and all the assembly then dispersed quite satisfied. "What is all this?" quoth *Candide*, "and what devil reigns here?" He asked who was the stout gentleman who came to die in this ceremonious manner. "It is an Admiral," they answered. "And why kill the Admiral?" "It is because he has not killed enough of other people. He had to give battle to a French Admiral, and they find that he did not go near enough to him." "But," said *Candide*, "the French Admiral was as far from him as he was from the French Admiral." "That is very true," replied they; "but in this country it is useful to kill an Admiral now and then, just to encourage the rest [*pour encourager les autres*]."

THE REFORM ACT OF 1831-2: OLD SARUM.

The 14th of March 1831 is a remarkable day in English history, as that on which the celebrated bill for parliamentary reform was read for the first time in the House of Commons. The changes proposed in this bill were sweeping beyond the expectations of the most sanguine, and caused many advocates of reform to hesitate. So eagerly, however, did the great body of the people lay hold of the plan—demanding, according to a phrase of Mr Rintoul of the *Spectator* newspaper, the 'Bill, the whole Bill, and nothing but the Bill,'—that it was found impossible for all the conservative influences of the country, including latterly that of royalty itself, to stay, or greatly alter the measure. It took fourteen months of incessant struggle to get the bill

passed; but no sooner was the contest at an end than a conservative reaction set in, falsifying alike many of the hopes and fears with which the measure had been regarded. The nation calmly resumed its ordinary *aplomb*, and moderate thinkers saw only occasion for congratulation that so many perilous anomalies had been removed from our system of representation.

Amongst these anomalies there was none which the conservative party felt it more difficult to defend, than the fact that at least two of the boroughs possessing the right of returning two members, were devoid of inhabitants, namely Gotton and Old Sarum. 'Gotton and Old Sarum' were of course a sort of *tour de force* in the hands of the reforming party, and the very names became indelibly fixed in the minds of that generation. With many Old Sarum thus acquired a ridiculous association of ideas, who little knew that, in reality, the attributes of the place were calculated to raise sentiments of a beautiful and affecting kind.

Old Sarum, situated a mile and a half north of Salisbury—now a mere assemblage of green mounds and trenches—is generally regarded as the *Sorbiodunum* of the Romans. Its name, derived from the Celtic words, *sorbio*, dry, and *dun*, a fortress, leads to the conclusion that it was a British post: it was, perhaps, one of the towns taken by Vespasian, when he was engaged in the subjugation of this part of the island under the Emperor Claudius. A number of Roman roads meet at Old Sarum, and it is mentioned in

OLD SARUM.

the *Antonine Itinerary*, thus shewing the place to have been occupied by the Romans, though, it must be admitted, the remains present little resemblance to the usual form of their posts. In the Saxon times, Sarum is frequently noticed by

historians; and under the Anglo-Saxon and Anglo-Norman princes, councils, ecclesiastical and civil, were held here, and the town became the seat of a bishopric. There was a castle or fortress, which is mentioned as early as the time

of Alfred, and which may be regarded as the citadel. The city was defended by a wall, within the enclosure of which the cathedral stood. Early in the thirteenth century, the cathedral was removed to its present site; many or most of the citizens also removed, and the rise of New Sarum, or Salisbury, led to the decay of the older place; so that, in the time of Leland (sixteenth century), there was not one inhabited house in it. The earthworks of the ancient city are very conspicuous, and traces of the foundation of the cathedral were observed about thirty years ago. Mr Constable, R.A., was so struck with the desolation of the site, and its lonely grandeur, that he painted a beautiful picture of the scene, which was ably engraved by Lucas.

The plate was accompanied with letter-press, of which the following are passages: 'This subject, which seems to embody the words of the poet, "Paint me a desolation," is one with which the grander phenomena of nature best accord. Sudden and abrupt appearances of light—thunder-clouds—wild autumnal evenings—solemn and shadowy twilights, "flinging half an image on the straining sight"—with variously tinted clouds, dark, cold, and grey, or ruddy bright—even conflicts of the elements heighten, if possible, the sentiment which belongs to it.

'The present appearance of Old Sarum, wild, desolate, and dreary, contrasts strongly with its former splendour. This celebrated city, which once gave laws to the whole kingdom, and where the earliest parliaments on record were convened, can only now be traced by vast embankments and ditches, tracked only by sheep-walks. "The plough has passed over it." In this city, the wily Conqueror, in 1086, confirmed that great political event, the establishment of the feudal system, and enjoined the allegiance of the nobles. Several succeeding monarchs held their courts here; and it too often screened them after their depredations on the people. In the days of chivalry, it poured forth its Longspear and other valiant knights over Palestine. It was the seat of the ecclesiastical government, when the pious Osmond and the succeeding bishops diffused the blessings of religion over the western kingdom: thus it became the chief resort of ecclesiastics and warriors, till their feuds and mutual animosities, caused by the insults of the soldiery, at length occasioned the separation of the clergy, and the removal of the Cathedral from within its walls, which took place in 1227. Many of the most pious and peaceable of the inhabitants followed it, and in less than half a century after the completion of the new church, the building of the bridge over the river Harnham diverted the great western road, and turned it through the new city. This last step was the cause of the desertion and gradual decay of Old Sarum.'

SMITHFIELD MARTYRS' ASHES.

Fanaticism sent many Protestants to the stake at Smithfield in the time of Queen Mary. The place of their suffering is supposed to have been on the south-east side of the open area, for old engravings still extant represent some of the buildings known to have existed on that side, as backing the scene of the burnings. Ashes

and bones have more than once been found, during excavations in that spot; and it has long been surmised that those were part of the remains of the poor martyrs. A discovery of this kind occurred on the 14th March 1849. Excavations were in progress on that day, connected with the construction of a new sewer, near St Bartholomew's church. At a depth of about three feet beneath the surface, the workmen came upon a heap of unhewn stones, blackened as if by fire, and covered with ashes and human bones, charred and partially consumed. One of the city antiquaries collected some of the bones, and carried them away as a memorial of a time which has happily passed. If there had only been a few bones present, their position might possibly be explained in some other way; and so might a heap of fire-blackened stones; but the juxtaposition of the two certainly gives the received hypothesis a fair share of probability.

THE GREYBEARD, OR BELLARMINE.

The manufacture of a coarse strong pottery, known as 'stoneware,' from its power of withstanding fracture and endurance of heat, originated in the Low Countries in the early part of the sixteenth century. The people of Holland particularly excelled in the trade, and the productions of the town of Delft were known all over Christendom. During the religious feuds which raged so horribly in Holland, the Protestant party originated a design for a drinking jug, in ridicule of their great opponent, the famed Cardinal Bellarmine, who had been sent into the Low Countries to oppose in person, and by his pen, the progress of the Reformed religion. He is described as 'short and hard-featured,' and thus he was typified in the corpulent beer-jug

here delineated. To make the resemblance greater, the Cardinal's face, with the great square-cut beard then peculiar to ecclesiastics, and termed 'the cathedral beard,' was placed in front

of the jug, which was as often called 'a grey-beard' as it was 'a Bellarmine.' It was so popular as to be manufactured by thousands, in all sizes and qualities of cheapness; sometimes the face was delineated in the rudest and fiercest style. It met with a large sale in England, and many fragments of these jugs of the reign of Elizabeth and James I. have been exhumed in London. The writers of that era very frequently allude to it. Bulwer, in his *Artificial Changeling*, 1653, says of a formal doctor, that 'the fashion of his beard was just, for all the world, like those upon Flemish jugs, bearing in gross the form of a broom, narrow above and broad beneath.' Ben Jonson, in *Bartholomew Fair*, says of a drunkard, 'The man with the beard has almost struck up his heels.' But the best description is the following in Cartwright's play, *The Ordinary*, 1651:

— Thou thing!

Thy belly looks like to some strutting hill,
O'ershadowed with thy rough beard like a wood;
Or like a larger jug, that some men call
A Bellarmine, but we a conscience,
Whereon the tender hand of pagan workman
Over the proud ambitious head hath carved
An idol large, with beard episcopal,
Making the vessel look like tyrant Egton!

The term *Greybeard* is still applied in Scotland to this kind of stoneware jug, though the face of Bellarmine no longer adorns it. A story connected with Greybeards was taken down a few years ago from the conversation of a venerable prelate of the Scottish Episcopal church; and though it has appeared before in a popular publication, we yield to the temptation of bringing it before the readers of the *BOOK OF DAYS*:

About 1770, there flourished a Mrs Balfour of Denbog, in the county of Fife. The nearest neighbourhood of Denbog was a Mr David Paterson, who had the character of being a good deal of a humorist. One day when Paterson called, he found Mrs Balfour engaged in one of her half-yearly brewings, it being the custom in those days each March and October to make as much ale as would serve for the ensuing six months. She was in a great pother about bottles, her stock of which fell far short of the number required, and she asked Mr Paterson if he could lend her any.

'No,' said Paterson, 'but I think I could bring you a few Greybeards that would hold a good deal; perhaps that would do.' The lady assented, and appointed a day when he should come again, and bring his Greybeards with him. On the proper day, Mr Paterson made his appearance in Mrs Balfour's little parlour.

'Well, Mr Paterson, have you brought your Greybeards?'

'Oh yes. They're down stairs waiting for you.'

'How many?'

'Nae less than ten.'

'Well, I hope they're pretty large, for really I find I have a good deal more ale than I have bottles for.'

'Tse warrant ye, mem, ilk ane o' them will hold twa gallons.'

'Oh, that will do extremely well.'

Down goes the lady.

372

'I left them in the dining-room,' said Paterson. When the lady went in, she found ten of the most bibulous old lairds of the north of Fife. She at once perceived the joke, and entered into it. After a hearty laugh had gone round, she said she thought it would be as well to have dinner before filling the greybeards; and it was accordingly arranged that the gentlemen should take a ramble, and come in to dinner at two o'clock.

The extra ale is understood to have been duly disposed of.

MARCH 15.

St Abraham, hermit of Mesopotamia, and his niece, St Mary, 4th century. St Zachary, Pope, 752. St Leocritia, of Cordova, virgin, martyr, 859.

LONGINUS THE KNIGHT.

One would suppose that the mediæval legends were very hard-set for saints, if we judge by the strange names which are sometimes introduced in their lists. A very slight ground was sufficient for building a legend, as may be instanced by a saint who, in the old calendars, especially the English and German calendars, was commemorated on this day. The Evangelists St Matthew and St Mark, describing the crucifixion, tell us that a centurion who was on guard saw the signs which attended the death of the Saviour, and became converted, and exclaimed, 'Truly this man was the Son of God;' and St John adds how, while Christ still remained on the cross, 'one of the soldiers with a spear pierced his side, and forthwith came thereout blood and water.' The mediæval ecclesiastics made one individual of these two persons, and gave him the name of Longinus, more usually written in mediæval French, Longinas or Longis, and in old English Longeus, under which he was one of the most popular personages of mediæval legend. He was said to have been blind (how a blind man came to be made a centurion is not quite clear); when ordered by Pontius Pilate to pierce our Saviour's side with his spear, the blood, according to the story, ran down into his eyes, and restored him miraculously to sight, which was partly the cause of his conversion to Christianity. He now associated with the Apostles, becoming an active 'soldier of the faith,' and distinguishing himself by the fervency of his zeal. He was thus, in the twenty-eighth year of his age, living at Casarea of Cappadocia, when information of his behaviour was carried to the prefect or governor, Octavius, who immediately summoned him to his presence. When questioned, Longinus told the prefect his name, said that he was a Roman soldier, of the province of Isauria, and acknowledged that he was a zealous follower of Christ. After some discussion on the relative merits of Christianity and paganism, Longinus was commanded to worship the idols, and eat of the sacrifice offered to them, but he refused; whereupon the tormentors or executioners (*questionarii*) were ordered to cut off his tongue

and knock out his teeth. He long bears this and other outrages with great fortitude ; but at length he proposes a curious sort of compromise, to which Octavius consents. It had been shewn, said Longinus, how little all the torments of the pagans affected him, but now, if he might have leave, he would undertake to break all their idols and overcome their gods, it being made a condition that, if he were successful, the pagans should desert their idols, and believe in the true God ; but if their gods were able to do him any injury, he would become a pagan. Longinus immediately 'broke to pieces the idol, overthrew his altars and all his marble statues, and spilt all the offerings,' and the devils who dwelt in them fled, but they were arrested by Longinus, who chose to obtain some information from them. The demons acknowledged, that his was the greatest God. He asked them further how they came to dwell in the idols, and they said that they came to seek comfortable places of refuge, and, finding beautiful images of stone, on which the name of Christ had not been invoked, nor the sign of the cross made, they immediately took possession of them, as well as of the people of the neighbourhood, who were equally unprotected ; and now that he had driven them out, they supplicated him to let them go where they would, and begged not to be 'precipitated into the abyss.' This is a very curious illustration of the mediæval notion of the nature of the heathen idols. When the citizens heard this revelation, they set up a great shout of joy, and, as soon as the devils were driven out of them, they all embraced the Christian faith. This, however, did not save the saint from martyrdom ; for Octavius, terrified lest the emperor should punish him and the city for its apostasy from the imperial faith, caused the head of Longinus to be cut off, and then repented, and became a Christian himself. 'These things,' says the legend, 'were acted in the city of Casarea of Cappadocia, on the Ides of March, under Octavius the prefect.' The legend is found in mediæval manuscripts in Latin and in other languages.

listening to the wearisome conversation of a party of old women playing at cards ; and yet improving the occasion, by mentally laying the foundation of the most elaborate work on gaming that ever has been written. These were exactly the circumstances which gave origin to Barbeyrac's celebrated *Traité de Jeu*.

Barbeyrac was a native of France ; but, being a Calvinist, was compelled by the revocation of the edict of Nantes to take refuge in Switzerland. He became professor of law at Lausanne, and subsequently at Gröningen ; and published many works on jurisprudence, besides a translation of Tillotson's *Sermons*. But the work on which his reputation is founded, and by which he is known at the present day, is his treatise on gaming, dedicated to Ann Princess of Orange, eldest daughter of George II., the text-book for all who wish to study the subject.

The *Traité de Jeu* abounds in the most recondite learning. The first of its four books contains arguments to prove that gaming is not inconsistent with natural laws, morality, or religion. In the second book the author applies these arguments specifically to the various kinds of games that have been played at different periods in the history of the world. The third book states the limitations under which the previous arguments are to be considered ; and the fourth enumerates the various abuses of gaming. Finally, he comes to the rather startling conclusion that gambling is not in itself immoral or illegal, and that it is nowhere, directly or indirectly, forbidden in the Holy Scriptures.

Barbeyrac starts with the undeniable proposition that man is essentially a worker, his whole existence depending upon labour ; consequently God had designed that man should be employed in works of usefulness for himself and others. But, as man cannot work without rest, food, and relaxation, the Deity had expressly sanctioned all those requirements, by the mere act of creating man a working animal—the evil consisting in the abuse, not in the use of those indispensable requisites.

'There are persons, however,' says Barbeyrac, 'who unreasonably suppose that use and abuse cannot be separated ; and who, forming to themselves strange mystical notions of virtue and piety, would persuade us that every kind of diversion and amusement, being neither more nor less than the consequences of man's fallen nature, is unworthy of rational creatures. Such persons may be above the common limits of human nature, in a sphere of perfection unattainable by the great mass of mankind. Still, they ought to allow those, who cannot arrive at such a high degree of perfection, to follow in low humility the path which nature and providence have pointed out to them, to enjoy their opinions in peace, and their consciences devoid of scruple.'

'I maintain,' he continues, 'as an irrefragable principle, that, for the sake of relaxation, man may indulge in such amusements as are free from vice. This being admitted, if a person takes pleasure in playing at cards or dice, there is no reason why he may not amuse himself in that manner, quite as innocently as in painting,

Born.—Theophilus Bonet, eminent Genevese physician, 1620 ; Jean Barbeyrac, eminent jurist, 1674, *Beziers* ; General Andrew Jackson, 1767.

Died.—Julius Cæsar, assassinated, B.C. 44, *Rome* ; Thomas Lord Chancellor Egerton, 1617, *Dodleston, Cheshire* ; Sir Theodore Mayerne, physician to James I. and Charles I., 1655, *Chelsea* ; John Earl of Loudon, Chancellor of Scotland, 1663 ; the Rev. Dr Thomas Franklin, eminent Greek scholar, 1784, *London* ; Admiral John Jervis, Earl St Vincent, 1823, *Stone* ; John Liston, comic actor, 1846 ; Otto Kotzebue, navigator, 1846 ; Cardinal Mezzofanti, extraordinary linguist, 1849 ; Captain Sir Samuel Brown, civil engineer, 1852.

JEAN BARBEYRAC.

The circumstances under which the ideas were developed, that led to the production of noted works in literature or art, would, if it were possible to collect them, form a remarkable history, affording strange illustrations of the multifarious phases presented by the human mind. Fancy, for instance, a learned professor and doctor of jurisprudence, compelled by fate to reside with a gambling mother-in-law, and to sit for hours

dancing, music, hunting, or any other similar diversions. The question then arises, whether the game be played for nothing, or for a stake of value. In the first case, it is a mere relaxation, bearing not the slightest semblance of criminality; with regard to the second, there can be no evil in it, looking at the matter generally, without taking into consideration peculiar circumstances. For, if I am at liberty to promise and give my property, absolutely and unconditionally, to whomsoever I please, why may I not promise and give a certain sum, in the event of a person proving more fortunate or more skilful than I, with respect to the result of certain contingencies, movements, or combinations, on which we had previously agreed? And why may not this person honestly avail himself of the result, either of his skill, or of a favourable concurrence of fortuitous circumstances, on the issue of which I had voluntarily contracted an obligation? And though but one of the parties gains an advantage, yet there is nothing contrary to strict equity in the transaction, the terms having been previously agreed on by both. Every person, being at liberty to determine the conditions on which he will concede a right to another, may make it dependent on the most chance circumstances. *A fortiori*, then, a person may fairly and honestly avail himself of these winnings, when he has risked on the event as much as he was likely to gain. In fact, gaming is a contract, and in every contract the mutual consent of the parties is the supreme law; this is an incontestable maxim of natural equity.

Many of Barbeyrac's arguments and quotations are taken from our old Puritan writers, who admitted that a kind of gambling, under the designation of lots, was sanctioned by the Scriptures; though only to be used to decide matters connected with religion and the church. The able authoress of *Silas Marner* has shewn us something of the working of this lot system, though it certainly is more a kind of divination than gambling.

To conclude, Barbeyrac's arguments must be considered as a series of clever paradoxes, written by a learned philosopher unacquainted with the world and the manifold wickednesses of its ways. Though we may certainly employ our time better, there can be no great harm in a friendly game of whist or backgammon; but the undeniable vice and folly of gambling has received and ever will receive the direct condemnation of all good men, able to form an opinion on the matter.

SIR THEODORE MAYERNE.

Collectors of heads, for such is the ghastly phrase used by the *cognoscenti* to indicate engraved portraits, fancy themselves fortunate when they can obtain a folio engraving, representing a jolly-looking, well-kept individual, apparently of not more than sixty summers, holding a skull in the left hand, and bearing the following inscription:

'Theodore Turquet de Mayerne, knight, aged eighty-two years, by birth a Frenchman, by religion a Protestant; in his profession a second

Hippocrates; and what has seldom happened to any but himself, first physician to three kings; in erudition unequalled, in experience second to none, and as the result of all these advantages, celebrated far and near.'

If the inscription stated that Mayerne had been physician to four kings, it would be nearer the mark, for he really served in that capacity Henry IV. of France, James I., Charles I., and Charles II., of England. He was born at Geneva, in 1573, and named Theodore after his godfather, the celebrated reformer Beza. He studied at Montpellier, and soon after taking his degrees, received the appointment of physician to Henry IV.; but, his profession of Protestant principles being a bar to his advancement in France, he came to England, and was warmly received by James the First. His position in the history of medical science is well defined, by his being among the earliest practitioners who applied chemistry to the preparing and compounding of medicines. His skill and celebrity enabled him to acquire a large fortune, and to live unmolested and respected during the terrible convulsions of the civil war. Though a noted *bon vivant*, he attained the advanced age of eighty-two years, dying in 1655, at his own house in Chelsea, a favourite place of residence among the physicians of the olden time. The immediate cause of his death he attributed to drinking bad wine with a convivial party, at a tavern in the Strand. 'Good wine,' he used to say, 'is slow poison: I have drunk it all my lifetime, and it has not killed me yet; but bad wine is sudden death.'

In hours of relaxation, Mayerne applied his chemical knowledge to the improvement of the arts of painting and cookery, in both of which he was no mean proficient, as an amateur. The famous artist Petitot owed the perfection of his colouring in enamel to Mayerne's experiments, and the best cookery book of the period was written by the learned physician himself. Indeed it is not generally known how much cookery is indebted to medicine. Mayerne, in the seventeenth, Hunter and Hill in the eighteenth, and Kitchiner in the nineteenth century, have given to the world the best cookery books of their respective eras. Indeed, in ancient times, cookery was specifically considered as an important branch of the healing art; the word *curare*, among the Romans, signifying to dress a dinner, as well as to cure a disease. Mayerne's cookery-book bears the high sounding title of *Archimagirus Anglo-Gallicus*, and the following specimen of its contents will testify that it well merited its appellation. The jolly physician often participated in the hospitalities of my Lord Mayor, and the great commercial guilds and companies; so, as a fitting token of his gratitude, he named his *chef-d'œuvre*, the first and principal recipe in his book,

A City of London Pie.

'Take eight marrow bones, eighteen sparrows, one pound of potatoes, a quarter of a pound of eringoes, two ounces of lettuce stalks, forty chesnuts, half a pound of dates, a peck of oysters, a quarter of a pound of preserved citron, three artichokes, twelve eggs, two sliced lemons, a

handful of pickled barberries, a quarter of an ounce of whole pepper, half an ounce of sliced nutmeg, half an ounce of whole cinnamon, a quarter of an ounce of whole cloves, half an ounce of mace, and a quarter of a pound of currants. Liquor when it is baked, with white wine, butter, and sugar.'

Some half-a-dozen years ago, with very slight alterations—only adopted after deep consultation, to suit the palates of the present day—a pie was made from the above recipe, which gave complete satisfaction to the party of connoisseurs in culinary matters, who heartily and merrily partook of it.

MEZZOFANTI'S WONDERFUL MEMORY.

This celebrated linguist, born at Bologna, in 1774, was the son of a carpenter, and was intended for the same occupation, had not a priest observed the remarkable intelligence of the boy, and had him educated for the priesthood, when he acquired, before the completion of his university career, the Latin, Greek, Hebrew, Arabic, Spanish, French, German, and Swedish languages. At the early age of twenty-two, he was appointed professor of Arabic in the university, and next of Oriental languages; but through political changes, he lost both these appointments, and was for some years reduced to great distress. Meanwhile, Mezzofanti made his all-engrossing pursuit the study of languages. One of his modes of study was calling upon strangers at the hotels of Bologna, interrogating them, making notes of their communications, and taking lessons in the pronunciation of their several languages. 'Nor did all this cost me much trouble,' says Mezzofanti; 'for, in addition to an excellent memory, God had gifted me with remarkable flexibility of the organs of speech.' He was now reinstated in his appointments; and his attainments grew prodigious. Mr Stewart Rose, in 1817, reported him as reading twenty languages, and speaking eighteen. Baron Tsch, in 1820, stated the number at thirty-two. Lord Byron, about the same time, described him as 'a walking polyglot, a monster of languages, and a Briareus of parts of speech.' In 1831, he settled in Rome, accepted a prebend in the church of St Mary Major, which he exchanged for a canonry in St Peter's; he was next appointed keeper of the Vatican library, and in 1838 was elevated to the Cardinalate.

Mezzofanti's residence at Rome gave a new impulse to his linguistic studies. Herr Guido Görres, the eminent German scholar, writes of him, in 1841, 'He is familiar with all the European languages; and by this I understand not only the ancient classical tongues, and the modern ones of the first class, such as the Greek and Latin, or the Italian, French, German, Spanish, Portuguese, and English; his knowledge extends also to languages of the second class, viz., the Dutch, Danish, and Swedish, to the whole Slavonic family, Russian, Polish, Bohemian, or Czechish, to the Servian, the Hungarian, the Turkish, and even to those of the third and fourth classes, the Irish, the Welsh, the Wallachian, the Albanian, the Bulgarian, and the Illyrian. Even the Romani of the Alps, and the Lettish, are not unknown to him; nay, he has made himself acquainted with Lappish. He is master of the languages which fall within the Indo-Germanic family, the Sanscrit and Persian, the Koordish, the Georgian, the Armenian; he is familiar with all the members of the Semitic family, the Hebrew, the Arabic, the Syriac, the Samaritan, the Chaldee, the Sabaic, nay, even with the Chinese, which he not only reads, but speaks. Among the Hamitic languages,

he knows Coptic, Ethiopic, Abyssinian, Amharic, and Angolese.' He is described as invariably speaking in each language with the precision, and in most cases with the fluency of a native. His pronunciation, his idiom, his vocabulary, were alike unexceptionable; even the familiar words of every-day life, and the delicate turns of conversational speech, were at his command. He was equally at home in the pure Parisian of the Faubourg St Germain and in the Provençal of Toulouse. He could accommodate himself to the rude jargon of the Black Forest, or to the classic vocabulary of Dresden.

Cardinal Wiseman, the friend of Mezzofanti, has thus spoken of his extraordinary power of acquiring and remembering a number of languages—that is, knowing them thoroughly, grammatically, and familiarly,—so as to speak each with its own accentuation, read it with facility and point, express himself technically through its medium, and, above all, write a familiar note in it. Of this power, says Dr Wiseman, no one, perhaps, ever attained such pre-eminence in philology, and no one could have made a more noble use of the wonderful gift entrusted to him to improve. His labours were in the prisons, in which he found confined natives of every habitable country—Croats, Bulgarians, Wallachians, Bohemians, Hungarians, Poles, Lithuanians. As may be supposed, in a provincial city in Italy there was but small chance that any of these should meet with priests of their own nation. Cardinal Mezzofanti was moved with a burning desire to converse with them and offer them the consolations of religion. He set himself to work, and in a few days was able to speak with them readily and fluently. Cases have been known of persons coming to this extraordinary man for confession, but speaking only some out-of-the-way language which debarred them from intercommunication with all priests within their reach. On such occasions Cardinal Mezzofanti would request a delay of three weeks, during which time he would so completely master the language, however difficult, that he could apprehend the most minute particulars communicated to him. At the age of fifty he was thoroughly versed in fifty languages, and before his death the number he knew must have amounted to seventy or eighty. Of these, it must be added, he was acquainted with all the varieties of dialect, provincialisms, and patois. He would detect the particular county in England from which a person came, or the province in France, and was conversant not only with the grammar, but with the literature of all those nations. By a Portuguese he was once, to his (Cardinal Wiseman's) own knowledge, taken for a countryman; and on another occasion he was similarly mistaken for an Englishman. He could write a note or an apology (perhaps, after all, the greatest test) without an error in form, language, style, or title of address of his correspondent, and would turn his sentences without ever losing sight of the little niceties, idioms, and peculiarities which form the distinctive characteristics of a language. His method of studying a language was to take the grammar and read it through, after which he was its master. He used to say he had never forgotten anything he had ever read or heard. Cardinal Wiseman states that he one day met Mezzofanti hurrying away, as he said, to a Propaganda—'What are you going to do there?' 'To teach the Californians their language.' 'How did you learn Californian?' 'They taught me, but they had no grammar; I have made a grammar, and now I am going to teach them to read and write it.'—(*Lectures on the Phenomena of Memory*, 1857.)

Mezzofanti died on the 15th of March 1849; and was buried in the church of St Onofrio, beside the grave of Torquato Tasso.

CAPTAIN SIR SAMUEL BROWN.

Many nations in past times sought to find how a bridge might so be constructed that the weight of the roadway, instead of resting upon arches of masonry, or on a rigid iron or wooden framework, might be supported by the tension of ropes or chains. Kircher described a bridge of chains which the Chinese constructed many centuries ago in their country. Turner, in his *Account of Bootan or Bhotan in India*, describes several very ingenious bridges devised by the natives for crossing the ravines which intersect that mountainous country. One is a bridge consisting of a number of iron chains supporting a matted platform; another is formed of two parallel chains, around which creepers are loosely twisted, with planks for a roadway suspended; while a third is formed of two rattan or osier ropes, encircled by a hoop of the same material: the passenger propelling himself by sitting in the hoop, holding a rope in each hand, and making the hoop slide along. Some of the rude bridges constructed by the natives in South America, such as that at Taribita, consist each of a single rush rope, on which a kind of carriage is swung, and drawn along by another rope held by a person on the bank. At Apurima the natives have constructed a bridge nearly 400 feet long, by 6 feet wide, by placing two bark ropes parallel, and interweaving cross-pieces of wood from one to the other.

Of an actual iron suspension bridge, the first made in Europe seems to have been one over the Tees near Middleton, constructed rather more than a century ago. Two chains were stretched in a nearly straight line, steadied by inclined ties from the banks below; and the roadway (only a narrow path for foot-passengers) was supported immediately by the chains. In 1816, a little bridge was constructed over Gala Water in Scotland, made chiefly of wire, at the orders of a manufacturer named Richard Lees; and another of similar kind was soon afterwards constructed across the Tweed at King's Meadows, near Peebles, with a platform four feet wide resting on the wires. It was about that date, or a little earlier, that Captain Brown made an important advance in the construction of chain bridges, by changing altogether the form of the links. Instead of making them short and circular or oval, he made them several feet long, with eyes drilled at each end, and connecting them with short links and bolt-pieces. Every main link, in fact, consisted of a series of flat bars, pivoted at the ends to each other and to the adjacent links. He also devised an ingenious mode of removing a defective link without disturbing the continuity of the chain. These two capital inventions laid the basis for the plans of most of the great suspension bridges since constructed, including Brown's Bridge over the Tweed at Berwick, Brown's Trinity Pier at Newhaven near Leith, Telford's beautiful Menai and Conway bridges, Brown's Chain-pier at Brighton, Tierney Clark's bridge at Hammersmith, Brown's bridge at Montrose, and the grandest suspension bridge, perhaps, ever constructed—that built by

Mr Tierney Clark over the Danube at Pesth. It was no small merit in an engineer to render such works possible.

JULIUS CÆSAR.

'It is possible,' says a living author, 'to be a very great man, and to be still very inferior to Julius Cæsar, the most complete character, so Lord Bacon thought, of all antiquity. Nature seems incapable of such extraordinary combinations as composed his versatile capacity, which was the wonder even of the Romans themselves. The first general—the only triumphant politician—inferior to none in eloquence—comparable to any in the attainments of wisdom, in an age made up of the greatest commanders, statesmen, orators, and philosophers that ever appeared in the world—an author who composed a perfect specimen of military annals in his travelling carriage—at one time in a controversy with Cato, at another writing a treatise on punning, and collecting a set of good sayings—fighting and making love at the same moment, and willing to abandon both his empire and his mistress for a sight of the Fountains of the Nile. Such did Cæsar appear to his contemporaries.*'

The assassination of Cæsar on the Ides of March, B.C. 44, was immediately preceded by certain prodigies, which it has greatly exercised the ingenuity of historians and others to attempt to explain.

First, on the night preceding the assassination, Cæsar dreamt, at intervals, that he was soaring above the clouds on wings, and that he placed his hand within the right hand of Jove. It would seem that perhaps some obscure and half-formed image floated in Cæsar's mind of the eagle, as the king of birds,—secondarily, as the tutelary emblem under which his conquering legions had so often obeyed his voice; and thirdly, as the bird of Jove. To this triple relation of the bird, the dream covertly appears to point. And a singular coincidence is traced between the dream and a circumstance reported to us, as having actually occurred in Rome, about twenty-four hours before Cæsar's death. A little bird, which by some is represented as a very small kind of sparrow, but which, both to the Greeks and Romans, was known by a name implying a regal station (probably from the audacity which at times prompted it to attack the eagle), was observed to direct its flight towards the senate-house, consecrated by Pompey, whilst a crowd of other birds were seen to hang upon its flight in close pursuit, towards Pompey's Hall. Flight and pursuit were there alike arrested; the little bird-king was overtaken by his enemies, who fell upon him as so many conspirators, and tore him limb from limb. †

The other prodigies were—2. A dream of Cæsar's wife, Calphurnia, that their house had fallen in, that he had been wounded by assassins, and had taken refuge in her bosom. 3. The arms of Mars, deposited in Cæsar's house, rattled at night. 4. The doors of the room wherein he slept flew open spontaneously. 5. The victims and birds were inauspicious. 6. Solitary birds appeared in the Forum. 7. There were lights in the sky, and nocturnal noises. 8. Fiery figures of men were seen; a flame issued from the hand of a soldier's slave without hurting him. 9. After the murder of Cæsar, it was remembered that the attendant removed his gilded chair from the senate-room, thinking that he would not attend the meeting.

The last words of Cæsar, as he fell before the blows of his assassins, have become proverbial, being generally given as 'Et tu, Brute!' (And thou too,

* Lord Broughton (John Cam Hobhouse) in notes to *Childe Harold*, Canto IV.

† See a paper by De Quincey, in *Blackwood's Edinburgh Magazine*, 1832.

Brutus!—certainly a most natural expression on seeing a youthful and beloved friend among those prepared to shed his blood. There is, however, a doubt as to the words used by Caesar. They have been given as composed of the Greek language, 'Καὶ σὺ τέκνον!' (What, thou, too!) Some even express a doubt if he was heard to utter any expression at all after the stabbing began, or did anything more than adjust his mantle, in order that, when fallen, the lower part of his person might be covered.

LAST WORDS OF REMARKABLE PERSONS.

It may amuse the reader, in connection with the preceding matter, to glance over a small collection of the final expressions of remarkable persons, as these are communicated by biographers and historians. In most instances, the authorities are given, along with such explanations as may be presumed to be necessary.

SOCRATES. (To a friend, when about to drink the cup of poison :) 'Krito, we owe a cock to Æsculapius; discharge the debt and by no means omit it.'—*Grote*.

'I consider the sacrifice of the cock as a more certain evidence of the tranquillity of Socrates, than his discourse on Immortality.'—*Dr Cullen*.

MAHOMET. 'Oh Allah! be it so—among the glorious associates in Paradise!'—*Irving's Life of Mahomet*.

SIR HUGH PERCY. 'I have saved the bird in my bosom.'

Sir Hugh, fighting unsuccessfully for Henry VI at Hedgely Moor, April 1464, used this expression on feeling himself mortally wounded, in reference to the faith he had pledged to his unfortunate sovereign, while so many deserted him.

COLUMBUS. 'In manus tuas, Domine, commendo spiritum meum.'

PIZARRO. 'Jesu!'

'At that moment he received a wound in the throat, and, reeling, sank on the floor, while the swords of Rada and several of the conspirators were plunged into his body. "Jesu!" exclaimed the dying man, and, tracing a cross with his finger on the bloody floor, he bent down his head to kiss it, &c.'—*Prescott*.

KING JAMES V. OF SCOTLAND. 'It came with a lass, and it will go with one!'

Alluding to the intelligence brought to him, that his wife was delivered of a daughter, the heiress of the crown, and to the fact of the crown having come into his family by the daughter of King Robert Bruce.

CARDINAL BEATON (assassinated 1546). 'Fy, fy, all is gone!'

'And so he (James Melvin) stroke him twyse or thrise trowght him with a stog sward; and so he fell; never word heard out of his mouth, but "I am a preast, I am a preast: fy, fy, all is gone!"'—*Know's Hist. Reformation in Scot.*, edit. 1846, i. 177.

TASSO. 'Into thy hands, O Lord!'—*Wiffen's Life of Tasso*.

CHARLES V. 'Ay, Jesus!'—*Stirling's Cloister Life of Charles V.*

FERRAR, BISHOP OF ST DAVID'S. March 30, 1555. (On being chained to the stake at Carmarthen Cross :) 'If I stir through the pains of my burning, believe not the doctrine I have taught.'

JOHN KNOX. 'Now it is come.'—*M'Crie's Life of John Knox*.

DR DONNE. 'Thy will be done.'

'He lay fifteen days earnestly expecting his hourly

change, and in the last hour of his last day, as his body melted away, and vapoured into spirit, his soul having, I verily believe, some revelation of the beatific vision, he said, "I were miserably if I might not die;" and after those words, closed many periods of his faint breath by saying often, "Thy kingdom come, thy will be done!"'—*Walton's Life of Dr Donne*.

GEORGE HERBERT. 'And now, Lord—Lord, now receive my soul!'

RALEIGH. (To the executioner, who was pausing :) 'Why dost thou not strike? Strike, man!'

GROTIUS. 'Be serious.'

ROBERT CECIL, FIRST EARL OF SALISBURY, *Minister to James I.* 'Ease and pleasure quake to hear of death; but my life, full of cares and miseries, desireth to be dissolved.'

It may be remarked that Lord Salisbury died when, to all appearance, at the summit of earthly glory.

DUKE OF BUCKINGHAM. 'Traitor, thou hast killed me!' [To the assassin Felton.]

CHARLES I. 'Remember!'

To Bishop Juxon, on the scaffold; supposed to refer to a message to his son, commanding him to forgive his enemies and murderers.

CROMWELL. 'It is not my design to drink or sleep, but my design is to make what haste I can to be gone.' Followed by a few pious ejaculations.—*Carlyle's Cromwell*.

CHARLES II. 'Don't let poor Nelly starve.' [Referring to his mistress, Nell Gwynne.]

WILLIAM III. 'Can this last long?' [To his physician.]

This is not an uncommon death-bed expression. A lady, a victim by burning to a preposterous fashion of dress now in vogue, and who survived the accident a few hours, was heard to breathe, 'Shall I be long in dying?'

LOCKE. 'Cease now.' [To Lady Marsham, who had been reading the Psalms to him.]

POPE. 'There is nothing that is meritorious but virtue and friendship, and, indeed, friendship itself is but a part of virtue.'

GENERAL WOLFE. 'What, do they run already? then I die happy.'

Alluding to the intelligence given him as he lay wounded on the field, that the French were beaten.

WILLIAM, DUKE OF CUMBERLAND. 'It is all over.'

'On the 30th of October [1766], his Royal Highness was playing at piquet with General Hodgson. He grew confused and mistook the cards. The next day he recovered enough to appear at Court, but after dinner was seized with a suffocation, and ordered the window to be opened. One of his *valets de chambre*, who was accustomed to bleed him, was called, and prepared to tie up his arm; but the Duke said, "It is too late!—it is all over!" and expired.'—*Walpole's Mem. of Reign of George III.*

HAYDN. 'God preserve the Emperor.'

HALLER. 'The artery ceases to beat.'

MADAME DE POMPADOUR, 1764. (To the curé of the Madeleine, who had called to see her, and was taking his leave, as she seemed just about to expire :) 'Un moment, Monsieur le Curé, nous nous en irons ensemble.'

EARL OF CHESTERFIELD. 'Give Dayrolles a chair.'

'Upon the morning of his decease, and about half an hour before it happened, Mr Dayrolles [a friend] called upon him to make his usual visit. When he had entered the room, the *valet de chambre* opening the curtains of the bed, announced Mr Dayrolles to his

lordship. The earl just found strength in a faint voice to say, *Give Dayrolles a chair*. These were the last words he was heard to speak. They were characteristic, and were remarked by the very able and attentive physician then in the room [Dr Warren]. "His good breeding," said that gentleman, "only quits him with life."—*Maty's Memoirs of Philip Earl of Chesterfield*, 1779.

DR FRANKLIN. 'A dying man can do nothing easy.'

To his daughter, who had advised him to change his position in bed, that he might breathe more easily. These are the last words recorded in his biography; but they were pronounced a few days before his decease.

DR WILLIAM HUNTER. 'If I had strength enough to hold a pen, I would write how easy and pleasant a thing it is to die.'

GOLDSMITH.

'It then occurred to Dr Turton to put a very pregnant question to his patient. "Your pulse," he said, "is in greater disorder than it should be, from the degree of fever you have. *Is your mind at ease?*" "No, it is not," was Goldsmith's melancholy answer. They are the last words we are to hear him utter in this world."—*Forster's Life and Times of Oliver Goldsmith*.

FONTENELLE. 'Je ne souffre pas, mes amis, mais je sens une certaine difficulté d'être.' (I do not suffer, my friends; but I feel a certain difficulty of existing.)

THURLOW. 'I'm shot if I don't believe I'm dying.'

JOHNSON. 'God bless you, my dear.'

To Miss Morris, a friend's daughter, who came to him at the last to ask his blessing.

GIBBON. 'Mon Dieu, mon Dieu!'

MARAT. 'A moi, ma chère!' (Help, my dear!) To his waiting maid, on feeling himself stabbed in his bath by Charlotte Corday.

MADAME ROLAND. 'Oh, Liberty, how many crimes are committed in thy name!'

Addressed to the statue of Liberty, at her execution.

MIRABEAU. 'Let me die to the sounds of delicious music.'

GAINSBOROUGH. 'We are all going to heaven, and Vandyke is of the company.'—*A. Cunningham's Lives of Painters*.

BURNS. 'That scoundrel, Matthew Penn!'

The solicitor who had written to him about a debt, and inspired the poor poet with fears of a jail.

WASHINGTON. 'It is well.'

NELSON. 'I thank God I have done my duty.'

WILLIAM PITT. 'Oh my country! how I leave my country!'

There was long a doubt as to the last words of Mr Pitt. The Earl of Stanhope, in his *Life of the great minister* (1862), gave them from a manuscript left by his lordship's uncle, the Hon. James H. Stanhope, as, 'Oh my country! how I love my country!' But his lordship afterwards stated in a letter in the *Times*, April 26, 1862, that, on re-examination of the manuscript,—a somewhat obscure one,—no doubt was left on his mind that the word 'love' was a mistake for 'leave.' The expression, as now in this manner finally authenticated, is in a perfect and most sad conformity with the state of the national affairs at the time when Mr Pitt was approaching his end. A new coalition, which England had with great difficulty and at vast expense formed against Napoleon, had been dashed to pieces by the prostration of Austria; and Pitt must have had the idea in his mind that

hardly now a stay against that prodigious power remained. It was indeed generally believed that the overthrow of the coalition was what brought him to his end.

SIR JOHN MOORE. 'Stanhope, remember me to your sister.'

Addressed to one of his aides-de-camp, the Hon. Captain Stanhope, son of the Earl of Stanhope. The person referred to was the celebrated Lady Hester Stanhope.—*Life of Sir John Moore, by his brother, James Carrick Moore*.

DR ADAM, *Rector of the High School of Edinburgh*, 1809. 'It grows dark, boys; you may go.'

The venerable teacher thought he was exercising his class in Buchanan's Psalms, his usual practice on a Monday. The delirium ended with these words.

DE STAEL. 'I have loved God, my father, and liberty.'

NAPOLEON. 'Mon Dieu—La Nation Française—Tête d'armée.'—*Alison*.

'He expired at length without pain and in silence, during a convulsion of the elements, on the night of the 5th of May 1821. The last words he stammered out were *Army and France*, but it could not be ascertained whether it was a dream, delirium, or adieu.'—*Lamartine*.

JOHN ADAMS, SECOND PRESIDENT OF THE UNITED STATES. 'Thomas Jefferson still survives.'

Adams died on the 6th July 1826, the fiftieth anniversary of the declaration of Independence. As he found his end approaching at so interesting a crisis, he reflected that there would yet remain the writer of that famous document, his associate in so many trying scenes. He was in reality mistaken in the point of fact, for Jefferson at a distant part of the country had died that morning.

THOMAS JEFFERSON. 'I resign my soul to God, my daughter to my country.'

BYRON. 'I must sleep now.'

TALMA. 'The worst of all is that I cannot see.'

GEORGE IV. 'Watty, what is this? It is death, my boy—they have deceived me.'

To his page, Sir Wathen Waller, who was assisting him on a seat when the last qualm came.

SIR WALTER SCOTT. 'God bless you all!'

To his family, surrounding his death-bed.

SIR JAMES MACKINTOSH. 'Happy.'

'Upon our inquiring how he felt, he said he was "happy."—*Life by his Son*.

GOETHE. 'More light!'

'His speech was becoming less and less distinct. The last words audible were, *More light!* The final darkness grew apace, and he whose eternal longings had been for more light, gave a parting cry for it, as he was passing under the shadow of death.'—*G. H. Lewes's Life of Goethe*.

EDWARD IRVING. 'If I die, I die unto the Lord. Amen!'—*Oliphant's Life of Edward Irving*.

CHARLES MATHEWS. 'I am ready.'

'I approached him,' says his widow biographer, 'and, kissing his head, said, "I want you to go to bed now." He closed the Bible which he had been reading; and, looking up at me, replied meekly, "I am ready." . . . "I am ready!" memorable words!—they were his last, and they recurred to me as I was taken from him in a twofold sense, and ought in some degree to have tempered the anguish of the time.'

EARL OF ELDON. 'It matters not to me, where I am going, whether the weather be cold or hot.'

To Mr Pennington, who had made the remark that it was a cold day.—*Campbell's Lives of the Chancellors*.

PRINCESS CHARLOTTE. 'You make me drunk. Pray leave me quiet. I find it affects my head.'

To her medical attendants, who had been administering brandy, hot-wine, and sal volatile.—*Raikes's Correspondence with the Duke of Wellington.*

PROFESSOR EDWARD FORBES. 'My own wife.'

To Mrs Forbes, who inquired as he was dying if he still knew her.—*Memoir of Edward Forbes by George Wilson, &c.*

It is remarkable how few of these last words of noted persons express what may be called the ruling passion of the life—contrary to Pope's idea:

'And you, brave Cobham, to the latest breath,
Shall feel your ruling passion strong in death;
Such in those moments as in all the past,
"Oh, save my country, Heaven!" shall be your last.'

In many instances the matter referred to is trivial, in some surprisingly so. In others, there is only an allusion to what was passing at the moment. In few is there any great thought. Some express only the enfeebled mind. Perhaps the most striking is that of Dr Adam of the Edinburgh High School, for it reveals in fact what dying is—a darkening and fading away of the faculties. There is, however, this general lesson to be derived from the expressions of the dying, that there is usually a calmness and absence of strong sensation of any kind at the last moment. On this point, we quote a short passage from the *Quarterly Review*.

'The pain of dying must be distinguished from the pain of the previous disease; for when life ebbs, sensibility declines. As death is the final extinction of corporeal feelings, so numbness increases as death comes on. The prostration of disease, like healthful fatigue, engenders a growing stupor—a sensation of subsiding softly into a coveted repose. The transition resembles what might be seen in those lofty mountains, whose sides exhibiting every climate in regular gradation, vegetation luxuriates at their base, and dwindles in the approach to the regions of snow, till its feeblest manifestation is repressed by the cold. The so-called agony can never be more formidable than when the brain is the last to go, and the mind preserves to the end a rational cognizance of the state of the body. Yet persons thus situated commonly attest that there are few things in life less painful than the close. "If I had strength enough to hold a pen," said William Hunter, "I would write how easy and delightful it is to die." "If this be dying," said the niece of Newton, of Olney, "it is a pleasant thing to die;" "the very expression," adds her uncle, "which another friend of mine made use of on her death-bed a few years ago." The same words have so often been uttered under similar circumstances, that we could fill pages with instances which are only varied by the name of the speaker. "If this be dying," said Lady Glenorehy, "it is the easiest thing imaginable." "I thought that dying had been more difficult," said Louis XIV. "I did not suppose it was so sweet to die," said Francis Suarez, the Spanish theologian. An agreeable surprise was the prevailing sentiment with them all. They expected the stream to terminate in the dash of the torrent, and they found it was losing itself in the

gentlest current. The whole of the faculties seem sometimes concentrated on the placid enjoyment. The day Arthur Murphy died, he kept repeating from Pope:

"Taught half by reason, half by mere decay,
To welcome death, and calmly pass away."

'Nor does the calm partake of the sensitiveness of sickness. There was a swell in the sea the day Collingwood breathed his last upon the element which had been the scene of his glory. Captain Thomas expressed a fear that he was disturbed by the tossing of the ship. "No, Thomas," he replied, "I am now in a state in which nothing in this world can disturb me more. I am dying; and am sure it must be consolatory to you, and all who love me, to see how comfortably I am coming to my end."

MARRIAGE FORTUNES.

Under the 15th March 1735, the *Gentleman's Magazine* records—"John Parry, Esq., of Carmarthenshire, (married) to a daughter of Walter Lloyd, Esq., member for that county; a fortune of £8,000." It seems to us indecorous thus to trumpet forth a little domestic particular, of no importance to any but the persons concerned; but it was a regular custom in the reign of George II., and even considerably later. There is scarcely a single number of the magazine here quoted which does not include several such announcements, sometimes accompanied by other curious particulars. For example, in 1731, we have—"Married, the Rev. Mr Roger Waina, of York, about twenty-six years of age, to a Lincolnshire lady, upwards of eighty, with whom he is to have £8,000 in money, £300 per annum, and a coach-and-four during life only." What would now be matter of gossip in the locality of the marriage was then deemed proper information for the whole community. Thus, in March 1735, the *Gentleman's Magazine* gives this *annonce*—"The Earl of Antrim, of Ireland, to Miss Betty Pennefeather, a celebrated beauty and toast of that kingdom." It is to be feared that Miss Betty Pennefeather was without fortune; otherwise it would have been sure to be stated, or at least alluded to.

Towards the end of the century, such announcements were given with less glaring precision. Thus in the *Gazette* of January 5, 1789, we find—"Sunday se'nnight, at St Aulkman's Church, Shrewsbury, A. Holbeche, Esq., of Slowley Hill, near Coleshill, in this county, to Mrs Ashby, of Shrewsbury, a very agreeable lady, *with a good fortune.*" On the 2nd of January 1792—"Yesterday, at St Martin's Church, William Lucas, Esq., of Holywell, in Northamptonshire, to Miss Legge, only daughter of the late Mr Francis Legge, builder, of this town; an agreeable young lady, *with a handsome fortune.*" And on the 29th of October 1798—"A few days ago, at St Martin's Church, in this town, Mr William Barnsley, of the Soho, to Miss Sarah Jorden, of Birmingham Heath; an agreeable young lady, *with a genteel fortune.*" In other cases, where possibly the bride was penniless, her personal qualifications alone were mentioned; as this, in April 1783—[MARRIED] on Saturday last, Mr George Donisthorpe, to the agreeable Mrs Mary Bowker, both of this town.'

One of the latest notices of the kind occurs in *Aris's Birmingham Gazette*, of July 14, 1800, being that of the Right Hon. Mr Canning, Under Secretary of State, to Miss Scott, sister to the Marchioness of Titchfield, *'with £100,000 fortune.'*

MARCH 16.

St Julian, of Cilicia, martyr, about 303. St Finian, surnamed Lohbar (or the Leper), of Ireland, 8th century.

Born.—René de Bossu, classical scholar, 1631, *Paris*; Jacques Boileau, French theologian, 1635; Caroline Lueretia Herschel, astronomer, 1750, *Hanover*; Madame Campan, historical writer, 1752.

Died.—Tiberius Claudius Nero, A.D. 37, *Misenum*; the Emperor Valentinian III., assassinated 455; Alexander III. of Scotland, 1286; Lord Berners, translator of Froissart, 1532, *Calais*; Richard Burbage, original performer in Shakspeare's plays, 1618-19, *Shoreditch*; Johann Severin Vater, German linguist and theologian, 1826, *Halle*; Gottfried Nees von Esenbach, botanist, 1853; M. Camille Jullien, musician, 1860.

RICHARD BURBAGE.

Everything connected with Shakspeare and his works possesses a powerful interest to cultivated Englishmen. So little, indeed, is known of our great dramatist, that we are in some instances, perhaps, too ready to make the most of the simplest trifles pertaining to his meagre history. But Richard Burbage, the actor, who first personated Shakspeare's leading characters, and whose eminence in his art may have suggested many of the noble mind creations which now delight us, merits a niche in the temple of Shakspearean history, second only in rank to that of the great master of nature himself. Burbage, the son of a player, was born about 1564. His name stands next to that of Shakspeare in the licences for acting, granted to the company at the Globe Theatre, by James I., in 1603. Little more can be learned regarding his career, than what is stated in the many funeral elegies written on his death. One of these, of which an incorrect copy was first printed in the *Gentleman's Magazine*, 1825, thus enumerates the principal characters he performed:

'He's gone, and with him what a world are dead,
Friends, every one, and what a blank instead!
Take him for all in all, he was a man
Not to be matched, and no age ever ean.
No more young Hamlet, though but scant of breath,
Shall cry, "Revenge!" for his dear father's death.
Poor Romeo never more shall tears beget
For Juliet's love and cruel Capulet:
Harry shall not be seen as king or prince,
They died with thee, dear Dick (and not long
since),
Not to revive again, Jeronimo
Shall cease to mourn his son Horatio:
They cannot call thee from thy naked bed
By horrid outcry; and Antonio's dead.
Edward shall lack a representative;
And Crookback, as befits, shall cease to live.
Tyrant Maebeth, with unwashed bloody hand,
We vainly now may hope to understand.
Brutus and Marcus henceforth must be dumb,
For ne'er thy like upon the stage shall come,
To charm the faculties of ears and eyes,
Unless we could command the dead to rise.
Vindex is gone, and what a loss was he!
Frankford, Braehiano, and Malvole.
Heart-broken Philaster, and Amintas too,
Are lost for ever; with the red-haired Jew,

380

Which sought the bankrupt merchant's pound of
flesh,

By woman-lawyer caught in his own mesh.
What a wide world was in that little space,
Thyself a world—the Globe thy fittest place!
Thy stature small, but every thought and mood
Might throroughly from thy face be understood;
And his whole action he could change with ease
From ancient Lear to youthful Perieles.
But let me not forget one chiefest part,
Wherein, beyond the rest, he moved the heart;
The grieved Moor, made jealous by a slave,
Who sent his wife to fill a timeless grave,
He slew himself upon the bloody bed.
All these, and many more, are with him dead.'

It must be cited as no mean evidence of Burbage's merit as an actor, that the fame of his abilities held a prominent place in theatrical tradition, down to the days of Charles the Second, when Flecknoe wrote a poem in his praise, inscribed to Charles Hart, the great performer after the Restoration.

Burbage was performing at the Globe Theatre on the 29th of June 1613, when that classic edifice was burned down, very shortly after Shakspeare had given up the stage, and retired to his native town. And it is, in all probability, owing to this irremediable disaster,

THE GLOBE THEATRE.

that not one line of a drama by Shakspeare, in the handwriting of the period, has been preserved to us. The play in performance, when the fire broke out, was called *All This is True*—supposed, with good reason, to be a revival of *King Henry the Eighth*, under a new name. This we learn from a contemporary ballad, *On the Pitiful Burning of the Globe Play-house*, in which Burbage is thus mentioned:

'Out ran the knights, out ran the lords,
And there was great ado,
Some lost their hats, some lost their swords,
Then out ran Burbage too;
The reprobates, though drunk on Monday,
Prayed for the fool, and Henry Condy.
Oh! sorrow, pitiful sorrow, and yet
All This is True.'

Elegiac effusions poured forth like a torrent on the death of Burbage. The poets had been under heavy obligations to the great actor, and felt his loss severely. By one of those written by Middleton, the dramatist, the tradition which represents Burbage to have been a successful painter in oil, as well as an actor, is corroborated:

ON THE DEATH OF THAT GREAT MASTER IN HIS ART AND QUALITY, PAINTING AND PLAYING, R. BURBAGE.

'Astronomers and star-gazers this year,
Write but of four eclipses—five appear:
Death interposing Burbage, and their staying,
Hath made a visible eclipse of playing.'

The lines remind one of Dr Johnson's saying, that the death of Garrick had eclipsed the gaiety of nations. The word 'staying,' at the end of the third line, refers to the players being then inhibited from acting, on account of the death of Anne of Denmark, Queen of James the First; who died at Hampton Court, just a fortnight before Burbage.

The abilities and industry of Burbage earned their due reward. He left landed estate at his death producing £300 per annum; equivalent to about four times the amount at the present day.

He was buried in the church of St Leonard's, Shoreditch, and the only inscription put over his grave were the simple and expressive words,

'EXIT BURBAGE.'

M. JULLIEN.

M. Jullien is likely to be under-estimated by those who remember only his peculiarities. His name is so closely associated with Promenade Concerts, that the one is almost certain to suggest the other; and his appearance at those concerts was so remarkable, so unusually conspicuous, that many persons remember his vanity rather than his ability. In dress and manner he always seemed to say, 'I am the great Jullien;' and it is not surprising that he should, as a consequence, earn a little of that contempt which is awarded to vain persons. But the estimate ought not to stop here. Jullien had really a feeling for good music. Although not the first to introduce high-class orchestral music to the English public at a cheap price, he certainly was the first who succeeded in making such a course profitable night after night for two or three months together. His promenade concerts were repeated for many successive years, and so well were they attended, that the locomotion implied by the word 'promenade' became almost an impossibility. Of the quadrilles and mazurkas, the waltzes and polkas, played on those occasions, high-class musicians thought nothing; but when Jullien, with a band of very admirable performers, played some of the finest instrumental works due to the genius of Beethoven, Mozart, Mendelssohn, and Haydn, such as the 'Choral' and 'Pastoral Symphonies,' the 'Symphony Eroica,' the 'Jupiter Symphony,' the 'Italian,' and 'Scotch Symphonies,' and the like, persons of taste crowded eagerly to hear them. He knew his players well, and they knew him; each could trust the other, and the consequence was that the symphonies, concertos, and overtures were always

admirably performed. He found the means of making his shilling concerts pay, even when hiring the services of an entire opera or phillharmonic band; and by his tact in doing this, he was enabled year after year to present some of the highest kind of music to his hearers. The rapt attention with which the masterpieces were listened to was always remarkable; the noisy quadrilles were noisily applauded, but Jullien shewed that he could appreciate music of a higher class, and so did his auditors. His life was a remarkable one, humble at the beginning, showy in the meridian, melancholy at the close. Born in 1810, he was in early life a sailor-boy, and served as such at the battle of Navarino. About 1835 his musical taste lifted him to the position of manager of one of the public gardens of Paris. His success in this post induced him to visit London, where his Promenade Concerts were equally well received. In 1851 his troubles began, owing to unsuccessful speculations at the Surrey Gardens and Covent Garden Theatre. Barely had he recovered from these when his mind became affected, and his death, in 1860, took place in a lunatic asylum at Paris.

PRINCE HOHENLOHE'S MIRACULOUS CURES.

On the 16th of March 1823, Prince Hohenlohe wrote a letter which, connected with subsequent events, produced a great sensation among that class of religious persons who believe that the power of working miracles still exists. Three or four years before that date, Miss O'Connor, a nun in the convent of New Hall, near Chelmsford, began to be affected with swellings in one hand and arm. They became gradually worse, and the case assumed an aggravated form. A surgeon of Chelmsford, after an unsuccessful application of the usual modes of cure, proposed to send for Dr Carpué, an eminent London practitioner. He also failed; and so did Dr Badeley, the physician of the convent. At length, after more than three years of suffering, the poor nun tried spiritual means. The Superioress or Lady Abbess, having heard of certain extraordinary powers alleged to be possessed by Prince Hohenlohe, wrote to him, soliciting his prayers and advice in reference to Miss O'Connor. In his reply, dated as above, the Prince directed that on the 3d of May (a high festival in the Roman Catholic Church), at eight o'clock in the morning, the sufferer should make confession, partake of the Sacrament, and offer up fervent prayers; and stating that, on the same day and hour, he also would pray for her. At the appointed time, Miss O'Connor did as had been directed; and, according to the account given, her pains immediately left her, and she gradually recovered. The facts were attested by Dr Badeley; and the authorities of the convent mentioned that he was a Protestant, as if to disarm suspicion concerning the honesty of his testimony.

This Prince Hohenlohe was a young religious enthusiast. There is no just ground to believe that he was an impostor. Like Joanna Southcote, he sincerely credited his own possession of some kind of miraculous power. He belonged to a branch of an ancient sovereign family in Bavaria. Having become an ecclesiastic, he was

very fervent in his devotions. In 1821, when about twenty-nine years of age, his fame as a miraculous curer of diseases began to spread abroad. The police were ordered to watch the matter; for there were hundreds of believers in him at Bamberg; and even princesses came to solicit his prayers for their restoration to health and beauty. The police required that his proceedings should be open and public, to shew that there was no collusion; this he resisted, as being contrary to the sacred character of such devotional exercises. They therefore forbade him to continue the practice; and he at once retired into Austria, where the Government was likely to be more indulgent.

His fame spread to England, and on the 3d of January 1822, there appeared an advertisement so remarkable that we will give it in full:—'To Germans, Foreign Merchants, and Others.—Prince Alexander of Hohenlohe.—Whereas several public journals, both foreign and domestic, have announced most extraordinary cures to have been performed by Prince Alexander of Hohenlohe: This is to entreat that any one who can give unerring information concerning him, where he now is, or of his intended route, will immediately do so; and they will thereby confer on a female, labouring under what is considered an incurable malady, an obligation which no words can describe. Should a gentleman give the information, his own feelings would sufficiently recompense him; but if a person in indigent circumstances, ten guineas will with pleasure be given, provided the correctness of his information can be ascertained.—Address to A. B., at Mrs Hedge's, Laundress, 9, Mount Row, Davies Street, Berkeley Square.' There is a touching earnestness about this, which tells of one yearning to fly to any available succour as a relief from suffering: whether it was obtained, we do not know.

In France, twelve witnesses deposed to a fact which was alleged to have occurred in the Convent of St Benoit, at Toulouse. One of the nuns, named Adelaide Veysre, through an injury in the leg, had her foot twisted nearly round; and for six months she endured great suffering. During a visit which the Cardinal Bishop of Toulouse paid to her, to administer spiritual consolation, she begged him to apply to Prince Hohenlohe. He did so, and penned a letter dated May 22, 1822. The Prince, in reply, directed that on the 25th of July, the feast of St James (patron of monks), solemn prayer should be offered up for her recovery. The Bishop performed mass in the invalid's chamber on the appointed day; and, it is asserted, that when the Holy Wafer was raised, the foot resumed its proper position, the first stage in a complete recovery.

In 1823, Dr Murray, Roman Catholic Archbishop of Dublin, avowed his belief in the following narrative:—Miss Mary Stuart, a nun in the Ranelagh Convent at Dublin, who had been afflicted with a nervous malady for four years, having heard that the 1st of August was a day on which Prince Hohenlohe advised all sufferers to pray solemnly for relief, begged that everything should be done to give effect to the ceremony. Two priests and four nuns joined her in mass, and before the day was ended, her reco-

very had commenced. The facts were sworn to before a Dublin magistrate. The Rev. Robert Daly afterwards wrote to Dr Cheyne, an eminent physician who had previously attended Miss Stuart, asking whether in his opinion there was any miraculous interposition, or whether he could account for the cure by natural causes. The physician, in a courteous but cautious reply, simply stated that he found it quite easy to explain the phenomenon according to principles known in every-day practice. Dr Cheyne seems to have considered the ailments of such persons as in a great measure dependent on nervous exhaustion and depression of mind, and the convalescence as arising chiefly from mental elevation and excitement.

There is no necessity for suspecting wilful distortion of truth in these recitals. All, or nearly all the Prince's patients were young females of great nervous susceptibility; and they as well as he were doubtless sincere in believing that the cures were miraculous. Modern medical science regards such facts as real, but to be accounted for on simply natural principles.

MARCH 17.

St Joseph of Arimathæa, the patron of Glastonbury. Many martyrs of Alexandria, about 392. St Patrick, apostle of Ireland, 464 or 493. St Gertrude, virgin, abbess in Brabant, 659.

Legendary History of St Patrick.

Almost as many countries arrogate the honour of having been the natal soil of St Patrick, as made a similar claim with respect to Homer. Scotland, England, France, and Wales, each furnish their respective pretensions; but, whatever doubts may obscure his birthplace, all agree in stating that, as his name implies, he was of a patrician family. He was born about the year 372, and when only sixteen years of age, was carried off by pirates, who sold him into slavery in Ireland; where his master employed him as a swineherd on the well-known mountain of Sleamish, in the county of Antrim. Here he passed seven years, during which time he acquired a knowledge of the Irish language, and made himself acquainted with the manners, habits, and customs of the people. Escaping from captivity, and, after many adventures, reaching the Continent, he was successively ordained deacon, priest, and bishop; and then once more, with the authority of Pope Celestine, he returned to Ireland to preach the Gospel to its then heathen inhabitants.

The principal enemies that St Patrick found to the introduction of Christianity into Ireland, were the Druidical priests of the more ancient faith, who, as might naturally be supposed, were exceedingly adverse to any innovation. These Druids, being great magicians, would have been formidable antagonists to any one of less miraculous and saintly powers than Patrick. Their obstinate antagonism was so great, that, in spite of his benevolent disposition, he was compelled to curse their fertile lands, so that they became

dreary bogs; to curse their rivers, so that they produced no fish; to curse their very kettles, so that with no amount of fire and patience could they ever be made to boil; and, as a last resort, to curse the Druids themselves, so that the earth opened and swallowed them up.

A popular legend relates that the saint and his followers found themselves, one cold morning, on a mountain, without a fire to cook their breakfast, or warm their frozen limbs. Unheeding their complaints, Patrick desired them to collect a pile of ice and snow-balls; which having been done, he breathed upon it, and it instantaneously became a pleasant fire—a fire that long after served to point a poet's conceit in these lines:

‘Saint Patrick, as in legends told,
The morning being very cold,
In order to assuage the weather,
Collected bits of ice together;
Then gently breathed upon the pyre,
When every fragment blazed on fire.
Oh! if the saint had been so kind,
As to have left the gift behind
To such a lovelorn wretch as me,
Who daily struggles to be free;
I'd be content—content with part,
I'd only ask to thaw the heart,
The frozen heart, of Polly Roe.’

The greatest of St Patrick's miracles was that of driving the venomous reptiles out of Ireland, and rendering the Irish soil, for ever after, so obnoxious to the serpent race, that they instantaneously die on touching it. Colgan seriously relates that St Patrick accomplished this feat by beating a drum, which he struck with such fervour that he knocked a hole in it, thereby endangering the success of the miracle. But an angel appearing mended the drum; and the patched instrument was long exhibited as a holy relic.

In 1831, Mr James Cleland, an Irish gentleman, being curious to ascertain whether the climate or soil of Ireland was naturally destructive to the serpent tribe, purchased half-a-dozen of the common harmless English snake (*natrix torquata*), in Covent Garden market in London. Bringing them to Ireland, he turned them out in his garden at Rath-gael, in the county of Down; and in a week afterwards, one of them was killed at Milecross, about three miles distant. The persons into whose hands this strange monster fell, had not the slightest suspicion that it was a snake, but, considering it a curious kind of eel, they took it to Dr J. L. Drummond, a celebrated Irish naturalist, who at once pronounced the animal to be a reptile and not a fish. The idea of a ‘rale living sarpint’ having been killed within a short distance of the very burial-place of St Patrick, caused an extraordinary sensation of alarm among the country people. The most absurd rumours were freely circulated, and credited. One far-seeing clergyman preached a sermon, in which he cited this unfortunate snake as a token of the immediate commencement of the millennium; while another saw in it a type of the approach of the cholera morbus. Old prophecies were raked up, and all parties and sects, for once, united in believing that the snake foreshadowed ‘the beginning of the end,’ though they very widely differed as to what that end was to

be. Some more practically minded persons, however, subscribed a considerable sum of money, which they offered in rewards for the destruction of any other snakes that might be found in the district. And three more of the snakes were not long afterwards killed, within a few miles of the garden where they were liberated. The remaining two snakes were never very clearly accounted for; but no doubt they also fell victims to the reward. The writer, who resided in that part of the country at the time, well remembers the wild rumours, among the more illiterate classes, on the appearance of those snakes; and the bitter feelings of angry indignation expressed by educated persons against the—very fortunately then unknown—person, who had dared to bring them to Ireland.

A more natural story than the extirpation of the serpents, has afforded material for the pencil of the painter, as well as the pen of the poet. When baptizing an Irish chieftain, the venerable saint leaned heavily on his crozier, the steel-spiked point of which he had unwittingly placed on the great toe of the converted heathen. The pious chief, in his ignorance of Christian rites, believing this to be an essential part of the ceremony, bore the pain without flinching or murmur; though the blood flowed so freely from the wound, that the Irish named the place *Struth-flhuil* (stream of blood), now pronounced Struill, the name of a well-known place near Downpatrick. And here we are reminded of a very remarkable fact in connection with geographical appellations, that the footsteps of St Patrick can be traced, almost from his cradle to his grave, by the names of places called after him. Thus, assuming his Scottish origin, he was born at Kilpatrick (the cell or church of Patrick), in Dumbar-tonshire. He resided for some time at Dalpatrick (the district or division of Patrick), in Lanarkshire; and visited Crag-phadrig (the rock of Patrick), near Inverness. He founded two churches, Kirkpatrick at Irongray, in Kircudbright; and Kirkpatrick at Fleming, in Dumfries; and ultimately sailed from Portpatrick, leaving behind him such an odour of sanctity, that among the most distinguished families of the Scottish aristocracy, Patrick has been a favourite name down to the present day. Arriving in England, he preached in Patterdale (Patrick's dale), in Westmoreland; and founded the church of Kirkpatrick, in Durham. Visiting Wales, he walked over Sarn-badrig (Patrick's causeway), which, now covered by the sea, forms a dangerous shoal in Carnarvon Bay; and departing for the Continent, sailed from Llan-badrig (the church of Patrick), in the island of Anglesea. Undertaking his mission to convert the Irish, he first landed at Innis-patrick (the island of Patrick), and next at Holmpatrick, on the opposite shore of the mainland, in the county of Dublin. Sailing northwards, he touched at the Isle of Man, sometimes since, also, called Innis-patrick, where he founded another church of Kirkpatrick, near the town of Peel. Again landing on the coast of Ireland, in the county of Down, he converted and baptized the chieftain Dichu, on his own threshing-floor. The name of the parish of Saul, derived from Sabbal-patrick

(the barn of Patrick), perpetuates the event. He then proceeded to Temple-patrick, in Antrim, and from thence to a lofty mountain in Mayo, ever since called Croagh-patrick.

He founded an abbey in East Meath, called Donnach-Padraig (the house of Patrick), and built a church in Dublin on the spot where St Patrick's Cathedral now stands. In an island of Lough Derg, in the county of Donegal, there is St Patrick's Purgatory; in Leinster, St Patrick's Wood; at Cashel, St Patrick's Rock; the St Patrick's Wells, at which the holy man is said to have quenched his thirst, may be counted by dozens. He is commonly stated to have died at Saul on the 17th of March 493, in the one hundred and twenty-first year of his age.

Poteen, a favourite beverage in Ireland, is also said to have derived its name from St Patrick; he, according to legend, being the first who instructed the Irish in the art of distillation. This, however, is, to say the least, doubtful; the most authentic historians representing the saint as a very strict promoter of temperance, if not exactly a teetotaler. We read that in 445 he commanded his disciples to abstain from drink in the daytime, until the bell rang for vespers in the evening. One Colman, though busily engaged in the severe labours of the field, exhausted with heat, fatigue, and intolerable thirst, obeyed so literally the injunction of his revered preceptor, that he refrained from indulging himself with one drop of water during a long sultry harvest day. But human endurance has its limits: when the vesper bell at last rang for evensong, Colman dropped down dead—a martyr to thirst. Irishmen can well appreciate such a martyrdom; and the name of Colman, to this day, is frequently cited, with the added epithet of *Stadhach*—the Thirsty.

As the birthplace of St Patrick has been disputed, so has that of his burial. But the general evidence indicates that he was buried at Downpatrick, and that the remains of St Columb and St Bridget were laid beside him; according to the old monkish Leonine distich:

'In Burgo Duno, tumulo tumulantur in uno,
Brigida, Patricius, atque Columba pius.'

Which may be thus rendered:—

'On the hill of Down, buried in one tomb,
Were Bridget and Patricius, with Columba the pious.'

One of the strangest recollections of a strange childhood is the writer having been taken, by a servant, unknown to his parents, to see a silver case, containing, as was said, the jaw-bone of St Patrick. The writer was very young at the time, but remembers seeing one much younger, a baby, on the same occasion, and has an indistinct idea that the jaw-bone was considered to have had a very salutary effect on the baby's safe introduction into the world. This jaw-bone, and the silver shrine enclosing it, has been, for many years, in the possession of a family in humble life near Belfast. In the memory of persons living, it contained five teeth, but now retains only one—three having been given to members of the family, when emigrating to America; and the fourth was deposited under the altar of the Roman Catholic Chapel of Derriaghy, when re-

built some years ago. The curiously embossed case has a very antique appearance, and is said to be of an immense age; but it is, though certainly old, not so very old as reported, for it carries the 'Hall-mark' plainly impressed upon it. This remarkable relic has long been used for a kind of extra-judicial trial, similar to the Saxon *corsnet*, a test of guilt or innocence of very great antiquity; accused or suspected persons freeing themselves from the suspicion of crime, by placing the right hand on the reliquary, and declaring their innocence, in a certain form of words, supposed to be an asseveration of the greatest solemnity, and liable to instantaneous, supernatural, and frightful punishment, if falsely spoken, even by *suppressio veri*, or *suggestio falsi*. It was also supposed to assist women in labour, relieve epileptic fits, counteract the diabolical machinations of witches and fairies, and avert the baleful influence of the evil eye. We have been informed, however, that of late years it has rarely been applied to such uses, though it is still considered a most welcome visitor to a household, where an immediate addition to the family is expected.

The shamrock, or small white clover (*trifolium repens* of botanists), is almost universally worn in the hat over all Ireland, on St Patrick's day. The popular notion is, that when St Patrick was preaching the doctrine of the Trinity to the pagan Irish, he used this plant, bearing three leaves upon one stem, as a symbol or illustration of the great mystery. To suppose, as some absurdly hold, that he used it as an argument, would be derogatory to the saint's high reputation for orthodoxy and good sense; but it is certainly a curious coincidence, if nothing more, that the trefoil in Arabic is called *shamrakh*, and was held sacred in Iran as emblematical of the Persian Triads. Pliny, too, in his *Natural History*, says that serpents are never seen upon trefoil, and it prevails against the stings of snakes and scorpions. This, considering St Patrick's connexion with snakes, is really remarkable, and we may reasonably imagine that, previous to his arrival, the Irish had ascribed mystical virtues to the trefoil or shamrock, and on hearing of the Trinity for the first time, they fancied some peculiar fitness in their already sacred plant to shadow forth the newly revealed and mysterious doctrine. And we may conclude, in the words of the poet, long may the shamrock,

'The plant that blooms for ever,
With the rose combined,
And the thistle twined,
Defy the strength of foes to sever.
Firm be the triple league they form,
Despite all change of weather;
In sunshine, darkness, calm, or storm,
Still may they fondly grow together.'

W. P.

In the Galtee or Gaultie Mountains, situated between the counties of Cork and Tipperary, there are seven lakes, in one of which, called Lough Dilveen, it is said Saint Patrick, when banishing the snakes and toads from Ireland, chained a monster serpent, telling him to remain there till Monday.

The serpent every Monday morning calls out in Irish, 'It is a long Monday, Patrick.'

That St Patrick chained the serpent in Lough Dilveen, and that the serpent calls out to him every Monday morning, is firmly believed by the lower orders who live in the neighbourhood of the Lough.

Noah and his Wife.

The early English calendars pretend that on the 17th of March Noah entered the ark (*introtus Noë in arcam*), and they add, under the 29th of April, *egressus Noë de arca*, Here Noah went out of the ark. It would not be easy to determine why this particular day was chosen as that of Noah's entrance into the ark; but the poetic and romantic spirit of the middle ages habitually seized upon certain persons and facts in biblical history, and gave them a character and clothed them in incidents which are very different from those they present in the Scriptures. In this respect mediæval legend took greater liberties with Noah's wife than with Noah himself. This lady was, for some reason or other, adopted as the type of the mediæval shrew; and in the religious plays, or mysteries, the quarrels between Noah and his helpmate were the subject of much mirth to the spectators. In the play of Noah in the Towneley mysteries (one of the earliest of these collections), when Noah carries to his dame the news of the imminence of the flood which had just been announced to him by the Creator, she is introduced abusing him for his credulity, sneering at him as an habitual bearer of bad news, and complaining of the ill life she leads with him. He tells her to 'hold her tongue,' but she only becomes more abusive, till he is provoked to strike her; she returns the blow, and they fall a-fighting, until Noah has had enough, and runs away to his work. When the ark is finished another quarrel arises, for Noah's wife laughs at his ark, and declares that she will not go into it. In reply to the first invitation, she says scornfully (we modernize the orthography):

'I was never barrd ere, as ever might I the [prosper],

In such an oyster as this!

In faith, I cannot find

Which is before, which is behind;

But shall we here be pinned,

Noah, as have thou bliss?'

The water is now rising, and she is pressed still more urgently to go into the ark, on which she returns for answer:

'Sir, for Jack nor for Gill will I turn my face,
Till I have on this hill span a space

On my rock;

Well were he might get me!

Now will I down set me;

Yet rede [counsel] I no man let [hinder] me

For dread of a knock.'

The danger becomes now so imminent, that Noah's wife jumps into the ark of her own will, where she immediately picks up another quarrel with her husband, and they fight again, but this time Noah is conqueror, and his partner complains of being beaten 'blue,' while their three sons lament over the family discords.

In the similar play in the Chester mysteries, the wife assists in tolerably good temper during the building of the ark, but when it is finished she refuses to go into it, and behaves in a manner which leads Noah to exclaim:

'Lorde, that wemen be crabbed aye!
And non are meke, I dare well saye.'

Noah's wife becomes so far reconciled that she assists in carrying into the ark the various couples of beasts and birds; but when this labour is achieved, she refuses to go in herself unless she be allowed to take her gossips with her, telling Noah, that unless he agree to her terms, he may row whither he likes, and look out for another wife. Then follows a scene at the tavern, where the good dame and her gossips join in the following chant:

'The good gossippes songe.

The flude comes flittinge in full faste,
On everye syde that spreades full farr;
For feare of drowninge I am agaste;
Good gossippes, lett us drawe nere,
And lett us drinke or [ere] we departe,
For ofte tymes we have done soe.
For att a draughte thou drinks a quarte,
And soe will I doe or I goe.
Here is a pottill full of malmsine, good and
stronge;
Itt will rejoice bouth hearte and tonge;
Though Noye thinke us never so longe,
Heare we will drinke alike.'

At this moment, her three sons arrive and drag her away to the ark, which she has no sooner entered than she falls a-beating her husband.

These will serve as curious examples of the corrupt and not very reverent form in which the events of Scripture history were during the middle ages communicated to the vulgar. The quarrels of Noah and his wife formed so popular a story that they became proverbial. The readers of Chaucer will remember how, in the *Canterbury Tales*, Nicholas, when examining the carpenter on his knowledge of Noah's flood, asks him—

"Hast thou not herd," quod Nicholas, "also
The sorwe of Noe, with his felawship,
Or that he mighte get his wif to ship?
Him had be lever, I dare wel undertake,
At thilke time, than all his wethers blake,
That she had had a ship hireself alone."

DAVID DALE.

Died, on the 17th March 1806, David Dale, one of the fathers of the cotton manufacture in Scotland. He was the model of a self-raised, upright, successful man of business. Sprung from humble parents at Stewarton in Ayrshire, he early entered on a commercial career at Glasgow, and soon began to grapple with great undertakings. In company with Sir Richard Arkwright, he commenced the celebrated New Lanark Cotton Mills in 1783, and in the course of a few years he had become a rich man. Mr Dale in this career had great difficulties to overcome, particularly in the prejudices and narrow-sightedness of the surrounding country gentlemen. He overcame them all. He took his full share of public duty as a magistrate. The poor recognised him as the most princely of philanthropists. He was an active lay preacher in a little body of Independents to which he belonged, and whose small, poor, and scattered congregations he half supported. Though unostentatious to a remarkable degree, it was impossible to conceal that David Dale was one of those rare mortals who hold all wealth as a trust for a general working of good in the world, and who cannot truly enjoy anything in which others are not participators. Keeping in view certain prejudices entertained regarding the moral effects of the factory system, it is curious to learn what were the motives of the philanthropic Dale in promoting cotton mills. His great object was to furnish a profitable employment for the poor, and train to habits of industry those whom he saw ruined by a semi-idleness. He aimed at correcting evils already existing, evils broad and palpable; and it never occurred to him to imagine that good, well-paid work would sooner or later harm any body.

By a curious chance, Robert Owen married the eldest daughter of Mr Dale, and became his successor in the management of the New Lanark Mills. Both were zealous in promoting education among their people; but there was an infinite difference between the views of the two men as to education. Dale was content with little more than impressing the old evangelical faith of western Scotland upon the youth under his charge. Owen contemplated modes of moralising the people such as no Scotchman had ever dreamt of. The father-in-law was often put upon the defensive by the son-in-law, regarding his simple unmistrusting faith, and was obliged to admit that there was force in what Owen said, assuming the truth of his view of human nature. But he would generally end the discussion by remarking with his affectionate smile, 'Thou needest to be very right, for thou art very positive.'

David Dale was a remarkably obese man, inasmuch it was said he had not for years seen his shoe-buckles as he walked. He one day spoke of having fallen all his length on the ice; to which his friend replied that he had much reason to be thankful that it was not all his breadth. The name of the worthy philanthropist has been commemorated in the names of two of his grandchildren,—the Hon. Robert Dale Owen, lately ambassador for the United States to the King-

dom of the Two Sicilies, and David Dale Owen, author of a laborious work on the *Geology of Wisconsin, Iowa, and Minnesota* (1852).

MARCH 18.

St Alexander, Bishop of Jerusalem, martyr, 251. St Cyril, Archbishop of Jerusalem, 336. St Fridian, Bishop of Lucca, 578. St Edward, King of England, and martyr, 978. St Anselm, Bishop of Lucca, 1086.

EDWARD THE KING AND MARTYR.

The great King Edgar had two wives, first Elfrida, and, after her death, Elfrida, an ambitious woman, who had become queen through the murder of her first husband, and who survived her second; and Edgar left a son by each, Edward by Elfrida, and Ethelred by Elfrida. At the time of their father's death, Edward was thirteen, and Ethelred seven years of age; and they were placed by the ambition of Elfrida, and by political events, in a position of rivalry. Edgar's reign had been one continued struggle to establish monarchism, and with it the supremacy of the Church of Rome, in Anglo-Saxon England; and the violence with which this design had been carried out, with the persecution to which the national clergy were subjected, now caused a reaction, so that at Edgar's death the country was divided into two powerful parties, of which the party opposed to the monks was numerically the strongest. The queen joined this party, in the hope of raising her son to the throne, and of ruling England in his name; and the feeling against the Romish usurpation was so great, that, although Edgar had declared his wish that his eldest son should succeed him, and his claim was no doubt just, the crown was only secured to him by the energetic interference of Dunstan. Edward thus became King of England in the year 975.

Edward appears, as far as we can learn, to have been an amiable youth, and to have possessed some of the better qualities of his father; but his reign and life were destined to be cut short before he reached an age to display them. He had sought to conciliate the love of his step-mother by lavishing his favour upon her, and he made her a grant of Dorsetshire, but in vain; and she lived, apparently in a sort of sullen state, away from court, with her son Ethelred, at Corfe in that county, plotting, according to some authorities, with what may be called the national party, against Dunstan and the government. The Anglo-Saxons were all passionately attached to the pleasures of the chase, and one day—it was the 18th of March 978—King Edward was hunting in the forest of Dorset, and, knowing that he was in the neighbourhood of Corfe, and either suffering from thirst or led by the desire to see his half-brother Ethelred, for whom he cherished a boyish attachment, he left his followers and rode alone to pay a visit to his mother. Elfrida received him with the warmest demonstrations of affection, and, as he was unwilling to dismount from his horse, she offered him the

cup with her own hand. While he was in the act of drinking, one of the queen's attendants, by her command, stabbed him with a dagger. The prince hastily turned his horse, and rode toward the wood, but he soon became faint and fell from his horse, and his foot becoming entangled in the stirrup, he was dragged along till the horse was stopped, and the corpse was carried into the solitary cottage of a poor woman, where it was found next morning, and, according to what appears to be the most trustworthy account, thrown by Elfrida's directions into an adjoining marsh. The young king was, however, subsequently buried at Wareham, and removed in the following year to be interred with royal honours at Shaftesbury. The monastic party, whose interests were identified with Edward's government, and who considered that he had been sacrificed to the hostility of their opponents, looked upon him as a martyr, and made him a saint. The writer of this part of the Anglo-Saxon chronicle, who was probably a contemporary, expresses his feelings in the simple and pathetic words, 'No worse deed than this was done to the Anglo race, since they first came to Britain.'

The story of the assassination of King Edward is sometimes quoted in illustration of a practice which existed among the Anglo-Saxons. Our forefathers were great drinkers, and it was customary with them, in drinking parties, to pass round a large cup, from which each in turn drank to some of the company. He who thus drank, stood up, and as he lifted the cup with both hands, his body was exposed without any defence to a blow, and the occasion was often seized by an enemy to murder him. To prevent this, the following plan was adopted. When one of the company stood up to drink, he required the companion who sat next to him, or some one of the party, to be his *pledge*, that is, to be responsible for protecting him against anybody who should attempt to take advantage of his defenceless position; and this companion, if he consented, stood up also, and raised his drawn sword in his hand to defend him while drinking. This practice, in an altered form, continued long after the condition of society had ceased to require it, and was the origin of the modern practice of pledging in drinking. At great festivals, in some of our college halls and city companies, the custom is preserved almost in its primitive form in passing round the ceremonial cup—the loving cup, as it is sometimes called. As each person rises and takes the cup in his hand to drink, the man seated next to him rises also, and when the latter takes the cup in his turn, the individual next to him does the same.

Born.—Philip de Lahire, French geometrician, 1640, Paris; John Caldwell Calhoun, American statesman, 1782, South Carolina.

Died.—Edward, King and Martyr, 978; Pope Honorius III., 1227; Bishop Patrick Forbes, 1635, Aberdeen; Dr George Stanhope, eminent divine, 1728, Lewisham; Sir Robert Walpole, (Earl of Orford,) prime minister to George I. and II., 1745, Houghton; the Rev. Lawrence Sterne, author of *Tristram Shandy*, 1768, Bond-street;

John Horne Tooke, political writer, 1812, Ealing; Sebastian Pether, painter of moonlight scenery, 1844, Battersea; Sir Henry Pottinger, G.C.B., military commander in India, 1856; W. H. Playfair, architect, 1857, Edinburgh.

LAWRENCE STERNE.

The world is now fully aware of the moral deficiencies of the author of *Tristram Shandy*. Let us press lightly upon them for the sake of the bright things scattered through his writings—though these, as a whole, are no longer read. The greatest misfortune in the case is that Sterne was a clergyman. Here, however, we may charitably recall that he was one of the many who have been drawn into that profession, rather by connection than their own inclination. If Sterne had not been the great-grandson of an Archbishop of York, with an influential pluralist uncle, who could give him preferment, we should probably have been spared the additional pain of considering his improprieties as made the darker by the complexion of his coat. He spent the best part of his life as a life-enjoying, thoughtless, but not particularly objectionable country pastor, at Sutton in Yorkshire, and he had attained the mature age of forty-seven when the first volumes of his singular novel all at once brought him into the blaze of a London reputation. It was mainly during the remaining eight years of his life that he incurred the blame which now rests with his name. These years were made painful to him by wretched health. His constitution seems to have been utterly worn out. A month after the publication of his *Sentimental Journey*, while it was reaping the first fruits of its rich lease of fame, the poor author expired in solitary and melancholy circumstances, at his lodgings in Old Bond-street. There is something peculiarly sad in the death of a merry man. One thinks of Yorick—'Where be your gibes now? your gambols? your songs? your flashes of merriment, that were wont to set the table in a roar?' We may well apply to Sterne—since he applied them to himself—the mournful words, 'Alas, poor Yorick!' Dr Dibdin found, in the possession of Mr James Atkinson, an eminent medical practitioner at York, a very curious picture, done rather coarsely in oil, representing two figures in the characters of quack doctor and mountebank on a stage, with an indication of populace looking on. An inscription, to which Mr Atkinson appears to have given entire credence, represented the doctor as Mr T. Brydges, and the mountebank as Lawrence Sterne; and the tradition was that each had painted the other. It seems hardly conceivable that a parish priest of Yorkshire in the middle of the eighteenth century should have consented to be enduringly presented under the guise and character of a stage mountebank; but we must remember how much he was at all times the creature and the victim of whim and drollery, and how little control his profession and calling ever exercised over him. Mr Atkinson, an octogenarian, told Dibdin that his father had been acquainted with Sterne, and he had thus acquired many anecdotes of the whims and crotchets of the far-famed sentimental traveller. Amongst other things which Dibdin

learned here was the fact that Sterne possessed the talent of an amateur draughtsman, and was

fond of exercising his pencil. In our copy of the picture in question, albeit it is necessarily given

BRYDGES AND STERNE.

on a greatly reduced scale, it will readily be observed that the face of Sterne wears the characteristic comicality which might be expected.

BURNING OF TWO HERETICS.

On Wednesday, the 18th of March 1611-12, one Bartholomew Legat was burnt at Smithfield, for maintaining thirteen heretical (Arian) opinions concerning the divinity of Christ. It was at the instance of the king, himself a keen controversialist, that the bishops, in consistory assembled, tried, and condemned this man. The lawyers doubted if there were any law for burning heretics, remarking that the executions for religion under Elizabeth were 'done *de facto* and not *de jure*.' Chamberlain, however, thought the King would 'adventure to burn Legat with a good conscience.' And adventure he did, as we see, taking self-sufficiency of opinion for conscience, as has been so often done before and since. Nor did he stop there, for on the 11th of April following, 'another miscreant heretic,' named William Wightman, was burnt at Lichfield. We learn that Legat declared his contempt for all ecclesiastical government, and refused all favour. He 'said little, but died obstinately.'

King James had no mean powers as a polemic. He could argue down heretics and papists to the admiration (not wholly insincere) of his courtiers.

It was scarcely fair that he should have had so powerful an ally as the executioner to close the argument. It is startling to observe the frequency of bloodshed in this reign for matters of opinion. As an example—on the Whitsun-eve of the year 1612, four Roman Catholic priests, who had previously been 'twice banished, but would take no warning' (such is the cool phrase of Chamberlain), were hanged at Tyburn. It is remarked, as a fault of some of the officials, that, being very confident at the gallows, they were allowed to 'talk their full' to the assembled crowd, amongst whom were several of the nobility, and others, both ladies and gentlemen, in coaches.

THE OMNIBUS TWO HUNDRED YEARS AGO.

It may appear strange, but the omnibus was known in France two centuries ago. Carriages on hire had already been long established in Paris: coaches, by the hour or by the day, were let out at the sign of St Fiacre; but the hire was too expensive for the middle classes. In 1662, a royal decree of Louis XIV. authorized the establishment of a line of twopence-halfpenny omnibuses, or *carrosses à cinq sous*, by a company, with the Duke de Roanès and two marquises at its head, and the gentle Pascal among the shareholders. The decree expressly stated that these coaches, of which there were originally seven, each con-

taining eight places, should run at fixed hours, full or empty, to and from certain extreme quarters of Paris, 'for the benefit of a great number of persons ill provided for, as persons engaged in lawsuits, infirm people, and others, who have not the means to ride in chaise or carriage, which cannot be hired under a pistole, or a couple of crowns a day.'

The public inauguration of the new conveyances took place on the 18th of March 1662, at seven o'clock in the morning, and was a grand and gay affair. Three of the coaches started from the Porte St Antoine, and four from the Luxembourg. Previous to their setting out, two commissaries of the Chatelet, in legal robes, four guards of the grand provost, half a score of city archers, and as many cavalry, drew up in front of the people. The commissaries delivered an address upon the advantages of the twopence-halfpenny carriages, exhorted the riders to observe good order, and then, turning to the coachmen, covered the body of each with a long blue frock, with the arms of the King and the city showily embroidered on the front. With this badge off drove the coachmen; but throughout the day, a provost-guard rode in each carriage, and infantry and cavalry, here and there, proceeded along the requisite lines, to keep them clear.

There are two accounts of the reception of the novelty. Sanyal, in his *Antiquities of Paris*, states the carriages to have been pursued with the stones and hisses of the populace, but the truth of this report is doubted; and the account given by Madame Perrier, the sister of the great Pascal, describing the public joy which she witnessed on the appearance of these low-priced conveyances, in a letter written three days after, is better entitled to credit; unless the two accounts may relate to the reception by the people in different parts of the line. For a while all Paris strove to ride in these omnibuses, and some stood impatiently to gaze at those who had succeeded better than themselves. The twopence-halfpenny coach was the event of the day; even the *Grand Monarque* tried a trip in one at St Germain, and the actors of the Marais played the *Intrigue des Carrosses à Cinq Sous*, in their joyous theatre. The wealthier classes seem to have taken possession of them for a considerable time; and it is singular that when they ceased to be fashionable, the poorer classes would have nothing to do with them, and so the speculation failed.

The system reappeared in Paris in 1827, with this inscription placed upon the sides of the vehicles: *Enterprise générale des Omnibus*. In the *Monthly Magazine* for 1829, we read: 'The Omnibus is a long coach, carrying fifteen or eighteen people, all inside. Of these carriages, there were about half a dozen some months ago, and they have been augmented since; their profits are said to have repaid the outlay within the first year; the proprietors, among whom is Lafitte, the banker, are making a large revenue out of Parisian sous, and speculation is still alive.'

The next item in the history of the omnibus is of a different cast. In the struggle of the Three Days of July 1830, the accidental upset of an

omnibus suggested the employment of the whole class of vehicles for the forming of a barricade. The help thus given was important, and so it came to pass that this new kind of coach had something to do in the banishing of an old dynasty.

The omnibus was readily transplanted to London. Mr Shillibeer, in his evidence before the Board of Health, stated that, on July 4, 1829, he started the first pair of omnibuses in the metropolis, from the Bank of England to the Yorkshire Stingo, New Road. Each of Shillibeer's vehicles carried twenty-two passengers inside, but only the driver outside; each omnibus was drawn by three horses abreast, the fare was one shilling for the whole journey, and sixpence for half the distance, and for some time the passengers were provided with periodicals to read on the way. The first *conductors* were two sons of British naval officers, who were succeeded by young men in velvet liveries. The first omnibuses were called 'Shillibeers,' and the name is common to this day in New York.

The omnibus was adopted in Amsterdam in 1839; and it has since been extended to all parts of the civilized world.

INTRODUCTION OF INOCULATION.

March 18th 1718, Lady Mary Wortley Montague, at Belgrade, caused her infant son to be inoculated with the virus of small-pox, as a means of warding off the ordinary attack of that disease. As a preliminary to the introduction of the practice into England, the fact was one of importance; and great credit will always be due to this lady for the heroism which guided her on the occasion.

LADY MARY WORTLEY MONTAGUE.

At the time when Dr Sydenham published the improved edition of his work on fevers, in 1675, small-pox appears to have been the most widely diffused and the most fatal of all the pestilential diseases, and was also the most frequently epide-

mic. The heating and sweating plau of treatment prevailed universally. Instead of a free current of air and cooling diet, the patient was kept in a room with closed windows and in a bed with closed curtains. Cordials and other stimulants were given, and the disease assumed a character of malignity which increased the mortality to a frightful extent. The regimen which Dr Sydenham recommended was directly the reverse, and was gradually assented to and adopted by most of the intelligent practitioners.

Inoculation of the small-pox is traditionally reported to have been practised in some mode in China and Hindustan; and Dr Russell, who resided for some years at Aleppo, states, as the result of his inquiries, that it had been in use among the Arabians from ancient times; but he remarks, that no mention is made of it by any of the Arabian medical writers known in Europe. (*Phil. Trans.* lviii. 142.) None of the travellers in Turkey have noticed the practice previous to the eighteenth century. The first accounts are by Pylarini and Timoni, two Italian physicians, who, in the early part of the eighteenth century, sent information of the practice to the English medical professors, by whom, however, no notice was taken of it.*

It was in the course of her residence in Turkey, with her husband Mr Edward Wortley Montague, the British ambassador there, that Lady Mary made her famous experiment in inoculation. Her own experience of small-pox had led her, as she acknowledged, to observe the Turkish practice of inoculation with peculiar interest. Her only brother, Lord Kingston, when under age, but already a husband and a father, had been carried off by small-pox; and she herself had suffered severely from the disease, which, though it had not left any marks on her face, had destroyed her fine eyelashes, and had given a fierceness of expression to her eyes which impaired their beauty. The hope of obviating much suffering and saving many lives induced her to form the resolution of introducing the practice of inoculation into her native country.

In one of her letters, dated Adrianople, April 1st, 1717, she gives the following account of the observations which she had made on the proceedings of the Turkish female practitioners.

'The small-pox, so general and so fatal amongst us, is entirely harmless by the invention of *in-grafting*, which is the term they give it. There is a set of old women who make it their business to perform the operation every autumn, in the month of September, when the great heat is abated. People send to one another to know if any one has a mind to have the small-pox. They make parties for this purpose, and when they are met (commonly fifteen or sixteen together), the old woman comes with a nut-shell full of the matter of the best sort of small-pox, and asks you what vein you please to have opened. She immediately rips open that you offer to her with a large needle (which gives you no more pain than a common scratch), and puts into the vein as much

* The communications of the two Italian physicians are recorded in the abridged edition of the *Philosophical Transactions*, vol. v. p. 370.

matter as can lie upon the head of her needle, and after that binds up the little wound with a hollow bit of shell, and in this manner opens four or five veins. . . . The children or young patients play together all the rest of the day, and are in perfect health till the eighth. Then the fever begins to seize them, and they keep their beds two days, very seldom three. They have very rarely above twenty or thirty on their faces, which never mark, and in eight days' time they are as well as they were before their illness. Where they are wounded there remain running sores during the distemper, which, I don't doubt, is a great relief to it. Every year thousands undergo the operation; and the French ambassador says pleasantly that they take the small-pox here by way of diversion, as they take the waters in other countries. There is no example of any one that has died of it; and you may believe me that I am well satisfied of the safety of this experiment, since I intend to try it upon my dear little son. I am patriot enough to try to bring this useful invention into fashion in England.'

While her husband, for the convenience of attending to his diplomatic duties, resided at Pera, Lady Mary occupied a house at Belgrade, a beautiful village surrounded by woods, about fourteen miles from Constantinople, and there she carried out her intention of having her son inoculated. On Sunday, the 23rd of March 1718, a note addressed to her husband at Pera contained the following passage: 'The boy was ingrafted on Tuesday, and is at this time singing and playing, very impatient for his supper. I pray God my next may give you as good an account of him. I cannot ingraft the girl: her nurse has not had the small-pox.'

Lady Mary Wortley Montague, after her return from the East, effectively, though gradually and slowly, accomplished her benevolent intention of rendering the malignant disease as comparatively harmless in her own country as she had found it to be in Turkey. It was an arduous, a difficult, and, for some years, a thankless undertaking. She had to encounter the pertinacious opposition of the medical professors, who rose against her almost to a man, predicting the most disastrous consequences; but, supported firmly by the Princess of Wales (afterwards Queen Caroline) she gained many supporters among the nobility and the middle classes. In 1721 she had her own daughter inoculated. Four chief physicians were deputed by the government to watch the performance of the operation, which was quite successful; but the doctors were apparently so desirous that it should not succeed, that she never allowed the child to be alone with them for a single instant, lest it should in some way suffer from their malignant interference. Afterwards four condemned criminals were inoculated, and this test having proved successful, the Princess of Wales had two of her own daughters subjected to the operation with perfect safety. While the young princesses were recovering, a pamphlet was published which denounced the new practice as unlawful, as an audacious act of presumption, and as forbidden in Scripture by the express command: 'Thou shalt not tempt

the Lord thy God.' Some of the nobility followed the example of the Princess, and the practice gradually extended among the middle classes. The fees at first were so expensive as to preclude the lower classes from the benefit of the new discovery.

Besides the opposition of the medical professors, the clergy denounced the innovation from their pulpits as an impious attempt to take the issues of life and death out of the hands of Providence. For instance, on the 8th of July 1722, a sermon was preached at St Andrew's, Holborn, in London, by the Rev. Edward Massey, Lecturer of St Alban's, Wood-street, 'against the dangerous and sinful practice of inoculation.' The sermon was published, and the text is Job ii. 7: 'So went Satan forth from the presence of the Lord, and smote Job with sore boils from the sole of his foot unto his crown.' The preacher says: 'Remembering our text, I shall not scruple to call that a diabolical operation which usurps an authority founded neither in the laws of nature or religion; which tends, in this case, to anticipate and banish Providence out of the world, and promote the increase of vice and immorality.' The preacher further observes that 'the good of mankind, the seeking whercof is one of the fundamental laws of nature, is, I know, pleaded in defence of the practice; but I am at a loss to find or understand how that has been or can be promoted hereby; for if by *good* be meant the preservation of life, it is, in the first place, a consideration whether *life* be a *good* or *not*.' In addition to denunciations such as these from high places, the common people were taught to regard Lady Mary with abhorrence, and to hoot at her, as an unnatural mother who had risked the lives of her own children.

So annoying was the opposition and the obloquy which Lady Mary had to endure, that she confessed that, during the four or five years which immediately succeeded her return to England, she often felt a disposition to regret having engaged in the patriotic undertaking, and declared that if she had foreseen the vexation and persecution which it brought upon her she would never have attempted it. In fact, these annoyances seem at one time to have produced a depression of spirits little short of morbid; for in 1725 she wrote to her sister Lady Mar, 'I have such a complication of things both in my head and my heart, that I do not very well know what I do; and if I cannot settle my brains, your next news of me will be that I am locked up by my relations. In the meantime I lock myself up, and keep my distraction as private as possible.'

It is remarkable that Voltaire should have been the first writer in France to recommend the adoption of inoculation to the inhabitants of that country. In 1727 he directed the attention of the public to the subject. He pointed out to the ladies especially the value of the practice, by informing them that the females of Circassia and Georgia had by this means preserved the beauty for which they have for centuries been distinguished. He stated that they inoculated their children at as early an age as six months; and observed that most of the 20,000 inhabitants of Paris who died of small-pox in 1720 would pro-

bably have been saved if inoculation had been then in use.

Dr Gregory has observed, that the first ten years of the progress of inoculation in England were singularly unfortunate. It fell into bad hands, was tried on the most unsuitable subjects, and was practised in the most injudicious manner. By degrees the regular practitioners began to patronise and adopt it, the opposition of the clergy ceased, and the public became convinced of the fact that the disease in the new form was scarcely ever fatal, while they were aware from experience that when it occurred naturally, one person died out of about every four.

A new era in the progress of inoculation commenced when the Small-pox Hospital was founded by voluntary subscription in 1746, for the extension of the practice among the poor of London. Dr Mead, who had been present when the four criminals were inoculated, wrote a treatise in favour of it in 1748, and the College of Physicians published a strong recommendation of it in 1754. Mr Sutton and his two sons, from about 1763, became exceedingly popular as inoculators; in 1775 a dispensary was opened in London for gratuitous inoculation of the poor, and Mr Dimsdale at the same time practised with extraordinary success. The Small-pox Hospital having adopted the plan of promiscuous inoculation of out-patients, carried it on to an immense extent between 1790 and 1800. In 1796, Dr Jenner announced his discovery of vaccination, and inoculation of the small-pox was gradually superseded by inoculation of the cow-pox.

On the 23d of July 1840, the practice of inoculation of the small-pox was prohibited by an act of the British Parliament, 3 and 4 Vict. c. 29. This statute, entitled 'An Act to Extend the Practice of Vaccination,' enacted that any person who shall produce or attempt to produce by inoculation of variolous matter the disease of small-pox, shall be liable on conviction to be imprisoned in the common gaol or house of correction for any term not exceeding one month.'

MARCH 19.

St Joseph, husband of the Virgin Mary, 1st century. St Alemond, of England, martyr, about 819.

Born.—John Astruc, eminent French physician, 1684, *Sauve*; the Rev. Edward Bickersteth, writer on religious subjects, 1786, *Kirby Lonsdale*.

Died.—Alexander Severus, murdered, A.D. 235; Spencer Compton, Earl of Northampton, 1643, killed at *Hopton Heath*; Bishop Thomas Ken, 1711, *Frome*; Pope Clement II., 1721; Nicholas Hawksmoor, architect, pupil of Wren, 1736; Admiral Sir Hugh Palliser, 1786, *Greenwich Hospital*; Stephen Storace, musical composer, 1796, *London*; John Duke of Roxburghe, bibliophilist, 1804; Sir Joseph Banks, naturalist, forty-two years P.R.S., 1820, *Spring-grove, Middlesex*; Thomas William Daniell, R.A., painter of Oriental scenery, 1840.

JOHN DUKE OF ROXBURGHE.

John Duke of Roxburghe, remarkable for the magnificent collection of books which wealth and taste enabled him to form, and to whom a vena-

tive reference is made in the name of the Roxburghe Club, died at the age of sixty-four. His Grace's library in St James's Square comprised upwards of ten thousand distinct articles, the richest department being early English literature. It cost its noble collector forty years, but probably a moderate sum of money, in comparison with what was realized by it when, after his death, it was brought to the hammer. On that occasion, a single book—Boccaccio's *Decamerone*, printed at Venice in 1471—was sold at £2,260, the highest price known to have ever been given for a book. Dr Dibdin's account of the sale, or as he chooses to call it, *the fight*, which took place in May 1812, is in an exaggerative style, and extremely amusing.

'It would seem,' says the reverend bibliomaniac, 'as if the year of our Lord 1811 was destined, in the annals of the book auctions, to be calm and quiescent, as a prelude and contrast to the tremendous explosion or contest which, in the succeeding year, was to rend asunder the bibliomaniacal elements. It is well known that Mr George Nichol had long prepared the catalogue of that extraordinary collection; and a sort of avant-courier or picquet guard preceded the march of the whole army, in the shape of a *preface*, privately circulated among the friends of the author. The publication of a certain work, cycloped the *Bibliomania*, had also probably stirred up the metal and hardened the sinews of the contending book-knights. At length the hour of battle arrived. . . . For *two-and-forty* successive days—with the exception only of Sundays—was the voice and hammer of Mr Evans heard, with equal efficacy, in the dining-room of the late duke, which had been appropriated to the vendition of the books; and within that same space (some thirty-five feet by twenty) were such deeds of valour performed, and such feats of book-heroism achieved, as had never been previously beheld, and of which the like will probably never be seen again. The shouts of the victors and the groans of the vanquished stunned and appalled you as you entered. The throng and press, both of idle spectators and determined bidders, was unprecedented. A sprinkling of Caxtons and De Wordes marked the first day; and these were obtained at high, but, comparatively with the subsequent sums given, moderate prices. *Theology, jurisprudence, philosophy, and philology*, chiefly marked the earlier days of this tremendous contest; and occasionally, during these days, there was much stirring up of courage, and many hard and heavy blows were interchanged; and the combatants may be said to have completely wallowed themselves in the conflict! At length came *poetry*, Latin, Italian, and French; a steady fight yet continued to be fought: victory seemed to hang in doubtful scales—sometimes on the one, sometimes on the other side of Mr Evans—who preserved throughout (as it was his bounden duty to preserve) a uniform, impartial, and steady course; and who may be said, on that occasion, if not to have "rode the whirlwind," at least to have "directed the storm." At length came ENGLISH POETRY!! and with that came the tug and trial of war: Greek met Greek; in other words,

grandee was opposed to grandee; and the indomitable Atticus was compelled to retire, stunned by the repeated blows upon his helmet. The lance dropped from his hand, and a swimming darkness occasionally skimmed his view; for on that day, the *Waterloo* among book-battles, many a knight came far and wide from his retirement, and many an unfledged combatant left his father's castle to partake of the glory of such a contest. Among these knights from a "far countree" no one shot his arrows with a more deadly effect than Astiachus! But it was reserved for Romulus to reap the greatest victories in that poetic contest! He fought with a choice body-guard: and the combatants seemed amazed at the perseverance and energy with which that body-guard dealt their death-blows around them!

'*Dramatic Poetry* followed; what might be styled rare and early pieces connected with our ancient poetry; but the combat now took a more tranquil turn: as after "a smart brush" for an *early Shakspeare* or two, Atticus and Coriolanus, with a few well-known dramatic aspirants, obtained almost unmolested possession of the field.

'At this period, to keep up our important metaphor, the great *Roxburghe day* of battle had been somewhere half gone through, or decided. There was no disposition, however, on either side to relax from former efforts; when (prepare for something terrific!) the *Romances* made their appearance; and just at this crisis it was that more blood was spilt, and more ferocity exhibited, than had ever been previously witnessed.'

At length came the *Valdarfer Boccaccio*, of which it may be remarked that it had been acquired by the Duke's father for a hundred guineas. It was supposed to be the only faultless copy of the edition in existence.

'I have a perfect recollection,' says Dibdin, 'of this notorious volume, while in the library of the late Duke. It had a faded yellow morocco binding, and was a sound rather than a fine copy. The expectations formed of the probable price for which it would be sold were excessive; yet not so excessive as the price itself turned out to be. The marked champions were pretty well known beforehand to be the Earl Spencer, the Marquis of Blandford (now Duke of Marlborough), and the Duke of Devonshire. Such a rencontre, such a "shock of fight," naturally begot uncommon curiosity. My friends, Sir Egerton Bridges, Mr Lang, and Mr G. H. Freeling, did me the kindness to breakfast with me on the morning of the sale—and upon the conclusion of the repast, Sir Egerton's carriage conveyed us from Kensington to St James's Square.

—The morning lowered,
And heavily with clouds came on the day—
Big with the fate of . . . and of

In fact the rain fell in torrents, as we lighted from the carriage and rushed with a sort of impetuosity to gain seats to view the contest. The room was crowded to excess; and a sudden darkness which came across gave rather an additional interest to the scene. At length the

moment of sale arrived. Evans prefaced the putting up of the article by an appropriate oration, in which he expatiated upon its excessive rarity, and concluded by informing the company of the regret and even "anguish of heart" expressed by Mr Van Praet [librarian to the Emperor Napoleon] that such a treasure was not to be found in the imperial collection at Paris. Silence followed the address of Mr Evans. On his right hand, leaning against the wall, stood Earl Spencer: a little lower down, and standing at right angles with his lordship, appeared the Marquis of Blandford. Lord Althorp stood a little backward to the right of his father, Earl Spencer. Such was "the ground taken up" by the adverse hosts. The honour of firing the first shot was due to a gentleman of Shropshire, unused to this species of warfare, and who seemed to recoil from the reverberation of the report himself had made!—"One hundred guineas," he exclaimed. Again a pause ensued; but anon the biddings rose rapidly to 500 guineas. Hitherto, however, it was evident that the firing was but masked and desultory. At length all random shots ceased; and the champions before named stood gallantly up to each other, resolving not to flinch from a trial of their respective strengths. "A thousand guineas" were bid by Earl Spencer—to which the marquis added "ten." You might have heard a pin drop. All eyes were turned—all breathing well-nigh stopped—every sword was put home within its scabbard—and not a piece of steel was seen to move or to glitter, except that which each of these champions brandished in his valorous hand. See, see!—they parry, they lunge, they bet: yet their strength is undiminished, and no thought of yielding is entertained by either. *Two thousand pounds* are offered by the marquis. Then it was that Earl Spencer, as a prudent general, began to think of a useless effusion of blood and expenditure of ammunition—seeing that his adversary was as resolute and "fresh" as at the onset. For a quarter of a minute he paused: when my Lord Althorp advanced one step forward, as if to supply his father with another spear for the purpose of renewing the contest. His countenance was marked by a fixed determination to gain the prize—if prudence, in its most commanding form, and with a frown of unusual intensity of expression, had not made him desist. The father and son for a few seconds converse apart; and the biddings are resumed. "*Two thousand two hundred and fifty pounds*," said Lord Spencer. The spectators were now absolutely electrified. The marquis quietly adds his usual "ten," . . . and there is an end of the contest. Mr Evans, ere his hammer fell, made a due pause—and indeed, as if by something preternatural, the ebony instrument itself seemed to be charmed or suspended "in the mid air." However, at length down dropped the hammer. . . . The spectators,' continues Mr Dibdin in his text, 'stood aghast! and the sound of Mr Evans's prostrate sceptre of dominion reached, and resounded from, the utmost shores of Italy. The echo of that fallen hammer was heard in the libraries of Rome, of Milan, and St Mark. Boccaccio himself started from his slumber of some five hundred years; and Mr

Van Praet rushed, but rushed in vain, amidst the royal book-treasures at Paris, to see if a copy of the said *Valdarfer Boccaccio* could there be found! The price electrified the bystanders, and astounded the public! The marquis's triumph was marked by a plaudit of hands, and presently after he offered his hand to Lord Spencer, saying, "We are good friends still!" His lordship replied, "Perfectly, indeed I am obliged to you." "So am I to you," said the marquis, "so the obligation is mutual." He declared that it was his intention to have gone as far as £5,000. The noble marquis had previously possessed a copy of the same edition, wanting five leaves; "for which five leaves," Lord S. remarked, "he might be said to have given £2,600."

'What boots it to recount minutely the various achievements which marked the conclusion of the *Roxburghe contest*, or to describe, in the manner of Sterne, the melancholy devastations which followed that deathless day? The battle languished towards its termination (rather, we suspect, from a failure of ammunition than of valour or spirit on the part of the combatants); but notwithstanding, there was oftentimes a disposition manifested to resume the glories of the earlier part of the day, and to show that the spirit of bibliomania was not made of poor and perishable stuff. Illustrious be the names of the book-heroes, who both conquered and fell during the tremendous conflict just described! And let it be said, that John Duke of Roxburghe both deserved well of his country and the book-cause.'

Dibdin had afterwards occasion (*Reminiscences of a Literary Life*) to make the following addition to the history of this precious volume: 'Of all EXTRAORDINARY RESULTS, what could exceed that of the Boccaccio of 1471, coming eventually into the possession of the former nobleman (Earl Spencer), at a price less than ONE-HALF of that for which he had originally contended with the latter, who had become its first purchaser at the above sale? Such, however, is the FACT. At the sale of the Marquis of Blandford's library in 1819, this volume was purchased by the house of Longman and Co. for £918, it having cost the Marquis £2,260.' It came from them to Lord Spencer at that price, and is now in the beautiful library at Althorpe, Northamptonshire.

PERSONAL DEFECTS OVERCOME.

March 19, 1638, John Rous enters in his diary: 'Some years since I saw in Holborn, London, near the bridge, an Italian, who with his mouth did lay certain sheets of paper together, one upon another lengthwise, between the right hand and the left; and then he took a needle and pricked it through the one end, and so then the other, so that the paper lay sure. Then he took a short-text pen, and dipped it in a standish or ink-horn of lead, and therewith wrote *Laus Deo semper*, in a very fair text hand (not written with his hand, but his mouth); then with another pen he flourished daintily about these letters in divers forms. He did with his mouth also take up a needle and thread, pricking the needle right down, out of which he pulled the thread, and took another by (fitter), and put it into the needle.

Then therewith he took three stitches in a cloth with a linen wheel (prepared with a turner's device for the foot). He did spin with his mouth. He wrote fair with his left foot. He used a pencil and painted with his mouth. He took a pretty piece or gun with his toes, and poured in a paper of powder, pulled out the scouring stick very nimbly, rammed in the powder, put up the stick, pulled up the cock with his toes, then another short piece charged (that had a Swedish firelock) being put in his mouth by another man, he held it forth and discharged it, and forthwith, with his toes, he discharged the other. He gathered up four or five small dice with his foot, and threw them out fealty. His hands were both shrimped and lame.*

MURDER OF MURDOCH GRANT.

The wild and sequestered district of Assynt, in Sutherlandshire, was, in the spring of 1830, the scene of a murder, remarkable on account of the allegation of one of the witnesses at the subsequent trial, that he had been prompted to a knowledge of some of the circumstances in a dream.

Murdoch Grant, an itinerant pedler, had attended a rustic wedding and merry-making at the hamlet of Assynt on the 19th of March in the above year, and for some time after he was not heard of. When four weeks had elapsed, a farm servant passing a lonely mountain lake, called Loch-tor-na-eigin, observed a dead body in the water, and, on this being dragged ashore, the features of the missing pedler were recognised. From the marks of violence about the head, and the fact of the pockets being empty and turned inside out, no doubt was entertained that the unfortunate man had met his death by foul means. But for some time all the efforts of the authorities to discover the perpetrator of the deed proved vain. The sheriff, Mr Lumsden, was much assisted in his investigations by a young man named Hugh Macleod, who had recently attempted to set up a school, but was now living idly with his parents.

One day, Mr Lumsden calling at the post-office of the district, it chanced to be mentioned by the postmaster, that, soon after the murder, he had changed a ten-pound note for a man whom he did not expect to find so rich, namely Hugh Macleod. Mr Lumsden afterwards asked Macleod how he came to have so large a note, and finding the latter deny the fact, his suspicions were so much excited that he deemed it justifiable to have the young man arrested. On his house being searched, none of the pedler's property was found in it, and, after a while, there seemed so little probability in the suspicion, that the young man was on the point of being liberated. At that juncture, however, a remarkable event took place.

A tailor named Kenneth Fraser came voluntarily forward with an avowal that he had had a dream in which some particulars of the murder were revealed. In his sleep the image of the Macleods' cottage was presented to him, and a voice said to him in Gaelic, 'The merchant's pack is lying in a cairn of stones, in a hole near

their house.' The authorities went with him to the house in question, and there, certainly, under a pile of stones, lay some articles which had belonged to Grant. When accident afterwards discovered that Macleod was in possession of a pair of stockings which had belonged to the unfortunate pedler, there was no longer any hesitation felt in bringing him before a Court of Justice. He was tried by Lord Moncreiff, at the Circuit Court in Inverness, September 27th, when Kenneth Fraser gave the evidence regarding his dream with the greatest firmness and consistency. Macleod was found guilty, condemned, and executed, ultimately confessing that he had been the murderer of the pedler.*

It has not been stated to what extent Fraser's evidence weighed with the jury in the making up of their verdict. In so sceptical an age as ours, one would suppose that his tale of the dream would tend to invalidate the force of his evidence; but we must remember that the trial took place at Inverness. The supposition indulged in by ordinary people was, that Fraser, in the course of his carousings with Macleod, had got a glimpse of the terrible secret, and only affected to put it in the form of a dream, though how he should have thought such a falsehood advantageous when so many were sure to treat it with derision, is difficult to see. The case being so peculiar, we deem it worth while to reprint the report of Fraser's depositions from the *Inverness Courier* (Sept. 28, 1830).

Kenneth Fraser, "the dreamer," was in the employ of John Macleod, tailor in Clachtoll, in the spring of 1830. Had some drink with the prisoner on the 5th April, and saw him have £1 11s. 0d. in money, and a red pocket-book; prisoner said he got the money from Lochbroom, where he was a schoolmaster, but told witness to say nothing about it. They went about drinking together for a day or two, prisoner paying all. Witness was at the Loch searching for the pack this year. It was in April when a messenger came for him to search for it. It had been said that witness had seen in a dream where the pack was lying. He said so himself at Hugh Graham's in Lynnmore, and it was true. "I was at home when I had the dream in the month of February.† It was said to me in my sleep, by a voice like a man's, that the pack was lying in such a place. I got a sight of the place just as if I had been awake; I never saw the place before. The voice said in Gaelic, 'The pack of the merchant is lying in a cairn of stones in a hole near their house.' The voice did not name the Macleods, but he got a sight of the ground fronting the south with the sun shining on it, and a burn running beneath Macleods' house. I took the officer to the place I had got a sight of. It was on the south-west side of Loch-torna-eigin. We found nothing there. We went to search on the south side of the burn. I had not seen this place in my dream. It was not far

* Newspapers of the day. *Fraser's Magazine*, December 1856. For a striking account of the conduct of Macleod under sentence, see *Quarterly Review*, September 1851.

† There is obviously an anachronism here. February is, probably, a mistake for April.

* Diary of John Rous (Camden Society), p. 84.

from the place seen in my dream that the things were found. There were five silk handkerchiefs lying in a hole." The witness, having recounted this marvellous occurrence, said he saw the prisoner in about a fortnight after the 6th April, at church. Did not go with prisoner, who went home. Never heard Macleod's voice after that time. Witness was at Dornoch when Macleod was in jail, but no message was sent to him from the prisoner. Witness saw Murdoch Grant at the wedding of Betty Fraser. Never was told the articles were put in the hole, and knew nothing of them but from the dream.'

A judicial case resembling the above happened in London in the reign of William III. One Stockden, a victualler in Grub-street, was murdered on the 23d of December, 1695, by some person or persons unknown. Justice appeared to be baffled in its attempts to discover the guilty, when a Mrs Greenwood came voluntarily forward with the declaration that Stockden had appeared to her in a dream, and shewn her a house in Thames-street, where he alleged one of the murderers lived. Afterwards he appeared a second time, and shewed her the likeness of one Maynard, as that of the guilty person in question. Maynard was consequently put in Newgate prison, where he confessed the fact, and impeached three accomplices. It is stated that in a third dream Stockden displayed to Mrs Greenwood the portrait of one of these wretched men, and that she, from her recollection of the likeness, identified him in prison. Three of the criminals suffered on the scaffold. A sober account of this case was published by the Rev. William Smithies, curate of St Giles, Cripplegate, the parish in which the murdered man had lived.

Many will have a recollection of the case of Corder, who was tried at Bury St Edmunds, in August 1828, for the murder of Maria Marten, at Polsted, in Suffolk, about sixteen months before. Corder, after murdering his victim, a young woman whom he had seduced, concealed her body in a solitary building called the Red Barn. The stepmother of the deceased, a witness on the trial, gave testimony that she had received in a dream that knowledge of the situation of the body which led to the detection of the murder.

MARCH 20.

St Cuthbert, Bishop of Lindisfarne, 687. St Wulfran, Archbishop of Sens, and apostolic missionary in Friesland, 720.

ST CUTHBERT.

In the seventh century, when the northern part of Britain was a rude woody country occupied by a few tribes of half-savage inhabitants, and Christianity was planted in only a few establishments of holy anchorets, a high promontory, round which swept the waters of the Tweed, was the seat of a small monastery, bearing the descriptive name of *Muilros*.* A shepherd boy of the neighbouring

* The name and establishment were afterwards shifted a few miles up the Tweed, leaving 'Old Melrose' in decay. Only the faintest traces of it now exist.

vale of the Leader had seen this primitive abode of religious zeal and self-denial, and he became impelled by various causes to attach himself to it. Soon distinguished by his ardent, but mild piety, and zeal for the conversion of the heathen, he in time rose to be superior or prior of Muilros; and was afterwards transferred to be prior of a similar establishment on Lindisfarne, an island on the Northumbrian coast. The holy Cuthbert excelled all his brethren in devotion; he gave himself so truly to the spirit of prayer and heavenly contemplation, that he appeared to others more like an angel than a man. To attain to still greater heights in devotion, he raised a solitary cell for his own habitation in the smaller island of Farne, where at length he died on the 20th of March 687.

His brother monks, raising the body of Cuthbert eleven years afterwards, that it might be placed in a conspicuous situation, found it uncorrupted and perfect; which they accepted as a miraculous proof of his saintly character. It was put into a fresh coffin, and placed on the ground, where very soon it proved the means of working miraculous cures. A hundred and seventy-four years afterwards, on the Danes invading Northumberland, the monks carried away the body of Cuthbert, and for many years wandered with it from place to place throughout Northumbria and southern Scotland, everywhere willingly supported by the devout; until at length, early in the eleventh century, it was settled at the spot where afterwards, in consequence, arose the beautiful cathedral of Durham. There, for five centuries, the shrine over the incorrupt body of Cuthbert was enriched by the offerings of the faithful: it became a blaze of gold and jewellery, dazzling to look upon. The body was inspected in 1104, and found still fresh. In 1540, when commissioners came to reduce Durham to a conformity with the new ecclesiastical system, the body of Cuthbert was again inspected, and found fresh; after which it was buried, and so remained for nearly three centuries more. In May 1827, eleven hundred and thirty-nine years after the death of the holy man on Farne island, the coffin was exhumed, and the body once more and perhaps finally examined, but this time more rigorously than before, for it was found a mere skeleton swaddled up so as to appear entire, with plaster balls in the eye-sockets to plump out that part of the visage. It thus appeared that a deception had been practised; but we are not necessarily to suppose that more than one or two persons were concerned in the trick. Most probably, at the various inspections, the examiners were so awed as only to look at the exterior of the swaddlings, the appearance of which would satisfy them that the body was still perfect within. The case is, however, a very curious one, as exhibiting a human being more important dead than alive, and as having what might be called a posthumous biography infinitely exceeding in interest that of his actual life.

Palm Sunday.

The brief popularity which Jesus experienced on his last entry into Jerusalem, when the people

'took branches of palm trees, and went forth to meet Him, crying Hosanna, &c.,' has been commemorated from an early period in the history of the Church on the Sunday preceding Easter, which day was consequently called PALM SUNDAY. Throughout the greater part of Europe, in defect of the palm tree, branches of some other tree, as box, yew, or willow, were blessed by the priests after mass, and distributed among the people, who forthwith carried them in a joyous procession, in memory of the Saviour's triumphant entry into the holy city; after which they were usually burnt, and the ashes laid aside, to be sprinkled on the heads of the congregation on the ensuing Ash Wednesday, with the priest's blessing.

Before the change of religion, the Palm Sunday customs of England were of the usual elaborate character. The flowers and branches designed to be used by the clergy were laid upon the high altar; those to be used by the laity upon the south step of the altar. The priest,

the cross] sanctify this creature of flowers and branches, and slips of palms, or boughs of trees, which we offer,' &c. The flowers and branches were then fumed with frankincense from censers, after which there were prayers and sprinklings with holy water. The flowers and branches being then distributed, the procession commenced, in which the most conspicuous figures were two priests bearing a crucifix. When the procession had moved through the town, it returned to church, where mass was performed, the communion taken by the priests, and the branches and flowers offered at the altar.

In the extreme desire manifested under the ancient religion to realize all the particulars of Christ's passion, it was customary in some places to introduce into the procession a wooden figure of an ass, mounted on wheels, with a wooden human figure riding upon it, to represent the Saviour. Previous to starting, a priest declared before the people who was here represented, and what he had done for them; also, how he

had come into Jerusalem thus mounted, and how the people had strewn the ground as he went with palm branches. Then it set out, and the multitude threw their willow branches before it as it passed, till it was sometimes a difficulty for it to move; two priests singing psalms before it, and all the people shouting in great excitement. Not less eager were the strewers of the willow branches to gather them up again after the ass had passed over them, for these twigs were deemed an infallible protection against storms and lightning during the ensuing year.

Another custom of the day was to cast cakes from the steeple of the parish church, the boys scrambling for them below, to the great amusement of the bystanders. Later, an angel appears to have been introduced as a figure in the procession: in the accounts of St Andrew Hubbard's parish in London, under 1520, there is an item of eightpence for the hire of an angel to serve on this occasion. Angels, however, could fall in more ways than one, for, in 1537, the hire was only fourpence. Crosses of palm were made and blessed by the priests, and sold to the people as safeguards against disease. In Cornwall, the peasantry carried these crosses to 'our lady of Nantswell,' where, after a gift to the priest, they were allowed to throw

the crosses into the well, when, if they floated, it was argued that the thrower would outlive the year; if they sunk, that he would not. It was a saying that he who had not a palm in his hand on Palm Sunday, would have his hand cut off.

After the Reformation, 1536, Henry VIII. declared the carrying of palms on this day to be one of those ceremonies not to be contemned or

PROCESSION OF THE ASS.

arrayed in a red cope, proceeded to consecrate them by a prayer, beginning, 'I conjure thee, thou creature of flowers and branches, in the name of God the Father,' &c. This was to displace the devil or his influences, if he or they should chance to be lurking in or about the branches. He then prayed—'We humbly beseech thee that thy truth may [here a sign of

dropped. The custom was kept up by the clergy till the reign of Edward VI., when it was left to the voluntary observance of the people. Fuller, who wrote in the ensuing age, speaks of it respectfully, as 'in memory of the receiving of Christ into Hierusalem a little before his death, and that we may have the same desire to receive him into our hearts.' It has continued down to a recent period, if not to the present day, to be customary in many parts of England to go *apalming* on the Saturday before Palm Sunday; that is, young persons go to the woods for slips of willow, which seems to be the tree chiefly employed in England as a substitute for the palm, on which account it often receives the latter name. They return with slips in their hats or button-holes, or a sprig in their mouths, bearing the branches in their hands. Not many years ago, one stall-woman in Covent-garden market supplied the article to a few customers, many of whom, perhaps, scarcely knew what it meant. Slips of the willow, with its velvety buds, are still stuck up on this day in some rural parish churches in England.

The ceremonies of Easter at Rome—of what is there called *Holy Week*—commence on Palm Sunday.* To witness these rites, there are seldom fewer than ten thousand foreigners assembled in the city, a large proportion of them English and American, and of course Protestant. During Holy Week, the shops are kept open, and concerts and other amusements are given; but theatrical performances are forbidden. The chief external differences are in the churches, where altars, crucifixes, and pictures are generally put in mourning.

About nine on Palm Sunday morning, St Peter's having received a great crowd of people, all in their best attire, one of the papal regiments enters, and forms a clear passage up the central aisle. Shortly afterwards the 'noble guard,' as it is called, of the Pope—a superior body of men—takes its place, and the corps diplomatique and distinguished ecclesiastics arrive, all taking their respective seats in rows in the space behind the high altar, which is draped and fitted up with carpets for the occasion. The Pope's chief sacristan now brings in an armful of so-called palms, and places them on the altar. These are stalks about three feet long, resembling a walking-cane dressed up in scraps of yellow straw; they are sticks with bleached palm leaves tied on them in a tasteful but quite artificial way. The preparation of these substitutes for the palm is a matter of heritage, with which a story is connected. When Sextus V. (1585—90) undertook to erect in the open space in front of St Peter's, the tall Egyptian obelisk which formerly adorned Nero's circus, he forbade any one to speak on pain of death, lest the attention of the workmen should be diverted from their arduous task. A naval officer of St Remo, who happened to be present, foreseeing that the ropes would take fire, cried out to 'apply water.' He was immediately arrested, and conducted before the pontiff. As the cry had saved the ropes, Sextus could not enforce the decree, and to shew his munificence he offered the transgressor

* The Holy Week of 1862 is described in this work by a gentleman who witnessed the ceremonies.

his choice of a reward. Those who have observed the great abundance of palms which grow in the neighbourhood of St Remo, between Nice and Genoa, will not be surprised to hear that the wish of the officer was to enjoy the privilege of supplying the pontifical ceremonies with palms. The Pope granted him the exclusive right, and it is still enjoyed by one of his family.

At 9.30 a burst of music is heard from the choir, the soldiers present arms, all are on the tip-toe of expectation, and a procession enters from a side chapel near the doorway. All eyes are turned in this direction, and the Pope is seen borne up the centre of the magnificent basilica in his *sedia gestatoria*. This chair of state is fixed on two long poles covered with red velvet, and the bearers are twelve officials, six before and six behind. They bear the ends of the poles on their shoulders, and walk so steadily as not to cause any uneasy motion. On this occasion, and always keeping in mind that the church is in mourning, the Pope is plainly attired, and his mitre is white and without ornament. There are also wanting the *flabelli*, or large fans of feathers, which are carried on Easter Sunday. Thus slowly advancing, and by the movement of his hand giving his benediction to the bowing multitude, the Pope is carried to the front of his throne at the further end of the church. Descending from his *sedia gestatoria*, his Holiness, after some intermediate ceremonies and singing, proceeds to bless the palms, which are brought to him from the altar. This blessing is effected by his reading certain prayers, and incensing the palms three times. An embroidered apron is now placed over the Pope's knees, and the cardinals in turn receive a palm from him, kissing the palm, his right hand, and knee. The bishops kiss the palm which they receive and his right knee; and the mitred abbots and others kiss the palm and his foot. Palms are now more freely distributed by sacristans, till at length they reach those among the lay nobility who desire to have one. The ceremony concludes by reading additional prayers, and more particularly by chanting and singing. The *Benedictus qui venit* is very finely executed. In conclusion, low mass is performed by one of the bishops present, and the Pope, getting into his *sedia gestatoria*, is carried with the same gravity back to the chapel whence he issued, and which communicates with his residence in the Vatican. The entire ceremonial lasts about three hours, but many, to see it, endure the fatigue of standing five to six hours. Among the strangers present, ladies alone are favoured with seats, but they must be in dark dresses, and with black veils on their heads instead of bonnets.

There exists at Caistor, in Lincolnshire, a Palm Sunday custom of a very quaint nature, and which could not have been kept up in modern times if it had not been connected with a tenure of property. A person representing the proprietor of the estate of Broughton comes into the porch of Caistor Church while the first lesson is reading, and three times cracks a gad-whip, which he then folds neatly up. Retiring for the moment to a seat in the church, he must come

during the second lesson to the minister, with the whip held upright, and at its upper end a purse with thirty pieces of silver contained in it; then he must kneel before the clergyman, wave the whip thrice round his head, and so remain till the end of the lesson, after which he retires.

The precise origin of this custom has not been ascertained. We can see in the purse and its thirty pieces of silver a reference to the misdeeds of Judas Iscariot; but why the use of a whip? Of this the only explanation which conjecture has hitherto been able to supply, refers us back to the ancient custom of the Procession of the Ass, before described. Of that procession it is supposed that the gad-whip of Caistor is a sole-surviving relic. The term *gad-whip* has been a puzzle to English antiquaries; but a gad [goad] for driving horses, was in use in Scotland so lately as the days of Burns, who alludes to it. A portraiture of the gad-whip employed on a recent occasion, with the purse at its upper end, is here presented.*

THE GAD-WHIP.

THE DEATH OF HENRY THE FOURTH. AMBIGUOUS PROPHECIES.

Robert Fabian, alderman and sheriff of London, a man of learning, a poet, and historian, in his *Concordance of Stories* (a history commencing with the fabulous Brute, and ending in the reign of Henry VII.), was the first to relate the since often-quoted account of the circumstances attending the death of the fourth Henry.

'In this year' [1412], says the worthy citizen, 'and twentieth day of the month of November, was a great council holden at the Whitefriars of London, by the which it was, among other things, concluded, that for the King's great journey he intended to take in visiting the Holy Sepulchre of our Lord, certain galleys of war should be made, and other purveyance concerning the same journey.'

* *Archæological Journal*, 1849, p. 245.

'Whereupon, all hasty and possible speed was made, but after the feast of Christmas, while he was making his prayers at St Edward's shrine, to take there his leave, and so to speed him on his journey, he became so sick, that such as were about him feared that he would have died right there; wherefore they, for his comfort, bare him into the Abbot's place, and lodged him in a chamber; and there, upon a pallet, laid him before the fire, where he lay in great agony a certain of time.

'At length, when he was come to himself, not knowing where he was, freyned [inquired] of such as then were about him, what place that was; the which shewed to him, that it belonged unto the Abbot of Westminster; and for he felt himself so sick, he commanded to ask if that chamber had any special name. Whereunto it was answered, that it was named Jerusalem. Then said the king—"Loving be to the Father of Heaven, for now I know I shall die in this chamber, according to the prophecy of me before said that I should die in Jerusalem;" and so after, he made himself ready, and died shortly after, upon the day of St Cuthbert, or the twentieth day of March 1413.'

This story has been frequently told with variations of places and persons; among the rest, of Gerbert, Pope Sylvester II., who died in 1003. Gerbert was a native of France, but, being imbued with a strong thirst for knowledge, he pursued his studies at Seville, then the great seat of learning among the Moors of Spain. Becoming an eminent mathematician and astronomer, he introduced the use of the Arabic numerals to the Christian nations of Europe; and, in consequence, acquired the name and fame of a most potent necromancer. So, as the tale is told, Gerbert, being very anxious to inquire into the future, but at the same time determined not to be cheated, by what Macbeth terms the juggling fiends, long considered how he could effect his purpose.

At last he hit upon a plan, which he put into execution by making, under certain favourable planetary conjunctions, a brazen head, and endowing it with speech. But still dreading diabolical deception, he gave the head power to utter only two words—plain 'yes' and 'no.' Now, there were two all-important questions, to which Gerbert anxiously desired responses. The first, prompted by ambition, regarded his advancement to the papal chair; the second referred to the length of his life,—for Gerbert, in his pursuit of magical knowledge, had entered into certain engagements with a certain party who shall be nameless; which rendered it very desirable that his life should reach to the longest possible span, the reversion, so to speak, being a very uncomfortable prospect. Accordingly Gerbert asked the head, 'Shall I become Pope?' The head replied, 'Yes!' The next question was, 'Shall I die before I chant mass in Jerusalem?' The answer was, 'No!' Of course, Gerbert had previously determined, that if the answer should be in the negative, he would take good care never to go to Jerusalem. But the certain party, previously hinted at, is not so easily cheated. Gerbert became Pope Sylvester,

and one day while chanting mass in a church at Rome, found himself suddenly very ill. On making inquiry, he learned that the church he was then in was named Jerusalem. At once, knowing his fate, he made preparations for his approaching end, which took place in a very short time.

Malispini relates in his Florentine history that the Emperor Frederick II. had been warned, by a soothsayer, that he would die a violent death in Firenze (Florence). So Frederick avoided Firenze, and, that there might be no mistake about the matter, he shunned the town of Faenza also. But he thought there was no danger in visiting Firenzuolo, in the Appenines. There he was treacherously murdered in 1250, by his illegitimate son Manfred. Thus, says Malispini, he was unable to prevent the fulfilment of the prophecy.

The old English chroniclers tell a somewhat similar story of an Earl of Pembroke, who, being informed that he would be slain at Warwick, solicited and obtained the governorship of Berwick-upon-Tweed; to the end that he might not have an opportunity of even approaching the fatal district of Warwickshire. But a short time afterwards, the Earl being killed in repelling an invasion of the Scots, it was discovered that Berwick, as it was then pronounced, was the place meant by the quibbling prophet.

The period of the death of Henry IV. was one of great political excitement, and consequently highly favourable to the propagation of prophecies of all kinds. The deposition of Richard and usurpation of Henry were said to have been foretold, many centuries previous, by the enchanter Merlin; and both parties, during the desolating civil wars that ensued, invented prophecies whenever it suited their purpose. Two prophecies of the ambiguous kind, 'equivocations of the fiend that lies like truth,' are recorded by the historians of the wars of the roses, and noticed by Shakspeare.

William de la Pole, first Duke of Suffolk, had been warned by a wizard, to beware of water and avoid the tower. So when his fall came, and he was ordered to leave England in three days, he made all haste from London, on his way to France, naturally supposing that the Tower of London, to which traitors were conveyed by water, was the place of danger indicated. On his passage across the Channel, however, he was captured by a ship named Nicholas of the Tower, commanded by a man surnamed Walter. Suffolk, asking this captain to be held to ransom, says—

'Look on my George, I am a gentleman;
Rate me at what thou wilt, thou shalt be paid.'
Captain. 'And so am I; my name is Walter Whitmore—
How now? why start'st thou? What, doth death affright?'
Suffolk. 'Thy name affrights me, in whose sound is death;
A cunning man did calculate my birth,
And told me that by water I should die;
Yet let not this make thee be bloody-minded,
Thy name is Gualtier being rightly sounded.'

Of course, the prophecy was fulfilled by Whitmore beholding the Duke.

The other instance refers to Edmund Beaufort, Duke of Somerset, who is said to have consulted Margery Jourdemayne, the celebrated witch of Eye, with respect to his conduct and fate during the impending conflicts. She told him that he would be defeated and slain at a castle; but as long as he arrayed his forces and fought in the open field, he would be victorious and safe from harm. Shakspeare represents her familiar spirit saying—

'Let him shun castles,
Safer shall he be on the sandy plain
Than where castles mounted stand.'

After the first battle of St Albans, when the trembling monks crept from their cells to succour the wounded and inter the slain, they found the dead body of Somerset lying at the threshold of a mean alehouse, the sign of which was a castle. And thus,

'Underneath an alehouse' paltry sign,
The Castle, in St Albans, Somerset
Hath made the wizard famous in his death.'

Cardinal Wolsey, it is said, had been warned to beware of Kingston. And supposing that the town of Kingston was indicated by the person who gave the warning, the cardinal took care never to pass through that town; preferring to go many miles about, though it lay in the direct road between his palaces of Esher and Hampton Court. But after his fall, when arrested by Sir William Kingston, and taken to the Abbey of Leicester, he said, 'Father Abbot, I am come to leave my bones among you,' for he knew that his end was at hand.

SIR ISAAC NEWTON.

It was an equally just and generous thing of Pope to say of Newton, that his life and manners would make as great a discovery of virtue and goodness and rectitude of heart, as his works have done of penetration and the utmost stretch of human knowledge. Assuredly, Sir Isaac was the perfection of philosophic simplicity. His plays in childhood were mechanical experiments. His relaxations in mature life from hard thinking and investigation, were dabbings in ancient chronology and the mysteries of the Apocalypse. The passions of other men, for love, for money, for power, were in him non-existent; all his energies were devoted to pure study. Sir David Brewster, in his able *Life of Newton*, has successfully defended his character from imputations brought upon it by Flamsteed. He has also, however, printed a letter attributed to Sir Isaac—a love-letter—a love-letter written when he was sixty, proposing marriage to the widow of his friend Sir William Norris. It is quite impossible for us to believe that the author of the *Principia* ever wrote such a letter, until more decisive proof of the fact can be adduced, and scarcely even then.

The subjoined autograph of Sir Isaac is fur-

Isaac Newton

nished to us from an inedited letter. It precisely resembles one which we possess, extracted from the books of the Mint, of which Sir Isaac was master.

LORD CHIEF JUSTICE, EARL OF MANSFIELD.

Lord Campbell, in his *Lives of the Chief Justices*, has traced the career of William Murray, Earl of Mansfield, with great precision and a good deal of fresh light. He shews us how he came of a very poor Scotch peer's family, the eleventh of a brood of fourteen children, reared on oatmeal porridge in the old mansion of Scoon, near Perth, which our learned author persists in calling a *castle*, while it was nominally a palace, but in reality a plain old-fashioned house. One particular of some importance in the Chief Justice's history does not seem to have been known to his biographer—that, while the father (David, fifth Viscount Stormont) was a good-for-little man of fashion, the mother, Marjory Scott, was a woman of ability, who was supposed to have brought into the Stormont family any talent—and it is not little—which it has since exhibited, including that of the illustrious Chief Justice. She came of the Scots, (so they spelt their name) of Scotstarvit, in Fife, a race which produced an eminent patron of literature in Sir John Scot, Director of the Chaucery in the time of Charles I., and author of a bitingly clever tract, entitled *The Staggering State of Scots Statesmen*, which was devoted to the amiable purpose of shewing all the public and domestic troubles that had fallen upon official persons in Scotland from the days of Mary downward. Marjory, Viscountess of Stormont, was the great-granddaughter of Sir John, whose wife again was of a family of talent, Drummond of Hawthornden. In the history of the lineage of intellect we could scarcely find a clearer pretension to ability than what lay at the door of the youth William Murray.

It is not our business to trace, as Lord Campbell has done, the steps by which this youth rose at the English bar, attained office, prosecuted Scotch peers, his cousins, for treason against King George, became a great parliamentary orator, and the highest criminal judge in the kingdom, and, without political office, was the director of several successive cabinets.

We may remark, however, what has hitherto been comparatively slurred, that the Jacobitism of Murray's family was unquestionable. His father was fully expected to join in the insurrection of 1715, and he was thought to avoid doing so in a way not very creditable to him. An elder brother of William was in the service of 'the Pretender' abroad. When Charles Edward, in 1745, came to Perth, he lodged in the house of Lord Stormont, and one of the ladies of the family (sister to the Chief Justice) made his Royal Highness's bed with her own fair hands. After this, the remark of Lovat at his trial to the Solicitor-General, that his mother had been very kind to the Frasers as they marched through Perth, may well be accepted as a simple reference to a matter of fact.

The most important point in the life of the Lord Chief Justice, all things considered, is his

transplantation to England. His natural destiny was, as Lord Campbell remarks, to have lived the life of an idle younger brother, fishing in the Tay, and hunting deer in Atholl. How comes it that he found a footing in the south? On this subject, Murray himself must have studied to preserve an obscurity. It was given out that he had been brought to London at three years of age, and hence the remark of Johnson to Boswell, that much might be made of a Scotsman 'if caught young.' To Lord Campbell belongs the credit of ascertaining that young Murray in reality received his juvenile education at the Grammar-school of Perth, and did not move to England till the age of fourteen, by which time he had shown great capacity, being, for one thing, able to converse in Latin. The Jacobite elder brother was the means of bringing 'Willie' southward. As a Scotch member during the Harley and Bolingbroke administration, he had gained the friendship of Atterbury, then Dean of Westminster. In the Stuart service himself, and anxious to bring Willie into the same career, he recommended that he should be removed to Westminster school, and brought up under the eye of the dean; professing to believe that he was sure of a scholarship at Christchurch, and of all desirable advancement that his talent fitted him for. Willie was accordingly sent on horseback by a tedious journey to London, in the spring of 1718, and never saw his country or his parents again. In a year he had obtained a king's scholarship, and it is suspected that the interest of Atterbury was the means of his getting it.

Lord Campbell duly tells us of the elegant elocution to which Murray attained. He succeeded, it seems, in getting rid of his Scotch accent; and yet 'there were some *shibboleth* words which he could never pronounce properly to his dying day: for example, he converted *regiment* into *reg'ment*; at dinner he asked not for *bread*, but *brid*; and in calling over the bar, he did not say, 'Mr *Solicitor*,' but 'Mr *Soleester*, will you move anything?'

MARCH 21.

St Serapion (called the Sindonite), about 388. St Serapion (the scholastic), Bishop in Egypt, 4th century. St Serapion, abbot. St Benedict (or Bennet), abbot of Mount Casino, patriarch of the Western monks, 543. St Enna, abbot in Ireland, 6th century.

ST BENEDICT.

The history of St Benedict is chiefly interesting to us from the circumstance that he was in a manner the father of Western monachism, and especially of that portion of it which exercised so great and durable an influence on the social history of this part of Europe. He was born about the year 480, and was a native of Norcia, in Umbria, from whence he was sent to study at Rome, but he had imbibed a strong taste for asceticism, and when about fourteen or fifteen, he fled to the wild mountains of Subiaco, disgusted, as it is said, by the vices practised in

Rome. He took up his residence alone in a cavern which is now called the Holy Grotto, and his hiding-place was known only to a monk of a neighbouring monastery, named Romanus, who supplied him scantily with food. After three years passed in this manner, Benedict became endowed with sanctity, and his reputation began soon to spread over the country, so that he was at length elected Abbot of Vicovara, between Subiaco and Tivoli; but he disagreed with the monks, and returned to his old place of retirement. His fame drew so many monks to the desert, that he established twelve monasteries; placing in each twelve monks, and a superior. Here he received a continual accession of monks, and is said to have performed many miracles; but at length becoming an object of persecution to some of his flock, he left Subiaco, and went to Monte Cassino, a lofty mountain in the kingdom of Naples. On the brow of the mountain stood an ancient temple of Apollo, surrounded by a grove, where some of the inhabitants of this district appear to have remained still addicted to their old idolatrous worship. Benedict converted these by his preaching, and by the miracles which accompanied it, broke the idol, and overthrew the altar; and having demolished the temple and cut down the grove, built on the spot two small oratories, which were the first beginning of the celebrated abbey of Monte Cassino. When he founded this abbey in the year 529, Benedict was forty-eight years of age. While Abbot of Monte Cassino, Benedict founded several other similar establishments, and he drew up the rule for their governance, which became subsequently that of the whole Benedictine order. The great principle of this rule was absolute obedience, the other main duties being charity and voluntary poverty. The monks were to employ seven hours of the day in manual labour, and two in pious reading. They were to abstain entirely from animal food, and were allowed only a fixed quantity of food daily. They were to possess everything in common, and this article was at first enforced so strictly, that in some of the monasteries in France a monk was considered to have merited punishment when he said, '*my* cloak,' or '*my* hat,' as no individual was allowed to possess anything of his own. In course of time, however, this injunction was generally evaded, and the Benedictine monasteries became celebrated for their immense possessions, which they excused on the ground that the wealth of the monasteries belonged to the monks not individually but collectively—that they were so many pauper members of a rich foundation. Benedict ruled the abbey of Monte Cassino about fourteen years, and died on Saturday the 21st of March, it is believed in the year 543, and was buried in the church of his monastery. In England the name of this saint is usually known by its popular form of Benet or Bennet.

After his death the rule of St Benedict was adopted by nearly all the monks of the West. In England the rule of the earlier Anglo-Saxon monks was very loose, and their monasteries partook more of the character of secular than of religious establishments. In the tenth century,

St Dunstan, with the aid of some other ecclesiastics of his time, and after an obstinate struggle, forced the Benedictine order upon the Anglo-Saxons, and it was still more completely established in this island by the Normans. But the more onerous parts of the rule were no longer observed, and the monks and nuns had become celebrated for their luxurious living, and for the secular character of their lives. Frequent attempts were made to restore the order to somewhat of its religious purity, and these various reformations produced numerous branch orders, among which the most powerful and celebrated were the monks of Cluny, and the Cistercians.

Born.—Robert Bruce, King of Scotland, 1274; Humphrey Wanley, antiquary, 1672, *Coventry*; John Sebastian Bach, musical composer, 1685, *Eisenach*; J. B. J. Fourier, mathematician, 1768; Henry Kirke White, poet, 1785, *Nottingham*.

Died.—Edmond of Woodstock, Earl of Kent, beheaded, 1330; Archbishop Cranmer, burnt at *Oxford*, 1556; Peter Ernest, Count de Mansfeld, 1604, *Luxembourg*; Tomasso Campanella, Dominican metaphysician and politician, 1639, *Paris*; Archbishop Usher, 1656, *Reigate, Surrey*; Charlotte Tremouille, Countess of Derby, heroic defender of Latham House, and of the Isle of Man, 1663, *Ormskirk*; Richard Dawes, eminent Greek scholar, 1766, *Haworth*; Duc d'Enghien, shot at Vincennes, 1804; Michael Bryan, biographer of painters and engravers, 1821; Baron La Motte-Fouqué, poet and novelist, 1843; Robert Southey, LL.D., poet laureate, 1843, *Keswick*; Rev. W. Scoresby, Arctic voyager, 1857.

CRANMER.

It is startling to note in how many instances the future destiny of a great man seems at one time or other to have hung on a thread. One little chance, one event, in itself most trivial, substituted for another at some critical point, and the great man's name might have been omitted in Fame's scroll. Had Thomas Cranmer not met with Henry VIII. accidentally, we might never have heard of him; for he was not a man to push his way to distinction. He was in no way a very extraordinary man. Henry found him a fellow of his college, a widower, a private tutor, learned in divinity, and a staunch believer in the King's supremacy. Whatever may be said of Henry, he had undoubtedly a shrewd insight into character. He saw at once that Cranmer was an acquisition. He at once employed him. He sent him on an embassy to the Pope, as well as to Germany, and made him archbishop in four years, against his will. He stood by him to the last.

Cranmer must have been the most useful man of the Reformation. His cautious prudence enabled him to steer safely where bolder guides would have endangered the vessel, and to keep in harbour when others would have risked the storm. He pushed on the cause indefatigably, but never agitated. During Henry's reign he supported the King's supremacy, laboured at the English Bible, and began a revised Liturgy. Edward VI., reigning from nine years old to fifteen, afforded him a golden opportunity for cautiously, but surely, advancing the great cause. Cranmer was the chief compiler of the new Liturgies, Articles, Homilies, &c., and the chief

allayer of disputes which began to harass the unity of the Reformers. In Mary's reign the old man was duped into recantations, and burnt at Oxford.

Cranmer is by some described as a weak man, and by others elaborately defended. It is easier to detract from or extol a character, than to analyse it. As a man he was vacillating, as a Christian strong, as both prudent. A man naturally weak may be often courageous, and an upright conscience is easily confused in a weak mind. Prudence was Cranmer's chief characteristic, and prudence begets compromise, compromise vacillation. When he took contradictory oaths on his instalment, he was content with a protest: he said, 'What could I have done more?' And the key to his whole course is given in his own words: 'It pertains not to private subjects to reform things, but quietly to suffer what they cannot amend'—a difficult rule in those days as a guide to consistent conduct. No doubt it was by aid of this principle that his enemies at the last undermined his consistency.

Yet he was a most pure Christian. When he saw his duty clearly, he never turned from it. He strongly opposed Henry's Six Articles, and almost seditiously circulated his disapproval of Mary. Worldly we are sure he was not, though Dr Hook would have it so, building an imaginary charge on an obscure transaction. Ever would he plead for those condemned. He uniformly forgave his enemies, and confided in his friends with a childish simplicity. 'Do my lord of Canterbury an ill turn, and he is your friend for ever,' was the world's testimony of him. 'When he was informed of their treachery and ingratitude, he led aside Thornden and Barber into his garden, told them that some whom he trusted had disclosed his secrets and accused him of heresy, and asked how they thought such persons ought to be treated. They were loud in expressing their indignation, and declared that such traitors deserved to die. "Know ye these letters, my masters?" said the primate, and shewed them the proof of their own falsehood. The two offenders fell upon their knees to implore forgiveness; for it was evident that their lives were in his power, but all the revenge he took was to bid them ask God's forgiveness.'

'Kind, gentle, good, and weak.'

Shakespeare puts it very well:

'Look, the good man weeps!
He's honest, on mine honour. God's bless'd mother!
I swear he is true-hearted; and a soul
None better in my kingdom.'

HENRY KIRKE WHITE.

White was remarkable at the schools he attended in Nottingham for extraordinary application. Such was his early passion for reading, that, when seated in his little chair with a large book on his knee, his mother would have to say more than once, 'Henry, my love, come to dinner,' ere she could rouse him from his reverie. At the age of seven he used to steal into the kitchen to teach the servant to read and write. But so little sympathy did his father, who was a butcher, show with his tastes and predilections,

that he not only kept him from school one whole day a week to carry out meat, but actually, for a time, occupied nearly all his leisure hours besides in this ungenial task.

At the age of fourteen he was sent to work at the stocking-loom, with a view to future promotion to the hosier's warehouse. It would be impossible to imagine a more disagreeable occupation for poor Henry; and while he drudged at

HOUSE AT NOTTINGHAM IN WHICH HENRY KIRKE WHITE WAS BORN.

it most unwillingly for a twelvemonth, his thoughts were roaming along the banks of the silvery Trent, or resting in the welcome shade of Clifton Grove. At fifteen his mother succeeded in procuring his admission into a lawyer's office, where, as no premium could be paid with him, he had to serve two years before he could be articled—a form which took place in 1802. He now began to learn Latin and Greek. Such, we are told, was his assiduity, that he used to decline Greek nouns and verbs as he went to and from the office, gave up supping with the family, and ate his meal in his own little room, in order to pursue his studies more uninterruptedly,—studies which often extended far into the night, and became almost encyclopædic in their range. He commenced as author by sending contributions to the *Monthly Preceptor* and *Monthly Mirror*. From the former he received a pair of 12-inch globes as a prize for the best imaginary tour from London to Edmburgh, which he wrote one evening after tea, and read to the family at supper. He was then only sixteen. Through the latter he attracted the notice of Mr Hill and Capel Loft, who persuaded him to prepare a volume of poems, which appeared in 1803, dedicated to the Duchess of Devonshire—a lady more interested in elections than books of poetry, and who consequently took no further notice of the volume or its author. Henry's great desire now was to

enter the Church. He disliked the drudgery of an attorney's office; a deafness, too, which was gaining upon him, threatened to make him useless as a lawyer, and his mind was deeply imbued with religious feelings. He hoped that the publication of his poems might in some way or other further this object. For a time, however, he was doomed to disappointment. At length, through the influence of Mr Simeon, the author of the well-known *Skeleton Sermons*, his fondest hopes were realized. In October 1805, he went to Cambridge, where, by unexampled industry, he speedily attained distinction, was first at every examination, and was looked upon as a future Senior Wrangler. But he had long overtaxed his strength. At the end of one short year from his entering the College, exhausted nature sank beneath incessant toil and anxiety. He died October 19, 1806.

Byron, in his *English Bards and Scotch Reviewers*, has finely said of him :

'Science' self destroy'd her favourite son !

* * * * *

'Twas thine own genius gave the final blow,
And help'd to plant the wound that laid thee low :
So the struck eagle, stretch'd upon the plain,
No more through rolling clouds to soar again,
View'd his own feather on the fatal dart,
And wing'd the shaft that quiver'd in his heart :
Keen were his pangs, but keener far to feel,
He nursed the pinion which impell'd the steel,
While the same plumage that had warm'd his nest
Drank the last life-drop of his bleeding breast.'

MARCH 22.

St Paul, Bishop of Narbonne, 3d century. St Basil, of Ancyra, martyr, 362. St Lea, widow, of Rome, 384. St Deogratias, Bishop of Carthage, 457. St Catharine, of Sweden, Abbess, 1381.

Born.—Henry de Beauchamp, Earl and last Duke of Warwick, 1424, *Ilanley Castle*; Sir Anthony Vanduyck, painter, 1599, *Antwerp*; Edward Moore, dramatic writer, 1712, *Abingdon*; Rosa Bonheur, artist, 1822.

Died.—Thomas Earl of Lancaster, beheaded at *Pontefract*, 1322; Thomas Duke of Clarence, slain in *Anjou*, 1421; Anne Clifford, Countess of Pembroke, 1676, *Brougham*; Jean Baptiste Lully, father of French dramatic music, 1687, *Paris*; Jonathan Edwards, Calvinistic minister, 1758, *New Jersey*; John Canton, electrician, 1772; J. W. von Goethe, German poet and prose writer, 1832, *Weimar*; Rev. David Williams, warden of New College, 1860.

GOETHE.

When the spirit of Goethe passed away, all Europe took note of the event, and pondered on those last words, 'Let the light enter.' He was venerable with age and honours, a wise many-sided mind, and the greatest poet of Germany. 'In virtue of a genius such as modern times have only seen equalled once or twice,' says Mr Lewes, 'Goethe deserves the epithet of great; unless we believe a great genius can belong to a small mind. Nor is it in virtue of genius alone that he deserves the name. Merck said of him that what he lived was more beautiful than what he

wrote; and his life, amid all its weaknesses and all its errors, presents a picture of a certain grandeur of soul, which cannot be contemplated unmoved.'

Johann Wolfgang Goethe was born in 1749, in the busy old-fashioned town of Frankfort-on-the-Maine; a child so precocious that we find it recorded that he could write German, French, Italian, Latin, and Greek, before he was eight. His age fulfilled the promise of youth: he grew up a genuine man, remarkable for endless activity of body and mind, a sage minister, a noble friend, and a voluminous writer.

He commenced his collegiate course at Leipsic in 1765, but gave himself little to prescribed studies. Jurisprudence suited him as little at Strasburg, whither he went in 1770; yet in the following year he duly became Dr Goethe. He gave himself chiefly to literature and society. At length, in 1775, at the request of Karl August, he went to Weimar, 'where his long residence was to confer on an insignificant duchy the immortal renown of a German Athens.' He remained the Duke's counsellor, prime minister, and personal friend for more than fifty years; busying himself in acts of public utility and private benevolence, and studying and writing upon everything which came in his way.

When Napoleon and the Emperor of Russia met at Erfurt, near Weimar, in 1808, the former patronised Goethe by summoning him to a private audience. It lasted nearly an hour, and seems to have given mutual satisfaction. On Nov. 7, 1825, Goethe was honoured with a Jubilee, on the fiftieth anniversary of his residence at Weimar. His own play *Iphigenia* was performed in the Theatre, and the whole town was illuminated. An anecdote will illustrate his exalted position. 'Karl August came into his study accompanied by the King of Bavaria, who brought with him the Order of the Grand Cross as a homage. In strict etiquette a subject was not allowed to accept such an order without his sovereign granting permission; and Goethe, ever punctilious, turned to the Grand Duke, saying, "If my gracious sovereign permits;" upon which the Duke called out, "Du alter Kerl! mache doch kein dummes Zeug!" "Come, old fellow, no nonsense!" He received another noteworthy honour. A handsome seal, with a motto, "Without haste, without rest," taken from his poems, reached him from England. The accompanying letter expressed its desires "to shew reverence where reverence is due," and was signed by fifteen English admirers of the "spiritual teacher," among whom were Carlyle, Dr Carlyle, Sir Walter Scott, Lockhart, Wordsworth, Southey, and Professor Wilson.' He died in his eighty-fourth year, at least in mind still young.

His juvenile production, *The Sorrows of Werther*, seized upon the sentimental spirit of the time, and rendered him famous. Though a genuine and characteristic work, he outgrew its philosophy and lived to regret it. *Faust* is his great work, but can never be popular, as its wisdom does not lie on the surface. *Hermann and Dorothea* is immortal as the *Vicar of Wakefield*. His minor poems have widely influenced modern verse. He wrote an *Autobiography* and many prose works, and

was by no means insignificant as a pioneer to the noble host of modern veterans in science.

His friendship and co-operation with Schiller is one of the most lovable parts of Goethe's life. Those two great minds were essentially diverse. Yet we find them, to their eternal honour, 'brought into brotherly union only by what was highest in their natures and their aims.' When Schiller's death was concealed from him, Goethe discovered it by the shyness of his domestics. He saw Schiller must be ill, and at night was heard to weep. 'In the morning he said to a friend, "Is it not true that Schiller was very ill yesterday?"' The friend (it was a woman) sobbed. "He is dead?" said Goethe faintly. "You have said it," was the answer. "He is dead," repeated Goethe, and covered his face with his hands.' Then he wrote with truth, doubtless, 'The half of my existence is gone from me.'

There is something in Goethe's greatness not always pleasing. He feared to marry, lest he should cripple his freedom. Not that he professed such a motive, but this is the only explanation of the fact that so many loves stopped short of marriage. The names of women in his works mostly belong to real characters. Continually in his biography we are coming upon 'traces of a love-affair;' and besides obscure cases, we have Gretchen, Käthchen, Frederica, Lotte, Lili, Bettina, Frau von Stein, &c. &c. Frederica he treated badly in his youthful days, unless the reader can excuse Hamlet's conduct to Ophelia. Bettina he only petted, and seemingly did not ill-treat. Frau von Stein he was faithful to during many years, and she was a married woman. With Christine Vulpius he lived sixteen years, in defiance of public opinion; and then, in defiance again of the same public opinion, when she was fat, ugly, and intemperate, he honourably married her. Yes, and when she died, let us thoughtfully take note, he wrote thus to Zelter: 'When I tell thee, thou rough and sorely-tried son of earth, that my dear little wife has left me, thou wilt know what that means.'

Genius is often whimsical. Poet Goethe wasted as much precious time in trying to be an artist, as artist Turner wasted in vainly labouring to express himself in verse.

SUPPRESSION OF THE ORDER OF THE KNIGHTS TEMPLARS, MARCH 22, 1312.

The origin of the celebrated order of Templars is due to the piety of nine French knights, who in 1118 had followed Godfrey de Bouillon to the Crusades, and there dedicated themselves to insure the safety of the roads against the attacks of the infidels who maltreated the pilgrims to the Holy City. Their numbers rapidly increased; men of every nation, rank, and riches joined themselves to the generous militia who gained such glory on the battle-field. The council of Troyes approved them, encouragements and recompenses were awarded to their devotion, and a rule was granted them. St Bernard thus describes them in their early days: 'They lived without anything they could call their own, not even their will: they are generally simply dressed, and covered with dust, their faces em-

browned with the burning sun, and a fixed severe expression. On the eve of a battle, they arm themselves with faith within, and steel without; these are their only decoration, and they use them with valour, in the greatest perils fearing neither the number nor the strength of the barbarians. Their whole confidence is placed in the God of armies, and fighting for His cause they seek a certain victory, or a holy and honourable death. O happy way of life, in which they can await death without fear, desire it with joy, and receive it with assurance!'

The statutes of the order had for their basis all military and Christian virtues. The formula of the oath they took on their entrance was found in the archives of the Abbey of Alcobaza, in Arragon; it is as follows:

'I swear to consecrate my words, my arms, my strength, and my life to the defence of the mysteries of the faith, and that of the unity of God. I also promise to be submissive and obedient

GRAND MASTER OF THE TEMPLARS.

to the Grand Master of the Order. Whenever it is needful, I will cross the seas to fight, I will give help against all infidel kings and princes; and in the presence of three enemies I will not fly but fight, if they are infidels.'

At their head they carried their celebrated standard, called the Beaucéant, which bore the motto: 'Non nobis, Domine, non nobis, sed nomini tuo, da gloriam;' and after this they marched to battle, reciting prayers, having first received the holy sacrament. It was in 1237 that the knight who carried the Beaucéant in an action where the Mussulmans had the advantage, held it raised above his head until his conquerors, with redoubled blows, had pierced his whole body and cut off both his hands: such was their determined courage, while many authentic witnesses prove

that, faithful to their oath, they respected the laws of religion and honour.

It is not fair for an impartial seeker after truth to judge the conduct of the Templars from works written after their misfortunes; seldom indeed do the proscribed find courageous apologists: we must rather look to contemporary historians, the witnesses of their virtues and exploits; and to the honourable testimony of popes, kings, and princes, who shortly after became their oppressors. They are never denounced by the troubadours, and it is well known that these bold poets were the severest censors of their age, and attacked without pity the popes, clergy, and great men: nor was the favourite proverb, 'to drink like a Templar,' ever imagined until after their abolition: whilst our own king, Edward II., who afterwards so weakly gave in to the prevailing cry, wrote at the first to the kings of Portugal, Castile, Sicily, and Arragon, praying them not to give credence to the calumnies which were spread against them.

It was in France that the storm burst out with all violence: the unscrupulous king, Philip le Bel, with his minister Marigny, had cast a covetous eye upon the wealth acquired by the knights, and determinedly used every means to obtain it. The first accusations were made by two men, the Prior of Montfaucon and Naffodei, a Florentine, who had been banished from his country, and whom none believed to have ever been one of the order. The prior had been condemned to perpetual imprisonment by the Grand Master, for heresy and infamous conduct, so that revenge was evidently his motive.

The first act was to recal the Grand Master from Cyprus upon another pretext, and on the 13th of October 1307, he, with one hundred and thirty-nine knights, were arrested in their own Palace of the Temple at Paris, their possessions were confiscated, and the king himself took up his abode at the Temple on that day, and seized their treasures. All the knights throughout France were at the same time thrown into prison. Their accusation was that new statutes had been established in place of the old ones, by which the knight on his admittance was required to deny his faith in Christ, to spit upon the cross, and to suffer other scandalous liberties: they were spoken of as 'ravens wolves, a perfidious idolatrous society, whose works and words alone are sufficient to pollute the earth and infect the air.' The inhabitants of Paris were convoked in the king's garden, the heads of the parishes and communities assembled, whilst the commissioners and monks preached against the condemned.

They were put into irons, and the Inquisitor, Guillaume de Paris, questioned them, not permitting them to employ any counsel. Warriors, who by their privileges and riches had walked beside princes, were left without the necessaries of life. The comforts of religion were even refused, under the pretext that they were heretics, and unworthy to participate in them. Life, liberty, and rewards were offered to those knights who would confess the crimes of which their order was accused; twenty-six grandees of the court declared themselves their accusers; and from all quarters archbishops, bishops, abbés, chapters,

and corporate bodies of the cities and villages, sent in their adhesion. After the barbarous fashion of the age, the Inquisitor commanded the trial to begin by torture; one hundred and forty were thus tried in order to wring from them a confession, and it appears that only three resisted all entreaties; the remainder attested the pretended crimes imputed to them, but throughout there is so much improbability, absurdity, and contradiction in the evidence, that it is easy to see under what constraint it was given. The Pope, Clement the Fifth, who claimed the right of being their sole judge, called the fathers of the church to a council at Vienne. Numbers of proscribed Templars were wandering among the mountains near Lyons, and with praiseworthy resolution they chose nine knights to go and plead their cause, in spite of the instruments of torture and the still smoking fagots by which thirty-six had died in Paris alone. They presented themselves as the representatives of from fifteen hundred to two thousand knights, under the safe-conduct of the public faith; but Clement immediately arrested and put them in chains, augmenting his guard to save himself from the despair the others might be driven to. The Council were scandalised at such a proceeding, and refused their sentence until they had an opportunity of hearing the accused; but this suited neither the Pope nor Philip, and after trying in vain to bend the just decision of the fathers, the former pronounced, in a secret consistory, the suppression of the order.

Jacques de Molay, a brave and virtuous knight, was at this time the Grand Master. Of a noble family of Burgundy, he had been received into the order in 1265, and gained himself an honourable place at the French court, so much so as to stand at the baptismal font for Robert, the fourth son of the king. During his absence in the East he was unanimously elected to his high office, and when the calumnies which began to be whispered reached his ear, he returned to the Pope and demanded an immediate examination into the conduct of the order. His own character would stand the highest test for probity and morality, his prosecutors even never imputing to him the shameful and dissolute crimes of which they so readily accused his associates; but this was no protection, for he too was loaded with chains, and severe tortures applied. His sufferings, the menaces of the Inquisitor, the assurance that the knights would be condemned to death, and the order destroyed, if they did not yield to the king's projects, the pardonable desire of sparing their blood, and the hope of appeasing the King and Pope, induced him to condescend to an acknowledgment that he had against his own will denied his Saviour. But this he retracted very speedily, and kept steadfast to it through many sufferings and privations; the cardinals, however, refused credence to the withdrawal, and in May 1310, they read the sentence in the church of Notre Dame, condemning him to perpetual imprisonment. To the great astonishment of those present, the Grand Master and one of his companions proclaimed the retraction of their confession, accusing themselves only of the crime of having ever made it. The

cardinals, taken by surprise, entrusted these two prisoners to the care of the Provost, but when the king heard of it, he called his council together, among whom there was not a single ecclesiastic, and it was decided that De Molay and the knights should be immediately burnt.

An immense pile of wood was prepared for them, when, as a last effort on the part of the king, he sent the public crier to offer pardon and liberty to any one who would avow his participation in these pretended crimes. Neither the sight of horrible preparations for death, nor the tears of their relatives, nor the entreaties of their friends, could shake any of these inflexible souls; the offers of the king were reiterated, but cunning, prayers, and menaces, all were useless.

They had already submitted to the shame of an untrue confession, and now a noble repentance, with the feelings of virtue and truth, made them prefer death on the scaffold to a life redeemed by ignominy and untruth. The Grand Master was the first to ascend the steps, and the heroic old man addressed the multitude thus; 'None of us have betrayed either our God or our country; we die innocent; the decree which condemns us is an unjust one, but there is in heaven an august tribunal where the oppressed never implore in vain: to that tribunal I cite thee, O Roman Pontiff; within forty days thou shalt be there: and thee, O Philip, my master and my king; in vain do I pardon thee, thy life is condemned; within the year I await thee before God's throne.'

Such citations were not uncommon in the middle ages, but perhaps the deaths of the pope and king, who survived De Molay but a short time, were the occasion of the popular tradition which has been retained by historians—Justus Lipsius, for instance. This at least is certain, that the Templars died without a groan, shewing an admirable firmness of courage, invoking the name of God, blessing Him, and calling Him to witness to their innocence.

Time has rendered them justice. The great Arnaud did not hesitate to believe them guiltless. 'There is scarcely any one,' he says, 'who now believes there was any justice in accusing the Templars of committing impiety, idolatry, and impurity.' The whole charge belonged to the spirit of the age, which, shortly after the death of Philip le Bel, degraded his minister Marigny, and gained over his wife and sister to swear that he had employed a magician to attempt the king's life, by moulding wax images of him and running them through with pins, using at the same time magical incantations. The magician was imprisoned, whereupon he hung himself in despair; his wife was burnt as an accomplice, and Marigny himself was hung.

Philip had done all he could to induce the other European sovereigns to follow his example in the suppression of the Templars; the greater part were only too ready to seize upon their vast treasures. In England sealed orders were sent to all the sheriffs, which when opened were to be executed suddenly. The Templars were imprisoned, but torture does not seem to have been used; they were finally dispersed among various monasteries to live on a miserable pittance granted

by the king out of their own enormous revenues. The final decree against them was issued on the 22nd March 1312.

PETER CUMMIN AND OTHER CENTENARIANS.

March 22, 1724, was buried in Alnwick churchyard, Peter Cummin, a day-labourer reputed as upwards of a hundred and twenty years old. His name could not be found in the parish register of baptisms, because all previous to 1645 were lost. In his latter years this venerable person used to live from house to house amongst the gentry of the district. It is related of him that, coming to the house of Mr Brown, of Shawdon, near Alnwick, he looked round him, and expressed wonder at the great changes that had taken place since he was there last. He was asked how long that was ago, when, on a comparison of circumstances, the family found it was just a hundred years.*

It may be added that, at Newcastleton in Roxburghshire, they point to a field in the neighbourhood, where one day about 1770, amongst those engaged in reaping, was a woman of great age, but still in possession of a fair share of strength. Chatting with some of her neighbours, she told them she had once reaped in that field before, when she was a girl; and after some discussion, this proved to have been exactly a hundred years before.

As an additional pendant to the case of Peter Cummin, the reader may take that of a noted vagrant, named James Stuart, who died at Tweedmouth, April 11, 1844, aged 116, having been born in South Carolina on 25th December 1728. A few charitable persons having combined to make the last days of this veteran comfortable, he naively remarked to an inquiring friend one day, that 'he had na been see weel of this hunder year.'

One of the most curious, though not the most extreme instances of longevity, was described in a letter by Thomas Atkins, dated Windsor, September 28, 1657, addressed to Fuller, and printed by him in his *Worthies*. The subject of the recital was the Rev. Patrick M'Ilvain, minister of Lesbury, near Alnwick. He was a hundred and ten years of age, having been born at Whithorn, in Wigtonshire, in 1546. Atkins heard this ancient pastor perform the service and preach, as was his custom, using neither spectacles for reading, nor notes for his sermon. 'His text was, "Seek you the kingdom of God, and all things shall be added unto you." In my poor judgment he made an excellent good sermon, and went cleverly through, without the help of any notes.' It appeared that, many years before, he had exhibited the usual symptoms of decay; but latterly his eyesight had been restored, he had got a fresh crop of thin flaxen hair, and three new teeth appeared in his gums. He had always been a spare man, and very abstemious in his habits. Having married when above eighty, he had four youthful daughters living with him, besides his wife, who was only about fifty. It does not appear how long the veteran survived 1657.

MARCH 23.

St Victorian, proconsul of Carthage, and others, martyrs, 484. St Edelwald, of England, 699. St Alphonsus Turibius, Archbishop of Lima, 1606.

Wednesday in Holy Week in Rome.

On this occasion the only ceremony that attracts attention is the singing of the first *Miserere* in the Sistine Chapel. This commences at half-past four in the afternoon. The crowding is usually very great. The service, which is sometimes called *Tenebræ*, from the darkness of the night in which it was at one time celebrated, is repeated on the two following days in the Sistine Chapel, and singing not greatly different takes place also in St Peter's. The whole office of *Tenebræ* is a highly-finished musical composition, performed by the organ and the voices of one of the finest choirs in the world. Some parts are of exquisite beauty and tenderness. We give the following account of the composition from a work quoted below. 'In no other place has this celebrated music ever succeeded. Bainsi, the director of the pontifical choir, in a note to his *Life of Palestrina*, observes that on Holy Wednesday, 1519 (pontificate of Leo X.), the singers chanted the *Miserere* in a new and unaccustomed manner, alternately singing the verses in symphony. This seems to be the origin of the far-famed *Miserere*. Various authors, whom Bainsi enumerates, afterwards composed *Miserere*; but the celebrated composition of Gregorio Allegri, a Roman, who entered the papal college of singers in 1629, was the most successful, and was for some time sung on all the days of *Tenebræ*. Ultimately, the various compositions were eclipsed by the *Miserere* composed by Bai; but since 1821 the compositions of Bainsi, Bai, and Allegri are sung on the three successive days, the two latter sometimes blended together. The first verse is sung in harmony, the second in plain chant, and so successively till the last verse.*

At the office of the *Miserere*, a ceremony takes place that may be described from the same authority: 'A triangular candlestick, upon which are fifteen candles, corresponding to the number of psalms recited, is placed at the epistle side of the altar. After each psalm one of the candles is extinguished by a master of the ceremonies, and after the *Benedictus* the candle on the top is alone not extinguished, but it is removed and concealed behind the altar, and brought out at

* The Ceremonies of Holy Week at Rome, by Right Rev. Monsignor Baggs. (Rome, Piale, 1854.)

the end of the service; while that canticle is sung the six candles on the altar also are extinguished, as well as those above the rails. The custom of concealing the last and most elevated candle, and of bringing it forward burning at the end of the service, is in allusion to the death and resurrection of Christ, whose light is represented by burning tapers. In the same manner, the other candles extinguished one after another, may represent the prophets successively put to death before their divine Lord.'

Born.—Pierre Simon Laplace, French savant, author of *Mécanique Céleste*, 1749, *Beaumont-en-Ange*; William Smith, 'The Father of English Geology,' 1769.

Died.—Peter the Cruel, king of Castile, 1369; Pope Julius III., 1556; Justus Lipsius, eminent historical writer, 1606, *Lowain*; Paul, Emperor of Russia, assassinated, 1801, *St Petersburg*; Thomas Holcroft, miscellaneous writer, 1809; Duchess of Brunswick, sister of George III., 1813; Augustus Frederick Kotzebue, German dramatist, 1819, assassinated at *Mannheim*; Carl Maria von Weber, German musical composer, 1829, *London*; Archdeacon Nares, philologist, 1829.

FACSIMILES OF INEDITED AUTOGRAPHS.

PEDRO THE CRUEL.

The following facsimile presents the autograph of Pedro I., King of Castile, styled the Cruel. The original is the signature to a treaty, and is copied from Cott. MS. Vesp. C. xii. The ink is thick, and of a brown colour, and it will be seen that Pedro, for a king in the fourteenth century, wrote a very good hand. He has been stigmatised as unnatural, cruel, an infidel, and a fratricide; but Pedro's fratricide consisted in executing an illegitimate brother who was about to assassinate him, and his infidelity appears chiefly to have been hatred of the monks. The latter, in their turn, hated him, and as their pens were more lasting than his sceptre, Pedro's name has descended to posterity blackened by the accusation of almost every crime which man could commit.

Don Pedro was born in 1334, and died by the dagger of his illegitimate brother Enrique (who usurped his throne) at Montiel, on the 23d of March 1369, aged thirty-five. His two surviving daughters became the wives of John of Gaunt and Edmund of Langley, sons of Edward III. of England.

This Prince is one of the first modern kings who possessed the accomplishment of writing. Our Henry I. ('Beauclerc') could not write, and signed with a mark, as any one may see who will take the trouble to consult Cott. MS. Vesp. F. iii. (British Museum).

'YO EL REY'—'I THE KING.'

ENGLAND LAID UNDER INTERDICT.

On the 23d of March 1208, England underwent the full vengeance of the papal wrath. King John had occupied the throne during nearly nine years, and had contrived to lose his continental territories, and to incur the hatred of his subjects; and he now quarrelled with the Church—then a very formidable power. The ground of dispute was the appointment of an Archbishop of Canterbury; and as the ecclesiastics of Canterbury espoused the papal choice, John treated them with a degree of brutality which could not fail to provoke the utmost indignation of the Court of Rome. Innocent III., who at this time occupied the papal chair, expostulated with the king of England, and demanded redress, following up these demands with threats of laying an interdict upon the kingdom, and excommunicating the king. When these threats were announced to John, 'the king,' to use the words of the contemporary historian, Roger de Wendover, 'became nearly mad with rage, and broke forth in words of blasphemy against the Pope and his cardinals, swearing by God's teeth that, if they or any other priests soever presumptuously dared to lay his dominions under an interdict, he would banish all the English clergy, and confiscate all the property of the church;' adding that, if he found any of the Pope's clerks in England, he would send them home to Rome with their eyes torn out and their noses split, 'that they might be known there from other people.' Accordingly, on Easter Monday, 1208, which that year fell on the 23d of March, the three bishops of London, Ely, and Winchester, as the Pope's legates, laid a general interdict on the whole of England, by which all the churches were closed, and all religious service was discontinued, with the exception of confession, the administration of the viaticum on the point of death, and the baptism of children. Marriages could no longer be celebrated, and the bodies of the dead 'were carried out of cities and towns, and buried in roads and ditches, without prayers or the attendance of priests.' The king retaliated by carrying out his threat of confiscation; he seized all the church property, giving the ecclesiastical proprietors only a scanty allowance of food and clothing. 'The corn of the clergy was everywhere locked up,' says the contemporary writer, 'and distrained for the benefit of the revenue; the concubines of the priests and clerks were taken by the king's servants, and compelled to ransom themselves at a great expense; monks and other persons ordained, of any kind, when found travelling on the roads, were dragged from their horses, robbed, and basely ill-treated by the king's satellites, and no one would do them justice. About that time the sergeants of a certain sheriff on the borders of Wales came to the king, bringing in their custody, with his hands tied behind him, a robber who had robbed and murdered a priest on the high road; and on their asking the king what it was his pleasure should be done to a robber in such a case, the king immediately replied, "He has only slain one of my enemies; release him, and let him go."'

In such a state of things, it is not to be won-

dered at if the higher ecclesiastics fled to the Continent, and as many of the others as could make their escape followed their example. This gloomy period, which lasted until the taking off the interdict in 1214, upwards of six years, was long remembered in the traditions of the peasantry.

We have heard a rather curious legend, on tradition, connected with this event. Many of our readers will have noticed the frequent occurrence, on old common lands, and even on the sides of wild mountains and moorlands, of the traces of furrows, from the process of ploughing the land at some very remote period. To explain these, it is pretended that King John's subjects found an ingenious method of evading one part of the interdict, by which all the cultivated land in the kingdom was put under a curse. People were so superstitious that they believed that the land which lay under this curse would be incapable of producing crops, but they considered that the terms of the interdict applied only to land in cultivation at the time when it was proclaimed, and not to any which began to be cultivated afterwards; and to evade its effect, they left uncultivated the land which had been previously cultivated, and ploughed the commons and other uncultivated lands: and that the furrows we have alluded to are the remains of this temporary cultivation. It is probable that this interpretation is a very erroneous one; and it is now the belief of antiquaries that most of these very ancient furrow-traces, which have been remarked especially over the Northumbrian hills, are the remains of the agriculture of the Romans, who obtained immense quantities of corn from Britain, and appear to have cultivated great extents of land which were left entirely waste during the middle ages.

Our mediæval forefathers frequently shewed great ingenuity in evading the ecclesiastical laws and censures. We have read in an old record, the reference to which we have mislaid, of a wealthy knight, who, for his offences, was struck with the excommunication of the Church, and, as he was obstinate in his contumacy, died under the sentence. According to the universal belief, a man dying under such circumstances had no other prospect but everlasting damnation. But our knight had remarked that the terms of the sentence were that he would be damned whether buried within the church or without the church, and he gave orders to make a hole in the exterior wall of the building, and to bury his body there, believing that, as it was thus neither within the church nor without the church, he would escape the effects of the excommunication. Curiously enough, one or two examples have been met with of sepulchral interments within church walls, but it may perhaps be doubted if they admit of this explanation.

CAMPDEN HOUSE, KENSINGTON.

On the morning of Sunday, March 23, 1862, at about four o'clock, the mansion known as Campden House, built upon the high ground of Kensington just two centuries and a half ago, was almost entirely destroyed by fire. It was

one of the few old mansions in the environs of the metropolis which time has spared to our day; it belonged to a more picturesque age of architecture than the present; and though yielding in extent and beauty to its more noble neighbour, Holland House, built within five years of the same date, and which in general style it resembled, was still a very interesting fabric. It was built for Sir Baptist Hicks, about the year 1612; and his arms, with that date, and those of his son-in-law, Edward Lord Noel, and Sir Charles Morison, were emblazoned upon a large bay-window of the house. In the same year (1612), he built the Sessions House in the broad part of St John Street, Clerkenwell; it was named after him, Hicks's Hall, a name more familiar than Campden House, from the former being inscribed upon scores of milestones in the suburbs of London, the distances being measured 'from Hicks's Hall.' This Hall lasted about a century and a half, when it fell into a ruinous condition, and a new Hall was built on Clerkenwell Green, and thither was removed a handsomely carved wood mantelpiece from the old Hall, together with a portrait of Sir Baptist Hicks, painter unknown, and stated by Sir Bernard Burke to have never been engraved: it hung in the dining-room at the Sessions House.

Baptist Hicks was the youngest son of a wealthy silk-mercator, at the sign of the White Bear, at Soper Lane end, in Cheapside. He was brought up to his father's business, in which he amassed a considerable fortune. In 1603, he was knighted by James I., which occasioned a contest between him and the alderman, respecting precedence; and in 1611, being elected alderman of Bread Street ward, he was discharged, on paying a fine of £500, at the express desire of the King. Strype tells us that Sir Baptist was one of the first citizens that, after knighthood, kept their shops; but being charged with it by some of the aldermen, he gave this answer: 'That his servants kept the shop, though he had a regard to the special credit thereof; and that he did not live altogether upon interest, as most of the alderman knights did, laying aside their trade after knighthood; and that, had two of his servants kept their promise and articles concluded between them and him, he had been free of his shop two years past; and did then but seek a fit opportunity to leave the same.' This was in the year 1607. Sir Baptist was created a baronet 1st July 1620; and was further advanced to the peerage as Baron Hicks, of Ilmington, in the county of Warwick; and Viscount Campden, in Gloucestershire, 5th May 1628. He died at his house in the Old Jewry, 18th October 1629, and was buried at Campden. He was a distinguished member of the Mercers' Company, to which his widow made a liberal bequest, one object of which was to assist young freemen beginning business as shopkeepers, with the gratuitous loan of £1000. Lady Campden was also a benefactress to the parish of Kensington.

The Campden House estate was purchased by Sir Baptist Hicks from Sir Walter Cope, or, according to a tradition in the parish, was won of him at some game of chance. Bowack, in his *Antiquities of Middlesex*, describes it as 'a very

noble pile, and finished with all the art the architects of that time were masters of; the situation being upon a hill, makes it extreme healthful and pleasant.' Sir Baptist Hicks had two daughters, coheiresses, who are reputed to have had £100,000 each for their fortune: the eldest, Juliana, married Lord Noel, to whom the title devolved at the first Viscount Campden's decease; Mary, the youngest daughter, married Sir Charles Morison, of Cashiobury, Herts. Baptist, the third Lord Campden, who was a zealous royalist, lost much property during the Civil Wars, but was permitted to keep his estates on paying the sum of £9000 as a composition, and making a settlement of £150 per annum on the Commonwealth Ministry. He resided chiefly at Campden House during the Protectorate: the Committee for Sequestrations held their meetings here.

At the Restoration, the King honoured Lord Campden with particular notice; and we read in the *Mercurius Politicus*, that on June 8, 1666, 'His Majesty was pleased to sup with Lord Campden at Kensington.' In 1662, an Act was passed for settling Campden House upon this nobleman and his heirs for ever; and in 1667, his son-in-law, Montague Bertie, Earl of Lindsey, who so nobly distinguished himself by his filial piety at the battle of Edge Hill, and who was wounded at Naseby, died in this house.

In 1691, Anne, Princess of Denmark, hired Campden House from the Noel family, and resided there for about five years with her son, William Duke of Gloucester, then heir-presumptive to the throne. The adjoining house is said to have been built at this time for the accommodation of her Royal Highness's household: it was named Little Campden House, and was for some time the residence of William Pitt; it had an outer arcade gallery, and was subsequently called The Elms, and tenanted by Mr Egg, the painter: it was greatly injured by the late fire.

At Campden House, the young Duke's amusements were chiefly of a military cast; and at a very early age he formed a regiment of boys, chiefly from Kensington, who were on constant duty here. He was placed under the care of the Earl of Marlborough and of Bishop Burnet. When King William gave him into the hands of the former, 'Teach him to be what you are,' said the King, 'and my nephew cannot want accomplishments.' Bishop Burnet, who had superintended his education for ten years, describes him as an amiable and accomplished prince, and in describing his education, says, 'The last thing I explained to him was the Gothic constitution, and the beneficiary and feudal laws: I talked of these things, at different times, near three hours a day. The King ordered five of his chief ministers to come once a quarter, and examine the progress he had made.' They were astonished at his proficiency. He was, however, of weak constitution; 'but,' says the Bishop, 'we hoped the dangerous time was over. His birthday was on the 24th of July 1700, and he was then eleven years old: he complained the next day, but we imputed that to the fatigue of a birthday, so that he was too much neglected; the day after, he grew much worse, and it proved

to be a malignant fever. He died (at Windsor) on the fourth day of his illness: he was the only remaining child of seventeen that the Princess had borne.' Burnet adds, 'His death gave great alarm to the whole nation. The Jacobites grew insolent upon it, and said, now the chief difficulty was removed out of the way of the Prince of Wales's succession.' Mr Shippen, who then resided at Holland House, wrote the following lines upon the young Prince's death:

'So, by the course of the revolving spheres,
Whene'er a new discovered star appears,
Astronomers, with pleasure and amaze,
Upon the infant luminary gaze.
They find their heaven's enlarged, and wait
from thence
Some blest, some more than common influence;
But suddenly, alas! the fleeting light,
Retiring, leaves their hopes involved in endless
night.'

In 1704, Campden House was in the occupation of the Dowager Countess of Burlington, and of her son the architect Earl, then in his ninth year. In the latter part of Queen Anne's reign, Campden House was sold to Nicholas Lechmere, an eminent lawyer, who became Chancellor of the Duchy of Lancaster, and Attorney-General. In 1721, he was created a peer, and Swift's ballad of *Duke upon Duke*, in which the following lines occur, had its origin in a quarrel between his lordship, who then occupied this mansion, and Sir John Guise:

'Back in the dark, by Brompton Park,
He turned up through the Gore,
So slunk to Campden House so high,
All in his coach and four.
The Duke in wrath call'd for his steeds,
And fiercely drove them on;
Lord! Lord! how rattled then thy stones,
O kingly Kensington!
Meanwhile, Duke Guise did fret and fume,
A sight it was to see,
Benumbed beneath the evening dew,
Under the greenwood tree.'

The original approach to Campden House from the town of Kensington was through an avenue of elms, which extended nearly to the High-street and great western road, through the grounds subsequently the cemetery. About the year 1798, the land in front of the house was planted with trees, which nearly cut off the view from the town; and at the same time a new road was made to the east, and planted with a shrubbery. About this time, Lyons describes a caper-tree, which had flourished in the garden of Campden House for more than a century. Miller speaks of it in the first edition of his *Gardener's Dictionary*; it was sheltered from the north, having a south-east aspect, and though not within the reach of any artificial heat, it produced fruit every year.

The olden celebrity of Campden House may be said to have ceased a century since; for Faulkner, in his *History and Antiquities of Kensington*, 1820, states it to have then been occupied more than sixty years as a boarding-school for ladies. He describes the piers of the old gateway as then surmounted by two finely sculptured dogs, the supporters of the Campden arms, which were

placed there when the southern avenue was removed in the year 1798. The mansion was built of brick, with stone finishings; and a print of the year 1793 shews the principal or southern

CAMPDEN HOUSE.

front, of three stories, to have then consisted of three bays, flanked by two square turrets, surmounted with cupolas; the central bay having an enriched Jacobean entrance porch, with the Campden arms sculptured above the first-floor bay-windows; a pierced parapet above; and dormer windows in the roof. As usual with old mansions, as the decorated portions decay, they are not replaced; and Faulkner's view of this front, in 1820, shews the turrets without the cupola roofs; the main roof appears flat, and the ornamental porch has given way to a pair of plain columns supporting the central bay-window. He describes this front as having lost most of its original ornaments, and being then covered with stucco. His view also shews the eastern end, with its bays and gables, its stacks of chimneys in the form of square towers, and the brickwork panelled according to the original design. The north or garden front was, at the same period, more undermined than the south front; and westward the mansion adjoined Little Campden House.

Faulkner described—two-and-forty years since, be it remembered—the entrance-hall lined with oak panelling, and having an archway leading to the grand staircase; on the right was a large parlour, modernised; and on the west were the domestic offices. The great dining-room, in which Charles II. supped with Lord Campden, was richly carved in oak; and the ceiling was stuccoed, and ornamented with the arms of the Campden family. But the glory of this room was the tabernacle oak mantelpiece, consisting of six Corinthian columns, supporting a pediment; the intercolumniations being filled with grotesque devices, and the whole supported by two caryatid figures, finely carved. The *state apartments* on the first floor consisted of three large rooms facing the south; that on the east, 'Queen Anne's bed-chamber,' had an enriched plaster ceiling, with pendants, and the walls were hung with red damask tapestry, in imitation of foliage. The central apartment originally had its large bay-window filled with painted glass,

shewing the arms of Sir Baptist Hicks, Lord Noel, and Sir Charles Morison; and the date of the erection of the mansion, 1612. The eastern wing, on the first floor, contained 'the globe-room,' which Faulkner thought to have been originally a chapel; but we rather think it had been the theatre for puppets, fitted up for the amusement of the young Duke of Gloucester; it communicated with a terrace in the garden by a flight of steps, made, it is said, for the accommodation of the Princess Anne. The apartment adjoining that last named had its plaster ceiling enriched with arms, and a mantelpiece of various marbles. Such was the Campden House of sixty years since. Within the last dozen years, large sums had been expended upon the restoration and embellishment of the interior: a spacious theatre had been fitted up for amateur performances, and the furniture and enrichments were in sumptuous taste, if not in style accordant with the period of the mansion; but, whatever may have been their merits, the whole of the interior, its fittings and furniture, were destroyed in the conflagration of March 23; and before the Londoners had risen from their beds that Sunday morning, all that remained of Campden House, or 'Queen Anne's Palace,' as it was called by the people of Kensington, were its blackened and windowless walls. As the abode of the ennobled merchant of the reign of James I.; where Charles II. feasted with his loyal chamberlain; and as the residence of the Princess, afterwards Queen Anne, and the nursing home of the heir to the British throne, Campden House is entitled to special record, and its disappearance to a passing note.

SWALLOWING A PADLOCK.

Medical men see more strange things, perhaps, than any other persons. They are repeatedly called upon to grapple with difficulties, concerning which there is no definite line of treatment generally recognised; or to treat exceptional cases, in which the usual course of proceeding cannot with safety be adopted. If it were required to name the articles which a woman would not be likely to swallow, a *brass padlock* might certainly claim a place in the list; and we can well imagine that a surgeon would find his ingenuity taxed to grapple with such a case. An instance of this kind took place at Edinburgh in 1837; as recorded in the local journals, the particulars were as follows: On the 23d of March, the surgeons at the Royal Infirmary were called upon to attend to a critical case. About the middle of February, a woman, while engaged in some pleasantry, put into her mouth a small brass padlock, about an inch and two-thirds in length, and rather more than an inch in breadth. To her consternation, it slipped down her throat. Fear of distressing her friends led her to conceal the fact. She took an emetic, but without effect; and for twenty-four hours she was in great pain, with a sensation of suffocation in the throat. She then got better, and for more than a month suffered but little pain. Renewed symptoms of inconvenience led her to apply to the Infirmary. One of the professors believed the story she told; others deemed it incredible; and nothing immediately was done. When, however, pain, vomiting, and a sense of suffocation returned, Dr James Johnson, hospital-assistant to Professor Lizars, was called upon suddenly to attend to her. He saw that either the padlock must be extracted, or the

woman would die. An instrument was devised for the purpose by Mr Macleod, a surgical instrument maker; and, partly by the skill of the operator, partly by the ingenious formation of the instrument, the strange mouthful was extracted from the throat. The woman recovered.

MARCH 24.

St Irenæus, Bishop of Sirmium, martyr, 304. St William, martyr at Norwich (aged eleven years), 1137. St Simon (an infant), martyr at Trent, 1472.

Maundy Thursday.

The day before Good Friday has been marked from an early age of the church by acts of humility, in imitation of that of Christ in washing the feet of his disciples on the eve of his passion. Ecclesiastics small and great, laymen of eminence, not excepting sovereign princes, have thought it fitting, in the spirit of their religion, to lay by personal dignity on this occasion, and condescend to the menial act of washing the feet of paupers. It is in consequence of an associated act of charity, the distribution of food in baskets, or *maunds*, that the day has come to be distinguished in England as Maundy Thursday. In Rome, however, and throughout Catholic Europe generally, the day is known as Holy Thursday. Another popular old name of the day in England is *Shere* Thursday, from the custom of shearing the hair which the priesthood used to observe.*

The observance of Maundy Thursday among the religious of old is duly described by Neogeorgus in his *Popish Kingdom*, as thus translated by Gooze:

'And here the monks their maundies make with
sundry solemm rites,
And signs of great humility, and wondrous pleasaunt sights.
Each one the other's feet doth wash, and wipe
them clean and dry,
With hateful mind and secret fraud, that in their
hearts doth lie;
As if that Christ with his examples did these things
require,
And not to help our brethren here with zeal and
free desire;
Each one supplying other's want, in all things that
they may,
As he himself a servant made, to serve us every
way.
Then straight the loaves do walk, and pots in every
place they skink,
Wherewith the holy fathers oft to pleasant damscels
drink.'

Cardinal Wolsey, at Peterborough Abbey, in

* By a natural inversion, maund and maundy have come to signify articles given in charity or from kindness. In an old jest-book, there is a story of a rich merchant dictating a testament to a scrivener, while a poor nephew stood by, hoping to hear of something to his advantage. While the testator was still enumerating the debts due to him, the nephew cried, 'Ha, ha! what saith my uncle now?—does he now make his *maundies*?' 'No,' answered the cool man of business, 'he is yet in his *demands*.' This is a good example of the secondary meaning.

1530, 'made his maund in our lady's chapel, having fifty-nine poor men whose feet he washed and kissed; and after he had wiped them, he gave every of the said poor men twelve pence in money, three ells of good canvas to make them shirts, a pair of new shoes, a cast of red herrings, and three white herrings; and one of these had two shillings'—the number of the poor men being probably in correspondence with the years of his age. About the same period, the Earl of Northumberland, on Maundy Thursday, gave to each of as many poor men as he was years old, and one over, a gown with a hood, a linen shirt, a platter with meat, an ashen cup filled with wine, and a leathern purse containing as many pennies as he was years old, and one over; besides miscellaneous gifts to be distributed in like manner in name of his lady and his sons.

The king of England was formerly accustomed on Maundy Thursday to have brought before him as many poor men as he was years old, whose feet he washed with his own hands, after which his majesty's maunds, consisting of meat, clothes, and money, were distributed amongst them. Queen Elizabeth, when in her thirty-ninth year, performed this ceremony at her palace of Greenwich, on which occasion she was attended by thirty-nine ladies and gentlewomen. Thirty-nine poor persons being assembled, their feet were first washed by the yeomen of the laundry with warm water and sweet herbs, afterwards by the sub-almoner, and finally by the queen herself, kneeling; these various persons, the yeomen, the sub-almoner, and the queen, after washing each foot, marked it with the sign of the cross above the toes, and then kissed it. Clothes, victuals, and money were then distributed. This strange ceremonial, in which the highest was for a moment brought beneath the lowest, was last performed in its full extent by James II.

King William left the washing to his almoner; and such was the arrangement for many years afterwards. 'Thursday, April 15 [1731], being Maundy Thursday, there was distributed at the Banqueting House, Whitehall, to forty-eight poor men and forty-eight poor women (the king [George II.]'s age being forty-eight), boiled beef and shoulders of mutton, and small bowls of ale, which is called dinner; after that large wooden platters of fish and loaves, viz. undressed, one large old ling, and one large dried cod; twelve red herrings and twelve white herrings, and four half-quarter loaves. Each person had one platter of this provision; after which were distributed to them shoes, stockings, linen and woollen cloth, and leather bags, with one penny, two-penny, threepenny, and fourpenny pieces of silver and shillings; to each about four pounds in value. His Grace the Lord Archbishop of York, Lord High Almoner, performed the annual ceremony of washing the feet of a certain number of poor in the Royal Chapel, Whitehall, which was formerly done by the kings themselves, in imitation of our Saviour's pattern of humility.' For a considerable number of years, the washing of the feet has been entirely given up; and since the beginning of the reign of Queen Victoria, an additional sum of money has been given in lieu

of provisions. Some examples of the *Maundy money* recently used by English royalty are here represented.

In Austria, the old rite of the *Fusswaschung* is still kept up by the Emperor, under circumstances of great ceremony.

The ceremonies of Holy Thursday at Rome call for being described in detail.

1. *Blessing the Oils*.—This ceremony takes place in St Peter's during mass, the cardinal arch-priest, or a bishop in his stead, officiating. There are three varieties of the oil to be blessed. The first is the oil of catechumens, used in blessing baptism, in consecrating churches and altars, in ordaining priests, and in blessing and crowning sovereigns. The second is the oil used in administering extreme unction to the apparently dying. Third, the sacred chrism, composed of oil and balm of Gilead or of the West Indies, and which is used in confirmation, the consecration of bishops, patens, and chalices, and in the blessing of bells. The Roman Pontifical prescribes, that besides the bishop and the usual ministers, there should be present twelve priests, seven deacons, and seven sub-deacons, all habited in white vestments. The bishop sits down before a table facing the altar, and exorcises and blesses the oil for the sick, which is brought in by a sub-deacon. He then proceeds with the mass, during which the balsam is brought in, and also the oil for the chrism and that for the catechumens, by two deacons. The bishop blesses the balsam and mixes it with some oil; he then breathes three times in the form of a cross over the vessel of the chrism, as do the twelve priests also. Next follows the blessing, and then the salutation of the chrism; the latter is made three times, by the bishop and each of the twelve priests in succession saying, 'Hail, holy chrism,' after which they kiss the vessel which contains it. The oil of catechumens is blessed and saluted in like manner; and with the remaining part of the mass the rite terminates. Roman Catholic writers adduce various authorities and traditions sanctioning these ceremonies.

2. *Silencing the Bells*.—In the Sistine chapel, at the performance of mass, after the Gloria in Excelsis is sung, no bells are allowed to be rung in Rome, except at the Papal benediction, until the same canticle is sung in the Papal chapel on the following Saturday morning. In other words, all the bells in Rome are mute from about half-past eleven on Thursday morning till

the same time on Saturday. During this period of two days, such is the force of the custom, that hand-bells, usually employed in hotels to be rung for dinner, are silent. So likewise bells rung for school remain mute. As a substitute for bells, it is the practice to use a kind of wooden clappers, or *troccola*. These are in the form of wooden boxes, with some interior mechanism turned by a handle, so as to make a disagreeable clattering noise. This species of troccole is said to have been used anciently by the Greeks. The silencing of the bells—a signal comfort to the ears in some parts of Rome—being prescribed in ancient rituals, is thus enforced as one of the old customs of the church.

3. *Feet Washing at St Peter's*.—The Pope, who officiates at this and other ceremonies, is this day dressed very plainly, in white, with a red cope, and a small white skull-cap; and instead of being carried he walks, for the object of the usages in which he is concerned is to typify the humility of Christ on the night of the Last Supper. After mass at the Sistine chapel, his Holiness, about one o'clock, proceeds to the balcony over the central door of St Peter's, and there pronounces his general benediction. As this is repeated in grander style on Easter Sunday, there is usually no great concourse of spectators. Descending to the church, the Pope proceeds to the northern transept, which is fitted up for the occasion. On the north is his chair of state; on the west and ranged along the draped wall, embellished with a tapestry picture of the Last Supper, is a bench or seat elevated on a platform so as to be conspicuous. The other parts of the transept are fitted with seats for distinguished persons, also for ladies who are suitably dressed and provided with tickets. Just as the Pope is about to take his seat, there enter from a side door thirteen bishops dressed in high white caps and white garments. Twelve of these represent the apostles, whose feet were washed by Christ, and the thirteenth represents an angel, who, according to the legend, appeared to Gregory the Great (590—604), while he was performing an act of charity to poor persons. These thirteen bishops, who are all habited alike, take their seats gravely on the bench along the wall, and are the objects of general attention; for it is their feet which the Pope is about to wash. After some singing and reading of passages of Scripture, the Pope's cope is taken off, an embroidered apron is put on, and a towel is fastened to his waist by the assisting cardinal deacons; and then he washes and kisses the right foot of each of the thirteen priests. It is to be understood that the washing is of the slightest possible kind. Little time is occupied. The ceremony terminates by each receiving from the Pope a towel and a nosegay, besides a gold and silver medal which are presented by the treasurer. The Pope now washes his hands, is re-invested in his red cope, and proceeds immediately to the next act of humiliation.

4. *The Pope Serving at Supper*.—Conducted in procession from the northern transept, the Pope walks across the nave of St Peter's to a stair which leads to a large apartment above the portico. Here a table is laid, as for a regular meal, the recipients of which are the thirteen

priests who have just been honoured by having their feet washed. He gives them water to wash their hands, helps them to soup and other dishes, and pours out wine and water for them to drink. The plates are handed to him by prelates. During the ceremony, one of his chaplains reads prayers. He then blesses them, washes his hands, and departs. The priests who are the objects of these attentions are selected from different countries by the favour of diplomatic agents. Some of them, however, are Italians, selected by officials on the spot, the captain of the Pope's Swiss guard having the privilege of appointing one.

5. *The Grand Penitentiary*.—Among the remarkable things in St Peter's, are the number of confessionals, in which are seated clergymen ready to hear the confessions of those who apply to them, and who seem so many religious sentinels at their posts. Still more to accommodate applicants, the confessionals, as is seen by inscriptions on them, are for the French, German, Spanish, Portuguese, English, and Greek, as well as Italian languages. Besides this usual arrangement, the Grand Cardinal Penitentiary sits in a confessional in the afternoon of Holy Thursday to give absolution for mortal sins which are beyond the sphere of ordinary confession, and which cannot otherwise be absolved. This day, the altars of St Peter's are all stripped, the hundred lamps that usually burn round the tomb of St Peter are extinguished, and with the chanting of the *Miserere* a general gloom prevails.

6. *Washing the Feet of Pilgrims*.—The ceremonies connected with the so-called pilgrims, take place at the *Trinità de' Pellegrini*, an establishment adapted for accommodating pilgrims and situated in one of the populous parts of Rome. Poor persons are admitted to the benefit of the charity, who have come to visit the holy places from a greater distance than sixty miles, and who bring certificates from their bishop. The ceremonies on the evening of Holy Thursday consist in washing the feet of pilgrims of both sexes, the men in one place, and the women in another. To the female department ladies only are admitted as spectators. After the feet-washing, each class is entertained at supper. The following account of the affair is by an eye-witness in the present year:—'I went to the feet-washing of the male pilgrims about eight o'clock. On entering a passage, I saw a tremendous crush at the further end, where there was a door opening on a lower floor, in which the ceremony takes place. With some little squeezing, I got through the doorway, down a few steps, and found myself in a hot and close apartment, crowded nearly to suffocation. Along one end and side was a bench to be used as a seat, with a foot-board raised off the floor. A paling and guards kept back the crowd. In half an hour, a troop of poor-looking people, very much resembling the ragged beggars whom one sees in the streets of Rome, entered by a side door, and ranging themselves along the bench, proceeded to take off their shoes and stockings. Several priests now appear, and one of them having read some prayers, they join the body of operators. These are gentlemen and persons in

business in Rome, who form a confraternity devoted to this and other acts of charity. They are habited in a red jacket, a little cravat, and apron, and sit chatting and laughing till the tubs with warm water are brought in, and set, one before each poor person. They now begin the operation of washing, the general remark of the on-lookers being that to all appearance the feet had previously been cleaned, so that the act of voluntary humiliation does not seem particularly nauseous, nor does it last long. The priests get their hands washed by having hot water poured on them, along with a squeeze of lemon, and another prayer ends the ceremony, which, to say the least of it, is not pleasing. The pilgrims afterwards adjourn to a hall, where, at long tables, the same operators wait upon them at supper. To my mind, the whole thing had a got-up look, and one wonders how it should be perpetuated. Similar ceremonies take place in the female department, where the operators are ladies of distinction. These ceremonies are repeated on Friday and Saturday evenings. The pilgrims are lodged and otherwise entertained during this period, and are dismissed with small money presents.

At Rome, on the evening of this day, the shops of sausage-makers, candle-makers, and pork-dealers are decorated and illuminated in a fantastic way. The most prominent object in each is a picture of the Virgin and Child, enshrined amidst flowers and candles, as on a sort of altar. Festoons of flowers and evergreens are otherwise stuck about, and there is a profusion of patches of divers colours on the pork, candles, and other articles on the shelves. These grotesque illuminations draw crowds of strangers and others to witness them; the shops so lighted up doing apparently a little more business than usual.

Thomas Gisborne, miscellaneous writer, 1846.

FACSIMILES OF INEDITED AUTOGRAPHS.
QUEEN ELIZABETH.

Elizabeth was born at Greenwich, September 7, 1533, and died March 24, 1602-3, in her seventieth year. This is one of her earliest autographs, being the signature of a letter (Cott. MSS. Vesp. F. III.) written in 1558, the year of her accession to the throne. Her hand changed much for

the worse in her latter years. The present autograph is, however, slightly injured, in consequence of the edges of the letter having been burnt away.

DEATH OF QUEEN ELIZABETH.

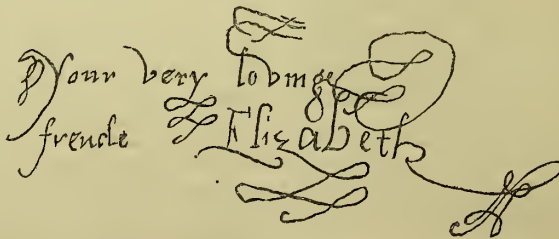

A variety of relations and reports of the circumstances of the death of this great queen are current; but that which appears deserving of most credit has been least noticed. It is found in the manuscript diary of a contemporary, a barrister named Maningham, which is preserved among the Harleian manuscripts in the British Museum (No. 5353). Maningham was acquainted with men at court well situated to give him correct information, especially with the queen's chaplain, Dr Parry, and, anxious to ascertain the real condition of the queen, he went to Richmond, where the court was then established, on the 23d of March 1603. He has entered in considerable detail the facts of this visit. 'March 23. I was at the court at Richmond to hear Dr Parry, one of her majesties chaplens, preach, and be assured whether the queane were living or dead. I heard him, and was assured shee was then living.' After the service, he dined with the preacher, and gathered from him the following interesting information:

'I dyned with Dr Parry in the privy chamber, and understood by him, the Bishop of Chichester, the Deane of Canterbury, the Deane of Windsor, &c., that her majestic hath bin by fits troubled with melancholy some three or four moneths; but for this fortnight extreame oppressed with it, in soc much that she refused to eate anything, to receive any phisicke, or admit any rest in bedd, till within these two or three dayes. Shee hath bin in a manner speechlesse for two dayes; very pensive and silent since Shrovetides, sitting sometyms with her eye fixed upon one object many houres together; yct shee always had her perfect senses and memory, and yesterday signified by the lifting up of her hand and eyes to heaven, a signe which Dr Parry entreated of hir, that shee beleaved that fayth which shee had caused to be professed, and looked faythfully to be saved by Christ's merits and mercy onely, and no other meanes. Shee tooke great delight in hearing prayers, would often at the name of Jesus lift up hir hands and eyes to heaven. Shee would not heare the archbishop speake of hope of hir longer lyfe, but when he prayed, or spake of heaven and those joyes, shee would hug his hand, &c. It seems she might have lived yf shee would have used meanes, but shee would not be persuaded, and princes must not be forced. Hir physicians

sayd shee had a body of a firme and perfect constitution, likely to have lived many yeares. A royal majesty is not privilege against death.'

Next day, Maningham was again at Richmond, probably he had remained all night,

Your very loving
frende Elizabeth

and he added the following entry in his diary :—
 'March 24. This morning about three at
 clocke, her majestie departed this lyfe, mildly
 like a lambe, easely like a ripe apple from the
 tree; *cum levi quâdam febre, absque gemitu.* Dr
 Parry told me that he was present, and sent his
 prayers before hir soule; and I doubt not but
 shee is amongst the royall saints in heaven in
 eternall joyes.'

It will be seen that our diarist makes no allu-
 sions to the manner in which Elizabeth was
 rumoured to have signified her wish that James
 of Scotland should be her successor on the
 English throne; but a few days later we find the
 following curious entry:

'April 4. Dr Parry told me the Countess
 Kildare assured him that the queane caused the
 ring wherewith shee was wedded to the crowne to
 be cutt from hir finger some six weekes before hir
 death; but wore a ring which the Earl of Essex
 gave hir unto the day of hir death.'

THE OLD MANOR-HOUSE AT STOKE POGIS,
 BUCKINGHAMSHIRE.

This venerable mansion was built, or begun
 to be built by George Hastings, first Earl of
 Huntingdon, who died on the 24th of March
 1544, and was buried in Stoke church. Like
 many other manor-houses of the same, or of an

MANOR-HOUSE OF STOKE POGIS.

earlier period, that of Stoke was invested with
 considerable interest from its association with
 persons who were remarkable in their genera-
 tion, if not of historic fame. This interest in
 Stoke manor-house has been preserved and
 enhanced by Gray, who, in his amusing poem of
 'A Long Story,' has thus described it:

'In Britain's isle, no matter where,
 An ancient pile of building stands,
 The Huntingdons and Hattons there
 Employed the power of fairy hands
 To raise the building's fretted height,
 Each panel in achievement clothing,

Rich windows that exclude the light,
 And passages that lead to nothing.
 Full off within the spacious walls,
 When he had fifty winters o'er him,
 My grave Lord Keeper led the brawls;
 The seal and maces danced before him.
 His bushy beard, and shoe-strings green,
 His high-crowned hat, and satin doublet,
 Moved the stout heart of England's Queen,
 Though Pope and Spaniard could not trouble it.'

This 'grave Lord Keeper' was Sir Christo-
 pher Hatton, who, it must be remarked, was
 never the owner or occupier of this old mansion,
 although generally supposed to have been so by
 topographers, and by commentators on Gray's
 Poems. The old manor-house, indeed, was not
 completely finished till it came into the posses-
 sion of Henry, the third Earl of Huntingdon,
 who, although it might have been burdened by a
 mortgage, certainly retained possession of it till
 his death.

One of his letters now in existence is dated at
 Stoke, on 13th December 1592,* and among the
 payments after his funeral, occurs this item—
 'Charges about the vendition of my Lord's goods
 in the county of Bucks, £8.'† This most prob-
 ably refers to the sale of his property at Stoke.
 Now Sir Christopher Hatton died in November
 1591, a year before the date of the Earl's letter
 from Stoke, and four years before his death,
 which occurred in 1595. But we have more
 conclusive evidence to the same effect. Sir
 Christopher has left numerous letters from which
 his proceedings during the latter years of his
 life—the only time in which he could have been
 at Stoke—may be traced from month to month,
 almost from day to day, and not one of these
 letters affords the slightest indication of his
 connexion with Stoke.‡ Nor is such connexion
 noticed in any parish record at Stoke. The idea
 rests solely on tradition, and can easily be
 accounted for.

On the death of the third Earl of Huntingdon,
 Sir Edward Coke, the great lawyer, purchased
 the manor and resided at Stoke; and soon after,
 in 1598, married for his second wife, Lady
 Hatton, widow of Sir William Hatton, nephew
 and heir of the 'Lord Keeper.' This lady was
 sufficiently conspicuous to stamp the name of
 Hatton on the traditions of Stoke. She was a
 daughter of Lord Burleigh, and while priding
 herself on her 'gentle blood,' was imperious,
 officious, and vindictive. From her first husband
 she received a rich jointure, and retained his
 three places of residence in her own hands.
 She also retained his name after her marriage
 with Sir Edward Coke, who was old enough to
 have been her father, and towards whom she
 always affected great contempt. She stipulated
 that her marriage should be secretly performed
 in a private house, late in the evening, and
 without banns or licence. For this irregular
 marriage the 'great oracle of the law,' his bride,
 her father Lord Burleigh, and the officiating
 minister, were cited into the ecclesiastical court.

* History of Stoke Pogis.

† Bell's *Huntingdon Peerage*, p. 80.

‡ See *Life of Sir Christopher Hatton*, by Sir Harris
 Nicolas. 1847.

Thus commenced 'the honeymoon of the happy pair.*' Lady Hatton next forbade her spouse to enter her house in Holborn except by a back door. For many years the stern lawyer submitted to be hen-pecked in silence. At length he was driven to have recourse to law; for while he was professionally engaged in London, his faithful wife was at Stoke dismantling his house. She collected all his plate, and other valuable moveables, and carried them off to one of her own houses.

She is also supposed to have influenced Lord Bacon and others to prejudice the King against him, by casting discredit on his official proceedings. Certain it is that about this time he lost the King's favour; was deprived of his office as Lord Chief Justice, and advised to 'live privately at home, and take into consideration and review his book of Reports, wherein, as his Majesty is informed, be many extravagant and exorbitant opinions set down and published for positive and good law.' Poor Sir Edward!—'to live privately at home,' in a dismantled house, with a sullied reputation, and his wife entertaining his enemies with his property, and at the expense of his character. This was too much to bear. The lion was roused; and he who was such a stickler for the law set the law at defiance, and, forcibly entering Lady Hatton's houses in search of his property, not only carried off his own, but some of hers also. This led to legal proceedings against each other. Sir Edward accused his lady of having 'embezzled all his gilt and silver plate and vessel, and instead thereof foisted in alkumy of the same sorte, fashion, and use, with the illusion to have cheated him of the other.' Lady Hatton, on her part, alleged that 'Sir Edward broke into Hatton House, seased upon my coach and coach horses, nay, my apparel, which he detains; thrust all my servants out of doors without wages, sent down his men to Corfe Castle [another of her ladyship's residences] to inventory, seize, ship, and carry away all the goods, which being refused him by the castle-keeper, he threatens to bring your lordship's warrant for the performance thereof. Stop, then, his high tyrannical courses; for I have suffered beyond the measure of any wife, mother, nay, of any ordinary woman in this kingdom, without respect to my father, my birth, my fortunes, with which I have so highly raised him.' Judgment was given in favour of Lady Hatton; and a reconciliation took place, for Sir Edward 'flattered himself she would still prove a very good wife.'

In the following year these domestic broils took another course. Sir Edward Coke and Lady Hatton had one child, a daughter, and when she was about fourteen years old, her father negotiated for her marriage with Sir John Villiers, brother of Buckingham, the King's favourite, hoping through this alliance to regain the King's favour. The proposal was graciously received, and Sir Edward was delighted with the prospect of success. It is true that his wife and daughter, who were then residing with him at Stoke, did not relish his scheme; but this did

not much trouble him, as he considered that his daughter, in such a case, was bound to obey her father's mandate. Highly gratified with this prospect, he retired to rest, and enjoyed a quiet, undisturbed slumber. But the first intelligence of the morning was that Lady Hatton and her daughter had left Stoke at midnight, and no one knew where they were gone. Here was a blow to his promising scheme. Day after day passed, and yet he could learn no tidings of the fugitives. At last he ascertained that they were concealed at Oatlands, a house then rented by a cousin of Lady Hatton. Without waiting for a warrant, Sir Edward, accompanied by a dozen sturdy men, all well armed, hastened to Oatlands, and, after two hours' resistance, took the house by assault and battery. This curious piece of family warfare is admirably described by Lady Hatton herself as 'Sir Edward Cook's most notorious riot, committed at my Lord of Arguyl's house, when, without constable or warrant, associated with a dozen fellows well weaponed, without cause being beforehand offered, to have what he would, he took down the doors of the gate-house and of the house itself, and tore the daughter in that barbarous manner from the mother, and would not suffer the mother to come near her.'

Having thus gained possession of his daughter, he carried her off to Stoke, locked her up in an upper chamber, and kept the key of the door in his pocket. Lady Hatton made an attempt to recover her daughter by forcible means; but to her astonishment, for this attempt, and her other proceedings, her husband, now fortified by the King's favour, succeeded in throwing her into prison. Thus with his wife incarcerated in a public prison, and his daughter safely locked up in his own house, the great lawyer, to use his own expression, 'had got upon his wings again,' and forced both his wife and daughter to promise a legal consent to the marriage. Lady Hatton was even induced by the severities of prison to write to the king and promise to settle her lands on her daughter and Sir John Villiers. Thus Sir Edward Coke effected his object. His daughter and Sir John Villiers were married in 1617, at Hampton Court, in the presence of the King and Queen and all the chief nobility of England. The bridal banquet was most splendid, and a masque was performed in the evening; but Lady Hatton was still in confinement. Shortly afterwards she was liberated, and gave a magnificent entertainment at Hatton House, which was honoured by the presence of the King and Queen, but Sir Edward Coke and all his servants were peemptorily excluded. Two years afterwards Sir John Villiers was raised to the peerage, as Viscount Purbeck and Baron Villiers of Stoke Pogis. But the sequel of these family broils was melancholy. Lady Purbeck deserted her husband, and lived with Sir Robert Howard, which rapidly brought on her degradation, imprisonment, and an early death. Lady Hatton pursued her husband with rancorous hatred, and openly avowed her impatience for his death. A report of his death having one day reached her, she immediately left London for Stoke to take possession of his mansion, but on reaching Colnbrook, she met one of

* Disraeli's *Curiosities of Literature*, and *The Story of Corfe Castle*, by Bankes.

his physicians, who informed her of his amendment. On hearing this she returned to London in evident disappointment.

Sir Edward, in his solitary old age, must have viewed the fruits of his own scheme with bitter compunction. When eighty years of age, we are told, he 'felt himself alone on the earth, was suspected by his king, deserted by his friends, and detested by his wife.' His only domestic solace, during the last two years of his life, was the company of his daughter, Lady Purbeck, who, much to her credit, left her paramour to watch over the last hours of her aged father.

Three days before his death, being suspected of possessing seditious writings, his peace was disturbed by Sir Francis Windebank, who came with an order of Council to search his papers, and who carried off more than fifty manuscripts, including his will, which were not returned to the family till 1641. Sir Edward Coke died on the 3rd of September 1634, in his eighty-fourth year. Lady Purbeck then left Stoke, and soon after was imprisoned in the Gatehouse at Lambeth.*

Lady Hatton now took possession of the old manor-house, and occasionally resided in it till her death in 1644. From her, who must have long been the subject of local gossip, the name of Hatton might well be mixed up with the traditions of Stoke; and Gray, by poetic licence, or from want of better information, applied it to the Lord Keeper, who certainly never possessed the old manor-house, nor 'led the brawls' in it. It was, however, honoured by the presence of his royal mistress. Queen Elizabeth, in 1601, paid a visit at Stoke to Sir Edward Coke, who entertained her very sumptuously, and presented her on the occasion with jewels worth from ten to twelve hundred pounds.† In 1647, the old manor-house was for some days the residence of Charles I., when a prisoner in the custody of the parliamentary army.‡ It would have been visited by another of our monarchs had not its then owner refused to admit him. This was Sir Robert Gayer, who, by the bequest of his brother, came into possession of the manor in 1657. At the coronation of Charles II. this eccentric gentleman was made a knight of the Bath, which so strengthened his previous attachment to the House of Stuart that he never would be reconciled to any other dynasty. Soon after William III. had ascended the throne, he visited Stoke, and signified his desire to see the old manor-house. But the irascible old knight burst into a violent rage, vehemently declaring that the king should never come under his roof. 'He has already,' said he, 'got possession of another man's house—he is an usurper—tell him to go back again!' Lady Gayer expostulated; she entreated; she even fell on her knees, and besought her husband to admit the king, who was then actually waiting at the gate. All her efforts were useless. The obstinate knight only became more furious, vociferating—'An Englishman's house is his castle. I shall open and close my door to whom I please. The king,

† Lysons' *Magna Britannia*.

‡ Idem.

I say, shall not come within these walls!' So his majesty returned as he came,—a stranger to the inside of the mansion, and the old knight gloried in his triumph.*

Thus the old manor-house at Stoke was possessed by some very remarkable characters; it entertained one sovereign in all the state and magnificence of royalty; it received another as a prisoner in the custody of his own subjects; it closed its doors against a third, and dismissed him as though he had been an insignificant intruder, and after having thus witnessed the strange and changing scenes of two centuries and a half, it was itself pulled down, with the exception of one wing, in 1789, by its then owner, Granville Penn, Esq., a descendant of the celebrated William Penn, the founder of Pennsylvania. The existing wing of the old house, though only a portion of an inferior part of the mansion, affords a specimen of Tudor architecture, and conveys some idea of the internal arrangement of the aristocratic residences of that period.

MARCH 25.

THE ANNUNCIATION OF THE BLESSED VIRGIN MARY (Lady Day). St Cammin, of Ireland, abbot.

The Annunciation.

This day is held in the Roman Catholic Church as a great festival, in the Anglican Reformed Church as a feast, in commemoration of the message of the angel Gabriel to the Virgin Mary, informing her that the Word of God was become flesh. In England it is commonly called *Lady Day*; in France, *Notre Dame de Mars*. It is a very ancient institution in the Latin Church. Among the sermons of St Augustine, who died in 430, are two regarding the festival of the Annunciation.

'In representations of the Annunciation, the Virgin Mary is shewn kneeling, or seated at a table reading. The lily (her emblem) is usually placed between her and the angel Gabriel, who holds in one hand a sceptre surmounted by a fleur-de-lis, on a lily stalk; generally a scroll is proceeding from his mouth with the words *Ave Maria gratiâ plenâ*; and sometimes the Holy Spirit, represented as a dove, is seen descending towards the Virgin.'—*Calendar of the Anglican Church*.†

In the work here quoted, we find a statement affording strong proof of the high veneration in which the Virgin was formerly held in England, as she still is in Catholic countries; namely, that no fewer than two thousand one hundred and twenty churches were named in her sole honour, besides a hundred and two in which her name was associated with that of some other saint.

Born.—Archbishop John Williams, 1582, *Abercomway*; Bishop George Bull, 1634, *Wells*; Sir Richard Cox, Lord Chancellor of Ireland, 1650, *Bandon*; Joachim Murat, King of Naples, 1771, *Bastide Frontonnière*.

Good Friday.

The day of the Passion has been held as a festival by the Church from the earliest times. In England, the day is one of two (Christmas being the other) on which all business is suspended. In the churches, which are generally well attended, the service is marked by an unusual solemnity.

Before the change of religion, Good Friday was of course celebrated in England with the same religious ceremonies as in other Catholic countries. A dressed figure of Christ being mounted on a crucifix, two priests bore it round the altar, with doleful chants; then, laying it on the ground with great tenderness, they fell beside it, kissed its hands and feet with piteous sighs and tears, the other priests doing the like in succession. Afterwards came the people to worship the assumedly dead Saviour, each bringing some little gift, such as corn and eggs. There was finally a most ceremonious burial of the image, along with the 'singing bread,' amidst the light of torches and the burning of incense, and with flowers to strew over the grave.

The king went through the ceremony of blessing certain rings, to be distributed among the people, who accepted them as infallible cures for cramp. Coming in state into his chapel, he found a crucifix laid upon a cushion, and a carpet spread on the ground before it. The monarch crept along the carpet to the crucifix, as a token of his humility, and there blessed the rings in a silver basin, kneeling all the time, with his almoner likewise kneeling by his side. After this was done, the queen and her ladies came in, and likewise crept to the cross. The blessing of cramp-rings is believed to have taken its rise in the efficacy for that disease supposed to reside in a ring of Edward the Confessor, which used to be kept in Westminster Abbey. There can be no doubt that a belief in the medical power of the cramp-ring was once as faithfully held as any medical maxim whatever. Lord Berners, the accomplished translator of Froissart, while ambassador in Spain, wrote to Cardinal Wolsey, June 21, 1518, entreating him to reserve a few cramp-rings for him, adding that he hoped, with God's grace, to bestow them well.

A superstition regarding bread baked on Good Friday appears to have existed from an early period. Bread so baked was kept by a family all through the ensuing year, under a belief that a few gratings of it in water would prove a specific for any ailment, but particularly for diarrhœa. We see a memorial of this ancient superstition in the use of what are called hot cross-buns, which may now be said to be the most prominent popular observance connected with the day.

In London, and all over England (not, however, in Scotland), the morning of Good Friday

is ushered in with a universal cry of *Hot Cross-Buns!* A parcel of them appears on every breakfast table. It is a rather small bun, more than usually spiced, and having its brown sugary surface marked with a cross. Thousands of poor children and old frail people take up for this day the business of disseminating these quasi-religious cakes, only intermitting the duty during church hours; and if the eagerness with which young and old eat them could be held as expressive of an appropriate sentiment within their hearts, the English might be deemed a pious people. The ear of every person who has ever dwelt in England is familiar with the cry of the street bun-vendors:

One a penny, buns,
Two a penny, buns,
One a penny, two a penny,
Hot cross-buns!

Whether it be from failing appetite, the chilling effects of age, or any other fault in ourselves, we cannot say; but it strikes us that neither in the bakers' shops, nor from the baskets of the street-vendors, can one now get hot cross-buns comparable to those of past times. They want the spice, the crispness, the everything they once had. Older people than we speak also with mournful affection of the two noted bun-houses of Chelsea. Nay, they were *Royal* bun-houses, if their signs could be believed, the popular legend always insinuating that the King himself had stopped there, bought, and eaten of the buns. Early in the present century, families of the middle classes walked a considerable way to taste the delicacies of the Chelsea bun-houses, on the seats beneath the shed which screened the pavement in front. An insane rivalry, of course, existed between the two houses, one pretending to be *The Chelsea Bun-house*, and the other the *Real Old Original Chelsea Bun-house*. Heaven knows where the truth lay, but one thing was certain and assured to the innocent public, that the buns of both were so very good that it was utterly impossible to give an exclusive verdict in favour of either.

A writer, signing himself H. C. B., gives in the *Athenæum* for April 4, 1857, an account of an ancient sculpture in the Museo Borbonico at Rome, representing the miracle of the five barley loaves. The loaves are marked each with a cross on the surface, and the circumstance is the more remarkable, as the *hot cross-bun* is not a part of the observance of the day on the Continent. H. C. B. quotes the late Rev. G. S. Faber for a train of speculation, having for its conclusion that our eating of the hot cross-buns is to be traced back to a pagan custom of worshipping the Queen of Heaven with cakes—a custom to be found alike in China and in ancient Mexico, as well as many other countries. In Egypt, the cakes were horned to resemble the sacred heifer, and thence called *bous*, which in one of its oblique cases is *boun*—in short, *bun!* So people eating these hot cross-buns little know what, in reality, they are about.

WASHING MOLLY GRIME.

In the church of Glenthams, Lincolnshire, there is a tomb with a figure, popularly called

Molly Grime; and this figure was regularly washed every Good Friday by seven old maids of Glenthams, with water brought from Newell Well, each receiving a shilling for her trouble, in consequence of an old bequest connected with some property in that district. About 1832, the property being sold without any reservation of the rent-charge of this bequest, the custom was discontinued.*

GOOD FRIDAY IN ROME.

At Rome, the services in the churches on Good Friday are of the same solemn character as on the preceding day. At the Sistine Chapel, the yellow colour of the candles and torches, and the nakedness of the Pope's throne and of the other seats, denote the desolation of the church. The cardinals do not wear their rings; their dress is of purple, which is their wearing colour; in like manner, the bishops do not wear rings, and their stockings are black. The mace, as well as the soldiers' arms, are reversed. The Pope is habited in a red cope; and he neither wears his ring nor gives his blessing. A sermon is preached by a conventual friar. Among other ceremonies, which we have not space to describe, the crucifix is partially unveiled, and kissed by the Pope, whose shoes are taken off on approaching, to do it homage. A procession takes place (across a vestibule) to the Paolina Chapel, where mass is celebrated by the Grand Penitentiary. In the afternoon, the last *Miserere* is chanted in the Sistine Chapel, on which occasion the crowding is very great. After the *Miserere*, the Pope, cardinals, and other clergy, proceed through a covered passage to St Peter's, in order to venerate the relics of the *True Cross*, the *Lance*, and the *Volto Santo*, which are shewn by the canons from the balcony above the statue of St Veronica. Notwithstanding the peculiar solemnity of the religious services of the day, the shops, public offices, and places of business, also the palazzos where galleries of pictures are shewn, are open as usual—the only external indications of the religious character of the day being the muteness of the bells. This disregard of Good Friday at Rome contrasts strangely with the fact, that Roman Catholics shut their shops and abstain from business on that day in Scotland and other countries where it is in no respect a legal *non dies*.

THE MYSTERY PLAY OF GOOD FRIDAY AT MONACO.

The principality of Monaco is one of the smallest, yet one of the prettiest, possessions in the world. Three short streets, an ancient château well fortified, good barracks, a tolerably large square or place, a church, and fine public gardens, placed on a rock which descends perpendicularly into the Mediterranean five hundred feet deep, and you have there the whole of this Lilliputian principality. High mountains rise behind the town, and shelter it from the north wind, whilst the mildness of the climate is attested by the vigorous growth of the palm trees and cactus, which stretches its knotty arms, set with thorns, over the rocks, reminding the passer-by of beggars

* Edwards's *Remarkable Charities*, 100.

who hold out their malformations or solicit attention by their contortions. The mountain tops dazzle you with their snowy mantle, whilst the gardens are filled with the sweet perfume of Bengal roses, orange blossom, geraniums, and Barbary figs, which seem to have found here their natal soil. This little spot was given in the tenth century to the Grimaldi family, of Genoa, by a special favour of the Emperor, but it was a source of continual jealousy; the Republic of Genoa attacking it on the one side, and Charles of Anjou on the other.

In 1300 it was restored to the Grimaldi, but shortly after fell into the hands of the Spinolas, an equally illustrious Genoese family, when it became one of the centres for the Ghibellin faction. Yet in 1329 it was restored to its rightful owners, and remained in their hands by the female side up to the last prince. The château is an interesting edifice of the middle ages, with its two towers and double gallery of arcades. The court is large, and adorned with fine frescoes by Horace de Ferrari; whilst the staircase is as magnificent as that at Fontainebleau, and entirely of white marble.

We will enter this little city with the crowd of strangers which the procession of Good Friday annually collects. When the services of the evening are over, about nine o'clock preparations are made for a display which is allegorical, symbolical, and historical; the intention is to depict the different scenes of Christ's passion, and his path to the cross. The members of a brotherhood act the different parts, and a special house preserves the costumes, decorations, lay figures, and other articles necessary for the representation. Torches are lighted, and the drums of the national guard supply the place of bells, which are wanting. There are numbers of stations on the way to Calvary, and a different scene enacted at each; the same person who represents Christ does not do so throughout, but there is one who drinks the vinegar, another who is scourged, another bears the cross. Each is represented by an old man with white hair and beard, clothed in scarlet robes, a crown of thorns, and the breast painted with vermilion to imitate drops of blood. The four doctors of the law wear black robes and an advocate's cap; from time to time they draw a large book from their pocket, and appearing to consult together, shew by significant gestures that the text of the law is decisive, and they can do no other than condemn Jesus. Pontius Pilate is near to them, escorted by a servant, who carries a large white parasol over his head; whilst the Roman prefect wears the dress of the judge of an assize court, short breeches and a black toga. Behind this majestic personage walks a slave in a large white satin mantle, carrying a silver ewer, which he presents to the Governor when he pronounces the words 'I wash my hands of it.' King Herod is not forgotten in the group; he will be recognised by his long scarlet mantle, his wig with three rows of curls, his grand waistcoat, and gilt paper crown placed on his grey hair. Then comes the *Colonel of Pontius Pilate's Army* (so described in the list), distinguished by his great height and extreme leanness: his white trousers were

fastened round his legs after the fashion of the Gauls, he had a Roman cuirass, the epaulettes of a general, a long rapier, white silk stockings, a gigantic helmet, over which towered a still higher plume of feathers. This military figure was mounted on a horse of the small Sardinian breed, so that the legs of the rider touched the ground. St Peter with the cock, Thomas the incredulous, the Pharisees and Scribes, were all there; none were forgotten. As for Judas, his occupation consisted in throwing himself every moment into his master's arms, and kissing him in a touching manner. Adam and Eve must not be forgotten, under the form of a young boy and girl, in costumes of Louis Quinze, with powdered wigs, and eating apples off the bough of an orange tree!

The procession advances; the Jewish nation, represented by young persons dressed in blue blouses with firemen's helmets, form in rank to insult the martyred God as he passes. Here it is a tall rustic who gives him a blow with his fist; there a woman offers vinegar and gall; still further, the Roman soldiers, at a signal from the beadle, throw themselves forward, lance in hand, and make a feint of piercing him with sanguinary fury, drawing back only to repeat the same formidable movement. The Jews brandish menacing axes, whilst the three Maries, dressed in black, their faces covered with lugubrious veils, weep and lament bitterly.

Finally, there is Christ on the cross, and Christ laid in the tomb; but this part of the scene is managed by puppets suitably arranged.

If we place all these scenes in the narrow old streets of Monaco, passing through antique arcades, and throw over the curious spectacle the trembling light of a hundred torches and a thousand wax lights, the stars shining in the dark blue sky, the distant chanting of the monks, the charm of mystery and poetry, and the scent of orange blossoms and geraniums, we shall feel that we have retrograded many centuries, and can fancy ourselves transported into the dark middle ages, to the time when the mystery plays, of which this is a relic, replaced the Greek tragedy.

The Holy Coat of Treves.

The ancient archiepiscopal city of Treves, on the Moselle, is remarkable for possessing among its cathedral treasures, the coat reputed to be that worn by the Saviour at his execution, and for which the soldiers cast lots. Its history is curious, and a certain antiquity is connected with it, as with many other 'relics' exhibited in the Roman Catholic Church, and which gives them an interest irrespective of their presumed sacred character. This coat was the gift of the famed Empress Helena, the mother of Constantine the Great, and the 'discoverer' of so large a number of memorials of the founders of Christianity. In her day, Treves was the capital of Belgic Gaul, and the residence of the later Roman Emperors; it is recorded that she converted her palace into the Cathedral, and endowed it with this treasure—the seamless coat of the Saviour. That it was a treasure to the Cathedral and city is apparent from the records of great pilgrimages performed at intervals during the middle ages, when this coat was exhibited; each pilgrim offered money

to the shrine, and the town was enriched by their general expenditure. Unlike other famed relics, this coat was always exhibited sparingly. The Church generally displays its relics at intervals of a few years, but the Holy Coat was only seen once in a century; it was then put away by the chief authorities of the Cathedral in some secret place known only to a few. In Murray's *Hand-book for Travellers*, 1841, it is said, 'The existence of this relic, at present, is rather doubtful—at least, it is not visible; the attendants of the church say it is walled up.' All doubts were soon after removed, for in 1844 the Archbishop Arnaldi announced a centenary jubilee, at which the Holy Coat was to be exhibited. It produced a great effect, and Treves exhibited such scenes as would appear rather to belong to the fourteenth than the nineteenth century. Pilgrims came from all quarters, many in large bands preceded by banners, and marshalled by their village priests. It was impossible to lodge the great mass of these foot-sore travellers, and they slept on inn-stairs, in outhouses, or even in the streets, with their wallets for their pillows. By the first dawn they took up their post by the Cathedral doors; and long before these were opened, a line of many hundreds was added: sometimes the line was more than a mile in length, and few persons could reach the high altar where the coat was placed in less time than three hours. The heat, dust, and fatigue were too much for many, who fainted by the way; yet hour after hour, a dense throng passed round the interior of the Cathedral, made their oblation, and retired. The coat is a loose garment with wide sleeves, very simple in form, of coarse material, dark brown in colour, probably the result of its age, and entirely without seam or decoration. Our cut is copied from the best of the prints published

THE HOLY COAT OF TREVES.

at Treves during the jubilee, and will convey a clear impression of a celebrated relic which few are destined to examine. The dimensions given on this engraving state that the coat measures from the extremity of each sleeve, 5 feet 5 inches; the length from collar to the lowermost edge being 5 feet 2 inches. In parts it is tender, or threadbare; and some few stains upon it are reputed to be those of the Redeemer's blood. It is reputed to have worked many miracles in the way of cures, and its efficacy has never been doubted in Treves.

The *éclat* which might have attended the exhibition of 1844, was destined to an opposition from the priestly ranks of the Roman Catholic Church itself. Johann Ronge, who already had become conspicuous as a foremost man among the reforming clergy of Germany, addressed an eloquent epistle to the Archbishop of Treves, indignantly denouncing a resuscitation of the superstitious observances of the middle ages. This letter produced much effect, and so far excited the wrath of Rome, that Ronge was excommunicated; but he was far from weakened thereby. Before the January of the following year he was at the head of an organized body of Catholics prepared to deny the supremacy of Rome; but the German governments, alarmed at the spread of freedom of opinion, suppressed the body thus called into vitality, and Ronge was ultimately obliged to leave his native land. In 1850 he came to England, and it is somewhat curious to reflect that the bold priest who alarmed Rome, lives the quiet life of a teacher in the midst of busy London, very few of whose inhabitants are conversant with the fact of his residence among them.

PENITENT WITH CROWN OF THORNS.

In the Lent processions of Penitents which take place in the Southern Italian states, the persons who form them are so completely enveloped in a peculiar dress that nothing but the

ITALIAN PENITENT IN LENT PROCESSIONS.

eyes and hands are visible. A long white gown covers the body, and a high pointed hood envelops the head, spreading like a heavy tippet over the shoulders; holes are cut to allow of sight, but there are none for breathing. The sketch here engraved was made at Palermo, in Sicily, on the Good Friday of 1861, and displays these peculiarities, with the addition of others, seldom seen even at Rome. Each penitent in the procession wore upon the hood a crown of thorns twisted round the brow and over the head. A thick rope was passed round the neck, and looped in front of the breast, in which the uplifted hands of the penitent rested in the attitude of prayer. Thus, deprived of the use of hands and almost of sight, the slow movement of these lines of penitents through the streets was regulated by the clerical officials who walked beside and marshalled them.

MARCH 26.

St Braulio, Bishop of Saragossa, 646. St Ludger, Bishop of Munster, Apostle of Saxony, 809.

HOLY SATURDAY IN ROME.

On the reading of a particular passage in the service of the Sistine Chapel, which takes place about half-past eleven o'clock, the bells of St Peter's are rung, the guns of St Angelo are fired, and all the bells in the city immediately break forth, as if rejoicing in their renewed liberty of ringing. This day, at St Peter's, the only ceremony that need be noticed is the blessing of the fire and the paschal candle. For this purpose, *new fire*, as it is called, is employed. At the beginning of mass, a light, from which the candles and the charcoal for the incense is kindled, is struck from a flint in the sacristy, where the chief sacristan privately blesses the water, the fire, and the five grains of incense which are to be fixed in the paschal candle. Formerly, all the fires in Rome were lighted anew from this holy fire, but this is no longer the case. After the service, the cardinal vicar proceeds to the baptistry of St Peter's; there having blessed and exorcised the water for baptism, and dipped into the paschal candle, concludes by sprinkling some of the water on the people. Catechumens are afterwards baptized, and deacons and priests are ordained, and the tonsure is given.

DEATH OF SIR JOHN VANBRUGH.

In a diminutive house, which he had built for himself at Whitehall with the ruins of the old

palace, died Sir John Vanbrugh, 'a man of wit and man of honour,' leaving a widow many years younger than himself, but no children, his only son having been killed at the battle of Tournay.

Vanbrugh was of Dutch descent, and the son of a sugar-baker at Chester, where he was born in 1666. We have no account of his being educated for the profession of an architect: he is believed to have been sent to France at the age of nineteen, and there studied architecture; and being detected in making drawings of some fortifications, he was imprisoned in the Bastille. He became a dramatic writer and a herald; in the first he excelled, but his wit and vivacity were of a loose kind: hence Pope says, 'Van wants grace,' &c. Still he borrowed little, and when he translated, he enriched his author. He built, as a speculation of his own, a theatre in the Haymarket, which afterwards became the original Opera-house, on the site of the present building. In this scheme he had Congreve for his dramatic coadjutor, and Betterton for manager, by whom the house was opened in 1706; and here Vanbrugh's admirable comedy of *The Confederacy* was first brought out.

Many years before this, Vanbrugh had acquired some reputation for architectural skill; for in 1695 he was appointed one of the commissioners for completing the palace at Greenwich, when it was about to be converted into an hospital. In 1702, he produced the palace of Castle Howard for his patron, the Earl of Carlisle, who being then Earl Marshal of England, bestowed upon Vanbrugh the not unprofitable appointment of Clarencieux, King-at-Arms. His work of Castle Howard recommended him as architect to many noble and wealthy employers, and to the appointment to build a palace to be named after the victory at Blenheim. This brought the architect vexation as well as fame; for Duchess Sarah, 'that wicked woman of Marlborough,' as Vanbrugh calls her, discharged him from his post of architect, and refused to pay what was due to him as salary. Sir Joshua Reynolds declared Vanbrugh to have been defrauded of the due reward of his merit, by the wits of the time, who knew not the rules of architecture. 'Vanbrugh's fate was that of the great Perault: both were objects of the petulant sarcasms of factious men of letters; and both have left some of the fairest monuments which, to this day, decorate their several countries,—the façades of the Louvre, Blenheim, and Castle Howard.' Reynolds was among the first to express his approbation of Vanbrugh's style, and to bear his testimony as an artist to the picturesque magnificence of Blenheim.

The wits were very severe on Vanbrugh. Swift, speaking of his diminutive house at Whitehall, and the stupendous pile at Blenheim, says of the former:

'At length they in the corner spy
A thing resembling a goose pye.'

Of the palace at Blenheim:

'That, if his Grace were no more skill'd in
The art of battering walls than building,
We might expect to see next year
A mousetrap man chief engineer.'

This ridicule pursued Vanbrugh to his epitaph,

for after his remains had been deposited in Wren's beautiful church of St Stephen's, Walbrook, Dr Evans, alluding to Vanbrugh's massive style, wrote:

'Lie heavy on him, earth, for he
Laid many a heavy load on thee.'

A ZEALOUS FRIEND OF ST PAUL'S CATHEDRAL.

On the 26th of March 1620, being Midlent Sunday, a remarkable assemblage took place around St Paul's Cross, London.

St Paul's Cathedral had lain in a dilapidated state for above fifty years, having never quite recovered the effects of a fire which took place in 1561. At length, about 1612, an odd busy being, called Henry Farley—one of those people who are always going about poking the rear of the public to get them to do something—took up the piteous call of the fine old church, resolved never to rest till he had procured its thorough restoration. He issued a variety of printed appeals on the subject, beset state officers to get bills introduced into Parliament, and in 1616 had three pictures painted on panel; one representing a procession of grand personages, another the said personages seated at a sermon at St Paul's Cross, both being incidents which he wished to see take place as a commencement to the desired work. The cut on next page is a reduction of the latter extraordinary picture, which Farley lived to see realized on the day cited at the head of this little article.

The picture represents that curious antique structure, the Preaching Cross, which for centuries existed in the vacant space at the north-east corner of St Paul's churchyard, till it was demolished by a Puritan lord mayor at the beginning of the Civil War. A gallery placed against the choir of the church contains, in several compartments, the King, Queen, and Prince of Wales, the Lord Mayor, &c., while a goodly corps of citizens sit in the area in front of the Cross. Most probably, when the King came in state with his family and court, to hear the sermon which was actually preached here on Midlent Sunday, 1620, the scene was very nearly what is here presented.

One of Farley's last efforts for the promotion of the good work he had taken in hand, was the publication of a tract in twenty-one pages, in the year 1621. After some other matters, it gives a petition to the King, written in the name of the church, which introduces Farley to notice as 'the poore man who hath been my voluntary servant these eight years, by books, petitions, and other devises, even to his owne dilapidations.' It also contains a petition which Farley had prepared to be given to the King two days before the Midlent sermon, but which the Master of Bequests had taken away before the King could read it, 'as many had been so taken before, to the great hindrance and grief of the poore author.' In this address, the church thus speaks:—'Whereas, to the exceeding great joy of all my deare friends, there is certaine intelligence that your Highnesse will visit me on Sunday next, and the rather I believe it, for that I have had more sweeping, brushing, and cleansing than I have had in forty

years before.' Then the author adds a recital of the various efforts he had made to attract the royal attention to St Paul's. He had assailed him with 'carols' on various occasions. He had published a 'Dream,' prefiguring what he wished to see effected. Towards the last, he tells the church, 'I grew much dismayed . . . Many rubs I ran through; many scoffes and scornes I did undergo; forsaken by butterflie friends; laughed at and derided by your enemies; pursued after by wolves of Wood Street and foxes of the Poultry, . . . sometimes at the point of death and despaire. Instead of serving my Prince (which I humbly desired, though but as a doorkeeper in you), I was presst for the service of King Lud [put into Ludgate prison], when all the comfort I had was that I could see you, salute you, and condole with your miseries [the prison being in a tower crossing the street of Ludgate Hill; consequently commanding a view of the west front of the church]. My poore clothes and ragges I could not compare to anything better than to your west end, and my service to you nothing lesse than bondage.' In the midst of his troubles, when thinking of quitting all and going to Virginia, he heard of the King's intended visit, and was comforted. The tract ends with St Paul's giving Mr Farley a promise that, for his long and faithful services, he should have a final resting-place within her walls.

MARCH 27.

St John, of Egypt, hermit, 394. St Rupert, or Robert, Bishop of Saltzburg, 718.

Easter.

Easter, the anniversary of our Lord's resurrection from the dead, is one of the three great festivals of the Christian year,—the other two being Christmas and Whitsuntide. From the earliest period of Christianity down to the present day, it has always been celebrated by believers with the greatest joy, and accounted the Queen of Festivals. In primitive times it was usual for Christians to salute each other on the morning of this day by exclaiming, 'Christ is risen;' to which the person saluted replied, 'Christ is risen indeed;' or else, 'And hath appeared unto Simon;'—a custom still retained in the Greek Church.

The common name of this festival in the East was the *Paschal Feast*, because kept at the same

THE PREACHING CROSS, ST PAUL'S.

time as the *Pascha*, or Jewish passover, and in some measure succeeding to it. In the sixth of the Ancyran Canons it is called the *Great Day*. Our own name *Easter* is derived, as some suppose, from *Eostre*, the name of a Saxon deity, whose feast was celebrated every year in the spring, about the same time as the Christian festival—the name being retained when the character of the feast was changed; or, as others suppose, from *Oster*, which signifies rising. If the latter supposition be correct, Easter is in name, as well as reality, the feast of the resurrection.

Though there has never been any difference of opinion in the Christian church as to *why* Easter is kept, there has been a good deal as to *when* it ought to be kept. It is one of the moveable feasts; that is, it is not fixed to one particular day—like Christmas Day, *e. g.*, which is always kept on the 25th of December—but moves backwards or forwards according as the full moon next after the vernal equinox falls nearer or further from the equinox. The rule given at the beginning of the Prayer-book to find Easter is this: 'Easter-day is always the first *Sunday* after the full moon which happens upon or next after the twenty-first day of *March*; and if the full moon happens upon a *Sunday*, Easter-day is the *Sunday* after.'

The paschal controversy, which for a time divided Christendom, grew out of a diversity of custom. The churches of Asia Minor, among whom were many Judaizing Christians, kept their paschal feast on the same day as the Jews kept their passover; *i. e.* on the 14th of Nisan, the Jewish month corresponding to our March or April. But the churches of the West, remembering that our Lord's resurrection took place on the Sunday, kept their festival on the Sunday following the 14th of Nisan. By this means they hoped not only to commemorate the resurrection on the day on which it actually occurred, but also to distinguish themselves more effectually from the Jews. For a time this difference was borne with mutual forbearance and charity. And when disputes began to arise, we find that Polycarp, the venerable bishop of Smyrna, when on a visit to Rome, took the opportunity of conferring with Anicetas, bishop of that city, upon the question. Polycarp pleaded the practice of St Philip and St John, with the latter of whom he had lived, conversed, and joined in its celebration; while Anicetas adduced the practice of St Peter and St Paul. Concession came from neither side, and so the matter dropped; but the two bishops continued in Christian friendship and concord. This was about A.D. 158.

Towards the end of the century, however, Victor, bishop of Rome, resolved on compelling the Eastern churches to conform to the Western practice, and wrote an imperious letter to the prelates of Asia, commanding them to keep the festival of Easter at the time observed by the Western churches. They very naturally resented such an interference, and declared their resolution to keep Easter at the time they had been accustomed to do. The dispute henceforward gathered strength, and was the source of much bitterness during the next century. The East was divided from the West, and all who, after the example of the Asiatics, kept Easter-day on the 14th, whether that day were Sunday or not, were styled *Quartodecimans* by those who adopted the Roman custom.

One cause of this strife was the imperfection of the Jewish calendar. The ordinary year of the Jews consisted of 12 lunar months of $29\frac{1}{2}$ days each, or of 29 and 30 days alternately; that is, of 354 days. To make up the 11 days' deficiency, they intercalated a thirteenth month of 30 days every third year. But even then they would be in advance of the true time without other intercalations; so that they often kept their passover before the vernal equinox. But the Western Christians considered the vernal equinox the commencement of the natural year, and objected to a mode of reckoning which might sometimes cause them to hold their paschal feast twice in one year and omit it altogether the next. To obviate this, the fifth of the apostolic canons decreed that, 'If any bishop, priest, or deacon, celebrated the Holy Feast of Easter before the vernal equinox, as the Jews do, let him be deposed.'

At the beginning of the fourth century, matters had gone to such a length, that the Emperor Constantine thought it his duty to take steps to allay the controversy, and to insure uniformity

of practice for the future. For this purpose, he got a canon passed in the great Œcumenical Council of Nice (A.D. 325), 'That everywhere the great feast of Easter should be observed upon one and the same day; and that not the day of the Jewish passover, but, as had been generally observed, upon the Sunday afterwards.' And to prevent all future disputes as to the time, the following rules were also laid down:

1. 'That the twenty-first day of March shall be accounted the vernal equinox.'
2. 'That the full moon happening upon or next after the twenty-first of March, shall be taken for the full moon of Nisan.'
3. 'That the Lord's-day next following that full moon be Easter-day.'
4. 'But if the full moon happen upon a Sunday, Easter-day shall be the Sunday after.'

As the Egyptians at that time excelled in astronomy, the Bishop of Alexandria was appointed to give notice of Easter-day to the Pope and other patriarchs. But it was evident that this arrangement could not last long; it was too inconvenient and liable to interruptions. The fathers of the next age began, therefore, to adopt the golden numbers of the Metonic cycle, and to place them in the calendar against those days in each month on which the new moons should fall during that year of the cycle. The Metonic cycle was a period of nineteen years. It had been observed by Meton, an Athenian philosopher, that the moon returns to have her changes on the same month and day of the month in the solar year after a lapse of nineteen years, and so, as it were, to run in a circle. He published his discovery at the Olympic Games, B.C. 433, and the cycle has ever since borne his name. The fathers hoped by this cycle to be able always to know the moon's age; and as the vernal equinox was now fixed to the 21st of March, to find Easter for ever. But though the new moon really happened on the same day of the year after a space of nineteen years as it did before, it fell an hour earlier on that day, which, in the course of time, created a serious error in their calculations.

