and U. S. /
of

THE BOOK OF DAYS was designed to consist of—1. Matters connected with the Church Kalendar, including the Popular Festivals, Saints' Days, and other Holidays, with illustrations of Christian Antiquities in general; 2. Phenomena connected with the Seasonal Changes; 3. Folk-Lore of the United Kingdom—namely, Popular Notions and Observances connected with Times and Seasons; 4. Notable Events, Biographies, and Anecdotes connected with the Days of the Year; 5. Articles of Popular Archæology, of an entertaining character, tending to illustrate the progress of Civilisation, Manners, Literature, and Ideas in these kingdoms; 6. Curious, Fugitive, and Inedited Pieces.

It was stated to be the desire of the Editor—while not discouraging the progressive spirit of the age, to temper it with affectionate feelings towards what is poetical and elevated, honest and of good report, in the old national life; while in no way discountenancing great material interests, to evoke an equal activity in those feelings beyond self, on which depend remoter but infinitely greater interests; to kindle and sustain a spirit of patriotism, tending to unity, peace, and prosperity in our own state, while not exclusive of feelings of benevolence, as well as justice, towards others. It was desired that these volumes should be a repertory of old fireside ideas in general, as well as a means of improving the fireside wisdom of the present day.

The day of profession has now merged into the day of performance, the half of the work being completed. It is given to few to feel assured that every particular of a favourite object has been duly accomplished; and the individual who has superintended the birth of these pages is certainly not of that happy minority. He would say, nevertheless, that he has done his best, with the means and opportunities at his disposal, to produce a work answering to his plan, and calculated to improve, while it entertains, and mingling the agreeable with the instructive. It will also be his hope to produce a second volume, if possible to him, excelling the first; and in this he meanwhile rests, THE GENTLE READER'S HUMBLE SERVANT.

January 1, 1863.

List of Illustrations.

TIME AND ITS NATURAL MEASURERS.

TIME is one of those things which cannot be defined.

We only know or become sensible of it through certain processes of nature which require it for their being carried on and perfected, and towards which it may therefore be said to bear a relation. We only appreciate it as a fact in the universal frame of things, when we are enabled by these means to measure it. Thus, the rotation of the earth on its axis, the process by which we obtain the alternation of day and night, takes a certain space of time. This, multiplied by

366, gives the time required for the revolution of

the earth around the sun, the process by which we enjoy the alternations of the seasons. The life of a well-constituted man will, under fair conditions, last during about seventy such spaces of time or years; very rarely to a hundred. The cluster of individuals termed a nation, or constituting a state, will pass through certain changes, inferring moral, social, and political improvement, in the course of still larger spaces of time; say several centuries: also certain processes of decay, requiring, perhaps, equal spaces of time. With such matters it is the province of history to deal; and actually from this source we learn pretty clearly what has been going on upon the surface of the earth during about four thousand years. We have also reason, however, to conclude, that our planet has existed for a prodigiously longer space of time than that. The

sculptures of Egypt are held by scholars to imply that there was a political fabric of the monarchical kind in that country thirty-four centuries before the commencement of our present era. Rude weapons and implements of stone, flint, and bone, found interred in countries now occupied by civilised people, point, in like manner, to the existence of savage nations in those regions at a time long before the commencement of history. Geology, or the examination of the crust of the earth, still further prolongs our backward view of time. It shews that the earth has passed through a succession of physical changes, extending over a great series of ages; that during the same time vegetable and animal life underwent great changes; changes of one set of species for others; an advancement from invertebrate to vertebrate animals, from fishes to reptiles, from reptiles to birds and mammifers; of these man coming in the last. Thus it has happened that we could now give a biography of our little world, in which the four thousand years of written history would be multiplied many times over; and yet this vastly extended period must, after all, be regarded as but a point in that stretch of duration which we call time. All beyond, where related facts fail us—above all, a beginning or an end to time—are inconceivable; so entirely dependent is our idea of it upon measurement, or so purely, rather, may it be said to consist of measurement.

What we are more immediately concerned with at present is the YEAR, the space of time required for a revolution of the earth around the sun, being about one-seventieth of the ordinary duration of a healthy human life. It is a period very interesting to us in a natural point of view, because within it are included all seasonal changes, and of it nearly everything else in our experience of the appearances of the earth and sky is merely a repetition. Standing in this relation to us, the year has very reasonably become the unit of our ordinary reckonings of time when any larger space is concerned; above all, in the statement of the progress and completion of human life. An old man is said to die *full of years*. *His years have been few*, is the affecting expression we use regarding one who has died in youth. The *anniversary* of an event makes an appeal to our feelings. We also speak of the history of a nation as its *annals*—the transactions of its succession of years. There must have been a sense of the value and importance of the year as a space of time from a very early period in the history of humanity, for even the simplest and rudest people would be sensible of 'the seasons' difference,' and of the cycle which the seasons formed, and would soon begin, by observations of the rising of the stars, to ascertain roughly the space of time which that cycle occupied.

Striking, however, as the year is, and must always have been, to the senses of mankind, we can readily see that its value and character were not so liable to be appreciated as were those of the minor space of time during which the earth performed its rotation on its own axis. That space, within which the simple fathers of our

race saw light and darkness exchange possession of the earth—which gave themselves a waking and a sleeping time, and periodised many others of their personal needs, powers, and sensations, as well as a vast variety of the obvious processes of external nature—must have impressed them as soon as reflection dawned in their minds; and the DAY, we may be very sure, therefore, was amongst the first of human ideas.

While thus obvious and thus important, the Day, to man's experience, is a space of time too frequently repeated, and amounting consequently to too large numbers, to be readily available in any sort of historic reckoning or reference. It is equally evident that, for such purposes, the year is a period too large to be in any great degree available, until mankind have advanced considerably in mental culture. We accordingly find that, amongst rude nations, the intermediate space of time marked by a revolution of the moon—the MONTH—has always been first employed for historical indications. This completes the series of natural periods or denominations of time, unless we are to agree with those who deem the *Week* to be also such, one determined by the observation of the principal aspects of the moon, as half in increase, full, half in decrease, and change, or simply by an arithmetical division of the month into four parts. All other denominations, as hours, minutes, &c., are unquestionably arbitrary, and some of them comparatively modern; in fact, deduced from clockwork, without which they could never have been measured or made sensible to us.

On Time.

Why sit'st thou by that ruined hall,
Thou aged carle, so stern and gray?
Dost thou its former pride recall,
Or ponder how it passed away?

Know'st thou not me? the Deep Voice cried,
So long enjoyed, so oft misused—
Alternate, in thy fickle pride,
Desired, neglected, and accused?

Before my breath, like blazing flax,
Man and his marvels pass away;
And changing empires wane and wax,
Are founded, flourish, and decay.

Redeem mine hours—the space is brief—
While in my glass the sand-grains shiver,
And measureless thy joy or grief,
When Time and thou shalt part for ever!

The Antiquary.

LONDON LEGEND OF THE CLOCK WHICH STRUCK THIRTEEN, AND SAVED A MAN'S LIFE.

There is a traditionary story very widely diffused over the country, to the effect that St Paul's clock on one occasion struck thirteen at midnight, with the extraordinary result of saving the life of a sentinel accused of sleeping at his post. It is not much less than half a century

since the writer heard the tale related in a remote part of Scotland. In later times, the question has been put, Is there any historic basis for this tradition? followed by another still more pertinent, Is the alleged fact mechanically possible? and to both an affirmative answer has been given.

An obituary notice of John Hatfield, who died at his house in Glasshouse-yard, Aldersgate, on the 18th of June 1770, at the age of 102—which notice appeared in the *Public Advertiser* a few days afterwards—states that, when a soldier in the time of William and Mary, he was tried by a court-martial, on a charge of having fallen asleep when on duty upon the terrace at Windsor. It goes on to state—‘He absolutely denied the charge against him, and solemnly declared [as a proof of his having been awake at the time], that he heard St Paul’s clock strike thirteen, the truth of which was much doubted by the court because of the great distance. But while he was under sentence of death, an affidavit was made by several persons that the clock actually did strike thirteen instead of twelve; whereupon he received his majesty’s pardon.’ It is added, that a recital of these circumstances was engraved on the coffin-plate of the old soldier, ‘to satisfy the world of the truth of a story which has been much doubted, though he had often confirmed it to many gentlemen, and a few days before his death told it to several of his acquaintances.’

An allusion to the story occurs in a poem styled *A Trip to Windsor*, one of a volume published in 1774 under the title of *Weeds of Parnassus*, by *Timothy Scribble*:

‘The terrace walk we with surprise behold,
Of which the guides have oft the story told:
Hatfield, accused of sleeping on his post,
Heard Paul’s bell sounding, or his life had lost.’

A correction, however, must here be applied—namely, that the clock which struck on this important occasion was Tom of Westminster, which was afterwards removed to St Paul’s. It seems a long way for the sound to travel, and when we think of the noises which fill this bustling city even at midnight, the possibility of its being heard even in the suburbs seems faint. Yet we must recollect that London was a much quieter town a hundred and fifty years ago than now, and the fact that the tolling of St Paul’s has often been heard at Windsor, is undoubted. There might, moreover, be a favourable state of the atmosphere.

As to the query, Is the striking of thirteen mechanically possible? a correspondent of the *Notes and Queries* has given it a satisfactory answer.* ‘All striking clocks have two spindles for winding: one of these is for the *going* part, which turns the hands, and is connected with and regulated by the pendulum or balance-spring. Every time that the minute hand comes to twelve, it raises a catch connected with the *striking* part (which has been standing still for the previous sixty minutes), and the striking work then makes as many strokes on the bell (or spring gong) as the space between the notch which the catch has left and the next notch allows. When the catch falls into the next notch,

* Second Series, vii. 14.

it again stops the striking work till the minute hand reaches twelve again an hour afterwards. Now, if the catch be stiff, so as not to fall into the notch, or the notch be worn so as not to hold it, the clock will strike on till the catch does hold. . . . If a clock strike midnight and the succeeding hour together, there is thirteen at once, and very simply. . . . If the story of St Paul’s clock be true, and it only happened once, it must have been from stiffness or some mechanical obstacles.’

In connection with the above London legend, it is worthy of remark that, on the morning of Thursday the 14th of March 1861, ‘the inhabitants of the metropolis were roused by repeated strokes of the new great bell of Westminster, and most persons supposed it was for a death in the royal family. It proved, however, to be due to some derangement of the clock, for at four and five o’clock, ten or twelve strokes were struck instead of the proper number.’ The gentleman who communicated this fact through the medium of the *Notes and Queries*, added: ‘On mentioning this in the morning to a friend, who is deep in London antiquities, he observed that there is an opinion in the city that anything the matter with St Paul’s great bell is an omen of ill to the royal family; and he added: “I hope the opinion will not extend to the Westminster bell.” This was at 11 on Friday morning. I see this morning that it was not till 1 A.M. the lamented Duchess of Kent was considered in the least danger, and, as you are aware, she expired in less than twenty-four hours.’

DIFFERENCE BETWEEN A WATCH AND A CLOCK.

A watch differs from a clock in its having a vibrating wheel instead of a vibrating pendulum; and, as in a clock, gravity is always pulling the pendulum down to the bottom of its arc, which is its natural place of rest, but does not fix it there, because the momentum acquired during its fall from one side carries it up to an equal height on the other—so in a watch a spring, generally spiral, surrounding the axis of the balance-wheel, is always pulling this towards a middle position of rest, but does not fix it there, because the momentum acquired during its approach to the middle position from either side carries it just as far past on the other side, and the spring has to begin its work again. The balance-wheel at each vibration allows one tooth of the adjoining wheel to pass, as the pendulum does in a clock; and the record of the beats is preserved by the wheel which follows. A mainspring is used to keep up the motion of the watch, instead of the weight used in a clock; and as a spring acts equally well whatever be its position, a watch keeps time though carried in the pocket, or in a moving ship. In winding up a watch, one turn of the axle on which the key is fixed is rendered equivalent, by the train of wheels, to about 400 turns or beats of the balance-wheel; and thus the exertion, during a few seconds, of the hand which winds up, gives motion for twenty-four or thirty hours.—*Dr. Arnott.*

The Year.

The length of the year is strictly expressed by the space of time required for the revolution

of the earth round the sun—namely, 365 days, 5 hours, 48 minutes, 49 seconds, and 7 tenths of a second, for to such a nicety has this time been ascertained. But for convenience in reckoning, it has been found necessary to make the year terminate with a fraction of one, lumping the fractions together so as to make up a day among themselves. About forty-five years before Christ, Julius Cæsar, having, by the help of Sosigenes, an Alexandrian philosopher, come to a tolerably clear understanding of the length of the year, decreed that every fourth year should be held to consist of 366 days for the purpose of absorbing the odd hours. The arrangement he dictated was a rather clumsy one. A day in February, the sixth before the calends of March (*sextilis*), was to be repeated in that fourth year; and each fourth year was thus to be *bissextile*. It was as if we were to reckon the 23d of February twice over. Seeing that, in reality, a day every fourth year is too much by 11 minutes, 10 seconds, and 3 tenths of a second, it inevitably followed that the beginning of the year moved onward ahead of the point at which it was in the days of Cæsar; in other words, the natural time fell behind the reckoning. From the time of the Council of Nice, in 325, when the vernal equinox fell correctly on the 21st of March, Pope Gregory found in 1582 that there had been an over-reckoning to the extent of ten days, and now the vernal equinox fell on the 11th of March. To correct the past error, he decreed that the 5th of October that year should be reckoned as the 15th, and to keep the year right in future, the overplus being 18 hours, 37 minutes, and 10

seconds in a century, he ordered that every centennial year that could not be divided by 4, (1700, 1800, 1900, 2100, 2200, &c.) should *not* be bissextile, as it otherwise would be; thus, in short, dropping the extra day three times every four hundred years. The Gregorian style, as it was called, readily obtained sway in Catholic, but not in Protestant countries. It was not adopted in Britain till the year 1752, by which time the discrepancy between the Julian and Gregorian periods amounted to *eleven* days. An act of parliament was passed, dictating that the 3d of September that year should be reckoned the 14th, and that three of every four of the centennial years should, as in Pope Gregory's arrangement, not be bissextile or leap-years. It has consequently arisen—1800 not having been a leap-year—that the new and old styles now differ by *twelve* days, our first of January being equivalent to the 13th old style. In Russia alone, of all Christian countries, is the old style still retained; wherefore it becomes necessary for one writing in that country to any foreign correspondent, to set down his date thus: $\frac{12^{\text{th}}}{24^{\text{th}}}$ March, or $\frac{25^{\text{th}}}{7^{\text{th}}}$ September; or, it may be $\frac{28^{\text{th}} \text{ December } 1860}{9^{\text{th}} \text{ January } 1861}$.

‘The old style is still retained in the accounts of Her Majesty’s Treasury.’ This is why the Christmas dividends are not considered due till Twelfth Day, nor the midsummer dividends till the 5th of July; and in the same way it is not until the 5th of April that Lady Day is supposed to arrive. There is another piece of antiquity visible in the public accounts. In old times, the year was held to begin on the 25th of March, and this usage is also still observed in the computations over which the Chancellor of the Exchequer presides. The consequence is, that the first day of the financial year is the 5th of April, being old Lady Day, and with that day the reckonings of our annual budgets begin and end.’
—*Times*, February 16, 1861.

The Day.

—There came the Day and Night,
Riding together both with equal pace;
The one on palfrey black, the other white;
But Night had covered her uncomely face
With a black veil, and held in hand a mace,
On top whereof the moon and stars were pight,
And sleep and darkness round about did trace:
But Day did bear upon his sceptre’s height
The goodly sun encompassed with beames bright.
Spenser.

The day of nature, being strictly the time required for one rotation of the earth on its axis,

is 23 hours, 56 minutes, 4 seconds, and 1 tenth of a second. In that time, a star comes round to appear in the same place where we had formerly seen it. But the earth, having an additional motion on its orbit round the sun, requires about 3 minutes, 56 seconds more, or 24 hours in all, to have the sun brought round to appear at the same place; in other words, for any place on the surface of the earth to come to the meridian. Thus arises the difference between a *sidereal* day and a *solar* day, between *apparent* and *mean* time, as will be more particularly explained elsewhere.

Fixing our attention for the present upon the solar day, or day of mean time, let us remark in the first place that, amongst the nations of antiquity, there were no divisions of the day beyond what were indicated by sun-rise and sun-set. Even among the Romans for many ages, the only point in the earth's daily revolution of which any public notice was taken was mid-day, which they used to announce by the sound of trumpet, whenever the sun was observed shining straight along between the Forum and a place called Græcostasis. To divide the day into a certain number of parts was, as has been remarked, an arbitrary arrangement, which only could be adopted when means had been invented of mechanically measuring time. We accordingly find no allusion to hours in the course of the Scriptural histories till we come to the Book of Daniel, who lived 552 years before Christ. 'Then Daniel, whose name was Belteshazzar, was astonished for *one hour*, and his thoughts troubled him.' The Jews and the Romans alike, on introducing a division of the day into twenty-four hours, assigned equal numbers to day and night, without regard to the varying length of these portions of the solar day; consequently, an hour was with them a varying quantity of time, according to the seasons and the latitude. Afterwards, also that of an equal division was adopted, as was also that of dividing an hour into 60 minutes, and a minute into 60 seconds.

Before the hour division was adopted, men could only speak of such vague natural divisions as morning and evening, forenoon and afternoon, or make a reference to their meal-times. And these indications of time have still a certain hold upon us, partly because they are so natural and obvious, and partly through the effect of tradition. All before dinner is, with us, still morning—notwithstanding that the meal has nominally been postponed to an evening hour. The Scotch, long ago, had some terms of an original and poetical nature for certain periods of the day. Besides the *davin'* for the dawn, they spoke of the *skreigh o' day*, q. d., the cry of the coming day. Their term for the dusk, the *gloaming*, has been much admired, and is making its way into use in England.

Intimately connected with the day is the WEEK, a division of time which, whatever trace of a natural origin some may find in it, is certainly in a great measure arbitrary, since it does not consist in all countries of the same number of days. The week of Christian Europe, and of the Christian world generally, is, as is well known, a period of seven days, derived from the Jews, whose sacred scriptures represent it as a commemoration of the world having been created by God in six days, with one more on which he rested from his work, and which he therefore sanctified as a day of rest.

Of weeks there are 52, and one day over, in ordinary years, or two days over in leap-years; and hence the recurrence of a particular day of the month never falls in an immediately succeeding year on the same day of the week, but on one a day in advance in the one case, and two in the other. Every twenty-eight years, however,

the days of the month and the days of the week once more coincide.

The week, with its terminal day among the Jews, and its initial day among the Christians, observed as a day of rest and of devotion, is to be regarded as in the main a religious institution. Considering, however, that the days have only various names within the range of one week, and that by this period many of the ordinary operations of life are determined and arranged, it must be deemed, independently of its connection with religion, a time-division of the highest importance.

While the Romans have directly given us the names of the months, we have immediately derived those of the days of the week from the Saxons. Both among the Romans, however, and the Saxons, the several days were dedicated to the chief national deities, and in the characters of these several sets of national deities there is, in nearly every instance, an obvious analogy and correspondence; so that the Roman names of the days have undergone little more than a translation in the Saxon and consequently English names. Thus, the first day of the week is *Sunnan-daeg* with the Saxons; *Dies Solis* with the Romans. Monday is *Monan-daeg* with the Saxons; *Dies Lunæ* with the Romans. Tuesday is, among the Saxons, *Tues-daeg*—that is, Tuesco's Day—from Tuesco, a mythic person, supposed to have been the first warlike leader of the Teutonic nations: among the Romans it was *Dies Martis*, the day of Mars, their god of war. The fourth day of the week was, among the Saxons, *Woden's-daeg*, the day of Woden, or Oden, another mythical being of high warlike reputation among the northern nations, and the nearest in character to the Roman god of war. Amongst the Romans, however, this day was *Dies Mercurii*, Mercury's Day. The fifth day of the week, *Thors-daeg* of the Saxons, was dedicated to their god Thor, who, in his supremacy over other gods, and his attribute of the Thunderer, corresponds very exactly with Jupiter, whose day this was (*Dies Jovis*) among the Romans. Friday, dedicated to Venus among the Romans (*Dies Veneris*), was named by the Saxons, in honour of their corresponding deity (Friga), *Frigedaeg*. The last day of the week took its Roman name of *Dies Saturni*, and its Saxon appellation of *Seater-daeg*, respectively from deities who approach each other in character.

It may be remarked, that the modern German names of the days of the week correspond tolerably well with the ancient Saxon: *Sonntag*, Sunday; *Montag*, Monday; *Dienstag*, Tuesday; *Mittwoche*, mid-week day [this does not correspond, but Godenstag, which is less used, is Woden's day]; *Donnerstag*, Thursday [this term, meaning the Thunderer's day, obviously corresponds with Thors-daeg]; *Freitag*, Friday; *Samstag* or *Sonnabend*, Saturday [the latter term means eve of Sunday]. The French names of the days of the week, on the other hand, as befits a language so largely framed on a Latin basis, are like those of ancient Rome: Dimanche [the Lord's Day], Lundi, Mardi, Mercredi, Jeudi, Vendredi, Samedi.

With reference to the transference of honour

from Roman to Saxon deities in our names of the days of the week, a quaint poet of the last century thus expresses himself:

'The Sun still rules the week's initial day,
The Moon o'er Monday yet retains the sway;
But Tuesday, which to Mars was whilom given,
Is Tuesco's subject in the northern heaven;
And Woden hath the charge of Wednesday,
Which did belong of old to Mercury;
And Jove himself surrenders his own day
To Thor, a barbarous god of Saxon clay:
Friday, who under Venus once did wield
Love's balmy spells, must now to Frea yield;
While Saturn still holds fast his day, but loses
The Sabbath, which the central Sun abuses.
Just like the days do persons change their masters,
Those gods who them protect against disasters;
And souls which were to natal genii given,
Belong to guardian angels up in heaven:
And now each popish patron saint disgraces
The ancient local Genius's strong places.
Mutamus et mutamur—what's the odds
If men do sometimes change their plaything gods!
The final Jupiter will e'er remain
Unchanged, and always send us wind and rain,
And warmth and cold, and day and shady night,
Whose starry pole will shine with Cynthia's light:
Nor does it matter much, where Prudence reign,
What other gods their empire shall retain.'

THE DAY ABSOLUTE AND THE DAY PRACTICAL.

While the day absolute is readily seen to be measured by a single rotation of our globe on its axis, the day practical is a very different affair. Every meridian has its own practical day, differing from the practical day of every other meridian. That is to say, take any line of places extending between the poles; at the absolute moment of noon to them, it is midnight to the line of places on the antipodes, and some other hour of the day to each similar line of places between. Consequently, the denomination of a day—say the 1st of January—reigns over the earth during *two* of its rotations, or forty-eight hours. Another result is, that in a circumnavigation of the globe, you gain a day in reckoning by going eastward, and lose one by going westward—a fact that first was revealed to mankind at the conclusion of Magellan's voyage in September 1522, when the surviving mariners, finding themselves a day behind their countrymen, accused each other of sleeping or negligence, and thought such must have been the cause until the true one was explained.

The mariners of enlightened European nations, in pursuing their explorations some centuries ago, everywhere carried with them their own nominal day, without regard to the slide which it performed in absolute time by their easterly and westerly movements. As they went eastward, they found the expressed time always moving onward; as they moved westwards, they found it falling backwards. Where the two lines of exploration met, there, of course, it was certain that the nominal days of the two parties would come to a decided discrepancy. The meeting was between Asia and America, and accordingly in that part of the world, the day is (say) Thurs-

day in one place, and Wednesday in another not very far distant. Very oddly, the extreme west of the North American continent having been settled by Russians who have come from the west, while the rest was colonized by Europeans from the opposite direction, a different expression of the day prevails there; while, again, Manilla, in Asia, having been taken possession of by Spaniards coming from the east, differs from the day of our own East Indies. Thus the discrepancy overlaps a not inconsiderable space of the earth's surface.

It arises as a natural consequence of these facts, that throughout the earth there is not a simultaneous but a consecutive keeping of the Sabbath. The inhabitants of Great Britain at eight o'clock on Sabbath morning, may realise the idea that at that hour there is a general Sabbath over the earth from the furthest east to the furthest west. The Russians in America are finishing their latest *vespers*; the Christians in our own colony of British Columbia are commencing their earliest *matins*. Among Christians throughout the world, the Sabbath is more or less advanced, except at Manilla, where it is commenced at about four o'clock P.M. on our Sabbath. At the first institution of the Sabbath in the Garden of Eden, it was finished in the space of twenty-four hours; but now, since Christians are found in every meridian under the sun, the Sabbath, from its very commencement to its final close, extends to forty-eight, or rather to fifty-six hours, by taking the abnormal state of Manilla into account.*

DAY AND NIGHT, AS CONNECTED WITH ANIMAL LIFE.

'Every animal, after a period of activity, becomes exhausted or fatigued, and a period of repose is necessary to recruit the weakened energies and qualify the system for renewed exertion. . . . In the animals which are denominated *Diurnal*, including man, daylight is requisite for enabling them to provide their food, protection, and comfort, and to maintain that correspondence with one another which, in general, is requisite for the preservation of the social compact. Such animals rest during the night; and in order to guard the system from the influence of a cold connected with the descending branch of the curve,† and peculiarly injurious to an exhausted frame, they retire to places of shelter, or assume particular positions, until the rising sun restores the requisite warmth, and enables the renovated body to renew the ordinary labours of life.

'With the *Nocturnal* animals, on the other hand, the case is widely different. The daytime is the period of their repose; their eyes are

* John Husband, in *Notes and Queries*, 2nd Series, vii. 51.

† By the curve, the writer means a formula for expressing in one wavy line the rises and falls of the thermometer in the course of a certain space of time.

THE MONTHS.

adapted for a scanty light, hearing and smelling co-operate, and the objects of their prey are most accessible. Even among diurnal animals, a cessation of labour frequently takes place during the day. Some retire to the shade; others seek for the coolness of a marsh or river, while many birds indulge in the pleasure of dusting themselves.

'Crowing of the Cock. The time-marking propensities of the common cock during the night-season have long been the subject of remark, and conjectures as to the cause very freely indulged in. The bird, in ordinary circumstances, begins to crow after midnight, and [he also crows] about daybreak, with usually one intermediate effort. It seems impossible to overlook the connection between the times of crowing and the minimum temperature of the night; nor can the latter be viewed apart from the state of the dew-point, or maximum degree of dampness. Other circumstances, however, exercise an influence, for it cannot be disputed that the times of crowing of different individuals are by no means similar, and that in certain states of the weather, especially before rain, the crowing is continued nearly all day.

'Paroxysms of Disease. The attendants on a sick-bed are well aware, that the objects of their anxiety experience, in ordinary circumstances, the greatest amount of suffering between midnight and daybreak, or the usual period of the crowing of the cock. If we contemplate a frame, at this period of the curve, weakened by disease, we shall see it exposed to a cold temperature against which it is ill qualified to contend. Nor is this all; for, while dry air accelerates evaporation, and usually induces a degree of chilliness on the skin, moist air never fails to produce the effect by its increased conducting power. The depressed temperature and the air approaching to saturation, at the lowest point of the curve, in their combined influences, act with painful energy, and require from an intelligent sick-nurse a due amount of counteracting arrangements.'—*Dr. John Fleming on the Temperature of the Seasons.* Edinburgh, 1852.

THE MONTHS.

Our arbitrary division of the year into twelve months, has manifestly taken its origin in the natural division determined by the moon's revolutions.

The month of nature, or lunar revolution, is strictly 29 days, 12 hours, 44 minutes, 3 seconds; and there are, of course, twelve such periods, and rather less than 11 days over, in a year. From an early period, there were efforts among some of the civilised nations to arrange the year in a division accordant with the revolutions of the moon; but they were all strangely irregular till Julius Cæsar reformed the Calendar, by establishing the system of three years of 365 followed by one (bissextile) of 366 days, and decreed that the latter should be divided as follows:

Januarius,	31 days.
Februarius,	30 "
Martius,	31 "
Aprilis,	30 "
Maius,	31 "
Junius,	30 "
Quintilis (altered to Julius),	31 "
Sextilis,	30 "
September,	31 "
October,	30 "
November,	31 "
December,	30 "

365 "

The general idea of Cæsar was, that the months should consist of 31 and 30 days alternately; and this was effected in the bissextile or leap-year, consisting, as it did, of twelve times thirty with six over. In ordinary years, consisting of one day less, his arrangement gave 29 days to Februarius. Afterwards, his successor Augustus had the eighth of the series called after himself, and from vanity broke up the regularity of Cæsar's arrangement by taking another day from February to add to his own month, that it might not be shorter than July; a change which led to a shift of October and December for September and November as months of 31 days. In this arrangement, the year has since stood in all Christian countries.

The Roman names of the months, as settled by Augustus, have also been used in all Christian countries excepting Holland, where the following set of names prevails:

January,	Lauwmaand,	chilly month.
February,	Sprokelmaand,	vegetation month.
March,	Lentmaand,	spring month.
April,	Grasmaand,	grass month.
May,	Blowmaand,	flower month.
June,	Zomermaand,	summer month.
July,	Hooymaand,	hay month.
August,	Oostmaand,	harvest month.
September,	Herstmaand,	autumn month.
October,	Wynmaand,	wine month.
November,	Slagmaand,	slaughter month.
December,	Wintermaand,	winter month.

'These characteristic names of the months are the remains of the ancient Gaulish titles, which were also used by our Anglo-Saxon ancestors.'—*Brady.**

Amidst the heats of the Revolution, the French Convention, in October 1793, adopted a set of names for the months, somewhat like that kept up in Holland, their year standing thus:

	French Months.	Signification.	English Months.
Autumn.	1. Vindemaire,	Vintage,	Sept. 22.
	2. Brumaire,	Foggy,	Oct. 21.
	3. Frimaire,	Frosty or Sleety,	Nov. 21.
Winter.	4. Nivose,	Snowy,	Dec. 21.
	5. Pluviose,	Rainy,	Jan. 20.
	6. Ventose,	Windy,	Feb. 19.
Spring.	7. Germinal,	Springing or Budding,	Mar. 21.
	8. Floreal,	Flowery,	Apr. 20.
Summer.	9. Prairial,	Hay Harvest,	May 20.
	10. Messidor,	Corn Harvest,	June 19.
	11. Thermidor,	Hot,	July 19.
	12. Fructidor,	Fruit,	Aug. 18.

* *Analysis of the Calendar.*

Five days at the end, corresponding to our 17th, 18th, 19th, 20th, and 21st of September, were supplementary, and named *sans-culottides*, in honour of the half-naked populace who took so prominent a part in the affairs of the Revolution. At the same time, to extinguish all traces of religion in the calendar, each month was divided into three decades, or periods of ten days, whereof the last was to be a holiday, the names of the days being merely expressive of numbers—Primidi, Duodi, Tredi, &c. And this arrangement was actually maintained for several years, with only this peculiarity, that many of the people preferred holding the Christian Sunday as a weekly holiday. The plan was ridiculed by an English wit in the following professed translation of the new French Calendar:

'Autumn—wheezy, sneezy, freezy.
Winter—slippy, drippy, nippy.
Spring—showery, flowery, bowery.
Summer—hoppy, croppy, poppy.'

'Thirty days hath September,
April, June, and November;
All the rest have thirty-one,
But February twenty-eight alone,
Except in leap-year, once in four,
When February has one day more.'

Sir Walter Scott, in conversation with a friend, adverted jocularly to 'that ancient and respectable, but unknown poet who had given us the invaluable formula, Thirty days hath September, &c.' It is truly a composition of considerable age, for it appears in a play entitled *The Return from Parnassus*, published in 1606, as well as in *Winter's Cambridge Almanac* for 1635.

From what has here been stated introductorily, the reader will be, in some measure, prepared to enter on a treatment of the individual days of the year. Knowing how the length of the year has been determined, how it has been divided into months, and how many days have been assigned to each of these minor periods, he will understand on what grounds men have proceeded in various seasonal observations, as well as in various civil and religious arrangements. He has seen the basis, in short, of both the Calendar and the Almanac.

THE CALENDAR—PRIMITIVE ALMANACS.

It was a custom in ancient Rome, one which came down from a very early period, to proclaim the first of the month, and affix a notice of its occurrence on a public place, that the people might be apprised of the religious festivals in which they would have to bear a part. From the Greek verb *καλεω*, I call or proclaim, this first of the month came to be styled the *Kalendæ* or *Kalends*, and *Fasti Calendaræ* became a name for the placard. Subsequently, by a very natural process of ideas, a book for accounts referring to days was called *Calendarium*, a calendar; and from this we have derived our word, applicable to an exposition of time arrangements generally.

At Pompeii there has been found an ancient calendar, cut upon a square block of marble, upon each side of which three months are registered in perpendicular columns, each headed by the proper sign of the zodiac. The information given is astronomical, agricultural, and religious.—*Lib. Ent. Knowl.—Pompeii*, vol. ii. pp. 287-8.

'The calendar, strictly speaking, refers to time in general—the almanac to only that portion of time which is comprehended in the annual revolution of the earth round the sun, and marking, by previous computation, numerous particulars of general interest and utility; religious feasts; public holidays; the days of the week, corresponding with those of the month; the increasing and decreasing length of the day; the variations between true and solar time; tables of the tides; the sun's passage through the zodiac; eclipses; conjunctions and other motions of the planets, &c., all calculated for that portion of duration comprehended within the year. . . The calendar denotes the settled and national mode of registering the course of time by the sun's progress: an almanac is a subsidiary manual formed out of that instrument. . . . The etymology of the word almanac has been, perhaps, the subject of more dispute than that of any term admitted into our language. With the single exception of Verstegan, all our lexicographers derive the first syllable *al* from the article definite of the Arabic, which signifies *the*; but the roots of the remaining syllables are variously accounted for, some taking it from the Greek *μανακος*, a lunary circle; others from the Hebrew *manach*, to count; Johnson derives it from the Greek *μην*, a month; but why the first syllable should be in one language, which these authorities agree in, and the two last in any other language, it is not easy to comprehend. Whether, therefore, the Saxons originally took their term from the Arabic, either wholly or in part, Verstegan seems the most to be relied on. "They," he says, alluding to our ancient Saxon ancestors, "used to engrave upon certaine squared sticks, about a foot in length, or shorter, or longer as they pleased, the courses of the moones of the whole yeere, whereby they could alwaies certainly tell when the new moones, full moones, and changes should happen, as also their festivall daies; and such a carved stick they called an *al-mon-aght*; that is to say, al-mon-heed, to wit, the regard or observation of all the moones; and hence is derived the name of almanac." An instrument of this kind, of a very ancient date, is to be seen in St John's College at Cambridge, and there are still in the midland counties several remains of them.'—*Brady*.*

The Clog Almanac.

The simple-minded, yet for his time intelligent and inquiring Dr Robert Plot, in his *Natural History of Staffordshire* (folio, 1686), gives an account of what he calls the *Clog Almanac*, which he found in popular use in that and other northern counties, but unknown further south, and which, from its being also used in Denmark, he conceived to

* *Analysis of the Calendar*, i. 143.

have come into England with our Danish invaders and settlers many centuries before. The clog bore the same relation to a printed almanac which the Exchequer tallies bore to a set of account books. It is a square stick of box, or any other hard wood, about eight inches long, fitted to be hung up in the family parlour for common reference, but sometimes carried as part of a walking-cane. Properly it was a perpetual almanac, designed mainly to shew the Sundays and other fixed holidays of the year, each person being content, for use of the instrument, to observe on what day the year actually began, as compared

tinguished by a notch somewhat broader than usual. There were indications—but they are not easily described—for the Golden Number and the cycle of the moon. The feasts were denoted by symbols resembling hieroglyphics, in a manner which will be best understood by examples. Thus, a peculiarly shaped emblem referred to the *Circumcisio Domini* on the 1st of January. From the notch on the 13th of that month proceeded a cross, as indicative of the episcopal rank of St Hilary; from that on the 25th, an axe for St Paul, such being the instrument of his martyrdom. Against St Valentine's Day was a true lover's knot, and against St David's Day (March 1), a harp, because the Welsh saint was accustomed on that instrument to praise God. The notch for the 2d of March (St Ceadda's Day) ended in a bough, indicating the hermit's life which Ceadda led in the woods near Lichfield. The 1st of May had a similar object with reference to the popular fête of *bringing home the May*. A rake on St Barnaby's Day (11th June) denoted hay harvest. St John the Baptist having been beheaded with a sword, his day (June 24) was graced with that implement. St Lawrence had his gridiron on the 10th of August, St Catherine her wheel on the 25th of the same month, and St Andrew his peculiar cross on the last of November. The 23d of November (St Clement's Day) was marked with a pot, in reference to the custom of going about that night begging drink to make merry with. For the Purification, Annunciation, and all other feasts of the Virgin, there was a heart, though 'what it should import, relating to Mary, unless because upon the shepherds' relation of their vision, Mary is said to have kept all these things and pondered them in her heart, I cannot imagine,' says our author. For Christmas there was a horn, 'the ancient vessel in which the Danes used to wassail or drink healths, signifying to us that this is the time we ought to make merry, *cornua exchaurienda notans*, as Wormius will have it.' The learned writer adds: 'The marks for the greater feasts observed in the church have a large point set in the middle of them, and another over against the preceding day, if vigils or fasts were observed before them.'

CLOG ALMANAC.

with that represented on the clog; so that, if they were various, a brief mental calculation of addition or subtraction was sufficient to enable him to attain what he desired to know.

The entire series of days constituting the year was represented by notches running along the angles of the square block, each side and angle thus presenting three months; the first day of a month was marked by a notch having a patulous stroke turned up from it, and each Sunday was dis-

Written and Printed Almanacs.

The history of written almanacs has not been traced further back than the second century of the Christian era. All that is known is, that the Greeks of Alexandria, in or soon after the time of Ptolemy (100-150 A.D.), constructed almanacs; and the evidence for this fact is an account of Theon the commentator on Ptolemy, in a manuscript found by Delambre at Paris, in which the method of arranging them is explained, and the materials necessary for them pointed out. The Greek astronomers were not astrologers. That pretended science appears to have been introduced into Europe from the East, where it has prevailed from time immemorial. Lalande, an assiduous inquirer after early astronomical works, has stated that the most ancient almanacs of which he could find any express mention were those of Solomon Jarchus, published about 1150. Petrus de Dacia,

about the year 1300, published an almanac, of which there is a manuscript copy in the Savilian Library at Oxford. In this almanac the influence of the planets is thus stated :

'Jupiter atque Venus boni, Saturnusque malignus ;
Sol et Mercurius cum Luna sunt mediocres.'

The 'homo signorum' (man of the signs), so common in later almanacs, is conjectured to have had its origin from Peter of Dacia.

During the middle ages, Oxford was the seat of British science, mixed as that science occasionally was with astrology, alchemy, and other kinds of false learning; and from Oxford the standard almanacs emanated; for instance, that of John Somers, written in 1380, of Nicolas de Lynna, published in 1386, and others.

An almanac for 1386 was printed as a literary curiosity in 1812. It is a small 8vo, and is thus introduced: '*Almanac for the Year 1386. Transcribed verbatim from the Original Antique Illuminated Manuscript in the Black Letter; omitting only the Monthly Calendars and some Tables. Containing many Curious Particulars illustrative of the Astronomy, Astrology, Chronology, History, Religious Tenets, and Theory and Practice of Medicine of the Age.* Printed for the Proprietor by C. Stower, Hackney, 1812. The Manuscript to be disposed of. Apply to the printer. Entered at Stationers' Hall.' The contents are—1. The Houses of the Planets and their Properties; 2. The Exposition of the Signs; 3. Chronicle of Events from the Birth of Cain; 4. To find the Prime Numbers; 5. Short Notes on Medicine; 6. On Blood-letting; 7. A Description of the Table of Signs and Movable Feasts; 8. Quantitates Diei Artificialis. Of the information given under the head, 'Exposycion of the Synes,' the following extract may serve as a specimen: 'Aquarius es a syne in the whilk the son es in Jan', and in that moneth are 7 plyos [pluiviose] dayes, the 1, 2, 4, 5, 6, 15, 19, and if thoner is heard in that moneth, it betokens grete wynde, mykel fruite, and batel. Aquarius is hote, moyste, sangyune, and of that ayre ites gode to byg castellis, or hous, or to wed.' The clumsy method of expressing numbers of more than two figures, shews that the Arabic notation had been but recently introduced, and was then imperfectly understood; for instance, 52mcc20 is put for 52,220.

Almanacs in manuscript of the fifteenth century are not uncommon. In the library at Lambeth Palace there is one dated 1460, at the end of which is a table of eclipses from 1460 to 1481. There is a very beautiful calendar in the library of the University of Cambridge, with the date of 1482.

The first almanac printed in Europe was probably the *Kalendarium Novum*, by Regiomontanus, calculated for the three years 1475, 1494, and 1513. It was published at Buda, in Hungary. Though it simply contained the eclipses and the places of the planets for the respective years, it was sold, it is said, for ten crowns of gold, and the whole impression was soon disposed of in Hungary, Germany, Italy, France, and England.

The first almanac known to have been printed in England was the *Sheapheards Kalendar*, trans-

lated from the French, and printed by Richard Pynson in 1497. It contains a large quantity of extraneous matter. As to the general influence of the celestial bodies, the reader is informed that

'Saturne is hiest and coldest, being full old,
And Mars with his bluddy swerde ever ready to
kyll.

Sol and Luna is half good and half ill.'

Each month introduces itself with a description in verse. January may be given as an example :

'Called I am Januyere the colde,
In Christmas season good fyre I love.
Yonge Jesu, that sometime Judas solde,
In me was circumcised for man's behove.
Three kinges sought the sonne of God above ;
They kneeled downe, and dyd him homage, with love
To God their Lorde that is mans own brother.'

Another very early printed almanac, of unusually small size, was exhibited to the Society of Antiquaries on the 16th of June 1842. Dr Bliss brought it with him from Oxford. It had been found by a friend of Dr Bliss at Edinburgh, in an old chest, and had been transmitted to him as a present to the Bodleian Library. Its dimensions were 2½ inches by 2 inches, and it consisted of fifteen leaves. The title in black letter, was *Almanacke for XII. Yere*. On the third leaf, 'Lately corrected and empyrnted in the Fletestrete by Wynkyn de Worde. In the yere of the reyne of our most redoubted sovereyayne Lorde Kinge Henry the VII.'

Almanacs became common on the continent before the end of the fifteenth century, but were not in general use in England till about the middle of the sixteenth. Skilful mathematicians were employed in constructing the astronomical part of the almanacs, but the astrologers supplied the supposed planetary influences and the predictions as to the weather and other interesting matters, which were required to render them attractive to the popular mind. The title-pages of two or three of these early almanacs will sufficiently indicate the nature of their contents.

A Prognossicacion and an Almanack fastened together, declaring the Disposicion of the People and also of the Wether, with certain Electyons and Tymes chosen both for Phisike and Surgerye, and for the husbandman. And also for Hawekyng, Huntynge, Fishyng, and Foullynge, according to the Science of Astronomy, made for the Yere of our Lord God M.D.L., Calculated for the Merydyan of Yorke, and practiced by Anthony Askham. At the end, 'Imprynted at London, in Flete Strete, at the Signe of the George, next to Saynt Dunstan's Church, by Wyllyam Powell, cum privilegio ad imprimendum solum.' Then follows the Prognostication, the title-page to which is as follows: *A Prognossicacion for the Yere of our Lord M.CCCC.L., Calculated upon the Merydyan of the Towne of Anwarpe and the Country thereabout, by Master Peter of Moorbeeke, Doctour in Physicke of the same Towne, whereunto is added the Judgment of M. Cornelius Schute, Doctour in Physicke of the Towne of Bruges in Flanders, upon and concerning the Disposicion, Estate, and Condicion of certaine Prynces, Contreys, and Regions, for the present Yere, gathered oute of his Prognossicacion for the same Yere. Translated*

oute of Duch into Englyshe by William Harrys. At the end, 'Imprynted at London by John Daye, dwellyne over Aldersgate, and Wyllyam Seres, dwellyne in Peter Colledge. These Bokes are to be sold at the Newe Shop by the Lytle Conduyte in Chepesyde.'

'An Almanacke and Prognosticatyon for the Yeare of our Lorde MDLI., practysed by Simon Henringius and Lodowyke Boyard, Doctors in Physike and Astronomye, &c. At Worcester in the Hygh Strete.'

'A Newe Almanacke and Prognostication, Collected for the Yere of our Lord MDLVIII., wherein is expressed the Change and Full of the Moone, with their Quarters. The Varietie of the Ayre, and also of the Windes throughout the whole Yere, with Infortunate Times to Bie and Sell, take Medicine, Sowe, Plant, and Journey, &c. Made for the Meridian of Norwich and Pole Arcticke LI. Degres, and serving for all England. By William Kenningham, Physician. Imprynted at London by John Daye, dwelling over Aldersgate.'

Leonard Digges, a mathematician of some eminence, and the author of two or three practical treatises on geometry and mensuration, was also the author of a *Prognostication*, which was several times reprinted under his own superintendence, and that of his son, Thomas Digges.* It is not properly an almanac, but a sort of companion to the almanac, a collection of astrological materials, to be used by almanac-makers, or by the public generally. It is entitled '*A Prognostication everlasting of Right Good Effect, fructfully augmented by the Author, containing Plaine, Briefe, Plesant, Chosen Rules to judge the Weather by the Sunne, Moon, Starres, Comets, Rainbow, Thunder, Clowdes, with other Extraordinary Tokens, not omitting the Aspects of Planets, with a Briefe Judgement for ever, of Plentie, Lacke, Sicknes, Dearth, Warres, &c., opening also many naturall causes worthie to be knowne. To these and other now at the last are joined divers generall pleasant Tables, with many compendious Rules, easie to be had in memorie, manifolde wayes profitable to all men of understanding.*' Published by Leonard Digges. Lately Corrected and Augmented by Thomas Digges, his sonne. London, 1605.' The first edition was published in 1553; the second edition, in 1555, was 'fructfully augmented,' and was 'imprynted at London within the Blacke Fryars.' In his preface he thus discourses concerning the influence of the stars (the spelling modernised): 'What meteoroscooper, yea, who, learned in matters astronomical, noteth the great effects at the rising of the star called the Little Dog? Truly, the consent of the most learned do agree of his force. Yea, Pliny, in his *History of Nature*, affirms the seas to be then most fierce, wines to flow in cellars, standing waters to move, dogs inclined to madness. Further, these constellations rising—Orion, Arcturus, Corona—provoke tempestuous weather; the Kid and Goat, winds; Hyades, rain. What meteorologer consenteth not to the great alteration and mutation of air at the conjunction, opposition, or

quadrant aspect of Saturn with either two lights? Who is ignorant, though poorly skilled in astronomy, that Jupiter, with Mercury or with the sun, enforces rage of winds? What is he that perceives not the fearful thunders, lightnings, and rains at the meeting of Mars and Venus, or Jupiter and Mars? Desist, for shame, to oppugn these judgments so strongly authorised. All truth, all experience, a multitude of infallible grounded rules, are against him.'

In France, a decree of Henry III., in 1579, forbade all makers of almanacs to prophesy, directly or indirectly, concerning affairs either of the state or of individuals. No such law was ever enacted in England. On the contrary, James I., allowing the liberty of prophesying to continue as before, granted a monopoly of the publication of almanacs to the two Universities and the Company of Stationers. The Universities, however, accepted an annuity from their colleagues, and relinquished any active exercise of their privilege. Under the patronage of the Stationers' Company, astrology continued to flourish.

Almanac-making, before this time, had become a profession, the members of which generally styled themselves Philomaths, by which they probably meant that they were fond of mathematical science; and the astrologers had formed themselves into a company, who had an annual dinner, which Ashmole, in his *Diary*, mentions having attended during several successive years. The Stationers' Company were not absolutely exclusive in their preference for astrological almanacs. Whilst they furnished an ample supply for the credulous, they were willing also to sell what would suit the taste of the sceptical; for Allstree's Almanac in 1624 calls the supposed influence of the planets and stars on the human body 'heathenish,' and dissuades from astrology in the following doggrel lines:

'Let every philomathy
Leave lying astrology;
And write true astronomy,
And I'll bear you company.'

Thomas Decker, at a somewhat earlier period, evidently intending to ridicule the predictions of the almanac-makers, published *The Raven's Almanacke, foretelling of a Plague, Famine, and Civill Warr, that shall happen this present yere, 1609. With certaine Remedies, Rules and Receipts, &c.* It is dedicated 'To the Lyons of the Wood, to the Wilde Buckes of the Forrest, to the Harts of the Field, and to the whole country that are brought up wisely to prove Guls, and are born rich to dye Beggars.' By the Lyons, Buckes, and Harts, are meant the courtiers and gallants, or 'fast young men' of the time.

There was perhaps no period in which the prophetic almanacs were more eagerly purchased than during the civil wars of Charles I. and the parliament. The notorious William Lilly was one of the most influential of the astrologers and almanac-makers at that time, and in his autobiography not only exhibits a picture of himself little creditable to him, but furnishes curious portraits of several of his contemporary almanac-makers, Dr Dee, Dr Forman, Booker, Winder, Kelly, Evans, and others. The character of

* L. Digges's *Prognostication* was published 1553, 1555, 1556, 1567, 1576, 1578, 1605.

Sidrophel in *Hudibras* has been supposed to represent Lilly, but probably Butler merely meant to hold up to ridicule and scorn the class of persons of whom Lilly may be regarded as a type. He was evidently a crafty, time-serving knave, who made a good living out of the credulity of his countrymen. He was consulted as an astrologer about the affairs of the king, but afterwards, in 1645, when the royal cause began to decline, he became one of the parliamentary party. He was born in 1602, was educated at the grammar-school of Ashby-de-la-Zouch, came to London when he was about eighteen years of age, and spent the latter part of his life at Hershams, near Walton-on-Thames, where he died in 1681. In the chapter of his autobiography, *Of the Manner how I came to London*, he states that he was engaged as a servant in the house of Mr Gilbert Wright, who could neither read nor write, lived upon his annual rents, and was of no calling or profession. He states: 'My work was to go before my master to church; to attend my master when he went abroad; to make clean his shoes; sweet the street; help to drive bucks when he washed; fetch water in a tub from the Thames (I have helped to carry eighteen tubs of water in one morning); weed the garden. All manner of drudgeries I performed, scraped trenchers, &c. . . . 'In 1644, I published *Merlinus Anglicus Junior* about April. In that year I published *Prophetical Merlin*, and had eight pounds for the copy.' Alluding to the comet which appeared in 1677, Lilly says: 'All comets signify wars, terrors, and strange events in the world.' He gives a curious explanation of the prophetic nature of these bodies: 'The spirits, well knowing what accidents shall come to pass, do form a star or comet, and give it what figure or shape they please, and cause its motion through the air, that people might behold it, and thence draw a signification of its events.' Further, a comet appearing in the sign Taurus portends 'mortality to the greater part of cattle, as horses, oxen, cows, &c.,' and also 'prodigious shipwrecks, damage in fisheries, monstrous floods, and destruction of fruit by caterpillars and other vermine.' Lilly, in his autobiography, appears on one occasion to have acted in one of the meanest of capacities. There is no doubt that he was employed as a spy; but the chief source of income to Lilly, and to most of the other astrologers, was probably what was called casting nativities, and foretelling, or rather foreshadowing, the future events of the lives of individuals; in fact, fortunetelling.

It has been mentioned before that the Stationers' Company had no objection to supply an almanac to the sceptics and scoffers who treated the celestial science with ridicule and contempt. Such an almanac was '*Poor Robin*, 1664: *an Almanack after a New Fashion, wherein the Reader may see (if he be not blinde) many Remarkable Things worthy of Observation, containing a Two-fold Kalender—viz., the Julian or English, and the Roundheads or Fanatics, with their several Saints' Daies, and Observations upon every Month.* Written by Poor Robin, Knight of the Burnt Island, a well-wisher to the Mathematics; calculated for the Meridian of Saffron Walden, where the Pole is elevated 52 degrees and 6 minutes

above the Horizon. Printed for the Company of Stationers.'

Poor Robin has four lines of verse at the head of each of the odd pages of the Calendar. For instance, under January, we have

'Now blustering Boreas sends out of his quiver
Arrows of snow and hail, which makes men shiver;
And though we hate sects and their vile partakers,
Yet those who want fires must now turn Quakers.'

As a specimen of his humour in prose, under January we are told that 'there will be much frost and cold weather in Greenland.' Under February, 'We may expect some showers of rain this month, or the next, or the next after that, or else we shall have a very dry spring.' *Poor Robin* first appeared in 1663. Robert Herrick, the poet, is said to have assisted in the compilation of the early numbers. It was not discontinued till 1828. The humour of the whole series was generally coarse, with little of originality, and a great deal of indecency.

In 1664, John Evelyn published his *Kalendarium Hortense*, the first Gardener's Almanac, containing directions for the employment of each month. This was dedicated to the poet Cowley, who acknowledged the compliment in one of his best pieces, entitled 'The Garden.' It was perhaps in this almanac that there appeared a sage counsel, to which Sir Walter Scott somewhere alludes, as being presented in an almanac of Charles II.'s time—namely, that every man ought for his health's sake to take a country walk of a mile, every morning before breakfast—'and, if possible, let it be upon your own ground.'

The next almanac-maker to whom the attention of the public was particularly directed was John Partridge, chiefly in consequence of Swift's pretended prophecy of his death. Partridge was born in 1644, and died in 1714. He was brought up to the trade of a shoemaker, which he practised in Covent Garden in 1680; but having acquired some knowledge of Latin, astronomy, and astrology, he at length published an almanac. Swift began his humorous attacks by *Predictions for the Year 1708, wherein the Month and the Day of the Month are set down, the Persons named, and the Great Actions and Events of Next Year particularly related as they will come to pass. Written to prevent the People of England from being further imposed upon by the Vulgar Almanac-makers.* After discussing with much gravity the subject of almanac-making, and censuring the almanac-makers for their methods of proceeding, he continues as follows: 'But now it is time to proceed to my predictions, which I have begun to calculate from the time the sun enters Aries, and this I take to be properly the beginning of the natural year. I pursue them to the time when he enters Libra, or somewhat more, which is the busy time of the year; the remainder I have not yet adjusted,' &c. . . . 'My first prediction is but a trifle, yet I will mention it to shew how ignorant those sottish pretenders to astronomy are in their own concerns. It relates to Partridge the almanac-maker. I have consulted the star of his nativity by my own rules, and find he will infallibly die on the 29th of March next, about eleven at night, of a raging fever; therefore, I advise him to con-

sider of it, and settle his affairs in time.' Partridge, after the 29th of March, publicly denied that he had died, which increased the fun, and the game was kept up in *The Tatler*. Swift wrote *An Elegy on the Supposed Death of Partridge, the Almanac-maker*, followed by

‘THE EPITAPH.

Here, five foot deep, lies on his back
A cobbler, starmonger, and quack,
Who to the stars, in pure good-will,
Does to his best look upward still.
Weep, all ye customers, that use
His pills, his almanacs, or shoes;
And you that did your fortunes seek,
Step to his grave but once a week.
This earth, which bears his body's print,
You'll find has so much virtue in't,
That I durst pawn my ears 'twill tell
Whate'er concerns you full as well
In physic, stolen goods, or love,
As he himself could when above.'

Partridge, having studied physic as well as astrology, in 1682 styled himself 'Physician to his Majesty,' and was one of the sworn physicians of the court, but never attended nor received any salary. His real epitaph, and a list of some of his works, are printed by Granger in his *Biographical History*. Partridge wrote a life of his contemporary almanac-maker, John Gadbury.

The *Vox Stellarum* of Francis Moore was the most successful of the predicting almanacs. There has been much doubt as to whether Francis Moore was a real person, or only a pseudonym. A communication to *Notes and Queries*, vol. iii. p. 466, states that 'Francis Moore, physician, was one of the many quack doctors who duped the credulous in the latter period of the seventeenth century. He practised in Westminster.* In all probability, then, as in our own time, the publication of an almanac was to act as an advertisement of his healing powers, &c. Cookson, Salmon, Gadbury, Andrews, Tanner, Colcy, Partridge, &c., were all predecessors, and were students in physic and astrology. Moore's *Almanac* appears to be a perfect copy of Tanner's, which appeared in 1656, forty-two years prior to the appearance of Moore's. The portrait in Knight's *London* is certainly imaginary. There is a genuine and certainly very characteristic portrait, now of considerable rarity, representing him as a fat-faced man, in a wig and large neckcloth, inscribed "Francis Moore, born in Bridgenorth, in the county of Salop, the 29th of January 1656-7. John Drapentier, *delin. et sculp.*" Moore appears to have been succeeded as compiler of the *Almanac* by Mr Henry Andrews, who was born in 1744, and died at Royston, Herts, in 1820. "Andrews was astronomical calculator to the Board of Longitude, and for many years corresponded with Maskelyne

* Francis Moore, in his *Almanac* for 1711, dates 'from the Sign of the Old Lilly, near the Old Barge House, in Christ Church Parish, Southwark, July 19, 1710.' Then follows an advertisement in which he undertakes to cure diseases. Lysons mentions him as one of the remarkable men who, at different periods, resided at Lambeth, and says that his house was in Calcott's Alley, High Street, then called Back Lane, where he practised as astrologer, physician, and schoolmaster.

and other eminent men."—*Notes and Queries*, vol. iv. p. 74. Mr Robert Cole, in a subsequent communication to *Notes and Queries*, vol. iv. p. 162, states that he had purchased from Mr William Henry Andrews of Royston, son of Henry Andrews, the whole of the father's manuscripts, consisting of astronomical and astrological calculations, with a mass of very curious letters from persons desirous of having their nativities cast. Mr W. H. Andrews, in a letter addressed to Mr Cole, says: 'My father's calculations, &c., for Moore's *Almanac* continued during a period of forty-three years, and although, through his great talent and management, he increased the sale of that work from 100,000 to 500,000, yet, strange to say, all he received for his services was £25 per annum.'

The *Ladies' Diary*, one of the most respectable of the English almanacs of the eighteenth century, was commenced in 1704. Disclaiming astrology, prognostications, and quackery, the editor undertook to introduce the fair sex to the study of mathematics as a source of entertainment as well as instruction. Success was hardly to have been expected from such a speculation; but, by presenting mathematical questions as versified enigmas, with the answers in a similar form, by giving receipts for cookery and preserving, biographies of celebrated women, and other 'entertaining particulars peculiarly adapted for the use and diversion of the fair sex,' the success of the work was secured; so that, though the *Gentleman's Diary* was brought out in 1741 as a rival publication, the *Ladies' Diary* continued to circulate independently till 1841, when it was incorporated with the *Gentleman's Diary*. The projector and first editor of the *Ladies' Diary*, was John Tipper, a schoolmaster at Coventry.

In 1733, Benjamin Franklin published in the city of Philadelphia the first number of his almanac under the fictitious name of Richard Saunders. It was commonly called *Poor Richard's Almanac*, and was continued by Franklin about twenty-five years. It contained the usual astronomical information, 'besides many pleasant and witty verses, jests, and sayings.' The little spaces that occurred between the remarkable days of the calendar he filled with proverbial sentences inculcating industry and frugality. In 1757, he made a selection from these proverbial sentences, which he formed into a connected discourse, and prefixed to the almanac, as the address of a prudent old man to the people attending an auction. This discourse was afterwards published as a small tract, under the title of *The Way to Wealth*, and had an immense circulation in America and England. At the sale of the Ingham Library, in Philadelphia, an original *Poor Richard's Almanac* sold for fifty-two dollars.—*Notes and Queries*, vol. xii. p. 143.

In 1775, the legal monopoly of the Stationers' Company was destroyed by a decision of the Court of Common Pleas, in the case of Thomas Carnan, a bookseller, who had invaded their exclusive right. Lord North, in 1779, brought in a bill to renew and legalise the Company's privilege, but, after an able argument by Erskine in favour of the public, the minister's bill was rejected. The defeated monopolists,

however, still kept possession of the trade, by bribing their competitors, and by their influence over the book-market. In 1828, *The British Almanac* of the Society for the Diffusion of Useful Knowledge was published, and in the course of a few years the astrological portions disappeared from the other almanacs. Several new ones, containing valuable information, have since been presented to the public. But the measure which led to the improvement and great increase of almanacs, was the entire repeal of the stamp-duties thereon, by 3 and 4 Will. IV. c. 37, 13th August 1834. Hitherto, the stamp-duty upon each Moore's Almanac was 15*d*.

In a letter from Robert Heath, of Upnor Castle, date about 1753, the sheet almanac of the Stationers' Company is stated to sell '175,000, and they give three guineas for the copy; Moore's sells 75,000, and they give five guineas for the copy; the *Lady* sells above 30,000, and they give ten guineas, the most copy-money of any other. The *Gentleman's* copy is three guineas, sells 7000. Here are a fine company to write for.' In 1751, he describes White, who computes an ephemeris for the Stationers' Company, as living at Grantham, in Lincolnshire.

The Stationers' Company present annually to the Archbishop of Canterbury copies of their almanacs, which custom originated as follows: When Tenison was archbishop, a near relation of his, who was master of the Stationers' Company, thought it a compliment to call at Lambeth Palace in the Company's stately barge, on the morning of Lord Mayor's Day, when the archbishop sent out a pint of wine for each liveryman, with bread and cheese and hot-spiced ale for the watermen and attendants; and this grew into a settled custom; the Stationers' Company acknowledging the hospitality by presenting to the archbishop a copy of the several almanacs which they publish. The wine was served in small two-handled wooden bowls, or small cups, which were provided yearly by the Company. But since the abolition of the procession by water on Lord Mayor's Day, this custom has been discontinued.

Southey, in the *Doctor*, relates the following legal anecdote, to exemplify how necessary it is upon any important occasion to scrutinise the accuracy of a statement before it is taken on trust. A fellow was tried at the Old Bailey for highway robbery, and the prosecutor swore positively to him, saying he had seen his face distinctly, for it was a bright moonlight night. The counsel for the prisoner cross-questioned the man so as to make him repeat that assertion, and insist upon it. He then affirmed that this was a most important circumstance, and a most fortunate one for the prisoner at the bar: because the night on which the alleged robbery was said to have been committed was one in which there had been no moon: it was then during the dark quarter! In proof of this he handed an almanac to the bench, and the prisoner was acquitted accordingly. The prosecutor, however, had stated everything truly; and it was known afterwards that the almanac with which the counsel came provided, had been prepared and printed for the occasion.

The same writer remembers when a countryman had walked to the nearest large town, thirty miles distant, for the express purpose of seeing an almanac, the first that had been heard of in those parts. His inquiring neighbours crowded round the man on his return. 'Well, well,' said he, 'I know not; it muffles and talks. But all I could make out is, that Collop Monday falls on a Tuesday next year.'

THE RIDDLE OF THE YEAR.

There is a father with twice six sons; these sons have thirty daughters a piece, party-coloured, having one cheek white and the other black, who never see each other's face, nor live above twenty-four hours.

IMPROVEMENT OF SMALL PORTIONS OF TIME.

Among those who have contributed to the advancement of learning, many have risen to eminence in opposition to all the obstacles which external circumstances could place in their way, amidst the tumults of business, the distresses of poverty, or the dissipation of a wandering and unsettled state. A great part of the life of Erasmus was one continued peregrination: ill supplied with the gifts of fortune, and led from city to city, and from kingdom to kingdom, by the hopes of patrons and preferment—hopes which always flattered and always deceived him—he yet found means, by unshaken constancy and a vigilant improvement of those hours which, in the midst of the most restless activity, will remain unengaged, to write more than another in the same condition could have hoped to read. Compelled by want to attendance and solicitation, and so much versed in common life that he has transmitted to us the most perfect delineation of the manners of his age, he joined to his knowledge of the world such application to books, that he will stand for ever in the first rank of literary heroes. Now, this proficiency he sufficiently discovers by informing us that the *Praise of Folly*, one of his most celebrated performances, was composed by him on the road to Italy, lest the hours which he was obliged to spend on horseback should be tattled away, without regard to literature.—*Johnson*.

The Chancellor D'Aguesseau, finding that his wife always kept him waiting a quarter of an hour after the dinner-bell had rung, resolved to devote the time to writing a book on jurisprudence, and, putting the project in execution, in course of time produced a work in four quarto volumes.

Many persons thoughtlessly waste their own time simultaneously with that of others. Lord Sandwich, when he presided at the Board of Admiralty, paid no attention to any memorial that extended beyond a single page. 'If any man,' he said, 'will draw up his case, and will put his name to the bottom of the first page, I will give him an immediate reply; where he compels me to turn over the page, he must wait my pleasure.'

— came old January, wrapped well
 In many weeds to keep the cold away ;
 Yet did he quake and quiver like to quell,
 And blowe his nayles to warm them if he may ;
 For they were numbed with holding all the day
 An hatchet keene, with which he felled wood,
 And from the trees did lop the needlesse spray ;
 Upon an huge great Earth-pot Steane he stood,
 From whose wide mouth there flowed forth the Romane flood.

SPENSER.

(DESCRIPTIVE.)

JANUARY is the open gate of the year, shut until the shortest day passed, but now open to let in the lengthening daylight, which will soon fall upon dim patches of pale green, that shew where spring is still sleeping. Sometimes between the hoary pillars—when the winter is mild—a few wan snowdrops will peep out and catch the faint sunlight which

streams in coldly through the opening gateway, like timid messengers sent to see if spring has yet stirred from her long sleep. But it is yet too early for the hardy crocus to throw its banded gold along the pathway ; and as for the 'rathe primrose,' it sits huddled up in its little cloak of green, or is seen peeping through its half-closed yellow eye, as if watching the snowflakes as they fall. Only the red-breasted robin—his heart filled with hope—sings his cheerful song on the naked hawthorn spray, through which the tiny buds are striving to break forth, like a

herald proclaiming glad tidings, and making known, far and wide, that ere long 'the winter will be over and gone,' and the moonlight-coloured May-blossoms once again appear.

All around, as yet, the landscape is barren and dreary. In the early morning, the withered sedge by the water-courses is silvered over with hoary rime; and if you handle the frosted flag-rushes, they seem to cut like swords. Huddled up like balls of feathers, the fieldfares sit in the leafless hedges, as if they had no heart to breakfast off the few hard, black, withered berries which still dangle in the wintry wind. Amid the cold frozen turnips, the hungry sheep look up and bleat pitifully; and if the cry of an early lamb falls on your ear, it makes the heart sorrowful only to listen to it. You pass the village churchyard, and almost shiver to think that the very dead who lie there must be pierced by the cold, for there is not even a crimson hip or haw to give a look of warmth to the stark hedges, through which the bleak wind whistles. Around the frozen pond the cattle assemble, lowing every now and then, as if impatient, and looking backward for the coming of the herdsman to break the ice. Even the nose of cherry-cheeked Patty looks blue, as she issues from the snow-covered cowshed with the smoking milk-pail on her head. There is no sound of the voices of village children in the winding lanes—nothing but the creaking of the old carrier's cart along the frost-bound road, and you pity the old wife who sits peeping out between the opening of the tilt, on her way to the neighbouring market-town. The very dog walks under the cart in silence, as if to avail himself of the little shelter it affords, instead of frisking and barking beside his master, as he does when 'the leaves are green and long.' There is a dull, leaden look about the sky, and you have no wish to climb the hill-top on which those gray clouds hang gloomily. You feel sorry for the poor donkey that stands hanging his head under the guide-post, and wish there were flies about to make him whisk his ears, and not leave him altogether motionless. The 'Jolly Farmer' swings on his creaking sign before the road-side alehouse, like the bones of a murderer in his gibbet-irons; and instead of entering the house, you hurry past the closed door, resolved to warm yourself by walking quicker, for you think a glass of ale must be but cold drink on such a morning. The old ostler seems bent double through cold, as he stands with his hands in his pockets, and his pitchfork thrust into the smoking manure-heap that litters the stable-yard.

