that can be made—a machine that will not warp or shrink, or open up at the seams, as every joint is lapped over with our galvanized iron covering—giving you a machine that will last a life time. Don't class this big, galvanized iron covered dependable hatcher with cheaply constructed machines. Ironclads are not covered with cheap thin metal and painted, like some do to cover up poor quality of material. Ironclads are shipped in their natural color—you can see exactly what you are getting. Don't buy any incubator until you know what it is made of. Note these Ironclad Specifications: Genuine California Redwood, triple walls, asbestos lining, galvanized iron covering. Galvanized iron legs, large egg tray, extra deep chick nursery—hot water top heat, copper tanks and boilers, self regulator, Tyco's Thermometer, glass in door, complete box of directions, and many other special features fully explained in free catalog. Write for it today or order direct from this advertisement and save time.

DR. WOODS' NOTES AND COMMENT

(Continued from Page 176)

extreme cold weather the fowls were far more comfortable in such partly open buildings than in the cold, ill-ventilated, damp houses of the closed type. The open-front house has been indorsed as a comfortable and practical dwelling for fowls in bleak New England and in extremely cold locations in Canada. This winter has been a good test of the open-front house. We had the coldest December of record for forty years. We have had storms with high winds, heavy snow fall, and uncommonly severe and penetrating storms of sleet and ice. Thru it all our fowls, housed in buildings with always-open fronts, have been comfortable, healthy, happy and productive. We had a fine fall egg yield, with winter egg yield steadily gaining right down to date, January 11, and it has been cold enough to freeze milk in the farm house kitchen only a few feet from a very hot kitchen range—house banked up with pine needles in first-class shape too.

* * *

Labor on the poultry farm is a difficult problem today. No food producer can meet the competition in the labor market. With his poultry produce selling at prices which barely pay and sometimes do not pay feed costs, he is not in a position to make labor an offer which seems attractive beside the big pay for easy work and eight hours in other lines, to say nothing of double pay for overtime. Mighty few workers care to take a job on a poultry plant where there is work seven days a week, six of them calling for close to sixteen-hour days. And the labor that is not on deck for service by dawn in the morning and after dark at night is not of much use on a poultry plant during the busy season.

* * *

Prevent torn backs, a common injury of hens at this season. The toe nails, and sometimes the spurs, of the male are the cause. Blunt the spurs. Examine the edges of the male bird's toe nails, you will find them razor sharp. Use a knife to scrape them blunt. Do not cut into the quick.

BEST DISPLAY AT THE CHICAGO COLISEUM SHOW, on

Rose Comb Reds

has been won for

Five Successive Years by Longfield REDS

A record, to the best of our knowledge, never duplicated by any R. C. Red breeder at any National Show. Twenty of the first premiums at this great Red show in the past seven years have been won by us. Another record.

LONGFIELD REDS, the strain that comes back and wins year after year where the competition is strongest. Write for catalog, giving winnings in detail and our interesting guarantee of 15 chicks from each setting of our best eggs. A grand lot of birds for sale. Priced very reasonable.

"A Chick in the Hand is Worth Three in the Shell"

You can buy Chicks this season from the ORIGINAL SCRANTON S. C. REDS

In response to popular demand and in line with our desire to give our customers fullest measure of satisfaction, we shall offer for the season of 1918 day-old chicks, as well as eggs from twenty superb matings—a real line-bred flock—winners in America's leading shows—producing each year outstanding quality in type, color, size, vigor and laying ability.

CHICKS—\$12 to \$35 per twenty-five, \$20 to \$60 per fifty, \$35 to \$75 per hundred. Ready to start growing lustily and become richly colored exhibition and useful Reds.

EGGS—\$3, \$5 and \$10 per fifteen, \$6, \$8 and \$18 per thirty, \$10, \$15 and \$30 per fifty, \$18 and \$25 per hundred. Everyone guaranteed new-laid and fertile, clears replaced, and if you wish to do your own hatching the surest promise of your ultimate satisfaction.

Our "Red Quills," the original Scranton S. C. Reds, are generally conceded to be the strain that most nearly approaches the desired combination of type, color, size, quick growth and laying ability. A prominent eastern fancier and pioneer breeder of Reds said of them: "It is the one truly line-bred strain in America." Why not stamp these qualities and the ability to reproduce them on your flock? Get your winners the way the other fellow gets his. Take advantage of the world-wide fame of these original Scranton Reds to get your share of the best sales.

Send today for baby chick and egg circular. Better still, get your order booked now direct from this ad and insure prompt and early delivery.

Remember, only the best wins. There is but one best. Get the "Red Quills" original Scranton S. C. Reds and be convinced.

THE GREAT BOSTON SHOW

Massachusetts "Goes Over the Top" With Its Annual Quality Show.—Fanciers' Exhibition and a "Life-Saver for the Business." *By Prince T. Woods, M. D.*

THE big Boston Poultry Show put the big B in business and went "over the top" with a fine fanciers' exhibition that more than one poultryman said should prove "a life-saver for the business this season." It was a war time show with a somewhat smaller list of entries than last season, but it was a big show, a show of good cheer, enthusiasm and good sportsmanship. It lived up to its reputation as a "quality show."

Governor Samuel W. McCall, in his official capacity as war governor of the state, attended the show on the evening of opening day and addressed the assembled fanciers and visitors on the importance of the poultry industry and the need of increased production the coming season. He said that he considered the Boston Poultry Show one of the biggest events of the year. That in Massachusetts two of the most important industries are dairy farming and poultry raising, very important to the state, as Massachusetts only produces about 25 percent of the food required by the inhabitants, and milk, poultry and eggs are foods which the state can and does produce in great quantity. He thought the poultry industry one of the most important and necessary in the United States, representing greater annual value in dollars and cents than the steel industry. He urged every citizen to keep

a war flock if possible. Said that there is much land suitable for poultry keeping and that every back-yard and every gravelly hill side could be turned into a veritable mine for food supply thru efficient poultry keeping. He thought that possibly some poultrymen might be a little extravagant in their methods of feeding and suggested that possibly just as good results would follow keeping the fowls on wholesome, plain boarding-house fare as attempting to keep them in the luxurious manner of the fashionable hotel. The audience, standing, gave Governor McCall three rousing cheers and a "tiger." At the close of the brief address, Secretary-Manager Winthrop B. Atherton piloted the Governor and his party on a personally conducted tour of the show, and we last saw them deep in the mysteries of "Barred Rock" undercolor, and heard the state's chief executive say, "I want to sell all the chickens, I'm interested in them."

As usual, this thirtieth annual exhibition of the Boston Poultry Association was held in the Mechanics' Building. The two big halls were attractively decorated and in spite of the fuel shortage were warm and cheerful. Opening day was one of rain and sleet, but the remainder of the week was unusually fine for January weather in Boston. The attendance was very good when one con-

siders the time and conditions and the fact that the drastic war regulations were put in force by the fuel administration during show week. The spirit of optimism was found thruout the exhibition halls and everybody seemed to be "doing his bit" to help out the poultry situation and to bring better business. It was evident that the "coldfeetos" had stayed at home and even when someone brought a little "gloom" after a "wheatless, meatless" dinner, the dark cloud simply could not linger in that cheerful, sunny place. Even "war bread" was powerless to cause its usual indigestion.

The displays by manufacturers and dealers in incubators, brooders, portable houses, feeds, and all sorts of poultry equipment, were fine and unusually attractive. There were plenty of incubators hatching and many brooders filled with sturdy baby chicks. There was abundant interest shown everywhere and the representatives of the press reported good subscription business.

Rhode Island Reds were probably the most sensational classes of the show. Hamburgs were wonderful classes and White Wyandottes were right on deck with both numbers and quality. The Plymouth Rocks, Barred, White, Buff, and Partridge made a strong showing, with quality good. Light Brahmans, Black Langshans and Buff Cochins were

MAJESTIC BUFF ORPINGTONS

Great Cockerel Sale
Now On!

At the Greater Chicago Show, 1918, I won gold medal for best display; have hundreds of cockerels, early hatched, sound in color and real Orpington type, all reared from my Chicago and New York winners. I have enough confidence in them to offer to ship C. O. D. if the customer wishes, and in any event am willing to pay the express both ways. Fine breeding and exhibition cockerels at \$5, \$10, \$15, \$20, \$25 and \$35. Order direct from this ad—I take all the risk. Cocks, hens and pullets at same prices, sold on same terms. Pens mated for best results in breeding. Order early. Nearly 100 customers were disappointed last spring.

"The Farm With No Dissatisfied Customers"

is our motto and we have lived up to it. This means a great deal to you. Write now for your copy of my 1918 mating list.

SPROUTED OATS—WINTER EGGS

The Vapor-Bath Sprouts produced by the Close-To-Nature machines possess an efficiency for prolific egg-production not found in sprouts grown the old way or in many so-called grain sprouters. A sweet, succulent, tender, edible, palatable sprout is grown in the Close-To-Nature Vapor-Bath machines.

Sprouted Oats From One Bushel Of Grain

CLOSE-TO-NATURE GRAIN SPROUTERS

Cut down the feed bill and run up the egg yield. Change high price dry grain into low price green feed. Make one bushel into three or four. The Close-To-Nature vapor-bath sprouters produce the succulent sprouts, the vegetable milk and the grape sugar that contribute to prolific egg production. The originators of the grain sprouter business and the largest sprouter manufacturers in the U. S., offer three kinds and many sizes from 1/4 bu. to 8 bu., for a few hens to 1,000.

The Double Quick

nomical and efficient sprouter ever put on the market.

FEEDING FOR EGG PRODUCTION

This is the Title of a small book we have just issued, written by H. L. KEMPSTER. By following this feeding system you can be sure of the best egg yield. It has plain tables for feeding and tells exactly

HOW AND WHAT TO FEED FOR BEST RESULTS.

Whether you keep ten hens or ten hundred, you cannot afford to feed them **HIGH PRICED FEED** unless they lay regularly, and this book tells you how to feed. A food that has material for **100 yolks** and only **25 whites** will mean that the hen can lay but **25 eggs** on that feed. The over-supply of yolks in that feed cannot be used and goes toward making fat rather than eggs.

This book not for sale, but given **Free** with 6 mos. trial subscription to **POULTRY KEEPER** at 25c. **POULTRY KEEPER** is the most helpful of Poultry magazines. It is practical. It is published for those who want to make **Poultry Pay**. It is

chuck full of money saving suggestions. Send 25c for Six Months trial subscription to **POULTRY KEEPER** and receive a copy of "Feeding for Egg Production" by return mail **FREE**.

Speckled Sussex

Pedigreed Cockerels, Pullets and Eggs, bred for their laying qualities from prize-winning males and females at Madison Square, Chicago Coliseum, Palace, New York State Fair, Philadelphia, Keystone Poultry Association, Doylestown, and other shows. Bred first to lay, second as show birds, secured by trap-nested pens, hatched under hens from the best laying females, each egg marked when laid, giving number of hen and pen, duly branded with colored spiracles when hatched, and continued to full-growing birds. Write for prices.

T. CADWALLADER

DOYLESTOWN, PA.

the strongest and best of the Asiatics. White and Brown Leghorns and the Black Minorcas made a fine demonstration for the Mediterraneans. The Bantam exhibits made a fine showing and we were surprised to find that Bantam breeders were doing so good a business with demand close on the heels of supply.

The United States Department of Agriculture was represented at the show by husbandmen Harry M. Lamon and Robert Slocum. Massachusetts Agricultural College had a good educational exhibit in charge of Professors Graham and Luni, in co-operation with the representatives of the Federal Government. A part of the hall formerly used for utility exhibits was turned into a lecture room, where a poultry institute was conducted. Among the interesting posters found in the educational exhibit were the following:

EGGS

Cut down meat and make left-overs pleasing. Give the children EGGS to make rosy cheeks and strong bodies. Give the invalid EGGS, they give strength, they are easily digested, they offer variety.

* * *

EAT EGGS—WHY?

To supply building material and repair waste. Easily cooked. Save fuel. For flavor and digestibility cook at low temperatures.

* * *

A large placard recommended a standard chick feed as follows:

Fine cracked corn.....70 lbs.
Steel cut oats.....20 lbs.
Cracked wheat10 lbs.
If steel cut oats are not available, increase the cracked corn. To standard mashes add 100 lbs. of bran to each 300 lbs. of mash for chick feeding.

Display cages contained many exhibits of heavy laying strains, showing specimens with high trapnest records. Breeders of this class of poultry say that the demand is increasing for "bred-to-lay" fowl with certified "official" records and practically all of them reported good business and excellent sales, as well as satisfactory advance bookings for hatching eggs and baby chicks. Apparently the laying contests are creating a strong demand for stock that is backed by the "official" trapnest record. The owner of the champion of the Storrs' laying contest was reported as refusing an offer of \$5 each for the eggs from this hen. There were also many bidders for an exhibit of White Leghorns, with high "official" records, but no sale was made at the time we were present, altho the price offered was an attractive one.

At a meeting held during the show by the Boston Poultry Association and many exhibitors, the poultry and feed situation was discussed and the following resolution unanimously adopted to be sent to the Food Administration at Washington:

"Where as, we are informed that there are in the United States, especially in the West and Middle West, large quantities of corn, which are in danger of being spoiled because of insufficient drying.

You Can Get Twice As Many Eggs From the Same Flock and the Same Grain When You Feed MILKOLINE MIXTURE

THAT'S why the big poultry raisers and the big egg producing companies have for four years used, and continue to use **Milkoline**. Experiments made at Missouri University, extending over a year, absolutely prove the above statement—in fact, the following table shows that we could almost say three times as many eggs from the same flock and the same grain.

Young Pigs and Hogs

thrive on **Milkoline**. It is the best possible tonic. A long-felt want for the hog raiser as well as the poultryman. Keeps young pigs and hogs toned up so that they can resist disease, take on weight quickly and develop rapidly.

What Milk Did For One Flock

Fed without Skim Milk.

25 hens
1373 eggs
1095 pounds grain
409 pounds mash diet

Cost per dozen 22²/₃c.

Fed with Skim Milk.

25 hens
3275 eggs
957 pounds grain
446 pounds mash with skim milk added

Cost per dozen 10³/₈c

Breeding and Laying Birds

This is the month when breeding and laying birds must be in the very best of condition to produce the maximum number of eggs. They need a food ration that continually builds up the system. For early baby chicks nothing better than **Milkoline**. Where **Milkoline** is fed White Diarrhoea is unknown.

In this feeding test \$3.90 worth of Sour Skim Milk saved 2,149 lbs. of grain and mash and 11 Months' time in producing 3,275 Eggs. Many other tests prove this as an average result.

Milkoline, mixed 1 Gallon to 50 Gallons of water, gives even better results.

30c Worth of Milkoline Saves 100 lbs. of Grain

In figuring 30c worth of Milkoline to save 100 lbs. of grain, twice as much Milkoline is allowed, compared with the Sour Skim Milk in the above named test.

Milkoline is made from pure, fresh buttermilk, modified and condensed for cheap shipping and easy handling. It is improved in feeding value by added vegetable oils for proper balance of protein and carbohydrates. Milkoline with its added acidity is a wonderful aid to the digestion and eliminates disease germs, thereby allowing hens to derive full nutriment from every ounce of feed. Milkoline has a stimulating effect on organs of egg production.

GALLOWAY'S HELP

for Poultrymen

When feed is high and labor is scarce — save money with Galloway's

ENGINES — FEED MILLS — CORN SHELLERS

You can make up for high cost of feed and labor by doing your work with a Galloway Engine. Let it pump your water, run your feed mill and shell your corn. These are times that call for greatest economy and Galloway power is one sure way to economize. Galloway Engines mean economy in the work they do and the way I sell them, because they are—

Sold direct from factory at low prices

Get My New 1918 Proposition Selling direct from factory is the most economical way of distribution. Everybody knows that, as there is no waste between the maker and consumer. That's my plan, which saves you big money. Read my New 1918 Book. Get the latest engine facts. Learn how Galloway saves you money on the best engine built.

ENGINES

Light Work Models, 1 1/2 to 6 H.P.
Galloway Engines are for all kinds of light work — pumping, running corn sheller, feed mill, or saw rig. Portable and stationary. Made of superior materials by skilled workmen; every part standardized and interchangeable. Uses any fuel. Develops way above rated horsepower. Large, heavy, counterbalanced flywheels. Make-and-break ignition; never misses fire. Easily started. No cranking. Frost-proof and fool-proof. A Galloway is the kind of engine you want and demand.

Feed Mills — Corn Shellers

at a New Money-Saving Price

I make two sizes of feed mills—8-inch and 10-inch burrs. Work perfectly, grind fine, with regular flow. Big capacities. My Corn Shellers are self-feed — handle any corn—run easily, with big capacity. Strong, durable and wonderfully simple.

Get This Book

Read about Galloway Engines and other Galloway implements that sell direct. You need Galloway Engines now more than ever. Prices will never be lower. Don't wait. We ship from near-by points to save you freight. Send coupon today for FREE book. Use the coupon.

P. O. _____

R. F. D. _____ State _____

"Resolved, that we, the officers of the Boston Poultry Association and many of its exhibitors throughout the United States here assembled, do hereby urge upon the Government of the United States, the necessity of building, forthwith, proper drying kilns, for the preservation of corn and to take means of reducing the price of grains and other foods and to place a maximum price on these goods used by the poultrymen, in the production of poultry, meat and eggs."

Wednesday, as usual, was Veteran Fanciers' Day and was celebrated by a dinner to the veteran poultrymen. Those present were:

Isaac K. Felch, Natick, 79 years, poultry breeder 60 years; Dr. Buchanan Burr, Yarmouthport, Mass.; 62 years, poultry breeder 54 years; Charles Weeden, E. Haverhill, N. H., 62 years, poultry breeder 20 years; N. L. Berry, Camden, Me., 71 years, poultry breeder since boyhood; W. H. Sylvester, Brockton, Mass., 70 years, poultry breeder since boyhood; P. H. Freeman, Fitchburg, Mass., 68 years, poultry breeder 50 years; D. E. Tasker, Brattleboro, Vt., 64 years, poultry breeder 40 years; Abel F. Stevens, Wellesley Hills, 65 years, poultry breeder 53 years; George W. Weed, East Lee, 64 years, poultry breeder 40 years; C. H. Pope, Brockton, 61 years, poultry breeder 45 years; C. A. Ballou, Worcester, 68 years, poultry breeder many years; C. W. Richardson, Apponag, R. I., 75 years, poultry breeder 50 years; W. J. Stokes, Boston, 81 1/2 years, poultry breeder 71 years; John Lowell, Chestnut Hill, Mass., 61 years, poultry breeder 51 years.

Resolutions were adopted on the death of F. A. Houdlett, of Boston.

The poultry judges at Boston Show were:

W. M. Anderson, Saratoga Spring, N. Y.; C. A. Ballou, Worcester, Mass.; F. C. Burbank, Sandwich, Mass.; A. J. Braun, Jr., Syracuse, N. Y.; W. H. Card, Manchester, Conn.; F. G. Cook, Waltham, Mass.; Chas. D. Cleveland, Eatontown, N. J.; J. H. Drevendst, Schenectady, N. Y.; Frank H. Davey, Vineyard Haven, Mass.; James Glasgow, Mahwah, N. J.; W. A. Hendrickson, Mattapan, Mass.; John Kriner, Stettlersville, Pa.; Mrs. W. P. Masten, Pleasant Valley, N. Y.; Haldie Nicholson, Leominster, Mass.; Richard Oke, London, Canada; Charles W. Pratt, North Abington, Mass.; F. W. Rogers, Brockton, Mass.; H. P. Schwab, Rochester, N. Y.; A. O. Schilling, Buffalo, N. Y.; Eugene Sites, Elyria, Ohio; George W. Weed, East Lee, Mass.; George L. Young, Brooklyn, N. Y.

Judging was somewhat delayed on account of late arrival of some exhibits. Most of the birds came thru in excellent condition. John S. Martin shipped a big string of White Wyandottes from Canada, part of them arrived in good season, but some twenty-one birds in personal charge of Mr. Martin got into a snow blockade and later were tied up by a railroad wreck, arriving with their owner after the judging had closed.

Light Brahmas were strong classes, with quality excellent: 10 cocks, 11 hens, 9 cockerels, 11 pullets, 9 pens. Dark Brahmas small classes.

Buff Cochins, good classes of fine quality. Partridge Cochins well filled classes.

Black Langshans, fair quality in adults and some very good ones among the young stock; 5 cocks, 3 hens, 9 cockerels, 11 pullets.

Barred Plymouth Rocks, some excellent quality; 9 cocks, 10 hens, 21 cockerels, 10 pullets, 5 pens. Good showing also in cockerel-bred and pullet-bred classes.

White Plymouth Rocks, 5 cocks, 9 hens, 18 cockerels, 15 pullets, 1 pen. Buff Plymouth Rocks, 6 cocks, 8 hens, 9 cockerels, 10 pullets, 1 pen. Partridge Plymouth Rocks, 10 cocks, 14 hens, 10 cockerels, 9 pullets, 4 pens.

Silver Wyandottes, some good quality but scattered, the breeders of this variety seem to be slipping and are not keeping up the fine lacing and snappy contrast we used to see at Boston; 12 cocks, 17 hens, 14 cockerels, 13 pullets, 6 pens. Golden Wyandottes, well filled classes.

White Wyandottes, strong classes with some fine birds in the ribbons; 23 cocks, 22 hens, 30 cockerels, 22 pullets, 9 pens.

Partridge Wyandottes, quality excellent; 6 cocks, 7 hens, 5 cockerels, 5 pullets. Black Wyandottes, small classes. Buff Wyandottes, well filled classes and some good quality. Silver Penciled Wyandottes, some excellent quality; 6 cocks, 7 hens, 10 cockerels, 7 pullets, 1 pen. Columbian Wyandottes, strong classes; 11 cocks, 8 hens, 24 cockerels, 13 pullets, 4 pens.

American Dominiques, fair classes with quality good.

STILES' COLORED Leg Bands

Mention the American Poultry Journal when writing to advertisers.

S. C. Rhode Island Reds, fine classes, quality in young stock rather superior to the adults; 25 cocks, 22 hens, 32 cockerels, 31 pullets, 14 pens. R. C. Rhode Island Reds also fine classes, with quality about evenly divided among young and adult stock; 12 cocks, 7 hens, 14 cockerels, 11 pullets, 9 pens.

Small exhibits of White Dorkings and Silver Grey Dorkings.

Orpington classes well filled and some excellent quality shown in Buffs, Blacks, and Whites.

Cornish made an excellent showing in Dark, White, and White Laced Red varieties.

S. C. Brown Leghorns were strong classes; 10 cocks, 13 hens, 15 cockerels, 12 pullets, 2 pens. R. C. Browns, small classes.

S. C. White Leghorns, good classes, with excellent quality; 10 cocks, 10 hens, 17 cockerels, 15 pullets, 8 pens. R. C. Whites represented by one pullet. Buff Leghorns, well filled classes, with some fair quality. Other Leghorn classes small.

Black Minorcas, some excellent specimens; 5 cocks, 8 hens, 7 cockerels, 7 pullets, 1 pen. R. C. Blacks, small classes. Fair classes of Buff Minorcas.

Small classes of Blue Andalusians and Anconas. Polish, well filled classes. Houdans, small classes.

Hamburgs made strong classes, in fact a good Hamburg show in itself. Blacks, 9 cocks, 17 hens, 11 cockerels, 14 pullets, 1 pen. Golden Spangled, 4 cocks, 6 hens, 8 cockerels, 7 pullets. Silver Spangled, 17 cocks, 28 hens, 25 cockerels, 30 pullets, 2 pens. Golden Penciled, small classes.

Silver Campines, excellent classes of good quality. Golden Campines, small classes.

Buttercups good classes, showing improvement in quality; 6 cocks, 8 hens, 9 cockerels, 10 pullets, 2 pens.

Salmon Faverolles, small classes. Some excellent exhibits of turkeys, water fowls and pigeons. A good sized cat show, a fish exhibit, and a big exhibit of hares, rabbits, and calves, also a small exhibit of eggs, dressed poultry, and dressed hares, made up a well balanced big show of more than usual interest.

Full list of awards follows:

Light Brahma—Geo. V. Fletcher, Belmont, Mass., 1-2-3 cock, 3-4-5 hen, 4-5 ckl, 4-5 pl, 1 old pen, 2 young pen. J. R. Crispin, Magnolia, Mass., 5 cock. Harvey C. Wood, Bound Brook, N. J., 4 cock, 1-2 hen, 1-2-3 ckl, 1-2-3 pl, 1 young pen. Fairview Farm, South Portland, Me., 2 old pen.

Dark Brahma—C. A. Ballou, Worcester, Mass., 1 cock, 1 hen, 1 ckl, 1-2 pl.

Barred Plymouth Rocks, Cockerel-Bred—F. G. Swanberg, 1-2 pl. Geo. A. Bowker, 3 pl. W. W. Carpenter, 1 pen.

White Plymouth Rocks—Mirimichi Poultry Farm, Foxboro, Mass., 1-3-5 cock, 4-5 hen, 1-5 ckl, 3-5 pl, 1 old pen. F. A. Brown, Brockton, Mass., 4 cock, 2 hen, 2 ckl. Wakefield Poultry Farm, Wakefield, Mass., 2 cock, 1 hen, 3 ckl, 2 pl. Wentworth Lodge Poultry Co., Derry Village, N. H., 4 ckl. E. F. Whitman, South Weymouth, Mass., 3 hen, 4 pl. H. K. Chadwick, Oak Bluffs, Mass., 1 pl.

Buff Plymouth Rocks—F. J. Nutting Brandon, Vt., 1 cock, 1-4 hen, 1-2-5 ckl, 1-2-4 pl, 1 young pen. Percy E. Jarnis, Marion, Mass., 3 cock. P. W. Noyes, New London, Conn., 2 cock, 2 hen, 4 ckl, 5 pl. B. N. Duclos, Lenox, Mass., 4 cock, 3-5 hen, 3 pl. W. B. Reed, South Duxbury, Mass., 5 cock. Wm. Oliver, Barre, Vt., 3 ckl.

Partridge Plymouth Rocks—Bird Bros., Meyersdale, Pa., 1-2-5 cock, 1-2-4 hen, 1-2-4 ckl, 1-2-3 pl, 2 old pen. F. O. Shephardson, Mansfield, Mass., 3 cock, 3 hen. Thos. H.

HIP! HIP! HOORAY! Victorious Again!

Victorious in the Largest Barred Rock Show of America

This time the glorious ARISTOCRATS win out at that mighty NATIONAL BARRED ROCK CLUB SHOW, HELD AT CHICAGO

the entire nation's big club show—the Barred Rock show of all America.

And above everything else stands out this powerful fact: These great winnings were made with Aristocrats by my customers. Think! My customers are able to make such magnificent winnings with Aristocrats in competition with all those big, notable Barred Rock breeders and advertisers who showed their birds at Chicago. One of my customers alone carried home six ribbons, four on Aristocrat stock purchased from me, and two on Aristocrats which he hatched from Aristocrat eggs purchased last spring. (By the way, those same identical matings which produced these winners at this great show are again mated up and my customers are receiving eggs from them.)

It is the breeders who are raising ARISTOCRATS who are making the money. Aristocrats are possessing this greatest, best-paying combination of all: They are great show chickens, great market chickens and great layers—with many individual records of over 200 eggs per year and as high as 260 eggs in one year.

Therefore, while you are breeding and raising chickens, why not breed, feed and raise THE BEST? Why not? It costs no more to feed and raise the very richest Aristocrats than to raise scrubs. Think!

I can help you out with wonderfully rich breeding cockerels, pairs, trios and pens—for the most magnificent collection of Aristocrats I have ever had in my yards right now. Write me your wants and I will help you. Every Aristocrat is guaranteed to be absolutely satisfactory or the full purchase price will be refunded.

Eggs from matings which are producing such wonderful specimens (including eggs from the same matings which produced the above great winners) \$10 for 15; \$25 for 50; \$50 for 100.

W. D. HOLTERMAN, Fancier

Box A, FORT WAYNE, INDIANA, U. S. A.

1st Buff Orpington Hen Indianapolis, 1917

No, I did not sell my

Buff Orpingtons

on the market because feed prices advanced.

I have the best lot of young birds I ever raised, bred from hens like the one illustrated in this ad and sired by my first Indianapolis cock.

Other Breeders May Have Better Birds, But These Look Good to Me.

I have a lot of March and April hatched cockerels you can have your pick for \$10.00, \$15.00, \$20.00 and \$25.00. No more, no less. You can order direct from this advertisement. Your money back if not satisfied.

No, this price does not govern in females. Eggs are now selling at 50 cents per dozen and they will sell for \$1.00 this winter, so I am not crazy to sell females from the greatest winter layers that wear feathers.

Yes, I won at the Indiana State Fair, 1917: Five ribbons in the strongest class of Buff Orpingtons ever caged in this State. At the February show I won 1st cock; 1st and 2d hen; 2d cockerel; 1st old and 2d young pens. The young males I am offering in this advertisement were bred from these winners.

"Just shove your money under the door" and I will send you birds worth a little more than you pay for them. DO IT NOW!

Get 100% Efficiency From Your Feed

The U. S. Food Administration predicts a 40% to 50% reduction as compared with last year's poultry feed prices. But you cannot afford to waste a pound of feed. You are wasting it—losing good dollars—if your fowls are not digesting it perfectly.

Perfect digestion prevents feed waste and increases production. Your birds will get the full benefit of everything they eat and earn bigger profits if you use

Pratts Poultry Regulator

America's Original Guaranteed Poultry Tonic and Conditioner

It assists digestion in a natural way—tones up the entire system—sharpens the appetite—stirs sluggish egg-producing organs into activity—makes hens lay—turns loafers into steady producers.

Used and recommended by leading poultry authorities. Pres. T. E. Quisenberry, of the American School of Poultry Husbandry, uses it at his great experimental farm. He says:—"*Pratts Poultry Regulator is used every day in the moist mash, except when salts or sulphur are fed. We use this as per directions furnished with the Regulator.*" It will pay you to follow the advice of this recognized authority.

Pratts Poultry Disinfectant is a great health-protector. Pleasant to use, non-poisonous, inexpensive. One gallon makes seventy gallons of powerful solution. Applied occasionally to houses, coops, incubators and brooders, it drives away vermin, exterminates disease germs, kills disagreeable odors, keeps everything clean and sanitary. Secure a supply early. Protect your layers, breeders and chicks.

Our dealer in your town has instructions to supply you with **Pratts Preparations under our square-deal guarantee—**
"Your money back if YOU are not satisfied"—
 the guarantee that has stood for nearly 50 years.

ANOTHER PROOF

Our 1917 Egg Competition Winners

Our entry of five Wyandotte hens in the North American Egg Laying Competition, just ended, won First Prize and Three Silver Cups. These hens laid 1165 eggs, having these high individual records: 294, 267, 221, 220 eggs. Contest under govern-ment supervision.

Our Champion Wyandotte hen, “Liberty Belle,” laid 294 eggs, winning first prize and cup, and establishing World’s Highest Official Wyandotte Record. Her sister laid 267 eggs, winning third prize and cup against 500 competitors.

Merely another proof of our success in breeding 200-egg layers. Other com-petition winnings:

LEGHORNS—Highest award North American Egg Laying Competition, 100 pens competing, five hens laying 251, 250, 224, 222 and 192 eggs.

REDS—Highest award, in their class, N. A. Contest, five hens laying 1043 eggs, an average of over 200 eggs per hen. Highest Official Red Record known.

WHITE WYANDOTTES—Missouri International Contest, ten birds laid 2006 eggs, over 200-egg average. One layer made a record of 265 eggs.

If you want Leghorns and Wyandottes that lay, if Official Records mean any-thing to you, you should secure our strain. Our Reds and Orpingtons are also won-derful layers. We have many individuals that hold remarkable official records, and this bred-to-lay blood is strong in every bird in our flocks; acknowledged by poultry experts to be the **Most Profitable Poultry in America.**

Simplex Midget \$ 1.00 Feather Brooder

Postpaid

This Midget Brooder is made to fill a gap between the old "cluck" and the large artificial brooders.

We guarantee that this brooder will raise as many chicks as a "cluck" if placed in a living room or warm basement. It is made to accommodate one setting of 15 chicks, but will take care of 25 chicks for the first week.

Uses for this Brooder

Thousands of people buy baby chicks in dozen lots and have no place to properly brood them until they can take care of themselves. This Midget Brooder will take the place of the hen and raise them.

Many times a poor hatch comes out of an incubator or a few weak chicks de-

The feather hover inside can be raised and lowered to suit the size of the chicks.

mand special attention. It is a good deal of trouble to raise a few chicks in a big brooder. Why try, when you can get this Midget Feather Brooder to raise them without trouble?

When the old hen deserts her chicks, that's another time the Midget Feather Brooder is worth its weight in gold.

Construction

The body of this brooder is made of germ proof fibre board; the top and bottom are made of best grade of corrugated board and the feathers are genuine down feathers, the same as used in our larger Simplex Perfection Feather Brooders; and this brooder is guaranteed to raise every chick worth raising.

Send one dollar today and let us send you one by parcel post, prepaid. Money will be refunded if you are not satisfied. Also ask for our catalog of larger brooders and other poultry supplies.

Note the thickness of the downy feathers which warm the chicks.

GOVERNMENT URGES EARLY HATCHES.

Get Your Incubators Busy. — Eggs and Poultry Higher Than Ever Known and Feed Going Down. — Pullets in the American Egg-Laying Contest Just Making Good Start.

T. E. QUISENBERRY, Leavenworth, Kan.

THE United States Government wants you to raise more poultry and produce more eggs. The United States Department of Agriculture is urging poultry men to get off some early hatches. The early hatched birds are easier raised, you avoid many of the deadly parasites and enemies of poultry and your birds mature early enough to make good fall and winter layers. So get out your old incubators and clean them up, or, better still, perhaps, is to buy a new one that has all the improvements and which will turn out strong, vigorous chicks. We urge you to do your best this season, for we believe it will pay. Eggs and poultry have been selling for more than they were ever before known to sell, and feed has gradually been declining in price in most sections.

It behooves every poultryman to use such methods in raising his stock as will insure the lowest percent of mortality and the quickest growth. Brooder stoves of many kinds are upon the market and several of these are giving excellent satisfaction. We know of some who use two of these stoves, of small size, in one room. Then if one stove goes out, the other will protect the chicks and prevent chilling. For this method of brooding, we build a house 10 x 20 feet or 12 x 24 feet. The house has a partition in the center with the board nearest the floor on hinges so it can be raised as a runway for the chicks and a swinging door for the attendant. The stove is placed on one side of the partition and cool room is used for feeding and exercise. It is necessary to have a cool room so the chicks can get away from the heat. This is one of the secrets of successful brooding. Or you may use one room that is long and narrow. Place the stove in one end and the other end remains cool.

The houses for these brooder stoves are built just as we would build any laying or breeding house. We would not build a special brooder house which we could only use three or four months during the year and then let it remain idle for the remainder of the time. Every poultryman should endeavor to have as little idle equipment as possible. We locate the buildings where the chicks can have plenty of range after they grow up. As soon as they

Bronze Turkeys

Again They Win at Madison Square Garden

Where the cream of the highest class fowls of the nation come, in the great preeminent show, Bird Brothers again demonstrate the superiority of their strains by winning as follows:

Partridge Plymouth Rocks 1-2 cock; 1-2 hen; 1-2-3 cockerel; 1-3 pullet; 1 pen. | Bronze Turkeys 1-2 cock; 1-2 hen; 1-2-3 cockerel; 1-2-3 pullet.

EGGS, SHOW AND BREEDING STOCK

BIRD BROTHERS

Box "C"

MEYERSDALE, PA.

are old enough to do without heat, we simply remove the brooder stove and put in temporary roosts. The chicks remain right in this house until the next fall or winter when it comes time to cull them and to select the choicest for the laying and breeding pens. A flock of pullets are usually wintered in these houses. Nests can be put in temporarily until the houses are needed again for next season.

By handling the chicks in this way you avoid handling them so often they become accustomed to their quarters and you do not check their growth by moving and you are getting the benefit of your equipment throuth the year. It is easier and better to move the stove to another house than it is to move the chicks and have the house vacant for eight months. We know of one party who lost an entire flock last year simply because they crowded, as the result of being moved six times, contracted colds and suffered in other ways.

Tack cloth over the ventilators and make the house comfortable and provide for ventilation near the floor, but avoid drafts. Be certain to provide for one cool room. If the chicks have a tendency to cannibalism and pick at one another's toes, paint the window panes with a bluish or whitish frosting. You want light in your brooder house, but not the direct rays of the sun. Keep the chicks busy and active. Put some fresh earth on the floor in one corner of the room. If they show signs of developing the habit of picking at one another, grind some lean meat and mix equal parts of bran, shorts, corn meal and ground meat with

a little water, just to moisten it a trifle. After it is mixed run it thru a sausage mill or meat grinder and then feed it to the chicks every day. The frosted windows will do most to prevent cannibalism. You will not be troubled with the chicks piling up and crowding at night in a room where you use these brooder stoves if your room is kept warm enough. Don't feed chicks until about 48 hours after they are hatched and dry. One of the first things should be sour milk or buttermilk and coarse sand. Cover the floor of the brooder with clover chaff or fine cut straw. Don't have this too deep. For the first two or three days, feed a mixture of two-thirds rolled oats, one-third wheat bran mixed with hard-boiled eggs and a little powdered charcoal and fine bone meal. Feed a little about five times a day for the first three days. The first mixture is fed morning, noon and night and the chick feed between meals.

As they become older gradually eliminate the rolled oats until you use only the chick feed, and keep before them a dry mash in the following proportions: 10 lbs. wheat bran, 2½ lbs. ground oats, 5 lbs. shorts, 5 lbs. corn meal, 2 ounces fine charcoal and 2 ounces fine salt.

If you cannot secure sour milk or buttermilk, then mix two pounds of dry beef scraps with the above. If you use any form of milk, keep it before them at all times or at least the first half of the day. They need some green food. Use clippings from sprouted oats or cut up some onions occasionally. The above methods have proved simple and successful.

ENDORSED, RECOMMENDED AND USED BY AMERICA'S MOST SUCCESSFUL POULTRY RAISERS

Licene Exterminates all Chicken Lice as if by Magic

When such breeders as Mrs. Helen Dow Whitaker, E. B. Thompson, Dr. N. L. Smith, A. C. Hawkins, O. F. Mittendorf, Prof. T. E. Quisenberry, Len Rawnsley, U. R. Fisel, A. A. Carver and thousands of other big breeders that have had years of experience in raising poultry, endorse and use a preparation as the best, it must have exceptional merit, and will do all that is claimed for it.

LICENE Makes Hens More Profitable

No hen can lay her best when tormented by lice. Kill the lice and watch the increase in your egg production. John G. Poorman, Tinley Park, Ill., the owner of "Lady Show-you," the \$800.00 hen, and breeder of the celebrated 200-egg strain, writes:

"Lice is the one great factor in determining success or failure in the poultry business. If exterminating lice means success, and it surely does, LICENE should be given all the credit. I would as soon be without feed as without LICENE, for without either profitable egg farming is not a success."

LICENE Cheapest Lice Killer Known

Price, 60c a Tube, Postpaid Sufficient for 150 to 200 Fowls

LICENE is applied twice a year, but many report that they have found one application a year sufficient. When you stop and consider that one tube is sufficient for 150 to 200 birds, you must realize that LICENE is cheaper than lice powder and liquid lice killers. It is also more conveniently handled and more easily applied, saving time, labor and money, making LICENE not only the best but cheapest lice exterminator the world has ever known. Put up in collapsible tubes, which prevents waste. Remember LICENE will not injure the birds in any way or destroy fertility of eggs, so with our positive guarantee you take absolutely no risk in giving LICENE a trial.

Positive Satisfaction Guaranteed or Money Back

If Licene does not destroy every louse and "nit" (egg of a louse) or does not clean scaly legs on your chickens, or if applied on sitting hens, and does not prevent head lice on chicks—you are the judge—we will refund your money if you notify us (or our agent) within one month after receiving Licene and no questions will be asked.

The Poultry Doctor FREE This little book is worth its weight in gold to any one raising poultry. Thousands of poultry breeders are following its suggestions with success and profit. It contains 16 different tested and proven formulas of remedies for diseases common among fowls. It is invaluable to the beginner and experienced breeder alike. Remember it is absolutely FREE, so just send your name and address for it.

THE LICENE CO., 1500 Pontiac Bldg., CHICAGO, ILL.

Stop Hatching Weak Chicks

With Cheap Incubators

Remember it is not how many you hatch that counts, but how many you **raise**.

Chicks that hatch out **weak and wobbly**, and live but a few days, mean nothing to you except trouble and loss. They make one sick of the poultry business.

Most of the chicks you lose in the first two weeks die because they did not hatch out with enough vitality or strength for a good start.

QUEEN Incubators

HATCH CHICKS that LIVE and GROW

The Queen is accurately regulated—taking care of a temperature variation of 70 degrees without danger.

It is built of genuine California Redwood—very scarce in these days of imitation and cheap substitution.

Redwood **does not absorb the odor** from the hatching eggs. Cheaper woods, and pasteboard lining in iron and tin machines, **retain the odors**, to weaken and kill the hatching chicks.

Don't Buy ANY Incubator Until You Check It Up with the Queen

Some Machines are made of galvanized iron, or tin, or cardboard, or other cheap material that gets hot or cold quickly, absorbs odors, moisture, etc., and is liable to kill or weaken the chicks after the first few hatches.

The Queen is made of California Redwood, the best material ever discovered for incubators. Of course it costs more.

Some Machines have only one real wall and consequently are not properly insulated.

The Queen has double Redwood walls, the space between being filled with corrugated strawboard, making perfect insulation.

Some Machines regulate only when temperature is uniform and everything runs right.

The Queen Regulator is a wonder. It will take care of a heat variation of 70 degrees.

Start Your Chicks with a Queen Constitution

and they will make money for you. The Queen is not a cheap incubator, compared with many of the cheaply constructed machines on the market, but it is **cheap in the long run**. It will be turning out high percentage hatches years after the cheap machines have been junked. Sold by dealers. Catalog sent free on request.

Not a Single Complaint

Queen Incubator Co., Lincoln, Neb.

Gentlemen:—During the many years you have been advertising Queen Incubators in the columns of American Poultry Journal, we have not, to the best of our recollection, received a single complaint from one of your customers. *American Poultry Journal*.

Not Even an Expression of Dissatisfaction

Western Poultry Journal, Cedar Rapids, Ia., writes: "In all these years that the Queen Incubator has been advertised in Western Poultry Journal, we have as yet to receive the first expression of dissatisfaction from any of our subscribers. We think this is a splendid recommendation, not only for promptness and business ability, but for the quality of Queen Incubators."

The Best—East or West

John Bowen of the Colorado Poultry Fanciers Association, wrote: "Last season the writer installed a Queen as an experiment, and found that it hatched 18 per cent better than Eastern made machines and 11 per cent better than any machine built in the West. All of the machines were run under exactly the same conditions."