A cycle was then framed at Rome for 84 years, and generally received by the Western church, for it was then thought that in this space of time the moon's changes would return not only to the same day of the month, but of the week also. Wheatley tells us that, 'During the time that Easter was kept according to this cycle, Britain was separated from the Roman empire, and the British churches for some time after that separation continued to keep Easter according to this table of 84 years. But soon after that separation, the Church of Rome and several others discovered great deficiencies in this account, and therefore left it for another which was more perfect.'—*Book on the Common Prayer*, p. 40. This was the Victorian period of 532 years. But he is clearly in error here. The Victorian period was only drawn up about the year 457, and was not adopted by the Church till the fourth Council of Orleans, A.D. 541. Now from the time the Romans finally left Britain (A.D. 426), when he supposes both churches to be using the cycle of 84

years, till the arrival of St Augustine (A.D. 596), the error can hardly have amounted to a difference worth disputing about. And yet the time the Britons kept Easter must have varied considerably from that of the Roman missionaries to have given rise to the statement that they were Quartodecimans, which they certainly were not; for it is a well-known fact that British bishops were at the Council of Nice, and doubtless adopted and brought home with them the rule laid down by that assembly. Dr Hooke's account is far more probable, that the British and Irish churches adhered to the Alexandrian rule, according to which the Easter festival could not begin before the 8th of March; while according to the rule adopted at Rome and generally in the West, it began as early as the fifth. 'They (the Celts) were manifestly in error,' he says; 'but owing to the haughtiness with which the Italians had demanded an alteration in their calendar, they doggedly determined not to change.'—*Lives of the Archbishops of Canterbury*, vol. i. p. 14. After a good deal of disputation had taken place, with more in prospect, Oswy, King of Northumbria, determined to take the matter in hand. He summoned the leaders of the contending parties to a conference at Whitby, A.D. 664, at which he himself presided. Colman, bishop of Lindisfarne, represented the British church. The Romish party were headed by Agilbert, bishop of Dorchester, and Wilfrid, a young Saxon. Wilfrid was spokesman. The arguments were characteristic of the age; but the manner in which the king decided irresistibly provokes a smile, and makes one doubt whether he were in jest or earnest. Colman spoke first, and urged that the custom of the Celtic church ought not to be changed, because it had been inherited from their forefathers, men beloved of God, &c. Wilfrid followed: 'The Easter which we observe I saw celebrated by all at Rome: there, where the blessed apostles, Peter and Paul, lived, taught, suffered, and were buried.' And concluded a really powerful speech with these words: 'And if, after all, that Columba of yours were, which I will not deny, a holy man, gifted with the power of working miracles, is he, I ask, to be preferred before the most blessed Prince of the Apostles, to whom our Lord said, "Thou art Peter, and upon this rock will I build my church, and the gates of hell shall not prevail against it; and to thee will I give the keys of the kingdom of heaven"?''

The King, turning to Colman, asked him, 'Is it true or not, Colman, that these words were spoken to Peter by our Lord?' Colman, who seems to have been completely cowed, could not deny it. 'It is true, O King.' 'Then,' said the King, 'can you shew me any such power given to your Columba?' Colman answered, 'No.' 'You are both, then, agreed,' continued the King, 'are you not, that these words were addressed principally to Peter, and that to him were given the keys of heaven by our Lord?' Both assented. 'Then,' said the King, 'I tell you plainly, I shall not stand opposed to the door-keeper of the kingdom of heaven; I desire, as far as in me lies, to adhere to his precepts and obey his commands, lest by offending him who keepeth

the keys, I should, when I present myself at the gate, find no one to open to me.'

This settled the controversy, though poor honest Colman resigned his see rather than submit to such a decision.

On Easter-day depend all the moveable feasts and fasts throughout the year. The nine Sundays before, and the eight following after, are all dependent upon it, and form, as it were, a body-guard to this Queen of Festivals. The nine preceding are the six Sundays in Lent, Quinquagesima, Sexagesima, and Septuagesima; the eight following are the five Sundays after Easter, the Sunday after Ascension Day, Whit Sunday, and Trinity Sunday.

Easter Customs.

The old Easter customs which still linger among us vary considerably in form in different parts of the kingdom. The custom of distributing the 'pace' or 'pasche ege,' which was once almost universal among Christians, is still observed by children, and by the peasantry in Lancashire. Even in Scotland, where the great festivals have for centuries been suppressed, the young people still get their hard-boiled dyed eggs, which they roll about, or throw, and finally eat. In Lancashire, and in Cheshire, Staffordshire, and Warwickshire, and perhaps in other counties, the ridiculous custom of 'lifting' or 'heaving' is practised. On Easter Monday the men lift the women, and on Easter Tuesday the women lift or heave the men. The process is performed by two lusty men or women joining their hands across each other's wrists; then, making the person to be heaved sit down on their arms, they lift him up aloft two or three times, and often carry him several yards along a street. A grave clergyman who happened to be passing through a town in Lancashire on an Easter Tuesday, and having to stay an hour or two at an inn, was astonished by three or four lusty women rushing into his room, exclaiming they had come 'to lift him.' 'To lift me!' repeated the amazed divine; 'what can you mean?' 'Why, your reverence, we're come to lift you, 'cause it's Easter Tuesday.' 'Lift me because it's Easter Tuesday? I don't understand. Is there any such custom here?' 'Yes, to be sure; why, don't you know? all us women was lifted yesterday; and us lifts the men to-day in turn. And in course it's our reights and duties to lift 'em.' After a little further parley, the reverend traveller compromised with his fair visitors for half-a-crown, and thus escaped the dreaded compliment. In Durham, on Easter Monday, the men claim the privilege to take off the women's shoes, and the next day the women retaliate. Anciently, both ecclesiastics and laics used to play at ball in the churches for tansycakes on Eastertide; and, though the profane part of this custom is happily everywhere discontinued, tansycakes and tansy-puddings are still favourite dishes at Easter in many parts. In some parishes in the counties of Dorset and Devon, the clerk carries round to every house a few white cakes as an Easter offering; these cakes, which are about the eighth of an inch thick, and of two sizes,—the larger being seven or eight inches, the smaller about five in diameter,

—have a mingled bitter and sweet taste. In return for these cakes, which are always distributed after Divine service on Good Friday, the clerk receives a gratuity according to the circumstances or generosity of the householder.

Easter Sunday in Rome.

At Rome, as might be expected, Easter Sunday is celebrated with elaborate ceremonials, for

which preparations have been making all the previous week.* The day is ushered in by the firing of cannons from the castle of St Angelo, and about 7 o'clock, carriages with ladies and gentlemen are beginning to pour towards St Peter's. That magnificent basilica is found to be richly decorated for the occasion, the altars are freshly ornamented, and the lights around the tomb and figure of St Peter are now blazing after their temporary extinction. According to

THE POPE CARRIED IN ST PETER'S CHURCH ON EASTER DAY.

usage, the Pope officiates this day at mass in St Peter's, and he does so with every imposing accessory that can be devised. From a hall in the adjoining palace of the Vatican, he is borne into the church, under circumstances of the utmost

splendour. Seated in his *Sedia Gestatoria*, his vestments blaze with gold; on his head he wears the Tiara, a tall round gilded cap representing a

* The description which follows is prepared by a gentleman who witnessed the ceremonials in 1862.

triple crown, and which is understood to signify spiritual power, temporal power, and a union of both. Beside him are borne the *flabelli*, or large fans, composed of ostrich feathers, in which are set the eye-like parts of peacocks' feathers, to signify the eyes or vigilance of the church. Over him is borne a silk canopy richly fringed. After officiating at mass at the high altar, the Pope is, with the same ceremony, and to the sound of music, borne back through the crowded church, and then ascends to the balcony over the central doorway. There rising from his chair of state, and environed by his principal officers, he pronounces a benediction, with indulgences and absolution. This is the most imposing of all the ceremonies at Rome at this season, and the concourse of people in the area in front of St Peter's is immense. On the occasion in 1862, there were, in addition, at least 10,000 French troops. The crowd is most dense almost immediately below the balcony at which the Pope appears; for there papers are thrown down containing a copy of the prayers that have been uttered, and ordinarily there is a scramble to catch them. The prayers, it need hardly be said, are in Latin.* On the evening of Easter Sunday, the dome and other exterior parts of St Peter's are beautifully illuminated with lamps.

THE BIDDENDEN CAKES.

Hasted, in his *History of Kent* (1790), states that, in the parish of Biddenden, there is an endowment of old, but unknown date, for making a distribution of cakes among the poor every Easter Sunday in the afternoon. The source of the benefaction consists in twenty acres of land, in five parcels, commonly called the *Bread and Cheese Lands*. Practically, in Mr Hasted's time, six hundred cakes were thus disposed of, being given to persons who attended service, while 270 loaves of three and a half pounds weight each, with a pound and a half of cheese, were given in addition to such as were parishioners.

The cakes distributed on this occasion were impressed with the figures of two females side by side and close together. Amongst the country people it was believed that these figures represented two maidens named Preston, who had left the endowments; and they further alleged that these ladies were twins, who were born in bodily union—that is, joined side to side, as represented on the cakes; who lived nearly thirty years in this connection, when at length one of them died, necessarily causing the death of the other in a few hours. It is thought by the Biddenden people that the figures on the cakes are meant as a memorial of this natural prodigy, as well as of the charitable disposition of the two ladies. Mr Hasted, however, ascertained that the cakes had only been printed in this manner within the preceding fifty years, and concluded more rationally that the figures were meant to represent two widows, 'as the general objects of a charitable benefaction.'

If Mr Hasted's account of the Biddenden cakes be the true one, the story of the conjoined twins

* A translation, along with a number of details we have not space to notice, will be found in Murray's *Hand-book to Rome*.

—though not inferring a thing impossible or unexampled—must be set down as one of those cases, of which we find so many in the legends of the common people, where a tale is invented to account for certain appearances, after the real meaning of the appearances was lost. It is a process most natural and simple. First, apparently, some one suggests how the circumstance *might be* accounted for; next, some one blunderingly states that the circumstance *is* so accounted for, the only change being one from the subjunctive to the indicative mood. In this way, a vast number of old monuments, and a still greater number of the names of places, come to have grandam tales of the most absurd kind connected with them, as histories of their origin.

There is, for example, in the Greyfriars' churchyard, Edinburgh, a mausoleum composed of a recumbent female figure with a pillar-supported canopy over her, on which stand four female figures at the several corners. The popular story is, that the recumbent lady was poisoned by her four daughters, whose statues were afterwards placed over her in eternal remembrance of their wickedness; the fact being, that the four figures were those of Faith, Charity, Justice, &c., favourite emblematical characters in the age when the monument was erected, and the object in placing them there was merely ornamental.

About Easter 1333, a curious occurrence took place at Durham. 'The Queen of Edward III. having followed the king to that city, was conducted by him through the gate of the abbey to the prior's lodgings, where, having supped and gone to bed with her royal lord, she was soon disturbed by one of the monks, who readily intimated to the king that St Cuthbert by no means loved the company of her sex. The queen, upon this, got out of bed, and having hastily dressed herself, went to the castle for the remaining part of the night, asking pardon for the crime she had inadvertently been guilty of against the patron saint of their church.'—Brand's *History of Newcastle*, ii. 408.

JEMMY CAMBER, ONE OF KING JAMES'S FOOLS.

During his reign in Scotland, King James had a fool or court jester, named Jemmy Camber, who lodged with a laundress in Edinburgh, and was making love to her daughter, when death cut him off in an unexpected and singular manner, as related by Robert Armin in his *Nest of Ninnies*, published in 1608.

'The chamberlaine was sent to see him there (at the laundress's), who, when he came, found him fast asleep under the bed stark naked, bathing in nettles, whose skinn when we wakened him was all blistered grievously. The king's chamberlaine bid him arise and come to the king. "I will not," quoth he, "I will go make my grave." See how things chanced; he spake truer than he was aware. For the cham-

berlaine, going home without him, tolde the king his answe. Jemmy rose, made him ready, takes his horse, and rides to the churchyard in the high towne, where he found the sexton (as the custom is there) making nine graves—three for men, three for women, and three for children; and whoso dyes next, first comes, first served. "Lend mee thy spade," says Jemmy, and with that digs a hole, which hole hee bids him make for his grave; and doth give him a French crowne; the man, willing to please him (more for his gold than his pleasure), did so; and the foole gets upon his horse, rides to a gentleman of the towne, and on the sodaine within two houres after dyed; of whom the sexton telling, he was buried there indeed. Thus you see, fooles have a guesse at wit sometime, and the wisest could have done no more, nor so much. But thus this fat foole fills a leane grave with his carkasse; upon which grave the king caused a stone of marble to bee put, on which poets writ these lines in remembrance of him:

"He that gaed all men till jeare,
Jemy a Camber he ligges here;
Pray for his saule, for he is geane,
And here a ligges beneath this steane."

EASTER FESTIVITIES IN CHESTER.

Most people are aware how much of a mediæval character still pertains to the city of Chester, —how its gable-fronted houses, its 'Rows' (covered walks over the ground-floors), and its castellated town walls, combine to give it an antique character wholly unique in England. It is also well known how, in the age succeeding the Conquest, this city was the seat of the despotic military government of Hugh d'Avranches, commonly called, from his savage character, *Hugo Lupus*, whose sword is still preserved in the British Museum.

Chester was endowed by Hugo with two yearly fairs, at Midsummer and Michaelmas, on which occasions criminals had free shelter in it for a month, as indicated by a glove hung out at St Peter's Church,—for gloves were a manufacture at Chester. It was on these occasions that the celebrated Chester mysteries, or scriptural plays, were performed.

As the tourist walks from the Watergate along the ancient walls towards the Cathedral, he cannot fail to notice the beautiful meadow lying between him and the river; it is the Rood-eye, or as formerly written, the Roodee; the scene of the sports for which Chester was so long famous, eye being a term used for a waterside meadow; and the legend of the rood or cross was the following:—A cross was erected at Hawarden, by which a man was unfortunately killed; and in accordance with the superstition of those days, the cross was made to bear the blame of the accident, and was thrown into the river; for which sacrilegious act the men received the name of Ha'rden Jews. Floated down the stream, it was taken up at the Rood-eye, and became very

celebrated for the number of miracles it wrought. Sad to relate, after the Reformation it again became the subject of scorn and contempt; for

HIGH CROSS OF CHESTER.

the master of the grammar-school converted it into a block on which to chastise his refractory pupils, and it was finally burnt, perhaps by the very scholars who had suffered on it.

We need not wonder that in so ancient and thriving a city old customs and games were well kept up; and to begin with those of the great festival of Easter. Then might be seen the mayor and corporation, with the twenty guilds established in Chester, with their wardens at their heads, setting forth in all their pageantry to the Rood-eye to play at football. The mayor, with his mace, sword, and cap of maintenance, stood before the cross, whilst the guild of Shoemakers, to whom the right had belonged from time immemorial, presented him with the ball of the value of 'three and four pence or above,' and all set to work right merrily. But, as too often falls out in this game, 'greate strife did arise among the younge persons of the same cittie,' and hence, in the time of Henry the Eighth, this piece of homage to the mayor was converted into a present from the shoemakers to the drapers of six gleaves or hand-darts of silver, to be given for the best foot-race; whilst the saddlers, who went in procession on horseback, attired in all their bravery, each carrying a spear with a wooden ball, decorated with flowers and arms, exchanged their offering for a silver bell, which should be a 'rewarde for that horse which with speedy runninge should run before all others.'

It would appear that the women were not banished from a share in the sports, but had their own football match in a quiet sort of way; for as the mayor's daughter was engaged with other maidens in the Pepper-gate at this game, her lover, knowing well that the father was too busy

on the Rood-eye with the important part he had to play at these festivities, entered by the gate and carried off the fair girl,—nothing loth, we may suppose. The angry father, when he discovered the loss, ordered the Pepper-gate to be for ever closed, giving rise to the Chester proverb—‘When the daughter is stolen, shut the Pepper-gate;’ equivalent to our saying, ‘When the steed is stolen, shut the stable door.’

The good and healthful practice of archery was not forgotten at these Shrove Tuesday and Easter Monday meetings; the reward for the best shot was provided, not by the guilds, but by the bridegrooms. All those happy men who had not closed their first year of matrimonial bliss, if they had been married in the said city, were bound to deliver to the guild of drapers there before the mayor, an arrow of silver, instead of the ball of silk and velvet which had been the earlier offering, to be given as a prize for the exercise of the long-bow. In this the sheriffs had to take their part, for there was a custom, ‘the memory of man now living not knowinge the original,’ that on Black Monday (a term used for Easter Monday, owing, it is supposed, to the remarkably dark and inclement weather which happened when Edward the Third lay with his army before Paris) the two sheriffs should shoot for a breakfast of calves’ head and bacon. The drum sounded the proclamation through the city, and from the stalwart yeomen on the Rood-eye, the sheriffs each chose one, until they had got the number of twelve-score; the shooting began on one side and then on the other, until the winners were declared; they then walked first, holding their arrows in their hands, whilst the losers followed with their bows only, and marching to the Town Hall took their breakfast together in much loving jollity, ‘it being a commendable exercise, a good recreation, and a loveing assembly;’ a remark of the old writer with which our readers will not disagree. But time, which changes all things, led the sheriffs in 1640 to offer a piece of plate to be run for instead of the calves’ head breakfast; we may be sure there were some Puritans at work here, but with the Englishman’s natural love of good fare, this resolution was rescinded in 1674, and it was decided that the breakfast was established by ancient usage, and could not be changed at the pleasure of the sheriffs; yet these great men were not easily persuaded, for we find that two years after they were fined ten pounds for not keeping the calves’ head feast. When the last of these festivities came off, we know not: it is now kept as an annual dinner, but not on any fixed day. The shooting has, alas! disappeared; the care with which they trained their children in this vigorous exercise may be traced from a curious order we find in the common council book, that, ‘For the avoiding of idleness, all children of six years old and upwards, shall, on week days, be set to school, or some virtuous labour, whereby they may hereafter get an honest living; and on Sundays and holy days they shall resort to their parish churches and there abide during the time of divine service, and in the afternoon all the said male children shall be exercised in shooting with bows and arrows, for pins and points only; and that their parents furnish them

with bows and arrows, pins and points, for that purpose, according to the statute lately made for maintenance of shooting in long-bows and artillery, being the ancient defence of the kingdom.’

If we walk through the streets of the city on this festive Easter Monday, we shall probably see a crowd of young and gay gallants carrying about a chair, lined with rich white silk, from which garlands of flowers and streamers of ribbon depend; as they meet each fair damsel, she is requested to seat herself in the chair, no opposition being allowed, nor may we suppose, in those times of free and easy manners, that any would be offered. The chair is then lifted as high as the young men can poise it in the air, and on its descent a kiss is demanded by each, and a fee must be also paid. It would seem that this custom called ‘lifting’ still prevails in the counties of Cheshire, Lancashire, Shropshire, and Warwickshire, but is confined to the streets; formerly they entered the houses, and made every inmate undergo the lifting. The late Mr Lysons, keeper of the records of the Tower of London, gave an extract from one of the rolls in his custody to the Society of Antiquaries, which mentioned a payment to certain ladies and maids of honour for taking King Edward the First in his bed, and lifting him; so it appears that no rank was exempt. The sum the King paid was no trifle, being equal to about £400 in the present day. The women take their revenge on Easter Tuesday, and go about in the same manner: three times must the luckless wight be elevated; his escape is in vain, if seen and pursued. Strange to say, the custom is one in memory of the Resurrection, a vulgar and childish absurdity into which so many of the Romish ceremonies degenerated.

We may be sure that the Pace, Pask, or Easter eggs were not forgotten by the Chester children. Eggs were in such demand at that season that they always rose considerably in price; they were boiled very hard in water coloured with red, blue, or violet dyes, with inscriptions or landscapes traced upon them; these were offered as presents among the ‘valentines’ of the year, but more frequently played with by the boys as balls, for ball-playing on Easter Monday was universal in every rank. Even the clergy could not forego its delights, and made this game a part of their service. Bishops and deans took the ball into the church, and at the commencement of the antiphone began to dance, throwing the ball to the choristers, who handed it to each other during the time of the dancing and antiphone. All then retired for refreshment: a gammon of bacon eaten in abhorrence of the Jews was a standard dish; with a tansy pudding, symbolical of the bitter herbs commanded at the paschal feast. An old verse commemorates these customs:

‘At stool-ball, Lucia, let us play,
For sugar, cakes, or wine;
Or for a tansy let us pay,
The loss be thine or mine.
If thou, my dear, a winner be
At trunding of the ball,
The wager thou shalt have, and me,
And my misfortunes all.’

The churches were adorned at this season like

theatres, and crowds poured in to see the sepulchres which were erected, representing the whole scene of our Saviour's entombment. A general belief prevailed in those days that our Lord's second coming would be on Easter Eve; hence the sepulchres were watched through the night, until three in the morning, when two of the oldest monks would enter and take out a beautiful image of the Resurrection, which was elevated before the adoring worshippers during the singing of the anthem, 'Christus resurgens.' It was then carried to the high altar, and a procession being formed, a canopy of velvet was borne over it by ancient gentlemen: they proceeded round the exterior of the church by the light of torches, all singing, rejoicing, and praying, until coming again to the high altar it was there placed to remain until Ascension-day. In many places the monks personated all the characters connected with the event they celebrated, and thus rendered the scene still more theatrical.

Another peculiar ceremony belonging to Chester refers to the minstrels being obliged to appear yearly before the Lord of Dutton. In those days when the monasteries, convents, and castles were but dull abodes, the insecurity of the country and the badness of the roads making locomotion next to impossible, the minstrels were most acceptable company 'to drive dull care away,' and were equally welcomed by burgher and noble. They generally travelled in bands, sometimes as Saxon gleemen, sometimes having instrumentalists joined to the party, as a tabourer, a bagpiper, dancers, and jugglers. At every fair, feast, or wedding, the minstrels were sure to be; arrayed in the fanciful dress prevailing during the reigns of the early Norman kings—mantles and tunics, the latter having tight sleeves to the wrist, but terminating in a long depending streamer which hung as low as the knees; a hood or flat sort of Scotch cap was the general head-dress, and the legs were enveloped in tight bandages, called *chausses*, with the most absurd peak-toed boots and shoes, some being intended to imitate a ram's horn or a scorpion's tail. In all the old books of household expenses, we meet with the largesses which were given to the minstrels, varying, of course, according to the riches and liberality of the donor: thus when the Queen of Edward I. was confined of the first Prince of Wales in Carnarvon Castle, the sum of £10 was given to the minstrels (Welsh harpers, we may suppose them to have been) on the day of her churching. In another old record of the brotherhood feasts at Abingdon, we find them much more richly rewarded than the priests themselves; for whilst twelve of the latter got fourpence each for singing a dirge, twelve minstrels had two-and-threepence each, food for themselves and their horses, to make the guests merry: wise people were they, and knew the value of a good laugh during the process of digestion.

It was customary for the minstrels of certain districts to be under the protection of some noble lord, from whom they received a licence at the holding of an annual court; thus the Earls of Lancaster had one at Tutbury, on the 16th of August, when a king of the minstrels and four stewards were chosen: any offenders against the rules of the society were tried, and all complaints brought before a regular jury. This jurisdiction belonged in Chester to the very ancient family of the Duttons, who took their name from a small township near Frodshaw, which was purchased for a coat of mail and a charger, a palfrey and a sparrowhawk, by Hugh the grandson of Odard, son of Ivron, Viscount of Constantine, one of William the Conqueror's Norman knights. Nor did the Duttons soon lose the warlike character of their race, for we find them long after joining in any rebellion or foray that the licentious character of the times permitted. Harry Hotspur inveigled Peter, the eleventh knight, to join him in his ill-fated expedition; happily, however, the king pardoned him. Much more unfortunate were they at Bloreheath; at that battle Sir Peter's grandson, Sir Thomas, was killed, with his brother and eldest son. The way in which they gained the jurisdiction over the Cheshire minstrels was characteristic. We have previously mentioned the extraordinary privilege granted of exemption from punishment during the Chester fairs, a privilege which could not fail in those days to draw together a large concourse of lawless and ruffianly people. During one of these fairs, Ranulph de Blundeville, Earl of Chester, was besieged in his Castle of Rhuddlan, by the yet unsubdued Welsh; when the news of this reached the ears of John Lacy, constable of Chester, he called together the minstrels who were present at the fair, and with their assistance collected a large number of disorderly people, armed but indifferently with whatever might be at hand, and sent them off under the command of Hugh Dutton, in the hope of effecting some relief for the Earl. When they arrived in sight of the castle their numbers had a highly imposing appearance; and the Welsh, taking them for the regular

TRUMPETER AND HERALD IN THE CHESTER FESTIVITIES.

army, and not waiting to try their discipline, or discover their lack of arms, immediately raised the siege, and marched back to their own fastnesses, leaving the Earl full of gratitude to his deliverers; as a token of which, he gave to their captain jurisdiction over the minstrels for ever.

This, then, was the origin of the grand procession which took place yearly on St John the Baptist's day, and was continued for centuries, being only laid aside in the year 1756. In the fine old Eastgate Street, the minstrels assembled, the lord of Dutton or his heir giving them the meeting. His banner or pennon waved from the window of the hostelry where he took up his abode, and where the court was to be held; a drummer being sent round the town to collect the people, and inform them at what time he would meet them. At eleven o'clock a procession was formed: a chosen number of their instrumentalists formed themselves into a band and walked first; two trumpeters in their gorgeous attire followed, blowing their martial strains; the remainder of the minstrels succeeded, white napkins hung across their shoulders, and the principal man carried their banner. After these came the higher ranks, the Lord of Dutton's steward bearing his token of office, a white wand; the tabarder, or herald, his short gown, from which he derived his name, being emblazoned with the Dutton arms; then the Lord of Dutton himself, the object of all this homage, accompanied by many of the gentry of the city and neighbourhood—and Cheshire can number more ancient families than any other county in England; of whom old Fuller tells us, 'They are remarkable on a fourfold account; their numerousness, not to be paralleled in England in the like extent of ground; their antiquity, many of their ancestors being fixed here before the Norman conquest; their loyalty; and their hospitality.' Thus they moved forward to the church of St John the Baptist, the which having entered, the musicians fell upon their knees, and played several pieces of sacred music in this reverent attitude; the canons and vicars choral then performed divine service, and a proclamation was made, 'God save the King, the Queen, the Prince, and all the Royal family; and the honourable Sir Peter Dutton, long may he live and support the honour of the minstrel court.' The procession returned as it came, and then entered upon the important business of satisfying the appetite with the fine rounds of beef, haunches of venison, and more delicate dishes of peacock, swan, and fowls; followed by those wondrous sweet compounds called 'subtleties,' with stout, ale, hippocras, and wine, to make every heart cheerful. The minstrels did not forget to make their present of four flagons of wine, and a lance, as a token of fealty to their lord, with the sum of fourpence-halfpenny for the licence which he granted them, and in which they were commanded 'to behave themselves lively as a licensed minstrel of the court ought to do.' The jury were empannelled during the afternoon, to inquire if they knew of any treason against the King or the Earl of Chester, or if any minstrel were guilty of using his instrument without licence, or had in any

way misdemeaned himself; the verdicts were pronounced, the oaths administered, and all separated, looking forward to their next merry meeting.

EASTER SINGERS IN THE VORARLBERG.

If there be any country which has hitherto escaped the invasion of civilization and a revolution in manners, it is assuredly the Vorarlberg in the Tyrol. This primitive region begins where the ordinary traveller stops, wearied with the beauties of Switzerland and hesitating whether he should abandon the high roads to rough it in the difficult passes of these mountains. At Rochach the steamer leaves Switzerland and five times changes its flag on Lake Constance before reaching Bregentz, where the two-headed eagle announces to the traveller that he has set foot in Austrian territory. There he disembarks, and after passing through the formalities of the custom-house and passport office, he can go about, act, and talk with the greatest freedom, delivered from the fear of any espionage even on the part of the gens-d'armes of his Apostolic Majesty, the Emperor Francis Joseph. It is only for the last twelve years that the inhabitants have had to submit to a police, who are looked upon with an evil eye by these free mountaineers; they say that it is not required by reason of the tranquillity of the country, no robbery or assassination having ever been committed.

About a league from Lake Constance the mountains assume a wild and savage character; a narrow defile leads to a high hill which must be crossed to reach the valley of Schwartzberg. I gained the summit of the peak at sunset; the rosy vapour which surrounded it hid the line of the horizon, and gave to the lake the appearance of a sea; the Rhine flowed through the bottom of the valley and emptied itself into the lake, to recommence its course twelve leagues farther on. On one side were the Swiss mountains; opposite was Landau, built on an island; on the other side the dark forests of Wurtemberg, and over the side of the hill the chain of the Vorarlberg mountains. The last rays of the setting sun gilded the crests of the glaciers, whilst the valleys were already bathed in the soft moonlight. From this high point the sounds of the bells ringing in the numerous villages scattered over the mountains were distinctly heard, the flocks were being brought home to be housed for the night, and everywhere were sounds of rejoicing.

'It is the evening of Holy Saturday,' said our guide; 'the Tyrolese keep the festival of Easter with every ceremony.' And so it was; civilization has passed that land by and not left a trace of its unbelieving touch; the resurrection of Christ is still for them the tangible proof of revelation, and they honour the season accordingly. Bands of musicians, for which the Tyrolese have always been noted, traverse every valley, singing the beautiful Easter hymns to their guitars; calling out the people to their doors, who join them in the choruses and together rejoice on this glad anniversary. Their wide-brimmed Spanish hats are decorated with bouquets of flowers; crowds of children accompany them, and when the darkness of night comes on, bear lighted

torches of the pine wood, which throw grotesque shadows over the spectators and picturesque

wooden huts. The Pasch or Paschal eggs, which have formed a necessary part of all Easter offer-

EASTER SINGERS IN THE TYROL.

ings for centuries past, are not forgotten: some are dyed in the brightest colours and boiled hard; others have suitable mottoes written on the shells, and made ineffaceable by a rustic process of chemistry. The good wife has these ready prepared, and when the children bring their baskets they are freely given: at the higher class of farmers' houses wine is brought out as well as eggs, and the singers are refreshed and regaled in return for their Easter carols.

WENTZEL HOLLAR.

Wentzel Hollar, an eminent engraver, and scion of an ancient Bohemian family, was born at Prague in 1607. His parents destined him for the profession of the law, but his family being ruined and driven into exile by the siege and capture of Prague, he was compelled to support himself by a taste and ability, which he had very early exhibited, in the use of the pen and pencil. In 1636, Thomas Earl of Arundel, an accomplished connoisseur, when passing through Frankfurt, on his way to Vienna, as Ambassador to the Emperor Frederick II., met Hollar, and was so pleased with the unassuming manner and talent of the young engraver, that he attached him to the suit of the embassy. On his return to England, the earl introduced Hollar to Charles the First, and procured him the appointment of drawing-master to the young prince, subsequently Charles the Second. For a short period all went well with Hollar, for he now enjoyed the one fitful gleam of sunshine which illumined his toil-worn life. He resided in apartments in Arundel House, and was constantly employed by his noble

patron, in engraving those treasures of ancient art still known as the Arundelian marbles. But soon the great civil war broke forth; Lord Arundel was compelled to seek a refuge on the Continent, while Hollar, with two other artists, Peake and Faithorne, accepted commissions in the King's service. All three, under the command of the heroic Marquis of Winchester, sustained the memorable protracted siege in Basing House, and though most of the survivors were put to the sword by the parliamentary party, yet, through some means now unknown, the lives of the artists were spared.

When he regained his liberty, Hollar followed his patron to Antwerp, and resumed his usual employment; but the early death of Lord Arundel compelled him to return to England, and earn a precarious subsistence by working for print-dealers. His patient industry anticipated a certain reward at the Restoration; but when that event occurred, he found himself as much neglected as the generality of the expectant Royalists were. A fallacious prospect of advantage was opened to him in 1669. He was appointed by the Court to proceed to Tangier, and make plans and drawings of the fortifications and principal buildings there. On his return, the vessel in which he sailed was attacked by seven Algerine pirates, and after a most desperate conflict, the English ship succeeded in gaining the protection of the port of Cadiz, with a loss of eleven killed and seventeen wounded. Hollar, during the engagement, coolly employed himself in sketching the exciting scene, an engraving of which he afterwards published. For a year's hard work, under an African sun, poor Hollar received no more than one hundred pounds and the barren title of the King's Iconographer.

His life now became a mere struggle for bread. The price he received for his work was so utterly inadequate to the extraordinary care and labour he bestowed upon it, that he could scarcely earn a bare subsistence. He worked for fourpence an hour, with an hour-glass always before him, and was so scrupulously exact with respect to his employer's time, that at the least interruption, he used to turn the glass on its side to prevent the sand from running. Hollar was not what may be termed a great artist. His works, though characterised by a truthful air of exactness, are deficient in picturesque effect; but he is the engraver whose memory is ever faithfully cherished by all persons of antiquarian predilections. Hundreds of ancient monuments, buildings, costumes, ceremonies, are preserved in his works, that, had they not been engraved by his skillful hand, would have been irretrievably lost in oblivion.

He died as poor as he had lived. An execution was put into his house as he lay dying. With characteristic meekness, he begged the bailiff's forbearance, praying that his bed might be left for him to die on; and that he might not be removed to any other prison than the grave. And thus died Hollar, a man possessed of a singular ability, which he exercised with an industry that permitted neither interval nor repose for more than fifty years. He is said to have engraved no

less than 24,000 plates. Of a strictly moral character, unblemished by the failings of many men of genius, and of unceasing industry, he passed a long life in adversity, and ended it in destitution of common comfort. Yet of no engraver of his age is the fame now greater, or the value of his works enhanced to so high a degree.

TRIAL OF FATHER GARNET.

On the 28th of March 1606, took place the trial of Father Garnet, chief of the Jesuits in England, for his alleged concern in the Gunpowder Treason. He was a man of distinguished ability and zeal for the interests of the Romish Church, and had been consulted by the conspirators Greenway and Catesby regarding the plot, on an evident understanding that he was favourable to it. Being found guilty, he was condemned to be hanged, which sentence was put in execution on the ensuing 3rd of May, in St Paul's-churchyard. There has ever since raged a controversy about his criminality; but an impartial person of our day can scarcely but admit that Garnet was all but actively engaged in forwarding the conspiracy. He himself acknowledged that he was consulted by two of the plotters, and that he ought to have revealed what he knew. At the same time, one must acknowledge that the severities then practised towards the professors of the Catholic faith were calculated in no small measure to confound the sense of right and wrong in matters between them and their Protestant brethren.

PRIESTS' HIDING CHAMBERS.

During a hundred and fifty years following the Reformation, Catholicism, as is well known, was generally treated by the law with great severity, insomuch that a trafficking priest found in England was liable to capital punishment for merely performing the rites of his religion. Nevertheless, even in the most rigorous times, there was always a number of priests concealed in the houses of the Catholic nobility and gentry, daring everything for the sake of what they thought their duty. The country-houses of the wealthy Catholics were in many instances provided with secret chambers, in which the priests lived concealed probably from all but the lord and lady of the mansion, and at the utmost one or two confidential domestics. It is to be presumed that a priest was rarely a permanent tenant of the *Patmos* provided for him, because usually these concealed apartments were so straitened and inconvenient that not even religious enthusiasm could reconcile any one long to occupy them. Yet we are made aware of an instance of a priest named Father Blackhall residing for a long series of years in the reign of Charles I. concealed in the house of the Viscountess Melgum, in the valley of the Dee, in Scotland.*

As an example of the style of accommodation, two small chambers in the *roof* formed the priest's retreat in the old half-timber house of Harborough Hall, midway between Hegley and

* See his Memoirs, published by the Spalding Society.

Kidderminster.* At Watcomb, in Berks, there is an old manor-house, in which the priest's chamber is accessible by lifting a board on the staircase.

A similar arrangement existed at Dinton Hall, near Aylesbury, the seat of Judge Mayne, one of the Regicides, to whom it gave temporary shelter at the crisis of the Restoration. It was at the top of the mansion, under the beams of the roof, and was reached by a narrow passage lined with cloth. Not till three of the steps of an ordinary stair were lifted up, could one discover the entrance to this passage, along which Mayne could crawl or pull himself in order to reach his den.†

Captain Duthy, in his *Sketches of Hampshire*, notices an example which existed in that part of England. In the old mansion of Woodcote, he says, 'behind a stack of chimneys, accessible only by removing the floor boards, was an apart-

ment which contained a concealed closet . . . a *priest's hole*.'

The arrangements thus indicated give a striking idea of the dangers which beset the ministers of the Romish faith in times when England lived in continual apprehension of changes which they might bring about, and when they were accordingly treated with all the severity due to public enemies.

One of the houses most remarkable for its means of concealing proscribed priests was Hendlip Hall, a spacious mansion situated about four miles from Worcester, supposed to have been built late in Elizabeth's reign by John Abingdon, the queen's cofferer, a zealous partisan of Mary Queen of Scots. It is believed that Thomas Abingdon, the son of the builder of the mansion, was the person who took the chief trouble in so fitting it up. The result of his labours was that there was scarcely an apartment which had not

HENDLIP HOUSE.

secret ways of going in and out. Some had back staircases concealed in the walls; others had places of retreat in their chimneys; some had trap-doors, descending into hidden recesses. 'All,' in the language of a writer who examined the house, 'presented a picture of gloom, insecurity, and suspicion.'‡ Standing, moreover, on elevated ground, the house afforded the means of keeping a watchful look-out for the approach of the emissaries of the law, or of persons by whom it might have been dangerous for any skulking priest to be seen, supposing his reverence to have gone forth for an hour to take the air.

Father Garnet, who suffered for his guilty

* *Notes and Queries*, 2nd ser. ii. 337.

‡ *Beauties of England*, xv. part i. p. 184.

knowledge of the Gunpowder Treason, was concealed in Hendlip, under care of Mr and Mrs Abingdon, for several weeks, in the winter of 1605-6. Suspicion did not light upon his name at first, but the confession of Catesby's servant, Bates, at length made the government aware of his guilt. He was by this time living at Hendlip, along with a lady named Anne Vaux, who devoted herself to him through a purely religious feeling, and another Jesuit, named Hall. Just as we have surmised regarding the general life of the skulking priesthood, these persons spent most of their hours in the apartments occupied by the family, only resorting to places of strict concealment when strangers visited the house. When Father Garnet came to be inquired after, the government, suspecting Hendlip to be his place of retreat, sent Sir Henry Bromley thither, with

instructions which reveal to us much of the character of the arrangements for the concealment of priests in England. 'In the search,' says this document, 'first observe the parlour where they use to dine and sup; in the east part of that parlour it is conceived there is some vault, which to discover you must take care to draw down the wainscot, whereby the entry into the vault may be discovered. The lower parts of the house must be tried with a broach, by putting the same into the ground some foot or two, to try whether there may be perceived some timber, which, if there be, there must be some vault underneath it. For the upper rooms, you must observe whether they be more in breadth than the lower rooms, and look in which places the rooms be enlarged; by pulling up some boards, you may discover some vaults. Also, if it appear that there be some corners to the chimneys, and the same boarded, if the boards be taken away there will appear some. If the walls seem to be thick, and covered with wainscot, being tried with a gimlet, if it strike not the wall, but go through, some suspicion is to be had thereof. If there be any double loft, some two or three feet, one above another, in such places any may be harboured privately. Also, if there be a loft towards the roof of the house, in which there appears no entrance out of any other place or lodging, it must of necessity be opened and looked into, for these be ordinary places of hovering [hiding].'

Sir Henry invested the house, and searched it from garret to cellar, without discovering anything suspicious but some books, such as scholarly men might have been supposed to use. Mrs. Abingdon—who, by the way, is thought to have been the person who wrote the letter to Lord Monteaigle, warning him of the plot—denied all knowledge of the person searched for. So did her husband when he came home. 'I did never hear so impudent liars as I find here,' says Sir Henry in his report to the Earl of Salisbury, forgetting how the power and the habit of mendacity was acquired by this persecuted body of Christians. After four days of search, two men came forth half dead with hunger, and proved to be servants. Sir Henry occupied the house for several days more, almost in despair of further discoveries, when the confession of a conspirator condemned at Worcester put him on the scent for Father Hall, as for certain lying at Hendlip. It was only after a search protracted to ten days in all, that he was gratified by the voluntary surrender of both Hall and Garnet. They came forth from their concealment, pressed by the need for air rather than food, for marmalade and other sweetmeats were found in their den, and they had had warm and nutritive drinks passed to them by a reed 'through a little hole in a chimney that backed another chimney, into a gentlewoman's chamber.' They had suffered extremely by the smallness of their place of concealment, being scarcely able to enjoy in it any movement for their limbs, which accordingly became much swollen. Garnet expressed his belief that, if they could have had relief from the blockade for but half a day, so as to allow of their sending away books and furniture by which

the place was hampered, they might have baffled inquiry for a quarter of a year.*

MARCH 29.

Saints Jonas, Barachisius, and their companions, martyrs, 327. St Mark, Bishop of Arethusa, in Syria, 4th century. Saints Armogastes, Archinimus, and Satur, martyrs, 457. St Gundleus, a Welsh King, 5th century. St Eustasius (or Eustachius), abbot of Luxeu, 625.

SIR THOMAS PARKYNS—CORNISH WRESTLING.

Sir Thomas Parkyns, Bart., of Bunny Park, Nottinghamshire, who died on the 29th of March 1741, was the author of a curious work, entitled *The Inn Play, or Cornish Hugg Wrestler*. Nor was he a mere writer on wrestling; he was an able and skilful athlete himself, as well as a ripe scholar, subtle disputant, and energetic country magistrate. Slightly eccentric, he was equally at home in the wrestling ring or on the magisterial bench; and it was said that he could throw an antagonist, combat a paradox, quote the classics, and lay down the law at quarter sessions, with any man in all England. It was when a boy, under the famous Dr Busby, at Westminster School, that the attention of Sir Thomas was first attracted to wrestling, by his having to construe the well-known epigram of Martial, commencing with the line:

'Rure morans, quid agam? respondi pauca, rogatus,'
which has been thus translated:

'When to my farm retired, how do I live?
If any ask, this short account I give;
The gods, at the first light, I do adore,
And place this care all other cares before.
My grounds I visit then, and servants call,
And their just tasks I do impose on all.'

* Jardine's *Narrative of the Gunpowder Plot*, p. 189. 1857.

† Sometimes the 28th of March is given as the date of the birth of the illustrious Raphael. The original statement on the subject is that Raphael was born on Good Friday (he died also on Good Friday). A French work, entitled *Ephémérides*, 1812, affirms that Good Friday of 1483 was the 29th of March, and this authority we follow.

I study next, rouse my poetic vein ;
 My body then anoint, and gently strain
 With some meet exercise ; exult in mind
 At every turn, myself both free to find
 From crimes and debts ; last, I bathe, sup, laugh,
 drink,
 Jest, sing, rest, and, on all that passes, think.
 A little lamp the while sends forth a ray,
 Which to my nightly studies makes a day.'

From Westminster, Sir Thomas went to Cambridge, where his principal study was mathematics and mechanics, in their applications to feats of strength and dexterity. We next find him a student at Gray's-inn, relieving the dry study of the law by instructions in wrestling, boxing, and fencing, from the best masters that the metropolis could produce. Succeeding to the title early in life, he settled down on his ancestral estate at Bunny, and established an annual wrestling match in his park, open to all comers. The prize was a gold-laced hat, value twenty-two shillings, and three shillings for the second best. The amount was small, but the glory was great. Sir Thomas was no idle patron of the contests ; he never objected to go in for a fall with the best man on the ground, and often won and wore the gold-laced hat himself. His servants were all upright, muscular, young fellows, and good wrestlers. Indeed, his favourite coachman and footman had defeated the baronet himself in the wrestling ring, throwing him on his back in such consummate style, that his heart warned to them at once, and, like Robin Hood of yore, he immediately took them into his service. There was a policy in this, for he well knew that a good and powerful wrestler could be no other than a sober man. 'Whoever would be a complete wrestler,' says Sir Thomas, 'must avoid being overtaken in drink, which very much enervates, or, being in a passion at the sight of his adversary, or having received a fall, in such cases he is bereaved of his senses, not being master of himself is less of his art, but sheweth too much play, or none at all, or rather pulleth, kicketh, and ventureth beyond all reason and his judgment when himself.

That man's a fool, that hopes for good,
 From flowing bowls and feverish blood.'

He also further informs us, that the greatest of wrestling masters is one Bacchus, who has many assistants, among others : 'Brandy a Frenchman, Usquebaugh an Irishman, Rum a Molossian—these masters teach mostly the trip, which I assure you is no safe and sound play. You may know them by their walkings and gestures, they stagger and reel, and cross legs, which I advise my scholars to avoid, and receive many a foul fall in the sink or kennel : and were your constitutions of porphyry, marble, or steel, they will make you yield to your last and only fair fall.'

Speaking of the antiquity of wrestling, he says :—'Though at the beginning of the preface I take notice that wrestling was in vogue, great credit, reputation, and estimation in Martial the poet's days, wrestling without all doubt is of greater antiquity, as appears by Genesis, Jacob wrestled with an angel. Whether it was real

and corporeal, or mystical and spiritual in its signification, I leave the divines to determine. But I advise all my scholars to avoid wrestling with angels ; for, though they may maintain the struggle till break of day, and seem to lay their adversaries supine and on their backs, yet they will have the fall and be out of joint with Jacob's thigh.'

A good specimen of what may be termed the wrestling style of Sir Thomas is found in the following directions for giving an opponent the throw called by adepts

'THE FLYING HORSE.

'Take him by the right hand with your left, your palm being upwards as if you designed only to shake him by the hand in a friendly manner in the beginning, and twist it outwards, and lift it upwards to make way for your head, and put your head under his right arm-pit, and hold his hand down to your left side, hold your head stiff backwards, to hold him out of his strength, then put your right arm up to the shoulder between his grainings, and let your hand appear behind past his breech, but if you suspect they will cavil at that arm, as a brecching, lay your arm along his belly, and lift him up as high as your head and in either hold, when so high, lean backward, and throw him over your head.'

There is a good-humoured quaintness in the description of this encounter. How placidly it commences with taking the opponent's hand 'in a friendly manner,' reminding us of Izaak Walton's words, 'use him as though you loved him,' when directing how to impale a wretched frog on a fishing-hook. Anon, the plot thickens, until, at last, the astonished novice finds himself performing the flying-horse—the spread eagle the Americans more analogically term it—over his friend's head !

One of the wrestling baronet's whims was to form a collection of stone coffins ; and a rare and probably unexampled collection he did form, and keep with great nicety, in the churchyard at Bunny. It was not from any antiquarian tastes, however, that he made this collection ; neither was it for the mere empty desire of possessing a few score stone coffins. He was one who loved to read a moral in all around him ; to find tongues in trees, books in the running brooks, and good in everything. The coffins ranged before him were emblems of mortality, teaching the athletic champion of the wrestling ring that the great wrestler Death would inevitably overcome him in the end. And to carry this impression of humility even into the house of prayer, he caused his own monument—the marble effigies of Sir Thomas Parkyns, as he termed it—to be placed opposite his pew in the chancel—his own chancel—of Bunny Church, that he might look on it every Lord's day, and say—What is life ! This monument was carved out of a 'fair piece of marble,' in his own great barn, by his own domestic chaplain ; and from what remains of it now, we may hope that the chaplain was a much better clergyman than a sculptor.

On this monument Sir Thomas is depicted in the centre, standing in his wrestling dress, potent and postured, ready for either flying-horse or

Cornish-hug. His attitude is the first position of wrestling, as well as a moralising posture, and emblematises 'the divine and human struggle for the glorious mastery.' On one side is a well-

EFFIGY OF SIR THOMAS PARKYNS.

limbed figure lying *above* the scythe of time, the sun rising gloriously over it, showing that the strong man and wrestler is in the prime of youth. On the other side we see the same figure stretched in a coffin, with Time, scythe in hand, standing triumphantly over *it*; the sun gone down, marking the darkness of the tomb, the fate of all, strong or feeble. There are some Latin verses on the monument, that have been translated as follows:—

'At length, by conquering Time subdued,
Lo! here Britannia's wrestler lies;
Till now he still unshaken stood,
Whene'er he strove, and gain'd the prize.
Long was the doubtful strife—beset
With years, he long eludes the fall;
Nor yet inglorious his defeat,
O'ermatch'd by Him who conquers all.
To life restored, the day will come,
When he, though now he faint and fail,
Shall rise victorious from the tomb,
And over Time himself prevail.'

Thus did Sir Thomas Parkyns moralise in marble, and decorate with solemn emblems the church at Bunny.

Though no training will enable a man to wrestle successfully against a century, still temperance, wholesome toil, and manly exercise, will carry him bravely over several scores of years. Sir Thomas Parkyns never knew a day's illness until his seventy-eighth year, when death at last gave him the backfall, and he died universally beloved and lamented. The wrestling matches he instituted were annually kept up for many years after his death, and were not finally done away with till about the year 1810. His monument, though considerably dilapidated, is still to be seen in the chancel of Bunny Church; we had almost forgotten to say that, having selected one of his stone coffins for his own use, he left the remainder to such parishioners of Bunny as might choose to be interred in them.

CORAM AND THE FOUNDLING HOSPITAL.

Captain Thomas Coram was born at Lyme Regis, in Dorsetshire, in 1668. He emigrated to Massachusetts, where, after working a while as a shipwright, he became master of a trading vessel, made some money, and at last settled in London. In 1720, when living at Rotherhithe, and walking to and from the city early in the morning and late at night, his feelings were often keenly tried in coming across infants exposed and deserted in the streets. His tender heart at once set his head devising some remedy. There were hospitals for foundlings in France and Holland, and why not in England? Coram was an honest mariner, without much learning or art of address; but he had energy and patience, and for seventeen years he spent the most of his time in writing letters and visiting in advocacy of a home for foundlings. After long striking, a spark caught

CAPTAIN CORAM, BY HOGARTH.

the tinder of the fashionable world; such an institution was voted a necessity of the age; and in 1739, the Foundling Hospital was established by Royal Charter. Subscriptions poured freely in, and in 1741 the Lamb's Conduit estate of 56 acres was bought as a site and grounds for £5,500. It was a fortunate investment. London rapidly girdled the Hospital, which now lies at its very centre, and from the leases of superfluous outskirts the Hospital draws an annual income equal to the original purchase-money. Hogarth was a great friend of the Hospital, and was one of its earliest Governors. For its walls he painted Coram's portrait, 'one of the first,' he writes, 'that I did the size of life, and with a particular desire to excel.' He and other painters displayed

their works in the rooms of the Foundling, and out of the practice grew the first Exhibition of the Royal Academy in the Adelphi, in 1760. The show of pictures drew 'the town' to the Hospital, and its grounds became the morning lounge of the belles and beaux of London in the last years of George II. Handel also served the Foundling nobly. To its chapel he presented an organ, and for eleven years, from 1749 to his death in 1759, he conducted an oratorio for its benefit, from which sums varying from £300 to £900 were annually realized. The original score of his 'Messiah' is preserved among the curiosities of the Hospital.

The Governors commenced work in a house in Hatton Garden on 25th March 1741, having exhibited a notice the previous day, that 'Tomorrow at 8 o'clock in the evening this house will be opened for the reception of 20 children.' Any person bringing a child rang the bell at the inner door, and waited to hear if there were no objections to its reception on account of disease. No questions were asked as to whom the infant belonged to, or why it was brought. When the full number of babes had been received, a board was hung out over the door, '*The House is full.*' Sometimes a hundred children were brought when only twenty could be admitted, and in the crush for precedence riots ensued; in consequence, a ballot was instituted, and the women drew out of a bag, white, red, and black balls. Those who drew black had to go away, those who drew white were accepted, and those who drew red remained in case the child of any woman who had drawn white should be found ineligible from infectious disease. The fame of the charity spread far and wide, and the country began to consign foundlings to its care. A tinker was tried at Monmouth for drowning a child he had received to carry to London. Seven out of eight infants a waggoner undertook to bring to town were found dead at the end of the journey. One man with five in a basket got drunk on his way, fell asleep on a common, and when he awoke three of his charge were suffocated. A horseman from Yorkshire was asked on Highgate Hill what he carried in his panniers, and he shewed two infants, saying that he got eight guineas for the trip, but that others were offering to do it cheaper.

In 1754, the governors moved into the present Hospital, erected from the designs of architect Jacobson, with 600 children, whom they were supporting at an expense of five times the amount of their income! In their distress they applied to Parliament for aid, which voted them £10,000, but plunged them into new difficulties by ordering the reception of all infants that might be brought to them, and opening country branches. At one of these, Ackworth, near Pontefract, cloth was made, in suits of which some of the patrons of the Hospital appeared at the annual festivals. At another, Aylesbury, John Wilkes, M.P., was treasurer, and when he left the kingdom in 1764, it was found that he was in possession of some of the funds.

In compliance with the Act of Parliament a basket was hung at the gate of the Hospital, in which the foundling was deposited, and a bell rung to give notice to the officers in attendance.

From 1741 to 1756 the Governors had accepted the charge of 1384 children, but under the new parliamentary arrangement the traffic developed amazingly. On the 2d of June 1756, the first day of the basket, 117 infants were put into it. In 1757, bills were posted through the streets, apprising the public of their privilege. The work-houses got rid of all their infantile encumbrances in the convenient basket. Women stood at the gate, stripped their babies naked, popped them into the basket, and rang the bell. In the first year, 3,296 were put in; in the second, 4,025; in the third, 4,229; and in ten months of the fourth, 3,324. Out of the total of 14,874, it is scarcely surprising, however horrible, to learn that only 4,000 lived to be apprenticed, a mortality of 70 per cent. ! The expense of the charity thus far was nearly £500,000. Of course results like these alarmed the most Quixotic, and in 1760 Parliament revoked the order for indiscriminate admission, and agreed to bear the charge of the children who had flooded the charity at their invitation. Warned by this terrible experience, the Governors were content to work with much humbler aims. They still accepted any infant that might be brought, if a purse of £100 was given with it, but even this privilege they felt it wise to abolish in 1801.

The annual revenue of the Hospital at this day from its estate and funded property is nearly £11,000, and with this sum 460 boys and girls are maintained and educated, from infancy until their fifteenth year. The Queen is a donor of fifty guineas annually, following the precedent set by George II. The conditions of admission now are 'that the child be illegitimate, except that the father be a soldier or sailor killed in the service of his country, and that the mother shall have borne a good character previous to her misfortune, and that she be poor and have no relations able or willing to maintain her child.' The object of the Governors is to hide the shame of the mother, as well as to preserve the life of her child, and dismiss her with the charge, 'Sin no more.' The average admissions are thirty-seven annually. No infant is received older than twelve months. The treasurer gives each babe a name, and when christened it is sent into the country to nurse, and on the attainment of its third year is brought to the Hospital in London. There all receive a plain education in reading, writing, and arithmetic. The girls, taught sewing and household work, are put out to domestic service in respectable families. There is a constant demand, much in excess of the supply, for servants bred at the Foundling. The boys are apprenticed to various trades, and about fifty of them are instructed in music, and draughted into the bands of the army and navy. The children on the whole turn out well in the world, and generally bear the home of their youth in kindly remembrance.

From Handel the Foundling has inherited a high musical reputation. Several blind children, received during the years of indiscriminate admission, were trained as a choir, and their sweet voices were a great attraction to the chapel. Mr. Grenville, the organist, Mr.

Printer, Jenny Freer, and Miss Thetford, noted singers, were all blind foundlings. On Sundays the chapel is usually filled in every corner by crowds who come to hear the excellent music, which is led by professionals, and supported by the voices of 500 children. The pew rents, and collections at the door, average from £600 to £900 a year, after paying all expenses. The altar-piece, 'Christ presenting a Child,' is by West, who retouched the picture in 1816. From the pulpit Sterne and Sidney Smith, not to run over other names, have pleaded for the charity.

The collection of pictures at the Foundling is worth seeing. They are nearly all gifts, and illustrate very fairly the state of British art in the third quarter of last century. There is Hogarth's portrait of Coram, of which he said that 'it had stood the test of twenty years' competition, notwithstanding the first painters in the kingdom exerting all their talents to vie with it; also his March to Finchley, and his Moses brought to Pharaoh's Daughter. There is a portrait of Lord Dartmouth, by Sir Joshua Reynolds; of George II., by Shackleton; of Handel, by Kneller; of Dr Mead, by Allan Ramsay; views of various London hospitals, by Gainsborough, Richard Wilson, Hayley, and Wale; three sacred subjects by Hayman, Highmore, and Wills; a bas-relief by Rysbrack, and a bust of Handel by Roubiliac.

Captain Coram's fortune appears never to have been large, and his credit in the institution of the Foundling lay, not in any pecuniary endowment, but in the undaunted pertinacity with which he fought down public apathy, and at last induced wealth and power to work out his philanthropic design. Two years before his death it was discovered that he had lost all his means. His friends thereon bestirred themselves to raise him to independence by subscription; and in order that the good old man might not be offended, Dr Brocklesby broke to him the project. His answer was, 'I have not wasted the little money I once had in self-indulgence or vanity, and am not ashamed to confess that in my old age I am poor.' In 1749 they secured him an annuity of £170. He happily did not live to see the charity he had founded, in the years of its frightful efflorescence. He died on the 29th of March 1751, aged eighty-four, when the Hospital which preserves his memory was in course of erection; and in the new stone catacombs of the chapel his body was the first to be laid. There, also, Lord Tenterden was buried in 1832—the Canterbury barber's boy, who rose to be Lord Chief Justice of England. An excellent statue of Coram, by Calder Marshall, was set up at the gates of the Hospital in 1856; but the stone out of which it is cut has already proved so friable, that it has had to be painted over to save it from destruction.

THE BERKSHIRE LADY'S GARLAND.

'March 29, 1679,' is the date of a baronetcy conferred on a Berkshire gentleman, William Kenrick, of Whitley, which, however, expired with the second generation about the close of the century. The second baronet left his property

to an only daughter, who is understood to have soon after disposed herself in marriage in a very extraordinary way. Tradition and a contemporary *broadside* ballad concur in representing this young gentlewoman as paid court to by many, but refusing all, and keeping her affections disengaged, until, attending a wedding at Reading, she met a young and handsome but poor attorney, named Benjamin Child, with whom she fell violently in love on the spot. For some days she reasoned with herself on the subject, trying to shake herself free of this sudden passion, but all in vain. Then, feeling that something must be done, but unable from confusion of mind to devise a proper course, she took the extraordinary step of sending the young man a letter, demanding satisfaction for injuries she alleged he had inflicted on her, and appointing time and place for a hostile meeting. Mr. Child was much surprised, and quite at a loss to conceive who the challenger could be. By the advice of a friend, however, he resolved to attend. The meeting may be described in the words of the ballad :

'Early on a summer's morning,
When bright Phœbus was adorning
Every bower with his beams,
The fair lady came, it seems.

At the bottom of a mountain,
Near a pleasant crystal fountain,
There she left her gilded coach,
While the grove she did approach.

Covered with her mask, and walking,
There she met her lover, talking
With a friend that he had brought,
So she asked him whom he sought.

"I am challenged by a gallant
Who resolves to try my talent ;
Who he is I cannot say,
But I hope to shew him play."

"It is I that did invite you ;
You shall wed me, or I'll fight you
Underneath those spreading trees ;
Therefore choose from which you please.

"You shall find I do not vapour,
I have sought my trusty rapier ;
Therefore take your choice," said she :
"Either fight or marry me !"

Said he, "Madam, pray what mean you ?
In my life I've never seen you ;
Pray unmask, your visage shew
Then I'll tell you ay or no."

"I will not my face uncover
Till the marriage ties are over ;
Therefore choose you which you will,
Wed me, sir, or try your skill.

"Step within that pleasant bower
With your friend one single hour ;
Strive your thoughts to reconcile,
And I'll wander here the while."

While this beauteous lady waited,
The young bachelors debated
What was best for to be done.
Quoth his friend, "The hazard run ;

"If my judgment can be trusted,
Wed her first, you can't be worsted ;
If she's rich you'll rise to fame,
If she's poor, why, you're the same."

440

He consented to be married ;
All three in a coach were carried
To a church without delay,
Where he weds the lady gay.

Though sweet pretty Cupids hover'd
Round her eyes, her face was cover'd
With a mask,—he took her thus,
Just for better or for worse.'

The ballad goes on to state that the pair went in her coach to the lady's elegant mansion, where, leaving him in a parlour, she proceeded to dress herself in her finest attire, and by and by broke upon his vision as a young and handsome woman and his devoted wife :

'Now he's clothed in rich attire,
Not inferior to a squire ;
Beauty, honour, riches' store,
What can man desire more ?'

It appears that Mr Child took a position in society suitable to the fortune thus conferred upon him, and was high sheriff of the county in 1714.*

MRS FITZHERBERT.

29th March 1837, died at Brighton, Mrs Fitzherbert, at the age of eighty-one. Born Mary Anne Smythe (daughter of Walter Smythe, Esq., of Brambridge, in the county of Hants), she was first married to Edward Weld, Esq., of Lulworth Castle, Dorsetshire ; secondly to Thomas Fitzherbert, Esq., of Swinnerton, Staffordshire. She was a second time a widow, living on a handsome jointure, and greatly admired in society on account of her beauty and accomplishments, when, in 1785, being twenty-nine years of age, she became acquainted with the Prince of Wales, who was six years younger. He fell distractedly in love with her, and was eager to become her third husband ; but she, well aware that the royal marriage-act made the possibility of anything more than an appearance of decent nuptials in this case extremely doubtful, resisted all his importunities. It has been stated, on good authority, that, to overcome her scruples, he caused himself one day to be bled, put on the appearance of having made a desperate attempt on his own life, and sent some friends to bring her to see him. She was thus induced to allow him to engage her with a ring in the presence of witnesses ; but she afterwards broke off, went abroad, and for a long time resisted all the efforts he made to induce her to return. It is told, as a curious fact in this strange love history, that one of the chief instruments in bringing about the union of the ill-assorted pair, was the notorious Duke of Orleans (Philip Egalité.)

Towards the close of 1785, it became known that the heir-apparent of the British crown was about to marry a Catholic widow lady named Mrs Fitzherbert. Charles Fox, to whose party the prince had attached himself, wrote to his royal highness on the 10th of December, a long letter, pointing out the dangerous nature of the course he was following. 'Consider,' said he, 'the circumstances in which you stand ; the King not feeling for you as a father ought ; the Duke of York

* See the entire ballad, with notes, in *Ancient Ballads and Songs of the Peasantry*, edited by Robert Bell, 1857.

professedly his favourite, and likely to be married to the King's wishes; the nation full of its old prejudices against Catholics, and justly dreading all disputes about succession.' Then the marriage could not be a real one. 'I need not,' said he, 'point out to your good sense what a source of uneasiness it must be to you, to her, and above all, to the nation, to have it a matter of dispute and discussion whether the Prince of Wales is or is not married.' The whole letter, written in a tone of sincere regard for the prince, was highly creditable to the wisdom of the writer.

The prince answered on the instant, thanking Mr Fox for his advices and warnings, but assuring them they were needless. 'Make yourself easy, my dear friend; believe me, the world will now soon be convinced that there not only is [not], but never was, any ground for those reports which have of late been so malevolently circulated.'

Ten days after the date of this letter, namely, on the 21st of December, the Prince and Mrs Fitzherbert were married by an English clergyman, before two witnesses. Mr Fox, misled by the Prince, took it upon him to deny the fact of the marriage in the House of Commons; but society was never blinded on the subject. Mrs Fitzherbert lived for several years with great openness, as the wife of the Prince of Wales, and in the enjoyment of the entire respect of society, more especially of her husband's brothers. A separation only took place about 1795, when the prince was about to marry (for the payment of his debts) the unfortunate Caroline of Brunswick. Mrs Fitzherbert survived this event forty-two years, and never during the whole time ceased to be 'visited.' The case is a very peculiar one, from its standing in so dubious a position both with respect to law and morality.

MARCH 30.

St John Climacus, the Scholastic, abbot of Mount Sinai, 605. St Zozimus, Bishop of Syracuse, 660. St Regulus (or Rieul), Bishop of Senlis.

Born.—Sir Henry Wotton, Provost of Eton College, and poetical and prose writer, 1568, *Boughton Hall, Kent*; Archbishop Somner, antiquary, 1606, *Canterbury*; Francis Pilatre de Rozier, aeronaut, 1756, *Metz*; Field-Marshal Henry Viscount Hardinge (Peninsular war and Sutlej campaign), 1785, *Wrotham, Kent*.

Died.—Phocion, Athenian general and statesman, B. C. 317; Cardinal Bouchier, early promoter of printing in England, 1486, *Knowle, Kent*; Sir Ralph Sadler, diplomatist (Sadler Papers), 1587, *Standon, Herts*; Dr John King, Bishop of London, 1621; Archbishop Somner, 1669, *Canterbury*; Sebastian de Vauban, military engineer (fortification), 1707, *Paris*; Dr William Hunter, 1783, *Windmill-street, St James's*; James Morier, traveller and novelist, 1849.

SIR HENRY WOTTON.

Boughton Hall, in Kent, situated, as Izaak Walton tells us, 'on the brow of such a hill as gives the advantage of a large prospect, and of equal pleasure to all beholders,' was the birth-place of Sir Henry Wotton. After going through

the preliminary course at Winchester School, he proceeded to Oxford, where he studied until his twenty-second year; and then, laying aside his books, he betook himself to the useful library of travel. He passed one year in France, three in Germany, and five in Italy. Wherever he stayed, to quote Walton again, 'he became acquainted with the most eminent men for learning and all manner of arts, as picture, sculpture, chemistry, and architecture; of all which he was a most dear lover, and a most excellent judge. He returned out of Italy into England about the thirtieth year of his age, being noted by many, both for his person and comportment; for indeed he was of a choice shape, tall of stature, and of a most persuasive behaviour, which was so mixed with sweet discourse and civilities as gained him much love from all persons with whom he entered into an acquaintance.'

One of his acquaintances was Robert Devereux, Earl of Essex, and there can be little doubt that Wotton was, some way or another, implicated in the rash plot of that unfortunate nobleman. For when Essex was sent to the Tower, as a step so far on his way to the scaffold, Wotton thought it prudent, 'very quickly and as privately, to glide through Kent unto Dover,' and, with the aid of a fishing-boat, to place himself on the shores of France. He soon after reached Florence, where he was taken notice of by Ferdinand de Medici, Grand Duke of Tuscany, who sent him, under the feigned name of Octavio Baldi, on a secret mission to James VI. of Scotland. The object of this mission had reference to James's succession to the English throne, and a plot to poison him, said to be entered into by some Jesuits. After remaining three months in Scotland, Wotton returned to Italy, but soon after, hearing of the death of Elizabeth, he waited on the King at London. 'Ha,' said James, when he observed him at Court, 'there is my old friend Signor Octavio Baldi.' The assembled courtiers, among whom was Wotton's brother, stared in confusion, none of them being aware of his mission to Scotland. 'Come forward and kneel, Signor Octavio Baldi,' said the king; who, on Wotton obeying, gave him the accolade, saying, 'Arise, Sir Henry Wotton.' James, as from his character may readily be supposed, highly enjoyed the state of mystification the courtiers were thrown into by the unexpected scene. Immediately after, Wotton received the appointment of ambassador to the city of Venice.

It was on this journey to Venice, that Sir Henry, when passing through Augsburg, wrote in the album of his friend Flecamore, the punning and often quoted definition of an ambassador—an honest man sent to lie abroad for the good of his country. Certainly ambassadors had no good repute for veracity in those days, yet in all probability Wotton's diplomatic tactics were of a different description. On an occasion, his advice on this rather delicate question being asked, by a person setting out for a foreign embassy, he said, 'Ever speak the truth; for if you do so, you shall never be believed, and 'twill put your adversaries (who will still hunt counter) to a loss in all their disquisitions and undertakings.'

For twenty years Sir Henry represented the

English court at Venice, and during that time successfully sustained the Doge in his resistance to the aggression of the Papal power. And finally returning to his native country, he received what Thomas Fuller styles, 'one of the genteel and entrest preferments in England,' the Provostship of Eton College.

To Wotton's many accomplishments was added a rich poetical taste, which he often exercised in compositions of a descriptive and elegiac character. He also delighted in angling, finding it, 'after tedious study, a cheerer of his spirits, a diverter of sadness, a calmer of inquiet thoughts, a moderator of passions, a procurer of contentedness; and that it begat habits of peace and patience in those who professed and practised it.' So when settled down in life as Provost of Eton, he built himself a neat fishing-lodge on the banks of the Thames, where he was often visited by his friend and subsequent biographer, Walton. The site is still occupied by a fishing-lodge, though not the one that Wotton erected. It is on an island, a green lawn sloping gently down to the pleasant river. On one side, the turrets of Windsor Castle are seen, through a vista of grand old elm trees; on the other the spires and antique architecture of Eton Chapel and College. The property still belongs to the College, and it is said that it never has been untenanted by a worthy and expert brother of the angle since the time of Wotton. And there it was, 'with peace and patience cohabiting in his heart,' as Walton tells us, that Sir Henry, when beyond seventy years of age, 'made this description of a part of the present pleasure that possessed him, as he sat quietly, on a summer's evening, on a bank fishing. It is a description of the Spring; which, because it glided as softly and sweetly from his pen as that river does at this time, by which it was then made, I shall repeat it unto you:

"This day dame Nature seemed in love;
The lusty sap began to move;
Fresh juice did stir th' embracing vines,
And birds had drawn their valentines.
The jealous trout, that low did lie,
Rose at a well-dissembled fly;
There stood my friend, with patient skill
Attending on his trembling quill.
Already were the eaves possest
With the swift pilgrim's danbed nest;
The groves already did rejoice
In Philomel's triumphant voice;
The showers were sport, the weather mild,
The morning fresh, the evening smiled.
Joan takes her neat-rubbed pail, and now
She trips to milk the sand-red cow,
Where, for some sturdy foot-ball swain,
Joan strokes a syllabub or twain.
The fields and gardens were beset
With tulips, crocus, violet:
And now, though late, the modest rose
Did more than half a blush disclose.
Thus all looks gay, and full of cheer,
To welcome the new-liveried year."

As Sir Henry, in the quiet shades of Eton, found himself drawing towards the end of life, he felt no terror; he was only inspired with hope for the future and kindly remembrances of the past. Among these last, was the wish to revisit the school where he had played and

studied when a boy; so for this purpose he travelled to Winchester, and here is his commentary:—"How useful was that advice of a holy monk, who persuaded his friend to perform his customary devotions in a constant place, because in that place we usually meet with those very thoughts which possessed us at our last being there. And I find it thus far experimentally true; that, at my now being in that school, and seeing that very place, where I sat when I was a boy, occasioned me to remember those very thoughts of my youth which then possessed me; sweet thoughts indeed, that promised my growing years numerous pleasures, without mixtures of cares; and those to be enjoyed when time (which I then thought slow-paced) had changed my youth into manhood. But age and experience have taught me that those were but empty hopes. For I have always found it true, as my Saviour did foretell, "sufficient for the day is the evil thereof." Returning to Eton from this last visit to Winchester, he died in 1639, and was buried in the College chapel, according to his own direction, with no other inscription on his tomb than—

'HERE LIES THE AUTHOR OF THIS SENTENCE:
THE ITCH OF DISPUTATION IS THE SCAB OF THE
CHURCH.'

We translate the inscription, for, strange to say, the original Latin words were incorrectly written, and, as gossiping Pepys tells us, so basely altered that they disgrace the stone.

THE SICILIAN VESPER.

On this day, five hundred and eighty years ago, the people of Sicily rescued themselves from the tyranny of a foreign dynasty by an insurrection which has become a celebrated event in history, and which presents some points of resemblance to the revolution in the same island which we have so recently witnessed. In our time the Neapolitan tyrant was a Prince of the French house of Bourbon; at the most distant period he was of the French house of Anjou. The secret prompter of it was in the both cases an Italian patriot,—Garibaldi in 1860, and in 1282 John of Procida. It is difficult to say in which the tyranny had been most galling, but in the earlier period the revolt was directed with less skill, and was carried on with greater ferocity.

Sicily and Naples were at that time ruled by a conqueror and usurper, to whom they had been handed over by the will of a pope, and they were occupied by a French soldiery, of whose unbounded greediness and brutal licentiousness, the properties and persons of the inhabitants of all ranks were the prey. In Sicily, more even than in the continental provinces of Naples, the Italians were subjected, without any chance of redress, to the oppressions of their French rulers; and almost incredible anecdotes are told by the old chroniclers of the manner in which they were treated. They were attacked especially in that point on which all people feel sensitive, the honours of their wives and daughters. A French baron named Ludolph, who was governor of Menone, is said to have taken by force a young girl every week to satisfy his passions; and a knight of Artois

named Faramond, who commanded in Noto, made a regular practice of causing all the handsomest women of his government to be brought to his palace, where they were sacrificed to his violence. John of Procida, who had been himself robbed of his lands by the French, was indefatigable in his efforts to rouse the spirits of the Sicilians, secretly visited and encouraged their chiefs, and secured the aid of the King of Arragon, Don Pedro, who was tempted by the prospect of obtaining for himself the crown of Sicily, to which he made out a claim through his wife. Yet, though John of Procida had made the Sicilians eager for revolt, we have no reason for supposing that there was any organised plan of insurrection, when it burst out suddenly and by accident; and we must probably ascribe in a great measure to this circumstance the sanguinary character which it assumed.

The 30th of March in the year 1282 was Easter Monday, and, as was customary on such festive occasions, the people of Palermo determined to go in procession to hear vespers at a church a short distance out of the town. The French looked upon all such gatherings with suspicion, and caused the people thus assembled to be searched for arms, which appears to have been made a pretext by the French soldiery for insulting the Sicilian females. Such was the case on the present occasion. As a young lady of great beauty, and the daughter of a gentleman of condition, was proceeding to the church, a French soldier laid hands upon her, and, under pretence of ascertaining if she had weapons concealed under her dress, offered her publicly a brutal insult. Her screams threw the multitude into a furious excitement, and, led by her father and husband and their friends, they seized whatever weapons came to hand, and massacred the whole of the French in Palermo, sparing neither sex nor age. To such a degree had the hatred of the population been excited, that even the monks issued from their monasteries to encourage and assist in the slaughter. Saint Remi, the governor of Palermo, attempted to make his escape in disguise, but was taken and killed, and the father of the young lady whose insult had been the signal for the rising, was chosen governor of the city for the Sicilians.

This signal, once given, was quickly acted upon in other parts of the island. The same day similar massacres took place in Monte Reale, Conigio, Carini, Termini, and other neighbouring towns; on the morrow, the example spread to Cefaladi, Mazaro, and Marsala; and on the 1st of April at Gergenti and Liceta. Burdac, the governor of Marsala, had just issued an order to the inhabitants of his government, to bring in all their gold and silver to the royal treasury, when the insurgents came to put him to death; and Louis de Montpellier, governor of San Giovanni, was poignarded by an injured husband, and his corpse hung out ignominiously at the castle window. Another unprovoked insult led to the revolt of Catania on the 4th of April. A young Frenchman named Jean Vignemada, notorious for his libertinism, attempted to take liberties with a lady named Julia Villamelli, when he was prevented by the unexpected en-

trance of her husband, whom he slew. The lady rushed through the street screaming for vengeance; and the people assembled, and, falling furiously on the Frenchmen, made a horrible carnage of them. Eight thousand are said to have perished in the massacre; all who escaped sought refuge in a strong fortress, where some perished with hunger and the rest were killed in attempting to leave it in disguise. The people of Palermo had meanwhile raised troops, and with these they laid siege to Taormina, took the place by assault, and slaughtered the whole of its French garrison. Messina alone remained in the possession of the French, and this was soon lost by their own imprudence. A citizen named Collura, supposed to have been employed by conspirators, made his appearance armed in the most public place of the town. As the Sicilians had been forbidden under the most severe penalties to carry or even possess arms, this was an act of defiance to the French authority, and four archers came to take the offender to prison. He offered a vigorous resistance, and some friends came to his assistance. The municipal authorities, believing that the citizens were not strong enough to overcome the French garrison, assisted in arresting the rioters, who, after an obstinate struggle, were all secured and committed to prison. The affair would probably have ended here, but the viceroy, not satisfied with imprisoning the men who had resisted his officers, sent to seize their wives also; and the citizens, provoked at this act of injustice, flew to arms, and, taking the French unprepared, massacred about three thousand of them. The rest retired into the fortresses, which were taken by assault, and their defenders put to the sword. The fate of the viceroy is a matter of doubt.

Such are the circumstances, as far as known, of this celebrated insurrection, which, from the circumstance of its having begun on the occasion of a public procession of the people of Palermo to attend vespers, received the name of the *Sicilian Vespers*. It is stated by some of the old writers that the numbers of the French who perished in the massacres throughout the island were not less than from twenty-four to twenty-eight thousand; but this number is supposed by historical writers to be greatly exaggerated. The King of Naples, Charles of Anjou, was at Monte-Fiascone, treating with the Pope, when the news of these events was brought to him, and he was so overcome with rage and indignation that it was some time before he could speak, but he gnawed a cane which he used to carry in his hand, and rolled his eyes furiously from side to side. When at length he opened his mouth, it was to give vent to frightful threats against the 'traitorous' Sicilians. But from that time nothing prospered with him. While the Pope laboured to overwhelm the insurgents with his excommunications, the King assembled an immense force, and laid siege to Messina, the inhabitants of which were reduced to propose terms of capitulation; but the conditions he insisted on imposing were so harsh that they resolved on continuing their defence, which they did until they were relieved by the King of Arragon, who had now thrown off

the mask, and arrived with a numerous fleet. Charles was obliged to raise the siege of Messina, and nearly the whole naval armament was taken or destroyed by the Arragonese. Don Pedro had already been crowned King of Sicily at Palermo. In the war which followed, Charles had to submit to defeats and disappointments until he died in 1285, not only deprived of Sicily, but threatened by revolt in Naples.

MARRIAGE OF ELIZA SPENCER.

Sir John Spencer, Lord Mayor of London in 1594, was a citizen of extraordinary wealth. At his death, March 30, 1609, he was said to have left £800,000, a sum which must have appeared utterly fabulous in those days. His funeral was attended by a prodigious multitude, including three hundred and twenty poor men, who each had a large dole of eatable, drinkable, and wearable articles given him.

Ten years before his death, 'Rich Spencer,' as he was called, had his soul crossed by a daughter, who insisted upon giving her hand to a slenderly endowed young nobleman, the Lord Compton. It seems to have been a rather perilous thing for a citizen in those times to thwart the matrimonial designs of a nobleman, even towards a member of his own family. On the 15th March 1598-9, John Chamberlain, the Horace Walpole of his day, as far as the writing of gossip letters is concerned, adverted in one of his epistles to the troubles connected with the love affairs of Eliza Spencer. 'Our Sir John Spencer,' says he, 'was the last week committed to the Fleet for a contempt, and hiding away his daughter, who, they say, is contracted to the Lord Compton; but now he is out again, and by all means seeks to hinder the match, alleging a pre-contract to Sir Arthur Henningham's son. But upon his beating and misusing her, she was sequestered to one Barker's, a proctor, and from thence to Sir Henry Billingsley's, where she yet remains till the matter be tried. If the obstinate and self-willed fellow should persist in his doggedness (as he protests he will), and give her nothing, the poor lord should have a warm catch.'*

Sir John having persisted in his self-willed course of desiring to have something to say in the disposition of his daughter in marriage, the young couple became united against his will, and for some time he steadily refused to take Lady Compton back into his good graces. At length a reconciliation was effected by a pleasant stratagem of Queen Elizabeth. When Lady Compton had her first child, the queen requested that Sir John would join her in standing as sponsors for the first offspring of a young couple happy in their love, but discarded by their father; the knight readily complied, and her Majesty dictated her own surname for the Christian name of the child. The ceremony being performed, Sir John assured the Queen that, having discarded his own daughter, he should adopt this boy as his son. The parents of the child being introduced, the knight, to his great surprise, discovered that he had adopted his own grandson; who, in

* Letters of John Chamberlain during the Reign of Queen Elizabeth, edited from the originals by Sarah Williams. Camden Society, 1861, p. 50.

reality, became the ultimate inheritor of his wealth.

There is extant a curious characteristic letter of Lady Compton to her husband, apparently written on the paternal wealth coming into their hands:

'My sweete Life,

'Now I have declared to you my mind for the settling of your state, I supposed that it were best for me to bethink, or consider with myself, what allowance were meetest for me. For, considering what care I ever had of your estate, and how respectfully I dealt with those, which, by the laws of God, of nature, and civil polity, wit, religion, government, and honesty, you, my dear, are bound to, I pray and beseech you to grant to me, your most kind and loving wife, the sum of £1600 per annum, quarterly to be paid.

'Also, I would (besides the allowance for my apparel) have £600 added yearly (quarterly to be paid) for the performance of charitable works, and those things I would not, neither will, be accountable for.

'Also, I will have three horses for my own saddle, that none shall dare to lend or borrow; none lend but I; none borrow but you.

'Also, I would have two gentlewomen, lest one should be sick, or have some other lett. Also, believe that it is an indecent thing for a gentlewoman to stand mumping alone, when God hath blessed their lord and lady with a great estate.

'Also, when I ride a-hunting, or hawking, or travel from one house to another, I will have them attending; so, for either of these said women, I must and will have for either of them a horse.

'Also, I will have six or eight gentlemen; and I will have my two coaches,—one lined with velvet, to myself, with four very fair horses, and a coach for my women, lined with cloth; one laced with gold, the other with scarlet, and laced with watch-lace and silver, with four good horses.

'Also, I will have two coachmen; one for my own coach, the other for my women's.

'Also, at any time when I travel, I will be allowed, not only carriages and spare horses for me and my women, but I will have such carriages as shall be fitting for all, or duly; not pestering my things with my women's, nor theirs with chambermaids', or theirs with washmaids'.

'Also, for laundresses, when I travel, I will have them sent away with the carriages, to see all safe; and the chambermaids I will have go before with the grooms, that the chambers may be ready, sweet, and clean.

'Also, for that it is indecent to crowd up myself with my gentleman usher in my coach, I will have him to have a convenient horse to attend me either in city or country; and I must have two footmen; and my desire is, that you defray all the charges for me.

'And, for myself (besides my yearly allowance), I would have twenty gowns of apparel; six of them excellent good ones, eight of them for the country, and six others of them very excellent good ones.

'Also, I would have put into my purse £2000 and £200, and so you to pay my debts.

'Also, I would have £6,000 to buy me jewels, and £4,000 to buy me a pearl chain.

'Now, seeing I have been and am so reasonable unto you, I pray you do find my children apparel, and their schooling; and all my servants, men and women, their wages.

'Also, I will have all my houses furnished, and all my lodging-chambers to be suited with all such furniture as is fit; as beds, stools, chairs, suitable cushions, carpets, silver warming-pans, cupboards of plate, fair

hangings, and such like. So, for my drawing-chamber, in all houses, I will have them delicately furnished, both with hangings, couch, canopy, glass, chairs, cushions, and all things thereunto belonging.

'Also, my desire is, that you would pay your debts, build Ashby-house, and purchase lands, and lend no money (as you love God) to the Lord Chamberlain,* which would have all, perhaps your life, from you. Remember his son, my Lord Waldon, what entertainment he gave me when you were at Tilt-yard. If you were dead, he said, he would marry me. I protest I grieve to see the poor man have so little wit and honesty, to use his friends so vilely. Also, he fed me with untruths concerning the Charter-house; but that is the least: he wished me much harm; you know him. God keep you and me from him, and such as he is.

'So, now that I have declared to you what I would have, and what that is I would not have, I pray, when you be an earl, to allow me £1,000 more than now desired, and double attendance.

'Your loving wife,
'ELIZA COMPTON.'

The Passover of the Modern Jews.

Jewish life, which is every day losing its originality in towns, has still preserved in some village communities on the Continent its strong traditional impress. It is among the Vosges mountains and on the banks of the Rhine that we must look for the superstitious, singular customs, and patriarchal simplicity of ancient Judea.

Having an invitation to witness the festival of Paëcach at the house of a fine old Jew, at Bolwiller, near Basle, I set off on the fourteenth of their month Nisan, corresponding to our 29th of March, to be ready for the ceremony which was to celebrate the flight of Israel from Egypt with their kneading troughs upon their shoulders. Hence its name of the 'Feast of Azymes,' or unleavened bread. As I was passing down the street, I marked the first sign; children were running in all directions with baskets of bottles, the presents of the rich tradespeople to the rabbi, schoolmaster, beadle, &c., of wine of the best quality, that the poor as well as the rich may make merry.

My host received me on the threshold with the classical salutation, 'Alechem Salem,' 'Peace be with you,' and I was soon in the midst of his numerous family, who had just concluded the week's preparations. These consist of the most extensive washings and cleanings; every cup to be used must be boiled in water, the floors are washed and sprinkled with red and yellow sand; the *matsès*, or Passover cakes, are kneaded by robust girls, on immense tables near the flaming stove; others take it from the bright copper bowls, roll it out into the round cakes, prick and bake it. Enormous chaplets of onions are hung round the kitchen, and shining tin plates are ranged by dozens on the shelves, to be used only at the Passover. White curtains adorn every window; the seven-branched lamp is brought out; the *misrach*, a piece of paper on which this word, meaning *east*, is written, is reframed and hung on the side of the room towards Jerusalem.

* Thomas Howard, Earl of Suffolk, made Lord Treasurer in 1613.

in which direction they turn at prayer; the raised sofa on which the master of the house passes the first two nights is fitted with cushions.

Our conversation was interrupted by the three knocks of the *Schuleklopfer*, who comes to each house to call the faithful to prayer; we followed him immediately, and found the synagogue splendidly illuminated, and when the service was over, each family returned home to hold the *seder*, the most characteristic ceremony of the festival. The table in the dining-room was covered with a cloth, the lamp lighted, plates were set, but no dishes; on each plate a small book was laid, called the *Haggada*, in Hebrew, consisting of the chants and prayers to be used, and illustrated with engravings of the departure of the Israelites from Egypt. My host took the sofa at the head of the table, his wife and daughters were on one side, his sons on the other, all dressed in new clothes, and their heads covered. At the end of the table I noticed an angular-faced man in far-worn clothes. I found he was a sort of beggar who always partook of Herr Salomon's festivals. In the middle of the table, on a silver dish, were laid three Passover-cakes, separated by a napkin; above these, on smaller dishes, was a medley of lettuce, marmalade flavoured with cinnamon, apples, and almonds, a bottle of vinegar, some chervil, a hard-boiled egg, horse-radish, and at one side a bone with a little flesh on it. All these were emblems: the marmalade signified the clay, chalk, and bricks in which the Hebrew slaves worked under Pharaoh; the vinegar and herbs, the bitterness and misery they then endured; and the bone the paschal lamb. Each guest had a silver cup; the master's was of gold; on a side-table were several bottles of Rhenish Falernian; the red recalling the cruelty of Pharaoh, who, tradition says, bathed in the blood of the Hebrew children.

The master of the house opened the ceremony with the prayer of blessing; the cups having first been filled to the brim, then the eldest son rose, took a ewer from another table, and poured water over his father's hands, all present rising and stretching out their hand to the centre dish, repeating these words from the *Haggada*: 'Behold the bread of sorrow our fathers ate in Egypt! Whoever is hungry let him come and eat with us. Whoever is poor let him take his Passover with us.' The youngest son asks his father in Hebrew, 'What is the meaning of this ceremony?' and his father replies, 'We were slaves in Egypt, and the Lord our God has brought us out with a mighty hand and a stretched out arm.' All then repeated the story of the departure from Egypt in Bible words, and tasted the various symbolical articles arranged in the dish. By the side of the master's cup stood one of much larger dimensions, which was now filled with the best wine; it is set apart for the prophet Elijah, the good genius of Israel, an invisible guest it is true, but always and everywhere present at high festivals.

Thus ends the first part of the *seder*: the evening meal is set on the table, good cheer and cheerful conversation follow. At a certain time every one resumes his former position, and the table is arranged as at the first. Herr Salomon

returns to his cushions, and half a Passover-cake covered with a napkin is laid before him, which division typifies the passage of the Red Sea; he gave a piece of it to each. A prayer followed, and he then desired his eldest son to open the door. The young man left his place, opened the door into the corridor very wide, and stood back as if to let some one pass. The deepest silence prevailed; in a few minutes the door was closed, the prophet had assuredly entered, he had tasted the wine which was exclusively set apart for him, and sanctified the house by his presence as God's delegate. The cups of wine are now emptied for the fourth time; the 115th, 116th, 118th, and 150th Psalms are sung with their traditional inflexions; and each rivals his neighbour in spirit and voice; the women even are permitted to join on this evening, though prohibited at all other times.

Thus ends the religious part of the festival, but the singing continues, the libations become more and more copious; at nine the women retire, and leave the men, until the influence of the Rhenish wine reminds them it is time to separate. The usual evening prayer is never offered on this night and the following one; they are special occasions, when God watches, as formerly in Egypt, over all the houses of the Jews. The ceremonies we have described are repeated on the following day, which is a great festival. All the people go early to the synagogue in their new clothes. Dinner is prepared at noon, and the afternoon is devoted to calling on friends; the dessert remains on the table, and a plate and glass of wine are presented to each guest with the hospitable salutation, 'Baruch-haba,' 'Blessed be he who cometh.'

The feast lasts a week, but four days are only half feasts, during which the men attend to necessary business, and the women pay visits, and make the arrangements for marriages, which are scarcely ever concluded without the intervention of a marriage agent, who receives so much from the dowry at the completion of the affair.

On bidding adieu to my host at the conclusion of the feast, he begged me to be careful during my journey, as we were in the time of *omer*. This is the interval between the Passover and Pentecost, the seven weeks elapsing from the departure from Egypt and the giving of the law, marked in former days by the offering of an omer of barley daily at the temple. Now there is no offering, but all the villagers after the evening prayer count the days, and look forward to its close with a sort of impatience; it is considered a fearful time, during which a thousand extraordinary events take place, and when every Jew is particularly exposed to the influence of evil spirits. There is something dangerous and fatal in the air; every one should be on the watch, and not tempt the *schédim* (demons) in any way; the smallest and most insignificant things require attention. These are some of the recommendations given by Jewish mothers to their children: 'Do not whistle during the time of omer, or your mouth will be deformed; if you go out in your shirt sleeves, you will certainly come in with a lame arm; if you throw stones in the air, they will fall back upon you.' Let not

men of any age ride on horseback, or in a carriage, or sail in a boat; the first will run away with you, the wheels of the second will break, the last will take in water. Have a strict eye upon your cattle, for the sorcerers will get into your stables, mount your cows and goats, bring diseases upon them, and turn their milk sour. In the latter case, try to lay your hand upon the suspected person, shut her up in a room with a basin of the sour milk, and beat the milk with a hazel wand, pronouncing God's name three times. Whilst you are doing this, the sorceress will make great lamentation, for the blows are falling upon her. Only stop when you see blue flames dancing on the surface of the milk, for then the charm is broken. If at nightfall a beggar comes to ask for a little charcoal to light his fire, be very careful not to give it, and do not let him go without drawing him three times by his coat tail, and without losing time, throw some large handfuls of salt on the fire. This beggar is, probably, a sorcerer, for they seize upon every pretext, and take all disguises to enter into your houses. Such are the dangers of omer.

PRETENDED MURDERS OF CHRISTIAN CHILDREN BY THE JEWS.

The Christians of the middle ages, especially in the west of Europe, regarded the Jews with bitter hatred, and assailed them with horrible calumnies, which served as the excuses for persecution and plunder. One of the most frequent of these calumnies was the charge of stealing Christian children, whom, on Good Friday, or on Easter day, they tormented and crucified in the same way that Christ was crucified, in despite of the Saviour and of all true believers. Rumours of such barbarous atrocities were most frequent during the twelfth and thirteenth centuries. The Anglo-Saxon Chronicle informs us, under the year 1137, how, 'in his (King Stephen's) time, the Jews of Norwich bought a Christian child before Easter, and tortured him with all the same torture with which our Lord was tortured; and on Long Friday (the name among the Anglo-Saxons and Scandinavians for Good Friday) hanged him on a rood for hatred of our Lord, and afterwards buried him. They imagined it would be concealed, but our Lord shewed that he was a holy martyr. And the monks took him and buried him honourably in the monastery; and through our Lord he makes wonderful and manifold miracles, and he is called St William.' The writer of this was contemporary with the event, and, although his testimony is no proof that the child was murdered by the Jews, it leaves no doubt of the fact of their being accused of it, or of the advantage which the English clergy took of it. The later chroniclers, John of Bromton, and Matthew of Westminster, repeat the story, and represent it as occurring in the year 1145. The Roman Catholic Church made a saint of Hugh, who, they say, was twelve years of age, and had been apprenticed to a tanner, and his martyrdom is commemorated in the calendar on the 24th of March. The words of the Anglo-Saxon Chronicle would seem to shew that the old practice of selling children for slaves con-

tinued to exist at Norwich in the time of Stephen. St William's shrine at Norwich was long an object of pilgrimage; and the people of that city built and dedicated a chapel to him in Thorp-Wood, near Norwich, where his body is said to have been found.

A child is said to have been put to death in the same manner by the Jews of Gloucester, in the year 1160; and again, in the year 1181, the Jews of Bury St Edmunds are accused of having crucified a child named Robert, on Easter day, at whose shrine in the church there numerous miracles were believed to be performed. Two years afterwards, Philippe Auguste, King of France, banished the Jews from his kingdom on a similar charge, which was again brought against the Jews of Norwich in 1235 and 1240, on which charge several Jews were punished. Matthew of Westminster states that the Jews of Lincoln circumcised and crucified a Christian child in 1250, at whose tomb miracles were performed; but this is perhaps only a mistake of date for the more celebrated child martyr, whose story we will now relate.

As the story is related by Matthew Paris,—who also, it must be remarked, lived at the time of the event,—the Jews of Lincoln, about the feast of Peter and Paul (June 29), stole a Christian child eight years of age, whose name was Hugh, and kept him secretly till they had given information to all the Jews throughout England, who sent deputies to be present at the ceremony of crucifying him. This was alleged to have been done with all the particularities which attended the passion of our Saviour. The mother of the child, meanwhile, was in great distress, went about the city inquiring for it, and, informed that it had been last seen playing with some Jewish children and entering a certain Jew's house there, she suddenly entered the Jew's house, and discovered the body of her child thrown into a well. The alarm was given to the citizens, who forced the house, and carried away the body of the murdered child. In the middle of this tumult, King Henry's Justiciary, John de Lexington, was in Lincoln, and he caused the Jew who lived in this house, and was called Copin, to be seized and strictly examined. Copin, on a pardon for his life and limbs, made a confession of all the circumstances of the murder, and declared that it was the custom of the Jews thus to sacrifice Christian children every year. The canons of Lincoln obtained the body of the child, and buried it under a shrine in their cathedral, and for ages, according to the belief of the Catholic Church, miracles continued to be performed at the tomb of St Hugh. That the public circumstances of this story took place,—namely, that the Jews of Lincoln were accused of murdering a child under these circumstances, that many of them were imprisoned and brought to punishment on this charge, and that the body of the child was buried honourably in Lincoln Cathedral,—there is no room for doubt. In the Chronicle of London, known as the *Liber de Antiquis Legibus*, it is stated that on St Cecilia's day (Nov. 22), then a Monday, ninety-two Jews were brought from Lincoln to Westminster, accused of having slain a male Christian child, and were all committed to

the Tower of London. There is a peculiar interest attached to this event, from the circumstance that it appears to be the first instance we know in which the right of a foreigner to be tried by a mixed jury was insisted upon, in this case unsuccessfully. The London Chronicle, by a contemporary writer, adds, 'of which number eighteen, who refused to submit to the verdict of Christians without Jews, when the king was at Lincoln, and when they were indicted for that murder before the king, were the same day drawn, and after dinner in the evening hanged. The rest were sent back to the Tower.' Official documents relating to these Jews in the Tower are also printed in Rymer's *Fœdera*. A ballad in Anglo-Norman has been preserved in the National Library in a contemporary manuscript, and has been printed by M. Francisque Michel in a little volume entitled *Hugues de Lincoln*, which gives an account of the pretended martyrdom of the child 'St Hugh,' resembling generally the narrative of Matthew Paris, except that it gives considerably more details of the manner in which the child was treated. But the most remarkable proof of the firm hold which this story had taken upon men's minds in the middle ages is the existence of a ballad, more romantic in its details, which has been preserved orally down to our own time, and is still recited from time to time in Scotland and the north of England. Several copies of it have been printed from oral recitation, among our principal collections of old ballads, of which perhaps the best is that given by Jamieson.

HUGH OF LINCOLN.

Four and twenty bonny boys
Were playing at the ba';
And by it came him, sweet sir Hugh,
And he play'd o'er them a'.
He kick'd the ba' with his right foot,
And catch'd it wi' his knee;
And throug-and-thro' the Jew's window,
He gar'd the bonny ba' flee.
He's done him to the Jew's castell,
And walk'd it round about;
And there he saw the Jew's daughter
At the window looking out.
'Throw down the ba', ye Jew's daughter,
Throw down the ba' to me!
'Never a bit,' says the Jew's daughter,
'Till up to me come ye.'
'How will I come up? How can I come up?
How can I come to thee?
For as ye did to my auld father,
The same ye'll do to me.'
She's gane till her father's garden,
And pu'd an apple, red and green;
'Twas a' to wyle him, sweet sir Hugh,
And to entice him in.
She's led him in through ae dark door,
And sae has she thro' mine;
She's laid him on a dressing table,
And stickit him like a swine.
And first came out the thick thick blood,
And syne came out the thin;
And syne came out the bonny heart's blood;
There was nae mair within.

She's row'd him in a cake o' lead,
Bade him lie still and sleep ;
She's thrown him in Our Lady's draw-well,
Was fifty fathom deep.

When bells were rung, and mass was sung,
And a' the bairns came hame,
When every lady gat hame her son,
The Lady Maisry gat nane.

She's ta'en her mantle her about,
Her coffer by the hand ;
And she's gane out to seek her son,
And wander'd o'er the land.

She's done her to the Jew's castell,
Where a' were fast asleep ;
' Gin ye be there, my sweet sir Hugh,
I pray you to me speak.'

She's done her to the Jew's garden,
Thought he had been gathering fruit ;
' Gin ye be there, my sweet sir Hugh,
I pray you to me speak.'

She near'd Our Lady's deep draw-well,
Was fifty fathom deep ;
' Where'er ye be, my sweet sir Hugh,
I pray you to me speak.'

' Gae hame, gae hame, my mither dear ;
Prepare my winding sheet ;
And, at the back o' merry Lincoln,
The morn I will you meet.'

Now lady Maisry is gane hame ;
Made him a winding sheet ;
And, at the back o' merry Lincoln,
The dead corpse did her meet.

And a' the bells o' merry Lincoln,
Without men's hands, were rung ;
And a' the books o' merry Lincoln,
Were read without man's tongue ;
And ne'er was such a burial
Sin Adam's days begun.

THE BORROWED DAYS.

It was on the 30th of March 1639, that the Scottish covenanting army, under the Marquis of Montrose, marched into Aberdeen, in order to put down a reactionary movement for the king and episcopacy which had been raised in that city. The day proved a fine one, and therefore favourable for the march of the troops, a fact which occasioned a thankful surprise in the friends of the Covenant, since it was one of the *Borrowed Days*, which usually are ill. One of their clergy alluded to this in the pulpit, as a miraculous dispensation of Providence in favour of the good cause.

The Borrowed Days are the three last of March. The popular notion is, that they were borrowed by March from April, with a view to the destruction of a parcel of unoffending young sheep—a purpose, however, in which March was not successful. The whole affair is conveyed in a rhyme thus given at the firesides of the Scottish peasantry:—

' March said to Aperill,
I see three hogs * upon a hill,
And if you'll lend me dayes three,
I'll find a way to make them dee.
The first o' them was wind and weat,
The second o' them was snaw and sleet,

* Hogg, a sheep in its second year.

The third o' them was sic a freeze,
It froze the birds' nebs to the trees :
When the three days were past and gane,
The three silly hogs came hirpling * hame.'

Sir Thomas Browne, in his *Vulgar Errors*, alludes to this popular fiction, remarking, 'It is usual to ascribe unto March certain *Borrowed Daies from April*.' But it is of much greater antiquity than the time of Browne. In the curious book entitled the *Complaynt of Scotland*, printed in 1548, occurs the following passage:—'There eftir i' entrit in ane grene forest, to contempill the tender yong frutes of grene treis, becaus the borial blastis of the *thre borowing daies of Marche* hed chaisit fragrant flureise of evyrie frut-tree far athourt the fieldis.' Nor is this all, for there is an ancient calendar of the church of Rome often quoted by Brand, † in which allusion is made to 'the rustic fable concerning the nature of the month [March]; the rustic names of six days which shall follow in *April, or may be last in March*.'

No one has yet pretended fully to explain the origin or meaning of this fable. Most probably, in our opinion, it has taken its rise in the observation of a certain character of weather prevailing about the close of March, somewhat different from what the season justifies; one of those many wintry relapses which belong to the nature of a British spring. This idea we deem to be supported by Mrs. Grant's account of a similar superstition in the Highlands:—'The *Faoilteach*, or those first days of February, serve many poetical purposes in the Highlands. They are said to have been borrowed for some purpose by February from January, who was bribed by February with three young sheep. These three days, by Highland reckoning, occur between the 11th and 15th of February; and it is accounted a most favourable prognostic for the ensuing year that they should be as stormy as possible. If these days should be fair, then there is no more good weather to be expected through the spring. Hence the *Faoilteach* is used to signify the very ultimatum of bad weather.'—*Superstitions of the Highlanders*, ii. 217.

FANTOCCINI.

In the simulative theatricals of the streets, the Fantoccini, when they existed, might be considered as the legitimate drama; Punch as sensational melodrama. The Punch puppets, as is well known—but what a pity it should be known!—are managed by an unseen performer below the stage, who has his fingers thrust up within their dresses, so as to move the head and arms only. In the case of the Fantoccini, all the figures have moveable joints, governed by a string, and managed by a man who stands behind the scene, passing his arms above the stage, and so regulating the action of his *dramatis personæ*. The Fantoccini were in considerable vogue in the bye streets of London in the reign of George IV., on the limited scale represented by our artist. Turks, sailors, clowns, &c., dangled and danced through the scene with great propriety

* Limping.

† Popular Antiquities, edit. 1854, ii. 41.

of demeanour, much to the delight of the young, and the gaping wonderment of strangers.

Few persons who gazed upon the grotesque movements of these figures imagined the profound age of their invention. The Fantoccini, introduced as a novelty within our own remembrance, in reality had its chief features developed in the days of the Pharaohs; for in the tombs of ancient Egypt, figures have been found whose limbs were made moveable for the delight of children before Moses was born. In the tombs of Etruria similar toys have been discovered; they were disseminated in the East; and in China and India are now made to act dramas, either as moveable figures, or as shadows behind a curtain. As 'ombres Chinoises' these figures made a novelty for London sightseers at the end of the last century; and may still be seen on winter nights in London performing a brief, grotesque, and not over-delicate drama, originally produced at Astley's Amphitheatre, and there known as 'The Broken Bridge.'

It requires considerable dexterity to 'work'

FANTOCCINI IN LONDON.

these figures well; and when several are grouped together, the labour is very great, requiring a quick hand and steady eye. The exhibition does not 'pay' now so well as Punch; because it is too purely mechanical, and lacks the bustle and fun, the rough practical joking and comicality of that great original creation. The proprietors of these shows complain of this degenerate taste; but it is as possible for the manager of a street show to be in advance of the taste of his audience, as for the manager of a Theatre Royal; and the 'sensation dramas' now demanded by the theatre-goers, are to better plays what Punch is to the Fantoccini.

MARCH 31.

St Acacius (or Achates), Bishop of Antioch, 3rd century. St Benjamin, Deacon, martyr, 424. St Guy (or Witen), Abbot at Ferrara, 1046.

Born.—Prince Arthur, Duke of Brittany, 1187; Henry II. of France, 1518, *St Germain*; René Descartes, French philosopher, 1596, *La Haye*; Pope Benedict XIV., *Bologna*; Frederick V. of Denmark, 1732; Francis Joseph Haydn, musical composer, 1732, *Rohrau*; Dr Joseph Towers, 1737, *Southwark*; General Richard D. Guyon, commander in the Hungarian patriotic army, 1813, *Walcot, Somerset*.

Died.—Francis I. of France, 1547, *Rambouillet*; Philip III. of Spain, 1621, *Madrid*; Dr John Donne, poet, 1631; Peter Burman, law-writer and Leyden professor, 1741; George, Earl Macartney, Ambassador to China, 1806, *Chiswick*; Ludwig Beethoven, musical composer, 1827, *Vienna*; John Constable, R.A., landscape painter, 1837; John C. Calhoun, American statesman, 1850; Edward Riddle, mathematician, 1854; Charlotte Brontë (Mrs Nicol), novelist, 1855; Lady Charlotte Bury, novelist, 1861, *Sloane-street*.

GEORGE, EARL MACARTNEY.

George Macartney, a descendant of the Macartneys of Auchenleck, near Kirkcudbright, was born at his father's seat, Lissanoure, in the county of Antrim, Ireland, on the 14th of May 1737. So quick was he to learn, and so well instructed by a private tutor named Dennis, that, at the early age of thirteen, he was admitted a fellow commoner of Trinity College, Dublin. His choice of profession inclined towards medicine, until accidentally reading 'certain curious old tracts on chronology' (the *Book of Days* of the period), his circle of ideas became enlarged, and an honourable spirit of ambition changed his first design. And long after, when he had it in his power to reward his tutor's care with two rich benefices, he emphatically acknowledged that 'the events, dates, and other facts' gleaned up, when a boy, from those old chronological works, not only pointed out the way, but were of the greatest service to him as he travelled the arduous path which eventually led to wealth and distinction. Having obtained the degree of M.A., he spent some time in travel, during which he fortunately made the acquaintance of Stephen, son of Lord Holland, and elder brother of the renowned orator and statesman, Charles James Fox. Here was the tide that led to fortune, nor was the ambitious youth, whose head was stored with 'facts, dates, and other events,' slow to take advantage of the flood. The abilities and personal advantages of the young Irishman were soon recognised at Holland House; and, after a short course of political training, he was brought into Parliament for the borough of Midhurst, then at the command of his influential patron. He did not disappoint the expectations of his friends. Just at that period, statesmen of all parties were puzzled by the attitude of Russia. Scarcely permitted, by the public opinion of Europe, to hold a place among civilized states, the empire of the Czars had, at one bound, stepped into the first class, under the clever

guidance of an ambitious woman, whom romantically unexpected events had placed upon the throne. Macartney was the first to see the position and accept it, in the following oracular words,—‘Russia,’ he said, ‘is no longer to be gazed at as a distant glimmering star, but as a great planet, that has obtruded itself into our system, whose place is yet undetermined, but whose motions must powerfully affect those of every other orb.’

It was necessary, for many important reasons, that England should stand well with the newly-born, semi-savage giant of the North. Yet three ambassadors from the Court of St James’s had failed in persuading the Empress Elizabeth to renew the treaty which expired in 1734. To all three she flatly refused to continue the close connection that had long existed between the two countries, on the simple and unanswerable grounds, that Russia would not enter into exclusive relations with any particular European power. In this emergency, Macartney was appointed Envoy Extraordinary to the Empress; and having received the honour of knighthood, departed on his delicate mission. He was eminently successful. His consummate tact enabled him to obviate the difficulty of access to the Empress, which had utterly discomfited the previous envoys; while his penetration and discretion enabled him to triumph over other obstacles. At his first public audience with the Czarina, he completely gained her consideration by a piece of flattery. After assuring her of his master, George the Third’s inviolable attachment to her person, he added:—‘And forgive me, Madam, if here I express my own particular satisfaction in having been chosen for so pleasing, so important an employment. By this means, I shall have the happiness of more nearly contemplating those extraordinary accomplishments, those heroic virtues, which make you the delight of that half of the globe over which you reign, and which render you the admiration of the other.’ He succeeded in persuading the Court of St Petersburg to agree to a treaty as nearly as possible in accordance with his instructions; and many distinguished testimonials were conferred upon him, for this important service. From being a simple envoy, he was elevated to the position of ambassador and plenipotentiary; the Empress gave him a magnificent gold snuff-box, inlaid with diamonds; and the king of Poland sent him the insignia of the White Eagle.

On his return, he was appointed Chief Secretary for Ireland, and soon after made a Knight Companion of the Bath. For several stormy sessions, he sat in the Irish House of Commons, and on one occasion, being taunted with his red ribbon and White Eagle, he gave a reply which effectually prevented any other attacks of that kind; observing in conclusion—‘Thus, Sir, I was employed at a very early age, whilst some of my opponents were engaged in the weighing of syllables, the measurement of words, and the construction of new phrases. If, in my embassies, I have received testimonies never before granted but to my superiors; if my person is adorned with extraordinary proofs of distinction, let me tell these

gentlemen that they are badges of honour, not of shame and disgrace. Let me tell them that, if, from my public situation, my name should ever pass to posterity, it will be transmitted as a testimony of my services and integrity, not as a record of infamy and crimes.’

We next find Sir George in the British parliament, representing the burghs of Ayr, Irvine, Rothesay, &c., most probably by the influence of Lord Bute, whose daughter, Lady Jane Stewart, he had lately married. In 1775 he was appointed Governor of Grenada, and in the following year advanced to the Irish peerage, under the title of Lord Macartney, Baron of Lissanoure.

A more important field for his public services soon after presented itself in the governorship of the Madras Presidency. He entered upon this office with all the zeal and discretion by which he was so eminently distinguished. His arrival in India was hailed with joy as an event pre-empting some hopes of relief from the difficulties and degradations into which the Presidency had sunk. There was disunion in the council, and danger without. The country was overrun by Hyder Ali; while famine relentlessly swept away the wretched natives; but, worse than all, there existed a shameless system of gross and complicated corruption, in every branch of the Company’s service. In reforming these abuses, the Governor was subjected to the grossest calumnies, and actual personal danger. Yet, in the short space of four years, by indomitable, unceasing effort, he introduced better arrangements. His wisdom was as beneficial to his country, as his unsullied integrity was honourable to himself. Nor were his services unrecognised. In approbation of his conduct, he was appointed to the high office of Governor-General, which after due consideration he declined. The Company, however, in acknowledgment of his eminent services, bestowed on him an unsolicited life-pension of £1500 per annum.

For six years after his return from Madras, Lord Macartney lived on his paternal estate at Lissanoure; finding full scope for his active mind in building houses for his tenantry, draining bogs, and planting trees. But the services he could render his country were much too valuable to be absorbed in the simple affairs of private life. In 1792, he was appointed ambassador to China. A detailed account of this embassy, prepared by Sir George Staunton from Lord Macartney’s own papers, was, till a very late period, the standard authority on all matters relating to the Chinese empire. On his return, he was sent on a peculiar mission to Italy, the precise objects of which have never transpired; but the service was evidently conducted to the entire satisfaction of the Government, as we find him about this time created a British peer, under the title of Baron Macartney of Parkhurst. He was subsequently appointed Governor of the Cape Colony, an office he was compelled by ill health to resign shortly afterwards. On leaving the Cape, he deemed it right to place on record a declaration, similar to one he previously had made when resigning the governorship of Madras. This declaration consisted simply of a solemn form of oath, to the effect that he had lived

exclusively on his salary, never received bribes, nor engaged in trafficking speculations for his own benefit. In speaking of this public act, he says,—‘I trust that it will not be imputed to me as proceeding from any motive of vanity, ostentation, or parade, but from a sense of that propriety and consistency, which I wish to preserve through the whole course of my political life, now drawing near to its conclusion. If it be a gratification to my private feelings, it is equally the discharge of a debt, which the public has a right to demand from every public man.’ After his return from the Cape, Lord Macartney engaged no more in public affairs. During the latter part of his life, he resided at Chiswick, enjoying the society of the leading literary and scientific men of the day.

JOHN C. CALHOUN.

Amongst the statesmen of powerful intellect who arose in America in the age succeeding Independence, a prominent place is due to Mr Calhoun, who occupied the position of Secretary of War during the whole presidency of Mr Monroe (1817-25), and was himself Vice-President of the States during the ensuing six years. The name (identical with Colquhoun) indicates a Scottish extraction; but the father of Mr. Calhoun was an Irishman, who emigrated to Pennsylvania. At New Haven College, at the bar in South Carolina, as representative of that State in Congress, and in all his administrative capacities, the massive talents of Mr Calhoun were conspicuous, nor was the grandeur of his moral nature held in less esteem.

It was in 1831, during Jackson’s presidency, and while Mr Calhoun was senator for South Carolina, that that state and others threatened to secede from the Union, on account of the system of protection adopted in the interest of the manufacturers of the Northern States. Mr Calhoun was the earnest and powerful advocate of Free Trade and of State Rights and State Sovereignty. South Carolina actually passed an Act of Nullification, or a refusal to pay the duties of a highly protective tariff, and the dissolution of the Union and war were imminent, when a compromise, proposed by Mr Clay, was agreed to, a lower tariff adopted, and the danger for the time averted. A speech pronounced by Mr Calhoun at this period, contained the following passage:—‘We are told that the Union must be preserved. And how is it proposed to preserve the Union? By force! Does any man in his senses believe that this beautiful structure,—this harmonious aggregate of States, produced by the joint consent of all,—can be preserved by force? Its very introduction will be certain destruction to the Federal Union. No, no! You cannot keep the States united in their constitutional and federal bonds by force. Force may, indeed, hold the parts together; but such union would be the bond between the master and slave—a union of exaction on one side, and of unqualified *obedience* on the other. It is madness to suppose that the Union can be preserved by force. Disguise it as you may, the contest is one between power and liberty.’ In 1843, Mr Calhoun became Secretary of State under the admi-

nistration of Mr Tyler, who, by the death of General Harrison, had become President. In 1845 he returned to the Senate, of which he remained a member until his death.

Mr Calhoun is considered by many as the greatest of American statesmen. Loved, admired, trusted, and almost idolized in South Carolina and throughout the Southern States, he was necessarily less popular in the north. His free-trade principles were opposed to northern interests; his defence of State rights, and the right of nullification and secession, were opposed to the territorial passion of the north; while his opinions on the necessity, and even philanthropy of negro slavery, were such as only local feelings have ever been able to sanction. But while Mr Calhoun’s political opinions found little favour, except in his own section, his commanding talents, and the purity of his public and private character, made him everywhere respected. His influence in his native state was unbounded, and he, more than any other man, moulded the public opinion of the Southern States, and prepared them for the steps which they took at the election of Mr Lincoln.

FRANCIS I.

The era of Francis I. in France was that of revived learning and skill in the arts. Up to his time, notwithstanding that the use of the vernacular language had been introduced in the legal proceedings of Germany, England, and other countries, they continued in France to employ a barbarous Latin, to the great bewilderment of all sorts of people. Francis ordered a change in this respect, in order that those who had the unhappiness to go to law might at least have the satisfaction of reading their ruin in their own tongue. He likewise introduced the fashion of long hair and short beards, after Pope Julius II. As soon as it was observed that the courtiers allowed their beards to grow, it became an object with magistrates and grave elderly men generally to get themselves well-shaven. The courtiers and *petit-maitres* by and by grew disgusted with their long beards, and took once more to close shaving. Then the grave men, determined to be unlike those people, immediately began to allow their beards to grow.

Francis was cut off at fifty-three in consequence of his immoralities. The bishop of Mâcon, preaching his funeral sermon, had the *hardiesses* to assure his auditors that the king’s soul had gone straight to paradise, without passing through purgatory. To the credit, however, of the Sorbonne, it rebuked the bishop for this piece of courtliness, and forbade his sermon to be printed.

BEETHOVEN.

This eminent composer was the son of a tenor-singer, who in his turn was the son of a bass-singer, both being of course obscure men. It is remarkable how often the genealogy of brilliant musical power is of this nature. Bach came of a tribe of humble musicians, commencing, it is said, with a miller. Haydn’s father was an amateur harpist in humble life. Mozart was the son of an ordinary *kapell-meister* and teacher of the violin. The father of Rossini was a horn-blower in the orchestra of a strolling company. It seems as if, for the production of the musical genius, the antecedence of musical temperament and a moderate ability were necessary; or as if the family musical gift, in that case, only became somewhat intensified—screwed up an octave higher, as it were.

Next came fresh April, full of lustyhed,
 And wanton as a kid whose horne new buds ;
 Upon a bull he rode, the same which led
 Europa floating through th' Argolick fluds :
 His horns were gilden all with golden studs,
 And garnished with garlands goodly sight,
 Of all the fairest flowers and freshest buds,
 Which th' earth brings forth ; and wet he seemed in sight
 With waves through which he waded for his love's delight.

SPENSER.

(DESCRIPTIVE.)

APRIL

presents no prettier picture than that of green fields, with rustic stiles between the openings of the hedges, where old footpaths go in and out, winding along, until lost in the distance ; with children scattered here and there, singly or in groups, just as the daisies are, all playing or gathering flowers.

452

With what glee they rush about ! chasing one another in zigzag lines like butterflies, tumbling here, and running there ; one lying on its back, laughing and shouting in the sunshine ; another, prone on the grass, is pretending to cry, in order to be picked up. A third, a quiet little thing, with her silky hair hanging all about her sweet face, sits patiently sticking daisy-buds on the thorns of a leafless branch, that she may carry home a tree of flowers. Some fill their pinafores, others sit decorating their caps and bonnets, while one, whose fair brow has been garlanded, dances as she holds up the skirt of her little frock daintily

with her fingers. Their graceful attitudes can only be seen for a few moments; for if they catch a strange eye directed towards them, they at once cease their play, and start off like alarmed birds. We have often wished for a photograph of such a scene as we have here described and witnessed while sheltered behind some hedge or tree.

Dear to us all are those old footpaths that, time out of mind, have gone winding through the pleasant fields, beside hedges and along watercourses, leading to peaceful villages and far-away farms, which the hum and jar of noisy cities never reach; where we seem at every stride to be drawing nearer the Creator, as we turn our backs upon the perishable labours of man.

Only watch some old man, bent with the weight of years, walking out into the fields when April greens the ground—

‘ Making it all one emerald.’

With what entire enjoyment he moves along, pausing every here and there to look at the opening flowers! Yes, they are the very same he gazed upon in boyhood, springing from the same roots, and growing in the very spots where he gathered them fifty long years ago. What a many changes he has seen since those days, while they appear unaltered! He thinks how happy life then passed away, with no more care than that felt by the flowers that wave in the breeze and sunshine, which shake the rain from their heads, as he did when a boy, darting in and out bareheaded, when he ran to play amid the April showers. Tears were then dried and forgotten almost as soon as shed. He recalls the companions of his early manhood, who stood full-leaved beside him, in the pride of their summer strength and beauty, shewing no sign of decay, but exulting as if their whole life would be one unchanged summerhood. Where are they now? Some fell with all their leafy honours thick upon them. A few reached the season of the ‘sere and yellow leaf’ before they fell, and were drifted far away from the spot where they flourished, and which now ‘knoweth them no more for ever.’ A few stood up amid the silence of the winter of their age, though they saw but little of one another in those days of darkness. And now he recalls the withered and ghastly faces, which were long since laid beneath the snow. He alone is spared to look through the green gates of April down those old familiar footpaths, which they many a time traversed together. ‘Cuckoo! cuckoo!’ Ah, well he knows that note! It brings again the backward years—the sound he tried to imitate when a boy—home, with its little garden—the very face of the old clock, whose ticking told him it was near schooltime. And he looks for the messenger of spring now as he did then, as it flies from tree to tree; but all he can discover is the green foliage, for his eyes are dim and dazed, and he cannot see it now. He hears the song of some bird, which was once as familiar to him as his mother’s voice, and tries to remember its name, but cannot; and as he tries, he thinks of those who were with him when he heard it; and so he goes on unconsciously unwinding link by link the golden chain which reaches from the grave to heaven. And when he

returns home, he carries with him a quiet heart, for his thoughts scarcely seem allied to earth, and lie ‘too deep for tears.’ He seems to have looked behind that gray misty summit, where the forgotten years have rolled down, and lie buried, and to have seen that dim mustering-ground beyond the grave, where those who have gone before are waiting to receive him.

Many of the trees now begin to make ‘some little show of green.’ Among these is the elm, which has a beautiful look with the blue April sky seen through its half-developed foliage. The ash also begins to show its young leaves, though the last year’s ‘keys,’ with the blackened seed, still hang among the branches, and rattle again in every wind that blows. The oak puts out its red buds and bright metallic-looking leaves slowly, as if to shew that its hardy limbs require as little clothing as the ancient Britons did, when hoary oaks covered long leagues of our forest-studded island. The chestnut begins to shoot forth its long, finger-shaped foliage, which breaks through the rounded and gummy buds that have so firmly enclosed it. On the limes we see a tender and delicate green, which the sun shines through as if they were formed of the clearest glass. The beech throws from its graceful sprays leaves which glitter like emeralds when they are steeped in sunshine; and no other tree has such a smooth and beautiful bark, as rustic lovers well know when they carve the names of their beloved ones on it. The silver birch throws down its flowers in waves of gold, while the leaves drop over them in the most graceful forms, and the stem is dashed with a variety of colours like a bird. The laburnums stand up like ancient foresters, clothed in green and gold. But, beautiful above all, are the fruit-trees, now in blossom. The peaches seem to make the very walls to which they are trailed burn again with their bloom, while the cherry-tree looks as if a shower of daisies had rained it, and adhered to the branches. The plum is one mass of unbroken blossom, without shewing a single green leaf, while, in the distance, the almond-tree looks like some gigantic flower, whose head is one tuft of bloom, so thickly are the branches embowered with buds. Then come the apple-blossoms, the loveliest of all, looking like a bevy of virgins peeping out of their white drapery, covered with blushes; while all the air around is perfumed with the fragrance of the bloom, as if the winds had been out gathering flowers, and scattered the perfume everywhere as they passed. All day long the bees are busy among the bloom, making an unceasing murmur, for April is beautiful to look upon; and if she hides her sweet face for a few hours behind the rain-clouds, it is only that she may appear again peeping out through the next burst of sunshine in a veil of fresher green, through which we see the red and white of her bloom.

Numbers of birds, whose names and songs are familiar to us, have, by the end of this month, returned to build and sing once more in the bowery hollows of our old woods, among the bushes that dot our heaths, moors, and commons, and in the hawthorn-hedges which stretch for weary miles over green Old England, and will soon be covered

with May-buds. We find the 'time of their coming' mentioned in the pages of the Bible, shewing that they migrated, as they do now, and were noticed by the patriarchs of old, as they led their flocks to the fresh spring-pastures. The sand-marten—one of the earliest swallows that arrives—sets to work like a miner, making a pick-axe of his beak, and hewing his way into the sandbank, until he hollows out for himself a comfortable house to dwell in, with a long passage to it, that goes sloping upward to keep out the wet, and in which he is caverned as dry and snug as ever were our painted forefathers. The window-swallow is busy building in the early morning,—we see his shadow darting across the sunny window-blind while we are in bed; and if we arise, and look cautiously through one corner of the blind, we see it at work, close to us, smoothing the clay with its throat and the under part of the neck, while it moves its little head to and fro, holding on to the wall or window-frame all the time by its claws, and the flattening pressure of the tail. It will soon get accustomed to our face, and go on with its work, as if totally unconscious of our presence, if we never wilfully frighten it. Other birds, like hatters, felt their nests so closely and solidly together, that they are as hard to cut through as a well-made mill-board. Some fit the materials carefully together, bending one piece and breaking another, and making them fit in everywhere like joiners and carpenters, though they have neither square, nor rule, nor tool, only their tiny beaks, with which they do all. Some weave the materials in and out, like basket-makers; and by some unknown process—defying all human ingenuity—they will work in, and bend to suit their purpose, sticks and other things so brittle and rotten that were we only to touch them ever so gently, they would drop to pieces. Nothing seems to come amiss to them in the shape of building materials, for we find their nests formed of what might have been relics of mouldering scarecrows, bits of old hats, carpets, wool-stockings, cloth, hair, moss, cotton in rags and hanks, dried grass, withered leaves, feathers, lichen, decayed wood, bark, and we know not what beside; all put neatly together by these skilful and cunning workmen. They are the oldest miners and masons, carpenters and builders, felters, weavers, and basket-makers; and the pyramids are but as the erections of yesterday compared with the time when these ancient architects first began to build. As for their nests—

'What nice hand,
With every implement and means of art,
And twenty years' apprenticeship to boot,
Could make us such another?'

HURDIS.

Amongst the arrivals in April is the redstart, which is fond of building in old walls and ruins. Where the wild wallflower waves from some crumbling castle, or fallen monastery, there it is pretty sure to be seen, perched perhaps on the top of a broken arch, constant at its song from early morn, and shaking its tail all the time with a tremulous motion. We also recognise the pleasant song of the titlark, or tree-pipit, as it is often called; and peeping about, we see the bird perched on

some topmost branch, from which it rises, singing, into the air a little way up, then descends again, and perches on the same branch it soared from, never seeming at rest. We also see the pretty whitethroat, as it rises up and down, alighting a score times or more on the same spray, and singing all the time, seeming as if it could neither remain still nor be silent for a single minute on any account. Sometimes it fairly startles you, as it darts past, its white breast flashing on the eye like a sudden stream of light. Country children, when they see it, call out,

'Pretty Peggy Whitethroat,
Come stop and give us a note.'

The woodlark is another handsome-looking bird, that sings while on the wing as well as when perched on some budding bough, though its song is not so sweet as that of Shakespeare's lark, which

'At heaven's gate sings.'

Then there are the linnets, that never leave us, but only shift their quarters from one part of the country to another, loving most to congregate about the neighbourhood of gorse-bushes, where they build and sing, and live at peace among the thousands of bees that are ever coming to look for honey in the golden baskets which hang there in myriads. We hear also the pretty goldfinch, that is marked with black and white, and golden brown; and pleasant it is to watch a couple of them, tugging and tearing at the same head of groundsel. But all the land is now musical: the woods are like great cathedrals, pillared with oaks and roofed with the sky, from which the birds sing, like hidden nuns, in the green twilight of the leafy cloisters.

Now the angler hunts up his fishing-tackle, for the breath of April is warm and gentle; a golden light plays upon the streams and rivers, and when the rain comes down, it seems to tread with muffled feet on the young leaves, and hardly to press down the flowers. But to hear the sweet birds sing, to feel the refreshing air blowing gently on all around, and see Nature arraying herself in all her spring beauty, has ever seemed to us a much greater pleasure than that of fishing. Few care about reading the chapters in delightful old Izaak Walton, that treat upon fishes alone: it is when he quits his rod and line, and begins to gossip about the beauty of the season; when he sits upon that primrose bank, and tells us that the meadows 'are too pleasant to be looked at but only on holidays;' making, while so seated, 'a brave breakfast with a piece of powdered beef, and a radish or two he has in his bag,'—that we love most to listen to him. Still, angling is of itself a pleasant out-of-door sport; for, if tired, there is the bank ready to sit down upon; the clear river to gaze over; the willows to watch as they ever wave wildly to and fro; or the circle in the water—made by some fish as it rises at a fly—to trace, as it rounds and widens, and breaks among the pebbles on the shore, or is lost amid the tangles of the overhanging and ever-moving sedge. Then comes the arrowy flight of the swallows, as they dart after each other through the arch of the bridge, or dimple the water every here and there as they sweep over it. Ever shifting our position, we can 'dander' along,

where little curves and indentations form tiny bays and secluded pools, which, excepting where they open out riverward, are shut in by their own overhanging trees and waving sedges. Or, walking along below the embankment, we come to the great sluice-gates, that are now open, and where we can see through them the stream that runs between far-away meadows where all is green, and shadows are thrown at noonday over the haunts of the water-hen and water-rat. Saving the lapping of the water, all is silent. There a contemplative man may sit and hold communion with Nature, seeing something new every time he shifts his glance, for many a flower has now made its appearance which remained hidden while March blew his windy trumpet, and in these green moist shady places the blue bell of spring may now be found. It is amongst the earliest flowers—such as the cowslips and daisies—that country children love to place the bluebell, to ornament many an open cottage-window in April; it bears no resemblance to the blue harebell of summer, as the latter flowers grow singly, while those of the wild hyacinth nearly cover the stem with their closely-packed bells, sometimes to a foot in height. The bells, which are folded, are of a deeper blue than those that have opened; and very gracefully do those hang down that are in full bloom, shewing the tops of their fairy cups turning backward. The dark upright leaves are of a beautiful green, and attract the eye pleasantly long before the flowers appear. Beside them, the delicate lily-of-the-valley may also now be found, one of the most graceful of all our wild-flowers. How elegantly its white ivory-looking bells rise, tier above tier, to the very summit of the flower-stalk, while the two broad leaves which protect it seem placed there for its support, as if a thing of such frail beauty required something to lean upon! Those who have inhaled the perfume from a whole bed of these lilies in some open forest-glade, can fancy what odours were wafted through Eden in the golden mornings of the early world. At the end of the month, cowslips are sprinkled plentifully over the old deep-turfed pastures in which they delight to grow, for long grass is unfavourable to their flowering, and in it they run all to stalk. What a close observer of flowers Shakspeare must have been, to note even the ‘crimson drops i’ th’ bottom’ of the cowslip, which he also calls ‘cinque-spotted!’ The separate flowers or petals are called ‘peeps’ in the country, and these are picked out to make cowslip wine. We have counted as many as twenty-seven flowers on one stalk, which formed a truss of bloom larger than that of a verbena. A pile of cowslip ‘peeps,’ in a clean basket, with a pretty country child, who has gathered them and brought them for sale, is no uncommon sight at this season in the market-place of some old-fashioned country town. The gaudy dandelion and great marsh-marigold are now in flower, one lighting up our wayside wastes almost everywhere, and the other looking like a burning lamp as its reflection seems blazing in the water. It is pleasant to see a great bed of tall dandelions on a windy April day shaking all their golden heads together; and common as it may appear,

it is a beautiful compound flower. And who has not, in the days of childhood, blown off the downy seed, to tell the hours of the day by the number of puffs it took to disperse the feathered messengers? How beautifully, too, the leaves are cut! and when bleached, who does not know that it is the most wholesome herb that ever gave flavour to a salad? Shakspeare’s

‘Lady-smock all silver white,’

is also now abundant in moist places, still retaining its old name of ‘cuckoo-flower,’ though we know that several similar flowers are so called in the country through coming into bloom while the cuckoo sings. The curious arum or cuckoopint, which children call ‘lords and ladies,’ in the midland counties, is now found under the hedges. Strip off the spathe or hood, and inside you will find the ‘parson-in-his-pulpit,’ for that is another of its strange country names. Few know that this changing plant, with its spotted leaves, forms those bright coral-berries which give such a rich colouring to the scenery of autumn. It must have furnished matter of mirth to our easily pleased forefathers, judging from the many merry names they gave to it, and which are still to be found in our old herbals.

Leaves, also, are beautiful to look upon without regarding the exquisite forms and colours of the flowers; and strange are the names our botanists have been compelled to adopt to describe their different shapes. Awl, arrow, finger, hand, heart, and kidney-shaped are a few of the names in common use for this purpose. Then the margin or edges of leaves are saw-toothed, crimped, smooth, slashed, notched, torn out, and look even as if some of them have been bitten by every variety of mouth; as if hundreds of insects had been at work, and each had eaten out its own fanciful pattern. Others, again, are armed, and have a ‘touch-me-not’ look about them, like those of the holly and thistles; while some are covered underneath with star-shaped prickles, hair-like particles, or soft down, making them, to the touch, rough, smooth, sticky, or soft as the down of velvet. To really see the form of a leaf, it must be examined when all the green is gone and only the skeleton left, which shews all the ribs and veins that were before covered. A glass is required to see this exquisite workmanship. The most beautiful lace is poor in comparison with the patterns which Nature weaves in her mysterious loom; and skilful lace-makers say, that no machine could be made to equal the beautiful patterns of the skeleton leaves, or form shapes so diversified. Spring prepares the drapery which she hangs up in her green halls for the birds to shelter and build and sing among; and soon the hawthorn will light up these hanging curtains with its silver lamps, and perfume the leafy bowers with May.

In a work entitled *The Twelve Months*, published in 1661, April is described with a glow of language that recalls the Shaksperian era:

‘The youth of the country make ready for the morris-dance, and the merry milkmaid supplies them with ribbons her true love had given her. The little fishes lie nibbling at the bait, and the porpoise plays in the pride of the tide. The

shepherds entertain the princes of Arcadia with pleasant roundelays. The aged feel a kind of youth, and youth hath a spirit full of life and activity; the aged hairs refreshen, and the youthful cheeks are as red as a cherry. The lark and the lamb look up at the sun, and the labourer is abroad by the dawning of the day. The sheep's eye in the lamb's head tells kind-hearted maids strange tales, and faith and troth make the true-lover's knot. It were a world to set down the worth of this month; for it is Heaven's blessing and the earth's comfort. It is the messenger of many pleasures, the courtier's progress, and the farmer's profit; the labourer's harvest, and the beggar's pilgrimage. In sum, there is much to be spoken of it; but, to avoid tediousness, I hold it, in all that I can see in it, the jewel of time and the joy of nature.

'Hail April, true Medea of the year,
That makest all things young and fresh appear,
What praise, what thanks, what commendations due,
For all thy pearly drops of morning dew?
When we despair, thy seasonable showers
Comfort the corn, and cheer the drooping flowers;
As if thy charity could not but impart
A shower of tears to see us out of heart.
Sweet, I have penned thy praise, and here I bring it,
In confidence the birds themselves will sing it.'

(HISTORICAL.)

In the ancient Alban calendar, in which the year was represented as consisting of ten months of irregular length, April stood first, with thirty-six days to its credit. In the calendar of Romulus, it had the second place, and was composed of thirty days. Numa's twelve-month calendar assigned it the fourth place, with twenty-nine days; and so it remained till the reformation of the year by Julius Cæsar, when it recovered its former thirty days, which it has since retained.

It is commonly supposed that the name was derived from the Latin, *aperio*, I open, as marking the time when the buds of the trees and flowers open. If this were the case, it would make April singular amongst the months, for the names of none of the rest, as designated in Latin, have any reference to natural conditions or circumstances. There is not the least probability in the idea. April was considered amongst the Romans as Venus's month, obviously because of the reproductive powers of nature now set agoing in several of her departments. The first day was specially set aside as *Festum Veneris et Fortunæ Virilis*. The probability, therefore, is, that *Aprilis* was *Aphrilis*, founded on the Greek name of Venus (*Aphrodite*). Our Anglo-Saxon forefathers called the month

Oster-monath; and for this appellation the most plausible origin assigned is—that it was the month during which east winds prevailed. The term Easter may have come from the same origin.

CHARACTERISTICS OF APRIL.

It is eminently a spring month, and in England some of the finest weather of the year occasionally takes place in April. Generally, however, it is a month composed of shower and sunshine rapidly chasing each other; and often a chill is communicated by the east winds. The sun enters Taurus on the 20th of the month, and thus commences the second month past the equinox. At the beginning of April, in London, the sun rises at 5:33 A.M., and sets at 6:27 P.M.; at the end, the times of rising and setting are 4:38 and 7:22. The mean temperature of the air is 49° 9'.

Proverbial wisdom takes, on the whole, a kindly view of this flower-producing month. It even asserts that—

A cold April
The barn will fill.

The rain is welcomed:

An April flood
Carries away the frog and his brood.

And

April showers
Make May flowers.

Nor is there any harm in wind:

When April blows his horn,
It's good for both hay and corn.

AN APRIL DAY.

This day Dame Nature seemed in love;
The lusty sap began to move;
Fresh juice did stir th' embracing vines,
And birds had drawn their valentines.
The jealous trout that low did lie,
Rose at a well-dissembled fly;
Already were the eaves possess'd
With the swift pilgrim's daubed nest:
The groves already did rejoice,
In Philomel's triumphing voice:
The showers were short, the weather mild,
The morning fresh, the evening smiled.
Joan takes her neat-rubbed pail, and now
She trips to milk the sand-red cow.
The fields and gardens were beset
With tulips, crocus, violet;
And now, though late, the modest rose
Did more than half a blush disclose.
Thus all looks gay and full of cheer,
To welcome the new-liveried year.

SIR H. WOTTON.

First of April.

St Melito, Bishop of Sardis, in Lydia, 2d century. St Hugh, Bishop of Grenoble, 1132. St Gilbert, Bishop of Caithness, in Scotland, 1240.

Born.—William Harvey, discoverer of the circulation of the blood, 1578, *Folkestone*; Charles de St Evremont, 1613, *St Denis le Guast*; Solomon Gesner, painter and poet, author of 'The Death of Abel,' 1730, *Zurich*; Robert Surtees, historical antiquary, 1779, *Durham*; Sir Thomas F. Buxton, Bart., philanthropist, 1786, *Essex*.

Died.—Sultan Timur (Tamerlane), conqueror of Persia, &c., 1405 (the date otherwise given as 19th of February); Robert III., King of Scots, 1406, *Paisley*; Sigismund I., King of Poland, 1548; Jean Baptiste Thiers, miscellaneous writer, 1702; Dr John Langhorne, poet, translator of Plutarch, 1779, *Blagdon*; Dr Isaac Milner, Dean of Carlisle, theological writer, 1820, *Kensington Gore*; Reginald Heber, Bishop of Calcutta, 1826, *Trichinopoly*.

ROBERT SURTEES.

It was very appropriate that Mr Surtees should be born on the 1st of April, as he was the perpetrator of one of the most dexterous literary impostures of modern times. Be it observed, in the first place, that he was a true and zealous historical antiquary, and the author of a book of high merit in its class, the *History and Antiquities of the County Palatine of Durham*. Born to a fair landed estate, educated at Oxford, possessed of an active and capacious mind, marked by a cheerful, social temper, the external destiny of Surtees was such as to leave little to be desired. Residing constantly on his paternal acres at Mainsforth, near Durham, in the practice of a genial hospitality, he fulfilled most of the duties of his station in a satisfactory manner, and was really a very popular person.

It was not till after the death of Surtees in 1835, that any discovery was made of the literary imposture above referred to. Sir Walter Scott, upon whom it was practised, had died three years earlier, without becoming aware of the deception. Scott had published three editions of his *Border Minstrelsy*, when, in 1806, he received a letter from Mr Surtees (a stranger to him), containing remarks upon some of the ballads composing that work. Scott sent a cordial answer, and by and by there came from Mr Surtees, a professedly old ballad 'on a feud between the Riddleys and the Featherstones,' which he professed to have taken down from the recitation of an old woman on Alston Moor. It is, to the apprehension of the writer of this article, a production as coarse as it is wild and incoherent; but it was accompanied by historical notes calculated to authenticate it as a narrative of actual events, and Scott, who was then full of excitement about ballads in general, did not pause to criticise it rigorously. He at once accepted it as a genuine

relic of antiquity—introduced a passage of it in *Marmion*, and inserted it entire in the next edition of his *Minstrelsy*.

Supposing a person generally truthful to have been for once tempted to practise a deception like this, one would have expected him, on finding it successful, to be filled with a concern he had never anticipated, wishful to repair the error, and, above all, determined to commit no more such mistakes. Contrary to all this, we find Mr Surtees in the very next year passing off another ballad of his own making upon the unsuspecting friend whose confidence he had gained. In a letter, dated the 28th of February in that year, he proceeds to say:

'I add a ballad of *Lord Ewrie*, apparently a song of gratulation on his elevation to the peerage, which I took by recitation from a very aged person, Rose Smith, of Bishop Middleham, æt. 91, whose husband's father and two brothers were killed in the Rebellion of 1715. I was interrogating her for Jacobite songs, and instead acquired *Lord Ewrie*. The person intended is William Lord Eure,' &c. In this, as in the former case, he added a number of historical notes to support the deception, and Scott did not hesitate in putting *Lord Ewrie* in a false character before the world in the next edition of his *Border Minstrelsy*. This, however, was not all. Tempted, apparently, by the very faith which Scott had in his veracity, he played off yet a third imposture.

There is, in the later editions of the *Minstrelsy*, a ballad of very vigorous diction, entitled *Barthram's Dirge*, beginning:

'They shot him dead on the Nine-stone Rig,
Beside the Headless Cross;
And they left him lying in his blood,
Upon the moor and moss.'

The editor states that it was obtained from the recitation of an old woman by his 'obliging friend' Mr Surtees, who communicated it to him, with only a few missing lines replaced by himself, as indicated by brackets. In reality, this ballad was also by Mr Surtees. The missing lines, supplied within brackets, were merely designed as a piece of apparent candour, the better to blind the editor to the general falsehood of the story. When we turn to the letter, in which Surtees sent the ballad to Scott, we obtain a good notion of the plausible way in which these tricks were framed: 'The following romantic fragment,' says Surtees, '(which I have no further meddled with than to fill up a hemistich, and complete rhyme and metre), I have from the imperfect recitation of Ann Douglas, a withered crone who weeded in my garden:

"They shot him dead on the Nine-stone Rig," &c.

I have no local reference to the above. The

name of Bartram bids fair for a Northumbrian hero; but the style is, I think, superior to our Northumbrian ditties, and more like the Scotch. There is a place called Headless Cross, I think, in old maps, near Elsdon, in Northumberland; but this is too vague to found any idea upon.—*Letter of November 9, 1809.*

Thus, we see the deceptions of the learned historian of Durham were carefully planned, and very coolly carried out. There was always the simple crone to recite the ballad. Quotations from old wills and genealogies established the existence of the persons figuring in the recital. And, when necessary, an affectation was made of supplying missing links in modern language. A friendship was established with the greatest literary man of his age on the strength of these pretended services. Scott was not only misled himself, but he was induced to mislead others. The impostor looked coolly on, as, from day to day, his too trusting friend was allowed to introduce into his book fictitious representations, calculated, when detected, to take away its credit. It is difficult to understand how the person so acting should be, in the ordinary affairs of life, honourable and upright. But it was so. We are left no room to doubt that Mr Robert Surtees was faithful in his own historical narrations, and wholly above mendacity for a sordid or cowardly purpose. It was simply this—that men of honourable principles have heretofore had but imperfect ideas of the obligation to speak the truth in the affairs of ancient traditional literature—we might almost say, of literature generally.

If they judged aright, they would see that the natural consequence of deceptions regarding professedly old ballads is to create and justify doubts regarding all articles of the kind. Seeing that one so well skilled in such matters as Scott was deceived in at least three instances, how shall we put trust in a single other case where he states that a ballad was taken down for him from popular recitation? A whole series of his legends were professedly obtained from a Mrs Brown of Falkland; another series from a Mrs Arnot of Arbroath: what guarantee have we that these were not female Surteeses? How rapidly would belief extend in cases where it was justified, if there were no liars and impostors! Every instance of deception sensibly dashes faith; and not even the slightest departure from truth can be practised without consequences of indefinite mischief.

THE REV. RICHARD NAPIER, ASTROLOGER AND PHYSICIAN, DIED APRIL 1, 1634.

Astrology was so much in vogue in the seventeenth century, that neither learning, nor rank, nor piety secured persons from becoming its dupes. James I. was notorious for his credulity about such delusions. Sir Kenelm Digby, though one of the most learned and scientific men of his day, as well as an able statesman, was scarcely less credulous. Charles I., and his supplanter Cromwell, are alike said to have consulted astrologers. Even the clergy, who ought to have denounced such delusions, not

only sanctioned, but in some instances practised, astrology. Thus the Rev. Richard Napier, though remarkable for piety, was no less remarkable for his supposed skill in astrology. He was a son of Sir Robert Napier, of Luton-Hoo, in Bedfordshire, and became rector of Great Linford, in the adjoining county of Buckingham, in 1589. He was instructed in astrology and physic by the celebrated Dr Forman, who, as Lilly informs us, 'used to say, on his first becoming his pupil, that he would be a dunce, yet, in continuance of time, he proved a singular astrologer and physician.' Dr Forman eventually thought so highly of his pupil, that he bequeathed him 'all his rarities and secret manuscripts of what sort soever.'

Napier was an M.A., and was usually styled Dr; 'but,' says Aubrey, 'whether doctorated by degree or courtesy, because of his profession, I know not. He was a person of great abstinence, innocence, and piety, and spent two hours every day in family prayer.' When a patient or 'querent' came to consult him, he immediately retired to his closet for prayer, and was heard as holding conversations with angels and spirits. He asked them questions respecting his patients, and by the answers, which he fancied they returned, he was guided more than by his professed skill in medicine or astrology. In fact, he privately acknowledged that he practised astrology chiefly as the ostensible means of information, while he really depended on his (supposed) communications from spiritual beings. 'He did,' says Aubrey, 'converse with the angel Raphael.' 'The angel told him if the patient were curable or incurable.' The angel Raphael 'did resolve him, that Mr Booth of Cheshire should have a son that should inherit three years hence. This was in 1619, and we are informed that in 1622 his son George was born, who eventually became Lord Delamere.' 'At some times,' continues Aubrey, 'upon great occasions, he had conference with Michael, but very rarely. He outwent Forman in physick and holiness of life; cured the falling-sickness perfectly by constellated rings; some diseases by annulets, &c.' Lilly, in his Autobiography, says: 'I was with him (Napier) in 1632 or 1633, upon occasion; he had me up into his library, being excellently furnished with very choice books; there he prayed almost one hour. He invoked several angels in his prayer—viz., Michael, Gabriel, Uriel, &c.'

One or two examples may suffice to illustrate the nature of his practice. When 'E. W——, Esq.,' was about eight years old, he was troubled with worms, and was taken by his grandfather, 'Sir Francis——,' to Dr Napier. The doctor retired to his closet, and E. W—— peeped in, and saw him on his knees at prayer. The doctor, duly instructed by his angelic adviser, returned to Sir Francis, and ordered his grandson to take a draught of muscadine every morning, and predicted he would be free from the disorder when fourteen years old!

A woman afflicted with ague applied to the doctor, who gave her a spell to cure it; but 'a minister' seeing it, sharply reproved her for using such a diabolical aid, and ordered her to burn it. She burned it; but the ague returned

so severely, that she again applied to the doctor for the spell, and was greatly benefited by its use. But the minister, on discovering what she was doing, so alarmed her with its consequences, that she again burned the spell. 'Whereupon she fell extremely ill, and would have had the spell the third time; but the doctor refused, saying, that she had contemned and slighted the power and goodness of the blessed spirits, and so she died.'

In 1634, the Earl of Sunderland placed himself for some months under the care of Dr Napier; the Earl of Bolingbroke and Lord Wentworth also patronised him, and protected him from the interference of magistrates, extending their protection even to his friends and fellow-practitioners of the unlawful art. For the doctor, we are told, 'instructed many other ministers in astrology,' 'lent them whole cloak-bags full of books,' and protected them from harm and violence, especially one William Marsh of Dunstable, a recusant, who, 'by astrology, resolved thievish questions, and many times was in trouble, but by Dr Napier's interest was still enabled to continue his practice, no justice of the peace being permitted to vex him.' 'This man had only two books, Guido and Haly, bound together. He had so numbed and thumbed the leaves of both, that half one side of every leaf was torn even to the middle. He did seriously confess to a friend of mine that astrology was but the countenance, and that he did his business by the help of the blessed spirits, with whom only men of great piety, humility, and charity could be acquainted.'

Dr Napier does not appear to have been assisted by Raphael in his clerical ministrations; for 'miscarrying one day in the pulpit, he never after used it, but all his lifetime kept in his house some excellent scholar or other to officiate for him!' 'Tis certain,' says Aubrey, 'he told his own death to a day and hour, and died praying upon his knees, being of a very great age, on April 1st, 1634. His knees were horny with frequent praying.' His burial is thus entered in the parish register: 'April 15, 1634. Buried, Mr. Richard Napier, rector, the most renowned physician both of body and soul.'

His manuscripts, which contained a diary of his practice for fifty years, fell into the hands of Elias Ashmole, who had them bound in several folio volumes, and deposited with his own in the library at Oxford which bears his name, and where they still remain, together with a portrait of Dr Napier. Many of the medical recipes in these manuscripts are marked by Dr Napier, as having been given him by the angel Raphael.

W. H. K.

ORIGIN OF HACKNEY-COACH STANDS.

On the 1st of April 1639, Mr Garrard, writing in London to Wentworth, Earl of Strafford, then Lord-lieutenant of Ireland, says:

'I cannot omit to mention any new thing that comes up amongst us, though never so trivial. Here is one Captain Baily; he hath been a sea-captain, but now lives on the land, about this city, where he tries experiments. He hath erected, according to his ability, some four

hackney-coaches, put his men in a livery, and appointed them to stand at the Maypole in the Strand, giving them instructions at what rate to carry men into several parts of the town, where all day they may be had. Other hackney-men seeing this way, they flocked to the same place, and performed their journeys at the same rate; so that sometimes there is twenty of them together, which disperse up and down, that they and others are to be had everywhere, as watermen are to be had by the water-side. Everybody is much pleased with it; for, whereas before coaches could not be had but at great rates, now a man may have one much cheaper.'

'Gossip Garrard,' as he has been termed, was scarcely correct in saying that everybody was pleased with the new and convenient system of metropolitan conveyances introduced by the retired sea-captain. The citizen shopkeepers bitterly complained that they were ruined by the coaches. 'Formerly,' they said, 'when ladies and gentlemen walked in the streets, there was a chance of obtaining customers to inspect and purchase our commodities; but now they whisk past in the coaches before our apprentices have time to cry out "What d'ye lack!"' Another complaint was, that in former times the tradesmen in the principal streets earned as much as paid their rents by letting out their upper apartments to members of parliament, and country gentlemen visiting London on pleasure or business, until the noise made by the coaches drove the profitable lodgers to less frequented thoroughfares.

Taylor, the water-poet, being a waterman, one of the class whose business was most injured by the coaches, felt exceedingly bitter against the new system, and wrote an invective, entitled *The World Runs upon Wheels*, in which he adduces all the inconveniences of coaches, enumerating, in his peculiar style, all the disadvantages caused by them. 'We poor watermen,' he says, 'have not the least cause to complain against this infernal swarm of trade-spoilers, who, like grasshoppers or caterpillars of Egypt, have so overrun the land, that we can get no living on the water; for I dare truly affirm, that every day, especially if the court be at Whitehall, they do rob us of our livings, and carry five hundred and sixty fares daily from us.'

In another publication, entitled *The Thief*, Taylor says:

'Carroches, coaches, jades, and Flanders mares,
Do rob us of our shares, our wares, our fares:
Against the ground, we stand and knock our heels,
Whilst all our profit runs away on wheels;
And, whosoever but observes and notes
The great increase of coaches and of boats,
Shall find their number more than e'er they were,
By half and more, within this thirty year.
The watermen at sea had service still,
And those that staid at home had work at will:
Then upstart helcart-coaches were to seek,
A man could scarce see twenty in a week;
But now, I think, a man may daily see
More than the wherrys on the Thames can be.'

The stillness of London streets in the olden time is unexpectedly exemplified by the serious complaints made regarding the noise of coaches. We might wonder what an ancient citizen would

say if he could possibly hear the incessant roar of the cabs, omnibuses, vans, &c., of the present day! Taylor, when there were only some dozen hackney-coaches, and a very few private carriages, thus entreats his readers :

'I pray you but note the streets, and the chambers or lodgings in Fleet Street or the Strand, how they are pestered with coaches, especially after a masque or play at the court, where even the very earth shakes and trembles, the casements shatter, tatter, and clatter, and such a confused noise is made, as if all the devils were at barley-break,* so that a man can neither sleep, speak, hear, write, or eat his dinner or supper quiet for them; besides, their tumbling din (like a counterfeit thunder) doth sour wine, beer, and ale most abominably, to the impairing of their healths that drink it, and the making of many a victualler trade-fallen.'

'A coach,' he continues, 'like a heathen, a pagan, an infidel, or an atheist, observes neither Sabbath nor holiday, time nor season, robustiously breaking through the toil or net of divine and human law, order, and authority, and, as it were, condemning all Christian conformity, like a dog

that lies on a heap of hay, who will eat none of it himself, nor suffer any other beast to eat any. Even so, the coach is not capable of hearing what

* The game now called 'Thread-the-Needle.'

a preacher saith, nor will it suffer men or women to hear that would hear, for it makes such a hideous rumbling in the streets by many church doors, that people's ears are stopped with the noise, whereby they are debarred of their edifying, which makes faith so fruitless, good works so barren, and charity as cold at midsummer as if it were a great frost, and by this means souls are robbed and starved of their heavenly manna, and the kingdom of darkness replenished. To avoid which they have set up a cross-post in Cheapside on Sundays, near Wood Street end, which makes the coaches rattle and jumble on the other side of the way, further from the church, and from hindering of their hearing.'

Public convenience, however much it may be opposed at first, invariably triumphs in the end over private interests. The four hackney-coaches started by Captain Baily in 1634, increased so rapidly, that their number in 1637 was confined by law to 50; in 1652, to 200; in 1659, to 300; in 1662, to 400; in 1694, to 700; in 1710, to 800; in 1771, to 1000. It is not our purpose to continue their history further.

At first the hackney coach-driver sat in a kind of chair, in front of the vehicle, as may be seen by a rude wood-cut in a ballad of the period, preserved in the Roxburghe collection, written by Taylor, and entitled *The Coach's Overthrow*. Subsequently, in the reign of Charles II., the driver sat on one of the horses, in manner of a modern postilion. This is clearly evident, by the short whip and spurs of the man in the preceding illustration, taken from a contemporary engraving, representing a hackney-coachman of that reign. In the early part of the last century the custom had changed, the driver sitting in front on a box, in which was kept food for the horses, and a piece of rope, nails, and hammer to repair the vehicle in case of accident. Subsequently, this rude box was, for neatness' sake, covered with a cloth, and thus we now have the terms box-seat and hammer-cloth.

It is said that the sum of £1500, arising from the duty on hackney-coaches, was applied in part payment of the cost of rebuilding Temple Bar.

April Fools.

The 1st of April, of all days in the year, enjoys a character of its own, in as far as it, and it alone, is consecrated to practical joking. On this day it becomes the business of a vast number of people, especially the younger sort, to practise innocent impostures upon their unsuspecting neighbours, by way of making them what in France are called *poissons d'Avril*, and with us April fools. Thus a knowing boy will despatch a younger brother to see a public statue descend from its pedestal at a particular appointed hour. A crew of giggling servant-maids will get hold of some simple swain, and send him to a bookseller's shop for the *History of Eve's Grandmother*, or to a chemist's for a pennyworth of *pigeon's milk*, or to a cobbler's for a little *strap oil*, in which last case the messenger secures a hearty application of the strap to his shoulders, and is sent home in a state of bewilderment as to what the affair means. The urchins in

the kennel make a sport of calling to some passing beau to look to his coat-skirts; when he either finds them with a piece of paper pinned to them or not; in either of which cases he is saluted as an April fool. A waggish young lady, aware that her dearest friend Eliza Louisa has a rather empty-headed youth dangling after her with little

encouragement, will send him a billet, appointing him to call upon Eliza Louisa at a particular hour, when instead of a welcome, he finds himself treated as an intruder, and by and by discovers that he has not advanced his reputation for sagacity or the general prospects of his suit. The great object is to catch some person off his guard, to pass

off upon him, as a simple fact, something barely possible, and which has no truth in it; to impose upon him, so as to induce him to go into positions of absurdity, in the eye of a laughing circle of bystanders. Of course, for successful April fooling, it is necessary to have some considerable degree of coolness and face; as also some tact whereby to know in what direction the victim is most ready to be imposed upon by his own tendencies of belief. It may be remarked, that a large proportion of the business is effected before and about the time of breakfast, while as yet few have had occasion to remember what day of the year it is, and before a single victimisation has warned people of their danger.

What compound is to simple addition, so is Scotch to English April fooling. In the northern part of the island, they are not content to make a neighbour believe some single piece of absurdity. There, the object being, we shall say, to befool simple Andrew Thomson, Wag No. 1 sends him away with a letter to a friend two miles off, professedly asking for some useful information, or requesting a loan of some article, but in reality containing only the words:

'This is the first day of April,
 Hunt the gowk another mile.'

Wag No. 2, catching up the idea of his correspondent, tells Andrew with a grave face that it is not in his power, &c.; but if he will go with another note to such a person, he will get what is wanted. Off Andrew trudges with this second note to Wag No. 3, who treats him in the same manner; and so on he goes, till some one of the series, taking pity on him, hints the trick that has been practised upon him. A successful affair of this kind will keep rustic society in merriment for a week, during which honest Andrew Thomson hardly can shew his face. The Scotch employ the term *gowk* (which is properly a cuckoo) to express a fool in general, but more especially an April fool, and among them the practice above described is called *hunting the gowk*.

Sometimes the opportunity is taken by ultra-jocular persons to carry out some extensive hoax upon society. For example, in March 1860, a vast multitude of people received through the post a card having the following inscription, with a seal marked by an inverted sixpence at one of

the angles, thus having to superficial observation an official appearance: 'Tower of London.—Admit the Bearer and Friend to view the Annual Ceremony of Washing the White Lions, on *Sunday, April 1st, 1860*. Admitted only at the White Gate. It is particularly requested that no gratuities be given to the Wardens or their Assistants.' The trick is said to have been highly successful. Cabs were rattling about Tower Hill all that Sunday morning, vainly endeavouring to discover the White Gate.

It is the more remarkable that any such trick should have succeeded, when we reflect how identified the 1st of April has become with the idea of imposture and unreality. So much is this the case, that if one were about to be married, or to launch some new and speculative proposition or enterprise, one would hesitate to select April 1st for the purpose. On the other hand, if one had to issue a mock document of any kind with the desire of its being accepted in its proper character, he could not better insure the joke being seen than by dating it the 1st of April.

The literature of the last century, from the *Spectator* downwards, has many allusions to April fooling; no references to it in our earlier literature have as yet been pointed out. English antiquaries appear unable to trace the origin of the custom, or to say how long it has existed among us. In the Catholic Church, there was the Feast of the Ass on Twelfth Day, and various mummings about Christmas; but April fooling stands apart from these dates. There is but one plausible-looking suggestion from Mr Pegge, to the effect that, the 25th of March being, in one respect, New Year's Day, the 1st of April was its *octave*, and the termination of its celebrations; but this idea is not very satisfactory. There is much more importance in the fact, that the Hindoos have, in their *Huli*, which terminates with the 31st of March, a precisely similar festival, during which the great aim is to send persons away with messages to ideal individuals, or individuals sure to be from home, and enjoy a laugh at their disappointment. To find the practice so widely prevalent over the earth, and with so near a coincidence of day, seems to indicate that it has had a very early origin amongst mankind.

Swift, in his *Journal to Stella*, enters under March 31, 1713, that he, Dr Arbuthnot, and Lady Masham had been amusing themselves that evening by contriving 'a lie for to-morrow.' A person named Noble had been hanged a few days before. The lie which these three laid their heads together to concoct, was, that Noble had come to life again in the hands of his friends, but was once more laid hold of by the sheriff, and now lay at the Black Swan in Holborn, in the custody of a messenger. 'We are all,' says Swift, 'to send to our friends, to know whether they have heard anything of it, and so we hope it will spread.' Next day, the learned Dean duly sent his servant to several houses to inquire among the footmen, not letting his own man into the secret. But nothing could be heard of the resuscitation of Mr Noble; whence he concluded that 'his colleagues did not contribute' as they ought to have done.

April fooling is a very noted practice in France,

and we get traces of its prevalence there at an earlier period than is the case in England. For instance, it is related that Francis, Duke of Lorraine, and his wife, being in captivity at Nantes, effected their escape in consequence of the attempt being made on the 1st of April. 'Disguised as peasants, the one bearing a hod on his shoulder, the other carrying a basket of rubbish at her back, they both at an early hour of the day passed through the gates of the city. A woman, having a knowledge of their persons, ran to the guard to give notice to the sentry. "April fool!" cried the soldier; and all the guard, to a man, shouted out, "April fool!" beginning with the sergeant in charge of the post. The governor, to whom the story was told as a jest, conceived some suspicion, and ordered the fact to be proved; but it was too late, for in the meantime the duke and his wife were well on their way. The 1st of April saved them.'

It is told that a French lady having stolen a watch from a friend's house on the 1st of April, endeavoured, after detection, to pass off the affair as *un poisson d'Avril*, an April joke. On denying that the watch was in her possession, a messenger was sent to her apartments, where it was found upon a chimney-piece. 'Yes,' said the adroit thief, 'I think I have made the messenger a fine *poisson d'Avril*!' Then the magistrate said she must be imprisoned till the 1st of April in the ensuing year, *comme un poisson d'Avril*.

THE WISE FOOLS OF GOTHAM.

On an eminence about a mile south of Gotham, a village in Nottinghamshire, stands a bush known as the 'Cuckoo Bush,' and with which the following strange legend is connected. The present bush is planted on the site of the original one, and serves as a memorial of the disloyal event which has given the village its notoriety.

King John, as the story goes, was marching towards Nottingham, and intended to pass through Gotham meadow. The villagers believed that the ground over which a king passed became for ever afterwards a public road; and not being minded to part with their meadow so cheaply, by some means or other they prevented the king from passing that way. Incensed at their proceedings, he sent soon after to inquire the reason of their rudeness and incivility, doubtless intending to punish them by fine or otherwise. When they heard of the approach of the messengers, they were as anxious to escape the consequences of the monarch's displeasure as they had been to save their meadow. What time they had for deliberation, or what counsels they took we are not told, but when the king's servants arrived they found some of the inhabitants endeavouring to drown an eel in a pond; some dragging their carts and wagons to the top of a barn to shade a wood from the sun's rays; some tumbling cheeses down a hill in the expectation that they would find their way to Nottingham Market, and some employed in hedging in a cuckoo, which had perched upon an old bush! In short they were all employed in such a manner as convinced the king's officers that they were a village of *fools*, and consequently unworthy of

his majesty's notice. They, of course, having outwitted the king, imagined that they were *wise*. Hence arose the saying 'The wise fools of Gotham.' Fuller says, alluding to this story, and some others to which this gave rise, such as 'The Merry Tales of the Mad Men of Gotham,' published in the time of Henry VIII., 'Gotham doth breed as *wise* people as any which causelessly laugh at their simplicity.'

But they have other defenders besides Fuller. Some sceptical poet, whose production has not immortalised his name, writes:

'Tell me no more of Gotham fools,
Or of their eels, in little pools,
Which they, we're told, were drowning;
Nor of their carts drawn up on high
When King John's men were standing by,
To keep a wood from browning.
Nor of their cheese shov'd down the hill,
Nor of the cuckoo sitting still,
While it they hedged round:
Such tales of them have long been told,
By prating boobies young and old,
In drunken circles crowned.
The fools are those who thither go,
To see the cuckoo bush, I trow,
The wood, the barn, and pools;
For such are seen both here and there,
And passed by without a sneer,
By all but errant fools.'

APRIL 2.

St Apian, of Lycia, martyr, 306. St Theodosia, of Casarea, martyr, 308. St Nicetius, archbishop of Lyons, 577. St Ebba, or Abba, abbess, martyr, 874. B. Constantine, King of Scotland, 874. St Bronacha, of Ireland. St Francis of Paula, founder of the order of Minims, 1508.

Born.—C. N. Oudinot, Marshal of France, Duke of Reggio, 1767, *Bar-sur-Ornain* (sometimes the 25th is given as the date).

Died.—Arthur, Prince of Wales, 1502, *Ludlow*; Jean Barth, French naval commander, 1702; Thomas Carte, historian, 1754, *Yattendon*; Comte de Mirabeau, 1791, *Paris*; Dr James Gregory, professor of medicine, author of 'Conspetus Medicinæ,' 1821, *Edinburgh*; John Le Keux, architectural engraver, 1846.

ARTHUR, PRINCE OF WALES.

King Henry VII., the first of our Tudor monarchs, had three sons, Arthur, Henry, and Edmond, the last of whom died in his childhood. Arthur was born on the 20th of September 1486, at Winchester. His birth was the subject of universal joy throughout the kingdom, as in him were united the claims of the rival houses of York and Lancaster, and the general satisfaction was soon increased by the early display of precocious talents, and of a gentle and amiable disposition. In 1489, Arthur was created Prince of Wales. This title, as given to the king's eldest son, had been created originally as a measure of conciliation towards the Welsh, and it would be still more gratifying to that people when the House of Tudor came to the throne. The House of York had also, before its attainment of royalty, had close relations with Wales;

and Edward IV., as a stroke of wise policy, had sent his eldest son to reside in his great castle of Ludlow, on the border, and had established there a court of government for Wales and the Marches, which had now become permanent. Henry VII., in continuation of this policy, sent his son, Prince Arthur, to Ludlow, to reside there under the governance of a distant relative of the Tudor family, named Sir Rhys ap Thomas, and Ludlow Castle became Arthur's home. Little is said of the actions of the youthful prince, except that his good qualities became more and more developed, until the year 1501, when, in the month of November, Arthur, who had just completed his fifteenth year, was married with great ceremony to Catherine of Arragon, a Spanish princess, then in her eighteenth year. The young prince and his bride repaired to Ludlow immediately after the marriage, which he survived but a short time, dying in Ludlow Castle, on the 2nd of April 1502. His corpse was conveyed in solemn procession to Worcester, and was there buried in the cathedral, and a rich shrine, which still remains, raised over the tomb. The untimely death of this amiable prince was the subject of sincere and universal grief, but indirectly it led to that great revolution which gave to England her present religious and ecclesiastical forms. Henry VII., for political reasons, and on the plea that the marriage had never been consummated, married the widow of Arthur to his younger brother Henry, who became afterwards King Henry VIII. Henry, who subsequently declared that the marriage was forced upon him, divorced his wife, and the dispute, as every one knows, was, under the direction of Providence, the cause of the separation of the English church from Rome. In a somewhat similar manner the untimely death of Henry, Prince of Wales, the son of James I., led perhaps indirectly to that great convulsion in the middle of the following century, to which we owe the establishment of the freedom of the English political constitution.

A GROUP OF OLD LADIES.

Died at Edinburgh, on the 2nd of April 1856, Miss Elizabeth Gray, at the age of 108, having been born in May 1748. That cases of extraordinary longevity are seldom supported by clear documentary evidence has been very justly alleged; it has indeed been set forth that we scarcely have complete evidence for a single example of the centenarian. In this case, however, there was certainly no room for doubt. Miss Gray had been known all her life as a member of the upper circle of society in the Scottish metropolis, and her identity with the individual Elizabeth Gray, the daughter of William Gray, of Newholm, writer in Edinburgh, whose birth is chronicled in the register of her father's parish of Dolphington, in Lanarkshire, as having occurred in May 1748, is beyond dispute in the society to which the venerable lady belonged. It may be remarked that she was a very cheerful person, and kept up her old love of whist till past the five score. Her mother attained ninety-six, and two of her sisters died at ninety-four and ninety-six

respectively. She had, however, survived her father upwards of a hundred years, for he died in 1755; nay, a more remarkable thing than even this was to be told of Betty Gray—a brother of hers (strictly a half-brother) had died so long ago as 1728. A faded marble slab in the wall of Dolphington Kirk, which records the decease of this child—for such he was—must have been viewed with strange feelings, when, a hundred and twenty-eight years later, the age-worn sister was laid in the same spot.

Little more than two years after the death of Miss Gray, there died in Scotland another centenarian lady, about whose age there could be no ground for doubt, as she had lived in the eye of intelligent society all her days. This person was the Hon. Mrs Hay Mackenzie, of Cromartie. She died in October 1858, at the age of 103; she was grandmother to the present Duchess of Sutherland; her father was the sixth Lord Elibank, brother and successor of Lord Patrick, who entertained Johnson in Edinburgh; her maternal grandfather was that unfortunate Earl of Cromartie who so narrowly escaped accompanying Kilmarnock and Balmerino to the scaffold in 1746. She was a most benevolent woman—a large giver—and enjoyed universal esteem. Her conversation made the events of the first half of the eighteenth century pass as vividly before the mind as those of the present day. It was remarked as a curious circumstance, that of Dunrobin Castle, the place where her grandfather was taken prisoner as a rebel, her granddaughter became mistress.

It is well known that female life is considerably more enduring than male; so that, although boys are born in the proportion of 105 to 100 of girls—a fact that holds good all over Europe—there are always more women in existence than men. It really is surprising how enduring women sometimes become, and how healthily enduring too, after passing the more trying crises of female existence. Mrs Piozzi, who herself thought it a person's own fault if they got old, gives us in one of her letters a remarkable case of vigorous old-ladyism.

'I must tell you,' says she, 'a story of a Cornish gentlewoman hard by here [Penzance], Zenobia Stevens, who held a lease under the Duke of Bolton by her own life only ninety-nine years—and going at the term's end ten miles to give it up, she obtained permission to continue in the house as long as she lived, and was asked of course to drink a glass of wine. She did take one, but declined the second, saying she had to ride home in the twilight upon a young colt, and was afraid to make herself giddy-headed.*'

The well known Countess Dowager of Cork, who died in May 1840, had not reached a hundred—she had but just completed her ninety-fourth year—but she realized the typical character of a veteran lady who, to appearance, was little affected by age. Till within a few days of her death she was healthy and cheerful as in those youthful days when she charmed Johnson and Boswell, the latter of whom was only six years her senior. She was in the custom to the last of dining out every day when she had not company

* Mrs Piozzi's *Remains*, sub anno 1821.

at home. As to death, she always said she was ready for him, come when he might; but she did not like to see him coming. Lady Cork was daughter of the first Lord Galway, and she lived to see the *sixth*, her great grand-nephew.

Mr Francis Brokesby, who writes a letter on antiquities and natural curiosities from Shottesbrooke in 1711 (published by Hearne in connection with *Leland's Itinerary*, vi. 104), mentions several instances of extremely protracted female life. He tells of a woman then living near the Tower in London, aged about 130, and who remembered Queen Elizabeth. Hearne himself subsequently states that this woman was Jane Scrimshaw, who had lived for four score years in the Merchant Tailors' alms-houses, near Little Tower-hill. She was, he says, born in the parish of Mary-le-Bow, London, on the 3rd of April 1584, so that she was then in the 127th year of her age, 'and likely to live much longer.' She, however, died on the 26th of December 1711. It is stated that even at the last there was scarcely a grey hair on her head, and she never lost memory or judgment. Mr Brokesby reported another venerable person as having died about sixty years before—that is, about 1650—who attained the age of a hundred and forty. She had been the wife of a labouring man named Humphry Broadhurst, who resided at Hedgerow, in Cheshire, on the property of the Leighs of Lyme. The familiar name she bore, *The Cricket in the hedge*, bore witness to her cheerful character; a peculiarity to which, along with great temperance and plainness of living, her great age was chiefly to be attributed. A hardly credible circumstance was alleged of this woman, that she had borne her youngest child at four score. Latterly, having been reduced by gradual decay to great bodily weakness, she used to be carried in the arms of this daughter, who was herself sixty. She was buried in the parish church of Prestbury. It was said of this woman that she remembered Bosworth Field; but here there must be some error, for to do so in 1650, she would have needed to be considerably more than 140 years old, the battle being fought in 1485. It is not unlikely, however, that her death took place earlier than 1650, as the time was only stated from memory.

THE GAME OF PALL MALL.

April 2, 1661, Pepys enters in his Diary, 'To St James's Park, where I saw the Duke of York playing at Pelemele, the first time that I ever saw the sport.'

The Duke's brother, King Charles II., had recently formed what is called the Mall in St James's-park for the playing of this game, which, however, was not new in England, as there had previously existed a walk for the purpose (lined with trees) on the ground now occupied by the street called Pall Mall. It was introduced from France, probably about the beginning of the seventeenth century; but the derivation of the name appears to be from the Italian, *Palamaglio*, i. e., *palla*, a ball, and *maglio*, a mallet; though we derived the term directly from the French *Palemaille*. The game answers to this name, the

object being by a mallet to drive a ball along a straight alley and through an elevated ring at the end: victory being to him who effects this object at the smallest number of strokes. Thus

THE GAME OF PALL MALL.

pall-mall may be said in some degree to resemble golf, being, however, less rustic, and more suitable for the man of courts.* King Charles II. would appear to have been a good player. In Waller's poem on St James's Park, there is a well-known passage descriptive of the Merry Monarch engaged in the sport:

'Here a well-polished mallet gives us the joy,
To see our Prince his matchless force employ;
His manly posture and his graceful mien,
Vigour and youth in all his motions seen;
No sooner has he touched the flying ball,
But 'tis already more than half the mall.
And such a fury from his arm has got,
As from a smoking culverin 'twere shot.'

MALLET AND BALL FORMERLY USED IN THE GAME OF PALL MALL.

(Length of Mallet 3 ft. 8 in., diameter of the Ball 2½ in.)

The phrase 'well polished' leads to the remark that the alley for pall-mall was hardened and strewn with pounded shells, so as to present a perfectly smooth surface. The sides of the alley appear to have been boarded, to prevent the ball from going off the straight line. We do not learn anywhere whether, as in golf, mallets of different shapes and weights were used for a variety of strokes,—a light and short one, for instance, for the final effort to ring the ball. There is, however, an example of a mallet and

ball preserved in London from the days when they were employed in Pall Mall; and they are here represented.*

The game was one of a commendable kind, as it provoked to exercise in the open air, and was of a social nature. It is rather surprising that it should have so entirely gone out, there being no trace of it after the Revolution. The original alley or avenue for the game in London began, even in the time of the Commonwealth, to be converted into a street—called, from the game, Pall Mall—where, if the reader will pardon a

* See an interesting paper on the Game of Pall Mall, by Mr Albert Way, in the *Archaeological Journal*, volume xi. p. 253.

* These curious relics of an extinct game were long in the possession of the late Mr Benjamin L. Vulliamy.

very gentle pun, clubs now take the place of mallets.

THE FLEET PRISON OF OLD.

April 2, 1844, the Fleet Prison in London was abolished, after existing as a place of incarceration for debtors more than two centuries; all that time doing little credit to our boasted civilization.

In the spring of the year 1727 a Committee of the House of Commons, appointed to inquire into the management of Debtors' prisons, brought to

light a series of extortions and cruelties practised by the jailers towards the unfortunate debtors in their charge, which now appear scarcely credible, but which were not only true, but had been practised continually for more than a century by these monsters, who had gone on unchecked from bad to worse, until this commission disclosed atrocities which induced the House of Commons to address the King, desiring he would prosecute the wardens and jailers for cruelty and extortion, and they were committed prisoners to Newgate.

Hogarth has chosen for the subject of one of

THE OLD FLEET PRISON.

his most striking pictures the examination of the acting warden of the Fleet—Thomas Bambridge—before a Committee of the House of Commons. In the foreground of the picture a wretched

prisoner explains the mode by which his hands and neck were fastened together by metal clamps. Some of the Committee are examining other instruments of torture, in which the heads and

necks of prisoners were screwed, and which seem rather to belong to the dungeons of the Inquisition than to a debtors' prison in the heart of London. Bambridge and his satellites had used these tortures to extort fees or bribes from the unfortunate debtors; at the same time allowing full impunity to the dishonest, whose cash he shared. At the conclusion of the investigation, the House unanimously came to the conclusion that he had wilfully permitted several debtors to escape; had been guilty of the most notorious breaches of trust, great extortions, and the highest crimes and misdemeanours in the execution of his office; that he had arbitrarily and unlawfully loaded with irons, put into dungeons, and destroyed, prisoners for debt under his charge, treating them in the most barbarous and cruel manner, in high violation and contempt of the laws of the kingdom. Yet this wretch, probably by means of the cash he had accumulated in his cruel extortions, managed to escape justice, dying a few years afterwards, not as he might and ought to have done, at Tyburn, but by his own hands.

When the Commissioners paid their first and unexpected visit to the Fleet prison, they found an unfortunate baronet, Sir William Rich, confined in a loathsome dungeon, and loaded with irons, because he had given some slight offence to Bambridge. Such was the fear this man's cruelty excited, that a poor Portuguese, who had been manacled and shackled in a filthy dungeon for months, on being examined before the Commissioners, and surmising wrongly, from something said, that Bambridge might return to his post, 'fainted, and the blood started out of his mouth and nose.'

Thirty-six years before this Committee gave the death-blow to the cruel persecution which awaited an unfortunate debtor, the state of this and other prisons was fully exposed in a little volume, 'illustrated with copper plates,' and termed *The Cries of the Oppressed*. The frontispiece gives the curious view of the interior of the Prison, here produced on a larger scale. It is a unique view in old London, and gives the general aspect of the place, its denizens and its visitors, in 1691, when the plate was engraved. In the foreground, some persons of the better class, who may have come to visit friends, are walking; and one male exquisite, in a wig of fashionable proportions, carries some flowers, and perhaps a few scented herbs, to prevent 'noisome smells' (which we learn were very prevalent in the jail) from injuring his health. A charitable gentleman places in the begging-box some cash for the benefit of the destitute prisoners, who are seen at grated windows clamouring for charity. In the archway which connects the forecourt with the prisoners' yard, are seated some visitors waiting their turn; a female is about to leave the jail, and walks towards the jailer, seated on the opposite bench, who bears the key of the gate in his hand; the gate is provided with a grated opening, through which to examine and question applicants for admission; the wall is surmounted by a formidable row of spikes; and over these (by aid of a violent use of perspective) we see the hats of those who walk Farringdon Street, or Fleet Market, as it

was then called, the view being bounded by the old brick houses opposite the prison.

Moses Pitt, who published this, now rare little volume, was at one time an opulent man. He rented from Dr Fell, Bishop of Oxford, 'the printing house called the Theatre' in the time of Charles the Second, where he commenced an Atlas in 12 vols. folio, and, as he says, 'did in the latter end of King Charles's time print great quantities of Bibles, Testaments, Common-prayers, &c., whereby I brought down the price of Bibles more than half, which did great good at that time, popery being then likely to overflow us.' His troubles began in building speculations at Westminster, in King Street, Duke Street, and elsewhere. He tells that he 'also took care to fill up all low grounds in that part of St James's Park between the bird-cages and that range of buildings in Duke Street, whose back front is toward the said park.*'

He erected a great house in Duke Street, which he let to the famed Lord Chancellor Jefferies; but the Revolution prevented him from getting a clear title to all the ground, though Sir Christopher Wren, the King's Architect, had begun to negotiate the matter. Then creditors came on Pitt, and a succession of borrowings, and lawsuits consequent thereto, led rapidly to his incarceration in the Fleet Prison for debt.

Pitt's book is the result of communications addressed to 65 debtors' prisons in England. It is, as he says, 'a small book as full of tragedies as pages; they are not acted in foreign nations among Turks and Infidels, Papists and Idolaters, but in this our own country, by our own countrymen and relations to each other,—not acted time out of mind, by men many thousand or hundred years ago; but now at this very day by men now living in prosperity, wealth, and grandeur; they are such tragedies as no age or country can parallel.' He, among many others, narrates the case of Mr Morgan, a surgeon of Liverpool, who, being put in prison there, was ultimately reduced so low by poverty, neglect, and hunger, as to catch by a cat mice for his sustenance. On his complaining of the barbarity of his jailer, instead of redress, he was beaten and put into irons. In the Castle of Lincoln, one unfortunate, because he had asked for a purse the jailers had taken from him, he being destitute thereby, was treated to 'a ride in the jailer's coach,' as they termed it; that is, he was placed in a hurdle,

* These bird-cages gave the name still retained of 'Bird-cage walk' to the southern avenue in the park, and there Charles the Second kept his feathered favourites. The park seems to have been left in a comparatively neglected state, for Pitt says, he 'filled the low ground near Storey's Gate with garden mould, and sowed it with hay seed, where the water in moist weather stagnated, and was the cause of fogs and mists, so that thereby that part of the park is clear from fogs, and healthy. I also, at my own cost, cleansed a great part of the common shoars, not only about the said park, but Westminster also, and laid out about £12,000 in buildings, whereby I have made Westminster as healthy a place as any other part about London, and as commodious for gentry to live in, which has brought a considerable trade to that part of the town.'

with his head on the stones, and so dragged about the prison yard, 'by which ill-usage he so became not altogether so well in his intellects as formerly.' From Appleby, in Westmoreland, an unfortunate debtor writes, 'Certainly no prisoners' abuses are like ours. Our jail is but eight yards long, and four and a half in breadth, without any chimney, or place of ease; several poor prisoners have been starved and poisoned in it; for whole years they cannot have the benefit of the air, or fires, or refreshment.' It was the custom of the jailers to charge high fees for bed or lodging; to force prisoners to purchase from them all they wanted for refreshment at extortionate charges, to continually demand gratuities, and to ill-treat and torture all who would not or could not gratify their rapacity. One wretched man at St Edmundbury jail, for daring to send out of the prison for victuals, had thumbscrews put upon him, and was chained on tip-toe by the neck to the wall.

All these cruelties resulted from the easy possibility of making money. The office of prime warden was let at a large price, and the money made by forced fees. The debtor was first taken to a sponging-house, charged enormously there; if too poor to pay, removed to the prison, but subjected to high charges for the commonest necessaries. Even if he lived 'within the rules,' as the privileged houses of the neighbourhood were termed, he was always subjected to visits from jailers, who would declare his right to that little liberty forfeit unless their memory was refreshed by a fee. The Commission already alluded to remedied much of this, but still gross injustice remained in many minor instances.

The state of the prison in 1749 may be gathered from a poem, entitled 'The Humours of the Fleet,' written by a debtor, the son of Dance, the architect of old Buckingham House and of Guy's Hospital. It is 'adorned' with a frontispiece shewing the prison yard and its denizens. A new-comer is treating the jailer, cook, and others to drink; others play at rackets against the high brick-wall, which is furnished with a formidable row of spikes at right angles with it, and above that a high wooden hoarding. A pump and a tree in one corner do not obliterate the unpleasant effect of the ravens who are feeding on garbage thrown about.

The author describes the dwellers in this 'poor, but merry place,' the joviality consisting in ill-regulated, noisy companionship. Some, we are told, play at rackets, or wrestle; others stay indoors at billiards, backgammon, or whist.

'Some, of low taste, ring hand-bells, direful noise!
And interrupt their fellows' harmless joys;
Disputes more noisy now a quarrel breeds,
And fools on both sides fall to loggerheads:
Till wearied with persuasive thumps and blows,
They drink to friends, as if they ne'er were foes.'

The prisoners had a mode of performing rough justice among themselves on disturbers of the general peace, by taking the offending parties to the common yard, and well drenching them beneath the pump!

'Such the amusement of this merry jail,
Which you'll not reach, if friends or money fail:
468

For ere its three-fold gates it will unfold,
The destined captive must produce some gold;
Four guineas at the least for different fees
Completes your *Habeas*, and commands the keys;
Which done and safely in, no more you're bled.
If you have cash, you'll find a friend and bed;
But that deficient, you'll but ill betide,
Lie in the hall, perhaps, or common side.'

'The chamberlain' succeeded the jailers, and he expected a 'tip,' or gratuity, to shew proper lodgings; a 'master's fee,' consisting of the sum of £1 2s. 8d., had then to be paid for the privilege of choosing a decent room. This, however, secured nothing, as the wily chamberlain,

'When paid, puts on a most important face,
And shows *Mount-scoundrel* as a charming place.'

This term was applied to wretched quarters on the common side at the top of the building, where no one stayed if he could avoid it; hence 'this place is first empty, and the chamberlain commonly shews this to raise his price upon you for a better.' A fee of another half-guinea induces him to shew better rooms, for which half-a-crown a-week rent has to be paid; unless 'a chum' or companion be taken who shares the charge, and sponges on the freshman; for generally 'the chum' was an old denizen, who made the most of new-comers. The one our author seems to have startled him by his appearance; but the chamberlain comforts him with the assurance:

'The man is now in dishabille and dirt,
He shaves to-morrow though, and turns his shirt.'

The first night is spent over a heavy supper and drinking bout, ordered lavishly by the old stager and jailers, and paid for by the new-comer.

One custom may be noted in the words of this author as a 'wind-up to a day in prison.' He tells us that 'Watchmen repeat *Who goes out?* from half an hour after nine, till St Paul's clock strikes ten, to give visitors notice to depart; when the last stroke is given, they cry *All told!* at which time the gates are locked, and nobody suffered to go out upon any account.'

The cruelties which had been repeatedly complained of from 1586 by the poor prisoners, who charged the wardens with murder and other misdemeanours, continued unchecked in the midst of London until 1727. The simpler, but still unwarrantable extortions, which we have described from Dance's poem, as existing in 1749, continued with very little modification until the suppression of the jail in 1844. The same may be said of other debtors' jails in the kingdom. All good rules were abandoned or made of no avail by winking at their breakage. Thus, spirituous liquors were not permitted to be brought in by visitors for prisoners' use, yet dram-shops were established in the prison itself, under the name of 'tape shops,' where liquor at an advanced charge might be bought, under the name of *white* or *red tape*, as gin, rum, or brandy was demanded. In the same way game, not allowed to be sold outside, was publicly sold inside the prison's walls. Any luxuries or extravagances might be obtained by a dishonest or rich prisoner. The rules for living outside were equally lax, and though the

person who availed himself of the privilege was supposed to never go beyond their precincts, country trips were often taken, *if paid for*: one of the denizens of the rules of the King's Bench, a sporting character of the name of Hetherington, drove the coach from London to Birmingham for more than a month consecutively, during the illness of his friend the coachman, for whom he often 'handled the ribbons.' On festival occasions, such as Easter Monday, the prisoners invited their friends, who came in shoals; and 'the mirth and fun grew fast and furious' during the day; hopping in sacks, foot-races, and other games were indulged in, and on one occasion a mock election was got up within the walls, which has been immortalized on canvas by the artist, B. R. Haydon, then in the King's Bench for debt. It was considered one of his best works, was purchased for £500 by King George the Fourth, and is now at Windsor Castle.

DR GREGORY AND THE MODERATE MAN.

Dr James Gregory, Professor of the Practice of Physic in the University of Edinburgh, was a man of vigorous talents and great professional eminence. He was what is called a *starving doctor*, and, not long after his death, the following anecdote was put in print, equally illustrative of this part of the learned professor's character, and of the habits of life formerly attributed to a wealthy western city:

SCENE—*Doctor's Study. Enter a grave-looking Glasgow Merchant.*

Patient.—Good morning, doctor; I'm just come to Edinburgh about some law business, and I thought, when I was here at any rate, I might just as weel tak your advice, sir, anent my trouble.

Doctor.—Aud pray what may your trouble be, my good sir?

P.—Deed, doctor, I'm no very sure; but I'm thinking it's a kind of weakness that makes me dizzy at times, and a kind of pickling about my stomach—I'm just no right.

Dr.—You're from the west country, I should suppose, sir?

P.—Yes, sir, from Glasgow.

Dr.—Ay. Pray, sir, are you a gourmand—a glutton?

P.—God forbid, sir! I'm one of the plainest men living in all the west country.

Dr.—Then, perhaps, you're a drunkard?

P.—No, doctor; thank God, no one can accuse me of that: I'm of the Dissenting persuasion, doctor, and an elder; so ye may suppose I'm nae drunkard.

Dr.—(*Aside*—I'll suppose no such thing, till you tell me your mode of life.) I'm so much puzzled with your symptoms, sir, that I should wish to hear in detail what you eat and drink. When do you breakfast, and what do you take to it?

P.—I breakfast at nine o'clock. I tak a cup of coffee, and one or two cups of tea; a couple of eggs, and a bit of ham or kipper'd salmon, or may be both, if they're good, and two or three rolls and butter.

Dr.—Do you eat no honey, or jelly, or jam, to breakfast?

P.—O yes, sir; but I don't count that as anything.

Dr.—Come, this is a very moderate breakfast. What kind of dinner do you make?

P.—Oh, sir, I eat a very plain dinner indeed. Some soup, and some fish, and a little plain roast or boiled; for I dinna care for made dishes; I think, some way, they never satisfy the appetite.

Dr.—You take a little pudding, then, and afterwards some cheese?

P.—Oh yes; though I don't care much about them.

Dr.—You take a glass of ale or porter with your cheese?

P.—Yes, one or the other, but seldom both.

Dr.—You west country people generally take a glass of Highland whisky after dinner?

P.—Yes, we do; it's good for digestion.

Dr.—Do you take any wine during dinner?

P.—Yes, a glass or two of sherry; but I'm indifferent as to wine during dinner. I drink a good deal of beer.

Dr.—What quantity of port do you drink?

P.—Oh, very little; not above half a dozen glasses or so.

Dr.—In the west country, it is impossible, I hear, to dine without punch?

P.—Yes, sir; indeed 'tis punch we drink chiefly; but, for myself, unless I happen to have a friend with me, I never tak more than a couple of tumblers or so,—and that's moderate.

Dr.—Oh, exceedingly moderate, indeed! You then, after this slight repast, take some tea, and bread and butter?

P.—Yes, before I go to the counting-house to read the evening letters.

Dr.—Aud, on your return, you take supper, I suppose?

P.—No, sir, I cannot be said to tak supper; just something before going to bed: a rizzer'd haddock, or a bit of toasted cheese, or half a hundred oysters, or the like o' that; and, may be, two-thirds of a bottle of ale; but I tak no regular supper.

Dr.—But you take a little more punch after that?

P.—No, sir; punch does not agree with me at bedtime. I tak a tumbler of warm whisky toddy at night; it's lighter to sleep on.

Dr.—So it must be, no doubt. This, you say, is your every-day life; but, upon great occasions, you perhaps exceed a little?

P.—No, sir, except when a friend or two dine with me, or I dine out, which, as I am a sober family man, does not often happen.

Dr.—Not above twice a-week?

P.—No; not oftener.

Dr.—Of course you sleep well, and have a good appetite?

P.—Yes, sir, thank God, I have; indeed, any wee harl o' health that I hae is about mealtimes.

Dr.—(Assuming a severe look, knitting his brows, and lowering his eyebrows.) Now, sir, you are a very pretty fellow, indeed; you come here and tell me that you are a moderate man, and I might have believed you, did I not know the nature of the people in your part of the country; but, upon examination, I find, by your own shewing, that you are a most voracious glutton: you breakfast in the morning in a style that would serve a moderate man for dinner; and, from five o'clock in the afternoon, you undergo one almost uninterrupted loading of your stomach till you go to bed. This is your moderation! You told me, too, another falsehood—you said you were a sober man; yet, by your own shewing, you are a beer swiller, a dram-drinker, a wine-bibber, and a guzzler of Glasgow punch,—a liquor, the name of which is associated, in my mind, only with the ideas of low company and beastly intoxication. You tell me you eat indigestible suppers, and swill toddy to force sleep—I see that you chew tobacco. Now, sir, what human stomach can stand this? Go home, sir, and leave off your present course of riotous living—take some dry toast and tea to your breakfast—some plain meat and soup for dinner, without adding to it anything to spur on your flagging appetite; you may take

a cup of tea in the evening, but never let me hear of haddocks and toasted cheese, and oysters, with their accompaniments of ale and toddy at night; give up chewing that vile narcotic, nauseous abomination, and there are some hopes that your stomach may recover its tone, and you be in good health like your neighbours.

P.—I'm sure, doctor, I'm very much obliged to you—(taking out a bunch of bank-notes)—I shall endeavour to—

Dr.—Sir, you are not obliged to me—put up your money, sir. Do you think I'll take a fee from you for telling you what you knew as well as myself? Though you are no physician, sir, you are not altogether a fool. You have read your Bible, and must know that drunkenness and gluttony are both sinful and dangerous; and, whatever you may think, you have this day confessed to me that you are a notorious glutton and drunkard. Go home, sir, and reform, or, take my word for it, your life is not worth half a year's purchase.

[*Exit Patient, dumbfounded, and looking blue.*

Dr.—(*Solus.*) Sober and temperate! Dr Watt tried to live in Glasgow, and make his patients live moderately, and purged and bled them when they were sick; but it would not do. Let the Glasgow doctors prescribe beefsteaks and rum punch, and their fortune is made.

APRIL 3.

Sts Agape, Chionia, and Irene, martyrs, 304. St Ulpian, of Tyre, martyr. St Nicetias, abbot, 824. St Richard, 1253, *Dover*.

Born.—Richard II., King of England, 1366, *Bordeaux*; Rev. George Herbert (religious poetry), 1593, *Montgomery Castle*; Roger Rabutin, Count de Bussy, 1618, *Epiry*; Washington Irving, American miscellaneous writer, 1783, *New York*; Rev. Dionysius Lardner, scientific and miscellaneous writer, 1793, *Dublin*.

Died.—Prince Arthur, Duke of Brittany, English prince, murdered, 1203, *Rouen*; John Napier of Merchiston, inventor of logarithms, 1617, *Merchiston*; Edward, Marquis of Worcester, 1667, *Raglan*; Jacques Ozanam, French mathematical writer, 1717, *Paris*; Dr John Berkenhout (medical and scientific writings), 1791.

PRINCE ARTHUR.

A peculiar interest seems to attach itself to the fate of most of the princes known in history by the name of Arthur, and none of them has attracted more general sympathy than the youthful nephew of Richard Cœur de Lion, the manner of whose death is itself a subject of mysterious doubt. This sympathy is probably in some measure owing to the touching scene in which he has been introduced by Shakspeare.

In the order of succession of the five sons of King Henry II., Geoffrey Duke of Brittany intervened between Richard and John. Geoffrey was accidentally slain in a tournament, leaving his wife Constance advanced in pregnancy, and she subsequently, in 1187, gave birth to Prince Arthur, who was acknowledged as the successor to his father as Duke of Brittany. On the death of King Richard, in 1199, Arthur, then twelve years of age, was no doubt his rightful heir, but John, as is well known, seized at once upon the crown of England, and people in general seem to

have preferred, according to principles which were strictly constitutional, the prince who could govern to the one who was for the time incapacitated by his age. But the barons of Anjou, Touraine, and Maine espoused the cause of Arthur, and took the oath of allegiance to him and to his mother Constance as his guardian. Cœur de Lion, at the time of his death, had just signed a truce with the King of France, Philippe Auguste, and it was to this monarch that Constance carried her young son when the territories of the barons who supported him were invaded and barbarously ravaged by King John and his mercenary troops. Philippe, who was waiting eagerly for the opportunity of depriving the King of England of his continental possessions, embraced the cause of Arthur with the utmost zeal, and not only sent troops to assist the barons of Anjou and Brittany, but invaded Normandy. It was soon, however, evident that Philippe was fighting for himself and not for Arthur, and the barons of Arthur's party became so certain of his designs, that their leader, Guillaume des Roches, seneschal of Anjou, effected a reconciliation with King John, and succeeded in carrying the young prince away from the court of France. This was hardly done, when the seneschal learnt from secret information that John was acting treacherously, and only sought to gain possession of his nephew in order to poison him; and he carried Arthur by night to Angers, and placed himself again under the protection of Philippe. The latter made peace with the king of England at the beginning of the year 1200, when Arthur was induced by the French king to remain contented with the Duchy of Brittany, and renounce all claims to the crown of England, as well as to the continental provinces of Normandy, Maine, Anjou, Touraine, and Poitou.

Affairs remained in this position until the beginning of the year 1202, when Philippe Auguste resumed his hostile designs against Normandy, and again put forward the claims of Arthur, who was now fifteen years old. As the continental barons were nearly all ready to rise against King John, Philippe immediately invested Arthur with the counties of Poitou, Anjou, Maine, and Touraine, and sent him with an escort into Poitou to head the insurrection there; but, unfortunately, the young prince was persuaded to make an attempt upon Mirabeau, and he was there surprised by King John, on the 1st of August 1202, and captured with all the barons who accompanied him. Arthur was carried a prisoner to Falaise, from whence he was subsequently transferred to Rouen, and nothing further is satisfactorily known of him, although there is no doubt that he was murdered.

Many accounts of the circumstances of the murder, probably all more or less apocryphal, were afterwards current, and some of them have been preserved by the old chroniclers. According to that given by Ralph of Coggeshall, John, at the suggestion of some of his evil councillors, resolved on putting out Arthur's eyes, and sent some of his creatures to Falaise, to execute this barbarous design in his prison; but it was prevented by Hubert de Burgh, then governor of

Falaise, who took time to communicate personally with the king. In consequence of Hubert's humanity, Arthur was removed from Falaise to Rouen, where, on the 3rd of April 1203, he was taken from the tower in which he was confined, placed in a boat where King John with his esquire, Peter de Maulac, waited for him, and there murdered by the latter at the king's command. According to another version, Maulac shrunk from the deed, and John murdered his nephew with his own hand. This account is evidently the foundation of part of the story adapted by Shakspeare, who, however, strangely lays the scene at Northampton. Roger de Wendover, who is quite as good authority as the abbot of Coggeshall, gives an entirely different explanation of the cause of the prisoner's removal from Falaise to Rouen. He says that 'after some lapse of time, King John came to the castle of Falaise, and ordered his nephew Arthur to be brought into his presence. When he appeared, the King addressed him kindly, and promised him many honours, requiring him to separate himself from the French king, and to adhere to the party of himself, as his lord and uncle. But Arthur ill-advisedly replied with indignation and threats, and demanded of the King that he should give up to him the kingdom of England, with all the territories which King Richard possessed at the time of his death; and, inasmuch as all those possessions belonged to him by hereditary right, he affirmed with an oath that unless King John immediately restored the territories aforesaid to him, he should never enjoy peace for any length of time. The King was much troubled at hearing these words, and gave orders that Arthur should be sent to Rouen, to be imprisoned in the new tower there, and placed under close guard; but shortly afterwards the said Arthur suddenly disappeared.' Popular tradition was from a rather early period almost unanimous in representing the murder as having been perpetrated by the king's own hand; but this perhaps arose more out of hatred to John's memory than from any accurate knowledge of the truth. Arthur was sixteen years of age at the time of his death.

LORD WORCESTER AND HIS 'CENTURY OF INVENTIONS.'

In respect of his pursuits and tastes, Edward, Marquis of Worcester, stands much isolated in the British peerage, being a speculative mechanical inventor. His little book, called *A Century of Inventions*, is one of the most curious in English literature. It appears to have been written in 1655, and strictly consists of descriptions of a hundred projects, as its title imports; none of them, however, so explicit as to enable a modern adventurer to carry them out in practice. The objects in view were very multifarious. Secret writing, by cipher, or by peculiar inks; telegraphs or semaphores; explosive projectiles that would sink any ship; ships that would resist any explosive projectiles; floating gardens for English rivers; automaton figures; machines for dredging harbours; an engine to raise ships for repair; an instrument for teaching perspective; a method of fixing shifting sands on the seashore; a cross-

bow that will discharge two arrows at once; an endless watch, that never wants winding up; a key that will fasten all the drawers of a cabinet by one locking; a large cannon that could be shot six times in a minute; flying machines; a brass mould to cast candles; hollow-handled pocket-combs, knives, forks, and spoons, for carrying secret papers; calculating machines for addition and subtraction; a pistol to discharge a dozen times with once loading; an apparatus for lighting its own fire and candle at any predetermined hour of the night; a complete portable ladder, which, taken out of the pocket, may be fastened to a point a hundred feet high; a way to make a boat work against wind and tide; nothing came amiss to the mechanical Marquis. Knowing to how extraordinary a degree many of those projects foreshadow inventions which have brought renown to other men in later days, it is tantalizing to be unable to discover how far he had really proceeded in any one of them. It is a generally accepted fact, however, that he had worked out in his mind a clear conception of a steam-engine (as we should now call it); indeed he is believed to have set a model of a steam-engine at work shortly before his death. He employed, too, a German artisan, Casper Kaltoff, for many years in constructing models and new machines of various kinds.

A brave, loyal, and worthy man was the Marquis of Worcester. Like many other noble cavaliers, he impoverished himself in befriending Charles the First; and, like them again, he failed in obtaining any recompense from Charles the Second. He was the owner and occupier of Raglan Castle during the troubles of the Civil War; and it is to him that the incident relates (carefully told ever since to visitors to the Castle), concerning the practical aid given by his ingenuity to his loyalty. He had constructed some hydraulic engines and wheels for conveying water from the moat to the top of the great tower. Some of the Roundheads approaching, the Marquis resolved to startle them by a display of his engineering powers. He gave private orders to set the water works in play. 'There was such a roaring,' he afterwards wrote, 'that the poor silly men stood so amazed as if they had been half dead; and yet they saw nothing. At last, as the plot was laid, up comes a man staring and running, crying out before he came to them, "Look to yourselves, my masters, for the lions are got loose." Whereupon the searchers gave us such a loose, that they tumbled so over one another down the stairs, that it was thought one half of them had broke their necks: never looking behind them till they were sure they had got out of the Castle.'

THE POET LAUREATESHIP.

On April 3rd, 1843, we find Sir Robert Peel writing to Wordsworth, kindly urging him to overcome his reluctance, and become poet-laureate. The bard of Rydal Mount being seventy-four, feared he might be unfit to undertake the tasks expected of him; but on being assured it would be a sinecure as far as he chose, he accepted the office. We are most of us aware

that this office was, in no remote times, one of real duty, an ode being expected on the king's birthday and other occasions. According to modern conceptions, a genuine poet conferred as much honour on the office, as the office upon him. Originally, the title inferred a great public honour to some special bard, placing him high above his fellows. Among the ancients, as late as the Emperor Theodosius, the ceremony of crowning with the laurel wreath was actually performed; even in modern times, from so far back as the thirteenth century, Abbé Resnel conjectures the custom was revived and retained in Italy and Germany. In England and France it does not seem to have been at any time regularly established.

Petrarch, in Italy, wore his laurel with true dignity. The curious formula used at his coronation has been preserved. 'We, count and senator, for us and our college, declare Francis Petrarch great poet and historian; and for a special mark of his quality of poet, we have placed with our hands on his head a *crown of laurel*, granting to him by the tenor of these presents, and by the authority of King Robert, of the senate, and the people of Rome, in the poetic as well as in the historic art, and generally in whatsoever relates to the said arts, as well in this holy city as elsewhere, our free and entire power of reading, disputing, and interpreting all ancient books, to make new ones, and compose poems, which God assisting, shall endure from age to age.'

It was not all Francis Petrarch's successors who composed such poems. Mad Querno, 'Antichrist of wit,' laureate of Leo X., wrote twenty thousand verses, but no god assisted, save Bacchus, and the wits twisted sily among the laurels vine-leaf and cabbage-leaf.

Chaucer is often called poet-laureate. He held sundry appointments under Edward III., Richard II., and Henry IV., and several curious grants were made to him, among which was a pipe of wine. Edward III. made him comptroller of the custom of wool, but not in the way of sinecure: on the contrary, we find it enjoined 'that the said Geoffrey write with his own hand his rolls touching the said office, and continually reside there, and do and execute all things pertaining to the said office in his own proper person, and not by his substitute.'

The Reverend 'Master Skelton, poet laureate,' as he terms himself, figured in Henry VIII.'s time as a most hearty reviler of bad customs and worse clergy. To wit:—

'Salt-fish, stock-fish, nor herring,
It is not for your wearing,
Nor in holy Lenten season
Ye will neither beancs ne peason,
But ye looke to be let loose
To a pygge or to a goose,
Your george not a stewed,
Without a capon ended.'

And much more, equally scurrilous, till at last Wolsey punished him for alluding to his (Wolsey's) 'greasy genealogy.'

The office of laureate should never be more than an honour; or, at least, it should never

impose taskwork. Only so far as the laureate feels, let him speak. If the true poet endeavour to offer such a sacrifice on the altar of public taste, as to sing of unheroic or unpoetic events, the spirit of inspiration will go up from him in the smoke, like the angel at Manoh's offering. Let any one read through Warton's Birthday Odes, for June 4, in regular succession, and he will discover the difficulties of this jobbing. Of many national effusions, practically imposed or prompted by his office, Tennyson cannot shew one,—nor even the ode to the Duke,—worthy to stand by the side of his other noble poems.

APRIL 4.

St Isidore, bishop of Seville, 606. St Plato, abbot, 813.

Born.—John Jackson, learned English divine, 1686, *Thirsk, Yorkshire.*

Died.—St Ambrose, 397, *Milan*; Pope Nicolas IV., 1292; Sir Robert Naunton, 1634; Simon Episcopus (Bisschop), Dutch theological writer, 1643, *Amsterdam*; Robert Ainsworth (Latin Dictionary), 1743, *Poplar*; Oliver Goldsmith, poet and miscellaneous writer, 1774, *Temple, London*; Lloyd Kenyon, Lord Chief Justice of England, Lord Kenyon, 1802, *Bath*; Lalande, French mathematician, 1807; Andrea Massena, Duke of Rivoli, Marshal of France, 1817, *Ruel*; Rev. John Campbell, missionary to South Africa, 1840.

SAINT AMBROSE AND THE EMPEROR.

The election of Ambrose to the bishopric of Milan is, perhaps, unequalled in the singularity of all its circumstances. He was carefully educated when young for the civil service, became an advocate, and practised with such success that, at the age of thirty-one, he was appointed governor of Liguria. In this capacity he had resided five years at Milan, and was renowned for his prudence and justice, when Auxentius the bishop died, A.D. 374.

The city was at that time divided between Arians and Orthodox. Party disputes ran high respecting the election of a new bishop, and a tumult appeared imminent, when Ambrose, hearing of these things, hastened to the church where the people had assembled, and exhorted them to peace and submission to the laws. His speech was no sooner ended than an infant's voice was heard in the crowd, 'Ambrose is Bishop.' The hint was taken at once, and the whole assembly cried out, 'Ambrose shall be the man!' The contending factions agreed, and a layman whose pursuits seemed to exclude him altogether from the notice of either party, was suddenly elected by universal consent. It was in vain he refused, affected an immoral course of life, and twice fled from the city: the emperor seconded the choice of the people, and Ambrose was at length compelled to yield. Valentinian gave thanks to God that it had pleased Him to make choice of the very person to take care of men's souls whom he had himself before appointed to preside over their temporal concerns. And Ambrose, having given all his property to the church and the poor, reserving only an annual

income for his sister Marcellina, set about his new duties with a determination to honestly discharge them.

The most striking instance of the manner in which he executed this resolve is found in his treatment of the Emperor Theodosius. This august person was naturally hot tempered. And it so happened that, in a popular tumult in Thessalonica, A.D. 390, Botheric, the imperial officer, was slain. This was too much for the emperor's forbearance, and he ordered the sword to be let loose upon them. Seven thousand were massacred in three hours, without distinction and without trial. Ambrose wrote him a faithful letter, reminding him of the charge in the prophecy, that, if the priest does not warn the wicked, he shall be answerable for it. 'I love you,' he says, 'I cherish you, I pray for you, but blame not me if I give the preference to God.' On these principles he refused to admit Theodosius into the church at Milan. The emperor pleaded that David had been guilty of murder and adultery. 'Imitate him then,' said the zealous bishop, 'in his repentance as well as his sin.' He submitted, and kept from the church eight months. Ruffinus, the master of the offices, now undertook to persuade the bishop to admit him. He was at once reminded of the impropriety of his interference, inasmuch as he, by his evil counsels, had been in some measure the author of the massacre. 'The emperor,' he said, 'is coming.' 'I will hinder him,' said Ambrose, 'from entering the vestibule: yet if he will play the king, I shall offer him my throat.' Ruffinus returned and informed the emperor. 'I will go,' he exclaimed, 'and receive the refusal which I desire:' and as he approached the bishop, he added, 'I come to offer myself to submit to what you prescribe.' Ambrose enjoined him to do public penance, and to suspend the execution of all capital warrants for thirty days in future, that the ill effects of intemperate anger might be prevented.

The writings of St Ambrose, many of which breathe a touching eloquence, were collected in two volumes, folio, 1691.

OLIVER GOLDSMITH.

That exhibition of serio-comic sprightliness and naïve simplicity which gives a peculiar character to Goldsmith's works, shewed itself equally in his life. In his writings it amuses us. But when we think of the poverty, and hardship, and drudgery which fell to his lot, we cannot smile at the man with the same hearty goodwill. Still the ludicrous element remains. Even in his outward appearance his biographer, Mr Forster, has to admit it, and make the best of it. 'Though his complexion was pale, his face round and pitted with the small-pox, and a somewhat remarkable projection of his forehead and his upper lip suggested excellent sport for the caricaturists, the expression of intelligence, benevolence, and good humour predominated over every disadvantage, and made the face extremely pleasing.'

At school and at college he shewed all the symptoms of a dunce, and many of those of a fool. Then, after idling some time, he succeeded

in failing utterly in a very fair number of attempts to set up in life, as much out of sheer negligence and simplicity, as incapacity; and when his friends had pretty well given him up, he set out, with a flute in his hand, and nothing in his pocket, to see the world. He passed through many countries, and much privation; and finally returned, bringing with him a degree in medicine, some medical knowledge, and that wide experience of manners which ever fed his genius more than reading or books. Now he became usher in a school, apothecary's journeyman, poor physician, press-corrector, and other things, alternately or simultaneously starving and suffering: thought of going to Mount Sinai to interpret the inscriptions; but at length became reviewer. He made one attempt more to escape from bondage; got an appointment as medical officer at Coromandel; lost it; and then finally settled down to the profession of author. Fame soon came to the side of Sorrow, and Pleasure often joined them; till death, fifteen years later, took him away by disease arising from sedentary habits. He was buried in the Temple burial-ground, and Johnson wrote the Latin epitaph in Westminster Abbey.

Undoubtedly, Goldsmith's greatest works are those which were labours of love. *The Traveller* and *The Deserted Village* stand first, with their graceful simplicity, without humour. Then, *The Vicar of Wakefield*, which joins shrewd humour to simplicity. His comedies proved most remunerative. In all his works, self-chosen, or dictated by necessity, his style remains attractive.

He preserved his independence and honesty through much drudgery and many vexations, which tried him even in his best days. Yet, after all the laments about the sufferings of authors, many of his might by common sense and prudence have been avoided. He failed in these. He was all innocence, humour, good-nature, and sensibility. To be a simpleton is not a necessary qualification of an author. Goldsmith has accurately sketched himself: 'Fond of enjoying the present, careless of the future, his sentiments those of a man of sense, his actions those of a fool; of fortitude able to stand unmoved at the bursting of an earthquake, yet of sensibility to be affected by the breaking of a tea-cup.' Prosperity added to his difficulties as well as to his enjoyments: the more money he had, the more thoughtlessly he expended, wasted, or gave it away.

Yet his heart was right, and right generous. He squandered his money quite as often in reckless benevolence as in personal indulgence. When at College, and in poverty, he would write ballads, and sell them for a few shillings; then give the money to some beggar on his way home. This habit continued through his life. He would borrow a guinea, to give it away; he would give the clothes off his own bed. In private life, or at the famous *Literary Club*, where he figured both in great and little, in wisdom, wit, and blue silk, his friends, who laughed at him, loved and valued him. Edmund Burke, the gentle Reynolds, Johnson, Hogarth,—all but jealous Bozzy,—delighted in him. When he died, it was 'Poor Goldy!' Burke wept. Reynolds laid his work

aside. Johnson was touched to the quick: 'Let not his failings be remembered: he was a very great man.'

His failings have been dragged to light more than need have been. He spoke out every thought, and so occasionally foolish ones. Therefore Garrick (though but in joke) must write this:

'Here lies Nolly Goldsmith, for shortness called Noll,
Who wrote like an angel, but talked like poor Poll.'

He liked to appear to advantage on great occasions, and had a child's eye for colour; so his tailor's bills have been hunted up and paraded, revealing glimpses of 'Tyrian bloom, satin-grain, and garter-blue silk breeches' (£8, 2s. 7d.); or when Bozzy gives a dinner, 'a half dress suit of ratten, lined with satin, a pair of silk stocking breeches, and a pair of bloom-coloured ditto,' costing £16. Yet a man less unsophisticated could easily have concealed such weaknesses as Goldsmith indulged.

One thing is strange. Not a trace of love or love-making in forty-six years, save one obscure tale of his being with difficulty dissuaded from 'carrying off and marrying' a respectable needlewoman, probably as a kindness; and a guess that he might have had that sort of fancy for a young lady friend, at whose house he often visited, and who, when he was dead, begged, with her sister, a lock of his brown hair.

LADY BURLEIGH AND HER THREE LEARNED SISTERS.

In the reign of Elizabeth, and even from an earlier period, it was customary for ladies to receive a classical education. The 'maiden Queen' herself was a good Greek scholar, and could speak Latin with fluency. But amongst the learned ladies of that day, the four daughters of Sir Anthony Cooke, the preceptor of Edward VI., were pre-eminent. Mildred, his eldest daughter, married William Cecil, afterwards Lord Burleigh. She was equally remarkable for learning, piety, and benevolence. She could read with critical accuracy Hebrew, Greek, and Latin. She presented a Hebrew Bible to the University of Cambridge, and accompanied it with a letter written by herself in Greek. She had not only read most of the Greek and Latin classics, but the chief works in those languages by early Christian writers, from some of which she made very able English translations. She was a general patroness of literature; she supported two poor students at St John's College, Cambridge; made large presents of books to both universities, and provided various facilities for the encouragement of learning. Amongst her acts of benevolence, she provided the Haberdashers' Company with the means of lending to six poor tradesmen twenty pounds each, every two years; and a similar charity for the poor people of Waltham and Cheshunt in Hertfordshire; four times every year she relieved all the poor prisoners in London; and expended large sums in other acts of benevolence and charity, far too numerous to specify. She lived forty-three years with her husband, who speaks of her death, which occurred 4th

April 1589, as the severest blow he had ever experienced, but says, 'I ought to comfort myself with the remembrance of hir manny vertuouss and godly actions wherein she contynued all her liff.'

Anna, the second daughter of Sir Anthony Cooke, was also a good Latin and Greek scholar, and well acquainted with some of the continental languages. At an early age she translated twenty-five sermons from the Italian of Barnardine Ochine, which were published in an octavo volume. From the Latin she translated Bishop Jewel's *Apology for the Church of England*, which was so faithfully and skilfully executed, that the bishop, on revising the manuscript, did not find it necessary to alter a single word. On sending her translation of the *Apology* to the bishop, she wrote him a letter in Greek, which he answered in the same language. She married Sir Nicholas Bacon, and was the mother of the famous Sir Anthony Bacon, and the still more famous Francis Bacon, created Lord Verulam.

Elizabeth, the third daughter of Sir Anthony Cooke, was equally remarkable for her learning. She wrote epitaphs and elegies on her friends and relations in Greek, in Latin, and in English verse; and published an English translation from a French work. She married, first, Sir Thomas Hobby, of Bisham, Berks, and accompanied him to France, when he went thither as ambassador from Queen Elizabeth, and where he died in 1566. She brought his body back to Bisham, and, building there a sepulchral chapel, buried him and his brother Sir Philip therein, and wrote epitaphs on them in Greek, Latin, and English. She next married John, Lord Russell, and surviving him, wrote epitaphs on him in the same languages, for his tomb in Westminster Abbey.

Katherine, fourth daughter of Sir Anthony Cooke, was famous for her scholarship in Hebrew, Greek, and Latin; and for considerable talent in poetry. She married Sir Henry Killebrew, and was buried in the Church of St Thomas the Apostle, in Vintry Yard, London, where a handsome monument was erected to her memory, inscribed with the following epitaph, written by herself:—

'Dormio nunc Domino, Domini virtute resurgam;
Et σωτήρα meum carne videbo mea.
Mortua ne dicar, fruitur pars altera Christo:
Et surgam Capiti, Tempore, tota mea.'

'To God I sleep, but I in God shall rise,
And, in the flesh, my Lord and Saviour see.
Call me not dead, my soul to Christ is fled,
And soon both soul and body joined shall be.'

There is a curious ghost story about Lady Russell. She was buried at Bisham by the remains of her first husband, Sir Thomas Hobby, and in the adjoining mansion still hangs her portrait, representing her in widow's weeds, and with a very pale face. Her ghost, resembling this portrait, is still supposed to haunt a certain chamber; which is thus accounted for by local tradition. Lady Russell had by her first husband a son, who, so unlike herself, had a natural antipathy to every kind of learning, and such was his obstinate repugnance to learning to write,

that he would wilfully blot over his copy-books in the most slovenly manner. This conduct so irritated his refined and intellectual mother, that to cure him of the propensity, she beat him again and again severely, till at last she beat him to death. As a punishment for her cruelty, she is now doomed to haunt the room where the fatal catastrophe happened, and as her apparition glides through the room it is always seen with a river passing close before her, in which she is ever trying, but in vain, to wash off the blood-stains of her son from her hands. It is remarkable that about twenty years ago, in altering a window-shutter, a quantity of antique copy-books were discovered pushed into the rubble between the joists of the floor, and one of these books was so covered with blots, that it fully answered the description in the story.

There is generally some ground for an old tradition. And certain it is that Lady Russell had no comfort in her sons by her first husband. Her youngest son, a posthumous child, especially caused her much trouble, and she wrote to her brother-in-law, Lord Burleigh, for advice how to treat him. This may have been the naughty boy who was flogged to death by his mamma, though he seems to have lived to near man's estate.

W. H. K.

HAYDON THE PAINTER AND TOM THUMB.

It is scarcely an exaggeration to say that poor Haydon, the historical painter, was killed by Tom Thumb. The lucky dwarf was 'the feather that broke the back' of the unhappy artist. Of that small individual it is not necessary here to say much. He was certainly, from his smallness, a great natural curiosity; nor could it be denied that, with a happy audacity, surprising in one so young, he exhibited some cleverness, and a few rather extraordinary attainments.

Haydon had from boyhood entertained a noble estimate of the province of art, and strove to rise to eminence in the highest form of painting, instead of descending to mere portraiture. The world, however, never gave him credit for such an amount of genius or ability as he believed himself to possess, although he was everywhere recognised as a remarkable and deserving artist. He was one of those men who make enemies for themselves. Conceited, obstinate, and irritable, he was always quarrelling—now with the Royal Academy, now with individuals, and gradually relapsed into the conviction that he was an ill-understood and ill-used man. In 1820 he produced a large picture, 'Christ entering Jerusalem,' and he gained a considerable sum of money by exhibiting it to shilling visitors, in London and throughout the provinces. After this, however, his troubles began; his historical pictures were too large for private mansions, and failed to meet with purchasers.

Few diaries are more sad than that which Haydon kept, and which accumulated at length to twenty-six large MS. volumes. Despondency marked nearly every page. At one time he mourned over the absence of customers for his pictures; at another, of some real or fancied slight he had received from other painters, while

his entries made repeated reference to debts, creditors, insolvencies, applications to friends for loans, and appeals to ministers for Government supply. One great and honourable ambition he had cherished—to illustrate the walls of the new Houses of Parliament with historical pictures; but this professional eminence was denied to him, as he believed, through unworthy favouritism.

Such was the mental condition of the unhappy painter in the early part of the year 1846, when the so-called General Tom Thumb came to England. Haydon had then just finished a large picture on which he had long been engaged, 'The Banishment of Aristides.' He hoped to redeem his fallen fortunes, and to relieve himself of some of his debts, by exhibiting the picture. He engaged a room at the Egyptian Hall in Piccadilly, under the roof where the dwarf was attracting his crowds, and sent hundreds of invitations to distinguished persons and critics to attend a private view. An entry in his diary on April 4th was 'the beginning of the end,' shewing how acutely the poor man felt his comparative want of success:—'Opened; rain hard; only Jerrold, Baring, Fox Maule, and Hobhouse came. Rain would not have kept them away twenty-six years ago. Comparison—

1st day of "Christ entering Jerusalem,"	
1820	£19 16 0
1st day of "Banishment of Aristides,"	
1846	1 1 6

I trust in God, Amen!' Soon afterwards he wrote, 'They rush by thousands to see Tom Thumb. They push, they fight, they scream, they faint, they cry "Help!" and "Murder!" They see my bills and caravan, but do not read them; their eyes are on them, but their sense is gone. It is an insanity, a *rabies furor*, a dream, of which I would not have believed England could have been guilty.' He had exhibited his 'Aristides' as an appeal to the public against the Commissioners for the Houses of Parliament, who had reported slightly of his cartoons for a series of large pictures; and now the public gave hardly any response whatever to his appeal. About a fortnight after the opening of his exhibition he recorded in his diary, with few but bitter words, the fact that in one week 12,000 persons had paid to see Tom Thumb, while only 133½ (the fraction being doubtless a child at half-price) paid to see the 'Aristides.' After five weeks' struggle he closed the Exhibition, with a positive loss of more than a hundred pounds; and thus, in the midst of poverty and misery, relieved only by a kind of pious tenderness which distinguished him in his domestic relations, he renewed work upon the fondly cherished series of pictures intended by him for the House of Lords. One piteous entry in his diary was to the effect—'Oh, God! let it not be presumptuous in me to call for thy blessing on my six works!' The end was not long delayed. One morning in June, the hapless man was found in his painting-room, prostrate in front of his picture of 'Alfred the Great and the First British Jury.' His diary, a small portrait of his wife, his prayer-book, his watch, and letters to his wife and children, were all orderly arranged; but, for the rest—a pistol and a razor had ended his earthly troubles.

MARRIAGE ARRANGEMENTS IN OLD TIMES.

Such of our ancestors as possessed rank and wealth had a very arbitrary mode of arranging the alliances of their children. So late as the reign of James I., the disposal of a young orphan heiress lay with the monarch on the throne, by whom it was generally deputed to some favourite possessed of sons to whom the marriage might be important. The union of the ward to a son of that person, or some other person chosen by him, was then inevitable. No one, hardly even the young persons themselves, appear even to have entertained a doubt that this arrangement was all in the natural and legitimate course of things. The subordination of the young in all respects to their seniors was, indeed, one of the most remarkable peculiarities of social life two or three centuries ago.

There is preserved the agreement entered into on the 4th April 1528, between Sir William Sturton, son and heir apparent of Edward Lord Sturton, on the one part, and Walter Hungerford, squire of the body to the king, on the other, for the disposal of Charles, the eldest son of the former, in marriage to one of the three daughters of the latter, Elinor, Mary, or Anne, whichever *Sir William* might choose. It was at the same time agreed that Andrew, the second son of Sir William Sturton, should marry another of the young ladies. The terms under which the covenant was made give a striking idea of the absolute rigour with which it would be carried out. Hungerford was to have the *custody of the body* of Charles Sturton, or, in case of his death, of Andrew Sturton, in order to make sure of at least one marriage being effected. On the other hand, the father of the three girls undertook to pay Sir William eight hundred pounds, two hundred 'within twelve days of the deliverance of the said Charles,' and the remainder at other specified times.

The covenant included an arrangement for the return of the money in case the young gentleman should refuse the marriage, or if by the previous decease of Sir William the wardship of his sons should fall to the crown.*

JOE HAINES.

Funny Joe Haines, a celebrated comedian, who flourished in the latter part of the seventeenth century, was the first to introduce the absurd, but mirth-provoking performance of delivering a speech from the back of an ass on the stage. Shuter, Liston, Wilkinson, and a host of minor celebrities have since adopted the same method of raising the laughter of an audience. When a boy, at a school in St Martin's Lane, the abilities and ready wit of Haines induced some gentlemen to send him to pursue his studies at Oxford, where he became acquainted with Sir Joseph Wilkinson; who, when appointed Secretary of State, made Joe his Latin secretary. But the wit, being incapable of keeping state secrets, soon lost this honourable situation, finding a more congenial position as one of the king's company of actors at Drury Lane. Here he was in his true element, the excellence of his acting and brilliancy of wit having the effect, in that dissolute era, of causing his society to be eagerly sought for by both men and women of high rank. The manners of the period are well indicated by the fact that a noble Duke, when going as an ambassador to France, took Haines with him as an agreeable companion. In Paris, the actor assumed a new character. Dubbing himself Count Haines, he commenced the career of sharper and swindler, which afterwards gave him a high position in the extraordinary work of Theophilus Lucas, entitled *The Lives of the Gamblers*.

When he could no longer remain in France, Haines made his escape to London, and returned to the stage. Subsequently he went to Rome, in the suite of Lord Castlemaine, when that nobleman was sent by James II. on an embassy to the Pope. Here Haines professed to be a Roman Catholic, but, on his return to England, after the Revolution, he made a public recantation — sufficiently public, it must be admitted, since it was read on the stage. Nor did the indecorum of this exhibition prevent it from being one of the most popular performances of the day.

Haines was the author of but one play, entitled *The Fatal Mistake*, but he wrote many witty prologues and epilogues, and a *Satire against Brandy* has been ascribed to him. Numberless anecdotes are related of his practical jokes,

* Antiquarian Repertory, by Grose and Astle, 1809, vol. iv., p. 669.

JOE HAINES ADDRESSING A THEATRICAL AUDIENCE FROM THE BACK OF AN ASS.

swindling tricks, and comical adventures, but the only one fit to appear here is the following adventure with two bailiffs and a bishop.

One day Joe was arrested by two bailiffs for a debt of twenty pounds, just as the Bishop of Ely was riding by in his carriage. Quoth Joe to the bailiffs, 'Gentlemen, here is my cousin the Bishop of Ely; let me but speak a word to him, and he will pay the debt and costs.' The bishop ordered his carriage to stop, whilst Joe close to his ear whispered: 'My lord, here are a couple of poor waverers, who have such terrible scruples of conscience that I fear they will hang themselves!' 'Very well,' replied the bishop. So, calling to the bailiffs, he said—'You two men, come to me to-morrow, and I will satisfy you.' The bailiffs bowed, and went their way. Joe (tickled in the midriff, and hugging himself with his device) went his way too. In the morning the bailiffs repaired to the bishop's house. 'Well, my good men,' said his reverence, 'what are your scruples of conscience?'—'Scruples!' replied the bailiffs, 'we have no scruples; we are bailiffs, my lord, who yesterday arrested your cousin, Joe Haines, for twenty pounds. Your lordship promised to *satisfy* us to-day, and we hope you will be as good as your word.' The bishop, to prevent any further scandal to his name, immediately paid the debt and costs.

Haines's choice companion was a brother actor, named Mat Coppinger, a man of considerable abilities. Coppinger wrote a volume of *Poems, Songs, and Love Verses*, which he dedicated to the Duchess of Portsmouth; and all that can be said of them is, that they are exactly what might have been written by such a man to such a woman. Coppinger one night, after personating a mock judge in the theatre, took the road in the character of a real highwayman. The consequence was that, a few days afterwards, the unfortunate Mat found himself before a real judge, receiving the terrible sentence of death. The town was filled with indignation and dismay; for a paltry 'watch, and seven pounds in money,' the amusing Coppinger was to lose his precious life! Petitions poured in from every quarter; expressing much the same sentiments as those of ancient Pistol:

'Let gallows gape for dog, let man go free,
And let not hemp his windpipe suffocate.'

But in vain: a stave of an old song tells us that

'Mat didn't go dead, like a sluggard in bed,
But boldly in his shoes, died of a noose
That he found under Tyburn Tree.'

Haines died in 1701, at the age of fifty-three. As with all the notorieties of the time, his decease was commemorated by poetical honours, as is thus testified by—

An Elegy on the Death of Mr. Joseph Haines, the late Famous Actor, in the King's Play-house.

'Lament, ye beaux and players, every one,
The only champion of your cause is gone;
The stars are surly, and the fates unkind,
Joe Haines is dead, and left his ass behind.
Ah! cruel fate, our patience thus to try,
Must Haines depart, while asses multiply?

If nothing but a player down should go,
There's choice enough, without great Haines the beau!

In potent glasses, when the wine was clear,
His very looks declared his mind was there.
Awful majestic on the stage at night,
To play, not work, was all his chief delight;
Instead of danger, and of hateful bullets,
He liked roast beef and goose, and harmless pullets!

Here lies the famous Actor, Joseph Haines,
Who while alive in playing took great pains,
Performing all his acts with curious art,
'Till Death appeared, and smote him with his dart.'

LORD KENYON ON FORESTALLERS.

Considering how completely the British public is now emancipated from the illusion that there is any harm to them from what was called forestalling and regrating, it sounds strange that a judge so recent as Chief Justice Kenyon presided at various trials where punishment was inflicted for this imaginary offence. In charging a jury in the case of one Rusby, who was indicted for purchasing a quantity of oats and selling them at a profit on the same day, his lordship adverted with scorn to the doctrines of Adam Smith. 'I wish,' said he, 'Dr Smith had lived to hear the evidence of to-day. If he had been told that cattle and corn were brought to market, and there bought by a man whose purse happened to be longer than his neighbour's, so that the poor man who walks the streets and earns his daily bread by his daily labour could get none but through his hands, and at the price he chooses to demand; that it had been raised 3d., 6d., 9d., 1s., 2s., and more a quarter on the same day, would he have said there is no danger from such an offence?' On a verdict of guilty being pronounced, the judge added: 'Gentlemen, you have done your duty, and conferred a lasting obligation on your country.' Sydney Smith remarks that 'this absurdity of attributing the high price of corn to combinations of farmers and the dealings of middlemen was the common nonsense talked in the days of my youth. I remember when ten judges out of twelve laid down this doctrine in their charges to the various grand juries on their circuits.'

ONLY ONE.

Mr W. S. Gilpin, a nephew of the well-known author of various works on the picturesque, practised the business of a landscape gardener at Painesfield, East Sheen, till his death at an advanced age on the 4th April, 1843. 'When, in the course of a conversation upon the crowded state of all professions, it was casually remarked to Mr Gilpin that his profession at least was not numerous, he quietly remarked, "No, there is but *one*." He afterwards admitted that there was one Pontet, a gardener, in Derbyshire.'—*Gentleman's Magazine*, August 1843.

James Hogg, the Ettrick Shepherd, used to relate with much humorous relish a similar anecdote of the author of *The Excursion*. At a meeting in the house of Professor Wilson, on Windermere, in the autumn of 1817, where Wordsworth, Hogg, and several other poets were present, the evening became distinguished by a remarkably brilliant bow of the nature of the aurora borealis across the heavens. The party came out to see it, and looked on for some time in admiration. Hogg remarked, 'It is a triumphal arch got up to celebrate this meeting of the poets.' He afterwards heard the future poet-laureate whispering unconsciously to himself—'Poets—poets! what does the fellow mean? Where are they?' In his conception there was but one poet present.*

* The writer oftener than once heard James Hogg relate this story.

APRIL 5.

St Tigernach, of Ireland, 550. St Becan, of Ireland, abbot, 6th century. St Gerald, abbot of Seauve, near Bordeaux, 1095. St Vincent Ferrer, of Spain, confessor, 1419.

Born.—Thomas Hobbes, philosophical writer, 1588, *Malmesbury*; Dr Edmund Calamy, 1671, *Aldermanbury*; Catherine I. of Russia, 1689, *Ringens*.

Died.—John Stow (history and antiquities of London), 1605, *London*; William Lord Brounker, mathematician, P.R.S., 1684, *St Catherine's*; Rev. William Derham, D.D., scientific writer, 1735, *Upminster*; Sir Thomas Hanmer, Speaker of the House of Commons in the reign of Queen Anne, editor of Shakspeare, 1746; Danton, guillotined, 1794; Rev. William Gilpin, writer on scenery, 1804, *Boldre, Hampshire*; Robert Raikes, first institutor of Sunday-schools, 1811, *Gloucester*.

JOHN STOW.

One of the most remarkable and precious preservations of the past,—a photograph, as it were, of old London,—is the well-known *Survey* of the venerable John Stow. From it we acquire a knowledge not of the topography alone, but also of the manners, habits, and customs of London and its inhabitants in the palmy days when the Lord Mayor was little less than a monarch, and Shakspeare was holding horses at the Globe Theatre on Bankside. In fact, we possess from Stow's indefatigable labours a more intimate knowledge of Queen Elizabeth's capital than we do of the same city at any other period, or, indeed, of any other city at any age of the world. Nor is the *Survey* the mere dry bones of antiquarian research. A distinguished critic has designated it as the most picturesque of narratives. The very minuteness that gave an air of ridicule to the work, causing Fuller to describe Stow as 'such a smell-feast that he cannot pass by Guildhall but his pen must taste of the good cheer therein,' renders the *Survey* all the more valuable to us now. For instance, after giving a complete account of the abbey of St Clair, he says:—

'Near adjoining to this abbey, on the south side thereof, was some time a farm belonging to the said nunnery, at which farm I myself, in my youth, have fetched many a halfpennyworth of milk, and never had less than three ale pints for a halfpenny in the summer, nor less than one ale quart for a halfpenny in the winter, always hot from the kine, as the same was milked and strained. One Trolop, and afterwards Goodman, were farmers there, and had thirty or forty kine to the pail. Goodman's son, being heir to his father's purchase, let out the ground first for the grazing of horses, and then for garden plots, and lived like a gentleman thereby.'

Here we have a part of his own autobiography, an account of the price and quality of the milk then sold in London, and the source from which the now crowded district of Goodman's Fields derived its name.

Stow was born in the parish of St. Michael's, Cornhill, and brought up to his father's business of a tailor. It is rather a singular circumstance

that Speed and Stow, the two most distinguished historians of the sixteenth century, were both tailors, which led Sir Henry Spelman to say, 'We are beholden to Mr Speed and Mr Stow for *stitching* up for us our English history.'

To unceasing industry, Stow added an unquenchable love of truth. In his earliest writings, he announced his views of historical composition. No amount of fine phrases or elegant composition, he considered, could atone for the slightest deviation from fact. 'In history,' he said, 'the chief thing that is to be desired is truth; and adds this rhythmical caution to the 'phrase-makers':

'Of smooth and flattering speech,
Remember to take heed,
For truth in plain words may be told,
But craft a lie doth need.'

A life devoted to the study of history affords the biographer but few incidents. Stow was ever engaged in travelling on foot from place to place, in search of materials; or employed in transcribing, translating, abstracting, and compiling the materials so collected. Nor was the painful, patient labourer allowed to live in peace. The vulgar scoffed at him, as the 'lazy prick-louse,' who would not work at his honest trade; and the higher powers, fearing that his researches in antiquity might injure the Reformed religion, threw him into prison, and ransacked his humble dwelling. From the report of those enforcers of the law, we have a pleasant peep at his library, which consisted of 'great collections of his own for his English Chronicles, also a great sort of old books printed; some fabulous, as *Sir Gregory Triamour, &c.*, and a great parcel of old manuscript chronicles in parchment and paper; besides miscellaneous tracts touching physic, surgery, herbs, and medical receipts; and also fantastical popish books printed in old time, and others written in Old English on parchment.'

Such a man could never be expected to become wealthy; accordingly we find Stow in his old age struggling with poverty. Yet his good-humour never forsook him. Being troubled with pains in his feet, he observed that his afflictions lay in the parts he had formerly made so much use of. And this elucidates a passage in the Hawthornden MSS. Ben Jonson, conversing with Drummond respecting Stow, said, 'He and I walking alone, he asked two cripples what they would have to take them to their order.'

At last, when eighty years of age, Stow received a state acknowledgment of his public services. He petitioned James I. for a licence to beg, as he himself expresses in the petition—

'A recompense for his (the petitioner's) labour and travel of forty-five years, in setting forth the *Chronicles of England*, and eight years taken up in the *Survey* of the cities of London and Westminster, towards his relief in his old age: having left his former means of living, and only employing himself for the service and good of his country.'

The prayer was granted by Letters Patent under the Great Seal, reciting that—

'Whereas our loving subject, John Stow (a very aged and worthy member of our city of

London), this five-and-forty years hath to his great charge, and with neglect of his ordinary means of maintenance (for the general good, as well of posterity as of the present age), compiled and published divers necessary books and chronicles; and therefore we, in recompense of these his painful labours, and for the encouragement to the like, have, in our Royal inclination, been pleased to grant our Letters Patent, under our great Seal of England, thereby authorizing him, the said John Stow, to collect among our loving subjects their voluntary contributions and kind gratuities.'

These Letters were granted for one year, but produced so little, that they were extended for another twelve months, one entire parish in the city of London giving the munificent sum of seven-and-sixpence. Such was the public remuneration of the man who had been useful to his country but not to himself—the reward of the incessant labours of a well-spent life—of, as Stow himself said, many a weary day's travel, and cold winter night's study.

His person and character are thus described by his literary executor, Edmond Howes:—

'He was tall of stature, lean of body and face, his eyes small and crystalline, of a pleasant and cheerful countenance; his sight and memory very good; very sober, mild, and courteous to any that required his instructions; and retained the true use of all his senses unto the day of his death, being of an excellent memory. He always protested never to have written anything, either for malice, fear, or favour, nor to seek his own

STOW'S MONUMENT.

particular gain or vainglory; and that his only pains and care was to write the truth. He could never ride, but travelled on foot unto divers

cathedral churches, and other chief places of the land to search records. He was very careless of scoffers, backbiters, and detractors. He lived peacefully and died at fourscore years of age, and was buried in his parish church of St Andrew's Undershaft; whose mural monument near to his grave was there set up at the charges of Elizabeth, his wife.'

It is a curious circumstance—one which, in some countries, would be termed a miracle—that the Great Fire in 1666 spared the monument of Stow: the man from whose records alone we know what London was previous to the devouring conflagration. Independent of its interest, it is a remarkable curiosity, from its being made of terra cotta, coloured to resemble life; very few sepulchral memorials of that kind being now in existence. It represents the venerable antiquary in a sitting posture, poring over one of the three hundred and thirty-nine manuscripts from which he extracted and condensed his imperishable *Annals*.

WILTSHIRE SHEPHERDS.

John Aubrey was a native of Wiltshire, and therefore proud of its downs, which, in his odd, quaint way, he tells us, 'are the most spacious plaines in Europe, and the greatest remaines that I can hear of the smooth primitive world when it lay all under water. The turfe is of a short sweet grasse, good for the sheep. About Wilton and Chalke, the downes are intermixt with boscages, that nothing can be more pleasant, and in the summer time doe excell Arcadia in verdant and rich turfe.' Then, pursuing the image, he says, 'The innocent lives of the shepherds here doe give us a resemblance of the Golden Age. Jacob and Esau were shepherds; and Amos, one of the royall family, asserts the same of himself, for he was among the shepherds of Tecua (Tekoa) following that employment. The like, by God's own appointment, prepared Moses for a scepter, as Philo intimates in his life, when he tells us that a shepherd's art is a suitable preparation to a kingdom. The same he mentions in his Life of Joseph, affirming that the care a shepherd has over his cattle very much resembles that which a king hath over his subjects. The same St Basil, in his Homily de St Mamene, Martyre, has, concerning David, who was taken from following the ewes great with young ones to feed Israel. The Romans, the worthiest and greatest nation in the world, sprang from shepherds. The augury of the twelve vultures placed a sceptre in Romulus's hand, which held a crook before; and as Ovid says,

"His own small flock each senator did keep."

Lucretius mentions an extraordinary happiness, and as it were divinity, in a shepherd's life:—

"Thro' shepherds' care, and their divine retreats."

And to speake from the very bottome of my heart, not to mention the integrity and innocence of shepherds, upon which so many have insisted and copiously declaimed, methinks he is much more happy in a wood that at ease contemplates the universe as his own, and in it the sunn and stars, the pleasing meadows, shades, groves, green

banks, stately trees, flowing springs, and the wanton windings of a river, fit objects for quiet innocence, than he that with fire and sword disturbs the world, and measures his possessions by the waste that lies about him.'

Then the old Wiltshire man tells us how the plains abound with hares, fallow deer, partridges, and bustards; the fallow deer and bustards have disappeared. In this delightful part of the country is the Arcadia about Wilton which 'did no doubt conduce to the heightening of Sir Philip Sydney's phansie. He lived much in these parts, and the most masterly touches of his pastoralls he wrote here upon the spot where they were conceived. 'Twas about these purlicious that the Muses were wont to appeare to Sir Philip Sydney, and where he wrote down their dictates in his table-book, though on horseback,' and some old relations of Aubrey's remembered to have seen Sir Philip do this.

Aubrey then proceeds to trace many of the shepherds' customs of his district to the Romans, from whom the Britons received their knowledge of agriculture. The festivals at sheep-shearings he derives from the Parilia. In Aubrey's time, the Wiltshire sheepmasters gave no wages to their shepherds, but they had the keeping of so many sheep *pro ratâ*, 'soe that the shepherd's lambs doe never miscarry;' and Plautus gives a hint of this custom amongst the Romans in his time. In Scotland, it is still the custom to pay shepherds partly in this manner. The Wiltshire antiquary goes so far as to say that the habit of his time was that of the Roman, or Arcadian shepherds, as delineated by Drayton, in his *Polyolbion*, i.e., a long white cloak with a very deep cape, which comes half way down their backs, made of the locks of the sheep. There was a sheep-crook, as we read of in Virgil and Theocritus; a sling, a scrip, their tar box, a pipe or flute, and their dog. But since 1671 (when Aubrey wrote) they are grown so luxurious as to neglect their ancient warm and useful fashion, and go *à la mode*. T. Randolph, in an Eclogue on the Cotswold Hill games, says:

'What clod pates, Thenot, are our British swaines,
How lubber-like they loll upon the plaines!'

And, as additional evidence of their luxurious taste, Aubrey remembered that before the Civil War many of them made straw hats, which was then left off; 'and the shepherdesses of late yeares (1680) doe begin to worke point, whereas before they did only knitt coarse stockings.' Evelyn notes that, instead of the slings, the shepherds had, in his time, a hollow iron, or piece of horn not unlike a shooing horne, fastened to the other end of the crosier, by which they took up stones, and kept their flocks in order.

It is curious to find that the shepherds and other villagers, in Aubrey's time, took part in welcoming any distinguished visitors to their country by rustic music and pastoral singing. We read of the minister of Bishop's Cannings, an ingenious man and excellent musician, making several of his parishioners good musicians, both vocal and instrumental; and they sung psalms in concert with the organ in the parish church. When King James I. visited Sir Edward Bayn-

ton, at Bromham, the minister entertained his Majesty, at the Bush, in Cotefield, with bucolics of his own making and composing, of four parts; which were sung by his parishioners, who wore frocks and whips like carters. Whilst his Majesty was thus diverted, the eight bells rang merrily, and the organ was played. The minister afterwards entertained the king with a football match of his own parishioners; who, Aubrey tells us, 'would, in those days, have challenged all England for musique, football, and ringing.' For the above loyal reception King James made the minister of Bishop's Cannings one of his chaplains in ordinary.

When Anne, Queen of James I., returned from Bath, the worthy minister received her at Shepherd-shard, with a pastoral performed by himself and his parishioners in shepherds' weeds. A copy of this song was printed, with an emblematic frontispiece of goats, pipes, sheep-hooks, cornucopias, &c. The song was set for four voices, and so pleased the queen, that she liberally rewarded the singers.

APRIL 6.

St Sixtus, pope, martyr, 2nd century. Hundred and twenty martyrs of Hadiab in Persia, 345. St Celestine, pope, 432. St Prudentius, bishop of Troyes, 861. St Celsus, archbishop of Armagh, 1129. St William, abbot of Eskille, confessor, 1203.

Born.—Jean Baptiste Rousseau, French poet, 1669, Paris; James Mill, historian and political economist, 1773.

Died.—Richard I. (*Cœur-de-Lion*), King of England, 1199, Fontevraud; Laura de Noves, the subject of Petrarch's amatory poetry, 1348, Avignon; Sanzio Raffaele, painter, 1520; Albert Dürer, artist, 1528, Nuremberg; Sir Francis Walsingham, statesman, 1590, London; David Blondel, French historical writer, 1655, Amsterdam; Dr Richard Busby, teacher, 1695, Westminster; William Melmoth, the elder, author of *The Great Importance of a Religious Life*, 1743, Lincoln's Inn, London; Sir William Hamilton, British ambassador at Naples (work on Vesuvius), 1803.

RICHARD CŒUR-DE-LION.

The outlines of the history of Richard I. are tolerably well known to all readers. After a very turbulent youth during the reign of his father, Henry II., Richard succeeded to the throne of England on the 6th of July 1189, though he was only crowned on Sunday, the 3rd of September following, when his reign is considered as beginning. On the 11th of December he started for the Holy Land, and spent nearly two years on the way, engaged in a variety of adventures in the Mediterranean. At length he joined the King of France in Syria, and they took the city of Acre on the 12th of July 1192; but the two kings soon quarrelled, and Philip returned home, while Richard remained, performing marvellous exploits against the Saracens, until the latter end of September, when the King of England made a truce with Saladin, and embarked on his return to his own dominions. He was wrecked near Aquileia, and fell into the hands of his

enemy, the Duke of Austria, who sent him prisoner to the Emperor; and the latter, as we all know, kept him in close confinement until the beginning of February 1194, when Richard's subjects paid an immense ransom for his release. The remainder of his reign was occupied chiefly in profitless wars with France; and at last, on the 6th of April 1199, this brilliant hero perished in a paltry squabble with a continental feudatory, who, having found a treasure in his own lands, refused to give more than half of it to his suzerain, who claimed the whole.

Richard Cœur-de-Lion had spent no more than a few months in his own kingdom, and he had never been anything but a burthen to his subjects; yet, for some cause or other, perhaps partly from comparison with his still more worthless brother John, the strange brilliance of his exploits, and particularly his efforts to wrest the Holy Land from the infidels, his tyranny and vices have been thrown into oblivion, and he takes the place of an imaginary hero rather than of an ordinary king. He furnishes us with the example of a king whose whole history actually became a romance within half a century after his death. The romance of Richard Cœur-de-Lion is supposed to have been composed in French, or Anglo-Norman, towards the middle of the thirteenth century, and a version of it in English verse was composed about the end of the same century, or at the beginning of the fourteenth. From this time we frequently find, even in the sober chroniclers, the incidents of the romance confounded with those of history.

This romance furnishes us with a curious instance of the ease with which history becomes perverted in popular tradition. Richard is here a mythic personage, even supernatural by his mother's side; for his father, King Henry, is represented as marrying a sort of elf-woman, daughter of the King of Antioch (of course an infidel prince), by whom he has three children, named Richard, John, and Topias, the latter a daughter. As was usual with such beings, the lady was unable to remain at the performance of Christian worship; and one day, when she was obliged to be present at the sacrament, she fled away through the roof of the church, taking with her her youngest son and her daughter, but John was dropped, and broke his thigh by the fall. Richard, the eldest son, was no sooner crowned, than he proclaimed a tournament, where he jousted with his knights in three disguises, in order to discover who was the most worthy, and he selected two, named Sir Thomas Multon and Sir Fulk Doyly, as his companions, and engaged them to go with him in the guise of palmers to see the Holy Land, preparatory to his intended crusade. After wandering through the principal countries of the East, they returned overland, still in their disguise, and one day, on their way, they put up at a tavern, and cooked themselves a goose for their dinner. When they had dined, and 'had well drunken,' which appears to have been their habit, a minstrel presented himself, and offered them minstrelsy. Richard, as we know, was himself a poet and loved minstrelsy; but on this occasion, perhaps through the effect of the drinking, the king treated the minstrel with

rudeness, and turned him away. The latter was an Englishman, and knew King Richard and his two knights, and, in revenge, he went to the King of Almayn (Germany), who is here named Modard, and informed him who the three strangers were. Modard immediately seized them, and threw them into a loathsome prison. The son of the King of Almayn, who was an insolent fellow, and thought himself the strongest man in the world, insulted the King of England, and challenged him to fight with fists, and Richard struck him down dead with the first blow. The king, enraged at the loss of his son and the heir to his kingdom, condemned his prisoner to be put to death, but Richard was saved by the king's daughter, the Princess Margery, with whom he formed an illicit intercourse. King Modard discovered by accident the disgrace done to him in the person of his daughter, and was more firm than ever in his resolution to put the King of England to death; and a powerful and ferocious lion which the king possessed was chosen as the executioner, was kept three days and nights without food to render him more savage, and was then turned into the chamber where Richard was confined. Richard fearlessly encountered the lion, thrust his arm down his throat, tore out his heart, and killed him on the spot. Not content with this exploit, he took the lion's heart into the hall where King Modard and his courtiers were seated at table, and dipping it in salt, ate it raw, 'without bread!' Modard, in astonishment, gave him the nickname of Richard Cœur-de-Lion, or Richard Lion's-heart:

'I wis, as I undyrstande can,
This is a devyl, and no man,
That has my stronge lyoun slawe,
The harte out of hys body drawe,
And has it eeten with good wylle!
He may be callyd, be ryght skylle,
King icyrstenyd off most renoun,
Stronge Rychard Coer-de-Lyoun.'

Modard now voluntarily allows Richard to be ransomed, and the latter returns to England, where he immediately prepares for the crusade, which occupies the greater part of the romance, in the course of which Richard not only kills innumerable Saracens with his own hand, but he cooks, eats, and relishes them.

Such is a very brief outline of the earlier part of the romantic history of Richard Cœur-de-Lion, which was extremely popular through the middle ages of England, and exercised a wide influence on the popular notions of history. We know well that Richard's nickname, if we may so call it, of Cœur-de-Lion, was intended merely to express his characteristic bravery, and that it meant simply the Lion-hearted; but the old legendary explanation continued to be received even as late as the time of Shakspeare, and still more recently. In the second act of *King John*, the dauphin Louis speaks of—

'Richard, that robb'd the lion of his heart;'

and the bastard Faulconbridge describes King Richard as one—

'Against whose fury and unmatched force
The aweless lion could not wage the fight,
Nor keep his princely heart from Richard's hand.

He that perforce robs lions of their hearts
May easily win a woman's.

King John, Act i. Sc. 1.

But perhaps of all the romantic incidents of Richard's life, the one which has remained most strongly impressed upon people's minds, is that of the discovery of his place of confinement by his favourite minstrel Blondel. The story has been very differently told, and has been altogether discredited by some, while other historians have looked upon it as authentic. We are enabled to give, from a manuscript of the thirteenth century, in the British Museum (MSS. Addit. No. 7103), the earliest version of this story which has yet been published. We translate from the old French :

'We will now,' this narrative proceeds, 'go on to tell you more of King Richard, whom the Duke of Austria held in his prison; and nobody knew what had become of him, except the duke and his counsellors. Now it happened that the king had bred up from his childhood a minstrel, who was named Blondel; and it came into his mind that he would seek his lord through all lands until he obtained intelligence of him. Accordingly, he went on his way, and wandered so long through strange countries that he had employed full a year and a-half, and still could obtain no satisfactory news of the king. And he continued his search so long that, as chance would have it, he entered Austria, and went straight to the castle where the king was in prison, and he took his lodgings at the house of a widow woman. And he asked her whose castle that was, which was so strong and fair, and well-placed. His hostess replied that it belonged to the Duke of Austria. "Ah! fair hostess," said Blondel, "tell me now, for love, is there no prisoner within this castle?" "Truly," said the good dame, "yes, there has been one this four years, but we cannot by any means know who he is. And I can tell you for truth that they keep him close and watchfully; and we firmly believe that he is of gentle blood and a great lord." And when the good Blondel heard these words, he was marvellously glad; and it seemed to him in his heart that he had found what he sought; but he was careful not to let his hostess perceive his joy. That night he was much at his ease, and slept till day; and when he heard the watch proclaim the day with his horn, he rose and went straight to the church to pray God to help him. And then he returned to the castle, and addressed himself to the castellan within, and told him that he was a minstrel, and would very gladly stay with him if he would. The castellan was a young and joyous knight, and said that he would retain him willingly. Then was Blondel very joyful, and went and fetched his viol and his instruments, and served the castellan so long that he was a great favourite with him, and was much in favour in the castle and household. Thus he remained at the castle all the winter, but without getting to know who the prisoner was. And it happened that he went one day at Easter all alone in the garden which was near the tower, and looked about, and thought if by any accident he might see the prison. And while he was in this thought, the king looked

through a loophole, and saw Blondel, who had been his minstrel, and considered how he should make himself known to him. And he bethought himself of a song which they had made between them two, and which nobody in that country knew except them, and he began to sing the first verse loud and clear, for he sang right well. And when Blondel heard it, he then knew for certain that it was his lord; and he had in his heart the greatest joy that ever he had in his life. And immediately he left the garden, and went to his chamber where he lay, and took his viol and began to play a note; and in playing he rejoiced for his lord whom he had found. Thus Blondel remained from that time till Pentecost, and kept his secret so well that nobody suspected him. And then came Blondel to the castellan and said to him: "For God's sake! dear sir, if it pleased you, I would willingly return to my country, for it is a long time since I have had any intelligence thence." "Blondel, dear brother, that you will not do, if you will believe me; but, continue to dwell here, and I will do you much good." "In faith," said Blondel, "I will remain on no terms." When the castellan saw that he could not retain him, he gave him leave with great reluctance. So Blondel went his way, and journeyed till he came to England, and told King Richard's friends and barons that he had found his lord the king, and told them where he was.'

Richard was slain by a *quarrel* from a cross-bow, shot by Bertram de Gordon from the castle of Chalun, in Aquitaine, which the king was besieging in order to put down a rebellion. He 'was buried at Fontevrault, at his father's feet, whom he confessed he had betrayed. His heart was buried in Rouen, in testimony of the love he had ever borne unto that city, for the steadfast love he always found in the citizens thereof, and his bowels at the foresaid Chalun.'—*Stow*.

The visitor of the cathedral of Rouen sees a recumbent full-length statue of the lion-hearted King. An English gentleman informs us, in the work quoted below, that, on his visiting the Museum of Antiquities at Rouen, in 1857, he 'observed a small portion of dust, having a label attached, marking it to be the dust of the heart of Richard Cœur-de-Lion from the cathedral.*

That lion heart now transformed into 'a little dust,' exposed in a paper with a label, in a Museum, for the gratification of the curious!

The case, however, is not unexampled. In the last century, a stone coffin was dug up in front of the mansion-house of Eccles, in Berwickshire. 'As it had been buried above two hundred years, every part of the body was reduced to ashes. As the inside of the stone was pretty smooth, and the whole portrait of the person visible (though in ashes), Sir John Paterson had the curiosity to collect the whole, and (wonderful to tell!) it did not exceed in weight one ounce and a-half.†

LAURA DE NOVES.

This far-famed woman was long held to be nothing more than an imaginary personage, until

* Notes and Queries, March 30, 1861.

† Statistical Account of Scotland, 1794, vol. xi., p. 239.

satisfactory information established the facts of her actual history. The angel upon earth, clothed in ideal grace, and only fit to live in the seventh heaven, of whom we catch such bright glimpses in Petrarch's poems, was imaginary enough; but there was a Laura of real flesh and blood.

When Petrarch first saw her he was twenty-two, and she not yet twenty, though already married; and from that minute to her death, upwards of twenty years after, he bestowed on her a poet's devotion, making her the theme of that wonderful series of sonnets which constitutes the bulk of his poetical writings; raving of her beauty, her gentleness, her many admirable qualities, and yet so controlled by her prudence that the history of Laura de Noves is as pure as it is interesting.

It fully appears that her life could not have been one of the happiest. Though it must have bred a proud delight to be the subject of such verse and the talk of all Italy, the relation was one full to her of embarrassment, and most probably even sorrow. The sonnets of Petrarch added jealousy to her lord's natural moroseness; and even without any such pretext, there is little ground for thinking that he cared much for her. For when, after a life entirely faithful to her marriage vow, as there is every reason to believe, after putting up with his unkindness more than twenty years, and bearing him ten children, she died of the plague, this husband married again within seven months of her death.

In his manuscript copy of Virgil—a valuable relic, afterwards removed from Italy by the French—Petrarch is discovered to have made the following marginal note: 'The sainted Laura, illustrious for her virtues, and for a long time celebrated in my verses, was first seen of me in my early youth on the 6th of April 1327, in the church of St. Clara, at Avignon, at the first hour of the day; and in the same city, in the same month of April, on the same sixth day, and at the same hour, in the year 1348, this light disappeared from our day, when I was then by chance at Verona, ignorant, alas! of my calamity. The sad news reached me at Parma, by letter from my friend Ludovico, on the morning of the 19th of May. This most chaste and beautiful lady was buried on the same day of her death, after vespers, in the church of the Cordeliers. Her soul, as Seneca says of Africanus, returned, I feel most assured, to heaven, whence it came. These words, in bitter remembrance of the event, it seemed good to me to write, with a sort of melancholy pleasure, in this place' (that is, in the Virgil) 'especially, which often comes under my eyes, that nothing hereafter in this life may seem to me desirable, and that I may be warned by continual sight of these words and remembrance of so swiftly-fleeting life,—by this strongest cord broken,—that it is time to flee from Babylon, which, God's grace preventing, will be easy to me, when I think boldly and manfully of the fruitless cares of the past, the vain hopes, and unexpected events.'

Petrarch contrived to survive the loss of Laura twenty-six years; yet his was a strange passion. It is hard to decide how much he really feels, or

does not feel, in his enamoured laments. A poet will write according to the habit of his time; and the fact that Petrarch has clothed his sorrows in a fanciful garb of cold conceit and whimsical expression, does not disprove the existence of real feeling underlying them. Although it may have been kept alive by artificial means; though there may have been pleasure mixed with the bitterness—the pleasure of making verses, of winning fame—there must have been a solid substratum of real passion for this one theme to have engrossed a long life. We may quote a fragment of Petrarch's correspondence as an interesting comment on these remarks: 'You are befooling us all,' writes the bishop of Lombes from Rome to Avignon, where Laura resided, and from whence, now nine years after his first meeting with her, the poet still continued to pour forth his sonnets, 'and it is wonderful that at so tender age' (his age was thirty-one) 'you can deceive the world with so much art and success. . . . Your Laura is a phantom created by your imagination for the exercise of your poetry. Your verse, your love, your sighs, are all a fiction; or, if there is anything real in your passion, it is not for the lady Laura, but for the *lauriel*, that is, the crown of poets.' To which Petrarch answers: 'As to Laura, would to heaven she were only an imaginary personage, and my passion for her only a pastime! Alas! it is a madness, which it would be difficult and painful to feign for any length of time, and what an extravagance it would be to affect such a passion! . . . How often have you yourself been witness of *my paleness and sufferings*. I know very well that you speak only in irony. . . .'