A walk in the country on a fine frosty morning in January gives the blood a healthy circulation, and sets a man wondering why so many sit 'crodleing' over the fire at such a season. The trees, covered with hoar-frost, are beautiful to look upon, and the grass bending beneath its weight seems laden with crystal; while in the distance the hedges seem sheeted with May blossoms, so thickly, that you might fancy there was not room enough for a green leaf to peep out between the bloom. Sometimes a freezing shower comes down, and that is not quite so pleasant to be out in, for in a few moments everything around is covered with ice—the boughs seem as if cased

in glass, the plumage of birds is stiffened by it, and they have to give their wings a brisk shaking before they are able to fly; as for a bunch of red holly-berries, could they but retain their icy covering, they would make the prettiest ornaments that could be placed on a mantel-piece. This is the time of year to see the beautiful ramification of the trees, for the branches are no longer hidden by leaves, and all the interlacings and crossings of exquisite network are visible—those pencilling of the sprays which too few of our artists study. Looking nearer at the hedges, we already see the tiny buds forming, mere specks on the stem, that do but little more than raise the bark; yet by the aid of a glass we can uncoil the future leaves which summer weaves in her loom into broad green curtains. The snails are asleep; they have glued up the doorways of their moveable habitations; and you may see a dozen of their houses fastened together if you probe among the dead leaves under the hedges with your walking-stick; while the worms have delved deep down into the earth, beyond the reach of the frost, and thither the mole has followed them, for he has not much choice of food in severe frosty weather. The woodman looks cold, though he wears his thick hedging gloves, for at this season he clears the thick underwood, and weaves into hurdles the smooth hazel-wands, or any long limber twigs that form the low thicket beneath the trees. He knows where the primroses are peeping out, and can tell of little bowery and sheltered hollows, where the wood-violets will ere long appear. The ditcher looks as thoughtful as a man digging his own grave, and takes no heed of the pretty robin that is piping its winter song on the withered gorse bushes with which he has just stopped up a gap in the hedge. Poor fellow, it is hard work for him, for the ground rings like iron when he strikes it with his spade, yet you would rather be the ditcher than the old man you passed a while ago, sitting on a pad of straw and breaking stones by the wayside, looking as if his legs were frozen. That was the golden-crested wren which darted across the road, and though the very smallest of our British birds, it never leaves us, no matter how severe the winter may be, but may be seen among the fir-trees, or pecking about where the holly and ivy are still green. If there is a spring-head or water-course unfrozen, there you are pretty sure to meet with the wag-tail—the smallest of all our walking birds, for he marches along like a soldier, instead of jumping, as if tied up in a sack, as most of our birds do when on the ground. Now the blue titmouse may be seen hanging by his claws, with his back downward, hunting for insects in some decaying bough, or peeping about the thatched eaves of the cottages and outhouses, where it will pull out the straw to stir up the insects that lie snug within the thatch. In the hollows of trees, caverns, old buildings, and dark out-of-the-way places, the bats hibernate, holding on by their claws, while asleep, head downwards, one over another, dozens together, there to await the coming of spring, along with the insects which will then come out of their hiding-places.

But unsightly as the bat appears to some eyes, there is no cleaner animal living, in spite of all our poets have written against it; for it makes

a brush of its droll-looking little head, which it pokes under its umbrella-like wings, not leaving a cranny unswept, and parts its hair as carefully as a ringletted beauty. As for the insects it feeds upon, they are now in a state of torpor; most of the butterflies and moths are dead; those summer beauties that used to sit like folded pea-blossoms swinging on the flowers, have secured their eggs from the cold, to be hatched when the primrose-coloured sky of spring throws its warm light over the landscape. None of our clever warehouse packers can do their work so neatly as these insects; for, after laying their eggs in beautiful and regular order, they fill up the interstices with a gum that hardens like glue, and protects them in the severest weather. Those who wish for a good crop of fruit now hunt among the naked branches for these eggs, which are easily found through the dead leaves, to which they adhere; when these are destroyed, there is no fear of young grubs gnawing and piercing the bloom, nor can there be a better time to hunt for these destroyers of melting plums and juicy apples than in January. No doubt, the soft-billed birds that remain with us all the year round devour myriads of these eggs, and they serve to eke out the scanty subsistence these hardy choristers find strewn so sparingly in severe winters. How these birds manage to live through the killing frosts has long been a puzzle to our ablest naturalists, and after all their research, He alone knoweth without whose permission not a sparrow falls to the ground.

There is no better time than during a walk in January to get a good view of the mosses that grow on and around the trees, for at this season they stand boldly out in all their beautiful colourings, falling on the eye in masses of rich red, silver-gray, umbered brown, and gaudy orange; while the yellow moss is almost as dazzling as sunshine, and the green the most beautiful that gladdens the earth. In some places, we see it fitted together like exquisite mosaic work, in others it hangs down like graceful fringe, while the green looks like fairy trees, springing from a cushion of yielding satin. The screw moss is very curiously formed; it grows plentifully on old walls, and looks like dark-green flossy velvet. Now, if closely examined, a number of slender stems will be found springing from this soft bed, crowned with what botanists call the fruit. On this is a cap, just like that found on the unblown and well-known *eschscholtzia*; when this extinguisher-shaped cap is thrown off (it may be lifted off) a beautiful tuft of twisted hairs will be found beneath, compressed at the neck, and forming just such a brush as one can imagine the fairies use to sweep out the pollen from the flowers. Place this beautiful moss in water, and this brush will uncoil itself, if left above the surface, and release the seed within. Another of the scale mosses is equally curious, and if brought into a warm room, with a drop of water applied to the seed-vessel, it will burst open and throw out a little puff of dust; and this dust, when examined by a powerful glass, will be found to consist of links of little chains, not unlike the spring of a watch. But the most beautiful of all is the 'siller' cup moss, the silvery cup of which

is shaped like a nest, while the sporules inside look like eggs, such as a bird no larger than a gnat might build to breed in. This moss is commonly found on decayed wood. Sometimes, while hunting for curious mosses, at the stems of aged trees, we have aroused the little dormouse from his wintry sleep, as he lay coiled up, like a ball, in his snug burrow, where his store of provision was hoarded; for, unlike the fabled ant, he does lay in a stock for this dark season, which the ant does not.

Snow in the streets is very different from snow in the country, for there it no sooner falls than it begins to make more dirt, and is at once trampled into mud by a thousand passing feet on the pavement, while in the roadway the horses and vehicles work it into 'slush,' which only a brisk shower of rain can clear away. In the country snow is really white; there is none of that gray dirty look about it, which is seen in localities that neighbour upon town, but it lies on the fields, as Milton says, like

'A wintry veil of maiden white.'

The embankments look like stately terraces formed of the purest marble, and the hills in the distance are scarcely distinguishable from the fleecy clouds that crown their summits; while the wild open moors and hedgeless commons look like a sea of foam, whose waves were suddenly frozen into ridgy rest, the buried bushes only shewing like loftier crests. Vehicles pass along the scarcely distinguishable road with a strange, dull, muffled sound, like objects moving before the eye in a dream, so much do we miss the gritty and grinding noise which the wheels make in the dust of summer. What a different aspect the landscape presents when viewed from some neighbouring eminence! But for a few prominent landmarks, we should hardly know it was the same scene that we looked upon in summer; where the hedges then stretched like green walls across the country, we see but whitened barriers; for the only dark object that now catches the eye is the river that goes rolling between its powdered banks. The appearance of the village, too, is altered; the picturesque thatched roofs of the cottages have vanished, and but for the smoke that curls above the scene, you might fancy that all the inhabitants had fled, for neither flocks nor herds are seen or heard bleating and lowing from the fields, and all out-of-door employment has ceased. You hear the ringing of the blacksmith's hammer, and as you return when the day darkens, will see the light of his forge fall with a crimson glare across the snow-covered road. Even the striking of the church clock falls upon the ear with a deadened sound, and the report of the sportsman's gun dies away as soon as heard, leaving no prolonged echo behind.

While watching the snow fall, you can almost fancy that the flakes are white blossoms shaken from a land of flowers that lies somewhere above the sky; those that touch the river are gone in an instant, while some, as they fall slantways, unite together before they touch the earth. Science has seized upon and pictured the fantastic shapes the falling snow-flakes assume, and they are 'beautiful exceedingly.' Not less

so is frost-work, which may be seen without stirring abroad on the window-panes; what a mingling of fern leaves and foliage of every shape, rare network and elfin embroidery, does this silent worker place before the eye, such as no pattern-drawer ever yet seized upon, although

‘A thing of beauty is a joy for ever.’—*Keats*.

The farmer must attend to his cattle during this ‘dead season,’ for they require feeding early and late; and it is his business to put all the meat he can on their backs, so that they may weigh heavy, and realise a good price in the market. For this purpose, he must be active in cutting swedes and mangel-wurzel. Without this care, the farmer cannot keep pace with his neighbours. He gets rid of his saleable stock as soon as he can; he says, he ‘likes to see fresh faces in his fields.’ It is a pleasant sight to see the well-fed, clean-looking cattle in the straw-yard, or sniffing about the great barn-doors, where the thresher is at work, waiting for the straw he will throw out. It is a marvel that the poultry escape from those great heavy hoofs; as for a game-cock, he will make a dash at the head of an ox, as if he cared not a straw for his horns; and as for sucking pigs, they are farrowed to be killed.

The teams are also now busy taking the farm produce to market, for this is the season when corn, hay, and straw realise a good price; and a wagon piled high with clean white turnips, or laden with greens or carrots, has a pleasant look moving through the wintry landscape, as it conjures up before the hungry pedestrian visions of boiled beef and mutton, which a walk in frosty weather gives a hearty man a good appetite to enjoy. Manure can also be carted better to the fields during a frost than at any other time, for the ground is hard, and the wheels make but little impression on rough fallow lands. Let a thaw come, and few persons, unless they have lived in the country, can know the state the roads are in that lead to some of our out-of-the-way villages in the clayey districts. A foot-passenger, to get on at all, must scramble through some gap in the hedge, and make his way by trespassing on the fields. In the lane, the horses are knee-deep in mire every step they take; and as for the wain, it is nearly buried up to the axles in places where the water has lodged. In vain does the wagoner keep whipping or patting his strong well-fed horses, or clapping his broad shoulder to the miry wheels; all is of no avail; he must either go home for more horses, or bring half-a-dozen men from the farm to dig out his wagon. It’s of no use grumbling, for perhaps his master is one of the surveyors of the highways.

The gorse, furze, whin, or ‘fuzz’—country people sometimes calling it by the latter name—is often in flower all the year round, though the great golden-bellied baskets it hangs out in summer are now nearly closed, and of a pale yellowish green. Although its spikes are as sharp as spears, and there is no cutting out a golden branch without wearing thick gloves, still it is one of the most beautiful of our wayside shrubs, and we hardly wonder at Linnæus falling on his knees in admiration the first time he saw it. Many a time have

we cut a branch in January, put it in water, and placed it in a warm room, when in two or three days all its golden lamps have lighted up, and where it stood it seemed to ‘make sunshine in the shady place.’

Where gorse grows abundantly, and bees have ready access to the bloom, there the finest-coloured and sweetest honey is produced. In a very mild season, we have seen, under sheltered hedges that face the south, the celandine in flower in January. Even when not in bloom, its large bright green leaves give a spring look to the barren embankments; but when out, its clear yellow star-shaped flowers catch the eye sooner than the primrose, through their deep golden hue. Country children call it the hedge buttercup, and their little hearts leap with delight when they see it springing up from among the dead leaves of winter. The common red or dead nettle may also occasionally be found in flower. Let those who would throw it aside as an unsightly weed, examine the bloom through a glass, and they will be amazed at its extreme loveliness; such ruby tints as it shews, imbedded in the softest bloom, never graced the rounded arm of beauty. The blue periwinkle is another beautiful flower that diadems the brow of January when the season is warm. It must be looked for in sheltered situations, for it is not at all a common wild-flower: once seen, it can never be mistaken, for the twisted bud before opening resembles the blue convolvulus. Nor must the common chickweed be overlooked, with its chaste white star-shaped flowers, which shew as early as the snowdrops. The large broad-leaved mouse-ear chickweed flowers later, and will be sought for in vain in January, though it sheds its seed and flowers frequently six times during the summer. Many other flowers we might name, though they are more likely to be found in bloom next month.

Many rare birds visit us occasionally in winter, which never make their appearance on our island at any other season. Some are only seen once now and then in the course of several years, and how they find their way hither at all, so far from their natural haunts, is somewhat of a mystery. Many birds come late in the autumn, and take their departure early in spring. Others remain with us all the year round, as the thrush and blackbird, which often commence singing in January. Wrens, larks, and many other small birds never leave our country. Flocks of wild-geese and other water-fowl, also visit our reedy marshes and sheltered lakes in winter; far up the sky their wild cries may be heard in the silence of midnight, as they arrive. Rooks now return from the neighbouring woods, where they have mostly wintered, to their nest-trees; while the smaller birds, which drew near to our habitation during the depth of winter, begin to disappear. Those that require insect food, go and forage among the grass and bushes; others retreat to the sides of stagnant pools, where, during the brief intervals of sunshine, gnats are now found. Others hunt in old walls, or among decayed trees, where insects are hidden in a dormant state, or are snugly ensconced in their warm cocoons, awaiting the first warm touch of spring, when, in the words of Solomon, ‘the flowers appear on the

carth and the voice of the turtle is heard
in our land.'

HISTORY OF JANUARY.

It is very appropriate that this should be the first month of the year, as far as the northern hemisphere is concerned; since, its beginning being near the winter solstice, the year is thus made to present a complete series of the seasonal changes and operations, including equally the first movements of spring, and the death of all annual vegetation in the frozen arms of winter. Yet the earliest calendars, as the Jewish, the Egyptian, and Greek, did not place the commencement of the year at this point. It was not done till the formation of the Roman calendar, usually attributed to the second king, Numa Pompilius, whose reign is set down as terminating anno 672 B.C. Numa, it is said, having decreed that the year should commence now, added two new months to the ten into which the year had previously been divided, calling the first Januarius, in honour of Janus, the deity supposed to preside over doors (Lat. *janua*, a door), who might very naturally be presumed also to have something to do with the opening of the year.

Although, however, there was a general popular regard to the 1st of January as the beginning of the year, the ancient Jewish year, which opened with the 25th of March, continued long to have a legal position in Christian countries. In England, it was not till 1752 that the 1st of January became the initial day of the legal, as it had long been of the popular year. Before that time, it was customary to set down dates between the 1st of January and the 24th of March inclusive, thus: January 30, 1648-9: meaning, that popularly the year was 1649, but legally 1648. In Scotland, this desirable change was made by a decree of James VI. in privy council, in the year 1600. It was effected in France in 1564; in Holland, Protestant Germany, and Russia, in 1700; and in Sweden in 1753.

According to Verstegan, in his curious book *The Restitution of Decayed Intelligence* (4to, 1628), our Saxon ancestors originally called this month *Wolf-monat*—that is, Wolf-month—'because people were wont always in that month to be more in danger to be devoured of wolves than in any season else of the year, for that, through the extremity of cold and snow, those ravenous creatures could not find beasts sufficient to feed upon.' Subsequently, the month was named by the same people *Aefter-Yule*—that is, After Christmas. It is rather odd that we should have abandoned the Saxon names of the months, while retaining those of the days of the week.

CHARACTERISTICS OF JANUARY.

The deity Janus was represented by the Romans as a man with two faces, one looking backwards, the other forwards, implying that he stood between the old and the new year, with a regard to both. To this circumstance the English poet Cotton alludes in the following lines:

'Hark, the cock crows, and yon bright star
Tells us, the day himself's not far;
And see where, breaking from the night,
He gilds the western hills with light.
With him old Janus doth appear,
Peeping into the future year,
With such a look as seems to say,
The prospect is not good that way.
Thus do we rise ill sights to see,
And 'gainst ourselves to prophesy;
When the prophetic fear of things
A more tormenting mischief brings,
More full of soul-tormenting gall
Than direst mischiefs can befall.
But stay! but stay! Methinks my sight,
Better informed by clearer light,
Discerns sereneness in that brow,
That all contracted seemed but now.
His reversed face may shew distaste,
And frown upon the ills are past;
But that which this way looks is clear,
And smiles upon the new-born year.'

In the quaint drawings which illuminate the Catholic missals in the middle ages, January is represented by 'the figure of a man clad in white, as the type of the snow usually on the ground at that season, and blowing on his fingers as descriptive of the cold; under his left arm he holds a billet of wood, and near him stands the figure of the sign Aquarius, into which watery emblem in the zodiac the sun enters on the 19th of this month.'—*Brady*.

January is notably, in our northern hemisphere, the coldest month in the year. The country people in England state the fact in their usual strong way:

'Janiveer—
Freeze the pot upon the fier.'

They even insist that the cold rather increases than decreases during the course of the month, notwithstanding the return of the sun from the Tropic of Capricorn, remarking:

'As the day lengthens,
The cold strengthens.'

or, as it is given in Germany, where the same idea prevails:

'Wenn die Tage beginnen zu langen,
Dann komm erst der Winter gegangen'

the fact being, we suppose, that it only does so in some instances, while those of an opposite character pass unnoticed.

In the middle of the month, the sun at London is only 8h. 20m., at Edinburgh, 7h. 34m., above the horizon. There is a liability to severe and lasting frosts, and to heavy falls of snow. Vegetation lies dead, and it is usually 'sore times' for the animal creation; the farmer has his bestial, including the sheep, if he keeps any, much upon his hands for artificial supplies. The birds of the field and wood, reduced to great extremities, come nearer to the residences of men, in the hope of picking up a little food. The robin is especially remarkable for this forced familiarity. In unusually severe seasons, many birds perish of cold and hunger, and consequently, when the spring comes on, there is a marked dimi-

nution of that burst of sylvan song which usually makes the season so cheerful.

When frost occurs without a snow-fall—what is called in the north a *black frost*—the ground, wholly without protection, becomes hard for several inches deep. In Canada, it is sometimes frozen three feet down, so that any sort of building not founded considerably deeper, is sure to be dislodged at the next thaw. Even a macadamised road will be broken up and wholly ruined from this cause. In our country, and on the continent of Europe, a snowless frost gives the means of several amusements, which the rural people are enabled with good conscience to indulge in, as being thrown off from all more serious employments by the state of the ground.

' Now in the Netherlands, and where the Rhine
Branched out in many a long canal, extends,
From every province swarming, void of care,
Batavia rushes forth; and as they sweep,
On sounding skates, a thousand different ways
In circling poise, swift as the winds along,
The then gay land is maddened all to joy.
Nor less the northern courts, wide o'er the snow,
Pour a new pomp. Eager, on rapid sleds,
Their vigorous youth in bold contention wheel
The long-resounding course. Meantime to raise
The manly strife, with highly blooming charms
Flushed by the season, Scandinavia's dames,
Or Russia's buxom daughters, glow around.'

Thomson.

In Holland, the peasantry, male and female, take advantage of the state of the waters to come to market on skates, often bearing most part of a

hundredweight on their heads; yet proceeding at the rate of ten miles an hour for two or three hours at a stretch.

In England, skating is on such occasions a favourite amusement; nor do the boys fail to improve the time by forming slides on lake, on pond, yea, even on the public highways, notwithstanding the frowns of old gentlemen and the threatenings of policemen. All of these amusements prevail during dry frost in Scotland, with one more, as yet little known in the south. It bears the name of *Curling*, and very much resembles bowls in its general arrangements, only with the specialty of flat stones to slide along the ice, instead of bowls to roll along the grass. Two parties are ranged in contention against each other, each man provided with a pair of handled stones and a broom, and having crampets on his feet to enable him to take a firm hold of the glassy surface. They play against each other, to have as many stones as possible lying near a fixed point, or *tee*, at the end of the course. When a player happens to impel his stone weakly, his associates sweep before it to favour its advance. A *skip*, or leader, stands at the tee, broom in hand, to guide the players of his party as to what they should attempt; whether to try to get through a certain open channel amongst the cluster of stones guarding the tee, or perhaps to come smashing among them, in the hope of producing rearrangements more favourable to his side. Incessant vociferation, frequent changes of fortune, the excitation of a healthy physical exercise, and the general feeling of socialty evoked, all contribute to render curl-

CURLING (FROM HARVEY'S WELL-KNOWN PICTURE).

ing one of the most delightful of amusements. It is further remarkable that, in a small community, the curling *rink* is usually surrounded by persons of all classes—the laird, the minister, and the provost, being all hail-fellow-well-met on this occasion with the tailors, shoemakers, and weavers, who at other times never meet them without a reverent vailing of the beaver. Very

often a plain dinner of boiled beef with *greens* concludes the merry-meeting. There is a *Caledonian Curling Club* in Scotland, embracing the highest names in the land, and having scores of provincial societies affiliated to it. They possess an artificial pond in Strathallan, near the line of the Scottish Central Railway, and thither sometimes converge for one day's conten-

SNOW CRYSTALS.

tion representatives from clubs scattered over fully a hundred and fifty miles of country.

When the low temperature of January is attended with a heavy snow-fall, as it often is, the ground receives a certain degree of protection, and is so far benefited for tillage in spring. But a load of snow is also productive of many serious inconveniences and dangers, and to none more than to the farmer, especially if he be at all concerned in *store-farming*. In Scotland, once every few years, there is a snow-fall of considerable depth, threatening entire destruction to sheep-stock. On one such occasion, in 1795, the snow was drifted in some hollows of the hills to the depth of a hundred feet. In 1772, there was a similar fall. At such times, the shepherd is exposed to frightful hardships and dangers, in trying to rescue some part of his charge. James Hogg tells us that, in the first-mentioned of these storms, seventeen shepherds perished in the southern district of Scotland, besides about thirty who, carried home insensible, were with difficulty recovered. At the same time, many farmers lost hundreds of their sheep.

SNOW CRYSTALS.

For the uninstructed mind, the fall of snow is a very common-place affair. To the thoughtless

schoolboy, making up a handful of it into a missile, wherewith to surprise his friend passing on the other side of the way; to the labouring man plodding his way through it with pain and difficulty; to the agriculturist, who hails it as a comfortable wrappage for the ground during a portion of the dead season of the year, it is but a white cold substance, and nothing more. Even the eye of weather-wisdom could but distinguish that snow sometimes fell in broad flakes, and sometimes was of a powdery consistence; peculiarities from which certain inferences were drawn as to the severity and probable length of the storm. In the view of modern science, under favour of the microscope, snow is one of the most beautiful things in the museum of nature; each particle, when duly magnified, shewing a surprising regularity of figure, but various according to the degree of frost by which the snow has been produced. In the Book of Job, 'the treasures of the snow' are spoken of; and after one has seen the particles in this way, he is fully disposed to allow the justice of the expression.

The indefatigable Arctic voyager, Scoresby, was the first to observe the forms of snow particles, and for a time it was supposed that they assumed these remarkable figures in the polar regions alone. It was, however, ascertained by Mr

VARIOUS FORMS OF SNOW CRYSTALS.

James Glaisher, secretary of the British Meteorological Society, that, in the cold weather which marked the beginning of 1855, the same and even more complicated figures were presented in England.

In consistence, a snow particle is laminar, or flaky, and it is when we look at it in its breadth that the figure appears. With certain exceptions, which probably will be in time explained away, the figure is *stellar*—a star of six arms or points, forming of course angles of 60 degrees. And sometimes the figure is composed merely of six *spiculæ* meeting at a point in this regular way. It more frequently happens, however, that the spicular arms of the figure are feathered with other and smaller spiculæ, all meeting their respective stems at an angle of 60 degrees, or loaded with hexagonal prisms, all of which have of course the same angles. It is in obedience to a law governing the crystallisation of water, that this angle of 60 degrees everywhere prevails in the figures of snow particles, with the slight and probably only apparent exceptions which have been alluded to. But while there is thus a unity in the presiding law, the results are of infinite variety, probably no two particles being ever precisely alike. It is to be observed that there is a tendency to one *style of figure* at any particular time of a snow-fall, in obedience to the degree of the temperature or some other condition of the atmosphere; yet within the range of this *style*, or general character, the minute differences may be described as endless. A very complicated form will even go through a series of minor changes as it melts on the object-glass of the observer; passing from the

more complicated to the less, till it ends, perhaps, as a simple star of six points, just before becoming water.

The accompanying wood-engraving represents a selection of figures from ninety-six given by Dr Scoresby in his work on the Arctic Regions.* It includes, as will be observed, certain triangular and other figures of apparently exceptional character. In a brochure issued by Mr Glaisher, and quoted below,† a hundred and fifty-one figures are presented, many of them paragons of geometrical beauty, and all calculated further to illustrate this interesting subject.‡

PROVERBS REGARDING JANUARY.

If the grass grows in Janiveer,
It grows the worse for 't all the year.

A January spring
Is worth naething.

Under water dearth,
Under snow bread.

March in Janiveer,
January in March, I fear.

If January calends be summerly gay,
'Twill be winterly weather till the calends of May.

The blackest month in all the year
Is the month of Janiveer.

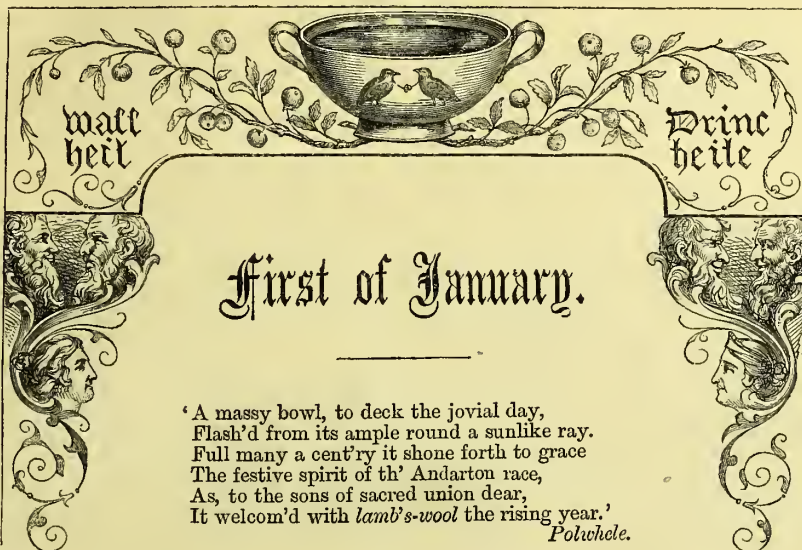

* Published in 1820, 2 vols., 8vo.

† Report of Council of Brit. Meteor. Society, May 1855.

‡ It has been found by Mr J. Spencer, and confirmed by observations of Mr Glaisher, that a weak solution of camphor produces, when rapidly dried, crystals resembling those of snow, of the more elementary forms.

SLEDGE-TRAVELLING ON SNOW IN THE NORTH OF EUROPE.

'A massy bowl, to deck the jovial day,
Flash'd from its ample round a sunlike ray.
Full many a cent'ry it shone forth to grace
The festive spirit of th' Andarton race,
As, to the sons of sacred union dear,
It welcom'd with *lamb's-wool* the rising year.'
Polwhale.

ELD in the Roman Catholic Church as the festival of *Circumcisio Domini*; observed as a feast in the Church of England on the same account. In the Roman Church, the following saints are honoured on this day: St Fulgentius, bishop and confessor; St Odilo or Olou, sixth abbot of Cluni; St Almachus, martyr; St Eugendus, abbot; St Faine or Fanchea, virgin, of Ireland; St Mochua or Moncain, *alias* Clannus, abbot in Ireland; and St Mochua, *alias* Cronan, of Balla, abbot in Ireland.

Born.—Soame Jenyns, 1704, *London*; Baron Franz Von Trenck, 1710; Edmund Burke, 1730, *Dublin*; G. A. Bürger, 1748, *Walmerswende*; Miss Maria Edgeworth, 1767; Edward Stanley, Bishop of Norwich, 1779; Francis Earl of Ellesmere, 1800.

Died.—Louis XII. of France, 1515; W. Wycherley, 1716; C. A. Helvetius, 1772, *Paris*; Silvio Pellico, 1854; John Britton, antiquary and topographer, 1857.

EDMUND BURKE.

In the oratorical era of the House of Commons—the eighteenth century—who greater in that arena than Edmund Burke? A wonderful basis of knowledge was crowned in his case by the play of the most brilliant imagination. It is an example of 'inconsistency in expectations,' to look for life-long solidity of opinion in such a man. His early friend, *Single-speech Hamilton*, hit off his character as a politician in a single sentence: 'Whatever opinion Burke, from any motive, supports, so ductile is his imagination, that he soon conceives it to be right.' Goldsmith's epitaph upon him, in the *Haunch of Venison*, is not less true:

'Here lies our good Edmund, whose genius was such,
We scarcely can praise it or blame it too much;
Who, born for the universe, narrowed his mind,
And to party gave up what was meant for mankind.
Though fraught with all learning, yet straining his
throat
To persuade Tommy Townsend to lend him a vote;
Who, too deep for his hearers, still went on refining,
And thought of convincing, while they thought of
dining;
Though equal to all things, for all things unfit;
Too nice for a statesman, too proud for a wit;
For a patriot too cool; for a drudge disobedient,
And too fond of the *right* to pursue the *expedient*.
In short, 'twas his fate, unemployed or in place, sir,
To eat mutton cold, and cut blocks with a razor.'

Turning away from the inconstancy of Mr Burke as a politician, let us contemplate him as a private friend in a day's journey, as delineated by Mr Hardy in his *Memoirs of Lord Charlemont*. 'One of the most satisfactory days, perhaps, that I ever passed in my life was going with him, *tête-à-tête*, from London to Beaconsfield. He stopped at Uxbridge whilst the horses were feeding, and happening to meet some gentlemen, of I know not what militia, who appeared to be perfect strangers to him, he entered into discourse with them at the gateway of the inn. His conversation at that moment completely exemplified what Johnson said of him: "That you could not meet Burke for half an hour under a shed, without saying he was an extraordinary man." He was on that day altogether uncommonly instructive and agreeable. Every object of the slightest notoriety, as we passed along, whether of natural or local history, furnished him with abundant materials for conversation. The house at Uxbridge, where the Treaty was held during Charles the First's time; the beautiful and undulating grounds of Bulstrode, formerly the residence

of Chancellor Jeffries; and Waller's tomb, in Beaconsfield Churchyard, which, before we went home, we visited, and whose character—as a gentleman, a poet, and an orator—he shortly delineated, but with exquisite felicity of genius, altogether gave an uncommon interest to his eloquence; and, although one-and-twenty years have now passed since that day, I entertain the most vivid and pleasing recollection of it.

G. A. BÜRGER.

To the poet Bürger belongs the honour of having, by two ballads, impressed the poetical mind of England, and conducted in some measure to its being turned into new channels. A translation of these ballads, which appeared in 1796, was the first publication of Scott. The ride of the spectre bridegroom with his mistress, in Scott's version of *Lenore*, is a splendid piece of painting:

'Strong love prevailed; she busks, she bounes,
She mounts the barb behind,
And round her darling William's waist
Her lily arms she twined.

And hurry! hurry! off they rode,
As fast as fast might be;
Spurned from the courser's thundering heels,
The flashing pebbles flee.

And on the right, and on the left,
Ere they could snatch a view,
Fast, fast, each mountain, mead and plain,
And cot and castle, flew.

"Sit fast—dost fear? The moon shines clear—
Fleet goes my barb—keep hold!
Fear'st thou?" "O no," she faintly said;
"But why so stern and cold?"

What yonder rings? what yonder sings?
Why shrieks the owl gray?"
"'Tis death bells' clang, 'tis funeral song,
The body to the clay.

With song and clang, at morrow's dawn,
Ye may inter the dead:
To-night I ride, with my young bride,
To deck our bridal-bed.

Come with thy choir, thou cofined guest,
To swell our nuptial song!
Come, priest, to bless our marriage feast,
Come all, come all along!"

24

Ceased clang and song; down sank the bier;
The shrouded corpse arose:
And hurry! hurry! all the train
The thundering steed pursues.

And forward! forward! on they go;
High snorts the straining steed;
Thick pants the riders' labouring breath,
As headlong on they speed.

"O William, why this savage haste?
And where thy bridal-bed?"
"'Tis distant far, low, damp, and chill,
And narrow, trustless maid."

"No room for me?" "Enough for both;
Speed, speed, my barb, thy course!"
O'er thundering bridge, through boiling surge,
He drove the furious horse.

Tramp! tramp! along the land they rode,
Splash! splash! along the sea;
The scourge is white, the spur is bright,
The flashing pebbles flee.

Fled past on right and left how fast,
Each forest, grove, and bower!
On right and left fled past how fast,
Each city, town, and tower!

"Dost fear? dost fear? The moon shines clear,
Dost fear to ride with me?
Hurrah! hurrah! the dead can ride!"
"O William, let them be!"

See there ! see there ! What yonder swings
And creaks 'mid whistling rain ?"
"Gibbet and steel, the accursed wheel ;
A murderer in his chain.

Hollo ! thou felon, follow here :
To bridal-bed we ride ;
And thou shalt prance a fetter dance
Before me and my bride."

And hurry ! hurry ! clash, clash, clash !
The wasted form descends ;
And fleet as wind through hazel-bush
The wild career attends.

Tramp ! tramp ! along the land they rode,
Splash ! splash ! along the sea ;
The scourge is red, the spur drops blood,
The flashing pebbles flee.

How fled what moonshine faintly shewed !
How fled what darkness hid !
How fled the earth beneath their feet,
The heaven above their head !

"Dost fear ? dost fear ? The moon shines clear,
And well the dead can ride ;
Does faithful Helen fear for them ?"
"O leave in peace the dead !"

"Barb ! barb ! methinks I hear the cock,
The sand will soon be run ;
Barb ! barb ! I smell the morning air ;
The race is well-nigh done."

Tramp ! tramp ! along the land they rode,
Splash ! splash ! along the sea ;
The scourge is red, the spur drops blood,
The flashing pebbles flee.

"Hurrah ! hurrah ! well ride the dead ;
The bride, the bride is come :
And soon we reach the bridal-bed,
For, Helen, here 's my home."

In his latter days, as a professor in the university of Göttingen, Bürger was inefficient, yet still much respected as the writer of the immortal *Lenore*. 'When Tieck became acquainted with him, he had been lately separated from his third wife. He was lean, pale, shrunken—misery was written in his features. His voice had lost its force; he could only make himself intelligible with difficulty; and yet he was obliged to speak. Now and then he would ride out, and there was something spectral about the pale man as he trotted through the streets of Göttingen on his lean white horse. One was reminded of the Ride of Death, which he had so forcibly described. Sometimes a ray of sunshine would fall on his gloomy soul, when any one succeeded in drawing him against his will into his old circle of good friends, whom he now anxiously avoided—shunning, indeed, all intercourse with mankind. . . . In *unconstrained* moments, Bürger could appear *unconstrained*, sympathetic, and even cheerful. He had something amiable and child-like in his nature.'—KÖPKE'S *Reminiscences of Ludwig Tieck*, 1856.

FRANCIS, EARL OF ELLESMERE.

There is something in Johnson's remark, that personal merits in a man of high rank deserve to be 'handsomely acknowledged.' Sure of homage on account of birth and means, it must be unusually good impulses which lead him to study, to useful arts, or to administrative

business. The second son of the Duke and Duchess of Sutherland, destined to an immense collateral inheritance, the Earl of Ellesmere devoted himself to elegant literature—in which his own efforts were far above mediocrity—to the patronage of the ennobling arts, and to disinterested duty in the public service. The benevolence of his nature led him in early life, as a member of the House of Commons, to lean to a liberal class of measures which were then little patronised, but the benefits of which were afterwards realised. At a time, moreover, when few were thinking much of the tastes and gratifications of the great body of the people, Lord Ellesmere prepared a splendid picture gallery which he made easily accessible to the public. This amiable nobleman died on the 18th February 1857.

WILLIAM WYCHERLEY.

While a literary man has his natural life, like other men, his fame has another and distinct life, which grows to maturity, flourishes a greater or less space of time, decays, and comes to an end, or in rare cases perseveres in a sort of immortality. Wycherley is one of the larger class of poets whose fame-life may be said to have died. First, his poems dropped out of notice; finally, his plays. Yet his name has still a place in literary biography, if only for one or two anecdotes which it includes, and for his having as a veteran patronised the youthful Pope.

One of Wycherley's most successful plays was entitled *The Plain Dealer*; and thereby hangs one of the anecdotes: 'Wycherley went down to Tunbridge, to take either the benefit of the waters or the diversions of the place; when walking one day upon the Wells Walk, with his friend Mr Fairbeard of Gray's Inn, just as he came up to the bookseller's, the Countess of Drogheda, a young widow, rich and beautiful, came to the bookseller and inquired for *The Plain Dealer*.

"Madam," says Mr Fairbeard, "since you are for the Plain Dealer, there he is for you," pushing Mr Wycherley towards her.

"Yes," says Mr Wycherley, "this lady can bear plain dealing, for she appears to be so accomplished, that what would be a compliment to others, when said to her would be plain dealing."

"No, truly, sir," said the lady, "I am not without my faults more than the rest of my sex: and yet, notwithstanding all my faults, I love plain dealing, and never am more fond of it than when it tells me of a fault."

"Then, madam," says Mr Fairbeard, "you and the Plain Dealer seem designed by heaven for each other."

'In short, Mr Wycherley accompanied her on her walks, waited upon her home, visited her daily at her lodgings whilst she stayed at Tunbridge, and after she went to London, at her lodgings in Hatton Garden, where in a little time he obtained her consent to marry her.*

The story unfortunately does not end so

* Cibber's *Lives of the Poets*, 5 vols. 1753; vol. iii. p. 252.

pleasantly. The lady proved unreasonably jealous, and led her husband a rather sad life. After her death, her bequest to him was disputed at law, and, drowned in debt, he was immured in a jail for seven years!—such frightful penalties being then exigible by creditors.

LOUIS XII. OF FRANCE.

He was one of the few sovereigns of France who were entirely estimable. He was sober, sweet-natured, modest, laborious, loved knowledge, was filled with sentiments of honour, religion, and benevolence. He strove by economy to keep down the amount of the public burdens, and when his frugal habits were ridiculed in the theatre, he said laughingly that he would rather have the people to be amused by his stinginess than groan under his prodigality. He held as a principle that the justice of a prince obliged him to owe nothing, rather than his greatness to give much. It was rare indeed to find such correct ideas regarding the use and value of money in those days.

The first wife of Louis XII. being dead, he married, at fifty-three, a second and youthful spouse, the Princess Mary, sister of Henry VIII., and did not outlive the event three months. His widow returned to her own country, and married her first lover, Charles Brandon, Duke of Suffolk.

CORONATION OF CHARLES II. AT SCONE, 1651.

On the 1st of January 1651, the son of Charles I. was crowned as Charles II. by the Scots at Scone, the southern part of the country being occupied at the time by Cromwell with a hostile army. The extreme measure of cutting off the late king and extinguishing the monarchy was generally disapproved of in Scotland; but in taking up the young king, the Scots were chiefly animated by a desire of preserving and advancing their favourite Presbyterian church arrangements, according to the spirit of the famous Solemn League and Covenant. Charles, who was then only twenty, being anxious to get a footing in his father's lost dominions, consented, much against his will, to accept this Covenant, which inferred an active persecution of both popery and prelacy; and the Scots accordingly received him amongst them, fought a battle for him against Cromwell at Dunbar, and now crowned him. A sermon was preached on the occasion by Mr Robert Douglas, who had the reputation (but upon no just grounds) of being a descendant of Mary queen of Scots. The crown was put upon the young king's head by the Marquis of Argyle, whom ten years after he sent to the scaffold for compliances with Cromwell. The defeat of the Scots and their young king at Worcester on the 3d September of this year put an end to Charles's adventure, and he with difficulty escaped out of the country. How he subsequently treated the Covenant and its adherents need not here be particularised.

MARCH OF GENERAL MONK FROM COLDSTREAM.

On the 1st of January 1660, General Monk commenced that march from Scotland to London which was so instrumental in effecting the Restor-

ation. He started with his little army of six or seven thousand men from the town of Coldstream, in Berwickshire—a name which has been commemorated in the title of a regiment which he is believed to have embodied at the place, or soon after. Monk had spent about three weeks at Coldstream, which was a favourable spot for his purpose, as the Tweed was there fordable; but he seems to have found it a dismal place to quarter in. On his first arrival, he could get no provisions for his own dinner, and was obliged to content himself with a quid of tobacco. His chaplains, less easily satisfied, roamed about till they obtained a meal at the house of the Earl of Hume near by.—*Monk, a Historical Study, by M. Guizot, translated by J. Stuart Wortley, 1838.*

UNION OF IRELAND WITH GREAT BRITAIN, 1801.

On the 1st of January 1801—the initial day of the nineteenth century—Ireland passed into an incorporating union with Great Britain, and the three kingdoms were thenceforth styled the United Kingdom of Great Britain and Ireland.

The expression, 'initial day of the nineteenth century,' requires something to be said in its defence, for many persons regard the year 1800 as the beginning of the present century. The year 1801 is, in reality, entitled to this honour, because then only had the previous century been completed. To make this plain, let the reader reflect that it required the year 100 to complete the first century, the year 200 to complete the second century, and so on through all that followed. To say, then, that the year 1800 was the first of a new century, is to be led by sound, instead of fact.

DISCOVERY OF THE PLANETOIDS.

On the 1st of January 1801, the Sicilian astronomer, M. Piazzi, discovered a new planet, to which he gave the name of Ceres, in honour of a goddess formerly in much esteem in Sicily. It was the first discovered of a number of such bodies of small size, which occupy the place due to one such body of large size, between the orbits of Mars and Jupiter. At present (1861), the number is over seventy.

'It was noted that between the orbits of Mercury and Venus there is an interval of thirty-one millions of miles; between those of Venus and the Earth, twenty-seven millions; and between those of the Earth and Mars, fifty millions; but between the orbits of Mars and Jupiter there intervenes the tremendous gap of three hundred and forty-nine millions of miles, to the apparent interruption of the general order, which, however, is again resumed beyond Jupiter.' This wide interval, and some other considerations, having raised the suspicion of an unknown planet between Mars and Jupiter, a combination of twenty-four practical observers was formed to search for the missing link. 'On New-Year's Day 1801, ere they had well got into harness, Piazzi, one of their number [at Palermo], made an observation on a small star in Taurus, which he took for one of Mayer's. On the 2d of January, he found that the supposed star had retro-

graded no less than 4' in ÆR , and $3\frac{1}{2}$ ' in north declination. This retrogradation continued till about the 12th, when the movement became direct, and he followed the body till it was lost in the solar rays. Illness, however, prevented his getting observations enough to establish its nature, and he considered it to be cometary. Meantime, he had written to Bode and Oriani on the subject, but the delays of the post in that comparatively recent day, by keeping back the intelligence, precluded its being examined during that apparition. Curiosity and zeal were, however, on the alert; Bode immediately suspected the real nature of the stranger; and Olbers, Burekhardt, and Gauss computed its orbit from the slender data thus afforded. The knowledge of its having been stationary on the 12th of January, with an elongation from the sun of $4^{\circ} 2' 37' 48''$ aided the computation, and proved it to be a superior planet. . . . Thus was Ceres discovered on the 1st of January 1801. Its diameter, according to Sir William Herschel, is only 163 miles.—SMYTHE'S *Cycle of Celestial Objects*, i. 154.

New-Year's Day Festivities.

'Long ere the lingering dawn of that blithe morn
Which ushers in the year, the roosting cock,
Flapping his wings, repeats his larum shrill;
But on that morn no busy flail obeys
His rousing call; no sounds but sounds of joy
Salute the year—the first-foot's entering step,
That sudden on the floor is welcome heard,
Ere blushing maids have braided up their hair;
The laugh, the hearty kiss, the *good new year*
Pronounced with honest warmth. In village, grange,
And borough town, the steaming flagon, borne
From house to house, elates the poor man's heart,
And makes him feel that life has still its joys.
The aged and the young, man, woman, child,
Unite in social glee; even stranger dogs,
Meeting with bristling back, soon lay aside
Their snarling aspect, and in sportive chase,
Excursive scour, or wallow in the snow.
With sober cheerfulness, the grandam eyes
Her offspring round her, all in health and peace;
And, thankful that she's spared to see this day
Return once more, breathes low a secret prayer,
That God would shed a blessing on their heads.'

Grahame.

As New-Year's Day, the first of January bears a prominent place in the popular calendar. It has ever been a custom among northern nations to see the old year out and the new one in, with the highest demonstrations of merriment and conviviality. To but a few does it seem to occur that the day is a memorandum of the subtraction of another year from the little sum of life; with the multitude, the top feeling is a desire to express good wishes for the next twelvemonths' experience of their friends, and be the subject of similar benevolence on the part of others, and to see this interchange of cordial feeling take place, as far as possible, in festive circumstances. It is seldom that an English family fails to sit up on the last night of the year till twelve o'clock, along with a few friends, to drink a happy New Year to each other over a cheerful glass. Very frequently,

too, persons nearly related but living apart, dine with each other on this day, to keep alive and cultivate mutual good feeling. It cannot be doubted that a custom of this kind must tend to obliterate any shades of dissatisfaction or jealous anger, that may have arisen during the previous year, and send the kindred onward through the next with renewed esteem and regard. To the same good purpose works the old custom of giving little presents among friends on this day:

'The King of Light, father of aged Time,
Hath brought about that day which is the prime,
To the slow-gliding months, when every eye
Wears symptoms of a sober jollity.'

Charles Lamb had a strong appreciation of the social character of New-Year's Day. He remarks that no one of whatever rank can regard it with indifference. 'Of all sounds of all bells,' says he, 'most solemn and touching is the peal which rings out the old year. I never hear it without a gathering up of my mind to a concentration of all the images that have been diffused over the past twelvemonth; all I have done or suffered, performed or neglected, in that regretted time. I begin to know its worth as when a person dies. It takes a personal colour; nor was it a poetical flight in a contemporary, when he exclaimed:

"I saw the skirts of the departing year."

One could wish that the genial Elia had added something in recommendation of resolutions of improvement of the year to come, for which New-Year's Day is surely a most appropriate time. 'Every first of January that we arrive at, is an imaginary milestone on the turnpike track of human life: at once a resting-place for thought and meditation, and a starting point for fresh exertion in the performance of our journey. The man who does not at least *propose to himself* to be better *this* year than he was last, must be either very good or very bad indeed! And only to *propose* to be better, is something; if nothing else, it is an acknowledgment of our *need* to be so, which is the first step towards amendment. But, in fact, to propose to oneself to do well, is in some sort to *do* well, positively; for there is no such thing as a stationary point in human endeavours; he who is not worse to-day than he was yesterday, is better; and he who is not better, is worse.*

The merrymakings of New-Year's Eve and New-Year's day are of very ancient date in England. The head of the house assembled his family around a bowl of spiced ale, comically called *lamb's wool*, from which he drank their healths; then passed it to the rest, that they might drink too. The word that passed amongst them was the ancient Saxon phrase, *Wass hael*; that is, To your health. Hence this came to be recognised as the Wassail or Wassel Bowl. The poorer class of people carried a bowl adorned with ribbons round the neighbourhood, begging for something wherewith to obtain the means of filling it, that they too might enjoy wassail as well as the rich. In their computations, they had songs suitable to the occasion, of which a Gloucestershire example has been preserved:

* *Mirror of the Months.*

'Wassail! wassail! over the town,
Our toast it is white, our ale it is brown :
Our bowl it is made of the maplin tree,
We be good fellows all ; I drink to thee.

Here's to —, * and to his right ear,
God send our maister a happy New Year ;
A happy New Year as e'er he did see—
With my wassailing bowl I drink to thee.

Here's to —, † and to his right eye,
God send our mistress a good Christmas pie :
A good Christmas pie as e'er I did see—
With my wassailing bowl I drink to thee.

Here's to Filpail, ‡ and her long tail,
God send our measter us never may fail
Of a cup of good beer ; I pray you draw near,
And then you shall hear our jolly wassail.

Be here any maids, I suppose here be some ;
Sure they will not let young men stand on the
cold stone ;

Sing hey O maids, come troll back the pin,
And the fairest maid in the house, let us all in.

Come, butler, come bring us a bowl of the best :
I hope your soul in heaven may rest :
But if you do bring us a bowl of the small,
Then down fall butler, bowl, and all.'

What follows is an example apparently in use
amongst children :

'Here we come a wassailing,
Among the leaves so green,
Here we come a wandering,
So fair to be seen.

Chorus. Love and joy come to you,
And to your wassel too,
And God send you a happy New Year,
A New Year,
And God send you a happy New Year !
Our wassel cup is made of rosemary-tree,
So is your beer of the best barley.

We are not daily beggars,
That beg from door to door ;
But we are neighbours' children,
Whom you have seen before.

Call up the butler of this house,
Put on his golden ring,
Let him bring us up a glass of beer
And the better we shall sing.

We have got a little purse,
Made of stretching leather skin,
We want a little of your money
To line it well within.

Bring us out a table,
And spread it with a cloth ;
Bring us out a mouldy cheese,
And some of your Christmas loaf.

God bless the master of this house,
Likewise the mistress too,
And all the little children,
That round the table go !

Good master and mistress,
While you're sitting by the fire,
Pray think of us poor children,
Who are wandering in the mire.

Chorus. Love and joy come to you,' &c. §

* The name of some horse.

† The name of another horse.

‡ The name of a cow.

§ *Notes and Queries*, i. 137.

The custom of wassail at the New Year was kept up in the monasteries as well as in private houses. In front of the abbot, at the upper end of the refectory table, was placed the mighty bowl styled in their language *Poculum Caritatis*, and from it the superior drank to all, and all drank in succession to each other.* The corporation feasts of London still preserve a custom that affords a reflex of that of the wassail bowl. A double-handled flagon full of sweetened and spiced wine being handed to the master, or other person presiding, he drinks standing to the general health, as announced by the toastmaster ; then passes it to his neighbour on the left hand, who drinks standing to his next neighbour, also standing, and so on it goes, till all have drunk. Such is the well-known ceremony of the *Loving Cup*.

Till very few years ago in Scotland, the custom of the wassail bowl at the passing away of the old year might be said to be still in comparative vigour. On the approach of twelve o'clock, a *hot pint* was prepared—that is, a kettle or flagon full of warm, spiced, and sweetened ale, with an infusion of spirits.† When the clock had struck the knell of the departed year, each member of the family drank of this mixture 'A good health and a happy New Year and many of them' to all the rest, with a general hand-shaking, and perhaps a dance round the table, with the addition of a song to the tune of *Hey tuttie taitie* :

'Weel may we a' be,
Ill may we never see,
Here's to the king
And the gude companie !' &c.

The elders of the family would then most probably sally out, with the hot kettle, and bearing also a competent provision of buns and short-bread, or bread and cheese, with the design of visiting their neighbours, and interchanging with them the same cordial greetings. If they met by the way another party similarly bent, whom they knew, they would stop and give and take sips from their respective kettles. Reaching the friend's house, they would enter with vociferous good wishes, and soon send the kettle a-circulating. If they were the first to enter the house since twelve o'clock, they were deemed as the *first-foot* ; and, as such, it was most important, for

* *Archæologia*, xi. 420.

† *Receipt for Making the Wassailbowl*.—Simmer a small quantity of the following spices in a teacupful of water, viz. :—Cardamums, cloves, nutmeg, mace, ginger, cinnamon, and coriander. When done, put the spice to two, four, or six bottles of port, sherry, or madeira, with one pound and a half of fine loaf sugar (pounded) to four bottles, and set all on the fire in a clean bright saucepan; meanwhile, have yolks of 12 and the whites of 6 eggs well whisked up in it. Then, when the spiced and sugared wine is a little warm, take out one teacupful ; and so on for three or four cups ; after which, when it boils, add the whole of the remainder, pouring it in gradually, and stirring it briskly all the time, so as to froth it. The moment a fine froth is obtained, toss in 12 fine soft roasted apples, and send it up hot. Spices for each bottle of wine :—10 grains of mace, 46 grains of cloves, 37 grains of cardamums, 28 grains of cinnamon, 12 grains of nutmeg, 48 grains of ginger, 49 grains of coriander seeds.—*Mark Lane Express*.

luck to the family in the coming year, that they should make their entry, not empty-handed, but with their hands full of cakes and bread and cheese; of which, on the other hand, civility demanded that each individual in the house should partake.

To such an extent did this custom prevail in Edinburgh in the recollection of persons still living, that, according to their account, the principal streets were more thronged between twelve

FIRST-FOOTING IN EDINBURGH.

and one in the morning than they usually were at midday. Much innocent mirth prevailed, and mutual good feelings were largely promoted. An unlucky circumstance, which took place on the 1st January of 1812, proved the means of nearly extinguishing the custom. A small party of reckless boys formed the design of turning the innocent festivities of *first-footing* to account for purposes of plunder. They kept their counsel well. No sooner had the people come abroad on the principal thoroughfares of the Old Town, than these youths sallied out in small bands, and commenced the business which they had undertaken. Their previous agreement was, to *look out for the white neckcloths*,—such being the best mark by which they could distinguish in the dark individuals likely to carry any property worthy of being taken. A great number of gentlemen were thus spoiled of their watches and other valuables. The least resistance was resented by the most brutal maltreatment. A policeman, and a young man of the rank of a clerk in Leith, died of the injuries they had received. An affair so singular, so uncharacteristic of the people among whom it happened,

produced a widespread and lasting feeling of surprise. The outrage was expiated by the execution of three of the youthful rioters on the chief scene of their wickedness; but from that time, it was observed that the old custom of going about with the *hot pint*—the ancient wassail—fell off.

A gentleman of Preston has communicated to a popular publication,* that for many years past he has been in the habit of calling on a friend, an aged lady, at an early hour of New-Year's Day, being by her own desire, as he is a fair-complexioned person, and therefore assumed to be of good omen for the events of the year. On one occasion, he was prevented from attending to his old friend's request, and her first caller proved to be a dark-complexioned man; in consequence of which there came that year sickness, trouble, and commercial disaster.

In the parish of Berlen, near Snodland, in the county of Kent, are the remains of the old mansion of Groves, originally the property of a family named Hawks. On part of this house being pulled down in the latter part of the eighteenth century, there was found an oak beam supporting the chimney, which presented an antique carving exactly represented in the engraving at the head of this article. The words *Wass heil* and *Drinc heile* leave no doubt that the bowl in the centre was a representation of the wassail bowl of the time when the house was built, probably the sixteenth century. The two birds on the bowl are hawks—an allusion to the name of the family which originally possessed the mansion.

'The wassail bowle,' says Warton, 'is Shakespeare's Gossip's Bowl in the *Midsommer Night's Dream*. The composition was ale, nutmeg, sugar, toast, and roasted crabs or apples.' The word is interpreted by Verstegan as *wase hale*—that is, grow or become well. It came in time to signify festivity in general, and that of rather an intemperate kind. A wassail candle was a large candle used at feasts.

There was in Scotland a *first-footing* independent of the *hot-pint*. It was a time for some youthful friend of the family to steal to the door, in the hope of meeting there the young maiden of his fancy, and obtaining the privilege of a kiss, as her *first-foot*. Great was the disappointment on his part, and great the joking among the family, if through accident or plan, some half-withered aunt or ancient grand-dame came to receive him instead of the blooming Jenny.

It may safely be said that New-Year's Day has hitherto been observed in Scotland with a heartiness nowhere surpassed. It almost appears as if, by a sort of antagonism to the general gravity of the people, they were impelled to break out in a half-mad merriment on this day. Every face was bright with smiles; every hand ready with the grasp of friendship. All stiffness arising from age, profession, and rank, gave way. The soberest felt entitled to take a licence on that special day. Reunions of relatives very generally took place over the festive board, and thus many little family differences were obliterated. At the present time, the ancient practices are somewhat

* *Notes and Queries*, 2d Series, ii. 325.

decayed; yet the First of January is far from being reduced to the level of other days.

A grotesque manorial custom is described as being kept up in the reign of Charles II., in connection with Hilton in Staffordshire. There existed in that house a hollow brass image, about a foot high, representing a man kneeling in an indecorous posture. It was known all over the country as Jack of Hilton. There were two apertures, one very small at the mouth, another about two-thirds of an inch in diameter at the back, and the interior would hold rather more than four pints of water, 'which, when set to a strong fire, evaporates after the same manner as in an *Æolipile*, and vents itself at the mouth in a constant blast, blowing the fire so strongly that it is very audible, and makes a sensible impression in that part of the fire where the blast lights.'

Now the custom was this. An obligation lay upon the lord of the adjacent manor of Essington, every New-Year's Day, to bring a goose to Hilton, and drive it three times round the hall fire, which Jack of Hilton was all the time blowing by the discharge of his steam. He was then to carry the bird into the kitchen and deliver it to the cook; and when it was dressed, he was further to carry it in a dish to the table of his lord paramount, the lord of Hilton, receiving in return a dish of meat for his own mess.*

At Coventry, if not in other places throughout England, it is customary to eat what are called God-cakes on New-Year's Day. They are of a triangular shape, of about half an inch thick, and filled with a kind of mince-meat. There are halfpenny ones cried through the street; but others of much greater price—even it is said to the value of a pound—are used by the upper classes.†

A Happy New Year—Happiness.

Sir John Sinclair, visiting Lord Melville at Wimbledon on the last day of the year 1795, remained all night, and next morning entered his host's room at an early hour to wish him a happy New Year. Melville, who had been reading a long paper on the importance of conquering the Cape of Good Hope, as an additional security to our Indian possessions, said, as he received the shake of his friend's hand: 'I hope this year will be happier than the last, for I scarcely recollect having spent one happy day in the whole of it.' 'This confession, coming from an individual whose whole life hitherto had been a series of triumphs, and who appeared to stand secure upon the summit of political ambition, was often dwelt upon by my father, as exemplifying the vanity of human wishes.'—*Memoirs of Sir John Sinclair by his Son*, 1837, i. 275.

This anecdote recalls one which Gibbon extracts from the pages of Cardonne. He states that in the Closet of the Kaliph Abdalrahman the following confession was found after his decease: 'I have now reigned fifty years in victory or peace; beloved by my subjects, dreaded by my enemies,

* Plot's *Natural History of Staffordshire*, p. 433.

† *Notes and Queries*, Sep. 20, 1856.

and respected by my allies. Riches and honours, power and pleasure, have waited on my call, nor does any earthly blessing appear to have been wanting to my felicity. In this situation I have numbered the days of pure and genuine happiness which have fallen to my lot: they amount to *fourteen*. O man! place not thy confidence in this present world!'—*Decline and Fall of the Roman Empire*, x. p. 40.

An actual millionaire of our time, a respected member of parliament on the liberal side, conversing confidently some years ago with a popular authoress, stated that he had once been a clerk in Liverpool, with forty pounds a year, living in a house of four small apartments; and he was fully of belief that he enjoyed greater happiness then, than he has since done in what must appear to the outer world as the most superbly fortunate and luxurious circumstances.

Much has been said, first and last, by sages, preachers, and poets, about happiness and its unattainableness here below; but, after all, there remains something to be done—a summing up for the jury, as it were. God certainly has not arranged that any such highly intelligent being as man should be perfectly happy; we have so many faculties to be exercised, so many desires and tastes calling for their several gratifications, and so many and so critical are the circumstances of relation in which these stand towards the outer world, that such a state never can be *fully* attained. But that approaches may be made to happiness, that by certain conduct we may secure many innocent gratifications, and avoid many painful experiences, is just as true. A harmonious exercise of the faculties in subjection to conscientiousness and benevolence—something to be always working at, something to be always hoping for—under the guidance of reason, so as to avoid over-carefulness on the one hand and over-sanguineness on the other—these, attended by a regard to the preservation of that health of body on which health of mind so much depends, will assuredly bring us as near to happiness as Providence, for the keeping of us in activity, has intended we should ever go; and that is all but up to the ideal point. Where, after an active life, the apparently successful man proclaims his having altogether failed to secure happiness, we may be very sure there has been some strange inconsistency in his expectations, some undue straining in a wrong direction, some want of stimulus to the needful activity, some pervading jar between him and his life relations, or that he has been tempted into acts and positions which leave a sting in the mind.

Solemn Thoughts for New-Year's Day, by Southey.

Come, melancholy Moraliser, come!
Gather with me the dark and wintry wreath;
With me engarland now
The Sepulchre of Time;
Come, Moraliser, to the funeral song!
I pour the dirge of the Departed Days;
For well the funeral song
Befits this solemn hour.

But hark! even now the merry bells ring round
 With clamorous joy to welcome in this day,
 This consecrated day,
 To mirth and indolence.

Mortal! whilst Fortune with benignant hand
 Fills to the brim thy cup of happiness,
 Whilst her unclouded sun
 Illumes thy summer day,

Canst thou rejoice—rejoice that Time flies fast?
 That night shall shadow soon thy summer sun?
 That swift the stream of Years
 Rolls to eternity?

If thou hast *wealth* to gratify each wish,
 If pow'r be thine, remember what thou art—
 Remember thou art Man,
 And Death thine heritage!

Hast thou known *Love*? does beauty's better sun
 Cheer thy fond heart with no capricious smile,
 Her eye all eloquence,
 Her voice all harmony?

Oh! state of happiness! hark how the gale
 Moans deep and hollow o'er the leafless grove:
 Winter is dark and cold—
 Where now the charms of spring?

Sayst thou that Fancy paints the future scene
 In hues too sombrous? that the dark-stoled Maid
 With stern and frowning front
 Appals the shuddering soul?

And wouldst thou bid me court her fairy form,
 When, as she sports her in some happier mood,
 Her many-coloured robes
 Dance varying to the sun?

Ah! vainly does the Pilgrim, whose long road
 Leads o'er the barren mountain's storm-vexed
 height,
 With anxious gaze survey
 The fruitful far-off vale.

Oh! there are those who love the pensive song,
 To whom all sounds of mirth are dissonant!
 There are who at this hour
 Will love to contemplate!

For hopeless sorrow hail the lapse of Time,
 Rejoicing when the fading orb of day
 Is sunk again in night,
 That one day more is gone!

And he who bears Affliction's heavy load
 With patient piety, well pleased he knows
 The World a pilgrimage,
 The Grave the inn of rest!

New-Year's Gifts.

The custom of making presents on New-Year's Day has, as far as regards the intercourse of the adult population, become almost if not entirely obsolete. Presents are generally pleasant to the receiver on any day of the year, and are still made, but not on this day especially. The practice on New-Year's Day is now limited to gifts made by parents to their children, or by the elder collateral members of a family to the younger; but the old custom, which has been gradually, like the drinking of healths, falling into disuse in England, is still in full force in France, as will presently be more particularly adverted to.

The practice of making presents on New-Year's Day was, no doubt, derived from the Romans. Suetonius and Tacitus both mention it. Claudius

prohibited demanding presents except on this day. Brand, in his *Popular Antiquities*, observes, on the authority of Bishop Stillingfleet, that the Saxons kept the festival of the New Year with more than ordinary feasting and jollity, and with the presenting of New-Year's gifts to each other. Fosbroke notices the continuation of the practice during the middle ages; and Ellis, in his additions to Brand, quotes Matthew Paris to shew that Henry III. extorted New-Year's gifts from his subjects.

The New-Year's gifts presented by individuals to each other were suited to sex, rank, situation, and circumstances. From Bishop Hall's *Satires* (1598), it appears that the usual gifts of tenants in the country to their landlords was a capon; and Cowley, addressing the same class of society, says:

'When with low legs and in an humble guise
 Ye offered up a capon-sacrifice
 Unto his worship at the New-Year's tide.'

Ben Jonson, in his *Masque of Christmas*, among other characters introduces 'New-Year's Gift in a blue coat, serving-man like, with an orange, and a sprig of rosemary on his head, his hat full of brooches, with a collar of gingerbread, his torch-bearer carrying a marchpane, with a bottle of wine on either arm.' An orange stuck with cloves was a common present, and is explained by Lupton, who says that the flavour of wine is improved, and the wine itself preserved from mouldiness, by an orange or lemon stuck with cloves being hung within the vessel, so as not to touch the liquor.

Gloves were customary New-Year's gifts. They were formerly a more expensive article than they are at present, and occasionally a sum of money was given instead, which was called 'glove-money.' Presents were of course made to persons in authority to secure favour, and too often were accepted by magistrates and judges. Sir Thomas More having, as lord chancellor, decided a cause in favour of a lady with the unattractive name of Croaker, on the ensuing New-Year's Day she sent him a pair of gloves with forty of the gold coins called an angel in them. Sir Thomas returned the gold with the following note: 'Mistress, since it were against good manners to refuse your New-Year's gift, I am content to take your gloves, but as for the *lining* I utterly refuse it.'

When pins were first invented and brought into use about the beginning of the sixteenth century, they were a New-Year's gift very acceptable to ladies, and money given for the purchase of them was called 'pin-money,' an expression which has been extended to a sum of money secured by a husband on his marriage for the private expenses of his wife. Pins made of metal, in their present form, must have been in use some time previous to 1543, in which year a statute was passed (35 Hen. VIII. c. 6), entitled 'An Acte for the true making of Pynnes,' in which it was enacted that the price charged should not exceed 6s. 8d. a thousand. Pins were previously made of boxwood, bone, and silver, for the richer classes; those used by the poor were of common wood—in fact, skewers.

The custom of presenting New-Year's gifts to

the sovereigns of England may be traced back to the time of Henry VI. In Rymer's *Fœdera*, vol. x. p. 387, a list is given of gifts received by the king between Christmas Day and February 4, 1428, consisting of sums of 40s., 20s., 13s. 4d., 10s., 6s. 8d., and 3s. 4d.

A manuscript roll of the public revenue of the fifth year of Edward VI. has an entry of rewards given on New-Year's Day to the king's officers and servants, amounting to £155, 5s., and also of sums given to the servants of those who presented New-Year's gifts to the king.

A similar roll has been preserved of the reign of Philip and Mary. The Lord Cardinal Pole gave a 'saulte,' with a cover of silver and gilt, having a stone therein much enamelled of the story of Job; and received a pair of gilt silver pots, weighing 143½ ounces. The queen's sister, the Lady Elizabeth, gave the fore part of a kyrtell, with a pair of sleeves of cloth of silver, richly embroidered over with Venice silver, and rayed with silver and black silk; and received three gilt silver bowls, weighing 132 ounces. Other gifts were—a sacrament cloth; a cup of crystal; a lute in a case, covered with black silk and gold, with two little round tables, the one of the *phisnamy* of the emperor and the king's majesty, the other of the king of Bohemia and his wife. Other gifts consisted of hosen of Garnsey-making, fruits, sugar-loaves, gloves, Turkey hens, a fat goose and capon, two swans, two fat oxen, conserves, rose-water, and other articles.