THE BREEDERS' CONTEST.

The great laying and exhibition strains that we have today were not bred in a year nor in a day. It required much thought and labor to accomplish what some of the breeders who have entries in this contest have produced. Even tho the birds are properly bred, in shipping, in getting accustomed to their new quarters, new climate and new surroundings, the birds may be temporarily thrown off feed or out of condition and suffer a check or drop in egg yield. But if all would look at the matter as one of our broad-minded contestants expressed himself, there would exist a most pleasant spirit of helpfulness and co-operation between this school and the owners of all birds entrusted to our care. This splendid man said: "You will not find me too critical. I feel confident; in fact, I shall abide by results without a whimper. I am not over-sanguine, have gone into the thing in the proper spirit, I believe; I only hope that the pullets I sent will help justify the belief which you and I both entertain that poultry can lay well and look well—a belief which will not be dispelled in my own case even if the coming contest happens not to support it."

Each contestant must realize that unavoidable conditions will arise and accidents will happen and that it is just as much to our own credit to get a good egg yield as it is to himself, and we are just as anxious as he can possibly be to see that his birds keep in good health and produce maximum results.

A Light Sussex pullet, No. 482, from Ohio, won highest honors for December with 28 eggs. The pen of which she was a member won the monthly record with 104 eggs. The five highest pens in this contest were as follows:

Pen No.	Eggs.
48—Light Sussex, Ohio.....	104
27—White Orpingtons, Ohio.....	92
26—White Orpingtons, Indiana.....	87
43—White Wyandottes, Illinois.....	86
35—R. I. Whites, Illinois.....	82

The varieties entered in this contest made the following averages for December:

AVERAGE EGGS PER PULLET.

White Leghorns.....	9
Brown Leghorns.....	7
Black Leghorns.....	9
Buff Leghorns.....	13
Anconas.....	4
Buff Plymouth Rocks.....	4
White Plymouth Rocks.....	4
Barred Plymouth Rocks.....	7
White Orpingtons.....	13
Single Comb Reds.....	6
Rose Comb Reds.....	9
Rhode Island Whites.....	12
Silver Wyandottes.....	7
Columbia Wyandottes.....	3
White Wyandottes.....	12
Light and Red Sussex.....	14
Speckled Sussex.....	7

Some of the averages were reduced because the pullets were not mature and had not started to lay.

YEARLING HEN CONTEST.

The hens in this contest all made good records last year. As a result, they were late in moulting and some are not thru yet. We, therefore, cannot expect many eggs for a few weeks yet. There ought to be some of these hens that will go over 200 eggs in their second year. The best hen for December was a White Rock from Kansas, which laid 24 eggs. The best pen was a pen of Black Langshans from Kansas that laid 91 eggs.

The best White Plymouth Rock at Chicago Show, January, 1918. Owned by North Hill Poultry Farm, Washington, Ill.

WHITE LEGHORN CONTEST.

We had the coldest and severest winter weather in December that has been experienced in this section in more than thirty years. At the beginning of the month the temperature took a sudden drop and stayed below zero for several days. The Leghorns being a small and close-feathered bird seemed to suffer

most and many pens that had begun to lay well suddenly dropped to nothing. This ruined our egg record for the month. This was simply because the birds were not accustomed and hardened to such weather. Their egg record then began to climb back and at the last of the month, even tho a second spell of the same sort of

FUL-O-PEP

GROWING MASH

A GREAT many people think because a little chick likes to "scratch and pick"—that cracked wheat, cracked corn or scratch feeds are the best feeds for young chicks. *That's a wrong idea.* This old-time fallacy has played havoc with poultry profits too long. More chicks die from improper feeding than any other cause. *The losses are enormous.*

For years our poultry feed experts have been experimenting to find a feed which would change this deplorable condition. They studied the habits and physical weaknesses of chicks—tested numerous feed formulae and finally discovered that OATMEAL (without hulls) when properly balanced with beef scraps, bone meal, green feed and other protein ingredients, not only agreed perfectly with the delicate digestive organs of young chicks, but

made them *grow much bigger*, faster, sturdier, healthier— hastened maturity and developed *earlier, better laying pullets.*

This new OATMEAL feed, FUL-O-PEP GROWING MASH, which is a finely ground, *easily assimilated* feed, is fast changing the "old-time" grain feeding practice, which has played such havoc with poultry profits. It is without doubt the best growing mash ever placed at the disposal of poultry keepers.

OATMEAL The Big Successful Poultrymen's Secret of SUCCESS with Chicks

Poultrymen like Thompson, Fishel, Felch, Dann, Kempster, Lambert and numerous others are wise to the superior value of OATMEAL for little chicks. They all use and recommend it.

Prof. A. B. Dann, of Cornell University, says: "When hulls are removed from oats (oatmeal) we have one of the finest feeds we know of for little chicks."

E. B. Thompson, says: "I consider Oatmeal a valuable ingredient for a poultry food for both young chicks and laying hens."

U. R. Fishel, says: "Any poultry food that contains plenty of oats (oatmeal) is bound to make good growing feed."

FUL-O-PEP GROWING MASH, for chicks and young fowls, goes several steps further than the big poultry raisers' method. While its base is finely ground OATMEAL, we have added other necessary ingredients—animal foods, bone and muscle foods, green foods, etc., all so skillfully balanced that it makes chicks grow faster, bigger, healthier.

After your chicks are ten days old give them all they will eat. You cannot over-feed it. *Keep it before them all the time.* They will "go to it" just like feasting on bugs, insects, worms and green stuff when on free range, only in this feed we have given them many more good things than they could possibly pick up on free range.

GROWING MASH — Not Grain Feeds — MAKES CHICKS GROW BIG

The big successful poultrymen no more think of raising chicks without a GROWING MASH than they expect to get eggs without feeding an egg mash.

For chicks just hatched, after three days on bread crumbs, feed FUL-O-PEP CHICK FEED which consists of finely granulated corn, wheat, pin head oatmeal and fish scraps. You will find it gives them a fine start.

For laying hens you will find FUL-O-PEP DRY MASH and FUL-O-PEP SCRATCH GRAINS so much superior to anything you ever used there is no comparison. Ask your dealer for FUL-O-PEP FEEDS—if he can't supply you, write us.

Just fill out the coupon and get our New Free Poultry Calendar. It is said by the "WISE ONES" to be the best book on poultry feeding ever published.

White Wyandottes, 245 and Silver cup. Eggs \$2 to \$7 for 15; \$10 per 100. Catalog.

W. W. Kulp, Box 70, Pottstown, Pa.

weather was experienced, the Leghorns laid right on thru it and made an increase each day and when the month closed their daily yield was in excess of any Leghorns we had ever had in any of our previous contests. This would indicate that after Leghorns are hardened and are properly cared for you can expect satisfactory results from them, even in the severest months.

The highest individual was pullet No. 784 from Washington with a record of 26 eggs. The five highest pens of five pullets each were as follows:

Pen No.	Eggs.
70—White Leghorns, Washington	83
121—White Leghorns, Pennsylvania	77
74—White Leghorns, Kansas	75
131—White Leghorns, Missouri	63
110—White Leghorns, Pennsylvania	65

Fourth Arkansas State Egg-Laying Contest.

THE fourth Arkansas State Egg-Laying Contest started with five breeds and eight varieties represented. The Single Comb White Leghorns are in the majority, with five pens. The Rhode Island Reds are second with four, White Rocks three, while Barred Rocks, Columbian Rocks and Single Comb Brown Leghorns have two each, and the White Wyandottes and Partridge Rocks one each. The five White Leghorn pens represent four strains.

The pullets as a whole were not as well developed as the pullets were for the third contest. Six pens did not lay during November, while a good many of the pullets in other pens did not lay, either. Only 45 percent of the pullets have laid. This was due not only to the birds being immature, but also to the fact that so many were not shipped until the first of the month and therefore would not start laying until they became accustomed to their new surroundings. Those that were well developed and were received about the middle of October started laying early in November and have done very well. All the birds are in good health and no doubt will be laying well before December is very far gone.

The ration which is being fed this year is about the same as that of the third contest. The scratch feed is made up of two parts of cracked corn and one part of whole wheat by weight. This will be somewhat different in the spring, when the corn will be lowered and the amount of wheat increased. The dry mash contains equal parts by weight of the following: Wheat bran, shorts, corn meal, ground oats and meat scraps. To this mixture is added about a pound of salt to 500 pounds of the mixture. Sprouted oats are fed to supply the green succulent material to the ration.

This department is preparing a poultry breeders' directory and ask that each breeder please send in his name, address and the breed and variety of poultry that he is breeding. This is being done for your benefit, so please help us make this list complete by sending in this information at once.

Fayetteville, Ark.

Boys' and Girls' Poultry Clubs.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: I believe that thru printing this we might be able to bring about a change that surely would in the end put the poultry industry on a better footing. I am writing to you because I know it will be bound to reach the people at the head and cause them to seriously consider this need.

There should be a change made in the laws of the Boys and Girls' Clubs. A boy or girl in this town cannot belong to the Boys and Girls' Club that meets in the very town in which he lives. In other words, this club is a country club to which town or city boys cannot belong. This club is making farming and poultry culture more interesting and profitable for the boys and girls who tomorrow will supply the American

table. However, this does not keep the country boys from going to the city in many cases. We need farmers as we need no other industry, and we need more of them. They would, by extending this membership to the town boys and girls, induce many to go to the farm. This club's head wanted our Junior department to be open only to the Boys and Girls' Club. I mean that if we had made this provision, boys and girls in the very town the show was held could not have entered their chickens. Why be so close, stingy or one-sided? Isn't the city boy as good as the country boy or girl? Doesn't the city taxpayer's money go as far toward the existence of the Department of Agriculture and thru it the Boys and Girls' Clubs, as does the farmer's money? It is time that somebody woke up, dropped all partiality and made the Boys and Girls' Club in reality an American organization from which the country and city boy alike could derive the benefits.
W. A. PARSONS, JR.,

A Plea for the Light Brahma.

WE SO seldom see anything written in behalf of the Light Brahma that I wish to say a few words for them.

In these times of such strenuous efforts for production, I am sure that my favorite breed of chickens is not receiving its due amount of notice.

In the first place there is not, in my opinion, a prettier bird in the long list of domestic fowls than the Light Brahma. It is true that they are not a success as a range fowl for the farm, but in the crowded rural districts and the small town lot, where they must be kept in close confinement, there is not, to my knowledge, a breed of chickens that will equal them in weight and egg production. They require just such confinement to make them do their best, for they are not an active bird and will wait to have their wants supplied. They are easy to keep in restricted quarters because of this.

Contrary to general opinion, they do not consume any greater amount of feed because of their larger size, than the smaller, more active birds do. The smaller, more active birds use up feed to produce the energy that gives them the activity, while the less active Brahmas, given a properly balanced ration, do not waste any of this for unusual activity, but turn it into weight and eggs.

The Light Brahma is usually a winter layer, but my hens have given equally as good returns in summer. I have had them begin laying early in January and continue, with scarcely a day's intermission, until late in November. I have never had any of the smaller, more popular breeds do better.

Given a balanced ration, which, for the Light Brahma, must include an extra supply of shell—they are more imperative in their demand for this than almost any other breed—and I prefer them to any other for the small lot, or for a fowl that must be kept in confinement.

CLASSIFIED ADS.

UNDER this heading ads will be inserted for seven cents per word each month for less than three months, or *six cents per word each insertion for three months or longer*. Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under *classified headings*. No ads accepted at less than an average of 60 cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers using Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers, mention AMERICAN POULTRY JOURNAL. *All copy for Classified Ads must reach us by the 17th of month preceding the date of issue.*

NOW AGAIN AT THE IOWA State Show, Cedar Rapids, Iowa, Peterson's pullet-bred Barred Plymouth Rocks on six birds entered won 1-2-3 pullet, 5-6-7 cockerel. We raised every one from our own matings (not a bird or egg bought). Are you interested in pullet-bred Barred Plymouth Rocks bred to win, to lay and to pay their way, at reasonable prices, \$5 to \$10 each, cockerels or pullets? Do not write for prices if you mean business. Send your order today for what you want. Compare with the large breeders' \$25 to \$50 birds and if not satisfied return the birds and your money will be as cheerfully refunded as received, without quibbling, less express charges. We are responsible. Every year we have had to return remittances because we were sold out. Do not delay. Order today. John Peterson, Box 29, Randall, Iowa. 2

MANKATO INCUBATOR

Write Today for Our New Catalog EXPRESS PREPAID telling all about this wonder of a machine—built in the heart of the northern poultry district. Owners are enthusiastic about them. Here's just a few of the many words of praise: "I'll swell, big chicks from 188 fertile eggs. Beats all I ever heard of." Mrs. Peter Strom. "In competition with two others, my Mankato was most successful in turning out big hatches." Geo. F. Wohlrahe. "Works wonderfully and gives no trouble at all." R. S. Newsum. "Special gave splendid results, three hatches, none below 80%." Northern Normal and Industrial School. Now, find out for yourself what a really wonderful machine this is. Send for our big free book today, telling all. Remember, you needn't wait for slow freight. Your Mankato Special comes to you QUICK, BY EXPRESS PREPAID.

ILLUSTRATED BREEDERS CARDS

What and How to Feed Growing Chicks

The Experts Secret of Raising Big Healthy Sturdy Chicks

**Growing Mash –
Not Grain Feeds is
What Makes
Chicks
GROW
BIG**

Do You Know the Secret

of the big poultry raisers' success in raising big, sturdy, healthy chicks and why they have fewer losses?

They Feed Oatmeal Extensively

Thompson, Fishel, Felch, Dann, Kempster, Lambert and other experts all use it. While making exhaustive tests with different feeds for growing chicks, our feed experts discovered this same secret—AND MORE. By using oatmeal as the base and adding beef scraps, bone meal, green food and other protein ingredients to give variety and supply more bone, muscle and flesh building materials, they completed a growing feed that is SIMPLY IDEAL. We call it

FUL-O-PEP GROWING MASH

and say, how it does make young chicks GROW and THRIVE! It is so far ahead of any feed you ever tried for young chicks you will be astonished at the way they grow.

Scratch feeds won't make chicks grow big and thrifty, because it does not supply the bone, muscle, flesh, nerve and frame building nutrition required by growing chicks. Just put your chicks on FUL-O-PEP GROWING MASH and see the difference this year. They will grow bigger and faster. Your pullets will develop earlier and be better layers.

You see our experts determined to find just what young chicks and growing fowls needed to make bone, muscle and big, fast growth. They studied and experimented until they produced a feed which "does the work" as nothing else will. Chicks "go for it" like a feast on June bugs and how they do grow! Your chick raising troubles will vanish and your poultry profits pile up fast with this wonderful feed. We guarantee it. Ask your dealer about FUL-O-PEP POULTRY FEEDS; if he can't supply you, write us.

Valuable Poultry Book Free

DO YOU KNOW HOW to make hens lay larger eggs?—how to make pullets lay earlier?—how to make hens lay winter and summer?—how to select layers to make a productive flock?—how to insure fertile eggs for hatching?—how to break up a setting hen quickest and best?

These and many more valuable hints and helps are in our new FUL-O-PEP POULTRY CALENDAR we have just published. Contains a yearly egg-record, chapters on poultry raising—how to start—back-lot poultry keeping—poultry secrets, etc. In short, it is said to be the most instructive poultry book put out recently. Fill out the coupon and we will gladly mail you a copy, postpaid.

WRITE FOR THE BLUE HEN BOOK FREE

The government has asked everyone to raise more poultry this year. Of course, you are going to try to do your share. Whether or not you succeed will depend largely on the equipment you buy. Don't let poor equipment nullify your efforts! Don't let poor incubators waste your eggs! Don't let poor brooders lose your chicks!

Before You Buy Any Equipment, Write for the Blue Hen Book FREE

Prices
\$17.50
Up

Blue Hen Colony Brooders

For 100 to 1000 Chicks

SAVE CHICKS — SAVE FUEL — SAVE TIME — SAVE WORK — SAVE MONEY

It's the chicks you raise—not the chicks you hatch—that determine your profit. That's where Blue Hen Colony Brooders come in—they raise more chicks.

Plenty of heat for coldest weather. Fire can't burn up too high nor down too low. Curtain arrangement—exclusive Blue Hen feature—gives chicks fresh air, but prevents floor drafts.

Big powerful heater—burns hard or soft coal or gas. Automatic regulation—requires practically no attention except putting on coal and shaking down ashes day and night. Costs only a few cents a day for fuel.

Brooder Book FREE

Write for the Blue Hen Brooder Book and be convinced by facts. "You take out 'chick insurance' when you put in a Blue Hen." Thousands of satisfied users will tell you so.

- No. 43—Capacity 350 Chicks **\$17.50**
 - No. 44—Capacity 500 Chicks **\$21.50**
 - No. 45—Capacity 1000 Chicks **\$25.00**
- Prices slightly higher west of Mississippi River. Curtain and thermometer furnished on Nos. 44 and 45 only.

Blue Hen Portable Hovers

For 50 to 100 Chicks

For small flocks the Blue Hen Portable Hover has no equal. It is built on right principles—heater entirely outside. Plenty of room for chicks inside. Special adjustable curtain arrangement. Self-ventilating. Gives chicks plenty of fresh warm air. Burns 10 percent to 30 percent less fuel. Raises uniformly high percentage of all chicks.

No. 12, for 50 chicks, \$ 9
No. 24, for 100 chicks, 12
Prices slightly higher west of Miss. River

Blue Hen Lamp Incubators

Built to hold heat in and keep the cold out

You can buy a cheaper incubator but not a better one. Because Blue Hen Incubators are built not merely to sell but to give satisfactory service season after season for 20 years or more. Double Walls—Thick Insulation. Even Temperature Egg Chamber, Refrigerator Style Doors. Dovetail Lock-Joint Construction. Self-regulating and Ventilating. Nursery under Egg Trays. Big powerful heater. Fireproof lamp case. Don't gamble on results! Eggs are too valuable to risk in an inferior machine. Get a Blue Hen and make sure! Write for our free booklet,

"Making Poultry Pay"

Tells all about the Blue Hen and why it gives uniformly big hatches in all weathers and under all conditions. Also gives some valuable hints on making money with poultry and Our Special Get Acquainted Offer to first purchasers in each locality.

COVERING ALL BRANCHES OF

POULTRY KEEPING

From the list of books below, you can select one covering any subject regarding poultry culture you may desire.

"The true university of these days is a collection of books."—Carlyle.

\$1.00 Buys More Meat Feed Now Compared to the Cost of Grain

Grain prices have gone up 200 to 300 per cent. Meat feed prices have gone up only 40 per cent. While meat feed was always the most economical considering the nourishment it furnished, it is now even more economical compared to grain because it has advanced relatively little in price.

DARLING'S MEAT CRISPS

is a pure, sweet, greaseless, odorless, concentrate of fresh meat, cooked and prepared for every day feeding for all kinds of poultry. It contains 50 per cent more nourishment than the best meat scrap on the market (75 per cent protein guaranteed) and is thoroughly digestible. A small measure in the ration supplies all the necessary protein and makes the whole ration more nourishing. Write for our free book entitled "Feeding Secrets of Famous Poultrymen." Please give your dealers' name.

Has Aldrich Made Good with His Combination Strain?

WINTER LAYERS

EXHIBITION QUALITY

Aldrich Pen of S. C. White Orpingtons, at N. L. Contest, Mountain Grove, Mo., ties with Wyandotte Pen for Highest Egg Record in January, of the coldest winter known in many years.

AND READ THIS:

Bozeman, Montana, January 18, 1918.

First Cockerel
Chicago Coliseum, 1917

Aldrich Poultry Farm, Columbus, Ohio.
Gentlemen—I know you will be pleased to learn that my Aldrich strain White Orpingtons have gotten firmly fixed in the habit of the individual honors at the All-Northwest Egg Laying Contest at Pullman, Wash.

In December, 1916, my pullet, No. 1271, had a clear lead of one egg above the entire thousand or twelve hundred birds entered. She came back again in February and was in second place for the month and 4th place for the winter egg period ending February 28th. My pen was in 3rd place for the month of February and also in the same place for the entire winter period previously mentioned, tho the birds comprising the pen were all April hatched and did not commence laying for an average period of 30 days after the contest opened on October 15th.

One of my pullets, which commenced laying on November 3, was in 4th place for that month and finished the contest one egg ahead of all Orpingtons entered. Her nearest competitor being a Buff.

My pen the present season was comprised of pullets hatched March 28 and April 9. We had the most backward season ever. Chicks were two to three weeks or more late in maturing. Four of the pen started laying in November, the other one and the alternate on December 3rd and 10th.

Last season, while your Mr. E. S. Aldrich was secretary of the White Orpington Club, I remember some ribbons and trophies were offered. If a ribbon is awarded to the individual female leading the contest in any month, what is the deserts of a pen which produces double leaders in addition to the ribbons, or didn't the officers of the club anticipate such a sensational record?
Very truly,
MRS. W. T. THOMPSON.

"A Chick in the Hand is Worth Three in the Shell"

You can buy Chicks this season from the ORIGINAL

SCRANTON S. C. REDS

In response to popular demand and in line with our desire to give our customers fullest measure of satisfaction, we shall offer for the season of 1918 day-old chicks, as well as eggs from twenty superb matings—a real line-bred flock—winners in America's leading shows—producing each year outstanding quality in type, color, size, vigor and laying ability.

CHICKS—\$12 to \$35 per twenty-five, \$20 to \$60 per fifty, \$35 to \$75 per hundred. Ready to start growing lustily and become richly colored exhibition and useful Reds.

EGGS—\$3, \$5 and \$10 per fifteen, \$6, \$8 and \$18 per thirty, \$10, \$15 and \$30 per fifty, \$18 and \$25 per hundred. Everyone guaranteed new-laid and fertile, clears replaced, and if you wish to do your own hatching the surest promise of your ultimate satisfaction.

Our "Red Quills," the original Scranton S. C. Reds, are generally conceded to be the strain that most nearly approaches the desired combination of type, color, size, quick growth and laying ability. A prominent eastern fancier and pioneer breeder of Reds said of them: "It is the one truly line-bred strain in America." Why not stamp these qualities and the ability to reproduce them on your flock? Get your winners the way the other fellow gets his. Take advantage of the world-wide fame of these original Scranton Reds to get your share of the best sales.

Send today for baby chick and egg circular. Better still, get your order booked now direct from this ad and insure prompt and early delivery.

Remember, only the best wins. There is but one best. Get the "Red Quills" original Scranton S. C. Reds and be convinced.

International Poultry Federation, Topeka, Kansas, U. S. A.

A Brooder or Hover is no better than its heating system

Our machines are all equipped with a Wickless Blue Flame Burner that makes perfect gas from common kerosene oil.

IT'S bad enough to hatch out a brood of chicks and have them die off for want of good brooding equipment in normal times, but right now when we need poultry meat and eggs so badly, it is more important than ever before that every chick possible be raised. To accomplish this it takes dependable brooding equipment. **Harrysbourg Brooding Devices Are Dependable.** The Wickless Blue Flame Burner, using common kerosene oil (coal oil), makes a perfect gas and air mixture which is changed into heat before it can escape in the form of smoke and fumes. Consequently, we get an abundance of heat from small oil consumption, burning from 40 to 65 hours on six quarts of oil. This burner requires no cleaning, as there are no wicks to char and make carbon. The entire construction is of heavy metal. We have operated it on our farm six weeks at a time without removing the burner rings, or fire going out. Ventilating system draws oxygen consumed by burner from outside the curtain.

Plenty of Heat in Coldest Weather

The complete hover, or coal stove connection, will furnish plenty of heat for coldest weather. Just for an experiment we set one of our large hovers in an open-front laying house, 20 x 60, the coldest week in January, and had no trouble to hold heat at 120 degrees under the canopy, or 20 degrees more than necessary to brood chicks.

MADE IN TWO SIZES

Our larger hover has a 50-inch canopy, capacity 100 to 600 chicks, price \$25.00, express prepaid; our Harrysbourg Jr. has a 40-inch canopy, capacity 100 to 300 chicks, price \$20.00, express prepaid.

Guarantee: We allow any customer 30 days to test out our machines, and if not satisfactory will return money in full.

Change Your Coal Brooder Stove Into a Perfect Blue Flame Oil Burner

We furnish our Wickless Blue Flame Burner, with all connections, ready to be installed in any coal brooder made. This device has been thoroughly tested out at Harrysbourg Poultry Farm and will furnish plenty of heat in the coldest weather for a 52-inch canopy. We guarantee this device to give satisfaction or return the money. Price \$12.50, express prepaid.

Biggest Hatches Strongest Chicks

That's What You Want — That's What You Will Get With My Champion Belle City Hatching Outfit — And I Can Prove It.

140-Egg
Champion
Belle City

Jim Rohan
Pres.

The whole story is in my big book—"Hatching Facts", in colors, sent Free. It gives short cuts to success in raising poultry and you will want to start one of these wonderful Guaranteed

Hatching Outfits making money for you. It is a matter of good business and good patriotism to raise all the poultry you can this year. And besides you can make extra big profits by using my

\$8⁹⁵ 140-Egg Champion
Belle City
Incubator

Freight Prepaid East of Rockies

The incubator that regulates and ventilates itself — equipped with patented thermometer holder — round cornered, and non-leakable, copper tank — big safety lamp and deep nursery. — The incubator with the Fibre Board double-walled construction, that has led the field for over 12 years. The kind used by Uncle Sam — leading Agricultural Colleges and over 650,000 of America's most successful Poultry Raisers. My \$5.25 World Famous Hot - Water, Double - Walled,

big, roomy, 140 - Chick Belle City Brooder (Illustrated below) is guaranteed to raise the chicks, and makes your Hatching Outfit complete. When ordered with Incubator — both cost only \$12.95. Freight Prepaid East of Rockies and allowed that far if you live beyond. You cannot get a better Hatching Outfit at any price. If you are in a hurry and wish shipment to come by express, I will prepay amount of freight towards the express charges, and it will cost but little more.

Read how money is made — what pleasure folks have raising poultry the Belle City way. — Letters and actual photographs prove every statement

A Trusted Servant
My success is due to the perfect working of the Belle City Machines. You have done something to help every working person interested in poultry, to make money. — My 140-Egg Champion Belle City Incubators are trusted servants and produce unequalled results.
H. W. Norberry, Mass.

Boy of 16 Makes \$350
It's easy work and lots of fun raising poultry with a 140-Egg Champion Belle City Hatching Outfit. I am only 16 years old, and made \$350 clear last season. Most incubator men forget about the boys and girls, but you give them a great opportunity to make money.
Dale Schaffer, Ohio

Women Handle With Ease
This year I am using nine of your perfect incubators, because I find them absolutely self-regulating—an incubator a woman can handle with ease — with deep nursery to keep chicks comfortable, with a device to keep thermometer where you place it — that hatches turkeys as well as chicks.
Mrs. Pearl Sarver, Mo.

"I Wish my
Daddy had a
Belle City"

What Others Are Doing You Can Easily Do
And you are perfectly safe in ordering direct from this advertisement—Now. I ship quick from Buffalo, N.Y., Kansas City, Mo., Minneapolis, Minn., or Racine. Besides you share in my

Special Offers

to you. Full particulars come with my catalogue, "Hatching Facts". These special offers provide ways to make extra money. With this Guaranteed Hatching Outfit and my complete guide book for setting up and operating, you are sure to have poultry in abundance, as shown here. JUST SEE The Money You Can Save on A \$100 UNDERWOOD

Here is your chance to get a genuine, high-grade Underwood Typewriter at the lowest price put on a fine typewriter today. Poultry Journal readers in thousands of cities and towns are using my Underwoods to speed up their work and prepare them for better positions. And I am ready to help you get an Underwood if you will just write me. You can earn one without soliciting or canvassing. Or, you can rent an Underwood at small monthly rates. To make it easier for you to own it, I will deduct all your first six months' rental from the purchase if you desire to buy it after six months' renting. All you have to do is to WRITE ME TODAY, so I can tell you how the Poultry Journal readers secured their Underwoods and explain why and how I can sell Underwoods at such astonishingly low prices.

What I Send You—What I Save You

You can use one of my Underwoods all you like on TEN DAYS' FREE TRIAL. I want to give YOU a chance to SEE IT, USE IT, TEST IT, just the same as 200,000 of my customers have done before.

I will send you a genuine No. 4 Visible Writing Underwood, exactly as illustrated below, with Back Spacer,

Tabulator, Stencil Attachment, 2-Color Ribbon, Waterproof Cover and Special Touch Typewriting Instruction Book which will teach you to operate an Underwood in one day. My prices, which I will quote when you write me, are so low that I know you will want to obtain one at once—particularly when you realize that in a month of so I must raise my prices!

You May

RENT APPLYING RENT ON PURCHASE PRICE

OR

BUY FOR CASH OR ON EASY PAYMENTS

Largest Institution of Its Kind in World Confidence of 200,000 Customers

I am the largest typewriter rebuilder in the world, handling only Underwoods, obtaining all machines and new parts direct from the Underwood Company. I am not a second-hand dealer. Every machine goes thru a process I have spent 25 years perfecting. Each machine is equipped with new type, new platen, new ribbon vibrator, new front scale, new feed rolls, new ribbon, new space bar, new key rings, etc. After you get one of my machines, if you can't say "The Underwood you sent me looks, works and is as good as a new \$100.00 machine!" I don't want you to keep it—return it to me at my expense.

My Five Year Guarantee—10 Days' Free Trial

I personally stand back of every machine that goes thru my factory—with a WRITTEN FIVE-YEAR GUARANTEE OF SERVICE. I guarantee to send you a genuine Underwood, exactly as here illustrated and described. And you don't even have to buy the machine to try it and prove its extraordinary value at my price. Try it for 10 Days FREE—and then, if you are not perfectly satisfied, I request you to return it to me. I will refund any deposit or charge paid by you. Could I protect you more?

Rent or Buy. Mail coupon or post card today for special low price and terms. You can Rent, applying six months' rental on purchase price, buy on easy terms or secure discount for cash.

Our Other Plan Brings Underwood FREE

A new plan—our agency plan. You are not asked to do any canvassing or soliciting for orders. You simply cooperate with us, becoming part of our nation-wide organization. You can easily get your Underwood free in this way. Send name and address on coupon today and learn about Offer No. 221. Write me today—address me personally. I will help you secure a machine by my easy plan.

Shoemaker Poultry Farm

Freeport Illinois

Established Over 28 Years

Don't endanger your success

by using a poor incubator. Your incubator will be the keystone of your season's efforts. If it fails you or does not give the maximum of efficiency you lose at least several weeks' time, or maybe the whole season. Incubators will be hard to get on short notice this spring, due to manufacturing and shipping difficulties, so prepare now.

Globe Incubators and Brooders

are not just "good enough." They are the best machines on the market today and we are willing to prove it. They are not mail order house machines, but are built to last and give satisfaction for a generation. No machine leaves the factory until it passes the most rigid examinations, for our good name is back of every one of them. Our motto is: "How good we can build them—not how cheap." The remarkable hatches which our customers obtain is positive proof that you can afford to buy but one incubator and that is the GLOBE.

Genuine success cannot be achieved in incubator work unless the work is completed by using a really good brooder. Compared with an incubator, a brooder is rather a simple apparatus, but nevertheless the work it has to do demands that it be thoroughly well made. Globe brooders are made with the same painstaking care as Globe incubators.

HATCHING EGGS Let us book your order for Eggs NOW for prompt DELIVERY

Poultry Almanac For 1918

It is a textbook of information. Tells about and shows pictures of the different varieties, incubators, brooders; poultry ills and how to cure them, what and how to feed, how to build poultry houses, etc. Write for it today, inclosing 15 cts.

We Breed 48 Varieties of Poultry

and can supply your wants. Our old customers come back year after year, which proves we give satisfaction. We believe in always giving them a bit more than they pay for. Don't delay your order for eggs. Remember, many unforeseen difficulties are constantly arising, and delay may mean serious loss.

Send for our Poultry Almanac today—all about Fowls and Incubators—Price 15c.

How to Raise Chicks

By Prince T. Woods, M. D.
Managing Editor American Poultry Journal

A guide to success in this, the most difficult, poultry problem. The results of years of practical experience and study. Written in plain language by a man who knows how, and how to teach others.

This book will save many dollars

for any poultryman, but it is indispensable to the beginner.

It has ten chapters: Chapter I—Selecting and Mating Breeding Stock. Chapter II—Food, Vegetable, Animal and Mineral. Chapter III—Fowls and Food. Chapter IV—Care and Management of Breeders. Chapter V—Eggs for Hatching. Chapter VI—Incubation, Natural and Artificial. Chapter VII—Brooding with Hens and with Brooders. Chapter VIII—Chick Foods and Feeding Chicks. Chapter IX—Growing Chicks. Chapter X—Facts About White Diarrhoea. What white diarrhoea is. Symptoms of disease. Causes. Is there more than one form? Has germ of specific disease been found? Infection. Prevention. Treatment. Formula for a simple remedy which has proved effective in many cases in many climates for years.

Don't go through years of costly and discouraging experiments to learn the facts taught in this book. One chick saved will pay for it. Learn how to feed, how to avoid and prevent disease, how to make your own brooders and chick foods—how to turn loss into profit.

88 pages, 35 illustrations from photographs and pen drawings, printed on good paper, handsomely bound in cloth, price 75c postpaid.

American Poultry Journal Pub. Co., 542 So. Dearborn St., Chicago, Ill.

Be a Money Maker this year with Old Trusty

Tell Me Your Poultry Troubles

Send and Get This ABC of Poultry-Raising

and let me put you on the right track for *big profits* this year. There are good reasons why Old Trusty owners make big incomes. Let me give you some of them. They get a machine that's *unlike* the usual incubator. Old Trusty was invented by a *practical engineer and poultry raiser*—and is built by workers of *long experience* and who take pride in their work. *26 years* of experience are back of Old Trusty. That means that you don't try out somebody's experiment when you put your valuable eggs into it and await results.

750,000 Pleased Customers say: "Get Johnson's Book, you are missing something if you don't!"

The More Eggs Are Worth—the More You Want Old Trusty

You *can't* afford to experiment this year—you don't want to gamble. That is why you need Old Trusty more than ever. If you don't use Old Trusty, where else can you get a hatcher that is built as well? That has for example, a case with *triple walls* besides dead air spaces made by heavy dented insulation—that heats up in the *coldest weather*, that has a *pure copper* hot water heating system designed by a practical engineer—that has a *big drawer-shaped oil tank* holding 6 quarts of oil—that has the Old Trusty *handy thermometer holder*—that is so simple that anyone can run it, and that has a *long record* for *big average hatches*. Where else can you get anything like Old Trusty construction at Old Trusty's *low price*? When customers write that they have used Old Trusty every year for ten, *twelve and fifteen years*, and the incubator is still good, it's a pretty sure sign Old Trusty *must* be right.

Neighbors' Successes Made Him Investigate

Buxton, Iowa, October 1, 1917.
Please mail me your catalog and other printed matter. Quite a few poultry raisers in this section are having phenomenal success with your product, has influenced me to investigate your product.
Yours truly, HENRY U. MEASE.

Mail Coupon or Postal Today

and get our book and learn why so many succeed every year with Old

Trusty. Learn how easy it is to get big average hatches not just once in a while, but *every* time. Learn what it means to own an incubator that's good for business for *ten, fifteen years or more*. Learn how Old Trusty takes work out of raising big flocks. Learn the satisfaction of using an incubator that's built at the *hub of the incubator world*, and that has brought success and profits to over *three-quarters of a million owners*—many *times* more than any other incubator can show. *Get our book*—whether you intend to buy now or later, we are glad to send it *free*. Send for it—**TODAY**.
Yours truly, H. H. Johnson, "Incubator Man."

M. M. Johnson, Inventor of "Old Trusty"

M. M. JOHNSON COMPANY, Clay Center, Neb.

750,000 Owners Say You Can't Beat OLD TRUSTY

We Pay Freight or Express, shipping the quickest and best way according to your instructions or routing of our expert who ships thousands of Old Trustys every year.

Old Trusty comes completely built. We don't expect you to fiddle all day putting it together. A five minute job to take crate off and screw the legs on. Note big oil drawer and handy thermometer holder. Conveniences that save time and work.

M. M. Johnson Company, Clay Center, Neb.

I had 58 Leghorns entered; 45 were placed. If you wish exhibition stock or hatching eggs from the very best matings, write me today. I have the stock in quality and in quantity. I guarantee to satisfy my customers. I quote rock-bottom prices. Where else can you buy S. C. White Leghorns of an established strain that win year after year, both in the show-room and in egg-laying contests? Write me your wants today; I will guarantee to fill them.

BUY MY LEGHORNS AND WIN IN THE SHOW-ROOM

1,000 head of young stock are now on my 15-acre poultry plant, awaiting the pleasure of my customers. Every one of these Leghorns is from a pen headed by a Blue Ribbon Coliseum winner. The foremost judges in the country pronounce my 1918 matings the equal of any they have ever seen. My guarantee to satisfy you is given with every sale. Drop me a line today.

Experts on My Great Victory

"I have photographed the best specimens of S. C. White Leghorns exhibited at the Coliseum Show for more than ten years, and I feel that I am entirely competent to speak of the quality of the Leghorns that have been exhibited there during that period. This year the class was stronger than at any time in the past. The specimens exhibited by Frank E. Hering—about 60 in number—were easily the best that have ever been exhibited at the Coliseum. His entries were uniformly strong. He has developed a type with splendid station and fine Leghorn lines that delight the eye of the true Leghorn breeder and fancier. Among Leghorn breeders, Mr. Hering must be assigned one of the foremost places."—Louis Stahmer, Artist of the American Poultry Journal.

"I have been a judge in one or another of the Leghorn varieties at the Coliseum, Chicago, for the last seven years. I consider the S. C. White Leghorn class of 1917 the very strongest that has ever been exhibited at the Coliseum. Frank E. Hering has won the Sweepstakes Championship for the third successive year. This year he had seven entries in each of the single classes and six pens. It is the simple truth to say that his Leghorns are considerably stronger in every class this year than ever before, and that is a mighty strong assertion. Mr. Hering has earned the right to be considered in the select class of the very foremost breeders of S. C. White Leghorns in the country."—Herman Rikhoff, A. P. A. Judge.

1918 - Hatching Eggs - 1918

Eggs from the finest exhibition S. C. White Leghorn matings:

- Per sitting of 15 eggs . . . \$10.00
- Three sittings for . . . 25.00
- One hundred eggs for . . . 50.00

In case eggs from special pens are designated, add 25% additional.

Eggs from other pens headed by Coliseum Winners —but not Blue Ribbon Males:

- Per sitting of 15 eggs . . . \$ 5.00
- Three sittings for . . . 12.50
- One hundred eggs for . . . 25.00

My Guarantee

I will guarantee eleven fertile eggs out of every fifteen. Shipments are all carefully packed so as to provide against breakage as well as against extremes of weather. I ship to remote points of the country with excellent results.

 His Kind Comes in Clusters . . . of ONE!
 (This photograph has not been retouched)

It Raises Them All

The Standard Colony Brooder has brought certainty of results to the poultry world.

It has taken the risk out of chicken raising by making three chicks grow where one grew before; by reducing the labor involved to one-fourth; by reducing the cost to less than half.

There's ample proof of every word of these remarkable statements in the wonderful experiences related by the 30,000 delighted users of the

STANDARD Colony Brooder

Behind these experiences are good reasons for its remarkable results. It is absolutely automatic in action, and so simple and positive that it can't go wrong.

Burns soft or hard coal at an operating expense of less than six cents a day, with nothing to break and nothing to wear out. 100 to 1000 chicks.

Write your own money-back guarantee. Put into it everything you would expect a perfect brooder to do—and a guarantee that the Standard will do it. We'll sign it, then give you thirty days to try it. If the Standard Colony Brooder does not work up to your guarantee in every particular, we'll take it back and refund your money.

The reasons for its superiority are found in our new catalog, which points the way to profits in chicken raising, and proves every word it says by the most wonderful collection of testimonials ever published. Get that catalog! It means profit for you. Write for it today.

Over 6,000 enthusiastic dealers sell the Standard Colony Brooder. You may see it in operation at their places. If you don't know the dealer in your town, we will gladly tell you.

The Buckeye Incubator Company

11 Euclid Avenue,

Springfield, Ohio

Pacific Coast Branch Box 11
Oakland, California

BUCKEYE THE PERFECT INCUBATOR

The Buckeye incubator is guaranteed always to give a perfect hatch of the largest and strongest chicks, or we take it back.

The fame of this guarantee has traveled from sea to sea. Over half a million "Buckeyes" are in use by big and little breeders and over 6,000 leading dealers sell it.

A Bit of Advice For You from Owen Farms

Every poultryman will have two ambitions this year. First, to produce all the meat and eggs he possibly can to help release beef and pork for the use of our "Boys Over There;" second, to not only hold the fine average quality now existing in the unmatched flocks on this continent, but to make the usual advance in average quality.

Buff Orpington
1st Madison Square Garden

White Wyandotte
1st Chicago Coliseum

S. C. R. I. Red
1st Madison Square Garden

To my mind there is just one way to fulfill these ambitions: First, for each one of us to hatch and bring to salable age more chicks than ever before in our lives. At broiler age, cull harder than we usually do. At roaster age cull very hard and market every cockerel that will not make a good breeder. Sell every husky pullet that is off in Standard requirements but will make a paying layer to egg farms or to the thousands of new back yard poultrymen that will keep layers next winter. This course of procedure will produce our maximum quantity of meat and eggs and will produce

Real Quality in Quantity

Every mating of poultry or of any other animal or bird that was ever made has produced a percentage of culls not worthy to use as thorobred breeders. If you hatch fewer chicks than in former years, you will have fewer good birds next fall than normally and you will not accomplish your patriotic duty of producing all the poultry meat you can. Should every poultryman follow this same course, there will be a dearth of good birds and a famine in poultry products.

Every poultryman must make a sacrifice if necessary. I believe that the market prices the coming summer and fall will enable us all to make expenses or a little more from the sale of market poultry and eggs even at high food costs. More and more the poultryman of the country will feel our obligation and help by doing our bit. In our humble way we can make our links in the chain the strongest of all, and it will be utterly impossible to break it. Let each one of us consider it not only a duty but a privilege to "Do our bit" in the way we can do it best and in the way that will be most helpful to our Country and to the cause of Democracy. Always remember one fact: It costs no more to feed good birds than poor ones, and good birds bring better results.

What Owen Farms Has Done

In the face of heavy feed bills and increased costs in other ways, I have kept over and now offer you eggs for hatching from my usual number of high-class birds. Many customers have already sent on egg orders who ordinarily buy stock. Liberty Loan, Red Cross, Y. M. C. A. and other patriotic ways have taken the money they intended buying birds with last winter. They will add their egg orders to those of my thousands of regular egg customers. I have done my bit by holding and mating the best birds that were ever on Owen Farms in

PRESENT-DAY POULTRY FARMS

Edward F. Schmidt
Mgr. Poultry Dept.