The reader must believe this passion real, however reluctantly. Perhaps he would like a specimen of the poems themselves.

First, a piece of absurd conceit, written when Laura was in danger of death, a specimen of the worst:

How Laura, if she dies, will certainly enjoy an exalted position in Heaven.

'This lovely spirit, if ordained to leave
Its mortal tenement before its time,
Heaven's fairest habitation shall receive,
And welcome her to breathe its sweetest clime.
If she establish her abode between
Mars and the planet-star of beauty's queen,
The sun will be obscured, so dense a cloud
Of spirits from adjacent stars will crowd
To gaze upon her beauty infinite.
Say that she fixes on a lower sphere,
Beneath the glorious sun, her beauty soon
Will dim the splendour of inferior stars—
Of Mars, of Venus, Mercury, and the Moon.
She'll choose not Mars, but higher place than Mars;
She will eclipse all planetary light,
And Jupiter himself will seem less bright.'

Now a specimen extremely beautiful, of the best:

Depicts the heavenly beauty of his lady, and vows to love her always.

'Time was, her tresses, by the breathing air,
Were wreathed to many a ringlet golden bright.
Time was, her eyes diffused unmeasured light,
Tho' now their lovely beams are waxing rare;

Her face methought that in its beauty showed
Compassion, her angelic shape and walk,
Her voice that seemed with heaven's own speech to
talk.

At these, what wonder that my bosom glowed !
A living sun she seemed,—a spirit of heaven !
Those charms decline ; but does my passion ? no !
I love not less—the slackening of the bow
Assuages not the wound its shaft has given.'

The above are Thomas Campbell's translations.

ADVENTURES OF THE KOH-I-NOOR.

Large diamonds, like first-class pictures, have a European reputation, because they are few in number, are not susceptible of reproduction, are everywhere prized, and can only be bought by the wealthy. Only six *very* large diamonds (called *paragons*) are known in the world. The standard here in view is a minimum weight of one hundred carats (a carat being about $\frac{3}{16}$ th Troy grains, or 100 carats equal to $\frac{2}{3}$ ds of a Troy ounce). The 'Koh-i-noor,' in its present perfected state, weighs 102 carats; the 'Star of the South,' 125; the Regent, or Pitt diamond, 137; the great Austrian diamond, 139; the Orloff, or great Russian diamond, 193; while the largest known, in possession of the Rajah of Malan, in Borneo, weighs 367 carats, but this in the uncut state.

A romantic history is attached to every one of these jewels, owing chiefly to the eagerness of wealthy persons to gain possession of them. The Rajah of Malan, it is said, was once offered by the Governor of Batavia a hundred and fifty thousand dollars, two large war-brigs, and a complete store of guns and ammunition, for his diamond; but he refused the offer. A portion of this eagerness is attributable to a belief on the part of Orientals in certain mystical and medical properties in the diamond.

The Koh-i-noor, which left India on the 6th of April 1850, to pass into the hands of Queen Victoria, has had an especially notable history. It was found in the mines of Golconda. How many ages this was ago no one can tell; but the Hindoos, who are fond of high numbers, say that it belonged to Kama, King of Anga, three thousand years ago. Viewed within more modest limits, the diamond is said to have been stolen from one of the Kings of Golconda by a treacherous general named Mininzola, and by him presented to the Great Mogul, Shah Jehan, father of Aurungzebe, about the year 1640. It was then in a rough uncut state, very much larger than at present. Shah Jehan employed a Venetian diamond-worker, Hortensio Borgis, to cut it, in order to develop its brilliancy: this was done so badly that more than half of the gem was cut away, and the rest very imperfectly treated. The Mogul, in a rage, fined the jeweller ten thousand ducats, instead of paying him for his misdirected labours. When Tavernier, the French traveller, was in India, about two hundred years ago, he saw the Koh-i-noor, and told of the intense wonderment and admiration with which it was regarded in that country. After his time, the treasure changed hands frequently among the princes of India, generally by means either of fraud or violence; but it is not worth while to trace the particulars. Early in the present

century the possessor was the Khan of Cabul. From him it was obtained in an audacious way by the famous chief of Lahore, Runjeet Singh. 'Having heard that the Khan of Cabul possessed a diamond that had belonged to the Great Mogul, the largest and purest known, he invited the unfortunate owner to his court, and there, having him in his power, demanded the diamond. The guest, however, had provided himself against such a contingency, with a perfect imitation of the coveted jewel. After some show of resistance, he reluctantly acceded to the wishes of his powerful host. The delight of Runjeet was extreme, but of short duration: the lapidary to whom he gave orders to mount his new acquisition pronouncing it to be merely a bit of crystal. The mortification and rage of the despot were unbounded. He immediately ordered the palace of the Khan to be invested, and ransacked from top to bottom. For a long while, all search was vain. At last a slave betrayed the secret; the diamond was found concealed beneath a heap of ashes. Runjeet Singh had it set in an armlet, between two diamonds, each the size of a sparrow's egg.* When the Hon. W. G. Osborne was at Lahore some years afterwards, and visited the great Sikh potentate, 'the whole space behind the throne was crowded with Runjeet's chiefs, mingled with natives from Candahar, Cabul, and Afghanistan, blazing with gold and jewels, and dressed and armed with every conceivable variety of colour and fashion. Cross-legged in a golden chair sat Runjeet Singh, dressed in simple white, wearing no ornaments but a single string of enormous pearls round the waist, and the celebrated Koh-i-noor, or "Mountain of Light," upon his arm.' Sometimes, in a fit of Oriental display, Runjeet decked his horse with the Koh-i-noor, among other jewels. After his death, the precious gem passed into the hands of his successors on the throne of Lahore; and when the Punjab was conquered by the English in 1850, the Koh-i-noor was included among the spoil. Colonel Mackesin and Captain Ramsay brought it to England in the *Medea*, as a present from the East India Company to the Queen.

The Koh-i-noor, when examined by European diamond merchants, was pronounced to be badly cut; and the Court jeweller employed Messrs. Coster, of Amsterdam, to re-cut it—a work that occupied the labours of thirty-eight days, of twelve hours each. This is not really cutting, it is grinding; the gem being applied to the surface of a flat iron plate, moistened with oil and diamond powder, and rotating with great velocity, in such a way as to produce new reflecting facets. The late Duke of Wellington gave the first touch to this work, as a sort of honorary amateur diamond-cutter. The world-renowned gem has since been regarded as far more dazzling and beautiful than at any former time in its history.

Voltaire having paid some high compliments to the celebrated Haller, was told that Haller was not in the habit of speaking so favourably of him. 'Ah!' said Voltaire, with an air of philosophic indulgence, 'I dare say, we are both of us very much mistaken.'

FOURIER.

Among the dreamers and contrivers of new social worlds, Fourier is unquestionably the prince; no one ever brought to the task a more imperial intellect, or evolved a grander, more complex, and more detailed Utopia. His works are voluminous, and to master the laws and ordinances of his ideal kingdom would be a labour more than equivalent to the comprehension of Blackstone and the Code Napoleon.

Fourier, the son of a linendraper, was born at Besançon. His father dying in narrow circumstances, he commenced life behind a haberdasher's counter in Rouen, from whence he moved to Lyons, in which city, as a clerk and as a merchant, he spent a large part of his life. The Revolution had filled the air with daring social speculations, and Fourier quickly arrived at the conviction that the existing constitution of society was radically rotten. In 1796 he was draughted into the army as a private soldier, but after two years of service he was discharged as an invalid, and bearing with him a notable stock of ideas derived from his experience of military discipline and organization. Whilst a clerk at Marseilles, in 1799, he was ordered to superintend the sinking of a quantity of corn in the sea at midnight, which had become spoiled by hoarding when the people were dying of famine. This, and sundry encounters with commercial knavery, inspired him with an increasing aversion to trade. He gave all his spare hours to study, and among his acquaintances had a repute for universal knowledge, and for some unfathomable notions on the reconstruction of society. Excited by their curiosity, he was induced to publish, in 1808, a book as a prospectus of his scheme, to be developed in eight volumes; but the poor book did not find above a dozen purchasers. Six years elapsed, when by chance a copy of the neglected work fell into the hands of M. Just Muron, a gentleman of Besançon, who read it with delight, entered into correspondence with Fourier, and avowed himself his

disciple. He urged Fourier to fulfil his programme, and offered to bear a great part of the cost of publication. The result was, that Fourier gave up business, and retired into the country, and between the years 1816 and 1821 produced the bulk of his writings. He printed two large volumes at Besançon, and at the end of 1822 carried them to market in Paris; but no one would buy or even read them. The reviewers dismissed them as voluminous and abstruse. To meet this objection he produced an abridgment, but it fared no better. Worn out with waiting, and unable to bear the expense of a Parisian residence, he was compelled to return to Lyons in 1825, and take a situation as cashier at £50 a year. Meanwhile his work found receptive readers here and there throughout France, who encouraged him to go on writing. Madame Clarissa Vigoureux became a most effective ally, devoting her fortune and a skilful pen to the propagation of his views. In 1829, he made his abode permanently in Paris. The Revolution of 1830 brought the St Simonian sect of socialists into notoriety, and Fourier sent copies of his books to its leaders, but they paid them no attention. He tried the Owenites of England in the same way, and met with the same neglect. Irritated by their indifference, he attacked them in a sarcastic pamphlet, *The Fallacy and Charlatanism of the St Simonians and the Owenites*, which created a great sensation, and put an end to his weary years of obscurity. Several of the cleverest St Simonians became his adherents, and in June 1832 they started a weekly paper, *The Phalanstery*, which Fourier edited. Some disciples, anxious to realize the paradisiacal life of *The Phalanstery*, set up a joint-stock society, with a nominal capital of £20,000, at Rambouillet, but it turned out an utter failure. Fourier protested against the experiment, as entered into with wild haste, and without the completion of the conditions essential to success. Whilst waiting in the confident expectation that some great capitalist would knock at his door, and give him power to transform into fact the dream of his life, Fourier died on the 10th of October 1837, in his sixty-sixth year. He was never married.

Fourier was a thin, nervous man, of about five feet seven inches. His head, which was not large, was high in front, depressed behind (what phrenologists call the bankrupt form of head, as indicating an over-generous and too little selfish nature), and very full on each side. His hair was light brown, his eyes blue, his nose aquiline, his chin large, and his lips thin and closely compressed. In manner he was dignified, yet simple and earnest; and in his later years there was a sphere of sadness, if not bitterness, around him from long travail and hope deferred. His income was scarcely ever more than £60 a year, but his wants were few; he was a good economist, and at his death £40 was found in his cash-box. Music and flowers were his perpetual delights.

Fourier's writings extend over eight thick volumes, and about an equal quantity remains in manuscript. They deal with a wide variety of subjects, and a well-read Fourierite is seldom at a loss for a quotation from his master on any

matter under discussion. In many points there is a close resemblance between Fourier and Swedenborg: both were equally ready to evolve the unknown from their internal consciousness, and to deliver it with all the assurance of certainty. Fourier's grand aim was to assort mankind according to their characters, powers, and propensities; to band them together in such a way, that friendship, work, and pleasure should coincide. He was never tired of asserting that the Newtonian law of attraction was equally applicable to the world of mind as the world of matter; and that all the disorder and misery of society springs from the infraction and resistance of its benign operation. His socialism had thus a spiritual side; and many who would have been repelled from the dead level of a material communion, were fascinated with his glorious pictures of harmonious hierarchies of workers, where each man should do what he loved to do, and could do best, in fellowship with those whose tastes and feelings were kindred to his own. Fourier's language is graphic and striking, but seldom elegant, and often incorrect. His wealth of imagination and his logical power, as remarkable in construction as in destruction, amaze, while they excite regret that such genius should have been squandered so fruitlessly. Had he tried to govern a single village or workshop, he might have discovered the vanity of drawing out schemes of society on paper, the folly of legislating for men as though they were bricks and mortar, and the hopelessness of doing them good in any way save through the consent of their erratic, perverse, and incalculable wills.

Fourierism found many adherents in France and the United States, and various abortive attempts were made to institute associations after his model. The Revolution of 1848 brought a flush of promise to the Parisian Fourierites, but the reaction which followed blighted all. Fourier's doctrines are far too complicated to enter into popular politics, and the day is probably not distant when they will altogether lapse out of any faith into the condition of literary and psychological curiosities.

LOVE AND MADNESS.

On the evening of the 7th of April 1779, a handsome, well-dressed lady was stepping out of Covent Garden Theatre, to take her coach, when a young man in the dress of a clergyman moved abruptly towards her, and firing a pistol into her head, killed her in a moment. Immediately he fired another at himself, but without fatal effect, and then began to beat his head with its butt, as if eager in any way to deprive himself of life. He was, however, secured, and carried, all bespattered with his own blood and that of his victim, to a magistrate. The dead body was taken to a neighbouring tavern to await a coroner's inquest.

No more romantic story broke the dull tenor of English aristocratic life in the eighteenth century. The lady was Miss Reay, well known as the mistress of the Earl of Sandwich, an elderly statesman of great ability, who conducted the whole of the naval affairs of England during

the war with the American colonies. Miss Reay was of humble origin, but possessed beauty, intelligence, and an amiable character. She had borne four children to the Earl, who treated her with the greatest tenderness and affection. Rather more than three years before the above date, a young military officer named Hackman, in quarters at Huntingdon, was, in the course of an ordinary hospitality, invited by Lord Sandwich to Hitchinbroke, his lordship's country residence. Though the time is so near our own, it was different in some of the essentials of good taste, if not of morals; and we learn with some little surprise that this distinguished statesman had Miss Reay established as the mistress of his house, for the reception of such society as visited him. The young man, who was of an enthusiastic temperament, fell violently in love with Miss Reay, and sought to win her affections with a view to matrimony. The poor girl, who had the grace to wish she were not what she was, opened her heart to his addresses. They corresponded, they met; the young man was permitted to believe that the most cherished hope of his heart would be realized. To fit himself the better to maintain her as his wife, he studied for the church, took orders, and actually entered upon a curacy (Wiverton, in Norfolk). Miss Reay's situation became always more and more embarrassing, as the number of her children increased. Well disposed to Hackman, she was yet bound by strong ties of gratitude to Lord Sandwich. In short, she could not summon sufficient moral courage to break through her bondage. She seems to have striven to temper the violent transports of her lover; but his was not a constitution to bear with such a disappointment. His letters, afterwards published, fully shew how his love for this unfortunate woman gradually fixed itself as a morbid idea in his mind. For some weeks before the fatal day, he dwells in his letters on suicides, and cases of madmen who murdered the objects of their affections. The story of Chatterton seems to have had a fascination for him. He tells a friend on the 20th of March, that he did not believe he could exist without Miss Reay. He then, and for some time further, appears to have only contemplated his own death, as the inevitable consequence of his blighted passion. On the morning of the 7th of April he was employed in reading Blair's *Sermons*; but afterwards having traced Miss Reay to the theatre, he went back to his lodgings for a brace of pistols, which he employed in the manner which has been described.

The wretchedness of the unhappy man during the few days left to him on earth was extreme. He woke to a just view of his atrocious act, but only to condemn himself, and the more eagerly to long for death. After his condemnation, the following note reached him:

'17 April, '79.

'To Mr Hackman, in Newgate.

'If the murderer of Miss Reay wishes to live, the man he has most injured will use all his interest to procure his life.'

His answer was:

'Condemned cell, Newgate,
'17 April, 1779.

'The murderer of her whom he preferred, far preferred, to life, suspects the hand from which he has just received such an offer as he neither desires nor deserves. His wishes are for death, not for life. One wish he has: could he be pardoned in this world by the man he has most injured? Oh, my lord, when I meet her in another world, enable me to tell her (if departed spirits are not ignorant of earthly things) that you forgive us both, that you will be a father to her dear infants! 'J. H.'

Two days after this date, Hackman expiated his offence at Tyburn.*

The surviving children of Miss Reay were well educated by their father; and the fourth, under the name of Basil Montagu, attained the rank of Queen's Counsel, and distinguished himself by a *Life of Bacon* and other works.

SALE OF A WIFE.

The *Annual Register* for 1832 gave an account of a singular wife-sale which took place on the 7th of April in that year. Joseph Thomson, a farmer, had been married for three years without finding his happiness advanced, and he and his wife at length agreed to separate. It is a prevalent notion amongst the rude and ignorant in England that a man, by setting his wife up to public auction, and so parting with her, legally dissolves the marriage tie, and escapes from all its obligations. Thomson, under this belief, came into Carlisle with his wife, and by the bellman announced that he was about to sell her. At twelve o'clock at noon the sale commenced, in the presence of a large number of persons. Thomson placed his wife on a large oak chair, with a rope or halter of straw round her neck. He then spoke as follows:—'Gentlemen, I have to offer to your notice my wife, Mary Anne Thomson, otherwise Williams, whom I mean to sell to the highest and fairest bidder. Gentlemen, it is her wish as well as mine to part for ever. She has been to me only a born serpent. I took her for my comfort, and the good of my home; but she became my tormentor, a domestic curse, a night invasion, and a daily devil. Gentlemen, I speak truth from my heart when I say—may God deliver us from troublesome wives and frolicsome women! Avoid them as you would a mad dog, a roaring lion, a loaded pistol, cholera morbus, Mount Etna, or any other pestilential thing in nature. Now I have shewn you the dark side of my wife, and told you her faults and failings, I will introduce the bright and sunny side of her, and explain her qualifications and goodness. She can read novels and milk cows; she can laugh and weep with the same ease that you could take a glass of ale when thirsty. Indeed, gentlemen, she

reminds me of what the poet says of women in general:

"Heaven gave to women the peculiar grace,
To laugh, to weep, to cheat the human race."

She can make butter and scold the maid; she can sing Moore's melodies, and plait her frills and caps; she cannot make rum, gin, or whisky, but she is a good judge of the quality from long experience in tasting them. I therefore offer her with all her perfections and imperfections, for the sum of fifty shillings.' If this speech is correctly reported, the man must have been a humorist in addition to his other qualities. The account concludes with the statement that, after waiting about an hour, Thomson knocked down the lot to one Henry Mears, for twenty shillings and a Newfoundland dog; they then parted in perfect good temper—Mears and the woman going one way, Thomson and the dog another.

Of course an affair of this kind is simply an outrage upon decency, and has no legal effect whatever. It can only be considered as a proof of the besotted ignorance and brutal feelings of a portion of our rural population. Rather unfortunately, the occasional instances of wife-sale, while remarked by ourselves with little beyond a passing smile, have made a deep impression on our continental neighbours, who seriously believe that it is a habit of all classes of our people, and constantly cite it as an evidence of our low civilization. It would never occur to us as a proof of any such thing, for we recognise it as only an eccentricity; yet it may be well for us to know that it really does take place now and then,—more frequently, indeed, than almost any are aware of,—and is a social feature by no means unworthy of the grave consideration of educationists.

In 1815, a man held a regular auction in the market-place at Pontefract, offering his wife at a minimum bidding of one shilling, and 'knocking her down' for eleven shillings. In 1820, a man named Brouchet led his wife, a decent-looking woman, into the cattle-market at Canterbury, from the neighbouring village of Broughton; he asked a salesman to sell her for him; the salesman replied that his dealings were with cattle, not with women, and he refused. The man thereupon hired a pen or stall, for which he paid the usual tollage of sixpence, and led his wife into it by a halter; and soon afterwards he sold her to a young man at Canterbury for five shillings. In 1834, a man led his wife by a halter, in precisely a similar way, into the cattle-market at Birmingham; but the local journals did not report the sum at which the unfortunate 'lot' was knocked down. A case occurred in 1835, in which a woman was sold by her husband for fifteen pounds; she at once went home with the buyer; she survived both buyer and seller, and then married again. Some property came to her in the course of years from her first husband; for, notwithstanding claims put forth by other relations, she was able to maintain in a court of law that the sale did not and could not vitiate her rights as his widow. A good deal of surprise was felt in many villages of ignorant peasantry, in 1837, at

* The correspondence of Hackman with Miss Reay was published by Mr. Herbert Croft, under the appropriate title which has been assumed as a heading for this article. The book has become extremely rare; but the bulk of the letters are reprinted in a *Collection of Criminal Trials*, 6 vols. Knight and Lacy, 1825.

the result of a trial at the West Riding Sessions in Yorkshire, where a man was committed to a month's imprisonment and hard labour for selling, or attempting to sell, his wife: the right to do this being believed in more extensively than we are apt to imagine. In 1858, in a beer-shop at Little Horton, near Bradford, a man named Hartley Thompson put up his wife, described by the local journals as a pretty young woman, for sale; he even announced the sale beforehand by means of a crier or bellman; he brought her in with a ribbon round her neck, by way of halter. These two persons had lived unhappily together, and both entertained a belief that by such a process as this they might legally separate for life. It is difficult, indeed, to credit how such things can be, unless the wife be more or less a consenting party; this supposition once made, however, so cheap a substitute for the Divorce Court becomes intelligible. Doubtless, in some cases the husband acts wholly for himself in the matter; as happened in 1859 at Dudley, where a man sold his wife for sixpence, under the full belief that by so doing she would have no further legal claim on him for support.

There are not wanting instances of a belief that the marital tie may be legally dissolved by a document partaking of the character of a lease. In the feudal days there was the famous case of Sir John de Camoys, who regularly leased his wife to Sir William de Paynel; the lady was, however, not a consenting party to the transaction; and on appealing to the law, the lease was declared null and void. In recent times one particular instance presented a curious variation from this course of proceeding. The Birmingham Police Court, in 1853, had to adjudicate on an assault case; and in the evidence the strange fact came out that a husband had leased, not his wife, but *himself*. He had deserted his wife, and had paid a lawyer thirty-five shillings to draw up a regular contract between him and another woman. In proper form the man was described as a 'carpenter,' and the woman as a 'spinster.' Omitting the names, the opening sentences ran thus:—'Wherein the said — and — have mutually agreed with each other to live and reside together, and to mutually assist in supporting and maintaining each other during the remainder of their lives, and also to sign the agreement hereinafter contained to that effect: now, therefore, it is hereby mutually agreed by and between the said — and —, that they shall live and reside together during the remainder of their lives, and that they shall mutually exert themselves by work and labour, and by following all their business pursuits, to the best of their abilities, skill, and understanding, and by advising and assisting each other, for their mutual benefit and advantage, and also to provide for themselves and each other the best support and comforts in life which their means and income can afford, &c. &c.' The man had allowed himself, or had been allowed, to believe that the existence of this document would be a bar to any claim on the part of his poor wife. It is no wonder that the magistrate administered a severe reproof to the lawyer who lent himself to such a scandal.

APRIL 8.

St Dionysius, of Corinth, 2nd century. St Ædesius, martyr, 306. St Perpetuus, bishop of Tours, 491. St Walter, abbot of St Martin's, near Pontoise, 1099. B. Albert, patriarch of Jerusalem, 1214.

Born.—John C. Loudon, writer on botany, &c., 1783, *Cambuslang, Lanarkshire.*

Died.—Caracalla, Roman emperor, assassinated, 217, *Edessa*; Pope Benedict III., 858; John the Good, King of France, 1364, *Savoy Palace, London*; Lorenzo de Medicis, 'the Magnificent,' 1492, *Florence*; Dr Thomas Gale, learned divine and editor, 1702, *York.*

THE CAPTIVITY OF JOHN, KING OF FRANCE,
AT SOMERTON CASTLE.

John I. (surnamed 'Le Bon') mounted the throne of France in 1350, at the age of thirty. He began his reign most inauspiciously by beheading the Count d'Eu, an act which alienated the affections of all his greater nobles from him, and which he in vain endeavoured to repair by instituting the order of the 'Star,' in imitation of that of the 'Garter,' founded by the sovereign of England. Next he was much perplexed by the continued enmity of Charles d'Evereux, King of Navarre. Finally, the Black Prince, invading his realm, ravaged Limousin, Auvergne, Berri, and Poitou. Incensed by the temerity of his English assailants, John hastily raised an army of 60,000 men, swearing that he would give battle to the prince immediately. The two armies met at Mauvertuis, near Poitiers, September 19, 1356, when the Black Prince, with only 8,000 men under his command, succeeded in routing the French army most completely, and taking the king and his fourth son, Philip, a brave youth of fifteen, prisoners. The royal captives were first taken to Bordeaux, and thence brought to England, where they landed, May 4, 1357. During the first year of his captivity, John resided at the palace of the Savoy in London, where he was well entertained, enjoying full liberty, and often receiving visits from King Edward and Queen Philippa. Towards the close of the year 1358, a series of restrictions began to be imposed upon the captives, accompanied by reductions of their suite; but this change was the result of political caution, not of any unnecessary severity, and ended in their transfer to Somerton Castle, near Navenby, in Lincolnshire, August 4, 1359. William Baron d'Eyncourt, a noble in whom the king could place the utmost confidence, was appointed custodian of the royal prisoners.

Previous to this coming into Lincolnshire, in accordance with an edict of Edward III., John had been forced to dismiss forty-two of his attendants; he still, however, retained about the same number around his person. Among these were two chaplains, a secretary, a clerk of the chapel, a physician, a maître d'hôtel, three pages, four valets, three wardrobe men, three furriers, six grooms, two cooks, a fruiterer, a spiceman, a barber, and a washer, besides some higher officers, and a person bearing the exalted name of 'le roy de menestereulx,' who appears to have

been a maker of musical instruments and clocks as well as a minstrel; and last, but not least, 'Maitre Jean le fol.' The Somerton Castle furniture being utterly insufficient for such a vast increase of inmates, the captive king added a number of tables, chairs, forms, and trestles, besides fittings for the stables, and stores of fire-wood and turf. He also fitted up his own chamber, that of the Prince Philip, and of M. Jean le fol, besides the chapel, with hangings, eurtains, cushions, ornamented coffers, seonees, &c., the furniture of each of these filling a separate wagon when the king left Somerton.

Large consignments of good Bordeaux wines were transmitted from France to the port of Boston for the captive king's use, as much as a hundred and forty tuns being sent at one time as a present, intended partly for his own use and partly as a means of raising money to keep up his royal state. One of the costly items in the king's expenditure was sugar, together with spices bought in London, Lincoln, and Boston, immense quantities of which we may infer were used in the form of confectionery; for in the household books we meet constantly with such items as eggs to clarify sugar, roses to flavour it with, and cochineal to colour it. These bon-bons appear to have cost about three shillings the pound; at least such is the price of what is termed 'sucre roset vermeil,' and especial mention is made of a large silver gilt box made for the king as a 'bonbonniere,' or receptacle for such sweets.

In the article of dress John was most prodigal. In less than five months he ordered eight complete suits, besides one received as a present from the Countess of Boulogne, and many separate articles. One ordered for Easter was of Brussels manufacture, a marbled violet velvet, trimmed with miniver; another for Whitsuntide, of rosy scarlet, lined with blue taffeta. The fur and trimmings of these robes formed a most costly additional item, there having been paid to William, a furrier of Lincoln, £17, 3s. 9d. for 800 miniver skins, and 850 ditto of 'gris;' also £8, 10s. to Thornsten, a furrier of London, for 600 additional miniver skins, and 300 of 'gris,' all for one set of robes. Thus 2,550 skins, at a cost of £25, 13s. 9d., were used in this suit, and the charge for making it up was £6, 8s. Indeed, so large were the requirements of the captive king and his household in this particular, that a regular tailoring establishment was set up in Lincoln by his order, over which one M. Tassin presided.

The pastimes he indulged in were novel-reading, music, chess, and backgammon. He paid for writing materials in Lincolnshire three shillings to three shillings and sixpence for one dozen parchments, sixpence to ninepence for a quire of paper, one shilling for an envelope with its silk binder, and fourpence for a bottle of ink. The youthful tastes of the valorous Prince Philip appear to have been of what we should consider a more debased order than his royal father's. He had dogs, probably greyhounds, for coursing on the heath adjoining Somerton, and falcons, and, I am sorry to add, game cocks, too; a charge appearing in the royal household accounts for

the purchase of one of these birds, termed, in language characteristic of the period, 'un coc à faire jouter.'

One very marked trait in King John's character was his love of almsgiving. His charitable gifts, great and small, public and private, flowed in a ceaseless stream when a captive in adversity, no less than when on the throne in prosperity. Wherever he was he made a small daily offering to the curate of the parish, besides presenting larger sums on the festivals of the church. For instance, he gave to the humble Curé of Boby (Boothby) a sum equal to twelve shillings, for masses offered by him at Christmas; eight shillings at the Epiphany; and four shillings and fourpence at Candlemas. The religious orders also received large sums at his hands; on each of the four mendicant societies of Lincoln he bestowed fifteen escuz, or ten pounds. On his way from London to Somerton, he offered at Grantham five nobles (£1, 13s. 4d.); gave five more nobles to the preaching friars of Stamford, and the same sum to the shrine of St Albans. In fact, wherever he went, churches, convents, shrines, recluses, and the poor and unfortunate, were constant recipients of his bounty.

On the 21st of March 1360, King John was removed from Somerton, and lodged in the Tower of London, the journey occupying seven days. Two months after (May 19), he was released on signing an agreement to pay to England 3,000,000 of gold crowns (or £1,500,000) for his ransom, of which 600,000 were to be paid within four months of his arrival in France, and 400,000 a year, till the whole was liquidated, and also that his son, the Duc d'Anjou, and other noble personages of France, should be sent over as hostages for the same. The last act of this unfortunate monarch shews his deep-seated love of truth and honour. On the 6th of December 1363, the Duc d'Anjou and the other hostages broke their parole, and returned to Paris. Mortified beyond measure at this breach of trust, and turning a deaf ear to the remonstrances of his council, John felt himself bound in honour to return to the English coast, and accordingly four days afterwards he crossed the sea once more, and placed himself at the disposal of Edward. The palace of the Savoy was appointed as his residence, where he died after a short illness in the spring of 1364.

THE TURNSPIT.

A few months ago the writer happened to be at an auction of what are technically termed fixtures; in this instance, the last moveable furnishings of an ancient country-house, about to be pulled down to make room for a railway station. Amongst the many lots arranged for sale, was a large wooden wheel enclosed in a kind of circular box, which gave rise to many speculations respecting the use it had been put to. At last, an old man, the blacksmith of the neighbouring village, made his appearance, and solved the puzzle, by stating that it was a 'dog-wheel,'—a machine used to turn a spit by the labour of a dog; a very common practice down to a not distant period, though now scarcely

within the memory of living men. Besides the blacksmith, the writer has met with only one other person who can remember seeing a turnspit dog employed in its peculiar vocation; but no better authority can be cited than that of Mr Jesse, the well-known writer on rural subjects, who thus relates his experiences:—

'How well do I recollect in the days of my youth watching the operations of a turnspit at the house of a worthy old Welsh clergyman in Worcestershire, who taught me to read! He was a good man, wore a bushy wig, black worsted stockings, and large plated buckles in his shoes. As he had several boarders as well as day scholars, his two turnspits had plenty to do. They were long-bodied, crook-legged, and ugly dogs, with a suspicious, unhappy look about them, as if they were weary of the task they had to do, and expected every moment to be seized upon to perform it. Cooks in those days, as they are said to be at present, were very cross; and if the poor animal, wearied with having a larger joint than usual to turn, stopped for a moment, the voice of the cook might be heard rating him in no very gentle terms. When we consider that a large solid piece of beef would take at least three hours before it was properly roasted, we

may form some idea of the task a dog had to perform in turning a wheel during that time. A pointer has pleasure in finding game, the terrier worries rats with eagerness and delight, and the bull-dog even attacks bulls with the greatest energy, while the poor turnspit performs his task with compulsion, like a culprit on a tread-wheel, subject to scolding or beating if he stops a moment to rest his weary limbs, and is then kicked about the kitchen when the task is over.'

The services of the turnspit date from an early period. Doctor Caius, founder of the college at Cambridge which bears his name, and the first English writer on dogs, says,—'There is comprehended under the curs of the coarsest kind a certain dog in kitchen service excellent. For when any meat is to be roasted, they go into a wheel, which they turning about with the weight of their bodies, so diligently look to their business, that no drudge nor scullion can do the feat more cunningly, whom the popular sort hereupon term turnspits.'

The annexed illustration, taken from *Remarks on a Tour to North and South Wales*, published in 1800, clearly exhibits how the dog was enabled to perform his curious and uncongenial task. The letterpress in reference to it says:—'New-

A TURNSPIT AT WORK.

castle, near Carmarthen, is a pleasant village; at a decent inn here a dog is employed as turnspit; great care is taken that this animal does not observe the cook approach the larder; if he does, he immediately hides himself for the remainder of the day, and the guest must be contented with more humble fare than intended.'

One dog being insufficient to do all the roasting

for a large establishment, two or more were kept, working alternately; and each animal well knowing and noting its regular turn of duty, great difficulty was experienced in compelling it to work out of the recognised system of rotation. Buffon relates that two turnspits were employed in the kitchen of the Duc de Lianfort at Paris, taking their turns every other day to go into the

wheel. One of them, in a fit of laziness, hid itself on a day that it should have worked, so the other was forced to go into the wheel instead. When the meat was roasted, the one that had been compelled to work out of its turn began to bark and wag its tail till it induced the scullions to follow it; then leading them to a garret, and dislodging the skulker from beneath a bed, it attacked and killed its too lazy fellow-worker.

A somewhat similar circumstance occurred at the Jesuits' College of La Flèche. One day, the cook, having prepared the meat for roasting, looked for the dog whose turn it was to work the wheel for that day; but not being able to find it, he attempted to employ the one whose turn it was to be off duty. The dog resisted, bit the cook, and ran away. The man, with whom the dog was a particular favourite, was much astonished at its ferocity; and the wound being severe and bleeding profusely, he went to the surgeon of the College to have it dressed. In the meantime the dog ran into the garden, found the one whose turn it was to work the spit for that day, and drove it into the kitchen; where the deserter, seeing no opportunity of shirking its day's labour, went into the wheel of its own accord, and began to work.

Turnspits frequently figure in the old collections of anecdotes. For instance, it is said that the captain of a ship of war, stationed in the port of Bristol for its protection in the last century, found that, on account of some political bias, the inhabitants did not receive him with their accustomed hospitality. So, to punish them, he sent his men ashore one night, with orders to steal all the turnspit dogs they could lay their hands upon. The dogs being conveyed on board the ship, and snugly stowed away in the hold, consternation reigned in the kitchens and dining-rooms of the Bristol merchants; and roast meat rose to a premium during the few days the dogs were confined in their floating prison. The release of the turnspits was duly celebrated by many dinners to the captain and his officers.

In an exceeding rare collection of poems, entitled *Norfolk Drollery*, there are the following lines:—

*Upon a dog called Fuddle, turnspit at the Popinjay,
in Norwich.*

'Fuddle, why so? Some fuddle-cap sure came
Into the room, and gave him his own name;
How should he catch a fox?* he'll turn his back
Upon tobacco, beer, French wine, or sack.
A bone his jewel is; and he does scour,
With Æsop's cock, to wish a barley-corn.
There's not a soberer dog, I know, in Norwich,
What would ye have him drunk with
porridge?

This I confess, he goes around, around,
A hundred times, and never touches ground;
And in the middle circle of the air
He draws a circle like a conjuror.
With eagerness he still does forward tend,
Like Sisyphus, whose journey has no end.
He is the soul (if wood has such a thing?)
And living posy of a wooden ring.
He is advanced above his fellows, yet
He does not for it the least envy get.

* An old slang term for becoming fuddled.

He does above the Isle of Dogs commence,
And wheels the inferior spit by influence.
This, though, befalls his more laborious lot,
He is the Dog-star, and his days are hot.
Yet with this comfort there's no fear of burning,
'Cause all the while the industrious wretch is turning.

Then no more Fuddle say; give him no spurns,
But wreak your spleen on one that never turns,
And call him, if a proper name he lack,
A four-foot hustler, or a living Jack.'

The poets not unfrequently used the poor turnspit as an illustration or simile. Thus Pitt, in his *Art of Preaching*, alluding to an orator who speaks much, but little to the purpose, says:—

'His arguments in silly circles run,
Still round and round, and end where they begun.
So the poor turnspit, as the wheel runs round,
The more he gains, the more he loses ground.'

A curious political satire, published in 1705, and entitled *The Dog in the Wheel*, shews, under the figure of a turnspit dog, how a noisy demagogue can become a very quiet placeman. The poem commences thus:—

'Once in a certain family,
Where idleness was dis-esteemed;
For ancient hospitality,
Great plenty and frugality,
'Bove others famous deemed.
No useless thing was kept for show,
Unless a paroquet or so;
Some poor relation in an age,
The chaplain, or my lady's page:
All creatures else about the house
Were put to some convenient use.
Nay, ev'n the cook had learned the knack
With cur to save the charge of jack;
So trained 'em to her purpose fit,
And made them earn each bit they ate.
Her ready servants knew the wheel,
Or stood in awe of whip and bell;
Each had its task, and did it well.'

The poem as it proceeds describes the dogs in office lying by the kitchen fire, and discussing some savoury bones, the well-earned rewards of the day's exertions. The demagogic cur, entering, calls them mean, paltry wretches, to submit to such shameful servitude; unpatriotic vermin to chew the bitter bones of tyranny. For his part, he would rather starve a thousand times over than do so. Woe be to the tyrannic hand that would attempt to make him a slave, while he had teeth to defend his lawful liberty—and so forth. At this instant, however, the cook happens to enter—

'And seeing him (the demagogue) among the rest,
She called him very gently to her,
And stroked the smooth, submissive cur:
Who soon was hushed, forgot to rail,
He licked his lips, and wagged his tail,
Was overjoyed he should prevail
Such favour to obtain.
Among the rest he went to play,
Was put into the wheel next day,
He turned and ate as well as they,
And never speeched again.'

Died.—Constantine II., Roman emperor, assassinated, 340; Zenon, Emperor of the East, 491; Pope Constantine, 715; Edward IV., King of England, 1483; Gabrielle d'Estrées ('La Belle Gabrielle'), 1599; Francis Bacon, 1626, *St Albans*; William, Earl of Craven, 1697; Simon, Lord Lovat, beheaded, 1747; Christian Wolf, philosophical writer, 1754, *Halle*; Jacques Necker, French financial minister (1788), 1804, *Geneva*; John Opie, painter, 1807; Dr William Prout, scientific writer, 1850, *London*.

EDWARD IV.

On this day, in the year 1483, died Edward IV., a king who makes a figure in history rather through the circumstances of the period in which he lived, than from the personal influence he exercised over them. He was the instrument of a revolution rather than the hero of it. That revolution was virtually the overthrow of feudalism, which had, through its own inherent defects and its increasing incongruity with the advance in the political and social condition of the world, been long tending to its fall. The disastrous government of a weak monarch on the throne, Henry VI., and the violent animosities of the feudal nobles, fomented by the intrigues of the Duke of York, the representative of a rival dynasty which had been displaced by a former revolution, brought on the long and furious civil wars known as the Wars of the Roses, in which the feudal nobles and great families were occupied much more in the indulgence of personal hatred and in mutual destruction than in carrying out any important political principles. When the power of the aristocracy had exhausted itself, the fortunes, perhaps we may say the accidents of war had left the party of the house of York the stronger of the two divisions into which the country had fallen; and to this circumstance, without any remarkable merits of his own, Edward owed the throne. His claim on the score of descent was no doubt according to strict law better than that of the dynasty he displaced, inasmuch as he was descended from Lionel, Duke of Clarence, the second son of Edward III., while the branch of Lancaster was descended only from that monarch's third son. In the savage war of feudal rivalry in which the old aristocracy had almost worn itself out, Edward's father, Richard, Duke of York, perished at the moment when the crown of England was within his grasp, in consequence chiefly of his own want of caution and foresight in the battle of Wakefield, fought on the 30th of December 1460. Edward, who now succeeded his father in his claim to the crown, was a brave and able soldier, with more perseverance and less hesitation in pursuing his object. After having

inflicted a severe defeat on the Lancastrians at Mortimer's Cross, on the northern borders of Herefordshire, he advanced upon London, to which place Queen Margaret had also directed her retreat after the defeat and death of the Duke of York. She had gained a victory over the Yorkists near St Albans and delivered her husband from imprisonment, when consciousness of the superiority of Edward's forces obliged her to retrace her steps northward. Edward, who was then only in the nineteenth year of his age, was proclaimed King of England on the 2nd of March 1461.

Edward possessed many of the qualities which then in a prince conciliated the attachment of the multitude. He was bold and active, princely in bearing, one of the handsomest men of his time, and popular in his manners. Even his more apparent vices were such as were easily pardoned by popular opinion; but under a brilliant exterior he was selfish and unscrupulous, eager of pleasure, and at the same time treacherous and cruel. The precarious character of the tenure by which he held the throne was shewn within the first few years of his reign. He had hardly ascended the throne, before he was obliged to hurry to the north to meet his opponents, who had already brought together a very powerful army under Queen Margaret and the Duke of Somerset. On Palm Sunday, the 29th of the same month of March 1461, Edward defeated the Lancastrians with frightful slaughter, at Towton, in Yorkshire; and Queen Margaret, with her husband, Henry VI., and their son, the young prince Edward, were obliged to seek safety in Scotland. Queen Margaret subsequently entered England, and renewed the struggle, but the only result was the capture of the deposed king, who was imprisoned in the Tower.

King Edward was at this time popular among his subjects, but he seems to have given himself up entirely to his pleasures, and to have neglected the great feudal chiefs to whom he owed his throne. Perhaps they, on the other side, were unreasonable in their wishes to monopolise favour and power. The great Earl of Warwick had formed a design for the marriage of his daughter with the Duke of Clarence, to which Edward refused his consent; and Warwick is said to have been further offended by the neglect which the king shewed to him in the circumstances of his marriage with the Lady Elizabeth Grey. The powerful nobleman now quitted Edward, and became reconciled to Queen Margaret, and the civil war having recommenced, King Edward was taken prisoner, but he succeeded in making his escape, and fled to Holland. During his absence, Henry VI. was restored to the throne, and Edward was deposed, and proclaimed a traitor. But within a short time Edward returned with the assistance of the Duke of Burgundy, landed in Yorkshire in March 1471, and directing his march south, entered London and recovered the throne almost without resistance. On Easter Sunday, the 14th of April, Edward gained a great victory over the Lancastrians at Barnet, in which the Earl of Warwick was slain; and on the 4th of May he defeated Queen Mar-

garet's army in the battle of Tewkesbury. King Henry had again become a prisoner at Barnet; and Queen Margaret and her son Edward, Prince of Wales, were captured at Tewkesbury, and the young prince was barbarously murdered in King Edward's presence. King Henry himself was murdered in the Tower, on the 21st of May, so that Edward could now enjoy the crown without a competitor. Queen Margaret was some time afterwards set at liberty on the payment of a considerable ransom by her brother the King of France.

Edward, thus relieved from further uneasiness, now gave himself up to his pleasures, in which he is said to have indulged indiscriminately, and not always with dignity. He died of the results of a surfeit, on the 9th of April 1483, in the forty-second year of his age. He exercised little influence on the political or social condition of his country, although the parliament took the opportunity of his weakness or inattention to obtain some concessions which were important for the strengthening of the national liberty. It was under Edward IV. that the art of printing was introduced into England, and it received encouragement from him personally, and from his ministers. Otherwise King Edward's reign seems best known, in popular remembrance, as the age of Jane Shore, his favourite mistress. The dynasty which Edward had founded was short-lived, and was soon driven out to give place to the house of Tudor, which destroyed the feudal power, only weakened by the successor of the Yorkists.

WILLIAM, EARL OF CRAVEN.

In the latter half of the sixteenth century, a poor lad, named Craven, trudged his weary way from Yorkshire to London, with the laudable design of seeking his fortune. Assisting to drive a long string of pack-horses, he found protection and companionship on the road; and when the carrier was delivering a pack of Yorkshire cloth to a draper in Watling Street, he recommended the boy to the service of the citizen. The youth was soon advanced to be an apprentice; steady industry claiming its due reward, he in course of time set up for himself in Leadenhall; and ultimately becoming Lord Mayor, received the honour of knighthood from King James. The accession of wealth and honour did not cause him to forget his native Wharfedale. He beautified and repaired the church of Burnsall, in which he had sat when a poor boy; founded and endowed alms-houses and other charitable institutions for indigent Yorkshiremen, and when death called him, full of years, he left an immense fortune to his only son William.

At that period, wealth alone, without the addition of a long pedigree, had not the position which it now enjoys; though military renown was considered a sufficient cover for any deficiency of birth. Probably for this reason, William Craven, the wealthy grandson of a Yorkshire peasant, at an early age took service in the army of Henry, Prince of Orange, and acquitted himself with honour and distinction. Afterwards, being one of the English volunteers who joined Gustavus Adolphus, he led the

forlorn hope at the storming of Creutznach. Though the first assault was repulsed, Craven, with determined bravery, led on a second, which proved gloriously successful. Though smarting under a severe wound, our hero generously granted quarter to the vanquished enemy, and Gustavus coming up knighted him as he lay wounded on the ground.

One of the avowed objects of Gustavus was the reinstatement of the Count-Palatine Frederiek in the palatinate. The character of Frederiek was not of a description to excite the respect or admiration of bold and politic men; but his wife, the Princess Elizabeth, daughter of James I., was endowed with all the romantic qualities of a true heroine, as certainly as she was the heroine of a sad but true romance. The days of chivalry had not then quite passed away. Harte tells us that the courage and presence of mind of the princess were so conspicuous, and her figure and manners so attractive—though not to be termed a consummate beauty—that half the army of Gustavus was in love with her. The ferocious Christian, Duke of Brunswick, was her most tractable slave; so was young Thurm, and so was Sir William Craven. But the death of Gustavus destroyed the last hope of recovering the palatinate, and Sir William Craven entered the service of the States of Holland, and continued in their army till the Restoration.

Though Sir William took no part in the civil war of England, yet from his great wealth, combined with his exceedingly simple, soldier-like habits of life, he was enabled to afford the exiled royal family very considerable pecuniary supplies. As a single instance of his liberality in this respect, he gave Charles II. no less than fifty thousand pounds in one sum and at one time. On this account the Parliament confiscated his estates, and though the States-General interfered through their ambassador, no effect ensued from the mediation. At the Restoration he regained his estates, and Charles conferred upon him the title of Earl.

On returning to England, Craven's first care was to purchase a grand old edifice called Drury House, from its having belonged to the knightly family of that name, and from which also the street called Drury-lane derives its appellation. This building, part of which was in existence within the memory of persons now living, stood on the site of the Olympic Theatre and the adjoining tavern called the "Craven Arms." After he had fitted up this house in a style of regal magnificence, the Princess Elizabeth, then twelve years a widow, came to reside in it with Lord Craven. Whether any stronger tie than pure friendship existed between them, it is not our place to inquire. When she came to live in Drury House, Craven was fifty-three years of age, and the Princess was sixty-five. It has been said, however, that they had previously been privately married on the Continent, and that the fifty thousand pounds given to Charles II. was the price of his consent to the marriage of his unfortunate aunt.

When the Princess arrived in England, Earl Craven began to build a magnificent palace for her, on his estate of Hampstead Marshall, in

Berkshire; but Elizabeth scarcely lived a year after her return from the Continent, and this house, intended to rival the castle of Heidelberg, was burned to the ground ere its completion. During the great plague of 1665, Lord Craven remained in London to succour the wretched, encourage the timid, and preserve order. On the death of Monk, he received the colonelcy of the Coldstream Guards, and during the latter part of the seventeenth century, the stout old Earl was one of the most conspicuous characters in London. Whenever a fire took place, he was sure to be present, to render assistance and preserve order; so it became a common saying that his horse could smell a fire ere it happened. His city birth, warlike fame, and romantic connexion with a queen—for Elizabeth was always styled in England by her fatal title of Queen of Bohemia—rendered him the most popular man in London, and his quiet remonstrances would disperse a riotous mob more effectively than a regiment of soldiers. He died in 1696, at the advanced age of eighty-eight years.

Across the end of Craven Buildings in Drury-lane, there will be observed a wall, on which is inscribed, at the present day, the name and business of a neighbouring tradesman. There was formerly a fresco painting on this wall, representing Lord Craven on a white charger, with a marshal's bâton in his hand. This portrait was frequently repainted in oil, and down to the present century was considered one of the sights of London; but it is now completely obliterated.

LA BELLE GABRIELLE.

The gallant, chivalrous, favourite French monarch, Henri Quatre, when starting on one of his warlike exploits in 1590, sojourned for a night at the Château de Cauvers, belonging to an artillery officer whom he had much befriended, the Chevalier D'Estrées. The daughter of the house, Gabrielle, a gentle, beautiful creature, about nineteen, had long honoured the king secretly, as belonging to the type of heroes whom women love. Her enthusiasm gave a warmth to the grace that naturally belonged to her; and she fairly captured the heart of Henri, without, so far as appears, any predetermined design of so doing. The king could not then delay his military proceedings; but he carried away with him recollections that were not likely to die. He found opportunities to see her again, and to work both upon her love and her gratitude. The state of court morals in those days in France, as in many other countries, points to what followed—how that she was married to Damerval de Liancourt, as a means of appeasing or blinding her father; how that the king procured a divorce for her on some pretext, well or ill founded; and how that she then lived with Henri during the remainder of her brief life, ennobled as a duchess, in order to give her station at court. Abating the one fact that she was his mistress and not his wife, all other parts of her career have met with the general encomiums of French writers. She was exceedingly beautiful, and was known everywhere as 'La Belle Gabrielle.' She spent her life royally, almost as a queen; yet she

was without haughtiness or arrogance. She never abused the favour she received, and withal was so affable, gentle, and benevolent, that she won the good-will of courtiers and people alike. The king loved her deeply; once, when engaged in a military enterprise of which the issue was doubtful, he wrote to her: 'If I am defeated, you know me well enough to be certain I shall not flee; my last thought will be of God—my last but one, of thee.' Her only quarrels were with the great minister, Sully, who disapproved of some of the persons promoted or rewarded through her means. The king well knew what an inestimable servant or friend he had in his unyielding minister; and once, when Gabrielle appealed to him, he told her honestly that he would rather lose her than Sully, if one must be lost. Her good sense came to the aid of her other qualities, and she no longer opposed Sully's views. Gabrielle's end was a sad one. On the 9th of April 1599, a fit of apoplexy carried her off, accompanied by such frightful contortions as to induce a suspicion that she had been poisoned; but no proof of such a crime ever came to light. The king mourned for her as he would for a princess of the blood royal, and felt her loss deeply. French song and poem, drama and opera, have had much to say concerning Henri Quatre and La Belle Gabrielle.

THE PONY EXPRESS.

The Pacific States, as they are called, of America, being separated from the rest by the wide sierra of the Rocky Mountains,—canal, railway, or even good roads not yet being practicable in that region,—communication necessarily becomes a difficulty. Even to convey letters over two thousand miles of prairie, mountain, and forest, was a task of a sufficiently formidable character. This difficulty was, however, overcome in 1860, by the enterprise of a private firm. Messrs. Russell, Major, and Waddell, who had been engaged as contractors for the conveyance of government stores, determined to establish a kind of express mail, by which letters should be conveyed in about a week between the two extreme points; depending partly on the commercial public and partly on the government for an adequate return. The contractors first built stations along the line of route, at convenient intervals, stocking them plentifully; then purchased six hundred ponies, or strong serviceable horses; then engaged a corps of fearless and trustworthy riders; and finally provided an equipment of riding-dress, letter-bags, revolvers, and rifles for the men. On the 9th of April 1860, the service commenced. Two pony-couriers started on the same day; one from St Francisco, to come east; the other from St Joseph on the Missouri, to go west. When a pony had done his stage, at twelve miles an hour, he was replaced by another; and when a courier had done as many stages as he could accomplish without rest, another took his place. Thus the mail-bags were travelling incessantly at the rate of twelve miles an hour. Each mail accomplished the nineteen hundred miles of distance in about seven days and a half. The system very soon became com-

paratively consolidated. The men suffered from fatigue, hunger, cold, heat, and especially from the attacks of Indians, but they persevered undauntedly; and the Pony Express might be considered as an established fact, so to remain till something better could be devised.

APRIL 10.

St Bademus, abbot, martyr, 376. B. Mechtildes, virgin and abbess, 14th century.

Born.—Hugo Grotius, historical and theological writer, 1583, *Delft*; Sir John Pringle, P.R.S., medical writer, 1707, *Stitchel, Roxburghshire*; William Hazlitt, miscellaneous writer, 1778, *Maidstone*.

Died.—Louis II., King of France, 'Le Bègue,' 879; William, Earl of Pembroke, 1630; Jean Lebeuf, French antiquarian writer, 1760; Prince Eugène of Savoy, 1736, *Vienna*; William Cheselden, anatomist, 1752; Admiral John Byron, 1786; Erasmus Darwin, poet, 1802; Lagrange, French mathematician, 1813, *Paris*; Paul Courier, French novelist, 1825; Cardinal Weld, 1837, *Rome*; Alexander Nasmyth, painter, 1840, *Edinburgh*.

INTRODUCTION OF THE ORGAN INTO A CHURCH AT COMPIÈGNE.

The only incident of religious history connected with the 10th of April that is noticed in a French work resembling the present, is the introduction by King Pepin, of France, of an organ into the Church of St Corneille at Compiègne, in the year 787—rather a minute fact to be so signalled; suggesting, however, the very considerable antiquity of the instrument in association with devotion. It may be remarked that the bagpipe is believed by the historians of music to be the basis of the organ: the organ is, in its primitive form, a bagpipe put into a more mechanical form, and furnished with a key-board. And this, again, suggests how odd it is that Scotland, which still preserves the bagpipe as a national instrument, should have all along, in her religious history, treated its descendant, the organ, with such contumely.

'When the Scots invaded the northern parts in 1640, a sergeant-major was billeted in one Mr Calvert's house, who was musically disposed, and had a portable organ for his pleasure in one of his chambers. The Scotchman, being of the preciser strain, and seeing the instrument open, "Art thou a kirkman?" says he. "No, sir," says he (Mr Calvert). "Then, what the de'il, man," returns the Scot, "dost thou with this same great box o' whistles here?"'—*Thom's Anecdotes and Traditions*.

THE 'TENTH OF APRIL.'

The name of this day is almost the only one applied in England, in the manner of our French neighbours, as a denomination for an event. And yet the event was, after all, one of slight ultimate importance. It was an apparent danger to the peace of the country, and one which was easily turned aside and neutralised.

The Parisian Revolution of February, 1848, had, as usual, stirred up and brought into violent action all the discontents of Europe. Even in happy England there was a discontent,

one involving certain sections of the working classes, and referring rather to certain speculative political claims than to any practical grievance. The Chartists, as they were called, deemed this a good opportunity for pressing their claims, and they resolved to do so with a demonstration of their numbers, thus hinting at the physical force which they possessed, but probably without any serious designs against the peace of their fellow-citizens. It was arranged that a mouster petition should be presented to parliament on the 10th of April, after being paraded through London by a procession. The Government, fearing that an outbreak of violence might take place, as had happened already at Manchester, Glasgow, and other large towns, assembled large bodies of troops, planted caannon in the neighbourhood of Westminster Bridge, and garrisoned the public offices; at the same time a vast number of the citizens were sworn in as special constables to patrol the streets. The Chartists met on Kennington Common, under the presidency of Mr Feargus O'Conuor, M.P., but their sense of the preparations made for the preservation of the peace, and a hint that they would not be allowed to cross the bridges in force, took away all hope of their intended demonstration. Their petition was quietly taken 'in three cabs' along Vauxhall Bridge, and presented to the House of Commons; the multitude dispersed; by four o'clock in the afternoon London had resumed its ordinary appearances, and the *Tenth of April* remained only a memory of an apprehended danger judiciously met and averted.

HOARDED TREASURES AND TREASURE TROVE.

The custom of hoarding or burying money belongs either to a rude or a disturbed state of society. Where matters are more systematic and peaceful, spare cash can always be made to yield interest. Sometimes, in past years, the hiding of treasure arose from a sort of diseased activity of the money-loving propensity. A singular case of this kind occurred in 1843. On the 10th of April, eight labourers were employed in grubbing up trees at Tufnell Park, near Highgate, and during their labours they lighted upon two jars containing nearly four hundred sovereigns in gold. They divided the money, and one of them spent his share; but soon afterwards Mr Tufnell, lord of the manor, claimed the whole of it as *treasure-trove*. There is a complex law, partly statute and partly civil, relating to the recovery of treasure for which the original owner does not apply; and according to the circumstances of the finding, the property belongs to the Crown, to the lord of the manor, or to the finder, or to two out of these three. While the eight labourers were anxiously puzzling over Mr Tufnell's claim, the real owner stepped forward, and told a singular tale. He was a brass-founder living in Clerkenwell; and being about nine months before under a temporary mental delusion, he one night took out two jars of sovereigns with him, and buried them in the field at Tufnell Park. Being able to prove these facts, his claim to the money was admitted. In other cases, the burying of treasure results not from

any delusion, but from the ignorance of the owner as to any better mode of securing it. In 1820, some labouring men, on clearing out a ditch at Bristol, found a number of guineas and half-guineas, and a silver snuff-box. Some time afterwards a sailor was seen to be disconsolately grubbing at that spot; and on inquiry, it appeared that, before starting on his last voyage, he had hidden behind the ditch his few worldly treasures, and had cut a notch in a tree to denote the spot.

Times of trouble, as we have said, led to frequent burials of treasure. In 1820, the foundations of some old houses were being removed at Exeter, and during the operations the workmen came upon a large collection of silver coins. They made merry and got drunk on the occasion, which attracted the attention of their employer; he caused more careful examination to be made, which resulted in the discovery of a second heap of coins, in a hole covered with a flat stone. The coins were of all dates, from Henry the Eighth to Charles the First or the Commonwealth; and it is not improbable that the disturbed state of affairs in the middle of the seventeenth century led to this mode of securing treasure. The French Revolution was fruitful in such proceedings, some of which came to light in our own country. In January 1836, at Great Stanmore, the rector's coachman and gardener found in a field on the side of a ditch, a heap of more than three hundred and sixty foreign gold coins, comprising louis d'ors, Napoleons, doubloons, and other kinds, worth on an average more than a guinea a-piece. The wife of one of the men told the rector's wife; and then came an inquiry—to whom did or should the treasure belong? As soon as the news became noised abroad, excited villagers rushed to the spot, and found stores far more rich than that which had set the place in commotion, amounting to nearly four thousand pounds in value. The finders naturally claimed it; then the rector claimed it, because it had been found on glebe-land; and then the Crown appointed a regular coroner's inquest (in accordance with an ancient usage) to investigate the whole matter. During the inquiry, some singular evidence came out. About twenty years earlier, when the downfall of Napoleon had led to the resuscitation of the Bourbons, a foreigner came to reside at Stanmore; he used to walk about the fields in an abstracted manner, and was naturally regarded by the villagers as a singular character. He suddenly left the place, and never re-appeared. Two years after the stranger's departure, another person came, searched about the fields, and made minute inquiries concerning some hidden wealth. He stated that the foreigner who had formerly lived at Stanmore was dead; that on his death-bed he had revealed the fact of having hidden considerable treasure; and that he had sketched a ground-plan of the field where the hoard lay. On comparing notes it appeared that, during the long intervening period, two ash-trees had been removed from the side of the ditch; that this change had prevented the foreigner's agent or heir from identifying the spot; and that a change in the watercourse had gradually washed away the earth and left the coins exposed. As a question of probability, we may conjecture that the

troubled state of France had something to do with this burying of the foreigner's treasure; as a question of law, the amount reverted to the Crown as *treasure-trove*.

BELLMAN'S VERSES.

In London, and probably other English cities, in the seventeenth century, the Bellman was the recognised term for what we would now call a night watchman, being derived from the hand-bell which the man carried in order to give alarm in case of fire. In the Luttrell Collection of Broad-sides (Brit. Mus.) is one dated 1683-4, entitled 'A Copy of Verses presented by Isaac Ragg, Bellman, to his Masters and Mistresses of Holbourn Division, in the parish of St Giles's-in-the-Fields.' It is headed by a wood-cut representing Isaac in professional accoutrements, a pointed pole in the left hand, and in the right

THE BELLMAN OF HOLBORN.

a bell, while his lantern hangs from his jacket in front. Below is a series of verses, on St Andrew's Day, King Charles the First's Birthday, St Thomas's Day, Christmas Day, St John's Day, Childermas Day, New Year's Day, on the thirtieth of January, &c., all of them very proper and very insufferable; the 'prologue' is, indeed, the only specimen worth giving here, being the expression of Mr Ragg's official duty; it is as follows:

'Time, Master, calls your bellman to his task,
To see your doors and windows are all fast,
And that no villany or foul crime be done
To you or yours in absence of the sun.
If any base lurker I do meet,
In private alley or in open street,
You shall have warning by my timely call,
And so God bless you and give rest to all.'

In a similar, but unadorned broadside, dated

1666, Thomas Law, bellman, greets his masters of 'St Giles, Cripplegate, within the Freedom,' in twenty-three dull stanzas, of which the last may be subjoined:

'No sooner hath St Andrew crowned November,
But Boreas from the North brings cold December,
And I have often heard a many say,
He brings the winter month Newcastle way;
For comfort here of poor distressed souls,
Would he had with him brought a fleet of coals!'

It seems to have been customary for the bellman to go about at a certain season of the year, probably Christmas, amongst the householders of his district, giving each a copy of his broadside—firing a broadside at each, as it were—and expecting from each in return some small gratuity, as an addition to his ordinary salary. The execrable character of his poetry is indicated by the contempt with which the wits speak of 'bellman's verses.'

Robert Herrick has a little poem giving his friends a blessing in the form of the nightly addresses of

THE BELLMAN.

From noise of scare fires rest ye free,
From murders benedictie;
From all mischances that may fright
Your pleasing slumbers in the night;
Mercie secure ye all, and keep
The goblin from ye, while ye sleep.
Past one o'clock, and almost two,
My masters all, 'good day to you.'

APRIL 11.

St Leo the Great, Pope, 461. St Antipas, martyr. St Maccai, abbot, 5th century (?). St Aid, abbot in Ireland. St Guthlac, hermit, patron of the abbey of Croyland, 716.

ST GUTHLAC.

Of St Guthlac, one of the most interesting of the old Saxon anchorets, we have a good biography by a nearly contemporary monk named Felix. From this it appears that the saint was at first devoted to warlike enterprises, but after a time was moved to devote himself wholly to a contemplative religious life in Croyland Isle in the fen countries. Here he performed, as usual, many miracles, was tortured by devils, and had many blessed experiences; at length, on the 11th of April 716, he was favoured with a quiet and easy passage to a higher state of existence, at the age of forty-one.

There is much that is admirable in this biography, and the character it ascribes to St Guthlac. The account contains no trace of those monstrous asceticisms which so often disgust us. He wore skins instead of linen, and had one daily meal only, of barley-bread and water; but no self-inflictions are recorded, only abstemious habits and incessant devotion. 'The blessed man Guthlac was a chosen man in divine deeds, and a treasure of all wisdom; and he was steadfast in his duties, as also he was earnestly intent on Christ's service, so that never was aught else in his mouth but Christ's praise, nor

in his heart but virtue, nor in his mind but peace and love and pity; nor did any man ever see him angry nor slothful to Christ's service: but one might ever perceive in his countenance love and peace; and evermore sweetness was in his temper, and wisdom in his breast, and there was so much cheerfulness in him, that he always appeared alike to acquaintances and to strangers.' We must confess,—not a revolting character.

Monk Felix describes the fen wilderness: 'There are immense marshes, now a black pool of water, now foul-running streams, and also many islands, and reeds, and hillocks, and thickets.' Doubtless, a true description. The villages were mostly built on beds of gravel, which afforded comparative security.

Ethelbald founded an abbey in Croyland Isle, St Guthlac's retreat, which was destroyed by the Danes when they sacked Ely and Peterborough. It was rebuilt, and destroyed by fire; and again rebuilt. The monks in after time got to be somewhat ill-famed for drunkenness, revellings, and such like.

Croyland Isle, like the Isle of Ely, is now no more. Of the four streams which enclosed it, the drainage has removed all trace of three, changing them to quiet pastures and rich farming land; and the Welland itself now runs wide of the village, in a new channel. The curious old triangular bridge stands high and dry in the centre of the village square, lorn of its three streams; and on it sits a robed figure in stone, with a great stone in its hand, supposed to be, amongst other things, a loaf. The modern church is built out of part of the old abbey, and a beautiful portion of ruin remains, though the restorers, alas! are at it. We ourselves can testify to the beautiful peace of those Croyland fens, even at this day; and they must have been much more beautiful in the saint's time.

Born.—Christopher Smart, poet, 1722, *Shepburne in Kent*; David Hamilton, architect, 1768, *Glasgow*; Marshal Lannes, Duke of Montebello, 1769, *Lectoure*; George Canning, statesman, 1770, *London*.

Died.—Cardinal Beaufort, 1447, *Winchester*; Gaston de Foix, French warrior, 1512, *Ravenna*; Pope Gregory XIII., 1585; Stanislaus Poniatowski, last king of Poland, 1798, *St Petersburg*; John Galt, novelist and miscellaneous writer, 1839.

CARDINAL BEAUFORT.

Henry of Beaufort, who was a very good example of the political prelates of our papal middle ages, and is well known in the annals of England during the fifteenth century, was the second son of John of Gaunt, by that prince's third wife, the Lady Catherine Swynford, and he was therefore half-brother of King Henry IV. He took his name from the castle of Beaufort, in France, where he was born. His birth occurred before the marriage of his parents, but he was legitimized in the 20th of Richard II., along with his brothers, the eldest of whom was Marquis of Dorset and Lord High Admiral of England, and the other became distinguished as a warrior, and was created Duke of Exeter by Henry V. From the former the present ducal house of Beaufort claims descent. Henry of Beaufort was thus

allied by blood both with the crown and with the most powerful men of the day. He studied at Aix-la-Chapelle and at Oxford, and appears to have been well versed in the civil and canon laws. In 1397, and therefore immediately after his legitimation, he was intruded by Pope Boniface IX. into the bishopric of Lincoln, and the new prelate appears to have been in favour with Richard II., for he accompanied that prince in his last expedition into Ireland, and was with him on his return when he met Beaufort's half-brother, Henry of Lancaster, and became his prisoner.

No doubt Bishop Beaufort stood high in the favour of his brother when the latter ascended the throne. On the death of William of Wickham, in 1405, he was translated from the see of Lincoln to that of Winchester, which he continued to hold during the rest of his life. It is recorded of him, that when Henry V., obliged to obtain large sums for his wars, meditated a heavy taxation of the ecclesiastical body, the Bishop of Winchester did not oppose his nephew's demand, but he bought off the danger by lending the king, out of his own great wealth, the sum of twenty thousand pounds. That his power in England was great, and that he was not unpopular, was proved by the circumstance that on the death of Henry V. he was chosen by the Parliament to be, with the Earl of Warwick, guardian of the infant prince, who had now become Henry VI. He seems to have taken an active part in the government from the first, but he differed in many of his views from the Duke of Gloucester, and the disagreement rose to such a height that the bishop wrote to the Duke of Bedford to call him from France to interfere, and his presence alone effected a reconciliation. Nor was this reconciliation easy, for though the regent Bedford arrived in London on the 10th of January, private negotiations produced so little effect that, after several months' discussion, it was found necessary to submit the matter to a parliament, the members of which were forbidden to appear in arms, lest it might end in a fight. 'The twentieth of February,' says Stow, 'began a great council at St Albans, which was afterwarde rejoined to Northampton, but, for that no due conclusion might be made, on the 15 of March was called a parliament at Leicester, the which endured till the 25 day of June. This was called the parliament of bates, because men being forbidden to bring swords or other weapons, brought great bates and staves on their neckes, and when those weapons were inhibited them, they took stones and plomets of lead. During this parliament, the variance betwixt the two lords was debated, insomuch that the Duke of Gloucester put a bill of complaint against the byshop, containing six articles, all which articles were by the bishop sufficiently answered; and finally, by the counsel of the lord regent, all the matters of variance betweene the sayde two lords were put to the examination and judgement of certain lords of the parliament.' The bishop, however, seems not to have been fully satisfied, for soon afterwards he resigned his office of Lord Chancellor.

Immediately after this reconciliation, on the 23rd of June 1426, Bishop Beaufort's ambition

was gratified by his election at Rome to the dignity of a cardinal (of St Eusebius), and on the Duke of Bedford's return to France in the February of the following year he accompanied him to Calais to receive there the cardinal's hat. In the autumn of 1429, Cardinal Beaufort was appointed by the Pope the papal legate in the army which he was sending against the Bohemian heretics, who at the same time enjoined him to bring with him out of England a body of soldiers to assist in the expedition, for the raising of which he authorised him to levy a tax of one-tenth on the incomes of the spirituality in England. Cardinal Beaufort raised the money, collected upwards of four thousand English soldiers, and was on his way to the Continent, when he received a message from the Regent Bedford, earnestly requesting him to carry him whatever troops he could to reinforce him in Paris. The cardinal's patriotism overcame his devotion to the Pope, and he proceeded with his soldiers to Paris, where he was gladly received, but, after remaining no long while there, the cardinal continued his journey to Bohemia. He soon, however, returned thence to England, having, as far as is known, performed no act worth recording.

Cardinal Beaufort continued to take an active part in political affairs, and he appears to have been generally considered as a friend to reforms. He was popular, because he seems to have steadily supported the French policy of Henry V., and to have been opposed to all concessions to the enemy. The remarkable political poem entitled the *Libel of English Policy*, written in the year 1436, was dedicated to him. Yet he acted in concert with the Duke of Suffolk in concluding the truce of 1444, and in bringing about the marriage of the young King of England with Margaret of Anjou, which was the fertile source of so many troubles in England. From this time the cardinal's political party became identified with Suffolk's party, that is, with the party of the queen. Beaufort was himself perhaps falling into dotage, for he was now an octogenarian, and he did not long survive this event, for he died in his episcopal palace of Walvesey, on the 11th of April 1447. He had ruled the see of Winchester during the long period of nearly forty-three years. Cardinal Beaufort was usually considered to be a selfish, hard, and unfeeling man, yet it must be remembered to his credit that, when Joan d'Arc was brought into the market-place of Rouen for execution, Beaufort, who sat on a scaffold with the prelates of France, rose from his seat in tears, and set the example to the other bishops of leaving the place. He was certainly ambitious, for at the advanced age of eighty he still cherished the hope of securing his election to the papacy.

HOCK-TIDE.

A fortnight after Easter our forefathers celebrated a popular anniversary, the origin and meaning of which has been the subject of some dispute. It was called Hoke-tide, or Hock-tide, and occupied two days, the Monday and Tuesday following the second Sunday after Easter, though

the Tuesday was considered the principal day. On this day it was the custom for the women to go out into the streets and roads with cords, and stop and bind all those of the other sex they met, holding them till they purchased their release by a small contribution of money. On the Monday, the men had proceeded in the same way towards the women. The meaning of the word *hoke*, or *hock*, seems to be totally unknown, and none of the derivations yet proposed seem to be deserving of our consideration. The custom may be traced, by its name at least, as far back as the thirteenth century, and appears to have prevailed in all parts of England, but it became obsolete early in the last century. At Coventry, which was a great place for pageantry, there was a play or pageant attached to the ceremony, which, under the title of 'The old Coventry play of Hock Tuesday,' was performed before Queen Elizabeth during her visit to Kenilworth, in July 1575. It represented a series of combats between the English and Danish forces, in which twice the Danes had the better, but at last, by the arrival of the Saxon women to assist their countrymen, the Danes were overcome, and many of them were led captive in triumph by the women. Queen Elizabeth 'laughed well' at this play, and is said to have been so much pleased with it, that she gave the actors two bucks and five marks in money. The usual performance of this play had been suppressed in Coventry soon after the Reformation, on account of the scenes of riot which it occasioned.

It will be seen that this Coventry play was founded on the statement which had found a place in some of our chroniclers as far back as the fourteenth century, that these games of Hock-tide were intended to commemorate the massacre of the Danes on St Brice's day, 1002; while others, alleging the fact that St Brice's day is the 13th of November, suppose it to commemorate the rejoicings which followed the death of Hardicanute, and the accession of Edward the Confessor, when the country was delivered from Danish tyranny. Others, however, and probably with more reason, think that these are both erroneous explanations; and this opinion is strongly supported by the fact that Hock Tuesday is not a fixed day, but a moveable festival, and dependent on the great Anglo-Saxon pagan festival of Easter, like the similar ceremony of heaving, still practised on the borders of Wales on Easter Monday and Tuesday. Such old pagan ceremonies were preserved among the Anglo-Saxons long after they became Christians, but their real meaning was gradually forgotten, and stories and legends, like this of the Danes, afterwards invented to explain them. It may also be regarded as a confirmation of the belief, that this festival is the representation of some feast connected with the pagan superstitions of our Saxon forefathers, that the money which was collected was given to the church, and was usually applied to the reparation of the church buildings. We can hardly understand why a collection of money should be thus made in commemoration of the overthrow of the Danish influence, but we can easily imagine how, when the festival was continued

by the Saxons as Christians, what had been an offering to some one of the pagan gods might be turned into an offering to the church. The entries on this subject in the old churchwardens' registers of many of our parishes, not only shew how generally the custom prevailed, but to what an extent the middle classes of society took part in it. In Reading these entries go back to a rather remote date, and mention collections by men as well as women while they seem to shew that there the women, 'hocked,' as the phrase was, on the Monday, and the men on the Tuesday. In the registers of the parish of St Laurence, under the year 1499, we have—

'Item, received of Hock money gaderyd of women, xxxs.

Item, received of Hok money gaderyd of men, iijs.

And, in the parish of St Giles, under the date 1535—

'Hoc money gatheryd by the wyves (women), xiijs. ixd.'

And, in St Mary's parish, under the year 1559—

'Hoctyde money, the mens gatheryng, iijs. The womens, xijs.'

Out of this money, it would appear that the 'wyves,' who always gained most, were in Reading treated with a supper, for we find in the churchwardens' accounts of St Giles's parish, under the year 1526, this entry—

'Paid for the wyves supper at Hoctyde, xxiiij*d*.'

In the year 1450, a bishop of Worcester inhibited these 'Hoctyde' practices, on the ground that they led to all sorts of dissipation and licentiousness. It may be added that it appears, from the entries in the churchwardens' registers of various parishes, that in the fifteenth and sixteenth centuries Hock-tide was called in London Hob-tide.

APRIL 12.

St Victor, of Braga, martyr. St Julius, Pope, 352. St Sahas, the Goth, martyr, 372. St Zeno, bishop of Verona, 380.

Born.—Edward Bird, eminent 'genre' painter, 1772, *Wolverhampton*; Henry Clay, American statesman, 1777; John George, Earl of Durham, statesman, 1792, *Durham*.

Died.—Seneca, Roman philosopher, ordered to death by Nero, 65, *Rome*; Jacques-Benique Bossuet, Bishop of Condom, orator, philosopher, and historian, 1704, *Meaux*; Dr George Cheyne, eminent physician, 1742, *Bath*; William Kent, painter, sculptor, and architect, 1748, *Burlington House, Chiswick*; Pietro Metastasio, Italian poet, 1782, *Vienna*; Dr Edward Young, poet, 1765, *Welwyn*.

LUCIUS ANNÆUS SENECA.

Lucius Annæus Seneca, the Roman philosopher, was born B.C. 6. His life may be considered as an ineffectual protest against the corruption of his time. At length the tyranny and excesses of the emperors were indulged in unchecked, where only a few opposed what the majority were not sorry to reap the fruits of.

Seneca was educated in all that was to be

learned, and became a pleader at the bar. This vocation he had to abandon through the jealousy of Caligula, who deemed himself an able orator. Nevertheless, the emperor took occasion to banish him to Corsica; where he remained, till recalled by Agrippina to educate her son Nero. After being Nero's tutor, he became his minister, and endeavoured to restrain his excesses. Suspecting danger, he asked to be allowed to surrender to his master all his wealth, and to go into studious retirement. But the tyrant refused this request; and taking hold of the first pretext, ordered him to put an end to himself. This he did like a philosopher, before his wife and friends. First his veins were opened. Then he took a draught of poison. But still dying slowly, he was put into a warm bath; and at last, it is said, suffocated in a stove.

His manner of life was abstemious and noble. His philosophy was somewhat eclectic — a fusion of all the existing systems, though the stoical predominated. His style was somewhat florid and ostentatious, yet both the style and the philosophy are frequently admirable, and often filled with such a spirit as we are apt to think Christianity alone has inculcated.

We subjoin, in illustration, an extract from his essay *On Anger*, which is a fair specimen of this spirit:—'Verily, what reason is there for hating those who fall into the hands of the law? or into sins of any kind? It is not the mark of a wise man to hate those that err: indeed, if he does, he himself should hate himself. Let him think how much of what he does is base, how many of his actions call for pardon. Will he hate himself then? Yet a just judge does not give one decision in his own case, another in a stranger's. No one is found who can absolve himself. Whoever says he is innocent, looks at the proof rather than his conscience. How much more human is it to shew a mild, kind spirit to those who do wrong; not to drive them headlong, but to draw them back! If a man wander out of his path through ignorance of the country, it is better to set him right again, than to urge him on further.' (*Seneca, De Ira*, i. 14.)

DR GEORGE CHEYNE.

Dr George Cheyne, a physician of considerable eminence in his day, was born in Aberdeenshire, and educated at Edinburgh under the celebrated Doctor Pitcairne. After a youth passed in severe study and prudent abstinence, Cheyne came to London, with the determination of entering on practice. On his first arrival, being a stranger, and having to make friends, he was compelled to conform to the general style of life, which was to be described as free. The consequence of the sudden change from abstemiousness to epicurean indulgence, was, that Cheyne increased daily in bulk, swelling to such an enormous size, that he weighed no less than thirty-two stones; and was compelled to have the whole side of his carriage made open to receive him. With this increase of size came its natural concomitants, shortness of breath, habitual lethargy, and a crowd of nervous and scorbutic symptoms. In this deplorable condition, having vainly exhausted the powers of medicine, he determined to try a milk

and vegetable diet, the good effects of which speedily appeared. His size was reduced almost to a third; and he recovered his strength, activity, and cheerfulness, with the perfect use of all his faculties. And by a regular adherence to a milk and vegetable regimen, he lived to a good age, dying at Bath in his seventy-second year. He wrote several works that were well received by the medical and scientific world, two of which—*An Essay on Health and Long Life*, and *The English Malady, or a Treatise of Nervous Diseases*,—contained the results of his own experience, and, as may be supposed, met with considerable ridicule from the free-living doctors and critics of the day. On the publication of the first work, Winter, a well-known physician of the period, addressed the following epigram to Cheyne:

'Tell me from whom, fat-headed Scot,
Thou didst thy system learn;
From Hippocrate thou hadst it not,
Nor Celsus, nor Pitcairne.

Suppose we own that milk is good,
And say the same of grass;
The one for babes is only food,
The other for an ass.

Doctor! one new prescription try,
(A friend's advice forgive);
Eat grass, reduce thyself, and die,
Thy patients then may live.'

To which Cheyne made the following reply:

'My system, doctor, is my own,
No tutor I pretend;
My blunders hurt myself alone,
But yours your dearest friend.

Were you to milk and straw confined,
Thrice happy might you be;
Perhaps you might regain your mind,
And from your wit get free.

I can't your kind prescription try,
But heartily forgive;
'Tis natural you should wish me die,
That you yourself may live.'

KENT AND HIS ST CLEMENT'S ALTAR-PIECE.

William Kent was a distinguished mediocrity in a mediocre time. The favour of the Earl of Burlington and some other men of rank, enabled him, without genius or acquired skill, to realize good returns, first for pictures, afterwards as an architect. It is fully admitted that he was deficient in all the qualities of the artist, that his portraits were without likeness, his ceilings and staircases coarse caricatures of Olympus—that he was, in short, wholly a bad artist. And yet, in a worldly point of view, Kent, to the discredit of the age, was anything but a failure.

Amongst a few pictures which Kent had interest to get bought and introduced into London churches, was one which the vestry of St Clement's in the Strand—Johnson's church—had unhappily placed above their communion-table. It was such a muddle, in point of both design and execution, that nobody could pretend to say what was the meaning of it. The wags, at length getting scent of it, began to lay bets as to what it was all about; some professing to believe one thing and some another. The Bishop of London became so scandalised at what was

going on, that—probably feeling as much bewildered as anybody—he ordered the picture to be taken down.

Then came in Wag-in-chief, William Hogarth, professing to clear up the mystery, or at least to solve several dubious points in it, by an engraving representing the picture; which engraving

being placed under the piece, might, he said, enable the vestry to restore it to its place, and so save 'the sixty pounds which they wisely gave for it.' On this engraving he had letters with references below for explanation. Thus, said he, 'No. 1 is not the Pretender's wife and children, as our weak brethren imagine. No. 2 is not St

KENT'S DUBIOUS ALTAR-PIECE.

Cecilia, as the connoisseurs think, but a choir of angels playing in concert.' The other explanations betray the fine secretive humour of Hogarth: 'A, an organ; B, an angel playing on it. C, the shortest joint of the arm; D, the longest joint. E, an angel tuning a harp; F, the inside of his

leg, but whether right or left is not yet discovered. G, a hand playing on a lute; H, the other leg, judiciously omitted to make room for the harp. J and K, smaller angels, as appears from their wings.'

Kent must have writhed under this play upon

his precious work ; but the sixty pounds secured in his pocket would doubtless be a sort of consolation.

YOUNG'S NARCISSA.

The 'Third Night' of Young's *Complaint* is entitled 'Narcissa,' from its being dedicated to the sad history of the early death of a beautiful lady, thus poetically designated by the author. Whatever doubts may exist with respect to the reality or personal identity of the other characters noticed in the *Night Thoughts*, there can be none whatever as regards Narcissa. She was the daughter of Young's wife by her first husband, Colonel Lee. When scarcely seventeen years of age, she was married to Mr Henry Temple, son of the then Lord Palmerston.* Soon afterwards being attacked by consumption, she was taken by Young to the south of France in hopes of a change for the better ; but she died there about a year after her marriage, and Dr Johnson, in his *Lives of the Poets*, tells us that 'her funeral was attended with the difficulties painted in such animated colours in *Night the Third.*' Young's words in relation to the burial of Narcissa, eliminating, for brevity's sake, some extraneous and redundant lines, are as follows :

'While nature melted, superstition raved ;
That mourned the dead ; and this denied a grave.
For oh ! the curst ungodliness of zeal !
While sinful flesh relented, spirit nursed
In blind infallibility's embrace,
Denied the charity of dust to spread
O'er dust ! a charity their dogs enjoy.
What could I do ? What succour ? What re-
source ?

With pious sacrilege a grave I stole ;
With impious piety that grave I wronged ;
Short in my duty ; coward in my grief !
More like her murderer than friend, I crept
With soft suspended step, and muffled deep
In midnight darkness, whispered my last sigh.
I whispered what should echo through their
realms,

Nor writ her name, whose tomb should pierce the
skies.'

All Young's biographers have told the same story, from Johnson down to the last edition of the *Night Thoughts*, edited by Mr Gilfillan, who, speaking of Narcissa, says, 'her remains were brutally denied sepulture as the dust of a Protestant.'

Le Tournour translated the *Night Thoughts* into French about 1770, and, strange to say, the work soon became exceedingly popular in France, more so probably than ever it has been in England. Naturally enough, then, curiosity became excited with respect to where the unfortunate Narcissa was buried, and it was soon discovered that she had been interred in the Botanic Garden of Montpellier. An old gate-keeper of the garden, named Mercier, confessed that many years previously he had assisted to bury an English lady in a hollow, waste spot of the garden. As he told the story, an English clergyman came to him and begged that he would bury a lady ; but he refused, until the Englishman, with tears in his eyes, said that she was his only

* By a second wife, grandfather of the present Premier (1862).

daughter ; on hearing this, he (the gate-keeper), being a father himself, consented. Accordingly, the Englishman brought the dead body on his shoulders, his eyes 'raining' tears, to the garden at midnight, and he there and then buried the corpse. The dismal scene has been painted by a French artist of celebrity ; and there cannot be many persons who have not seen the engravings from that picture, which are sold as *souvenirs* of Montpellier. About the time this confession was made, Professor Gouan, an eminent botanist, was writing a work on the plants in the garden, into which he introduced the above story, thus giving it a sort of scientific authority ; and consequently the grave of Narcissa became one of the treasures of the garden, and one of the leading lions of Montpellier. A writer in the *Evangelical Magazine* of 1797 gives an account of a visit to the garden, and a conversation with one Bannal, who had succeeded Mercier in his office, and who had often heard the sad story of the burial of Narcissa from Mercier's lips. Subsequently, Talma, the tragedian, was so profoundly impressed with the story, that he commenced a subscription to erect a magnificent tomb to the memory of the unfortunate Narcissa ; but as the days of bigotry in matters of sepulture had nearly passed away, it was thought better to erect a simple monument, inscribed, as we learn from Murray's *Handbook*, with the words :

'PLACANDIS NARCISSÆ MANIBUS.'

The *Handbook* adding, 'She was buried here at a time when the atrocious laws which accompanied the Revocation of Nantes, backed by the superstition of a fanatic populace, denied Christian burial to Protestants.'

Strange to say, this striking story is almost wholly devoid of truth. Narcissa never was at Montpellier ; she died and was buried at Lyons. That she died at Lyons, we know from Mr Herbert Crofts's account of Young, published by Dr Johnson ; that she was buried there, we know by her burial registry and her tombstone, both of which are yet in existence. And by these we also learn that Young's 'animated' account of her funeral in the *Night Thoughts* is simply untrue. She was not denied a grave :

'Denied the charity of dust to spread
O'er dust ;'

nor did he steal a grave, as he asserts, but bought and paid for it. Her name was not left unwrit, as her tombstone still testifies.

The central square of the Hôtel de Dieu at Lyons was long used as a burial-place for Protestants ; but the alteration in the laws at the time of the great Revolution doing away with the necessity of having separate burial-places for different religions, the central square was converted into a medical garden for the use of the hospital. The Protestants of Lyons being of the poorer class, there were few memorials to remove when the ancient burying-ground was made into a garden. The principal one, however, consisting of a large slab of black marble, was set up against a wall, close by an old Spanish mulberry-tree. About twenty years ago, the increasing growth of this tree necessitated the removal of the marble slab, when it was found

that the side that had been placed against the wall contained a Latin inscription to the memory of Narcissa. The inscription, which is too long to be quoted here, leaves no doubt upon the matter. It mentions the names of her father and mother, her connexion with the noble family of Lichfield, her descent from Charles II., and the name of her husband, and concludes by stating that she died on the 8th of October 1736, aged eighteen years.

On discovering this inscription, M. Ozanam, the director of the Hôtel de Dieu, searched the registry of Protestant burial, still preserved in the Hôtel de Ville of Lyons, and found an entry, of which the following is a correct translation :

'Madam Elizabeth Lee, daughter of Colonel Lee, aged about eighteen years, wife of Henry Temple, English by birth, was buried at the Hôtel de Dieu at Lyons, in the cemetery of persons of the Reformed religion of the Swiss nation, the 12th of October 1736, at eleven o'clock at night, by order of the Prévôt of the merchants. Received 729 livres, 12 sols.

'Signed, PAPA, Priest and Treasurer.'

From this document, the authenticity of which is indisputable, we learn the utter untruthfulness of Young's recital. True, Narcissa was buried at night, and most probably without any religious service, and a considerable sum charged for the privilege of interment, but she was not denied the 'charity their dogs enjoy.' Calculating according to the average rate of exchange at the period, 729 livres would amount to thirty-five pounds sterling. Was it this sum that excited a poetical indignation so strong as to overstep the bounds of veracity? We could grant the excuse of poetical licence, had not Young declared in his preface that the poem 'was real, not fictitious.' The subject is not a pleasing one, and we need not carry it any further; but may conclude in the words of Mr Cecil, who, alluding to Young's renunciation of the world in his writings, when he was eagerly hunting for church preferment, says: 'Young is, of all other men, one of the most striking examples of the sad disunion of piety from truth.'

RODNEY'S NAVAL VICTORY.

The victory achieved by Admiral Rodney over the French fleet in the West Indies, on the 12th of April 1782, was brilliant in itself, but chiefly remarkable for the service which it rendered to Britain at a critical time. The English military force had been baffled in America; France, Spain, and Holland were assailing her in the weakness to which her contest with the colonies had reduced her; the very coasts of Britain were insulted by the cruisers of her many enemies. There was at the best before her a humiliating peace. Rodney's victory came to hold up her drooping head, and enable her to come respectably out of the war.

The French fleet, consisting of thirty vessels, under Count de Grasse, was placed at Martinique. It designed to make a junction with the Spanish fleet, that the two might fall with full force upon Jamaica. It became of the first importance for the British fleet under Sir George Rodney to prevent this junction. With a somewhat greater

number of vessels, but less aggregate weight of metal, he followed the French for three or four days, fighting a partial and inconclusive action on the 9th of April; finally bringing it to a general action on the morning of the 12th, in a basin of water bounded by the islands of Guadaloupe, Dominique, Saintes, and Marigalante.

The battle began at seven in the morning, and consisted throughout the day of a close hand-to-hand fight, in which the English ships poured destruction upon the largely manned vessels of the enemy. A little after noon, the English admiral made a movement of a novel character; with four vessels he broke through the enemy's line near the centre, and doubled back upon it, thus assailing it on both sides, and throwing all into confusion. The French admiral's vessel, the *Ville de Paris*, was a superb one of 110 guns, a present from the French capital to Louis XV. at the close of the preceding war. An English 74, the *Canada*, grappled with it, and in a two-hours' combat reduced it nearly to a wreck. It finally surrendered to Sir Samuel Hood, commander of the English van, when only two men besides the admiral were left unhurt. The whole affair was a series of hand-to-hand conflicts, in which the English displayed all their characteristic audacity and perseverance. When evening came with the abruptness peculiar to the tropical regions, the French obtained some advantage from it, as it permitted some of their vessels to escape. Seven, however, remained in the hands of the victors. The killed and wounded on that side reached the astounding amount of nine thousand, while that of the English was under one thousand. Rodney also had the glory of carrying the French commander as his prisoner to London.

The British nation, on receiving intelligence of this great victory, broke out in a tumult of joy which had scarcely had a precedent since the acquittal of the seven bishops. Rodney, who previously had been in rather depressed personal circumstances, was made a peer, and pensioned.

APRIL 13.

St Hermengild, martyr, 586. St Guinoch, of Scotland, 9th century. St Caradoc, priest and martyr, 1124.

Born.—Thomas Wentworth, Earl of Strafford, statesman, 1593, *Chancery-lane, London*; Jean Pierre Crousaz, Swiss divine, philosopher, and mathematician, 1663, *Lausanne*; Frederick North, Earl of Guildford, statesman, 1732; Philip Louis, Duke of Orleans, 1747, *St Cloud*; Dr Thomas Beddoes, writer on medicine and natural history, 1760.

Died.—Henry, Duke of Rohan, French military commander, 1638, *Switzerland*; Charles Leslie, controversialist, 1722, *Glaslough*; Christopher Pitt, translator of Virgil, 1748, *Blandford*; George Frederick Handel, musical composer, 1759; Dr Charles Burney, musician, and author of *History of Music*, 1814, *Chelsea*; Captain Hugh Clapperton, traveller, 1827; Sir Henry de la Beche, geologist, 1855; Sydney Lady Morgan, miscellaneous writer, 1859, *London*.

SIR HENRY DE LA BECHE.

The chief of the Geological Survey of England and Wales, who died at the too early age of fifty-

nine, was one of those men who, using moderate faculties with diligence, and under the guidance of sound common sense, prove more serviceable as examples than the most brilliant geniuses. His natural destiny was the half-idle, self-indulgent life of a man of fortune; but his active mind being early attracted to the rising science of geology, he was saved for a better fate. With ceaseless assiduity he explored the surface of the south-western province of England, completing its survey in a great measure at his own expense. He employed intervals in composing works expository of the science, all marked by wonderful clearness and a strong practical bearing. Finally, when in office as chief of the survey, he was the means of founding a mineralogical museum and school in London, which has proved of the greatest service in promoting a knowledge of the science, and which forms the most suitable monument to his memory.

THE EDICT OF NANTES.

With a view to the conclusion of a series of troubles which had harassed his kingdom for several years, Henry IV. of France came to an agreement with the Protestant section of his subjects, which was embodied in an edict, signed by him at Nantes, April 13, 1598. By it, Protestant lords *de fief haut-justicier* were entitled to have the full exercise of their religion in their houses; lords *sans haute-justice* could have thirty persons present at their devotions. The exercise of the Reformed religion was permitted in all places which were under the jurisdiction of a parliament. The Calvinists could, without any petition to superiors, print their books in all places where their religion was permitted [some parts of the kingdom were, in deference to particular treaties, exempted from the edict]. What was most important, Protestants were made competent for any office or dignity in the state. Considering the prejudices of the bulk of the French people, it is wonderful that the Protestants obtained so much on this occasion. After all, Henry was not able to get the edict registered till next year, when the Pope's legate had quitted the kingdom.

KING CHARLES'S STATUE AT CHARING-CROSS.

The bronze statue at Charing-cross has been the subject of more vicissitudes, and has attracted a larger amount of public attention, than is usual among our statues. In 1810, the newspapers announced that 'On Friday night (April 13th), the sword, buckler, and straps fell from the equestrian statue of King Charles the First at Charing-cross. The appendages, similar to the statue, are of copper [bronze?]. The sword, &c., were picked up by a man of the name of Moxon, a porter, belonging to the Golden Cross Hotel, who deposited them in the care of Mr Eyre, trunk-maker, in whose possession they remain till that gentleman receives instructions from the Board of Green Cloth at St James's Palace relative to their reinstatement.'

Something stranger than this happened to the statue in earlier times. It may be here stated that this statue is regarded as one of the finest

in London. It was the work of Hubert le Sœur, a pupil of the celebrated John of Bologna. Invited to this country by King Charles, he modelled and cast the statue for the Earl of Arundel, the enlightened collector of the Arundelian marbles. The statue seems to have been placed at Charing-cross at once; for immediately after the death of the king, the Parliament ordered it to be taken down, broken to pieces, and sold. It was bought by a brazier in Holborn, named John River. The brazier having an eye for taste, or, possibly, an eye for his own future profit, contrived to evade one of the conditions of the bargain; the statue, instead of being broken up, was quietly buried uninjured in his garden, while some broken pieces of metal were produced as a blind to the Parliament. River was, unquestionably, a fellow alive to the tricks of trade; for he made a great number of bronze handles for knives and forks, and sold them as having been made from the fragments of the statue; they were bought by the loyalists as a mark of affection to the deceased king, and by the republicans as a memorial of their triumph. When Charles the Second returned, the statue was brought from its hiding-place, repurchased, and set up again at Charing-cross, where it was for a long time regarded as a kind of party memorial. While the scaffolding was up for its re-erection, Andrew Marvell wrote some sarcastic stanzas, of which the following was one:

'To comfort the heart of the poor Cavalier,

The late King on horseback is here to be shewn.

What ado with your kings and your statues is here!

Have we not had enough, pray, already of one?'

About the year 1670, Sir Robert Vyner, merchant and Lord Mayor, set up an equestrian statue of Charles the Second at Stocks Market, the site of the present Mansion House; and as there was some reason to believe that Vyner had venal reasons for flattering the existing monarch, Andrew Marvell took advantage of the opportunity to make an onslaught on both the monarchs at once. He produced a rhymed dialogue for the two bronze horses: the Charing-cross horse reviled the profligacy of Charles the Second; while the Stocks Market horse retaliated by abusing Charles the First for his despotism. Among the bitter things said by the Charing-cross horse, was:

'That he should be styled Defender of the Faith,

Who believes not a word what the Word of God saith!'

and

'Though he changed his religion, I hope he's so civil,

Not to think his own father is gone to the devil!'

And when the Stocks Market horse launched out at Charles the First for having fought desperately for 'the surplice, lawn sleeves, the cross, and the mitre,' the Charing-cross horse retorted with a sneer—

'Thy king will ne'er fight unless for his queans.'

In much more recent days, the Charing-cross statue became an object of archaeological solicitude on other grounds. In *Notes and Queries*

for 1850 (p. 18), Mr Planché asked, 'When did the *real* sword of Charles the First's time, which but a few years back hung at the side of that monarch's equestrian figure at Charing-cross, disappear; and what has become of it?' This question was put, at my suggestion, to the official authorities by the Secretary of the British Archaeological Association; but no information could be obtained on the subject. That the sword *was* a real one of that period, I state upon the authority of my learned friend, the late Sir Samuel Meyrick, who had ascertained the fact, and pointed out to me its loss.' To this query Mr Street shortly afterwards replied, 'The sword disappeared about the time of the coronation of her present majesty, when some scaffolding was erected about the statue, which afforded great facilities for removing the rapier (for such it was); and I always understood that it found its way, by some means or other, to the Museum (so called) of the notorious Captain D.; where, in company with the wand of the Great Wizard of the North, and other well-known articles, it was carefully labelled and numbered, and a little account appended of the circumstance of its acquisition and removal.' The editor of *Notes and Queries* pointedly added, 'The age of chivalry is certainly past; otherwise the idea of *disarming a statue* would never have entered the head of any man of arms even in his most frolicsome of moods.' We may conclude, then, that the *present* sword of this remarkable statue is a modern substitute.

RUSIES AND RUSH-BEARING.

In ages long before the luxury of carpets was known in England, the floors of houses were covered with a much more homely material.

When William the Conqueror invested his favourites with some of the Aylesbury lands, it was under the tenure of providing 'straw for his bed-chamber; three eels for his use in winter, and in summer straw, *rushes*, and two green geese thrice every year.'

It is true that in the romance of *Yvain and Gawin*, we read:

'When he unto chamber yede,
The chamber flore, and als ye bede,
With klathes of gold were al over spred;'

but even in the palaces of royalty the floors were generally strewed with rushes and straw, sometimes mixed with sweet herbs. In the household roll of Edward II. we find an entry of money paid to John de Carleford, for going from York to Newcastle to procure straw for the king's chamber. Froissart, relating the death of Gaston, Count de Foix, says,—that the count went to his chamber, which he found ready strewed with rushes and green leaves, and the walls were hung with boughs newly cut for perfume and coolness, as the weather was marvellously hot. Adam Davie, Marshal of Stratford-le-bow, who wrote about the year 1312, in his poem of the *Life of Alexander*, describing the marriage of Cleopatra, says—

'There was many a blithe grome;
Of olive, and of ruge floures,
Weren y strewed halls and bowres;
With samytes and bandekyns
Weren curtayned the gardyns.'

This custom of strewing the 'halle and bowres' was continued to a much later period. Hentzner, in his *Itinerary*, says of Queen Elizabeth's presence chamber

at Greenwich, 'The floor, after the English fashion, was strewed with *rushes*. If, however, we may trust to an epistle, wherein Erasmus gives an account of this practice to his friend Dr Francis, physician to Cardinal Wolsey, it would appear that, the rushes being seldom thoroughly changed, and the habits of those days not very cleanly, the smell soon became anything but pleasant. He speaks of the lowest layer of rushes (the top only being renewed) as remaining unchanged sometimes for twenty years; a receptacle for beer, grease, fragments of victuals, and other organic matters. To this filthiness he ascribes the frequent pestilences with which the people were afflicted, and Erasmus recommends the entire banishment of rushes, and a better ventilation, the sanitary importance of which was thus, we see, perceived more than two centuries since.

When Henry III., King of France, demanded of Monsieur Dandelot what especial things he had noted in England during the time of his negotiation there, 'he answered that he had seen but three things remarkable; which were, that the people did drinke in bootes, eate rawe fish, and strewed all their best roomes with *hay*; meaning blacke jacks, oysters, and rushes.'—(*Wits, Fits, and Fancies*, 4to. 1614.)

The English stage was strewed with rushes in Shakspeare's time; and the Globe Theatre was roofed with rushes, or as Taylor, the water-poet, describes it, the old theatre 'had a thatched hide,' and it was through the rushes in the roof taking fire that the first Globe Theatre was burnt down. Killigrew told Pepys how he had improved the stage from a time when there was 'nothing but rushes upon the ground, and everything else mean.' To the rushes succeeded matting; then for tragedy black hangings, after which came the green cloth still used—the cloth, as Goldsmith humorously observes, spread for bloody work.

The strewing of rushes in the way where processions were to pass, is attributed by our poets to all times and countries. Thus, at the coronation of Henry V. when the procession is coming, the grooms cry:

'More rushes, more rushes!'
Henry IV. Act v. Sc. 5.

Thus also at a wedding:

'Full many maids, clad in their best array,
In honour of the bride, come with their flaskets
Fill'd full with flowers: others in wicker baskets
Bring from the marish rushes, to o'erspread
The ground, whereon to church the lovers tread.'
Browne's *Brit. Past.*, i. 2.

They were used green:

'Where is this stranger? Rushes, ladies, rushes,
Rushes as green as summer for this stranger.'
—Beaumont and Fletcher's *Valentinian*, ii. 4.

Not worth a rush became a common comparison for anything worthless; the rush being of so little value as to be trodden under foot. Gower has:

'For til I se the daie springe,
I sette slepe nought at a rushe.'

We find the rush used in Devonshire in a charm for the thrush, as follows: 'Take three rushes from any running stream, and pass them separately through the mouth of the infant, then plunge the rushes again into the stream, and as the current bears them away, so will the thrush depart from the child.'—*Notes and Queries*, No. 203.

In the *Herball to the Bible*, 1587, mention is made of 'sedge and rushes, the whiche manie in the countrie doe use in sommer-time to strew for their parlors or churches, as well for coolness as for pleasant smell.' The species preferred was the *Calamus aromaticus*, which, when bruised, gives forth an odour resembling that of the myrtle;

in the absence of this, inferior kinds were used. Provision was made for strewing the earthen or paved floors of churches with straw or rushes, according to the season of the year. We find several entries in parish accounts for this purpose.

Brand quotes from the churchwardens' accounts of St Mary-at-hill, London, of which parish he was rector: '1504. Paid for 2 Burden Rysshes for the strewing the newe pewes, 3d.' '1493. For 3 Burdens of rushes for ye new pewes, 3d.'

We find also in the parish account-book of Hailsham, in Sussex, charges for strewing the church floor with straw or rushes, according to the season of the year; and in the books of the city of Norwich, entries for pea-straw used for such strewing.

The Rev. G. Miles Cooper, in his paper on the Abbey of Bayham, in the *Sussex Archaeological Collections*, vol. ix. 1857, observes:

'Though few are ignorant of this ancient custom, it may not perhaps be so generally known, that the strewing of churches grew into a religious festival, dressed up in all that picturesque circumstance where-with the old church well knew how to array its ritual. Remains of it linger to this day in remote parts of England. In Westmoreland, Lancashire, and districts of Yorkshire, there is still celebrated between hay-making and harvest a village fête called the Rush-bearing. Young women dressed in white, and carrying garlands of flowers and rushes, walk in procession to the parish church, accompanied by a crowd of

RUSH-BEARING.

rustics, with flags flying and music playing. There they suspend their floral chaplets on the chancel rails, and the day is concluded with a simple feast. The neighbourhood of Ambleside was, until lately, and may be still, one of the chief strongholds of this popular practice; respecting which I will only add, as a curious fact, that up to the passing of the recent Municipal Reform Act, the town clerk of Norwich was accustomed to pay to the subsacrist of the cathedral an annual guinea for strewing the floor of the cathedral with rushes on the Mayor's Day, from the western door to the entrance into the choir; this is the most recent instance of the ancient usage which has come to my knowledge.'

In Cheshire, at Runcorn, and Warburton, the annual rush-bearing wake is carried out in grand style. A large quantity of rushes—sometimes a cart-load—

is collected, and being bound on the cart, are cut evenly at each end, and on Saturday evening a number of men sit on the top of the rushes, holding garlands of artificial flowers, tinsel, &c. The cart is drawn round the parish by three or four spirited horses, decked with ribbons, the collars being surrounded with small bells. It is attended by morris-dancers fantastically dressed; there are men in women's clothes, one of whom, with his face blackened, has a belt with a large bell attached, round his waist, and carries a ladle to collect money from the spectators. The party stop and dance at the public-house in their way to the parish church, where the rushes are deposited, and the garlands are hung up, to remain till the next year. *

* Communication to *Notes and Queries*, i. 358.

The uses of the rush in domestic economy are worth notice. Rush-lights, or candles with rush wicks, are of the greatest antiquity; for we learn from Pliny that the Romans applied different kinds of rushes to a similar purpose, as making them into flambeaux and wax-candles for use at funerals. The earliest Irish candles were rushes dipped in grease and placed in lamps of oil; and they have been similarly used in many districts of England. Aubrey, writing about 1673, says that at Ockley, in Surrey, 'the people draw peeled rushes through melted grease, which yields a sufficient light for ordinary use, is very cheap and useful, and burns long.' This economical practice was common till towards the close of the last century. There was a regular utensil for holding the rush in burning; of which an example is here presented.

THE RUSH-HOLDER.

The Rev. Gilbert White has devoted one letter to 'this simple piece of domestic economy,' in his *Natural History of Selborne*. He tells us:

'The proper species is the common soft rush, found in most pastures by the sides of streams, and under hedges. Decayed labourers, women, and children, gather these rushes late in summer; as soon as they are cut, they must be flung into water, and kept there, otherwise they will dry and shrink, and the peel will not run. When peeled they must lie on the grass to be bleached, and take the dew for some nights, after which they are dried in the sun. Some address is required in dipping these rushes into the scalding fat or grease. The careful wife of an industrious Hampshire labourer obtains all her fat for nothing: for she saves the scummings of her bacon pot for this use; and if the grease abound with salt she causes the salt to precipitate to the bottom, by setting the scummings in a warm oven. Where hogs are not much in use, and especially by the sea-side, the coarse animal oils will come very cheap. A pound of common grease may be procured for fourpence; and about six pounds of grease will dip a pound of rushes, which cost one shilling, so that a pound of rushes ready for burning will cost three shillings. If men that keep bees will mix a little wax with the grease, it will give it a consistency, render it more cleanly, and make the rushes burn longer: mutton suet will have the same effect.'

A pound avoirdupois contains 1600 rushes; and supposing each to burn on an average but half-an-hour, then a poor man will purchase 1800 hours of light, a

time exceeding thirty-three entire days, for three shillings. According to this account, each rush, before dipping, costs one thirty-third of a farthing, and one-eleventh afterwards. Thus a poor family will enjoy five and a-half hours of comfortable light for a farthing. An experienced old housekeeper assured Mr White that one pound and a half of rushes completely supplied her family the year round, since working-people burn no candle in the long days, because they rise and go to bed by daylight.

Little farmers use rushes in the short days both morning and evening, in the dairy and kitchen; but the very poor, who are always the worst economists, and therefore must continue very poor, buy a half-penny candle every evening, which in their blowing, open rooms, does not burn much longer than two hours. Thus, they have only two hours' light for their money, instead of eleven.

WARWICK, THE KING MAKER.

Richard Nevill, Earl of Warwick, may be looked upon as the hero of the wars of the Roses. He was the eldest son of the Richard Nevill who had obtained through his marriage with the heiress of the Montagues the earldom of Salisbury, and who stood high in court favour in the earlier part of the reign of Henry VI. The other sons of the Earl of Salisbury were Thomas John, afterwards created Marquis of Montagu, and George, who became Archbishop of York. The eldest brother, Richard, who had married the heiress of the Beauchamps, Earl of Warwick, inherited their estates, and was created Earl of Warwick in 1449. Both earls, Salisbury and Warwick, espoused warmly the cause of the house of York, and were bitter opponents of the Queen's favourite, the Duke of Suffolk, and of the Duke of Somerset, who succeeded him. At the beginning of the year 1452, the Duke of York, alarmed by the intrigues at court, withdrew to his castle of Ludlow, in Shropshire, where he assembled his forces, and may be said to have commenced the civil war. He no doubt reckoned on the support of Salisbury and Warwick, who, however, were not with him on this occasion; but, when he was again obliged to assemble his friends at Ludlow in the beginning of 1455, they joined him there with their forces, as well as the Duke of Norfolk and other great feudal barons. Marching thence direct to London,

they came upon the king's army at St Albans by surprise, and the first victory of the Yorkists was gained there on the 22nd March, in a great measure by the military talents of the Earl of Warwick. The Duke of York was again made protector of the kingdom, and he immediately made Salisbury Lord Chancellor, and gave the important post of Captain-General of Calais to the Earl of Warwick. The Duke of Somerset and other Lancastrian lords had been slain in the battle; but the courage and activity of the queen soon restored the court party to its strength. The battle of St Albans had excited personal animosities among the feudal barons which left little hopes of peace, though both parties hesitated long in commencing the war. At length, at a council held at Coventry at the end of the month of February, an outward reconciliation was effected, which was concluded at a general meeting of the great lords in London, about a fortnight afterwards. Some of the terms of this reconciliation shew how much of the personal feelings of the chiefs were mixed up in the old feudal wars. The Yorkist chiefs were to pacify the families of the lords slain in the battle of St Albans by expenditure of blood-money, of which the Duke of York was to pay to Somerset's widow and children five thousand marks, the Earl of Warwick to Lord Clifford a thousand marks, and Salisbury to Lord Egremont a similar consideration, while all three were to build at their own expense a chapel for the souls of the slain lords. In the solemn procession which took place on the 25th of March, to confirm this reconciliation, the Duke of York walked hand in hand with the queen, the Earl of Salisbury with the Duke of Somerset, and the Earl of Warwick with the Duke of Exeter, and all hostile feelings appeared to be laid aside. It was soon, however, seen how hollow are all such reconciliations.

The Earl of Warwick was now looked upon as the real head of the Yorkist party, and he furnished the occasion of the first outward breach of the late reconciliation. He had repaired to his government at Calais, where his power and popularity were unlimited, and which he had now made his head-quarters. In the month of May, he considered himself justified in attacking a large fleet of ships which was proceeding from the Hanse Towns to Spain, which he defeated, sinking some and capturing others. The Hanseatic League complained, and Warwick was called upon for explanations. The earl did not hesitate in presenting himself at court to answer the charges brought against him; but his reception seems to have been such as to give him suspicion of personal danger. On the 9th of November 1455, when Warwick was attending the court at Westminster, he was attacked by some of the queen's household, and escaped with difficulty to his barge on the Thames, in which he immediately dropped down the river and made the best of his way to Calais.

It was soon after so evident to the Yorkist lords that the queen was concerting measures for their destruction, that they determined on providing for their own defence. We find them in the autumn of 1459 mustering in the north and west of England, fighting, dispersing tempo-

rarily, finally re-assembling in great force in the summer of 1460. Warwick was then able to enter London, and soon after (July 10) to overthrow the royal forces at Northampton. The imbecile Henry being here taken prisoner, and his queen and their son driven to seek refuge in Scotland, York first definitely advanced his claim to the crown. Soon after, fortune deserted him at the battle of Wakefield (Dec. 30, 1460), when he and the Earl of Salisbury's second son, Sir Thomas Nevill, were slain, and the Earl of Salisbury himself taken prisoner and beheaded. Warwick was defeated in a second battle of St Albans, fought on the 17th February 1461; but the success of the young Duke of York at Mortimer's Cross had turned the tide again in favour of that house; the queen again retired to the north; young Edward, joined by Warwick, marched to London, and was proclaimed king, under the title of Edward IV. (March 4, 1461); and three weeks after, by the bloody defeat of Towton, the hopes of the house of Lancaster appeared extinguished.

There could be no doubt that to the Earl of Warwick Edward owed his throne, and for a while he appeared to reign only under the earl's protection. Rewards, honours, places of emolument were monopolised by the family and friends of Warwick. At this time he was perhaps the most potent noble that had ever lived in feudal England. He dwelt in his palace in London, known as Warwick House, occupying the site of what is now called Warwick-lane, in a style of princely magnificence, and with profuse hospitality, which we can now hardly understand. 'When hee came to London,' the old chronicler tells us, 'hee helde such an house, that sixe oxen were eaten at a breakefast, and everie taverne was full of his meate, for who that had any acquaintance in that house, he should have as much sodden and rost as he might carry upon a long dagger.' The earl became thus extremely popular among the commonalty, but the young king grew gradually weary of the sort of tutelage in which he was held, and gathered round him friends who were not likely to encourage him to bear it. While Edward sought to escape from the thrall of the great earl, and began to distribute his favours among his new friends, Warwick appears to have become personally more ambitious, and perhaps more imperious. He had two daughters, Isabel and Anne, and he evidently aimed at approaching nearer to the crown by marrying the eldest to the Duke of Clarence, the king's brother, who was then heir presumptive to his throne, and over whom he had gained great influence. Edward, however, refused his consent to this match, and Warwick is said to have taken further offence at the king's marriage with Elizabeth Wydeville, in 1464, and with the influence gained by her relatives. Still, though greatly dissatisfied, Warwick continued in appearance the friend of the king of his own making, and who had loaded him with honours and wealth, for he was at the same time Prime Minister, Commander-in-Chief, and Admiral of England, besides a multitude of other lucrative offices. The first subject of open disagreement arose out of a foreign marriage, the

heir of the Duke of Burgundy having solicited the hand of Edward's sister Margaret, while Louis XI. of France also demanded her for one of his sons. Warwick advocated the latter, and went as negotiator with great pomp to France, and had many familiar and secret interviews with Louis, at which were said to have been discussed less the terms of the marriage than the means of a reconciliation between Warwick and the Lancastrian party. During his absence, Edward yielded to other influence, and concluded the match with the heir of Burgundy. Warwick, on his return, complained bitterly of the way in which he had been treated, and retired to his castle of Middleham, in Yorkshire. A reconciliation was effected through the intercession of the Archbishop of York, and the great earl returned to court; but the time he spent there was occupied chiefly by intrigues on both sides, with which we are very imperfectly acquainted. In spite of the king's opposition, the Duke of Clarence was married to the Lady Isabel Nevill, at Calais, in July 1469, the Archbishop of Canterbury performing the ceremony; and there can be little doubt that at this time Warwick contemplated the design of dethroning Edward and placing the crown on the head of his son-in-law Clarence. During their absence serious insurrections broke out in England, and the king was reduced to such distress that he called them urgently to his assistance. Warwick and Clarence had, however, no sooner arrived, than the king found himself placed under restraint, and was carried as a virtual prisoner to the castle of Middleham. Both kings were now prisoners at the same time, for Henry VI. was confined in the Tower of London. Towards the end of 1469, after Warwick and his friends had exacted various grants and conditions, Edward was set at liberty, and another hollow reconciliation took place. In the month of February 1470, an entertainment was given by Warwick's brother, the archbishop, at the Moor, in Hertfordshire, to the king, the earl, and the Duke of Clarence; when, as Edward was washing his hands before supper, an attendant whispered some words of suspicion into his ear, which caused him to slip out of the room, take horse, and fly in haste to the castle of Windsor. The king and the earl were reconciled again, by the intermediation of Edward's mother, the Duchess of York, but this reconciliation was shorter even than the former. Popular insurrections broke out, which Edward believed to be secretly promoted by Warwick and his friends, and his suspicions were further excited by the slowness with which they proceeded against the rebels. Edward hastily raised a considerable army, defeated the rebels, and then marched against his minister and brother, and Warwick and Clarence were now compelled to seek safety in flight. They succeeded in getting to France, where they were well received by Louis XI. This crafty monarch seized upon the occasion to carry into effect a new plan of his own contriving. Warwick was introduced secretly to Queen Margaret, and these two bitter enemies became reconciled, Warwick undertaking to dethrone Edward, and restore Henry VI., under

certain conditions, one of which was the marriage of his second daughter, Anne, to the youthful Prince of Wales. He thus secured, in any event, a fair prospect of one of his daughters becoming Queen of England; and he had sufficient influence over the Duke of Clarence to induce him to join in this arrangement.

King Edward's fears appear to have been lulled by the treacherous professions of Warwick's two brothers, the Marquis of Montagu and the Archbishop of York, and he made no preparations against the impending danger. Warwick, with assistance from the King of France, set sail, and landed on the coast of Devon on the 13th of September 1470, while Edward was in the north, drawn thither by reports of an insurrection of the Nevills. The earl had thus time to carry out his plans in the south. He was speedily joined by his friends, took possession of the capital, and directed his march northwards with a powerful army to meet his opponent. Edward, on the other hand, was deserted by many of the chief men in attendance upon him, who were kinsmen or friends of Warwick, and in despair he took ship and fled to Holland, to seek a temporary refuge at the court of Burgundy. So rapid was the succession of events, that, on the 6th of October, Warwick returned to London in triumph, and, taking King Henry from the Tower, replaced him on the throne. On this occasion, he did not forget to reserve to himself all the offices and quite as much power as he had held under the reign of his Yorkist sovereign.

The triumph, however, was a short one. Edward, aided by the Duke of Burgundy, landed at Ravenspur, in Yorkshire, on the 15th of March 1471. Warwick advanced to meet him as far as Coventry; but there he experienced the uncertainty of such alliances as he had been making. No sooner did the rival armies come into each other's presence at Coventry, than the Duke of Clarence, who is believed to have been secretly tampered with, led away his troops from Warwick's army, and joined his brother, King Edward. The earl was now obliged to retire, and Edward succeeded in placing himself between him and the capital. The decisive battle was fought on Easter Sunday, the 14th of April, and the result is well known. The Lancastrians were defeated with great slaughter, and the Earl of Warwick, and his brother, the Marquis of Montagu, were both among the slain. The French historian of these events, Commines, tells us that it was the custom of the Earl of Warwick never to fight on foot, but that his manner was, when he had dismounted to lead his men to the charge, to remount again immediately, so that if the fortune of the day was against him, he could ride away in time. The historian adds, that on this occasion the Earl had been persuaded by his brother, the Marquis of Montagu, to send away his horse, so that when he left the field he was soon overtaken and slain. His death left King Edward far more firmly established on the throne than when he had held it under the protection of the *King-maker*.

BLACK MONDAY.

'It is to be noted that the 14 day of April, and the morrow after Easter Day (1360), King Edward [III.] with his host lay before the city of Paris; which day was full dark of mist and hail, and so bitter cold, that many men died on their horsebacks with the cold; wherefore unto this day it hath been called the *Black Monday*.'—*Stow's Chronicle*.

ACCESSION OF A BOURBON PRINCE TO THE SPANISH THRONE.

Philip, the grandson of Louis XIV., being called to the throne of Spain by the will of the preceding monarch, Charles II., made his entry into Madrid on the 14th of April 1701. To receive him with the more magnificence, they had prepared a splendid auto-da-fé for his arrival, at which several Jews were ready to be burnt; but the new sovereign declared firmly that he had no wish to behold any such ceremony, and signalled his accession to the throne by an act of clemency which must have seemed very extraordinary to his subjects.

On the same day ten years after, died Monseigneur, the father of this young sovereign. It is told of him that when he heard of the brilliant destiny opening for his second son, he remarked that he had never wished to be able to say more than *the king my father, and the king my son*; fine words, if they had not been prompted by indolence more than by moderation. Nothing was more common for many years before his death than to hear people saying of him, '*Fils de roi, père de roi, jamais roi.*' The event seemed to favour the credulity of those who have faith in such predictions; but the saying was founded on the obvious fact that his father, King Louis, from superior constitution and health, was likely to outlive him.

MOUNTEBANKS.

The *Gazette* of April 14, 1684, contains an order suppressing all mountebanks, rope-dancers, and ballad-singers, who had not taken a licence from the Master of the Revels, and particularly Samuel Rutherford, — Irish, Willian Bevel, and Richard Olsworth. The Master of the Revels was at this time the celebrated player Killigrew, who was thus allowed, by favour of the king, to tax all makers of fun but those of his own order, and whose function seems to have been of an oppressive character, strangely at issue with its festive appellation.

The mountebank and the merry-andrew played their fantastic tricks in country towns within memory; but scarcely with such state as a hundred and forty years since, when they were thus sketched in *A Tour through England* (1723): 'I cannot leave Winchester without telling you of a pleasant incident that happened there. As I was sitting at the George Inn, I saw a coach with six bay horses, a calash and four, a chaise and four, enter the inn, in a yellow livery turned up with red; four gentlemen on horseback, in blue, trimmed with silver; and as yellow is the colour given by the dukes in England, I went out to see

what duke it was; but there was no coronet on the coach, only a plain coat-of-arms on each, with this motto:

"ARGENTO LABORAT FABER."

Upon inquiry, I found this great equipage belonged to a mountebank, and that his name being Smith, the motto was a pun upon his name. The footmen in yellow were his tumblers and trumpeters, and those in blue his merry-andrew, his apothecary, and spokesman. He was dressed in black velvet, and had in his coach a woman that danced on the ropes. He cures all diseases, and sells his packets for sixpence a-piece. He erected stages in all the market towns twenty miles round; and it is a prodigy how so wise a people as the English are gulled by such pick-pockets. But his amusements on the stage are worth the sixpence, without the pills. In the morning he is dressed up in a fine brocade night-gown, for his chamber practice, when he gives advice, and gets large fees.'

Cowper, in describing the newspaper of his day, adverts to one of this class of vagabonds in a well-remembered couplet:

'And Katerfelto, with his hair on end
At his own wonders, wondering for his bread.'

Task: the Winter Evening.

Cowper probably wrote this passage in 1782; the *Task* was published complete in 1785. But, who was Katerfelto?

In a pamphlet on quackery, published at Kingston-upon-Hull, in 1805, it is stated that Dr Katerfelto practised on the people of London in the influenza of 1782; that he added to his nostrums the fascinations of hocus-pocus; and that with the services of some extraordinary *black cats* he astonished the vulgar. In 1790 or 1791, he visited the city of Durham, accompanied by his wife and daughter. His travelling equipage consisted of an old rumbling coach, drawn by a pair of sorry hacks; and his two black servants wore green liveries with red collars. They were sent round the town, blowing trumpets, and delivering bills of their master's performances. These were—in the day-time, a microscope; in the evening, electrical experiments, in which the black cats—the Doctor's devils—played their parts in yielding electric sparks; tricks of leger-main concluded the entertainments.

He was a tall, thin man, dressed in a black gown and square cap; he is said to have been originally a soldier in the Prussian service. In one of his advertisements he states that he was a Colonel in the 'Death's Head' regiment of Hussars, a terrific prognostic of his ultimate profession. He had many mishaps in his conjuring career: once he sent up a fire-balloon, which, falling upon a haystack, set it on fire, and it was consumed, when Katerfelto was sued for its value, and was sent to prison in default of payment. And, not long before his death, he was committed by the Mayor of Shrewsbury to the House of Correction in that city as a vagrant and impostor.

Katerfelto mixed up with his quackery some real science, and by aid of the solar microscope astonished the world with insect wonders. In one of his advertisements in the *Morning Post*,

of July 1782, he says that by its aid the insects on the hedges will be seen larger than ever, and those insects which caused the late influenza will be seen as large as a bird; and in a drop of water the size of a pin's head there will be seen above 50,000 insects; the same in beer, milk, vinegar, blood, flour, cheese, &c., and there will be seen many surprising insects in different vegetables, and above 200 other dead objects.' He obtained good prices for his show:—'The admittance to see these wonderful works of Providence is only—front seats, three shillings; second seats, two shillings; and back seats, one shilling only, from eight o'clock in the morning till six in the afternoon, at No. 22, Piccadilly.' He fully understood the advantages of puffing, and one of his advertisements commences with a story of 'a gentleman of the faculty belonging to Oxford University, who, finding it likely to prove a fine day, set out for London purposely to see those great wonders which are advertised so much by that famous philosopher, Mr Katerfelto;' that the said gentleman declared 'if he had come 300 miles on purpose, the knowledge he had then received would amply reward him; and that he should not wonder that some of the nobility should come from the remotest part of Scotland to hear Mr Katerfelto, as the people of that country in particular are always searching after knowledge.' He elsewhere declares himself 'the greatest philosopher in this kingdom since Sir Isaac Newton.' 'And Mr Katerfelto, as a divine and moral philosopher, begs leave to say that all persons on earth live in darkness, if they are able to see, but will not see his wonderful exhibition.'

A still more famous quack flourished in London at the same time. This was Dr Graham, who opened what he called a Temple of Health, in the Adelphi, in which he expatiated on the advantages of electricity and magnetism. He says in one of his advertisements that he will explain 'the whole art of enjoying health and vigour of body and mind, and of preserving and exalting personal beauty and loveliness; or in other words, of living with health, honour, and happiness in this world, for at least a hundred years.'

One of the means for ensuring this was the frequent use of mud-baths; and that the doctor might be observed to practise what he preached, he was to be seen, on stated occasions, immersed in mud to the chin; accompanied by a lady to whom he gave the name of Vestina, Goddess of Health, and who afterwards became celebrated as the wife of Sir William Hamilton, and the great counsellor and friend of Lord Nelson. At this time she had only recently ceased to be a nurse-maid; but her beauty attracted general attention in London. It is to be remarked that while she remained in the mud-bath, she had her hair elaborately dressed in the prevailing fashion, with powder, flowers, feathers, and ropes of pearl; the doctor appearing in an equally elaborate wig.

From the Adelphi Graham removed to Schomberg House, Pall Mall, which he christened the Temple of Health and Hymen, and fitted up with much magnificence. The admittance was five shillings, yet the place was crowded by a silly audience, brought together by his

audacious puffs and impudent lectures on subjects now impossible to be alluded to. One of them may be a sufficient sample of the whole:

'If there be one human being, rich or poor, male or female, in or near this great metropolis of the world, who has not had the good fortune and the happiness of hearing the celebrated lecture, and of seeing the grand celestial state bed, the magnificent electrical apparatus, and the supremely brilliant and unique decorations of this magical edifice, of this enchanting Elysian palace! where wit and mirth, love and beauty—all that can delight the soul, and all that can ravish the senses, will hold their court, this, and every evening this week in chaste and joyous assemblage! let them now come forth, or for ever afterwards let them blame themselves, and bewail their irremediable misfortune.'

Graham engaged the services of two gigantic porters, whom he stationed at the door in the showiest liveries covered with gold lace. His rooms at night were superbly lighted by wax, and nothing spared to attract visitors. The doctor alternated his lectures with those of the lady just alluded to, and thus he advertised her performances: 'Vestina, the rosy Goddess of Health, presides at the evening lecture, assisting at the display of the celestial meteors, and of that sacred vital fire over which she watches, and whose application in the cure of diseases she daily has the honour of directing. The descriptive exhibition of the apparatus in the daytime is conducted by the officiating junior priest.' This latter office was performed by a young medical man, who afterwards became Dr Mitford, and was father to the famed authoress. Graham's expenses, always large, continued when his popularity waned, and he died poor in the neighbourhood of Glasgow. He may fairly be considered as the last of the unblushing quack-doctors.

We get a very good and clear account of mountebanks, as existing in Venice in the beginning of the seventeenth century, from that extraordinary compound of sense and oddity, Tom Coryat, who then travelled over Europe and into India, and published an account of his adventures under the modest, yet not very inappropriate name of *Coryat's Crudities*. He first tells us that mountebanks are common throughout Italy, but more especially abundant in Venice, the name being of the language of that country, *Monta' inbanco*, to mount a bench, 'because these fellows do act their part upon a stage, which is compacted of benches or forms.

The principal place where they act is the first part of St Mark's street that reacheth betwixt the west front of St Mark's church and the opposite front of St Germinian's church. Twice a day, that is in the morning and in the afternoon, you may see five or six several stages erected for them. . . . These mountebanks at one end of their stage place their trunk, which is replenished with a world of new-fangled trumperies. After the whole rabble of them is gotten up to the stage,—whereof some wear vizards like fools in a play, some that are women are attired with habits according to that person that they sustain,—the music begins; sometimes vocal, sometimes instrumental, sometimes both.

'While the music plays, the principal mountebank opens his trunk and sets abroad his wares. [Then] he maketh an oration to the audience of half an hour long, wherein he doth most hyperbolically extol the virtue of his drugs and confections—though many of them are very counterfeit and false. I often wondered at these natural orators; for they would tell their tales with such admirable volubility and plausible grace, *extempore*, and seasoned with that singular variety of elegant jests and witty conceits, that they did often strike great admiration into strangers [He then] delivereth his commodities by little and little, the jester still playing his part, and the musicians singing and playing upon their instruments. The principal things that they sell are oils, sovereign waters, amorous songs printed, apothecary drugs, and a commonweal of other trifles. The head mountebank, every time he delivereth out anything, maketh an extemporal speech, which he doth eftsoons intermingle with such savoury jests (but spiced now and then with singular scurrility), that they minister passing mirth and laughter to the whole company, which may perhaps consist of a thousand people.'

Coryat saw a mountebank one day play with a viper; another he saw cut and gash his arm till the blood streamed, and heal it all up in a few minutes. There was one who had been born and still continued blind, who was noted for his extemporal songs, 'and for a pretty kind of music which he made with two bones betwixt his fingers.' The scene would last a couple of hours, when, having cloyed the audience with their jests, and sold as many of their wares as they could, they would 'remove their trinkets and stage till the next meeting.'

Ben Jonson in his comedy of *Volpone*; or,

the Fox, has given in full the scene of a mountebank's stage at Venice, and the speech of the quack, who vends his medicines in a style singularly like that adopted by 'Cheap Jack' at country fairs in the present day. Thus he says: 'You all know, honourable gentlemen, I never valued this ampulla, or vial, at less than eight crowns; but for this time I am content to be deprived of it for six: six crowns is the price, and less in courtesy I know you cannot offer me. Take it or leave it, however both it, and I, am at your service! Well! I am in a humour at this time to make a present of the small quantity my coffer contains: to the rich in courtesy, and to the poor for God's sake. Wherefore, now mark: I asked you six crowns, and six crowns at other times you have paid me; you shall not give me six crowns, nor five, nor four, nor three, nor two, nor one, nor half a ducat. Sixpence it will cost you, (or six hundred pounds); expect no lower price, for I will not bate.' The latter part of this speech might pass for a short-hand report of a modern speech at a fair, the words with which bargains are still sold being identical with those Ben Jonson puts into the mouth of his *Volpone*.

The Earl of Rochester whose vices and eccentricities made him famous in the days of Charles the Second, on one occasion personated a mountebank doctor, and delivered a speech which obtained some celebrity. His example was followed by the legitimate comedians. Thus Leveridge and Penkethman appeared at fairs as '*Doctor Leverigo, and his Jack-Pudding Pinkanello*,' and the still more famous actor Joe Haines as '*Watho Van Claturbank, High German Doctor*.' His burlesque speech was published as a broadside, with an engraving representing his temporary stage, which we here copy.

The scene is Tower-hill, then a rendezvous of

MOUNTEBANK DISTRIBUTING HIS WARES ON THE STAGE.

mountebanks: Joe is represented delivering his speech, medicine in hand; beside him is a harlequin; behind, his 'Jack-Pudding' sounds lustily on the trumpet to call attention to his work. A gouty patient is seated in the operating chair; behind are boxes of medicines and phials for 'retail trade.' Patients on sticks hobble towards the stage; an itinerant vendor of 'strong waters,' in days when no excise interfered with extreme indulgence in cheap liquors, keeps up the courage of one waiting his turn on the stage for cure. A mass of all kinds of people are in front, among them a juvenile pickpocket. It is a perfect transcript of the genuine mountebank's stage of the days of Queen Anne; his speech burlesques their high-flown pretensions and inflated verbosity. He calls himself 'High German Doctor, Chymist, and Dentificator, native of Arabia Deserta, citizen and burgomaster of the City of Brandipolis, seventh son of a seventh son, unborn doctor of above sixty years' experience. Having studied over Galen, Hypocrates, Albumazar, and Paracelsus, I am now become the Esculapius of the age; having been educated at twelve universities, and travelled through fifty-two kingdoms, and been counsellor to the counsellors of several monarchs.

'By the earnest prayers and entreaties of several lords, earls, dukes, and honourable personages, I have been at last prevailed upon to oblige the world with this notice. That all persons, young and old, blind or lame, deaf or dumb, curable or incurable, may know where to repair for cure, in all cephalalgias, paralytic paroxysms, palpitations of the pericardium, empyemas, synopes, and nasieties; arising either from a plethory or a cachochymy, vertiginous vapours, hydrocephalous dysenteries, odontalgie, or podagrical inflammations, and the entire legion of lethiferous distempers.'

'This is Nature's palladium, health's magazine; it works seven manner of ways, as Nature requires, for it scorns to be confined to any particular mode of operation; so that it effecteth the cure either hypnotically, hydrotically, cathartically, poppismatically, pneumatically, or synedochically; it mundifies the hypogastrium, extinguishes all supernatural fermentations and ebullitions, and, in fine, annihilates all nosotropical morbid ideas of the whole corporeal compages. A drachm of it is worth a bushel of March dust; for, if a man chance to have his brains beat out, or his head dropped off, two drops—I say two drops! gentlemen, seasonably applied, will recall the fleeting spirits, re-enthroned the deposed archeus, cement the discontinuity of the parts, and in six minutes restore the lifeless trunk to all its pristine functions, vital, natural, and animal; so that this, believe me, gentlemen, is the only sovereign remedy in the world.

'*Venienti occurrige morbo.*—Down with your dust.

'*Principiis obsta.*—No cure no money.

'*Quærenda pecunia primum.*—Be not sick too late.'

One of the last, if not the very last of the genuine foreign mountebank doctors, was a German, known as Doctor Bossy; who had considerable reputation, and ended as a practitioner

in a good house with a fair competence. He used to mount his stage in the early part of the present century, on alternate days at Tower-hill or Covent Garden Market, that the East and West of London might alike avail themselves of his services. There is a story of Colonel Kelly's famous parrot once disconcerting the doctor; when he had induced an old woman to mount his stage in the market, and narrate the wonderful cures he had effected with her. The parrot had learnt much coarse language in that locality, which was sometimes applied as if intentionally. The old lady having concluded her narrative, 'Lying old ——!' exclaimed the bird. The doctor, for the moment discomfited by the roar of laughter from his audience, soon gravely stepped forth with his hand on his heart, and said with due solemnity: 'It is no lie, you wicked bird!—it is all true as is de Gospel!'

Very few of these practitioners now remain. Where they do exist it is in very humble form, and they sell little else than corn-plasters and cheap cough medicines. The author of this paper saw one at York three years ago, who aspired somewhat higher, and sold medicines on a stage in the old style, but without the merry-andrew or the music; he presented himself in shabby black clothes, with a dirty white neckcloth. The genuine mountebank doctor, with his roomy phaeton, his band of music behind, and his jester on the box, is only to be met with in the country towns of the south of France, or in Italy. The writer remembers one at Marseilles, who shared his duties with his wife; the lady occasionally drawing the teeth of persons who mounted the phaeton, and whose cries were drowned by the brass band seated in the rear. The best idea of an Italian travelling doctor of this sort was afforded to opera-goers by the late Signor Lablache, in his whimsically humorous personation of Doctor Dulcamara in the popular opera of *L'Elisor d'Amore*. His gorgeous equipage, with its musical and other attendants; his vast size, and still vaster pomposity; the exuberance of his dress, and the greater exuberance of his style when descanting on his nostrums, left nothing to desire in perfecting the picture of a full-blown quack and mountebank.

AN ECCENTRIC.

Lysons, in his *Environs of London*, gives a singular account of one Russell, a native of Streatham, who, as appears by the register, was buried on the 14th of April 1772, the following passage being annexed to the entry:—'This person was always known under the guise or habit of a woman, and answered to the name of *Elizabeth*, as registered in this parish, Nov. 21st 1669, but on death proved to be a man.' John Russell, his father, had three daughters, and two sons, William and John, who were baptized respectively in 1668 and 1672. 'There is little doubt, therefore, that the person here recorded was one of the two,' and must consequently have been either 100 or 104 years of age at the time of his death; but he himself used to aver that he was 108 years old. Early in life he associated with gipsies, and he accompanied the celebrated Bampfylde Moore Carew in many of his rambles. He also visited most parts of the Continent as a stroller and vagabond; and having acquired a knowledge of astrology and quackery, he returned to

England, and practised both arts with much profit. This was after his assumption of the female garb, and Lysons remarks that 'his long experience gained him the character of a most infallible *doctress*;' he was likewise 'an excellent sempstress, and celebrated for making a good shirt.' In 1770, he applied for a certificate of his baptism, under the name of his sister Elizabeth, who had been christened in November 1669. About the same time he became a resident of his native place, where his extraordinary age obtained him the charitable notice of many respectable families, and among others that of Mr Thrale, at whose house 'Dr Johnson, who found him a shrewd sensible person, with a good memory, was very fond of conversing with him.' He died suddenly, and his true sex was then discovered, to the extreme surprise of all the neighbourhood.

APRIL 15.

Saints Basilissa and Anastasia, martyrs, 1st century. Saint Paternus, Bishop of Avranches, 563. St Ruadhan, abbot, 584. St Munde, abbot, 962. St Peter Gonzales, 1246.

Born.—William Augustus, Duke of Cumberland, 1721, London; Sir James Clark Ross, navigator, 1800.

Died.—George Calvert, Lord Baltimore, 1632; Dominico Zampieri (Domenichino), Italian painter, 1641, Naples; Madame de Maintenon, 1719, St Cyr; William Oldys, antiquary, 1761, London; Madame de Pompadour, mistress of Louis XV., 1764, Paris; Dr Alexander Murray, philologist, 1813; John Bell, eminent surgeon, 1820, Rome; Thomas Drummond, eminent in physical science, 1840, Dublin.

WILLIAM OLDYS.

Quaint and simple-minded William Oldys gave himself up, heart and soul, to the pleasant task of searching among old literary stores. The period in which he lived and laboured was not one to appreciate the value of such an enthusiast. Booksellers and men of letters found it worth while to make use of him, but it was little in their power to benefit him in return. So he rummaged old book-stalls undisturbed, made his honest notes, collected materials for mighty works contemplated, jotted down gentle indignation at unworthy treatment in endless diaries, and left all these invaluable treasures at his death to be scattered and lost and destroyed.

Little is known of his life, and that little, not always of a pleasing nature. 'His parents' relates Grose—antiquary himself, after another fashion—'dying when he was very young, he soon squandered away his small patrimony, when he became, at first attendant in Lord Oxford's library, and afterwards librarian.' Possibly, the patrimony was very small; possibly, it went in books; be that as it may, it is pleasing to find him in a post so congenial to his tastes. But Lord Oxford died, and Oldys became dependent on the booksellers. How this served his ends, we may judge by an anecdote communicated by the son of a friend of his. It was made known to the Duke of Norfolk one day at dinner, that Oldys had been passing 'many years in quiet obscurity in the Fleet Prison.' The Duke, to his honour, set him free, and got him appointed Norroy King-at-arms.

Oldys wrote many valuable articles on various subjects; but his chief remains were manuscript materials laboriously collected for works to come. 'His discoveries and curiosities,' says D'Israeli, 'were dispersed on many a fly-leaf, in occasional memorandum-books; in ample marginal notes on his authors. They were sometimes thrown into what he calls his *Parchment Budgets*, or *Bags of Biography—Of Botany—Of Obituary—of Books Relative to London*, and other titles and bags, which he was every day filling.' His annotated edition of *Longbaine's Dramatic Poets*, preserved in the British Museum, is 'not interleaved, but overflowing with notes, written in a very small hand about the margins, and inserted between the lines; nor may the transcriber pass negligently over its corners,' stored with date and reference. He also kept *diaries*, in which he jotted down work to be done, researches to be made, his feelings, his sorrows, with an infinitude of items, whose loss is to be regretted. In one volume, which has been preserved, he grows melancholy about his work, and sets down a pious misgiving, —'he heapeth up riches, and cannot tell who shall gather them.' In sadder mood still, he includes the contents in a quaint couplet:

'Fond treasurer of these stores, behold thy fate
In Psalm the thirty-ninth, 6, 7, and 8.'

He sighs over books he has lent, which have not returned. He tells how he wrote some valuable article, of nearly two sheets, and how the book-sellers 'for sordid gain, and to save a little expense in print and paper, got Mr John Campbell to cross it and cramp it, and play the devil with it, till they squeezed it into less compass than a sheet.' Or again, he growls humorously at 'old counsellor Fane, of Colchester, who, *in formâ pauperis*, deceived me of a good sum of money which he owed me, and not long after set up his chariot,' and who 'gave me a parcel of manuscripts, and promised me others, which he never gave me, nor anything else, besides a barrel of oysters.'

Probably 'old counsellor Fane' knew his man, not only in the bribe of manuscript, but that of oysters. We know, at least, that when his throat was dry with the dust of folios, Oldys was wont to moisten it. Here is a song '*made extempore by a gentleman, occasioned by a fly drinking out of his cup of ale*,' which D'Israeli traces to Oldys:

'Busy, curious, thirsty fly!
Drink with me, and drink as I!
Freely welcome to my cup,
Couldst thou sip and sip it up;
Make the most of life you may:
Life is short and wears away.

'Both alike are mine and thine,
Hastening quick to their decline!
Thine's a summer, mine no more,
Though repeated to threescore!
Threescore summers, when they're gone,
Will appear as short as one!'

THE NIGHTINGALE AND ITS SONG.

The nightingale is pre-eminently the bird of April. Arriving in England about the middle of the month, it at once breaks forth into full song,

which gradually decreases in compass and volume, as the more serious labours of life, nest-building, incubating, and rearing the young, have to be performed. The peculiar mode of migration, in reference to the limited range of this bird, has long been a puzzling problem for naturalists. In some districts they are to be heard filling the air with their sweet melody in every hedge-row; while in other places, to all appearance quite as well suited to their habits, not one has ever been observed. And, stranger still, this marked difference, between abundance and total absence of nightingales, exists between places only a few miles apart. It might be supposed that the warmer districts of the kingdom would be most congenial to their habits, yet they are not found in Cornwall, nor in the south of Devonshire, where, in favourable seasons, the orange ripens in the open air. On the other hand, they are seldom heard to the northward of York, while they are plentiful in Denmark.

The migration of the nightingale to and in England seems to be conducted in an almost due north and south direction; its eastern limits being bounded by the sea, and its western by the third degree of west longitude, which latter a very few stragglers only ever cross. This line completely cuts off Devonshire and Cornwall, nearly all Wales, and of course Ireland. Its northern limit, on the eastern side, is York; but on the west it has been heard as far north as the neighbourhood of Carlisle.

The patriotic Sir John Sinclair, acting on the general rule that migratory song-birds almost always return to their native haunts, endeavoured to establish the nightingale in Scotland, but unfortunately without success. The attempt was conducted on a scale large enough to exhibit very palpable results, in case that the desired end had been practicable. Sir John commissioned a London dealer to purchase as many nightingale's eggs as he could get at the liberal price of one shilling each; these were well packed in wool, and sent down to Scotland by mail. A number of trustworthy men had previously been engaged to find and take especial care of all robin-redbreasts' nests, in places where the eggs could be hatched in perfect safety. As regularly as the parcels of eggs arrived from London, the robins' eggs were removed from their nests and replaced by those of the nightingale; which in due course were sat upon, hatched, and the young reared by their Scottish fosterers. The young nightingales, when full fledged, flew about, and were observed for some time afterwards apparently quite at home, near the places where they first saw the light, and in September, the usual period of migration, they departed. They never returned.

The poets have applied more epithets to this bird than, probably, to any other object in creation. The gentleman so favourably known to the public under the pseudonym of Cuthbert Bede, collected and published in *Notes and Queries* no less than one hundred and thirteen simple adjectives epithetically bestowed upon the nightingale by British poets; and the present writer, in the same periodical, added sixty-five more to the number. The great difference, however, among the poets, is with reference to the

character of its song. Milton speaks of it as the—

‘Sweet bird, that shuns the noise of folly,
Most musical, most melancholy.’

To this, Coleridge almost indignantly replies:—

“‘Most musical, most melancholy bird!’
A melancholy bird? O idle thought,
In nature there is nothing melancholy;
But some night wandering man, whose heart was
pierced
With the remembrance of a grievous wrong,
Or slow distemper, or neglected love,
And so, poor wretch, filled all things with himself,
And made all gentle sounds tell back the tale
Of his own sorrows—he, and such as he,
First named thy notes a melancholy strain.
* * * * *
’Tis the merry nightingale,
That crowds, and hurries, and precipitates,
With fast thick warble, his delicious notes,
As he were fearful that an April night
Would be too short for him to utter forth
His love chant, and disburden his full soul
Of all its music.’

The classical fable of the unhappy Philomela may have given an ideal tinge of melancholy to the Daulian minstrel's midnight strain; as well as an origin to the once, and even now not altogether forgotten popular error, that the bird sings with its breast impaled upon a thorn. In an exquisite sonnet by Sir Philip Sidney, set to music by Bateson in 1604, we read:—

‘The nightingale, as soon as April bringeth
Unto her rested sense a perfect waking,
While late bare earth, proud of her clothing
springeth,
Sings out her woes, a thorn her song-book making;
And mournfully bewailing,
Her throat in tunes expresseth,
While grief her heart oppresseseth,
For Tereus o'er her chaste will prevailing.’

The earliest notice of this myth by an English poet is, probably, that in the *Passionate Pilgrim* of Shakspeare.

‘Everything did banish moan,
Save the nightingale alone;
She, poor bird, as all forlorn,
Leaned her breast up till a thorn,
And there sung the dolefull'st ditty,
That to hear it was great pity.’

Hartley Coleridge, alluding to the controversy respecting the song of the nightingale, says:—
‘No doubt the sensations of the bird while singing are pleasurable; but the question is, what is the feeling which its song, considered as a succession of sounds produced by an instrument, is calculated to convey to a human listener? When we speak of a pathetic strain of music, we do not mean that either the fiddle or the fiddler is unhappy, but that the tones or intervals of the air are such as the mind associates with tearful sympathies. At the same time, I utterly deny that the voice of Philomel expresses present pain. I could never have imagined that the pretty creature sets its breast against a thorn, and could not have perpetrated the abominable story of Tereus.’ And to still further illustrate his opinion, he compares the songs of the nightingale and lark in the following lively poem, extracted

from a little known limp volume published at Leeds:—

'Tis sweet to hear the merry lark,
That bids a blithe good morrow;
But sweeter to hark, in the twinkling dark,
To the soothing song of sorrow.
Oh, nightingale! what doth she ail?
And is she sad or jolly?
For ne'er on earth was sound of mirth
So like to melancholy.
The merry lark, he soars on high,
No worldly thought o'ertakes him;
He sings aloud to the clear blue sky,
And the daylight that awakes him.
As sweet a lay, as loud as gay,
The nightingale is trilling;
With feeling bliss, no less than his,
Her little heart is thrilling.
Yet ever and anon a sigh
Peers through her lavish mirth;
For the lark's bold song is of the sky,
And hers is of the earth.
By night and day she tunes her lay,
To drive away all sorrow;
For bliss, alas! to night must pass,
And woe may come to-morrow.'

Tennyson, in his *In Memoriam*, fully recognises the characteristics of both joy and grief in the nightingale's song:

'Wild bird! whose warble liquid, sweet,
Rings echo through the budded quicks,
Oh, tell me where the senses mix,
Oh, tell me where the passions meet,
Whence radiate? Fierce extremes employ
Thy spirit in the lurking leaf,
And in the midmost heart of grief
Thy passion clasps a secret joy.'

Again, he expresses a similar idea in *The Gardener's Daughter*:

'Yet might I tell of weepings, of farewells,—
Of that which came between more sweet than each,
In whispers, like the whispers of the leaves,
That tremble round a nightingale—in sighs
Which perfect joy, perplexed for utterance,
Stole from her sister sorrow.'

Faber, in *The Cherwell Water Lily*, gives an angelic character to the strains of Philomel:

'I heard the raptured nightingale
Tell from yon elm grove his tale
Of jealousy and love,
In thronging notes that seem'd to fall,
As faultless and as musical
As angels' strains above.
So sweet, they cast on all things round
A spell of melody profound;
They charmed the river in its flowing,
They stayed the night wind in its blowing,
They lulled the lily to her rest,
Upon the Cherwell's heaving breast.'

It seems very probable that Faber had read the following lines by Drummond, of Hawthornden:—

'Sweet artless songster, thou my mind doth raise
To airs of spheres, yes, and to angels' lays.'

The beautiful prose passage on the nightingale in Walton's *Angler* has been frequently quoted, amongst others by Sir Walter Scott, Sir Humphrey Davy, and Bishop Horne; Dr Drake, too, in his *Literary Hours*, asserts that this description surpasses all that poets have written on the

subject. 'The nightingale,' says Walton, 'breathes such sweet, loud music out of her little instrumental throat, that it might make mankind to think miracles are not ceased. He that at midnight, when the very labourer sleeps securely, should hear, as I have very often, the clear airs, the sweet descants, the natural rising and falling, the doubling and redoubling of her voice, might well be lifted above earth, and say, Lord, what music hast thou provided for the saints in heaven, when thou affordest bad men such music on earth?'

More than two hundred years ago, a learned Jesuit, named Marco Bettini, attempted to reduce the nightingale's song to letters and words; and his attempt has been considered eminently successful. Towards the close of the last century, one Bechstein, a German, neither a scientific naturalist nor a scholar, simply a sportsman and observer of nature, but whose name must ever be connected with singing-birds, improved Bettini's attempt into the following form; which, however uncouth it may look, must be acknowledged by all acquainted with the song a very remarkable imitation, as far as the usual signs of spoken language can represent the different notes and modulations of the voice of the nightingale:—

Tiouou, tiouou, tiouou, tiouou,
Shpe tiou tokoua;
Tio, tio, tio, tio,
Kououtio, kououtiou, kouotiou, koutioutio,
Tokuo, tskouo, tskouo, tskouo,
Tsii, tsii, tsii, tsii, tsii, tsii, tsii, tsii, tsii, tsii,
Kouorror, tiou, tksoua, pipitksousi,
Tso, tso, tso, tso, tso, tso, tso, tso, tso, tso,
tsirrhading.
Tsi, tsi, si, tosi, si, si, si, si, si, si, si,
Tsorre, tsorre, tsorre, tsorreki;
Tsatu, tsatu, tsatu, tsatu, tsatu, tsatu, tsi,
Dlo, dlo, dlo, da, dlo, dlo, dlo, dlo, dlo,
Kouiou, trrrrrrrritzt,
Lu, lu, lu, ly, ly, ly, li, li, li, li.

Chalons, a celebrated Belgian composer, has set this to music, and Nodier asserts that there is nothing equal to it in the language of imitation. Yet, in the writer's own opinion, it is surpassed in expression, compass of voice, emphasis on the notes, and trill of terminating cadence, by the following rather ungallant imitation, sung by the French peasantry:—

Le bon Dieu m'a don - né une femme, Que j'ai
tant, tant, tant, tant, bat - tue, Que
s'il m'en donne une autre, Je ne la bat - ter - ais plus,
plus, plus, plus, Qu'un petit, qu'un petit, qu'un petit!

A ROYAL OPINION ON THE INCOMES OF
THE CLERGY.

'The Duke of Cumberland heard a Mr Mudge, one of our angelic order [a clergyman], and who had a most seraphic finger for the harpsichord, play him a tune at some friendly knight or squire's house, where he was ambushed for him on his way to or from Scotland, and very honestly expressed great satisfaction at the performance. "And would your highness think," says his friend, "that with such a wonderful talent, this worthy clergyman has not above a hundred a-year?" "And do you not think, sir," replied his highness, "that when a priest has more, it generally spoils him?"'—*Rev. Dr Warner, in Jesse's 'George Selwyn and his Contemporaries,'* iii. 336.

APRIL 16.

Eighteen martyrs of Saragossa, 304. St Turibius, Bishop of Astorga, about 420. St Fructuosus, Archbishop of Braga, 665. St Magnus, of Orkney, martyr, 1104. St Druon, recluse, patron of shepherds, 1186. St Joachim of Sienna, 1305.

Born.—Sir Hans Sloane, naturalist, 1660, *Killleagh*; George Montagu, Earl of Halifax, 1661, *Horton*; John Law, speculative financier, 1671, *Edinburgh*.

Died.—Aphra Behn, poetess, 1689; George Louis, Comte De Buffon, naturalist, 1788, *Montbard*; Dr George Campbell, theologian, 1796; Arthur Young, writer on agriculture, 1820, *Bradfield*; Muzio Clementi, celebrated pianist, 1820; Henry Fuseli, artist, 1825, *Putney Hill*; — Reynolds, dramatist, 1841; Pietro Dragonetti, eminent musician, 1846, *London*; Madame Tussaud (wax figures), 1850, *London*.

APHRA BEHN.

Aphra Behn, celebrated as a writer and a wit, was born in the city of Canterbury, in the reign of Charles I. Her father, whose name was Johnson, being of a good family and well connected, obtained, through the interest of his relative, Lord Willoughby, the appointment of Lieutenant-General of Surinam, and set out with his wife and children to the West Indies. Mr Johnson died on the voyage, but his family reached Surinam, and settled there for some years. While here, Aphra became acquainted with the American Prince Oroonoka, and his beloved wife Imoinda, and the adventures of this pair became the materials of her first novel. On returning to London, she became the wife of Mr Behn, a Dutch merchant resident in that city. How long Mr Behn lived after his marriage is not known, but, probably, not long; for when we next hear of Mrs Behn, her wit and abilities had brought her into high repute at the Court of Charles II.; so much so, that Charles thought her a fit and proper person to be entrusted with the transaction of some affairs of importance abroad during the Dutch war. Our respect for official English is by no means increased when we learn that these high-sounding terms merely mean that she was to be sent over to Antwerp as a *spy*! However, by her skill and intrigues, but more by the influence she possessed over Vander Albert, she succeeded so well as to obtain information of the design of the Dutch to sail up the

Thames and burn the English ships in their harbours, and at once communicated her information to the English Court. Although subsequent events proved her intelligence to be well founded, it was only laughed at at the time, which probably determined her to drop all further thoughts of political affairs, and during the remainder of her stay at Antwerp to give herself up to the gallantries and gaieties of the place. On her voyage back to England, she was very near being lost. The vessel foundered in a storm, but fortunately in sight of land, so that the passengers were saved by boats from the shore. The rest of her life was devoted to pleasure and the muses.

Her writings, which are numerous, are nearly forgotten now, and from the opinion of several writers, it is well they should be. The following are the principal: three vols. of *Miscellany Poems*; seventeen *Plays*; two volumes of *History and Novels*; and a translation of M. Fontenelle's *History of Oracles*, and *Plurality of Worlds*.

A plain black marble slab covers her grave in the cloisters of Westminster Abbey, bearing the following inscription:

'MRS APHARRA BEHN DIED APRILL THE 16TH, 1689.

'Here lies a proof that wit can never be
Defence enough against mortality.
Great poetess, O thy stupendous lays
The world admires, and the Muses praise.'

MADAME TUSSAUD.

The curious collection of wax-work figures exhibited in Baker-street, London, under the name of Madame Tussaud, is well known in England. Many who are no longer in their first youth must also have a recollection of the neat little figure of Madame Tussaud herself, seated in the stair of approach, and hard to be distinguished in its calm primness from the counterfeit of humanity which it was the business of her life to fabricate. Few, however, are aware of the singularities which marked the life of Madame Tussaud, or of the very high moral merits which belonged to her.

She had actually lived among the celebrated men of the French Revolution, and framed their portraits from direct observation. It was her business one day to model the horrible countenance of the assassinated Marat, whom she detested, and on another to imitate the features of his beautiful assassin, Charlotte Corday, whom she admired and loved. Now, she had a Princess Lamballe in her hands; anon, it was the atrocious Robespierre. At one time she was herself in prison, in danger of the all-devouring guillotine, having there for her associates Madame Beauharnais and her child, the grandmother and mother of the Emperor Napoleon III. Escaping from France, she led for many years a life of struggle and difficulty, supporting herself and her family by the exercise of her art. Once she lost her whole stock by shipwreck on a voyage to Ireland. Meeting adversity with a stout heart, always industrious, frugal, and considerate, the ingenious little woman at length was enabled to set up her models in London, where she had forty years of constant prosperity, and where she died at the age of ninety, in the midst of an attached

and grateful family, extending to several generations. Let ingenuity be the more honoured when it is connected, as in her case, with many virtues.

THE SWEATING SICKNESS.

April 16, 1551, the sweating sickness broke out at Shrewsbury. This was the last appearance of one of the most remarkable diseases recorded in history. Its first appearance was in August 1485, among the followers of Henry VII. who fought and gained the memorable battle of Bosworth Field. The battle was contested on the 22nd of August, and on the 28th the king entered London, bringing in his train the fatal and previously unknown pestilence. The 'Swetyng Sykenesse,' as it is termed by the old chroniclers, immediately spread its ravages among the crowded, unhealthy dwellings of the citizens of London. Two lord mayors and six aldermen, having scarcely laid aside the state robes in which they had received the Tudor king, died in the first week of the terrible visitation. The national joy and public festivities, consequent on the conclusion of the long struggle between the rival houses of York and Lancaster, were at once changed to general terror and lamentation. The coronation of Henry, an urgent measure, as it was expected to extinguish the last scruples that some might entertain regarding his right to the throne, was of necessity postponed. The disease spread over all England with fearful rapidity. It seems to have been a violent inflammatory fever, which, after a short rigor, prostrated the vital powers as with a blow; and, amidst a painful oppression at the stomach, head-ache, and lethargic stupor, suffused the whole body with a copious and disgustingly fœtid perspiration. All this took place in a few hours, the crisis being always over within the space of a day and night; and scarcely one in a hundred recovered of those who were attacked by it. Hollinshed says:—'Suddenly, a deadly burning sweat so assailed their bodies and distempered their blood with a most ardent heat, that scarce one among an hundred that sickened did escape with life, for all in manner, as soon as the sweat took them, or a short time after, yielded the ghost. Kaye, the founder of Caius College, Cambridge, and the most eminent physician of his day, who carefully observed the disease at its last visitation, relates that its 'sudden sharpness and unwonted cruelty passed the pestilence (the plague). For this (the plague) commonly giveth three or four, often seven, sometimes nine, sometimes eleven, and sometimes fourteen days respect to whom it vexeth. But that (the sweating sickness) immediately killed. Some in opening their windows, some in playing with their children at their street doors, some in one hour, many in two, it destroyed, and, at the longest, to them that merrily dined it gave a sorrowful supper. As it found them, so it took them, some in sleep, some in wake, some in mirth, some in care, some fasting, and some full, some busy, and some idle, and in one house, sometimes three, sometimes four, sometimes seven, sometimes eight, sometimes more, sometimes all.'

Though the sweating sickness of 1485 desolated the English shores of the Irish Channel,

and the northern border counties of England, yet it did not penetrate into either Ireland or Scotland. It disappeared about the end of the year; a violent tempest that occurred on the 1st of January 1486, was supposed to have swept it away for ever.

The slight medical knowledge of the period found itself utterly unable to cope with the new disease. No resource was therefore left to the terrified people, but their own good sense, which fortunately led them to adopt the only efficient means that could be pursued. Violent medicines were avoided. The patient was kept moderately warm, a small quantity of mild drink was given, but total abstinence from food was enjoined until the crisis of the malady had passed. Those who were attacked in the day, in order to avoid a chill, went immediately to bed without taking off their clothes, and those who sickened at night did not rise, carefully avoiding the slightest exposure to the air of either hand or foot. Thus they carefully guarded against heat or cold, so as not to encourage the perspiration by the former, nor check it by the latter; bitter experience having taught that either was certain death.

In 1506, the sweating sickness broke out in London for the second time, but the disease exhibited a much milder character than it did during its first visitation; numbers who were attacked by it recovered, and the physicians of the day rejoiced triumphantly, attributing the cures to their own skill, instead of to the milder form of the epidemic. It was not long till they discovered their error. In 1517, the disease broke out in England for the third time, with all its pristine virulence. It ravaged England for six months, and as before did not penetrate into Ireland or Scotland. It reached Calais, however, then an English possession, but did not spread farther into France.

As eleven years elapsed between the second and third visitation of this fell destroyer, so the very same period intervened between its third and fourth appearance, the latter taking place in 1528. The previous winter had been so wet, that the seed corn had rotted in the ground. Some fine weather in spring gave hopes to the husbandman, but scarcely had the fields been sown when a continual series of heavy rains destroyed the grain. Famine soon stalked over the land, and with it came the fatal sweating sickness. This, as far as can be collected, was its most terrible visitation, the old writers describing it as *The Great Mortality*. All public business was suspended. The Houses of Parliament and courts of law were closed. The king, Henry VIII., left London, and endeavoured to avoid the epidemic by continually travelling from place to place, till, becoming tired of so unsettled a life, he determined to await his destiny at Tittenhanger. There, with his first wife, Katherine of Arragon, and a few favourites, he lived in total seclusion from the outer world, the house being surrounded with large fires, which night and day were kept constantly burning, as a means of purifying the atmosphere. There are no accurate data by which the number of persons destroyed by this epidemic can be

estimated, but they must have been many, very many. The visitation lasted much longer than the previous ones. Though the greater number of deaths occurred in 1528, the disease was still prevalent in the following summer. As before, the epidemic did not extend to Scotland or Ireland. It was even affirmed and believed that natives of those countries were never attacked by it, though dwelling in England; that in Calais it spared the French, the men of English birth alone becoming its victims; that, in short, it was a disease known only in England, and fatal only to Englishmen; consequently, the learned gave it the name of *Sudor Anglicus*—the English sweat. And the learned writers of the period all cordially agreed in ascribing the English pestilence to the sins of Englishmen, though they differed in opinion as to the particular sins which called down so terrible a manifestation of Divine displeasure. Not one of them conjectured the real causes of the epidemic, namely, the indescribable filthiness of English towns and houses, and the scarcity and disgusting unwholesomeness of the people's food.

The disease soon gave the lie to the expression *Sudor Anglicus* by spreading into Germany, and there committing frightful ravages. On its last visit to England, in April 1551, it made its first appearance at Shrewsbury. It was found to have undergone no change. It attacked its hapless victims at table, on journeys, during sleep, at devotion or amusement, at all times of the day or night. Nor had it lost any of its malignity, killing its victims sometimes in less than an hour, while in all cases the space of twenty-four hours decided the fearful issue of life or death.

Contemporary historians say that the country was depopulated. Women ran about negligently clothed, as if they had lost their senses, and filled the air with dismal outcries and lamentations. All business came to a stand. No one thought of his daily avocations. The funeral bells tolled night and day, reminding the living of their near and inevitable end. Breaking out at Shrewsbury, it spread westward into Wales, and through Cheshire to the north-western counties; while on the other side, it extended to the southern counties, and easterly to London, where it arrived in the beginning of July. It ravaged the capital for a month, then passed along the east coast of England towards the north, and finally ceased about the end of September. Thus, in the autumn of 1551, the sweating sickness vanished from the earth; it has never reappeared, and in all human probability never will, for the conditions under which a disease of its nature and malignity could occur and extend itself do not now exist. Modern medical science avers that the *Sudor Anglicus* was a rheumatic fever of extraordinary virulence; still of a virulence not to be wondered at, when we take into consideration the deficiency of the commonest necessities of life, that prevailed at the period in which it occurred.

BATTLE OF CULLODEN.—PRINCE CHARLES'S KNIFE-CASE.

On the 16th of April 1746, was fought the battle of Culloden, insignificant in comparison

with many other battles, from there being only about eight thousand troops engaged on each side, but important as finally setting at rest the claims of the expatriated line of the house of Stuart to the British throne. The Duke of Cumberland, who commanded the army of the government, used his victory with notable harshness and cruelty; not only causing a needless slaughter among the fugitives, but ordering large numbers of the wounded to be fusilladed on the field: a fact often doubted, but which has been fully proved. He probably acted under an impression that Scotland required a severe lesson to be read to her, the reigning idea in England being that the northern kingdom was in rebellion, whereas the insurgents represented but a small party of the Scottish people, to whom in general the descent of a parcel of the Highland clans with Charles Edward Stuart was as much a surprise as it was to the court of St James's. The cause of the Stuarts had, indeed, extremely declined in Scotland by the middle of the eighteenth century, and the nation was turning its whole thoughts to improved industry, in peaceful submission to the Brunswick dynasty, when the romantic enterprise of Prince Charles, at the head of a few hundred Camerons and Maedonalds, came upon it very much like a thunder-cloud in a summer sky. The whole affair of the Forty-five was eminently an *affair out of time*, an affair which took its character from a small number of persons, mainly Charles himself and a few West Highland chieftains, who had pledged themselves to him, and after all went out with great reluctance.

The wretched wanderings of the Prince for five months, in continual danger of being taken and instantly put to death, form an interesting pendant to the romantic history of the enterprise itself. Thirty thousand pounds was the fee offered for his capture; but, though many scores of persons had it in their power to betray him, no one was found so base as to do it. A curious circumstance connected with his wanderings has only of late been revealed, that, during nearly the whole time, he himself had a large command of money, a sum of about twenty-seven thousand pounds in gold having come for him too late to be of any use in the war, and been concealed in the bed of a *burn* in the Cameron's country, whence, from time to time, portions of it were drawn for his use and that of his friends.

When George IV. paid his visit to Scotland in 1822, Sir Walter Scott was charged by a lady in Edinburgh, with the duty of presenting to him the pocket knife, fork, and spoon which Charles Edward was believed to have used in the course of his marches and wanderings in 1745-6. The lady was, by Sir Walter Scott's acknowledgment,* Mary Lady Clerk, of Penicuik. This relic of Charles, having subsequently passed to the Marquis of Conyngham, and from him to his son Albert, first Lord Loudesborough, is now preserved with great care amidst the valuable collection of ancient plate and *bijouterie* at Grimston Park, Yorkshire. The case is a small one covered with black shagreen; for portability, the knife,

* Note to Croker's *Boswell*, 8vo. ed. p. 329.

fork, and spoon are made to screw upon handles, so that the three articles form six pieces, allowing

of close packing, as shewn in our first cut. The second cut exhibits the articles themselves, on a scale of half their original size; one of the handles being placed below, while the rose pattern on the knob of each is shewn at *a*. They are all engraved with an ornament of thistle leaves, and the spoon and fork marked with the initials

C. S., as will be better seen on reversing the engraving. The articles being impressed with a Dutch plate stamp, we may presume that they were manufactured in Holland.

520

On reverting to the chronicles of the day,* we find that the king, in contemplation of his visit to Scotland, expressed a wish to possess some relic of the 'unfortunate Chevalier,' as he called him; and it was in the knowledge of this fact, that Lady Clerk commissioned Sir Walter Scott to present to his Majesty the articles here described. On the king arriving in Leith Road, Sir Walter went out in a boat to present him with a silver cross badge from 'the ladies of Scotland,' and he took that opportunity of handing him the gift of Lady Clerk, which the king received with marked gratification. At a ball a few days afterwards, he gave the lady his thanks in person, in terms which shewed his sense of the value of the gift. He was probably by that time aware of an interesting circumstance in her own history connected with the Forty-five. Born Mary Daeres, the daughter of a Cumberland gentleman, she had entered the world at the time when the Prince's forces were in possession of Carlisle. While her mother was still confined to bed, a Highland party came to the house; but the officer in command, on learning the circumstances, not only restrained his men from giving any molestation, but pinned his own white rosette or cockade upon the infant's breast, that it might protect the household from any trouble from others. This rosette the lady kept to her dying day, which was not till several years subsequent to the king's visit. Her ladyship retained till past eighty an erect and alert carriage, which, together with some peculiarities of dressing, made her one of the most noted street figures of her time. With Sir Walter she was on the most intimate terms. The writer is enabled to recall a walk he had one day with this distinguished man, ending at Mr Constable's warehouse in Princes-street, where Lady Clerk was purchasing some books at a side counter. Sir Walter, passing through to the stairs by which Mr Constable's room was reached, did not recognise her ladyship, who, catching a sight of him as he was about to ascend, called out, 'Oh, Sir Walter, are you really going to pass me?' He immediately turned to make his usual cordial greetings, and apologised with demurely waggish reference to her odd dress, 'I'm sure, my lady, by this time I might know your back as well as your face.'

It is understood in the Conyningham family, that the knife-case came to Lady Clerk 'through the Primrose family,' probably referring to the widow of Hugh third Lord Primrose, in whose house in London Miss Flora Macdonald was sheltered after her liberation from a confinement she underwent for her concern in promoting the Prince's escape. We are led to infer that Lady Primrose had obtained the relic from some person to whom the Chevalier had given it as a *souvenir* at the end of his wanderings.†

* *Edinburgh Observer*, quoted in *Gentleman's Magazine*, September 1822.

† We learn from Boswell that the Prince gave a similar knife-case to Dr Macleod, brother of 'Rasay,' who had promoted his escape; and it appears that this relic was lately in the possession of Dr Macleod's great grandson, Mr Shaw, sheriff-substitute, Lochmaddy.

APRIL 17.

St Anicetus, Pope and martyr, 173. St Simeon, Bishop of Ctesiphon, 341. St Stephen, abbot of Citeaux, 1134.

Born.—John Ford, dramatist (baptized), 1586, *Islington*; Bishop Edward Stillingfleet, 1635, *Cranbourn, Dorset*.

Died.—Marino Falieri, doge of Venice, executed, 1355; Joachim Camerarius, German Protestant scholar, 1574, *Leipsic*; George Villiers, second Duke of Buckingham, 1687, *Kirby Moorside*; Bishop Benjamin Hoadley, 1761, *Winchester*; Dr Benjamin Franklin, 1790, *Philadelphia*; James Thom, 'The Ayrshire sculptor, 1850, *New York*.

GEORGE VILLIERS, SECOND DUKE OF
BUCKINGHAM.

This nobleman, whose miserable end is described by Pope, was about six or seven years old when, on his father's murder, he succeeded to his titles and estates. During his long minority, which he passed chiefly on the Continent, his property so greatly accumulated as to have become, it is said, fifty thousand a year, equal to at least four times that sum at the present day.

At the battle of Worcester, he was General of the king's horse, and, after the loss of that contest, he escaped with much difficulty. Travelling on foot through bye lanes, obtaining refreshment at cottages, and changing his dress with a woodman, he was enabled to elude the vigilance of his pursuers. At the restoration of Charles II., he was appointed to several offices of trust and honour; but such were his restless disposition and dissolute habits, that he soon lost the confidence of the king, and made a wreck of his property. 'He gave himself up,' says Burnet, 'to a monstrous course of studied immoralities.' His natural abilities, however, were considerable, and his wit and humour made him the life and admiration of the court of Charles. 'He was,' says Granger, 'the alchemist and the philosopher; the fiddler and the poet; the mimic and the statesman.'

His capricious spirit and licentious habits unfitted him for the permanent leadership of any political party, nor did he generally take much interest in politics, but occasionally he devoted himself to some special measure, and would then become its principal advocate; though even on such occasions his captious, ungoverned temper often led him to give personal offence, and to infringe the rules of the House, for which he was more than once committed to the Tower. Lord Clarendon relates an amusing anecdote of him on one of these occasions, which is also a curious illustration of the manner of conducting public business at that period. 'It happened,' says the Chancellor, 'that upon the debate of the same affair, the Irish Bill, there was a conference appointed with the House of Commons, in which the Duke of Buckingham was a manager, and as they were sitting down in the Painted Chamber, which is seldom done in good order, it chanced that the Marquis of Dorchester sate next the Duke of Buckingham, between whom there was no good correspondence. The one changing his posture for his own ease, which made the station

of the other more uneasy, they first endeavoured by jostling to recover what they had dispossessed each other of, and afterwards fell to direct blows. In the scuffle, the Marquis, who was the lower of the two in stature, and was less active in his limbs, was deprived of his periwig, and received some rudeness, which nobody imputed to his want of courage. Indeed, he was considered as beforehand with the Duke, for he had plucked off much of his hair to compensate for the loss of his own periwig.' For this misdemeanour they were both sent to the Tower, but were liberated in a few days.

The Duke of Buckingham began to build a magnificent mansion at Cliefden, in Buckinghamshire, on a lofty eminence commanding a lovely view on the banks of the Thames, where he is said to have carried on his gallantries with the notorious Countess of Shrewsbury, whose husband he killed in a duel, an account of which has already been given in this volume (page 129).

Large as was his income, his profligate habits reduced him to poverty, and he died in wretchedness at Kirby Moorside, in Yorkshire, in 1687. The circumstances of his death have thus been, somewhat satirically, described by Pope in his third Epistle to Lord Bathurst:

'Behold! what blessings wealth to life can lend,
And see, what comfort it affords our end!
In the worst inn's worst room, with mat half-hung,
The floors of plaster, and the walls of dung,
On once a flock-bed, but repaired with straw,
With tape-tied curtains, never meant to draw,
The George and Garter dangling from that bed
Where tawdry yellow strove with dirty red,
Great Villiers lies—alas! how changed from him,
That life of pleasure, and that soul of whim,
Gallant and gay, in Cliefden's proud alcove,
The bower of wanton Shrewsbury and Love;
Or just as gay at council, in a ring
Of mimic'd statesmen and their merry king.
No wit to flatter, left of all his store!
No fool to laugh at, which he valued more.
There, victor of his health, of fortune, friends,
And fame, this lord of useless thousands ends.'

The house in which the Duke died is still in existence. There is no tradition of its ever having been an inn, and it is far from being a mean habitation. It is built in the Elizabethan style, with two projecting wings; and at the time of the Duke's decease, must have been, with but one exception, the best house in the town. The room in which he expired is the best sleeping room in the house, and had then, as now, a good boarded floor. His Yorkshire place of residence was Helmsley Castle, which is about six miles from Kirby Moorside, and now a mere ruin. While hunting in the neighbourhood of Kirby, the manor of which belonged to him, he was seized with hernia and inflammation, which caused his detention and death at the above-mentioned house, then occupied, probably, by one of his tenants.

So little did the house in which the Duke died really resemble Pope's description. Nor was his death-bed altogether without proper attendants. It so happened that just about the time of his seizure, the Earl of Arran, his kinsman, was passing through York, and hearing of the Duke's illness he hastened to him, and, on finding the

condition he was in, immediately sent for a physician from York, who, with other medical men, attended on the Duke till his death. Lord Arran also sent for a Mr Gibson, a neighbour and acquaintance of the Duke's, and apprized his family and connexions of the circumstances of his case; so that Lord Fairfax, Mr Brian Fairfax, Mr Gibson, and Colonel Liston, were speedily in attendance. Lord Arran also informed the Duke of his immediate danger, and, supposing him to be a Roman Catholic, proposed to send for a priest of that persuasion, but the Duke declared himself to be a member of the Church of England, and after some hesitation agreed to receive the clergyman of the parish, who offered up prayers for him, 'in which he freely joined;' and afterwards administered to him the Holy Communion.

Shortly after this he became speechless, and died at eleven o'clock on the night of the 16th of April.* Lord Arran ordered the body to be carried to Helmsley Castle, and, after being disbowelled and embalmed, to remain there till orders were received from the Duchess. It was subsequently taken to London, and interred in Westminster Abbey. This circumstantial account of the Duke's death is given, because Pope's has been received as historical, instead of a poetic exaggeration of the real facts of the case.

Of the Duke's dissolute habits, of his unprincipled character, of his self-sacrificed health, and his ruined fortune, it is scarcely possible to speak too strongly. His possession of Helmsley Castle at his death was only nominal. In reference to his funeral, Lord Arran says: 'There is not so much as one farthing towards defraying the least expense.' Soon after his death all his property, which had long been deeply mortgaged, was sold, and did not realize sufficient to pay his debts; and dying issueless, his titles, which had been undeservedly conferred on his father and only disgraced by himself, became extinct. Indeed all the titles, nine in number, conferred by James on his favourite George Villiers and his brothers, became extinct in the next generation. Strange to say, this profligate Duke married Mary, daughter and heir of the puritan Lord Fairfax, the Parliamentary General, whom he deserted while living and left without a memento at his death.

Many years after the Duke's decease, a steel seal, with his crest on it, was found in a crevice in the room wherein he died, and is still possessed by the present owner of the house; and an old parish register at Kirby contains the following curious entry:

'Burials; 1687, April 17th, Georges Viluas Lord dooke of bookingham.†

W. H. K.

GREYSTEIL.

The books of the Lord Treasurer of Scotland indicate that, when James IV. was at Stirling on

* Lord Arran's letter to the Bishop of Rochester, from which the above account is taken, is dated 'Kerby-moor-Syde, April 17, 1687.' The duke, therefore, probably died on the preceding night, although generally said to have died on the 17th.

† For this extract, and for other local information, the writer is indebted to the courtesy of the Rev. C. R. Hay, late vicar of Kirby Moorside.

the 17th April 1497, there was a payment 'to twa fithalaris [fiddlers] that sang *Greysteil* to the king, ix s.' *Greysteil* is the title of a metrical tale which originated at a very early period in Scotland, being a detail of the adventures of a chivalrous knight of that name. It was a favourite little book in the north throughout the sixteenth and seventeenth centuries, sold commonly at sixpence; yet, though there was an edition so late as 1711, so entirely had it lost favour during the eighteenth century, that Mr David Laing, of Edinburgh, could find but one copy, from which to reprint the poem for the gratification of modern curiosity. We find a proof of its early popularity, not merely in its being sung to King James IV., but in another entry in the Lord Treasurer's books, as follows:—'Jan. 22, 1508, to Gray Steill, lutar, vs. ;'* from which it can only be inferred that one of the royal lute-players, of whom there appear to have been four or five, bore the nickname of Greysteil, in consequence of his proficiency in singing this old minstrel poem. It appears to have been deemed, in the sixteenth and seventeenth centuries, as high a compliment as could well be paid to a gallant warrior, to call him Greysteil. For example, James V. in boyhood bestowed this pet name upon Archibald Douglas, of Kilspindie; and even when the Douglas was under banishment, and approaching the king in a kind of disguise for forgiveness, 'Yonder is surely my Greysteil,' exclaimed the monarch, pleased to recall the association of his early days. Another personage on whom the appellation was bestowed was Alexander, sixth Earl of Eglintoun, direct ancestor of the present Earl. A break in the succession (for Earl Alexander was, paternally, a Seton, not a Montgomery) had introduced a difficulty about the descent of both the titles and estates of the family, and the lordship of Kilwinning was actually given away to another by Act of Parliament, in 1612. In a family memoir we are told, 'Alexander was not a man tamely to submit to such injustice, and the mode which he adopted to procure redress was characteristic. He had repeatedly remonstrated, but in vain. Irritated by the delay on the part of the crown to recognise his right to the earldom, and feeling further aggrieved by the more material interference with his barony of Kilwinning, he waited personally on the Earl of Somerset, the King's favourite, with whom he supposed the matter mainly rested. He gave the favourite to understand that, as a peer of the realm, he was entitled to have his claims heard and justice done him, and that though but little skilled in the subtleties of law and the niceties of court etiquette, he knew the use of his sword. From his conduct in this affair, and his general readiness with his sword, the Earl acquired the *sobriquet* of Greysteil, by which he is still known in family tradition.'†

It will probably be a surprise to most of our readers that the tune of old called *Greysteil*, and probably the same which was sung to James

* Dauney's *Ancient Scottish Melodies*, 4to, Edinburgh, 1838, p. 358.

† Memorials of the Earls of Eglintoun, by William Fraser. 2 vols. 4to. Edinburgh [privately printed], 1859.

IV. of Scotland in 1497, still exists, and can now be forthcoming. The piece of music we refer to is included, under the name *Greysteil*, in 'Ane Playing Booke for the Lute, noted and collected at Aberdeen by Robert Gordon in 1627,' a manuscript which some years ago was in the possession of George Chalmers, the historian. The airs in this book being in tablature, a form of notation long out of use, it was not till about 1840 that the tune of Greysteil was with some difficulty read off from it, and put into modern notation, and so communicated to the writer of this notice by his valued friend Mr William Daune, advocate, editor of the ancient Scottish melodies just quoted. Mr Daune, in sending it, said, 'I have no doubt that it is in substance the air referred to in the Lord Treasurer's accounts. The ballad or poem to which it had been chanted, was most probably the popular romance of that name, which you will find in Mr Laing's *Early Metrical Tales*, and of which he says in the preface that, "along with the poems of Sir David Lyndsey, and the histories of Robert Bruce and of Sir William Wallace, it

formed the standard production of the vernacular literature of the country." The tune, Mr Daune goes on to say, 'is not Scottish in its structure or character; but it bears a resemblance to the somewhat monotonous species of chant to which some of the old Spanish and even English historical ballads were sung. In this respect it is suitable to the subject of the old romance, which is not Scottish.' There is a serviceable piece of evidence for the presumed antiquity of the air, in the fact that a satirical Scotch poem on the unfortunate Earl of Argyle, dated 1686, bears on it, 'appointed to be sung to the tune of old Greysteil.' We must, however, acknowledge that, but for this proof of poetry being actually sung to 'Old Greysteil,' we should have been disposed to think that the tune here printed was only presented by the luters as a sort of prelude or refrain to their chanting of the metrical romance in question. The abruptness of the end is very remarkable.

The tune of *Greysteil*, for certain as old as 1627, and presumed to be traditional from at least 1497, is as follows:

When on the subject of so early a piece of Scotch music, it may not be inappropriate to advert to another specimen, which we can set forth as originally printed in 1588, being the oldest piece in print as far as we know. It is only a simple little *lilt*, designed for a homely dance, but still, from its comparative *certain antiquity*, is well worthy of preservation. Mr Douce has transferred it into his *Illustrations of Shakspeare*, from the book in which it originally appeared, a volume styled *Orchesographie*, professedly by Thionot Arbeau (in reality by a monk named Jean Tabouret), printed at Lengres in the

year above mentioned. He calls it a *branle* or *brawl*, 'which was performed by several persons uniting hands in a circle and giving each other continual shakes, the steps changing with the tune. It usually consisted of three *pas* and a *piéd-joint* to the time of four strokes of the bow; which being repeated, was termed a *double brawl*. With this dance balls were usually opened.'

The copy given in the original work being in notation scarcely intelligible to a modern musician, we have had it read off and harmonised as follows:

BRING THEM IN AND KEEP THEM AWAKE.

On the 17th April 1725, John Rudge bequeathed to the parish of Trysull, in Staffordshire, twenty shillings a year, that a poor man might be employed to go about the church during sermon and keep the people awake; also to keep dogs out of church. A bequest by Richard Dovey, of Farmcote, dated in 1659, had in view the payment of eight shillings annually to a poor man, for the performance of the same duties in the church of Claverley, Shropshire. In the parishes of Chislet, Kent, and Peterchurch, Herefordshire, there are similar provisions for the exclusion of dogs from church, and at Wolverhampton there is one of five shillings for keeping boys quiet in time of service.*

We do not find any very early regulations made to secure the observance of festivals among Christians. A solicitude on the subject becomes apparent in the middle ages. Early in the thirteenth century, we meet with a document of a curious nature, the principal object of which is to awaken a reverence for the Lord's day. It professes to be 'a mandate which fell from heaven, and was found on the altar of

St Simon, on Mount Golgotha, in Jerusalem,' and humbly taken by the patriarch, and the Archbishop Akarias, 'after that for three days and three nights the people, with their pastors, had lain prostrate on the ground, imploring the mercy of God.' A copy of it was brought to England by Eustachius, abbot of Hay; who, on his return from the Holy Land, preached from city to city against the custom of buying and selling on the Sunday. 'If you do not obey this command,' says this celestial message, 'verily, I say unto you, that I will not send you any other commands by another letter, but I will open the heavens, and instead of rain I will pour down upon you stones and wood, and hot water by night; so that ye shall not be able to guard against it, but I will destroy all the wicked men. This I say unto you; ye shall die the death, on account of the holy day of the Lord; and of the other festivals of my saints which ye do not keep, I will send upon you wild beasts to devour you,' &c.

Yet the sacredness of the day had been attested by extraordinary interpositions of divine power. At Beverley, a carpenter who was making a peg, and a weaver who continued to work at his web after three o'clock on the

* Edwards's *Remarkable Charities*, 220.

Saturday, were severally struck with palsy. In Nasurta, a village which belonged to one Roger Arundel, a man who had baked a cake in the ashes after the same hour, found it bleed when he tried to eat it on Sunday, and a miller who continued to work his mill was arrested by the blood which flowed from between the stones, in such quantity as to prevent their working; while in some places, not named, in Lincolnshire, bread put by a woman into a hot oven after the forbidden hour, remained unbaked on the Monday; when another piece, which by the advice of her husband she put away in a cloth, because the ninth hour was past, she found baked on the morrow.—(Notes to *Feasts and Fasts*, by E. V. Neale.)

Leland presents evidence of the same kind of feeling in a story told of Richard de Clare, Earl of Gloucester, by annalists, to this effect. In the year 1260, a Jew of Tewkesbury fell into a sink on the Sabbath, and out of reverence for the day, would not suffer himself to be drawn out; the earl, out of reverence for the Sunday, would not permit him to be drawn out the next day, and between the two he died.

By the 5th and 6th Edward VI., and by 1st Elizabeth, it was provided, that every inhabitant of the realm or dominion shall diligently and faithfully, having no lawful or reasonable excuse to be absent, endeavour themselves to their parish church or chapel accustomed; or, upon reasonable let, to some usual place where common prayer shall be used,—on Sundays and holidays,—upon penalty of forfeiting for every non-attendance twelve pence, to be levied by the churchwardens to the use of the poor. But the application of these provisions to the attendance upon other holidays than Sundays, seems to have been soon dropped. The statute of James I., re-enacting the penalty of one shilling for default in attendance at church, is limited to Sundays; and the latter day alone is mentioned in the Acts of William and Mary, and George III., by which exceptions in favour of dissenters from the Church of England were introduced.

As the statute of James applied solely to Sundays, there was no civil punishment left for this neglect; though it remained punishable, under the 5th and 6th of Edward VI., by ecclesiastical censures. Mr Vansittart Neale, in his *Feasts and Fasts*, however, cites several cases which appear to settle that the ecclesiastical courts had not the power to compel any person to attend his parish church, because they have no right to decide the bounds of parishes.

There were, however, from time to time, suits commenced against individuals for this neglect of attendance at church; these actions being generally instigated by personal motives rather than with religious feeling. Professor Amos, in his Treatise on Sir Matthew Hale's *History of the Pleas of the Crown*, states the following cases: 'In the year 1817, at the Spring Assizes for Bedford, Sir Montague Burgoyne was prosecuted for having been absent from his parish church for several months; when the action was defeated by proof of the defendant having been indisposed. And in the Report of Prison Inspectors to the House of Lords, in 1841, it appeared, that in

1830, ten persons were in prison for recusancy in not attending their parish churches. A mother was prosecuted by her own son.' These enactments remained in our Statute-book, until, in common with many other penal and disabling laws in regard to religious opinions, they were swept away by the statute 9th and 10th Viet., c. 59.

It also appears that in old times many individuals considered it their duty to set aside part of their worldly wealth for keeping the congregation awake. Some curious provisions were made for this purpose. At Acton church in Cheshire, about five and twenty years ago, one of the churchwardens or the apparitor used to go round the church during service, with a long wand in his hand; and if any of the congregation were asleep, they were instantly awoken by a tap on the head. At Dunchurch, a similar custom existed: a person bearing a stout wand, shaped like a hay fork at the end, stepped stealthily up and down the nave and aisle, and, whenever he saw an individual asleep, he touched him so effectually that the spell was broken; this being sometimes done by fitting the fork to the nape of the neck.

We read of the beadle in another church, going round the edifice during service, carrying a long staff, at one end of which was a fox's brush, and at the other a knob; with the former he gently tickled the faces of the female sleepers, while on the heads of their male compere he bestowed with the knob a sensible rap.

In some parishes, persons were regularly appointed to whip dogs out of church; and 'dog-whipping' is a charge in some sexton's accounts to the present day.

LORD CHANCELLOR JEFFREYS.

As even Nero had some one to strew flowers over his grave, so was there a bard who found the notorious Jeffreys worthy of a gratulatory ode on his acceding to the Chief Justiceship. It appears in a broadside, dated October 23, 1683, and is wholly composed of panegyric. The circumstance becomes the more remarkable as the effusion is in Latin verse, arguing that the author was a man of good education. It ends with—

'I, seculi presentis amor, longumque futuri
Exemplar, qui sic titulos virtutibus ornas,
Virtutem celsis titulis! Antiqua Britannum
Gesta sepulcorum per te rediviva resurgant,
Anglicumque novis cumulant annalibus orbem.*

ERASMUS DARWIN.

Erasmus Darwin, poet and physician, was born at Elton, near Newark, in Nottinghamshire. From his early youth, he was inclined to the easily enjoyed pleasures of the imagination, rather than to the hard-earned rewards of scientific studies. The following anecdote shews how open to vivid impressions his mind was in youth. Journeying from Newark, to enter upon his collegiate education at Cambridge, he rested for the night at the house of two old bachelor brothers. They were delighted with the vivacity of the young student, and were rendered by it so painfully sensible that they were childless and solitary, that he heard one say regretfully to the other, 'Why did not one of us marry!' The tone and the circumstances never allowed that sentence to fade from Darwin's memory, and it was the origin of that strong condemnation of an unmarried life, which for ever afterwards he was so ready to utter. In due course, Darwin graduated in medicine at Cambridge; but even there he distinguished himself more by poetic exercises than proficiency in science. Indeed, he never attained to any particular eminence as a physician, and would now be completely forgotten were it not for his principal poem, *The Loves of the Plants*. This work formed part only of a poem entitled *The Botanic Garden*, in which the physiology and classification of the vegetable world is related in high-sounding, but not unmelodious verse, and illustrated with many notes amusing, though not profound. The digressions are many, and the flights of imagination widely discursive. These flights are not always characterised by scientific accuracy, but reach the extreme limits of poetic frenzy. One, however, as a prognostication of steam-vessels and locomotive engines, has become among the most hackneyed quotations in our language—

'Soon shall thy arm, unconquered steam! afar
Drag the slow barge, or drive the rapid car.'

The *Loves of the Plants* had a great popularity in its day, but was at last snuffed out by the able but severe burlesque, *The Loves of the Triangles*.

Darwin had often expressed a hope that the termination of his life might come to him without pain, for he ever esteemed pain as a much greater evil than death. The hope was realized; complaining of cold, he seated himself by the fire, and died in a few minutes, without pain or emotion.

FOLK LORE OF NAIL-CUTTING.

A man had better ne'er been born
Than have his nails on a Sunday shorn.
Cut them on Monday, cut them for health;
Cut them on Tuesday, cut them for wealth;
Cut them on Wednesday, cut them for news;
Cut them on Thursday, for a pair of new shoes;

* Luttrell Collection of Broad-sides, Brit. Mus.

Cut them on Friday, cut them for sorrow;
Cut them on Saturday, see your sweetheart to-morrow.'

Sir Thomas Brown remarks: 'To cut nails upon a Friday or a Sunday is accounted lucky amongst the common people in many places. The set and statutory times of paring nails and cutting hair is thought by many a point of consideration, which is perhaps but the continuation of an ancient superstition. To the Romans it was piacular to pare their nails upon the *nundinae*, observed every ninth day,' &c.

APRIL 19.

St Ursmar, bishop and abbot, 713. St Elphege, Archbishop of Canterbury, martyr, 1012. St Leo IX., Pope, 1054.

THE MARTYRDOM OF ST ELPHEGE.

The Danes, emboldened by success, had determined at no distant time to conquer England; and, as a measure of precaution, to anticipate any league that might be formed against them, they resolved on the murder of the king and Witan. Their plan was disclosed, and Ethelred and his nobles, panic-struck and frenzied, took refuge in the last resource of cowards, assassination. Orders were secretly sent over the country to exterminate the Danes, who were billeted on the different Anglo-Saxon families, on the next St Brice's Day, Nov. 13, 1002. A massacre ensued which only finds a parallel in the Sicilian Vespers, the atrocities of St Bartholomew's Day, and the barbarism of the French Revolution. The Danes vowed revenge, and for years after kept their vow with desolating rigour.

Under these circumstances, Elphege became Archbishop of Canterbury, A.D. 1006. He was an enthusiastic Benedictine monk. It is told of him that, in winter, he would rise at midnight, and, issuing unseen from his house, kneel, exposed to the night air while praying, barefoot, and without his great coat. Flesh he never touched, except on extraordinary occasions; his body was so attenuated, that, it is said, when he held up his hand,

'It was so wan, and transparent of hue,
You might have seen the moon shine through.'

In 1011, the marauding Danes appeared, for the second time, before Canterbury, and prepared for an assault. The nobles fled; but the good old archbishop buckled on his spiritual armour, and shewed a vigour of mind but little expected in one who had hitherto displayed only the virtues of the recluse. He exhorted the citizens; and they, encouraged by his example, for twenty days successfully repelled the assaults of the enemy. How the contest would have ended it is impossible to say, had not the city been betrayed by one Ælmar. While the plunder was going on with every circumstance of cruelty, the archbishop, trusting that his person would be respected, resolved to address the Danes, in the hope of moderating their excesses. He arrived at a spot where the carnage and cruelty were beyond all description. Women were exposed to worse than death, because they could

not reveal the hiding-place of treasures which did not exist; and their children were tossed from spear-point to spear-point before their eyes, amid the laughter of incarnate fiends, or crushed beneath the waggon-wheels which bore away the plunder. Eloquent from very anguish of heart, Elphege called upon them not to make war upon infants, and offered himself for death if they would but respect the women and spare the children. Instead of yielding to his entreaties, the Danes seized him, bound him, and by a refinement of cruelty dragged him to witness the destruction of his cathedral by fire. He knew that the church was filled with defenceless clergy, monks, and women. As the falling timbers and streams of melted lead drove them from the sanctuary, they were butchered amid shouts and merriment. Then to vary the sport, every tenth person was spared to become a slave. The archbishop himself was spared, his ransom being considered more profitable than his death. For seven months he was carried about with the army wherever they went, kept a close prisoner, and often in chains. On the day before Easter, he received notice that unless his ransom were paid within eight days—and it was fixed at 3,000 pieces of silver—his life would be forfeited. Paid it was not, and the anger of the Danes became excessive. At one of their feasts, when the men had gorged themselves, as was their fashion, and drunk themselves half mad with south-country wine, the archbishop was sent for to make them sport. 'Money, bishop, money!' was the cry which greeted him on all sides, as he was hurried into the hall. Breathless from fatigue, he sat down for a short time in silence. 'Money, money!' was still the cry. 'Your ransom, bishop, your ransom!' Having recovered his breath, the archbishop rose with dignity, and all were silent to hear if he would promise money for his ransom. 'Silver and gold,' he said, 'have I none; what is mine to give I freely offer, the knowledge of the one true God.' Here some one snatched up one of the ox-bones with which the floor was plentifully strewed, and threw it at the defenceless old man. Amid shouts of laughter, the cowardly example was followed, till he sank, severely bruised, but not dead. Some one standing near—it is said in pity for the sufferings of Elphege—raised his battle-axe, and with one blow ended his mortal agony. From a feeling of remorse, the body was given up to his friends, without ransom, for burial, and was first interred in London with great pomp; and then, only ten years after, conveyed in the barge of a Danish king, and attended by a Danish guard of honour, to Canterbury, and deposited by the side of the illustrious Dunstan.

Born.—Edward Pellew, Viscount Exmouth, naval commander, 1757.

Died.—King Robert II. of Scotland, 1390, *Dundonald Castle, Ayrshire*; Philip Melancthon, German Protestant scholar, 1560, *Wittenburg*; Thomas Sackville, Earl of Dorset, poet, Lord Treasurer of England, 1608; Queen Christina, of Sweden, 1689, *Rome*; Jean Gallois, French scholar and critic, 1707; Nicolas Saunderson, blind scholar and mathematician, 1739, *Boxworth*; Dr Richard Price, calculator, 1791, *Hackney*; George, Lord Byron,

poet, 1824, *Missolonghi, Greece*; John Carne, miscellaneous writer, 1844, *Penzance*; Professor Robert Jameson, naturalist, 1854, *Edinburgh*.

QUEEN CHRISTINA OF SWEDEN.

Gustavus Adolphus, the heroic king of Sweden, was succeeded at his death in 1632 by his daughter Christina. This princess, having reigned as gloriously as her father had fought, having presided at the treaty of Westphalia, which gave peace to Germany, astonished Europe by abdicating at the age of twenty-seven. It was certainly a strange event, yet one that might not have been discreditable to her, if she had not had the weakness to repent of it.

The design of Queen Christina in quitting the Swedish throne was that she might have freedom to gratify her taste for the fine arts. She knew eight languages; she had been the disciple of Descartes, who died in her palace at Stockholm. She had cultivated all the arts in a climate where they were then unknown. She wished to live amongst them in Italy. With this view, she resolved also to accommodate her religion to her new country, and became a Roman Catholic.

Self-denying and self-repudiating acts do not always leave the character the sweeter. It is fully admitted that Christina was not improved by descending into private life. There remains one terrible stain upon her memory, the murder of her equerry, Monaldeschi, which she caused to be perpetrated in a barbarous manner in her own presence, during her second journey in France. During the thirty-five years of her ex-queenship, her conduct was marked by many eccentricities, the result of an almost insane vanity.

LORD BYRON.

George Gordon, Lord Byron, born in London, January 22nd, 1788, the chief of the English poets of his day—endowed with rank, fortune, brilliant intellect, fed full of literary fame, an object of intense interest to the mass of enlightened society,—what more seemed necessary to make an enviable fate? and yet, as we all know, no man seemed in his time more unhappy—perhaps really was so. An explanation of all this is only to be found in some elements of his own nature. He was, we must remember, the son of a man of almost insane profligacy, by a woman whose violent temper often appeared to approach frenzy. The genius of Byron was as much distemper as ability.

He was unlucky in a congenital malformation of the limbs, which he could only conceal by careful padding; it was such a defect as a man of well-balanced mind would have been little affected by. With him, we may fear, it was a source of misanthropical bitterness, poisoning all the springs of happiness. Early extravagances led him into a marriage, which proved another source of misery, not from any demerit in his partner, for she was in reality an excellent woman, but from the want of congeniality between the pair. Twelve months after the union, one only after the birth of a daughter, Lady Byron formed the resolution of separating from him, his conduct being such that only on the supposition of his insanity (which her lawyers negatived), could

she have excused it. Byron then, in the very zenith of literary fame, and only six-and-twenty, became an exile from his native country.

He spent the remainder of his life at Venice, at Ravenna, at Pisa, finally at Genoa, never ceasing to write actively, till passing to Greece, for the purpose of throwing himself into the service of its patriots, he was struck down by fever at Missolonghi, and died when little over six-and-thirty.

The freakish, mysterious life of Byron, his egotistical misanthropical poetry, so expressive of an unsatisfied and unhappy mind, latterly his giving himself to the composition of works trenching on the indecent and immoral, caused him to be the subject of intense curiosity and infinite discussion in his own day and for some years after. The melancholy tone of his poetry infected all young persons of a susceptible nature, and more particularly those who attempted verse. He set a fashion of feeling, which only died out with its generation. We can now estimate his productions more coolly, and assign them their true place, as not poetry of the highest order; and we can now better judge of the faults of the man. If Lady Byron's lawyers had been more enlightened in psychology, they would have saved their client from throwing off her unfortunate husband. A lawyer only inquires if there appear in the general actions a knowledge of right and wrong; he knows nothing of the infinite shades of unsoundness which often mingle with the strains of a character able to pass muster in this respect. In Byron there was an eccentricity of feeling which can only be interpreted as a result of unhealthiness of brain, obviously derived from his parents. The common sense of the multitude understands these matters in a rough sort of way, and is never at a loss to judge of those who, apparently fit to conduct their own affairs, have yet an undeclared *queerness*, which is apt to shew itself in certain circumstances.

There is something extremely touching in the references which Byron made in certain of his poems to the infant daughter whom he never saw after she was a month old. The third book of *Childe Harold*, written in 1816, begins with a kind of dedication to Ada:

'Is thy face like thy mother's, my fair child?
Ada! sole daughter of my house and heart!
When last I saw thy young blue eyes they smiled,
And then we parted, not as now we part,
But with a hope.'

And with Ada it ends:

'My daughter! with thy name this song began—
My daughter! with thy name thus much shall
end—
I see thee not,—I hear thee not,—but none
Can be so wrapt in thee; thou art the friend
To whom the shadows of far years extend;
Albeit my brow thou never shouldst behold,
My voice shall with thy future visions blend,
And reach into thy heart, when mine is cold,—
A token and a tone, even from thy father's mould.

'To aid thy mind's development,—to watch
Thy dawn of little joys,—to sit and see
Almost thy very growth,—to view thee catch
Knowledge of objects,—wonders yet to thee!

To hold thee lightly on a gentle knee,
And print on thy soft cheek a parent's kiss,—
This, it would seem, was not reserved for me;
Yet this was in thy nature:—as it is,
I know not what is there, yet something like to this.'

She was but eight years old at the time of her father's lamented and premature death. At the age of nineteen, in 1835, she was married to Lord King, who subsequently became Earl of Lovelace, and to whom she bore three children. It is said that she did not resemble her father in features—still less did she in the tendencies of her mind, which were wholly to scientific and mathematical studies. She had a presentiment that she would die at the same age as her father, and it was fulfilled, her decease taking place in November 1852, when she was several months less than thirty-seven.

APRIL 20.

St Serf or Servanus, of Scotland, 5th century. St Agnes of Monte Pulciano, 1317. St James of Slavonia, 1485.

CROMWELL'S DISSOLUTION OF THE RUMP PARLIAMENT.

The 20th of April 1653, is the date of this memorable event. The Parliament by which Charles I. had been met and overcome, was dwindled down by various purgations to about fifty-three members, who aimed at becoming a sort of mild oligarchy for the administration of the affairs of the commonwealth. They were deliberating on a bill for the future representation, in which they should have a permanent place, when Cromwell resolved to make an end of them. It was the last incident in the natural series of a revolution, placing military power above all other.

Cromwell, having ordered a company of musketeers to follow him, entered the House 'in plain black clothes and grey worsted stockings,' and, sitting down, listened for a while to their proceedings. Hearing at length the question put, that the bill do pass, he rose, put off his hat, and began to speak. In the course of his address, he told them of their self-seeking and delays of justice, till at length Sir Peter Wentworth interrupted him with a remonstrance against such language. Then blazing up, he said, 'We have had enough of this—I will put an end to your prating.' Stepping into the floor of the House, and clapping on his hat, he commenced a violent harangue, which he occasionally emphasized by stamping with his feet, and which came mainly to this, 'It is not fit you should sit here any longer—you have sat too long for any good you have been doing lately. You shall now give place to better men.' 'Call them in!' he exclaimed; and his officer Harrison and a file of soldiers entered the House. Then proceeding,

'You are no parliament! Some of you are drunkards'—bending a stern eye upon Mr Chaloner; 'some of you are ——,' a word expressive of a worse immorality, and he looked here at Henry Marten and Sir Peter Wentworth—'living in open contempt of God's commandments. Some of you are corrupt, unjust persons—how can you be a parliament for God's people? Depart, I say, and let us have done with you. Go!'

He lifted the mace from the table, and gave it to a musketeer to be taken away. He caused Harrison to give his hand to Speaker Lenthal, and lead him down from the chair. The members, cowed by his violence, and the sight of the armed men, moved gloomily out of the House. 'It is the Lord that hath caused me to do this,' he said. 'I have sought that He would rather slay me than put me upon doing this work.' Sir Harry Vane venturing a remonstrance, 'Oh, Sir Harry Vane!' exclaimed the Lord-General; 'the Lord deliver me from Sir Harry Vane!' When all had gone out, he came out too, and locked the door. From that time he was master of the three kingdoms for about five and a half years.

JAMES WOOD, BANKER, GLOUCESTER.

This wealthy and most extraordinary individual died on the 20th of April 1836, having attained the age of eighty years. 'Jemmy Wood'—for by such name he was usually recognised—was the sole proprietor of the old Gloucester Bank, which had been established by his grandfather in the year 1716, being one of those primitive banking concerns which took their rise in

JEMMY WOOD'S HOUSE, GLOUCESTER.

a shop business, and of which, perhaps, hardly one example now survives. Wood's bank was conducted to the last by the proprietor and two or three clerks, at the end of a common chandlery shop, which they also attended to. Wood was latterly considered as the richest commoner in

the kingdom. His habits were those of a thrifty old bachelor. In the bank or shop his whole time was passed: he went to no one's house, and never invited any person to his. It was his habit on Sundays to go to church regularly, eat his dinner on his return, and then take a short walk into the country. He left several wills of a conflicting character, and, as a matter of course, these documents caused litigation, and gave employment to lawyers and attorneys for years.

Many anecdotes illustrating his penuriousness are told; amongst others the following: One Sunday before leaving his house to proceed to church, he gave to a little boy, who acted as his servant, a chicken, which he intended to be roasted for dinner. The cooking process commenced; and as the bird was turned and basted, the savoury steam which it gave forth sharpened the boy's appetite, and he ventured to rub his finger on the breast, which was being gradually browned, and apply his finger to his mouth. The taste was delicious! He became bolder, and picked away a morsel of the breast of the bird; then another; other bits followed, until none of the breast remained. Hunger was gnawing at the boy's heart, and he could not resist temptation; so the whole chicken speedily disappeared. His hunger now appeased, he saw his fault, and, trembling at the prospect of meeting his thrifty master, like most little boys after doing wrong, he thought of hiding. On entering a closet adjoining the room, his eye fell on a small bottle, having on it a label with the awful word 'poison' in legible characters. He feared death much, but his master still more, and in a minute he resolved to end his days; accordingly, he drained the bottle, and was, as he thought, safe from his master's rage. In a short time, the old banker appeared on the scene, resolved to enjoy his chicken and glass of brandy - and - water. Great was his astonishment to see the spit empty, and find the boy away. On making a search he found the latter lying on the pantry floor with the empty bottle, which quickly brought before his mind a solution of the mystery. The boy was drunk, for the bottle contained old Wood's brandy, which was marked 'poison,' to guard it from the possibility of being touched by the servants. What the old gentleman did with the lad is not recorded.

The Cuckoo.

The 20th of April is the fair-day of Tenbury, in Worcestershire, and there is a belief in that county that you never hear the cuckoo till Tenbury fair-day, or after Pershore fair-day, which is the 26th of June.*

The following is a very common rhyme in England, regarding the period of the cuckoo:—

In April
The cuckoo shows his bill;
In May
He is singing all day;
In June
He changes his tune;

* Notes and Queries, 2nd ser. i. 429.

In July
He prepares to fly ;
In August
Fly he must.

It is a popular belief in Norfolk that whatever you are doing the first time you hear the cuckoo, that you will do most frequently all the year. Another is that an unmarried person will remain single as many years as the cuckoo, when first heard, utters its call.*

Mr Marryat found a curious legend among the Danes regarding the cuckoo. 'When in early spring-time the voice of the cuckoo is first heard in the woods, every village girl kisses her hand, and asks the question, "Cuckoo! cuckoo! when shall I be married?" and the old folks, borne down with age and rheumatism, inquire, "Cuckoo! cuckoo! when shall I be released from this world's cares?" The bird, in answer, continues singing "Cuckoo!" as many times as years will elapse before the object of their desires will come to pass. But as some old people live to an advanced age, and many girls die old maids, the poor bird has so much to do in answering the questions put to her, that the building season goes by; she has no time to make her nest, but lays her eggs in that of the hedge-sparrow.'

Several of our English birds were objects of superstition in the Middle Ages, and none more so than the cuckoo. Our forefathers looked upon it as the harbinger of spring, and as the merriest songster of summer, and it is the subject of the oldest of English popular songs now remaining. This song, which is preserved in MSS. Harl. No. 978, must be of the earlier half of the thirteenth century, and is remarkable for being accompanied with musical notes, and as being the oldest sample of English secular music. The words are as follows:

'Sumer is icumen in,
Lhude sing Cuccu;
Groweth sed, and bloweth med,
And springth the wde nu.
Sing Cuccu.
Awe bleteth after lomb,
Lhouth after calve cu;
Bulluc sterteth, bucke verteth;
Murie sing Cuccu,
Cuccu, Cuccu.
Wel singes thu, Cuccu;
Ne swik thu naver nu.'

Which may be thus interpreted in modern English:

'Summer is come in,
Loud sing Cuckoo;
Grows the seed, and blooms the mead,
And sprouts the wood now.
Sing Cuckoo.
The ewe bleats after the lamb,
The cow lows after the calf,
The bullock leaps, the buck verts (*goes to
the fern*);
Merrily sing Cuckoo,
Cuckoo, Cuckoo.
Well singest thou, Cuckoo;
Cease thou never to sing, Cuckoo.'

The reader will remember the somewhat similar song of spring in Shakspeare's *Love's Labour's Lost*, where spring is 'maintained by the cuckoo.'

* Notes and Queries, 2nd ser. i. 523.

It was the spring, indeed, and not the summer, that the cuckoo was considered to represent in the Middle Ages. There is an early Latin poem on the cuckoo in connexion with spring, which is ascribed, no doubt incorrectly, to Bede, in which the cuckoo is called upon to awake, because the spring had arrived:

'Tempus adest veris, cuculus, modo rumpe soporem.'

It is the popular belief in some parts of the country that the cuckoo always makes its first appearance on the 21st of April.

The cuckoo was often celebrated in the mediæval poetry of all ages and all languages, and was looked upon as possessing some share of supernatural knowledge. In some parts it seems to have been an article of belief that it was one of the gods who took the form of the bird, and it was considered a crime to kill it. Its most singular quality, in this superstitious lore, was the power of telling how long people would live, the faith in which is still preserved among the peasantry of many parts of Germany and the north of Europe. It was believed that if, when you first heard a cuckoo in the morning, you put the question in a respectful manner, it would immediately repeat its note just as many times as you had years to live. This superstition is the foundation of many stories in the mediæval Latin writers, of which the following, told by Cæsius of Heisterbach, belongs to the year 1221. A 'converse' in a certain monastery—that is, a layman who had become a monk—was walking out one day, when, hearing a cuckoo and counting the number of times its note was repeated, he found it to be twenty-two. 'Ah!' said he, 'if I am yet to live twenty-two years more, why should I mortify myself all this long time in a monastery? I will return to the world, and give myself up to the enjoyment of its pleasures for twenty years, and then I shall have two years to repent in.' So he returned to the world, and lived joyously two years, and then died, losing twenty out of his reckoning.

In another given in *Wright's Selection of Latin Stories*, a woman is described as lying on her death-bed, when her daughter urged her to send for a priest, that she might confess her sins. To whom her mother replied, 'Why? if I am ill to-day, to-morrow or next day I shall be well.' But the daughter, seeing she became worse, brought in several of her neighbours, who urged the same thing. To whom she said, 'What do you talk about? or, what do you fear? I shall not die these twelve years; I have heard the cuckoo, who told me so.' At length she became speechless, and was at the point of death. Then her daughter sent for the priest, who came, bringing what was necessary [to perform the last duties], and approaching her he asked if she had anything to confess. All she said was 'kuckuc' [cuckoo]. Again the priest offered her the sacrament, and asked her if she believed the Lord was her Saviour, and she replied 'kuckuc,' so the priest went away, and shortly afterwards she died.

In one of the branches of the celebrated romance of Renart (Reynard the Fox), written in French verse in the thirteenth century, and

published by Meon (vol. iv., p. 9), Renart and his wife, dame Ermengart, are introduced reposing together in the early morning, and discoursing of ambitious prospects, when Renart suddenly hears the note of the cuckoo :

‘ A cest mot Renart le cucu
Entent, si jeta un faus ris ;
“ Jou te conjur,” fait il, “ de cris,
Cucus, que me dise le voir,
Quans ans j’ai à vivre ; savoir
Le veil, cucu.”

‘ At this word Renart the cuckoo
Hears, and broke into a false laugh ;
“ I conjure you,” said he, “ earnestly,
Cuckoo, that you tell me the truth,
How many years I have to live ; to know
It I wish, Cuckoo.”

The cuckoo responded at once, and repeated his note thirteen times,—

‘ Atant se taist, que plus ne fu
Li oisiaus illuec, ains s’envolle.
Et Renars maintenant acole
Dame Ermengart ; “ Avés oi ?”
“ Sire,” dist-ell, “ des cuer joi ;
Vos semons que me baisies.”
“ Dame,” dist-il, “ j’en suis tos lies.
* * * * *
M’a li cucus treize ans d’aë
A vivre encore ci après.”

‘ Then he ceased, for no longer was
The bird there, but flew away.
And Renart now embraced
Dame Ermengart ; “ Have you heard ?”
“ Sir,” said she, “ I have heard it gladly ;
I demand that you kiss me.”
“ Dame,” said he, “ I am quite rejoiced.
* * * * *

To me has the cuckoo thirteen years of life
To live yet here taught.”

The notion which couples the name of the cuckoo with the character of the man whose wife is unfaithful to him, appears to have been derived from the Romans, and is first found in the Middle Ages in France, and in the countries of which the modern language is derived from the Latin. We are not aware that it existed originally among the Teutonic race, and we have doubtless received it through the Normans. The opinion that the cuckoo made no nest of its own, but laid its eggs in that of another bird which brought up the young cuckoo to the detriment of its own offspring, was well known to the ancients, and is mentioned by Aristotle and Pliny. But they more correctly gave the name of the bird not to the husband of the faithless wife, but to her paramour, who might justly be supposed to be acting the part of the cuckoo. They gave the name of the bird in whose nest the cuckoo’s eggs were usually deposited, *curruca*, to the husband. It is not quite clear how, in the passage from classic to mediæval, the application of the term was transferred to the husband.

There are, or have been not long ago, in different parts of England, remnants of other old customs, marking the position which the cuckoo held in the superstitions of the Middle Ages. In Shropshire, till very recently, when the first cuckoo was heard, the labourers were in the habit of leaving their work, making

holiday of the rest of the day, and carousing in what they called the cuckoo ale. Among the peasantry in some parts of the kingdom, it is considered to be very unlucky to have no money in your pocket when you hear the cuckoo’s note for the first time in the season. It was also a common article of belief, that if a maiden ran into the fields early in the morning, to hear the first note of the cuckoo, and when she heard it took off her left shoe and looked into it, she would there find a man’s hair of the same colour as that of her future husband.

APRIL 21.

St Eingan, or Enean, King of Scots, about 590. St Anastasius, surnamed the Younger, patriarch of Antioch, 610. St Anastasius, the Sinaite, anchorite, after 678. St Beuno, abbot of Clynnog, in Carnarvonshire, 7th century. St Malrubins, martyr, of Ireland, 721. St Anselm, Archbishop of Canterbury, 1109.

Born.—Prince George of Denmark, consort of Anne, Queen of England, 1653 ; James Harris, Earl of Malmesbury, statesman, 1746, *Salisbury* ; Samuel Hibbert Ware, M.D., scientific writer, 1782, *Manchester* ; Reginald Heber, poet, Bishop of Calcutta, 1783, *Malpas, Cheshire* ; Thomas Wright, historical and antiquarian writer, 1810.

Died.—Alexander the Great, B.C. 323, *Alexandria* ; Diogenes the cynic, B.C. 323, *Corinth* ; Anselm, Archbishop of Canterbury, 1109, *Canterbury* ; Peter Abelard, eminent French scholar, 1142 ; Jean Racine, French dramatic poet, 1699 ; David Mallet, poet, 1765, *Drury Lane, London*.

ARCHBISHOP ANSELM.

Few English prelates have exercised so great an influence on the politics and on the literature and learning of their age, as Anselm, Archbishop of Canterbury. He was born at Aosta, in Piedmont, about the year 1033, and exhibited from a very early age a strongly marked love for learning and a monastic life. As these tastes were sternly opposed by his father, young Anselm secretly left his home, and after wandering in Burgundy and France full three years, he at length reached Bec, in Normandy, and entered himself in the school which had just then been rendered famous by the teaching of Lanfranc. Here he soon distinguished himself by the rapidity with which he acquired learning, but, when pressed to become a teacher himself, he preferred the monastic state, and became a monk in the abbey of Bec in the year 1060 ; six years afterwards he was chosen prior of that abbey, and in 1078 he was still further advanced to the high office of abbot. During this period he wrote most of his important works, nearly all of a theological character, which soon spread his fame through Western Europe. His piety and numerous virtues were at the same time so remarkable, that his brethren in the abbey of Bec believed him to be capable of working miracles. His friend Lanfranc had been made Archbishop of Canterbury, and soon after Anselm became abbot of Bec he paid a visit to England, and passed some time at Canterbury. He again visited England in 1092, at the invitation of Hugh, Earl of Chester, who chose to

establish monks from Bec in his newly-founded monastery at Chester.

At this time the see of Canterbury had been vacant about four years, King William Rufus having refused to fill it up, in order that he might retain the revenues in his own hands, and it appears that the English clergy had been already looking to Anselm as a suitable successor to Lanfranc. It is probable that he had already become known as a staunch champion of the temporal power of the Church. During Anselm's second visit to England, the urgent expostulations of the prelates had overcome William's selfishness; and early in 1093, while Anselm was still in England, the King announced his election to the archbishopric of Canterbury. Anselm at first refused the proffered honour, but his reluctance was overcome by the persuasions of his clerical brethren, and he was finally consecrated on the 4th of December. The archbishop and the king quarrelled at Christmas, not much more than a fortnight after his consecration. The subject of dispute was the heriot then usually paid to the king on the decease of the archbishop, Anselm refusing to give so large a sum as the king demanded. A second quarrel soon followed, occasioned by Anselm's attempt to restrain the king from trespassing on the rights of the Church. On the return of the king from Normandy, in November 1094, a third dispute arose, on a subject of still greater moment in regard to the papal supremacy in England. Urban II. had been elected Pope on the 12th of March 1088, but he had not yet been officially acknowledged by the English monarch, for the papal election had been disputed. Anselm had recently written a learned book, his treatise *De Incarnatione Verbi*, which he had dedicated to Pope Urban, and he now demanded the king's permission to go to Rome to receive the pallium from the pope's hands. The king not only refused, but burst into a violent passion, declaring that no one was acknowledged pope in England without the king's consent. Anselm refused to yield this point, and a grand council of prelates and nobles was held, in which nearly all the English prelates took part on this question with the king against the Archbishop of Canterbury. Soon afterwards the king acknowledged Pope Urban, and Anselm received the pallium, and was outwardly reconciled with the king; but other quarrels soon occurred, and in 1097 Anselm obtained with difficulty the king's permission to proceed to Rome. He remained in Italy some time, and in the spring of 1099 he went to Lyons to wait there the effect of the pope's expostulations with William Rufus, but Urban died (July 1099) before this could be known, and the king himself was killed in August 1100, while Anselm was still at Lyons.

Anselm was recalled by Henry I., and taken into favour, but he had now become the unflinching champion of the temporal power of the Church of Rome, and we can hardly excuse him for being himself the cause of many of his quarrels with the crown, since, in spite of all that King Henry was willing to do to conciliate the Church, Anselm remained on no better terms with him than with his predecessor. On Anselm's return to England began the great dispute on

the question of the investiture. The prelates of the Church had been accustomed to receive from the hands of the sovereign the investiture of the ring and crozier, by which the temporalities of the see were understood to be conveyed. The pope had been long seeking to deprive the king of this right, the question it involved being simply whether the clergy in England should hold their estates, and be the subjects of the king or the pope. The council of Rome in 1099, at which Anselm was present, declared against the secular power, and decided that any layman presuming to grant such investiture, or any priest accepting it, should thereby incur sentence of excommunication. On Anselm's return to England, it would have been his duty to receive the investiture from the new monarch, but, when required to do so, he absolutely refused, referring the king to the acts of the council. Henry was equally firm in withstanding this new encroachment of the court of Rome, and the question was finally referred to the new pope, and Anselm again repaired to Rome, where he had been preceded by an envoy from the king. Pascacius II. decided against the king, but Anselm, on his way back, was met by a message from King Henry intimating that he would not be allowed to enter England, and he again sought an asylum at Lyons. The dispute between the king and the pope was at last settled by mutual concession, the secular sovereign being allowed the right of exacting homage, but not of investing, and Anselm returned to England in the autumn of 1106. He spent the remainder of his days in reforming abuses in the Church and in writing books, and died, 'laid in sackcloth and ashes,' on the 21st of April 1109, in the seventy-sixth year of his age. With the exception of his violent and unyielding advocacy of the temporal power of the Church, Anselm's character was no less exemplary as a prelate than as a man. He was a person of great intellectual powers, and it is to him really that we owe the introduction of metaphysical reasoning into theology, and therefore a new school for the latter science. His works have always held a very high rank in the Catholic church.

PAPER-MARKS.

The water-marks adopted by the old paper-makers to distinguish their own manufactures, have engaged the attention of antiquaries,

particularly bibliographers; as by their aid a proximate date to books or documents may be obtained. In courts of law such evidence has been of use, and especially so when brought to bear on cases of forgery, where the paper could be proved of a much more modern date than the document purported to be.

One of the earliest paper-marks consists of a circle surmounted by a cross, resembling those borne in the hands of sovereign princes on coronations or state occasions, and typical of the Christian faith — the

sions, and typical

cross planted on earth. This very interesting mark is met on documents as early as 1301.

The papers manufactured in the Low Countries, for the use of the first printers, have a great variety of marks, and shew that the new art soon gave impetus to the trade of the paper-makers. Many of them were the marks or badges of noble families, whose tenants fabricated the paper. Thus the letter P and the letter Y, sometimes separate and sometimes conjoined, are the initials of Philip the Good, Duke of Burgundy (who reigned from 1419 to 1467), and his wife Isabella, daughter of John, King of Portugal (married 1429), and whose name was, in accordance with the custom of the age, spelt Ysabella. The letter P had been used alone as a paper-mark from the time of the Duke Philip de Rouvere (1349), so that for 116 years it had been a national water-mark. Other symbols of the house of Burgundy also appear; particularly the single fleur-de-lys, which was the peculiar cognizance of this important family, and is borne on the shield of arms of the famous Jean-sans-peur. The Unicorn, the Anchor, and the Bull's head, were also badges of the family. The Unicorn was the supporter of the armorial bearings of the Dukes; it was typical of power and purity, and Monstrelet relates the fondness of Duke Philip for displaying it on all occasions.

The Bull as typical of power, and the Anchor of stability and hope, were part of the fanciful imaginings with which the great of the Middle Ages delighted to indulge themselves.

It is a very curious fact, that some of the most ancient technical terms used in the first printing-offices, are still employed by modern printers. We all at the present day ask for paper in accordance with the ancient distinctive water-marks of qualities or sizes.

The fleur-de-lys just alluded to has long been the distinctive mark of *demy* paper; but a still more curious instance occurs in the *foolscap* paper, originally marked with a fool's head, wearing the cap and bells, such as the privileged jesters of the old nobility and gentry appear to have worn, from the thirteenth to the seventeenth century. This curious mark distinguished the paper until the middle of the seventeenth century, when the English paper-makers adopted the figure of Britannia, and the continental makers other devices.

Equal in general interest is the post-horn; from which *post* paper takes its name. This mark was in use as early as 1370. It sometimes

appears on a shield, and in the seventeenth century is surmounted by a ducal coronet, in which form it still appears on our ordinary writing paper.

An open hand sometimes surmounted by a star or cross; with the fingers occasionally disposed as if in the act of giving the pastoral benediction of a Churchman, is one of the oldest paper-marks. It was in use at the commencement of the fifteenth century and probably earlier. It occurs on letters preserved in the Record Office of that early date, and constantly appears on books which issued from the presses of Germany and the Netherlands, in the very infancy of the art of printing; continuing to a comparatively recent date, and giving the name to what is still called *hand* paper.

Most of our readers will no doubt be familiar with the small square quartos, known as pot-quartos which were extremely popular in the sixteenth and seventeenth centuries, for printing editions of plays and pamphlets; and which will be more familiar to modern readers as the size chosen for the publications of the Camden Society. This

paper takes its name from the pot or tankard in common use at the time of its original manufacture. It was particularly characteristic of Dutch paper, and is found in the account books of Matilda, Duchess of Holland, still preserved at the Hague. It continued to be used on paper of different forms and sizes, made in the Low Countries, and is found on the paper of books printed at Gouda, Louvain, Delft, and other places in the Netherlands, during the fifteenth century.

The excellence of Dutch paper, its purity and durability, have never been excelled. Dr Dibdin, that genuine bibliomaniac, speaks of the music of the rustle of leaves when turned over in a good old book. The modern papers, though whiter and more beautiful to the eye, obtain their qualities by chemical agencies that carry the elements of decay in them; and equal in name only the coarser looking but stronger papers of a past era.

THUNDER AND THE DAYS OF THE WEEK.

'Some write (their ground I see not) that Sunday's thunder should bring the death of learned men, judges, and others; Monday's thunder the death of women; Tuesday's thunder plenty of grain; Wednesday's thunder the death of harlots; Thursday's thunder plenty of sheep and corn; Friday's thunder, the slaughter of a great man, and other horrible murders; Saturday's thunder a general plague and great dearth.'

—LEONARD DIGGES'S *Prognostication Everlasting of right good Effect*, Lond. 1556.

APRIL 22.

Saints Epipodius and Alexander, martyrs at Lyons, 2nd century. Saints Soter and Caius, Popes, martyrs, 2nd and 3rd centuries. St Leonides, father of Origen, 202. Saints Azades, Tharba, and others, martyrs in Persia, 341. St Rufus, or Rufin, anchorite at Glendalough, near Dublin. St Theodorus of Siceon, Bishop and Confessor, 613. St Opportuna, Abbess of Montreuil, 770.

Born.—Henry Fielding, dramatist and novelist, 1707; Immanuel Kant, German philosopher, 1724, *Königsberg*; James Grahame, poet, 1765, *Glasgow*.

Died.—King Henry VII. of England, 1509, *Richmond*; Antoine de Jussieu, eminent French botanist, 1758; Chrétien Guillaume de Malherbes, advocate, beheaded, 1794, *Paris*; Thomas Haynes Bailey, lyrical poet, 1839, *Cheltenham*.

THE WANDERING JEW.

The story of the Jew who had witnessed the Crucifixion, and had been condemned to live and wander over the earth until the time of Christ's second coming, while it is one of the most curious of the mediæval legends, has a peculiar interest for us, because, so far as we can distinctly trace its history, it is first heard of with any circumstantial details in our island. The chronicler of the abbey of St Albans, whose book was copied and continued by Matthew Paris, has recorded how, in the year 1228, 'a certain archbishop of Armenia Major came on a pilgrimage to England to see the relics of the saints, and visit the sacred places in this kingdom, as he had done in others; he also produced letters of recommendation from his Holiness the Pope to the religious men and prelates of the churches, in which they were enjoined to receive and entertain him with due reverence and honour. On his arrival, he came to St Albans, where he was received with all respect by the abbot and monks; and at this place, being fatigued with his journey, he remained some days to rest himself and his followers, and a conversation took place between him and the inhabitants of the convent, by means of their interpreters, during which he made many inquiries relating to the religion and religious observances of this country, and told many strange things concerning the countries of the East. In the course of conversation he was asked whether he had ever seen or heard anything of Joseph, a man of whom there was much talk in the world, who, when our Lord suffered, was present and spoke to him, and who is still alive, in evidence of the Christian faith; in reply to which a knight in his retinue, who was his interpreter, replied, speaking in French, "My Lord well knows that man, and a little before he took his way to the western countries, the said Joseph ate at the table of my lord the archbishop in Armenia, and he has often seen and held converse with him." He was then asked about what had passed between Christ and the said Joseph, to which he replied, "At the time of the suffering of Jesus Christ, he was seized by the Jews and led into the hall of judgment before Pilate, the governor, that he might be judged by him on the accusation of the Jews; and Pilate finding no cause for adjudging him to death, said to them, 'Take him and judge

him according to your law;' the shouts of the Jews, however, increasing, he, at their request, released unto them Barabbas, and delivered Jesus to them to be crucified. When therefore the Jews were dragging Jesus forth, and had reached the door, Cartaphilus, a porter of the hall, in Pilate's service, as Jesus was going out of the door, impiously struck him on the back with his hand, and said in mockery, 'Go quicker, Jesus, go quicker; why do you loiter?' and Jesus, looking back on him with a severe countenance, said to him, 'I am going, and you will wait till I return.' And, according as our Lord said, this Cartaphilus is still awaiting his return. At the time of our Lord's suffering he was thirty years old, and, when he attains the age of a hundred years, he always returns to the same age as he was when our Lord suffered. After Christ's death, when the Catholic faith gained ground, this Cartaphilus was baptized by Ananias (who also baptized the apostle Paul), and was called Joseph. He dwells in one or other division of Armenia, and in divers Eastern countries, passing his time amongst the bishops and other prelates of the church; he is a man of holy conversation, and religious; a man of few words, and circumspect in his behaviour, for he does not speak at all unless when questioned by the bishops and religious men, and then he tells of the events of old times, and of those which occurred at the suffering and resurrection of our Lord, and of the witnesses of the resurrection, namely, those who rose with Christ, and went into the holy city, and appeared unto men. He also tells of the creed of the apostles, and of their separation and preaching. And all this he relates without smiling or levity of conversation, as one who is well practised in sorrow and the fear of God, always looking forward with fear to the coming of Jesus Christ, lest at the last judgment he should find him in anger, whom, when on his way to death, he had provoked to just vengeance. Numbers come to him from different parts of the world, enjoying his society and conversation; and to them, if they are men of authority, he explains all doubts on the matters on which he is questioned. He refuses all gifts that are offered to him, being content with slight food and clothing."

Such is the account of the Wandering Jew left us by a chronicler who was contemporary with what he relates, and we cannot doubt that there was such a person as the Armenian in question, and that some impostor had assumed the character of the Jew who was supposed to be still wandering about the world, until in the middle of the sixteenth century he made his appearance in Germany. He had now changed his name to Ahasuerus, and somewhat modified his story. It was again a bishop who had seen him, when he attended a sermon at Hamburg, where a stranger appeared in the winter of 1542, who made himself remarkable by the great devotion with which he listened. When questioned, he said that he was by nation a Jew, that his original occupation had been that of a shoemaker, that he had been present at the passion of Jesus Christ, and that since that time he had wandered through many countries. He said that he was

one of the Jews who dragged Christ before Pilate and were clamorous for his death, and on the way to the place of crucifixion, when Jesus stopped to rest, he pushed him forward, and told him rudely to go on. The Saviour looked at him, and said, 'I shall stop and repose, but thou shalt go on;' upon which the Jew was seized with an irresistible desire to wander, and had left his wife and children, whom he had never seen since, and had continued to travel from one country to another, until he now came to Germany. The bishop described him as a tall man, apparently of about fifty years of age, with long hair, which hung down to his shoulders, who went barefooted, and wore a strange costume, consisting of sailor's trousers which reached to the feet, a petticoat which descended to the knees, and a mantle which also reached to the feet. He was always taciturn, was never seen to laugh, ate and drank little, and, if anybody offered him money, he never took more than two or three pence, which he afterwards gave away in charity, declaring that God contributed to all his wants. He related various events which he had seen in different countries and at different times, to people's great astonishment. All these details, and many more, are told in a letter, dated the 29th of June 1564, which was printed in German and in French. On this occasion the Jew spoke good German, in the dialect of Saxony; but when he, or another person under the same character, appeared in the Netherlands in 1575, he spoke Spanish. A few years later the Wandering Jew arrived in Strasburg, and, presenting himself before the magistrates, informed them that he had visited their city just two hundred years before, 'which was proved to be true by a reference to the registers of the town.'

The Wandering Jew proceeded next to the West Indies, and returned thence to France, where he made his appearance in 1604, and appears to have caused a very considerable sensation. As during the time he was there the country was visited by destructive hurricanes, it was believed that these visitations accompanied the Jew in his wanderings, and this belief became so general that at the present day, in Brittany and Picardy, when a violent hurricane comes on, the peasantry are in the habit of making the sign of the cross, and exclaiming, 'C'est le Juif-errant qui passe!' Various accounts of the appearance of the Wandering Jew in different parts of France at this time were printed, and he became the subject of more than one popular ballad, one of which is well known as still popular in France, and is sold commonly by the hawkers of books, the first lines of which are,—

'Est-il rien sur la terre
Qui soit plus surprenant
Que la grande misère
Du pauvre Juif-errant ?
Que son sort malheureux
Paraît triste et fâcheux !'

There is a well-known English ballad on the Wandering Jew, which is perhaps as old as the time of Elizabeth, and has been reprinted in *Percy's Reliques*, and in most English collections of old ballads. It relates to the Jew's appearance in Germany and Flanders in the sixteenth

century. The first stanza of the English ballad is,—

'When as in fair Jerusalem
Our Saviour Christ did live,
And for the sins of all the world
His own dear life did give;
The wicked Jews with scoffs and scorn
Did dailie him molest,
That never till he left his life
Our Saviour could not rest.'

On the 22nd of April 1774, the Wandering Jew, or some individual who had personated him, appeared in Brussels, where he told his story to the *bourgeois*, but he had changed his name, and now called himself Isaac Laquedem. The wanderer has not since been heard of, but is supposed to be travelling in some of the unknown parts of the globe. The *Histoire admirable du Juif-errant*, still printed and circulated in France, forms one of the class of books which our antiquaries call chap-books, and is full of fabulous stories which the Jew is made to tell with his own mouth.

THE TRIUMPH TAVERN.—LONDON INNS, THEIR SIGNS AND TOKENS.

April 22, 1661, Charles II. made a formal procession from the Tower to Westminster, as a preliminary to his coronation, which was effected next day. The arches raised on this occasion were allowed to remain for a year, and the whole affair was commemorated by a new tavern at Charing-cross, taking to itself the name of the Pageant Tavern—alternately the Triumph Tavern—and on whose token money a specimen of the arches was given, as appears from the accompanying representation of one of the pieces. Pepys

notes a visit he made to the Triumph Tavern in May 1662, in company with Captain Ferrars, to have a sly peep at the Portuguese maids of honour who had accompanied the queen, Catherine of Braganza, to England, and who do not seem to have pleased the worthy diarist, as he styles them 'sufficiently unagreeable.'

These trivial particulars may serve as a fit starting-point for a few notes regarding London taverns and hostleries of past ages, and the token money which they issued. The tavern life of old London opens a large field for the study of national manners, for they were not only places of convenient sojourn, or pleasant sociality, but the rendezvous of politicians and traders. In days when newspapers were scarce, and business was conducted more privately than at present, the nearest tavern took the place with the ordinary shopkeeper that the Royal Exchange occupied with the merchant. They lined the main thoroughfares of London, particularly the great leading one from High-street, Southwark, to the

northern extremity of Bishopsgate; and that still more important 'main artery' which followed the course of the river from London-bridge by way of Cheapside, Fleet-street, and the Strand, to Westminster.

We will follow this latter roadway, noting the chief hosteries on our way, as they are among the most celebrated which London possessed, and are enough to indicate the associations of the whole class.

On the Southwark side of London-bridge stood a tavern known as 'The Bear at the Bridge-foot,' which retained a celebrity for some centuries. It was the house to which travellers resorted who wished to pass by water to Gravesend in the 'tilt-boats' which, in about two days, conveyed them to that—then—far-off locality. Of such convenience was this house to voyagers, that in 1633, when others were closed, this was exempted, 'for the convenience of passengers to Greenwich.' Pepys in his *Diary* more than once mentions this tavern; and, among other things, notes that the Duke of Richmond arranged that the king's cousin, the fair Frances Stewart, should leave the court privily, and join him 'at The Beare at the Bridge-foot,' where a coach was ready, and they are stole away into Kent, without the king's leave.' The antiquity of the house is noted in a poem of 1691, entitled 'The Last Search after Claret in Southwark:'

'We came to the Bear, which we soon understood,
Was the first house in Southwark built after the
flood.'

It took its sign, doubtless, from the popular sport of bear-bating, which was indulged in by the Londoners in the Southwark bear gardens, and the 'token' issued by one of the owners of this hostelry exhibits a chained and muzzled bear, as may be seen in our cut issued from the original in the British Museum. Cornelius Cook,

who issued this coin, was connected with the parish of St Olave's as early as 1630; he was a captain in the civic trainband, and afterwards a colonel in Cromwell's army; but at the Restoration he subsided into private life as mine host of the Bear, and took to the mintage of his own coin, like other innkeepers and traders.

We must now say a few words of this generally usurped privilege of coinage so universal in the middle of the seventeenth century. The want of an authorized money as small change had been felt long, and complained of. Farthings, half-pence, and pence, were all struck by the Government in silver, the farthings necessarily so small and thin as to be losses rather than gain to the trader: hence an authorized currency was established, and larger copper coins, known as 'Abbey-pieces,' and 'Nuremberg counters,' were issued by the great monastic establishments, and

by traders, who exchanged each other's 'tokens,' they being, in fact, small accommodation bills payable at sight. The Abbey-pieces were large, about the size of a florin, and generally had a religious inscription in Latin around them; the 'Nuremberg counters' have sometimes a counting-table on one side and an emblematic device on the other. They originated at Nuremberg, and were imported in large quantities; the name of one maker, 'Hans Krauwinkel,' is of most frequent occurrence.

An attempt was made during the reign of Elizabeth to supersede this *pseudo moneta* by a legitimate copper currency; but her majesty had a magnificent contempt for any other than the precious metal to bear her authorized effigy, and never favoured the scheme. James the First granted a monopoly to Lord Harrington for the exclusive manufacture of copper tokens, but the whole affair was so discreditable to both parties, and dishonourable toward the public, that those issued privately by tradesmen were preferred, and rapidly increased during the reign of Charles I.; and throughout the Commonwealth nearly every innkeeper and tradesman struck his own 'for necessarise change,' as they sometimes inscribed upon them. Soon after the Restoration, the Government took the matter into their serious consideration; and in 1665, pattern farthings were struck in copper, having, for the first time, a figure of Britannia on the reverse; but it was not until 1671 that half-pence and farthings were generally issued, and it was not until 1674 that the traders' tokens were effectually prohibited by royal proclamation.

One of the most interesting of the tavern tokens is that issued by the host at the Boar's

Head, in Eastcheap—the house immortalized by Shakspeare as the scene of Falstaff's jollities, and the resort of the bard and his dramatic brethren. It was destroyed in the Fire of London, afterwards rebuilt, and a stone-carved boar's head (as upon the token) placed over the door, with the date 1668 upon it, which 'sign' was removed to the Guildhall Library when the house was demolished to form the approaches to London-bridge.

Arrived at the Poultry (so called, says Stowe, because 'poulterers in the olden time dwelt and sold poultry at their stalls in the High-street'), the Rose Tavern first invites attention, as a house of ancient repute for good wines; here were also the 'Three Cranes,' and 'The Exchange Tavern,' all issuing tokens, the latter with a curious view of the building after which it was named.

Of the Cheapside taverns, the most renowned from its associations was the Mermaid, the resort of Ben Jonson and his literary friends, members of a club established by Sir Walter Raleigh in

1603, and numbering among them Shakspeare,

Beaumont, Fletcher, Donne, Selden, and the noblest names in English authorship. Truly might Beaumont, in his poetical epistle to Jonson, exclaim :

'What things have seen
Done at the Mermaid ; heard words that have been
So nimble, and so full of subtle flame,
As if that every one from whom they came
Had mean'd to put his whole wit in a jest !'

This celebrated tavern stood behind the houses between Bread-street and Friday-street. The Mitre was close beside it, a house celebrated for its good cheer, and popularity with the *bon-vivants* of the days of Elizabeth and James the First. At the corner of Friday-street, nearly opposite, stood the famed 'Nag's Head,' a tavern the pretended scene of the consecration of the first Protestant archbishop—Parker of Canterbury—in the reign of Elizabeth (1559). His confirmation really took place at the church of St Mary-le-Bow ; but the party prejudices of the papistical writers induced them to transfer the locality to the Nag's Head tavern, where they frequently asserted the meeting and ordination took place ; a fable fully refuted in Strype's *Life of Parker*.

At the north-west angle of St Paul's there still remains one of the most whimsical of the old London signs—'The Goose and Gridiron.' This tavern was in existence long before the Great Fire, up to which time it bore the graver designation of 'The Mitre.' It had become known through the concerts given here by the Society of Musicians, and their arms displaying the lyre of Apollo, surmounted by the crest of the swan, when the house was rebuilt, these figures, being adopted for the sign, were soon jocularly converted into the Goose and Gridiron ; and now we have a veritable representation of the latter absurdity over the door. In the same way we have a giant's mouth with a bull in it to indicate the Bull and Mouth in Aldersgate-street, the sign originally being the mouth or harbour of Boulogne ; and the 'Swan with Three Necks,' in Lad-lane, a bird represented with three heads on one body, though originally meant to indicate the three nicks or marks of ownership made on its bill. Well might Ben Jonson exclaim :

'—— It even puts Apollo
To all his strength of art to follow
The flights, and to divine
What's meant by every sign.'

Thus the Bell Savage on Ludgate-hill, when emblazoned with a painting of a savage man standing beside a bell, destroyed the reminiscences of its origin, which lay in the name of the innkeeper, Savage, attached to his hostelry 'The Bell.' We shall look long at 'The Pig and Tinder-box' ere we find its prototype in 'The

Elephant and Castle,' but that it undoubtedly is. The 'Devil and Bag o' nails' is a vulgar corruption of the Satyr and Bacchanals which some art-loving landlord placed over his door. The faithful governor of Calais—'Caton Fidèle'—is transformed into 'The Cat and Fiddle ;' Sir Cloudesley Shovel, Queen Anne's brave admiral, into 'The Ship and Shovel ;' and Mercury, the messenger of the gods, into 'The Goat in Boots.' A writer in the *British Apollo*, 1707, says :

'I'm amused at the signs
As I pass through the town,
To see the odd mixture—
A Magpie and Crown,
The Whale and the Crow,
The Razor and Hen,
The Leg and Seven Stars,
The Scissors and Pen,
The Axe and the Bottle,
The Tun and the Lute,
The Eagle and Child,
The Shovel and Boot.'

Such strange combinations are, however, easily comprehensible when we remember that it was the custom to combine a new sign with an old one, that apprentices placed their masters' with their own, and that others, like 'The Eagle and Child,' are the badges of old families. From the latter come our red lions, blue boars, antelopes, griffins, swans, and dragons. To have a large showy sign, brilliantly painted and gilt, was the chief desire of a tavern in the old time, and there were many artists who lived well by sign-painting. Chief among them was Isaac Fuller, whom Vertue notes as 'much employed to paint the great taverns in London,' the chief rooms being often adorned on walls and ceiling after the fashion of noble mansions. When the first exhibition of pictures by living English artists was opened in 1760, the sneerers at native talent announced by advertisements in the daily papers that preparations were making for a rival 'exhibition of curious signs by brokers and sign-painters.'

Fleet-street has been long celebrated for its taverns. Many of old foundation and with quaint signs still remain ; others have passed away, leaving an undying celebrity. 'The Bolt-in-Tun' was the punning heraldic badge of Prior Bolton, the last of the ancient clerical rulers of St. Bartholomew's prior to the Reformation. Peele's coffee-house, at the corner of Fetter-lane, has been established more than 150 years ; 'The Hole-in-the-Wall,' near it, is a characteristic house, behind the main line of building, approached by a passage or hole in the wall of the front house ; this is the case with most of the old inns here, which had originally ground in front of them, afterwards encroached on by building. 'The Rainbow' was celebrated as the first coffee-house opened in London. 'The Mitre' was established here after the Great Fire had destroyed the original tavern in Cheapside. 'The King's Head' stood at the corner of Chancery-lane, and was as old as the time of Edward VI. It was a picturesque pile, and is more familiar to modern men than any of the famed hostelries of the past, as it was the residence of Isaac Walton, and appears in all

illustrated editions of his 'Angler,' which he advertises to be 'sold at his shop in Fleet-street, under the King's Head tavern, the public rooms of the tavern being on the first floor. Nearly opposite, and again behind the houses, is 'Dick's Tavern,' which stands on the site of the printing office of Richard Tottel, law-stationer in the reign of Henry VIII. Facing this is another famed tavern, 'The Cock,' also approached by an alley; it was a favourite retreat of lawyers and law-students in the last century, and is renowned in modern lyrics by Alfred Tennyson in 'Will Waterproof's Monologue.' Its proprietor during the Great Plague closed it entirely, and advertised the fact 'to all persons who have any accompts with the master, or farthings belonging to the said house,' that they might be paid or exchanged for the proper currency. We engrave one of this honest man's farthings.

None of the Fleet-street taverns are surrounded with an interest equal to that known as 'The Devil,' situated within two doors of Temple Bar, on the south side of the street, where Child's-place is now situated. It was a favourite haunt of the wits and lawyers, and the latter placarded their chamber doors with the announcement 'gone to the Devil,' when they needed refreshment. The sign represented St Dunstan seizing the devil by the nose when he came to tempt him during his labour at the goldsmith's forge, according to the old legend. As this tale was depicted on the sign, it is shewn in the 'token' of its landlord, here engraved, which was issued

in the early part of the reign of Charles the Second. The fame of the saint was completely submerged in that of his sable opponent, and the tavern only known by the name of the latter from the days of Ben Jonson, who has given it endless fame. It was then kept by Simon Wadloe, and appears to have been in the hands of his descendants when this token was issued. Aubrey tells us that 'Ben Jonson, to be near the Devil Tavern, lived without Temple Bar, at a combmaker's shop.' Here he removed the wits from the Mermaid at Cheap-side, and founded the renowned Apollo club, writing his admirable 'sociable rules' for its guidance, in his favourite Latin, which has been translated into English verse by Brome, one of his poetic 'sons,' for thus he termed the men

538

admitted. Near the door was placed a gilded bust of Apollo, and a 'Welcome' in flowing hearty rhymes, by the great poet. When the famed old tavern gave place to other buildings, this bust and inscribed board found a resting-place in Child's bank, where they may still be seen; they have been re-gilt and re-painted from time to time, but the original lettering of Ben's era may be still detected under the more modern paint.

Palsgrave-place, a little beyond Temple Bar, marks the spot where once stood the 'Palsgrave's Head Tavern,' a sign adopted in the reign of James the First, in honour of Frederick, Palsgrave of the Rhine, who married the king's daughter, the Princess Elizabeth. Ship-yard, opposite, denotes the sign of the Ship, a house established in honour of Sir Francis Drake, and taking for its sign the bark in which he circumnavigated the world.

Such are a few of the interesting associations connected with London taverns and their money tokens. The subject of London tokens generally has been treated in an octavo volume by Mr Akerman, the late Secretary of the Society of Antiquaries; also by Mr J. H. Burn, whose excellent volume was published at the expense of the Corporation of London; since these were printed, a more extensive quarto volume, with an abundance of illustration, has been published by Mr Boyne, and devoted to the description of all issued throughout the kingdom.

FAMOUS LONDON TAVERN KEEPERS.

One of the most noted tavern keepers of the last century was Le Beck, whose portrait was painted by Sir Godfrey Kneller, wearing a linen cap, and holding a glass. Le Beck distinguished himself by providing the best food, exquisitely cooked, and the most admirable wines; nor did he yield to any of his competitors in the extravagance of his charges. Perhaps Le Beck's temple was the best provided in London for the devotees of the Epicurean sect; and their high priest seems to have been a huge, powerful-looking man, fit for the ancient office of killing the largest victims offered at their altars. His mighty head became the sign of a noted tavern in the reign after Le Beck himself had disappeared.

Le Beck was not, however, without his rivals. In the *Hind and Panther Transversed* is mentioned, with Epicurean honour, Pontack's, a celebrated French eating-house, in Abchurch-lane, in the City, where the annual dinners of the Royal Society were held until 1746:

'What wretch would nibble on a hanging shelf,
When at Pontack's he may regale himself?

* * * * *

Drawers must be trusted, through whose hands
conveyed

You take the liquor, or you spoil the trade;
For sure those honest fellows have no knack
Of putting off stum'd claret* for Pontack.'

Evelyn describes Pontack as son to the famous and wise prime President of Bordeaux, whose head was painted for the tavern sign. Defoe, in 1722, describes the best French claret as named after him: 'here you may bespeak a dinner from four or five shillings a head to a guinea, or what sum you please; and Swift

* Stum'd wine was wine strengthened by extraneous infusions.

describes the wine at seven shillings a flask, adding, 'Are not these pretty rates?'

Among its extravagances, in the bill of fare of 'a guinea ordinary figure,' we read 'a ragout of fatted snails,' and 'chickens not two hours out of the shell.'

The Castle, near Covent Garden, was memorable for its celebrated cook, Tom Pierce. Here a most gallant act was performed by some men of gaiety, who, taking off one of the shoes from a noted belle, filled it with wine, and drank her health, and then consigned it to Pierce to dress for them; when Tom produced it exquisitely ragood for their supper. The wits of that day wrote against its luxuries, though they did not refuse to partake of them. Garth sings the happiness of the contented rural rector, who has good plain food nicely dressed; for, with him,

'No cook with art increased physicians' fees,
Nor served up death in soups and fricassees.'

APRIL 23.

St George, martyr, about 303. St Ibar, or Ivor, Bishop in Ireland, about 500. St Gerard, Bishop of Toul, confessor, 994. St Adalbert, Bishop of Prague, martyr, 997.

St George.

If Gibbon's sketch of St George's career be correct, that martial hero owes his position in the Christian calendar to no merit of his own. Born

in a fuller's shop in Epiphania, Cicilia, he contrived to ingratiate himself with those above him by servilely flattering them, and so gradually rose from his original obscurity. A lucrative contract for supplying the army with bacon, proved, under his unscrupulous management, a mine of wealth; but as soon as he had made his fortune, he was compelled to fly the country, to escape the consequences of the discovery of his dishonest practices. He afterwards became a zealous convert to Arianism, and made himself so conspicuous in his new vocation, that he was

sent by Constantius to supersede Athanasius in the archbishopric of Alexandria. To satisfy his avarice, the pagan temples were plundered, and the pagan and Christian inhabitants taxed, till the oppression became unendurable. The people rose and expelled the ex-contractor, but he was quickly reinstated by the army of Constantius. The accession of Julian was the signal for retribution. George and two of his most obnoxious adherents were dragged to prison by the exultant Alexandrians, where they lay for twenty-four days, when the impatience of the people refused to wait longer for revenge. The prison doors were broken open, the archbishop and his friends murdered, and their bodies, after being carried through the city in triumph, thrown into the sea. This death at the hands of the pagans made the tyrant a martyr in the eyes of the Arians, and canonization followed as a matter of course. When the Arians re-entered the church, they brought back their saint with them; and although he was at first received with distrust, the sixth century saw him firmly established as one of the first order. The Crusades added to his renown. He was said to have fought for Godfrey of Bouillon at the battle of Antioch, and appeared to Cœur-de-Lion before Acre as the precursor of victory, and from that time the Cappadocian adventurer became the chosen patron of arms and chivalry. Romance cast its halo around him, transforming the symbolical dragon into a real monster slain in Lybia to save a beautiful maiden from a dreadful death.

Butler, the historian of the Romish calendar, repudiates George of Cappadocia, and will have it that the famous saint was born of noble Christian parents, that he entered the army, and rose to a high grade in its ranks, until the persecution of his co-religionists by Diocletian compelled him to throw up his commission, and upbraid the emperor for his cruelty, by which bold conduct he lost his head and won his saintship. Whatever the real character of St George might have been, he was held in great honour in England from a very early period. While in the calendars of the Greek and Latin churches he shared the twenty-third of April with other saints, a Saxon Martyrology declares the day dedicated to him alone; and after the Conquest his festival was celebrated after the approved fashion of Englishmen. In 1344, this feast was made memorable by the creation of the noble Order of St George, or the Blue Garter, the institution being inaugurated by a grand joust, in which forty of England's best and bravest knights held the lists against the foreign chivalry attracted by the proclamation of the challenge through France, Burgundy, Hainault, Brabant, Flanders, and Germany. In the first year of the reign of Henry V., a council held at London decreed, at the instance of the king himself, that henceforth the feast of St George should be observed by a double service; and for many years the festival was kept with great splendour at Windsor and other towns.* Shakspeare, in *Henry VI.*, makes the Regent Bedford say, on receiving the news of disasters in France:

* Betts's *Memorials of the Order of the Garter.*

' Bonfires in France I am forthwith to make
To keep our great St George's feast withal !'

Edward VI. promulgated certain statutes severing the connexion between the 'noble order' and the saint; but on his death, Mary at once abrogated them as 'impertinent, and tending to novelty.' The festival continued to be observed until 1567, when, the ceremonies being thought incompatible with the reformed religion, Elizabeth ordered its discontinuance. James I., however, kept the 23rd of April to some extent, and the revival of the feast in all its glories was only prevented by the Civil War. So late as 1614, it was the custom for fashionable gentlemen to wear blue coats on St George's day, probably in imitation of the blue mantle worn by the Knights of the Garter.

In olden times, the standard of St George was borne before our English kings in battle, and his name was the rallying cry of English warriors. According to Shakspeare, Henry V. led the attack on Harfleur to the battle-cry of 'God for Harry! England! and St George!' and 'God and St George' was Talbot's slogan on the fatal field of Patay. Edward of Wales exhorts his peace-loving parents to

'Cheer these noble lords,
And hearten those that fight in your defence;
Unsheath your sword, good father, cry St George !'

The fiery Richard invokes the same saint, and his rival can think of no better name to excite the ardour of his adherents :

'Advance our standards, set upon our foes,
Our ancient word of courage, fair St George,
Inspire us with the spleen of fiery dragons.'

England was not the only nation that fought under the banner of St George, nor was the Order of the Garter the only chivalric institution in his honour. Sicily, Arragon, Valencia, Genoa, Malta, Barcelona, looked up to him as their guardian saint; and as to knightly orders bearing his name, a Venetian Order of St George was created in 1200, a Spanish in 1317, an Austrian in 1470, a Genoese in 1472, and a Roman in 1492, to say nothing of the more modern ones of Bavaria (1729), Russia (1767), and Hanover (1839).

DRAGON LEGENDS.

In all the wide domain of the mythical and marvellous, no legends occur so frequently, or in so many various forms, as those which describe a monstrous winged serpent, or dragon, devouring men, women, and children, till arrested by the miraculous valour or saintly piety of some hero. In nearly all of these legends, a maiden, as the special victim of the monster, and a well, cave, or river, as its dwelling-place, are mixed up with the accessory objects of the main story. The Grecian mythology abounds with such narrations, apparently emblematical of the victory gained by spring over winter, of light over darkness, of good over evil. Nor was this pagan myth antagonistic to the language or spirit of Christianity. Consequently we find a dragon—as the emblem of sin in general, and paganism in particular—vanquished by a saint, a perpetually recurring myth running through all the ancient

Christian legends. At first the monster was used in its figurative sense alone; but in the darker ages, the idea being understood literally, the symbol was translated into an acknowledged fact.

In many instances the ravages caused by inundations have been emblemized as the malevolent deeds of dragons. In the seventh century, St Romanus is said to have delivered the city of Rouen from one of those monsters. The feat was accomplished in this very simple manner. On Ascension day, Romanus, taking a condemned criminal out of prison, ordered him to go and fetch the dragon. The criminal obeyed, and the dragon following him into the city, walked into a blazing fire that had previously been prepared, and was burned to death. To commemorate the event, King Dagobert gave the clergy of Rouen the annual privilege of pardoning a condemned criminal on Ascension day; a right exercised with many ceremonies, till the period of the first Revolution. This dragon, named Gargouille (a water-spout), lived in the river Seine; and as Romanus is said to have constructed embankments to defend Rouen from the overflowing of that river, the story seems to explain itself. The legends of Tarasque, the dragon of the Rhone, destroyed by St Martha, and the dragon of the Garonne, killed by St Martial at Bordeaux, admit of a similar explanation. The winding rivers resembling the convolutions of a serpent, are frequently found to take the name of that animal in common language, as well as in poetical metaphor. The river Draco, in Bithynia, is so called from its numerous windings, and in Italy and Germany there are rivers deriving their names from the same cause. In Switzerland the word *drack* has been frequently given to impetuous mountain torrents, which, suddenly breaking out, descend like avalanches on the lower country. Thus we can easily account for such local names as *Drachenlok*, the dragon's hole; *Drachenveid*, the dragon's march; and the legends of Struth, of Winkelreid, and other Swiss dragon-slayers.

But the inundation theory will not explain all dragon legends. Indeed, it would be as easy for a supernaturally endowed power to arrest the overflowing of a river as to destroy a dragon, admitting there were animals of that description. But such a comparison cannot be applied to the limited power of an ordinary man, and we find not only saints, but sinners of all kinds, knights, convicts, deserters, and outlaws, figuring as dragon-killers. And this may readily be accounted for. In almost every strange object the ignorant man fancies he discovers corroboration of the myths learned in his childhood; and, as different periods and places exhibit different phenomena, legends in course of time are varied by being mixed up with other myths and facts originally unconnected with them. The mediæval naturalists, too, by recognising the dragon as a genuine existing animal known to science and travellers, laid a foundation for innumerable varieties of the legend. Thus, at Aix, the fossilized head of an extinct Saurian reptile is shewn as the veritable head of the dragon slain by St Martha.