During the reign of Queen Elizabeth, the custom of presenting New-Year's gifts to the sovereign was carried to an extravagant height. The queen delighted in gorgeous dresses, in jewellery, in all kinds of ornaments for her person and palaces, and in purses filled with gold coin. The gifts regularly presented to her were of great value. An exact and descriptive inventory of them was made every year on a roll, which was signed by the queen herself, and by the proper officers. Nichols, in his *Progresses of Queen Elizabeth*, has given an accurate transcript of five of these rolls. The presents were made by the great officers of state, peers and peeresses, bishops, knights and their ladies, gentlemen and gentlewomen, physicians, apothecaries, and others of lower grade, down to her majesty's dustman. The presents consisted of sums of money, costly articles of ornament for the queen's person or apartments, caskets studded with precious stones, valuable necklaces, bracelets, gowns, embroidered mantles, smocks, petticoats, looking-glasses, fans, silk stockings, and a great variety of other articles. Howell, in his *History of the World*, mentions that 'Queen Elizabeth, in 1561, was presented with a pair of black silk knit stockings by her silk-woman, Mrs Montague, and thenceforth she never wore cloth hose any more.' The value of the gifts in each year cannot be ascertained, but some estimate may be made of it from the presents of gilt plate which were in all instances given in return by the queen; an exact account having been entered on the roll of the weight of the plate which each individual received in return for his gift. The total weight in 1577-8 amounted to 5882 ounces. The largest sum of

money given by any temporal lord was £20; but the Archbishop of Canterbury gave £40, the Archbishop of York £30, and other spiritual lords £20 or £10. The total amount in the year 1561-2 of money gifts was £1262, 11s. 8d. The queen's wardrobe and jewellery must have been principally supplied from her New-Year's gifts.

The Earl of Leicester's New-Year's gifts exceeded those of any other nobleman in costliness and elaborate workmanship. The description of the gift of 1571-2 may be given as a specimen: 'One armlet, or shakell of gold, all over fairely garnished with rubyes and dyamondes, haveing in the closing thereof a clocke, and in the fore part of the same a fayre lozengie dyamonde without a foyle, hanging thearat a round juell fully garnished with dyamondes, and perle pendant, weying 11 oz. qu. dim., and farthing golde weight: in a case of purple vellate all over embranderid with Venice golde, and lyned with greene vellat.'

In the reign of James I. the money gifts seem to have been continued for some time, but the ornamental articles presented appear to have been few and of small value. In January 1604, Sir Dudley Carleton, in a letter to Mr Winwood, observes: 'New-Year's Day passed without any solemnity, and the accustomed present of the purse and gold was hard to be had without asking.' Mr Nichols, in a note on this passage, observes: 'During the reigns of King Edward VI., Queen Mary, and Queen Elizabeth, the ceremony of giving and receiving New-Year's gifts at Court, which had long before been customary, was never omitted, and it was continued at least in the early years of King James; but I have never met with a roll of those gifts similar to the several specimens of them in the *Progresses of Queen Elizabeth*.' He afterwards, however, met with such a roll, which he has copied, and in a note attached to the commencement of the roll, he makes the following remarks: 'Since the note in that page [471 of vol. i., *Progresses of James I.*] was printed, the roll here accurately transcribed has been purchased by the trustees of the British Museum, from Mr Rodd, bookseller of Great Newport Street, in whose catalogue for 1824 it is mentioned. It is above ten feet in length; and, like the five printed in Queen Elizabeth's "*Progresses*," exhibits the gifts to the king on one side, and those from his majesty on the other, both sides being signed by the royal hand at top and bottom. The gifts certainly cannot compete in point of curiosity with those of either Queen Mary's or Queen Elizabeth's reign. Instead of curious articles of dress, rich jewels, &c., nothing was given by the nobility but gold coin.' The gifts from the nobility and prelates amounted altogether to £1293, 13s. 4d. The remainder were from persons who held some office about the king or court, and were generally articles of small value. The Duke of Lennox and the Archbishop of Canterbury gave each £40; all other temporal lords, £20 or £10; and the other spiritual lords, £30, £20, £13, 6s. 8d., or £10. The Duke of Lennox received 50 ounces of plate, the Archbishop of Canterbury 55 ounces; those who gave £20 received about 30 ounces, and for

smaller sums the return-gift was in a similar proportion.

No rolls, nor indeed any notices, seem to have been preserved of New-Year's gifts presented to Charles I., though probably there were such. The custom, no doubt, ceased entirely during the Commonwealth, and was never afterwards revived, at least to any extent worthy of notice. Mr Nichols mentions that the last remains of the custom at court consisted in placing a crown-piece under the plate of each of the chaplains in waiting on New-Year's Day, and that this custom had ceased early in the nineteenth century.

There is a pleasant story of a New-Year's gift in the reign of King Charles I., in which the court jester, Archy Armstrong, figures as for once not the maker, but the victim of a jest. Coming on that morn to a nobleman to bid him good-morrow, Archy received a few gold pieces; which, however, falling short of his expectations in amount, he shook discontentedly in his hand, muttering that they were too light. The donor said: 'Prithee, then, Archy, let me see them again; and, by the way, there is one of them which I would be loth to part with.' Archy, expecting to get a larger gift, returned the pieces to his lordship, who put them in his pocket, with the remark: 'I once gave my money into the hands of a fool, who had not the wit to keep it.'—*Banquet of Jests*, 1634.

It cannot be said that the custom of giving presents to superiors was a very rational one: one can even imagine it to have been something rather oppressive—a custom more honoured in the breach than the observance.' Yet Robert Herrick seems to have found no difficulty in bringing the smiles of his cheerful muse to bear upon it. It must be admitted, indeed, that the author of the *Hesperides* made his poem the gift. Thus it is he addresses Sir Simon Steward in

'A jolly
Verse, crowned with ivy and with holly;
That tells of winter's tales and mirth,
That milkmaids make about the hearth;
Of Christmas' sports, the wassail bowl,
That's tost up after fox-i'-th'-hole;
Of blind-man-buff, and of the care
That young men have to shoe the mare;
Of twelfth-tide cakes, of pease and beans,
Wherewith ye make those merry scenes;
Of crackling laurel, which fore-sounds
A plenteous harvest to your grounds;
Of those, and such like things, for shift,
We send, *instead of New-Year's gift*.
Read then, and when your faces shine
With buxom meat and cap'ring wine,
Remember us in cups full crown'd,
And let our city-health go round.
Then, as ye sit about your embers,
Call not to mind the fled Decembers;
But think on these, that are t' appear
As daughters to the instant year;
And to the bagpipes all address,
Till sleep take place of weariness.
And thus throughout, with Christmas plays,
Frolic the full twelve holidays.'

The custom of giving of presents among relatives and friends is much declined in England, but is still kept up with surprising

vigour in Paris, where the day is especially recognised from this circumstance as *Le Jour d'Etrennes*. Parents then bestow portions on their children, brothers on their sisters, and husbands make settlements on their wives. The mere externals of the day, as observed in Paris, are of a striking character: they were described as follows in an English journal, as observed in the year 1824, while as yet the restored Bourbon reigned in France: 'Carriages,' says this writer, 'may be seen rolling through the streets with cargoes of bon-bons, souvenirs, and the variety of etceeteras with which little children and grown up children are bribed into good humour; and here and there pastrycooks are to be met with, carrying upon boards enormous temples, pagodas, churches, and playhouses, made of fine flour and sugar, and the embellishments which render French pastry so inviting. But there is one street in Paris to which a New-Year's Day is a whole year's fortune—this is the Rue des Lombards, where the wholesale confectioners reside; for in Paris every trade and profession has its peculiar quarter. For several days preceding the 1st of January, this street is completely blocked up by carts and wagons laden with cases of sweetmeats for the provinces. These are of every form and description which the most singular fancy could imagine; bunches of carrots, green peas, boots and shoes, lobsters and crabs, hats, books, musical instruments, gridirons, frying-pans, and sauce-pans; all made of sugar, and coloured to imitate reality, and all made with a hollow within to hold the bon-bons. The most prevailing device is what is called a *cornet*; that is, a little cone ornamented in different ways, with a bag to draw over the large end, and close it up. In these things, the prices of which vary from one franc (tenpence) to fifty, the bon-bons are presented by those who choose to be at the expense of them, and by those who do not, they are only wrapped in a piece of paper; but bon-bons, in some way or other, must be presented. It would not, perhaps, be an exaggeration to state that the amount expended for presents on New-Year's Day in Paris, for sweetmeats alone, exceeds 500,000 francs, or £20,000 sterling. Jewellery is also sold to a very large amount, and the fancy articles exported in the first week of the year to England and other countries, is computed at one-fourth of the sale during the twelvemonths. In Paris, it is by no means uncommon for a man of 8000 or 10,000 francs a year, to make presents on New-Year's Day which cost him a fifteenth part of his income. No person able to give must on this day pay a visit empty-handed. Everybody accepts, and every man gives according to the means which he possesses. Females alone are excepted from the charge of giving. A pretty woman, respectably connected, may reckon her New-Year's presents at something considerable. Gowns, jewellery, gloves, stockings, and artificial flowers fill her drawing-room: for in Paris it is a custom to display all the gifts, in order to excite emulation, and to obtain as much as possible. At the palace, the New-Year's Day is a complete *jour de fête*. Every branch of the royal family is then expected to make handsome presents to the king. For the

six months preceding January 1824, the female branches were busily occupied in preparing presents of their own manufacture, which would fill at least two common-sized wagons. The Duchess de Berri painted an entire room of japanned panels, to be set up in the palace, and the Duchess of Orleans prepared an elegant screen. An English gentleman, who was admitted suddenly into the presence of the Duchess de Berri two months before, found her and three of her maids of honour, lying on the carpet, painting the legs of a set of chairs, which were intended for the king. The day commences with the Parisians, at an early hour, by the interchange of their visits and bon-bons. The nearest relations are visited first, until the furthest in blood have had their calls; then friends and acquaintances. The conflict to anticipate each other's calls, occasions the most agreeable and whimsical scenes among these proficients in polite attentions. In these visits, and in gossiping at the confectioners' shops, which are the great lounge for the occasion, the morning of New-Year's Day is passed; a dinner is given by some member of the family to all the rest, and the evening concludes, like Christmas Day, with cards, dancing, or any other amusement that may be preferred.'

HOBSON, THE CAMBRIDGE CARRIER.

Died, January 1, 1630-1, Thomas Hobson, of Cambridge, the celebrated University carrier, who had the honour of two epitaphs written upon him by Milton. He was born in or about 1544; his father was a carrier, and he bequeathed to him 'the team ware, with which he now goeth, that is to say, the cart and eight horses,' harness, nag, &c. After his father's death, he continued the business of a carrier with great success; a considerable profit was then made by carrying letters, which the University of Cambridge licensed persons to do, before and after the introduction of the post-office system. The old man for many years passed monthly with his team between his own home in Cambridge, and the Bull Inn in Bishopsgate-street, and back again, conveying both packages and human beings. He is also said to have been the first person in the kingdom who let horses for hire, and the scrupulous pertinacity with which he refused to allow any horse to be taken from his stables except in its proper turn, has given him a kind of celebrity. If the horse he offered to his customer was objected to, he curtly replied, 'This or none;' and 'Hobson's choice—this or none,' became a proverb, which it is to this day. Steele, in the *Spectator*, No. 509, however, considers the proverb to be 'by vulgar error taken and used when a man is reduced to an extremity, whereas the propriety of the maxim is to use it when you would say, There is plenty, but you must make such a choice as not to hurt another who is to come after you.' 'He lived in Cambridge, and observing that the scholars rid hard, his manner was to keep a large stable of horses, with boots, bridles, and whips, to furnish the gentlemen at once, without going from college to college to borrow.' He used to tell the scholars they would 'come time enough to London if they

did not ride too fast.' By his rule of taking the horse which stood next the stable-door, 'every customer,' says Steele, 'was alike well served according to his chance, and every horse ridden with the same justice. This memorable man stands drawn in fresco at an inn (which he used) in Bishopsgate-street, with an hundred pound bag under his arm.'

Hobson grew rich by his business: in 1604, he contributed £50 to the loan to King James I. In 1626, he gave a large Bible to the church of St Benedict, in which parish he resided. He became possessed of several manors, and, in 1628, gave to the University and town the site of the Spinning House, or 'Hobson's Workhouse.'

In 1630, Hobson's visits to London were suspended by order of the authorities, on account of the plague being in London; and it was during this cessation from business that he died. Milton, in one of his epitaphs on him, quaintly adverts to this fact, remarking that Death would never have hit him had he continued dodging it backwards and forwards between Cambridge and the Bull.

Hobson was twice married. By his first wife he had eight children, and he survived his second wife. He bequeathed considerable property to his family; money to the corporation, and the profits of certain pasture-land (now the site of Downing College) towards the maintenance and heightening of the conduit in Cambridge. He also left money to the poor of Cambridge, Chesterton, Waterbeach, Cottenham, and Buntingford, of which latter place he is believed to have been a native. He was buried in the chancel of Benedict's church, but no monument or inscription marks the spot. In one of Milton's humorous epitaphs on him, reference is made to his cart and wain, which proves that there is no foundation for the popular opinion that Hobson carried on his business by means of packhorses. In the second epitaph it is amusing to hear the author of England's solemn epic indulging in drolleries and puns regarding poor Hobson, the carrier:

'Rest, that gives all men life, gave him his death,
And too much breathing put him out of breath;
Nor were it contradiction to affirm
Too long vacation hastened on his term.
Merely to drive the time away he sickened,
Fainted, and died, nor would with all be quickened.
Ease was his chief disease; and, to judge right,
He died for weariness that his cart went light:
His leisure told him that his time was come,
And lack of load made his life burdensome:
Obedient to the Moon, he spent his date
In course reciprocal, and had his fate
Linked to the mutual flowing of the seas;
Yet, strange to think, his wain was his increase.
His letters are delivered all and gone,
Only remains this superscription.'

Several memorials of the benevolent old carrier, who is believed to have reached his eighty-fifth year, are preserved. There was formerly a picture of him at Anglesey Abbey; and Roger Yorke had another, supposed to have belonged to Mrs Katherine Pepys, who, in her will dated 1700, bequeathed 'old Mr Hobson's picture.' His saddle and bridle were preserved in the town-hall at Cambridge during the present cen-

tury. A public-house in the town was called 'Old Hobson,' and another 'Hobson's House,' but he is traditionally said to have resided at the south-west corner of Pears Hill, and the site of the two adjoining houses were his stables. Even in his life-time his popularity must have been great, as in 1617 was published a quarto tract, entitled 'Hobson's Horseload of Letters, or Precedent for Epistles of Business, &c.'

The name of Hobson has been given to a street in Cambridge, 'in which have long resided Messrs Swann and Sons, carriers, who possess a curious portrait of Hobson, mounted on a stately black nag. This was preserved for many years at Hobson's London inn, the Bull, in Bishopsgate Street.'—Cooper's *Annals of Cambridge*, vol. iii. p. 236.

There are several engraved portraits of Hobson: that by John Payne, who died about 1648, represents Hobson in a cloak, grasping a bag of money, and has these lines underneath:

'Laugh not to see so plaine a man in print,
The shadow's homely, yet there's something in't.
Witness the Bagg he wears (though seeming poore),
The fertile Mother of a thousand more:
He was a thriving Man, through lawful gain,
And wealthy grew by warrantable faime.
Men laugh at them that spend, not them that gather,
Like thriving sonnes of such a thrifty Father.'

HOBSON, THE CAMBRIDGE CARRIER.

From the Print by Payne.

This print is, most probably, from the fresco figure at the Bull Inn, which, in Chalmers's *English Poets*, 1810, is stated as 'lately to be seen,' but it has long since disappeared; and the Bull is more modernised than either the Green Dragon or the Four Swans inns, at a few houses distant: the Green Dragon has its outer galleries remaining, but modernised and inclosed with glass; the Four Swans is still more perfect, and is, perhaps, the most entire galleried inn

which remains in the metropolis, and shews how well adapted were the inns of old for the representation of stage plays. That the Bull was indeed for this purpose, we have evidence—the yard having supplied a stage to our early actors before James Burbage and his fellows obtained a patent from Queen Elizabeth for erecting a permanent building for theatrical entertainments. Tarlton often played here.—Collier's *Annals*, vol. iii. p. 291, and Tarlton's *Jests*, by Halliwell, pp. 13, 14. Anthony Bacon (the brother of Francis) lived in Bishopsgate Street, not far from the Bull Inn, to the great annoyance of his mother, who dreaded that the plays and interludes acted at the Bull might corrupt his servants.

Dr Stukeley says that Hobson, the famous carrier, had a brother who lived at Holbeach, and was one of those who first set up the cattle-market in Smithfield.

JANUARY 2.

St Macarius of Alexandria, anchorite. St Concordius, martyr. St Adelard, abbot.

[It is not possible in this work to give special notices of all the saints of the Romish calendar; nor is it desirable that such should be done. There are, however, several of them who make a prominent figure in history; some have been remarkable as active and self-devoted missionaries of civilisation; while others supply curious examples of the singularities of which men are capable under what are now very generally regarded as morbid views of religion. Of such persons it does not seem improper that notices of a dispassionate nature should be given, among other memorable matters connected with the days of the year.]

ST MACARIUS.

St Macarius was a notable example of those early Christians who, for the sake of heavenly meditation, forsook the world and retired to live in savage wildernesses. Originally a confectioner in Alexandria, he withdrew, about the year 325, into the Thebais in Upper Egypt, and devoted himself wholly to religious thoughts. Afterwards, he took up his abode in still remoter deserts, bordering on Lybia, where there were indeed other hermits, but all out of sight of each other. He exceeded his neighbours in the practice of those austerities which were then thought the highest qualification for the blessed abodes of the future. 'For seven years together,' says Alban Butler, 'he lived only on raw herbs and pulse, and for the three following years contented himself with four or five ounces of bread a day;' not a fifth part of the diet required to keep the inmates of modern gaols in good health. Hearing great things of the self-denial of the monks of Tabenna, he went there in disguise, and astonished them all by passing through Lent on the aliment furnished by a few green cabbage leaves eaten on Sundays. He it was of whom the striking story is told, that, having once killed a gnat which bit him, he immediately hastened

in a penitent and self-mortifying humour to the marshes of Sceté, which abound with great flies, a torment even to the wild boar, and exposed himself to these ravaging insects for six months; at the end of which time his body was a mass of putrid sores, and he only could be recognised by his voice.*

The self-devoting, self-denying, self-tormenting anchorite is an eccentricity of human nature now much out of fashion; which, however, we may still contemplate with some degree of interest, for the basis of the character is connected with both true religion and true virtue. We are told of Macarius that he was exposed to many temptations. 'One,' says Butler, 'was a suggestion to quit his desert and go to Rome, to serve the sick in the hospitals; which, by due reflection, he discovered to be a secret artifice of vain-glory inciting him to attract the eyes and esteem of the world. True humility alone could discover the snare which lurked under the specious gloss of holy charity. Finding this enemy extremely importunate, he threw himself on the ground in his cell, and cried out to the fiends, "Drag me hence, if you can, by force, for I will not stir." Thus he lay till night, and by this vigorous resistance they were quite disarmed. As soon as he arose they renewed the assault; and he, to stand firm against them, filled two great baskets with sand, and laying them on his shoulders, travelled along the wilderness. A person of his acquaintance meeting him, asked him what he meant, and made an offer of easing him of his burden; but the saint made no other reply than this: "I am tormenting my tormentor." He returned home in the evening, much fatigued in body, but freed from the temptation. St Macarius once saw in a vision, devils closing the eyes of the monks to drowsiness, and tempting them by diverse methods to distractions, during the time of public prayer. Some, as often as they approached, chased them away by a secret supernatural force, whilst others were in dalliance with their suggestions. The saint burst into sighs and tears; and, when prayer was ended, admonished every one of his distractions, and of the snares of the enemy, with an earnest exhortation to employ, in that sacred duty, a more than ordinary watchfulness against his attacks. St Jerom and others relate, that a certain anchorite in Nitria having left one hundred crowns at his death, which he had acquired by weaving cloth, the monks of that desert met to deliberate what should be done with the money. Some were for having it given to the poor, others to the church; but Macarius, Pambo, Isidore, and others, who were called the fathers, ordained that the one hundred crowns should be thrown into the grave and buried with the corpse of the deceased, and that at the same time the following words should be pronounced: *May thy money be with thee to perdition.*† This example struck such a terror into all the monks, that no one durst lay up any money by him.'

Butler quotes the definition of an anchorite given by the Abbot Rancé de la Trappe, as a lively portraiture of the great Macarius: 'When,'

says he, 'a soul relishes God in solitude, she thinks no more of anything but heaven, and forgets the earth, which has nothing in it that can now please her; she burns with the fire of divine love, and sighs only after God, regarding death as her greatest advantage: nevertheless they will find themselves much mistaken, who, leaving the world, imagine they shall go to God by straight paths, by roads sown with lilies and roses, in which they will have no difficulties to conquer, but that the hand of God will turn aside whatever could raise any in their way, or disturb the tranquillity of their retreat: on the contrary, they must be persuaded that temptations will everywhere follow them, that there is neither state nor place in which they can be exempt, that the peace which God promises is procured amidst tribulations, as the rose buds amidst thorns; God has not promised his servants that they shall not meet with trials, but that with the temptation he will give them grace to be able to bear it: heaven is offered to us on no other conditions; it is a kingdom of conquest, the prize of victory—but, O God, what a prize!'

Born.—John, Marquis of Granby, 1721; General Wolfe, *Westerham, Kent, 1727.*

Died.—Publius Ovidius Naso, the Roman poet, 18; Titus Livius, the Roman historian, 18, *Padua*; Alexander, Earl of Rosslyn, Lord Chancellor of England, 1805; Dr John Mason Good, 1827; Dr Andrew Ure, chemist, 1857.

GENERAL WOLFE.

When, in 1759, Pitt entrusted General Wolfe with the expedition against Quebec, on the day preceding his embarkation, Pitt, desirous of giving his last verbal instructions, invited him to dinner at Hayes, Lord Temple being the only other guest. As the evening advanced, Wolfe, heated, perhaps by his own aspiring thoughts, and the unwonted society of statesmen, broke forth in a strain of gasconade and bravado. He drew his sword and rapped the table with it, he flourished it round the room, and he talked of the mighty things which that sword was to achieve. The two Ministers sat aghast at an exhibition so unusual from any man of real sense and spirit. And when, at last, Wolfe had taken his leave, and his carriage was heard to roll from the door, Pitt seemed for the moment shaken in the right opinion which his deliberate judgment had formed of Wolfe: he lifted up his eyes and arms, and exclaimed to Lord Temple: 'Good God! that I should have entrusted the fate of the country and of the administration to such hands!' This story was told by Lord Temple himself to the Rt. Hon. Thomas Grenville, the friend of Lord Mahon, who has inserted the anecdote in his *History of England*, vol. iv. Lord Temple also told Mr Grenville, that on the evening in question, Wolfe had partaken most sparingly of wine, so that this ebullition could not have been the effect of any excess. The incident affords a striking proof how much a fault of manner may obscure and disparage high excellence of mind. Lord Mahon adds: 'It confirms Wolfe's own avowal, that he was not seen to advantage in the common occur-

* Butler's *Lives of the Saints.* † Acts viii. 20.

rences of life, and shews how shyness may, at intervals, rush, as it were, for refuge, into the opposite extreme; but it should also lead us to view such defects of manner with indulgence, as proving that they may co-exist with the highest ability and the purest virtue.'

The death of General Wolfe was a kind of military martyrdom. He had failed in several attempts against the French power in Canada, dreaded a court martial, and resolved by a bold and original stroke to justify the confidence of Pitt, or die. Thence the singularity of his movement to get upon the plain of Abram behind Quebec. The French came out of their fortress, fought him, and were beaten; but a stray shot

brought down the young hero in the moment of victory. The genius of West has depicted very successfully a scene which remains engraved in the national heart. Wolfe died on the 13th of September 1759, in the 33d year of his age. His body was brought to England, and interred at Greenwich.

The want of a *Life* of General Wolfe,—a strange want, considering the glory which rests on the name,—has caused some points regarding him to remain in doubt. It is doubtful, for example, if he was in service in the campaign of the Duke of Cumberland in the north of Scotland in 1746.

In *Jacobite Memoirs of the Rebellion of 1745-6*, a collection of original papers edited by Mr

THE DEATH OF GENERAL WOLFE. (FROM THE PAINTING BY WEST.)

Robert Chambers in 1834, there are evidences of a gentleman's house at Aberdeen having been forcibly taken possession of by the Duke of Cumberland and General Hawley; who, not content with leaving no requital behind them, took away many articles of value, which are afterwards found to have been sold in London. In this unpleasant story, a 'Major Wolfe,' described as aide-de-camp to Hawley, figures as a bearer of rough messages. A painful question arises, 'Could this be the future hero of Quebec?' One fact is gratifying by contradiction, that this hero was not a major till 1749. Could it be his father? This is equally

or more unlikely, for he was then a brigadier-general. It is to be observed that James Wolfe, though only nineteen at this time, was a captain in Barrell's regiment (having received that commission in June 1744), and Barrell's regiment, we know, stood in the left of the front line of the royal army at Culloden: a mistake of major for captain is easily conceivable. In the hope of getting conclusive evidence that the admired Wolfe was not involved in the personal barbarisms of Cumberland and Hawley, the editor of the *Jacobite Memoirs* wrote to Mr Southey, who, he understood, was prepared to compile a memoir of

General Wolfe from original materials; and he received the following answer:

'Kewick, 11th August, 1833.

'Sir,—Immediately upon receiving your obliging letter, I referred to my own notes and extracts from the correspondence of Wolfe with his family, the whole of which has been in my possession.

'There I find that his father was with the Duke of Cumberland's army in 1745, and that he himself was at Newcastle in the November of that year. His father was a general at that time; and Wolfe, I think, was not yet a major (though I cannot immediately ascertain this), for he only received his lieutenant's* commission in June 1744. My present impression is that he was not in the Scotch campaign, and that the Major Wolfe of whom your papers speak must have been some other person. His earliest letter from Scotland is dated January 1749.

'Throughout his letters Wolfe appears to have been a considerate, kind-hearted man, as much distinguished from most of his contemporary officers by humane and gentlemanly feeling as by the zeal with which he devoted himself to his profession. All that has hitherto been known of him tends to confirm this view of his character.

'I am much obliged to you for your offer of the volume in which the paper is printed, and shall thankfully receive it when it is published. Meantime, Sir, I have the honour to remain, &c.'

If, after all, there is nothing but character to plead against the conclusion that Wolfe was the harsh message-bearer of the brutal Hawley, it is to be feared that the defence is a weak one. In the army which marched into Scotland in 1746, and put down the rebellion, there was a general indignation and contempt for the Scottish nation, disposing men otherwise humane to take very harsh measures. The ordinary laws were trampled on; worthy friends of the government, who pleaded for mercy to the vanquished, were treated with contumely; some of the English officers were guilty of extreme cruelty towards the Highland peasantry. No one is remembered with more horror for his savage doings than a certain Captain Caroline Scott; and yet this is the same man whom Mallet introduces in his poem of the *Wedding Day* as a paragon of amiableness. The verses are as follows:

'A second see! of special note,
Plump Comus in a Colonel's coat;
Whom we this day expect from far,
A jolly first-rate man of war;
On whom we boldly dare repose,
To meet our friends, or meet our foes.'

To which the poet appends a prose note:

'The late Col. Caroline Scott, who, though extremely corpulent, was uncommonly active; and who, to much skill, spirit, and bravery, as an officer, joined the greatest gentleness of manners as a companion and friend. He died a sacrifice to the public, in the service of the East India Company, at Bengal, in the year 1755.'

If the Caroline Scott who tortured the poor Highlanders was really this gentle-natured man, the future hero of Quebec can be imagined as carrying rough messages to the lady at Aberdeen.

* Mistake for 'captain's.'

In the National Portrait Gallery, Westminster, there is a bust portrait of General Wolfe, representing him in profile, and with a boyish cast of countenance.

OIDID.

Ovid died at about the age of sixty-one. We have only imperfect accounts of the Roman bards; but we know pretty clearly that Ovid lived as a gay and luxurious gentleman in Rome through the greater part of the reign of Augustus, and when past fifty was banished by that emperor, probably in consequence of his concern in some scandalous amour of a female member of the imperial family. Let us

think of what it would be for a darling of London society like the late Thomas Moore to have been condemned to spend his days at a fishing-village in Friesland or Lapland, and we shall have some idea of the pangs of the unfortunate Naso on taking up his forced abode at Tomi on the Black Sea. His epistles thence are full of complaints of the severity of the climate, the wildness of the scenery, and the savage nature of the surrounding people. How much we find expressed in that well-known line addressed to a book which he sent from Tomi to be published in Rome:—'Sine me, liber, ibis in urbe!' Yet it appears that the inhabitants appreciated his literary reputation, and treated him with due respect; also that he tried to accommodate himself to his new circumstances by learning their language. Death brought the only true relief which he could experience, after he had endured his exile at least eight years. It is an interesting instance of the respect which brilliant talents extort even from the rudest, that a local monument was reared to Ovid, and that Tomi is now called Ovidiopol, or Ovid's City.

'I have a veneration for Virgil,' says Dr King; 'I admire Horace; but I love Ovid. . . . Neither of these great poets knew how to move the passions so well as Ovid; witness some of the tales of his *Metamorphoses*, particularly the story of Ceyx and Halcione, which I never read without weeping. No judicious critic hath ever yet denied that Ovid has more wit than any other poet of the Augustan age. That he has too much, and that his fancy is too luxuriant, is the fault generally imputed to him. All the imperfections of Ovid are really pleasing. But who would not excuse all his faults on account of his many excellencies, particularly his descriptions, which have never been equalled.'

LORD CHANCELLOR ROSSLYN.

Alexander Wedderburn, Earl of Rosslyn, Lord Chancellor of England from 1793 to 1801, entered in his youth at the Scottish bar, but had from

* Political and Literary Anecdotes of his own Times, by Dr William King, Principal of St Mary Hall, Oxon. 1819, p. 30.

the first an inclination to try the English, as a higher field of ambition. After going through the usual drudgeries of a young Scotch counsel for three years, he was determined into that career which ended in the English chancellorship by an accident. There flourished at that time at the northern bar a veteran advocate named Lockhart, the Dean of the body, realising the highest income that had ever been known there, namely, a thousand a year, and only prevented from attaining the bench through the mean spite of the government, in consequence of his having gallantly gone to defend the otherwise helpless Scotch rebels at Carlisle in 1746.* Lockhart, with many merits, wanted that of a pleasant temper. He was habitually harsh and overbearing towards his juniors, four of whom (including Wedderburn) at length agreed that, on the first occasion of his shewing any insolence towards one of them, he should publicly insult him, for which object it was highly convenient that the Dean had been once threatened with a caning, and that his wife did not bear a perfectly pure character. In the summer of 1757, Wedderburn chanced to be opposed to Lockhart, who, nettled probably by the cogency of his arguments, hesitated not to apply to him the appellation of 'a presumptuous boy.' The young advocate, rising afterwards to reply, poured out upon Lockhart a torrent of invective such as no one in that place had ever heard before. 'The learned Dean,' said he, 'has confined himself on this occasion to vituperation; I do not say that he is capable of *reasoning*, but if *tears* would have answered his purpose, I am sure tears would not have been wanting.' Lockhart started up and threatened him with vengeance. 'I care little, my lords,' said Wedderburn, 'for what may be said or done by a man who has been disgraced in his person and dishonoured in his bed.' The judges felt their flesh creep at the words, and Lord President Craigie could with difficulty summon energy to tell the young pleader that this was language unbecoming an advocate and unbecoming a gentleman. According to Lord Campbell, 'Wedderburn, now in a state of such excitement as to have lost all sense of decorum and propriety, exclaimed that "his lordship had said as a judge what he could not justify as a gentleman." The President appealed to his brethren as to what was fit to be done, who unanimously resolved that Mr Wedderburn should retract his words and make an humble apology, on pain of deprivation. All of a sudden Wedderburn seemed to have subdued his passion, and put on an air of deliberate coolness; when, instead of the expected retraction and apology, he stripped off his gown, and holding it in his hands before the judges, he said: "My lords, I neither retract nor apologise, but I will save you the trouble of deprivation; there is my gown, and I will never wear it more; *virtute me involvo*." He then coolly laid his gown upon the bar, made a low bow to the judges, and, before they had reco-

* These particulars regarding Lockhart are stated from the writer's recollection of a conversation in 1833 with Sir William Macleod Bannatyne, who had entered at the Scotch bar *exactly seventy years before*, while Lockhart was still flourishing.

vered from their amazement, he left the court, which he never again entered.*

It is said that he started that very day for London, where, thirty-six years afterwards, he attained the highest place which it is in the power of a barrister to reach. It is generally stated that he never revisited his native country till near the close of his life, after his resignation of the chancellorship.

There is something spirited, and which one admires and sympathises with, in the fact of a retort and reproof administered by a young barrister to an elderly one presuming upon his acquired reputation to be insolent and oppressive; but the violence of Wedderburn's language cannot be justified, and such merit as there was in the case one would have wished to see in connection with a name more noted for the social virtues, and less for a selfish ambition, than that of Alexander Wedderburn.

CAPTURE OF GRANADA, 1492.

The long resistance of the Moors to the Spanish troops of King Ferdinand and Isabella being at length overcome, arrangements were made for the surrender of their capital to the Spaniards. As the Bishop of Avila passed in to take possession of the Alhambra—the magnificent palace of the Moorish king—its former master mournfully passed out, saying only, 'Go in, and occupy the fortress which Allah has bestowed upon your powerful land, in punishment of the sins of the Moors!' The Catholic sovereigns meanwhile waited in the vega below, to see the silver cross mounted on the tower of the Alhambra, the appointed symbol of possession. As it appeared, a shout of joy rose from the assembled troops, and the choristers of the royal chapel broke forth with the anthem, *Te Deum laudamus*.

Boabdil, king of the Moors, accompanied by about fifty horsemen, here met the Spanish sovereigns, who generously refused to allow him to pay any outward homage to them, and delivered up to him, with expressions of kindness, his son who had been for some time in their hands as a hostage. Boabdil handed them the keys of the city, saying, 'Thine, O king, are our trophies, our kingdom, and our person; such is the will of God!' After some further conversation, the Moorish king passed on in gloomy silence, to avoid witnessing the entrance of the Spaniards into the city. Coming at about two leagues' distance to an elevated point, from which the last view of Granada was to be obtained, he could not restrain himself from turning round to take a parting look of that beautiful city which was lost to him and his for ever. 'God is great!' was all he could say; but a flood of tears burst from his eyes. His mother upbraided him for his softness; but his vizier endeavoured to console him by remarking that even great misfortunes served to confer a certain distinction. 'Allah Achbar!' said he; 'when did misfortunes ever equal mine?'

'From this circumstance,' says Mr Irving, in his *Chronicle of the Conquest of Granada*, 'the hill, which is not far from Padul, took the name

* *Lives of the Chancellors.*

of *Fez Allah Achbar*; but the point of view commanding the last prospect of Granada is known among Spaniards by the name of *El ultimo suspiro del Moro*, or the Last Sigh of the Moor.'

EXECUTION OF JOHN OF LEYDEN, 'THE
PROPHET.' 1536.

It was in 1523 that the sect of the Anabaptists rose in Germany, so named because they wished that people should re-baptize their children, so as to imitate Jesus Christ, who had been baptized when grown up. Two fanatics named Storck and Muncer were the leaders of this sect, the most horrible that had ever desolated Germany.

As Luther had raised princes, lords, and magistrates against the Pope and the bishops, Muncer raised the peasants against the princes, lords, and magistrates. He and his disciples addressed themselves to the inhabitants of Swabia, Misnia, Thuringia, and Franconia, preaching to them the doctrine of an equality of conditions among men. Germany became the theatre of bloody doings. The peasantry rose in Saxony, even as far as Alsace; they massacred all the gentlemen they met, including in the slaughter a daughter of the Emperor Maximilian I.; they ravaged every district to which they penetrated; and it was not till after they had carried on these frightful proceedings for three years, that the regular troops got the better of them. Muncer, who had aimed at being a second Mahomet, perished on the scaffold at Mulhausen.

The chiefs, however, did not perish with him. The peasants were raised anew, and acquiring additional strength in Westphalia, they made themselves masters of the city of Munster, the bishop of which fled at their approach. They here endeavoured to establish a theocracy like that of the Jews, to be governed by God alone; but one named Matthew their principal prophet being killed, a tailor lad, called John of Leyden, assured them that God had appeared to him and named him king; and what he said the people believed.

The pomp of his coronation was magnificent. One can yet see the money which he struck; he took as his armorial bearings two swords placed the same way as the keys of the Pope. Monarch and prophet in one, he sent forth twelve apostles to announce his reign throughout all Low Germany. After the example of the Hebrew sovereigns, he wished to have a number of wives, and he espoused twelve at one time. One having spoken disrespectfully of him, he cut off her head in the presence of the rest, who, whether from fear or fanaticism, danced with him round the dead body of their companion.

This prophet-king had one virtue—courage. He defended Munster against its bishop with unflinching resolution during a whole year. Notwithstanding the extremities to which he was reduced, he refused all offers of accommodation. At length he was taken, with arms in his hands, through treason among his own people; and the bishop, after causing him to be carried about for some time from place to place as a monster, consigned him to the death reserved for all kings of his order.

EXTRAORDINARY LIGHT.

On the 2d of January 1756, at four in the afternoon, at Tuam, in Ireland, an unusual light, far above that of the brightest day, struck all the beholders with amazement. It then faded away by invisible degrees; but at seven, from west to east, 'a sun of streamers' appeared across the sky, undulating like the waters of a rippling stream. A general feeling of alarm was excited by this singular phenomenon. The streamers gradually became discoloured, and flashed away to the north, attended by a shock, which all felt, but which did no damage.—*Gentleman's Magazine*, xxvi. 39. The affair seems to have been an example of the aurora borealis, only singular in its being bright enough to tell upon the daylight.

Unfounded but Persevering Popular Notions.

Under this head may be ranked a belief amongst book-collectors, that certain books of uncommon elegance were, by a peculiar diletanteism of the typographer, printed from silver types. In reality, types of silver would not print a book more elegantly than types of the usual composite metal. The absurdity of the idea is also shewn by the circumstances under which books are for the most part composed; some one has asked, very pertinently, if a set of thirsty compositors would not have quickly discovered 'how many ems, long primer, would purchase a gallon of beer.' It is surmised that the notion took its rise in a mistake of *silver* for *Elzevir* type, such being the term applied early in the last century to types of a small size, similar to those which had been used in the celebrated miniature editions of the Amsterdam printers, the Elzevirs.*

Another of these popular notions has a respectability about it, because, though not true, it proceeds on a conception of what is just and fitting. It represents all persons who have ever had anything to do with the invention or improvement of instruments of death, as suffering by them, generally as the first to suffer by them. Many cases are cited, but on strict examination scarcely one would be found to be true. It has been asserted, for example, that Dr Guillotin of Paris, who caused the introduction into France of the instrument bearing his name, was himself the first of its many victims; whereas he in reality outlived the Revolution, and died peaceably in 1814. Nor is it irrelevant to keep in mind regarding Guillotin, that he was a man of gentle and amiable character, and proposed this instrument for execution as calculated to lessen the sufferings of criminals. So has it been said that the Regent Morton of Scotland introduced the similar instrument called the *Maiden* into his country, having adopted it from an instrument for beheading which long stood in terror of the wicked at one of the gates of the town of Halifax in Yorkshire. But it is ascertained that, whether Morton introduced it or not—and there is no proof that he did—it was in operation at Edinburgh some years before his death; first under the name of the *Maiden*, and afterwards under that of the *Widow*—a change

* *Notes and Queries*, Mar. 16, 1861.

of appellation to which it would be entitled after the death of its first bridegroom.

It has likewise been represented that the *drop* used in hanging was an improvement effected by an eminent joiner and town-councillor of Edinburgh, the famous Deacon Brodie, and that when he was hanged in October 1788 for housebreaking, he was the first to put the utility of the plan to the proof. But it is quite certain that, whether Brodie made this improvement or not, he was not the first person to test its serviceableness, as it appears to have been in operation at least three years before his death.* Even his title to the improvement must be denied, except, perhaps, as far as regards the introduction of it into practice in Edinburgh, as some such contrivance was used at the execution of Earl Ferrers in 1760, being part of a scaffold which the family of the unfortunate nobleman caused their undertaker to prepare on that occasion, that his lordship might not swing off from a cart like a plebeian culprit. 'There was,' says Horace Walpole, 'a new contrivance for sinking the stage under him, which did not play well; and he suffered a little by the delay, but was dead in four minutes.'

It is much to be feared that there is no belief of any kind more extensively diffused in England, or more heartily entertained, than that which represents a Queen Anne's farthing as the greatest and most valuable of rarities. The story everywhere told and accepted is, that only three farthings were struck in her reign: that two are in public keeping; and that the third is still going about, and if it could be recovered would bring a prodigious price.

In point of fact, there were eight coinings of farthings in the reign of Queen Anne, besides a medal or token of similar size, and these coins are no greater rarities than any other product of the Mint issued a hundred and fifty years ago. Every now and then a poor person comes up from a remote place in the country to London, to sell the Queen Anne's farthing, of which he has become the fortunate possessor; and great, of course, is the disappointment when the numismatist offers him perhaps a shilling for the curiosity, justifying the lowness of the price by pulling out a drawer and shewing him eight or ten other examples of the same coin. On one occasion, a labourer and his wife came all the way from Yorkshire on foot to dispose of one of these provoking coins in the metropolis. It is related that a rural publican, having obtained one of the tokens, put it up in his window as a curiosity, and people came from far and near to see it, doubtless not a little to the alleviation of his beer barrels; nor did a statement of its real value by a numismatist, who happened to come to his house, induce him to put it away. About 1814, a confectioner's shopman in Dublin, having taken a Queen Anne's farthing, substituted an ordinary farthing for it in his master's till, and endeavoured to make a good thing for himself by selling it to the best advantage. The master, hearing of the trans-

* The *Scots Magazine*, in relating the execution of one William Mills for housebreaking, 21st September 1785, says, that 'part of the platform on which he stood dropped a few minutes before three.'

action, had the man apprehended and tried in the Recorder's Court, when he was actually condemned to a twelvemonth's imprisonment for the offence.

Numismatists have set forth, as a possible reason for the universal belief in the rarity of Queen Anne's farthings, that there are several *pattern-pieces* of farthings of her reign in silver, and of beautiful execution, by Croker, which are rare and in request. But it is very unlikely that the appreciation of such an article amongst men of *vertu* would ever impress the bulk of the people in such a manner or to such results. A more plausible story is, that a lady in the north of England, having lost a Queen Anne's farthing or pattern-piece, which she valued as a keepsake, advertised a reward for its recovery. In that case, the popular imagination would easily devise the remainder of the tale.

Unlucky Days.

That peculiar phase of superstition which has regard to lucky or unlucky, good or evil days, is to be found in all ages and climes, wherever the mystery-man of a tribe, or the sacerdotal caste of a nation, has acquired rule or authority over the minds of the people. All over the East, among the populations of antiquity, are to be found traces of this almost universal worship of Luck. It is one form of that culture of the beneficent and the maleficent principles, which marks the belief in good and evil, as an antagonistic duality of gods. From ancient Egypt the evil or unlucky days have received the name of 'Egyptian days.' Nor is it only in pagan, but in Christian times, that this superstition has held its potent sway. No season of year, no month, no week, is free from those untoward days on which it is dangerous, if not fatal, to begin any enterprise, work, or travel. They begin with New-Year's Day, and they only end with the last day of December. Passing over the heathen augurs, who predicted fortunate days for sacrifice or trade, wedding or war, let us see what our Anglo-Saxon forefathers believed in this matter of days. A Saxon MS. (*Cott. MS. Vitell, C. viii. fo. 20*) gives the following account of these *Dies Mali*:—'Three days there are in the year, which we call Egyptian days; that is, in our language, dangerous days, on any occasion whatever, to the blood of man or beast. In the month which we call April, the last Monday; and then is the second, at the coming in of the month we call August; then is the third, which is the first Monday of the going out* of the month of December. He who on these three days reduces blood, be it of man, be it of beast, this we have heard say, that speedily on the first or seventh day, his life he will end. Or if his life be longer, so that he come not to the seventh day, or if he drink some time in these three days, he will end his life; and he that tastes of goose-flesh, within forty days' space his life he will end.'

In the ancient Exeter Kalendar, a MS. said to

* The coming in of a month consisted of the first 15 days in the month (or 16 if it had 31 days); the going out, of the last 15 days of any month.

be of the age of Henry II., the first or Kalends of January is set down as 'Dies Mala.'

These Saxon Kalendars give us a total of about 24 evil days in the 365; or about one such in every fifteen. But the superstition 'lengthened its cords and strengthened its stakes;' it seems to have been felt or feared that the black days had but too small a hold on their regarders; so they were multiplied.

'Astronomers say that six days of the year are perilous of death; and therefore they forbid men to let blood on them, or take any drink; that is to say, January 3, July 1, October 2, the last of April, August 1, the last day going out of December. These six days with great diligence ought to be kept, but namely [mainly?] the latter three, for all the veins are then full. For then, whether man or beast be knit in them within 7 days, or certainly within 14 days, he shall die. And if they take any drinks within 15 days, they shall die; and if they eat any goose in these 3 days, within 40 days they shall die; and if any child be born in these 3 latter days, they shall die a wicked death. Astronomers and astrologers say that in the beginning of March, the seventh night, or the fourteenth day, let the blood of the right arm; and in the beginning of April, the 11th day, of the left arm; and in the end of May, 3d or 5th day, on whether arm thou wilt; and thus, of all the year, thou shalt orderly be kept from the fever, the falling gout, the sister gout, and loss of thy sight.'—*Book of Knowledge*, b. 1. p. 19.

Those who may be inclined to pursue this subject more fully, will find an essay on 'Day-Fatality,' in John Aubrey's *Miscellanies*, in which he notes the days lucky and unlucky, of the Jews, Greeks, Romans, and of various distinguished individuals of later times.

In a comparatively modern MS. Kalendar, of the time of Henry VI., in the writer's possession, one page of vellum is filled with the following, of which we modernise the spelling:—

'These underwritten be the perilous days, for to take any sickness in, or to be hurt in, or to be wedded in, or to take any journey upon, or to begin any work on, that he would well speed. The number of these days be in the year 32; they be these:—

In January there be 7:—1st, 2d, 4th, 5th, 7th, 10th, and 15th.

In February be 3:—6th, 7th, and 18th.

In March be 3:—1st, 6th, and 8th.

In April be 2:—6th and 11th.

In May be 3:—5th, 6th, and 7th.

In June be 2:—7th and 15th.

In July be 2:—5th and 19th.

In August be 2:—15th and 19th.

In September be 2:—6th and 7th.

In October is 1:—6th.

In November be 2:—15th and 16th.

In December be 3:—15th, 16th, and 17th.'

The copyist of this dread list of evil days, while apparently giving the superstition a qualified credence, manifests a higher and nobler faith, lifting his aspiration above days and seasons; for he has appended to the catalogue, in a bold firm hand of the time—'Sed tamen in Domino confido.' (But, notwithstanding, I will trust in the Lord.) Neither in this Kalendar, nor in another of the same owner, prefixed to a small MS. volume containing a copy of *Magna Charta*, &c., is there inserted in the body of the Kalendar anything to

denote a 'Dies Mala.' After the Reformation, the old evil days appear to have abated much of the ancient malevolent influences, and to have left behind them only a general superstition against fishermen setting out to fish, or seamen to take a voyage, or landmen a journey, or domestic servants to enter on a new place—on a Friday. In many country districts, especially in the north of England, no weddings take place on Friday, from this cause. According to a rhyming proverb, 'Friday's moon, come when it will, comes too soon.' Sir Thomas Overbury, in his charming sketch of a milkmaid, says, 'Her dreams are so chaste, that she dare tell them; only a Friday's dream is all her superstition; and she consents for fear of anger.' Erasmus dwells on the 'extraordinary inconsistency' of the English of his day, in eating flesh in Lent, yet holding it a heinous offence to eat any on a Friday out of Lent. The Friday superstitions cannot be wholly explained by the fact that it was ordained to be held as a fast by the Christians of Rome. Some portion of its maleficent character is probably due to the character of the Scandinavian Venus Freya, the wife of Odin, and goddess of fecundity. But we are met on the other hand by the fact that amongst the Brahmins of India a like superstitious aversion to Friday prevails. They say that 'on this day no business must be commenced.'* And herein is the fate foreshadowed of any antiquary who seeks to trace one of our still lingering superstitions to its source. Like the bewildered traveller at the cross roads, he knows not which to take. One leads him into the ancient Teuton forests; a second amongst the wilds of Scandinavia; a third to papal, and thence to pagan Rome; and a fourth carries him to the far east, and there he is left with the conviction that much of what is old and quaint and strange among us, of the superstitious relics of our forefathers, has its root deep in the soil of one of the ancient homes of the race.

JANUARY 3.

St Peter Balsam, martyr, 311; St Anterus, pope, 235, St Gordius, martyr; Ste Geneviève, virgin.

STE GENEVIÈVE.

Sainte Geneviève, who has occupied, from the time of her death to the present day, the distinguished position of Patroness Saint of the city of Paris, lived in the fifth century, when Christianity, under corrupted forms, was contending with paganism for domination over the minds of rude and warlike races of men. Credible facts of this early period are few, obscure, and not easily separated from the fictions with which they have been combined; but the following principal events of the life of Ste Geneviève may be taken as probably authentic:—She was born in the year 422, at Nanterre, a village about four miles from Paris. At the early age of seven years she was consecrated to the service of religion by St Germanus, bishop of Auxerre, who happened to pass through the village, and was

* Dr Buchanan, *Asiat. Res.*, vol. vi. p. 172.

struck with her devotional manners. At the age of fifteen years she received the veil from the hands of the Archbishop of Paris, in which city she afterwards resided. By strict observance of the services of the Church, and by the practice of those austerities which were then regarded as the surest means of obtaining the blessedness of a future state, she acquired a reputation for sanctity which gave her considerable influence over the rulers and leaders of the people. When the Franks under Clovis had subdued the city of Paris, her solicitations are said to have moved the conqueror to acts of clemency and generosity. The miracles ascribed to Ste Geneviève may be passed over as hardly likely to obtain much credence in the present age. The date of her death has been fixed on January 3d, 512, five months after the decease of king Clovis. She was buried near him in the church of St Peter and St Paul, since named the church of Sainte Geneviève. The present handsome structure was completed in 1764. During the revolutionary period it was withdrawn from the services of religion, and named the Pantheon, but has since been restored to ecclesiastical uses and to its former name of Sainte Geneviève. Details of her life are given in Bollandus's 'Acta Sanctorum,' and in Butler's 'Lives of the Saints.'

Born.—Marcus Tullius Cicero, B.C. 107; Douglas Jerrold, 1803.

Died.—Jeremiah Horrox, mathematician, 1641; George Monk, Duke of Albemarle, 1670; Josiah Wedgwood, 1795; Charles Robert Maturin, novelist, 1842; Eliot Warburton, historical novelist, 1852.

MARCUS TULLIUS CICERO.

Cicero, like nearly every other great man, gives in his life a testimony to the value and necessity of diligent culture of the mind for the attainment of eminence. His education for oratory was most laborious. He himself declared that no man ought to pretend to the character of an orator without being previously acquainted with everything worth knowing in nature and art, as eloquence unbased upon knowledge is no better than the prattle of a child. He was six-and-twenty before he considered himself properly accomplished for his profession. 'He had learned the rudiments of grammar and languages from the ablest teachers; gone through the studies of humanity and the politer letters with the poet Archias; been instructed in philosophy by the principal professors of each sect—Phædrus the Epicurean, Philo the Academic, and Diodotus the Stoic; acquired a perfect knowledge of the law from the greatest lawyers as well as the greatest statesmen of Rome, the two Scævolas; all which accomplishments were but ministerial and subservient to that on which his hopes and ambition were singly placed, the reputation of an orator. To qualify himself therefore for this, he attended the pleadings of all the speakers of his time; heard the daily lectures of the most eminent orators of Greece, and was perpetually composing somewhat at home, and declaiming under their correction; and, that he might neglect nothing which might in any degree help to improve and polish his style, he spent the inter-

vals of his leisure in the company of the ladies; especially of those who were remarkable for a politeness of language, and whose fathers had been distinguished by a fame and reputation for eloquence. While he studied the law, therefore, under Scævola the augur, he frequently conversed with his wife Lælia, whose discourse, he says, was tinged with all the elegance of her father Lælius, the politest speaker of his age: he was acquainted likewise with her daughter Mucia, who married the great orator Lucius Crassus; and with her granddaughters the two Licinia, . . . who all excelled in that delicacy of the Latin tongue which was peculiar to their families, and valued themselves on preserving and propagating it to their posterity.'—Melmoth's *Life of Cicero*.

GENERAL MONK.

The most curious portion of Monk's private history is his marriage to Anne, daughter of John Clarges, a farrier in the Savoy in the Strand. She was first married to Thomas Radford, late farrier: they lived at the Three Spanish Gipsies in the New Exchange, Strand, and sold wash-balls, powder, gloves, &c., and she taught plain work to girls. In 1647 she became sempstress to Monk, and used to carry him linen. In 1649 she and her husband fell out and parted; but no certificate of any parish-register appears recording his burial. In 1652 she was married at the Church of St George, Southwark, to General Monk, though it is said her first husband was living at the time. In the following year she was delivered of a son, Christopher, who 'was suckled by Honour Mills, who sold apples, herbs, oysters, &c.' The father of 'Nan Clarges,' according to Aubrey's *Lives* (written about 1680), had his forge upon the site of No. 317, on the north side of the Strand. 'The shop is still of that trade,' says Aubrey; 'the corner shop, the first turning, on y^e right hand, as you come out the Strand into Drury Lane: the house is now built of brick.' The house alluded to is believed to be that at the right-hand corner of Drury Court, now a butcher's. The adjoining house, in the court, is now a whitesmith's, with a forge, &c. Nan's mother was one of *Five Women Barbers*, celebrated in her time. Nan is described by Clarendon as a person 'of the lowest extraction, without either wit or beauty;' and Aubrey says 'she was not at all handsome nor cleanly,' and that she was seamstress to Monk, when he was imprisoned in the Tower. She is known to have had great control and authority over him. Upon his being raised to a dukedom, and her becoming Duchess of Albemarle, her father, the farrier, is said to have raised a Maypole in the Strand, nearly opposite his forge, to commemorate his daughter's good fortune. She died a few days after the Duke, and is interred by his side in Henry the Seventh's Chapel, Westminster Abbey. The Duke was succeeded by his son, Christopher, who married Lady Elizabeth Cavendish, granddaughter of the Duke of Newcastle, and died childless. The Duchess' brother, Thomas Clarges, was a physician of note; was created a baronet in 1674, and was ancestor to the baronets; whence is named Clarges Street, Piccadilly.

JOSIAH WEDGWOOD.

Josiah Wedgwood, celebrated for his valuable improvements in the manufacture of earthenware, was born July 12th 1730, at Burslem, in Staffordshire, where his father and others of the family had for many years been employed in the potteries. At the early age of eleven years, his father being then dead, he worked as a thrower in a pottery belonging to his elder brother; and he continued to be thus employed till disease in his right leg

JOSIAH WEDGWOOD.

compelled him to relinquish the potter's wheel, and ultimately to have the limb cut off below the knee. He then began to occupy himself in making imitations of agates, jaspers, and other coloured stones, by combining metallic oxides with different clays, which he formed into knife-handles, small boxes, and ornaments for the mantelpiece. After various movements in business, he finally settled in a pottery of his own, at Burslem, where he continued for a time to make the small ornamental articles which had first brought him into notice, but by degrees began to manufacture fine earthenware for the table. He was successful, and took a second manufactory, where he made white stoneware; and then a third, where he produced a delicate cream-coloured ware, of which he presented some articles to Queen Charlotte, who was so well pleased with them and with a complete service which he executed by order, that she appointed him her potter. The new kind of earthenware, under the name of Queen's ware, became fashionable, and orders from the nobility and gentry flowed in upon him. He took into partnership Mr Bentley, son of the celebrated Dr Bentley, and opened a warehouse in London, where the goods were exhibited and sold. Mr Bentley, who was a man of learning and taste, and had a large circle of acquaintance among men of rank and science, superintended the business in the metropolis. Wedgwood's operations in earthenware and stoneware included the production of various articles of ornament for the cabinet, the drawing-room, and the boudoir. To facilitate the conveyance of his goods, as well as of materials required for the manufacture, he contributed a large sum towards the formation of the Trent and Mersey Canal, which was completed in 1770. On the bank of this canal,

while it was in progress, he erected, near Stoke, a large manufactory and a handsome mansion for his own residence, and there he built the village of Etruria, consisting chiefly of the habitations of his workmen. He died there on the 3d of January 1795, in the 65th year of his age. He was married, and had several children.

To Wedgwood originally, and to him almost exclusively during a period of more than thirty years, Great Britain was indebted for the rapid improvement and vast extension of the earthenware manufacture. During the early part of his life England produced only brown pottery and common articles of white earthenware for domestic use. The finer wares for the opulent classes of society, as well as porcelain, were imported from Holland, Germany, and France. He did not extend his operations to the manufacture of porcelain—the kaolin, or china-clay, not having been discovered in Cornwall till he was far advanced in life; but his earthenwares were of such excellence in quality, in form, and in beauty of ornamentation, as in a great degree to supersede the foreign china-wares, not only in this country, but in the markets of the civilised world. Wedgwood's success was the result of experiments and trials, conducted with persevering industry on scientific principles. He studied the chemistry of the aluminous, silicious, and alkaline earths, colouring substances, and glazes, which he employed. He engaged the most skilful artisans and artists, and superintended assiduously the operations of the workshop and the kiln. In order to ascertain and regulate the heat of his furnaces, he invented a pyrometer, by which the higher degrees of temperature might be accurately measured: it consisted of small cylinders of pure white clay, with an apparatus which showed the degrees of diminution in length which the cylinders underwent from the action of the fire. Besides the manufacture of the superior kinds of earthenware for the table and domestic purposes, he produced a great variety of works of fine art, such as imitations of cameos, intaglios, and other antique gems, vases, urns, busts, medallions, and other objects of curiosity and beauty. His imitations of the Etruscan vases gained him great celebrity, and were purchased largely. He also executed fifty copies of the Portland vase, which were sold for fifty guineas each.

DOUGLAS JERROLD.

No one that has seen Douglas Jerrold can ever forget him—a tiny round-shouldered man, with a pale aquiline visage, keen bright grey eyes, and a profusion of iron-brown hair; usually rather taciturn (though with a never-ceasing play of eye and lips) till an opportunity occurred for shooting forth one of those flashes of wit which made him the conversational chief of his day. The son of a poor manager haunting Sheerness, Jerrold owed little to education or early connection. He entered life as a midshipman, but early gravitated into a London literary career. His first productions were plays, whereof one, based on the ballad of 'Black-eyed Susan' (written when the author was scarce twenty), obtained such success as redeemed theatres and made

theatrical reputations, and yet Jerrold never realised from it above seventy pounds. He also wrote novels, but his chief productions were contributions to periodicals. In this walk he had for a long course of years no superior. His 'Caudle Lectures,' contributed to *Punch*, were perhaps the most attractive series of articles that ever appeared in any periodical work.

DOUGLAS JERROLD.

The drollery of his writings, though acknowledged to be great, would not perhaps have made Douglas Jerrold the remarkable power he was, if he had not also possessed such a singular strain of colloquial repartee. In his day, no man in the metropolis was one half so noted for the brilliancy and originality of his sayings. Jerrold's wit proved itself to be, unlike Sheridan's, unpremeditated, for his best sayings were answers to remarks of others; often, indeed, they consisted of clauses or single words deriving their significancy from their connection with what another person had said. Seldom or never did it consist of a pun or quibble. Generally, it derived its value from the sense lying under it. Always sharp, often caustic, it was never morose or truly ill-natured. Jerrold was, in reality, a kind-hearted man, full of feeling and tenderness; and of true goodness and worth, talent and accomplishment, he was ever the hearty admirer.

Specimens of conversational wit apart from the circumstances which produced them, are manifestly placed at a great disadvantage; yet some of Jerrold's good things bear repetition in print. His definition of dogmatism as 'puppyism come to maturity,' might be printed by itself in large type and put upon a church-door, without suffering any loss of point. What he said on passing the flamingly uxorious epitaph put up by a famous cook on his wife's tomb—'Mock Turtle!'—might equally have been placed on the tomb itself with perfect preservation of its poignancy. Similarly independent of all external aid is the keenness of his answer to a fussy clergyman, who was expressing opinions very revolting to Jerrold,—to the effect that the real evil of modern times was

the surplus population—'Yes, the *surplice* population.' It is related that a prosy old gentleman, meeting him as he was passing at his usual quick pace along Regent Street, poised himself into an attitude, and began: 'Well, Jerrold, my dear boy, what is going on?' 'I am,' said the wit, instantly shooting off. Such is an example of the brief fragmentary character of the wit of Jerrold. On another occasion it consisted of but a monosyllable. It was at a dinner of artists, that a barrister present, having his health drunk in connection with the law, began an embarrassed answer by saying he did not see how the law could be considered as one of the arts, when Jerrold jerked in the word 'black,' and threw the company into convulsions. A bore in company remarking how charmed he was with the *Prodigue*, and that there was one particular song which always quite carried him away,—'Would that I could sing it!' ejaculated the wit.

What a profound rebuke to the *inner consciousness* school of modern poets there is in a little occurrence of Jerrold's life connected with a volume of the writings of Robert Browning! When recovering from a violent fit of sickness, he had been ordered to refrain from all reading and writing, which he had obeyed wonderfully well, although he found the monotony of a seaside life very trying to his active mind. One morning he had been left by Mrs Jerrold alone, while she had gone shopping, and during her absence a parcel of books from London arrived. Among them was Browning's '*Sordello*,' which he commenced to read. Line after line, and page after page was devoured by the convalescent wit, but not a consecutive idea could he get from that mystic production. The thought then struck him that he had lost his reason during his illness, and that he was so imbecile that he did not know it. A perspiration burst from his brow, and he sat silent and thoughtful. When his wife returned, he thrust the mysterious volume into her hands, crying out, 'Read this, my dear!' After several attempts to make any sense out of the first page or so, she returned it, saying, 'Bother the gibberish! I don't understand a word of it!' 'Thank Heaven,' cried the delighted wit; 'then I am not an idiot!'

His winding up a review of Wordsworth's poems was equally good. 'He reminds me,' said Jerrold, 'of the Beadle of Parnassus, strutting about in a cocked hat, or, to be more poetical, of a modern Moses, who sits on Pisgah with his back obstinately turned to that promised land the Future; he is only fit for those old maid tabbies, the Muses! His Pegasus is a broken-winded hack, with a grammatical bridle, and a monosyllabic bit between his teeth!'

Mr Blanchard Jerrold, in his *Life* of his father, groups a few additional good things which will not here be considered superfluous. 'A dinner is discussed. Douglas Jerrold listens quietly, possibly tired of dinners, and declining pressing invitations to be present. In a few minutes he will chime in, "If an earthquake were to engulf England to-morrow, the English would manage to meet and dine somewhere among the rubbish, just to celebrate the event." A friend drops in, and walks across the smoking-room to Douglas

Jerrold's chair. The friend wants to rouse Mr Jerrold's sympathies in behalf of a mutual acquaintance who is in want of a round sum of money. But this mutual friend has already sent his hat about among his literary brethren on more than one occasion. Mr —'s hat is becoming an institution, and friends were grieved at the indelicacy of the proceeding. On the occasion to which I now refer, the bearer of the hat was received by my father with evident dissatisfaction. "Well," said Douglas Jerrold, "how much does — want this time?" "Why, just a four and two noughts will, I think, put him straight," the bearer of the hat replied. *Jerrold*—"Well, put me down for one of the noughts." "The Chain of Events," playing at the Lyceum Theatre, is mentioned. "Humph!" says Douglas Jerrold. "I'm afraid the manager will find it a door chain, strong enough to keep everybody out of the house." Then some somewhat lackadaisical young members drop in. They assume that the Club is not sufficiently west; they hint at something near Pall-Mall, and a little more style. Douglas Jerrold rebukes them. "No, no, gentlemen; not near Pall-Mall: we might catch coronets." A stormy discussion ensues, during which a gentleman rises to settle the matter in dispute. Waving his hands majestically over the excited disputants, he begins: "Gentlemen, all I want is common sense." "Exactly," says Douglas Jerrold, "that is precisely what you do want." The discussion is lost in a burst of laughter. The talk lightly passes to the writings of a certain Scot. A member holds that the Scot's name should be handed down to a grateful posterity. *Douglas Jerrold*—"I quite agree with you that he should have an itch in the Temple of Fame." Brown drops in. Brown is said by all his friends to be the toady of Jones. The assurance of Jones in a room is the proof that Brown is in the passage. When Jones has the influenza, Brown dutifully catches a cold in the head. *Douglas Jerrold to Brown*—"Have you heard the rumour that's flying about town?" "No." "Well, they say Jones pays the dog-tax for you." Douglas Jerrold is seriously disappointed with a certain book written by one of his friends, and has expressed his disappointment. *Friend*—"I have heard you said — was the worst book I ever wrote." *Jerrold*—"No, I didn't. I said it was the worst book anybody ever wrote." A supper of sheep's-heads is proposed, and presently served. One gentleman present is particularly enthusiastic on the excellence of the dish, and, as he throws down his knife and fork, exclaims, "Well, sheep's-head for ever, say I!" *Jerrold*—"There's egotism!"

It is worth while to note the succession of the prime jokers of London before Jerrold. The series begins with King Charles II., to whom succeeded the Earl of Dorset, after whom came the Earl of Chesterfield, who left his mantle to George Selwyn, whose successor was a man he detested, Richard Brinsley Sheridan; after whom was Jekyl, then Theodore Hook, whose successor was Jerrold: eight in all during a term of nearly two hundred years.

INTRODUCTION OF FEMALE ACTORS.

Pepys relates, in that singular chronicle of gossip, his Diary, under January 3, 1661, that he went to the theatre and saw the *Beggar's Bush* well performed; 'the first time,' says he, 'that ever I saw women come upon the stage.'

This was a theatre in Gibbon's Tennis Court, Vere Street, Clare Market, which had been opened at the recent restoration of the monarchy, after the long theatrical blank under the reign of the Puritans. It had heretofore been customary for young men to act the female parts. All Shakspeare's heroines were thus awkwardly enacted for the first sixty years. At length, on the restoration of the stage, it was thought that the public might perhaps endure the indecorum of female acting, and the venture is believed to have been first made at this theatre on the 8th of December 1660, when a lady acted Desdemona for the first time.

Colley Cibber gives a comic traditional story regarding the time when this fashion was coming in. 'Though women,' says he, 'were not admitted to the stage till the return of King Charles, yet it could not be so suddenly supplied with them, but that there was still a necessity, for some time, to put the handsomest young men into petticoats, which Kynaston was said to have then worn with success; particularly in the part of Evadne in the *Maid's Tragedy*, which I have heard him speak of, and which calls to my mind a ridiculous distress that arose from that sort of shifts which the stage was then put to. The king, coming before his usual time to a tragedy, found the actors not ready to begin; when his Majesty, not choosing to have as much patience as his good subjects, sent to them to know the meaning of it; upon which the master of the company came to the box, and rightly judging that the best excuse for their default would be the true one, fairly told his Majesty that the queen was not shaved yet. The king, whose good humour loved to laugh at a jest as well as make one, accepted the excuse, which served to divert him till the male queen could be effeminated. Kynaston was at that time so beautiful a youth, that the ladies of quality prided themselves in taking him with them in their coaches to Hyde Park in his theatrical habit, after the play, which in those days they might have sufficient time to do, because plays then were used to begin at four o'clock.*

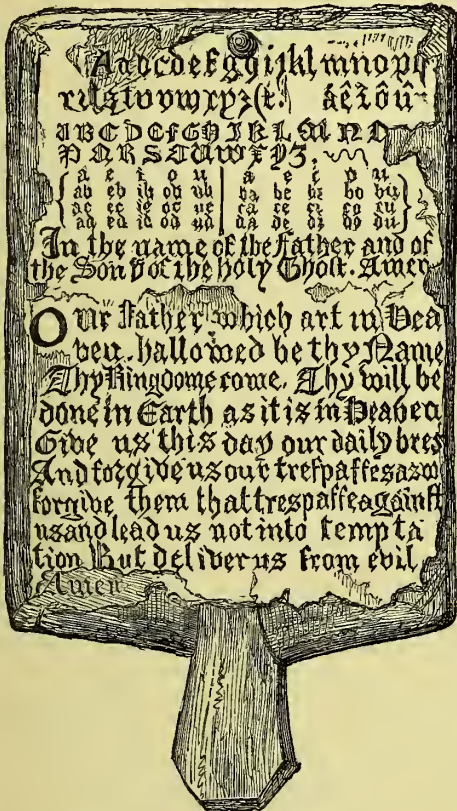

The Horn Book.