THERE are few men to whom are given the opportunity to take the wild beauty of Nature, and with the aid of the conveniences and works of man, improve on it. Of the few to whom the opportunity is given, the majority fail. Not so with Carl E. Schmidt, owner of the Schmidt Stock and Poultry Farm, Route 1, Oscoda, Mich., the poultry department of which is known as Walhalla Poultry Farm — Walhalla meaning a "haven of refuge," and the name is truly applied. Mr. Schmidt, a thoro sportsman and born lover of animals, conceived the idea of making this beautiful tract of 10,000 acres

a veritable heaven on earth for man and beast, and we believe he has succeeded.

The farm occupies twelve miles of shore line on Lake Huron, and completely surrounds Cedar Lake, a body of water seven miles long, varying from a half mile to a mile in width. On the west shore of the lake is Seradella Farm, on which are conducted extensive agricultural pursuits, besides the production of pedigreed horses, cattle and sheep. It contains the manager's residence, office building, cattle, dairy, horse, sheep barns and other

farm buildings, private hotel, gymnasium hall, residence cottages for the married men and a school house. All buildings on both farms are equipped with electric lights, as is also the roadway thru the farms, and the bridge across the lake, connecting the poultry and livestock farms. When lighted, the two farms present the appearance of twin cities, and the roadways remind one of beautiful boulevards.

Geese Pasturing on Range.

A Row of Cottages at
Walhalla.

There are other buildings, colony houses, etc., too numerous to mention. They are all double-walled, with concrete floors, the space between the walls being filled with concrete to a height of three feet above the floor, thus being absolutely rat-proof. The remainder of the walls to the top are filled with sawdust, and the ceilings are lined with wall board. Thus they are comfortable, even in the cold winters prevailing in this locality, and frosted combs are strangers at Walhalla Farm.

It is easily understood why all of these conveniences, supervised by a poultryman with the well known ability of Mr. Schmidt, produce their remarkable winners.

All stock is reared under ideal free range. Conditions, which all make for the best that can be produced.

What and How to Feed Growing Chicks

Test the Freshness and Sweetness of All Chick Food Before Feeding It. There Is Danger in Feeding Musty or Spoiled Grains. *By Maurice H. Decker, La Porte, Ind.*

AS SOON as the baby chicks are weaned from their nursery mixture of rolled oats, dry bread crumbs and hard-boiled eggs moistened a trifle with sweet milk, we start them upon a diet of commercial chick feed and milk mash. We find it pays to use ready mixed cracked grains and milk mash at this stage when the chicks' appetites are small, as they put on the greatest gains in proportion to the amount of food consumed. A good brand of each will prove more economical and satisfactory than the usual homemade feeds prepared by the poultryman. We give our chicks five meals each day at this period, the first as early as 4 o'clock in the morning, or it can be scattered in the litter at night after the chicks have gone to sleep. This meal, the one at noon and the one at night are of cracked chick grains, while those at 9 a. m. and 3 p. m. are of moistened milk mash. In addition, we keep dry milk mash and fine beef scraps mixed together, half and half, in small hoppers for the chicks to eat at will. This dry mixture is continued about ten days to two weeks until the chicks are accustomed to the beef scraps, and we feel assured they will not over-eat of the pure scraps which are now substituted in the hoppers. Most directions that accompany chick mashes read to feed dry, but we have never yet been able to get as satisfactory a growth with dry mash as we do by giving it moistened, either with water or sweet milk, twice a day.

It costs the least to put on the first pound of weight on a chick and more for each succeeding pound; in fact, a good healthy growing chick will gain as much the first two months of his life as he will the second two, and at practically one-half the cost in feed. Therefore, it is to the poultryman's interest to feed whatever food, the first sixteen weeks, will force the chick along to a maximum weight and after this period use cheaper, more common grains and ground feeds

that will still encourage thrifty growth; for by this time an active growing chick is less particular what he eats so long as he has sufficient to fill his crop. Counting the extra room gained by the pullets and the additional time released to spend upon their care, it hardly pays to keep cockerels intended for market poultry longer than the time required for them to reach 2 to 4-pound weights.

When the chicks are three weeks old we begin to decrease their supply of commercial chick feed, substituting a mixture of our own until in about two weeks later they are getting none of the former. This mixture is composed of 100 pounds of fine cracked corn with the meal screened out, 200 pounds wheat screenings and 50 pounds of steel cut oatmeal or hulled oats. If hulled oats reach a lower level in price we will feed a little more of them, probably 75 pounds instead of 50. This mixture, with an occasional evening feed of cracked corn alone, when the chicks appear particularly eager for corn, is continued until the chicks are large enough to eat regular scratch grain.

Wheat screenings are one of the most economical feeds we can buy at present and are well suited to both growing chicks and adult fowls. An abundance of them can be obtained in wheat-growing localities, as is our own, for screening is the first operation the wheat receives when it reaches the mill. We have laid in a good supply of the finer size of screenings, which contains over 60 percent of broken and shrunken wheat grains and probably 10-percent more of edible seeds such as fox-tail, timothy, etc., at a price of \$1.25 per cwt. in ton lots, or at the rate of 75 cents per bushel. These screenings, we figure, are worth to us for feeding chicks about one-half as much as commercial chick food, which makes them a very good buy, as chick feed will hardly sell under \$4 per hundred this season. Screenings furnish

First prize S. C. White Leghorn cockerel at Madison Square Garden, 1917-18. Owned by D. W. Young, Monroe, N. Y.

a very good example of the varied workings of the price fixing on wheat. We live about midway between two towns, each within easy driving distance and both of which contains a mill. The mill at one removes the screenings from the farmers' wheat, pays them \$2.05 per bushel for the cleaned grain and allows them to take the screenings back home with

juice and all, in a food hopper. As soon as our early potatoes and sweet corn are up we will follow our practice, which proved very successful last year, and bury soaked oats between the rows for the chicks to dig up and eat. We scatter the soaked grain thickly ahead of the cultivator which covers it up nicely.

Special attention should be given to testing the freshness and sweetness of all chick food that is purchased. Last year when corn became scarce and high in price, much chick food containing musty cracked corn was sent out by the poultry feed mills, and it is reasonable to suppose the same will happen this season with a large percent of soft and poor corn in the country.

We have found our coal-burning brooders very useful for drying out soft corn until it is hard and dry enough to use for chick feed. We hang it up in loose woven burlap bags from the roof of the brooder, around the stove, where it is out of our way and in a week to ten days, and sometimes sooner, it is firm and dry. Last fall we bought a quantity of very soft corn that was wringing wet and spread it upon the floor of one of our brooders. We ran the stove for a few days and the stuff became dry enough to keep until it was fed out to pigs.

We intend to try out several different varieties of corn this season in the hopes of finding at least one that will mature dry enough for poultry feeding in the exceedingly short growing period we have here in Northern Indiana. Only a small proportion of our yellow dent is fit food for young chicks and then only after considerable drying. Perhaps Dr. Woods will tell us more about the Rhode Island White Flint corn and Yellow Flint corn he mentions in the issue of last November. I am sure details of the average yield, time of planting, length of required growing period and size of ears and fodder will prove of interest and value to poultrymen in the latitude of Chicago and Buffalo who have the facilities for growing corn for their poultry and who are becoming discouraged with the results obtained with our regular yellow dent varieties. A variety of corn that is dry enough to be ground into meal before the first of November, even if the yield is lower, certainly will prove more profitable than our customary varieties, which, when soft, are of no use to the poultryman and only bring a price of 25 to 30 cents per hundred pounds for feeding to cattle and hogs.

them. The mill at the other town paid me \$2.02 a bushel for our wheat, screenings and all, and then sold us the screenings for 75 cents per bushel. Another inconsistency we are unable to comprehend is, why do the prices upon bran and middlings raise when the price of wheat is fixed and stationary? We bought our first supply of bran at \$30 per ton and a few weeks later were asked \$36 a ton. The chaff and dirt in wheat screenings do no harm, for chicks one month old and over will pick out only the wholesome portions and leave the rest lay in the litter. We are feeding some of the screenings to our hens, particularly in a few pens where our Wyandottes appear a little too fat to lay their best. They encourage active exercise and appear to be cleaned up to the last small seed, altho thrown in six inches of straw litter.

When the chicks are large enough to eat regular sized cracked corn, we mix this with an equal weight of wheat screenings and feed twice a day. In addition, one meal a day is given of soaked whole oats, which we regard as the best way to feed oats to chicks old enough to eat the whole grain.

The milk mash is continued until the chicks are six weeks of age and then a mixture of 100 pounds bran, 100 pounds corn meal, 150 pounds middlings, 100 pounds ground oats and 60 pounds beef scrap is gradually substituted. This substitution must be very gradual or the chicks will experience a check in growth, for it is quite a drop from the concentrated flour-like mash to this coarser mixture. The beef scrap in open hoppers will be continued as long as we think the chicks are growing in proportion to the amount of extra scrap they consume. Last year we stopped feeding scraps in hoppers when the chicks were about six weeks old, which we now think was a little too soon. Meat scraps and good hard corn are particularly valuable feeds for forcing rapid growth in cold weather, so early broods will have scraps before them in addition to that contained in the mash at least until warmer weather comes.

For green feed we will depend upon mealed alfalfa mixed with the moist mash while the chicks are under one month old and then will feed green rye and oats, ground up fine,

ECONOMIC VALUE OF THE FAT FOWL

Eat Well-Fattened Hens to Conserve "Red Meat" and Fats

By Prince T. Woods, M. D.

THE question is often asked, "Why do the Jewish people seek to buy 'fat old hens' in preference to other poultry?" The chief reason is that the "fat old hen" is the biggest food value for the least money to be found in the live meat market. The economic value of the well-fattened fowl is not generally well understood nor appreciated. Many people look upon a fat fowl as a wasteful purchase. So it is, if you are so ignorant of its value that you waste what you buy. Make good use of all that you buy in the fat fowl, and you have a variety of wholesome food at very moderate cost as compared with other meat food.

Our Uncle Sam is asking us to save beef, pork, and both beef and pork fats. We must save these "red meats" and we must save lard, suet and tallow. It will not be any hardship to do without these foods if we can find satisfactory and wholesome substitutes. The fat fowl will help in the conservation of fats and meat. Careless people ordinarily waste a considerable part of poultry, because they do not understand the value of their fowl and how to make best use of the dressed carcass. From one fat fowl can be secured a fine roast, soup stock, broth, "chicken butter"—better than lard and much superior to cooking butter—fat for frying, and a variety of left-overs from the roast. People in foreign lands utilize the whole fowl. Surely Americans can learn to do so. In making the best use of the whole fowl you not only "do your bit" but also benefit yourself and the whole family.

Living on a poultry farm, we have always used a good deal of poultry on the family table. It is not only the most convenient meat food but it is as good or better than most meat we can buy. With home-produced milk, butter, eggs and poultry, fish from the pond, and vegetables from the farm, we are fairly independent of the butcher shop. Believing that AMERICAN POULTRY JOURNAL readers will benefit, and also be better able to help Uncle Sam conserve "red meats" and fats, we have made a record of the well-fattened fowl, with some photographic illustrations, as it passes thru Mrs. Woods' commissary department.

We killed and dry picked a Black Langshan and a White Plymouth Rock, after letting them fast for 24 hours to make sure that the intestinal contents were reduced to the minimum. These birds were yearling hens and each weighed when dressed,

chilled, and dry, just 8¼ pounds, as shown in illustration, ready for market. The chief difference in these two birds was in quantity of meat and internal fat. The Langshan had rather more breast meat and less internal fat than the Rock. Otherwise the two hens yielded about the same quantity and value of food.

The yield of one fowl will serve for illustration. We utilize everything but the head, toe nails, and stripped intestines, of the dressed carcass. Some foreign cooks utilize the head and intestines, but this does not appeal to us. From one fat White Plymouth Rock fowl, weight 8¼ pounds dressed, we secured the following:

Soup parts, for chicken broth and soup stock, including legs, neck, and wing tips. The neck is cut close up to head and body, as it is seldom eaten if served with the fowl and it spends well in soup. The legs are washed clean, scalded to remove skin, and toe nails are chopped off. The legs are valuable in making soup and can be used for making stock jelly. The wing tips are removed at first joint and serve same purpose as legs. Total weight of these soup parts was half a pound.

Giblets, for use in supps and gravies or to be served fried. Weight of giblets one-quarter of a pound.

Fat, for making "chicken butter," a lard and cooking butter substitute, total weight one pound. This is equal to the best cooking butter for all culinary purposes. In an emergency it could, when properly prepared, be salted and used as a butter substitute. In the preparation of "chicken butter" the fat leaf and the fat about intestines, gizzard, etc., is all utilized. This is carefully tried out by heating the clean fat in the upper part of a double boiler, water being kept boiling vigorously in lower part. It is then strained into clean glass jars and allowed to cool. Frying fat is also secured from the carcass of the fowl when roasted, saving all that tries out.

Waste, is very small, the only waste being the practically empty intestines, stripped of fat; the gizzard contents, the gall bladder, the toe nails, and the head. Total weight of this fresh waste was half a pound. The bones from the roast carcass were used in soup and the remaining dry bone, about three-quarters of a pound, fed to the dog.

Roast Fowl, was the chief dish served and the net weight of the fowl when ready for stuffing was 6 pounds. Of the shrinkage all but half a pound of waste

Dressed carcass of White Plymouth Rock hen, cut open to display the fat leaf and fat about intestines. This fat is used for making "chicken butter." (See article "Economic Value of the Fat Fowl.")

"Chicken butter tried out of the leaf and intestinal fat of a White Rock hen. An ideal shortening, or lard and cooking butter substitute. (See article "Economic Value of the Fat Fowl.")

"By-products" from the fat fowl. Secured from a White Plymouth Rock hen prepared for roast. From left to right these foods are: one and one-half pints of rich soup stock (jellied); one pint rich chicken broth; half a pound of fat for frying; about one pound of best quality "chicken butter" in last two jars at right. (See article "Economic Value of the Fat Fowl.")

was economically utilized. The following is a summary of what one 8¼-pound dressed fat fowl may be made to yield:

Six pound roast fowl when ready for stuffing.

1½ pints of rich soup stock.

About one pound best "chicken butter."

Half a pound of good fat for frying.

One pint of rich chicken broth.

One-quarter pound of giblets, including liver, heart and gizzard.

The roast fowl makes meat for one good hot dinner for two adults and two children; cold meat for another meal; minced chicken on toast for a third meal.

The market value of the dressed carcass was \$2.50. From it was secured a roast equal to or better than any other meat roast that could be bought for \$2.50, and this roast was net weight already trimmed down to eliminate practically all waste. About a pound of "chicken butter" worth 40 cents, at present prices, was secured. The giblets were worth not less than 10 cents, and if served in a restaurant would cost four times that amount. The soup and broth, worth fully 35 cents, furnished part of another meal. The fat for frying saved at least 15 cents. Without counting the last item, which was salvaged from the roast, about \$3.35 worth of wholesome food was secured from that 8¼-pound White Plymouth Rock hen having a market value of \$2.50.

Fowls fattened on the back lot, or on the farm, can be made to do wonderful service in conserving our National food supply. A yearling or two-year-old hen of any heavy breed, and Plymouth Rocks particularly, can be quickly and easily

Fat, intestines surrounded by fat, giblets, etc., removed from fat fowl. All fat and giblets are saved for food.

fattened on food that cannot possibly be utilized for feeding human beings. So we can all help Uncle Sam to win the war, if, as he says "Food will win the war," by producing fat fowls and by making the best possible use of all that is good in the prime fat fowl.

Pies and cake are seldom seen in our home in these war times, but when they are made "chicken butter" takes the place of lard and cooking butter. "Chicken butter" has preference over all other fats for "shortening" and is used with success and satisfaction in bread making.

To help Uncle Sam, and for your own sake, make good use of the big food values in fine fat fowl.

Breast and profile views of dry-picked fat fowl. Weight of each, eight and one-quarter pounds. In each view the fowl at the left is a Black Langshan and that at the right is a White Plymouth Rock. Note the difference in shape of carcass.

Poultry and Garden on an Acre in 1917

A Story of an Off-Season's Success Raising Chicks and Vegetables. First Prize Article A. P. J. Monthly Contest.

By M. C. Wilson, Oil City, Pa.

THE YEAR 1917 will long be remembered by many poultrymen and war gardeners. Some for their successes, others for their failures. For the benefit of both, I will give an outline of our experience on an acre surrounding our residence. This acre is of irregular shape, being 91 feet on the east or front, 180 feet on the south, 241 feet on the west and 242-5/10 feet on the north. On the acre is a modern ten-room house, a good barn, good comfortable house for 100 layers, four large breeding pens, a chicken park about 30 x 200 feet, a shop and storage house for grain and general paraphernalia pertaining to poultry keeping, as well as a gas engine and general machinery.

Near the west line of this acre are (or were) ten large Montmorency cherry trees that seldom fail to produce large crops of extra fine cherries. Two years ago these trees produced thirty-five bushels of cherries and in 1917 we estimated our crop at thirty bushels, but one of the worst windstorms that has visited this section in many years came about two weeks before the crop was ready to pick, doing great damage to the row of trees, besides cutting our crop in two. The row of cherry trees is in the chicken park and here we raise about 200 youngsters to culling age. We give the

chicks credit for seldom having a wormy cherry, altho we do not spray the trees.

Usually we have from ten to twenty bushels of apples, but 1917 was an off-year for apples and we had scarcely a quarter of our usual crop, but our pears did unusually well and we had pears to eat, pears to can and pears to sell. We also had some plums, but one of our largest plum trees laden with fruit went over in the storm, also an apple and a pear tree, with a black walnut tree badly damaged. We had more currants than we could use, a nice lot of red raspberries, gooseberries, a few blackberries and sweet cherries. But now to the garden.

We do not figure on raising over what we use ourselves, yet we generally do so. We only devote odd times to gardening, as business keeps us away from home ten hours of the day, six days of the week, excepting holidays. Yet we find recreation in the long summer evenings and mornings in the garden and chicken yards. Right here let me assure you that the man who claims it is necessary to have a large range in order to raise vigorous, profitable, fancy fowls is just blowing a very poor quality of theory into his hearers' ears. I found that out away back in the 'eighties, when in the poul-

try business as a business, raising the chickens on land where the flock could have gone ten miles without finding a fence. But, did they? No! Back of our poultry houses was a ravine with a spring and shady trees, lots of leaves to scratch over, and right there you would find the flock with no inclination to go further, as long as they were fed enough food which was absolutely necessary to produce an average egg yield.

Year after year we raise about 200 chicks on our acre, besides having a good garden and a fair amount of fruit, and we stand ready to prove that we have more vigorous stock than the average poultry keeper. Last year we bred some of our most vigorous young stock from a hen nine years old. This hen could scarcely be picked out from a flock of yearlings. Would you know the secret of good chickens? Why, a good garden. The secret of a good garden? Why, a large flock of well-kept chickens.

About the first thing I plant in the spring is several rows of Swiss chard. I put it in with a seed planter, quite thick. When the plants are about two inches high, I set out six inches apart in rows about twelve inches apart in shady places and corners—any old place where it is too shady for other things to do well, but where the soil is good. This gives me a large amount of the very best green food for chickens from early in the summer until snow falls. We never pull the plant up by the roots. Just cut off the outside leaves when about six inches long. Other leaves keep forming from the center of the plant to be cut in a few days, furnishing one of the most relished green foods that can be grown for chickens from day-old to old age. My next planting is usually onions and lettuce, both valuable greens for poultry as well as for family use. We usually plant a bed of onion sets to furnish green onions for the table after the multipliers or winter onions are getting old. The multipliers always come first, being out all winter. They give an abundance of tender green onions about the time the others can be planted and up until the others are fit to use. As soon as the ground is fit to work, we plant onion seed for large onions for winter use. In 1917 we planted quite thickly a bed of onion seed 15 x 30 feet. As they came along we thinned out the young green onions for the table and in the fall harvested nine full bushels of nice large onions from the bed. In the next bed were beets and from it we took two bushels of beets after having used young beets all summer and fall for the table. We also had eight bushels of sugar mangels, eight bushels of carrots, six bushels of ruta-bagas or Swedish turnips, besides large beds of parsnips and salsify or oyster plant, both of which stay in the ground during the winter for use in the spring. We also had peppers, which are fine for chickens: beans, all the string variety we could use and

can, and some to sell, besides a bushel of shelled beans for winter. We had ten bushels of tomatoes, 150 dozen ears of extra quality sweet corn (and, by the way, we breed our sweet corn just as carefully as we do our chickens).

Between the rows of sweet corn we plant celery. We sow the seed in a bed early in the spring and set the plants out between the corn rows in July and up to August 10. We had fully as many stalks of celery as we had ears of corn. We have it every day on our table up to April and quite a lot of it to spare. Just beyond the corn patch we had 200 heads of cabbage, besides a great quantity of waste from it for the chickens. In odd corners about the garden we had patches of radishes, kohlrabi (which are better than turnips), peas in succession during the summer, parsley, asparagus in season and more extra fine pumpkins and squashes than we could use.

Spring chicken? Well, yes! Say, that was some garden, was it not, for an off-year that only measured five months and ten days between snows? The secret? Chickens, furnishing the most valuable fertilizer we have for gardens. We have been told that chicken manure is too strong, burns everything up and makes the ground hard. Yes, my benighted friend, it will, if you do not use considerable horse sense and give the chickens plenty of straw or litter or a sandy ground floor to dig over and pulverize. All the droppings from the roosts should be mixed with this straw and dirt and then kept dry. Add also a few loads of straw litter from the horse barn to the ground to supply humus and these will be no difficulty in getting good crops.

How about weeds? Well, they do not bother us at all. They are really one of our most valuable crops. The way we handle the weed proposition is that when we get up in the morning, we pull a few baskets of weeds and throw them over the fence to the chickens, and when we come home in the evening we do the same thing again, and the chickens transform the weeds into eggs and nice, juicy, tender, delicious spring chicken. Before long, we are looking for more weeds.

It ought to pay any man to have a garden and raise a flock of chickens for his own use. If it doesn't pay him, it is not the garden's or the chickens' fault.

Carcass of White Rock fowl ready to be stuffed for roasting. Net weight 6 pounds. (See article "Economic Value of the Fat Fowl.")

Advice to the Beginner with Poultry

Be Slow to Find Fault with Others For the Mistakes You Make Yourself. Second Prize Article A. P. J. Monthly Contest. *By Mrs. P. S. Brumfield, Van Bibber, Maryland*

PRACTICALLY every campaign which is now being carried on has a slogan. As yet I have not seen any suggested for the novices whom we are urging to take up poultry keeping this spring. All of these must either buy day-old chicks, adult stock, or eggs for hatching. Most of them know little about poultry culture and I would suggest that they adopt the slogan, "Be Slow to Find Fault."

One of the first things for the novice to learn is that the man from whom he buys chicks, eggs or stock cannot guarantee the beginner's success with them. I have seen perfectly well hatched, healthy, day-old chicks die off like sick flies within a week from the time they arrived at their destination. The man who hatched and sold the chicks was in no way to blame for the loss. Many people who have never kept chicks before think it a pleasant time to exhibit the chicks to their friends and handle them unduly. They also feed them "choice tidbits" which were never intended for chicken food. They move them from the living room to the shed and from the shed to the kitchen and thence to the chicken coop. Now, there is no animal or bird or beast which so dislikes to be moved from post to pillar and back again as a chicken—no, not excepting men. A chicken likes to be let alone as long as he is reasonably warm and well fed. The least handling and fussing over him the better. When he is hungry or cold he will cry for help and the help should be forthcoming without delay.

A year ago a family near a friend of mine in a small city took up poultry keeping. They bought the best breeding stock to be had and erected an attractive little poultry house in the back lot. As they did not want trouble with their neighbors, many of whom had extensive flower gardens and fruits, they fenced in their birds with a high wire fence. They had read a great deal of the "bunk" in regard to feed-

ing fowls on the waste from the family table, and everything from orange peels, egg shells and bacon rind on down, went into the poultry yard. The birds were laying when they got them, but less than two weeks of this stopped the laying. In six months the birds were wading around in swill and slime, none of them had laid for a long time and all of them were sick. The man whom the birds were bought of was blamed for the condition. He was even asked to refund the money and take the birds back, and when he would not do this, the birds were advertised as being his stock and sold to another party some distance away. The birds were refused by this buyer because they were half-starved and sick with colds and were eventually sold to market, tho they were not fit to be eaten. The breeder who originally sold the birds was blamed for all the trouble, tho he was in no wise to blame.

A person who has never superintended the hatching of chicks is not apt to be very successful at it, for it is as truly an art to hatch and raise chicks as it is to assemble a machine or to cut a garment to the cloth. It is a happy idea not to expect a chick from every egg. I know many of the estimates of profits in poultry keeping are based upon the supposition that every egg will hatch a chick, but not many people are successful in doing it. Taking it all around, I suppose an average of one chick from every two eggs would be a very fair average, tho it is possible to do better. In buying eggs for hatching I should never feel that I had reason to find fault if I was able to get eight chicks from fifteen eggs. If I raised five of those I should consider I was doing well.

While the man who sells the eggs, the chicks, or the breeding birds, as the case may be, is, of course, sometimes to blame for unfavorable results, it is my belief that in the case of the novice handling chicks, eggs, or breeders, the fault

S. C. Brown Ancona cockerel exhibited at Chicago Coliseum Show, 1917, by the originator, I. H. Murray, 11337 Longwood Drive, Chicago, Illinois.

Third prize White Wyandotte hen at Madison Square Garden, 1917-18. Owned by J. W. Andrews, Dighton, Mass.

is his, about nine times in ten. For this reason, I believe he needs to "be slow to find fault." Two years ago I knew of a shipment of 100 day-old chicks purchased by a novice. They were as fine, healthy a bunch of chicks as were ever hatched, and the purchaser was delighted with them. The whole family began to feed the chicks on a little of this and a little of that. When the chicks cried because they were not warm enough, they fed them more and more, and usually foods unsuited to the needs of little chickens. Before ten days had gone by, the chickens were beginning to appear "dumpy" and in two weeks nearly half of them were dead. The shipper, tho in all probability not in the least to blame, was asked to accept half payment for the chicks, which he did rather than have any trouble about the matter.

I would recommend that everyone purchasing chicks, eggs or stock first inform himself how to care for same and to be only reasonably sanguine in his expectations from his purchase. There is always bound to be more or less loss in handling live stock, and this is especially true in the case of the novice. The AMERICAN POULTRY JOURNAL is constantly printing good sound advice on how to hatch, rear and care for chicks. No one should attempt to undertake a thing of this kind without a little careful study of the subject. A man who buys an automobile and runs it without attempting to understand its mechanism or its requirements will soon run amuck. If he goes into the subject as he should, he will find that an automobile needs to be kept reasonably clean, well supplied with gasoline, oil and water. When he neglects any one of these things he is very apt to be brought to a sudden realization of his neglect. Little chicks require a like

attention. They should be kept in reasonably clean quarters, given nourishing food and water and an opportunity to exercise in the open air. During the brooding season they need supplied heat. They should have sunlight, green food and some form of grit or an opportunity to scratch in the earth. All food supplied them should be sound and wholesome and free from mold or must of any kind. A bit of decayed fruit or vegetable or a crust of moldy bread will be sufficient to upset the digestive apparatus of a flock of little chicks. The litter should be changed often to keep it free from contamination, and the brooder or coop should be open to the air and sunlight a part of every sunny day, if only for a few moments. Feed frequently while the chicks are small and keep a box of dry mash and well selected chick food before them all day long. Do not close coops or brooders tightly at night. Let a little fresh air in the brooder from the first, but as the chicks grow increase the opening and when large enough, leave the front of the coop open with only a screen to protect them from cats, skunks and the like. Let the chicks out early in the morning, as soon as the weather is at all spring-like. Many chicks die every spring and summer by being kept penned up in a closed coop for an hour or two after sun-up.

The novice must learn that poultry keeping or chick raising is just like any other undertaking. It requires the exercise of an uncommon amount of so-called "common sense." Go about the work with the determination to learn as much as possible in regard to it, and "be slow to find fault" with others, for the mistakes you make yourself.

Following Are the Three Articles Which Won the Prizes Offered
by Hubert Meyer, Riverview Poultry Farm, Klondike, Missouri

R. C. Reds—Why I Breed Them

We Have the Best Variety of All. Let Us Watch That We Do Nothing to Impair Their Vitality and Other All-Around Good Qualities. First Prize Article. *By L. E. Rauch, Carbondale, Ill.*

I AM a railway postal clerk, and one day while our train was stopped at a station, the rural carrier, who often came for the mail, said to me, "Let me sell you a sitting of eggs." I jokingly answered that he would have to sell me a setting hen first, as I had no chickens at all. I thought nothing more about the matter until the next day when the train stopped at the station, here came Mr. Rural Router with a box in which a hen was sitting as quietly as one could wish. I gave him six-bits for the outfit and took it home with me. The hen kept to the nest as nice as you please, so next day I got my sitting of eggs for which I paid \$1.25, making my total investment \$2. I hatched and raised nine chickens, of which five were pullets.

That fall as we stopped in a town I noticed a rather nice-looking coop being loaded into the express end of the car. It was good enough looking to attract my attention, so I asked about it and was told that it was on its way to the State Fair. After giving the chickens a rather careful "once over," I delivered myself of the wise (?) statement that I had some at home that were "just as *purty* if not *purtier*" and that I did not think mine had "any black around the neck."

As there was to be a poultry show in a town on the road, I thought I would send mine. The party of whom I had bought my eggs gave me the directions for making those nice coops in which he had shown his birds at the State Fair and I made two, in each of which I put a pair of my chickens and loading them into my car, took them to the show.

As my run was a little "hack-line," I persuaded a clerk out of the postoffice in my home town to go with me and take my run the rest of the way and back to the town in which the show was being held. I got off and visited the

show in the meantime. Say, wouldn't you like to see a clerk put one over on the Department like that now? But it went then, and there was never a time when the clerks worked harder nor gave better service. We then knew that we were being treated fairly and gave our best to the work. Well, I went to see my ribbons and a third prize was on one coop and a fourth prize on the other. As they were both on the cockerels I went to see why my pullets did not come in for anything and was told that they were disqualified for "clipped wings." You can easily see how green I was and what would be necessary for me to do. Well, I went to the judge and he kindly consented to score them for me. He said that their scores, 92 and 93½, were good, but that my males were not good enough to keep. He also said that the black which my pullets had around their necks was all right.

To make a long story short, I came away from the show a full-fledged enthusiast. My friend fitted me out with a male and the judge told me that the winner at the State Show had some extra good Reds. I wrote him and secured fifteen eggs at the, to me, enormous price of \$3. From these eggs we hatched fourteen chicks and raised twelve, only three of which were pullets, and one of these I later found out had "stubs" on her legs.

Now, here comes a reason why I *breed* Rose Combs: My wife, whose mother was a successful breeder of Barred Rocks, said that she did not like the Reds because they did not grow fast like the Rocks. To please her, as she had most of the work to do, we drove to the country and bought some good country eggs. These hatched the same day as my good Reds and you may be sure that they had equally as good care. In fact, much of the time they were in the same pen. At three months of age the Reds averaged a trifle over three pounds while the Rocks did but little better than two and a half pounds. They feathered better than the Rocks and looked more marketable, as their feathers did not stand on end, nor did they have great bare places. We then started into the Rose Combs for keeps. I sent to Tuttle and bought some hens to go with my good cockerels, and one of the hens weighed eight pounds. I kept her and my 93½ pullet until they were four years old and they never failed to get

me a blue as long as I had them, and they usually placed first and second. They laid well for me as long as I had them and the country woman to whom I sold them told me next year that they were good layers and fine mothers for her. I wonder how long they did live! They were fine hens!

The next spring we sold over \$60 worth of eggs from ten hens. We got 10 cents per egg and had to replace but two sittings. Another score for the Rose Combs—they lay lots of fertile eggs.

We hatched most too many chickens for our lot, so had to eat a good many of them, and, as they are a fine table fowl, that was a great punishment to us! Say, did you ever meet up with a finer thing than a good yellow-legged, three-pound Red, fried nice and brown and accompanied by good biscuit, gravy, mashed potatoes and well-seasoned cabbage? Not in this vale of tears! As a table fowl, they are par excellence.

That was fourteen years ago. I wish I had space to tell you of some of our successes—yes, and failures, too—with them in the meantime. Suffice to say we have come in for our share of the ribbons where we have shown and have enjoyed the competition. We nearly all get into the show-room sooner or later, and most of us get in soon and stay late. The Rose Combs are fine for this purpose, as they breed fairly true, yet present enough difficulties to make it interesting. Each will have his own problems which he would not want worked out by others. That would take out all the interest. If one knew just how each mating would “nick,” he might as well quit the work and go into the carpenter’s trade.

One great point in favor of breeding Reds is their popularity. It’s of little worth, even if one could breed a bird that would score 100, if there were no competition in the show-room, nor sale for it or its progeny. In choosing a breed it is always well to select one that is popular, for then one may the more easily procure new blood as well as having better opportunities for disposing of surplus stock.

It is to their utility qualities that the Rose Combs owe much of their popularity. Their very origin proves that they have vitality and hardiness. Their ancestors, as is well known, were the game cocks that were able to vanquish all other fighters that started on the long voyage from the Asiatic coast to the New England harbors. No other bird survived.

Again, the thrifty Yankee wanted a profitable fowl, just as he wanted a profitable “nutmeg,” and to him a profitable fowl was one that would lay in the winter. To get that kind of a hen he must have rugged vitality. He, therefore, took up these descendants of the old sea captain’s fight winners and bred them to lay in the winter. Their combs being dense and conforming to their heads did not freeze readily and thus keep them out of condition. And they do lay well in the winter.

Last winter we had eight pullets and they laid on an average of five eggs a day from November until the following May. My wife being called away February 12, 13 and 14, these hens were left in care of our daughter, who insisted that she got twenty-five eggs in the three days. It seemed to me as if one had worked overtime, but as there was no possible reason for any misrepresentation I just accepted the statement.

We put on no frills in caring for our chickens. Much of our feed is just a bin of corn in the husk, to which the hens are permitted to go whenever they please. Last year they had access to a rye patch, but this winter it has been covered with snow too much to be of any considerable value, and we have not tried to sprout any oats. The only green food for them is a few mangel-wurzels and corn fodder. Yes, they eat the blades of the sweet corn that I cut up last fall and seem to get good from them.

We are interested in the “Hogan” system and use it almost as much as we do the Standard in choosing our breeders. We find that a four, five—yes, even a six—inch abdominal capacity is not uncommon. We should never lose sight of the fact that there was but one reason for the origin of the Rose Comb and that was their utility. Take that from them and they will cease to exist. We must watch this part above all others. To keep this, we must have strong vitality. Watch for vitality. This will be best found in those birds whose shape conforms to that of the Standard, and those which have

the “brilliant sheen” on their feathers. Insist that your breeders have these things. A little “smut” on the “under-color” or a little “slate” on the surface will not hurt as badly as the lack of “luster.”

Now, fellow breeders, we have absolutely the best variety of all. Let us talk our variety both in season and out of season. Let us watch that we do nothing to impair the vitality of our flocks, insisting that our flocks be profitable first, and let exhibition follow if we can, and we can, for the Standard was made to permit just that thing. At least, it was made to fit the variety when it was a variety noted for its ruggedness, its hardiness, and its vitality.

Why I Breed R. C. R. I. Reds

Because They Are Beautiful and Second to None in Utilitarian Qualities and Because I Love Them. Second Prize Article. *By Geo. B. Curran, Napanee, Ontario, Canada.*

THIS is a story of progress and success. Five years ago I started in a small way with a pen of Rose Comb Rhode Island Reds, and the first year raised about 100 Red chickens. By careful culling and a system of color mating, I have gradually improved the Rose Comb Reds until today my Reds are the equal in color to any Reds in the world; Single or Rose Comb. But I had better tell my story in detail from the beginning, so that any new breeder of Reds will be able to follow in my footsteps, and be equally successful.

I was attracted to the Reds because of their beautiful rich red color, set off with a black tail. I wanted the best to start with, and first definitely set an amount in my mind that I could afford to pay for a breeding pen of exhibition quality as foundation stock. I wrote to every well-known and reputable breeder in the United States, and told him I wanted a foundation pen mated to produce exhibition stock. I finally settled on a prominent New York State breeder who had won at New York, Rochester and Buffalo. The birds upon arrival proved most satisfactory and well worth the money. I selected the Reds because I firmly believe they possess a greater combination of utility qualities than any other one bird on earth. The Reds are large and possess square, deep bodies, well covered with lots of flesh. A well-developed cockerel at seven months of age, crate-fattened, will dress around 7 to 8 pounds and is more delicious than a turkey. The chicks are very hardy and active, and hustle for themselves from the day they are hatched, and grow rapidly. The Red hens lay extra well in the fall months when eggs are high priced. This is because the Red hens will stand heavy feeding for egg production and shell out the eggs, when under similar conditions the Rocks or Wyandottes would become hog-fat. In my experience, the Red hens have never been persistent setters, and I attribute this to my system of feeding. If a hen does not lay all winter and you start feeding her heavily for eggs in the spring, as the weather gets warmer, she wants to sit, probably after laying a dozen eggs. I feed my Red hens heavily in the fall and up to February 1st, then I begin to reduce their feed and every warm day give them a little epsom salts in their drinking water. As a result, I get eggs all spring to sell for hatching and only have an odd hen want to sit, just enough for my own use.

The Reds are a fairly large breed. They must be hatched early. I find if I get my chicks out in March and April that the pullets will all be matured and laying in September and October, and the cockerels may be selected at the same time, the culls going to the market at the highest price, while the better cockerels are retained for breeding and exhibition birds.

Here is an important point in raising chicks: Do not give any soft food of any kind until the chicks are at least ten days old, and then very sparingly until the chicks are one month to six weeks old. More chicks are killed by sour food than all other causes combined. I feed when twenty-four hours old a little chick scratch food in clover chaff, and the little chicks *scratch for their food*. I give fresh water three times a day. When the chicks are six weeks old, I begin to give them milk mash, a teaspoonful to a chick in the morn-

ing and the same at 4 o'clock in the afternoon. Grain is given first thing in the morning, at noon and at night in *small quantities*. Never fill a little chick up too full, but feed him often and keep him growing. Lots of deep shade and fresh cool water must be provided. I like the corn field best for producing good deep rich Reds, as it is coolest about the time of our hottest weather.

You cannot raise good exhibition Reds if lice or mites get on them. The sleeping coops must be *cleaned out and disinfected every day*. Perhaps the ordinary reader will think this is too often, but try my plan and see what a difference it makes in the matured chickens. Lice will turn a feather white, and red mites will cause wry wings. To get the rich, even, sound and brilliant red color, the birds must be raised in dry, well-ventilated, clean coops, absolutely free from lice or mites, and the air always clean and sweet-smelling. Red chicks must never be crowded so they sweat at night, or they will be ruined as exhibition birds. For this reason I like to get them roosting as early as possible on flat roosts two inches wide. Separate the cockerels and pullets when three months old.

I have a method of mating to produce rich, bright red females with that *soft, rich, red undercolor* that matches the surface, so much desired in Red females and so hard to get. I found out that the average Red breeder was mating only for cockerels, and if he got a good pullet it was an accident. I found out by careful observation that in the average flock of Reds, as bred, the cockerels came dark and uniform and fit for exhibition, *while the females on the average were too light in color, and only a very few females dark enough for exhibition*.

The problem then was to get a type of Red male that mated to these dark exhibition females would reproduce a large percentage of dark red exhibition females. I began to study the question and stumbled on the solution in this way.

Here is my theory: There are two colors combined in a Rhode Island Red—red and black. Practically all Red breeders, in trying to produce better Reds, had been working to produce darker Reds. They had been using black in the form of smut. To breed good show pullets they used males with smut or a few females with smut in each mating. I figured they were wrong. For this reason—it was not a darker red that was wanted, *but a richer, more brilliant red*. In simple words, a redder red.

Here is the solution: Use the reddest males possible, and mate to the clean, bright colored exhibition pullets. I have tested this theory out for three seasons now in succession.

The Rose Comb Rhode Island Reds, as now bred, are equal to any other Standard fowl on earth, and with their rich, brilliant, lustrous coat of red feathers are, in my opinion, the most beautiful fowl on earth.

But not alone are they beautiful. As egg layers they are second to none. Utility is the keynote of any breed. I never keep a pullet for breeding unless she is deep and capacious of body, is covered with lots of flesh, and "Hoganizes" well, so she can lay eggs. Cockerels must be large, strong, healthy, vigorous, active birds, and must also "Hoganize" well, and, in addition, possess a fine quality of scales on legs. This is a sure sign of quality of skin and flesh. By selecting breeders as above, the Rhode Island Reds will be maintained as a superlative exhibition bird which are also *good layers*. But my advice to every breeder of Reds is, whenever possible, to trap-nest the pullets and breed only from the high producers. No breed will last unless utility qualities are kept foremost. The Reds made their reputation as a utility breed. We must strive to maintain these paying qualities.

In conclusion, I breed Rose Comb Rhode Island Reds because I love them. I would not sell one of my prize winners because I value them more highly than money. I regard my prize pullet as a work of art, equally valuable as a painting by a great artist. The painter merely juggles with dead inanimate colors; the poultry breeder juggles with live birds possessing color (red and black) whose proportions he cannot change. He must select two individuals and mix (mate) them so that the resultant combination of colors will combine to give the rich brilliant, yet soft, shade of red sought for in the ideal exhibition bird. I regard the poultry breeder as the greater magician of the two.

Why R. C. Reds? Farmer's View

First-Class Fowls for the Farm. Special Mating and Trapnesting Pays. Third Prize Article. *By Carl E. Scott, Moundridge, Kansas.*

BEING born and raised on a farm, I cannot remember the time I was not a lover of fine poultry and live stock in general. When a small boy I had charge of the farm flock, and ever since it has been a pleasure for me to work with poultry.

My ideal for a farm hen has always been one that possesses vigor, is a good layer in the winter and early spring months, and has size enough to make a good meal for an average sized family. She can stop laying in the hot summer months, if she so desires, but I want her to produce eggs when they are eggs.

I want her to be gentle and a good mother. Also, I want her to be beautiful to look at.

Having handled and owned many of the medium sized and larger breeds of chickens before becoming acquainted with the Reds, my choice for a number of years was one of the Asiatic breeds. They were hardy, fairly good winter layers, also a good table fowl. I was satisfied with them until a friend sent me a setting of Rose Comb Rhode Island Red eggs. I hatched a number and raised to maturity five pullets and three cockerels. One could not help but notice the vigor and thrift of those Reds, the way they rustled around from early morning until dark, and how they did grow.

I liked them so well, the next spring I purchased a cockerel to mate with the few pullets I had raised, giving them a pen to themselves. They surely did give a good account of themselves that spring, in filling the egg basket. I was beginning to think a great deal of the Reds by this time.