In churches at Marseilles, Lyons, Ragusa, and Cimiers, skins of stuffed alligators are exhibited as the remains of dragons. The best authenticated of all the dragon stories is that of the one said to have been killed by Dieudonne, of Gozo, a knight of Rhodes, and afterwards Grand Master of the Order, in the fourteenth century. The head of this dragon was carefully preserved as a trophy at Rhodes, till the knights were driven out of the island. The Turks, respecting bravery even in a Christian enemy, preserved the head with equal care, so that it was seen by Thevenot as late as the middle of the seventeenth century; and from his account it appears to have been no other than the head of a hippopotamus.

Real persons have, in some instances, been made the heroes of legends as wild as that of Perseus. The ignorant, unable to appreciate or even to comprehend the mere idea of literary fame, have ever given a mythical reputation to men of letters. In Italy, Virgil is still spoken of as a potent necromancer; and a sculptured representation of St George and the dragon on the portal of a church at Avignon has conferred on Petrarch the renown of a dragon-killer. According to the tale, as Petrarch and Laura were one day hunting, they chanced to pass the den of a dragon. The hideous monster, less ravenous than amorous, attacked Laura; but the poet rushing to her assistance, killed the beast with his dagger. If the story be doubted, the narrator triumphantly points to the sculpture as a proof of its correctness; just as the painted representation of a dragon, on the wall of Mordiford church, in Herefordshire, has been innumerable times pointed out as the exact resemblance and memorial of a reptile killed by a condemned criminal in the neighbouring river Lug. To vulgar minds such evidence appears incontrovertible. As a local poet sings—

'Who has not heard, of Herefordian birth,
Who has not heard, as winter evenings lag on,
That tale of awe to some—to some of mirth—
Of Mordiford's most famous huge green dragon?
Who has not seen the figure on its church,
At western end outspread to all beholders,
Where leaned the beggar pilgrim on his crutch
And asked its meaning—body, head, and shoulders?
There still we see the place, and hear the tale,
Where man and monster fought for life and glory;
No one can righteously the facts assail,
For even the church itself puts it before ye.'

A fertile source of mythical narrations is found in the ancient names of places; legends being invented to account for the names, and then we are gravely informed that the names were derived from the alleged facts of the legends. Near Dundee, in Forfarshire, there is a well called The Nine Maidens' Well, and adjoining are places named respectively Pittempton, Baldragon, Strathmartin, and Martinstane. From these simple circumstances we have a dragon story, which may be thus abridged. A dragon devoured nine maidens at the well near Pittempton. Martin, the lover of one of the maidens, finding life a burden, determined to kill the reptile, or perish in the attempt. Accord-

ingly, he attacked it with a club, striking the first blow at Strath—pronounced by the country people Strike—martin. The venomous beast was scotched, not killed, by this blow; but as it dragged—Scottice, *draiglet*—'its slow length along' through a morass, the hero of the adventure followed up the attack, and finally killed the monster at Martinstane. The dragon, like other great criminals of the olden time, made a 'last speech, confession, and dying declaration,' in the following words:

'I was temptit (tempted) at Pittempton,
Draiglit (dragged) at Baldragon,
Stricken at Strikemartin,
And killed at Martinstane.'

The festival of the Rogations, anciently held on the three days preceding Ascension Day, were the prime source of dragon legends. During these days the clergy, accompanied by the church officers and people, walked round the boundaries of their respective parishes; and at certain prescribed spots offered up prayers, beseeching blessings on the fruits of the earth, and protection from the malevolent spirit of all evil. To a certain extent, the custom is still observed in many English parishes. In the ancient processions, there was always carried the image of a dragon, the emblem of the infernal spirit, whose overthrow was solicited from heaven, and whose final defeat was attributed to the saint more particularly revered by the people of the diocese or parish. On the third day of the processions, the dragon was stoned, kicked, buffeted, and treated in a very ignominious if not indecent manner. Thus every parish had its dragon as well as its saint, with a number of dragon localities—the dragon's rock, the dragon's well, &c., so named from being the spots where the dragon was deposited, when the processions stopped for refreshment or prayer.

The processional dragon has descended down even to our own day. Previous to the Municipal Corporations Act of 1835, Snap, the famous Norwich dragon, annually went in procession with the mayor and corporation on the Tuesday preceding the eve of St John the Baptist. Snap was a magnificent reptile, all glittering in green and gold. He was witty, too, bandying jokes on men and things in general, with his admiring friends in the crowd. Guarded by four *whiffers*, armed with drawn swords, Snap seemed to be quite at home among the bands and banners of the procession. But, true to his ancient traditional instincts, though on that important anniversary the cathedral was strewn with rushes to receive the civic dignitaries in the olden manner, Snap never presumed to enter the sacred edifice, but sat upon a stone—the dragon's stone—till the service was concluded, and the procession resumed its onward march. But the act previously referred to has ruthlessly swept away Snap, with all the grand corporate doings and feastings for which the East Anglian city was once so famous. Yet the rabble, affectionately clinging to their time-honoured friend the dragon, have more than once attempted to get up a mock Snap, to be speedily put to flight by the 'Move on there!' of a blue-coated policeman. Such are the inevitable changes of time.

SHAKSPEARE.

‘He was a man of universal genius, and from a period soon after his own era he has been universally idolized. It is difficult to compare

W. Shakspeare

him to any other individual. The only one to whom I can at all compare him is the wonderful Arabian dervise who dived into the body of each [person], and in that way became familiar with the thoughts and secrets of their hearts. He was a man of obscure origin, and, as a player, limited in his acquirements; but he was born evidently with a universal genius. His eye glanced at the various aspects of life, and his fancy portrayed with equal felicity the king on the throne and the clown who cracked his chestnuts at a Christmas fire. Whatever note he took, he struck it just and true, and awakened a corresponding chord in our bosoms.’—*Sir Walter Scott's speech on proposing the Memory of Shakspeare at the Edin. Theat. Fund Dinner, February 23, 1827.*

As is well known, a house in Henley Street, Stratford, is traditionally famous as that in which Shakspeare was born, though the fact has been the subject of considerable doubt. It is but the beginning of the obscurities which rest on the biography of the Bard of Avon. The facts established regarding him by documentary evidence form but a handful: that he was baptized on the 26th of April 1564; that his father was a man

of substance, at one time high bailiff of the burgh, but subsequently fell into difficulties; that he himself, at eighteen, married Anne Hathaway, who was twenty-seven, and who brought him a

THE BIRTHPLACE OF SHAKSPEARE.

daughter six months after, and subsequently a daughter and a son together; that, in 1589, he is found as a shareholder in the Blackfriars Theatre in London, afterwards a shareholder in that called the Globe; that, as a writer of plays for these houses, he realized large gains, and in 1597 began to buy houses and land at his native town, to which he latterly retired to spend the evening of his days in comfort and dignity; and that, on the 23rd of April 1616, he died at Stratford, and was buried in the chancel of the parish church, where there is a monument, presenting a portrait bust to his memory. Such is nearly all we know for certain; it is from the uncertain voice of tradition alone that we hear of his having been apprenticed to a butcher, of his having got into trouble by a deer-stealing adventure, and of his first occupation in London having been that of holding gentlemen's horses at the theatre door. One or two faint allusions to his writings in those of his contemporaries complete the effective materials of what may be by courtesy called the Life of Shakspeare. Let us not forget, however, one other particular to which we should cling with great and affectionate interest, that he was characterised by these contemporaries as the *Gentle Shakspeare*. It conveys the idea of a union of amiability and modest dignity, especially pleasing.

Driven to deductions and surmises regarding Shakspeare, we hope that the following remarks may appear allowable. First, we would say that the shade of family misfortune and difficulty

which fell upon him in early manhood is sufficient to account for his leaving his native borough. We conceive that, his father being impoverished, and himself feeling anxious for the future of his own little family, he bethought him, as so many young men in similar circumstances still do, of attempting to advance his fortunes in London. An acquaintance with the London players, who we know occasionally visited Stratford, and the impulse of his own genius, probably determined him to the stage. There, in adapting plays which had been written by other persons, he fully discovered his wonderful powers, and was gradually drawn on to write original plays, deriving his subjects from history and from collections of prose tales. Fortune following on these exertions, his mind took only the firmer hold of Stratford and his loved relatives there. It became the dream of his life to restore his family to the comfort and respectability from which they had fallen—to become, if possible, a man of some consequence there. In this he might be said to resemble Scott, who, comparatively indifferent to literary *éclat*, concentrated his highest aspirations on founding a laird's family in the county of his race—Roxburghshire. As in Scott's case there was a basis for the idea in the gentle blood of which he was descended, so was there in Shakspeare's. Through at least the mother, Mary Arden, of Wilmcote, if not also through the father, there was a trace of connexion with land and birth. It is a highly significant circumstance that, in 1596, when Shakspeare was getting his head above water in London, his father is found applying to the Heralds' College for a coat-of-arms, on the basis of family service to King Henry VII., of official dignity, of the possession of property, and the fact of having married a daughter of Arden of Wilmcote; an application which was extended three years later, to one for the privilege of impaling the Shakspeare arms with those of Arden. There can of course be no doubt that William the poet prompted these ambitious applications, and designed them for the benefit of himself and his descendants. They take their place with the investments at Stratford as part of the ultimate plan of life which the great poet had in view. Let it be observed that with this conception of his idea of life all the other known and even the negative circumstances are in conformity. He thought not of taking a high place in London—he rather kept retired, and saved money. To this voluntary obscurity it may be attributed that he has passed so notelessly amongst his fellows in the metropolis, and been left so wholly without a biography amongst them. In about ten years from his coming to London—namely in 1597—he was beginning to make his purchases of property in Stratford, and in a few years more he had wholly withdrawn to live like a private gentleman in the handsome house of the New Place—probably the best house in the town—where he lived till the end of his days. Let it be observed—strange that it should not have been observed before!—that this whole course of procedure is peculiar,—stands quite singular among the literary, and still more the theatrical lives of that day, arguing a character in Shakspeare as original and self-dependent as

his talents were exalted. It seems to us to speak strongly for a just and rational view of the ends of life on his part; it shews him as a man whose original healthy tastes had never become spoiled by town life, as one who never allowed himself to be carried away by love of excitement and applause: the smoke of the stage lamps had never smirched him; the homage of the Pembrokes and the Northampton had never misled him. He desired simply to be a gentleman, living on his own acres, *procul à negotiis*. It was an idea of life both modest and dignified. We hear not of his seeking any external honours beyond the coat-of-arms. We hear of no ovations at his retirement from the stage; most probably he was too proud a man to undergo a testimonial, even had such things been then fashionable. He had come to town for a purpose, and when that was accomplished, he quietly resumed the calm existence he loved by the banks of that beautiful river of his youth, ever pressing along its green and umbrageous meadows. Could anything be more worthy of 'a gentleman of Nature's making' or of a man of genius?

One of the few certainties about Shakspeare is the date of his baptism, for it is inserted in the baptismal register of his native town of Stratford in the following clear, though ungrammatical fashion: '1564, April 26, Gulielmus, filius Joannes Shakspere.' We know, then, that he was baptized on the 26th of April 1564. When was he born? A fond prepossession in favour of St George's day has led to an assumption that the 23rd of April might be his natal morn, thus allowing him to be three days old at the time of his baptism; and accordingly it has long been customary to hold festivals in his honour on that day.

The question that first arises here is, Did three days form a customary interval in that age between the birth and baptism of a child? We must answer that there are examples of its doing so.* But there are also many instances of a longer interval. Milton, who was born in Shakspeare's lifetime, was baptized when eleven days old. In the case of the family of Thomas Godfrey, the eldest of whom was born in 1609, not one of the fifteen was christened in less than six days from birth, the entire series giving us the following intervals: 13, 6, 8, 15, 11, 12, 14, 21, 13, 10, 14, 10, 18, 15, and 11 days.†

There is, however, something like positive, though hitherto almost unnoticed evidence, that the Bard of Avon sang his first song some time before the 23rd of April. It is to be found on his tomb-stone in the legend—'OBIIIT ANO. DOR. 1616. ETATIS 53. DIE 23, AP.†' As this was

* Arthur Dee was born on the 13th of July 1579, and christened on the 16th; and Katherine Dee was born on the 7th of June, and christened on the 10th. On the other hand, Theodore Dee was born on the 28th of February, and christened on the 1st of March; and Margaret Dee was not christened till a fortnight after her birth. These instances are selected from Dr Dee's *Diary*, and tend to shew that there was no great regularity observed in such matters.—*Halliwel*.

‡ Notes and Queries, 2nd ser. vii. 337.

inscribed under the care of relatives and contemporaries, it could scarcely but be correct;

day. It has not heretofore been pointed out that, if Shakspeare died on the day reckoned the 23rd of April in England, and Cervantes on that reckoned the 23rd of April in Spain, these two great, and in some measure kindred geniuses, necessarily did not die on the same day. Spain had adopted the Gregorian calendar on its first promulgation in 1582, and consequently the 23rd day of April in Spain corresponded with the 13th in England; there being at that time ten days' difference between the new and old style. It is to be hoped, then, that we shall have no more carefully-laboured, semi-mystical disquisitions on the now [we believe for the first time] exploded fallacy of Shakspeare and Cervantes having died on the same day.

SHAKSPEARE'S BURIAL-PLACE AND MONUMENT, STRATFORD-UPON-AVON CHURCH.

From an Original Drawing.

and, if so, we must accept it as an intimation that, on the 23rd of April 1616, Shakspeare had passed the fifty-two years which would have been exactly his age if he had been born on the 23rd of April 1564, and gone some way into his fifty-third year. In other words, being in his fifty-third year on the 23rd of April 1616, he must have been born some time before the same day in 1564.

The date of the baptism, nevertheless, gives us tolerable assurance that the birthday was one *very short while prior to the 23rd*; and there is a likelihood that it was the 22nd. 'One only argument,' says Mr de Quincey,* 'has sometimes struck us, for supposing that the 22nd might be the day, and not the 23rd; which is, that Shakspeare's sole grand-daughter, Lady Barnard, was married on the 22nd of April 1626, ten years exactly from the poet's death; and the reason for choosing this day might have had a reference to her illustrious grandfather's birthday, which, there is good reason for thinking, would be celebrated as a festival in the family for generations.'

The 23rd of April being usually given as the date of the death of Cervantes, a supposition has arisen, and become the subject of some rather puerile remark, that Shakspeare and the illustrious author of *Don Quixote* died on the same

* Encyclopædia Britannica, 8th ed. art. SHAKSPEARE.

AN IDEA AND A RHYME.

On the title-page of the first folio edition of Shakspeare's plays, there is an engraved portrait of the immortal bard, from the burin of Martin Droeshout, accompanied by some verses written by Ben Jonson, and commencing thus,

'The figure that thou here see'st put,
It was for gentle Shakspeare cut;
Wherein the graver had a strife
With nature, to outdo the life.'

When Betterton, the English Roscius, possessed the painting, now termed the Chandos portrait of Shakspeare, he allowed Dryden to have a copy taken from it by the pencil of Kneller. The poet paid the painter for his trouble, in flattery, a medium most convenient for Dryden, and, next to coin, the most acceptable to Kneller. In Dryden's poetic epistle to Kneller, on this occasion, we find the following lines:

'Such are thy pieces, imitating life
So near, they almost conquer in the strife.'

On the publication of the above, the coffee-house critics of the day, uproariously bellowing plagiarism, reviled Dryden for so servilely appropriating the idea and rhyme of Jonson, overlooking the actual fact that Jonson himself had appropriated both from Shakspeare's *Venus and Adonis*, where we may read:

'Look, where a painter would surpass the life,
His art's with nature's workmanship at strife.'

The rhyme thus repeated was not suffered to lie idle even, though the original idea was lost sight of. Thus, in an epilogue to the play of the *Brothers*, written by Cumberland, we find the following allusion to Reynolds's celebrated picture of Garrick, between Tragedy and Comedy—

'Who but hath seen the celebrated strife,
Where Reynolds calls the canvas into life,
And 'twixt the tragic and the comic muse,
Court'd of both, and dubious which to chose,
Th' immortal actor stands?'

And in reference to the very same subject, we find in a *Critical Epistle to Sir Joshua Reynolds*—

‘Your pencil summoned into life,
For Garrick’s choice, the ardent strife.’

Both the rhyme and the original idea might be hunted much further, and found in many unexpected places, were the result of sufficient interest to merit further attention here.

HENRY CLIFFORD ‘THE SHEPHERD LORD.’

The life of Henry Clifford, commonly called the Shepherd Lord, is a striking illustration of the casualties which attended the long and disastrous contest between the Houses of York and Lancaster. The De Cliffords were zealous and powerful adherents of the Lancastrian interest. In this cause Henry’s grandfather had fallen at the battle of St Alban’s; and his father at the battle of Towton, that bloody engagement at which nearly 40,000 Englishmen perished by the hands of their fellow-countrymen. But scarcely had the Yorkists gained this victory, which placed their leader on the throne as Edward the Fourth, than search was made for the sons of the fallen Lord Clifford. These were two boys, of whom Henry, the eldest, was only seven years old. But the very name of Clifford was so hated and dreaded by the Yorkists, that Edward, though acknowledged king, could be satisfied with nothing less than the lives of these two boys. The young Cliffords were immediately searched for, but their mother’s anxiety had been too prompt even for the eagerness of revenge; they could nowhere be found. Their mother was closely and peremptorily examined about them. She said, ‘She had given direction to convey them beyond sea, to be bred up there; and that being thither sent, she was ignorant whether they were living or not.’ This was all that could be elicited from their cautious mother. Certain it is that Richard, her younger son, was taken to the Netherlands, where he shortly afterwards died. But Henry, the elder, and heir to his father’s titles and estates, was either never taken out of England; or, if he were, he speedily returned, and was placed by his mother at Lonsborow, in Yorkshire, with a trustworthy shepherd, the husband of a young woman who had been under-nurse to the boy whom she was now to adopt as her foster-son. Here, in the lowly hut of this humble shepherd, was the young heir of the lordly Cliffords doomed to dwell—to be clothed, fed, and employed as the shepherd’s own son. In this condition he lived month after month, and year after year, in such perfect disguise, that it was not till he had attained the fifteenth year of his age that a rumour reached the court of his being still alive and in England. Happily the Lady Clifford had a friend at court, who forewarned her that the king had received an intimation of her son’s place of concealment. With the assistance of her then husband, Sir Lancelot Threlkeld, Lady Clifford instantly removed ‘the honest shepherd with his wife and family into Cumberland,’ where he took a farm near the Scottish Borders. Here, though his mother occasionally held private communications

with him, the young Lord Clifford passed fifteen years more, disguised and occupied as a common shepherd; and had the mortification of seeing his Castle and Barony of Shipton in the hands of his adversary, Sir William Stanley; and his Barony of Westmoreland possessed by the Duke of Gloucester, the king’s brother.

On the restoration of the Lancastrian line by the accession of Henry the Seventh, Henry Clifford, now thirty-one years old, was summoned to the House of Lords, and restored to his father’s titles and estates. But such had been his humble training, that he could neither write nor read. The only book open to him during his shepherd’s life was the book of nature; and this, either by his foster-father’s instruction, or by his own innate intelligence, he had studied with diligence and effect. He had gained a practical knowledge of the heavenly bodies, and a deep-rooted love for Nature’s grand and beautiful scenery.

‘Among the shepherd-grooms, no mate
Had he—a child of strength and state!

* * * * *
Among the heavens his eye could see
Face of thing that is to be;
And, if man report him right,
He could whisper words of might.’

Wordsworth.

Having regained his property and position, he immediately began to repair his castles and improve his education. He quickly learnt to write his own name; and, to facilitate his studies, built Barden Tower, near Bolton Priory, that he might place himself under the tuition of some learned monks there, and apply himself to astronomy, and other favourite sciences of the period.

Thus this strong-minded man, who, up to the age of thirty, had received no education, became by his own determination far more learned than noblemen of his day usually were, and appears to have left behind him scientific works of his own composition.

His training as a warrior had been equally defective. Instead of being practised from boyhood to the use of arms and the feats of chivalry, as was common with the youth of his own station, he had been trained to handle the shepherd’s crook, and tend, and fold, and shear his sheep. Yet scarcely had he emerged from his obscurity and quiet pastoral life, when we find him become a brave and skilful soldier,—an able and victorious commander. At the battle of Flodden he was one of the principal leaders, and brought to the field a numerous retinue. He died the 23rd of April 1523, being then about seventy years old.

A CELEBRATED JOCKEY.

It was said of Tregonwell Frampton, Royal Stud Keeper at Newmarket, and ‘Father of the Turf,’ that he was ‘a thorough good groom, yet would have made a good minister of state, if he had been trained for it.’ Frampton was supposed to be better acquainted with the genealogy of the most celebrated horses than any man of his time, for he could reckon up the sires, grandsires, great grandsires, and great-great-grandsires, which he had himself seen. As few

genealogists can trace the pedigrees of the most noted running horses for more than ten or twelve descents, it has been regretted that a kind of Herald's Office was never created for horses, by which Childers in the last, and some of the great racers in the present age, might prove their descent from Bucephalus.

Frampton could choose the best racers equally well, from the thorough English black to the best-bred bay; and 'not a splint, or sprain, or bad eye, or old broken knee, or pinched foot, or low heel, escaped in the choice of a horse.' But the longest heat will come to an end; and even Frampton finished his course, in 1727, aged 86.

APRIL 24.

St Mellitus, third Archbishop of Canterbury, 624. Saints Beuve and Doda, of Rheims, 7th century. St Robert, of Chase-dieu, Auvergne, 1067. St Fidelis, martyr, 1622.

Born.—Edmund Cartwright, inventor of the power loom, 1743, *Marnham, Notts.*

Died.—James Beaton, archbishop of Glasgow, 1603, *Paris*; Daniel Defoe, author of *Robinson Crusoe*, &c., 1731, *London*; William Seward, miscellaneous writer, 1799; Pierre de Beaumarchais, musician, 1799, *Paris*.

BEAUMARCHAIS.

Pierre Augustine Caron de Beaumarchais, the son of an eminent Parisian watchmaker, served an apprenticeship to his father's business, and gained a prize from the French Academy of Sciences, for an improvement in watchmaking, when only twenty-one years of age. His knowledge of musical instruments, and skill in music, obtained him the high post of music-master to the daughters of Louis the Fifteenth. Possessed of an attractive figure, great talents, and an unbounded assurance, he was early employed in political intrigues by the leading statesmen of France, yet still found time to distinguish himself as an author and dramatist, as well as to realize a large fortune by financial and mercantile speculations. Two of the most popular and best known dramatic pieces in the world, the *Barber of Seville* and *Marriage of Figaro*, are from his witty and prolific pen. His many accomplishments, however, were obscured by an inordinate self-conceit, which he never cared to suppress; and it has been wittily remarked, that if he had been condemned to be hanged, he would have petitioned for a gallows as high as Haman's, to render his end the more conspicuous. But, with all his egotism, he had the good sense never to blush at the lowness of his birth. One day, a number of noblemen of high rank having been kept waiting for a considerable time in an ante-room while Beaumarchais was closeted with a minister in high office, it was determined to insult the *ci-devant* watchmaker, when he came out from the audience chamber. On Beaumarchais appearing, one of them said aloud:—'Pray, Monsieur de Beaumarchais, have the goodness to examine my watch, and inform me what is the matter with it; it very often stops, and I am sure from your youthful experience you will be able to tell me the cause.' 'Certainly, my lord,' replied Beaumarchais, with a profound bow, 'I served my apprenticeship to the watchmaking

trade under my respected father.' So, taking the proffered watch from the nobleman's hand, Beaumarchais opened and examined it with profound interest, a number of courtiers crowding round to witness the curious scene. All at once, as if by an awkward inadvertence, he let the valuable watch fall heavily on the floor, and, amidst the uproarious laughter of the bystanders, walked away, begging ten thousand pardons of the enraged nobleman for the unlucky accident.

SWINTON MAY-SONGS.

A correspondent sends us the following account of a custom in South Lancashire, which, he says, is new to him, and of which he can find no notice in Brand, or Strutt, or Hone, or in *Notes and Queries*, and which has therefore the recommendation of novelty, though old:

While reading one evening towards the close of April, 1861, I was on a sudden aware of a party of waits or carollers who had taken their stand on the lawn in my garden,* and were serenading the family with a song. There were four singers, accompanied by a flute and a clarinet; and together they discoursed most simple and rustic music. I was at a loss to divine the occasion of this local custom, seeing the time was not within any of our great festivals—Easter, May-day, or Whitsuntide. Inquiry resulted in my obtaining from an old 'Mayer' the words of two songs, called by the singers themselves 'May Songs,' though the rule and custom are that they *must* be sung before the first day of May. My chief informant, an elderly man named Job Knight, tells me that he 'went out' a May-singing for about fourteen years, but has now left it off. He says that the Mayers usually commence their singing rounds about the middle of April, though some parties start as early as the beginning of that month. The singing invariably ceases on the evening of the 30th April. Job says he can remember the custom for about thirty years, and he never heard any other than the two songs which follow. These are usually sung, he says, by five or six men, with a fiddle or flute and clarinet accompaniment. The songs are verbally as recited by Job Knight, and when I ventured to hint that one tune (the third in the third verse of the New May Song), was too long, he sang the verse, to show that all the words were deftly brought into the strain. The first song bears marks of some antiquity, both in construction and phraseology. There is its double refrain—the second and fourth lines in every stanza—which, both musically and poetically, are far superior to the others. Its quaint picture of manners, the worshipful master of the house in his chain of gold, the mistress with gold along her breast, &c; the phrases, 'house and harbour,' 'riches and store,'—all seem to point to earlier times. The last line of this song appears to convey its object and to indicate a simple superstition, that these songs were charms to draw or drive 'these cold winters away.' There are several lines in both songs, in which the

* In the hamlet of Swinton, township of Worsley, parish of Eccles.

sense, no less than the rhythm, seems to have been marred, from the songs having been handed down by oral tradition alone; but I have not ventured on any alteration. In the second, and more modern song, the refrain in the fourth line of each stanza is again the most poetical and musical of the whole. But I detain your readers too long from the ballads themselves.

OLD MAY SONG.

All in this pleasant evening, together comers
[? come are] we,

For the Summer springs so fresh, green, and gay;
We'll tell you of a blossom and buds on every tree,
Drawing near to the merry month of May.

Rise up, the master of this house, put on your chain
of gold,

For the Summer springs so fresh, green, and gay;
We hope you're not offended, [with] your house we
make so bold,

Drawing near to the merry month of May.

Rise up, the mistress of this house, with gold along
your breast.

For the Summer springs so fresh, green, and gay;
And if your body be asleep, we hope your soul's at
rest,

Drawing near to the merry month of May.

Rise up, the children of this house, all in your rich
attire,

For the Summer springs so fresh, green, and gay;
For every hair upon your head[s] shines like the
silver wire,

Drawing near to the merry month of May.

God bless this house and harbour, your riches and
your store,

For the Summer springs so fresh, green, and gay;
We hope the Lord will prosper you, both now and
evermore,

Drawing near to the merry month of May.

So now we're going to leave you, in peace and
plenty here,

For the Summer springs so fresh, green, and gay;

We shall not sing you May again until another
year,
For to draw you these cold winters away.

NEW MAY SONG.

Come listen awhile unto what we shall say,
Concerning the season, the month we call May;
For the flowers they are springing, and the birds
they do sing,
And the baziers* are sweet in the morning of May.

When the trees are in bloom, and the meadows are
green,
The sweet-smelling cowslips are plain to be seen;
The sweet ties of nature, which we plainly do see,
For the baziers are sweet in the morning of May.

All creatures are deem'd, in their station below,
Such comforts of love on each other bestow;
Our flocks they're all folded, and young lambs
sweetly do play,
And the baziers are sweet in the morning of May.

So now to conclude, with much freedom and love,
The sweetest of blessings proceeds from above;
Let us join in our song that right happy may we be,
For we'll bless with contentment in the morning of
May. †

From Job Knight I obtained the airs of both
songs, which have been arranged or harmonised
for me by a musical friend. They are as
follows:—

* The *bazier* is the name given in this part of Lancashire to the auricula, which is usually in full bloom in April. This name for it is not to be found in Gerard's *History of Plants*, or Culpepper's *British Herbal*, or in the Glossaries of Halliwell, Nares, &c. The auricula was introduced into this country from Switzerland about the year 1567. Can its Lancashire name, say *base-ear* (i.e., low ear) have any relation to the name *auricula*? (q. d. little ear).

† This last line would read better thus:
'For we're blest with content in the morning of May.'

OLD MAY SONG. I.

'All in this pleasant Evening.'

NEW MAY SONG. II.

'Come listen awhile.'

THE PASSING BELL.

There are many practices and ceremonies in use amongst us at the present day for the existence of which we are at a loss to account. The change which takes place in circumstances, as well as in the opinions of men, as time rolls on, causes us no longer to see the origin of numberless institutions which we still possess, and which we retain with respect and affection, although we no longer know their cause or their meaning, and in which we often unconsciously celebrate that of which we might not approve. Of such is the ceremony of tolling the bell at the time of death, formerly called the passing-bell, or the soul-bell, which seems to be as ancient as the first introduction of bells themselves, about the seventh century. Venerable Bede is the first who makes mention of bells, where he tells us that, at the death of St Thilda, one of the sisters of a distant monastery, as she was sleeping, thought she heard the bell which called to prayers when any of them departed this life. The custom was therefore as ancient as his days, and the reason for the institution was not, as some imagine, for no other end than to acquaint the neighbourhood that such a person was dead, but

chiefly that whoever heard the bell should put up their prayers for the soul that was departing, or *passing*.

In Bourne's *Antiquitates Vulgares* there is this passage on the subject, which goes to show that at times the custom had been disapproved:—'In a vestry-book belonging to the chapel of All Saints, in Newcastle-upon-Tyne, it is observable that the tolling of the bell is not mentioned in the parish accounts from the year 1643 till 1655, when we find it ordered to be tolled again at a vestry holden January 21st, 1655. The order stands thus:—'Whereas for some years past the collecting of the duty for bell and tolling hath been foreborne and laid aside, which hath much lessened the revenue of the church, by which, and such like means, it is brought into dilapidation, and having now taken the same into serious consideration, and fully debated the objections made by some against the same, and having had the judgment of our ministers concerning any superstition that might be in it, which being made clear, it is this day ordered, that from henceforth the church-officer appointed thereunto do collect the same, and bring the money unto the church wardens, and that those who desire to have

the use of the bells may freely have them as formerly, paying the accustomed fees!" It is certain they laid it aside because they thought it superstitious, and it is probable, if they had not wanted money, they had not seen the contrary.*

There are also some regulations belonging to the parish of Wolchurch for the fines of the ringing and tolling of bells, amongst which one item is: 'The clerke to have for tollynge of the passynge belle, for manne, womanne, or childes, if it be in the day, four-pence; if it be in the night, eight-pence for the same.'*

Of the reason for calling it the soul-bell, Bishop Hall says: 'We call them soul-bells because they signify the departure of the soul, not because they help the passage of the soul.' Whatever its origin and meaning, as it remains to us at present, it is a ceremony which accords well with our feelings upon the loss of a friend, and when we hear the tolling of the bell, whether at the hour of death or at the hour of burial, the sound is to us like the solemn expression of our grief.

APRIL 25.

St Mark, evangelist [68 ?]. St Anianus, second bishop of Alexandria [86 ?]. St Kebius of Cornwall, 4th century. St Phœbadius, bishop of Agen, after 392. St Maughold or Macallius, of Isle of Man, 6th century. St Ivo, 7th century.

St Mark's Ebr.

'Tis now, replied the village belle,
St Mark's mysterious eve,
And all that old traditions tell
I tremblingly believe;
How, when the midnight signal tolls,
Along the churchyard green,
A mournful train of sentenced souls
In winding-sheets are seen.
The ghosts of all whom death shall doom
Within the coming year,
In pale procession walk the gloom,
Amid the silence drear.'

MONTGOMERY.

In the northern parts of England, it is still believed that if a person, on the eve of St Mark's day, watch in the church porch from eleven at night till one in the morning, he will see the apparitions of all those who are to be buried in the churchyard during the ensuing year. The following illustration of this superstition is found among the Hollis manuscripts, in the Lansdowne Collection. The writer, Gervase Hollis, of Great Grimsby, in Lincolnshire, was a colonel in the service of Charles the First, and by no means one who could be termed a superstitious man, even in his own day. He professes to have received the tale from Mr Liveman Rampaine, minister of God's word at Great Grimsby, in Lincolnshire, who was household chaplain to Sir Thomas Munson, of Burton, in Lincoln, at the time of the incident.

'In the year 1634, two men (inhabitants of Burton) agreed betwixt themselves upon St Mark's eve at night to watch in the churchyard at Burton, to try whether or no (according to the ordinary belief amongst the common people) they should see the Spectra, or Phantasma of those

* Strutt's *Manners and Customs*.

persons which should die in that parish the year following. To this intent, having first performed the usual ceremonies and superstitions, late in the night, the moon shining then very bright, they repaired to the church porch, and there seated themselves, continuing there till near twelve of the clock. About which time (growing weary with expectation and partly with fear) they resolved to depart, but were held fast by a kind of insensible violence, not being able to move a foot. About midnight, upon a sudden (as if the moon had been eclipsed), they were environed with a black darkness; immediately after, a kind of light, as if it had been a resulcancy from torches. Then appears, coming towards the church porch, the minister of the place, with a book in his hand, and after him one in a winding-sheet, whom they both knew to resemble one of their neighbours. The church doors immediately fly open, and through pass the apparitions, and then the doors clap to again. Then they seem to hear a muttering, as if it were the burial-service, with a rattling of bones and noise of earth, as in the filling up of a grave. Suddenly a still silence, and immediately after the apparition of the curate again, with another of their neighbours following in a winding-sheet, and so a third, fourth, and fifth, every one attended with the same circumstances as the first. These all having passed away, there ensued a serenity of the sky, the moon shining bright, as at the first; they themselves being restored to their former liberty to walk away, which they did sufficiently affrighted. The next day they kept within doors, and met not together, being both of them exceedingly ill, by reason of the affrightment which had terrified them the night before. Then they conferred their notes, and both of them could very well remember the circumstances of every passage. Three of the apparitions they well knew to resemble three of their neighbours; but the fourth (which seemed an infant), and the fifth (like an old man), they could not conceive any resemblance of. After this they confidently reported to every one what they had done and seen; and in order designed to death those three of their neighbours, which came to pass accordingly. Shortly after their deaths, a woman in the town was delivered of a child, which died likewise. So that now there wanted but one (the old man), to accomplish their predictions, which likewise came to pass after this manner. In that winter, about mid-January, began a sharp and long frost, during the continuance of which some of Sir John Munson's friends in Cheshire, having some occasion of intercourse with him, despatched away a foot messenger (an ancient man), with letters to him. This man, travelling this bitter weather over the mountains in Derbyshire, was nearly perished with cold, yet at last he arrived at Burton with his letters, where within a day or two he died. And these men, as soon as ever they see him, said peremptorily that he was the man whose apparition they see, and that doubtless he would die before he returned, which accordingly he did.'

It may readily be presumed that this would prove a very pernicious superstition, as a malignant person, bearing an ill-will to any neighbour,

had only to say or insinuate that he had seen him forming part of the visionary procession of St Mark's Eve, in order to visit him with a serious affliction, if not with mortal disease. Of a similar tendency was a custom indulged in among cottage families on St Mark's Eve, of riddling out all the ashes on the hearth-stone over night, in the expectation of seeing impressed upon them, in the morning, the footstep of any one of the party who was to die during the ensuing year. In circles much given to superstition, great misery was sometimes created by a malicious or wanton person coming slyly into the kitchen during the night, and marking the ashes with the shoe of one of the party.

St Mark's Eve appears to have enjoyed among our simple ancestors a large share of the privileges which they assigned to All Saints' Eve (the Scottish Halloween.) In Poor Robin's Almanack for 1770, occurs this stanza :

'On St Mark's eve, at twelve o'clock,
The fair maid will watch her smock,
To find her husband in the dark,
By praying unto good St Mark.'

We presume that the practice was to hang up the smock at the fire before going to bed; the rest of the family having retired, the anxious damsel would plant herself to wait till the resemblance of him who was to be her husband should come in and turn the garment. The divination by nuts was also in vogue. A row being planted amongst the hot embers on the hearth, one from each maiden, and the name of the loved one being breathed, it was expected that if the love was in any case to be successful, the nut would jump away; if otherwise, it would go on composedly burning till all was consumed :

'If you love me, pop and fly,
If not, lie there silently.'

Our artist has made a very pretty illustration of such a ceremonial, as he has seen it practised in his youth in rural England.

St Mark's Day is marked at Alwrick by a ridiculous custom, in connexion with the admission of *freemen of the common*. The persons who are to receive this privilege march on horseback, in great ceremony, dressed in white, with their swords by their sides, to the common, headed by the Duke of Northumberland's chamberlains and bailiff. Arrived at the *Freemen's Well*, a large

dirty pool on the border of the common, they all deliberately walk into and through it, coming out on the other side begrimed with mud, and dripping all over. Then hastily changing their clothes, and having comforted themselves with a dram, they make a round of the common, return into the town, where a ceremonial reception by fantastically dressed women awaits them, and end by calling at each other's houses, and imbibing more liquor. It is alleged that this singular procedure has reference to a visit which King John

paid to Alnwick. Having been 'laired' in this pool, he punished the inhabitants for their bad roads by imposing upon them, in the charter of their common, an obligation each to subject himself, on his entry, to the same filthy ablution.

Born.—King Edward II., of England, 1284, *Carnarvon*; Oliver Cromwell, Protector of England, 1599, *Huntingdon*; Sir Mark Isambard Brunel, engineer of the Thames Tunnel, 1769.

Died.—Torquato Tasso, Italian poet, 1595, *Rome*; James Hay, Earl of Carlisle, statesman, 1636; Dr Henry Hammond, theologian, 1660; Dr John Woodward, naturalist, 1728; Samuel Wesley, the elder, 1735, *Epworth*; William Cowper, poet, 1800, *East Dereham*; Dr Patrick Colquhoun, writer on police and social improvements, 1820.

THE BIRTH OF EDWARD OF CARNARVON,

The first Prince of Wales, A. D. 1284.

Weep, noble lady, weep no more,
The woman's joy is won;
Fear not, thy time of dread is o'er,
And thou hast borne a son!

Then ceased the Queen from pain and cry,
And as she proudly smiled,
The tear stood still within her eye—
A mother saw her child!

'Now bear him to the Castle-gate!'
Thus did the King command,
There, stern and stately all, they wait,
The warriors of the land.

They met! another lord to claim,
And loud their voices rung,
'We will not brook a stranger's name,
Nor serve the Saxon tongue!

'Our King shall breathe a British birth,
And speak with native voice:—
He shall be lord of Cymryan earth,
The Chieftain of our choice!'

Then might you hear the drawbridge fall,
And echoing footsteps nigh:—
And hearken! by yon haughty wall
A low and infant cry!

'God save your Prince!' King Edward said,
'Your wayward wish is won,
Behold him! from his mother's bed,
My child! my firstborn son!

'Here in his own, his native place,
His future feet shall stand,
And rule the children of your race,
In language of the land!'

'Twas strange to see! so sternly smiled
The warriors gray and grim:—
How little thought King Edward's child
Who thus would welcome him!

Nor knew they then how proud the tone
They taught their native vales:—
The shout, whole nations lived to own,
God bless the Prince of Wales!

R. S. H.

CROMWELL'S BAPTISMAL REGISTER.

The Protector, as is well known, was born at Huntingdon, April 25, 1599, the son of Robert Cromwell, a gentleman well-connected in that county. Through the favour of an obliging correspondent, there is here presented a facsimile of the entry of his birth and baptism in the parish register.

Thus extended and translated:—'Anno Domini

Anno Domini 1599
~~(English translation of the Latin text)~~
 Olivarius filius Roberti Cromwell generosi et Elizabethæ
 uxoris ejus natus vicesimo quinto die Aprilis et
 baptizatus vicesimo nono eiusdem mensis

1599 Oliverus filius Roberti Cromwell generosi, et Elizabethæ uxoris ejus, natus vicesimo-quinto die Aprilis, et baptizatus vicesimo nono mensis. In the year of our Lord 1599, Oliver, son of Robert Cromwell, gentleman, and Elizabeth his wife, born on the 25th of April, baptized the 29th of the same month.

It will further be observed that some zealous cavalier has inserted, under the year of our Lord, the words '*England's Plague for five years,*' which have subsequently been erased.

DR HAMMOND.—NAT. CROUCH.

Dr Henry Hammond must be held as a somewhat notable figure in the history of English literature, if it be true, as is alleged of him by Hearne, that he was 'the first man in England that had copy-money, *i.e.*, a price for the copy-right of a literary work. 'He was paid such a sum of money (I know not how much) by Mr Royston, the king's printer, for his *Annotations on the New Testament.*'

One naturally feels some curiosity about a man who was the first of the long list who have written for booksellers' pay. He was one of the most noted of the many divines who lost their benefices (his was that of Penshurst, in Kent) under the Cromwellian rule. He was devoted to the monarchy, and bewailed the martyred Charles with bitter tears. His activity was thereafter given to the investigation of the literature and antiquities of the Bible, in which he had in his own age no rival. There could not be a more perfect ideal of a student. He ate little more than one meal a-day; five hours of his bed sufficed; he read in walking, and had books read to him while dressing. Finally, he could compose faster than any amanuensis could transcribe—a most serviceable quality at first sight for one who looked to be paid by the sheet. Five sheets a-day were within his range of power. It is related of him that, on two several occasions, he sat down at eleven at night, and composed a pamphlet for the press before going to rest. Dr Fell, however, who wrote his life, seems to have found that easy writing made rather hard reading, for he speaks of Hammond's compositions as incumbered with parentheses. It is also to be observed that the learned doctor did not thrive upon his assiduity in study, for he died of the stone at fifty-five.

In connexion with this article, it may be mentioned that *the first book published in England by subscription* was a polyglot Bible, prepared under the care of Dr Brian Walton, and published in six volumes in 1657. The learned editor became, at the Restoration, Bishop of Chester, but enjoyed the honour a very short time, dying November 29, 1661.

It may also be worth while to introduce to notice the first person who made any efforts in that business of *popularising literature* which now occupies so broad a space. It was unquestionably Nathaniel Crouch, a bookseller at the sign of the Bell, in the Poultry, London. He flourished in the reigns of William III. and Queen Anne, but very little of his personal history is known. With probably little education, but something of a natural gift for writing in his native language, Crouch had the sagacity to see that the works of the learned, from their form and price, were kept within a narrow circle of readers, while there was a vast multitude outside who were able and willing to read, provided that a literature suited to their means and capacities were supplied to them. He accordingly set himself to the task of transfusing the matter of large and pompous books into a series of small, cheap volumes, modestly concealing his authorship under the *nom de plume* of Robert Burton, or the initials R. B. Thus he produced a *Life of Cromwell*, a *History of Wales*, and many other treatises,* all printed on very plain paper, and sold at an

* Amongst the publications of Mr Crouch were: *Historical Rarities in London and Westminster*, 1681. *Wars in England, Scotland, and Ireland*, 1681. *Surprising Miracles of Nature and Art. Life of Sir F. Drake*, 1687. *Unfortunate Court Favourites of England*, 1706. *General History of Earthquakes*, 1736. This is the last date known, shewing that Mr Crouch's publications extended over a period of fifty-five years.

exceedingly reasonable rate. His enterprise and diligence were rewarded by large sales and considerable wealth. He must have appeared as something of a phenomenon in an age when authors were either dignified men in the church and the law, or vile Grub-streeters, whose lives were a scandal to the decent portion of society. John Dunton, a contemporary bookseller, who was pleased to write and publish an account of his own life, speaks of Crouch in such terms as betray a kind of involuntary respect. He says, 'He [Crouch] prints nothing but what is very useful and very entertaining. . . . His talent lies at *collection*. He has melted down the best of our English histories into twelve-penny books, which are filled with wonders, rarities, and curiosities. . . . Nat. Crouch is a very ingenious person, and can talk fine things on any subject. He is . . . the only man who gets an estate by writing books. He is, or ought to be, an honest man; and I believe the former, for all he gets will wear well. . . . His whole life is one continued lecture, wherein all his friends, but especially his two sons, may legibly read their duty.'

FASTERS.

Among the wonderful things believed in by our ancestors were instances of long-protracted fasts. In Rymer's *Fœdera* (vol. vi., p. 13), there is a rescript of King Edward III., having reference to a woman named Cecilia, the wife of John de Rygeway, who had been put up in Nottingham gaol for the murder of her husband, and there had remained mute and abstinent from meat and drink for forty days, as had been represented to the king on fully trustworthy testimony; for which reason, moved by piety, and for the glory of God and the Blessed Virgin, to whom the miracle was owing, his grace was pleased to grant the woman a pardon. The order bears date the 25th of April, in the 31st year of the king's reign, equivalent to A.D. 1357.

About the year 1531, one John Scott, a Teviotdale man, attracted attention in Scotland by his apparent possession of the ability to fast for many days at a time. Archbishop Spottiswood gives an account of him. 'This man,' says the historian, 'having succumbed in a plea at law, and knowing himself unable to pay that wherein he was adjudged, took sanctuary in the abbey of Holyrood-house, where, out of a deep displeasure, he abstained from all meat and drink the space of thirty or forty days together. Public rumour bringing this about, the king would have it put to trial, and to that effect, shutting him up in a private room within the Castle of Edinburgh, whereunto no man had access, he caused a little bread and water to be set by him, which he was found not to have tasted in the space of thirty-two days. This proof given of his abstinence, he was dimitted, and coming forth into the street half naked, made a speech to the people that flocked about him, wherein he professed to do all this by the help of the Blessed Virgin, and that he could fast as long as he pleased. Many did take it for a miracle, esteeming him a person of singular holiness; others thought him to be frantic and mad; so as in a short time he came

to be neglected, and thereupon leaving the country, went to Rome, where he gave the like proof to Pope Clement the Seventh.

'From Rome he came to Venice, apparelled with holy vestures, such as the priests use when they say mass, and carrying in his hand a testimonial of his abstinence under the Pope's seal. He gave there the like proof, and was allowed some fifty ducats to make his expense towards the Holy Sepulchre, which he pretended to visit. This voyage he performed, and then returned home, bringing with him some palm-tree leaves and a scripful of stones, which he said were a part of the pillar to which our Saviour was tied when he was scourged; and coming by London, went up into the pulpit in Paul's churchyard, where he cast forth many speeches against the divorce of King Henry from Katherine his queen, inveighing bitterly against him for his defection from the Roman see, and thereupon was thrust into prison, in which he continued fifty days fasting.'

John Scott, the faster, is alluded to by his relative Scott of Satchells, an old soldier of the German wars, who, about 1688, drew up a strange rhyming chronicle of the genealogies of the Scotts and other Border families, which he published, and of which a new edition appeared at Hawick in 1784. The author plainly tells that he was

'———ane that can write name
But just the letters of his name,'

and accordingly his verses are far from being either elegant in form or clear in meaning. Yet we can gather from him that the faster was John Scott of Borthwick, son of Walter Scott, of the family of Buccleuch, since ennobled.

Hearne states (*Leland's Itinerary*, vi., preface) that the story of John Scott, the fasting-man, was investigated with great care by Signor Albergati, of Bononia, and set down by him in a paper which is preserved, and of which he prints a copy. The learned signor affirms that he himself took strict means of testing the verity of Scott's fasting power during a space of eleven days in his own house, and no fallacy was detected. He put the man into clothes of his own, locked him up, kept the key himself, and did not allow meat or drink to come near him. He ends the document, which is dated the 1st of September 1532, with a solemn protestation of its truthfulness.

The industrious Dr Robert Plot quotes these two fasting cases in his *Natural History of Staffordshire*, and adds a third, of a somewhat different nature. Mary Woughton, of Wigginton, in Staffordshire, had been accustomed, he tells us, from her cradle to live upon an amount of food and liquor so much below what is customary, that she had become a local wonder. She does not eat in a day, he says, 'a piece above the size of half-a-crown in bread and butter; or, if meat, not above the quantity of a pigeon's egg at most. She drinks neither wine, ale, or beer, but only water or milk, or both mixed, and of either of these scarce a spoonful in a day. And yet she is a maiden of a fresh complexion, and healthy enough, very piously disposed, of the Church of

England, and therefore the less likely to put a trick upon the world; besides, 'tis very well known to many worthy persons with whom she has lived, that any greater quantities, or different liquors, have always made her sick.*

In 1751, a young French girl, Christina Michelot, was attacked with a fever, which was followed by many distressing consequences, one of which was an inability or disinclination to take food. Water was her constant beverage, unaccompanied by any solid food whatever. From November in the year above named, until July 1755, this state of things continued. She was about eleven years old when the attack commenced; and M. Lardillon, a physician who attended her three years afterwards, expressed a belief that she would yet surmount her strange malady, and eat again. This opinion was borne out by the result. Her case attracted much attention among the medical men of France, who tested its credibility by various observations. In 1762, Ann Walsh, of Harrowgate, a girl of twelve years old, suddenly lost her appetite. For eighteen months her daily sustenance consisted solely of one-third of a pint of wine and water. Her good looks and general state of health suffered little; and she gradually recovered her normal condition. About the same time a boy was living at Chateauroux, in France, who was not known to have taken any kind of food for a whole year; he had strength enough to assist his father's labourers in field work, but he became very thin and cadaverous. The accounts recorded lead to the conclusion that his inclination for food returned when the malady was removed which had brought on the abstinence. The journals of 1766 noticed with wonder the case of a gentleman at Clapham, who for twenty-five years had tasted no butcher's meat, and no beverage but water; but the professed vegetarians can doubtless adduce many instances analogous to this. In 1771, a man at Stamford, for a wager of ten pounds, kept himself for fifty-one days without any kind of solid food or milk; he won his wager, but probably inflicted more than ten pounds worth of damage upon his constitution. In 1772, occurred the case which has become known as Pennant's fasting woman of Ross-shire, Pennant having described it in his *Tour*. Katherine M'Leod, aged thirty-five, was attacked with fever, which occasioned partial blindness, and almost total inability to take food. Her parents sometimes put a little into her mouth; but for a year and three-quarters they had no evidence that either food or drink passed down her throat. Once, now and then, by a forcible opening of the mouth and depression of the tongue, they sought to compel the passage of food; but a suffocating constriction led them to desist from their course. When Pennant saw her, she was in a miserable state of body and mind. In 1774, attention was drawn to the case of Monica Mutcheteria, a Swabian woman, about thirty-seven years of age, who had been attacked by fever and nervous maladies several years before. For two years she could take no other sustenance than a little curds and whey and water; for another year, she took (according to

* Plot's *Staffordshire*, p. 287.

the narrative) not a single atom of food or drop of liquid, and she did not sleep during the three years. The difficulty in all such narratives is not to believe the main story, but to believe that the truth goes so far as the story asserts. Monica, it is said, swallowed a bit of the consecrated wafer once a month, when the Eucharist was administered to her; if this were so, other small efforts at swallowing might have been practicable. In 1786, Dr Willan, an eminent physician whose labours have been noticed by Dr Marshall Hall, was called in to attend a monomaniac who had been sixty-one days without food. The physician adopted a course which threw a little sustenance into the system, and kept the man alive for seventeen days longer; but there seems to have been no doubt entertained that he really fasted for the space of time named.

One of the most curious cases of the kind was the exploit of Ann Moore, the 'Fasting woman of Tutbury,' who, in and about the year 1809, astonished the public by her assertion, or the assertion made by others concerning her, of a power to remain without food. The exposure, while it showed the possibility of really wonderful things in this way, equally showed how possible is deception in such matters. Several gentlemen in the neighbourhood, suspecting that Ann Moore's performances were not quite genuine, formed a plan by which they should become cognizant of any attempt to give this woman food or drink. She held on resolutely till the *ninth* day; when, worn out with debility and emaciation, she yielded, partook of food like other persons, and signed the following confession—'I, Ann Moore, of Tutbury, humbly asking pardon of all persons whom I have attempted to deceive and impose upon, and, above all, with the most unfeigned sorrow and contrition imploring the Divine mercy and forgiveness of that God whom I have so greatly offended, do most solemnly declare that I have occasionally taken sustenance during the last six years.' Of course, the detection of one imposture does not condemn other cases, for simulation of truth is a course open to every one. It gives us, however, to suspect that if equal care had been taken in other cases, similar detections might have followed. The question of the possibility must remain unresolved. We know that the need of nutrition depends on the fact of waste. If, in certain abnormal circumstances, waste be interrupted, the need of nutrition must be interrupted also, and a fasting woman like Cecilia Ridgway, or a fasting man like John Scott, will become a possibility of nature.

THINGS BY THEIR RIGHT NAMES.

The sportsmen of the middle ages invented a peculiar kind of language, with which it was necessary to be acquainted when speaking of things belonging to the chase. Different kinds of beasts, when going together in companies, were distinguished each by their own particular epithet, which was in some way descriptive of the nature or habits of the animal to which it was applied; and to have made a wrong use of one of these would have subjected him who made the mistake to undisguised ridicule; indeed, such is still the case, and to use the word *dog*, when sporting language would have that animal called a *hound*,

would be an offence which the ears of a sportsman would not tolerate, and of which it would be no palliation to argue that, though every dog is not a hound, still, every hound is a *dog*.

Of the epithets applied to companies of beasts in past times several are in use at the present day, though the greater part have passed away from us; or if they have not entirely done so, they are not all universally employed, though perhaps every one of them might still be found in existence if sought in the different counties of England. Of those which we daily apply we are at a loss to account for the origin in many cases, though no doubt when first employed the application seemed natural and descriptive enough; but as words are continually undergoing change in their spelling, or are subject to become obsolete or repudiated because *old-fashioned*, we come, in time, no longer to recognise their source.

The following list* will show what were those invented in the middle ages and what we retain. There was said to be a *pride* of lions; a *lepe* of leopards; a *herde* of harts, of bucks, and of all sorts of deer; a *bevy* of roes; a *sloth* of bears; a *singular* of boars; a *souder* of wild swine; a *doyft* of tame swine; a *route* of wolves; a *harras* of horses; a *rag* of colts; a *stud* of mares; a *pace* of asses; a *baren* of mules; a *team* of oxen; a *drove* of kine; a *flock* of sheep; a *tribe* of goats; a *skulk* of foxes; a *cete* of badgers; a *richesse* of martins; a *fesyne* of ferrets; a *huske*, or *down* of hares; a *nest* of rabbits; a *clowder* of cats, and a *kindle* of young cats; a *shrewdness* of apes, and a *labour* of moles. Also, of animals when they retired to rest, a hart was said to be *harbored*, a buck *lodged*, a roebuck *bedded*, a hare *formed*, a rabbit *set*. Two greyhounds were called a *brace*, and three a *leash*, but two harriers or spauiels were called a *couple*. We have also a *mute* of hounds for a number, a *kenel* of raches, a *litter* of whelps, and a *cowardice* of curs.

This kind of descriptive phraseology was not confined to birds and beasts and other of the brute creation, but extended to the human species and their various natures, propensities, and callings, as shown in the list below, in which the meaning of the epithets is more obvious than in many of the foregoing.

Here we have: a *state* of princes; a *skulk* of friars; a *skulk* of thieves; an *observance* of hermits; a *subtiltie* of sergeants; a *safeguard* of porters; a *stalk* of foresters; a *blast* of hunters; a *draught* of butlers; a *temperance* of cooks; a *melody* of harpers; a *poverty* of pipers; a *drunkenship* of cobblers; a *disguising* of tailors; a *wandering* of tinkers; a *fighting* of beggars; a *ragful* (a netful) of knaves; a *blush* of boys; a *bevy* of ladies; a *nonpatience* of wives; a *gagle* of women and a *gagle* of geese. As applied to inanimate things, there was a *cluster* of grapes, a *cluster* of nuts, a *caste* of bread, &c.

The cluster of grapes and of nuts we are well acquainted with, but the *caste* of bread is quite gone, probably because bread is no longer baked in the same way as formerly, for by the word *caste* is meant that whole quantity of bread which was baked in a tin with divisious in it, or in a set of moulds all run together, and in that way the word is used as of something cast in a mould, as we say of metal. No doubt there was as much reason in all the terms when they were invented, and, as to the use of them, we are as rigorous as ever where we have them at all. Who would dare to call two horses anything but a *pair* when they are harnessed to a carriage, though they may be *two* in any other situation, and although four horses are *four*, let them be where they will. Then, two pheasants are a *brace*, two fowls are a *pair*, and two ducks are a *couple*, and so we might go on with an endless number.

* Strutt's *Sports and Pastimes*.

APRIL 26.

Saints Cletius and Marcellinus, popes and martyrs, 1st and 3rd centuries. St Riquier, or Ricardus, French anchorite, about 645. St Paschasius Radbert, abbot of Corwei, in Saxony, about 865.

Born.—Thomas Reid (moral philosophy), 1710, *Strachan, Kincardineshire*; David Hume, philosopher and historian, 1711, *Edinburgh*; Johann Ludwig Uhland, German poet, 1787.

Died.—Ferdinand Magellan, Portuguese navigator, killed, 1521, *Isle of Matan*; John, Lord Somers, Lord High Chancellor of England, 1697-1700, statesman, 1716, *North Mims*; Jeremy Collier, writer against the stage, 1726, *London*; Sir Eyre Coote, military commander, 1783, *Madras*; Carsten Niebuhr, traveller, 1815, *Meldorf in Holstein*; Henry Cockburn, author of 'Memorials of Edinburgh,' &c., 1854.

DAVID HUME, HIS NATIVITY AND EARLY CIRCUMSTANCES.

The exact or parochial nativity of David Hume has never been stated. It was the Tron church parish in Edinburgh, as appears from a memorandum in his father's handwriting among the family papers. The father was a small laird on the Whitadder, in Berwickshire, within sight of English ground, and the family mansion, where David must have spent many of his early years, was a plain small house, as here represented, taking its name of Ninewells from a remarkable spring, which breaks out in the

steep bank, descending from the front of the house to the river.

The sketch of Ninewells House here given—the more curious, as the house has long since been superseded by a neat modern mansion—is from *Drummond's History of Noble British Families*. The eccentric author of the work says, underneath: 'It is a favourable specimen of the best Scotch lairds' houses, by the possession of which they think themselves entitled to modify their family coats, and establish coats of their own.'

A remarkable circumstance in the early history of the philosopher has been little regarded. Though of good descent, and the nephew of a Scotch peer, he was compelled, by the narrow circumstances of the family, to attempt a mercantile career at Bristol when a little over twenty years of age. We know nothing of what he did, with whom he was placed, or how he chiefly spent his time while aiming at a mercantile life in the city of the west; but we are made aware by himself that the scene was an alien one. He seems to have looked back with some degree of bitterness to his sojourn in Bristol, if we may judge from a little quiet sarcasm at the place which he utters in his *History of England*. He is there describing James Naylor, the quaker's, entry into the city at the time of the civil war, in imitation of that of Christ into Jerusalem. 'He was mounted,' says Hume, 'on a horse;' then adds, 'I suppose from the difficulty in that place of *finding an ass*.'

NINEWELLS HOUSE.

Doubtless, David believed there could have been no difficulty in finding an ass in Bristol.

It is a curious fact, sometimes adverted to in Edinburgh, but which we cannot authenticate, that in the room in which David Hume died, the Bible Society of Edinburgh was many years afterwards constituted, and held its first meeting.

SUNDAY SPORTS AUTHORIZED BY QUEEN
ELIZABETH.

The antiquary Hearne, as an illustration of the views of the early reformed church of England regarding amusements for the people on Sundays, brings forward the following license issued by Elizabeth on the 26th of April, in the eleventh year of her reign (1569).* 'To all mayors, sheriffs, constables, and other head officers within the county of Middlesex. After our hearty commendations, whereas we are informed that one John Seconton, poulter, dwelling within the parish of St Clement's Danes, being a poor man, having four small children, and fallen into decay, is licensed to have and use some plays and games at or upon several Sundays, for his better relief, comfort, and sustentation, within the county of Middlesex, to commence and begin at and from the 22nd of May next coming, after the date hereof, and not to remain in one place not above three several Sundays; and we considering that great resort of people is like to come thereunto, we will and require of you, as well for good order as also for the preservation of the Queen's Majesty's peace, that you take with you four or five of the discreet and substantial men within your office or liberties where the games shall be put in practice, then and there to foresee and do your endeavour to your best in that behalf, during the continuance of the games or plays, which games are hereafter severally mentioned; that is to say, the shooting with the standard, the shooting with the broad arrow, the shooting at twelve score prick, the shooting at the Turk, the leaping for men, the running for men, the wrestling, the throwing of the sledge, and the pitching of the bar, with all such other games as have at any time heretofore or now be licensed, used, or played. Given the 26th day of April, in the eleventh year of the Queen's Majesty's reign.†

In connexion with the above, it may be worth while to advert to the fact that, on the 27th September, 1631, being Sunday, the play of the *Midsummer Night's Dream* was privately performed in the Bishop of Lincoln's house in London. The Puritans had influence to get this affair inquired into and visited with punishment, and there is something rather humorous in what was decreed to the performer of Bottom the weaver: 'We do order that Mr. Wilson, as he was a special plotter and contriver of this business, and did in such a brutish manner act the same with an ass's head, shall upon Tuesday next, from six o'clock in the morning till six o'clock at night, sit in the porter's lodge at my lord bishop's house, with his feet in the stocks,

* The spelling in our transcript is modernized.

† Hearne's edition of Camden, i. xxviii.

and attired with an ass's head, and a bottle of hay before him, and this subscription on his breast:

' Good people, I have played the beast,
And brought ill things to pass;
I was a man, but thus have made,
Myself a silly ass.'*

APRIL 27.

St Anthimus, bishop, and other martyrs at Nicomedia, 303. St Anastasius, pope and confessor, 401. St Zita, virgin, of Lucca, 1272.

Born.—Edward Gibbon, historian, 1737, *Putney*; Mary Woolstonecroft, (Mrs Godwin), 1753; Maria Christina, consort of Ferdinand VII., of Spain, 1806, *Naples*.

Died.—Philip the Bold, Duke of Burgundy, 1404, *Hall in Hainault*; John James Ankerström, regicide, executed 1792, *Stockholm*; Sir William Jones, poet and scholar, 1794, *Calcutta*; James Bruce, traveller in Africa, 1794, *Kinnaird, Stirlingshire*; Thomas Stothard, R.A., 1834, *London*.

BRUCE THE TRAVELLER.

Amongst the noted men of the eighteenth century, Bruce stands out very clearly distinguished to us by his dignified energy and perseverance as a traveller in barbarous lands. Of imposing person (six feet four), of gentlemanly birth and position, accomplished in mind, possessed of indomitable courage, self-reliance, and sagacity, powerful, calm, taciturn, he was quite the kind of man to press his way through the deserts of Abyssinia, Nubia, and Ethiopia, and bring back accounts of them. It is said that, after all, the river to whose head he attained was not the proper Nile; no matter, it was something pretty nearly, if not fully equivalent. He was altogether twelve years absent from his country, engaged in these remarkable peregrinations.

When at length, after great labour and care, he published his travels in five quartos, with an additional volume of illustrations, a torrent of sceptical derision in a great measure drowned the voice of judicious praise which was their due. We must say the public appears to us to have shown remarkable narrow-mindedness and ignorance on this occasion. How foolish, for instance, to object to the story of the people under an obligation to live on lion's flesh for the purpose of keeping down the breed of that race, that the converse case, the devouring of man by the lion, had alone been heretofore known. There was nothing physically impossible in man's eating lion's flesh. If it were practicable to save the country from a dangerous animal by putting a premium upon its destruction, why should not the plan have been resorted to? Equally absurd was it to deny that there could be a people so barbarous as to cut steaks from the living animal. Why, in the northern parts of Mr Bruce's own country, it was at that very time customary for the people to bleed their cattle, for the sake of a little sustenance to themselves, in times of dearth. It was creditable to

* Halliwell's *Shakspeare*, v. 12.

George III., that he always stood up for the veracity of Bruce, while men who thought themselves better judges, denounced him as a fabulist.

The end of Bruce was striking. While enjoying the evening of his laborious life in his mansion of Kinnaird, on the Carse of Falkirk, he had occasion one night to hand a lady to her carriage. His foot slipped on the stair, and he fell on his head. Taken up speechless, he expired that night, at the age of sixty-four.

A PERSEVERING SLEEPER.

April 27th 1546, 'being Tuesday in Easter week, William Foxley, pot-maker for the Mint in the Tower of London, fell asleep, and so continued sleeping, and could not be wakened with pinching, cramping, or otherwise burning whatsoever, till the first day of term, which was fourteen days and fifteen nights. The cause of his thus sleeping could not be known, although the same were diligently searched after by the king's physicians and other learned men: yea, and the king himself examined the said William Foxley, who was in all points found at his waking to be as if he had slept but one night; and he lived more than forty years after in the Tower.'—*Stow*.

Instances of abnormal sleepiness are not uncommon. In the middle of the last century a woman of twenty-seven years of age, residing near Tholouse, had fits of sleep, each lasting from three to thirteen days, throughout a space of half a year. About the same time a girl of nineteen years, residing at Newcastle, slept fourteen weeks without waking, notwithstanding many cruel tests to which she was subjected. Her awaking was a process which lasted three days, after which she seemed in good health, but complained of faintness. Of cases of this nature on record, an over proportion refer to females.

APRIL 28.

St Vitalis, martyr, about 62. Saints Didymus and Theodore, martyrs, 304. St Pollio and others, martyrs in Pannonia, 304. St Pannicius, bishop of Pruse, in Bithynia, martyr. St Cronan, abbot of Roscrea, Ireland, about 640.

Born.—Charles Cotton, poet, 1630, *Ovingden*; Anthony, seventh Earl of Shaftesbury, philanthropist, statesman, 1801.

Died.—Thomas Betterton, actor, 1710, *London*; Count Struensee, executed, 1772, *Copenhagen*; Baron Denon, artist, learned traveller, 1825, *Paris*; Sir Charles Bell, anatomist and surgeon, 1842, *Hallow Park, near Worcester*; Sir Edward Codrington, naval commander, 1851, *London*; Gilbert A. à Becket, comic prose writer, 1856.

CHARLES COTTON.

High on the roll of England's minor poets must be placed the well-known name of 'Charles Cotton, of Beresford in the Peak, Esquire.' He was descended from an honourable Hampshire family; his father, also named Charles, was a man of parts and accomplishments, and in his youth a friend and fellow-student of Mr Hyde, subsequently Lord Chancellor Clarendon. The elder Cotton, marrying an heiress of the Beresford family in Derbyshire, settled on an estate of that name near the Peak, and on the romantic banks of the river Dove. The younger, Charles,

studied at Cambridge, from whence he returned to his father's house, and, seemingly not being intended for any profession, passed the early part of his life in poetical studies, and the society of the principal literary men of the day. In 1656, being then in his twenty-sixth year, he married a distant relative of his own, the daughter of Sir Thomas Hutchinson; and this marriage appears from the husband's verses to have been a very happy one. He soon after succeeded to the paternal acres, but found them almost inundated with debt; mainly the consequence, it appears, of the imprudent living in which his father had long indulged. The poet was often a fugitive from his creditors: a cave is shown in Dovedale which proved a Patmos to him in some of his direst extremities.

It was not till after the Restoration that he began to publish the productions of his muse. There is a class of his writings very coarse and profane, which were extremely popular in their day, but from which we gladly avert our eyes, in order to feast on his serious and sentimental effusions, and contemplate him as a votary of the most gentle of sports, that of the angle. Coleridge says, 'There are not a few of his poems replete with every excellence of thought, image, and passion, which we expect or desire in the poetry of the minor muse.' The long friendship and unfeigned esteem of such a man as Izaak Walton is a strong evidence of Cotton's moral worth.

An ardent angler from youth, being brought up on the banks of one of the finest trout streams in England, we need not be surprised to find Cotton intimately acquainted with his contemporary brother-angler, author, and poet, Izaak Walton. How the acquaintance commenced is easier to be imagined than discovered now; but it is certain that they were united in the strictest ties of friendship, and that Walton frequently visited Beresford Hall, where Cotton had erected a fishing house, on a stone in the front of which was inscribed their incorporated initials, with the motto, *Sacrum Piscatoribus*.

A pleasant primitive practice then prevailed of adepts in various arts adopting their most promising disciples as *sons* in their special pursuits. Thus Ben Jonson had a round dozen of poetical sons; Elias Ashmole was the alchemical son of one Backhouse, thereby inheriting his adopted father's most recondite secrets; and Cotton became the angling son of his friend Walton. But though Walton was master of his art in the slow-running, soil-coloured, weed-fringed rivers of the south, there was much that Cotton could teach his angling parent with respect to fly-fishing in the rapid sparkling streams of the north country. So, when the venerable Walton was preparing the fifth edition of his *Compleat Angler*, he solicited his son Cotton to write a second part, containing *Instructions how to Angle for a Trout or Grayling in a Clear Stream*; and this second part, published in 1676, has ever since formed one book with the first. As is well known, Cotton's addition is written, like the first part, in the form of a dialogue, and though it may, in some respects, be inferior to its forerunner, yet in others it probably possesses more interest, from its descrip-

tion of wild romantic scenery, and its representation of Cotton himself, as a well-bred country gentleman of his day: courteous, urbane, and hospitable, a scholar without a shadow of pedantry; in short, a cavalier of the old school, as superior to the fox-hunting squire of the eighteenth century as can readily be conceived. As there are now no traces of Walton on his favourite fishing-river, the Lea, Dovedale has become the Mecca of the angler, as well as a place of pilgrimage for all lovers of pure English literature, honest simplicity of mind, unaffected piety, and the beautiful in nature.

It is more than thirty years ago since the writer made his first visit to Dovedale, and easily identified every point in the scenery as described by Cotton. Beresford Hall was then a farm-house; the semi-sacred Walton chamber

WALTON CHAMBER.

a store-room for the produce of the soil; and the world-renowned fishing-house in a sorrowful state of dilapidation. The estate has since then been purchased by Viscount Beresford, who, by a very slight expenditure of money, with exercise of good taste, has restored everything as nearly as possible to the same state as when Cotton lived. Mr Anderdon, the most enthusiastic of Walton's admirers, who seems to have caught the good old angler's best style of composition, thus describes the Walton chamber as it now is.

The scene is Beresford Hall, the time during Cotton's life, who is supposed to be from home. The Angler and Painter are travellers, guided by the host of the inn at the neighbouring village of Alstonefields. The servant is showing the Hall.

'*Servant.*—We have a chamber that my master calls Mr Walton's own chamber.

'*Angler.*—Indeed! I must tell you I profess myself to be a scholar of his, and we call him the father of anglers; may we therefore have permission to see that apartment?

'*Servant.*—With pleasure, sir.—Sir, here is the chamber I told you of.

'*Painter.*—I declare, a goodly apartment, and his bed with handsome coverlid and hangings; and I observe three angels' heads stamped on the ceiling in relief.

'*Angler.*—A fit emblem of the peaceful slumbers of the innocent; and so, I am sure, are Mr Walton's. And whose picture is that over the mantel?

'*Servant.*—That is my master, sir. It was painted at court, and brought last summer from London.

'*Painter.*—This portraiture is so delicately limned, and the colours so admirable, it could only be of a master's hand.

'*Angler.*—Beseech you, brother, may not this chamber deserve to be highly esteemed of all anglers? Think—here it was Viator had his lodgings when Mr Cotton brought him to his house.

'*Host.*—There is the very bed where he was promised "sheets laid up in lavender;" and you may be sure he had them.

'*Painter.*—And see the panels of oak wood, in figured patterns, over the chimney.

'*Angler.*—It is a rich work, and falls in with the rest of the chamber; look at this fine cabinet chiselled in oak, and inlaid with painting.

'*Host.*—And here, again, the latticed windows, set with the arms of Beresford and Cotton.*

Cotton's attached wife died about 1670, and he some time after married the Countess Dowager of Ardglass, who had a jointure of fifteen hundred pounds per annum. This second marriage relieved his more pressing necessities; but at his death, which took place in 1687, the administration of his estate was granted to his creditors, his wife and children renouncing their claims.

IMPIOUS CLUBS.

An order in council appeared, April 28, 1721, denouncing certain scandalous societies which were believed to hold meetings for the purpose of ridiculing religion. A bill was soon after brought forward in the House of Peers for the suppression of blasphemy, which, however, was not allowed to pass, some of the lords professing to dread it as an introduction to persecution. It appears that this was a time of extraordinary profligacy, very much in consequence of the large windfalls which some had acquired in stock-jobbing and extravagant speculation. Men had waxed fat, and were come to be unmindful of their position on earth, as the creatures of a superior power. They were unbounded in indulgence, and an outrageous disposition to mock at all solemn things followed.

Hence arose at this time fraternities of free-living gentlemen, popularly recognised then, and remembered since, as Hell-fire clubs. Centring in London, they had affiliated branches at Edinburgh and at Dublin, among which the metropolitan secretary and other functionaries would occasionally perambulate, in order to impart to them, as far as wanting, the proper spirit. Grisly nicknames, as Pluto, the Old Dragon, the King of Tartarus, Lady Envy, Lady Gomorrah (for there were female members too), prevailed among them. Their toasts were blasphemous beyond modern belief. It seemed an ambition with these misguided persons how they should most express their contempt for everything which ordinary men held sacred. Sulphurous flames and fumes were raised at their meetings to give them a literal resemblance to the infernal regions.

* *The River Dove: with some Quiet Thoughts on the happy Practice of Angling, near the Seat of Mr Charles Cotton, at Beresford Hall, in Staffordshire.* We make no apology for so long an extract from this exquisite work, which being originally printed for private circulation, is very little known, even to those most competent to appreciate its numerous beauties.

Quiet, sober-living people heard of the proceedings of the Hell-fire clubs with the utmost horror, and it is not wonderful that strange stories came into circulation regarding them. It was said that now and then a distinguished member would die immediately after drinking an unusually horrible toast. Such an occurrence might well take place, not necessarily from any supernatural intervention, but from the moral strain required for the act, and possibly the sudden revulsion of spirits under the pain of remorse.

In Ireland, before the days of Father Mathew, there used to be a favourite beverage termed *scaltheen*, made by brewing whisky and butter together. Few could concoct it properly, for if the whisky and butter were burned too much or too little, the compound had a harsh or burnt taste, very disagreeable, and totally different from the soft, creamy flavour required. Such being the case, a good *scaltheen*-maker was a man of considerable repute and request in the district he inhabited. Early in the present century there lived in a northern Irish town a very respectable tradesman, noted for his abilities in making *scaltheen*. He had learned the art in his youth, he used to say, from an old man, who had learned it in his youth from another old man, who had been *scaltheen*-maker in ordinary to what we may here term, for propriety's sake, the H. F. club in Dublin. With the art thus handed down, there came many traditional stories of the H. F.'s, which the writer has heard from the noted *scaltheen*-maker's lips. How, for instance, they drank burning *scaltheen*, standing in impious bravado before blazing fires, till the marrow melting in their wicked bones, they fell down dead upon the floor. How there was an unaccountable, but unmistakable smell of brimstone at their wakes; and how the very horses evinced a reluctance to draw the hearses containing their wretched bodies to the grave. Strange stories, too, are related of a certain large black cat belonging to the club. It was always served first at dinner, and a word lightly spoken of it was considered a deadly insult, only to be washed out by the blood of the offender. This cat, however, as the story goes, led to the ultimate dissolution of the club, in a rather singular manner. As a rule, from their gross personal insults to clergymen, no member of the sacred profession would enter the club-room. But a country curate, happening to be in Dublin, boldly declared that if the H. F.'s asked him to dinner, he would consider it his duty to go. Being taken at his word, he was invited, and went accordingly. In spite of a torrent of execrations, he said grace, and on seeing the cat served first, asked the president the reason of such an unusual proceeding. The carver drily replied that he had been taught to respect age, and he believed the cat to be the oldest individual in company. The curate said he believed so, too, for it was not a cat but an imp of darkness. For this insult, the club determined to put the clergyman to instant death, but, by earnest entreaty, allowed him five minutes to read one prayer, apparently to the great disgust of the cat, who expressed his indignation by yelling and growling in a terrific

manner. Instead of a prayer, however, the wily curate read an exorcism, which caused the cat to assume its proper form of a fiend, and fly off, carrying the roof of the club-house with it. The terrified members then, listening to the clergyman's exhortations, dissolved the club, and the king, hearing of the affair, rewarded the curate with a bishopric.

Other stories equally absurd, but not quite so fit for publication, are still circulated in Ireland. It is said that in the H. F. clubs blasphemous burlesques of the most sacred events were frequently performed; and there is a very general tradition, that a person was accidentally killed by a lance during a mocking representation of the crucifixion. A distinguished Irish antiquary has very ingeniously attempted to account for these stories, by supposing that traditional accounts of the ancient mysteries, miracle plays, and ecclesiastical shows, once popular in Ireland, have been mixed up with traditions of the H. F. clubs; the religious character of the former having been forgotten, and their traditions merged into the alleged profane orgies of the latter. But, more probably, the recitals in question are merely imaginations arising from the extreme sensation which the H. F. system excited in the popular mind.

CAPTAIN MOLLOY.

On the 28th of April 1795, a naval court-martial, which had created considerable excitement, and lasted for sixteen days, came to a conclusion. The officer tried was Captain Anthony James Pye Molloy, of His Majesty's ship *Cæsar*; and the charge brought against him was, that he did not bring his ship into action, and exert himself to the utmost of his power, in the memorable battle of the 1st of June 1794. The charge in effect was the disgraceful one of cowardice; yet Molloy had frequently proved himself to be a brave sailor. The court decided that the charge had been made good; but, 'having found that on many previous occasions Captain Molloy's courage had been unimpeachable,' he was simply sentenced to be dismissed his ship, instead of the severe penalty of death.

A very curious story is told to account for this example of the 'fears of the brave.' It is said that Molloy had behaved dishonourably to a young lady to whom he was betrothed. The friends of the lady wished to bring an action of breach of promise against the inconstant captain, but she declined doing so, saying that God would punish him. Some time afterwards, they accidentally met in a public room at Bath. She steadily confronted him, while he, drawing back, mumbled some incoherent apology. The lady said, 'Captain Molloy, you are a bad man. I wish you the greatest curse that can befall a British officer. When the day of battle comes, may your false heart fail you!' His subsequent conduct and irremediable disgrace formed the fulfilment of her wish.

A TRAVELLED GOAT.

On the 28th April 1772, there died at Mile End a goat that had twice circumnavigated the globe; first, in the discovery ship *Dolphin*, under Captain

Wallis; and secondly, in the renowned *Endeavour*, under Captain Cook. The lords of the Admiralty had, just previous to her death, signed a warrant, admitting her to the privileges of an in-pensioner of Greenwich Hospital, a boon she did not live to enjoy. On her neck she had for some time worn a silver collar, on which was engraved the following distich, composed by Dr Johnson.

'Perpetui ambita bis terra præmia lactis,
Hac habet, altrici capra secunda Jovis.'

APRIL 29.

St Fiachna of Ireland, 7th century. St Hugh, abbot of Cluni, 1109; St Robert, abbot of Molesme, 1110. St Peter, martyr, 1252.

Born.—King Edward IV. of England, 1441 (?) *Rouen*; Nicolas Vansittart, Lord Bexley, English statesman, 1766.

Died.—John Cleveland, poet, 1659, *St Michael's, College Hill*; Michael Ruyter, Dutch admiral, 1676, *Syracuse*; Abbé Charles de St Pierre, philanthropist, 1743, *Paris*.

A BRACE OF CAVALIER POETS.

John Cleveland, the noted loyalist poet during the reign of Charles the First and the Commonwealth, was a tutor and fellow of St John's College, Cambridge. His first appearance in political strife was the determined opposition he organized and maintained against the return of Oliver Cromwell, then a comparatively obscure candidate in the Puritan interest, as member of Parliament for Cambridge. Cromwell's stronger genius prevailing, he gained the election by one vote; upon which Cleveland, with the combined foresight of poet and prophet, exclaimed that a single vote had ruined the church and government of England. On the breaking out of the civil war, Cleveland joined the king at Oxford, and greatly contributed to raise the spirits of the cavaliers by his satires on the opposite party. After the ruin of the royal cause, he led a precarious fugitive life for several years, till, in 1655, he was arrested, as 'one of great abilities, averse, and dangerous to the Commonwealth.' Cleveland then wrote a petition to the Protector, in which, though he adroitly employed the most effective arguments to obtain his release, he did not abate one jot of his principles as a royalist. He appeals to Cromwell's magnanimity as a conquerer, saying:—'Methinks, I hear your former achievements interceding with you not to sully your glories with trampling on the prostrate, nor clog the wheel of your chariot with so degenerate a triumph. The most renowned heroes have ever with such tenderness cherished their captives, that their swords did but cut out work for their courtesies.*' He thus continues:—'I cannot conceit that my fidelity to my prince should taint me in your opinion; I should rather expect it would recommend me to your favour.

* This idea was paraphrased in *Hudibras*,—

'The ancient heroes were illust'rous
For being benign, and not blust'rous
Against a vanquished foe: their swords
Were sharp and trenchant, not their words,
And did in fight but cut work out
T' employ their courtesies about.'

My Lord, you see my crimes; as to my defence, you bear it about you. I shall plead nothing in my justification but your Highness' clemency, which, as it is the constant inmate of a valiant breast, if you be graciously pleased to extend it to your suppliant, in taking me out of withering durance, your Highness will find that mercy will establish you more than power, though all the days of your life were as pregnant with victories as your twice auspicious third of September.'

The transaction was highly honourable to both parties. Cromwell at once granted full liberty to the spirited petitioner; though, personally, he had much to forgive, as is clearly evinced by Cleveland's

DEFINITION OF A PROTECTOR.

'What's a Protector? He's a stately thing,
That apes it in the nonage of a king;
A tragic actor—Cæsar in a clown,
He's a brass farthing stamped with a crown;
A bladder blown, with other breaths puffed full;
Not the Perillus, but Perillus' bull;
Æsop's proud ass veiled in the lion's skin;
An outward saint lined with a devil within:
An echo whence the royal sound doth come,
But just as barrel-head sounds like a drum;
Fantastic image of the royal head,
The brewer's with the king's arms quartered;
He is a counterfeited piece that shows
Charles his *effigies* with a copper nose;
In fine, he's one we must Protector call—
From whom, the King of kings protect us all.'

After his release, Cleveland went to London, where he found a generous patron, and ended his days in peace; though he did not live to be rejoiced (or disappointed) by the Restoration.

Cleveland's poetry, at one time highly extolled, now completely sunk in oblivion, has shared the common fate of all works composed to support and flatter temporary opinions and prejudices. Contemporary with Milton, Cleveland was considered immeasurably superior to the author of *Paradise Lost*. Even Philips, Milton's nephew, asserts that Cleveland was esteemed the best of English poets. Milton's sublime work could scarcely struggle into print, while edition after edition of Cleveland's coarse satires were passing through the press; now, when Cleveland is forgotten, we need say nothing of the estimation in which Milton is held.

In connexion with the life of Cleveland, it may be well to notice a brother cavalier poet, Richard Lovelace, who in April 1642, was imprisoned by the parliament in the Gatehouse, for presenting a petition from the county of Kent, requesting them to restore the king to his rights. It was looked upon as an act of *malignancy*, or anti-patriotic loyalism, as we might now explain it. There is something fascinating in the gay, cavalier, self-devoted, poet nature, and tragic end of Lovelace. It was while in prison that he wrote his beautiful lyric, so heroic as to his sufferings, so charmingly sweet to his love, so delightful above all for its assertion of the independence of the moral on the physical and external conditions.

'When love with unconfined wings
Hovers within my gates,
And my divine Althea brings
To whisper at my grates;

When I lye tangled in her haire,
And fettered with her eye,
The birds that wanton in the aire
Know no such libertie.

When flowing cups ran swiftly round
With no allaying Thames,
Our careless heads with roses crowned,
Our hearts with loyal flames ;
When thirsty grieffe in wine we scepe,
When healths and draughts goe free,
Fishes, that tittle in the deepe,
Know no such libertie.

When, linnet-like, confined I
With shriller note shall sing
The mercye, sweetness, majesty,
And glories of my king ;
When I shall voyce aloud how good
He is, how great should be,
Th' enlarged winds, that curl the flood,
Know no such libertie.

Stone walls do not a prison make,
Nor iron barres a cage,
Mindes innocent and quiet take
That for an hermitage :
If I have freedom in my love,
And in my soule am free,
Angels alone, that soare above,
Enjoy such libertie.'

Lovelace, according to Anthony Wood, was 'the most amiable and beautiful person that eye ever beheld.' He had a gentleman's fortune, which he spent in the royal cause, and in succouring royalists more unfortunate than himself.

Perhaps there was a dash of thoughtlessness and extravagance about him also—for we must remember he was a poet. The end was, that Lovelace, the high-spirited cavalier, poet, and lover, died in obscurity and poverty in a lodging in Shoe Lane, Fleet Street—memorable in the history of another poet, Chatterton—and was buried notelessly at the end of Bride's Church.

RUYTER.

From the condition of a common sailor arose the singular man who, in the seventeenth century, made the little half-ruined country of Holland the greatest maritime power in Europe. In 1672, while Louis XIV. overran that state, it triumphed over him by Ruyter's means at sea, just as Nelson checked the Emperor Napoleon in the midst of his most glorious campaigns. In the ensuing year, he met the combined fleets of France and England in three terrible battles, and won from D'Estrees, the French commander, the generous declaration that for such glory as Ruyter acquired he would gladly give his life. In a minor expedition against the French in Sicily, the noble Dutch commander was struck by a cannon-ball, which deprived him of life, at the age of sixty-nine.

COWPER THORNHILL'S RIDE.

April 29, 1745, Mr Cowper Thornhill, keeper of the Bell Inn at Stilton, in Huntingdonshire, performed a ride which was considered the

COWPER THORNHILL'S RIDE.

greatest ever done in a day up to that time. A contemporary print, here copied, presents the following statement on the subject: 'He set out from his house at Stilton at four in the morning, came to the Queen's Arms against Shoreditch Church in three hours and fifty-two minutes; returned to Stilton again in four hours and twelve minutes; came back to London again in four hours and thirteen minutes, for a wager of five hundred guineas. He was allowed fifteen hours to perform it in, which is 213 miles, and he did it in twelve hours and seventeen minutes. It is reckoned the greatest performance of the kind ever yet known. Several thousand pounds were laid upon the affair, and the roads for many miles were lined with people to see him pass and repass.'

Mr Cowper Thornhill is spoken of in the *Memoirs of a Banking-house*, by Sir William Forbes (Edin. 1860), as a man carrying on a large business as a corn-factor, and as 'much respected for his gentlemanly manners, and generally brought to table by his guests.'

Stow records a remarkable feat in riding as performed on the 17th July 1621, by Bernard Calvert of Andover. Leaving Shoreditch in London that morning at three o'clock, he rode to Dover, visited Calais in a barge, returned to Dover and thence back to St George's church in Shoreditch, which he reached at eight in the evening of the same day. Dover being seventy-one miles from London, the riding part of this journey was, of course, 142 miles.

A ride remarkable for what it accomplished in the daylight of three days, was that of Robert Cary, from London to Edinburgh, to inform King James of the death of Queen Elizabeth. Cary, after a sleepless night, set out on horseback from Whitehall between nine and ten o'clock of Thursday forenoon. That night he reached Doncaster, 155 miles. Next day he got to his own house at Witherington, where he attended to various matters of business. On the Saturday, setting out early, he would have reached Edinburgh by mid-day, had he not been thrown and kicked by his horse. As it was, he knelt by King James's bed-side at Holyrood, and saluted him King of England, soon after the King had retired to rest; being a ride of fully 400 miles in three days.

The first rise of Wolsey from a humble station was effected by a quick ride. Being chaplain to Henry VII. (about 1507), he was recommended by the Bishop of Winchester to go about a piece of business to the Emperor Maximilian, then at a town in the Low Countries. Wolsey left London at four one afternoon by a boat for Gravesend, there took post-horses, and arrived at Dover next morning. The boat for Calais was ready to sail. He entered it, reached Calais in three hours; took horses again, and was with the Emperor that night. Next morning, the business being dispatched, he rode back without delay to Calais, where he found the boat once more on the eve of starting. He reached Dover at ten next day, and rode to Richmond, which he reached in the evening, having been little more than two days on the journey.—*Cavendish's Life of Wolsey*.

APRIL 30.

St Maximus, martyr, 251. Saints James, Marian, and others, martyrs in Numidia, 259. St Sophia, virgin, martyr, 3rd century. St Erkonwald, bishop of London, about 686. St Adjutre, recluse, Vernon in Normandy, 1131. St Catherine of Sienna, virgin, 1380.

Born.—Queen Mary II. of England, 1662.

Died.—Marcus Annæus Lucanus, Roman poet, 65, *Rome*; Chevalier Bayard, killed, 1524; John, Count de Tilly, military commander, 1632, *Ingoldstadt*; Dr Robert Plot, naturalist, topographer, 1696, *Borden*; G. Farquhar, dramatist, 1707, *London*; Jean Jacques Barthelemi, 1795, *Paris*; Thomas Duncan, Scottish artist, 1845, *Edinburgh*; Samuel Maunder, author of books of information, 1849, *London*; Sir Henry Bishop, musical composer, 1855; James Montgomery, poet, 1854, *Sheffield*.

BAYARD.

The compatibility of high warlike qualities with the gentlest nature is strikingly shown in the case of Bayard, who at once gave the hardest strokes in the battle and the tournament, and was in society the most amiable of men. Simple, modest, kindly, the delicate lover, the sincere friend, the frank cavalier, pious, humane, and liberal, nothing seems wanting to complete the character of the *Chevalier sans peur et sans reproche*. He ought to be the worship of all soldiers, for no one has done more to exalt the character of the profession.

The exploits of Bayard fill the chronicles of his age, which embraces the whole reign of Louis XII., and the nine first years of that of Francis I. His end was characteristic. Engaged in the unfortunate campaign of Bonnivet, in Northern Italy, where the imperial army under the traitor De Bourbon pressed hard upon the retreating French troops, he was entreated to take the command and save the army if possible. 'It is too late,' he said; 'but my soul is God's, and my life is my country's.' Then putting himself at the head of a body of men-at-arms, he stayed the pressure of the enemy till struck in the reins by a ball, which brought him off his horse. He refused to retire, saying he never had shown his back to an enemy. He was placed against a tree, with his face to the advancing host. In the want of a cross, he kissed his sword; in the absence of a priest, he confessed to his *maitre-d'hôtel*. He uttered consolations to his friends and servants. When De Bourbon came up, and expressed regret to see him in such a condition, he said, 'Weep for yourself, sir. For me, I have nothing to complain; I die in the course of my duty to my country. You triumph in betraying yours; but your successes are horrible, and the end will be sad.' The enemy honoured the remains of Bayard as much as his own countrymen could have done.

FARQUHAR THE DRAMATIST AT LICHFIELD.

This admirable comic writer appears, in other respects, to have been wedded to misfortune throughout his brief life. He was born at Londonderry in 1678, and educated in the University of Dublin. He appeared early at the Dublin theatre, made no great figure as an

actor, and accidentally wounding a brother-comedian with a real sword, which he mistook for a foil, he forsook the stage, being then only seventeen years old. He accompanied the actor Wilks to London, and there attracted the notice of the Earl of Orrery, who gave him a commission in his own regiment. Wilks persuaded him to try his powers as a dramatist, and his first comedy, *Love and a Bottle*, produced in 1798, was very successful. In 1703, he adapted Beaumont and Fletcher's *Wildgoose Chase*, under the title of *The Inconstant*, which became popular. Young Mirabel in this play was one of Charles Kemble's most finished performances.

Farquhar was married to a lady who deceived him as to her fortune; he fell into great difficulties, and was obliged to sell his commission; he sunk a victim to consumption and over-exertion, and died, in his thirtieth year, leaving two helpless girls; one married 'a low tradesman,' the other became a servant, and the mother died in poverty.

Our dramatist has laid the scene of two of his best comedies at Lichfield. He has drawn from his experience as a soldier the incidents of his *Recruiting Officer*, produced in 1706, and of his *Beaux' Stratagem*, written during his last illness. One of his recruiting scenes is a street at Lichfield, where Kite places one of his raw recruits to watch the motion of St Mary's clock, and another the motion of St Chad's. We all remember in the *Beaux' Stratagem* the eloquent jollity of Boniface upon his Lichfield 'Anno Domini 1706 ale.' 'The Dean's Walk' is the avenue described by Farquhar as leading to the house of Lady Bountiful, and in which Aimwell pretends to faint.

The following amusing anecdote is also told of Farquhar at Lichfield. It was at the top of Market-street, that hastily entering a barber's shop, he desired to be shaved, which operation was immediately performed by a little deformed man, the supposed master of the shop. Dining the same day at the table of Sir Theophilus Biddulph, Farquhar was observed to look with particular earnestness at a gentleman who sat opposite to him; and taking an opportunity of following Sir Theophilus out of the room, he demanded an explanation of his conduct, as he deemed it an insult to be seated with such inferior company. Sir Theophilus, amazed at the charge, assured the captain the company were every one gentlemen, and his own particular friends. This, however, would not satisfy Farquhar; he was, he said, certain that the little humpbacked man who sat opposite to him at dinner was a barber, and had that very morning shaved him. Unable to convince the captain of the contrary, the baronet returned to the company, and stating the strange assertion of Farquhar, the mystery was elucidated, and the gentleman owned having, *for joke's sake*, as no other person was in the shop, performed the office of terror to the captain.

SIR HENRY R. BISHOP.

'In every house where music, more especially vocal music, is welcome, the name of Bishop has long been, and must long remain, a household

word. Who has not been soothed by the sweet melody of "Blow, gentle gales;" charmed by the measures of "Lo! here the gentle lark;" enlivened by the animated strains of "Foresters, sound the cheerful horn;" touched by the sadder music of "The winds whistle cold." Who has not been haunted by the insinuating tones of "Tell me, my heart;" "Under the greenwood tree;" or, "Where the wind blows," which Rossini, the minstrel of the south, loved so well? Who has not felt sympathy with

"As it fell upon a day,
In the merry month of May;"

admired that masterpiece of glee and chorus, "The chough and crow;" or been moved to jollity at some convivial feast by "Mynheer Van Dunck," the most original and genial of comic glees?—*Contemporary Obituary Notice.*

THE QUARTER-STAFF.

Contentions with the quarter-staff take their place among the old amusements of the people of England: rather rough for the taste of the present day, yet innocent in comparison with other sports of our forefathers. The weapon, if

QUARTER-STAFF, SHERWOOD FOREST.

it be worthy of such a term—perhaps we should content ourselves with calling it implement—was a tough piece of wood, of about eight feet long, not of great weight, which the practitioner grasped in the middle with one hand, while with the other he kept a loose hold midway between the middle and one end. An adept in the use of the staff might be, to one less skilled, a formidable opponent.

Dryden speaks of the use of the quarter-staff in a manner which would imply that in his time, when not in use, the weapon was hung upon the back, for he says

'His quarter-staff, which he could ne'er forsake,
Hung half before and half behind his back.'

Bacon speaks of the use of cudgels by the captains of the Roman armies; but it is very questionable whether these cudgels partook of the character of the quarter-staff. Most persons will remember how often bouts at quarter-staff occur in the ballads descriptive of the adventures of Robin Hood and Little John. Thus, in the encounter of Robin with the tanner, Arthur-a-Bland:

'Then Robin he unbuckled his belt,
And laid down his bow so long;
He took up a staff of another oak graff,
That was both stiff and strong.

* * * * *

"But let me measure," said jolly Robin,
"Before we begin our fray;
For I'll not have mine to be longer than thine,
For that will be counted foul play."

"I pass not for length," bold Arthur replied,
"My staff is of oak so free;
Eight foot and a half it will knock down a calf,
And I hope it will knock down thee."

Then Robin could no longer forbear,
He gave him such a knoek,
Quickly and soon the blood came down,
Before it was ten o'clock.

* * * * *

About and about and about they went,
Like two wild boars in a chase,
Striving to aim each other to maim,
Leg, arm, or any other place.

And knoek for knoek they hastily dealt,
Which held for two hours and more;
That all the wood rang at every bang,
They plied their work so sore.'

In the last century games or matches at cudgels were of frequent occurrence, and public subscriptions were entered into for the purpose of finding the necessary funds to provide prizes. We have in our possession the original subscription list for one of these cudgel matches, which was played for on the 30th of April 1748, at Shrivensham, in the county of Berks, the patrons on that occasion being Lord Barrington, the Hons. Daniel and Samuel Barrington, Witherington Morris, Esq., &c. The amount to be distributed in prizes was a little over five pounds. We find now-a-days pugilists engage in a much more brutal and less scientific display for a far less sum. The game appears to have almost gone out of use in England, although we occasionally hear of its introduction into some of our public schools.

WONDERS OF THE GLASTONBURY WATERS.

Under the 30th April 1751, Richard Gough enters in his diary—'At Glastonbury, Somerset, a man thirty years afflicted with an asthma, dreamed that a person told him, if he drank of such particular waters, near the Chain-gate, seven Sunday mornings, he should be cured, which he

accordingly did and was well, and attested it on oath. This being rumoured abroad, it brought numbers of people from all parts of the kingdom to drink of these *miraculous waters* for various distempers, and many were healed, and great numbers received benefit.'

Five days after, Mr Gough added: 'Twas computed 10,000 people were now at Glastonbury, from different parts of the kingdom, to drink the waters there for various distempers.'

Of course, a therapeutical system of this kind could not last long. Southey preserves to us in his *Common-place Book* a curious example of the cases. A young man, witnessing the performance of *Hamlet* at the Drury Lane Theatre, was so frightened at sight of the ghost, that a humour broke out upon him, which settled in the king's evil. After all medicines had failed, he came to these waters, and they effected a thorough cure. Faith healed the ailment which fear had produced.

The last of April may be said to have in it a tint of the coming May. The boys, wisely provident of what was to be required to-morrow, went out on this day to seek for trees from which they might obtain their proper supplies of the May blossom. Dryden remarks the vigil or eve of May day:

'Waked, as her custom was, before the day,
To do th' observance due to sprightly May,
For sprightly May commands our youth to keep
The vigils of her night, and breaks their rugged sleep.'

EARLY HISTORY OF SILK STOCKINGS.

April 30th 1560. Sir Thomas Gresham writes from Antwerp to Sir William Cecil, Elizabeth's great minister, 'I have written into Spain for silk hose both for you and my lady, your wife; to whom it may please you I may be remembered.' These silk hose, of blaek colour, were accordingly soon after sent by Gresham to Cecil.†

Hose were, up to the time of Henry VIII., made out of ordinary cloth: the king's own were formed of yard-wide taffata. It was only by chance that he might obtain a pair of silk hose from Spain. His son Edward VI. received as a present from Sir Thomas Gresham—Stow speaks of it as a great present—'a pair of long Spanish silk stockings.' For some years longer, silk stockings continued to be a great rarity. 'In the second year of Queen Elizabeth,' says Stow, 'her silk woman, Mistress Montague, presented her Majesty with a pair of blaek knit silk stockings for a new-year's gift; the which, after a few days wearing, pleased her Highness so well that she sent for Mistress Montague, and asked her where she had them, and if she could help her to any more; who answered, saying, "I made them very carefully, of purpose only for your Majesty, and seeing these please you so well, I will presently set more in hand." "Do so," quoth the Queen, "for indeed I like silk stockings so well, because they are pleasant, fine, and delicate, that henceforth I will wear no more cloth stockings." And from that time to her death the Queen never wore cloth hose, but only silk stockings.‡

* *Palamon and Arcite*, B.L.

† *Burgon's Life of Sir Thomas Gresham*, 2 vols., 1839, vol. i., p. 110, 302.

‡ *Stow's Chronicle*, edit. 1631, p. 887.

Then came fair MAY, the fayrest mayd on ground,
 Deckt all with dainties of her season's pryde,
 And throwing flowres out of her lap around :
 Upon two brethren's shoulders she did ride,
 The twinnes of Leda ; which on either side
 Supported her, like to their soveraine queene.
 Lord ! how all creatures laught, when her they spide,
 And leapt and daunc't as they had ravisht beene !
 And Cupid selfe about her fluttered all in greene.

SPENSER.

(DESCRIPTIVE.)

MAY brings with her the beauty and fragrance of hawthorn blossoms and the song of the nightingale. Our old poets delighted in describing her as a beautiful maiden, clothed in sunshine, and scattering flowers on the earth, while she danced to the music of birds and brooks. She has given a rich greenness to the young corn, and the grass is now tall enough

for the flowers to play at hide-and-seek among, as they are chased by the wind. The grass also gives a softness to the dazzling white of the daisies and the glittering gold of the buttercups, which, but for this soft bordering of green, would almost be too lustrous to look upon. We hear the song of the milkmaid in the early morning, and catch glimpses of the white milkpail she balances on her head between the openings in the hedge-rows, or watch her as she paces through the fields, with her gown drawn through the pocket-hole of her quilted petticoat, to prevent it dragging in the dew. We see the dim figure of

the angler, clad in grey, moving through the white mist that still lingers beside the river. The early school-boy, who has a long way to go, loiters, and lays down his books to peep under almost every hedge and bush he passes, in quest of birds' nests. The village girl, sent on some morning errand, with the curtain of her cotton-covered bonnet hanging down her neck, 'buttons up' her little eyes to look at us, as she faces the sun, or shades her forehead with her hand, as she watches the skylark soaring and singing on its way to the great silver pavilion of clouds that stands amid the blue plains of heaven. We see the progress spring has made in the cottage gardens which we pass, for the broad-leaved rhubarb has now grown tall; the radishes are rough-leaved; the young onions show like strong grass; the rows of spinach are ready to cut, peas and young potatoes are hoed up, and the gooseberries and currants show like green beads on the bushes, while the cabbages, to the great joy of the cottagers, are beginning to 'heart.' The fields and woods now ring with incessant sounds all day long; from out the sky comes the loud cawing of the rook as it passes overhead, sometimes startling us by its sudden cry, when flying so low we can trace its moving shadow over the grass. We hear the cooing of ringdoves, and when they cease for a few moments, the pause is filled up by the singing of so many birds, that only a practised ear is enabled to distinguish one from the other; then comes the clear, bell-like note of the cuckoo, high above all, followed by the shriek of the beautifully marked jay, until it is drowned in the louder cry of the woodpecker, which some naturalists have compared to a laugh, as if the bird were a cynic, making a mockery of the whole of this grand, wild concert. In the rich green pastures there are sounds of pleasant life: the bleating of sheep, and the musical jingling of their bells, as they move along to some fresh patch of tempting herbage; the lowing of full-uddered cows, that morning and night brim the milkpails, and make much extra labour in the dairy, where the rosy-cheeked maidens sing merrily over their pleasant work. We see the great farm-house in the centre of the rich milk-yielding meadows, and think of cooling curds and whey, luscious cheesecakes and custards, cream that you might cut, and strawberries growing in rows before the beehives in the garden, and we go along licking our lips at the fancied taste, and thinking how these pleasant dainties lose all their fine country flavour when brought into our smoky cities, while here they seem as if—

'Cool'd a long age in the deep-delyed earth,
Tasting of Flora and the country green.'

KEATS.

Every way bees are now flying across our path, after making 'war among the velvet buds,' out of which they come covered with pollen, as if they had been plundering some golden treasury, and were returning home with their spoils. They, with their luminous eyes—which can see in the dark—are familiar with all the little inhabitants of the flowers they plunder, and which are only visible to us through glasses that magnify

largely. What a commotion a bee must make among those tiny dwellers in the golden courts of stamens and pistils, as its great eyes come peeping down into the very bottom of the calyx—the foundation of their flowery tower. Then, as we walk along, we remember that in those undated histories called the Welsh triads—which were oral traditions ages before the Romans landed on our shores—England was called the Island of Honey by its first discoverers, and that there was a pleasant murmur of bees in our primeval forests long before a human sound had disturbed their silence. But, beyond all other objects that please the eye with their beauty, and delight the sense with their fragrance, stand the May-buds, only seen in perfection at the end of this pleasant month, or a few brief days beyond. All our old poets have done reverence to the milk-white scented blossoms of the hawthorn—the May of poetry—which throws an undying fragrance over their pages; nor does any country in the world present so beautiful a sight as our long leagues of English hedgerows sheeted with May blossoms. We see it in the cottage windows, the fireless grates of clean country parlours are ornamented with it, and rarely does anyone return home without bringing back a branch of May, for there is an old household aroma in its bloom which has been familiar to them from childhood, and which they love to inhale better than any other that floats around their breezy homesteads. The refreshing smell of May-buds after a shower is a delight never to be forgotten; and, for aught we know to the contrary, birds may, like us, enjoy this delicious perfume, and we have fancied that this is why they prefer building their nests and rearing their young among the May blossoms. The red May, which is a common ornament of pleasure-grounds, derives its ruddy hue from having grown in a deep red clayey soil, and is not, we fancy, so fragrant as the white hawthorn, nor so beautiful as the pale pink May, which is coloured like the maiden blush rose. It is in the dew they shake from the pink May that our simple country maidens love to bathe their faces, believing that it will give them the complexion of the warm pearly May blossoms, which they call the Lady May. What a refreshing shower-bath, when well shaken, a large hawthorn, heavy with dew, and covered with bloom, would make!

The nightingale comes with its sweet music to usher in this month of flowers, and it is now generally believed that the male is the first that makes its appearance in England, and that his song increases in sweetness as the expected arrival of the female draws nearer. Nor will he shift his place, but continues to sing about the spot where he is first heard, and where she is sure to find him when she comes. We have no doubt these birds understand one another, and that the female finds her mate by his song, which was familiar to her before her arrival, and that she can distinguish his voice from all others. Could the nightingales which are said to be seen together in the countries to which they migrate be caught and marked before they return to England, this might be proved.

One bird will answer another, taking up the

song where the first ceases, when they are far beyond our power of hearing, as has been proved by persons placed midway, and close to the rival songsters, who have timed the intervals between, and found that, to a second, one bird began the instant the other was silent; though the distance between was too far apart for human ears to catch a note of the bird farthest from the listener, the hands which marked the seconds on the watches showed that one bird had never begun to sing until the other had ended. You may throw a stone among the foliage where the nightingale is singing, and it will only cease for a few moments, and move away a few feet, then resume its song. At the end of this month, or early in June, its nest, which is generally formed of old oak leaves, may be found, lined only with grass—a poor home for so sweet a singer, and not unlike that in which many of our sweetest poets were first cradled. As soon as the young are hatched the male ceases to sing, losing his voice, and making only a disagreeable croaking noise when danger is near, instead of giving utterance to the same sweet song

‘That found a path

Through the sad heart of Ruth, when, sick for home,
She stood in tears amid the alien corn.’

KEATS.

How enraptured must good old Izaak Walton have been with the song of the nightingale, when he exclaimed, ‘Lord, what music hast Thou provided for the saints in heaven, when Thou affordest bad men such music on earth.’

Butterflies are now darting about in every direction, here seeming to play with one another—a dozen together in places—there resting with folded wings on some flower, then setting off in that zig-zag flight which enables them to escape their pursuers, as few birds can turn sudden enough, when on the wing, to capture them. What is that liquid nourishment, we often wonder, which they suck up through their tiny probosces; is it dew, or the honey of flowers? Examine the exquisite scales of their wings through a glass, and then you will say that, poetical as many of the names are by which they are known, they are not equal to the beauty they attempt to designate. Rose-shaded, damask-dyed, garden-carpet, violet-spotted, green-veined, and many another name beside, conveys no notion of the jewels of gold and silver, and richly-coloured precious stones, set in the forms of the most beautiful flowers, which adorn their wings, heads, and the under part of their bodies, some portions of which appear like plumes of the gaudiest feathers. Our old poet Spenser calls the butterfly ‘Lord of all the works of Nature,’ who reigns over the air and earth, and feeds on flowers, taking

‘Whatever thing doth please the eye.’

What a poor name is Red Admiral for that beautiful and well-known butterfly which may be driven out of almost any bed of nettles, and is richly banded with black, scarlet, and blue! Very few of these short-lived beauties survive the winter; such as do, come out with a sad, tattered appearance on the following spring,

and with all their rich colours faded. By the end of this month most of the trees will have donned their new attire, nor will they ever appear more beautiful than now, for the foliage of summer is darker; the delicate spring-green is gone by the end of June, and the leaves then no longer look fresh and new. Nor is the foliage as yet dense enough to hide the traces of the branches, which, like graceful maidens, still show their shapes through their slender attire—a beauty that will be lost when they attain the full-bourgeoned matronliness of summer. But trees are rarely to be seen to perfection in woods or forests, unless it be here and there one or two standing in some open space, for in these places they are generally too crowded together. When near, if not over close, they show best in some noble avenue, especially if each tree has plenty of room to stretch out its arms, without too closely elbowing its neighbour; then a good many together can be taken in by the eye at once, from the root to the highest spray, and grand do they look as the aisle of some noble cathedral. In clumps they are ‘beautiful exceedingly,’ scattered as it were at random, when no separate branch is seen, but all the foliage is massed together like one immense tree, resting on its background of sky. Even on level ground a clump of trees has a pleasing appearance, for the lower branches blend harmoniously with the grass, while the blue air seems to float about the upper portions like a transparent veil. Here, too, we see such colours as only a few of our first-rate artists succeed in imitating; the sunshine that falls golden here, and deepens into amber there, touched with bronze, then the dark green, almost black in the shade, with dashes of purple and emerald—green as the first sward of showery April. We have often fancied, when standing on some eminence that overlooked a wide stretch of woodland, we have seen such terraces along the sweeps of foliage as were too beautiful for anything excepting angels to walk upon. While thus walking and musing through the fields and woods at this pleasant season of the year, a contented and imaginative man can readily fancy that all these quiet paths and delightful prospects were made for him, or that he is a principal shareholder in Nature’s great freehold. He stops in winter to see the hedger and ditcher at work, or to look at the men repairing the road, and it gives him as much pleasure to see the unsightly gap filled up with young ‘quicksets,’ the ditch embankment repaired, and the hole in the high road made sound, as it does the wealthy owner of the estate, who has to pay the men thus employed for their labour. And when he passes that way again, he stops to see how much the quicksets have grown, or whether the patch on the embankment is covered with grass and wild flowers, or if the repaired hollow in the road is sound, and has stood the drying winds of March, the heavy rains of April, and is glad to find it standing level and hard in the sunshine of May. If it is a large enclosed park, and the proprietor has put up warnings that within there are steel traps, spring guns, and ‘most biting laws’ for trespassers, still the contented wanderer is sure to find some gentle eminence that over-

looks at least a portion of it. From this he will catch glimpses of glen and glade, and see the deer trooping through the long avenues, standing under some broad-branched oak, or, with their high antlers only visible, couching among the cool fan-leaved fern. They cannot prosecute him for looking through the great iron gates, which are aptly mounted with grim stone griffins, who ever stand rampant on the tall pillars, and seem to threaten with their dead eyes every intruder, nor prevent him from admiring the long high avenue of ancient elms, through which the sunshine streams and quivers on the broad carriage way as if it were canopied with a waving network of gold. He sees the great lake glimmering far down, and making a light behind the perspective of dark branches, and knows that those moving specks of silver which are ever crossing his vision are the stately swans sailing to and fro; the cawing of rooks falls with a pleasant sound upon his ear, as they hover around the old ancestral trees, which have been a rookery for centuries. Once there were pleasant footpaths between those aged oaks, and beside those old hawthorns—still covered with May-buds—that led to neighbouring villages, which can only now be reached by circuitous roads, that lie without the park: alas, that no 'village Hampden' rose up to do battle for the preservation of the old rights of way! Here and there an old stile, which forms a picturesque object between the heavy trunks to which it was clamped, is allowed to remain, and that is almost all there is left to point out the pleasant places through which those obliterated footpaths went winding along.

We have now a great increase of flowers, and amongst them the graceful wood-sorrel—the true Irish shamrock—the trefoil leaves of which are heart-shaped, of a bright green, and a true weather-glass, as they always shut up at the approach of rain. The petals, which are beautifully streaked with lilac, soon fade when the flower is gathered, while the leaves yield the purest oxalic acid, and are much sourer than the common sorrel. Buttercups are now abundant, and make the fields one blaze of gold, for they grow higher than the generality of our grasses, and so overtop the green that surrounds them. Children may now be seen in country lanes and suburban roads carrying them home by armfuls, heads and tails mixed together, and trailing on the ground. This common flower belongs to that large family of plants which come under the *ranunculus* genus, and not a better flower can be found to illustrate botany, as it is easily taken to pieces, and readily explained; the number five being that of the sepals of calyx, petals, and nectar-cup, which a child can remember. Sweet woodroof now displays its small white flowers, and those who delight in perfuming their wardrobes will not fail to gather it, for it has the smell of new hay, and retains its scent a length of time, and is by many greatly preferred before lavender. This delightful fragrance is hardly perceptible when the plant is first gathered, unless the leaves are bruised or rubbed between the fingers; then the powerful odour is inhaled. The sweet woodroof is rather a scarce plant, and must be sought for in woods, about the trunks

of oaks—oak-leaf mould being the soil it most delights in; though small, the white flowers are as beautiful as those of the star-shaped jessamine. Plentiful as red and white campions are, it is very rare to find them both together, though there is hardly a hedge in a sunny spot under which they are not now in bloom. Like the ragged robin, they are in many places still called cuckoo-flowers, and what the 'cuckoo buds of yellow hue' are, mentioned by Shakspeare, has never been satisfactorily explained. We have little doubt, when the names of flowers two or three centuries ago were known to but few, that many which bloomed about the time the cuckoo appeared, were called cuckoo-flowers; we can find at least a score bearing that name in our old herbals. Few, when looking at the greater stitchwort, now in flower, would fancy that that large-shaped bloom was one of the family of chickweeds; as for the lesser stitchwort, it is rarely found excepting in wild wastes, where gorse and heather abound; and we almost wonder why so white and delicate a flower should choose the wilderness to flourish in, and never be found in perfection but in lonely places. Several of the beautiful wild geraniums, commonly called crane's-bill, dove's-bill, and other names, are now in flower, and some of them bear foliage as soft and downy as those that are cultivated. Some have rich rose-coloured flowers, others are dashed with deep purple, like the heart's-ease, while the one known as herb Robert is as beautiful as any of our garden flowers. But it would make a long catalogue only to give the names of all these beautiful wild geraniums which are found in flower in May. But the most curious of all plants now in bloom are the orchises, some of which look like bees, flies, spiders, and butterflies; for when in bloom you might, at a distance, fancy that each plant was covered with the insects after which it is named. An orchis has only once to be seen, and the eye is for ever familiar with the whole variety, for it resembles no other flower, displaying nothing that would seem capable of forming a seed vessel, as both stamen and style are concealed. Like the violet, it has a spur, and the bloom rises from a twisted stalk. The commonest, which is hawked about the streets of London in April, is the Early Purple, remarkable for the dark purple spots on the leaves, but it seldom lives long. Kent is the county for orchises, where several varieties may now be found in flower.

(HISTORICAL.)

'May was the second month in the old Alban calendar, the third in that of Romulus, and the fifth in the one instituted by Numa Pompilius—a station it has held from that distant date to the present period. It consisted of twenty-two days in the Alban, and of thirty-one in Romulus's calendar; Numa deprived it of the odd day, which Julius Cæsar restored, since which it has remained undisturbed.'—*Brady*. The most receivable account of the origin of the name of the month is that which represents it as being assigned in honour of the *Majores*, or *Maiores*, the senate in the original constitution of Rome, June being in like manner a compliment to the

Juniores, or inferior branch of the Roman legislature. The notion that it was in honour of Maia, the mother by Jupiter of the god Hermes, or Mercury, seems entirely gratuitous, and merely surmised in consequence of the resemblance of the word. Amongst our Saxon forefathers the month was called *Tri-Milchi*, with an understood reference to the improved condition of the cattle under benefit of the spring herbage, the cow being now able to give milk thrice a-day.

It is an idea as ancient as early Roman times, stated by Ovid in his *Fasti*, and still prevalent in Europe, that May is an unlucky month in which to be married.

CHARACTERISTICS OF MAY.

While there is a natural eagerness to hail May as a summer month—and from its position in the year it ought to be one—it is after all very much a spring month. The mean temperature of the month in the British Islands is about 54°. The cold winds of spring still more or less prevail; the east wind has generally a great hold; and sometimes there are even falls of snow within the first ten or fifteen days. On this account proverbial wisdom warns us against being too eager to regard it as a time for light clothing:

‘Change not a clout
Till May be out.’

At London, the sun rises on the 1st of the month at 4.36; on the 31st at 3.54; the middle day of the month being 15h. 36m. long. The sun usually enters Gemini early in the morning of the 21st.

Other proverbs regarding May are as follow:—

- ‘Be it weal or be it woe,
Beans blow before May doth go.’
- ‘Come it early or come it late,
In May comes the cow-quake.’
- ‘A swarm of bees in May
Is worth a load of hay.’
- ‘The haddocks are good,
When dipped in May flood.’
- ‘Mist in May, and heat in June,
Make the harvest right soon.’

In Scotland, in parts peculiarly exposed, the east wind of May is generally felt as a very severe affliction. On this subject, however, a gentleman was once rebuked in somewhat striking terms by one *abnormis sapiens*. It was the late accomplished Lord Rutherford of the Edinburgh bench, who, rambling one day on the Pentland Hills, with his friend Lord Cockburn, encountered a shepherd who was remarkable in his district for a habit of sententious talking, in which he put everything in a triple form. Lord Rutherford, conversing with the man, expressed himself in strong terms regarding the east wind, which was then blowing very keenly. ‘And what ails ye at the east wind?’ said the shepherd. ‘It is so bitterly disagreeable,’ replied the judge. ‘I wonder at you finding so much fault with it.’ ‘And pray, did you ever find any good in it?’ ‘Oh, yes.’ ‘And what can you say of good for it!’ inquired Lord Rutherford. ‘Weel,’ replied the triadist, ‘it dries the yird (soil), it stockens (refreshes) the ewes, and it’s God’s wull.’ The learned judges were silent.

First of May.

St Philip and St James the Less, apostles. St Andeolus, martyr, 208. Saints Acius and Acheolus, martyrs, of Amiens, about 290. St Amator, Bishop of Auxerre, 418. St Briocus, of Wales, about 502. St Sigismund, King of Burgundy, about 517. St Marcon, abbot of Nanteu, in Normandy, 558. St Asaph, abbot and bishop at Llanelwy, in North Wales, about 590.

May 1st is a festival of the Anglican church, in honour of St Philip and St James the Less, apostles.

ST ASAPH.

Asaph is one of those saints who belong to the fabulous period, and whose history is probably but a legend altogether. According to the story, there was, in the sixth century, a bishop of Glasgow called Kentigern, called also by the Scots St Mungo, who was driven from his bishopric in 543, and took refuge in Wales with

St David. Kentigern also was a saint; so the two saints wandered about Wales for some time seeking unsuccessfully for a convenient spot to build a church for the fugitive, and had almost given up the search in despair, when the place was miraculously pointed out to them through the agency of a wild boar. It was a piece of rising ground on the banks of the little river Elwy, a tributary of the Clwyd, and Kentigern built upon it a small church of wood, which, from the name of the river, was called Llanelwy, and afterwards established a monastery there, which soon became remarkable for its numerous monks. Among these was a young Welshman, named Asaph, who, by his learning and conduct, became so great a favourite with Kentigern, that when the latter established an episcopate at Llanelwy, and assumed the dignity of a bishop, he deputed to Asaph the government of the monas-

tery. More than this, when at length St Kentigern's enemies in Scotland were appeased or silenced, and he was recalled to his native country, he resigned his Welsh bishopric to Asaph, who thus became bishop of Llanelwy, though what he did in his episcopacy, or how long he lived, is equally unknown, except that he is said, on very questionable authority, to have compiled the ordinances of his church, and to have written a life of his master, St Kentigern, as well as some other books. We can only say that nobody is known to have ever seen any such works. After his death, no bishops of Llanelwy have been recorded for a very long period of years—that is, till the middle of the twelfth century. The church and see still retained the name of Llanelwy, which, the supposed second bishop having been canonized, was changed at a later period to St Asaph, by which name it is still known.

Rogation Sunday. (1864.)

Rogation Sunday—the fifth after Easter—is one of the moveable festivals of the Anglican Church. It derived its name from the Gospel for the day, teaching us how we may *ask* of God so as to obtain. In former times there was a perambulation, in the course of which, at certain spots, thanksgiving psalms were sung. (See larger account under title ROGATION DAYS, May 2.)

Born.—William Lilly, astrologer, 1602, *Diseworth*; Joseph Addison, miscellaneous writer, 1672, *Milston*, near *Amesbury, Wilts*; Sebastian de Vauban, 1633, *Nivernois*; Arthur, Duke of Wellington, 1769; Dr John Woodward, naturalist, 1665, *Derbyshire*.

Died.—Arcadius, emperor of the East, 408; Maud, Queen of England, 1118; Pope Pius V., 1572; John Dryden, poet, 1700, *London*; François de Paris, 1727, *Paris*; Miss Richmal Mangnall, author of *Miscellaneous Questions*, &c., 1820.

FRANÇOIS DE PARIS.

In the history of the great Jansenist schism which troubled the church in France for a hundred years, the name of the Deacon François de Paris bears a conspicuous place, not on account of anything he did or said in his life, but what happened regarding him after his death. Dying at thirty-seven, with a great reputation for sanctity and an infinite number of charitable works among the poor, his tomb in the cemetery of St Medard came to be regarded with much veneration among such of the Parisian populace as had contracted any sympathies for Jansenism. Within about four years of his interment, this tomb was the daily resort of multitudes, who considered it a good place for their extra devotions. It then began to be rumoured that, among such of these individuals as were diseased, miraculous cures took place at the tomb of Paris. The French capital chanced to be then in want of a new sensation. The strange tales of the doings in the cemetery of St Medard came very opportunely. It became a fashionable amusement to go there and witness the revivals of health which took place at the Deacon Paris's tomb. Scores of people afflicted with deep-seated rheumatism, sciatica, and contractions of

the limbs, or with epilepsy and neuralgia, went away professing to have been suddenly and entirely cured in consequence of their devotions at the shrine of this quasi-Protestant saint. The Jesuits were of course scornfully incredulous of miracles wrought at an opposite shop. But nevertheless the cures went on, and all Paris was excited.

In the autumn of 1731, the phenomena began to put on an even more striking shape. The votaries, when laid on the deacon's tomb, which was one slightly raised above the ground, began to experience strange convulsive movements, accompanied by dreadful pains, but always ending in cure. Some of them would be suddenly shot up several feet into the air, as by some explosive force applied below. Demonstrations of eloquence beyond the natural acquirements of the individual, knowledge of things beyond the natural scope of the faculties, powers of physical endurance above what seem to belong to human nature—in short, many of the phenomena alleged to happen in our own time under the influence of mesmerism—began to be exhibited by the *convulsionnaires*. The scenes then daily presented in the St Medard churchyard became a scandal too great to be endured by the opponents of the Jansenists, and a royal decree was issued, shutting up the place except for its ordinary business of receiving the bodies of the dead. As the Parisian epigram went—for on what subject will not the gay ones of such a city make jokes?—

‘De par le roi, defense à Dieu
De faire miracle en ce lieu.’

This prohibition, however, was only attended with the effect of shifting the scenes of the alleged miracles. The *convulsionnaires* continued to meet in private, and it was found that a few particles of earth from the grave of Paris sufficed to produce all the usual phenomena. For years there continued to be assemblages of people who, under the professed influence of the deacon's miraculous power, could sustain enormous weights on their bellies, and undergo other tortures, such as human beings usually shrink from with terror. The Jesuits, unable to deny the facts, or account for them on natural grounds, could only attribute them to the devil and other evil spirits.

A gentleman of the name of Montgeron, originally sceptical, afterwards made a believer, employed himself for many years in collecting fully certified proofs of the St Medard cures and other phenomena. He published three large volumes of these evidences, forming one of the most curious books in existence; bearing with patience several imprisonments in the Bastille as the punishment of his interference. There is no doubt of the sincerity of Montgeron. It cannot be disputed that few of the events of history are nearly so well evidenced as the convulsionnaire phenomena. All that science can now say upon the subject is that the alleged facts are impossible, and therefore the evidence goes for nothing.

May Day.

The outbreak into beauty which Nature makes at the end of April and beginning of May excites

so joyful and admiring a feeling in the human breast, that there is no wonder the event should have at all times been celebrated in some way. The first emotion is a desire to seize some part of that profusion of flower and blossom which spreads around us, to set it up in decorative fashion, pay it a sort of homage, and let the pleasure it excites find expression in dance and song. A mad happiness goes abroad over the earth, that Nature, long dead and cold, lives and smiles again. Doubtless there is mingled with this, too, in bosoms of any reflection, a grateful sense of the Divine goodness, which makes the promise of seasons so stable and so sure.

Amongst the Romans, the feeling of the time found vent in their Floralia, or Floral Games, which began on the 28th of April, and lasted a few days. Nations taking more or less their origin from Rome have settled upon the 1st of May as the special time for fêtes of the same kind. With ancients and moderns alike it was one instinctive rush to the fields, to revel in the bloom which was newly presented on the meadows and the trees; the more city-pent the population, the more eager apparently the desire to get among the flowers, and bring away samples of them; the more sordidly drudging the life, the more hearty the relish for this one day of communion with things pure and beautiful. Among the barbarous Celtic populations of Europe, there was a heathen festival on the same day, but it does not seem to have been connected with flowers. It was called Beltein, and found expression in the kindling of fires on hill-tops by night. Amongst the peasantry of Ireland, of the Isle of Man, and of the Scottish Highlands, such doings were kept up till within the recollection of living people. We can see no identity of character in the two festivals; but the subject is an obscure one, and we must not speak on this point with too much confidence.

In England we have to go back several generations to find the observances of May-day in their fullest development. In the sixteenth century it was still customary for the middle and humbler classes to go forth at an early hour of the morning, in order to gather flowers and hawthorn branches, which they brought home about sunrise, with accompaniments of horn and tabor, and all possible signs of joy and merriment. With these spoils they would decorate every door and window in the village. By a natural transition of ideas, they gave to the hawthorn bloom the name of the May; they called this ceremony 'the bringing home the May;' they spoke of the expedition to the woods as 'going a-Maying.' The fairest maid of the village was crowned with flowers, as the 'Queen of the May;' the lads and lasses met, danced and sang together, with a freedom which we would fain think of as bespeaking comparative innocence as well as simplicity. In a somewhat earlier age, ladies and gentlemen were accustomed to join in the Maying festivities. Even the king and queen condescended to mingle on this occasion with their subjects. In Chaucer's *Court of Love*, we read that early on May-day 'Forth goeth all the court, both most and least, to fetch the flowers fresh.' And we know, as one illustrative fact, that, in the

reign of Henry VIII. the heads of the corporation of London went out into the high grounds of Kent to gather the May, the king and his queen, Catherine of Arragon, coming from their palace of Greenwich, and meeting these respected dignitaries on Shooter's Hill. Such festal doings we cannot look back upon without a regret that they are no more. They give us the notion that our ancestors, while wanting many advantages which an advanced civilization has given to us, were freer from monotonous drudgeries, and more open to pleasurable impressions from outward nature. They seem somehow to have been more ready than we to allow themselves to be happy, and to have often been merrier upon little than we can be upon much.

The contemporary poets are full of joyous references to the May festivities. How fresh and sparkling is Spenser's description of the going out for the May:

'Siker this morrow, no longer ago,
I saw a shole of shepherds outgo
With singing, and shouting, and jolly cheer;
Before them yode a lusty Tabrere,
That to the many a horn-pipe play'd,
Whereto they dancen each one with his maid.
To see these folks make such jouissance,
Made my heart after the pipe to dance.
Then to the greenwood they spedden them all,
To fetchen home May with their musical:
And home they bring him in a royal throne
Crowned as king; and his queen attone
Was Lady Flora, on whom did attend
A fair flock of fairies, and a fresh bend
Of lovely nymphs—O that I were there
To helpen the ladies their May-bush to bear!

Shepherd's Calendar, Eclogue 5.

Herrick, of course, could never have overlooked a custom so full of a living poetry. 'Come, my Corinna,' says he,

'——— Come, and coming mark
How each field turns a street, and each street a
park,
Made green and trimmed with trees: see how
Devotion gives each house a bough
Or branch; each porch, each door, ere this
An ark, a tabernacle is
Made up of white-thorn neatly interweve.

'A deal of youth ere this is come
Back, and with white-thorn laden home.
Some have dispatched their cakes and cream,
Before that we have left to dream.'

Not content with a garlanding of their brows, of their doors and windows, these merry people of the old days had in every town, or considerable district of a town, and in every village, a fixed pole, as high as the mast of a vessel of a hundred tons, on which each May morning they suspended wreaths of flowers, and round which they danced in rings pretty nearly the whole day. The May-pole, as it was called, had its place equally with the parish church or the parish stocks; or, if anywhere one was wanting, the people selected a suitable tree, fashioned it, brought it in triumphantly, and erected it in the proper place, there from year to year to remain. The Puritans—those most respectable people, always so unpleasantly shown as the enemies of mirth and good humour—caused May-poles to be uprooted, and a stop put to

all their jollities ; but after the Restoration they were everywhere re-erected, and the appropriate

rites re-commenced. Now, alas ! in the course of the mere gradual change of manners, the May-pole

RAISING OF THE MAY-POLE.

has again vanished. They must now be pretty old people who remember ever seeing one. Washington Irving, who visited England early in this century, records in his *Sketch Book*, that he had seen one. 'I shall never,' he says, 'forget the delight I felt on first seeing a May-pole. It was on the banks of the Dee, close by the picturesque old bridge that stretches across the river from the quaint little city of Chester. I had already been carried back into former days by the antiquities of that venerable place, the examination of which is equal to turning over the pages of a black-letter volume, or gazing on the pictures in Froissart. The May-pole on the margin of that poetic stream completed the illusion. My fancy adorned it with wreaths of flowers, and peopled the green bank with all the dancing revelry of May-day. The mere sight of this May-pole gave a glow to my feelings, and spread a charm over the country for the rest of the day ; and as I traversed a part of the fair plains of Cheshire, and the beautiful borders of Wales, and looked from among swelling hills down a long green valley, through which "the Deva wound its wizard stream," my imagination turned all into a perfect Arcadia. I value every custom that tends to infuse poetical feeling into the common people, and to sweeten and soften the rudeness of rustic manners, without destroying their simplicity.

Indeed, it is to the decline of this happy simplicity that the decline of this custom may be traced ; and the rural dance on the green, and the homely May-day pageant, have gradually disappeared, in proportion as the peasantry have become expensive and artificial in their pleasures, and too knowing for simple enjoyment. Some attempts, indeed, have been made of late years by men of both taste and learning to rally back the popular feeling to these standards of primitive simplicity ; but the time has gone by—the feeling has become chilled by habits of gain and traffic—the country apes the manners and amusements of the town, and little is heard of May-day at present, except from the lamentations of authors, who sigh after it from among the brick walls of the city.'

The custom of having a Queen of the May, or May Queen, looks like a relic of the heathen celebration of the day: this flower-crowned maid appears as a living representative of the goddess Flora, whom the Romans worshipped on this day. Be it observed, the May Queen did not join in the revelries of her subjects. She was placed in a sort of bower or arbour, near the May-pole, there to sit in pretty state, an object of admiration to the whole village. She herself was half covered with flowers, and her shrine was wholly composed of them. It must have

been rather a dull office, but doubtless to the female heart had its compensations. In our country, the enthronization of the May Queen has been longer obsolete than even the May-pole; but it will be found that the custom still survives in France. The only relic of the

custom now surviving is to be found among the children of a few out-lying places, who, on May-day, go about with a finely-dressed doll, which they call *the Lady of the May*, and with a few small semblances of May-poles, modestly presenting these objects to the gentlefolks they

CHILDREN'S MAY-DAY CUSTOMS.

meet, as a claim for halfpence, to be employed in purchasing sweetmeats. Our artist has given a very pretty picture of this infantine representation of the ancient festival.

In London there are, and have long been, a few forms of May-day festivity in a great measure peculiar. The day is still marked by a celebration, well known to every resident in the metropolis, in which the chimney-sweeps play the sole part. What we usually see is a small band, composed of two or three men in fantastic dresses, one smartly dressed female glittering with spangles, and a strange figure called Jack-in-the-green, being a man concealed within a tall frame of herbs and flowers, decorated with a flag at top. All of these figures or persons stop here and there in the course of their rounds, and dance to the music of a drum and fife, expecting of course to be remunerated by halfpence from the onlookers. It is now generally a rather poor show, and does not attract much regard; but many persons who have a love for old sports and day-observances, can never see the little troop without a feeling of interest, or allow it to pass without a silver remembrance. How this black profession should have been the last sustainers of the old rites of May-day in the metropolis does not appear.

At no very remote time—certainly within the present century—there was a somewhat similar demonstration from the milk-maids. In the course of the morning the eyes of the householders would be greeted with the sight of a milch-cow, all garlanded with flowers, led along by a small group of dairy-women, who, in light and fantastic dresses, and with heads wreathed in flowers, would dance around the animal to the sound of a violin or clarinet. At an earlier time, there was a curious addition to this choral troop, in the form of a man bearing a frame which covered the whole upper half of his person, on which were hung a cluster of silver flagons and dishes, each set in a bed of flowers. With this extraordinary burden, the legs, which alone were seen, would join in the dance,—rather clumsily, as might be expected, but much to the mirth of the spectators,—while the strange pile above floated and flaunted about with an air of heavy decorum, that added not a little to the general amusement. We are introduced to the prose of this old custom, when we are informed that the silver articles were regularly lent out for the purpose at so much an hour by pawn-brokers, and that one set would serve for a succession of groups of milk-maids during the day. In Vauxhall, there used to be a picture

representing the May-day dance of the London milk-maids: from an engraving of it the accompanying cut is taken. It will be observed that

the scene includes one or two chimney-sweeps as side figures.

In Scotland there are few relics of the old

MILK-MAIDS' DANCE ON MAY-DAY.

May-day observances—we might rather say none, beyond a lingering propensity in the young of the female sex to go out at an early hour, and wash their faces with dew. At Edinburgh this custom is kept up with considerable vigour, the favourite scene of the lavation being Arthur's Seat. On a fine May morning, the appearance of so many gay groups perambulating the hill sides and the intermediate valleys, searching for dew, and rousing the echoes with their harmless mirth, has an indescribably cheerful effect.

The fond imaginings which we entertain regarding the 1st of May—alas! so often disappointed—are beautifully embodied in a short Latin lyric of George Buchanan, which the late Archdeacon Wrangham thus rendered in English:

THE FIRST OF MAY.

Hail! sacred thou to sacred joy,
To mirth and wine, sweet first of May!
To sports, which no grave cares alloy,
The sprightly dance, the festive play!
Hail! thou of ever circling time,
That gracest still the ceaseless flow!
Bright blossom of the season's prime
Age, hastening on to winter's snow!
When first young Spring his angel face
On earth unveiled, and years of gold
Gilt with pure ray man's guileless race,
By law's stern terrors uncontrolled:
Such was the soft and genial breeze,
Mild Zephyr breathed on all around;
With grateful glee, to airs like these
Yielded its wealth th' unlaboured ground.

So fresh, so fragrant is the gale,
Which o'er the islands of the blest
Sweeps; where nor aches the limbs assail,
Nor age's peevish pains infest.

Where thy hushed groves, Elysium, sleep,
Such winds with whispered murmurs blow;
So where dull Lethe's waters creep,
They heave, scarce heave the cypress-bough.

And such when heaven, with penal flame,
Shall purge the globe, that golden day
Restoring, o'er man's brightened frame
Haply such gale again shall play.

Hail, thou, the fleet year's pride and prime!
Hail! day which Fame should bid to bloom!
Hail! image of primeval time!
Hail! sample of a world to come!

May-poles—English and Foreign.

One of the London parishes takes its distinctive name from the May-pole which in olden times overtopped its steeple. The parish is that of St Andrew *Undershaft*, and its May-pole is celebrated by the father of English poetry, Geoffrey Chaucer, who speaks of an empty braggart:—

'Right well aloft, and high ye beare your head,
As ye would beare the greatshaft of Cornhill.'

Stow, who is buried in this church, tells us that in his time the shaft was set up 'every year, on May-day in the morning,' by the exulting Londoners, 'in the midst of the street before the south door of the said church; which shaft, when it was set on end, and fixed in the ground, was higher than

the church steeple.' During the rest of the year this pole was hung upon iron hooks above the doors of the neighbouring houses, and immediately beneath the projecting penthouses which kept the rain from their doors. It was destroyed in a fit of Puritanism in the third year of Edward VI., after a sermon preached at St Paul's Cross against May games, when the inhabitants of these houses 'sawed it in pieces, everie man taking for his share as much as had layne over his doore and stall, the length of his house, and they of the alley divided amongst them so much as had lain over their alley gate.'

The earliest representation of an English May-pole is that published in the *variorum* Shakspeare, and depicted on a window at Betley, in Staffordshire, then the property of Mr Tollett,

and which he was disposed to think as old as the time of Henry VIII. The pole is planted in a mound of earth, and has affixed to it St George's red-cross banner, and a white pennon or streamer with a forked end. The shaft of the pole is painted in a diagonal line of black colour, upon a yellow ground, a characteristic decoration of all these ancient May-poles, as alluded to by Shakspeare in his *Midsummer Night's Dream*, where it gives point to *Hermia's* allusion to her rival *Helena* as a 'painted May-pole.' The fifth volume of Halliwell's folio edition of Shakspeare has a curious coloured frontispiece of a May-pole, painted in continuous vertical stripes of white, red, and blue, which stands in the centre of the village of Welford, in Gloucestershire, about five miles from Stratford-on-Avon. It may be an exact copy and legitimate successor of one standing there in the days when the bard himself visited the village. It is of great height, and is planted in the centre of a raised mound, to which there is an ascent by three stone steps: on this mound

probably the dancers performed their gyrations. Stubbes, in his *Anatomic of Abuses*, 1584, speaks of May-poles 'covered all over with flowers and hearbes, bounde rounde aboute with stringes, from the top to the bottom, and some tyme painted with variable colours.' The London citizen, Machyn, in his *Diary*, 1552, tells of one brought at that time into the parish of Fenchurch; 'a goodly May-pole as you have seene; it was painted whyte and green.'

In the illuminations which decorate the manuscript 'Hours' once used by Anne of Brittany and now preserved in the Bibliothèque Royale at Paris, and which are believed to have been painted about 1499, the month of May is illustrated by figures bearing flower-garlands, and behind them the curious May-pole here copied,

which is also decorated by colours on the shaft, and ornamented by garlands arranged on hoops, from which hang small gilded pendants. The pole is planted on a triple grass-covered mound, embanked and strengthened by timber-work.

That this custom of painting and decorating the May-pole was very general until a comparatively recent period, is easy of proof. A Dutch picture, bearing date 1625, furnishes our third specimen (see next page); here the pole is surmounted by a flower-pot containing a tree, stuck all round with gaily-coloured flags; three hoops with garlands are suspended below it, from which hang gilded balls, after the fashion of the pendent decorations of the older French example. The shaft of the pole is painted white and blue.

London boasted several May-poles before the days of Puritanism. Many parishes vied with each other in the height and adornment of their own. One famed pole stood in Basing-lane, near St Paul's Cathedral, and was in the time of Stow kept in the hostelry called Gerard's Hall. 'In

the high-roofed hall of this house,' says he, 'sometime stood a large fir pole, which reached

to the roof thereof,—a pole of forty feet long, and fifteen inches about, fabled to be the justing staff of Gerard the Giant.' A carved wooden figure of this giant, pole in hand, stood over the gate of this old inn, until March 1852, when the whole building was demolished for city improvements.

The most renowned London May-pole, and the latest in existence, was that erected in the Strand, immediately after the Restoration. Its history is altogether curious. The Parliament of 1644 had ordained that 'all and singular May-poles that are or shall be erected, shall be taken down,' and had enforced their decree by penalties that effectually carried out their gloomy desires. When the populace gave again vent to their May-day jollity in 1661, they determined on planting the tallest of these poles in the most conspicuous part of the Strand, bringing it in triumph, with drums beating, flags flying, and music playing, from Scotland Yard to the opening of Little Drury Lane, opposite Somerset House, where it was erected, and which lane was after termed 'May-pole Alley' in consequence. 'That stately cedar erected in the Strand, 134 feet high,' as it is glowingly termed by a contemporary author, was considered as a type of 'golden days' about to return with the Stuarts. It was raised by seamen, expressly sent for the purpose by the Duke of York, and decorated with three gilt crowns and other enrichments. It is frequently alluded to by authors. Pope wrote—

'Where the tall May-pole once o'erlooked the Strand.'

Our cut, exhibiting its features a short while before its demolition, is a portion of a long print by Vertue representing the procession of the members of both Houses of Parliament to St Paul's Cathedral to render thanks for the Peace of Utrecht, July 7th, 1713. On this occasion the London charity children were ranged on scaffolds, erected on the north side of

the Strand, and the cut represents a portion of one of these scaffolds, terminating at the opening

to Little Drury Lane, and including the pole, which is surmounted by a globe, and has a long streamer floating beneath it. Four years afterwards, this famed pole, having grown old and decayed, was taken down. Sir Isaac Newton arranged for its purchase with the parish, and it

was carried to Wanstead, in Essex, and used as a support to the great telescope (124 feet in length), which had been presented to the Royal Society by the French astronomer, M. Hugon. Its celebrity rendered its memory to be popularly preserved longer than falls to the lot of such

relics of old London, and an anonymous author, in the year 1800, humorously asks:—

‘What’s not destroy’d by Time’s relentless hand?
Where’s Troy?—and where’s the May-pole in the
Sstrand?’

Scattered in some of the more remote English villages are a few of the old May-poles. One still does duty as the supporter of a weathercock in the churchyard at Pendleton, Manchester; others might be cited, serving more ignoble uses than they were originally intended for. The custom of dressing them with May garlands, and dancing around them, has departed from utilitarian England, and the jollity of old country customs given way to the ceaseless labouring monotony of commercial town life. The same thing occurs abroad as at home, except in lonely districts as yet unbroken by railways, and our concluding illustration is derived from such a locality. Between Munich and Salzburg are many quiet villages, each rejoicing in its May-pole; that we have selected for engraving is in the middle of the little village of St Egydien, near Salzburg. It is encircled by garlands, and crowned with a May-bush and flags. Beneath the garlands are figures dressed in the ordinary peasant costume, as if ascending the pole; they are large wooden dolls, dressed in linen and cloth clothing, and nailed by hands and knees to the pole. It is the custom here to place such figures, as well as birds, stags, &c., up the poles. In one instance a stag-hunt is so represented. The pole thus decorated remains to adorn the village green, until a renovation of these decorations takes place on the yearly May festival.

MAY, AS CELEBRATED IN OLD ENGLISH POETRY.

Our mediæval forefathers seem to have cherished a deep admiration for nature in all her forms; they loved the beauty of her flowers, and the song of her birds, and, whenever they could, they made their dwellings among her most picturesque and pleasant scenery. May was their favourite month in the year, not only because it was the time at which all nature seemed to spring into new life, but because a host of superstitions, dating from remote antiquity, were attached to it, and had given rise to many popular festivals and observances. The poets especially loved to dwell on the charms of the month of May. ‘In the season of April and May,’ says the minstrel who sang the history of the Fitz-Warines, ‘when fields and plants become green again, and everything living recovers virtue, beauty, and force, hills and vales resound with the sweet songs of birds, and the hearts of all people, for the beauty of the weather and the season, rise up and gladden themselves.’ The month of May is celebrated in the earliest attempts at English lyric poetry (*Wright’s Specimens of Lyric Poetry of the Reign of Edward I.*, p. 45), as the season when ‘it is pleasant at day-break,’—

‘In May hit murgeth when hit dawes;’

and

‘Blosmes bredeth on the bowes,’

37

The ‘Romance of Kyng Alisaunder,’ as old, apparently, as the beginning of the fourteenth century, similarly speaks of the pleasantness of May (for it must be kept in mind that the old meaning of the word *merry* was pleasant)—

‘Mery time it is in May;
The foules syngeth her lay;
The knightes loveth the tornay;
Maydens so dauneen and thay play.’—(l. 5,210, in
Weber.)

And the same poet alludes in another place (l. 2,547) to the melody of the birds—

‘In tyme of May, the nyghtyngale
In wode makith miry gale (*pleasant melody*);
So doth the foules grete and smale,
Som on hulle, som on dale.’

Much in the same tone is the ‘merry’ month celebrated in the celebrated ‘Romance of the Rose,’ which we will quote in the translation made by our own poet Chaucer. After alluding to the pleasure and joy which seemed to pervade all nature, after its recovery from the rigours of winter, now that May had brought in the summer season, the poet goes on to say that—

‘—than bycometh the ground so proude,
That it wole have a newe shroude,
And makith so quaynt his robe and faire,
That it had hewes an hundred payre
Of gras and flouris, ynde (*blue*) and pers (*grey*),
And many hewes ful dyvers:
That is the robe I mene, ivis (*truly*),
Through which the ground to preisen is.

The briddes, that haven lefte her song,
While thei han suffrid eold so strong
In wedres gryl and derk to sight,
Ben in May for the sonne bright
So glade, that they shewe in syngyng
That in her hertis is sueth lykyn (*pleasure*),
That they mote syngen and be light,
Than doth the nyghtyngale hir myght
To make noyse and syngen blythe,
Than is blisful many sithe (*times*)
The chelaundre (*goldfinch*) and the papyngay
Than young folk entenden ay
For to ben gay and amorous;
The tyme is than so saverous.

Hard is his hart that loveth nought
In May, whan al this mirth is wrought;
Whan he may on these braunches here
The smale briddes syngen elere.’

The whole spirit of the poetry of mediæval England is embodied in the writings of Chaucer, and it is no wonder if we often find him singing the praises of May. The daisy, in Chaucer’s estimate, was the prettiest flower in that engaging month—

‘How have I thanne suche a eondieion,
That of al the floures in the mede
Thanne love I most these floures white and rede,
Suehe as men callen daysyes in our toun.
To hem have I so grete affeeioun,
As I seyde erst, whanne comen is the May,
That in my bed ther daweth (*dawns*) me no day
That I nam (*am not*) uppe and walkyng in the mede,
To seen this floure ayein (*against*) the sunne sprede
Whan it up-ryseth erly by the morwe;
That blisful sight softeneh al my sorwe.’

Prologue to Legend of Goode Women.

Chaucer more than once introduces the feathered minstrels welcoming and worshipping the month

577

of May; as, for an instance, in his 'Court of Love,' where robin redbreast is introduced at the 'lectorn,' chaunting his devotions—

"Hail now," quoth he, "o fresh sason of May,
Our moneth glad that singen on the spray!
Hail to the floures, red, and white, and blewes,
Which by their vertue maketh our lust newe!"

And so again in 'The Cuckow and the Nightingale,' when the poet sought the fields and groves on a May morning—

"There sat I downe among the faire floures,
And sawe the birdes trippe out of hir boures,
There as they rested hem alle the night;
They were so joyful of the dayes light,
They gan of May for to done honourcs.'

It is the season which puts in motion people's hearts and spirits, and makes them active with life. 'For,' as we are told in the same poem—

"—every true gentle herte free,
That with him is, or thinketh for to be,
Againe May now shal have some stering (*stirring*)
Or to joye, or elles to some mourning,
In no season so muche, as thinketh me.
For when they may here the birdes singe,
And see the floures and the leaves springe,
That bringeth into hertes remembraunce
A manner ease, medled (*mixed*) with grevaunce,
And lustie thoughtes full of grete longinge.'

May, in fact, was the season which was to last for ever in heaven, according to the idea expressed in the inscription on the gate of Chaucer's happy 'park'—

"Through me men gon into the blisful place
Of hertes, hele and dedly, woundes cure;
Through me men gon into the welle of grace,
There grene and lusty May shal ever endure.'

Chaucer's Assembly of Fowles.

In the 'Court of Love,' when the birds have concluded their devotional service in honour of the month, they separate to gather flowers and branches, and weave them into garlands—

"Thus sange they alle the service of the feste,
And that was done right early, to my dome (*as I judged*);
And forth goeth al the court, both moste and leste,
To feche the floures freshe, and braunche, and blome;
And namely (*especially*) hawthorn brought both
page and grome,
With freshe garlandes party blew and white;
And than rejoysen in their grete delight,
Eek eche at other threw the floures bright,
The primerose, the violete, and the gold' (*the mari-gold*).

The practice of going into the woods to gather flowers and green boughs, and make them into garlands on May morning, is hardly yet quite obsolete, and it is often mentioned by the other old poets, as well as by Chaucer. At the period when we learn more of the domestic manners of our kings and queens, in the sixteenth and seventeenth centuries, we find even royalty following the same custom, and rambling in the fields and woods at daybreak to fetch home 'the May.' So in Chaucer's 'Knights Tale,' it was on a May morning that—

"Arcite, that is in the court ryal
With Theseus, his squyer principal,

578

Is risen, and loketh on the mery day.
And for to doon his observance to May,
Remembryng of the poynt of his desire,
He on his courser, stertyng as the fire,
Is riden into feeldes him to pleye,
Out of the court, were it a mile or tweye.
And to the grove, of which that I yow tolde,
By aventure his wey he gan to holde,
To make him a garland of the greves,
Were it of woodewynde or hawthorn leves;
And lowde he song agens the sonne scheene.'

MAY-DAY CAROL.

Two or three years ago we obtained the following song or carol from the mouths of several parties of little girls in the parish of Debden, in Essex, who on May morning go about from house to house, carrying garlands of different sizes, some large, with a doll dressed in white in the middle, which no doubt represents what was once the Virgin Mary. All who sing it, do so with various readings, or rather with corruptions, and it was only by comparing a certain number of these different versions, that we could make it out as intelligible as it appears in this text:

'I, been a rambling all this night,
And sometime of this day;
And now returning back again,
I brought you a garland gay.
A garland gay I brought you here,
And at your door I stand;
'Tis nothing but a sprout, but 'tis well budded out,
The works of our Lord's hand.
So dear, so dear as Christ lov'd us,
And for our sins was slain,
Christ bids us turn from wickedness,
And turn to the Lord again.'

Sometimes a sort of refrain is sung after each verse, in the following words:

'Why don't you do as we have done,
The very first day of May;
And from my parents I have come,
And would no longer stay.'

This is evidently a very old ballad, dating probably from as far back as the time of Elizabeth, when, according to the puritanical moralists, it was the custom for the youths of both sexes to go into the fields and woods on May eve, and remain out all night, returning early in the morning with green branches and garlands of flowers. The doll representing the Virgin Mary perhaps refers us back to a still older period. The puritans have evidently left their mark upon it, and their influence is still more visible in a longer version of it, preserved in a neighbouring parish, that of Hitchin, in Hertfordshire, which was communicated to Hone's *Every Day Book*, as sung in 1823 by the men in that parish. This also was, we believe, the case a few years ago in Debdenham parish, where the girls have only taken it up at a comparatively recent period. The following is the Hitchin version:

'Remember us poor Mayers all,
And thus we do begin
To lead our lives in righteousness,
Or else we die in sin.

We have been rambling all this night,
And almost all this day,
And now returned back again,
We have brought you a branch of May.

A branch of May we have brought you,
And at your door it stands ;
It is but a sprout, but it's well budded out
By the work of our Lord's hands.

The hedges and trees they are so green,
As green as any leek,
Our Heavenly Father he watered them
With heavenly dew so sweet.

The heavenly gates are open wide,
Our paths are beaten plain,
And, if a man be not too far gone,
He may return again.

The life of man is but a span,
It flourishes like a flower ;
We are here to-day, and gone to-morrow,
And we are dead in one hour.

The moon shines bright, and the stars give a light,
A little before it is day ;
So God bless you all, both great and small,
And send you a joyful May !

The same song is sung in some other parishes in the neighbourhood of Debenham, with further variations, which show us, in a curious and interesting manner, the changes which such popular records undergo in passing from one generation to another. At Thaxted, the girls wave branches before the doors of the inhabitants, but they seem to have forgotten the song altogether.

May-day Festivities in France.

In some parts of France, before the Revolution, it was customary to celebrate the arrival of May-day by exhibitions, in which the successors of William of Guienne and Abelard contended for the golden violet. The origin of these miniature Olympics is traced back to the year 1323, when seven persons of rank invited all the troubadours of Provence to assemble at Toulouse the first of May of the year following. Verses were then recited ; and amidst much glee, excitement, and enthusiasm, Arnauld Vidal de Castelraudari, contemporary with Deguileville and Jean de Meung, bore off the first prize.

Every succeeding year was accompanied by similar competitions, and so profitable did the large concourse of people from the neighbouring countries become to the good burghesses of Toulouse, that at a later period, the 'Jeux Floraux,' as they were called, were conducted at their expense, and the prizes provided by the coffers of the city.

In 1540, Clémence Isaure, a lady of rank, and a patroness of the belles lettres, bequeathed the great bulk of her fortune for the purpose of perpetuating this custom, by providing golden and silver flowers of different design and value as rewards for the successful. It may be imagined with what enthusiasm the French people attended these lively meetings, where the gay sons of the South repeated their glowing praises of love, beauty, and knightly worth, in the soft numbers of the *langue d'oc*.

It may not be uninteresting that, in 1694, 'les Jeux Floraux' were continued by order

of the Grand Monarque, when forty members (being the same number as that of the Académie Française) were elected into an academy for the purpose of having the fêtes conducted with more splendour and regularity. The academicians' office was to preside at the feasts, decide who were the victors, and distribute the rewards.

When I was quite a child, I went with my mother to visit her relatives at a small town in the South of France. We arrived about the end of April, when the spring had fully burst forth, with its deep blue sky, its balmy air, its grassy meadows, its flowering hedges and trees already green. One morning I went out with my mother to call upon a friend : when we had taken a few steps, she said :

'To-day is the first of May ; if the customs of my childhood are still preserved here, we shall see some "Mays" on our road.'

'Mays,' I said, repeating a word I heard for the first time, 'what are they ?'

My mother replied by pointing to the opposite side of the place we were crossing :

'Stop, look there,' she said ; 'that is a May.'

Under the gothic arch of an old church porch a narrow step was raised covered with palms. A living being, or a statue—I could not discern at the distance—dressed in a white robe, crowned with flowers, was seated upon it ; in her right hand she held a leafy branch ; a canopy above her head was formed of garlands of box, and ample draperies which fell on each side encircled her in their snowy folds. No doubt the novelty of the sight caused my childish imagination much surprise, my eyes were captivated, and I scarcely listened to my mother, who gave me her ideas on this local custom ; ideas, the simple and sweet poetry of which I prefer to accept instead of discussing their original value.

'Because the month of May is the month of spring,' said she, 'the month of flowers, the month consecrated to the Virgin, the young girls of each *quartier* unite to celebrate its return. They choose a pretty child, and dress her as you see ; they seat her on a throne of foliage, they crown her and make her a sort of goddess ; she is May, the Virgin of May, the Virgin of lovely days, flowers, and green branches. See, they beg of the passers-by, saying, "For the May." People give, and their offerings will be used some of these days for a joyous festival.'

When we came near, I recognised in the May a lovely little girl I had played with on the previous day. At a distance I thought she was a statue. Even close at hand the illusion was still possible ; she seemed to me like a goddess on her pedestal, who neither distinguished nor recognised the profane crowd passing beneath her feet. Her only care was to wear a serene aspect under her crown of periwinkle and narcissus, laying her hand on her olive sceptre. She had, it is true, a gracious smile on her lips, a sweet expression in her eyes ; but these, though charming all, did not seem to seek or speak to any in particular ; they served as an adornment to her motionless physiognomy, lending life to the statue, but neither voice nor affections. Was it coquetry in so young a child thus studying to

gain admiration? I know not, but to this day I can only think of the enchantment I felt in contemplating her. An older sister of hers came forward as a collector, saying, 'For the

MAY-QUEEN IN THE SOUTH OF FRANCE.

May.' My mother stopped, and drawing some money from her purse, laid it on the china saucer that was presented; as for myself, I took a handful of sous, all that I could find in my pocket, and gave them with transport; I was too young to appreciate the value of my gift, but I felt the exquisite pleasure of giving.

In passing through the town we met with several other 'Mays,' pretty little girls, perhaps, but not understanding their part; always restless, arranging their veils, touching their crowns, talking, eating sweetmeats, or weary, stiff, half asleep, with an awkward, displeasing attitude. None was the May, the representative of the joyous season of sweet and lovely flowers, but my first little friend.

[That there was a ceremony resembling this in England long ago has already been mentioned. It is thus adverted to by Browne, in *Britannia's Pastorals*—

'As I have seene the Lady of the May
Set in an harbour — — —
Built by the May-pole, where the jocund swains
Dance with the maidens to the bagpipe's straines,
580

When envious night commands them to be gone,
Call for the merry yongsters one by one,
And for their well performance some disposes,
To this a garland interweve with roses;
To that a carved hooke, or well wrought scrip;
Gracing another with her cherry lip:
To one her garter, to another then
A handkerchiefe cast o're and o're again;
And none returneth empty, that hath spent
His paynes to fill their rural merriment.']

Robin Hood Games.

Mingling with the festivities of May-day, there was a distinct set of sports, in great vogue in the fifteenth and sixteenth centuries, meant to represent the adventures of the legendary Robin Hood. They have been described with (it is believed) historical fidelity in Mr Strutt's novel of *Queen Hoo Hall*, where the author has occasion to introduce them as performed by the dependents and servants of an English baron. (We abridge a little in the matter of costume.)

'In the front of the pavilion, a large square was staked out, and fenced with ropes, to prevent the crowd from pressing upon the performers, and

interrupting the diversion; there were also two bars at the bottom of the enclosure, through which the actors might pass and repass, as occasion required. Six young men first entered the square, clothed in jerkins of leather, with axes upon their shoulders like woodmen, and their heads bound with large garlands of ivy leaves, intertwined with sprigs of hawthorn. Then followed six young maidens of the village, dressed in blue kirtles, with garlands of primroses on their heads, leading a fine sleek cow decorated with ribbons of various colours interspersed with flowers; and the horns of the animal were tipped with gold. These were succeeded by six foresters equipped in green tunics, with hoods and hosen of the same colour; each of them carried a bugle-horn attached to a baldrick of silk, which he sounded as he passed the barrier. After them came Peter Lanaret, the baron's chief falconer, who personified *Robin Hood*; he was attired in a bright grass-green tunic, fringed with gold; his hood and his hosen were parti-coloured, blue and white; he had a large garland of rose-buds on his head, a bow bent in his hand, a sheaf of arrows at his girdle, and a bugle-horn depending from a baldrick of light blue tarrantine, embroidered with silver; he had also a sword and a dagger, the hilts of both being richly embossed with gold. Fabian, a page, as *Little John*, walked at his right hand; and Cecil Cellerman, the butler, as *Will Stukely*, at his left. These, with ten others of the jolly outlaw's attendants who followed, were habited in green garments, bearing their bows bent in their hands, and their arrows in their girdles. Then came two maidens, in orange-coloured kirtles with white court-pies, strewing flowers, followed immediately by the *Maid Marian*, elegantly habited in a watchet-coloured tunic reaching to the ground. She was supported by two bride-maidens, in sky-coloured rochets girt with crimson girdles. After them came four other females in green court-pies, and garlands of violets and cowslips. Then Sampson, the smith, as *Friar Tuck*, carrying a huge quarter-staff on his shoulder; and Morris, the mole-taker, who represented *Much*, the miller's son, having a long pole with an inflated bladder attached to one end. And after them the *May-pole*, drawn by eight fine oxen, decorated with scarfs, ribbons, and flowers of divers colours, and the tips of their horns were embellished with gold. The rear was closed by the hobby-horse and the dragon. When the *May-pole* was drawn into the square, the foresters sounded their horns, and the populace expressed their pleasure by shouting incessantly until it reached the place assigned for its elevation. During the time the ground was preparing for its reception, the barriers of the bottom of the enclosure were opened for the villagers to approach and adorn it with ribbons, garlands, and flowers, as their inclination prompted them. The pole being sufficiently ornamented with finery, the square was cleared from such as had no part to perform in the pageant, and then it was elevated amidst the reiterated acclamations of the spectators. The *woodmen* and the *milk-maidens* danced around it according to the rustic fashion; the measure was played by Peretto

Cheveritte, the baron's chief minstrel, on the *bagpipes*, accompanied with the pipe and tabor, performed by one of his associates. When the dance was finished, Gregory the jester, who undertook to play the *hobby-horse*, came forward with his appropriate equipment, and frisking up and down the square without restriction, imitated the galloping, curvetting, ambling, trotting, and other paces of a horse, to the infinite satisfaction of the lower classes of the spectators. He was followed by Peter Parker, the baron's ranger, who personated a *dragon*, hissing, yelling, and shaking his wings with wonderful ingenuity; and to complete the mirth, Morris, in the character of *Much*, having small bells attached to his knees and elbows, capered here and there between the two monsters in the form of a dance; and as often as he came near to the sides of the enclosure, he cast slyly a handful of meal into the faces of the gaping rustics, or rapped them about their heads with the bladder tied at the end of his pole. In the meantime, Sampson, representing *Friar Tuck*, walked with much gravity around the square, and occasionally let fall his heavy staff upon the toes of such of the crowd as he thought were approaching more forward than they ought to do; and if the sufferers cried out from the sense of pain, he addressed them in a solemn tone of voice, advising them to count their beads, say a paternoster or two, and to beware of purgatory. These vagaries were highly palatable to the populace, who announced their delight by repeated plaudits and loud bursts of laughter; for this reason they were continued for a considerable length of time; but Gregory, beginning at last to falter in his paces, ordered the dragon to fall back. The well-nurtured beast, being out of breath, readily obeyed, and their two companions followed their example, which concluded this part of the pastime. Then the *archers* set up a target at the lower part of the green, and made trial of their skill in a regular succession. *Robin Hood* and *Will Stukely* excelled their comrades, and both of them lodged an arrow in the centre circle of gold, so near to each other that the difference could not readily be decided, which occasioned them to shoot again, when *Robin* struck the gold a second time, and *Stukely's* arrow was affixed upon the edge of it. *Robin* was therefore adjudged the conqueror; and the prize of honour, a garland of laurel embellished with variegated ribbons, was put upon his head; and to *Stukely* was given a garland of ivy, because he was the second best performer in that contest. The pageant was finished with the archery, and the procession began to move away to make room for the villagers, who afterwards assembled in the square, and amused themselves by dancing round the *May-pole* in promiscuous companies, according to the ancient custom.

In Scotland, the *Robin Hood* games were enacted with great vivacity at various places, but particularly at Edinburgh; and in connection with them were the sports of the *Abbot of Inobedience*, or *Unreason*, a strange half serious burlesque on some of the ecclesiastical arrangements then prevalent, and also a representation called the *Queen of May*. A recent historical

work* thus describes what took place at these whimsical merry-makings: 'At the approach of May, they (the people) assembled and chose some respectable individuals of their number—very grave and reverend citizens, perhaps—to act the parts of Robin Hood and Little John, of the Lord of Inobedience or the Abbot of Unreason, and "make sports and jocosities" for them. If the chosen actors felt it inconsistent with their tastes, gravity, or engagements, to don a fantastic dress, caper and dance, and incite their neighbours to do the like, they could only be excused on paying a fine. On the appointed day, always a Sunday or holiday, the people assembled in their best attire and in military array, and marched in blithe procession to some neighbouring field, where the fitting preparations had been made for their amusement. Robin Hood and Little John robbed bishops, fought with pinners, and contended in archery among themselves, as they had done in reality two centuries before. The Abbot of Unreason kicked up his heels and played antics, like a modern pantaloon.' Maid Marian also appeared upon the scene, in flower-sprout kirtle, and with bow and arrows in hand, and doubtless slew *hearts* as she had formerly done *harts*. Mingling with the mad scene were the morris-dancers, with their fantastic dresses and jingling bells. So it was until the Reformation, when a sudden stop was put to the whole affair by severe penalties imposed by Act of Parliament.

MAY 2.

St Athanasius, 373.

ST ATHANASIUS.

The life of this holy man presents a long detail of troubles which he underwent as Patriarch of Alexandria, in consequence of his strenuous opposition to the heresies introduced by Arius, and through the injustice of several of the degenerate successors of the Emperor Constantine. It is not necessary in this place to cite the particulars of the story; suffice it, that Athanasius was six times driven from his see, had to take refuge in deserts from the wrath of his enemies, was often placed on trial under false charges, seldom knew any peace during nearly forty years, yet never swerved for a moment from the primitive orthodoxy, and finally died in his charge at Alexandria, with the esteem of all who truly knew him, and has ever since been one of the most venerated fathers of the church. There must have been a vast amount of quiet energy in St Athanasius. He always bore himself meekly; but he never yielded. The creed which bears his name, embodies his view of the mystery of the Trinity, but is believed to have been compiled in the fifth century.

Rogation Days.

The Rogation Days are the Monday, Tuesday, and Wednesday before Holy Thursday, or Ascension Day. It is said that Claudius Mamercus, Bishop of Vienna, about the year 452,

* *Domestic Annals of Scotland*, i. 7.

ordered these days to be observed as public fasts, with solemn processions and supplications, on the occasion of some great public calamity. The arrangement, meeting with approbation, was imitated and repeated, till at length it became a law in the Latin Church that they should be observed annually, with processions and supplications, to secure a blessing on the fruits of the earth, and the temporal interests of men. These three days are called *Rogation Days*, the week *Rogation Week*, and the Sunday preceding, *Rogation Sunday*, from the *Rogations* or *Litanies* chanted in the processions. The Church of England, at the Reformation, discontinued the public processions, but ordered these days to be observed as private fasts. There is no special office, or order of prayer, or even a single collect appointed in the prayer-book for the Rogation Days; but in the book of Homilies we find a Homily, divided into three parts, specially designed for the improvement of these three days.

Gange Days.

The Gange Days are the same as the three Rogation Days, and were so called from the ancient custom of perambulating the boundaries of the parish on those days, the name being derived from the Saxon word *gangan*, to go. In Roman Catholic times, this perambulation was a matter of great ceremony, attended with feasting and various superstitious practices. Banners, which the parish was bound to provide, hand-bells, and lights enlivened the procession. At one place the perambulators would stop to feast; and at another assemble round a cross to be edified with some godly admonition, or the legend of some saint or martyr, and so complete the circuit of the parish. When processions were forbidden, the useful part of these perambulations was retained. By the injunctions of Queen Elizabeth it was required that, in order to retain the perambulation of the circuits of parishes, the people should once in the year, at the time accustomed, with the curate and substantial men of the parish, walk about the parishes, as they were accustomed, and at their return to the church make their common prayers. And the curate in these perambulations was at certain convenient places to admonish the people to give thanks to God, as they beheld his benefits, and for the increase and abundance of the fruits upon the face of the earth. The 104th Psalm was appointed to be said on these occasions, and the minister was to inculcate such sentence as, '*Cursed be he which translateth the bounds and doles of his neighbour.*'

The writer recollects one of these perambulations in his earlier days. The vicar of the parish was there; so were the 'substantial men,' and a goodly number of juveniles too; but the admonitions, the psalm, and the sentences, were certainly not. It was a merry two days' ramble through all sorts of odd places. At one time we entered a house by the door, and left it by a window on the opposite side; at another, men threw off their clothes to cross a canal at a certain point; then we climbed high walls, dived through the thickest part of a wood, and left everywhere in our track the conspicuous capitals, R. P. Buns and beer were served out to those

who were lucky enough, or strong enough, to get them. And at one spot a large flat stone was pointed out, which had a hole in the middle; and the oracles of the day assured us that the parson used to have his head thrust into that hole, with his heels uppermost, for refusing to bury a corpse found there.

PAROCHIAL PERAMBULATIONS.

The ancient custom of perambulating parishes in Rogation week had a two-fold object. It was designed to supplicate the Divine blessing on the fruits of the earth; and to preserve in all classes of the community a correct knowledge of, and due respect for, the bounds of parochial and individual property. It appears to have been derived from a still older custom among the ancient Romans, called Terminalia, and Ambarvalia, which were festivals in honour of the god Terminus and the goddess Ceres. On becoming a Christian custom the heathen rites and ceremonies were of course discarded, and those of Christianity substituted. It was appointed to be observed on one of the Rogation days which were the three days next before Ascension Day. These days were so called from having been appropriated in the fifth century by Mamerus, Bishop of Vienna, to special prayer and fasting on account of the frequent earthquakes which had destroyed, or greatly injured vegetation. Before the Reformation parochial perambulations were conducted with great ceremony. The lord of the manor, with a large banner, priests in surplices and with crosses, and other persons with hand-bells, banners and staves, followed by most of the parishioners, walked in procession round the parish, stopping at crosses, forming crosses on the ground, 'saying or singing gospels to the corn,' and allowing 'drinkings and good cheer';* which was remarkable, as the Rogation days were appointed fasts. From the different practices observed on the occasion the custom received the various names of *processioning*, *rogationing*, *perambulating*, and *ganging the boundaries*; and the week in which it was observed was called *Rogation week*; *Cross week*, because crosses were borne in the processions; and *Grass week*, because the Rogation days being fasts, vegetables formed the chief portion of diet.

At the Reformation, the ceremonies and practices deemed objectionable were abolished, and only 'the useful and harmless part of the custom retained.' Yet its observance was considered so desirable, that a homily was prepared for the occasion; and injunctions were issued requiring that for 'the perambulation of the circuits of parishes, the people should once in the year, at the time accustomed, with the rector, vicar, or curate, and the substantial men of the parish, walk about the parishes, as they were accustomed, and at their return to the church make their common prayer. And the curate, in their said common perambulations, was at certain convenient places to admonish the people to give thanks to God (while beholding of his benefits), and for

the increase and abundance of his fruits upon the face of the earth, with the saying of the 103rd Psalm. At which time also the said minister was required to inculcate these, or such like sentences, Cursed be he which translateth the bounds and doles of his neighbour; or such other order of prayers as should be lawfully appointed.* In strict accordance with these directions, we find that 'the judicious Richard Hooker,' who is allowed by all parties to be a faithful exemplar of a true English Churchman, duly observed the custom of perambulation. 'He would by no means,' says his biographer, 'omit the customary time of procession, persuading all, both rich and poor, if they desired the preservation of love, and their parish rights and liberties, to accompany him in his perambulation, and most did so; in which perambulation he would usually express more pleasant discourse than at other times, and would then always drop some loving and facetious observations to be remembered against the next year, especially by the boys and young people; still inclining them and all his present parishioners to meekness, and mutual kindnesses, and love; because *love thinks not evil, but covers a multitude of infirmities.*'†

Those engaged in the processions usually had refreshments provided for them at certain parts of the parish, which, from the extent of the circuit of some parishes, was necessary; yet the cost of such refreshment was not to be defrayed by the parish, nor could such refreshment be claimed as a custom from any particular house or family. But small annuities were often bequeathed to provide such refreshments. In the parish of Edgcott, Buckinghamshire, there was about an acre of land, let at £3 a year, called 'Gang Monday Land,' which was left to the parish officers to provide cakes and beer for those who took part in the annual perambulation of the parish. At Clifton Reynes, in the same county, a bequest of land for a similar purpose directs that 'one small loaf, a piece of cheese, and a pint of ale, should be given to every married person, and half a pint of ale to every unmarried person, resident in Clifton, when they walked the parish boundaries in Rogation week.' A certain estate in Husborne Crawley, Bedfordshire, has to pay £4 on Rogation Day, once in seven years, to defray the expense of perambulating, and keeping up the boundaries of the parish.

Although perambulations were not to be at the cost of parishes, yet they were justified in maintaining the ancient circuit, though opposed by the owners of property over which they proceeded. Burns cites an instance in which this case was tried against the parishioners of Rudham, who, in their perambulation, had broken down two gates and a fence; and the court decided in favour of the parishioners, stating: 'parishioners may well justify the going over any man's land in the perambulation, according to their usage, and abate all nuisances in their way.'

This necessity or determination to perambulate along the old track often occasioned curious

incidents. If a canal had been cut through the boundary of a parish, it was deemed necessary that some of the parishioners should pass through the water. Where a river formed part of the boundary line, the procession either passed along it in boats, or some of the party stripped and swam along it, or boys were thrown into it at

customary places. If a house had been erected on the boundary line, the procession claimed the right to pass through it. A house in Buckinghamshire, still existing, has an oven only passing over the boundary line. It was customary in the perambulations to put a boy into this recess to preserve the integrity of the boundary line.

BEATING THE BOUNDS IN LONDON.

It was considered a good joke by the village lads, who, therefore, became ambitious of the honour, and, as they approached the house, generally settled by lot who should be the hero for the year. On one occasion, as the procession entered the house, they found the mistress just about to bake, and the oven full of blazing fagots. The boys, on seeing the flame issuing from the oven-mouth, exclaimed—'Tom Smith is the boy to go into the oven!' Poor Tom, expecting to be baked alive, uttered a fearful scream, and ran off home as fast as his legs could carry him. Another boy was made to scramble over the roof of the oven, and the boundary right was thus deemed sufficiently maintained. A more ludicrous scene occurred in London about the beginning of the present century. As the procession of churchwardens, parish officers, &c., followed by a concourse of cads, were perambulating the parish of St George's, Hanover-square, they came to the part of a street where a nobleman's coach was standing just across the boundary line. The carriage was empty, waiting for the owner, who was in the opposite house.

The principal churchwarden, therefore, himself a nobleman, desired the coachman to drive out of their way. 'I won't!' said the sturdy coachman; 'my lord told me to wait here, and here I'll wait, till his lordship tells me to move!' The churchwarden coolly opened the carriage door, entered it, passed out through the opposite door, and was followed by the whole procession, eads, sweeps, and scavengers. The last perambulation I witnessed was in 1818, at a small village in Derbyshire. It was of rather a degenerate character. There was no clergyman present, nor anything of a religious nature in the proceedings. The very name *processioning* had been transmuted (and not inaptly) into *possessioning*. The constable, with a few labourers, and a crowd of boys, constituted the procession, if such an irregular company could be so called. An axe, a mattock, and an iron erow, were carried by the labourers, for the purpose of demolishing any building or fence which had been raised without permission on the 'waste ground,' or for which the 'acknowledgment' to the lord of the manor had not been paid. At

a small hamlet, rejoicing in the name of 'Wicked Nook,' some unfortunate rustic had unduly built a pig-sty. Poor grunty was turned adrift, and his luckless shed levelled to the ground. A new cottage, or mud hut, not much better than the pig's shed, was allowed to remain, on the cottager's wife proffering the 'acknowledgment.' At various parts of the parish boundaries, two or three of the village boys were 'bumped'—that is, a certain part of the person was swung against a stone wall, a tree, a post, or any other hard object which happened to be near the parish boundary. This, it will scarcely be doubted, was an effectual method of recording the boundaries in the memory of these *battering-rams*, and of those who witnessed this curious mode of registration.

The custom of perambulating parishes continued in some parts of the kingdom to a late period, but the religious portion of it was generally, if not universally, omitted. The custom has, however, of late years been revived in its integrity in many parishes, and certainly such a perambulation among the bounties of creation affords a Christian minister a most favourable opportunity for awakening in his parishioners a due sense of gratitude towards Him who maketh the 'sun to shine, and the rains to descend upon the earth, so that it may bring forth its fruit in due season.'

The Bezant.

On Monday in Rogation week was held, in the town of Shaftesbury or Shaston, in Dorsetshire, a festival called the Bezant, a festival so ancient, that no authentic record of its origin exists.

The Borough of Shaftesbury stands upon the brow of a lofty hill, having an extensive view over the vale of Blackmore. Until lately, from its situation, it was so deficient in water, that its inhabitants were indebted for a supply of this necessary article of life to the little hamlet of Enmore Green, which lies in the valley below. From two or three wells or tanks, situate in the village, the water with which the town was provided was carried up the then precipitous road, on the backs of horses and donkeys, and sold from door to door.

The Bezant was an acknowledgment on the part of the Mayor, Aldermen and Burgesses of the Borough, to the Lord of the Manor of Mitcombe, of which Enmore Green forms a part, for the permission to use this privilege; no charter, or deed, however, exists among their archives, as to the commencement of the custom, neither are there any records of interest connected with its observance, beyond the details of the expenses incurred from year to year.

On the morning of Rogation Monday, the Mayor and Aldermen accompanied by a lord and lady, appointed for the occasion, and by their mace-bearers carrying the Bezant, went in procession to Enmore Green. The lord and lady performed at intervals, as they passed along, a traditional kind of dance, to the sound of violins. The steward of the manor meeting them at the green, the mayor offered for his acceptance, as the representative of his lord,—The Bezant,—a calf's head, uncooked,—a gallon of ale, and two penny

loaves, with a pair of gloves edged with gold lace, and gave permission to use the wells, as of old, for another year. The steward, having accepted the gifts, retaining all for his own use, except the Bezant, which he graciously gave back, accorded the privilege, and the ceremony ended. The procession returned as it came, and the day, which was one of universal enjoyment to all classes of the population, was brought to a conclusion, according to the hospitable fashion of our country, in a dinner given by the Corporation to their friends.

The Bezant, which gave its name to the festival, is somewhat difficult to describe. It consisted of a sort of trophy, constructed of ribbons, flowers, and peacock's feathers, fastened to a frame, about four feet high, round which were hung jewels, coins, medals, and other matters of more or less value, lent for the purpose by persons interested in the matter, and many traditions prevailed of the exceeding value to which, in earlier times, it sometimes reached, and of the active part which persons of the highest rank in the neighbourhood took in its annual celebration.*

Latterly, however, the festival sadly degenerated, and in the year 1830, the Town and the Manor passing into the hands of the same proprietor, it ceased altogether, and is now one of those many ancient observances, not without their interest to the antiquary, which are numbered with the past. If this had not happened, however, the necessity for it no longer exists. The ancient Borough is no longer indebted to the lord of the manor for its water, for, through the liberality of the Marquis of Westminster, its present owner, the town is bountifully supplied with the purest water, from an artesian well sunk at his expense.

Born.—William Camden, English historical antiquary, 1551, London; William, Earl of Shelburne, first Marquis of Lansdowne, statesman, 1737; Rev. Robert Hall, Baptist preacher, 1764, Arnsby; John Galt, novelist, 1779, Irvine, Ayrshire; Sir John Malcolm, author of *History of Persia*, &c., 1769.

Died.—Leonardo da Vinci, painter, 1520, Fontainebleau; Sir Horace Vere, Lord Tilbury, military commander, 1635, London; James Sharpe, Archbishop of St Andrew's, assassinated, 1679; Sir George Mackenzie, at one time King's Advocate for Scotland, miscellaneous writer, 1691, Oxford; Antoine Yves Goguet, author of a work on the Origin of Laws, 1758; William, Earl of Shelburne, first Marquis of Lansdowne, statesman, 1805; Hester Lynch Salusbury, Madame Piozzi, 1821, Clifton; William Beckford, author of *Vathek*, 1844, Bath.

WILLIAM BECKFORD.

Mr Beckford succeeded at an early period of life to immense wealth. He possessed great talents, and had cultivated and refined his mind to a singular degree. While still a mere youth, he surprised the world with his striking eastern tale of *Vathek*. The recluse nature of his life, in the indulgence of tastes equally magnificent and capricious, made him the subject of much remark and discussion. It seemed nothing to him

* Bezant being the recognised name of an ancient gold coin, we may presume that the ceremony took its name from such a piece of money being originally rendered to the lord of the manor.—*Ed.*

to take down a palace with which he was dissatisfied, and to build up a new one. The dash of whim which foreigners attribute to the English character, appeared in him to reach the highest point compatible with sanity.

The memoirs of Mr Beckford, published after his death, convey an anecdote, representing his whimsical character as not unsusceptible of having a certain 'method in it,' and that to a very fair purpose.

'I once,' said he, 'shut myself up at Fonthill to be out of the way of a lady—an ungallant thing to any lady on earth but her with whom it occurred. You must well remember the late Duchess of Gordon, as she was the continual talk of the town for her curious mercenary ways, and mode of entrapping men with her brood of daughters. I could have served no other lady so, I hope—I never enjoyed a joke so much. At that time everybody talked of Mr Beckford's enormous wealth—everything about me was exaggerated proportionately. I was in consequence a capital bait for the Duchess—so she thought; I thought very differently. She had been told that even a dog kennel at Fonthill was a palace—my house a Potosi. What more upon earth could be desired by a managing mother for a daughter? I might have been aged and imbecile—no matter, such is fashion's philosophy. I got a hint from town of her intention to surprise me with her hard face at Fonthill—a sight I could gladly dispense with. I resolved to give her a useful lesson. Fonthill was put in order for her reception, with everything I could devise to receive her magnificently—not only to receive her, but to turn the tables upon her for the presumption she had that I was to become the plaything of her purposes. The splendour of her reception must have stimulated her in her object. I designed it should operate in that manner. I knew her aim—she little thought so. My arrangements being made, I ordered my *major-domo* to say, on the Duchess's arrival, that it was unfortunate—everything being arranged for her Grace's reception, Mr Beckford had shut himself up on a sudden, a way he had at times, and that it was more than his place was worth to disturb him, as his master only appeared when he pleased; forbidding interruption, even if the King came to Fonthill. I had just received a large lot of books—nothing could be more opportune. I had them removed to the rooms of which I had taken possession. The Duchess conducted herself with wonderful equanimity, and seemed much surprised and gratified at what she saw, and the mode of her reception—just as I desired she should be, quite on tiptoe to have me for a son-in-law. When she got up in the morning, her first question was, "Do you think Mr Beckford will be visible to-day?"

"I cannot inform your Grace—Mr Beckford's movements are so very uncertain—it is possible. Would your Grace take an airing in the park—a walk in the gardens?"

'Everything which Fonthill could supply was made the most of, whetting her appetite to her purpose still more. My master of the ceremonies to the Duchess did not know what to make of his master, the Duchess, or his own position. "Per-

haps Mr Beckford will be visible to-morrow?" was the Duchess's daily consolation. To-morrow, and to-morrow, and to-morrow, came and went—no Mr Beckford. I read on, determined not to see her. Was it not serving a woman of such a coarse nature quite right?

'She remained seven or eight days, magnificently entertained, and then went away without seeing him. She was very angry, and said of him in her rage things too scandalous to have escaped any woman's lips but her own. Think of such a woman's vengeance—such a woman as the Duchess was, who never suffered anything to stand in the way of her objects!'

MAY 3.

Invention (or discovery) of the Holy Cross.

INVENTION OF THE CROSS.

On this day is commemorated the discovery—through the zeal of the Empress Helena, the mother of Constantine the Great—of the cross on which the Saviour was crucified. The statement usually given is that Helena went to Jerusalem, and there compelled the Jews to bring from their concealment and give up to her this and other crosses, and that its identity was established by a miracle: the body of a dead man was placed on each of the crosses, and when it touched the true one, the dead man immediately came to life. The cross was entrusted to the charge of the bishop of Jerusalem, and soon became an object of pilgrimage, and a source of profit, for small pieces were cut from it and given to the pilgrims, who made liberal offerings. In this manner the whole cross would naturally have been soon used up; but such a result was averted: it was found that the wood of the cross possessed the power of reproducing itself, and that, how much soever was cut off, the substance was not diminished. On the capture of Jerusalem, in 614, the true cross is said to have been carried into Persia, where it remained a few years, until it was recovered by the conquests of Heraclius, who carried it into Jerusalem on his back, in solemn procession: an event which is commemorated in the Roman Catholic church by the festival of the exaltation of the cross on the 14th of September, commonly called Holyrood-day. When the Empress Helena discovered the cross, she also obtained possession of the four nails with which Christ's body was attached to it, the spear which pierced his side, and other articles. Of the four nails, two were placed in the imperial crown, one was at a later period brought by Charlemagne to France, and a fourth was thrown into the Adriatic to calm the waters of that stormy sea.

The history of these and of the other numerous relics worshipped by the Roman Catholics, forms a curious picture of mediæval belief. The reformer Calvin published a book on the subject at a time when relic worship was at its height, which was translated into English by Stephen Wythers, in a quaint little black-letter volume, entitled 'A very profitable Treatise, made by M.

Jhon Calvyne, declarynge what great profit might come to al Christendome, yf there were a regester made of all Sainctes' Bodies, and other Reliques,' printed in 1561. Calvin declares that so great a quantity of fragments of the true cross were scattered among the Christian churches in his time, that they would load a large ship; and that, whereas the original cross could be carried by one man, it would take three hundred men to support the weight of the existing fragments of it. The largest pieces of it were then preserved in the Sainte Chapelle, at Paris; at Poitiers; and at Rome. Calvin gives a list of the numerous relics connected with Christ's personal history which were preserved in his time, of which the following are a few examples:—The manger in which he was laid was preserved in the church of Sancta Maria Maggiore, at Rome; the cloth in which he was wrapped when born, in the church of St Paul, at Rome, and at San Salvador, in Spain; his cradle (!) and the shirt made for him by his mother, at Rome.

Following the events of the Saviour's life on earth, we find the jugs which held the water he turned into wine at the marriage at Cana, in considerable numbers, at Pisa, at Ravenna, Cluny, Angers, San Salvador, &c., and some of the wine into which the water was turned was preserved at Orleans; the table on which the last supper was served was shown in the church of St John Lateran; some of the bread he ate on that occasion, at San Salvador; the knife with which the paschal lamb was cut, at Treves; the cup in which he administered the wine, in a church near Lyons, as well as in an Augustine abbey in the district of the Albigeois; the platter on which the paschal lamb was placed, in three places; the towel with which he wiped the apostles' feet, at Rome, and at Aix; the palm-branch which he held in his hand when he entered Jerusalem, at San Salvador; a portion of the earth on which he stood when he raised Lazarus, in another church; and, in another, a portion of a fish which St. Peter caught, broiled, and offered to Jesus. In relation to the passion, the fragments of the cross, as already observed, were innumerable; and the nails were very numerous—one is still shown at Cologne; the spear with which his side was pierced had been greatly multiplied, for it is known to have been preserved in seven different places, among which were Rome, and the Sainte Chapelle, in Paris; in the latter locality was preserved the largest portion of the crown of thorns, fragments of which, however, were largely scattered, and many abbeys and churches were glad to boast of a single thorn; the seamless garment was shown at Treves, at Argenteuil, and at other places; and the dice with which the soldiers played for it, at Treves, and at San Salvador. Some of Christ's blood was shown in several places; and the celebrated French printer and reformer, Henry Stephens, mentions as shown in his time (the middle of the sixteenth century), in one church in France, a phial of glass containing some of Christ's tears, and in another church one full of his breath! His shoes were preserved at Rome. Hardly less numerous were the relics connected with the Virgin Mary. The slippers

of her husband, St Joseph, were preserved at Treves; one of Mary's shifts was shown at Aix-la-Chapelle; many of her clothes were shown in different places; one of her combs was exhibited at Rome, and another at Besançon; and they showed her wedding ring (!) at Perugia; but the most popular relic of the Virgin Mary was her milk, portions of which were shown in almost as many places as fragments of the true cross. There were not a few samples of it in England. We might fill many pages with the often ridiculous relics of the innumerable saints of the Romish calendar. Some of the stones with which St Stephen was stoned were shown at Florence, at Arles, and at Vigaud, in Languedoc. The Augustine monks at Poitiers worshipped one of the arrows with which St Sebastian was slain, or at least made other people worship it; and there was another at Lambesc, in Provençe. St Sebastian had become multiplied in a very extraordinary manner, for his body was found in four places, and his head in two others, quite independent of his body; while the grey friars at Angers exhibited his brains, which, when the case was broken up in the religious wars, were found to have been turned into a stone. St Philip appears to have had three feet—at least, a foot of St Philip's was found in three several places. Materialism in religion was carried to such a point, that the celebrated monastery of Mont St Michael, in Normandy, exhibited the sword and buckler with which the archangel Michael combated the spirit of evil, and we believe they were preserved there till the period of the great French Revolution; and one of the relic-mongers of earlier times is said to have exhibited a feather of the Holy Ghost—supposing, no doubt, from the pictorial representations, that the sacred spirit was a real pigeon.

The multiplicity of the same object seems sometimes to have embarrassed the exhibitors of relics. There is an old story of a rather sceptical visitor of sacred places in France, in the earlier part of the sixteenth century, to whom in a certain monastery the skull of John the Baptist was shown, on which he remarked, with some surprise, 'Ah! the monks of such a monastery showed me the skull of John the Baptist yesterday.' 'True,' said the monastic exhibitor, not disconcerted, 'but those monks only possess the skull of the saint when he was a young man, and ours was his skull when he was advanced in years and wisdom.' All the clergy, however, did not possess this peculiar style of ingenuity; but some labour was bestowed in sustaining the earlier doctrine, much enlarged in its application, that *all* holy relics possessed the miraculous power of multiplying themselves.

Born.—Nicolas Machiavelli, statesman and political writer, 1469, *Florence*; Dean Humphry Prideaux, theological writer, 1648, *Padstow*; William Windham, English statesman, 1750, *London*; Augustus Frederiek Kotzebue, German poet, 1761, *Weimar*.

Died.—Dr Isaac Dorislaus, assassinated, 1649; Pope Benedict XIV., 1758; George Psalmanazar, miscellaneous writer, 1763; James Morison, hygeist, 1840; Thomas Hood, poet, 1845, *London*.

MACHIAVELLI.

What an unenviable immortality is that of Nicolas Machiavelli! Out of his surname has been coined a synonyme for treacherous craft; and some antiquaries hold with Butler, in *Hudibras*, that—'Nick Machiavel . . . gave his name to our Old Nick.' But like many other high coloured, popular beliefs, that of Machiavelli's unmitigated diabolism does not endure critical scrutiny.

Machiavelli was born in Florence, in 1469, of an ancient, but not wealthy family. He received a liberal education, and in his 29th year he was appointed secretary to the Ten, or committee of foreign affairs for the Florentine Republic. His abilities and penetration they quickly discerned, and despatched him from time to time on various and arduous diplomatic missions to the courts and camps of doubtful allies and often enemies. The Florentines were rich and weak, and the envy of the poor and strong; and to save themselves from sack and ruin, they had to trim adroitly between France, Spain, Germany, and neighbouring Italian powers. Machiavelli proved an admirable instrument in such difficult business; and his despatches to Florence, describing his own tactics and those of his opponents, are often as fascinating as a romance, while furnishing authentic pictures of the remorseless cruelty and deceit of the statesmen of his age.

In 1512 the brothers Giuliano and Giovanni de Medici, with the help of Spanish soldiers, re-entered Florence, from which their family had been expelled in 1494, overthrew the government, and seized the reins of power. Machiavelli lost his place, and was shortly after thrown into prison, and tortured, on the charge of conspiring against the new régime. In the meanwhile Giovanni was elected Pope by the name of Leo X.; and knowing the Medicæan love of literature, Machiavelli addressed a sonnet from his dungeon to Giuliano, half sad, half humorous, relating his sufferings, his torture, his annoyance in hearing the screams of the other prisoners, and the threats he had of being hanged. In the end a pardon was sent from Rome by Leo X., to all concerned in the plot, but not until two of Machiavelli's comrades had been executed.

Machiavelli now retired for several years to his country-house at San Casciano, about eight miles from Florence, and spent his days in literary pursuits. His exile from public life was not willing, and he longed to be useful to the Medici. Writing to his friend Vettori at Rome, 10th December, 1513, he says, 'I wish that these Signori Medici would employ me, were it only in rolling a stone. They ought not to doubt my fidelity. My poverty is a testimony to it.' In order to prove to them 'that he had not spent the fifteen years in which he had studied the art of government in sleeping or playing,' he commenced writing *The Prince*, the book which has clothed his name with obloquy. It was not written for publication, but for the private study of the Medici, to commend himself to them by proving how thoroughly he was master of the art and craft of Italian statesmanship.

About 1519 the Medici received him into

favour, and drew him out of his obscurity. Leo X. employed him to draw up a new constitution for Florence, and his eminent diplomatic skill was brought into play in a variety of missions. Returning to Florence, after having acted as spy on the Emperor Charles Fifth's movements during his descent upon Italy, he took ill, and doctoring himself, grew worse, and died on the 22nd of June, 1527, aged fifty-eight. He left five children, with little or no fortune. He was buried in the church of Santa Croce, where, in 1787, Earl Cowper erected a monument to his memory.

The Prince was not published until 1532, five years after Machiavelli's death, when it was printed at Rome with the sanction of Pope Clement VII.; but some years later the Council of Trent pronounced it 'an accursed book.' *The Prince* is a code of policy for one who rules in a State where he has many enemies; the ease, for instance, of the Medici in Florence. In its elaboration, Machiavelli makes no account of morality, probably unconscious of the principles and scruples we designate by that name, and displays a deep and subtle acquaintance with human nature. He advises a sovereign to make himself feared, but not hated; and in cases of treason to punish with death rather than confiscation, 'for men will sooner forget the execution of their father than the loss of their patrimony.' There are two ways of ruling, one by the laws and the other by force: 'the first is for men, the second for beasts;' but as the first is not always sufficient, one must resort at times to the other, 'and adopt the ways of the lion and the fox.' The chapter in which he discusses, 'in what manner ought a prince to keep faith?' has been most severely condemned. He begins by observing, that everybody knows how praiseworthy it is for a prince to keep his faith, and practise no deceit; but yet, he adds, we have seen in our own day how princes have prospered who have broken their faith, and artfully deceived their rivals. If all men were good, faith need never be broken; but as they are bad, and will cheat you, there is nothing left but to cheat them when necessary. He then cites the example of Pope Alexander VI. as one who took in everybody by his promises, and broke them without hesitation when he thought they interfered with his ends.

It can hardly excite wonder, that a manual of statesmanship written in such a strain should have excited horror and indignation throughout Europe. Different theories have been put forth concerning *The Prince* by writers to whom the open profession of such deceitful tactics has seemed incredible. Some have imagined, that Machiavelli must have been writing in irony, or with the purpose of rendering the Medici hateful, or of luring them to destruction. The simpler view is the true one: namely, that he wrote *The Prince* to prove to the Medici what a capable man was resting idly at their service. In holding this opinion, we must not think of Machiavelli as a sinner above others. He did no more than transcribe the practice of the ablest statesmen of his time into luminous and forcible language. Our feelings of repugnance at

his teaching would have been incomprehensible, idiotic, or laughable to them. If they saw any fault in Machiavelli's book, it would be in its free exposure of the secrets of statecraft. Unquestionably, much of the odium which gathered round the name of Machiavelli arose from that cause. His posthumous treatise was conveniently denounced for its immorality by men whose true aversion to it sprang from its exposure of their arts. The Italians, refined and defenceless in the midst of barbarian covetousness and power, had many plausible excuses for Machiavellian policy; but every reader of history knows, that Spanish, German, French, and English statesmen never hesitated to act out the maxims of *The Prince* when occasion seemed expedient. If Machiavelli differed from his contemporaries, it was for the better. Throughout *The Prince* there flows a hearty and enlightened zeal for civilization, and a patriotic interest in the welfare of Italy. He was clearly a man of benevolent and honourable aims, but without any adequate idea of the wrongfulness of compassing the best ends by evil means. The great truth, which our own age is only beginning to incorporate into statesmanship, that there is no policy, in the long run, like honesty, was far beyond the range of vision of the rulers and diplomatists of the 15th and 16th centuries.

Machiavelli was a writer of singularly nervous and concise Italian. As a dramatist he takes high rank. His comedy of *Mandragola* is spoken of by Lord Macaulay as superior to the best of Goldoni, and inferior only to the best of Molière. It was performed at Florence with great success; and Leo X. admired it so much, that he had it played before him at Rome. He also wrote a *History of Florence*, which is a lively and graphic narrative, and an *Art of War*, which won the praise of so competent a judge as Frederick the Great of Prussia. These and other of his works form eight and ten volumes octavo in the collected editions.

AUGUSTUS FREDERICK KOTZEBUE.

Kotzebue, as a dramatic author, stands in some such relation to Schiller, the first master of the tragic art in his own country, as that in which our own Beaumont and Fletcher stand to Shakespeare. He had great fertility of invention, and the number of plays, on all subjects, which he favoured the world with, was in itself a marvel. He possessed considerable skill in producing tragic effects; but these were rather the results of exaggeration and sickly sentimentalism, of exhibiting things and events extraordinary and revolting, than of genuine human catastrophes, replete with fine passion, with high-souled interests, and happy exhibition of character. Hence that opposition between Kotzebue on the one hand, and Schiller and Goethe on the other, during the short time when all three together were doing their utmost at Weimar.

Nothing can convey a better idea of the sort of exaggeration which is chargeable upon Kotzebue, than an extract from an *autobiography* of the first fifty years of his life, which he published at Vienna in 1811; 'Come forth, ye magic

images of my happy childhood. The recollection of you is scarcely connected with my present self. Come forth, ye lovely shadows, and delude my fancy; ascend like a thin vapour from the ocean of the past, and let those sweet hours float once again before my eyes. I stand as on the brink of the stream of time, watching the current as it bears away my flowers; I see them already yonder on the summit of a wave, about to be engulfed and to disappear for ever. Let me catch that last glimmer. Do you see that boy who hangs with fixed eyes upon his mother's lips, while on a winter's evening she is reading some good book to him and to his sister? Such wast thou! See him again, making a table of his stool, and a seat of his foot-stool, while he is devouring a beloved romance, and leaves his ball and hobby-horse neglected in a corner. Such wast thou!'

Yes, so it seems, such was Kotzebue, even at fifty years old. But his life, if we can read it aright through such a haze, was eventful and full of interest.

He was born at Weimar, May 3, 1761. He proved a precocious child—precocious alike for sensibility and the gifts of an author. Unfortunately for him, and perhaps for the world, he had only a mother to direct him. He studied *Don Quixote* and *Robinson Crusoe*, and at the age of seven proposed to his future aunt in a letter. He stood three hours with a friend, in the snow and cold, outside the house of a sick girl, watching the window-blind, and burst into tears to see the shadow of a spoon administering physic. At this time, also, he wrote a comedy of one page in length—subject, *The Milkmaid and the Two Huntsmen*, which, the reader will surmise, was never printed. He describes himself as stealing under the stage of the theatre at Weimar, and hiding behind the drum, when he could not obtain admittance in the regular way; and he made himself a little wooden theatre, and pushed his figures hither and thither with wires, blowing *semen lycopodii* through a quill into a candle to produce lightning.

And so the child was father of the man. This taste for dramatic writing, and for setting up little theatres wherever he went, grew upon him; and when he was a student of the Jena Academy, in 1779, his first tragedy was acted in the private theatre. 'I succeeded,' he relates, 'in persuading our company to perform my drama, and Wolf, the deceased chapel-master, was so obliging as to compose a very fine *adagio* for it. This was played while the hero of the piece was at his prayers, and was by far the best thing in the whole performance. I myself personated the prince; but, alas! when at last I ought to have been shot, the pistol missed fire. Against this emergency, however, my murderer was prepared, as he had armed himself also with a dagger; but I was so eager to die, that I fell at sight of the pistol, before I had time to perceive the disaster. The hero, however, threw himself upon my prematurely dead body, and, equally resolved to kill as I was to die, gave me several desperate stabs with the dagger. The curtain dropped, and the audience was very sparing of their applause.'

When about nineteen, Kotzebue returned to

Weimar, and was admitted an advocate, but digressed continually to more congenial pursuits than those of the law. At length, in 1781, unforeseen good fortune placed him high in the world. Frederick William Von Bawr, who, after leading an active military life for some years, had entered the service of Catherine of Russia, in 1769, and risen to eminence, gave Kotzebue his unbounded patronage; and though the general died two years after the poet's arrival at St Petersburg, he contrived in that time to procure him in marriage a woman of condition, and have him appointed president of the government-magistracy for the province of Esthland. On a visit to Weimar, in 1790, Kotzebue lost his wife, and, to heal his grief, made a stay in Paris; after which he returned, and married another Russian lady. Then he came, for some reason or other, to reside in Weimar, and accepted the direction of the Imperial Theatre at Vienna. He was often in trouble on account of his writings; and soon after this, possibly on account of something he had written,—for he himself professes to be ignorant of the true cause,—he was entrapped into Russia, and banished to Siberia. He must have had influential friends about court, for he did not long remain in exile, being soon completely restored to the Emperor Paul's favour, and 'he slept in the imperial palace of Michailoff on the night of the 11th March, 1801, which transferred to Alexander the imperial dignity,' without, he maintains, any suspicion of what was to happen. He was further honoured in the new reign. Then, for some private reasons, after travelling in Italy some time, he finally settled in Mannheim, where his advocacy of Russian interests raised such a cry against him, as a traitor to his country and base spy, that conspiracies were formed to remove him; and on that same 11th day of March, in 1819, a young student, of excellent character previously, called on him in private, and stabbed him with a dagger. He may have been honestly advocating his own principles and opinions, influenced more or less by gratitude to the country which had done so much for him; yet, it must be confessed, much of his connection with Russia, and his own accounts of it, seem involved in obscurity.

Of Kotzebue's works, perhaps the best comedy is *False Shame*, and his principal tragic performance is *Gustavus Vasa*. *Misanthropy and Repentance*, a somewhat strange medley, is familiar to the English stage under the title of *The Stranger*; so have other pieces of his been introduced in England, with other titles and in various disguises. His interest is by no means confined to a limited range of subjects. We have scenes laid among the negroes, scenes laid in Russia, Spanish scenes, English scenes, comedies, tragedies, farces, in profuse abundance from Kotzebue's too prolific brain.

MORISON, THE 'HYGEIST.'

Died at Paris, May 3, 1840, James Morison, who styled himself 'Hygeist,' and was for many years notorious for his extensively advertised 'vegetable medicines.' It will be a surprise to many to know that Morison was a man of good family (in Aberdeenshire), and that he had

attained a competence by honourable merchandise in the West Indies before he came before the world in the capacity by which he has acquired fame. His own story, which there is no particular reason to discredit, always was that his own sufferings from bad health, and the cure he at length effected upon himself by vegetable pills, were what made him a disseminator of the latter article. He had found the pills to be the 'only rational purifiers of the blood.' By their use he had at fifty renewed his youth. His pains were gone; his limbs had become supple. He enjoyed sound sleep and high spirits. He feared neither heat nor cold, dryness nor humidity. Sensible that all this had come of the simple use of two or three pills at bed-time and a glass of lemonade in the morning, how should he be excused if he did not do his endeavour to diffuse the same blessing among his fellow-creatures? People may smile at this statement; but we can quite believe in its entire sincerity.

The pills were splendidly successful, giving a revenue of £60,000 to Government during the first ten years. Mr Morison had attained the age of seventy at his death, since which time his central institution, called the British College of Health, in the New-road, London, has continued to be carried on.

THOMAS HOOD.

The births and deaths of many very notable men have to be left in this chronicle uncommenced on; but the too early departure of Thomas Hood is associated with such feelings, that it cannot be passed over. Hood came of a family in humble life at Dundee, in Scotland, whence his father migrated to London. The young genius tried bookselling, which was his father's profession—also engraving—but was thrown out of all regular occupation by weak health. While little more than a stripling, he contributed prose and poetical pieces to periodical works, and soon attracted attention by his singular gift of humour. Of his *Comic Annual* and other subsequent publications, it is unnecessary to give a list. They have made for themselves a place in higher records than this. All have relished the exquisite drollery of Hood's writings; but it requires to be insisted on that they have qualities in addition, distinguishing them from nearly all such productions. There is a wonderful play of fancy over all that Hood wrote, and few writers surprise us so often with fine touches of humane feeling. It is most sad to relate that the life of this gifted man was clouded by misfortunes, mainly arising from his infirm health, and that he sunk into the grave, in poverty, at the age of forty-seven. In personal character he was extremely amiable; but his external demeanour was that of a grave and rather melancholy man.

SHAKSPEAREAN RELICS.

On the 3rd of May 1769, the freedom of Stratford-upon-Avon was presented to Mr Garrick, by the Mayor, Aldermen, and Burgesses, enclosed in the far-famed cassolette or casket, made from the veritable mulberry tree planted by Shak-

speare. This precious relic is beautifully carved with the following devices:—In the front, Fame is represented holding the bust of Shakspeare, while the three Graces crown it with laurel. On the back, Garrick is delineated as King Lear, in the storm scene. On the sides are emblematical figures representing Tragedy and Comedy; and the corners are ornamented with devices of Shakspeare's works. The feet are silver griffins with garnet eyes. The carving was executed by Davis, a celebrated artist of Birmingham, at the expense of fifty-five pounds.

It was purchased by the late Mr Mathews, the eminent comedian, at Mrs Garrick's sale. In 1835, it was again brought to the hammer, when Mr Mathews's library and curiosities were sold. Amidst a cloud of bidders, anxious to secure so matchless a relic, it was knocked down to Mr George Daniel, of Islington, at forty-seven guineas.

In September 1769, the Mayor and Corporation of Stratford-upon-Avon presented to Garrick a cup, about eleven inches in height, carved from the same far-famed mulberry tree. Garrick held this cup in his hand at the Jubilee, when he sang the beautiful song composed by himself for that occasion, commencing—

'Behold this fair goblet, 'twas carved from the tree,
Which, O my sweet Shakspeare, was planted by thee;

As a relic, I kiss it, and bow at the shrine;
What comes from thy hand must be ever divine!

All shall yield to the mulberry tree;

Bend to thee,

Blest mulberry;

Matchless was he

Who planted thee;

And thou, like him, immortal shall be.'

After the death of Mrs Garrick, the cup was sold, under a decree of Chancery, at Christie's auction-rooms, and purchased by a Mr Johnson, who afterwards offered it for sale at the price of two hundred guineas.

MAY 4.

St Monica, widow, 387. St Godard, bishop, 1038.

Born.—Dr Francis Peck, English historical antiquary, 1692, *Stamford, Lincolnshire*; John James Audubon, ornithologist, 1782, *Louisiana*.

Died.—Edward, Prince of Wales, son of Henry VI., 1471, *Tewkesbury*; Ulysses Aldovrandi, naturalist, 1605; Louis XIII., King of France, 1643; Dr Isaac Barrow, eminent English divine, 1677; Sir James Thornhill, painter, 1734; Eustace Budgell, contributor to the *Speculator*, drowned in the Thames, 1737; Tippoo Sahib, Sultan of Mysore, killed at the siege of Seringapatam, 1799; Sir Robert Kerr Porter, traveller, artist, 1842, *St Petersburg*; Horace Twiss, miscellaneous writer, 1849.

AUDUBON.

One of those enthusiasts who devote themselves to one prodigious task, of a respectable, but not remunerative nature, and persevere in it till it, or their life, is finished. He was born of French parents, in the then French colony of Louisiana, in North America, and received a

good education at Paris. Settled afterwards by his father on a farm near Philadelphia, he married, engaged in trade, and occasionally cultivated a taste for drawing. Gradually, a love of natural history, and an intense relish for the enjoyment of forest life, led him away from commercial pursuits; and before he was thirty, we find him in Florida, with his rifle and drawing materials, thinking of nothing but how he might capture and sketch the numerous beautiful birds of his native country. At that time, there was a similar enthusiast in the same field, the quondam Scotch pedlar and poet, Alexander Wilson. They met, compared drawings, and felt a mutual respect. Wilson, however, saw in young Audubon's efforts the promise of a success beyond his own.

Years of this kind of life passed over. The stock of drawings increased, notwithstanding the loss at one time of two hundred, containing a thousand subjects, and in time the resolution of publishing was formed. He estimated that the task would occupy him fifteen more years, and he had not one subscriber; but, notwithstanding the painful remonstrances of friends, he persevered. In the course of his preparations, about 1828, he visited London, Edinburgh, and Paris. We remember him at the second of these cities, a hale man of forty-six, nimble as a deer, and with an aquiline style of visage and eye that reminded one of a class of his subjects; a frank, noble, natural man. Professor Wilson took to him wonderfully, and wrote of him, 'The hearts of all are warmed toward Audubon. The man himself is just what you would expect from his productions, full of fine enthusiasm and intelligence, most interesting in his looks and manners, a perfect gentleman, and esteemed by all who know him, for the simplicity and frankness of his nature.'

In 1830, he published his first volume, with ninety-nine birds, and one hundred plates. His birds were life-size and colour. The kings of England and France placed their names at the head of his subscription list. He was made a fellow of the Royal Society of London, and member of the Natural History Society of Paris.

In 1834, the second volume of the birds of America was published, and then Audubon went to explore the State of Maine, the shores of the Bay of Fundy, the Gulf of St Lawrence, and the Bay of Labrador. In the autumn of 1834, the second volume of *Ornithological Biography* was published in Edinburgh. People subscribed for the birds of America, with a view to posterity, as men plant trees. Audubon mentions a nobleman in London, who remarked, when subscribing, 'I may not live to see the work finished, but my children will.' The naturalist, though a man of faith, hope, and endurance, seems to have been afflicted by this remark. 'I thought—what if I should not live to finish my work?' But he comforted himself by his reliance on Providence. After the publication of his third volume, the United States government gave him the use of an exploring vessel, and he went to the coast of Florida and Texas. Three years after this, the fourth volume of his engravings, and the fifth of his descriptions, were published. He had now

435 plates, and 1,165 figures, from the eagle to the humming-bird, with many land and sea views.

Audubon never cultivated the graces of style. He wrote to be understood. His descriptions are clear and simple. He describes the mocking-bird with the heart of a poet, and the eye of a naturalist. His description of a hurricane proves that he never ceased to be a careful and accurate observer in the most agitating circumstances.

Audubon died at his home, near New York, on the 27th January, 1851.

SIR JAMES THORNHILL.

This artist was an example of those who are paid for their services, not according to the amount of genius shown, but according to the area covered. His paintings were literally estimated by the *square yard*, like the work of the bricklayer or plasterer. He generally painted the ceilings and walls of large halls, staircases, and corridors, and was very liberal in his supply of gods and goddesses. Among his works were—the eight pictures illustrating the history of St Paul, painted in chiaroscuro on the interior of the cupola of St Paul's Cathedral; the princess's chamber at Hampton Court; the staircase, a gallery, and several ceilings at Kensington Palace; a hall at Blenheim; the chapel at Wimpole, in Cambridgeshire; and the ceiling of the great hall at Greenwich Hospital. For the pictures at St Paul's he was paid at the rate of forty shillings per square yard. Walpole, in his 'Anecdotes of Painters,' makes the following observations on the petty spirit in which the payments to Thornhill were made:—'High as his reputation was, and laborious as his work, he was far from being generously rewarded for some of them; and for others he found it difficult to obtain the stipulated prices. His demands were contested at Greenwich; and though La Fosse received £2,000 for his work at Montague House, and was allowed £500 for his diet besides, Sir James could obtain but forty shillings a square yard for the cupola of St Paul's, and, I think, no more for Greenwich. When the affairs of the South Sea Company were made up, Thornhill, who had painted their staircase and a little hall, by order of Mr Knight, their cashier, demanded £1,500; but the directors, hearing that he had been paid only twenty-five shillings a yard for the hall at Blenheim, would allow no more. He had a longer contest with Mr Styles, who had agreed to give him £3,500 (for painting the saloon at Moor Park); but not being satisfied with the execution, a law-suit was commenced; and Dahl, Richardson, and others, were appointed to inspect the work. They appeared in court bearing testimony to the merit of the performance; Mr Styles was condemned to pay the money.' Notwithstanding this mode of paying for works of art by the square yard, Sir James, who was an industrious man, gradually acquired a handsome competency. Artists in our day, who seldom have to work upon ceilings, conduct their labours under easier bodily conditions than Thornhill. It is said that he was so long lying on his back while painting the great hall at

Greenwich Hospital, that he could never afterwards sit upright with comfort.

TAKING OF SERINGAPATAM.

On the 4th of May 1799, Seringapatam was taken, and the empire of Hyder Ally extinguished by the death of his son, the Sultan Tippoo Sahib. The storming of this great fortress by the British troops took place in broad day, and was on that account unexpected by the enemy. The commander, General Sir David Baird, led one of the storming parties in person, with characteristic gallantry, and was the first man after the forlorn hope to reach the top of the breach. So far, well; but when there, he discovered to his surprise a second ditch within, full of water. For a moment he thought it would be impossible to get over this difficulty. He had fortunately, however, observed some workmen's scaffolding in coming along, and taking this up hastily, was able by its means to cross the ditch; after which all that remained was simply a little hard fighting. Tippoo came forward with apparent gallantry to resist the assailants, and was afterwards taken from under a heap of slain. It is supposed he made this attempt in desperation, having just ordered the murder of twelve British soldiers, which he might well suppose would give him little chance of quarter, if his enemy were aware of the fact.

It was remarkable that, fifteen years before, Baird had undergone a long and cruel captivity in this very fort, under Tippoo's father, Hyder Ally. The hardships he underwent on that occasion were extreme; yet, amidst all his sufferings, he never for a moment lost heart, or ceased to hope for a release. He was truly a noble soldier. As with Wellington, his governing principle was a sense of *duty*. In every matter, he seemed to be solely anxious to discover *what was right to be done, that he might do it*. He was a Scotchman, a younger son of Mr Baird, of Newbyth, in East Lothian (born in 1757, died in 1829). His person was tall and handsome, and his look commanding. In all the relations of his life he was a most worthy man, his kindness of heart winning him the love of all who came in contact with him.

An anecdote of Sir David Baird's boyhood forms the key to his character. When a student at Mr Locic's Military Academy at Chelsea, where all the routine of garrison duty was kept up, he was one night acting as sentinel. A companion, older than himself, came and desired leave to pass out, that he might fulfil an engagement in London. Baird steadily refused—'No,' said he, 'that I cannot do; but, if you please, you may knock me down, and walk out over my body.*'

The taking of Seringapatam gave occasion for a remarkable exercise of juvenile talent in a youth of nineteen, who was studying art in the Royal Academy, and whose name appears in the obituary list at the head of this day. He was then simply Robert Ker Porter, but afterwards, as Sir Robert, became respectfully known for his *Travels in Persia*; while his two sisters Jane and Anna

* Theodore Hook's *Life of Sir David Baird*.

Maria, attained a reputation as prolific writers of prose fiction. There had been such a thing before as a *panorama*, or picture giving details of a scene too extensive to be comprehended from one point of view; but it was not a work entitled to much admiration. With marvellous enthusiasm this boy artist began to cover a canvas of two hundred feet long with the scenes attending the capture of the great Indian fort; and, strange to say, he had finished it in six weeks. Sir Benjamin West, President of the Royal Academy, got an early view of the picture, and pronounced it a miracle of precocious talent. When it was arranged for exhibition, vast multitudes both of the learned and the unlearned flocked to see it. 'I can never forget,' says Dr Dibdin, 'its first impression upon my own mind. It was as a thing dropped from the clouds,—all fire, energy, intelligence, and animation. You looked a second time, the figures moved, and were commingled in hot and bloody fight. You saw the flash of the cannon, the glitter of the bayonet, and the gleam of the falchion. You longed to be leaping from crag to crag with Sir David Baird, who is hallooing his men on to victory! Then again you seemed to be listening to the groans of the wounded and the dying—and more than one female was carried out swooning. The oriental dress, the jewelled turban, the curved and ponderous scimitar—these were among the prime favourites of Sir Robert's pencil, and he treated them with literal truth. The colouring was sound throughout; the accessories strikingly characteristic. . . . The public poured in thousands for even a transient gaze.*'

THE BEGGAR'S OPERA.

In the spring and early summer of 1728, the *Beggar's Opera* of Gay had its unprecedented run of sixty-two nights in the theatre of Lincoln's-Inn Fields. No theatrical success of Dryden or Congreve had ever approached this; probably the best of Shakspeare's fell far short of it. We learn from Spence, that the idea of a play, with malefactors amongst its characters, took its rise in a remark of Swift to Gay, 'What an odd, pretty sort of thing a Newgate pastoral might make.' And, Gay proceeding to work out the idea in the form of a comedy, Swift gave him his advice, and now and then a correction, but believed the piece would not succeed. Congreve was not so sure—he said it would either take greatly or be condemned extremely. The poet, who was in his fortieth year, and had hitherto been but moderately successful in his attempts to please the public, offered the play to Colley Cibber for the Drury Lane Theatre, and only on its being rejected there took it to Mr Rich, of the playhouse just mentioned, where it was presented for the first time on the 29th of January, 1727-8. Strange to say, the success of the piece was considered doubtful for the greater part of the first act, and was not quite determined till Polly sang her pathetic appeal to her parents,—

'Oh, ponder well, be not severe,
To save a wretched wife,
For on the rope that hangs my dear
Depends poor Polly's life.'

* *Reminiscences of a Literary Life*, i. 145.

Then the audience, completely captivated, broke out into an applause which established the success of the play. It has ever since been a stock piece of the British stage, notwithstanding questionable morality, and moderate literary merit both in the dialogue and the songs; the fifty beautiful airs introduced into it being what apparently has chiefly given it its hold upon the public. It is to be remarked, that in the same season the play was presented for at least twenty nights in succession at Dublin; and even into Scotland, which had not then one regular theatre, it found its way very soon after.

The author, according to usage, got the entire receipts of the third, sixth, ninth, and fifteenth nights, amounting in the aggregate to £693, 13s. 6d. In a letter to Swift, he takes credit for having 'pushed through this precarious affair without servility or flattery;' and when the play was published, Pope complimented him on not prefacing it with a dedication, thus deliberately foregoing twenty guineas (the established price of such things in those days). So early as the 20th of March, when the piece had only been acted thirty-six times, Mr Rich had profited to the extent of near four thousand pounds. So it might well be said that this play had made Rich *gay*, and Gay *rich*. Amongst other consequences of the *furor* for the play was a sad decline in the receipts at the Italian opera, which Gay had all along meant to rival. The wags had it that *that* should be called the *Beggars' Opera*.

The king, queen, and princesses came to see the *Beggar's Opera* on the twenty-first night of its performance. What was more remarkable, it was honoured on another night with the presence of the prime minister, Sir Robert Walpole, whose corrupt practices in the management of a majority in the House of Commons were understood to be glanced at in the dialogues of *Peachum* and *Lockit*. Sir Robert, whose good humour was seldom at fault, is said to have laughed heartily at *Lockit's* song:

'When you censure the age,
Be cautious and sage,
Lest the courtiers offended should be;
If you mention vice or bribe,
'Tis so fit to all the tribe,
Each cries—That was levelled at me;'

and so he disarmed the audience.

We do not hear much of any of the first actors of the *Beggar's Opera*, excepting Lavinia Fenton, who personated *Polly*. She was a young lady of elegant figure, but not striking beauty, a good singer, and of very agreeable conversation and manners. The performance of this part stood out conspicuous in its success, and brought her much notice. Her portrait was published in mezzotint; there was also a memoir of her hitherto obscure life. Her songs were printed on ladies' fans. The fictitious name became so identified with her, that her benefit was announced as *Polly's* night. One benefit having been given her on the 29th of April, when the *Beaux Stratagem* was performed, the public were so dissatisfied, that the *Beggar's Opera* had to be played for a second benefit to her on the 4th of May. The Duke of Bolton, a nobleman then in the prime of life, living apart from his wife,

became inflamed with a violent passion for Miss Fenton, and came frequently to see the play. There is a large print by Hogarth, representing the performance at that scene in Newgate, towards the end of the second act, where *Polly* kneels to *Peachum*, to intercede for her husband. There we see two groups of fashionable figures

in boxes raised at the sides of the stage; the Duke of Bolton is the nearest on the right hand side, dressed in wig, riband, and star, and with his eyes fixed on the kneeling *Polly*. At the end of the first season, his grace succeeded in inducing Miss Fenton to leave the stage and live with him, and when the opportunity arrived he married

THE BEGGAR'S OPERA.

her. She was the first of a series of English actresses who have been raised to a connexion with the peerage. Warton tells us that he knew her, and could testify to her wit, good manners, taste, and intelligence. 'Her conversation,' says he, 'was admired by the first characters of the

age, particularly the old Lord Bathurst and Lord Granville.'

Charles, third Duke of Bolton, who married Lavinia Fenton, died in 1754, without legitimate issue, though Miss Fenton had brought him before marriage several children, one of whom, a

Performers.—1. Macheath, Mr Walker; 2. Lockit, Mr Hall; 3. Peachum, Mr Hipplesey; 4. Lucy, Mrs Egleton; 5. Polly, Miss Fenton. Audience.—6. Duke of Bolton; 7. Major Pounceford; 8. Sir Robert Fagg; 9. Mr Rich; 10. Mr Cook, the Auctioneer; 11. Mr Gay; 12. Lady Jane Cook; 13. Anthony Henley, Esq.; 14. Sir Conyers D'Arcy; 15. Lord Gage; 16. Sir Thos. Robinson.

clergyman, was living in 1809, when Banks mentioned the circumstance in his *Extinct Peerage of England*. The Bolton peerage fell into this condition in 1794, on the death of Harry, the fifth duke, and thus ended the main line of the Pauletts, so noted as statesmen and public characters in the days of Elizabeth and the first Stuarts.

MAY 5.

St Hilary, Archbishop of Arles, 449. St Mauront, abbot, 706. St Avertin, confessor, about 1189. St Angelus, Carmelite friar, martyr, 1225. St Pius V., pope, 1572.

Ascension Day (1864).

Ascension Day, or Holy Thursday, is a festival observed by the Church of England in commemoration of the glorious ascension of the Messiah into heaven, 'triumphing over the devil, and leading captivity captive; 'opening the kingdom of heaven to all believers.' It occurs forty days after Easter Sunday, such being the number of days which the Saviour passed on earth after his resurrection. The observance is thought to be one of the very earliest in the church—so early, it has been said, as the year 68.

WELL-DRESSING AT TISSINGTON.

'Still, Dovedale, yield thy flowers to deck the fountains

Of Tissington upon its holyday;

The customs long preserved among the mountains

Should not be lightly left to pass away.

They have their moral; and we often may

Learn from them how our wise forefathers wrought,

When they upon the public mind would lay

Some weighty principle, some maxim brought

Home to their hearts, the healthful product of deep thought.'

Edwards.

Such was our feeling when our kind landlady at Matlock reminded us that on the following day, being Holy Thursday, or Ascension Day, there would take place the very ancient and well kept-up custom of dressing the wells of Tissington with flowers. She recommended us on no account to miss the opportunity, 'for the festivity draws together the rich and poor for many miles round,' said she; 'and the village looks so pretty you cannot but admire it.' It was one of those lovely May mornings when we started on our twelve miles drive which give you the anticipation of enjoyment; the bright sun was shining on the hills surrounding the romantically situated village of Matlock, the trees were already decked with the delicate spring tints of pale browns, olives, and greens, which form even a more pleasing variety to the artist's eye than the gorgeous colours of the dying autumn; whilst the air had the crispness of a sharp frost, which had hardened the ground during the night, making our horses step merrily along.

We were soon at Willersley, with its woods and walks overhanging the Derwent, and connected in its historical associations with two remarkable but very different characters, having

been formerly a possession of the Earl of Shrewsbury, the husband of that 'sharpe and bitter

THE HALL WELL, TISSINGTON, AS DRESSED FOR ASCENSION DAY.

shrewe,' as the Bishop of Lichfield calls her, who figured so prominently in the reigns of Mary and Elizabeth. Married no less than four times, she was the ancestress of some of the most noble families in England. At the early age of fourteen she became the wife of Robert Barley, Esq., the union not lasting much more than a year. Sir William Cavendish then aspired to her hand, by which the fine old seat and lands of Hardwicke Hall, of which she was the heiress, came into the Devonshire family. Sir William was a man of eminent talent, and the zeal he displayed in the cause of the Reformation recommended him highly to his sovereign. He was better fitted to cope with his wife's masculine understanding and violent temper than her last husband, the Earl of Shrewsbury, who gives vent to some very undignified remonstrances in a letter to the Earl of Leicester, dated 1585. The queen had, it seems, taken the part of her own sex, and ordered the earl an allowance of five hundred a-year, leaving all the lands in the power of his wife: 'Sith that her majestie hathe sett down this hard sentence againste me, to my perpetual infamy and dishonour, to be ruled and oberaunc by my wief, so bad and wicked a woman; yet her majestie shall see that I obey her commandement, though no curse or plage in the erthe cold be more grievous to me. It is to much to make me my wiefe's pencyoner, and sett me downe the demeanes of Chatsworth, without the house and

other landes leased.' From this time the pair lived separate; whilst the restless mind of the countess still pursued the political intrigues which had been the terror of her husband, and the aggrandizement of her family. She bought and sold estates, lent money, farmed, and dealt in lead, coals, and timber, patronized the wits of the day, who in return flattered but never deceived her, and died at the advanced age of eighty-seven, immensely rich, leaving the character behind her of being 'a proud, furious, selfish, and unfeeling woman.' She and the carl were for some time the custodians of the unfortunate Mary Queen of Scots, who passed a part of her imprisonment at Chatsworth, and at the old Hall at Hardwicke, which is now in ruins.

Very different from this has been the career of the present proprietor of beautiful Willersley, whose ancestor, Richard Arkwright, springing from a very humble origin, created his own fortune, and provided employment for thousands of his fellow-creatures by his improvements in cotton spinning. A history so well known needs no farther comment here, and we drive on through the Via Gemina, with its picturesque rocks and springing vegetation, gay with

'The primrose drop, the spring's own spouse,
Bright daisies, and the lips-of-cows,
The garden star, the queen of May,
The rose, to crown the holyday.' *Jonson.*

We cannot wonder that the Romans dedicated this lovely season to Flora, whom they depicted as strewing the earth with flowers, attended by her spouse, Zephyr; and in honour of whom they wove garlands of flowers, and carried branches of the newly-budded trees. From the entire disappearance of old customs, May comes upon us unwelcomed and unnoticed. In the writer's childhood a May-pole carried about in the hand was common even in towns; but now no children understand the pleasures of collecting the wayside and garden flowers, and weaving them into the magic circle. Still less applicable are L. E. L.'s beautiful lines:

'Here the Maypole rears its crest,
With the rose and hawthorn drest;
In the midst, like the young queen
Flower-crowned, of the rural green,
Is a bright-cheeked girl, her eye
Blue, like April's morning sky.
Farewell, cities! who could bear
All their smoke and all their care,
All their pomp, when wooed away
By the azure hours of May?
Give me woodbine-scented bowers,
Blue wreaths of the violet flowers,
Clear sky, fresh air, sweet birds, and trees,
Sights and sounds, and scenes like these.'

We could not but notice, in passing through the meadows near Brassington, those singular limestone formations which crop out of the ground in the most fantastic forms, resembling arrows and spires, and which the people designate by various names, such as Peter's Pike, Reynard's Tor. Then came the village of Bradbourne, and the pretty foot-bridge, close by the mill, crossing Bentley Brook, a little stream mentioned by Walton as 'full of good trout and grayling.' This bridge is the direct foot-road to

Tissington, at which 'village of the holy wells' we soon arrived, and found it decked out in all its bravery. It has in itself many points of attraction independent of the ornaments of the day; the little stream that runs through the centre, the rural-looking cottages and comfortable farmhouses, the old church, which retains the traces of Saxon architecture, and, lastly, the Hall, a fine old edifice, belonging to the ancient family of the Fitzherberts, who reside there, the back of which comes to the village, the front looking into an extensive, well-wooded park.

When we drove into the village, though it was only ten o'clock, we found it already full of people from many miles round, who had assembled to celebrate the feast: for such indeed it was, all the characteristics of a village wake being there in the shape of booths, nuts, gingerbread, and toys to delight the young. We went immediately to the church, foreseeing the difficulty there would be in getting a seat, nor were we mistaken; for, though we were accommodated, numbers were obliged to remain outside, and wait for the service peculiar to the wells. The interior of the church is ornamented with many monuments of the Fitzherbert family, and the service was performed in rural style by a band of violinists, who did their best to make melody. As soon as the sermon was ended, the clergyman left the pulpit, and marched at the head of the procession which was formed into the village; after him came the band; then the family from the hall, and their visitors, the rest of the congregation following; and a halt was made at the first of the wells, which are five in number, and which we will now attempt to describe.

The name of 'well' scarcely gives a proper idea of these beautiful structures: they are rather fountains, or cascades, the water descending from above, and not rising, as in a well. Their height varies from ten to twelve feet; and the original stone frontage is on this day hidden by a wooden erection in the form of an arch, or some other elegant design: over these planks a layer of plaster of Paris is spread, and whilst it is wet, flowers without leaves are stuck in it, forming a most beautiful mosaic pattern. On one, the large yellow field ranunculus was arranged in letters, and so a verse of scripture or of a hymn was recalled to the spectator's mind; on another, a white dove was sculptured in the plaster, and set in a groundwork of the humble violet; the daisy, which our poet Chaucer would gaze upon for hours together, formed a diaper work of red and white; the pale yellow primrose was set off by the rich red of the ribes; nor were the coral berries of the holly, mountain ash, and yew forgotten; these are carefully gathered and stored in the winter, to be ready for the May-day *fête*. It is scarcely possible to describe the vivid colouring and beautiful effect of these favourites of nature, arranged in wreaths, and garlands, and devices of every hue; and then the pure, sparkling water, which pours down from the midst of them unto the rustic moss-grown stones beneath, completes the enchantment, and makes this feast of the well-flowering one of the most beautiful of all the old customs that are left in 'merrie England.'

The groups of visitors and country people, dressed in their holiday clothes, stood reverently round, whilst the clergyman read the first of the three psalms appointed for the day, and then gave out one of Bishop Heber's beautiful hymns, in which all joined with heart and voice. When this was over, all moved forwards to the next well, where the next psalm was read and another hymn sung; the epistle and gospel being read at the last two wells. The service was now over, and the people dispersed to wander through the village or park, which is thrown open; the cottagers vie with each other in showing hospitality to the strangers, and many kettles are boiled at their fires for those who have brought the materials for a pic-nic on the green. It is welcomed as a season of mirth and good fellowship, many old friends meeting then to separate for another year, should they be spared to see the well-dressing again; whilst the young people enjoy their games and country pastimes with their usual vivacity.

The origin of this custom of dressing the wells is by some persons supposed to be owing to a fearful drought which visited Derbyshire in 1615, and which is thus recorded in the parish registers of Youlgrave: 'There was no rayne fell upon the earth from the 25th day of March till the 2nd day of May, and then there was but one shower; two more fell betweene then and the 4th day of August, so that the greatest part of this land were burnt upp, bothe corn and hay. An ordinary load of hay was at £2, and little or none to be gotte for money.' The wells of Tissington were flowing during all this time, and the people for ten miles round drove their cattle to drink at them; and a thanksgiving service was appointed yearly for Ascension Day. But we must refer the origin much further back, to the ages of superstition, when the pastimes of the people were all out-of-doors, and when the wakes and daytime dances were on the village green instead of in the close ball-room; it is certainly a 'popish relic,'—perhaps a relic of pagan Rome. Fountains and wells were ever the objects of their adoration. 'Where a spring rises or a river flows,' says Seneca, 'there should we build altars and offer sacrifices;' they held yearly festivals in their honour, and peopled them with the elegant forms of the nymphs and presiding goddesses. In later times holy wells were held in the highest estimation: Edgar and Canute were obliged to issue edicts prohibiting their worship. Nor is this surprising, their very appearance being symbolic of loveliness and purity. The weary and thirsty traveller gratefully hails the 'diamond of the desert,' whether it be in the arid plains of the East, or in the cooler shades of an English landscape. May was always considered the favourable month for visiting the wells which possessed a charm for curing sick people; but a strict silence was to be preserved both in going and coming back, and the vessel in which the water was carried was not to touch the ground. After the Reformation these customs were strictly forbidden, as superstitious and idolatrous, the cures which were wrought being doubtless owing to the fresh air, and what

in these days we should call hydropathic remedies.

In consequence of this questionable origin, whether Pagan or Popish, we have heard some good but straitlaced people in Derbyshire condemn the well-dressing greatly, and express their astonishment that so many should give it their countenance, by assembling at Tissington; but, considering that no superstition is now connected with it, and that the meeting gives unusual pleasure to many, we must decline to agree with them, and hope that the taste of the well-dressers may long meet with the reward of an admiring company.

Born.—Emperor Justinian, 482, *Tauresium*, in *Bulgaria*.

Died.—Paulus Æmilius, 1529, *Paris*; Samuel Cooper, 1672; Stephen Morin, 1700, *Amsterdam*; John Pichon, 1751; Thomas Davies (dramatic biography), 1785, *London*; Pierre J. G. Cabanis, French materialist philosopher, 1808; Robert Mylne, architect, 1811; Napoleon Bonaparte, ex-Emperor of the French, 1821, *St Helena*; Rev. ROBERT MYLNE.

Mr Mylne, the architect of Blackfriars Bridge in London, had aimed at perfecting himself in his profession by travel, by study, and a careful experience. His temper is said to have been rather peculiar, but his integrity and high sense of duty were universally acknowledged. He was born in Edinburgh in 1733, the son of one respectable architect, and nephew of another, who constructed the North Bridge in that city. The father and grandfather of his father were of the same profession; the latter (also named Robert) being the builder of Holyrood Palace in its present form, and of most of the fine, tall, ashlar-fronted houses which still give such a grandeur to the High-street. Considering that the son and grandson of the architect of Blackfriars Bridge have also been devoted to this profession, we may be said to have here a remarkable example of the perseverance of certain artistic faculties in one family; yet the whole case in this respect has not been stated. In the Greyfriars churchyard, in Edinburgh, there is a handsome monument, which the palace builder reared over his uncle, John Mylne, who died in 1667, in the highest reputation as an architect, and who was described in the epitaph as the last of *six generations*, who had all been 'master-masons' to the kings of Scotland. It cannot be shown that this statement is true, though it may be so; but it can be pretty clearly proved that there were at least three generations of architects before the one we have called the palace builder; exhibiting, even on this restricted ground, an example of persistent special talents in hereditary descent such as is probably unexampled in any age or country.

OPENING OF THE STATES-GENERAL OF FRANCE, 1789.

This event, so momentous in its consequences as to make it an era in the history of the world,

took place at Versailles on the 5th of May, 1789. The first sitting was opened in the Salle de Menus. Nothing could be more imposing than the spectacle that presented itself. The deputies were introduced according to the order and etiquette established in 1614. The clergy, in cassocks, large cloaks, and square caps, or in violet robes and lawn sleeves, were placed on the right of the throne; the nobles, covered with cloth of gold and lace, were conducted to the left; whilst the commons, or *tiers état*, were ranged in front, at the end of the hall. The galleries were filled with spectators, who marked with applause those of the deputies who were known to have been favourable to the convention. When the deputies and ministers had taken their places, Louis XVI. arrived, followed by the queen, the princes, and a brilliant suite, and was greeted with loud applause. His speech from the throne was listened to with profound attention, and closed with these words: 'All that can be expected from the dearest interest in the public welfare, all that can be required of a sovereign the first friend of his people, you may and ought to hope from my sentiments. That a happy spirit of union may pervade this assembly, and that this may be an ever-memorable epoch for the happiness and prosperity of the kingdom, is the wish of my heart, the most ardent of my desires; it is, in a word, the reward which I expect for the uprightness of my intentions, and my love of my subjects.' He was followed by Barentin, keeper of the seals, and then by Necker; but neither the king nor his ministers understood the importance of the crisis. A thousand pens have told how their anticipations of a happy issue were frustrated.

WHIPPING VAGRANTS.

Three centuries ago, the flagellation of vagrants and similar characters for slight offences was carried to a cruel extent. Owing to the dissolution of the monasteries, where the poor had chiefly found relief, a vast number of infirm and unemployed persons were suddenly thrown on the country without any legitimate means of support. These destitute persons were naturally led to wander from place to place, seeking a subsistence from the casual alms of any benevolent persons they might chance to meet. Their roving and precarious life soon produced its natural fruits, and these again produced severe measures of repression. By an act passed in 22 Henry VIII., vagrants were to be 'carried to some market town or other place, and there tied to the end of a cart naked, and beaten with whips throughout such market town or other place, till the body should be bloody by reason of such whipping.' The punishment was afterwards slightly mitigated; for by a statute passed in the 39th of Elizabeth's reign, vagrants were only 'to be stripped naked from the middle upwards, and whipped till the body should be bloody.* Still vagrancy not only continued, but increased, so that several benches of magistrates issued special orders for the apprehension and punishment of vagrants found in their respective districts. Thus, in the quarter sessions at Wycomb,

* *Burn's Justice*, vol. v. 501.

in Bucks, held on the 5th of May, 1698, an order was passed directing all constables and other parish officers to search for vagrants, &c.; 'and all such persons which they shall apprehend in any such search, or shall take begging, wandering, or misconducting themselves, the said constables, headboroughs, or tything-men, being assisted with some of the other parishioners, shall cause to be whipped naked from the middle upwards, and be openly whipped till the bodies shall be bloody.' This order appears to have been carried into immediate execution, not only within the magisterial jurisdiction of Wycomb, but throughout the county of Buckingham; and lists of the persons whipped were kept in the several parishes, either in the church registers, or in some other parish book. In the book kept in the parish of Lavenden, the record is sufficiently explicit. For example, 'Eliz. Roberts, lately the wife of John Roberts, a tallow-chandler in ye Strand, in Hungerford Market, in ye County of Middlesex, of a middle stature, brown-haired, and black-eyed, aged about — years, was whipped and sent to St Martin's-in-the-Field, in London, where she was born.' At Burnham, in the same county, there is in the church register a long list of persons who have been whipped, from which the following specimens are taken—'Benjamin Smat, and his wife and three children, vagrant beggars; he of middle stature, but one eye, was this 28th day of September 1699, with his wife and children, openly whipped at Boveney, in the parish of Burnham, in the county of Buck., according to ye laws. And they are assigned to pass forthwith from parish to parish by ye officers thereof the next direct way to the parish of St [Se] pulchers Lond., where they say they last inhabited three years. And they are limited to be at St [Se] pulch. within ten days next ensuing. Given under our hands and seals. Will. Glover, Vicar of Burnham, and John Hunt, Constable of Boveney.' The majority of those in this list were females—as 'Eliz. Collins, a mayd pretty tall of stature;' 'Anne Smith, a vagrant beggar about fifteen years old;' 'Mary Web, a child about thirteen years of age, a wandering beggar;' 'Isabel Harris, a widd. about sixty years of age, and her daughter, Eliz. Harris, with one child.' Thus it appears that this degrading punishment was publicly inflicted on females without regard to their tender or advanced age. It is, however, only fair to mention, as a redeeming point in the parish officers of Burnham, that they sometimes recommended the poor women whom they had whipped to the tender mercies of the authorities of other parishes through which the poor sufferers had to pass.

The nature of these recommendations may be seen from copies of those still remaining in the register, one of which, after the common preamble, 'To all constables, headboroughs, and tything-men, to whom these presents shall come,' desires them 'to be as charitable as the law in such cases allows, to the bearer and her two children.' Cruelty in the first instance, and a recommendation of benevolence to others in the second, looks like an improved reading of Sidney Smith's celebrated formula—'A. never sees B.

in distress but he wishes C. to go and relieve him.'

The law of whipping vagrants was enforced in other counties much in the same manner as in Buckinghamshire.

The following curious items are from the constable's accounts at Great Staughton, Huntingdonshire :

169½	Pd. in charges, taking up a distracted woman, watching her, and whipping her next day	0	8	6
171½	Spent on nurse London for searching the woman to see if she was with child before she was whipped, 3 of them	0	2	0
	Pd. Tho. Hawkins for whipping 2 people yt had the small-pox	0	0	8
171½	Paid for watching, victuals and drink, for Ma. Mitchell	00	02	06
	Pd. for whipping her	00	00	04
171½	Pd. for whipping Goody Barry*	00	00	04

'Men and women were whipped promiscuously at Worcester till the close of the last century, as may be seen by the corporation records. Male and female rogues were whipped at a charge of 4*d.* each for the whip's-man. In 1680 there is a charge of 4*d.* "for whipping a wench." In 1742, 1*s.* "for whipping John Williams, and exposing Joyce Powell." In 1759, "for whipping Elizabeth Bradbury, 2*s.* 6*d.*" probably including the cost of the cart, which was usually charged 1*s.* 6*d.* separately.†

Whipping, however, was not always executed at the 'cart's tail.' It was, indeed, so ordered in the statute of Henry VIII.; but by that passed in the 39th of Elizabeth it was not required, and about this time (1596), whipping-posts came into use. When the writings of John Taylor, 'the water-poet,' were published (1630), they appear to have been plentiful, for he says—

'In London, and within a mile I ween,
There are of jails or prisons full eighteen;
And sixty whipping-posts, and stocks and cages.'

And in *Hudibras* we read of—

'An old dull sot, who toll'd the clock
For many years at Bridewell-dock;

* * * * *

Engaged the constable to seize
All those that would not break the peace;
Let out the stocks, and whipping-post,
And cage, to those that gave him most.'

On May 5th, 1713, the corporation of Doncaster ordered 'a whipping-post to be set up at the stocks at Butcher Cross, for punishing vagrants and sturdy beggars.† The stocks were often so constructed as to serve both for stocks and whipping-post. The posts which supported the stocks being made sufficiently high, were furnished near the top with iron clasps to fasten round the wrists of the offender, and hold him securely during the infliction of the punishment. Sometimes a single post was made to serve both purposes; clasps being provided near the top for the wrists, when used as a whipping-post, and similar clasps below for the ankles when used as stocks, in which

case the culprit sat on a bench behind the post, so that his legs when fastened to the post were in a horizontal position. Stocks and whipping-

WHIPPING-POST AND STOOL.

posts of this description still exist in many places, and persons are still living who have been subjected to both kinds of punishment for which they were designed. Latterly, under the in-

PARISH STOCKS.

fluence, we may suppose, of growing humanity, the whipping part of the apparatus was dispensed

* *Notes and Queries*, vol. xvii., 327.

† *Idem*, 425.

‡ *Idem*, 568.

with, and the stocks left alone. The weary knife-grinder of Canning, we may remember, only talks of being put in the stocks for a vagrant. The stocks was a simple arrangement for exposing a culprit on a bench, confined by having his ankles laid fast in holes under a movable board. Each parish had one, usually close to the churchyard, but sometimes in more solitary places. There is an amusing story told of Lord Camden, when a barrister, having been fastened up in the stocks on the top of a hill, in order to gratify an idle curiosity on the subject. Being left there by the absent-minded friend who had locked him in, he found it impossible to procure his liberation for the greater part of a day. On his entreating a chance traveller to release him, the man shook his head, and passed on, remarking that of course he was not put there for nothing. Now-a-days, the stocks are in most places removed as an unpopular object; or we see little more than a stump of them left. The whipping of female vagrants was expressly forbidden by a statute of 1791.

OATMEAL—ITS FORMER USE IN ENGLAND.

Edward Richardson, owner of an estate in the township of Ince, Lancashire, directed, in 1784, that for fifty years after his death there should be, on Ascension Day, a distribution of oatmeal amongst the poor in his neighbourhood, three loads to Ince, one to Abram, and another to Hindley.*

The sarcastic definition of oats by Johnson, in his *Dictionary*—‘A grain which in England is generally given to horses, but in Scotland supports the people,’ has been the subject of much remark. It is, however, worthy of notice that, when the great lexicographer launched this sneer at Caledonia, England herself was not a century advanced from a very popular use of oatmeal. Markham, in his *English Housewife*, 1653, speaks of oatmeal as a viand in regular family use in England. After giving directions how it should be prepared, he says the uses and virtues of the several kinds are beyond all reckoning. There is, first, the small ground meal, used in thickening pottage of meat or of milk, as well as both thick and thin gruel, ‘of whose goodness it is needless to speak, in that it is frequent with every experience.’ Then there are oat-cakes, thick and thin, ‘very pleasant in taste, and much esteemed.’ And the same meal may be mixed with blood, and the liver of sheep, calf, or pig; thus making ‘that pudding which is called haggas, or haggus, of whose goodness it is in vain to boast, because there is hardly to be found a man that does not affect them.’

It is certainly somewhat surprising thus to find that the haggis of Scotland, which is understood now-a-days to be barely compatible with an Englishman remaining at table, was a dish which nearly every man in England affected in the time of the Commonwealth. More than this, Markham goes on to describe a food called *wash-brew*, made of the very small oatmeal by frequent steeping of it, and then boiling it into a jelly, to be eaten with honey, wine, milk, or ale, according

* Edwards's *Remarkable Charities*, 36.

to taste. ‘I have,’ says he, ‘seen them of sickly and dainty stomachs which have eaten great quantities thereof, beyond the proportion of ordinary meats.’ The Scotsman can be at no loss to recognise, in this description, the *sowens* of his native land, a dish formerly prevalent among the peasantry, but now comparatively little known. To illustrate Markham's remark as to the quantity of this mess which could be eaten, the writer may adduce a fact related to him by his grandmother, who was the wife of an extensive store-farmer in Peeblesshire, from 1768 to 1780. A new ploughman had been hired for the farm. On the first evening, coming home just after the sowens had been prepared, but when no person was present in the kitchen, he began with one of the cogs or bowls, went on to another, and in a little time had despatched the very last of the series; after which he coolly remarked to the maid, at that moment entering the house, ‘Lass, I wish you would to-morrow night make my sowens all in one dish, and not in drippocks and drappocks that way!’

LESLIE, CHANTREY, AND SANCHO PANZA.

Leslie, the graceful and genial painter, whose death created a void in many a social circle, is chiefly associated in the minds of the public with two charming pictures—‘Uncle Toby and the Widow,’ and ‘Sancho Panza and the Duchess;’ pictures which he copied over and over again, with slight alterations—so many were the persons desirous of possessing them. A curious anecdote is told concerning the latter of the two pictures. When Leslie was planning the treatment of his subject, Chantrey, the sculptor, happened to come in. Chantrey had a hearty, jovial countenance, and a disposition to match. While in lively conversation, he put his finger to his nose in a comical sort of way, and Leslie directly cried out, ‘That is just the thing for Sancho Panza,’ or something to that effect. He begged Chantrey to maintain the attitude while he fixed it upon his canvas; the sculptor was a man of too much sterling sense to be fidgeted at such an idea; he complied, and the Sancho Panza of Leslie's admirable picture is indebted for much of its striking effect to Chantrey's portraiture. There has, perhaps, never been a story more pleasantly told by a modern artist than this—the half-shrewd, half-obtuse expression of the immortal Sancho; the sweet half-smile, tempered by high-bred courtcsy, of the duchess; the sour and stern duenna, Doña Rodriguez; and the mirthful whispering of the ladies in waiting—all form a scene which Cervantes himself might have admired, Leslie painted the original for the Petworth collection; then a copy for Mr Rogers; then another for Mr Vernon; and then a fourth for an American collection. But these were none of them mere copies; Leslie threw original dashes of genius and humour into each of them, retaining only the main characteristics of the original picture.

A POETICAL WILL.

The will of John Hedges, expressed in the following quaint style, was proved on the 5th of July, 1737:—

‘This fifth day of May,
Being airy and gay,
To hip not inclined,
But of vigorous mind,
And my body in health,
I'll dispose of my wealth;
And of all I'm to have
On this side of the grave

To some one or other,
 I think to my brother.
 But because I foresaw
 That my brothers-in-law,
 If I did not take care,
 Would come in for a share,
 Which I nowadays intended,
 Till their manners were mended—
 And of that there's no sign—
 I do therefore enjoin,
 And strictly command,
 As witness my hand,
 That naught I have got
 Be brought to hotch-pot ;
 And I give and devise,
 Much as in me lies,
 To the son of my mother,
 My own dear brother,
 To have and to hold
 All my silver and gold,
 As th' affectionate pledges
 Of his brother,

JOHN HEDGES.'

THE CONSTABLE DE BOURBON.

During the middle ages nothing inspired greater horror than false oaths and perjury. It was not enough to give up the guilty persons to the authorities who administered justice, but it was generally believed that God did not wait for the last judgment. The hand of the exterminating angel was always stretched out, menacing and implacable, over those who escaped the action of the law, or who placed themselves superior to it. Numbers of popular legends were current which related the awful divine judgments by which the anger of heaven was manifested against the impious. Such was the death of the Constable de Bourbon.

Born in the year 1489, he early displayed, under the careful training of his mother, a superiority to most men in mental and bodily accomplishments. His beauty and strength excited wonder and admiration ; whilst his correct understanding made friends of all around him. His first campaign was made in Italy, with Louis the Twelfth, during which the gallant Bayard became his most intimate friend ; and being raised by Francis the First to be a Constable of France, he accompanied him also to Italy, and to his talent was due the victory at Marignano. A coldness ensued between the king and his general, owing, it was supposed, to a pique of the queen-mother, who had made advances to Bourbon, which were repulsed. She induced the king to

refuse repayment of the money which Bourbon had borrowed to save the Milanese ; and afterwards various processes of law were commenced, which, by depriving him of his estates, would have left him penniless.

Provoked by his king's ingratitude, he entered into a secret correspondence with Charles the Fifth, Francis's great rival, and with some difficulty escaped from France, and was immediately appointed lieutenant-general to the emperor, in Italy.

When he had brought back victory under the flag of his new master, relieved Italy from the French rule, and given up the King of France, who was taken prisoner at the disastrous battle of Pavia, to his rival, he did not receive the price he expected for his treason. The emperor refused to give the hand of his sister Eleanor to a traitor, who covered himself in vain with military glory.

The indignant Bourbon returned into the midst of that army of which he was the soul, to hide his shame and rancour. Charles, in the meantime, forgetting the old Spanish bands to whom he owed the conquest of the Milanese, failed to send their pay, and the troops were many months in arrears. At first they supported the privations which their chief shared ; but soon murmurs broke out, and menaces of desertion to the enemy were heard. The constable, after having endeavoured to soften their complaints, no longer offered any opposition to the exactions of every kind that they levied on the duchy of Milan. The magistrates and inhabitants entreated him to put an end to this deplorable state of things, and to remove his army, who, according to the expression of the times, 'lived on the poor man.' He appeared to be touched with the unheard-of evils which the army had caused, and solemnly promised that they should cease, provided the city of Milan furnished him with thirty thousand ducats to pay his bands of mercenaries ; after which he would lead them out of the territory. Thus ran the oath, the breaking of which was fully believed to be the cause of his death by the superstitious : 'In case the least extortion,' said he, calling heaven to witness his promise, 'should be made on the poorest villager or citizen, I pray that, at the next battle or assault in which I shall be engaged, the first cannon-ball which is fired may be at me, and carry away my head.'

The money was paid, but the army remained ; robbery, burning, and murder marked the passage of madmen who cared nothing for their captain's oath ; the desolation of the country was so great, that some of the inhabitants, ruined, ill-used, and dishonoured, killed themselves with their own hands, praying heaven to avenge them. At length, the constable, who doubtless did not possess sufficient authority to keep his word, marched his army out of a country which could no longer maintain it, to Rome, which he intended to besiege and give up to the soldiers, who demanded money or pillage. A thousand sinister voices repeated in his ear the fatal oath he had so imprudently made.

The presentiment of his death seems to have oppressed him when he encamped on the 5th of May, 1527, before the walls of the Eternal City,

where the rumour of his approach had spread the greatest alarm. His soldiers, even, who loved him as a father, and believed themselves invincible under his guidance—wild adventurers, who feared nothing either in this world or the next—shook their heads, and fixed their tearful eyes on the general's tent, where he had shut himself up, ordering that all should be ready for the attack on the following morning. During the night, he neither slept nor lay down, remaining in arms, with his brow resting on his hands.

At daybreak the trumpet sounded the assault: the constable, without saying a word, seized a ladder, and rushing before the boldest, himself planted it against the wall. At the same moment, an artillery-man (some say the famous sculptor, *Benevenuto Cellini*), who had recognised him from the battlements of the Castle of Saint-Angelo, directed his piece so skilfully that the ball carried away the head of Bourbon, who was just crying, 'The city is taken.' Rome was indeed taken, and given up to all the horrors of pillage, but at least the perjurer had received his punishment.

CORNELIUS JANSEN,

The world knows more about the Jansenists than about Jansen, for greater have been the disciples than the master. Cornelius Jansen was born, in 1585, at Acquoi, near Leerdam, in Holland. He was educated for the priesthood, and whilst acting as Professor of the Holy Scriptures at Louvain, he published a treatise, entitled *Mars Gallicus*, denouncing France for heresy on account of the alliances she was forming with Protestant states for the purpose of breaking the power of Spain. In acknowledgment of this service he was made Bishop of Ypres in 1635, but enjoyed his dignity for only three years, being cut off by the plague on the 6th of May, 1638, at the age of 53. If matters had rested here, Jansen would have been forgotten, wrapt in the odour of sanctity; but for twenty years he had been engaged on a great theological work, in the preparation of which he had read over ten times the whole writings of St Augustine, collating them with the Fathers, and had studied thirty times every passage in which Augustine had referred to the Pelagian controversy. Two years after his death, his executors published the results of his persevering labours as *Augustinus Cornelii Jansenii*, and great was the amazement and horror of orthodox readers. Whilst holding firmly and faithfully to the ecclesiastical order of Rome, it turned out that Jansen had been doctrinally neither more nor less than a Calvinist. Louvain was thrown into a ferment, and attempts were made to suppress the work. The agitation spread to Paris. The inmates of the convent of Port Royal valiantly defended Jansen's positions, which the Jesuits as vigorously attacked. An abstract of Jansen's opinions was drawn up and laid before the pope, who, on 31st of May, 1653, pronounced them heretical. The Jansenists, who now numbered in their ranks men like Pascal and Nicole, admitted the justice of the papal decision, but evaded its force by saying the pope had rightly condemned the doctrines

included in the abstract, but that these doctrines were not to be found in Jansen. Again the Jesuits appealed to Rome, and the pope gratified them in asserting that the opinions condemned in the abstract were to be found in Jansen. Thereupon Louis XIV. expelled the Jansenists from Port Royal as heretics, and the Jesuits were triumphant. The controversy did not end here, but lingered on for years, absorbing other questions in its course. So late as 1713, Clement XI. issued his famous bull 'Unigenitus,' in which he condemned 101 propositions of a book by Father Quesnel, for its revival of the heresy of Jansen.

THE LAST OF THE ALCHEMISTS.

On the 6th of May 1782, a remarkable series of experiments was commenced, in his private laboratory at Guildford, by James Price, a distinguished amateur chemist, and Fellow of the Royal Society. Mr Price, during the preceding year, imagined he had succeeded in compounding a powder, capable, under certain circumstances, of converting mercury and other inferior metals into gold and silver. He hesitated before making public this extraordinary discovery; but having communicated it to a few friends, and the matter becoming a subject of doubtful discussion among chemists, he determined to put it beyond cavil, by conducting a series of experiments in presence of a select assemblage of men of rank, science, and public character. The experiments, seven in number, commenced, as already observed, on the 6th of May, and ended on the twenty-fifth of the same month. They were witnessed by peers, baronets, clergymen, lawyers, and chemists, and in all of them gold and silver, in greater or less quantities, were apparently produced from mercury: to use the language of the alchemists, mercury was transmuted into gold and silver. Some of the gold thus produced was presented to the reigning monarch, George III., who received it with gracious condescension. The University of Oxford, where Price had been a fellow-commoner of Oriel College, bestowed on him the degree of M.D.; and his work, containing an account of the experiments, ran through two editions in the course of a few months.

The more sanguine and less scientific of the community saw in this work the approach of an era of prosperity for England such as the world had never previously witnessed. Who could doubt it? Had not the king honoured, and Oxford rewarded, the fortunate discoverer? Some, on the other hand, asserted that Price was merely a clever juggler; while others attempted to show in what manner he had deceived himself. On some points, however, there could be no difference of opinion. Unlike many professors of alchemy, Price was not a needy, nameless adventurer, but a man of wealth, family, and corresponding position in society. As a scientific man, he had already distinguished himself in chemistry, the study of which he pursued from a pure love of science; and in private life his amiability of character had insured many worthy and influential friends.