In the manuscript account books of the Archer family, quoted by Mr Halliwell in his elaborate notes on Shakspeare, occurs this entry: 'Jan. 3, 1715-16, one horn-book for Mr Eyres, 00:00:02.' The article referred to as thus purchased at twopence was one once most familiar, but now known only as a piece of antiquity, and that rather obscurely. The remark has been very justly made, that many books, at one time enjoying a more than usually great circulation, are precisely those likely to become the scarcest in a succeed-

* Cibber's *Apology for his Own Life*.

ing age; for example, nearly all school-books, and, above all, a Horn-Book. Down to the time of George II., there was perhaps no kind of book so largely and universally diffused as this said horn-book; at present, there is perhaps no book of that reign, of which it would be more difficult to procure a copy.

The annexed representation is copied from one given by Mr Halliwell, as taken from a black-letter example which was found some years ago in pulling down an old farm-house at Middleton, in Derbyshire. A portrait of King Charles I. in armour on horseback was upon the reverse, affording us an approximation to the date.

HORN BOOK.—17TH CENTURY.

The horn-book was the Primer of our ancestors—their established means of learning the elements of English literature. It consisted of a single leaf, containing on one side the alphabet large and small—in black-letter or in Roman—with perhaps a small regiment of monosyllables, and a copy of the Lord's Prayer; and this leaf was usually set in a frame of wood, with a slice of diaphanous horn in front—hence the name *horn-book*. Generally there was a handle to hold it by, and this handle had usually a hole for a string, whereby the apparatus was slung to the girdle of the scholar. In a *View of the Beau Monde*, 1731, p. 52, a lady is described as 'dressed like a child, in a bodice coat and leading-strings, with a horn-book tied to her side.' A various

kind of horn-book gave the leaf simply pasted against a slice of horn; but the one more generally in use was that above described. It is to it that Shenstone alludes in his beautiful cabinet-picture-poem, *The Schoolmistress*, where he tells of the children, how

' Their books of stature small they take in hand,
Which with pellucid horn secured are,
To save from fingers wet the letters fair.'

It ought not to be forgotten that the alphabet on the horn-book was invariably prefaced with a Cross: whence it came to be called the Christ Cross Row, or by corruption the Criss Cross Row, a term which was often used instead of horn-book.

In earlier times, it is thought that a cast-lead plate, containing the alphabet in raised letters, was used for the instruction of the youth of England, as Sir George Musgrave of Eden-hall possesses two carved stones which appear to have been moulds for such a production.

MIGRATORY BOGS.

On a bitter winter's night, when rain had softened the ground, and loosened such soil as was deficient in cohesiveness, a whole mass of Irish bog or peat-moss shifted from its place. It was on the 3d of January 1853; and the spot was in a wild region called Enagh Monmore. The mass was nearly a mile in circumference, and several feet deep. On it moved, urged apparently by the force of gravity, over sloping ground, and continuing its strange march for twenty-four hours, when a change in the contour of the ground brought it to rest. Its extent of movement averaged about a quarter of a mile.

Such phenomena as these, although not frequent in occurrence, are sufficiently numerous to deserve notice. There are in many, if not most countries, patches of ground covered with soft boggy masses, too insecure to build upon, and not very useful in any other way. Bogs, mosses, quagmires, marshes, fens—all have certain points of resemblance: they are all masses of vegetable matter, more or less mixed with earth, and moistened with streams running through them, springs rising beneath them, or rains falling upon them. Some are masses almost as solid as wood, fibrous, and nearly dry; some are liquid black mud; others are soft, green, vegetable, spongy accumulations; while the rest present intermediate characters. Peat-bogs of the hardest kind are believed to be the result of decayed forests, acted upon by long-continued heat, moisture, and pressure; mosses and marshes are probably of more recent formation, and are more thoroughly saturated with water. In most cases they fill hollows in the ground; and if the edges of those hollows are not well-defined and sufficiently elevated, we are very likely to hear of the occurrence of *quaking bogs* and *flow-mosses*.

In the year 1697, at Charleville, near Limerick, a peat-bog burst its bounds. There was heard for some time underground a noise like thunder at a great distance or when nearly spent. Soon afterwards, the partially-dried crust of a large bog began to move; the convexity of the upper surface began to sink; and boggy matter flowed

out at the edges. Not only did the substance of the bog move, but it carried with it the adjacent pasture-grounds, though separated by a large and deep ditch. The motion continued a considerable time, and the surface rose into undulations, but without bursting up or breaking. The pasture-land rose very high, and was urged on with the same motion, till it rested upon a neighbouring meadow, the whole surface of which it covered to a depth of sixteen feet. The site which the bog had occupied was left full of unsightly holes, containing foul water giving forth stinking vapours. It was pretty well ascertained that this catastrophe was occasioned by long-continued rain—not by softening the bog on which it fell, but by getting *under* it, and so causing it to slide away.

England, though it has abundance of fenny or marshy land in the counties lying west and south of the Wash, has very few such bogs as those which cover nearly three million acres of land in Ireland. There are some spots, however, such as Chat Moss in Lancashire, which belong to this character. Leland, who wrote in the time of Henry the Eighth, described, in his quaint way, an outflow of this moss: 'Chat Moss brast up within a mile of Mosley Haul, and destroyed much grounde with mosse thereabout, and destroyed much fresh-water fishche thereabout, first corrupting with stinkinge water Glasebrooke, and so Glasebrooke carried stinkinge water and mosse into Mersey water, and Mersey corrupted the roulling mosse, part to the shores of Wales, part to the isle of Man, and some unto Ireland. And in the very top of Chateley More, where the mosse was hyst and brake, is now a fair plaine valley as ever in tymes paste, and a rylle runnith int, and peaces of small trees be found in the bottom.' Let it be remembered that this is the same Chat Moss over which the daring but yet calculating genius of George Stephenson carried a railway. It is amusing now to look back at the evidence given, thirty-five years ago, before the Parliamentary Committee on the Liverpool and Manchester Railway. Engineers of some eminence vehemently denied the possibility of achieving the work. One of them said that no vehicle could stand on the Moss short of the bottom; that the whole must be scooped out, to the depth of thirty or forty feet, and an equivalent of hard earth filled in; and that even if a railway could be formed on the Moss, it would cost £200,000. Nevertheless Stephenson *did* it, and expended only £30,000; and there is the railway, sound to the present hour. The moss, over an area of nearly twelve square miles, is so soft as to yield to the foot; while some parts of it are a pulpy mass. Stephenson threw down thousands of cubic yards of firm earth, which gradually sank, and solidified sufficiently to form his railway upon; hurdles of heath and brushwood were laid upon the surface, and on these the wooden sleepers. There is still a gentle kind of undulation, as if the railway rested on a semi-fluid mass; nevertheless it is quite secure.

Scotland has many more bogs and peat-mosses than England. They are found chiefly in low districts, but sometimes even on the tops of the mountains. Mr Robert Chambers gives an

account of an outburst which took place in 1629: 'In the fertile district between Falkirk and Stirling, there was a large moss with a little lake in the middle of it, occupying a piece of gradually-rising ground. A highly-cultivated district of wheat-land lay below. There had been a series of heavy rains, and the moss became overcharged with moisture. After some days, during which slight movements were visible on this quagmire, the whole mass began one night to leave its native situation, and slide gently down to the low grounds. The people who lived on these lands, receiving sufficient warning, fled and saved their lives; but in the morning light they beheld their little farms, sixteen in number, covered six feet deep with liquid moss, and hopelessly lost.'—*Domestic Annals of Scotland*, ii. 35.

Somewhat akin to this was the flowing moss described by Pennant. It was on the Scottish border, near the shore of the Solway. When he passed the spot during his First Journey to Scotland in 1768, he saw it a smiling valley; on his Second Journey, four years afterwards, it was a dismal waste. The Solway Moss was an expanse of semi-liquid bog covering 1600 acres, and lying somewhat higher than a valley of fertile land near Netherby. So long as the moderately hard crust near the edge was preserved, the moss did not flow over; but on one occasion some peat-diggers imprudently tampered with this crust; and the moss, moistened with very heavy rain, overcame further control. It was on the night of the 17th of November 1771, that a farmer who lived near the Moss was suddenly alarmed by an unusual noise. The crust had given way, and the black deluge was rolling towards his house while he was searching with a lantern for the cause of the noise. When he caught sight of a small dark stream, he thought it came from his own farm-yard dung hill, which by some strange cause had been set in motion. The truth soon flashed upon him, however. He gave notice to his neighbours with all expedition. 'Others,' said Pennant, 'received no other advice than what this Stygian tide gave them: some by its noise, many by its entrance into their houses; and I have been assured that some were surprised with it even in their beds. These passed a horrible night, remaining totally ignorant of their fate, and the cause of their calamity, till the morning, when their neighbours with difficulty got them out through the roof.' About 300 acres of bog flowed over 400 acres of land, utterly ruining and even burying the farms, overturning the buildings, filling some of the cottages up to the roof, and suffocating many cattle. The stuff flowed along like thick black paint, studded with lumps of more solid peat; and it filled every nook and crevice in its passage. 'The disaster of a cow was so singular as to deserve mention. She was the only one, out of eight in the same cow-house, that was saved, after having stood sixty hours up to the neck in mud and water. When she was relieved she did not refuse to eat, but would not touch water, nor would even look at it without manifest signs of horror.'

The same things are going on around us at the present day. During the heavy rains of August 1861, there was a displacement of Auchingray

Moss between Slamannan and Airdrie. A farmer, looking out one morning from his farm-door near the first-named town, saw, to his dismay, about twenty acres of the moss separate from its clay bottom, and float a distance of three quarters of a mile. The sight was wonderful, but the consequences were grievous; for a large surface of potato-ground and of arable land became covered with the offensive visitant.

JANUARY 4.

St Titus, disciple of St Paul. St Gregory, bishop, 541. St Rigobert, or Robert, about 750. St Ruman, bishop.

Born.—Archbishop Usher, 1580; Jacob Ludwig Carl Grimm, 1785.

Died.—The Mareschal Duc de Luxembourg, 1695; Charlotte Lennox, novelist, 1804; Rachel, *tragédienne*, 1858.

JACOB L. C. GRIMM.

Jacob Grimm and his younger brother Wilhelm, natives of Hanau in the electorate of Hesse Cassel, now (1861) occupying professorships at Berlin, are distinguished as investigators of the early history and literature of Germany. They have produced numerous works, and finally have engaged upon a large Dictionary of the German Language. 'All my labours,' says Jacob Grimm, 'have been either directly or indirectly devoted to researches into our ancient language, poetry, and laws. These studies may seem useless to many; but to me they have always appeared a serious and dignified task, firmly and distinctly connected with our common fatherland, and calculated to foster the love of it. I have esteemed nothing trifling in these inquiries, but have used the small for the elucidation of the great, popular traditions for the elucidation of written documents. Several of my books have been published in common with my brother William. We lived from our youth up in brotherly community of goods; money, books, and collectanea, belonged to us in common, and it was natural to combine our labours.' The publications of Jacob extend over fully half a century, the first having appeared in 1811.

MARESCHAL DUC DE LUXEMBOURG, 1695.

Whatever glory or territory France gained by arms under Louis XIV. might be said to be owing to this singularly able general. It was remarked that each of his campaigns was marked by some brilliant victory, and as these were always blazoned on the walls of the principal church of Paris, he came to be called, by one of those epigrammatic flatteries for which the French are distinguished, *Le Tapissier de Notre Dame*. With his death the prosperities of Louis XIV. terminated.

MADEMOISELLE RACHEL.

The modern tragedy queen of France died at thirty-eight—that age which appears so fatal to genius; that is to say, the age at which an overworked nervous system comes naturally to a close. An exhausting professional tour in America, entered upon for needless money-

making, is believed to have had much to do in bringing the great *tragédienne* to a premature grave. Rachel was the child of poor Hebrew parents, and her talents were first exercised in singing to a guitar on the streets of Paris. When at an early age she broke upon theatrical audiences in the characters of Roxane, Camille, and others of that class, she created a *furor* almost unexampled. Yet her style of acting was more calculated to excite terror than to melt with pity. She was in reality a woman without estimable qualities. The mean passion of avarice was her predominating one, and strange stories are told of the oblique courses she would resort to to gratify it. There was but one relieving consideration regarding it, that she employed its results liberally in behalf of the poor family from which she sprang. The feelings with which we heard in England in 1848 that Rachel had excited the greatest enthusiasm in the *Théâtre Français* by singing the Marseillaise hymn, and soon after that her lover M. Ledru Rollin, of the provisional government, had paid her song with a grant of public money, will not soon be forgotten.

INTRODUCTION OF THE SILK MANUFACTURES INTO EUROPE.

It was on the 4th of January 536, that two monks came from the Indies to Constantinople, bringing with them the means of teaching the manufacture of silk. Workmen instructed in the art carried it thence to Italy and other parts of Europe. In England, however, the manufacture was not practised till 1604; nor was there a silk-throwing mill in our island till 1714.

ARREST OF THE FIVE MEMBERS.

The 4th of January 1641-2 is the date of one of the most memorable events in English history—the attempted arrest of the five members of the House of Commons—Pym, Hampden, Hollis, Haselrig, and Strode—by Charles I. The divisions between the unhappy king and his parliament were lowering towards the actual war which broke out eight months later. Charles, stung by the Grand Remonstrance, a paper in which all the errors of his past government were exposed, thought by one decisive act to strike terror into his outraged subjects, and restore his full authority. While London was on the borders of insurrection against his rule, there yet were not wanting considerable numbers of country gentlemen, soldiers of fortune, and others, who were eager to rally round him in any such attempt. His design of coming with an armed band to the House and arresting the five obnoxious members, was communicated by a lady of his court; so that, just as he approached the door of the House with his cavalier bands, the gentlemen he wished to seize were retiring to a boat on the river, by which they made their escape.

Mr John Forster has assembled, with great skill, all the facts of the scene which ensued.

'Within the House,' he says,* 'but a few minutes had elapsed since the Five Members had departed, and Mr Speaker had received instruction to sit still with the mace lying before him, when

* The Arrest of Five Members, by Charles I. A Chapter of English History re-written. By John Forster. 1860.

a loud knock threw open the door, a rush of armed men was heard, and above it (as we learn from Sir Ralph Verney) the voice of the King commanding "upon their lives not to come in." The moment after, followed only by his nephew, Charles, the Prince Elector Palatine, Rupert's eldest brother, he entered; but the door was not permitted to be closed behind him. Visible now at the threshold to all were the officers and desperadoes, of whom, D'Ewes proceeds: "some had left their cloaks in the hall, and most of them were armed with pistols and swords, and they forcibly kept the door of the House of Commons open, one Captain Hide standing next the door holding his sword upright in the scabbard." A picture which Sir Ralph Verney, also present that day, in his place, completes by adding that, "so the door was kept open, and the Earl of Roxburgh stood within the door, leaning upon it."

The King walked uncovered along the hall, while the members stood uncovered and silent on each side. Taking a position on the step in front of the Speaker's chair, he looked round for the faces of Pym and his four associates, and not finding them, he thus spoke: "Gentlemen, I am sorry for this occasion of coming among you. Yesterday I sent a serjeant-at-arms upon a very important occasion to apprehend some that by my command were accused of high treason; whereunto I did expect obedience, and not a message. And I must declare unto you here, that albeit no king that ever was in England, shall be more careful of your privileges, to maintain them to the uttermost of his power, than I shall be, yet you must know that in cases of treason no person hath a privilege. And therefore I am come to know if any of these persons that were accused are here."

Still casting his eyes vainly around, he after a pause added, "So long as those persons that I have accused (for no slight crime, but for treason) are here, I cannot expect that this House will be in the right way I do heartily wish it. Therefore I am come to tell you that I must have them, wherever I find them."

After another pause, he called out, "Is Mr Pym here?" No answer being returned, he asked if Mr Hollis was here. There being still no answer, he turned to the Speaker, and put these questions to him. The scene became painfully embarrassing to all, and it grew more so when Lenthal, kneeling before the King, entreated him to understand that he could neither see nor speak but at the pleasure of the House. Mr Forster has been enabled by D'Ewes to describe the remainder of the scene in vivid terms. After another long pause—a "dreadful silence"—"Charles spoke again to the crowd of mute and sullen faces. The complete failure of his scheme was now accomplished, and all its possible consequences, all the suspicions and retaliations to which it had laid him open, appear to have rushed upon his mind. "Well, since I see all my birds are flown, I do expect from you that you will send them unto me as soon as they return hither. But, I assure you, on the word of a king, I never did intend any force, but shall proceed against them in a legal and fair way, for I never meant any other. And now, since I see that I cannot

do what I came for, I think this no unfit occasion to repeat what I have said formerly, that whatsoever I have done in favour, and to the good, of my subjects, I do mean to maintain it. I will trouble you no more, but tell you I do expect, as soon as they come to the House, you will send them to me; otherwise I must take my own course to find them." To that closing sentence, the note left by Sir Ralph Verney makes a not unimportant addition, which, however, appears nowhere in Rushworth's Report. "For their treason was foul, and such an one as they would all thank him to discover." If uttered, it was an angry assertion from amid forced and laboured apologies, and so far, would agree with what D'Ewes observed of his change of manner at the time. "After he had ended his speech, he went out of the House in a more discontented and angry passion than he came in, going out again between myself and the south end of the clerk's table, and the Prince Elector after him."

"But he did not leave as he had entered, in silence. Low mutterings of fierce discontent broke out as he passed along, and many members cried out aloud, so as he might hear them, *Privilege! Privilege!* With these words, ominous of ill, ringing in his ear, he repassed to his palace through the lane again formed of his armed adherents, and amid audible shouts of an evil augury from desperadoes disappointed of their prey."

There was but an interval of six days between the King's entering the House of Commons, and his flight from Whitehall. Charles raised the issue, the Commons accepted it, and so began our Great Civil War.

LIFE-BOATS AND THEIR BOATMEN.

The northern coast of Wales, between the towns of Rhyl and Abergele, was thrown into excitement on the 4th of January 1847, by the loss of one gallant life-boat, and the success of another. A schooner, the *Temperance* of Belfast, got into distress in a raging sea. The Rhyl life-boat pushed off in a wild surf to aid the sufferers; whether the boat was injured or mismanaged, none survived to tell; for all the crew, thirteen in number, were overwhelmed by the sea, and found a watery grave. The *Temperance*, however, was not neglected; another life-boat set out from Point-of-Air, and braving all dangers, brought the crew of the schooner safe to land.

This event is a type of two important things in relation to the shipping of England—the enormous amount of wreck on our coasts, and the heroic and unselfish exertions made to save human life imperilled by those catastrophes. The wreck is indeed terrible. There is a 'Wreck Chart' of the British Islands now published annually, spotted with death all over; little black marks are engraved for every wreck, opposite the part of the coast where they occurred. More than one of these charts has had a *thousand* such spots, each denoting either a total wreck or a serious disaster, and involving the loss of a still larger number of lives. The collier ships which bring coal from the north to London are sadly exposed to these calamities during their ten or twelve thousand annual voyages. The eastern coast from the Tyne to the Humber, the coast opposite Yar-

mouth, the shoals off the mouth of the Thames, the Scilly Isles, the west coast of Wales, and Barnstaple Bay, are all dismal places for wrecks.

Little need is there to tell the story of shipwreck: it is known full well. How the returning emigrant, with his belt full of gold, sinks to a briny grave when within sight of his native shore; how the outgoing migrant meets with a similar death before his voyage has well commenced; how the soldier is overwhelmed when departing to fight on foreign shores; how friends are severed, valuable goods lost, merchants ruined—all this is known to every one who takes up a newspaper. Some may say, looking at the prodigious activity of our shipping, that wreck is an inevitable accompaniment of such a system. When we consider that seven hundred over-sea voyages *per day* either begin or end at a port in the United Kingdom, we ought to expect disasters as one of the attendant consequences. True, some disasters: the question is, whether prudent arrangements might not lessen the number.

About seventy years ago, after a terrible storm on the Northumbrian coast, Mr Greathead, of South Shields, constructed what he called a *safety-boat* or *life-boat*, containing much cork in its composition, as a means of producing buoyancy. Other inventors followed and tried to improve the construction by the use of air-tight cases, india-rubber linings, and other light but impervious substances. Sometimes these boats were instrumental in saving life; sometimes a Grace Darling, daring all perils, would push forth to a distressed ship in a common open boat; but still the loss of life by shipwreck was every year distressingly great. It was under this state of things that the 'Institution for the Preservation of Life from Shipwreck' was founded in 1824, to establish life-boats and mortar-rockets at all the dangerous parts of our coasts; to induce the formation of local committees at the chief ports for a similar purpose; to maintain a correspondence with those committees; and to encourage the invention of new or improved boats, buoys, belts, rocket apparatus, and other appliances for saving life. Right nobly has this work been done. Without fee or reward, without guarantee or 'subsidy,' the Institution, now called the 'Life-Boat Institution,' has been employed for nearly forty years in saving human life. Many an exciting narrative may be picked out of the pages of the *Life-Boat*, a journal in which the Institution occasionally records the story of shipwreck and of life-preserving.

The life-boat system is remarkable in all its points. In 1850 the Duke of Northumberland offered a prize for the best form of life-boat. The boat-builders set to work, and sent in nearly 300 plans; the winner was Mr Beeching, boat-builder at Yarmouth. Oddly enough, however, the examiners did not practically adopt any one of them, not even Mr Beeching's; they got a member of their own body (Mr Peake, master shipwright at Woolwich dockyard) to construct a life-boat that should comprise all the best points of all the best plans. This boat, slightly improved by later alterations, is the one now adopted by the Life-Boat Institution, and coming

into use in other countries besides our own. It is about thirty feet long, seven wide, and four deep; nearly alike at both ends, and ingeniously contrived with air chambers, passages, and valves. It possesses in a high degree these qualities—great lateral stability; speed against a heavy sea; facility for landing and for taking the shore; immediate self-discharge of sea-water; facility of self-righting if upset; great strength of construction; and stowage room for a number of passengers. Gallantly the boatmen manage these life-boats. The Institution maintains life-boat stations all round the coast, each of which is a little *imperium* in itself—a life-boat, generally a boat-house to keep it in, a carriage on which to drag it out to the sea, and a complete service of all the articles necessary for the use of the men. There is a captain or coxswain to each boat, and he can command the services of a hardy crew, obtained partly by salaries and partly by reward when actually engaged in saving life. The Institution can point to nearly 12,000 lives saved between 1824 and 1861, either directly by the boats and boatmen, or by exertions encouraged and rewarded by the Institution.

Nor should the gallant life-boatmen be grudged their bit of honest pride at what they have done. They can tell of the affair of October 7th, 1854, when, in an easterly gale at Holm Sand on the Suffolk coast, the life-boat boldly struck out, and finding a Norwegian brig in distress, was baffled by the drunken state of the eight seamen on board, but succeeded, on a second attempt next morning, in bringing all safely off, the men being by that time sobered and manageable. They can tell of the affair of the 2nd of May, 1855, when the Ramsgate beachmen saw signal rockets at the light-vessels moored off the Goodwin Sands, denoting that a ship was in danger. The life-boat gallantly started on her mission of mercy. Then was there seen a hapless ship, the *Queen of the Teign*, high and dry on the Goodwins, with a foaming sea on the edge of the sand. How to get near it? The boatmen waited till the morning tide supplied a sufficiency of water; they went in, ran on the sand among the breakers, and aided the poor exhausted crew of the ship to clamber on board the life-boat. All were saved; and by dexterous management the ship was saved also. There was the Whitby case of January the 4th, 1857, when one of the boatmen was clearly washed out of the life-boat, *over the heads of all his companions*, by a raging sea; and yet all were saved, ship's crew and boatmen alike. But most of all do the life-boatmen pleasurably reflect on the story of the *Northern Belle*, and what they achieved for the crew of that ship. It was a fine vessel, an American trader of 1100 tons. On the 5th of January 1857, she was off the North Foreland, struck by a terrible sea, and placed in imminent peril. The Broadstairs boatmen harnessed themselves to their life-boat carriage, and dragged it with the boat a distance of no less than two miles, from Broadstairs to Kingsgate, over a heavy and hilly country. In the dead of a winter's night, amid hail, sleet, and rain, the men could not see where to launch their boat. They waited through the darkness. At day-break on

the next morning, a distressing sight presented itself: twenty-three poor fellows were clinging to the rigging of the only remaining mast of the *Northern Belle*, to which they had held on during this appalling night. Off went the life-boat, the *Mary White*, manned by seven daring boatmen, who braved the raging sea which washed over them repeatedly. They went to the wreck, brought off seven men, and were obliged to leave the rest for fear of involving all in destruction. Meanwhile another life-boat, the *Culmer White*, was wheeled overland from Broadstairs, then launched, and succeeded in bringing away fourteen of the sufferers. There remained only two others, the captain and the pilot, who refused to leave the wreck so long as a spar was standing. The *Culmer White* dashed out a second time, rescued these two mariners, and left the hapless ship to its watery grave. How the poor American sailors were warmed and cared for at the little hostelry, the 'Captain Digby,' at Kingsgate; how the life-boats returned in triumphant procession to Broadstairs; and how the quiet heroism of the life-boatmen was the admiration of all—the newspapers of the period fully told.

EVIDENCE ABOUT A CHIMNEY.

A claim having been made this day (1826), at the Marlborough-street Police Office, for a reward on account of the detection of a brewery chimney on fire, it was resisted on the ground that the flue, which was above eighty feet high, was so constructed and managed that it *could not* take fire. A witness on this side, who gave the (unnecessary) information that he was a chimney-sweep, set forth his evidence in the following terms: 'This here man (pointing to the patrol) has told a false affidavit, your wortship. I knows that ere chimley from a hinfant, and she knows my foot as well as my own mother. The ways I goes up her is this—I goes in all round the boiler, then I twists in the chimley like the smoke, and then up I goes with the wind, for, your wortship, there's a wind in her that would blow you out like a feather, if you didn't know her as well as I do, and that makes me always go to the top myself, because there isn't a brick in her that doesn't know my foot. So that you see, your wortship, no soot or blacks is ever in her; the wind won't let 'em stop: and besides they knows that I go up her regular. So that she always keeps herself as clean as a new pin. I'll be bound the sides of her is as clean this minute as I am (not saying much for the chimney); therefore, your wortship, that ere man as saw two yards of fire coming out of her, did not see no such thing, I say; and he has told your wortship, and these here gentlemen present, a false affidavit, I say. I was brought up in that chimley, your wortship, and I can't abear to hear such things said—lies of her; and that's all as I knows at present, please your wortship.'

Handsel Monday.

The first Monday of the year* is a great holiday among the peasantry of Scotland, and

* The year 1864 being assumed as the basis of the *Book of Days*, the popular Scotch festival of *Handsel-Monday* comes to be treated under the 4th of January.

children generally, as being the day peculiarly devoted in that country to the giving and receiving of presents. It is on this account called *Handsel Monday*, handsel being in Scotland the equivalent of a Christmas box, but more specially inferring a gift at the commencement of a season or the induing of some new garment. The young people visit their seniors in expectation of *tips* (the *word*, but not the *action*, unknown in the north). Postmen, scavengers, and deliverers of newspapers look for their little annual guerdons. Among the rural population, *Auld Hansel Monday*, i. e. Handsel Monday old style, or the first Monday after the 12th of the month, is the day usually held. The farmers used to treat the whole of their servants on that morning to a liberal breakfast of roast and boiled, with ale, whiskey, and cake, to their utmost contentment; after which the guests went about seeing their friends for the remainder of the day. It was also the day on which any disposed for change gave up their places, and when new servants were engaged. Even now, when most old fashions are much decayed, *Auld Handsel Monday* continues to be the holiday of the year to the class of farm-labourers in Scotland.

'It is worth mentioning that one William Hunter, a collier (residing in the parish of Till-coultry, in Clackmannanshire), was cured in the year 1738 of an inveterate rheumatism or gout, by drinking freely of new ale, full of barm or yeast. The poor man had been confined to his bed for a year and a half, having almost entirely lost the use of his limbs. On the evening of Handsel Monday, as it is called, some of his neighbours came to make merry with him. Though he could not rise, yet he always took his share of the ale, as it passed round the company, and in the end he became much intoxicated. The consequence was that he had the use of his limbs next morning, and was able to walk about. He lived more than twenty years after this, and never had the smallest return of his old complaint.'—(Sinclair's) *Statistical Account of Scotland*, xv. 201, note.

The Man in the Moon.

This is a familiar expression, to which few persons attach any definite idea. Many would be found under a belief that it refers merely to that faint appearance of a face which the moon presents when full. Those who are better acquainted with natural objects, and with folklore, are aware that the Man in the Moon—the object referred to under that name—is a dusky resemblance to a human figure which appears on the western side of the luminary when eight days old, being somewhat like a man carrying a thorn-bush on his back, and at the same time engaged in climbing, while a detached object in front looks like his dog going on before him. It is a very old popular notion amongst various nations, that this figure is the man referred to in the book of Numbers (chap. xv. v. 32 *et seq.*), as having been detected by the children of Israel in the wilderness, in the act of gathering sticks on the Sabbath-day, and whom the Lord directed (in absence of a law on the subject) to be stoned

to death without the camp. One would have thought this poor stiek-gatherer sufficiently punished in the actual history: nevertheless, the popular mind has assigned him the additional pain of a perpetual pillorying in the moon. There he is with his burden of sticks upon his back, continually climbing up that shining height with his little dog before him, but never getting a step higher! And so it ever must be while the world endures!

Our poets make clear to us how old is this notion. When *Moonshine* is to be represented in the famous play of *Pyramus and Thisbe* (Shakspeare's *Midsummer Night's Dream*), Mr Quince, the carpenter, gives due directions, as follows: 'One must come in with a bush of thorns and a lantern, and say he comes in to disfigure, or to present, the person of moonshine.' And this order is realised. 'All I have to say,' concludes the performer of this strange part, 'is, to tell you, that the lantern is the moon; I the man in the moon; this thorn-bush my thorn-bush; and this dog my dog.' Chaucer adverts to the Man in the Moon, with a needless aggravation of his criminality:

'On her brest a chorle painted ful even,
Bearing a bush of thorns on his backe,
Which for his *theft* might clime so ne'r the heaven.'

Dante, too, the contemporary of Chaucer, makes reference, in his *Inferno*, to the Man in the Moon, but with a variation upon the popular English idea, in as far as he calls him Cain.

In Ritson's *Ancient Songs*, there is one extracted from a manuscript of the time of Edward II., on the Man in the Moon, but in language which can scarcely now be understood. The first verse, in modern orthography, will probably satisfy the reader:

'Man in the Moon stand and stit (?)
On his bot fork his burden he beareth,
It is much wonder that he na down slit,
For doubt lest he fall he shudd'reth
and shi'ereth.
When the frost freezes must chill he byde,
The thorns be keen his hattren * so
teareth,
Nis no wight in the world there wot when
he syt (?)
Ne bote it by the hedge what weeds he
weareth.'

JANUARY 5.

Twelfth-Day Eve.

St Simeon Stylites, 459; St Telesphorus, seventh bishop of Rome, 128; St Syncretica (4th century?), virgin.

ST SIMEON STYLITES,

so named from the Greek word *stylos*, a pillar, was the founder of an order of monks, or rather solitary devotees, called pillar-saints. Of all the forms of voluntary self-torture practised by the early Christians this was one of the most extraordinary. Originally a shepherd in Cilicia about the year 408, when only thirteen years of age,

* Attire.

Simeon left his flocks, and obtained admission into a monastery in Syria, but afterwards withdrew to a mountain about thirty or forty miles east from Antioch, where he at first confined himself within a circle of stones. Deeming this mode of penance not sufficiently severe, in the year 423 he fixed his residence on the top of a pillar, which was at first nine feet high, but was successively raised to the somewhat incredible height of sixty feet (forty cubits). The diameter of the top of the pillar was only three feet, but it was surrounded by a railing which secured him from falling off, and afforded him some relief by leaning against it. His clothing consisted of the skins of beasts, and he wore an iron collar round his neck. He exhorted the assembled people twice a day, and spent the rest of his time in assuming various postures of devotion. Sometimes he prayed kneeling, sometimes in an erect attitude with his arms stretched out in the form of a cross, but his most frequent exercise was that of bending his meagre body so as to make his head nearly touch his feet. A spectator once observed him make more than 1240 such reverential bendings without resting. In this manner he lived on his pillar more than thirty years, and there he died in the year 459. His remains were removed to Antioch with great solemnity. His predictions and the miracles ascribed to him are mentioned at large in Theodoretus, who gives an account of the lives of thirty celebrated hermits, ten of whom were his contemporaries, including St Simeon Stylites. The pillar-saints were never numerous, and the propagation of the order was almost exclusively in the warm climates of the East. Among the names recorded is that of another Simeon, styled the younger, who is said to have dwelt sixty years on his pillar.

Born.—Dr. Benjamin Rush, 1745, *Philadelphia*; Thomas Pringle, traveller and poet, 1789.

Died.—Edward the Confessor, 1066, *Westminster*; Catherine de Medicis, Queen of France, 1589; James Merrick, 1769, *Reading*; John Howie, author of *The Scots Worthies*, 1793; Isaac Reed, commentator on Shakspeare 1807; Marshal Radetsky, 1858.

EDWARD THE CONFESSOR.

Towards the close of 1065, this pious monarch completed the rebuilding of the Abbey at Westminster, and at Christmas he caused the newly-built church to be hallowed in the presence of the nobles assembled during that solemn festival.

The king's health continued to decline; and early in the new year, on the 5th of January, he felt that the hand of death was upon him. As he lay, tradition says, in the painted chamber of the palace at Westminster, a little while before he expired, Harold and his kinsman forced their way into the apartment, and exhorted the monarch to name a successor, by whom the realm might be ruled in peace and security. 'Ye know full well, my lords,' said Edward, 'that I have bequeathed my kingdom to the Duke of Normandy, and are there not those *here* whose oaths have been given to secure his succession?' Harold stepped nearer, and interrupting the king, he asked of Edward upon

whom the crown should be bestowed. 'Harold! take it, if such be thy wish; but the gift will be thy ruin. Against the Duke and his baronage no power of thine can avail thee!' Harold replied that he did not fear the Norman or any other enemy. The dying king, wearied with importunity, turned himself upon his couch, and faintly intimated that the English nation might name a king, Harold, or whom they liked; and shortly afterwards he expired. In the picturesque language of Sir Francis Palgrave, 'On the festival of the Epiphany, the day after the king's decease, his obsequies were solemnised in the adjoining abbey, then connected with the royal

abode by walls and towers, the foundations whereof are still existing. Beneath the lofty windows of the southern transept of the Abbey, you may see the deep and blackened arches, fragments of the edifice raised by Edward, supporting the chaste and florid tracery of a more recent age. Westward stands the shrine, once rich in gems and gold, raised to the memory of the Confessor by the devotion of his successors, despoiled, indeed, of all its ornaments, neglected, and crumbling to ruin, but still surmounted by the massy iron-bound oaken coffin which contains the ashes of the last legitimate Anglo-Saxon king.'—*History of England: Anglo-Saxon Period.*

DEATH AND BURIAL OF THE CONFESSOR, FROM THE BAYEUX TAPESTRY.

We possess many interesting memorials of the Confessor: most of the coronation insignia which he gave to the Abbey Treasury—including the rich vestments, golden crown and sceptres, dalmatic, embroidered pall, and spurs—have been used at the coronations of our sovereigns, through nearly eight centuries. The death and funeral of the Confessor are worked in a compartment of the Bayeux Tapestry, believed to be of the age of the Conquest. The crucifix and gold chain and ring were seen in the reign of James II. The sculptures upon the frieze of the present shrine represent fourteen scenes in the life of the Confessor. He was the first of our sovereigns who touched for the king's-evil; he was canonized by Pope Alexander about a century after his death. The use of the Great Seal was first introduced in his reign: the original is in the British Museum. He was esteemed the patron-saint of England until superseded in the 13th century by St George; the translation of his relics from the old to his new shrine at Westminster, in 1263, still finds a

place, on the 13th of October, in the English Calendar: and more than twenty churches exist, dedicated either to him or to Edward the king and martyr.

JOHN HOWIE

was author of a book of great popularity in Scotland, entitled the *Scots Worthies*, being a homely but perspicuous and pathetic account of a select number of persons who suffered for 'the covenanted work of Reformation' during the reigns of the last Stuarts. Howie was a simple-minded Ayrshire moorland farmer, dwelling in a lonely cot amongst bogs, in the parish of Fenwick, a place which his ancestors had possessed ever since the persecuting time, and which continued at a recent period to be occupied by his descendants. His great-grandfather was one of the persecuted people, and many of the unfortunate brethren had received shelter in the house when they did not know where else to lay their head. One friend, Captain Paton, in Meadowhead, when

executed at Edinburgh in 1684, handed down his bible from the scaffold to his wife, and it soon after came into the hands of the Howies, who still preserve it. The captain's sword, a flag for the parish of Feuwick, carried at Bothwell Bridge, a drum believed to have been used there, and a variety of manuscripts left by covenanting divines, were all preserved along with the captain's bible, and rendered the house a museum of Presbyterian antiquities. People of great eminence have pilgrimised to Lochgoin to see the home of John Howie and his collection of curiosities, and generally have come away acknowledging the singular interest attaching to both. The simple worth, primitive manners, and strenuous faith of the elderly sons and daughters of John Howie, by whom the little farm was managed, formed a curious study in themselves. Visitors also fondly lingered in the little room, constituting the only one besides the kitchen, which formed at once the parlour and study of the author of the *Worthies*; also over a bower in the little cabbage-garden, where John used to spend hours—nay, days—in religious exercises, and where, he tells us, he formally subscribed a covenant with God on the 10th of June 1785. A stone in the parish churchyard records the death of the great-grandfather in 1691, and of the grandfather in 1755, the latter being ninety years old, and among the last survivors of those who had gone through the fire of persecution. John Howie wrote a memoir of himself, which no doubt contains something one cannot but smile at, as does his other work also. Yet there is so much pure-hearted earnestness in the man's writings, that they cannot be read without a certain respect. The Howies of Lochgoin may be said to have formed a monument of the religious feelings and ways of a long by-past age, protracted into modern times. We see in them and their cot a specimen of the world of the century before the last. It is to be feared that in a few more years both the physical and the moral features of the place will be entirely changed.

ATTEMPTED ASSASSINATION OF LOUIS XV.

On the 5th of January 1757, an attempt was made upon the life of the worthless French king, Louis XV., by Robert Francis Damiens. 'Between five and six in the evening, the king was getting into his coach at Versailles to go to the Trianon. A man, who had lurked about the colonnades for two days, pushed up to the coach, jostled the dauphin, and stabbed the king under the right arm with a long knife; but, the king having two thick coats, the blade did not penetrate deep. Louis was surprised, but thinking the man had only pushed against him, said, 'Le coquin m'a donné un furieux coup de poing,' but putting his hand to his side, and feeling blood, he said, 'Il m'a blessé; qu'on le saisisse, et qu'on ne lui fasse point de mal.' The king being carried to bed, it was quickly ascertained that the wound was slight and not dangerous.

'Damiens, the criminal, appeared clearly to be mad. He had been footman to several persons, had fled for a robbery, had returned to Paris in

a dark and restless state of mind; and by one of those wonderful contradictions of the human mind, a man aspired to renew that had descended to theft. Yet in this dreadful complication of guilt and frenzy, there was room for compassion. The unfortunate wretch was sensible of the predominance of his black temperament; and the very morning of the assassination, asked for a surgeon to let him blood; and to the last gasp of being, he persisted that he should not have committed this crime, if he had been blooded. What the miserable man suffered is not to be described. When first raised and carried into the guard-chamber, the *Garde-de-secaux* and the *Duc d'Ayen* ordered the tongs to be heated, and pieces torn from his legs, to make him declare his accomplices. The industrious art used to preserve his life was not less than the refinement of torture by which they meant to take it away. The inventions to form the bed on which he lay (as the wounds on his leg prevented his standing), that his health might in no shape be affected, equalled what a reproving tyrant would have sought to indulge his own luxury.

'When carried to the *dugeon*, Damiens was wrapped up in mattresses, lest despair might tempt him to dash his brains out, but his madness was no longer precipitate. He even amused himself by indicating a variety of innocent persons as his accomplices; and sometimes, more harmlessly, by playing the fool with his judges. In no instance he sank either under terror or anguish. The very morning on which he was to endure the question, when told of it, he said with the coolest intrepidity, "La jouruée sera rude"—after it, insisted on some wine with his water, saying, "Il faut ici de la force." And at the accomplishment of his tragedy, studied and prolonged on the precedent of *Ravillac's*, he supported all with unrelaxed firmness; and even unremitted torture of four hours, which succeeded to his being two hours and a-half under the question, forced from him but some momentary yells.'—*Memoirs of the Reign of King George the Second*, ii., 281.

That, in France, so lately as 1757, such a criminal should have been publicly torn to pieces by horses, that many persons of rank should have been present on the occasion, and that the sufferer allowed 'quelques plaisanteries' to escape him during the process, altogether leave us in a strange state of feeling regarding the affair of Damiens.

Twelfth-Day Eve.

Twelfth-day Eve is a rustic festival in England. Persons engaged in rural employments are, or have heretofore been accustomed to celebrate it; and the purpose appears to be to secure a blessing for the fruits of the earth.

'In Herefordshire, at the approach of the evening, the farmers with their friends and servants meet together, and about six o'clock walk out to a field where wheat is growing. In the highest part of the ground, twelve small fires, and one large one, are lighted up. The attendants, headed by the master of the family, pledge the company

in old cider, which circulates freely on these occasions. A circle is formed round the large fire, when a general shout and hallooing takes place, which you hear answered from all the adjacent villages and fields. Sometimes fifty or sixty of these fires may be all seen at once. This being finished, the company return home, where the good housewife and her maids are preparing a good supper. A large cake is always provided, with a hole in the middle. After supper, the company all attend the bailiff (or head of the oxen) to the wain-house, where the following particulars are observed: The master, at the head of his friends, fills the cup (generally of strong ale), and stands opposite the first or finest of the oxen. He then pledges him in a curious toast: the company follow his example, with all the other oxen, and addressing each by his name. This being finished, the large cake is produced, and, with much ceremony, put on the horn of the first ox, through the hole above mentioned. The ox is then tickled, to make him toss his head: if he throw the cake behind, then it is the mistress's perquisite; if before (in what is termed the boosy), the bailiff himself claims the prize. The company then return to the house, the doors of which they find locked, nor will they be opened till some joyous songs are sung. On their gaining admittance, a scene of mirth and jollity ensues, which lasts the greatest part of the night.—*Gentleman's Magazine, February, 1791.* The custom is called in Herefordshire *Wassailing*. The fires are designed to represent the Saviour and his apostles, and it was customary as to one of them, held as representing Judas Iscariot, to allow it to burn a while, and then put it out and kick about the materials.

At Pauntley, in Gloucestershire, the custom has in view the prevention of the smut in wheat. 'All the servants of every farmer assemble in one of the fields that has been sown with wheat. At the end of twelve lands, they make twelve fires in a row with straw; around one of which, made larger than the rest, they drink a cheerful glass of cider to their master's health, and success to the future harvest; then returning home, they feast on cakes made with carraways, soaked in cider, which they claim as a reward for their past labour in sowing the grain.*

'In the south hams [villages] of Devonshire, on the eve of the Epiphany, the farmer, attended by his workmen, with a large pitcher of cider, goes to the orchard, and there encircling one of the best bearing trees, they drink the following toast three several times:—

'Here's to thee, old apple-tree,
Whence thou mayst bud, and whence thou mayst
blow!
And whence thou mayst bear apples enow!
Hats full! caps full!
Bushel—bushel—sacks full,
And my pockets full too! Huzza!

This done, they return to the house, the doors of which they are sure to find bolted by the females, who, be the weather what it may, are inexorable to all entreaties to open them till some one has

* Rudge's Gloucester.

guessed at what is on the spit, which is generally some nice little thing, difficult to be hit on, and is the reward of him who first names it. The doors are then thrown open, and the lucky clod-pole receives the tit-bit as his recompense. Some are so superstitious as to believe, that if they neglect this custom, the trees will bear no apples that year.—*Gentleman's Magazine, 1791, p. 403.*

OLD ENGLISH PRONUNCIATIONS.

The history of the pronunciation of the English language has been little traced. It fully appears that many words have sustained a considerable change of pronunciation during the last four hundred years: it is more particularly marked in the vowel sounds. In the days of Elizabeth, high personages pronounced certain words in the same way as the common people now do in Scotland. For example, the wise Lord Treasurer Burleigh said *whan* instead of when, and *war* instead of were; witness a sentence of his own: 'At Enfield, fyndyng a dozen in a plump, *whan* there was no rayne, I bethought myself that they *war* appointed as watchmen, for the apprehending of such as are missyng,' &c.—Letter to Sir Francis Walsingham, 1586. (*Collier's Papers to Shakspeare Society.*) Sir Thomas Gresham, writing to his patron in behalf of his wife, says: 'I humbly beseech your honour to be a *stey* and some comfort to her in this my absence.' Finding these men using such forms, we may allowably suppose that much also of their colloquial discourse was of the same homely character.

Lady More, widow of the Lord Chancellor Sir Thomas More, writing to the Secretary Cromwell in 1535, beseeched his '*especial gude maistership*,' out of his '*abundant gudeness*' to consider her case. 'So, bretherne, here is my *maister*,' occurs in Bishop Lacy's Exeter Pontifical about 1450. These pronunciations are the broad Scotch of the present day.

Tway for two, is another old English pronunciation. 'By whom came the inheritance of the lordship of Burleigh, and other lands, to the value of *twai* hundred pounds yearly,' says a contemporary life of the illustrious Lord Treasurer. *Tway* also occurs in Piers Ploughman's Creed in the latter part of the fourteenth century:

'—Thereon lay a litel chylde lapped in cloutes,
And tweyne of *twie* yeres olde,' &c.

So also an old manuscript poem preserved at Cambridge:

'Dame, he seyde, how schalle we doo,
He fayleth *twaye* tethe also.'

This is the pronunciation of Tweeddale at the present day; while in most parts of Scotland they say *twa*. *Tway* is nearer to the German *zwei*.

A Scotsman, or a North of England man, speaking in his vernacular, never says 'all:' he says 'a.' In the old English poem of *Havelok*, the same form is used:

'He shall haven in his hand
A Denemark and England.'

The Scotsman uses *ony* for any :

'Aye keep something to yoursel'
Ye scarcely tell to *ony*.'

BURNS.

This is old English, as witness Caxton the printer in one of his publishing advertisements issued about 1490: 'If it ples *ony* man, spirituel or temporel,' &c. An Englishman in those days would say *ane* for one, even in a prayer :

'Thus was Thou aye, and evere salle be,
Thre yn *ane*, and *ane* yn thre.'

A couplet, by the way, which gives another Scotch form in *sal* for shall. He also used *amang* for among, *sang* for song, *faught* for fought,

('They faught with Heraud everilk *ane*,
Guy of Warwick.)

tald for told, *fand* for found, *gane* for gone, and *awn* for own. The last four occur in the curious verse inscriptions on the frescoes representing scenes in St Augustine's life in Carlisle Cathedral, and in many other places, as a reference to Halliwell's *Dictionary of Archaisms* will shew.

In a manuscript form of the making of an abbess, of probably the fifteenth century, *mainteyne* for maintain, *sete* for seat, and *quere* for quire, shew the prevalence at that time in England of pronunciations still retained in Scotland. (*Dugdale's Monasticon*, i. 437.) *Abstein* for abstain, persevered down to the time of Elizabeth: 'He that will doo this worke shall *absteine* from lecherousnes and dronkenesse,' &c. *Scot's Discoverie of Witchcraft*, 1584, where *contein* also occurs. The form *sook* for suck, which still prevails in Scotland, occurs in Capgrave's metrical *Life of St Katherine*, about 1450.

'Ah! Jesu Christ, crown of maidens all,
A maid bare thee, a maid gave thee *sook*.'

Stree for straw—being very nearly the Scottish pronunciation—occurs in Sir John Mandeville's *Travels*, of the fourteenth century. Even that peculiarly vicious northern form of *shooter* for suitor would appear, from a punning passage in Shakspeare, to have formerly prevailed in the south also:

Boyet.—Who is the suitor?

Rosaline.—Well, then, I am the *shooter*.
Love's Labour Lost.

It is to be observed of Shakspeare that he uses fewer old or northern words than some of his contemporaries; yet the remark is often made by Scotsmen, that much of his language, which the commentators explain for English readers, is to them intelligible as their vernacular, so that they are in a condition more readily to appreciate the works of the bard of Avon than even his own countrymen.

The same remark may be made regarding Spenser, and especially with respect to his curious poem of the *Shepherd's Calendar*. When he there tells of a ewe, that 'She mought ne gang on the greene,' he uses almost exactly the language that would be employed by a Selkirkshire shepherd, on a like occasion, at the

present day. So also when Thenot says: 'Tell me, good Hobbino!, what gars thee greet?' he speaks pure Scotch. In this poem, Spenser also uses *tway* for two, *gait* for goat, *mickle* for much, *wark* for work, *wae* for woe, *ken* for know, *craig* for the neck, *warr* for worse, *hame* for home, and *teen* for sorrow, all of these being Scottish terms.

From that rich well of old English, Wycliffe's translation of the Bible, we learn that in the fourteenth century *aboon* stood for above ('Gird *abowen* with knychtis gyrdill,' 2 *Kings* iii. 21), *nowther* was neither, and *breed* was bread ('Give to us this day oure breed,' &c.), all of these being Scottish pronunciations of the present day.

Wycliffe also uses many words, now obsolete in England, but still used in Scotland, as *oker* for interest, *orison* for oration, *almery*, a press or cupboard, *sad* for firm or solid, *tolbooth*, a place to receive taxes ('He seith a man syttinge in a tolbothe, Matheu by name,' *Matt.* ix. 9); *toun* for a farm ('The first saide, Y have boucht a toun, and Y have nede to go out and se it,' *Luke* xiv. 19), *scarry* for precipitous, *repe* for a handful of corn-straw ('Here's a *rip* to thy auld baggie.'—*Burns*. 'Whanne thou repest corn in the feeld, and forgetist and leuest a repe, thou schalt not turn agen to take it,' *Deut.* xxiv. 19), *forleit* for left altogether. The last, a term which every boy in Scotland applies to the forsaking of a nest by the bird, was used on a remarkable public occasion to describe the act of James II. in leaving his country. 'Others,' says Sir George Mackenzie, 'were for declaring that the king had *forleited* the kingdom.'

The differences of pronunciation which now exist between the current English and cognate languages chiefly lie in the vowel sounds. The English have flattened down the broad A in a vast number of cases, and played a curious legerdemain with E and I, while other nations have in these particulars made no change. It seems to have been a process of refinement, or what was thought to be such, in accordance with the advancing conditions of domestic life in a country on the whole singularly fortunate in all the circumstances that favour civilization. Whether there is a real improvement in the case may be doubted; that it is a deterioration would scarcely be asserted in any quarter. Even those, however, who take the most favourable view of it, must regret that the change should have extended to the pronunciation of Greek and Latin. To introduce the flat A for the broad one, and interchange the sounds of E and I, in these ancient languages, must be pronounced as an utterly unwarrantable interference with something not our own to deal with—it is like one author making alterations in the writings of another, an act which justice and good taste alike condemn.

Chalk.—Mrs Delany says: 'I have found remarkable benefit from having chalk in everything I drink; a lump put into the jug of water, and the tea-water managed in the same way. It is a great sweetener of the blood.'

Price of Tea in 1728.—'The man at the Poultry has tea of all prices—Bohea from thirteen to twenty shillings, and green from twelve to thirty.'—*Mrs. Delany's Correspondence*.

JANUARY 6.

Epiphany, or Twelfth-Day.

(Old Christmas Day.)

St Melanius, bishop, 490. St Nilammon, hermit. St Peter, abbot of St Austin's, Canterbury, 608.

Born.—Richard II., King of England, 1366; Joan d'Arc, 1402; Peter Metastasio, poet, 1698; Benjamin Franklin, philosopher, *Boston, U.S.*, 1706; David Dale, philanthropist, 1739; George Thomas Doo, engraver, 1800.

Died.—Seth Ward, Bishop of Salisbury, mathematician, 1689; John Dennis, critic, 1734; Madame d'Arblay (Frances Burney), novelist, 1840; James Smith, comic poet, 1840; Fanny Wright, lady politician, 1853.

BENJAMIN FRANKLIN.*

Modern society has felt as if there were something wanting in the character of Franklin; yet what the man positively had of good about him was, beyond all doubt, extremely good. Self-

denial, energy, love of knowledge, sagacity to discern and earnestness to pursue what was calculated to promote happiness amongst mankind, scientific ingenuity, courage in the protection of patriotic interests against misrule—all were his. How few men possess half so many high qualities!

It is an extremely characteristic circumstance that, landing at Falmouth from a dangerous voyage, and going to church with his son to return thanks to God for their deliverance, he felt it as an occasion when a Catholic would have vowed to build a chapel to some saint: 'not being a Catholic,' said the philosopher, 'if I were to vow at all, it would be to build a *lighthouse*' [the article found chiefly wanting towards the end of their voyage].

It is little known that it was mainly by the advice of Franklin that the English government resolved to conquer Canada, and for that purpose sent out Wolfe's expedition.

While in our island at that time (1759), as agent for the colony of Pennsylvania, he made an ex-

* Franklin is sometimes said to have been born on the 17th of January. He was, in reality, born on what was held at the time of birth as the 6th, being *old style*. Considering that the day of the birth of remarkable men, as expressed in *their own time*, is that round which our associations arrange themselves, it is intended in this work to adhere to that date, in all cases where it is known.

ursion to Scotland, accompanied by his son. His reputation as a man of science had made him well known there, and he was accordingly received with distinction by Hume, Robertson, Lord Kames, and other literary men of note, was made a doctor of St Andrew's University, and a Burgess by the Town Council of Edinburgh. Franklin paid a long visit to Lord Kames at his seat of Kames in Berwickshire, and when he came away, his host and hostess gave him a convoy into the English border. Some months after, writing to his lordship from London, he said: 'How much more agreeable would our journey have been, if we could have enjoyed you as far as York! We could have beguiled the way by discoursing on a thousand things that now we may never have an opportunity of considering together; for conversation warms the mind, enlivens the imagination, and is continually starting fresh game that is immediately pursued and taken, and which would never have occurred in the duller intercourse of epistolary correspondence. So that whenever I reflect on the great pleasure and advantage I received from the free communication of sentiment in the conversation we had at Kames, and in the agreeable little rides to the Tweedside, I shall ever regret our premature parting.'

'Our conversation,' he added, 'until we came to York, was chiefly a recollection of what we had seen and heard, the pleasure we had enjoyed, and the kindnesses we had received in Scotland, and how far that country had exceeded our expectations. On the whole, I must say, I think the time we spent there was six weeks of the *densest* happiness I have ever met with in any part of my life; and the agreeable and instructive society we found there in such plenty, has left so

pleasing an impression

on my memory, that, did not strong connections draw me elsewhere, I believe Scotland would be the country I should choose to spend the remainder of my days in.'

Soon after, May 3rd, 1760, Franklin communicated to Lord Kames a plan he had formed to write a little book under the title of *The Art of Virtue*. 'Many people,' he said, 'lead bad lives that would gladly lead good ones, but do not know how to make the change. They have frequently resolved and endeavoured it; but in vain, because their endeavours have not been properly

BENJAMIN FRANKLIN.

conducted. To expect people to be good, to be just, to be temperate, &c., without shewing them how they should become so, seems like the ineffectual charity mentioned by the Apostle, which consisted in saying to the hungry, the cold, and the naked, "Be ye fed, be ye warmed, be ye clothed," without shewing them how they should get food, fire, or clothing.

'Most people have naturally some virtues, but none have naturally *all* the virtues.

'To inquire those that are wanting, and secure what we require as well as those we have naturally, is the subject of an art. It is properly an art, as painting, navigation, or architecture. If a man would become a painter, navigator, or architect, it is not enough that he is *advised* to be one, that he is *convinced* by the arguments of his adviser that it would be for his advantage to be one, and that he resolves to be one; but he must also be taught the principles of the art, be shewn all the methods of working, and how to acquire the habits of using properly all the instruments; and thus regularly and gradually he arrives, by practice, at some perfection in the art. If he does not proceed thus, he is apt to meet with difficulties that might discourage him, and make him drop the pursuit.

'My *Art of Virtue* has also its instruments, and teaches the manner of using them.

'Christians are directed to have faith in Christ, as the effectual means of obtaining the change they desire. It may, when sufficiently strong, be effectual with many; for a full opinion, that a teacher is infinitely wise, good, and powerful, and that he will certainly reward and punish the obedient and disobedient, must give great weight to his precepts, and make them much more attended to by his disciples. But many have this faith in so weak a degree, that it does not produce the effect. Our *Art of Virtue* may, therefore, be of great service to those whose faith is unhappily not so strong, and may come in aid of its weakness. Such as are naturally well-disposed, and have been so carefully educated as that good habits have been early established and bad ones prevented, have less need of this art; but all may be more or less benefited by it.*

Between two men of such sentiments as Franklin and Lord Kames, thrown together for six weeks, the subject of religious toleration we may well suppose to have been frequently under discussion. Franklin communicated to his Scotch friend a small piece, of the nature of an apology, designed to give a lesson of toleration, and which Kames afterwards published. It has often been reprinted as an original idea of the American philosopher; but, in reality, he never pretended to anything more than giving it its literary style, and the idea can be traced back through a devious channel to Saadi, the Persian poet, who, after all, relates it as coming from another person. It was as follows:—

'1. And it came to pass after these things, that Abraham sat in the door of his tent, about the going down of the sun.

'2. And behold a man, bowed with age, came from the way of the wilderness, leaning on a staff.

* Sparkes's *Life and Correspondence of Franklin*. 10 vols. 8vo. Philadelphia. Vol. ix.

'3. And Abraham arose and met him, and said unto him, "Turn in, I pray thee, and wash thy feet, and tarry all night, and thou shalt arise early on the morrow, and go on thy way."

'4. But the man said, "Nay, for I will abide under this tree."

'5. And Abraham pressed him greatly; so he turned, and they went into the tent, and Abraham baked unleavened bread, and they did eat.

'6. And when Abraham saw that the man blessed not God, he said unto him, "Wherefore dost thou not worship the most high God, Creator of heaven and earth?"

'7. And the man answered and said, "I do not worship the God thou speakest of, neither do I call upon his name; for I have made to myself a god which abideth alway in mine house, and provideth me with all things."

'8. And Abraham's zeal was kindled against the man, and he arose and fell upon him, and drove him forth with blows into the wilderness.

'9. And at midnight God called unto Abraham, saying, "Abraham, where is the stranger?"

'10. And Abraham answered and said, "Lord, he would not worship thee, neither would he call upon thy name; therefore have I driven him out from before my face into the wilderness."

'11. And God said, "Have I borne with him these hundred ninety and eight years, and nourished him, and clothed him, notwithstanding his rebellion against me; and couldst not thou, that art thyself a sinner, bear with him one night?"

'12. And Abraham said, "Let not the anger of the Lord wax hot against his servant; lo, I have sinned; forgive me, I pray thee."

'13. And Abraham arose, and went forth into the wilderness, and sought diligently for the man and found him, and returned with him to the tent: and when he had entreated him kindly, he sent him away on the morrow with gifts.'

That Franklin should have ascended from the condition of a journeyman compositor to be a

PRINTING PRESS WORKED AT BY FRANKLIN
IN LONDON.

great philosopher and legislator, and 'to stand before kings,' is certainly one of the most interesting biographical facts which the eighteenth century presents. Without that frugal use of means, the want of which so signally keeps our toiling millions poor, it never could have been.

Of ever memorable value is the anecdote he tells of his practice in a London printing-office. 'I drank only water,' says he; 'the other workmen, near fifty in number, were great drinkers of beer. On one occasion, I carried up and down stairs a large form of types in each hand, when others carried but one in both hands. They wondered to see that the *Water American*, as they called me, was stronger than themselves who drank *strong beer*. We had an alehouse boy, who always attended in the house to supply the workmen. My companion at the press drank every day a pint before breakfast, a pint at breakfast with his bread and cheese, a pint between breakfast and dinner, a pint at dinner, a pint in the afternoon about six o'clock, and another when he had done with his day's work. I thought it a detestable custom; but it was necessary, he supposed, to drink *strong beer* that he might be *strong* to labour. I endeavoured to convince him that the bodily strength afforded by beer could only be in proportion to the grain or flour of the barley dissolved in the water of which it was made; that there was more flour in a pennyworth of bread; and therefore, if he could eat that with a pint of water, it would give him more strength than a quart of beer. He drank on, however, and had four or five shillings to pay out of his wages every Saturday night for that vile liquor; an expense I was free from. And thus these poor devils kept themselves always under.'

THE RETREAT FROM CAUBUL, 1842.

The British power went into Afghanistan, in 1839, upon an unrighteous cause. The punishment which Providence, in the natural course of events, brings upon such errors, overtook it towards the close of 1841, and on the 6th of January it became a necessity that an army of about 4,500 men, with 12,000 camp followers, should commence a precipitate retreat from its Caubul cantonments, through a difficult country, under frost and snow, which it was ill-fitted to endure, and harassed by hordes of implacable enemies. The *Noche Triste* of Cortez's troops on their retirement from Mexico, the terrible retreat of Napoleon's army from Moscow, even the fearful scenes which attended the destruction of Jerusalem, scarcely afford a more distressing narrative of human woe. The first day's march took them five miles through the snow, which was in many places dyed with their blood. They had to bivouack in it, without shelter, and with scarcely any food, and next morning they resumed their journey, or rather flight,—a long confused line of soldiery mixed with rabble, camels and other beasts of burden, and ladies with their children; while the native bands were continually attacking and plundering. The second evening saw them only ten miles advanced upon their fatal journey, and the night was again spent in the snow, which proved the winding-sheet of many before morning. It is believed that if they had started more promptly, and could have advanced more rapidly, the enemy, scarcely prepared to follow them, could not have proved so destructive. But the general—Elphinstone, — and other chief officers, were

tempted to lose time in the hope of negotiating with the hostile chiefs, and particularly Akbar-Khan, for a purchased safety. Unfortunately, the native chiefs had little or no control over their followers. It was on this third day that they had to go through the celebrated Koord-Caubul Pass. The force, with its followers, in a long disorderly string, struggled on through the narrow defile, suffering under a constant and deadly fire from the fanatical Ghilzyes, or falling under their knives in close encounter. Thus, or by falling exhausted in the snow, 3,000 are said to have perished. Another night of exposure, hunger, and exhaustion followed. Next day, the sadly reduced files were stayed for a while, to try another negotiation for safety. The ladies and the married officers were taken under the protection of Akbar-Khan, and were thus saved. The remaining soldiery, and particularly the Indian troops, were now paralysed with the effects of the cold, and scarcely able to handle or carry their arms. Many were butchered this day. They continued the march at night, in the hope of reaching Jugdulluck, and next day they still went on, doing their best to repel the enemy as they went. Reduced to a mere handful, they still exhibited the devoted courage of British soldiers. While the wretched remnant halted here, the general and two other officers gave themselves up to Akbar-Khan, as pledges that Jellalabad would be delivered up for the purchase of safety to the troops. The arrangement only served to save the lives of those three officers. The subsequent day's march was still harassed by the natives, and at a barrier which had been erected in the Jugdulluck Pass, the whole of the remainder were butchered, excepting about twenty officers and forty-five soldiers. After some further collisions with the foe, there came to be only six officers alive at a place about sixteen miles from Jellalabad. On the 13th of January, the garrison of that fortress saw a single man approaching their walls, mounted on a wretched little pony, and hanging exhausted upon its neck. He proved to be Dr Bryden, the only one of the force which left Caubul a week before, who had escaped to tell the tale.

It is easy to shew how the policy of particular commanders had a fatal effect in bringing about this frightful disaster to the British power—how, with better management on their part, the results might have been, to some extent, otherwise; but still the great fact remains, that a British army was where it ought never to have been, and of course exposed to dangers beyond those of fair warfare. An ancient Greek dramatist, in bringing such a tragedy before the attention of his audience, would have made the Chorus proclaim loudly the wrath of the gods. Ignorant men, of our own day, make comments not much different. The remark which a just philosophy makes on the subject is, that God has arranged that justice among men should have one set of effects, and injustice another. Where nations violate the Divine rule to do to others as they would have others to do to them, they lay themselves open to all the calamitous consequences which naturally flow from the act, just as surely as do individuals when they act in the same manner.

Twelfth-Day.

This day, called Twelfth-Day, as being in that number after Christmas, and Epiphany from the Greek *Ἐπιφάνεια*, signifying *appearance*, is a festival of the Church, in commemoration of the *Manifestation of Christ to the Gentiles*; more expressly to the three Magi, or Wise Men of the East, who came, led by a star, to worship him immediately after his birth. (*Matt. ii. 1-12.*) The Epiphany appears to have been first observed as a *separate* feast in the year 813. Pope Julius I. is, however, reputed to have taught the Church to distinguish the Feasts of the Nativity and Epiphany, so early as about the middle of the fourth century. The primitive Christians celebrated the Feast of the Nativity for twelve days, observing the first and last with great solemnity; and both of these days were denominated Epiphany, the first the greater Epiphany, from our Lord having on that day become Incarnate, or made His appearance in "the flesh;" the latter, the lesser Epiphany, from the three-fold manifestation of His Godhead—the first, by the appearance of the blazing star which conducted Melchior, Jasper, and Balthuzar, the three Magi, or wise men, commonly styled the three Kings of Cologne, out of the East, to worship the Messiah, and to offer him presents of "Gold, Frankincense, and Myrrh"—Melchior the *Gold*, in testimony of his royalty as the promised King of the Jews; Jasper the *Frankincense*, in token of his Divinity; and Balthuzar the *Myrrh*,

in allusion to the sorrows which, in the humiliating condition of a man, our Redeemer vouchsafed to take upon him: the second, of the descent of the Holy Ghost in the form of a Dove, at the Baptism: and the third, of the first miracle of our Lord turning water into wine at the marriage in Cana. All of which three manifestations of the Divine nature happened on the same day, though not in the same year.