After my first start I began building up my flock as to their laying qualities, also according to the requirements of the Standard. I was now a "chicken crank" right.

I purchased all the literature pertaining to Reds that I could get hold of, studied them at all spare times, subscribed for the Rhode Island Red Journal, AMERICAN POULTRY JOURNAL, and a few other poultry magazines.

By studying these publications I learned many things that I didn't know before. Among other things, I learned there were different persons breeding Reds for certain characteristics, such as one specializing on shape, another in color, another on egg production, and so on. Now, I wondered why one person couldn't raise Reds combining all these qualities. I at once purchased a pen of birds from a breeder who had a nation-wide reputation for raising good shaped Reds. Later, purchasing some from an excellent color strain. By carefully mingling the blood of these two with my already good laying strain, I laid the foundation upon which I have built a flock of useful, beautiful, Standardbred Reds.

Being a farmer, I raise all my own grain and feed liberally of wheat, corn, and oats. Am careful at all times not to feed damaged or mouldy feed.

Each December I mate from three to five special matings, using one male and never more than ten females in one mating. These I house in open-front colony houses, supplying a large run for each mating, this run being seeded to either wheat, rye or oats to supply green food. I am also careful to supply plenty of shade thru the hot weather.

Another point in favor of the Reds is the fence enclosing their yards is only four feet in height—plenty high for a Red.

These special breeding hens are always the best of the flock, being chosen as to size, vigor, color and shape, valuing each quality as in turn mentioned. My breeding hens are all trap-nested; each hen is given a number, this number being placed on the egg when gathered. This is done for several reasons. One is to pick the good layers; another is, by marking the chicks hatched from these eggs and knowing their ancestors enables one to mate intelligently the next year. Trap-nesting, also, enables one to cull out the layers of small, over-large or ill-shaped eggs. Again, there is now and then a hen that lays infertile eggs. Thru this method she is easily detected.

Stabbing at the Heart of the Nation

The War Revenue Bill passed by Congress in October, 1917, carried with it as a "rider" a clause compelling magazines and newspapers to be mailed on the "Zone System." This means that the postage gets bigger and bigger the farther away you live from the place where the magazines and newspapers are published. This law will be put into effect on July 1, 1918, unless Congress repeals it in the meantime. You should write at once to your Congressman and Senator and demand the repeal of this most unjust law, which increases the postage on periodicals from 50 to 900 per cent. Do not delay. Write today.

The law is class legislation of the most unjust sort. It was not needed. It is most unfair. Publishers pay all taxes imposed by the War Revenue Bill and in addition they alone have had the transportation on their product increased from 50 to 900 per cent. It means the ruin of many periodicals. It means restricted circulation for all magazines and newspapers. It attacks the whole mechanism of merchandising thru advertising and means ruin for the many who do a large mail-order business. It will eventually greatly reduce the revenue of the Post Office Department itself. It is wholly unnecessary.

The Post Office Department is operated for the benefit of the people—it is intended to serve all the people and was never meant to be a business run for profit. Yet, the Post Office Department, on October 26, turned over to the U. S. Treasury \$9,000,000. This is the largest profit ever made in any one year of its history. These big profits came out of the pockets of the people who created the department to give service to the people at cost. The nine

million dollars profit was made in spite of the claim that \$50,000,000 was lost on Rural Free Delivery, and in spite of the fact that newspapers and periodicals were carried at the established second-class rates. No one has yet been able to show figures to prove that the Post Office Department loses money in handling real second-class matter like newspapers and magazines. The second-class postal rates on newspapers and magazines have been 1c a pound since 1879. These rates were originally adopted to benefit the public and have been maintained to benefit the public. They should continue. Canada, with the same great distances to ship mail matter and with less population to support its postal system, has a postal rate for newspapers and magazines of only one-half a cent per pound, just half our rate, and she has been at war since 1914.

The publishers have no desire to dodge legitimate war taxation, but, in face of the greatly increased cost of publication, they do protest against unjust discrimination which places them in a position where either they must be forced out of business or must demand a much increased subscription price, which in effect will put many out of business and greatly limit the circulation of others. In all sincerity the publishers actually offered the Government every cent of profit made during the war rather than have the Zone System of increased postage forced upon them—for the Zone System postal increase means a great hardship to the reading public, to the manufacturers, merchants, live stock and poultry breeders, as well as for the publishers. Everyone is glad to do his bit to help win the war and no one will dodge just taxation. But it is not going to help win the war to put the publishing houses out of business. It will not help win the war, or to "make the world safe for democracy," to deprive the great mass

of our people, who live in the country or remote from big publishing centers, of good, clean, educational publications. To put this Zone System law into effect is postal persecution of the worst sort. It is stabbing at the very heart of the Nation. It tends to kill democracy and to dissolve the Union. By restricting the circulation of the many clean and wholesome magazines to limited zones it takes away from the great majority of American homes publications which are great educators. It will confine the circulation to a few well-to-do readers who can afford the greatly increased costs. It will tend to create sectionalism among our people by preventing the free exchange of ideas and experiences among all citizens of the United States. Sectionalism is easily developed and not readily done away with. We cannot afford the risks involved. Good, clean, wholesome newspapers and magazines are not only great educators but they are nation-binders, they tend to keep us one people and united. The immortal Lincoln was willing to sacrifice all other issues in order to save the Union. Do we want to tear down, or do we wish to build up?

Prof. J. W. Linn, of the University of Chicago, said to Congress:

"You say these newspapers and magazines would not be destroyed by these proposed new laws? You know what would happen—you know that the prices to subscribers would rise, and circulation would narrow—and just who would lose out?"

"Why, just exactly the people who must have the reading habit if this is going to be a democratic nation—the small town and country people. These publications are printed in big cities; the first zone, the cheapest zone, would be in and near those cities. That means you have shut off education just where it is needed. The cities will read anyway; there are many educational opportunities in the cities anyway; but the small towns and the rural districts depend to a large extent on newspapers and magazines.

"You shut out those boys and girls, those men and women, from the reading habit.

"You shut them out from the freest possible circulation of ideas, just at the time when that freest possible circulation is most essential.

"I say as a college teacher, a man who has been in the educational profession almost a generation, that in my judgment you could hardly stab nearer the heart of the Nation than by stabbing at the country circulation of newspapers and magazines.

"Yet that is exactly where this increase in second-class postal rates, this Zone System, is directing the knife!

"You shut off the farm journals, as these proposed zone rates would shut them off, and you decrease the productive power of this country by millions of dollars.

"You shut off the trade journals, and you decrease the manufacturing power of this country by many more millions."

Friend Reader, you have been good enough to tell us many times how our poultry magazine has helped you, how it has enabled you to make a success of your individual share in the great "billion dollar poultry business" of America. Will you now help us, and at the same time help to avoid bringing upon yourself greatly increased cost for the continuance of your magazine, by writing at once to your Congressman and Senator, asking them to repeal this unjust law which compels Zone System postage increase on magazines and newspapers? Act now. Write today.

Who Will Pay the Bills?

By the time this issue reaches our readers it is quite probable that a maximum price may have been fixed upon poultry and poultry products. It is also likely that measures will be taken to prevent the

sale of fattened hens until after the first of May. An effort is to be made to "have prices so adjusted that they may not rise above a reasonable maximum." Consumers are asked to refrain from buying hens during the period between the first of February and the first of May.

This action by the Food Administration is bound to make the practical poultryman sit up and take notice—he will ask "Who will pay the bills?" The natural tendency of this course of action will be to smash prices on both poultry and eggs, and to make it possible to fill up cold storage warehouses with poultry and eggs at the expense of the already heavily burdened producer. It seems to be the theory of the officials that interference with marketing and distribution, price regulation, and lessening the market prices, can have no other effect on producers than to stimulate greatly increased production "as a patriotic duty." Perhaps it might work, if we could only pay grain bills and bank loans with drafts on our patriotism. Unfortunately only good hard cash is accepted by the grain dealers and the banks—also no one has yet suggested that patriotism will be legal tender for payment of taxes.

For a good many years it has been our practice to depend, for a considerable amount of our return from our poultry plant, on the sale of fat old hens for the Jewish holidays. We force these hens for eggs thru the summer, fall and winter, pushing them to the limit while eggs are at top prices. By March they are hog fat and about ready to stop laying and get broody. At the time we sell them they are in a condition of internal fatness that makes it exceedingly unlikely that they could again be brought to laying within sixty days, and probably they are so overfat they would go to pieces and become a loss if held over. The March price is invariably double that of price obtainable after the first of May. So aside from the possible loss of the hens, the loss from non-laying, the loss from continued feeding, there is also a very considerable money loss from price shrinkage amounting often to 50 percent. If this loss is to be forced upon poultrymen, who is to pay the bills?

As is our usual custom, we have been fattening quite a good sized flock of old hens for the Jewish Passover sales, and this year expected to sell them about the third week in March at from 32 to 35 cents a pound alive, possibly at even a little better price if the market is good and lively. These hens have been laying since last summer and are now (February 11) pretty close to the end of their string as layers. They will lay just about enough eggs during the finishing period to pay for a part of their feed, and will be practically all thru laying when selling time arrives. They will be too fat to be fit to hold over into warm weather. If the Government does as it now plans to do, and discourages the sale of live hens and urges buyers to refrain from buying until after the first of May, it means the loss of several hundred dollars on our poultry farm alone. There are many other poultry keepers in the same boat. If our production and products are to be interfered with in this way, we cannot increase production and we may be forced to stop producing altogether. We have been counting on this sale of fat hens to Jewish trade to help us make good on a part of our losses of the 1917 season. The live poultry price after May 1 is likely to be about 16 cents a pound. Where do we get off?

On January 26, the live poultry dealers of New York sent a letter to the Food Administration urging that there be no Government interference with the normal sale of live fowls this spring. The letter was signed by practically the entire live poultry commission trade of New York. It presented the facts concerning the matter forcefully and fairly. In part this letter stated:

"We believe that such a prohibition, if enforced, would defeat the end in view. It might, indeed, to a very limited degree increase the supply of eggs available for cold storage, but, on the other hand, it would deprive large numbers of the population of the larger cities in the country, and more particularly of New York City, of their main supply of flesh food, and would compel them to turn to beef and veal to satisfy their absolute wants.

"We have in the metropolitan district of New York City a Jewish population of more than 1,500,000. About 95 percent of all the live poultry received in New York is consumed by them. If they are deprived of it, they will need an increased weekly supply of about 1,500,000 lbs. of beef and veal more than they now consume. It is an accepted fact that the Jews of New York use very little mutton, and a further fact that practically no Kosher-killed mutton or lamb is offered for sale on this market.

"By the Jewish ritual, all meat must be Kosher-killed, and must be fresh when sold. Fifty-two percent of the carcass, only, is Kosher; and only about 42 percent, or four-fifths of the Kosher end of the carcass, consisting of the chucks and plates, is used by the Jews. The other one-fifth, consisting of the Kosher rib, is usually sold to Christian trade. Thus, if it would require 1,500,000 lbs. weekly of beef and veal to replace the poultry now consumed, it would require a weekly increased output of beef and veal of about 3,000,000 lbs., if the full 52 percent of Kosher meat is considered; and if only 42 percent, the actual amount of Kosher meat consumed, as above noted, is considered, it would require an additional supply of live cattle necessary to produce 3,500,000 to 3,550,000 lbs. net of dressed beef and veal.

"An increased demand of this character,

which would be imperative, would not only operate to greatly deplete the reserve supply of live stock, including calves, thruout the country, but would surely defeat the purpose of the Meatless or Beefless Days now in practice under the ruling of your honorable body.

"The Jewish Passover, which occurs during the full flush of the egg-producing season, is always celebrated with the aid of live poultry exclusively. This fact is merely mentioned for

especially is this true of laying hens, and in view of the very high prices for eggs likely to prevail this spring, this movement will no doubt be even more restricted, and, as is usually the case, farmers will sell their laying hens only to a very limited extent, and very sparingly, and even if tempted with very high prices will cull their flocks carefully and sell only those from which they are not getting satisfactory results. This condition always

Conditioning House and Incubator Cellar on the White Wyandotte farm of Chas. V. Keeler, R. F. D. 11, Winamac, Ind.

your consideration, and while it may not be in the line of food conservation to so consider it, a great hardship would certainly apply if the proposition to cut off the supply of live fowls was made effective.

"With regard to the actual situation, and the usual movement of live fowls during the egg-producing season, we would remind your honorable commission that it is always restricted;

applies during the egg season, and we believe will be greatly emphasized this year.

"We believe that viewed from the standpoint of food conservation, no special restriction should be placed on the sale of live fowls; that to do so would greatly complicate the situation, and would destroy the balance which now exists and which is operating to conserve the supply of beef and veal. We do believe,

WE WIN

AGAIN!

AT CLEVELAND, OHIO, 1918, "HILLVIEW" S. C. W. LEGHORNS won 3 "BLUES" in the hands of one customer. Here is the letter:

"Hurrah for you and Hillview — won 1st cockerel, 1st cock, 1st pullet and 3d hen at Cleveland. We certainly put one over on the bunch here, and thank you from the bottom of our hearts for the splendid specimens you sent us."

YOU CAN DO THE SAME in your city if you get "Hillview" White Leghorns — the pleasure derived out of winning the "blue" over your fellow townsman will be yours. I furnish more winners annually than any other farm for the largest shows in the United States and Canada. I can furnish YOU with blue-ribbon winners!

AND, my Leghorns are **REAL WINTER LAYERS**. They prove it by winning **Three Years in Succession** at the Missouri Laying Contest, because they have this year — in the present contest (the fourth year) made the best record for December, and are again **LEADING** all Leghorns in this contest. In the American Contest my pen also made the best December record, and laid double the number of eggs laid by any other Leghorn pen entered. My birds **LAY IN WINTER!**

My beautifully illustrated catalog, just off the press, tells you completely all about my Leghorns. My mating list is ready and will be enclosed with the catalog. Don't hesitate; write today; just send a post card and in return get an introduction to **America's Finest White Leghorns**. See last month's ad. for description of matings.

Mating Time Is Here

Now's the time to put your hens and roosters in the pink of condition with Poultry Pan-a-ce-a.

If you want chicks that will live and develop rapidly—if you want early broilers—if you want pullets that will develop into early winter layers, then feed the parent stock Dr. Hess Poultry Pan-a-ce-a.

Remember, it's the singing, scratching, industrious hen that lays the healthy, fertile eggs that will hatch into strong, livable chicks.

Makes Poultry Healthy—Makes Hens Lay

Here are a few of the valuable ingredients in Pan-a-ce-a to meet the requirements of your poultry which I have just stated: *Nux Vomica*, a nerve tonic; *Carbonate of Lime*, a shell former; *Hyposulphite of Soda*, an internal antiseptic; *Quassia*, an appetizer; *Iron*, to enrich the blood, and other valuable ingredients, all well known and recommended by the highest medical and veterinary authorities.

There's a dealer in your town that will supply you with Dr. Hess Poultry Pan-a-ce-a and it's to make your poultry healthy—it's to make your hens lay—it's to make your chicks grow—if it doesn't do these things, he will return every cent you have paid him. Packages, 25c, 60c and \$1.25. 25-lb. pail, \$2.50; 100-lb. drum, \$9.00. Except in the far West and Canada.

however, that every effort should be made to induce an increased production of poultry by a nationwide movement for an increased hatch."

The reply received by the live poultry dealers is not a pleasant one for producers to read. Apparently it does not matter where the producer gets off, if there is any possible way to smash prices so that poultry packers' storage warehouses can be filled up, after May 1, at low cost. Here is the reply:

Washington, February 2, 1918.

Gentlemen—We have your communication of January 26th, 1918, regarding the live poultry situation, in which you outline reasons why there should be no interference by the Food Administration with the market of fowl by

farmers, and their consumption, for the next two months.

One of the duties of the Food Administration is to prevent and eliminate, as far as possible, any wasteful practices.

To us the killing of hens just before and during the heavy spring lay is a wasteful practice—just as wasteful as the killing of fresh milk cows for beef; and we are appealing to the farmers from a patriotic standpoint not to sell these hens while laying freely.

Every hen which is sold before the first of May represents a food loss to the Nation of about thirty eggs. The total loss of eggs represented by the customary selling of hens between the first of February and the first of May, amounts to about 150,000,000 eggs. In order to save this much needed food, the Department of Agriculture is now opening a campaign, urging farmers to refrain from selling hens from the first of February to the first

of May, and buyers from buying hens during that time.

The Food Administration believes that this is a highly desirable move on the part of the Department of Agriculture, and will use all the facilities at its command to obtain this most desirable end.

We intend to ask the consumers to reduce their consumption, during this period, for the same reason that we ask the farmer not to sell them—that is as a patriotic duty.

The other question is one of distribution. It is a fixed principle with the Food Administration that, taking the Nation as a whole, prices should be kept within reason, so that the middle classes may purchase food stuffs as well as the wealthy. This cannot be possible under these abnormal conditions without some restriction.

We feel that the present limitation of trade activity is for the general benefit and that our attitude is fundamentally right. We are, therefore, asking you dealers—also from a patriotic standpoint—to co-operate with us in every way possible to bring about this result.

We wish also to have prices adjusted so that they may not rise above a reasonable maximum, and we ask your advice and co-operation in making this adjustment. An adjustment will also be made on frozen and dressed poultry prices.

United States Food Administration,
By W. F. Priel

BEST DISPLAY AT THE CHICAGO COLISEUM SHOW, on

Rose Comb Reds

has been won for

Five Successive Years by Longfield REDS

A record, to the best of our knowledge, never duplicated by any R. C. Red breeder at any National Show. Twenty of the first premiums at this great Red show in the past seven years have been won by us. Another record.

LONGFIELD REDS, the strain that comes back and wins year after year where the competition is strongest. Write for catalog, giving winnings in detail and our interesting guarantee of 15 chicks from each setting of our best eggs. A grand lot of birds for sale. Priced very reasonable.

Longfield Poultry Farm, Box 321 Bluffton, Ind.

White Leghorn Chicks

RESULTS

Grewe's White Leghorns hit the bullseye of Results—the dollar mark. Average egg production last year 75%—How's that? Pullets laid at 4 1/2 months. The only kind worth having are those that lay a profitable number of eggs. That's the kind we sell.

WOOLERY FARM Box A BLOOMINGTON, INDIANA

Reader, as a matter of self preservation, you must plan during the coming 1918 season to help feed yourself and your family—to actually produce a part of the food you consume and, if possible, to produce a surplus to supply those who are less fortunate than you are.

You can "do your bit" by raising more poultry and by having a good, substantial, well-planned home garden. Make the back-lot, and even the lawn, productive. If you would eat, and you must eat, you will have to help produce food.

Two million organized farmers, of the United States, in an appeal to President Wilson, stated that the chief causes which will inevitably bring about a smaller crop in 1918 are six in number, viz.:

1. The shortage of farm labor.
2. The shortage of seed.
3. Prices often below the cost of production.
4. Lack of reasonable credit.
5. Exclusion of the farmer from his

right and necessary share in the conduct of the war.

6. *Deep-seated doubt as to whether he can raise the increased crops demanded of him and still support his family and pay his debts.*

When two million food producers find it necessary to make an appeal to the Nation, asking for simple justice and a square deal so that they may perform their most necessary task, and when the majority of unorganized food producers feel the same way about it, it will be a wise thing for the food consuming public to sit up and take notice. We have all clamored loudly about high prices and the high cost of living, but we have not yet really experienced war prices for foodstuffs. The attempted fixing of maximum prices on foods, to keep down the cost to the consumer, has resulted in an awful muddle which is likely to prove a national calamity. Which do you prefer, low prices, increasing "eat-less days," and no food? or an increased production of food—ample supplies of food at somewhat higher prices, which permit a fair and just living profit for producers?

A prominent Congressman writes us: "I note all you say relative to the administration of affairs relative to food production and regulation of prices. The problems are not, in my opinion, being adjusted satisfactorily, for several reasons, among them being a desire to turn over to men unacquainted with the vital issues, authority which they are unable to exercise intelligently. The case you cite is typical." (We mentioned the case of one of the "Dollar a Year Men" who seems to be muddling the poultry situation in a most unfortunate way.) "The Food Administration is not, in my opinion, as yet, solving the difficulties, which were foreseen, and while the American people are ready to make every sacrifice for the soldiers and sailors whom we are sending across the seas, the people have a right to demand that the best brains of the nation be called to service to handle domestic problems, in order that our Army and our Navy may be properly fed, clothed and equipped, and also to the end that those who remain at home, the farmers, merchants and others may not suffer unduly by inefficiency and lack of foresight."

The *New England Homestead* points out that 85 percent of the farmers cannot increase production this year unless something is done at once to remedy the situation, and that 45 percent will be obliged to produce less than in 1917. It says editorially:

"The stumbling block to an adequate food supply for domestic consumption, as well as

45% in November

One of our pens led first 4 weeks of the N.A. Contest (Delaware official) with 45% production against 13% average for the 100 pens. We breed hens for egg-type as dairymen breed cows for milk. Our S. C. White

support of our own and allied soldiers, is the too evident intention of keeping prices down to producers and leaving them in doubt as to exactly what is to be done. If there were more inducement to raise crops and stock than there is to make candy, to run a retail or wholesale store, to make munitions or ships, or to do a dozen and one other things, there is not a shadow of a doubt but what many more people would become producers of food, and the thousands of farmers already in the game would manage to speed up production. Anyone, be he producer, consumer, or middleman, must agree to this upon thought and exercise of common horse sense. * * * * * City folks more than farmers have cause to worry.

"The Good Book asks, 'What it profiteth a man to gain the whole world but lose his own soul?' Paraphrased to fit the food situation, primarily from the consumer's standpoint, 'What will it profiteth the consumer to gain low prices but lose his food supply?' Again, 'What will it profiteth our authorities to gain the passing approval of consumers and lose the war?'"

Are we too dull to realize our peril? Are we too blind, dreaming of the hoped for revolution in the enemy nation, to be able to see the dangers of famine and class dissensions resulting from disorganizing and discouraging our produc-

tive industries? Will we be able to break up our fixed ideas and theories in time to face really serious and vital facts and adapt ourselves to new world conditions before they destroy us? Just now we seem to be sitting on the edge of a grumbling volcano, rolling irritating objects into the crater. It will be our own fault if an eruption overcomes us.

This is no alarmist view, nor false alarm, the danger is real and very grave. Do not say "It does not concern me, I'm fixed all right." It does concern you, it concerns every one of us. It is time now to wake up. Time to do something to convince producers that we mean to give them a square deal. No manufacturing concern would increase production under present conditions except to fill contracts that will pay a fair and just profit. We must speed up production. Individuals, who do not produce foods, can help by contracting in advance, at fair prices, with producers to grow supplies for them. Those who can should pro-

duce foods to help feed themselves.

"Food will win the war," no doubt of that, but the way to make it win the war does not end with using the phrase in cancelling postage on our letters. We must apply some real sound horse sense to the food problem. Individual efforts at back-lot production are good and desirable as a means of helping in self-preservation, but such measures are only a drop in the bucket. The great bulk of the food needed to win the war must come from small farms and poultry plants all over this big country. The only way to obtain increased production from these farms is to make it possible for the food producer to make a fair and just profit. That will mean "war prices" until supply catches up with demand, but it will prevent famine. We simply must remove the "deep-seated doubt" of the food producer, "as to whether he can raise the increased crops demanded of him and still support his family and pay his debts."

Remember the coal famine! Real food shortage would be infinitely worse.

Incubators Are "Farm Machinery."

WHAT an awful muddle things are getting into nowadays, just when we need the greatest possible efficiency. It really seems as if we had among our "Dollar

REGAL MATINGS FOR 1918

First Prize Cock at Madison Square Garden, December, 1916

prize cockerel at Boston this winter and the second Chicago cockerel. At the National White Wyandotte Club Show at Detroit last winter no less than eleven out of eighteen firsts, seconds and thirds were won by customers. What does all this mean from a customer's standpoint? It means that I am sending out freely of the very best blood I own. How many breeders are sending out eggs that will hatch New York and Boston winners?

If you are not getting good results in fertility or egg production; if your birds are just good enough for the seconds and thirds, while your competitor wins the "blues," why not come to headquarters and start all over again with the pure Regal strain? My customers are winning and I have the records to prove it. Read the following letter from Mr. McCubbin, of California, which is only one of hundreds:

Los Angeles, Cal., February 8, 1918.

"Am mailing you catalog of Los Angeles Show this winter. You will see that the Regals are on top. My winnings were first and second cockerels; first, second and third pullets; second cock; first pen and four silver cups on champion male, champion female, champion pen and best display. Have marked Regal winnings of your other customers, which were first cock, second hen, fourth pullet and fifth cockerel. My first and second pullets were sired by Regal champion and my third pullet by Madison. First cockerel won four blue ribbons under three different judges during the season. Please send mating list for 1918. I remain

Yours very truly,
W. O. McCUBBIN."

Utility Matings of vigorous heavy laying stock on free range, \$6.50 per 50; \$12 per 100; \$55 per 500; \$100 per 1,000.

For the season of 1918 my forty-five Exhibition and Dorcas Matings are the finest ever offered and represent the result of my years of careful breeding. My Exhibition Pens are headed by winning males at the New York State Fair, Boston and Hagerstown and contain all my winning females. My Dorcas Matings are headed by males bred from high record females and are mated to females with records ranging from 175 to 255 and pullets of the same breeding. Hundreds of my customers were winners in the shows this past season. The Regal strain has reproduced its quality and established more successful breeders than any other strain in existence. But this is not all; for years the Regals have been bred for heavy egg production and stamina and it is generally conceded that no strain has a better record for usefulness. In spite of the very severe winter my brooder house is nearly full of fine sturdy little chicks, proving that the breeding birds are in the best of health. Upon my show records and the utility qualities of my birds I base my claim that

Regal White Wyandottes Are the Best in the World

Moreover, I positively guarantee to send out eggs from my best birds. I have records in my possession that would be most convincing if I were permitted to use them. One case I can mention is that of the first prize cock Madison Square Garden, 1916. This magnificent bird was hatched out of a setting of eggs I sold. Two other notable winners were the second of a setting of eggs I sold. Two other notable winners were the second of a setting of eggs I sold. Two other notable winners were the second of a setting of eggs I sold.

PORT DOVER, ONT., CAN.

a Year Men," who have volunteered to serve Uncle Sam and — perhaps — their own interests at the same time, too many men who are unacquainted with the vital issues and clothed with authority which they are unable to exercise intelligently.

If incubators and brooders are not "farm machinery" essential to spring farm work, what are they? Certainly they cannot be classed as non-essential furniture. We consider that incubators and brooders are most assuredly "farm machinery" and most decidedly essential in spring work.

The Fuel Administration evidently considers that incubators and brooders are essential farm machinery. Dr. Garfield notified the Baby Chick Association that the fuel authorities would arrange to have coal supplied promptly to local dealers, when notified that the coal was needed for use in incubators and brooders for the purpose of hatching and raising more chickens. All the Fuel Administration asked was to be promptly notified of the need in order to be able to speed up delivery in time.

The United States Department of Agriculture is now spending an appropriation of nearly \$150,000 to increase the production of poultry, to speed up the hatching of early pullets, in order that we may have more poultry meat and eggs to save beef and pork. The department itself is installing mammoth incubating equipment on Government farms. It is recommending and urging the use of incubators and brooders to speed up poultry production.

Our State Agricultural Colleges are fairly humping themselves to get people to use incubators and brooders in order to increase the production of poultry—we need the increased food supply to ward off famine, as well as to make sure of being able to feed our fighting men and our Allies.

Mr. McAdoo, Director-General of Railroads, has exempted farm machinery and agricultural implements for spring planting from all embargoes — unfortunately he did not specify that incubators and brooders be included in such farm machinery.

The American Incubator Manufacturers' Association has been endeavoring to secure prompt delivery of incubators and brooders during February and March as necessary farm machinery, needed to speed up food production. Surely incubators and brooders are greatly needed at this time of the year, if we are to increase the production of early pullets, essential to fall and winter egg production, and the early cockerels which may be quickly grown into large meaty roasters.

But, W. F. Priebe, "poultry packer" and "dollar a year man" on the poultry and eggs job of the Food Administration, does not see the matter in this light. He takes the position that the railroads already have enough trouble without adding to their burden. The farms of the middle west have always contributed sufficient poultry and eggs to fill his string of poultry packing houses, and, doubtless, he isn't worried

Winners!

STARKS "Garden King"

1st Cock, Madison Square Garden, 1917-18. At this, America's greatest show, our birds won as follows: Cock — First, Third, Fifth. Cockerel — Second, Fourth. Hen — Second, Third, Fifth. Pullet — Third. Pen — Third. The greatest Garden winning ever made by a Western exhibitor.

STARKS WHITE ROCKS

are truly "winners and workers." The records in the show room and on the nest prove it. Our winning birds are also fine layers. Our heaviest layers are true White Rocks of show quality. No birds on earth have more "pep" and vigor than these bred in the North, where the temperature reaches forty below zero.

Altho our birds possess such all-round excellence, our prices are most moderate. We are offering a number of grand cockerels, hens and pullets and

BIG VALUES IN EGGS

for this season, both in single sittings and larger lots. And our broad guarantee is behind every sale. These eggs carry the blood of our winners at the leading shows and of our high-record layers. They will produce "winners and workers" for you, will enable you to get more fun and profit from your poultry work. You can pay more—you can't get more! Investigate. Write today for that catalog.

STARKS FARM Box 100 STARKS, WIS.

Workers!

STARKS "Wisconsin Belle"

Record, 240 eggs in pullet year. Hens in the same pen with "Belle" have pullet-year records as follows: 247, 247, 246, 244, 244, 241, 240 and 239 eggs. Mated to the son of a 240-egg hen. The finest group of show quality, heavy laying White Rocks ever produced.

TYPEWRITERS

\$10 and up. All makes. Save \$25 to \$50 on rebuilt at the factory by the well-known "Young Process." Sold for low cash—installment or rented. Rental applies on purchase price. Write for full details and guarantee. Free trial.

YOUNG TYPEWRITER CO.
Dept. 533, Chicago

very much about being able to stock up this season. He virtually tells the incubator manufacturers that they will have to wait until the embargoes are lifted in the regular way. It will be remembered that he predicted grain prices after January first at 40 to 50 percent lower than the prices of fall and winter of 1917. He also urged the public to eat less eggs, on ground of feared egg famine, reported 85 percent of cold storage eggs consumed, at a time when eastern cold storage was carrying almost a double stock for the season and poultrymen would be heavy losers if consumption of eggs should fall off more than it already had. He was working for the fixing of unreasonably low maximum prices on storage eggs in New York at about the same time. Also he is believed to be responsible for the maximum prices of storage eggs, which the Food Administration announces it considers as fair wholesale prices for eggs now in stock, viz.: For Chicago, 40 cents per dozen for storage firsts and 41 cents for extras; for Buffalo and Pittsburgh, Chicago prices and a differential of one cent; for eastern seaboard

Do you breed S. C. W. Leghorns?

Would you like to have a fine catalog of your own, handsomely illustrated in colors, but find the cost too much? If so, send for a sample and prices of my special catalog for S. C. White Leghorn breeders. Catalogs in colors from \$7.00 up. THOS. NASH, 542 S. Dearborn St., CHICAGO, ILL.

centers, Chicago prices plus a differential of two cents. It should hardly be necessary to state that, if these prices are forced, eastern poultrymen who put eggs into storage on consignment to avoid losses are bound to lose heavily.

We are still hoping that the Food Administration will soon "see the light" and give a square deal to poultrymen and other food producers. Keeping the price down to consumers may temporarily gain the approval of the buying public, but it does not encourage producers to increase production. Later on, when the real shortage causes the public to feel the "belly pinch," public opinion may quickly change to condemnation, and consumers will be clamoring for food at any price. Then we would not wish to be in the shoes of the well-meaning men who are now so busily engaged in price fixing to please the public and which is certain to discourage production. A man with a full stomach will view complacently many things which he sees differently and which drive him to desperate measures when his stomach is empty and there is nothing in sight with which to fill it.

Things are surely in a desperate muddle just now, and all these difficulties were foreseen—most of them could have been prevented. Will we wake up to save the food situation before it is too late? The time is very short, the growing season for both poultry and crops is close at hand. It is time now to be using incubators and brooders, and we hope that someone in authority will help to speed up the delivery of these very

necessary farm machines. Write your incubator man today; we believe he will be able to make reasonably prompt delivery, and you may be able to help him to speed things up. Tell him what you need in equipment and how many chickens you expect to raise this season. Do it now.

The Baby Chick Industry.

BABY chick hatcheries have been having some rather hard sledding this season. The fuel shortage presented unexpected difficulties which were only overcome by prompt action on the part of the International Baby Chick Association. Then, owing to transportation difficulties, the express companies proposed limiting baby chick shipments to points within 400 miles direct line. This, we think, a big mistake even under prevailing conditions of transportation. If a limit must be placed it should be extended to a radius of at least 1,000 miles from the hatchery. Certainly chicks could be safely delivered that distance, even if transportation gets worse than at present. Strong, healthy chicks, if properly packed and properly handled during shipment, should safely make any journey by express which can be covered within 72 hours from hatchery to customer. We do not understand that the express companies have made any fixed ruling as yet and hope that no limit will be set for distances less than 1,000 miles.

We are informed that the express companies desire to do everything pos-

E. B. Thompson's Imperial Ringlet Barred Plymouth Rocks

are recognized throughout the world as the leaders of all Barred Rocks. Their record at Madison Square Garden, New York, 1918, is without a parallel. (See back cover page for this achievement).

You Want Eggs to Produce the Silver Cup and Blue Ribbon Winners for Next Season's Shows

No other Barred Rock eggs have ever produced the supreme high quality birds as my Imperial "Ringlets." Hundreds of old customers order eggs every year — these eggs have

brought them rich rewards in Silver Cups and First Prizes, and proved the foundation for many a money-making business.

My Imperial "Ringlet" Eggs will Put You in Position to Win at Next Season's Shows

You may raise a single chick worth hundreds of dollars, hundreds of my customers have done this.

My Matings are Unequaled in All America

No such magnificent color and barring can be found on any other living birds. In my Imperial "Ringlet" eggs you get the best First Prize Sweepstakes Madison Square Garden winning blood, which you must have to win in the strongest competition. I want to help every customer get First Prize Winners — they know they get the finest eggs in America and consider it a privilege. You will share with me and have an equal chance of producing the finest First Prize Birds of the year.

MY EGGS ARE THE BEST MONEY CAN BUY — THEY PRODUCE FIRST PRIZE BIRDS

Mr. E. B. Thompson,

Dear Sir: I showed the E. B. Thompson Strain at Charles City, December 18th to 21st, won 1st and 2d Cocks; 1st, 3d and 4th Cockerels; 1st, 2d, 3d, 4th Hens; 1st, 2d, 3d Pullets; 1st, 2d Pen. At Hampton, Iowa, January 7th to 12th. 1st, 2d Cock; 2d, 3d, 4th Cockerel; 1st, 2d, 3d, 4th Hen; 1st, 2d, 3d, 4th Pullet; 1st Old Pen; 1st Young Pen. I think that shows that E. B. Thompson has the stuff.

Yours truly, J. E. Weiss.

From Egg to Egg Basket

It's
not the
chicks
you
hatch
but the
chicks you
raise that
bring the
profit

We have eliminated the "problem" in feeding.

First: Blatchford's Milk Mash will push your little chicks forward with a sturdy, natural growth and you will avoid all loss from *bowel trouble, leg weakness or white diarrhea.*

Blatchford's

Milk Mash
saves the
baby chicks

Blatchford's Milk Mash

—composed of milk, milk substitutes, meat and grains, prepared for easy digestion—should be *every chick's* first feed. Keep it constantly before them until they are three months old, as it *grows, matures or fattens*

Then: by following *at once* with **Blatchford's "Fill the Basket" Egg Mash** the feeding system remains unbroken, and there is no "problem" to solve as to what the "next" feed shall be.

AND I WILL FILL YOUR BASKET

It is the best *starting, growing and developing* food obtainable, carrying all kinds of young poultry safely through the danger periods of early life and assuring a profitable maturity—either for the laying-pen or market.

No fillers, by-products or waste materials being used in its manufacture, every bit is eaten up clean by the rapidly growing birds.

sible to handle the baby chick shipments in a satisfactory manner and that it is expected that fully twenty million baby chicks will be carried in the 1918 season shipments. Shippers are asked to co-operate with express agents to secure prompt service and to insure that customer is ready to receive the chicks immediately on arrival.

Baby chick hatcheries are well supplied with hatching eggs, having contracted with breeders of Standard-bred fowl last fall to insure a good supply. The hatchery men are right on the job and doing their utmost to deliver chicks to aid in the big drive Uncle Sam is making for increased production of poultry. We understand that the United States Department of Agriculture will shortly issue a special bulletin devoted to the interests of the baby chick business. Of course, that will help in the effort being made to encourage customers to "buy more baby chicks."

Now comes a new and interesting development of the baby chick situation. On January 26, 1918, W. F. Priebe, head of the poultry and eggs division of the Food Administration, wrote a letter to the Buckeye Incubator Company in which he said:

"You would be surprised to see the number of letters we have had from people asking the Food Administration to prohibit the hatching of chickens for display advertising, and the shipping of day-old chicks. The statement is made that a great many people buying these chicks do it for the novelty of the thing, and most of them being amateurs, do not know how to take care of chicks, and in reality it is a great waste and should be prohibited during the war.

By this you will see that there are always two sides to every proposition.

"I want to ask you a question that I have asked various others, and it is: *'What percentage of the birds hatched and sold thru stores or shipped as day-old chicks do you think grows up and becomes food?'* In answering this question, I am sure that you will forget any self-interest in the matter, and also please understand that in asking you this I am in no way prejudiced. I am simply trying to arrive at a fact."

Now, isn't that the limit? Most of AMERICAN POULTRY JOURNAL readers will guess that those who are "knocking" the baby chick business to the Food Administration are of the same piece with that little group of "has beens" who, at the Atlantic City convention of the American Poultry Association, in 1913, tried to knife the baby chick men and legislate them out of business. A small group of slip-shod near-fanciers, who blamed the baby chick business for their lessened sales of hatching eggs, when in reality their loss of business was chiefly due to careless business methods and failure to give customers that good service which is delivered by the up-to-date fanciers, and which means satisfied customers and repeat orders. We really did not expect this bogey to rear its ugly head again, but evidently there is no limit to the possibilities of envy and malice in incompetents, who cannot stand to see others prosper where they fail.

Mr. Priebe's question is an interesting one but very difficult to answer. One might as well ask at spring seeding time, "How many kernels of corn will mature a sound, ripe ear?" Novices

usually have exceptionally good luck rearing their first brood of chicks, because they are unusually careful with them. Later on, when they find it an old story to raise a brood of baby chicks, some of them may grow careless and reap the experience which generally follows carelessness. However, the fact remains that beginners are wonderfully successful at chick rearing with the first broods as a rule. It is our firm belief that fully as large a percentage of baby chicks sold and shipped by reliable hatcheries, reach marketable maturity as do chicks hatched and reared on the farm, or back lot, whether by hens or in incubators and brooders.

Chick mortality is a thing we have to reckon with, no matter where or how the chicks are hatched and reared. Every egg will not produce a chick and every chick hatched may not live—Nature does not work that way; she is prodigal with seed, and losses of young life, whether animal or plant, are always considerable—only the fittest survive. Should only 50 percent of the chicks hatched and shipped survive, the work would be well worth while. However, take the season thru and counting all losses, big and little, it is our guess that quite 75 percent of the baby chicks are brought to marketable maturity and made available as food.

We should consider it a great hardship to be unable to buy baby chicks. We buy a good many each season, some near by and some from fully seventy-two hours distant. Of some broods we have raised every chick. We have known of some novices who made equally good records. In other broods our losses have been no greater than

AT LAST A REAL

Safety Hatching-Egg Carrier

Note how each egg is carried in its own compartment, protected by air cushions at the top and at the bottom.

FANCIERS SAY IT'S THE BEST CARRIER EVER INVENTED

U. R. Fishel, the well-known White Rock breeder of Hope, Ind., who probably ships more eggs than any other fancier in America, is going to use them this coming season. J. C. Fishel of Hope, Ind., the White Wyandotte breeder, will also use them. Eugene Smith of Aurora, Ill., breeder of White Leghorns, has placed his order. C. R. Baker, Abilene, Kansas, has also placed his order. Russel F. Palmer of American School of Poultry Husbandry, Leavenworth, Kansas, says it's the best thing for the purpose, and what the fanciers have long been looking for. Artist Stahmer says: "The fact that I have taken the agency for your carrier to represent you at the poultry shows this season is sufficient proof that I consider your carrier the most perfect and safest ever placed before poultry fanciers of America."

Heat Proof Shock Proof Chill Proof Fool Proof

Don't waste your time shipping valuable hatching eggs the old-fashioned way when you can buy **Arminger's Safety Hatching-Egg Carrier**. The best thing ever invented for the purpose. All eggs are protected by air

cushions and suspended in individual compartments, thus preventing all of the eggs from getting soiled in case one of them should be broken. The carrier is constructed in such a manner that accidents of this kind can seldom happen. Made from non-conductive material and prevents eggs from getting overheated on account of being placed near steam pipes and likewise prevents them from being chilled if exposed to cold.

They cost no more than others but are years ahead of them in safety

Write for circular giving complete instructions for packing and prices.

RESULTS

Cincinnati, O., Jan. 30, 1918.
Mr. John G. Poorman,
Tinley Park, Ill.

Dear Sir:
Enclosed please find Money Order (\$30.00) for a White Rock cockerel from your special mating. Kindly give me some information as to his ancestry, as I intend to breed him to some extra heavy laying hens. These hens were raised from chicks purchased from you in 1915 and 1916. Have trapnested them and some of the records are 280, 242, 216, 201, 200—not from the date of their first egg, but from November 1st to November 1st, same as the official laying contests.

Please ship as soon as possible via American Express to Elmwood Place, to be marked, "Will be called for."
J. J. H.

Special Pair Mating—S. C. Reds

RESULTS

Grosse Ile, Mich., Feb. 5, '18
John G. Poorman,
Tinley Park, Ill.

Dear Sir:
Enclosed find my check for \$15.00 for which, with my credit of \$10.00, kindly book my order for 50 Class A day-old chicks.

If possible, I would like to receive this shipment by American Express not later than the 15th of April.

This sure has been tough laying weather for the last sixty days, but you may be surprised to learn that the Poorman Orpingtons have been hugging the 50 percent mark for December and January and have outlayed some White Leghorns which I had given to me last year.

With best regards for the season's success, I am
Very truly yours,
N. A. P.

My 18 Years

of practical poultry experience has been incorporated into my bred-to-lay strains in such a manner that brings forth unsolicited hundreds of repeat orders from customers of many years standing. My catalog contains descriptions of my plant by representatives of the leading poultry publications, reports from many of my customers, and also my methods of breeding, care, and management. It is fully illustrated, and very instructive, and will prove to you that my prices on eggs at 15c and 30c each, baby chicks at 25c and 50c each, and breeding and laying stock at \$2.50 and up, are very reasonable.