In the fierce paper conflict that ensued on the

publication of the experiments, the Royal Society felt bound to interfere; and, accordingly, called upon Price, as a fellow of the society, to prove, to the satisfaction of his brother fellows, the truth of his alleged transmutations, by repeating his experiments in their presence. From this point Price seems to have lost confidence, and decided symptoms of equivocation and evasion appear in his conduct. He declined to repeat his experiments, on the grounds that the process of preparing the powder of projection was difficult, tedious, and injurious to health. Moreover, that the result of the experiments, though most valuable as a scientific fact, was not of the profitable character he at first believed and the public still supposed; the cost of making gold in this manner being equal to, in some instances more than, the value of the gold obtained; so much so, indeed, that, by one experiment, it cost about seventeen pounds sterling to make only one ounce of gold, which, in itself, was not of the value of four pounds. These excuses were taken for what they were worth; Sir Joseph Banks, the president of the society, reminding Price that not only his own honour, but the honour of the first scientific body in the world, was implicated in the affair. Price replied that the experiments had already been conducted in the presence of honourable and competent witnesses, and no advantage whatever could be gained by repeating them—'for, as the spectators of a fact must always be less numerous than those who hear it related, so the majority must at last believe, if they believe at all, on the credit of attestation.' Further, he adduced his case as an example of the evil treatment that has ever been the reward of great discoverers; and concluded by asserting that his wealth, position in society, and reputation as a scientific chemist, ought, in unenviable and unprejudiced minds, to free him from the slightest suspicion of deceit. To Price's friends this line of conduct was painfully distressing. Yielding at last to their urgent entreaties, he consented to make some more powder of projection, and satisfy the Royal Society. For this purpose, as he stated, he left London, in January 1783, for his laboratory at Guildford, faithfully promising to return in a month, and confound, as well as convince, all his opponents.

Arriving at Guildford, Price shut himself up in his laboratory, where he made it his first employment to distil a quantity of laurel-water, the quickest and deadliest poison then known. He next wrote his will, commencing thus—'Believing that I am on the point of departing from this world.' After these ominous preliminaries, he commenced the preparation of his promised powder of projection. One, two, three—six months passed, but nothing being heard of Price, even his most attached friends reluctantly confessed he had deceived them, when, to the surprise of every one, he reappeared in London, and formally invited as many members of the Royal Society as could make it convenient to attend, to meet him in his laboratory at Guildford on the 3rd of August. Although, scarcely a year previous, the first men in England were contending for the honour of witnessing the great chemist's marvellous experiments, such was

the change in public estimation caused by his equivocal conduct, that, on the appointed day, three members only of the Royal Society arrived at the laboratory, in acceptance of his invitation. Price received them with cordiality, though he seemed to feel acutely the want of confidence implied by their being so few. Stepping to one side for a moment, he hastily swallowed the contents of a flask of laurel-water. The visitors seeing a sudden change in his appearance, though then ignorant of the cause, called for medical assistance; but in a few moments the unfortunate man was dead. Many and various were the speculations hazarded on this strange affair. It is most probable that Price had in the first instance deceived himself, and then, by a natural sequence, attempted either wilfully or in ignorance to deceive others, and, subsequently discovering his error, had not the moral courage to confess openly and boldly that he had been mistaken.

Thus it was that alchemy, among scientific men at least, in England, came to an end with the last act of a tragedy; while in Germany, contrary to what might have been expected, it disappeared amidst the hilarious laughter of a comedy. Contemporary with Price, there lived, at the University of Halle, a grave and learned professor of theology named Semler. In his youth, the professor had frequently heard a friend of his father, a crack-witted enthusiast, rejoicing in the appellation of Taubenschus, recount the dazzling marvels of the philosopher's stone. These youthful impressions were never completely obliterated from the mind of the theologian, who used to relieve his severer labours by performing a few chemical experiments in a small private laboratory. But an astute Jew coming to Halle, and informing Semler that he had picked up some wonderful alchemical secrets in Barbary, so completely cheated the simple professor, that he abandoned chemistry, as he then thought, for ever. But, long after, when Semler was well advanced in years, a Baron Hirschen discovered one of those universal medicines, which, like the tar-water, brandy-and-salt, and other nostrums of our own country, occasionally appear, create a furor, and then sink into oblivion. Semler tried some of this Salt of Life, as it was termed; and fancying it benefited his health, German professor-like, sat down and wrote three ponderous treatises on its astonishing virtues, greatly to the disgust of Hirschen, who felt that the theologian was rather ploughing with his heifer, as one might say; but in time he had his revenge.

While studying and developing the virtues of the Salt of Life, Semler could not fail to remember the ancient notion of the alchemists, that the philosopher's stone, when discovered, would also be a panacea. Here, thought he, is a universal medicine, powerful enough to change all diseases into pure and perfect health; why then, he continued, may it not be able to change an imperfect metal into pure and perfect gold? So he determined to fit up his laboratory once more, merely to try a few experiments; and in the meantime he placed an earthen jar, containing a solution of the Salt of Life in pure water, near a stove, to see

how it would be affected by a moderate heat. On examining this jar a few days afterwards, to Semler's surprise he found it contained some thin scales of a yellowish metal, which, being tested, unmistakably proved to be pure gold. Here was a discovery!—gold, real, glittering gold, made without trouble or transmutation, furnace or crucible! proving that the dreams of the alchemists regarding transmutation were as absurd as they were proved fallacious; that gold, in accordance with Hermes Trismegistus, could be generated, but not transmuted. Semler's former experience, however, rendered him cautious: he repeated the experiment several times with the same success, till he became perfectly convinced. As conscientious as cautious, the professor considered that the benefits of this great discovery did not belong to him; Hirschen was the discoverer of the Salt of Life, and to him rightfully belonged all the advantages that might accrue from it. So Semler wrote to Hirschen a very minute account of his wonderful discovery; but such is the ingratitude of mankind, that the latter sent back a very contemptuous letter in reply, advising Semler to attend to his chair of theology, and not meddle with matters that he could not comprehend.

Thus repulsed, Semler thought it his duty to publish the matter to the world, which he accordingly did. All Germany was astounded. Salt of Life came into universal demand, and there were few houses in which a jar of it might not be seen near the stove; but fewer still were the houses in which it produced gold—only one, in fact, and that we need not say was Semler's.

The professor, in a lengthy memoir, attempted to explain how it was that his mixture produced gold, while that of others did not. It was owing, he considered, to a perfect regularity of temperature, which was necessary, by fecundating the salt, to produce the gold. But Klaproth, the most eminent chemist of the day, having analyzed the Salt of Life, found it to be a mixture of Glauber's salts and sulphate of magnesia, and utterly incapable of producing gold under any circumstances whatever. Semler then sent Klaproth some of his Salt of Life in powder, as well as in solution, and in both of these the chemist found gold, but not in combination with the other ingredients, as it could be removed from them by the mere process of washing. There could be only one conclusion on the matter; but Semler's known probity, and the absurdity of even the most ignorant person attempting a deception so easily discovered, rendered it very mysterious. As Semler was a theologian, and Klaproth a man of science, suspected of being imbued with the French philosophy, the common-sense view of the question was ignored, and the bitter controversy that ensued turned principally on the veracity of the respective leaders, whether the theologian was more worthy of belief than the chemist, or the contrary. And so hard did theology press upon science, that Klaproth condescended to analyze some of Semler's solution, in presence of the ministers of the king, and other distinguished persons, in Berlin.

The result was more surprising than before.

In this public analysis Klaproth found a metal not gold, but a kind of brass called tombac; the substance we term 'Dutch metal.' This new discovery created shouts of laughter; but the government interfering, instituted a legal inquiry, and the police soon solved the mystery. Semler had a faithfully-attached old servant, who, for the simple purpose of gratifying his beloved master, used to slyly slip small pieces of gold leaf into the professor's chemical mixtures. Having once commenced this course, the servant had to keep it up, as he well knew the disappointment at not finding gold would be much greater than in the first instance. But the old servant, being a pensioner, had to muster at head-quarters once a year. So, when the time came for him to depart, he entrusted the secret to his wife, giving her money to purchase the gold leaf as it might be required. But this woman, having a partiality for brandy, thought it a sin to waste so much money in gold leaf, and so bought Dutch metal instead, expending the balance on her favourite beverage. Semler fairly enough confessed his error when the laughable discovery was made, and no pretensions of that kind were ever again listened to in the German States.

THE TRIBUTE OF ROSES, A MAY-DAY CUSTOM.

In the times of the early kings of France, the parliament, placed between royalty and the church, formed one of the three great powers of the state. The kings felt a real esteem and respect for this judiciary body, and regularly attended its sittings; besides, it was not always stationary in Paris, but made an annual tour, when the princes and princesses of royal blood were accustomed to follow it in its laborious peregrinations, and thus added to the brilliancy and pomp of its meetings.

It was in 1227, during one of these judicial pilgrimages, that the custom called 'The Tribute of Roses' was founded; one of the most charming of which the parliamentary annals speak. The ceremony was created by a woman and for a woman; by a powerful and illustrious queen, for the wise and lovely daughter of the first president of the parliament of Paris, and possesses at the same time the majesty of all that comes from a throne, and the grace of all that comes from a woman. These, then, were the circumstances, according to ancient chronicles, under which the ceremony was instituted.

The parliament was convoked at Poitiers to judge of an important matter. The Vidame (or judge of a bishop's temporal jurisdiction) de Bergerac, who had been married three times, had left seven children of each union; and it was necessary to decide if those of the first marriage should take their share of the property in the same proportion as the junior branches, the written law and the customs of the provinces of Guyenne and Poitou not being agreed upon the point, and the parliament must settle the difference. The young Count Philibert de la Marche had been appointed judge to report the case; but as he was known to be much fonder of pleasure than work, the family counted little upon him; in addition to which the young man,

one of the first peers of the court, had formed a warm attachment, and it is well known that love leaves little time for the serious duties of jurisprudence. They were, however, deceived.

On the 6th of May, Queen Blanche de Castille, widow of Louis VII., and Regent of the kingdom, made her entrance into Poitiers, followed by the principal lords of her court, the president and members of parliament. The streets were strewn with flowers, the houses hung with gay flags and cloth of gold, the cries of 'Vive le Roi,' 'Vive la Regente,' 'Noël, Noël,' mingled with the ringing of bells and the merry chimes of the Hotel de Ville. Mounted on a superb palfrey, the regent had at her right hand her son, twelve years of age, to whom she thus taught the respect which kings owe to justice; precious lessons, which made Louis the Ninth the most just and wise of kings, and gained for him a renown which will never perish. At her left was Thibault, Count of Champagne; then came the Lords of Crecy, of Zaintrailles, of Bourville, and Fécamp; the Earls of Ponthieu, of Toulouse, of Narbonne; the Vidames of Chartres and Abbeville; and a crowd of other gentlemen of renown, covered with their glittering armour. After these chosen warriors, the support and defence of the crown, came the members of parliament, mounted on their more peaceful mules.

At the head of the grave magistrates, every one must have noticed Pierre Dubuisson, the first of a long line of presidents, who, in spite of his eighty years, was fulfilling the serious duties of his appointment. At his side were the Nestors of the French magistracy, Philippe de Moïrol, Clément Toutemain, Ange de Saint-Préval, Jacques Saint-Burge, and others who, if younger, were already celebrated for their ripened judgment. This brilliant procession went first to the cathedral, where a solemn mass was sung with due ceremony, in which the prayer was uttered that the Holy Spirit might descend on their proceedings; after which each received the holy communion from the hands of Claude de Blaisemont, Bishop of Poitiers. When this ceremony was ended, the procession again set forth to the house of Maturin de Surlaive, lord high treasurer to the crown.

The queen was anxious that the members, who usually brought their wives and families with them, should find lodgings in her immediate neighbourhood, and had fixed upon the field of roses—which were then in flower, and surrounded the magnificent and luxurious abode prepared for her—as the place for the court of justice to be held in; the first sitting was to take place the following day. The president, Pierre Dubuisson, had then apartments very near to the Regent. A widower for many years past, he had brought with him his daughter Marie, upon whom he lavished all his affections; she was endowed with remarkable beauty, as modest as wise, her wit equalling her elegance, and beloved and respected by the whole court. It was for her that the Count de la Marche felt such a violent passion; in his office as judge and peer of France, he had recourse to the learning of Dubuisson, and thus had often the opportunity of seeing Marie. His sentiments had been long avowed,

his title and coronet laid at her feet; but the modest young girl had always replied to these brilliant offers:—'Monseigneur, yours is an ancient race; your ancestors have left you a dozen turreted castles which adorn and defend France; you ought to have a wife worthy of your greatness, and I am only the daughter of a man of science and virtue. Permit me, then, to refuse your homage.'

This noble refusal, as often happens, had redoubled the ardeur of the young count; hence he learnt with delight the determination of the Regent to accompany the parliament in its journey to Poitiers, and be present at its sittings; hoping that during the journey, while his functions obliged him to remain constantly near the princess, he should see Marie more frequently, as Blanche de Castille was much attached to her, and kept her at her side all the day; but the constraint of the royal presence did not permit him to express all he felt. It, however, made him imprudent; and when night came he ventured into the rose garden under Marie's windows, and to attract her attention, he sung one of Count Thibault de Champagne's romances. At the end of the second verse, Marie's window opened, and she addressed him in these words:—

'Are you not ashamed, Monseigneur, to employ the hours of work in vain gallantry? You will be called upon to-morrow to defend before a parliamentary assembly the honour and possessions of orphans, and you are wasting the hours of work in worthless pleasures. Look around you, and see the lights in the windows of the members who are preparing themselves for the important duties which you are called to fill; go and imitate them!'

Feeling the justice of this reproach, the young count felt that the only way of obtaining Marie's hand was to make himself worthy of it; and returning home, he began earnestly to study the cause which he was to plead.

On the morrow's sitting the succession of the Vidame de Bergerac's was the first case called for. The president, certain that the Count de la Marche was not prepared, proposed to pass on to another; but the Regent, who had heard all the previous evening, commanded that the cause should be tried. The count made his deferential bow to her majesty, and proceeded with a clear and luminous statement of the case. He offered conclusions based upon strict legal rules with an eloquence which astonished the wisest magistrates; and, carried away by the talent of the young nobleman, they received and adopted his opinion unanimously.

'Count,' said the Regent, after the sitting, 'you have just given us a marvellous proof of your erudition and eloquence; we thank you for it. But be candid, and tell us who has inspired you so well.'

'The voice of an angel descended from heaven to recall me to my duty,' replied the count.

'I knew it,' said the Regent; 'and I wish to recompense you for having followed the good advice that this angel gave you. Messire Pierre Dubuisson, you are created Chancellor of France; and you, my sweet Marie, shall after to-morrow be saluted by the name of Countess de la Marche.'

And to perpetuate the remembrance of this day, to remind the young peers of France how they ought, like the Count de la Marche, to turn the most tender feelings to the advantage of justice, I shall expect them each year to give a tribute to my parliament.'

'And what shall the tribute be?' asked the Count de Champagne.

'A tribute of roses,' replied the Regent. 'Count de la Marche, you are the first to offer it to the parliament.'

In a moment the rose garden was despoiled of its most beautiful flowers, which the count presented in baskets to the grave members. Since then, every year on the first of May the youngest peer of France offered this tribute, which they called *la baillée aux roses*. In 1541 it gave rise to a dispute for precedence between the young Duke of Bourbon-Montpensier and the Duke de Nevers, one of whom was a prince of the blood. The claims of the two pretenders being submitted to the parliament, were argued by the two most celebrated lawyers of the period, François Marillac and Pierre Séguier. After both sides had been heard, the parliament gave its decree on Friday, the 17th of June 1541: 'that having regard to the rank of prince of the blood joined to his peerage, the court orders that the Duke de Montpensier shall offer the tribute of roses.'

This contest, which had excited in the highest degree both the court and the city, proves the value which the highest noblemen attached to the opportunity of paying respect, by this curious and graceful tribute, to the administrators of justice. But in 1589 the League, no longer considering the parliament as a court of peers, abolished the *baillée aux roses*, and since then the custom has been forgotten.

Bussy-Rabutin relates, that under the reign of Louis XIV. the President de Samoignan proposed its re-establishment; but the Duke de Vivonne, to whom he spoke, replied—

'Monsieur le President, the peers of France, who support above all things the prerogatives of the crown, are not always on a good understanding with the parliament; believe me, it is better that we should both keep within our limits; let us not exhume old customs, which might perhaps become real subjects of dissension.'

These words induced the president to resign his intention; and this charming custom, so graceful in its origin, was for ever abolished.

MAY 7.

St Benedict II., Pope, confessor, 686. St John of Beverley, 721. St Stanislaus, Bishop of Cracow, martyr, 1079.

JOHN OF BEVERLEY.

Most of the early Anglo-Saxon saints were men and women of princely, or at least of noble birth; and such was the case with John of Beverley, who is commemorated on this day. He was born at Harpham, near Driffield, which latter place was apparently a favourite residence of the Northumbrian kings; and he was there-

fore a Yorkshireman. As was not very common among the Anglo-Saxons, he received a scriptural instead of an Anglo-Saxon name; and he was evidently intended for the church from his infancy, for we are told that when a boy his education was entrusted to the Abbess Hilda, and he afterwards went to Canterbury, and pursued his studies under Theodore the Great, who may be looked upon as the father of the Anglo-Saxon schools. On leaving Theodore, John set up as a teacher himself, and opened a school in his native district, in which his learning drew together a number of scholars, among whom was the historian Bede. About the year 685, John was made bishop of Hexham, one of the sees into which the then large diocese of York had been divided during the exile of Wilfred; but on Wilfred's return the see of York was restored to its former condition, and John resigned his bishopric, and retired into comparatively private life. Not long afterwards Hexham was again formed into a separate bishopric, and restored to John, who was removed thence to be made Archbishop of York, in the year 705.

From the account of this prelate given by his disciple Bede, it is evident that he was a man of learning, and of great piety, and that he exercised considerable influence over the Northumbrian church in his time; yet he was evidently not ambitious of public life, but preferred solitude and contemplation. Hence, both as bishop and archbishop, he selected places of retirement, where he could enjoy temporary seclusion from the world. With this view, he built a small monastic cell in an open place in the heart of the forest of the Deiri, which was so far removed from the haunts of men that its little stream was the resort of beavers, from which circumstance it was called in Anglo-Saxon *Beofor-leag*, or the lea of beavers, which, in the change of language, has been smoothed down into Beverley. From this circumstance, the Archbishop of York became known by the name of John of Beverley, which has distinguished him ever since. In 718, when he felt old age creeping upon him, John resigned his archbishopric, and retired to the solitude of Beverley, where he spent the remainder of his days. He died on the 7th of May 721. It is hardly necessary to add, that John's cell in the forest soon became a celebrated monastery, and that the flourishing town of Beverley gradually arose adjacent to it. Hither, during Roman Catholic times, numerous pilgrims resorted to the shrine of the saint, where great miracles and wonderful cures of diseases were believed to be performed; and his memory was held in such reverence, and his power as a saint supposed to be so great, that 'St John' became the usual war cry of the English of the North in their wars with the Scots.

Born.—Gerard Van Swieten, physician, 1700, *Leyden*.

Died.—Otho the Great, emperor, 973, *Magdeburg*; Jacques Auguste de Thou (Thuanus), French historian, 1617; John Gwillim, herald, 1621; Patrick Delany, D.D., miscellaneous writer, 1768, *Bath*; William, Marquis of Lansdowne, 1805; Richard Cumberland, English dramatist, 1811; H. W. Bunbury, amateur artist, 1811; Thomas Barnes, editor of the *Times*, 1841, *London*.

DE THOU.

The great work of the Sieur De Thou, the history of his own time, is of a character to which no English writer has presented an exact parallel. According to one of his countrymen: 'That love of order, that courageous hatred of vice, that horror of tyranny and rebellion, that attachment to the rights of the crown and the ancient maxims of the monarchy, that force in the descriptions, that fidelity in the portraits,—all those characters of truth, of courage, and impartiality which shine in all parts of his work, have given it the distinction of being the purest source of the history of the sixteenth century.'

It must ever reflect credit on De Thou, while affording a noble incentive to others, that this truly great work was composed in the midst of the most laborious state employments.

THOMAS BARNES.

A future generation may perhaps enjoy the memoirs of some of the great editors who in the course of the present century have raised the political press to a power in the state. Common and natural is the curiosity to penetrate the mystery of the thunder of *The Times*, but discreetly and thoroughly has that mystery been preserved. We know the names of Walter, Stoddart, Barnes, Sterling, and Delane; but of their mode of working and associates, little certainly.

Thomas Barnes, under whose editorship *The Times* became the greatest of newspapers, was born in 1785, and was educated as a Blue-coat boy. From Christ's Hospital he went to Cambridge; after which, returning to London, he entered as a student for the bar at the Temple. The monotony of the law he relieved by light literary pursuits. He commenced writing a series of critical essays on English poets and novelists for a paper called *The Champion*, in which he manifested an eminent degree of power and taste. *The Champion* became sought after for the sake of Barnes's essays, which its conductors accordingly were anxious to see continued. There was, however, great difficulty in Barnes's irregular habits. Moved by their importunity, he had a table with books, paper, and ink, placed at his bedside, and ordered that he should be regularly called at four in the morning. Rising then, and wrapping round him a dressing-gown, he would dash off the coveted articles. Afterwards, having more ambitious views, he addressed a number of letters to *The Times*, on the men and events of the day, and was gratified by seeing them accepted. Mr Walter, struck with their merit, called on Barnes, and employed him, first as reporter, and then as editor. It is said Barnes wrote very few leaders, but spent his skill in appointing subjects to able writers, and in trimming and amplifying their productions. His life of incessant labour was unhappily closed by a premature death. After long suffering from stone, he was operated upon by Liston; but his system, sapped by dissipation, and worn down by mental toil and bodily pain, gave way, and he died on the 7th of May 1841, at the age of fifty-six.

DON SALTERO.

In an entry of 'several presentments of Court Leet, relative to the repairs of walls on the banks of the Thames,' dated May 7th, 1685, there appears the name of James Salter, as one of the tenants who was fined the sum of five pounds, for suffering the river wall opposite his dwelling-house to become ruinous. The earliest notice, however, that we have of this person as the proprietor of a museum, is contained in a paper by Sir Richard Steele, published in *The Tatler*, in 1709, in which he is recognised by his nickname of Don Saltero, and several of his curiosities are incidentally mentioned. Salter had been valet to Sir Hans Sloane. On leaving service, he returned to his original trade of a barber,—combined, as it then was, with the arts of bleeding and tooth-drawing. In 1693, he set up a coffee-house, his late master giving him a few curiosities to place in the public room, as an attraction to customers. Salter being himself an oddity, his house soon became frequented by retired naval officers, and other residents of Chelsea, who contributed to his collection, and gave him the title of Don Saltero, from a fancied resemblance he bore to the celebrated knight of the woful countenance. Steele describes him as a sage of a thin and meagre countenance, enough to make one doubt whether reading or fretting had made it so philosophic. His first advertisement appears in *The Weekly Journal* of June 22nd, 1723, in the following words:—

'SIR,

Fifty years since, to Chelsea great,
From Rodnam, on the Irish main,
I stroll'd, with maggots in my pate,—
Where, much improv'd they still remain.
Through various employs I've past:
A scraper, vertuos', projector,
Tooth-drawer, trimmer, and at last
I'm now a grimcrack whim-collector.
Monsters of all sorts here are seen,
Strange things in nature as they grew so;
Some relics of the Sheba queen,
And fragments of the fam'd Bob Cruso.
Knick-knacks to dangle round the wall,
Some in glass cases, some on shelf;
But, what's the rarest sight of all,
Your humble servant shows himself.
On this my chiefest hope depends.
Now, if you will the cause espouse,
In journals pray direct your friends
To my museum coffee-house;
And, in requital for the timely favour,
I'll gratis bleed, draw teeth, and be your shaver;
Nay, that your pate may with my noddle tally,
And you shine bright as I do—marry shall ye
Freely consult my revelation Molly;
Nor shall one jealous thought create a huff,
For she has taught me manners long enough.

DON SALTERO.

Chelsea Knackatory.'

Salter made no charge for seeing his museum, but visitors were expected to take refreshments; and catalogues were sold for twopence each, headed with the words.

'O RARE!'

containing a list of the collection, and names of

the persons who had contributed to it. This catalogue went through forty-five editions, and the business was no doubt a profitable one. The time of Salter's death is not very certain, but his daughter, a Mrs Hall, kept the house in 1760.

Pennant, when a boy, saw in Don Saltero's collection 'a lignified hog,' that had been presented by his great uncle; it was simply the root of a tree, somewhat resembling the form of a pig. From one of the catalogues, now before us, we extract the following items, as a sample of the whole:—'A piece of Solomon's temple. Job's tears that grow on a tree. A curious piece of metal found in the ruins of Troy. A set of beads made of the bones of St Anthony of Padua. A curious flea-trap. A piece of Queen Catherine's skin. Pontius Pilate's wife's great-grandmother's hat. Manna from Canaan. A cockatrice serpent. The Pope's infallible candle. The lance of Captain How Tow Sham, King of the Darien Indians, with which he killed six Spaniards, and took a tooth out of each head, and put it in his lance as a trophy. Oliver's broadsword.' This last article had, in all probability, been presented by one of the earliest frequenters of the coffee-house, 'a little and very neat old man, with a most placid countenance,' named Richard Cromwell, the ex-protector of England. Sir John Cope and his sons, who lived in the neighbourhood, are included among the contributors to the museum; but there is no Highland broadsword mentioned in the catalogue. There is one remarkable item in it, which forms a curious link with the present day. It is described as 'a coffin of state for a friar's bones.' In Nichols's edition of *The Tatler*, we learn that this elaborately carved and gilt coffin, with its contents, was a present from the Emperor of Japan to the King of Portugal, that had been captured by an English privateer, whose captain gave it to Saltero. There can be little doubt that the bones it contained were the remains of one of 'the Japanese martyrs!'

One can hardly realize the fact, that in the last century, strangers in London made a point of visiting Don Saltero's, just as they now-a-days visit the British Museum. Franklin, in his 'Life,' says: 'We one day made a party to go by water to Chelsea, in order to see the college and Don Saltero's curiosities.' It was on the return from this party that the then journeyman printer, by displaying his skill in swimming, was induced to consider whether he would not try his fortunes in England as a teacher of swimming.

Everything has its day. So in 1799, after being an institution for more than a hundred years, Saltero's house and curiosities fell under the all-conquering and inevitable hammer of the auctioneer. In the advertisement which announces the sale, the house is described as 'a substantial and well-crected dwelling-house, delightfully situated facing the River Thames, commanding a beautiful view of the Surrey hills and adjacent country. Also, the valuable collection of curiosities.' The last fetched no more than £50. The highest price given for a lot was thirty-six shillings, which was paid for 'a very curious model of our blessed Saviour's sepulchre at Jerusalem, very neatly inlaid with mother-o'-pearl.'

MONKS OF ST FRANCIS.

May 7, 1772, died Sir William Stanhope, K.B., a younger brother of the celebrated Philip, Earl of Chesterfield. He resided at Eyethorpe in a handsome and hospitable manner, and exercised an attraction in society through his wit and literary talents. Sir William was a member of a convivial fraternity very characteristic of an age which, having material prosperity, and nothing to be fearful or anxious about, showed men of fortune generally in the light of pleasure-seekers rather than of duty-doers. The association bore the name of the *Monks of St Francis*, partly in allusion to the place of meeting, the house of Medmenham, in Bucks, which had been originally a Cistercian monastery. It comprised John Wilkes and Charles Churchill; the less-known poets, Lloyd and Paul Whitehead; also Francis Lord le Despencer, Sir John Dashwood King, Bubb Doddington, and Dr Benjamin Bates. The spirit of the society was shown by their putting up over the door of their place of meeting, the motto of the actual order of St Francis, 'Fais ce que tu voudras;' and it is understood that they took full advantage of the permission. Their orgies will not bear description. One can only express a regret that men possessed generally of some share of talents, and perhaps of impulses not wholly discreditable to their hearts, should have so far mistaken their way in the world.*

When Dr Lipscomb published his elaborate work on Buckinghamshire in 1847, he could hear of but one surviving member of the order of St Francis, and he in extreme old age, together with a gentleman who had been admitted to a few meetings while yet too young to be made a member.

While the orgies of the Medmenham monks must needs be buried in oblivion, it may be remarked that such societies were not uncommon in that full-fed, unthinking age. There was one called the *Harry-the-Fifth Club*, or *The Gang*, designed to exemplify in a more or less metaphorical manner the habits attributed to the hero of Agincourt. Of this fraternity, the then heir of British royalty, Frederick Prince of Wales, was a member; and there exists, or lately existed, at Windsor, a picture representing a sitting of the Gang, in which the Prince appears as president, with Sir Hugh Smithson, Lord Inchiquin, and other members. An example of the badge supposed to have belonged to this club represents the exploits of the tavern on one side, and those of the highway on the other, the latter containing, moreover, a view of a distant town, with stocks and a gibbet, with the motto, 'JACK GANG WARILY.'† Although the two latter words are an injunction to proceed with caution, it cannot be doubted that an extreme licence in all kinds of sensual enjoyments was assumed as the privilege of the Harry-the-Fifth Club.

* Lipscombe's *Buckinghamshire*, i. 481; iii. 615.

† *Gentleman's Magazine*, Sept. 1854. 'Gang Warily,' is the motto of the Drummonds, Earls of Perth, meaning simply, *walk cautiously*. The jingle of sound and sense between the name and motto might not be above the contemplation of this self-enjoying society.

MAY 8.

Apparition of St Michael. St Victor, martyr, 303. St Odrian, of Waterford (era unknown). St Wiro, of Ireland, 7th century. St Gybrian, of Ireland, 8th century. St Peter, Archbishop of Tarentaise, in Savoy, 1174.

Born.—Alain René le Sage, French novelist, 1668, *Sargeau, in Brittany*; Dr Beilby Porteus, Bishop of London, 1731, *York*; Rev William Jay, congregationalist divine, 1769, *Tisbury, Wilts.*

Died.—Dr Peter Heylin, author of the *Life of Archbishop Laud*, &c., 1662; Marc René de Voyer de Paulmi, Marquis d'Argenson, French minister, 1721; Archbishop William King, 1729, *Donnybrook*; Bishop Hough, of Worcester, 1743; Pope Benedict XIV., 1758; Dr Samuel Chandler, 1766, *London*; Sebastian, Marquis de Pombal, Portuguese statesman, 1782, *Pombal*; Duc de Choiseul, French minister, 1785; Antoine L. Lavoisier, chemist, guillotined at Paris, 1794; W. C. Townsend, Q.C., author of *Lives of Eminent Judges*, 1850, *Wandsworth Common, near London*; Captain Barclay Allardice, noted athlete and pedestrian, 1854.

ARGENSON

Is worthy of a passing note as the first institutor of the modern system of police. He was a man of high family and no small personal merit, and when he took the position of lieutenant of the Parisian police, in 1697, he was considered as somewhat degrading himself. He contrived, however, to raise the office to his own level, by the improvements which he introduced, resulting in that system of easy and noiseless movement which not only checks ordinary breaches of the law, but assists so notably in preserving the government from its enemies. Argenson was a native of Venice, and received his first honours in that republic; it was probably from the old secret practices of the Venetian state that he derived his idea of an improved police for Paris, that form of police which has since been extended to Austria, Prussia, and other governments. He finally became the French minister of finance, and died a member of the Academy.

BISHOP HOUGH'S MUNIFICENCE.

This memorable prelate, who had been elected to the presidentship of Magdalen College, Oxford, in opposition to the Roman Catholic recommended to the Fellows of the College by James II., attained the great age of ninety-three. Of his boundless munificence the following instance is related:—'He always kept a thousand pounds in the house for unexpected occurrences, perhaps to pay his funeral expenses, or legacies. One day, one of the excellent societies of his country came to him to apply for his contributions. The bishop told his steward to give them £500. The steward made signs to his master, intimating that he did not know where to find so large a sum. He replied, "You are right, Harrison; I have not given enough. Give the gentleman the thousand pounds; and you will find it in such a place;" with which the old steward, though unwillingly, was forced to comply.' The good bishop was buried in his cathedral (Worcester), where is a fine monument to his memory, by Roubiliac;

the scene of the above anecdote of his munificence being sculptured in bas-relief upon the memorial.

The bishop, though he had acted a prominent part in public affairs, lived without an enemy. Pope says of him:

'Such as on Hough's unsullied mitre shine.'

Lord Lyttelton and Hawkins Browne also speak highly of Bishop Hough; and Sir Thomas Bernard has introduced him as the principal speaker in his excellent colloquy—*The Comforts of Old Age.*

'CAPTAIN BARCLAY.'

By this name, without the affix of Allardice, was recognised, in the early part of the present century, a man whose pride and pleasure it was to exhibit the physical potentialities of human nature in their highest stretch. Rather oddly, he represented genealogically a man of wholly different associations, the celebrated Robert Barclay, who, in the reign of Charles II., wrote the *Apology for the Quakers*. It appears, however, that both the father and son of Robert were remarkable for their bodily strength. A powerful athletic figure was in fact hereditary in the family.

One of Captain Barclay's first notable feats—done, indeed, in his fifteenth year—was to walk, 'fair toe and heel,' six miles in an hour. In June 1801, when two and twenty, he walked from his family seat of Ury, in Kincardineshire, to Borough-bridge, in Yorkshire, a distance of 300 miles, in five oppressively hot days. It was on the 10th of November in the same year, that he completed the performance of one of his most notable feats, walking ninety miles in twenty-one and a half successive hours, on a bet of 5000 guineas. This he accomplished in an hour and eight minutes within time, without being greatly fatigued. Some years later, the task of walking 1000 miles in 1000 successive hours, a mile within each hour, in which many had before failed and none succeeded, was undertaken by Barclay, and about £100,000 was staked on the issue. He began his course at Newmarket, at midnight, on the 1st of June, and duly finished it at 3 p.m. on the 12th of July, amidst a vast concourse of spectators. Here, of course, the shortness of the periods of repose was what constituted the real difficulty. The pain undergone by the gallant captain is understood to have been excessive; he had often to be lifted after resting, yet his limbs never swelled, nor did his appetite fail; and, five days after, he was off upon duty in the luckless Walcheren expedition.

The great amateur athlete of the nineteenth century was a frank, honourable man, in universal esteem among his neighbours, and distinguished himself not a little as a promoter of agricultural improvements.

MASTER JOHN SHORNE.

The 8th of May 1308 is the date of the will of Master John Shorne, rector of North Marston, in Bucks, a very remarkable person, since he attained all the honours of a saint without ever being strictly pronounced one. There must have been something uncommon in the character of

this country pastor to have so much impressed his contemporaries, and cast such an odour round his tomb for centuries after he was inured. For one thing, he was thought to have a gift for curing the ague. He had greater powers than this, however, for it was reported of him that he once conjured the devil into a boot. Venerated profoundly, he was no sooner dead than his body was enclosed in a shrine, which immediately became an object of pilgrimage to vast numbers of people, and so continued till the Reformation. The allusions to the multitudes running to Master John Shorne, scattered about our mediæval literature, are endless. The votaries came mainly for cure of ague, which it was supposed the holy man could still effect; and so liberal were their oblations, that the rectory was enriched by them to the extent of £300 a year—a very large sum in those days. At one time the monks of Windsor contrived, by an adroit bargain with those of Osney, to get the body of Master Shorne removed to their church; but, though they advertised well—and this language is literally applicable—the saint did not ‘take’ in that quarter, and the body was afterwards returned to North Marston. At the same time, there was a well, near North Marston church, which passed by the name of Master John Shorne’s Well, and whose waters were believed to be of great virtue for the cure of various diseases. It still exists, a neat square building, about eight feet by six, with an internal descent by steps; but its reputation is wholly gone.

MASTER JOHN SHORNE.

(From the Rood Screen in Gately Church.)

What is known of Master John Shorne gives
610

us a curious glimpse of the habits and ideas of our ancestors. To expect a miraculous cure by visiting the shrine of the saint, or drinking of the waters of his well, was a conviction from which no class was exempt. Equally undoubting were they as to the celebrated boot exorcism. On the ancient screen still existing in the church of Gately, in Norfolk, is a panel containing a tall figure, labelled underneath *Magister Johes Schorn*, exhibiting the saint with the boot in his left hand, and the devil peeping out of it; of which panel a representation appears in the cut. The same objects are painted on a screen at Cawston, in the same county. It would appear as if the saint were understood to keep the fiend in the boot and let it emerge occasionally, like a ‘Jack in the box,’ to impress the vulgar.

Fox in his *Martyrology* shews us that a pilgrimage to Master John Shorne was sometimes imposed as a penance. Of certain penitent heretics, he tells us, ‘some were compelled to bear fagots; some were burned in their cheeks with hot irons; some condemned to perpetual prison; some compelled to make pilgrimages . . . some to the Rood at Wendover, some to Sir John Schorn, &c.’ A Protestant ballad says—

‘To Maister John Schorn, that blessed man born,
For the ague to him we apply,
Which jugeleth with a bote, I beshrew his herte-rote,
That will trust him, and it be I.’

EXHORTATION TO THE CONDEMNED AT
NEWGATE.

Near to Newgate prison, in London, is a parish church bearing the grisly name of St Sepulchre’s. On the 8th of May 1705, Robert Dowe gave fifty pounds to the vicar and churchwardens thereof, to the end that, through all futurity, they should cause a bell to be tolled, and a serious exhortation to be made to condemned prisoners in Newgate, during the night preceding their execution. For many years this custom was kept up in its full integrity, according to the will of the donor. At midnight, the sexton of St Sepulchre’s came with a hand-bell to the window of the condemned cell—rang his bell—and delivered this address:

‘All you that in the condemned hold do lie,
Prepare you, for to-morrow you shall die:
Watch all and pray, the hour is drawing near
That you before the Almighty must appear:
Examine well yourselves, in time repent,
That you may not to eternal flames be sent:
And when St Sepulchre’s bell to-morrow tolls,
The Lord above have mercy on your souls!’

On the ensuing day, when the dismal procession, setting out for Tyburn, passed the gate of St Sepulchre’s church, it paused for a brief space, while the clergyman addressed a prayer in behalf of the prisoner or prisoners, the great bell tolling all the time. There is something striking and impressive in the whole arrangement. By and by came a time when the executions took place in front of Newgate, and the clergyman’s address was necessarily given up. Some years ago, it was stated that the sexton was still accustomed to come and offer his midnight address, that the terms of Mr Dowe’s bequest might be fulfilled; but the offer was always declined, on the ground that all needful services of the kind were performed by the chaplain of the prison.

MAY 9.

St Hermas, 1st century. St Gregory Nazianzen, 389. St Brynoth I., Bishop of Scara, in Sweden, 1317. St Nicholas, Bishop of Lincopen, in Sweden, 1391.

Born.—Giovanni Paisiello, Italian musical composer, 1741, *Tarento*.

Died.—Cardinal de Bourbon, 1590; Francis, fourth Earl of Bedford, 1641; Count Zinzendorf, founder of the sect of Moravian brethren, 1760, *Hernhutt*; Comte de Lally, executed at Paris, 1766; Bonnel Thornton, miscellaneous writer, 1768; Frederick Schiller, illustrious German poet, 1805, *Weimar*; Nicolas Francis Gay-Lussac, chemist, 1850, *Paris*.

SCHILLER.

‘I will make Schiller as large as life,—that is, colossal.’ ‘Such,’ says Emil Pallaske, Schiller’s latest German biographer, speaking of the sculptor Dannecker, ‘were Dannecker’s words, on hearing of the death of his friend. Sorrowful, but steadfast, he commenced his labour of love, and the work became what he aimed at—an apotheosis. No complicated details, no stamp of commonplace reality, dim the pure ether of these features: the traces of a sublime struggle on the lofty forehead, the knit brows, and the hollow cheeks, alone proclaim that this mighty spirit once wandered upon earth; but the impress of past disquietude only serves to heighten the perfect repose which now designates the divinity. The earnest self-won harmony on the noble countenance irresistibly demands our reverence; while its lofty resignation imperceptibly reminds us of many anxious cares which beat within our own restless hearts.’

This passage conveys a better idea than our words could give, of the reverential worship paid to Schiller in his own country. He was an intellectual giant, and a grateful people have placed him among their deities. Full of the spirit of his time, of powerful genius, of inexhaustible mental energy, devoted with passionate devotion to his own grand ideal of the beautiful and true, he mastered a wretched constitution, and revelled in the domains of mind. Poetry was to him no idle amusement, but conscience, religion, politics, and philosophy.

Johann Christoph Friedrich Schiller was born on the 10th of November 1759, at Marbach. His mother was a pious, worthy woman, of the true German mould, and his father an energetic, intelligent military man, in the service of Karl Eugen, Duke of Würtemberg. As a boy, he was chiefly remarkable for industry and strong feeling. He was intended for the church; but Karl Eugen had founded a military academy, and took care to press into it all the promising youth: so Schiller’s views of life changed. As a student of the academy, he was devoted to his duke, and exercised his growing talent for verse in praise of the duchess, equally out of admiration and necessity. He became a regimental surgeon, and practised in Stuttgart. But with this post he was dissatisfied, and justly; and when his *Robbers* appeared, and made him popular, he became still more restless. The duke looked with

suspicious eye on this mad youth, who spoke his mind so freely; and fresh writings giving fresh offence, he prohibited the poet from writing again. At length he was put under arrest for fourteen days, and reprimanded, for stealing, without leave of absence, to Mannheim, to see his play acted. Then he fled in the night with a friend, and became an exile. After enduring much privation in many wanderings, he became theatre poet at Mannheim. Here he produced *Fiesco* and *Don Carlos*, toiled incessantly, indulged in numerous elective affinities, and got further into debt.

Debt—or rather uncertainty of income—was Schiller’s bane. He trusted entirely to his pen and Providence for subsistence. In Mannheim, a friend, who had been bound for his Stuttgart debts, was arrested, and only set free at the expense of a poorer man, on whom the loss fell. Such are awkward incidents in the history of genius!

The Duke of Weimar, having encouraged Schiller in 1785, he set off to that diminutive Athens, where Jupiter Goëthe reigned supreme, and staying at Leipsic on his way, commenced that remarkable friendship with Körner, which lasted through life, and which gave us a long series of noble letters. At last he came to Weimar, but Goëthe kept aloof, finding how diametrically opposed their minds were. Years passed over before the restraint was removed. Here Schiller made many friends, as also at Jena, where he accepted a Professorship of History, with no salary. He laboured hard in his duties, and during this period wrote his *History of the Thirty Years’ War*, a delight to youth and to age, sketched his great drama of *Wallenstein*; loved, courted, and married Lotte von Lengefeld, a woman who proved worthy of him; and enjoyed the friendship of Fichte and Wilhelm von Humboldt. He had a severe illness soon after his marriage, from the effects of which he never recovered. At last, in 1795, the bond of brotherhood was sealed, which reflects such honour on Schiller and Goëthe, and which has caused the brother poets to be named the *Dioscuri*. After this, we have mutual plans and productions,—among them the *Xenien*, a series of fine satirical hits at all their numerous enemies, a book which set Germany on fire; mutual direction of the Weimar theatre; struggles with failing health; fresh cares, joys, hopes; *Wallenstein*; *Mary Stuart*; *The Maid of Orleans*; *The Bride of Messina*; and lastly, *Wilhelm Tell*; and so we draw near to the inevitable day.

Schiller’s drama of *Wilhelm Tell* took possession of the hearts of the people more than any of its predecessors; and yet, at the performance of an earlier work, very badly performed in Leipsic, we read that, ‘after the first act, loud cries burst forth, from the whole of the crowded house, of “Long live Friedrich Schiller!” accompanied by a grand flourish of trumpets. At the end of the performance all the audience rushed out of the house to see their beloved poet more closely. When his tall form, bent by suffering, appeared, the crowd respectfully made way for him, all heads were quickly uncovered, and the poet was received in profound silence, as he passed through the long rows of people; all hearts, all

eyes, followed his steps; fathers and mothers holding their children aloft to see him, whispering, "That is he! that is he!"

Schiller had a heart as fine and noble as his forehead. He deserved and won the love and esteem of all. Princes and people delighted to honour him. And posterity has not tarnished, but brightened, the lustre of the honours bestowed on him while he lived.

GAY-LUSSAC.

To Nicolas Francis Gay-Lussac unquestionably belongs the honour of first applying aërostation to scientific purposes on a great scale. True, ascents had been made by other philosophers, at Hamburg in 1803, and at St Petersburg in 1804, to determine in some degree the effect of altitude on magnetic action; but the scale of operations was in each case very limited. The Academy of Sciences, with the aid of the minister of the interior (Chaptal), organized an ascent in August 1804, which was to be managed by Gay-Lussac and Biot, with the aid of Conté, who had been the chief aëronaut with Bonaparte in Egypt. The ascent took place on the 23rd, from the garden of the Conservatoire des Arts et Metiers. The philosopher soon found that the rotatory motion of a balloon, as it ascends, ought to be taken into account in all delicate observations made while in the air; a precaution which had been neglected by the preceding observers. Gay-Lussac determined to make another ascent alone, to reach a still greater altitude. This was done on the 16th of September. He attained the unprecedented elevation of 7016 metres (about 23,000 English feet, upwards of four miles). A magnetic needle, a dipping needle, a centigrade thermometer, two hygrometers, two barometers, two little glass balloons, and one of copper; such were the instruments which the intrepid man took up with him, and which he undertook to observe, besides managing his balloon and car. His chief observations were recorded when he was at the heights of 3,032, 3,863, 4,511, 6,107, and 6,977 metres; and they were very valuable in reference to magnetism, pressure, temperature, and moisture. Biot and Gay-Lussac had lowered a pigeon out of their car when at the height of 10,000 feet, to notice its flight; Gay-Lussac made observations on his own respiration at high altitudes; he brought down specimens of rarefied air in his three little balloons; he determined the heights of the clouds he passed through; and he achieved other scientific results which have been brought largely into use by later savans.

The experiments of Mr Gay-Lussac may be said to have remained unrivalled till 1862, when the ardour of meteorological research led to others of a very remarkable character being made by Mr James Glaisher. After a number of preliminary ascents, Mr Glaisher made one at Wolverhampton, in company with Mr Coxwell, on the 6th of September in that year, when the balloon attained the height indicated by $9\frac{3}{4}$ inches of the barometer, reckoned as equal to $5\frac{1}{2}$ miles. This was certainly the highest point ever attained by a human being in any circumstances. When thus elevated, the rarity

of the air and extremely low temperature (for the thermometer stood a good way below zero) caused the adventurous aëronaut to fall into a state of insensibility, which was so far partaken of by Mr Coxwell, that the latter had to use his teeth in pulling the valve of the balloon, in order to cause a descent. 'On descending when the temperature rose to 17°, it was remarked as warm, and at 24° it was noted as very warm.' According to the narrative of Mr Glaisher, 'Six pigeons were taken up. One was thrown out at the height of three miles; it extended its wings, and dropped as a piece of paper. A second, at four miles, flew vigorously round and round, apparently taking a great dip each time. A third was thrown out between four and five miles, and it fell downwards. A fourth was thrown out at four miles when we were descending; it flew in a circle, and shortly after alighted on the top of the balloon. The two remaining pigeons were brought down to the ground; one was found to be dead.'

BLOOD'S ATTEMPT ON THE CROWN JEWELS.

This day, in the year 1671, witnessed one of the most extraordinary attempts at robbery recorded in the annals of crime. The designer was an Irishman, named Thomas Blood, whose father had gained property, according to the most probable account, as an iron-master, in the reign of Charles I. When the civil wars broke out, the son espoused the cause of the parliament, entered the army, and rose to the rank of colonel; at least, in subsequent times,

COLONEL BLOOD.

he is always spoken of as Colonel Blood. As, at the Restoration, we find him reduced to poverty, we may conclude that he had either squandered away his money, or that his property had been

confiscated, perhaps in part both, for he seems to have laboured under the impression of having been injured by the Duke of Ormond, who had been appointed lord lieutenant of Ireland, and against whom he nourished the bitterest hatred. In 1663, he formed a plot for surprising Dublin Castle, and seizing upon the lord lieutenant, which, however, was discovered before it could be carried into execution. Blood then became a wandering adventurer, roaming from one country to another, until he established himself in London, in the disguise of a physician, under the name of Ayliffe. Such was his position in 1670, when he made another attempt on the life of his enemy, the Duke of Ormond. On the evening of the 6th of December in that year, as the duke was returning home from a dinner given to the young Prince of Orange, in St James's Street, he was stopped by six men on horseback, who dragged him from his coach, and having fastened him with a belt behind one of them, were carrying him off towards Tyburn, with the intention of hanging him there. But, by desperate struggling, he succeeded in slipping out of the strap which bound him, and made his escape, under favour of the darkness, but not without considerable hurt from the brutal treatment he had undergone. A reward of a thousand pounds was offered for the discovery of the ruffians concerned, but in vain.

It was not many months after this event, that Colonel Blood formed the extraordinary design of stealing the crown of England, and he contrived his plot with great artfulness. The regalia were at this time in the care of an aged but most trustworthy keeper, named Talbot Edwards, and Blood's first aim was to make his acquaintance. Accordingly, he one day in April went to the Tower, in the disguise of a parson, with a woman whom he represented as his wife, for the purpose of visiting the regalia. After they had seen them, the lady pretended to be taken ill, upon which they were conducted into the keeper's lodgings, where Mr Edwards gave her a cordial, and treated her otherwise with kindness. They parted with professions of thankfulness, and a few days afterwards the pretended parson returned with half-a-dozen pairs of gloves, as a present to Mrs Edwards, in acknowledgment of her courtesy. An intimacy thus gradually arose between Blood and the Edwardses, who appear to have formed a sincere esteem for him; and at length he proposed a match between their daughter and a supposed nephew of his, whom he represented as possessed of two or three hundred a-year in land. It was accordingly agreed, at Blood's suggestion, that he should bring his nephew to be introduced to the young lady at seven o'clock in the morning on the 9th of May (people began the day much earlier then than now); and he further asked leave to bring with him two friends, who, he said, wished to see the regalia, and it would be a convenience to them to be admitted at that early hour, as they were going to leave town in the forenoon.

Accordingly, as we are told by Strype, who received his narrative from the lips of the younger Edwards, 'at the appointed time, the old man had

got up ready to receive his guest, and the daughter had put herself into her best dress to entertain her gallant, when, behold! parson Blood, with three more, came to the jewel house, all armed with rapier blades in their canes, and every one a dagger and a pair of pocket pistols. Two of his companions entered in with him, and a third stayed at the door, it seems, for a watch.' At Blood's wish, they first went to see the regalia, that his friends might be at liberty to return; but as soon as the door was shut upon them, as was the usual practice, they seized the old man, and bound and gagged him, threatening to take his life if he made the smallest noise. Yet Edwards persisted in attempting to make all the noise he could, upon which they knocked him down by a blow on the head with a wooden mallet, and, as he still remained obstinate, they beat him on the head with the mallet until he became insensible; but recovering a little, and hearing them say they believed him to be dead, he thought it most prudent to remain quiet. The three men now went deliberately to work; Blood placing the crown for concealment under his cloak, while one of his companions, named Parrot, put the orb in his breeches, and the other proceeding to file the sceptre in two, for the convenience of putting it in a bag.

The three ruffians would probably thus have succeeded in executing their design, but for the opportune arrival of a son of Mr Edwards from Flanders, accompanied by his brother-in-law, a Captain Beckman, who, having exchanged a word with the man who watched at the door, proceeded upstairs to the apartments occupied by the Edwardses. Blood and his companions thus interrupted, immediately decamped with the crown and orb, leaving the sceptre, which they had not time to file. Old Edwards, as soon as they had left the room, began to shout out, 'Treason! Murder!' with all his might; and his daughter, rushing out into the court, gave the alarm, and cried out that the crown was stolen. The robbers reached the drawbridge without hindrance, but there the warder attempted to stop them, on which Blood discharged a pistol at him. As he fell down, though unhurt, they succeeded in clearing the other gates, reached the wharf, and were making for St Katherine's-gate, where horses were ready for them, when they were overtaken by Captain Beckman. Blood discharged his second pistol at the captain's head, but he escaped hurt by stooping, and immediately seized upon Blood, who struggled fiercely; but finding escape impossible, when he saw the crown wrested from his grasp, he is said to have exclaimed, in a tone of disappointment, 'It was a gallant attempt, however unsuccessful; for it was for a crown!' A few of the jewels fell from the crown in the struggle, but all that were of any value were recovered and restored to their places. Blood and Parrot (who had the orb and the most valuable jewel of the sceptre in his pocket) were secured and lodged in the White Tower, and three others of the party were subsequently captured.

The king, when informed of this extraordinary outrage, ordered Blood and Parrot to be brought to Whitehall to be examined in his presence.

There Blood behaved with insolent effrontery. He avowed that he was the leader in the attempt upon the life of the Duke of Ormond, in the preceding year, and that it was his intention to hang him at Tyburn; and he further stated that he, with others, had on another occasion concealed themselves in the reeds by the side of the Thames, above Battersea, to shoot the king as he passed in his barge; and that he, Blood, had taken aim at him with his carbine, but that 'his heart was checked by an awe of majesty,' and that he had not only relented himself, but had prevented his companions from proceeding in their design. This story was probably false, but it seems to have had its designed effect on the king, which was no doubt strengthened by Blood's further declaration that there were hundreds of his friends yet undiscovered (he pretended to have acted for one of the discontented parties in the state), who were all bound by oath to revenge each other's death, which 'would expose his majesty and all his ministers to the daily fear and expectation of a massacre. But, on the other side, if his majesty would spare the lives of a few, he might oblige the hearts of many; who, as they had been seen to do daring mischief, would be as bold, if received into pardon and favour, to perform eminent services for the crown.' The singularity of the crime, the grand impudence of the offender, united perhaps with a fear of the threatened consequences, induced the king to save Blood from the vengeance of the law. He not only pardoned the villain, but gave him a grant of land in Ireland, by which he might subsist, and even took him into some degree of favour. It is alleged that Blood occasionally obtained court favours for others, of course for 'a consideration.' Charles received a rather cutting rebuke for his conduct from the Duke of Ormond, who had still the right of prosecuting Blood for the attempt on his life. When the king resolved to take the ruffian into his favour, he sent Lord Arlington to inform the duke that it was his pleasure that he should not prosecute Blood, for reasons which he was to give him; Arlington was interrupted by Ormond, who said, with formal politeness, that 'his majesty's command was the only reason that could be given; and therefore he might spare the rest.' Edwards and his son, who had been the means of saving the regalia—one by his brave resistance, and the other by his timely arrival—were treated with neglect; the only rewards they received being grants on the exchequer, of two hundred pounds to the old man, and one to his son, which they were obliged to sell for half their value, through difficulty in obtaining payment.

After he had thus gained favour at court, Blood took up his residence in Westminster; and he is said by tradition to have inhabited an old mansion forming the corner of Peter and Tufton streets. Evelyn, not long after the date of the attempt on the crown, speaks of meeting Blood in good society, but remarks his 'villanous, unmerciful look; a false countenance, but very well spoken, and dangerously insinuating.' He died on the 24th of August, 1680.

In the Luttrell Collection of Broad-sides (*Brit.*

Mus.) is one styled 'An Elegie on Colonel Blood, notorious for stealing the Crown.'

'Thanks, ye kind fates, for your last favour shown,—
For stealing Blood, who lately stole the crown.'

The elegist is no flatterer. He boldly accuses Blood of having spent his whole life in villany. The first considerable affair he was engaged in

'Was rescuing from justice Captain Mason,
Whom all the world doth know to have been a base
one;

The next ill thing he boldly undertook,
Was barbarously seizing of a duke,' &c.

The conclusion comes well off:—

'At last our famous hero, Colonel Blood,—
Seeing his projects all will do no good,
And that success was still to him denied,—
Fell sick with grief, broke his great heart, and
died.'

The imperial crown now used by the British monarch on state occasions is different from that so nearly purloined by Colonel Blood. It was constructed in 1838, with jewels taken from old crowns, and others furnished by command of Her Majesty Queen Victoria. Professor Tennant, of King's College, laid the following account of it before the London and Middlesex Archæological Association, at Islington, July 7th, 1858:—

'It consists of diamonds, pearls, rubies, sapphires, and emeralds, set in silver and gold; it has a crimson velvet cap, with ermine border, and is lined with white silk. Its gross weight is 39 oz. 5 dwts. Troy. The lower part of the band,

above the ermine border, consists of a row of 129 pearls, and the upper part of the band of a row of 112 pearls, between which, in front of the

crown, is a large sapphire (partly drilled), purchased for the crown by King George the Fourth. At the back are a sapphire of smaller size and 6 other sapphires (three on each side), between which are 8 emeralds.

Above and below the seven sapphires are 14 diamonds, and around the eight emeralds 128 diamonds. Between the emeralds and sapphires are sixteen trefoil ornaments, containing 160 diamonds. Above the band are 8 sapphires, surmounted by 8 diamonds, between which are eight festoons, consisting of 148 diamonds.

In the front of the crown, and in the centre of a diamond Maltese cross, is the famous ruby said to have been given to Edward Prince of Wales, son of Edward the Third, called the Black Prince, by Don Pedro, King of Castile, after the battle of Najera, near Vittoria, A.D. 1367. This ruby was worn in the helmet of Henry the Fifth at the battle of Agincourt, A.D. 1415. It is pierced quite through, after the Eastern custom, the upper part of the piercing being filled up by a small ruby. Around this ruby, to form the cross, are 75 brilliant diamonds. Three other Maltese crosses, forming the two sides and back of the crown, have emerald centres, and contain, respectively, 132, 124, and 130 brilliant diamonds.

Between the four Maltese crosses are four ornaments in the form of the French *fleur-de-lis*, with 4 rubies in the centre, and surrounded by rose diamonds, containing, respectively, 85, 86, 86, and 87 rose diamonds.

From the Maltese crosses issue four imperial arches, composed of oak leaves and acorns; the leaves containing 728 rose, table, and brilliant diamonds; 32 pearls forming the acorns, set in cups containing 54 rose diamonds and 1 table diamond. The total number of diamonds in the arches and acorns is 108 brilliant, 116 table, and 559 rose diamonds.

From the upper part of the arches are suspended 4 large pendant pear-shaped pearls, with rose diamond caps, containing 12 rose diamonds, and stems containing 24 very small rose diamonds. Above the arch stands the mound containing in the lower hemisphere 304 brilliants, and in the upper 244 brilliants; the zone and arc being composed of 33 rose diamonds. The cross on the summit has a rose-cut sapphire in the centre, surrounded by 4 large brilliants, and 108 smaller brilliants.

Summary of Jewels comprised in the Crown.—1 large ruby irregularly polished; 1 large broad-spread sapphire; 16 sapphires; 11 emeralds; 4 rubies; 1363 brilliant diamonds; 1273 rose diamonds; 147 table diamonds; 4 drop-shaped pearls; 273 pearls.

PLATED CANDLESTICKS.

Candlesticks plated with silver were first made about a century since. Horace Walpole, in a letter to Mr Montagu, writes, Sept. 1, 1760: 'As I went to Lord Strafford's, I passed through Sheffield, which is one of the foulest towns in England, in the most charming situation; there are two-and-twenty thousand inhabitants making knives and scissors; they remit eleven thousand pounds a week to London. One man there has discovered the art of plating copper with silver; I bought a pair of candlesticks for two guineas that are quite pretty.'

MAY 10.

Saints Gordian and Epimachus, martyrs, 3rd and 4th centuries. St Comgall, abbot, 601. St Cataldus, Bishop of Tarentum, 7th century. St Isidore of Madrid, labourer, patron of Madrid, 1170. St Antoninus, Archbishop of Florence, 1459.

Born.—A. R. J. Turgot, illustrious finance minister of France, 1727, Paris.

Died.—Mareschal de Marillac, beheaded at Paris, 1632; La Bruyère, author of *Caractères*, 1696; Barton Booth, comedian, 1733, Cowley, in Middlesex; Louis XV., King of France, 1774; Caroline Matilda, Queen of Denmark, 1775, Zelle; General De Dampierre, killed at Tamars, 1793.

LOUIS XV.

Louis XV., though his private life was immoral, and his public conduct deficient in firmness and energy, was not without some of those merits which are always so much appreciated when they occur in high places. He has the credit of having been a liberal encourager of the useful arts. In connexion with this feature of his character a strange story is told.

A native of Dauphiny, named Dupré, who had passed his life in making experiments in chemistry, professed to have invented a kind of fire, so rapid and so devouring, that it could neither be evaded nor quenched, water only giving it fresh activity. On the canal of Versailles, in presence of the king, in the court of the arsenal of Paris, and in other places, Dupré made experiments, the results of which astonished the beholders. When it fully appeared that a man possessing this secret could burn a fleet or destroy a town in spite of all resistance, Louis forbade that the invention should be made public. Though he was then embarrassed with a war with the English, whose fleet it was most important that he should destroy, he declined to avail himself of an invention, the suppression of which he deemed to be required in the general interests of humanity. Dupré died some time after, carrying the secret with him to his grave. One naturally listens to all such stories with a certain degree of incredulity; yet it does not seem to be beyond the hopes of science to invent a fire which would, by the very tremendousness of its effects, make war an absurdity, and so force on the great expected day when a general police of nations will prevent any one from entering on hostilities afflicting to itself and others.

PUBLIC PLEASURE-GARDENS OF THE COMMONWEALTH.

Evelyn enters in his Diary, under May 10, 1654: 'My lady Gerrard treated us at Mulberry Garden, now the only place of refreshment about the town for persons of the best quality to be exceedingly cheated at; * Cromwell and his partizans having shut up and seized on Spring Garden, which till now had been the usual rendezvous for the ladies and gallants at this season.'

* Buckingham Palace now occupies the site of Mulberry Gardens.

Evelyn presently after adds: 'I now observed how women began to paint themselves, formerly a most ignominious thing, and used only by prostitutes.'

'SOMETHING TO YOUR ADVANTAGE.'

On the 10th of May 1830, there came before a London police magistrate a case involving a peculiar kind of fraud which for many years baffled the law, and consequently acquired a considerable degree of notoriety. Joseph Ady may be said to have been one of the newspaper celebrities of England during fully twenty years of the first half of the nineteenth century. Every now and then we were regaled with paragraphs headed, 'Joseph Ady again,' giving accounts of some one having been despoiled by him, and who had vainly sought for redress. Strange to say, a true and thorough notoriety ought to have been sufficient to guard the public against his practices; and yet, notorious as he appeared to most people, there must have been vast multitudes who had never heard of him, and who consequently were liable to become his victims. Ady was a decent-looking elderly man, a quaker, with the external respectability attached to the condition of a householder, and to all appearance considered himself as pursuing a perfectly legitimate course of life. His *métier* consisted in this. He was accustomed to examine, so far as the means were afforded him, lists of unclaimed dividends, estates or bequests waiting for the proper owners, and unclaimed property generally. Noting the names, he sent letters to individuals bearing the same appellatives, stating that, on their remitting to him his fee of a guinea, they would be informed of 'something to their advantage.' When any one complied, he duly sent a second letter, acquainting him that in such a list was a sum or an estate due to a person of his name, and on which he might have claims worthy of being investigated. It was undeniable that the information *might* prove to the advantage of Ady's correspondent. Between this *might* be and the unconditional promise of something to the advantage of the correspondent, lay the debatable ground on which it might be argued that Ady was practising a dishonest business. It was rather too narrow a margin for legal purposes; and so Joseph went on from year to year, reaping the guineas of the unwary—seldom three months out of a police-court and its reports—till his name became a by-word; and still, out of the multitudes whom he addressed, finding a sufficient number of persons ignorant of his craft, and ready to be imposed upon—and these, still more strange to say, often belonging to the well-educated part of society.

In the case brought under notice on the 10th of May, 1830, Mr Blamire, a London solicitor, acting for a Mr Salkeld, had given in charge one Benjamin Ridgeway for defrauding him of a sovereign. Mr Salkeld, a solicitor in Cumberland, had received one of Ady's letters, had requested Mr Blamire to inquire into the matter; and a sovereign having consequently been given to Ridgeway, who was Ady's servant, a notice had been returned, stating that the name of Salkeld was in a list of persons having unclaimed money in the funds. Mr Blamire being of belief that there could be no connexion between the two Salkelds, demanded back the sovereign; and, on failing to obtain it, gave Ady's messenger, Ridgeway, into custody. The chief Bow-street police magistrate at that time was Sir Richard Birnie, who often indulged in rather undignified colloquies with the persons brought before him. Joseph Ady came forward to protect or assist his messenger, and then the following conversation occurred:—

Sir R. Birnie. Oh! you are the Mr Ady to whom so many persons, myself amongst the number, have been indebted for such valuable information; are you not?

Ady. I have come forward on behalf of my servant; but, if you have any charge against me, here I am.

Sir R. Birnie. You are charged, in conjunction with your servant, with having swindled Mr Blamire out of a sovereign, under pretence of furnishing a Mr Salkeld with information which turns out to be false.

Ady. I have lived for upwards of twenty-five years in Houndsditch, and, if I were a swindler, I could not have preserved my character so long.

Sir R. Birnie. Then you admit having empowered your agent to receive the money in your name?

Ady. I do. I have carried on transactions of a similar description for years; and although I have met with persons who were ungrateful enough to demand back the fee which I require for my trouble, I have always maintained my point, and I mean still to maintain it. If this gentleman has any demand against me, he knows my address, and the law is open to him. I insist that this is not the right place to try the question.

Sir R. Birnie. We will see that presently. Let the police constable who took this fellow's servant into custody stand forward, and produce the money he found upon him.

The constable accordingly produced two sovereigns and some halfpence; and, by direction of the magistrate, he handed one of the sovereigns to Mr Blamire. Ady said that he had not the least objection to his servant stating where and from whom he got the other. Ridgeway, looking significantly at his master, said he had forgotten the name of the gentleman who paid him the sovereign, but that he lived in Suffolk Place. An officer was sent to the address named, with directions that the gentleman should come forward and state the pretence under which Ridgeway had obtained the money. While the officer was gone, the magistrates conferred as to what should be done.

Sir R. Birnie. There is no doubt whatever that a gross system of fraud and imposition has been carried on for years by the defendant Ady. Upwards of fifty letters have been addressed to me upon the subject by persons who have been swindled out of their money.

Ady. I wonder, then, that you, as a magistrate, have not taken earlier notice of me. I am always to be found, and everybody knows there is law enough in England to reach every species of offence. If I had done wrong, I should have been punished long ago.

Sir R. Birnie. You are a clever fellow, and manage to keep within the law; but take care, Mr Ady, for I am determined to have my eye upon you.

Ady. So you may; you cannot say that you ever lost a sovereign by me yet.

Sir R. Birnie. No; but you tried hard for it, by sending me one of your swindling letters.

Ady. If I did, I dare say I could have told you something worth your notice.

Sir R. Birnie. Not you, indeed. And I'll tell you candidly, I never had a relation so rich as I am myself; therefore it would be quite useless to throw away your information upon me.

Ady. If that's the case, Sir Richard, your name shall be scratched from my books whenever I have your permission to go home.

The officer, on his return, whispered the result of his inquiry to Sir Richard, who exclaimed aloud—'What! Mr Doherty, Solicitor-General for Ireland! Why, you pitch your game high indeed! So you have obtained the other sovereign from the Irish Solicitor-General!'

Ady. I did; and that I think is a sufficient proof that my transactions are fair and above board. I should indeed be a hardy swindler to attempt to impose upon a Solicitor-General.

Sir R. Birnie. I have the honour to be acquainted with Mr Doherty; and I dare say he will be good enough to tell me upon what pretence he parted with his money. He certainly could have known nothing of your character.

Ady. Perhaps not, Sir Richard.

The conversation ended here. The marked superiority of the cool, calm sense, and self-possession of Ady, over the inconsequential blustering of the magistrate, will enable the reader to understand how this singular man lived so many years upon the simplicity of the public.

CROMWELL'S COURTESY TO SIR WILLIAM SMYTH.

Sir William Smith, or Smyth, who on the 10th of May 1661, was created a baronet by Charles II. for his services during the civil war, was born at Buckingham about 1616. He was a member of the Middle Temple, and was in 1640 elected a Burgess for Winchelsea. For some time he joined the side of the Parliament, but on perceiving its destructive tendencies, he deserted it, and entered the royal army, in which he soon became a colonel. He was governor, or commander of the king's garrison at Hillesden House, near Newport Pagnell, when it was besieged and taken by Cromwell, in 1643. The garrison, however, had capitulated to march out with their arms, baggage, &c., unmolested. But as soon as they were out of the gate, one of Cromwell's soldiers snatched off Sir William Smyth's hat. He immediately complained to Cromwell of the man's insolence, and breach of the capitulation. 'Sir,' said Cromwell, 'if you can point out the man, or I can discover him, I promise you he shall not go unpunished. In the meantime (taking off a new beaver which he had on his own head) be pleased to accept of this hat instead of your own.*'

MAY 11.

St Mammertus, Archbishop of Vienna, 477. St Maieul, abbot of Cluni, 994.

Born.—Cardinal Pole, 1500, *Stoverton Castle*; Peter Camper, anatomist, 1722, *Leyden*.

Died.—David I., King of Scots, 1153, *Carlisle*; Jacques de Molay, Grand Master of the Templars, burnt at Paris, 1310; Jules-Hardouin Mansard, architect of Versailles, 1708; Catherine Cockburn, poetess, 1749; William Pitt, Earl of Chatham, 1778, *Hayes*; Spencer Percival, English minister, assassinated, 1812, *London*; Madame Récamier, 1849.

ASSASSINATION OF MR SPENCER PERCIVAL.

A weak ministry, under a premier of moderate abilities, Mr Spencer Percival, was broken up, May 11, 1812, by the assassination of its chief. On the evening of that day, Mr Percival had just entered the lobby of the House of Commons, on his way into the house, when a man concealed behind the door shot him with a pistol. He staggered forward with a slight exclamation, and fell expiring. The incident was so sudden, that the assassin was at first disregarded by the

bystanders. He was at length seized, and examined, when another loaded pistol was found upon him. He remained quite passive in the hands of his captors, but extremely agitated by his feelings, and when some one said, 'Villain, how could you destroy so good a man, and make a family of twelve children orphans?' he only murmured in a mournful tone, 'I am sorry for it.' It was quickly ascertained that he was named John Bellingham, and that a morbid sense of some wrongs of his own alone led to the dreadful deed. His position was that of an English merchant in Russia: for some mercantile injuries there sustained he had sought redress from the British government; but his memorials had been neglected. Exasperated beyond the feeble self-control which his mind possessed, he had at length deliberately formed the resolution of shooting the premier, not from any animosity to him, against which he loudly protested, but 'for the purpose,' as he said, 'of ascertaining, through a criminal court, whether his Majesty's ministers have the power to refuse justice to [for] a well-authenticated and irrefutable act of oppression committed by their consul and ambassador abroad.' His conduct on his trial was marked by great calmness, and he gave a long and perfectly rational address on the wrongs he had suffered, and his views regarding them. There was no trace of excitable mania in his demeanour, and he refused to plead insanity. The unhappy man, who was about forty-two years of age, met his fate a week after the murder with the same tranquillity. He probably felt death to be a kind relief from past distresses, for it was his own remark on his trial, 'Sooner than suffer what I have suffered for the last eight years, I should consider five hundred deaths, if it were possible for human nature to endure them, far more to be preferred.' He had left a wife of twenty years, with a babe at her breast, in St Petersburg, waiting to be called to England when his affairs should be settled. A more affecting image of human misery can scarcely be conceived.

It has often been stated that Mr John Williams of Scorrier House, near Redruth, in Cornwall—a man noted through a long life for his vigorous practical talents as a miner and mining speculator—had a dream representing the assassination of Mr Percival on the night after its occurrence, when the fact could not be known to him by any ordinary means, and mentioned the fact to many persons during the interval between the dream and his receiving notice of its fulfilment. In a book of old world matters, it may be allowable to give such particulars of this alleged affair as can be gathered, more particularly as it is seldom that such occurrences can be stated on evidence so difficult to be dealt with by incredulity. It may be remarked that, unlike many persons who are supposed or alleged to have had such revelations, Mr Williams never made any secret of his story, but freely related every particular, even to individuals who meant to advert to it in print. Thus a minute account of it found its way into the *Times* of 28th August 1828, and another was furnished to Dr Aber-

* Dr. King's *Anecdotes of his Own Times*.

crombie, and inserted by him in his *Inquiries Concerning the Intellectual Powers*; being directly drawn, he tells us, by an eminent medical friend of his own, 'from the gentleman to whom the dream occurred.' This latter account has been republished in a work by Dr Clement Carlyon,* formerly a Fellow of Pembroke College, who states that he had more than once heard the particulars from Mr Williams's own lips. Finally, Mr Hill, a barrister, and grandson of Mr Williams, communicated to Dr Carlyon a narrative which he drew up from the words of his grandfather, agreeing in all essential respects with the other recitals.

According to Dr Abercrombie's account, which Dr Carlyon mainly follows—'Mr Williams dreamt that he was in the lobby of the House of Commons, and saw a small man enter, dressed in a blue coat, and white waistcoat. Immediately after, he saw a man dressed in a brown coat with yellow basket buttons draw a pistol from under his coat and discharge it at the former, who instantly fell, the blood issuing from a wound a little below the left breast.' According to Mr Hill's account, 'he heard the report of the pistol, saw the blood fly out and stain the waistcoat, and saw the colour of the face change.' Dr Abercrombie's recital goes on to say, 'he saw the murderer seized by some gentlemen who were present, and observed his countenance, and on asking who the gentleman was who had been shot, he was told it was the Chancellor. (Mr Percival was at the time Chancellor of the Exchequer.) He then awoke, and mentioned the dream to his wife, who made light of it.' † We now pursue the more detailed narrative of the *Times*. 'Mrs Williams very naturally told him it was only a dream, and recommended him to be composed, and go to sleep as soon as he could. He did so, and shortly after, again awoke her, and said that he had the second time had the same dream; whereupon she observed he had been so much agitated by his former dream, that she supposed it had dwelt on his mind, and begged of him to try to compose himself and go to sleep, which he did. A third time the vision was repeated; on which, notwithstanding her entreaties that he would be quiet, and endeavour to forget it, he arose, it being then between one and two o'clock, and dressed himself. At breakfast, the dreams were the sole subject of conversation: and in the forenoon Mr Williams went to Falmouth, where he related the particulars of them to all of his acquaintance that he met. On the following day, Mr Tucker, of Tremanton Castle, accompanied by his wife, a daughter of Mr Williams, went to Scorrier House about dusk.

'Immediately after the first salutations, on their entering the parlour, where were Mr, Mrs, and Miss Williams, Mr Williams began to relate to Mr Tucker the circumstances of his dream: and Mrs Williams observed to her daughter, Mrs Tucker, laughingly, that her father could not even suffer Mr Tucker to be seated before he told him of his nocturnal visitation: on the statement of

* *Early Years and Late Reflections*. By Clement Carlyon, M.D. 2 vols. Vol. i., p. 219.

† Dr Abercrombie's *Inquiries Concerning the Intellectual Powers*. Fifth ed. p. 301.

which, Mr Tucker observed that it would do very well for a dream to have the Chancellor in the lobby of the House of Commons, but he could not be found there in reality; and Mr Tucker then asked what sort of a man he appeared to be, when Mr Williams minutely described him; to which Mr Tucker replied, "Your description is not that of the Chancellor, but it is certainly that of Mr Percival, the Chancellor of the Exchequer; and although he has been to me the greatest enemy I ever met with through life, for a supposed cause which had no foundation in truth (or words to that effect), I should be exceedingly sorry, indeed, to hear of his being assassinated, or of injury of the kind happening to him." Mr Tucker then inquired of Mr Williams if he had ever seen Mr Percival, and was told that he had never seen him; nor had ever even written to him, either on public or private business; in short, that he never had anything to do with him, nor had he ever been in the lobby of the House of Commons in his life. Whilst Mr Williams and Mr Tucker were still standing, they heard a horse gallop to the door of the house, and immediately after Mr Michael Williams, of Treviner, (son of Mr Williams, of Scorrier), entered the room, and said that he had galloped out from Truro (from which Scorrier is distant seven miles), having seen a gentleman there who had come by that evening's mail from London, who said that he had been in the lobby of the House of Commons on the evening of the 11th, when a man called Bellingham had shot Mr Percival; and that, as it might occasion some great ministerial changes, and might affect Mr Tucker's political friends, he had come as fast as he could to make him acquainted with it, having heard at Truro that he had passed through that place on his way to Scorrier. After the astonishment which this intelligence created had a little subsided, Mr Williams described most particularly the appearance and dress of the man that he saw in his dream fire the pistol, as he had before done of Mr Percival.

'About six weeks after, Mr Williams, having business in town, went, accompanied by a friend, to the House of Commons, where, as has been already observed, he had never before been. Immediately that he came to the steps at the entrance of the lobby, he said, "This place is as distinctly within my recollection in my dream as any in my house," and he made the same observation when he entered the lobby. He then pointed out the exact spot where Bellingham stood when he fired, and which Mr Percival had reached when he was struck by the ball, and when and how he fell. The dress both of Mr Percival and Bellingham agreed with the description given by Mr Williams, even to the most minute particulars.'

It is worthy of remark that Mr Williams died in April 1841, after the publication of the two accounts of his dream which are here quoted, and no contradiction of the narrative, or of any particular of it, ever appeared. He is described in the obituary of the *Gentleman's Magazine*, as a man in the highest degree estimable. 'His integrity,' says this record, 'was proof against all temptation and above all reproach.'

MADAME RÉCAMIER.

Jeanne Françoise Julia Adelaide Bernard, Madame Récamier, was born on the 4th of December 1777. French memoirs record the histories of many remarkable women, who have exercised no unimportant influence on the times in which they lived; and among these, Madame Récamier, not by any means one of the least remarkable, appears to have been in some respects almost unique. It is difficult to explain the source of her influence, which was so universal, which was exercised alike over princes and people, which drew politicians and generals, artists and savans, willingly captive to the feet of a woman during fully half a century. Madame Roland was a woman of indomitable spirit; Madame de Staël was a writer; many French beauties have reigned by a very bad kind of influence; but Madame Récamier had none of these recommendations. She never professed any political opinions decidedly; she was not a writer, nor remarkably witty, nor even high-born, nor yet licentious. But she was beautiful; and to this beauty she united a certain mysterious charm of placid and kind demeanour, a sweet natural manner, a dignified obsequiousness, which made all love her, because she seemed to love them. It was this artful simplicity which made her beauty all-powerful; it was this which made the populace follow after her in the streets of Lyons, where she was born; and this which drew unhappy Marie Antoinette to take notice of a child in a crowd.

A writer in *Fraser's Magazine* draws up a rough list of Madame Récamier's most distinguished admirers. 'There are crowned heads without number; first and foremost, he who was to be Napoleon I.; then Bernadotte, the future King of Sweden; the prince, afterwards King, of Würtemberg; the Hereditary Grand-Duke of Mecklenburg-Strelitz; the Prince of Bavaria; our Prince of Wales; the Dukes of Beaujolais and Montpensier, brothers of Louis Philippe; and last, not least, Prince Augustus of Prussia. . . . Next we find more than crowned heads: Wellington, Metternich, Duke Mathieu de Montmorency, Benjamin Constant, Canova, Balanche, and Chateaubriand:—truly, conquests enough for one woman, and she but a notary's daughter!

Madame Récamier's influence over Napoleon is interesting. The first time he saw her was on a singular occasion. He was delivering his brief and pithy rejoinder to an address presented to him on his return from Italy in 1797, when he observed all eyes suddenly turned from him to another—Madame Récamier had stood up to gain a better sight of the general, and her beauty at once drew all eyes upon her; but so severe, she relates, was the look he directed towards her, that she resumed her seat in confusion. The only other occasion on which Napoleon personally encountered her was at his brother Lucien's house. It was then that Fouché whispered in her ear, 'The First Consul thinks you charming.' Napoleon endeavoured to be placed next to her at dinner; but, failing in this, he called out to Cambacérés, the second consul, who had proved on this occasion more fortunate than his comrade, 'Ah! ah!

citizen consul, close to the prettiest, eh!' A speech which affords a fair specimen of Napoleon's delicacy. After dinner, he endeavoured to open a conversation with her by saying, 'So you like music, madame,' but was interrupted by Lucien. The great man saw her no more. In after years she declined to figure at his court, and fell a victim to his jealousy, and, amongst other indignities, received an order of exile.

It is natural to pass from Napoleon to our own Duke. Wellington is said rather to have been enchanted than favourably received, and Madame Récamier's biographer, Madame Lenormant, charges him with want of good taste on one occasion. The latter statement remains altogether unsubstantiated; and for the former, it is quite plain that the fair dame tried her arts on the honest soldier. A specimen of his letters to her will be interesting for its novel French, as well as for being much more like a despatch than a love-letter.

'Paris, le 20 Octobre, 1814.

'J'étais tout hier à la chasse, madame, et je n'ai reçu votre billet et les livres qu'à la nuit, quand c'était trop tard pour vous répondre. J'espérais que mon jugement serait guidé par le votre dans ma lecture des lettres de Mademoiselle Espinasse, et je desespère de pouvoir le former moi-même. Je vous suis bien obligé pour la pamphlète de Madame de Staël.

'Votre très obeissant et fidel serviteur,

'WELLINGTON.'

But, however much Madame Récamier coveted, and did her best to retain, the admiration of all admirers, she undoubtedly bestowed her best affections on Chateaubriand. She became, when they were both growing old, his champion, his priestess, and his nurse. Attachment to him was, latterly, the only merit which won her favour. He was devoted to her, in spite of all his selfishness, in spite of all his morbid sentimentality, with genuine and enduring, if somewhat romantic affection; and when his wife died, he offered her his hand, though she was almost blind, and he on the brink of the grave. This was in 1847; the old man died in 1848, and Madame Récamier in 1849. She had the good sense to refuse a proposal so absurd, but nursed him to the last, with great kindness and self-denial; and when we remember that this Platonic attachment was of thirty years' standing, we cannot refuse to be moved by the last melancholy scenes.

It may sound strange to say that Madame Récamier's life was praiseworthy for its purity and devotion, when we remember that she was a married woman: but, whether or not we approve, we have to bear in mind the difference between French and English customs in respect of marriage. She was married to M. Récamier, who was a wealthy banker, when he was forty-two and she sixteen; and though he always remained a father to her, he was in no sense her husband, except in the legal sense. Here was the error: it was too much to expect a beautiful girl to refuse the world's admiration, or not to have her head turned by the devotion of princes. Indeed, such self-command seems never to have been contemplated. When Lucien Bonaparte, who, by the way, is not set down in the list, paid his

passionate addresses to her, M. Récamier recommended her to seem to encourage him, lest she should give some dangerous offence. At another time she even wrote to her husband to ask him to consent to a divorce, in order that she might marry Prince Augustus of Prussia, who had proposed to her; and he did not absolutely refuse, though he expostulated. It is curious, but certainly consistent, to find that the husband's failure in business, and loss of fortune, was afterwards considered sufficient reason for a separation. But there was not the least disagreement; he continued to dine with her daily, till he died in 1830.

Of all her admirers, Canova, whom she intruded herself upon in 1813, pleases us most. He behaved like a sensible man and an artist. He was devoted in a good practical way, lending her his pleasant villa. He shewed his admiration of her beauty not unbecomingly, and with no affectation. He did not talk such silly nonsense as Chateaubriand, who was always in such a vein as this: 'I fear I shall not be able to see you at half-past five, and yet I have but this happiness in the whole world;' or, 'Je ne vis que quand je crois que je ne vous quitterai de ma vie;' but he quietly carved out of the marble an exquisite bust of the beauty; and when she had the bad taste not to be pleased with it, put it as quietly aside, only, when she was gone, to wreath the brow with bays, and expose it as 'Beatrice.' Surely it was the beauty he loved, and not the woman. So can beauty rule the great and the mean, the artist and the clown. It is this same beauty that has spread the praise of Madame Récamier through the length and breadth of the world; it is this same beauty which has buried in oblivion many an error such a woman must have been guilty of; which blinds the eyes of biographers. 'Fleeting, transient, evanescent,' pleads the writer before quoted—'such are the terms invariably applied to beauty by the poet; a fatal gift, more sadly still says the moralist; and the wisdom of nations embodied in a popular adage vainly strives to persuade each succeeding generation that those alone are handsome who act handsomely; yet who dare deny the lasting influence of beauty? Even athwart the silent gulf which separates the living from the dead its pleadings are heard. Prove but that a woman was beautiful, and scarcely a historian remains impartial. Surely the charm which was sufficient to throw a halo round a Cleopatra, and better than her royal robes to hide the blood-stains on the life of a Mary Stuart, may procure forgiveness for the venial weaknesses which, in this country, will prevent the apotheosis of a Récamier.'

AN EARLY NORTHERN EXPEDITION.

The discoveries and conquests of the Spaniards and Portuguese in South America and India had greatly narrowed the limits of English maritime enterprise, when the discovery of North America by Sebastian Cabot suggested another and shorter route to the *El Dorado* of the East. 'Why,' it was naturally asked, 'should there not be a passage leading to the westward in the northern part of the great American continent, like that of Magellan in the southern?' The

subject having been canvassed for some years, at last took a practical shape, and a company was formed under the name of *The Mystery, Company, and Fellowship of the Merchant Adventurers, for the Discovery of Unknown Lands*. Two hundred and forty shares of £25 each were rapidly subscribed, and the first three ships fitted out by the Merchant Adventurers weighed anchor at Deptford on the 11th of May 1553, and dropped down the Thames, their destination being to discover a way to China by a north-west passage. Great things being expected from the expedition, the day was made one of general rejoicing. As the ships passed Greenwich, where the court was then held, the courtiers came running out on the terraces of the palace, while the common people stood thick upon the shores below. The privy councillors, as became their dignity, merely looked out of the windows; but those of lesser degree crowded the battlements and towers. 'The ships discharged their ordnance, shooting off their great pieces after the manner of war, and of the sea, so that the tops of the hills sounded, and the valleys gave an echo, while the mariners shouted in such sort that the sky rang again.' It was a very triumph in all respects. 'But,' as the describer of the scene, the tutor of the royal pages, writes, 'alas! the good King Edward, by reason of his sickness, was absent from this show; and, not long after the departure of these ships, the lamentable and most sorrowful accident of his death followed.'

Cabot drew out the instructions for the conduct of this expedition, being too far advanced in years to take command of it in person. Many bold adventurers offered their services for this important post; 'but the Company of Merchants made greatest account of one Sir Hugh Willoughby, both by reason of his goodly personage, as also for his singular skill in war, so that they made choice of him for general of the voyage.' Willoughby, about three years previous, had acquired considerable fame by his long-sustained defence of Lauder Castle, in Berwickshire, against the French and Scots. Though suffering the greatest privations, he and a handful of brave men held the castle till peace was proclaimed; and this circumstance most probably pointed him out to the Company as one whose courage, foresight, and fertility in resources, under the most trying circumstances, peculiarly fitted him for the command of their expedition. Richard Chancellor, the second in command, was recommended to the Company by Sir Henry Sidney, as a man whom he knew most intimately from daily intercourse, and one in the highest degree fitted for carrying out their purpose.

Cabot's instructions did not relate to the scientific part of the voyage alone, but took cognizance of the minutest details of discipline. Thus one clause directs:—'That no blaspheming of God, or detestable swearing, be used in any ship, nor communication of ribaldry, filthy tales, or ungodly talk be suffered in the company of any ship: neither dicing, tabling, carding, nor other devilish games to be frequented, whereby ensueth not only poverty to the players, but also strife, variance, brawling, fighting, and oftentimes murder, to the destruction of the parties and

provoking of God's wrath and sword of vengeance.' Prayers, too, were to be said in each ship night and morning, but the explorers were not to attempt to force their religion upon any strange people they might discover; and they were to bear with any religious rites such people might have. The instructions conclude by assuring the explorers of their great likelihood of succeeding in the enterprise, adducing the examples of the Spaniards and Portuguese, who had, to the great wealth of their nations, discovered lands in places previously considered uninhabitable 'for extremities of heats and colds, and yet, when tried, found most rich, well-peopled, temperate, and so commodious that all Europe hath not the like.'

The three ships were respectively named the *Edward Bonadventure*, the *Bona Esperanza*, and the *Bona Confidentia*. Soon after sailing, at a consultation among the captains, Wardhuus in Norway was appointed as their place of rendezvous. A gale in the North Sea occasioned the separation thus foreseen and provided for; but they never met again. Willoughby, with the *Bona Esperanza* and *Bona Confidentia*, steering northwards, discovered Nova Zembla, and from thence was buffeted by opposing winds to the coast of Lapland. Here he anchored in a bay near the mouth of a river now called by the Russians the Varsina, merely intending to wait for a favourable wind to pursue his voyage; but extremely cold weather setting in, he resolved to winter there. This we learn from the last entry in his journal, written about the beginning of October, in the following words:—

'Thus remaining in this haven the space of a week, and seeing the year far spent, and also very evil weather—as frost, snow, hail, as though it had been the deep of winter—we thought best to winter there. Wherefore, we sent out three men south-south-west, to search if they could find people, who went three days' journey, but could find none; after that we sent other three westward, four days' journey, which also returned without finding people. Then sent we three men south-east, three days' journey, who in like sort returned without finding of people, or any similitude of habitation.'

The English at that time had no idea of the severity of a northern winter; and, consequently, the discovery ships were unprovided with the means of guarding against it. The crews of the two ships, six merchants, two surgeons, and Sir Hugh Willoughby, in all about seventy men, were frozen to death, about the same time as Sir Hugh's grand-niece, Lady Jane Grey, and many others of his relations, died on the scaffold. By a signature of Willoughby, attached to his will, it is known that he and some others were alive in January 1554, and may have been rejoiced by a glimpse of the sun at mid-day; but what a scene of horror it shone upon! Such as the poet only can depict:—

'Miserable they!

Who here entangled in the gathering ice,
Take their last look of the descending sun;
While, full of death, and fierce with ten-fold frost,
The long, long night, incumbent o'er their heads,
Falls horrible! Such was the Briton's fate,

As with first prow (what have not Britons dared!)
He for the passage sought, attempted since
So much in vain, and seeming to be shut
By jealous Nature with eternal bar.
In these fell regions, in Arzina caught,
And to the stony deep his idle ship
Immediate seal'd, he with his hapless crew,
Each full exerted at his several task,
Froze into statues; to the cordage glued
The sailor, and the pilot to the helm.'

When the gale by which Chancellor, in the *Edward Bonadventure*, was separated from the other ships, had moderated, he made the best of his way to the rendezvous at Wardhuus, where he waited some time for Willoughby; but the latter not arriving, and the season being far advanced, he determined to push on by himself. From this course he was earnestly dissuaded by some 'friendly Scottish men,' whom, to his great surprise, he found at this distant and inhospitable place. But we are not surprised to find Scotchmen there at that time, for the marriage of James III. with the daughter of Christian of Denmark opened up an early communication between Scotland and the extreme north of Europe. And among the Russian archives there is a notice of one David Coken (probably Cochran), a Scotch herald in the service of John, King of Denmark, who visited Russia, by way of the White Sea, three different times previous to 1502, half a century before it was known in England, by the result of Chancellor's voyage, that Russia could be reached in that direction. Chancellor, however, did not listen to the 'friendly Scottishmen,' 'being steadfastly and immutably determined to bring that to pass which he had undertaken to do, or die the death.' 'So,' to use the words of his chronicler, 'he sailed so far that he came at last to the place where he found no night at all, but a continual light and brightness of the sun shining on the mighty sea; and having the benefit of this perpetual light for certain days, at length it pleased God to bring him into a certain great bay, which was one hundred miles or thereabouts over.' This was the White Sea. Soon after he met with some fishermen, from whom he learned that the adjacent country was called Moscovy, and that 'one Juan Vasiliwich ruled far and wide in those places.'

Wintering his ship near the mouth of the Dwina, Chancellor proceeded to Moscovy, where he was well received by the Czar; and in the following summer he returned to England as a great discoverer, equal to Columbus or Vasco de Gama. 'Will it not,' says old Hakluyt, 'be in all posterity as great a renown to our English nation to have been the first discoverers of a sea beyond the North Cape, and a convenient passage into the great empire of Russia, as for the Portuguese to have found a sea beyond the Cape of Good Hope, and consequently a passage to the East Indies; or for the Italians and Spaniards to have discovered unknown lands many hundred leagues westward of the Pillars of Hercules?'

In the spring of 1555, some Laplanders found Willoughby's ships uninjured, with their crews still frozen. The news being conveyed to the Czar, he ordered them to be brought to the

Dwina, and their cargoes preserved under seal for the benefit of their English owners. On Chancellor's second voyage to Russia, which immediately succeeded the first, he learned the recovery of these ships; and on his third voyage he brought out men to man and bring them to England. Sailors believe that there are what they term unlucky ships, and the fate of these would almost warrant the idea. In 1556, the three ships of the original expedition sailed from Russia, bound to England. Chancellor, in the *Edward Bonadventure*, returning from his third voyage, bringing with him a Russian ambassador and suite, and the *Bona Esperanza* and *Bona Confidentia*, rescued from the ice to be the agents of another disaster. Not one of the three reached England. The *Edward Bonadventure* was lost on the coast of Aberdeenshire; Chancellor, his son, and most of his crew perished, but the ambassador was miraculously saved.* The *Bona Confidentia* was lost, with all her crew, on the coast of Norway; and the *Esperanza* was swallowed up by the ocean, time and place unknown.

JOHN GILPIN.

Mr Beyer, an eminent linendraper at the end of Paternoster Row, where it adjoins to Cheapside—who died on the 11th of May 1791, at the ripe age of ninety-eight—is reported upon tolerable authority to have undergone in his earlier days the adventure which Cowper has depicted in his ballad of 'John Gilpin.' It appears from Southey's life of the poet, that, among the efforts which Lady Austen from time to time made to dispel the melancholy of Cowper, was her recital of a story told to her in her childhood of an attempted but unlucky pleasure-party of a London linendraper ending in his being carried past his point both in going and returning, and finally brought home by his contrarious beast without ever having come in contact with his longing family at Edmonton. Cowper is said to have been extremely amused by the story, and kept awake by it a great part of the ensuing night, during which he probably laid the foundations of his ballad embodying the incidents. This was in October 1782.

Southey's account of the origin of the ballad may be consistent with truth; but any one who candidly reads the marriage adventure of Commodore Trunnion, in *Peregrine Pickle*, will be forced to own that what is effective in the narration previously existed *there*.

MAY 12.

Saints Nereus and Achilleus, martyrs, 2nd century. St Flavia Domitilla, 2nd century. St Pancras, martyr, 304.

St Pancras, after whom many churches are called, in Italy, France, and Spain, and whose name designates a parish in London having a population equal to many large cities, was a Roman youth of only fourteen at the time of his martyrdom under Dioclesian.

Born.—John Bell, eminent anatomist, 1763, *Edinburgh*; Hon. General Sir George Cathcart, 1784; John Russell Hind, astronomer, 1823, *Nottingham*.

* Of this ambassador's adventures and reception in England, an account is given in the present work, under 27th February.

Died.—Thomas Earl of Strafford, English minister, executed 1641, *Tower-hill, London*; John Rushworth, (historical collections), 1690, *Southwark*; Christopher Smart, poet, 1771, *London*; Francis Grose, antiquary, 1791.

THOMAS EARL OF STRAFFORD.

He deserted the popular cause, to become one of the most noted instruments of Charles I. in establishing an arbitrary government in England; he ruled Ireland with a rod of iron, and sowed the seeds of the great massacre in that kingdom. He was undoubtedly a great political culprit; yet the iniquitous nature of his trial and condemnation is equally undoubted; and every generous heart must sympathize with him when he found that the master he had served only too well yielded to sign his death-warrant. Political crime, too, is always so mixed up with sincere, though it may be blind opinion, that it seems hard to visit it with the punishment which we award to downright turpitude. The people made bonfires, and danced round them at his execution; but we, in a cooler time, may sigh over the idea of such a grand man being brought low on Tower-hill.

When Strafford lay in the Tower, he wrote several letters to members of his family, marking the existence in that proud bosom of all the natural affections. To his wife he thus wrote, on receiving the charge preferred by his enemies:

'Sweet Harte,—It is long since I writt unto you, for I am here in such a trouble as gives me little or noe respite. The chardge is now cum inn, and I am now able, I prayse God, to tell you that I conceive ther is nothing capitall; and for the rest, I knowe at the worste his Majestie will pardon all without hurting my fortune, and then we shall be happy by God's grace. Therefore comfort yourself, for I trust the clouds will pass away, and that we shall have fine weather afterwards. Farewell!—Your loving husbände,

'Tower of London,
4 Febr., 1644.'

'STRAFFORD.

The clouds did *not* pass away. The summer of 1641 was to be no summer for him. Less than a month before his death, when the bill for his attainder was passing to the House of Lords, he wrote in less confident, but still hopeful terms, to his little daughter—*

'My dearest Nan,—The time, I trust, draws on when I may hope to see you, which will be one of the best sightes I can look upon in this world. Your father, as you desired, has been hearde speake for himself, now thes three weeke together, and within a few days we shall see the conclusion. Ther is, I think, little fear of my life; soe I hope for a meanes to be left me to let you see how deare and much esteemed you are and ever shall be to me.

'Look that you learne to play the good housewife, for now, perchance, there may be need of it; yet, however fortune befall me, I shall ever willingly give you the first good of it, and content myself with the second.

'My dear hearte,—Plie your book and other learnings, which will be of use unto you hereafter, and you will see how we will live happily and contentedly, and live to see all these stormes blown

* This interesting letter appeared in the Earl of Albe-marle's work, *Memoirs of the Marquis of Rockingham*. 2 vols. 1852.

over; that so, at leisure, and in fairer weather, I may tell that which I am, and must infallibly be, in all the conditions of life,—Your loving father,

'Tower, this 19th April, 1641. 'STRAFFORD.'

FRANCIS GROSE.

Francis Grose, the son of a rich Swiss jeweller settled in London—at one time an officer in the Surrey militia, whence it was he derived his epithet of 'Captain,'—noted personally for his Falstaff-like figure, wit, and good-fellowship, was suddenly cut off by apoplexy at about the age of sixty. His voluminous works, depicting the ancient buildings of the three kingdoms, his treatises on military antiquities and on ancient arms and armour, may now be considered as superseded by better books; yet they were meritorious for their day. A huge, hearty, laughing figure he makes, through some twenty years of the last century; finally canonized in the verses of Burns, who was captivated by his good-humour, and wrote for him the wondrous tale of *Tam o' Shanter*. There were also some minor works by Grose, including one which embodied the slang and many of the curious local proverbs of England. In one of these lesser books he gives, apparently from his own observation in early life, a sketch of the small squire of England, as he existed before the days of modern improvement; it has something of the merit of Addison, and may be not inappropriately transferred to these pages:—

THE COUNTRY SQUIRE.

Another character, now worn out and gone, was the little independent gentleman, of £300 per annum, who commonly appeared in a plain drab or plush coat, large silver buttons, a jockey cap, and rarely without boots. His travels never exceeded the distance of the county town, and that only at assize and session time, or to attend an election. Once a week he commonly dined at the next market town with the attorneys and justices. This man went to church regularly, read the weekly journal, settled the parochial disputes between the parish officers at the vestry, and afterwards adjourned to the neighbouring ale-house, where he usually got drunk for the good of his country. He never played at cards but at Christmas, when a family pack was produced from the mantel-piece. He was commonly followed by a couple of greyhounds and a pointer, and announced his arrival by smacking his whip, or giving the view-halloo. His drink was generally ale, except at Christmas, the 5th of November, or some other gala days, when he would make a bowl of strong brandy punch, garnished with a toast and nutmeg. A journey to London was, by one of these men, reckoned as great an undertaking as is at present a voyage to the East Indies, and undertaken with scarcely less precaution and preparation.

The mansion of one of these squires was of plaster striped with timber, not unaptly called calamanco work, or of red brick, large casemented bow windows, a porch with seats in it, and over it a study; the eaves of the house well inhabited by swallows, and the court set round with holly-hocks. Near the gate a horse-block for the convenience of mounting.

The hall was furnished with fitches of bacon, and the mantel-piece with guns and fishing-rods of various dimensions, accompanied by the broad-sword, partisan, and dagger, borne by his ancestors in the civil wars. The vacant spaces were occupied by stags' horns. Against the wall were posted King Charles's *Golden Rules*, Vincent Wing's *Almanack*, and a portrait of

the Duke of Marlborough; in his window lay *Baker's Chronicle*, *Foxe's Book of Martyrs*, *Glanvil on Apparitions*, *Quincey's Dispensatory*, *The Complete Justice*, and a Book of Farriery.

In the corner, by the fire-side, stood a large wooden two-armed chair, with a cushion; and within the chimney corner were a couple of seats. Here, at Christmas, he entertained his tenants assembled round a glowing fire made of the roots of trees, and other great logs, and told and heard the traditional tales of the village respecting ghosts and witches, till fear made them afraid to move. In the meantime the jorum of ale was in continual circulation.

The best parlour, which was never opened but on particular occasions, was furnished with Turk-worked chain, and hung round with portraits of his ancestors; the men in the character of shepherds, with their crooks, dressed in full suits and huge full-bottomed perukes; others in complete armour or buff coats, playing on the bass viol or lute. The females likewise as shepherdesses, with the lamb and crook, all habited in high heads and flowing robes.

Alas! these men and these houses are no more; the luxury of the times has obliged them to quit the country, and become the humble dependents on great men, to solicit a place or commission to live in London, to rack their tenants, and draw their rents before due. The venerable mansion, in the mean time, is suffered to tumble down, or is partly upheld as a farm-house; till, after a few years, the estate is conveyed to the steward of the neighbouring lord, or else to some nabob, contractor, or limb of the law.

THE 'PRENTICE'S PILLAR.

The beautiful collegiate church, commonly called *chapel*, of Roslin, near Edinburgh, which Britton allows to combine the solidity of the Norman with the finest tracery and ornamentation of the Tudor period, a gem of architectural

ANNIE WILSON OF ROSLIN.

beauty, and so entire that it has lately been refitted as a place of worship for an episcopalian

congregation,* used to be shewn, in the earlier years of this century, by a venerable crone named Annie Wilson, of whom a counterfeit presentment is here given, borrowed from the sober pages of the *Gentleman's Magazine* (September 1817). You obtained from Annie a sort of cottage version of the legends of the place: how the barons of Roslin were always buried in mail—how when any evil or death was about to befall one of them, 'the *chapel aye* appeared on fire the night afore'—how Sir William Sinclair's dog saved his master's life by bringing down a stag 'afore it crossed the March-burn, and all the puffy accounts of the former dignity of the Sinclairs of Roslin, which their relative, Father Hay, has put on record. Mrs Wilson also gave her numerous visitors an account, not quite in the manner of Pugin or Willis, of the details of the architecture—the site of the high altar—the 'star in the east' hanging from a drop in the groining over it—the seven acts of mercy and the seven deadly sins, carved on two lintels

THE 'PRENTICE'S PILLAR.

in the aisle—the legend on a stone, 'Strong is wine, stronger is the king, stronger are women, but above all truth conquers,—the mural tablet

* Roslin Chapel was desecrated by a mob at the Revolution, and remained for upwards of a century and a half windowless and mouldy, with great hazard of entire, though slow, destruction of its fine internal work. From this fate it has been rescued by the proprietor, the Earl of Rosslyn, to whom the further praise must be given of having effected a complete cleaning of the walls without the slightest injury to the carved work. The church was re-opened for worship on Easter Tuesday 1862, under the auspices of the Bishop of Edinburgh, the Bishop of Brechin, and other clergy of the Scottish episcopal communion.

and epitaph of the Earl of Caithness, of the Latin of which she made sad havoc; all this in a monotonous voice, and without pauses, somewhat to the discomfiture of the hearers, who, however, never interrupted Annie with a question but they had reason to regret it, for she then recommenced her sing-song recital, and gave it all over again, it being impossible for her to resume the broken thread of her discourse.

Mrs Wilson's strong point was the *Apprentice's Pillar*. 'There ye see it, gentlemen, with the lace bands winding sae beautifully round about it. The maister had gane awa to Rome to get a plan for it, and while he was awa his 'prentice made a plan himself and finished it. And when the maister cam back and fand the pillar finished, he was sae enraged that he took a hammer and killed the 'prentice. There you see the 'prentice's

face—up there in ae corner, wi' a red gash in the brow, and his mother greeting for him in the

corner opposite. And there, in another corner, is the maister, as he lookit just before he was hanged; it's him wi' a kind o' ruff round his

face,' with a great deal more of the like twaddle, which Annie had told for fifty years without ever hearing a word of it doubted, and never once doubting it herself.

The 'Prentice's Pillar of Roslin is really a most beautiful specimen of Gothic tracery—a thing standing out conspicuously where all is beautiful. Viewing its exquisite workmanship, we need not wonder that such a story as that of the incensed

master and his murder of the apprentice should be told regarding it. We have to fear, however, that, notwithstanding the faces of the master, the apprentice, and the apprentice's mother, exhibited on the walls, there is no real foundation for the tale. What chiefly gives cause for this apprehension is, that similar stories are told regarding particular pieces of work in other Gothic churches. In Lincoln cathedral, for example, there is a specially fine circular transept window, concerning which the verger tells you that an apprentice was the fabricator of it in the absence of his master, who, mortified at being so outdone, put an end to his own (not the apprentice's) existence in consequence. So also, in the cathedral of Rouen, there are two rose windows in the respective transepts, both fine, but one decidedly finer than the other. The guide's story is, that the master architect and his pupil strove which should plan the finest window. The pupil produced the north window, which proved 'plus belle que celle du midi,' and the humiliated master revenged himself by killing the pupil. We do not hear that in any of these cases there is any tangible memorial of the event, as at Roslin. How, it may be asked, should there be memorials of the event in that case, if the event be a fiction? We do not see that there is much force in this query. The faces, which are mere masks at the points in the architecture where such objects are commonly given, and not solitary objects (for there are two or three others without any story), may have been modified with a reference to the tale at a date subsequent to that of the building, or the apprentice's pillar and the faces together might all have been formed at the first, in playful or satirical allusion to similar stories told of previous Gothic churches.

All who have ever visited the noble minster of Lincoln must remember the tomb of Bishop Fleming, whereon he is represented twice above in full pontificals, and below in the form of an emaciated figure encompassed in a winding-sheet. All, too, must remember the verger's tale regarding this worthy bishop of Wickliffite memory, to the effect that he died while making an attempt to imitate the Saviour in his miraculous fast of forty days. Every Lincolnshire clown has heard of the 'mon that doyed foasting,' and of whose final condition a memorial is presented on his tomb. Now the truth is that similar figures are to be seen in many churches—as, for example, on the tomb of Canon Parkhouse in Exeter cathedral,—on that of Bishop Tully, of St David's, at Tenby,—on the tomb of John Baret, in the abbey church of Bury,—or that of Fox, bishop of Winchester, who died in 1528,—and always with the same story. Amongst well-informed persons no doubt is entertained that the story is a mere fiction of the plebeian mind, excogitated as a means of accounting for the extraordinary object presented to view. Such acts of ascetism are quite inappropriate regarding ecclesiastics of the fifteenth and sixteenth centuries. What was really aimed at was to give human pride a check, by showing what a great man was reduced to by wasting disease and the natural decay of extreme age. It was a sermon in stone.

Another romantic story, 'representing how a

young bride on her marriage-day sportively hid herself in an old oak chest, which closed down upon her with a spring-lock, and how she was not discovered for many years after, by which time her husband had ended his life in melancholy fatuity,'—that tale which Mr Rogers narrated so well in his poem *Italy*, and which a popular ballad has made still more familiar to the English public,—is, in like manner told in several places besides Modena. For example, there is a large old oaken chest in the possession of the Rev. J. Haygarth, rector of Upham, which is said to have formerly been in the neighbouring mansion of Marwell Old Hall, between Winchester and Bishop's Waltham,—where it proved a living tomb to a young lady, precisely in the like circumstances described by Mr Rogers. Bramshill, Hampshire, has a similar chest and tale. The multiplicity of instances reveals the real character of the story, as one engendered by the popular mind in accordance with appearances. The chest is big enough to be a tomb for a human being: therefore it was so. The youth and bridal condition of the victim follow, as necessary to make the case the more telling.

MAY 13.

St Servatius, Bishop of Tongres, 384. St John the Silent, Armenian anchorite, 559. St Peter Regalati, confessor, 1456.

Born.—Empress Maria Theresa, 1717; Charles, Marquis of Rockingham, statesman, 1730.

Died.—Johan Van Olden Barneveldt, Dutch statesman, beheaded, 1619, *Hague*; Louis Bourdaloue, French divine, 1704, *Paris*; James Basire, 1802; Cardinal Fesch, uncle of Napoleon Bonaparte, 1839.

BARNEVELDT.

This name is usually associated with ideas of national ingratitude. Another is evoked by it, that there is no party or body of men safe by their professions of liberal principles, or even their professed support of liberal forms of government, from the occasional perpetration of acts of the vilest tyranny and oppression. After William of Orange, the Netherlands owed their emancipation from the Spanish yoke to the advocate, Johan Van Olden Barneveldt. He it mainly was who obtained for his country a footing among the powers of Europe. As its chief civil officer, or advocat-general, he gained for it peace and prosperity, freed it from debt, restored its integrity by gaining back the towns which had been surrendered to England as caution for a loan, and extorted from Spain the recognition of its independence. It owed nearly everything to him. Nor could it be shewn that he ever was otherwise than an upright and disinterested administrator. He had, however, to oppose another and a dangerous benefactor of Holland in Prince Maurice of Orange. A struggle between the civil and the military powers took place. There was at the same time a struggle between the Calvinists and the Arminians. In British history, the former religious body has been associated with the cause of civil liberty.

The history of the Netherlands is enough to shew that this was from no inherent or necessary affinity between liberty and the Genevan church. Barneveldt, who had embraced the tenets of Armin, contended that there should be no predominant sect in Holland; he desired toleration for all, even for the Catholics. The Calvinists, to secure their ascendancy, united themselves with Prince Maurice, who, after all, was not of their belief. By these combined influences, the sage and patriotic Barneveldt was overwhelmed. After a trial, which was a mockery of justice, he was condemned to death; and this punishment was actually inflicted by decapitation, at the Hague, on the 13th of May 1619, when Barneveldt was seventy-two years of age.

MAY 14.

St Pontius, martyr, about 258. St Boniface, martyr, about 307. St Pachomius, abbot, 348. St Carthag, Bishop of Lismore, about 637.

Born.—John Dunton, 1659, *Graffham*; Gabriel Daniel Fahrenheit, 1686, *Dantzic*; Robert Owen, philanthropic social reformer, 1771.

Died.—Henry IV. of France, assassinated at Paris, 1610; Louis XIII. of France, 1643, *St Germain-en-Laye*; Duc de Maine, 1736; Professor David Runkenius, 1798, *Leyden*; Henry Grattan, statesman, 1820; Sir William Congreve, Bart., inventor of warlike missiles, 1828, *Toulouse*.

JOHN DUNTON.

One of the most curious of autobiographies is the *Life and Errors of John Dunton*, a very erratic and versatile genius, who, combining the avocations of author and bookseller, wrote upwards of sixty works, and published more than six hundred. Dunton's mind has, not inaptly, been compared to 'a table, where the victuals were ill-sorted and worse dressed.' He was born at Graffham, in Huntingdonshire, and, at an early age, sent to school, where he passed through the general series of boyish adventures and mishaps—robbing orchards, swallowing bullets, falling into rivers, in short, improving in everything but learning, and not scrupling to tell lies when he could gain any advantage by concealing the truth. His family had been connected with the ministry for three generations; and though he felt prouder of this descent from the house of Levi, than if he had been a duke's son, yet being of too volatile a disposition to follow in the footsteps of his reverend ancestors, he was apprenticed to Thomas Parkhurst, a noted Presbyterian bookseller of the day, at the sign of the Bible and Three Crowns, Cheapside, London. Dunton and his master seem to have agreed very well together; a young lady, however, coming to visit Mr Parkhurst's family, the apprentice made love to her, and they met occasionally in Grocers' Hall Garden; but the master making a 'timely discovery,' sent Miss Susanna back to her friends in the country. Another slight difference occurred between master and apprentice. Parkhurst was a strict Presbyterian, and, according to the established custom of the

period, Dunton was bound to attend the same place of worship as his master; but the rambling nature of the apprentice led him 'to break the order and harmony of the family,' by attending the ministrations of a Mr Doolittle, a famous Nonconformist. This course did not escape its merited punishment. One Sunday, as Dunton's eyes were wandering round Mr Doolittle's congregation, a certain beautiful Sarah Seaton gave him 'a mortal wound.' A courtship soon followed, with much letter-writing, to the loss of his master's time, and, worse still, clandestine visits to a dancing-school. How the affair ended we are not informed; in this instance love seems to have given place to politics; for the great struggle which led to the Revolution was in progress; the whole nation was divided into Whigs and Tories, and, of course, the bold 'prentices of London could not be neutral. So Dunton, joining the Whig apprentices, was chosen their treasurer, and one of a deputation that presented a petition bearing 30,000 signatures to the Lord Mayor. His lordship promised that he would acquaint the king with its contents, and then told them to return to their respective homes, and diligently attend to their masters' business.

At the expiration of his term of apprenticeship, Dunton gave his friends a feast to celebrate its 'funeral,' according to the usual custom. 'Such entertainments,' he truly observes, 'are vanity, and expensive;' and undoubtedly he had good reason to say so, for no less than one hundred apprentices were at the feast.

Soon afterwards, commencing trade on his own account, the cares of the world and business set him perfectly at ease from all inclinations to love or courtship. He was a bookseller now, but his great ambition was to be a publisher also. 'Printing,' he says, 'was uppermost in my thoughts, and authors began to ply me with specimens as earnestly, and with as much passion and concern, as the watermen do passengers with oars and sculls.' But Dunton had acquired a knowledge of the venal tribe of Grub-street when serving his time, and knew them to be 'paste and scissors hacks, and most inveterate liars also; for they will pretend to have studied six or seven years in the Bodleian library, and to have turned over all the Fathers, though you shall find that they can scarce tell whether they flourished before the Christian era or afterwards.' So avoiding those hack writers, Dunton's first publishing ventures were three religious works of sound doctrine, which did him good service. Moreover, discovering that politics, though very well for an apprentice, were not so suitable for a master tradesman, he avoided the pillory, in which more than one author and publisher of the time was uncomfortably exhibited; a notable instance being Benjamin Harris, bookseller, of Gracechurch-street, whose brave wife stood on the scaffold beside him, to protect her husband from the missiles of the brutal mob. And it is pleasing to know that this faithful couple, emigrating to America, prospered in New England; and after the Revolution, returned to their old shop in Gracechurch-street, where they lived honoured and respected.

Dunton, becoming 'a rising tradesman,' now turned his attention to matrimony, cautiously consulting his friends respecting his choice of a partner for life. After careful consideration, three ladies were selected, as the most eligible. First, there was Sarah Day, extremely pretty, well-bred, of considerable fortune, and the best natured creature in the world. But then Sarah Doolittle would make a better wife by ten degrees, for her father was a popular author as well as preacher; one of his works had reached the twentieth edition, and his son-in-law might naturally expect a few copyrights for nothing. There was even a third Sarah, a Miss Briscoe, of Uxbridge, handsome, rich, and religious. During his embarrassment as to which of the three Sarahs he should select, Dunton chanced, in his desultory way, to step into Dr Annesley's meeting-house one Sunday, where he saw a young lady, who almost charmed him dead, but on inquiry he found that she was pre-engaged. However, his friends advised him 'to make an experiment on her elder sister, they both being the daughters of Dr Annesley.' The experiment proving successful, the languishing Philaret, as Dunton styles himself, gives a history of the courtship, a sketch of his own and the lady's personal appearance, a recital of the love letters, an abstract of the wedding sermon preached by the father of the lovely Iris, an account of the wedding dinner, and a description of the wedding ring, the device being two hearts united, with the motto—

God saw thee
Most fit for me,

Dunton now removed to a large house, the sign of the Black Raven, near the Royal Exchange. The lovely Iris, whose real prose name was Elizabeth, becoming his bookseller and cash-keeper, managed all his affairs, leaving him entirely to his own rambling and scribbling humours. These were his 'golden days.' Among other works at this period, he published *Maggots; or Poems on several Subjects*, written, at the age of nineteen, by Samuel Wesley, his brother-in-law, and father of the celebrated founder of Methodism.

It is quite probable that his wife's business habits left Dunton too much to his own devices. When the Duke of Monmouth's rebellion was trampled down, Dunton, suddenly remembering that his debtors in New England owed him five hundred pounds, started off across the Atlantic. It is not unlikely that John, like many other citizens of London, was implicated in Monmouth's melancholy affair, and thought it best to get out of the way for a short time.

Dunton gives an amusing and interesting description of New England, as he observed it. In Boston, he saw a woman, who had been condemned to wear for life, on her right arm, the figure of an Indian cut out of red cloth; the mode of punishment so powerfully represented in Hawthorne's *Scarlet Letter*. The books he took over sold well, though the people of Boston were, even at that early period, 'smart' customers and slow paymasters. After a pleasant sojourn of some months, he returned to London, and found

that his wife had admirably managed business during his absence.

His next excursion was to Holland; and then, seeing a prospect of better times, he returned to England, removed to a new shop in the Poultry, and opened it on the same day the Prince of Orange entered London. The better times had arrived; Dunton set himself steadily to business, and soon became a leading and prosperous publisher. He says—'The world now smiled with me; I sailed with the wind and tide, and had humble servants enough among the booksellers, stationers, printers, and binders; but especially my own relations on every side were all upon the very height of love and tenderness.' His most fortunate speculation as a publisher, and of which he seems to have been proudest, was the *Athenian Mercury*, a weekly periodical. This work professed to answer all inquiries on matters of history, divinity, philosophy, love, or marriage. It had a great success, many men of mark were contributors, and it flourished for six years; till the great increase of similar publications of a lighter character caused Dunton to give it up. The complete series forms twenty folio volumes, and there have at various times been several selections of questions and answers reprinted from it. Dunton says, 'Mr Swift, a country gentleman, sent an ode, which, being an ingenious poem, was prefixed to the fifth supplement of the *Athenian Mercury*.' This country gentleman was subsequently the witty Dean of St Patrick's; and the ode has since been incorporated in his collected works. There is an anecdote respecting this poem worth noticing. On reading it Dryden said to Swift, 'Cousin, you will never be a poet;' and this denunciation is supposed to have been the cause of Swift's perpetual hostility to Dryden.

Prosperity still attended Dunton. Succeeding to some property by the death of a relative, he took up the livery of the Stationers' Company, and with the master, wardens, and a select few of the liverymen, dined with the Lord Mayor. The dinner was sumptuous, and his lordship presented each one of the guests with 'a noble spoon' to take home to his wife.

Evil days, however, were at hand. The lovely Iris sickened and breathed her last. John provided mourning for twenty of her relations, buried her handsomely in Bunhill Fields, and procured Mr Rogers, a learned divine, to preach her funeral sermon in her late father's meeting-house. Dunton published this sermon, and also erected a grave-stone to her memory, with a long inscription in verse of his own composition.

The extravagance of Dunton's grief for the loss of his wife clearly indicated that it would not last long. In about six months, he was married again to Sarah, daughter of Madame Jane Nicholas, of St Albans. Of this lady, whom he terms Valeria, he says, 'She seemed to be his first wife in a new edition, corrected and enlarged, or rather, in a new binding,' for he had only 'changed the person, not the virtues.' The marriage did not tend either to his comfort or happiness. His mother-in-law possessed some property, which Dunton wished her to sell, and invest the proceeds in his business, a course she

very wisely refused to adopt. The disputes on this subject led to a separation; and there being no one to look after business, the Black Raven was closed, Dunton setting off to Dublin with a venture of books. There he became involved in a ridiculous dispute with a rival bookseller, of which he published an account in a pamphlet termed *The Dublin Scuffle*. His wayward and unsettled disposition was now fast leading to its inevitable result. In 1705 we find him in terror of a gaol, hiding from his creditors, while writing his *Life and Errors*. As a bookseller he is no more known, though he long existed as a political pamphleteer, having written no less than forty tracts in favour of the Hanoverian succession. Swift says that one of Dunton's pamphlets, entitled *Neck or Nothing*, was one of the best ever published. In 1723, he petitioned George I. for a pension, comparing his unrequited services to those of Mordecai, but his application was unsuccessful. Surviving his second wife, he died in 1735, at the age of seventy-six; and the last literary notice of him is in *The Dunciad*, where he is not unjustly termed a broken bookseller and abusive scribbler.

VACCINATION, AND ITS OPPONENTS.

On the 14th of May 1796, the immortal Edward Jenner conclusively established the important principles of vaccination; proving that it was possible to propagate the vaccine affection by artificial inoculation from one human being to another, and thereby at will communicate security to all who were liable to small-pox. In a letter to his friend Gardner, the great discoverer thus modestly expresses himself on this memorable experiment: 'A boy of the name of Phipps was inoculated in the arm, from a pustule on the hand of a young woman,* who was infected by her master's cows. Having never seen the disease but in its casual way before, that is, when communicated from the cow to the hand of the milker, I was astonished at the close resemblance of the pustules, in some of their stages, to the variolous pustules. But now listen to the most delightful part of my story. The boy has since been inoculated for the small-pox, which, as I ventured to predict, produced no effect.'

Never was there a discovery so beneficial to the human race, and never did a discovery meet with so violent, so virulent an opposition. The lowest scribblers, excited by political animosity or personal rivalry, never vented such coarse, illiberal absurdities, as the learned physicians who opposed vaccination. Charges of murder and falsehood were freely made by them; nor was the war waged in the medical schools alone; it polluted the sanctity of the pulpit, and malignantly invaded the social harmonies of private life. Dr Mosely, one of the first of the anti-vaccinists, sagely asks:—'Can any person say what may be the consequences of introducing a bestial humour into the human frame, after a long lapse of years? Who knows, besides, what ideas may rise in course of time from a brutal fever having excited its incongruous impressions on the brain? Who knows but that the human

* Her name should be recorded—it was Sarah Nelves.

character may undergo strange mutations from quadrupedan sympathy?'

After vaccination had been for some time doing its benign work, a Dr Rowley adduced no less than five hundred cases 'of beastly new diseases' produced by vaccination, in a pamphlet adorned by two coloured engravings, representing the ox-faced boy and the cow-manged girl. Nor does he confine himself to the medical part of the subject; he asserts that small-pox is a visitation of God, while cow-pox is produced by impious and wicked men. The former being ordained by Heaven, the latter became neither more nor less than a daring impiety—'an attempt to wrest out of the hands of the Almighty the divine dispensations of Providence.'

Mosely described a boy whose face and part of his body, after vaccination, became covered with cow's hair; and a Dr Smyth says:—'Among the numerous shocking cases of cow-pox which I have heard of, I know not if the most horrible of all has yet been published, viz., of a child at Peckham, who, after being inoculated with the cow-pox, had his former natural disposition absolutely changed to the brutal; so that it ran upon all fours, bellowing like a cow, and butting with its head like a bull.'

Well, indeed, might a satirical poet of the day thus sing—

'O Mosely! thy books mighty phantasies rousing,
Full oft make me quake for my heart's dearest
treasures:
For fancy, in dreams, oft presents them all brow-
sing
On commons, just like little Nebuchadnezzars.
There, nibbling at thistles, stand Jem, Joe, and
Mary;
On their foreheads, oh, horrible! crumpled horns
bud:
Here Tom with a tail, and poor William all hairy,
Reclined in a corner, are chewing the cud.'

The wildest opponent of vaccination was a certain Ferdinand Smyth Stuart, who described himself as 'physician, barrack-master, and great-grandson to Charles the Second.' The frontispiece to Smyth's work represents Dr Jenner, with a tail and hoofs, feeding a hideous monster with infants, out of baskets. Of course this monster is the pictorial representative of vaccination, and is thus described: 'A mighty and horrible monster, with the horns of a bull, the hind hoofs of a horse, the jaws of the kraken, the teeth and claws of a tiger, the tail of a cow,—all the evils of Pandora's box in his belly,—plague, pestilence, leprosy, purple blotches, fetid ulcers, and filthy sores, covering his body,—and an atmosphere of accumulated disease, pain, and death around him, has made his appearance in the world, and devours mankind,—especially poor, helpless infants; not by scores only, or hundreds, or thousands, but by hundreds of thousands.' The spirit and wisdom of this member of a royal house will be sufficiently exemplified by one more quotation. Rising with his subject, he exclaims:—'The omnipotent God of nature, the inconceivable Creator of all existence, has permitted Evil, Buonaparte, and Vaccination to exist, to prosper, and even to

triumph for a short space of time, perhaps as the scourge and punishment of mankind for their sins, and for reasons no doubt the best, far beyond the powers of our circumscribed and limited portion of penetration and knowledge to discover. But are we to worship, to applaud, or even to submit to Evil, to Buonaparte, or to Vaccination, because they have for some time been prosperous? No! Never let us degrade our honour, our virtue, or our conscience by such servility; let us contend against them with all our exertions and might, not doubting we shall ultimately triumph in a cause supported by truth, humanity, and virtue, and which therefore we well know Heaven itself will approve.'

MAY 15.

Saints Peter, Andrew, and companions, martyrs, 250. St Dymphna, virgin, martyr, 7th century. St Genebrard, martyr, 7th century.

Whit Sunday. (1864.)

Whit Sunday is a festival of the Church of England, in commemoration of the descent of the Holy Ghost on the Apostles, when 'they were all with one accord in one place,' after the ascension of our Lord; on which occasion they received the gift of tongues, that they might impart the gospel to foreign nations. This event having occurred on the day of Pentecost, Whit Sunday is of course intimately associated with that great Jewish festival.

Born.—Cardinal Alberoni, Spanish minister, 1664, *Placentia, Italy*; Constantine, Marquis of Normanby, 1797.

Died.—St Isidore, 1170, *Madrid*; Mademoiselle Champmêlé, celebrated French actress, 1698; Alexander Cunningham, historian, 1737, *London*; Ephraim Chambers (*Cyclopædia*), 1740, *London*; Alban Butler, author of *Lives of the Saints*, 1773, *St Omer*; Dr John Wall Callcott, musician, 1821; John Bonnycastle, 1821, *Woolwich*; Edmund Kean, tragedian, 1833; Daniel O'Connell, 1847.

ALBAN BUTLER.

Supposing any one desired to take a course of reading in what is called hagiology, he might choose between the *Acta Sanctorum* and Alban Butler's *Lives of the Saints*. The first would be decidedly an alarming undertaking, for the *Acts of the Saints* occupy nearly sixty folios. The great work was commenced more than two hundred years ago by Bolland, a Belgian Jesuit. His design was to collect, under each day of the year, the saints' histories associated therewith. He got through January and February in five folios, when he died in 1658. Under the auspices of his successor, Daniel Papebroch, March appeared in 1668, and April in 1675, each in three volumes. Other editors followed bearing the unmelodious names of Peter Bosch, John Stilling, Constantine Suyskhen, Urban Stieken, Cornelius Bye, James Bue, and Ignacius Hubens; and in 1762, one hundred and forty years after the appearance of January, the month of September was completed in eight volumes, making forty-seven in all. A part

of October was published, but in its midst the work came to a stand for nearly a century. It was resumed about twenty years ago. Nine volumes for October have now appeared, the last embracing only two days, the 20th and 21st of October, and containing as much matter as the five volumes of Macaulay's *History of England*. Although abounding in stores of strange, recondite, and interesting information, the *Acta Sanctorum* do not find many readers outside the walls of convents; and the secular inquirer into saintly history will, with better advantage, resort to Alban Butler's copious, yet manageable narratives.

The Rev. Alban Butler, the son of a Northamptonshire gentleman of reduced fortune, was born in 1710, and in his eighth year was sent to the English college at Douay. There he became noted for his studious habits. He did nothing but read; except when sleeping and dressing, a book was never out of his hand. Of those he deemed worthy he drew up abstracts, and filled bulky volumes with choice passages. With a passion for sacred biography, he early began to direct his reading to the collection of materials for his *Lives of the Saints*. He became Professor of Philosophy, and then of Divinity, at Douay, and in 1745 accompanied the Earl of Shrewsbury and his brothers, the Talbots, on a tour through France and Italy. On his return he was sent to serve as a priest in England, and set his heart on living in London, for the sake of its libraries. To his chagrin he was ordered into Staffordshire. He pleaded that he might be quartered in London for the sake of his work, but was refused, and quietly submitted. Afterwards he was appointed chaplain to the Duke of Norfolk. His *Lives of the Saints* he published in five quarto volumes, after working on them for thirty years. The manuscript he submitted to Challoner, the vicar apostolic of the London district, who recommended the omission of all the notes, on which Butler had expended years of research and pains. Like a good Catholic he yielded to the advice, but in the second edition he was allowed to restore them. He was ultimately chosen President of the English college of St Omer's, where he died in 1773.

Of Alban Butler there is nothing more to tell, save that he was a man of a gentle and tolerant temper, and left kindly memories in the hearts of all who knew him. His *Lives* are written in a simple and readable style; and Gibbon, in his *Decline and Fall*, perhaps gives the correct Protestant verdict when he says, 'It is a work of merit; the sense and the learning belong to the author—his prejudices are those of his profession.'

Whitsuntide.

The Pentecost was a Jewish festival, held, as the name denotes, fifty days after the feast of unleavened bread; and its only interest in the history of Christianity arises from the circumstance that it was the day on which the Holy Ghost descended upon the apostles and imparted to them the gift of tongues. It is remarkable that this feast appears to have had no name

peculiar to the early languages of Western Europe, for in all these languages its only name, like the German *Pfingst*, is merely derived from the Greek word, with the exception of our English Whit Sunday, which appears to be of comparatively modern origin, and is said to be derived from some characteristic of the Romish ceremonial on this day. We might suppose, therefore, that the peoples of Western Europe, before their conversion, had no popular religious festival answering to this day. Yet in mediæval Western Europe, Pentecost was a period of great festivity, and was considered a day of more importance than can be easily explained by the incidents connected with it, recorded in the gospel, or by any later Christian legends attached to it. It was one of the great festivals of the kings and great chieftains in the mediæval romances. It was that especially on which King Arthur is represented as holding his most splendid court. The sixth chapter of the *Mort d'Arthur* of Sir Thomas Malory, tells us how, 'Then King Arthur removed into Wales, and let erie a great feast that it should be holden at Pentecost, after the coronation of him at the cite of Carlion.' And chapter one hundred and eighteen adds, 'So King Arthur had ever a custome, that at the high feast of Pentecost especially, afore al other high feasts in the yeare, he would not goe that day to meat until he had heard or seene some great adventure or mervaile. And for that custom all manner of strange adventures came before King Arthur at that feast afore all other feasts.' It was in Arthur's grand *cour plenière* at the feast of Pentecost, that the fatal mantle was brought which threw disgrace on so many of the fair ladies of his court. More substantial monarchs than Arthur held Pentecost as one of the grand festivals of the year; and it was always looked upon as the special season of chivalrous adventure of tilt and tournament. In the romance of *Bevis of Hampton*, Pentecost, or, as it is there termed, Whitsuntide, appears again as the season of festivities—

'In somer at Whitsontyde,
Whan knightes most on horsebacke ride,
A cours let they make on a daye,
Steedes and palfraye for to assaye,
Whiche horse that best may ren.'

We seem justified from these circumstances in supposing that the Christian Pentecost had been identified with one of the great summer festivals of the pagan inhabitants of Western Europe. And this is rendered more probable by the circumstance, that our Whitsuntide still is, and always has been, one of the most popularly festive periods of the year. It was commonly celebrated in all parts of the country by what was termed the Whitsun-ale, and it was the great time for the morris-dancers. In Douce's time, that is, sixty or seventy years ago, a Whitsun-ale was conducted in the following manner: 'Two persons are chosen, previously to the meeting, to be lord and lady of the ale, who dress as suitably as they can to the characters they assume. A large empty barn, or some such building, is provided for the lord's hall, and fitted up with seats to accommodate the company. Here they assemble to dance and

regale in the best manner their circumstances and the place will afford; and each young fellow treats his girl with a riband or favour. The lord and lady honour the hall with their presence, attended by the steward, sword-bearer, purse-bearer, and mace-bearer, with their several badges or ensigns of office. They have likewise a train-bearer or page, and a fool or jester, drest in a party-coloured jacket, whose ribaldry and gesticulation contribute not a little to the entertainment of some part of the company. The lord's music, consisting of a pipe and tabor, is employed to conduct the dance.' These festivities were carried on in a much more splendid manner in former times, and they were considered of so much importance, that the expenses were defrayed by the parish, and charged in the churchwardens' accounts. Those of St Mary's, at Reading, as quoted in Coates's History of that town, contain various entries on this subject, among which we have, in 1557: 'Item payed to the morrys dausers and the mynstrelles, mete and drink at Whytsontide, iij*s.* iij*d.*' The churchwardens' accounts at Brentford, in the county of Middlesex, also contain many curious entries relating to the annual Whitsun-ales in the seventeenth century; and we learn from them, as quoted by Lysons, that in 1621 there was 'Paid to her that was lady at Whitsontide, by consent, 5*s.*' Various games were indulged in on these occasions, some of them peculiar to the season, and archery especially was much practised. The money gained from these games seems to have been considered as belonging properly to the parish, and it is usually accounted for in the churchwardens' books, among the receipts, as so much profit for the advantage of the parish, and of the poor.

THE MORRIS-DANCE.

Antiquaries seem agreed that the old English morris-dance, so great a favourite in this country in the sixteenth century, was derived through Spain from the Moors, and that its name, in Spanish *Morisco*, a Moor, was taken from this circumstance. It has been supposed to be originally identified with the fandango. It was certainly popular in France as early as the fifteenth century, under the name of *Morisque*, which is an intermediate step between the Spanish *Morisco* and the English *Morris*. We are not aware of any mention of this dance in English writers or records before the sixteenth century; but then, and especially in writers of the Shakspearian age, the allusions to it become very numerous. It was probably introduced into this country by dancers both from Spain and France, for in the earlier allusions to it in English it is sometimes called the *Morisco*, and sometimes the *Morisce* or *Morisk*. Here, however, it seems to have been very soon united with an older pageant dance, performed at certain periods in honour of Robin Hood and his outlaws, and thus a morris-dance consisted of a certain number of characters, limited at one time to five, but varying considerably at different periods. The earliest allusions to the morris-dance and its characters were found by Mr Lysons in the

churchwardens' and chamberlains' books at Kingston-upon-Thames, and range through the last two years of the reign of Henry VII. and the greater part of that of his successor, Henry VIII. We learn there that the two principal characters in the dance represented Robin Hood and Maid Marian; and the various expenses connected with their different articles of dress, show that they were decked out very gaily. There was also a *frere*, or friar; a musician, who is sometimes called a minstrel, sometimes a piper, and at others a taborer,—in fact he was a performer on the pipe and tabor, and a 'dysard'

or fool. The churchwardens accounts of St Mary's, Reading, for 1557, add to these characters that of the hobby-horse. 'Item, payed to the mynstrels and the hobby-horse uppon May-day, 3s.' Payments to the morris-dancers are again recorded on the Sunday after May-day, and at Whitsuntide. The dancers, perhaps, at first represented Moors—prototypes of the Ethiopian minstrels of the present day, or at least there was one Moor among them; and small bells, usually attached to their legs, were indispensable to them. In the Kingston accounts of the 29th of Henry VIII. (1537-8), the wardrobe of the

THE MORRIS-DANCERS.

morris-dancers, then in the custody of the churchwardens, is thus enumerated :—' A fryers cote of russet, and a kyrtle weltyd with red cloth, a Mowrens (Moor's) cote of buckram, and four morres daunsars cotes of white fustian spangelid, and too gryne saten cotes, and disarddes cote of cotton, and six payre of garters with belles.'

There was preserved in an ancient mansion at Betley, in Staffordshire, some years ago, and we suppose that it exists there still, a painted glass window of apparently the reign of Henry VIII., representing in its different compartments the several characters of the morris-dance. George Tollett, Esq., who possessed the mansion at the beginning of this century, and who was a friend of the Shakspearian critic, Malone, gave a rather lengthy dissertation on this window, with an engraving, in the variorum edition of the works of Shakspeare. Maid Marian, the queen of May, is there dressed in a rich costume of the period referred to, with a golden crown on her head, and a red pink, supposed to be intended as the emblem of summer, in her left hand. This queen of May is supposed to represent the goddess Flora of the Roman festival; Robin Hood appears as the lover of Maid Marian. An ecclesiastic also appears among the characters in the window, 'in the full clerical tonsure, with a chaplet of white and red beads in his right hand, his corded girdle and his russet habit denoting him to be of the Franciscan order, or one of the Grey Friars; his stockings are red; his red girdle is ornamented with a golden twist, and with a golden tassel.' This is supposed to be Friar Tuck, a well-known character of the *Robin Hood Ballads*. The fool, with his cock's comb and bauble, also takes his place in the figures in the window; nor are the tabourer, with his tabor and pipe, or the hobby-horse wanting. The illustration on the preceding page throws these various characters into a group representing, it is conceived, a general morris-dance, for which, however, fewer performers might ordinarily serve. The morris-dance of the individual, with an occasional Maid Marian, seems latterly to have been more common. One of the most remarkable of these was performed by William Kemp, a celebrated comic actor of the reign of Elizabeth, being a sort of dancing journey from London to Norwich. This feat created so great a sensation, that he was induced to print an account of it, which was dedicated to one of Elizabeth's maids of honour. The pamphlet is entitled, '*Kemp's Nine Daies' Wonder*, performed in a daunce from London to Norwich. Containing the pleasure, paines, and kinde entertainment of William Kemp betweene London and that City, in his late *Morrice*.' It was printed in 1600; and the title-page is adorned with a woodcut, representing Kemp dancing, and his attendant, Tom the Piper, playing on the pipe and tabor. The exploit took place in 1599, but it was a subject of popular allusion for many years afterwards.

Kemp started from London at seven in the morning, on the first Monday in Lent, and, after various adventures, reached Romford that night, where he rested during Tuesday and Wednesday. He started again on Thursday morning, and made an unfortunate beginning by straining his

hip; but he continued his progress, attended by a great number of spectators, and on Saturday morning reached Chelmsford, where the crowd assembled to receive him was so great, that it took him an hour to make his way through them to his lodgings. At this town, where Kemp remained till Monday, an incident occurred which curiously illustrates the popular taste for the morris-dance at that time.

'At Chelmsford, a mayde not passing foureteeene years of age, dwelling with one Sudley, my kinde friend, made request to her master and dame, that she might daunce the Morrice with me in a great large roome. They being intreated, I was soone wonne to fit her with bells; besides, she would have the olde fashion, with napping on her armes; and to our jumps we fell. A whole houre she held out; but then being ready to lye downe, I left her off; but thus much in her praise, I would have challenged the strongest man in Chelmsford, and amongst many I thinke few would have done so much.'

Other challenges of this kind, equally unsuccessful, took place on Monday's progress; and on the Wednesday of the second week, which was Kemp's fifth day of labour,—in which he danced from Braintree, through Sudbury, to Melford,—he relates the following incidents.

'In this towne of Sudbury there came a lusty, tall fellow, a butcher by his profession, that would in a Morrice keepe me company to Bury. I being glad of his friendly offer, gave him thankes, and forward wee did set; but ere ever wee had measur'd halfe a mile of our way, he gave me over in the plain field, protesting, that if he might get a 100 pound, he would not hold out with me; for, indeed, my pace in dancing is not ordinary. As he and I were parting, a lusty country lasse being among the people, cal'd him faint-hearted lout, saying, "If I had begun to daunce, I would have held out one myle, though it had cost my life." At which words many laughed. "Nay," saith she, "if the dauncer will lend me a leash of his belles, I'll venter to treade one myle with him myselfe." I lookt upon her, saw mirth in her eies, heard boldness in her words, and beheld her ready to tucke up her russat petticoate; I fitted her with bells, which she merrily taking, garnisht her thicke short legs, and with a smooth brow bad the taber begin. The drum strucke; forward marcht I with my merry Mayde Marian, who shooke her fat sides, and footed it merrily to Melford, being a long myle. There parting with her (besides her skinfull of drinke), and English crowne to buy more drinke; for, good wench, she was in a pittious heate; my kindness she requited with dropping some dozen of short courtesies, and bidding God blesse the dauncer. I bade her adieu; and, to give her her due, she had a good care, daunst truly, and wee parted friends.'

Having been the guest of 'Master Colts,' of Melford, from Wednesday night to Saturday morning, Kemp made on this day another day's progress. Many gentlemen of the place accompanied him the first mile, 'Which myle,' says he, 'Master Colts his foole would needs daunce with me, and had his desire, where leaving me, two fooles parted faire in a foule way; I keeping

on my course to Clare, where I a while rested, and then cheerefully set forward to Bury.' He reached Bury that evening, and was shut up there by an unexpected accident, so heavy a fall of snow, that he was unable to continue his progress until the Friday following. This Friday of the third week since he left London was only his seventh day's dancing; and he had so well reposed that he performed the ten miles from Bury to Thetford in three hours, arriving at the latter town a little after ten in the forenoon. 'But, indeed, considering how I had been booted the other journeys before, and that all this way, or the most of it, was over a heath, it was no great wonder; for I far'd like one that had escaped the stocks, and tride the use of his legs to out-run the constable; so light was my heeles, that I counted the ten myle as a leape.' At Thetford, he was hospitably entertained by Sir Edwin Rich, from Friday evening to Monday morning; and this worthy knight, 'to conclude liberally as hee had begun and continued, at my departure on Monday, his worship gave me five pounds,' a considerable sum at that time. On Monday, Kemp danced to Hingham, through very bad roads, and frequently interrupted by the hospitality or importunity of the people on the road. On Wednesday of the fourth week Kemp reached Norwich, but the crowd which came out of the city to receive him was so great, that, tired as he was, he resolved not to dance into it that day; and he rode on horseback into the city, where he was received in a very flattering manner by the mayor, Master Roger Weld. It was not till Saturday that Kemp's dance into Norwich took place, his journey from London having thus taken exactly four weeks, of which period nine days were occupied in dancing the Morris.

The morris-dance was so popular in the time of James I., that when a Dutch painter of that period, Vinckenboom, executed a painting of Richmond palace, he introduced a morris-dance in the foreground of the picture. In Horace Walpole's time, this painting belonged to Lord Fitzwilliam; and Douce, in his dissertation on the morris-dance, appended to the 'Illustrations of Shakspeare,' has engraved some of the figures. At this time the favourite season of the morris-dance was Whitsuntide. In the well-known passage of the play of *Henry V.*, the Dauphin of France is made to twit the English with their love of these performances. When urging to make preparations against the English, he says—

'And let us do it with no show of fear;
No! with no more than if we heard that England
Were busied with a Whitsun morris-dance.'

In another play (*All's Well that Ends Well*, act ii., sc. 2), Shakspeare speaks of the fitness of 'a morris for May-day;' and it formed a not unimportant part of the observances on that occasion. A tract of the time of Charles I., entitled *Mythomistes*, speaks of 'the best taught country morris-dancer, with all his bells and napkins,' as being sometimes employed at Christmas; so that the performance appears not to have been absolutely limited to any period of the year, though it seems to have been considered as most appropriate to Whitsuntide and the month of May.

The natives of Herefordshire were celebrated for their morris-dancers, and it was also a county remarkable for longevity. A pamphlet, printed in the reign of James I., commemorates a party of Herefordshire morris-dancers, ten in number, whose ages together amounted to twelve hundred years. This was probably somewhat exaggerated; but, at a later period, the names of a party of eight morris-dancers of that county are given, the youngest of whom was seventy-nine years old, while the age of the others ranged from ninety-five to a hundred and nine, making together just eight hundred years. Morris-dancing was not uncommon in Herefordshire in the earlier part of the present century. It has been practised during the same period in Gloucestershire and Somerset, in Wiltshire, and in most of the counties round the metropolis. Hone saw a troop of Hertfordshire morris-dancers performing in Goswell-street Road, London, in 1826. Mrs Baker, in her *Glossary of Northamptonshire Words*, published in 1854, speaks of them as still met with in that county. And Halliwell, in his *Dictionary of Archaic and Provincial Words*, also speaks of the morris-dance as still commonly practised in Oxfordshire, though the old costume had been forgotten, and the performers were only dressed with a few ribbons.

THE WHITSUN MYSTERIES AT CHESTER.

The mystery or miracle plays, of which we read so much in old chronicles, possess an interest in the present day, not only as affording details of the life and amusements of the people in the middle ages—of which we have no very clear record but in them and the illuminated MSS.—but also in helping us to trace the progress of the drama from a very early period to the time when it reached its meridian glory in our immortal Shakspeare. It is said that the first of these plays, one on the passion of our Lord, was written by Gregory of Nazianzen, and a German nun of the name of Roswitha, who lived in the tenth century, and wrote six Latin dramas on the stories of saints and martyrs. When they became more common, about the eleventh or twelfth century, we find that the monks were generally not only the authors, but the actors. In the dark ages, when the Bible was an interdicted book, these amusements were devised to instruct the people in the Old and New Testament narratives, and the lives of the saints; the former bearing the title of mysteries, the latter of miracle plays. Their value was a much disputed point among churchmen: some of the older councils forbade them as a profane treatment of sacred subjects; Wickliffe and his followers were loud in condemnation; yet Luther gave them his sanction, saying, 'Such spectacles often do more good, and produce more impression, than sermons.' In Sweden and Denmark, the Lutheran ecclesiastics followed the example of their forefathers, and wrote and encouraged them to the end of the seventeenth century; it was about the middle of that century when they ceased in England. Relics of them may still be traced in the Cornish acting of 'St George and the Dragon,' and 'Beelzebub.'

They were usually performed in churches, but frequently in the open air, in cemeteries, market-places, and squares, being got up at a cost much exceeding the spectacles of the modern stage. We read of one at Palermo which cost 12,000 ducats for each performance, and comprised the entire story of the Bible, from the Creation to the Incarnation; another, of the Crucifixion, at the pretty little town of Aci Reale, attracted such crowds that all Sicily was said to congregate there. The stage was a lofty and large platform before the cathedral, whilst the senate-house served as a side scene, from which issued the various processions. The mixture of sacred and profane persons is really shocking: the Creator with His angels occupied the highest stage, of which there were three; the saints the next; the actors the lowest; on one side of this was the mouth of hell, a dark cavern, out of which came fire and smoke, and the cries of the lost; the buffoonery and coarse jests of the devils who issued from it formed the chief attraction to the crowd, and were considered the best part of the entertainment. Sometimes it was productive of real danger, setting fire to the whole stage, and producing the most tragic con-

sequences; as at Florence, where numbers lost their lives. Some of the accounts of these stage properties, in Mr Sharp's extracts, are amusing to read: 'Item, payd for mendyng hell mought, 2*d.*'—'Item, payd for kepyng of fyre at hell mothe, 4*d.*'—'Payd for settingg the world of fyre, 5*d.*'

We seem to have borrowed our plays chiefly from the French; there is indeed a great similarity between them and the Chester plays; but the play of wit is greater in the former than the latter, each partaking of the character of the nation. At first they were written in Latin, when of course the acting was all that the people understood:—that, however, was sufficient to excite them to great hilarity; afterwards they seem to have been composed for the neighbourhood in which they were performed.

We have no very authentic account of the year when the mysteries were first played at Chester; some fix it about 1268, which is perhaps too early. In a note to one of the proclamations, we are told that they were written by a monk of Chester Abbey, Randall Higgenett, and played in 1327, on Monday, Tuesday, and Wednesday in Whitsun week. They were always acted in

CHESTER MYSTERY PLAYS.

the open air, and consisted of twenty-four parts, each part or pageant being taken by one of the | guilds of the city; the tanners beginning with 'The Fall of Lucifer;' the drapers took the

'Creation,' the water-carriers of the Dee suitably enough acted 'The Flood,' and so on; the first nine being performed on Monday, the nine following on Tuesday, and the remaining seven on Wednesday. Twenty-four large scaffolds or stages were made, consisting of two tiers, or 'rowmes' as they are called, and fixed upon four wheels: in the lower one the actors dressed and undressed; the upper one, which was open on all sides for the spectators to see distinctly, was used for acting. By an excellent arrangement, to prevent crowding, each play was performed in every principal street; the first began before the old abbey gates, and when finished it was wheeled on to the market-cross, which was the mayor's position in all shows; by the time it was ended, the second pageant was ready to take its place, and it moved forward to Water-gate, and then to Bridge Street, so that all the pageants were going on at different places at the same time. Great order was preserved, in spite of the immense concourse of people who came from all quarters to enjoy the spectacle; and scaffolds were put up in all the streets, on which they might sit, for which privilege it is supposed that payment was received. It was wisely ordered that no man should wear any weapon within the precincts of the city during the time of the plays, as a further inducement, were any wanting, to make the people congregate to hear the 'holsome doctrine and devotion' taught by them. Pope Clement granted to each person attending a thousand days' pardon, and the Bishop of Chester forty days of the same grace.

They were introduced by 'banes', or proclamation, a word which is still retained in our marriage bans; three heralds made it with the sound of trumpets, and set forth in a lengthy prologue the various parts which were to be shown. 'The Fall of Lucifer' was a very popular legend from the earliest ages of Christianity, and its influence is felt to the present day, having been the original groundwork upon which Milton wrote some of his finest passages in *Paradise Lost*, which, as is well known, was intended to be a sacred drama commencing with Satan's address to the sun. Pride is represented as the cause of his fall; he declares, 'that all heaven shines through his brightness, for God hymselfe shines not so cleare;' and, on attempting to seat himself on the throne of God, he is cast down with Light-born, and part of the nine orders of angels, among whom there follows a scene of bitter repentance and recrimination that they ever listened to the tempter. The stage directions for these scenes are curious enough; a great tempest is to spout forth fire, and a secret way underneath is to hide the evil angels from the spectators' sight.

It is unnecessary to describe each of these plays, as for the most part they follow the Bible narrative very closely; but, in passing, we will notice a few of the legends and peculiarities mixed up with them. Thus a very popular part was that of Noah's wife, who preferred staying with her gossips to entering the ark; and, with the characteristic perverseness of woman, had to be dragged into it by her son Shem, when she gives her husband a box on the ear. The play of the

'Shepherds of Bethlehem' gives some curious particulars of country life. The three shepherds meet and converse about their flocks, and then propose that each should bring out the food he has with him, and make a pic-nic of the whole. A wrestling match follows, and then the angels appear, and they go to Bethlehem; their gifts are curious, the first says—

'Heale kinge ! borne in a mayden's bower,
Proffites did tell thou shouldest be our succore.
Loe, I bring thee a bell;
I praie thee save me from hell,
So that I maye with thee dwell,
And serve thee for aye.'

The next—

'Heale thee, blessed full barne (child),
Loe, sonne, I bring thee a flaggette,
Theirby heiges a sponne,
To eate thy pottage with all at noune.'

The last—

'Loe, sonne, I bring thee a cape,
For I have nothinge elles.'

Their boys follow with offerings: one 'a payre of ould hose;' another, 'a fayre bottill;' 'a pipe to make the woode ringe;' and lastly, 'a nutthooke to pull down aples, peares, and plumes, that ould Joseph nede not hurte his thombes.' In the 'Passion,' the 'Tourmentoures' are very prominent, with their coarse rough jokes and rude buffetings. 'The Harrowing of Hell,' is a very singular part. Christ is represented as descending there, and choosing out Adam, Seth, Isaiah, and many other saints to go to Paradise, where they are met by Enoch and Elijah, who until this period had been its solitary inmates. There is in this picce a strong satire against a woman who is left behind; she says—

'Wo be to the tyme when I came heare.
Some tyme I was a taverner,
A gentill gossipe and a tapstere,
Of wyne and ale a trustie brewer,
Which wo hath me wroughte:
Of cannes I kept no trewe measurer,
My cuppes I soulde at my pleasure,
Deceavinge manye a creature.
With hoppes I made my ale stronge,
Ashes and erbes I blend amonge,
And marred so good maulte;
Therefore I may my handes wringe,
Shake my cannes, and cuppes ringe;
Sorrowful may I siehe and singe
That ever I so dealt.'

These allusions to the taverners are so frequent in this description of writing, that we may feel sure they were guilty of much evil doing.

The play of 'Ezekiel' contains a summary of various prophecies, and especially the fifteen signs which were to precede the end of the world, a subject which then much engrossed the thoughts of mankind. The signs, as fixed by St Jerome, were as follow:—The first day the sea was to rise as a wall higher than the hills; the second, to disappear entirely; on the third, great fishes were to rise from it, and 'rore hideously;' the fourth, the sea and all waters were to be on fire; the fifth, a bloody dew was to fall on all trees and herbs; on the sixth, churches, cities, and houses were to be thrown down; the seventh, the rocks were to be rent;

the eighth, an earthquake; on the ninth, the hills and valleys were to be made plain; on the tenth, men who had hidden themselves in the caves were to come out mad; the eleventh, the dead should arise; the twelfth, the stars were to fall; the thirteenth, all men should die and rise again; on the fourteenth, earth and heaven should perish by fire; and the fifteenth would see the birth of the new heaven and new earth.

'Antichrist' the subject of the next play, was also a much expected character in the middle ages. He performs the miracle of self-resurrection, to deceive the kings who ask for proofs of his power; and brings all men to worship and sacrifice to him. Enoch and Elijah come from Paradise to expose their sin, and, after a long disputation, are martyred, Michael the archangel coming at the same moment and killing Antichrist, who is carried off by two demons; the martyrs rising and ascending with Michael. 'Doomsday' forms the last of the series, in which a pope, emperor, king, and queen are judged and saved; while a similar series confess their various sins, and are turned into hell. The queen says—

'Fie on pearls! fie on pride!
Eye on gowne! fye on hyde! (skin)
Eye on hewe! fye on guyde! (gold)
Thes harrowe me to hell.'

Jesus descends with his angels, and complains of the injuries men have done to him: how his members bled afresh at every oath they swore, and that he had suffered more from them than from his Jewish persecutors.

There can be no doubt that the people of the most 'ancient, renowned citie of Caerleon, now named Chester,' were passionately fond of these 'Shewes;' and when the progress of enlightenment and refinement which the Reformation brought about banished the mystery plays, as bordering on profanity and licentiousness, as well as having a strong flavour of popery about them, they set about with alacrity to substitute in their place the pageants which became so general in the reigns of the Tudors and Stuarts, and are connected in history with the journeys or progresses of these monarchs. These pageants or triumphs have, like their predecessors, the mysteries, their relation to the English drama; not only were they composed for the purpose of flattering and complimenting their princes, but a moral end was constantly kept in view: virtue was applauded, while vice was set forth in its most revolting and unpleasing colours; and the altercations between these two leading personages often afforded the populace the highest amusement. The opportunity was also seized upon of presenting to royal ears some of the political abuses of the day; as in one offered by the Inns of Court to Charles the First, where ridicule was thrown upon the vexatious law of patents: a fellow appearing with a bunch of carrots on his head, and a capon on his fist, and asking for a patent of monopoly as the first inventor of the art of feeding capons with carrots, and that none but himself should have privilege of the said invention for fourteen years; whilst another came mounted on a little horse with an immense bit in his mouth, and the

request that none should be allowed to ride unless they purchased his bits.

Considerable sums of money were spent on these pageants; the expense falling sometimes on the guilds, who each took their separate part in the performance, or the mayor of the city would frequently give one at his own cost; whilst the various theatrical properties would seem to have been kept in order from the city funds, as we often read such entries as these in their books; 'For the annual painting of the city's four giants, one unicorn, one dromedarye, one luce, one asse, one dragon, six hobby-horses, and sixteen naked boys.' 'For painting the beasts and hobby-horses, forty-three shillings. For making new the dragon, five shillings; and for six naked boys to beat at it, six shillings.' The first of these pageants of which we have any record as performed at Chester, was in 1529; the title was 'Kynge Robart of Cicyle.' 'The History of Æneas and Queen Dido' was played on the Rood-eye in 1563, on the Sunday after Midsummer-day, during the time of the yearly fair, which attracted buyers and sellers in great numbers from Wales and the neighbouring counties. Earl Derby, Lord Strange, and other noblemen honoured these representations with their presence.

The pageant which we are about to describe, and which is the only one preserved to the present day, was given by Mr Robert Amory, sheriff of Chester in 1608, a liberal and public-spirited man, who benefited his city in many ways. It was got up in honour of Henry Frederic, the eldest son of James the First, on his creation as Prince of Wales; and perhaps no prince who ever lived was more worthy of the festival.

The author addresses his readers with a certain amount of self-approbation; he says, 'To be brief, what was done was so done, as being by the approbation of many said to be well done; then, I doubt not, but it may merit the mercifull construction of some few who may chance to swear 'twas most excellently ill done. Zeale procured it, loue deuis'd (devised) it, boyes performed it, men beheld it, and none but fooles dispraised it. As for the further discription of the businesse I referre to further relation; onely thus: The chiefest part of this people-pleasing spectacle consisted in three Bees, viz., Boyes, Beasts, and Bels: Bels of a strange amplitude and extraordinarie proportion; Beasts of an excellent shape and most admirable swiftnesse; and Boyes of a rare spirit and exquisite performance.'

These wonderful beasts consisted of two personages who took a leading part in all pageants, and were the 'greene or salvage men;' they were sometimes clothed completely in skins, but on this occasion ivy leaves were sewed on to an embroidered dress, and garlands of the same leaves round their heads; a 'huge blacke shaggie hayre' hung over their shoulders, whilst the 'herculean clubbes' in their hands made them fit and proper to precede and clear the way for the procession that followed. With them came the highly popular and important artificial dragon, 'very lively to behold: pursuing the savages,

entring their denne, casting fire from his mouth; which afterwards was slaine, to the great pleasure of the spectators, bleeding, fainting, and staggering as though he endured a feelinge paine even at the last gaspe and farewell.'

The various persons who were to take part in the procession met at the old 'Highe Crosse,' which stood at the intersection of the four principall streets in Chester, and the proceedings were opened by a man in a grotesque dress climbing to the top of it, and fixing upon a bar of iron an 'Ancient,' or flag of the colours of St George; at the same time he called the attention of all present by beating a drum, firing off a gun, and brandishing a sword, after which warlike demonstrations he closed his exhibition by standing on his head with his feet in the air, on the bar of iron, 'very dangerously and wonderfully, to the view of the beholders, and eating fireworks very delightfull.' Envy was there on horseback, with a wreath of snakes about her head and one in her hand; Plenty came garlanded with wheat ears round her body, strewing wheat among the multitude as she rode along; St George, in full armour, attended by his squires and drummers, made a glorious show; Fame (with her trumpet), Peace, Joy, and Rumour were in their several places, spouting their orations; whilst Mercury, descending from heaven in a cloud, artificially winged, 'a wheele of fire burning very eunningly, with other fireworks,' mounted the Cross by the assistance of ropes, in the midst of heavenly melody. Other horsemen represented the City of Chester, the King, and the Prince of Wales, carrying the suitable colours, shields and escuteheons emblazoned on their dresses and horses' foreheads. The three silver gilt bells, which were to be run for, supported by lions rampant, were carried with many trumpets sounding before; and, when all were marshalled, eight voices sang the opening strain:—

'Come downe, thou mighty messenger of blisse,
Come, we implore thee;
Let not thy glory be obscured from us,
Who most adore thee.
Then come, oh come, great Spirit,
That we may joyful sing,
Welcome, oh welcome to earth,
Joy's dearest darling.

Lighten the eyes, thou great Mercurian Prince,
Of all that view thee,
That by the lustre of their optick sense
They may pursue thee:
Whilst with their voyces
Thy praise they shall sing,
Come away,
Joy's dearest darling.'

Mercury replies to this invocation, and then follow a series of most tedious speeches from each allegorical person, in praise of Britain in general, and Prince Henry in particular, with which we should be sorry to weary our readers. Envy comes in at the end, to sneer at the whole and spoil the sport; and in no measured terms explains the joy she feels,

'To see a city burnt, or barnes on fire,
To see a sonne the butcher of his sire;

To see two swaggerers eagerly to strive
Which of them both shall make the hangman
thrive;

To see a good man poore, or wise man bare,
To see Dame Virtue overwhelmed with care;
To see a ruined church, a preacher dumbe,' &c.

But Joy puts her to flight, saying,—

'Envy, avaunt! thou art no fit compeere
T' associate with these our sweet consociats here;
Joy doth exclude thee,' &c.

Thus ends the pageant of 'Chester's Triumph in Honour of her Princee:' what followed cannot be better described than in the words of the author, one Richard Davies, a poet unknown to fame. 'Whereupon all departed for a while to a place upon the river, called the Roode, garded with one hundred and twentie halberders and a hundred and twentie shotte, bravely furnished. The Mayor, Sheriffs, and Aldermen of Chester, arrayed in their scarlet, having seen the said shewes, to grace the same, accompanied, and followed the actors unto the said Roode, where the ships, barques, and pinises, with other vessels harbouring within the river, displaying the armes of St George upon their maine toppes, with several pendants hanging thereunto, discharged many voleyces of shotte in honour of the day. The bells, dedicated, being presented to the Mayor. Proclamation being generally made to bring in horses to runne for the said bells, there was runne a double race, to the greate pleasure and delight of the spectators. Men of greate worthe running also at the ring for the saide cuppe, dedicated to St George, and those that wonne the prizes had the same, with the honour thereto belonging. The said several prizes, being with speeches and several wreathes set on their heads, delivered in eeremonious and triumphant manner, after the order of the Olympian sportes, whereof these were an imitation.'

THE WHITSUN-ALE.

Ale was so prevalent a drink amongst us in old times, as to become a part of the name of various festal meetings, as Leet-ale, Lamb-ale, Bride-ale [bridal], and, as we see, Whitsun-ale. It was the custom of our simple ancestors to have parochial meetings every Whitsuntide, under the auspices of the churchwardens, usually in some barn near the church, all agreeing to be good friends for once in the year, and spend the day in a sober joy. The squire and lady came with their piper and taborer; the young daneed or played at bowls; the old looked on, sipping their ale from time to time. It was a kind of pic-nic, for each parishioner brought what victuals he could spare. The ale, which had been brewed pretty strong for the occasion, was sold by the churchwardens, and from its profits a fund arose for the repair of the church. In latter days, the festival degenerated, as has been the case with most of such old observances; but in the old times there was a reverence about it which kept it pure. Shakspeare gives us some idea of this when he adverts to the song in *Pericles*—

'It hath been sung at festivals,
On ember eves, and holy ales.'

WHIT SUNDAY FÊTE AT NAPLES.

Among the religious festivals of the Neapolitans none is more joyously kept than that of the *Festa di Monte Vergine*, which takes place on Whit Sunday, but usually lasts three days. The centre of attraction is a church situated on a mountain near Avelino, and as this is a day's journey from Naples, carriages are in requisition. The remarkable feature of the festival is the gaiety of the crowds who attend from a wide district around. In returning home, the vehicles of all sorts which

have been pressed into the service are decorated in a fantastic manner with flowers and boughs of trees; the animals which draw the carriages, consisting sometimes of a bullock and ass, as represented in the subjoined cut, are ornamented with ribbons; and numbers of the merry-makers, bearing sticks, with flowers and pictures of the Madonna, dance untiringly alongside. These festivities of the Neapolitans are traced to certain usages of their Greek ancestry, having possibly some relation to ancient Bacchanalian processions.

WHIT SUNDAY FÊTE AT NAPLES.

FIRST SUNDAY MORNING OF MAY (OLD STYLE)
AT CRAIGIE WELL, BLACKISLE OF ROSS.

Among the many relics of superstition still extant in the Highlands of Scotland, one of the most remarkable is the veneration paid to certain wells, which are supposed to possess eminent virtues as charms against disease, witchcraft, fairies, and the like, when visited at stated times, and under what are considered favourable auspices.

Craigie Well is situated in a nook of the parish of Avoch, which juts out to the south, and runs along the north shore of the Munlochy bay. The well is situated within a few yards of high-water mark. It springs out between two crags or boulders of trap rock, and immediately behind it the ground, thickly covered with furze, rises very abruptly to the height of about sixty feet. Probably the name of the well is suggested by

638

the numerous masses of the same loose rock which are seen to protrude in so many places here and there through the gorse and broom which grow round about. There is a large briar bush growing quite near the two masses of rock mentioned, which is literally covered with small threads and patches of cloth, intended as offerings to the well. None, indeed, will dare go there on the day prescribed without bringing an offering, for such would be considered an insult to the 'healing waters!'

For more than a week before the morning appointed for going upon this strange pilgrimage, there is scarcely a word heard among farm servants within five miles of the spot, but, among the English speaking people, 'Art thee no ganging to Craigack wall, to get thour health scured another year?' and, among the Gaelic speaking population, 'Dol gu topar Chreckack?'

Instigated more by curiosity than anything

else, I determined to pay this well a visit, to see how the pilgrims passed the Sunday morning there. I arrived about an hour before sunrise; but long before crowds of lads and lasses from all quarters were fast pouring in. Some, indeed, were there at daybreak, who had journeyed more than seven miles! Before the sun made his appearance, the whole scene looked more like a fair than anything else. Acquaintances shook hands in true highland style; brother met brother, and sister sister; while laughter and all manner of country news and gossip were so freely indulged in, that a person could hardly hear what he himself said. Some of them spoke tolerable English, others spoke Gaelic, while a third party spoke Scotch, very quaint in the phraseology and broad in the pronunciation.

Meantime crowds were eagerly pressing forward to get a tasting of the well before the sun should come in sight; for, once he made his appearance, there was no good to be derived from drinking of it. Some drank out of dishes, while others preferred stooping on their knees and hands to convey the water directly to their mouths. Those who adopted this latter mode of drinking had sometimes to submit to the inconvenience of being plunged in over head and ears by their companions. This practice was tried, however, once or twice by strangers, and gave rise to a quarrel, which did not end till some blows had been freely exchanged.

The sun was now shooting up his first rays, when all eyes were directed to the top of the brae, attracted by a man coming in great haste, whom all recognised as Jock Forsyth, a very honest and pious, but eccentric individual. Scores of voices shouted, 'You are too late, Jock: the sun is rising. Surely you have slept in this morning.' The new-comer, a middle-aged man, with a droll squint, perspiring profusely, and out of breath, pressed nevertheless through the crowd, and stopped not till he reached the well. Then, muttering a few inaudible words, he stooped on his knees, bent down, and took a large draught. He then rose up and said: 'O Lord! thou knowest that weel would it be for me this day an' I had stooped my knees and my heart before thee in spirit and in truth as often as I have stooped them afore this well. But we maun keep the customs of our fathers.' So he stepped aside among the rest, and dedicated his offering to the briar-bush, which by this time could hardly be seen through the number of shreds which covered it.

Thus ended the singular scene. Year after year the crowds going to Craigach are perceptibly lessening in numbers.

J. S.

MAY 16.

St Brendan the Elder, 578. St Abdjesus, bishop, martyr. St Abdas, Bishop of Cascar, martyr. St Ubaldu, Bishop of Gubio, 1160. St Simon Stock, confessor, of Kent, 1265. St John Nepomuc, 1383.

THE LEGEND OF ST BRENDAN.

Mankind have ever had a peculiar predilection for stories of maritime adventure and discovery,

of the mysterious wonders and frightful perils of the mighty ocean; and almost every nation can boast of its one great real or mythical navigator. The Greeks had their Ulysses, the Carthaginians their Hanno. The name of the adventurous Tyrian who first brought back a cargo of gold and peacocks from the distant land of Ophir may be unknown; but every school-boy has read with delight the voyages of the Arabian Sinbad. To come nearer home, as Denmark had its Gorm, and Wales its Madoc, so Ireland had its Brendan. Of all the saintly legends, this of Brendan seems to have been the most popular and widely diffused. It is found in manuscript in all the languages of Western Europe, as well as in the mediæval Latin of the monkish chroniclers, and several editions of it were printed in the earlier period of typography.

Historically speaking, Brendan, an Irishman of royal lineage, was the founder and first abbot of the monastery of Clonfert, in the county of Galway; several treatises on religion and church government, still extant, are attributed to him; and the year 578 is assigned as the date of his death.

According to the legend, Brendan, incited by a report he had heard from another abbot, named Berint, determined to make a voyage of discovery, in search of an island supposed to contain the identical paradise of Adam and Eve. So, having procured a good ship, and victualled it for seven years, he was about to start with twelve monks, his selected companions, when two more earnestly entreated that they might be allowed to accompany him. Brendan replied, 'Ye may sail with me, but one of you shall go to perdition ere ye return.' In spite, however, of this warning, the two monks entered the ship.

And, forthwith sailing, they were on the morrow out of sight of any land, and, after forty days and forty nights, they saw an island and sailed thitherward, and saw a great rock of stone appear above the water; and three days they sailed about it, ere they could get into the place. But at last they found a little haven, and there they went on land. And then suddenly came a fair hound, and fell down at the feet of St Brendan, and made him welcome in its manner. Then he told the brethren, 'Be of good cheer, for our Lord hath sent to us this messenger to lead us into some good place.' And the hound brought them to a fair hall, where they found tables spread with good meat and drink. St Brendan said grace, and he and his brethren sat down, and ate and drank of such as they found. And there were beds ready for them, wherein they took their rest.

On the morrow they returned to their ship, and sailed a long time ere they could find any land, till at length they saw a fair island, full of green pasture, wherein were the whitest and greatest sheep ever they saw, for every sheep was as big as an ox. And soon after there came to them a goodly old man, who welcomed them, and said, 'This is the Island of Sheep, and here is never cold weather, but ever summer; and that causes the sheep to be so big and so white.' Then this old man took his leave, and bade them sail forth right east, and, within

a short time, they should come into a place, the Paradise of Birds, where they should keep their Easter-tide.

And they sailed forth, and came soon after to land, but because of little depth in some places, and in some places great rocks, they went upon an island, weening themselves to be safe, and made thereon a fire to dress their dinner; but St Brendan abode still in the ship. And when the fire was right hot, and the meat nigh sodden, then this island began to move, whereof the monks were afraid, and fled anon to the ship, and left their fire and meat behind them, and marvelled sore of the moving. And St Brendan comforted them, and said that it was a great fish named Jascon, which laboured night and day to put its tail in its mouth, but for greatness it could not.

The reader will recollect the similar story in the voyages of Sinbad; but Jascon, or Jasconius, as it is styled in the Latin version, turned out to be a much more useful fish than its Eastern counterpart, as will be seen hereafter.

After three days' sailing, they saw a fair land full of flowers, herbs, and trees; whereof they thanked God of His good grace, and anon they went on land. And when they had gone some distance they found a well, and thereby stood a tree, full of boughs, and on every bough sat a bird; and they sat so thick on the tree, that not a leaf could be seen, the number of them was so great; and they sang so merrily, that it was a heavenly noise to hear. And then, anon, one of the birds flew from the tree to St Brendan, and, with flickering of its wings, made a full merry noise like a fiddle, a joyful melody. And then St Brendan commanded the bird to tell him why they sat so thick on the tree, and sang so merrily. And then the bird said, 'Sometime we were angels in heaven; but when our master Lucifer fell for his high pride, we fell for our offences, some hither and some lower, after the nature of their trespass; and because our trespass is but little, therefore our Lord hath set us here, out of all pain, to serve Him on this tree in the best manner that we can.'

The bird, moreover, said to the saint: 'It is twelve months past that ye departed from your abbey, and in the seventh year hereafter ye shall see the place that ye desire to come to; and all these seven years ye shall keep your Easter here with us every year, and at the end of the seventh year ye shall come to the land of behest!' And this was on Easter-day that the bird said these words to St Brendan. And then all the birds began to sing even-song so merrily, that it was a heavenly noise to hear; and after supper St Brendan and his fellows went to bed and slept well, and on the morrow rose betimes, and then these birds began matins, prime, and hours, and all such service as Christian men use to sing.

Brendan remained with the birds till Trinity Sunday, and then returning to Sheep Island, he took in a supply of provisions, and sailed again into the wide ocean. After many perils, he discovered an island, on which was a monastery of twenty-four monks; with them Brendan spent Christmas, and on Twelfth-day again made sail.

On Palm Sunday they reached Sheep Island, and were received by the old man, who brought them to a fair hall, and served them. And on Holy Thursday, after supper, he washed their feet and kissed them, like as our Lord did to His disciples; and there they abode till Easter Saturday evening, and then departed and sailed to the place where the great fish lay; and anon they saw their caldron upon the fish's back, which they had left there twelve months before; and there they kept the service of the Resurrection on the fish's back; and after sailed the same morning to the island where was the tree of birds, and there they dwelt from Easter till Trinity Sunday, as they did the year before, in full great joy and mirth.

Thus they sailed, from island to island, for seven years; spending Christmas at the monastery, Palm Sunday at the Sheep Island, Easter-Sunday on the fish's back, and Easter Monday with the birds. There were several episodes, however, in this routine of sailings, of which space can be afforded for one of the strangest only.

After having been driven for many days to the northward by a powerful south wind, they saw an island, very dark, and full of stench and smoke; and there they heard great blowing and blasting of bellows, and heard great thunderings, wherefore they were sore afraid, and blessed themselves often. And soon after there came one, all burning in fire, and stared full ghastly on them, of whom the monks were aghast; and at his departure he made the horriblest cry that might be heard. And soon there came a great number of fiends, and assailed them with red hot iron hooks and hammers, in such wise that the sea seemed to be all on fire; but by the will of God, they had no power to hurt them nor the ship. And then they saw a hill all on fire, and a foul smoke and stench coming from thence; and the fire stood on each side of the hill, like a wall all burning. Then one of the monks began to cry and weep full sore, and say that his end was come, and that he might abide no longer in the ship; and anon he leapt into the sea, and then he cried and roared full piteously, cursing the time he was born; 'For now,' said he, 'I must go to perpetual torment.' And then the saying of St Brendan was verified, what he said to that monk ere he entered the ship. Therefore, it is good a man do penance and forsake sin, for the hour of death is uncertain.

According to the Latin version of the legend, the other monk, who voluntarily joined the expedition in defiance of the saint's solemn warning, came to an evil end also. On the first island where they landed, and were so hospitably entertained in 'a fair hall,' the wretched monk, overcome by temptation, stole a silver-mounted bridle and hid it in his vest; and in consequence of the theft died, and was buried on the island.

Their last visit to Jascon was marked by a more wonderful occurrence than on any of the previous occasions.

So they came to the great fish, where they used to say matins and mass on Easter Sunday. And when the mass was done, the fish began to move, and swam fast in the sea, whereof the

monks were sore aghast. But the fish set the monks on land, in the Paradise of Birds, all whole and sound, and then returned to the place it came from. Then St Brendan kept Easter-tide till Trinity Sunday, like as he had done before.

The prescribed wandering for seven years having been fulfilled, they were allowed to visit the promised land. After sailing for many days in darkness—

‘The mist passed away, and they saw the fairest country that a man might see—clear and bright, a heavenly sight to behold. All the trees were loaded with fruit, and the herbage with flowers. It was always day, and temperate, neither hot nor cold; and they saw a river which they durst not cross. Then came a man who welcomed them, saying, “Be ye now joyful, for this is the land ye have sought. So lade your ship with fruit, and depart hastily, for ye may no longer abide here. Ye shall return to your own country, and soon after die. And this river that you see here parteth the world asunder, for on that side of the water may no man come that is in this life.” Then St Brendan and his monks took of the fruit, and also great plenty of precious stones, and sailed home into Ireland, where their brethren received them with great joy, giving thanks to God, who had kept them all those seven years from many perils, and at last brought them home in safety. To whom be glory and honour, world without end. Amen.’

This legend, absurd as it may appear, exercised considerable influence on geographical science down to a comparatively late period, and formed one of the several collateral causes which led to the discoveries of Columbus. The Spanish government sent out many vessels in search of the Island of St Brendan, the last in 1721. In the treaty of Evord, by which the Portuguese ceded the Canary Islands to the Castilians, the Island of St Brendan is mentioned as the island which cannot be found. The lower class of Spaniards still relate how Roderick, last of the Goths, made his escape thither; while the Portuguese assert that it served for a retreat to Don Sebastian, after the battle of Acazar. On many old English charts it is to be found under its Irish name of I’Brazil. So common were voyages from Ireland in search of this island during the seventeenth century, that Ludlow, the regicide, when implicated in a conspiracy to seize Dublin Castle, made his escape to the Continent, by chartering a vessel at Limerick under the pretence of seeking for I’Brazil. Leslie of Glasslough, a man of judgment and enterprise, purchased a patent grant of this imaginary island from Charles I., and expended a fortune in seeking for—

‘That Eden, where th’ immortal brave
Dwell in a land serene,—
Whose towers beyond the shining wave,
At sunset oft are seen.
Ah! dream too full of saddening truth!
Those mansions o’er the main
Are like the hopes I built in youth,—
As sunny, and as vain!’

ST JOHN NEPOMUC.

The fine and venerable old city of Prague, seated on the hill overlooking the new town, is decked out in all its bravery on this day. It is the *fête* of its favourite saint, the patron saint of Bohemia, St John Nepomuc. Hundreds, nay thousands, of people flock from the distant hills of the Tyrol, from Hungary, and from all parts of Bohemia, to the celebration. The old bridge dedicated to his memory, and on which his chapel stands, is so crowded that carriages are forbidden to cross it during the twenty-four hours. Service is going forward constantly, and as one party leaves, another fills the edifice. These poor people have walked all the distance, carrying their food, which often consists of cucumber, curds, and bread, in a bundle; they join together in parties, and come singing along the road, so many miles each day. The town presents a most picturesque aspect; the variety of costume worn in Hungary is well known;* besides these, we find the loose green shooting-jackets of the Tyrol, the high-pointed hat, and tightly-fitting boots and stockings. The Bohemians, with their blue and red waistcoats, and large hats, remind you of the days of Luther; whilst the women are gay with ribbons tied in their hair, and smartly embroidered aprons.

The legend of the saint is, that he lived in the days of a pagan king, whose queen he converted to the true faith, and who privately confessed to St John. Her husband, hearing of this, demanded to know her confession from the holy man, which he twice refused to reveal, on the plea of duty, though he was under threat of death. The consequence was that the king ordered him to be thrown over the old bridge into the Moldau, first barbarously cutting out his tongue. Tradition generally adds the marvellous to the true, and tells us that five stars shone in a crescent over his head. As a representation of this, a boat always sails between the arches of the bridge towards dusk on the *fête* day, with five lights, to remind the people of the stars which hung over the dying saint’s head.

Born.—Sir William Petty, political economist, 1623, *Romsey, Hampshire*; Sir Dudley North, merchant, traveller, author of *An Account of Turkey*, 1641.

Died.—Pope John XXI., killed at Viterbo, 1277; Samuel Bochart (history and languages), 1667, *Caen, Normandy*; Paul Rapin de Thoyras, historian, 1725; Dr Daniel Solander, naturalist, 1782; Jean Baptiste Joseph, Baron Fourier, mathematician, 1830; George Clint, artist, 1854, *Kensington*; Professor Henslow, botanist, 1861.

RAPIN AND HIS HISTORY.

The huge, voluminous history of England, by Rapin, kept a certain hold on the public favour, even down to a time which the present writer can remember. It was thought to be more impartial than other histories of England, the supposed fact being attributed to the country of the author.

* The photographs in the Austrian Court of the Exhibition of 1862 will be remembered by all who have seen them as striking examples of rich colouring, and taste in dress, even among the lower ranks.

But, in reality, Rapin had his twists like other people. A refugee from France under the revocation of the Edict of Nantes, he bore away a sense of wrongs extending back through many Protestant generations of his family, and this feeling expressed itself in a very odd way. In regard to the famous quarrel between Edward III. and Philip of Valois, he actually advocates the right of the former, which no Englishman of his own or any later time would have done.

Rapin came to England in the expedition of the Prince of Orange, served the new king in Ireland, and afterwards became governor to the son of William's favourite, the Duke of Portland.

DR SOLANDER.

The name of Solander, the Swedish botanist, the pupil of Linnæus, and the friend of Sir Joseph Banks, was honourably distinguished in the progress of natural science in the last century. He was born in Nordland, in Sweden, on the 28th of February, 1736; he studied at Upsala, under Linnæus, by whose recommendation he came to England in the autumn of 1760, and was employed at the British Museum, to which institution he was attached during the remainder of his life; he died, under-librarian of the Museum, in the year 1782.

It was, however, in voyages of discovery that Solander's chief distinction lay, especially in his contributions to botanical knowledge. In 1768, he accompanied Captain Cook in his first voyage round the world; the trustees of the British Museum having promised a continuance of his salary in his absence. During this voyage, Dr Solander probably saved a large party from destruction in ascending the mountains of Terra del Fuego; and very striking and curious is the story of this adventure in illustrating the effect of drowsiness from cold. It appears that Solander and Sir Joseph Banks had walked a considerable way through swamps, when the weather became suddenly gloomy and cold, fierce blasts of wind driving the snow before it. Finding it impossible to reach the ships before night, they resolved to push on through another swamp into the shelter of a wood, where they might kindle a fire. Dr Solander, well experienced in the effects of cold, addressed the men, and conjured them not to give way to sleepiness, but, at all costs, to keep in motion. 'Whoever sits down,' said he, 'will sleep; and whoever sleeps, will wake no more.' Thus admonished and alarmed, they set forth once again; but in a little time the cold became so intense as to produce the most oppressive drowsiness. Dr Solander himself was the first who felt the inclination to sleep too irresistible for him, and he insisted on being suffered to lie down. In vain Banks entreated and remonstrated; down he lay upon the snow, and it was with much difficulty that his friends kept him from sleeping. One of the black servants began to linger in the same manner. When told that if he did not go on, he would inevitably be frozen to death, he answered that he desired nothing more than to lie down and die. Solander declared himself willing to go on, but declared that he must first take some sleep.

It was impossible to carry these men; they were therefore both suffered to lie down, and in a few minutes were in a profound sleep. Soon after, some of those men who had been sent forward to kindle a fire, returned with the welcome news that a fire awaited them a quarter of a mile off. Banks then happily succeeded in awaking Solander, who, although he had not been asleep five minutes, had almost lost the use of his limbs, and his flesh was so shrunk that the shoes fell from his feet. He consented to go forward with such assistance as could be given; but no attempts to rouse the black servant were successful, and he, with another black, died there.

Dr Solander returned from this voyage in 1771, laden with treasures, which are still in the collection at the British Museum. He did not receive any remuneration for his perilous services beyond that extended by Sir Joseph Banks.

It will be recollected that the spot whereon Captain Cook first landed in Australia was named Botany Bay, from the profusion of plants which the circumnavigators found there, and the actual point of land was named, after one of the naturalists of the expedition, *Cape Solander*; the discovery has also been commemorated by a brass tablet, with an inscription, inserted in the face of the cliff, by Sir Thomas Brisbane, G.C.B., Governor of New South Wales.

PROFESSOR HENSLOW.

As Dr Buckland at Oxford, so Mr Henslow at Cambridge, did laudable service in leading off the attention of the university from the exclusive study of dead languages and mathematics to the more fruitful and pleasant fields of natural science.

John Stevens Henslow was born at Rochester, in 1796, and from a child displayed those tastes which distinguished his whole life. Stories are told of how he made the model of a caterpillar; dragged home a fungus, *Lycoperdon giganteum*, almost as big as himself; and how, having received as a prize *Travels in Africa*, his head was almost turned with a desire to become an explorer of that mysterious continent, and make acquaintance with its terrible beasts and reptiles. He went to Cambridge in 1814, where he took high mathematical honours, and in 1825 was appointed Professor of Botany. As Buckland bewitched Oxford with the charms of geology, Henslow did Cambridge with those of botany. All who came within the magic of his enthusiasm caught his spirit, and in his herborizing excursions round Cambridge he drew troops of students in his train. He was an admirable teacher; no one who listened to him could fail to follow and understand. At his lectures he used to provide baskets of the more common plants, such as primroses, and other species easily obtained in their flowering season; and as the pupils entered, each was expected to select a few specimens and bear them to his seat on a wooden plate, so that he might dissect for himself, and accompany the professor in his demonstration. He was also an excellent draughtsman, and by a free use of diagrams he was enabled to remove the last shade of obscurity from his expositions. At his house

he held a *soirée* once a week, to which all were welcomed who had an interest in science. These evenings at the professor's became popular beyond measure, and to this day are held in affectionate remembrance by those who were his guests. In this useful activity, varied by other interests, theological and political, were Henslow's years passed at Cambridge, when in 1837, Lord Melbourne—who had almost given him the bishopric of Norwich—promoted him to the well-endowed rectory of Hitcham, in Norfolk. The people of his parish he found sunk almost to the lowest depth of moral and physical debasement, but Henslow bravely resolved to take them in hand, and spend his strength without reserve in their regeneration. His mode was entirely original. He got up a cricket-club, and encouraged ploughing matches, and all sorts of manly games. He gave every year an exhibition of fireworks on the rectory lawn, and tried to interest the more intelligent of his parishioners in his museum of curiosities. Then he took them annual excursions, sometimes to Ipswich, sometimes to Cambridge, Norwich, the sea-side, Kew, and London, leading through these places from one to two hundred rustics at his heels. Then he got up horticultural shows, to which the villagers sent their choice plants; and amid feasting and games he delivered at short intervals what he called 'lecturets' on various matters of morals and economy, brimming over with good sense and good-humour. Of course he paid special attention to his parish school, and from the first he made botany a leading branch of instruction. There were three botanical classes, and admission to the very lowest was denied to any child who could not spell, among other words, the terms Angiosperms, Glumaceans, and Monocotyledons. Under Henslow's enthusiasm and unequalled power of teaching, the hard and difficult vocabulary grew easy to the childhood of Hitcham, and ploughboys and dairymaids learned to discourse in phrases which would perplex a London drawing-room. Whilst looking after the labourers, he did not forget their employers, the farmers; and by lectures to the Hadleigh Farmers' Club he strove to 'convert,' as he expressed it, 'the art of husbandry into the science of agriculture.' In these secular labours Henslow believed that he laid the only durable basis for any spiritual culture that was worth the name. Under his ceaseless energy his parish gradually and surely changed its character from sloth and depravity to industry and virtue; and we scarcely know a more encouraging example of the good a clergyman may effect in the worst environment than that afforded by the story of Henslow's life at Hitcham. The last public appearance of the professor was as president of the natural history section of the British Association at Oxford in June, 1860. In 1861 a complication of disorders, arising, it was thought, from his long habit of overtasking mind and body, brought him to his death-bed. There, in his last hours, was seen the scientific instinct active as ever. In his sufferings he set himself to watch the signs of approaching dissolution, and discussed them with his medical attendants as though they were natural phenomena occurring outside himself.

GREENWICH FAIR.

In former times, the conception of Whit Monday in the mind of the great mass of Londoners had one central spot of intense brightness in—Greenwich Fair. For some years past, this has been a bygone glory, for magistrates found that the enjoyments of the festival involved much disorder and impropriety; and so its chief attractions were sternly forbidden. Strict justice owns that such an assemblage could not take place without some share of evil consequences; and yet one must sigh to think that so much pleasure, to all appearance purely innocent, has been subtracted from the lot of the industrious classes, and it may even be insinuated that the gain to morality is not entire gain.

If Whit Monday dawned brightly, every street in London showed, from an early hour, streams of lads and lasses pouring towards those outlets from the city by which Greenwich (five miles off) was then approached, the Kent Road and the river being the chief. No railway then—no steamers on the river—their place was supplied to some extent by stage-coaches and wherries. When the holiday-maker and his partner had, by whatever means, made their way to Greenwich, they found the principal street filled from end to end with shows, theatrical booths, and stalls for the sale of an infinite variety of merchandise. Usually, however, the first object was to get into the park; a terrible struggle it was, through accesses so much narrower than the multitude required. In this beautiful piece of ground, made venerable by the old oaks of Henry and Elizabeth, and dear to science by the towery Observatory, the youth and maidenhood of London carried on a series of sports during the whole forenoon. At one place there was kiss-in-the-ring; at another you might, for a penny, enjoy the chance of knocking down half-a-dozen pieces of gingerbread by throwing a stick; but the favourite amusement above all was to run your partner down the well-known slope between the high and low levels of the park. Generally, a row was drawn up at the top, and at a signal off they all set; some bold and successful in getting to the bottom on their feet, others, timid and awkward, tumbling headlong before they were half-way down. The strange disorders of this scene furnished, of course, food for no small merriment; the rule was to take every discomposure and spoiling of dress good-humouredly. Meanwhile there were other regalements. One of the old pensioners of the Hospital would be drawing halfpence for the use of his telescope, whereby you could see St Paul's Cathedral, Barking Church, Epping Forest, or the pirates hanging in chains along the river (the last a favourite spectacle). At another place, a sailor, or one assuming the character, would exemplify the nautical hornpipe to the sounds of a cracked violin. The game of 'thread-my-needle,' played by about a dozen lasses, also had its attractions.

After the charms of the park were exhausted, a saunter among the shows and players' booths occupied a few hours satisfactorily. Even the pictures on the exterior, and the musical bands

and spangled dancers on the front platform, were no small amusement to minds vacant alike of care and criticism; but to plunge madly in, and see a savage baron get his deserts for a long train of cruelties, all executed in a quarter of an hour,—there lay the grand treat of this department. Here, however, there was nothing locally peculiar—nothing but what was to be seen at Bartholomew Fair, or any other fair of importance throughout the country.

Towards evening, the dancing booths began to drain off the multitudes from the street. Some of these were boarded structures of two and even three hundred feet long, each, of course, provided with its little band of violinists, each also presenting a bar for refreshments, with rows of seats for spectators. Sixpence was the ordinary price of admission, and for that sum the giddy youth might dance till he was tired, each time with a new partner, selected from the crowd. Here lay the most reprehensible part of the enjoyments of Greenwich Fair, and that which conduced most to bring the festival into disrepute, and cause its suppression. The names adopted for these temples of Terpsichore were often of a whimsical character, as 'The Lads of the Village,' 'The Moonrakers,' 'The Black Boy and Cat,' and so forth. The second of these names probably indicated an Essex origin, with reference to the celebrated fable of the Essex farmers trying to rake Luna out of a pool in which they saw her fair form reflected.

When the limbs were wearied with walking and dancing, the heart satiated with fun, or what passed as such, and perhaps the stomach a little disordered with unwonted meats and drinks, the holiday-makers would address themselves for home. Then did the stage-coaches and the hackneys make rich harvest, seldom taking a passenger to London under four shillings, a tax which but few could pay. The consequence was that vast multitudes set out on foot, and, getting absorbed in public-houses by the way, seldom reached their respective places of abode till an advanced hour of the night.

Fairs were originally markets—a sort of commercial rendezvous rendered necessary by the sparseness of population and the paucity of business; and merry-makings and shows were only incidental accompaniments. Now that population is dense, and commercial communications of all kinds are active and easy, the country fair is no longer a necessity, and consequently they have nearly everywhere fallen much off. At one time, the use being obvious and respectable, and the merriments not beyond what the general taste and morality could approve of, the gentlefolk of the manor-house thought it not beneath them to come down into the crowded streets and give their countenance to the festivities. Arm-in-arm would the squire and his dame, and other members of the family, move dignifiedly through the fair, receiving universal homage as a reward for the sympathy they thus showed

A STATUTE FAIR.

with the needs and the enjoyments of their inferiors. At the fair of Charlton, in Kent, not much beyond the recollection of living persons, the wife of Sir Thomas Wilson was accustomed to make her appearance with her proper attendants, walking forth from the family mansion into the crowded streets, where she was sure to be hailed with a musical band, got up gratefully in her especial honour. It surely is not in the giving up of such kindly customs that the progress of our age is to be marked. Does it not rather indicate something like a retrogression?

This fair of Charlton, which was held on St Luke's Day (18th of October), had some curious peculiarities. The idea of horns was somehow connected with it in an especial manner. From Deptford and Greenwich came a vast flock of holiday-makers, many of them bearing a pair of horns upon their heads. Every booth in the fair had its horns conspicuous in the front. Ram's horns were an article abundantly presented for sale. Even the gingerbread was marked by a gilt pair of horns. It seemed an inexplicable mystery how horns and Charlton fair had become associated in this manner, till an antiquary at length threw a light upon it by pointing out that a horned ox is the recognised mediæval symbol of St Luke, the patron of the fair, fragmentary examples of it being still to be seen in the painted windows of Charlton Church. This fair was one where an unusual license was practised. It was customary for men to come to it in women's clothes—a favourite mode of masquerading two or three hundred years ago—against which the puritan clergy launched many a fulmination. The men also amused themselves, in their way across Blackheath, in lashing the women with furze, it being proverbial that 'all was fair at horn fair.*'

All over the south of Scotland and north of England there are fairs devoted to the hiring of servants—more particularly farmers' servants—both male and female. In some districts, the servants open to an engagement stand in a row at a certain part of the street, ready to treat with proposing employers; sometimes exhibiting a straw in their mouths, the better to indicate their unengaged condition. It is a position which gives occasion for some coquetry and badinage, and an air of good-humour generally prevails throughout. When the business of the day is pretty well over, the amusement begins. The public houses, and even some of the better sort of hotels, have laid out their largest rooms with long tables and forms, for the entertainment of the multitude. It becomes the recognised duty of the lads to bring in the lasses from the streets, and give them refreshments at these tables. Great heartiness and mirth prevail. Some gallant youths, having done their duty to one damsel, will plunge down into the street, seize another with little ceremony, and bring her in also. A dance in another apartment concludes the day's enjoyments. The writer, in boyhood, has often looked upon these scenes with great amusement; he must now acknowledge that they involve too great an element of coarseness, if not

* Charlton fair is still held on the above date, and retains many of its old peculiarities.

something worse; and he cannot but rejoice to hear that there is now a movement for conducting the periodical business of hiring upon temperance principles. It is one of the misfortunes of the lowly that, bound down to monotonous toil the greater part of their lives, they can scarcely enjoy an occasional day of relaxation or amusement without falling into excesses. Let us hope that in time there will be more frequent and more liberal intervals of relaxation, and consequently less tendency to go beyond reasonable bounds in merry-making.

HELOISE.

The story of Heloise and Abelard is one of the saddest on record. It is a true story of man's selfishness and woman's devotion and self-abnegation. If we wished for an allegory which should be useful to exhibit the bitter strife which has to be waged between the earthly and the heavenly, between passion and principle, in the noblest minds, we should find it provided for us in this painful history. We know all the particulars, for Abelard has written his own confessions, without screening himself or concealing his guilt; and several letters which passed between the lovers after they were separated, and devoted to the exclusive service of religion, have come down to posterity.

Not alone the tragic fate of the offenders, but also their exalted worth and distinguished position, helped to make notorious the tale of their fall. Heloise was an orphan girl, eighteen years old, residing with a canon of Nôtre Dame, at Paris, who was her uncle and guardian. This uncle took great pains to educate her, and obtained for her the advantage of Abelard's instruction, who directed her studies at first by letters. Her devotion to study rendered her remarkable among the ladies of Paris, even more than her beauty. 'In face,' Abelard himself informs us, 'she was not insignificant; in her abundance of learning she was unparalleled; and because this gift is rare in women, so much the more did it make this girl illustrious through the whole kingdom.' Abelard, though twice the age of Heloise, was a man of great personal attraction, as well as the most famous man of his time, as a rising teacher, philosopher, and divine. His fame was then at its highest. Pupils came

to him by thousands. He was lifted up to that dangerous height of intellectual arrogance, from which the scholar has often to be hurled with violence by a hard but kind fate, that he may not let slip the true humility of wisdom. 'Where was found,' Heloise writes, 'the king or the philosopher that had emulated your reputation? Was there a village, a city, a kingdom, that did not ardently wish to see you? When you appeared in public, who did not run to behold you? And when you withdrew, every neck was stretched, every eye sprang forward to follow you. The women, married and unmarried, when Abelard was away, longed for his return!' And, becoming more explicit, she continues: 'You possessed, indeed, two qualifications—a tone of voice, and a grace in singing—which gave you the control over every female heart. These powers were peculiarly yours, for I do not know that they ever fell to the share of any other philosopher. To soften by playful instruments the stern labours of philosophy, you composed several sonnets on love, and on similar subjects. These you were often heard to sing, when the harmony of your voice gave new charms to the expression. In all circles nothing was talked of but Abelard; even the most ignorant, who could not judge of harmony, were enchanted by the melody of your voice. Female hearts were unable to resist the impression.' So the girl's fancies come back to the woman, and it must have caused a pang in the fallen scholar to see how much his guilt had been greater than hers.

It was a very thoughtless thing for Fulbert to throw together a woman so enthusiastic and a man so dangerously attractive. In his eagerness that his niece's studies should advance as rapidly as possible, he forgot the tendency of human instinct to assert its power over minds the most cultivated, and took Abelard into his house. A passionate attachment grew up between teacher and pupil: reverence for the teacher on the one hand, interest in the pupil on the other, changed into warmer emotions. Evil followed. What to lower natures would have seemed of little moment, brought to them a life of suffering and repentance. In his penitent confessions, no doubt conscientiously enough, Abelard represents his own conduct as a deliberate scheme of a depraved will to accomplish a wicked design; and such a terrible phase of an intellectual mind is real, but the circumstances in which the lovers were placed are enough to account for the unhappy issue. The world, however, it appears, was pleased to put the worst construction upon what it heard, and even Heloise herself expresses a painful doubt, long afterwards, for a moment, at a time when Abelard seemed to have forgotten her. 'Account,' she says, 'for this conduct, if you can, or must I tell you my suspicions, which are also the general suspicions of the world? It was passion, Abelard, and not friendship, that drew you to me; it was not love, but a baser feeling.'

The attachment of the lovers had long been publicly known, and made famous by the songs which Abelard himself penned, to the utter neglect of his lectures and his pupils, when the utmost extent of the mischief became clear at

last to the unsuspecting Fulbert. Abelard contrived to convey Heloise to the nunnery of Argenteuil. The uncle demanded that a marriage should immediately take place; and to this Abelard agreed, though he knew that his prospects of advancement would be ruined, if the marriage was made public. Heloise, on this very account, opposed the marriage; and, even after it had taken place, would not confess the truth. Fulbert at once divulged the whole, and Abelard's worldly prospects were for ever blasted. Not satisfied with this, Fulbert took a most cruel and unnatural revenge upon Abelard, the shame of which decided the wretched man to bury himself as a monk in the Abbey of St Dennis. Out of jealousy and distrust, he requested Heloise to take the veil; and having no wish except to please her husband, she immediately complied, in spite of the opposition of her friends.

Thus, to atone for the error of the past, both devoted themselves wholly to a religious life, and succeeded in adorning it with their piety and many virtues. Abelard underwent many sufferings and persecutions. Heloise first became prioress of Argenteuil; afterwards, she removed with her nuns to the Paraclete, an asylum which Abelard had built and then abandoned. But she never subdued her woman's devotion for Abelard. While abbess of the Paraclete, Heloise revealed the undercurrent of earthly passion which flowed beneath the even piety of the bride of heaven, in a letter which she wrote to Abelard, on the occasion of an account of his sufferings, written by himself to a friend, falling into her hands. In a series of letters which passed between them at this time, she exhibits a pious and Christian endeavour to perform her duties as an abbess, but persists in retaining the devoted attachment of a wife for her husband. Abelard, somewhat coldly, endeavours to direct her mind entirely to heaven; rather affects to treat her as a daughter than a wife; and seems anxious to check those feelings towards himself which he judged it better for the abbess of the Paraclete to discourage than to foster. Heloise survived Abelard twenty-one years.

We have endeavoured to state the bare facts of this tragic history, and feel bound, in conclusion, to warn the reader that Pope's far-famed epistle of *Heloise to Abelard* conveys a totally erroneous notion of a woman who died a model of piety and universally beloved. She ever looked up to her husband with veneration, appreciating him as a great scholar and philosopher. She gave up everything on his account; and though once, when a mere girl, she was weak when she should have been strong, there is none of that sensuality traceable in her passionate devotion which is Pope's pet idea, and which he pursues with such assiduity. Perhaps the best passage in Pope's poem is one in which he represents Heloise as describing the melancholy of her convent's seclusion. We subjoin it as a specimen of the poem, without being very vain of it.

'The darksome pines, that o'er yon rocks reclined,
Wave high, and murmur to the hollow wind;
The wandering streams that shine between the hills,
The grotts that echo to the tinkling rills;

The dying gales that pant upon the trees,
 The lakes that quiver to the curling breeze ;—
 No more these scenes my meditation aid,
 Or lull to rest the visionary maid.
 But o'er the twilight groves and dusky caves,
 Long sounding isles, and intermingling graves,
 Black Melancholy sits, and round her throws
 A death-like silence and a dread repose :
 Her gloomy presence saddens all the scene,
 Shades every flower, and darkens every green ;
 Deepens the murmur of the falling floods,
 And wreathes a browner horror on the woods.'

TALLEYRAND.

At his death in 1838, Talleyrand had reached the age of eighty-four. He had figured as a bishop before the Revolution, made a narrow escape in that crisis of the national history, was Napoleon's minister for foreign affairs under both the Consulate and Empire, was the leading Frenchman in arranging the Restoration, and did not forsake public life under either the restored Bourbons or Louis Philippe. The character of the age in which he had lived was strongly brought before our thoughts when, on taking the oath to the new system of things in 1830, he said—'This is the thirteenth—I hope it will be the last.' He is generally reputed as the very type of the statesman of expediency and the slippery *diplomat*; and yet there is reason to believe that Talleyrand, all through, acted for the best in behalf of his country. It is true, he had an extraordinary amount of that sagacity which, in the midst of general enthusiasm, can coolly calculate chances; which is, accordingly, never *carried away*; which plays with the passions and sentiments of men. But he was not necessarily on this account a wicked politician. He was even honest in certain great crises—for example, when he counselled Napoleon to moderation after obtaining the purple, and lost his favour by discommending the invasion of Spain, which he truly prophesied would be found 'the beginning of the end.' Being out of the immediate service of the Emperor, he was perfectly at liberty to move for the change of dynasty in 1814, and he continued faithful to the new one in the trying crisis of the ensuing year.

The reputation of Talleyrand has arisen more from his words than his actions. He could justly appreciate the ardour of other people, and make cool, witty remarks upon them. Hence it was thought that he had no heart, no generous feeling. He could point out the evil consequences of openness and zeal; hence it was thought that he had no probity or faithfulness. But he was in reality a kind-hearted man, and generally acted correctly. All we can truly say is just this, that in the various difficult matters he was concerned in, he could see the inevitable consequences of being the simpleton or the enthusiast; and that, being a wit, he loved to put his reflections on these things into epigrammatic form, thus unavoidably giving them an air of heartlessness. The generality of men, repining at the useful self-command they saw he could exercise, took their revenge by representing him as a monster of cold-heartedness and treachery—which was far from being his actual character. Their injustice was supported by a *sang-froid* which was

constitutional with Talleyrand, but which was merely external.

The *bon mots* of Talleyrand had a great celebrity. There was something cynical about them, but they were also playful. When told that the Duke of Bassano was come back with Napoleon from Russia, he remarked, with an expression of doubt on his countenance, 'Those bulletins are always lying—they told us all the baggage had been left behind.' Such a fling at a stupid statesman many might have made. But what are we to say of the depth of such of his sayings as that the execution of the Duc D'Enghien was 'worse than a crime—it was a blunder'? There we see the comprehensive and penetrating intellect, as well as the epigrammatist. After all, as often happens with men's good things, some are traced to earlier wits. For instance, his saying that language was given to man 'not to express his thoughts, but to conceal them,' is traced back to South, the English divine. So also his reply to the question 'What had passed in the council?' '*Trois heures*,' had a prototype in a saying which Bacon records of Mr Popham, the Speaker of the House of Commons, who, being asked by Queen Elizabeth what had passed in the lower house, answered, 'Please your majesty, seven weeks.' It is not easy even for a Talleyrand to be original.

Some of his acts were practical witticisms, as when, at the death of Charles X., he appeared in a white hat in the republican quarters of Paris, and in the quartier St Germain put on a crape; or, when asked by a lady for his signature in her album, he inscribed it at the very top of a page, so that there might be no order for ten thousand francs written over it.

Not long before the death of Talleyrand, an able English writer, speaking of his brilliant apothegms, said, 'What are they all to the practical skill with which this extraordinary man has contrived to baffle all the calamities of thirty years, full of the ruin of all power, ability, courage, and fortune? Here is the survivor of the age of the Bastille, the age of the guillotine, the age of the prison-ship, the age of the sword. And after baffling the Republic, the Democracy, the Despotism, and the Restoration, he figures in his eightieth year as the Ambassador to England, the Minister of France, and retires from both offices only to be chief counsellor, almost the coadjutor of the king. That where the ferocity of Robespierre fell, where the sagacity of Napoleon fell, where the experience of the Bourbons fell, this one old man, a priest in a land of daring spirits—where conspiracy first, and soldiery after, were the great means of power—should survive all, succeed in everything, and retain his rank and influence through all change, is unquestionably among the most extraordinary instances of conduct exhibited in the world.'

SITTING BELOW THE SALT.

One of the customs of great houses, in former times, was to place a large ornamental *salt-vat* (commonly but erroneously called salt-foot) upon the table, about the centre, to mark the part below which it was proper for tenants and de-

pendents to sit. The accompanying illustration represents a remarkably handsome article of this kind which belonged to Archbishop Parker, and

ARCHBISHOP PARKER'S SALT-VAT.

has since been preserved in Corpus Christi College, Cambridge, along with other plate presented to that institution by the venerable prelate, who was at one time its *Master*. The Corpus Christi salt-vat is an elegant fabric of silver and gold, beautifully carved externally, and twice the size of our illustration.

The salt-cellar of Bishop Fox, 1517, which is preserved in Corpus Christi College, Oxford, is a beautiful specimen of the goldsmiths' work of the period. It is silver-gilt, covered with ornaments elaborately chased, one of the chief figures being the pelican, which was the bishop's emblem.

This practice of old days, so invidiously distinguishing one part of a company from another, appears to have been in use throughout both England and Scotland, and to have extended at least to France. It would be an error to suppose that the distinction was little regarded on either hand, or was always taken good-humouredly on the part of the inferior persons. There is full evidence in old plays, and other early productions of the press, that both parties were fully sensible of what sitting below the salt inferred. Thus, in *Cynthia's Revels*, by Ben Jonson, we hear of a character who takes no notice of any ill-dressed person, and never drinks to anybody below the salt. One writing in 1613 about the miseries of a poor scholar in the houses of

the great,* says, 'he must sit under the salt—that is an axiom in such places.' Even, strange to say, the clerical preceptor of the children had to content himself with this inferior position, if we are to trust to a passage in Bishop Hall's satires—

'A gentle squire would gladly entertain
Into his house some trencher-chapelaine,
Some willing man that might instruct his sons,
And that could stand to good conditions :
First, that he lie upon the truckle bed
Whiles his young maister lieth o'er his head ;
Second, that he do, on no default,
Ever presume to sit above the salt ;
Third, that he never change his trencher twice,' &c.

So also we find in an old English ballad the following sufficiently pointed allusion—

'Thou art a carle of mean degree,
The salt it doth stand between me and thee ;
But, an' thou hadst been of a gentle strain,
I would have bitten my gant^t again.'

A Scotch noble, again, writing in 1680 about his family and its old neighbours, introduces a derogatory allusion to the self-raised son of one of those against whom he had a spite, as coming of a family who, in visiting his (the noble's) relatives, 'never came to sit above the salt-foot.' ‡

THE BURIAL OF HELOISE.

The connexion of Heloise with Abelard, their separation, their subsequent lives, spent in penitence and religious exercises, not unmingled with human regrets, have employed a hundred pens. Heloise, surviving Abelard twenty-one years, was deposited in the same grave within Paraclete's white walls. The *Chronique de Tours* reports that, at the moment when the tomb of Abelard was opened for the body of Heloise, Abelard held out his hand to receive her. The author of a modern life of Abelard tells this tale, and, the better to support it, gives instances of similar miracles ; as, for example, that of a senator of Dijon, who, having been interred twenty-eight years, opened his arms to embrace his wife when she descended into the same tomb. These, being French husbands, may be supposed to have been unusually polite ; but that posthumous conjugal civilities are not necessarily confined to that nation, is shown by an anecdote told of the sainted Queen Margaret of Scotland. When, many years after her death, this royal lady was canonized, it was necessary to remove her body from a place in Dunfermline Abbey, where it lay beside her husband, King Malcolm, to a place more convenient for a shrine. It was found that the body was so preternaturally heavy that there was no lifting it. The monks were nonplused. At length, one suggested that the queen refused to be moved without her husband. Malcolm was then raised, and immediately the queen's body resumed its ordinary weight, and the removal was effected.

The bodies of Abelard and Heloise, after several migrations, were finally removed in 1800 to the cemetery of Père la Chaise, near Paris.

MAY 18.

St Venantius, martyr, 250. St Theodotus, vintner, and seven virgins, martyrs, 303. St Potamon, martyr, 341. St Eric, King of Sweden, martyr, 1151.

Died.—Bishop Nicolas Longespee, 1297; Bishop Herbert Croft, 1691; Elias Ashmole, antiquary, 1692, *Great Lambeth*; Charles Perrault, miscellaneous writer, 1703; Ephraim Chambers, encyclopædist, 1740; Bishop John Douglas, 1807.

PERRAULT.

This name calls for a brief passing notice, as one associated with pleasures which we have all enjoyed in childhood. It is but little and even dubiously known, that the universally diffused *Tales of Mother Goose*, to wit, *Blue Beard*, *Tom Thumb*, *Cinderella*, &c., were a production of this celebrated French writer. After having spent a long life in more or less profound studies, and produced several learned dissertations, it pleased him to compose these fairy tales, probably to amuse a little son who had been born to him in his advanced age. It was in 1697 that these matchless stories were given to the world at Paris; not, however, as the production of Charles Perrault, the accomplished and esteemed scholar and critic, but as the work of Perrault d'Armancourt, his son, who was as yet a mere child. They have since been translated into nearly every language. Perrault died in the seventy-sixth year of his age.

A ROMANCE OF MILITARY HISTORY.

Early in the last century, the government raised six companies of highland soldiers, as a local force to preserve the peace and prevent robberies in the northern parts of Scotland. These companies, the famous Black Watch of Scottish song and story, were formed into a regiment in 1739, and four years after were marched to London, on their way to join the British army, then actively serving in Germany. Many of the men composing this regiment, believing that their terms of enlistment did not include foreign service, felt great dissatisfaction on leaving Scotland; but it being represented to them that they were merely going to London to be reviewed by the king in person, no actual disobedience to orders occurred. About the time, however, that the regiment reached London, the king departed for the Continent, and this the simple and high-minded Highlanders considered as a slight thrown upon either their courage or fidelity. Several disaffected persons, among the crowds that went to see the regiment in their quarters at Highgate, carefully fanned the flame of discontent; but the men, concealing any open expression of ill-feeling, sedulously prepared for a review announced to take place on the king's birthday, the 14th of May 1743. On that day Lord Sempill's Highland regiment, as it was then termed, was reviewed by General Wade, on Finchley Common. A paper of the day, says: 'The Highlanders made a very handsome appearance, and went through their exercise and firing with the utmost exactness. The

novelty of the sight drew together the greatest concourse of people ever seen on such an occasion.'

The review having taken place, the dissatisfied portion of the regiment, considering that the duty for which they were brought to London had been performed, came to the wild resolution of forcing their way back to Scotland. So immediately after midnight, on the morning of the 18th of May, about one hundred and fifty of them, with their arms and fourteen rounds of ball-cartridge each, commenced their march northwards. On the men being missed, the greatest consternation ensued, and the most frightful apprehensions were entertained regarding the crimes likely to be perpetrated by the (supposed) savage mountaineers, on the peaceful inhabitants of English country-houses. Despatches were sent off to the officers commanding in the northern districts, and proclamations of various kinds were issued; among others, one offering a reward of forty shillings for every captured deserter. The little intercourse between different parts of the country, and the slow transmission of intelligence at the period, is remarkably exemplified by the fact that the first authentic news of the deserters did not reach London till the evening of the seventh day after their flight.

The retreat was conducted by a corporal, Samuel Macpherson, who exhibited considerable military skill and strategy. Marching generally by night, and keeping the line of country between the two great northern roads, they pushed forward with surprising celerity, carefully selecting strong natural positions for their resting-places. When marching by day, they directed their course from one wood or defensive position to another, rather than in a direct northern line—thus perplexing the authorities, who never knew where to look for the deserters, as scarcely two persons agreed when describing their line of march.

General Blakeney, who then commanded the north-eastern district, specially appointed Captain Ball, with a large body of cavalry, to intercept the Highlanders. On the evening of the 21st, Ball received intelligence that about three o'clock on the same day the fugitives had crossed the river Nen, near Wellingborough, in Northamptonshire. Conjecturing that they were making for Rutlandshire, he placed himself in an advantageous position at Uppingham, on the border of that county; Blakeney, with a strong force, being already posted at Stamford, on the border of Lincolnshire. But the Highlanders encamped for the night in a strong position on a hill surrounded by a dense wood, about four miles from Oundle, in Northamptonshire.

Early on the following morning, a country magistrate named Creed, hearing of the Highlanders' arrival in his neighbourhood, went to their camp, and endeavoured to persuade them to surrender. This they refused to do without a grant of pardon, which Creed could not give. After considerable discussion, both parties agreed to the following terms. Creed was to write to the Duke of Montague, Master-General of the Ordnance, stating that the deserters were willing to return to their duty on promise of a free

pardon; they engaging to remain in the place they then occupied till a reply arrived from the duke; Creed also was to write to the military officer commanding in the district, desiring him not to molest the Highlanders until the duke's wishes were known. At five o'clock in the morning the letters were written by Creed, in the presence of the Highlanders, and immediately after despatched, by special messengers, to their respective destinations. In that to the military officer, Creed says, 'These Highlanders are a brave, bold sort of people, and are resolved not to submit till pardon comes down.'

In the meantime, a gamekeeper of Lord Gainsborough, having reported the position of the Highlanders to Captain Ball, that officer, arriving on the ground on the forenoon of the same day, demanded their immediate surrender. They replied that they were already in treaty with the civil authorities, and referred Captain Ball to Mr Creed. At the same time they wrote the following letter to Mr Creed, then attending church at Oundle:—

'Honoured Sir,—Just now came here a captain belonging to General Blakeney's regiment, and proposed to us to surrender to him, without regard to your honour's letter to the Duke of Montague, which we refused to do; wherefore he is gone for his squadron, and is immediately to fall on us. So that, if you think they can be kept off till the return of your letter, you'll be pleased to consider without loss of time.'

With this letter they also sent a verbal message, stating that they were strongly posted, and resolved to die to a man, rather than surrender on any other terms than those they had already proposed. Creed replied, advising them to surrender, and offering his good offices in soliciting their pardon. Ball, finding the position of the deserters unassailable by cavalry, rested till the evening, when General Blakeney's forces arrived. The Highlanders then sent out a request for another interview with Ball, which was granted. He told them he could grant no other terms than an unconditional surrender. They replied that they preferred dying with arms in their hands. They took him into the wood, and showed him the great strength of their position, which, from Ball's military description, seems to have been one of those ancient British or Roman earthworks which still puzzle our antiquaries. They said they were soldiers, and would defend it to the last. Ball replied that he too was a soldier, and would kill the last, if it came to the arbitration of arms. They then parted, a guard of the Highlanders leading Ball out of the wood. On their way, Ball, by offering an absolute pardon to the two by whom he was accompanied, succeeded in inducing them to return to their duty. One went with him to the general; the other, returning to the wood, prevailed upon a number of his comrades to submit also; these persuaded others, so that in the course of the night the whole number surrendered to General Blakeney.

As the Highlanders in their retreat conducted themselves in the most unexceptionable manner, none of the fearful anticipations respecting them were realized. So, on their surrender, the public

fright resolved itself into the opposite extreme of public admiration. The flight of the deserters was compared to the retreat of the Ten Thousand; and Corporal Macpherson was regarded as a

CORPORAL MACPHERSON.

second Xenophon. But the stern exigencies of military discipline had to be satisfied. By sentence of a court-martial, two corporals, Macpherson and his brother, and one private named Shaw, were condemned to be shot. The execution took place on the 12th of July, a newspaper of the day tells that—'The rest of the Highlanders were drawn out to see the execution, and joined in prayer with great earnestness. The unfortunate men behaved with perfect resolution and propriety. Their bodies were put into three coffins by three of their clansmen and namesakes, and buried in one grave near the place of execution.'

General Stewart, in his *Sketches of the Highlanders*, says, 'There must have been something more than common in the case or character of these unfortunate men, as Lord John Murray, who was afterwards colonel of the regiment, had portraits of them hung up in his dining-room. I have not at present the means of ascertaining whether this proceeded from an impression on his lordship's mind that they had been victims to the designs of others, and ignorantly misled rather than wilfully culpable, or merely from a desire of preserving the resemblances of men who were remarkable for their size and handsome figure.'

Whatever stain may have been cast on the character of a brave and loyal regiment by this

ill-judged affair, was soon after effectually washed away by their desperate courage on the sanguinary field of Fontenoy. One of Sempill's Highlanders, named Campbell, killed nine Frenchmen with his broadsword, and, while aiming a blow at a tenth, had his arm carried away by a cannon-ball. The Duke of Cumberland nominated him to a lieutenancy on the field; his portrait was engraved; and there was scarcely a village throughout England but had the walls of its cottages decorated with the representation of this warlike Celt. Sempill's regiment, losing its distinctive appellation about the middle of the last century, became the 42nd Highlanders, and as such can boast of laurels gained in every part of the globe where British valour and determination have stemmed and turned the headlong tide of battle.

THE MISCHIANZA.

On the 18th May 1778, a remarkable *fête*, known by the name of the Mischianza (Italian for a medley), took place in the city of Philadelphia. A British army, under General Sir William Howe had occupied the city as winter quarters for some months, while Washington lay with his shoeless army in a hutted camp a few miles off. The British troops had found the possession of Philadelphia barren of results, although they

had friends in a portion of the population. Howe, disappointed, was about to retire from the command and go home. The army itself contemplated withdrawal, and did a month afterwards withdraw. It was, nevertheless, resolved to put a good face upon matters, and hold a festival, professedly in honour of the retiring general.

The affair took a character of romance and elegant gaiety from the genius of a young officer, named André. There was first a regatta on the river Delaware; then the main personages landed, and made a splendid procession for about a quarter of a mile to a piece of ground designed for the land *fête*. There a tournament took place between six knights of the *Blended Rose* on one side, and as many of the *Burning Mountain* on the other; all in fantastic silk dresses, with ribbons, devices, and mottoes, lances, shields, and pistols, each attended by his squire, and each professing to serve some particular lady of his love. Lord Cathcart, who acted as chief of the knights (and whom the writer remembers seeing thirty years afterwards in much soberer circumstances), rode at the head, with a squire on each hand; the device of his shield, a Cupid mounted on a lion, and professing to appear 'in honour of Miss Auchmuty.' One of the knights of the *Blended Rose* was the young Captain

THE MISCHIANZA TICKET.

André, already alluded to, who stood forth for | cocks, and the motto, 'No Rival.' The first set
Miss P. Chew, with the device of two game | of knights caused their herald to proclaim their

intention to maintain by force of arms the supremacy of their ladies, in wit, beauty, and virtue; the herald of the other set responded with defiance, and they closed in mock fight, shivering lances, discharging pistols, and finally taking to their swords, until the Marshal of the Field, at the request of the ladies, ordered them to desist.

Then the gay party adjourned to a large and handsome house near by, where, in finely decorated rooms, they entered upon a series of dances. Afterwards, a pair of hitherto concealed doors being thrown open, they moved into a large pavilion laid out with an elegant supper. Fireworks completed this fantastic entertainment, the like of which had never before been seen on the west side of the Atlantic. A few days afterwards, General Howe withdrew to England, and three or four weeks later the English troops vacated Philadelphia.

The tragic fate which three years after befell the sprightly and ingenious André, the moving spirit of this show, gives it a sad interest. The writer, being not long ago in Philadelphia, sought out the scene of the *fête*, and with some difficulty found it, involved amidst the meaner details of that largely increased city. The house in which the ball and banquet took place appears as one which originally belonged to some opulent merchant, but is now sadly fallen from its once high estate, and used as a charity school. The spacious halls of the Mischianza we found rudely partitioned into smaller apartments for a variety of school classes. The walls, which were fantastically coloured for the ball, are now in a state of neglect. It was melancholy to tread the floors, and think of them as they were in May 1778, freighted with the festivity of gay, hopeful men and women, not one of whom is now in the land of the living.

DISRUPTION OF THE SCOTCH CHURCH, MAY 18, 1843.

This was an event of very great moment in Scotland, and perhaps of more importance to the rest of the United Kingdom than the rest of the United Kingdom was aware of. It took its origin in a movement of zeal in the Presbyterian Church of Scotland, mainly promoted by Dr Chalmers, and to which a stimulus was given by a movement in the Scotch dissenting bodies for putting an end to the connexion of church and state. Eager to show itself worthy of the status it enjoyed, and to obtain popular support, the church in 1834 passed a law of its own, ordaining that thenceforth no presentee to a parish church should be admitted or 'settled' (a duty of the presbytery of the district), if he was objected to by a majority of the male communicants of the congregation. This of course struck at the face of the system of patronage, long established—a system involving important civil rights. A presentee objected to next year claimed the protection of the civil courts, and had his claim allowed. The Veto law, as it was called, became a dead letter. It was after several years of vain struggling against the civil powers on points like this, that a large portion of the national clergy formed the resolu-

tion of withdrawing from an Establishment in which, as they held, 'Christ's sole and supreme authority as king in his church,' was dishonoured.

When the annual convocation or assembly of the church was approaching in May 1843, it was generally understood that this schism was about to take place; but nearly all cool on-lookers fully assured themselves that a mere handful of clergymen, chiefly those specially committed as leaders, would give up their comfortable stipends and manses, and all the other obvious advantages of their position. The result was such as to show that to judge of a probable course of action by a consideration of the grosser class of human motives only, is not invariably safe—on the contrary, may be widely wrong. The day of the meeting arrived. The assembly met in St Andrew's Church, in Edinburgh, under its Moderator or President, Dr Welsh, and with the usual sanctioning presence of the royal commissioner—an anomalous interference with the very principle concerned, which had been quietly submitted to by the church ever since the Revolution. There was a brilliant assemblage of spectators within, and a vast crowd without, most of them prepared to see the miserable show of eight or ten men voluntarily sacrificing themselves to what was thought a fantastic principle. When the time came for making up the roll of the members, Dr Welsh rose, and said that he must protest against further procedure, in consequence of proceedings affecting the rights of the church which had been sanctioned by her Majesty's government and by the legislature of the country. After reading a formal protest, he left his place and walked out of the church, followed first by Dr Chalmers, then by other prominent men, afterwards by others, till the number amounted to four hundred; who then walked along the streets to another place of meeting, and constituted themselves into the Free Church of Scotland—free, as distinguished from one fettered by the state connexion. There was of course general astonishment, mingled with some degree of consternation, at the magnitude of the separating body, indicating, as it did, something like the break-up of a venerable institution. But the full numbers of the seceding clergy were not yet ascertained; they reached four hundred and seventy, or not much less than a half of the entire body. It was a remarkable instance of the energy of religious (though, in the estimation of many, mistaken) principles, in an age of material things. When Lord Jeffrey was told, an hour after, what had taken place, he started up, exclaiming, 'Thank God for my country; there is not another upon earth where such a deed could have been done!'

Within four years the new church numbered 720 clergy, for whose subsistence a very fair provision was made by the contributions of their adherents; thus, by the way, proving the energy of that voluntary principle, to check which this movement had partly been made, and to which this sect still professed to be opposed. The real importance of the event lay in its taking away the support of a majority of the people from the Establishment, in one more of the three divisions of the empire.

MAY 19.

St Prudentiana, virgin, 1st century. St Dunstan, Archbishop of Canterbury, 988. St Peter Celestine, Pope, 1296.

ST DUNSTAN.

St Dunstan was one of those men who stamp their own character on the age they live in. He was in every way a remarkable man. And, like most remarkable men, he has been unduly extolled on one hand, and vilified on the other. Monkish writers have embellished his life with a multitude of ridiculous, or worse than ridiculous miracles; and their opponents have represented him as ambitious, bigoted, and utterly unscrupulous as to means, so that he only gained his end.

In the following sketch we hope to keep clear of both these extremes, and present a truthful outline of the man.

Dunstan was born in the isle of Glastonbury, about the year 924 A.D. He was of noble, even royal descent. His father's name was Herstan, his mother's Cynedryda. Those who seek for the formation of character in first impressions derived from external objects, find them in this case in the scenery and local associations of his birthplace. Glastonbury was always esteemed a sacred spot. King Arthur, of imperishable memory, was buried there; and it was also believed that the remains of Joseph of Arimathea, and of St Patrick, the apostle of Ireland, rested thin its hallowed precincts. On account of the clearness of the waters by which it was surrounded, the ancient British named it *Ynyswytryn*, or the 'Glassy Island'; the Romans knew it as *Avalonia*; and the Saxons called it *Glaestingabyrig*. Whatever its natural charms may have been, they can surely never have equalled those with which the poet laureate has invested it, when he describes it as

'The island valley of Avilion,

Where falls not hail, nor rain, nor any snow,
Nor ever wind blows loudly; but it lies
Deep-meadowed, happy, fair, with orchard lawns,
And bowery hollows, crowned with summer sea.'

Amid the scenery and associations of this favoured spot young Dunstan grew up, delicate in bodily health, but of prodigious mental powers. Ardent, and full of imagination, he aimed at everything, and easily accomplished nearly all he attempted. Besides Holy Scripture, the great divines of the church, poetry and history, he paid considerable attention to arithmetic, geometry, astronomy, and music. He excelled in drawing and sculpture. He spent much of his time in writing and illuminating books; and he also worked in gold and silver, copper and iron. Instead of moderating his too eager pursuit of knowledge, his parents and tutors made the grand mistake of inciting him to still greater efforts. The result was a brain fever. At the crisis of the disease, when his friends gave him up for dead, there was an access of delirium, and eluding the vigilance of his nurse, he rushed out of the room and went to the church. It was night, and the doors were

closed; but he madly mounted some scaffolding, and by a perilous descent made his way into the building, where he was found the next morning, uninjured, and in a placid sleep. This was, of course, ascribed to a miracle—a belief which was confirmed both in his own mind and in that of others when he related, what was evidently a delirious dream, that he had been pursued by demons in the shape of wild dogs.

When the fever left him, change of scene was recommended, and his high connexions procured his admission into the court of Athelstan. Here he soon became a favourite, especially with the ladies, who frequently consulted him about their embroidery, &c. But the favourite at court is sure to have enemies there too. Whispers were spread abroad that he had learned to practise heathen charms and magic. Instead of allaying these reports, he freely indulged his wonder-loving propensities, till he proceeded a step too far. On one occasion he was in the bower of the noble Lady Ethelwync, tracing some patterns for her embroidery, when the tune and words of a well-known anthem were heard proceeding from his harp, which hung against the wall, no hand being near it. The matron and her maidens rushed out of the apartment, declaring that Dunstan was wiser than he ought to be. Their statement confirmed the suspicions already excited; and he was banished from the court. The cold water ordeal was one specially provided for witches and wizards; and certain youngsters at court saw no reason why Dunstan should escape it. It would, at least, satisfy some old grudges to see whether he would sink or float, and perhaps it might do something towards clearing his character. So after him they went, as he was riding mournfully away, overtook him, dragged him from his horse, threw him into a pond, and when he had succeeded in crawling to the bank, set their dogs to chase him. This cruel treatment disordered his imagination, and he again fancied that the demons of hell were let loose upon him.

Mortified by these indignities, and nearly heartbroken at being driven away from his lady-love—for he had become deeply enamoured of a young lady while at court—he betook himself to his uncle, Elphege the Bald, then bishop of Winchester. Elphege was a fanatic, and a fanatic in those days was sure to be an enemy to the married state. He was aware of the genius and talents of Dunstan, and he determined to enlist them on the monastic side, and, if possible, to make a monk of him. A return of fever aided the otherwise inconclusive arguments of the prelate, and Dunstan, on his recovery, was ordained priest, and went to Fleury to learn the rule of St Benedict, and conform to monastic discipline. He returned to Glastonbury an enthusiastic monk; for whatever he did, he did with all his might. He built himself a cell five feet long by two and a-half feet wide, and not more than breast-high above ground, which served him for study, dormitory, and workshop, and in which he lived as an anchorite. As he entered manhood, his natural passions gained strength, and a hard conflict with himself ensued. To escape from his thoughts, he almost destroyed

himself with fasting and labouring at his forge. Osbern relates a story of this period of his life which has become one of the best known of monkish legends. The devil used to annoy the young saint by paying him nocturnal visits in the form of a bear, a serpent, or other noxious animal; but one night, as he was hammering away at his forge, Satan came in a human form as a woman, and looking in at his window, began to tempt him with improper conversation. Dunstan bore it till he had heated his pincers sufficiently, and then, with the red-hot instrument, seized his visitor by the nose. So, at least, he is reported to have told his neighbours in the morning, when they inquired what those horrible cries were which startled them from their sleep.

On the death of Athelstan, the new king, Edmund, recalled Dunstan to the court, made him abbot of the royal monastery of Glastonbury, and one of his counsellors. Having about this time inherited an ample fortune, he rebuilt and endowed the church, surrounded it with conventual buildings, introduced the Benedictine rule, and raised his favourite monastery to the rank of the first great public school in England during the rest of the Anglo-Saxon period. One great object of Dunstan's after life was to establish the Benedictine rule in all other monasteries in this country; and he succeeded so far as to be considered the father of the English Benedictines. His rule became the rule of the country.

Under Edred his power and influence were greatly increased. He was the personal friend of the king as well as his minister. And during the long illness with which he was afflicted, Dunstan not only conversed and prayed with him, but managed to convert his palace into a school of virtue. In fact, during this reign all real power was in the hands of Dunstan. Both the king and the Archbishop of Canterbury were governed by his superior mind. There could, therefore, be no temptation for him to leave the court; and when offered the bishopric of Winchester, and pressed by the king's mother to accept it, he could reply in all sincerity, 'Most assuredly the episcopal mitre shall never cover my brows while thy son liveth.' A change of fortune came with the accession of Edwy. The young king, though only sixteen years old, was married to the beautiful Elgiva. On his coronation day he rose from the table after dinner, leaving his guests over their cups, and went into an inner apartment to his wife and her mother. This gave offence to the nobles, and Odo desired that some persons would go and bring the king back. Dunstan and one of his kinsmen undertook this rude commission; and instead of persuading, they actually dragged the king back into the Mead-hall by force. Edwy, justly offended, called the minister to account for the public money committed to his care during the previous reign; and as this was not done to his satisfaction, he deprived him of his honours, confiscated his property, and banished him from the kingdom. This was such a triumph for the devil, that he was heard laughing and exulting over the saint's departure; but Dunstan told him

to moderate his joy, for his discomfiture would be as great at his return!—at least, so we read.

Edgar was shortly afterwards proclaimed king, and Dunstan returned in triumph. He was now made bishop of both Worcester and London, and still retained the abbey of Glastonbury. Shortly after he became Archbishop of Canterbury. In this position he was neither more nor less than an ecclesiastical statesman. He was the minister of Edgar, and though the king reigned, it was Dunstan who ruled. Clerical and monastic discipline were reformed by him. He encouraged the king to make royal progresses through the land, which brought him and his people together, and facilitated the administration of justice.

A splendid navy was also established and maintained in a state of efficiency through his instrumentality, and several public works were executed. Edgar was a most licentious wretch, and there can be little doubt that the archbishop connived at many of his disgraceful acts. At last, however, he went so far as to violate the sanctity of a convent. This raised an outcry. Dunstan was obliged to inflict a penance; and the king became more guarded in his amours for the future. Dr Hook sums up the result of Dunstan's administration as follows:—'Northumbria was divided into earldoms instead of kingdoms; the Danes were either subdued or conciliated; the sovereignty of the Anglo-Saxon king over the Scots was established; the navy was placed in such a state of efficiency that no enemy ventured to attack the coast; English pirates, who had infested our ports, were restrained and punished; while at home, trade was encouraged, family feuds were suppressed, and men were compelled, instead of taking the law into their own hands, to submit the decision of their quarrels to the magistrates. Regular circuits were established for the administration of justice, forming a court of appeal from the inferior judges. Standard measures were made and deposited at Winchester. Steps were taken to annihilate the wolves which still abounded in the country. Even to trivial matters could the mind of Dunstan descend; finding that quarrels very frequently arose in taverns, from disputes among the toppers about their share of the liquor when they drank out of the same cup, he advised Edgar to order gold or silver pegs to be fastened in the pots, that whilst every man knew his just measure, shame should compel each to confine himself to his proper share.' Hence the expression, 'a peg too low.'

A reaction on behalf of the married clergy now commenced, and gathered strength; and although Dunstan remained minister of the crown under Edgar, his power was effectually shaken. Two circumstances took place about this time, which brought considerable disgrace on his name. At a council held at Winchester, the advocates of the regular clergy were getting the best of the argument, and beginning to demand the restitution of their benefices which had been taken from them, when a voice was heard as if proceeding from a crucifix on the wall, saying, 'Let it not be! let it not be! you have done well, and would do ill to change it.' The regu-

lars, however, suspected trickery, and were not to be silenced so easily. A second meeting was held without effecting anything. A third was then called at Calne, in Wiltshire (A.D. 978), which was held, not in the open air, as was usual with the Anglo-Saxons, but in the upper room of a house. Another suspicious circumstance was, that the king, who had been present at both the previous councils, was kept away from this. When it came to Dunstan's turn to reply to the arguments of his adversaries, instead of doing so, he professed to commit his cause to Christ as judge, and immediately the floor of the room gave way, and all except the archbishop and his friends were precipitated to the floor beneath. Some were killed and some escaped. The populace sided with the Dunstanites, and it was supposed that the question was now settled by a miracle. This 'arch miracle-monger,' as Southey styles him, lived ten years after these exploits, to enjoy his victory and to establish his reforms. His death, like his life, was a scene of miracles. He expired in all the odour of monastic sanctity, on the 19th of May, in the year 988, and was buried in Canterbury cathedral.

Born.—John Theophilus Fichte, German philosophical writer, 1762, *Rammenau*; Professor John Wilson, poet and miscellaneous writer, 1785, *Paisley*.

Died.—Flaccus Alcuin, learned theologian, 804, *Tours*; Anne Boleyn, queen of England, beheaded, 1536; John Hales, 'the ever memorable' scholar and critic, *Eton*; Adam Billaut, French poet, 1662; Thomas Gent, printer, of York, 1778; James Boswell, author of *Life of Dr Johnson*, 1795; Charles James Apperley, writer on field sports, 1483.

ALCUIN.

Alcuin was one of the most remarkable Anglo-Saxons of the eighth century. He was born of noble and wealthy parents, at York, about the year 735, and was from his infancy dedicated to the church. York was at this period the great seat of learning among the Anglo-Saxons, and in the school of the celebrated Archbishop Egbert, Alcuin made such progress that he was subsequently appointed to the mastership, and became hardly less celebrated than his predecessor; and was on more than one occasion sent on important ecclesiastical missions to Rome, which made him early acquainted with the continent. It was on the second of these visits, in the year 781, that he met Charlemagne, who was then meditating great intellectual reforms in his kingdom, and who soon formed for the Anglo-Saxon ecclesiastic a warm attachment. In 782, at Charlemagne's earnest desire, having obtained the consent of his spiritual and temporal superiors, Eanbald, Archbishop of York, and Alfwold, King of Northumbria, Alcuin left England to settle in France. He was received in the Frankish court as Charlemagne's friend and counsellor, as the companion of his private hours, and the instructor of his children; and the revenues of the two monasteries of Ferrieres and St Lupus, at Troyes, were assigned to him for his income. About the year 790, he obtained the Emperor's reluctant consent to visit his native land, and that only on the condition that he

should return to France without delay. He had now, indeed, become an almost necessary minister of the great monarch, for he was a chief adviser in the plans of national instruction which had so great an influence on the civilization of Europe during the middle ages. He came in the character of ambassador from Charlemagne to King Offa, the great monarch of the Mercians, and remained till 792, when he left his native country for the last time, accompanied by a number of the Anglo-Saxon ecclesiastics.

Charlemagne had collected round him at this time an intellectual circle, which, by its refined learning and its philosophical spirit, reminds us almost of the intercourse of the philosophers and scholars of ancient Greece and Rome. Those who were admitted into this society assumed literary names and surnames in their intercourse and correspondence. Thus Charlemagne himself was called David; Alcuin assumed the name of Flaccus Albinus; Angilbert, another of the most distinguished men of this circle, took that of Homarus; and Riculf, Archbishop of Mentz, was named Damotas. Under these names, when assembled together, they no doubt laid aside all the pomp of worldly dignity, and conversed together on an equality of intellectual enjoyment, enlivened by wit as well as learning; and this spirit is reflected in many of the letters preserved among Alcuin's correspondence. Such a club appears as a bright light in the midst of the darkness of these remote ages.

When he was probably rather more than sixty years of age, Alcuin again formed the design of returning to his native country; but his departure was prevented by the news of great troubles and revolutions in the kingdom of Northumbria, and he gave up all intention of quitting France. He died at Tours, in the abbey of St Martin, of which he was abbot, on the 19th of May 804. Alcuin left many works, which were highly esteemed in the middle ages, and most of them have been printed. The most interesting to modern readers are his epistles, which furnish us with many details of his life and thoughts, and throw no little light on the history and condition of his time.

ANNE BOLEYN.

The unhappy fate of Anne Boleyn calls for commiseration, and there are probably few who would deny the claim. It is at the same time strictly true that Anne betrayed anything but true womanly delicacy in angling for the affections of a king while he was the husband of another. The stroke which fell on her was but a Nemesis, though a too severe one, for the divorce of Catherine, to which Anne allowed herself to be conducive.

It may fairly be assumed that, but for his passion towards Boleyn, Henry would have been little troubled by conscientious scruples as to his marriage with the widow of a deceased brother. As the law, however, seemed to favour him, he was politic enough to accept of its services.

All the host of clergy and bishops, and councils and universities, with their propositions and counter-propositions, and their arguments out of *Leviticus*, must have seemed to him very amusing

indeed—he all the time laughing in his sleeve. We get at the real case much better by slipping behind the scenes, by reading a few of the love-letters which were passing to and fro all the time between the lovers, or looking into Meg More's *Libellus* of domestic and daily occurrences.

Margaret More, Sir Thomas More's eldest and dearest daughter, kept an occasional diary, to improve herself, as she tells us, in English composition. This book, besides giving us many most interesting glimpses of passing events, is in itself a sort of poem, and has a true human music in it, worthy to have come from her who (if we interpret aright Tennyson, in his *Dream of Fair Women*),

‘Clasped in her last trance
Her murdered father's head.’

Let us take note of our lover's appearance, as Henry was to be seen in 1524. Speaking of her mother, Margaret More says: ‘She calls him a fine man; he is indeed big enough, and like to become too big, with long slits of eyes that gaze free on all, as who should say, “Who dare let or hinder us?” His brow betokens sense and frankness, his eyebrows are supercilious, and his cheeks puffy: a rolling, straddling gait, and abrupt speech.’

And, in 1528, we are informed indirectly, when the writer happens to be setting down something about Sir Thomas Boleyn, what is going on at court: ‘Mistress Anne is not there at present; indeed, she is now always hanging about court, and followeth somewhat too literally the Scriptural injunction to Solomon's spouse—to forget her father's house. The king likes well enow to be compared with Solomon; but mistress Anne is not his spouse yet, not ever will be, I hope. Flattery and Frenchified habits have spoilt her, I trow.’

Mistress Anne had a clever woman's knack of drawing the king deeper into danger by judicious encouragement, and all the time keeping him in suspense. She knew how to play her cards, and to keep them out of sight. Here are two letters, of Henry to her, and her to Henry, in which her arts are plainly visible.

Henry VIII. to Anne Boleyn.

‘My Mistress and my Friend,—

‘My heart and I surrender themselves into your hands, and we supplicate to be commended to your good graces, and that by absence your affections may not be diminished to us, for that would be to augment our pain, which would be a great pity, since absence gives enough, and more than I ever thought could be felt. This brings to my mind a fact in astronomy, which is, that the further the poles are from the sun, notwithstanding, the more scorching is the heat. Thus is it with our love: absence has placed distance between us; nevertheless, fervour increases, at least on my part. I hope the same from you, assuring you that in my case the anguish of absence is so great that it would be intolerable, were it not for the firm hope I have of your indissoluble affection towards me. In order to remind you of it, and because I cannot in person be in your presence, I send you the thing which comes nearest that is possible,—that is to say, my picture, and the whole device, which you already know of, set in bracelets, wishing myself in their place when it pleases you. This is from the hand of

‘Your servant and friend,

‘H. R.’

Anne Boleyn to Henry VIII.

‘Sir,—

‘It belongs only to the august mind of a great king, to whom nature has given a heart full of generosity towards the sex, to repay by favours so extraordinary an artless and short conversation with a girl. Inexhaustible as is the treasury of your majesty's bounties, I pray you to consider that it cannot be sufficient to your generosity; for if you recompense so slight a conversation by gifts so great, what will you be able to do for those who are ready to consecrate their entire obedience to your desires? How great soever may be the bounties I have received, the joy that I feel in being loved by a king whom I adore, and to whom I would with pleasure make a sacrifice of my heart, if fortune had rendered it worthy of being offered to him, will ever be infinitely greater.

‘The warrant of maid of honour to the queen induces me to think that your majesty has some regard for me, since it gives me the means of seeing you oftener, and of assuring you, by my own lips (which I shall do on the first opportunity), that I am,

‘Your majesty's very obliged and very obedient

‘Servant, without any reserve,

‘ANNE BOLEYN.’

The result of all this was just what might have been foreseen. Henry grew restless at the Pope's delay—which was indeed tedious, extending as it did over years—and so he cut the Gordian knot, first by a secret marriage, and then by a public one in 1532; and poor unhappy Catherine, after having served him faithfully a matter of eighteen years, he willingly turned adrift. ‘And all,’ says Meg More, ‘for love of a brown girl, with a wen on her throat, and an extra finger.’

Henry was more concerned about the wen than any scruples of conscience, and, in 1536, was pleased to prefer Lady Jane to either; upon which there followed a base accusation, a mockery of a trial, and the gleam of a bright axe.

JAMES BOSWELL.

Boswell gets but hard measure from the world. We owe to him the best, because the most complete, account of a human being—in short, the best piece of *biography*—that the world possesses; and yet he is seldom respectfully spoken of. Even the completeness of the life of Johnson, proceeding as it does from his extreme veneration for the man, stands as a fact rather against than for him. True, Boswell did not exhibit in life many solid qualities; he failed in his profession as a counsel, both in his own country and in London; and he clouded his latter days and cut them short by dissipation. Surely many estimable men have done no better. True, also, he was vain, fickle, frivolous, to some extent; but have not many been so without forfeiting the regard of those who knew them? Perhaps the best defence that can be made for Boswell is to cite the regard in which he was held by his contemporaries—Johnson, above all. Invariable tradition represents him as the most pleasant of all pleasant companions. His high spirits, his drollery, his pure self-revealing simplicity, made him the delight of his friends. Surely, if a man had these good qualities, was at the same time honourable in his social and domestic relations, and possessed of the literary power and industry required for

such a book as the *Life of Johnson*, he could not be quite a despicable being.

It is little known that Boswell occasionally wooed the Muses. The following is a song which he composed to an Irish air, in celebration of one of his many youthful love-affairs, and which can scarcely be said to have been published.*

'Oh, Larghan Clanbrassil, how sweet is thy sound,
To my tender remembrance, as Love's sacred ground:
For there Marg'ret Caroline first charmed my sight,
And filled my young heart with a fluttering delight.
When I thought her my own, ah! too short seemed
the day
For a jaunt to Downpatrick, or a trip on the sea;
To express what I felt then, all language were vain—
'Twas in truth what the poets have studied to feign.

But too late I found even she could deceive,
And nothing was left but to weep and to rave;
Distracted I fled from my dear native shore,
Resolved to see Larghan Clanbrassil no more.

Yet still, in some moments enchanted, I find
A ray of her softness beam soft on my mind;
While thus in blest fancy my angel I see,
All the world is a Larghan Clanbrassil to me.'

OPENING OF THE CANAL OF LANGUEDOC.

In the reign of Louis XIV., long before any canal had been even projected in England, a noble one was executed in France, the famous canal of Languedoc, connecting the Mediterranean and the Atlantic. The obvious utility of such a communication had caused it to be projected so long ago as the reign of Francis I.; but it was reserved for that of Louis XIV. to see it effected. The difficulties overcome were prodigious. The meritorious engineer, Riquetti, unfortunately did not live to see his work completed; but his place was supplied by his two sons, and the opening—a great day for France—took place on the 19th of May 1681. The effect of this canal in promoting agriculture, commerce, and the arts, in the south of France, has been very marked, and as universally admitted.

DELUSIONS OF JOHN MASON.

May 19, 1694, died John Mason, rector of Water Stratford, in Buckinghamshire; a strange offshoot of the religious fervours of the seventeenth century. He is allowed to have shown in his earlier days both learning and abilities, and the simplicity of his character was never doubted. Through some cause, however, which has not been clearly stated, Mason fell into that condition, so apt to beset persons who allow their religious practice to press upon their bodily health, in which the patient (as he may well be called) is visited with apparent messages and addresses from a higher world. All that we learn on this subject is that he had given himself up to 'Calvinistic and millenary notions;' but this alone would scarcely account for the results. It became Mason's conviction that he was the Elias appointed to proclaim the second advent. Equally assured was he that the Saviour, at his re-descent upon earth, would commence his

* It is transcribed from a volume of songs which his son, Sir Alexander Boswell, gave anonymously to the world in 1803.

reign at Water Stratford. He promulgated his beliefs, probably in a style calculated to impress the vulgar, and in a short time his own delusion spread to others. Crowds of people, forsaking their homes, came to reside near him; many sold their estates, or what else they had, in order to take up their quarters at Water Stratford. Every house and every out-house in that parish was filled to overflowing with these misled people, among whom community of goods prevailed, even to a point outraging decency. Browne Willis, the antiquary, anxious to have a correct notice of this delusion in his *History of Buckinghamshire*, wrote to a friend living near Mason's parish for full particulars. In reply, his friend, from his own and his mother's knowledge, gave him a minute account, from which the following is an extract.

'They went out most evenings into the fields and sung their hymns. My grandfather and mother went out to see them. The first object they met with was a countryman who lay on his face in Water Stratford churchyard, who was quite tired with singing, and when turned on his back was speechless, but came to himself. Then they went into the parsonage-house, and there was a congregation walking round the hall in a ring, making a most prodigious noise, and all of them crying out, "Glory! Glory! Glory!" and all in a sweat, and looking as if they were mad. My mother told them she thought theirs was an odd way of serving God, and wished they were not mad. At which they all stood still, with their mouths open, and stared fiercely on her, but said nothing; and she verily believes, if my grandfather and another gentleman had not been with her, with their swords by their side, they would have served her as they did Mrs Lisle, of Imley, whose head-clothes they pulled off, and cried, "Avoid Satan!" Then my mother said, "Poor deluded people! I am sorry for you. I wish I could speak with Mr Mason." Then one of their women went upstairs, and brought down word that Mr Mason was not to be seen or spoke with. Some time after this came the then Duke of Richmond, and a great many more noble persons, who, though denied access to him, forced their way up to him, and talked to him a good deal. And amongst other things he told them he had seen our Lord Christ in the room where they were then, with his fleshly eyes, and spoke to Him with his fleshly tongue; and that our Lord Christ told him *He would come and appear in the air over Water Stratford, and judge the world on Whit Sunday following.*

'After this he looked out of his chamber window, and said the same things to the multitude that stood underneath.

'After this he was struck speechless, which was occasioned (as is supposed) by over talking himself; on which Dr Paxton (a very eminent physician) was sent for from Buckingham, who came from visiting Mr Mason to our house, and told my father and mother that Mr Mason's ail was a squinacy, and that he would not recover; and he accordingly died of it. He (Mr Mason) told his auditory when he was alive, that he should rise the third day after his decease, and with his body ascend into heaven. He was

buried before the third day; and several of his people averring that they had seen him and spoke to him after his resurrection, on a piece of ground close behind the parsonage-house, which they called Holy Ground, his successor, Mr Rushworth, thought proper to take his body up, and had the coffin opened, and showed them the corpse. But this did not satisfy them. Still they would meet on Holy Ground, as they called it, and did so for sundry years; and when Mr Rushworth discharged them from coming there, they assembled in a house at Water Stratford. In the year 1710 (sixteen years after Mason's death), one Sunday my mother and a neighbouring lady went and saw them there, and they sung the same hymns, and made the same noise, and went round in a ring as they used to do.'

'Never was there,' says Granger, 'a scene of more frantic joy, expressed by singing, fiddling, dancing, and all the wildness of enthusiastic gestures and rapturous vociferations, than was seen at Stratford. Every vagabond and village fiddler that could be procured bore a part in the rude concert at this tumultuous jubilee.'

MARSHAL SOULT'S PICTURES.

On the 19th May 1852, began at Paris a sale of the pictures which had belonged to the deceased Marshal Soult. The prices realized for some of the articles were of unprecedented liberality. On the first day, three pieces by Murillo were disposed of, the 'Jesus and Child,' at 63,000 francs (£2,520); 'St Peter in Bonds,' at 151,000 francs (£6,040); and the 'Conception of the Virgin,' at the astounding price of 586,000 francs, which is equivalent to £23,440 sterling. The sums obtained for various articles on the ensuing days were on the same prodigious scale. It is understood that all Soult's valuable pictures were the plunder of Spanish convents, ruined during his occupation of the country. It was a brave show and enviable possession, but it was not without some accompanying qualms. When the Republic was established in the spring of 1848, the wary old soldier became nervous about these interesting pictures, lest, in some democratic freak, they should be reclaimed. He accordingly had them all quietly removed to Brussels, where they found an obscure, though temporary resting-place, in a gentleman's stable. At that crisis, many of them were offered in England at sums comparatively moderate, but not purchased; the 'Conception of the Virgin,' for instance, which brought £23,440 in 1852, might then have been had at £6,000.

MAY 20.

St Ethelbert, king of the East Angles, 793. B. Yvo, Bishop of Chartres, 1115. St Bernardine of Sienna.

Born.—Albert Durer, artist, 1471, Nuremberg; Elijah Fenton, poet, 1683, Shelton, Staffordshire.

Died.—Christopher Columbus, 1506, Valladolid; Bishop Thomas Sprat, 1713, Bromley, Kent; Nicholas Brady, D.D., joint translator of the Psalms into English, 1726, Clapham; Thomas Boston, popular Scotch writer in divinity, 1732, Ettrick; Charles Bonnet, naturalist, 1793, Geneva; Rev. Blanco White, miscellaneous writer, 1841.

BLANCO WHITE.

There is, perhaps, no more remarkable and affecting story of the conflict and suffering en-

duced by an earnest and honest mind in search for religious truth, than that afforded by the life of the Rev. Joseph Blanco White.

He was born at Seville, in 1775. His father belonged to an Irish family, and his mother was a Spaniard, connected with the old Andalusian nobility. His father was engaged in trade, and Blanco was placed in the counting-house, that he might at once learn writing and arithmetic, and become fitted for business. The drudgery he abhorred; his mother sympathized with him, and as a way of escape it was resolved that he should announce the church as his vocation. His father unwillingly assented. He was sent to college, became a priest, and attained sundry preferments. From an early age he had been afflicted with doubts. In reading Fenelon's *Telemaque*, before he was full eight years old, his delight in the story and sympathy with the courage and virtue of the characters, suggested the question, 'Why should we feel so perfectly sure that those who worshipped in that manner were wrong?' As a priest, graver doubts thickened in his mind, until at last he found himself 'worked to the madness of utter atheism.' He found other priests in the same case, but they were satisfied to perform their offices as matters of business or routine. This was impossible for White, and he longed to escape to some land where he should be free to speak openly all that he thought inwardly. In the excitement of the French invasion he sailed for England, and arrived in London in 1810. There he was fortunate enough to project and edit a monthly magazine, *El Espanol*, for circulation in Spain. It met the favour of the English government, and when discontinued in 1814, with the expulsion of the French from the Peninsula, White was rewarded with a pension of £250 a-year. The five years of hard work he passed through in the preparation of *El Espanol* ruined his health to such a degree, that his life was never afterwards free from suffering.

After his arrival in England he reviewed his opinions free from the antagonism and irritation he had endured in Spain, and which, he writes, 'had for ten years rendered the very name of religion so odious to me, that no language was strong enough to express my dislike.' After two years of serious consideration, in which he discovered 'that, with the exception of points essentially Popish, there is the most perfect agreement in the theological systems of Rome and England, he became a member of the Church of England, and then a clergyman, by signing the twenty-four Articles, being all that is required to transform a Roman into an Anglican priest. His life henceforward for many years was spent in literary pursuits; he wrote some very popular works illustrative of his experience and opinions of Catholicism; and enjoyed the friendship of Lord Holland, Southey, Coleridge, Campbell, Mrs Hemans, and, above all, of Archbishop Whately. The peace he had at first enjoyed in the Church of England began to ebb away, and in 1818 difficulties about the Trinity were haunting him continually.

After a long and weary time of internal strife, the crisis arrived in December 1834, when residing at the archbishop's palace in Dublin. To

Dr Whately he wrote, 'My views in regard to the Scripture doctrine respecting our Saviour have gradually become Unitarian. The struggles which my mind has gone through on this point are indescribable.' The pain which this confession excited among his friends in the Church was intense. The Rev. J. H. Newman wrote him a letter from Oxford, which he describes as 'one long moan.' Many turned away from him, but Archbishop Whately, while regretting the change, preserved his friendship unaltered. To enjoy the worship and fellowship of the Unitarians, he settled in Liverpool, and there spent the remaining six years of his life. His health was wretched, but his days of pain were soothed by intercourse with congenial society, and correspondence with Dr Channing and other notable men in the Unitarian body. Worn with suffering, he obtained release in death, on the 20th of May 1841. On the morning of that day he woke, and said, 'Now I die;' and after sitting for about two hours in the attitude of expectation, it came to pass as he had said.

Blanco White was the author of a sonnet on 'Night,' which has been thought by many the best composition of the kind in our language; as it is not much known, it is here inserted.

'Mysterious night! when our first parent knew
Thee from report Divine, and heard thy name,
Did he not tremble for this lovely frame,
This glorious canopy of light and blue?
Yet 'neath a curtain of translucent dew,
Bathed in the rays of the great setting flame,
Hesperus with the host of heaven came,
And lo! Creation widened in man's view.
Who could have thought such darkness lay concealed
Within thy beams, O Sun! or who could find,
Whilst fly, and leaf, and insect stood revealed,
That to such countless orbs thou madest us blind!
Why do we then shun death with anxious strife?
If Light can thus deceive, wherefore not Life?'

THE GARRAT ELECTIONS.

A comparatively obscure act of local injustice originated during the last century a political burlesque, which was so highly relished by the British public, that sometimes upwards of 80,000 persons assembled to take part in or enjoy the fun. The inhabitants of the hamlet of Garrat, situated between Wandsworth and Tooting, in Surrey, had certain rights in a small common, which had been encroached upon; they therefore met in conclave, elected a president, resisted, and obtained their rights. As this happened at the time of a general election, it was determined that their president, or mayor, should hold office during parliament, and be re-elected with a new one. It was impossible that the ridiculous pomposity of the whole affair should not be felt and joked upon. When, therefore, party-spirit ran high, its effervescence was parodied by 'the storm in a tea-pot' of a Garrat election. The public soon began to enjoy the joke, and the innkeepers and publicans of Wandsworth and the neighbourhood reaped so rich a harvest, that they ultimately made up a purse to pay necessary expenses; the queerest and most facetious of can-

didates were brought from all quarters; and all the paraphernalia of a serious election were parodied in this mock one. The culminating point of its popularity was reached in 1761, when Foote attended, and soon afterwards produced his farce, *The Mayor of Garrat*, at the Haymarket Theatre, where it had a great and deserved success, and immortalized elections that else would have been long since forgotten.

We possess no information as to who were the candidates for this important borough before 1747, when Squire Blowmedown and Squire Gubbins contested the honour. These were, as usual, assumed titles—the first being borne by John Willis, a waterman of Wandsworth; the second by James Simmonds, keeper of a public-house known as the 'Gubbins' Head,' in Blackman Street, Borough. 'The Clerk and Recorder' issued from an imaginary town-hall, at the order of the mayor, a due notification of the day of election; and each candidate gave out handbills, in which he asserted his own merits, and abused his opponent in the style of the genuine elections. An 'Oath of Qualification' was administered to electors, which was couched throughout in a strain of *double entendre*, and nothing was left undone that was usually done to insure success to the candidates.