'To render due honour to the memory of the ancient Magi, who are supposed to have been kings, the monarch of this country himself, either personally or through his chamberlain, offers annually at the altar on this day, Gold, Frankincense, and Myrrh; and the kings of Spain, where the Feast of Epiphany is likewise called the "Feast of the Kings," were accustomed to make the like offerings.'—*Brady.*

In the middle ages, the worship by the Magi was celebrated by a little drama, called the Feast of the Star. 'Three priests, clothed as kings, with their servants carrying offerings, met from different directions before the altar. The middle one, who came from the east, pointed with his staff to a star. A dialogue then ensued; and, after kissing each other, they began to sing, "Let us go and inquire;" after which the precentor began a responsory, "Let the Magi come." A procession then commenced; and as soon as it began to enter the nave, a crown, with a star resembling a cross, was lighted up, and pointed

out to the Magi, with, "Behold the Star in the East." This being concluded, two priests standing at each side of the altar, answered meekly, "We are those whom you seek;" and, drawing a curtain, shewed them a child, whom, falling down, they worshipped. Then the servants made the offerings of gold, frankincense, and myrrh, which were divided among the priests. The Magi, meanwhile, continued praying till they dropped asleep; when a boy, clothed in an alb, like an angel, addressed them with, "All things which the prophets said are fulfilled." The festival concluded with chanting services, &c. At Soissons, a rope was let down from the roof of the church, to which was annexed an iron circle having seven tapers, intended to represent Lucifer, or the morning star; but this was not confined to the Feast of the Star.—Fosbroke's *Antiquities*, ii. 700.

At Milan, in 1336, the *Festival of the Three Kings* was celebrated in a manner that brings forcibly before us the tendency of the middle ages to fix attention on the historical externals of Christianity. The affair was got up by the Preaching Friars. 'The three kings appeared, crowned, on three great horses richly habited, surrounded by pages, body guards, and an innumerable retinue. A golden star was exhibited in the sky, going before them. They proceeded to the pillars of St Lawrence, where King Herod was represented with his scribes and wise men. The three kings ask Herod where Christ should be born, and his wise men, having consulted their books, answer, at Bethlehem. On which the three kings, with their golden crowns, having in their hands golden cups filled with frankincense, myrrh, and gold, the star going before, marched to the church of St Eustorgius, with all their attendants, preceded by trumpets, horns, asses, baboons, and a great variety of animals. In the church, on one side of the high altar, there was a manger with an ox and ass, and in it the infant Christ in the arms of his mother. Here the three kings offer Him gifts. The concourse of the people, of knights, ladies, and ecclesiastics, was such as was never before beheld.*

In its character as a popular festival, Twelfth-Day stands only inferior to Christmas. The leading object held in view is to do honour to the three wise men, or, as they are more generally denominated, the three kings. It is a Christian custom, ancient past memory, and probably suggested by a pagan custom, to indulge in a pleasantry called the *Election of Kings by Beans*.† In England, in later times, a large cake was formed, with a bean inserted, and this was called *Twelfth-Cake*. The family and friends being assembled, the cake was divided by lot, and whoever got the piece containing the bean was accepted as king for the day, and called King of the Bean. The importance of this ceremony in France, where the mock sovereign is named *Le Roi de la Fève*, is indicated by the proverbial

* Warton's *History of English Poetry*, quoting a Chronicle of Milan, by Gualvanei de la Flamma.

† 'Some maintain it to have been derived from the custom observed by the Roman children, who, at the end of their Saturnalia, drew lots with beans, to see who would be king.'—*Brady*.

phrase for good luck, 'Il a trouvé la fève au gâteau.' He has found the bean in the cake. In Rome, they do not draw king and queen as in England, but indulge in a number of jocularities, very much for the amusement of children. Fruit-stalls and confectioners' shops are dressed up with great gaiety. A ridiculous figure, called *Beffana*, parades the streets, amidst a storm of popular wit and nonsense. The children, on going to bed, hang up a stocking, which the *Beffana* is found next morning to have filled with cakes and sweetmeats if they have been good, but with stones and dirt if they have been naughty.

In England, it appears there was always a queen as well as a king on Twelfth-Night. A writer, speaking of the celebration in the south of England in 1774, says: 'After tea, a cake is produced, with two bowls containing the fortunate chances for the different sexes. The host fills up the tickets, and the whole company, except the king and queen, are to be ministers of state, maids of honour, or ladies of the bed-chamber. Often the host and hostess, more by design than accident, become king and queen. According to Twelfth-Day law, each party is to support his character till midnight.

In the sixteenth century, it would appear that some peculiar ceremonies followed the election of the king and queen. Barnaby Gooch, in his paraphrase of the curious poem of Nageorgus, *The Popish Kingdom*, 1570, states that the king, on being elected, was raised up with great cries to the ceiling, where, with chalk, he inscribed crosses on the rafters to protect the house against evil spirits.

The sketch on the opposite page is copied from an old French print, executed by J. Mariatte, representing *Le Roi de la Fève* (the King of the Bean) at the moment of his election, and preparing to drink to the company. In France, this act on his part was marked by a loud shout of 'Le Roi boit!' (The king drinks,) from the party assembled.

A Twelfth-Day custom, connected with Paget's Bromley in Staffordshire, went out in the seventeenth century. A man came along the village with a mock horse fastened to him, with which he danced, at the same making a snapping noise with a bow and arrow. He was attended by half-a-dozen fellow-villagers, wearing mock deers' heads, and displaying the arms of the several chief landlords of the town. This party danced *the Hays*, and other country dances, to music, amidst the sympathy and applause of the multitude. There was also a huge pot of ale with cakes by general contribution of the village, out of the very surplus of which 'they not only repaired their church, but kept their poor too; which charges,' quoth Dr Plot, 'are not now, perhaps, so cheerfully borne.*'

On Twelfth-Night, 1606, Ben Jonson's masque of *Hymen* was performed before the Court; and in 1613, the gentlemen of Gray's Inn were permitted by Lord Bacon to perform a Twelfth-Day masque at Whitehall. In this masque the character of Baby Cake is attended by 'an

* *Natural History of Staffordshire*, 1680, p. 434.

THE KING OF THE BEAN.

usher bearing a great cake with a bean and a pease.'

On Twelfth-Day, 1563, Mary Queen of Scots celebrated the French pastime of the King of the Bean at Holyrood, but with a queen instead of a king, as more appropriate, in consideration of herself being a female sovereign. The lot fell to the real queen's attendant, Mary Fleming, and the mistress good-naturedly arrayed the servant in her own robes and jewels, that she might duly sustain the mimic dignity in the festivities of the night. The English resident, Randolph, who was in love with Mary Beton, another of the queen's maids of honour, wrote in excited terms about this festival to the Earl of Leicester. 'Happy was it,' says he, 'unto this realm, that her reign endured no longer. Two such sights, in one state, in so good accord, I believe was never seen, as to behold two worthy queens possess, without envy, one kingdom, both upon a day. I leave the rest to your lordship to be judged of. My pen staggereth, my hand faileth, further to write. . . . The queen of the bean was that day in a gown of cloth of silver; her head, her neck, her shoulders, the rest of her whole body, so beset with stones, that more in our whole jewel-house were not to be found. . . . The cheer was great. I never found myself so happy, nor so well treated, until that it came to the point that the old queen [Mary] herself, to show her mighty power, contrary unto the assurance granted me by the younger queen [Mary Fleming], drew me into the dance, which part of the play I could

with good will have spared unto your lordship, as much fitter for the purpose.*

Charles I. had his masque on Twelfth-Day, and the Queen hers on the Shrovetide following, the expenses exceeding £2000; and on Twelfth-Night, 1633, the Queen feasted the King at Somerset House, and presented a pastoral, in which she took part.

Down to the time of the Civil Wars, the feast was observed with great splendour, not only at Court, but at the Inns of Court, and the Universities (where it was an old custom to choose the king by the bean in a cake), as well as in private mansions and smaller households.

Then, too, we read of the English nobility keeping Twelfth-Night otherwise than with cake and characters, by the diversion of blowing up pasteboard castles; letting claret flow like blood, out of a stag made of paste; the castle bombarded from a pasteboard ship, with cannon, in the midst of which the company pelted each other with egg-shells filled with rose-water; and large pies were made, filled with live frogs, which hopped and flew out, upon some curious person lifting up the lid.

Twelfth-Night grew to be a Court festival, in which gaming was a costly feature. Evelyn tells us that on Twelfth-Night, 1662, according to custom, his Majesty [Charles II.] opened the revels of that night by throwing the dice himself in the Privy Chamber, where was a table set on purpose, and lost his £100. [The year before

* Strickland's *Lives of the Queens of Scotland*, iv. 20.

he won £1500.] The ladies also played very deep. Evelyn came away when the Duke of Ormond had won about £1000, and left them still at passage, cards, &c., at other tables.

The Rev. Henry Teonge, chaplain of one of Charles's ships-of-war, describes Twelfth-Night on board: 'Wee had a great kake made, in which was put a beane for the king, a pease for the queen, a cloave for the knave, &c. The kake was cut into several pieces in the great cabin, and all put into a napkin, out of which every one took his piece as out of a lottery; then each piece is broken to see what was in it, which caused much laughter, and more to see us tumble one over the other in the cabin, by reason of the ruff weather.' The celebrated Lord Peterborough, then a youth, was one of the party on board this ship, as Lord Mordaunt.

The Lord Mayor and Aldermen and the guilds of London used to go to St Paul's on Twelfth-Day, to hear a sermon, which is mentioned as an old custom in the early part of Elizabeth's reign.

A century ago, the king, preceded by heralds, pursuivants, and the Knights of the Garter, Thistle, and Bath, in the collars of their respective orders, went to the Royal Chapel at St James's, and offered gold, myrrh, and frankincense, in imitation of the Eastern Magi offering to our Saviour. Since the illness of George III., the procession, and even the personal appearance of the monarch, have been discontinued. Two gentlemen from the Lord Chamberlain's office now appear instead, attended by a box ornamented at top with a spangled star, from which they take the gold, frankincense, and myrrh, and place them on an alms-dish held forth by the officiating priest.

In the last century, *Twelfth-Night Cards* represented ministers, maids of honour, and other attendants of a court, and the characters were to be supported throughout the night. John Britton, in his *Autobiography*, tells us he 'suggested and wrote a series of Twelfth-Night Characters, to be printed on cards, placed in a bag, and drawn out at parties on the memorable and merry evening of that ancient festival. They were sold in small packets to pastrycooks, and led the way to a custom which annually grew to an extensive trade. For the second year, my pen-and-ink characters were accompanied by prints of the different personages by Cruikshank (father of the inimitable George), all of a comic or ludicrous kind.' Such characters are still printed.

The celebration of Twelfth-Day with the costly and elegant Twelfth-cake has much declined within the last half-century. Formerly, in London, the confectioners' shops on this day were entirely filled with Twelfth-cakes, ranging in price from several guineas to a few shillings; the shops were tastefully illuminated, and decorated with artistic models, transparencies, &c. We remember to have seen a huge Twelfth-cake in the form of a fortress, with sentinels and flags; the cake being so large as to fill two ovens in baking.

One of the most celebrated and attractive displays was that of Birch, the confectioner,

No. 15, Cornhill, probably the oldest shop of its class in the metropolis. This business was established in the reign of King George I., by a Mr Horton, who was succeeded by Mr Lucas Birch, who, in his turn, was succeeded by his son, Mr Samuel Birch, born in 1757; he was many years a member of the Common Council, and was elected alderman of the ward of Candlewick. He was also colonel of the City Militia, and served as Lord Mayor in 1815, the year of the battle of Waterloo. In his mayoralty, he laid the first stone of the London Institution; and when Chantrey's marble statue of George III. was inaugurated in the Council Chamber, Guildhall, the inscription was written by Lord Mayor Birch. He possessed considerable literary taste, and wrote poems and musical dramas, of which the *Adopted Child* remained a stock piece to our time. The alderman used annually to send, as a present, a Twelfth-cake to the Mansion House. The upper

NO. 15, CORNHILL.

portion of the house in Cornhill has been rebuilt, but the ground-floor remains intact, a curious specimen of the decorated shop-front of the last century, and here are preserved two door-plates, inscribed, 'Birch, Successor to Mr Horton,' which are 140 years old. Alderman Birch died in 1840, having been succeeded in the business in Cornhill in 1836 by the present proprietors, Ring and Brymer. Dr Kitchiner extols the soups of Birch, and his skill has long been famed in civic banquets.

We have a Twelfth-Night celebration recorded in theatrical history. Baddeley, the comedian (who had been cook to Foote), left, by will, money to provide cake and wine for the performers, in the green-room at Drury-lane Theatre, on Twelfth-Night; but the bequest is not now observed in this manner.

The Carnival.

The period of Carnival—named as being *car-nivale*, a farewell to flesh—is well known as a time of merry-making and pleasure, indulged in in Roman Catholic countries, in anticipation of the abstemious period of Lent: it begins at Epiphany, and ends on Ash Wednesday. Selden remarks: 'What the Church debars one day, she gives us leave to take out in another. First, we fast, then we feast; first, there is a Carnival, then a Lent.' In these long revels, we trace some of the licence of the Saturnalia of the Christian Romans, who could not forget their pagan festivals. Milan, Rome, and Naples were celebrated for their carnivals, but they were carried to their highest perfection at Venice. Bishop Hall, in his *Triumphs of Rome*, thus describes the *Jovial Carnival* of that city: 'Every man cries *Sciolta*, letting himself loose to the maddest of merriments, marching wildly up and down in all forms of disguises; each man striving to outgo others in strange pranks of humorous debauchedness, in which even those of the holy order are wont to be allowed their share; for, howsoever it was by some sullen authority forbidden to clerks and votaries of any kind to go masked and disguised in those seemingly abusive solemnities, yet more favourable construction hath offered to make them believe it was chiefly for their sakes, for the refreshment of their sadder and more restrained spirits, that this free and lawless festivity was taken up.'

In modern Rome, the masquerading in the streets and all the out-of-door amusements are limited to eight days, during which the grotesque maskers pelt each other with sugar-plums and bouquets. These are poured from baskets from the balconies down upon the maskers in carriages and afoot; and they, in their turn, pelt the company at the windows: the *confetti* are made of chalk or flour, and a hundredweight is ammunition for a carriage-full of roisterers.

The Races, however, are one of the most striking out-of-door scenes. The horses are without riders, but have spurs, sheets of tin, and all sorts of things hung about them to urge them onward; across the end of the Piazza del Popolo is stretched a rope, in a line with which the horses are brought up; in a second or two, the rope is let go, and away the horses fly at a fearful rate down the Corso, which is crowded with people, among whom the plunging and kicking of the steeds often produce serious damage.

Meanwhile, there is the Church's Carnival, or the *Carnivale Sanctificato*. There are the regular spiritual exercises, or retreats, which the Jesuits and Passionists give in their respective houses for those who are able to leave their homes and shut themselves up in a monastery during the whole ten days; the *Via Crucis* is practised in the Coliseum every afternoon of the Carnival, and this is followed by a sermon and benediction; and there are similar devotions in the churches. In the colleges are given plays, the scenery, drops, and acting being better than the average of public performances; and between the acts

are played solos, duets, and overtures, by the students or their friends.

The closing revel of the Carnival is the *Moccoletti*, when the sport consists in the crowd carrying lighted tapers, and trying to put out each other's taper with a handkerchief or towel, and shouting *Sens moccolo*. M. Dumas, in his *Count of Monte Christo*, thus vividly describes this strange scene:

'The *moccolo* or *moccoletti* are candles, which vary in size from the paschal taper to the rushlight, and cause the actors of the great scene which terminates the Carnival two different subjects of anxiety: 1st, how to preserve their *moccoletti* lighted; secondly, how to extinguish the *moccoletti* of others. The *moccolo* is kindled by approaching it to a light. But who can describe the thousand means of extinguishing the *moccoletti*? The gigantic bellows, the monstrous extinguishers, the superhuman fans? The night was rapidly approaching: and, already, at the shrill cry of *Moccoletti!* repeated by the shrill voices of a thousand vendors, two or three stars began to twinkle among the crowd. This was the signal. In about ten minutes, fifty thousand lights fluttered on every side, descending from the Palais de Venise to the Plaza del Popolo, and mounting from the Plaza del Popolo to the Palais de Venise. It seemed the *fête* of Jack-o'-Lanterns. It is impossible to form any idea of it without having seen it. Suppose all the stars descended from the sky, and mingled in a wild dance on the surface of the earth; the whole accompanied by cries such as are never heard in any other part of the world. The *facchino* follows the prince, the *transtavere* the citizen: every one blowing, extinguishing, re-lighting. Had old Æolus appeared at that moment, he would have been proclaimed king of the *mocoli*, and Aquilo the heir-presumptive to the throne. This flaming race continued for two hours; the Rue du Cour was light as day, and the features of the spectators on the third and fourth stories were plainly visible. Suddenly the bell sounded which gives the signal for the Carnival to close, and at the same instant all the *moccoletti* were extinguished as if by enchantment. It seemed as though one immense blast of wind had extinguished them all. No sound was audible, save that of the carriages which conveyed the masks home; nothing was visible save a few lights that gleamed behind the windows. The Carnival was over.'

In Paris, the Carnival is principally kept on the three days preceding Ash Wednesday; and upon the last day, the procession of the *Bœuf-gras*, or Government prize ox, passes through the streets; then all is quiet until the Thursday of Mid-Lent, or *Mi-carême*, on which day only the revelry breaks out wilder than ever.

RHYTHMICAL PUNS ON NAMES.

One of the best specimens of this kind of composition is the poem said to have been addressed by Shakspeare to the Warwickshire beauty, Ann Hathaway, whom he afterwards married. Though his biographers assert that not a fragment of the

Bard of Avon's poetry on this lady has been rescued from oblivion, yet, that Shakspeare had an early disposition to write such verses, may be reasonably concluded from a passage in *Love's Labour Lost*, in which he says:

'Never durst poet teach a pen to write,
Until his ink were tempered with love's sighs.'

The lines, whether written by Shakspeare or not, exhibit a clever play upon words, and are inscribed:

'TO THE IDOL OF MY EYE, AND DELIGHT OF MY
HEART, ANN HATHAWAY.

Would ye be taught, ye feathered throng,
With love's sweet notes to grace your song,
To pierce the heart with thrilling lay,
Listen to mine Ann Hathaway!
She hath a way to sing so clear,
Phœbus might wondering stop to hear.
To melt the sad, make blithe the gay,
And Nature charm, Ann hath a way;
She hath a way,
Ann Hathaway;

To breathe delight, Ann hath a way.

When Envy's breath and rancorous tooth
Do soil and bite fair worth and truth,
And merit to distress betray,
To soothe the heart Ann hath a way.
She hath a way to chase despair,
To heal all grief, to cure all care,
Turn foulest night to fairest day.
Thou know'st, fond heart, Ann hath a way;

She hath a way,
Ann Hathaway;

To make grief bliss, Ann hath a way.

Talk not of gems, the orient list,
The diamond, topaze, amethyst,
The emerald mild, the ruby gay;
Talk of my gem, Ann Hathaway!
She hath a way, with her bright eye,
Their various lustre to defy,—
The jewels she, and the foil they,
So sweet to look Ann hath a way;

She hath a way,
Ann Hathaway;

To shame bright gems, Ann hath a way.

But were it to my fancy given
To rate her charms, I'd call them heaven;
For though a mortal made of clay,
Angels must love Ann Hathaway;
She hath a way so to control,
To rapture the imprisoned soul,
And sweetest heaven on earth display,
That to be heaven Ann hath a way;

She hath a way,
Ann Hathaway;

To be heaven's self, Ann hath a way!

When James I. visited the house of Sir Thomas Pope in Oxfordshire, the knight's infant daughter was presented to the king, with a piece of paper in her hands, bearing these lines:

'See! this little mistress here
Did never sit in Peter's chair,
Neither a triple crown did wear;
And yet she is a Pope!

No benefice she ever sold,
Nor did dispense with sin for gold;
She hardly is a fortnight old,
And yet she is a Pope!

No king her feet did ever kiss,
Or had from her worse looks than this;
Nor did she ever hope
To saint one with a rope,
And yet she is a Pope!

'A female Pope!' you'll say—"a second Joan!"
No, sure—she is Pope Innocent, or none.'

The following on a lady rejoicing in the name of Rain is not unworthy of a place here:

'Whilst shivering beaux at weather rail,
Of frost, and snow, and wind, and hail,
And heat, and cold, complain,
My steadier mind is always bent
On one sole object of content—
I ever wish for Rain!

Hymen, thy votary's prayer attend,
His anxious hope and suit befriend,
Let him not ask in vain;
His thirsty soul, his parched estate,
His glowing breast commiserate—
In pity give him Rain!

Another amorous rhymester thus writes:

'ON A YOUNG LADY NAMED CARELESS.

Careless by name, and Careless by nature;
Careless of shape, and Careless of feature.
Careless in dress, and Careless in air;
Careless of riding, in coach or in chair.
Careless of love, and Careless of hate;
Careless if crooked, and Careless if straight.
Careless at table, and Careless in bed;
Careless if maiden, not Careless if wed.
Careless at church, and Careless at play;
Careless if company go, or they stay.
E'en Careless at tea, not minding chit-chat;
So Careless! she's Careless for this or for that.
Careless of all love or wit can propose;
She's Careless—so Careless, there's nobody knows.
Oh! how I could love thee, thou dear Careless thing!
(Oh, happy, thrice happy! I'd envy no king.)
Were you Careful for once to return me my love,
I'd care not how Careless to others you'd prove.
I then should be Careless how Careless you were;
And the more Careless you, still the less I should care.'

Thomas Longfellow, landlord of the 'Golden Lion' inn at Brecon, must have pulled a rather long face, when he observed the following lines, written on the mantelshelf of his coffee-room:

'Tom Longfellow's name is most justly his due:
Long his neck, long his bill, which is very long too;
Long the time ere your horse to the stable is led,
Long before he's rubbed down, and much longer till
fed;
Long indeed may you sit in a comfortless room,
Till from kitchen long dirty your dinner shall come:
Long the often-told tale that your host will relate,
Long his face while complaining how long people eat;
Long may Longfellow long ere he see me again—
Long 'twill be ere I long for Tom Longfellow's inn.'

Nor has the House of Lords, or even the Church, escaped the pens of irreverent rhyming punsters. When Dr Goodenough preached before the Peers, a wag wrote:

'Tis well enough, that Goodenough
Before the Lords should preach;
For, sure enough, they're bad enough
He undertakes to teach.'

Again, when Archbishop Moore, dying, was succeeded by Dr Manners Sutton, the following lines were circulated:

'What say you? the Archbishop's dead?
A loss indeed!—Oh, on his head
May Heaven its blessings pour!
But if with such a heart and mind,
In Manners we his equal find,
Why should we wish for M-ore?'

Our next example is of a rather livelier description:

'At a tavern one night,
Messrs More, Strange, and Wright
Met to drink and their good thoughts exchange.
Says More, "Of us three,
The whole will agree,
There's only one knave, and that's Strange."

"Yes," says Strange, rather sore,
"I'm sure there's one More,
A most terrible knave, and a bite,
Who cheated his mother,
His sister, and brother."
"Oh yes," replied More, "that is Wright."

Wright again comes in very appropriately in these lines written

'ON MEETING AN OLD GENTLEMAN NAMED WRIGHT.

What, Wright alive! I thought ere this
That he was in the realms of bliss!
Let us not say that Wright is wrong,
Merely for holding out so long;
But ah! 'tis clear, though we're bereft
Of many a friend that Wright has left,
Amazing, too, in such a case,
That Wright and left should thus change place!
Not that I'd go such lengths as quite
To think him left because he's Wright:
But left he is, we plainly see,
Or Wright, we know, he could not be:
For when he treads death's fatal shore,
We feel that Wright will be no more.
He's, therefore, Wright while left; but, gone,
Wright is not left: and so I've done.'

When Sir Thomas More was Chancellor, it is said that, by his unremitting attention to the duties of his high office, all the litigation in the Court of Chancery was brought to a conclusion in his lifetime; giving rise to the following epigram:

'When More some years had Chaucellor been,
No more suits did remain.
The same shall never more be seen,
Till More be there again.'

More has always been a favourite name with the punsters—they have even followed it to the tomb, as is shown in the following epitaph in St Benet's Churchyard, Paul's Wharf, London:

'Here lies one More, and no more than he.
One More and no more! how can that be?
Why, one More and no more may well lie here alone;
But here lies one More, and that's more than one.'

Punning epitaphs, however, are not altogether rarities. The following was inscribed in Peterborough Cathedral to the memory of Sir Richard Worme:

'Does worm eat Worme? Knight Worme this truth confirms;

For here, with worms, lies Worme, a dish for worms.
Does Worme eat worm? Sure Worme will this deny;

For worms with Worme, a dish for Worme don't lie.
'Tis so, and 'tis not so, for free from worms
'Tis certain Worme is blest without his worms.'

In the churchyard of Barro-upon-Soar, in Leicestershire, there is another punning epitaph on one Cave:

'Here, in this grave, there lies a Cave:
We call a cave a grave.
If cave be grave and grave be Cave,
Then, reader, judge, I crave,
Whether doth Cave lie here in grave,
Or grave here lie in Cave:
If grave in Cave here buried lie,
Then, grave, where is thy victory?
Go, reader, and report, here lies a Cave,
Who conquers death, and buries his own grave.'

JANUARY 7.

St Lucian, of Antioch, priest and martyr, 312. St Cedd, bishop of London, 7th century. St Thillo, 702. St Kentigerna, widow, 728. St Aldric, bishop of Mans, 856. St Canut, 1171.

St Lucian, whose name occurs in the calendar of the Church of England on the 8th of January, being the first Roman priest who occurs and is retained there, was a learned Syrian who busied himself in revising the Holy Scriptures—was for a while disaffected to orthodox doctrine, but afterwards conformed to it, and finally died at Nicomedia, after a long imprisonment.

St Cedd was an Anglo-Saxon saint, who took a prominent part in Christianising his hitherto heathen countrymen in the midland districts of England. He long served God in the monastery of Lindisfarne, and afterwards was appointed bishop of the East Saxons. Amongst his noted acts was the building of a monastery at Tilbury, near the mouth of the Thames.

Born.—Robert Nicoll, poet, 1814.
Died.—Fenelon de la Mothe, 1715; Allan Ramsay, the Scottish poet, 1757.

FENELON.

François de Salignac de la Mothe Fenelon was born at Perigord, in 1651. He preached a sermon at the early age of fifteen, before a select assembly at Paris; but his uncle, the Marquis de Fenelon, fearing that the praises of the world would make the boy vain, caused him to enter the seminary of St Sulpice, where he remained several years and took orders. He was sent by Louis XIV. to Poitou, to convert the Protestants, when he nobly refused the aid of dragoons, relying solely on his powers of persuasion. He was appointed tutor to the young Duke of Burgundy, and in five years Louis made him Archbishop of Cambrai. Thence began his troubles: he was suspected of favouring the doctrines of the

Quietists, and upon his refusing to condemn them, Bossuet denounced him to the king as a heretic, and he was eventually banished from the court; he, however, signed a recantation, and would have been restored to royal favour, had not his celebrated romance of *Télémaque*, which he had written some years before, been published against his will, through the treachery of a servant. Louis suspected several passages in this work to be directed against himself; it was suppressed in France, but rapidly circulated in Holland; and perhaps there is no book in the French language which has been more read. It is, at this day, a class-book in almost every European school. His work on Female Education, published in 1688, proceeds upon the uniformly indulgent theory,—teaching without tears. He wrote his *Dialogues of the Dead* for the use of his pupil, the Duke of Burgundy: his noble zeal in not sparing the vices of kings shines throughout the work. His political opinions were liberal; and his acts of benevolence were munificent: in the year 1709 he fed the French army at his own expense.

St Distaff's Day.

As the first free day after the twelve by which Christmas was formerly celebrated, the 7th of January was a notable one among our ancestors. They jocularly called it *St Distaff's Day*, or *Rock Day*, because by women the rock or distaff was then resumed, or proposed to be so. The duty seems to have been considered a dubious one, and when it was complied with, the ploughmen, who on their part scarcely felt called upon on this day to resume work, made it their sport to set the flax a-burning; in requital of which prank, the maids soused the men from the water-pails. Herrick gives us the popular ritual of the day in some of his cheerful stanzas:

'ST DISTAFF'S DAY; OR, THE MORROW AFTER
TWELFTH-DAY.

Partly work and partly play
You must on St Distaff's Day:
From the plough soon free your team;
Then come home and fother them:
If the maids a-spinning go,
Burn the flax and fire the tow,
Bring in pails of water then,
Let the maids bewash the men.
Give St Distaff all the right:
Then bid Christmas sport good night,
And next morrow every one
To his own vocation.'

This mirthful observance recalls a time when spinning was the occupation of almost all women who had not anything else to do, or during the intervals of other and more serious work—a cheering resource to the solitary female in all ranks of life, an enlivenment to every fireside scene. To *spin*—how essentially was the idea at one time associated with the female sex! even to that extent, that in England *spinster* was a recognised legal term for an unmarried woman—the *spear* side and the *distaff* side were legal terms to distinguish the inheritance of male from that of female children—and the *distaff* became a

synonym for woman herself: thus, the French proverb was: 'The crown of France never falls to the distaff.' Now, through the change wrought by the organised industries of Manchester and Glasgow, the princess of the fairy tale who was destined to die by a spindle piercing her hand, might wander from the Land's End to John o' Groat's House, and never encounter an article of the kind, unless in an archaeological museum.

Mr John Yonge Akerman, in a paper read before the Society of Antiquaries, has carefully traced the memorials of the early use of the distaff and spindle on the monuments of Egypt, in ancient mythology and ancient literature, and everywhere shews these implements as the insignia of womanhood. We scarcely needed such proof for a fact of which we have assurance in the slightest reflection on human needs and means, and the natural place of woman in human society. The distaff and spindle must, of course, have been coeval with the first efforts of our race to frame textures for the covering of their persons, for they are the very simplest arrangement for the formation of thread: the distaff, whereon to hang the flax or tow—the spindle, a loaded pin or stick, whereby to effect the twisting; the one carried under the arm, the other dangling and turning in the fingers below, and forming an axis round which to wind parcels of the thread as soon as it was made. Not wonderful is it that Solomon should speak of woman as laying her hands to the distaff (Prov. xxxi. 19), that the implement is alluded to by Homer and Herodotus, and that one of the oldest of the mythological ideas of Greece represented the Three Fates as spinning the thread of human destiny. Not very surprising is it that our own Chaucer, five hundred years ago, classed this art among the natural endowments of the fair sex in his ungalant distich:

'Deceit, weeping, spinning, God hath given
To women kindly, while they may live.'

It was admitted in those old days that a woman could not quite make a livelihood by spinning; but, says Anthony Fitzherbert, in his *Boke of Husbandrie*, 'it stoppeth a gap,' it saveth a woman from being idle, and the product was needful. No rank was above the use of the spindle. Homer's princesses only had them gilt. The lady carried her distaff in her gemmed girdle, and her spindle in her hand, when she went to spend half a day with a neighbouring friend. The farmer's wife had her maids about her in the evening, all spinning. So lately as Burns's time, when lads and lasses came together to spend an evening in social glee, each of the latter brought her spinning apparatus, or *rock*,* and the assemblage was called a *rocking*:

'On Easten's eve we had a *rocking*.'

It was doubtless the same with Horace's *uxor Sabina, perusta solibus*, as with Burns's bonnie Jean.

The ordinary spindle, throughout all times, was a turned pin of a few inches in length, having a nick or hook at the small and upper end, by which to fasten the thread, and a load of

* From the German, *rocken*.

some sort at the lower end to make it hang rightly. In very early times, and in such rude nations as the Laps, till more recent times, the load was a small perforated stone, many examples of which (called *whorls*) are preserved in antiquarian museums. It would seem from the Egyptian monuments as if, among those people, the whorl had been carried on the top.

Some important improvements appear to have been made in the distaff and spindle. In Stow's *Chronicle*, it is stated: 'About the 20th year of Henry VIII., Anthony Bonvise, an Italian, came to this land, and taught English people to spin with a distaff, at which time began the making of Devonshire kersies and Coxall clothes.' Again, Aubrey, in his *Natural History of Wiltshire*, says: 'The art of spinning is so much improved within these last forty years, that one pound of wool makes twice as much cloth (as to extent) as it did before the Civill Warres.'

SPINNING WITH THE DISTAFF.

It is hard to say when the spinning-wheel superseded the simpler process of the distaff and spindle. The wheel is stated, in the *Dictionnaire des Origines*, to have been invented by a citizen of Brunswick in 1533; in which year also was printed the *Dictionary of Palsgrave*, wherein we find the phrase, 'I spyne upon a rock,' rendered 'Je file au rouet.'

We have, however, evidence, in a manuscript in the British Museum, written early in the fourteenth century, of the use of a spinning-wheel at that date: herein are several representations of a woman spinning with a wheel: she stands at her work, and the wheel is moved with her right hand, while with her left she whirls the spindle: this is the wheel called a *turn*, the term for a spinning-wheel still used in some districts of England. The spinning-wheel said to have been invented in 1533 was, doubtless, that to which women *sat*, and which was worked with the feet.

Spinning with the wheel was common with the recluses in England: Aubrey tells us that Wiltshire was full of religious houses, and that old Jacques 'could see from his house the nuns of Saint Mary's (juxta Kington) come forth into the Nymph Hay with their rocks and wheels to spin, and with their sewing work.' And in his

MS. *Natural History of Wiltshire*, Aubrey says: 'In the old time they used to spin with rocks; in Staffordshire, they use them still.'

The change from the distaff and spindle to the spinning-wheel appears to have been almost coincident with an alteration in, or modification of, our legal phraseology, and to have abrogated the use of the word *spinster* when applied to single women of a certain rank. Coke says: '*Generosus* and *Generosa* are good additions: and, if a gentlewoman be named *spinster* in any original writ, etc., *appeale*, or *indictment*, she may abate and quash the same; for she hath as good right to that addition as *Baronesse*, *Viscountesse*, *Marchionesse*, or *Dutchesse* have to theirs.' Blount, in his *Law Dictionary*, says of *spinster*: 'It is the addition usually given to all unmarried women, from the Viscount's daughter downward.' In his *Glossographia*, he says of *spinster*: 'It is a term or addition in our law dialect, given in evidence and writings to a *femme sole*, as it were calling her *spinner*: and this is the only addition for all unmarried women, from the Viscount's daughter downward.'

'I am unable' (says Mr Akerman) 'to trace these distinctions to their source, but they are too remarkable, as indicating a great change of feeling among the upper classes in the sixteenth century, to be passed unnoticed. May we suppose that, among other causes, the art of printing had contributed to bring about this change, affording employment to women of condition, who now devoted themselves to reading instead of applying themselves to the primitive occupation of their grandmothers; and that the wheel and the distaff being left to humbler hands, the time-honoured name of *spinster* was at length considered too homely for a maiden above the common rank.'

Before the science of the moderns banished the spinning-wheel, some extraordinary feats were accomplished with it. Thus, in the year 1745, a woman at East Dereham, in Norfolk, spun a single pound of wool into a thread of 84,000 yards in length, wanting only 80 yards of 48 miles, which, at the above period, was considered a circumstance of sufficient curiosity to merit a place in the Proceedings of the Royal Society. Since that time, a young lady of Norwich has spun a pound of combed wool into a thread of 168,000 yards; and she actually produced from the same weight of cotton a thread of 203,000 yards, equal to upwards of 115 miles: this last thread, if woven, would produce about 20 yards of yard-wide muslin.

The spinning-wheel has almost left us—with the lace-pillow, the hour-glass, and the horn-book; but not so on the Continent. 'The art of spinning, in one of its simplest and most primitive forms, is yet pursued in Italy, where the country-women of Caia still turn the spindle, unrestrained by that ancient rural law which forbade its use without doors. The distaff has outlived the consular fasces, and survived the conquests of the Goth and the Hun. But rustic hands alone now sway the sceptre of Tanaquil, and all but the peasant disdain a practice which once beguiled the leisure of high-born dames.'

Sermon to the Jews.

7th January 1645, Mr John Evelyn was present at a peculiar ceremony which seems to have been of annual occurrence at Rome. It was a sermon preached to a compulsory congregation of Jews, with a view to their conversion. Mr Evelyn says: 'They are constrained to sit till the hour is done, but it is with so much malice in their countenances, spitting, humming, coughing, and motion, that it is almost impossible they should hear a word from the preacher. A conversion is very rare.'*

Cattle in January.

Worthy Thomas Tusser, who, in Queen Mary's time, wrote a doggerel code of agriculture under the name of *Five Hundred Points of Good Husbandry*, † recommends the farmer, as soon as Christmas observances are past, to begin to attend carefully to his stock.

'Who both by his calf and his lamb will be known,
May well kill a neat and a sheep of his own;
And he that can rear up a pig in his house,
Hath cheaper his bacon and sweeter his souse.'

He urges the gathering up of dung, the mending of hedges, and the storing of fuel, as employments for this month. The scarcity in those days of fodder, especially when frost lasted long, he reveals to us by his direction that all trees should be pruned of their superfluous boughs, that the cattle might browse upon them. The myrtle and ivy were the wretched fare he pointed to for the sheep. The homely verses of this old poet give us a lively idea of the difficulties of carrying cattle over the winter, before the days of field turnips, and of the miserable expedients which were had recourse to, in order to save the poor creatures from absolute starvation:

'From Christmas till May be well entered in,
Some cattle wax faint, and look poorly and thin;
And chiefly when prime grass at first doth appear,
Then most is the danger of all the whole year.

Take verjuice and heat it, a pint for a cow,
Buy salt, a handful, to rub tongue ye wot how:
That done with the salt, let her drink off the rest;
This many times raiseth the feeble up beast.'

Connection of Distant Ages by the Lives of Individuals.

The shortness at once and speed of human life are brought strongly before our minds when we cast the simplest look back upon our own career, find ourselves grandfathers so long before what appears the proper time, and finally discover that we are about to leave the world with not half of our plans and wishes accomplished. The matter is also very pointedly illustrated by the great changes which every one finds in the *personnel* of his surrounding world every ten years or so;

* Evelyn's *Diary*, i. p. 136.

† Reprint by Lackington, Allen and Co., 1812.

the boys become men, the little girls now reckoning each their two or three babies, the matronly hostesses who used to sit at the heads of hospitable tables now retired into quiet dowagerhood, the vigorous mature men now becoming shaly and unfit for business, the old and venerable now to be found only in the churchyard! On the other hand, one sometimes get an exhilaration as to human life and his own individual prospects, by instances of lives at once remarkably protracted and attended by singular health and vigour. To find a Brougham at eighty-two heading a great social gathering like that which took place at Glasgow in September 1860, or a Lyndhurst at eighty-eight pouring out the words of experience and sagacity in the House of Lords for four hours at a time, is felt by all younger persons as a moral glass of champagne. The day looks brighter by our even hearing such a fact alluded to. And the reason obviously is that we get from such facts a conviction of pleasant possibilities for ourselves. We all feel that such *may*, in favouring circumstances, be our own case. It seems to imply that Time is, after all, not so deadly an enemy to us as he is generally represented: if we use him well, he will use us well. There is, moreover, a spirit in man which gives him the desire and the power to resist the influence of surrounding agencies. We delight to brave cold, hunger, fatigue, and danger. The unconquerable will joyfully hardens itself to throw off the common effects of life's many evils. It is a joy to this spirit to find that some valorous souls can and do live on, and on, and on, so long, seeming as if they had acquired some mastery over fate itself—that Power—'*nil miserantis Orci*,'—before which, alas, we must all fall sooner or later.

There is, we must admit, a limit to this satisfaction; for when life becomes in any instance protracted to a decidedly extraordinary extent, the individual necessarily feels himself amongst strangers—perhaps helplessly dependent on them—the voice of every youthful companion hushed—wife, perhaps even children, removed from his side—new things in which he has no part or vocation all around him. Then, indeed, it were better for him to follow those who have gone before. Yet, while the spectacle of such a superfluous relic of past ages gives us, of course, little pleasure in the contemplation, and can inspire us with no pleasant anticipations, it may become a matter of considerable interest to a mind which dwells upon time with a regard to either its historical or its sentimental relations.

For example, while no one could wish to imitate the recently deceased American, Ralph Farnham, in length of days—the fact being that he lived to 107—no one could see him, as the Prince of Wales did in November 1860, and reflect that here was still in the body one of the little civic band which defended Bunker Hill in 1775, without feelings of extreme interest. Such a man, thus so long surviving the multitude amongst whom he once acted, becomes to us as one returned from the dead. He ought to be a shadow and a recollection, and behold he is a reality! The whole story of the War of American Independence is now so far removed into the

region of history, that any living link between it and the present time is necessarily heard of with extreme surprise. Yet Lord Lyndhurst, who still (1862) takes a part in our public affairs, was born in Boston, a British subject, the State of Massachusetts being then and for some years later a British province.

The affair of the *Forty-five* precedes the struggle for American independence by thirty years; yet even that event is brought into apparent closeness to us by many surprising connections. There were still one or two Culloden men living when George IV. was king: one came to see him at Holyrood in 1822, and greeted him as 'the last of his enemies.' It is worth noting that an uncle of the present Lord Torphichen (1862) was an officer in the royal army in 1745, was present at the battle of Prestonpans, and is noted by Dr Carlyle in his *Autobiography* as the only wounded man on the king's side who was carried to Bankton House, all the other wounded people taken there being Highlanders. [Lord Torphichen, however, had another *uncle*, who, when a boy in 1720, was supposed to be bewitched, and thus was the cause of a fast being held in Calder parish, and of three or four poor persons being imprisoned under suspicion of sorcery!] That there should be now moving in society in Edinburgh, a lady whose father-in-law attended the Prince in his wanderings, does not call for particular remark. It becomes more startling to hear Mr Andrew Coventry, of Edinburgh, a gentleman in the vigour of life, speak of having dined with the *mother-in-law* of the gallant Charles Edward. He did so in 1823, at the house of Mr Bethmann in Frankfort. This lady was the Princess Stolberg, then ninety years of age. Her daughter, the Princess Louisa de Stolberg, had married the Prince about fifty years before. It appears from a note in Earl Stanhope's *History of England*, that his lordship also was introduced to the Princess at Frankfort. He states that she was 'still lively and agreeable,' and that she lived till 1826. 'It is singular,' his lordship very naturally adds, 'that a man born eighty-five years after the Chevalier, should have seen his mother-in-law.'

When George IV. acceded to the throne in 1820, he had occasion to remark a very curious circumstance connecting his reign with one which we are accustomed to consider as remote. The decorations of the Order of the Garter, which then returned to the king from his deceased father, had only been worn by two persons since the reign of Charles II.! By that monarch they had been conferred upon the Duke of Somerset—he who was commonly called the Proud Duke—and by him they had been retained till his death in 1748, when they were conferred upon the young Prince of Wales, subsequently George III. The entire time embraced by the two tenures of the honour was about a hundred and forty years. It was remarkable of the Duke of Somerset, that he figured in the pageants and politics of six reigns. 'At the funeral of Charles II., he was one of the supporters of the chief mourner, Prince George of Denmark. He carried the orb at the coronation of James II.; at the coronation of William and Mary, he bore the queen's crown.

At the funeral of King William, he was again one of the supporters of the chief mourner, Prince George; and at the coronations of Queen Anne, George I., and George II., he carried the orb.' Mr Jesse, in relating these circumstances a few years ago, makes the remark, that there might be individuals still living, who had conversed with the Duke of Somerset, who had conversed with Charles II.*

Lord Campbell quotes, in his *Lives of the Chief Justices*, the statement of the Earl of Mansfield to Mr Murray of Henderland, about 1787, that 'he had conversed with a man who was present at the execution of the Blessed Martyr.' Mr Murray, who died a very few years ago, accompanies his report of this statement with the remark, 'How wonderful it seems that there should be only one person between me and him who saw Charles's head cut off!'† Perhaps this is scarcely so wonderful as that the mother of Sir Walter Scott, who survived 1820, had seen a person who had seen Cromwell make his entry into Edinburgh in 1650; on which occasion, by the way, the individual in question remarked nothing in the victor of Dunbar but the extraordinary magnitude of his nose! It was also quite as singular that Charles James Fox, who might have lived to attend the levees of Queen Victoria without being much older than Lord Lyndhurst now is, had an uncle in office as joint paymaster of the forces in 1679! This last person was a son of Sir Stephen Fox by his first marriage. All Sir Stephen's first family having predeceased him, he wedded in his old age, in Queen Anne's time, a healthy young woman, the daughter of a Lincolnshire clergyman, and by her left two sons, one of whom was the father of Charles James.

Dr Routh, who died December 22, 1854, President of Magdalen College, Oxford, in the hundredth year of his age, 'knew Dr Theophilus Leigh, Master of Baliol, the contemporary of Addison, who had pointed out to him the situation of Addison's rooms: and he had been told by a lady of her aunt, who had seen Charles II. walking round the parks at Oxford (when the parliament was held there during the plague of London) with his dogs, and turning by the cross path to the other side when he saw the heads of horses coming.'—*Times*, Dec. 25, 1854.

One more such case may be noticed in reference to the reign of Charles II. Dr John Mackenzie, who had been Burns's medical attendant at Mauchline, and who died in Edinburgh in 1841 at no very advanced age, had attended

* It would appear that George IV. could not, with strict truth, say that his father succeeded in the order of the Garter to Charles Duke of Somerset. He in reality succeeded to John first Earl of Poulett, who died 28th May 1743. But, the Duke of Somerset dying 2nd December 1748, John Earl Granville was invested as his grace's successor on the same day with Prince George, along with four other knights.

† A Mr Evans, who died October 9, 1780, at the age of 139, in the full possession of his faculties, 'could well remember the execution of Charles I., being seven years old at the time.'—*Bailey's Records of Longevity*. If this be a true statement, Mr Evans was probably the last person in life who remembered the Blessed Martyr's death.

professionally a lady of rank who was born eight years before the death of the Merry Monarch. This was the Countess of Loudon, widow of the third Earl. She was born in 1677 and died in 1777, having attained the venerable age of a hundred.

Elizabeth, Countess Dowager of Hardwicke, who died May 26, 1858, was daughter of a person who had been a naval officer of Queen Anne and a rebel at the battle of Sheriffmuir, namely, James, fifth Earl of Balcarres. This venerable lady could have said that at her grandfather's first marriage King Charles gave away the bride; an event which took place nearly a hundred and ninety years before her own death.

This marriage, by the way, was a remarkable one. The young Colin Earl of Balcarres was obtaining for his bride, a young Dutch lady, Mauritia de Nassau, daughter of a natural son of Maurice Prince of Orange. 'The Prince of Orange, afterwards William III., presented his fair kinswoman on this joyful occasion with a pair of magnificent emerald ear-rings, as his wedding-gift. The day arrived, the noble party were assembled in the church, and the bride was at the altar; but, to the dismay of the company, no bridegroom appeared! The volatile Colin had forgotten the day of his marriage, and was discovered in his night-gown and slippers, quietly eating his breakfast! Thus far the tale is told with a smile on the lip, but many a tear was shed at the conclusion. Colin hurried to the church, but in his haste left the ring in his writing-case;—a friend in the company gave him one,—the ceremony went on, and, without looking at it, he placed it on the finger of his fair young bride:—it was a mourning ring, with the mort-head and cross-bones. On perceiving it at the close of the ceremony, she fainted away, and the evil omen had made such an impression on her mind, that, on recovering, she declared she should die within the year, and her presentiment was too truly fulfilled.*

When Mr and Mrs S. C. Hall in 1840 made a tour in Ireland, in order to prepare the beautiful book regarding that country which they afterwards published, they were startled one day by finding themselves in the company of a gentleman of the county of Antrim,† who could tell them that his father had been at the battle of the Boyne, fought exactly a hundred and fifty years before. The latter was fifteen at the time of the battle. He lived a bachelor life till, on approaching old age, he overheard one day some young collateral relations talking rather too freely of what they would do with his property after his death; whereupon, in disgust, he took an early opportunity of marrying, and became the father of the gentleman in question. It is even more

* *Lives of the Lindsays*, ii. 120. Rings bearing a death's head were in great favour in the grim religious times then not long past. In a will dated 1648, occurs this clause: 'Also I do will and appoint ten rings of gold to be made of the value of twenty shillings a-piece sterling, with a death's head upon some of them.'—*Halliwel's Shakspeare*, v. 318.

† Sir Edmund Macnaghten, of Bush Mills; he was father of Sir William Macnaghten, political agent at Caubul, and who fell in the massacre at that place.

remarkable that Maurice O'Connell of Derrynane, who died in 1825 at the age of 99, knew Daniel M'Carthy, who had been at the battle of Aughrim (July 12, 1691),—who was indeed the first man to run away from it,—but who, being 108 at his death in 1740, might have equally well remembered Cromwell's massacre at Drogheda in 1649. The gentleman who relates this fact in the *Notes and Queries*,* says: 'I remember being told in the county of Clare, about 1828, of an individual then lately deceased, who remembered the siege of Limerick by General Ginkle, and the news of the celebrated Treaty of Limerick (October 3, 1691).'

If we go back to any former period of British history, we shall find precisely similar linkings of remote ages by the lives of individuals. Lettice Countess of Leicester, who died in 1634, was born about 1539; consequently might have remembered Henry VIII., whose queen, Anne Boleyn, was her great aunt. To pursue the remarks of a contemporary writer,† 'during the reign of Edward VI., the young Lettice was still a girl; but Sir Francis Knollys, her father, was about the court, and Lettice no doubt saw and was acquainted with the youthful sovereign. The succession of Mary threw the family of Lettice into the shade. As a relative of the Boleyns, and the child of a Puritan, she could expect no favour from the daughter of Catherine of Arragon; but Mary and Philip were doubtless personally known to her. At Elizabeth's succession, Lettice was in her eighteenth year, and in all the beauty of opening womanhood. About 1566, at the age of twenty-six, she was married to the young Walter Devereux, Viscount Hereford, created Earl of Essex in 1572. He died in 1576, and in 1578 his beautiful Countess was secretly married to Robert Dudley, Earl of Leicester. The great favourite died in 1588, and within the year of her weeds Lettice was again married to an unthrifty knight of doubtful character, Sir Christopher Blount. In 1601, Lettice became a widow for the third time: her husband was a party to the treasonable madness of her son, and both suffered on the scaffold. Such accumulated troubles would have sufficed to kill an ordinary woman; but Lettice retired to Drayton Bassett, and lived on in spite of her sorrows. In James's time her connections were in favour. She came up to London to share the smiles of the new dynasty, and to contest for her position as Countess of Leicester against the base-born son of her predecessor in the Earl's affections. At James's death she had attained the age of eighty-five, with faculties unimpaired. We may imagine that she was introduced to the new sovereign. The grandmother of the Earls of Holland and Warwick, and the relation of half the court, would naturally attract the attention and share the courtesies of the lively Henrietta and the grave, stately, formal Charles. He was the sixth English sovereign (or the seventh if Philip be counted) whom she had seen. The last few years of her life were passed at Drayton:

* April 12, 1851.

† John Bruce, *Notes and Queries*, 2nd ser. iii. 13.

‘ “ Where she spent her days so well,
That to her the better sort
Came as to an holy court,
And the poor that lived near
Dearth nor famine could not fear
Whilst she lived.”

‘ Until a year or two of her death, we are told that she “ could yet walk a mile of a morning.” She died on Christmas Day in 1634, at the age of ninety-four.

‘ Lettice was one of a long-lived race. Her father lived till 1596, and one of her brothers attained the age of eighty-six, and another that of ninety-nine.

‘ There is nothing incredible, nor even very extraordinary, in the age attained by the Countess Lettice; but even her years will produce curious results if applied to the subject of possible transmission of knowledge through few links. I will give one example: Dr Johnson, who was born in 1709, might have known a person who had seen the Countess Lettice. If there are not now, there were, amongst us, within the last three or four years, persons who knew Dr Johnson. There might therefore be only two links between ourselves and the Countess Lettice who saw Henry VIII.’

Even these cases, remarkable as they are when viewed by themselves, sink into comparative unimportance before some others now to be adverted to.

The first gives us a connection between the time of Cromwell and that of Queen Victoria by only two lives. William Horrocks, born in 1657, one year before the death of the Protector, was married at the usual time of life, and had a family. His wife was employed as a nurse in the family of the Chethams at Castleton Hall, near Rochdale. In 1741, when eighty-four years of age, he married for a second wife a woman of twenty-six, who, as his housekeeper, had treated him with a remarkable degree of kindness. The circumstance attracted some share of public attention, and the Chetham family got portraits of the pair painted, to be retained in their mansion as a curiosity; which portraits were not long ago, and probably still are, in existence. To William Horrocks in 1744 there was born a son, named James, who lived down to the year 1844, on a small farm at Harwood, about three miles from Bolton. This remarkable centenarian, who could say that he had a brother born in the reign of Charles II., and that his father first drew breath as a citizen of the Commonwealth, is described as having been wonderfully well-preserved down almost to the last. At ninety, he had one day walked twenty-one miles, returning from Newton, where he had been recording his vote at an election.*

The second case we have in store for the reader is a French one, and quite as remarkable as the preceding. It may first be stated in this form: a lady, who might be described as a niece of Mary Queen of Scots, died so lately as 1713. She was the widow of the Duc d'Angoulême, a natural son of Charles IX., king of France, who

* See a full account of Horrocks, quoted from the *Manchester Guardian*, in *Notes and Queries*, 2nd ser. iii. 475.

died in 1574, so that she survived her father-in-law a hundred and thirty-nine years.* At the time when she left the world, a sixth generation of the posterity of Mary (Prince Frederick, father of George III.) was a boy of five years.

A third case may be thus stated: A man residing in Aberdeenshire, within the recollection of people still living there, not only had witnessed some of the transactions of the Civil War, but he had seen a man who was connected with the battle of Flodden, fought in September 1513. The person in question was Peter Garden, who died at Auchterless in 1775, aged 131. When a youth, he had accompanied his master to London, and there saw Henry Jenkins, who died in 1670, at the extraordinary age of 169. Jenkins, as a boy, had carried a horse-load of arrows to Northallerton, to be employed by the English army in resisting the invasion of James IV. of Scotland, and which were in reality soon after used at the battle of Flodden. Here two lives embraced events extending over two hundred and sixty-two years!

STE GUDULA

is regarded with veneration by Roman Catholics as the patroness-saint of the city of Brussels. She was of noble birth, her mother having been niece to the eldest of the Pepins, who was Mairc of the Palace to Dagobert I. Her father was Count Witger. She was educated at Nivelles, under the care of her cousin Ste Gertrude, after whose death in 664, she returned to her father's castle, and dedicated her life to the service of religion. She spent her future years in prayer and abstinence. Her revenues were expended on the poor. It is related of her, that going early one morning to the church of St Morgelle, two miles from her father's mansion, with a female servant bearing a lantern, the wax taper having been accidentally extinguished, she lighted it again by the efficacy of her prayers. Hence she is usually represented in pictures with a lantern. She died January 8th, 712, and was buried at Ham, near Villevord. Her relics were transferred to Brussels in 978, and deposited in the church of St Gery, but in 1047 were removed to the collegiate church of Michael, since named after her the cathedral of Ste Gudula. This ancient Gothic structure, commenced in 1010, still continues to be one of the architectural ornaments of the city of Brussels. Her Life was written by Hubert of Brabant not long after the removal of her relics to the church of St Michael.

* Francis II., the elder brother of Charles IX., was first husband of Mary of Scotland; consequently this unfortunate princess was by marriage aunt of the Duchess d'Angoulême.

Died.—Galileo Galilei, 1642; John Earl of Stair, 1707; Sir Thomas Burnet, 1753; John Baskerville, printer, 1775; Sir William Draper, 1787; Lieutenant Thomas Waghorn, 1850.

GALILEO GALILEI.

Such (though little known) was the real full name of the famous Italian professor, who first framed and used a telescope for the observation of the heavenly bodies, and who may be said to have first given stability and force to the theory which places the sun in the centre of the planetary system. In April or May 1609, Galileo heard at Venice of a little tubular instrument lately made by one Hans Lippershey of Middleburg, which made distant objects appear nearer, and he immediately applied himself to experimenting on the means by which such an instrument could be produced. Procuring a couple of spectacle glasses, each plain on one side, but one convex and the second concave on the other side, he put these at the different ends of a tube, and applying his eye to the concave glass, found that objects were magnified three times, and brought apparently nearer. Soon afterwards, having made one which could magnify thirty times, Galileo commenced observations on the surface of the moon, which he discovered to be irregular, like that of the earth, and on Jupiter, which, in January 1610, he ascertained to be attended by four stars, as he called them, which afterwards proved to be its satellites. To us, who calmly live in the knowledge of so much that the telescope has given us, it is inconceivable with what wonder and excitement the first discoveries of the rude tube of Galileo were received. The first effects to himself were such as left him nothing to desire; for, by the liberality of his patron, the Grand Duke of Tuscany, he was endowed with a high salary, independent of all his former professional duties.

The world has been made well aware of the opposition which Galileo experienced from the ecclesiastical authorities of his age; but it is remarkable that the first resistance he met with came from men who were philosophers like himself. As he went on with his brilliant discoveries—the crescent form of Venus, the spots on the sun, the peculiar form of Saturn—he was met with a storm of angry opposition from the adherents of the old Aristotelian views; one of whom, Martin Horky, said he would ‘never grant that Italian his new stars, though he should die for it.’ The objections made by these persons were clearly and triumphantly refuted by Galileo: he appealed to their own senses for a sufficient refutation of their arguments. It was all in vain. The fact is equally certain and important that, while he gained the admiration of many men of high rank, he was an object of hostility to a vast number of his own order.

It was not, after all, by anything like a general movement of the Church authorities that Galileo was brought to trouble for his doctrines. The Church had overlooked the innovations of Copernicus: many of its dignitaries were among the friends of Galileo. Perhaps, by a little discreet management, he might have escaped censure. He was, however, of an ardent disposition; and

being assailed by a preacher in the pulpit, he was tempted to bring out a pamphlet defending his views, and in reality adding to the offence he had already given. He was consequently brought before the Inquisition at Rome, February 1615, and obliged to disavow all his doctrines, and solemnly engage never again to teach them.

From this time, Galileo became manifestly less active in research, as if the humiliation had withered his faculties. Many years after, recovering some degree of confidence, he ventured to publish an account of his *System of the World*, under the form of a dialogue, in which it was simply discussed by three persons in conversation. He had thought thus to escape active opposition; but he was mistaken. He had again to appear before the Inquisition, April 1633, to answer for the offence of publishing what all educated men now know to be true; and a condemnation of course followed. Clothed in sackcloth, the venerable sage fell upon his knees before the assembled cardinals, and, with his hands on the Bible, abjured the heresies he had taught regarding the earth’s motion, and promised to repeat the seven penitential psalms weekly for the rest of his life. He was then conveyed to the prisons of the Inquisition, but not to be detained. The Church was satisfied with having brought the philosopher to a condemnation of his own opinions, and allowed him his liberty after only four days. The remaining years of the great astronomer were spent in comparative peace and obscurity.

That the discoverer of truths so certain and so important should have been forced to abjure them to save his life, has ever since been a theme of lamentation for the friends of truth. It is held as a blot on the Romish Church that she persecuted ‘the starry Galileo.’ But the great difficulty as to all new and startling doctrines is to say whether they are entitled to respect. It certainly was not wonderful that the cardinals did not at once recognise the truth contained in the heliocentric theory, when so many so-called philosophers failed to recognise it. And it may be asked if, to this day, the promulgator of any new and startling doctrine is well treated, so long as it remains unsanctioned by general approbation, more especially if it appears in any degree or manner inconsistent with some point of religious doctrine. It is strongly to be suspected that many a man has spoken and written feelingly of the persecutors of Galileo, who daily acts in the same spirit towards other reformers of opinions, with perhaps less previous inquiry to justify him in what he is doing.

JOHN, FIRST EARL OF STAIR.

The Earl of Stair above cited was eldest son of James Dalrymple, Viscount Stair, the President of the Court of Session in Scotland, and the greatest lawyer whom that country has produced. This first earl, as Sir John Dalrymple, was one of three persons of importance chosen to offer the crown of Scotland to William and Mary at the Revolution. As Secretary of State for Scotland, he was the prime instrument in causing the Massacre of Glencoe, which covered his name with infamy, and did not leave that of his royal master untarnished. He was greatly

instrumental in bringing about the union of Scotland with England, though he did not live to see it effected. His son, the second earl, as ambassador to France in the time of the regency of Orleans, was of immense service in defeating the intrigues of the Stuarts, and preserving the crown for the Hanover dynasty.

The remarkable talents and vigour of three generations of one family on the Whig side, not to speak of sundry offshoots of the tree in eminent official situations, rendered the Dalrymples a vexation of no small magnitude to the Tory party in Scotland. It appears to have been with reference to them, that the Nine of Diamonds got the name of the *Curse of Scotland*; this card bearing a resemblance to the nine lozenges, or, arranged saltire-wise on their armorial coat.*

Various other reasons have, indeed, been suggested for this expression—as that, the game of Comète being introduced by Mary of Lorraine (alternatively by James, Duke of York) into the court at Holyrood, the Nine of Diamonds, being the winning card, got this

name in consequence of the number of courtiers ruined by it; that in the game of Pope Joan, the Nine of Diamonds is the Pope—a personage whom the Scotch Presbyterians considered as a curse; that diamonds imply royalty, and every ninth king of Scotland was a curse to his country: all of them most lame and unsatisfactory suggestions, in comparison with the simple and obvious idea of a witty reference to a set of detested but powerful statesmen, through the medium of their coat of arms. Another supposition, that the Duke of Cumberland wrote his inhuman orders at Culloden on the back of the Nine of Diamonds, is negated by the fact, that a caricature of the earlier date of October 21, 1745, represents the young chevalier attempting to lead a herd of bulls, laden with papal curses, excommunications, &c., across the Tweed, with the Nine of Diamonds lying before them.

LIEUTENANT WAGHORN.

This name will be permanently remembered in connection with the great improvements which have been made of late years in the postal communications between the distant parts of the British Empire and the home country. Waghorn was a man of extraordinary energy and resolution, as well as intelligence; and it is sad to think that his life was cut short at about fifty, before he had reaped the rewards due to his public services.

In the old days of four-month passages round Cape Horn, a quick route for the Indian mail was generally felt as in the highest degree desirable. It came to be more so when the Australian colonies began to rise into importance. A pas-

* In the arms of the Earl of Stair, this bearing stands first and fourth, for Dalrymple. The bearings in the second and third quarters are derived from marriages.

sage by the Euphrates, and the 120 miles of desert between that river and the Mediterranean, was favourably thought of, was experimented upon, but soon abandoned. Waghorn then took up the plan of a passage by Egypt and the Red Sea, which, after many difficulties, was at length realized in 1838. Such was his energy at this time, that, in one of his early journeys, when charged with important dispatches, coming one winter's day to Suez, and being disappointed of the steamer which was to carry him to Bombay, he embarked in an open boat to sail along the six hundred miles of the Red Sea, without chart or compass, and in six days accomplished the feat. A magnificent steam fleet was in time established on this route by the Peninsular and Oriental Steam Navigation Company, and has, we need scarcely say, proved of infinite service in facilitating personal as well as postal communications with the East.

BI-CENTENARY OF NEWSPAPERS.

There are several newspapers in Europe which have lived two hundred years or more—papers that have appeared regularly, with few or no interruptions, amid wars, tumults, plagues, famines, commercial troubles, fires, disasters of innumerable kinds, national and private. It is a grand thing to be able to point to a complete series of such a newspaper; for in it is to be found a record, however humble and imperfect, of the history of the world for that long period. The proprietors may well make a holiday-festival of the day when such a bi-centenary is completed. A festival of this kind was held at Haarlem on the 8th of January, 1856, when the *Haarlem Courant* completed its 200th year of publication. The first number had appeared on the 8th of January, 1656, under the title of *De Weekelycke Courant van Europa*; and a fac-simile of this ancient number was produced, at some expense and trouble, for exhibition on the day of the festival. Lord Macaulay, when in Holland, made much use of the earlier numbers of this newspaper, for the purposes of his *History*. The first number contained simply two small folio pages of news.

The Continent is rather rich in old newspapers of this kind. On the 1st of January, 1860, the *Gazette of Rostock* celebrated its 150th anniversary, and the *Gazette of Leipzig* its 200th. The proprietors of the latter paper distributed to their subscribers, on this occasion, fac-similes of two old numbers, of Jan. 1, 1660, and Jan. 1, 1760, representing the old typographical appearance as nearly as they could. It has lately been said that Russian newspapers go back to the year 1703, when one was established which Peter the Great helped both to edit and to correct in proof. Some of the proof sheets are still extant, with Peter's own corrections in the margin. The Imperial Library at St Petersburg is said to contain the only two known copies of the first year complete. The *Hollandsche Mercurius* was issued more than two centuries ago, a small quarto exactly in size like our *Notes and Queries*; we can there see how the news of our civil war was from time to time received among the people of Holland, who were generally well affected to the royalist cause. At the assumption of power by

Cromwell in 1653, the paper hoisted a wood-cut title representing various English matters, including Cromwell seated in council; and this, as an historical curiosity, we have caused to be here reproduced. In the original, there is a copy

of verses by some Dutch poet, describing the subjects of the various designs on this carved page. He tells us that the doors of Westminster were opened to Oliver; that both the council and the camp bowed to him; and that London, frantic

FRONTISPIECE OF A DUTCH NEWSPAPER, 1653.

with joy, solicited his good services in connection with peace and commerce. The *Hollandsche Mercurius* was, after all, a sort of Dutch 'Annual Register,' rather than a newspaper: there are many such in various countries, much more

than 200 years old. Old newspapers have been met with, printed at Nürnberg in 1571, at Dillingen in 1569, at Ratisbon in 1528, and at Vienna even so early as 1524. There may be others earlier than this, for aught that is at present known.

Modern investigators of this subject, however, have found it previously necessary to agree upon an answer to the question, 'What is a newspaper?' Many small sheets were issued in old days, each containing an account of some one event, but having neither a preceding nor a following number under the same title. If it be agreed that the word 'newspaper' shall be applied only to a publication which has the following characteristics—a treatment of news from various parts of the world, a common title for every issue, a series of numbers applied to them all, a date to each number, and a regular period between the issues—then multitudes of old publications which have hitherto been called newspapers must be expelled from the list. It matters not what we call them, provided there be a general agreement as to the scope of the word used.

A very unkind blow was administered to our national vanity somewhat more than twenty years ago. We fancied we possessed in our great National Library at the British Museum, a real printed English newspaper, two centuries and a half old. Among the Sloane MSS. is a volume containing what purport to be three numbers of the *English Mercurie*, a newspaper published in 1588: they profess to be Nos. 50, 51, and 54 of a series: and they give numerous particulars of the Spanish Armada, a subject of absorbing interest in those days. Each number consists of four pages somewhat shorter and broader than that which the reader now holds in his hand. Where they had remained for two centuries nobody knew; but they began to be talked about at the close of the last century—first in Chalmers' *Life of Ruddiman*, then in the *Gentleman's Magazine*, then in Nichols' *Literary Anecdotes*, then in D'Israeli's *Curiosities of Literature*, then in the English edition of *Beckmann*, then in various English and Foreign Cyclopædias, and then, of course, in cheap popular periodicals. So the public faith remained firm that the *English Mercurie* was the earliest English newspaper. The fair edifice was, however, thrown down in 1839. Mr Thomas Watts, the able Assistant Librarian at the British Museum, on subjecting the sheets to a critical examination, found abundant evidence that the theory of their antiquity was not tenable. Manuscript copies of three numbers are bound up in the same volume; and from a scrutiny of the paper, the ink, the handwriting, the type (which he recognised as belonging to the Caslon foundry), the literary style, the spelling, the blunders in fact and in date, and the corrections, Mr Watts came to a conclusion that the so-called *English Mercurie* was printed in the latter half of the last century. The evidence in support of this opinion was collected in a letter addressed to Mr Panizzi, afterwards printed for private circulation. Eleven years later, in 1850, Mr Watts furnished to the *Gentleman's Magazine* the reasons which led him to think that the fraud had been perpetrated by Philip Yorke, second Earl of Hardwicke: in other words, that the Earl, for some purpose not now easy to surmise, had written certain paragraphs in a seemingly Elizabethan style, and caused them to be printed as if belonging to a

newspaper of 1588. Be this as it may, concerning the identity of the writer, all who now look at the written and printed sheets agree that they are not what they profess to be; and thus a pretty bit of national complacency is set aside; for we have become ashamed of our *English Mercurie*.