Start right, by writing for my instructive catalog today.

It has helped others and will undoubtedly help you.

JOHN G. POORMAN, BOX 100, TINLEY PARK, ILLINOIS, U. S. A.

with home-hatched chicks. Each season we have made it a practice to ship hatching eggs to a custom hatchery, located about twenty miles from our farm, and have such chicks as we needed from these eggs shipped back to us. It is much more convenient than hatching at home and quite as satisfactory. One veteran poultryman of our acquaintance says that he believes that the chicks he buys from a Boston store make a better live of it than those he hatches at home.

It is surprising that anyone would make themselves ridiculous by opposing the baby chick industry at this late day, particularly today, when, as a war measure, there is under consideration the plan of establishing a chain of mammoth hatcheries, for community custom hatching, from Atlantic to Pacific.

The baby chick industry and custom hatching is no new thing. It has been an established success for several thousand years. It is not likely to fall down now, unless we are too ignorant to appreciate the hatcheries in this country and so persecute them that they have to stop business.

In Egypt, mammoth incubators have been in successful use since many hundred years before the birth of Christ. They are being successfully conducted today in spite of the world war. At least Dr. Howard S. Paine, an American traveler and scientist, who was in Egypt during the winter of 1916-17, visited one of these Egyptian incubators at Luxor, about 600 miles up the Nile, and found it doing a good successful business. He made a report on it in July, 1917, AMERICAN POULTRY JOURNAL.

This Egyptian hatchery, of ancient

type, had a capacity of 56,000 eggs at one hatching. He stated that the number of unhatched eggs was small. Other travelers report that these Egyptian hatcheries do business on a community plan, that they exchange a given number of chicks for a certain number of hatching eggs, or charge a low price per chick. The chicks are often carried long distances back into the country, making the journey in small cages on donkey-back. This baby chick business in Egypt, so far as we can learn, has been going on successfully, and in the same fashion, since the ancient days of the great Pharaohs.

Just because some little group of jealous men, or some group of fanatics, are opposed to community hatching and the baby chick industry, are we going to listen to their nonsense? Are we ready to admit that Americans are less clever than the natives of Egypt, who, ever since History was wearing swaddling clothes, have been calmly hatching, selling, shipping and rearing baby chicks and making such a success of it that the baby chick industry of Egypt has lived longer than Egyptian civilization?

Small wonder that Puck, in "Midsummer Night's Dream," said: "What fools these mortals be."

R. C. Rhode Island Red Contest.

ROSE COMB Rhode Island Red breeders are "full of pep," all right. When Hubert Meyer, Riverview Poultry Farm, Klondike, Mo., offered three prizes for best articles on "Rose Comb Rhode Island Reds—Why I Breed Them" to AMERICAN POULTRY JOURNAL readers, he "started something."

Fifty-five articles were received, including Red enthusiasts in Illinois, Indiana, New York, West Virginia, Iowa, Kansas, Pennsylvania, Maryland, Missouri, North Carolina, Texas, Michigan, Minnesota, Ohio, Connecticut, Colorado, North Dakota, Oklahoma, Wisconsin, Tennessee, Kentucky, Mississippi, and Ontario, Canada. Most of the articles were excellent, a few were just brief boosts for the Reds, but not long enough to count as articles. The exceptionally interesting articles will appear in AMERICAN POULTRY JOURNAL from time to time.

Many of the contestants made a point of the good fellowship existing among Red breeders and one said: "There are always a good bunch of fellows to rub elbows with in Red alley."

The prize awards follow:

First Prize. One pair pedigree R. C. Rhode Island Reds, cockerel from an egg out of "World's Champion Pen 59" and pullet from a hen having a record of 230 eggs in one year; value of pair, \$35. Won by L. E. Rauch, a railway postal clerk, of Carbondale, Illinois; best article in contest.

Second Prize. Pedigreed Rose Comb Red cockerel from "World's Champion Pen 59;" value, \$20. Won by George B. Curran, secretary Canadian Rhode Island Red Club, Napanee, Ontario, Canada; second best article.

Third Prize. One sitting of eggs from "World's Champion Pen 59." Won by Carl E. Scott, farmer, Moundridge, Kansas; third best article.

Mr. Meyer has been notified of the prize awards and requested to make delivery as advised by the winners. We congratulate the winners and Mr. Meyer

"The Proven Leaders"

Again Prove their Superiority
by Winning at

Madison Square Garden, New York
January 1st, 1918

First Pullet, Madison Square Garden, 1918

1st and 3rd Cockerel
2nd and 5th Cock

2nd Pen
Best Display

1st and 4th Pullet
1st and 4th Hen

At this great National Show we have won the last three years more points than any three of our competitors combined.

"The Proven Leaders" are the Real "Repeaters"

Last season they won at Madison Square Garden, Chicago Coliseum and New York State Fair, the three strongest shows of the year, 10 firsts, 6 seconds, 4 thirds and best display at each show, besides every special cup offered.

Leaders as Exhibitors—Leaders as Layers

In the American Egg Laying Contest conducted by The American School of Poultry Husbandry, Leavenworth, Kansas, our Pen No. 27 ranks second for the first three months, November, December and January—51 pens competing, all varieties represented. Our pullet No. 273 laid 19 eggs in November, 23 in December and 24 in January, zero weather prevailing. We breed a dual purpose fowl—meat and eggs—as well as one that wins in the show room.

Eggs for Hatching

Our pens contain the World's Best in White Orpingtons. Twelve grand pens are headed by winning males at Coliseum, Chicago, and Madison Square Garden, New York. Book your orders early, we will give "value received." We can supply a number of Baby Chicks in April, May and June. Catalog free.

The Morris Poultry Farm H. RAWNSLEY, Mgr. **Lebanon, Ohio**

Announcement

February 9, 1918.

TAKE this means and opportunity of *announcing* that I have engaged the services of Mr. Charles Hubbard (for 15 years in charge of the celebrated Foxhurst Farms, Lime Rock, Conn.), who will have full charge of my poultry plant.

I have taken over Mr. Hubbard's string of Peerless Buff Orpingtons, which breed will be continued. My other breeds are S. C. White Orpingtons, S. C. White Leghorns and S. C. Black Minorcas. I have been breeding the last three mentioned strains for several years; all of my foundation stock was purchased from the best breeders of these strains in this country and when I purchased them I paid liberal prices, getting birds that were direct descendants of Madison Square Garden prize winners. There are in all about 400 birds in my coops at the present time and the highest compliment I can pay them is to mention Mr. Hubbard's remark when he visited my place with a view of looking it over. At his first sight of the birds he exclaimed: "Say, by George, these birds are fit for fast company right now," and I feel confident that it was the birds as much as anything else that induced Mr. Hubbard to accept a position with me.

A mating list will be ready for distribution in the very near future and I will be very glad indeed to mail one to any and all applicants; incidentally as my plant is conveniently situated, it being only thirty miles from New York City and situated on the Boston Post Road. I extend a hearty invitation to all visitors, who I know will be gladly received by Mr. Hubbard.

HUBBARD'S POULTRY SECRETS

This well recognized book Mr. Hubbard will be glad to mail to any one post paid on receipt of \$1.25, and I personally *guarantee* that after the book has been read, if it is not entirely satisfactory I will return the money.

I was one of the early purchasers of a copy of this book and I consider that it contains more *horse sense* regarding the Mating, Growing and Caring for Poultry than any other book I have ever read.

Robadel Poultry Farm

A. C. ROBERTSON, Prop.

COS COB, CONN.

BABY CHICKS!!

From YOUNG'S STRAIN S. C. WHITE LEGHORNS, 200-285 egg layers. The World's greatest laying and exhibition combination. Government tests show Leghorns lay more eggs and eat less feed than other breeds. If you want eggs come on the right side of the fence.

Grade A pens contain my best females, 200-285 egg blood lines, mated to sons of Madison Sq. Garden, New York, 4th cockerel, 4th cock, 1917, and 4th cock, 4th cockerel, Boston, 1915. Baby chicks from these pens \$20 per 100, \$12 per 50. Grade B pens contain same quality as above, only short on show points. Baby chicks from these pens \$15 per 100, \$8.50 per 50. I guarantee safe delivery of chicks anywhere in U. S. east of Rocky Mts. Eggs are one-half the price of chicks. Catalog telling of my methods free.
David T. Farrow, Peoria, Illinois.

"BRED TO LAY"

on the success of this contest. It is a very fine showing for Rhode Island Red breeders in these strenuous times when we have so many things besides our poultry work to occupy our thoughts. Winning articles appear in this issue and others will follow as we have space for those of most human interest.

March.

ACCORDING to the almanac, spring begins on the twenty-first day of this month. To most of us it will be particularly welcome. For a large part of this country the winter, now passing, has been the most severe since the famous "Eighteen hundred and freeze to death," the winter of the great cold nearly a century ago. Yet the whole country has not suffered and some parts of the West have been specially favored. A correspondent in northern Idaho wrote us that he picked roses in full bloom in his garden on Christmas day, and that up to the middle of January it was the mildest winter he had experienced there. Happily for all of us, spring should soon be here.

This should be a very busy month for our readers. The broods of early chicks will require careful attention to keep them comfortable and growing rapidly. There should be many more hens set, and the incubators should be kept running to full capacity. Hatching egg and baby chick orders should be speeded up. There is plenty of work to do and there will be more of it soon, with long days full to overflowing with demands for our best efforts, when the spring rush comes close on the heels of milder weather. There will be no more idle or vacation days, enforced or otherwise, until the spring broods are well started and the crops are coming along in good shape. The sixteen-hour day will soon be the rule for poultrymen, and some of us will be lucky if we are able to clean up our day's work between 4 a. m. and 10 p. m.

The appeal to "raise more poultry" is growing more urgent every day. We should all raise what we can. But don't let enthusiasm run away with your better judgment. A small flock well reared is worth far more than a big flock half fed and half cared for. Grow only as many chickens as you can feed well and properly care for. Quality counts most, and a well-kept flock in good flesh will do far more to help out the food supply than a big flock of scrawny, rangy, half-fed wasters. "Don't bite off more than you can chew." Do not start something you can't finish. But do keep busy and produce all you can of best quality chickens. Get your neighbors interested in poultry keeping and help them to make a success of it.

Be Sure of Big Money-Making Hatches This Year With the Great Mankato Special

Which Comes Quick by Fast Express, All Charges Paid by Us, to Practically All Points

HERE is the dependable time-tested quality Mankato Incubator—the old standby of thousands of successful poultry raisers. Built with wonderful new improvements, which have been carefully tested on our great poultry farm, and are backed by our strong guarantee and many years of experience in incubator building in the Northwest where you have simply got to have a good machine if you want big successful hatches in cold weather, yet our machines are so simple and so easy to operate that a child can make big successful hatches with it.

6 New Features

Large Oil Tank—one filling to hatch saves work and keeps lamp from going out and spoiling the hatch. Extra strong egg tray, the kind that don't wobble when taken out. Has triple walls, heavier insulated Redwood case construction. Double glass door. Thermometer always in sight. New Double-Sure End Regulator, which leaves a clear table top. Great combination Double Heating System—Hot Water and Hot Air. Better than ever with more heat radiation surface. Wonderful new automatic ventilating system. No adjusting, a real chick life saver.

Express Prepaid

to practically all points. Here is the incubator you want, a high grade hatcher direct from factory to user at wholesale price, no dealer, no middleman's profit. We divide the melon with you. Why risk your valuable eggs in an untried or cheap machine, when you can get this time-tested Mankato Special with all latest improvements at factory prices? Write for our money-saving offer on this machine. Go in for a money-making success with the old standby that is now making money for thousands. Write today.

Large New Book FREE

Be sure to send for this valuable book "Pointers on Hatching," telling all about this wonderful hatcher now used by thousands of successful poultry raisers, and how you too can make more money by raising chickens than ever before. Take our advice that this year is going to be the biggest poultry year the world has ever seen—never has there been such a wonderful opportunity to make money from poultry—and a small investment will start you. Read this letter, **PLEASE!**

Hampton, Minn., Aug. 1, 1917.

I will tell you what wonderful luck I had with your new 1917 model incubator. It certainly works fine. Had a 200-egg incubator and hatched 180 lively chicks. People told me that incubator chicks would not thrive as well as others. I must say they can come and see for themselves that they are far ahead of the chicks raised with clucks. I certainly feel proud of my incubator and also my little daughter of 10 can run it alone next year. This is my first experience with an incubator and must say again was very lucky with the machine. Must say machine is so well patented that it really is so simple to run and especially the large oil tank which certainly is a boon to the machine. My first hatch was fine—180 lively little chicks. Second some better. I certainly cannot praise the Mankato Special enough. I would not sell my incubator for double the price if I were not to get any more like it. Many of my friends are bound to get one like it next spring. I broke the record all around here with my Mankato Special. Followed the direction book very closely and you can't fail. Would advise any person interested in an incubator to be sure and get the Mankato Special—large machine. Don't buy too small a machine, as the large one only needs the same amount of care and not much more oil and you will have so many more little chicks. Hoping everybody will have as good luck as I had this spring, I am, Respectfully yours, MRS. NICK MIES.

MANKATO INCUBATOR CO.
MANKATO Box 752 MINNESOTA

Dr. Woods' Notes and Comment

Tomorrow's fate, tho thou be wise,
Thou canst not tell nor yet surmise;
Pass, therefore, not today in vain,
For it will never come again.
—Omar'Khayyam.

* * *

Clean up the incubators after every hatch. Good old-fashioned yellow soap and hot water, and all parts scrubbed clean, is as good a means of disinfection as any, as a general rule. Most so-called "disinfectants" have more power in their smell than in anything else, and doubtless this comforts the user. Keep incubator lamps clean, filled, wick trimmed and burner bright. Start each hatch with a new wick. Use same care with brooder lamps and put in a new wick every month.

* * *

Keep all the good, motherly, broody hens busy this month. Hen-hatched chicks in March and April can be reared with very little trouble and usually make good quick growth.

* * *

Be careful in feeding. There is much spoiled, heated, musty and moldy grain in the market this season. Such badly damaged grain is not safe to feed to small chicks and may cause heavy losses. If the chick food is off-color, looks bluish or greenish, and smells musty or moldy, do not buy it.

* * *

Keep brooders clean, litter them with hay-mow chaff, cut clover or cut alfalfa, after sanding the floor with dry, clean

sand. Keep the brooders well ventilated and air and sun them at least once a day. Do not pay more attention to the thermometer temperatures than you do to the comfort of the chicks—it is chick comfort that counts for successful rearing.

* * *

Both crushed oats and rolled oats make fine food for small chicks. Steel-cut oats are good. A daily ration of clean, bright sprouted oats, fed in a small box where chicks can scratch them over, makes an excellent exercise food. Remove the wilted left-overs each afternoon and give a new supply of fresh sprouts in the morning.

* * *

Baby chicks do not require a great deal of food the first three weeks, but what they do get should be good, sweet, clean and wholesome. It is apt to prove wasteful to attempt to economize on foods for baby chicks the first three weeks. Cooked cereals, particularly boiled cracked rice, make excellent variety food for small chicks. A little will go a long way.

* * *

For first food for small chicks, we prefer hard-boiled eggs, rubbed up crumbly with dry cracker or bread crumbs. It is not necessary to moisten the crumbs, and better not to.

* * *

A good chick food can be ground at home in a grinding mill. Four meas-

ures of sound old corn, two measures of heavy white oats, two measures of heavy barley and one measure of good quality feeding wheat, makes a good mixture for grinding into chick food. Grind to chick food size and sift out hulls and meal. The meal can be mixed with an equal quantity of wheat bran and about 5 percent of fish meal or fine beef scrap and used as mash for the chicks. This season, except where one can secure an ample supply of dependable ready-mixed feeds, known to be sound and sweet, we may have to plan our chick food mixtures according to such supply of grains and feeds as can be obtained in local markets. Business has been so disorganized by transportation difficulties and conflicting regulations, that each community presents a problem of its own which the poultry keeper must solve for himself.

* * *

Good, sweet, clean fish waste, well scalded or boiled, makes excellent food for growing chicks. If you live near the ocean you can doubtless arrange with the small boys for a fair supply at reasonable rates. Near rivers, ponds and lakes, the same plan will work well.

* * *

We have received from M. C. Wilson, Oil City, Pa., a very welcome supply of golden sugar corn, a special strain of his own raising. He says that it is very fine for the table and that it grows with red stalks and red-ribbed green leaves. We are going to plant a piece of garden with this corn and give it the best of care. We are looking for some good-sized, rosy-skinned, early potatoes—the kind that cook up fine-flavored and mealy. If any reader has

Money-Making Leghorns

That fairly describes the stock from the Lord Farms. 90 percent of the good Leghorns in the New England States originated from our plant, and there are very few towns in New York State, Pennsylvania, or New Jersey that hasn't got a good thrifty poultry plant depending on our strain of Leghorns for their success. We have furnished the foundation stock during the past seven years to scores of well known farms, that are today doing a good business in day-old chicks and hatching eggs.

Standard American Bred Leghorns

No English blood in our stock. Our strain lays good sized market eggs, that always bring top prices. They are larger and more rugged than the exhibition American Leghorn. We have trapnested our stock for several years, and every male bird on our plant is a son of a 200 or better egg producer. Another good feature of our Leghorns is their stamina and vitality. We have received thousands of testimonials proving the extreme vigor of our stock.

Day-Old Chicks and Hatching Eggs

Extra Special 200-Egg Stock

Every hen in this grade has a record of 200 to 265 eggs. Chicks, 50c; eggs, 25c. We can take your order for 25 to 10,000 chicks at one shipment. Remember we are the largest breeders of W. Leghorns in the Eastern States. Write for catalog and complete price list with full description.

LORD FARMS, Inc. Box 240-M METHUEN, MASS.

A National Proclamation

The Greatest Incubator

BARGAIN

Ever Offered

For years we have manufactured the good old reliable National Incubator. For years we have successfully started thousands in the profitable poultry business, and during all these years we have longed to build a bigger, better, simpler machine to sell at a price everyone can afford. At last we have accomplished our desire. Our 1918 National with all the latest features and improvements is a revelation to the poultry world. Think of it—165 Egg National Incubator for only \$10.00, freight prepaid—On 40 Days Trial—Backed by Our Money Back Guarantee. Your hard-earned dollars cannot buy greater hatching value. You cannot equal this exceptional offer anywhere. Take no chances. The National is simple, compact, durable, economical—and remember, it is

Built on "Uncle Sam's" Specifications

as outlined by the U. S. Dept. of Agriculture in Farmers Bulletin No. 236. We want to prove to you that the old reliable National Incubators are the best built, best equipped and most durable machines made for the money. Here's how we built the National. Hot water heating plant—Double wall—Dead air space between—Double glass doors—Special high grade cold rolled copper tank—Asbestos lining—Famous National regulator and boiler—Self Regulating—Self Ventilating—Safety lamp—Tested thermometer—Metal case (which makes it sanitary, air tight and non-shrinkable). No extras to buy. Not a cheap tin covered machine. Easy to operate. Will not warp or shrink. Pays for itself many times in one season. With proper care will last a lifetime.

165 Egg National Incubator

The National Brooder Better Than The Hen

Protects the tender chicks from all harm. Keeps proper temperature—properly ventilated—strong—durable. Sent prepaid east of the rocks.

165 Egg Incubator Both \$12.50
165 Chick Brooder

ONLY \$10

Freight Paid East of the Rockies

We have built thousands of incubators, but never have we offered such amazing value. The National contains every modern operating convenience. We guarantee it to be faultless and will replace any defective part for five years. It is the greatest incubator value ever offered. To prove it to you we will send it for

40 Days Trial

12 Year Guarantee

What Users Say—

The Incubator you kindly sent the Agricultural class of the Carretville High School proved a wonderful success. The simplicity of putting the parts together; the ease of regulation; are virtues which speak for themselves. We recommend your machine to anyone. G. H. S. Agricultural Class, Ohio.
Pleasurship at once 165 egg machine. My other one is O. K. Got fine chicks my first hatch. Harry Neff, W. Va.
I find everything just as you advertised it. Mrs. M. G. Potter, Mich.

Why Take Chances

Safety Lamp

Cannot explode or ignite—reliable, unbreakable. Produces steady blaze without smoke or fume. A sputtering, tuming, unreliable lamp will spoil your hatch and may cause fire.

To save time you can order direct from this advertisement. You risk nothing. Try the National for 40 days—compare with your neighbor—put it to the greatest of all tests—THE HATCH. If you are not satisfied it is the greatest incubator bargain you ever saw return it at our expense—we will promptly refund your money. We know you will not return it after your first big hatch of strong healthy chicks. You are absolutely safe. We deal fair and above board—no red tape. The publisher of this paper knows we will stand back of our word.

FREE 1918 Poultry Book

No matter whether you hatch 10 or 10,000 chicks you need this great book. It is far more than a catalog. Tells all about the care of eggs and chicks. All about this great hatcher and the men behind it. Worth dollars to every poultry raiser. Just the thing for beginners. Don't fail to get it when a postal will bring it. Send postal today.

SEND ORDER DIRECT

This is the Greatest Incubator Opportunity You Will Ever Have

Use it the year around. Its perfect construction, simplicity, wonderful heating plant and metal covering combine to give it the greatest hatching value. This big metal covered machine is not to be classed with cheaply built machines. With proper care it will give you years and years of faithful service. Comes to you set up ready to run with egg tester and book of instructions. Order now and save time—start hatches early—early chicks bring the most money. Send postal money order, bank draft or certified check for \$10, (\$12.50 for both incubator and brooder. Machines will be shipped day order is received so don't delay.

NATIONAL INCUBATOR COMPANY
Box 162 Racine, Wisconsin

OUR MONEY BACK Guarantee Protects You

Take no chances, the hatching season is too short. This dependable Hatcher is the largest, simplest and best machine on the market for the money. Money cannot buy greater hatching value. You cannot fully appreciate this wonderful machine until you have tried it. The National gets big hatches when days mean dollars. Order this dependable hatcher today or send for big book and read what users say.

Galloway's Help

for **Poultrymen** When feed is high and labor is scarce—save money with Galloways

Engines, Feed Mills, Corn Shellers

Let a Galloway Engine pump your water, run your feed mill and shell your corn. These are times that call for greatest economy and Galloway power is one sure way to economize.

Sold direct from factory at low prices

Get My New 1918 Proposition

Selling direct from factory is the most economical way of distribution. That's my plan, which saves you big money. Read my New 1918 Book. Get the latest engine facts. Learn how Galloway saves you money on the best engine built.

ENGINES

Light Work Models, 1 1/2 to 6 H. P.

Galloway Engines are for all kinds of light work—pumping, running corn sheller, feed mill, or saw rig. Portable and stationary. Made of superior materials by skilled workmen; every part standardized and interchangeable. Uses any fuel. Develops way above rated horsepower. Large, heavy, counterbalanced flywheels. Make-and-break ignition; never misses fire. Easily started. No cranking. Frost-proof and fool-proof.

Feed Mills—Corn Shellers
I make two sizes of feed mills—8-inch and 10-in. burrs. Work perfectly, grind fine, with regular flow. Big capacities. My Corn Shellers are self-feed—handle any corn—run easily, with big capacity. Strong, durable and wonderfully simple.

FREE BOOK. Read about Galloway Engines and other Galloway implements that sell direct. Don't wait. We ship from near-by points to save you freight. Send today for FREE book.

a surplus of this kind of seed, we would appreciate a few of the spuds for trial in our garden. * * *

Most of us have a good deal of curiosity about the much-talked-of Russian Bolshevics these days. We wish that every reader could read the article, "What Is a Bolshevich?" by Charles Edward Russell in February *Hearst's*. It is a wonderful article and it is evident that Mr. Russell knows by personal experience what he is talking about. He says: "To the end of time mankind will probably have reason to lament that in the year 1917 the American did not understand the Russian and the Russian did not understand the American. * * * Probably we can understand the Russian better than anybody else can understand him, and we ought to do it. He is the worth-while man of the coming generations." Look up the article and read it.

Dr. Sanborn has made his first trip to Florida in winter and has returned home full of enthusiasm, with a very severe attack of the "Florida land fever." He wants to locate there right away, and to hear him talk about the country one would think that dollar bills grew on bushes, you could pick silver quarters from the nut trees, and gold eagles in the citrus orchards. He says, "There is only one Florida," and we believe him to the extent that winters there are undoubtedly very beautiful, and that we would like very much to own a winter home there. But when the good doctor gets to spouting about poultry keepers who are making a profit of \$1,000 a year on 500 hens, this past 1917 season, and about \$60 profits from the yield of a single nut tree planted for shade, we suspect that he has a very severe and genuine attack of "Floriditis." We have seen many people so affected, especially those who have reached a period of life when the severe northern winter becomes a hardship instead of a pleasure. We recall a friend who had a similar attack of "land fever" on spending a winter in California, and who plunged in California real estate while the enthusiasm was at its height, but she did not like her purchase after better acquaintance with it and sold out at a heavy loss. Any warm climate looks mighty attractive in the winter season to the man from the North, and there are desirable homes to be had in both of the states named, but it does not pay to buy in haste when filled with glow of the "land fever." Dr. Sanborn returned to the North and arrived in New York City during the coldest spell of the past winter, when the fuel famine was making itself felt. We do not wonder that the Florida he had just left seemed like a sort of "seventh heaven" to him. However, if we were buying land anywhere on earth to make a farm home, we should want to spend at least twelve months in the community before buying, or at least get pretty well posted on local conditions at all seasons of the year.

We have had a very severe winter in Massachusetts, hard storms, much snow, and long continued cold. We had more than one week of zero weather; there were periods when the mercury did not rise above zero for several days at a time, and one night it touched 28 degrees below, while 10 to 14 degrees below was too common for comfort. Dur-

Everlay Brown Leghorns

It pays to keep Brown Leghorns. Mrs. Russell, of Missouri, made \$1,970 last year from 365 hens. But it takes good stock. Vow to get a start of the best this year, direct from EVERLAY Farm, America's greatest winning-laying strain. 1-2-5 cocks, 1-2-3-4-5 cockerels, Madison Square Garden; champion males, Boston, Cleveland, Chicago, New Orleans; a 1 head pens. Eggs, \$5 per 15 and up. Farm flock, \$10 per 100. Safe delivery guaranteed.

ing the entire winter the family spent the nights on our open-front, outdoor sleeping porch; the youngsters could not be induced to sleep indoors when it was suggested to them, during the long spell of zero weather. They have been comfortable, healthy and happy. Our poultry has, as usual, occupied the semi-monitor-top open-front houses, not a curtain of any description was used in these houses. The hens and pullets have been unusually productive, even the long continued cold spells have not caused any noticeable check in laying. Frosted combs have been comparatively rare among the males and none at all among the females. We are located on the shore of the coldest and windiest lake in this section and but three miles from the ocean. It, therefore, amuses us to find that a veteran poultryman friend of ours, who has a bleak hill-top poultry farm on the shore, with his poultry houses on top of the hill and nothing between them and the North Pole but the air and Atlantic Ocean, is disposed to disbelieve in open-front poultry houses and thinks that, maybe, in severe winter weather, artificial heat in the poultry house, to take the chill off, would be a good thing.

There are no really modern, practical open-front houses on this poultryman's plant; most of his buildings are rather out of repair, and about the nearest approach to open-front houses on the place are a few wire-fronted A-shaped houses with burlap or other curtains. There is probably quite a good deal of ventilation, however, as we should judge that the sea breezes would find little to hinder them from blowing thru the buildings. Such houses do not afford the protection that is provided in a deep open-front house that is tight on three sides and roof and that is not drafty. This poultryman, too, has always carried full-feathered, heavy fowl, but this season has a good many Leghorns. In spite of the fact that he has been tying up some of his best birds in bags, on severe nights, to protect their combs and wattles, he has had a good deal of trouble with frozen combs, wattles and toes. He has also been using a heated room to protect some of the male birds. We are inclined to believe that the treatment did not help matters much and only made the birds more tender and more likely to freeze in day time.

According to old-timers, this has been the most severe winter, here for forty years, and a weather reporter claims that the records show it to be the worst winter since 1826. However that may be, it has been cold enough, with plenty of long zero spells. We had a week of similar weather in January, 1914, when the mercury registered zero most of the week and hit 17 below one night and 28 below another. We had a lot of big-combed birds in open-front houses that winter and had very little trouble with them. We have wintered flocks of both American and English Leghorns in these modern open-front houses, with not as much difficulty from frosting as with birds in closed houses. Frost-bite is often a matter of condition. If the bird is a little off condition, it is more readily affected. We believe that more severe cases of frostbite occur from exposure to wind and cold in the day time than when the birds are snug on the roosts. Warm drinking water is a fertile cause of liability to frostbite. The birds get their wattles wet and scatter

BABY CHIX

MILKOLINE

We all know how the small flock of chicks kept by the farmer's wife thrive and grow—no sickness—no trouble. Why? She feeds them skim milk—buttermilk—sour milk, and you can see them grow. It is impossible for everyone to have a home supply of milk products for their chicks. **Milkoline** solves the problem. It is made from pure, fresh buttermilk, modified and condensed for cheap shipping and easy handling. Just mix

1 Gallon Milkoline and 50 Gallons of Water

Riley's Barred Plymouth Rocks

The Strain that Produces Winners for My Customers

The hatching season is again here and you, of course, are planning to try and raise the finest birds possible. You naturally will turn to the breeder who you know has the stock, but your chief consideration will be the breeder who you know will sell you eggs from his very best stock. I will positively sell you eggs from every pen I have on my farm and all my pens are carefully listed in my Mating List for you to make your selection. My customer's records for the past 15 years prove that what I say is true, and they have hatched first and second prize winners at such shows as Madison Square Garden, Boston, Chicago, Philadelphia, Detroit, Buffalo, Guelph, Canada, etc. No other breeder of Barred Rocks can make this claim. The past season was no exception and many winners were hatched from my eggs.

The finest pens I have ever mated up are in my yards this season, all headed by proven sires or their line-bred sons. Send for my Mating List and be convinced that when you buy eggs from Riley you are: Buying from the best strain in the world. Buying from a man that has proved he sells his best. Buying from a man that does and will sell you his best. The opportunity is offered you and you will make the mistake of your life not to seize it. I have a few choice exhibition cockerels for sale at a bargain.

Henry D. Riley Box B Strafford, Chester County, Pa.

Eggs Baby Chicks Eggs

Yes, those peerless champions that startled competition by absolutely proving their superiority over all others at the **Greater Chicago Show, 1918**, (the American White Plymouth Rock Club Show), by winning every first, every second, every third competed for, all specials, championships, and grand championships galore are now mated and will keep the

Halbach Strain of White Rocks "The Proven Leaders"

in advance. We are offering both eggs and baby chicks from these and other classy birds. Write today for our special free Mating List. See how we can serve you. You can share with the greatest quality ever produced. Eggs \$3, \$5, \$8 and \$12 per 15.

H. W. Halbach & Sons R. R. 1, Sec. B. Waterford, Wis.

P. S.—A very choice collection of stock left at prices you can afford to pay. Write your wants fully. Let us help you make your birds pay.

the water about with head shakings; this wets down a number of birds besides the one drinking. Wet plumage, wet wattles and wet combs will freeze quickly. Exposure out of doors, or in a very drafty house, to chilling wind will invite frostbite. We always use snow in place of drinking water in extreme cold spells, if we can get the snow; it slakes the thirst of the fowls, they like it as well as water or better, it does not check egg flow, and it is less likely to wet the birds and result in frosting. We are still "from Missouri" when it comes to heat in a poultry house or the abandonment of open-front houses.

* * *

Back-lotters and others who have a surplus of eggs this spring season will be wise to keep the surplus and put the eggs down in waterglass. We would not sell the eggs if you can preserve and use them. Next fall and winter those surplus eggs will prove very desirable and useful, if properly preserved. We do not believe that eggs will be plentiful next fall and winter. Preserving eggs in waterglass is easy. We use large stone crocks, glazed ware, four-gallon size. These are cleaned thoroughly, scalded, and allowed to cool. The eggs are packed in the crocks, just as they come from the nests, using only clean sound eggs—a cracked egg may rot and spoil the whole lot. The waterglass solution is poured over the eggs, using enough to have the top layer of eggs about two inches below the level of the solution. To make the waterglass solution, mix one quart of liquid waterglass with ten quarts of water. The water should be boiled and then cooled before mixing. Be sure that the solution is cold before using to cover the eggs. Be sure that the eggs are clean, fresh and sound. Our waterglass preserved eggs have kept in splendid condition all winter. We do not use them for any but cooking purposes or as scrambled eggs, as we have plenty of new-laid eggs for boiling and frying. Before attempting to boil a preserved egg, be sure to puncture the large end with a needle, otherwise it will burst.

* * *

When eggs shipped in from a distance fail to hatch, do not be in haste to blame the breeder who sold them. There are many mishaps which may happen to eggs during transit that will spoil them for hatching purposes and may prevent them from even starting. Common transportation troubles with egg shipments are rough handling and breakage, also overheating from being placed near hot steam pipes or heaters. We have known some eggs to be partly cooked in transit.

* * *

It is all very well to feel good over the fine egg record of some phenomenal layer, or a highly productive flock, but we should remember that, to be fair with the producer, the consumer should pay a price for eggs based on the production of the average hen—and he should pay production costs plus a fair and just profit.

Readers Experience Department

Mating Blue Andalusians.

Editor American Poultry Journal: Not seeing anything in regard to Blue Andalusians and their breeding, I have decided to ask you to help me out. I have had considerable experience breeding several varieties of poultry, but no experience with Andalusians.

I bought a sitting of eggs from a Western breeder and paid a good price. Hatched eleven good strong chicks. As they developed, four of them were blue, two were black, one was blue and black, two were blue and white, and two were blue and a light salmon color. I suppose those other than the four blue ones are "sports," or four out of eleven were O. K. and seven were "sports." Is this a good, average, or poor percentage?

Which is the best way to mate these pullets, with the blue cockerel or the black one, as I saved both? Which one will give the lowest percent "sports"? Will the pullets, namely, the black, blue and white, and blue and salmon, be all right to breed, or must only the blue pullets be used?

I have heard many stories in regard to mating this variety, but not by one who is of authority. Any information in regard to Blue Andalusians will be welcome.

Cobleskill, N. Y. Wm. M. Walker.
[Note.—The following reply is from Walter J. Coates, Secretary of the Blue Andalusian Club of America, East Calais, Vermont, and will interest all fanciers of Andalusians. This breed is one of the oldest, is classed among the thoroughbreds, and will always provide entertaining and profitable employment for the real fancier. Andalusians belong to the Mediterranean class, are midway between the Leghorns and Minorcas in size, are remarkably fine layers of large white eggs. They are hardy, grow rapidly, and possess excellent table qualities. The Salmon Breasted Blue Andalusian, originated by Mr. Coates, is a very interesting variety since it more nearly approaches the color scheme of the Blue Bird

than any other variety of domestic fowl. Could the combination of blue and salmon be intensified to more nearly approach the Blue Bird coloring, it would indeed be a wonderfully striking fowl for the fancier's yards.—Editor American Poultry Journal.]

Editor American Poultry Journal: Your letter at hand, enclosing letter from Wm. M. Walker, Cobleskill, N. Y., who wants information relative to the proper mating of Blue Andalusians and kindred subjects.

Being vitally interested in this subject myself—both as Secretary of the Blue Andalusian Club and as a breeder of this variety of about eleven years' experience—I am pleased to answer.

The Blue Andalusian—the one of the oldest and purest breeds in existence, being used, on account of its unmixed ancestry, for expert biological and inheritance research work in many leading college experiment stations—is an anomaly among other breeds so far as relates to its behavior in the breeding pen. This arises from the fact that its color, unlike that of other breeds, is composite. Blue is not a natural color in the realm of domesticated fowls; and, while it exists in nature, as exemplified in the plumage of many wild birds, it is doubtless even there a result of the accidental mixing of natural colors. So far as the best breeding experience can teach us, blue plumage—as in the Andalusian—is due to a carefully planned combination of the three following colors: Black, white, and red.

But since black is a dominant color, while white is a recessive or negative one, it would become necessary—in creating a blue color scheme—to first break up the potency of the black pigment by mating it to another potent color, viz., red. Then by crossing this offspring of a black and red mating to a white color scheme, one ought to secure a resulting fowl of blue color.

We come then to Mendel's law of heredity, which—in the breeding of Andalusians—is de-

FIRST PRIZE COCKEREL, BOSTON, 1915
BRED AND OWNED BY D. W. YOUNG, MONROE, N. Y.

∴ I HAVE NO OTHER BREEDS ∴

Add another phenomenal win at the Madison Square Garden Show, January 1st, 1918:

- 1-2-3 Cocks 1-4-5 Hens 1-3 Pens
- 1-2-3-4 Cockerels 2-3 Pullets

AND EVERY SPECIAL PRIZE OFFERED

The one strain that has made good. This is the eighteenth consecutive year that I have won best display and nothing less than 3 firsts and from that to every 1st, 2nd, 3rd, 4th and 5th. This is a record never accomplished by any other breed or breeder in the world. Young's Strain has outclassed itself in quality this season. My birds have never been so superb or shown such perfect health and form. They have won 1st prizes in every state in the Union and in every country in North and South America. This strain is acknowledged thruout the world as being the standard for all the Leghorns and the leaders of heavy layers. They have always been bred and selected for heavy laying alone and the show specimens have been chosen from the layers. This is the only original line-bred strain of utility and exhibition Leghorns in America today. Why not come to headquarters and get the best? Hundreds of grand cockerels that will improve your flock for utility and exhibition purposes for sale at reasonable prices.

terminative of all results to be obtained in the mating of this breed. Mendel's law may not always hold precisely true in every mating of Blues; but it will always hold approximately true. Some variation is doubtless due to the suppressed red pigment in our blue plumage, and some variation must be allowed in favor of the dominating black pigment. Blue is the recessive or resultant color—not the original or dominant one.

Blue mated to blue is supposed to produce 50 percent blue chicks, 25 percent black, and 25 percent splash white. "A splash white" is a white bird having splashes of blue or black feathers interspersed thruout its plumage.

Three distinct matings—the three matings preferred by our best exhibition fanciers—belong to the category above given of blue mated to blue.

1. Standard exhibition blue males mated to standard exhibition blue females. Ground color should be clean and lacing distinct in every section of birds so mated. Also in the two following matings.

2. A male of dark even blue ground color and distinct wide lacing, mated to females of very light blue ground color and narrow lacing.

3. A male of light even blue ground color and narrow lacing, mated to females of very dark blue ground color and heavy or wide lacing.

Black mated to splash white is supposed to produce approximately 100 percent blue offspring. This mating is much used and preferred by the breeders of utility Blue Andalusians, but is in some disfavor among many fanciers, because the resulting offspring are apt to lack in evenness of ground color and in uniformity of lacing. The combinations used are:

1. A splash white male mated to black females.

2. A black male mated to splash white females.

The breeder should, of course, be careful to select specimens of proper shape or type for his breeding pens, remembering that "type makes the breed, while color makes the variety."

The occasional "sport" offspring that shows salmon brown, or red, or golden brown, in plumage should not be used in the breeding pen by a novice; and, in fact, the main value of such birds consists in the variation in color which, when handled properly by an expert breeder, often results in the creation of a new variety. I have, myself, been experimenting along these lines for several years and I have perfected a strain of Salmon Breasted Blue Andalusians which are breeding remarkably true to color. I also have a Partridge variety in the making.

Those interested in Andalusians, for the very low expense of one dollar membership fee, can become members of the Blue Andalusian Club and thus receive from authoritative sources any further information concerning this breed that they may desire.

East Calais, Vt. Walter J. Coates.

Favors the Dominiques.

The Dominique is the oldest American breed—much neglected, yet still here. Just now in these days of high cost of living, the Dominique will find a place in the front ranks for they will produce more eggs and meat at less cost than any breed I know of.

I have been breeding Dominiques for the past five years and find them the best all-purpose fowls, being especially well adapted for the farm and the back-yard poultry keeper. Double mating is unnecessary to breed show birds of this variety. I select my best birds for the breeding pen and rarely have more than 5 percent culls in the offspring. The Dominiques keep up their size without extra forcing. I have tried other varieties and could not get 10 percent good fowls, many of them difficult to keep up to Standard weight.

The Dominiques breed true to color, size and type with plain common sense feeding. I am now feeding oats in the litter in the morning and corn at night, all they want to eat. I do not measure out a given quantity, as sometimes they eat more and sometimes less, according to the weather and how they are laying. I feed cut bone and greens as often as I can get them and they appear to relish these more than anything else.

This past winter I have kept a flock of old birds, some of them three years old, and they have given me a 40 percent egg yield from

White Plymouth Rocks IN THE SOUTH

I have 9 hens with records above 200 eggs and 3 males from 200-egg hens that I will sell for \$75.00; or 3 hens and 1 male for \$25.00. Here is a grand opportunity for someone.

HARRY McPEEK R. F. D. 1 Moweaqua, Ill.
Formerly McPeck & Sparling

Mention the American Poultry Journal when writing to advertisers.

November first up to the present date (January 19). I am getting a 50 percent egg yield from pullets which started laying about Christmas time. The Dominiques are small eaters, but I have to admit I did not make from \$3 to \$7 a hen profit during the past year, as some claim. I have been selling eggs all winter for 60 cents a dozen. Corn is now \$4.50 per hundred pounds, and oats are \$2.10 for a seventy-pound bag. I figure I made \$1.73 per bird over feed cost the past year.

The Dominique is a very good mother, yet is easily broken up if not wanted for hatching. I use open-front coops. The pens are 8 x 18 ft. and the front 6 ft. high. The front is closed up to a height of 3 ft. and the other 3 ft. covered with wire the entire length of the house. I have only had one Dominique with a cold since I began keeping them five years ago. I find the first hatched chicks to be the strongest and best. It is very rare to have early hatched chicks die off as later ones sometimes do. I believe early hatching pays in more ways than one.

The Dominique has not been favored by widespread popularity as many other breeds have been, perhaps because there is not so much money back of them, yet I believe that in these days when true worth must come to the front, the good old Dominique will come to be known and bred for its great economic value as a farmer's or back-lot fowl.

Wortendyke, N. J. D. Baker.

Profit in Poultry.

Since the middlemen are taking the lion's share of the profits in poultry keeping at the present time they are aiding in driving individual families into raising their own supply of poultry in the back yards. Any man with a small back lot or village yard can raise and care for from twelve to twenty-five chicks, and keep over as many adult fowls, and by so doing cut down materially household expenses while at the same time providing one of the best foods for his family.

Poultry meat is at the present time the cheapest meat on the market. I have just bought beefsteak at 68 cents a pound. In the same market chicken is selling for 40 cents and fowls for 35 cents. Why this great difference? Don't lose courage, boys, the time will come when these matters will be righted.

Natick, Mass. I. K. Felch.

Editor American Poultry Journal.