From a somewhat large and curious collection of handbills and broadsides, printed during these elections, we may be enabled to give an idea of the wit of the day.* In 1747 the pretensions of Squire Blowmedown were enforced in 'a letter sent from an elector of the borough of Garrat to another,' and dated from St James's Market, in which we are assured that 'the greatest stranger must look upon himself as void of reason, entirely barren of wisdom, extinct of humanity, and unworthy the esteem of men of sense and veracity, should he neglect any opportunity to testify how ardent his wishes are that *this Phenix* may be unanimously chosen.' For, 'as our worthy candidate judiciously observes, if drinking largely, heading a mob majestically, huzzaing eloquently, and feeding voraciously, be merits in any degree worthy the esteem of the good people of this land, a *Garrat*, I must ingeniously confess, is too mean an apartment for such a worthy; for Envy herself must confess, if the above qualifications are of any efficacy, the universal voice of the whole realm of Great Britain would not be equivalent to his wondrous deserts.'

In 1754, the same candidates came forward again, and, in imitation of their betters, bespattered each other in handbills. Thus Gubbins, while declaring himself 'zealously affected to his present Majesty King George, the Church and State,' asks—'where was Esquire Blowmedown when the Jew Bill, Matrimony Bill, and Wheel Bill passed?' Worse still, Blowmedown 'washes his boat every Sabbath-day, that he may not be induced to rise on Monday morning before high-water!' Of course, this meets with an indignant reply from the friends of the party attacked, 'a large majority of the most substantial and wealthy freeholders, electors of the ancient

* They have been obligingly communicated by T. Blackmore, Esq., of Wandsworth, who is also proprietor of Green's drawings, here copied.

borough of Garrat,' who state themselves to be 'not ashamed, much less afraid, to publicly declare that Blownedown is the pride and glory of our minds, and that we will support him to the last.' The bill ends with an important—'N.B. The Esquire entertains his friends at all the houses in Wandsworth on the day of election, which will be elegant and generous, without any other expense than that of every one paying for what they call for.'

The election of May 20, 1761, was alike remarkable for the number of candidates and for the efficient aid of their friends. Nine candidates came forward, and it is said that Foote, Garrick, and Wilkes wrote some of their addresses. Foote attended the election, and paid nine guineas for a room opposite Wandsworth church, for himself and friends to see the proceedings. The character of Snuffle, the sexton, in Foote's play, was derived from John Gardiner, a cobbler of Wandsworth and the parish gravedigger, who was one of the candidates under the name of Lord Twankum. That of Crispin Heeltap was copied from another candidate, a shoemaker, who came forward as Lord Lapstone. The other five were Kit Noisy, Esq. (one Christopher Beacham, a waterman), Lords Wedge and Paxford, Sir John Crambo and Beau Silvester. The claims of the latter were strongly enforced in an address to the electors of 'the antient, loyal, and renowned Boroughwick,' the principal point of the appeal being the resistance he is reputed to have made to an extra tax on beer, which at that time excited much popular ire. A lengthy and high-flown address was also issued by the Beau, in which he declares, 'I have given necessary orders for opening great plenty of public-houses in every hamlet throughout the electorate, for the reception of my friends and their acquaintance, desiring at the same time that they will be punctual in paying for what they call for; and not to overgorge, as it may endanger their health, and prejudice my election.' He then alludes to his fellow-candidates, giving his highest praise to Lord Lapstone, whose powers of drinking, he thinks, will produce 'a vast revenue' to his country, if he be 'spared for a long life!' We reprint entire another of his harangues, as it is one of the best specimens of the Garrat literature.

'To the worthy Electors of the Antient and Opulent Borough of Garrat.'

'I return my unfeigned and hearty thanks to the numberless and worthy electors that have exerted themselves in my interest, in support of my election; and should I be so happy (as by almost a general voice I am already declared) to be your representative, the honour so conferred will lay on me such high obligations, as my best endeavours can never discharge; but my service shall be always at your command, and my study ever for your welfare. Without flattery I promise, and without delay I perform; and, worthy gentlemen, I doubt not your peculiar penetration, unbiased integrity, and renowned prudence in the choice of another,* worthy of such high honour and important trust. In your choice thereof, with submission I entreat you neither to choose one of fancied high blood, and certain low fortune, for by him your privileges will be at stake, either to maintain or

* Two members were returned for Garrat.

advance his honour; nor one either mean in descent or fortune, as the integrity of such will be always doubtful; nor yet proud, as your highest esteem of his merit will serve only for a footstool to his ambition; nor covetous, for he will be enamoured with your verdant lawns, and never rest till he has enclosed your extensive plains in his parchment noose, and confined your wide-spread space within the secure bounds of his coffers; nor impudent, because ignorance will be his only guide and your sure destruction. If one too venerable, he will require more respect from you than ever you will have service from him; and your remarkable temperance and sobriety demonstrates your abhorrence of a beastly glutton and a stupid sot; and common prudence will direct you to beware of one prompted by a complication of iniquities, for to his will the antique charter of your borough, your public treasure, your private properties, without remorse will he grasp, and without mercy snatch away your lives to feed his insatiable cruelty; against either of these may fate protect your borough and me from such connexions, but in them the devil will get his due. As for your humble servant, if my religion is not the most profound, 'tis the most universally applauded (20s. to the pound); and I fear not but by my pious example to increase the practice thereof. In honour I am upright, and downright in justice; immovably attached to my king and country, with an unbiased hatred to their enemies; my manners are untainted with gaudy politeness or fawning complaisance. My abilities will procure you the knowledge of your wants, if not the gratification of your desires; and those that dare advance the present price of the darling essence of Sir John Barley will highly incur my displeasure, if not feel the weight of my resentment. Through my purer and universal connexion, your liberty and commerce shall be spread to the Antipodes, and I will order yet undiscovered regions to be alarmed with your fame; in your borough I will erect a non-existent edifice for the transaction of your timber business, and in your suburbs plant an imaginary grove for your private affairs. My unknown fortune shall be ever ready for your assistance, my useless sword drawn in your defence; and my waste blood I'll freely spill in your protection. And, with permission,

'I will, for ever and a day,
'Subscribe myself, gentlemen,
'Your most obedient servant,

'Bull Hall, May 4th 1761. 'BEAU SILVESTER.'

'N.B.—The Election will be the 20th instant. The Angel at Bull Stairs will be opened every day for the reception of all friends that please to honour me with their company.'

It is impossible to read this address without being forcibly reminded of Matthew Mug, the principal candidate in Foote's drama. He is a specious promiser of all good things to Garrat and its inhabitants, and, like Beau Silvester, particularly dilates on improving their trade. 'Should I succeed, you gentlemen may depend on my using my utmost endeavours to promote the good of the borough; to which purpose the encouragement of your trade and manufactories will most principally tend. Garrat, it must be owned, is an inland town, and has not, like Wandsworth, and Fulham, and Putney, the glorious advantage of a port; but what nature has denied, industry may supply. Cabbages, carrots, and cauliflowers may be deemed at present your staple commodities; but why should not your commerce be extended? Were I, gentle-

men, worthy to advise, I should recommend the opening a new branch of trade; sparrowgrass, gentlemen, the manufacturing of sparrowgrass! Battersea, I own, gentlemen, bears at present the bell; but where lies the fault? In ourselves, gentlemen; let us, gentlemen, but exert our natural strength, and I will take upon me to say, that a hundred of grass from the corporation of Garrat will, in a short time, at the London market, be held at least as an equivalent to a Battersea bundle! There can be little doubt that Beau Silvester is 'the great original' of Matthew Mug.

Kitt Noisy's pretensions are summed up in a grandiloquent placard, which ends by confidently prognosticating his success: 'For I am well assured you know a Demosthenes from a madman, a Lyncurgus from a libertine, and a Mark Anthony from a mountebank.' All this is sneered down by Sir Humphry Gubbins, who desires Noisy 'not to make so free with those capital ancients, Demosthenes, Lyncurgus, &c.; as they are gentlemen as little acquainted with the majority of his readers as with himself.' His abuse of his fellow-candidates is dismissed with the remark, that 'the regions of his ignorance and scurrility are so extensive, that was the ocean converted into ink, the sky into paper, and the stars into pens, it would not be adequate to the task' of exposing it. He ends with—'A word or two by way of conclusion. It was the common saying of an old philosopher to his son, "I know what you have been doing, by knowing what company you have been in." As Moorfields, St Giles's, and Hockley-in-the-Hole are such recent and familiar phrases in the mouth of Mr Noisy's advocate, it requires no great skill in philosophy to learn at what academies he received his education. *Probatum est.*'

In 1763, we have again Lord Twankum, Kit Noisy, and the new candidate, Sir John Crambo, who declares, 'I will not only use my best endeavours to get repealed the late act on cyder and perry, but also my strongest efforts that you shall have strong beer again for threepence a quart.'

Seven candidates came forward for the next election in 1768. These were Sir Christopher Dashem, Lord Twankum, Sir George Comefirst, Sir William Airey, Sir William Bellows, one who signs himself 'Batt from the Workhouse,' and Sir John Harper. The latter was one James Anderson, a breeches-maker of Wandsworth, who became one of the most popular candidates during several elections.

This year's election was formally commenced by the following announcement:

'Whereas divers persons have thought proper to nominate themselves as candidates for this most antient and loyal borough without conforming to the several previous modes, forms, and methods to be observed and taken before such putting-up:

'This is therefore to give notice, that by antient records of the borough, each and every candidate who enters the list of fame must subscribe his name (either real or fictitious), his place of residence (if he has one), and occupation (if any), in the Doomsday-book of this borough, kept at the Mansion House, lest any disqualified person should dare to infringe, but

the least atom, on the privileges and immunities of this antient and most loyal borough.

'Cross { Mayor and keeper of
the Archives.

'9th of April, 1768.'

In another broadside the same mayor complains, 'That it hath been a custom of late for several people, strangers and foreigners, to erect booths for vending of beer and other liquors on this occasion, who have neither right, title, nor pretension to that privilege; and that this custom is highly injurious to all the publicans of Garrat, to whom solely that privilege belongs by right of inheritance from time immemorial.' He therefore earnestly adjures the public not to patronize them, and ends his harangue thus:—'Now I must exhort you all to order and good breeding; let the spirit of love reign amongst you—yea, and the spirit of Englishmen. Then, and in that there case, will the greatest decorum and brightest example shine throughout your conduct; which shall be the fervent prayer of him who will certainly suffer by the contrary, viz.,

'Cross, Mayor. (His own fist!)

On this occasion Lady Twankum played a conspicuous part with her lord. His bills announce that 'Lady Twankum desires those ladies who intend to honour her with their company to send their servants for tickets.' In a second announcement, 'Lady Twankum desires those ladies who are in the interest of her lord to come *full dressed*, and clean about the *heels*.' She also hopes they will honour her so far as to drink chocolate, tea, coffee, or *any other liquor* they please to order, on the morning of election; and adds, 'The lane and the whole borough will be grandly illuminated, according to custom, during the ball.'

Lord Twankum concludes his address by informing his constituents, 'The election will be on the 7th of June ensuing; when I have given strict orders that every house on the road between Greenwich and Farnham shall be open from five o'clock in the morning to nine, and from nine all day long; where you may please, drink, amuse, and regale yourselves at the moderate price of paying for what you use. Also by water, boats, barges, lighters, and wherries; and by land, proper vehicles, viz., sand-carts, dust-carts, dung-carts, carrion-carts, trucks, and truckadoes, will be ready at the most convenient places for you all—if you will only take the trouble to seek them, and *pay the hire*.'

The election of 1775 is announced by 'Richard Penn, Mayor, Deputy Ranger of Wandsworth Common, and Superintendent of all the Gravel-pits thereto belonging;' who recommends Sir William Blaize and Sir Christopher Dashem, and announces that two places of subscription are opened in Wandsworth and four in London, at various public houses, 'that the candidates shall not put themselves to a shilling expense.' He deprecates bribery, and notes a report 'as a caution to the worthy electors, that Sir John Harper has engaged a certain *famous dancing Punch*, who will exhibit during the whole election.' Sir William Blaize announces himself as 'Nephew to the late Lord Twankum,' and that

he 'went as a volunteer from the artillery in the City of London to St James's, with 11,000 men to serve his majesty in the rebellion in the year '45, under the command of Sir William Bellows and Sir Joseph Hankey; [he] has been fourteen years since in the Surrey Militia, and exerted his abilities in such a manner [as] has gained him the applause of his country in general.'

The election of 1781 was as remarkable as those of 1761 and 1768 for the number of candidates; no less than nine contested the borough. Among them were our old friends Sir John Harper, Sir Christopher Dashwood, and Sir William Blaize; the new candidates being a Sir John Gnawpost, Sir William Swallowtail (one William Cook, a basketmaker, of Brentford), Sir Thomas Nameless, Sir Thomas Tubbs (a waterman), Sir Buggy Bates (one Robert Bates, a waterman and chimney-sweep), and Sir Jeffrey Dunstan, an itinerant dealer in old wigs, who turned out to be one of the most popular of the candidates that ever appeared on the Garrat hustings, and was retained member for three successive parliaments. He came forward in his own name with merely the prefix of a title, was much of a humorist, and possessed a fund of vulgar wit, and an extremely grotesque personal appearance. He had been long known about London, from his whimsical mode of crying his trade; and it was his pride to appear hatless, and regardless of personal grace, by wearing his shirt and waistcoat open to the waist, his breeches unbuttoned at the knees, and his stockings ungartered. He, however, assumed much mock dignity, spite of his dwarfish size, disproportioned head, and knock-knees; spoke of his daughters as 'Miss Dinah' and 'beautiful Miss Nancy,' the latter being elevated into 'Lady Ann' after she married 'Lord Thompson,' a dustman of

Bethnal Green, where Sir Jeffrey resided until his death, by excess of drink, about 1797. He was in the habit of rehearsing his election speeches, and giving his imitations of popular London cries, on stated occasions, at the White-chapel public-houses, in company with 'Ray the Tinker,' and 'Sir Charles Hartis,' a deformed fiddler and an unsuccessful candidate for Garrat. His quaint figure appears on some of the London tradesmen's tokens, and was used as a sign to public-houses.

Sir John Harper, in his address, speaks of 'having had the honour of serving Garrat in the last two parliaments *out-of-doors*;' calls himself 'principal rectifier of all mistakes and blunders;' promises 'to promote the trade and commerce of this land in general, and of every freeman in particular of this ancient and loyal borough of Garrat; to establish a firm, lasting, and universal peace with America; chastise the insolence and ingratitude of France, Spain, and Holland; and restore this nation to its ancient glory.' He also promises to call public servants to account in high places, to lighten taxes, shorten parliaments, and bring forward a scheme for the liquidation of the National Debt. He at the same time solemnly declares that he 'will never accept from government either place, pension, title, contract, or emolument whatsoever.' Sir John Harper and Sir Jeffrey Dunstan were unanimously returned, though an imputation was cast on the latter, to the effect that his daughter was to marry the son of the Premier, Lord North. Other candidates had wicked allegations levelled at them: Sir John Swallowtail was declared to have a contract to supply government with baskets; and Sir Buggy Bates another 'for a supply of soot, for the powder to destroy vermin in biscuit.'

There are preserved three very curious draw-

ings by Valentine Green,* delineating the chief features of this great electioneering farce. The most curious of the series represents Lady Blaize in her state barge passing through Wandsworth ;

the principal inns, 'The Spread Eagle' and 'The Ram,' are indicated, with the entrance to Garrat Lane. Her ladyship carries in her boat a 'dancing Punch,' similar to that noted in 1775. She has

also two pages, one to shield her beauties under a huge umbrella, the other to ply an enormous

* They were copied in Hone's *Every-Day Book*, vol. ii., but with alterations and omissions, to compress them into two small cuts. We have re-engraved them strictly in accordance with the originals. Green is best known as a

very good mezzotint engraver ; he was born in Warwickshire, 1739, came to London in 1765, was appointed keeper of the British Institution upon its first foundation, a post he filled with zeal and integrity. He died 1813.

fan. She was graphically described to Hone by an old lady of Wandsworth. 'I remember her very well,' said she, 'and so I ought, for I had a good hand in the dressing of her. I helped to put together many a good pound of wool to make her hair up; I suppose it was more than three feet high, at least; and as for her stays, I also helped to make them, down in Anderson's barn. They were neither more nor less than a washing-tub without the bottom, well covered, and bedizened outside to look like a stomacher; as she sat in the boat she was one of the drollest creatures for size and dress ever seen!'

The boats were mounted on wheels and drawn by horses, though in one instance we see them dragged by men. The racket and semi-masquerading of the populace is a notable feature; many are habited in quaint wigs and hats, one drummer is in female costume; women join the rowers, quarrels and fights abound, and the scaffolding in front of the 'Spread Eagle' falls with its occupants. There is one remarkable spectator in the right-hand corner of this scene—a coatless, loosely-dressed, bald-headed man, with a porter-pot in his left hand; this is the publican, Sam House, celebrated at all Westminster elections for his zeal in the cause of Fox. He was never seen to wear either hat or coat, and has been spiritedly depicted by the famed caricaturist Gillray.

Sir John Harper addresses his constituents from a phaeton drawn by six horses, with mounted postilions, and preceded by horsemen carrying mops and brooms. Upon his carriage is inscribed, 'Harper for ever! No Whigs!' an allusion, possibly, to Sir Jeffrey Dunstan. He is speaking opposite the inn known as 'The Leathern Bottle,' which still stands unchanged in Garrat Lane, nearly opposite the common, which was the glory of the place. Sir William Swallowtail came to the poll in a wicker-chariot made by himself, and was preceded by hand-bell players. Sir Christopher Dashwood was drawn in a boat, with drums and fifes, and a Merry-Andrew mounted beside him. The road was kept by 'the Garrat Cavalry,' consisting of forty boys of all ages and sizes, so arranged that the smallest boys rode the largest horses, and *vice versa*; who were commanded by a 'Master of the Horse,' in caricature regimentals, with a sword seven feet long, boots reaching to the hips, provided with enormous spurs, and mounted on the largest dray-horse that could be procured.

At the next election, in 1785, the death of Sir John Harper left Sir Jeffrey Dunstan without a rival; but in that for 1796 he was ousted by a new candidate, Sir Harry Dimsdale, a muffin-seller and dealer in tin-ware, almost as deformed as himself, but by no means so great a humorist. The most was made of his appearance, by dressing him in an ill-proportioned tawdry court suit, with an enormous cocked hat. He enjoyed his honour but a short time, dying before the next general election; he was 'the last' of the grotesque mayors, for no candidates started after his death, the publicans did not as before subscribe toward the expenses of the day, and the great saturnalia died a natural death.

'None but those who have seen a London

mob on any great holiday,' says Sir Richard Phillips, 'can form a just idea of these elections. On several occasions a hundred thousand persons, half of them in carts, in hackney coaches, and on horse and ass-back, covered the various roads from London, and choked up all the approaches to the place of election. At the two last elections, I was told that the road within a mile of Wandsworth was so blocked up by vehicles, that none could move backward or forward during many hours; and that the candidates, dressed like chimney-sweepers on May-day, or in the mock fashion of the period, were brought up to the hustings in the carriages of peers, drawn by six horses, the owners themselves condescending to become their drivers.'

After a lapse of thirty-four years, when the whim and vulgarity of a Garrat election was only remembered by a few, and recorded by Foote's drama, the general election of 1826 seems to have induced a desire to resuscitate the custom. A placard was prepared to forward the interests of a certain 'Sir John Paul Pry,' who was to come forward with Sir Hugh Allsides (one Callendar, beadle of All Saints' Church, Wandsworth), and Sir Robert Needall (Robert Young, surveyor of roads), described as a 'friend to the ladies who attend Wandsworth Fair.' The placard, which may be read in Hone's *Every-Day Book*, displays 'a plentiful lack of wit.' The project of revival failed; and Garrat has had no parliamentary representative 'out-of-doors' since the worthy muffin-seller was gathered to his fathers at the close of the last century.

CLIEFDEN HOUSE.

On the night of the 20th of May 1795, shortly after the family at Cliefden House had retired to rest, a maid-servant of the establishment, as

CLIEFDEN HOUSE AS BEFORE 1795.

she lay in bed, was reading a novel. Absorbed

in the story, she was perhaps supremely happy. But she was suddenly roused from her enjoyment by perceiving that her bed-curtains were in flames. Too terrified to alarm the family, she sank down on her bed and fainted. While she lay helpless and unconscious, the flames gathered strength, and spread to other parts of the building. Happily, many of the family were still awake, and in a few minutes the whole household was in motion. Such, according to tradition, was the origin of the conflagration. Certain it is, that however it originated, the fire occurred at the date mentioned, and calamitous were its effects. Every life indeed was saved, but the whole mansion, with the exception of its two end wings and the terrace, perished in the flames, and nearly all its rich furniture, its valuable paintings, and beautiful tapestry, shared the same fate. This house, which had been originally designed by Archer for the profligate George Villiers, second Duke of Buckingham, was built of red brick, with stone dressings. At each end was a square wing, connected with the main building by a colonnade, and a magnificent terrace about 440 feet long. The Duke of Buckingham, who purchased Cliefden from the family of Manfeld, its ancient proprietors, expended large sums, and evinced much taste in its arrangement and decoration. Regardless of expense, he procured the choicest productions of our own and other countries, and enriched this naturally lovely spot with a variety of trees, shrubs, and flowers, scarcely to be met with, at that period, in any other grounds of the same extent. He also adorned it, according to the fashion of the day, with alcoves and similar buildings.

Cliefden was his favourite place of residence; and here he carried on his amours with the infamous Countess of Shrewsbury, whose husband he killed in a duel.

‘Gallant and gay, in Cliefden’s proud alcove,
The bower of wanton Shrewsbury and love.’

His gallantries, however, were often rudely curtailed by the want of money, and, from the same cause, he was unable to complete the mansion here; for, although the inheritor of immense property, his lavish expenditure had involved him deeply in debt, and he died in middle life, self-ruined in health, in fortune, and in reputation.

After the death of the Duke of Buckingham, Cliefden was purchased by Lord George Hamilton (fifth son of the Duke of Hamilton), who for his military services was created Earl of Orkney. At considerable cost he completed the house, and added new beauties to the ground. He died in 1737, and leaving no surviving male issue, his eldest daughter, Anne, became Countess of Orkney, and succeeded to the Cliefden estate. While in her possession, it was rented by his Royal Highness Frederick Prince of Wales, who for many years made it his summer residence. This amiable prince, unlike his father, who never appreciated the character of his British subjects, or sought their true interest, exerted his best energies to acquire a knowledge of the British laws and constitution, and to assimilate his own tastes and feelings to those of the people

he expected to be called on to govern. In his general behaviour he was courteous and considerate to all. He was a zealous promoter of every measure that he considered likely to forward the public good, and a special patron of the arts, sciences, and literature. Cliefden, as his residence, became the resort of the *litterati* of the day, among whom Thomson and Mallet are still memorable in connexion with it. Mallet first received the prince’s patronage, and was made his under-secretary, with a salary of two hundred pounds a year. Thomson’s introduction to the prince, as described by Johnson, is amusing. The author of the *Castle of Indolence* appears to have been by no means diligent himself. His muse was a lazy jade, except under the sharp spur of necessity; and Thomson, having received a comfortable appointment under Government, indulged his love of ease and good living, paying little or no attention to his poetical mistress. But a change of ministry threw him out of his lucrative post; his finances were soon exhausted, and he lapsed into his former indigence. While in this condition he was introduced to the prince, and ‘being gaily interrogated,’ says Johnson, ‘about the state of his affairs, he replied, they were in a more poetical posture than formerly.’ He was then allowed a pension of one hundred pounds a year; but this being inadequate to his now luxurious habits, he began again to court his muse, and several dramatic productions were the result. One of them was a masque entitled *Alfred*, which he and Mallet in conjunction composed for the Prince of Wales, before whom it was performed for the first time, in 1740, at Cliefden. One of the songs in that masque was *Rule Britannia*. The masque is forgotten; the author of the song, and they who first heard its thrilling burst from the orchestra, are mouldering in their tombs; the halls through which the strain resounded have long since perished; but the enthusiasm then awakened still vibrates in the British heart to the sound of those words,

‘Rule Britannia, Britannia rule the waves,
For Britons never, never shall be slaves!’

Cliefden House, after the fire in 1795, remained nearly as the flames left it till 1830, when it was rebuilt by Sir George Warrender, who had purchased the estate. After the death of Sir George Warrender, Cliefden was purchased from his trustees by the Duke of Sutherland; and within a few months after his purchase was again burnt down, on the 15th of November, 1849, being the day of thanksgiving for the cessation of the cholera.

In the summer of 1850, the mansion was rebuilt by the Duke of Sutherland in a still more magnificent style, from designs by Barry. The centre portion, which is a revival of the design for old Somerset House, now extends to the wings, which, together with the terrace, are made to harmonize with the new building. It is indeed a magnificent and imposing structure, though by those who prefer the more picturesque appearance of the Tudor style, it may be considered heavy and formal. It is now (1862) the residence of the Dowager Duchess of Sutherland.

But the grounds of Cliefden, which are about a hundred and thirty-six acres in extent, are its chief attraction. They have often been celebrated both in prose and verse. 'It is to Cliefden,' says a modern writer, 'that the river here owes its chief loveliness; and whether we view the valley of the Thames from it, or float leisurely along the stream, and regard it as the principal object, we shall alike find enough to delight the eye and kindle the imagination. Cliefden runs along the summit of a lofty ridge which overhangs the river. The outline of this ridge is broken in the most agreeable way, the steep bank is clothed with luxuriant foliage, forming a hanging wood of great beauty, or in parts bare, so as to increase the gracefulness of the foliage by the contrast; and the whole bank has run into easy flowing curves at the bidding of the noble stream which washes its base. A few islands deck this part of the river, and occasionally little tongues of land run out into it, or a tree overhangs it, helping to give vigour to the foreground of the rich landscape. In the early morning, when the sun has risen just high enough to illumine the summit of the ridge and highest trees, and all the lower part rests a heavy mass of shadow on the sleeping river, the scene is one of extraordinary grandeur.*'

THE SALTPETRE MAN.

It will perhaps surprise some readers to learn that chemical science was so far advanced in this country two hundred and twenty years ago, that a patent was granted (dated 1625) to Sir John Brook and Thomas Russel, for obtaining saltpetre, for the manufacture of gunpowder, from animal exuviae, from the soil of slaughter-houses and stables, and even from the floors of dwelling-houses. But it appears that the patent did not immediately produce a supply equal to the demand; for in the year 1627, the third of the reign of Charles I., a proclamation was issued to remedy the inconvenience arising to the service from the want of a full and proper supply of *nitre* for the gunpowder manufactures. It first set forth that the saltpetre makers were never able to furnish the realm with a third part of the saltpetre required, more especially in time of war; and then proceeded to state that, since a patent had been granted to Sir John Brook and Thomas Russel, for the making of saltpetre by a new invention, they were authorized to collect the animal fluids (which were ordered by this same proclamation to be preserved by families for this purpose) once in twenty-four hours, from house to house, in summer, and once in forty-eight hours in winter. It will not require a very fertile imagination to conceive that this proclamation was offensive and highly inconvenient to the people, and that the frequent visits of the *Saltpetre Man* and his agents would be anything but welcome. This, however, was not the worst. All soils throughout the kingdom which were impregnated with animal matter were claimed by the Crown for this peculiar purpose. And the same proclamation empowered the saltpetre makers to dig up the floors of all dove-houses, stables, cellars, slaughter-houses,

&c., for the purpose of carrying away the earth; and prohibited the proprietors from relaying such floors with anything but 'mellow earth,' to afford greater facilities to the diggers. An obvious consequence was, that individuals anxious to preserve their premises from injury by this ruinous digging, resorted to bribery, and bought off the visits of the *Saltpetre Man*. He, on the other hand, conscious of the power his privileges gave him, became extortionate, and made his favours more ruinous than his duties. These vexatious and mischievous visits were put a stop to in 1656, by the passing of an act forbidding saltpetre makers from digging in houses or enclosed lands without leave of the owners. It also appears, from the extensive powers of the act under which the above-named patent was granted, that the corporate bodies of certain, or perhaps all, municipal towns were compelled at their own charge to maintain works for the manufacture of saltpetre from the refuse of their respective localities—a supposition which is confirmed by the fact that, in the year 1633, an order was made by the corporation of Nottingham, to the effect that no person, without leave from the mayor and common council, should remove any soil except to places appointed for the reception of such matter; nor should any such material be sold to any foreigner (stranger) without their license. Four years later (1637) the hall book of the same corporation contains the following entry:—'William Burrows agreed to be made burgess on condition of freeing the town from all charges relating to the saltpetre works.' Doubtless the corporation were glad enough to rid themselves of the obnoxious character of the *Saltpetre Man*, with all its disagreeable contingencies, when relief could be had on such easy terms.

Troubles with the *Saltpetre Man* can be traced to a still earlier date than any we have mentioned, as the following curious memorial will show.

'To the Righte Honorable oure verie goode Lorde, the Lorde Burghley, Lorde High Threasiror of Englande.

'Righte Honorable, oure humble dewties to your good lordshippe premised, maye it please the same to be advertised, that at the Quarter Sessions holden at Newarke, within this countie of Nottingham, there was a general complaynte made unto us by the whole countrie, that one John Ffoxe, saltpetre maker, had charged the whole countrie by his precepts for the caryinge of cole from Selsona, in the countie of Nottingham, to the towne of Newarke, within the same countie, being sixteen miles distant, for the making of saltpetre, some towne with five cariages, and some with lesse, or else to give him four shillings for evrie loade, whereof he hath received a greate parte. Uppon which complaynte we called the same John Ffoxe before some of us at Newarke, at the sessions there, to answere the premises, and also to make us a proposition what lodes of coles would serve to make a thousand weight of saltpetre, to the end we might have sette some order for the preparing of the same; but the saide Ffoxe will not sette down anie rate what would serve for the making of a thousand. Therefore, we have thoughte

* *Rambles by Rivers.*

good to advise youre good lordshippe of the premises, and have appoynted the clark of the peace of this countie of Nottingham to attend your lordshippe, to know your lordshippe's pleasure about the same, who can further inform your good lordshippe of the particularities thereof, if it shall please your lordshippe to give him hearinge: and so most humblie take our leaves.—Newark, the 8th of October, 1589.

After the discovery and importation of rough nitre from the East Indies, the practice of obtaining it by such processes as those described in the patent of Brook and Russel fell into gradual disuse, and thus the country was relieved from one of the greatest annoyances to which it had ever been subject.

THOMAS WARTON.

Thomas Warton was but a sorry singer himself, little better than an elegant 'gatherer and disposer of other men's stuff,' but he did good service to English literature, chiefly by the impulse he gave to a better appreciation of our early poets.

Warton was an Oxford Fellow, of an easy temperament, polished manners, and romantic taste. When only twenty-one—in 1749—he rendered himself notorious and popular by his early poem, *The Triumph of Isis*, a defence of Oxford against certain strictures of Mason. His *Observations on the Faerie Queen of Spenser* appeared in 1754, and showed where his greatest strength lay. Three years later he was made Professor of Poetry, which office he filled very efficiently for ten years, indulging in many excursions into general literature, and working chiefly at a handsome and elaborate translation of *Theocritus*, which he published in 1770. But his greatest and most elaborate work was a *History of English Poetry*, which he brought down to the end of the Elizabethan age. The completion of this useful and laborious task has often been projected, and not seldom commenced, but never fully accomplished, but will at some future day, it is to be hoped, find some one who will do it

justice, and supply a need, and merit the gratitude of a nation not—in this branch of literature—inferior to any.

Warton's *Notes on Milton*, though somewhat diffuse, possess great merit, and bear witness to extensive reading. This work, begun in 1785, the same year in which he was made Camden Professor of History and poet laureate, was not more fortunate than the *History of Poetry*, in that it was not completed when the author died.

Warton was a loungeur in the pleasant fields of literature, and would have accomplished more had he undertaken less. He edited the works of poets, wrote biographies, histories of localities, comic scraps, papers in the *Idler*, and other periodicals, a history of Gothic architecture, of which the manuscript was lost, and produced a variety of heterogeneous matter; or at other times spent his life leisurely wandering in old cathedrals and by pleasant streams, or figuring at Johnson's literary club, or musing in his favourite haunts in his brother's garden at Winchester.

His *Sonnets* are the best of his poems, and that *To the River Lodon* the most natural of these.

To the River Lodon.

'Ah! what a weary race my feet have run
Since first I trod thy banks with alders crowned,
And thought my way was all thro' fairy ground,
Beneath thy azure sky and golden sun;
Where first my muse to lisp her notes begun!
While pensive Memory traces back the round,
Which fills the varied interval between;
Much pleasure, more of sorrow, marks the scene.
Sweet native stream! those skies and suns so pure
No more return, to cheer my evening road!
Yet still one joy remains, that, not obscure,
Nor useless, all my vacant days have flow'd,
From youth's gay dawn to manhood's prime mature;
Nor with the muse's laurel unbested.'

AN EARTHQUAKE.

May 21, 1382, 'There was a great earthquake in England, at nine of the clock, fearing the hearts of many; but in Kent it was most vehement, where it sunk some churches and threw them down to the earth.'—*Stow's Chronicles*.

A song written at the time upon this earthquake has been preserved,* and must be considered as something of a curiosity. It treats the matter as a great warning to an over-careless people.

'And also when this earth quoke, †
Was none so proud he n'as aghast,
And all his jollity forsook,
And thought on God while that it last;
And as soon as it was over-past,
Men wox as evil as they dead are;
Each man in his heart may cast,
This was a warning to beware.

Forsooth, this was a lord to dread,
So suddenly made men aghast,
Of gold and silver they took none heed,
But out of their houses full soon they passed;

* *Political Poems and Songs relating to English History*. Published under direction of the Master of the Rolls. 1859. Vol. I.

† The original language is here given in modern spelling.

Chambers, chimneys, all to-brest [burst],
Churches and castles foul 'gan fare ;
Pinnacles, steeples to ground it cast,
And all for warning to beware.

* * * * *

Sickerly I dare well say,
In such a plight this world is in,
Mony for winning would betray
Father and mother and all his kin.
Now [it] were high time to begin
To amend our lives and well to fare ;
Our bag hangeth on a slipper pin,
But we of this warning beware.'

The effect of an earthquake in producing serious feelings must of course depend on the strength of the shock. We may presume that the particular course which reformation is to take will depend in great measure on the kinds of profligacy and folly which happen to be reigning at the time. A New England newspaper of 1727 announces* that 'a considerable town in this province has been so *awakened* by the awful providence in the earthquake, that the women have generally laid aside their hoop-petticoats.' Many amongst us would probably be glad to stand a shock of not immoderate violence, if any such reformation could be expected from it.

THE MARINER'S COMPASS.

The history of the mariner's compass in Western Europe furnishes a curious illustration of the danger of forming conclusions upon negative evidence—that is, of supposing a thing did not exist at any time, merely because no known contemporary writer mentions its existence. It had been long believed that this instrument, so important an agent in the progress of man's civilization, had been invented in Italy about the year 1302, by one Flavio Gioia. When the celebrated orientalist, Jules Klaproth, discovered that it had been known to the Chinese from a very early period; that there were reasons for believing that an implement made on the same principles, and for the same object, had been in use among that people at a date prior to the Christian era; but that they certainly had the mariner's compass, in a rather rude form, it is true, before the end of the eleventh century of our chronology; it was immediately concluded that the people of Europe had derived the knowledge of this invention direct from the Chinese. Subsequent to this discovery, other orientalists have found evidence in a contemporary Arab writer, that this instrument was in use among the Mahometan sailors in the Mediterranean so early as the year 1242; and it was therefore concluded that the Christians of the West derived the mariner's compass from the Chinese, not directly, but indirectly through the Arabs. The more extensive researches into the literature of Western Europe have, however, shown that neither of these suppositions is correct, but that the principles of the mariner's compass were known among our forefathers at a date considerably earlier than the one last mentioned.

* As we learn from the *St James's Evening Post*.
Jan. 16, 1728.

A French poet, named Guyot de Provins, wrote a satire on the vices of his time, which is known by the title of *La Bible de Guyot de Provins*, and which is supposed to have been completed in the year 1205. In speaking of the pope, he uses words which are literally translated as follows: 'I wish he resembled the star which never moves. The mariners who take it for their guide, observe it very carefully, and go and come directing their way by it; they call it the polar star. It is fixed and motionless; all the others move, and change, and vary their position; but this star moves not. They have a contrivance which never deceives them, through the qualities of the magnet. They have an ugly brown stone, which attracts iron; they mark the exact quarter to which the needle points, which they have rubbed on this stone and afterwards stuck into a straw. They merely put it in water, in which the straw causes it to swim: then the point turns directly towards the star, with such certainty that it will never fail, and no mariner will have any doubt of it. When the sea is dark and foggy, that neither star nor moon can be seen, they place a lighted candle beside the needle, and have then no fear of losing their way; the needle points direct to the star, and the mariners know the right way to take. This is a contrivance which cannot fail. The star is very fair, and very bright; and so I wish our holy father (the pope) were.' Another French poet, supposed to have been contemporary with Guyot de Provins, has left us a short amatory poem on his mistress, whom he compares to the polar star, which, he says, when they can see it, serves them as a safe guide; and he adds: 'Its position is still known for their route, when the weather is quite dark, to all those who employ the following process: they insert a needle of iron, so that it is almost all exposed to view, into a bit of cork, and rub it on the brown stone of the magnet (the loadstone). If this be placed in a vessel full of water, so that nobody thrusts it out, as soon as the water becomes motionless, to whatever side the point turns, there without any doubt is the polar star.'

The use of this rude kind of mariner's compass must have been generally known, to allow of its being referred to in this manner by the popular poets; and the *Bible* of Guyot de Provins, at least, was so well known, that Dante's preceptor, Brunetto Latine, when he tells in one of his letters how, during a visit to England, he had seen one of these instruments, borrows the words of the poet to describe it. One or two other Latin writers of the same age also allude to it, though rather obscurely.

But a still more curious account has been recently brought to light by the researches of Mr T. Wright, who has found descriptions of the mariner's compass in two different works by Alexander Neckam, one of the most learned English scholars of the latter half of the twelfth century. He is said to have died in 1217, but one, at least, of the works alluded to was probably compiled when he was young; both of these passages had remained concealed in the obscurity of mediæval manuscripts until they were published by Mr Wright. They reveal the fact

that already, in the twelfth century, the English navigators used a compass, which was so far an improvement upon that described above by writers of the thirteenth century, that the needle was placed on a pivot as at present, instead of being thrust into a straw or a bit of cork, and made to swim in a basin of water. Neckam speaks of this needle as one of the necessary parts of a ship's furniture.

It is thus quite evident that the mariner's compass, instead of being invented by an Italian at the beginning of the fourteenth century, was well known to English sailors as far back as the twelfth; and, in fact, that we find them using it earlier than any other people in Europe. M. D'Avezac, the eminent geographer, who pointed out the exact meaning and importance of these passages from Alexander Neckam, in several communications to the Society of Geography of Paris, suggests, and we think with great appearance of truth, that the real invention of Flavio Gioia was that of placing the needle permanently in a box, instead of putting it in water, or placing it on a pivot raised permanently for the occasion; and he conjectures that its modern Italian and French name, *bussola*, *boussola*, is derived from the box in which it was thus placed, and which was probably made of box-wood.

It appears, therefore, to be established beyond doubt, that the invention of the mariner's compass, instead of being borrowed from the Chinese or Arabs, was one which developed itself gradually and independently in Western Europe. M. D'Avezac has further shown that the card of the compass (called in French the *rose des vents*, and in the mediæval Latin *stella maris*) was in use at the close of the thirteenth century; and that, so early as the year 1268, a French writer, Pierre de Maricourt, describes the variation of the compass, and that allowance was made for it, though this is commonly supposed not to have been observed before the end of the fifteenth century.

It is worthy of note that in England the French and Italian name was never adopted; but we have preserved our original word, 'needle,' which as we have seen, appears at first to have been the only permanent part of the instrument, the other parts being, when it had to be used, made or taken for the occasion.

MAY 22.

Trinity Sunday (1864).

The mystery of the Holy Trinity has been from an early date commemorated by a festival, the observance of which is said to have been established in England by Thomas à Becket near the close of the twelfth century. In the fact of three hundred and ten churches in England being dedicated to the holy and un-

divided Trinity, we read the reverence paid to the mystery in mediæval times; but even this is exceeded in our age, when one-fifth of all new churches are so dedicated. Architects and other artists in early times racked their brains for devices expressive of the Three in One, and many very curious ones are preserved.

RELICS OF HENRY VI.

After the battle of Hexham (15th May 1464), by which the fortunes of the House of Lancaster were for the time overthrown, the imbecile King Henry VI. fled from the field, and for some time was entirely lost to public observation; nor has English history been heretofore very clear as to what for a time became of him. It appears that, in reality, the unfortunate monarch was conducted by some faithful adherents into Yorkshire, and there, in the wild and unfrequented district of Craven, found a temporary and hospitable shelter in Bolton-hall, with Sir Ralph Pudsey, the son-in-law of a gentleman named Tunstall, who was one of the esquires of his body. It was an old and primitive mansion, of the kind long in use among the English squirearchy, having a hall and a few other apartments, forming three irregular sides of a square, which was completed by a screen wall. Remoteness of situation, and not any capacity of defence, must have been what recommended the house as the shelter of a fugitive king. Such as it was, Henry was entertained in it for a considerable time, till at length, tiring of the solitude, and fearful that his enemies would soon be upon him, he chose

BOOT, GLOVE, AND SPOON OF HENRY VI.

to leave it, and was soon after seized and carried to the Tower.*

* *Antiquarian Repertory*, iii. 298.

The family of Pudsey was a hospitable and not over-prudent one. The spacious chimney-breast bore a characteristic legend, 'There ne'er was a Pudsey that increased his estate.' Nevertheless, and though for a number of years out of their old estate and house, the family is still in the enjoyment of both, although not in the person of a male representative.* They have for ages preserved certain articles which are confidently understood to have been left by King Henry when he departed from their house. These are, a boot, a glove, and a spoon, all of them having the appearances of great age. Engravings of these objects are here presented, taken from sketches made so long ago as 1777. The boot, it will be observed, has a row of buttons down the side. The glove is of tanned leather, with a lining of hairy deer's skin, turned over. The only remark which the articles suggest is, that King Henry appears to have been a man of effeminate proportions, as we know he was of poor spirit.

THE FOUNDER OF THE VERNON GALLERY.

The splendid collection of pictures preserved under this name in the South Kensington Museum was collected by a man whose profession suggests very different associations. Robert Vernon had risen from poverty to wealth as a dealer in horses. While practising this trade in a prudent and honourable manner, his natural taste led him to give much thought, as well as money (about £150,000, it was said), to the collection of a gallery of pictures. His pictures were selected by himself alone—with what sound discretion, consummate judgment, and exquisite taste, the Vernon collection still testifies. No greater contrast could possibly be than that between Mr Vernon and the connoisseur of the last century, represented by the satirist as saying—

'In curious matters I'm exceeding nice,
And know their several beauties by their price;
Auctions and sales I constantly attend,
But choose my pictures by a skilful friend;
Originals and copies much the same,
The picture's value is the painter's name.'

As a patron of art, no man has stood so high as Mr Vernon. He made it an invariable rule never to buy from a picture-dealer, but from the painter himself; thus securing to the latter the full value of his work, and stimulating him, by a higher and more direct motive, to greater exertions. Treating artists as men of genius and high feeling, he never cheapened their productions; though, to a rising young painter, the honour of having a picture admitted into Mr Vernon's gallery was considered a far greater boon—as a test of merit and promise for the future—than any mere pecuniary consideration could bestow. And Mr Vernon did not confine his generous spirit to the public patronage of art and artists; it was his pride and pleasure to seek out merit and foster it. Numerous were the instances in which his benevolent mind and princely fortune enabled him to smooth the path of struggling talent, and encourage fainting, toil-worn genius, in its dark hours of depression.

* *Gentleman's Magazine*, May 1841.

In forming his collection, Mr Vernon's leading idea was to exhibit to future times the best British Art of his period. So it was necessary, as any painter advanced in the practice of his profession, to secure his better productions; consequently from time to time, at a great expenditure of money, Mr Vernon, as it is termed, weeded his collection; never parting, however, with a picture without commissioning the artist to paint another and more important subject in his improved style.

It is not the mere money's worth of Mr Vernon's munificent gift to the nation that constitutes its real value, but the very peculiar nature of the collection; it being in itself a select illustration of the state and progress of painting in this country from the commencement of the present century. Besides, it is an important nucleus for the formation of a gallery of British Art, both as regards its comprehensiveness and the general excellence of its examples, which are among the masterpieces of their respective painters. And we may conclude in the words of the *Times* newspaper, by stating that, 'there is nothing in the Vernon collection without its value as a representative of a class of art, and the classes are such that every eminent artist is included.'

FIRST CREATION OF BARONETS—MYTHS.

The 22nd May 1611 is memorable for the first creation of baronets. It is believed to have been done through the advice of the Earl of Salisbury to his master King James I., as a means of raising money for his majesty's service, the plan being to create two hundred on a payment of £1,000 each. On the king expressing a fear that such a step might offend the great body of the gentry, Salisbury is said to have replied, 'Tush, sire; you want the money: it will do you good; the honour will do the gentry very little harm.' At the same time care was professedly taken that they should all be men of at least a thousand a year; and the object held out was to raise a band for the amelioration of the province of Ulster—to build towns and churches in that Irish province, and be ready to hazard life in preventing rebellion in its native chiefs, each maintaining thirty soldiers for that purpose.

One curious little particular about the first batch of eighteen now created was, that to one—Sir Thomas Gerard, of Bryn, Lancashire—the fee of £1,000 was returned, in consideration of his father's great sufferings in the cause of the king's unfortunate mother.*

From the connexion of the first baronets with Ulster, they were allowed to place in their armorial coat the open red hand heretofore borne by the forfeited O'Neils, the noted *Lamb derg Eirin*, or red hand of Ulster. This heraldic device, seen in its proper colours on the escutcheons and hatchments of baronets, has in many instances given rise to stories in which it was accounted for in ways not so creditable to family pride as the possession of land to the extent of £1,000 per annum in the reign of King James.

For example, in a painted window of Aston

* *Nichols's Progresses of James I.* Vol. ii., 428.

Church, near Birmingham, is a coat-armorial of the Holts, baronets of Aston, containing the red hand, which is accounted for thus. Sir Thomas Holt, two hundred years ago, murdered his cook in a cellar, by running him through with a spit; and he, though forgiven, and his descendants, were consequently obliged to assume the red hand in the family coat. The picture represents the hand minus a finger, and this is also accounted for. It was believed that the successive generations of the Holts got leave each to take away one finger from the hand, as a step towards the total abolition of the symbol of punishment from the family escutcheon.

In like manner, the bloody hand upon a monument in the church of Stoke d'Abernon, Surrey, has a legend connected with it, to the effect that a gentleman, being out shooting all day with a friend, and meeting no success, vowed he would shoot at the first live thing he met; and meeting a miller, he fired and brought him down dead. The red hand in a hatchment at Wateringbury Church, Kent, and on a table on the hall of Church-Gresly, in Derbyshire, has found similar explanations. Indeed, there is scarcely a baronet's family in the country respecting which this red hand of Ulster has not been the means of raising some grandam's tale, of which murder and punishment are the leading features.

In the case of the armorial bearings of Nelthorpe of Gray's Inn, co. Middlesex, which is subjoined, the reader will probably acknowledge

that, seeing a sword erect in the shield, a second sword held upright in the crest, and a red hand held up in the angle of the shield, nothing could well be more natural, in the absence of better information, than to suppose that some bloody business was hinted at.

The fables thus suggested by the red hand of Ulster on the baronets' coats form a good example of a class which we have already done something to illustrate,—those, namely, called myths, which are now generally regarded as springing from a disposition of the human mind to account for actual appearances by some imagined history which the appearances suggest.

It may be remarked that, from the disregard of the untutored intellect to the limits of the natural,

myths as often transcend their proper bounds as keep within them. Thus, wherever we have a deep, dark, solitary lake, we are sure to find a legend as to a city which it submerges. The city was a sink of wickedness, and the measure of its iniquities was at last completed by its inhospitality to some saint who came and desired a night's lodging in it; whereupon the saint invoked destruction upon it, and the valley presently became the bed of a lake. Fishermen, sailing over the surface in calm, clear weather, sometimes catch the forms of the towers and spires far down in the blue waters, &c. Also, wherever there is an ancient castle ill-placed in low ground, with fine airy sites in the immediate neighbourhood, there do we hear a story how the lord of the domain originally chose a proper situation for his mansion on high ground; but, strange to say, what the earthly workmen reared during each day was sure to be taken down again by visionary hands in the night-time, till at length a voice was heard commanding him to build in the low ground—a command which he duly obeyed. A three-topped hill is sure to have been split by diabolical power. A solitary rocky isle is a stone dropped from her apron by some migrating witch. Nay, we find that, a wear having been thrown across the Tweed at an early period for the driving of mills, the common people, when its origin was forgotten, came to view it as one of certain pieces of taskwork which Michael Scott the wizard imposed upon his attendant imps, to keep them from employing their powers of torment upon himself.

Flat rock surfaces and solitary slabs of stone very often present hollows, oblong or round, resembling the impressions which would be made upon a soft surface by the feet of men and animals. The real origin of such hollows we now know to be the former presence of concretions of various kinds which have in time been worn out. But in every part of the earth we find that these apparent footprints have given rise to legends, generally involving supernatural incidents. Thus a print about two feet long, on the top of the lofty hill called Adam's Peak, in Ceylon, is believed by the people of that island to be the stamp of Buddha's foot as he ascended to heaven; and, accordingly, it is amongst them an object of worship.

Even simpler objects of a natural kind have become the bases of myths. Scott tells us, in *Marmion*, how, in popular conception,

'St Cuthbert sits and toils to frame
The sea-born beads that bear his name;'

said beads being in fact sections of the stalks of encrinetes, stone-skeletoned animals allied to the star-fish, which flourished in the early ages of the world. Their abundance on the shore of Holy Island, where St Cuthbert spent his holy life in the seventh century, is the reason why his name was connected with their supposed manufacture.

The so-called fairy-rings in old pastures—little circles of a brighter green, within which, it is supposed, the fairies dance by night—are now known to result from the outspreading propagation of a particular agaric, or mushroom, by

which the ground is manured for a richer following vegetation.

At St Catherine's, near Edinburgh, is a spring containing *petroleum*, an oil exuding from the coal-beds below, but little understood before our own age. For many centuries this mineral oil was in repute as a remedy for cutaneous diseases, and the spring bore the pretty name of the Balm Well. It was unavoidable that anything so mysterious and so beneficial should become the subject of a myth. Boece accordingly relates with all gravity how St Catherine was commissioned by Margaret, the consort of Malcolm Canmore, to bring her a quantity of holy oil from Mount Sinai. In passing over Lothian, by some accident she happened to lose a few drops of the oil; and, on her earnest supplication, a well appeared at the spot, bearing a constant supply of the precious unguent.

Sound science interferes sadly with these fanciful old legends, but not always without leaving some doubtful explanation of her own. The presence of water-laid sand and gravel in many parts of the earth very naturally suggests tales of disastrous inundations. The geologist himself has heretofore been accustomed to account for such facts by the little more rational surmise of a discharged lake, although there might be not the slightest trace of any dam by which it was formerly held in. The highland fable which described the parallel roads of Glenroy as having been formed for the use of the hero Fingal, in hunting, was condemned by the geologist: but the lacustrine theory of Macculloch, Lauder, and other early speculators, regarding these extraordinary natural objects, is but a degree less absurd in the eyes of those who are now permitted to speculate on upheavals of the frame of the land out of the sea—a theory, however, which very probably will sustain great modifications as we become better acquainted with the laws of nature, and attain more clear insight into their workings in the old world before us.

QUARANTINE.

If a hundred persons were asked the meaning of the word quarantine, it is highly probable that ninety-nine would answer, 'Oh! it is something connected with shipping—the plague and yellow-fever.' Few are aware that it simply signifies a *period of forty days*; the word, though common enough at one time, being now only known to us through the acts for preventing the introduction of foreign diseases, directing that persons coming from infected places must remain forty days on shipboard before they be permitted to land. The old military and monastic writers frequently used the word to denote this space of time. In a truce between Henry the First of England and Robert Earl of Flanders, one of the articles is to the following effect:—'If Earl Robert should depart from the treaty, and the parties could not be reconciled to the king in three *quarantines*, each of the hostages should pay the sum of 100 marks.'

From a very early period, the founders of our legal polity in England, when they had occasion to limit a short period of time for any particular purpose, evinced a marked predilection for the quarantine. Thus, by the laws of Ethelbert, who died in 616, the limitation for the payment of the fine for slaying a man at an open grave was fixed to forty nights, the Saxons

reckoning by nights instead of days. The privilege of sanctuary was also confined within the same number of days. The eighth chapter of Magna Charta declares that 'A widow shall remain in her husband's capital message for forty days after his death, within which time her dower shall be assigned.' The tenant of a knight's fee, by military service, was bound to attend the king for forty days, properly equipped for war. According to Blackstone, no man was in the olden time allowed to abide in England more than forty days, unless he were enrolled in some tithing or decennary. And the same authority asserts that, by privilege of Parliament, members of the House of Commons are protected from arrest for forty days after every prorogation, and forty days before the next appointed meeting. By the ancient *Costumale* of Preston, about the reign of Henry II., a condition was imposed on every new-made burgess, that if he neglected to build a house within forty days, he should forfeit forty pence.

In ancient prognostications of weather, the period of forty days plays a considerable part. An old Scotch proverb states:

'Saint Swithin's day, gin ye do rain,
For forty days it will remain;
Saint Swithin's day, and ye be fair,
For forty days 'twill rain nae mair.'

There can be no reasonable doubt that this precise term is deduced from the period of Lent, which is in itself a commemoration of the forty days' fast of Christ in the wilderness. The period of forty days is, we need scarcely say, of frequent occurrence in Scripture. Moses was forty days on the mount; the diluvial rain fell upon the earth for forty days; and the same period elapsed from the time the tops of the mountains were seen till Noah opened the window of the ark.

Even the pagans observed the same space of time in the mysteries of Ceres and Proserpine, in which the wooden image of a virgin was lamented over during forty days; and Tertullian relates as a fact, well known to the heathens, that for forty days an entire city remained suspended in the air over Jerusalem, as a certain presage of the Millennium. The process of embalming used by the ancient Egyptians lasted forty days; the ancient physicians ascribed many strange changes to the same period; so, also, did the vain seekers after the philosopher's stone and the elixir of life.

MAY 23.

St Julia, martyr, 5th century. St Desiderius, Bishop of Langres, martyr, 411 (?). St Desiderius, bishop of Vienne, martyr, 612.

Born.—Elias Ashmole, antiquary, 1617, *Litchfield*; Dr William Hunter, 1718, *Kilbride, Lanarkshire*; Empress Catherine of Russia, 1729, *Zerbst Castle, Germany*; James Boaden, theatrical writer, biographer, 1762.

Died.—Emperor Henry V., 1125, *Utrecht*; Jerome Savonarola, religious and political reformer and orator, burnt at *Florence*, 1498; Francis Algarotti (physical science), 1764, *Pisa*; William Woollet, engraver, 1785; Richard Lalor Sheil, poet, politician, 1851, *Florence*.

SAVONAROLA.

The excessive corruption at which the church had arrived in the fifteenth century brought out an earlier and Italian Luther in the person of Gioralano Savonarola, a Dominican preacher of

Florence, a man of great natural force of character, well fitted to be a reformer, but who was also one of those extreme pietists who derive their main energies from what they accept as divine promptings and commands whispered to them in their moments of rapture. Of Savonarola it was alleged that he had frequent conversations with God, and it was said the devils who infested his convent trembled at his sight, and in vexation never mentioned his name without dropping some of its syllables. His stern and daring eloquence caused his name to ring through Florence, and from Florence through Italy. He denounced the luxury and vices of the Florentines with a terrible thoroughness, and so effectually, that he quickly gathered around him a party of citizens as self-denying and earnest as himself. He openly resisted the despotism of the Medici, and sided with the democracy, prophesying judgment and woe for his adversaries. The lives led by the clergy and the papal court he pronounced infernal, and sure to sweep the church to perdition if repentance and amendment were not early sought and found. Pope Alexander VI. excommunicated and forbade him to preach; but he forbore only a while, and when he resumed preaching it was with greater vehemence and popular applause than before. The pope and the Medici then resolved to fight him with his own weapons. The Dominicans, glorified in their illustrious brother, were envied by the Franciscans. Savonarola had posted a thesis as a subject for disputation, and it was not difficult to prompt a Franciscan to prove it heretical. The strife between the two orders grew very hot. One of the Dominicans, in his zeal for the orthodoxy and sanctity of Savonarola, offered to prove them by walking through a fire unhurt. A Franciscan, not to be beaten, offered to do the same. The magistrates made arrangements for the trial. In the great square the city assembled to witness the spectacle. A pile of faggots was laid, but when set a-blaze, and everything was ready, Savonarola proposed that his champion should bear the consecrated host as his protection through his fiery walk. The magistrates would not listen to the proposal; its impiety, they said, was horrible. Savonarola was inflexible; he would not allow the ordeal to go forward except on that condition; and in the dispute the faggots consumed uselessly away. This business was his ruin with the Florentines. His enemies seized the advantage, broke into his convent of San Marco, and dragged him, his champion, and another monk to prison. The pope appointed a commission of clergy and laymen to try them, and the end was, that all three were strangled, and then burned, on the 23rd May 1498.

THE IRON CROWN OF ITALY.

On the 23rd of May 1805, when the Emperor Napoleon the First was crowned King of Italy at Milan, he, with his own hands, placed the ancient iron crown of Lombardy on his head, saying, 'God has given it to me, let him beware who would touch it;' thus assuming, as Sir Walter Scott observes, the haughty motto

attached to the antique diadem by its early possessors.

This celebrated crown is composed of a broad circle of gold, set with large rubies, emeralds,

THE IRON CROWN OF ITALY.

and sapphires, on a ground of blue and gold enamel. The jewels and embossed gold exhibit a very close resemblance to the workmanship of an enamelled gold ornament, inscribed with the name of King Alfred the Great, which was found in the isle of Athelney, in Somersetshire, about the close of the seventeenth century, and is now carefully preserved in the Ashmolean museum at Oxford. But the most important part of the iron crown, from which, indeed, it derives its name, is a narrow band of iron, about three-eighths of an inch broad, and one-tenth of an inch in thickness, attached to the inner circumference of the circle. This inner band of sacred iron—perfectly visible in the above engraving—is said to have been made out of one of the nails used at the crucifixion, given by the Empress Helena, the alleged discoverer of the cross, to her son Constantine, as a miraculous protection from the dangers of the battle-field. The ecclesiastics who exhibit the crown point out as a 'permanent miracle,' that there is not a single speck of rust upon the iron, though it has now been exposed more than fifteen hundred years. The earliest quasi-historical notice of the iron crown is, that it was used at the coronation of Agilulfus, King of Normandy, in the year 591.

Bonaparte, after his coronation at Milan, instituted a new order of knighthood for Italy, entitled the Iron Crown, on the same principles as that of the Legion of Honour for France.

MINISTERIAL FISH DINNER.

A ministerial fish dinner, in which whitebait forms a prominent feature, always signalizes the close of the parliamentary session—hilarious, we believe, as the break-out of boys from school on an unexpected holiday, whether the recent votes should have indicated approaching removal from the Treasury benches, or their continued and permanent occupation. Under this day, for reasons which will appear, we give an account (which was furnished to the *Times* in 1861) of the origin of the festival.

'Some of your readers have no doubt heard of Dagenham Reach, in Essex, a lake formed by the sudden irruption of the waters of the Thames over its banks nearly a century ago, covering the adjacent lands, from which they have never retired. On the banks of Dagenham Lake once stood, and, for aught I know, may still stand, a cottage occupied by a princely merchant named Preston, a baronet, of Scotland and Nova Scotia, and some time M.P. for Dover. He called it his "fishing cottage," and often in the spring went thither with a friend or two to escape the toils of parliamentary and mercantile duties. His most frequent guest was, as he was familiarly styled, Old George Rose, Secretary of the Treasury, and an Elder Brother of the Trinity House. Sir Robert also was an active member of that fraternity. Many a joyous day did these two worthies pass at Dagenham Reach, undisturbed by the storms that raged in the political atmosphere of Whitehall and St Stephen's Chapel. Mr Rose once intimated to Sir Robert that Mr Pitt, of whose friendship they were both justly proud, would, no doubt, much delight in the comfort of such a retreat. A day was named, and the Premier was accordingly invited, and received with great cordiality at the "fishing cottage." He was so well pleased with his visit and the hospitality of the baronet—they were all considered two, if not three-bottle men—that on taking leave Mr Pitt readily accepted an invitation for the following year, Sir Robert engaging to remind him at the proper time. For a few years Mr Pitt was an annual visitor at Dagenham Reach, and he was always accompanied by Old George Rose. But the distance was great, railways had not yet started into existence, and the going and coming were somewhat inconvenient for the First Minister of the Crown. Sir Robert, however, had his remedy, as have all such jovial souls, and he proposed that they should in future dine nearer London. Greenwich was suggested as a convenient *salle à manger* for the three ancients of the Trinity House—for Pitt was also a distinguished member of that august fraternity. The party was now changed from a trio to a quartet, Mr Pitt having requested to be permitted to bring Lord Camden. Soon after this migration a fifth guest was invited, Mr Long, afterwards Lord Farnborough. All still were the guests of Sir Robert Preston; but, one by one, other notables were invited (all of the Tory school), and at last Lord Camden considerably remarked that, as they were all dining at a tavern, it was only fair that Sir Robert Preston should be released from the expense. It was then arranged that the dinner should be given as usual by Sir Robert Preston, that is to say, at his invitation, and he insisted on still contributing a buck and champagne; but the rest of the charges of mine host were thenceforward defrayed by the several guests, and on this plan the meetings continued to take place annually till the death of Mr Pitt. Sir Robert was requested in the following year to summon the several guests, the list of whom by this time included most of the Cabinet Ministers. The time for meeting was usually after Trinity Monday, a short period before the end of the Session. By degrees a meeting, which was originally purely gastronomic, appears to have assumed, in consequence of the long reign of the Tories, a political or semi-political character. In the year 18—Sir Robert Preston died, but the affairs had become so consolidated by long custom, that the "fish dinner," as it was now called, survived; and Mr Long (I believe he was then Lord Farnborough) undertook to summon the several guests to the "Ministerial fish dinner," the private secretary of the late Sir Robert Preston furnishing to the private secretary of Lord Farnborough the names of the noblemen and gentlemen who had

been usually invited. Up to the decease of the baronet the invitations had been sent privately. I have heard that they now go in Cabinet boxes, and the party was certainly limited to the members of the Cabinet for some time. No doubt, eating and drinking are good for digestion, and a good digestion makes men calm and clear-headed, and calmness and a clear head promote logical reasoning, and logical reasoning aids the counsels of the nation, and *reipublicæ consilio* the nation goes on to glory. So I suppose, in one way or another, the "Ministerial Whitebait Dinner" conduces to the grandeur and prosperity of our beloved country.'

A HEREFORDSHIRE LADY IN THE TIME OF THE CIVIL WAR.

Amidst the leisure in the social life of two centuries since, time was found for recording a number of curious particulars bearing upon events, persons, circumstances, and manners, which are not to be found in the more pretentious histories of the period. Such information must be sought in the old family diaries, of which many specimens have been brought to light of late years, largely gratifying the fondness for archaeological illustration by which the present age is distinguished from its predecessor.

A very interesting memorial of this sort is in the possession of Sir Thomas Edward Winnington, Bart., of Stamford Court, in the county of Worcester. It is the autograph account-book of Mrs Joyce Jefferies, a lady resident in Herefordshire and Worcestershire during the civil war, and who was half-sister and sole executrix of Humphrey Conyngesby, Esq., who travelled on the Continent between 1594 and 1610, in which latter year he left London for Venice, 'and was never after seen by any of his acquaintance on this side of the sea or beyond, nor any certainty known of his death, where, when, or how.' The book is kept in a clear hand, and comprises the receipt and expenditure of nine years; and besides containing many curious particulars of the manners of the age, sets forth her own very extraordinary self—the general representative of a class that is now exhibited only in the family pictures of the country ladies of the time.*

Mrs Jefferies lived in Widemarsh Street, Hereford, and her income amounted, on an average, to £500 per annum; she lived far beyond her means, not by over-indulgence in costly luxuries, for her own record is a tissue of benevolence from beginning to end, and three-fourths of the entries consist of sums bestowed in presents, excused in loans, or laid out in articles to give away. By being over free to her god-children,—by building her house in Widemarsh Street, which cost £800, and which was ordered to be pulled down in the time of the rebellion under Charles I., and the materials sold for £50—by other calamities of war—but worse, by knavish servants—she had so far consumed her means, that, had not her nephew received her in Holme Castle, she must have come to want in her old age.

Her personal appearance and style of dress may be gathered from her book. In 1633, in her palmy days, she wore a tawny camlet and kirtle, which, with trimmings and making, cost £10 17s. 5d. She had at the same time a black silk calimanco loose gown,

* The paper in *Archæologia*, vol. xxxvii., whence these details have been selected and condensed, is accompanied with *Historical Observations and Notes*, by John Webb, M.A., F.S.A., and was read to the Society of Antiquaries on April 17, and May 1, 1856. The first portion relates to points of character and domestic matters; and its sequel to the civil strife which at this period distracted the homes of our forefathers, and in which our benevolent lady had her share.

petticoat, and bodice, which, with the making, came to £18 1s. 8d.; and a Polonia coat and skirt cost in all £5 1s. 4d. Tailors were the male dressmakers of the time; and Mrs Jefferies employed them in Hereford, Worcester, and London. Sir Philip Warwick, describing the appearance of Cromwell in the House of Commons, remarks that his 'clothes were made by an ill country tailor.' But the country tailor was not the only artist who was unskilful in the trade; for the above tawny coat and silk calimanco dresses were so badly made in London, that they had to be altered by a country tailor. She had about the same period a head-dress of black tiffany; wore ruff-stocks, and a beaver hat with a black silk band, and adopted worsted hose of different colours, sometimes blue, sometimes grass-green. Among the articles of her toilet may be observed false curls and curling-irons; she had Cordovan gloves, sweet gloves, and embroidered gloves. She wore diamond and cornelian rings, used spectacles, and carried a whistle for a little dog, suspended at her girdle. A cipress (Cyprus?) cat, given to her by a Herefordshire friend, the Lady Dansey, of Brinsop, was no doubt a favourite; and she kept a throstle in a twiggen cage. The young lady above mentioned, who resided with her, was dressed at her expense, in a manner more suitable to her earlier time of life: for instance, she had in August 1638, a green silk gown, with a blue taffeta petticoat. At Easter following, she went to a christening, arrayed in a double cobweb lawn, and had a muff. In April 1639, she was dressed in a woollen gown, 'spun by the cook's wife, Whooper,' liver-coloured, and made up splendidly with a stomacher laced with twisted silver cord. Another article of this young lady's wardrobe was a gown of musk-coloured cloth; and when she rode out she was decked in a bastard scarlet safeguard coat and hood, laced with red, blue, and yellow; but none of her dresses were made by female hands.*

The household establishment of Mrs Jefferies is by no means, for a single person, on a contracted scale. Many female servants are mentioned; two having wages from £3 to £3 4s. per annum, with gowns of dark stuff at Midsummer. Her coachman, receiving 40s. per annum, had at Whitsuntide, 1639, a new cloth suit and cloak; and, when he was dressed in his best, exhibited fine blue silk ribbon at the knees of his hose. The liveries of this and another manservant were, in 1641, of fine Spanish cloth, made up in her own house, and cost upwards of nine pounds. Her man of business, or steward, had a salary of £5 16s. A horse was kept for him, and he rode about to collect her rents and dues, and to see to her agricultural concerns. She appeared abroad in a coach drawn by two mares; a nag or two were in her stable; one that a widow lady in Hereford purchased of her, she particularly designated as 'a rare ambler.' She had a host of country cousins, and was evidently an object of great interest and competition among such as sought for sponsors to their children. She seems to have delighted in the office of gossip, and the number of her god-children became a serious tax upon her purse. A considerable list of her christening gifts includes, in 1633, a silver tankard to give her

god-daughter, little Joyce Walsh, £5 5s. 6d.; 'at Heriford faier, for blue silk riband and taffeta lace for skarfs,' for a god-son and god-daughter, 8s.; and 1642, 'paid Mr Side, goldsmith in Heriford, for a silver bowle to give Mrs Lawrence daughter, which I found, too, called Joyse Lawrence, at 5s. 8d. an oz., 48s. 10d.' But to Miss Eliza Acton she was more than maternally generous, and was continually giving proofs of her fondness in all sorts of indulgence, supplying her lavishly with costly clothes and sums of money—money for gloves, for fairings, for cards against Christmas, and money repeatedly to put in her purse.

Of her system of housekeeping we get a glimpse. In summer, she frequently had her own sheep killed; and at autumn a fat heifer, and at Christmas a beef or brawn were sometimes slaughtered, and chiefly spent in her house. She is very observant of the festivals and ordinances of the Church, while they continue unchanged; duly pays her tithes and offerings, and, after the old seignorial and even princely custom, contributes for her dependents as well as herself, in the offertory at the communion at Easter; has her pew in the church of All Saints at Hereford dressed, of course, with flowers at that season by the wife of the clerk; gives to the poor's-box at the minster, and occasionally sends doles to the prisoners at Byster's Gate. Attached to ancient rules in town and country, she patronizes the fiddlers at sheep-shearing, gives to the wassail and the hinds at Twelfth Eve, when they light their twelve fires, and make the fields resound with toasting their master's health, as is done in many places to this day; and frequently in February is careful to take pecuniary notice of the first of the other sex, among those she knew, whom she met on Valentine's Day, and enters it with all the grave simplicity imaginable: 'Gave Tom Aston, for being my valentine, 2s. Gave Mr Dick Gravell, cam to be my valentine, 1s. I gave Timothy Pickering of Clifton, that was my valentine at Horn-castle, 4d.' Sends Mr Mayor a present of 10s. on his 'law-day;' and on a certain occasion dines with him, when the waits, to whom she gives money, are in attendance at the feast; and contributes to these at New Year and Christmas tide, and to other musical performers at entertainments or fairs; seems fond of music, and strange sights, and 'rarer monsters.' She was liberal to Cherlickcome 'and his Jack-an-apes,' some vagrant that gained his living by exhibiting a monkey; and at Hereford Midsummer fair, in 1640, 'to a man that had the dawncing horse.' To every one who gratified her by a visit, or brought her a present, she was liberal; as well as to her own servants, and attendants at friends' houses. She provided medicine and advice for those who were sick, and could not afford to call in medical aid; and she took compassion upon those who were in the chamber of death and house of mourning, as may be seen in this entry: '1648, Oct. 29. For a pound of shugger to send Mrs Eaton when her son Fitz Wm. lay on his death-bed, 20d.'

In many instances, the feeling is worth more than the gift bestowed. She makes a little boy happy by threepence to put into his purse; and to a poor fellow that was stationed to keep watch and ward at one of the city gates near her house, she contributed 'at several times,' 9d.

Not a single direct expression of ill-will can be detected in any of her comments. Mr Garnons, an occasional suitor for relief, she styles 'an unthrifty gentleman;' amuses herself in setting down a small bad debt, and after recording the name of the borrower, and the trifling sum lent, adds, in a note, by way of anticipation, 'which he will never pay.' In another case, that of a legal transaction, in which a

* The spelling of this book is one of its curious features; it is a transcript of speech as well as an exposition of thought; for it corresponds closely with the mode of expression and pronunciation prevailing among the common people of Herefordshire, Worcestershire, and Salop, at the present day. Thus, in January 1642, we have a striking example in the dress of Miss Acton. 'A yeard and a half of scarlet baize was bought to make her a waistcoate to dress her in, and four yeards of red galoon to bind him, i.e., the waistcoate.

person had agreed to surrender certain premises to her use, and she had herself paid for drawing the instrument upon which he was to have acted, she observes, 'But he never did, and I lost my money.' In all matters she exhibits a gentle and a generous mind.

But it may be repeated that her greatest triumph, and one that her relations and acquaintance took care she should frequently enjoy, was at a *christening*. Here she was perfectly happy, if we may judge from what she herself tells us: 'Childe borne called Joyce. Memorand. that my cosin Mrs Jane Jeffrys, of Horn-castle, was delivered of a daughter about a q'rter of an howre before 9 o'clock at night on Thursday night, being Christmas-eve's eve, and ye 23rd day of December 1647; and hitt was baptised on ye Munday following, being St John's-day, 27 day, 1647, and named Joyce. Ould Mrs Barkley and myself Joyse Jeffreys were gossipis. God blesse hitt: Amen. Hitt went home with nurce Nott to the Smeeths in greate Chelsey's parish, ye same Munday after diner, to nurce.'

'December 27. Gave the midwyfe, good wyfe Hewes, of Upper Tedston, the christening day, 10s.' 'Munday. Gave nurce Nott ye same day, 10s.'

But what at this season gave the strong spur to her emotions, was the circumstance of the infant having been called by her own Christian name. The exact period of her decease is unknown; the codicil of her will carries her to 1650; and it is shown that she was buried in the chancel of the parish church of Clifton-upon-Tyne, on the border of Worcestershire.

MAY 24.

Saints Donatian and Rogatian, martyrs, about 287. St Vincent of Lerins, 450. St John de Prado, priest, martyr.

Born.—Bishop Jewel, 1522; Charles Von Linné (Linnæus), illustrious naturalist, 1707; Sir Robert Adair, ambassador, 1763; Albert Smith, comic writer, 1816, *Chertsey*; John Henry Foley, artist, 1818, *Dublin*; Her Majesty Queen Victoria, 1819, *Kensington*.

Died.—Pope Gregory VII., 1085; Nicolas Copernicus, astronomer, 1543, *Thorn, Prussia*; Robert Cecil, Earl of Salisbury, minister to James I., 1612; George Brydges, Lord Rodney, naval commander, 1792; Miss Jane Porter, novelist, 1850, *Bristol*.

LINNÆUS.

Carl Linné (usually Latinized to Linnæus) was born at Rashalt, a hamlet in the south of Sweden, on the 24th of May (N.S.) 1707. His father was a clergyman, whose house was situated in a delightful spot on the banks of a fine lake, surrounded by hills and valleys, woods and cultivated grounds. As Linné was wont to say, he walked out of his cradle into a garden. His father and an uncle had both a passion for horticulture, and they early inspired the child with their own spirit. Carl, however, was reckoned a dull boy. He was destined for the church; but for theological studies he had a positive aversion, and, as a consequence, he made no progress in them. He was not disinclined to study, but his study was botany, and out of botany neither money nor advancement was to be had. It was finally resolved to make him a physician, and at the age of twenty he was sent to the University of Lund, where he was 'less

known for his knowledge of natural history than for his ignorance of everything else.' By good fortune he became a lodger in the house of the Professor of Medicine, Dr Stobæus, who discerning genius where others saw stupidity, gave Linné the free range of his library and museum, and treated him with all the kindness of a father. In this genial atmosphere he came to the determination to spend his life as a student of Nature, a resolve from which neither poverty nor misery ever moved him. To the regret of Stobæus he left Lund for Upsala, thinking that it was a better university. His father could allow him no more than eight pounds a year. Often he felt the pangs of hunger, and holes in his shoes he stuffed with paper; but he read and attended lectures with an energy which let nothing slip, and was sure in the end to meet with reward.

LINNÆUS, AS HE TRAVELED IN LAPLAND.

Celsius, the Professor of Divinity, himself a botanist, discovered Linné one day in the academical garden intently examining a plant, and, entering into conversation with the poor student, surprise followed surprise as the extent of his knowledge revealed itself. He led Linné

to Rudbeck, the Professor of Botany, who took him into his house as tutor to his children, and allowed him to lecture as his deputy. In the quiet of Rudbeck's library Linné first conceived those schemes of classification by which he was to revolutionize botanical science. On the 12th of May 1732, he set forth on his celebrated journey to Lapland. Alone, sometimes on horseback and sometimes on foot, he skirted the borders of Norway, and returned by the eastern coast of the Gulf of Bothnia to Upsala on the 12th of October, having travelled 4,000 miles, and brought back upwards of one hundred plants before unknown or undescribed. The university rewarded him with £10, his travelling expenses. With £15 he had scraped together, he went to Holland in 1735, to seek a university where at a cheap rate he might obtain a diploma, to enable him to practise physic for a livelihood. At Hardervyck he succeeded in this object, defending on the occasion the hypothesis 'that intermittent fevers are owing to fine particles of clay, taken in with the food, lodging in the terminations of the arterial system.' In Holland, by the advice of Boerhaave, he tarried for three years, making many delightful acquaintances in that country of flowers. Clifort, a rich Dutch banker, who had a fine garden and museum, committed them to his care to put in order. He paid liberally, but worked Linné very hard, especially in editing a grand folio, *Hortus Cliffartianus*, adorned with plates, and full of learned botanical lingo, for which Linné had nothing but contempt. In the same years he managed to get printed several works of his own, his *Flora Lapponica*, *Fundamenta Botanica*, *Genera Plantarum*, and *Critica Botanica*, by which he quickly became famous. From Holland he made an excursion to England, but was disappointed alike in his reception by English botanists, and in the state of their collections as compared with the Dutch. There is a tradition, that when he first saw the golden bloom of the furze on Putney Heath, he fell on his knees enraptured with the sight. He vainly endeavoured to preserve some specimens of the plant through the Swedish winter. On leaving Holland he had an interview with Boerhaave on his death-bed. His parting words were, 'I have lived out my time, and done what I could. May God preserve thee, from whom the world expects much more! Farewell, my dear Linnæus!'

On his return to Sweden he married, and commenced business in Stockholm as a physician; but in 1740 he was called to Upsala as Professor of Medicine, and shortly afterwards was transferred to the chair of Botany. In Upsala, as professor and physician, he spent the remaining eight-and-thirty years of his life. Honours from all nations, and wealth, flowed freely unto him. The king raised him to nobility, and he took the title of Von Linné. Ease, however, induced no cessation of his old habits of industry. To the end he laboured incessantly. He cared for nothing but science, and he knew no delight but to be busy in its service. Towards the close of his life he suffered from a complication of diseases, but from his bed he kept dictating to an amanuensis on his favourite subjects. He died on the

10th of January 1778, aged seventy years, seven months, and seven days; closing in a blaze of honour and renown a life which had commenced in obscurity and poverty.

The labours of Linné were not confined to botany, but ranged over all branches of natural history; but with botany his fame is indissolubly associated. The classification and nomenclature of plants he found in utter confusion—a confusion all the worse, inasmuch as it was formal, and the product of a pedantry jealous of innovation and proud of its jargon. The changes introduced by Linné were, however, such obvious improvements, that they attained general acceptance with surprising facility. It is true that Linné's classification of the vegetable kingdom was itself artificial, and that it has almost everywhere given place to the natural system of Jussieu, but none the less is the world his debtor. It is the glory of science that it is progressive, and that the high achievement of to-day makes way for a higher to-morrow. It is rarely the lot of the *savant* to set forth any system or hypothesis which is more than provisional, or which sooner or later does not suggest and yield place to a more comprehensive. But without the first it is not likely we should have the second; without Linné, we should scarcely have enjoyed Jussieu.

A QUACK OCULIST.

Sir William Read, originally a tailor or a cobbler, became progressively a mountebank and a quack doctor, and gained, in his case, the equivocal honour of knighthood from Queen Anne. He is said to have practised by 'the light of nature'; and though he could not read, he could ride in his own chariot, and treat his company with good punch out of a golden bowl. He had an uncommon share of impudence; a few scraps of Latin in his bills made the ignorant suppose him to be wonderfully learned. He did not seek his reputation in small places, but practised at that high seat of learning, Oxford; and in one of his addresses he called upon the Vice-Chancellor, University, and the City, to vouch for his cures—as, indeed, he did upon the people of the three kingdoms. Blindness vanished before him, and he even deigned to practise in other distempers; but he defied all competition as an oculist.

Queen Anne and George I. honoured Read with the care of their eyes; from which one would have thought the rulers, like the ruled, as dark intellectually as Taylor's (his brother quack) coach-horses were corporeally, of which it was said five were blind in consequence of their master having exercised his skill upon them.

Dr Radcliffe mentions this worthy as 'Read the mountebank, who has assurance enough to come to our table upstairs at Garraway's, swears he'll stake his coach and six horses, his two blacks, and as many silver trumpets, against a dinner at Pontack's.'

Read died at Rochester, May 24, 1715. After Queen Anne had knighted him and Dr Hannes, there appeared the following lines:—

'The Queen, like Heav'n, shines equally on all,
Her favours now without distinction fall:
Great Read and slender Hannes, both knighted, show
That none their honours shall to merit owe.
That Popish doctrine is exploded quite,
Or Ralph * had been no duke, and Read no knight.

* Ralph, first Duke of Montague.

That none may *virtue* or their *learning* plead,
This has no *grace*, and that can hardly read.'

There is a curious portrait of Read, engraved in a sheet, with thirteen vignettes of persons whose extraordinary cases he cured.

SUPERSTITIONS ABOUT ANIMALS.

The robin is very fortunate in the superstitions which attach to it. The legend which attributes its red breast to his having attended our Lord upon the cross, when some of His blood was sprinkled on it, may have died out of the memory of country-folk; but still—

'There's a divinity doth hedge—a robin,'
which keeps it from innumerable harms.

His nest is safe from the most ruthless bird-nesting boy. 'Yon must not take robin's eggs; if you do, you will get your legs broken,' is the saying in Suffolk. And, accordingly, you will never find their eggs on the long strings of which boys are so proud.

Their lives, too, are generally respected. 'It is unlucky to kill a robin.' 'How badly you write,' I said one day to a boy in our parish school; 'your hand shakes so that you can't hold the pen steady. Have you been running hard, or anything of that sort?' 'No,' replied the lad, 'it always shakes; I once had a robin die in my hand; and they say that if a robin dies in your hand, it will always shake.'

The cross on the donkey's back is still connected in the rustic mind with our Lord's having ridden upon one into Jerusalem on Palm Sunday; and I wish that it procured him better treatment than he usually meets with.

[A good many years ago a writer in *Blackwood's Magazine*, advertng to the fact that the ass must have borne this mark before the time of Christ, suggested that it might be a premonition of the honour which was afterwards to befall the species. But the naturalist comes rather roughly across this pleasant fancy, when he tells that the cross stripe is, as it were, the evanishment in this species of the multitude of stripes which we see in the allied species, the zebra.—*Swainson's Zoology*.]

It is unky for you that martins should build against your house, for they will never come to one where there is strife. Soon after setting up housekeeping for myself, I was congratulated on a martin having built its nest in the porch over my front door.

It is unky to count lambs before a certain time; if you do, they will be sure not to thrive. With this may be compared the popular notion of the character of David's sin in numbering the people of Israel and Judah, related in the last chapter of the Second Book of Samuel—a narrative which makes some people look with suspicion and dislike upon our own decennial census.

It is unlucky to kill a *harvest man*, *i. e.*, one of those long-legged spiders which one sees scrambling about, perfectly independent of cobwebs: if you do kill one, there will be a bad harvest.

If there are superstitions about animals, it is satisfactory to find them leaning to the side of humanity; but the poor hedgehog finds to his cost that the absurd notion of his sucking the teats of cows serves as a pretext for the most cruel treatment.

It is currently believed that if you put horsehairs into a spring they will turn to eels. A few months ago, a labouring man told a friend of mine that 'he knew it was so, for he had proved it.' He had put a number of horsehairs into a spring near his house, and in a short time it was full of young eels.

Mermaids are supposed to abound in the ponds and ditches in this neighbourhood. Careful mothers use them as bugbears to prevent little children from going

too near the water. I once asked a child what mermaids were, and he was ready with his answer at once, 'Them nasty things what crome you (*i. e.*, hook you) into the water!' Another child has told me, 'I see one wunst, that was a grit big thing loike a feesh.' Very probably it may have been a pike, basking in the shallow water. Uncaught fish are very likely to have their weight and size exaggerated. Everybody knows what enormous fish those are which anglers lose. A man has told me of carp, that he could 'compare them to nothing but great fat hogs,' which I have afterwards caught in a drag-net, and found to be not more than four pounds weight. No wonder, then, that a little child, with its mind prepared to believe in mermaids, should have seen something big enough for one in a pike.

The saying about magpies is well known—

'One, sorrow;
Two, mirth;
Three, a wedding;
Four, death.'

And it is a curious thing that, as the man said about the horsehairs being turned into eels,—'I have proved it;' for, as I was on my way to be married, travelling upon a coach-top to claim my bride the next day, three magpies—neither more nor less—flew across the road.

Suffolk.

MAY 25.

St Urban, pope and martyr, 230 (?). Saints Maximus (vulgarly Meuxe) and Venerand, martyrs in Normandy (5th century?). St Adhelm, first bishop of Sherburn (since Salisbury), 709. St Dunhade, abbot of Iona, 717. St Gregory VII., pope (Hildebrand), 1085. St Mary Magdalen of Pazzi, 1607.

Born.—John Mason Good, medical writer, 1764, *Epping*; John Pye Smith, D.D., learned theologian, 1774, *Sheffield*; Francis Edward Todleben (military engineering), 1818, *Mitau, Courland*.

Died.—Cardinal D'Amboise, minister of Louis XII., 1510; Dr George Fordyce, medical writer and teacher, 1802, *London*; Dr William Paley, author of *Natural Theology, Evidences of Christianity, &c.*, 1805; Edmond Malone, critical writer, 1812.

THE PLAGUE AT MARSEILLES, 1720.

The arrival of a ship from Sidon on this day, in 1720, at Marseilles, brought the plague into that city, and caused the death of an immense number of persons. It was the last time that this formidable disease appeared in Western Europe in any force. Only by the most active and rigorous arrangements was the evil prevented from extending into the rest of France. Severe as the affliction was, it brought out some gratifying results, in showing of how much abandonment of self human nature is capable. A monument was erected in 1802, to commemorate the courage shown on the occasion by the principal public functionaries of the city, and by upwards of 150 priests, and a great number of doctors and surgeons, who died in the course of their zealous efforts to relieve and console the afflicted. Amongst other matters adverted to on this interesting monument is 'Homage au Dey Tunisien, qui respecta ce don qu'un pape (Clement XI.) faisoit au malheur.'

FLITTING-DAY IN SCOTLAND.

The 25th of May, as the Whitsunday term (old style), is a great day in Scotland, being that on which, for the most part, people change their residences. For some unexplained reason the Scotch 'remove' oftener than their southern neighbours. They very generally lease their houses by the year, and are thus at every twelve-month's end able to shift their place of abode. Whether the restless disposition has arisen from the short leases, or the short leases have been a result of the restless disposition, is immaterial. That the restlessness is a fact, is what we have mainly to deal with.

It happens, accordingly, that at every Candlemas a Scotch family gets an opportunity of considering whether it will, in the language of the country, sit or flit. The landlord or his agent calls to learn the decision on this point; and if 'flit' is the resolution, he takes measures by advertising to obtain a new tenant. The two or three days following upon the Purification, therefore, become distinguished by a feathering of the streets with boards projected from the windows, intimating 'A House to Let.' Then comes on a most lively excitement for individuals proposing to remove; you see them going about for weeks, inspecting the numerous houses offered to them. Considerations of position, accommodation, and rent, afford scope for endless speculation. The gentleman deliberates about the rent—whether it will suit his means. The lady has her own anxious thoughts about new furniture that may be required, and how far old carpets can be made to suit the new premises. Both have their reflections as to what the Thomsons and the Jacksons will say on hearing that they are going into a house so much handsomer, more ambitiously situated, and dearer than their last. At length the pleasing dream is over—they have taken the house, and the only thing that remains to be done is to 'flit.'

Intensely longed for, the 25th of May comes at last. The departing tenant knows he must vacate his house before twelve o'clock; consequently, he has to arrange for a quick transportation of his household gods that forenoon. What he is to the new tenant, the tenant of the house he is going to occupy is to him. He dreads—hates—to be pushed; but on the other hand he must push, lest his penates be left shelterless on the street. There is accordingly all that morning a packing up, a sending off, a pushing in—upholstery meeting upholstery in deadly contention; streets encumbered with card-tables and arm-chairs in the most awkward irrelatation to their proper circumstances; articles even more sacredly domestic exposed to every idle passer-by—a straw-and-ropiness everywhere. In the humbler class of streets, the show of poor old furniture is piteous to look upon, more especially if (as sometimes happens) Jove has chosen to make it a dropping morning. Each leaves his house dishevelled and dirty—marks of torn down brackets and departed pictures on the walls, floors loaded with unaccountable rubbish—all the beauties and attractions that were so witching at Candlemas now strangely obscured. But there

is no time for cleaning, and in each must plunge, with all his goods and all his family, settle as they may. There is only a rude bivouac for the first twenty-four hours, with meals more confused and savage than the roughest pic-nic. And yet, such is the charm of novelty, that a 'flitting' is seldom spoken of as a time or occasion of serious discomfort. Nor are the drawbacks of the new dwelling much insisted on, however obvious. On the contrary, the tendency is to apologize for every less agreeable feature—to view hopefully the effect of a little cleaning here, a coat of size there; to trust that something will make that thorough draft in the lobby tolerable, and compensate for the absence of a sink in the back-kitchen. Jack does not think much of the lowness of the ceiling of the bedroom assigned to him, and Charlotte Louisa has the best hopes of the suitableness of the drawing-room (when the back-bedroom is added to it) for a dancing-party.

A few months generally serve to dispel much of this illusion, and show all the disadvantages of the new mansion in a sufficiently strong light. So when Candlemas next comes round, our tenant has probably become dissatisfied, and anxious for another change. If considerations of prudence stand in the way, the family must be content to stay where they are for another year or two. If able to encounter another change, they will undertake it, only perhaps to find new, though different discomforts, and long for other changes.

MAY 26.

St Quadratus, Bishop of Athens, 2nd century. St Eleutherius, pope, martyr, 192. St Augustine, apostle of the English (605?). St Oduvald, abbot of Melrose, 698. St Philip Neri, 1595.

ST AUGUSTINE.

Close upon thirteen hundred years ago, a monk named Gregory belonged to the great convent of St Andrew, situated on the Coelian Mount, which, rising immediately behind the Coliseum, is so well known to all travellers at Rome. Whatever may have been the good or evil of this remarkable man's character is not a fit subject for discussion here. Let it suffice to say, both his panegyrist and detractors agree in stating that he was distinguished among his contemporaries for Christian charity, and a deep interest in the bodily and spiritual welfare of children. One day, as Gregory happened to pass through the slave market at Rome, his attention was attracted by an unusual spectacle. Among the crowd of slaves brought from many parts to be sold in the great mart of Italy, there were the ebony-coloured, simple-looking negroes of Africa, the dark, cunning-eyed Greeks, the tawny Syrians and Egyptians—these were the usual sights of the place. But on this eventful occasion Gregory perceived three boys, whose fair, red and white complexions, blue eyes, and flaxen hair, contrasted favourably with the dusky races by whom they were surrounded. Attracted by feelings of benevolent curiosity, the monk asked the

slave-dealer from whence had those beautiful but strange-looking children been brought. 'From Britain, where all the people are of a similar complexion,' was the reply. To his next question, respecting their religion, he was told that they were pagans. 'Alas!' rejoined Gregory, with a profound sigh, 'more is the pity that faces so full of light and brightness should be in the hands of the Prince of Darkness; that such grace of outward appearance should accompany minds without the grace of God within.' Asking what was the name of their nation, he was told that they were called Angles, or English. 'Well said,' replied the monk, 'rightly are they called Angles, for they have the faces of angels, and they ought to be fellow-heirs of heaven.' Pursuing his inquiries, he was informed that they were 'Deirans,' from the land of Deira (the land of wild deer), the name then given to the tract of country lying between the rivers Tyne and Humber. 'Well said again,' answered Gregory, 'rightly are they called Deirans, plucked as they are from God's ire (*de ira Dei*), and called to the mercy of heaven.' Once more he asked, 'What is the name of the king of that country?' The reply was, 'Ella.' Then said Gregory, 'Allelujah! the praise of God their Creator shall be sung in those parts.'

Thus ended the memorable conversation, strangely exhibiting to us the character of Gregory and his age. The mixture of the playful and the serious, the curious distortions of words, which seem to us little more than childish punning, was to him and his contemporaries the most emphatic mode of expressing their own feelings, and instructing others. Nor was it a mere passing interest that the three English slaves had awakened in the mind of the monk; he went at once from the market-place to the Pope, and obtained permission to preach the Gospel to the English people. So, soon after, Gregory, with a small but chosen band of followers, set out from Rome for the far-distant shores of Britain. But on the third day of their journey, as they rested during the noontide heat, a locust leaped upon the book that Gregory was reading; and he then commenced to draw a moral from the act and name of the insect. 'Rightly is it called locusta,' he said, 'because it seems to say to us *loco sta*—stay in your place. I see that we shall not be able to finish our journey.' And as he spoke couriers arrived, commanding his instant return to Rome, a furious popular tumult having broken out on account of his absence.

Years passed away. Gregory became Pope; still affairs of state and politics did not cause him to forget the pagan Angles. At length, learning that one of the Saxon kings had married a Christian princess, he saw that the favourable moment had arrived to put his long-cherished project into execution. Remembering his old convent on the Cælian Mount, he selected Augustine, its prior, and forty of the monks, as missionaries to England. The convent of St Andrew still exists, and in one of its chapels there is yet shown an ancient painting representing the departure of Augustine and his followers.

Let us now turn our attention to England.

The Saxon Ethelbert, one of the dynasty of the Ashings, or sons of the Ash-tree, was then king of Kent, and had also acquired a kind of imperial sway over the other Saxon kings, as far north as the banks of the Humber. To consolidate his power, he had married Bertha, daughter of Caribert, King of Paris. Like all his race, Ethelbert was a heathen; while Bertha, as a descendant of Clovis, was a Christian; and one of the clauses in their marriage contract stipulated that she should enjoy the free exercise of her religion. Accordingly, she brought with her to England one Luidhard, a French bishop, as her chaplain; and she, and a few of her attendants, worshipped in a small building outside of Canterbury, on the site of which now stands the venerable church dedicated to St Martin. Of all the great saints of the period, the most famous was St Martin of Tours; and, in every probability, the name, as applied to this church, or the one which preceded it on the same site, was a memorial of the recollections the French princess cherished of her native country and religion while in a land of heathen strangers.

Augustine and his companions landed at a place called Ebbe's Fleet, in the island of Thanet. The exact date of this important event is unknown, but the old monkish chroniclers delight in recording that it took place on the very day the great impostor, Mahomet, was born. The actual spot of their landing is still traditionally pointed out, and a farm-house near it still bears the name of Ebbe's Fleet. It must be remembered that Thanet was at that period really an island, being divided from the mainland by an arm of the sea. Augustine selected this spot, thinking he would be safer there than in a closer contiguity to the savage Saxons; and Ethelbert, on his part, wished the Christians to remain for some time in Thanet, lest they might practise magical arts upon him.

At length a day was appointed for an interview between the missionary and king. The meeting took place under an ancient oak, that grew on the high land in the centre of Thanet. On one side sat the Saxon son of the Ash-tree, surrounded by his fierce pagan warriors; on the other the Italian prior, attended by his peaceful Christian monks and white-robed choristers. Neither understood the language of the other, but Augustine had provided interpreters in France, who spoke both Latin and Saxon, and thus the conversation was carried on. Augustine spoke first; the king listened with attention, and then replied to the following effect:—'Your words and promises are fair; but as they are new and doubtful, I cannot give my assent to them, and leave the customs I have so long observed with all my race. But as you have come hither strangers from a long distance, and as I seem to myself to have seen clearly that what you yourselves believed to be good you wish to impart to us, we do not wish to molest you; nay, rather we are anxious to receive you hospitably, and to give you all that is needed for your support; nor do we hinder you from joining all whom you can to the faith of your religion.'

Augustine and his followers, being then allowed

to reside in Canterbury, walked thither in solemn procession, headed by a large silver cross, and a banner on which was painted—rudely enough, no doubt—a representation of the Saviour. And as they marched the choristers sang one of the still famous Gregorian chants, a litany which Gregory had composed when Rome was threatened by the plague, commencing thus:—‘We beseech thee, O Lord, in all thy mercy, that thy wrath and thine anger may be removed from this city, and from thy holy house, Allelujah!’ And thus Gregory’s grand wish was fulfilled; the Allelujah was heard in the wild country of Ella, among the pagan people of the Angles, who (as Gregory said, in his punning style) are situated in the extreme angle of the world.*

On the following Whit Sunday, June 2nd, A.D. 597, Ethelbert was baptized—with the exception of that of Clovis, the most important baptism the world had seen since the conversion of Constantine. The lesser chiefs and common people soon followed the example of their king, and it is said, on the authority of Gregory, that on the following Christmas ten thousand Saxons were baptized in the waters of the Swale, near Sheerness.

When Gregory sent Augustine to the conversion of England, the politic pope gave certain directions for the missionary’s guidance. One referred to the delicate question of how the pagan customs which already existed among the Anglo-Saxons should be dealt with. Were they to be entirely abrogated, or were they to be tolerated as far as was not absolutely incompatible with the religion of the Gospel? Gregory said that he had thought much on this important subject, and finally had come to the conclusion that the heathen temples were not to be destroyed, but turned into Christian churches; that the oxen, which used to be killed in sacrifice, should still be killed with rejoicing, but their bodies given to the poor; and that the refreshment booths round the heathen temples should be allowed to remain as places of jollity and amusement for the people on Christian festivals. ‘For,’ he says, ‘it is impossible to cut away abruptly from hard and rough minds all their old habits and customs. He who wishes to reach the highest place must rise by steps, and not by jumps.’ And it would be inexcusable not to mention in *The Book of Days*, that it is through this judicious policy of Gregory that we still term the days of the week by their ancient Saxon appellations, derived in every instance from heathen deities. Christianity succeeded to Paganism, Norman followed Saxon, Rome has had to give way to Canterbury; yet the names of Odin, Thor, Tuisco, Saeter, and Friga are indelibly impressed upon our calendar.

Colonists in distant climes delight to give the familiar names of places in their loved native land to newly-established settlements in the wilderness. Something of this very natural feeling may be seen in Augustine. The first heathen temple he consecrated for Christian worship in England he dedicated to St Pancras. According to the legend, Pancras was a noble Roman youth, who, being martyred under Dioclesian at the early age of fourteen years,

* *Gens Anglorum in mundi angulo posita.*

was subsequently regarded as the patron saint of children. There was a certain fitness, then, in dedicating the first church to him, in a country that owed its conversion to three children. But there was another and closer link connecting the first church founded in England by Augustine with St Pancras. The much-loved monastery of St Andrew, on the Celian Mount, which Gregory had founded, and of which Augustine was prior, had been erected on the very estate that had anciently belonged to the family of Pancras. Nor was the monastery without its own more particular memorial. When Augustine founded a cathedral on the banks of the Medway, he dedicated it to St Andrew, to perpetuate in barbarian Britain the old name so dear in civilized Italy; and subsequently St Paul’s in London, and St Peter’s in Westminster, represented on the banks of the Thames the great churches erected over the tombs of the two apostles of Rome beside the banks of the yellow Tiber.

Little is known of Augustine’s subsequent career in England; he is said to have visited the Welsh, and journeyed into Yorkshire. He died on the 26th of May, but the year is uncertain.

Born.—Charles Duke of Orleans, 1391; Dr Michael Ettmuller, eminent German physician, 1644, *Leipsig*; John Gale, 1680, *London*; Shute Barrington, Bishop of Durham, 1734.

Died.—The Venerable Bede, historian, 735, *Jarrow, Durham*; Samuel Pepys, 1703, *Clapham*; Thomas Southern, dramatist, 1746; James Burnet, Lord Monboddo, 1799, *Edinburgh*; Francis Joseph Haydn, musical composer, 1809, *Grumpendorff, Vienna*; Capel Loffit, miscellaneous writer, 1821, *Moncallier, near Turin*; Admiral Sir Sidney Smith, G.C.B., 1840; Jacques Lafitte, eminent French banker and political character, 1844, *Paris*.

FAC-SIMILES OF INEDITED AUTOGRAPHS.

CHARLES DUKE OF ORLEANS.

The following is the signature of a remarkable and ill-fated man—the poet Duke of Orleans, father of Louis XII. of France. He was the son of the elegant, gentlemanly, and most unprincipled Duke Louis, murdered in the streets of Paris in 1407. His mother, Valentina of Milan, ‘that gracious rose of Milan’s thorny stem,’ died of a broken heart for the loss of her much-loved and unloving lord. Charles, the eldest of their four children, was born May 26, 1391. He was married in 1409, to his cousin, Princess Isabelle, the little widow of Richard II. of England. She died in the following year, leaving one daughter. Charles exerted himself earnestly to procure the banishment of the Duke of Burgundy, suspected of inciting the murder of his father; but he was after some time most reluctantly persuaded to make peace with him. In 1415 he was taken prisoner at Agincourt, and confined in various English castles for the long term of twenty-five years. During his captivity he cultivated his poetical talent. In 1440 he was ransomed, and returned to France. His second wife, Bonne of Armagnac, having died without issue, Charles married, thirdly, Marie of Cleve, a lady with a fair face and fickle heart, by whom he had three

children, Louis XII., and two daughters. He died on the 4th of June, 1465.

One of his poems has been translated by Longfellow, and the English version of another, an elegy on his first wife, will be found in her memoir, in the *Lives of the Queens of England*.

The autograph is the signature to a letter, in Cott. MSS. Vesp. F. III.

PEPYS AND HIS DIARY.

The publication of the *Diary* of Samuel Pepys, in 1825, has given us an interest in the man which no consideration of his place in society, his services to the state, or any other of his acts, could ever have excited. It is little to us that Pepys was clerk to the Admiralty through a great part of the reign of Charles II., sat in several parliaments, and died in honour and wealth at a good age. What we appreciate him for is, that he left us a chronicle of his daily life, written in a strain of such frank unreserve as to appear like thinking aloud; and which preserves for us a vast number of traits of the era of the Restoration which in no other way could we have obtained.

Mr Pepys's *Diary* was written in short-hand, and though it was left amongst his other papers at his death, it may be doubted if he ever entertained the least expectation that it would be perused by a single human being besides himself. Commencing in 1659, and closing in 1669, it comprises the important public affairs connected with the Restoration, the first Dutch war, the plague and fire of London. It exhibits the author as a zealous and faithful officer, a moderate loyalist, a churchman of Presbyterian leanings—on the whole, a respectably conducted man; yet also a great gossip, a gadder after amusements, fond of a pretty female face besides that of his wife, vain and showy in his clothing, and greatly studious of appearances before the world. The charm of his *Diary*, however, lies mainly in its deliberate registration of so many of those little thoughts and reflections on matters of self which pass through every one's mind at nearly all times and seasons, but which hardly any one would think proper to acknowledge, much less to put into a historical form.

The diarist's official duties necessarily brought him into contact with the court and the principal persons entrusted with the administration of affairs. Day by day he commits to paper his most secret thoughts on the condition of the state, on the management of affairs, on the silli-

ness of the king, the incompetency of the king's advisers, and the shamelessness of the king's mistresses. He tells us of a child 'being dropped at a ball at court, and that the king had it in his closet a week after, and did dissect it;' of a dinner given to the king by the Dutch ambassador, where, 'among the rest of the king's company there was that worthy fellow my Lord of Rochester, and Tom Killigrew, whose mirth and raillery offended the former so much that he did give Tom Killigrew a box on the ear in the king's presence;' and of a score more such scandalous events. He also gives us an insight into church matters at the time of the Restoration, and into the difficulties attending a reimposition of Episcopacy. Under date 4th November 1660, for instance, he observes:—'In the morn to our own church, where Mr Mills did begin to nibble at the *Common Prayer*, by saying, "Glory be to the Father, &c.," but the people had been so little used to it, that they could not tell what to answer.' Pepys was an admirer and a good judge of painting, music, and architecture, and frequent allusions to these arts and their professors occur throughout the work; with respect to theatrical affairs he is very explicit. We are furnished with the names of the plays he witnessed, the names of their authors, the manner in which they were acted, and the favour with which they were received. His opinion of some well-known plays does not coincide with the judgment of more modern critics. For instance, of *Midsummer Night's Dream* he says:—'It is the most insipid, ridiculous play that ever I saw in my life;' and, again, of another of Shakespeare's he thus writes: 'To Deptford by water, reading *Othello*, *Moor of Venice*, which I ever heretofore esteemed a mighty good play; but having so lately read the *Adventures of Five Houres*, it seems a mean thing.' His notices of literary works are frequently interesting; of Butler's *Hudibras* he thought little—'It is so silly an abuse of the Presbyter Knight going to the warrs, that I am ashamed of it;' of Hobbes's *Leviathan*, he tells us that 30s. was the price of it, although it was heretofore sold for 8s., 'it being a book the bishops will not let be printed again.'

From 1684, Pepys occupied a handsome mansion at the bottom of Buckingham Street, Strand, the last on the west side, looking upon the Thames. Here, while president of the Royal Society, in 1684, he used to entertain the members. Another handsome house on the opposite side of the street, where Peter, the Czar of Russia, afterwards lived for some time, combines with Pepys's house, and the water-work tower of the York Buildings Company, to make this a rather striking piece of city scenery; and a picture of it, as it was early in the last century, is presented on next page. Pepys's house no longer exists.

How Mr Pepys spent his Sundays.

Pepys, as has been remarked, was a churchman inclined to favour the Presbyterians; he was no zealot, but he never failed to have prayers daily in his house, and he rarely missed a Sunday at church. We learn from his *Diary* how an average Christian comported himself with respect to religion in that giddy time.

Usually, before setting out for church, Pepys | 'The barber having done with me,' he says, 'I paid a due regard to the decoration of his person. | went to church.' We may presume that the

operation was tedious. In November 1663, he began to wear a peruke, which was then a new fashion, and he seems to have been nervous about appearing in it at public worship. 'To church, where I found that my coming in a periwig did not prove so strange as I was afraid it would, for I thought that all the church would presently cast their eyes upon me, but I found no such thing.' A day or two before, he had been equally anxious on presenting himself in this

guise before his patron and principal, the Earl of Sandwich. The earl 'wondered to see me in my perukuque, and I am glad it is over.'

Pepys had a church to which he considered himself as attached; but he often—indeed, for the most part—went to others. One day, after attending his own church in the forenoon, and dining, he tells us, 'I went and ranged and ranged about to many churches, among the rest to the Temple, where I heard Dr Wilkins a

little. It was something like a man of fashion looking in at a succession of parties in an evening of the London season.

Very generally, Pepys makes no attempt to conceal how far secular feelings intruded both on his motives for going to church, and his thoughts while there. On the 11th August 1661, 'To our own church in the forenoon, and in the afternoon to Clerkenwell Church, *only to see the two fair Botelers.*' He got into a pew from which 'I had my full view of them both; but I am out of conceit now with them.'

His general conduct at church was not good. In the first place, he allows his eyes to wander. He takes note of a variety of things:—'By coach to Greenwich Church, where a good sermon, a fine church, and a great company of handsome women.' On another occasion, attending a strange church, we are told, 'There was also my pretty black girl.'

Then, if anything ludicrous occurs, he has not a proper command of his countenance: 'Before sermon, I laughed at the reader, who, in his prayer, desired of God that he would imprint his Word on the thumbs of our right hands and on the right great toes of our right feet.' He even talks in church somewhat shamelessly, without excuse, or attempt at making excuse: 'In the pew both Sir Williams and I had *much talk* about the death of Sir Robert.'

Again, there was one more sad trick he had—he occasionally went to sleep: 'After dinner, to church again, my wife and I, where we had a dull sermon of a stranger, which made me sleep.' Here he satisfies his conscience with excuses. But sometimes he is without excuse, and then is sorry: 'Sermon again, at which I slept; God forgive me!'

At church he has a habit of criticizing alike service and parson; and undeniably strange specimens of both seem to have come under his notice. First, the prayers. He goes to White Hall Chapel, 'with my lord,' but 'the ceremonies,' he says 'did not please me, *they do so overdo them.*' In fact, the singing takes his fancy much more. He is not without some skill himself: 'To the Abbey, and there meeting with Mr Hooper, he took me in among the quire, and there I sang with them their service.' It was very well for him he had this taste; for on one occasion, he tells us, a psalm was set which lasted an hour, while some collection or other was being made. He criticizes the congregation also, instead of bestowing his whole attention on what is going on. He observes, 'The three sisters of the Thornburys, *very fine*, and the most zealous people that ever I saw in my life, even to admiration, *if it were true zeal.*' He has his personal observations to make of the parson, with little show of reverence sometimes: 'Went to the red-faced parson's church.' There, however, 'I heard a good sermon of him, better than I looked for.'

The sermon itself never escapes from his criticism. It is 'an excellent sermon,' or 'a dull sermon,' or 'a very good sermon,' or 'a lazy, poor sermon,' or 'a good, honest, and painful sermon.' He evidently expects the parson to take pains and be judicious: on one occasion 'an Oxford

man gave us a most impertinent sermon,' and on another, 'a stranger preached like a fool.' But he does not seem to have minded these gentlemen availing themselves of the services of each other, or repeating their own discourses; he seems to have been quite used to it: 'I heard a good sermon of Dr Bucks, *one I never heard before.*'

He goes home to dinner; and, although he makes a point of remembering the text, he can seldom retain the exact words. It is generally after this fashion he has to enter it in the *Diary*: 'Heard a good sermon upon "teach us the right way," or *something like it.*' But, as a proof that he listened, he often favours us with a little abstract of how the subject was treated.

Pepys's Sunday dinner is generally a good one—he is particular about it: 'My wife and I alone to a leg of mutton, the sauce of which being made sweet, I was angry at it, and ate none;' not that he went without dinner,—he 'dined on the marrow-bone, that we had beside.' Fasting did not suit him. He began, one first day of Lent, and says, 'I do intend to try whether I can keep it or no;' but presently we read, 'Notwithstanding my resolution, yet, for want of other victuals, *I did eat flesh this Lent.*' Now, how long would the reader fancy from that passage that he stood it?—alas! the register is made on the second day only!

Then, after dinner, what does Mr Pepys do? To put it simply, he enjoys himself. Often, indeed, he goes out to dinner (his wife going also), or has guests (with their wives) at his own house; but always, by some means or other, he contrives to get through a large amount of drinking before evening. 'At dinner and supper I drank, I know not how, *of my own accord*, so much wine, that I was even almost foxed, and my head ached all night.' Yet let us, in fairness, quote the rest: 'So home, and to bed, without prayers, *which I never did yet*, since I came to the house, of a Sunday night: I being now so out of order, that I durst not read prayers, for fear of being perceived by my servants in what case I was.'

But this is not Mr Pepys's only Sabbath amusement. He is musical: 'Mr Childe and I spent some time at the lute.' Or he takes a very sober walk, to which the strictest will not object. 'In the evening (July), my father and I walked round past home, and viewed all the fields, which was pleasant.' Sometimes he treats himself to a more doubtful indulgence: 'Mr Edward and I into Greye's Inn walks, and saw many beauties.' Nor was this an exceptional instance, or at a friend's instigation: 'I to Greye's Inn walk *all alone*, and *with great pleasure*, seeing the fine ladies walk there.'

On some part of the day, unless he was in very bad condition,—as, for instance, that night when there were no prayers,—Mr Pepys *cast up his accounts*. We read, 'Casting up my accounts, I do find myself to be worth £40 more, which I did not think.' Or, 'Stayed at home *the whole afternoon*, looking over my accounts.' And sometimes he so far hurts his conscience by this proceeding as to be fain to make excuses and apologies: '*All the morning* at home, making up my

accounts (God forgive me!) to give up to my lord this afternoon.'

SHUTE BARRINGTON.

The venerable Shute Barrington, Bishop of Durham, died on the 25th of March 1826, at the great age of ninety-two, having exercised episcopal functions for fifty-seven years. It was remarkable that there should have been living to so late a period one whose father had been the friend of Locke, and the confidential agent of Lord Somers in bringing about the union between Scotland and England. While the revenues of his see were large, so also were his charities; one gentleman stated that fully a hundred thousand pounds of the bishop's money had come through his hands alone for the relief of cases of distress and woe. A military friend of Mrs Barrington, being in want of an income, applied to the bishop, with a view to becoming a clergyman, thinking that his lordship might be enabled to provide for him. The worthy prelate asked how much income he required; to which the gentleman replied, that 'five hundred a year would make him a happy man.' 'You shall have it,' said the bishop; 'but not out of the patrimony of the church. I will not deprive a worthy and regular divine to provide for a necessitous relation. You shall have the sum you mention yearly out of my own pocket.' A curious circumstance connected with money occurred at the bishop's death. This event happening after 12 o'clock of the morning of the 25th, being quarter-day, gave his representatives the emoluments of a half-year, which would not have fallen to them had the event occurred before that hour.*

DUEL BETWEEN THE DUKE OF YORK AND COLONEL LENOX.

The political excitement caused by the mental alienation of George the Third, and the desire of the Prince of Wales, aided by the Whig party, to be appointed Regent, was increased rather than allayed by the unexpected recovery of the king, early in 1789, and the consequent public rejoicings thereon. At that time the Duke of York was colonel of the Coldstream Guards, and Charles Lenox, nephew and heir to the Duke of Richmond, was lieutenant-colonel of the same regiment. Colonel Lenox being of Tory predilections, and having proposed the health of Mr Pitt at a dinner-party, the Duke of York, who agreed with his brother in politics, determined to express his resentment against his lieutenant, which he did in the following manner:—At a masquerade given by the Duchess of Ancaster, a gentleman was walking with the Duchess of Gordon, whom the duke, suspecting him to be Colonel Lenox, went up to and addressed, saying that Colonel Lenox had heard words spoken to him at D'Aubigny's club to which no gentleman ought to have submitted. The person thus addressed was not Colonel Lenox, as the duke supposed, but Lord Paget, who informed the former of the circumstance, adding that, from the voice and manner, he was certain the speaker was no other than the Duke of York. At a field day which happened soon after, the duke was present at the parade of his regiment, when Colonel Lenox took the opportunity of publicly asking him what were the words he (Lenox) had submitted to hear, and by whom were they

spoken. The duke replied by ordering the colonel to his post. After parade, the conversation was renewed in the orderly room. The duke declined to give his authority for the alleged words at D'Aubigny's, but expressed his readiness to answer for what he had said, observing that he wished to derive no protection from his rank; when not on duty he wore a brown coat, and hoped that Colonel Lenox would consider him merely as an officer of the regiment. To which the colonel replied that he could not consider his royal highness as any other than the son of his king.

Colonel Lenox then wrote a circular to every member of D'Aubigny's club, requesting to know whether such words had been used to him, begging an answer within the space of seven days; and adding that no reply would be considered equivalent to a declaration that no such words could be recollected. The seven days having expired, and no member of the club recollecting to have heard such words, Colonel Lenox felt justified in concluding that they had never been spoken; so he formally called upon the duke, through the Earl of Winchelsea, either to give up the name of his false informant, or afford the satisfaction usual among gentlemen. Accordingly, the duke, attended by Lord Rawdon, and Colonel Lenox, accompanied by the Earl of Winchelsea, met at Wimbledon Common (May 26th 1789). The ground was measured at twelve paces; and both parties were to fire at a signal agreed upon. The signal being given, Lenox fired, and the ball grazed his royal highness's side curl: the Duke of York did not fire. Lord Rawdon then interfered, and said he thought enough had been done. Lenox observed that his royal highness had not fired. Lord Rawdon said it was not the duke's intention to fire; his royal highness had come out, upon Colonel Lenox's desire, to give him satisfaction, and had no animosity against him. Lenox pressed that the duke should fire, which was declined, with a repetition of the reason. Lord Winchelsea then went up to the Duke of York, and expressed his hope that his royal highness could have no objection to say he considered Colonel Lenox a man of honour and courage. His royal highness replied, that he should say nothing: he had come out to give Colonel Lenox satisfaction, and did not mean to fire at him; if Colonel Lenox was not satisfied, he might fire again. Lenox said he could not possibly fire again at the duke, as his royal highness did not mean to fire at him. On this, both parties left the ground.

Three days afterwards, a meeting of the officers of the Coldstream Guards took place on the requisition of Colonel Lenox, to deliberate on a question which he submitted; namely, whether he had behaved in the late dispute as became an officer and a gentleman. After considerable discussion and an adjournment, the officers came to the following resolution: 'It is the opinion of the Coldstream regiment, that subsequent to the 15th of May, the day of the meeting at the orderly room, Lieut.-Col. Lenox has behaved with courage, but, from the peculiar difficulty of his case, not with judgment.'

The 4th of June being the king's birthday, a

* Nichols's *Illustrations of Literature*.

grand ball was held at St James's Palace, which came to an abrupt conclusion, as thus described in a magazine of the period: 'There was but one dance, occasioned, it is said, by the following circumstance. Colonel Lenox, who had not danced a minuet, stood up with Lady Catherine Barnard. The Prince of Wales did not see this until he and his partner, the princess royal, came to Colonel Lenox's place in the dance, when, struck with the incongruity, he took the princess's hand, just as she was about to be turned by Colonel Lenox, and led her to the bottom of the dance. The Duke of York and the Princess Augusta came next, and they turned the colonel without the least particularity or exception. The Duke of Clarence, with the Princess Elizabeth, came next, and his highness followed the example of the Prince of Wales. The dance proceeded, however, and Lenox and his partner danced down. When they came to the prince and princess, his royal highness took his sister, and led her to her chair by the queen. Her majesty, addressing herself to the Prince of Wales, said—"You seem heated, sir, and tired!" "I am heated and tired, madam," said the prince, "not with the dance, but with dancing in such company." "Then, sir," said the queen, "it will be better for me to withdraw, and put an end to the ball!" "It certainly will be so," replied the prince, "for I never will countenance insults given to my family, however they may be treated by others." Accordingly, at the end of the dance, her majesty and the princesses withdrew, and the ball concluded. The Prince of Wales explained to Lady Catherine Barnard the reason of his conduct, and assured her that it gave him much pain that he had been under the necessity of acting in a manner that might subject a lady to a moment's embarrassment.'

A person named Swift wrote a pamphlet on the affair, taking the duke's side of the question. This occasioned another duel, in which Swift was shot in the body by Colonel Lenox. The wound, however, was not mortal, for there is another pamphlet extant, written by Swift on his own duel.

Colonel Lenox immediately after exchanged into the thirty-fifth regiment, then quartered at Edinburgh. On his joining this regiment, the officers gave a grand entertainment, the venerable castle of the Scottish metropolis was brilliantly illuminated, and twenty guineas were given to the men for a merry-making. Political feeling, the paltry conduct of the duke, the bold and straightforward bearing of the colonel, and probably a lurking feeling of Jacobitism—Lenox being a left-handed descendant of the Stuart race—made him the most popular man in Edinburgh at the time. The writer has frequently heard an old lady describe the clapping of hands, and other popular emanations of applause, with which Colonel Lenox was received in the streets of Edinburgh.

MANDRIN.

It is a curious consideration regarding France, that she had a personage equivalent to the Robin Hood of England and the Rob Roy of the Scottish Highlands, after the middle of the eighteenth

century. We must look mainly to bad government and absurd fiscal arrangements for an explanation of this fact. Louis Mandrin had served in the war of 1740, in one of the light corps which made it their business to undertake unusual dangers for the surprise of the enemy. The peace of 1748 left him idle and without resource; he had no other mode of supporting life than to be continually risking it. In these circumstances, he bethought him of assembling a corps of men like himself, and putting himself at their head; and began in the interior of France an open war against the farmers and receivers of the royal revenues. He made himself master of Autun, and of some other towns, and pillaged the public treasuries to pay his troops, whom he also employed in forcing the people to purchase contraband merchandise. He beat off many detachments of troops sent against him. The court, which was at Marly, began to be afraid. The royal troops showed a strong reluctance to operate against Mandrin, considering it derogatory to engage in such a war; and the people began to regard him as their protector against the oppressions of the revenue officers.

At length, a regiment did attack and destroy Mandrin's corps. He escaped into Switzerland, whence for a time he continued to infest the borders of Dauphiny. By the baseness of a mistress, he was at length taken and conducted into France; his captors unscrupulously breaking the laws of Switzerland to effect their object, as Napoleon afterwards broke those of Baden for the seizure of the Duc d'Enghien. Conducted to Valence, he was there tried, and on his own confession condemned to the wheel. He was executed on the 26th of May 1755.

CORPUS CHRISTI DAY (1864).

This is a festival of the Roman Catholic Church held on the Thursday after Whit Sunday, being designed in honour of the doctrine of transubstantiation. It is a day of great show and rejoicing; was so in England before the Reformation, as it still is in all Catholic countries. The main feature of the festival is a procession, in which the pyx containing the consecrated bread is carried, both within the church and throughout the adjacent streets, by one who has a canopy held over him. Sundry figures follow, representing favourite saints in a characteristic manner—Ursula with her many maidens, St George killing the dragon, Christopher wading the river with the infant Saviour upon his shoulders, Sebastian stuck full of arrows, Catherine with her wheel; these again succeeded by priests bearing each a piece of the sacred plate of the church. The streets are decorated with boughs, the pavement strewed with flowers, and a venerative multitude accompany the procession. As the pyx approaches, every one falls prostrate before it. The excitement is usually immense.

After the procession there used to be mystery or miracle plays, a part of the ceremonial which in some districts of this island long survived the Reformation, the Protestant clergy vainly endeavouring to extinguish what was not merely religion, but amusement.

MAY 27.

St Julius, martyr, about 302. St John, pope, martyr, 526. St Bede, confessor, 'father of the Church,' 735.

Born.—Alighieri Dante, poet, 1265, *Florence*; Caspar Scioppius, learned grammarian, Catholic controversialist, 1576, *Neumarck*; Cardinal Louis de Noailles, 1651, *Paris*; Rev. T. D. Fosbroke, antiquarian writer, 1770.

Died.—John Calvin, theologian, 1564, *Geneva*; Gui de Faur, seigneur de Pibrac, reformer of the bar of France, 1584; Vincent Voiture, prince of the belles-lettres of France in his day, 1648; Archibald, Marquis of Argyle, beheaded at *Edinburgh*, 1661; Dominique Bouhours, jesuit, (grammar and critical literature,) 1702, *Clermont*; Charles de la Rue, eminent French preacher, one of the fabricators of the 'Delphin Classics,' 1725; Comte de Löwendhall, marshal of France, 1755; Henry Dundas, first Viscount Melville, statesman, 1811, *Edinburgh*; Noah Webster, author of an English dictionary, 1843, *Newhaven, U.S.*

JOHN CALVIN.

It would be difficult to name a theologian who has exercised a deeper and more tenacious influence on the human mind than John Calvin. To him the Protestantism of France and Switzerland, the Puritanism of England and New England, and, above all, the Presbyterianism of Scotland, owed their life and vigour. Luther has been called the heart of the Reformation, but Calvin its head.

He was the son of a cooper, and was born at Noyon, in Picardy, on the 10th of July 1509. Manifesting in his childhood a pious disposition, he was destined for the priesthood; and, aided by a wealthy family of Noyon, his father sent him to the University of Paris. At the age of twelve he obtained a benefice, and other preferment followed; but as his talents developed, it was thought he would make a better lawyer than a divine; and at Paris, Orleans, and Bruges, he studied law under the most celebrated professors. Calvin was in nowise averse to this change in his profession, for he had begun to read the Bible, and to grow dissatisfied with the doctrines of the Catholic Church; but, when at Bruges, he met Wolmar the Reformer, who fully confirmed him in the Protestant faith, and inspired him with a burning desire for its propagation. For this purpose he resolved to leave law and return to divinity. He went to Paris, and whilst there induced the Rector of the University to deliver a discourse on All Saints' Day, in which the tenets of the reformers were boldly set forth. In consequence of the excitement produced, both had to fly for their lives; and Calvin found refuge at Angoulême, where he supported himself by teaching Greek. In this retreat he composed the greater part of *The Institutes of the Christian Religion*, which he published at Basle in 1535. When we consider the excellent Latinity of this work, its severe logic, the range and force of its thought, its fame and effects, it does indeed appear the most wonderful literary achievement by a young man under twenty-six recorded in history. In 1536 he visited Geneva, where Protestantism had the same year been established, and, at the earnest request of Farel and some

leading citizens, he was induced to settle there as preacher. His presence was quickly felt in Geneva. In conjunction with Farel, he drew up a plan for its government, which was passed into law, but which, when carried into execution, was felt so intolerable, that the citizens rebelled, and drove Farel and Calvin out of the town.

Calvin then took up his residence in Strasburg, where he became minister of a French congregation, into which he introduced his own form of church government. Great efforts were meanwhile made in Geneva to bring back its inhabitants to the fold of Rome; but Calvin addressed such able epistles to them that the reactionists made no progress.

In 1541 he was invited back to Geneva, and at once became the virtual ruler of the city. He laid before the council his scheme of government, which they implicitly accepted. The code was as minute as severe, and carried as it were the private regulations of a stern and pious father in his household out into the public sphere of the commonwealth, and annexed thereto all the pains and penalties of the magistrate. It was Calvin's aim to make Geneva a model city, an example and light to the world. His rule was tyrannous; but, if gaiety vanished, and vice hid itself in hypocrisy, at least industry, education, and literature of a certain sort flourished under his sway.

The painful passage in Calvin's career was the martyrdom of Servetus. With Michael Servetus, a physician, he had at one time carried on a theological correspondence, which unfortunately degenerated into acrimony and abuse on both sides; and of Calvin, ever afterwards, Servetus was accustomed to speak with the utmost contempt. The exasperation was mutual, and of the bitterest kind. In 1546 Calvin wrote to Farel, vowing that if ever Servetus came within his grasp he should not escape scathless. Besides, Servetus had written a book on the Trinity, in which he had expressed opinions akin to those of the Unitarians, and which subjected him to the charge of heresy alike by Catholics and Protestants. In the summer of 1553, Servetus was rash enough to enter Geneva on his way to Italy, when he was arrested, thrown into prison, and brought to trial as a heretic—Calvin acting throughout as informer, prosecutor, and judge. He was sentenced to death, and, on the 27th of October, was burned at the stake with more than ordinary cruelty. Dreadful as such a deed now seems to us, it was then a matter of course. All parties in those times considered it the duty of the magistrate to extirpate opinions deemed erroneous. A Protestant led to martyrdom did not dream of pleading for mercy on the ground of freedom of conscience, or of toleration. In his eyes the crime of his persecutors lay in their hatred of the truth as manifested in him. If only his cords were loosed, and he endowed with power, he in like manner would find it his duty to prosecute his adversaries until they consented to confess the truth in unity with him. Yet, after making every allowance for the spirit of his age, it is impossible to escape the painful conclusion that there was as much revenge as mistaken justice

in Calvin's treatment of his lone antagonist; and his sincerest admirers cannot but shudder and avert their gaze, when in imagination they draw near the forlorn Spaniard in his fiery agony.

The labours of Calvin were unceasing and excessive. He preached every day for two weeks of each month; he gave three lessons in divinity every week; and assisted at all the deliberations of the consistory and company of pastors. In his study he maintained an active correspondence with theologians and politicians in every part of Europe; defended the principles of the Reformation in a multitude of treatises; and expounded and fortified that set of doctrines which bears his name in voluminous commentaries on the Scriptures. In person he was spare and delicate, and he suffered constantly from ill health. His habits were frugal and simple to the last degree. For years he only allowed himself one meagre meal daily. He had a prodigious memory, a keen understanding, and a will of iron. He was a man to fear or to reverence, but not to love. Emaciated to a skeleton, he died on the 27th of May 1564, aged only fifty-five. On his death-bed he took God to witness that he had preached the Gospel purely, and exhorted all to walk worthy of the divine goodness.

PIBRAC.

Pibrac was perhaps the most eminent man at the French bar during the sixteenth century. At the Council of Trent, he sustained with distinguished eloquence the interests of the French crown and the liberties of the Gallican Church. His state services were many, and he added to them the composition of a set of *Moral Quatrains*, which parents for ages after used to make their children learn by heart. He was remarkable for the amiableness of his character; nevertheless—and it is an humbling proof of the effects of religious bigotry—this eminent and admirable man wrote an apology for the Bartholomew massacre.

BRITISH ANTHROPOPHAGI.

Cannibalism, so ordinary a feature of savage life in many parts of the earth in our day, may for that reason be presumed to have marked the people of the British isles when they were in the same primitive state. The earliest notices that we have upon this subject are certain accusations brought against the Saxon conquerors of England, in the old chronicles called the *Welsh Triads*. In these historical documents it is alleged that Ethelfrith, King of England, encouraged cannibalism at his court; and that Gwrgi, a truant Welshman there, became so enamoured of human flesh, that he would eat no other. It was his custom to have a male and female Kymry killed for his own eating every day, except Saturday, when he slaughtered two of each, in order to be spared the sin of breaking the Sabbath. A northern chief, named Gwendoleu, is also stated to have had his treasure guarded by two rapacious birds, for whom he had two Kymry slain daily.

St Jerome, who visited Gaul in his youth, about the year 380, has the following passage in

one of his works:—'Cum ipse adolescentulus in Galliâ viderim Attacottos, gentem Britannicam, humanis vesci carnis; et cum per sylvas porcorum greges, et armentorum pecudumque reperiant, pastorum *nates* et feminarum *papillas* solere abscindere; et has solas ciborum delicias arbitrari.* That is, he learned that the Attacotti, the people of the country now called Scotland, when hunting in the woods, preferred the shepherd to his flocks, and chose only the most fleshy and delicate parts for eating. This reminds us extremely of the late reports brought home by M. de Chaillu regarding the people of the gorilla country in Western Africa. Gibbon, in adverting to it, makes it the occasion of a compliment to Scotland. 'If,' says he, 'in the neighbourhood of the commercial and literary town of Glasgow, a race of cannibals has already existed, we may contemplate, in the period of the Scottish history, the opposite extremes of savage and civilized life. Such reflections tend to enlarge the circle of our ideas, and to encourage the pleasing hope that New Zealand may produce, in a future age, the Hume of the Southern Hemisphere.'

There is reason to fear that cannibalism was not quite extinct in Scotland even in ages which may be deemed comparatively civilized. Andrew Wyntoun has a grisly passage in his rhyming chronicle regarding a man who lived so brief a while before his own day, that he might easily have heard of him from surviving contemporaries. It was about the year 1339, when a large part of Scotland, even the best and most fertile, had been desolated by the armies of Edward III.

'About Perth thare was the countrie
Sae waste, that wonder wes to see;
For intill well-great space thereby,
Wes nother house left nor herb'ry.
Of deer thare wes then sic foison [abundance],
That they wold near come to the town.
Sae great default was near that stead,
That mony were in hunger dead.

'A carle they said was near thereby,
That wold set settis [traps] commonly,
Children and women for to slay,
And swains that he might over-ta;
And ate them all that he get might:
Chrysten Cleek till name he hight.
That sa'ry life continued he,
While waste but folk was the countrie.†

Lindsay of Pitscottie has a still more dismal story regarding the close of the reign of James II. (about 1460), a time also within the recollection of people living in the epoch of the historian. He says: 'About this time there was ane brigand ta'en, with his hail family, who haunted a place in Angus. This mischievous man had ane execrable fashion, to tak all young men and children he could steal away quietly, or tak away without knowledge, and eat them, and the younger they were, esteemed them the mair tender and delicious. For the whilk cause and damnable abuse, he with his wife and bairns were all burnt, except ane young wench of a year old, wha was saved and brought to Dundee, where she was brought up and fostered; and when she cam to a woman's years, she was condemned and burnt

* Quoted in Gibbon's *Decline and Fall*.

† Wyntoun's *Chronicle*, ii. 236.

quick for that crime. It is said that when she was coming to the place of execution, there gathered ane huge multitude of people, and specially of women, cursing her that she was so unhappy to commit so damnable deeds. To whom she turned about with an ireful countenance, saying, "Wherefore chide ye with me, as if I had committed ane unworthy act? Give me credence, and trow me, if ye had experience of eating men and women's flesh, ye wold think it so delicious, that ye wold never forbear it again." So, but [without] any sign of repentance, this unhappy traitor died in the sight of the people.*

MAY 28.

St Caranus (Cheron), martyr, 5th century. St Germanus, Bishop of Paris, 576.

Born.—James Sforza, the Great, 1639, *Cotignola*; George I. of England, 1660; John Smeaton, engineer, 1724, *Ansthorpe*; William Pitt, minister of George III., 1759, *Hoyes, Kent*; Thomas Moore, poet, 1780, *Dublin*.

Died.—St Bernard of Savoy, 1008; Thomas Howard, Earl of Suffolk, 1626, *Walden*; Admiral de Tourville, 1701, *Paris*; Madame de Montespan, mistress of Louis XIV., 1708; Electress Sophia of Hanover, 1714; George Earl Mareschal, 1778, *Potsdam*; Bishop Richard Hurd, 1808, *Hartlebury*; William Eden, Lord Auckland, 1814; Sir Humphry Davy, chemist, 1829, *Geneva*; William Erskine (*Memoirs of Emperor Baber, &c.*), 1852, *Edinburgh*.

THOMAS MOORE.

The public is well aware of Moore's life in outline: that he was the son of a grocer in Aungier Street, in Dublin; that he migrated at an early period of life to London, and there, and at his rural retreat near Devizes, produced a brilliant succession of poems, marked by a manner entirely his own,—also several prose works, chiefly in biography; that he was the friend of Byron, Rogers, Scott, and Lord John Russell, and a favourite visitor of Bowood, Holland House, and other aristocratic mansions;—a bright little man, of the most amiable manners and the pleasantest accomplishments, whom everybody liked, whom Ireland viewed with pride, and whom all Britain mourned.

In 1835, Moore visited his native city, and, led by his usual kindly feelings, sought out the house in Aungier Street in which he had been born, and where he spent the first twenty years of his life. The account he gives of this visit in his *Diary* is, to our apprehension, a poem, and one of the finest he ever wrote. 'Drove about a little,' he says, 'in Mrs Meara's car, accompanied by Hume, and put in practice what I had long been contemplating—a visit to No. 12, Aungier Street, the house in which I was born. On accosting the man who stood at the door, and asking whether he was the owner of the house, he looked rather gruffly and suspiciously at me, and answered, "Yes;" but the moment I mentioned who I was, adding that it was the house I was born in, and that I wished to be permitted to look through the rooms, his countenance bright-

* Lindsay's *Chronicles of Scotland*. Edition, 1814, p. 163.

ened up with the most cordial feeling, and seizing me by the hand, he pulled me along to the small room behind the shop (where we used to breakfast in old times), exclaiming to his wife (who was sitting there), with a voice tremulous with feeling, "Here's Sir Thomas Moore, who was born in this house, come to ask us to let him see the rooms; and it's proud I am to have him under the old roof." He then without delay, and entering at once into my feelings, led me through every part of the house, beginning with the small old yard and its appurtenances, then the little dark kitchen where I used to have my bread and milk in the morning before I went to school; from thence to the front and back drawing-rooms, the former looking more large and respectable than I could have expected, and the latter, with its little closet, where I remember such gay supper-parties, both room and closet fuller than they could well hold, and Joe Kelly and Wesley Doyle singing away together so sweetly. The bedrooms and garrets were next visited, and the only material alteration I observed in them was the removal of the wooden partition by which a little corner was separated off from the back bedroom (in which the two apprentices slept) to form a bedroom for me. The many thoughts that came rushing upon me in thus visiting, for the first time since our family left it, the house in which I passed the first nineteen or twenty years of my life, may be more easily conceived than told; and I must say, that if a man had been got up specially to conduct me through such a scene, it could not have been done with more tact, sympathy, and intelligent feeling than it was by this plain, honest grocer; for, as I remarked to Hume, as we entered the shop, "Only think, a grocer's still!" When we returned to the drawing-room, there was the wife with a decanter of port and glasses on the table, begging us to take some refreshment; and I with great pleasure drank her and her good husband's health. When I say that the shop is still a grocer's, I must add, for the honour of old times, that it has a good deal gone down in the world since then, and is of a much inferior grade of grocery to that of my poor father—who, by the way, was himself one of nature's gentlemen, having all the repose and good breeding of manner by which the true gentleman in all classes is distinguished. Went, with all my recollections of the old shop about me, to the grand dinner at the Park [the Lord-Lieutenant's palace]; company forty in number, and the whole force of the kitchen put in requisition. Sat at the head of the table, next to the carving aide-de-camp, and amused myself with reading over the *menu*, and tasting all the things with the most learned names.'

SIR HUMPHRY DAVY.

Dr John Davy, in his interesting *Memoirs of the Life of* [his brother] *Sir Humphry Davy*, relates with much feeling the latter days of the great philosopher. A short while before his death, being at Rome, he mended a little, and as this process went on, 'the sentiment of gratitude to Divine Providence was overflowing, and he was most amiable and affectionate in manner.

He often inculcated the propriety, in regard to happiness, of the subjugation of self, as the very bane of comfort, and the most active cause of the dereliction of social duties, and the destruction of good and friendly feelings; and he expressed frequently the intention, if his life were spared, of devoting it to purposes of utility (seeming to think lightly of what he had done already), and to the service of his friends, rather than to the pursuits of ambition, pleasure, or happiness, with himself for their main object.'

A BISHOP'S GHOST.

Henry Burgwash, who became Bishop of Lincoln on the 28th of May 1320, is chiefly memorable on account of a curious ghost story recorded of him in connexion with the manor of Fingest, in Bucks. Until the year 1845, Buckinghamshire was in the diocese of Lincoln, and formerly the bishops of that see possessed considerable estates and two places of residence in the county. They had the palace of Wooburn, near Marlow, and a manorial residence at Fingest, a small secluded village near Wycomb. Their manor-house of Fingest, the ruins of which still exist, stood near the church, and was but a plain mansion, of no great size or pretensions. And why those princely prelates, who possessed three or four baronial palaces, and scores of manor-houses superior to this, chose so often to reside here, is unknown. Perhaps it was on account of its sheltered situation, or from its suitability for meditation, or because the surrounding country was thickly wooded and well stocked with deer; for in the 'merrie days of Old England,' bishops thought no harm in heading a hunting party. Be this as it may, certain it is that many of the early prelates of Lincoln, although their palace of Wooburn was near at hand, often preferred to reside at their humble manor-house of Fingest. One of these was Henry Burgwash, who has left reminiscences of his residence here more amusing to posterity than creditable to himself. 'He was,' says Fuller, 'neither good for church nor state, sovereign nor subjects; but was covetous, ambitious, rebellious, injurious. Yet he was twice lord treasurer, once chancellor, and once sent ambassador to Bavaria. He died A.D. 1340. Such as wish to be merry,' continues Fuller, 'may read the pleasant story of his apparition being condemned after death to be *viridis viridarius*—a green forester.' In his *Church History*, Fuller gives this pleasant story: 'This Burgwash was he who, by mere might, against all right and reason, took in the common land of many poor people (without making the least reparation), therewith to complete his park at Tinghurst (Fingest). These wronged persons, though seeing their own bread, beef, and mutton turned into the bishop's venison, durst not contest with him who was Chancellor of England, though he had neither law nor equity in his proceeding.' He persisted in this cruel act of injustice even to the day of his death; but having brought on himself the hatred and maledictions of the poor, he could not rest quietly in his grave; for his spirit was doomed to wander about that land which he had,

while living, so unjustly appropriated to himself. It so happened, however, as we are gravely informed by his biographer, that on a certain night he appeared to one of his former familiar friends, apparelled like a forester, all in green, with a bow and quiver, and a bugle-horn hanging by his side. To this gentleman he made known his miserable case. He said, that on account of the injuries he had done the poor while living, he was now compelled to be the park-keeper of that place which he had so wrongfully enclosed. He therefore entreated his friend to repair to the canons of Lincoln, and in his name to request them to have the bishop's park reduced to its former extent, and to restore to the poor the land which he had taken from them. His friend duly carried his message to the canons, who, with equal readiness, complied with their dead bishop's ghostly request, and deputed one of their prebendaries, William Bachelor, to see the restoration properly effected. The bishop's park was reduced, and the common restored to its former dimensions; and the ghostly park-keeper was no more seen.

VAUXHALL.

The public garden of London, in the reigns of James I. and Charles I., was a royal one, or what had been so, between Charing Cross and St James's Park. From a playfully contrived water-work, which, on being unguardedly pressed by the foot, sprinkled the bystanders, it was called *Spring Garden*. There was bowling there, promenading, eating and drinking, and, in consequence of the last, occasional quarrelling and fighting; so at last the permission for the public to use Spring Garden was withdrawn. During the Commonwealth, Mulberry Garden, where Buckingham Palace is now situated, was for a time a similar resort. Immediately after the Restoration, a piece of ground in Lambeth, opposite Millbank, was appropriated as a public garden for amusements and recreation; which character it was destined to support for nearly two centuries. From a manor called Fulke's Hall, the residence of Fulke de Breauté, the mercenary follower of King John, came the name so long familiarized to the ears of Londoners—*Vauxhall*.

Pepys, writing on the 28th of May 1667, says—'By water to Fox-hall, and there walked in the Spring Gardens [the name of the old garden had been transferred to this new one]. A great deal of company, and the weather and garden pleasant; and it is very cheap going thither, for a man may spend what he will or nothing, all as one. But to hear the nightingale and the birds, and here fiddles and there a harp, and here a jew's trump and there laughing, and there fine people walking, is mighty divertising.' The repeated references to Vauxhall, in the writings of the comic dramatists of the ensuing age, fully show how well these diversions continued to be appreciated.

Through a large part of the eighteenth century, Vauxhall was in the management of a man who necessarily on that account became very noted, Jonathan Tyers. On the 29th of May 1786, a jubilee night celebrated the fiftieth

anniversary of his management, being after all somewhat within the truth, as in reality he had opened the gardens in 1732. On that occasion, there was an entertainment called a *Ridotto al fresco*, at which two-thirds of the company appeared in masks and dominoes, a hundred soldiers standing on guard at the gates to maintain order.

Tyers went to a great expense in decorating the gardens with paintings by Hogarth, Hayman, and other eminent artists; and having, by a judicious outlay, succeeded in realizing a large fortune, he retired to a country seat known as Denbighs, in the beautiful valley of the Mole. Here he amused himself by constructing a very

VAUXHALL, 1751.

extraordinary garden, for his own recreation. The peculiarly eccentric tastes—as regards house and garden decorations—of retired eaters for public amusements, such as showmen and exhibitors of various kinds, are pretty well known; but few ever designed a garden like that of Tyers. One of its ornaments was a representation of the Valley of the Shadow of Death, thus described by Mr Hughson: 'Awful and tremendous the view, on a descent into this gloomy vale! There was a large avenue, divided into two compartments, in one of which the unbeliever was represented dying in great agony. Near him were his books, which had encouraged him in his libertine course, such as Hobbes, Tindal, &c. In the other was the Christian, represented in a placid and serene state, prepared for the mansions of the blest!' After the death of Jonathan Tyers, his son succeeded to the proprietorship of Vauxhall; he was the friend of Johnson, and is frequently mentioned by Boswell under the familiar designation of Tom Tyers.

In a *Description of Vauxhall*, many times published during the last century, we read the following account of what was called the Dark Walk: 'It is very agreeable to all whose minds are adapted to contemplation and scenes devoted to solitude, and the votaries that court her shrine; and it must be confessed that there is

something in the amiable simplicity of unadorned nature, that spreads over the mind a more noble sort of tranquillity, and a greater sensation of pleasure, than can be received from the nicer scenes of art.

"How simple nature's hand, with noble grace,
Diffuses artless beauties o'er the place."

'This walk in the evening is dark, which renders it more agreeable to those minds who love to enjoy the full scope of imagination, to listen to the orchestra, and view the lamps glittering through the trees.'

This is all very fine and flowery, but the medal has its reverse; and the newspapers of 1759 speak of the loose persons of both sexes who frequented the Dark Walk, yelling 'in sounds fully as terrific as the imagined horrors of Cavalcanti's bloodhounds;' they further state that ladies were sometimes forcibly driven from their friends into those dark recesses, where dangerous terrors were wantonly inflicted upon them. In 1763, the licensing magistrates bound the proprietors to do away with the dark walks, and to provide a sufficient number of watchmen to keep the peace.

The following extract, from a poem published in 1773, does not speak favourably of the company that used to visit the gardens at that time.

‘Such is Vauxhall—
 For certain every knave that’s willing,
 May get admittance for a shilling;
 And since Dan Tyers doth none prohibit,
 But rather seems to strip each gibbet,
 His clean-swept, dirty, boxing place,
 There is no wonder that the thief
 Comes here to steal a handkerchief;
 For had you, Tyers, each jail ransacked,
 Or issued an insolvent act,
 Inviting debtors, lords, and thieves,
 To sup beneath your smoke-dried leaves,—
 And then each knave to kindly cram
 With fusty chickens, tarts, and ham,—
 You had not made such a collection,
 For your disgrace and my selection.’

Horace Walpole, writing in 1750, gives a lively account of the frolics of a fashionable party at these gardens in the June of that year. ‘I had a card from Lady Caroline Petersham, to go with her to Vauxhall. I went accordingly to her house, and found her and the little Ashe, or the Pollard Ashe, as they call her; they had just finished their last layer of red, and looked as handsome as crimson could make them. . . We marched to our barge, with a boat of French horns attending, and little Ashe singing. We paraded some time up the river, and at last embarked at Vauxhall. . . Here we picked up Lord Granby, arrived very drunk from Jenny’s Whim [a tavern]. . . At last we assembled in our booth, Lady Caroline in the front, with the visor of her hat erect, and looking gloriously handsome. She had fetched my brother Orford from the next box, where he was enjoying himself with his *petite partie*, to help us to mince chickens. We minced seven chickens into a china dish, which Lady Caroline stewed over a lamp, with three pats of butter and a flagon of water—stirring, and rattling, and laughing; and we every minute expecting the dish to fly about our ears. She had brought Betty the fruit-girl, with hampers of strawberries and cherries, from Rogers’s; and made her wait upon us, and then made her sup by herself at a little table. . . In short, the air of our party was sufficient, as you will easily imagine, to take up the whole attention of the gardens; so much so, that from eleven o’clock to half an hour after one, we had the whole concourse round our booth; at last they came into the little gardens of each booth on the sides of ours, till Harry Vane took up a bumper and drank their healths, and was proceeding to treat them with still greater freedoms. It was three o’clock before we got home.’

Innumerable jokes used to be passed on the smallness of the chickens, and the exceeding thinness of the slices of ham, supplied to the company at Vauxhall. It has been said that the person who cut the meat was so dexterous from long practice, that he could cover the whole eleven acres of the gardens with slices from one ham. However that may be, the writer well remembers the peculiar manner in which the waiters carried the plates, to prevent the thin shavings of ham from being blown away!

The *Connoisseur*, in 1755, gives the following amusing account of a penurious citizen’s reflections on a dish of ham at Vauxhall: ‘When it was brought, our honest friend twirled the dish

about three or four times, and surveyed it with a settled countenance. Then, taking up a slice of the ham on the point of his fork, and dangling it to and fro, he asked the waiter how much there was of it. “A shilling’s worth, sir,” said the fellow. “Prithee,” said the cit, “how much dost think it weighs?” “An ounce, sir.” “Ah! a shilling an ounce, that is sixteen shillings per pound; a reasonable profit, truly! Let me see. Suppose, now, the whole ham weighs thirty pounds: at a shilling per ounce, that is sixteen shillings per pound. Why, your master makes exactly twenty-four pounds off every ham; and if he buys them at the best hand, and salts and cures them himself, they don’t stand him in ten shillings a-piece!”’

In the *British Magazine* for August 1782, there is a description of what may be termed a royal scene at Vauxhall. It states:

‘The Prince of Wales was at Vauxhall, and spent a considerable part of the evening in comfort with a set of gay friends; but when the music was over, being discovered by the company, he was so surrounded, crushed, pursued, and overcome, that he was under the necessity of making a hasty retreat. The ladies followed the prince—the gentlemen pursued the ladies—the curious ran to see what was the matter—the mischievous ran to increase the tumult—and in two minutes the boxes were deserted; the lame were overthrown—the well-dressed were demolished—and for half an hour the whole company were contracted in one narrow channel, and borne along with the rapidity of a torrent, to the infinite danger of powdered locks, painted cheeks, and crazy constitutions.’

Mainly owing to the constant patronage of the Prince of Wales, Vauxhall was a place of fashionable resort all through his time. Nor were the proprietors ungrateful to the prince. In 1791, they built a new gallery in his honour, and decorated it with a transparency of an allegorical and most extraordinary character. It represented the prince in armour, leaning against a horse, which was held by Britannia. Minerva held his helmet, while *Providence* was engaged in *fixing on his spurs*. Fame, above, blowing a trumpet, and crowning him with laurels!

AN ARTIFICIAL MEMORY.

John Bruen, of Stapleford, in Cheshire, who died in 1625, was a man of considerable fortune, who had received his education at Alban Hall, in the University of Oxford. Though he was of Puritan principles, he was no slave to the narrow bigotry of a sect. Hospitable, generous, and charitable, he was beloved and admired by men of all persuasions. He was conscientiously punctual in all the public and private duties of religion, and divinity was his constant study and delight. He was a great frequenter of the public sermons of his times, called prophecies; and it was his invariable practice to commit the substance of all that he heard to writing.

The old adage of ‘like master, like man,’ was fully verified in the instance of Bruen’s servant, one Robert Pasfield, who was equally as fond of sermons as his master, but though ‘mighty in the Scriptures,’ could neither read nor write.

So, for the help of his memory, he invented and framed a girdle of leather, long and large, which went twice about him. This he divided into several parts, allotting each book in the Bible, in its order, to one of these divisions; then, for the chapters, he affixed points or thongs of leather to the several divisions, and made knots by fives and tens thereupon to distinguish the chapters of each book; and by other points he divided the chapters into their particular contents or verses. This he used, instead of pen and ink, to take notes of sermons; and made so good use of it, that when he came home from the conventicle, he could repeat the sermon through all its several heads, and quote the various texts mentioned in it, to his own great comfort, and the benefit of others. This girdle Mr Bruen kept, after Pasfield's decease, in his study, and would often merrily call it the Girdle of Verity.

MAY 29.

St Cyril, martyr (3rd century?). St Conon and his son, martyrs, of Iconia in Asia (about 275). St Maximinus, Bishop of Thiers, 349. Saints Sisinnius, Martyrius, and Alexander, martyrs, in the territory of Trent, 397.

Born.—Charles II. of England, 1630, *London*; Sarah Duchess of Marlborough, 1660; Louis Daubenton, 1716, *Montbard*; Patrick Henry, American patriot and orator, 1736, *Virginia*; Joseph Fouché, police minister of Napoleon I., 1763, *Nantes*.

Died.—Cardinal Beaton, assassinated at St Andrew's, 1546; Stephen des Courcelles, learned Protestant divine, 1658, *Amsterdam*; Dr Andrew Ducarel, English antiquary, 1785, *South Lambeth*; Empress Josephine, 1814, *Malmaison*; W. H. Pyne, miscellaneous writer, 1843, *Paddington*; Sir Thomas Dick Lauder, Bart., miscellaneous writer, 1848, *Edinburgh*.

CHARLES II.

It is a great pity that Charles II. was so dissolute, and so reckless of the duties of his high station, for his life was an interesting one in many respects; and, after all, the national joy attending his restoration, and his cheerfulness, wit, and good-nature, give him a rather pleasant association with English history. His parents, Charles I. and Henrietta Maria (daughter of Henry IV. of France), who had been married in 1626, had a child named Charles James born to them in March 1629, but who did not live above a day. Their second infant, who was destined to live and to reign, saw the light on the 29th of May 1630, his birth being distinguished by the appearance, it was said, of a star at mid-day.

It was on his thirtieth birthday, the 29th of May 1660, that the distresses and vicissitudes of his early life were closed by his triumphal entry as king into London. His restoration might properly be dated from the 8th of May, when he was proclaimed as sovereign of the three kingdoms in London: but the day of his entry into the metropolis, being also his birthday, was adopted as the date of that happy event. Never had England known a day of greater happiness. Defend the Commonwealth who may—make a hero of Protector Oliver with

highest eloquence and deftest literary art—the intoxicated delight of the people in getting quit of them, and all connected with them, is their sufficient condemnation. The truth is, it had all along been a government of great difficulty, and a government of difficulty must needs be tyrannical. The old monarchy, ill-conducted as it had been under Charles I., shone white by comparison. It was happiness overmuch for the nation to get back under it, with or without guarantees for its better behaviour in future. An army lately in rebellion joyfully marshalled the king along from Dover to London. Thousands of mounted gentleman joined the escort, 'brandishing their swords, and shouting with inexpressible joy.' Evelyn saw the king arrive, and set down a note of it in his diary. He speaks of the way strewn with flowers; the streets hung with tapestry; the bells madly ringing; the fountains running with wine; the magistrates and the companies all out in their ceremonial dresses—chains of gold, and banners; nobles in cloth of silver and gold; the windows and balconies full of ladies; 'trumpets, music, and myriads of people flocking even so far as from Rochester, so as they were seven hours in passing the city, even from two in the afternoon till nine at night.' 'It was the Lord's doing,' he piously adds; unable to account for so happy a revolution as coming about by the ordinary chain of causes and effects.

It belongs more particularly to the purpose of this work to state, that among the acts passed by parliament immediately after, was one enacting 'That in all succeeding ages the 29th of May be celebrated in every church and chapel in England, and the dominions thereof, by rendering thanks to God for the king's peaceable restoration to actual possession and exercise of his legal authority over his subjects, &c. The service for the Restoration, like that for the preservation from the Gunpowder Treason, and the death of Charles I., was kept up till the year 1859.

THE ROYAL OAK.

The restoration of the king, after a twelve years' interregnum from the death of his father, naturally brought into public view some of the remarkable events of his intermediate life. None took a more prominent place than what had happened in September 1651, immediately after his Scottish army had been overthrown by Cromwell at Worcester. It was heretofore obscurely, but now became clearly known, that the royal person had for a day been concealed in a bushy oak in a Shropshire forest, while the Commonwealth's troopers were ranging about in search of the fugitives from the late battle. The incident was romantic and striking in itself, and, in proportion to the joy in having the king once more in his legal place, was the interest felt in the tree by which he had been to all appearance providentially preserved. The ROYAL OAK accordingly became one of the familiar domestic ideas of the English people. A spray of oak in the hat was the badge of a loyalist on the recurrence of the Restoration-day. A picture of an oak tree, with a crowned figure sitting amidst the branches, and a few dragoons scouring about

the neighbouring ground, was assumed as a sign upon many a tavern in town and country. (Some taverns still bear at least the name—one in Paddington, near London). And 'Oak Apple-day' became a convertible term for the Restoration-day among the rustic population. We thus find it necessary to introduce—first, a brief account of the king's connexion with the oak; and, second, a notice of the popular observance still remembered, if not practised, in memory of its preservation of a king.

The King at Boscobel.

After the defeat of the royal army at Worcester, (September 3, 1651), the king and his principal officers determined on seeking safety by returning along the west of England to Scotland. As they proceeded, however, the king bethought him that the party was too large to make a safe retreat, and if he could get to London before the news of the battle, he might obtain a passage *incognito* in a vessel for France or Holland. On Kinver Heath they were brought to a standstill by the failure of their guide to find the way. In the midst of the dismay which prevailed, the Earl of Derby stated to the king that he had lately, when in similar difficulty, been beholden for his life to a place of concealment on the borders of Staffordshire—a place called Boscobel. Another voice, that of Charles Giffard, the proprietor of this very place, broke the silence—'I will undertake to guide his majesty to Boscobel before daybreak.' It was immediately determined that the king, with a very small party of associates, should proceed under Giffard's care to the promised shelter.

By daybreak, Charles had reached White Ladies, a house taking its name from a ruined monastery hard by, and in the possession of Giffard's family, who were all Catholics. Here he was kindly received, put into a peasant's dress, and sent off to the neighbouring house of Boscobel, under the care of a dependent of the family, named Richard Penderel. His friends took leave of him, and pursued their journey to the North.

Boscobel was a small mansion which had been not long before built by Mr Giffard, and called so from a fancy of the builder, as being situated in *Bosco-bello*—Italian for a fair wood. The king knew how suitable it was as a place of concealment, not only from its remote and obscure situation, but because the Catholics always had hiding-holes in their houses for priests. At this time the house was occupied by a family of peasants, named Penderel, whose employment it was to cut and sell the wood, having 'some cows' grass to live upon.' They were simple, upright people, devoted to their master; and, probably from habit as Catholics, accustomed to assist in concealing proscribed persons. Certain it is, the house contains two 'priests' holes,* one entered by a trap in the floor of a small closet; though it does not appear

* It was during his wanderings in this district that Charles became acquainted with and was aided by Father Huddlestone, who ultimately gave him the last sacrament on his death-bed, after he had solemnly declared

that Charles took any advantage of such a retreat while living at the place.

Charles, in his anxiety to make toward London, determined to set out on foot, 'in a country fellow's habit, with a pair of ordinary grey cloth breeches, a leathern doublet, and green jerkin,' taking no one with him but 'trusty Dick Penderel,' as one of the brethren was called; they had, however, scarcely reached the edge of the wood, when a troop of the rebel soldiery obliged them to lie close all day there, in a drenching rain. During this time the king altered his mind and determined to go towards the Severn, and so to France, from some Welsh seaport. At midnight they started on their journey; but after some hair-breadth escapes, finding the journey difficult and dangerous, they returned to Boscobel. Here they found Colonel William Careless, who had seen the last man killed in the Worcester fight, and whom the king at once took into his confidence. Being Sunday, the king kept in the house, or amused himself by reading in the close arbour in the little garden; and the next day he took the colonel's advice, 'to get up into a great oak, in a pretty plain place, where we might see round about us.' This tree was about a bowshot distance from the house. Charles describes it as 'a great oak, that had been lopped some three or four years before, and being grown out again very bushy and thick, could not be seen through.' There Charles and the colonel stayed the whole day, having taken up with them some bread and cheese and small beer, the colonel having a pillow placed on his knees, that the king might rest his head on it as he sat among the branches. While there, they saw many soldiers beating the woods for persons escaped.

After an uneasy day, the king left the friendly shelter of Boscobel at midnight, for Mr Whitgrave's house at Mosely; the day after, he went to Colonel Lane's, at Bently; from whence, disguised as a serving-man, he rode with Lane's sister toward Bristol, intending to take ship there; but after many misadventures and much uncertain rambling, he at last succeeded in obtaining a vessel at Shoreham, in Sussex, which carried him across to Fécamp, in Normandy.

The appearance of the lonely house in the wood, that gave such important shelter to the king, has been preserved in a contemporary engraving here copied. It was a roomy, half-timbered building, with a central turret of brick-work and timber, forming the entrance stair. A small portion of the wood was cleared around it for a little enclosed garden, having a few flower-beds, in front of the house; and an artificial 'mount,' with a summer-house upon it, reached by a flight of steps. Here Charles sat during the only Sunday he passed at Boscobel. Blount says:—'His majesty spent some part of this Lord's-day in reading, in a pretty arbour in Boscobel garden, which grew upon a mount, and wherein there was a stone table, and seats about it; and commended the place for its retiredness.'

himself a member of the Romish Church. James II., alluding to both events, observed that 'the father had once saved his brother's life, and afterwards saved his soul.'

At the back of this arbour was the gate leading toward the wood where the friendly oak of shelter stood. Dr Stukely, who visited the place in the early part of the last century, speaks of

BOSCOBEL HOUSE.

the oak, as 'not far from Boscobel House, just by a horse track passing through the wood.' The celebrity of the tree led to its partial destruction; Blount tells us, 'Since his majesty's happy restoration, hundreds of people for many miles round have flocked to see the famous Boscobel, which had once the honour to be the palace of his sacred majesty, but chiefly to behold the Royal Oak, which has been deprived of all its young boughs by the numerous visitors, who keep them in memory of his majesty's happy preservation; insomuch, that Mr Fitzherbert, who was afterwards proprietor, was forced in a due season of the year to crop part of it for its preservation, and put himself to the charge of fencing it about with a high pale, the better to transmit the happy memory of it to posterity.' Stukely, half a century later, says:—'The tree is now enclosed with a brick wall, the inside whereof is covered with laurel. Close by its side grows a young thriving plant from one of its acorns. Over the door of the enclosure, I took this inscription in marble:—

"Felicissimam arborem, quam in asyllum potentissimi Regis Caroli II. Deus. O. M., per quem reges regnant, hic crescere voluit, tam in perpetuam rei tantæ memoriam, quam specimen firmæ in reges fidei, muro cinctam posteris commendârunt Basilius et Jana Fitzherbert.

Quercus amica Jovi."

The enclosure has long since disappeared; but the inscription is still preserved in the farmhouse at Boscobel. Burgess, in his *Eidodendron*, speaking of this tree, says:—'It succumbed at length to the reiterated attentions of its votaries; and a huge bulk of timber, consisting of many loads, was taken away by handfuls. Several saplings were raised in different parts of the country from its acorns, one of which grew near St James's palace, where Marlborough House now stands; and there was another in the Botanic Gardens, Chelsea; the former has long since been felled,

and of the latter the recollection seems almost to be lost.' On the north side of the Serpentine in Hyde Park, near the powder magazine, flourished two old trees, said to have been planted by Charles II. from acorns of the Boscobel oak. They were both blighted in a severe frost a few years ago; one has been entirely removed, but the stem and a few branches of the other still remain, covered with ivy, and protected by an iron fence. In the Bodleian library is preserved a fragment of the original tree, turned into the form of a salver, or stand for a tankard; the inscription upon it records it as the gift of Mrs Letitia Lane, a member of the family who aided Charles in his escape.

It was the intention of the king to institute a new order, into which those only were to be admitted who were eminently distinguished for their loyalty—they were to be styled 'Knights of the Royal Oak;' but these knights were soon abolished, 'it being wisely judged,' says Noble, in his *Memoirs of the Cromwell Family*, 'that the order was calculated only to keep awake animosities which it was the part of wisdom to lull to sleep.' He adds, that the names of the intended knights are to be seen in the *Baronetage*, published in 5 vols. 8vo, 1741, and that Henry Cromwell, 'first cousin, one remove, to Oliver, Lord Protector,' was among the number. This gentleman was a zealous royalist, instrumental in the restoration of the royal family; 'and as he knew the name of Cromwell would not be very grateful in the court of Charles the Second, he disused it, and styled himself only plain Henry Williams, Esq., by which name he was set down in the list of such persons as were to be made Knights of the Royal Oak.*' It may be

* Mrs Williams was equally ardent. Noble says, 'her loyalty exceeded all due moderation.' There is a curious MS. volume of religious and loyal rhapsody by her, preserved in the British Museum. Harleian MS. No. 2311.

here remarked that the Cromwell family derived its origin from Wales, and that they bore the name of Williams before they assumed that of Cromwell, on the marriage of Richard Williams with the sister of Cromwell Earl of Essex, prime minister of Henry VIII.; by which he became much enriched, all grants of dissolved religious houses, &c., passing to him by the names of Richard Williams, otherwise Cromwell. He was great-great-grandfather to Oliver, Lord Protector.

At the coronation of Charles II., the first triumphal arch erected in Leadenhall Street, near Lime Street, for the king to pass under on his way from the Tower to Westminster, is described in Ogilby's contemporary account of the ceremony as having in its centre a figure of Charles, royally attired, behind whom, 'on a large table, is deciphered the Royal Oak bearing crowns and sceptres instead of acorns; amongst the leaves, in a label—

“——— Miraturque novas
Frondes et non sua poma.”

(——— Leaves unknown
Admiring, and strange apples not her own.)

As designing its reward for the shelter afforded his majesty after the battle of Worcester.' In the Lord Mayor's show of the same year, a pageant was placed near the Nag's Head tavern, in Cheapside, 'like a wood, in the vacant part thereof several persons in the habit of woodmen and wood-nymphs disport themselves, dancing about the Royal Oak;' while the rural god Sylvanus indulged in a long and laudatory speech in honour of the celebrated tree.

Colonel Careless, the companion of Charles in the oak, was especially honoured at the Restora-

tion, by the change of his name to Carlos, at the king's express desire, that it might thus assimilate with his own; and the grant of 'this very honourable coat of arms, which is thus described in the letters patent, "upon an oak proper, in a field or, a fess gules, charged with three royal crowns of the second, by the name of Carlos. And for his crest a civic crown, or oak garland, with a sword and sceptre crossed through it saltier-wise."'

The Penderels were also honoured by court notice and a government pension. 'Trusty Dick' came to London, and died in his majesty's service. He was buried in 1671, under an altar tomb in the churchyard of St Giles's-in-the-Fields, then a suburban parish, and a fitting residence for the honest country woodman. The

tomb still preserves its characteristic features, and an epitaph remarkable for a high-flown confusion of ideas and much grandiloquent verbosity.

The Barber-Surgeons' Company of London possess a curious memorial of the celebrated tree which sheltered Charles at Boscobel. It is a cup

of silver, partially gilt, the stem and body representing an oak tree, from which hang acorns, fashioned as little bells; they ring as the cup passes from hand to hand round the festive board of the Company on great occasions. The cover represents the Royal Crown of England. Though curious in itself as a quaint and characteristic piece of plate, it derives an additional interest from the fact of its having been made by order of Charles the Second, and presented by him to the Company, the Master at that time being Sir Charles Scarborough, who was chief physician to the king.

Oak-Apple Day.

There are still a few dreamy old towns and villages in rural England where almost every ruin that Time has unroofed, and every mouldering wall his silent teeth have gnawed through, are attributed to the cannon of Cromwell and his grim Ironsides; though, in many instances, history has left no record that either the stern Protector or his dreaded troopers were ever near the spot. In many of these old-fashioned and out-of-the-way places, the 29th of May is still celebrated, in memory of King Charles's preservation in the oak of Boscobel, and his Restoration. The Royal Oak is also a common alehouse sign in these localities, on which the Merry Monarch is pictured peeping through the branches at the Roundheads below, looking not unlike some boy caught stealing apples, who dare not descend for fear of the owners of the

fruit. Oak Apple-day is the name generally given to this rural holiday, which has taken the place of the old May-day games of our more remote ancestors; though the Maypoles are still decorated and danced around on the 29th of this month, as they were in the more memorable May-days of the olden time. But Oak Apple-day is not the merry old May-day which our forefathers delighted to honour. Sweet May, as they loved to call her, is dead; for although they still decorate the May-pole with flowers, and place a garish figure in the centre of the largest garland, it is but the emblem of a dead king now, instead of the beautiful nymph which our ancestors typified, wreathed with May-buds, and scattering flowers on the earth, and which our grave Milton pictured as the flowery May, that came 'dancing from the East,' and throwing from her green lap

'The yellow cowslip and the pale primrose!'

On the 29th of May—one of the bright holidays of our boyish years—we were up and away at the first peep of dawn to the woods, to gather branches of oak and hawthorn, so that we might bring home the foliage and the May-buds as green and white and fresh as when the boughs were unbroken, and the blossoms ungathered.

Many an old man and woman, awakened out of their sleep as we went sounding our bullock-horns through the streets at that early hour, must have wished our breath as hushed as that of Cromwell or King Charles, as the horrible noise we made rang through their chambers. Some, perhaps, would awaken with a sigh, and, recalling the past, lie half dreaming of the old years that had departed, when they were also young, and rose with the dawn as we did, and went out with merry hearts a-Maying.

We were generally accompanied by a few happy girls—our sisters, or the children of our neighbours—whose mothers had gone out to bring home May-blossoms when they were girls and their husbands boys, as we then were. The girls brought home sprays of hawthorn, sheeted over with moonlight-coloured May-blossoms, which, along with wild and garden flowers, they wove into the garlands they made to hang in the oak branches, across the streets, and on the May-pole; and great rivalry there was as to which girl could make the handsomest May-garland.

If it were a dewy morning, the girls always bathed their faces in May-dew, to make them fair. It was our part to cut down and drag, or carry home huge branches of oak, with which, as Herrick says, we made 'each street a park—green, and trimmed with trees.' Beautiful did the old woods look in the golden dawn, while the dewy mist still hung about the trees, and nothing seemed awake but the early birds in all that silent land of trees. We almost recall the past with regret, as we remember how we stopped the singing of 'those little angels of the trees,' by blowing our unmelodious horns; and marvel that neither Faun nor Dryad arose to drive us from their affrighted haunts. We climbed the huge oaks like the Druids of old, and, although we had no golden pruning-hooks,

we were well supplied with saws, axes, and knives, with which we hacked and hewed at the great branches, until they came down with a loud crash, sometimes before we were aware, when we now and then came down with the boughs we had been bestriding. Very often the branches were so large, we were compelled to make a rude hurdle, on which we dragged them home; a dozen of us hauling with all our strength at the high pile of oak-boughs, careful to keep upon the road-side grass, lest the dust should soil the beautiful foliage. Yet with all our care there was the tramp of the feet of our companions beside us along the dusty highway; and though the sun soon dried up the dew which had hung on the fresh-gathered leaves, it was no longer the sweet green oak that decorated the woods—no longer the maiden May, with the dew upon her bloom—but a dusty and tattered Doll Tear-sheet, that dragged her bemired green skirt along the street, compared with the vernal boughs and sheeted blossoms we had gathered in the golden dawn. Many a wreck of over-reaching ambition strewn the roadway from the woods, in the shape of huge oaken branches which the spoilers had cast aside, after toiling under the too weighty load until their strength was exhausted.

Publicans, and others who could afford it, would purchase the biggest branches that could be bought of poor countrymen, or others whom they sent out—for there was great rivalry as to who should have the largest bough at his door; and wherever the monster branch was placed, that we made our head-quarters for the day, and there was heard the loudest sounding of horns. Neither the owners of the woods, gamekeepers, nor woodmen interfered with us, beyond a caution not to touch the young trees; for lopping a few branches off the large oaks was never considered to do them any harm, nor do we remember that ever a summons was issued for trespassing on the 29th of May. Beautiful did these old towns and villages look, with their long lines of green boughs projecting from every house, while huge gaudy garlands of every colour hung suspended across the middle of the streets, which, as you looked at them in the far distance, seemed to touch one another, like lighted lamps at the bottom of a long road, forming to appearance one continuous streak of fire. Then there were flags hung out here and there, which were used at the club-feasts and Whitsuntide holidays—red, blue, yellow, purple, and white blending harmoniously with the green of the branches and their gilded oak-apples, and the garlands that were formed of every flower in season, and rainbow-coloured ribbons that went streaming out and fluttering in the wind, which set all the banners in motion, and gave a look of life to the quiet streets of these sleepy old towns. But as all is not gold that glitters, so were those gaudy-looking garlands not altogether what they appeared—for ribbons were expensive, and we were poor; so we hoarded up our blue sugar-paper, and saved clean sheets of our pink blotting-paper, with other sheets of varied colour—and these, when made up into bows, and shaped like flowers, and hung too high over head for the

cheat to be discovered, might be taken for silk, as the gilded oak-apples might pass for gold; and many a real star or ribbon, which the ambitious wearers had wasted a life to obtain, were never worn nor gazed upon with greater pleasure than that afforded us by the cunning of our own hands. And in these garlands were hung the strings of birds' eggs we had collected from hundreds of nests—some of us contributing above a hundred eggs—which were strung like pearls. Those of the great hawks, carrion crows, rooks, magpies, and such like, in the centre, and dwindling—

'Fine by degrees, and beautifully less,'

to the eggs of the tiny wren, which are not larger than a good-sized pea. No doubt it is as cruel to rob birds'-nests as it is to sack cities; but as generals must have spoil for their soldiers, so we believed we could not have garlands without plundering the homes of our sweet singing-birds, to celebrate the 29th of May. Tired enough at night we were, through having risen so early, and pacing about all day long; and sore and swollen were our lips, through blowing our horns so many hours; and yet these rural holidays bring back pleasant memories—for time might be worse misspent than in thus celebrating the 29th of May.

T. M.

Cavalier Claims.

The dispensers of patronage under the Restoration had no enviable office. The entry of Charles II. into his kingdom was no sooner known, than all who had any claim, however slight, upon royal consideration, hastened to exercise the right of petition. Ignoring the Convention of Breda, by which the king bound himself to respect the *status quo* as far as possible, the nobility and gentry sought to recover their alienated estates, clergymen prayed to be reinstated in the pulpits from which they had been ejected, and old placcholders demanded the removal of those who had pushed them from their official stools. Secretary Nicholas was overwhelmed with claims on account of risks run, sufferings endured, goods supplied, and money advanced on behalf of the good cause; petitions which might have been endorsed, like that of the captain who entreated the wherewithal to supply his wants and pay his debts, 'The king says he cannot grant anything in this kind till his own estates be better settled.'

The *Calendar of State Papers* for the year 1660 is little else than a list of royalist grievances, for the bulk of documents to which it forms an index are cavalier petitions. As might be expected, it is rather monotonous reading; still, some interesting and curious details may be gathered from its pages. The first petition preserved therein is that of twenty officers of the Marquis of Hertford's Sherborne troop, who seek to be made partakers of the universal joy by receiving some provision for the remainder of their days; 'the late king' having promised that they should 'have the same pay as long as they lived.' The gallant twenty seem to have thought, with Macbeth, that if a thing was to be done, it were well it were done quickly, for their petition is

dated the 29th of May. It is true the numeral is supplied by Mrs Green, but even giving them the benefit of the doubt, it is evident that the appeal must have been presented within three days of Charles II.'s ascension to the throne. If that monarch had endorsed all the promises of his father, he would have made some curious appointments; a quartermaster of artillery actually applies for the office of king's painter, the patron of Vandyke 'having promised him the office on seeing a cannon painted by him when he came with the artillery after the taking of Hawksby House.' Another artillery officer, Colonel Dudley, puts forth somewhat stronger claims for reward, having lost £2000 and an estate of £200 a-year, had his sick wife turned out of doors, his men taken, 'one of them, Major Harcourt, being miserably burned with matches, and himself stripped and carried in scorn to Worcester, which he had fortified as general of artillery, where he was kept under double guard; but escaped, and being pursued, he took to the trees in the daytime, and travelled in the night till he got to London; was retaken, brought before the Committee of Insurrection, sent to the gatehouse, and sentenced to be shot; but escaped with Sir H. Bates and ten others during sermon-time; lived three weeks in an enemy's haymow, went on crutches to Bristol, and escaped.' George Paterick asks a place in his majesty's barge, having served the late king sixteen years by sea and land; been often imprisoned, twice tried for his life, and three times banished the river, and forbidden to ply as a waterman. One soldier solicits compensation for fifteen wounds received at Edgehill, and another for his sufferings after Worcester fight, when 'the barbarous soldiers of the grand rebel, Cromwell, hung him on a tree till they thought him dead.' The Cromwellian system of colonization is aptly illustrated by the petition of Lieut.-Col. Hunt, praying his majesty to order the return of thirty soldiers taken prisoners at Salisbury, 'who were sold as slaves in Barbadoes;' and by that of John Fowler, captain of pioneers at Worcester, 'sent by the rebels to the West Indies as a present to the barbarous people there, *which penalty he underwent with satisfaction and content.*' The evil case to which the exiled king had been reduced is exemplified by the complaint of 'his majesty's regiment of guards in Flanders,' that they had not received a penny for six months, and were compelled to leave officers in prison for their debts, before they could march to their winter quarters at Namur, where their credit was so bad, that the officers had to sell their clothes, 'some even to their last shirt,' to procure necessities.

The brief abstracts of the memorials of less active partisans speak even more eloquently of the misery wrought by civil strife. Thomas Freebody solicits admission among the poor knights of Windsor, having been imprisoned seven times, banished twice, and compelled on three occasions to find sureties for a thousand pounds. James Towers was forced, on account of his loyalty, to throw dice for his life; and, winning the cast, was banished. Thomas Holyoke, a clergyman, saw his aged father forced from his

habitation, his mother beaten so that her death was hastened, his servant killed, while he was deprived of property bringing in £300 a-year, and obliged to live on the charity of commiserating friends. Another clergyman recounts how he suffered imprisonment for three years, and was twice corporally punished for preaching against rebellion and using the Common Prayer-book. Sir Edward Pierce, advocate at Doctors' Commons, followed Charles I. to York as judge marshal of the army, which he augmented by a regiment of horse. He lost thereby his property, his profession, and his books; 'was decimated and imprisoned, yet wrote and published at much danger and expense many things very serviceable to king and church.' Abraham Dowcett supplied the late king with pen and ink, at hazard of his life conveyed letters between him and his queen, and afterwards plotted his escape from Carisbrook Castle, for which he was imprisoned and his property sequestrated. The brothers Samburne seem to have earned the commissionership of excise, for which they petition. After being exiled for executing several commissions on behalf of both the king and his father, and spent £25,000 in supplying war material to their armies, they transmitted letters for the members of the royal family, 'when no one else would sail;' and when Charles II. arrived at Rouen, after the battle of Worcester, James Samburne was the only person to whom he made himself known, or whom he would entrust with dispatches to the queen-mother. The Samburnes further assisted Charles by prevailing upon a Mr Scott to advance him 'money for Paris,' and religiously preserved a portion of his majesty's disguise as a precious relic.

Lady petitioners muster strong, and for the most part show good cause why their prayers should be granted. Some of them afford remarkable proof of what women will do and suffer for a cause with which they sympathize. Katherine de Luke asks for the lease of certain waste lands near Yarmouth; she served Charles I. by carrying letters when none else durst run the risk, for which she was sent to Bridewell, and whipped every other day, burnt with lighted matches, and otherwise tortured to make her betray her trust. Her husband died of his wounds, her son was sold to slavery, and she herself obliged to live abroad for sixteen years. Elizabeth Cary, an aged widow, was imprisoned in Windsor Castle, Newgate, Bridewell, the Bishop of London's house, and lastly in the Mews, at the time of the late king's martyrdom, for peculiar service in carrying his majesty's gracious proclamation and declaration from Oxford to London. She had her back broken at Henley-on-Thames, where a gibbet was erected for her execution. This extremity she escaped, and succeeded in finding shelter in her own county. Her loyalty was rewarded by a pension of £40 a-year. Elizabeth Pinckney, who buried her husband after Reading fight, seeks the continuation of an annuity of £20 he had earned by thirty-six years' service. She complains that since 1643 she had waited on all parliaments for justice, 'but they have imprisoned her, beaten her with whips, kicked, pulled, and torn her, till shame was cried upon them.' Ann

Dartigueran says her father lost his life in the cause, leaving her nothing but sadness to inherit. Mrs Mary Graves certainly deserved well of the restored monarch; for when he made his last attempt to recover his crown by force, she sent him twelve horses, ten furnished with men and money, and two empty, on one of which the king rode at Worcester, escaping from the field on the other. This service cost the loyal lady her liberty, an estate of £600 a-year, and two thousand pounds' worth of personal property. Nothing daunted, she prevailed upon her husband to let her send provisions from Ireland to Chester in aid of Sir George Booth's rising, for which she was again imprisoned, and her remaining property seized. In a second appeal, Mrs Graves says she sent one Francis Yates to conduct his majesty out of Worcester to Whitehaven, for doing which he was hung; and she had been obliged to maintain his widow and five children ever since. To this petition is appended a paper, signed by Richard Penderel, certifying that Edward Martin was tenant of White Ladies, where Charles hid himself for a time, disguised in a suit of his host; and further, that Francis Yates's wife was the first person to give the fugitive prince any food after the defeat, which he ate in a wood, upon a blanket. Charles afterwards borrowed ten shillings of Yates himself, 'for a present necessity,' and 'was pleased to take his bill out of his hand and kept it in his own, the better to avoid suspicion;' Yates seeing his charge safe from Bosobel to Mosely, a service which, as is stated above, cost the faithful yeoman his life.

After such stories of suffering and devotion, one has no sympathy to spare for Robert Thomas, whose principal claim upon royal consideration seems to be his having lost his mother, 'who was his majesty's seamstress from his birth;' or for one Maddox, who seeks a re-appointment as tailor to the crown, excusing himself for not waiting upon his customer for twelve years by a vague assertion of being prevented by 'sufferings for his loyalty.' An old man of ninety-five asks to be restored to his post of cormorant-keeper, an office conferred on him by James I.; and another claims favour for 'having served his majesty in his young days as keeper of his batons, paumes, tennis-shoes, and ankle-socks.' E. Fawcett, too, who taught his majesty to shoot with the long-bow, 'an exercise honoured by kings and maintained by statutes,' solicits and obtains the office of keeper of the long-bows; having in anticipation provided four of the late king's bows, with all necessaries, for the use of his majesty and his brothers, when they shall be inclined to practise the ancient art. Edward Harrison, describing himself as 70 years old, and the father of twenty-one children, encloses a certificate from the Company of Embroiderers, to the effect that he is the ablest workman living. He wishes to be re-appointed embroiderer to the king, having filled that situation under James, and having preserved the king's best cloth of state and his rich carpet embroidered in pearls from being cut in pieces and burnt, and restored them with other goods to his majesty.

While Robert Chamberlain prays for a mark of

favour before going to his grave, being 110 years of age, Walter Braems asks for a collectorship of customs, for 'being fetched out of his sick bed at fourteen years old and carried to Dover Castle, and there honoured by being the youngest prisoner in England for his majesty's service.' John Southcott, with an eye to the future, wants to be made clerk of the green cloth to his majesty's children, 'when he shall have issue;' and Squire Beverton, Mayor of Canterbury, is encouraged to beg a receivership because his majesty was pleased to acknowledge his loyalty, on his entry into Canterbury, 'with gracious smiles and expressions.'

To have satisfied the many claims put forward by those who had espoused the royal cause, Charles II. needed to have possessed the wealth of a Lydian monarch and the patronage of an American president. As it was, he was compelled to turn a deaf ear to most suppliants, at the risk of their complaining, as one unsuccessful petitioner does, that 'those who are loyal have little encouragement, being deprived of the benefit of the law; destitute of all favours, countenances, and respect; and left as a scorn to those who have basely abused them.'

INEDITED AUTOGRAPHS.

SARAH DUCHESS OF MARLBOROUGH.

Sarah Jennings, the wife of the great general, John Duke of Marlborough, has been painted in terms far too black by Lord Macaulay, a fact easily to be accounted for by her coming into opposition to his lordship's hero, King William.

AUTOGRAPH OF THE DUCHESS OF MARLBOROUGH.

Her worst fault was her imperious temper. It was her destiny to become the intimate friend of King James's second daughter, the Princess Anne, a gentle and timid woman of limited understanding, who, in her public career, felt the necessity of a strong-minded female friend to lean upon. There is something very conciliating in the account her grace gives of the commencement of her friendship with the princess. Anne justly deemed a feeling of equality necessary for friendship. 'She grew uneasy to be treated by me with the form and ceremony due to her rank; nor could she hear from me the sound of words which implied in them distance and superiority. It was this turn of mind that made her one day propose to me, that whenever I should happen to be absent from her, we might in all our letters write ourselves by feigned names, such as would import nothing of distinction of rank between us. *Morley* and *Freeman* were the names her fancy hit upon; and she left me to choose by which of them I

would be called. My frank, open temper, naturally led me to pitch upon Freeman, and so the princess took the other; and from this time Mrs Morley and Mrs Freeman began to converse as equals, made so by affection and friendship.*

Through the reign of her father, when in difficulties from his wish to make her embrace the Catholic faith—through that of William and Mary, when called upon by those sovereigns, her cousin and sister, to give up her friendship with the duchess, because of the duke having become odious to them—Anne maintained her love for Mrs Freeman; but when she became queen, a series of unfortunate circumstances led her to withdraw her attachment. The queen now disliked the duke, and another and humbler confidante, Mrs Masham, had engaged her affections. It was in vain that Sarah sought to replace herself on the old footing with Mrs Morley. She had to drink to the dregs the bitter cup of the discarded favourite.† Her narrative of this distressing crisis, and particularly of her last interview with the queen—when with tears, but in vain, she entreated to be told of any fault she had committed—can scarcely be read without a feeling of sympathy. She could not help at last telling the queen that her majesty would yet suffer for such an instance of inhumanity; to which the only answer was, 'That will be to myself.' And then they parted, to meet no more.

She quotes a letter of her husband on the subject: 'It has always,' he says, 'been my observation in disputes, especially in that of kindness and friendship, that all reproaches, though ever so just, serve to no end but making the breach wider. I cannot help being of opinion, that, however insignificant we are, there is a power above that puts a period to our happiness or unhappiness. If anybody had told me eight years ago, that after such great success, and after you had been a faithful servant twenty-seven years, we should be obliged to seek happiness in a private life, I could not have believed that possible.'

LONG INTERMISSION.

There is a well-known anecdote of a silent man, who, riding over a bridge, turned about and asked his servant if he liked eggs, to which the servant answered, 'Yes;' whereupon nothing more passed till next year, when, riding over the same bridge, he turned about to his servant once more, and

* *An Account of the Conduct of the Dowager Duchess of Marlborough, 1742, p. 14.*

† Mrs Masham, born Abigail Hill, was full cousin to the Duchess, but originally in penurious circumstances. She had been introduced by Sarah herself to the service in which she was ultimately able to supplant her patroness. These circumstances must have feathered the dart that went to the heart of the proud lady. From the notoriety of Mrs Masham's rise in the position of a waiting-woman, seems to have come the practice of Swift, Fielding, and other wits in using Abigail as a term for a lady's maid.

said, 'How?' to which the instant answer was, 'Poached, sir.' Even this sinks, as an example of long intermission of discourse, beside an anecdote of a minister of Campsie, near Glasgow. It is stated that the worthy pastor, whose name was Archibald Denniston, was put out of his charge in 1655, and not replaced till after the Restoration. He had, before leaving his charge, begun a discourse, and finished the first head. At his return in 1661, he took up the second, calmly introducing it with the remark that 'the times were altered, but the doctrines of the gospel were always the same.'*

In the newspapers of July 1862, there appeared a paragraph which throws even the minister of Campsie's interrupted sermon into the shade. It was as follows: 'At the moment of the destruction of Pompeii by an eruption of Mount Vesuvius, A.D. 79, a theatrical representation was being given in the Amphitheatre. A speculator, named Langini, taking advantage of that historical reminiscence, has just constructed a theatre on the ruins of Pompeii; and the opening of which new theatre he announces in the following terms:—"After a lapse of 1800 years, the theatre of the city will be re-opened with *La Figlia del Reggimento*. I solicit from the nobility and gentry a continuance of the favour constantly bestowed on my predecessor, Marcus Quintus Martius; and beg to assure them that I shall make every effort to equal the rare qualities he displayed during his management."'

MAY 30.

St Felix, pope and martyr, 274. St Maguil, recluse in Picardy, about 685. St Walstan, farm labourer at Taverham in Norfolk, devoted to God, 1016. St Ferdinand III., first king of Castile and Leon in union, 1252.

Born.—Peter the Great, of Russia, 1672, *Moscow*; Henry Viscount Sidmouth, statesman, 1757, *Reading*; John Charles, third Earl Spencer, Chancellor of the Exchequer (1830-4), 1782; Samuel Spalding, writer in physiology, theory of morals, and biblical criticism, 1807, *London*.

Died.—King Arthur, 542; St Hubert, 727, *Ardennes*; Jerome of Prague, religious reformer, burnt at *Constance*, 1416; Joan d'Arc, burnt at *Rouen*, 1431; Charles IX. of France, 1574, *Vincennes*; Peter Paul Rubens, painter, 1640; Charles Montagu, Earl of Halifax, statesman, 1715; Alexander Pope, poet, 1744, *Twickenham*; Elizabeth Elstob, learned in Anglo-Saxon, 1756, *Bulstrode*; Voltaire, 1778, *Paris*.

KING ARTHUR.

According to British story, at the time when the Saxons were ravaging our island, but had not yet made themselves masters of it, the Britons were ruled by a wise and valiant king, named Uther Pendragon. Among the most distinguished of Uther's nobles was Gorlois Duke of Cornwall, whose wife Igera was a woman of surpassing beauty. Once, when King Uther was as usual holding his royal feast of Easter, Gorlois attended with his lady; and the king, who had

* The fact is stated on the credit of tradition in the Statistical Account of the parish, 1795.

not seen her before, immediately fell in love with her, and manifested his passion so openly, that Gorlois took away his wife abruptly, and went home with her to Cornwall without asking for Uther's leave. The latter, in great anger, led an army into Cornwall to punish his offending vassal, who, conscious of his inability to resist the king in the field, shut up his wife in the impregnable castle of Tintagel, while he took shelter in another castle, where he was immediately besieged by the formidable Uther Pendragon. During the siege, Uther, with the assistance of his magician, Merlin, obtained access to the beautiful Igera in the same manner as Jupiter approached Alcemea, namely, by assuming the form of her husband; the consequence was the birth of the child who was destined to be the Hercules of the Britons, and who when born was named Arthur. In the sequel, Gorlois was killed, and then Uther married the widow.

Such, according to Geoffrey of Monmouth, and the so-called British historians, was the origin of King Arthur. On the death of Uther, Arthur was unanimously chosen to succeed him, and was crowned at Silchester. No sooner had he ascended the throne than he was called upon to war against the Saxons, who, under a new chief named Colgrin, had united with the Picts and Scots, and made themselves masters of the northern parts of the island. With the assistance of his nephew, Hoel King of Brittany, Arthur overcame the Anglo-Saxons, and made them promise to leave the island. But, instead of going to their own country, they only sailed round the coasts, and landing again at Totness, laid waste the country with fire and sword till they reached the city of Bath, which they besieged. Arthur, leaving his nephew Hoel sick at Alcluyd (Dunbarton), hastened southward to encounter the invaders, and defeated them with great slaughter at a place which is called in the story Mount Badon. Having thus crushed the Saxons, Arthur returned to Alcluyd, and soon reduced the Picts and Scots to such a condition, that they sought shelter in the islands in Loch Lomond, and there made their peace with him. Not content with these successes, Arthur next conquered Ireland, Iceland, Gothland, and the Orcades; to which he afterwards added Norway and Denmark, placing over them all tributary kings chosen from among his own chieftains. Next he turned his arms against Gaul, which also he subdued, having defeated and slain its governor Flolo in single combat, under the walls of Paris. The conquest of the whole of Gaul occupied nine years, at the end of which Arthur returned to Paris, and there distributed the conquered provinces among his followers.

Arthur was now in the zenith of his power, and on his return to his native land he made a proud display of his greatness, by calling to a great council at Caerleon all these tributary princes, and there in great pomp he was crowned again. Before the festivities were ended, an unexpected occurrence turned the thoughts of the assembled princes to new adventures. Twelve aged men arrived as ambassadors from Lucius Tiberius, the 'procurator' of the republic of

Rome, bearing a letter by which King Arthur was summoned in peremptory language to restore to Rome the provinces which he had unjustly usurped on the Continent, and also to pay the tribute which Britain had formerly paid to the Imperial power. A great council was immediately held, and it was resolved at once to retort by demanding tribute of Rome, and to march an army immediately into Italy, to subdue the Imperial city. Arthur next entrusted the government of Britain to his nephew Modred and his queen Guanhumara, and then embarked at Southampton for the Continent. They landed near Mont St Michael, where Arthur slew a Spanish giant, who had carried away Helena, the niece of Hoel of Brittany. The army of the Britons now proceeded on their march, and soon encountered the Romans, who had advanced into Gaul to meet them; but who, after much fighting and great slaughter, were driven out of the country, with the loss of their commander, Lucius Tiberius, who was slain by Arthur's nephew, Walgan, the Gawain of later romance. At the approach of the following spring, King Arthur began his march to Rome, but as he was beginning to pass the Alps he was arrested by disastrous news from Britain.

Modred, who had been left there as regent during the absence of the king, conspired with the queen, whom he married, and usurped the crown; and he had called in a new horde of Saxons to support him in his usurpation. On hearing of these events, Arthur divided his forces into two armies, one of which he left in Gaul, under the command of Hoel of Brittany, while with the other he passed over to Britain, and landed at Rutupie, or Richborough, in Kent, where Modred awaited them with a powerful army. Although Arthur lost a great number of his best men, and among the rest his nephew Walgan, Modred was defeated and put to flight, and he was only able to rally his troops when he reached Winchester. When the news of this defeat reached the queen, who was in York, she fled to Caerleon, and took refuge in a nunnery, where she resolved to pass the remainder of her life in penitence. Arthur followed his nephew to Winchester, and there defeated him in a second battle; but Modred escaped again, and made his retreat towards Cornwall. He was overtaken, and finally defeated in a third battle, which was far more obstinate and fatal than those which preceded. Modred was slain, and King Arthur himself was mortally wounded. They carried him to the Isle of Avallon (Glastonbury), to be cured of his wounds; but all the efforts of the physicians were vain, and he died and was buried there, Geoffrey of Monmouth says, in the year 542. Before his death, he resigned the crown to his kinsman Constantine.

Such is an outline of the fabulous history of King Arthur, as it is given by the earliest narrator, Geoffrey of Monmouth, who wrote in the year 1147. The numerous stories of King Arthur, and his knights of the round table, which now swell out the story, are the works of the romance writers of later periods. There was a time when every writer or reader of British history was expected to put entire faith in this narra-

tive; but that faith has gradually diminished, until it has become a matter of serious doubt whether such a personage ever existed. There are few indeed now who take Geoffrey of Monmouth's history for anything but fable. The name of a King Arthur was certainly not known to any chroniclers in this country before the Norman period, and Giraldus Cambrensis, towards the end of the twelfth century, bears testimony to the fact that Geoffrey's stories were not Welsh. From different circumstances connected with their publication, it seems probable that they were derived from Brittany, and one of the opinions regarding them is that Arthur may have been a personage in the mythic history of the Bretons. However, be this as it may, the history of King Arthur has become an important part of our literature; and as it sinks lower in the estimate of the historian, it seems to have become more popular than ever, and to have increased in favour with the poet. In proof of this, we need only point to Tennyson and Bulwer.

JOAN D'ARC.

When Horace Walpole wished to amuse his father by reading a historical work to him, the aged statesman, 'hackneyed in the ways of men,' exclaimed—'Anything but history; that must be false.' Dr Johnson, according to Boswell, held a somewhat similar opinion; and Gibbon, alluding to the fallacies of history, said, 'the spectators of events knew too little, the actors were too deeply interested, to speak the real truth.' The French heroine affords a remarkable instance of historic uncertainty. Historians, one copying the words of another, assert she was burned at Rouen, in 1431; while documentary evidence of the most authentic character, completely negating the story of her being burned, shew she was alive, and happily married, several years after the period alleged to be that of her execution.

Many of these documents are in the registry of the city of Mentz, and prove she came thither in 1436. The magistrates, to make sure that she was not an impostor, sent for her brothers, Pierre and Jean, who at once recognised her. Several entries in the city records enumerate the presents, with the names of the donors, that were given to her on the occasion of her marriage with the Chevalier d'Armoise, and even the marriage contract between Robert d'Armoise, Knight, and Jeanne d'Arc, la Pucelle d'Orleans, has been discovered.

The archives of the city of Orleans contain important evidence on this subject. In the treasurer's accounts for 1435, there is an entry of eleven francs and eight sous paid to messengers who had brought letters from 'Jeanne, la Pucelle.' Under the date of 1436, there is another entry of twelve livres paid to Jean de Lys, brother of 'Jeanne, la Pucelle,' that he might go and see her. The King of France ennobled Joan's family, giving them the appellation of de Lys, derived from the *fleur de lys*, on account of her services to the state; and the entry in the Orleans records corresponds with and corroborates the one in the registry of Mentz, which

states that the magistrates of the latter city sent for her brothers to identify her. These totally independent sources of evidence confirm each other in a still more remarkable manner. In the treasurer's accounts of Orleans for the year 1439, there are entries of various sums expended for wine, banquets, and public rejoicings, on the occasion of Robert d'Armoise and Jeanne, his wife, visiting that city. Also a memorandum that the council, after mature deliberation, had presented to Jeanne d'Armoise the sum of 210 livres, for the services rendered by her during the siege of the said city of Orleans. There are several other documents, of equally unquestionable authority, confirming those already quoted here; and the only answer made to them by persons who insist that Joan was burned is, that they are utterly unexplainable.

It has been urged, however, that Dame d'Armoise was an impostor; but if she were, why did the brothers of the real Joan recognise and identify her? Admitting that they did, for the purpose of profiting by the fraud, how could the citizens of Orleans, who knew her so well, and fought side by side with her during the memorable siege, allow themselves to be so grossly deceived? The idea that Joan was not burned, but another criminal substituted for her, was so prevalent at the period, that there are accounts of several impostors who assumed to be her, and of their detection and punishment; but we never hear of the Dame d'Armoise having been punished.

In fine, there are many more arguments in favour of the opinion that Joan was not burned, which need not be entered into here. The French antiquaries, best qualified to form a correct opinion on the subject, believe that she was not burned, but kept in prison until after the Duke of Bedford's death, in 1435, and then liberated; and so we may leave the question—a very pretty puzzle as it stands.

POPE'S GARDEN.

If we could always discover the personal tastes and pleasurable pursuits of authors, we should find these the best of comments on their literary productions. The outline of our life is generally the work of circumstance, and much of the filling-in is done after an acquired manner; but the fancies a man indulges when he gives the reins to his natural disposition are the clearest index of his mind.

No one will deny to Pope excellence of a certain sort. Though, in his verse, we look in vain for the spontaneous and elegant simplicity of nature, yet, in polish and finish, and artificial skill, he stands unrivalled among English poets. And apropos of this ought to be noted how much time and skill he expended on his garden. Next to his mother and his fame, this he loved best. He altered it and trimmed it like a favourite poem, and was never satisfied he had done enough to adorn it. Himself a sad slip of nature, with a large endowment of sensitiveness and love of admiration, he was never very anxious to appear in public—indeed, had he wished, being such an invalid as he was, it would have been out of his power; so he settled at Twicken-

ham, where Lord Bacon and many other literary celebrities had lived before him, and adorned his moderate acres with the graces of artificial elegance. Here, during many long years, he cherished his good mother—and here, when she died, he built a tomb, and planted mournful cypress; here he penned and planned, with his intimate friends, deep designs to overthrow his enemies, and to astonish the world, or listened to philosophy for the use of his *Essay on Man*, or clipped and filed his elegant lines and sharp-toothed satires.

When we read of Pope's delightful little sanctum, when we hear Walpole describing 'the retiring and again assembling shades, the dusky groves, the larger lawn, and the solemnity of the termination at the cypresses that led up to his mother's tomb,' we almost wonder that so much envy and spite, and filthiness and bitter hatred, could there find a hiding-place. Such hostility did the publication of the *Dunciad*—in which he lashed unmercifully all his literary foes, and many who had given him no cause of offence—bring upon the reckless satirist, that his sanctuary, it is hinted, might for a short time have been considered a prison. He was threatened with a cudgelling, and afraid to venture forth. His old friends and new enemies, Lady Mary Montagu and Lord Hervey, seized upon this opportunity of annoying him, and jointly produced a pamphlet, of which the following was the title: *A Pop upon Pope; or a true and faithful account of a late horrid and barbarous whipping, committed on the body of Sawney Pope, poet, as he was innocently walking in Ham Walks, near the River Thames, meditating verses for the good of the public. Supposed to have been done by two evil-disposed persons, out of spite and revenge for a harmless lampoon which the said poet had writ upon them.* So sensitive was Pope, that believing this fabulous incident would find people to credit it, he inserted in the *Daily Post*, June 14, 1728, a contradiction:—'Whereas there has been a scandalous paper cried aloud about the streets, under the title of a *Pop upon Pope*, insinuating that I was whipped in Ham Walks on Thursday last; this is to give notice, that I did not stir out of my house at Twickenham on that day, and the same is a malicious and ill-grounded report.—A. P.'

That part of Pope's garden which has always excited the greatest curiosity was the grotto and subterraneous passage which he made.* Pope himself describes them thus fully in 1725:—'I have put my last hand to my works of this kind, in happily finishing the subterraneous way and grotto. I there formed a spring of the clearest water, which falls in a perpetual rill that echoes through the cavern day and night. From the River Thames you see through my arch up a walk of the wilderness to a kind of open temple, wholly

* It has never been properly explained that Pope's villa was a *roadside house*, backed by a lawn verging on the Thames, that the garden was a neighbouring piece of ground on the *opposite* side of the way, and that the grotto and subterraneous passage were formed *under the road*, as a means of connecting the aforesaid lawn with the garden—a Cockneyish expedient to mask a vulgarizing circumstance.—*Ed.*

composed of shells in a rustic manner, and from that distance under the temple you look down through a sloping arcade of trees, and see the sails on the river passing suddenly and vanishing, as through a perspective glass. When you shut the doors of this grotto, it becomes on the instant, from a luminous room, a camera obscura; on the walls of which all objects of the river—hills, woods, and boats—are forming a moving picture in their visible radiations; and when you have a mind to light it up, it affords you a very different scene. It is finished with shells, interspersed with pieces of looking-glass in angular forms; and in the ceiling is a star of the same material, at which, when a lamp (of an orbicular figure of thin alabaster) is hung in the middle, a thousand pointed rays glitter, and are reflected over the place.

'There are connected to this grotto by a narrower passage two porches, one towards the river, of smooth stones, full of light, and open; the other towards the gardens, shadowed with trees, rough with shell, flints, and iron ore. The bottom is paved with simple pebble, as is also the adjoining walk up the wilderness to the temple, in the natural taste agreeing not ill with the little dripping murmur and the aquatic idea of the whole place. It wants nothing to complete it but a good statue with an inscription, like the beautiful antique one which you know I am so fond of:

"Hujus Nympha loci, sacri custodia fontis,
Dormio, dum blandæ sentio murmur aquæ;
Parce meum, quisquis tangis cava murmura, somnum
Rumpere, si bibas, sive lavare, tace."

"Nymph of the grot, these sacred springs I keep,
And to the murmur of these waters sleep;
Ah! spare my slumbers, gently tread the cave,
And drink in silence, or in silence lave."

You'll think I have been very poetical in this description, but it is pretty near the truth. I wish you were here to bear testimony how little it owes to art, either the place itself or the image I give of it.

It would be easy to draw a parallel between this grotto and the poet's mind, and instructive to compare the false taste, and eloquence, and pettiness of both. But let us rather, at this present time, hear what became of it. Dodsley, in his *Cave of Pope*, foreshadows its future fate:

"Then some small gem, or moss, or shining ore,
Departing, each shall pilfer: in fond hope
To please their friends in every distant shore,
Boasting a relic from the cave of Pope."

The inevitable destiny came in due time. The poet's garden first disappeared. Horace Walpole writes to Horace Mann in 1760: 'I must tell you a private woe that has happened to me in my neighbourhood. Sir William Stanhope bought Pope's house and garden. The former was so small and bad, one could not avoid pardoning his hollowing out that fragment of the rock of Parnassus into habitable chambers; but—would you believe it?—he has cut down the sacred groves themselves. In short, it was a little bit of ground of five acres, enclosed with three lanes, and seeing nothing. Pope had twisted and twirled, and rhymed and harmonized this, till it

appeared two or three sweet little lawns opening and opening beyond one another, and the whole surrounded with thick, impenetrable woods. Sir William, by advice of his son-in-law, Mr Ellis, has hacked and hewed these groves, wriggled a winding gravel walk through them, with an edging of shrubs, in what they call modern taste, and, in short, desired the three lanes to walk in again; and now is forced to shut them out again by a wall, for there was not a Muse could walk there but she was spied by every country fellow that went by with a pipe in his mouth.'

Pope's house itself was pulled down by Lady Howe (who purchased it in 1807), in order that she might be rid of the endless stream of pilgrims.

THE SHREWSBURY SHOW.

Three remarkable examples of the pageantry of the Middle Ages, in rather distant parts of England, remain at present as the only existing representatives of this particular branch of mediæval manners—the Preston Guild, the festival of the Lady Godiva at Coventry, and the Shrewsbury Show. Attempts have recently been made in each of these cases to revive customs which had already lost much of their ancient character, and which appeared to be becoming obsolete; but probably with only temporary success. It is not, indeed, easy, through the great changes of society, to make permanent customs which belong exclusively to the past. The municipal system of the Middle Ages, and the local power and influence of the guild, which alone supported these customs, have themselves passed away.

As in other old towns, the guilds or trading corporations of Shrewsbury were numerous, and had no doubt existed from an early period—all these fraternities or companies were in existence long before they were incorporated. The guilds of the town of Shrewsbury presented one peculiarity which, as far as we know, did not exist elsewhere. On the southern side of the town, separated from it by the river, lies a large space of high ground called Kingsland, probably because in early times it belonged to the kings of Mercia. At a rather remote period, the exact date of which appears not to be known, this piece of ground came into the possession of the corporation; and it has furnished during many ages a delightful promenade to the inhabitants, pleasant by its healthful air and by the beautiful views it presents on all sides. It was on this spot that the Shrewsbury guilds held their great annual festivities, and hither they directed the annual procession which, as in other places, was held about the period of the feast of Corpus Christi. The day of the Shrewsbury Show, which appears from records of the reign of Henry VI. to have then been held 'time out of mind,' is the second Monday after Trinity Sunday. At some period, which also is not very clearly known, portions of land were distributed to the different guilds, who built upon them their halls, or, as they called them, harbours. The word *harbour* meant properly a place of entertainment, but it is one of the peculiarities of the

local dialects on the borders of Wales to neglect the *h*, and these buildings are now always called arbour. Seven of these arbours are, we believe, still left. They are halls built chiefly of wood, each appropriated to a particular guild, and furnished with a large table (or tables) and benches, on which the members of the guild feasted at the annual festival, and probably on other occasions. Other buildings, sometimes of brick, were attached to the hall, for people who had the care of the place, and a court or space of ground round, generally rectangular, was surrounded by a hedge and a ditch, with an entrance gateway more or less ornamented. These halls appear to have been first built after the restoration of Charles II. The first of which there is any account was that of the Tailors, of which there is the following notice in account books of the Tailors' Company for the year 1661.

Pd. for making ye harbour on Kingsland	02	11	10
Pd. for seates...	00	10	02
Pd. for cutting ye bryars and ditching, and spent yt day	00	01	04

Thus the building of the Tailors' arbour cost the sum total of £3, 3s. 4d. It was of wood, and underwent various repairs, and perhaps received additions during the following years; and it is still standing, though in a dilapidated condition. Our cut represents the entrance gateway as it now appears, and the bridge over the ditch

THE TAILORS' ARBOUR.

which surrounds it. The ornamental part above, on which are carved the arms of the Tailors' Company, was erected in 1669, at an expense of £1, 10s., as we learn from the same books.

Our second cut will give a better general notion of the arrangement of these buildings. It is the Shoemakers' arbour, the best preserved and most interesting of them all. The hall of timber is seen within the enclosure; the upper part is open-work, which admits light into the interior.

At the back of it is a small brick house, no doubt more modern than the arbour itself. The gateway, which is much more handsome than usual, and is built of stone, bears the date of 1679, and the initials, H. P. and E. A., of the wardens of the Shoemakers' guild at that time. At the sides of the arms of the company are two now sadly-mutilated statues of the patron saints of the Shoemakers, Crispin and Crispinianus, and on the square tablet below the following rather naïve rhymes, now nearly effaced, were inscribed:

'We are but images of stonne,
Doe us noe harme, we can doe nonne.'

The Shearmen's Company (or Clothworkers) had a large tree in their enclosure, with seats ingeniously fixed among the branches, to which those who liked mounted to carouse, while the less venturesome members of the fraternity contented themselves with feasting below.

Shrewsbury Show has been in former times looked forward to yearly by the inhabitants in general as a day of great enjoyment, although at present it is only enjoyment to the lower orders. Each company marched in their livery, with a pageant in front, preceded by their minstrels or band of music. The pageants were prepared with great labour and expense, the costume, &c., being carefully preserved from year to year. The choice of the subject for the pageant for each guild seems in some cases to have been rather arbitrary—at least during the period of which we have any account of them; and most of them are doubtless entirely changed from the mediæval pageants. Thus the pageant of the Shearmen represented sometimes King Edward VI., and at others Bishop Blaise. The Shoemakers have always been faithful to their patron saints, Crispin and Crispinianus. The Tailors have had at different times a queen, understood to represent Queen Elizabeth; two knights, carrying drawn swords; or Adam and Eve, the two latter dressed in aprons of leaves sewed together. The last of these only receive any explanation—the Tailors looked upon Adam and Eve as the first who exercised their craft. The Butchers had as their pageant a personage called the Knight of the Cleaver, who carried as his distinguishing badge an axe or cleaver, and was followed by a number of boys decked gaily with ribbons, and brandishing fencing-swords, who were called his Fencers. The Barber-Chirurgeons and Weavers united in one body, and had for their pageant what is described as 'Catherine working a spinning-wheel,' which was no doubt intended to represent St Catherine and her wheel, which was anything but a spinning-wheel. The Bricklayers, Carpenters, and Joiners had adopted for their pageant King Henry VIII.; but some years ago they deserted the bluff king temporarily for a character called 'Jack Bishop.' The Hatters and Cabinetmakers, for some reason unknown, selected as their pageant an Indian chief, who was to ride on horseback brandishing a spear. The Bakers seem to have studied Latin sufficiently deep to have learnt that *sine Cerere friget Venus*, and they adopted the two goddesses Venus and Ceres; sometimes giving one and sometimes the other. The pageant

of the Skinners and Glovers was a figure of a stag, accompanied by huntsmen blowing horns. The Smiths had Vulcan, whom they clothed in complete armour, giving him two attendants, armed with blunderbusses, which they occasionally discharged, to the great delight of the mob. The Saddlers have a horse fully caparisoned, and led by a jockey. The united Printers, Painters, and others, have of late years adopted as their pageant Peter Paul Rubens. It was probably this grouping together of the guilds, in order to distinguish the number of pageants, which has caused the arbitrary selection of new subjects. On some of the late occasions, a new personage was placed at the head of the procession to represent King Henry II., because he granted the first charter to the town.

In the forenoon of the day of the show, the performers usually muster in the court of the castle, and then go to assemble in the market-square, there to be marshalled for the procession. On the occasion at which we were present, in the summer of 1860, the number of pageants was reduced to seven. First came the pageant of the Shoemakers—Crispin, in a bright new leathern doublet, and his martial companion, also in a new suit, both on horseback. Next came a pageant of Cupid and a stag, with what may be supposed to have been intended for his mother, Venus, in a handsome car, raised on a platform drawn by four white horses—the pageant of the Tailors, Drapers, and Skinners. The third pageant was the Knight of the Cleaver, who also had a new suit, and who represented on this

THE SHOEMAKERS' ARBOUR.

occasion the Butchers and Tanners. Henry VIII., his personage padded out to very portly dimensions, in very dashing costume, who might almost have been taken by his swagger for the immortal Falstaff, and carrying a short staff or sceptre in his hand, rode next, as the head of the Bricklayers, Carpenters, and Joiners. Then came the Indian chief, the pageant of the Cabinet-makers, Hatters, and others; followed by Vulcan, representing the Smiths, and who, as usual, was equipped in complete armour; and Queen Catherine (?), as the representative of the Flax-dressers and Thread-manufacturers. The showy ranks of the trades of former times had dwindled into small parties of working men,

who marched two and two after each pageant, without costume, or only distinguished by a ribbon; each, however, preceded by a rather substantial band; and the fact that all these bands were in immediate hearing of each other, and all playing at the same time, and not together, will give a notion of the uproar which the whole created. The procession started soon after mid-day, and the confusion was increased by the sudden fall of a shower of rain just at that moment; whereupon Cupid was rendered not a bit more picturesque by having a great-coat thrown over his shoulders, while both he and Venus took shelter under an umbrella. In this manner the procession turned the High Street,

and proceeded along Pride Hill and Castle Street round the Castle end of the town—back, and by way of Dogpole and Wylecop, over the English Bridge into the Abbey Foregate. In the course of this perambulation they made many halts, and frequently partook of beer; so that when, after making the circuit of the Abbey Church, they returned over the English Bridge into the town, the procession had lost most of the order which it had observed at starting—whoever represented the guilds had quitted their ranks, and the principal personages were evidently already much the worse for wear. Venus looked sleepy, and Queen Catherine had so far lost all the little dignity she had ever possessed, that she seemed to have a permanent inclination to slip from her horse; while King Henry, look-

ing more arrogant than ever, brandished his sceptre with so little discretion, that an occasional blow on his horse's head caused him every now and then to be nearly ejected from his seat. At the Abbey Foregate the greater part of the crowd deserted, and took the shortest way to Kingsland, while the procession, much more slenderly escorted, returned along the High Street, and proceeded by way of Mardol over the Welsh Bridge, and reached Kingsland through the other suburb of Frankwell.

Our view of the procession, taken from a photograph by a very skilful amateur, made four or five years before the date of the one we have just described, represents it returning disordered and straggling over the English Bridge, and just entering the Wylecop. It will be seen that the

THE PROCESSION.

guildmen who formed anything like procession have disappeared, and that most of the mob has departed to Kingsland. The man on foot with his rod is the Marshal, who marched in advance of the procession. Behind him comes Henry VIII., with an unmistakable air of weariness, and probably of beer. Behind him are Crispin and Crispinianus, on horseback. Then comes Cupid's car, the god of love seated between two dames, an arrangement which we are unable to explain; a little further we see Vulcan in his suit of armour. Even the musicians are here no longer visible.

Formerly, the different guilds, who assembled in considerable numbers, each gave a collation in

their particular arbour; and the mayor and corporation proceeded in ceremony and on horseback from the town to Kingsland, and there visited the different arbours in succession. They were expected to partake in the collation of each, so that the labour in the way of eating was then very considerable. This part of the custom has long been laid aside, and the corporation of Shrewsbury now takes no part personally in the celebration, which is chiefly a speculation among those who profit by it, supported by a few who are zealous for the preservation of old customs. We may form some idea of the style in which the procession was got up in the latter part of the seventeenth century from the items

of the expenses of the Tailors' guild in the 'Show' of the year 1687, collected from the records of that guild by Mr Henry Pidgeon, a very intelligent antiquary of Shrewsbury, to whom we owe a short but valuable essay on the guilds of that town, published some years ago in Eddowes's *Shrewsbury Journal*. These expenses are as follows (it must be borne in mind that the pageant of the Tailors' Company was the queen, here represented by the 'gyrle').

	£	s.	d.
1687. Pd. 4 doz. and 9 yards ribbon, at 3s. per doz.	0	14	0
— Drink att Kingsland	0	16	0
— Wine att do.	0	6	0
— Bunns, 8d., bread, 12d., tobacco and pipes, 19d.	0	3	3
— Drums and music	1	4	0
— Carrying ye colours	0	1	6
— John Boulton and William Lewis	0	3	0
— The woman for looking after ye drinke, &c.	0	2	0
— Man for do.	0	1	0
— Man att ye gate	0	1	6
— Trumpitter in ye harbor	0	3	0
— For ruffles and a shute of knotts	0	6	0
— For making ye peake and altering ye gloves	0	1	6
— For a payre of gloves for ye gyrle and given ye gyrle	0	3	6
— For moweing ye harbor, and cut- ting ye hedge	0	2	6
— Woman for bringing and fetching ye saddle	0	1	0
— The man for fetching ye horse and dressing him	0	1	6
— For altering ye mantua	0	1	6
— For levinian to line ye sleeves ...	0	0	10
— Given to Mrs Scott for dressing ye gyrle	0	5	0
— For a band-box	0	0	6

In 1861, a revival of the show was again attempted, and it was believed that it would be rendered more popular by grafting upon it an exhibition of 'Olympic Games,' including the ordinary old English country pastimes, to which a second day was appropriated; but the attempt was not successful. On this occasion, the 'Black Prince' was introduced as a pageant, to represent the Bakers and Cabinetmakers; and a dispute about the payment of his expenses, which was recently decided in the local court, brought out the following bill of charges, which is quite as quaint as the account of expenses of the Tailors for 1687, given above from the accounts of that guild.

1861. Expenses of one of the stewards of the com-brethren of hatters, cabinetmakers, &c., in the procession to Kingsland, at Shrewsbury Show, and to find a band of music, a herald, and a horse properly caparisoned for the pageant.

	£	s.	d.
Earnest money to the prince, who was then in want of it	0	1	0
Band of music, 8 performers	3	0	0
Ale for ditto	0	10	0
Horse for the prince	0	10	0
Herald	0	1	0
The prince's state allowance	0	6	6
Flowers, gloves, stockings, and calico for repairing his unmentionables, used on a former occasion	0	5	3

Repairing the turban	0	1	6
Spent in ale for the prince's retinue during the royal progress to Kingsland	0	7	0
Ditto after the return from ditto	0	6	6
Paid for repairing the prince's robes, which were shabby	0	5	0
For flags, banners, &c., to adorn the pro- cession	0	4	0

It remains to be added, that the scene on Kingsland is now only that of a very great fair, with all its ordinary accompaniments of booths for drinking and dancing, shows, &c., to which crowds of visitors are brought by the railways from considerable distances, and which is kept up to a late hour. The 'arbours' are merely used as places for the sale of refreshments. Towards nine o'clock in the evening the pageants are again arranged in procession to proceed on their return into the town; and as many of the actors as are in a condition to do so take part in them. The arbours and the ground on which they stand have recently been purchased by the corporation from the guild, and are, it is understood, to be all cleared away, preparatory to the enclosure of Kingsland, which has now become a favourite site for genteel villa residences.

MAY 31.

St Petronilla, 1st century. Saints Cantius and Cantianus, brothers, and Cantianilla, their sister, martyrs, 304.

Born.—Dr James Currie, miscellaneous writer, 1756, *Kirkpatrick Fleming*, *Dumfriesshire*; Friedrich Von Hardenberg, Prussian statesman, 1772; Ludwig Tieck, German poet, novelist, and dramatist, 1773.

Died.—Bishop Simon Patrick, 1707, *Ely*; William Baxter, editor of Latin classics, antiquary, 1723, *buried at Islington*; Philip Duke of Wharton, 1731, *Terragona*; Frederick William I. of Prussia, 1740; Marshal Lannes, (Duc de Montebello), 1809; Joseph Grimaldi, comedian, 1837; Thomas Chalmers, D.D., 1847; Charlotte Brontë, novelist, 1855; Daniel Sharpe, F.R.S., geologist, 1856.

PHILIP DUKE OF WHARTON.

Brilliant almost beyond comparison was the prospect with which this erratic nobleman began his earthly career. His family, hereditary lords of Wharton Castle and large estates in Westmoreland, had acquired, by his grandfather's marriage with the heiress of the Goodwins, considerable property, including two other mansions, in the county of Buckingham. His father, Thomas, fifth Lord Wharton, was endowed with uncommon talent, and had greatly distinguished himself at court, in the senate, and in the country. Having proved himself a skilful politician, an able debater, and no less a zealous advocate of the people than supporter of the reigning sovereign, he had considerably advanced his family, both in dignity and influence. In addition to his hereditary title of Baron Wharton, he had been created Viscount Winchenden and Earl of Wharton in 1706; and in 1715, George I. made him Earl of Rathfarnham and Marquis of Catherlough in Ireland, and Marquis of Wharton and Malmesbury in England. He was also entrusted with several posts of honour and emolument.

Thus, possessed of a large income, high in the favour of his sovereign, the envy or admiration of the nobility, and the idol of the people, he lived in princely splendour—chiefly at Wooburn, in Bucks, his favourite country-seat, on which he had expended £100,000 merely in ornamenting and improving it. With the view of qualifying Philip, his only surviving son, for the eminent position he had achieved for him, he had him educated at home under his own supervision. And the boy's early years were as full of promise as the fondest or most ambitious father could desire. Handsome and graceful in person, he was equally remarkable for the vigour and acuteness of his intellect. He learned with great facility ancient and modern languages, and, being naturally eloquent, and trained by his father in the art of oratory, he became a ready and effective speaker. When he was only about nine years old, Addison, who visited his father at Winchenden House, Bucks, was charmed and astonished at 'the little lad's' knowledge and intelligence; and Young, the author of the *Night Thoughts*, called him 'a truly prodigious genius.' But these flattering promises were soon marred by his early predilection for low and dissolute society; and his own habits speedily resembled those of his boon companions. His father, alarmed at his perilous situation, endeavoured to rescue him from the slough into which he was sinking; but his advice and efforts were only met by his son's increased deceit and alienation. When scarcely fifteen years old, he contracted a clandestine marriage with a lady greatly his inferior in family and station. When his father became acquainted with this, his last hope vanished. His ambitious spirit could not bear the blow, and he died within six weeks after the marriage. Hope still lingered with the fonder and deeper affections of his mother. But self-gratification was the ruling passion of her son; and, reckless of the feelings of others, he rushed deeper and deeper into vice and degradation. His mother's lingering hope was crushed, and she died broken-hearted within twelve months after his father. These self-caused bereavements, enough to have softened the heart of a common murderer, made no salutary impression on him. He rather seemed to hail them as welcome events, which opened for him the way to more licentious indulgence. For he now devoted himself unreservedly to a life of vicious and sottish pleasures; but, being still a minor, he was in some measure subject to the control of his guardians, who, puzzled what was best to do with such a character, decided on a very hazardous course. They engaged a Frenchman as his tutor or companion, and sent him to travel on the Continent, with a special injunction to remain some considerable time at Geneva, for the reformation of his moral and religious character.

Proceeding first to Holland, he visited Hanover and other German courts, and was everywhere honourably received. Next proceeding to Geneva, he soon became thoroughly disgusted at the manners of the place, and, with contempt both for it and for the tutor who had taken him there, he suddenly quitted both. He left

behind him a bear's cub, with a note to his tutor, stating that, being no longer able to submit to his treatment, he had committed to his care his young bear, which he thought would be a more suitable companion to him than himself—a piece of wit which might easily have been turned against himself. He had proceeded to Lyons, which he reached on the 13th of October 1716, and immediately sent from thence a fine horse as a present to the Pretender, who was then living at Avignon. On receiving this present the Pretender invited him to his court, and, on his arrival there, welcomed him with enthusiasm, and conferred on him the title of Duke of Northumberland. From Lyons he went to Paris, and presented himself to Mary D'Este, widow of the abdicated King James II. Lord Stair, the British ambassador at the French court, endeavoured to reclaim him by acts of courtesy and kindness, accompanied with some wholesome advice. The duke returned his civilities with politeness—his advice with levity. About the close of the year 1716, he returned to England, and soon after passed to Ireland; where he was allowed, though still a minor, to take his seat in parliament as Marquis of Catherlough. Despite his pledges to the Pretender, he now joined his adversaries, the king and government who debarred him from the throne. So able and important was his support, that the king, hoping to secure him on his side, conferred on him the title of Duke of Wharton. When he returned to England, he took his seat in the house as duke, and almost his first act was to oppose the government from whom he had received his new dignity.

Shortly afterwards he professed to have changed his opinions, and told the ministerial leaders that it was his earnest desire to retrace his steps, and to give the king and his government all the support in his power. He was once more taken into the confidence of ministers. He attended all their private conferences; he acquainted himself with all their intentions; ascertained all their weak points; then, on the first important ministerial measure that occurred, he used all the information thus obtained to oppose the government, and revealed, with unblushing effrontery, the secrets with which they had entrusted him, and summoned all his powers of eloquence to overthrow the ministers into whose confidence he had so dishonourably insinuated himself. He made a most able and effective speech—damaging, indeed, to the ministry, but still more damaging to his own character. His fickle and unprincipled conduct excited the contempt of all parties, each of whom he had in turn courted and betrayed. Lost to honour, overwhelmed with debt, and shunned by all respectable society, he abandoned himself to drunkenness and debauchery. 'He drank immoderately,' says Dr King, 'and was very abusive and sometimes mischievous in his wine; so that he drew on himself frequent challenges, which he would never answer. On other accounts likewise, his character was become very prostitute.' So that, having lost his honour, he left his country and went to Spain. While at Madrid he was recalled by a writ of Privy Seal,

which he treated with contempt, and openly avowed his adherence to the Pretender. By a decree in Chancery his estates were vested in the hands of trustees, who allowed him an income of £1200 a-year. In April 1726, his first wife died, and soon afterwards he professed the Roman Catholic faith, and married one of the maids of honour to the Queen of Spain. This lady, who is said to have been penniless, was the daughter of an Irish colonel in the service of the King of Spain, and appears only to have increased the duke's troubles and inconsistency; for shortly after his marriage he entered the same service, and fought against his own countrymen at the siege of Gibraltar. For this he was censured even by the Pretender, who advised him to return to England; but, contemptuous of advice from every quarter alike, he proceeded to Paris. Sir Edward Keane, who was then at Paris, thus speaks of him: 'The Duke of Wharton has not been sober, or scarce had a pipe out of his mouth, since he left St Ildefonso. . . . He declared himself to be the Pretender's prime minister, and Duke of Wharton and Northumberland. "Hitherto," added he, "my master's interest has been managed by the Duke of Perth, and three or four other old women, who meet under the portal of St Germain. He wanted a Whig, and a brisk one, too, to put them in a right train, and I am the man. You may look on me as Sir Philip Wharton, Knight of the Garter, running a race with Sir Robert Walpole, Knight of the Bath—running a course, and he shall be hard pressed, I assure you. He bought my family pictures, but they shall not be long in his possession; that account is still open; neither he nor King George shall be six months at ease, as long as I have the honour to serve in the employment I am now in." He mentioned great things from Muscovy, and talked such nonsense and contradictions, that it is neither worth my while to remember, nor yours to read them. I used him very *cavalièrement*, upon which he was much affronted—sword and pistol next day. But before I slept, a gentleman was sent to desire that everything might be forgotten. What a pleasure must it have been to have killed a prime minister!'

From Paris the duke went to Rouen, and living there very extravagantly, he was obliged to quit it, leaving behind his horses and equipage. He returned to Paris, and finding his finances utterly exhausted, entered a monastery with the design of spending the remainder of his life in study and seclusion; but left it in two months, and, accompanied by the duchess and a single servant, proceeded to Spain. His erratic career was now near its close. His dissolute life had ruined his constitution, and in 1731 his health began rapidly to fail. He found temporary relief from a mineral water in Catalonia, and shortly afterwards relapsing into his former state of debility, he again set off on horseback to travel to the same springs; but ere he reached them, he fell from his horse in a fainting fit, near a small village, from whence he was carried by some Bernardine monks to a small convent near

at hand. Here, after languishing for a few days, he died, at the age of thirty-two, without a friend to soothe his dying moments, without a servant to minister to his bodily sufferings or perform the last offices of nature. On the 1st of June 1731, the day after his decease, he was buried at the convent in as plain and humble manner as the poorest member of the community. Thus, in obscurity, and dependent on the charity of a few poor monks, died Philip Duke of Wharton—the possessor of six peerages, the inheritor of a lordly castle, and two other noble mansions, with ample estates, and endowed with talents that might have raised him to wealth and reputation, had he been born in poverty and obscurity. By his death his family, long the pride of the north, and all his titles, became extinct. The remnant of his estates was sold to pay his debts; and his widow, who survived him many years, lived in great privacy in London, on a small pension from the court of Spain. Not long before he died, he sent to a friend in England a manuscript tragedy on Mary Queen of Scots, and some poems; and finished his letter with these lines from Dryden:

'Be kind to my remains; and oh! defend
Against your judgment your departed friend!
Let not the insulting foe my fame pursue,
But shade those laurels that descend to you.'

Notwithstanding this piteous appeal, Pope has enshrined his character in the following lines:

'Clodio—the scorn and wonder of our days,
Whose ruling passion was the lust of praise;
Born with whate'er could win it from the wise,
Women and fools must like him, or he dies;
Though wondering senates hung on all he spoke,
The club must hail him master of the joke.
Shall parts so various aim at nothing new?
He'll shine a Tully and a Wilmot too.
Thus, with each gift of nature and of art,
And wanting nothing but an honest heart;
Grown all to all, from no one vice exempt,
And most contemptible to shun contempt;
His passion still to covet general praise,
His life to forfeit it a thousand ways;
His constant bounty no one friend has made;
His angel tongue no mortal can persuade;
A fool, with more of wit than half mankind,
Too quick for thought, for action too refined;
A tyrant to the wife his heart approves,
A rebel to the very king he loves;
He dies, sad outcast of each church and state,
And, harder still! flagitious, yet not great.
Ask you, why Clodio broke through every rule?
'Twas all for fear the knaves should call him fool.

* * * * *
What riches give us, let us first inquire:
Meat, fire, and clothes. What more? Meat, clothes,
and fire.

Is this too little? Would you more than live?
Alas! 'tis more than Turner finds they give;
Alas! 'tis more than—all his visions past—
Unhappy Wharton, waking, found at last!'

CHARLOTTE BRONTË.

At the end of 1847, a novel was published which quickly passed from professed readers of fiction into the hands of almost every one who had any interest in English literature. Grave business men, who seldom adventured into lighter reading than the *Times*, found themselves

* Seward's *Anecdotes*, ii., 294.

sitting until past midnight entranced in its pages, and feverish with curiosity until they had engrossed the final mystery of its plot. Devoured by excitement, many returned to its pages to note anew its felicities of diction, and the graphic, if sometimes rude force, with which character, scenery, and events were portrayed. That novel was *Jane Eyre*, by Currer Bell. Who was Currer Bell? was the world's question. Was Currer a man or a woman? The truth of the case was so surprising as to be quite out of the range of conjecture. *Jane Eyre*, a work which in parts seemed welded with the strength of a Titan, was the performance of a delicate lady of thirty, who had little experience of the world beyond her father's lonely parsonage of Haworth, set high among the bleak Yorkshire moors. Even her father did not learn the secret of his daughter's authorship until her book was famous. One afternoon she went into his study, and said—

'Papa, I've been writing a book.'

'Have you, my dear?'

'Yes; and I want you to read it.'

'I am afraid it will try my eyes too much.'

'But it is not in manuscript, it is printed.'

'My dear! you've never thought of the expense it will be! It will be almost sure to be a loss, for how can you get a book sold? No one knows you or your name.'

'But, papa, I don't think it will be a loss; no more will you, if you will just let me read you a review or two, and tell you more about it.'

So she sat down and read some of the reviews to her father; and then, giving him a copy of *Jane Eyre*, she left him to read it. When he came in to tea, he said, 'Girls, do you know Charlotte has been writing a book, and it is much better than likely?'

This Charlotte was the daughter of the Rev. Patrick Brontë, a tall and handsome Irishman, from County Down, who in 1812 married Miss Branwell, an elegant little Cornishwoman from Penzance. They had six children, one son and five daughters, who were left motherless by Mrs Brontë's premature death in 1821. Within a few years, two of her girls followed her to the tomb, leaving Charlotte, Emily Jane, Anne, and Patrick Branwell survivors. A stranger group of four old-fashioned children—shy, pale, nervous, tiny, and precocious—was probably never seen. Their father was eccentric and reserved; and, thrown on their own resources for amusement, they read all that fell into their hands. They wrote tales, plays, and poems; edited imaginary newspapers and magazines; and dwelt day by day in a perfect dream world.

These literary tastes formed in childhood strengthened as the sisters grew in years; and amid many and bitter cares, they were not the least among their sources of solace. Their first venture into print was made in 1846. It consisted of a small volume of *Poems*, by Currer, Ellis, and Acton Bell, the initials of each name being alone true. The book excited little attention, and brought them neither money nor fame. They next resolved to try their hands at novels; and Charlotte wrote *The Professor*, Emily *Wuthering Heights*, and Anne *Agnes Grey*.

Emily's and Anne's novels were accepted by publishers; but none would have Charlotte's. Then it was that, undaunted by disappointment and rebuffs, she set to work and produced *Jane Eyre*, which was followed in 1849 by *Shirley*, and in 1852 by *Villette*.

The family affections of the Brontës were of the deepest and tenderest character, and in them it was their sad lot to be wounded again and again. Their brother Branwell, on whom their love and hopes were fixed, fell into vice and dissipation; and, after worse than dying many times, passed to his final rest in September 1848, at the age of thirty. Haworth parsonage was unhealthily situated by the side of the graveyard, and the ungenial climate of the moors but ill accorded with constitutions exotic in their delicacy. Ere three months had elapsed from Branwell's death, Emily Jane glided from earth, in her twenty-ninth year; and within other six months Anne followed, at the age of twenty-seven, leaving poor Charlotte alone with her aged father. It was a joy to all to hear that on the 29th of June 1854 she had become the wife of the Rev. A. Bell Nicholls, who for years had been her father's curate, and had daily seen and silently loved her. The joy however was soon quenched, for on the 31st May 1855 Charlotte also died, before she had attained her fortieth year. Last of all, in 1861 the Brontë family became extinct with the decease of the father, at the advanced age of eighty-four.

CECILY, DUCHESS OF YORK.

Cecily, Duchess of York, who died on the 31st May 1495, was doomed to witness in her own family more appalling calamities than probably are to be found in the history of any other individual.

She was a Lancastrian by birth, her mother being Joan Beaufort, a daughter of John of Gaunt. Her father was that rich and powerful nobleman, Ralph Neville, Earl of Westmoreland. She was the youngest of twenty-one children, and, on her becoming the wife of Richard Plantagenet, Duke of York, her numerous, wealthy, and powerful family exerted all their influence to place her on the throne of England. But, after a series of splendid achievements, almost unparalleled in history, the whole family of the Nevilles were swept away, long before their sister Cecily—who by their conquering swords became the mother of kings—had descended in sorrow to the grave.

To avoid confusion, the sad catalogue of her misfortunes requires to be recorded in chronological order. Her nephew, Humphrey, Earl of Stafford, was killed at the first battle of St Albans, in 1455. Her brother-in-law, Stafford, Duke of Buckingham, was killed at the battle of Northampton, in 1460. Her husband, Richard, Duke of York, was slain in 1460, at the battle of Wakefield, just as the crown of England was almost within his ambitious grasp. Her nephew, Sir Thomas Neville, and her husband's nephew, Sir Edward Bouchier, were killed at the same time and place. Her brother, the Earl of Salisbury, was taken prisoner, and put to death

after the battle; and her son Edmund, Earl of Rutland, a boy but twelve years of age, was captured when flying with his tutor from the fatal field, and cruelly murdered in cold blood by Lord Clifford, ever after surnamed the Butcher. Her nephew, Sir John Neville, was killed at the battle of Towton, in 1461; and her nephew, Sir Henry Neville, was made prisoner and put to death at Banbury, in 1469. Two other nephews, Richard Neville, Earl of Warwick, 'the king-maker,' and John Neville, Marquis of Montague, were killed at the battle of Barnet, in 1471. Edward, Prince of Wales, who married her great niece, was barbarously murdered after the battle of Tewkesbury, in the same year. Her son George, Duke of Clarence, was put to death—drowned in a malmsey butt, as it is said—in the Tower of London, in 1478, his wife Cecily having previously been poisoned. Her son-in-law, Charles the Bold, Duke of Burgundy, was killed at the battle of Nancy, in 1477. Her eldest son, Edward the Fourth, King of England, fell a victim to his passions in the prime of manhood, in 1483. Lord Harrington, the first husband of her niece, Catherine Neville, was killed at Wakefield; and Catherine's second husband, William Lord Hastings, was beheaded, without even the form of a trial, in 1483. Her great nephew Vere, son of the Earl of Oxford, died a prisoner in the Tower, his father being in exile and his mother in poverty. Her son-in-law, Holland, Duke of Exeter, who married her daughter Anne, lived long in exile, and in such poverty as to be compelled to beg his bread; and in 1473 his corpse was found stripped naked on the sea-shore, near Dover. Her two grandsons, King Edward V. and Richard Duke of York, were murdered in the Tower in 1483. Her son-in-law, Sir Thomas St Ledger, the second husband of her daughter Anne, was executed at Exeter in 1483; and her great-nephew, Henry Stafford, Duke of Buckingham, was beheaded at or about the same time. Her grandson, Edward, Prince of Wales, son of Richard III., through whom she might naturally expect the honour of being the ancestress of a line of English kings, died in 1484, and his mother soon followed him to the tomb. Her youngest son, Richard III., was killed at Bosworth Field, in 1485; and her grandson, John de la Pole, Earl of Lincoln, was slain at the battle of Stoke in 1487.

Surviving all those troubles, and all her children, with the sole exception of Margaret, Duchess of Burgundy, she died at a good old age, after seeing three of her descendants kings of England, and her grand-daughter, Elizabeth, queen of Henry VII. By her death, she was saved the additional affliction of the loss of her grandson, Edward, Earl of Warwick, the last male of the princely house of Plantagenet, who was tyrannically put to death by a cruel and jealous monarch in 1499.

When her husband was killed at the battle of Wakefield, the conquerors cut off his head, and putting a paper crown on it, in derision of his royal claims, placed it over the principal gate of the city of York. But when her son Edward came to the throne, he caused the mangled

remains of his father to be collected, and buried with regal ceremonies in the chancel of the Collegiate Church at Fotheringay, founded and endowed by the piety and liberality of his ancestors. And Cecily, according to directions contained in her will, was buried at Fotheringay, beside the husband whose loss she had mourned for thirty-five long years. It was fated that she was to be denied the last long rest usually allotted to mortals. At the Reforma-

CECILY, DUCHESS OF YORK.

tion, the Collegiate Church of Fotheringay was razed to the ground, and the bodies of Richard and Cecily, Duke and Duchess of York, were exposed to public view. A Mr Creuso, who saw them, says:—'Their bodies appeared very plainly, the Duchess Cecily had about her neck, hanging on a ribbon, a pardon from Rome, which, penned in a fine Roman hand, was as fair and fresh to be seen as if it had been written the day before.' The discovery having been made known to Queen Elizabeth, she ordered the remains to be carefully re-interred, with all decent solemnities.

THE COTSWOLD GAMES.

The range of hills overlooking the fertile and beautiful vale of Evesham is celebrated by Drayton, in his curious topographical poem, the *Poly-Olbion*, as the yearly meeting-place of the country folks around to exhibit the best bred cattle, and pass a day in jovial festivity. He pictures these rustics dancing hand-in-hand to the music of the bagpipe and tabor, around a flag-staff erected on the highest hill—the flag inscribed '*Heigh for Cotswold!*'—while others feasted upon the grass, presided over by the winner of the prize.

—————The Shepherds' King,
Whose flock hath chanced that year the earliest
lamb to bring,
In his gay baldrick sits at his low grassy board,
With flawns, lards, clowted cream, and country
dainties stored;

And, whilst the bagpipe plays, each lusty jocund swain
 Quaffs sillibubs in cans to all upon the plain,
 And to their country girls, whose nose-gays they
 do wear,
 Some roundelays do sing; the rest the burthen bear.'

The description pleasantly, but yet painfully, reminds us of the halcyon period in the history of England procured by the pacific policy of Elizabeth and James I., and which apparently would have been indefinitely prolonged—with a great progress in wealth and all the arts of peace—but for the collision between Puritanism and the will of an injudicious sovereign, which brought about the civil war. The rural population were, during James's reign, at ease and happy; and their exuberant good spirits found vent in festive assemblages, of which this Cotswold meeting was but an example. But the spirit of religious austerity was abroad, making continual encroachments on the genial feelings of the people; and, rather oddly, it was as a countercheck to that spirit that the Cotswold meeting attained its full character as a festive assemblage.

There lived at that time at Burton-on-the-Heath, in Warwickshire, one Robert Dover, an attorney, who entertained rather strong views of the menacing character of Puritanism. He deemed it a public enemy, and was eager to put it down. Seizing upon the idea of the Cotswold meeting, he resolved to enlarge and systematize it into a regular gathering of all ranks of people in the province—with leaping and wrestling, as before, for the men, and dancing for the maids, but with the addition of coursing and horse-racing for the upper classes. With a formal permission from King James, he made all the proper arrangements, and established the Cotswold games in a style which secured general applause, never failing each year to appear upon the ground himself—well mounted, and accoutred as what would now be called a master of the ceremonies. Things went on thus for the best part of forty years, till (to quote the language of Anthony Wood), 'the rascally rebellion was begun by the Presbyterians, which gave a stop to their proceedings, and spoiled all that was generous and ingenious elsewhere.' Dover himself, in milder strains, thus tells his own story:—

'I've heard our fine refined clergy teach,
 Of the commandments, that it is a breach
 To play at any game for gain or coin;
 'Tis theft, they say—men's goods you do purloin;
 For beasts or birds in combat for to fight,
 Oh, 'tis not lawful, but a cruel sight.
 One silly beast another to pursue
 'Gainst nature is, and fearful to the view;
 And man with man their activeness to try
 Forbidden is—much harm doth come thereby;
 Had we their faith to credit what they say,
 We must believe all sports are ta'en away;
 Whereby I see, instead of active things,
 What harm the same unto our nation brings;
 The pipe and pot are made the only prize
 Which all our spiteful youth do exercise.

The effect of restrictions upon wholesome out-of-doors amusements in driving people into sotting public-houses is remarked in our own day,

and it is curious to find Mr Dover pointing out the same result 250 years ago. His poem occurs at the close of a rare volume published in 1636, entirely composed of commendatory verses on the exploits at Cotswold, and entitled *Annalia Dubrensia*. Some of the best poets of the day contributed to the collection, and among them were Ben Jonson, Michael Drayton, Thomas Randolph, Thomas Heywood, Owen Feltham, and Shackerly Marmyon. 'Rare Ben' contributed the most characteristic effusion of the series, which, curiously enough, he appears to have overlooked, when collecting such waifs and strays for the volume he published with the quaint title of *Underwoods*; neither does it appear in his *Collection of Epigrams*. He calls it 'an epigram to my jovial good friend, Mr Robert Dover, on his great instauration of hunting and dancing at Cotswold.'

'I cannot bring my Muse to drop vies *
 'Twi'xt Cotswold and the Olympic exercise;
 But I can tell thee, Dover, how thy games
 Renew the glories of our blessed James:
 How they do keep alive his memory
 With the glad country and posterity;
 How they advance true love, and neighbourhood,
 And do both church and commonwealth the good—
 In spite of hypocrites, who are the worst
 Of subjects; let such envy till they burst.'

Drayton is very complimentary to Dover:—

'We'll have thy statue in some rock cut out,
 With brave inscriptions garnished about;
 And under written—"Lo! this is the man
 Dover, that first these noble sports began."
 Lads of the hills and lasses of the vale,
 In many a song and many a merry tale,
 Shall mention thee; and, having leave to play,
 Unto thy name shall make a holiday.
 The Cotswold shepherds, as their flocks they keep,
 To put off lazy drowsiness and sleep,
 Shall sit to tell, and hear thy story told,
 That night shall come ere they their flocks can
 fold.'

The remaining thirty-one poems, with the exception of that by Randolph, have little claim to notice, being not unfrequently turgid and tedious, if not absurdly hyperbolic. They are chiefly useful for clearly pointing out the nature of these renowned games, which are also exhibited in a quaint wood-cut frontispiece. In this, Dover (in accordance with the antique heroic in art) appears on horseback, in full costume, three times the size of life; and bearing in his hand a wand, as ruler of the sports. In the central summit of the picture is seen a castle, from which volleys were fired in the course of the sports, and which was named Dover Castle, in honour of Master Robert; one of his poetic friends assuring him—

'———— thy castle shall exceed as far
 The other Dover, as sweet peace doth war!'

This redoubtable castle was a temporary erec-

* This word may be taken in the sense of comparison. To vie is interpreted by Halliwell as 'to wager or put down a certain sum upon a hand of cards;' and the word is still in use as a verb, with the sense of to compete. As the line halts, however, there is probably a word of one syllable wanting between 'drop' and 'vies.'

tion of woodwork, brought to the spot every year. The sports took place at Whitsuntide, and consisted of horse-racing (for which small honorary prizes were given), hunting, and coursing (the best dog being rewarded with a silver collar), dancing by the maidens, wrestling, leaping, tumbling, cudgel-play, quarter-staff, casting the hammer, &c., by the men.

Tents were erected for the gentry, who came in numbers from all quarters, and here refresh-

ments were supplied in abundance; while tables stood in the open air, or cloths were spread on the ground, for the commonalty.

'None ever hungry from these games come home,
Or e'er make plaint of viands or of room;
He all the rank at night so brave dismisses,
With ribands of his favour and with blisses.'

Horses and men were abundantly decorated with yellow ribbons (Dover's colour), and he

THE COTSWOLD GAMES.

was duly honoured by all as king of their sports for a series of years. They ceased during the Cromwellian era, but were revived at the Restoration; and the memory of their founder is still preserved in the name Dover's Hill, applied to an eminence of the Cotswold range, about a mile from the village of Campden.

Shakspeare, whose slightest allusion to any

subject gives it an undying interest, has immortalized these sports. Justice Shallow, in his enumeration of the four bravest roisterers of his early days, names 'Will Squell, a Cotswold man;' and the mishap of Master Page's fallow greyhound, who was 'out-run on Cotsale,' occupies some share of the dialogue in the opening scene of the *Merry Wives of Windsor*.

— After her came jolly JUNE, arrayed
 All in green leaves, as he a player were ;
 Yet in his time he wrought as well as played,
 That by his plough-irons mote right well appear.
 Upon a crab he rode, that did him bear,
 With crooked crawling steps, an uncouth pace,
 And backward rode, as bargemen wont to fare,
 Bending their force contrary to their face ;
 Like that ungracious crew which feigns demurest grace.

SPENSER.

(DESCRIPTIVE.)

JUNE has now come, bending beneath her weight of roses, to ornament the halls and bowers which summer has hung with green. For this is the Month of Roses, and their beauty and fragrance conjure up again many in poetical creation which Memory had buried. We think of Herrick's Sappho, and how the

roses were always white until they tried to rival her fair complexion, and, blushing for shame because they were vanquished, have ever since remained red ; of Shakspeare's Juliet, musing as she leant over the balcony in the moonlight, and thinking that the rose 'by any other name would smell as sweet.' They carry us back to Chaucer's Emilie, whom we again see pacing the garden in the early morning, her hair blown backward, while, as she gathers roses carefully, she ' thrusts among the thorns her little hand.' We again see Milton's Eve in Eden, standing half-veiled in a cloud of fragrance—'so thick the

blushing roses round about her blow.' This is the season to wander into the fields and woods, with a volume of sterling poetry for companionship, and compare the descriptive passages with the objects that lie around. We never enjoy reading portions of Spenser's *Faery Queen* so much as when among the great green trees in summer. We then feel his meaning, where he describes arbours that are not the work of art, 'but by the trees' own inclination made.' We look up at the great network of branches, and think how silently they have been fashioned. Through many a quiet night, and many a golden dawn, and all day long, even when the twilight threw her grey veil over them, the work advanced; from when the warp was formed of tender sprays and tiny buds, until the woof of leaves was woven with a shuttle of sunshine and showers, which the unseen wind sent in and out through the branches. No human eye could see how the work was done, for the pattern of leaves was woven motionless—here a brown bud came, and there a dot of green was thrown in; yet no hand was visible during the workmanship, though we know the great Power that stirred in that mysterious loom, and wove the green drapery of summer. Now in the woods, like a fair lady of the olden time peeping through her embowered lattice, the tall woodbine leans out from among the leaves, as if to look at the procession that is ever passing, of golden-belted bees, and gauze-winged dragonflies, birds that dart by as if sent with hasty messages, and butterflies, the gaudy outriders, that make for themselves a pathway between the overhanging blossoms. All these she sees from the green turret in which she is imprisoned, while the bees go sounding their humming horns through every flowery town in the forest. The wild roses, compelled to obey the commands of summer, blush as they expose their beauty by the wayside, and hurry to hide themselves again amid the green when the day is done, seeming as if they tried 'to shut, and become buds again.' Like pillars of fire, the foxgloves blaze through the shadowy green of the underwood, as if to throw a light on the lesser flowers that grow around their feet. Pleasant is it now after a long walk to sit down on the slope of some hill, and gaze over the outstretched landscape, from the valley at our feet to where the river loses itself in the distant sunshine. In all those widely-spread farmhouses and cottages—some so far away that they appear but little larger than mole-hills—the busy stir of every-day life is going on, though neither sound nor motion are audible or visible from this green slope. From those quiet homes move christening, marrying, and burying processions. Thousands who have tilled the earth within the space our eye commands, 'now sleep beneath it.' There is no one living who ever saw yonder aged oak look younger that it does now. The head lies easy which erected that grey old stile, that has stood bleaching so many years in sun and wind, it looks like dried bones; the very step is worn hollow by the feet of those who have passed away for ever. How quiet yonder fields appear through which the brown footpath stretches;

there those that have gone walked and talked, and played, and made love, and through them led their children by the hand, to gather the wild roses of June, that still flower as they did in those very spots where their grandfathers gathered them, when, a century back, they were children. And yet it may be that these fields, which look so beautiful in our eyes, and awaken such pleasant memories of departed summers, bring back no such remembrances to the unlettered hind; that he thinks only of the years he has toiled in them, of the hard struggle he has had to get bread for his family, and the aching bones he has gone home with at night. Perhaps, when he walks out with his children, he thinks how badly he was paid for plashing that hedge, or repairing that flowery embankment; how long it took him to plough or harrow that field; how cold the days were then, and, when his wants were greatest, what little wages he received. The flaunting woodbine may have no charms for his eye, nor the bee humming round the globe of crimson clover; perhaps he pauses not to listen to the singing of the birds, but, with eyes bent on the ground, he 'homeward plods his weary way.' Cottages buried in woodbine or covered with roses are not the haunts of peace and homes of love which poets so often picture, nor are they the gloomy abodes which some cynical politicians magnify into dens of misery.

How peaceably yonder village at the foot of this hill seems to sleep in the June sunshine, beneath the overshadowing trees, above which the blue smoke ascends, nothing else seeming to stir! What rich colours some of those thatched roofs present—moss and lichen, and stonecrop which is now one blaze of gold. That white-washed wall, glimmering through the foliage, just lights up the picture where it wanted opening; even the sunlight, flashed back from the windows, lets in golden gleams through the green. That bit of brown road by the red wall, on one side of which runs the brook, spanned by a rustic bridge, is of itself a picture—with the white cow standing by the gate, where the great elder-tree is now covered with bunches of creamy-coloured bloom. Water is always beautiful in a landscape; it is the glass in which the face of heaven is mirrored, in which the trees and flowers can see themselves, for aught we know, so hidden from us in the secret of their existence and the life they live. Now, one of those out-of-door pictures may be seen which almost every landscape painter has tried to fix on canvas—that of cattle standing in water at noon-day. We always fancy they look best in a large pond overhung with trees, that is placed in a retiring corner of rich pasture lands, with their broad sweeps of grass and wild flowers. In a river or a long stream the water stretches too far away, and mars the snugness of the picture, which ought to be bordered with green, while the herd is of various colours. In a pond surrounded with trees we see the sunlight chequering the still water as it streams through the branches, while a mass of shadow lies under the lower boughs—part of it falling on a portion of the cattle, while the rest stand in a warm, green light; and

should one happen to be red, and dashed with the sunlight that comes in through the leaves, it shows such flecks of ruddy gold as no artist ever yet painted. We see the shadows of the inverted trees thrown deep down, and below a blue, unfathomable depth of sky, which conjures back those ocean chasms that have never yet been sounded.

We now hear that sharp rasping sound in the fields which the mower makes every time he whets his scythe, telling us that he has already cut down myriads of those beautiful wild flowers and feathered grasses which the morning sun shone upon. We enter the field, and pick a few fading flowers out of the great swathes; and, while watching him at his work, see how at one sweep he makes a desert, where a moment before all was brightness and beauty. How one might moralize over this globe of white clover, which a bee was rifling of its sweets just before the scythe swept it down, and dwell upon the homes of ground-building birds and earth-burrowing animals and insects, which the destroyer lays bare. But these thoughts have no place in his mind. He may, while whetting his scythe, wonder how many more times he will have to sharpen it before he cuts his way up to the hedge, where his provision basket, beer bottle, and the clothes he has thrown off, lie in the shade, guarded by his dog—and when there slake his thirst. Many of those grasses which he cuts down so thoughtlessly are as beautiful as the rarest flowers that ever bloomed, though they must be examined minutely for their elegant forms and splendid colours. No plumage that ever nodded over the brow of Beauty, not even that of the rare bird of paradise, can excel the graceful silky sweep of the feather-grass, which ladies used to wear in their head-dresses. The silky bent grass, which the least stir of air sets in motion, is as glossy and beautiful as the richest satin that ever enfolded the elegant form of maidenhood. The quaking or tottering grass is hung with hundreds of beautiful spikelets, which are all shaken by the least movement of an insect's wing; and when in motion, the shifting light that plays upon its many-coloured flowers makes them glitter like jewels. But let the gentlest breeze that ever blew breathe through a bed of this beautiful grass, and you might fancy that thousands of fairy bells were swinging, and that the hair-like stems were the ropes pulled by the greenwood elves, which are thinner than the finest silk. It has many pretty names, such as pearl-grass, silk-grass; while the country children call it Ringing-all-the-bells-in-London, on account of its purple spikelets being ever in motion. Nothing was ever yet woven in loom to which art could give such graceful colouring as is shown in the luminous pink and dazzling sea-green of the soft meadow-grass; the flowers spread over a panicle of velvet bloom, which is so soft and yielding, that the lightest footed insect sinks into its downy carpeting when passing. Many grasses which the mower is now sweeping down would, to the eye of a common observer, appear all alike; though upon close examination they will be found to differ as much as one flower does from another. Amongst these are the fox-tail and other grasses,

which have all round heads, and seem at the first glance only to vary in length and thickness; they are also so common, that there is hardly a field without them. We take up a handful of grass from the swathe just cut down, and find dozens of these round-headed flowers in it. One is of a rich golden green, with a covering of bright silvery hairs, so thinly interspersed, that they hide not the golden ground beneath; another is a rich purple tint, that rivals the glowing bloom of the dark-shaded pansy; while, besides colours, the stems will be found to vary, some being pointed and pinched until they resemble the limbs of a daddy-long-legs. This is the scented vernal grass, that gives out the rich aroma we now inhale from the new-mown field. It seldom grows more than a foot high, and has, as you see, a close-set panicle, just like wheat; and in these yellow dots, on the green valves that hold the flowers, the fragrance is supposed to lie which scents the June air for miles round when the grass is cut and dried.

The rough, the smooth, and the annual meadow-grasses are those which everybody knows. But for the rough meadow-grass, we should not obtain so many glimpses of green as are seen in our squares and streets—for it will grow in the smokiest of cities; while to the smooth meadow-grass we are indebted for that first green flush of spring—that spring green which no dyer can imitate, and which first shows through the hoary mantle of winter. The annual meadow-grass grows wherever a pinch of earth can be found for it to root in. It is the children's garden in the damp, sunless back yards of our cities; it springs up between the stones of the pavement, and grows in the crevices of decaying walls. Neither summer suns which scorch, nor biting frosts which blacken, can destroy it; for it seeds eight or nine months of the year, and, do what you will, is sure to come up again. Pull it up you cannot, excepting in wet weather, when all the earth its countless fibres adhere to comes with it; for it finds nourishment in everything it lays hold of, nor has it, like some of the other grasses, to go far into the earth for support.

In the next field we see the haymakers hard at work, turning the grass over, and shaking it up with their forks, or letting it float loose on the wind, to be blown as far as it can go; while the air that passes through it carries the pleasant smell of new-mown hay to the far away fields and villages it sweeps by. How happy haymakers always appear, as if work to them were pleasure; even the little children, while they laugh as they throw hay over one another, are unconsciously assisting the labourers, for it cannot be dispersed too much. What a blessing it would be if all labour could be made so pleasant! Some are gathering the hay into windrows, great long unbroken ridges, that extend from one end of the field to the other, and look like motionless waves in the distance, while between them all the space is raked up tidily. Then comes the last process, to roll those long windrows into haycocks, turning the hay on their forks over and over, and clearing the ground at every turn, as boys do the huge snowball, which it takes four or five of them to move—until the haycock

is as high as a man's head, and not a vestige of a windrow is left when the work is finished by the rakers. Rolling those huge haycocks together is hard work; and when you see it done, you marvel not at the quantity of beer the men drink, labouring as they do in the hot open sunshine of June. We then see the loaded hay wagons leaving the fields, rocking as they cross the furrows, over which wheels but rarely roll, moving along green lanes and between high hedgerows, which take toll from the wains as they pass, until new hay hangs down from every branch. What labour it would save the birds in building, if hay was led two or three months earlier, for nothing could be more soft and downy for the lining of their nests than many of the feathered heads of those dried grasses. Onward moves the rocking wagon towards the rick-yard, where the gate stands open, and we can see the men on the half-formed stack waiting for the coming load.