Mr Knight Hunt, in his *Fourth Estate*, gives us credit, however, for a printed newspaper considerably more than two centuries old. He says: 'There is now no reason to doubt that the puny ancestor of the myriads of broad sheets of our time was published in 1622; and that the most prominent of the ingenious speculators who offered the novelty to the world was Nathaniel Butter. His companions in the work appear to have been Nicholas Bourne, Thomas Archer, Nathaniel Newberry, William Sheppard, Bartholomew Donner, and Edward Allde. All these different names appear in the imprint of the early numbers of the first newspaper, the *Weekly News*. What appears to be the earliest sheet bears the date 23d of May 1622.' About 1663, there was a newspaper called *Kingdom's Intelligencer*, more general and useful than any of its predecessors. Sir Roger L'Estrange was connected with it; but the publication ceased when the *London Gazette* (first called the *Oxford Gazette*) was commenced in 1665. A few years before this, during the stormy times of the Commonwealth, newspapers were amazingly numerous in England; the chief writers in them being Sir John Birkenhout and Mordaunt Needham.

If it were any part of our purpose here to mention the names of newspapers which have existed for a longer period than one century and a half, we should have to make out a pretty large list. Claims have been put forward in this respect for the *Lincoln, Rutland, and Stamford Mercury*, the *Scotch Postman*, the *Scotch Mercury*, the *Dublin News-Letter*, the *Dublin Gazette*, *Pue's Occurrences*, *Falconer's Journal*, and many others, some still existing, others extinct. The *Edinburgh Evening Courant* has, we believe, never ceased to appear thrice a week (latterly daily) since the 15th of December 1718; and its rival, the *Caledonian Mercury*, is but by two years less venerable. *Saunders's News-Letter* has had a vitality in Dublin of one hundred and eighteen years, during eighty of which it has been a daily paper.

In connection with these old newspapers, it is curious to observe the original meaning of the terms *Gazette* and *News-Letter*. During the war between the Venetians and the Turks in 1563, the Venetian Government, being desirous of communicating news on public affairs to the people, caused sheets of military and commercial intelligence to be written: these sheets were read out publicly at certain places, and the fee paid for hearing them was a small coin called a *gazetta*. By degrees, the name of the coin was transferred to the written sheet; and an official or government newspaper became known as a *Gazzetta* or *Gazetta*. For some time afterwards, the Venetian Government continued the practice, sending several written copies to several towns, where they were read to those who chose to listen to them. This

rude system, however, was not calculated to be of long duration: the printing-press speedily superseded such written sheets. The name, however, survives; the official newspapers of several European countries being called *Gazettes*.

Concerning *News-Letters*, they were the precursors of newspapers generally. They were really letters, written on sheets of writing-paper. Long after the invention of printing, readers were too few in number to pay for the issue of a regular periodically-printed newspaper. How, then, could the wealthy obtain information of what was going on in the world? By *written* newspapers or news-letters, for which they paid a high price. There were two classes of news-writers in those days—such as wrote privately to some particular person or family, and such as wrote as many copies as they could dispose of. Whitaker, in his *History of Craven*, says that the Clifford family preserves a record or memorandum to the following effect: 'To Captain Robinson, by my Lord's commands, for writing letters of news to his Lordship for half a year, five pounds.' In or about the year 1711, the town-council of Glasgow kept a news-writer for a weekly 'letter.' A collection of such letters was afterwards found in Glammis Castle. During the time of Ben Jonson, and down to a later period, there were many news-writers living in London, some of them unemployed military men, who sought about in every quarter for news. Some would visit the vicinity of the Court, some the Exchange, some Westminster Hall, some (old) St Paul's—the nave of which was, in those days, a famous resort for gossips. All that they could pick up was carried to certain offices, where they or other writers digested the news, and made it sufficient to fill a sheet of certain size. The number of copies of this sheet depended on the number of subscribers, most of whom were wealthy families residing in the country. Ben Jonson frequently satirizes these news-writers, on account of the unscrupulous way in which the news was often collected. Even in the days of Queen Anne, when mails and posts were more numerous, and when the printing-press had superseded the written news-letter, the caterers for the public were often suspected of manufacturing the news which they gave. Steele, in No. 42 of the *Tatler*, represents a news-writer as excusing himself and his craft in the following way: 'Hard shifts we intelligencers are forced to. Our readers ought to excuse us, if a westerly wind, blowing for a fortnight together, generally fills every paper with an order of battle; when we shew our mental skill in every line, and according to the space we have to fill, range our men in squadrons and battalions, or draw out company by company, and troop by troop: ever observing that no muster is to be made but when the wind is in a cross-point, which often happens at the end of a campaign, when half the men are deserted or killed. The *Courant* is sometimes ten deep, his ranks close; the *Postboy* is generally in files, for greater exactness; and the *Postman* comes down upon you rather after the Turkish way, sword in hand, pell-mell, without form or discipline; but sure to bring men enough into

the field; and wherever they are raised, never to lose a battle for want of numbers.'

GETTING INTO A SCRAPE.

This phrase, involving the use of an English word in a sense quite different from the proper one, appears to be a mystery to English lexicographers. Todd, indeed, in his additions to Johnson, points to *skrap*, Swedish, and quotes from Lye, '*Draga en in i scraeper*—to draw any one into difficulties.' But it may be asked, what is the derivation of the Swedish phrase? It is as likely that the Swedes have adopted our phrase as that we have adopted theirs. It may be suspected that the phrase is one of those which are puzzling in consequence of their having originated in special local circumstances, or from some remarkable occurrence.

There is a game called golf, almost peculiar to Scotland, though also frequently played upon Blackheath, involving the use of a small, hard, elastic ball, which is driven from point to point with a variety of wooden and iron clubs. In the north, it is played for the most part upon downs (or *links*) near the sea, where there is usually abundance of rabbits. One of the troubles of the golf-player is the little hole which the rabbit makes in the sward, in its first efforts at a burrow; this is commonly called a *rabbit's scrape*, or simply a *scrape*. When the ball gets into a scrape, it can scarcely be played. The rules of most golfing fraternities, accordingly, include one indicating what is allowable to the player *when he gets into a scrape*. Here, and here alone, as far as is known to the writer, has the phrase a direct and intelligible meaning. It seems, therefore, allowable to surmise that this phrase has originated amongst the golfing societies of the north, and in time spread to the rest of the public.

JANUARY 9.

SS. Julian and Basilissa, martyrs, 313. St Peter of Sebaste, bishop and confessor, about 387. St Marchiana, virgin and martyr, about 305. St Vaneng, confessor, about 688. St Fillan, abbot, 7th century. St Adrian, abbot at Canterbury, 710. St Brithwald, archbishop of Canterbury, 731.

ST FILLAN

is famous among the Scottish saints, from his piety and good works. He spent a considerable part of his holy life at a monastery which he built in Pittenweem, of which some remains of the later buildings yet exist in a habitable condition. It is stated that, while engaged here in transcribing the Scriptures, his left hand sent forth sufficient light to enable him, at night, to continue his work without a lamp. For the sake of seclusion, he finally retired to a wild and lonely vale, called from him Strathfillan, in Perthshire, where he died, and where his name is still attached to the ruins of a chapel, to a pool, and a bed of rock.

'At Strathfillan, there is a deep pool, called the Holy Pool, where, in olden times, they were wont to dip insane people. The ceremony was performed after sunset on the first day of the

quarter, O.S., and before sunrise next morning. The dipped persons were instructed to take three stones from the bottom of the pool, and, walking three times round each of three cairns on the bank, throw a stone into each. They were next conveyed to the ruins of St Fillan's chapel; and in a corner called St Fillan's bed, they were laid on their back, and left tied all night. If next morning they were found loose, the cure was deemed perfect, and thanks returned to the saint. The pool is still (1843) visited, not by parishioners, for they have no faith in its virtue, but by people from other and distant places.—*New Statistical Account of Scotland, parish of Killin, 1843.*

Strange as it may appear, the ancient bell of the chapel, believed to have been St Fillan's bell, of a very antique form, continued till the beginning of the nineteenth century to lie loose on a grave-stone in the churchyard, ready to be used, as it occasionally was, in the ceremonial for the cure of lunatics. The popular belief was, that it was needless to attempt to appropriate and carry it away, as it was sure, by some mysterious means, to return. A curious and covetous English traveller at length put the belief to the test, and the bell has been no more heard of. The head of St Fillan's crosier, called the *Quigrich*, of silver gilt, elegantly carved, and with a jewel in front, remained at Killin, in the possession of a peasant's family, by the representative of which it was conveyed some years ago to Canada, where it still exists. The story is that this family obtained possession of the *Quigrich* from King Robert Bruce, after the battle of Bannockburn, on his becoming offended with the abbot of Inchaffray, its previous keeper; and there is certainly a document proving its having been in their possession in the year 1487.

QUIGRICH OF ST FILLAN, FROM WILSON'S 'PRE-HISTORIC ANNALS OF SCOTLAND.'

A relic of St Fillan figures in Hector Bocce's account of the battle just alluded to. 'King Robert,' says he, 'took little rest the night before the battle, having great care in his mind for the surety of his army, one while revolving in his

consideration this chance, and another while that : yea, and sometimes he fell to devout contemplation, making his prayer to God and St Fillan, whose arm, as it was set and enclosed in a silver case, he supposed had been the same time within his tent, trusting the better fortune to follow by the presence thereof. As he was thus making his prayers, the case suddenly opened and clapped to again. The king's chaplain being present, astonished therewith, went to the altar where the case stood, and finding the arm within it, he cried to the king and others that were present, how there was a great miracle wrought, confessing that he brought the empty case to the field, and left the arm at home, lest that relic should have been lost in the field, if anything chanced to the army otherwise than well. The king, very joyful of this miracle, passed the remnant of the night in prayer and thanksgiving.'

Born.—John Earl St Vincent (Admiral Jervis), 1734.

Died.—Bernard de Fontenelle, philosopher, 1757; Thomas Birch, biographical and historical writer, 1766; Elizabeth O. Benger, historian, 1822; Caroline Lucretia Herschel, astronomer, 1848.

LORD ST VINCENT.

In the history of this great naval commander, we have a remarkable instance of early difficulties overcome by native hardihood and determination. The son of a solicitor who was treasurer to Greenwich Hospital, he received a good education, and was designed for the law; but this was not to be his course. To pursue an interesting recital given by himself—'My father's favourite plan was frustrated by his own coachman, whose confidence I gained, always sitting by his side on the coach-box when we drove out. He often asked what profession I intended to choose. I told him I was to be a lawyer. "Oh, don't be a lawyer, Master Jackey," said the old man; "all lawyers are rogues." About this time young Strachan (father of the late Admiral Sir Richard Strachan, and a son of Dr Strachan, who lived at Greenwich) came to the same school, and we became great friends. He told me such stories of the happiness of a sea life, into which he had lately been initiated, that he easily persuaded me to quit the school and go with him. We set out accordingly, and concealed ourselves on board of a ship at Woolwich.' After three days' absence, young Jervis returned home, and persisted in not returning to school. 'This threw my mother into much perplexity, and, in the absence of her husband, she made known her grief, in a flood of tears, to Lady Archibald Hamilton, mother of the late Sir William Hamilton, and wife of the Governor of Greenwich Hospital. Her ladyship said she did not see the matter in the same light as my mother did, that she thought the sea a very honourable and a very good profession, and said she would undertake to procure me a situation in some ship-of-war. In the meantime my mother sent for her brother, Mr John Parker, who, on being made acquainted with my determination, expostulated with me, but to no purpose. I was resolved I would not be a lawyer, and that I would be a sailor. Shortly afterwards Lady

Archibald Hamilton introduced me to Lady Burlington, and she to Commodore Townshend, who was at that time going out in the *Gloucester*, as Commander-in-Chief, to Jamaica. She requested that he would take me on his quarter-deck, to which the commodore readily consented; and I was forthwith to be prepared for a sea life. My equipment was what would now be called rather grotesque. My coat was made for me to grow up to; it reached down to my heels, and was full large in the sleeves; I had a dirk, and a gold-laced hat; and in this costume my uncle caused me to be introduced to my patroness, Lady Burlington. Here I acquitted myself but badly. I lagged behind my uncle, and held by the skirt of his coat. Her ladyship, however, insisted on my coming forward, shook hands with me, and told me I had chosen a very honourable profession. She then gave Mr Parker a note to Commodore George Townshend, who lived in one of the small houses in Charles Street, Berkeley Square, desiring that we should call there early the next morning. This we did; and after waiting some time, the commodore made his appearance in his night-cap and slippers, and in a very rough and uncouth voice asked me how soon I would be ready to join my ship? I replied, "Directly." "Then you may go to-morrow morning," said he, "and I will give you a letter to the first lieutenant." My uncle, Mr Parker, however, replied that I could not be ready quite so soon, and we quitted the commodore. In a few days after this we set off, and my uncle took me to Mr Blanchard, the master-attendant or the boatswain of the dockyard—I forget which—and by him I was taken on board the hulk or receiving-ship the next morning, the *Gloucester* being in dock at the time. This was in the year 1748. As soon as the ship was ready for sea we proceeded to Jamaica, and as I was always fond of an active life, I volunteered to go into small vessels, and saw a good deal of what was going on. My father had a very large family, with limited means. He gave me twenty pounds at starting, and that was all he ever gave me. After I had been a considerable time at the station, I drew for twenty more, but the bill came back protested. I was mortified at this rebuke, and made a promise, which I have ever kept, that I would never draw another bill, without a certainty of its being paid. I immediately changed my mode of living, quitted my mess, lived alone, and took up the ship's allowance, which I found to be quite sufficient; washed and mended my own clothes, made a pair of trousers out of the ticking of my bed, and, having by these means saved as much money as would redeem my honour, I took up my bill; and from that time to this' (he said this with great energy) 'I have taken care to keep within my means.'

FONTENELLE.

Fontenelle stands out amongst writers for having reached the extraordinary age of a hundred years. He was probably to a great extent indebted for that length of days to a calmness of nature which forbade the machine to be subjected to any rough handling. It was believed of him that he had never either truly laughed or truly

cried in the whole course of his existence. His leading characteristic is conveyed in somebody's excellent *mot* on hearing him say that he flattered himself he had a good heart: 'Yes, my dear Fontenelle, as good a heart as can be made out of brains.' Better still in an anecdote which has got into currency: 'One day, a certain *bon-vivant* abbé came unexpectedly to dine with him. The abbé was fond of asparagus dressed with butter; for which Fontenelle also had a great *goût*, but preferred it dressed with oil. Fontenelle said for such a friend there was no sacrifice he would not make: the abbé should have half the dish of asparagus he had ordered for himself, and, moreover, it should be dressed with butter. While they were conversing thus together, the poor abbé fell down in a fit of apoplexy; upon which his friend Fontenelle instantly scampered down stairs, and eagerly called out to his cook: "The whole with oil! the whole with oil, as at first!"'

Fontenelle was born at Rouen, 11th February, 1657, and was, by his mother's side, nephew of the great Corneille. He was bred to the law, which he gave up for poetry, history, and philosophy. His poetical pieces have, however, fallen into neglect and oblivion. The *Dialogues des Morts*, published in 1683, first laid the foundation of his literary fame. He was the first individual who wrote a treatise expressly on the Plurality of Worlds. It was published in 1686, the year before the publication of Newton's *Principia*, and is entitled *Conversations on the Plurality of Worlds*. It consists of five chapters, with the following titles: 1. The Earth is a planet which turns round its own axis and also round the sun. 2. The Moon is a habitable world. 3. Particulars concerning the world in the Moon, and that the other planets are inhabited. 4. Particulars of the worlds of Venus, Mercury, Mars, Jupiter, and Saturn. 5. The Fixed Stars are so many suns, each of which illuminates a world. In another edition of the work published in 1719, Fontenelle added a sixth chapter, entitled, 6. New thoughts which confirm those in the preceding conversations—the latest discoveries which have been made in the heavens. This singular work, written by a man of great genius, and with a sufficient knowledge of astronomy, excited a high degree of interest, both from the nature of the subject, and the vivacity and humour with which it is treated. The conversations are carried on with the Marchioness of G—, with whom the author is supposed to be residing. The lady is distinguished by youth, beauty, and talent, and the share which she takes in the dialogue is not less interesting than the more scientific part assumed by the philosopher.

The *Plurality of Worlds* (says Sir David Brewster) was read with unexampled avidity through every part of Europe. It was translated into all the languages of the Continent, and was honoured by annotations from the pen of the celebrated astronomer Lalande; and of M. Gottsched, one of its German editors. No fewer than three English translations of it were published; and one of these, we believe the first, had run through *six* editions so early as the year 1737.

We have given this outline of Fontenelle's

celebrated work in consequence of the great attention which its subject, the Plurality of Worlds, has of late excited in scientific circles. One of the leading controversialists has been the author of an Essay on the *Plurality of Worlds*, who urges the theological, not less than the scientific, reasons for believing in the old tradition of a single world: 'I do not pretend,' says this writer, 'to disprove the plurality of worlds; but I ask in vain for any argument which makes the doctrine probable.' . . . 'It is too remote from knowledge to be either proved or disproved.' Sir David Brewster has replied in *More Worlds than One*, emphatically maintaining that analogy strongly countenances the idea of all the solar planets; if not all worlds in the universe, being peopled with creatures, not dissimilar in being and nature to that of the inhabitants of the earth.

CAROLINE LUCRETIA HERSCHEL

was one of those women who occasionally come forth before the world, as in protest against the commonly accepted ideas of men regarding the mental capacity of the gentler sex. Of all scientific studies one would suppose that of mathematics to be the most repulsive to the female mind; yet what instances there are of the contrary! Jeanne Dumée, the widow who sought solace for her desolate state in the study of the Copernican theory; Marie Caunitz, who assisted her husband in making up his *Mathematical Tables*; the Marquise de Châtelet, the friend of Voltaire, Maupertius, and Bernouilli, who published in 1740 her *Institution de Physique*, an exposition of the philosophy of Leibnitz, and who likewise translated the *Principia* of Newton; Nicole de Lahière, who helped her husband Lefante with a Treatise on the Lengths of Pendulums; the Italian Agnosi, who wrote and debated on all learned subjects, a perfect Admirable Crichton in petticoats, and whose mathematical treatises yet command admiration: finally, an-

other fair Italian, Maria Catarina Bassi, who was equally conversant with classical and mathematical studies, and actually attained the honours of a professor's chair in the university of Bologna. Such examples are certainly enough to prove that, whatever may be the ordinary or average powers and tendencies of the female mind, there is nothing in its organization absolutely to forbid an occasional competency for the highest subjects of thought.

Isaac Herschel and his wife Ilse little thought, when he was plying his vocation as a musician at Hanover, what a world-wide reputation was in store for their family. He taught them all music—four sons and a daughter. The second son, William, came to England to seek his fortune in 1758; and when, after many difficulties, he became organist at Bath, his sister Caroline came over to live with him. In time, turning his attention to telescopes and astronomy, and gaining the favour of George III., he became the greatest practical astronomer of his age. For more than forty years did the brother pursue his investigations at Slough, near

CAROLINE LUCRETIA HERSCHEL.

Windsor, Caroline assisting him. It is stated that when he became for ten or twelve hours at a time absorbed in study, Miss Herschel sometimes found it necessary to put food into his mouth, as otherwise he would have neglected even that simplest of nature's needs. The support of the pair was assured by a pension from the king, who did himself honour by conferring on William Herschel the honour of knighthood.

In 1798 Caroline Herschel published a *Catalogue of Stars*, at the expense of the Royal Society, which has ever since been highly valued by practical astronomers. After a noble career, Sir William died in 1822; and his sister then went to spend the rest of her days at Hanover.

She afterwards prepared a *Catalogue of Nebulae and Star-Clusters*, observed by her brother.

It was an event worth remembering, when, on the 8th of February 1828, the Astronomical Society's gold medal was awarded to Caroline

Herschel. Her nephew John, now the eminent Sir J. F. W. Herschel, was President of the Society, and shrank from seeming to bestow honour on his own family; but the Council worthily took the matter in hand. Sir James South, in an address on the occasion, after advertising to the labours of Sir William Herschel, said: 'Who participated in his toils? Who braved with him the inclemency of the weather? Who shared his privations? A female! Who was she? His sister. Miss Herschel it was who, by night, acted as his amanuensis. She it was whose pen conveyed to paper his observations as they issued from his lips; she it was who noted the right ascensions and polar distances of the objects observed; she it was who, having passed the night near the instruments, took the rough manuscripts to her cottage at the dawn of day, and produced a fine copy of the night's work on the subsequent morning; she it was who planned the labour of each succeeding night; she it was who reduced every observation and made every calculation; she it was who arranged everything in systematic order; and she it was who helped him to obtain an imperishable name. But her claims to our gratitude end not here. As an original observer, she demands, and I am sure has, our most unfeigned thanks. Occasionally, her immediate attention during the observations could be dispensed with. Did she pass the night in repose? No such thing. Wherever her illustrious brother was, there you were sure to find her also.' As one remarkable fact in her career, she discovered seven comets, by means of a telescope which her brother made expressly for her use.

It was not until the extraordinary age of *ninety-seven* that this admirable woman closed her career. Her intellect was clear to the last; and princes and philosophers alike strove to do her honour. The foregoing portrait—in which, notwithstanding age and decay, we see the lineaments of intellect and force of character,—is from a sketch in the possession of Sir John Herschel.

Touching for the Evil.

On this day in the year 1683, King Charles II. in council at Whitehall, issued orders for the future regulation of the ceremony of Touching for the King's Evil. It was stated that 'his Majesty, in no less measure than his royal predecessors, having had good success therein, and in his most gracious and pious disposition being as ready as any king or queen of this realm ever was, in any thing to relieve the necessities and distresses of his good subjects,' it had become necessary to appoint fit times for the 'Publick Healings;' which therefore were fixed to be from All-Hallow-tide till a week before Christmas, and after Christmas until the first week of March, and then cease till Passion week; the winter being to be preferred for the avoidance of contagion. Each person was to come with a recommendation from the minister or churchwardens of his parish, and these individuals were enjoined to examine carefully into the cases before granting such certificates, and in particular to make sure

that the applicant had not been touched for the evil before.*

Scrofula, which is the scientific name of the disease popularly called the *King's evil*, has been described as 'indolent glandular tumours, frequently in the neck, suppurating slowly and imperfectly, and healing with difficulty.' (Good's *Study of Medicine*.) This is the kind of disease most likely to be acted upon by the mind in a state of excitement. The tumours may be stimulated, and the suppuration quickened and increased, which is the ordinary process of cure. Whether the result be produced through the agency of the nerves, or by an additional flow of blood to the part affected, or by both, has not perhaps been clearly ascertained: but that cures in such cases are effected by some such natural means, is generally admitted by medical practitioners; and it is quite credible that, out of the hundreds of persons said to have been cured of king's evil by the royal touch, many have been restored to health by the mind under excitement operating on the body. In all such cases, however, the probability of cure may be considered as in proportion to the degree of credulity in the person operated upon, and as likely to be greatest where the feeling of reverence or veneration for the operator is strongest. As society becomes instructed in the causes and nature of diseases, and the methods of cure established by medical experience, the belief in amulets, charms, and the royal touch passes away from the human mind, together with all the other superstitions which were so abundant in ages of ignorance, and of which only a few remains still linger among the most unstructed classes of society.

The practice of touching for the king's evil had its origin in England from Edward the Confessor, according to the testimony of William of Malmesbury, who lived about one hundred years after that monarch. Mr Giles's translation of this portion of the *Chronicle of the Kings of England* is as follows: 'But now to speak of his miracles. A young woman had married a husband of her own age, but having no issue by the union, the humours collecting abundantly about her neck, she had contracted a sore disorder, the glands swelling in a dreadful manner. Admonished in a dream to have the part affected washed by the king, she entered the palace, and the king himself fulfilled this labour of love by rubbing the woman's neck with his hands dipped in water. Joyous health followed his healing hand; the lurid skin opened, so that worms flowed out with the purulent matter, and the tumour subsided; but as the orifice of the ulcer was large and unsightly, he commanded her to be supported at the royal expense till she should be perfectly cured. However, before a week was expired, a fair new skin returned, and hid the ulcers so completely that nothing of the original wound could be discovered. . . . Those who knew him more intimately affirm that he often cured this complaint in Normandy; whence appears how false is their notion who in our times assert that the cure of this disease does not proceed from personal sanctity, but from hereditary virtue in the royal line.'

Shakspeare describes the practice of the holy

* Broadside printed by John Bill, 1683.

king in his tragedy of *Macbeth*, 'the gracious Duncan' having been contemporary with Edward the Confessor :

'*Macduff*.—What's the disease he means ?
Malcolm.— 'Tis called the evil ;

A most miraculous work in this good king ;
Which often, since my here-remain in England,
I've seen him do. How he solicits heaven
Himself best knows ; but strangely-visited people,
All swoll and ulcerous, pitifull to the eye,
The mere despair of surgery, he cures ;
Hanging a golden stamp about their necks,
Put on with holy prayers : and 'tis spoken,
To the succeeding royalty he leaves
The healing benediction. With this strange virtue
He hath a heavenly gift of prophecy ;
And sundry blessings hang about his throne,
That speak him full of grace.'

Holinshed's Chronicle is Shakspeare's authority, but by referring to the passage it will be seen that the poet has mixed up in his description the practice of his own times. Referring to Edward the Confessor, Holinshed writes as follows :— 'As it has been thought, he was inspired with the gift of prophecy, and also to have the gift of healing infirmities and diseases. He used to help those that were vexed with the disease commonly called the king's evil, and left that virtue, as it were, a portion of inheritance to his successors, the kings of this realm.'

Laurentius, first physician to Henry IV. of France, in his work *De Mirabili Strumas Sanando*, Paris, 1609, derives the practice of touching for the king's evil from Clovis, A.D. 481, and says that Louis I., A.D. 814, also performed the ceremony with success. Philip de Commines says (Danett's transl., ed. 1614, p. 203), speaking of Louis XI. when he was ill at Forges, near Chinon, in 1480: 'He had not much to say, for he was shriven not long before, because the kings of Fraunce use alwaies to confesse themselves when they touch those that be sick of the king's evil, which he never failed to do once a weeke.'

There is no mention of the first four English kings of the Norman race having ever attempted to cure the king's evil by touching; but that Henry II. performed cures is attested by Peter of Blois, who was his chaplain. John of Gaddesden, who was physician to Edward II., and flourished about 1320 as a distinguished writer on medicine, treats of scrofula, and, after describing the methods of treatment, recommends, in the event of failure, that the patient should repair to the court in order to be touched by the king. Bradwardine, Archbishop of Canterbury, who lived in the reigns of Edward III. and Richard II., testifies as to the antiquity of the practice, and its continuance in the time when he lived. Sir John Fortescue, Lord Chief Justice of the Court of King's Bench in the time of Henry IV., and afterwards Chancellor to Henry VI., in his *Defence of the Title of the House of Lancaster*, written just after Henry IV.'s accession to the crown, and now among the Cotton manuscripts in the British Museum, represents the practice as having belonged to the kings of England from time immemorial. Henry VII. was the first English sovereign who established a particular ceremony to be used on the occasion

of touching, and introduced the practice of presenting a small piece of gold.

We have little trace of the custom under the eighth Harry; but Cavendish, relating what took place at the court of Francis I. of France, when Cardinal Wolsey was there on an embassy in 1527, has the following passage: 'And at his [the king's] coming into the bishop's palace [at Amiens], where he intended to dine with the Lord Cardinal, there sat within a cloister about 200 persons diseased with the king's evil, upon their knees. And the king, or ever he went to dinner, provided every of them with rubbing and blessing them with his bare hands, being bareheaded all the while; after whom followed his almoner, distributing of money unto the diseased. And that done, he said certain prayers over them, and then washed his hands, and came up into his chamber to dinner, where my lord dined with him.'—*Life of Wolsey*, ed. 1825, i. 124.

In the reign of Queen Elizabeth, William Tookes published a book on the subject of the cures effected by the royal touch—*Charisma; sive Donum Sanationis*. He is a witness as to facts which occurred in his own time. He states that many persons from all parts of England, of all ranks and degrees, were, to his own knowledge, cured by the touch of the Queen; that he conversed with many of them both before and after their departure from the court; observed an incredible ardour and confidence in them that the touch would cure them, and understood that they actually were cured. Some of them he met a considerable time afterwards, and upon inquiry found that they had been perfectly free from the disease from the time of their being touched, mentioning the names and places of abode of several of the persons cured. William Clowes, surgeon to Queen Elizabeth, denominates scrofula 'the King's or the Queen's Evil, a disease repugnant to nature; which grievous malady is known to be miraculously cured and healed by the sacred hands of the Queen's most royal majesty, even by Divine inspiration and wonderful work and power of God, above man's will, art, and expectation.'

In the State Paper Office there are preserved no less than eleven proclamations issued in the reign of Charles I. respecting the touching for the king's evil. They relate mostly to the periods when the people might repair to the court to have the ceremony performed. In the troubled times of Charles's reign he had not always gold to bestow; for which reason, observes Mr Wiseman, he substituted silver, and often touched without giving anything.

Mr Wiseman, who was principal surgeon to Charles II. after the Restoration, says: 'I myself have been a frequent eye-witness of many hundreds of cures performed by his Majesty's touch alone, without any assistance from chirurgery.' The number of cases seems to have increased greatly after the Restoration, as many as 600 at a time having been touched, the days appointed for it being sometimes thrice a week. The operation was often performed at Whitehall on Sundays. Indeed, the practice was at its height in the reign of Charles II. In the first

four years after his restoration he touched nearly 24,000 persons. Pepys, in his *Diary*, under the date June 23, 1660, says: 'To my lord's lodgings, where Tom Guy came to me, and then staid to see the king touch for the king's evil. But he did not come at all, it rained so; and the poor people were forced to stand all the morning in the rain in the garden. Afterwards he touched them in the Banqueting House.' And again, under the date of April 10, 1661, Pepys says: 'Met my lord the duke, and, after a little talk with him, I went to the Banquet House, and there saw the king heal,—the first time that ever I saw him do it,—which he did with great gravity; and it seemed to me to be an ugly office and a simple one.'

One of Charles II.'s proclamations, dated January 9, 1683, has been given above. Evelyn, in his *Diary*, March 28, 1684, says: 'There was so great a concourse of people with their children to be touched for the evil, that six or seven were crushed to death by pressing at the surgeon's door for tickets.' The *London Gazette*, October 7, 1686, contains an advertisement stating that his Majesty would heal weekly on Fridays, and commanding the attendance of the king's physicians and surgeons at the Mews, on Thursdays in the afternoon, to examine cases and deliver tickets.

Gemelli, the traveller, states that Louis XIV. touched 1600 persons on Easter Sunday, 1686. The words he used were: 'Le Roy te touche, Dieu te guérisse' ('The King touches thee; may God cure thee'). Every Frenchman received fifteen sous, and every foreigner thirty. —Barrington's *Observations on the Statutes*, p. 107.

But Charles II. and Louis XIV. had for a few years a rival in the gift of curing the king's evil by touching. Mr Greatrakes, an Irish gentleman of the county of Waterford, began, about 1662, to have a strange persuasion in his mind that the faculty of curing the king's evil was bestowed upon him, and upon trial found his touching succeed. He next ventured upon agues, and in time attempted other diseases. In January 1666, the Earl of Orrery invited him to England to attempt the cure of Lady Conway of a headache; he did not succeed; but during his residence of three or four weeks at Ragley, Lord Conway's seat in Warwickshire, cured, as he states, many persons, while others received benefit. From Ragley he removed to Worcester, where his success was so great that he was invited to London, where he resided many months in Lincoln's Inn Fields, and performed many cures.—*A brief Account of Mr Valentine Greatrakes, and divers of the strange cures by him performed; written by himself, in a Letter addressed to the Hon. Robert Boyle, Esq., whereunto are annexed the testimonials of several eminent and worthy persons of the chief matters of fact there related.* London, 1666.

The ceremony of touching was continued by James II. In the *Diary* of Bishop Cartwright, published by the Camden Society, at the date of August 27, 1687, we read: 'I was at his Majesty's levee; from whence, at nine o'clock, I attended him into the closet, where he healed

350 persons.' James touched for the evil while at the French court. Voltaire alludes to it in his *Siècle de Louis XIV.* William III. never performed the ceremony.

Queen Anne seems to have been the last of the English sovereigns who actually performed the ceremony of touching. Dr Dicken, her Majesty's serjeant-surgeon, examined all the persons who were brought to her, and bore witness to the certainty of some of the cures. Dr Johnson, in Lent, 1712, was amongst the persons touched by the Queen.

For this purpose he was taken to London, by the advice of the celebrated Sir John Floyer, then a physician in Lichfield. Being asked if he remembered Queen Anne, Johnson said he had 'a confused, but somehow a sort of solemn recollection of a lady in diamonds, and a long black hood.' Johnson was but thirty months old when he was touched.

Carte, the historian, appears to have been not only a believer in the efficacy of the royal touch, but in its transmission in the hereditary royal line; and to prove that the virtue of the touch was not owing to the consecrated oil used at the coronation, as some thought, he relates an instance within his own knowledge of a person who had been cured by the Pretender. (*History of England*, vol. i. p. 357, note.) 'A young man named Lovel, who resided at Bristol, was afflicted with scrofulous tumours on his neck and breast, and having received no benefit from the remedies applied, resolved to go to the Continent and be touched. He reached Paris at the end of August 1716, and went thence to the place where he was touched by the lineal descendant of a race of kings who had not at that time been anointed. He touched the man, and invested him with a narrow riband, to which a small piece of silver was pendant, according to the office appointed by the Church for that solemnity. The humours dispersed insensibly, the sores healed up, and he recovered strength daily till he arrived in perfect health at Bristol at the beginning of January following. There I saw him without any remains of his complaint.' It did not occur to the learned historian that these facts might all be true, as probably they were, and yet might form no proof that an unanointed but hereditarily rightful king had cured the evil. The note had a sad effect for him, in causing much patronage to be withdrawn from his book.

A form of prayer to be used at the ceremony of touching for the king's evil was originally printed on a separate sheet, but was introduced into the Book of Common Prayer as early as 1684. It appears in the editions of 1707 and 1709. It was altered in the folio edition printed at Oxford in 1715 by Baskett.

Previous to the time of Charles II., no particular coin appears to have been executed for the purpose of being given at the touching. In the reign of Queen Elizabeth, the small gold coin called an angel seems to have been used. The touch-pieces of Charles II. are not uncommon, and specimens belonging to his reign and of the reigns of James II. and of Queen Anne may be seen in the British Museum. They have figures of St Michael and the dragon on one side, and a

ship on the other. A piece in the British Museum has on one side a hand descending from a cloud

TOUCH-PIECE (TIME OF CHARLES II.).

TOUCH-PIECE (TIME OF QUEEN ANNE).

towards four heads, with 'He touched them' round the margin, and on the other side a rose and thistle, with 'And they were healed.'

We have engraved a gold touch-piece of Charles II., obverse and reverse; and the identical touch-piece, obverse and reverse, given by Queen Anne to Dr Johnson, preserved in the British Museum.

THE 'DAVY' AND THE 'GEORDY.'

On this day, in the year 1816, Davy's safety lamp, for the first time, shed its beams in the dark recesses of a coal-pit. The Rev. John Hodgson, rector of Jarrow, near Newcastle,—a man of high accomplishment, subsequently known for his laborious *History of Northumberland*,—had on the previous day received from Sir Humphry Davy, two of the lamps which have ever since been known by the name of the great philosopher. Davy, although he felt well-grounded reliance in the scientific correctness of his new lamp, had never descended a coal-pit to make the trial: and Hodgson now determined to do this for him. Coal mines are wont to give forth streams of gas, which, when mixed in certain proportions with atmospheric air, ignite by contact with an open flame, producing explosion, and scattering death and destruction around. Till this time, miners were in the habit, when working in foul air, of lighting themselves by a *steel mill*—a disk of steel kept revolving in contact with a piece of flint: such an arrangement being safe, though certainly calculated to afford very little light. Davy found the means, by enclosing the flame in a kind of lantern of wire-gauze, of giving out light without inviting explosion. Armed with one of these lamps, Mr Hodgson descended Hebburn pit, walked about in a terrible atmosphere of *fire-damp*, or explosive gas, held his lamp high and low, and saw it become full of blazing gas without producing any explosion. He approached gradually a miner working

by the spark light of a steel mill; a man who had not the slightest knowledge that such a wonder as the new lamp was in existence. No notice had been given to the man of what was about to take place. He was alone in an atmosphere of great danger, 'in the midst of life or death,' when he saw a light approaching, apparently a candle burning openly, the effect of which he knew would be instant destruction to him and its bearer. His command was instantly, '*Put out the light!*' The light came nearer and nearer. No regard was paid to his cries, which then became wild, mingled with imprecations against the comrade (for such he took Hodgson to be) who was tempting death in so rash and certain a way. Still, not one word was said in reply; the light continued to approach, and then oaths were turned into prayers that his request might be granted; until there stood before him, silently exulting in his success, a grave and thoughtful man, a man whom he well knew and respected, holding up in his sight, with a gentle smile, the triumph of science, the future safeguard of the pitmen.* The clergyman afterwards acknowledged that he had done wrong in subjecting this poor fellow to so terrible a trial.

Great and frequent as had been the calamities arising from fire-damp, it was not till after an unusually destructive explosion in 1812, that any concentrated effort was made to obtain from science the means of neutralising it. In August 1815, Sir Humphry Davy was travelling through Northumberland. In consequence of his notable discoveries in chemistry, Dr Gray, rector of Bishopwearmouth, begged him to make a short sojourn in Newcastle, and see whether he could suggest anything to cure the great danger of the mines. Mr Hodgson and Mr Buddle, the latter an eminent colliery engineer, explained all the facts to Davy, and set his acute mind thinking. He came to London, and made a series of experiments. He found that flame will not pass through minute tubes; he considered that a sheet of wire-gauze may be regarded as a series of little tubes placed side by side; and he formed a plan for encircling the flame of a lamp with a cylinder of such gauze. Inflammable air can get through the meshes to reach the flame, but it cannot emerge again *in the form of flame*, to ignite the rest of the air in the mine. He sent to Mr Hodgson for a *bottle of fire-damp*: and with this he justified the results to which his reasoning had led him. At length, at the end of October, Davy wrote to Hodgson, telling all that he had done and reasoned upon, and that he intended to have a rough 'safety lamp' made. This letter was made public at a meeting in Newcastle on the 3d of November; and soon afterwards Davy read to the Royal Society, and published in the *Philosophical Transactions*, those researches in flames which have contributed so much to his reputation. There can be no question that his invention of the safety lamp was due to his love of science and his wish to do good. He made the best lamp he could, and sent it to Mr Hodgson, and read with intense interest that gentleman's account of the

* Raine's *Life of the Rev. John Hodgson*.

eventful experiences of the 9th of January. It is pleasant to know that that identical lamp is preserved in the Museum of Practical Geology in Jermyn Street. Mr Buddle advised Sir Humphry to take out a patent for his invention, which he was certain would realise £5000 to £10,000 a year. But Davy would have none of this; he did not want to be paid for saving miners' lives. 'It might,' he replied, 'undoubtedly enable me to put four horses to my carriage; but what could it avail me to have it said that Sir Humphry drives his carriage and four?'

While the illustrious philosopher was thus effecting his philanthropic design by a strictly scientific course, a person then of little note, but afterwards the equal of Davy in fame,—George Stephenson, engine-wright at Killingworth Colliery, near Newcastle,—was taxing his extraordinary genius to effect a similar object by means more strictly mechanical. In August 1815, he devised a safety lamp, which was tried with success on the subsequent 21st of October. Accompanied by his son Robert, then a boy, and Mr Nicholas Wood, a superintendent at Killingworth, Stephenson that evening descended into the mine. 'Advancing alone, with his yet untried lamp, in the depths of those underground workings—calmly venturing his own life in the determination to discover a mode by which the lives of many might be saved and death disarmed in these fatal caverns—he presented an example of intrepid nerve and manly courage, more noble even than that which, in the excitement of battle and the impetuosity of a charge, carries a man up to the cannon's mouth. Advancing to the place of danger, and entering within the fouled air, his lighted lamp in hand, Stephenson held it firmly out, in the full current of the blower, and within a few inches of its mouth. Thus exposed, the flame of the lamp at first increased, and then flickered and went out; but there was no explosion of gas. . . . Such was the result of the first experiment with the first practical miner's safety lamp; and such the daring resolution of its inventor in testing its valuable qualities!'

Stephenson's first idea was that, if he could establish a current within his lamp, by a chimney at its top, the gas would not take fire at the top of the chimney; he was gradually led to connect with this idea, an arrangement by a number of small tubes for admitting the air below, and a third lamp, so constructed—being a very near approach to Davy's plan—was tried in the Killingworth pit on the 30th of November, where to this day lamps constructed on that principle—and named the 'Geordy'—are in regular use.

No one can now doubt that both Davy and Stephenson really invented the safety lamp, quite independently of each other: both adopted the same principle, but applied it differently. To this day some of the miners prefer the 'Geordy'; others give their vote for the 'Davy'; while others again approve of lamps of later construction, the result of a combination of improvements. In those days, however, the case was very different. A fierce lamp-war raged throughout 1816 and 1817. The friends of each party accused the other of stealing fame. Davy having the advantage

* Smiles's *Life of George Stephenson*.

of an established reputation, nearly all the men of science sided with him. They affected superb disdain for the new claimant, George Stephenson, whose name they had never before heard. Dr Paris, in his *Life of Davy*, says: 'It will hereafter be scarcely believed that an invention so eminently philosophic, and which could never have been derived but from the sterling treasury of science, should have been claimed on behalf of an engine-wright of Killingworth, of the name of Stephenson—a person not even professing a knowledge of the elements of chemistry.' There were others, chiefly men of the district, who defended the rights of the ingenious engine-wright, whose modesty, however, prevented him from ever taking up an offensive position towards his illustrious rival.

MARRIAGE OF MR ABERNETHY.

January 9, 1800, Mr Abernethy, the eccentric surgeon, was married to Miss Ann Threlfall. 'One circumstance on the occasion was very characteristic of him; namely, his not allowing it to interrupt, even for a day, his course of lectures at the hospital. Many years after this, I met him coming into the hospital one day, a little before two (the hour of lecture), and seeing him rather smartly dressed, with a white waistcoat, I said, "You are very gay to-day, sir?" "Ay," said he; "one of the girls was married this morning." "Indeed, sir," I said. "You should have given yourself a holiday on such an occasion, and not come down to the lecture." "Nay," returned he; "egad! I came down to lecture the day I was married myself!" On another occasion, I recollect his being sent for to a case just before lecture. The case was close in the neighbourhood, and it being a question of time, he hesitated a little; but being pressed to go, he started off. He had, however, hardly passed the gates of the hospital before the clock struck two, when, all at once, he said: "No, I'll be — if I do!" and returned to the lecture-room.'—*Macilvain's Memoirs of Abernethy*.

JANUARY 10.

St Marcan, priest, fifth century. St Agatho, pope, 682. St William, archbishop of Bourges, confessor, 1209.

St William was deemed a model of monastic perfection. 'The universal mortification of his senses and passions laid in him the foundation of an admirable purity of heart and an extraordinary gift of prayer; in which he received great heavenly lights and tasted of the sweets which God has reserved for those to whom he is pleased to communicate himself. The sweetness and cheerfulness of his countenance testified the uninterrupted joy and peace that overflowed his soul, and made a virtue appear with the most engaging charms in the midst of austerities. . . . He always wore a hair shirt under his religious habit, and never added, nor diminished, anything in his clothes either winter or summer.'—*Butler*.

Born.—Dr George Birkbeck, 1776.

Died.—Archbishop Laud (beheaded), 1645; Edward Cave, 1754; Admiral Boscawen, 1761; Linnæus, naturalist, 1778; Mary Russell Mitford, authoress, 1855.

DR BIRKBECK.

In inquiring into the origin of that movement for popular instruction which has occupied so broad a space during this century, we are met by the name of George Birkbeck standing out in conspicuous characters. The son of a banker at Settle, in Yorkshire, and reared as a medical practitioner, he was induced at an early period of life to accept a professorship in what was called the Andersonian Institution of Glasgow, —a kind of popular university which had just then started into being, under circumstances which will be elsewhere adverted to. Here Birkbeck found great difficulty in getting apparatus made for a course of lectures on Natural and Experimental Philosophy; and this suggested to him the establishment of popular lectures to working men, with a view to the spread of knowledge in various matters relating to the application of science to the practical arts. This was the germ from which Mechanics' Institutions afterwards sprang. The trustees of the Andersonian Institution had not Birkbeck's enthusiasm; they deemed the scheme visionary, and refused at first to support it. In the autumn of 1800 he went to Yorkshire for a vacation, and there digested a plan for forming a class 'solely for persons engaged in the practical exercise of the mechanical arts, men whose education in early life had precluded even the possibility of acquiring the smallest portion of scientific knowledge.'

This mechanics' class was to be held in one of the rooms of the Andersonian Institution. On his return to Glasgow he opened communications with the chief owners of manufacturing establishments, offering to the more intelligent workmen free admission to his class. The first lecture was attended by 75 artisans; it excited so much interest that 200 came to the second lecture, 300 to the third, and 500 to the fourth. His grateful pupils presented him with a silver cup at the close of the course, as a token of their appreciation of his disinterested kindness. He repeated these labours year after year till 1804, when he resigned his position at Glasgow to Dr Ure, who, like him, was at that time struggling into fame. Birkbeck married, came to London, and settled down as a physician.

Many years elapsed, during which Dr Birkbeck was wholly absorbed in his professional duties. He did not, however, forget his early schemes; and, as he advanced in life, he found or made opportunities for developing them. In 1820 he gave a gratuitous course of seventeen lectures at the London Institution. Gradually a wish spread in various quarters to put in operation the plan which had so long occupied the thoughts of Birkbeck—viz., to give instructions in science to working men. In 1821 a School of Arts was established at Edinburgh, chiefly through the instrumentality of Mr Leonard Horner. In 1823 a Mechanics' Institution was founded at Glasgow, and another in London, of which last Dr Birkbeck was very appropriately elected President, an office he filled till his death eighteen years afterwards. A controversy has recently arisen on the question whether Mr Robertson, the first editor of the *Mechanics' Magazine*, is not entitled to the honour of being the first proposer of Mechanics' Institutions; let it suffice for our purpose to associate the three names of Brougham, Birkbeck, and Robertson in this useful labour, and leave to others the due apportionment of praise.

DR BIRKBECK.

ARCHBISHOP LAUD.

The name of Laud does not savour agreeably in the minds of Englishmen; yet it will be generally admitted that he was unjustly and vindictively treated. The career of the man from a humble origin to the primate's throne, which he attained in 1633, need not be detailed. Led

by a love of the old ceremonies of the church—though, as he always alleged, with no affection for Rome—he became the principal minister of Charles I., in those unhappy movements for introducing episcopacy in Scotland and checking puritanism in England, which, in combination with arbitrary political rule, brought on the Great Civil War.

He was called to the council of Charles I., according to his own statement, against his will; yet he devised and executed many unwarrantable revenue schemes: he, doubtless, believed in the divine right of kings, and being opposed, an unhappy infirmity of temper induced him to concur in many cruel and arbitrary schemes, to crush opposition, and render his master independent of parliaments. These expedients succeeded

for a while, but, at length failing, the king was compelled to call his last parliament, Nov. 3, 1640; and early next year the Archbishop was impeached of treason by the Commons, and sent to the Tower, where he remained exposed to many hardships until his death. In 1643, he was accused of designs of overthrowing parliaments, and bringing about union with Rome. Prynne, the barrister, who was Laud's personal enemy, collected evidence against him, seized his private papers, and even his prayer-book, and took his Diary by force out of his pocket. Prynne tampered with the evidence to suit the views of his party, but the proofs were so weak that the Peers were disinclined to convict him. He has left a full and, on the whole, faithful account of his trial, in which he defended himself with courage and ability. The Commons then changed the impeachment to an ordinance for Laud's execution, to which the Lords assented; he had procured a pardon from the king, which was disregarded, and Laud was brought to the block on Tower-hill, mainly, it is alleged, to gratify the extreme Presbyterians of Scotland, and induce them to go heartily on with the war, this party having been inspired with bitter feelings regarding the unhappy primate, whom they considered as the main author of the calamities they had been for several years enduring. The last words of Laud were a solemn denial of the charge of affection for Rome: his chaplain, Dr Sterne, attended him to the scaffold, where, after some minutes spent in prayer, his head was cut off at one blow, in the 72nd year of his age. His body was buried in the church of Allhallows, Barking, near the Tower, but in 1663 was removed to his college at Oxford. He had been for several years Chancellor of that University, to which he gave many valuable MSS., and where many other proofs of his munificent patronage of learning yet remain. He employed Inigo Jones to build the picturesque eastern wing of St John's; here, in 1636, he entertained at dinner, the King and Queen and Prince Rupert. He restored the painted windows in the chapel at Lambeth, it was alleged, 'by their like in the mass-book,' but this he utterly denied.

Whitelock says: 'Laud was too full of fire, though a just and good man; and his want of experience in state matters and too much zeal for church ceremonies, if he proceeded in the way he was then in, would set the nation on fire.' Even at the University he had the character of being 'at least very popishly inclined.' 'His bigotry and cruelty in the execution of his high office ought assuredly not to have gone unpunished; but the sentence against him was, perhaps, the most unjustifiable act of the zealots of the Long Parliament; and it appears strongly one of the disadvantages of government by a large assembly of men: for the odium of the death of Laud, being divided among so many, has neither brought with it individual infamy, nor was likely to produce individual remorse.'—*Westminster Review*, vol. xvii.

SIR HENRY YELVERTON.

On the 10th January 1609-10, Sir Henry
88

Yelverton, Recorder of Northampton, and a member of Parliament, wrote out an account of the measures he took for regaining the favour of the King and some of his state-officers, which he had forfeited in consequence of the misunderstanding of some parts of his conduct and certain expressions which he had publicly used. From this document we get near glimpses of the King and some of his ministers, and it must be confessed that they do not suffer by being seen so near; on the contrary, one becomes rather inclined to think that they possessed at least the Christian graces of courtesy, patience, and plausibility in a creditable degree, and might be much more tolerable personages than they are usually represented to be by modern historians.

According to Mr Foss, Sir Henry Yelverton, being returned by Northampton to the first parliament of King James, 'took an independent, but not a factious part.*' An English parliament was then like the Reichsrath of Austria in our own time: it was expected to deliberate, but not to be very obstinate in thwarting the royal wishes. Yelverton thought rather more of the interest of the public than of the desires of the King. He did not fully and freely concur in granting the subsidy which was desired, but advocated its being graduated over a series of years, that its payment might be more easy. His language was plain and direct, and perhaps did include a few expressions that might have been better omitted. It was reported to James that Sir Henry Yelverton did not act as one of his friends in parliament. Moreover, he was said to have spoken on several occasions disrespectfully of the Scottish nation, and in particular of Sir George Dunbar, the Lord Treasurer of Scotland, and of the Earl of Dunfermline, its Chancellor. He soon learned that the King and these two ministers were deeply offended with him, and that the royal disfavour might prove a serious impediment to his advance in life.

If Sir Henry Yelverton had been meaning to act the part of a high-flying patriot, he would, we may hope, have disregarded these hints and wrapped himself in his virtue, as many did in the next reign. But he had no such thing in view, nor was there then any great occasion at this time for a high patriotism. He was a good-natured though honest and sincere man, well-affected to the King, his officers, and nation; and he saw no reason for remaining on bad terms with them, if a few words of explanation could restore him to their good graces. He therefore resolved, if possible, to see the persons offended, and put himself right with them.

The first step he took was to consult with a Scotch gentleman, 'one Mr Drummond,' as to the means of approaching the persons offended. We suspect this to have been William Drummond, the poet, who was just at this time returning from his legal studies at Paris, and would probably be passing through London on his way homewards; but we only can speak by conjecture. By 'Mr Drummond' Yelverton was recommended to use any favour he had with the Lady Arabella Stuart, the King's cousin, in order to make an advance to the Lord Chancellor Dunfermline,

* Foss's *Judges of England*, 1857, vol. vi. p. 391.

who was then living in London. By Lady Arabella's kind intervention, an interview was arranged between Yelverton and the Chancellor, which accordingly took place at the Scottish Secretary of State's house in *Warwick Lane*. This Chancellor, it may be remarked, was a Seton, a man of magnificent tastes, and most dignified and astute character. He frankly told Yelverton that the King had, on being spoken to on the subject, shewn himself grievously displeased, but yet not unwilling to listen to any certain and authentic expression of his regret for the past, if such should be presented to him; and the Chancellor undertook to lay a petition from Yelverton before his Majesty.

The petition sets forth that he, Sir Henry Yelverton, had long been vexed with the grief of his Highness' displeasure, and that it added much to the petitioner's unhappiness that he could not see the way how to make known to his Highness his sorrow and the truth of his subjection; he adds: 'Pardon, most merciful Sovereign, him who, by misconstruction only, hath thus been wrapped and chained in your Highness' displeasure; for if ever, either by way of comparison or otherwise, any word did ever slip me either in disgrace or diminution of the state of the Scottish nation, I neither wish mercy from God, nor grace from your Majesty; yea, vouchsafe, most renowned and noble Sovereign, to credit me thus far, that I never so much as lisped out any word against the Union, which I as heartily seek as any subject can; neither did ever in Parliament so much as whisper against the general naturalisation it seemed your Highness upon weighty reasons did desire.'

The arrangements for the interview being completed, Sir H. Yelverton thus narrates the details: 'After which, the 6th of January 1609, being sent for to court by his lordship, about five of the clock in the afternoon, he brought me into the King's presence, where his Majesty sat alone in his chair in his bedchamber; but soon after my coming in, while I was on my knee, and his Majesty having entered into his speech, there came in, besides, my Lord of Dunbar (who was there at first), my Lord Chamberlain, and my Lord of Worcester, and stood all behind me.

'At my first coming in I made three low congees to his Majesty, and being somewhat far from him, stirring his hat, he beckoned his hand, and bade me come near; so, coming on, the carpet was spread before his Majesty, and I kneeled on my right knee, and spake as followeth:

"I humbly beseech your most excellent Majesty to vouchsafe your gracious pardon for all offences past, which I protest were not wilfully committed, but only out of the error of my judgment, which I ever was and ever will be ready to reform as I shall be taught from your Majesty."

The King paused, and beckoning with his hand, thrice bade Sir Henry stand up, which he then did: stirring his hat again, 'with a mild countenance,' he addressed Sir Henry at considerable length, complaining of his proposing a Bill to naturalise my Lord Kinloss, 'because he was half English, making a hateful distinction between him that was all Scot, and him that was some

part of this nation. If he were a mere Scot, away with him; but if he came from hence of any late time, then dandle him, and welcome him as a home-born: which reason was the worse made by you, that knows much and can speak so sourly. For since my title to this crown hath fetched me out of Scotland, and that both nations are my subjects, and I their head, would you have the left side so strange from the right, as there should be no embracement nor intercourse between them? Nay, you should rather have reasoned, We are now become brethren under one governor, and therefore what God hath joined let not us still keep in two.' The King then complained of Sir Henry's opposition to the subsidy, as well as to the union, to the general naturalisation of the Scots, to the commerce desirable between both nations, and to the abolition of the hostile laws.

'After his Majesty's speech, Sir Henry again knelt down, and, in whatsoever his Majesty should condemn him, would not labour to excuse himself; but humbly desired to purge his offence by his lowliest submission and faithful promise of amendment hereafter.' Sir Henry then touched upon the several points of his Majesty's speech, and the King replied, and concluded with saying, 'I shut up all, and acquit you.' Sir Henry humbly thanked the King, who bade him stand up; my Lord of Dunbar kneeling, desired that Sir Henry might kiss the king's hand, whereupon the king said, 'With all my heart,' and Sir Henry kissed the royal hand three times, bowed, and retired.

On the 10th of January, Sir Henry Yelverton went to the Lord Treasurer at Whitehall, and thanked his lordship for the furtherance of his peace and reconciliation with the King, to which the Lord Treasurer replied, concluding with the friendly assurance: "'But now all is well, and persuade yourself you have lost nothing by this jar between the King and you, for as by this the world knows you to be honest and sufficient, so the judgment of the King is, that there is good matter in you; for myself, I will desire your friendship as you do mine, and will promise to do you my best; whereupon in pledge I give you my hand:" and so, shaking me by the hand, he bid me farewell.'

Soon after this reconciliation, viz. in 1613, Mr Yelverton was made Solicitor-General, and knighted; and in 1616, Attorney-General. In 1625, he was made one of the Justices of the King's Bench, and afterwards of the Common Pleas: and had not the Duke of Buckingham been suddenly cut off, he would, in all probability, have been made Lord Keeper of the Great Seal.

THE PENNY POST.

The 10th of January 1840 will be a memorable day in the history of civilization, as that on which the idea of a Penny Postage was first exemplified. The practical benefits derived from this reform, are so well known that it is needless to dwell upon them. Let us rather turn attention for a few moments to the remarkable, yet most modest man, whom his species have to thank for this noble invention. Rowland Hill, born in 1795,

was devoted through all his early years, even from boyhood, to the business of a teacher. At the age of forty, we find him engaged in conducting the colonization of South Australia upon the plan of Mr. Edward Gibbon Wakefield, for which his powers of organization gave him a great advantage, and in which his labours were attended with a high degree of success. It was about the year 1835, that he turned his attention to the postal system of the country, with the conviction that it was susceptible of reform. Under enormous difficulties, he contrived to collect information upon the subject, so as to satisfy himself, and enable him to satisfy others, that the public might be benefited by a cheaper postage, and yet the revenue remain ultimately undiminished.

The leading facts on which he based his conclusions have been detailed in an authoritative document. 'The cost of a letter to the Post-Office he saw was divisible into three branches. First, that of receiving the letter and preparing it for its journey, which, under the old régime, was troublesome enough, as the postage varied first in proportion to the distance it had to travel; and again, according as it was composed of one, two, or three sheets of paper, each item of charge being exorbitant. For instance, a letter from London to Edinburgh, if single, was rated at 1s. 1½d.; if double, at 2s. 3d.; and if treble, at 3s. 4½d.; any—the minutest—inclosure being treated as an additional sheet. The duty of taxing letters, or writing upon each of them its

SIR ROWLAND HILL.

postage, thus became a complicated transaction, occupying much time and employing the labour of many clerks. This, and other duties, which we will not stop to specify, comprised the first of the three branches of expense which each letter imposed on the office. The second was the cost of transit from post-office to post-office. And this expense, even for so great a distance as from London to Edinburgh, proved, upon careful examination, to be no more than the ninth part of a farthing! The third branch was that of delivering the letter and receiving the postage—letters being for the most part sent away unpaid. Rowland Hill saw that, although a considerable reduction of postage might and ought to be made, even if the change rested there, yet that, if he could cheapen the cost to the Post-

office, the reduction to the public could be carried very much further, without entailing on the revenue any ultimate loss of serious amount. He therefore addressed himself to the simplification of the various processes. If, instead of charging according to the number of sheets or scraps of paper, a weight should be fixed, below which a letter, whatever might be its contents, should only bear a single charge, much trouble to the office would be spared, while an unjust mode of taxation would be abolished. For, certainly, a double letter did not impose double cost, nor a treble letter three-fold cost upon the Post-office. But, if the alteration had rested there, a great source of labour to the office would have remained; because postage would still have been augmented upon each letter in proportion to the distance it

had to travel. In the absence of knowledge as to the very minute cost of mere transit, such an arrangement would appear just; or, to place the question in another light, it would seem unjust to charge as much for delivering a letter at the distance of a mile from the office at which it was posted as for delivering a letter at Edinburgh transmitted from London. But when Rowland Hill had, by his investigation, ascertained that the difference between the cost of transit in the one instance and the other was an insignificant fraction of a farthing, it became obvious that it was a nearer approximation to perfect justice to pass over this petty inequality than to tax it even to the amount of the smallest coin of the realm. With regard to the third head, all that could be done for lessening the cost attendant on delivering the letters from house to house, was to devise some plan of pre-payment which should be acceptable to the public (so long accustomed to throw the cost of correspondence on the receiver of a letter instead of the sender), and which, at the same time, should not transfer the task of collection to the receiving-office, while it relieved the letter-carriers attached to the distributing office; otherwise comparatively little would have been gained by the change. This led to the proposal for pre-payment by stamped labels, whereby the Post-office is altogether relieved from the duty of collecting postage. Thus, one by one, were the impediments all removed to the accomplishment of a grand object—uniformity of postage throughout the British Isles.*

It necessarily followed, from the economy thus proposed, that the universal rate might be a low one, which again might be expected to react favourably on the new system, in enabling a wider public to send and receive letters. A brother of Mr Hill had, a few years before, suggested the *Penny Magazine*. Perhaps this was the basis of Mr Rowland Hill's conception, that each letter of a certain moderate weight should be charged one penny. The idea was simple and intelligible, and, when announced in a pamphlet in 1837, it was at once heartily embraced by the public. Neither the government nor the opposition patronised it. The Post-office authorities discountenanced it as much as possible. Nevertheless, from the mere force of public sentiment, it was introduced into parliament and ratified in 1839.

The Whig ministry of the day were so far just to Mr Hill, that they gave him a Treasury appointment to enable him to work out his plan, and this he held till the Conservative party came into power in 1841. Having been by them bowed out of office, on the allegation that his part of the business was accomplished, he might have shared the fate of many other public benefactors, if the community had not already become profoundly impressed with a sense of the value of his scheme. They marked their feeling towards him by a subscription which amounted to fifteen thousand pounds. On the replacement of the Whigs in 1846, he was brought back into office as Secretary to the Postmaster-

* *Our Exemplars, Poor and Rich.* Edited by Matthew D. Hill. London, 1861, p. 317.

General; in which position, and as Secretary to the Post-Office (to which honour he attained in 1854), he has been duly active in effecting improvements having the public convenience in view. Of these the chief has been the organization of the Money-Order Office, by which upwards of thirteen millions sterling are annually transmitted from hand to hand at an insignificant expense. Twenty-one years have now fully proved the virtues of the Penny Postage, under favour of which the number of letters transmitted by the Office annually has advanced from 77 to 545 millions, with an addition of outlay or cost on the part of the public amounting only to fifty per cent. Nor has England alone to thank Rowland Hill, for there is no civilised country which has not adopted his scheme. It was surely by a most worthy exercise of the royal power that the inventor of Penny Postage received in 1860 the dignity of Knight Commander of the Bath.

JANUARY 11.

St Hyginus, pope and martyr, 142. St Theodosius, the Cenobiarch, 529. St Salvius or Sauve, bishop of Amiens, 7th century. St Egwin, bishop, confessor, 717.

ST THEODOSIUS, THE CENOBIArch.

St Theodosius died in 529, at the age of 104. He was a native of Cappadocia, but when a young man removed to Jerusalem, in the vicinity of which city he resided during the remainder of his life. He is said to have lived for about thirty years as a hermit, in a cave, but having been joined by other saintly persons, he finally established a monastic community not far from Bethlehem. He was enabled to erect a suitable building, to which by degrees he added churches, infirmaries, and houses for the reception of strangers. The monks of Palestine at that period were called Cenobites; and Sallustius, bishop of Jerusalem, having appointed Theodosius superintendent of the monasteries, he received the name of Cenobiarch. He was banished by the Emperor Anastasius about the year 513, in consequence of his opposition to the Eutychian heresy, but was recalled by the Emperor Justinus.

'The first lesson which he taught his monks was, that the continual remembrance of death is the foundation of religious perfection; to imprint this more deeply in their minds, he caused a great grave or pit to be dug, which might serve for the common burial-place of the whole community, that by the presence of this memorial of death, and by continually meditating on that object, they might more perfectly learn to die daily. The burial-place being made, the abbot one day, when he had led his monks to it, said: "The grave is made; who will first perform the dedication?" Basil, a priest, who was one of the number, falling on his knees, said to St Theodosius: "I am the person; be pleased to give me your blessing." The abbot ordered the prayers of the Church for the dead to be offered up for him, and on the fortieth day, Basil wonderfully departed to our Lord in peace, without any apparent sickness.'—*Buller.*

It may not be superfluous, in all reverence, to remark that, while a remembrance of our mortality is an essential part of religion, it is not necessary to be continually thinking on that subject. Life has active duties calling for a different exercise of our thoughts from day to day and throughout the hours of the day, and which would necessarily be neglected if we were to be obedient to the mandate of the Cœnobiarch. Generally, our activity depends on the hopes of living, not on our expectation of dying; and perhaps it would not be very difficult to shew that the *fact* of our not being naturally disposed to dwell on the idea of an end to life, is one to be grateful for to the Author of the Universe, seeing that not merely our happiness, but in some degree our virtues, depend upon it.

Born.—Francesco Mazzuoli Parmigiano, painter, *Parma*, 1503; Henry Duke of Norfolk, 1654.

Died.—Sir Hans Sloane, M.D., 1753; François Roubiliac, sculptor, 1762; Dominic Cimarosa, musician, 1801; F. Schlegel, German critic, 1829.

HENRY DUKE OF NORFOLK.

Mr E. Browne (son of Sir Thomas Browne) tells us in his journal (*Sloane MSS.*) of the celebration of the birthday of Mr Henry Howard (afterwards Duke of Norfolk) at Norwich, January 11, 1664, when they kept up the dance till two o'clock in the morning. The festivities at Christmas, in the ducal palace there, are also described by Mr Browne, and we get an idea from them of the extravagant merry-makings which the national joy at the Restoration had made fashionable. 'They had dancing every night, and gave entertainments to all that would come; he built up a room on purpose to dance in, very large, and hung with the bravest hangings I ever saw; his candlesticks, snuffers, tongs, fire-shovels, and andirons, were silver; a banquet was given every night after dancing; and three coaches were employed to fetch ladies every afternoon, the greatest of which would hold fourteen persons, and cost five hundred pound, without the harness, which cost six score more.

'January 5, Tuesday. I dined with Mr Howard, where we drank out of pure gold, and had the music all the while, with the like, answerable to the grandeur of [so] noble a person: this night I danc'd with him also.

'January 6. I din'd at my aunt Bendish's, and made an end of Christmas, at the duke's palace, with dancing at night, and a great banquet. His gates were open'd, and such a number of people flock'd in, that all the beer they could set out in the streets could not divert the stream of the multitudes, till very late at night.'

SIR HANS SLOANE.