Dear Sir—Frequently seeing the question asked as to how long hens should be parked with the male before using the eggs for hatching, I should like to give a bit of my experience. On March 6th, 1917, I purchased three Light Brahma hens which had been with Barred Rock males. These I parked with a White Rock cockerel. I began getting eggs the next day, March 7th, and continued for some weeks, getting on an average two eggs per day. These I set under hens as rapidly as I had sufficient for a setting. All the first hatching were black and feathered out genuine Barred Rocks, not to my surprise.

I continued setting all eggs until late in June, and all hatched were Barred Rocks, like the first. I got good hatches, from twelve to fourteen from fifteen eggs.

These hens each became broody several times during the season and I broke them up as soon as possible and had them laying again in a short time. In August they all took a rest from laying for several weeks, but by the last of the month were all laying again. I set these eggs as soon as I had a setting, as an experiment to see whether I would get white chicks, but to my surprise, when they hatched September 27, all were Barred Rocks, just as all the others had been.

We had no Barred Rocks on the place and the hens were parked all summer. I do not see how the white male with which I had them parked had anything to do with the hatching of the chicks thru the entire season of six months.

Hip! Hip! Hooray!

VICTORIOUS AGAIN

Victorious in the Largest Barred Rock Show of America

This time the glorious ARISTOCRATS win out at that mighty NATIONAL BARRED ROCK CLUB SHOW, HELD AT CHICAGO

the entire nation's big club show—the Barred Rock show of all America.

And above everything else stands out this powerful fact: These great winnings were made with Aristocrats by my customers. Think! My customers are able to make such magnificent winnings with Aristocrats in competition with all those big, notable Barred Rock breeders and advertisers who showed their birds at Chicago. One of my customers alone carried home six ribbons, four on Aristocrat stock purchased from me, and two on Aristocrats which he hatched from Aristocrat eggs purchased last spring. (By the way, those same identical matings which produced these winners at this great show are again mated up and my customers are receiving eggs from them.)

It is the breeders who are raising ARISTOCRATS who are making the money. Aristocrats are possessing this greatest, best-paying combination of all: They are great show chickens, great market chickens and great layers—with many individual records of over 200 eggs per year and as high as 260 eggs in one year.

Therefore, while you are breeding and raising chickens, why not breed, feed and raise THE BEST? Why not? It costs no more to feed and raise the very richest Aristocrats than to raise scrubs. Think!

I can help you out with wonderfully rich breeding cockerels, pairs, trios and pens—for the most magnificent collection of Aristocrats I have ever had is in my yards right now. Write me your wants and I will help you. Every Aristocrat is guaranteed to be absolutely satisfactory or the full purchase price will be refunded.

Eggs from matings which are producing such wonderful specimens (including eggs from the same matings which produced the above great winners) \$10 for 15; \$25 for 50; \$50 for 100. Big, beautiful new catalog just off the press.

FRANK J. NUTTING

BRANDON, VERMONT

HOW TO USE COLONY BROODER STOVES.

Easy, Economical and Successful Method of Raising Chicks.

By JOHN W. DWINELL, Danvers, Mass.

WHILE attending the Boston Show in 1914, I became interested in coal burning brooder stoves. Previous to this time I had used several kinds of lamp hovers with little satisfaction. The labor-saving features of the coal brooder at once appealed to me and I spent most of my day at the show listening to the claims of the different salesmen, and examining the stoves very thoroly.

I returned to the show the next day and before going home I had placed my order for what, in my own judgment, was the best stove. Right here I want to say to the prospective purchaser that a great deal of trouble can be saved by making a careful selection. In the first place, don't have a damper in the funnel; be sure the stove has a two-piece rocker grate, easily removed, and a fire box that is wider at the bottom than at the top. In shaking down the fire, as the coals settle, they are loosened by falling into a larger space and the result is a much more freely burning fire. Buy the largest size stove offered, for a dependable fire cannot be run in too small a fire pot.

After I purchased a stove, I placed it in a 10x10 ft. portable house, with 6 ft. posts of an A-shaped roof (9 ft. from sill to peak). This house has two windows, hinged at the bottom and opening inward, which are opened and closed as the weather conditions require. These windows are in the south side of the house, as is also the door. A cotton screen forms the top half of the door, thus insuring fresh air at all times, which is essential to the well-being of chickens.

Sand is the only litter used. The top is frequently scraped off and replaced by fresh sand, thus keeping the litter

sweet and clean. After the stove is set up and the litter put in, the stove should be run for from three to five days before the hatch is due. This gives one time to become acquainted with the stove and thus avoid mistakes which

might prove expensive when the chicks are under the hover.

For extra early broods I would recommend a house 10 x 20 ft. with a solid partition in the middle which would supply an unheated scratch shed. In

the houses which we use, the chicks are placed under the brooders between March 25 and April 5th, and, of course, have access to outdoor runs very soon thereafter. I believe that very early broods would require a scratching shed for best results.

At hatching time we allow the chicks to remain in the incubator until thoroly dry. They are then placed under the hover and not fed until 60 to 72 hours old. I allow not more than 350 chicks to one stove. With this number we have been most successful.

The temperature under the hover should be 90 degrees. After the first ten days the temperature is reduced to 80 degrees, which temperature is maintained until the chicks are removed from the brooder house. It is best to maintain an even temperature under the hover after having once acquired it. Rather than meddle with the adjustments after they are satisfactorily made, let the chickens adapt themselves to the heat by moving in and out, as required by climatic conditions.

When three or four days old, if the weather permits, the chicks are allowed to run outdoors. For this purpose a little opening is made in the south side of the building. A draft board 5 feet long and 18 inches high is set up between the stove and the opening to keep drafts from under the hover.

The chicks are fed a good clean commercial chick feed, a little at a time and often until they are ten days old. A good commercial growing feed, containing 10 percent beef or fish scrap, is then placed before them in hoppers and kept before them until housed for laying. The chick food is also fed until the chicks are old enough for the intermediate food.

Plenty of fresh, cold water, grit and charcoal are kept before the chicks during the entire period of development. During February and March sprouted oats is supplied daily for green food, after which time the chicks have access to grass runs.

I have found this method of brooding most satisfactory and economical. The average coal consumption is 15 to 20 pounds of nut coal for 24 hours. The time required to care for the stove is from 10 to 15 minutes a day. The results are very satisfactory. I raise 90 percent of chicks put in the brooders and the chicks mature quickly and uniformly.

Some excellent bargains in breeding stock, eggs for hatching, baby chicks, incubators, brooders and poultry equipment will be found in the advertising columns in this issue. Look them over and send in your order soon. "First come, first served" will be the rule this season. If you intend to buy, do it *now!*

Bought that incubator and brooder yet? Better get busy and order today. At least get the catalog and plan for the equipment you will need the coming season. Get your order in early.

BABY CHICKS

Single Comb White Leghorns

For Foundation Stock and Flock Improvement

Have you a flock at the present time? If you have not, common sense tells you that the highest producers are the cheapest. If you have, you very likely have room for improvement in their egg-laying ability.

Come to Me - I Can Help You

Idylwild White Leghorns are a dyed-in-the-wool laying strain, founded from stock purchased from the most famous laying strains in the world. It is better to buy 300 chicks of this breeding than 600 from a haphazard mating. Remember, they are all from trap-nested, pedigreed, high-record stock.

EGGS FOR HATCHING

We also sell eggs for hatching in case you do not want baby chicks. Our eggs, stock and chicks are securely packed in the best method and will reach your safely. We guarantee 90 percent fertility on our hatching eggs.

Send for our handsome catalog and mating list.

IDYLVILD FARM W. S. POORE, Prop. SHERIDAN, ILLINOIS

Here is the Feeder and the Fountain

for which every poultryman has been looking.

It combines all the good qualities of the ordinary Mason jar fountain and feeder with the good qualities of the best baby chick feeders on the market. The bottom of the feed pan slopes from the center to the edges, thereby insuring a free flow of feed from the jar to the edge of the pan, where the chicks can reach it thru the openings. The small openings prevent dirt from getting into the pan—prevent the chicks from getting into the feed or water and prevent them from crowding too close around the feeder, thereby giving the weaker chicks an equal chance with the stronger ones. This overcomes every objection to the ordinary open pan Mason jar feeder and fountain. It fits any Mason jar.

2 for 35c

3 for 50c

The top of the pan can be removed in a second to clean or fill. It is the most inexpensive, most practical and most sanitary feeding and watering device on the market and is fully covered by U. S. letters of patent. If ordered from this ad we will send them postpaid to any address in the United States. **SIMPLEX SUPPLY HOUSE 1300 Pontiac Bldg. CHICAGO, ILLINOIS** Send for our complete Catalog of Poultry Supplies and find out about our marvelous Feather Brooders; also Automatic Grain Feeders and Non-Freezing Water Fountains.

Here's the Doctor

to help you serve your country and fill your needs
Our "Efficiency" Chicks

Never before in the history of our country has there been such a demand for poultry. Our Allies are calling for more and more food. Our own soldier boys must be fed to keep them in trim to fight our battles. We must raise all the poultry and eggs possible. Our "efficiency" chicks are the kind that meet those needs. Letters from our old patrons tell us how well our stock is doing for them. And our prices are surprisingly low. Ask for our catalog, which tells you all about them and the varieties we supply.

CARL J. JENSEN : North Ave., WAUKEGAN, ILL.

Why Chicks Die in the Shell and How
to Prevent It.

HOW many high priced eggs have you lost in incubation this season? Poor fertility and poor hatches soon run into a lot of wasted money. Everyone has had more or less chicks develop almost to the hatching day. Some even pip and then die in the shell. This, of course, makes one wonder if their incubator is at fault. No! dear reader, it is not, in most cases. The main cause of your loss lies in the operation of your machine; the care, feed and housing of your breeding stock; the selection of your breeders and a lot of other similar mistakes of your own. The mating and breeding of your stock, together with feeding and housing are the "big four" things necessary to be done right if you ever expect to have good fertility and good hatches. Right at this season of the year the "two things" which you "must do and do right" is hatch and brood the chicks without mistakes. Can you do it? Have you done it? It's better to be sure than sorry.

Several hundred of our readers have sent to Professor Quisenberry, President of American School of Poultry Husbandry, Box 206, Leavenworth, Kansas, for a copy of his new bulletin on "Solving the Poultry Feeding Problem." This tells how to cut down the cost of poultry food and gives many helpful suggestions, which every poultryman should practice this season. It also tells how to feed the breeding stock to get fertile eggs and makes some suggestions on how to brood young chicks. They also send you their 64-page book "Dollars and Sense in the Poultry Business," which tells how they teach every phase of poultry raising by mail and fully describes the complete poultry library of thirty-eight books and lessons, which they send free to every student. Our readers also found that Prof. Quisenberry and his entire corp of assistants stood ready to give advice on personal poultry problems, so most of them decided the cost of taking the course in this correspondence school was so small and the benefits so great that they could not afford to do without it.

Here is a sample of what some of those students say: "I can now save enough on feeds to pay for the entire course."—F. M. Hill, Illinois. "I would not take the price of the whole course for the lessons on breeding and mating."—F. L. Noyes, Utah. "I could have saved about \$400 had I taken your course before I started."—Frank Sawyer, Massachusetts. "The knowledge I have gained from the disease lesson is worth the price of the course."—Geo. W. Morris, Kentucky. "I have been in the building business for 30 years but your lesson on Poultry House Construction is the best I have ever seen."—E. M. Wiggin, Kansas. "Your lesson on baby chicks is just what we have been looking for. Last year we lost 650 chicks out of 1,500. This year we lost 65 out of 1,600. This is the result of just one of your lessons."—Geo. M. Jones, California. "I have read so many different things and people

DELAWARE HATCHERY

DELAWARE, OHIO

have told me so many different things that it was always confusing until I sent to headquarters, the American School of Poultry Husbandry, and I am glad to say I have always gotten the best of attention at their hands and always the best of advice—advice that has made and saved me hundreds of dollars. I don't know what I should have done without those good people.”—Mrs. Jerry Robinson, Mississippi.

This free bulletin, “Solving the Poultry Feeding Problem,” and their big book, “Dollars and Sense in the Poultry Business,” have just been written and published by Professor Quisenberry and will be mailed free to any of our readers who will write to the above box number and enclose ten cents in postage or “just a dime” to pay the mailing cost. Don't overlook the opportunity and write at once before their last edition has all been given away.—Adv.

New American Breed—The Patriots.

WHEN reading my January number of the AMERICAN POULTRY JOURNAL, I saw an item wanting breeders to say a few words about their favorite breed. I think it was a good and generous offer, and I shall accept the opportunity. As the originator, with the very valuable assistance of Mr. Henry Schultz, I should like to say a few words concerning the new American breed, the Patriots, which is ready for the public.

There are two varieties of the Patriot, one variety having every feather containing the three national colors—red, white and blue. The other variety has red head and breast, blue body, white tail and wings. Both varieties have yellow legs and skin.

About ten years ago I had an idea that if several of our best breeds were so mated that all the good qualities of each could be molded into one, it would be worth trying for. I dare not look back for any length of time on the disappointments, time and expense, but when I view the results of these long weary years I surely feel proud of what has been accomplished. I wish to make a very broad statement right here at the start. It is as follows: Every female that was used in this new breed had a record of 300 eggs. I certainly realize that the above is rather unbelievable; however, it is true. Of course, you will have to take my word for that, but I have the Patriots back of me and they will prove my statements. I also used non-setters as much as could be done, considering the use of eight of our best breeds.

I wanted something new in color, something new in meat, something that would be an A-1 table bird (short meat, not long and stringy). I wanted a bird that would weigh a little better than the Plymouth Rocks and one that would not spend one-third or more of its time setting on the nest. Also a bird that would lay at all times of the year and not shut off tight for a long spell. I have had Patriots laying every other day during molting—it is bred in them—they can't help it. I desired a breed that would lay a large egg. Patriots' eggs will weigh 29 to 31½ ounces to the dozen. All these things I have accomplished, and will prove it by the results of years of breeding. I could fill this page with interesting results of my experience in breeding and feeding.

R. H. BARNARD, Westboro, Mass.

We Can't All Carry a Gun

but we can nearly all assist our country in one way or another. One of the most important ways is to raise poultry for

Enlist!

in the Poultry Producers Brigade

And help win the war by raising chickens in a

Liberty Colony Brooder

Build it yourself. Easy! Requires a few feet of lumber, a few joints of stovepipe. We send complete plans and all equipment. Gives you a brooder 44 inches square with all space under canopy available for brooding purposes. Has capacity of average coal-heated brooder. Uses Sol-Hot Oil Lamp and stovepipe hot air system.

Daniel Sullivan, Staatsburg, N. Y.

writes: "Have your Colony Brooder running. 410 chicks under it. It's a splendid Brooder. Work is less than with coal stoves." Equipment consisting of Sol-Hot Lamp, Regulator and Thermometer, \$5.00.

SOL-HOT WICKLESS BLUE FLAME OIL GAS LAMP

Burns coal oil but by combining about 95% air with 5% vapor from this inexpensive oil, produces a perfect blue and Sol-Hot flame. New automatic oil filter enables it to burn low grade oil perfectly. Visible oil feed gives absolute flame regulation and prevents flaring or creeping of flame. Equipped with safety shut-off and automatic flame control. Leaves no residue, smoke or soot. No wicks to trim—no danger.

Made in three sizes. Will increase the efficiency of any standard incubator or brooder. Write for booklet describing it.

Liberty Hatcher

is made in two sizes, 70-egg and 100-egg capacity. Nest type. Eggs held in circular rows by inclined rings in deep hatching tray. Chicks drop into nursery beneath as they hatch. Combined damper and flame regulation and construction of egg chamber give uniform heat and save fuel. Surplus heat and foul gases escape automatically. Has standard first class equipment. Durable built --- beating system welded by electricity. Costs little ---takes little space. Try for one hatching. If not satisfied, return and money will be refunded.

Write for literature on Liberty Hatcher, Liberty Colony Brooder, Sol-Hot Lamp, Regulators, Lamps, Tanks, Heaters, etc. Free plans for building your own Incubators and Brooders.

GOVERNMENT POULTRY CAMPAIGN.

(Press Bulletin from Columbia, Mo.)

REALIZING the importance of the poultry industry with reference to the meat situation of the country, Congress has appropriated \$148,000 to stimulate and increase the poultry production of the country.

Poultry offers an opportunity for a greater number of people than any other means that we have of increasing our food production of animal origin. Here is an opportunity for the women and children of the farms and villages to help win the war and to do their bit in increasing the food supply. Because of its ability of rapid increase, poultry has been selected as the means of increasing our food supply for this year. The following is an outline of the Government Poultry Campaign, and will give a clear statement as to how we can best accomplish this necessary increase. It should be noted, however, that the object of this campaign is rather to increase the products of the fowls already on the farm, rather than increasing the number of fowls raised.

Careful selection of breeding stock to reproduce a larger percentage of good types of profitable producers.

Early hatching, so as to produce fall and winter layers.

To confine mother hens to brood coops for at least two weeks after the chicks are hatched. To provide free range for both growing stock and layers insofar as possible to stimulate growth and production and conserve food consumption.

To preserve eggs for winter use.

To production of infertile eggs as soon as the breeding season is over.

Disposing of surplus cockerels as broilers to conserve grain.

To discourage the marketing of all profitable hens of the general purpose class until the end of their second year, and of the Mediterranean or egg class until the end of their third laying year.

To encourage the careful selection of all hens in order to eliminate the unprofitable producers.

To discourage the marketing of all profitable pullets as broilers and of all well matured pullets for meat.

To encourage the caponizing of cockerels only when free range can be provided, and a special nearby market afforded.

To encourage back-yard poultry keeping, especially among city and suburban dwellers, thereby utilizing table scraps for the production of fowls and eggs for home consumption.

To encourage, when conditions permit, the feeding of a wheatless ration, in order to conserve this grain for human consumption.

To encourage turkey, duck and geese raising when circumstances are favorable.

The United States Department of Agriculture is stationing two men for work in Missouri, and the poultry associations and poultry raisers will be glad to know that R. L. Mason has already taken up the work of this campaign in Missouri.

It is planned to hold meetings in every county and it is necessary in order to make these meetings and the campaign a success to obtain the help and co-operation of everyone interested in poultry. Poultry associations and poultry keepers should take notice of this campaign and communicate with Mr. Mason, whose work is in conjunction with the University of Missouri, at Columbia. Make arrangements to help in this campaign for "100 hens on every farm and 100 eggs from every hen."

Conkey's Buttermilk Starting Food

THE ORIGINAL

The Proper Color of Speckled Sussex.

An article written by Mr. A. J. Falkenstein, the leading English breeder of Speckled Sussex, read at the annual meeting of the Sussex Club of America at Cleveland, Ohio, January 10, 1917.

BY REQUEST of our esteemed president, I send you a few notes on the color of Speckleds. I have bred this color now for some fourteen years and therefore I presume to know a little about it. These notes, however, simply represent my own ideas and are written with only one motive and that is to try to induce you all to breed for the rich, dark mahogany ground color. It is only a very few years since this rich color was first seen and I believe I am right in saying that Mr. Williams' cock, Lord Roberts, was the first bird of this color to be exported to the States. I have for years been trying without any cross to breed this particular color and he was the first good bird I produced. I hope you do not think that this color is common in England. Far from it, and I do not know of any fancier outside my own yards who has bred this color. The reason for this is that I have not sold any of this strain in England until this year when I have sold several.

The breeding of these birds was simply done by every year breeding from the darkest and clearest pullets and the darkest topped cockerels. Years ago the craze was for plenty of marking on breast, the three colors showing distinct, right up the throat. The shade of ground color (brown) was never defined and so long as they were showy they won. These birds were all very light in ground color, practically yellow, with very light yellow top color and with plenty of ticking on neck and saddle hackles. They were, however, of great size and good type. Until fairly recently this color continued with occasionally a darker one or two being bred, and fanciers here began to see that there was greater beauty in the darker ones and now among Speckled fanciers I constantly hear the remarks, "too light," or "not dark enough." The light-colored birds are easy to breed, as there is only size and type to breed for; the light color comes without any effort from the breeder. In breeding light-colored birds there is nothing to breed for, and if a color is worth having it should be difficult to attain.

My idea of a Speckled cockerel's color is that his neck, back, wing bows and saddle should be all the same shade of rich dark brown with a metallic luster all over when the sun is on them, the neck and saddle hackles to be striped with black and a white tip on each feather. In breeding these dark birds I find the ticking does not always come so distinct or pronounced as on the lighter birds, but I think this is only a question of time, but, even without ticking, to my idea, they are far more preferable than a light bird with proper ticking. In fact, given the choice, I

PAINTS AND DISINFECTS—
IT DRIES WHITE

**PAIN
OR
SPRAY**

CARBOLA
The Disinfecting White Paint.

in poultry houses, dairies, stables, hog pens, cellars, creameries, cheese factories, etc., instead of using whitewash and disinfectants. It is a better paint than whitewash—there is no better disinfectant made—you do two things at one time—you get satisfactory results or your money back.

Carbola dries a clear snow white—can be applied to wood, brick, stone or cement or over whitewash—and will not blister, flake or peel off. It will increase the light in a building—send sunlight into dark corners—make it clean, cheerful and sanitary—put it in shape to face the most rigid inspection of milk company or health authorities. Carbola kills lice, mites, nits, fly eggs, etc., and prevents the germs of roup, white diarrhea, glanders, contagious abortion, and the many other contagious diseases that affect poultry and live stock from getting a start and spreading thru your flock or herd. It is neither poisonous nor caustic—will not harm the smallest chick or injure stock that licks it.

Saves You Time and Labor

Carbola is a finely ground white powder and is ready to use as soon as mixed with water. No waiting or straining—none of the bother of mixing whitewash. Apply it with brush or sprayer—it will not clog the sprayer. Has no disagreeable odor to taint milk or food products. Does not spoil by standing so can be kept on hand ready when wanted. One gallon covers about 250 square feet.

Your hardware, seed, paint or drug dealer has Carbola or can get it. If not, send direct—shipment by parcel post or express the day order is received.

10 lbs. (10 gals.) \$1 and postage 20 lbs. (20 gals.) \$2 delivered

would take one real good dark one without ticking than fifty light-colored ones with ticking. I, and no doubt many of you, know who have been trying to breed dark ones, how difficult it is to get them and how easy it is to breed the light ones. To show that it is not always the rule for dark ones to come without ticking, I have a cockerel which I bred this season, darker on top than Lord Roberts and with a beautiful ticked neck and saddle hackles. I sent some feather from this bird to Mr. Williams and I expect he will show them to you. But I was giving you my idea of a Speckled cockerel's color. I myself prefer a colored tail, mixed black and white with black sickle feathers with white tips and also mixed flight feathers in wings, black, brown and white. I think it not so somber looking as black tails and dark flights. It shows up a bird and is much more handsome, to my idea. The color of breast I like is a rich dark brown and as near the color of top as possible. This should extend from throat to vent, all the same shade, with, of course, the black bar and white tip to each feather. I have sometimes bred cockerels with dark tops and a lighter shade of brown on breast, but I do not like this and think it ought not to be. It seems to me to make it a common bird at once. We cannot all think the same and, of course, there will always be a diversity of opinion; but I feel absolutely certain that in breeding the rich dark brown birds we are on the right track.

I would like to ask you all one question, especially those who have imported Speckles, and that is this: How many of these rich colored brown birds have you bred and how many have you had sent from England? (Mr. Williams will give me the answer.) Isn't it proof of the scarcity and therefore of the value of them? The light-topped birds, in my opinion, have had their day and are now only commoners. Any fancier with an eye to the beautiful cannot but help vote for the dark ones. The richness of color alone carries with it the one word, "quality."

With reference to pullets, I also like the rich dark brown ground color and enclose a feather taken from a pullet's back today and consider that they should not be any lighter in ground color than this, altho this feather looked darker in the bird than it does out. I also like to see every feather clear in the brown not ticked with small black ticks.

In breeding these dark brown birds I feel sure also that the females will in time keep their color better and not molt out so light. In proof of this I have a few hens, one two and another three years old, that have no more white in them than in their first year.

We in England have not considered under color to the extent you have; personally I prefer a slate or red or slate and red. I do not care for light in under color at all, either for a show or breeding bird.

The difficulty one has in showing these real dark birds is that often a man officiates as judge who has never bred Speckleds and therefore goes for a showy light bird and does not appreciate the difficulty in breeding the dark ones.

Straight Answers to Timely Questions

What is Pratts Poultry Regulator?

A positive tonic and conditioner for poultry of all kinds and ages. *A health-builder and health-preserver.* Not a food.

What does it contain?

Roots, herbs, spices, mineral substances, etc. Each ingredient performs a certain duty. The combination spells "health insurance."

What does it do?

Pratts Poultry Regulator makes and keeps poultry healthy, vigorous and productive. It sharpens the appetite, improves digestion and circulation, hastens growth and increases egg-production. *It saves feed* by preventing waste due to poor digestion. *It prevents disease* by keeping the birds in condition to resist the common ailments.

Has it been fully tested?

Yes! In general use for nearly fifty years. The original poultry conditioner. Imitated, but unequalled.

Does it give general satisfaction?

Positively! *Satisfaction guaranteed or money refunded.* Test it at our risk. Increased egg-production will prove that "Pratts makes hens lay."

How is it best used?

Daily, in small quantities. For adults, a tablespoonful daily for 10 birds. Younger stock in proportion. Mix with dry or moist mash.

What does it cost?

Nothing, because *it pays big profits.* One cent a month per hen is the investment required.

Where can I get it?

From 60,000 Pratt dealers. There is one near you. Direct from the manufacturer, prepaid, if your dealer can't supply you.

How can I learn more about it?

Ask the Pratt Food Co., Philadelphia, for valuable FREE BOOKS on poultry keeping. Write today!

Joseph Tolman - R. F. D. No. 1 - Rockland, Mass.

ORDER Your March, April and May Chicks and Eggs NOW!!

How many will you need? Write for open date of shipment. Remember that my Leghorns are all one strain, and the best proof of the satisfaction they give is the demand from year to year. I have increased the number of breeders by about 50 percent to help make up or the great deficiency in breeding stock this season.

I know how good my stock is, and how it compares with other breeders', yet I never make rash claims and statements about the heavy laying qualities of my birds. I probably have as many 200-egg layers as any breeder in the country, but every bird does not lay this quantity of eggs, and chicks from my stock would not average these numbers.

Tho, I am breeding lay 200 eggs a year. No strain on earth has more stamina and vitality, and chicks purchased from me are very easy to raise. All my breeders are bred and raised here on this farm from large white eggs and pure white stock.

Our prices vary from 18c to 23c a chick, according to whether you buy in lots of 25 or 5,000. Eggs at just one-half price of chicks. I make prompt deliveries and ship in best possible manner. Once a customer, always a customer. That's what keeps my business growing bigger and better every year. You should at least try out some of our Leghorn chicks and eggs this season. They are proving a revelation to a great many breeders in different parts of the country. Catalog and prices free for asking.

From the Sunny South.

THROUGH the courtesy of yourself and The Florida Farmer and Stock Grower, I have become a reader of the AMERICAN POULTRY JOURNAL. I read most of the good journals on farming and poultry raising and I regret I have not had yours before.

Your December number I think particularly good and some of the articles will assist the beginner. I commenced farming and poultry raising (for eggs) in Florida in 1886, and, like all beginners, bought fancy feathers from the fellows who advertised them for sale, and paid the price. Also purchased some books on poultry, advertised to be the thing. I remembered some of the care that mother gave her hens on the farm in Illinois and that the only ration fed them was whole grain corn shelled by hand, fresh out of the crib, and she got good, big, rich eggs, plenty of them; the balance of their living they hustled for.

I am sure the beginner would get along better if the men and women who write about poultry raising would be more specific, but most of these people are theorists and professors who never made a dollar in the poultry business and maybe never owned a hen. We had a number of that kind this spring, sent down here from Washington. Your northern methods have to be remodeled down here in the tropics. I grow on the farm all the grain fed except wheat and its products, bran and shorts, and oats. Grain, especially corn, is thoroughly devitalized when shipped to Florida; the life and food practically all cooked out of it. We grind our corn and other grains on the farm, buy wheat, bran, shorts, oats, meat meal, ground bone, salt, shell and grit. Grain cost 25 cents a bushel to produce this year. We have many plants grown the entire year; a little effort will furnish the hens with greens all winter, but nothing better than sprouted oats, sprouted in the earth. If they don't grow fast enough to suit me, I scatter a little nitrate of soda over the beds and sprinkle with the hose. The oat beds are highly fertilized with organic manure and hardwood ashes. Dr. Wood has about covered the ground in his "Quantity of Feed Required by Poultry." My scratch grain is about the same as on page 1127, except no barley or buckwheat, and salt and charcoal added, making a mash a little over 12 percent protein. My hens are fed 75 pounds of grain and mash annually, abundance of green feed during the summer months. I drop most of the corn. During the heavy laying months I feed one-half ounce scratch feed in the morning per hen (no roosters) in deep litter. Mash, grit of all kinds, including ground bone, clean quarters, pure water, all day; greens at noon; a little before sundown I feed 1 1/2 ounces of whole corn shelled the day I feed it and 1/2 ounce of scratch grain. This leaves a little scratch grain in the litter for early morning. The above amount weighed for each hen. Water vessels are disinfected twice a week in cool months, also all buildings; in hot months, oftener. The first seven months my hens produced eggs at 16 cents per dozen, sold at 50 cents. They are Standard-bred crosses. I added 1,000 May pullets from Ohio last September, Single Comb White Leghorns,

the 200-egg kind or better. I had some trouble with them, but they are fine-looking hens now and beginning to lay. The off months in the year are July, August, September, October and November. July and August a little profit, but you are doing mighty well to come out even during September, October and November. I am producing eggs now for 30 cents per dozen. One of the great hotels of Jacksonville takes the entire output and pays 70 cents per dozen. Next month the hens should lay double what they are doing now. I keep the hens, as near as possible, free from all excitement and fear, and have succeeded in getting an average to 145 eggs a year. I believe it advisable to instill new blood into the flock every year. Down here, on a basis of twelve dozen eggs per year, White Leghorns will produce them for 4 cents per dozen less than other breeds.

W. L. VAN DUZOR.
Jacksonville, Fla.

An Appeal to Eastern Women from the West.

By ARMINDA WOOD, President,
Woman's Club of Racine, Wis.

To my mind, it is most important that this law which increases postage on periodicals thru a "Zone System" should be repealed.

The many splendid magazines published today are a means of education to many a home where other opportunities are lacking. And many of these homes are remote from publishing centers—many even remote from city life. It is the magazine combined with rural delivery that has brought to the door of the country woman material which helps her solve problems needing advice more easily obtained by her city sister. Thru this medium she has known current events, has guided her children by the educational influences offered and has been able to keep herself in harmony with the world from which she was separated. Periodicals and newspapers are as essential as food to the country home.

Then again the attractive magazines in every city home means keeping together the family circle. To make the magazine prohibitive by excess postal rates would be to take away from mothers one of the means whereby they have battled against outside attractions.

Now just because a woman lives in a Western state remote from publishing centers—and, of course, home interests affect the woman most—is she to be made to pay a penalty in order to bring opportunities to her door? To enforce the 50 to 900 percent periodical postage law would be causing mental starvation to many who have only this means of keeping abreast of the times.

Every thinking Eastern woman should put her full strength into a drive which will give her Western sister the same advantages which she enjoys.

INCUBATORS TO HATCH—BROODERS TO BROOD—CHICKS

TO RAISE chicks profitably it is necessary to use incubators and brooders. They are simple to operate and easy to understand.

The word "incubator" still possesses, in the minds of many breeders of poultry, a most mysterious sound. To hatch eggs by means other than the sitting hen appears to some to be a wonderful and intricate undertaking. Yet if the requirements for producing a chick from a fertile egg be duly considered, it will be seen to be most simple—at least for the poultry breeder. For the incubator manufacturer, it may be different; but why should the farmer or breeder worry about that? It is up to the manufacturer to "produce the goods" in the shape of an incubator that will hatch—an incubator that will do so even in the hands of a novice who has had no previous experience. The incubator manufacturer has done, and is still doing, his part in making the hatching of chicks easy and profitable. He has produced a machine that gives less trouble than a sitting hen, and which, on the average, will hold as many eggs as a dozen hens can cover. If any eggs are broken in course of incubation, that is the fault of the operator—or the hen. The incubator does not break eggs.

What is there about the operation of an incubator that is difficult? Nothing. It is just a question of exercising ordinary care, and the thing is done. What does a hen do in order to hatch chicks? Simply applies the necessary heat, and leaves the nest now and again, which affords ventilation to the eggs. And that is all that is necessary to provide in an incubator in order that it also may hatch chicks—apply the proper heat and ventilation to the eggs. The manufacturer has provided the means. It is up to you to take advantage of it if you wish to hatch chicks profitably—numerously.

If you have an incubator, what do you do when you wish to operate it? Simply light the lamp to heat the machine to the right temperature (102 or 103 degrees); place the eggs on the tray as soon as the temperature remains stationary; cool the eggs each day as directed by the manufacturer, and that is all.

You cannot prevent eggs hatching in a properly constructed machine (assuming they are fertile) unless you do some fool trick, or leave undone one or more of the few things you are instructed to do. The incubator puts it all over the hen when it comes down to commercial hatching.

THE BROODER AS A CHICK RAISER

The brooder, like the incubator, is a simple machine. It is intended to raise the chicks that have been hatched either by an incubator or by hens. If the chicks have been hatched by hens, great care must be taken to thoroughly dust them with insect powder, so that they shall not carry into the brooder the lice which they have inherited from the hens, for they always get a few or many, and lice multiply rapidly. If the chicks are hatched in an incubator they are free from lice when placed in the brooder, and that is nearly half the battle in raising chicks. Start with a clean sheet. In any case it is easier to drive lice out

Hatching Eggs..... \$4.00 per 15
Chicks..... 20c each
COCKS BROS. Box 284 ATTLEBORO, MASS.

of a brooder or a brooder chick than it is from a hen, or a hen-raised chick, and economizing on labor counts in the "chicken business." The brooder can be fumigated; every vestige of life removed (move the chicks first, of course), while it is next to impossible to get rid of every louse on a hen.

Therefore, use a brooder to brood your chicks. There is nothing very wonderful about the fact that to raise chicks requires similar methods to those required to hatch them, namely, the utilization of heat and ventilation; the only difference being in the quantity of each that is required to be applied. For that reason brooders are constructed simply and are easy to operate.

When preparing to raise chicks in a brooder all you need to do is to "heat up" to the correct temperature, and when it is heated put in your chicks direct from the incubator. Of course, you have spread chaff, or a substitute, over the floor of the brooder—and it is a good idea to add a little sand for the chicks to pick at.

Don't bother your head about furnishing food for the chicks for a couple of days after they are hatched. They need no food at that time and are better without it.

When the little wing feathers begin to appear, which will be within a week, drop the heat in the brooder to 85 degrees, and in a few more days to 80 degrees, and increase the ventilation.

Now, all this appears very simple, and it is. The brooder will do its part if you do yours. And your part is to use your good judgment with the chicks in a brooder, as you would have to do if they were under a hen; only with the brooder you have less to do and less to worry about.

WHITE PLYMOUTH ROCKS AS A BREED.

By FRANK E. PALMER, Sparta, Ill.

ALL THINGS considered, I do not believe there is a breed of fowls today that are of more value than White Plymouth Rocks as an all around breed, whether it be for the farmer, the backlotter or the high-class fancier. And there is no other breed upon which utility and beauty can be as easily combined as on our leading strains of this variety, and as a rule our finest female exhibition specimens at the leading shows are excellent layers, not only as pullets but as hens, and are often good up to three and four years old.

White Plymouth Rocks are prolific breeders, and there are some qualities that are more pronounced on the average specimen in this variety than any other breed, and that is long, wide backs, broad across the saddle; deep, full, round breasts, long keel bones and powerful thighs. Quick feathering and quick maturing youngsters are features that most White Rock breeders have considered and are of great value in marketing young stock.

"That Common Sense Feed is certainly producing results for me"

"I'm getting half again as many eggs as I used to get—since I've started using Common Sense Feed. This last month I've made more money from my eggs than I ever did before.

"Common Sense Feed surely has the right food elements in it—and it must be a perfectly *balanced ration* to produce eggs this way!"

Scratch—Egg Mash—Baby Chick and Developing Feed—

You can get Common Sense Scratch Feed—Egg Mash—Baby Chick Feed and Developing Feed—and be *guaranteed* better results all around for less expense.

Every grain—fresh, sound, dry, sweet and clean. Read the guarantee.

Your Guarantee

You are guaranteed better results—healthier hens and chicks—and *more eggs*—with Common Sense Scratch Feed, Egg Mash, Baby Chick Feed and Developing Feed.

If your hens are not healthier—if you don't get more eggs—with Common Sense Feed after using a reasonable amount of your order—we will refund your original purchase price and pay all transportation and cartage charges—*both ways*.

Now, from the point of the fancier, I do not believe there is a breed in existence that will breed as true to type and color as our high-class White Plymouth Rocks, with as small percentage of culls. There are several reasons for this, one of which is that one man in originating one of our oldest strains bred them for fifteen years before introducing them to the public, during which time he marketed or disposed of every individual bird that did not come up to what he considered his standard, thus stamping their type and color so strong that even the inexperienced breeder could breed them to a wonderfully uniform flock. And there are several other flocks which have been originated in very much the same manner today. It has happened several times in some of our largest shows, take as an illustration the line of cockerels; the first six or seven birds were so near alike and so near perfection that there was only a shade of difference in the first prize cockerel and the sixth prize cockerel.

Now a word as to breeding and mating from my own practical experience, which would apply also to Barred Plymouth Rocks, outside of color. Let us take the first, the most important, considerations, which must be health, vigor and stamina, for without these no flock of fowls can be profitable for either fancy or utility, and another important feature is free range. These things we read about often but few breeders realize the all-importance of them. In mating White Plymouth Rocks we must select specimens that are pure white, including quills, with the pink pin feather, and if you have not got such birds you had better get a start of birds that are pure white and whose blood lines will reproduce birds that are white; and we must select specimens with deep, full breasts; long, wide backs; broad across the saddle and tail, with tail low and well spread; and also another thing I consider a valuable feature in a male from which to breed is a short tail, fully furnished and well covered, and in order to get birds with a nice sweep to the tail, saddle feathers running onto the tail without a break, we must breed from birds with deep, full breasts.

There is probably one mistake that breeders of all kinds of poultry make, and that is breeding from too many birds in the start. That is, if you have only one female and one male with these requirements and that will give you the desired results, I would only breed from that one pair the first season, and then you are right so far as you have gone. Then, the next season, if the objectionable features of the sire are not shown to any great extent, you can breed him to the best daughters, or, better still, if you had a half-brother to the first male, and at the same time possessed his good qualities, you could use him in ideal fashion, and in this manner using each season a male containing some of the blood of the first male and never using a bird of either sex with any serious defect, such as a bad eye or narrow tail, etc., you will be well paid for your time of study in the matings.

Questions and Answers

Conducted by
Prince T. Woods, M. D.

Questions about poultry are answered in this department free for all readers of American Poultry Journal. Where answers are desired by mail, a stamp for reply is requested. Address all query letters to the managing editor, Dr. Prince T. Woods, Lock Box 4, Silver Lake, Mass.

Beginner's Questions.

Q. (1) What is the difference between a fowl and a pullet?

A. (1) The name fowl generally applies to the domestic cock and hen. It is also applied to poultry in general and to birds collectively, as wild-fowl, sea-fowl, water-fowl, domestic fowl, etc. In market usage a fowl is a hen. The name pullet is given to the female domestic fowl under one year old. In common usage the name pullet is applied to the female domestic fowl until the bird ends its first year of laying; thus the eggs laid from the first egg until the close of first twelve months of laying are said to have been produced in the pullet-year and to be the pullet's record. A pullet, according to the Standard, becomes a hen when one year old, but in common use of the name she remains a pullet and does not become a hen until the end of her first year of laying.

Q. (2) What is the difference between a cock and a cockerel?

A. (2) A cock is a male fowl one year old or older. A cockerel is a male fowl less than one year old.

Q. (3) What two birds is it that breed?

A. (3) The male and female. Generally mating a cock with pullets and a cockerel with hens gives best results. Cocks are mated with hens and the mating continued as long as the results prove satisfactory. Cockerels may be mated with pullets if both males and females are fully matured—full grown and well developed—and are strong, vigorous and healthy.

Q. (4) How long does it take eggs to hatch?

A. (4) Twenty-one days. The period of incubation may show some variation, the eggs

of small, active varieties hatching in from 19 to 20 days, while the large varieties hatch in from 20 to 21 days.

Q. (5) Which two breeds would you advise a beginner to raise, White Plymouth Rocks, Barred Plymouth Rocks or Leghorns?

Lewiston, Me. H. J. D.
A. (5) Would advise a beginner to try but one variety. Choose whichever one you like best; you will not be disappointed in any one of those named.

House Questions.

Q. (1) What is the correct way to build a brooder house?

A. (1) That is a pretty big question to be answered in this department. There are many good types of brooder houses and much depends upon the type of brooder to be used. You will find the various types of brooder houses discussed in the leading practical books on poultry keeping. In February issue you will find reference to colony brooder houses for use with coal-burning brooder stoves. If you will look thru your back numbers of the American Poultry Journal for past few years you will find numerous articles covering brooding houses of the colony type. You can obtain plans for a good colony brooder house for use with a coal-burning brooder stove by applying to "Poultry Investigations," Bureau of Animal Industry, U. S. Department of Agriculture, Washington, D. C.

Q. (2) Do brooder houses that are made portable give better results, all things considered, than permanent buildings?

A. (2) The portable colony house is considered more economical and satisfactory since it can be made useful thruout the whole year and it can readily be moved to new ground,

giving the broods the advantage of being grown on fresh and uncontaminated soil.

Q. (3) How would you build an incubator cellar? Size, ventilation, etc.?

A. (3) For reply to this would advise you to consult several of the standard poultry books covering the subject. The size of the cellar will depend upon how many machines and what sort of machines you intend to operate. For one or two machines, or even more, a good house cellar answers very well. Would not want to build a special incubator cellar smaller than 12½ x 25 ft. with side walls 8 ft. stud and a double pitch roof. Side walls of brick or cement, 5 ft. high and in ground about 3 ft., balance banked with earth to just below windows. Ventilation thru windows in wood walls above the brick. Double windows,

First prize White Plymouth Rock hen at Milwaukee, January, 1918. Owned by Adam F. Polt, Hartford, Wis.