When the stack is nearly finished, only a strong man can pitch up a fork full of hay; and it needs some practice to use the long forks which are required when the rick has nearly reached to its fullest height. What a delicious smell of new-mown hay there will be in every room of that old farmhouse for days after the stacks are finished; we almost long to take up our lodging there for a week or two for the sake of the fragrance. And there, in the 'home close,' as it is called, sits the milkmaid on her three-legged stool, which she hides somewhere under the hedge, that she may not have to carry it to and fro every time she goes to milk, talking to her cow while she is milking as if it understood her: for the flies make it restless, and she is fearful that it may kick over the contents of her pail. Now she breaks forth into song—unconscious that she is overheard—the burthen of which is that her lover may be true, ending with a wish that she were a linnet, 'to sing her love to rest,' which he, wearied with his day's labour, will not require, but will begin to snore a minute after his tired head presses the pillow.

But we cannot leave the milkmaid, surrounded with the smell of new-mown hay, without taking a final glance at the grasses; and when we state that there are already upwards of two thousand varieties known and named, and that the discoveries of every year continue to add to the number, it will be seen that the space of a large volume would be required only to enumerate the different classes into which they are divided. The oat-like, the wheat-like, and the water-grasses, of which latter the tall common seed is the chief, are very numerous. It is from grasses that we have obtained the bread we eat, and we have now many varieties in England, growing wild, that yield small grains of excellent corn, and that could, by cultivation, be rendered as valuable as our choicest cereals. It is through being surrounded by the sea, and having so few mountain ranges to shut out the breezes, the sunshine, and the showers, that England is covered with the most beautiful grasses that are to be found in the world. The open sea woos every wind that blows, and draws all the showers towards our old homesteads, and clothes

our island with that delicious green which is the wonder and admiration of foreigners. It also feeds those flocks and herds which are our pride; for nowhere else can be seen such as those pastured on English ground. Our Saxon forefathers had no other name for grass than that we still retain, though they made many pleasant allusions to it in describing the labours of the months—such as grass-month, milk-month, mow-month, hay-month, and after-month, or the month after their hay was harvested. After-month is a word still in use, though now applied to the second crop of grass, which springs up after the hay-field has been cleared. None are fonder than Englishmen of seeing a 'bit of grass' before their doors. Look at the retired old citizen, who spent the best years of his life poring over ledgers in some half-lighted office in the neighbourhood of the Bank, how delighted he is with the little grass-plat which the window of his suburban retreat opens into. What hours he spends over it, patting it down with his spade, smoothing it with his garden-roller; stooping down until his aged back aches, while clipping it with his shears; then standing at a distance to admire it; then calling his dear old wife out to see how green and pretty it looks. It keeps him in health, for in attending to it he finds both amusement and exercise; and perhaps the happiest moments of his life are those passed in watching his grandchildren roll over it, while his married sons and daughters sit smiling by his side. Hundreds of such men, and many such spots, lie scattered beside the roads that run every way through the great metropolitan suburbs; and it is pleasant, when returning from a walk through the dusty roads of June, to peep over the low walls, or through the palisades, and see the happy groups sitting in the cool of evening by the bit of grass before their doors, and which they call 'going out on the lawn.'

(HISTORICAL.)

Ovid, in his *Fasti*, makes Juno claim the honour of giving a name to this month; but there had been ample time before his day for an obscurity to invest the origin of the term, and he lived before it was the custom to investigate such matters critically. Standing as the fourth month in the Roman calendar, it was in reality dedicated à *Junioribus*—that is, to the junior or inferior branch of the original legislature of Rome, as May was à *Majoribus*, or to the superior branch. 'Romulus assigned to this month a complement of thirty days, though in the old Latin or Alban calendar it consisted of twenty-six only. Numa deprived it of one day, which was restored by Julius Cæsar; since which time it has remained undisturbed.'—*Brady*.

CHARACTERISTICS OF JUNE.

Though the summer solstice takes place on the 21st day, June is only the third month of the year in respect of temperature, being preceded in this respect by July and August. The mornings, in the early part of the month especially, are liable to be even frosty, to the extensive

damage of the buds of the fruit-trees. Nevertheless, June is the month of greatest summer beauty—the month during which the trees are in their best and freshest garniture. ‘The leafy month of June,’ Coleridge well calls it, the month when the flowers are at the richest in hue and profusion. In English landscape, the conical clusters of the chesnut buds, and the tassels of the laburnum and lilac, vie above with the variegated show of wild flowers below. Nature is now a pretty maiden of seventeen; she may show maturer charms afterwards, but she can never be again so gaily, so freshly beautiful. Dr Aiken says justly that June is in reality, in this climate, what the poets only dream May to be. The mean temperature of the air was given by an observer in Scotland as 59° Fahrenheit, against 60° for August and 61° for July.

The sun, formally speaking, reaches the most northerly point in the zodiac, and enters the constellation of Cancer, on the 21st of June; but for several days about that time there is no observable difference in his position, or his hours of rising and setting. At Greenwich he is above the horizon from 3.43 morning, to 8.17 evening, thus making a day of 16h. 26m. At Edinburgh, the longest day is about 17½ hours. At that season, in Scotland, there is a glow equal to dawn, in the north, through the whole of the brief night. The present writer was able at Edinburgh to read the title-page of a book, by the light of the northern sky, at midnight of the 14th of June 1849. In Shetland, the light at midnight is like a good twilight, and the text of any ordinary book may then be easily read. It is even alleged that, by the aid of refraction, and in favourable circumstances, the body of the sun has been seen at that season, from the top of a hill in Orkney, though the fact cannot be said to be authenticated.

Marriage Superstitions and Customs.

was the month which the Romans considered the most propitious season of the year for con-

tracting matrimonial engagements, especially if the day chosen were that of the full moon or the conjunction of the sun and moon; the month of May was especially to be

avoided, as under the influence of spirits adverse to happy households.

All these pagan superstitions were retained in the Middle Ages, with many others which belonged more particularly to the spirit of Christianity: people then had recourse to all kinds of divination, love philters, magical invocations, prayers, fastings, and other follies, which were modified according to the country and the individual. A girl had only to agitate the water in a bucket of spring-water with her hand, or to throw broken eggs over another person's head, if she wished to see the image of the man she

should marry. A union could never be happy if the bridal party, in going to church, met a monk, a priest, a hare, a dog, cat, lizard, or serpent; while all would go well if it were a wolf, a spider, or a toad. Nor was it an unimportant matter to choose the wedding day carefully; the feast of Saint Joseph was especially to be avoided, and it is supposed, that as this day fell in mid-Lent, it was the reason why all the councils and synods of the church forbade marriage during that season of fasting; indeed, all penitential days and vigils throughout the year were considered unsuitable for these joyous ceremonies. The church blamed those husbands who married early in the morning, in dirty or negligent attire, reserving their better dresses for balls and feasts; and the clergy were forbidden to celebrate the rites after sunset, because the crowd often carried the party by main force to the ale-house, or beat them and hindered their departure from the church until they had paid a ransom. The people always manifested a strong aversion for badly assorted marriages. In such cases, the procession would be accompanied to the altar in the midst of a frightful concert of bells, sauce-pans, and frying-pans, or this tumult was reserved for the night, when the happy couple were settled in their own house. The church tried in vain to defend widowers and widows who chose to enter the nuptial bonds a second time; a synodal order of the Archbishop of Lyons, in 1577, thus describes the conduct it excommunicated: ‘Marching in masks, throwing poisons, horrible and dangerous liquids before the door, sounding tambourines, doing all kinds of dirty things they can think of, until they have drawn from the husband large sums of money by force.’

A considerable sum of money was anciently put into a purse or plate, and presented by the bridegroom to the bride on the wedding-night, as a sort of purchase of her person; a custom common to the Greeks as well as the Romans, and which seems to have prevailed among the Jews and many Eastern nations. It was changed in the Middle Ages, and in the north of Europe, for the *morgengabe*, or morning present; the bride having the privilege, the morning after the wedding-day, of asking for any sum of money or any estate that she pleased, and which could not in honour be refused by her husband. The demand at times became really serious, if the wife were of an avaricious temper. Something of the same kind prevailed in England under the name of the Dow Purse. A trace of this is still kept up in Cumberland where the bridegroom provides himself with gold and crown pieces, and, when the service reaches the point, ‘With all my worldly goods I thee endow,’ he takes up the money, hands the clergyman his fee, and pours the rest into a handkerchief which is held by the bridesmaid for the bride. When Clovis was married to the Princess Clotilde, he offered, by his proxy, a sou and a denier, which became the marriage offering by law in France; and to this day pieces of money are given to the bride, varying only in value according to the rank of the parties.

How the ring came to be used is not well ascertained, as in former days it did not occupy

its present prominent position, but was given with other presents to mark the completion of a contract. Its form is intended as a symbol of eternity, and of the intention of both parties to keep for ever the solemn covenant into which they have entered before God, and of which it is a pledge. When the persons were betrothed as children, among the Anglo-Saxons, the bridegroom gave a pledge, or 'wed' (a term from which we derive the word wedding); part of this wed consisted of a ring, which was placed on the maiden's right hand, and there religiously kept until transferred to the other hand at the second ceremony. Our marriage service is very nearly the same as that used by our forefathers, a few obsolete words only being changed. The bride was taken 'for fairer, for fouler, for better, for worse;' and promised 'to be buxom and bonny' to her future husband. The bridegroom put the ring on each of the bride's left-hand fingers in turn, saying at the first, 'in the name of the Father;' at the second, 'in the name of the Son,' at the third, 'in the name of the Holy Ghost;' and at the fourth, 'Amen.' The father presented his son-in-law with one of his daughter's shoes as a token of the transfer of authority, and the bride was made to feel the change by a blow on her head given with the shoe. The husband was bound by oath to use his wife well, in failure of which she might leave him; yet as a point of honour he was allowed 'to bestow on his wife and apprentices moderate castigation.' An old Welsh law tells us that three blows with a broomstick, on any 'part of the person except the head, is a fair allowance;' and another provides that the stick be not longer than the husband's arm, nor thicker than his middle finger.*

An English wedding, in the time of good Queen Bess, was a joyous public festival; among the higher ranks, the bridegroom presented the company with scarves, gloves, and garters of the favourite colours of the wedding pair; and the ceremony wound up with banquetings, masques, pageants, and epithalamiums. A gay procession formed a part of the humbler marriages; the bride was led to church between two boys wearing bride-laces and rosemary tied about their silken sleeves, and before her was carried a silver cup filled with wine, in which was a large branch of gilded rosemary, hung about with silk ribbons of all colours. Next came the musicians, and then the bridesmaids, some bearing great bridecakes, others garlands of gilded wheat; thus they marched to church amidst the shouts and benedictions of the spectators.

The penny weddings, at which each of the guests gave a contribution for the feast, were reprobated by the straiter-laced sort as leading to disorders and licentiousness; but it was found impossible to suppress them. All that could be done was to place restrictions upon the amount allowed to be given; in Scotland five shillings was the limit.

The customs of marrying and giving in marriage in Sweden, in former years, were of a somewhat barbarous character; it was beneath the dignity of a Scandinavian warrior to court a lady's

* Thrupp.

favour by gallantry and submission—he waited until she had bestowed her affections on another, and was on her way to the marriage ceremony, when, collecting his faithful followers, who were always ready for the fight, they fell upon the wedding *cortège*, and the stronger carried away the bride. It was much in favour of this practice that marriages were always celebrated at night. A pile of lances is still preserved behind the altar of the ancient church of Husaby, in Gothland, into which were fitted torches, and which were borne before the bridegroom for the double purpose of giving light and protection. It was the province of the groomsmen, or, as they were named, 'best men,' to carry these; and the strongest and stoutest of the bridegroom's friends were chosen for this duty. Three or four days before the marriage, the ceremony of the bride's bath took place, when the lady went in great state to the bath, accompanied by all her friends, married and single; the day closing with a banquet and ball. On the marriage-day the young couple sat on a raised platform, under a canopy of silk; all the wedding presents being arranged on a bench covered with silk, and consisting of plate, jewels, and money. To this day the bridegroom has a great fear of the trolls and sprites which still inhabit Sweden; and, as an antidote against their power, he sews into his clothes various strong smelling herbs, such as garlick, chives, and rosemary. The young women always carry bouquets of these in their hands to the feast, whilst they deck themselves out with loads of jewellery, gold bells, and *grelots* as large as small apples, with chains, belts, and stomachers. No bridegroom could be induced on that day to stand near a closed gate, or where cross roads meet; he says he takes these precautions 'against envy and malice.' On the other hand, if the bride be prudent, she will take care when at the altar to put her right foot before that of the bridegroom, for then she will get the better of her husband during her married life; she will also be studious to get the first sight of him before he can see her, because that will preserve her influence over him. It is customary to fill the bride's pocket with bread, which she gives to the poor she meets on her road to church, a misfortune being averted with every alms bestowed; but the beggar will not eat it, as he thereby brings wretchedness on himself. On their return from church, the bride and bridegroom must visit their cowhouses and stables, that the cattle may thrive and multiply.

In Norway, the marriages of the *bonder* or peasantry are conducted with very gay ceremonies, and in each parish there is a set of ornaments for the temporary use of the bride, including a showy coronal and girdle; so that the poorest woman in the land has the gratification of appearing for one day in her life in a guise which she probably thinks equal to that of a queen. The museum of national antiquities at Copenhagen contains a number of such sets of bridal decorations which were formerly used in Denmark. In the International Exhibition at London, in 1862, the Norwegian court showed the model of a peasant couple, as dressed and decorated for their wedding; and every beholder

must have been arrested by its homely splendours. Annexed is a cut representing the bride.

NORWEGIAN BRIDE.

In pagan days, when Rolf married King Erik's daughter, the king and queen sat throned in state, whilst courtiers passed in front, offering gifts of oxen, cows, swine, sheep, sucking-pigs, geese, and even cats. A shield, sword, and axe were among the bride's wedding outfit, that she might, if necessary, defend herself from her husband's blows.

In the vast steppes of south-eastern Russia, on the shores of the Caspian and Black Sea, marriage ceremonies recall the patriarchal customs of the earliest stages of society. The evening before the day when the affianced bride is given to her husband, she pays visits to her master and the inhabitants of the village, in the simple dress of a peasant, consisting of a red cloth jacket, descending as low as the knees, a very short white petticoat, fastened at the waist with a red woollen scarf, above which is an embroidered chemise. The legs, which are always bare above the ankle, are sometimes protected by red or yellow morocco boots. The girls of the village who accompany her are, on the contrary, attired in their best, recalling the old paintings of Byzantine art, where the Virgin is adorned with a coronal. They know how to arrange with great art the leaves and scarlet berries of various kinds of trees in their hair, the tresses of which are plaited as a crown, or hang down on the shoulders. A necklace of pearls or coral is wound at least a dozen times round the neck, on which they hang religious medals, with enamel paintings imitating mosaic. At each

house the betrothed throws herself on her knees before the head of it, and kisses his feet as she begs his pardon; the fair penitent is immediately raised and kissed, receiving some small present, whilst she in return gives a small roll of bread, of a symbolic form. On her return home all her beautiful hair is cut off, as henceforth she must wear the *platoke*, or turban, a woollen or linen shawl which is rolled round the head, and is the only distinction between the married and unmarried. It is invariably presented by the husband, as the Indian shawl among ourselves; which, however, we have withdrawn from its original destination, which ought only to be a head-dress. The despoiled bride expresses her regrets with touching grace, in one of their simple songs: 'Oh, my curls, my fair golden hair! Not for one only, not for two years only, have I arranged you—every Saturday you were bathed, every Sunday you were ornamented, and to-day, in a single hour, I must lose you!' The old woman whose duty it is to roll the turban round the brow, wishing her happiness, says, 'I cover your head with the *platoke*, my sister, and I wish you health and happiness. Be pure as water, and fruitful as the earth.' When the marriage is over, the husband takes his wife to the inhabitants of the village, and shows them the change of dress effected the night before.

Among the various tribes of Asia none are so rich or well-dressed as the Armenians; to them belongs chiefly the merchandise of precious stones, which they export to Constantinople. The Armenian girl whose marriage is to be described had delicate flowers of celestial blue painted all over her breast and neck, her eyebrows were dyed black, and the tips of her fingers and nails of a bright orange. She wore on each hand valuable rings set with precious stones, and round her neck a string of very fine turquoises; her shirt was of the finest spun silk, her jacket and trousers of cashmere of a bright colour. The priest and his deacon arrived; the latter bringing a bag containing the sacerdotal garments, in which the priest arrayed himself, placing a mitre ornamented with precious stones on his head, and a collar of metal,—on which the twelve apostles were represented in bas-relief,—round his neck. He began by blessing a sort of temporary altar in the middle of the room; the mother of the bride took her by the hand, and leading her forward, she bowed at the feet of her future husband, to show that she acknowledged him as lord and master. The priest, placing their hands in each other, pronounced a prayer, and then drew their heads together until they touched three times, while with his right hand he made a motion as if blessing them; a second time their hands were joined, and the bridegroom was asked, 'Will you be her husband?' 'I will,' he answered, raising at the same time the veil of the bride, in token that she was now his, and letting it fall again. The priest then took two wreaths of flowers, ornamented with a quantity of hanging gold threads, from the hands of the deacon, put them on the heads of the married couple, changed them three times from one head to the other, repeating each time, 'I unite you, and bind you one to another

—live in peace.' Such are the customs in the very land where man was first created; and, among nations who change so little as those in the East, we may fairly believe them to be among the most ancient.

WHIT-SUNDAY WOMAN-SHOW IN RUSSIA.

A custom has long prevailed at St Petersburg which can only be regarded as a relic of a rude state of society; for it is nothing more or less than a show of marriageable women or girls, with a view of obtaining husbands. The women certainly have a choice in the matter, and in this respect they are not brought to market in the same sense as fat cattle or sheep; but still it is only under the influence of a very coarse estimate of the sex that the custom can prevail. The manner of managing the show in past years was as follows. On Whit Sunday afternoon the Summer Garden, a place of popular resort in St Petersburg, was thronged with bachelors and maidens, looking out for wives and husbands respectively. The girls put on their best adornments; and these were sometimes more costly than would seem to be suitable for persons in humble life, were it not that this kind of pride is much cherished among the peasantry in many countries. Bunches of silver tea-spoons, a large silver ladle, or some other household luxury, were in many instances held in the hand, to denote that the maiden could bring something valuable to her husband. The young men, on their part, did not fail to look their best. The maidens were accompanied by their parents, or by some elder member of their family, in order that everything might be conducted in a decorous manner. The bachelors, strolling and sauntering to and fro, would notice the maidens as they passed, and the maidens would blushing try to look their best. Supposing a young man were favourably impressed with what he saw, he did not immediately address the object of his admiration, but had a little quiet talk with one of the seniors, most probably a woman. He told her his name, residence, and occupation; he gave a brief inventory of his worldly goods, naming the number of roubles (if any) which he had been able to save. On his side he asked questions, one of which was sure to relate to the amount of dowry promised for the maiden. The woman with whom this conversation was held was often no relative to the maiden, but a sort of marriage broker or saleswoman, who conducted these delicate negotiations, either in friendliness or for a fee. If the references on either side were unsatisfactory, the colloquy ended without any bargain being struck; and, even if favourable, nothing was immediately decided. Many admirers for the same girl might probably come forward in this way. In the evening a family conclave was held concerning the chances of each maiden, at which the offer of each bachelor was calmly considered, chiefly in relation to the question of roubles. The test was very little other than that 'the highest bidder shall be the purchaser.' A note was sent to the young man whose offer was deemed most eligible; and it was very rarely that the girl made any objection to the spouse thus selected for her.

The St Petersburg correspondent of one of the London newspapers, who was at the Woman Show on Whit Sunday, 1861, stated that the custom has been gradually declining for many years; that there were very few candidates for matrimony on that occasion; and that the total abandonment of the usage was likely soon to occur, under the influence of opinion more congenial to the tastes of Europeans generally.

CREELING THE BRIDEGROOM.

A curious custom in connexion with marriage prevailed at one time in Scotland, and, from the manner in which it was carried out, was called 'Creeling the Bridegroom.' The mode of procedure in the village of Galashiels was as follows. Early in the day after the marriage, those interested in the proceeding assembled at the house of the newly-wedded couple, bringing with them a 'creel,' or basket, which they filled with stones. The young husband, on being brought to the door, had the creel firmly fixed upon his back, and with it in this position had to run the round of the town, or at least the chief portion of it, followed by a number of men to see that he did not drop his burden; the only condition on which he was allowed to do so being that his wife should come after him, and kiss him. As relief depended altogether upon the wife, it would sometimes happen that the husband did not need to run more than a few yards; but when she was more than ordinarily bashful, or wished to have a little sport at the expense of her lord and master—which it may be supposed would not unfrequently be the case—he had to carry his load a considerable distance. This custom was very strictly enforced; for the person who was last creeled had charge of the ceremony, and he was naturally anxious that no one should escape. The practice, as far as Galashiels was concerned, came to an end about sixty years ago, in the person of one Robert Young, who, on the ostensible plea of a 'sore back,' lay a-bed all the day after his marriage, and obstinately refused to get up and be creeled; he had been twice married before, and no doubt felt that he had had enough of creeling.

MARRIAGE LAWS AND CUSTOMS IN THE EAST OF ENGLAND.

There is a saying of Hesiod's (*Works and Days*, l. 700), to the effect that it is better to marry a woman from the neighbourhood, than one from a distance. With this may be compared the Scotch proverb, 'It is better to marry over the midden, than over the moor,' i.e. to take for your wife one who lives close by—the other side of the muckheap—than to fetch one from the other side of the moor. I am not aware of the existence of any proverb to this effect in East Anglia; but the usual practice of the working classes is in strict accordance with it. Whole parishes have intermarried to such an extent that almost everybody is related to, or connected with everybody else. One curious result of this is that no one is counted as a 'relation' beyond first cousins, for if 'relationship' went further than that it might almost as well include the whole parish.

A very strong inducement to marry a near neighbour, lies, no doubt, in the great advantage of having a mother, aunt, or sister at hand whose help can be obtained in case of sickness; I have frequently heard complaints of the inconvenience of 'having nobody belonging to them,' made by sick people, whose near relations live at a distance, and who in consequence are obliged to call in paid help when ill.

'Marry in Lent,
And you'll live to repent,'

is a common saying in East Anglia; and so also is

'To change the name, and not the letter,
Is a change for the worst, and not for the better;'

i.e., it is unlucky for a woman to marry a man whose surname begins with the same letter as her own.

A curious custom with regard to marriages still exists: at any rate, I knew of its being observed a few years ago; it is that if a younger sister marries before the elder one, the elder must *dance in the hog's trough*. In the case to which I refer, a brother went through the ceremony also, and the dancers performed their part so well, that they danced both the ends of the trough, and the trough itself into two pieces. In the West of England it is a fixed rule that the lady should dance in *green stockings*; but I am not aware of any peculiar stockings being required on the occasion in East Anglia.

The attendance at the weddings of agricultural labourers is naturally small; but it is very remarkable that neither father nor mother of bride or bridegroom come with them to church. I can hardly recollect more than one instance of any of the parents being present at the ceremony, and then what brought the bridegroom's father was the circumstance of the ring being left behind. The omission had not been discovered by the wedding party, and the father came striding up the church, very red and hot, in time to shove a tiny screw of paper into the bridegroom's hand before the clergyman held out his book for the ring to be laid upon it.

The usual attendants at a labourer's wedding are only three—the official father, the bridesmaid, and the groomsmen; the two latter being, if possible, an engaged couple, who purpose to be the next pair to come up to the altar on a similar errand upon their own account.

The parties very frequently object to sign their names, and try to get off from doing so, even when they can write very fairly, preferring to set their *mark* to the entry in the register; and, unless the clergyman is awake to this disinclination, and presses the point, many good writers will appear in the books as 'marksmen,' a circumstance which much impairs the value of the comparative number of names and marks in the marriage registers as a test of the state of education among the poor.

The bridegroom sometimes considers it his duty to profess that he considers the job a very dear one—not particularly complimentary to the bride,—and once a man took the trouble to pay my fee entirely in three-penny and fourpenny pieces; which was, I suppose, a very good joke; not so much so, however, as when a friend of mine had his fee paid in coppers.

Suffolk.

C. W. J.

JUNE 1.

St Justin, the philosopher, 167. St Pamphilus, priest and martyr, 309. St Caprias, abbot, 430. St Wistan, Prince of Mercia, martyr, 849. St Peter of Pisa, founder of the Hermits of St Jerome, 1435.

Born.—Robert Cecil, Earl of Salisbury, minister to Elizabeth and James I., 1560; Nicolas Poussin, painter, 1594, *Andely, in Normandy*; Secretary John Thurloe, 1616, *Abbots Roding, Essex*; Sir John Dugdale, antiquary, 1628, *Shustoke*; John Tweddell (Eastern travels), 1769, *Threeewood, near Heatham*.

Died.—Henry Dandolo, doge of Venice, 1205, *bur. in St Sophia, Constantinople*; Jerome of Prague, religious

reformer, burnt at *Constance*, 1416; Christopher Marlowe, dramatist, 1593; James Gillray, caricaturist, 1815, *London*; Sir David Wilkie, artist, died at sea off *Gibraltar* 1841; Pope Gregory XVI. 1846.

JAMES GILLRAY.

In the churchyard of St James, Piccadilly, there is a flat stone, bearing the following inscription:—

IN MEMORY
OF MR JAMES GILLRAY,
CARICATURIST,
WHO DEPARTED THIS LIFE
1ST JUNE, 1815,
AGED 58 YEARS.

Gillray was the son of a native of Lanarkshire,* a soldier in the British army, who lost an arm at the fatal field of Fontenoy.

Like Hogarth, Gillray commenced his career as a mere letter engraver; but, tiring of this monotonous occupation, he ran away, and joined a company of wandering comedians. After experiencing the well-known hardships of a stroller's life, he returned to London, and became a student of the Royal Academy and an engraver. Admirably as many of his engravings, particularly landscapes, are executed, it is as a caricaturist that he is best known. In this peculiar art he never had even a rival, so much have his works surpassed those of all other practitioners. The happy tact with which he seized upon the points in manners and politics most open to ridicule, was equalled only by the exquisite skill and spirit with which he satirically portrayed them. By continual practice he became so facile, that he used to etch his ideas at once upon the copper, without making a preliminary drawing, his only guides being sketches of the characters he intended to introduce made upon small pieces of card, which he always carried in his pocket, ready to catch a face or form that might be serviceable.

The history of George III. may be said to have been inscribed by the graver of Gillray, and sure never monarch had such an historian. The unroyal familiarity of manner; awkward, shuffling gait, undignified carriage, and fatuous countenance; the habit of entering into conversation with persons of low rank; the volubility with which he poured out his pointless questions, without waiting for any other answer than his own 'hay? hay? hay?' his love of money, his homely savings; have all been trebly emphasized by the great caricaturist of his reign; and not less ably because the pencil of the public satirist was pointed by private pique. Gillray had accompanied Louthembourg into France, to assist him in making sketches for his grand picture of the siege of Valenciennes. On their return, the king, who made pretensions to be a patron of art, desired to look over their sketches, and expressed great admiration of Louthembourg's, which were plain landscape drawings, sufficiently finished to be intelligible. But when he saw Gillray's rude, though spirited sketches of

* Gillray is a Highland name, meaning Ruddy Lad; but it is found in the south of Scotland. The writer remembers a family of the name in a county adjacent to Lanarkshire.

French soldiers, he threw them aside with contempt, saying, 'I don't understand caricatures,' an action and observation that the caricaturist never forgot or forgave.

Gillray's character affords a sad example of the reckless imprudence that too frequently accompanies talent and genius. For many years he resided in the house of his publisher, Mrs Humphrey, by whom he was most liberally supplied with every indulgence; during this time he produced nearly all his most celebrated works, which were bought up with unparalleled eagerness, and circulated not only over all England, but most parts of Europe. Though under a positive engagement not to work for any other publisher, yet so great was his insatiable desire for strong liquors, that he often etched plates for unscrupulous persons, cleverly disguising his style and handling. The last of his works is dated 1811. In that year he sank into a state in which imbecility was only enlivened by delirium, and which continued till his death.

The accompanying illustration, not a bad specimen of Gillray's style, is taken from a popular caricature on the peace concluded between Great Britain and France in 1802, entitled *The First Kiss these Ten Years; or, the*

THE FIRST KISS THESE TEN YEARS.

Meeting of Britannia and Citizen François. Britannia appears as a portly lady in full dress, her shield and spear leaning neglected against the wall. The Frenchman expresses his delight at the meeting in warm terms, saying, 'Madame, permettez me to pay my profound esteem to your engaging person; and to seal on your divine lips my everlasting attachment.' The lady, who is blushing deeply, replies—'Monsieur, you are truly a well-bred gentleman! And though you make me blush, yet you kiss so delicately that I

cannot refuse you, though I were sure you would deceive me again.' On the wall, just behind these two principal figures, are framed portraits of George the Third and Bonaparte fiercely scowling at each other. This caricature became as popular in France as it was in England. Immense quantities of impressions were sent to, and sold on the Continent, and even the great Napoleon himself expressed the high amusement he derived from it.

THE 'GLORIOUS FIRST OF JUNE.'

We should need to bring back the horrors of the first French Revolution to enable us to understand the wild delight with which Lord Howe's victory, in 1794, was regarded in England. A king, a queen, and a princess guillotined in France, a reign of terror prevailing in that country, and a war threatening half the monarchs in Europe, had impressed the English with an intense desire to thwart the republicans. Our army was badly organized and badly generalled in those days; but the navy was in all its glory. In April 1794, Lord Howe, as Admiral-in-chief of the Channel fleet, went out to look after the French fleet at Brest, and a great French convoy known to be expected from America and the West Indies. He had with him twenty-six sail of the line, and five frigates. For some weeks the fleet was in the Atlantic, baffled by foggy weather in the attempt to discover the enemy; but towards the close of May the two fleets sighted each other, and a great naval battle became imminent. The French admirals had often before avoided when possible a close contest with the English; but on this occasion Admiral Villaret Joyeuse, knowing that a convoy of enormous value was at stake, determined to meet his formidable opponent. The two fleets were about equal in the number of ships; but the French had the advantage in number of guns, weight of metal, and number of men. On the 1st of June, Howe achieved a great victory over Villaret Joyeuse, the details of which are given in all the histories of the period.

The English valued this victory quite as much for the moral effect it wrought in Europe generally, as for the immediate material injury it inflicted on the French. They had long been anxious concerning Lord Howe's movements; and when they learned that he had really captured or destroyed a large part of the French fleet, the joy was great. In those days it took a considerable time to bring any news from the Bay of Biscay to London; insomuch that it was not till the 10th that the admiral's despatches reached the Government. On the evening of that day the Earl of Chatham made known the news at the opera; and the audience, roused with excitement, called loudly for 'God save the king' and 'Rule Britannia,' which was sung by Morichelli, Morelli, and Rovedico, opera stars of that period. Signora Banti, a greater star than the rest, being seen in one of the boxes, was compelled to go down to the stage, and join her voice to the rest in a second performance of these songs. The Duke of Clarence went and told the news to the manager of Covent Garden

Theatre; Lord Mulgrave and Colonel Phipps did the same at Drury Lane Theatre; Mr Suett and Mr Inledon made the announcement on the

stage to the audiences of the two theatres; and then ensued the most lively expressions of delight.

LORD HOWE'S VICTORY OF THE FIRST OF JUNE.

Of course there was much ringing of bells and firing of guns to celebrate the victory; and, in accordance with English custom, there was some breaking of windows during the illumination saturnalia in the evenings. The conduct of Earl Stanhope on this occasion was marked by some of the eccentricity which belonged to his character. He was among those statesmen (and they were not a few) who deprecated any interference with the internal affairs of France; and who, though not approving of regicide and the reign of terror, still saw something to admire in the new-born but misused liberty of that country. The earl, in spite of his own rank, had concurred with the French in regarding an 'Aristocrat' as necessarily an enemy to the well-being of the people. On the 13th, he inserted the following singular advertisement in the newspapers:— 'Whereas a mixed band of ruffians attacked my house in Mansfield Street, in the dead of the night between the 11th and 12th of June instant, and set it on fire at different times: and whereas a gentleman's carriage passed several times to and fro in front of my house, and the aristocrat, or other person, who was in the said carriage, gave money to the people in the street to encourage them: this is to request the friends of liberty and good order to send me any authentic information they can procure respecting the name and place of abode of the said aristocrat, or other person, who was in the carriage above-mentioned, in order that he may be made amenable to the law.' The words 'aristocrat' and 'liberty' were then more terrible than they are now.

St Patrick's Purgatory.

Three legendary stories excited the minds of the people in the middle ages—that of the Wandering Jew, that of Prester John, and that of St Patrick's Purgatory. The two former were insignificant in comparison with the last. It was about the middle of the twelfth century that a Benedictine monk, named Henry of Saltre, established the wondrous and widespread reputation of an insignificant islet in a dreary lake, among the barren morasses and mountains of Donegal, by giving to the world the Legend of the Knight. This legend, extravagant in our eyes, but in perfect accordance with the ideas of that age, was a sort of composition out of various previous notions, including one which held that the land of departed souls lay in the west.

It represented its hero, Sir Owen, as an Irishman, who with courage and fidelity had served in the wars of King Stephen of England. Returning to Ireland to see his parents, he was seized with sudden remorse for his many sins; for he had lived a life of bloodshed and rapine, and had not scrupled to plunder churches, maltreat nuns, and apply the most sacred things to his own profane use and benefit. In this penitent mood he determined to visit St Patrick's Purgatory, with the view of washing away the guilt of so many misdemeanours.

Respecting the origin of the Purgatory, the legend states that when St Patrick was endeavouring to convert the Irish by telling them of the torments of the infernal regions, the people cried, 'We cannot believe such things,

unless we see them.' So, the saint, miraculously causing the earth to open, showed them the flaming entrance of the place of punishment; and the unbelieving heathens were at once converted to the true faith. St Patrick, then placed a gate on the cave, and building an abbey near it, entrusted the key to the prior, so that he had the privilege of admitting pilgrims. The penitent who wished to enter had to pass a probation of fifteen days in prayer and fasting; and, on the sixteenth, having received the sacrament, he was led in solemn procession to the gate. Having entered, the gate was locked by the prior, and not opened till the following day. If the pilgrim were found when the gate was re-opened, he was received with great joy; if not, he was understood to have perished in the Purgatory, and his name was never after mentioned.

The knight, having duly performed the preliminary ceremonies, entered the cave, and travelled till he came to a spacious hall, where he was kindly received by fifteen venerable men, clothed in white garments, who gave him directions for his future guidance. Leaving the old men, and travelling onwards, he was soon attacked by troops of demons, whom he successfully resisted by earnest prayer. Still pushing on, he passed through four 'fields' of punishment, by fire, ice, serpents, &c., that need not be too particularly described. He ascended a lofty mountain, from whence he was blown by a hurricane into a horribly filthy river; and, after many adventures, surrounded by millions of demons, and wretched souls in dreadful tortures, he succeeded in crossing a narrow bridge, and found his troubles over, the malignant demons not daring to follow him farther. Pursuing his journey, he soon arrived at a wall as bright as glass, and entering a golden gate, found himself in the garden of Eden among those happy souls who had expiated their sins, and were now waiting to be received into the celestial Paradise. Here, Owen wished to remain, but was told that he must again return to the world, there to die and leave his corporeal fabric. As he was for ever exempt from the punishment of Purgatory, he was shown a short and pleasant road back to the mouth of the cave; where he was received with great joy by the prior and monks of the abbey.

The legend, in its original Latin prose, soon spread over all Europe, and was repeated by Matthew Paris as a historical and geographical fact. It was also rendered into several metrical versions in the vulgar tongues. It was introduced into an Italian romance of chivalry, *Don Quixote's* favourite work, entitled *Guerrino il Meschino*; and later still it was dramatised by Calderon, the celebrated Spanish poet. It was introduced even into a Dutch romance, founded on the story of Fortunatus, and in the forms of a chap-book and broadside, is current in Spain and Italy at the present day.

The earliest authentic record of a visit to Lough Derg is in the form of letters testimonial, granted, in 1358, by Edward III. to Ungarus of Rimini and Nicholas of Beccaria, in proof of their having faithfully performed the pilgrimage

to St Patrick's Purgatory. There are some documents of a similar description in the archiepiscopal archives of Armagh; and in 1397 Richard II. granted a safe conduct pass to Raymond, Viscount Perilhos, and Knight of Rhodes, to visit the Purgatory with a retinue of twenty men and thirty horses. Raymond wrote an account of his pilgrimage, which is little more than a paraphrase of the Legend of the Knight, interspersed with personal history and political matters.* There is yet another account of a pilgrimage by one William Staunton in 1409, preserved among the Cottonian MSS. in the British Museum. Staunton's story differs slightly from that of the knight. He was fortunate enough to meet with a countryman in the Purgatory, one St John of Bridlington, who protected him from the demons. He also had a romantic and affecting interview with a pre-deceased sister and her lover there; and was ultimately rescued by a fair woman, who drew him out of the fiery gulf with a rope that he had once charitably given to a beggar.

Later, however, in the fifteenth century, doubts began to be expressed regarding the

truth of the marvellous stories of the Purgatory; and these, with the increasing intelligence of the age, led to its suppression, as thus recorded in the annals of Ulster, under the date 1497: 'The Cavo of St. Patrick's Purgatory, in Lough Derg, was destroyed about the festival of St. Patrick this year, by the guardian of Donegal and the representatives of the bishop in the deanery of Lough Erne, by authority of the Pope; the people in general having understood from the history of the knight and other old books that this was not the Purgatory which St Patrick obtained from God, though the people in general were visiting it.'

The learned Jesuit, Bolandus, in the *Acta Sanctorum*, ascribes the suppression of the Purgatory to the inordinate rapacity of its custodians. The story is exceedingly amusing; but want of space compels us to curtail it. A pious Dutch monk, having obtained permission

* The above cut, representing a pilgrim entering St Patrick's Purgatory, was copied by the writer from an illuminated manuscript of the fifteenth century in the Bibliothèque Nationale, Paris, No. 7588, A.F., and published in the *Ulster Journal of Archaeology*. A good view of the island is given in Doyle's *Tours in Ulster*.

to visit holy places as a religious mendicant, came to Lough Derg, and solicited admission to the Purgatory. The prior informed him that he could not be admitted without a license from the bishop of the diocese. The monk went to the bishop; but, as he was both poor and poor-like, the prelate's servants unceremoniously shut the door in his face. The monk was a man of energy and perseverance; so he waited till he saw the bishop, and then, falling on his knees, solicited the license. 'Certainly,' said the bishop, 'but you must first pay me a sum of money, my usual fee.' The monk replied boldly, to the effect that the free gifts of God should not be sold for money; hinted that such a proceeding would be tainted with the leprosy of simony; and, by dint of sturdy solicitation, succeeded in obtaining the license. The bishop then told him that was not all: he must next obtain permission from Magrath, the hereditary ecclesiastical tenant of the territory in which the Purgatory was situated. The monk went to Magrath, who in turn demanded his fee; but at last, wearied with importunity, and seeing he could not receive what the other had not to give, conceded the required permission. The monk then returned to the prior, fortified with the licenses of the bishop and Magrath, but was most ungraciously received. The prior could in nowise understand how the monk could have the audacity to come there without money, when he knew that the convent was supported solely by the fees of pilgrims. The undaunted Dutchman spoke as boldly to the prior as he had to the bishop; and at last, but with a very bad grace, he was permitted to go through the prescribed ceremonies, and enter the Purgatory. In a high state of religious excitement and expectation, the monk was shut up in the cave; but neither heard nor saw anything during the whole twenty-four hours. Some, probably, would have taken a different view of the matter; but the disappointed and enthusiastic monk, implicitly believing the marvellous legends, considered that the miracle had ceased on account of having been made a source of profit. So going to Rome, the monk represented the whole affair to the sovereign pontiff, and the result was the suppression of the Purgatory, as above related.

The ancient renown of Lough Derg was thus destroyed; but an annual pilgrimage of the lowest classes commenced soon afterwards, and occasioned such scenes of licentious disorder, that in 1623 the Lords Justices commanded that all the buildings on the island should be utterly demolished. Bishop Spottiswood, who superintended this demolition, describes the 'Cave' as 'a poor beggarly hole, made with stones laid together with men's hands, such as husbandmen make to keep hogs from the rain.'

The annual pilgrimage has never been completely abolished, and continues to the present day, commencing on the 1st of June, and lasting to the 15th of August; during which time from about eight to ten thousand persons—all, with a very few exceptions, of the lowest class of society—visit the island. The penitential style is entirely done away with, the word purgatory

is abandoned, and a chapel called 'the prison' serves instead. The pilgrims, now termed 'stationers,' enter 'prison' at seven o'clock in the evening, the men ranging themselves on one side of the edifice, the women on the other. Here they remain without food or sleep for twenty-four hours; but they are allowed to drink water, and under certain restrictions may occasionally pass in and out of the building during that time. The rest of their penance consists in repeating a mechanical routine of prayers, painfully perambulating with bare feet, and crawling on bare knees over certain rocky paths, denominated saints' beds.

The tourist visitor to Lough Derg, during pilgrimage time, will meet with nothing to charm the eye or gratify the mind. The spot, once so celebrated, is as squalid and commonplace as can well be conceived. All romantic ideas will speedily be put to flight by the visitor observing the business word TICKETS, painted up over a hutch, made in railway-office style, in the shed which serves as a ferry-house. Here the pilgrim pays for his passage over to the island—one shilling, or as much more as he pleases, for the first-class, in the stern of the boat; or sixpence for the second-class, in the bow. Arrived on the island he again pays one shilling, or as much more as he can afford (it being well understood that the more he pays the greater spiritual advantages he will gain,) to the prior, for which he receives a ticket entitling him to the privilege of confession. Thus, though pilgrims are expected to disburse according to their means, the poor man need not pay more than eighteenpence. There are two chapels on the island, one named St Patrick's, is used as the 'prison,' the other, St Mary's, as the confessional. There is also a house for the prior and his four assistant priests, and five lodging-houses for the use of pilgrims. All these are common whitewashed buildings, such as may be seen in any Irish village, without the slightest pretension to even simple neatness; and Mr Otway has not unaptly described them as filthy, dreary, and detestable.

Still, the degrading penance performed at this place is flavoured by a certain spice of romantic interest, arising from the real or mythical dangers the pilgrims are supposed to incur. In 1796 the ferry-boat, when conveying pilgrims to the island, upset, and seventy persons were drowned. Tradition states that a similar accident happened once before that period, and prophecy asserts that the boat 'is to be lost' a third time. Again, it is freely reported, and currently believed, that if any one of the pilgrims should chance to fall asleep when in 'prison,' the great enemy of mankind would be entitled to fly off in the twinkling of an eye with the whole number; a truly horrible event, which it is said has twice occurred already, and, of course, must happen a third time. To prevent such a very undesirable catastrophe, each woman takes a large pin into prison with her, the point of which she freely employs upon the person of any of her neighbours who seem likely to be overcome by sleep. For a like purpose a few long sticks are distributed among the men, to tap the heads of drowsy sinners. And it not

unfrequently happens that those who are the least sleepy, and consequently the most busy in tapping their brother pilgrims' heads at the commencement of the twenty-four hours' imprisonment, become sleepy sinners themselves towards the latter part of the time; and then, as may readily be supposed, the taps are returned with compound interest.

The island is very small, not measuring more than three hundred paces in any direction, and contains about three roods of barren rocky ground. For this small space the Protestant proprietor receives a rental of £300 per annum.

JUNE 2.

Saints Pothinus, Bishop of Lyons, Sanctus, Attalus, Blandina, and the other martyrs of Lyons, 177. St Erasmus, bishop and martyr, 303. Saints Marcellinus and Peter, martyrs, about 304.

Born.—Nicolas le Fevre, 1544, Paris.

Died.—Thomas, Duke of Norfolk, executed, 1572, Tower of London; James Douglas, Earl of Morton, beheaded at Edinburgh, 1581; Sir Edward Leigh, 1671, Rushall; Madeleine de Scuderi, romances, miscellaneous writings, 1701.

THE REGENT MORTON—'HALIFAX LAW.'

After ruling Scotland under favour of Elizabeth for nearly ten years, Morton fell a victim to court faction, which probably could not have availed against him if he had not forfeited public esteem by his greed and cruelty. It must have been a striking sight when that proud, stern, resolute face, which had frowned so many better men down, came to speak from a scaffold, protesting innocence of the crime for which he had been condemned, but owning sins enough to justify

THE MAIDEN.

God for his fate. As is well known, the instrument employed on the occasion was one forming

a sort of prototype of the afterwards more famous guillotine, and named The Maiden, of which a portraiture is here presented, drawn from the original, still preserved in Edinburgh.

Morton is believed to have been the person who introduced The Maiden into Scotland, and he is thought to have taken the idea from a similar instrument which had long graced a mount near Halifax, in Yorkshire, as the appointed means of ready punishment for offences against forest law in that part of England.

Halifax Law.

'There is and hath been of ancient time a law, or rather a custom, at Halifax, that whosoever doth commit any felony, and is taken with the same, or confess the fact upon examination, if it be valued by four constables to amount to the sum of thirteen-pence halfpenny, he is forthwith beheaded upon one of the next market days (which fall usually upon the Tuesdays, Thursdays, and Saturdays), or else upon the same day that he is so convicted, if market be then holden. The engine wherewith the execution is done is a square block of wood, of the length of four feet and a half, which doth ride up and down in a slot, rabet, or regall, between two pieces of timber that are framed and set upright, of five yards in height. In the nether end of the sliding block is an axe, keyed or fastened with an iron into the wood, which, being drawn up to the top of the frame, is there fastened by a wooden pin (with a notch made into the same, after the manner of a Samson's post), unto the midst of which pin also there is a long rope fastened, that cometh down among the people; so that when the offender hath made his confession, and hath laid his neck over the nethermost block, every man there present doth either take hold of the rope (or putteth forth his arm so near to the same as he can get, in token that he is willing to see justice executed), and pulling out the pin in this manner, the head block wherein the axe is fastened doth fall down with such a violence, that if the neck of the transgressor were so big as that of a bull, it should be cut in sunder at a stroke, and roll from the body by an huge distance. If it be so that the offender be apprehended for an ox, sheep, kine, horse, or any such cattle, the self beast or other of the same kind shall have the end of the rope tied somewhere unto them, so that they being driven, do draw out the pin whereby the offender is executed.'—*Holinshed's Chronicle*, ed. 1587.

This sharp practice, in which originated the alliterative line in the Beggars' Litany: 'From Hell, Hull, and Halifax, good Lord deliver us!' seems to date from time immemorial. To make an offender amenable to Halifax Law, it was necessary he should be taken within 'the forest of Hardwick and liberty of Halifax' with the stolen property (of the value of thirteen-pence halfpenny or more) in his hands or on his back, or he could be convicted on his own confession. Upon apprehension the offender was taken before the Lord Bailiff, who immediately issued his summons to the constables of four towns within the district, to choose four 'Frith burghers' from each to act as jurymen. Before this tribunal

accuser and accused were confronted, and the stolen article produced for valuation. No oaths were administered; and if the evidence against the prisoner failed to establish the charge, he was set at liberty there and then. If the verdict went against him, he left the court for the block, if it happened to be Saturday (the principal market-day), otherwise he was reserved for that day, being exposed in the stocks on the intervening Tuesdays and Thursdays. If the condemned could contrive to outrun the constable, and get outside the liberty of Halifax, he secured his own; he could not be followed and recaptured, but was liable to lose his head if ever he ventured within the jurisdiction again. One Lacy actually suffered after living peaceably outside the precincts for seven years; and a local proverbial phrase, 'I trow not, quoth Dinnis,' commemorates the escape of a criminal of that name, who being asked by people he met in his flight whether Dinnis was not to be beheaded that day, replied, 'I trow not!' He very wisely never returned to the dangerous neighbourhood. After the sentence had been duly carried out, a coroner's inquest was held at Halifax, when a verdict was given respecting the felony for which the unlucky thief had been executed, to be entered in the records of the Crown Office.

On the 27th and 30th days of April 1650, Abraham Wilkinson, John Wilkinson, and Anthony Mitchell were charged before the sixteen representatives of Halifax, Skircoat, Sowerby, and Warley, with stealing sixteen yards of russet-coloured kersey and two colts; nine yards of cloth and the colts being produced in court. Mitchell and one of the Wilkinsons confessed, and the sentence passed with the following form,—

'THE DETERMINATE SENTENCE.—The prisoners, that is to say, Abraham Wilkinson and Anthony Mitchell, being apprehended within the liberty of Halifax, and brought before us, with nine yards of cloth as aforesaid, and the two colts above mentioned, which cloth is appraised to nine shillings, and the black colt to forty-eight shillings, and the grey colt to three pounds: All which aforesaid being feloniously taken from the above said persons, and found with the said prisoners; by the antient custom and liberty of Halifax, whereof the memory of man is not to the contrary, the said Abraham Wilkinson and Anthony Mitchell are to suffer death, by having their heads severed and cut from their bodies, at Halifax gibbet.'

The two felons were accordingly executed the same day, it being the great market-day, making the twelfth execution recorded from 1623 to 1650. This was destined to be the last; the bailiff was warned that if another such sentence was carried out, he would be called to account for it; and so the custom fell into desuetude, and Halifax Law ceased to be a special terror of thieves and vagabonds.

SCUDERI AND HER ROMANCES.

Fame occurs to authors in various ways. Some are famous in their lifetime and for ever; some are unknown in their lifetime, and become famous after death; some are famous in their

lifetime, and are unread after death, but their names are remembered as once famous; and some are famous in their lifetime, but after death are so completely forgotten, that posterity loses even the record of their very names. Mademoiselle de Scuderi is not in the last unfortunate case. She was famous in her own day, she is now seldom read save by the literary antiquary; but it is not forgotten that she was famous. Her name is perpetually quoted, proverbially, as an instance of the evanescence of a great reputation.

Madeleine de Scuderi was born at Havre-de-Grace, in 1607. Her family was noble, but of decayed fortune. Her mother dying while she was a child, she was adopted by an uncle, who, as he could not leave her money, spared neither pains nor expense in giving her a first-rate education. At his death, about her thirty-third year, she went to Paris to find a home with her brother George, a celebrated playwright, patronized by Richelieu, and thought a rival of Corneille. George could not afford to maintain her in idleness, and finding she had a lively wit and a ready pen, he set her to compose romances, which he published as his own. They sold well, and pleased far better than his dramas. George was an eccentric character, and it was said that he used to lock Madeleine up, in order that she might produce a proper quantity of writing daily. Soon the secret oozed out, and she speedily became one of the best known women, not only in Paris, but in Europe. Her publisher, Courbé, grew a rich man by the sale of her works, which were translated into every European language. When princes and ambassadors came to Paris, a visit to Mademoiselle de Scuderi was one of their earliest pleasures. She received a pension from Mazarin, which, at the request of Madame de Maintenon, Louis XIV. augmented to 2,000 livres a year. Philosophers and divines united in her praise. Leibnitz sought the honour of her friendship and correspondence. Her *Discourse on Glory* received the prize of eloquence from the French Academy, in 1671. Her house was the centre of Parisian literary society, and she was the queen of the blue stockings, whom Molière ridiculed in his *Femmes Savantes*, and his *Précieuses Ridicules*. No woman, in fact, who has ever written received more honours, more flatteries, and more substantial rewards. Endowed with great good-sense and amiability, she bore her prosperity through a very long life without offence, and without making a personal enemy. She was ugly; she knew it, owned it, and jested over it. It used to be said, that all who were happy enough to be her friends soon forgot her plain face, in the sweetness of her temper and the vivacity of her conversation. One gossip records her strong family pride, and the amusing gravity with which she was in the habit of saying, 'Since the ruin of our family,' as if it had been the overthrow of the Roman empire. She was never married, though she had many admirers; and, after a blameless and happy life, expired at the advanced age of ninety-four, on the 2nd of June 1701.

Mademoiselle de Scuderi was a voluminous

writer. Her romances alone occupy about fifty volumes, of from five to fifteen hundred pages each. Most of them are prodigiously long; *Le Grand Cyrus* and *Clélie* each occupy ten volumes, and took years to appear. They are, moreover, encumbered with episodes, the main story sometimes forming no more than a third of the whole. She laid her scenes nominally in ancient times and the East; but her characters are only French men and women masquerading under Oriental names. She delighted in company, and many wondered when she found leisure to write; but society was her study, and what she heard and saw she, with a romantic gloss, reproduced. She put her friends into her books, and all knew who was who, and detected one another's houses, furniture, and gardens in Nineveh, Rome, and Athens. Even under such cumbrous travestie we might resort to her pages for pictures of French society under *le grand Monarque*, but she made no attempt to depict the realities of life. In high-flying sentimental conversations about love and friendship all her personages pass their days; and their generosity, purity, and courage are only equalled by their uniform good-breeding and faculty for making fine speeches. Long ago has the world lost its taste for writing in that strain, and the de Scuderi romances would only move a modern novel reader to laughter, and then to yawning and sleep.

BAPTISM OF KING ETHELBERT.

Ethelbert was the Saxon king reigning in Kent, when Augustine landed there and introduced Christianity in a formal manner into England. After a while, this monarch joined the Christian church; his baptism, which Arthur Stanley considers as the most important since Constantine, excepting that of Clovis,* took place on the 2nd of June 597. Unfortunately the place is not known; but we know that on the ensuing Christmas-day, as a natural consequence of the example set by the king, ten thousand of the people were baptized in the waters of the Swale, at the mouth of the Medway.

JUNE 3.

St Cecilius, confessor, 211. St Clotildis or Clotilda, Queen of France, 545. St Lifard, abbot, near Orleans, 6th century. St Coemgen or Keivin, bishop and confessor in Ireland, 618. St Genesius, bishop and confessor, about 662.

Born.—Dr John Gregory, miscellaneous writer, 1724, *Aberdeen*; Dr James Hutton, one of the founders of geology, 1726, *Edinburgh*; Robert Tannahill, Scottish poet, 1774, *Paisley*; Sir William C. Ross, artist, 1794, *London*.

Died.—Bishop (John) Aylmer, 1594, *Fulham*; William Harvey, discoverer of the circulation of the blood, 1657, *bur. Hempstead, Essex*; Admiral Opdam, blown up at sea, 1665; Dr Edmund Calamy, nonconformist divine, 1732; Jethro Tull, speculative experimenter in agriculture, 1740.

JETHRO TULL.

Jethro Tull was the inventor and indefatigable advocate of 'drill-sowing and frequent hoeing,'

* Stanley's *Historical Memorials of Canterbury*, p. 20.

two of the greatest improvements that have been introduced into the modern system of agriculture. He was educated for the profession of the law, but an acute disease compelled him to relinquish a sedentary life. During his travels in search of health, he directed his attention to the agriculture of the various countries he traversed; and, observing that vines grew and produced well by frequently stirring the soil, without any addition of manure, he rashly concluded that all plants might be cultivated in a similar manner. On his return to England, Tull commenced a life-long series of experiments on his own farm at Shalborne, in Berkshire; and in spite of a most painful disease, and the almost forcible opposition of besotted neighbours and brutally ignorant farm-labourers, he succeeded in gathering remunerative crops from the hungry and barrenest of soils. His great invention was that of drill-sowing; the saving of seed effected by this practice is incalculable. From the scarcely numerable millions of acres that have been drill-sown since Tull's time, one-third at least of the seed has been saved. Nor is this all; the best informed agriculturists assert that this saving is of less importance than the facility which drill-sowing affords for the destruction of weeds and loosening of the soil by the hoe. It is true, that like many other speculative inventors, Tull arrived at conclusions scarcely justified by the results of his experiments, and principal among these was the erroneous notion that loosening and pulverizing the soil might supersede the use of manure altogether; but he lived long enough to discover his mistake, and he was honest and manly enough to acknowledge it.

Panegyric inscriptions, graven on ponderous marble and perennial brass, point out the last resting-places of the destroyers of the human race; but, strange to say, no man can tell where the remains of Jethro Tull, the benefactor of his kind, were deposited. Mr Johnson, speaking of Tull, says, 'His grave is undetermined; if he died at Shalborne, there is no trace of his burial in its parish register. The tradition of the neighbourhood is, that he died and was buried in Italy. His deeds, his triumphs, were of the peaceful kind with which the world in general is little enamoured: but their results were momentous to his native land. His drill has saved to it, in seed alone, the food of millions; and his horse-hoe system, by which he attempted to cultivate without manure, taught the farmer that deep ploughing and pulverization of the soil render a much smaller application of fertilizers necessary.'

KING JAMES AND THE TOWER LIONS.

On the 3rd June 1605, King James and his family went to the Tower of London, to see the lions. From the time of Henry III., who placed in the Tower three leopards which had been sent him as a present from the Emperor Frederick, in allusion to the three leopards on the royal shield, there had always been some examples of the larger carnivora kept in this grim old seat of English royalty. It came to be considered as a proper piece of regal magnificence, and the keeper was always a gentleman. In the four-

teenth century, to maintain a lion in the Tower cost sixpence a day, while human prisoners were supported for one penny. It cost, in 1532, £6, 13s. 4d. to pay for and bring home a lion. To go and see these Tower lions became an indispensable duty of all country visitors of London, insomuch as to give rise to a proverbial expression, 'the lions' passing as equivalent to all kinds of city wonders which country people go to see. Travelling menageries did not long ago exist, and wild animals were great rarities. In such circumstances, the curiosity felt about the lions in the Tower can be readily appreciated. Even down to the reign of William IV., the collection of these animals was kept up in considerable strength; but at length it was thought best to consign the remnant of the Tower lions to the Zoological Gardens in the Regent's Park, where they have ever since flourished.

The taste of King James was not of the most refined character. It pleased him to have an addition made to the Tower lion-house, with an arrangement of trap-doors, in order that a lion might be occasionally set to combat with dogs, bulls, or bears, for the diversion of the court. The arena was now completed; so the monarch and a great number of courtiers came to see a fight. The designed gallery for their use was not ready; but they found seats on a temporary platform. When the under-keepers on this occasion got a couple of the lions turned out into the place of combat, they acted much like Don Quixote's lions: more amazed and puzzled than anything else, they merely stood looking about them till a couple of pieces of mutton were thrown to them. After a live cock had also been devoured by the savage creatures, a live lamb was let down to them by a rope. 'Being come to the ground, the lamb lay upon his knees, and both the lions stood in their former places, and only beheld the lamb. Presently the lamb rose up and went unto the lions, who very gently looked upon and smelled on him, without any hurt. Then the lamb was very softly drawn up again, in as good plight as he was let down.'

Afterwards, a different lion, a male one, was brought into the arena by himself, and a couple of mastiffs were let in upon him; by which he was fiercely attacked, but with little effect. 'A bred dog took the lion by the face, and turned him upon his back—but the lion spoiled them all; the best dog died the next day.'

In this and other combats of the same kind, the conduct of the lions was generally conformable to the observations of modern naturalists regarding the character of the so-called king of beasts. The royal family and principal courtiers having come to the Tower on the 23rd June 1609, a bear which had killed a child, a horse, and six strong mastiffs, was let in upon a lion, with only the effect of frightening the creature. 'Then were divers other lions put into that place one after another; but they showed no more sport nor valour than the first, and every of them, so soon as they espied the trap doors open, ran hastily into their dens. Lastly, there were put forth together the two young lusty lions which were bred in that yard, and were now grown great. These at first began to march

* *Howes's Chronicle.*

proudly towards the bear, which the bear perceiving came hastily out of a corner to meet them; but both lion and lioness skipped up and down, and fearfully fled from the bear; and so these, like the former lions, not willing to endure any fight, sought the next way into their den.'

Such were amongst the amusements of the English court 250 years ago.

THE EMPRESS JOSEPHINE AND HER HOROSCOPE.

On the 3rd of June 1814, a distinguished company of mourners assembled in the church of Ruel, in France, the parish in which the palace of Malmaison is situated. There were the Prince of Mecklenburg, General Sacken, several marshals of France, senators, general officers, ecclesiastics, prefects, sub-prefects, maires, and foreigners of note; and there were eight thousand townspeople and peasants from the neighbourhood, come to pay the last tribute of respect to one who, in the closing years of her life, had won their esteem and affection.

It was the funeral of the ex-Empress Josephine, a lady whose sixty years of life had been chequered in a most remarkable way. Josephine appears, as a woman, to have been actuated in some degree by a prediction made concerning her when a girl. Mademoiselle Ducrest, Madame Junot, and others who have written on Josephine's career, mention this prediction. Josephine—or, with her full name, Marie Josephine Rose Tascher de la Pagerie—was the daughter of a French naval officer, and was born in the French colony of Martinique, in 1763. When a sensitive, imaginative girl of about fifteen, her 'fortune was told,' by an old mulatto woman named Euphemie, in words somewhat as follows:—'You will marry a fair man. Your star promises you two alliances. Your first husband will be born in Martinique, but will pass his life in Europe, with girded sword. An unhappy lawsuit will separate you. He will perish in a tragical manner. Your second husband will be a dark man, of European origin and small fortune; but he will fill the world with his glory and fame. You will then become an eminent lady, more than a queen. Then, after having astonished the world, you will die unhappy.'

The writers on whose authority this mystic horoscope is put forward, do not fail to point out how perfectly the events of Josephine's life fit into it. By an arrangement between the two families, Mademoiselle de la Pagerie was married to the Comte de Beauharnois, a fair man, and a native of Martinique. The young people never liked each other; and when they went to Paris, each fell into the evil course of life which was likely to result from such aversion, and to which the state of morals in France lent only too much temptation. In a fit of jealousy, he went to Martinique to rake up evidence concerning his wife's conduct before marriage, and on return raised a suit against her: this was 'the unhappy lawsuit' that 'separated them.' From 1787 till 1790 she lived at Martinique with her two children, Eugene (afterwards one of Napoleon's best generals) and Hortense (afterwards

mother of Napoleon III.) On their return to Paris, a reconciliation took place between her and her husband; and a period of comparative happiness lasted till 1793, when the guillotine put an end to his career. He 'perished in a tragical way.' Madame Beauharnois was imprisoned; she contrived to send her son and daughter away from home; but the Terrorists would not consent to let loose one who had been the wife of a count, and who for that reason was one of the aristocracy. While in prison, she showed that she did not forget the old mulatto woman's prediction. She and three other ladies of note being imprisoned in the same cell, they were all alike subject to the brutal language of the gaolers placed over them; and once, when the others were tearfully lamenting their fate, and anticipating the horrors of the guillotine, Josephine exclaimed—'I shall not die: I shall be queen of France!' The Duchess d'Aiguillon, one of her companions, with a feeble attempt at banter, asked her to 'name her future household;' to which Josephine at once replied, 'I will make you one of my ladies of honour.' They wept, for they feared she was becoming demented. Robespierre's fall occurred in time to save the life of Josephine. After three years more of successful adventurous life, she was married to the young victorious general, Napoleon Bonaparte: 'a dark man, of European origin and small fortune.' Napoleon proceeded in his wonderful career of conquest, military and political, until at length he became emperor in 1804. Then was Josephine indeed 'an eminent lady, more than a queen;' and her husband 'filled the world with his glory and fame.' But the wheel of fortune was now turning. Napoleon had no children by Josephine, and he began to fear for the succession to his great empire. His ambition led him to propose marriage to the Archduchess Marie Louise of Austria, after his victorious campaign of 1809; he obtained poor Josephine's consent, in a heart-breaking scene, and the church allowed him to annul his first marriage, on grounds which would never have been allowed but for his enormous power. Josephine did 'die unhappy,' as a divorced wife; and thus fulfilled the last clause of the alleged prediction.

SUPERSTITIONS ABOUT DISEASES.

Perhaps under this head may be classed the notion that a *galvanic ring*, as it is called, worn on the finger, will cure rheumatism. One sometimes sees people with a clumsy-looking silver ring which has a piece of copper let into the inside, and this, though in constant contact throughout, is supposed (aided by the moisture of the hand) to keep up a gentle, but continual galvanic current, and so to alleviate or remove rheumatism.

This notion has an air of science about it which may perhaps redeem it from the character of mere superstition; but the following case can put in no such claim. I recollect that when I was a boy a person came to my father (a clergyman), and asked for a 'sacramental shilling,' *i. e.*, one out of the alms collected at the Holy Communion, to be made into a ring, and worn as a cure for epilepsy. He naturally declined to give one for 'superstitious uses,' and no

doubt was thought very cruel by the unfortunate applicant.

Ruptured children are expected to be cured by being passed through a young tree, which has been split for the purpose. After the operation has been performed, the tree is bound up, and, if it grows together again, the child will be cured of its rupture. I have not heard anything about this for many years; perhaps it has fallen into disuse. There is an article on the subject in one of Hone's books, I think, and there the witch elm is specified as the proper tree for the purpose; but, whether from the scarcity of that tree, or from any other cause, I am not aware that it was considered necessary in this locality.

Ague is a disease about which various strange notions are prevalent. One is that it cannot be cured by a regular doctor—it is out of their reach altogether, and can only be touched by some old woman's nostrum. It is frequently treated with spiders and cobwebs.* These, indeed, are said to contain arsenic; and, if so, there may be a touch of truth in the treatment. Fright is also looked upon as a cure for ague. I suppose that, on the principle that *similia similibus curantur*, it is imagined that the shaking induced by the fright will counteract and destroy the shaking of the ague fit. An old woman has told me that she was actually cured in this manner when she was young. She had had ague for a long time, and nothing would cure it. Now it happened that she had a fat pig in the sty, and a fat pig is an important personage in a poor man's establishment. Well aware of the importance of piggy in her eyes, and determined to give her as great a shock as possible, her husband came to her with a very long face as she was tottering down stairs one day, and told her that *the pig was dead*. Horror at this fearful news overcame all other feelings; she forgot all about her ague, and hurried to the scene of the catastrophe, where she found to her great relief that the pig was alive and well; but the fright had done its work, and from that day to this (she must be about eighty years old) she has never had a touch of the ague, though she has resided on the same spot.

Equally strange are some of the notions about small-pox. Fried mice are relied on as a specific for it, and I am afraid that it is considered necessary that they should be fried *alive*.

With respect to whooping-cough, again, it is believed that if you ask a person riding on a pichald horse what to do for it, his recommendation will be success-

* Mrs Delany, in a letter dated March 1, 1743-4, gives these two *infallible recipes for ague* :—

1st. Pounded ginger, made into a paste with brandy, spread on sheep's leather, and a plaister of it laid over the navel.

2nd. A spider put into a goose-quill, well sealed and secured, and hung about the child's neck as low as the pit of his stomach. Either of these I am assured will give ease.—*Probatum est*.

Upon this Lady Llanover notes :—'Although the prescription of the spider *in the quill* will probably only create amusement from its apparent absurdity, considered merely as an *old charm*, yet there is no doubt of the medicinal virtue of spiders and their webs, which have been long known to the Celtic inhabitants of Great Britain and Ireland' (See *Notes and Queries*, No. 242, where particulars are given of the efficacy of spiders' webs, rolled up like a pill, and swallowed when the ague fit is coming on). Dr Graham (in his *Domestic Medicine*) prescribed spiders' webs for ague and intermittent fever, and also names powder made of spiders given for the ague; and mentions his knowledge of a spider having been sewn up in a rag and worn as a periapt round the neck to charm away the ague.

ful if attended to. My grandfather at one time used always to ride a piebald horse, and he has frequently been stopped by people asking for a cure for whooping-cough. His invariable answer was, 'Patience and water-gruel; perhaps, upon the whole, the best advice that could be given.'

Earrings are considered to be a cure for sore eyes, and perhaps they may be useful so long as the ear is sore, the ring acting as a mild seton; but their efficacy is believed in even after the ear has healed.

Warts are another thing expected to be cured by charms. A gentleman well known to me, states that, when he was a boy, the landlady of an inn where he happened to be took compassion on his warty hands, and undertook to cure them by rubbing them with bacon. It was necessary, however, that the bacon should be *stolen*; so the good lady took it *secretly* from her own larder, which was supposed to answer the condition sufficiently. If I recollect rightly, the warts remained as bad as ever, which was perhaps due to the bacon not having been *bond fide* stolen.

I do not know whether landladies in general are supposed to have a special faculty against warts; but one, a near neighbour of mine, has the credit of being able to charm them away by counting them. I have been told by boys that she has actually done so for them, and that the warts have disappeared. I have no reason to think that they were telling me a downright lie, but suppose that their imagination must have been strong to overcome even such horny things as warts. A mere coincidence would have been almost more remarkable.

There is a very distressing eruption about the mouth and throat, called the thrush, common among infants and persons in the last extremity of sickness. There is a notion about this disease that a person must have it once in his life, either at his birth or death. Nurses like to see it in babies; they say that it is healthy, and makes them feed more freely; but, if a sick person shows it, he is given over as past recovery, which is really indeed extremely rare in such cases.

I am no doctor, and do not know whether the disease is really the same in both cases, but it appears to be so. C. W. J.

Suffolk.

The following conversation, which took place in a Dorsetshire village, illustrates the popular nosology and therapeutics of that county:—

'Well, Betty,' said a lady, 'how are you?'

'Pure, thank you ma'am; but I has been rather poorlyish.'

'What has been the matter with you?'

'Why, ma'am, I was troubled with the *rising of the lights*; but I tooked a dose of *shot*, and that has a-keepit them down.*'

As a pendant to this take the following, hitherto unprinted. An old cottager in Morayshire, who had long been bed-ridden, was charitably visited by a neighbouring lady, much given to the administration of favourite medicines. One day she left a bolus for him, from which she expected strengthening effects, and she called next day to inquire for her patient, as usual.

'Well, John, you would take the medicine I left with you?'

'Oh, no, ma'am,' replied John; 'it wadna gang east.'

The Scotch, it must be understood, are accustomed to be precise about the 'airts' or cardinal points, and generally direct you to places in that way. This poor old fellow, constantly lying on one side, had come to have a geographical idea of the direction which anything took in passing into his gullet.

* *Notes and Queries*, 2nd ser. vi. 522.

JUNE 4.

St Quirinus, Bishop of Siscia, martyr, 304. St Optatus, Bishop of Milevum, confessor, 4th century. St Breaca, or Breague, virgin, of Ireland. St Nenoc, or Nennoca, virgin, of Britain, 467. St Burian, of Ireland. St Petroc, abbot and confessor, about 564. St Walter, abbot of Fontenelle, or St Vandrilles, 1150. St Walter, abbot in San-Serviliano, 13th century.

Born.—George III., of Great Britain, 1738, London; John Scott, Earl of Eldon, Chancellor of England, 1751, Newcastle; James Pennethorne, architect, 1801, Worcester.

Died.—M. A. Muret (Muretus), commentator on the ancient classics, 1585, Rome; Archbishop Juxon, 1663, St John's, Oxford; Admiral Sir Charles Wager, 1743; Marshal Davoust, 1823; Marguerite, Countess of Blessington, novelist, &c., 1849, Paris.

KING GEORGE THE THIRD'S BIRTHDAY.

At page 275 of the volume of the *Gentleman's Magazine* for 1738, under a sub-title, 'Wednesday, 24,' meaning the 24th of May, occurs the following little paragraph: 'This morning, between six and seven, the Princess of Wales was happily delivered of a prince at Norfolk House, St James's Square, the Archbishop of Canterbury being present.' This prince was he who afterwards reigned sixty years over England as George III.

The 4th of June, which was assumed as the prince's birthday on the change of style, must yet for many years be remembered on account of the affectionate and constantly growing interest felt in it during the old king's reign. A royal birthday in the present time, notwithstanding the respect and love cherished for the occupant of the throne, is nothing to what it was

'—When George the Third was king.'

The reverence felt for this sovereign by the generality of his subjects was most remarkable. It was a kind of religion with many of them. He was spoken of as 'the best of characters,' 'the good old king;' no phrase of veneration or love seemed to be thought inapplicable to him. And surely, though he had his faults as a ruler, and they were of a not very innocuous character, it is something, as shewing the power of personal or private goodness and worth, that King George was thus held in general regard.

The esteem for the personal virtues of the king, joined to a feeling of political duty which the circumstances of the country made appear necessary, caused the 4th of June to be observed as a holiday—not a formal and ostensible, but a *sincere* holiday—over the whole empire. Every municipality met with its best citizens to drink the king's health. There were bonfires in many streets. The boys kept up from morning to night an incessant fusillade with their mimic artillery. Rioting often arose from the very joyousness of the occasion. It is a curious proof of the intense feeling connected with the day, that in Edinburgh a *Fourth of June Club* continued for many years after King George's death to meet and dine, and drink to his amiable memory.

The feelings of the people regarding the king were brought to an unusually high pitch in the year 1809, when he entered on the fiftieth year of his reign. Passing over the formal celebrations of the day, let us revive, from a contemporary periodical, a poem written on that occasion, as by Norman Nicholson, a shepherd among the Grampian Hills, who professed to have then just entered upon the fiftieth year of his own professional life. It is entitled,

Jubilee for Jubilee.

Frae the Grampian Hills will the Royal ear hear it,
And listen to Norman the Shepherd's plain tale !
The north wind is blowing, and gently will bear it,
Unvarnish'd and honest, o'er hill and o'er dale.
Wheu London it reaches, at court, Sire, receive it,
Like a tale you may read it, or like a sang sing,
Poor Norman is easy—but you may believe it,
I'm fifty years shepherd—you're fifty a king !

Your jubilee, then, wi' my ain I will mingle,
For you and mysel' twa fat lambkins I'll slay ;
Fresh turf I will lay in a heap on my ingle,
An' wi' my auld neebours I'll raut out the day.
My pipes that I played on lang syne, I will blaw them,
My chanter I'll teach to lilt over the spring ;
My drones to the tune I will round an' round thrav
them,
O' fifty years shepherd, and fifty a king !

The flock o' Great Britain ye've lang weel attended,
The flock o' Great Britain demanded your care ;
Frae the tod and the wolf they've been snugly de-
fended,
And led to fresh pasture, fresh water, and air.
My flocks I ha'e led day by day o'er the heather,
At night they around me ha'e danced in a ring ;
I've been their protector thro' foul and fair weather—
I'm fifty years shepherd—you're fifty a king !

Their fleeces I've shorn, frae the cauld to protect me,
Their fleeces they gave, wheu a burden they grew ;
When escaped frae the sheers, their looks did respect
me,
Sae the flock o' Great Britain still looks upon you.
They grudge not their monarch a mite o' their riches,
Their active industry is ay on the wing ;
Then you and me, Sire, I think ar twa matches—
I'm fifty years shepherd—you're fifty a king !

Me wi' my sheep, Sire, and you wi' your subjects,
Ou that festive day will baith gladly rejoice ;
Our twa hoary heads will be fou' o' new projects,
To please our leal vassals that made us their choice.
Wi' sweet rips o' hay I will treat a' my wethers,
The juice o' the vine to your lords you will bring ;
The respect they ha'e for us is better than brithers'—
I'm fifty years shepherd—you're fifty a king !

I live in the cottage where Norval was bred in,
You live in the palace your ancestors reared ;
Nae guest uninvited dare come to your weddin',
Or ruthless invader pluck us by the beard.
Then thanks to the island we live, whar our
shipping
Swim round us abreast, or like geese in a string ;
For safe, I can say, as my brose I am sipping,
I'm fifty years shepherd—you're fifty a king !

But ah ! Royal George, and ah ! humble Norman,
Life to us baith draws near to a close ;
The year's far awa that has our natal hour, mau,
The time's at our elbow that brings us repose !
Then c'en let it come, Sire, if conscience acquit us,
A sigh frae our bosoms Death uever shall wring ;
And may the next jub'lee amang angels meet us,—
To hail the auld shepherd, and worthy auld king !

DAVOUST.—APPARENT INCONSISTENCIES
OF HUMAN NATURE.

The name of Davoust is held in greater horror than that of any other of Napoleon's generals, on account of the frightful oppression he exercised upon the citizens of Hamburg, when occupying that city for his master in 1813. His rapacity is described as unbounded. It is at the same time true that he was faithful beyond example to Napoleon through all the proceedings of the two subsequent years ; and after Waterloo, when a Bourbon decree prescribed several of his brother marshals, he wrote to the minister St Cyr, demanding that his name should be substituted for theirs, as they had only acted under his orders as the late war minister—a piece of generosity reminding us of chivalrous times. It is another curious and unexpected trait of Davoust, that he was a bibliophile, and possessed a fine vellum library.

One is continually surprised by incongruities in human character, although there is perhaps no peculiarity of human nature more conspicuous than what are called its inconsistencies. It would at first sight appear impossible that a noted murderer could be tender-hearted ; yet it is recorded of Eugene Aram, that he had been observed to walk aside to avoid treading on a worm. Archbishop Whately, in his annotations to Bacon, has the following paragraph : 'When Thurtell the murderer was executed, there was a shout of derision raised against the phrenologists for saying that his organ of *benevolence* was large. But they replied that there was also large *destructiveness*, and a moral deficiency, which would account for a man goaded to rage (by being cheated of almost all he had by the man he killed) committing that act. It is a remarkable confirmation of their view, that a gentleman who visited the prison where Thurtell was confined (shortly after the execution), found the jailors, &c., full of pity and affection for him. They said he was a kind, good-hearted fellow, so obliging and friendly, that they had never had a prisoner whom they so much regretted. And such seems to have been his general character, when not influenced at once by the desire of revenge and of gain.'

The gentle benevolence and piety of Izaak Walton shine through all his writings. The amiable sentimentalism of Mackenzie's novels (now unduly neglected) was forty years ago deeply impressed on the public mind. Yet both of these men were keen pursuers of sports which infer the destruction, and, what is worse, the torture of the humbler animals. It is related that Mr Mackenzie's wife, hearing him one day tell how many brace of grouse he had bagged in a late visit to the Highlands, and what a nice set of flies he had bought to take to Gala Water next week, exclaimed, 'Harry, Harry, you keep all your feeling for your books !' The writer knew this fine-toned author when he was eighty-five years of age, and retains a vivid recollection of the hearty, world-like, life-enjoying style of the man, so incongruous with all that one would imagine regarding him who wrote the story of La Roche.

Take in connexion with these remarks what Mr Baker has set forth in his work, styled *The Rifle and the Hound in Ceylon* (1854): 'I would always encourage a love of sport in a lad; guided by its true spirit of fair play, it is a feeling that will make him above doing a mean thing in every station of life, and will give him real feelings of humanity. I have had great experience in the characters of thorough sportsmen, and I can safely say that I never saw one that was not a straightforward, honourable man, who would scorn to take a dirty advantage of man or animal. In fact, all real sportsmen that I have met have been really tender-hearted men; men who shun cruelty to an animal, and who are easily moved by a tale of distress.'

THE FATE OF AMY ROBSART.

On the 4th of June 1550, Lord Robert Dudley, who subsequently was a great figure in English history, under the title of Earl of Leicester, was married to Amy, the daughter of Sir John Robsart, a gentleman of ancient family and large possessions in Cornwall. It was perhaps an imprudent marriage, for the bridegroom was only eighteen; but there was nothing clandestine or secret about it—on the contrary, it took place at the palace of Sheen, in the presence of the young king, Edward VI. The pair lived together ten years, but had no children. As this time elapsed, Dudley rose in the favour of his sovereign Elizabeth—even to such a degree that he might evidently, if unmarried, have aspired to her royal hand.

It is an odd consideration regarding Elizabeth and her high reputation as a sovereign, that one of her most famous ministers, and one who enjoyed her personal favour during a long course of years—whom, indeed, she *loved*, if she ever loved any—was a man proved to have been guilty of nearly every vice, a selfish adventurer, a treacherous hypocrite, and a murderer. We have now to speak of the first of a tolerably long series of wickednesses which have to be charged to the account of Leicester. He was still but Lord Robert Dudley when, in September 1560, he got quit of the wife of his youth, Amy Robsart. We know extremely little of this lady. There is one letter of hers preserved, and it only tells a Mr Flowerden, probably a steward of her husband, to sell the wool of certain sheep 'for six shillings the stone, as you would sell for yourself.' The lady came to her end at Cumnor Hall, a solitary manor-house in Berkshire, not far from Oxford. This house was the residence of a dependent of Dudley, one Anthony Forster, whose epitaph in the neighbouring church still proclaims him as a gentleman of birth and consideration, distinguished by skill in music and a taste for horticulture—a worthy, sagacious, and eloquent man, but whom we may surmise to have nevertheless been not incapable of serving Dudley in some of his worst ends. The immediate instrument, however, appears to have been Sir Richard Varney, another dependent of the aspiring courtier. By this man and his servant, who alone were in the house, the chamber of the unfortunate lady was

THE BEAR AT CUMNOR.

invaded by night, and after strangling her, and damaging her much about the head and neck, they threw her down a stair, to support their tale that she had died by an accidental fall. Dudley paid all proper external respect to her memory, by burying her magnificently in St Mary's Church, Oxford, at an expense of two thousand pounds. He did not, however, escape suspicion. The neighbouring gentry were so fully assured of the evil treatment of the lady, that they sought to get an inquiry made into the circumstances. We also find Burleigh afterwards presenting, among the reasons why it was inexpedient for the queen to marry Leicester, 'that he is infamed by the death of his wife.' Many actions of his subsequent life show how fully he was capable of ordering one woman out of the world to make way for another.

Mickle, a poet of the latter half of the eighteenth century, composed a ballad on the tragic death of Amy Robsart, whom he erroneously thought to have been a countess. Its smooth, euphonious strains, gave a charm to a composition which a critical taste would scarcely approve of.

'—Sore and sad that lady grieved,
In Cumnor Hall, so lone and drear;
Full many a piercing scream was heard,
And many a cry of mortal fear.
The death-bell thrice was heard to ring,
An aërial voice was heard to call;
And thrice the raven flapped its wing
Around the towers of Cumnor Hall.

* * * * *
And in that manor now no more
Is cheerful feast and sprightly ball:
For ever since that dreary hour
Have spirits haunted Cumnor Hall.
The village maids, with fearful glance,
Avoid the ancient moss-grown wall;
Nor ever lead the sprightly dance
Among the groves of Cumnor Hall.'

The place, nevertheless, from its natural beauties, its antique church, and the romance connected with the ancient hall, has an attraction for strangers. The BEAR—the inn which forms the opening scene of the romance of *Kenilworth*—a very curious specimen of old homely architecture, still exists at Cumnor, with the Dudley arms (the bear and ragged staff) over the door, strangely realizing to us the dismal connexion of Leicester with the spot.

JUNE 5.

St Dorotheus, of Tyre, martyr, 4th century. St Dorotheus the Theban, abbot, 4th century. Other Saints named Dorotheus. St Illidius, Bishop of Auvergne, confessor, about 385. St Boniface, Archbishop of Mentz, Apostle of Germany, and martyr, 755.

ST BONIFACE, THE APOSTLE OF THE GERMANS.

The true name of this saint was Winfrid, or Winfrith. He was the son of a West-Saxon chieftain, and was born at Crediton, in Devonshire, about the year 680. Having shown from his infancy a remarkable seriousness of character, he was sent, when in his seventh year, to

school in the monastery at Exeter. He made rapid and great proficiency in learning, and, having been ordained to the priesthood about the year 710, he was soon afterwards chosen by the West-Saxon clergy to represent them in an important mission to the Archbishop of Canterbury; and it was probably in the course of it that he formed the design of seeking to effect the conversion of the heathen Germans who occupied central Europe. Remaining firm in his design, he proceeded to Friesland in 716; but, on account of obstacles caused by the unsettled state of the country, he returned home and remained in England until 718, in the autumn of which year he went through France to Rome, where he formed a lasting friendship with the Anglo-Saxon princess-nun Eadburga, better known by her nickname of Bugga. The pope approved of the designs of Winfrid, and, in May 719, he gave him authority to undertake the conversion of the Thuringians. After making some converts in Thuringia, where his success appears to have fallen short of his anticipations, Boniface visited France, and went thence to Utrecht, where his countryman Wilbrord was preaching the gospel with success; but he soon returned to the first scene of his own labours, where he made many converts among the Saxons and Hessians. In 723, the pope, Gregory II., invited him to Rome, and there signified his approval of his missionary labours by ordaining him a bishop, and formally renewing his commission to convert the Germans. The pope at the same time conferred upon him the name of Boniface, by which he was ever afterwards known. After visiting the court of Charles Martel, Boniface returned into Germany, and there established himself in the character of Bishop of the Hessians.

The favour shown by the pope to Boniface had another object besides the mere desire of converting pagans. The German tribes in the country entrusted to his care had already been partially converted—but it was by Irish monks, the followers of Columbanus and St Gall, who, like most of the Frankish clergy, did not admit in its full extent the authority of the pope, and were in other respects looked upon as unorthodox and schismatical; and Gregory saw in the great zeal and orthodoxy of Boniface the means of drawing the German Christians from heterodoxy to Rome. Accordingly, we find him in the earlier period of his labours engaged more in contentions with the clergy already established in this part of Germany than with the pagans. In the course of these, the pope himself was obliged sometimes to check the zeal of his bishop. Still, in his excursions through the wilds of the Hercynian forest, the great resort of the pagan tribes, Boniface and his companions were often exposed to personal dangers. However, supported by the pope, and aided by the exertions of a crowd of zealous followers, the energetic missionary gradually overcame all obstacles. In his choice of assistants he seemed always to prefer those from his native country, and he was joined by numerous Anglo-Saxon ecclesiastics of both sexes. Among his Anglo-Saxon nuns was St Waltpurgis, so celebrated in Ger-

man legend. A bold proceeding on the part of the bishop sealed the success of Christianity among the Hessians and Thuringians. One of the great objects of worship of the former was a venerable oak, of vast magnitude, which stood in the forest at Geismar, near Fritzlar, and which was looked upon, according to the Latin narrative, as dedicated to Jupiter, probably to Woden. Boniface resolved to destroy this tree; and the Hessians, in the full belief that their gods would come forward in its defence, seem to have accepted it as a trial of strength between these and what they looked upon merely as the gods of the Christians, so that a crowd of pagans, as well as a large number of the preachers of the gospel, were assembled to witness it. Boniface seized the axe in his own hands, and, after a few strokes, a violent wind which had arisen, and of which he had probably taken advantage to apply his axe to the side on which the wind came, threw the tree down with a tremendous crash, which split the trunk into four pieces. The pagans were struck with equal wonder and terror; and, acknowledging that their gods were conquered, they submitted without further opposition. Boniface caused the tree to be cut up, and built of it a wooden oratory dedicated to St Peter.

In 732, a new pope, Gregory III., ordained Boniface Archbishop of the Germans, and he soon afterwards built two principal churches—that of Fritzlar, dedicated to St Peter; and that of Amnaburg, where he had first established his headquarters, dedicated to St Michael. From this time the number of churches among the German tribes increased rapidly. In 740, he preached with great success among the Bagoarii, or people of Bavaria. He subsequently divided their territory into four dioceses, and ordained four bishops over them. About this time a new field was opening to his zeal. The throne of the Franks was nominally occupied by one of a race of insignificant princes whose name was hardly known out of his palace, while the sceptre was really wielded by Charles Martel; and, as it was in the power of the Church of Rome to confirm the family of the latter in supplanting their feeble rivals, they naturally leaned towards the orthodox party, in opposition to the schismatical spirit of the French clergy. In 741, Charles Martel died, and his sons, Karlomann and Pepin, were equally anxious to conciliate the pope. During the following years several councils were held, under the influence of Boniface, for the purpose of reforming the Frankish Church, while the conversion of the Germans also proceeded with activity. In 744, Boniface founded the celebrated monastery of Fulda, over which he placed one of his disciples, a Bavarian, named Sturm, in one of the wildest parts of the Thuringian forest. In 745, at the end of rather severe proceedings against some of the Saxon ecclesiastics, the archbishopric of Mentz, or Mayence, was created. Next year Karlomann retired to a monastery, and left the entire kingdom of the Franks to his brother Pepin. The design of changing the Frankish dynasty was, during the following year, a subject of anxious consultation between the pope and the bishops; and, the authority of

the pope Zacharias having been obtained, King Childeric, the last of the Merovingian monarchs of the Franks, was deposed and condemned to a monastery, and Pepin received the reward of his zeal in enforcing the unity of the church. In 751, Boniface performed the coronation ceremonies at Soissons which made Pepin king of the Franks. Thus the Roman Catholic Church gradually usurped the right of deposing and creating sovereigns.

Boniface was now aged, and weak in bodily health; yet, so far from faltering in his exertions, he at this moment determined on undertaking the conversion of the Frieslanders, the object with which especially he had started on his missionary labours in his youth. His first expedition, in 754, was very successful; and he built a monastery at a town named Trehet, and ordained a bishop there. He returned thence to Germany, well satisfied with his labours, and next year proceeded again into Friesland, accompanied by a considerable number of priests and other companions, to give permanence to what he had effected in the preceding year. On the 4th of June they encamped for the night on the river Bordau, at a spot where a number of converts were to assemble next day to be baptized; but that day brought the labours of the Anglo-Saxon missionary to an abrupt conclusion. The country was still in a very wild and unsettled state, and many of the tribes lived entirely by plundering one another, and were scattered about in strong parties under their several chieftains. One of these had watched the movements of Boniface and his companions, under the impression that they carried with them great wealth. On the morning of the 5th of June, before the hour appointed for the ceremony of baptism, the pagans made their appearance, approaching in a threatening attitude. Boniface had a few armed attendants, who went forth from his encampment to meet the assailants; but the archbishop called them back, probably because they were evidently too weak to resist; and, exhorting his presbyters and deacons to resign themselves to their inevitable fate, went forth, carrying the relics of saints in his hands. The pagans rushed upon them, and put them all to the sword; and then, separating into two parties (they were probably two tribes who had joined together), they fought for the plunder, until a great number of one party was slain. The victorious party then entered the tents, and were disappointed at finding there nothing to satisfy their cupidity but a few books and relics, which they threw away in contempt. They were afterwards attacked and beaten by the Christians, who recovered the books and relics; and gathering together the bodies and limbs of the martyrs (for the pagans had hacked them to pieces, in the rage caused by their disappointment), carried them first to the church of Trehet, whence they were subsequently removed to Fulda, and they were at a later period transferred with great pomp to Mentz.

Such was the fate of one of the earliest of our English missionaries in his labours in central Europe. In reading his adventures we may almost think that we are following one of his successors

in our own day in their perilous wanderings among the savages of Africa, or some other people equally ignorant and uncultivated. Boniface was an extraordinary man in an extraordinary age; and few men, either in that age or any other, have left their impress more strongly marked on the course of European civilization, at a time when learning, amid a world which was beginning to open its eyes to its importance, exercised a sort of magic influence over society. He was a man of great learning as well as a man of energy, yet his literary remains are few, and consist chiefly of a collection of letters, most of them of a private and familiar character, which, rude enough in the style of the Latin in which they are written, form still a pleasing monument of the manners and sentiments of our forefathers in the earlier part of the eighth century. Boniface was an Englishman to the end of his life.

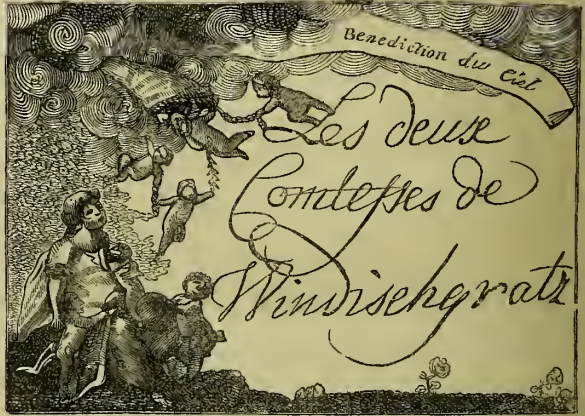

Born.—Socrates, Grecian philosopher (6th Thargelion), B.C. 468; Joseph de Tournefort, botanist, 1656; Dr Adam Smith, political economist, 1723, *Kirkcaldy*; Ernest Augustus, King of Hanover, 1771.

Died.—Count D'Egmont and Count Horn, beheaded at *Brussels*, 1568; John Henry Hottinger, learned orientalist, 1667, *drowned in River Limmat*; Rev. Dr Henry Sacheverell, 1724; John Paisiello, musical composer, 1816, *Naples*; Carl Maria Von Weber, musical composer, 1826, *London*; T. H. Lister, novelist, 1842, *London*; Jacques Pradier, French sculptor, 1852.

VISITING CARDS OF THE 18TH AND 19TH CENTURIES.

From the lady of fashion—who orders her carriage every afternoon, and takes the round of Belgravia, leaving a card at the door of twenty acquaintances who are all out on the same errand—to the man of business, and even the postman, who presents his card on Christmas-day morning, these little square bits of cardboard have become an established institution of polite society. The last century has, however, left us an example of how to make these trifles matters of taste and art. The good, quiet, moral society of Vienna, Dresden, and Berlin, in which, according to contemporary historians, it was so pleasant to live, piqued itself upon its delicacy of taste; and instead of our insipid card, with the name and quality of the visitor printed upon it, it distributed real *souvenirs*, charming vignettes, some of which are models of composition and engraving. The greatest artists, Raphael Mengs, Cassanova, Fischer, and Bartsch, did not disdain to please fashionable people by drawing the pretty things which Raphael Morgen engraved. About four or five hundred of these cards have been collected by Mons. Pioget, among which we meet with the greatest names of the empire, and a few Italians and French whom business or chance led to Germany.

The taste for these elegancies was undoubtedly borrowed from Paris; we find there a whole generation of designers and ornamenters, who

devoted their graving tools entirely to cards and addresses for the fashionable world, theatre and concert tickets, letters announcing marriages, ceremonies, programmes, &c. It was the recreation and most profitable work of Choffart, Moreau, Gravelot, and, above all, St Aubyn—the most indefatigable of all those who tried to amuse an age which only wished to forget itself. But the clouds which rose on the political horizon darkened that of art. *Ennui* glided like the canker-worm into this corrupt society; then a disgust for these trifles adorned by wit; after that followed a more serious, grander, more humane pre-occupation; so that, their task ended, their academy closed, and their diplomas laid on their country's altar, these designers without employment resigned their pencils in despair—Moreau becoming professor of the central schools under the Directory, after being the king's designer in 1770.

The other kingdoms of Europe, and Germany in particular, inherited from the French the taste for this amiable superfluity, the ornamenting of

trifles for the higher classes. In that country only could such a collection of cards be made,

where every one is so conservative that nothing | scene is both grand and poetical. The ass, carry-

ing the flag with the name inscribed, is another; and a man playing a drum, on a fiery charger, forms a third. Adam Bartsch, the celebrated author of the *Picentre Graveur*, a work published at Vienna in twenty-one volumes, was evidently a great lover of the canine species; here is a spaniel holding the card in his mouth, and there is a second, in which a savage dog has just torn a roll of paper with the date 1795; beneath is written, 'Adam Bartsch has the pleasure of presenting his compliments and good wishes for the new year.'

Fischer of Berne, makes a rebus of

is lost; and yet what a curious assemblage of names, with adjuncts which testify to the taste, character, and studies of each! What an assistance to the historian, what a charm for the novelist, the fortuitous *réunion* of all these personages affords; the greater part of whom have left no other remembrance than the card, addressed as much to posterity as to their friends.

There is an interesting one of the Marquis de Galle, minister plenipotentiary to the King of the Two Sicilies, designed and engraved by Raphael Morghen, representing Neptune resting on an urn, looking on the Bay of Naples, which is studded with lateen sails, and Vesuvius in a state of eruption. A naiad is advancing towards him, and between the two lies a monumental stone on which the name is inscribed, shaded by delicate shrubs; at the top a Cupid raises a *fleur-de-lis* resting on an eagle.

There are no less than four cards of Cassanova; the best is an aqua fortis of large size, in which an Austrian soldier is crushing a Turk under his feet; he holds a flag in his left hand, and a sword in his right, whilst in a tempestuous sky an eagle is hovering. The

his name, an artist's fancy and monogram of a new kind; namely, two men and a woman drawing out a net.

Raphael Mengs has not disdained drawing the card of the Marquis de Llano—a wreath of roses, bordered with olives. Another is that of the Comte Aloyse d'Harrach, lieutenant-general, of whom Georges Wille, in his interesting memoirs, writes: '12 Feb. 1767.—M. le Comte and Madame la Comtesse d'Harrach, Austrian nobles, came to visit me; they are well known here, and perfectly amiable; the Comtesse draws very beautifully.'

Generally the name of the artist is unknown; for most people bought the

subject engraved, and wrote their name on it, thus beginning at the end. Such is one of the Aulic Councillor de Martines, and that of the Comtesse de Sinzendorf. Great amateurs and persons of high rank, such as the Prince d'Auersperg, Count d'Harseg (Envoy Extraordinary of his Imperial Majesty), and the Prince Esterhazy, did not do so; the last mentioned has a beautiful vignette of a Cupid supporting a medallion wreathed with flowers, on which is the name of Francis Esterhazy, one of the illustrious family of diplomatists and statesmen who trace back their title to A.D. 960. This one sat as councillor in the last German Diet of 1804, when the Germanic empire ceased to exist. Some have engraved the bust of their favourite hero beside their name: as the Comte de Wrakslaw has that of the Archduke Charles defending the approach to Vienna, which is recognisable by the spire of its cathedral. We meet with the name of Demidoff, then a simple captain in the service of the Empress of Russia. Two Englishmen also appear in the collection—Lord Lyttelton with his dog, and Mr Stapleton with a medallion portrait; and many others whose names may be found in the *Almanach de Gotha*, but not many in the memory of man. One peculiarity belongs to the cards of English society, that all landscapes are more or less authentic; Bath, the city of English elegance at that period, is a frequent subject. Sometimes it is Milsom Street, with its long perspective of fashionable houses; North Parade, or Queen's Square, where Sheridan might point out his favourite residence, and Beau Brummel recognise himself parading the terrace.

The Italian cards are in a very different style; you see at once the imitation of the antique, and in some cases the Greek and Roman *chefs d'œuvres* are copied. Bas-reliefs, bronzes, niellos, mosaics, are found on these bits of card, which are changed into objects of great interest. The Comte de Nobili has several different and always tasteful ones; sometimes a sacrifice of sheep or oxen, or the appearance of Psyche before Venus and her son, seated in family conclave.

Le Comte de Nobili

Among other noble strangers, we notice the Marquis de Las-Casas', Ambassador of Spain: the sun, mounted on his car, is leaving the shores of the east. The architect Blondel inscribes

740

his name above the cornice of a ruined monument; and M. Burdett places his in the centre of the tomb of Metella. Long as we might linger over these relics of the past, we have given sufficient examples to point out the taste of the age, and a fashion which has had its day, and perished.

SACHEVERELL'S RESTING-PLACE.

Of the famous Sacheverell—whose trial in the latter part of Anne's reign almost maddened the people of England—it is curious to learn the *ultimate situation*, from the following paragraph:—

'The skeletons in our crowded London graveyards lie in layers which are quite historical in their significance, and which would be often startling if the circumstances of their juxtaposition could be made known. A cutting from an old London newspaper (title and date uncertain), and which exists in the well-known repertory of Green, of Covent Garden, contains an example of skeleton contact which is unusually curious, if reliable. It is there stated that Dr Sacheverell is buried in St Andrew's, Holborn, and that the notorious Mother Needham of Hogarth is lying above him, and above her again is interred Booth, the actor—a strange stratification of famous or notorious clay.'

JUNE 6.

St Philip the Deacon, 1st century. St Gudwall, Bishop of St Maloi, confessor, end of 6th or beginning of 7th century. St Claude, Archbishop of Besancon, confessor, 696 or 703. St Norbert, Archbishop of Magdeburg, and founder of the Premonstratensian Order, confessor, 1134.

Born.—Diego Velasquez, eminent Spanish artist, 1599, *Seville*; Pierre Corneille, French dramatist, 1606, *Rouen*; Jean Baptist Languet, 1675, *Dijon*; Dr Nathaniel Lardner, theologian, 1684, *Hawkhurst*.

Died.—Ludovico Giovanni Ariosto, eminent Italian poet, 1533, *Ferrara*; Memnon de Coehorn, eminent engineer, the 'Vauban of Holland,' 1704, *Hague*; Louise, Duchess de la Vallière, mistress of Louis XIV., 1710; George, Lord Anson, eminent naval commander, circumnavigator, 1762, *Moor Park*; Patrick Henry, American patriot and orator, 1799; Jeremy Bentham, writer on legal and political reforms, 1832, *London*.

JEREMY BENTHAM.

The son of a prosperous London solicitor, Jeremy Bentham was born on the 15th of February 1748, in Houndsditch—not then the murky and unsavoury neighbourhood that it is now. With a dwarfish body and a precocious mind, the boy was hawked about by his father as an infant prodigy, while his nursery was crowded with masters in French and music, drawing and dancing. Determined to lose no time in making a man of him, the father sent him to Westminster at eight, to Oxford at twelve, and entered him at Lincoln's Inn at sixteen. By these hasty operations the elder Bentham in a great measure frustrated his own plans. The nervous and feeble city child, thrown among rough lads, like

Cowper conceived a horror of society, and sought refuge from the tyranny of his kind in solitary study and meditation. His prospects at the bar were good; but what between conscientious scruples about doing as other lawyers did, and his preference for books over men and money, it at last became plain to his father that legal eminence would never be attained by Jeremy; and, after many struggles, he threw him up as a hopeless creature, leaving him thenceforth to follow his own devices.

The young man had in reality a love for legal studies, but for philosophical ends, and not as a means of livelihood. His favourite authors were Montesquieu, Barrington, Beccaria, and Helvetius. He had been haunted for a long while by the question, What is genius? When reading Helvetius, the etymology of the word suggested to him that it must mean invention. Helvetius also taught him that legislation was the most important of all subjects. Then came the further question, 'Have I a genius for legislation?' which, after a short course of self-examination, he tremblingly decided in the affirmative. From that time forward he devoted himself more and more exclusively to the reform of legislation. In 1769, he encountered in a pamphlet of Dr Priestley's the phrase, 'The greatest happiness of the greatest number,' which he chose for his lode-star, and identified with his name. He described himself at this time as 'seeking and picking his way; getting the better of prejudice and nonsense; making a little bit of discovery here, another there, and putting the little bits together.' In 1776 appeared, anonymously, his first publication, *A Fragment on Government*, which attracted considerable notice, and was attributed to some of the chief men of the day. In lonely lodgings, and oppressed with his father's displeasure, 'Mine,' he writes, 'was a miserable life.' Lord Shelburne, having discovered the author of the *Fragment*, called on Bentham, and invited him to his seat of Bowood. Visit followed visit, until he became almost domesticated in Shelburne's family. There he met congenial society, and 'was raised,' as he relates, 'from the bottomless pit of humiliation, and made to feel that I was something.' Between 1785 and 1787 he made an extensive tour over Europe, and whilst living at Kirchoff, in Southern Russia, at the house of his brother, who was in the service of the Czar, he produced the celebrated *Defence of Usury*, one of the most pleasantly written and conclusively reasoned of his minor works. His father dying, he came into possession of a handsome inheritance, and settled in Queen Square Place, Westminster, once Milton's house, where he abode without change until death, for half a century. His life henceforward was that of a literary recluse, with habits of the most regular and persevering industry. His writings were for years almost completely neglected; and for this the manner was chiefly to blame. It was through the medium of M. Dumont's French translations, and that of the higher class English reviews, that the ideas of Jeremy Bentham reached the public. He only became tolerable, only became intelligible, as Sydney Smith remarked, 'after he had been washed, trimmed, shaved, and forced into

clean linen.' In France he first attained something like popularity. Happening, when in Paris, in 1825, to enter one of the supreme law courts, he was recognised, and the whole body of advocates at once rose to do him reverence, and the judges invited him to sit beside them.

Bentham stirred very little abroad, being content to take exercise in his garden; and it used to be said that he was as surely to be found at home as Robinson Crusoe on his island. Easily found at home, it was easier to procure an interview with the king than with the philosopher. There was never a man so desirous of shunning others, unless some strong sense of duty, or prospect of usefulness, subdued his love of seclusion. Once, when Madame de Staël called on him, expressing an earnest desire for an audience, he sent to tell her that he certainly had nothing to say to her, and he could not see the necessity of an interview for anything she could have to say to him. On another occasion, Mr Edgeworth, in his somewhat pompous manner, called and delivered this message to the servant, 'Tell Mr Bentham that Mr Richard Lovell Edgeworth desires to see him;' to which he returned for answer, 'Tell Mr Richard Lovell Edgeworth that Mr Bentham does not desire to see him.'

With the exception of music, his tastes were all of a grave kind. Living in Milton's house, he had a slab put up in his garden, 'Sacred to Milton, prince of poets,' and as a duty once read his works; but he had no enjoyment of poetry, and assured young ladies that it was a sad misapplication of time. Like Franklin in appearance, he made a curious picture: his white hair, long and flowing, his neck bare; in a quaker-cut coat, list shoes, and white worsted stockings drawn over his breeches' knees. In his garden, in this odd guise, he might be seen trotting along on what he called his 'ante-prandial circumgyra-

JEREMY BENTHAM.

tions.' In-doors, he dined in his work-room, where the green window-curtains were pinned over with slips of paper, being notes taken at the moment of passing thoughts, to be located and

collated at a future time. This strange hermit was not without creatures and creations of his own. There was his stick, Dapple, which he laid on the shoulders of honoured visitors in friendly knighthood on meet occasions. There was his sacred tea-pot, Dickey, regularly set upon a lamp to sing. Last, and not least, were his favourite cats, chief among whom was Langborne. Him, Bentham boasted he had made a man of. First he raised him to the dignity of Sir John; but as he advanced in years he was put into the church, and as the Rev. Dr John Langborne he died.

At the mature age of eighty-five, with unimpaired intellect, with cheerful serenity, Bentham died, on the 6th of June 1832. To his physician and friend, Dr Southwood Smith, he left his body for dissection; and three days after his decease Dr Smith delivered an oration over it at the School of Anatomy, Webb Street, Maze Pond.

It would be difficult to exaggerate the importance of Bentham's labours as a jurist, and of his services as the instructor of statesmen and politicians, who, with more practical faculties, were able to work out the legal reforms he suggested and devised. At first, when he proposed changes in the fabric of English law, he was regarded as a harmless lunatic; as he persisted, he grew into estimation as a dangerous and sacrilegious madman; and for long years he wrote and published without gaining a single influential coadjutor. Towards the close of his career he became girt about with appreciation and help of the most useful kind. In 1823, the *Westminster Review*, started at his cost and conducted by his disciples, ably represented him in politics and literature. Undoubtedly he suffered from the seclusion in which he lived, and many crotchets he entertained were bred in his ignorance of human nature. A knowledge of men is indispensable for those who would teach or make laws for them; and to know the world, an author must live in it, and observe how many circumstances conspire to defeat the most reasonable expectations and deductions that can be formed on paper. From the same cause Bentham's style suffered. His early writings were terse, clear, and frequently happy in expression; his later were greatly the reverse. By much living and thinking alone he had forgot the familiar language of his kind. Bentham's moral philosophy is constantly attacked as 'cold-blooded, calculating, selfish;' and when we consider his prosaic temper, it is not to be wondered that more ideal spirits should revolt from the prominence he gives to the material over the spiritual interests of life; but of his good-will to mankind, and his earnest wish to promote their happiness, there can be no question; 'he did what he could,' and higher praise than this can be accorded to no one. Universal genius we shall never find in one man; instead, we attain it in pieces. One man can do one thing supremely well, and another another. Bentham did what Wordsworth could not, and Wordsworth what Bentham could not, and each depreciated the other. Let us be more catholic than either, and try to honour the eminent services of both, and

never erect our peculiar likings, necessarily narrow and imperfect, into a standard of universal judgment.

EDWARD III. OF ENGLAND AND PHILIP VI. OF FRANCE—QUARREL ABOUT HOMAGE.

The claim of one sovereign for homage from another, on account of a superiority over certain parts of that other's dominions, was surely not the wisest institution of the Middle Ages. It does not seem to have ever been a clear claim in any case, and as far as it could be substantiated at all, it was liable to be stretched so far as to excite hostile resistance. England was but just emerged from a long war with Scotland, arising from an overstretched claim over its monarch, when its own kings were plunged into one of a century long, in consequence of a similar claim over themselves on the part of the French monarch.

When Philip the Sixth had made good his somewhat questionable pretensions to the French throne, he lost no time in summoning Edward III. of England to come and pay homage as a vassal for Guienne. The latter, who through his mother claimed the whole French empire, refused an audience to the ambassadors, and sent word that the son of a king would not bow before the son of a count. Fresh envoys were despatched, to inform him that his fiefs and revenues would be seized if he persisted in his refusal; and as a war would at that time have been extremely inconvenient, Edward yielded to the advice of his peers, and wrote respectfully to Philip, 'that he had long intended to visit France to acquit himself of his debt; and that, all obstacles being now removed, he should shortly cross over.'

The 6th of June 1329 was the day fixed for the monarchs to meet at the cathedral of Amiens, and the grandeur which Edward displayed in his own dress and that of his followers made it evident that he was more anxious to parade his power and riches than to honour Philip. He wore a robe of Cramoisy velvet spotted with gold leopards, the crown on his head, the sword at his side, and gold spurs; three bishops, four counts, six barons, and forty noble knights were in his train. Philip, on his side, had forgotten nothing to render the ceremony as pompous as possible. He was seated on a superb throne, dressed in a long robe of violet velvet, spotted with gold *fleurs-de-lis*; his diadem set with precious stones, and holding a golden sceptre in his hand. The kings of Navarre, Bohemia, and Majorca stood by his side, with dukes, counts, and church dignitaries in abundance. Edward himself was struck with the magnificence of this numerous and brilliant *entourage*; on his return to England, when his queen questioned him about the king her uncle, he was never weary of speaking 'of the great state and honour in France, to which no other kingdom could be compared.'

As soon as Edward had approached the throne, the high chamberlain commanded him to take off his crown, his sword, and spurs, and to kneel before the king on a cushion that was prepared—a most humiliating ceremony for so proud a

spirit; he, however, obeyed, having advanced too far to recede, but all present remarked the indignation depicted on his face, to see himself forced to so lowly an attitude before such illustrious witnesses. The same officer then said, 'Sire, you must, as Count de Guienne, pay liege homage to monseigneur the king, and promise him faith and loyalty.' Here all Edward's pride was awakened, he declared he did not owe liege homage; both sides disputed the question warmly; at length, on his promising to consult his archives as soon as he returned to England, to know exactly to what he was pledged, and to send the declaration, sealed with the great seal, they let him off in these general terms: 'Sire,' said the chamberlain, 'you are the vassal of the King of France for Guienne and its appurtenances, which you hold of him as peer of France, according to the form of peace made between his predecessors and yours, as you and your ancestors have done for the same duchy to former kings.' To which Edward replied, 'Voire,' the old French word for yes. 'If it be so,' replied the Viscount de Melun, 'the king, our sire, receives you under protest.' The French monarch said, 'Voire,' and kissed the King of England on his mouth, holding his hands in his own. Thus ended a ceremony which enraged Edward so much that he swore eternal hatred to the prince who had treated him with so much haughtiness.

On his return to England he was in no haste to make the required search, but the Duke de Bourbon and other nobles were sent to this country to receive a formal and authentic declaration. The French juriconsults, who accompanied them, spent much time with the English parliament in examining previous acts of homage, and it was proved that the king was liege man in his rank of Duke of Guienne. The necessary papers were sent to Philip, and Edward never rested until he had prepared the army which was to attack France, and begin that fearful war which lasted above a century.

THE MOHOCKS.

On the 6th of June 1712, Sir Mark Cole and three other gentlemen were tried at the Old Bailey for riot, assault, and beating the watch. A paper of the day asserts that these were 'Mohocks,' that they had attacked the watch in Devereux Street, slit two persons' noses, cut a woman in the arm with a penknife so as to disable her for life, rolled a woman in a tub down Snow Hill, misused other women in a barbarous manner by setting them on their heads, and overset several coaches and chairs with short clubs, loaded with lead at both ends, expressly made for the purpose. In their defence, the prisoners denied that they were Mohocks, alleging that they were 'Scourers,' and had gone out, with a magistrate's sanction, to scour the streets, arrest Mohocks and other offenders, and deliver them up to justice. On the night in question they had attacked a notorious gambling-house, and taken thirteen men out of it. While engaged in this meritorious manner, they learned that the Mohocks were in Devereux

Street, and on proceeding thither found three men desperately wounded, lying on the ground; they were then attacked by the watch, and felt bound to defend themselves. As an instance of the gross misconduct of the watch, it was further alleged that they, the watch, had on the same night actually presumed to arrest a peer of the realm, Lord Hitchenbroke, and had latterly adopted the practice of going their rounds by night accompanied by savage dogs. The jury, however, in spite of this defence, returned a verdict of 'guilty;' and the judge fined the culprits in the sum of three shillings and fourpence each.

It is scarcely credible that, so late as the last century, a number of young men of rank and fashion, assuming the name of a savage tribe, emulated their barbarous actions by wantonly inflicting the most disgusting cruelties on the peaceable inhabitants, particularly women, of London. And after these Mohocks, as they styled themselves, had held the town in terror for two years, after a royal proclamation had offered £100 reward for the apprehension of any one of them, when these four persons were at last brought to justice, the amount of punishment inflicted was merely the paltry fine of 3s. 4d.

Gay thus alludes to the Mohocks, and this very trial, in his *Trivia* :

'Who has not heard the Scourers' midnight fame?
 Who has not trembled at the Mohocks' name?
 Was there a watchman took his hourly rounds,
 Safe from their blows or new-invented wounds?
 I pass their desperate deeds and mischief done,
 Where from Snow Hill black steepy torrents run;
 How matrons, hooped within the hog'shead's womb,
 Are tumbled furious thence: the rolling tomb
 O'er the stones thunders, bounds from side to side—
 So Regulus, to save his country, died.'

One of the miscellaneous publications, issued by the circle of wits that revolved round Pope and Swift, is entitled, *An Argument, proving from History, Reason, and Scripture, that the present Race of Mohocks and Hawkubites are the Gog and Magog mentioned in the Revelations; and therefore that this vain and transitory World will shortly be brought to its final Dissolution. Written by a reverend Divine, who took it from the Mouth of the Spirit of a Person who was slain by the Mohocks.*

The 'Spirit' introduces himself by saying, 'I am the porter that was barbarously slain in Fleet Street. By the Mohocks and Hawkubites was I slain, when they laid violent hands upon me. They put their hook into my mouth, they divided my nostrils asunder, they sent me, as they thought, to my long home; but now I am returned again to foretell their destruction.' When the Spirit disappears, the assumed reverend author sings:—

'From Mohoek and from Hawkubite,
 Good Lord, deliver me!
 Who wander through the streets at night,
 Committing cruelty.
 They slash our sons with bloody knives,
 And on our daughters fall;
 And if they murder not our wives,
 We have good luck withal.

Coaches and chairs they overturn,
 Nay, carts most easily;
 Therefore from Gog and Magog,
 Good Lord, deliver me !'

WILLIAM HUNNIS.

On the 6th of June 1597, died William Hunnis, chapel-master to Queen Elizabeth, and previously Gentleman of the Chapel under Edward the Sixth. Hunnis was a rhymester—we cannot call him a poet—as well as a musician; and according to his last will and testament, thus written in metre by himself, he experienced the once proverbial poverty of the rhyming race:

'To God my soul I do bequeath, because it is his own,
 My body to be laid in grave, where, to my friends best known;
 Excutors I will none make, thereby great strife may grow,
 Because the goods that I shall leave will not pay all I owe.'

Immediately after the Reformation a very general spirit for versifying the Psalms and other parts of Scripture prevailed in England. Hunnis, not the least idle of those versifiers, published several collections, under quaint titles, now worth far more than their weight in gold to the bibliomaniacs. *Seven Sobs of a Sorrowful Soul for Sin*, comprehending the seven penitential psalms in metre, was dedicated to Frances, Countess of Sussex, the foundress of Sydney-Sussex College at Oxford. Under the happy title of *A Handful of Honeysuckles*, he published *Blessings out of Deuteronomie, Prayers and Meditations*, in metre, with musical notes. His spiritual nosebags were numerous, to say nothing of his *Recreations on Adam's Banishment, the Lost Sheep*, and other similar topics; he turned the whole book of Genesis into rhyme, under the title of *A Hiveful of Honey*.

Christopher Tye, a contemporary of Hunnis, and organist to Queen Elizabeth, rendered the Acts of the Apostles into English verse, and having set them to music, they were sung in the Chapel Royal, but never became popular. The impropriety of the design, as well as the infelicity of its execution, was perceived even in that undiscerning age. Of the Acts, as versified by Tye, the initial stanzas of the fourteenth chapter may be selected as the least offensive for a specimen:

'It chanced in Iconium,
 As they oft' times did use,
 Together they into did come
 The synagogue of Jews,
 Where they did preach, and only seek
 God's grace them to achieve;
 That so they speak, to Jew and Greek,
 That many did believe.'

The early Puritans violently opposed the study of the classics, or the reading of translations from them, asserting that the customary mode of training youths in the Roman poets encourages idolatry and pagan superstition; their employing themselves so zealously in rendering the Bible into English metre was that it might serve as 'a substitute for the ungodliness of the heathens.' A favourite book for those versifiers was the Song of Solomon, of which many versions

were made. One, entitled *Sion's Muse*, is thus alluded to in a satire of Bishop Hall, written in ridicule of the spiritual poetry with which the age was inundated. After mentioning several of these productions, the nervous though inelegant satirist adds:

'Yea, and the prophet of the heavenly lyre,
 Great Solomon, sings in the English choir;
 And is become a new found sonnetist,
 Singing his love, the holy spouse of Christ:
 Like as she were some light-skirts of the rest,
 In mightiest inkhornisms he can thither wrest.
 Ye Sion Muses shall by my dear will,
 For this your zeal and far-admired skill,
 Be straight transported from Jerusalem,
 Unto the holy house of Bethlehem.*

Robert Wisdome, archdeacon of Ely, was also one of those versifiers; but he is chiefly memorable for a metrical prayer, intended to be sung in churches, against the Pope and Turk, of whom he had conceived most alarming apprehensions. As there is no stanza in this prayer which could be considered unprofane at the present day, it is impossible to quote it. Among other wits, however, the factious Bishop Corbet has happily ridiculed it. Supposing himself seized with a sudden impulse to hear or to write a puritanical hymn, he invokes the ghost of Wisdome, as the most skilful poet in this mode of composition, to come and assist him. But he advises Wisdome to steal back again to his tomb in Carfax Church, at Oxford, silent and unperceived, for fear of being discovered and intercepted by the terrible Pope or Turk. The epigram is as follows:—

'TO THE GHOST OF ROBERT WISDOME.

'Thou, once a body, now but air,
 Arch-botcher of a psalm or prayer,
 From Carfax come!
 And patch us up a zealous lay,
 With an old *ever and for aye*,
 Or *all and some*. †
 Or such a spirit lend me,
 As may a hymn down send me,
 To purge my brain;
 But, Robert, look behind thee,
 Lest Turk or Pope do find thee,
 And go to bed again.'

JUNE 7.

St Paul, Bishop of Constantinople and martyr, 350.
 St Colman, Bishop of Dromore, confessor, about 610.
 St Godeschalc, Prince of the Western Vandals, and his companions, martyrs, 1066. St Robert, Abbot of Newminster, 1159. St Meriadec, Bishop of Vannes, confessor, 1302.

Born.—John Rennie, engineer, 1761, *Prestonkirk, Haddingtonshire*; Robert Jenkinson, Earl of Liverpool, prime minister of George IV., 1770; Rev. W. D. Conybeare, geologist, 1787, *London*.

Died.—St Willibald, 790, *Aichstadt*; Robert Bruce,

* A witty allusion to the *Old Bethlehem Hospital* of London, which was converted into a receptacle for lunatics, and the name of which, subsequently corrupted into *Bedlam*, has been the origin of bedlamite, and other modern words.

† The words in italics were favourite phrases used by Wisdome in his versifications.

BISHOP WARBURTON.

A much less familiar name to our generation is Warburton than Johnson; but, had any one in the last century predicted such a freak of fame in the blaze of the Bishop's learning and rhetoric, he would certainly have been listened to with incredulity. Johnson and Warburton were contemporaries; Warburton by eleven years was Johnson's senior, but their lives flowed together for three score and ten, and five years alone divided the death of the great Bishop from the great Doctor. Strange to say, they only once met, as Boswell records; namely, at the house of Mrs French, in London, well known for her elegant assemblies and bringing eminent characters together; and the interview proved mutually agreeable. On one occasion it was told the Doctor that Warburton had said, 'I admire Johnson, but I cannot bear his style;' to which he replied, 'That is exactly my case as to him.'

William Warburton was born on the 24th December 1698, at Newark, where his father was town-clerk, and died when William was in his eighth year. His mother had him educated for an attorney, and when he was twenty-one he commenced business in Newark. Finding little to do, he threw up law and entered the church, and was fortunate enough to find a patron in Sir Robert Sutton, who, after various favours, presented him to the living of Brant Broughton, in Nottinghamshire. There, in the quiet of the country, he sedulously devoted himself to those literary pursuits, by which he raised himself to fame and fortune. In a visit to London, in 1726, he identified himself with the party which hated Pope, and, considering what followed in after years, was unfortunate enough to write a letter in which he said that Dryden borrowed for want of leisure and Pope for want of genius. Twelve years afterwards, in 1739, the orthodoxy of Pope's *Essay on Man* having been attacked, Warburton published a series of letters in its defence, which led to an introduction and a very intimate friendship between the divine and the poet. When Pope died in 1744, it was found that he had left Warburton half his library and the copyrights of all his works, valued by Johnson at £4000. Pope's attachment to Warburton had driven Bolingbroke from his side, and after his death some sparring ensued between the old friend and the new, in the course of which Bolingbroke addressed Warburton in a pamphlet entitled *A Familiar Epistle to the most Impudent Man Living*. By Pope he was introduced to Ralph Allen, of Prior Park, Bath—Fielding's Squire Allworthy—whose niece he married in 1745, and through her inherited Allen's extensive property.

In the years intervening between these events Warburton had made even greater progress in an ecclesiastical sense. In 1736, he published his celebrated defence of *The Alliance between*

Church and State, and, in 1738, the first volume of his great work, *The Divine Legation of Moses demonstrated on the Principles of a Religious Deist, from the Omission of the Doctrine of a Future State of Rewards and Punishments in the Jewish Dispensation*. It had often been brought as a reproach against Moses that his code contained no reference to heaven or hell, and theologians had ineffectually resisted it with a variety of apologies. Warburton, on the other hand, boldly allowing the charge, went on to argue that therein lay an infallible proof of the divine mission of the Hebrew lawgiver, for, unless he had been miraculously assisted, it was impossible that he could have dispensed with the armoury of hopes and terrors supplied by the doctrine of immortality. As might be expected, a violent storm of controversy broke out over this novel and audacious defence. The large and varied stores of learning with which he illustrated the course of his argument won the admiration of readers who cordially disliked his conclusion. In allusion to Warburton's abundant and well applied reading, Johnson observed: 'His table is always full. He brings things from the north, and the south, and from every quarter. In his *Divine Legation* you are always entertained. He carries you round and round, without carrying you forward to the point; but then you have no wish to be carried forward.' Honours and promotion now flowed on Warburton, culminating, in 1759, in his elevation to the bishopric of Gloucester, which he held for twenty years, until his death in 1779.

A powerful and daring, if not unscrupulous reasoner, Warburton reaped the full measure of his fame in his own generation. A brilliant intellect, whose highest effort was a paradox like the *Divine Legation*, may astonish for a season, but can never command enduring regard. His lack of earnest faith in his opinions inevitably produced in his writings a shallowness of tone, causing the discerning reader to query whether Warburton, had he chosen, might not have pleaded with equal effect on the other side. His antagonists, who were many and respectable, he treated with a supercilious contempt, passable, perhaps, in a *Dunciad*, but inexcusable in a clergyman dealing with clergymen. Warburton had never been trained to bridle his tongue when his anger was roused. What should we now-a-days think of a bishop saying, as he did of Wilkes in the House of Lords, that 'the blackest fiends in hell will not keep company with him when he arrives there?'

REVOLUTION HOUSE, WHITTINGTON.

On the 7th of June 1688, died Mr John D'Arey, one of a small group of eminent men who held a meeting at Whittington, near Chesterfield, in Derbyshire, which was believed to be preparatory in an important degree to the Revolution. The house in which the meeting took place, being a tavern under the sign of the Cock and Magpie, continued to be recognised for a century after as the *Revolution House*; there was even a particular room in it which the people called the *Plotters' Parlour*. If one might believe the traditionary report, it was

here, in this Plotters' Parlour, in the Revolution House, on the moor near Chesterfield, that the great change of 1688 was deliberated upon and arranged. For this reason, the esteemed antiquary, Mr Pegge, wrote an account of the house, and had a drawing of it published.

When the story is carefully sifted, we find that a meeting of some importance to the forthcoming Revolution did take place here in the summer of 1688. The Earl of Danby (after the Revolution, Duke of Leeds), who had been minister to Charles II. some years before, but had since suffered a long imprisonment under Whig influence in the Tower, was now anxious to see some steps taken by which the Protestant religion might be saved from King James II. He was disposed for this purpose to associate with his former enemies, the Whigs. It was necessary, in the first place, that he should be reconciled to the leaders of that party. With this view it appears to have been that he, in company with Mr John D'Arey, held a meeting in the public-house at Whittington with the Duke of Devonshire. The date of the meeting is not known, but it must have been some time before the 7th of June, when, according to any authority we have on the subject, Mr John D'Arey died. At that time, most certainly, no definite design of bringing in the Prince of Orange had been formed, excepting in one mind, that of Edward Russell; nor was it till after the birth of the Prince of Wales (June 10, 1688), that overtures were made on the subject to various nobles, including Danby and Devonshire. The meeting of these two grandees at Whittington was entirely preliminary—limited to the private explanations by which they were enabled soon after to associate in the enterprise. In a narrative left by Danby himself, it is stated that the Duke of Devonshire afterwards came to Sir Henry Goodricke's house in Yorkshire to meet him for a second time, and concert what they should each do when the prince should land. It was there agreed that, on the landing of the Prince of Orange, the duke should take possession of Nottingham, while Danby seized upon York. The paper inviting the prince over, signed by seven persons, Devonshire, Danby, Shrewsbury, Lumley, Compton (Bishop of London), Edward Russell, and Henry Sidney, was sent away to Holland in the hands of Mr Herbert, in an open boat, on the Friday after the acquittal of the seven bishops—an event which took place on the 30th of June.

When it was subsequently known that the Duke of Devonshire and the Earl of Danby were among the chiefs who had brought about the Revolution, the country people about Whittington could not but recall the mysterious private meeting which these two nobles had held in the parlour of the village inn early in the preceding summer; and it was of course very natural for them, imperfectly informed as they were, to suppose that the entire affair of the Revolution had then and there been concerted.

Even on the view of a more restricted connexion with the event, the house must be considered as an interesting one, and its portraiture is here accordingly given. The Plotters' Parlour is in the centre of the range of buildings, immediately

REVOLUTION HOUSE.

to the left of a projecting piece of building seen conspicuously in the view.*

There is another house which is supposed to have been connected in a remarkable manner with the Revolution—Lady Place; an Elizabethan mansion situated on a beautiful bend of the Thames, between Maidenhead and Henley. A crypt, of more ancient date than the house, is considered as the place where the secret meetings were held of those who invited over the Prince of Orange, as is expressed on a mural tablet inserted in one of the walls. Here it is first stated that the crypt is part of a Benedictine monastery founded at the time of the Norman Conquest; then the inscription proceeds: 'Be it remembered that in this place, six hundred years afterwards, the Revolution of 1688 was begun. This house was then in the possession of the

VAULTS AT LADY PLACE.

family of Lord Lovelace, by whom private meetings of the nobility were assembled in the

vault; and it is said that several consultations for calling in the Prince of Orange were held in this recess; on which account this vault was visited by that powerful prince after he had ascended the throne.*

All such traditionary stories, unsupported by evidence, must of course be treated with some degree of suspicion; yet it has been thought worth while to give in this paper a print exhibiting the interior of the crypt, with the mural tablet containing the inscription.

In connexion with this period of our history, the reader will readily recall the striking chapter in which Lord Macaulay recites the trial of the bishops, which occurred in the very month here under notice, and, as is well known, operated powerfully in effecting the change of dynasty. The noble historian makes a good point of the zeal of the people of Cornwall in behalf of their fellow-countryman, Trelawny, Bishop of Bristol, who was one of the seven. This dignitary was the son of Sir Jonathan Trelawny, of Trelawny, in Cornwall, baronet, and his successor in the baronetcy. Mr Davies Gilbert, in his *Parochial History of Cornwall*, says that the bishop enjoyed high popularity in his native district, and an intense excitement arose there when his danger was known, insomuch that the prompt acquittal of the bishops alone prevented the people from rising in arms. 'A song,' he adds, 'was made on the occasion, of which all the exact words, except those of what may be called the burden, were lost; but the whole has recently been restored, modernized, and improved by the Rev. Robert Stephen Hawker, of Whitstone, near Stratton.' The original song 'is said to have resounded in every house, in every highway, and in every street.' The reader will probably be gratified to see the restored ballad, which the kindness of Mr Hawker has enabled us here to reproduce.

'TRELAWNY.

'A good sword and a trusty hand!
A merry heart and true!
King James's men shall understand
What Cornish lads can do!

And have they fix'd the where and when?
And shall Trelawny die?
Here's twenty thousand Cornish men
Will know the reason why!

Out spake their captain brave and bold;
A merry wight was he;
"If London Tower were Michael's Hold,
We'll set Trelawny free!

We'll cross the Tamar, land to land,
The Severn is no stay,
With one and all, and hand to hand,
And who shall bid us nay!

And when we come to London Wall,
A pleasant sight to view;
Come forth! come forth! ye cowards all,
Here's men as good as you!

Trelawny he's in keep and hold,
Trelawny he may die;
But here's twenty thousand Cornish bold
Will know the reason why!"

It is worthy of notice that the opposition which Trelawny had presented to the arbitrary acts of

King James did not prevent his Majesty from afterwards advancing him to the see of Exeter, an event which happened just before the Revolution. By Queen Anne he was afterwards translated to Winchester, in which see he died in 1721.

LONDON, ON THE 7TH OF JUNE 1780,

Was in the almost unchecked possession of a mob composed of the vilest of the populace, in consequence of a singular series of circumstances. A movement for tolerance to the small minority of Catholics—resulting in an act (1778) for the removal of some of their disabilities in England, and the introduction of a bill (1779) for a similar measure applicable to the mere handful of that class of religionists in Scotland—had roused all the intolerant Protestant feeling in the country, and caused shameful riots in Edinburgh. A so-called Protestant Association, headed by a half insane member of the House of Commons—Lord George Gordon, brother of the Duke of Gordon—busied itself in the early part of 1780 to besiege the Houses of Parliament with petitions for the repeal of the one act and the prevention of the other. On the 2nd of June a prodigious Protestant meeting was held in St George's Fields—on a spot since, with curious retribution, occupied by a Catholic cathedral—and a 'monster petition,' as it would now be called, was carried in procession through the principal streets of the city, to be laid before Parliament. Lord George had by this time, by his wild speeches, wrought up his adherents to a pitch bordering on frenzy. In the lobbies of the Houses scenes of violence occurred, resembling very much those which were a few years later exhibited at the doors of the French Convention, but without any serious consequences. The populace, however, had been thoroughly roused, and the destruction of several houses belonging to foreign Catholics was effected that night. Two days after, a Sunday, a Catholic chapel in Moorfields was sacked and burned, while the magistrates and military presented no effective resistance.

The consignment of a few of the rioters next day to Newgate roused the mob to a pitch of violence before unattained, and from that time till Thursday afternoon one destructive riot prevailed. On the first evening, the houses of several eminent men well affected to the Catholics and several Catholic chapels were destroyed. Next day, Tuesday, the 6th, there was scarcely a shop open in London. The streets were filled with an uncontrolled mob. The Houses of Parliament assembled with difficulty, and dispersed in terror. The middle-class inhabitants—a pacific and innocent set of people—went about in consternation, some removing their goods, some carrying away their aged and sick relations. Blue ribbons were generally mounted, to give assurance of sound Protestantism, and it was a prevalent movement to chalk up 'NO POPERY,' in large letters on doors.* In the evening, Newgate was attacked and set fire to, and 300

* A foreign Jew in Houndsditch inscribed on his door, 'This house is a sound Protestant.' Grimaldi, an Italian actor newly come to England, with exquisite satire, put on his door, 'NO RELIGION.'

prisoners let loose. The house of Lord Mansfield, at the north-east corner of Bloomsbury Square, was gutted and burnt, the justice and his lady barely making their escape by a back-door. The house and distillery of a Mr Langdale, a Catholic, at the top of Holborn Hill, were destroyed, and there the mob got wildly drunk with spirits, which flowed along the streets like water. While they in many various places were throwing the household furniture of Catholics out upon the street, and setting fire to it in great piles, or attacking and burning the various prisons of the metropolis, there were bands of regular soldiery

and militia looking on with arms in their hands, but paralysed from acting for want of authority from the magistrates. Mr Wheatley's famous picture, of which a copy is annexed, gives us a faint idea of the scenes thus presented; but the shouts of the mob, the cries of women, the ring of fore-hammers breaking open houses, the abandonment of a debased multitude lapping gin from the gutters, the many scenes of particular rapine carried on by thieves and murderers, must be left to the imagination. Thirty-six great conflagrations raged that night in London; only at the Bank was the populace repelled—only on

THE 'NO-POPERY' RIOTS.

Blackfriars Bridge was there any firing on them by the military. Day broke upon the metropolis next day as upon a city suddenly taken possession of by a hostile and barbarous army. It was only then, and by some courage on the part of the king, that steps were taken to meet violence with appropriate measures. The troops were fully empowered to act, and in the course of Thursday they had everywhere beaten and routed the rioters, of whom 210 were killed, and 248 ascertained to be wounded. Of those subsequently tried, 59 were found guilty, and of these the number actually executed was twenty.

The leader of this strange outburst was thrown into the Tower, and tried for high treason; but a jury decided that the case did not warrant such a charge, and he was acquitted. The best condemnation that could be administered to the zealots he had led was the admission generally made of his insanity—followed up by the fact,

some years later, of his wholly abandoning Christianity, and embracing Judaism. It is remarkable that Lord George's family, all through the seventeenth century, were a constant trouble to the state from their tenacity in the Catholic faith, and only in his father's generation had been converted to Protestantism, the agent in the case being a duchess-mother, an Englishwoman, who was rewarded for the act with a pension of £1000 a-year. Through this Duchess of Gordon, however, Lord George was great-grandson of the half-mad Charles Earl of Peterborough, and hence, probably, the maniacal conduct which cost London so much.

THE DUNMOW FLITCH OF BACON.

Far back in the grey dimnesses of the middle ages, while as yet men were making crusades, and the English commons had not a voice in the

state, we see a joke arise among the flats of Essex. What makes it the more remarkable is, it arose in connexion with a religious house—the priory of Dunmow—showing that the men who then devoted themselves to prayers could occasionally make play out of the comicalities of human nature. The subject of the jest here was the notable liability of the married state to trivial janglements and difficulties, not by any means detracting from its general approvableness as a mode of life for a pair of mutually suitable persons, but yet something sufficiently tangible and real to vary what might otherwise be a too smooth surface of affairs, and, any how, a favourite subject of comment, mirthful and sad, for bystanders, according to the feeling with which they might be inclined to view the misfortunes of their neighbours. How it should have occurred to a set of celibate monks to establish a perennial jest regarding matrimony we need not inquire, for we should get no answer. It only appears that they did so. Taking it upon themselves to assume that perfect harmony between married persons for any considerable length of time was a thing of the greatest rarity—so much so as to be scarce possible—they ordered, and made their order known, that if any pair could, after a twelvemonth of matrimony, come forward and make oath at Dunmow that, during the whole time, they had never had a quarrel, never regretted their marriage, and, if again open to an engagement, would make exactly that they had made, they should be rewarded with a flitch of bacon. It is dubiously said that the order originated with Robert Fitzwalter, a favourite of King John, who revived the Dunmow priory about the beginning of the thirteenth century; but we do not in truth see him in any way concerned in the matter beyond his being a patron of the priory, and as we find the priors alone acting in it afterwards, it seems a more reasonable belief that the joke from the first was theirs.

And that the joke was not altogether an ill-based one certainly appears on a *facie* view of the history of the custom, as far as it has been preserved, for between the time of King John and the Reformation—in which upwards of three centuries slid away—there are shown but three instances of an application for the flitch by properly qualified parties. The first was made in 1445 by one Richard Wright, of Badbury, in the county of Norfolk, a labouring man; his claim was allowed, and the flitch rendered to him. The second was made in 1467 by one Stephen Samuel, of Ayston-parva, in Essex, a husbandman. Having made the proper oaths before Roger Bulecott, prior, in presence of the convent and a number of neighbours, he, too, obtained the bacon. The third application on record came from Thomas le Fuller, of Cogshall, in Essex, before John Tils, prior, in the presence of the convent and neighbours. This person also made good his claim, and carried off a gammon of bacon. We cannot, however, suppose that there was no application before 1445. It is more reasonable to surmise that the records of earlier applications have been lost. Of this, indeed, we may be said to have some evidence in the declaration of Chaucer's

Wife of Bath regarding one of her many husbands:—

‘The bacon was not fet for [t]hem, I trow,
That some men have in Essex, at Dunmow.’

It seems very probable that the offer held out by the prior of Dunmow was not at all times equally prominent in the attention of the public. Sometimes it would be forgotten, or nearly so, for a generation or two, and then, through some accidental circumstances, it would be revived, and a qualified claimant would come forward. Such a lapse from memory may be presumed to have taken place just before 1445, when a poet, bewailing the corruption of the times, declared that he could

‘—— find no man now that will enquire
The perfect ways unto Dunmow,
For they repent them within a year,
And many within a week, I trow.’

But see the natural consequence of this public notice of the custom. Immediately comes honest Richard Wright, all the way from Norfolk, to show that matrimonial harmony and happiness were not so wholly extinct in the land. He claimed the flitch, ‘and had his claim allowed.’

The priory of Dunmow was of course amongst the religious establishments suppressed by the Defender of the Faith. The old religion of the place was gone; but the bacon was saved. To the honour of the secular proprietors be it said, they either held it as a solemn engagement which they had inherited with the land, or they had the sense to appreciate and desire the continuance of the ancient joke. Doubtless, the records of many applications during the sixteenth and seventeenth centuries are lost to us; but at length, in 1701, we are apprized of one which seems to have been conducted and acted upon with all due state and ceremony. The record of it in the court roll of Dunmow is as follows:

‘Dunmow, At a Court Baron of the Right
Super Priorate. Worshipful Sir Thomas May,
Knight, there holden upon
Friday the 7th day of June, in the 13th
year of the reign of our sovereign Lord
William III., by the grace of God, &c.,
and in the year of our Lord 1701, before
Thomas Wheeler, Gent., Steward of the
said Manor. It is thus enrolled:

Homage.	}	Elizabeth Beaumont, spinster.	Jurat.
		Henrietta Beaumont, spinster.	
		Annabella Beaumont, spinster.	
		Jane Beaumont, spinster.	
		Mary Wheeler, spinster.	

‘Be it remembered, that at this court, in full and open court, it is found and presented by the homage aforesaid, that William Parsley, of Much Easton, in the county of Essex, butcher, and Jane his wife, have been married for the space of three years last past, and upward; and it is likewise found, presented, and adjudged by the homage aforesaid, that the said William Parsley and Jane his wife, by means of their quiet, peaceable, tender, and loving cohabitation for the space of time aforesaid (as appears by the said homage), are fit and qualified persons to be admitted by the court to receive the ancient and

accustomed oath, whereby to entitle themselves to have the bacon of Dunmow delivered unto them, according to the custom of the Manor.

'Whereupon, at this court, in full and open court, came the said William Parsley, and Jane his wife, in their proper persons, and humbly prayed they might be admitted to take the oath aforesaid. Whereupon the said Steward with the jury, suitors, and other officers of the court, proceeded with the usual solemnity to the ancient and accustomed place for the administration of the oath, and receiving the gammon aforesaid, (that is to say) the two great stones lying near the church door, within the said Manor, when the said William Parsley and Jane his wife, kneeling down on the said two stones, the said Steward did administer unto them the above-mentioned oath, in these words, or to the effect following, viz.:-

'You do swear by custom of confession,
That you ne'er made nuptial transgression ;
Nor since you were married man and wife,
By household brawls or contentious strife,
Or otherwise, in bed or at board,
Offended each other in deed or in word :
Or in a twelvemonth's time and a day,
Repented not in any way ;
Or since the church clerk said Amen,
Wished yourselves unmarried again,
But continue true and in desire
As when you joined hands in holy quire.'

'And immediately thereupon, the said William Parsley and Jane his wife claiming the said gammon of bacon, the court pronounced the sentence for the same, in these words, or to the effect following :-

'Since to these conditions, without any fear,
Of your own accord you do freely swear,
A whole gammon of bacon you do receive,
And bear it away with love and good leave :
For this is the custom of Dunmow well known ;
Tho' the pleasure be ours, the bacon's your own.'

'And accordingly a gammon of bacon was delivered unto the said William Parsley and Jane his wife, with the usual solemnity.

Examined per THOMAS WHEELER, *Steward*.*

At the same time Mr Reynolds, Steward to Sir Charles Barrington of Hatfield, Broad Oaks, received a second gammon.

Exactly half a century afterwards, John Shakeshaft, woolcomber, of Weathersfield, Essex, appeared with his wife at the Court Baron, and, after satisfying a jury of six maidens and six bachelors, received the prize, and the lucky pair were duly chaired through the town, attended by the Steward and other officers of the manor, the flitch being carried before them in triumph. The woolcomber showed himself as shrewd a man as he was a good husband, realizing a considerable sum by selling slices of the well-won bacon among the five thousand spectators of the

THE DUNMOW PROCESSION, 1751.

show. A picture of the procession was painted by David Osborne [from an engraving of which our representation of the scene is taken]. The bacon was again presented in 1763; but the name of the recipient has escaped record. After this the custom was discountenanced by the lord

of the manor, the swearing stones were removed from the churchyard, and the old oaken chair remained undisturbed in the priory. One John Gilder and his wife claimed the flitch in 1772; but when he and his sympathizers arrived at the

* Lansdowne MS. 846.

priory, they found the gates fast; the expectant couple were compelled to go away empty-handed, and the Dunmow festival henceforth was consigned to the limbo of extinct customs.

THE DUNMOW CHAIR.

In 1851 the lord of the manor was astonished by a worthy couple named Harrels demanding to be rewarded for their matrimonial felicity—a demand to which he declined to accede. However, the good people were so disappointed, and their neighbours so discontented thereat, that a compromise took place; the usual ceremony was dispensed with, but the candidates for the flitch received the bacon, after taking the prescribed oath at a rural fête at Easton Park.

In 1855, Mr Harrison Ainsworth determined to revive the old custom; the lord of the manor refused to allow the ceremony to take place at Little Dunmow, and some of the clergy and gentry strenuously opposed its transference to Great Dunmow. On the 19th of July, however, Mr and Mrs Barlow, of Chipping Ongar, and the Chevalier de Chatelain and his English wife, appeared before a mixed jury of bachelors and spinsters in the town-hall of Dunmow. Mr Ainsworth was judge, Mr Robert Bell counsel for the claimants, Mr Dudley Costello conducting the examination in opposition. After two hours and a half questioning and deliberation, both couples were declared to have fulfilled the necessary conditions, and the court, council, and claimants adjourned to the Windmill Field, where the oath was administered in the presence of fully seven thousand people, and the flitches presented to the deserving quartett.

The whimsical custom of rewarding immaculate

couples with a huge piece of bacon is not peculiar to Dunmow. For 100 years the abbots of St Melcine, in Bretagne, bestowed a similar prize for connubial contentment, and a tenure binding the lord of the manor of Whichenoure, in Staffordshire, to deliver a flitch of bacon to any husband ready to swear he had never repented becoming a Benedict, but would, if free again, choose his wife above all other women, dates as far back as the reign of the third Edward, but no actual award of the Whichenoure prize is recorded.

MOUTH MUSIC.

There appeared at the Egyptian Hall, in Piccadilly, on June 7, 1830, one of those queer musicians who get a living by producing music (or what passes as such) in modes quite out of the usual character. This was Michael Boai, the chin performer. Strange as it was, the music had its points of interest in a scientific or acoustic sense. When the cavity of the mouth is lessened by the voluntary action of the muscles, it will resonate higher or more acute tones than when in its more expanded state. The tones themselves may be produced in some other way; but the audible pitch may be varied in a remarkable degree by variations in the size and form of the interior of the mouth. Every whistling school-boy knows this practically, without thinking about it; during his whistling the pitch of the note is determined by the shape, not only of the lips, but of the interior of the mouth. Herr Vou Joel earned his living for many years by what may perhaps be termed high-class whistling, until the muscles of his mouth refused any longer to adapt themselves to this hard service. Boys sometimes produce a kind of music through the small teeth of a comb covered with tissue-paper, by breathing; the differences of tone or pitch being produced by varying the shape of the mouth. The Jew's-harp is a really beautiful example of this kind; the metal spring or vibrator produces only one note; the variations in the mouth effect all the rest. Herr Eulenstein, an accomplished performer on this instrument, destroyed all his teeth by too long a continuance in this practice. Some men can produce music from a tobacco-pipe, by placing one end between the teeth, varying the cavity of the mouth, and maintaining a series of slight percussions upon the stem. This has even been done with a common walking-stick. Several years ago, there were four performers known as the Bohemian minstrels or brothers, who attracted attention in London by their peculiar music; three sang in the ordinary way; the fourth, without articulating any words, brought forth sounds of vast depth and power by a peculiar action of the muscles of the mouth; and to these sounds were given a character like those of the strings of a contrabasso by the movements of the tongue. Some time afterwards, a party of Tyrolese imitated, or attempted to imitate, the several instruments of an orchestra, by the most extraordinary contortions of mouth and lips, and even by breathing violently through the nose; the scene was too ridiculous to merit much notice, but it served to illustrate the matter under consideration. Picco, the blind Sardinian shepherd, who produced the most rapid music, with variations of an elaborate kind, on a little whistle only two or three inches long, worked his mouth in a remarkable way, to vary its capacity; inasmuch that the musical instrument was quite as much his own mouth as the whistle. Michael Boai, in his chin performances, depended in like manner on the rapid changes in the shape and size which he gave to the cavity of the mouth. The absurd mode of striking the chin

(something like that in which the flint and steel were formerly used in striking a light), caused the lips to clap or slap together, and this produced the sound; but the *pitch* of the sound was made to vary according to the shape of the mouth. The intonation was sufficiently accurate to permit of a guitar and violin accompaniment.

A BEE BATTLE.

On the 7th of June 1827, occurred one of those battles of bees which naturalists have more than once had opportunity of observing. Among the many other remarkable instincts—sentiments, we may almost call them—possessed by these insects, is a sort of sense of property, right of location, or law of *meum* and *tuum*. According to an account in the *Carlisle Patriot*, on the day in question, at the village of Cargo, in Cumberland, a struggle took place between two swarms of bees. A day or two earlier, one of these communities had swarmed in the usual way, and been safely hived. On the day of battle, a swarm of bees from some neighbouring hive was seen to be flying over the garden in which the first-mentioned hive was situated. They instantly darted down upon the hive, and completely covered it; in a little time they began to enter the hive, and poured into it in such numbers that it soon became completely filled. Then commenced a terrible struggle. A loud humming noise was heard, and presently both armies of combatants rushed forth; the besiegers and the besieged did not fight within the beleaguered city, but in the open air. The battle raged with such fury, that the ground beneath was soon covered with the wounded and slain; the wounded crawled about painfully, unable to rise and rejoin their fellow-warriors. Not until one party was vanquished and driven away, did the sanguinary battle end. The victors then resumed possession of the hive. The local narrative does not furnish the means for deciding the question; but it seems most probable that there were some rights of property in the case, and that the interlopers were ejected.

SUPERSTITIONS ABOUT BEES IN SUFFOLK.

It is unlucky that a stray swarm of bees should settle on your premises, unclaimed by their owner.

Going to my father's house one afternoon, I found the household in a state of excitement, as a stray swarm of bees had settled on the pump. A hive had been procured, and the coachman and I hived them securely. After this had been done, I was saying that they might think themselves fortunate in getting a hive of bees so cheap; but I found that this was not agreed to by all, for one man employed about the premises looked very grave, and shook his head. On my asking him what was the matter, he told me in a solemn undertone that he did not mean to say that there was anything in it, but people *did* say that if a stray swarm of bees came to a house, and were not claimed by their owner, there would be a death in the family within the year; and it was evident that he believed in the omen. As it turned out, there was a death in my house, though not in my father's, about seven months afterwards, and I have no doubt but that this was taken as a fulfilment of the portent.

Bees will not thrive if you quarrel about them.

I was congratulating a parishioner on her bees looking so well, and at the same time expressing my surprise that her next-door neighbour's hives, which had formerly been so prosperous, now seemed quite deserted. 'Ah!' she answered 'them bees couldn't du.' 'How was that?' I asked. 'Why,' she said, 'there was words about them, and bees 'll niver du if there's words about them.' This was a superstition so favourable to peace and goodwill in families,

that I could not find it in my heart to say a word against it.

It has been shewn in a contemporary publication,* that it is customary in many parts of England, when a death takes place, to go and formally impart the fact to the bees, to ask them to the funeral, and to fix a piece of crape upon their hives; thus treating these insects as beings possessed of something like human intelligence, and therefore entitled to all the respect which one member of a family pays to the rest. Not long before penning these notes, I met with an instance of this feeling about bees. A neighbour of mine had bought a hive of bees at an auction of the goods of a farmer who had recently died. The bees seemed very sickly, and not likely to thrive, when my neighbour's servant bethought him that they had never been put in mourning for their late master; on this he got a piece of crape and tied it to a stick, which he fastened to the hive. After this the bees recovered, and when I saw them they were in a very flourishing state—a result which was unhesitatingly attributed to their having been put into mourning.

JUNE 8.

St Maximinus, first Archbishop of Aix, confessor, end of 1st or beginning of 2nd century. St Gildard, or Godard, Bishop of Rouen, confessor, 6th century. St Medard, Bishop of Noyon, confessor, 6th century. St Syra, virgin, of Ireland, 7th century. St Clou, or Clodolphus, Bishop of Metz, confessor, 696. St William, Archbishop of York, confessor, 1154.

CANONIZATION OF THE JAPANESE MARTYRS.

The canonization of saints has only been accepted as a dogma of faith by the Church of Rome since the twelfth century, and it was then confined to those who had suffered martyrdom for their religious principles. So rapid, however, was the increase of saints, that it was soon found necessary to place a limit to their admission to the canon: at first bishops were permitted to make them; this privilege was taken away, and the Pope alone had the power; another prudent regulation was that the holy man should have departed this life one hundred years at least before he was canonized, which no doubt prevented many a man, popular in his day, from attaining the honour, when his character was judged by a future generation.

We have in our own day (1862) seen a remarkable example of this ceremony. Pius the Ninth determined to add to the list of saints twenty-three missionaries who had been martyred in Japan during the seventeenth century. Great preparations were made for the event; letters of invitation were written, not only to the Bishops of the Romish church, but also to those of the Eastern churches, and, in spite of the marked repugnance of some of the governments—who feared a political demonstration—the attendance was very large. These ecclesiastics formed the most interesting part of the procession to St Peter's. Wearing the dresses of those early Syrian and Armenian churches which had been founded by the Apostles themselves, and the symbols which created so warm a discussion among the Fathers—the stole, the alb, the mitre with

* *Notes and Queries, passim.*

crosses, Greek and Latin, the forms of which were heretic or orthodox, according to the judgment of the observer. The procession was similar to the one already described under Easter Day; the only difference, perhaps, was that St Peter's was entirely lighted up with wax lights; a mistake, as was generally agreed, there not being sufficient brilliancy to set off the gay colours of the cardinals, the bishops, the bearers of the flabelli, and guarda nobili.

CAGLIOSTRO.

'The quack of quacks, the most perfect scoundrel that in these latter ages has marked the world's history,' says Mr Carlyle, 'we have found in the Count Alessandro di Cagliostro, pupil of the Sage Althotas, foster-child of the Scherif of Mecca, probable son of the last King of Trebisond; named also Acharat, and unfortunate child of nature; by profession healer of diseases, abolisher of wrinkles, friend of the poor and impotent, grand master of the Egyptian mason-lodge of high science, spirit-summoner, gold-cook, grand cophta, prophet, priest, and thaumaturgic moralist and swindler; really a liar of the first magnitude, thoroughpaced in all provinces of lying, what one may call the king of liars.'

This desperate character was the son of Pietro Balsamo, a poor shopkeeper of Palermo, and was born in 1743. He was placed in a monastery, and being set to read the *Lives of the Saints* to the monks whilst they ate their meals, he was detected interpolating naughty fictions of his own, and was at once discharged. He then professed to study for a painter, and associating with vicious company, he forged theatre tickets, and then a will, robbed an uncle, cheated a goldsmith under pretence of shewing a hidden treasure, was accused of murder, and at last, Palermo growing too hot for him, he fled, no one knew whither. According to his own account, he went to Alexandria, and there, by changing hemp into silk, made much money; thence to Malta, where he studied chemistry.

His first authentic appearance, however, was at Rome selling pen-drawings, or rather prints touched up with Indian ink, and passed off as

such. There he met Lorenza, the daughter of a girdle-maker, a comely young woman, who became his wife, and leaving Rome, the pair made their appearance at Venice, at Marseilles, at Madrid, Cadiz, Lisbon, Brussels, and other places, sometimes under one grand title, and sometimes under another, until, finally, they assumed that of the Count Alessandro and the Countess Seraphina Cagliostro. In a coach-and-four they rolled through Europe, found access to the highest society, and mysteriously dispensed potions, washes, charms, and love philtres. By a wine of Egypt, sold in drops more precious than nectar, they promised restoration to the vigour and beauty of youth to worn-out men and wrinkled women. Seraphina adduced herself as a living evidence of the efficacy of the elixir. Though young and blooming, she averred she was sixty, and had a son a veteran in the Dutch service. All, however, was not prosperity with them. Often they were reduced to miserable straits. Dupes who had their eyes opened were often very troublesome, and in a visit to London the count got for a while into the King's Bench Prison.

London, however, recompensed Alessandro and Seraphina by initiating both into the mysteries of Freemasonry, by which they were enabled to achieve their highest triumphs. From a bookseller the count professed to have purchased for five guineas certain manuscripts belonging to one George Cofton, in which he discovered the original system of Egyptian masonry instituted by Enoch and Elijah. In the process of centuries masonry had wofully declined from its pristine purity and splendour. The masonry of men had sunk into mere buffoonery, and that of women had become almost extinct; and the count proclaimed it as his mission to restore the sacred brotherhood to its ancient glory. Among the old and forgotten arcana were the philosopher's stone, an elixir of immortal youth, and a pentagon which restored its possessor to the primeval innocence forfeited by the fall. The prolonged and intricate series of rites by which these boons were to be attained conveniently deferred experiment and detection. From city to city, from Russia to France, travelled the count as the Grand Cophta, and the countess as the Grand Priestess, of the revived masonic faith. Their reputed success at this distance of time seems almost incredible. In dimly-lighted rooms, mysteriously decorated, the count in broken language, for he was master of none, and in unintelligible jargon, discoursed of the wonders and promises of Egyptian masonry, and led captive as believers people who would have scorned to be thought credulous. His calm, assured, and serious manner seemed to throw a seductive spell over those with whom he came in contact, and he decoyed them into his net even while their judgment protested. The old trade in Egyptian drops, beauty-waters, and secret-favours, under the influence of freemasonry, developed amazingly, and the prices in proportion rose.

Settling in Strasburg, he lived in magnificent state, but at the same time prosecuting assiduous labour in hospitals and the hovels of the poor,

with open purse and drug-box containing 'extract of Saturn.' Miraculous cures attested his skill, and wonder grew on wonder. The Prince Cardinal de Rohan expressed a wish to see him, to which he answered:—'If Monseigneur the Cardinal is sick, let him come, and I will cure him; if he is well, he has no need of me, I none of him.' The rebuff effected its purpose to a marvel. It filled the cardinal with keener desire to make his acquaintance. A short interview was granted, from which he retired 'penetrated with a religious awe'; others, long and solitary, followed. 'Your soul,' said the count to the cardinal, 'is worthy of mine; you deserve to be made partaker of all my secrets.' Under such bewitching flatteries, Prince Louis de Rohan yielded himself unreservedly into Cagliostro's power, the richest and choicest of his many conquests.

From Strasburg the cardinal led the count and countess off to Paris, where they plied their arts with more distinguished success than ever, and, for a consideration, produced the apparition of any departed spirit that might be desired. In this blaze of prosperity destruction was near. De Rohan, the dupe in that mysterious and famous business of the Diamond Necklace, which he sold or imagined he sold to Marie Antoinette, was thrown into the Bastille, and with him his friends the Cagliostros. After an imprisonment of nine months, they were released, but ordered to leave France. They went to London, and lived for two years in Sloane Street, Knightsbridge, doing a fair business; selling 'Egyptian pills at 30s. the dram.' In May 1787, they left England, and after wandering over the Continent, driven from place to place by suspicious governments, by some miscalculation they ventured to Rome, and commenced to organize an Egyptian lodge. The Holy Inquisition had long had an eye on their doings, and now within its power, they were seized, at the end of 1789, and consigned to the castle of St Angelo. After a year and a half of tedious trial and examination, his holiness gave judgment, that the manuscript of Egyptian masonry be burnt by the common hangman; that all that intermeddle with such masonry are accursed; that Guiseppe Balsamo, justly forfeited of life for being a Freemason, shall nevertheless in mercy be forgiven, instructed in the duties of penitence, and kept safe henceforth until death in ward of the holy church. Thus ended the career of Cagliostro. In the fortress of St Leo he died, in 1795, at the age of fifty-two. His wife, who was confined in a convent, survived him for several years.

Mr Carlyle, who has written the story of *The Arch Quack* in a most graphic manner, thus describes the impression made on him by his portrait:—

'One of the most authentic documents preserved of Joseph Balsamo is the picture of his visage. An effigy once universally diffused in oil-paint, aqua-tint, marble, stucco, and perhaps gingerbread, decorating millions of apartments. Fittest of visages, worthy to be worn by the quack of quacks! A most portentous face of scoundrelism: a fat, snub, abominable face; dew-lapped, flat-nosed, greasy, full of greediness,

sensuality, ox-like obstinacy; a forehead impudent, refusing to be ashamed; and then two eyes turned up seraphically languishing, as if in divine contemplation and adoration; a touch of quizz, too; on the whole, perhaps the most perfect quack-face produced by the eighteenth century.'

THOMAS DUNHAM WHITAKER.

Sir Henry Spelman, in his work showing (to his own satisfaction) how impossible it was for the appropriators of church lands to thrive upon them, takes as one of his illustrative examples a story connected with the parsonage of Rainham. In the reign of Charles I., Sir Roger Townsend, proposing to rebuild his house at Rainham, conveyed thither a large quantity of stones from the ruins of Croxford Abbey, in the neighbourhood. But these stones, as often as any attempt was made to build them up into an unhallowed edifice, obstinately persisted in falling to the ground. The sacrilegious owner of the estate next tried them in the construction of a bridge; but the well-keyed arch fell as soon as the framework on which it had been constructed was removed. At last, the stones were applied to the rebuilding of a parsonage-house, and, in this semi-ecclesiastical edifice, they quietly rested, till the middle of the last century, when they were once more removed by Lord Townsend, who wished to include the site of the building within the walls of his park. It was in this last parsonage-house that the antiquary Whitaker first saw the light.

Mr Whitaker is celebrated for having founded a new school of topographical literature, or rather, we may say, revived an ancient one, that had been allowed to become extinct. In the days of Leland and Camden, the fathers of this interesting study, an antiquary was not thought the worse for being a man of genius and learning; and consequently we find the ripest scholars of the age employed in archæological pursuits. But in succeeding times, the topographers woefully degenerated, as may be evidenced by the awful array of local histories that load the shelves of our public libraries; as heavy in matter, and dull in manner, as they are ponderous in mere physical gravity: dense folios, containing little more than transcripts of parish registers, title deeds, and monumental inscriptions, and often not having the simple negative merit of being correct copies of the originals.

Mr Whitaker was the first to redeem his favourite study from this state of degradation. In his histories of Whalley, Craven, and Richmondshire, he shewed that a topographical study of antiquities could be united with a keen relish for the beautiful in nature and in art; that the grave meditations of the moralist and the edifying labours of the biographer might be combined with the lofty aspirations of the poet; that the study of British antiquities might not only be facilitated, but enlivened, by bringing to classical information, correct taste, and an acquaintance with the Gothic, Anglo-Saxon, and Celtic languages and dialects, with a habit of detecting the numerous traces that the latter have left in the rude mother-tongue of our rustic

population. And thus it is that topographical and antiquarian works are now read with pleasure and avidity by young and old, grave and gay, and not suffered to lie on the dusty back shelf of a library, to be produced only on the transfer of a manor, a dispute on a pedigree, or the sale of an advowson.

A curious speculation in Mr Whitaker's *History of Craven*, as to the probability of Henry Lord Clifford, first Earl of Cumberland, being the hero of the well-known and beautiful ballad, *The Nut-Brown Maid*, is worthy of notice. This young nobleman, under the influence of a miserly father and jealous stepmother, was led by the extravagance of the court into pecuniary embarrassments. The method which he took to supply his necessities was characteristic of his era. Instead of resorting to Jew money-lenders, and bill-discounting attorneys, post-obits, life-insurances, and other means of raising money by anticipation, as he might have done at the present day, he became an outlaw, collected a band of dissolute followers, harassed religious houses, plundered their tenants, and sometimes obliged the inhabitants of whole districts to take refuge in their churches. He reformed, however, in good time, and married Lady Margaret Percy, daughter of the Earl of Northumberland. The ballad was first printed about 1502, and from it containing the word 'spleen,' just previously introduced into the English language by the study of the Greek medical writers, it could not possibly have been written long before it was put to the press. Clifford was a celebrated bow-man, to whom would well apply the words of the ballad—

'Such an archere, as men say ye be ;'

besides, the outlaw particularly describes Westmoreland as his heritage, thus identifying himself with Clifford. So we must either suppose the whole story to be a fiction, or refer it to one of the adventures of the outlaw, who had led that wild life within a very few years of the time when the ballad was written. The great lineage of the 'Maid' well agrees with Lady Percy, and it is probable that the reckless young man may have lurked in the forests of the Percy family, won the lady in a disguise, which he had assured her covered a knight, and the inversion of the rank of the parties in the ballad may be considered as nothing more than a decent veil of poetical fiction thrown over a recent and well-known fact.

TOM PAINE.

If Paine had died before passing the prime of life, his name might have been held in some respect among liberal politicians for the services he rendered to the American colonics in the crisis of their difficulties with the British ministry. What he did on that occasion is pointedly brought out in a work by Elkanah Watson, a New Englander, who gives at the same time a curious account* of the personal appearance of this notable man. It was about the close of the war, when Mr Watson was pursuing commerce at Nantes, that Paine arrived there in the *Alliance* frigate, as secretary of Colonel Laurens, minister-

extraordinary from the Congress, and took up his quarters at the boarding-house where the narrator resided. 'I could not,' says Mr Watson, 'repress the deepest emotions of gratitude towards him, as the instrument of Providence in accelerating the declaration of our independence. He certainly was a prominent agent in preparing the public sentiment of America for that glorious event. The idea of independence had not occupied the popular mind, and when guardedly approached on the topic, it shrunk from the conception, as fraught with doubt, with peril, and with suffering. In 1776, I was present, at Providence, Rhode Island, in a social assembly of most of the prominent leaders of the State. I recollect that the subject of independence was cautiously introduced by an ardent Whig, and the thought seemed to excite the abhorrence of the whole circle. A few weeks after, Paine's *Common Sense* appeared, and passed through the continent like an electric spark. It everywhere flashed conviction, and aroused a determined spirit, which resulted in the Declaration of Independence upon the 4th of July ensuing. The name of Paine was precious to every Whig heart, and had resounded throughout Europe. On his arrival being announced, the Mayor, and some of the most distinguished citizens of Nantes, called upon him to render their homage of respect. I often officiated as interpreter, although humbled and mortified at his filthy appearance, and awkward and unseemly address. Besides, as he had been roasted alive on his arrival at L'Orient, for the * * * *, and well basted with brimstone, he was absolutely offensive, and perfumed the whole apartment. He was soon rid of his respectable visitors, who left the room with marks of astonishment and disgust. I took the liberty, on his asking for the loan of a clean shirt, of speaking to him frankly of his dirty appearance and brimstone odour, and prevailed upon him to stew for an hour in a hot bath. This, however, was not done without much entreaty, and I did not succeed until, receiving a file of English newspapers, I promised, after he was in the bath, he should have the reading of them, and not before. He at once consented, and accompanied me to the bath, where I instructed the keeper in French (which Paine did not understand) to gradually increase the heat of the water, until "le Monsieur était bien bouilli." He became so much absorbed in his reading that he was nearly parboiled before leaving the bath, much to his improvement and my satisfaction.'

The idea of Tom Paine 'bien bouilli' is amusing, but some people will think that 'bien rôti' would have been a more appropriate treatment.

JUNE 9.

St Vincent, martyr, 2nd or 3rd century. Saints Primus and Felicianus, martyrs, 286. St Pelagia, virgin and martyr, 311. St Columba, or Columkille, Abbot and Apostle of the Picts, 597. St Richard, Bishop of Andria, confessor, about 8th century.

ST COLUMBA.

* A short distance from one of the wildest districts of the western coast of Scotland, opposite the mountains of Mull, only three miles to the south of Staffa, so famous for its stately caverns, lies a little island, which is celebrated as the centre from which the knowledge of the Gospel spread over Scotland, and indeed over all the North, and which, rocky and solitary, and now insignificant as it may be, was a seat of what was

* *Men and Times of the Revolution, &c.* New York, 1856.

felt as marvellous learning in the earliest period of mediæval civilization. Its original name appears to have been Hi or I, which was Latinized into the, perhaps, more poetical form of Iona, but it is now commonly called I-com-kill, or I of Columba of the Cells, from the saint who once possessed it, and from the numerous cells or monastic establishments which he founded.

Columba was an Irish priest and monk of the sixth century, who was earnest in his desire to spread among the ignorant pagans of the North that ascetic form of Christianity which had already taken root in Ireland. According to Bede, from whom we gather nearly all we know of this remarkable man, it was in the year 565 that Columba left his native island to preach to the Picts, the inhabitants of the Scottish Highlands. Encouraged by their chieftain, his mission was attended with success. The chieftain gave him, as a place to establish himself and his companions, the island of I, which Bede describes as in size, 'only of about five families, according to the calculation of the English,' or, as this is explained by the Anglo-Saxon Chronicle, five hides of land. It is now three miles in length, and not quite a mile broad. Here Columba built a church and a monastery, of which he became abbot, and collected round him a body of monks, under a rule which was remarkable chiefly for the strict enforcement of self-denial and asceticism. Their hours each day were divided between prayer, reading or hearing the Scriptures, and the labours required for producing the necessaries of life, chiefly cultivating the land, and fishing. Others were employed in writing copies of the books of the church service, which were wanted for their own use, or for the religious missions sent out amongst the neighbouring barbarians. The art most cultivated among the early Irish monks appears to have been caligraphy, and Columba himself is said to have been a very skilful penman, and, we may no doubt add, illuminator; and copies of the Psalter and Gospel, still preserved in Ireland, are attributed to him. Such of Columba's monks at I as were capable, were employed in instructing others, and this employment seems to have best suited their tastes, and education became the great object to which Columba's successors devoted themselves. For ages youths of noble, and even of royal blood, flocked hither from all parts, not only of Scotland, England, and Ireland, but from Scandinavia, to profit by the teaching of the monks; at the same time, colonies of Columba's monks went forth to establish themselves in various parts of the Scottish Highlands, and the neighbouring islands, in Iceland, and even in Norway. Bede tells us that, about thirty-two years after he settled in I, or Iona, which would carry us, according to his dates, to the year 597, St Columba died and was buried in his island monastery, being then seventy-seven years old. The 9th of June is usually assigned as the day of his death. The reputation of Iona as a seat of learning, and as a place of extraordinary sanctity, continued to increase after the death of the founder of its religious establishment, and his memory was

held in the most affectionate love. His disciples, or we may say the monks of his order, who formed the Pictish church, became known by the name of Culdees, a Celtic word meaning simply monks. Their first religious house of any importance on the mainland was Abernethy, the church of which is said to have been built in Columba's lifetime, and which became the principal seat of royalty and episcopacy in the Pictish kingdom. St Andrew's, also, was a foundation of the Culdees, as well as Dunkeld, Dunblane, Brechin, and many other important churches. From the particular position held by Columba towards his disciples in all parts, when Culdee bishoprics were established, all the bishops were considered as placed under the authority of the abbots of Iona, so that these abbots were virtually the Metropolitans of the Scottish church. In the ninth century the Danes, who ravaged with great ferocity the Scottish coasts, repeatedly visited Iona, and so completely destroyed its monks and their monastery, that the island itself disappears from history, until the twelfth century, when, in the reign of William the Lion, it was re-occupied by a convent of Cluniac monks. Long before this the Culdees had lost their character for sanctity and purity of life, and they were now so much degenerated that the Scottish King David I. (who reigned from 1124 to 1153), after an ineffectual attempt to reform them, suppressed the Culdees altogether, and supplied their place with monks and canons of other orders, but chiefly of that of St Augustine.

JOHN HOWARD PAYNE.

Thousands have had their tenderest sympathies awakened by the almost universal song of 'Home, sweet home,' without knowing that its author's name was John Howard Payne, and that it was first sung in a once popular, but now forgotten, melodrama, entitled *Clari; or, the Maid of Milan*. Payne was a native of America, born in 1792. Early turning his attention to the stage, he soon became a popular actor, and writer of dramatic pieces, both in England and his native country. Few persons have been so greatly loved by so large a circle of private friends. Dying at Tunis, where he latterly filled the office of United States consul, he was buried in the Christian cemetery of St George, where a monument has been erected over his grave by his 'grateful country,' expressive of his merits as a poet and dramatist, and stating that he died in the American consulate of the city of Tunis, 'after a tedious illness,' on the 1st of April 1852.

An amusing proof of the singular popularity of Mr Payne's song was afforded, soon after its first appearance, by a Dumbartonshire clergyman of the Established Presbyterian Church. He was preaching upon the domestic affections—he had wrought himself up a good deal—finally, forgetting all the objections of his cloth to stage matters, he recited the whole of the verses of 'Home, sweet home,' to the unutterable astonishment of his congregation.

SCHAMYL, IMAM OF CIRCASSIA.

It was in 1834 that Schamyl succeeded to that leadership among his countrymen in which he has acquired such distinction. Some tragical circumstances occurring about that time served first to impress the Circassians that in their new leader they had found one possessing a charmed life. The prestige which invested him was enhanced by his extremely reserved habits and isolated mode of life. He was consequently enabled to keep in check the best of the Russian generals, and came off conqueror in a hundred fights. His passionate love for his mountain home and freedom, claimed the sympathy of all Europe; such heroism is one of the finest traits in history, though, perhaps, his fall may be necessary for the march of civilization.

The greatest blow he ever received until the last was the capture of his son, nine years of age, by the Russians. Schamyl offered ransom and prisoners in exchange, but in vain. After the lapse of fifteen years, he made an incursion into the Russian territory, and carried off two Georgian princesses, who occupied a high rank at the court, and this time the exchange was accepted; though it was believed that Djammel-Eddin renounced civilization to return to barbarism with deep regret. Three years after he died.

Schamyl was not only a great warrior, but also a great legislator: he worked long hours in his private room surrounded by books and parchments; then he would leave home for a fortnight, and go from camp to camp preaching the Koran to his people, and rousing their love of

independence. On his return, his people rushed to meet him, singing verses from their holy book, and accompanying him home. Scarcely had he dismounted, when his children, to whom he was passionately attached, were in his arms. He had three wives, but never would permit them to be distinguished above the other women of the encampment.

Each day he received the Naibs who came on business, treating them with hospitality but simplicity. He himself always ate alone and with great sobriety; bread, milk, honey, rice, fruit, and tea composed his meals. He was adored by his people, and from one end of the Caucasus to the other his name was a talisman. His morals were of the utmost purity, and he put to death any offender with the strictest severity.

At the time of Schamyl's capture he was sixty-two years of age, and it is astonishing that at

that period his eye should have retained the quickness and penetration of earlier years; incessantly seeking to read the depths of the soul, and to guess the most secret thoughts of those about him. Always distrustful amidst his devoted soldiers, whom he had learnt to fascinate completely, he yet killed any of them whom he doubted, before his suspicions were changed into certainty, and many an innocent life was sacrificed for his repose. After the example of the dervishes, Schamyl dyed his beard with henna; his hands, small and well-shaped, were attended to with the greatest care. His

SCHAMYL.

head-dress was formed of a lamb-skin cap, surmounted by voluminous folds of a muslin turban. He wore a tunic, on the front of which was placed a cartouche-box, and for arms he carried a Circassian poniard and a sword; the blades of both were of the most costly description.

When he introduced his military code into the mountains, he instituted an order of chivalry to reward his brave murides, which he called the 'Sign of courage.' It was composed of three degrees; the insignia were of engraved silver: the first, in the form of a crescent, bore for its

device a sabre, with the inscription: 'This is the mark of the brave.' Through this they must pass to the second, which was a disk with

the figures cut through, a sabre with the device: 'He who is thinking of the consequences is wanting in courage.' The third and highest

INSIGNIA OF SCHAMYL'S ORDER OF BRAVERY.

was like the second, with a sabre, a pistol, and the Arabic words: 'He who is thinking of the consequences is wanting in bravery. Be devoted, and you shall be saved.'

Schamyl was not prodigal of his rewards, so that his people were very proud of these distinctions, and often sacrificed their lives in the hope of gaining them; those few that have been brought to Europe have been taken from the breasts of the dead, and are only to be found in the private arsenals of the Russian Emperor.

It was reserved for Prince Bariatinsky to conquer the unconquered chieftain: a cordon was drawn around the mountains, and Schamyl took refuge in his strong aoul of Gounib, provisioned and fortified for two years, and situated on a plateau in the form of a triangle, with a narrow road up to each corner. The Russians managed to climb up the rocks, and came unexpectedly on the Circassians; a terrible combat ensued, and Schamyl saw that resistance had become useless. He was much surprised when he found that his life was to be spared, and when he reached St Petersburg, and saw its magnificence, he understood for the first time what a powerful enemy he had had to oppose, and wondered how a prince with such fortresses could attach so much importance to the possession of the rock of Gounib.

Admitted to the highest society, he was dazzled with the costumes and diamonds of the ladies; 'I was far from expecting,' said he, 'to find Mahomet's paradise on earth.' One evening when he met with the French ambassador, he spoke to him of Abd-el-Kader. Hearing that the Arab chief had struggled as long as himself, but with superior forces, his face lighted up, because he felt he had done more: 'We have had the same fate,' he remarked. 'It is true,' was the answer, 'but he who has once been great will always be great.'

The Emperor Alexander granted him a pension sufficient for the comfortable maintenance of himself and his family, and a residence in a town which the government chose for him.

WILLIAM LILLY.

William Lilly was the last of the great English astrologers of the sixteenth and seventeenth centuries. He was born, as he tells us in his autobiography, at Diseworth in Leicestershire, on the 1st of May 1602, and received a tolerably good school education. In 1620, he went to London to seek service, which he obtained in the family of a Leicestershire man in the City, who had realized some property by business, the nature of which seems to be rather uncertain. It was said that he had been a tailor, and hence some of Lilly's enemies in after years reproached the astrologer with having been originally of that calling, though he denies it, and assures us that his duties in this family were of a much more menial character. At length, after the death of his master, Lilly married the young widow, and thus became a moneyed man. He appears to have had what we may perhaps call a taste for astrology, and had apparently picked up acquaintance with many of the pretenders in that science, and towards the year 1632 began to study it earnestly. About the year 1641 he set up as a regular practitioner. The political troubles in which the country was then involved, and the general agitation which resulted from them, opened a great field for those who speculated on popular credulity. They began to foretell and give information and advice upon public events, and were soon employed as instruments and agents by the rival parties. Lilly tells us that he first leaped towards the king's party, but that, having been treated in an insulting manner by the other astrologers who prophesied on that side, he deserted and became a confirmed Roundhead, and, as he says, he afterwards 'prophesied all on their side.' His prophecies, for the publication of which he had established an almanack which bore the title of *Merlinus Anglicus*, were indeed so many political weapons in the hands of the party leaders, and were used with very considerable effect. Butler, who is understood to have intended to picture Lilly under the character

of Sidrophel, alludes to the use which was thus made of his prophecies—

‘Do not our great reformers use
This Sidrophel to forbode news?
To write of victories next year,
And castles taken, yet i’ th’ air?
Of battles fought at sea, and ships
Sunk, two years hence? the last eclipse?
A total o’erthrow given the king
In Cornwall, horse and foot, next spring?
And has not he point-blank foretold
Whats’e’er the close committee would?
Made Mars and Saturn for the cause,
The Moon for fundamental laws?
The Ram, the Bull, and Goat, declare
Against the Book of Common Prayer?
The Scorpion take the protestation,
And Bear engage for reformation?
Made all the royal stars recant,
Compound, and take the covenant?’

As Lilly’s prophecies greatly encouraged the soldiers, he naturally gained favour with the chiefs of the army, and there is good reason for believing that he was patronized and befriended by Cromwell. The Presbyterians, who looked upon astrology with aversion, and classed it with witchcraft, took advantage of some expressions in his almanacks which seemed to reflect upon the parliament, and sought to bring him under the vengeance of that body, when it was in its greatest power, but he found no less powerful protectors. During the Protectorate, Lilly’s position was a flourishing and no doubt a lucrative one, and he appears to have become rich. He bought some of the confiscated estates of royalists. Towards the close of the Protectorate, he prophesied the Restoration, and thus made his peace with the government of Charles II., or more probably he was considered too insignificant an object to provoke the vengeance of the triumphant royalists. He was, however, compelled to surrender the estates he had purchased. Nevertheless, *Merlinus Anglicus*, which had become the most celebrated almanack of the day, was now distinguished for its loyalty. The only instance, however, in which the court seems to have taken any notice of Lilly, arose out of a remarkable prophecy in his almanack for 1666, which seemed to foretell the great fire of London in that year. As the fire was at first ascribed to a plot against the country, Lilly was suspected of knowing something of the conspiracy, and was arrested and closely examined, but his innocence was sufficiently evident. From this time he sank into comparative obscurity, and, probably finding that astrology and almanack-making were no longer profitable, he obtained a licence and began to practise as a physician. He died at an advanced age on the 9th of June 1681. He left an autobiography, addressed to the credulous Elias Ashmole, which is at the same time a curious record of the manners and sentiments of the time, and a remarkable picture of the self-conceit of its author. Lilly’s almanack, *Merlinus Anglicus*, continued to be published under his name long after his death; but no new astrologer arose to take the position he had once held, for the flourishing days of astrology were over.

THE PARKS AND THE MALL.—THE BEAUX.

It would be an interesting task to trace the history of London fashionable life through the last two centuries, and even a short sketch of it cannot be otherwise than amusing and instructive. Some might, indeed, consider it a history of frivolous things and frivolous sentiments; but when we look back to the past, setting aside the curiosity always felt in contemplating manners or customs which are new to us, even frivolous things have their meaning in tracing the continual movement of the public mind and intelligence.

Our ‘modish’ forefathers in London two or three generations ago lived much more out of doors than is the custom with fashionable society now-a-days. Spring Garden, the Mulberry Gardens, the Mall, the Park, were places of constant resort from early in the forenoon till late at night, and in addition to these there were continually masquerades, ridottos, &c., where the company was at least nominally more select. The masquerades, too, differed only from the public walks in the circumstance that in the former people dressed in characters, for it was the custom to wear masks everywhere; and intrigue was carried on and kept up quite as much in the promenade of the Park or the Mall, as in the masquerade itself. In the seventeenth and eighteenth centuries, as in the middle ages, May was the gay month in society, and its gaiety was usually carried through the month following. May and June were the fashionable months of the year. It was with the first of May that the *season* in London was considered as commencing, and on that day, proverbially, the parks and the Mall began to fill. Poor Robin’s Almanack for 1698 remarks, at the beginning of May—

‘Now at Hide Park, if fair it be,
A show of ladies you may see.’

And the same joking prognosticator, for an earlier date (1669), says of the same month,—‘The first day of this month (if the weather be fair), Jupiter being in his exaltation, prognosticates great resort of people to Hide Park, Spring Garden,’ &c.

The style of fashionable life which continued during a great part of the last century took its rise after the Restoration, and appears to have been carried on with greatest freedom from the reign of Charles II. to that of George II. Among the earlier places of fashionable resort was Spring Garden, celebrated in the journal of Pepys, in the time of the former of these monarchs, when it was the favourite place of promenade and intrigue. Arbours, where refreshments might be had, were distributed about the garden; and in Howard’s comedy of the *English Mounsieur*, published in 1674, it is spoken of as ‘a place will afford the sight of all our English beauties.’ This play contains a good picture of the society in Spring Garden at that time; indeed, we shall find nowhere so vivid and striking a picture of fashionable life in England during the period mentioned above, as in the contemporary comedies, which we shall

accordingly take as our principal guides in the following remarks.

Spring Garden was gradually abandoned as the fashionable world threw itself more entirely into the parks. Hyde Park had been long frequented, chiefly by carriages and equestrians; but St James's Park was nearer to the town, and with its no less celebrated promenade of the Mall, presented the further advantage of being near to the palace, and it thus became not unfrequently the lounge of the king and of the courtiers. There was great freedom in society at that time; and people who were sufficiently well-dressed accosted each other without hesitation, and without requiring any of the formalities of introduction. Thus the Park was a place of general conversation; persons of either sex 'joked' each other, sometimes rather practically, talked nonsense, (sometimes) sense, employed wit and sarcasm as well as flattery on each other, flirted (though they might be perfect strangers), and intrigued. The promenaders were so much at their ease, that they even sung in the Park. The Park and the Mall were frequented every day, and not only at all hours, but far into the night, though there were certain hours at which they were more crowded with company than at other times. Company was not wanting there even at an early hour in the forenoon. In the comedy of *Feigned Friendship*, two ladies, one disguised as a young man, are introduced in the Mall early, and meet an acquaintance who addresses them—

'Townley. G'morrow to your ladyship. You would not lose the fine morning.'

'Lady G. But did not expect so good company as Mr Townley.'

'Townley. Small want of that, I believe, madam, while this gentleman is with you.'

'Lady G. Truly we have pass'd an hour or two very divertingly. The Mall afforded us a large field of satyr, and this spark, I thank him, has managed his province much to my satisfaction. He comes up just to your pitch of malice and wit. I fancy your humours be very suitable. I must have you acquainted.'

One of the fashionable hours in the Park was that between twelve and one, being the hour preceding dinner. The ordinary dinner hour of good society appears to have been two o'clock, although at the beginning of the last century, very fashionable people had already adopted five. In Congreve's *Way of the World*, printed in 1700, a turn in the Park before dinner is spoken of as a common practice:—

'Mirabell. Fainall, are you for the Mall?'

'Fain. Ay, I'll take a turn before dinner.'

'Witwood. Ay, we'll all walk in the park; the ladies talked of being there.'

Seven o'clock in the evening was the next fashionable hour. The late dinner was then over, and 'modish' people again sought the open air. In the contemporary plays, gentlemen are introduced making appointments with the other sex for this hour. Hence the evening promenade was productive of a large amount of scandal. The first scene of the second act of Wilkinson's comedy of *Vice Reclaimed*, printed in 1703, is laid

in St James's Park in the morning. Two ladies begin their conversation as follows:—

'Annabella. 'Tis an inviting morning, yet little or no company.'

'Lucia. So much the better. I love retirement. Besides, this place is grown so scandalous, 'tis forfeiting reputation to be seen in an evening.'

Yet, with the gayer part of fashionable society, the evening appears to have been the favourite time in the Park. It included a good portion of the night. In Durfey's *Marriage Hater Matched*, Lady Hockley says of her dog, 'I carried him to the Park every night with me.' In Shadwell's comedy of *The Humorist*, a wit asks a lady in a tone of surprise, 'O madam, where were you that I missed you last night at the Park?' And in Wycherley's *Gentleman Dancing Master*, Mistress Flirt, making conditions of marriage, insists upon having her coach, adding, 'Nor will I have such pitiful horses as cannot carry me every night to the Park; for I will not miss a night in the Park, I'd have you to know.' There were various spots in or about the Park which obtained a reputation in the annals of gallantry. Barn Elms, near its south-west corner (St James's Park was then much more extensive than at present) was a locality famed for duelling and love-making; and Rosamond's Pond, near it, and surrounded with pleasant trees, was not only a well-known place of meeting for lovers, but had a more melancholy celebrity for the number of disappointed maidens who committed suicide in it. On the site now occupied by Buckingham Palace were the famed Mulberry Gardens, which had usurped the place of Spring Garden, and which, like it, had their shady tortuous walks and their arbours fitted up for refreshments and intrigues. The Mulberry Gardens often furnished scenes to the contemporary stage. They were entered from the Park, and were open till a late hour in the night. People talk of enjoying 'the garden by moonlight;' and some of the female characters in Shadwell's *Humorist* (1671), give us the following description:—

'Frisk. O me, madam! why does not your ladyship frequent the Mulberry Garden oftener? I vow we had the pleasantest divertisement there last night.'

'Strick. Ay, I was there, madam Frisk, and the garden was very full, madam, of gentlemen and ladies that made love together till twelve o'clock at night, the prettily'st: I vow 'twould do one's heart good to see them.'

'Theo. Why that's a time for cats to make love in, not men and women.'

In the reign of George I., the elegant scenes of the London parks were transferred for a few weeks in autumn to Tunbridge Wells. There, it is stated, 'after prayers, all the company appear on the walks in the greatest splendour, music playing all the time; and the ladies and gentlemen divert themselves with raffling, hazard, drinking of tea, and walking, till two, when they go to dinner.' There was no ceremony. 'Every gentleman is equally received by the fair sex upon the walks.' 'You engage with the ladies at play without any introduction.' 'At night, on the walks, there is all manner of play till

midnight.' The tourist who gives us this account calmly adds: 'I believe there is no place in the world better to begin an intrigue in than this, nor than London to finish it.*'

From an early period in this history of fashionable life, we have illustrations of its external features in contemporary prints; and, farther on, caricatures and satirical prints contribute their aid. We are thus enabled to give a few cuts, representing groups of the elegant loungers of the parks at successive periods. The first, taken from a large contemporary view of a public ceremony, represents a group of fashionables of

the male sex in the reign of William III. The second cut is of a rather later date, and represents a gentleman and lady meeting in the fashionable promenade of perhaps the earlier part of the reign of George I.

While the tone of the comedies and novels of the hundred years succeeding the Restoration leave us in no doubt as to the laxity of fashionable morals, it stands in curious contrast to this fact that the external aspect of the *beau monde* was decidedly formal. The gait of both men and women was artificial; their phrases of compliment wholly wanted natural ease and grace. A gentleman walking with a lady generally carried his hat in his hand or under his arm (the wig being the protection he trusted to for the

* *A Journey through England*, 2 vols. 4th edit. 1724. Vol. i., p. 93.

comfort of his poll). Take, as an indication of this practice, a conversation between Sylvia and Courtley, in Otway's *Soldier's Fortune*, 1681:—

'*Silv.* In next place, when'er we meet in the Mall, I desire you to look back at me.'

'*Court.* Which if I chance to do, be sure at next turning to pick up some tawdry fluttering fop or another.'

'*Silv.* That I made acquaintance with all at the musique meeting.

'*Court.* Right, just such another spark to saunter by your side with his hat under his arm.'

Of the freedoms taken on the promenades there is no want of illustrations. In Cibber's *Double Gallant* (1707), the jealous husband, Sir Solomon, says—

'I'll step into the park, and see if I can meet with my hopeful spouse there! I warrant, engaged in some innocent freedom (as she calls it), as walking in a mask, to laugh at the impertinence of fops that don't know her; but 'tis more likely, I'm afraid, a plot to intrigue with those that do.'

Masks were, as already stated, in common use among the lady promenaders, who, under cover of this disguise, assisted by a hood and scarf which helped to conceal their person, were enabled to carry on conversations and to follow adventures on which they would hardly have ventured uncovered. In Dilke's comedy of *The Pretenders* (1698), Sir Bellamore Blunt, who is a stranger to London fashionable society, is astonished at the forward manner of the young Lady Ophelia:—

'*Sir Bell.* Why so? where are you going then?'

'*Ophelia.* (aside) I'll soon try his reality; may you be trusted, sir?'

'*Sir Bell.* Indeed, I may, madam.'

'*Ophelia.* Then know I'm going to my chamber, to fetch my mask, hood, and scarf, and so jaunt it a little.'

'*Sir Bell.* Jaunt it! What's the meaning of that?'

'*Ophelia.* Why, that's to take a hackney coach, scour from playhouse to playhouse, till I meet with some young fellow that has power enough to attack me, stock enough to treat and present me, and folly enough to be laughed at for his pains.'

London society was haunted by two rather considerable classes of what we may perhaps term parasites, the Beaux and the Wits, of which the latter were by far the most respectable, because many of those who pretended to literary talent or taste, and frequented the society of the wits, were men of wealth, or at least easy circumstances. The beaux might also be divided into two classes, those who were beaux by mere vanity and affectation, and those who were adventurers in the world, who appear to have been by far the more numerous class. These lived upon society in every possible manner, and were especially the attendants on the gambling-table. The Park was the resort of the beaux, while the wits frequented the coffee-houses, and both met in the theatres. A beau, or as he was otherwise called, a fop or a spark, affected the most extravagant degree of fashion in his clothing, and he spent much of his time in the hands of his hairdresser and perfumer. He affected also grand and new words, and fine set phrases, in

this emulating the character of the wit. He was known by two signs especially, the care bestowed upon his wig, and the skilful manner in which he displayed his snuff-box—for without a snuff-box nobody could be a beau. In Cibber's *Double Gallant* (1707), a lady, speaking of a monkey, says—

'Now, I think he looks very humorous and agreeable; I vow, in a white periwig he might do mischief; could he but talk, and take snuff, there's ne'er a fop in town wou'd go beyond him.'

And in the comedy of *The Relapse* (1708), the counsel given to any one who wants to conciliate

a beau is, 'say nothing to him, apply yourself to his favourites, speak to his periwig, his cravat, his feather, his snuff-box.' The beau is represented as aiming by these fopperies at making conquests among the ladies, and so marrying a fortune. 'Every fop,' says one of the personages in the comedy of *The Apparition* (1714), 'every fop with a long wig and a snuff-box thinks he may pretend to an heiress of a thousand pounds a year.' In this character the beau was commonly accused, partly out of vanity and partly to promote his speculations on the sex, of injuring reputations by boasting of favours never

GROUP OF PARK FASHIONABLES, TIME OF GEORGE II.

received, and of forging love-letters addressed to himself, in support of his boasts. In Carlyle's comedy of *The Fortune Hunters* (1689), the leading characters in which are beaux of this description, the beau Shamtown is introduced in bed at five o'clock in the afternoon, soliloquizing over his useless life, confessing to the writing of billets-doux to himself in the names of amorous ladies, and lamenting over his want of success.

'Yet still,' he says, 'I kept my reputation up; wheresoe'er I came, fresh billet-doux on billet-doux were receiv'd; sent by myself, heaven knows, unto myself, on my own charges.' He subsequently produces a letter, written by himself, which he professes to have received from a lady, and which in no equivocal terms offers him an interview. That the practice was a dangerous one, we do not need the tragical case of Don

GROUP OF PARK FASHIONABLES, ABOUT 1780.

Matthias in *Gil Blas* to assure us. Another characteristic of the beau was, that he always carried with him a pocket looking-glass. It must not be forgotten that the beaux and wits together pretended to rule the theatre, and to decide what new pieces should be approved by the public and what rejected. Hence the

dramatic writers of the day, in their prologues and epilogues, often address themselves to these two classes. Thus Farquhar, in the prologue to his comedy of *Sir Harry Wildair*, says of the dramatic writer—

'He gains his ends, if his light fancy takes
St James's beaux and Covent Garden rakes.'

The popular writers of those days abound in satirical descriptions of the beaux. Thus a poem entitled *Islington Wells*, published in 1691, speaks of a beau 'bedaubed with lace,' and alludes especially to his love of fine language.

'For using vulgar words and phrases,
Their mouth most infinitely debases,
To say they've melancholy been
Is barbarous; no, they are *chagrin*.
To say a lady's looks are well
Is common; no, her air is *belle*.
If any thing offends, the wig
Is lost, and they're in such fatigue.'

In Delke's comedy of *The Pretender*, already quoted, we have the following description of the beau of 1678—

'*Sir Bellamour Blunt*. What the devil dost mean by that foolish word *beau* ?'

'*Vainthroat*. Why, faith, the title and qualifications of a beau have long been the standing mark for the random shot of all the poets of the age. And to very little purpose. The beaux bravely stand their ground still, egad. The truth on't is, they are a sort of case-hardened animals, as uncapable of scandal as they are insensible of any impression either from satyr or good sense.'

'*Sir Bell*. And prithee how must these case-hardened animals be distinguisht ?'

'*Vain*. Barring reflection, I believe the best way to be acquainted with the whole tribe of 'em, wou'd be to get a general register drawn from all the perfumers' shop books in town. Or, which is more scandalous, to examine the chancks in all the chairmen's cellars about the Pall Mall; where each morning the poor fellows sit, looking pensively upon their long scores, shaking their heads, and saying,—Ah! how many times have we trotted with such a powder'd son of nine fathers from the Chocolate-house to the play, and never yet saw a groat of his money !'

Ten years later, the comedy of *The Relapse* introduced on the stage a picture of the aristocratic beau, in the character of Lord Foppington—a sort of Lord Dunderary of his day—who, rallied on his pretensions by a party of ladies, gives the following account of his mode of life :—

'I rise, madam, about ten o'clock. I don't rise sooner, because 'tis the worst thing in the world for the complexion; not that I pretend to be a beau, but a man must endeavour to look wholesome, lest he make so nauseous a figure in the side-box, the ladies should be compelled to turn their eyes upon the play. So at ten o'clock, I say, I rise. Now if I find 'tis a good day, I resolve to take a turn in the Park, and see the fine women; so hnddle on my cloaths, and gett dress'd by one. If it be nasty weather, I take a turn in the Chocolate-hanse, where, as you walk, madam, you have the prettiest prospect in the world; you have looking-glasses all round you—But I'm afraid I tire the company.'

'*Berinthia*. Not at all. Pray go on.'

'*Lord Fop*. Why then, ladies, from thence I go to dinner at Lacket's, where you are so nicely and delicately serv'd, that, stap my vitals! they shall compose you a dish no bigger than a saucer shall come to fifty shillings. Between eating my dinner and washing my month, ladies, I spend my time till I go to the play; where, till nine a clack, I entertain myself with looking upon the company; and usnally dispose of one hour more in leading them out. So there's twelve of the four and twenty pretty well over. The other twelve, madam, are disposed of in

two articles: in the first four I toast myself drunk, and in t'other eight I sleep myself sober again. Thus, ladies, you see my life is an eternal round of delights.'

The ladies afterwards go on to remind him of another characteristic of the true beau—

'*Amanda*. But I thought, my lord, you beanx spent a great deal of your time in intrigues: you have given us no account of 'em yet.'

'*Lord Fop*. Why, madam—as to time for my intrigues, I usnally make detachments of it from my other pleasures, according to the exigency. Far your ladyship may please to take notice that those who intrigue with women of quality have rarely occasion for above half an hour at a time. People of that rank being under those decorums, they can seldom give you a longer view than will just serve to shoot 'em flying. So that the course of my other pleasures is not very much interrupted by my amours.'

The last description of the beau we shall quote belongs to a still later date. It is taken from that well-known romance, '*Chrysal*,' relating the adventures of a guinea, and published in the year 1760. *Chrysal* became at one time the property of a town beau, of whose manners and circumstances he gives an amusing description. This beau, having payned a laced waistcoat for three guineas, 'returned home, and changing his dress, repaired to a coffee-house at the court-end of the town, where he talked over the news of the day,'—'till he carelessly outstayed all his engagements for supper, when a Welsh-rabbit and three-penny-worth of punch made him amends for the want of a dinner, and he went home satisfied.' He made great show of finery and extravagance, but lived in private very parsimoniously, in one room, up three pairs of stairs, fronting a fashionable street, but with a back door into an obscure alley, by which he could enter unseen. He was attended only by his hairdresser, laundress, and tailor, at their appointed times. Here is a journal of one day of his life.

'As he had sat up late, it was near noon when he arose, by which genteel indulgence he saved coals, for his fire was never lighted till after he was up. He then sallied out to breakfast in a tarnished lacc frock and his thick-soled shoes, read the papers in the coffee house (*too soon after breakfast to take anything*), and then walked a turn in the Park, till it was time to dress for dinner, when he went home, and finding his stomach out of order, *from his last night's debauch* and his *late breakfasting*, he sent the maid of the house for a bason of pea-sonp from the cook's shop *to settle it*, by the time he had taken which, it was too late for him to think of going anywhere to dine, *though he had several appointments with people of the first fashion*. When this frugal meal was over, he set about the real business of the day. He took out and brushed his best cloaths, set his shirt to the fire to air, put on his stockings and shoes, and then sitting down to his toilet, on which his washes, paints, tooth-powders, and lip-salves were all placed in order, had just finished his face, when his hairdresser came, one hour under whose hands compleated him a first-rate beau. When he had contemplated himself for some time with pride of heart, and practised his looks and gestures at the glass, a chair was called, which carried him to a scene of equal magnificence and confusion. From the brilliant appearance of the company, and the ease and self-complacency in all their looks, it should have seemed that there was not one poor or unhappy

person among them. But the case of my master had convinced me what little faith is to be given to appearances, as I also found upon a nearer view that many of the gayest there were in no better a condition than he! After some time passed in conversation he sat down to cards.'

The character of the beau degenerated about 1770 into that of the Macaroni, of which we shall give a separate account on another occasion. It reappeared in the Dandy of about 1816, but may be said to have since become utterly extinct. Our third and last cuts are taken from engravings of the time, and represent groups of fashionable promenaders in the reigns of George II. and George III. They were among the last of those who gave celebrity to the Park and the Mall.

JUNE 10.

Saints Getalius and companions, martyrs, 2nd century. St Landry, or Landericus, Bishop of Paris, confessor, 7th century. St Margaret, Queen of Scotland, 1093. Blessed Henry, or Rigo of Treviso, confessor, 1315.

Born.—James, Prince of Wales, commonly called 'the Pretender,' 1688, *London*; John Dollond, eminent optician, 1706, *Spitalfields*; James Short, maker of reflecting telescopes, 1710, *Edinburgh*.

Died.—Emperor Frederick Barbarossa, 1190, *Cilicia*; Thomas Hearne, antiquary, 1735, *Oxford*; James Smith, promoter of sub-soil ploughing, 1850, *Kinzeanleuch, Ayrshire*.

BIRTH OF JAMES PRINCE OF WALES.

'The 10th [June 1688], being Trinity Sunday, between nine and ten in the morning, fifteen minutes before ten, the queen was delivered of a prince at St James's, by Mrs Wilkins the midwife, to whom the king gave 500 guineas for her pains: 'tis said the queen was very quick, so that few persons were by. As soon as known, the cannon at the Tower were discharged, and at night bonfires and ringing of bells were in several places.'—*Luttrell's Brief Relation of State Affairs*.

It is the fate of many human beings to receive the reverse of a welcome on their introduction into the world; but seldom has an infant been so unwelcome, or to so large a body of people, as this poor little Prince of Wales. To his parents, indeed, his birth was as a miracle calling for devourest gratitude; but to the great bulk of the English nation it was as the pledge of a continued attempt to re-establish the Church of Rome, and their hearts sunk within them at the news. Their only resource for a while was to support a very ill-founded rumour that the infant was supposititious—introduced in a warming-pan, it was said, into the queen's bedroom, that he might serve to exclude the Protestant princesses, Mary and Anne, from the throne.

How uncertain are all calculations of the results of remarkable events! What seemed likely to confirm the king on his throne, and assist in restoring the Catholic religion, proved

'THE OLD PRETENDER.'

very soon to have quite the contrary effect. It precipitated the Revolution, and before the close of the year, the little babe, which unconsciously was the subject of so much hope and dread, was, on a wet winter night, conveyed mysteriously across the Thames to Lambeth church, thence carried in a hackney coach to a boat, and embarked for France, leaving Protestantism in that safety which it has ever since enjoyed.

Unwelcome at birth, this child came to a manhood only to be marked by the hatred and repugnance of a great nation. He lived for upwards of seventy-seven years as an exiled pretender to the throne of Britain. He participated in two attempts at raising civil war for the recovery of what he considered his rights, but on no occasion showed any vigorous qualities. A modern novelist of the highest reputation, and who is incapable of doing any gross injustice in his dealings with living men, has represented James as in London at the death of Queen Anne, and so lost in a base love affair as to prove incapable of seizing a throne then said to have been open to him. It is highly questionable how far, even in fiction, it is allowable thus to put historical characters in an unworthy light, the alleged facts being wholly baseless. Leaving this aside, it fully appears from the Stuart papers, as far as published, that the so-called Pretender was a man of amiable character and refined sentiments, who conceived that the interests of the British people were identical with his own. He had not the audacious and adventurous nature of his son Charles, but he was equally free from Charles's faults. If he had been placed on the throne, and there had been no religious difficulties in the case, he would probably have made a very respectable ruler. With reference to the son, Charles, it is rather remarkable that, after parting with him, when he was going to France in 1744, to prepare for his Scotch adventure, the father and the son do not appear ever to have met again, though they were both alive for upwards of twenty years after. The 'Old Pretender,' as James at length came to be called, died at the beginning of 1766. To quote the notes of a Scottish adherent lying before us, and it is appropriate to do so, as a pendant to Luttrell's statement of the birth: 'The 1st of January (about a quarter after nine o'clock at night) put a period to all the troubles and disappointments of good old MR JAMES MISFORTUNATE.'

HEARNE, THE ANTIQUARY.

Old Tom Hearne, as he is fondly and familiarly termed by many even at the present day—though in reality he never came to be an old man—was an eminent antiquary, collector, and editor of ancient books and manuscripts. One of his biographers states that even from his earliest youth 'he had a natural and violent propensity for antiquarian pursuits.' His father being parish clerk of Little Waltham, in Berkshire, the infant Hearne, as soon as he knew his letters, began to decipher the ancient inscriptions on the tombstones in the parish churchyard. By the patronage of a Mr Cherry, he received a liberal

education, which enabled him to accept the humble, but congenial post of janitor to the Bodleian Library. His industry and acquirements soon raised him to the situation of assistant librarian, and high and valuable preferments were within his reach; but he suddenly relinquished his much-loved office, and all hopes of promotion, through conscientious feelings as a non-juror and a jacobite. Profoundly learned in books, but with little knowledge of the world and its ways, unpolished in manners and careless in dress, feeling imperatively bound to introduce his extreme religious and political sentiments at every opportunity, Hearne made many enemies, and became the butt and jest of the ignorant and thoughtless, though he enjoyed the approbation, favour, and confidence of some of his eminent contemporaries. Posterity has borne testimony to his unwearied industry and abilities; and it may be said that he united much piety, learning, and talent with the greatest plainness and simplicity of manners. Anxiety to recover ancient manuscripts became in him a kind of religion, and he was accustomed to return thanks in his prayers when he made a discovery of this kind.

Warton, the laureate, informs us of a waggish trick which was once played upon this simple-hearted man. There was an ale-house at Oxford in his time known by the sign of Whittington and his Cat. The kitchen of the house was paved with the bones of sheep's trotters, curiously disposed in compartments. Thither Hearne was brought one evening, and shown this floor as a veritable tessellated Roman pavement just discovered. The Roman workmanship of the floor was not quite evident to Hearne at the first glance; but being reminded that the Standsfield Roman pavement, on which he had just published a dissertation, was dedicated to Bacchus, he was easily induced, in the antiquarian and classical spirit of the hour, to quaff a copious and unwonted libation of potent ale in honour of the pagan deity. More followed, and then Hearne, becoming convinced of the ancient character of the pavement, went down upon his knees to examine it more closely. The ale had by this time taken possession of his brain, and once down, he proved quite unable to rise again. The wags led the enthusiastic antiquary to his lodgings, and saw him safely put to bed. Hearne died in his fifty-seventh year, and, to the surprise of everybody, was found to possess upwards of a thousand pounds, which was divided among his poor brothers and sisters.

BOARSTALL HOUSE.

This old mansion, memorable as the object of frequent contests in the civil wars, was finally surrendered to the Parliament on the 10th of June 1646. Willis called it 'a noble seat, and Hearne described it as 'an old house moated round, and every way fit for a strong garrison, with a tower at the north end much like a small castle.' This tower, which is still standing, formed the gate-house. It is a large, square, massive building, with a strong embattled turret at each corner. The entrance was across a

drawbridge, and under a massive arch protected by a portecullis and thick ponderous door, strengthened with large studs and plates of iron. The whole mansion, with its exterior fortifications, formed a post of strength and importance. Its importance, however, consisted not so much in its strength as its situation; it stood at the western verge of Buckinghamshire, two miles from Brill, and about half way between Oxford and Aylesbury. Aylesbury was a powerful garrison belonging to the Parliament, and Oxford was the king's chief and strongest hold,

GATEWAY OF BOARSTALL HOUSE.*

and his usual place of residence during the civil wars. While Boarstall, therefore, remained a royal garrison, it was able to harass and plunder the enemy at Aylesbury, and to prevent their making sudden and unexpected incursions on Oxford and its neighbourhood.

At an early period in the civil wars Boarstall House, then belonging to Lady Dynham, widow of Sir John Dynham, was taken possession of by the Royalists, and converted into a garrison; but in 1644, when it was decided to concentrate

the king's forces, Boarstall, among other of the smaller garrisons, was abandoned. No sooner was this done than the impolicy of the measure became apparent. Parliamentary troops from Aylesbury took possession of it, and by harassing the garrison at Oxford, and by seizing provisions on the way there, soon convinced the Royalists that Boarstall was a military position of importance. It was therefore determined to attempt its recovery, and Colonel Gage undertook the enterprise. With a chosen party of infantry, a troop of horse, and three pieces of cannon, he reached Boarstall before daybreak. After a slight resistance, he gained possession of the church and out-buildings, from whence he battered the house with cannon, and soon forced the garrison to crave a parley. The result was that the house was at once surrendered, with its ammunition and provisions for man and horse; the garrison being allowed to depart only with their arms and horses.* Lady Dynham, being secretly on the side of the parliament, withdrew in disguise.

The house was again garrisoned for the king, under the command of Sir William Campion, who was directed to make it as strong and secure as possible. For this purpose he was ordered 'to pull down the church and other adjacent buildings,' and 'to cut down the trees for the making of pallisadoes, and other necessaries for use and defence.' Sir William Campion certainly did not pull down the church, though he probably demolished part of its tower. The house, as fortified by Campion, was thus described by one of the king's officers: 'There's a pallisado, or rather a stockado, without (outside) the graffe; a deep graffe and wide, full of water; a pallisado above the false bray; another six or seven feet above that, near the top of the curtain.' The parliamentary garrison at Aylesbury suffering seriously from that at Boarstall, several attempts were made to recover it, but without success. It was attacked by Sir William Walley in 1644; by General Skippon in May 1645; and by Fairfax himself soon afterwards. All were repulsed with considerable loss. The excitement produced in the minds of the people of the district by this warfare is described by Anthony à Wood, then a schoolboy at Thame, as intense. One day a body of parliamentary troopers would rush close past the castle, while the garrison was at dinner expecting no such visit. Another day, as the parliamentary excise committee was sitting with a guard at Thame, Campion, the governor of Boarstall, would rush in with twenty cavaliers, and force them to fly, but not without a short stand at the bridge below Thame Mill, where half a score of the party was killed. On another occasion a large parliamentary party at Thame was attacked and dispersed by the cavaliers from Oxford and Boarstall, who took home twenty-seven officers and 200 soldiers as prisoners, together with between 200 and 300 horses. Some venison pasties prepared at the vicarage for the parliamentary soldiers fell as a prize to the schoolboys in the vicar's care.

In such desultory warfare did the years 1644

* Clarendon's *History of the Rebellion*, vol. ii., p. 494.

and 1645 pass in Buckinghamshire, while the issue of the great quarrel between king and commons was pending. Happy for England that it has to look back upwards of two centuries for such experiences, while, sad to say, in other countries equally civilized, it has been seen that they may still befall!

There was more than terror and excitement among the Bucks peasantry. Labourers were forcibly impressed into the garrisons; farmers' horses and carts were required for service without remuneration;* their crops, cattle, and provender carried off;† gentlemen's houses were plundered of their plate, money, and provisions; hedges were torn up, trees cut down, and the country almost turned into a wilderness. A contemporary publication, referring to Boarstall in 1644, says:— 'The garrison is amongst the pastures in the fat of that fertile country, which, though heretofore esteemed the garden of England, is now much wasted by being burthened with finding provision for two armies.' And Taylor, the 'water-poet,' in his 'Lecture to the People,' addressed to the farmers of Bucks and Oxfordshire, says:—

'Your crests are fallen down,
And now your journeys to the market town
Are not to sell your pease, your oats, your wheat;
But of nine horses stolen from you to intreat
But one to be restored: and this you do
To a buffed captain, or, perhaps unto
His surly corporal.'

Nor was it only the property of the peaceable that suffered; their personal liberty, and very lives, were insecure. In November 1645, a considerable force from Boarstall and Oxford made a rapid predatory expedition through Buckinghamshire, carrying away with them several of the principal inhabitants, whom they detained till they were ransomed.‡ In 1646, a party of dragoons from Aylesbury carried off Master Tyringham, parson of Tyringham, and his two nephews. They deprived them of their horses, their coats, and their money. 'They commanded Master Tyringham to pull off his cassock, who being not sudden in obeying the command, nor over hasty to untie his girdle to disrobe himself of the distinctive garment of his profession, one of the dragoons, to quicken him, cut him through the hat into the head with a sword, and with another blow cut him over his fingers. Master Tyringham, wondering at so barbarous usage without any provocation, came towards him that had thus wounded him, and desired him to hold his hands, pleading that he was a clergyman, a prisoner, and disarmed.' He was then hurried off to Aylesbury, but before reaching there he was deprived of his hat and cap, his jerkin and boots, and so severely wounded in one of his arms that it was found necessary the next day to amputate it. 'Master Tyringham (though almost three score years old) bore the loss of his arme with incredible resolution and courage.'§

Thus both parties were addicted to plunder, which is the inevitable consequence of civil war, and wanton cruelty is sure to follow in its train.

In 1646, Sir William Fairfax again attacked Boarstall House, and though its valiant little garrison for some time resolutely resisted, it wisely decided, on account of the king's failing resources, to surrender on terms which were honourable to both parties. The deed of surrender was signed on the 6th of June 1646, but did not take effect till the 10th. On Wednesday, June 10th, says A. Wood, 'the garrison of Boarstall was surrendered for the use of the Parliament. The schoolboys were allowed by their master a free liberty that day, and many of them went thither (four miles distant) about eight or nine of the clock in the morning, to see the form of surrender, the strength of the garrison, and the soldiers of each party. They, and particularly A. Wood, had instructions given them before they went, that not one of them should either taste any liquor or eat any provision in the garrison; and the reason was, for fear the royal party, who were to march out thence, should mix poison among the liquor or provision that they should leave there. But as A. Wood remembered, he could not get into the garrison, but stood, as hundreds did, without the works, where he saw the governor, Sir William Campion, a little man, who upon some occasion lay flat on the ground on his belly, to write a letter, or bill, or the form of a pass, or some such thing.'

Boarstall House, being now entirely relinquished by the Royalists, was taken possession of by its owner, Lady Dynham. In 1651, Sir Thomas Fanshawe, who had been taken prisoner at the battle of Worcester, was brought here by his custodians on their way to London. He was kindly received by Lady Dynham, 'who would have given him,' writes Lady Fanshawe, 'all the money she had in the house; but he returned her thanks, and told her that he had so ill kept his own, that he would not tempt his governor with more; but that if she would give him a shirt or two, and a few handkerchiefs, he would keep them as long as he could for her sake. She fetched him some shifts of her own, and some handkerchiefs, saying, that she was ashamed to give them to him, but having none of her son's shirts at home, she desired him to wear them.'

The country having become more settled, Lady Dynham repaired her house and the church; but the tower of the latter, which had been demolished, was not restored. In 1668, Anthony Wood again visited Boarstall, and has recorded this curious account of it: 'A. W. went to Borstall, neare Brill, in Bucks, the habitation of the Lady Penelope Dinham, being quite altered since A. W. was there in 1646. For whereas then it was a garrison, with high bulwarks about it, deep trenches, and pallisadoes, now it had pleasant gardens about it, and several sets of trees well growne.

* * * * *
Between nine and ten of the clock at night, being an hour or two after supper, there was

* Seward's *Anecdotes*, vol. iii., p. 309.

seen by them, M. H. and A. W., and those of the family of Borstall, a *Draco volans* fall from the sky. It made the place so light for a time, that a man might see to read. It seemed to A. W. to be as long as All Saints' steeple in Oxon, being long and narrow; and when it came to the lower region, it vanished into sparkles, and, as some say, gave a report. Great rains and inundations followed.*

Towards the close of the seventeenth century, Sir John Aubrey, Bart., by his marriage with Mary Lewis, the representative of Sir John Dynham, became possessed of Boarstall; and it continued to be the property and residence of his descendants till it was pulled down by Sir John Aubrey, about the year 1783. This Sir John Aubrey married Mary, daughter of Sir James Colebrooke, Bart., by whom he had a son, named after himself, who was born the 6th of December 1771, and came to an early and melancholy death.

When about five years old he was attacked with some slight ailment, for which his nurse had to give him a dose of medicine. After administering the medicine, she prepared for him some gruel, which he refused, saying 'it was nasty.' She put some sugar into it, and thus induced him to swallow it. Within a few hours he was a corpse! She had made the gruel of oatmeal with which arsenic had been mixed to poison rats. Thus died, on the 2nd of January 1777, the heir of Boarstall, and of all his father's possessions—the only child of his parents—the idol of his mother. The poor nurse, it is said, became distracted—the mother never recovered from the effects of the blow. She lingered out a year of grief, and then died at the early age of thirty-two, and, as her affecting memorial states, 'is deposited by the side of her most beloved son.' Sir John Aubrey, having thus lost his wife and child, pulled down the house in which they died, with the exception of the turreted gateway, and removed his residence to Dorton, carrying with him a painted window, and some other relics from the demolished house of Boarstall. He also pulled down the old church, which had been much shattered in the civil war, and in 1818 built an entirely new one on the same spot. He married a second time, but dying in 1826 without issue, he was succeeded by his nephew, Sir Thomas Digby Aubrey, by whose death, in 1856, the male line of this very ancient family became extinct, and Boarstall is now the property of Mrs Charles Spencer Ricketts, of Dorton House.

The gate-house at Boarstall, which still exists in fair preservation, was built in 1312 by John de Hadlo, who then had license from Edward II. 'to make a castle of his manor-house at Borstall.'† Since the civil wars the drawbridge has been removed, and one of two arches, bearing the date of 1735, has been substituted, one side of the moat has been filled in, and some slight alterations made in the building itself, but it has still the appearance of a strong fortress, and is a good specimen of the castellated architecture of the period when it was built.

† *Dugdale's Baronage*, vol. ii., p. 61.

Boarstall, according to a very ancient tradition, acquired its name from an interesting incident. It is situated within the limits of the ancient forest of Bernwood, which was very extensive and thickly wooded. This forest, in the neighbourhood of Brill, where Edward the Confessor had a palace, was infested with a ferocious wild boar, which had not only become a terror to the rustics, but a great annoyance to the royal hunting expeditions. At length one Nigel, a huntsman, dug a pit in a certain spot which he had observed the boar to frequent, and placing a sow in the pit, covered it with brushwood. The boar came after the sow, and falling into the pit, was easily killed by Nigel, who carried its head on his sword to the king, who was then residing at Brill. The king knighted him, and amply rewarded him. He gave him and his heirs for ever a hide of arable land, called Derehyde, a wood called Hulewood, with the custody of Bernwood Forest to hold from the king *per unum cornu quod est chartæ predictæ Forestæ*, and by the service of paying ten shillings yearly for the said land, and forty shillings yearly for all profits of the forest, excepting the indictment of herbage and hunting, which were reserved to the king. On the land thus acquired, perhaps on the very spot where he slew the boar, Nigel built a lodge or mansion, which, in commemoration of his achievement, he named Boar-stall. In testimony of this tradition, a field is still called 'Sow Close,' and the chartulary of Boarstall, which is a large folio in vellum, contains a rude delineation of the site of Borstall House and manor, and underneath the portraiture of a huntsman kneeling before the king, and presenting to him a boar's head on the point of a

sword, and the king rewarding him in return with a coat-of-arms. The armorial bearings, which are, arg. a fesse gu. two crescents, and a horn verde, could not, of course, have been conferred by Edward the Confessor, but by some subsequent king. As, however, these arms were borne by Nigel's successors, they must here be regarded as an anachronistical ornament added by the draughtsman. 'The same figure of a boar's head presented to the king was, says Kennett, carved on the head of an old bedstead

lately remaining in that strong and ancient house; and the said arms of Fitz-Nigel are now seen in the windows and in other parts.' The tradition further states that the king (Edward the Confessor) conveyed his grant to Nigel by presenting to him a horn as the charter of his land, and badge of his office as forester. In proof of this, an antique horn, said to be the identical one given to Nigel, has descended with the manor, and is still in the possession of the present proprietor, Mrs Spencer Ricketts, of Dorton House. This horn, which is two feet four inches long, is of a dark brown colour, resembling tortoiseshell. It is tipped at each end with silver gilt, and fitted with a leathern thong to hang round the neck; to this thong are suspended an old brass ring bearing the rude impression of a horn, a brass plate with a small horn of brass attached to it, and several smaller plates of brass impressed with *fleurs-de-lis*, which, says Kennett, are the arms of the Lizares, who intruded into the estate soon after the reign of William the Conqueror. There was also over one of the doors in the tower a painting or carving upon wood representing the king knighting Nigel. The late Sir Thomas Aubrey carried this to Oving House, his place of residence, and had it renovated, but where it is now is unknown.

JUNE 11.

St Barnabas, the Apostle, 1st century. St Tochumra, Virgin, of Ireland. Another Tochumra, Virgin.

Barnaby's Day.

Before the change of style, the 11th of June was the day of the summer solstice. This was expressed proverbially in England—

'Barnaby bright,
The longest day and the shortest night.'

It appears to have been customary on St Barnaby's day for the priests and clerks in English churches to wear garlands of the rose and the woodroff. A miraculous walnut-tree in the abbey churchyard of Glastonbury was supposed to bud invariably on St Barnaby's day.

ROGER BACON.

English science has a double interest in the name of Bacon, and the older of the two individuals who bore it is certainly not the least illustrious, although we know very little of his personal history. He lived in an age when the world in general cared little about the quiet life of the laborious student. According to the

account usually received, Roger Bacon was born near Ilchester, in Somersetshire, in the year 1214. It is said (for there is very little satisfactory authority for all this) that he displayed great eagerness for learning at a very early age, and that he was sent to study at Oxford when still a boy; yet it appears that there was a Gloucestershire tradition as old as the beginning of the last century, that Roger Bacon was born in the parish of Bisley, in that county, and that he received his first education at a chapel dedicated to St Mary, now called Bury Hill, in the parish of Hampton, in which a chamber was shown called Bacon's Study. After he had made himself master of all that could be learnt at Oxford, Bacon went, as was usual at that time, to the much more important school of scientific labour, the University of Paris, where he is said to have become a doctor in the civil law, and so celebrated by his teaching as to acquire the appellation of the 'Wonderful Doctor.' He there made the acquaintance of Robert Grosseteste, who was his friend and patron as long as he lived. He is said to have returned to England in 1240, when, if the date given as that of his birth be correct, he was still only twenty-six years of age, and he then established himself in Oxford. It seems doubtful if it were before or after his return to England that he entered the order of the Franciscans, or Friar Preachers, who were then great cultivators of science, and who are said to have been recommended to him by Grosseteste; but all we know of his life at this period seems to shew that in Oxford he took up his abode in the convent of that order. It is stated that, in the course of twenty years, he spent in his studies and experiments no less than £2000 sterling, which would be equivalent to a very large sum of money in the reckoning of the present day. We receive this statement from Bacon himself, and it is evident that Bacon's family was rich; yet he remained almost unknown within his convent, and apparently neglected, if not despised by his fellow friars, until he was at length dragged from his obscurity by Pope Clement IV. The facts of the Pope's interference we also obtain from Bacon himself.

It is, moreover, by no means certain that Bacon was all this time in Oxford, but, on the contrary, we have every reason to believe that he passed a part of it in France. After he had spent all his own money in science, he applied to 'his rich brother' in England for assistance; but his brother, who was a staunch royalist, had been reduced to poverty through his opposition to the liberal party in the baronial wars, and was not able to give him any assistance, and the terms in which Roger Bacon speaks shews that he was at that time residing in France. Bacon had another difficulty to deal with, for he now not only wanted money to pursue his studies, but he was not allowed to make public the discoveries he had made. It was a rule of the Franciscan order that no friar should be permitted the use of writing materials, or enjoy the liberty of publishing, without having first obtained leave from his superiors, and it is probable that he had already excited their watchful jealousy, and they had applied the rule to him

with excessive strictness. Bacon's own account gives a curious picture of some of the difficulties which then stood in the way of science—it is addressed to Pope Clement.

'When your holiness wrote to me on the last occasion, the writings you demanded were not yet composed, although you supposed they were. For whilst I was in a different state of life [that is, before he entered the order of the Franciscans], I had written nothing on science; nor in my present condition had I ever been required to do so by my superiors; nay, a strict prohibition had been passed to the contrary, under penalty of forfeiture of the book, and many days' fasting on bread and water, if any work written by me, or belonging to my house, should be communicated to strangers. Nor could I get a fair copy made, except by employing transcribers unconnected with our order; and then they would have copied my works to serve themselves or others, without any regard to my wishes; as authors' works are often pirated by the knavery of the transcribers at Paris. And certainly if it had been in my power to have communicated any discoveries freely, I should have composed many things for my brother the scholar, and for others my most intimate friends. But as I despaired of the means of communicating my thoughts, I forbore to communicate them to writing. . . . For, although I had at various times put together, in a hasty manner, some few chapters on different subjects, at the entreaty of my friends, there was nothing noteworthy in these writings; . . . they were such as I myself hold in no estimation, as being deficient in continuity and perfection.'

It appears that, before his accession to the papacy, Clement's curiosity had been excited by some accidental information he obtained relating to Bacon's wonderful knowledge and discoveries, and that he had written to ask the philosopher for some of his writings. The above extract is a portion of Bacon's reply to the pope's demand. Clement was an old soldier, and, however arbitrary he may have been in temper, he appears to have cared little for popular prejudices. In 1266, the year after he became pope, he despatched a brief to Bacon, enjoining, notwithstanding the order of any ecclesiastical superior or any rule of his order to the contrary, that he should communicate to him a copy of the important work which had been the subject of their previous correspondence. Bacon was thus fully brought before the world, and under Pope Clement's protection he continued for some years to diffuse his extraordinary knowledge. It was at this time that he produced his three great philosophical and scientific works, the *Opus Majus*, the *Opus Minus*, and the *Opus Tertium*, all three completed within the space of fifteen months.

In the thirteenth century, a man like Bacon was exposed to two very dangerous accusations. People in general, in their ignorant wonder at the extraordinary things he was said to be able to perform, believed him to be a magician, while the bigoted Churchman, alarmed at everything like an expansion of the human intelligence, sought to set him down as a heretic. Bacon incurred both these imputations; but, though the liberal views he expresses in his works, even

on religious questions, could not but be distasteful to the church, yet he was safe during Pope Clement's time. Several short papacies followed, until, in 1277, Pope Nicolas III. ascended the papal throne, a man of a different temper from Clement. At the beginning of his papacy, the general of the Franciscans, who had just been made a cardinal, brought forward an accusation of heresy against Bacon, and, with the pope's approval, caused him to be thrown into prison. When, ten years afterwards, the persecuting general of the Franciscans became pope himself, under the name of Nicolas IV., Bacon still remained a close prisoner, and it was only, we are told, towards the close of Nicolas's life that some of his friends were able to exercise sufficient interest to obtain his freedom. Nicolas IV. died in 1292; and, according to what appear to be the most reliable accounts, Bacon died on St Barnabas's day, the 11th of June 1292, although the real year of his death is by no means satisfactorily ascertained. He is said to have died in the convent of the Franciscans, at Oxford, and to have been buried in their church. Thus, in consequence of the fatal weight of the Roman Catholic Church on the minds of society, this great man had to pass all the earlier part of it in forced obscurity, and after only a few years in the middle, during which he was enabled to give some of his scientific knowledge to the world, he was rewarded for it during the latter part of his life with a prison. The real amount of his discoveries is very imperfectly known; but it is certain that they were far in advance of the age in which he lived, and that there was no branch of science which he had not sounded to its depths. His favourite subjects of study are said to have been mathematics, mechanics, and chemistry. He is said to have invented the camera obscura, the air-pump, and the diving-bell, but, though this statement may admit of some doubt, he was certainly acquainted with the nature and use of optical lenses and with gunpowder, at least with regard to the explosive powers of the latter, for the projectile power of gunpowder appears not to have been known till the following century. A great number of books remain under Bacon's name, but a considerable portion of them are of a spurious character. Tradition still points out in Oxford the building and even the room which is supposed to have been the scene of Roger Bacon's studies.

We may now turn from the real to the legendary character of Roger Bacon. When we consider the circumstances of the age, it is a proof of the extraordinary reverence in which the science of the friar Roger Bacon was held, that he not only became the subject of popular legends, but that in the course of years nearly all the English legends on science and magic became concentrated under the name of Friar Bacon. We have no means of tracing the history of these legends, which are extremely curious, as forming a sort of picture of the efforts, successful for a time, of the scholastic theology to smother the spirit of science. They were collected, still with a strong Romish prejudice, in the sixteenth century, into a popular

volume, entitled *The History of Friar Bacon: containing the wonderful things that he did in his life; also the manner of his death; with the lives and deaths of the two conjurers, Bungye and Vandermast*, a work which has been reprinted in Mr Thoms's interesting collection of *Early Prose Romances*. Bungye and Vandermast are comparatively modern creations, introduced partly to work up the legends into a story, and for the same purpose legends are worked into it which have nothing to do with the memory of Roger Bacon. According to this story, 'In most men's opinions he was borne in the west part of England, and was sonne to a wealthy farmer, who put him to the schoole to the parson of the towne where hee was borne; not with intent that hee should turne fryer (as he did), but to get so much understanding, that he might manage the better that wealth hee was to leave him. But young Bacon took his learning so fast, that the priest could not teach him any more, which made him desire his master that he would speake to his father to put him to Oxford, that he might not lose that little learning that hee had gained.' The father made an outward show of receiving the application favourably, but he had no sooner got his son away from the priest, than he deprived him of his books, treated him roughly, and sent him to the plough, telling him that was his business. 'Young Bacon thought this but hard dealing, yet would he not reply, but within sixe or eight dayes he gave his father the slip, and went to a cloyester some twenty miles off, where he was entertained, and so continued his learning, and in small time came to be so famous, that he was sent for to the University of Oxford, where he long time studied, and grew so excellent in the secrets of art and nature, that not England onely, but all Christendome admired him.'

Such was Bacon's youth, according to the legend. His fame soon attracted the notice of the king (what king we are not told), and his wonderful feats of magic at court gained him great reputation, which leads him into all sorts of queer adventures. On one occasion, with an ingenuity worthy of the bar in its best moments, he saves a man from a rash contract with the devil. But one of the most famous exploits connected with the history of the legendary Friar Bacon was the manufacture of the brazen head, famous on account of the misfortune which attended it. It is, in fact, the grand incident in the legend. 'Friar Bacon, reading one day of the many conquests of England, bethought himselfe how he might keepe it hereafter from the like conquests, and so make himselfe famous hereafter to all posterities.' After deep study, he found that the only way to effect this was by making a head of brass, and if he could make this head speak, he would be able to encompass England with an impregnable wall of the same material. Bacon took into his confidence Friar Bungye, and, having made their brazen head, they consulted the demon who was under their power, and were informed by him that, if they subjected the head to a certain process during a month, it would speak in the course of that period, but that he could

not tell them the exact day or hour, and that, if they heard him not before he had done speaking, their labour would be lost. The two friars proceeded as they were directed, and watched incessantly during three weeks, at the end of which time Bacon employed his man Miles, a shrewd fellow, and a bit of a magician himself, as a temporary watch while they snatched a few hours' repose. Accordingly, Bacon and Bungye went to sleep, while Miles watched. Miles had not been long thus employed, when the head, with some preparatory noise, pronounced very deliberately the words, 'Time is.' Miles thought that so unimportant an announcement was not a sufficient reason for waking his master, and took no further notice of it. Half an hour later, the head said in the same manner, 'Time was,' and, after a similar interval, 'Time is past;' but Miles treated it all as a matter of no importance, until, shortly after uttering these last words, the brazen head fell to the ground with a terrible noise, and was broken to pieces. The two friars, thus awakened, found that their design had been entirely ruined, and so, 'the greate worke of these learned fryers was overthrowen (to their great griefes) by this simple fellow.'

The next story is curious as presenting a legendary account of two of the great inventions ascribed to Roger Bacon. One day the king of England invaded France with a great army, and when he had besieged a town three months without producing any effect, Friar Bacon went over to assist him. After boasting to the king of many inventions of a description on which people were often speculating in the sixteenth century, Bacon proceeded to work. In the first place, having raised a great mound, 'Fryer Bacon went with the king to the top of it, and did with a perspect shew to him the towne, as plainly as if hee had beene in it.' This is evidently an allusion to the use of the camera obscura. The king, having thus made himself acquainted with the interior of the town, ordered, with Bacon's advice, that the assault should be given next day at noon. When the time approached, 'in the morning Fryer Bacon went up to the mount, and set his glasses and other instruments up and, ere nine of the clocke, Fryer Bacon had burnt the state house of the towne, with other houses, only by his mathematicall glasses, which made the whole towne in an uprore, for none did know whence it came; whilst that they were quenching of the same, Fryer Bacon did wave his flagge, upon which signall given, the king set upon the towne, and tooke it with little or no resistence.' This is clearly an allusion to the effects of burning lenses.

Other stories follow of a more trivial character, and not belonging to the story of Friar Bacon. At length, according to this legendary history, after many strange adventures, Bacon became disgusted with 'his wicked life,' burnt all his magical (? scientific) books, and gave himself up entirely to the study of divinity—a very orthodox and Catholic conclusion. He retained, however, sufficient cunning to cheat the fiend, for it is implied that he had sold his soul to the devil,

whether he died inside the church or outside, so 'then caused he to be made in the church wall a cell, where he locked himself in, and there remained till his death Thus lived he some two yeeres space in that cell, never coming forth : his meat and drink he received in at a window, and at that window he did discourse with those that came to him. His grave he digged with his owne nayles, and was laid there when he dyed. Thus was the life and death of this famous fryer, who lived most part of his life a magician, and dyed a true penitent sinner, and an anchorite.'

A PHILOSOPHER OF THE SEVENTEENTH CENTURY.

Such were the natural gifts of Sir Kenelm Digby, that although, as the son of one of the gunpowder conspirators, he began his career under unfavourable circumstances, he eventually succeeded in winning almost general admiration. He even became a favourite with the king, who had executed his father, and was prejudiced against his name. And if he be estimated by the versatility of his genius, he would not be undeserving of the pinnacle of fame on which his admirers have placed him. There seemed no post in literature, science, politics, or warfare, that he could not undertake with credit. He was a philosopher, a theologian, a linguist, a mathematician, a metaphysician, a politician, a commander by land and by sea, and distinguished himself in each capacity. The estimation in which he was held appears in the following lines written for his epitaph :

'Under this tomb the matchless Digby lies,
Digby the great, the valiant, and the wise ;
This age's wonder, for his noble parts,
Skilled in six tongues, and learned in all the arts ;
Born on the day he died, the eleventh of June,
And that day bravely fought at Scanderoon ;
It's rare that one and the same day should be
His day of birth, of death, of victory !'

The name of Sir Kenelm Digby is depreciated in our day by the patronage he bestowed on alchemy and other arts, now generally concluded upon as vain and superstitious. He was understood to possess a means of curing wounds, independent of all traceable physical causes. Mr Howell, the author of *Dendrologie*, having been seriously wounded in the hand while attempting to prevent a couple of friends from fighting, found various surgeons unserviceable for a cure, but at length applied to Sir Kenelm. 'It was my chance,' says the latter, 'to be lodged hard by him ; and four or five days after, as I was making myself ready, he came to my house, and prayed me to view his wounds, "for I understand," said he, "that you have extraordinary remedies on such occasions, and my surgeons apprehend some fear that it may grow to a gangrene, and so the hand must be cut off." In effect, his countenance discovered that he was in much pain, which he said was insupportable, in regard of the extreme inflammation. I told him I would willingly serve him ; but if haply he knew the manner how I would cure him, without touching or seeing him, it may be he would not

expose himself to my manner of curing, because he would think it, peradventure, either ineffectual or superstitious. He replied, "The wonderful things which many have related unto me of your way of medicine, makes me nothing doubt at all of its efficacy, and all that I have to say unto you is comprehended in the Spanish proverb, *Hagase el milagro y hagalo Mahoma*.—Let the miracle be done, though Mahomet do it." I asked him then for anything that had the blood upon it ; so he presently sent for his garter, wherewith his hand was first bound ; and as I called for a basin of water, as if I would wash my hands, I took a handful of powder of vitriol, which I had in my study, and presently dissolved it. As soon as the bloody garter was brought me, I put it within the basin, observing in the interim what Mr Howell did, who stood talking with a gentleman in a corner of my chamber, not regarding at all what I was doing ; but he started suddenly, as if he had found some strange alteration in himself. I asked him what he ailed ? "I know not what ails me ; but I find that I feel no more pain. Methinks that a pleasing kind of freshness, as it were a wet cold napkin, did spread over my hand, which hath taken away the inflammation that tormented me before." I replied, "Since then, that you feel already so good effect of my medicament, I advise you to cast away all your plasters ; only keep the wound clean, and in a moderate temper betwixt heat and cold." This was presently reported to the Duke of Buckingham, and a little after to the king, who were both very curious to know the circumstance of the business, which was, that after dinner I took the garter out of the water, and put it to dry before a great fire. It was scarce dry, but Mr Howell's servant came running, that his master felt as much burning as ever he had done, if not more ; for the heat was such as if his hand were twixt coles of fire.' Sir Kenelm sent the servant back, and told him to return to him unless he found his master eased. The servant went, 'and at the instant,' continues Sir Kenelm, 'I did put again the garter into the water ; thereupon he found his master without any pain at all. To be brief, there was no sense of pain afterwards ; but within five or six days the wounds were cicatrized and entirely healed.' Sir Kenelm represented himself as having learnt this secret from a Carmelite friar who had been taught it in Armenia or Persia.

Amongst the marvels of Sir Kenelm's discoveries in metaphysics and alchemy, we may notice the following as far more amusing than instructive. To remove warts he recommends the hands to be washed in an empty basin into which the moon shines ; and declares that the 'moonshine will have humidity enough to cleanse the hands because of the star from which it is derived.' He tells us of a man, who, having lived from boyhood among wild beasts in a wood, had learnt to 'wind at a great distance by his nose where wholesome fruits or roots did grow,' and could follow persons, whom he knew, by scenting their footsteps like a dog. At a scientific meeting in France he made 'several considerable relations, whereof two

did ravish the hearers to admiration. The one was of a king's house in England, which, having stood covered with lead for five or six ages, and being sold after that, was found to contain three-fourths of silver in the lead thereof. The other was of a fixed salt, drawn out of a certain potter's earth in France, which salt being for some time exposed to the sunbeams became salt-petre, then vitriol, then lead, then tin, copper, silver, and, at the end of fourteen months, gold; which he experienced himself and another able naturalist besides him.'

Butler, who keenly satirizes the philosophical credulity of his day, thus ridicules a belief in sympathetic powder, and similar nostrums:—

'Cure warts and corns with application
Of medicines to the imagination;
Fright agues into dogs, and scare
With rhymes the tooth-ache and catarrh;
And fire a mine in China here
With sympathetic gunpowder.'

But every age has its mania in science and philosophy, and though men of talent and research are not always secure against the prevailing delusion, they seldom fail to leave behind them some valuable, though perhaps miniature fruit of their investigations. It was the mania of Sir Kenelm Digby, and the philosophers of his day,—and perhaps it is of our day too,—to expect too much from science. Yet such expectations often stimulate to the discovery of facts, which, by others, were considered impossibilities. Glanvil, whose faith in the powers of witches was as firm as Sir Kenelm Digby's in sympathetic powder, among many ridiculous conjectures of the possible achievements of science, hit on a very remarkable one, which cannot but be striking to us. In a work addressed to the Royal Society just two centuries ago, he says; 'I doubt not but that posterity will find many things that now are but rumours verified into practical realities. It may be, some ages hence, a voyage to the southern unknown tracts, yea, possibly, to the moon, will not be more strange than one to America. To those that come after us, it may be as ordinary to buy a pair of wings to fly into the remotest regions, as now a pair of boots to ride a journey. And to confer, at the distance of the Indies, by sympathetic conveyances, may be as usual to future times as to us in literary correspondence.' This last conjecture, the possibility of which has now been realized, doubtless appeared, when hazarded two centuries ago, as visionary and impossible as a flight to the moon. Even Butler, were he living in these days of electric communication, would not have thought it so impossible to fire a mine in China by touching a wire in Britain. Glanvil, with much pertinency, further remarks, 'Antiquity would not have believed the almost incredible force of our cannons, and would as coldly have entertained the wonders of the telescope. In these we all condemn antique incredulity. And it is likely posterity will have as much cause to pity ours. But those who are acquainted with the diligent and ingenious endeavours of true philosophers will despair of nothing.'

GEORGE WITHERS.

'I lived,' says this remarkable man, 'to see eleven signal changes, in which not a few signal transactions providentially occurred: to wit, under the government of Queen Elizabeth, King James, Charles I., the King and Parliament together, the King alone, the Army, Oliver Cromwell, Richard Cromwell, a Council of State, the Parliament again, and the now King Charles II.' Withers was brought up as a rigid Puritan. Imbued with a mania for scribbling, and a thorough detestation of what Mr Carlyle calls shams, he left behind him upwards of a hundred and forty satirical pieces, the greater part in verse. In early life he took service under Charles I., but when the civil war broke out, he sold his estate to raise a troop of horse, which he commanded on the side of the Parliament. He was once taken prisoner by the Royalists, and about to be put to death as a traitor; but Sir John Denham begged his life, saying to the king—'If your Majesty kills Withers, I will then be the worst poet in England.'

As Withers's satires were conscientiously directed against all that he considered wrong, either in his own or the opposite party, he very often was made acquainted with the interior of a prison; but in spite of these drawbacks, he managed to rub through life, favoured in some degree by both sides, as he held office under Charles II. as well as under Cromwell. He died on the 2nd of May 1667, having reached (for a poet) the tolerable age of seventy-nine.

SIR JOHN FRANKLIN.

Sir John Franklin sailed, June 1845, in command of an expedition, composed of two vessels, the *Erebus* and *Terror*, for the discovery of the supposed North-west Passage. Several years having elapsed without affording any news of these ships, expedition after expedition was sent out with a view to ascertain their fate, but without any clear intelligence as to the vessels or their commander till 1859, when Captain F. L. M'Clintock, in command of a little vessel which had been fitted out at the expense of Lady Franklin, discovered, at Point Victory, in King William's Island, a record, contained in a canister, to the effect that the *Erebus* and *Terror* had been frozen up in lat. 70°05' N., and long. 98°23' W., from September 1846, and that Sir John Franklin died there on the 11th of June 1847. It further appeared that, at the date of the record, April 25, 1848, the survivors of the expedition, having abandoned their vessels, were about to attempt to escape by land; in which attempt, however, it has been learned by other means every one perished.

Franklin's expedition must be admitted to have been wholly an unfortunate one; but there is, after all, some consolation in looking to the many gallant efforts to succour and retrieve it—in the course of one of which the North-west Passage was actually discovered—and in remembering the constancy of a tender affection, through which, after many failures, the fate of the expedition was finally ascertained.

JUNE 12.

Saints Basilides, Quirinus, or Cyrinus, Nabor, and Nazarius, martyrs. St Onuphrius, hermit. St Ternan, Bishop of the Picts, confessor, 5th century. St Eskill, of Sweden, bishop and martyr, 11th century. St John of Sahagun, confessor, 1479.

Born.—Rev. Charles Kingsley, novelist, 1819; Harriet Martineau, novelist, historian, miscellaneous writer, 1802.

Died.—James III. of Scotland, killed near Bannockburn, Stirlingshire, 1488; Adrian Turnebus, eminent French scholar, 1565, *Paris*; James, Duke of Berwick, French commander, 1734, *Philipsburgh*; William Collins, poet, 1759, *Chichester*; R. F. P. Brunck, eminent philologist, 1803; General Pierre Augereau (Duc de Castiglioni), 1816; Edward Troughton, astronomical instrument maker, 1835, *London*; Rev. Dr Thomas Arnold, miscellaneous writer, eminent teacher, 1842, *Rugby*; Rev. John Hodgson, author of *History of Northumberland*, 1845; Dr Robert Brown, eminent botanist, 1858.

COLLINS.

The story of the life of Collins is a very sad one: Dr Johnson, in his *Lives of the Poets*, well expresses the unhappy tenor of it. 'Collins,' he says, 'who, while he *studied to live*, felt no evil but poverty, no sooner *lived to study* than his life was assailed by more dreadful calamities, disease and insanity.'

The poet's father, a hatter and influential man in Chichester, procured his son a good education, first at Winchester school, and then at Oxford. Accordingly, Collins promised well: but the seeds of disease, sown already, though yet concealed, silently took root; and strange vacillation and indecision trailed in the path of a mind otherwise well fitted for accomplishing noble designs. Suddenly and unaccountably throwing up his advantages and position at Oxford, he proceeded to London as a literary adventurer. His was not the strong nature to breast so rough a sea; and when home-supplies, for some reason, at length failed, he was speedily reduced to poverty. Nevertheless, at the age of twenty-six, an opportune legacy removed for ever this trouble; and then it seemed he was about to enter upon a brighter existence. Then it was that the most terrible of all personal calamities began to assail him. Every remedy, hopeful or hopeless, was tried. He left off study entirely; he took to drinking; he travelled in France; he resided in an asylum at Chelsea; he put himself under the care of his sister in his native city. All was in vain; he died, when not quite forty, regretted and pitied by many kind friends.

As we may naturally suppose, Collins wrote but little. At school he produced his *Oriental Elogues*, and published them when at college, in 1742, some four or five years afterwards. These poems he grew to despise, and fretted at the public, because it continued to read them. In 1746 he published his *Odes*, when the public again crossed him; but this time by *not* reading what he had written. He was so annoyed that he burnt all the remaining copies. One lost poem, of some length, entitled an *Ode on the Popular Superstitions of the Highlands of Scotland*, was recovered and published in 1788.

Time has avenged the neglect which Collins experienced in his own day. His *Ode on the Passions* is universally admired; the *Ode to Evening* is a masterpiece; there are not two more popular stanzas to be found than those which commence 'How sleep the brave;' nor a sweeter verse in all the language of friendship than that in the dirge for his poet-friend:—

'Remembrance oft shall haunt the shore
When Thames in summer wreaths is dressed;
And oft suspend the dashing oar
To bid his gentle spirit rest.'

ROBERT BROWN.

A kind, modest, great man—so early in the history of science, that he may be called the originator of vegetable physiology; so late in the actual chronology of the world that he died on the 12th of June 1858 (at, it is true, the advanced age of eighty-five)—has to be described under this homely appellative. His gentle, yet dignified presence in his department of the British Museum will long be a pleasing image in the memory of living men of science. The son of a minister of the depressed episcopal church of Scotland at Montrose, he entered life as an army surgeon, but quickly gravitated to his right place; first acting as naturalist in an Australian surveying expedition; afterwards as keeper of the natural history collections of Sir Joseph Banks; finally, as keeper of the botanical collection in the National Museum. His great work was the *Botany of New Holland*, published in 1814; but he wrote many papers, equally valuable in point of matter, for the Linnæan and Royal Societies. What was a dry assemblage of facts under an utterly wrong classification before his time, became through his labours a clearly apprehensible portion of the great scheme of nature. The microscope was the grand means by which this end was carried out—an instrument little thought of before his day, but which, through his example in botany, was soon after introduced in the examination of the animal kingdom, with the noblest results. Indeed, it may be said that, whereas little more than the externals of plants and animals were formerly cared for, we now have become familiar with their internal constitution, their growth and development, and their several true places in nature, and for this, primarily, we must thank Mr Robert Brown.

Animal-Named Plants.

A great number of plants are recognised, popularly at least, by names involving reference to some animal, or what appears as such. Sometimes this animal element in the name is manifestly appropriate to something in the character of the plant; but often it is so utterly irrelative to anything in the plant itself, its locality, and uses, that we are forced to look for other reasons for its being applied. According to an ingenious correspondent, it will generally be found that in these latter cases the animal name is a corruption of some early term having a totally different signification.

Our correspondent readily admits that cats love cat-mint, that the bee-orchis and the fly-orchis resemble respectively the bee and the fly, and that the flower of the single columbine is like an assemblage of doves [Lat. *columba*, a dove,]; hence the animal

names are here presumably real. He allows that the crane's-bill, the stork's-bill, fox-tail grass, hare's-tail grass, adder's-tongue fern, hare's-ear, lark's-spur, mare's-tail, mouse-tail, and snake's-head, are all appropriate on the plain meaning of the terms. He goes on, however, to cite a more considerable number, regarding which he holds it certain that the appellative is a metamorphose of some word, generally in another language, with no meaning such as the term would suggest to ordinary ears. We let him state his ideas in his own way:—

The name hare-bell is at present assigned to the wild hyacinth (*Scilla Nutans*), but properly belonging to the blue-bell (*Campanula rotundifolia*). Harebell may be traced to the Welsh *awyr-bel*, a balloon; that is, an inflated ball or distended globe or bell, to which description this flower corresponds; the name therefore would be more correctly spelled 'Airbell.' Fox-glove, embodying the entire sense of the Latin *Digitalis purpurea*, is simply the red-glove, or red-gauntlet, for fox or foxy, as the Latin *fuscus*, and Italian *fosco*, signifies tawny or red, and hence is derived the name of the fox himself. The toad-flax (*Cymbalaria Italica*) is so named from the appearance it presents of a multitudinous mass of threads (flax), matted together in a cluster or branch, for which our old language had the significant term *toad*, which may be met with in several of our older dictionaries, from *tot*, or *total*, a mass or assemblage of things. So the toad-pipe (*Equisetum Arvense*), which consists of a cluster of jointed hair-like tubes, as also the bastard-toad-flax, a plant with many clustering stems, both have the term *toad* or *tod* applied to them for the same reason. Louse-wort (*Pedicularis palustris*) appears to be only a corruption of loose-wort, the plant being otherwise called the red-rattle, from its near resemblance to the yellow-rattle (*Rhinanthus*), the seeds of which, being loosely held in a spacious inflated capsule, may be distinctly heard to rattle when the ripe, dry seed-vessel is shaken. Buck-bean (*Menyanthes trifoliata*) is more correctly bog-bean, its habitat being in very wet bog land. Swallow-wort, otherwise celandine (*Chelidonium Majus*), is properly swallow-wort, having received this name from the dark yellow juice which exudes freely from its stems and roots when they are broken. Horse-radish takes its name from its excessive pungency, horse, as thus used, being derived from the old English *curs*, or Welsh *gures*, signifying hot or fierce; and the horse-chestnut, not from any relation to a chestnut horse, but for a like reason, namely, that it is hot or bitter, and therein differs from the sweet or edible chestnut. The horse-mint also is pungent and disagreeable to the taste and to the smell, as compared with the cultivated kinds of mint.

Bear's garlic or the common wild garlic (*Allium ursinum*), may be traced in the Latin specific name, *ursinum*, and this, although it would at the present time be interpreted as 'pertaining to a bear,' may have had what was termed a barbarous origin, viz., *curs*-inon or *urs*-inon, the hot or strong onion. The bear gets his own name, *Ursa*, from the same original, as describing his savage ferocity. The sow-thistle, which is not indeed a true thistle, has the latter part of its name from the thistle-like appearance of its leaves; when these are handled, however, they are found to be perfectly inoffensive—they are formidable to the eye only, being too soft to inflict the slightest puncture; hence *sote* or *sooth*-thistle, that is soft thistle. The duck-weed, or ducks-meat, is by no means choice food for ducks, but simply ditchweed. It is that minute, round, leaf-like plant which so densely covers old moats and ponds with a green mantle. Its Latin name, *Lemna*, confirms this, derived as it is from the Greek *Limné*, a stagnant pool. The

corruption in this case may have originated in a misconstruction of the Saxon word *Dig*, which signifies both a ditch and a duck. This is still used in both senses in districts in our own country where a Saxon dialect prevails.

Colts'-foot (*Tussilago farfara*) seems to be either from cough-wood or cold-wood, in accordance with the Latin name, which is derived from *Tussis*, a cough. We are disposed to regard it as a corruption, and to conclude that it refers to the medicinal use of the plant, because, in our English species at least, we see no resemblance to the foot of a horse, whereas its virtue in the cure of colds, coughs, and hoarseness, has, whether justly or not, been believed in from time immemorial. Pliny tells us that it had been in use from remote times, even at his day, the fume of the burning weed being inhaled through a reed.

Lastly may be instanced the well-known gooseberry, notable for two things of very opposite character—for its fruit and its thorns,—the latter hardly less dreaded than the former is coveted, and in the name given to this tree may be found a combined reference to these two features—its terrors and its attractions. In the Italian, *Uva spina*, this is very plainly shewn. The old English name *carberry*, probably has the same meaning; and the north country name, *gozar* or *groser*, as also the French *groseille*, and the Latin *grossularia*, scarcely conceal in their slightly inverted form the original gorse, which means prickly. In short, we regard the name gooseberry as simply a modified form of gorseberry. There was a time when goose was both written and pronounced *gos*, as is shewn by the still current word *gosing*, a young goose, and gorse (the furze or whin) is familiarly pronounced exactly in the same way; therefore the transition of gorse to goose will not be wondered at.

ARCHERY IN ENGLAND.

In an epistle to the sheriffs of London, dated 12th June 1349, Edward III. sets forth how 'the people of our realm, as well of good quality as mean, have commonly in their sports before these times exercised their skill of shooting arrows; whence it is well known that honour and profit have accrued to our whole realm, and to us, by the help of God, no small assistance in our warlike acts.' Now, however, 'the said skill being as it were wholly laid aside,' the king proceeds to command the sheriffs to make public proclamation that 'every one of the said city, strong in body, at leisure times on holidays, use in their recreations bows and arrows, or pellets or bolts, and learn and exercise the art of shooting, forbidding all and singular on our behalf, that they do not after any manner apply themselves to the throwing of stones, wood, or iron, handball, football, bandyball, cambuck, or cockfighting, nor suchlike vain plays, which have no profit in them.'

It is not surprising that the king was thus anxious to keep alive archery, for from the Conquest, when it proved so important at Hastings, it had borne a distinguished part in the national military history. Even in his own time, notwithstanding the king's complaint of its decay, it was (to use modern language) an arm of the greatest potency. Creçy, Poitiers, and Agincourt were, in fact, archers' victories. At Homildon, the men-at-arms merely looked on while the chivalry of Scotland fell before the cloth-yard shafts. In one skirmish in the French

wars, eighty bowmen defeated two hundred French knights; and in another a hundred and

and gentlemen in white satin, and all his guard and yeomen of the crown in white sarcenet; and

twenty were disposed of by a sixth of their number. There is a well-known act of the Scottish parliament, in the reign of James I., expressive of the eagerness of the rulers of that nation to bring them up to a par with the English in this respect.

In the reign of Edward IV., it was enacted that every Englishman, whatever his station, the clergy and judges alone excepted, should own a bow his own height, and keep it always ready for use, and also provide for his sons' practising the art from the age of seven. Butts were ordered to be erected in every township, where the inhabitants were to shoot 'up and down,' every Sunday and feast day, under penalty of one halfpenny. In one of his plain-speaking sermons, Latimer censured the degeneration of his time in respect to archery. 'In my time my poor father was as delighted to teach me to shoot as to learn any other thing; and so, I think, other men did their children; he taught me how to draw, how to lay my body and my bow, and not to draw with strength of arm as other nations do, but with strength of body. I had my bow bought me according to my age and strength; as I increased in them, so my bows were made bigger and bigger; for men shall never shoot well, except they be brought up to it. It is a goodly art, a wholesome kind of exercise, and much commended as physick.' From this time the art began to decline. Henry VII. found it necessary to forbid the use of the cross-bow, which was growing into favour, and threatening to supersede its old conqueror, and his successor fined the possessor of the former weapon ten pounds. Henry VIII. was himself fond of the exercise, and his brother Arthur was famed for his skill, so that archers did not lack encouragement. 'On the May-day then next following, the second year of his reign,' says Holinshed, 'his grace being young, and willing not to be idle, rose in the morning very early, to fetch May, or green boughs; himself fresh and richly appareled and clothed, all his knights, squires,

and so went every man with his bow and arrows shooting to the wood, and so returning again to the court, every man with a green bough in his cap. Now at his returning, many hearing of his going a Maying, were desirous to see him shoot, for at that time his grace shot as strong and as great a length as any of his guard. There came to his grace a certain man with bow and arrows, and desired his grace to take the muster of him, and to see him shoot; for at that time his grace was contented. The man put then one foot in his bosom, and so did shoot, and shot a very good

shot, and well towards his mark; whereof not only his grace, but all others greatly marvelled. So the king gave him a reward for his so doing, which person after of the people and of those in the court was called, Foot-in-Bosom.' Henry conferred on Barlow, one of his guard, the jocular title of Duke of Shoreditch, as an acknowledgment of his skill with the bow, a title long afterwards held by the principal marksman of the city. In 1544 the learned Ascham took up his pen in the cause of the bow, and to counsel the gentlemen and yeomen of England not to change it for any other weapon, and bravely does he in his *Toxophilus* defend the ancient arm, and show 'how fit shooting is for all kinds of men; how honest a pastime for the mind; how wholesome an exercise for the body; not vile for great men to use, nor costly for poor men to sustain; not lurking in holes and corners for ill men at their pleasure to misuse it, but abiding in the open sight and face of the world, for good men if at fault, by their wisdom to correct it.' He attributes the falling-off in the skill of Englishmen to their practising at measured distances, instead of shooting at casual marks, or changing the distance at every shot.

On the 17th of September 1583, there was a grand muster of London archers. Three thousand of them (of whom 942 wore gold chains), attended by bellmen, footmen, and pages, and led by the Duke of Shoreditch, and the Marquises of Clerkenwell, Islington, Shacklewell, Hoxton, and St John's Wood, marched through the city (taking up the city dignitaries on the route) to Hoxton Fields, where a grand shooting match took place, the victors in the contest being carried home by torchlight to a banquet at the Bishop of London's palace.

