SPEE	D, CLIA	<b>ЛВ</b> ,	
at	various	altitudes	

Enemy planes seemed faster than PBM, and were able to tell when PBM made turns, probably by radar, since they turned quickly after each turn by PBM. But the enemy planes were never able to get closer than about 4 miles.

Tug was towing barge, latter being some 300 feet behind. As the plane attacked the tug, the barge was strafed. No explosives were seen on the tug immediately after the run was made, but at a distance of about 15 miles, some 7 minutes after the drop, a big flash and explosion was seen where the tug and barge were.

The pilot, Lt. Williams, believes that his bombs came close enough to damage the rudder of the tug. Slight damage both to the barge and the tug is probable. See the narrative subsequent hereto.

Lt. William L. Williams, of VPB-26, as Patrol Plane Commander, and his crewwere assigned a night search and tracking mission on June 20-21, with the call of 91V464. Taking off before dark from their base at Kerama Retto, they headed for the China Coast about 90 miles above Formosa.

After prowling Northward along the coast, they reached the mouth of the Yangtze River, and picked up two targets on radar, close together, at 31-40N, 122-26E. Fortunately the moon was out, which enabled them to identify the targets as a seagoing tug, about 90 feet long, towing a barge about 150 ft. in length.

An attack was made from a down moon position, with the tug and barge silhouetted. On a run approaching the starboard bow of the tug, 3 X 100 GP bomb s were dropped from an altitude of 400 feet. Strafing was withheld until just before the drop, so as not to alert the target, and then the bullets were directed at the barge, scoring hits. There was no observed result from the drops.

Another run was out of the question, because the lights of an aircraft were seen coming from the Northwest, at an altitude of about 1500 ft and on a course of approximately 135 degrees. The PBM immediately turned North and made for some patches of sea fog. At about 15 miles distance from the tug and barge; a big flash was seen where the targets were. It could not be determined whether the explosion was from the barge or the tug. Lt. Williams thinks that one of his bom's probably damaged the rudder of the tug.

Meanwhile, the radar showed two planes following the PBM, which by now was getting partial protection from fog patches. After going North for about 25 miles, Lt. Williams made a sharp turn to East, trying to throw off his pursuers, but they made the turn very readily, apparently having good radar or homing equipment. After 20 miles on an Easterly course he turned North for 60 miles, then East for 30 miles, always keeping down moon from the planes. After a few miles on the second easterly course, the plane disappeared from his screen, at about 0150I. Their closest approach had been about 4 miles.

Some 9½hours later, Lt. Cdr. Donald C. Coy made an attack on a tug and barge near the same location. See VPB-26 ACA Report 6-45. The position given by Lt. Williams, and the one Lt. Cdr. Coy gave differed only in 7 miles. Even if possible errors in navigation are considered, very small progress was made by the tug and barge, and they may have been the same. When seen by Lt. Williams, the tug and barge were on a course of 330°, which would take them Northward along the China coast. When sighted by Lt. Cdr. Coy, the tug and barge were headed Southwest (about 225 deg.), as if to put into Shanghai. The sbw speed at the time of sighting by Coy, plus the other evidence given above, would indicate that the targets had been damaged by Lt. Williams, and had turned back to port when caught by Lt. Cdr. Coy.