The Country Needs Millions of Chickens —You Need the "Successful" Incubator

Hatch Two Chicks, Where You Produced Only One Before

Successful Incubators will do it, and the country needs every chick you can raise. Never have poultry raisers had a bigger chance to help the country and make good profits themselves. Help prevent a great meat shortage—raise more chickens—get more eggs—sell more meat. And this year of all years you need the time tried "Successful"—backed with 25 years of experience—the machine used by the biggest money makers in the poultry business. Write for my 1918 offer on

WALHALLA

Buff Orpingtons

Buff Minorcas

The Strains of Quality

Here Are Several Reasons Why You Should Buy from Us

1. Look at this record made in two shows:

BUFF ORPINGTONS

Michigan State Fair, 1917—3 firsts, 2 seconds, 3 thirds, 3 fourths and 2 fifths. Chicago Coliseum, 1917—4 firsts, 4 seconds, 2 thirds, 3 fourths, 1 fifth and 5 silver cups.

BUFF MINORCAS

Michigan State Fair, 1917—3 firsts, 2 seconds, 3 thirds, 3 fourths and 2 fifths. Chicago Coliseum, 1917—6 firsts, 4 seconds, 3 thirds, 3 fourths and 2 fifths.

2. The above winnings, together with our other sweeping victories, unequaled by any Buff Orpington or Buff Minorca breeder, stamps our strains supreme.

3. Not only do our birds win prizes, but our birds also have been carefully line-bred for years and they will transmit their own good points to their progeny; they also have the breeding and blood lines in them that make certain their producing qualities, as show birds, breeders and great layers.

4. Hatching Eggs from our birds which are bred in a rugged northern climate and raised on unlimited free range have a very high percentage of strong fertility.

5. Baby Chicks hatched from such eggs are full of "pep," as lively as crickets and are able to stand shipment to any part of the country.

6. A breeder who has only a few exceptional birds is not going to supply many customers with hatching eggs, but when a breeder has an extra large number of big show winners as we have (every pen in both varieties is headed by a prize winner) the customers are sure to get some exceptional good quality in Hatching Eggs or Baby Chicks.

7. Our 1918 matings in both our varieties cannot be equaled. Eggs from these matings are bound to produce chicks which will win the highest honors for you next season in the strongest competition.

Something for your serious consideration before placing your egg and baby chick order.

The 1918 CHICK-ECONOMY COMBINATION

- 1 Chick Feeder (without jar) . . . 15c
- 1 Chick Fountain (without jar) . . . 15c
- Head Lice Ointment . . . 15c
- White Diarrhea Remedy . . . 30c
- 50 New Coil Leg Bands . . . 50c
- 50 Key-Ring-O Bands . . . 50c

Value . . . \$1.75
Our Advertising Offer . . . 1.22
You save 30% or . . . 53c

Every year we get out a **Key-Ring-O Combination** to advertise and introduce this celebrated leg band. This year's offer is one for **safety and economy**. You must raise your chicks this year safely and economically. For **safety** we include a regular 15c tube of Conkey's Head Lice Ointment and a regular 30c package of Pratt's White Diarrhea Remedy. Then you get a **Drinking Fountain** and a **Chick Feeder**—the latest style out, and a good one. Then we include **50 New Coil Chick Bands** that will last for years and enable you to mark each chick easily and quickly. And then in addition to the above you get a coupon that we will exchange (after you know just what colors and size you want) for 50 of the celebrated **Key-Ring-O Leg Bands** any size or color.

Surely you will agree that this year's **KEY-RING-O COMBINATION** gives you **SAFETY and ECONOMY** when we tell you that the entire outfit will be mailed postage paid for only \$1.22 and if you can duplicate this combination elsewhere for \$1.75, you may return it to us and we will immediately return your money, together with all postage you have paid. Isn't that fair? This is our method of advertising and you get the standard line of goods at our expense. However, we reserve the right to return money when our supply is sold out. Last year we returned 2527 orders that came too late.

C. H. GORDINIER, Dept. J, TROY, N. Y.

the outer sash hinged at top to swing out and the inner sash hinged at bottom to swing in. Rafters and ceiling sheathed with matched boards about 15 inches above level of plates.

Q. (4) Does an incubator cellar with a brooder house over it give good satisfaction?

A. (4) Many of the old-fashioned type of long brooder houses were built with incubator cellar attached and proved quite satisfactory. If we were going to build, we should have incubator cellar separate and, if going into the work extensively, would build the cellar to accommodate a modern mammoth machine.

Q. (5) Can the Woods' house be used with good results for brooding chicks?

A. (5) The 10 x 16 ft. size is being used very successfully with coal-burning colony brooders. The light partition is used to partition off the low open-front section—muslin partition being sufficient except in extremely cold locations—giving a warm brooding room and a cool open-front exercise room.

Q. (6) Does it pay to keep 75 hens over their third winter that average 147½ eggs their first twelve months, October to October? They are S. C. White Leghorns.

A. (6) Much will depend upon their condition and the circumstances. They might prove very useful as breeders if in good health and vigor.

Q. (7) Does it pay to force the molt with laying stock?

A. (7) Ordinarily, no. In some cases it may prove a good plan to put the flock on short rations on liberal range during hot mid-summer weather, then as cold weather approaches gradually work them on to the regular laying ration, using cooked vegetable mash and raw vegetables or other green stuff freely. This plan is almost certain to be followed by a prompt and quickly finished molt. Birds so molted, on good-sized, well-shaded range, generally make a fine clean molt and take up fall and winter laying in excellent condition.

Q. (8) Is it best to force pullets for early laying, say, at 4½ to 5 months old, or have them start at 6 months?

A. (8) Precocious pullets are seldom satisfactory layers and do not keep up their yield well. We would prefer the birds which develop well first and then begin laying, at 6 months for Leghorns.

Q. (9) How early can Leghorns be hatched in the spring and not have them molt in fall of same year?

A. (9) That depends a good deal upon the care and management of the birds and upon the season. To be safe in your section, April and May hatches would be best.

Q. (10) Does a pullet that molts out her first fall, the same as a yearling, take as long to get back on the laying job?

A. (10) This, too, depends largely upon the care and management. We never let fall molt of pullets worry us. Early pullets, if they molt, usually molt quickly and get down to the business of laying promptly if properly cared for. We have carried February hatched pullets thru without a molt, and other seasons have had April hatched birds, receiving same sort of treatment, molt heavily, although very little time was lost from egg production.

Q. (11) Which is best, to let birds run in the winter, or keep them housed from fall until spring?

A. (11) That depends upon your location and the winter. If ground is dry and there is a bare spot of earth not covered with snow, we like to let them run on fair days when there is not too much raw wind. If they can have a litter of straw, corn stalks or pine needles to scratch over out of doors it will do them good. Don't let them run in deep snow or in sloppy mud and slush.

Q. (12) How much yard or run should the birds have for permanent runs, that is square feet per hen?

A. (12) Sixty-five to seventy-five square feet of yard room per bird.

Q. (13) How many fowls can be comfortably housed and yarded on an acre of land?

A. (13) Four hundred.

Q. (14) I have a building 12 x 50 ft. and could make it 24 x 50 ft. to good advantage. I was thinking of putting a cellar under it for an incubator cellar and using it for a brooder house. Now, I am told that a portable house makes the best brooder house. Thought of putting the cellar in just the same and using the house for grown fowls, but have been told that narrow yards are a

YESTERLAIDS ARE MONEY HENS

Profit is fixed in the blood of Yesterlaid Leghorns. It does not require expert care to make a success with them. On January 20th a Yesterlaid customer writes up in New England, where the temperature went 20 below zero during the cold spell in January writes us: "My Leghorns surprised me. I had been told that this climate was too severe for Leghorns—just to show you how mine went through the spell—in the week December 22nd-28th, I had 44 dozen eggs. December 28th to January 3rd, 48 dozen, January 3rd to 19th, 46 dozen and they are now laying 40%. One of my old hens in the trapnest pen started on her second year in the coldest weather, she laid 216 eggs the first year. Another who laid 230 last year has also started on her second year."

Yesterlaid Single Comb White Leghorns are far superior to the average hen. They lay better in winter and cost less to feed. You can raise three Yesterlaid hens at the cost of two ordinary chickens, because they are vigorous, thrifty and quick-growing. Yesterlaid pullets lay enough eggs to pay their cost of raising before pullets from average hens begin to lay. They are big chalk-white eggs, hatch like popping corn and hand down superior vigor of the parents to the chicks.

Yesterlaid hens are supreme among Leghorns. This is evidenced by their constantly growing popularity, by reports from great numbers of pleased customers, and by the fact that twenty-four State Institutions and Experiment Stations have bought Yesterlaid hens.

Constitutional Vigor Insures Success

Careful, purposeful, selective breeding for vigor is the keynote of Yesterlaid's wonderful success. Buy Yesterlaid hens on the merits of vigor alone and you are sure to get what you want. Not a single female is used in Yesterlaid breeding flocks unless it is the unanimous verdict of Yesterlaid skillful specialists that she is perfectly fitted to reproduce her kind. These specialists are aided in their personal judgment of a breeding hen by the carefully kept records of the daily and yearly performance of the in-

dividuals, and of the flocks of Yesterlaid layers. Every Yesterlaid breeding pen carries the blood of hens that have laid 445 to 480 eggs in two years. The individuals in these pens are the result of more than a decade of diligent, painstaking study and breeding experience. They are pure line-bred Yesterlaid hens. They have never been out-crossed with English or other foreign blood. They rank high as show birds and breed true, generation after generation.

Yesterlaid prices are very reasonable.

Valuable literature giving further details of how this wonderful strain of Leghorns has been developed—how it is fed and housed, will be gladly mailed to you free on request.

Greatest Incubator

DISCOVERY IN 50 YEARS
SOFT-HEAT TUBELESS

Natural Soft Warmth of the Hen and Absolutely Uniform Temperature Over All the Eggs Attained for First Time in Artificial Incubation, in Marvelous New Porter Incubator

I THOUGHT when we discovered the center lamp, center heat idea years ago that perfection had been reached in incubator designing. But now I have improved 1,000 per cent on any other hatcher we know of. Note the lid of the new Porter Incubator—a complete radiator plate.

Gives vastly more radiation than old tube system and spreads the heat evenly over all the eggs. Another greatly advanced but common-sense principle: Combination hot water and warm air. This unit, as arranged in the Porter, produces the moist hatching warmth of the hen herself, making big hatches certain and all stronger, better chicks. Nothing like it ever before used. Heat, Moisture and Ventilation are automatically controlled. No responsibility on user, no worry, no trouble. I want to tell you all about this wonderful machine. Fill out the coupon below or write us a postal for our

Big New Illustrated Book FREE

Explains fully the Soft-Heat and Tubeless principles and 26 superior features of the Porter Incubator. Shows how every important action is automatically controlled and regulated; eggs turned without removing tray; hatches on one filling of tank and less than gallon oil; no gas or bad odors. Also full information about Porter SUXESS Double Brooders. Don't waste your time and eggs on ordinary hatchers. Get a Porter. Send today for our book.

Porter Incubator Co., Blair, Neb. Send me post-paid your FREE book on Porter Incubators and Brooders.

Porter Round, Jr.

failure after they have been used a while. I could make a two-story poultry house of this building, using cellar and all, but am at a loss to know what is best to do. I want to put this building to working to best advantage. It is the shape of a box-car with flat roof. Full size two-sash windows on one side, facing southeast. House is on posts and about 3 ft. above ground level. I have 300 layers, doing fine. Expect to install a mammoth incubator and want to get straightened out.

DuBois, Pa.

M. B. D.

A. (14) Narrow yards are likely to become badly fouled with droppings in time. It is best to have yards that can be plowed and cropped every other season and plowed up and planted to green stuff each season while in use by fowls, in order to keep soil sweet. Why make extensive alterations in the house? As it is 12 x 50 ft., it can be made useful for the operation of two colony brooder stoves and made to brood 700 chicks, 350 to each stove, to good advantage. Divide the house into four rooms, two for use of brooder stoves as brooding rooms and two as cool exercise rooms for the growing chicks. When the chicks no longer need brooding the stoves can be moved to other buildings and the birds matured where they were brooded. You can arrange outdoor run with portable fence panels and keep the soil sweet by frequent cultivation. Better plan an incubator cellar such as is recommended by the manufacturer of the mammoth incubator you intend to install.

Normal Temperature of a Hen.

Q. Saw a statement that "The temperature of a laying hen's body is 98 degrees. The temperature of a sitting hen's body is 103 to 106 degrees." Is this correct?

Baltimore, Md.

C. F. A.

A. It is not. The average normal temperature of the human body is 98.6 degrees Fahrenheit. The average normal temperature of the domestic fowl, with thermometer in rectum, is 106 degrees F. There is more or less variation with different individuals and under differing conditions. In tests of broody hens rectal temperatures have been noted ranging from 103 to 110 degrees F. Birds in each case apparently in normal health. The body temperature of hen taken each day during incubation has shown following variation in degrees F. from first to twentieth days, inclusive: 102.2, 103, 103.5, 104, 103.8, 105, 104.6, 104.5, 105, 104.8, 105.2, 104.5, 105, 105.2, 105, 104.6, 104.8, 104.5, 104.5. The internal temperature of the eggs was taken during the same period and showed a temperature range from 98 degrees on the first day to 103 degrees on the twentieth day. See page 66 of "The Development of the Chick," by Frank R. Lillie.

Mating Anconas.

Q. (1) I have ordered one \$10 sitting and one \$15 sitting of Ancona eggs from same breeder. Will I be using good judgment in mating the best from both sittings?

A. (1) If the chicks develop well and are healthy, full grown and vigorous at mating time next season, would mate them, taking care to balance defects in one mate with strength in same section in the other. Would describe your birds in a letter written to the breeder who supplied the eggs and ask him for advice on mating. He knows what is back of the birds, or should, and can advise you better than anyone else.

Q. (2) Have a cistern for rain water. There must be dead rats or something in the water, as it is not fit to use. Please suggest a way to clean it out. It is 20 ft. deep.

St. Clair Boro, Pa.

J. F. B.

A. (2) Pump out all water. Leave top of cistern open for a while to give it a chance to air out. Do not go down into the cistern until you have first lowered a lighted candle

Ironclad Wins in the Two BIGGEST HATCHING Contests Ever Held

Why take chances with untried machines when for only \$11 we guarantee to deliver safely, all freight charges paid (East of Rockies), BOTH of these big prize winning machines fully equipped, set up ready for use?

Why not own an IRONCLAD—the incubator that has for two years in succession won the greatest hatching contest ever held? In the last contest conducted by Missouri Valley Farmer and Nebraska Farm Journal, 2,000 Machines were entered including practically every make, style and price. With the Ironclad—the same machine we offer with Brooder freight, paid for only \$11, Mrs. C. F. Merrick, Lockney, Texas, hatched 148 chicks from 148 eggs in the last contest.

150 EGG Ironclads are not covered with cheap, thin metal and painted like some do, to cover up poor quality of material. Ironclads are shipped in the natural color—you can see exactly what you are getting. Don't class this galvanized iron covered, dependable hatcher with cheaply constructed machines—and don't buy any incubator until you know what it is made of. Note these Ironclad specifications: Genuine California Redwood, triple walls, asbestos lining, galvanized iron covering, galvanized iron legs, large egg tray, extra deep chick nursery—hot water top heat, copper tanks and boilers, self regulator, Tycoos Thermometer, glass in door, set up complete ready for use and many other special advantages fully explained in Free Catalog. Write TODAY or order direct from this advertisement.

Piqua, Ohio

to the bottom. If the candle burns brightly it will be safe to go down; if candle will not burn, it is not safe to enter the cistern until the heavy gas has been pumped out and fresh air forced in. Scrub walls and floor until clean and cement up any rat holes. Rinse the walls several times with clean water applied with a hose or force pump. Be sure that all pipes are clean before you let it fill up with rain water.

Blood Meal.

Q. (1) Will blood meal in any quantity take the place of beef scrap or fish meal in the dry mash for laying hens?

A. (1) Blood meal carries about 74 percent protein, or about 15 percent more than good average scrap, and carries about one-half as much mineral matter as beef scrap. Where mash formula calls for 17 to 20 percent meat scrap, use not over 15 percent blood meal.

Q. (2) As long as the feed is a "balanced ration," will a change of feed during the laying period have any effect upon egg production?

A. (2) Any radical change in ration is likely to affect egg production.

Q. (3) What application would you suggest for applying to sore feet of ducks? Bottoms of feet are affected and are sore and cracked. Quarters are clean.

Wheeler, Wis. J. W. LeB.

A. (3) Be sure that the duck house floor is dry and kept littered with draw straw.

Rake up all sharp stones in runs. Wash feet with warm, soapy water, dry, and apply camphorated petrolatum.

Hens Die After Laying.

Q. Kindly tell me probable cause and prevention of one-year-old White Leghorn hens dying on the nest after laying an egg. Apparently in perfect health, good flesh, not too fat, death appears to come immediately after laying the egg. Opening does not close and sometimes the parts protrude. I have had three cases in three weeks from same colony of 50 hens. I have six other colonies but no such results with them. This affected colony are inclined to be somewhat wild. They are ravenous eaters and are getting the range of an acre of ground.

A. D. B. Buena Vista, Fla.
A. Trouble looks like apoplexy following straining at laying time. Probably due to excess of internal fat. Do not feed heavily on fattening and heating foods. Avoid use of cottonseed meal in mashes.

More About Blood Meal.

Q. Is blood meal as good as beef scraps or fish scraps? Why is it seldom mentioned in feeding formulas? It is easier here for us to get a good blood meal than to get a good grade of beef or fish scraps, and it is as cheap. Is it harmful to chickens?

Wakarusa, Ind. E. M. I.

A. Good quality blood meal is an excellent animal food for poultry and may be substituted for beef scraps or fish scraps. It is usually more concentrated than average beef scrap and should not be fed as freely. As a general rule, 75 pounds of blood meal will take the place of 100 pounds of fine beef scrap in the mash mixture. Analyses give composition as follows:

	Blood Meal	Beef Scrap
Water	9.6	1.3
Fiber	2.2
Ash	3.8	8.0
Protein	74.1	58.0
Starches	8.8
Fat	2.1	32.9
Nutrient ratio	1:0.2	1:1.4
Calories in 1 ounce	103	154

Blood meal is deficient in fats as well as in ash. When it is used, corn may be fed more freely and a liberal amount of green food and fresh vegetables should be fed. If diarrhoea follows the use of blood meal in the mash, use less of it.

Black Minorcas for Back Yard.

Q. (1) Would you consider S. C. Black Minorcas good birds for back lot poultry keeping?

A. (1) Yes.
Q. (2) Do you consider them good layers?
A. (2) They are excellent layers of large white eggs.

Guarantee

I guarantee the Putnam Brooder Heater to give satisfaction or it may be returned to me within 30 days of receipt and the money paid for it will be refunded.

Brooder Complete \$2.96

Cut herewith shows the Putnam Home Made-Brooder—Complete

This Year Save Your Baby Chicks
Either those you hatch yourself or those you buy—and do it at small cost in every way.

← SEE SAMPLE BROODER AT LEFT

The materials used to make it were one shoe box; one-sixth yard of oil cloth and one Putnam Brooder Heater. The total cost, including Heater, was \$2.96. A 14-year-old boy can build one in an hour with no tools but saw and hammer. This Brooder will accommodate from 35 to 60 chicks and will take better care of them than any Brooder made, no matter how elaborate or expensive. Build one NOW and have it ready for the young chicks when they come. Write for plans for making this Brooder and testimonials from satisfied users. I will send you the plans FREE.

Advantages of the Putnam Home-Made Brooder

Requires filling BUT ONCE A WEEK—no other attention. Patented principle—EFFICIENCY guaranteed. Thousands in use. Every OTHER BROODER must be filled and trimmed SEVEN TIMES a week.

Putnam HOME-MADE BROODER is adapted to any size plant from 25 to 60 chicks in one brooder to any greater number desired; simply use more brooders. Is particularly adapted to needs of small breeder and back-lotter who aims to produce one lot of chicks or a few dozen.

No other brooder on the market is EASIER or more SIMPLE to operate; none uses SO LITTLE OIL per chick; brooder consumes less than a gallon of oil A MONTH. Send for and read the testimonials.

Putnam BROODER HEATER is so constructed that it acts LIKE AN OPEN FIRE PLACE, carrying the foul air out and drawing the fresh air in, thus providing PERFECT VENTILATION AUTOMATICALLY.

Heat is radiated from ABOVE onto the backs of chicks, giving the natural and soothing effect OF THE HEN—without the lice.

Hover is so constructed that chicks FIND EXACT TEMPERATURE THEY LIKE. Adjustable hover takes care of any season from February to July.

Putnam HOME-MADE BROODER CAN BE OPERATED ANYWHERE—in a sunny room in a house, an open shed, or, if a roof be built on it, out of doors; can be CARRIED ANYWHERE by a half-grown boy.

No other brooder is easier to clean and disinfect. Simply lift out hover and heater—brooder can then be emptied of litter and be disinfected.

Brooder Heater is made of brass and galvanized iron—IS PRACTICALLY INDESTRUCTIBLE.

Capacity of Putnam HOME-MADE BROODER IS ELASTIC. When chicks require more exercising space heater and hover can be placed in larger box or other structure. THE BROODER GROWS WITH THE BROOD.

Floor of this brooder is even with the ground and therefore chicks do not have steps or inclines to learn, thus avoiding loss from rain or chilling.

To summarize: At no price, HIGH OR LOW, can a brooder be bought so economical in first cost, also in fuel and labor—so simple and EASY TO OPERATE, so perfectly ventilated, or one that will so surely raise HEALTHY AND VIGOROUS BIRDS.

THE BROODER HEATER
Price only \$2.75 f. o. b. Elmira

HOW TO ORDER: I do not sell the Putnam Home-Made Brooder. I sell the Brooder-Heater only. It weighs, packed for shipment, 5 pounds. The price of the Heater is \$2.75 Elmira or \$2.98 prepaid east of the Rocky Mountains. With every Brooder-Heater I will send EASILY FOLLOWED DIRECTIONS for building the Home-Made Brooder. When ordering, give both your post-office and nearest express office. Can order direct from this advertisement to save time. Reference, by permission, Editor this Journal.

I. PUTNAM

Route 305

ELMIRA, N. Y.

Unretouched photo of a couple of "Aristocrat" Barred Plymouth Rock females. Owned by W. D. Holterman, Box A, Fort Wayne, Indiana.

Q. (3) Why is it that they are seldom entered in the egg-laying contests? I have room for fifty or more birds on my back lot and want hens that will lay.

Paterson, N. J. J. J. H.
A. (3) We believe that you will find the Black Minorcas entire satisfactory. We do not know why this variety has not been better represented at the laying contests. Comparatively few breeders show interest in the laying contests or realize the opportunity which is afforded them to boost their favorites. Unquestionably the buying public places a considerable value upon the "official records" in egg production secured at such contests; perhaps even greater value than the actual facts

warrant. Still it is a good opportunity to secure publicity if one can pick out birds that are certain to make good egg records.

Mating White Orpingtons.

Q. (1) I have 18 fine White Orpington females of two distinct strains, 9 of each. There is a marked difference between the two strains, and a stranger, if he knew anything about poultry, could tell them apart. I have one fine cockerel of each strain. One is long in back and one is rather short in back. The females of each strain are about evenly divided, long and short backed ones in each strain. Should I breed all long backed females

with the short backed male, and reverse, or should I mate each male with his own strain females?

A. (1) Mate each male with females of his own strain. Keep a trap nest record of the hens, mark the eggs, and pedigree the chicks. In that way you will learn which parents give you the progeny of the desired type.

Q. (2) I intend to buy an incubator this spring and want an electric one. There are no electric machines around here. Does an electric machine hatch as well as the other types? Why is it that there are not more of them in use?

Saskatoon, Sask. D. J. H.
A. (2) Probably the reason that they are not in more general use is the difficulty of getting dependable current for running the machines. Such electric incubators as we have observed in operation have given very good results.

Moldy Corn.

Q. (1) I bought 200 lbs. of corn from a dealer at \$3.90 per 100 lbs. It was moldy, but I could get no satisfaction from the dealer, who says that all corn is moldy this year. I am afraid to feed it to my chickens and do not like to throw it away. Is there any way to make it fit to eat?

A. (1) A great deal of the 1917 crop of corn has molded badly or otherwise spoiled. However, with prices prevailing in Chicago at date of your letter, January 21, the dealer should have supplied you with better quality corn for the price you paid. It is not safe to feed moldy corn. If it is not very moldy, you can experiment with it. Wash the grain and then dry it in the oven. Boil the whole

corn before feeding, boil until whole grain is soft. Feed sparingly and note results.

Q. (2) I have an oat sprouter but the oats are moldy and smelling badly now that sprouts are started. Would you feed it, anyway, or would you feed only the green tops?

A. (2) Do not feed the whole oat mat if it smells sour and is very moldy. Feed only the green sprouts. Next time make sure that your trays are clean. Scrub them with warm, soapy water and dry them in the sun. Wash the oats well before you put them in clean water to soak. Sprout quickly in a room which is not too warm. Feed the whole mass, roots, oats and all, as soon as you have sprouts half an inch long. If you do this you will not have trouble with mold.

Q. (3) I understand that corn is the best grain to keep hens warm in winter, but am told that it is too fattening.

Chicago, Ill. H. L. C.
A. (3) Corn is a good poultry feeding grain, probably the best. It does contain an abundance of heat and energy producing material and it is fattening. When feeding corn always feed plenty of greens and raw vegetables, also a good mash containing animal food, like blood meal, beef scraps or fish meal. Whole oats should be fed with the corn, about bushel for bushel, at this season. Later on, when warm weather comes, feed more oats and less corn. Do not let anyone sell you sour or moldy corn.

Palm Nut Meal.

Q. Where can I buy palm nut meal?
Toronto, Can. G. K.

A. We do not know of any dealer advertising it at present in America. It is advertised in English poultry papers. If your feed and supply dealer cannot get it for you, do not know where it can be secured readily under present condition of markets and transportation. Have had inquiries about use of palm nuts from the South and from California. One or two commercial mashes give palm nut meal among the ingredients used in their product. Write the Blatchford Calf Meal Co., Waukegan, Illinois; they may be able to advise you where to obtain palm nut meal.

Pullets Won't Lay.

Q. Can you help me and tell me what is the reason my pullets won't lay? I have 25 White Leghorns, March and April hatch, of a good laying strain, which laid only about six eggs in October and perhaps twelve in December. Have 25 Anconas which have laid only three eggs to date. Have May hatched Wyandottes from well-known strain that have never laid an egg. Nine Minorcas of established strain that never laid an egg, and these are March hatched pullets. The Leghorns are all from 200 and 234-egg record layers. The Wyandottes are out of a high record pen. Have tried different breeds for five years, and this winter am keeping these to decide between them. I can raise chickens and fatten them, but I cannot make them lay. I have talked to them and reasoned with them, but it does no good, altho they are very tame. They seem in excellent condition. Combs bright red and have been since early fall. My houses are old ones remodeled, clean and well ventilated, about half glass and half canvas front with good exposure. The birds have had warm water all winter. Always have charcoal, shell, grit, beef scraps, dry mash. The dry mash is made of equal parts corn meal, middlings, ground oats, gluten, with double quantity of bran, and one part of beef scraps and fish meal, half and half. Give scalded oats in morning, about 3 or 4 quarts, mixed grain, 2 or 3 quarts, and several ears of corn to 50 birds. Also feed cabbages. They have good litter. Have some Ancona yearlings that laid splendidly last summer, but are only just beginning to lay again now. The supply of mixed grain gave out the other day and I had to

Meet The Big Demand for Baby Chicks

"Am so well pleased with Reliable Incubators and Brooders that I'm enclosing draft for 35 more 300-egg size and 25 hovers. Sold 65,000 chicks this spring; have 15,000 more hatching, many of them sold."
—Mrs. Clara Colwell, Smith Center, Kansas.

The American Poultry Association calls upon poultry raisers to increase their products. "If we can produce ten times a hundred million pounds more than in 1916 all the better; there's a demand for all we can produce."

J. W. MYERS, Pres. America's Largest Incubator Factory

Today's Urgent National Demand

offers professional poultry raisers and beginners, too, an unusual opportunity to combine patriotism with profit, in a greatly increased production of poultry. Even in ordinary times the demand for day-old chicks greatly exceeds the supply—advance orders are the rule. The nation calls. Are you ready to respond? Whether you wish to hatch chicks to sell or to raise, it's important to get an early start. Insure a successful early spring hatch with

STANDARD RELIABLE INCUBATOR

The Reliable has held first place in the incubator world for 36 years. Its leadership is more firmly established today than ever, because its distinctively superior hatching features have never been successfully imitated. It's the

ONLY Incubator With Enclosed Double Heating System—Insures Winter Hatching

The Reliable utilizes both the hot air from the lamp and the heat from large copper hot-water tank extending full length of egg chamber—a double safeguard against chilling—saves half the fuel. Patent heat regulator, tested by U. S. Government standard, automatic supply of moisture and ventilation, highest quality construction throughout, make the Reliable as nearly failure-proof and trouble-proof as an incubator can be built. Successful in any climate or altitude. Shipped ready to start all but attaching legs, which come detached to make compact package to save freight cost.

\$5

Brings you this high quality 90-egg Reliable Special Incubator. Built with same care and has same perfect regulating system as Standard Reliable. Double walls, outer wall of thoroughly seasoned wood; mahogany finished, hot air heated. Guaranteed to hatch any egg the hen can hatch. A real bargain—good work for years. I'm responsible and stand behind it. Order Now! Send cash or P. O. order.

REMEMBER: Reliable Incubators are exactly as represented in every detail. Every machine backs every claim made for it.

Built in any capacity desired, hot air or hot water, from 80-eggs to 2,000-eggs. Sold at lowest price consistent with highest quality.

Reliable Brooders are necessary to poultry success. They save the chicks.

Write for my illustrated 100-page poultry book.

J. W. MYERS, Pres.

Reliable Incubator & Brooder Co. Dept. A-1 Quincy, Ill.

Enclosed find \$5 (cash, money order, check) for which please send me one Reliable Special Incubator, money to be returned to me if machine is not as represented. Send Free Poultry Book and prices on Standard Reliable Incubators and Brooders. (A-1)

Conkey's LICE POWDER

feed oats and corn at night and they will hardly eat it. They stopped laying. Have had as many as 200 birds but have gradually cut down the number. The pullets have free range in summer. Hens nave to be yarded. Am very much interested but am just about discouraged.

South Orange, N. J. P. O.
A. Your experience is an unusual one. Think your trouble is overfeeding and fussing with the stock too much. With a constant supply of dry mash before the birds you are feeding enough hard grain to 50 birds to take care of almost 100 birds of equal size. They are probably eating very little mash, and are undoubtedly quite fat, especially with internal fat. Would not feed scalded oats so often. Would not feed by measure; better feed according to appetite and keep the birds a little keen. Heavy feeding is necessary to get eggs, but where you hand feed as you do your birds over-eat and consume more than they would if all food was kept before them in hoppers.

Would put the birds on two meals a day. Give them a hard grain mixture in litter in the morning, not above 4 quarts for each 50 birds. In the afternoon give them a moist mash mixed up crumbly, allowing what they will clean up quickly and eagerly. Feed plenty of greens. Keep them busy and interested in their food. We very seldom find a case of over-feeding of hens and pullets in these times, but your case looks very much like it.

Colds—Damp Litter.

Q. (1) I have a Cornish cockerel that has a bad cold. He had a swollen head, foam in eyes. Gave him a cold remedy and used mentholatum in his nostrils and rubbed about head. Also washed his head in solution of permanganate of potash two or three times a week. He seems much better now and all right except for rattling in his throat. What can I do for this and what is the cause?

A. (1) The rattling in throat is due to the chronic catarrh from which the bird is still suffering. Believe he was dosed and treated too much. If you have cleaned up his head in good shape, applied the mentholatum or some camphorated vaseline, and then put him in open front quarters, dry and well sunned on sunny days, feeding chiefly on hard grain, we believe he would be all right now. It is not too late to try it. For the rattling in throat give him three times daily a tablet containing 1/1000 of a grain arsenite of antimony. Your druggist can get these tablets for you.

Q. (2) I bought two sittings of Dark Cornish eggs last spring from a breeder who claims to have good stock. Most all the youngsters raised have dark toes or black toe nails. What is the cause of this?

A. (2) The defect is a very common one. Q. (3) My poultry house has a cement floor in it and it is lined with tar paper. Window in south side 6 ft. long and 2 ft. high. Window has three sections of glass,

one of which I have removed and curtained with burlap to let in fresh air. When weather is not too cold I leave the burlap off entirely, but when cold or stormy I close it. The litter on floor is damp. I put in new litter every month, but it gets damp in a few days. Several pullets are sneezing and have foam in corners of eyes. What is the cause? What can I do to keep the litter dry? Would it be wise to cover the cement floor with heavy tar paper, or lay boards over it?

A. La Crosse, Kan. W. E. H.
A. (3) Cement floors are liable to be damp unless built on a cinder or crushed rock foundation.

Rider Agents Wanted

Everywhere to ride and exhibit the new Ranger "Motor-bike" completely equipped with electric light and horn, carrier, stand, tool tank, coaster-brake, mud guards and anti-skid tires. Choice of 44 other styles, colors and sizes in the famous "Ranger" line of bicycles.

DELIVERED FREE on approval and 30 DAYS TRIAL. Send for big free catalog and particulars of our Factory-direct-to-Rider marvelous offers and terms.

Study the Poultry Business It Pays

Raising Poultry is a Highly Profitable Business, If Conducted in a Systematic, Business-like Way. It Should Be More Profitable This Year than Ever Before

But There's a Lot to Know to Raise Poultry for Really Big Profits. More People Get Medium or Poor Results than Get Good Results.

Success in this Business, as in Every Other Business, Comes to the Few Who Learn the Work Thoroughly and Follow a Definite, Methodical Plan.

DO YOU KNOW

That in "doctoring" cases of roup, treatment under the wing is necessary?

That canker (chicken diphtheria) is very prevalent and very contagious, but can be cured in one night by proper bandaging?

How to instantly pick out from a flock of chickens those in the early stages of roup, chicken pox, etc.?

That the big, fat hen with the abdomen bagging down behind the legs will be found dead under the roost one of these fine mornings and that others will follow, killed by kindness?

That big head lice are often mistaken for pin-feathers?

That hens roosting on poles painted occasionally with Lee's Lice Killer always have bright, clean legs—never scaly-leg?

That "night ventilation" has killed ten chicks and fowls for every one that ever smothered to death?

That the chickens can be worked in connection with the garden to excellent advantage, keeping it free from weeds, bugs, etc.?

What dangers beset incubator chicks which hen-mothered chicks avoid?

That chickens often have skin troubles, redness, falling out of feathers, etc., and do you know what to do for it?

That white diarrhoea is a contagious germ disease generally transmitted to

newly hatched chicks from the shell of dirty, contaminated eggs and that the use of Egg-o-Hatch entirely prevents this trouble as well as strengthens the chick and weakens the shell?

That hens can be kept laying through the molt if properly handled?

That there are hundreds of little profit-making pointers awaiting you in the Lee Books at no expense to you except for the reading?

How to pick out the laying hens from the non-layers without trapping? You can cull out the slackers and send them to market.

That the freshness of an egg can be easily determined so as to know if a day old, three days old, a week old, etc.?

I WILL TELL YOU—I have answered these questions and scores of others just as important in my series of booklets which comprise the Lee Poultry Library. I will give you a set of these books.

The Lee Library will help you to learn the poultry business. It will teach you how to get more and better chicks from every hatch, how to easily keep your flock healthy and free from vermin, how to keep the hens laying regularly every season of the year, how to preserve spring and summer eggs perfectly for the high prices nine months later, how to feed and house chickens, how to detect disease in its incipency and how to quickly and inexpensively overcome it, etc.

The Lee Books are valuable to you whether you use Lee Poultry preparations or not. They are just as helpful to the experienced poultry raiser as to the beginner. They are written tersely and in an easily understood form. They are authentic, dependable.

I want you to have this library. It is absolutely free at any Lee dealer or, for five cents stamps to cover postage, I will mail it to you without charge. Use the attached coupon or write me a postal. Do it now.

Geo. H. Lee Co., Omaha, Neb., Gentlemen: Enclosed find 5c stamps, for which send me, without cost to me, the Lee Poultry Library and full information about the Lee Way to Poultry Profits.

LEE POULTRY LIBRARY

- "Lee's Poultry Book"
- "Secrets of Success"
- "Care of Baby Chicks"
- "Pointers for Summer and Fall"
- "All About Eggs"

These Books Contain all of the ordinary poultry information, but their greatest value is in the hundreds of little short cuts, pointers, etc., that are only obtainable, in such form and of established and sure value, from the long and successful observation and experience of one person. A compilation from various sources can not possibly have the same value. The Lee Books are copyrighted and are all from the pen of Geo. H. Lee and cover his experience of thirty years in poultry work.

These Books are Absolutely FREE at Lee dealers or a complete set mailed postpaid for 5c stamps. Use the attached coupon or write us a postal.

"Pointers I Never Dreamed Of." I have been in the poultry game for some years, but I will gladly admit that there are pointers in those various books which I never dreamed of and I expect to profit by them. — Jackson J. Bennett, Libertyville, Ill.

"A Heap of Help." I have your Lee Library and find it a heap of help to me. They are worth to me at least \$25.00. — George Erickson, 273 Dumont Ave., Brooklyn, N. Y.

"Handy and Invaluable." Thank you for the "Lee Poultry Library." It surely is very handy and invaluable for farmers and anyone who has to handle poultry. — George L. Matheson, 89 Sanford Place, Jersey City, N. J.

dation with a layer of tar paper buried in the cement above ground level. Think you close up your house too much. Would open more of the window space in sunny weather. Do not entirely close at any time. Air out house well every day. Put about two inches of good dry sand on that cement floor before you put in the next lot of litter. The colds in flock are result of dampness in house and the poor ventilation. Wash heads of affected birds with warm, soapy water, dry thoroughly and then apply camphorated vaseline, pressing a little into nostrils and cleft in roof of mouth. Dampness in the poultry house is much more dangerous than dry, cold air. A board floor raised on cleats about an inch above the cement would help keep litter dry.

Feeding Sound Grain.

We are in receipt of letters from several readers stating that they can buy plenty of sound wheat and good quality corn and asking how to feed this grain in combination. We are of the opinion that sound wheat, fit for milling and making flour for human use, should not be fed to poultry or other stock in the present crisis. There is a great shortage of wheat and all sound grain is needed for human use. There should be plenty of shrunken wheat, slightly damaged wheat and wheat screenings available where sound wheat can be bought. Use these lesser grades for

Tycos INCUBATOR-HYGROMETERS

poultry feeding. Such sound wheat as is not required for human food will undoubtedly be needed for seed.

The United States Government reports that the seed corn situation is very serious and urges that sound corn be saved for seed. Farmers, stockmen and poultrymen are urged not to feed sound corn that is suitable for seed. Seed corn is scarce and will be greatly needed this spring in order to plant sufficient crops for the 1918 season. There is a great deal of soft corn, unfit for seed and difficult to keep in fit condition, even for feeding. Extraordinary effort is being made to dry

White Orpington Eggs from PRIZE WINNERS

backed up by constitutional vigor developed by the right kind of raising. These are the birds that have the size, beauty and egg laying ability.

Breeders

I have a number of good breeders that are grand bargains. Write for my mating list stating your wants.

HARRY DICKEN MANVILLE, ILL.

Keep down the louse pest. It means better fowls, more eggs, better growth in chicks. Chicks are coming along now. Don't let them be pestered to death.

Dr. HESS Instant Louse Killer Is Quick and Sure

Take the handy sifting-top can in hand and sprinkle in feathers, in the nests, on roosts, about pens, coops and yards. Be sure to keep it in the dust bath all the year round. Fowls work it into the feathers—that means sure and quick death to lice—no injury to fowls or chicks. Sold by 28,000 dealers and guaranteed by Dr. Gilbert Hess, M.D., D.V.S.

and save this soft corn and it is available for poultry feeding. Care must be taken to avoid the use of badly heated or moldy soft corn in feeding fowls or chickens, as it is very risky business to feed it. Kiln-dried corn in good condition makes about as satisfactory poultry feeding corn as most of us will be able to use this season. Some sound old corn will be necessary for grinding into chick foods. Oats which were looked upon as a big crop last year, have been in such demand that there is now a shortage in many parts of the country.

A good scratch feed for fowls may be made as follows:

- Kiln-dried whole or cracked corn.....500 lbs.
- Wheat, of feed quality only, or screenings100 lbs.
- Well filled oats.....200 lbs.
- Heavy barley200 lbs.

For standard mash mix equal parts by weight of wheat bran, wheat middlings, corn meal (or feed meal and hominy chop), gluten feed, crushed or ground oats, meat scrap (or fish meal or blood meal).

Small flock poultry keepers and back-lotters will probably be best served by securing good commercial ready-mixed scratch grain and mash. Every poultry keeper who can should grow a grain crop this season.

Chemical Composition of the Egg.

The shell consists of an organic matrix of the nature of keratin impregnated with lime salts. Calcium and magnesium carbonates, about 97 percent; calcium and magnesium phosphates, about 1 percent; keratin and water, about 2 percent; trace of iron. The shell-membrane and the vitelline membrane are stated to consist of keratin or a closely allied substance. (See "The Development of the Chick," Lillie, 1908.)

Capons.

Q. (1) What is a capon? Is it a male or female fowl?

A. (1) A capon bears the same relationship to the male fowl that the ox bears to the bull. A capon is a castrated cockerel.

Q. (2) I have some Barred Plymouth Rocks eight months old. I am unable to ascertain their sex. Some look as if they were part male and part female. Others have a head like a female but the tail shows plumage like a male. Don't you think they ought to crow if they are males?

A. (2) Not knowing whether you bought these birds recently "as is" or if you reared them, we cannot say what you have. Better get some near-by experienced poultryman to look them over for you.

Q. (3) Which breed lays the largest and most eggs?

A. (3) We do not know. There are American, English, Asiatic and Mediterranean varieties which lay large eggs and plenty of them.

Q. (4) How much do fully matured Buff Cochins weigh?

A. (4) Cock, 11 lbs.; hen, 8½ lbs.; cockerel, 9 lbs.; pullet, 7 lbs.

Q. (5) When does a chick become a pullet, or if a male, when does it become a cockerel?

Chicago, Ill. G. L.
A. (5) From as soon as you can determine sex until the bird is a year old. With pullets the name is often used until end of first year of laying.

Red Sussex.

Q. Am interested in Red Sussex. Please describe them.

Jones, Ala. C. C. K.
A. The Red Sussex is a variety of an English breed originated in Sussex. It is an excellent fowl, good for both meat and eggs, and attractive for show purposes. The body is long, broad and deep, presenting an almost oblong appearance viewed in profile. Plumage is mahogany red. Under-color, slate. Feet and legs, white. Skin, white. Standard weights, cock, 9 lbs.; hen, 7 lbs.; cockerel, 7½ lbs.; pullet, 6 lbs.

Diseased Ovary.

Q. When we kill our hens we find a number of small yolks that are hard and almost black. They are a little larger than a pea. These hens do not lay very well.