Charles I., himself skilled in the use of the long bow, appointed two special commissions to enforce the practice of archery; but with the civil war the art died out; in that terrible struggle the weapon that had won so many

fields took no part, except it might be to a small extent in the guerilla warfare carried on against Cromwell in the Scottish Highlands. Charles II. had his keeper of the bows; but the office was a sinecure. In 1675, the London bowmen assembled in honour of Mayor Viners of 't'other Bottle' fame, and now and then spasmodic efforts were made to renew the popularity of the sport, but its day had gone, never to return.

In war, hoblors, or mounted archers, were employed to disperse small bodies of troops, and frustrate any attempts of the beaten foe to rally. The regular bowmen were drawn up on a 'hearse,' by which the men were brought as near the enemy as possible, the front of the formation being broad, while its sides tapered gradually to the rear. They were generally protected against the charge of horsemen by a barrier of pikes, or in default

'Sharp stakes cut out of hedges
They pitched on the ground confusedly,
To keep the horsemen off from breaking in.'

Each archer carried sixteen heavy and eight light shafts. The range of the former was about 240 yards, for Drayton records, as an extraordinary feat, that an English archer at Agincourt

'Shooting at a French twelve score away,
Quite through the body stuck him to a tree.'

The lighter arrows, used to gall the enemy, would of course have a longer range. Neade says an old English bow would carry from 18 to 20 score yards, but this seems rather too liberal an estimate. Shakspeare says: 'A good archer would clap in the clout at twelve score, and carry a forehand shaft a fourteen and a fourteen and a half.' The balladmongers make Robin Hood and Little John shoot a measured mile, and give the father of the Sherwood outlaw credit for having sent an arrow two north country miles and an inch at a shot!

Wych, hazel, ash, and elm were used for ordinary bows, but war-bows were always made of yew. The prices were usually fixed by statute. In Elizabeth's reign they were as follows:—Best foreign yew 6s. 8d.; second best, 3s. 4d.; English yew, and 'livery' bows (of coarsest foreign yew) 2s. Bows were rubbed with wax, resin, and tallow, and covered with waxed cloth, to resist the effects of damp, heat, and frost. Each bow was supplied with three good hempen strings, well whipped with fine thread.

The length of a bow was regulated by the height of the archer, the rule being that it should exceed his stature by the length of his foot. The arrows used at Agincourt were a yard long without the head, but the usual length was from twenty-seven to thirty-three inches. They were made of many woods,—hazel, turkeywood, fustic, alder, beech, blackthorn, elder, sallow; the best being of birch, oak, ash, service-tree, and hornbeam. The grey goose feather was considered the best for winging them, and the various counties were laid under contribution for a supply of feathers whenever war was impending.

The ancient weapon of England has degenerated into a plaything; but in the Volunteer movement we have a revival of the spirit which made the long-bow so formidable in the 'happy hitting hands' of our ancestors; and we may say of the rifle as Ascham said of the bow, 'Youth should use it for the most honest pastime in peace, that men might handle it as a most sure weapon in war.'

JUNE 13.

St Anthony of Padua, confessor, 1231. St Damnade of Ireland, virgin.

ST ANTHONY OF PADUA.

Few of the mediæval saints adopted into the Romish calendar have attained to such lasting celebrity as St Anthony, or Antonio, of Padua. All over Italy his memory is held in the highest veneration; but at Padua in particular, where his festival is enthusiastically kept, he is spoken of as *Il Santo*, or the saint, as if no other was of any importance. Besides larger memoirs of St Anthony, there are current in the north of Italy small chap-books or tracts describing his character and his miracles. From one of these, purchased within the present year from a stall in Padua, we offer the following as a specimen of the existing folk-lore of Venetian Lombardy. St Anthony was born at Lisbon on the 15th of August 1195. At twenty-five years of age he entered a convent of Franciscans, and as a preaching friar most zealous in checking heresy, he gained great fame in Italy, which became the scene of his labours. In this great work the power of miracle came to his aid. On one occasion, at Rimini, there was a person who held heretical opinions, and in order to convince him of his error, Anthony caused the fishes in the water to lift up their heads and listen to

ST ANTHONY PREACHING TO THE FISHES.

his discourse. This miracle, which of course converted the heretic, is represented in a variety of cheap prints, to be seen on almost every stall in Italy, and is the subject of a wood-cut in the chap-book from which we

quote, here faithfully represented. On another occasion, to reclaim a heretic, he caused the man's mule, after three days' abstinence from food, to kneel down and venerate the host, instead of rushing to a bundle of hay that was set before it. This miracle was equally efficacious. Then we are told of St Anthony causing a new-born babe to speak, and tell who was its father; also, of a wonderful miracle he wrought in saving the life of a poor woman's child. The woman had gone to hear St Anthony preach, leaving her child alone in the house, and during her absence it fell into a pot on the fire; but, strangely enough, instead of finding it scalded to death, the mother found it standing up whole in the boiling cauldron. What with zealous labours and fastings, St Anthony cut short his days, and died in the odour of sanctity on the 13th of June 1231. Padua, now claiming him as patron saint and protector, set about erecting a grand temple to his memory. This large and handsome church was completed in 1307. It is a gigantic building, in the pointed Lombardo-Venetian style, with several towers and minarets of an Eastern character. The chief object of attraction in the interior is the chapel specially devoted to Il Santo. It consists of the northern transept, gorgeously decorated with sculptures, bronzes, and gilding. The altar is of white marble, inlaid, resting on the tomb of St Anthony, which is a sarcophagus of verd antique. Around it, in candelabra and in suspended lamps, lights burn night and day; and at nearly all hours a host of devotees may be seen kneeling in front of the shrine, or standing behind with hands devoutly and imploringly touching the sarcophagus, as if trying to draw succour and consolation from the marble of the tomb. The visitor to this splendid shrine is not less struck with the more than usual quantity of votive offerings suspended on the walls and end of the altar. These consist mainly of small framed sketches in oil or water colours, representing some circumstance that calls for particular thankfulness. St Anthony of Padua, as appears from these pictures, is a saint ever ready to rescue persons from destructive accidents, such as the overturning of wagons or carriages, the falling from windows or roofs of houses, the upsetting of boats, and such like; on any of these occurrences a person has only to call vehemently and with faith on St Anthony in order to be rescued. The hundreds of small pictures we speak of represent these appalling scenes, with a figure of St Anthony in the sky interposing to save life and limb. On each are inscribed the letters P. G. R., with the date of the accident;—the letters being an abbreviation of the words *Per Grazia Ricevuto*—for grace or favour received. On visiting the shrine, we remarked that many are quite recent; one of them depicting an accident by a railway train. The other chief object of interest in the church is a chapel behind the high altar appropriated as a reliquary. Here, within a splendidly decorated cupboard, as it might be called, are treasured up certain relics of the now long deceased saint. The principal relic is the tongue of Il Santo, which is contained within an elegant case of silver gilt, as here represented. This

with other relics is exhibited once a year, at the

TONGUE OF ST ANTHONY IN ITS SHRINE AT PADUA.

great festival on the 13th of June, when Padua holds its grandest holiday.

* * It is to be remarked that the article entitled 'St Anthony and the Pigs,' inserted under January 17, ought properly to have been placed here, as the patronship of animals belongs truly to St Anthony of Padua, most probably in consequence of his sermon to the fishes.

Born.—C. J. Agricola, Roman commander, 40, *Frejus, in Provence*; Madame D'Arblay (*née Frances Burney*), English novelist, 1752, *Lyme Regis*; Dr Thomas Young, natural philosopher, 1773, *Melverton, Somersetshire*; Rev. Dr Thomas Arnold, 1795, *Cowes, Isle of Wight*.

Died.—Charles Francis Panard, French dramatist, 1765; Simon Andrew Tissot, eminent Swiss physician, 1797, *Lausanne*; Richard Lovell Edgeworth, writer on education, 1817, *Edgeworthstown, Ireland*.

AGRICOLA.

The admirable, honest, and impartial biography of Cnæus Julius Agricola, written by the Roman historian Tacitus, who married his daughter, paints him in all the grave, but attractive colours of a noble Roman; assigning to him a valour and virtue, joined to a prudence and skill, which would not have failed to do honour to the best times of the Republic.

But Agricola is chiefly interesting to us from his connexion with our own country. His first service was in Britain, under Suetonius Paulinus, the Roman general who finally subdued the rebellious Iceni, under Boadicea, their queen,

when 80,000 men are said to have fallen. Agricola afterwards, under the wise reign of Vespasian, was made governor of Britain. He succeeded in destroying the strongholds of North Wales and the Isle of Anglesea, which had resisted all previous efforts, and finally reduced the province to peace; after which he shewed himself at once an enlightened and consummate general, by seeking to civilize the people, by encouraging education, by erecting buildings, by making roads, and by availing himself of all those means which benefit a barbarous country, while they effectually subdue it. When he had in this way established the tranquillity of the province, he proceeded to extend it. Crossing the Tweed, he steadily advanced northwards, the enemy retreating before him. He built a line of forts from the Firth of Forth to the Clyde, and sent the fleet to explore the unknown coast, and to act in concert with his land forces, till at length, having hemmed in the natives on every side, he gained the decisive battle of the Mons Grampius, in which Galgacus so bravely resisted him; after this he retired into the original province, and was recalled by Domitian out of jealousy.

Agricola died soon after his return to Rome, in the year 93, in his fifty-fourth year; the circumstances of his death were somewhat peculiar, and Tacitus throws out a hint that he might have been poisoned.

FANATICISM ANALYSED BY ARNOLD.

Arnold regarded fanaticism as a form of selfishness. 'There is an ascending scale,' said he, 'from the grossest personal selfishness, such as that of Cæsar or Napoleon, to party selfishness, such as that of Sylla, or fanatical selfishness, that is the idolatry of an idea or principle, such as that of Robespierre or Dominic, and some of the Covenanters. In all of these, excepting perhaps the first, we feel a sympathy more or less, because there is something of personal self-devotion and sincerity; but fanaticism is idolatry, and it has the moral evil of idolatry in it; that is, a fanatic worships something which is the creature of his own devices, and thus even his self-devotion in support of it is only an apparent self-sacrifice, for it is in fact making the parts of his nature or his mind which he least values offer sacrifice to that which he most values.'

On another occasion he said: 'The life and character of Robespierre has to me a most important lesson; it shows the frightful consequences of making everything give way to a favourite notion. The man was a just man, and humane naturally, but he would narrow everything to meet his own views, and nothing could check him at last. It is a most solemn warning to us, of what fanaticism may lead to in God's world.*'

It is a pity that Arnold did not take us on from personal to what may be called class or institutional fanaticism, for it is a principle which may affect any number of men. We should have been glad to see from his pen an analysis of that spirit under which a collective body of men will grasp, deny justice, act falsely

* Stanley's *Life of Dr Arnold*, ii. 41.

and cruelly, all for the good of the institution which they represent, while quite incapable of any such procedure on their own several accounts. Here, too, acting for an idea, there is an apparent exemption from selfishness; but an Arnold could have shown how something personal is, after all, generally involved in such kinds of procedure; the more dangerous, indeed, as well as troublesome, that it can put on so plausible a disguise. There are even such things as fanaticisms upon a national scale, though these are necessarily of rarer occurrence; and then do we see a whole people propelled on to prodigious exterminating wars, in which they madly ruin, and are ruined, while other nations look on in horror and dismay. In these cases, civilization and religion afford no check or alleviation of the calamity: the one only gives greater means of destruction; the other, as usual, blesses all banners alike. The sacred name of patriotism serves equally in attack and defence, being only a mask to the selfish feelings actually concerned. All such things are, in fact, IDOLATRIES—the worship of something which is 'the creature of our own devices,' to the entire slighting and putting aside of those principles of justice and kindness towards others which God has established as the only true guides of human conduct.

JUNE 14.

St Basil the Great, Archbishop of Cæsarea, confessor 379. Saints Rufinus and Valerius, martyrs. St Doemael, or Toël, confessor, 6th century. St Nennus, or Nehemias, abbot, 7th century. St Psalmodius, hermit, 7th century. St Methodius, confessor, Patriarch of Constantinople, 846.

Born.—Thomas Pennant, naturalist, miscellaneous writer, 1723, *Bourning, Flintshire*.

Died.—Father Garasse, French Jesuit controversialist, 1631, *Poitiers*; Sir Harry Vane, English patriot, beheaded, 1662, *Tower of London*; Marin Leroi, sieur de Gomberville, author of *Polexandre* and other romances, 1674; Dr Ralph Bathurst, 1704, *Oxford*; Claude Fleury, confessor to Louis XV. (ecclesiastical history), 1723; Colin Maclaurin, mathematician, 1746; General J. B. Kleber, assassinated, 1800, *Cairo*; General Louis Dessaix, killed at Marengo, 1800.

THE HASTINGS DIAMOND.

At a levee held on the 14th of June, 1786, a very valuable diamond, of unusual size and brilliancy, was presented to George III., ostensibly as a gift from the Nizam, or native ruler of the Deccan. At the period when this magnificent peace offering was given to the king, the impeachment of Warren Hastings was advancing in Parliament; and it was very generally said, even publicly in the House of Commons, that this, with several other diamonds, was the purchase-money of Hastings's acquittal. Caricatures on the subject appeared in the windows of the print shops. One represented Hastings wheeling the king to market in a barrow, and saying, 'What a man buys he may sell again.' In another, the king was exhibited in a kneeling posture, with his mouth open, and Hastings throwing diamonds

into it. An Italian juggler, then in London, pretending to eat paving-stones, had placarded the walls with bills describing himself as 'The Great Stone-eater'; the caricaturists, improving upon the hint, represented the king in the character of 'The Greatest Stone-eater'; and the following ballad was sung about the streets, to the infinite amusement of the populace.

'A FULL AND TRUE ACCOUNT
OF THE
WONDERFUL DIAMOND PRESENTED TO THE KING'S
MAJESTY,
BY WARREN HASTINGS, ESQ.,
ON WEDNESDAY, THE 14TH OF JUNE, 1786.

'I'll sing you a song of a diamond so fine,
That soon in the crown of our monarch will shine,
Of its size and its value the whole country rings,
By Hastings bestowed on the best of all kings.

Derry down, &c.

From India this jewel was lately brought o'er,
Though sunk in the sea, it was found on the shore,
And just in the nick to St James's it got,
Carried in a bag by the great Major Scott.

Derry down, &c.

Lord Sydney stepp'd forth when the tidings were
known,

It's his office to carry such news to the throne,
Though quite out of breath, to the closet he ran,
And stammered with joy, ere his tale he began.

Derry down, &c.

Here's a jewel, my liege, there's none such in the
land,

Major Scott, with three bows put it into my hand;
And he swore, when he gave it, the wise ones were
bit,

For it never was shewn to Dundas or to Pitt.

Derry down, &c.

"For Dundas," cried our sovereign, "unpolished and
rough,

Give him a Scotch pebble, it's more than enough;
And jewels to Pitt, Hastings justly refuses,
For he has already more gifts than he uses."

Derry down, &c.

"But run, Jenkyn, run!" adds the king in delight,
"Bring the queen and the princesses here for a sight;
They never would pardon the negligence shown,
If we kept from their knowledge so glorious a
stone."

Derry down, &c.

"But guard the door, Jenkyn, no credit we'll win,
If the prince in a frolic should chance to step in;
The boy to such secrets of state we'll not call,
Let him wait till he gets our crown, income, and
all."

Derry down, &c.

In the princesses run, and surprised cry "O la!
'Tis as big as the egg of a pigeon, papa!"

"And a pigeon of plumage worth plucking is he,"
Replies our good monarch, "who sent it to me."

Derry down, &c.

Madam Schwellenbergh peeped through the door at
a chink,

And tipped on the diamond a sly German wink;
As much as to say, "Can he ever be cruel
To him who has sent us so glorious a jewel?"

Derry down, &c.

Now God save the queen, while the people I teach
How the king may grow rich while the commons
impeach;

Let nabobs go plunder and rob as they will,
And throw in their diamonds as grist to his mill.

Derry down, &c.'

MUTINIES OF 1797.

Following hard upon the quasi national insolvency of February 1797—the natural consequence of an unsuccessful war—came a series of seamen's mutinies which threatened to paralyse the best arm remaining to England, and lay her open to the invasion of her enemies.

For some years the seamen of the navy had complained of their treatment, and, as was afterwards generally acknowledged, with just cause. Their pay, and their prospective pensions from Greenwich Hospital, had received no augmentation since the time of Charles II.; prize money went almost wholly to the officers; and the captains and lieutenants often displayed much cruelty towards the men. In the month of March, petitions from four ships of war were sent to Lord Howe, who commanded the Channel fleet, intreating his lordship, as 'The Seaman's Friend,' to intercede with the Admiralty for the sailors, as a means of obtaining better treatment for them. The petitions were deemed rather mutinous in tone, but no special notice was taken of them. In April the Government were startled to hear that a mutiny had been planned at Spithead; the fleet was ordered hastily out to sea, as the most prudent course; but the seamen took matters at once into their own hands. The officers were deposed and guarded; delegates from all the ships in the Channel fleet met in the state cabin of the *Queen Charlotte*; and these delegates drew up an oath of fidelity, which all the men accepted. The proceeding was of course unlawful; but their wrongs were grievous, and their general conduct in other ways was admirable. A humiliating correspondence was opened by the Admiralty; offers, in a petty, narrow spirit were made; and these offers were accepted by the mutineers on the 23rd, although not without some distrust. Mutiny broke out again on the 7th of May, because the men found that the royal pardon was not accompanied by an effectual redress of grievances. Again the mutineers displayed surprising dignity and forbearance, deposing their officers, it is true, but maintaining admirable discipline on board the several ships. The Government, now thoroughly alarmed, hastily obtained an act of parliament for increased pay and food, prize-money and pension, to the seamen of the Royal Navy. Mr Pitt displayed extreme mortification when asking the House of Commons to vote £460,000 for this purpose, and urged the members to pass the bill with as few comments as possible. Lord Howe, the best man who could have been selected for the duty, went down to Portsmouth with the act of parliament and the royal pardon in his pocket. On the 15th of May he had the pleasure of seeing the mutineers return to their duty. All was not over, however. The *Nore* fleet mutinied on the 20th, and called themselves a 'floating republic,' under the presidency of Richard Parker, a sailor of some education and much ambition. This was a mutiny that obtained very little of the public sympathy; it was not a demand for redress of real grievances, so much as an attempt to republicanize the fleet. The seamen at the *Nore* shared all the advantages of

the new arrangements, and could only make new demands which the Government was quite justified in resisting. King, government, parliament, and people were against these mutineers at the Nore. Batteries, served with red-hot shot, were planted along the Kent and Essex shores to shoot them; and the seamen at Spithead made it known that they had no sympathy with Parker's proceedings. Dissensions then broke out in the several ships of the rebel fleet; many of the seamen hoisted the national flag in honour of the king's birthday on the 4th of June, against the wish of Richard Parker; and this audacious man felt his power gradually slipping through his hands. The ships left the rebel fleet one by one, according as their crews felt the consciousness of being in the wrong. At length, on the 14th, the crisis arrived. Parker exercised his presidency on board the *Sandwich*, 90 guns, from which he had expelled Vice-Admiral Buckner. The crew of that ship, in spite of his remonstrances, carried it under the guns at Sheerness, and delivered him up to a guard of soldiers. All the ships returned to their duty; very few of the men were punished; and soon afterwards a royal pardon was issued. Some of the more active leaders, however, were tried and executed. Parker's trial, on board the *Neptune*, lasted three days; he was cool and collected, and acknowledged the justice of the fatal sentence passed on him. His wife, a woman far superior to the general class of sailors' wives, made a strenuous effort to gain admission to Queen Charlotte, to beg her husband's life, offering a large reward to some of the attendants at the palace if they would further her views. All failed, and Parker was executed.

Circumstances which transpired during the trial brought to light the fact that many men had entered the navy whose antecedents were inconsistent with a sailor's life. Disqualified attorneys, cashiered excisemen, and dismissed clerks, wanting the means of daily support, were enticed by high bounty into the service; while two or three delegates or agitators from political societies, influenced by the excitement of the times, became seamen as a means of revolutionizing or republicanizing the royal fleets. Richard Parker in all probability belonged to one of these two classes, perhaps to both.

JUNE 15.

Saints Vitus, or Guy, Crescentia, and Modestus, martyrs, 4th century. St Vauge, or Vorech, hermit in Cornwall, 585. St Landelin, Abbot of Crespin, 686. St Bernard of Menthon, confessor, 1008. Blessed Gregory Lewis Barbado, Cardinal Bishop of Padua, confessor, 1697.

ST VITUS.

This saint has an importance from a purely accidental cause. In the Romish hagiology, we only find that he was a Sicilian boy who was made a Christian by his nurse, and, subsequently flying from a pagan father's wrath into Italy, fell a martyr under the sweeping persecution by Diocletian.* Somehow a chapel near Ulm was

* Butler's *Lives of the Saints*.

dedicated to him; and to this chapel came annually some women who laboured under a nervous or hysteric affection impelling them to violent motion. This ailment came to be called St Vitus's Dance, and perhaps the term was gradually extended to other affections involving involuntary muscular motion, of which there seems to be a considerable number. In modern times, in English medical practice, the name of St Vitus's Dance is confined to an ailment which chiefly befalls young persons during the five or six years preceding puberty, and manifests itself in an inability to command the movements of the limbs. As to its cause, whether nervous or intestinal, and equally as to the means of its cure, the greatest dubiety seems to prevail.*

Born.—Edward, 'the Black Prince,' 1330, *Woodstock*; Thomas Randolph, poet, 1605, *Badby, Northamptonshire*; Anthony Francis de Fourcroy, eminent French chemist, 1755, *Paris*.

Died.—Wat Tyler, plebeian insurgent, slain in Smithfield, 1381; Philip the Good, of Burgundy, 1467, *Bruges*; René Aubert de Vertot, French historian, 1735, *Paris*; James Short, maker of reflecting telescopes, 1768; Francis Pilatre de Rosier, killed by falling from a balloon, 1785, near *Boulogne*; Freteau de St Just, guillotined, 1794, *Paris*; Thomas Campbell, poet, 1844, *Boulogne*.

EDWARD THE BLACK PRINCE.

In the whole range of English history there is no name so completely wrapped up in the idea of English chivalry as that of Edward the Black Prince. Born on the 15th of June 1330, the son of Edward III. and Philippa of Hainault, he was only in his sixteenth year when he accompanied

EDWARD, THE BLACK PRINCE.

his father in the expedition into France which was crowned by the battle of Crécy. On that

* *Cyclopaedia of Practical Medicine*, i. 407.

memorable day, Sunday, the 26th of August, the young prince, supported by the Earls of Warwick and Hereford, the gallant John Chandos, and Godfroi d'Harcourt, had the command of the vanguard, or first of the three divisions into which the English army was divided, which in fact bore the brunt of the battle. It was the beginning of an entirely new system of military tactics, and the English men-at-arms on this occasion had dismounted from their horses, and engaged on foot the far more numerous mounted men-at-arms of France, who were led by princes and nobles, always looked upon as the ablest and bravest of the feudal chivalry of France. The English, encouraged by the conduct of their young leader, fought steadily in their ranks, but the struggle seemed so unequal, that the Earls of Northampton and Arundel, who commanded the second, or central division of the English army, hastened to their assistance; yet, though the force of the enemy appeared still so overwhelming, King Edward, who commanded the third division, or rear-guard, continued to stand aloof, and held his division in inaction. He appears to have had the greatest confidence in his son, and he was far better aware of the importance of the change in military tactics which he was inaugurating than any of his contemporaries. The Earls of Northampton and Arundel, however, when they moved up to support the Prince, dispatched a messenger to the king, who was surveying the battle calmly from the mound of a windmill, to ask him for immediate succour. When he had delivered his message, the king asked him, 'Is my son dead? or is he struck to the ground, or so wounded that he cannot help himself?' 'God forbid, Sir,' the messenger replied, 'but he is hard beset, and your aid would be right welcome.' The king replied firmly, 'Return to those who sent you, and tell them from me that they must not send for me to-day as long as my son is alive. Let the boy earn his spurs.* I desire, if it be God's will, that the day be his, and that the honour of it remain to him and to those whom I have appointed to support him.' The king's confidence gave courage to the English soldiers as well as to the English commanders, and led to that great and decisive victory, in which nearly all the great baronage of France perished. Next day, King Edward's heralds reported that there lay on the field of battle, on the side of the French, the bodies of eleven princes, of eighty knights bannerets, or knights who led their own troops into the field under their own banners, of twelve hundred knights, and of about thirty thousand ordinary soldiers. Among the most illustrious of the slain were John of Luxemburg, King of Bohemia, and his son Charles, who had been elected, through the French interest at Rome, King of the Romans, and was a claimant to the empire. It is said that the crest of the King of Bohemia, three ostrich feathers, with the motto *ich dien* (I serve), being presented to the young prince, he adopted it as

* The spurs were the distinguishing characteristic of knighthood, and the young knight sought to shew himself worthy of them, or, in other words, 'to earn them,' by some gallant deed of chivalry.

his own, and hence this has ever since been the crest of the princes of Wales.

Edward had been created Duke of Cornwall in the year 1337, which is understood to be the first creation of a dukedom by an English monarch, and since that time the eldest son of the King of England is considered as being born Duke of Cornwall. His father had knighted him when the army landed in Normandy on this expedition, and he is said to have gained the popular title of the Black Prince from the circumstance of his usually wearing black armour.

In the hour of battle, the Black Prince never belied the promises he had given on the field of Crécy. At Calais, he is said by his valour to have saved his father from being taken by the enemy; and he was with him again in the great victory gained over the Spaniards at sea in the year 1350. In the August of 1355, the prince proceeded to Bordeaux to take the command in Gascony, and his destructive excursion through the French provinces in the south brought on, on the 19th of September in the following year, the celebrated battle of Poitiers, which was, if anything, a more extraordinary victory than that of Crécy. It was fought in some respects under circumstances not very dissimilar; though the numbers on each side were much less, for the army of the Black Prince is believed to have been under ten thousand men, while that of the King of France was estimated at about fifty thousand. The prince, believing that his father was advancing into France from Calais, had formed the rash design of marching through the heart of France to join him, and he was not made aware of his mistake until he found himself so completely surprised by the French army in the neighbourhood of Poitiers, that it was impossible to avoid a battle with these unequal numbers. It is right to say that the victory must be attributed quite as much to his own great military talents, and to the steady bravery of his officers and troops, as to the blunders and rashness of the French. The quaint old historian Stowe, in describing the prowess of the Black Prince in this battle, quite warms up with his subject. 'Then,' says he, 'bestirreth himself the worthy Prince of Wales, cutting and hewing the Frenchmen with a sharpe sword. In the meantime, Captain de la Buche (the Captal de Buch) marches a compaign aboute under the hanging of the hill, which he with the Prince a little before forsooke. . . . and so sodainly breaking forth unlooked for, and shewing by the ensyne of St George that hee was our friend, the prince with great courage giveth a fresh charge on the French armie, being desirous to breake their ranks before the Captaine aforesayd should set on the side of the battayle. The prince, lustily encountering with his enemies, goeth into the middle of the throng, and where hee seeth most company, there he layeth about him on every side. . . . This was the courage of the prince, who at the length thrusteth thorow the throngs of them that guarded the French king; then should you see an ancient (*ensign*) beginne to nod and stumble, the bearers of them to fall downe, the blood of slaves and princes ran mingled together into the

waters which were nigh. In like sort the bore of Cornwall rageth, who seeketh to have none other way to the French king's standard then by blood onely; but when they came there, they met with a company of stout menne to withstand them; the Englishmen fight, the Frenchmen also lay on, but at length, God having so disposed, the prince presseth forward on his enemies, and like a fierce lion beating downe the proud, hee came to the yielding upp of the French king.' It is hardly necessary to state that the latter, and his youngest son Philippe, a boy of thirteen, who had remained by his side during the whole battle, and was, in fact, the only one of his sons who shewed any courage, were taken, and carried prisoners to Bordeaux. King John of France seemed not greatly to have felt his defeat, and he appeared almost to have forgotten it in his admiration of the knightly courtesy of the Black Prince, who that night served his prisoner at the supper table. The hostilities between England and France were ended for the present by a truce, and the latter country was left to all the consequences of bad government, popular discontent and insurrection, and the ravages and tyranny of the free companies.

The bravery and military talents of the Black Prince seem to have dazzled people's eyes to qualities of a description less to be admired. He appears to have been generous in disposition, and to have been respected and beloved by his friends, and he possessed in a high degree what were then considered noble and courtly feelings; but he shewed on many occasions an inclination to be arbitrary, and he could often be cruel and ferocious. But these, too, were then considered as qualities of a great soldier. He possessed a restless desire of activity, and at the same time a desire to gain popularity. These qualities, perhaps, made him fitter for the governor of a turbulent province than for a statesman at home. He was therefore entrusted with the government of Gascony, and in 1362 his father conferred upon him the duchy of Aquitain. He subsequently married his cousin Joan, the "fair maid of Kent," by whom he had two sons, Edward, who died in infancy, and Richard, called from the place of his birth, Richard of Bordeaux, who subsequently ascended the throne of England as Richard II.

In the year 1365, Pedro, the cruel King of Castile, was dethroned by his subjects, who chose his bastard brother, Enrique (or Henry), king in his stead, and the Black Prince rejoiced in the prospect of another active campaign, when, in the following year, Pedro sought his assistance to recover his throne. The war which occupied the year 1367 presents no great interest for English readers. Prince Edward was victorious again in the battle of Navaretta, fought on the 5th of April, and Pedro was restored to his throne, but only to disgust his protector by his ingratitude. The prince returned to Bordeaux sick in body, and apparently in mind, and his disease soon assumed the character of dropsy. Charles V., now King of France, had made up his mind to undertake a new war in England, and he began by exciting a spirit of insurrection in the provinces under the

government and feudal sovereignty of the Black Prince, in which he was so completely successful, that we cannot suppose that the prince had succeeded in making himself popular among his own subjects. The rapidity with which town after town revolted from him to the French king, at length so roused the prince's anger, that he rose from his bed of sickness at Angoulême, and took the field in person. His valour was rewarded by the capture of Limoges, which had been treacherously surrendered to the French; but his reputation was stained by the massacre in cold blood, by his imperious orders, of 3000 citizens, and by the destruction of the town. This was the last military action in which he commanded in person. In January 1371, he resigned his government to the Duke of Lancaster, his brother, and returned to England. The history of the remaining years of the life of the Prince of Wales is imperfectly known. He appears to have given great displeasure to his father by opposing the misgovernment of the closing period of his reign, and by espousing the popular cause; and extravagant hopes appear to have been raised of the reforms which would take place when the prince himself succeeded to the throne. These prospects, however, were destined never to be realized, for the Black Prince died on the 8th of June 1376, nearly a year before the death of his father. He was deeply lamented by the whole nation.

JAMES EARL OF BOTHWELL.

On the 15th of June 1567, a very hot sunny day, two little armies lay facing each other on a piece of gently sloping ground in Haddingtonshire. Along the crest of the rising ground were about two thousand men, many of them mounted, being chiefly the retainers of a powerful noble, James Earl of Bothwell. Beside the leader were one or two females on horseback, not as taking part in the war, but as under protection. The principal lady was Mary queen of Scots, who had lately wedded Bothwell, knowing or unknowing (who can ever tell which?) that he reeked with the blood of her former husband, Darnley. The army grouped on the slope below was composed of troops hastily assembled by a few nobles who professed indignation at this horrible marriage, and anxiety on account of the danger into which it brought the heir of the crown, the son of Mary, an infant of a year old. All through that long summer day there went on conferences for various issues, with a view to avoiding a hostile collision between the armies. And at length, towards evening, the queen consented to pass under the care of the insurgent lords, on a promise of respectful treatment. The blood-stained Bothwell then took leave of her, and withdrew within his own country to the eastward. They had been married but a month—and they never met again. The infatuated queen, refusing to declare against him or give him up, was deposed, while her infant son was crowned as king in her stead. Bothwell, hunted from the land, took to sea; was chased there; and obtained refuge in Denmark. His bold and unscrupulous mind had speculated

with confidence on being at the head of everything in Scotland through the queen's means. But public opinion was too strong for him. The Scotch people had been accustomed to see a good deal of violence practised by their men of affairs, but they could not stand seeing one king killed, and his murderer placed almost in the throne beside his widow.

It is only of late years that we have got any clear account of Bothwell's subsequent history. It appears that Frederick king of Denmark for some time treated him as a refugee of distinction, who might in time be once more a ruler in his own country. By and by, when made aware of how he stood in Scotland, the Danish monarch became cooler, and remanded the exile to the castle of Malmö, in Sweden, which then belonged to Denmark, and where he was treated as a prisoner, but still an honourable one. Frederick was pulled various ways; the Protestant government in Scotland demanding the rendition of Bothwell as a murderer and the associate of a Catholic sovereign,—Mary, and her friend the king of France, claiming his liberation; Bothwell himself offering to assist in getting the Orkneys back to Denmark as the purchase-money of freedom and assistance. Five years passed in fruitless negotiations. The cause of Mary being in 1573 regarded as ruined, Frederick unrelentingly assigned the Scottish noble to a stricter and baser imprisonment, in the castle of Drachsholm in the island of Zealand. Here his seclusion was so great, that a report of his being dead spread abroad without contradiction; and Mary herself, in her English prison, regarded herself as a widow some years before she really was one. It is now ascertained that Bothwell died on the 14th of April 1578, when he must have been about forty-seven or forty-eight years of age, and after he had endured a captivity more or less strict of nearly eleven years. He was buried in the neighbouring church of Faareveile. So ended a dream of ambition which at first must have seemed of fair enough prospects, being not much out of keeping with the spirit of the age, but which had been signally unfortunate in its results, precipitating both of the principal parties into utter ruin, and leaving their names to suspicion and reproach through all ages.

Mr Horace Marryat, travelling in Denmark in 1858, paid a visit to Faareveile church, and there, in a vault, found the coffin of Bothwell, which had originally been deposited in a chapel of the Adeler family, but afterwards placed in the church, that it might be more conveniently open to the visits of strangers. On the lid being raised, the English visitor beheld the figure of a man of about middle height, whose red hair mixed with grey denoted the age of fifty; with 'high cheek bones, remarkably prominent long hooked nose, somewhat depressed towards the end (this may have been the effect of emaciation), wide mouth; hands and feet small, well-shaped, those of a high-bred man.' The whole aspect suggested to Mr Marryat the idea of 'an ugly Scotchman,' though we think it hard to judge of a man's looks after he has been three hundred years in his grave. Mr

Marryat remarks, 'Bothwell's life was a troubled one; but had he selected a site in all Christendom for quiet and repose in death, he could have found none more peaceful, more soft and calm, than the village church of Faareveile.* It is worthy of remark, that on being first discovered, 'the body was found enveloped in the finest linen, the head reposing on a pillow of satin;' which looks like an evidence that Bothwell was treated with consideration to the last. If it be true, as alleged, that he was for some time chained up in a dungeon—and Mr Marryat tells us he saw, in what is now a wine-cellar, the ring to which he is believed to have been fixed—it may be that the one fact is not irreconcilable with the other, as the consignment to chains in a dungeon might be only a part of the horrible medical treatment for an insane person customary in that age.

A curious relic of Bothwell came before the public in November 1856, in the form of a book from his library. Life is full of surprises. Who could have dreamt that the murderous Scotch earl of the sixteenth century had a library at all? From this volume it fully appeared that he must have possessed one, for it bore his arms stamped on its side; of course, he could not have had a book-stamp unless he had had a plurality of books on which to get it impressed. Another curious and unexpected circumstance was the nature of the book. Had it been one devoted to the arts of the chase, or a copy of *Boccaccio*, one would not have been much surprised: strange to say, it was a philosophical book—*L'Arithmétique et Géométrie de Maistre Etienne de la Roche*, printed at Paris in 1538. Of the fact of Bothwell's ownership the book left no room for doubt, for not only were the arms impressed, but the inscription, 'JACOBUS HEBORN, Comes Bothv. D. Hailes Crichtonia Liddes. et Magn. Admiral. Scotia.' It was supposed that the binding had been executed in France. The volume was purchased by Mr James Gibson Craig, of Edinburgh, for thirteen guineas, and deposited in his beautiful and extensive collection, beside an equally precious volume from the library of Queen Mary.

RISING OF THE NILE.

The great advantages which Egypt derives from the annual inundation of the Nile in saving the country from total barrenness, cause us to feel little wonder at the inhabitants still calling it 'the most holy river;' or that they should believe that it draws its source from paradise. In former days it had its appointed priests, festivals, and sacrifices, and if its rising were delayed for a single day, they took the most beautiful young girl they could find, and dressing her richly, drowned her in the waters, as a victim to turn away the god's anger, and merit his favours. The caliphs abolished this cruel sacrifice, substituting one less barbarous but more ridiculous: they threw into its waters a letter, in which it was commanded to rise if it were the will of God. The inundation usually commences on the 15th of June, the greatest

* *A Residence in Jutland*, &c. 2 vols. 1860, i. 419.

height is at the autumnal equinox, and the waters gradually subside until the following April. The quality of the Nile water for drinking purposes is highly extolled: it is among waters what champagne is among wines, and the priests of Apis would not give it to the sacred bull lest he should become too fat. Benjamin of Tudela describes it as both drink and medicine; and Purchas goes farther: 'Nilus water I thinke to be the profitablest and wholesomest in the world by being both bread and drink.' However long it is kept, it never becomes impure, and it will be remembered that on the late visit of the Pasha of Egypt to this country, he brought jars of the Nile water to use during his absence from home.

JUNE 16.

Saints Ferreolus, or Fargeau, and Ferrutius, martyrs, 211 or 212. Saints Quiricus, or Cyr, and Julitta, martyrs, 304. St Aurelian, Archbishop of Arles, confessor, 552. St John Francis Regis, confessor, 1640.

Born.—Edward I. of England, 1239; Sir John Cheke, learned writer, promoter of the study of polite literature in England, 1514, *Cambridge*; Louis, Duc de Saint-Simon, author of *Memoirs of the Court of France*, 1675, *Paris*; Henrietta Stuart, Duchess of Orleans, 1644, *Exeter*.

Died.—Hugo the Great, father of Hugh Capet, head of the third series of French kings, 956; Sir Richard Fanshawe, accomplished cavalier, ambassador to Spain, 1666, *Madrid*; Sir Tristram Beresford, 1701; John Churchill, Duke of Marlborough, 1722, *Windsor Lodge*; Bishop Joseph Butler, 1752, *Bath*; Jean Baptiste Gresset, French comic poet, 1777, *Amiens*.

SIR TRISTRAM BERESFORD—LEGEND OF THE BLACK RIBBON.

Although Sir Tristram Beresford was the direct ancestor of the Waterford family, and did something for the Protestant cause at the Revolution, he would not have been particularly mentioned in this place but for his connexion with an uncommonly fascinating ghost legend—the foundation of a passage in one of Scott's beautiful ballads:

'For evermore that lady wore
A covering on her wrist.'

The lady to whom Sir Tristram was married, Nicola Sophia Hamilton, daughter of Hugh Lord Glenawley, was educated along with John, second Earl of Tyrone, and, according to the family legend, they were so taught that a belief in a future state was not among their convictions. It was agreed, nevertheless, between the two young people, that in the event of one dying before the other, the deceased should *if possible* return and give certainty to the survivor on that solemn question. In due time they went out on their respective destinations in life; but still an intimacy and occasional visiting were kept up. The Earl died on the 14th of October 1693, in his twenty-ninth year, and it was two or three days after when Lady Beresford attracted her husband's attention at the breakfast-table by a pallid and care-worn look, and her wearing a

black ribbon round her wrist. He inquired the cause of these circumstances; but she declined to give any explanation. She asked, however, very anxiously for the post, as she expected to hear of the death of her friend the Earl of Tyrone. Sir Tristram ridiculed the possibility of her knowing such an event beforehand. 'Nevertheless,' said she, 'my friend died on Tuesday last at four o'clock.' The husband was startled when a letter from Lord Tyrone's steward was soon after handed in, relating how his master had suddenly died at the very time stated by Lady Beresford. 'I can tell you more,' said the lady, 'and it is a piece of intelligence which I know will prove welcome: I shall ere long present you with a son.' This prediction was likewise in due time verified.

During the remaining years of their union the lady continued to wear the black ribbon round her wrist; but her husband died without being made privy to the secret. The widow made an imprudent second marriage with an officer named Gorges, and was very unhappy during her latter years. A month after the birth of a fourth child to Colonel Gorges, the day being her birthday, her friends came to congratulate her, and one of them, a clergyman, told her with a blithe countenance that he had just learned from parochial documents that she was a year younger than she thought—she was only forty-seven. 'Oh, then,' said she, 'you have signed my death-warrant. If I am only forty-seven to-day, I have but a few hours to live, and these I must devote to settling my affairs.' The company having all departed, excepting one intimate female friend, Lady Beresford told that person how it was that she was certain of her approaching death, and at the same time explained the circumstance connected with the sable wrist-band.

During the night preceding the conversation with her husband Sir Tristram Beresford, she awoke suddenly, and beheld the figure of Lord Tyrone at her bedside. She screamed, and endeavoured, but in vain, to awaken her husband. At length recovering some degree of composure, she asked Lord Tyrone how and why he had come there. He reminded her of their mutual promise, and added, 'I departed this life on Tuesday last at four o'clock. I am permitted to give you assurance of another world. I can also inform you that you will bear a son to Sir Tristram, after whose death you will marry again, and have other children, and will die in the forty-seventh year of your age.' 'And how,' said she, 'shall I be certain that my seeing you now, and hearing such important intelligence, are not mere dreams or illusions?' The spirit waved his hand, and the bed-curtains were instantly raised and drawn through a large iron hoop, by which the tester of the bed was suspended. She remained unsatisfied, for she might, she said, exercising the greater strength which one had in sleep, have raised the curtains herself. He then pencilled his name in her pocket-book. Still she doubted—she might imagine in the morning that she had written the name herself. Then, asking her to hold out her hand, the spirit laid a finger as cold as ice upon her wrist, which

was immediately impressed with a black mark, underneath which the flesh appeared to have shrunk. And then he vanished. Soon after completing her recital, and having finally arranged her affairs, the lady calmly expired in the arms of her friend. The ribbon being then removed, the mark was seen for the first time by any eye but her own. It has been stated that the ribbon and also the pocket-book containing the spiritual autograph were, nearly a century after, in the possession of Lady Beresford's grand-daughter, Lady Betty Cobbe, whose husband (son of Cobbe, Archbishop of Dublin) died in his house in Marlborough Buildings, Bath, so recently as 1814. The peerage books inform us that Lady Beresford died on the 23rd February 1713, and was buried in the Earl of Cork's tomb, in St Patrick's Cathedral, Dublin.

The circumstance of the black ribbon, equally picturesque and mysterious, is what has mainly given this family tale the currency which it has in the upper circles of British society. It is, however, remarkable that in this particular it is not without precedent in the annals of demonology. Mrs. Grant, in her *Superstitions of the Highlands*, tells a story of a widow in good circumstances who, going home through a wood at dusk, was encountered by the spirit of her deceased husband, who led her carefully along a difficult bridge, but left a blue mark on her wrist, which the neighbours had opportunities of seeing during the week that she survived the adventure.

Calmet, in his well-known work, *The Phantom World*, quotes a similar tale as told by the reformer Melancthon, whose word, he says, 'ought not to be doubted.*' According to this narration, an aunt of Melancthon, having lost her husband when she was far advanced in pregnancy, 'saw one day towards evening two persons come into her house; one of them wore the form of her deceased husband, the other that of a tall Franciscan. At first she was frightened, but her husband reassured her, and told her that he had important things to communicate to her; at the same time he begged the Franciscan to pass into the next room, while he imparted his wishes to his wife. Then he begged of her to have some masses said for the relief of his soul, and tried to persuade her to give her hand without fear; as she was unwilling to give it, he assured her she would feel no pain. She gave him her hand, and her hand felt no pain when she withdrew it, but was so blackened that it remained discoloured all her life. After that, the husband called in the Franciscan; they went out and disappeared.'

Richard Baxter relates, as coming under his own observation, a circumstance which involves the same kind of material phenomenon as the story of Lady Beresford. A little after the Restoration, when the parliament was passing acts which pressed sore on the dissenters, a lady of good quality and of that persuasion came to him to relate a strange thing that had befallen her. While praying for the deliverance of the faithful from the evils that seemed impending over them, 'it was suddenly given her, that there should be a speedy deliverance, even in a very

short time. She desired to know which way; and it was by somewhat on the king, which I refused to hear out, whether it was change or death. It being set strongly on her as a revelation, she prayed earnestly that if this were a true divine impulse and revelation, God would certify her by some visible sign; and she ventured to choose the sign herself, and laid her hand on the outside of the upper part of her leg, begging of God that, if it were a true answer, he would make on that place some visible mark. There was presently the mark of black spots, like as if a hand had burnt it, which her sister witnessed she saw presently, there being no such thing before.*

Dr Henry More heard from one Mrs Dark, of Westminster, that her deceased husband, when young and in good health, 'going out of his house one morning with the intention of returning to dinner, was, as he walked the streets, struck upon the thigh by an invisible hand (for he could see no man near him to strike him). He returned indeed about dinner-time, but could eat nothing; only he complained of the sad accident that befell him, and grew forthwith so mortally sick that he died in three days. After he was dead, there was found upon the place where he was struck the perfect figure of a man's hand, the four fingers, palm, and thumb, black and sunk into the flesh, as if one should clap his hand upon a lump of dough.†

SIR JOHN SUCKLING.

One of the best specimens of the gay and accomplished courtier of Charles the First's time, ere the evil days of civil war fell upon the land, is afforded to us by the poet, Sir John Suckling. His father having been secretary of state to James I., and comptroller of the household to Charles, Suckling may be said to have been bred at court: yet his education was not neglected, and such was the precocity of his talent and facility in acquiring knowledge, that he was able to speak Latin when only five years of age, and to write it when no more than eight. Ere he had attained the full period of manhood, he had travelled over the greater part of Europe, and been received as a welcome visitor at the principal continental courts. He also served a short but stirring campaign under Gustavus Adolphus, in which he was present at three battles, five sieges, and several lesser engagements.

On his return from travel, Sir John at once took first place among the leaders of wit and fashion; as an old writer observes, 'he was allowed to have the peculiar happiness of making everything he did become him.' When Charles marched against the Scottish Covenanters in 1639, Suckling raised 100 horsemen for the royal service, so very splendidly equipped (the troop cost him the large sum of £12,000), that Charles, not wisely undervaluing his sturdy northern subjects, said that if anything would make the Scotch fight well, it would be the prospect of plunder exhibited by the rich dresses of Suckling's men. This ill-judged expedition produced little result, save a crowd of satirists to ridicule its fruitless

* *Certainty of a World of Spirits*, p. 181.† *Antidote against Atheism*, p. 166.

* He quotes Melancthon's Works, fol. 326.

display; and, in the only skirmish that occurred, near Dunse, the English cavalry, including Suckling's troop, galloped off the field, pursued by a smaller body of the enemy. A satirical ballad was composed on this affair and Suckling's part in it, to a well-known and very lively old English tune, called *John Dory*, which became exceedingly popular, and was sung and printed with many variations. From its peculiar style and manner, we suspect that the ballad was composed by Suckling as a piece of good-humoured banter against himself, and that subsequently the more spiteful variations were added by others.* A few verses of the original are worth reprinting:

' Sir John he got him an ambling nag,
To Scotland for to ride-a,
With a hundred horse more, all his own he swore,
To guard him on every side-a.

No errant knight e'er went to fight
With half so gay a bravada,
Had you seen but his look, you'd have sworn on a
book,
He'd have conquered a whole armada.

The ladies ran all to the windows, to see
So gallant and warlike a sight-a,
And as he passed by they cried with a sigh,
Sir John, why will you go fight-a?

None liked him so well as his own colonel,
Who took him for John de Wert-a; †
But when there were shows of gunning and blows,
My gallant was nothing so pert-a.

The colonel sent for him back again,
To quarter him in the van-a,
But Sir John did swear, he would not come there,
To be killed the very first man-a.'

Suckling's best poem is certainly the celebrated ballad he composed on the marriage of Lord Broghill with Lady Margaret Howard, daughter of the Earl of Suffolk, commencing:—

' I tell thee, Dick, where I have been,
Where I the rarest things have seen,
Oh! things beyond compare.
Such sights again cannot be found
In any place on English ground,
Be it at wake or fair.'

The description of the bride in this ballad has been universally admired; it must be understood that the person speaking is supposed to be a clownish countryman.

' Her finger was so small, the ring
Would not stay on, which they did bring,
It was too wide a peck:
And, to say truth, (for out it must)
It look't like the great collar (just)
About our young colt's neck.

Her feet, beneath her petticoat,
Like little mice stole in and out,

* Perhaps the biographers of Suckling have attached more consequence to his conduct on this occasion than the facts warranted. It has not been remembered that the army brought by King Charles against the Scots in 1639 was wholly without heart in the cause, and indisposed to fight. When such is the humour of a body of soldiery, the commanders are usually left no choice but to make a precipitate retreat.—*Ed.*

† De Wert was a celebrated German general, who had been styled the terror of the French.

As if they feared the light;
But, oh! she dances such a way,
No sun upon an Easter day,
Is half so fine a sight.

Her cheeks, so rare a white was on,
No daisy makes comparison;
(Who sees them is undone;)
For streaks of red were mingled there,
Such as are on a Katherine pear,
The side that's next the sun.

Her lips were red, and one was thin
Compared to that was next her chin;
Some bee had stung it newly;
But, Dick, her eyes so guard her face,
I durst no more upon them gaze
Than on the sun in July.'

The grace and elegance of Suckling's ballads and songs were, in his own day, considered inimitable. Phillips says that, 'They have a touch of a gentle spirit, and seem to savour more of the grape than the lamp.'

One trait in Suckling's character must not be passed unnoticed; in language and idea he was one of the purest, if not the very purest poetical writer of his license-loving era. Indeed, his writings are more unexceptionable in expression, more fit to be read and circulated at the present day, than the productions of many of the so-termed Puritans, his contemporaries. Nor were all Suckling's writings mere poetical trifles. He was the author of a prose work, entitled *An Account of Religion by Reason*. Its aim is to answer the objections then made against admitting a belief in the Christian faith as a matter of reason. This is a work of considerable merit, written with great clearness, ingenuity, and force, and in a manner evidently indicating a sincere piety in the author.

In the short parliament of 1640, the gay poet was elected for Bramber in Sussex; but he was not destined to live much longer in his own country. Becoming engaged in a reactionary conspiracy, he was obliged to fly to Paris, where he lived for some time in great penury. There is in the British Museum a copy of a printed brochure, containing a ballad account of his distresses, as from himself, which gives us the one certain date connected with his life, 16th June 1641. It is believed to have been soon after this time that the cavalier bard, in despair of further happiness, put a period to his own life, when he could not have been much more than thirty-two years of age.

BATTLE OF STOKE.

On the 16th of June 1487, the last contest between the rival houses of York and Lancaster—the last great battle on English soil—was fought near Stoke, in Nottinghamshire. The fortunes of the Red Rose prevailed, firmly securing the house of Tudor on the throne of England; but the destruction of life was lamentable, six thousand men being numbered among the slain.

The Earl of Lincoln, Martin Swartz, Lord Thomas Fitzgerald, and Francis Viscount Lovel, commanded the Yorkist party. Henry VII., aided by the choice of the English nobility,

defended in person his right to the throne. The battle commenced by the Earl of Lincoln descending to the attack from a hill still called 'The Rampire,' hoping by a furious charge to break the first line of the king's army, and thus throw the main body into confusion. But, after fighting desperately for three hours, during which the German auxiliaries under Swartz exhibited great valour, and the Irish under Fitzgerald, armed only with darts and knives, obstinately maintained their ground, the royal troops prevailed, and the insurgents were routed with immense slaughter.

Lambert Simnel, the puppet set up by the Earl of Lincoln to clear his own way to the crown, was taken prisoner, and by an artful stroke of policy was made turnspit in the king's kitchen. But the dead bodies of the earl and all the other principal leaders, save that of Lord Lovel, were found where they had fallen sword-in-hand on the fatal field. Lord Lovel, as it has been often told, was never seen, living or dead, after the battle. Some assert that he was drowned when endeavouring to escape across the river Trent, the weight of his armour preventing the subsequent discovery of his body. Another report was that he fled to the north, where, under the guise of a peasant, he ended his days in peace. Lord Bacon, in his *History of Henry the Seventh*, says that 'he lived long after in a cave or vault.' And this last account has been partly corroborated in modern times. William Cowper, Esquire, Clerk of the House of Commons, writing from Herlingfordbury Park in 1738, says:—'In 1708, upon occasion of new-laying a chimney at Minster Lovel, there was discovered a large vault or room underground, in which was the entire skeleton of a man, as having been sitting at a table, which was before him, with a book, paper, pen, &c.; in another part of the room lay a cap, all much mouldered and decayed. Which the family and others judged to be this Lord Lovel, whose exit has hitherto been so uncertain.'

JUNE 17.

Saints Nicander and Marcian, martyrs, about 303. St Prior, hermit in Egypt, 4th century. St Avitus, or Avy, abbot, near Orleans, about 530. St Botolph, abbot of Ikanho, 655. St Molingus, or Dairchilla, bishop and confessor in Ireland, 697.

JOHN WESLEY.

The founder of Methodism was, as is well known, the son of a clergyman of the Established

Church, and became such himself, attaining his thirty-fifth year without doing anything remarkable, beyond a missionary excursion to the American Indians. Being in London on the 24th of May 1738, he went, 'very unwillingly' to a meeting in Aldersgate Street where one was reading Luther's preface to the Epistle to the Romans. Listening to the reader, 'at about a quarter before nine o'clock,' light flashed upon his mind, and he was converted. Until that evening, he used to say, that although a teacher of others, he had never known what Christianity really was. Following the example of Whitefield, he commenced preaching in the open air, and his life henceforward was consecrated to religious labours among the people. His early efforts were directed to supplement the services of the Church of England, but gradually he superseded them. He built chapels, organized a ministry and worship, allowed laymen to preach, and at last found himself at the head of a great and independent religious community, which in 1790 numbered 76,000 in Great Britain and 57,000 in America. Wesley died in London on the 2nd of March 1791, in his 88th year, and the 65th of his ministry, and was buried in the yard of the Methodist chapel in the City Road.

It would be difficult to find in the whole circle of biography a man who worked harder and longer than John Wesley. Not an hour did he leave unappropriated. For fifty years he rose at four in the morning, summer and winter, and was accustomed to preach a sermon at five, an exercise he esteemed 'the healthiest in the world.' This early devotion, he said, 'is the glory of the Methodists. Whenever they drop it they will dwindle away to nothing.' Travelling did not suspend his industry. 'Though I am always in haste,' he says of himself, 'I am never in a hurry, because I never undertake any more work than I can go through with perfect calmness of spirit. It is true I travel 4000 or 5000 miles in a year, but I generally travel alone in my carriage, and am as retired ten hours a-day as if I were in a wilderness. On other days, I never spend less than three hours, and frequently ten or twelve, alone.' In this way he found time to read much and to write voluminously. In eating and drinking he was very abstemious. Suppers he abhorred, and sometimes for years he never tasted animal food. Once for three or four years he lived almost exclusively on potatoes. From wine, beer, and spirits he habitually abstained, preferring water. Throughout his long life he enjoyed nearly uninterrupted health. He could sleep at will, and he owns that he never lost a night's sleep from his childhood. His fine health he attributed to his regular habits, his temperance, and to the frequent changes of air he experienced in travelling; also to his serene temper; he had a thousand cares resting upon him, but they never worried him. 'I feel and grieve,' he writes, 'but by the grace of God I fret at nothing.' To the end of his life his complexion was fresh, his walk agile, his eye keen and active. A curious and pleasant picture he left in the memory of many who saw him in the street in his old age, and noted his

lithic little figure, his long hair, white and bright as silver, his radiant countenance, his active paces and energetic air. He died painlessly, not of disease, but healthily worn out. Order and method pervaded all his doings. At the middle of 1790 he closed his cash-book with these words written in a tremulous hand:— 'For upwards of seventy-six years I have kept my accounts exactly: I will not attempt it any longer, being satisfied that I save all I can and give all I can; that is, all I have.' This was strictly true. From his youth up he lived on a trifle yearly, and gave the balance of his income away. When at Oxford he had £30 one year; he lived on £28, and gave £2 away. Next year having £60, he lived on £28, and gave away £32. The third year he had £90, and the fourth £120, yet he still limited himself to £28, and made alms of the rest. It is said that in the course of his life he gave away not less than £30,000. This great sum was chiefly derived from the sale of his writings. He was his own printer and bookseller, and managed his trade with economy and success.

Marvellous were Wesley's powers as a leader and administrator. Never general drilled a more heterogeneous army, and never was general more reverentially obeyed. He exacted no service which he did not in his own person exceed. Who could work more than he worked? who spare himself less? His example gave life and inspiration to all who came near him. His strong will and his quick, decisive intellect naturally raised him to kingship, and gathered around him willing and joyful subjects. The constructive force and order of his own mind were reflected in the organization of Methodism, and in the increase and permanence of that community we discern the highest testimony to the vigour and sagacity of his character.

His failures usually arose from the misapplication of those qualities by which he triumphed. As instances we may take Kingswood school and his marriage. At Kingswood, near Bristol, he set up a boarding-school for the sons of his preachers, who, being seldom at home, could not supervise the education of their children. Wesley devised the discipline of the school, and ordered that each day should be divided into three parts; eight hours for sleep, from eight at night to four in the morning, eight hours for study, and eight for meals and—play, no, play John Wesley could see no use for; amusement was proscribed at Kingswood. The hours not spent in sleep and study were to be used for prayer, self-examination, singing, and working in the garden in fine, and in the house in wet weather. The boys were never to be left alone, but always under the eye of a master who was to keep them busy and from idle talk. There were no holidays, and no vacations allowed, because a week from school might undo the good habits they were forming. It is needless to say that Kingswood school would not work, and gave Wesley endless trouble. He changed masters, and expelled some scholars for 'incurable wickedness,' but in vain. The rules were perpetually broken, and he never appears to have had a glimpse of the fact that he was striving after the impossible.

Of the nature of boyhood he had no conception, and why he could not turn out rows of juvenile Wesleys, caring for nothing but work and devotion, was by him set down to any cause but the right one. In his forty-eighth year he married Mrs Vizelle, a widow with four children and a fortune. Her money Wesley would not touch, but had it settled upon her. Some time before he had published *Thoughts on a Single Life*, in which he extolled celibacy, and advised the unmarried, who found it possible, to remain single; alleging that he was a bachelor because he thought he could be more useful in that state. It was a sad day when he changed his mind, and fell in love with Mrs Vizelle. He stipulated with her that he should not preach one sermon nor travel one mile the less after marriage than before; 'if I thought I should,' said he, 'well as I love you, I should never see your face more.' With these views, what could a wife be to him but an incumbrance? At first she conformed to his ascetic habits and travelled with him, but soon she grew tired of his rigid and restless life, and of the society of the humble Methodists to whom she was introduced. She began to grumble, but Wesley was far too busy to attend to her wails; then she grew jealous, opened his letters, followed him from town to town as a spy, and plagued him in every way, openly and secretly, that her malice could contrive. 'By her outrageous jealousy and abominable temper,' says Southey, 'she deserves to be classed in a triad with Xantippe and the wife of Job, as one of the three bad wives.' Wesley, however, was not a man to be henpecked. 'Know me,' said he, in one of his letters to her, 'and know yourself. Suspect me no more, asperse me no more, provoke me no more: do not any longer contend for mastery, for power, money, or praise: be content to be a private insignificant person, known and loved by God and me. . . . Of what importance is your character to mankind? If you were buried just now, or if you had never lived, what loss would it be to the cause of God?' After having been a thorn in his flesh for twenty years, she left his house, carrying off his journals and papers, which she never returned. He simply states the fact in his diary, saying he knew not what the cause had been, and adds, '*Non eam reliqui, non dimisi, non revocabo.*—I did not forsake her, I did not dismiss her, I will not recall her.' She lived ten years after her flight, and, in 1781, died at Camberwell, where a stone in the churchyard attests that 'she was a woman of exemplary virtue, a tender parent, and a sincere friend,' but it mercifully says nothing of her conjugal life.

AUTOGRAPH OF JOHN WESLEY.

LORD WILLIAM BENTINCK.

The inscription which was placed on a statue of Lord William Bentinck, at Calcutta—the composition of Lord Macaulay—gives a fine picture of an enlightened and disinterested public servant. It states that ‘during seven years he ruled India with eminent prudence, integrity, and benevolence,’ never forgetting that ‘the end of government is the happiness of the governed.’ He ‘abolished cruel rites;’ he ‘effaced humiliating distinctions;’ he ‘gave liberty to the expression of public opinion;’ and his ‘constant study was to elevate the intellectual and moral character of the nations committed to his charge.’ It is interesting to compare such a character as this with the accounts we have of the proconsuls of the Roman world: hardly anything could more expressively mark the progress which humanity has made in the last eighteen hundred years, than that such a man as Lord William Bentinck should have adorned our latter times.

THE BATTLE OF BUNKER HILL.

On a hill eighty-seven feet high, once called Breed’s Hill, but now known as Bunker Hill, on the peninsula of Charlestown, north of Boston, Massachusetts, rises a granite obelisk 220 feet in height, built to commemorate the first important battle in the American War of Independence.

Three distinguished generals, Howe, Clinton, and Burgoyne, with 12,000 veteran British troops, and a formidable fleet, occupied Boston. They were besieged by an undisciplined crowd of colonists, without arms, ammunition, supplies, or organization. On the morning of the 17th of June 1775, the British officers in Boston, and on the ships in the harbour, saw to their astonishment a breastwork on Bunker Hill, which had been thrown up in the night, and was every moment growing stronger, so as to threaten their position in a serious manner. This was the work of about fifteen hundred Yankees, under Colonel Prescott.

No time was to be lost. The ships in the harbour and a battery on Copp’s Hill opened fire; but those were not the days of Armstrong artillery. General Howe took 3000 infantry, and crossed over to Charlestown in boats to storm the works. It was a fine summer day, and the hills, spires, and roofs of the city were covered with spectators. Soon a fire, bursting from the wooden houses of the village of Charlestown, added to the grandeur of the spectacle.

General Howe was too proud of British valour to turn the works, but, forming his troops in two columns, marched to the assault. The Americans, who had little artillery, and no ammunition to waste, waited in silence until the British were within ten rods, and preparing to charge, when a sheet of fire broke out along their breastworks with such deadly aim, that whole ranks were cut down, and those not killed or wounded fled precipitately to the water-side. They were rallied, and advanced a second time with a like result. General Clinton, who had watched the progress of the battle from the heights of Boston, now came with reinforcements;

some gunboats enfiladed the works, and a third attack, aided by a flank diversion, and the fact that the Americans had expended their small store of ammunition, was successful. The rebels were driven from their works at the point of the bayonet. Having no bayonets themselves, they fell sullenly back, fighting with the butts of their muskets. The British loss was about 1000 killed and wounded, out of a force of 3000; that of the Americans, 400 or 500. It was a British victory which gave hope and confidence to the Americans, and has been celebrated by them as one of the most glorious events of their War of Independence.

THE ROXBURGHE CLUB.

This fraternity—the parent of the whole tribe of book-printing clubs which have occupied so broad a space in the literary system of our age—was formed on the 17th of June 1812. The plant shot forth from a hot-bed of bibliomania, which had been created by the sale of the Duke of Roxburghe’s library. On that occasion Earl Spencer, the youthful Duke of Devonshire, the Marquis of Blandford, and a whole host of minor men, lovers of old and rare books, were brought together in a state of high excitement, to contend with each other for the rarities exposed under the hammer of Mr Evans, in the Duke of Roxburghe’s mansion in St James’s Square. On the 16th of June, a number of them had chanced to dine together in the house of Mr Bolland (afterwards Justice Bolland), on Adelphi Terrace. They had to look forward to the exposure on the ensuing day of a most rare and remarkable volume, a folio edition of Boccaccio, printed by Valdarfer of Venice in 1471. They agreed to meet again at dinner on the ensuing evening, at the St Alban’s tavern, in order to talk over the fight which would by that time have taken place over the body of Valdarfer; and they did so. Earl Spencer, the unsuccessful candidate for the volume (which had sold at £2260), occupied the chair; Dr Dibdin acted as croupier. There were sixteen other gentlemen present, all of them possessors of choice libraries, and all keen appreciators of scarce and curious books. The lively Dibdin* tells us that they drank toasts which were as hieroglyphical characters to the public, but ‘all understood and cordially greeted by those who gave and those who received them.’ We may presume that the immortal memory of William Caxton was one of the most prominent; that sundry illustrious booksellers, and even notable binders (bibliopegists they called them), were not forgotten. The club was constituted by the persons there assembled; but by the time they had had two annual assemblages, the number was swelled to *thirty-one*, at which it was fixed. It was by an after thought that the club commenced its system of printing and reprinting, each member fixing upon some precious article, of which only as many copies were thrown off as afforded one to each, presented gratuitously. By this happy plan the friendly spirit of the brethren was of course promoted, at the same time that some valuable

* *Reminiscences of a Literary Life*, 2 vols. 1836, i. 374.

examples of ancient literature were rescued from oblivion. In the Scottish imitative societies—the Bannatyne Club, Maitland Club, &c.—the same plan was adopted; while in others of later institution the reprints have been effected by an equal annual subscription.

JUNE 18.

Saints Marcus and Marcellianus, martyrs, 286. St Amand, Bishop of Bordeaux. St Marina, of Bithynia, virgin, 8th century. St Elizabeth, of Sconauge, virgin and abbess, 1165.

Born.—Robert Stewart, Marquis of Londonderry, minister of George IV., 1769, *London*; Karl Wenceslaus Rodecker von Rotteck, historian, 1775, *Frieburg, in Breisgau*.

Died.—Caliph Othman, assassinated at Medina, 655; Bishop Thomas Bilson, 1616; A. Phillips, poet, 1749, near *Vauxhall, London*; Gerard Van Swieten, eminent physician and teacher of medicine, 1772, *Schoenbrunn, Vienna*; Arthur Murphy, dramatist, 1805, *Knightsbridge*; General Sir Thomas Picton, 1815, *Waterloo*; William Coombe, novelist and comic poet, 1823, *London*; William Cobbett, political writer, 1835; John Roby, author of *Traditions of Lancashire*, drowned at sea off Portpatrick, 1850.

THE BATTLE OF WATERLOO.

When William IV. was lying on his death-bed at Windsor, the firing for the anniversary of Waterloo took place, and on his inquiring and learning the cause, he breathed out faintly, 'It was a great day for England.' We may say it was so, in no spirit of vainglorious boasting on account of a well-won victory, but as viewed in the light of a liberation for England, and the civilized world generally, from the dangerous ambition of an unscrupulous and too powerful adversary.

When Napoleon recovered his throne at Paris, in March 1815, he could only wring from an exhausted and but partially loyal country about two hundred thousand men to oppose to nearly a million of troops which the allied sovereigns were ready to muster against him. His first business was to sustain the attack of the united British and Prussians, posted in the Netherlands, and it was his obvious policy to make an attack on these himself before any others could come up to their assistance. His rapid advance at the beginning of June, before the English and Prussian commanders were aware of his having left Paris; his quick and brilliant assaults on the separate bodies of Prussians and British at Ligny and Quatre Bras on the 16th, were movements marked by all his brilliant military genius. And even when, on the 18th, he commenced the greater battle of Waterloo with both, the advantage still remained to him in the divided positions of his double enemy, giving him the power of bringing his whole host concentratedly upon one of theirs; thus neutralizing to some extent their largely superior forces. And, beyond a doubt, through the superior skill and daring which he thus shewed, as well as the wonderful gallantry of his soldiery, the victory at Waterloo ought to have been his. There was

just one obstacle, and it was decisive—the British infantry stood in their squares immovable upon the plain till the afternoon, when the arrival of the Prussians gave their side the superiority. It is unnecessary to repeat details which have been told in a hundred chronicles. Enough that that evening saw the noble and in large part veteran army of Napoleon retreating and dispersing never to re-assemble, and that within a month his sovereignty in France had definitely closed. A heroic, but essentially rash and ill-omened adventure, had ended in consigning him to those six years of miserable imprisonment which form such an anti-climax to the twenty of conquest and empire that went before.

If we must consider it a discredit to Wellington that he was unaware on the evening of the 15th that action was so near—even attending a ball that evening in Brussels—it was amply redeemed by the marvellous coolness and sagacity with which he made all his subsequent arrangements, and the patience with which he sustained the shock of the enemy, both at Quatre Bras on the 16th, and on the 18th in the more terrible fight of Waterloo. Thrown on that occasion into the central position among the opponents of Bonaparte, he was naturally and justly hailed as the saviour of Europe, though at the same time nothing can be more clear than the important part which the equal force of Prussians bore in meeting the French battalions. Thenceforth the name of Wellington was venerated above that of any living Englishman.

According to Alison, the battle of Waterloo was fought by 80,000 French and 250 guns, against 67,000 English, Hanoverians, Belgians, &c., with 156 guns, to which were subsequently added certain large bodies of Prussians, who came in time to assist in gaining the day. There were strictly but 22,000 British troops on the field, of whom the total number killed was 1417, and wounded 4923. The total loss of the allied forces on that bloody day was 22,378, of whom there were killed 4172. It was considered for that time a very sanguinary conflict, but—

'The glory ends not, and the pain is past.'

BURLESQUE AND SATIRICAL HERALDRY.

Horace Walpole and a select few of his friends once beguiled the tedium of a dull day at Strawberry Hill by concocting a satirical coat-of-arms for a club in St James's Street, which at that time had an unfortunate character for high play as well as deep drinking. The club was known as 'the Old and Young Club,' and met at Arthur's. Lady Hervey gives a clue to the peculiarity of its designation in a letter dated 1756, in which she laments that 'luxury increases, all public places are full, and Arthur's is the resort of old and young, courtiers and anti-courtiers—nay, even of ministers.' The arms were invented in 1756 by Walpole, Williams, George Selwyn, and the Honourable Richard Edgcumbe, and drawn by the latter. This drawing formed lot twelve of the twenty-second day's sale at Strawberry Hill in 1842, and is here engraved, we believe, for the first time.

The arms may be thus described :—On a green field (in allusion to the baize on a card table)

three cards (aces); between, a chevron sable (for a hazard table), two rouleaus of guineas in saltier, and a pair of dice; on a canton, sable, a white election-ball. The crest is an arm issuing from an earl's coronet, and shaking a dice-box. The arms are surrounded by a claret-bottle ticket and its chain; the supporters are an old and a young Knave of Clubs; and the motto, 'Cogit amor nummi,' involves a pun in the first word, the letters being so separated as to allude to the cogging of dice for dishonest play.

Burlesque heraldry very probably had its origin in the mock tournaments, got up in broad caricature by the Hanse Towns of Germany in the sixteenth and seventeenth centuries, when the real tournaments had lost their chivalric charm, and feudalism was fast fading away. The wealthy *bourgeoisie* of the great commercial towns delighted in holding these mock encounters, and parodied in every particular the tourneys and jousts of the old noblesse; dressing their combatants in the most grotesque fashion, with tubs for breastplates and buckets for helmets, and furnishing them with squires who bore their shields with coat-armour of absurd significance. In that curious old poem, *The Tournament of Tottenham*, preserved in *Percy's Reliques*, the plebeians who fight for Tyb the Reve's daughter proclaim their blazonry in accordance with their calling; one bears

'— A riddle and a rake,
Powdered with a burning drake,
And three cantells of a cake
In each corner.'

Another combatant declares—

'In my arms I bear well,
A dough trough and a peel,
A saddle without a panel,
With a fleece of wool.'

Severe satirical allusions to individuals were sometimes indulged in; the most celebrated being the coat-of-arms invented by Roy, and placed in the title-page of his bold and bitter

attack on Wolsey; a satire in which Roy risked his life. It is printed in red and black, and described in caustic verse, of which we quote only as much as will explain it :—

'Of the proud cardinal this is the shield,
Borne up between two angels of Satan :
The six bloody axes in a bare field
Sheweth the cruelty of the red man.
The six bulls' heads in a field black
Betokeneth his sturdy furiousness.
The bandog in the midst doth express
The mastiff cur bred in Ipswich town,
Gnawing with his teeth a king's crown,
The club signifieth plain his tyranny
Covered over with a cardinal's hat.'

Walpole, with his antiquarian tastes, must have been fully aware of these old satires; but he

had a nearer and cleverer example in 'The Undertakers' Arms,' designed and published by Hogarth as a satire on medical quacks, whom he considers their best friends, and thus describes the coat : 'The Company of Undertakers beareth, sable, an urinal proper, between twelve quack heads of the second, and twelve cane heads, or, consultant. On a chief, nebuly, ermine, one complete doctor, issuant, checky, sustaining in his right hand a baton of the second. On the dexter and sinister sides, two demi-doctors, issuant of the second, and two cane-heads issuant of the third; the first having one eye couchant, towards the dexter side of the escutcheon; the second faced, per pale, proper, and gules guardant. With this motto, *Et plurima mortis imago* (the general image of death).' The humour of this satire is by no means restricted to the whimsical adaptation of heraldic terms to the design, in which there is more than meets the eye, or will be understood without a Parthian glance at the quacks of Hogarth's era, and whom the artist hated with his usual sturdy dislike of humbug. Thus the coarse-faced central figure of the upper triad, arrayed in a harlequin jacket, is intended for one Mrs Mapp, an Amazonian quack-doctress, who gained both fame and money as a bone-setter—her strength of arm being only equalled by her strength of language; there are some

records of her sayings extant that are perfectly unquotable in the present day, yet she was called in by eminent physicians, and to the assistance of eminent people. To the right of this Amazon is the famous Chevalier Taylor, the oculist (indicated by the eye in the head of his cane), whose impudence was unparalleled, and whose memoirs, written by himself, if possible outdo even that in effrontery. To the lady's left is Dr Ward, whose pills and nostrums gulled a foolish public to his own emolument. Ward was marked with what old wives call 'a claret stain' on his left cheek; and here heraldry is made of humorous use in depicting his face, per pale, gules.

In 1785 a curious duodecimo volume was published, called *The Heraldry of Nature; or, instructions for the King-at-Arms: comprising the arms, supporting crests and mottoes of the Peers of England. Blazoned from the authority of Truth, and characteristically descriptive of the several qualities that distinguish their possessors.* The author explains his position in a preface, where he states that he has 'rejected the common and patented bearings already painted on the carriages of our nobility, and instituted what he judges a wiser delineation of the honours they deserve.' He flies at the highest game, and begins with King George the Third himself, whose coat he thus describes:—'First, argent, a cradle proper; second, gules, a rod and sceptre, transverse ways; third, azure, five cups and balls proper; fourth, gules, the sun eclipsed proper; fifth, argent, a stag's head between three jockey caps; sixth, or, a house in ruins. Supporters: the dexter, Solomon treading on his crown; the sinister, a jackass proper. Crest: Britannia in despair. Motto: "Neque tangunt leviam" (little things don't move me).'

The irregularities of the Prince of Wales are severely alluded to in his shield of arms, but the satire is too broad for modern quotation. The whole of the nobility are similarly provided with coats indicative of their characters. Two are here selected as good specimens of the whole. The first is that of the Duke of Norfolk, whose indolence, habit of late hours, and deep drinking were notorious; at public dinners he would drink himself into a state of insensibility, and then his servants would lift him in a chair to his bedroom, and take that opportunity of washing him;

for his repugnance to soap and water was equal to his love of wine. The arms are 'quarterly;

or, three quart bottles, azure; sable, a tent bed argent; azure, three tapers proper; and gules, a broken flagon of the first. Supporters: dexter, a Silenus tottering; sinister, a grape-squeezer; both proper. Crest: a naked arm holding a corkscrew. Motto: "Quo me, Bacche, rapis" (Bacchus, where are you running with me?).

For Seymour Duke of Somerset a simpler but not more complimentary coat is invented:—'Vert, a mastiff couchant, spotted proper. Supporters: dexter, a bear muzzled argent; sinister, a savage proper. Crest: a Wiltshire cheese,

decayed. Motto: "Strenua nos exercet inertia" (The laziest dog that ever lounged).'

Though most of the nobility are 'tarred with the same brush,' a few receive very complimentary coat-armour. Thus the Duke of Buccleuch bears 'azure a palm-tree, or. Supporters: the dexter, Mercy; the sinister, Fortitude. Crest: the good Samaritan. Motto: "Humani nihil alienum" (I'm a true philanthropist).'

The foppish St John has his arms borne by two beaux, a box of lip-salve for a crest, and as a motto 'Felix, qui placuit.'

Hone, whose erudition in parody was sufficient to save him in three separate trials for alleged profanity by the proven plea of past usages, invented for one of his satirical works a clever burlesque of the national arms of England; the shield being emblazoned in a lottery wheel, the animals were represented in the last stage of starvation, and all firmly muzzled. The shield

is supported by a lancer (depicted as a centaur), who keeps the crown in its place with his lance. The other supporter is a lawyer (the Attorney-

General, with an *ex-officio* information in his bag), whose rampant condition is expressed with so much grotesque humour, that we end our selection with a copy of this figure.

THE BRITISH SOLDIER IN TROUSERS.

On the 18th of June 1823, the British infantry soldier first appeared in trousers, in lieu of other nether garments. The changes in military costume had been very gradual, marking the slowness with which novelties are sanctioned at head-quarters. When the regiments of the line first began to be formed, about two centuries ago, the dress of the officers and men partook somewhat of the general character of civil costume in the reign of Charles II. We have now before us a series of coloured engravings, showing the chief changes in uniform from that time to the beginning of the present century. Under the year 1685, the 11th foot are represented in full breeches, coloured stockings, and high shoes. Under date 1688, the 7th and 5th foot appear in green breeches of somewhat less amplitude, white stockings, and high shoes. Under 1692, the 1st royals and the 10th foot are shewn in red breeches and stockings; while another regiment appears in high boots coming up over blue breeches. In 1742, various regiments appear in purple, blue, and red breeches, white leggings or gaiters up to the thigh, and a purple garter under the knee. This dress is shewn very frequently in Hogarth's pictures. In 1759, the foot-soldiers shewn in the 'Death of General Wolfe' have a sort of knee-cap covering the breeches and gaiters. In 1793, the 87th foot are represented in tight green pantaloons and Hessian boots. During the great wars in the early part of the present century, pantaloons were sometimes worn, breeches at others, but gaiters or leggings in almost every instance.

The reform which took place in 1823 was announced in a Horse Guards' order, when the Duke of York was commander-in-chief. The order stated that 'His Majesty has been pleased to approve of the discontinuance of breeches, leggings, and shoes, as part of the clothing of the infantry soldiers; and of blue grey cloth trousers and half-boots being substituted.' After adverting to the deposit of patterns and the issue of supplies, the order makes provision for the very curious anomaly that used to mark the clothing system of the British army. 'In order to indemnify the colonels for the additional expense they will in consequence incur, the waistcoat hitherto provided with the clothing will be considered as an article of necessaries to be provided by the soldier; who, being relieved from the long and short gaiters, and also from the stoppage hitherto made in aid of the extra expense of the trousers (in all cases where such have been allowed to be furnished as part of the clothing of regiments), and being moreover supplied with articles of a description calculated to last longer than the breeches and shoes now used, cannot fail to be benefited by the above arrangement.' Non-professional readers may well be puzzled by the complexity of this announcement. The truth is, that until Lord Herbert of Lea (better known as Mr Sidney Herbert) became Secretary of State for War, a double deception was practised on the rask and file of the British army, little creditable to the nation. The legislature voted annually, for the clothing of the troops, a sum much larger than was actually applied to that purpose; and the same legislature, by a similarly annual vote, gave about a shilling a day to each private soldier as *pay*, the greater part of which was anything but pay to him. In the first place, the colonel of each regiment had an annual allowance for clothing his men, with a well-understood agreement that he

was to be permitted to purchase the clothing at a much lower rate, and put the balance in his own pocket. This balance usually varied from £600 to £1000 per annum, and was one of the prizes that made the 'clothing colonels' of regiments so much envied by their less fortunate brother-officers. In the second place, although the soldiers received their shilling a day, or thereabouts, as pay, so many deductions were made for the minor articles of sustenance and clothing, that only about fourpence remained at the actual disposal of each man. The two anomalies are brought into conjunction in a singular way in the above-quoted order, in reference to the soldier's waistcoat; the colonel was to be relieved from buying that said garment, and the poor soldier was to add the waistcoat to the number of 'necessaries', which he was to provide out of his slender pay. The miseries attendant on the Crimean war, by awaking public attention to the condition of the soldiers, led to the abandonment of the 'clothing colonel' system.

JUNE 19.

Saints Gervasius and Protasius, martyrs, 1st century. St Die or Deodatus, Bishop of Nevers and Abbot of Joinvures, 679 or 680. St Boniface, Archbishop of Magdeburg, Apostle of Russia and martyr, 1009. St Juliano Falconieri, virgin, 1340.

The Fête Dieu.

This day is kept by Roman Catholics as one of their highest festivals; it is held as a celebration of the name of God, when the people bring their offerings to him as the King of Heaven. The consecrated host is carried through the open air, the whole population turning out to do honour to it, and kneeling as it passes by.

Such processions as we see in the streets on this day are evidently borrowed from heathen times: the paintings which cover the Egyptian temples shew us how that people worshipped their god Isis in procession; and the chisel of Phidias, on the bas-reliefs of the Parthenon, has preserved the details of the Greek great festival in honour of Minerva, established many hundred years before Christ. First came the old men, bearing branches of the olive tree; then the young men, their heads crowned with flowers, singing hymns; children followed, dressed in their simple tunics or in their natural graces. The young Athenian ladies, who lived an almost cloistral life, came out on this occasion richly dressed, and walked singing to the notes of the flute and the lyre: the elder and more distinguished matrons also formed a part of the procession, dressed in white, and carrying the sacred baskets, covered with veils. After these came the lower orders, bearing seats and parasols, the slaves alone being forbidden to take part in it. The most important object, however, was a ship, which was moved along by hidden machinery, from the mast of which floated the *peplus*, or mantle of Minerva, saffron-coloured, and without sleeves, such as we see on the statues of the goddess; it was embroidered, under the direction of skilled work-women, by young virgins of the most distinguished families in Athens. The embroideries represented the various warlike episodes in heroic times. The grand object of the procession was

to place the *peplus* on Minerva's statue, and to lay offerings of every kind at the foot of her altar.

From these customs the early Christians adopted the practice of accompanying their bishop into the fields, where litanies were read, and the blessing of God implored upon their agricultural produce. Greater ceremonies were afterwards added; such as the carrying of long poles decorated with flowers, boys dressed in sacred vestments, and chanting the ancient church canticles. In the dark ages of superstition we find they advanced still further, and processions 'en chemise' were much in fashion: it was a mark of penitence which the people carried to its utmost limit during times of public calamity. Such were those in 1315, when a season of cold and rain had desolated the provinces of France: the people for five leagues round St Denis marched in procession—the women barefoot, the men entirely naked—religiously carrying the bodies of French saints and other relics.

St Louis himself, in the year 1270, on the eve of his departure to the last crusade he shared in, and which resulted in his death, went barefoot from the palace to the cathedral of Notre Dame, followed by the young princes his children, by the Count D'Artois, and a large number of nobles, to implore the help of heaven on his enterprise. Our king, Henry the Eighth, when a child, walked barefoot in procession to the celebrated shrine of Our Ladye of Walsingham, and presented a rich necklace as his offering. In later days he was only too glad to strip this rich chapel of all its treasures, and dissolve the monastery which had subsisted on the offerings of the pious pilgrims. That such processions became anything but religious, we may easily gather from the sermons that were preached against them: 'Alack! for pity!' says one, 'these solemn and accustomable processions be now grown into a right foul and detestable abuse, so that the most part of men and women do come forth rather to set out and shew themselves, and to pass the time with vain and unprofitable tales and merry fables, than to make general supplications and prayers to God. I will not speak of the rage and furor of these uplandish processions and gangings about, which be spent in rioting. Furthermore, the banners and badges of the cross be so irreverently handled and abused, that it is marvel God destroy us not in one day.'

To pass on now to a description of the modern procession of the Fête Dieu, such as may be seen in any of the cities of Belgium, or even in more splendour in the south of France, Nismes, Avignon, or Marseilles. On rising in the morning, the whole scene is changed as by magic from the night before: the streets are festooned and

garlanded with coloured paper, flowers, and evergreens, in every direction. Linen awnings are spread across to give shelter from the darting rays of the sun. The fronts of the houses are concealed by hangings, sometimes tastefully arranged by upholsterers, but more frequently consisting of curtains, coverlids, carpets, and pieces of old tapestry, which produce a very *bizarre* effect. The bells are ringing in every church, and crowds are meeting at the one from which the procession is to start, or arranging themselves in the rows of chairs which are prepared in the streets; others are leaning out of the windows, whilst the sellers of cakes and bonbons make a good profit by the disposal of their tempting wares.

But the distant sound of the drum is heard, which announces the approach of the procession: first come some hundreds of men, women, and children belonging to various *confréries*, which answer in some degree to our sick and burial clubs, each preceded by the head man, who is adorned with numerous medals and ribbons. The children are the prettiest part: dressed in pure white muslin, their hair hanging in curls, crowned with flowers, and carrying baskets of flowers ornamented with blue ribbons. Some adopt particular characters; four boys will carry reed pens and large books in which they are diligently writing, thus personating the four evangelists; there are many virgins, one in deep black, with a long crape veil, a large black heart on her bosom, pierced with silver arrows: those boasting of the longest hair are Magdalens. The monks and secular clergy follow the people, interspersed with military bands and other music. Near the end appears, like a white cloud, a choir of girls in long veils, crowns, and tarlatan dresses—satisfying, under a pretext of devotion, the most absorbing passion of women—love of the toilette; then, lastly, comes the canopy and dais under which the

CHILDREN'S ALTAR AT THE FÊTE DIEU.

priest of the highest rank walks, carrying the Holy Sacrament, 'Corpus Christi.' This is the most striking part: silk, gold, velvet, and feathers are used in rich profusion. The splendid dresses of the cardinals or priests who surround it; the acolytes, in white, throwing up the silver censers, filling the air with a cloud of incense; the people coming out of the crowd with large baskets of poppies and other flowers to throw before it, and then all falling on their knees as it passes, while the deep voices of the clergy solemnly chant the Litany, form a very picturesque and striking scene. After the principal streets have been visited, all return to the church, which is highly decorated and illuminated: the incense ascends, the organ resounds with the full force of its pipes; trombones, ophicleides, and drums make the pillars of the nave tremble, and the host is restored to its accustomed ark on the high altar.

As you walk through the streets during the week you will see at every corner, and before many *porte-cochères*, little tables on which poor children spread a napkin and light some tapers, adding one or two plaster figures of the Virgin or saints; to every passer-by they cry, 'Do not forget the little chapel.' These are a remnant of the chapels which in former days were decorated with great pomp to serve as stations for the procession, where Mass was said in the open air. The religious tolerance which has been proclaimed by the French laws has much lessened the repetition of these ceremonies in Paris since 1830; and perhaps the last great display there was when the Comte d'Artois, afterwards Charles the Tenth, walked in the procession to the ancient church of St Germain l'Auxerrois carrying a lighted taper in his hand.

Born.—James VI. of Scotland, I. of Great Britain, 1566, *Edinburgh Castle*; Blaise Pascal, French religious writer, 1623, *Clermont, in Auvergne*; Philip van Limborch, Arminian theologian, 1633, *Amsterdam*.

Died.—St Romuald, 1027, *Ancona*; Piers Gaveston, favourite of Edward II., executed 1312, *Gaverszyke*; Dr William Sherlock, Dean of St Paul's, Master of the Temple, theologian, controversialist, 1707, *Hampstead*; Nicolas Lemery, one of the fathers of true chemistry, 1715, *Paris*; John Brown, D.D., Scotch Dissenting divine, author of the *Self-Interpreting Bible, &c.*, 1787, *Haddington*; Sir Joseph Banks, naturalist, 1820, *Spring Grove*.

BIRTH OF JAMES I.

King James—so learned, yet so childish; so grotesque, yet so arbitrary; so sagacious, yet so weak—the wisest fool in Christendom, as Henry IV. termed him—does not personally occupy a high place in the national regards; but by the accident of birth and the current of events he was certainly a personage of vast importance to these islands. To him, probably, it is owing that there is such a thing as the United Kingdom of Great Britain and Ireland among the states of Europe.

This sovereign, the son of Henry Lord Darnley and Mary Queen of Scots, was born on the 19th of June 1566, in a small room in the ancient palace within Edinburgh Castle. We know how it was—namely, for security—that the queen

selected Edinburgh Castle for her expected accouchement; but it is impossible to imagine by what principle of selection she chose that this event should take place in a room not above eight feet square. There, however, is the room still shewn, to the wonder of everybody who sees it. The young prince was ushered into the world between nine and ten in the morning, and Sir James Melville instantly mounted horse to convey the news of the birth of an heir-apparent of Scotland, and heir-presumptive of England, to Queen Elizabeth. Darnley came at two in the afternoon to see his royal spouse and his child. 'My lord,' said Mary, 'God has given us a son.' Partially uncovering the infant's face, she added a protest that it was his, and no other man's son. Then, turning to an English gentleman present, she said, 'This is the son who I hope shall first unite the two kingdoms of Scotland and England.' Sir William Stanley said, 'Why, madam, shall he succeed before your majesty and his father?' 'Alas!' answered Mary, 'his father has broken to me;' alluding to his joining the murderous conspiracy against Rizzio. 'Sweet madam,' said Darnley, 'is this the promise you made that you would forget and forgive all?' 'I have forgiven all,' said the queen, 'but will never forget. What if Fawdonside's pistol had shot? [She had felt the cold steel on her bosom.] What would have become of him and me both?' 'Madam,' said Darnley, 'these things are past.' 'Then,' said the queen, 'let them go.*

A curious circumstance, recalling one of the superstitions of the age, is related in connexion with Queen Mary's accouchement. The Countess of Athole, who was believed to possess magical gifts, lay in within the castle at the same time as the queen. One Andrew Lundie informed John Knox that, having occasion to be in Edinburgh on business at that time, he went up to the castle to inquire for Lady Reres, the queen's wet-nurse, and found her labouring under a very awkward kind of illness, which she explained as Lady Athole's labour pains thrown upon her by enchantment. She said, 'she was never so troubled with no bairn that ever she bare.†

The infant king—for he was crowned at

CRADLE OF KING JAMES I. OF ENGLAND.

* This interesting conversation is reported in Lord Herries's *Memoirs*.

† Bannatyne's *Memorials*, p. 228.

thirteen months old—spent his early years in Stirling Castle, under the care of the Countess of Marr, 'as to his mouth,' and that of George Buchanan, as to his education. The descendants of the Countess possessed till a recent period, and perhaps still do so, the heavy wooden cradle in which the first British monarch was rocked. A figure of it is presented on the preceding page.

PASCAL.

A mind of singular strength and keenness, united to a fragile and sensitive body, afflicted with disease and tormented by austerity, constituted Blaise Pascal. As soon as he could talk, he amazed every one by his precocious intelligence. He was an only son, and his father, a learned man, and president of the Court of Aids in Auvergne, proud of his boy, resigned his office, and went to reside in Paris, for the more effectual prosecution of his education. He had been taught something of geometry, for which he shewed a marvellous aptitude; but his instructors, wishing to concentrate his attention on Latin and Greek, removed every book treating of mathematics out of his way. The passion was not thus to be defeated. One day Blaise was caught sitting on the floor making diagrams in charcoal, and on examination it was discovered that he had worked out several problems in Euclid for himself. No check was henceforth placed on his inclination, and he quickly became a first-rate mathematician. At sixteen he produced a treatise on Conic Sections, which was praised by Descartes, and at nineteen he devised an ingenious calculating machine. At twenty-four he experimentally verified Torricelli's conjecture that the atmosphere had weight, and gave the reason of Nature's horror of a vacuum.

There is no telling what might have been the height of his success as a natural philosopher, had he not, when about twenty-five, come under overpowering religious convictions, which led him to abandon science as unworthy of the attention of an immortal creature. The inmates of the convent of Port Royal had received the Augustinian writings of Bishop Jansen with fervent approval, and had brought on themselves the violent enmity of the Jesuits. With the cause of the Port Royalists, or Jansenists, Pascal identified himself with his whole heart, and an effective and terrible ally he proved. In 1656, under the signature of Louis de Montalte, he issued his *Lettres Ecrites à un Provincial par un de ses Amis*, in which he attacked the principles and practices of the Jesuits with a vigour of wit, sarcasm, and eloquence unanswerable. The *Provincial Letters* have long taken their place among the classics of universal literature by common consent.

Jansenism has been defined as Calvinism in doctrine united to the rites and strictest discipline of the Church of Rome; and Pascal's life and teaching illustrate the accuracy of the definition. His opinions were Calvinistic, and his habits those of a Catholic saint of the first order of merit. His health was always wretched; his body was reduced to skin and bone, and from pain he was seldom free. Yet he wore a girdle armed with iron spikes, which he was accustomed

to drive in upon his fleshless ribs as often as he felt languid or drowsy. His meals he fixed at a certain weight, and, whatever his appetite, he ate neither more nor less. All seasonings and spices he prohibited, and was never known to say of any dish, 'This is very nice.' Indeed, he strove to be unconscious of the flavour of food, and used to gulp it over to prevent his palate receiving any gratification. For the same reason he dreaded alike to love and to be loved. Toward his sister, who revered him as a sacred being, he assumed an artificial harshness of manner—for the express purpose, as he acknowledged, of repelling her sisterly affection. He rebuked a mother who permitted her own children to kiss her, and was annoyed when some one chanced to say that he had just seen a beautiful woman.

He died in 1662, aged thirty-nine, and the examination of his body revealed a fearful spectacle. The stomach and liver were shrivelled up, and the intestines were in a gangrenous state. The brain was of unusual size and density, and, strange to say, there was no trace of sutures in the skull, except the sagittal, which was pressed open by the brain, as if for relief. The frontal suture, instead of the ordinary dovetailing which takes place in childhood, had become filled with a calculus, or non-natural deposit, which could be felt through the scalp, and obtruded on the *dura mater*. Of the coronal suture there was no sign. His brain was thus enclosed in a solid, unyielding case or helmet, with a gap at the sagittal suture. Within the cranium, at the part opposite the ventricles, were two depressions filled with coagulated blood in a corrupt state, and which had produced a gangrenous spot on the *dura mater*. How Pascal, racked with such agonies from within, should have supplemented them by such afflictions from without, is one of those mysteries in which human nature is so prolific. Regarding himself as a Christian and a type of others, well might he say, as he often did, 'illness is the natural state of the Christian.'

In his last years Pascal was engaged on a *Defence of Christianity*, and after his death the fathers of Port Royal published the materials he had accumulated for its construction, as the *Pensées de Pascal*. The manuscripts happily were preserved,—fragmentary, elliptical, enigmatical, interlined, blotted, and sometimes quite illegible though they were. Some years ago, M. Cousin suggested the collation of the printed text with the autograph, when the startling fact came to light that *The Thoughts* the world for generations had been reading as Pascal's, had been garbled in the most distressing manner by the original editors, cut down, extended, and modified according to their own notions and apprehensions of their adversaries. In 1852, a faithful version of *The Thoughts* was published in Paris by M. Ernest Havet, and their revival in their natural state has deepened anew our regret for the sublime genius which perished ere its prime, two hundred years ago.

MAGNA CHARTA.

The 19th of June 1215 remains an ever-memorable day to Englishmen, and to all nations descended from Englishmen, as that on which the

Magna Charta was signed. The mean wickedness and tyranny of King John had raised nearly the whole body of his subjects in rebellion against him, and it at length appeared that he had scarcely any support but that which he derived from a band of foreign mercenaries. Appalled at the position in which he found himself, he agreed to meet the army of the barons under their elected general, Fitz-Walter, on Runnymede, by the Thames, near Windsor, in order to come to a pacification with them. They prepared a charter, assuring the rights and privileges of the various sections of the community, and this he felt himself compelled to sign, though not without a secret resolution to disregard it, if possible, afterwards.

It was a stage, and a great one, in the establishment of English freedom. The barons secured that there should be no liability to irregular taxation, and it was conceded that the freeman, merchants, and villains (bond labourers) should be safe from all but legally imposed penalties. As far as practicable, guarantees were exacted from the king for the fulfilment of the conditions. Viewed in contrast with the general condition of Europe at that time, the making good of such claims for the subjects seems to imply a remarkable peculiarity of character inherent in English society. With such a fact possible in the thirteenth, we are prepared for the greater struggles of the seventeenth century, and for the happy union of law and liberty which now makes England the admiration of continental nations.

JUNE 20.

St Silverius, pope and martyr, 538. St Gobain, priest and martyr, 7th century. St Idaberga, or Edburge, of Mercia, virgin, about 7th century. St Bain, Bishop of Terouanne, or St Omer, about 711.

TRANSLATION OF KING EDWARD.

In the Middle Ages it sometimes happened that, from miracles wrought at the tomb of some holy person, he had a posthumous increase of reputation, making it necessary or proper that his remains should be deposited in some more honourable or convenient place. Then was effected what was called a translation of his body, usually a ceremony of an impressive character, and which it consequently became necessary to celebrate by an anniversary. Thus it happens that some saints enjoy a double distinction in the calendar: one day to commemorate their martyrdom or natural death, another to keep in memory the translation of their bodies.

The unfortunate young Saxon King Edward, a victim to maternal jealousy, has a place in the calendar (March 18), on account of his tragical end. The removal of his body from its original tomb at Wareham, to Salisbury Cathedral, three years after his decease, was commemorated on another day (June 20), being that on which the translation was performed (anno 982). It was probably rather from a feeling for the early and cruel death of this young sovereign, than from any

reverence for his assumed sanctity, that *The Translation of King Edward* was allowed to maintain its place in the reformed Church of England calendar.

Born.—Dr George Hickee, Dean of Worcester (non-jurant bishop of Thetford), learned theologian and controversialist, 1642, *Newsham, Yorkshire*; Dr Adam Ferguson, historian, 1723, *Logierait, Perthshire*; Theophilus Lindsey, Unitarian divine, 1723, *Middlewick*; Anna Letitia Aiken (Mrs Barbauld), 1743, *Kibworth*.

Died.—William Cavendish, second Earl of Devonshire, 1628, *Derby*; Henrietta Stuart, Duchess of Orleans, 1670, *St Cloud*; Charles Coffin, French poet, 1749; Charles Frederick Abel, musical composer, 1787; Anna Maria Porter, novelist, 1832; William IV., King of Great Britain, 1837, *Windsor*.

RICHARD BRANDON, AND OTHER FINISHERS OF THE LAW.

On the 20th of June 1649 there died, in his own house at Rosemary Lane, Richard Brandon, the official executioner for the City of London, and the man who, as is generally supposed, decapitated Charles the First. A rare tract, published at the time, entitled *The Confession of the Hangman*, states that Brandon acknowledged he had £30 for his pains, all paid him in half-crowns, within an hour after the blow was given; and that he had an orange stuck full of cloves, and a handkerchief out of the king's pocket, so soon as he was carried off from the scaffold, for which orange he was proffered twenty shillings by a gentleman in White Hall, but refused the same, and afterwards sold it for ten shillings in Rosemary Lane. The tract further informs us that the sheriffs of the City 'sent great store of wine for the funeral, and a multitude of people stood waiting to see his corpse carried to the churchyard, some crying out, "Hang him, the rogue! Bury him in a dunghill;" others pressing upon him, saying they would quarter him for executing the king. Insomuch that the churchwardens and masters of the parish were fain to come for the suppression of them, and with great difficulty he was at last carried to Whitechapel churchyard, having a bunch of rosemary at each end of his coffin, on the top thereof, with a rope tied across from one end to the other.' In the Burial Register of Whitechapel there is the following entry under 1649: 'June 21st, Richard Brandon, a man out of Rosemary Lane. This R. Brandon is supposed to have cut off the head of Charles the First.*'

A broadside, published about the same time, is entitled, *A Dialogue between the Hangman and Death*, from which the following passages may be quoted as specimens of the whole:—

'*Death.*—Lay down thy axe, and cast thy ropes away,
'Tis I command, 'tis thou that must obey:
Thy part is played, and thou goest off the stage,
The bloodiest actor in this present age.

Brandon.—But, Death, thou know'st that I for many years—

As by old Tyburn's records it appears—
Have monthly paid my taxes unto thee,
Tied up in twisted hemp for more security;
And now, of late, I think thou didst put me to it,

* See p. 129 of the present volume.

When none but Brandon could be found to do it ;
I gave the blow caused thousands' hearts to ache—
Nay, more than that, it made three kingdoms quake.
Yet, in obedience to thy powerful call,
Down went the cedar with some shrubs, and all
To satisfy thy ne'er contented lust ;
Now, for reward, thou tellest me that I must
Lay down my tools, and with thee pack from hence—
Grim sir, you give a fearful recompense.'

The executioner, however, must submit to the
'hangman of creation;' and the author, at the
end of the dialogue, thus gives his epitaph :—

'Who do you think lies buried here ?
One that did help to make hemp dear.
The poorest subject did abhor him,
And yet his king did kneel before him ;
He would his master not betray,
Yet he his master did destroy.
And yet as Judas—in records 'tis found
Judas had thirty pence, he thirty pound.'

Brandon inherited his wretched office from his
father; the predecessor of the Brandons was one
Derrick, who has given his name to a temporary
kind of crane, used by sailors and builders for
suspending and raising heavy weights. Derrick
served under the Provost Marshal in the expedi-
tion against Cadiz, commanded by Robert Earl
of Essex. On this occasion Derrick forfeited
his life for an outrage committed on a woman ;
but Essex pardoned him, probably on account of
his useful character, as he was employed to hang
twenty-three others. Yet, such are the revolu-
tions of fortune, it subsequently became Derrick's
duty to decapitate his preserver Essex. These
particulars we learn from the following verse of
a contemporary ballad, called *Essex's Good Night*,
in which the unfortunate nobleman is repre-
sented saying—

'Derrick, thou know'st at Cales I saved
Thy life—lost for a rape there done ;
As thou thyself can testify,
Thine own hand three-and-twenty hung.
But now thou seest myself is come,
By chance into thy hands I light ;
Strike out thy blow, that I may know
Thou Essex loved at his good-night.'

Brandon was succeeded by Dunn, who is men-
tioned in *Hudibras*, and in the following royalist
epigram on the death of Hugh Peters :—

'Behold the last and best edition
Of Hugh, the author of sedition ;
So full of errors, 'twas not fit
To read, till Duun corrected it ;
But now 'tis perfect—ay, and more,
'Tis better bound than 'twas before.
Now loyalty may gladly sing,
Exit rebellion, in a string ;
And if you say, you say amiss,
Hugh now an Independent is.'

Dunn's successor was John Ketch, 'whose
name,' as the late Lord Macaulay said, 'has
during a century and a half been vulgarly given
to all who have succeeded him [in London] in
his odious office.'

The scaffold has had its code of etiquette.
When the Duke of Hamilton, Earl of Holland,
and Lord Capel were beheaded, they were
brought to the block one by one, according to

their rank—the duke first, earl next, and baron
last. When Capel was going to address the
crowd with his hat on, he was told to take it off,
such being the custom of the scaffold. At a later
period, the Earl of Kilmarnock, waiving his
right with graceful politeness, offered Lord
Balmerino the sad precedence; but the sheriffs
objected, saying they could not permit the esta-
blished etiquette to be infringed. With the lower
orders, however, there was less ceremony. When
the noted chimney-sweep, Sam Hall, was riding
up Holborn Hill in a cart, on his last journey, a
highwayman, dressed in the fashion, with an
elegant nosegay in his button-hole, who shared
the vehicle with Sam, cried out, 'Stand off,
fellow!' 'Stand off yourself, Mr Highwayman,'
the sweep indignantly retorted, 'I have quite as
good a right to be here as you have.'

The ghastly implements of the executioner have
been recognised in heraldry. A grandee of Spain
bears in his coat-armour a ladder with a gibbet.
The wheel, block, and axe, the rack, and other
implements of torture are borne by several
German houses of distinction; and the Scottish
family of Dalziel bear *sable* a hanged man with
his arms extended *argent*; formerly, as the
herald informs us, 'they carried him hanging on
a gallows.'

A LETTER FROM JONATHAN WILD.

In the town-clerk's office of the City of London are
deposited many old manuscripts, highly curious in
their character, in relation both to events of import-
ance and to phases of social life. Within the last few
years many of them have undergone examination and
classification. In 1841 was found among them an
original letter from Jonathan Wild, the noted thief-
taker, asking for remuneration for services he had
rendered to the cause of justice. The letter, which
was written in 1723, ran thus: 'To the Right
Honourable the Lord Mayor and the Court of Alder-
men.—The Humble Petition of Jonathan Wild,
Sheweth: That your petitioner has been at great
trouble and charge in apprehending and convicting
divers felons for returning from transportation since
October, 1720 (the names of whom are mentioned in
an account hereto annexed). That your petitioner
has never received any reward or gratuity for such his
service. That he is very desirous to become a free-
man of this honourable city, wherefore your petitioner
most humbly prays that your Honours will (in con-
sideration of his said services) be pleased to admit him
into the freedom of this honourable city. And your
petitioner shall ever pray, &c.—JONATHAN WILD.'
There is appended to the petition, 'An account of the
persons apprehended, taken, and convicted for re-
turning from transportation, by Jonathan Wyld
(another form of spelling the name), since October
1720, for which he has received no reward, viz.:
John Filewood, *alias* Violet, William Bard, Charles
Hinchman, Samuel Whittle, Martin Grey, James
Dalton, Robert Godfrey, *alias* Perkins, Old Harry,
alias Harry Williams, Henry Woodford, John Mosse.
Several others have been taken by him, and after-
wards sent abroad, viz.: Moll King, John Jones, &c.,
who were notorious street-robbers in the city of
London.' There is a record that Jonathan Wild's
petition was read by the Court of Aldermen, but we
do not find evidence that the coveted freedom of the
city was awarded to him.

JUNE 21.

St Eusebius, Bishop of Samosata, and martyr, 379 or 380. St Aaron, Abbot in Brittany, 6th century. St Meen, Mevenus, or Melanus, Abbot in Brittany, about 617. St Leufredus, or Leufroi, abbot, 738. St Ralph, Archbishop of Bourges, confessor, 866. St Aloysius, or Lewis Gonzaga, confessor, 1591.

Born.—Anthony Collins, author of a *Philosophical Enquiry into Liberty and Necessity*, &c., 1676, *Heston, near Hounslow, Middlesex.*

Died.—Thales, Grecian philosopher, B.C. 546, *Olympia*; Edward III. of England, 1377, *Shene, Richmond*; John Skelton, poet, 1529; Captain John Smith, colonizer of Virginia, 1631; Sir Inigo Jones, architect, 1651; William Beckford, Lord Mayor of London, 1770; John Armstrong, poet, 1797, *London*; Gilbert, first Earl of Minto, statesman, 1814; Mrs Mary Anne Clarke (*née* Farquhar), 1852.

SKELTON.

Skelton was poet laureate in the reign of Henry the Eighth. He had been at one time Henry's tutor, and was honoured with some appointment at the date of that monarch's accession, as a small token of royal favour. But neither his influence nor his merits seem to have procured him any other advancement in the church than the curacy of Trumpington, a village near Cambridge, and a living in Norfolk. He indulged a vein much too satirical to please those to whom his satire had reference, and probably made himself many enemies. 'A pleasant conceited fellow, and of a very sharp wit; exceeding bold, and could nip to the very quick when he once set hold.'

Skelton lived in the first dawn of that revival in poetry which brightened into a clear noon in the reign of Queen Bess; his verse is the veriest gingle imaginable. The reader will be curious to examine a specimen of the poetry of one whom so great a scholar as Erasmus called 'the glory and light of British literature.' One of the laureate's most fanciful effusions is a poem on a dead sparrow, named Philip, of whom Gib, the cat, had got hold. Perhaps the following is the most presentable extract we can make:

'Alas! my heart it stings,
Remembering pretty things;
Alas! mine heart it sleeth
My Philip's doleful death.
When I remember it,
How prettily it would sit;
Many times and oft,
Upon my finger aloft,
I played with him, tittle-tattle,
And fed him with my spatle,
With his bill between my lips,
It was my pretty Phips.
Many a pretty kusse
Had I off his sweet musse.
And now the cause is thus,
That he is slain me fro,
To my great pain and woe.'

But Skelton's favourite theme was abuses in the church. This is the title of one of his indiscriminate satirical attacks: *Here after foloweth a litle boke called Colyn Clout, compiled by Master Skelton, Poet Laureate.* As a clue to

what is coming, the author is pleased to prefix a Latin motto: 'Who will rise up with me against the evil-doers, or who will defend my cause against the workers of iniquity? *No man, Lord.*' Skelton begins at once to cut at what he considers the root of the evil;—to wit, the bishops. He tells us what strange reports of their doings have reached him:

'Men say indede
How they take no hede
Their sely shepe to fede,
But plucke away and pul
The fleeces of their wull.'

He hears how

'They gaspe and they gape,
Al to have promocijon ;'

and then he draws an inference which must have been harrowing to a bishop's conscience:

'Whiles the heades doe this,
The remnaunt is amis
Of the clergy all,
Both great and small.'

Skelton is willing to make all possible excuses for their lordships; he allows, indeed, the report of 'the temporality' to be well founded, that

'bishoppes disdain
Sermons for to make,
Or such labour to take ;'

but he says this is not to be ascribed in every case to sloth, for that some of them have actually no alternative:

'They have but small art,
And right sclender cunningg
Within their heades wunning.'

Then he proceeds to deal at some length with the minor orders. He dwells on sundry personal vices, to which those more insignificant offenders were commonly addicted, but reserves his severest satire for their vile ignorance. They know nothing, he says: they catch a 'Dominus Vobiscum by the head,' and make it serve all religious ends. And yet such men will presume to the office of teacher:

'Take they cures of soules
And woketh never what they rede,
Pater noster nor crede ;'

and as to their construing:

'Construe not worth a whistle
Nether Gospel nor Pistle.'

We must really join with the poet in his philosophic deduction from this survey:

'A priest without a letter,
Without his virtue be greater,
Doutlesse were much better
Upon him for to take
A mattocke or a rake.'

It was not to be expected that so virulent a truth-teller would escape the net of the wicked. It happened that Skelton—not being allowed, as a priest, to marry—had thought himself justified in evading what he considered an unfair rule by simply overlooking the ceremony. For this ingenious proceeding, Nix, Bishop of Norwich, took occasion to suspend him. But worse was to come. Having presumed to attack Wolsey in the very height of his power, that proud pre-

late was fain to procure a writ of arrest; and so honest Skelton had to take sanctuary at Westminster, and remained there till his death.

One of Skelton's poems is a long one in his usual incoherent style, entitled *The Tunning of Eleanour Rumming*, referring to an alewife so called, who dwelt

'In a certain stead
Beside Leatherhead;'

where he says—

'She breweth nobby ale,
And maketh thereof fast sale
To travellers, to tinkers,
To sweaters, to swinkers,
And all good ale-drinkers.'

She was, he assures us, one of the most frightful of her sex, being

'——— ugly of cheer,
Her face all bowsy,
Wondrously wrinkled;
Her een bleared,
And she gray-haired.
Her kirtle Bristow-red,
With cloths upon her head
That weigh a sow of lead.'

And when the reader surveys the annexed portrait of Eleanour, borrowed from the frontispiece of one of the original editions of the poem, he will probably acknowledge that Skelton did her no injustice.

ELEANOUR RUMMING.

'When Skelton wore the laurel crown,
My ale put all the alewives down.'

Mr Dalloway, one of Skelton's editors, speculates on the possibility of the poet having made acquaintance with the Leatherhead alewife while residing with his royal master at Nonsuch Palace, eight miles off; and he alleges that the domicile near the bridge still exists. This must be considered as requiring authentication. It appears, however, that there existed about the middle of the last century an alehouse on the road from Cambridge to Hardwicke, which bore a swinging sign, on which there could alone be discerned a couple of handled beer mugs, exactly in the relative situation of the two pots in the hands of Eleanour Rumming, as represented in her portrait. It looks as if it were a copy of that portrait, from which all had been obliterated but the pots; or, if this surmise could not be received, there must have been some general

characteristic involved in such an arrangement of two ale-pots on a sign or portrait. The gentleman who communicated a sketch of the sign and its couple of pots to the *Gentleman's Magazine* for May 1794, recalled the *Thepas Amphikupellon* of Vulcan, adverted to by Homer, and as to which learned commentators were divided—some asserting it was a cup with two handles, while others believed it to be a cup internally divided. The sign of the *Two-pot House*—for so it was called—had convinced him that 'the Grecian poet designed to introduce neither a bi-ansated nor a bi-cellular pot, but a pot for each hand; and consequently that a brace of pots, instead of a single one, were the legitimate object of his description.'

HENRY HUDSON, THE NAVIGATOR.

This ill-fated mariner was one of the most remarkable of our great English navigators of the

Elizabethan age, yet his history previous to the year 1607, when he sailed on his first recorded voyage, is entirely unknown. The Dutch appear to have invented, in order to support their claim to New Netherlands, a history of his previous life, according to which he had passed a part of it in the service of Holland; but this is not believed by the best modern writers on the subject. We first find Henry Hudson, in the year just mentioned, a captain in the service of the Muscovy Company, whose trade was carried on principally with the North, and who did not yet despair of increasing it by the discovery of a passage to China by the north-east or by the north-west. Hudson laboured with a rare energy to prove the truth or fallacy of their hopes, and he was at least successful in showing that some of them were delusive; and he would no doubt have done much more, had he not been cut off in the midst of his career. He acted first on a plan which had been proposed by an English navigator, named Robert Thorne, as early as the year 1527—that of sailing right across the north pole; and he left London for this voyage on the 23rd of April 1607. Among his companions was his son, John Hudson, who is described in the log-book as ‘a boy,’ and who seems to have accompanied his father in all his expeditions. He sailed by way of Greenland towards Spitzbergen, and in his progress met with the now well-known ice-barrier between those localities, and he was the first modern navigator who sailed along it. He eventually reached the coast of Spitzbergen, but after many efforts to overcome the difficulties which presented themselves in his way, he was obliged to abandon the hope of reaching the pole; and, after convincing himself that that route was impracticable, he returned home, and on the 15th of September arrived at Tilbury, in the Thames. On the 22nd of April in the following year (1608) Hudson, still in the employment of the Muscovy Company, sailed from London with the design of ascertaining the possibility of reaching China by the north-east, and, as we may now suppose, was again unsuccessful; he reached Gravesend on his return on the 26th of August. After his return from this voyage, Hudson was invited to Holland by the Dutch East India Company, and it was in their service that he made his third voyage. Sailing from Amsterdam on the 6th of April 1609, with two ships, manned partly by Dutch and partly by English sailors, he on the 5th of May reached the North Cape. It was originally intended to renew the search for a north-east passage, but in consequence of a mutiny amongst his crew when near Nova Zembla, he abandoned this plan, and sailed westward to seek a passage through America in lat. 40°. He had received vague information of the existence of the great inland lakes, and imagined that they might indicate a passage by sea through the mainland of America. It was on this voyage that he discovered the great river which has since borne his name; but his hopes were again disappointed, and he returned to England, and arrived at Dartmouth, in Devonshire, on the 7th of November. Hudson was detained in England by orders of the government, on what grounds is not known, while his

ship returned to Holland. The indefatigable navigator had now formed a design of seeking a passage by what has been named after him, Hudson’s Straits; and on the 17th of April 1610 he started from London with this object, in a ship named the *Discovery*. During the period between the middle of July and the first days of August he passed through Hudson’s Straits, and on the 4th of the latter month he entered the great bay which, from the name of its discoverer, has ever since been called Hudson’s Bay. The months of August, September, and October were spent in exploring the southern coast of this bay, until, at the beginning of November, Hudson took up his winter quarters in what is supposed to have been the south-east corner of James’s Bay, and the ship was soon frozen in. Hudson did not leave these winter quarters until the 18th of June following, and his departure was followed by the melancholy events which we have now to relate.

We have no reason for believing that Hudson was a harsh-tempered man; but his crew appears to have been composed partly of men of wild and desperate characters, who could only be kept in order by very severe discipline. Before leaving the Thames, he had felt it necessary to send away a man named Colburne, who appears to have been appointed as his second in command, probably because this man had shewn an inclination to dispute his plans and to disobey his orders; and while wandering about the southern coasts of Hudson’s Bay, signs of insubordination had manifested themselves on more than one occasion, and had required all Hudson’s energy to suppress them. The master’s mate, Robert Juet, and the boatswain seem to have distinguished themselves by their opposition on these occasions; and shortly before they entered winter quarters they were deprived of their offices. But, as we learn from the rather full account left by Abacuk Prickett, one of the survivors of this voyage, the principal leader of the discontented was an individual who had experienced great personal kindnesses from Henry Hudson. This was a young man named Henry Green, of a respectable family of Kent, but who had been abandoned by his relatives for his extravagance and ill-conduct; during Hudson’s last residence in London, Green seems to have been literally living on his charity. Finding that this Green could write well, and believing that he would be otherwise useful, Hudson took him out with him on his voyage as a sort of supernumerary, for he was not entered on the books of the company who sent out the ship, and had therefore no wages; but Hudson gave him provisions and lodgings in the ship as his personal attendant. In the beginning of the voyage Green quarrelled with several of the crew, and made himself otherwise disagreeable; but the favour of the captain (or master) saved him from the consequences, and he seems to have gradually gained the respect of the sailors for his reckless bravery. While the ship was locked up in the ice for the winter, the carpenter greatly provoked Hudson by refusing to obey his orders to build a timber hut on shore; and next day, when the carpenter chose to go on shore to shoot wild fowl, as it had been ordered that nobody should

go away from the ship alone, Green, who had been industriously exciting the men against their captain, went with him. Hudson, who had perhaps received some intimation of his treacherous behaviour, was angry at his acting in this contemptuous manner, and shewed his displeasure in a way which embittered Green's resentment. Under these circumstances, it was not difficult to excite discontent among the men, for it seems to have been the first time that any of them had passed a winter in the ice, and they were not very patient under its rigour, for some of them were entirely disabled by the frost. One day, at the close of the winter, when the greater part of the crew were to go out a-fishing in the shallop (a large two-masted boat), Green plotted with others to seize the shallop, sail away with it, and leave the captain and a few disabled men in the ship; but this plot was defeated by a different arrangement made accidentally by Hudson. The conspiracy against the latter was now ripe, and Prickett, who was evidently more consenting to it than he is willing to acknowledge, tells us that when night approached, on the eve of the 21st of June, Green and Wilson, the new boat-swain, came to him where he lay lame in his cabin, and told him 'that they and the rest and their associates would shift the company and turne the master and all the sicke men into the shallop, and let them shift for themselves.' The conspirators were up all night, while Hudson, apparently quite unconscious of what was going on, had retired to his cabin and bed. Probably he was in the habit of fastening his door; at all events, they waited till he rose in the morning, and as he left his cabin at an early hour, three of the men seized him from behind and pinioned him; and when he asked what they meant, they told him he should know when he was in the shallop. They then took all the sick and lame men out of their beds, and these, with the carpenter and one or two others who at the last remained faithful to their captain—not forgetting the boy John Hudson—were forced into the shallop. Then, as Prickett tells us, 'they stood out of the ice, the shallop being fast to the sterne of the shippe, and so (when they were nigh out, for I cannot say they were cleane out) they cut her head fast from the sterne of our shippe, then out with their topsails, and towards the east they [the mutineers] stood in a cleare sea.' This was the last that was ever seen or heard of Henry Hudson and his companions in misfortune. Most of them cripples, in consequence of the severity of the winter, without provisions, or means of procuring them, they must soon have perished in this inhospitable climate. The fate of the mutineers was not much better. For some time they wandered among coasts with which they were unacquainted, ran short of provisions, and failed in their attempts to gain a sufficient supply by fishing or shooting; and for some time seem to have lived upon little more than 'cockle-grass.' At first they seem to have proceeded without any rule or order; but finally Henry Green was allowed to assume the office of master or captain, and they were not decided as to the country in which they would finally seek a refuge, for they

thought 'that England was no safe place for them, and Henry Greene swore the shippe should not come into any place (but keep the sea still) till he had the king's majestie's hand and seal to shew for his safetic.' What prospect Green had of obtaining a pardon, especially while he kept out at sea, is altogether unknown; but he was not destined to survive long the effects of his treachery. On the 28th of July the mutineers came to the mouth of Hudson's Straits, and landed at the promontory which he had named Digges's Cape, in search of fowl. They there met with some of the natives, who showed so friendly a disposition, that Green—contrary, it seems, to the opinion of his companions—landed next day without arms to hold further intercourse with them. But the Indians, perceiving that they were unarmed, suddenly attacked them, and in the first onset Green was killed, and the others with great difficulty got off their boat and reached the ship, where Green's three companions, who were all distinguished by their activity in the mutiny, died of their wounds. Prickett, sorely wounded, and another man, alone escaped. Thus four of the most able hands were lost, and those who remained were hardly sufficient to conduct the ship. For some time they were driven about almost helpless, but they succeeded in killing a good quantity of fowl, which restored their courage. But when the fowls were eaten, they were again driven to great extremities. 'Now went our candles to wracke, and Bennet, our cooke, made a messe of meate of the bones of the fowle, frying them with candle-grease till they were crispe, and, with vinegar put to them, made a good dish of meate. Our vinegar was shared, and to every man a pound of candles delivered for a weeke, as a great daintie.' At this time Robert Juet, who had encouraged them by the assurance that they would soon be on the coast of Ireland, died of absolute starvation. 'So our men cared not which end went forward, insomuch as our master was driven to looke to their labour as well as his owne; for some of them would sit and see the fore sayle or mayne sayle lie up to the tops, the sheets being either flowne or broken, and would not helpe it themselves nor call to others for helpe, which much grieved the master.' At last they arrived on the Irish coast, but were received with distrust, and with difficulty obtained the means to proceed to Plymouth, from whence they sailed round to the Thames, and so to London. Prickett was a retainer of Sir Dudley Digges, one of the subscribers to the enterprise, through whom probably they hoped to escape punishment; but they are said to have been immediately thrown into prison, though what further proceedings were taken against them is unknown. Next year a captain named Batton was sent out in search of Hudson and his companions, and passed the winter of 1612 in Hudson's Bay, but returned without having obtained any intelligence of them. Thus perished this great but ill-fated navigator. Yet the name of the apparently obscure Englishman, of whose personal history we know so little, has survived not only in one of the most important rivers of the new continent, in the Strait through which he

passed, and in the bay in which he wintered and perished, but in the vast extent of territory which lies between this bay and the Pacific Ocean, and which has so long been under the influence of the Hudson's Bay Company; and the results of his voyages have been still more remarkable, for, as it has been well observed, he not only bequeathed to his native country the fur-trade of the territory last mentioned, and the whale-fisheries of Spitzbergen, but he gave to the Dutch that North American colony which, having afterwards fallen into the hands of England, developed itself into the United States.

SEFULCHRAL VAGARIES.

Although it has been the general practice of our country, ever since the Norman era, to bury the dead in churchyards or other regular cemeteries, yet many irregular and peculiar burials have taken place in every generation. A few examples may be useful and interesting. They will serve to illustrate human eccentricity, and go far to account for the frequent discovery of human remains in mysterious or unexpected situations.

Many irregular interments are merely the result of the caprices of the persons there buried. Perhaps there is nothing that more forcibly shews the innate eccentricity of a man than the whims and oddities which he displays about his burial. He will not permit even death to terminate his eccentricity. His very grave is made to commemorate it, for the amusement or pity of future generations. These sepulchral vagaries, however, vary considerably both in character and degree. Some are whimsical and fantastical in the extreme; others, apparently, consist only in shunning the usual and appointed places of interment; while the peculiarity of others appears, not in the place, but in the mode of burial. We will now exemplify these remarks.

From a small Hertfordshire village, named Flaunden, there runs a lonely footpath across the fields to another village. Just at the most dreary part of this road, the stranger is startled by suddenly coming upon a modern-looking altar tomb, standing close by the path. It is built of bricks, is about two feet and a half high, and covered with a large stone slab, bearing this inscription:

'SACRED TO THE MEMORY OF
MR WILLIAM LIBERTY,
OF CHORLEY WOOD, BRICKMAKER,
WHO WAS BY HIS OWN DESIRE BURIED IN A VAULT
IN THIS PART OF HIS ESTATE.
HE DIED 21 APRIL 1777, AGED 53 YEARS.

HERE ALSO LIETH THE BODY OF
MRS ALICE LIBERTY.
WIDOW OF THE ABOVE-NAMED
WILLIAM LIBERTY,
SHE DIED 29 MAY 1809, AGED 82 YEARS.'

There is nothing peculiar about the tomb. It is just such a one as may be seen in any cemetery. But why was it placed here? Was it to commemorate Mr Liberty's independence of sepulchral rites and usages? or to inform posterity that this ground once was his own? or was it to scare the simple rustic as he passes by in the shades of evening? Certain it is that—

'The lated peasant dreads the dell,
For superstition's wont to tell
Of many a grisly sound and sight,
Scaring its path at dead of night.'

About a mile from Great Missenden, a large Buckinghamshire village, stands a queer-looking building—a sort of dwarf pyramid, which is locally called 'Captain Backhouse's tomb.' It is built of flints, strengthened with bricks; is about eleven feet square at the base; the walls up to about four or five feet are perpendicular; then they taper pyramidically, but instead of terminating in a point, a flat slab-stone about three feet square forms the summit. There is a small gothic window in the north wall, and another in the south; the western and part of the southern walls are covered with ivy. (See the accompanying illustration.) This singular tomb stands in a thick wood

CAPTAIN BACKHOUSE'S TOMB.

or plantation, on a lofty eminence, about a quarter of a mile from Havenfield Lodge, the house in which Mr Backhouse resided. He had been a major or captain in the East Indian service, but quitting his military life, he purchased this estate, on which he built himself a house of one story, in Eastern fashion, and employed himself in planting and improving his property. He is described as a tall, athletic man, of a stern and eccentric character.

As he advanced in life his eccentricity increased, and one of his eccentric acts was the erection of his own sepulchre within his own grounds, and under his own superintendence. 'I'll have nothing to do,' said he, 'with the church or the churchyard! Bury me there, in my own wood on the hill, and my sword with me, and I'll defy all the evil spirits in existence to injure me!' He died, at the age of eighty, on the 21st of June 1800, and was buried, or rather deposited, according to his own directions, in the queer sepulchre he himself had erected. His sword was placed in the coffin with him, and the coffin reared upright within a niche or recess in the western wall, which was then built up in front, so that he was in fact *immured*. It is said in the village that he was never married, but had two or three illegitimate sons, one of whom became a Lieutenant-General. This gentleman, returning from India about seven years after his father's death, had his father's body removed to the parish churchyard, placing over his grave a large handsome slab, with a suitable inscription; and this fact is recorded in the parish register—

'August 8th, 1807.—The remains of Thomas Backhouse, Esq., removed, by a faculty from the Archdeacon of Buckingham, from the mausoleum in Havenfield to the churchyard of Great Missenden, and there interred.'

This removal has given rise to a popular notion in the village that Mr Backhouse was buried on his estate, 'to keep possession of it till his son returned. For,

don't you see,' say these village oracles, 'that when his son came back from abroad, and took possession of the property, he had his father's corpse taken from the queer tomb in Havenfield Wood, and decently buried in the churchyard?'

This 'queer tomb' has occasioned some amusing adventures, one of which was the following. As some boys were birds'-nesting in Havenfield Wood, they came up to this tomb, and began to talk about the dead man that was buried there, and that it was still haunted by his ghost; when one boy said to another, 'Jack, I'll lay you a penny you dursn't put your head into that window, and shout out, Old Backhouse!' 'Done!' said Jack. They struck hands, and the wager was laid. Jack boldly threw down his cap, and thrust his head in through the window, and called aloud, 'Old —' His first word roused an owl within from a comfortable slumber; and she, bewildered with terror, rushed to the same window, her usual place of exit, to escape from this unwonted intrusion. Jack, still more terrified than the owl, gave his head a sudden jerk up, and stuck it fast in the narrow part of the window. Believing the owl to be the dead man's ghost, his terror was beyond conception. He struggled, he kicked, he shrieked vociferously. With this hubbub the owl became more and more terrified. She rushed about within—flapping her wings, hooting, screeching, and every moment threatening frightful onslaughts on poor Jack's head. The rest of the boys, imagining Jack was held fast by some horrid hobgoblin, rushed away in consternation, screaming and bellowing at the full pitch of their voices. Fortunately, their screams drew to them some workmen from a neighbouring field, who, on hearing the cause of the alarm, hastened to poor Jack's assistance. He had liberated himself from his thralldom, but was lying panting and unconscious on the ground. He was carried home, and for some days it was feared his intellect was impaired; but after a few weeks he perfectly recovered, though he never again put his head into Captain Backhouse's tomb, and his adventure has become safely enrolled among the traditions of Misenenden.

Sir William Temple, Bart., a distinguished statesman and author, who died at his seat of Moor Park, near Farnham, in 1700, ordered his heart to be enclosed in a silver box, or china basin, and buried under a sundial in his garden, over against a window from whence he used to contemplate and admire the works of God, after he had retired from worldly business. Sir James Tillie, knight, who died in 1712, at his seat of Pentilly Castle, in Cornwall, was buried by his own desire under a tower or summer-house which stood in a favourite part of his park, and in which he had passed many joyous hours with his friends.*

A baronet, of some military fame, who died in a midland county in 1823, directed in his will that after his death his body should be opened by a medical man, and afterwards covered with a sere-cloth, or other such perishable material, and thus interred, without a coffin, in a particular spot in his park; and that over his grave should be sown a quantity of acorns, from which the most promising plant being selected, it should be there preserved and carefully cultured, 'that after my death my body may not be entirely useless, but may serve to rear a good English oak.' He left a small legacy to his gardener, 'to see that the plant is well watered, and kept free from weeds.' The directions of the testator were fully complied

* The story of his being buried in an arm-chair, with 'a table before him garnished with bottles, glasses, &c.' as stated in *Notes and Queries*, vol. vi. 448, is without foundation, as proved by his will.

with, except that the interment, instead of being in the prescribed spot, took place in the churchyard adjoining the mansion. The oak over the grave is now a fine healthy tree.

Baskerville, the famous printer, who died in 1775, is said to have been buried by his own desire under a windmill near his garden. Samuel Johnson, an eccentric dancing-master in Cheshire, who died in 1773, aged eighty-two, was, by his own request from the owner, buried in a plautiau forming part of the pleasure-grounds of the Old Hall at Gawsworth, near Macclesfield; and a stone stating the circumstances still stands over his grave. A farmer named Trigg, of Stevenage, Herts, directed his body to be enclosed in lead, and deposited in the tie-beam of the roof of a building which was once his barn; and where it may still be seen. The coffin enclosing the body of another eccentric character rests on a table in the summer-house belonging to a family residence in Northamptonshire.

Mr Hull, a bencher of the Inner Temple, who died in 1772, was buried beneath Leith Hill Tower, in Surrey, which he had himself erected a few years before his death.

Thomas Hollis, a gentleman of considerable property, resided for some years before his death on his estate at Corscomb, in Dorset. He was very benevolent, an extreme Liberal, and no less eccentric. In his will, which was in other respects remarkable, he ordered his body to be buried ten feet deep in any one of certain fields of his lying near his house; and that the whole field should immediately afterwards be ploughed over, that no trace of his burial-place might remain. It is remarkable that, while giving directions to a workman in one of these very fields, he suddenly fell down, and almost instantly expired, on the 1st of January 1774, in the fifty-fourth year of his age, when he was buried according to his directions. It is the popular opinion that these irregular burials are the result of infidelity. But this opinion must be received with great caution, for in most instances it might be proved to be erroneous. Mr Hollis, for example, was a large benefactor to both Church and Dissent. He attended the public worship of both; nearly rebuilt, at his own cost, the parish church at Corscomb; and the last words he uttered were, 'Lord have mercy upon me! Receive my soul!'

Instances of persons desiring to be buried in some favourite spot are too numerous to be specified. A few examples only will suffice to illustrate this peculiarity. Mr Booth, of Brush House, Yorkshire, desired to be buried in his shrubbery, because he himself had planted it, and passed some of his happiest hours about it. Doctor Reuny, a physician at Newport Pagnel, Bucks, for a similar reason was buried in his garden, on a raised plot of ground, surrounded by a suuk fence. In the same county, near a village named Radnage, Thomas Withers, an opulent German, who died January 1st, 1843, aged sixty-three, was by his own direction buried 'beneath the shade of his own trees, and in his own ground.' But one of the most interesting burials of this description is on the Chiltern Hills, in the same county. It is called *The Shepherd's Grave*, and though in the parish of Aston Clinton, is yet far away from the village and the habitations of man; it is in a lonely spot on the Chilterns, that remarkable range of hills which crosses Buckinghamshire, and stretches on the one side into Berks, and on the other into Bedfordshire. High on a towering knoll, it commands a fine panoramic view of the whole surrounding country. To this spot, about a century ago, a shepherd named Faithful was wont to lead his flock day by day, to depasture on the heathery turf around. Here, from

* Hutchins's *History of Dorset*, vol. i. 425.

morning to night, was his usual resting-place. Here he sat to eat his rustic meals. Here he rested to watch his sheep, as, widely spread before and around him, they diligently nibbled the scanty herbage of these chalky downs. Here, without losing sight of his flock, he could survey a vast expanse of earth and heaven—could contemplate the scenes of nature, and admire many a celebrated work of man. Here, as he sat at perfect ease, his eye could travel into six counties—a hundred churches came within the compass of his glance—mansions and cottages, towns and villages in abundance lay beneath his feet. And he was not a man whose mind slept while his eyes beheld the wonders of nature or of art; he became a wise and a learned, though unlettered philosopher.

'His head was silvered o'er with age,
And long experience made him sage;
In summer's heat and winter's cold
He fed his flock and penned his fold;
His wisdom and his honest fame
Through all the country raised his name.'

The spot which had been from youth to age the scene of his labours, his meditations, and enjoyments, had become so endeared to him, that he wished it to become his last earthly resting-place. 'When my spirit has fled to those glorious scenes above,' said he to his fellow-shepherds, 'then lay my body here.' He died, and there they buried him. And let no one say it was to him unconsecrated ground. It had been hallowed by his strict attention to duties; by meditations which had refined and elevated his mind; by heavenly aspirations, and spiritual communion with Him who is the only true sanctifier of all that is holy. His neighbours cut in the turf over his grave this rude epitaph—

'Faithful lived, and Faithful died,
Faithful lies buried on the hill side;
The hill so wide the fields surround,
In the day of judgment he'll be found.'

Up to a recent period the shepherds and rustics of the neighbourhood were accustomed 'to scour' the letters; and as they were very large, and the soil chalky, the words were visible at a great distance. The 'scouring' having been discontinued, the word 'Faithful' alone could be discerned in 1848, but the grave is still held in reverence, and generally approached with solemnity by the rustics of the neighbourhood.

A burial, which turned out to be remarkable in its results, took place on the moors near Hope, in Derbyshire. In the year 1674 a farmer and his female servant, in crossing these moors on their way to Ireland, were lost in the snow, with which they continued covered from January to May. Their bodies on being found were in such an offensive state that the coroner ordered them to be buried on the spot. Twenty-nine years after their burial, for some reason or other now unknown, their graves were opened, and their bodies were found to be in as perfect a state as those of persons just dead. The skin had a fair and natural colour, and the flesh was soft and pliant; and the joints moved freely, without the least stiffness. In 1716, forty-two years after the accident, they were again examined in the presence of the clergyman of Hope, and were found still in the same state of preservation. Even such portions of dress as had been left on them had undergone no very considerable change. Their graves were about three feet deep, and in a moist and mossy soil.* The antiseptic qualities of moss are well known.

Many ancient burials were curious, as the following instances exemplify. Geoffrey de Mandeville, Earl

* See *Wanderings of a Pen and Pencil*, 336.

of Essex, though the founder of the rich Abbey of Walden, and in other ways a liberal benefactor to the Church, was excommunicated for taking possession of the Abbey of Ramsey and converting it into a fortress, which he did in a case of extremity, to save himself from the sword of his pursuers. While under this sentence of excommunication, he was mortally wounded in the head by an arrow from the bow of a common soldier. 'He made light of the wound,' says an ancient writer, 'but he died of it in a few days, under excommunication. See here the just judgment of God, memorable through all ages! While that abbey was converted into a fortress, blood exuded from the walls of the church and the cloister adjoining, witnessing the Divine indignation, and prognosticating the destruction of the impious. This was seen by many persons, and I observed it with my own eyes.*'

Having died while under sentence of excommunication, the earl, notwithstanding his liberal benefactions to the Church, was inadmissible to Christian burial. But just before he breathed his last some Knights-Templars visited him, and finding him very penitent, from a sense of compassion, or of gratitude for bounties received from him, they threw over him 'the habit of their order, marked with a red cross,' and as soon as he expired, 'carried his dead body into their orchard at the Old Temple in London; and confining it in lead, hanged it on a crooked tree.' Some time afterwards, 'by the industry and expenses' of the Prior of Walden, absolution for the earl was obtained from Pope Alexander III.; and now his dead body, which had been hung like a scarecrow on the branch of a tree, became so precious that the Templars and the Prior of Walden contended for the honour of burying it. The Templars, however, triumphed by burying it privately or secretly in the porch before the west door of the New Temple. † 'So that his body,' continues Dugdale, 'was received amongst Christians, and divine offices celebrated for him.'

Howel Sele was buried in the hollow trunk of a tree, which from him received the name of 'Howel's Oak.' Owen Glendour, his cousin, but feudal adversary, having killed him in single combat, Madoc, a friend and companion of Owen, in order to hide the dead body from Howel's vassals who were searching for him, thrust it into a hollow tree. The circumstance is thus given in the popular ballad, in the words of Madoc:—

'I marked a broad and blasted oak,
Scorched by the lightning's livid glare;
Hollow its stem from branch to root,
And all its shrivelled arms were bare.
Be this, I cried, his proper grave
(The thought in me was deadly sin);
Aloft we raised the helpless chief,
And dropped his bleeding corpse within.'

The tree is still pointed out to strangers as 'Howel's Oak,' or, 'The spirit's blasted tree.'

'And to this day the peasant still,
With cautious fear, avoids the ground;
In each wild branch a spectre sees,
And trembles at each rising sound.'

We sometimes meet with a peculiar kind of ancient burial, which is chiefly interesting from the amusing legends connected with it. This is where the stone coffin, which contains the remains of the deceased, is placed within an external recess in the wall of a church, or under a low arch passing completely through the wall, so that the coffin, being in the middle of the wall, is seen equally within and without the church. At Brent Pelham, Herts, there is a monument of this

* Henry of Huntingdon's *Chronicle*.

† Dugdale's *Baronage*, vol. i. p. 203.

description in the north wall of the nave. It is supposed to commemorate O' Piers Shonkes, lord of a manor in the parish. The local tradition is, that by killing a certain serpent he so exasperated the spiritual dragon, that he declared he would have the body of Shonkes when he died, whether he was buried within or without the church. To avoid such a calamity, Shonkes ordered his body to be placed *in the wall*, so as to be neither inside nor outside the church. This tomb, says Chauncey, had formerly the following inscription over it:—

'Tantum fama mauet, Cadmi Sanctiq. Georgi
Posthuma, Tempus edax ossa, sepulchra vorat;
Hoc tamen in muro tutus, qui perdidit anguem,
Invito, positus, Demonæ Shonkus erat.'

'Nothing of Cadmus nor St George, those names
Of great renown, survives them but their fames;
Time was so sharp set as to make no bones
Of theirs, nor of their monumental stones,
But Shonkes one serpent kills, t'other defies,
And in this wall as in a fortress lies.'*

In the north wall of the church of Tremeirchion, North Wales, there is a tomb which is said to commemorate a necromancer priest, who died vicar of the parish about 1340. The tradition here is that this priestly wizard made a compact with the 'Prince of Magicians,' that if he would permit him to practise the black art with impunity during his life, he should possess his body at his death, whether he was buried in or out of the church. The wily priest outwitted his subtle master, by ordering his body to be buried neither inside nor outside of the church, but in the middle of its wall.† There are so many similar tombs, with similar legends connected with them, that one cannot but wonder the master of subtilty should have been so often outwitted by the same manoeuvre.

The dreadful punishment of immuring persons, or burying them alive in the walls of convents, was undoubtedly sometimes resorted to by monastic communities. Skeletons thus built up in cells or niches have frequently been found in the ruins of monasteries and nunneries. A skeleton thus immured was discovered in the convent of Penwortham, Lancashire; and Sir Walter Scott, who mentions a similar discovery in the ruins of Coldingham Abbey, thus describes the process of immuring:—'A small niche, sufficient to inclose the body, was made in the massive wall of the convent; a slender pittance of food and water was deposited in it, and the awful words, VADE IN PACEM, were the signal for immuring the criminal.'

On this awful species of punishment Sir Walter Scott has founded one of the striking episodes in his poem of *Marmion*. We can only give a short extract. Two criminals are to be immured—a beautiful nun who had fled after her lover, and a sordid wretch whom she had employed to poison her rival. They are now in a secret crypt or vault under the convent, awaiting the awful sentence.

'Yet well the luckless wretch might shriek,
Well might her paleness terror speak!
For there were seen, in that dark wall,
Two niches,—narrow, deep, and tall;
Who enters at such griesly door,
Shall ne'er, I ween, find exit more.

* * * * *

And now that blind old abbot rose,
To speak the chapter's doom
On those the wall was to inclose
Alive, within the tomb,

* *History of Herts*, vol. i. 284.

† *Notes and Queries*, vol. ii. 513.

But stopped, because that woeful maid,
Gathering her powers, to speak essayed.'

After revealing the cause of her flight, she is very effectively described as concluding with these prophetic words—

'Yet dread me from my living tomb,
Ye vassal slaves of bloody Rome!

* * * * *

Behind a darker hour ascends!
The altars quake, the crossier bends;
The ire of a despotic king
Rides forth upon destruction's wing.
Theu shall these vaults, so strong and deep,
Burst open to the sea-winds' sweep;
Some traveller then shall find my bones,
Whitening amid disjointed stones,
And, ignorant of priests' cruelty,
Marvel such relics here should be.'

We have also instances on record of persons being buried alive in the earth. Leland, in his account of Brackley, in Northamptonshire, says:—'In the churchyard lyethe an image of a priest revested (divested), the whiche was Vicar of Brakeley, and there buried quike by the tyranny of a Lord of the Towne, for a displeasure that he tooke with hym for an horse taken, as some say, for a mortuarie. But the Lord, as it is there sayde, went to Rome for absolution, and toke greate repentans.'

In *Notes and Queries*, vol. vi. p. 245, we are informed that, in the parish of Ensbury, Dorset, there is a tradition that on a spot called Patty Barn a man was many years ago buried alive up to the neck, and a guard set over him to prevent his being removed or fed by friends, so that he was left to die in this wretched state from starvation.

Another instance of this kind of burial, with which we will conclude, is connected with a curious family legend. Sir Robert de Shurland, Lord of Shurland, in the Isle of Sheppy, Kent, was attached to a lady who unhappily died unanointed and aneled, and consequently the priest refused to bury her with the rites of sepulture. Sir Robert, roused to madness by the indignity, ordered his vassals to bury the priest alive. Perhaps he did not expect to be obeyed. But his obsequious vassals instantly executed his command to the letter. Hereupon the impetuous knight, having somewhat cooled, became alarmed; and fearing the consequences of his sacrilegious murder, mounted his favourite charger, swam across the arm of the sea which separated Sheppy from the main land, galloped to court, and obtained the king's pardon for a crime which he had, he said, unwittingly committed in a fit of grief and indignation. 'He made the church a present, by the way,' to atone for his crime; but the prior of a neighbouring convent predicted that the gallant steed which had now saved his life would hereafter be the cause of his death. Like a prudent man, he ordered the poor horse to be stabbed, and thrown into the sea with a stone tied round his neck; and, in self-gratulation, assumed the motto, 'Fato prudentia major' (Prudence is superior to fate). Twenty years afterwards the aged knight was hobbling on the sands, in all the 'dignity of gout,' when he saw a horse's skeleton with a stone fastened round the neck. Giving it a kick, 'Ah!' he exclaimed, 'this must be my poor old horse.' The sharp points of the vertebrae pierced through his velvet shoe, and inflicted a wound in his toe which ended in mortification and death; thus fulfilling the prediction. The tomb of Sir Robert Shurland is still to be seen in Minster Church, under a Gothic arch in the south wall. The effigy is cross-legged, and on the right side is sculptured a horse's head emerging from the waves of the sea, as if in the act of swimming. The

vane of the tower of the church represented in Grose's time a horse's head, and the church was called 'The Horse Church.'*

John Wilkinson, the great ironfounder, having made his fortune by the manufacture of iron, determined that his body should be encased by his favourite metal when he died. In his will he directed that he should be buried in his garden, in an iron coffin, with an iron monument over him of twenty tons weight; and he was so buried within thirty yards of his mansion of Castlehead. He had the coffin made long before his death, and used to take pleasure in showing it to his visitors, very much to the horror of many of them. He would also make a present of an iron coffin to any one who might desire to possess one. When he came to be placed in his narrow bed, it was found that the coffin he had provided was too small, so he was temporarily interred until another could be made. When placed in the ground a second time, the coffin was found to be too near the surface; accordingly it was taken up, and an excavation cut in the rock, after which it was buried a third time. On the Castlehead estates being sold in 1828, the family directed the coffin again to be taken up, and removed to the neighbouring chapel-yard of Lindale, where it now lies. A man is still living (1862) at the latter place, who assisted at all the four interments.†

JUNE 22.

St Alban, protomartyr of Britain, 303. St Paulinus, Bishop of Nola, confessor, 431.

ST ALBAN.

St Alban has the honour of being regarded as the first British martyr. The bloody persecution of Dioclesian, which raged in other parts of the Roman empire with such terrible fury that Dioclesian declared the Christians exterminated, was kept in check in Gaul and Britain by Constantius, who governed those provinces with almost regal authority. But some few are alleged to have suffered, and among these St Alban was first. He sheltered a priest, whose name was Amphibalus, who is said to have converted him; and when he could conceal him no longer, he assisted his escape by changing clothes with him. For this act Alban was brought before the governor, condemned, and beheaded.

The execution took place at Verulam, and in remembrance of the martyr, the name of Verulam was changed to St Alban's. Ingulphus tells us, in his *History of the Abbey of Croyland*, that Offa, king of Mercia, 'founded a monastery of Black Monks at the city of Verulam, in honour of God and of St Alban, the protomartyr of the English,' in the year 793. In time, this became one of the richest and most beautiful abbacies in England, and its superior was in 1154 invested by Pope Adrian IV. with the privilege of taking the first place among the mitred abbots in parliament. Of its original grandeur some idea, though but a faint one, may still be acquired by a survey of the church, which continues to be used as a parochial place of worship.

When we view the ancient and still surviving grandeur of the church of St Alban's and its

* See Grose's *Antiquities*, vol. iii. 77.

† Smiles's *Lives of the Engineers*, vol. ii. 338, note.

appurtenances, it becomes a curious reflection that great doubts now exist whether St Alban himself ever had an existence.

BATTLE OF MORAT.

On the 22nd of June 1476, was fought at Morat in Switzerland one of the most sanguinary battles on record. The defeated party was Charles Duke of Burgundy, the last of a series of independent princes, who, with a territory which now forms eastern France, had for four generations maintained themselves in great power and splendour. Philip des Commines tells us of the magnificence of Charles the Bold, Duke of Burgundy, and of the luxurious opulence of his subjects, from personal observation. Up to the year 1475, he was an object of terror to the astute Louis XI., who had reason to dread that, if the duke succeeded in mastering Provence, the kings of France would not be able to hold intercourse with the rest of Europe, except by his permission. Everything seemed in a fair way to make Charles a dangerously powerful sovereign, when an infatuation overtook him, in consequence of a dispute arising from a trivial cause with his poor neighbours the Swiss.

Charles, having taken from them the town of Granson, imprudently advanced to meet them at the bottom of their own mountains, carrying with him all the plate, jewels, and other articles which he generally used at home. Most unexpectedly, a panic seized the mass of his army, and the Swiss gained a victory, attended by little slaughter, but by the seizure of an immense amount of valuables (April 2, 1476). The allies of the duke quickly showed by their coldness how slight a hold he had upon their friendship, and how critical another defeat would be: but he nevertheless persisted in his absurd war, and in less than three months came to another collision with the Swiss, in circumstances fully as unfavourable to himself as before. The two armies, each about 30,000 strong, met in a straitened situation beside the lake of Morat, when once more the forces of the duke were defeated, but this time with immense slaughter. All the Burgundians who stood to fight, or could be overtaken by the cavalry of the enemy, were massacred; so that 'cruel as at Morat' became a proverb. The wretched duke escaped; but the mortification of defeat did not give him wisdom. He persisted in the war for a few months longer, and was slain in a final defeat at Nancy, in Lorraine (January 1477), along with the best of his remaining adherents. The fall of the house of Burgundy was accomplished in less than a year. It naturally excited great wonder and much comment among surrounding states. Des Com-

mines could not conceive what should provoke the displeasure of the Almighty against the duke, 'unless it was his self-love and arrogance,'—a sufficient reason for the fall of both princes and people, without the supposition of any miracle, as has been proved in many cases, and will yet be in many others.

DAY, THE DIVER.

On the 22nd of June 1774, a man named John Day lost his life in a manner singularly exhibiting the great ignorance with respect to the simplest physical facts which prevailed at the period. Day, an ignorant but ingenious millwright, fancied that he had invented a plan by which he could remain below water, at any depth, and without any communication with the air, for at least twenty-four hours; returning to the surface whenever he thought proper. As no useful purpose could be promoted by this assumed discovery, Day thought of turning it to account as a means of making money by betting, and accordingly placed himself in communication with one Blake, a well-known sporting character of the period. A contract was soon entered into between Blake and Day, the former engaging to furnish funds for constructing Day's diving machine, and to pay him ten per cent. on the amount of all bets gained by it.

Day's plan, if it had no other merit, had that of simplicity. His machine was merely a water-tight box, or compartment, attached to an old vessel by means of screws. After entering the box, and carefully closing the hole of entrance, the vessel was to be sunk, and Day, being provided with a wax taper and a watch, would at the time appointed disengage his box from the vessel by drawing the screws, and thus rise to the surface. Granting that a man could live, let alone a taper burn, without a constant supply of fresh air, nothing could be easier than Day's proposed plan; but, at the present time, it must be a very young and ill-informed child that does not perceive the glaring absurdity of the proposition.

So confident, however, were the partners in this strangest of gambling speculations, that Blake at once commenced accepting bets that he would not, within the space of three months, cause a man to be sunk 100 feet deep under water, without any communication with air, for twelve hours; the man, at the exact termination of that time, rising to the surface of his own accord, and by his own exertions. While Blake was busy making his bets, Day on his part was as actively engaged at Plymouth in constructing his machine. He then seems to have acquired, from the shipwrights he employed, some idea of the difficulty of his undertaking, as far as regards the great pressure of water at a considerable depth. This caused delay, as he was induced to make his diving-box larger and stronger than he at first intended, and the three months elapsed before all was ready. Blake consequently lost his bets; but he paid them cheerfully, hoping for better luck the next time.

Soon afterwards, the machine being finished, Blake went down to Plymouth to superintend the first trial of the affair. A place in Plymouth

Sound, twenty-two fathoms (132 feet) in depth, having been selected, the vessel was towed thither; and Day, provided with a bed, a watch, a taper, some biscuits, and a bottle of water, entered the box which was to be his tomb. The box was then tightly closed according to his directions, and the vessel to which it was attached sank to the bottom, from whence neither it nor the unfortunate man ever arose.

Thus a clever, enterprising, but ignorant man perished, through want of a knowledge possessed by almost every child at the present day. Nor was the ingenious country millwright alone ignorant that fresh air is the first necessity of life. A pretentious monthly periodical of the time, *The British Magazine of Arts, Sciences, and Literature*, though it assigns four probable reasons for Day's failure, never alludes to the most patent and prominent one—the want of fresh air.

A BALLOON DUEL.

Perhaps the most remarkable duel ever fought took place in 1808. It was peculiarly French in its tone, and could hardly have occurred under any other than a French state of society. M. de Grandpré and M. le Pique had a quarrel, arising out of jealousy concerning a lady engaged at the Imperial Opera, one Mademoiselle Tirevit. They agreed to fight a duel to settle their respective claims; and in order that the heat of angry passion should not interfere with the polished elegance of the proceeding, they postponed the duel for a month—the lady agreeing to bestow her smiles on the survivor of the two, if the other was killed; or at all events, this was inferred by the two men, if not actually expressed. The duellists were to fight in the air. Two balloons were constructed, precisely alike. On the day denoted, De Grandpré and his second entered the car of one balloon, Le Pique and his second that of the other; it was in the garden of the Tuileries, amid an immense concourse of spectators. The gentlemen were to fire, not at each other, but at each other's balloons, in order to bring them down by the escape of gas; and as pistols might hardly have served for this purpose, each aeronaut took a blunderbuss in his car. At a given signal the ropes that retained the cars were cut, and the balloons ascended. The wind was moderate, and kept the balloons at about their original distance of eighty yards apart. When about half a mile above the surface of the earth, a preconcerted signal for firing was given. M. le Pique fired, but missed. M. de Grandpré fired, and sent a ball through Le Pique's balloon. The balloon collapsed, the car descended with frightful rapidity, and Le Pique and his second were dashed to pieces. De Grandpré continued his ascent triumphantly, and terminated his aerial voyage successfully at a distance of seven leagues from Paris!

JUNE 23.

St Etheldreda, or Audry, virgin and abbess of Ely, 679.
St Mary of Oignies, 1213.

Born.—Bishop John Fell, 1625, Longworth; Gottfried Wilhelm Leibnitz, historian, philosopher, 1646, Leipsic.

Died.—Caius Flaminius, killed at the battle of Thrasimene, B.C. 217; Louis I. of France (Le Débonnaire), 840; Mary Tudor, Duchess of Suffolk, 1533; Mark Akenside, poet, 1770; Catherine Macaulay (Mrs Graham), historian, 1791, *Binfield*; James Mill, author of the *History of India*, &c., 1836, *Kensington*; Lady Hester Stanhope, 1839, *Lebanon*; John Lord Campbell, Lord Chancellor of England, 1861.

MRS MACAULAY.

There was a Macaulay's *History of England* long before Lord Macaulay's was heard of; and in its day a famous history it was. The first volume appeared in 1763 and the fifth in 1771, and the five quartos sold rapidly, and were replaced by two or three editions in octavo. It was entitled, *The History of England from the Accession of James I. to the Elevation of the House of Hanover*, and the author was Mrs Catharine Macaulay.

The historian was the daughter of John Sawbridge, a gentleman resident at Ollantigh, near Wye, Kent, where she was born in 1733. From her girlhood she was an eager and promiscuous reader, her favourite books being, as she herself tells us, 'the histories which exhibit liberty in its most exalted state in the annals of the Roman and Greek Republics.' 'Liberty,' she says, 'became the object of a secondary worship in my delighted imagination.' She was married when in her twentieth-seventh year to Dr George Macaulay, a London physician, and excited by the conflict her enthusiastic republican opinions encountered in society, she set about writing her *History*, in which all characters and events were viewed through democratic spectacles. Female authorship was then more of a singularity than it is now, and her theme and her politics quickly raised her name into notoriety, and she was flattered and abused with equal vehemence. Her adversaries said she was horribly ugly (which she was not), and that in despair of admiration as a woman she was aspiring after glory as a man. Dr Wilson, a son of the Bishop of Sodor and Man, made her the present of a house and library in Bath worth £1,500, and, to the scandal of sober people, placed her statue in the chancel of St Stephen's, Walbrook, London, of which he was rector. One of her heartiest admirers was John Wilkes, and in the popular furor for 'Wilkes and Liberty' her *History* greatly profited. She made a trip to Paris in 1777, and there received most grateful attentions from Franklin, Turgot, Marmontel, and other Liberals. Madame Roland in her *Memoires* says: 'It was my ambition to be for France what Mrs Macaulay was for England.' In a dispute with Mrs Macaulay, Dr Johnson observed, 'You are to recollect, madam, that there is a monarchy in heaven;' to which she replied, 'If I thought so, sir, I should never wish to go there.' One day at her house he put on a grave face, and said, 'Madam, I am now become a convert to your way of thinking. I am convinced that all mankind are upon an equal footing; and, to give you an unquestionable proof, madam, that I am in earnest, here is a very sensible, civil, well-behaved fellow-citizen, your footman; I desire that he may be allowed to sit down and dine with us.' 'I thus,' relates

the doctor, 'shewed her the absurdity of the levelling doctrine. She has never liked me since. Your levellers wish to level *down* as far as themselves; but they cannot bear levelling *up* to themselves.'

Dr Macaulay died in 1778, and shortly after Mrs Macaulay married Mr Graham, a young Scotchman, a brother of the noted quack of the same name. The disparity of their years exposed her to much ridicule, and so offended Dr Wilson, that he removed her statue from St Stephen's, to the great satisfaction of his parishioners, who contemplated raising a motion in the ecclesiastical courts concerning it. She had corresponded for some years with Washington, and in 1785, accompanied by Mr Graham, she made a voyage to America, and spent three weeks in his society at Mount Vernon. On her return, she retired to a country-house in Leicestershire, where she died in 1791, aged 58.

In addition to her *History*, Mrs Macaulay was an active pamphleteer on politics, morals, and metaphysics, and always commanded a fair share of public attention. The *History* is sometimes met with at this day on the second-hand book-stalls, selling at little more than the price of waste paper. It is written in a vivacious style, but embodies no original thought or research, and is neither better nor worse than a series of republican harangues, in which the facts of English history under the Stuarts are wrought up from books which may be found in every gentleman's library.

JAMES MILL.

Though in a high degree romantic and wonderful, about no portion of their history do Englishmen shew less interest than in that which relates their struggles and conquests in India. On scarcely any matter is the attention of the House of Commons yielded less willingly than on Indian affairs. The reasons for this apathy may perhaps be traced to the complete division existing between the Hindoo and Englishman in race, mind, religion, and manners; and to the multitude of diverse tribes and nations who crowd Hindostan, turning India into a mere geographical expression, and complicating its history in a way to which even German history affords but a faint resemblance. We may imagine how all this might have been changed had the peninsula of Hindostan, like China, been ruled by one emperor, whose power Britain had sapped and overthrown. Instead of this the great drama is diffused in a myriad of episodes, and that unity is lost by which alone popular interest can be enthralled.

Until James Mill published his *History of British India*, in 1818, any one who wished to attain the truth concerning most parts of that history had to seek for it in a chaos of books and documents. It was Mill's merit out of that chaos to evolve order. Many who have opened Mill's history for amusement, have closed it in weariness; but Mill made no attempt at brilliancy, and was only careful to describe events accurately and clearly. From the first openings of intercourse with India to the establishment of the East India Company, in the reign of Queen

Anne, down to the end of the Mahratta war in 1805, he ran a straight, broad, and firm road through what had before been a jungle of hearsay, and voluminous and confused authorities. Mill was no mere compiler. He was a hard thinker and a philosopher; he thoroughly absorbed his matter, and reproduced it from his brain in a masterly digest, which has won the praise of all whose business it has been to consult him with serious purpose.

James Mill was the son of a shoemaker and small farmer, and was born at Montrose, on the 6th of April 1773. He was a thoughtful lad, and Sir John Stuart, of Fettercairn, unwilling that his talents should be hidden, sent him to Edinburgh University, with the purpose of educating him for a minister in the Scottish Church. Mill, however, had little inclination for the pulpit, and Dugald Stewart's lectures confirmed his taste for literature and philosophy in preference to theology. Long afterwards, in writing to a friend, he said, 'The taste for the studies which have formed my favourite pursuits, and which will be so to the end of my life, I owe to Dugald Stewart.' For some years he acted as a tutor or teacher, and in 1800, when in London, he accepted the editorship of *The Literary Journal*. This paper was a failure, but he soon secured other work, and for twenty years supported himself by writing for magazines and newspapers. Shortly after coming to London he married. In 1806 was born his celebrated son, John Stuart Mill, whose education, as well as that of eight other sons and daughters, he conducted. About 1806 he commenced the *History of British India* in the hours he could rescue from business, and in twelve years completed and gave it to the world in three quarto volumes. In the course of the history, he had meted out censure freely and honestly to the East India Company; but so highly were the directors impressed with the merits of the work, that in the spring of 1819 they appointed Mill to manage their finances, and subsequently their entire correspondence with India. In possession of affluence, Mill's pen was active as ever, his favourite themes being political economy and metaphysics. He was the intimate friend and constant visitor of Jeremy Bentham; their opinions on nearly all things coincided, and by many he was considered Bentham's ablest lieutenant. Mill died at Kensington, of consumption, on the 23rd of June 1836.

THE BOOK-FISH.

On the 23rd of June 1626, a cod-fish was brought to Cambridge market, which, upon being opened, was found to contain a book in its maw or stomach. The book was much soiled, and covered with slime, though it had been wrapped in a piece of sail-cloth. It was a duodecimo work written by one John Frith, comprising several treatises on religious subjects. In a letter now in the British Museum, written by Mr Mead, of Christchurch College, to Sir M. Stuteville, the writer says: 'I saw all with mine own eyes, the fish, the maw, the piece of sail-cloth, the book, and observed all I have written;

only I saw not the opening of the fish, which not many did, being upon the fish-woman's stall in the market, who first cut off his head, to which the maw hanging, and seeming much stuffed with somewhat, it was searched, and all found as aforesaid. He that had had his nose as near as I yester morning, would have been persuaded there was no imposture here without witness. The fish came from Lynn.'

The treatises contained in this book were written by Frith when in prison. Strange to say, he had been long confined in a fish cellar at Oxford, where many of his fellow-prisoners died from the impure exhalations of unsound salt fish. He was removed from thence to the Tower, and in 1533 was burned at the stake for his adherence to the reformed religion. The authorities at Cambridge reprinted the work, which had been completely forgotten, till it turned up in this strange manner. The reprint is entitled *Vox*

BOOK-FISH.

Piscis, or the Book-Fish, and is adorned with a woodcut representing the stall in Cambridge market, with the fish, book, and knife.

It also contains a few very feeble undergraduate jokes on the occasion; one is quite enough as a specimen of Cambridge wit at the period. 'A young scholar, who had, in a stationer's shop, peeped into the title of the Civil Law, then viewing this unconcocted book in the cod-fish, made a quibble thereupon; saying that it might have been found in the *Code*, but could never have entered into the *Digest*.'

CRESLOW PASTURES. A GHOST STORY.

The ancient manor of Creslow, which lies about half way between Aylesbury and Winslow, was granted by Charles II. to Thomas, first Lord Clifford of Chudleigh, on the 23rd of June 1673, and has continued ever since the property of his successors.

From possessing a fine old manor-house and the remains of an ancient church, as well as from historic associations, Creslow is not undeserving of notice. In the reign of Edward the Confessor, this manor was held by Aluren, a female, from whom it passed at the Conquest to Edward Sarisberi, a Norman lord. 'About the year 1120,' says Browne Willis, 'it was given to the Knights Templars, and on the suppression of

that community, it passed to the Knights Hospitallers, from whom, at the dissolution of monasteries, it passed to the Crown. From this time till it passed to Lord Clifford, Creslow Manor was used as feeding ground for cattle for the royal household; and it is remarkable that nearly the whole of this manor, containing more than 850 acres, has been pasture land from the time of the Domesday survey, and the cattle now fed here are among the finest in the kingdom. While Creslow pastures continued in possession of the Crown, they were committed to the custody of a keeper. In 1596, James Quarles, Esq., Chief Clerk of the Royal Kitchen, was keeper of Creslow pastures. He was succeeded by Benett Mayne, a relative of the regicide, who was succeeded in 1634 by the regicide Cornelius Holland. This Cornelius Holland, whose father died insolvent in the Fleet, was 'a poore boy in court waiting on Sir Henry Vane, by whose interest he was appointed by Charles I. keeper of Creslow pastures. He subsequently deserted the cause of his royal patron, and was rewarded by the Parliament with many lucrative posts. He entered the House of Commons in 1642, and after taking a very prominent part against the king, signed his death-warrant. He became so wealthy that, though he had ten children, he gave a daughter on her marriage £5,000, equal to ten times that sum at the present day. He is traditionally accused of having destroyed or dismantled many of the churches in the neighbourhood of Creslow.

At the Restoration, being absolutely excepted from the royal amnesty, he escaped execution only by flying to Lausanne, where, says Noble, 'he ended his days in universal contempt.'

Creslow, though once a parish with a fair proportion of inhabitants, now contains only the manor-house, and the remains of an ancient church. Originally the church consisted of a chancel, nave, and tower; but the present building, which is used as a coach-house, constituted apparently only the nave. It is forty-four feet long, and twenty-four feet wide, and built of hewn stone, though most other churches in the county are composed of rubble. The south wall, which contains the entrance to the coach-house, has been sadly mutilated. The

north wall remains in tolerable preservation, and presents many features of interest. The doorway, which is of the Norman, or very early English period, is decorated with the billet and zigzag ornaments. The present windows, which have evidently superseded others of an earlier date, belong to the decorated style, and consisted each of two trefoil-headed lights divided by a chamfered mullion.

The boundary of the churchyard is not known, but the ground all round the church has been used for sepulture. A stone coffin, which is said to have been taken from the floor of the church, is now used, turned upside down and cracked through the middle, as a paving stone near the west door of the mansion.

From the quantity of human remains found about the church, it is evident that the interments here have been unusually numerous for a village cemetery. But this is accounted for by the fact that the Hospitallers, for their valiant exploits at the siege of Ascalon, were rewarded by Pope Adrian IV. with the privilege of exemption from all public interdicts and excommunications, so that in times of any national interdict, when all other churches were closed, the noble and wealthy would seek, at any cost or inconvenience, interment for their friends where the rites of sepulture could be duly celebrated. Here, then, in this privileged little cemetery, not only were interred many a puissant knight of St John, and their dependents, but some of the proudest and wealthiest barons of the land.

'I do love these ancient ruins;
We never tread upon them but we set
Our foot upon some reverend history;
And questionless here in this open court,
Which now lies naked to the injuries
Of stormy weather, some men lie interred
Loved the church so well, and gave so largely to 't,
They thought it should have canopied their bones
Till Doomsday. But all things have an end:
Churches and cities, which have diseases like to
men,
Must have like death that we have.'

The mansion, though diminished in size and beauty, is still a spacious and handsome edifice. It is a picturesque and venerable looking build-

CRESLOW CHURCH, NORTH SIDE.

CRESLOW MANOR HOUSE.

ing with numerous gables and ornamental chimneys, some ancient mullioned windows, and a square tower with octagonal turret. The walls

of the tower are of stone, six feet thick; the turret is forty-three feet high, with a newal staircase and loopholes. Some of the more interesting objects within the house are the ground room in the tower, a large chamber called the banqueting room, with vaulted timber roof; a large oak door with massive hinges, and locks and bolts of a peculiar construction; and various remains of sculpture and carving in different parts of the house. Two ancient cellars, called 'the crypt' and 'the dungeon,' deserve special attention. The crypt, which is excavated in the solid limestone rock, is entered by a flight of stone steps, and has but one small window to admit light and air. It is about twelve feet square, and its roof, which is a good specimen of light Gothic vaulting, is supported by arches springing from four columns, groined at their intersections, and ornamented with carved flowers and bosses, the central one being about ten feet from the floor. The 'dungeon,' which is near the crypt, is entered by a separate flight of stone steps, and is a plain rectangular building, eighteen feet long, eight and a half wide, and six in height. The roof, which is but slightly vaulted, is formed of exceedingly massive stones. There is no window, or external opening into this cellar, and, for whatever purpose intended, it must have always been a gloomy, darksome vault, of extreme security. It now contains several skulls and other human bones—some of the thigh-bones, measuring more than nineteen inches, must have belonged to persons of gigantic stature. This dungeon had formerly a subterranean communication with the crypt, from which there was a newal staircase to a chamber above, which still retains the Gothic doorway, with hood-moulding resting on two well sculptured human heads, with grotesque faces. This chamber, which is supposed to have been the preceptor's private room, has also a good Gothic window of two lights, with head tracery of the decorated period. This is the haunted chamber. For Creslow, like all old manor-houses, has its ghost story. But the ghost is not a knight-templar or knight of St John, but a lady. Seldom, indeed, has she been seen, but often has she been heard, only too plainly, by those who have ventured to sleep in this room, or enter after midnight. She appears to come from the crypt or dungeon, and always enters this room by the Gothic door. After entering, she is heard to walk about, sometimes in a gentle, stately manner, apparently with a long silk train sweeping the floor—sometimes her motion is quick and hurried, her silk dress rustling violently, as if she were engaged in a desperate struggle. As these mysterious visitations had anything but a somniferous effect on wearied mortals, this chamber, though furnished as a bedroom, was seldom so used, and was never entered by servants without trepidation and awe. Occasionally, however, some one was found bold enough to dare the harmless noises of the mysterious intruder, and many are the stories respecting such adventures. The following will suffice as a specimen, and may be depended on as authentic. About the year 1850, a gentleman who resided some miles distant, rode over to a

dinner-party, and as the night became exceedingly dark and rainy, he was urged to stay over the night, if he had no objection to sleep in a haunted chamber. The offer of a bed in such a room, so far from deterring him, induced him at once to accept the invitation. He was a strong-minded man, of a powerful frame, and undaunted courage, and entertained a sovereign contempt for all ghost stories. The room was prepared for him. He would neither have a fire nor a burning candle, but requested a box of lucifers, that he might light a candle if he wished. Arming himself, in jest, with a cutlass and a brace of pistols, he took a serio-comic farewell of the family, and entered his formidable dormitory. Morning came, and ushered in one of those glorious autumnal days which often succeed a night of soaking rain. The sun shone brilliantly on the old manor-house. Every loophole and cranny in the tower was so penetrated by his rays, that the venerable owls, that had long inherited its roof, could scarcely find a dark corner to doze in, after their nocturnal labours. The family and their guests assembled in the breakfast room, and every countenance seemed cheered and brightened by the loveliness of the morning. They drew round the table, when lo! the host remarked that the tenant of the haunted chamber was absent. A servant was sent to summon him to breakfast, but he soon returned, saying he had knocked loudly at his door but received no answer, and that a jug of hot water left at his door was still standing there unused. On hearing this, two or three gentlemen ran up to his room, and after knocking at his door, and receiving no answer, they opened it, and entered the room. It was empty. The sword and the pistols were lying on a chair near the bed, which had been used, but its occupant was gone. The ghost had put him to flight. Inquiry was made of the servants: they had neither seen nor heard anything of him, but on first coming down in the morning they found an outer door unfastened. As he was a county magistrate, it was now supposed that he was gone to attend the board which met that morning at an early hour. The gentlemen proceeded to the stable, and found his horse was still there. This by no means diminished the mystery. The party sat down to breakfast, not without feelings of perplexity, mingled with no little curiosity. Many strong conjectures were discussed; and just as a lady suggested dragging the fish-ponds, in walked the knight-errant! Had the ghost herself appeared at that moment, she could scarcely have caused more consternation. Such was the general eagerness for an account of the knight's adventures, that, before beginning his breakfast, he promised to relate fully and candidly all the particulars of the case. 'Having entered my room,' said he, 'I locked and bolted both doors, carefully examined the whole room, and satisfied myself that there was no living creature in it but myself, nor any entrance but those I had secured. I got into bed, and, with the conviction I should sleep as usual till six in the morning, I was soon lost in a comfortable slumber. Suddenly I was aroused, and on raising my head to listen, I heard a sound cer-

tainly resembling the light, soft tread of a lady's footstep, accompanied with the rustling as of a silk gown. I sprang out of bed and lighted a candle. There was nothing to be seen, and nothing now to be heard. I carefully examined the whole room. I looked under the bed, into the fire-place, up the chimney, and at both the doors, which were fastened as I had left them. I looked at my watch, and found it was a few minutes past twelve. As all was now perfectly quiet, I extinguished the candle, and entered my bed, and soon fell asleep. I was again aroused. The noise was now louder than before. It appeared like the violent rustling of a stiff silk dress. I sprang out of bed, darted to the spot where the noise was, and tried to grasp the intruder in my arms. My arms met together, but enclosed nothing. The noise passed to another part of the room, and I followed it, groping near the floor, to prevent anything passing under my arms. It was in vain, I could feel nothing—the noise had passed away through the Gothic door, and all was still as death! I lighted a candle, and examined the Gothic door, and there I saw—the old monks' faces grinning at my perplexity; but the door was shut and fastened, just as I had left it. I again examined the whole room, but could find nothing to account for the noise. I now left the candle burning, though I never sleep comfortably with a light in my room. I got into bed, but felt, it must be acknowledged, not a little perplexed at not being able to detect the cause of the noise, nor to account for its cessation when the candle was lighted. While ruminating on these things, I fell asleep, and began to dream about murders, and secret burials, and all sorts of horrible things; and just as I fancied myself knocked down by a knight-templar I awoke, and found the sun shining so brightly, that I thought a walk would be far more refreshing than another disturbed sleep; so I dressed and went out before the servants were down. Such, then, is a full, true, and particular account of my night's adventure, and, though I cannot account for the noises in the haunted chamber, I am still no believer in ghosts.'

Doubtless there are no ghosts;
Yet somehow it is better not to move,
Lest cold hands seize upon us from behind.

DOBELL.

THE FIRST ENGLISH REGATTA.

Lady Montague's description of a regatta, or *fête* held on the water, which she witnessed at Venice, stimulated the English people of fashion to have something of a similar kind on the Thames, and after much preparation and several disappointments, caused by unfavourable weather, the long expected show took place on the 23rd of June 1775. The programme, which was submitted to the public a month before, requested ladies and gentlemen to arrange their own parties, except those who should apply to the managers of the Regatta for seats in the barges lent by the several City Companies for the occasion. The rowers were to be uniformly dressed in accordance with the three marine colours—white, red, and blue. The white division was directed to take position at the two arches on each side of the centre arch of Westminster Bridge. The red division at the four

arches next the Surrey shore; and the blue at the four on the Middlesex side of the river. The company were to embark between five and six o'clock in the evening, and at seven all the boats were to move up the river to Ranelagh in procession. The marshal of the white, in a twelve-oared barge, leading his division; the marshals of the red and blue, with their respective divisions, following at intervals of three minutes between each.

Early in the afternoon, the river, from London Bridge to Millbank, was crowded with pleasure boats, and scaffolds, gaily decorated with flags, were erected wherever a view of the Thames could be obtained. Half-a-guinea was asked for a seat in a coal-barge; and vessels fitted for the purpose drove a brisk trade in refreshments of various kinds. The avenues to Westminster Bridge were covered with gaming-tables, and constables guarded every passage to the water, taking from half-a-crown to one penny for liberty to pass. Soon after six o'clock, concerts were held under the arches of Westminster Bridge; and a salute of twenty-one cannons announced the arrival of the Lord Mayor. A race of wager-boats followed, and then the procession moved in a picturesque irregularity to Ranelagh. The ladies were dressed in white, the gentlemen in undress frocks of all colours; about 200,000 persons were supposed to be on the river at one time.

The company arrived at Ranelagh at nine o'clock, where they joined those who came by land in a new building, called the Temple of Neptune. This was a temporary octagon, lined with stripes of white, red, and blue cloth, and having lustres hanging between each pillar. Supper and dancing followed, and the entertainment did not conclude till the next morning. Many accidents occurred when the boats were returning after the *fête*, and seven persons were unfortunately drowned.

JUNE 24.

Nativity of St John the Baptist.* The Martyrs of Rome under Nero, 1st century. St Bartholomew of Dunelm.

Midsummer Day—the Nativity of St John the Baptist.

Considering the part borne by the Baptist in the transactions on which Christianity is founded, it is not wonderful that the day set apart for the observance of his nativity (June 24) should be, in all ages and most parts of Europe, one of the most popular of religious festivals. It enjoys the greater distinction that it is considered as Midsummer Day, and therefore has inherited a number of observances from heathen times. These are now curiously mixed with those springing from Christian feelings, insomuch that it is not easy to distinguish them from the other. It is only clear, from their superstitious character, that they have been originally pagan. To use the quaint phrase of an old translator of Scaliger, they 'form the footsteps of ancient gentility;' that is, gentilism or heathenism.

The observances connected with the Nativity of St John commenced on the previous evening, called, as usual, the eve or vigil of the festival, or Midsummer eve. On that evening the people

* The festivals of the Saints are generally celebrated on the anniversary of their death, but an exception to this rule holds in the case of John the Baptist.

were accustomed to go into the woods and break down branches of trees, which they brought to their homes, and planted over their doors, amidst great demonstrations of joy, to make good the Scripture prophecy respecting the Baptist, that many should rejoice in his birth. This custom was universal in England till the recent change in manners. In Oxford there was a specialty in the observance, of a curious nature. Within the first court of Magdalen College, from a stone pulpit at one corner, a sermon was always preached on St John's Day; at the same time the court was embowered with green boughs, 'that the preaching might resemble that of the Baptist in the wilderness.'

Towards night, materials for a fire were collected in a public place and kindled. To this the name of bonfire was given, a term of which the most rational explanation seems to be, that it was composed of contributions collected as *boons*, or gifts of social and charitable feeling. Around this fire the people danced with almost frantic mirth, the men and boys occasionally jumping through it, not to show their agility, but as a compliance with ancient custom. There can be no doubt that this leaping through the fire is one of the most ancient of all known superstitions, and is identical with that followed by Manasseh. We learn that, till a late period, the practice was followed in Ireland on St John's Eve.

It was customary in towns to keep a watch walking about during the Midsummer Night, although no such practice might prevail at the place from motives of precaution. This was done at Nottingham till the reign of Charles I. Every citizen either went himself, or sent a substitute; and an oath for the preservation of peace was duly administered to the company at their first meeting at sunset. They paraded the town in parties during the night, every person wearing a garland of flowers upon his head, additionally embellished in some instances with ribbons and jewels. In London, during the middle ages, this watch, consisting of not less than two thousand men, paraded both on this night and on the eves of St Paul's and St Peter's days. The watchmen were provided with cressets, or torches, carried in barred pots on the tops of long poles, which, added to the bonfires on the streets, must have given the town a striking appearance in an age when there was no regular street-lighting. The great came to give their countenance to this marching watch, and made it quite a pageant. A London poet, looking back from 1616, thus alludes to the scene:—

'The goodly buildings that till then did hide
Their rich array, open'd their windows wide,
Where kings, great peers, and many a noble dame,
Whose bright pearl-glittering robes did mock the
flame

Of the night's burning lights, did sit to see
How every senator in his degree,
Adorn'd with shining gold and purple weeds,
And stately mounted on rich-trapped steeds,
Their guard attending, through the streets did ride,
Before their foot-bands, graced with glittering pride
Of rich-gilt arms, whose glory did present
A sunshine to the eye, as if it meant,

Among the cresset lights shot up on high,
To chase dark night for ever from the sky;
While in the streets the sticklers to and fro,
To keep decorum, still did come and go,
Where tables set were plentifully spread,
And at each door neighbour with neighbour fed.'

King Henry VIII., hearing of the marching watch, came privately, in 1510, to see it; and was so much pleased with what he saw, that he came with Queen Catherine and a noble train to attend openly that of St Peter's Eve, a few nights after. But this king, in the latter part of his reign, thought proper to abolish the ancient custom, probably from a dread of so great a muster of armed citizens.

Some of the superstitious notions connected with St John's Eve are of a highly fanciful nature. The Irish believe that the souls of all people on this night leave their bodies, and wander to the place, by land or sea, where death shall finally separate them from the tenement of clay. It is not improbable that this notion was originally universal, and was the cause of the widespread custom of watching or sitting up awake on St John's night, for we may well believe that there would be a general wish to prevent the soul from going upon that somewhat dismal ramble. In England, and perhaps in other countries also, it was believed that, if any one sat up fasting all night in the church porch, he would see the spirits of those who were to die in the parish during the ensuing twelvemonths come and knock at the church door, in the order and succession in which they were to die. We can easily perceive a possible connexion between this dreary fancy and that of the soul's midnight ramble. The civic vigils just described were no doubt a result, though a more remote one, of the same idea. There is a Low Dutch proverb used by those who have been kept awake all night by troubles of any kind—'We have passed St John Baptist's night.' In a book written in the seventeenth century for the instruction of a young nobleman, the author warns his pupil against certain 'fearful superstitions, as to watch upon St John's evening, and the first Tuesday in the month of March, to conjure the moon, to lie upon your back, having your ears stopped with laurel leaves, and to fall asleep not thinking of God, and such like follies, all forged by the infernal Cyclops and Pluto's servants.' A circumstance mentioned by Grose supports our conjecture—that to sleep on St John's Eve was thought to ensure a wandering of the spirit, while watching was regarded as conferring the power of seeing the vagrant spirits of those who slept. Amongst a company who sat up in a church porch, one fell so deeply asleep that he could not be waked. His companions afterwards averred that, whilst he was in this state, they beheld his spirit go and knock at the church door.

The same notion of a temporary liberation of the soul is perhaps at the bottom of a number of superstitious practices resembling those appropriate to Hallow-*eve*. It was supposed, for example, that if an unmarried woman, fasting, laid a cloth at midnight with bread and cheese, and sat down as if to eat, leaving the street-door

open, the person whom she was to marry would come into the room and drink to her by bowing, after which, setting down the glass, with another bow he would retire. It was customary on this eve to gather certain plants which were supposed to have a supernatural character. The fern is one of those herbs which have their seed on the back of the leaf, so small as to escape the sight. It was concluded, according to the strange irrelative reasoning of former times, that to possess this seed, not easily visible, was a means of rendering one's self invisible. Young men would go out at midnight of St John's Eve, and endeavour to catch some in a plate, but without touching the plant—an attempt rather trying to patience, and which often failed. Our Elizabethan dramatists and poets, including Shakspeare and Jonson, have many allusions to the invisibility-conferring powers of fern seed. The people also gathered on this night the rose, St John's wort, vervain, trefoil, and rue, all of which were thought to have magical properties. They set the orpine in clay upon pieces of slate or potsherd in their houses, calling it a Midsummer Man. As the stalk was found next morning to incline to the right or left, the anxious maiden knew whether her lover would prove true to her or not. Young women likewise sought for what they called pieces of coal, but in reality, certain hard, black, dead roots, often found under the living mugwort, designing to place these under their pillows, that they might dream of their lovers. Some of these foolish fancies are pleasantly strung together in the *Connoisseur*, a periodical paper of the middle of the last century. 'I and my two sisters tried the dumb cake together; you must know two must make it, two bake it, two break it, and the third put it under each of their pillows (but you must not speak a word all the time), and then you will dream of the man you are to have. This we did; and, to be sure, I did nothing all night but dream of Mr Blossom. The same night, exactly at twelve o'clock, I sowed hemp-seed in our backyard, and said to myself—"Hemp-seed I sow, hemp-seed I hoe, and he that is my true love come after me and mow.' Will you believe me? I looked back and saw him as plain as eyes could see him. After that I took a clean shift and wetted it, and turned it wrong side out, and hung it to the fire upon the back of a chair; and very likely my sweetheart would have come and turned it right again (for I heard his step), but I was frightened, and could not help speaking, which broke the charm. I likewise stuck up two Midsummer Men, one for myself and one for him. Now, if his had died away, we should never have come together; but I assure you his bowed and turned to mine. Our maid Betty tells me, if I go backwards, without speaking a word, into the garden upon Midsummer Eve, and gather a rose, and keep it in a clean sheet of paper, without looking at it till Christmas Day, it will be as fresh as in June; and if I then stick it in my bosom, he that is to be my husband will come and take it out.' So also, in a poem entitled the *Cottage Girl*, published in 1786:—

'The moss rose that, at fall of dew,
Ere eve its duskier curtain drew,

Was freshly gather'd from its stem,
She values as the ruby gem;
And, guarded from the piercing air,
With all an anxious lover's care,
She bids it, for her shepherd's sake,
Await the new-year's frolic wake,
When, faded in its alter'd hue,
She reads—the rustic is untrue!
But if its leaves the crimson paint,
Her sickening hopes no longer faint;
The rose upon her bosom worn,
She meets him at the peep of morn,
And lo! her lips with kisses prest,
He plucks it from her panting breast.'

We may suppose, from the following version of a German poem, entitled *The St John's Wort*, that precisely the same notions prevail amongst the peasant youth of that country:—

'The young maid stole through the cottage door,
And blushed as she sought the plant of power:
"Thou silver glow-worm, oh, lend me thy light,
I must gather the mystic St John's wort to-night—
The wonderful herb, whose leaf will decide
If the coming year shall make me a bride,"
And the glow-worm came
With its silvery flame,
And sparkled and shone
Through the night of St John.
And soon has the young maid her love-knot tied,
With noiseless tread,
To her chamber she sped,
Where the spectral moon her white beams shed:
"Bloom here, bloom here, thou plant of power,
To deck the young bride in her bridal hour!"
But it droop'd its head, that plant of power,
And died the mute death of the voiceless flower;
And a wither'd wreath on the ground it lay,
More meet for a burial than bridal day.
And when a year was past away,
All pale on her bier the young maid lay;
And the glow-worm came
With its silvery flame,
And sparkled and shone
Through the night of St John,
As they closed the cold grave o'er the maid's cold
clay.'

Some years ago there was exhibited before the Society of Antiquaries a ring which had been found in a ploughed field near Cawood in Yorkshire, and which appeared, from the style of its inscriptions, to be of the fifteenth century. It bore for a device *two orpine plants* joined by a true love knot, with this motto above, *Ma fiancée velt*, that is, My sweetheart wills, or is desirous. The stalks of the plants were bent towards each other, in token, no doubt, that the parties represented by them were to come together in marriage. The motto under the ring was *Joye l'amour feu*. So universal, in time as in place, are these popular notions.

The observance of St John's Day seems to have been, by a practical bull, confined mainly to the previous evening. On the day itself, we only find that the people kept their doors and beds embowered in the branches set up the night before, upon the understanding that these had a virtue in averting thunder, tempest, and all kinds of noxious physical agencies.

The Eve of St John is a great day among the mason-lodges of Scotland. What happens with them at Melrose may be considered as a fair

example of the whole. 'Immediately after the election of office-bearers for the year ensuing, the brethren walk in procession three times round the Cross, and afterwards dine together, under the presidency of the newly-elected Grand Master. About six in the evening, the members again turn out and form into line two abreast, each bearing a lighted flambeau, and decorated with their peculiar emblems and insignia. Headed by the heraldic banners of the lodge, the procession follows the same route, three times round the Cross, and then proceeds to the Abbey. On these occasions, the crowded streets present a scene of the most animated description. The joyous strains of a well-conducted band, the waving torches, and incessant showers of fireworks, make the scene a carnival. But at this time the venerable Abbey is the chief point of attraction and resort, and as the mystic torch-bearers thread their way through its mouldering aisles, and round its massive pillars, the outlines of its gorgeous ruins become singularly illuminated and brought into bold and striking relief. . . . The whole extent of the Abbey is with "measured step and slow" gone three times round. But when near the *finale*, the whole masonic body gather to the chancel, and forming one grand semicircle around it, where the heart of King Robert Bruce lies deposited near the high altar, and the band strikes up the patriotic air, "Scots wha ha'e wi' Wallace bled," the effect produced is overpowering. Midst showers of rockets and the glare of blue lights the scene closes, the whole reminding one of some popular saturnalia held in a monkish town during the middle ages.'—*Wade's Hist. Melrose*, 1861, p. 146.

FOUNDATION OF THE ORDER OF THE GARTER.

It is concluded by the best modern authorities that the celebrated Order of the Garter, which European sovereigns are glad to accept from the British monarch, was instituted some time between the 24th of June and the 6th of August 1348. The founder, Edward III., was, as is well known, addicted to the exercises of chivalry, and was frequently holding jousts and tournaments, at some of which he himself did not disdain to wield a spear. Some years before this date, he had gone some way in forming an order of the *Round Table*, in commemoration of the legend of King Arthur, and, in January 1344, he had caused an actual round table of two hundred feet diameter to be constructed in Windsor

Castle, where the knights were entertained at his expense, the effect being that he thus gathered

around him a host of ardent spirits, highly suitable to assist in his contemplated wars against France. Before the date above mentioned, a turn had been given to the views of the king, leading him to adopt a totally different idea for the basis of the order. 'The popular account is, that, during a festival at court, a lady happened to drop her garter, which was taken up by King Edward, who, observing a significant smile among the bystanders, exclaimed, with some displeasure, "Honi soit qui mal y pense"—"Shame to him who thinks ill of it." In the spirit of gallantry, which belonged no less to the age than to his own disposition, conformably with the custom of wearing a lady's favour, and perhaps to prevent any further impertinence, the king is said to have placed the garter round his own knee.'—*Tighe and Davis's Annals of Windsor*.

It is commonly said that the fair owner of the garter was the Countess of Salisbury; but this is a point of as much doubt as delicacy, and there have not been wanting those who consider the whole story fabulous. Scepticism, however, rests mainly on the ridiculous character of the incident above described, a most fallacious basis, we must say in all humility, and rather indeed a support to the popular story, considering how outrageously foolish are many of the authenticated practices of chivalry. It is to be remarked that the tale is far from being modern. It is related by Polydore Virgil so early as the reign of Henry VII.

Although the order is believed to have been not founded before June 24th, 1348, it is certain that the garter itself was become an object of some note at court in the autumn of the preceding year, when at a great tournament held in honour of the king's return from France, 'garters with the motto of the order embroidered thereon, and robes and other habiliments, as well as banners and couches, ornamented with the same ensign, were issued from the great wardrobe at the charge of the sovereign.* The royal mind was evidently by this time deeply interested in the garter. A surcoat furnished to him in 1348, for a spear play or hastilude at Canterbury, was covered with garters. At the same time, the youthful Prince of Wales presented twenty-four garters to the knights of the society.

* *Beltz's Memorials of the Order of the Garter*, 1841, p. 2.

RELIEF OF SHIPWRECKED MARINERS AT
BAMBOROUGH CASTLE.

By his will of this date, in 1720, Lord Crewe, Bishop of Durham, left Bamborough Castle, and extensive manors in its neighbourhood, for various charitable and other purposes, including the improvement of certain church livings. The annual proceeds amounted a few years ago to £8126, 8s. 8d., being much more than was necessary for the purposes originally contemplated. The trustees have accordingly for many years devoted a part of the funds to the support of an establishment in the castle of Bamborough, directed to the benefit of distressed vessels and shipwrecked seamen.

This castle crowns the summit of a basalt

rock, a hundred and fifty feet high, starting up from a sandy tract on a dangerous part of the coast of Northumberland. The buildings are most picturesque, and they derive a moral interest from the purpose to which they are devoted. 'The trustees have ready in the castle such implements as are required to give assistance to stranded vessels; a nine-pounder is placed at the bottom of the great tower, which gives signals to ships in distress, and, in case of wreck, announces the same to the custom-house officers and their servants, who hasten to prevent the wreck being plundered. A constant watch is kept at the top of the great tower, whence signals are also made to the fishermen of Holy Island, as soon as any vessel is discovered to be in distress, when the fishermen immediately put

BAMBOROUGH CASTLE.

off to its assistance, and the signals are so regulated as to point out the particular direction in which the vessel lies; and this is partly indicated by flags by day, and rockets at night. Owing to the size and fury of the breakers, it is generally impossible for boats to put off from the main land in a severe storm, but such difficulty occurs but rarely in putting off from Holy Island.

'In addition to these arrangements for mariners in distress, men on horseback constantly patrol the coast, a distance of eight miles, from sunset to sunrise, every stormy night. Whenever a case of shipwreck occurs, it is their duty to forward intelligence to the castle without delay; and, as a further inducement to this,

premiums are often given for the earliest notice of such distress. During the continuance of fogs, which are frequent and sudden, a gun is fired at short intervals. By these means many lives are saved, and an asylum is offered to shipwrecked persons in the castle. The trustees also covenant with the tenants of the estate, that they shall furnish carts, horses, and men, in proportion to their respective farms, to protect and bring away whatever can be saved from the wrecks. There are likewise the necessary tackle and instruments kept for raising vessels which have sunk, and whatever goods may be saved are deposited in the castle. The bodies of those who are lost are decently interred at the expense of this charity—in fact, to sailors on that

perilous coast, Bamborough Castle is what the convent of St Bernard is to travellers in the Alps.*

The Rev. Mr Bowles thus addresses Bamborough Castle with reference to its charitable purpose:—

‘Ye holy towers, that shade the wave-worn steep,
 Long may ye rear your aged brows sublime,
 Though, hurrying silent by, relentless Time
 Assail you, and the winter whirlwinds sweep!
 For far from blazing Grandeur’s crowded halls,
 Here Charity hath fix’d her chosen seat;
 Oft list’ning tearful when the wild winds beat
 With hollow bodings round your ancient walls!
 And Pity, at the dark and stormy hour
 Of midnight, when the moon is hid on high,
 Keeps her lone watch upon the topmost tower,
 And turns her ear to each expiring cry!
 Blest if her aid some fainting wretch might save,
 And snatch him, cold and speechless, from the
 wave.’

THE WELL-FLOWERING AT BUXTON.

The example of Tissington has been followed by several of the towns of Derbyshire, and the decoration of their wells has become a most popular amusement. It is (1862) about twenty-two years since the Duke of Devonshire, who did so much for

the improvement of the fashionable watering-place of Buxton, supplied the town with water at his own expense, and the people, out of gratitude, determined henceforward to decorate the taps with flowers; this has become such a festival from the crowds arriving for miles round, as well as from Manchester and other towns, that it is the busiest day in the year, and looked forward to with the utmost pleasure by young and old. Vehicles of all kinds, and sadly overloaded, pour in at an early hour; the streets

are filled with admiring groups, and bands of music parade the town. The crescent walks are planted with small firs, and the pinnacles of the bath-house have each a little flag—alternately pink, white, blue, and yellow—the effect of which is extremely good, connected as they are by festoons of laurel. But the grand centres of attraction are the two wells. On an occasion when we visited the place, that

* *Edwards’s Remarkable Charities*, p. 87.

of St Anne’s was arched over; the whole groundwork covered with flowers stuck into plaster, and on a ground of buttercups were inscribed, in red daisies, the words ‘Life, Love, Liberty, and Truth.’ Ferns and rockwork were gracefully arranged at the foot, and amidst them a swan made of the white rocket, extremely well modelled; an oak branch supported two pretty white doves, and pillars wreathed with rhododendrons completed the design, which was on the whole very pretty. We can scarcely say so much for the well in the higher town, which was a most ambitious attempt to depict ‘Samson slaying the lion,’ in ferns, mosses, fir cones, blue bells, buttercups, peonies, and daisies—a structure twenty feet high, the foreground being occupied with miniature fountains, rockwork, and grass. Much pains had been lavished upon it; but the success was not great.

The morris-dancers form an interesting part of the day’s amusements. Formerly they were little girls dressed in white muslin; but as this was considered objectionable, they have been replaced by young men gaily decorated with ribbons, who come dancing down the hill, and when they reach the pole in the centre of the crescent fasten the long ribbons to it, and

in mystic evolutions plait them into a variety of forms, as they execute what is called the Ribbon Dance. In the meantime the children are delighting themselves in the shows, of which there are abundance, the men at the entrance of each clashing their cymbals, and proclaiming the superiority of their own in particular—whether it be a dwarf or a giant, a lion or a serpent; and the merry-go-rounds and swing-boats find plenty of customers. Altogether, it must be allowed that there is a genial

and kindly influence in the well-flowering which we should be sorry to see abolished in these days, when holidays, and the right use of them, is a question occupying so many minds.

The tap-dressing at Wirksworth is too similar to those at Tissington and Buxton to require any further description. This curious little town, surrounded by hills, looks gay indeed every Whitsuntide, which is the season at which the wakes are held and the taps dressed; the mills

ST ANNE'S WELL, BUXTON, DECORATED.

around are emptied of their workers, and friends assemble from all the neighbourhood. This custom has been established about a hundred and seven years, in gratitude for the supply of water which was procured for the town when the present pipes were laid down.

JUNE 25.

Saints Agoard and Aglibert, martyrs, near Paris, about 400. St Prosper of Aquitain, confessor, 463. St Maximus, Bishop of Thrin, confessor, 5th century. St Moloc, bishop and confessor in Scotland, 7th century. St Adelbert of Northumberland, confessor, about 740. St William of Monte-Vergine, 1142.

Born.—John Horne Tooke, political character, author of the *Diversions of Purley*, 1736, Westminster.

Died.—John Marston, dramatist, 1634 (?); Roger Gale, learned antiquary, 1744, *Scruton, Yorkshire*; Lady Miller, 1781; Charles Barbaroux, Girondist politician, guillotined, 1793; William Smellie, naturalist, miscellaneous writer, 1795, *Edinburgh*; Thomas Sandby, R.A., 1798; J. C. L. de Sismondi, historian, 1842, *near Geneva*; Louis Buonaparte, ex-king of Holland, 1846.

LADY MILLER—BATHEASTON POETICS.

Lady Miller of Batheaston was a literary amateur at a time when few women addressed the public. She was, moreover, a woman of warm emotional nature, of some taste, and even of a certain degree of talent. In company with her husband, Sir John, she made a tour of Italy, and wrote an account of it, which appeared under the modest title of *Letters written during a Tour of Italy by an Englishwoman*. On returning to their home at Batheaston, this amiable pair of enthusiasts brought with them an elegant antique vase, which they deposited on an altar in their saloon. The apartment was formally dedicated to Apollo, Lady Miller taking upon herself the august office of high priestess, the vase itself being considered as the shrine of the deity. A general invitation was then issued to all votaries of fashion and poetry to assemble in the temple twice a week in honour of the son of Latona. As Batheaston was but a suburb of Bath, it may be supposed that the invitation was well responded to; for, besides the mental gratification about to be described, an excellent collation always concluded the ceremonies.

The worship of Apollo was conducted by each candidate for fame dropping a votive offering, in the form of a short piece of poetry, into the urn, as the whole assemblage marched round it in solemn procession. A lady was deputed to take the pieces one by one out of the urn, and hand them to a gentleman, who read them aloud. The merits of the poems were then considered, and the prizes adjudged, the blushing authors of the four best compositions being presented to the high-priestess, Lady Miller, and by her crowned with myrtles, amidst the plaudits of the company.

The poetry was no doubt very poor, and the whole affair rather namby-pambyish; but it certainly was much more harmless than many of the fashionable follies of the day. The meetings

lasted for several years, till at length they were put an end to by a most unwarrantable breach of good manners and hospitable confidence. Some unknown person disgracefully and maliciously contaminated the sacred urn with licentious and satirical compositions, to the great annoyance of the ladies present, and the chagrin of the host and hostess. The urn was thenceforth closed, and the meetings were discontinued for ever. Of the more legitimate kind of satire on the Bath-easton meetings, freely indulged in by the wits of the day, the following is a good specimen:—

Addressed to Lady Miller, on the Urn at Batheaston.

'Miller, the Urn in ancient time, 'tis said,
Held the collected ashes of the dead:
So thine, the wonder of these modern days,
Stands open night and day for lifeless lays.
Leave not unfinished, then, the well-formed plan,
Complete the work thy classic taste began;
And oh, in future, ere thou dost unurn them,
Remember first to raise a pile, and burn them.'

JOHN HORNE TOOKE.

This person was looked upon as one of the political pests of his era. A renegade priest, who openly scoffed at his former calling, and who led that kind of life which is called in England 'not respectable,' he could not well be much esteemed as a private citizen, notwithstanding the learning and ingenuity of his own generally admired work, *The Diversions of Purley*. It is, however, rather startling to reflect that all the public questions on which Mr Tooke's opinions were deemed mischievous have since been settled in his favour. His opposition to the American war, for which he was fined and imprisoned, is now fully sanctioned by the general opinion of his countrymen. His advocacy of a reform of the House of Commons—which by the way he stultified sadly by sitting for Old Sarum—must be presumed to have received the stamp of public favour, since the measure was carried only twenty years after his death. He was the first prominent Englishman to proclaim the advantages of free-trade; was, it might almost be said, the father of the modern doctrine on that subject, and was for this one heresy perhaps more ridiculed and condemned than for any of the rest. And yet we have seen this social heresy established, and that with such triumphantly happy results, that its enemies were in a very few years silenced, and its maxims beginning to be received and acted upon in nearly every civilized country, excepting America, where Mr Tooke would doubtless have expected it to be first taken by the hand. One cannot thus trace the history of Mr Tooke's opinions without feeling how powerfully it speaks as a lesson of toleration.

The equivocal name of Mr Tooke's great work is said to have led to some queer results. The committee of a village library at Canonmills, near Edinburgh, ordered it, on its publication, as an entertaining popular work, and were surprised when they found themselves in possession of a solid quarto full of profound etymological disquisitions.

Mr Tooke is described by Samuel Rogers, who knew him intimately, as a charming companion.

JUNE 26.

Saints John and Paul, martyrs in Rome, about 362. St Vigilius, Bishop of Trent, 400 or 405. St Maxentius, Abbot in Poitou, about 515. St Babolen, Abbot in France, 7th century. The Venerable Raingarda of Auvergne, widow, 1135. St Anthelm, Bishop of Bellay, confessor, 1178.

Born.—Dr Philip Doddridge, eminent English Nonconformist divine, 1702, London; George Morland, artist, 1763, Haymarket.

Died.—Julian, emperor, slain near Samara, upon the Tigris, 363; Innocent V., pope, 1276; Francisco Pizarro, assassinated at Lima, 1541; Archbishop Robert Leighton, 1684, Warwick Lane, London; Ralph Cudworth, English 'latitudinarian' divine, author of the *True Intellectual System of the Universe*, 1688, Cambridge; John Flavel, eminent Nonconformist divine, miscellaneous writer, 1691, Exeter; Alexis Czarowitz of Russia, died under sentence, 1718, Petersburg; Cardinal Julius Alberoni, Spanish minister, 1752, Placentia; Rev. Gilbert White, naturalist, 1793, Selborne; Samuel Crompton, inventor of 'The Mule' (spinning machine), 1827; George IV. of England, 1830, Windsor; William Smyth (historical writings, poetry, &c.), 1849, Norwich.

ARCHBISHOP LEIGHTON.

The ordinary biographies of Archbishop Leighton fail to make us acquainted with a strange escapade of his youth—namely, his being temporarily expelled from the University of Edinburgh. The provost of that day, Provost Aikenhead—who *ex officio* was rector of the University—having in some way provoked the wrath of the students, one of them, Mr Robert Leighton, the future archbishop, formed an epigram upon him, turning upon the name Aikenhead (*q.d.*, head of oak), and the pimpled visage borne by the unfortunate official:

'That whilk his name pretends is falsely said,
To wit, that of ane aik his head is made;
For if that it had been composed so,
His fiery nose had flamed it long ago.'

For this the young man was called before the faculty of masters, and solemnly expelled. His guardian, Sir James Steuart, was absent at the time, but on his return was influential enough to get him *reponed*.*

Another semi-comic anecdote of the amiable prelate is quite as little known. It chanced to him that he never was married. While he held the see of Dumblane, he was of course a subject of considerable interest to the celibate ladies living in his neighbourhood. One day he received a visit from one who had come to a mature period of life. Her manner was solemn, yet somewhat embarrassed: it was evident from the first that there was something very particular upon her mind. The good bishop spoke with his usual kindness, encouraged her to be communicative, and by and by drew from her that she had had a very strange dream, or rather, as she thought, a revelation from heaven. On further questioning, she confessed that it had been intimated to her that she was to be united in marriage to the

* See *Scottish Pasquils*, 1827; Laing's *Fugitive Poetry of the Seventeenth Century*; *Notes and Queries*, 1st ser., xi. 150.

bishop. One may imagine what a start this would give to a quiet scholar who had long ago married his books, and never thought of any other bride. He recovered, however, and very gently addressing her, said that 'doubtless these intimations were not to be despised. As yet, however, the designs of heaven were but imperfectly explained, as they had been revealed to only one of the parties. He would wait to see if any similar communication should be made to himself, and whenever it happened he would be sure to let her know.' Nothing could be more admirable than this humour but the benevolence shown in so bringing an estimable woman off from a false position.

JUNE 27.

St John of Moutier and Chinon, priest and confessor, 6th century. St Ladislas I., King of Hungary, confessor, 1095.

Born.—Louis XII. ('the Just') of France, 1462, Blois; Charles IX. of France, 1550, St Germain; Charles XII. of Sweden, 1682.

Died.—Jean Rotrou, most eminent French dramatist before Corneille, 1650; Christian Heinecken, prodigy of precocious learning, 1725, Lübeck; Abbé de Chaulieu, French poet, 1740; Nicholas Tindal, historian, 1774, Greenwich Hospital; Dr William Dodd, executed at Tyburn, 1777; Runjeet Singh, chief of Lahore, 1839, Lahore; John Murray, eminent publisher, 1843, London.

CHRISTIAN HEINECKEN.

Christian Heinecken, one of the most remarkable beings recorded in the history of mankind, was born of respectable parentage, at Lubeck, in 1721. If he had come into the world during the dim and distant ages of antiquity, we might have set down the whole story as a myth, and thus dismissed it as unworthy of consideration. But the comparatively late period of his birth, and the unimpeachable character of the numerous witnesses that testify to his extraordinary precocity, leave us no alternative from belief and wonder. He spoke, we are told, and spoke sensibly too, within a few hours after his birth; when ten months old, he could converse on most subjects; when a year old he was perfect in the Old Testament, and in another short month he mastered the New. When two and a half years old, he could answer any question in ancient or modern history or geography. He next acquired Latin and French, both of which he spoke with great facility at the Court of Denmark, to which he was taken in his fourth year. His feeble constitution prevented him from being weaned until he was five years old, when he died in consequence of this necessary change of diet.

Some German *savans*, and one Frenchman, have written learned disquisitions in the attempt to explain on natural principles this wonderful precocity; but the result of their lucubrations has only been to prove that it is utterly inexplicable.

THE UNFORTUNATE DR DODD.

The son of a Lincolnshire vicar—educated at Cambridge—possessed of talents and a hand-

some person—witty and agreeable—Dodd might be said to have a good start in life. With something of the ballast of common sense and a decent degree of probity, he ought to have been a successful man. Wanting these, it is instructive to see what came of him. In 1751, at twenty-two years of age, he is found in London, without a profession or an income, yet indulging in all the enjoyments he had a mind for. When his father heard that he had married a gay, penniless girl, and furnished a house (it was, by the by, in Wardour-street), he came up to town in a state of alarm. What was to be done? The church was, in those days, simply looked on as a profession. The elder Dodd had no scruples any more than his son. It was decreed that William should take orders.

The step was, in a worldly point of view, successful. Dodd had from nature a showy oratorical power, and he cultivated it by the most careful study of the arts of elocution. Accordingly, in a succession of metropolitan cures, he shone out as a popular preacher of the highest attraction. George III. made him his chaplain in ordinary, and he was appointed tutor to the future Earl of Chesterfield. Meanwhile Dr Dodd and his wife lived in extravagant style, and were in perpetual pecuniary straits. They set up a coach, and took a country-house at Ealing. The doctor worked hard for the booksellers, and as he lacked leisure for original thought, he played the plagiarist with considerable vigour. He took pupils at high fees, and neglected them. He drew a lottery ticket for £1000, but the money only seduced him into new depths of waste. Had he only possessed an ordinary share of worldly wisdom, riches and advancement in the church would certainly have been his portion; but goaded by his necessities, and impatient for preferment, he was foolish enough, in 1774, to address an anonymous letter to the Lord Chancellor Apsley's wife, offering 3000 guineas if by her assistance Dr Dodd was appointed to St George's, Hanover-square, then vacant. The letter was at once traced to him, complaint was made to the king, and he was dismissed with disgrace from his office of chaplain to his majesty. The newspapers teemed with satire and invective over his simony, and Foote turned the transaction into a farce at the Hay-market. Covered with shame, he retired for a time to the Continent, and on his return resumed preaching in London, and seemed in a fair way to recover his lost popularity, when he committed his last fatal act. Importuned by creditors, he forged a bond on his old pupil, now Lord Chesterfield, for £4200. By a curious train of circumstances the fraud was detected. Dodd was arrested, brought to trial, and sentenced to death. Powerful exertions were made for his pardon. Curiously enough, in 1772, a highwayman who had stopped Dodd's coach and shot at him was captured, and on Dodd's evidence was hanged; whereon he preached and published a sermon, entitled *The Frequency of Capital Punishments inconsistent with Justice, Sound Policy, and Religion*. Petitions with upwards of 20,000 signatures were addressed to the king. A cry was raised for his respite, for the credit of the

clergy; but it was answered that if the honour of the clergy was tarnished, it was by Dodd's crime, and not by his punishment. Dodd appealed to Dr Johnson for his intercession, and Johnson, though he knew little of Dodd, bestirred himself on his behalf with all the energy of his tender heart. He drew up a petition of Dr Dodd to the king, and of Mrs Dodd to the queen; wrote *The Convict's Address to his Unhappy Brethren*, a sermon which Dodd delivered in the chapel of Newgate; also *Dr Dodd's last solemn Declaration*, and various other documents and letters to people in power; all without effect. The king had an inclination to mercy; but the year before Daniel and Robert Perreau, wine-merchants, had been executed for forgery; and he was plainly told, 'If your majesty pardon Dr Dodd, you will have murdered the Perreaus.' The law was therefore allowed to take its course, and on the 27th of June 1777, Dodd was conveyed, along with another malefactor, in an open cart, from Newgate to Tyburn, and there hanged in the presence of an immense crowd. As soon as his body was cut down, it was hurried to the house of Davies, an undertaker, in Goodge-street, Tottenham Court Road, where it was placed in a hot bath, and every exertion made to restore life, but in vain.

JOHN MURRAY.

Within the past century no name has been more frequent on the title-pages of first-rate books than that of John Murray; and few perhaps are aware that one reason of its long continuance arises from the fact that there has been a dynasty of three John Murrays.

The founder of the house was John MacMurray, who was born in Edinburgh about 1745, and commenced life in the Marines. In 1768 Lieut. MacMurray growing tired of his profession, bought for £400 the stock and goodwill of Paul Sandby, bookseller, 32 Fleet Street, opposite St Dunstan's Church, and close to Falcon Court, the site of the office of Wynkyn de Worde, whose sign was the Falcon. He was anxious to secure his friend Falconer, the author of *The Shipwreck*, as a partner; but Falconer declined, and the following year lost his life in the wreck of the 'Aurora,' off the African coast. Dropping the prefix of Mac, as Scotsmen were not then popular in London, Murray contrived, with much diligence, to improve and extend the business he had purchased. At the end of twenty-five years, in 1793, he died, leaving his trade, under executors, to his son John, at that time a minor of fifteen, having been born in the house over the Fleet Street shop on the 27th November 1778. John II. was educated at the best schools his father could find; among others at the High School of Edinburgh, and at Dr Burney's at Gosport, where he lost an eye by the writing-master's penknife accidentally running into it. For a time young Murray had for a partner Samuel Highley, a long-tried assistant of his father's; but feeling hampered by his associate's slow and cautious ways, he obtained a dissolution of the connexion in 1803—Highley moving off a few doors to carry on bookselling, and

leaving Murray to his more hazardous adventures as a publisher. One of his earliest and greatest projects was the *Quarterly Review*. To George Canning, in 1807, he wrote—'There is a work entitled the *Edinburgh Review*, written with such unquestionable talent, that it has already attained an extent of circulation not equalled by any similar publication. The principles of this work are, however, so radically bad, that I have been led to consider the effect which such sentiments, so generally diffused, are likely to produce, and to think that some means equally popular ought to be adopted to counteract their dangerous tendency. . . . Should you, sir, think the idea worthy of encouragement, I should with equal pride and willingness engage my arduous exertions to promote its success; but as my object is nothing short of producing a work of the greatest talent and importance, I shall entertain it no longer if it be not so fortunate as to obtain the high patronage which I have thus, sir, taken the liberty to solicit. Permit me, sir, to add, that the person who thus addresses you is no adventurer, but a man of some property, inheriting a business that has been established for nearly a century.' Canning was willing, and other helpers were found. On the 1st February 1809 the first number of the *Quarterly Review* appeared, and its success was instant and decisive, the circulation quickly rising to 12,000 copies. The *Review* was the origin of Mr Murray's eminent fortune. It brought around him such a galaxy of genius as no publisher before or since has had at his service. In 1812 he removed from under the shadow of Temple Bar to a western position in Albemarle Street, where his drawing-room became the resort in London of Scott, Byron, Campbell, Heber, D'Israeli, Canning, Hallam, Croker, Barrow, Madame de Staël, Crabbe, Southey, Belzoni, Washington Irving, Lockhart, and many more, remembered and forgotten. Murray's life-long distinction was his masterly enterprise, his fine combination of liberality with prudence, and his consummate literary and commercial tact. His transactions were the admiration and despair of lesser men.

An intimate alliance of business and friendship subsisted for a time between Murray and the Ballantynes and Constable of Edinburgh. Constable gave Scott £1000 for the copyright of *Marmion* before it was written, of which Murray took a fourth; and when Scott was in his difficulties he gracefully made him a present of his share. Murray published *The Tales of my Landlord*, and the secret of the Great Unknown was manifest to him from the beginning. He early foresaw the result of the reckless trading of John Ballantyne, and, after repeated warnings, finally broke off connexion with him. Happy would it have been for Scott had he taken the same course.

Mr Murray made Lord Byron's acquaintance in 1811, and gave him £600 for the first two cantos of *Childe Harold*, while the poet's fame was unestablished, thus shewing in a most happy instance that independent perception of literary talent which may be said to be the highest gift of the great publisher. It is understood that by

Mr Murray's aid and advice the poet profited largely. Hearing in 1815 that he was in pecuniary difficulties, Murray sent him a draft for £1500, promising another for the same amount in the course of a few months, and offering to sell his copyrights if necessity required. From first to last he paid Byron £20,000 for his poems. Byron playfully styled him 'the Anak of stationers,' and presented him with a handsome Bible, with the text 'Now Barabbas was a robber,' altered to 'Barabbas was a publisher.' Byron gave Moore his *Autobiography*, and Murray lent Moore £2000 on the security of the manuscript; and when Moore repaid the hard cash in order to destroy the memoir, Murray made up the loss by giving Moore £4000 for his *Life of Byron*.

When Crabbe came to town in the summer of 1817, he was soon a visitor of Murray's, whom he describes as a much younger and more lively man than he had imagined. For his *Poems* Murray offered the amply generous sum of £3000. It will scarcely be believed that Crabbe had friends so insensible to the publisher's liberality, and so inconceivably foolish, as to think this sum too little. Having, by their advice, opened negotiations with another firm, the simple-minded poet was alarmed to find a very much smaller price put upon his verses. In great anxiety, and fearful that he had lost what was to him a fortune, he wrote, saying he was willing to accept his offer. Receiving no answer, he persuaded Rogers and Moore to go to Albemarle Street and diplomatize for him. To his delight, their intervention proved unnecessary. 'Oh, yes,' said Murray, when they had described their errand, 'I have heard from Mr Crabbe, and looked on the matter as quite settled.'

Southey was one of Murray's regular and most industrious workmen. In 1810 he wrote an article on Nelson for the *Quarterly*. Murray offered him £100 to expand it for separate publication, and Southey turned out his perspicuous and famous *Life of Lord Nelson*. At a later date he received a further sum of £200 to revise the work as a volume of the *Family Library*. This is only one out of many instances which might be recorded in illustration of Murray's generosity.

Washington Irving was another of his authors. He gave £200 for the *Sketch Book*, which he increased to £400 when it proved successful. For *Bracebridge Hall* he paid £1000, for the *Chronicles of Granada* £2000, and for the *Life of Columbus* £3000. He wished to secure Irving's services as editor of a monthly magazine at £1000 a year; but the American could not endure the thought of permanent residence out of his own country.

In 1826, seduced by others more sanguine than himself, he started *The Representative*, a daily newspaper, price sevenpence, edited by Mr Benjamin Disraeli, and intended to rival *The Times*. It was a complete failure, and was stopped at the end of six months, with a loss to Mr Murray of £20,000. It was the solitary serious miscalculation of his life.

On the 27th of June 1843, Mr Murray closed his arduous and honourable career at the age of sixty-five, and was succeeded by his son John

Murray III., who to this day maintains undimmed the glory of his father's house, as publisher of the best books by the best authors.

REVIVALS AFTER SUS. PER COLL.

The efforts made for the restoration of the forfeited life of poor Dodd remind us that reanimation after hanging is far from being an uncommon event.

On the 16th August 1264, Henry III. granted a pardon to a woman named Inetta de Balsham, who, having been condemned to death for harbouring thieves, hung on a gallows from nine o'clock of a Monday to sunrise of Thursday, and yet came off with life, as was testified to the king by sufficient evidence.

Dr Plot, who quotes the original words of the pardon, surmises that it might have been a case like one he had heard of from Mr Obadiah Walker, Master of University College, being that of a Swiss who was hung up thirteen times without effect, life being preserved by the condition of the wind-pipe, which was found to be by disease converted into bone.

Dr Plot relates several cases of the resuscitation of women after hanging, and makes the remark that this revival of life appears to happen most frequently in the female sex. One notable case was that of a poor servant girl named Anne Green, who was condemned to death at Oxford in 1650 for alleged child-murder, although her offence could only be so interpreted by superstition and pedantry. This poor woman, while hanging, had her legs pulled, and her breast knocked by a soldier's musket; she was afterwards trampled on, and the rope was left unslackened around her neck. Yet, when in the hands of the doctors for dissection, she gave symptoms of life, and in fourteen hours was so far well as to be able to speak. Eager inquiries were made as to her sensations from the moment of suspension; but she remembered nothing—she came back to life like one awakening out of a deep sleep. This poor woman obtained a pardon, was afterwards married, and had three children.

A second female malefactor, the servant of a Mrs Cope, at Oxford, was hanged there in 1658, and kept suspended an unusually long time, to make sure of the extinction of life; after which, being cut down, her body was allowed to fall to the ground with a violence which might have been sufficient to kill many unhanged persons. Yet she revived. In this case the authorities insisted on fulfilling their imperfect duty next day.* Plot gives a third case, that of Marjory Mausole, of Arley, in Staffordshire, without informing us of its date or any other circumstances.

On the 2nd of September 1724, a poor woman named Margaret Dickson, married, but separated from her husband, was hanged at Edinburgh for the crime of concealing pregnancy in the case of a dead child. After suspension, the body was inclosed in a coffin at the gallows' foot, and carried off in a cart by her relatives, to be interred in her parish churchyard at Musselburgh, six

miles off. Some surgeon apprentices rudely stopped the cart before it left town, and broke down part of the *cooms*, or sloping roof of the coffin,—thus undesignedly letting in air. The subsequent jolting of the vehicle restored animation before it had got above two miles from the city, and Maggy was carried home a living woman, though faint and hardly conscious. Her neighbours flocked around her in wonder; a minister came to pray over her; and her husband, relenting under a renewed affection, took her home again. She lived for many years after, had several more children creditably born, and used to be pointed out in the streets of Edinburgh, where she cried salt, as *Half-hanget Maggy Dickson*.*

The instances of men reviving after hanging are scarcely less numerous than those of females. In 1705, a housebreaker named Smith being hung up at Tyburn, a reprieve came after he had been suspended for a quarter of an hour. He was taken down, bled, and revived. One William Duell, duly hanged in London in 1740, and taken to the Surgeons' Hall to be anatomized, came to life again, and was transported. At Cork a man was hanged in January 1767 for a street robbery, and immediately after carried to a place appointed, where a surgeon made an incision in his windpipe, and in about six hours recovered him. The almost incredible fact is added, that the fellow had the hardihood to attend the theatre the same evening.† William Brodie, executed in Edinburgh, October 1788, for robbing the excise-office, had similar arrangements made for his recovery. It was found, however, that he had had a greater fall than he bargained for with the hangman, and thus the design was frustrated.

On the 3rd of October 1696, a man named Richard Johnson was hanged at Shrewsbury. He had previously, on a hypocritical pretence, obtained a promise from the under-sheriff that his body should be laid in his coffin without being stripped. He hung half an hour, and still showed signs of life, when a man went up to the scaffold to see what was wrong with him. On a hasty examination, it was found that the culprit had wreathed cords round and under his body, connected with a pair of hooks at his neck, by which the usual effect of the rope was prevented, the whole of this apparatus being adroitly concealed under a double shirt and a flowing periwig. On the trick being discovered, he was taken down, and immediately hanged in an effectual manner.‡

It may be remarked, as helping to account for the great number of recoveries from hanging, that in former days a criminal was allowed to slide or slip gently from a ladder, so as to have very little fall; and consequently, as a rule, he suffered only *asphyxia*, and not a breaking of the vertebral column. In the mode followed now-a-days, hanging is a process very effectual for its end, so as to make resuscitation almost impossible.

* The date of this case is usually given wrong. The particulars here stated are authentic.

JUNE 28.

St Irenæus, Bishop of Lyons, martyr, 202. Saints Plutarch, Serenus, Hero, and others, martyrs, beginning of 3rd century. Saints Potamiana or Potamiæna, and Basilides, martyrs, 3rd century. St Leo II., pope and confessor, 683.

Born.—Henry VIII. of England, 1491, *Greenwich*; Sir Peter Paul Rubens, artist, 1577, *Cologne*; Jean Jacques Rousseau, 1712, *Geneva*; Charles Mathews, comedian, 1776, *London*.

Died.—Alphonso V. of Arragon, 'the Magnanimous,' 1458; Abraham Ortelius, Dutch geographer, 1598, *Antwerp*; Thomas Creech, translator of Roman poets into English verse, 1701, *Oxford*; Manrice, Duc de Noailles, French commander, 1766; Francis Wheatley, R.A. (picture of the London Riots of 1780,) 1801; Charles Mathews, comedian, 1835, *Plymouth*; James Henry Fitzroy, Lord Raglan, British commander, 1855.

KING HENRY VIII.

Henry's cruelty towards several of his wives, and to the statesmen who thwarted him in his views, has left an indelible impression against him on the minds of the English people. Our age, however, has seen a man of signal ability come forward in his defence, and, it must be confessed, with considerable success.

'If,' says Mr Froude, 'Henry VIII. had died previous to the first agitation of the divorce, his loss would have been deplored as one of the heaviest misfortunes which had ever befallen the country; and he would have left a name which would have taken its place in history by the side of that of the Black Prince or of the conqueror of Agincourt. Left at the most trying age, with his character unformed, with the means at his disposal of gratifying every inclination, and married by his ministers when a boy to an unattractive woman, far his senior, he had lived for thirty-six years almost without blame, and bore through England the reputation of an upright and virtuous king. Nature had been prodigal to him of her rarest gifts. In person he is said to have resembled his grandfather, Edward IV., who was the handsomest man in Europe. His form and bearing were princely; and, amidst the easy freedom of his address, his manner remained majestic. No knight in England could match him in the tournament except the Duke of Suffolk; he drew with ease as strong a bow as was borne by any yeoman of his guard; and these powers were sustained in unflinching vigour by a temperate habit and by constant exercise. Of his intellectual ability we are not left to judge from the suspicious panegyrics of his contemporaries. His state papers and letters may be placed by the side of those of Wolsey or of Cromwell, and they lose nothing in the comparison. Though they are broadly different, the perception is equally clear, the expression equally powerful, and they breathe throughout an irresistible vigour of purpose. In addition to this, he had a fine musical taste, carefully cultivated, and he spoke and wrote in four languages; and his knowledge of a multitude of other subjects, with which his versatile ability made him conversant, would have formed the reputation of any ordinary man. He was

among the best physicians of his age; he was his own engineer, invented improvements in artillery and new constructions in ship-building; and this not with the condescending incapacity of a royal amateur, but with thorough workmanlike understanding. His reading was vast, especially in theology. In all directions of human activity, Henry displayed natural powers of the highest order, at the highest stretch of industrious culture. He was "attentive," as it is called, "to his religious duties," being present at the services in chapel two or three times a day with unflinching regularity, and showing to outward appearance a real sense of religious obligation in the energy and purity of his life. In private, he was good-humoured and good-natured. His letters to his secretaries, though never undignified, are simple, easy, and unrestrained; and the letters written by them to him are similarly plain and businesslike, as if the writers knew that the person whom they were addressing disliked compliments, and chose to be treated as a man. Again, from their correspondence with one another, when they describe interviews with him, we gather the same pleasant impression. He seems to have been always kind, always considerate; inquiring into their private concerns with genuine interest, and winning, as a consequence, their warm and unaffected attachment. As a ruler he had been eminently popular. All his wars had been successful. He had the splendid tastes in which the English people most delighted, and he had substantially acted out his own theory of his duty.'

QUICK WORK IN COAT MAKING.

In 1811, Sir John Throckmorton, a Berkshire baronet, offered to lay a wager of a thousand guineas to the following effect: that at eight o'clock on a particular evening he would sit down to dinner in a well-woven, well-dyed, well-made suit, the wool of which formed the fleece on sheeps' backs at five o'clock on that same morning. It is no wonder that, among a class of persons accustomed to betting, such a wager should eagerly be accepted, seeing that the achievement of the challenged result appeared all but impossible. Mr Coxetter, of Greenham Mills, at Newbury, was entrusted with the work.

At five in the morning on the 28th of June he caused two South Down sheep to be shorn. The wool was washed, carded, stubbed, roved, spun, and woven; the cloth was scoured, fulled, tented, raised, sheared, dyed, and dressed; the tailor was at hand, and made up the finished cloth into garments; and at a quarter past six in the evening Sir John Throckmorton sat down to dinner at the head of his guests, in a complete damson-coloured suit that had been thus made—winning the wager, with an hour and three-quarters to spare. Of course every possible preparation was made beforehand; but still the achievement was sufficiently remarkable, and was long talked of with pride among the clothiers.

JUNE 29.

St Peter the Apostle, 68. St Hemma, widow, 1045.

St Peter the Apostle.

The 29th of June is a festival of the Anglican Church in honour of St Peter the Apostle. It

is familiarly known that St Peter, the son of Jonas, and brother of Andrew, obtained this name (signifying a rock) from the Saviour, in place of his original one of Simon, on becoming an apostle. He suffered martyrdom by the cross at Rome in the year 68, under the tyrannous rule of Nero. On the strange, obscure history, which exhibits a succession of bishops from Peter, resulting in the religious principality of Rome, it is not necessary here to enter. The veneration, however, felt, even in reformed England, for the alleged founder of the Church of Rome, is shown in the festival still held in commemoration of his martyrdom, and the great number of churches which are from time to time dedicated to him.

St Peter has in England 830 churches dedicated in his sole honour, and 30 jointly with St Paul, and 10 in connexion with some other saint, making 1070 in all.—*Calendar of the Anglican Church.*

It is well known to be customary for the popes on their elevation to change their Christian name. This custom was introduced in 884 by Peter di Porca (Sergius the Second), out of a feeling of humility, deeming that it would be presumptuous to have himself styled Peter the Second. Following in the same line of sentiment, no pope has ever retained or assumed the name of Peter.

Born.—Sir Henry Yelverton, eminent English judge, 1566, *Islington*; Rev. John Williams, 'the apostle of Polynesia,' 1796, *Tottenham*.

Died.—Margaret Beaufort, Countess of Richmond (mother of King Henry VII.), 1509; Pierre de Marca, archbishop of Paris, historian, 1662; Bishop Zachary Pearce, 1774; Francesco Caraccioli, Neapolitan patriot, shot, 1799; Valentine Green, eminent mezzotint engraver, 1813, *London*; Rev. David Williams, originator of the Royal Literary Fund, 1816; Rev. Edward Smedley, miscellaneous writer, editor of *Encyclopædia Metropolitana*, 1836, *Dulwich*; Henry Clay, American statesman, 1852, *Washington*; Elizabeth Barrett Browning, poetess, 1861, *Florence*.

MARGARET BEAUFORT, COUNTESS OF RICHMOND.

Margaret was the daughter and heiress of John Beaufort, Duke of Somerset, grandson of John of Gaunt, Duke of Lancaster. Being very beautiful, as well as the heiress of great possessions, she was at the early age of fifteen years anxiously sought in marriage by two persons of high rank and influence. One was a son of the Duke of Suffolk, then Prime Minister; the other was Edmund, Earl of Richmond, half-brother to the reigning monarch, Henry the Sixth. Wavering between these two proposals, Margaret, in her perplexity, requested advice from an elderly gentlewoman, her confidential friend. The matron recommended her not to consult her own inclinations, but to take an early opportunity of submitting the question to St Nicholas, the patron saint of undecided maidens. She did so, and the saint appeared to her in a vision, dressed in great splendour, and advised her to marry Edmund. Following this advice, she became the mother of Henry Tudor, who afterwards became King Henry VII. Edmund died soon after the birth of his son, and Margaret married twice afterwards: first, Humphrey Stafford, son

of the Duke of Buckingham; and, secondly, Thomas Lord Stanley, subsequently Earl of Derby. We are not told if she consulted St Nicholas in the choice of her second and third husbands.

Margaret founded several colleges, and employed herself in acts of real charity and pure devotion not common at the period. After a useful and exemplary life, she died at the age of sixty-eight years; having just lived to see her grandson Henry VIII. seated on the throne of England. She is included among the royal authors as a translator of some religious works from the French, one of which, entitled *The Soul's Perfection*, was printed in William Caxton's house by Wynkyn de Worde. At the end of this work are the following verses:—

' This heavenly book, more precious than gold,
Was late direct,* with great humility,
For godly pleasure therein to behold,
Unto the right noble Margaret, as ye see,
The King's mother of excellent bounty,
Harry the Seventh; that Jesu him preserve,
This mighty Princess hath commanded me
T' imprint this book, her grace for to deserve.'

THE ROYAL LITERARY FUND AND ITS ORIGIN.

On the 18th of May 1790, a society passing under the name of the Royal Literary Fund was constituted in London. It professes to have in view the relief of literary men of merit from distress, and the succour of such of their surviving relatives as may be in want or difficulty. Persons of rank, dignitaries of the church, and authors in good circumstances, assemble at the dinner,

DAVID WILLIAMS.

patronizing a collection for the fund, which seldom falls short of £800. The society at the close of 1861 possessed a permanent fund of £22,500, and the money distributed that year among deserving objects amounted to £1350. There is clearly here an agency for good—not

* Dedicated. We have modernized the orthography of the lines.

perhaps so ordered as to do the utmost good which it might be made to do (this has been strongly insisted upon in some quarters)—still a very good and serviceable institution, and one which stands in England without any parallel.

This fund has been in operation since a few years before the close of the eighteenth century. It took its origin from an obscure man of letters, named David Williams, who was born at a village near Cardigan, in 1738. The career of Williams was one not calculated to meet the entire approval of the prelates who sometimes preside at the aforesaid annual dinner. He was originally a Unitarian clergyman, at one time settled at Highgate. Afterwards, he set up an even more liberal form of religious worship in Margaret Street, Cavendish Square, where Dr Thomas Somerville, of Jedburgh, one Sunday heard him discourse without a text on the evils of gaming, and remarked the ominous indifference of the congregation.* At one time, during a short snatch of conjugal life, he kept a tolerably successful boarding-school at Chelsea, where, it is related, he had Benjamin Franklin for a guest, at the time when the American philosopher was subjected to the abuse of Wedderburn before the Privy Council. He wrote books on education, on public worship, on political principles, a moral liturgy, and much besides, cherishing high aims for the benefit of his fellow-creatures, while not only little patronized or encouraged by them, but regarded by most as a dangerous enthusiast and innovator. When the French Revolution drew on, Williams was found in Paris, mingling with the Girondists, and helping them to form constitutions. When sanguinary violence supervened, he came home, and calmly entered upon his cherished plans for getting up a fund for the benefit of poor literary men. The difficulties naturally to be encountered in this scheme must have been greatly enhanced in the ease of an originator whom all the upper classes of that day must have regarded as himself a social pest—a man to be classed, as Canning actually classed him, with ‘creatures villanous and low.’ He nevertheless persevered through many years, during which his own means of subsistence were of the most precarious kind; and having in time gathered £6000, succeeded in constituting the society. To the mere church-and-king Tories of that day, the whole of this history must have appeared a bewildering anomaly; but the truth is, that David Williams was a man of the noblest natural impulses, and the mission which he undertook was precisely in accordance with them. Had Canning ever met him, he would have found a man of dignified aspect and elegant manners, instead of the human reptile he had pictured in his imagination. His whole life, unapprovable as it must have appeared to many, had been framed with a view to what was for the good of mankind. The Literary Fund only happens to be the one thing practically good, and therefore practicable, which Williams had to deal with.

This benevolent person died on the 29th June 1816, and was buried in St Anne’s Church, Soho.

* *Memoirs of Rev. Thomas Somerville, 1861.*

HENRY CLAY.

After Washington, Jefferson, and Jackson, Henry Clay of Kentucky has been the most popular statesman of America. With an ordinary education, he made his way, first to distinction as a barrister, and next to eminence as a politician, purely by the force of his talents, and particularly that of oratory. His career as a statesman was unfortunately not quite consistent or unsullied, and hence he failed to obtain the highest success. In 1832 he was the candidate of his party for the Presidency, but was defeated by General Jackson, with only influence enough left to quiet for the time the national discordances respecting the tariff and slavery, by what were considered judicious compromises—moderate duties, and a division of the unpeopled territory by a line, separating the free and slave states that should be found in the future. In 1840 he might have been elected to the Presidency; but his timid party set him aside for General Harrison, who was considered a more available candidate. Later, he had the mortification of giving place to General Scott and General Taylor. In 1844 he was a candidate, but was defeated by Mr Polk, who was elected by the party in favour of the annexation of Texas, and of going to war with England rather than give up the claim to Oregon, or what is now British Columbia, up to the parallel of 54° 40’. The party motto was, ‘Fifty-four forty, or fight!’ but after the election they accepted a compromise and a lower parallel. Disappointed in his ambition, mortified by the ingratitude of his party, Mr Clay retired from the Senate in 1842, but was induced to return in 1849. His last public efforts were in favour of the slavery compromises of 1850.

Mr Clay was tall, raw-boned, and homely, but his face lighted up with expression, his voice was musical, and his manners extremely fascinating. Few men have had more or warmer personal friends. His oratory possessed a power over his hearers of which the reader of his speeches can form no conception. It was a kind of personal magnetism, going some way to justify those who suspect that there is a mystic influence in high-class oratory. He was loved with enthusiasm. No man in America ever had so great a *personal* influence, while few men of as high a position have left so little behind them to justify contemporary judgments to posterity.

MRS BROWNING.

When in the summer of 1861 the sad news reached England that Mrs Browning was no more, the newspapers confessed with singular accord that the world had lost in her the greatest poetess that had appeared in all its generations.

Elizabeth Barrett, the subject of this supreme eulogy, was the daughter of a gentleman of fortune, and at his country-seat in Herefordshire, among the lovely scenery of the Malvern Hills, she passed her girlhood. At the age of ten she began to attempt writing in prose and verse; and at fifteen her powers as a writer were well known to her friends. She was a diligent student, and was soon able to read

Greek, not as a task, but as a recreation and delight. She began to contribute to the magazines, and a series of essays on the Greek poets proved how deeply she had passed into and absorbed their spirit. In 1833 she published an anonymous translation of the *Prometheus Bound* of Æschylus, which afterwards she superseded by a better version. Her public fame dates, however, from 1838, when she collected her best verses from the periodicals, and published them as *The Seraphim and other Poems*. At this time occurred a tragic accident, which for years threw a black shadow over Miss Barrett's life. A blood-vessel having broke on her lungs, the physicians ordered her to Torquay, where a house was taken for her by the sea-side, at the foot of the cliffs. Under the influence of the mild Devonshire breezes she was rapidly recovering, when, one bright summer morning, her brother and two other young men, his friends, went out in a small boat for a trip of a few hours. Just as they crossed the bar, the vessel capsized, and all on board perished. Even their bodies were never recovered. This sudden and dreadful calamity almost killed Miss Barrett. During a whole year she lay in the house incapable of removal, whilst the sound of the waves rang in her ears as the moans of the dying. Literature was her only solace. Her physician pleaded with her to abandon her studies, and, to quiet his importunities, she had a small edition of Plato bound so as to resemble a novel. When at last removed to London, it was in an invalid carriage, at the slow rate of twenty miles a day. In a commodious and darkened room in her father's house in Wimpole Street she nursed her remnant of life, seeing a few choice friends, reading the best books in many languages, and writing poetry according to her inspiration. Miss Mitford tells us that many a time did she joyfully travel the five-and-forty miles between Reading and London, returning the same evening, without making another call, in order to spend some hours with Miss Barrett. Gradually her health improved, and in 1846 the brightness of her life was restored and perfected in her marriage with Robert Browning. They went to Italy, first to Pisa, and then settled in Florence. Mrs Browning's heart became quickly involved in Italy's struggles for liberty and unity, and various and fervent were the poetical expressions of her hopes and alarms for the result. Her love for Italy became a passion stronger even than natural patriotism. Inexplicably to English readers, she praised and trusted the Emperor of the French as Italy's earnest friend and deliverer; and Louis Napoleon will live long ere he hear more ardent words of faith in his goodness and wisdom than the English poetess uttered concerning him. Blest in assured fame, in a rising Italy, in a pleasant Florentine home, in a husband equal in heart and intellect, and in a son in the prime of boyhood—a brief illness snapped the thread of her frail life, and she was borne to the tomb, bewailed scarcely less in Tuscany than in England.

Mrs Browning wrote much and rapidly, and her poetry partakes largely of that mystical

obscurity which is the fault of so much of the verse produced in the present age. Indeed, it would be easy to produce many passages from her writings which might be set as puzzles for solution by the ingenious. At the same time there is much in her poetry which, for high imagination, subtlety, and delicacy of thought, force, music, and happy diction, is certainly unsurpassed by anything that ever woman wrote. Mrs Browning has been likened to Shelley, and the resemblances between them are in many respects very remarkable.

Miss Mitford describes Mrs Browning in her early womanhood as 'of a slight, delicate figure, with a shower of dark curls falling on each side of a most expressive face; large, tender cye, richly fringed by dark eyelashes; a smile like a sunbeam; and such a look of youthfulness, that I had some difficulty in persuading a friend that she was the translatrix of Æschylus and the authoress of the *Essay on Mind*. She was certainly one of the most interesting persons that I had ever seen.' Allowing for the influences of time and suffering, Mrs Browning remained the same until the end.

JUNE 30.

St Paul the Apostle, 68. St Martial, Bishop of Limoges, 3rd century.

Died.—Bishop Gavin Dunbar, 1547; Cardinal Baroni, eminent ecclesiastical writer, 1607, *Rome*; Alexander Brome, poet, 1666; Archibald Campbell, ninth Earl of Argyle, beheaded, 1685, *Edinburgh*; Sir Thomas Pope Blount, miscellaneous writer, 1697, *Tittenhanger*; Dr Thomas Edwards, learned divine, 1785, *Nuneaton*; Richard Parker, head of the naval mutiny at the Nore, hanged, 1797; Rev. Henry Kett, drowned, 1825; Sultan Mahmoud, of Turkey, 1839; James Silk Buckingham, miscellaneous writer, 1855.

MRS PIOZZI (THRALE).

Many people are remembered for the sake of others; their memory survives to after times because of some with whom they were connected, rather than on account of their own peculiar merits. The world is well contented to feed its curiosity with their sayings and doings, in consideration of the influence which they exercised over, or the acquaintance they had with, some one or other of its favourite heroes.

Mrs Thrale-Piozzi, (*née* Hester Salusbury) enjoys this sort of parasitical celebrity. Not that we wish to insinuate that she had not sufficient merit to deserve to be remembered on her own account. A woman of agreeable manners and lively wit, possessed of great personal attractions, if we may not say beauty, she could make no unskilful use of a ready pen, and enjoyed in her own day a literary notoriety. Yet it is not the leader of fashion, nor the star of society, nor the intelligent writer, that the present generation troubles itself to remember, so much as the sprightly hostess and dear intimate friend of Dr Samuel Johnson.

Henry Thrale, Mrs Thrale's first husband, entertained and commanded the best London

society. Engaged in business as a brewer, as his father had been before him, he was, in education, manners, and style of living, a perfect gentleman. Having neglected to avail himself of no advantages which wealth offered, or ambition to rise in the world prompted him to turn to his profit, he contrived to secure his position still more firmly by marrying a lady of good family and fair expectations. There was no passionate attachment in the case; it was a mere matter of business. The lady, indeed, according to her own account, seems scarcely to have been consulted; but, romance set aside, she made a good wife, and he, on the whole, a good husband. Such a wife was a valuable acquisition to Thrale's rising importance; doubtless her wit and spirit were the soul of that motley fashionable group, half literary, half aristocratic, which his wealth and generous hospitality drew together to Streatham.

It must have been at one time no small privilege to be a guest at Mrs Thrale's table. Here was the author of *Rasselas*, 'facile princeps,' a centre of attraction, flattered and fondled, in spite of his unouthness and occasional rudeness; here was 'little Burney,' Madame D'Arblay, jotting down notes stealthily for the *Diary*; here Garrick thought much of himself, as usual, and listened condescendingly to Goldsmith's 'palaver,' or writhed to hear the plaguy hostess telling how she sat on his knee as a child; here, too, was Bozzy, lively and observing, if not always dignified; here were Reynolds, and Burke, and Langton, and Beauclerk—lords, ladies, and ecclesiastics.

Johnson himself was introduced to the Thrales by Arthur Murphy, on the first reasonable pretext which Murphy could frame, and the result gave satisfaction to all parties. The shock of his appearance did not prove too much for them, for the introducer had taken care to give them due warning. Mr Thrale took to Johnson, and that 'figure large and well formed,' that 'countenance of the cast of an ancient statue,' as Boswell has it, gravely humorous, began to appear weekly at Mr Thrale's table; and when the family removed to Streatham, they persuaded the lexicographer to accompany them, because he was ill, and sadly in want of kind attention. He continued to live with them almost entirely for twenty years, and Mrs Thrale's good care succeeded at length, as she herself informs us, in restoring him to better health and greater tidiness.

Johnson delighted in Mrs Thrale. He scolded her, or petted her, or paid her compliments, or wrote odes to her, or joined with her in her pleasant literary labours, according to the form which his solid respect and fatherly affection assumed at any particular time. She gives us a specimen of his friendly flattery—a translation which he made at the moment from a little Italian poem:

'Long may live my lovely Hetty,
Always young, and always pretty;
Always pretty, always young,
Live my lovely Hetty long;
Always young, and always pretty,
Long may live my lovely Hetty!'

After Thrale's death, in 1781, Mrs Thrale left Streatham, and Johnson had to leave it also. From this time to 1784, though there is evidence of some little unpleasantness having arisen, we find Johnson keeping up a familiar correspondence with the widow, and occasionally in her company. But on June 30 of that year she put his patience and good sense utterly to flight for a time, by informing him that she designed immediately to unite herself to Mr Piozzi, who had been the music-master of her daughters. He wrote to her in great haste, what she describes afterwards as 'a rough letter,' and certainly it was:

'MADAM,—If I interpret your letter right, you are ignominiously married; if it is yet undone, let us [—] more [—] together. If you have abandoned your children and your religion, God forgive your wickedness; if you have forfeited your fame and your country, may your folly do no further mischief. If the last act is yet to do, I, who have loved you, esteemed you, revered you, and [—]; I, who long thought you the first of womankind, entreat that, before your fate is irrevocable, I may once more see you. I was, I once was, Madam,

'Most truly yours,

'July 2, 1784.

'SAM. JOHNSON.

'I will come down if you permit it.'

To this he received a reply:

'July 4, 1784.

'SIR,—I have this morning received from you so rough a letter in reply to one which was both tenderly and respectfully written, that I am forced to desire the conclusion of a correspondence which I can bear to continue no longer. The birth of my second husband is not meaner than that of my first; his sentiments are not meaner, his profession is not meaner, and his superiority in what he professes is acknowledged by all mankind. It is want of fortune, then, that is ignominious; the character of the man I have chosen has no other claim to such an epithet. The religion to which he has always been a zealous adherent will, I hope, teach him to forgive insults he has not deserved; mine will, I hope, enable me to bear them at once with dignity and patience. To hear that I have forfeited my fame is indeed the greatest insult I ever yet received. My fame is as unsullied as snow, or I should think it unworthy of him who must henceforth protect it.

'I write by the coach, the more speedily and effectually to prevent your coming hither. Perhaps by my fame (and I hope it is so) you mean only that celebrity which is a consideration of a much lower kind. I care for that only as it may give pleasure to my husband and his friends.

'Farewell, dear sir, and accept my best wishes. You have always commanded my esteem, and long enjoyed the fruits of a friendship never infringed by one harsh expression on my part during twenty years of familiar talk. Never did I oppose your will, or control your wish, nor can your unmerited severity itself lessen my regard; but, till you have changed your opinion of Mr Piozzi, let us converse no more. God bless you.'

Upon receiving this rejoinder, the old man penned a more amiable epistle, not apologizing, yet, as he says, with tears in his eyes; in answer to which, Mrs Piozzi informs us, she wrote him 'a very kind and affectionate farewell,' though she did not see fit to publish it afterwards, as we might have expected. Immediately upon this

she went to Italy with her new husband, and Johnson died the same year.

It is painful to contemplate such an end to a friendship of twenty years; but with what we now know of the case through the labours of Mr Hayward,* there is no room for hesitation as to which was in the wrong. There had been no cessation of benefits or of friendly feeling from Mrs Thrale to Johnson up to the moment of his writing her the 'rough' letter. The only prompting cause of that letter was that she, the widow of a brewer in good circumstances, was going to gratify a somewhat romantic attachment which she had formed to a man not in any particular inferior to her first husband, except in worldly means. The outrage was as unreasonable in its foundation as it was gross in its style. True, what is called society took the same unfavourable view of Mrs Thrale's second marriage; but the same society would have continued to smile on Mrs Thrale as the mistress of Mr Piozzi, if the sin could only have been tolerably concealed. Society, which admired wealth in a brewer, could see no merit in an Italian gentleman—for such it appears he was—whom poverty condemned to use an honourable and dignifying knowledge for his bread. Was it for a sage like Johnson to endorse the silly disapprobation of such a tribunal, and to insult a woman who for many years had literally nursed him as a daughter would a father? The only true palliation of his offence is to be found—and let us find it—in his age and infirm health.

THE PILLORY.

An act of the British parliament, dated June 30, 1837, put an end to the use of the pillory in the United Kingdom, a mode of punishment so barbarous, and at the same time so indefinite in its severity, that we can only wonder it should not have been extinguished long before.

The pillory was for many ages common to most European countries. Known in France as

* See the second edition of *Autobiography, Letters, &c., of Mrs Piozzi*. By A. Hayward, Esq., Q.C. 2 vols. 1862.

the *pillori* or *carcani*, and in Germany as the *pranger*, it seems to have existed in England before the Conquest in the shape of the stretch-neck, in which the head only of the criminal was confined. By a statute of Edward I. it was enacted that every stretch-neck, or pillory, should be made of convenient strength, so that execution might be done upon offenders without peril to their bodies. It usually consisted of a wooden frame erected on a stool, with holes and folding boards for the admission of the head and hands, as shown in the sketch of Robert Ockam undergoing his punishment for perjury in the reign of Henry VIII. In the companion engraving, taken from a MS. of the thirteenth century, we have an example of a pillory constructed for punishing a number of offenders at the same time, but this form was of rare occurrence.*

PILLORY FOR A NUMBER OF PERSONS.

Rushworth says this instrument was invented for the special benefit of mountebanks and quacks, 'that having gotten upon banks and forms to abuse the people, were exalted in the same kind;' but it seems to have been freely used for cheats of all descriptions. Fabian records that Robert Basset, mayor of London in 1287, 'did sharpe correction upon bakers for making bread of light weight; he caused divers of them to be put in the pillory, as also one Agnes Daintie, for selling of mingled butter.' We find, too, from the *Liber Albus*, that fraudulent corn, coal, and cattle dealers, cutters of purses, sellers of sham gold rings, keepers of infamous houses, forgers of letters, bonds, and deeds, counterfeiters of papal bulls, users of

* Douce's *Illustrations of Shakspeare*, ii. 146, 147.

unstamped measures, and forestallors of the markets, incurred the same punishment. One man was pilloried for pretending to be a sheriff's serjeant, and arresting the bakers of Stratford with the view of obtaining a fine from them for some imaginary breach of the city regulations. Another, for pretending to be the summoner of the Archbishop of Canterbury, and summoning the prioress of Clerkenwell. Other offences, visited in the same way, were playing with false dice, begging under false pretences, decoying children for the purpose of begging and practising soothsaying and magic.

Had the heroes of the pillory been only cheats, thieves, scandalmongers, and perjurers, it would rank no higher among instruments of punishment than the stocks and the ducking stool. Thanks to Archbishop Laud and Star Chamber tyrants, it figured so conspicuously in the political and polemical disputes which heralded the downfall of the monarchy, as to justify a writer of our own time in saying, 'Noble hearts had been tried and tempered in it; daily had been elevated in it mental independence, manly self-reliance, robust, athletic endurance. All from within that has undying worth, it had but the more plainly exposed to public gaze from without.* This rise in dignity dates from 1637, when a decree of the Star Chamber prohibited the printing of any book or pamphlet without a license from the Archbishop of Canterbury, the Bishop of London, or the authorities of the two universities; and ordered all but 'allowed' printers, who presumed to set up a printing press, to be set in the pillory, and whipped through the City of London. One of the first victims of this ordinance was Leighton (father of the archbishop of that name), who for printing his *Zion's Plea against Prelacy*, was fined £10,000, degraded from the ministry, pilloried, branded, and whipped, besides having an ear cropped, and his nostril slit. Lilburn and Warton were also indicted for unlawfully printing, publishing, and dispersing libellous and seditious works; and upon refusing to appear to answer the interrogatories of the court, were sentenced to pay £500 each, and to be whipped from the Fleet Prison to the pillory at Westminster; a sentence which was carried into execution on the 18th of April 1638. The undaunted Lilburn, when elevated in the pillory, distributed copies of the obnoxious publications, and spoke so boldly against the tyranny of his persecutors, that it was thought necessary to gag him. Prynne, after standing several times in the pillory for having by his denunciations of lady actresses libelled Queen Henrietta by anticipation, solaced his hours of imprisonment by writing his *News from Ipswich*, by which he incurred a third exposure and the loss of his remaining ear; this was in 1637. He did not suffer alone, Burton and Dr Bastwick being companions in misfortune with him. The latter's offence consisted in publishing a reply to one Short, directed against the bishops of Rome, and concluding with 'From plague, pestilence, and famine, from bishops, priests, and deacons, good Lord deliver us!' How the two bore their

* Forster's *Essay on Defoe*.

punishment is told in a letter from Garrard to Lord Strafford: 'In the palace-yard two pillories were erected, and there the sentence of the Star Chamber against Burton, Bastwick, and Prynne was executed. They stood two hours in the pillory. The place was full of people, who cried and howled terribly, especially when Burton was cropped. Dr Bastwick was very merry; his wife, Dr Poe's daughter, got on a stool and kissed him. His ears being cut off, she called for them, put them in a clean handkerchief, and carried them away with her. Bastwick told the people the lords had collar-days at court, but this was his collar-day, rejoicing much in it.* The sufferers were cheered with the acclamation of the lookers-on, notes were taken of all they said, and manuscript copies distributed through the city.

Half a century later, and the once popular informer, Titus Oates, expiated his betrayal of innocent lives in the pillory. Found guilty of perjury on two separate indictments, the inventor of the Popish Plot was condemned in 1685 to public exposure on three consecutive days. The first day's punishment in Palace Yard nearly cost the criminal his life; but his partisans mustered in such force in the city on the succeeding day that they were able to upset the pillory, and nearly succeeded in rescuing their idol from the hands of the authorities. According to his sentence, Oates was to stand every year of his life in the pillory on five different days: before the gate of Westminster Hall on the 9th of August, at Charing Cross on the 10th, at the Temple on the 11th, at the Royal Exchange on the 2nd of September, and at Tyburn on the 24th of April; but, fortunately for the infamous creature, the Revolution deprived his determined enemies of power, and turned the criminal into a pensioner on Government.

The next famous sufferer at the pillory was a man of very different stamp. In 1703, the Government offered a reward of fifty pounds for the apprehension of a certain spare, brown-complexioned hose-factor, the author of a scandalous and seditious pamphlet, entitled *The Shortest Way with the Dissenters*. Rather than his printer and publisher should suffer in his stead, honest Daniel Defoe gave himself up, and was sentenced to be pilloried three times; and on the 29th of July the daring satirist stood unabashed, but not careless, on the pillory in Cheapside—the punishment being repeated two days afterwards in the Temple, where a sympathizing crowd flung garlands, instead of rotten eggs and garbage, at the stout-hearted pamphleteer, drank his health with acclamations, while his noble *Hymn to the Pillory* was passed from hand to hand, and many a voice recited the stinging lines:

'Tell them the men that placed him here
Are scandals to the times;
Are at a loss to find his guilt,
And can't commit his crimes!'

Even his bitterest foes bear witness to Defoe's triumph. One Tory rhymester exclaims:

'All round him Philistines admiring stand,
And keep their Dagon safe from Israel's hand;

* Strafford's *Letters*, ii. 85.

They, dirt themselves, protected him from filth,
And for the faction's money drank his health.'

The subjects of this ignominious punishment did not always escape so lightly; when there was nothing to excite the sympathy of the people in their favour—still more when there was something in their case which the people regarded with antipathy and disgust—they ran great danger of receiving severer punishment than the law intended to inflict. In 1756, two thief-takers, named Egan and Salmon, were exposed in Smithfield for perjury, and were so roughly treated by the drovers, that Salmon was severely bruised, and Egan died of the injuries he received. In 1763, a man was killed in a similar way at Bow, and in 1780 a coachman, named Read, died on the pillory at Southwark before his time of exposure had expired.

The form of judgment expressed that the offender should be set 'in and upon the pillory;' and in 1759, the sheriff of Middlesex was fined £50 and imprisoned for two months, for not confining Dr Shebbeare's neck and arms in the pillory, and for allowing the doctor's servant to supply his master with refreshment, and shelter him with an umbrella. A droll circumstance connected with the punishment may here be introduced. A man being condemned to the pillory in or about Elizabeth's time, the foot-board on which he was placed proved to be rotten, and down it fell, leaving him hanging by the neck in danger of his life. On being liberated he brought an action against the town for the insufficiency of its pillory, and recovered damages.*

We have in our possession a dateless pamphlet (apparently about 1790), entitled *A Warning to the Fair Sex, or the Matrimonial Deceiver, being the History of the noted George*

* *Anecdotes and Traditions*, p. 53.

Miller, who was married to upwards of thirty different women, on purpose to plunder them. It gives a detail of the procedure of Mr Miller, which simply consisted in his addressing a love-

letter to his intended victim, seeking an interview, and declaring that since he saw her life was insupportable, unless under the hope of obtaining her affections. It seldom took more than a week to secure a new wife for this fellow, and usually in three days more he had bagged all her money and deserted her. Most of the thirty wives were servants with accumulations of wages. George at length was prosecuted by an indignant female, possessed of rather more determination than the rest, and his punishment was—the pillory. The frontispiece represents him in this exalted situation, with a crowd of women of the humbler class—his seraglio, we presume—pelted him with mud, which some are seen raking from the kennel. The helpless, miserable expression of the face projected from a

OATES IN THE PILLORY (FROM A CONTEMPORARY PRINT).

board blackened with dirt, entreating mercy from those who had none to give, might have been an admirable subject for Hogarth.

In 1814, Lord Cochrane, so unjustly convicted as a party to an attempted fraud on the Stock Exchange, was sentenced to the pillory. His parliamentary colleague, Sir Francis Burdett, told the Government that if that portion of the sentence were carried into effect, he would stand in the pillory by Lord Cochrane's side, and they must be responsible for the consequences. The authorities discreetly took the hint, and contented themselves with degrading, fining, and imprisoning the hero.

A pillory is still standing at the back of the market-place of Coleshill, Warwickshire, and another lies with the town engine in an unused chancel of Rye Church, Sussex. The latter is said to have been last used in 1813.