Sir Hans Sloane, Bart., the eminent physician and naturalist, from whose collections originated the British Museum, born at Killeleagh, in the north of Ireland, April 16, 1660, but of Scotch extraction—his father having been the head of a colony of Scots settled in Ulster under

James I.—gives us something like the model of a life perfectly useful in proportion to powers and opportunities. Having studied medicine and natural history, he settled in London in 1684, and was soon after elected a Fellow of the Royal Society, to which he presented some curiosities. In 1687 he was chosen a Fellow of the College of Physicians, and in the same year sailed for Jamaica, and remained there sixteen months, when he returned with a collection of 800 species of plants, and commenced publishing a *Natural History of Jamaica*, the second volume of which did not appear until nearly twenty years subsequent to the first; his collections in natural history, &c., then comprising 8,226 specimens in botany alone, besides 200 volumes of dried samples of plants. In 1716 George I. created Sloane a baronet—a title to which no English physician had before attained. In 1719 he was elected President of the College of Physicians, which office he held for sixteen years; and in 1727 he was elected President of the Royal Society. He zealously exercised all his official duties until the age of fourscore. He then retired to an estate which he had purchased at Chelsea, where he continued to receive the visits of scientific men, of learned foreigners, and of the Royal Family; and he never refused admittance nor advice to rich or poor, though he was so infirm as but rarely to take a little air in his garden in a wheeled chair. He died after a short illness, bequeathing his museum to the public, on condition that £20,000 should be paid to his family; which sum scarcely exceeded the intrinsic value of the gold and silver medals, and the ores and precious stones in his collection, which he declares, in his will, cost at least £50,000. His library, consisting of 3,556 manuscripts and 50,000 volumes, was included in the bequest. Parliament accepted the trust on the required conditions, and thus Sloane's collections formed the nucleus of the British Museum.

Sir Hans Sloane was a generous public benefactor. He devoted to charitable purposes every shilling of his thirty years' salary as physician to Christ's Hospital; he greatly assisted to establish the Dispensary set on foot by the College of Physicians; and he presented the Apothecaries' Company with the freehold of their Botanic Gardens at Chelsea. Sloane also aided in the formation of the Foundling Hospital. His remains rest in the churchyard of St Luke's, by the river-side, Chelsea, where his monument has an urn entwined with serpents. His life was protracted by extraordinary means: when a youth he was attacked by spitting of blood, which interrupted his education for three years; but by abstinence from wine and other stimulants, and continuing, in some measure, this regimen ever afterwards, he was enabled to prolong his life to the age of ninety-three years;* exemplifying the truth of his favourite maxim—that sobriety,

* Sir Edward Wilmot, the physician, was, when a youth, so far gone in consumption, that Dr. Radcliffe, whom he consulted, gave his friends no hopes of his recovery, yet he lived to the age of ninety-three; and Dr Heberden notes: "This has been the case with some others, who had many symptoms of consumption in youth."

temperance, and moderation are the best preservatives that nature has granted to mankind.

Sir Hans Sloane was noted for his hospitality, but there were three things he never had at his table—salmon, champagne, and burgundy.

LOTTERIES.

The first lottery in England, as far as is ascertained, began to be drawn on the 11th of January, 1569, at the west door of St Paul's Cathedral, and continued day and night till the 6th of May. The scheme, which had been announced two years before, shews that the lottery consisted of forty thousand lots or shares, at ten shillings each, and that it comprehended 'a great number of good prizes, as well of ready money as of plate, and certain sorts of merchandize.' The object of any profit that might arise from the scheme was the reparation of harbours and other useful public works.

Lotteries did not take their origin in England; they were known in Italy at an earlier date; but from the year above named, in the reign of Queen Elizabeth, down to 1826, (excepting for a short time following upon an Act of Queen Anne,) they continued to be adopted by the English government, as a source of revenue. It seems strange that so glaringly immoral a project should have been kept up with such sanction so long. The younger people at the present day may be at a loss to believe that, in the days of their fathers, there were large and imposing offices in London, and pretentious agencies in the provinces, for the sale of lottery tickets; while flaming advertisements on walls, in new books, and in the public journals, proclaimed the preferableness of such and such 'lucky' offices—this one having sold two-sixteenths of the last twenty thousand pounds prize; that one a half of the same; another having sold an entire thirty thousand pound ticket the year before; and so on. It was found possible to persuade the public, or a portion of it, that where a blessing had once lighted it was the more likely to light again.

The State lottery was framed on the simple principle, that the State held forth a certain sum to be repaid by a larger. The transaction was usually managed thus. The government gave £10 in prizes for every share taken, on an average. A great many blanks, or of prizes under £10, left, of course, a surplus for the creation of a few magnificent prizes wherewith to attract the unwary public. Certain firms in the city, known as lottery-office-keepers, contracted for the lottery, each taking a certain number of shares; the sum paid by them was always *more* than £10 per share; and the excess constituted the government profit. It was customary, for many years, for the contractors to give about £16 to the government, and then to charge the public from £20 to £22. It was made lawful for the contractors to divide the shares into halves, quarters, eighths, and sixteenths; and the contractors always charged relatively more for these aliquot parts. A man with thirty shillings to spare could buy a sixteenth; and the contractors made a large portion of their profit out of such customers.

The government sometimes paid the prizes in terminable annuities instead of cash; and the

loan system and the lottery system were occasionally combined in a very odd way. Thus, in 1780, every subscriber of £1000 towards a loan of £12,000,000, at four per cent., received a bonus of four lottery tickets, the value of each of which was £10, and any one of which might be the fortunate number for a twenty or thirty thousand pounds prize.

Amongst the lottery offices, the competition for business was intense. One firm, finding an old woman in the country named Goodluck, gave her fifty pounds a year on condition that she would join them as a nominal partner, for the sake of the attractive effect of her name. In their advertisements each was sedulous to tell how many of the grand prizes had in former years fallen to the lot of persons who had bought at *his* shop. Woodcuts and copies of verses were abundant, suited to attract the uneducated. Lotteries, by creating illusive hopes, and supplanting steady industry, wrought immense mischief. Shopmen robbed their masters, servant girls their mistresses, friends borrowed from each other under false pretences, and husbands stinted their wives and children of necessaries—all to raise the means for buying a portion or the whole of a lottery ticket. But, although the humble and ignorant were the chief purchasers, there were many others who ought to have known better. In the interval between the purchase of a ticket and the drawing of the lottery, the speculators were in a state of unhealthy excitement. On one occasion a fraudulent dealer managed to sell the same ticket to two persons; it came up a five hundred pound prize; and one of the two went raving mad when he found that the real ticket was, after all, not held by him. On one occasion circumstances excited the public to such a degree that extravagant biddings were made for the few remaining shares in the lottery of that year, until at length one hundred and twenty guineas were given for a ticket on the day before the drawing. One particular year was marked by a singular incident: a lottery ticket was given to a *child unborn*, and was drawn a prize of one thousand pounds on the day after his birth. In 1767 a lady residing in Holborn had a lottery ticket presented to her by her husband; and on the Sunday preceding the drawing her success was *prayed for* in the parish church, in this form: 'The prayers of this congregation are desired for the success of a person engaged in a new undertaking.' In the same year the prize (or a prize) of twenty thousand pounds fell to the lot of a tavern-keeper at Abingdon. We are told, in the journals of the time—'The broker who went from town to carry him the news he complimented with one hundred pounds. All the bells in the town were set a ringing. He called in his neighbours, and promised to assist this with a capital sum, that with another; gave away plenty of liquor, and vowed to lend a poor cobbler money to buy leather to stock his stall so full that he should not be able to get into it to work; and lastly, he promised to buy a new coach for the coachman who brought him down the ticket, and to give a set of as good horses as could be bought for money.'

The theory of 'lucky numbers' was in great

favour in the days of lotteries. At the drawing, papers were put into a hollow wheel, inscribed with as many different numbers as there were shares or tickets; one of these was drawn out (usually by a Blue-coat boy, who had a holiday and a present on such occasions), and the number audibly announced; another Blue-coat boy then drew out of another wheel a paper denoting either 'blank' or a 'prize' for a certain sum of money; and the purchaser of that particular number was awarded a blank or a prize accordingly. With a view to lucky numbers, one man would select his own age, or the age of his wife; another would select the date of the year; another a row of odd or of even numbers. Persons who went to rest with their thoughts full of lottery tickets were very likely to dream of some one or more numbers, and such dreams had a fearful influence on the wakers on the following morning. The readers of the *Spectator* will remember an amusing paper (No. 191, Oct. 9th, 1711), in which the subject of lucky numbers is treated in a manner pleasantly combining banter with useful caution. The man who selected 1711 because it was the year of our Lord; the other who sought for 134, because it constituted the minority on a celebrated bill in the House of Commons; the third who selected the 'mark of the Beast,' 666, on the ground that wicked beings are often lucky—these may or may not have been real instances quoted by the *Spectator*, but they serve well as types of classes. One lady, in 1790, bought No. 17090, because she thought it was the nearest in sound to 1790, which was already sold to some other applicant. On one occasion a tradesman bought four tickets, consecutive in numbers: he thought it foolish to have them so close together, and took one back to the office to be exchanged; the one thus taken back turned up a twenty thousand pounds prize!

The lottery mania brought other evils in its train. A species of gambling sprang up, resembling time-bargains on the Stock Exchange; in which two persons, A and B, lay a wager as to the price of Consols at some future day; neither intend to buy or to sell, although nominally they treat for £10,000 or £100,000 of stock. So in the lottery days; men who did not possess tickets nevertheless lost or won by the failure or success of particular numbers, through a species of insurance which was in effect gambling. The matter was reduced almost to a mathematical science, or to an application of the theory of probabilities. Treatises and Essays, Tables and Calculations, were published for the benefit of the speculators. One of them, *Painter's Guide to the Lottery*, published in 1787, had a very long title-page, of which the following is only a part:—"The whole business of Insuring Tickets in the State Lottery clearly explained; the several advantages taken by the office keepers pointed out; an easy method given, whereby any person may compute the Probability of his Success upon purchasing or insuring any particular number of tickets; with a Table of the prices of Insurance for every day's drawing in the ensuing Lottery; and another Table, containing the number of tickets a person ought to purchase to make it an equal chance to have any particular prize."

Plough Monday.

This being in 1864 the first Monday after Twelfth Day, is for the year *Plough Monday*. Such was the name of a rustic festival, heretofore of great account in England, bearing in its first aspect, like St Distaff's Day, reference to the resumption of labour after the Christmas holidays. In Catholic times, the ploughmen kept lights burning before certain images in churches, to obtain a blessing on their work; and they were accustomed on this day to go about in procession, gathering money for the support of these *plough-lights*, as they were called. The Reformation put out the lights; but it could not extinguish the festival. The peasantry contrived to go about in procession, collecting money, though only to be spent in conviviality in the public-house. It was at no remote date a very gay and rather pleasant-looking affair. A plough was dressed up with ribbons and other decorations—the *Fool Plough*. Thirty or forty stalwart swains, with their shirts over their jackets, and their shoulders and hats flaming with ribbons, dragged it along from house to house, preceded by one in the dress of an old woman, but much bedizened, bearing the name of *Bessy*. There was also a Fool, in fantastic attire. In some parts of the country, morris-dancers attended the procession; occasionally, too, some reproduction of the ancient Scandinavian sword-dance added to the means of persuading money out of the pockets of the lieges.

A Correspondent, who has borne a part (cow-horn blowing) on many a Plough Monday in Lincolnshire, thus describes what happened on these occasions under his own observation:—"Rude though it was, the Plough procession threw a life into the dreary scenery of winter, as it came winding along the quiet rutted lanes, on its way from one village to another; for the ploughmen from many a surrounding thorp, hamlet, and lonely farm-house united in the celebration of Plough Monday. It was nothing unusual for at least a score of the "sons of the soil" to yoke themselves with ropes to the plough, having put on clean smock-frocks in honour of the day. There was no limit to the number who joined in the morris-dance, and were partners with "Bessy," who carried the money-box; and all these had ribbons in their hats and pinned about them wherever there was room to display a bunch. Many a hardworking country Molly lent a helping hand in decorating out her Johnny for Plough Monday, and finished him with an admiring exclamation of—"Lawks, John! thou does look smart, surely." Some also wore small bunches of corn in their hats, from which the wheat was soon shaken out by the ungainly jumping which they called dancing. Occasionally, if the winter was severe, the procession was joined by threshers carrying their flails, reapers bearing their sickles, and carters with their long whips, which they were ever cracking to add to the noise, while even the smith and the miller were among the number, for the one sharpened the plough-shares and the other ground the corn; and Bessy rattled his box and danced so high that he shewed his worsted stockings and corduroy breeches; and

very often, if there was a thaw, tucked up his gown skirts under his waistcoat, and shook the bonnet off his head, and disarranged the long ringlets that ought to have concealed his whiskers. For Betsy is to the procession of Plough Monday

what the leading *figurante* is to an opera or ballet, and dances about as gracefully as the hippopotami described by Dr Livingstone. But these rough antics were the cause of much laughter, and rarely do we ever remember hearing any coarse

PROCESSION OF THE PLOUGH ON PLOUGH MONDAY.

jest that would call up the angry blush to a modest cheek.

'No doubt they were called "plough bullocks," through drawing the plough, as bullocks were formerly used, and are still yoked to the plough in some parts of the country. The rubbishy verses they recited are not worth preserving beyond the line which graces many a public-house sign of "God speed the plough." At the large farm-house, besides money they obtained refreshment, and through the quantity of ale they thus drank during the day, managed to get what they called "their load" by night. Even the poorest cottagers dropped a few pence into Bessy's box.

'But the great event of the day was when they came before some house which bore signs that the owner was well-to-do in the world, and nothing was given to them. Bessy rattled his box and the ploughmen danced, while the country lads blew their bullocks' horns, or shouted with all their might; but if there was still no sign, no coming forth of either bread-and-cheese or ale, then the word was given, the ploughshare driven into the ground before the door or window, the whole twenty men yoked pulling like one, and in a minute or two the ground before the house was as brown, barren, and ridgy as a newly-ploughed field. But this was rarely done, for everybody gave something, and were it but little the men never murmured, though they might talk about the stinginess of the giver afterwards amongst themselves, more especially if the party was what they called "well off in the world." We are not

aware that the ploughmen were ever summoned to answer for such a breach of the law, for they believe, to use their own expressive language, "they can stand by it, and no law in the world can touch 'em, 'cause it's an old charter;" and we are sure it would spoil their "folly to be wise."

'One of the mummers generally wears a fox's skin in the form of a hood; but beyond the laughter the tail that hangs down his back awakens by its motion as he dances, we are at a loss to find a meaning. Bessy formerly wore a bullock's tail behind, under his gown, and which he held in his hand while dancing, but that appendage has not been worn of late.

'Some writers believe it is called White Plough Monday on account of the mummers having worn their shirts outside their other garments. This they may have done to set off the gaudy-coloured ribbons; though a clean white smock frock, such as they are accustomed to wear, would shew off their gay decorations quite as well. The shirts so worn we have never seen. Others have stated that Plough Monday has its origin from ploughing again commencing at this season. But this is rarely the case, as the ground is generally too hard, and the ploughing is either done in autumn, or is rarely begun until February, and very often not until the March sun has warmed and softened the ground. Some again argue that Plough Monday is a festival held in remembrance of "the plough having ceased from its labour." After weighing all these arguments, we have come to the conclusion that the true light in which to look at the origin

of this ancient custom is that thrown upon the subject by the ploughman's candle, burnt in the church at the shrine of some saint, and that to maintain this light contributions were collected and sanctioned by the Church, and that the priests were the originators of Plough Monday.'

At Whitby, in Yorkshire, according to its historian, the Rev G. Young, there was usually an extra band of six to dance the sword-dance. With one or more musicians to give them music on the violin or flute, they first arranged themselves in a ring with their swords raised in the air. Then they went through a series of evolutions, at first slow and simple, afterwards more rapid and complicated, but always graceful. 'Towards the close each one catches the point of his neighbour's sword, and various movements take place in consequence; one of which consists in joining or plaiting the swords into the form of an elegant *hexagon* or rose, in the centre of the ring, which rose is so firmly made that one of them holds it up above their heads without undoing it. The dance closes with taking it to pieces, each man laying hold of his own sword. During the dance, two or three of the company called *Toms* or *Clowns*, dressed up as harlequins, in most fantastic modes, having their faces painted or masked, are making antic gestures to amuse the spectators; while another set called *Madgies* or *Madgy Pegs*, clumsily dressed in women's clothes, and also masked or painted, go from door to door rattling old canisters, in which they receive money. Where they are well paid they raise a huzza; where they get nothing, they shout "hunger and starvation!"

Domestic life in old times, however rude and comfortless compared with what it now is, or may be, was relieved by many little jocularities and traits of festive feeling. When the day came for the renewal of labour in earnest, there was a sort of competition between the maids and the men which should be most prompt in rising to work. If the ploughmen were up and dressed at the fire-side, with some of their field implements in hand, before the maids could get the kettle on, the latter party had to furnish a cock for the men next Shrovetide. As an alternative upon this statute, if any of the ploughmen, returning at night, came to the kitchen hatch, and cried 'Cock in the pot,' before any maid could cry 'Cock on the dunghill!' she incurred the same forfeit.

DUTIES OF A DAY IN JANUARY FOR A PLOUGHMAN IN THE SEVENTEENTH CENTURY.

Gervase Markham gives an account of these in his *Farewell to Husbandry*, 1653; and he starts with an allusion to the popular festival now under notice. 'We will,' says he, 'suppose it to be after Christmas, or about Plow Day, (which is the first setting out of the plow,) and at what time men either begin to fallow, or to break up pease-earth, which is to lic to bait, according to the custom of the country. At this time the Plowman shall rise before four o'clock in the morning, and after thanks given to God for his rest, and the success of his labours, he shall go into his stable or beast-house, and first he shall fodder his cattle, then clean the house, and make the booths

[stalls?] clean; rub down the cattle, and cleanse their skins from all filth. Then he shall curry his horses, rub them with cloths and wisps, and make both them and the stable as clean as may be. Then he shall water both his oxen and horses, and housing them again, give them more fodder and to his horse by all means provender, as chaff and dry pease or beans, or oat-hulls, or clean garbage (which is the hinder ends of any grain but rye), with the straw chopped small amongst it, according as the ability of the husbandman is.

'And while they are eating their meat, he shall make ready his collars, hames, treats, halters, mullers, and plow-gears, seeing everything fit and in its due place, and to these labours I will also allow two hours; that is, from four of the clock till six. Then he shall come in to breakfast, and to that I allow him half an hour, and then another half hour to the yoking and gearing of his cattle, so that at seven he may set forth to his labours; and then he shall plow from seven o'clock in the morning till betwixt two and three in the afternoon. Then he shall unyoke and bring home his cattle, and having rubbed them, dressed them, and cleansed them from all dirt and filth, he shall fodder them and give them meat. Then shall the servants go in to their dinner, which allowed half an hour, it will then be towards four of the clock; at what time he shall go to his cattle again, and rubbing them down and cleansing their stalls, give them more fodder; which done, he shall go into the barns, and provide and make ready fodder of all kinds for the next day. . . .

'This being done, and carried into the stable, ox-house, or other convenient place, he shall then go water his cattle, and give them more meat, and to his horse provender; and by this time it will draw past six o'clock; at what time he shall come in to supper, and after supper he shall either sit by the fireside, mend shoes both for himself and their family, or beat and knock hemp or flax, or pick and stamp apples or crabs for cider or vinegar, or else grind malt on the querns, pick candle rushes, or do some husbandly

THE QUERN.

office till it be fully eight o'clock. Then shall he take his lantern and candle, and go see his cattle, and having cleansed his stalls and planks, litter them down, look that they are safely tied, and then fodder and give them meat for all night. Then, giving God thanks for benefits received that day, let him and the whole household go to their rest till the next morning.'

It is rather surprising to find the quern, the hand-mill of Scripture, continuing in use in England so late as the time of the Commonwealth, though only for the grinding of malt. It is now obsolete even in the Highlands, but is still used in the Farøe Islands. The stone mill of Bible times appears to have been driven by two women; but in Western Europe it was fashioned to be driven by one only, sometimes by a fixed handle, and sometimes by a moveable stick inserted in a hole in the circumference.

JANUARY 12.

St Arcadius, martyr. St Benedict, commonly called Bennet, 690. St Tygrius, priest. St Ælred, 1166.

ST BENEDICT BISCOP.

Biscop was a Northumbrian monk, who paid several visits to Rome, collecting relics, pictures, and books, and finally was able to found the two monasteries of Wearmouth and Jarrow. Lambarde, who seems to have been no admirer of ornamental architecture or the fine arts, thus speaks of St Benedict Biscop: 'This man laboured to Rome five several tymes, for what other thinge I find not save only to procure pope-holye privileges, and curious ornaments for his monasteries, Jarrow and Weremouth; for first he gotte for these houses, wherein he nourished 600 monks, great liberties; then brought he them home from Rome, painters, glasiars, free-masons, and singers, to th' end that his buildings might so shyne with workmanshipe, and his churches so sounde with melodye, that simple souls ravished therewith should fantasie of them nothinge but heavenly holynes. In this jolitie continued these houses, and other by theire example embraced the like, till Hinguar and Hubba, the Danish pyrates, A.D. 870, were raised by God to abate their pride, who not only fyred and spoyled them, but also almost all the religious houses on the north-east coast of the island.'

Born.—George Fourth Earl of Clarendon, 1800.

Died.—The Emperor Maximilian I., 1519; the Duke of Alva, *Lisbon*, 1583; John C. Lavater, 1801, *Zurich*.

THE DUKE OF ALVA.

This great general of the Imperial army and Minister of State of Charles V., was educated both for the field and the cabinet, though he owed his promotion in the former service rather to the caprice than the perception of his sovereign, who promoted him to the first rank in the army more as a mark of favour than from any consideration of his military talents. He was undoubtedly the ablest general of his age. He was principally distinguished for his skill and prudence in choosing his positions, and for maintaining strict discipline in his troops. He often obtained, by patient stratagem, those advantages which would have been thrown away or dearly acquired by a precipitate encounter with the enemy. On the Emperor wishing to know his opinion about attacking the Turks, he advised

him rather to build them a golden bridge than offer them a decisive battle. Being at Cologne, and avoiding, as he always did, an engagement with the Dutch troops, the Archbishop urged him to fight. 'The object of a general,' answered the Duke, 'is not to fight, but to conquer; he fights enough who obtains the victory.' During a career of so many years, he never lost a battle.

While we admire the astute commander, we can never hear the name of Alva without horror for the cruelties of which he was guilty in his endeavours to preserve the Low Countries for Spain. During his government in Holland, he is reckoned to have put 18,000 of the citizens to death. Such were the extremities to which fanaticism could carry men generally not deficient in estimable qualities, during the great controversies which rose in Europe in the sixteenth and seventeenth centuries.

GREAT EATERS.

Under January 12, 1722-3, Thomas Hearne, the antiquary, enters in his Diary, what he had learned regarding a man who had been at Oxford not long before,—a man remarkable for a morbid appetite, leading him to devour large quantities of raw, half-putrid meat. The common story told regarding him was, that he had once attempted to imitate the Saviour in a forty days' Lent fast, broke down in it, and 'was taken with this unnatural way of eating.'

One of the most remarkable gluttons of modern times was Nicholas Wood, of Harrison, in Kent, of whom Taylor, the Water Poet, wrote an amusing account, in which the following feat is described: 'Two loynes of mutton and one loyne of veal were but as three sprats to him. Once, at Sir Warham St Leger's house, he shewed himself so violent of teeth and stomach, that he ate as much as would have served and sufficed thirty men, so that his belly was like to turn bankrupt and break, but that the serving-man turned him to the fire, and anointed his paunch with grease and butter, to make it stretch and hold; and afterwards, being laid in bed, he slept eight hours, and fasted all the while; which, when the knight understood, he commanded him to be laid in the stocks, and there to endure as long as he had laine bedrid with eating.'

In a book published in 1823, under the title of *Points of Humour*, having illustrations by the unapproachable George Cruikshank, there is a droll anecdote regarding an inordinate eater: 'When Charles Gustavus, King of Sweden, was besieging Prague, a boor of a most extraordinary visage desired admittance to his tent; and being allowed to enter, he offered, by way of amusement, to devour a large hog in his presenee. The old General Koenigsmark, who stood by the King's side, hinted to his royal master that the peasant ought to be burnt as a sorcerer. "Sir," said the fellow, irritated at the remark, "if your Majesty will but make that old gentleman take off his sword and spurs, I will eat him before I begin the pig." General Koenigsmark, who, at the head of a body of Swedes, performed

wonders against the Austrians, could not stand this proposal, especially as it was accompanied by a most hideous expansion of the jaws and mouth. Without uttering a word, the veteran turned pale, and suddenly ran out of the tent; nor did he think himself safe till he arrived at his quarters.'

EARLY RISING IN WINTER.

Lord Chatham, writing to his nephew, January 12, 1754, says:—'*Vitanda est improba Syren, Desidia*, I desire may be affixed to the curtains of your bedchamber. If you do not rise early, you can never make any progress worth mentioning. If you do not set apart your hours of reading; if you suffer yourself or any one else to break in upon them, your days will slip through your hands unprofitably and frivolously, unpraised by all you wish to please, and really unenjoyed by yourself.'

It must, nevertheless, be owned that to rise early in cold weather, and in the gloomy dusk of a January morning, requires no small exertion of virtuous resolution, and is by no means the least of life's trials. Leigh Hunt has described the trying character of the crisis in his *Indicator*:

'On opening my eyes, the first thing that meets them is my own breath rolling forth, as if in the open air, like smoke out of a cottage-chimney. Think of this symptom. Then I turn my eyes sideways and see the window all frozen over. Think of that. Then the servant comes in. "It is very cold this morning, is it not?"—"Very cold, sir."—"Very cold indeed, isn't it?"—"Very cold indeed, sir."—"More than usually so, isn't it, even for this weather?" (Here the servant's wit and good nature are put to a considerable test, and the inquirer lies on thorns for the answer.) "Why, sir, . . . I think it *is*." (Good creature! There is not a better or more truth-telling servant going.) "I must rise, however. Get me some warm water."—Here comes a fine interval between the departure of the servant and the arrival of the hot water; during which, of course, it is of "no use" to get up. The hot water comes. "Is it quite hot?"—"Yes, sir."—"Perhaps too hot for shaving: I must wait a little?"—"No, sir; it will just do." (There is an over-nice propriety sometimes, an officious zeal of virtue, a little troublesome.) "Oh—the shirt—you must air my clean shirt:—linen gets very damp this weather."—"Yes, sir." Here another delicious five minutes. A knock at the door. "Oh, the shirt—very well. My stockings—I think the stockings had better be aired too."—"Very well, sir."—Here another interval. At length everything is ready, except myself. I now cannot help thinking a good deal—who can?—upon the unnecessary and villanous custom of shaving; it is a thing so unmanly (here I nestle closer)—so effeminate, (here I recoil from an unlucky step into the colder part of the bed.)—No wonder, that the queen of France took part with the rebels against that degenerate king, her husband, who first affronted her smooth visage with a face like her own. The Emperor Julian never showed the luxuriancy of his genius to better advantage than in reviving the flowing

beard. Look at Cardinal Bembo's picture—at Michael Angelo's—at Titian's—at Shakspeare's—at Fletcher's—at Spenser's—at Chaucer's—at Alfred's—at Plato's. I could name a great man for every tick of my watch. Look at the Turks, a grave and otiose people—Think of Haroun Al Raschid and Bed-ridden Hassan—Think of Wortley Montague, the worthy son of his mother, a man above the prejudice of his time—Look at the Persian gentlemen, whom one is ashamed of meeting about the suburbs, their dress and appearance are so much finer than our own—Lastly, think of the razor itself—how totally opposed to every sensation of bed—how cold, how edgy, how hard! how utterly different from anything like the warm and circling amplitude which

Sweetly recommends itself
Unto our gentle senses.

Add to this, benumbed fingers, which may help you to cut yourself, a quivering body, a frozen towel, and an ewer full of ice; and he that says there is nothing to oppose in all this, only shews, at any rate, that he has no merit in opposing it.'

Running Footmen.

Down to the time of our grandfathers, while there was less conveniency in the world than now, there was much more *state*. The nobility lived in a very dignified way, and amongst the particulars of their grandeur was the custom of keeping running footmen. All great people deemed it a necessary part of their travelling equipage, that one or more men should run in front of the carriage, not for any useful purpose, unless it might be in some instances to assist in lifting the carriage out of ruts, or helping it through rivers, but principally and professedly as a mark of the consequence of the traveller. Roads being generally bad, coach travelling was not rapid in those days; seldom above five miles an hour. The strain required to keep up with his master's coach was accordingly not very severe on one of these officials; at least, it was not so till towards the end of the eighteenth century, when, as a consequence of the acceleration of travelling, the custom began to be given up.

Nevertheless, the running footman required to be a healthy and agile man, and both in his dress and his diet a regard was had to the long and comparatively rapid journeys which he had to perform. A light black cap, a jockey coat, white linen trousers, or a mere linen shirt coming to the knees, with a pole six or seven feet long, constituted his outfit. On the top of the pole was a hollow ball, in which he kept a hard-boiled egg, or a little white wine, to serve as a refreshment in his journey; and this ball-topped pole seems to be the original of the long silver-headed cane which is still borne by footmen at the backs of the carriages of the nobility. A clever runner in his best days would undertake to do as much as seven miles an hour, when necessary, and go three-score miles a day; but, of course, it was

not possible for any man to last long who tasked himself in this manner.

The custom of keeping running footmen survived to such recent times that Sir Walter Scott remembered seeing the state-coach of John Earl

of Hopetoun attended by one of the fraternity, 'clothed in white, and bearing a staff.' It is believed that the Duke of Queensberry who died in 1810, kept up the practice longer than any other of the London grandees: and Mr

Thoms tells an amusing anecdote of a man who came to be hired for the duty by that ancient but far from venerable peer. His grace was in the habit of trying their paces by seeing how they could run up and down Piccadilly, he watching and timing them from his balcony. They put on a livery before the trial. On one occasion, a candidate presented himself, dressed, and ran. At the conclusion of his performance he stood before the balcony. 'You will do very well for me,' said the duke. 'And your livery will do very well for me,' replied the man, and gave the duke a last proof of his ability as a runner by then running away with it.*

Running footmen were employed by the Austrian nobility down to the close of the last century. Mrs St George, describing her visit to Vienna at that time,† expresses her dislike of the custom, as cruel and unnecessary. 'These unhappy people,' she says, 'always precede the carriage of their masters in town, and sometimes even to the suburbs. They seldom live above

three or four years, and generally die of consumption. Fatigue and disease are painted in their pallid and drawn features; but, like victims, they are crowned with flowers, and adorned with tinsel.'

The dress of the official abroad seems to have been of a very gaudy character. A contributor to the *Notes and Queries* describes in vivid terms the appearance of the three footmen who preceded the King of Saxony's carriage, on a road near Dresden, on a hot July day in 1845: 'First, in the centre of the dusty *chaussée*, about thirty yards ahead of the foremost horses' heads, came a tall, thin, white-haired old man; he looked six feet high, about seventy years of age, but as lithe as a deer; his legs and body were clothed in drawers or tights of white linen; his jacket was like a jockey's, the colours blue and yellow, with lace and fringes on the facings; on his head a sort of barret cap, slashed and ornamented with lace and embroidery, and decorated in front with two curling heron's plumes; round his waist a deep belt of leather with silk and lace fringes, tassels, and quaint embroidery, which seemed to serve as a sort of pouch to the wearer. In his right hand he held, grasped by

* *Notes and Queries*, 2nd ser., i. 9.

† Journal kept during a visit to Germany, in 1799, 1800. Privately printed. 1861.

the middle, a staff about two feet long, carved and pointed with a silver head, and something like bells or metal drops hung round it, that gingled as he ran. Behind him, one on each side of the road, dressed and accoutred in the same style, came his two sons, handsome, tall young fellows of from twenty to twenty-five years of age; and so the king passed on.'

In our country, the running footman was occasionally employed upon simple errands when unusual dispatch was required. In the neighbourhood of various great houses in Scotland, the country people still tell stories illustrative of the singular speed which these men attained. For example: the Earl of Home, residing at Hume Castle in Berwickshire, had occasion to send his footman to Edinburgh one evening on important business. Descending to the hall in the morning, he found the man asleep on a bench, and, thinking he had neglected his duty, prepared to chastise him, but found, to his surprise, that the man had been to Edinburgh (thirty-five miles) and back, with his business sped, since the past evening. As another instance: the Duke of Lauderdale, in the reign of Charles II., being to give a large dinner-party at his castle of Thirlstane, near Lauder, it was discovered, at the laying of the cloth, that some additional plate would be required from the Duke's other seat of Lethington, near Haddington, fully fifteen miles distant across the Lammermuir hills. The running footman instantly darted off, and was back with the required articles in time for dinner! The great boast of the running footman was that, on a long journey, he could beat a horse. 'A traditional anecdote is related of one of these fleet messengers (rather half-witted), who was sent from Glasgow to Edinburgh for two doctors to come to see his sick master. He was interrupted on the road with an inquiry how his master was now. "He's no dead yet," was the reply; "but he'll soon be, for I'm fast on the way for twa Edinburgh doctors to come and visit him."'

Langham, an Irishman, who served Henry Lord Berkeley as running footman in Elizabeth's time, on one occasion, this noble's wife being sick, 'carried a letter from Callowdon to old Dr Fryer, a physician dwelling in Little Britain in London, and returned with a glass bottle in his hand, compounded by the doctor, for the recovery of her health, a journey of 148 miles performed by him in less than forty-two hours, notwithstanding his stay of one night at the physician's and apothecary's houses, which no one horse could have so well and safely performed; for which the Lady shall after give him a new suit of clothes.'—*Berkeley Manuscripts*, 4to, 1821, p. 204.

The memory of this singular custom is kept alive in the ordinary name for a man-servant—a *footman*. In Charles Street, Berkeley Square, London, there is a particular memorial of it in the sign of a public-house, called *The Running Footman*, much used by the servants of the neighbouring gentry. Here is represented a tall, agile man in gay attire, and with a stick having a metal ball at top; he is engaged in running.

Underneath is inscribed, 'I am the only Running Footman.' Of this sign a transcript is presented on the preceding page.

JANUARY 13.

NEW-YEAR'S DAY, O. S.

St Kentigern (otherwise St Mungo), of Glasgow, 601; St Veronica of Milan, 1497.

The 13th of January is held as St Hilary's day by the Church of England. On this day, accordingly, begins the Hilary Term at Cambridge, though on the 14th at Oxford; concluding respectively on the Friday and Saturday next before Palm Sunday.

ST VERONICA.

St Veronica was originally a poor girl working in the fields near Milan. The pious instructions of her parents fell upon a heart naturally susceptible in a high degree of religious impressions, and she soon became an aspirant for conventual life. Entering the nunnery of St Martha in Milan, she in time became its superioress; in which position her conduct was most exemplary. Some years after her death, which took place in 1497, Pope Leo X. allowed her to be honoured in her convent in the same manner as if she had been beatified in the usual form.

Veronica appears as one whose mind had been wholly subdued to a religious life. She was evangelical perfection according to the ideas of her Church and her age. Even under extreme and lingering sickness, she persisted in taking her share of the duties of her convent, submitting to the greatest drudgeries, and desiring to live solely on bread and water. 'Her silence was a sign of her recollection and continual prayer; in which her gift of abundant and almost continual tears was most wonderful. She nourished them by constant meditation on her own miseries, on the love of God, the joys of heaven, and the sacred passion of Christ. She always spoke of her own sinful life, as she called it, though it was most innocent, with the most profound compunction. She was favoured by God with many extraordinary visits and comforts.'—*Butler*.

The name Veronica conducts the mind back to a very curious, and very ancient, though obscure legend of the Romish Church. It is stated that the Saviour, at his passion, had his face wiped with a handkerchief by a devout female attendant, and that the cloth became miraculously impressed with the image of his countenance. It became *VERA ICONICA*, or a true portrait of those blessed features. The handkerchief, being sent to Abgarus, king of Odessa, passed through a series of adventures, but ultimately settled at Rome, where it has been kept for many centuries in St Peter's Church, under the highest veneration. There seems even to be a votive mass, 'de Sancta Veronica seu vultu Domini,' the idea being thus personified, after a manner peculiar to the ancient Church. From the term *Vera Iconica* has come the name Veronica, the image being thus, as it were, personified in the character of a

* Notes and Queries, 2nd ser., i. 121.

female saint, who, however, remains without biography and date. As a curiosity amongst ancient religious ideas, a picture of the revered handkerchief is here given.

From a series of papers contributed to the *Art Journal* for 1861, by Mr Thomas Heaphy, artist, London, entitled *An Examination of the Antiquity of the Likeness of our Blessed Lord*, it appears

that the legendary portrait of Christ can be traced with a respectable amount of evidence, much farther back than most persons are aware of. In the early days of the Christian Church at Rome, before it received the protection of the empire, the worshippers, rendered by their hopes of resurrection anxious to avoid burning the bodies of their friends, yet living amongst a people who burnt the dead and considered any other mode of disposing of them as a nuisance, were driven

to the necessity of making subterranean excavations for purposes of sepulture, generally in secluded grounds belonging to rich individuals. Hence the famous Catacombs of Rome, dark passages in the rock, sometimes three above each other, having tiers of recesses for bodies along their sides, and all wonderfully well preserved. In these recesses, not unfrequently, the remains of bodies exist; in many, there are tablets telling who was the deceased; in some, there are recesses

containing lachrymatories, or tear-vials, and little glass vessels, the sacramental cups of the primitive church, on which may still be traced pictures of Christ and his principal disciples. A vast number, however, of these curious remains have been transferred to the Vatican, where they are guarded with the most jealous care.

Mr Heaphy met with extraordinary difficulties in his attempts to examine the Catacombs, and

scarcely less in his endeavours to see the stores of reliques in the Vatican. He has nevertheless placed before us a very interesting series of the pictures found, generally wrought in gold, on the glass cups above adverted to. Excepting in one instance, where Christ is represented in the act of raising Lazarus from the dead (in which case the face is an ordinary one with a Brutus crop of hair), the portrait of Jesus is invariably repre-

sented as that peculiar oval one, with parted hair, with which we are so familiar; and the fact becomes only the more remarkable from the contrast it presents to other faces, as those of St Peter or St Paul, which occur in the same pictures, and all of which have their own characteristic forms and expressions. Now, Tertullian, who wrote about the year 160, speaks of these portraits on sacramental vessels as a practice of the *first Christians*, as if it were, even in his time, a thing of the past. And thus the probability of their being found very soon after the time of Christ, and when the tradition of his personal appearance was still fresh, is, in Mr Heaphy's opinion, established.

We are enabled here to give a specimen of these curious illustrations of early Christianity, being one on which Mr Heaphy makes the following remarks: 'An instance of what may be termed the transition of the type, being apparently executed at a time when some information respecting the more obvious traits in the true likeness had reached Rome, and the artist felt no longer at liberty to adopt the mere conventional type of a Roman youth, but aimed at giving such distinctive features to the portrait as he was able from the partial information which had reached him. We see in this instance that our Saviour,

who is represented as giving the crown of life to St Peter and St Paul, is delineated with the hair divided in the middle (distinctly contrary to the fashion of that day) and a beard, being so far an approximation to the true type. . . . One thing to be specially noticed is, that the portraits of the two apostles were at that time already depicted under an easily recognised type of character, as will be seen by comparing this picture with two others which will appear hereafter, in all of which the short, curled, bald head and thick-set features of St Peter are at once discernible, and afford direct evidence of its being an exact portrait likeness, [while] the representation of St Paul is scarcely less characteristic.'

ST KENTIGERN.

Out of the obscurity which envelopes the history of the northern part of our island in the fifth and sixth centuries, when all of it that was not provincial Roman was occupied by Keltic tribes under various denominations, there loom before us three holy figures, engaged in planting Christianity. The first of these was Ninian, who built a church of stone at Whithorn, on the promontory of Wigton; another was Serf, who some time after had a cell at Culross, on the north

shore of the Firth of Forth; a third was Kentigern, pupil of the last, and more notable than either. He appears to have flourished throughout the sixth century, and to have died in 601. Through his mother, named Thenew, he was connected with the royal family of the Cumbrian Britons—a rude state stretching along the west side of the island between Wales and Argyle. After being educated by Serf at Culross, he returned among his own people, and planted a small religious establishment on the banks of a little stream which falls into the Clyde at what is now the city of Glasgow. Upon a tree beside the clearing in the forest, he hung his bell to summon the savage neighbours to worship; and the tree with the bell still figures in the arms of Glasgow. Thus was the commencement made of what in time became a seat of population in connexion with an episcopal see; by and by, an industrious town; ultimately, what we now see, a magnificent city with half a million of inhabitants. Kentigern, though his amiable character procured him the name of Mungo, or the Beloved, had great troubles from the then king of the Strathclyde Britons; and at one time he had to seek a refuge in Wales, where, however, he employed himself to some purpose, as he there founded, under the care of a follower, St Asaph, the religious establishment of that name, now the seat of an English bishopric.

Resuming his residence at Glasgow, he spent many years in the most pious exercises—for one thing reciting the whole psalter once every day. As generally happened with those who gave themselves up entirely to sanctitude, he acquired the reputation of being able to effect miracles. Contemporaneous with him, though a good deal his junior, was Columba, who had founded the celebrated monastery of Icolmkill. It is recorded that Columba came to see St Kentigern at his little church beside the Clyde, and that they interchanged their respective pastoral staves, as a token of brotherly affection. For a time, these two places were the centres of Christian missionary exertion in the country now called Scotland. St Kentigern, at length dying at an advanced age, was buried on the spot where, five centuries afterwards, arose the beautiful cathedral which still bears his name.

Born.—Charles James Fox, statesman, 1748.

Died.—George Fox, founder of the sect of Quakers, 1690; Dr James Macknight, 1800; Earl of Eldon (formerly Lord Chancellor of England), 1838.

CHARLES JAMES FOX.

Of Charles James Fox, the character given by his friends is very attractive: 'He was,' says Sir James Mackintosh, 'gentle, modest, placable, kind, of simple manners, and so averse from parade and dogmatism, as to be not only unostentatious, but even somewhat inactive in conversation. His superiority was never felt, but in the instruction which he imparted, or in the attention which his generous preference usually directed to the more obscure members of the company. His conversation, when it was not repressed by modesty or indolence, was delightful. The pleasantries, perhaps, of no man of wit had so

unlaboured an appearance. It seemed rather to escape from his mind than to be produced by it. His literature was various and elegant. In classical erudition, which, by the custom of England, is more peculiarly called learning, he was inferior to few professed scholars. Like all

CHARLES JAMES FOX.

men of genius, he delighted to take refuge in poetry, from the vulgarity and irritation of business. His own verses were easy and pleasing, and might have claimed no low place among those which the French call *vers de société*. He disliked political conversation, and never willingly took any part in it. . . . From these qualities of his private as well as from his public character, it probably arose that no English statesman ever preserved, during so long a period of adverse fortune, so many affectionate friends, and so many zealous adherents.'

The shades of Fox's history are to be found in his extravagance, his gambling habits (which reduced him to the degradation of having his debts paid by subscription), and his irregular domestic life; but how shall the historian rebuke one whose friends declared that they found his faults made him only the more lovable?

Viewing the unreasonableness of many party movements and doings, simply virtuous people sometimes feel inclined to regard *party* as wholly opposed in spirit to truth and justice. Hear, however, the defence put forward for it by the great Whig leader: 'The question,' says he, 'upon the solution of which, in my opinion, principally depends the utility of party, is, in what situations are men most or least likely to act corruptly—in a party, or insulated? and of this I think there can be no doubt. There is no man so pure who is not more or less influenced, in a doubtful case, by the interests of his fortune or his ambition. If, therefore, a man has to decide upon every new question, this influence will have so many frequent opportunities of exerting itself that it will in most cases ultimately prevail; whereas, if a man has once engaged in a party, the occasions for new decisions are more rare, and consequently these corrupt influences operate less. This reasoning is much strengthened when you consider that many men's minds are so framed that, in a question at all dubious, they are incapable of any decision; some, from narrowness of understanding, not seeing the point of the question at all; others, from refinement, seeing so

much on both sides, that they do not know how to balance the account. Such persons will, in nine cases out of ten, be influenced by interest, even without their being conscious of their corruption. In short, it appears to me that a party spirit is the only substitute that has been found, or can be found, for public virtue and comprehensive understanding; neither of which can be reasonably expected to be found in a very great number of people. Over and above all this, it appears to me to be a constant incitement to everything that is right: for, if a party spirit prevails, all power, aye, and all rank too, in the liberal sense of the word, is in a great measure elective. To be at the head of a party, or even high in it, you must have the confidence of the party; and confidence is not to be procured by abilities alone. In an Epitaph upon Lord Rockingham, written I believe by Burke, it is said, "*his virtues were his means*;" and very truly; and so, more or less, it must be with every party man. Whatever teaches men to depend upon one another, and to feel the necessity of conciliating the good opinion of those with whom they live, is surely of the highest advantage to the morals and happiness of mankind; and what does this so much as party? Many of these which I have mentioned are only collateral advantages, as it were, belonging to this system; but the decisive argument upon this subject appears to me to be this: Is there any other mode or plan in this country by which a rational man can hope to stem the power and influence of the Crown? I am sure that neither experience nor any well-reasoned theory has ever shewn any other. Is there any other plan which is likely to make so great a number of persons resist the temptations of titles and emoluments? And if these things are so, ought we to abandon a system from which so much good has been derived, because some men have acted inconsistently, or because, from the circumstances of the moment, we are not likely to act with much effect?

Mr Fox was the third son of Henry Fox, afterwards Lord Holland, and of Lady Georgina Caroline Fox, eldest daughter of Charles, second Duke of Richmond. As a child he was remarkable for the quickness of his parts, his engaging disposition, and early intelligence. 'There's a clever little boy for you!' exclaims his father to Lady Caroline Fox, in repeating a remark made *à propos* by his son Charles, when hardly more than two years and a half old. 'I dined at home to-day,' he says, in another letter to her, '*tête-à-tête* with Charles, intending to do business, but he has found me pleasanter employment, and was very sorry to go away so soon.' He is, in another letter, described as 'very pert, and very argumentative, all life and spirits, motion, and good humour; stage-mad, but it makes him read a good deal.' That he was excessively indulged is certain: his father had promised that he should be present when a garden wall was to be flung down, and having forgotten it, the wall was built up again—it was said, that he might fulfil his promise.

DR MACKNIGHT.

Dr James Macknight, born in 1721, one of the

ministers of Edinburgh, wrote a laborious work on the Apostolical Epistles, which was published in 1795, in four volumes 4to. He had worked at it for eleven hours a day for a series of years, and, though well advanced in life, maintained tolerable health of body and mind through these uncommon labours; but no sooner was his mind relieved of its familiar task, than its powers, particularly in the department of memory, sensibly began to give way; and the brief remainder of his life was one of decline. Dibdin recommends the inviting quartos of Macknight, as containing 'learning without pedantry, and piety without enthusiasm.'

A SERMON BY THE POPE.

It is a circumstance not much known in Protestant countries, that the head of the Roman Catholic Church does not ascend the pulpit. Whether it is deemed a lowering of dignity for one who is a sovereign prince as well as a high priest to preach a sermon like other priests, or whether he has not time—certain it is that priests cease to be preachers when they become popes. One single exception in three hundred years tends to illustrate the rule. The present pope, Pius IX., has supplied that exception. It has been his lot to be, and to do, and to see many things that lie out of the usual path of pontiffs, and this among the number.

On the 2nd of June 1846, Pope Gregory XVI. died. Fifty-one cardinals assembled at the palace of the Quirinal at Rome, on Sunday the 14th, to elect one of their body as a successor to Gregory. The choice fell on Giovanni Maria Mastai Ferretti, Cardinal-Archbishop of Imola; and he ascended the chair of St Peter as Pope Pius IX. He was a liberal man, who had won much popular esteem by his general kindness, especially to the poor and afflicted. While yet an archbishop, he occupied the pulpit one day in an unexpected manner; the officiating priest was taken ill during his sermon, and the cardinal, who was present, at once took his place, his text, and his line of argument. It was equally an unforeseen incident for him to preach as a pope. The matter is thus noticed in Count de Liancourt's *Pius the Ninth: the First Year of his Pontificate*, under the date January 13th, 1847: 'This circumstance has been noticed in the chronological tables of the year as an event which had not occurred before for three hundred years. But it is as well that it should be known that it was not a premeditated design on the part of his Holiness, but merely the result of accident. On the day in question, the Octave of the Epiphany, the celebrated preacher Padre Ventura, whose eloquence attracted crowds of eager listeners, had not arrived at the church (de Santa Andrea della Valle, at Rome); and the disappointed congregation, thinking indisposition was the cause of his absence, were on the point of retiring, when suddenly the bells rang, and announced the unexpected arrival of the Sovereign Pontiff. It is impossible to describe the feelings of the congregation, or the deep interest and excitement which were produced in their minds when they saw Pius IX. advance towards the pulpit, or the profound silence with which they listened

to his discourse.' It was a simple, good, plain sermon, easily intelligible to all.

This was a day to be remembered, for Pius IX. was held almost in adoration at that time by the excitable Italians. He was a reforming pope, a liberal pope. He offended Austria and all the petty despots of Italy by his measures as an Italian prince, if not as the head of the Church. He liberated political prisoners; gave the first sign of encouragement to the construction of railways in the papal dominions; gave increased freedom to the press; encouraged scientific meetings and researches; announced his approval of popular education; surrounded himself with liberal ministers; and purified the papal household. It was hard work for him to contend against the opposition of Lambruschini and other cardinals; but he did so. Alas! it was all too good to be permanent. The year 1848 arrived, and with it those convulsions which agitated almost every country in Europe. Pope Pius became thoroughly frightened. He either really believed that nations are not fitted for so much liberty and liberalism as he had hitherto been willing to give them, or else the power brought to bear against him by emperors, kings, princes, grand-dukes, cardinals, and archbishops, was greater than he could withstand. He changed his manners and proceedings, and became like other popes. What followed all this, belongs to the history of Italy.

THE CHANGE OF THE STYLE IN BRITAIN.

The Act for the change of the style (24 Geo. II. cap. 23) provided that the legal year in England 1752 should commence, not on the 25th of March, but on the 1st of January, and that after the 3rd of September in that year, the next ensuing day should be held as the 14th, thus dropping out eleven days. The Act also included provisions regarding the days for fairs and markets, the periods of legal obligations, and the future arrangements of the calendar. A reformed plan of the calendar, with tables for the moveable feasts, &c. occupies many pages of the statute.

The change of the style by Pope Gregory in the sixteenth century was well received by the people of the Catholic world. Miracles which took place periodically on certain days of the year, as for example the melting of the blood of St Gennaro at Naples on the 19th of September, observed the new style in the most orthodox manner, and the common people hence concluded that it was all right. The Protestant populace of England, equally ignorant, but without any such quasi-religious principle to guide them, were, on the contrary, violently inflamed against the statesmen who had carried through the bill for the change of style; generally believing that they had been defrauded of eleven days (as if eleven days of their destined lives) by the transaction. Accordingly, it is told that for some time afterwards, a favourite opprobrious cry to unpopular statesmen, in the streets and on the hustings, was, 'Who stole the eleven days? Give us back the eleven days!'

Near Malwood Castle, in Hampshire, there was an oak tree which was believed to bud every

Christmas, in honour of Him who was born on that day. The people of the neighbourhood said they would look to this venerable piece of timber as a test of the propriety of the change of style. They would go to it on the new Christmas Day, and see if it budded: if it did not, there could be no doubt that the new style was a monstrous mistake. Accordingly, on Christmas Day, new style, there was a great flocking to this old oak, to see how the question was to be determined. On its being found that no budding took place, the opponents of the new style triumphantly proclaimed that their view was approved by Divine wisdom—a point on which it is said they became still clearer, when, on the 5th January, being old Christmas Day, the oak was represented as having given forth a few shoots. These people were unaware that, even although there were historical grounds for believing that Jesus was born on the 25th of December, we had been carried away from the observance of the true day during the three centuries which elapsed between the event and the Council of Nice.

The change of style has indeed proved a sad discomfiture to all ideas connected with particular days and seasons. It was said, for instance, that March came in like a lion and went out like a lamb; but the end of the March of which this was said, is in reality the 12th of April. Still more absurd did it become to hold All Saints' Eve (October 31) as a time on which the powers of the mystic world were in particular vigour and activity, seeing that we had been observing it at a wrong time for centuries. We had been continually for many centuries gliding away from the right time, and yet had not perceived any difference—a pretty good proof that the assumedly sacred character of the night was all empty delusion.

Recovered Rings.

In the *Acta Sanctorum* a curious legend is related in connexion with the life of Kentigern, as to the finding of a lost ring. A queen, having formed an improper attachment to a handsome soldier, put upon his finger a precious ring which her own lord had conferred upon her. The king, made aware of the fact, but dissembling his anger, took an opportunity, in hunting, while the soldier lay asleep beside the Clyde, to snatch off the ring, and throw it into the river. Then returning home along with the soldier, he demanded of the queen the ring he had given her. She sent secretly to the soldier for the ring, which could not be restored. In great terror, she then dispatched a messenger to ask the assistance of the holy Kentigern. He, who knew of the affair before being informed of it, went to the river Clyde, and having caught a salmon, took from its stomach the missing ring, which he sent to the queen. She joyfully went with it to the king, who, thinking he had wronged her, swore he would be revenged upon her accusers; but she, affecting a forgiving temper, besought him to pardon them as she had done. At the same time, she confessed her error to Kentigern, and

solemnly vowed to be more careful of her conduct in future.*

In the armorial bearings of the see of Glasgow, and now of the city, St Kentigern's tree with its bell forms the principal object, while its stem is crossed by the salmon of the legend, bearing in its mouth the ring so miraculously recovered.

GLASGOW ARMS.

Fabulous as this old church legend may appear, it does not stand quite alone in the annals of the past. In Brand's *History of Newcastle*, we find the particulars of a similar event which occurred at that city in or about the year 1559. A gentleman named Anderson—called in one account Sir Francis Anderson—fingering his ring as he was one day standing on the bridge, dropped the bauble into the Tyne, and of course gave it up as lost. After some time a servant of this gentleman bought a fish in Newcastle market, in the stomach of which the identical lost ring was found.†

An occurrence remarkably similar to the above is related by Herodotus as happening to Polycrates, after his great success in possessing himself of the island of Samos. Amasis, king of Egypt, sent Polycrates a friendly letter, expressing a fear for the continuance of his singular prosperity, for he had never known such an instance of felicity which did not come to calamity in the long run; therefore advising Polycrates to throw away some favourite gem in such a way that he might never see it again, as a kind of charm against misfortune. Polycrates consequently took a valuable signet-ring—an emerald set in gold—and sailing away from the shore in a boat, threw this gem, in the sight of all on board, into the deep. 'This done, he returned home and gave vent to his sorrow.

'Now it happened, five or six days afterwards, that a fisherman caught a fish so large and beautiful that he thought it well deserved to be made a present of to the king. So he took it with him to the gate of the palace, and said that he wanted to see Polycrates. Then Polycrates allowed him to come in, and the fisherman gave him the fish with these words following—'Sir king, when I took this prize, I thought I would not carry it to market, though I am a poor man who live by

my trade. I said to myself, it is worthy of Polycrates and his greatness; and so I brought it here to give it you.' The speech pleased the king, who thus spoke in reply: 'Thou didst well, friend, and I am doubly indebted, both for the gift and for the speech. Come now, and sup with me.' So the fisherman went home, esteeming it a high honour that he had been asked to sup with the king. Meanwhile, the servants, on cutting open the fish, found the signet of their master in its belly. No sooner did they see it than they seized upon it, and hastening to Polycrates with great joy, restored it to him, and told him in what way it had been found. The king, who saw something providential in the matter, forthwith wrote a letter to Amasis, telling him all that had happened. . . . Amasis . . . perceived that it does not belong to man to save his fellowman from the fate which is in store for him; likewise he felt certain that Polycrates would end ill, as he prospered in everything, even finding what he had thrown away. So he sent a herald to Samos, and dissolved the contract of friendship. This he did, that when the great and heavy misfortune came, he might escape the grief which he would have felt if the sufferer had been his loved friend.*

In Scottish family history there are at least two stories of recovered rings, tending to support the possible verity of the Kentigern legend. The widow of Viscount Dundee—the famous Claverhouse—was met and wooed at Colzium House, in Stirlingshire, by the Hon William Livingstone, who subsequently became Viscount Kilsyth. The gentleman gave the lady a pledge of affection in the form of a ring, having for its posy, 'YOURS ONLY AND EVER.' She unluckily lost it in the garden, and it could not again be found; which was regarded as an unlucky prognostic for the marriage that soon after took place. Nor was the prognostic falsified by the event, for not long after her second nuptials, while living in exile in Holland, she and her only child were killed by the fall of a house. Just a hundred years after, the lost ring was found in a clod in the garden; and it has since been preserved at Colzium House. The other story is less romantic, yet curious, and of assured verity. A large silver signet ring was lost by Mr Murray of Pennyland, in Caithness, as he was walking one day on a shingly beach bounding his estate. Fully a century afterwards, it was found in the shingle, in fair condition, and restored to Mr Murray's remote heir, the present Sir Peter Murray Threipland of Fingask, baronet.

Professor De Morgan, in *Notes and Queries* for December 21, 1861, relates an anecdote of a recovered ring nearly as wonderful as that connected with the life of Kentigern. He says he does not vouch for it; but it was circulated and canvassed, nearly fifty years ago, in the country town close to which the scene is placed, with all degrees of belief and unbelief. 'A servant boy was sent into the town with a valuable ring. He took it out of its box to admire it, and in passing over a plank bridge he let it fall on a muddy bank. Not being able to find it, he ran away, took to the sea, finally settled in a colony, made a large fortune, came back after many

* *Acta Sanctorum*, i. 820. † Brand's *Newcastle*, i. 45.

* Rawlinson's *Translation of Herodotus*, ii. 438.

years, and bought the estate on which he had been servant. One day, while walking over his land with a friend, he came to the plank bridge, and there told his friend the story. "I could swear," said he, pushing his stick into the mud, "to the very spot on which the ring dropped." When the stick came back the ring was on the end of it.'

Wild Oats.—We are more familiar with wild oats in a moral than in a botanical sense; yet in the latter it is an article of no small curiosity. For one thing, it has a self-inherent power of moving from one place to another. Let a *head* of it be laid down in a moistened state upon a table, and left there for the night, and next morning it will be found to have walked off. The locomotive power resides in the peculiar hard *awn* or spike, which sets the grain a-tumbling over and over, sideways. A very large and coarse kind of wild oats, brought many years ago from Otaheite, was found to have the ambulatory character in uncommon perfection. When ordinary oats is allowed by neglect to degenerate, it acquires this among other characteristics of wild oats.

JANUARY 14.

Sts Isaias and Sabbas, 273. St Barbasceminus, 346. St Hilary, B. 368. St Felix.

ST HILARY.

St Hilarius lived in the fourth century, and the active and influential part of his life was passed under the Emperor Constantius in the East, though he is included among the Fathers of the Western or Latin Church. He belonged to a family of distinction resident at Poitiers, in Gaul, and was brought up in paganism, but became a convert to Christianity, and in the year 354 was elected bishop of Poitiers. The first general council, held at Nice (Nicaea) in Bithynia, in 325, under the Emperor Constantine, had condemned the doctrine of Arius, but had not suppressed it; and Hilarius, about thirty years afterwards, when he had made himself acquainted with the arguments, became an opponent of the Arians, who were then numerous, and were patronised by the Emperor Constantius. The council of Arles, held in 353, had condemned Athanasius and others, who were opponents of the Arian doctrine; and Hilarius, in the council of Beziers, held in 356, defended Athanasius, in opposition to Saturninus, bishop of Arles. He was in consequence deposed from his bishopric by the Arians, and banished by Constantius to Phrygia. There he remained about four years, occupied in composing his principal work, *On the Trinity*, in twelve books. Hilarius, besides his twelve books *On the Trinity*, wrote a work *On Synods* addressed to the bishops of Gaul and Britain, in which he gives an account of the various creeds adopted in the Eastern church subsequent to the council of Nice; and he addressed three books to the Emperor Constantius, of whose religious opinions he was always an energetic and fearless opponent. He continued, indeed, from the time when he became a bishop till the termination of his life in 368, to be zealously engaged in the

Trinitarian controversy; and the final triumph of the Nicene creed over the Arian may be attributed in a great degree to his energetic exertions. After the death of Constantius, in 361, he was restored to his bishopric, and returned to Poitiers, where he died.

Born.—Prince Adam Czartoryski, 1770.

Died.—Edward Lord Bruce, 1610; Dr John Boyse, translator of the Bible, 1643; Madame de Sevigné, 1696; Edmund Halley, astronomer, 1742; Dr George Berkeley, Bishop of Cloyne, 1753.

DR JOHN BOYSE.

A minute and interesting memoir of this eminent scholar, in Peck's *Desiderata Curiosa*, makes us aware of his profound learning, his diligence in study, and his many excellences of character. Ultimately he was a prebendary of Ely; but when engaged in his task of translating the Bible, he was only rector of Boxworth. Boyse was one of a group of seven scholars at Cambridge to whom were committed the Apocryphal books; and when, after four years, this task was finished, he was one of two of that group sent to London to superintend the general revision. With other four learned men, Boyse was engaged for nine months at Stationers' Hall, in the business of revising the entire translation; and it is not unworthy of notice, as creditable to the trade of literature, that, while the task of translation passed unrewarded of the nation, that of revision was remunerated by the Company of Stationers sending each scholar *thirty shillings a week*. The idea of a guerdon for literary exertion was then a novelty—indeed a thing scarcely known in England.

Boyse was employed with Sir Henry Savile in that serious task of editing Chrysostom, which led to a celebrated witticism on the part of Sir Henry. Lady Savile, complaining one day to her husband of his being so abstracted from her society by his studies, expressed a wish that she were a book, as she might then receive some part of his attention. 'Then,' said Sir Henry, 'I should have you to be an almanack, that I might change you every year.' She threatened to burn Chrysostom, who seemed to be killing her husband; whereupon Dr Boyse quietly remarked, 'That were a great pity, madam.' 'Why, who was Chrysostom?' inquired she. 'One of the sweetest preachers since the Apostles' times,' he calmly answered. 'Then,' said she, corrected by his manner and words, 'I would not burn him for the world.'

Boyse lived to eighty-two, though generally engaged eight hours a day in study. He seems to have been wise before his time as to the management of his physical system under intellectual labour, and his practice may even yet be described with advantage. 'He made but two meals, dinner and supper;* betwixt which he never so much as drank, unless, upon trouble of flatulency, some small quantity of *acqua-vitæ* and sugar. After meat he was careful, almost to curiosity, in picking and rubbing his teeth;

* In the days of Elizabeth and the first James, few gentlemen took anything but a draught of ale by way of breakfast.

esteeming that a special preservative of health ; by which means he carried to his grave almost a Hebrew alphabet of teeth [twenty-two]. When that was done, he used to sit or walk an hour or more, to digest his meat, before he would go to his study. . . . He would never study at all, in later years, between supper and bed ; which time, two hours at least, he would spend with his friends in discourse, hearing and telling harmless, delightful stories, whereof he was exceedingly full. . . . The posture of his body in studying was always standing, except when for ease he went upon his knees. No modern physiologist could give a better set of rules than these for a studious life, excepting as far as absence of all reference to active exercise is concerned.

MADAME DE SEVIGNÉ.

This celebrated woman, who has the glory of being fully as conspicuous in the graces of style as any writer of her age, died, after a few days' illness, at the town of Grignan. Her children were throughout life her chief object, and especially her daughter, to her affection for whom we owe the greater part of that admirable collection of Letters upon which the fame of Madame de Sevigné is raised. La Harpe describes them as 'the book of all hours, of the town, of the country, on travel. They are the conversations of a most agreeable woman, to which one need contribute nothing but one's own ; which is a great charm to an idle person.'

Her Letters were not published till the eighteenth century, but they were written in the mid-day of the reign of Louis XIV. 'Their ease and freedom from affectation,' says Hallam, 'are more striking by contrast with the two epistolary styles which had been most admired in France—that of Balzac, which is laboriously tumid, and that of Voiture, which becomes insipid by dint of affectation. Everyone perceives that in the *Letters of a Mother to her Daughter*, the public, in a strict sense, is not thought of ; and yet the habit of speaking and writing what men of wit and taste would desire to hear and read, gives a certain mannerism, I will not say air of effort, even to the letters of Madame de Sevigné. The abandonment of the heart to its casual impulses is not so genuine as in some that have since been published. It is at least clear that it is possible to become affected in copying her unaffected style ; and some of Walpole's letters bear witness to this. Her wit and talent of painting by single touches are very eminent ; scarcely any collection of letters, which contain so little that can interest a distant age, are read with such pleasure. If they have any general fault, it is a little monotony and excess of affection towards her daughter, which is reported to have wearied its object, and, in contrast with this, a little want of sensibility towards all beyond her immediate friends, and a readiness to find something ludicrous in the dangers and sufferings of others.' Thus, in one letter she mentions that a lady of her acquaintance, having been bitten by a mad dog, had gone to be dipped in the sea, and amuses herself by taking off the provincial accent with which she will express herself on the first plunge. She makes a jest of La Voisin's execution, and

thought that person was as little entitled to sympathy as any one ; yet, when a woman is burned alive, it is not usual for another woman to turn it into drollery.—*Literature of Europe*.

Madame de Sevigné's taste has been arraigned for slighting Racine ; and she has been charged with the unfortunate prediction : "*Il passera comme le café*." But it has been denied that these words can be found, though few like to give up so diverting a miscalculation of futurity.

BISHOP BERKELEY AND TARWATER.

Berkeley was a poet, as well as a mathematician and philosopher ; and his mind was not only well stored with professional and philosophical learning, but with information upon trade, agriculture, and the common arts of life. Having received benefit from the use of tar-water, when ill of the colic, he published a work on the Virtues of Tar-water, on which he said he had bestowed more pains than on any other of his productions. His last work, published but a few months before his death, was *Further Thoughts on Tar-water* ; and it shews his enthusiastic character, that, when accused of fancying he had discovered a panacea in tar-water, he replied, that 'to speak out, he freely owns he suspects tar-water is a panacea.' Walpole has taken the trouble to preserve, from the newspapers of the day, the following epigram on Berkeley's tar-water :

'Who dare deride what pious Cloyne has done ?
The Church shall rise and vindicate her son ;
She tells us all her bishops shepherds are,
And shepherds heal their rotten sheep with tar.'

In a letter written by Mr John Whishaw, solicitor, May 25, 1744, we find this account of Berkeley's panacea : 'The Bishop of Cloyne, in Ireland, has published a book, of two shillings price, upon the excellencies of tar-water, which is to keep ye bloud in due order, and a great remedy in many cases. His way of making it is to put, I think, a gallon of water to a quart of tar, and after stirring it together, to let it stand forty-eight hours, and then pour off the clear and drink a glass of about half a pint in ye morn, and as much at five in ye afternoon. So it's become common to call for a glass of tar-water in a coffee-house, as a dish of tea or coffee.'

GREAT FROSTS.

On this day, in 1205, 'began a frost which continued till the two and twentieth day of March, so that the ground could not be tilled ; whereof it came to pass that, in summer following, a quarter of wheat was sold for a mark of silver in many places of England, which for the more part in the days of King Henry the Second was sold for twelve pence ; a quarter of beans or peas for half a mark ; a quarter of oats for forty pence, that were wont to be sold for fourpence. Also the money was so sore clipped that there was no remedy but to have it renewed.'—*Stowe's Chronicle*.

It has become customary in England to look to St Hilary's Day as the *coldest in the year* ; perhaps from its being a noted day about the

middle of the notably coldest month. It is, however, just possible that the commencement of the extraordinary and fatal frost of 1205, on this day, may have had something to do with the notion; and it may be remarked, that in 1820 the 14th of January was the coldest day of the year, one gentleman's thermometer falling to four degrees Fahrenheit below zero. On a review of the greatest frosts in the English chronicles, it can only be observed that they have for the most part occurred throughout January, and only, in general, diverge a little into December on the one hand, and February on the other. Yet one of the most remarkable of modern frosts began quite at the end of January.