New Windsor, N. Y. Subscriber.
A. Ovary is diseased. Probably trouble is due to bacillary white diarrhoea or similar

SPROUTED OATS—WINTER EGGS

The Vapor-Bath Sprouts produced by the Close-To-Nature machines possess an efficiency for prolific egg-production not found in sprouts grown the old way or in many so-called grain sprouters. A sweet, succulent, tender, edible, palatable sprout is grown in the Close-To-Nature Vapor-Bath machines.

Sprouted Oats From One Bushel Of Grain

CLOSE-TO-NATURE GRAIN SPROUTERS

The DOUBLE-QUICK, the ALL-METAL SECTIONAL, the LAMPLESS, three kinds and all sizes from a few hens to 1,000,—made by the pioneers and largest manufacturers of Grain Sprouters. The Grain Sprouter or Perpetual Poultry Silo runs up the egg yield and cuts down the feed bill. Turns high-priced grain into low-priced feed. The Close-To-Nature Vapor-Bath machines sprout in 20 to 30 hours and force growths of 1 to 2 inches daily, thus producing the best of easily-digested, highly-efficient, egg-producing feed. Circular free.

wish to know comparative yield per acre and how to feed. Also the digestibility and palatability of each. Which would you consider most practical as a poultry food?

Jeffersontown, Ky. J. F. M.
A. Write for information to your State Agricultural College and to "Poultry Investigations," U. S. Dept. of Agriculture, Washington, D. C. These foods have not been used extensively for poultry feeding. In limited quantities they are eaten readily. Soy beans yield from 15 to 35 bushels per acre. Cowpeas yield from 15 to 30 bushels per acre. The "Black-Eye" is a variety of cowpea.

Soy Beans		Cowpeas	
Water	10.8	14.8	
Fiber	4.8	4.1	
Ash	4.7	3.2	
Protein	34.0	20.8	
Starches	28.8	55.7	
Fat	16.9	1.4	
Nutrient ratio	1:2.1	1:2.8	
Calories in 1 ounce.....	117	92	

Can be utilized in small quantities in scratch grain. Should prove useful when ground for mixing with mash. Unless home-grown there will be difficulty in securing supplies. Cost is likely to prove over-high for poultry food in most cases. Samuel Tyson, Rising Sun, Maryland, has been one of the most successful growers of soy beans we know of, getting large yields per acre. Possibly you can obtain

advice from him as to seed, preparation of soil and planting.

Acute Indigestion.

Q. I have been breeding Silver Campines with splendid success, but last fall I lost one of my finest pullets. She was in fine laying condition. One day noticed her standing with eyes closed and gaping. Died in three days. Have had two more go the same this winter. Can you tell me what is wrong? Have a good warm house and they do not seem to have colds. All seem perfectly healthy until one becomes droopy.

Princeton, W. Va. J. C. McC.
A. Looks like acute indigestion. May be due to eating spoiled or heated grain, or moldy grain, or to some other undesirable food eaten to excess by the individual. Try to find the cause and remove it. Examine the crops of affected birds, the crop and gizzard contents may point out the cause of the trouble. Next time one is affected, use a fountain syringe to introduce sufficient warm water into crop to fill but not stretch it. Work the crop gently and then make bird vomit up contents of crop. Give warm milk and egg albumen containing a few drops of brandy. Feed this in teaspoonful doses occasionally. If bird shows improvement, give small amount of moist mash. Return to regular ration gradually.

WHY TAKE CHANCES?

Find Out What An Incubator Is Made of Before You Buy

Send for Our Free Catalog and We Will Send You a Sample of the Materials We Use in Our Incubators and Brooders.

It pays to investigate the kind of materials used in an incubator, before you buy. Then you will know how they are made and what they are made of; which machine is best and which will

[6]

last the longest and give the most value for your money. You will know what you are going to get before you pay for it. It will also save you disappointment, time and trouble. That's why we want to send you a sample of the material we use in our machines. Year after year, these unbeatable Wisconsin have proven their superiority over all others regardless of price. The reason is plain. It is because they are made of the best materials and by skilled workmen. We know before they leave our factory they will give the best of satisfaction. Dear Sirs: We are well pleased with the Wisconsin incubator as we got 135 good healthy chicks from 139 eggs.
Your customer,
Gust Weiland.

WISCONSIN INCUBATORS HAVE DOUBLE WALLS

I build the outer walls of my incubators of genuine California Redwood—costing four times as much as materials some manufacturers use—and the inner wall is of insulating board with dead air space between the walls—hot water heat, double glass doors, COPPER tanks and boiler, self-regulating. Roomy nursery under egg tray. Incubator is finished in its natural color showing the high grade California Redwood lumber used—not painted to cover up inferior material. Both machines shipped complete with thermometers, lamps, egg tester and book of directions, all set up ready for use when you get them. Freight paid East of the Rockies. I am undoubtedly making the readers of this paper the most remarkable offer on incubators and brooders ever made. I have been advertising in this paper for years. The publishers know me and know I do just as I agree. You take no risk in ordering a Wisconsin Outfit direct from this ad, or write for free catalog today.

Wisconsin Incubator Co.
Box 44
Racine, Wis.

Not few nor light are the burdens of life; then load it not
With heaviness of spirit. A wise traveler goeth on cheerily,
Thru fair weather or foul; he knoweth that his journey
Must be sped, so he carrieth his sunshine with him.
—Tupper.

IN THESE days of food scarcity, food conservation, and food substitutes, the mothers of growing children cannot be too careful in seeing to it that their children are being properly fed. A growing child requires a goodly amount of wholesome nourishing food to build up and maintain health. Most adults can eliminate considerable surplus food from their dietary with benefit to their physical well-being, but growing children need all the nourishing food they can get. The pity is that a great percentage of them cannot get it, and their later years show the evil result of poor nutrition and under-feeding during childhood. Not many years ago a lecturer of note stated that he believed we would have no further use for hospitals, jails, insane asylums and like institutions, in one generation, if the children were allowed plenty of pure air and sunshine and all the wholesome food they wanted.

Recently a committee of well-meaning women near one of our large cities examined the lunch pails of numerous school children, to see if the mothers of these children were observing the meatless, wheatless, sugarless rulings of the Food Administration, and they expressed themselves as being surprised and shocked to find that in many lunches there was "too much food" and of a kind not now allowable. One child was found to have five small slices of bread and butter, another had a meat sandwich, and still another a slice of cake. So the women set about to make public their findings in an effort to discourage further extravagance as regards school lunches.

It would appear from the reports of similar committees bent upon conservation, that, at this time of labor shortage, these excellent women could find employment which would

be of greater service to the Nation. The fault to be found with the school lunch of the average child is not that it is too abundant but that it is far too scanty. No doubt milk and eggs, rich broths and hot cocoa would be far better for the child than meat sandwiches or just plain wheat bread and butter, but the mother sending off two or three children several miles to school, during all degrees of severe winter weather, cannot supply her children with such foods as she would like. Every rural school should have a well conducted kitchenette with cooking equipment where hot lunches could be prepared and served by the children, but very few of them have anything of that kind. The child has to leave home early in the morning and does not reach home again until it is beginning to grow dark. For an all-day sojourn, where he is expected to put in a full day of trying work, he needs to be well nourished. Five slices of bread is not any too much for a child under such circumstances, tho, of course, other foods might be better for him. Children who eat corn muffins with relish for breakfast will, day after day, bring them back untasted when sent for lunch to be eaten cold. Anyone who has ever had the task of putting up school lunches realizes how few articles of food the average child relishes when sent in the lunch box. A small thermos bottle is one of the best investments I have made along this line. Every morning it is filled with steaming hot broth or cocoa or "Cambric tea" (which is not tea at all, but whole milk, boiling water, nutmeg and a bit of sugar) and forms a very essential part of the noon meal at the school house. Bran and wheat muffins and oatmeal bread are used for sandwiches with fillings of butter, jam, or minced

How to Raise Chicks

128 pages, profusely illustrated. An a to z manual for everyone who keeps fowls. Written by Prince T. Woods, a man who knows how and how to teach others. Cloth bound, price 75c. American Poultry Journal Pub. Co., 542 S. Dearborn St., Chicago, Illinois

ENDORSED, RECOMMENDED AND USED BY AMERICA'S MOST SUCCESSFUL POULTRY RAISERS

Licene

Exterminates all Chicken Lice as if by Magic

When such breeders as Mrs. Helen Dow Whitaker, E. B. Thompson, Dr. N. L. Smith, A. C. Hawkins, O. F. Mittendorf, Prof. T. E. Quisenberry, Len Rawnsley, U. R. Filsbel, A. A. Carver and thousands of other big breeders that have had years of experience in raising poultry, endorse and use a preparation as the best, it must have exceptional merit, and will do all that is claimed for it.

LICENE Makes Hens More Profitable

No hen can lay her best when tormented by lice. Kill the lice and watch the increase in your egg production. John G. Poorman, Tinley Park, Ill., the owner of "Lady Show-you," the \$800.00 hen, and breeder of the celebrated 200-egg strain, writes:

"Lice is the one great factor in determining success or failure in the poultry business. If exterminating lice means success, and it surely does, LICENE should be given all the credit. I would as soon be without feed as without LICENE, for without either profitable egg farming is not a success."

LICENE Cheapest Lice Killer Known

Price, 60c a Tube, Postpaid Sufficient for 150 to 200 Fowls

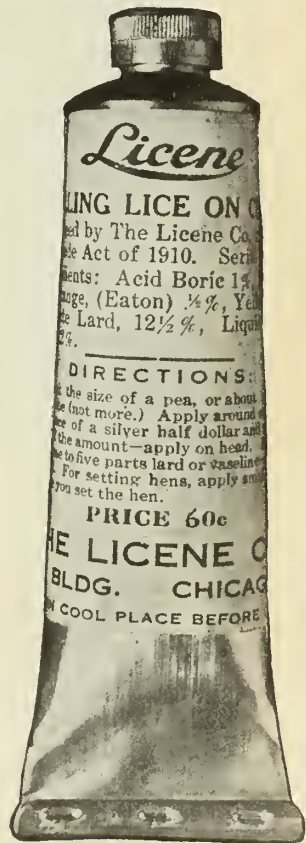

LICENE is applied twice a year, but many report that they have found one application a year sufficient. When you stop and consider that one tube is sufficient for 150 to 200 birds, you must realize that LICENE is cheaper than lice powder and liquid lice killers. It is also more conveniently handled and more easily applied, saving time, labor and money, making LICENE not only the best but cheapest lice exterminator the world has ever known. Put up in collapsible tubes, which prevents waste. Remember LICENE will not injure the birds in any way or destroy fertility of eggs, so with our positive guarantee you take absolutely no risk in giving LICENE a trial.

Positive Satisfaction Guaranteed or Money Back

If Licene does not destroy every louse and "nit" (egg of a louse) or does not clean scaly legs on your chickens, or if applied on sitting hens, and does not prevent head lice on chicks—you are the judge—we will refund your money if you notify us (or our agent) within one month after receiving Licene and no questions will be asked.

The Poultry Doctor FREE This little book is worth its weight in gold to any one raising poultry. Thousands of poultry breeders are following its suggestions with success and profit. It contains 16 different tested and proven formulas of remedies for diseases common among fowls. It is invaluable to the beginner and experienced breeder alike. Remember it is absolutely **FREE**, so just send your name and address for it.

THE LICENE CO., 1500 Pontiac Bldg., CHICAGO, ILL.

The above illustration of the first prize cock and champion male at the National Meet of the Single Comb White Leghorn Club, at the Greater Chicago Show, January, 1917, was made from an unretouched photograph taken by Artist Stahmer, April 22, 1917. The bird was taken direct from the breeding pen and photographed, without any preparation or conditioning whatever, and is one of the most remarkable birds ever produced. He has never been defeated and has won four first prizes and one championship at National shows: Greater Chicago Show, 1914, 1915 and 1917, and St. Louis, 1918. He has produced a line of sensational winners at the largest shows in the country, and will again head my Mating No. 1 this season. This bird was bred and is owned by me at the present time. My new 1918 catalog will be sent upon request. Eugene Smith, 317 Galena Boulevard, Aurora, Ill.

chicken, or to be eaten with a stuffed egg. Nut meats, apples and oranges are sent alternately for variety, with an occasional baked or steamed custard.

It is not the mothers of children who go long distances to school and who thus have to carry a lunch, who need to have food conservation drilled into them. Most of the children of these mothers have never had as much food as their bodies require for proper development, and while present day conditions exist are not likely to have. If the ration which is now being advocated for wealthy families could be made possible for the families of the poor, or even the middle classes, there would be fewer men and women physically unfit for the work which confronts the coming generations.

Three adults and a child of nine years were taking an all-day journey last fall thru a very beautiful section of the country. The hills were radiantly clad in the gorgeous reds, browns, yellows and greens of the New England foliage at that season of the year. The sun was shining its very best and the breath of the sea air as they sped down the coast line was most refreshing. The conversation, as most conversations nowadays, related to the war. Tales of cruelties, suffering, sacrifice, disaster and speculations as to what would follow the war were one after another discussed and no matter how enthusiastically any other subject was brought into the conversation, it soon merged itself into a war topic and ended as such.

Along in the mid-afternoon during a moment's lull in the conversation, the child of the party heaved a heavy sigh and in a plaintive voice remarked, "I wish the war would get over so we wouldn't have to talk about it so much!"

There are probably a great many sensitive children in all parts of the world who have felt the same way, for probably no other war has ever engaged the thoughts of so many people since the beginning of time. It is perfectly natural and right for people to think a great deal and talk about the war. In fact it could not be otherwise with all our interests at stake and all our hopes centered about its outcome. But perhaps we are overdoing it with sensitive-minded small children. A child's life should be as full of sunshine and joy as we can make it. Whatever of fear, or blight, or undue suffering, is forced upon childhood shows its evil effect upon the coming man.

The present is a time when every child needs all the sunshine, good fellowship, wise counsel and loving which his parents can bestow upon him. These things will do more to help the child toward right living than anything he can get from school, college or state. Juvenile crime has increased tremendously in all the belligerent countries during the past three war wearied years. In many places with schools closed and mothers working in factories, the children have been left to shift for themselves in what appears to them a lawless state of society. They hear nothing but war talked of at home, there is nothing else in the papers and it is but natural, with lessened parental care and school dictatorship, that their young minds should run along similar channels. Without wise counsel of more mature minds the result is apt to be very disastrous.

A happy childhood does not fit well into the environment with which children are surrounded in many parts of the world today. It thrives best amid green grass, sunny meadows, bird songs and woodland, but above all where the open expression of the parent's love and interest is made evident. A keener interest in the boy and his pursuits will awaken his self respect and stimulate his ambition. The sensitive girl, who feels the burden of the war as keenly as her elders, hungers for the affection of those near and dear to her and profits by a wise guidance in her reading and consequent thought and action!

Whatever of time and attention, of love and interest, we bestow upon our children's welfare in these days of world travail will net us good returns, and its undoubted survival value will add to the betterment of the child and the world in which he lives. A great many people have turned their children over to the schools and the church for the development of character, as well as mind training, only to find that no outside influence can take the place of good wholesome home environment. If a parent can do nothing else for his child he ought to be able to make the child happy, for happiness is a natural state for childhood and should everywhere, and under all circumstances, be encouraged.

I knew a little boy a few years ago who was having a hard time learning to do what he

FERRIS WHITE LEGHORNS

FERRIS WHITE LEGHORNS FOR EGGS

Compare them with ordinary hens and you will understand why so many thousands of poultry keepers breed Ferris White Leghorns. Trapped for 18 years they have records as high as 264 eggs per year and their laying qualities are so well established that they will produce good results for you wherever you are located. All stock is bred for size, health and profit, and raised on free range with every care to produce perfect development. Thirty-five acres are devoted exclusively to White Leghorns and we raise thousands.

PRICES OF BREEDING STOCK

	From 230 to 264 Egg Stock	From 200 to 230 Egg Stock	From Good Utility Stock
1 cockerel	\$ 10.00	\$ 6.00	\$ 4.00
1 male, 4 females.....	30.00	18.00	12.00
1 male, 12 females.....	60.00	40.00	27.50
100 females	365.00	250.00	175.00

Now is the best time to buy. Shipment can be made in cold weather with perfect safety. Hundreds of choice cockerels, pullets and hens. See catalog for complete descriptions.

ALL STOCK IS SHIPPED ON APPROVAL. You can return within three days any birds not satisfactory and money will be refunded. (We will ship C. O. D. if you want to see the birds before paying for them. Send only \$1.50 for a pen of five, and 20 cents each for larger numbers to guarantee express charges.) We insure all stock for 30 days. Any birds that die or get out of condition will be replaced free of charge. Their breeding value is also guaranteed. Any male that does not produce fertile eggs, any hen that does not lay hatchable, good-shaped eggs will be replaced free.

PRICES OF 8-WEEK-OLD PULLETS AND COCKERELS

	From 230 to 264 Egg Strain	From 200 to 230 Egg Strain	From Good Utility Stock
1 cockerel, 4 pullets...	\$ 15.00	\$ 10.00	\$ 8.75
1 cockerel, 10 pullets...	30.00	20.00	16.25
50 pullets	110.00	80.00	65.00
100 pullets	200.00	150.00	125.00

We are now booking orders for 8-week-old chicks. At this age the pullets weigh 3/4 lb., and the cockerels about 1 lb., and we guarantee safe arrival anywhere in the United States or Canada. Catalog gives full particulars.

EGGS FOR HATCHING — PRICES FOR FEBRUARY, MARCH AND APRIL

	From 230 to 264 Egg Strain	From 200 to 230 Egg Strain	From Good Utility Stock
15 eggs	\$ 5.00	\$ 2.75	\$ 2.25
30 eggs	9.00	5.00	4.00
50 eggs	13.00	8.00	6.00
100 eggs	25.00	15.00	11.00
500 eggs	110.00	65.00	52.50
1000 eggs	200.00	125.00	100.00

We replace all infertile eggs free of charge, or if you get less than a 60 percent hatch we will replace one-half the eggs that do not hatch. We guarantee safe arrival anywhere in the United States or Canada.

DAY-OLD CHICKS—MARCH AND APRIL PRICES

	From 230 to 264 Egg Strain	From 200 to 230 Egg Strain	From Good Utility Stock
10 chicks.....	\$ 3.00	\$ 4.50	\$ 3.00
25 chicks.....	13.50	9.50	6.50
50 chicks.....	26.00	18.00	12.50
100 chicks.....	50.00	35.00	24.00
500 chicks.....	220.00	145.00	115.00
1000 chicks.....	400.00	275.00	220.00

We guarantee safe arrival anywhere east of the Rocky Mountains. See catalog for full descriptions. Our first hatch comes off March 5th. Our incubator capacity is 47,000 eggs, or over 10,000 chicks a week; but we advise placing orders as far in advance as possible, as we expect an unusually large demand.

1918 CATALOG IS FREE

Send for your copy today. It describes fully the stock, eggs and chicks quoted above. Contains photos showing 35 acres of White Leghorns; describes our methods of feed and care; how we improve laying qualities; list of winnings at 20 big shows; many letters from customers; prices of exhibition, breeding and laying stock, eggs for hatching and day-old chicks.

Makes 'Em Turn up Their Toes Mighty Quick

There isn't a ghost of a show for lice and mites on hens, chicks or nests after a dust with the old reliable Lambert's Death to Lice. It knocks 'em stiff in a jiff. As one of the big successful poultrymen wrote us, "It is impossible to get along without your louse killer," so it is with every user. There's nothing so efficient.

Don't Experiment

Follow the example of the leaders—ask any successful poultryman which lice killer has been the standard for 30 years—which is acknowledged BEST. He will tell you to

Get **Lambert's**
OLD RELIABLE DEATH TO LICE

because he has found it **always the BEST.**

Don't expect to make your hens pay and permit lice to worry and annoy them. The lice will get the profit and often the hens and chicks, too. A few cents invested in Death to Lice will bring dollars in profit. Just the thing for layers, sitters, and exhibition stock. Will not injure eggs, chicks or hens or soil plumage. Get a 5 oz., 10c box at dealers to try (or send to us direct if he can't supply you). Other sizes 25c, 50c and \$1.00. Lambert's Latest copy of "POCKET BOOK OF POINTERS," a valuable book for poultry raisers. Mailed for 20 stamp.

KLEIN-LAMBERT CO.
601 TRADERS BLDG. CHICAGO

was told. It seemed too hard a task to leave instantly, when called, a sand pile in the corner of the yard, where he was constructing a trans-continental railway, for the apparently unnecessary task of washing up for dinner. His mother argued with him, telling him how he kept others waiting and that it was necessary for him to learn obedience—to do the thing he did not like to do. For several days she noticed whenever he was asked to do anything he did not care to do, he would run and pluck a fragrant flower and hold it his nose for a minute, breathing deeply. When asked to explain, he said, he could do difficult things, if he could "mell a wov" (smell a flower) first. And so it is with many of us. Let us put a little more of the fragrance of human love and kindness into our children's lives that they may be the better able to meet the difficulties which confront them.

HOMINY PUFFS.

To one cup of boiled hominy add three-fourths cup sweet milk and one beaten egg. Add also one tablespoonful melted chicken fat, half a teaspoon of salt, one tablespoon cooking syrup, one cup of whole wheat flour and two tablespoons baking powder. Have muffin irons hot, grease well and fill each partly full with the batter. Bake in quick oven and serve hot.

BOILED RICE WITH CANNED FRUIT.

Wash the rice thoroughly and cook in double boiler in boiling water. Do not stir. Have each grain separate when cooked. Rice mash is not appetizing. Serve as a desert with canned peaches heated in their own syrup. Canned pears are also very delicious to serve with hot boiled rice.

CANNED FRUIT SHORTCAKE.

Make a shortcake dough by sifting together one cup flour, one-fourth cup corn starch, one-half teaspoon salt, two tablespoons sugar, one and one-half teaspoon baking powder and moisten with thin cream. Roll into a sheet to fit a baking pan and cover with halved plums, peaches, apples or any other canned fruit on hand. Sprinkle with sugar and bake in a quick oven. Serve with the juice from the canned fruit. Cherries are very nice when served in this way if a thin layer of dough is placed over the fruit before baking. Dried fruits may be used in the same way by cooking them first.

RICE CAKES.

Cream one-half cup chicken fat with one-half cup sugar and two eggs. Sift in gradually one-quarter cup of rice flour and three-fourths of a cup of wheat flour and two teaspoons of baking powder. Drop on to a baking sheet and bake in a quick oven.

BOSTON BROWN BREAD.

Mix together one and one-half cups of rye meal, one cup corn meal, one quarter cup whole wheat flour, one egg, one-half cup molasses, one cup milk, preferably sour. Add one teaspoon soda to the molasses and stir well before adding to mixture. One-half cup seeded raisins should be stirred in just before placing in mould. Steam four or five hours. Serve hot.

Coliseum Announces Dates and Judges for 1918.

The tenth annual exhibition of the great Mid-West Poultry and Pet Stock Association will be held at the Coliseum Building, Chicago, December 3-8. The following judges have been selected—others will probably be added later:

- D. W. Young, Monroe, N. Y.—White Leghorns. James A. Tucker, Royal Oak, Mich.—R. I. Reds and Barred Plymouth Rock males.
- Harry Adkins, Davenport, Iowa—Partridge Wyandottes and Partridge Rocks. Chas. V. Keeler, Winamac, Ind.—Buff Wyandottes and Buff Rocks. T. J. Roundtree, Nora, Ill.—Campines. Herman Rikhoff, Indianapolis, Ind.—Buff Leghorns and Buff Minorcas.
- Hackett, North Freedom, Wis.—Black Minorcas. Fred Kummer—White Rocks and White Orpingtons. Leonard Rawnley—Sussex and Buff Orpingtons. Geo. Greenwood, Lake Mills, Wis.—Black Orpingtons and Blue Orpingtons. Geo. Wells, Oshkosh, Wis.—White Wyandottes. W. G. Warnock, Geneseo, Ill.—Brown Leghorns. Leo A. Lee, Chicago, Ill.—Columbian Wyandottes and Columbian Rocks. Fred Shellabarger, West Liberty, Ia.—Black Langshans and All Asiatics. R. P. Krum, Stafford, Kas.—Bantams. H. A. Pickett—Turkeys and Water Fowls. Chas. Brent, Oconomowoc, Wis.—Cornish.

Pet stock judges will be announced later, subject to the approval of the Chicago and National Pet Stock Club.—Theo. Hewes, Secretary, Indianapolis, Ind.

No More "Cold Corners"

You can see for yourself that a hover built in circular form cannot have "cold corners". Prairie State Hovers make the comfiest, coziest homes for baby chicks ever invented. They are equipped with every modern convenience and appliance that will help protect the frail lives of your baby chicks, and develop them into strong, healthy payers. A thermometer and thermostat automatically maintain an even, unvarying temperature in all kinds of weather. Three sizes and styles to meet every requirement, and every pocket book. Get our attractive prices before you buy.

PRAIRIE STATE HOVERS

THE PRAIRIE STATE JUNIOR PORTABLE HOVER is our newest and most popular model. Due to economies in designing we are able to offer it to you at an exceptionally low price. It gives you all the chick protection and does the work just as well as higher priced machines. Note illustration above. See how compact, how simple. It is substantially built of rust proof and wear proof galvanized iron and the best of materials, yet it is light enough to be easily portable. Diffusion ventilation brings in warmed fresh air, but no drafts. Beginners, fanciers and farmers rearing small flocks will find it ideal, and a big bargain.

Prairie State Incubators

Our new FREE book describes the complete Prairie State line—including incubators, hovers, stove brooders and poultry supplies. A postal card brings it postpaid.

Why I Breed R. C. Reds.

(Continued from Page 299)

Some farmers say this special mating and trap-nesting makes too much extra labor. Well, the ones who put forth this extra effort are the ones who are going to be ahead in any line of work. I might state that I farm and have under control seven hundred and sixty acres of land, raising each year wheat, corn, oats and alfalfa, also horses, cattle and hogs. Have no hired help six months of the year, and yet, with the aid of my wife and daughter at the busiest seasons, I find it a pleasure rather than drudgery to give my chickens this special attention.

Incubators and hens, both, are used for hatching; but let the hens raise all the chicks. I can tell no difference in the chicks hatched in the incubators or under hens, either in raising or at maturity.

After the chickens are hatched, they are placed in open-front brood coops, about twenty-five to a hen. A slat run 2x4 feet is placed in front of the coop, the hen being confined until chicks are old enough to wean. The coops are placed in an orchard, so as to have plenty of shade. After the chicks outgrow the brood coops, they are transferred to the colony houses, previously used by the breeders, and there kept until mature.

Then, my reasons, in brief, for keeping the Rose Comb Rhode Island Reds are:

First, the Rose Combs because they are not as easily frosted as the Single Combs.

Second, they cannot be beaten as winter layers.

Third, they have size enough for anyone, and are extra well meated.

Fourth, they are truly a fancier's fowl, possessing that stately carriage and that rich red color which no one can help but admire.

Fifth, they are vigorous, are great rustlers and are easily raised.

Sixth, there is ready sale for them. In fact, I cannot fill half the orders for fowls or eggs that come to me.

"Eggs for hatching for everybody." So say the breeders who have carried thru better fowls than ever before. Better Standardbred flocks. Better hatching eggs. At your service today to help you produce better flocks of poultry to help win the war. Write today and book your order for hatching eggs to be delivered when you need them. See breeders' ads. in this issue.

* * *

Bought that coal burning colony brooder stove yet? Better send the order in at once. Do not delay. Fuel administrator says plenty of coal will be available for those who operate coal burning incubators and brooder stoves. Coal is available for those who need to use it to hatch and grow chicks needed for food supply. See letter to president of International Baby Chick Association.

* * *

"Early hatched pullets produce more winter eggs and return the greatest profits." So say Government poultry experts. The surest way to get early pullets is to use incubators and brooders. Have you bought yours yet? Better order now.

Simplex Midget \$ 1 25 Feather Brooder

1 25
Postpaid

This Midget Brooder is made to fill a gap between the old "cluck" and the large artificial brooders.

We guarantee that this brooder will raise as many chicks as a "cluck" if placed in a living room or warm basement. It is made to accommodate one setting of 15 chicks, but will take care of 25 chicks for the first week.

Uses for this Brooder

Thousands of people buy baby chicks in dozen lots and have no place to properly brood them until they can take care of themselves. This Midget Brooder will take the place of the hen and raise them.

Many times a poor hatch comes out of an incubator or a few weak chicks de-

The feather hover inside can be raised and lowered to suit the size of the chicks.

mand special attention. It is a good deal of trouble to raise a few chicks in a big brooder. Why try, when you can get this Midget Feather Brooder to raise them without trouble?

When the old hen deserts her chicks, that's another time the Midget Feather Brooder is worth its weight in gold.

Construction

The body of this brooder is made of germ proof fibre board; the top and bottom are made of best grade of corrugated board and the feathers are genuine down feathers, the same as used in our larger Simplex Perfection Feather Brooders; and this brooder is guaranteed to raise every chick worth raising.

Send one dollar today and let us send you one Ly parcel post, prepaid. Money will be refunded if you are not satisfied. Also ask for our catalog of larger brooders and other poultry supplies.

Note the thickness of the downy feathers which warm the chicks.

SIMPLEX SUPPLY HOUSE, Pontiac Bldg. Chicago, Ill.

Eggs and Baby Chicks

Thorobred White and Barred Plymouth Rocks

Fill up your incubator and set all your hens with Orchard Farm's big, brown eggs. Strongly fertile and fresh from the trapnest. Pedigreed breeders' records from 200 to 261 eggs. At recent Harrisburg Capital Egg Show, our Mr. Hill won first prize 10 dozen, first prize 1 dozen, brown Rock eggs. Grand Sweepstakes prize over all color eggs, 100 dozen competing. \$12.50 per hundred; \$2.25 per setting. Sturdy Baby Chicks, 20 and 40 cents each. I guarantee safe arrival, a good hatch, full count and satisfaction. Write for full description today.

I AM WRITING these lines in my hotel in Miami, Florida, on January 27. The thermometer registered seventy-two degrees at seven this morning. The weather has been glorious nearly every day. The cold which has held the North in its grip nearly all winter found its way down here on December 13 and again a few days later. *The Miami Herald* thus tells of the great damage done in this part of the state:

Yesterday morning's cold weather did considerable damage to tender vegetation all over Dade county and in some localities of the northern part of the county injured young avocado trees. Everywhere vegetables that were not protected were killed.

The thermometer at the weather bureau registered thirty-seven degrees above zero, this high temperature being due principally to elevation above the ground and proximity to the bay.

Farther west, however, temperatures were considerably lower, reaching freezing in Riverside, and below freezing north and west of the city, and in some localities southwest of Miami. Frost occurred as far south as Homestead.

The growers had ample warning, and as a result most of their seed beds were saved. The field crops, however, to the west and northwest of Miami were nearly all destroyed. South of the Miami River the damage was not so general, and some localities escaped with only slight injury.

Reports from Arch Creek indicate that the temperature there was only one or two degrees higher than in the great freeze of last February.

You will note that the *Herald* refers to the "great freeze of last February." I call your attention to this fact because it shows that cold weather is liable to come here every year. Last season

when I reported in these columns the result of that great freeze I was savagely attacked by Florida boomers and the hirelings.

I have received a very large number of letters from Northern people asking many questions as to the growing of crops here. I am going to make a general reply by quoting from *The Miami Herald*:

Experience may be the only lamp for our feet, as was once said by an eminent American, but it takes a great deal of hard experience to teach the mass of people the lessons they ought to learn more easily.

Each recurring year there comes an intimation to Dade county that the methods of production should be changed, that new products should be raised, but we still go on from year to year raising the old, unreliable crops, taking the chances of the weather, gambling on the possibilities of favorable results.

There is seldom a year, even in this most favored section of Florida, that something does not occur to destroy or set back planted crops. One year it is cold, another rain, another drought. They are as inevitable, here, as they are in any other section of the country, or in any other section of the world.

We still cling, however, to the planting of these things that are easily affected by either cold, wet or dryness. We do it because if the crop does, by some miracle, escape flood or frost, drouth or bad prices, it usually, in the vernacular, makes a "killing," and the grower reaps a profitable harvest. That is the gambling element in it.

We received one of these lessons only this week, where in many places the cold suddenly descended and wiped out crops or parts of crops of growing vegetables. The growers knew when they set out their plants that they were taking chances. They knew that there was every possibility of the failure of the fall crop, yet they went ahead with the hope that they would be lucky enough to escape disaster, and that high prices would recompense

First prize Single Comb Ancona hen at Madison Square Garden, New York City. Owned by H. Cecil Sheppard, Berea, Ohio.

them for the chances they took and the anxiety they were forced to endure.

All this could be obviated, and certain, sure profits be made, if the growers of this section of the state would, in a measure, abandon the perishables and start in on the growing of staples, crops that cannot be injured, here, by any of the things that wipe out the profits on the cultivation of the perishable vegetables, from the growing of which we have not been weaned.

Corn, cotton, soy bean, castor bean, hay and a long list of the homely things actually promise a greater profit, taking the years as they come, than does the gamble of vegetable raising. Hogs and cattle promise a more permanent industry and more profitable in the long run, than does the growing of vegetables, and yet it is most difficult to induce the grower to think on those things, much less to start in to build up a certain and a sure business.

And thus we go on, from year to year, depending on our uncertain and fluctuating vegetable crops, while we might be building up a permanent prosperity by resorting to the intelligent cultivation of the things for which there is always a demand and for which there are no climatic threats.

This is a candid and truthful statement. I have been spending the winter here for nine years and conditions sustain the *Herald* in its statement

* * *
I have been referred to you for information in regard to how deep to plant pear trees. I have about fifteen young pear trees four or five years old. They are about 1 3/4 inches in diameter. On some of them the first roots are six or seven inches below the surface soil. I think they are planted too deep. The soil is a heavy black mixed clay. Ohio. Ed. Creig.

These pear trees may be planted somewhat too deep, but I would not advise transplanting them. All fruit trees should be planted an inch or two deeper than they were in the nursery row. Keep the heavy soil around your pear trees well broken up and cultivated, at least until the trees begin to bear normal crops of fruit.

* * *
Fresh eggs are selling at 60c to 70c a dozen here. This is the height of the tourist season. The hotels are full and people are being turned away every day. The fact that eggs bring this high price here is conclusive evidence that it costs a lot to produce them here.

* * *
Will the following apples be all right for planting in Fond du Lac County, Wisconsin: Jonathan, Grimes, Spitzenburg, Ortley, Delicious, Stayman, Rome Beauty, White Winter Pearmain, Yellow Newton, Winesap and Arkansas Black? I have one acre of land and want to plant a dozen or two apple trees on it for shade for my poultry and at the same time to get some good apples. Early apples are plentiful here in this town, and mostly given away, but late ones are not grown in any quantity, so want to see what I can do along this line later on. I think it would pay in this town to have a five or ten-acre orchard of late apples. In the stores they charge two and one-half cents per apple for the above named varieties.

Wisconsin. H. Bulto.
The list of apples you submit is a good one with a few exceptions. I advise you to plant Delicious, Senator and McIntosh Red. These are all winter apples of the finest quality. The trees are hardy and will withstand severe winters. Grimes Golden, if double-worked on Delicious or some other hardy kind, might endure your cold winters. The Winesaps, Newton and Spitzenburg are not adapted to your climatic conditions. Neither is Arkansas Black. The White Winter Pearmain is of little worth commercially. Neither is the Ortley. You will find the kinds I advise both profitable and in great demand.

J. B. Morris, New York, sends me the following clipping from his home

The call this year to cultivate is the most imperative in history

Answer it by using Planet Jr garden tools to grow your own vegetables. Planet Jrs are so designed and constructed that they do thorough, rapid cultivation.

You save time, labor, money, cut down living expenses, and increase the food-supply.

Planet Jr Garden Tools

No. 4 Planet Jr Combined Hill and Drill Seeder, Wheel Hoe, Cultivator and Plow sows all garden seeds (in drills or hills), plows, opens furrows and covers them, hoes and cultivates all through the season. A hand machine that does the work so easily, quickly and thoroughly that it pays for itself in a single season.

No. 12 Planet Jr Double and Single Wheel-Hoe is the greatest combination hand-cultivating tool in the world. The plows open furrows, cover them, and hill growing crops. The hoes are wonderful weed-killers. The cultivator teeth work deep or shallow. Crops are straddled till 20 inches high; then the tool works between rows with one or two wheels. We make 24 styles—various prices.

New 72-Page Catalog, Free!

Illustrates Planet Jrs doing actual farm and garden work, and describes over 55 different tools, including Seeders, Wheel-Hoes, Horse-Hoes, Harrows, Orchard-, Beet- and Pivot-Wheel Riding Cultivators. Write postal for it today!

When
you
think
of
Spring

you think of the wonderful blossoms of every fruit tree—of the exquisite green sheen of the fields and trees—of the thrilling voices of singing birds—of the wonderfully shrill Chanticleer's voice carried on the sweet perfumed zephyrs of SPRINGTIME.

Isn't it a bountiful and unrestrained feeling when you can walk to the "park" and get YOUR OWN "fresh eggs" for use in the home? And you KNOW they are fresh! Home gathered fresh eggs for breakfast! Who can wonder that so many are calling for

SHEPPARD'S Famous Anconas

the strain that has a record of 331 eggs in 365 days. As well—they have, for eleven consecutive years, won ten times as many first and second prizes at the Madison Square Garden Show as the nearest competitor. For beauty, exhibition and production they are unsurpassed.

Not only can you have "fresh eggs" and meat from YOUR OWN production, but you can market the surplus very much to YOUR PROFIT. By ordering a "setting" of eggs or a "pen" of the SHEPPARD FAMOUS ANCONAS you can start them working for YOUR PROFIT and USE.

Orders for "settings of eggs" will be filled consecutively—hence, early ordering will facilitate delivery at the time you want it.

Get my free catalog NOW—plan for SPRINGTIME, JOY and PROFIT.

newspaper and asks of what value are coal ashes as a fertilizer:

It is understood that a number of farmers in Chautauqua County will experiment with coal ashes next spring as a substitute for fertilizer. A number of farmers have had good results raising potatoes with coal ashes as a fertilizer, and if it proves a success it is expected that there will be a big demand for coal ashes another year.

I am asked this question several times each year. As before stated, there is scarcely a trace of plant food of any kind in coal ashes. They are valuable, however, because they put the ground to which they are applied in good physical condition. Used on stiff or hard land, they serve to make the soil lighter and able to retain moisture. I use every pound of coal ashes produced at home, and find I am well repaid for the labor of broadcasting them on the land.

I am a graduate nurse by profession, but I was raised on a farm in Kansas and lived there over twenty years. I am now looking for an opportunity to get a small place and it seems to me that the South is the only place where land is reasonable in price. Here in California the price on land is far too high for a poor man. If you know where I can secure honest, reliable information in regard to any of the Southern states, as, for instance, Tennessee, Arkansas, Kentucky, the Carolinas, I would be glad to know about it.

California. E. G. Haley.

You can secure the desired information by writing the land department of each of the states you name. Get in touch with the authorities in the Agricultural Colleges of these states.

* * *

Have been reading your valuable advice and would like to call on you to help me. I am a young man with only \$600 but want to start farming. I grew up to 18 years of age on a farm in Europe and have since been eight years in this country, but so far have not been anywhere except here in St. Louis, where I am at work now, and for two years was with my father-in-law, who is a farmer in Southern Mississippi. He is still down there, and while there I liked that country well for farming, as we could be out on the farm every day in the year. Of course, you know that the soil down there is poor and has to be built up first. Now, along comes my brother, who also wants me to go farming with him within a year or two, and he is trying to get me interested in farms in King County, California, in what they call the San Joaquin Valley. He has been reading some books from down there and he wants me to go with him this coming summer and look over that country. I have been thinking for some time that I would go down south to Mississippi to work with my father-in-law and try to get started down there. I do not know which way to go. If I thought California would suit me better than down South, I would go with my brother; but I don't care to spend hard-earned money without knowing whether it suits me or not. So here is where I need advice. Dear Mr. Rigg, in your opinion, are the chances better in California for a young married man like I am than in Mississippi? I hope you can understand the situation as I have tried to explain it. I am quite poor at the American language but am trying to learn every day.

Missouri. Joseph M. Stutz.

I wish I could so advise this very earnest young man that he might make the move which would bring him prosperity and happiness and contentment. But I cannot do it. For general farming there are lands in Mississippi which are exceedingly profitable. No doubt at all that Mississippi is a better agricultural state for staple crops than is California, but the latter state has a glorious climate and is rich in fruit production. There are also some good farming lands in the state. I take it that my correspondent has had no experience in fruit-raising. It looks as tho it would be best for him to devote his energy to general farming. This being the case, he would be able to find some very fine farming land in the delta

**Uncle
Sam**

country of Mississippi. I advise him to look over the state carefully before deciding where to locate.

* * *

At the close of the grape season last fall the Breeze mentioned that the Welch Grape Juice Company was experimenting with a new product, intended to utilize grapes not considered fit for the high-grade grape juice that is put out by that company.

Large quantities of grape pulp were stored in carboys, after the skins and seeds had been removed. It is expected now that by next month they will have ready for the market some fine grape marmalade or grape butter prepared from this pulp. This new line of work is in line with the recommendations of the Government that plants engaged in manufacturing beverages should also be utilized, if possible, for the production of some food product, at least during the war. The Welch people hesitated about putting out a new product under their name until they had experimented with it and found that it was something really good.—North East, Pa., Breeze.

This war is going to teach us many lessons. One of them is that we must not waste food products which we can use. For years there has been a great

A new Portable Whitewasher and Sprayer. Manufactured by Rippley Mfg. Co., Grafton, Illinois.

waste in the handling and food product making of the grape. I am glad the Welch people are going to make this great saving.

* * *

Can you give me the name and address of the nursery where I can purchase the "Iowa Brilliant" apple tree, the Summer Pear apple tree, the Royal Purple raspberry, and the Endicott, Omaha, America and Gold plum tree? Will these varieties do well here in the Lake Shore country of Western Pennsylvania?

Will H. Fenter.

You can secure the Iowa Brilliant and Summer Pear apple trees of the Patton Nursery, Charles City, Iowa. The only nursery selling the Royal Purple raspberry is L. J. Farmer Nurseries, Pulaskee, N. Y. The plum trees named can be secured of Stark Bros. Nursery and Orchard Company, Louisiana, Mo. All the fruits you name are perfectly adapted to the section you refer to.

* * *

There is a wonderful crop of grapefruit here this season. The cold weather in the North and the poor railroad service have worked greatly to the disadvantage of the growers here who have not been able to make normal shipments. Then, too, the scarcity of sugar has hurt the sale of grapefruit in the North. Taken all in all, it is not very encouraging to men who are thoroly posted on the situation, to put money into grapefruit groves or lands at this time. As before stated, I believe a grapefruit grove in Florida, located in

Poultry Fence

**34¹/₂C
A ROD**

KITSELMAN POULTRY FENCE is made of Open Hearth Basic steel wire, drawn annealed and galvanized in our own mill.