It was at that time in 1814 that London last saw the Thames begin to be so firmly frozen as to support a multitude of human beings on its surface. For a month following the 27th of the previous December, there had been a strong frost in England. A thaw took place on the 26th January, and the ice of the Thames came down in a huge 'pack,' which was suddenly arrested between the bridges by the renewal of the frost. On the 31st the ice pack was so firmly frozen in one mass, that people began to pass over it, and next day the footing appeared so safe, that thousands of persons ventured to cross. Opposite to Queenhithe, where the mass appeared most solid, upwards of thirty booths were erected, for the sale of liquors and viands, and for the playing of skittles. A sheep was set to a fire in a tent upon the ice, and sold in shilling slices, under the

appellation of *Lapland mutton*. Musicians came, and dances were effected on the rough and slippery surface. What with the gay appearance of the booths, and the quantity of favourite popular amusements going on, the scene was singularly cheerful and exciting. On the ensuing day, faith in the ice having increased, there were vast multitudes upon it between the London and Blackfriars' Bridges; the tents for the sale of refreshments, and for games of hazard, had largely multiplied; swings and merry-go-rounds were added to skittles; in short, there were all the appearances of a Greenwich or Bartholomew Fair exhibited on this frail surface, and *Frost Fair* was a term in everybody's mouth. Amongst those who strove to make a trade of the occasion, none were more active than the humbler class of printers. Their power of producing an article capable of preservation, as a memorial of the affair, brought them in great numbers to the scene. Their principal business consisted, accordingly, in the throwing off of little broadsides referring to Frost Fair, and stating the singular circumstances under which they were produced, in rather poor verses—such as the following:

'Amidst the arts which on the Thames appear,
To tell the wonders of this icy year,
Printing claims prior place, which at one view
Erects a monument of THAT and YOU.'

Another peculiarly active corps was the ancient fraternity of watermen, who, deserting their proper trade, contrived to render themselves ser-

FAIR ON THE THAMES, 1716.

viceable by making convenient accesses from the landings, for which they charged a moderate toll. It was reported that some of these men realized as much as ten pounds a day by this kind of business.

All who remember the scene describe it as having been singular and picturesque. It was not merely a white icy plain, covered with flag-bearing booths and lively crowds. The peculiar circumstances under which this part of the river

had finally been frozen, caused it to appear as a variegated ice country—hill and dale, and devious walk, all mixed together, with human beings thronging over every bit of accessible surface.

After Frost Fair had lasted with increasing activity for four days, a killing thaw came with the Saturday, and most of the traders who possessed any prudence struck their flags and departed. Many, reluctant to go while any customers remained, held on past the right time,

and towards evening there was a strange medley of tents, and merry-go-rounds, and printing presses seen floating about on detached masses of ice, beyond recovery of their dismayed owners, who had themselves barely escaped with life. A large refreshment booth, belonging to one Lawrence, a publican of Queenhithe, which had been placed opposite Brook's Wharf, was floated off by the rising tide, at an early hour on Sunday morning, with nine men in the interior, and was borne with violence back towards Blackfriars' Bridge, catching fire as it went. Before the conflagration had gone far, the whole mass was dashed to pieces on one of the piers of the bridge, and the men with difficulty got to land. A vast number of persons suffered immersion both on this and previous days, and three men were drowned. By Monday nothing was to be seen where Frost Fair had been, but a number of ice-boards swinging lazily backwards and forwards under the impulse of the tide.

There has been no recurrence of Frost Fair on the Thames from 1814 down to the present year (1861); but it is a phenomenon which, as a rule, appears to recur several times each century. The next previous occasion was in the winter of 1788-9; the next again in January 1740, when people dwelt in tents on the Thames for weeks. In 1715-16, the river was thickly frozen for several miles, and became the scene of a popular *fête* resembling that just described, with the additional feature of an ox roasted whole for the regalement of the people. The next previous instance was in January 1684. There was then a constant frost of seven weeks, producing ice eighteen inches thick. A contemporary, John Evelyn, who was an eye-witness of the scene, thus describes it:

'The frost continuing, more and more severe, the Thames, before London, was still planted with booths in formal streets, all sorts of trades and shops, furnished and full of commodities, even to a *printing press*, where the people and ladies took a fancy to have their names printed, and the day and the year set down when produced on the Thames: this humour took so universally, that it was estimated the printer gained five pounds a day, for printing a line only, at sixpence a name, besides what he got by ballads, &c. Coaches plied from Westminster to the Temple and from other stairs, to and fro, as in the streets; sheds, sliding with skates, or bull-baiting, horse and coach races, puppet-shows and interludes, cooks, tipping and other lewd places; so that it seemed to be a bacchanalian triumph or carnival on the water: while it was a severe judgment on the land, the trees not only splitting as if lightning-struck, but men and cattle perishing in divers places, and the very seas so locked up with ice, that no vessels could stir out or come in; the fowls, fish, and birds, and all our exotic plants and greens, universally perishing. Many parks of deer were destroyed; and all sorts of fuel so dear, that there were great contributions to keep the poor alive. Nor was this severe weather much less intense in most parts of Europe, even as far as Spain in the most southern tracts.

'London, by reason of the excessive coldness

of the air hindering the ascent of the smoke, was so filled with the fuliginous stream of the sea-coal, that hardly could any one see across the streets; and this filling of the lungs with the gross particles exceedingly obstructed the breath, so as one could scarcely breathe. There was no water to be had from the pipes or engines; nor could the brewers and divers other tradesmen work; and every moment was full of disastrous accidents.'

King Charles II. visited the diversions on the Thames, with other personages of the royal family; and the names of the party were printed upon a quarto piece of Dutch paper, within a type border, as follows:

CHARLES, KING.
JAMES, DUKE.
KATHERINE, QUEEN.
MARY, DUCHESS.
ANNE, PRINCESS.
GEORGE, PRINCE.
HANS IN KILDER.

London: Printed by G. Croom, on the
Ice on the River of Thames, Jan. 31,
1684.

Hollinshed describes a severe frost as occurring at the close of December 1564: 'On New Year's even,' he says, 'people went over and along the Thames on the ice from London Bridge to Westminster. Some played at the foot-ball as boldly there as if it had been on dry land. Divers of the court, being daily at Westminster, shot daily at pricks set upon the Thames; and the people, both men and women, went daily on the Thames in greater number than in any street of the city of London. On the 3d day of January it began to thaw, and on the 5th day was no ice to be seen between London Bridge and Lambeth; which sudden thaw caused great floods and high waters, that bare down bridges and houses, and drowned many people, especially in Yorkshire.'

A protracted frost necessarily deranges the lower class of employments in such a city as London, and throws many poor persons into destitution. Just as sure as this is the fact, so sure is it that a vast horde of the class who systematically avoid regular work, preferring to live by their wits, simulate the characteristic appearances of distressed labourers, and try to excite the charity of the better class of citizens. Investing themselves in aprons, clutching an old spade, and hoisting as their signal of distress a turnip on the top of a pole or rake, they will wend their way through the west-end streets, proclaiming themselves in sepulchral tones as *Frozen-out Gardeners*, or simply calling, 'Hall frozen hout!' or chanting 'We've got no work to do!' The faces of the corps are duly dolorous; but one can nevertheless observe a sharp eye kept on the doors and windows they are passing, in order that if possible they may arrest some female gaze on which to practise their spell of pity. It is alleged on good grounds that the generality of

these victims of the frost are impostors, and that their daily gatherings will often amount to double a skilled workman's wages. Nor do they usually discontinue the trade till long after the return of milder airs has liquidated even real claims upon the public sympathy.

FROZEN-OUT GARDENERS.

FROST PICTURES.

When, like a sullen exile driven forth,
Southward, December drags his icy chain,
He graves fair pictures of his native North
On the crisp window-pane.

So some pale captive blurs, with lips unshorn,
The latticed glass, and shapes rude outlines there,
With listless finger and a look forlorn,
Cheating his dull despair.

The fairy fragments of some Arctic scene
I see to-night; blank wastes of polar snow,
Ice-laden boughs, and feathery pines that lean
Over ravines below.

Black frozen lakes, and icy peaks blown bare,
Break the white surface of the crusted pane,
And spear-like leaves, long ferns, and blossoms fair
Linked in silvery chain.

Draw me, I pray thee, by this slender thread;
Fancy, thou sorceress, bending vision-wrought
O'er that dim well perpetually fed
By the clear springs of thought!

Northward I turn, and tread those dreary strands,—
Lakes where the wild fowl breed, the swan abides;
Shores where the white fox, burrowing in the sands,
Harks to the droning tides.

And seas, where, drifting on a raft of ice,
The she-bear rears her young; and cliffs so high,
The dark-winged birds that emulate their rise
Melt through the pale blue sky.

There, all night long, with far diverging rays,
And stalking shades, the red Auroras glow;
From the keen heaven, meek suns with pallid blaze
Light up the Arctic snow.

Guide me, I pray, along those waves remote,
That deep unstartled from its primal rest;
Some errant sail, the fisher's lone light boat
Borne waif-like on its breast!

Lead me, I pray, where never shallop's keel
Brake the dull ripples throbbing to their caves;
Where the mailed glacier with his armed heel
Spurs the resisting waves!

Paint me, I pray, the phantom hosts that hold
Celestial tourneys when the midnight calls;
On airy steeds, with lances bright and bold,
Storming her ancient halls.

Yet, while I look, the magic picture fades;
Melts the bright tracery from the frosted pane;
Trees, vales, and cliffs, in sparkling snows arrayed,
Dissolve in silvery rain.

Without, the day's pale glories sink and swell
Over the black rise of yon wooded height;
The moon's thin crescent, like a stranded shell,
Left on the shores of night.

Hark how the north wind, with a hasty hand,
Rattling my casement, frames his mystic rhyme.
House thee, rude minstrel, chanting through the land,
Runes of the olden times.*

* By Edith May, in *Hale's Selections from Female Writers*. 1853.

INFERNAL MACHINES.

The 14th of January 1858 was made memorable in France by an attempt at regicide, most diabolical in its character, and yet the project of a man who appears to have been by no means devoid of virtue and even benevolence. It was, however, the third time that what the French call an Infernal Machine was used in the streets of Paris, for regicidal purposes, within the present century.

The first was a Bourbonist contrivance directed against the life of the First Consul Bonaparte. 'This machine,' says Sir Walter Scott, in his *Life of Napoleon*, 'consisted of a barrel of gunpowder, placed on a cart, to which it was strongly secured, and charged with grape-shot, so disposed around the barrel as to be dispersed in every direction by the explosion. The fire was to be communicated by a slow match. It was the purpose of the conspirators, undeterred by the indiscriminate slaughter which such a discharge must occasion, to place the machine in the street, through which the First Consul must go to the opera; having contrived that it should explode exactly as his carriage should pass the spot.' Never, during all his eventful life, had Napoleon a narrower escape than on this occasion, on the 14th of December 1800. St Regent applied the match, and an awful explosion took place. Several houses were damaged, twenty persons were killed on the spot, and fifty-three wounded, including St Regent himself. Napoleon's carriage, however, had just got beyond the reach of harm. This atrocity led to the execution of St Regent, Carbon, and other conspirators.

Fieschi's attempt at regicide in 1835 was more elaborate and scientific; there was something of the artillery officer in his mode of proceeding, although he was in truth nothing but a scamp. Fieschi hired a front room of a house in Paris, in a street through which royal *cortéges* were sometimes in the habit of passing; he proceeded to construct a weapon to be fired off through the open window, on some occasion when the king was expected to pass that way. He made a strong frame, supported by four legs. He obtained twenty-five musket barrels, which he ranged with their butt ends raised a little higher than the muzzles, in order that he might fire *downwards*, from a first floor window into the street. The barrels were not ranged quite parallel, but were spread out slightly like a fan; the muzzles were also not all at the same height; so that by this combined plan he obtained a sweep of fire, both in height and breadth, more extensive than he would otherwise have obtained. Every year during Louis Philippe's reign there were certain days of rejoicing in July, in commemoration of the circumstances which placed him on the throne. On the 28th, the second day of the festival in 1835, a royal *cortége* was proceeding along this particular street, the Boulevard du Temple. Fieschi adjusted his machine, heavily loaded with ball (four to each barrel), and connected the touch-holes of all his twenty-five barrels with a train of gunpowder. He had a blind at his window, to screen his operations

from view. Just as the *cortége* arrived, he raised his blind and fired, when a terrific scene was presented. Marshal Mortier, General de Verigny, the aide-de-camp of Marshal Maison, a colonel, several grenadiers of the Guard, and several bystanders, were killed, while the wounded raised the number of sufferers to nearly forty. In this, as in many similar instances, the person aimed at escaped. One ball grazed the king's arm, and another lodged in his horse's neck: but he and his sons were in other respects unhurt. Fieschi was executed; and his name obtained for some years that kind of notoriety which Madame Tussaud could give it.

We now come to the attempt of Orsini and his companions. A Birmingham manufacturer was commissioned to make six missiles according to a particular model. The missile was of oval shape, and had twenty-five nipples near one end, with percussion caps to fit them. The greatest thickness and weight of metal were at the nipple end, to ensure that it should come foremost to the ground. The inside was to be filled with detonating composition, such as fulminate of mercury; a concussion would explode the caps on the nipples, and communicate the explosion to the fulminate, which would burst the iron shell into innumerable fragments. A Frenchman residing in London bought alcohol, mercury, and nitric acid; made a detonating compound from these materials, and filled the shells with it. Then ensued a very complicated series of manœuvres to get the conspirators and the shells to Paris, without exciting the suspicion of the authorities. On the evening of the 14th of January 1858, the Emperor and Empress were to go to the opera; and Orsini and his confederates prepared for the occasion. At night, while the imperial carriage was passing, three explosions were heard. Several soldiers were wounded; the Emperor's hat was perforated; General Roquet was slightly wounded in the neck; two footmen were wounded while standing behind the Emperor's carriage; one horse was killed; the carriage was severely shattered; and the explosion extinguished most of the gas-lights near at hand. The Emperor, cool in the midst of danger, proceeded to the opera as if nothing had happened. When the police had sought out the cause of this atrocity, it was ascertained that Orsini, Pierri, Rudio, and Gomez were all on the spot; three of the shell-grenades had been thrown by hand, and two more were found on Orsini and Pierri. The fragments of the three shells had inflicted the frightful number of more than five hundred wounds—Orsini himself had been struck by one of the pieces. Rudio and Gomez were condemned to the galleys; Orsini and Pierri were executed. Most readers will remember the exciting political events that followed this affair in England and France, nearly plunging the two countries into war.

The Feast of the Ass.

Formerly, the Feast of the Ass was celebrated on this day, in commemoration of the 'Flight into Egypt.' Theatrical representations of Scripture history were originally intended to impress

religious truths upon the minds of an illiterate people, at a period when books were not, and few could read. But the advantages resulting from this mode of instruction were counterbalanced by the numerous ridiculous ceremonies which they originated. Of these probably none exceeded in grossness of absurdity the Festival of the Ass, as annually performed on the 14th of January. The escape of the Holy Family into Egypt was represented by a beautiful girl holding a child at her breast, and seated on an ass, splendidly decorated with trappings of gold-embroidered cloth. After having been led in solemn procession through the streets of the city in which the celebration was held, the ass, with its burden, was taken into the principal church, and placed near the high altar, while the various religious services were performed. In place, however, of the usual responses, the people on this occasion imitated the braying of an ass; and, at the conclusion of the service, the priest, instead of the usual benediction, brayed three times, and was answered by a general *hee-hawing* from the voices of the whole congregation. A hymn, as ridiculous as the ceremony, was sung by a double choir, the people joining in the chorus, and imitating the braying of an ass. Ducange has preserved this burlesque composition, a curious medley of French and mediæval Latin, which may be translated thus:

' From the country of the East,
Came this strong and handsome beast:
This able ass, beyond compare,
Heavy loads and packs to bear.

Now, seignior ass, a noble bray,
Thy beauteous mouth at large display;
Abundant food our hay-lofts yield,
And oats abundant load the field.
Hee-haw! He-haw! He-haw!

' True it is, his pace is slow,
Till he feels the quickening blow;
Till he feel the urging goad,
On his hinder part bestowed.
Now, seignior ass, &c.

' He was born on Shechem's hill;
In Reuben's vales he fed his fill;
He drank of Jordan's sacred stream,
And gambolled in Bethlehem.
Now, seignior ass, &c.

' See that broad majestic ear!
Born he is the yoke to wear:
All his fellows he surpasses!
He's the very lord of asses!
Now, seignior ass, &c.

' In leaping he excels the fawn,
The deer, the colts upon the lawn;
Less swift the dromedaries ran,
Boasted of in Midian.
Now, seignior ass, &c.

' Gold from Araby the blest,
Seba myrrh, of myrrh the best,
To the church this ass did bring;
We his sturdy labours sing.
Now, seignior ass, &c.

' While he draws the loaded wain,
Or many a pack, he don't complain.
With his jaws, a noble pair,
He doth craunch his homely fare.
Now, seignior ass, &c.

' The bearded barley and its stem,
And thistles, yield his fill of them:
He assists to separate,
When it's threshed, the chaff from wheat.
Now, seignior ass, &c.

' With your belly full of grain,
Bray, most honoured ass, Amen!
Bray out loudly, bray again,
Never mind the old Amen;
Without ceasing, bray again,
Amen! Amen! Amen!
Hee-haw! He-haw! He-haw!

The 'Festival of the Ass,' and other religious burlesques of a similar description, derive their origin from Constantinople; being instituted by the Patriarch Theophylact, with the design of weaning the people's minds from pagan ceremonies, particularly the Bacchanalian and calendary observances, by the substitution of Christian spectacles, partaking of a similar spirit of licentiousness,—a principle of accommodation to the manners and prejudices of an ignorant people, which led to a still further adoption of rites, more or less imitated from the pagans. According to the pagan mythology, an ass, by its braying, saved Vesta from brutal violence, and, in consequence, 'the coronation of the ass' formed a part of the ceremonial feast of the chaste goddess.

An elaborate sculpture, representing a kneeling ass, in the church of St Anthony at Padua, is said to commemorate a miracle that once took place in that city. It appears that one morning, as St Anthony was carrying the sacrament to a dying person, some profane Jews refused to kneel as the sacred vessels were borne past them. But they were soon rebuked and put to contrition and shame, by seeing a pious ass kneel devoutly in honour of the host. The Jews, converted by this miracle, caused the sculpture to be erected in the church. It takes but little to make a miracle. The following anecdote, told by the Rev John Wesley, in his *Journal*, would, in other hands, have made a very good one. 'An odd circumstance,' says Mr Wesley, 'happened at Rotherham during the morning preaching. It was well only serious persons were present. An ass walked gravely in at the gate, came up to the door of the house, lifted up his head, and stood stoek still, in a posture of deep attention. Might not the dumb beast reprove many, who have far less decency, and not much more understanding?'

A somewhat similar asinine sensibility was differently displayed in the presence of King Henry IV. of France—the ass, on this occasion, not exhibiting itself as a dumb animal. When passing through a small town, just as the King was getting tired of a long stupid speech delivered by the mayor, an ass brayed out loudly; and Henry, with the greatest gravity and politeness of tone, said: 'Pray, gentlemen, speak one at a time, if you please.'

Mallard Day.

The 14th of January is celebrated in All Souls College, Oxford, by a great merrymaking,

in commemoration of the finding of an overgrown mallard in a drain, when they were digging a foundation for the college buildings, anno 1437.

The following extract from a contemporary chronicle gives an account of the incident: 'Whenas Henrye Chichele, the late renowned archbishops of Cantorberye, had minded to founden a collidge in Oxenforde, for the hele of his soule and the soules of all those who peryshed in the warres of Fraunce, fighteing valiantlye under our most gracious Henrye the fifthe, moche was he distraughten concerning the place he myghte choose for thilke purpose. Him thinkyth some whylest how he myghte place it withouten the eastern porte of the citie, both for the pleasauntnesse of the meadowes and the clere streamys thereye runninge. Agen him thinkyth odir whylest howe he mote builden it on the northe side for the heful ayre there coming from the fieldes. Nowe while he doubteth thereon he dremt, and behold there appereth unto him one of righte godelye personage, sayinge and adviseing as howe he myghte placen his collidge in the highe strete of the citie, nere unto the chirche of our blessed ladie the Virgine, and in wisesse that it was sowthe, and no vain and deceitful phantasie, wolled him to laye the first stane of the foundation at the corner which turneth towards the Cattys Strete, where in delvinge he myghte of a suretye finde a schwop-pinge mallarde imprisoned in the sinke or sewere, wele yfatted and almost ybosten. Sure token of the thrivaunce of his future college.

'Moche doubteth he when he awoke on the nature of this vision, whether he mote give hede thereto or not. Then advisyth he there with monie docters and leardy clerkys, who all seyde howe he oughte to maken trial upon it. Then comyth he to Oxenforde, and on a daye fixed, after masse seyde, procedeth he in solemnee wyse, with spades and pickaxes for the nonce provided, to the place afore spoken of. But long they had not digged ere they herde, as it myghte seme, within the wam of the erthe, horrid strugglings and flutteringes, and anon violent quaakings of the distressyd mallarde. Then Chichele lyfeth up his hondes and seyth Benedicite, &c. &c. Nowe when they broughte him forth, behold the size of his bodie was as that of a bustarde or an ostridge. And moch wonder was thereat; for the lycke had not been seene in this londe, ne in onie odir.'

We obtain no particulars of the merrymaking beyond a quaint song said to have been long sung on the occasion:

'THE MERRY OLD SONG OF THE ALL SOULS' MALLARD.

'Griffin, bustard, turkey, capon,
Let other hungry mortals gape on;
And on the bones their stomach fall hard,
But let All Souls' men have their MALLARD.
Oh! by the blood of King Edward,*
Oh! by the blood of King Edward,
It was a swapping, swapping MALLARD.

'The Romans once admired a gander
More than they did their chief commander;

* The allusion to King Edward is surely an anachronism, as King Henry VI. was reigning at the time of the foundation of this college.

Because he saved, if some don't fool us,
The place that's called th' head of Tolus.
Oh! by the blood, &c.

'The poets feign Jove turned a swan,
But let them prove it if they can;
As for our proof, 'tis not at all hard,
For it was a swapping, swapping MALLARD.
Oh! by the blood, &c.

'Therefore let us sing and dance a galliard,
To the remembrance of the MALLARD:
And as the MALLARD dives in pool,
Let us dabble, dive, and duck in bowl.
Oh! by the blood of King Edward,
Oh! by the blood of King Edward,
It was a swapping, swapping MALLARD.'

MISERRIMUS.

In the north aisle of the cloister of Worcester Cathedral is a sepulchral slab, which bears only the word MISERRIMUS, expressing that a most miserable but unknown man reposes below. The most heedless visitor is arrested by this sad voice speaking, as it were, from the ground; and it is no wonder that the imaginations of poets and romancists have been awakened by it:

' "Miserrimus!" and neither name nor date,
Prayer, text, or symbol, graven upon the stone;
Nought but that word assigned to the unknown,
That solitary word—to separate
From all, and cast a cloud around the fate
Of him who lies beneath. Most wretched one!
Who chose his epitaph?—Himself alone
Could thus have dared the grave to agitate,
And claim among the dead this awful crown;
Nor doubt that he marked also for his own,
Close to these cloistral steps, a burial-place,
That every foot might fall with heavier tread,
Trampling upon his vileness. Stranger, pass
Softly!—To save the contrite Jesus bled!'

There has of course been much speculation regarding the identity of Miserrimus: even a novel has been written upon the idea, containing striking events and situations, and replete with pathos. It is alleged, however, that the actual person was no hero of strikingly unhappy story, but only a 'Rev Thomas Morris, who, at the Revolution refusing to acknowledge the king's supremacy [more probably refusing to take the oaths to the new monarch], was deprived of his preferment, and depended for the remainder of his life on the benevolence of different Jacobites.' At his death, viewing merely, we suppose, the extreme indigence to which he was reduced, and the humiliating way in which he got his living, he ordered that the only inscription on his tomb should be—MISERRIMUS!*

Such freaks are not unexampled, and we cannot be always sure that there is a real correspondence between the inscription and the fact. For instance, a Mr Francis Cherry of Shottesbrooke, who died September 23, 1713, had his grave inscribed with no other words than HIC JACET PECCATORUM MAXIMUS (Here lies the Chief of Sinners), the truth being, if we are to believe his friend Hearne, that he was an upright and amiable man, of the most unexceptionable religious practice—in Hearne's own words, 'one

* Britton's *Cathedral Antiquities*, quoting Lees's *Worcestershire Miscellany*.

of the most learned, modest, humble, and virtuous persons that I ever had the honour to be acquainted with.*

The writer can speak on good authority of a similar epitaph which a dying person of unhappy memory desired to be put upon his coffin. The person referred to was an Irish ecclesiastic who many years ago was obliged, in consequence of a dismal lapse, to become as one lost to the world. Fully twenty-five years after his wretched fall, an old and broken down man, living in an obscure lodging at Newington, a suburb of Edinburgh, sent for one of the Scottish Episcopal clergy, for the benefit of his ministrations as to a dying person. Mr F—— saw much in this aged man to interest him; he seemed borne down with sorrow and penitence. It was tolerably evident that he shunned society, and lived under a feigned name and character. Mr F—— became convinced that he had been a criminal, but was not able to penetrate the mystery. The miserable man at length had to give some directions about his funeral—an evidently approaching event; and he desired that the only inscription on his coffin should be 'A CONTRITE SINNER.' He was in due time deposited without any further memorial in Warriston Cemetery, near Edinburgh.

JANUARY 15.

St Paul, the First Hermit, 342. St Isidore, priest and hermit, c. 390. St Isidore, priest and hospitaller of Alexandria, 403. St John Calybite, recluse, 450. St Maurus, abbot, 584. St Main, abbot. St Ita or Mida, virgin abbess, 569. St Bonitus, bishop of Auvergne, 710.

Born.—Dr Samuel Parr, 1747, Harrow; Dr John Aikin, 1747, *Knibsworth*; Talma, French tragedian, 1763, Paris; Thomas Crofton Croker, 1798.

Died.—Father Paul Sarpi, 1623; Sir Philip Warwick, 1683.

DR PARR,

as a literary celebrity, occupied no narrow space in the eyes of our fathers. In our own age, he has shrunk down into his actual character of only a literary eccentricity. It seems almost incredible that, after his death in 1825, there should have been a republication of his *WORKS*—in eight volumes octavo. Successively an assistant at Harrow, and the proprietor of an academy at Stanmore, he was at the basis a schoolmaster, although he spent the better part of his life as perpetual curate of Hatton, and even attained the dignity of a prebendal stall in St. Paul's.

It is related of Parr, that, soon after setting up at Stanmore, he found himself in need of a wife. By some kind friends, a person thought to be a suitable partner was selected for him; but the union did not prove a happy one. It was remarked that he had wanted a housekeeper, and that the lady had wanted a house. She was of a good family in Yorkshire, an only child, who had been brought up by two maiden aunts, 'in rigidity and frigidity,' and she described her

husband as having been 'born in a whirlwind, and bred a tyrant.' She was a clever woman and a voluble talker, and took a pleasure in exposing his foibles and peculiarities before company. At Stanmore Dr Parr assumed the full-bottomed wig, which afterwards became a distinguishing part of his full dress. The Rev Sydney Smith has given a humorous description of this ornament of his person: 'Whoever has had the good fortune to see Dr Parr's wig, must have observed, that while it trespasses a little on the orthodox magnitude of perukes in the anterior parts, it scorns even episcopal limits behind, and swells out into boundless convexity of frizz, the μέγα θαύμα of barbers, and the terror of the literary world.' At Stanmore he abandoned himself to smoking, which became his habit through life. He would sometimes ride in prelatial pomp through the streets on a black saddle, bearing in his hand a long cane or wand, with an ivory head like a crosier. At other times he was seen stalking through the town in a dirty striped morning gown.

In 1787 Dr Parr published, in conjunction with his friend the Rev Henry Homer, a new edition of *Bellendenus De Statu*. William Bellenden was a learned Scotchman, who was a Professor in the University of Paris, and wrote in Latin a work in three books, entitled *De Statu Principis, De Statu Reipublicæ, and De Statu Prisci Orbis*. The three books of this republication were dedicated respectively to Mr Burke, Lord North, and Mr Fox; and Dr Parr prefixed a Latin Preface, exhibiting in high eulogistic relief the characters of those three statesmen, the 'Tria Lumina Anglorum.' The book was published anonymously, and excited the curiosity of the literary world. Parr anticipated the fame which his preface would confer upon him. His vanity was excessive, and so obvious as frequently to expose him to ridicule. If the different passages of his letters, in which he has praised himself, were collected together, they would make a book; but the one which he wrote to Mr Homer, when he had completed the Preface to *Bellendenus*, contains an outburst of self-conceit and self-laudation, which is probably without a parallel. As such it is worth transcribing:

'Dear Sir,—What will you say, or rather, what shall I say myself, of myself? It is now ten o'clock at night, and I am smoking a quiet pipe, after a most vehement, and, I think, a most splendid effort of composition—an effort it was indeed, a mighty and a glorious effort; for the object of it is, to lift up Burke to the pinnacle where he ought to have been placed before, and to drag down Lord Chatham from that eminence to which the cowardice of his hearers, and the credulity of the public, had most weakly and most undeservedly exalted the impostor and father of impostors. Read it, dear Harry; read it, I say, aloud; read it again and again; and when your tongue has turned its edge from me to the father of Mr Pitt, when your ears tingle and ring with my sonorous periods, when your heart glows and beats with the fond and triumphant remembrance of Edmund Burke—then, dear Homer, you will forgive me, you will love me, you will congratulate me, and readily will

* Reliquiæ Hearnianæ, i. 294.

you take upon yourself the trouble of printing what in writing has cost me much greater though not longer trouble. Old boy, I tell you that no part of the Preface is better conceived, or better

DR PARR.

written; none will be read more eagerly, or felt by those whom you wish to feel it, more severely. Old boy, old boy, it is a stinger; and now to other business,' &c.— *Correspondence*, vol. ii., p. 196.

Soon after the death of Mr Fox, Dr Parr announced his intention of publishing a life of the statesman whom he so much admired. The expectations of the public were disappointed by the publication, in 1809, of *Characters of the late Charles James Fox, selected, and in part written, by Philopatri Varvicensis*, two vols. 8vo. Of the first volume one hundred and seventy-five pages are extracted *verbatim* from public journals, periodical publications, speeches, and other sources; and of these characters the best is by Sir James Mackintosh; next, a panegyric on Mr Fox by Dr Parr himself occupies one hundred and thirty-five pages. The second volume is entirely occupied by notes upon a variety of topics which the panegyric has suggested, such as the penal code, religious liberty, and others, plentifully inlaid with quotations from the learned languages.

Dr Parr's knowledge on ecclesiastical, political, and literary subjects, was extensive, and his conversation was copious and animated. He had a great reputation in his day as a table-talker, although his utterance was thick, and his manner overbearing, and often violent. Sydney Smith, several years after Dr Parr's death, remarked, that 'he would have been a more considerable man if he had been more knocked about among his equals. He lived with country gen-

tleman and clergymen, who flattered and feared him.' When he met with Dr Johnson, who was more than his equal, at Mr Langton's, as recorded in Boswell (*Life*, edited by Croker, royal 8vo, p. 659), he was upon his good behaviour, and the Doctor praised him. 'Sir, I am much obliged to you for having asked me this evening. Parr is a fair man. I do not know when I have had an occasion of such free controversy. It is remarkable how much of a man's life may pass without meeting any instance of this kind of open discussion.'

In the performance of his clerical duties Dr Parr was assiduous; he was an advocate for more than the pomp and circumstance of the established forms of public worship. His wax candles were of unusual length and thickness, his communion-plate massive, and he decorated his church, at his own expense, with windows of painted glass. He had an extraordinary fondness for church-bells, and in order to furnish his belfry up to the height of his wishes he made many appeals to the liberality of his friends and correspondents. He himself writes, 'I have been importunate, and even impudent.' In one of his letters he intimates an intention of writing a work on Campanology; but even if he had done so, he would hardly have reached the height of enthusiasm of Joannes Barbrius, who, in his book, *De Cælo et Cælesti Statu*, Mentz, 1618, employs four hundred and twenty-five pages to prove that the principal employment of the blessed in heaven will be the ringing of bells.

His style, as a writer of English, is exceedingly artificial. Sydney Smith, in reviewing his Spital Sermon, preached in 1800, gives a description of it which is generally applicable to all his compositions. 'The Doctor is never simple and natural for a single moment. Everything smells of the rhetorician. He never appears to forget himself, or to be hurried by his subject into obvious language. . . . Dr Parr seems to think that eloquence consists not in an exuberance of beautiful images, not in simple and sublime conceptions, not in the feelings of the passions, but in a studious arrangement of sonorous, exotic, and sesquipedal words.' He had a very high opinion of himself as a writer of Latin epitaphs, of which he composed about thirty. At a dinner, when Lord Erskine had delighted the company with his conversation, Dr Parr, in an ecstasy, called out to him, 'My Lord, I mean to write your epitaph.' Erskine, who was a younger man, replied, 'Dr Parr, it is a temptation to commit suicide.' The epitaph on Dr Johnson, inscribed on his monument in St Paul's Cathedral, was written by Dr Parr. At the end of the fourth volume of his works, is a long correspondence respecting this epitaph, between Parr, Sir Joshua Reynolds, Malone, and other friends of the deceased Doctor. The reader 'will be amused at the burlesque importance which Parr attaches to epitaph-writing.'—*Croker*.

Dr Parr's handwriting was very bad. Sir William Jones writes to him—'To speak plainly with you, your English and Latin characters are so badly formed, that I have infinite difficulty to read your letters, and have abandoned all hopes

of deciphering many of them. Your Greek is wholly illegible; it is perfect algebra.*

TALMA.

Though Talma displayed in early boyhood a remarkable tendency to theatricals, his first attempt on a public stage, in 1783, was such as to cause his friends to discommend his pursuing the histrionic profession. It was not till a second attempt at the Théâtre Français (four years later) that he fixed the public approbation. On the retirement of Lavire, he became principal tragedian at that establishment; and no sooner was he launched in his career than his superior intellect began to work towards various reformations of the stage, particularly in the department of costume. He is said to have been the first in his own country who performed the part of Titus in a Roman toga.

Talma was an early acquaintance of the first Napoleon, then Captain Buonaparte, to whom he was first introduced in the green-room of the Théâtre Français; and he used to relate that, about this time, Buonaparte, being in great pecuniary distress, had resolved to throw himself into the Seine, when he fortunately met with an old schoolfellow, who had just received a considerable sum of money, which he shared with the future emperor. 'If that warm-hearted comrade,' said he, 'had accidentally passed down another street, the history of the next twenty years would have been written without the names of Lodi, Marengo, Austerlitz, Jena, Friedland, Moscow, Leipsig, and Waterloo.'

When his friend Buonaparte was setting out on his expedition to Egypt, the great tragedian offered, in the warmth of his friendship, to accompany him; but Napoleon would not listen to the proposal. 'Talma,' said he, 'you must not commit such an act of folly. You have a brilliant course before you; leave fighting to those who are unable to do anything better.' When Napoleon rose to be First Consul, his reception of Talma was as cordial as ever. When he in time became Emperor, the actor conceived that the intimacy would be sure to cease; but he soon received a special invitation to the Tuileries.

Talma was a man of cultivated mind, unerring taste, and amiable qualities. 'His dignity and tragic powers on the stage,' says Lady Morgan, 'are curiously but charmingly contrasted with the simplicity, playfulness, and gaiety of his most unassuming, unpretending manners in private life.' He had long been married to a lady of fortune. He lived in affluence principally at his villa in the neighbourhood of Paris, whither, twice a week, he went to perform.

Talma, when near his sixtieth year, achieved one of his greatest triumphs in Jouy's tragedy of *Sylla*. Napoleon had then (December, 1821) been dead only a few months. The actor, in order to recal the living image of his friend and patron, dressed his hair exactly after the well-remembered style of the deceased emperor, and

his dictator's wreath was a fac-simile of the laurel crown in gold which was placed upon Napoleon's brow at Nôtre Dame. The intended identity was recognised at once with great excitement. The government thought of interdicting the play; but Talma was privately directed to curl his hair in future, and adopt a new arrangement of the head.

Talma was taken ill at Paris, where he expired without pain, 19th October 1826. His majestic features have been preserved to us by David in marble. The body was borne to the cemetery of Père la Chaise, attended by at least 100,000 mourners; and his friend, comrade, and rival, Lafont, placed upon the coffin a wreath of *immortelles*, and pronounced an affectionate funeral oration.—*Cole's Life of Charles Kean*.

Talma was no less honoured and esteemed by Louis XVIII. than by Napoleon. In 1825 he published some reflections on his favourite art; and, June 11, 1826, he appeared for the last time on the stage in the part of Charles VI. He is said altogether to have created seventy-one characters, the most popular of which were Orestes, Œdipus, Nero, Manlius, Cæsar, Cinna, Augustus, Coriolanus, Hector, Othello, Leicester, Sylla, Regulus, Leonidas, Charles VI., and Henry VIII. He spoke English perfectly; he was the friend and guest of John Kemble, and was present in Covent Garden Theatre, when that great actor took his leave of the stage.

THE BURLESQUE ENGAGEMENT.

'— many to the steep of Highgate hie;
Ask, ye Bœotian shades! * the reason why?
'Tis to the worship of the solemn Horn,
'Grasped in the holy hand of Mystery,
In whose dread name both men and maids are sworn,
And consecrate the oath with draught and dance till morn.'

BYRON.

The poet here alludes to a curious old custom which has been the means of giving a little gentle merriment to many generations of the citizens of London, but is now fallen entirely out of notice. It was localised at Highgate, a well-known village on the north road, about five miles from the centre of the metropolis, and usually the last place of stoppage for stage coaches on their way thither. Highgate has many villas of old date clustering about it, wealthy people having been attracted to the place on account of the fine air and beautiful views which it derives from its eminent site: Charles Mathews had his private box here; and Coleridge lived with Mr Gillman in one of the Highgate terraces. The village, however, was most remarkable, forty years ago, and at earlier dates, for the extraordinary number of its inns and taverns, haunts of recreation-seeking Londoners, and partly deriving support from the numerous travellers who paused there on their way to town.

When Mr William Hone was publishing his *Every Day Book* in 1826, he found there were no fewer than nineteen licensed houses of entertainment in this airy hamlet. The house of greatest

* Byron wrote this verse in Thebes, the capital of Bœotia.

* The Works of Samuel Parr, LL.D., Prebendary of St Paul's, Curate of Hatton, &c., with Memoirs of his Life and Writings, and a Selection from his Correspondence, by John Johnstone, M.D. 8 vols. 8vo, 1828.

dignity and largest accommodation was the *Gate House*, so called from the original building having been connected with a gate which here closed the road, and from which the name of the village is understood to have been derived. Another hostelry of old standing was 'The Bell.' There were also 'The Green Dragon,' 'The Bull,' 'The Angel,' 'The Crown,' 'The Flask,' &c. At every one of these public-houses there was kept a pair of horns, either ram's, bull's, or stag's, mounted on a stick, to serve in a burlesque ceremonial which time out of mind had been kept up at the taverns of Highgate, commonly called 'Swearing on the Horns.' It is believed that this custom took its rise at 'The Gatehouse,' and gradually spread to the other houses—perhaps was even to some extent a cause of other houses being set up, for it came in time to be an attraction for jovial parties from London. In some cases there was also a pair of mounted horns over the door of the house, as designed to give the chance passengers the assurance that the merry ceremonial was there practised.

And the ceremonial—in what did it consist? Simply in this, that when any person passed through Highgate for the first time on his way to London, he, being brought before the horns at one of the taverns, had a mock oath administered to him, to the effect that he would never drink small beer when he could get strong, unless he liked it better; that he would never, except on similar grounds of choice, eat brown bread when he could get white, or water-gruel when he could command turtle-soup; that he would never make love to the maid when he might to the mistress, unless he preferred the maid; and so on with a number of things, regarding which the preferableness is equally obvious. Such at least was the bare substance of the affair; but of course there was room for a luxuriance of comicality, according to the wit of the imposer of the oath, and the simplicity of the oath-taker; and, as might be expected, the ceremony was not a dry one. Scarcely ever did a stage-coach stop at a Highgate tavern in those days, without a few of the passengers being initiated amidst the laughter

SWEARING ON THE HORNS.

of the rest, the landlord usually acting as high-priest on the occasion, while a waiter or an ostler would perform the duty of clerk, and sing out 'Amen' at all the proper places.

Our artist has endeavoured to represent the ceremonial in the case of a simple countryman, according to the best traditionary lights that can now be had upon the subject.

It is acknowledged that there were great

differences in the ceremonial at different houses, some landlords having much greater command of wit than others. One who possessed the qualifications more eminently than the rest, would give an address warning the neophyte to avoid the allurements of the metropolis, in terms which provoked shouts of laughter from the bystanders. He would tell him—if, on his next coming to Highgate, he should see three pigs lying in a

ditch, it was his privilege to kick the middle one out and take her place; if he wanted a bottle of wine and had no money, he might drink one on credit if anybody felt inclined to trust him. He would also be told, at the end of the oath, to kiss the horns, or any pretty girl in the company who would allow him. Another part of the jocularly was to tell him to take notice of the first word of the oath—he must be sure to mind *that*. If he forgot *that*, he would be liable to have to take the oath over again. *That*, in short, was a word to him of infinite importance, a forgetting of which could not fail to be attended with troublesome consequences. The privileges of Highgate had always to be paid for in some liquor for the company, according to the means and inclination of the person sworn.

In those old unthinking days of merry England, societies and corporations and groups of work-people, who were admitting a new member or associate, would come out in a body to Highgate to have him duly sworn upon the Horns and enjoy an afternoon's merrymaking at his expense. If we can put faith in Byron, parties of young people of both sexes, under (it is to be hoped) proper superintendence, would dance away the night after an initiation at the Horns. Once a joke of that sort was established, it was wonderful what a great deal could be made of it, and how ill it was to wear out. For thirty years past, however, the Horns have disappeared from Highgate, and the taverns of that tidy village have now as grave an aspect as their neighbours.

With regard to the origin of the custom in connexion with Highgate, it seems impossible to obtain any light. Most probably the custom was long ago not an uncommon one at favourite inns, and only survived at Highgate when it had gone out elsewhere. The only historical fact which has been preserved regarding it, is that a song embodying the burlesque oath was introduced in a pantomime at the Haymarket Theatre in 1742.

BREAD, ITS MAKING AND SALE IN THE MIDDLE AGES.

In the chronicles and records of the Middle Ages that have survived to us, we find many items of curious information relative to the supply in those days of what was, from the absence of the potato and other articles of food, even more than now, the staff of human life. We cull a few of these particulars for the information—and, we trust, also the amusement—of those among our readers who care to know something about the usages of the olden time.

The bread that was in common use in England from five to six centuries ago, was of various degrees of fineness (or 'bolting,'* as it was called) and colour. The very finest and the whitest probably that was known, was *simnel-bread*, which (in the thirteenth and fourteenth centuries at least) was as commonly known under the name of *pain-demaïn* (afterwards corrupted into *payman*); a word which has given considerable trouble

* From the bolter, bolting-sieve, or bolting clot (cloth), as it was indifferently named.

to Tyrwhitt and other commentators upon Chaucer, but which means no more than 'bread of our Lord,' from the figure of our Saviour, or the Virgin Mary, impressed upon each round flat loaf, as is still the usage in Belgium with respect to certain rich cakes much admired there. This bread of course was only consumed by persons of the highest rank, and in the most affluent circumstances.

The next in quality to this was *wastel bread*, in common use among the more luxurious and more wealthy of the middle classes, and the name of which it seems not improbable is closely allied to the old French *gâteau*, 'a cake.' Nearly resembling this in price and quality, though at times somewhat cheaper, was *light bread*, or *puffe*, also known as '*French bread*,' or '*cocket*,' though why it was called by the latter appellation is matter of doubt. Bread of a still inferior quality was also sometimes known as '*cocket*;' and it seems far from improbable that it was so called from the word *cocket*, as meaning a seal, it being a strict regulation in London and elsewhere that each loaf (at all events each loaf below a certain quality) should bear the impress of its baker's seal. The halfpenny loaf of *simnel* was at times of the same weight as the farthing loaf of *wastel* or *puff*; the relative proportions, however, varied considerably at different periods.

The next class of bread was *tourte*, made of unbolted meal, and the name of which has much puzzled the learned. It seems not improbable, however, that this kind of bread was originally so called from the loaves having a twisted form (*torti*), to distinguish them from those of a finer quality. *Tourte* was in common use with the humbler classes and the inmates of monasteries. *Trete bread*, or *bread of trete*, was again an inferior bread to *tourte*, being made of wheat meal once bolted, or from which the fine flour at one sifting had been removed. This was also known as '*bis*,' or *brown bread*, and probably owed its name to the fact of bran being so largely its constituent, that substance being still known in the North of England as '*trete*.' An inferior bread to this seems to have passed under the name of *all-sorts*, or some similar appellation, being also known as *black bread*. It was made of various kinds of grain inferior to wheat.

In the reign of Edward III. we find mention made of a light, or French, bread, made in London (and resembling *simnel* probably), and known by the name of '*wygge*,' an appellation still given in Scotland to a kind of small cake. Another kind of white bread is also spoken of in the reigns of Edward II. and III., under the still well-known name of '*bunne*' (or *boun*). *Horse-bread* also was extensively prepared by the bakers, in the form of loaves duly sealed, beans and peas being the principal ingredients employed.

The profits of the bakers from very remote times were strictly a matter for legislative enactment. A general regulation was in force, from the days of King John until the reign of Edward I., if not later, throughout England (the City of London perhaps excepted), that the profit of the baker on each quarter of wheat was to be, for his own labour, three pence and such bran as

might be sifted from the meal; and that he was to add to the prime cost of the wheat, for fuel and wear of the oven, the price of two loaves; for the services of three men, he was to add to the price of the bread three halfpence; and for two boys one farthing; for the expenses attending the seal, one halfpenny; for yeast, one halfpenny; for candle, one halfpenny; for wood, threepence; and for wear and tear of the bolter, or bolting-sieve, one halfpenny.

In London, only farthing loaves and halfpenny loaves were allowed to be made, and it was a serious offence, attended by forfeiture and punishment, for a baker to be found selling loaves of any other size. Loaves of this description seem to have been sometimes smuggled into market beneath a towel, or beneath the folds of the garments, under the arms. For the better identification of the latter, in case of necessity, each loaf was sealed with the baker's seal; and this from time to time, and at the Wardmotes more especially, was shewn to the alderman of the Ward, who exacted a fee for registering it in his book. In London, from time to time, at least once in the month, each baker's bread (or, at all events, some sample loaves) was taken from the oven by the officers of the assayers, who seem to have had the appellation of 'hutch-reves,' and duly examined as to quality and weight; it being enacted, however, in favour of the baker, that the scrutiny should always be made while the bread was hot; the 'assay,' or sample loaves, which were given out to the bakers periodically for their guidance as to weight and quality, being delivered to them while hot.

In the City of London, if the baker sold his bread himself by retail, he was particularly forbidden—for reasons apparently not easy now to be appreciated or ascertained—to sell it in his house, or before his house, or before the oven where it was baked; in fact, he was only to sell it in the 'King's Market,' and such market as was assigned to him, and not elsewhere; by which term apparently, in the fourteenth century, the markets of Eastcheap, Cornhill, and Westcheap were meant. The *foreign* baker, however, or non-freeman, was allowed to store his bread for a single night. In the market, the loaves were exposed for sale in *panyers* (bread-baskets), or in boxes or chests, in those days known as 'hutches,' the latter being more especially employed in the sale of *tourte* bread. The principal days for the sale of bread in the London markets seem to have been Tuesday and Saturday, though sale there on Sundays is also mentioned: in the days of Henry III. and Edward I., the king's toll on each basket of bread was one halfpenny on week days, and three halfpence on Sundays. In other instances, we find bread delivered in London from house to house by *regratresses*, also called '*hucksters*,' or female retailers. These dealers, on purchasing their bread from the bakers, were privileged by law to receive thirteen articles for twelve, such being apparently the limit of their legitimate profits; though it seems to have been the usage in London, at least at one period, for the baker to give to each *regratress* who dealt with him sixpence every Monday morning, by way of *estrene*, or *hansel-money*, and threepence

as *curtesy* or good-bye money, on delivery upon Friday of the last batch of the week; a practice, however, which was forbidden by the authorities—the bakers being also ordered not to give credit to these *regratresses* when known to be in debt to others, and not to take bread back from them when once it had become cold. No *regratress* was allowed to cross London Bridge, or to go out of the City, to buy bread for the purpose of retailing it. The baker of *tourte* bread was also forbidden to sell to a *regratress* in his shop, but only from his hutch, in the King's market.

Though considerable favour was shewn to such bakers as were resident within the walls of the City, and though at times the introduction of *foreign* bread, as being 'adulterine' or spurious, was strictly prohibited; still, in general, a large proportion of the London supply was brought from a distance, Stratford le Bow, Stepney (Stevenhethel), Bromley (Bremble) in Essex, Paddington, and Saint Albans being among the places which we find mentioned; the carriage being by horse or in carts, the loaves being packed in the latter (at least sometimes, and as to the coarser kinds) without baskets. Bread seems to have been brought from the villages of Buckinghamshire and Oxfordshire, in barges known as '*scuts*,' or '*scows*.' We read that, occasionally, the country bakers contrived to undersell their London brethren by making the public gainers of two ounces in the pennyworth of bread. Against bread made in Southwark there appears to have been an extraordinary degree of prejudice, the reason on one occasion assigned being, 'because the bakers of Suthewerk are not amenable to the justice of the City.' A common piece of fraud with knavish bakers seems to have been the making of bread of pure quality on the outside and coarse within; a practice which was forbidden by enactment, it being equally forbidden to make loaves of bran, or purposely mixed with bran.

The baker of white bread was on no account to make *tourte* or brown bread, and similar restrictions were put upon the '*tourter*,' or baker of brown bread, as to the making of white. *Tourte* bread being made of unbolted meal, we find the *tourte* bakers of the City of London forbidden (in the reign of Richard II.) to have a bolting-sieve in their possession, as also to sell flour to a cook—the latter enactment being evidently intended to insure the comparative fineness of their bread, by preventing them from subtracting the flour from the meal. Bakers within the City were forbidden to heat their ovens with fern, stubble, or straw; and in the reign of King John (A.D. 1212), in consequence of the recent devastation of the City by fire, they were not allowed to bake at night. They were also at times reminded by the civic authorities that it was their duty to instruct their servants so many times in the year, how to bolt the flour and knead their dough; and for the latter purpose they were not to use fountain-water, as being probably too hard.

Hostelers and herbergeours (keepers of inns and lodging-houses) were not allowed to bake bread. Private individuals who had no ovens of their own, were in the habit of sending their

flour to be kneaded by their own servants at the 'moulding-boards' belonging to the bakers, the loaves being then baked in the baker's oven. Persons of respectability also had the right to enter bake-houses to see the bread made. Bakers were allowed, in London, to keep swine in their houses at times when other persons were forbidden, with a view probably to the more speedy consumption of the refuse bran, and as an inducement to the baker not to make his bread of too coarse a quality. The swine, however, were to be kept out of the public streets and lanes. No baker was allowed in the city to withdraw the servant or journeyman of another, nor was he to admit such a person into his service without a licence from the master whom he had previously served. The frauds and punishments of English bakers in bygone centuries, we may perhaps find an opportunity of making the subject of future investigation.

EDWARD GIBBON.

The confessions or statements of an author regarding the composition of a great work are

EDWARD GIBBON.

generally interesting. Gibbon gives an account both of the formation of the design of writing his

Decline and Fall of the Roman Empire, and of the circumstances under which that magnificent book was finished. At about twenty-seven years of age he inspected the ruins of Rome under the care of a Scotchman 'of experience and taste,' named Byers; and 'it was at Rome,' says he, 'on the 15th of October 1764, as I sat musing amidst the ruins of the Capitol, while the bare-footed friars were singing vespers in the Temple of Jupiter, that the idea of writing the decline and fall of the city first started to my mind.' It is to be observed that he thought only of the history of the city, not of the empire, to which his ideas finally expanded.

Gibbon commenced the writing of his history after settling in a house in London about 1772. The latter moiety of the work was composed in an elegant mansion at Lausanne, in Switzerland,

RESIDENCE OF GIBBON AT LAUSANNE.

to which he retreated on being disappointed in a political career in England. The whole work occupied about fifteen years. 'It was,' says he—and the passage can never be read without the deepest interest—'it was on the day, or rather night, of the 27th of June 1787, between the hours of eleven and twelve, that I wrote the last lines of the last page, in a summer-house in my garden. After laying down my pen, I took several turns in a *berceau*, or covered walk of acacias, which commands a prospect of the country, the lake, and the mountains. The air was temperate, the sky was serene, the silver orb of the moon was reflected from the waters, and all nature was silent. I will not dissemble the first emotions of joy on recovering my freedom, and, perhaps, the establishment of my fame. But my pride was soon humbled, and a sober melancholy was spread over my mind, by the idea that I had taken an everlasting leave of an old and agreeable companion, and that whatsoever might be the future fate of my History, the

life of the historian must be short and precarious.'

The historian was then fifty.

Gibbon, as is well known, spent his life in celibacy, and was thus the better fitted for undertaking and carrying through a great literary work. Partly in consequence of the sedentary life to which his task confined him, he became extremely obese. There is a story representing him as falling in love, while at Lausanne, with a young lady of great beauty and merit, and which goes on to describe him as one day throwing himself at her feet to declare his passion, when it was found impossible for him to rise again till he was extricated by the laughing damsel from his ludicrous position. George Coleman the Younger has painted the scene in verse of by no means great merit.

'— the fair pursued

Her prattle, which on literature flowed;
Now changed her author, now her attitude,
And much more symmetry than learning showed.
Eudoxus watched her features, while they glowed,
Till passion burst his puffy bosom's bound;
And rescuing his cushion from its load,
Flounced on his knees, appearing like a round
Large fillet of hot veal just tumbled on the ground.

'Could such a lover be with scorn repulsed?
Oh no! disdain befitted not the case;
And Agnes at the sight was so convulsed
That tears of laughter trickled down her face.
Eudoxus felt his folly and disgrace,
Looked sheepish, nettled, or wished himself away;
And thrice he tried to quit his kneeling place;
But fat and corpulency seemed to say,
Here's a petitioner that must for ever pray!'

The falling in love with a young lady at Lausanne is undoubtedly true; but it happens that the incident took place in Gibbon's youth, when, so far from being fat or unwieldy, he was extremely slender—for, be it observed, the illustrious historian was in reality a small-boned man, and of more than usually slight figure in his young days. He was about twenty years of age, and was dwelling in Switzerland with a Protestant pastor by his father's orders, that he might recover himself (as he ultimately did) from a tendency to Romanism which had beset him at College, when Mademoiselle Susan Curchod, the daughter of the pastor of Crassy in Burgundy, came on a visit to some relations in Lausanne. The father of the young lady, in the solitude of his village situation, had bestowed upon her a liberal education. 'She surpassed,' says Gibbon, 'his hopes, by her proficiency in the sciences and languages; and in her short visits to some relations at Lausanne, the wit, the beauty, and erudition of Mademoiselle Curchod were the theme of universal applause. The report of such a prodigy awakened my curiosity; I saw and loved. I found her learned without pedantry, lively in conversation, pure in sentiment, and elegant in manners; and the first sudden emotion was fortified by the habits and knowledge of a more familiar acquaintance. She permitted me to make two or three visits at her father's house. I passed some happy days there in the mountains of Burgundy, and her parents honourably encouraged the connection. In a calm retirement,

the vanity of youth no longer fluttered in her bosom; she listened to the voice of truth and passion, and I might presume to hope that I had made some impression on a virtuous heart. At Crassy and Lausanne, I indulged my dream of felicity; but, on my return to England, I soon found that my father would not hear of this strange alliance, and that without his consent I was myself destitute and helpless. After a painful struggle I yielded to my fate: I sighed as a lover, I obeyed as a son. My wound was insensibly healed by time, absence, and the habits of a new life. My cure was accelerated by a faithful report of the tranquillity and cheerfulness of the lady herself, and my love subsided into friendship and esteem.'

The subsequent fate of Susan Curchod is worthy of being added. 'The minister of Crassy soon after died; his stipend died with him: his daughter retired to Geneva, where, by teaching young ladies, she earned a hard subsistence for herself and her mother; but in her lowest distress she maintained a spotless reputation and a dignified behaviour. A rich banker of Paris, a citizen of Geneva, had the good fortune and good sense to discover and possess this inestimable treasure; and in the capital of taste and luxury, she resisted the temptation of wealth, as she had sustained the hardships of indigence. The genius of her husband has exalted him to the most conspicuous situation in Europe. In every change of prosperity and disgrace, he has reclined on the bosom of a faithful friend; and Mademoiselle Curchod is now the wife of M. Necker, the Minister, and perhaps the Legislator, of the French monarchy.'

Gibbon wrote when the husband of his old love was trying to redeem France from destruction by financial reforms. Not long after, he and his family were obliged to fly from France, after which they spent several years in Switzerland. They were the parents of Madame de Stael Holstein.

SIR JOHN MOORE.

The battle of Corunna, January 16, 1809, was heard of with profound feeling by the British public. An army had failed in its mission: deceived by the Spanish junta and British minister (Mr Frere), it had made an advance on Madrid, and was forced to commence a retreat in the depth of winter. But the commander, Sir John Moore, more than redeemed himself from any censure to which he was liable, by the skill and patience with which he conducted the troops on their withdrawal to the coast. Our army was in great wretchedness, but the pursuing French were worse; and when the gallant Moore stood at bay at Corunna, he gave the pursuers a thorough repulse, though at the expense of his own life.

The handsome and regular features of Moore bear a melancholy expression, in harmony with his fate. He was in reality an admirable soldier. He had from boyhood devoted himself to his profession with extreme ardour, and his whole career was one in which duty was never lost sight of. He perished at the too early age of forty-seven, survived by his mother, at the men-

tion of whose name, on his death-bed, he manifested the only symptom of emotion which escaped him in that trying hour.

While a boy of eleven years old, Moore had a great advantage, for his education in matters

MONUMENT OF SIR JOHN MOORE, AT CORUNNA.

of the world, by accompanying his father, Dr Moore, on a tour of Europe, in company with the minor Duke of Hamilton, to whom Dr Moore acted as governor or preceptor. The young soldier, constantly conversing with his highly enlightened parent, and introduced to many scenes calculated to awake curiosity, became a man in thoughts and manners while still a mere boy. At thirteen he danced, fenced, and rode with uncommon address. His character was a fine compound of intelligence, gentleness, and courage.

The connection with the Duke of Hamilton had very nearly cost Moore his life. The Duke, though only sixteen, was allowed to wear a sword. One day, 'in an idle humour, he drew it, and began to amuse himself by fencing at young Moore, and laughed as he forced him to skip from side to side to shun false thrusts. The Duke continued this sport till Moore unluckily started in the line of the sword, and received it in his flank.' The elder Moore was speedily on the spot, and found his son wounded on the outside of the ribs. The incident led to the formation of a lasting friendship between the penitent young noble and his almost victim.—*Life of Sir John Moore, by his brother, James Carrick Moore.*

THE BOTTLE HOAX.

On the 16th of January 1749, there took place in London a bubble or hoax, which has somehow become unusually well impressed upon the public

mind. 'A person advertised that he would, this evening, at the Haymarket Theatre, play on a common walking cane the music of every instrument now used, to surprising perfection; that he would, on the stage, get into a tavern quart bottle, without equivocation, and while there, sing several songs, and suffer any spectator to handle the bottle; that if any spectator should come masked, he would, if requested, declare who they were; and that in a private room he would produce the representation of any person dead, with which the person requesting it should converse some minutes, as if alive.' The prices proposed for this show were—gallery, 2s.; pit, 3s.; boxes, 5s.; stage, 7s. 6d.

At the proper time, the house was crowded with curious people, many of them of the highest rank, including no less eminent a person than the Culloden Duke of Cumberland. They sat for a little while with tolerable patience, though uncheered with music; but by and by, the performer not appearing, signs of irritation were evinced. In answer to a sounding with sticks and catcalls, a person belonging to the theatre came forward and explained that, in the event of a failure of performance, the money should be returned. A wag then cried out, that, if the ladies and gentlemen would give double prices, the conjurer would go into a pint bottle, which proved too much for the philosophy of the audience. A young gentleman threw a lighted candle upon the stage, and a general charge upon that part of the house followed. According to a private letter, to which we have had access—(it was written by a Scotch Jacobite lady)—'Cumberland was the first that flew in a rage, and called to pull down the house. . . . He drew his sword, and was in such a rage, that somebody slipped in behind him and pulled the sword out of his hand, which was as much as to say, "Fools should not have chopping sticks." This sword of his has never been heard tell of, nor the person who took it. Thirty guineas of reward are offered for it. Monster of Nature, I am sure I wish he may never get it!

'The greater part of the audience made their way out of the theatre; some losing a cloak, others a hat, others a wig, and others, hat, wig, and swords also. One party, however, stayed in the house, in order to demolish the inside; when, the mob breaking in, they tore up the benches, broke to pieces the scenes, pulled down the boxes, in short dismantled the theatre entirely, carrying away the particulars above-mentioned into the street, where they made a mighty bonfire; the curtain being hoisted in the middle of it by way of flag.'

There is a want of explanation as to the intentions of this conjurer. The proprietor of the theatre afterwards stated that, in apprehension of failure, he had reserved all the money taken, in order to give it back, and he would have returned it to the audience if they would have stayed their hands from destroying his house. It therefore would appear that either money was not the object aimed at, or, if aimed at, was not attained, by the conjurer. Most probably he only meant to try an experiment on the credulity of the public.

The bottle hoax proved an excellent subject for the wits, particularly those of the Jacobite party. The following advertisement appeared in the paper called *Old England* :

'Found, entangled in a slit of a lady's demolished smock-petticoat, a gilt-handled sword of martial temper and length, not much the worse of wearing, with the Spey curiously engraven on one side, and the Scheld on the other; supposed to be taken from the fat sides of a certain great general in his hasty retreat from the battle of Bottle-noddles in the Haymarket. Whoever has lost it may inquire for it at the sign of the Bird and Singing Lane in Potters' Row.⁷*

JANUARY 17.

St Anthony, patriarch of monks, 356. SS Spensippus, Eleusippus, Meleusippus, martyrs. St Nennius, abbot, 6th century. St Sulpicius the Pious, archbishop, 591. St Sulpicius the second, archbishop, 644. St Milgithc, virgin, 7th century.

ST ANTHONY.

Antonius, reputed as amongst the earliest of anchorets, and commonly called the Patriarch of Monks, was a native of Egypt, born about the year 251. After leading an ascetic life for some time in his native village, he withdrew from human society and took up his abode in a cave. His abstinence, his self-inflicted punishments, the temptations of the evil one, the assaults of demons, and the efficacy of his prayers, are all narrated by St Athanasius. His manner of life was imitated by a great number of persons, who occasionally resorted to him for advice and instruction. Antonius seems indeed to have been the founder of the solitary mode of living, which soon extended from Egypt into other countries. During the persecution under Maximinus, about the year 310, some of the solitaries were seized in the wilderness, and suffered martyrdom at Alexandria, whither Antonius accompanied them, but was not subjected to punishment. After his return, he retired farther into the desert, but went on one occasion to Alexandria in order to preach against the Arians.

The two monastic orders of St Anthony originated long after the time of the saint,—one in Dauphiné, in the eleventh century; and the other, a military order, in Hainault, in the fourteenth century. In Dauphiné, the people were cured of the erysipelas, by the aid, as they thought, of St Anthony; and the disease was afterwards called St Anthony's Fire.

It is scarcely necessary to remark that St Anthony is one of the most notable of all the saints in the Romish calendar. One cannot travel anywhere in Europe at the present day, and particularly in Italy, without finding, in churches and monasteries, and the habits and familiar ideas of the people, abundant memorials of this early Egyptian anchorite. Even in Scotland, at Leith, a street reveals by its name where a monastery of St Anthony once stood; while,

* Gentleman's and Scots Magazines, 1749. Bishop Forbes's MSS.

on the hill of Arthur's Seat, overhanging Edinburgh, we still see a fragment of a small church that had been dedicated to him, and a fountain called St Anton's Well.

The Temptations of St Anthony have, through St Athanasius's memoir, become one of the most familiar of European ideas. Scores of artists, from Salvator Rosa downwards, have exerted their talents in depicting these mystic occurrences. Satan, we are informed, first tried, by bemudding his thoughts, to divert him from the design of becoming a monk. Then he appeared to him in the form successively of a handsome woman and a black boy, but without in the least disturbing him. Angry at the defeat, Satan and a multitude of attendant fiends fell upon him during the night, and he was found in his cell in the morning lying to all appearance dead. On another occasion, they expressed their rage by making such a dreadful noise that the walls of his cell shook. 'They transformed themselves into shapes of all sorts of beasts, lions, bears, leopards, bulls, serpents, asps, scorpions, and wolves; every one of which moved and acted agreeably to the creatures which they represented: the lion roaring and seeming to make towards him; the bull to butt; the serpent to creep; and the wolf to run at him, and so, in short, all the rest; so that Anthony was tortured and mangled by them so grievously that his bodily pain was greater than before.' But, as it were laughingly, he taunted them, and the devils gnashed their teeth. This continued till the roof of his cell opened, a beam of light shot down, the devils became speechless, Anthony's pain ceased, and the roof closed again.

Bishop Latimer relates a 'pretty story' of St Anthony, 'who, being in the wilderness, had there a very hard and strait life, insomuch that none at that time did the like; to whom came a voice from heaven, saying, "Anthony, thou art not so perfect as is a cobbler that dwelleth at Alexandria." Anthony, hearing this, rose up forthwith and took his staff and went till he came to Alexandria, where he found the cobbler. The cobbler was astonished to see so reverend a father come to his house; when Anthony said unto him, "Come and tell me thy whole conversation, and how thou spendest thy time." "Sir," said the cobbler, "as for me, good works have I none, for my life is but simple and slender; I am but a poor cobbler. In the morning when I rise, I pray for the whole city wherein I dwell, especially for all such neighbours and poor friends as I have: after I set me at my labour, where I spend the whole day in getting my living; and I keep me from all falsehood, for I hate nothing so much as I do deceitfulness; wherefore, when I make to any man a promise, I keep to it, and perform it truly. And thus I spend my time poorly with my wife and children, whom I teach and instruct, as far as my wit will serve me, to fear and dread God. And this is the sum of my simple life." In this story, you see how God loveth those who follow their vocation and live uprightly without any falsehood in their dealing. Anthony was a great holy man; yet this cobbler was as much esteemed before God as he.'

MONTFAUCON.

A model of well-spent literary life was that of Bernard de Montfaucon. Overlooking many minor works, it is enough to regard his great ones: *Antiquity explained by Figures*, in fifteen folios, containing twelve hundred plates (descriptive of all that has been preserved to us of ancient art); and the *Monuments of the French Monarchy*, in five volumes. 'He died at the Abbey of St Germain des Prés, in 1741, at the age of eighty-seven, having preserved his faculties so entire, that nearly to the termination of his long career he employed eight hours a day in study. A very regular and abstemious life had so fortified his constitution that, during fifty years, he never was indisposed; nor does it appear that his severe literary labours had any tendency to abridge his days.'

Several other literary Nestors could be cited to prove that the life of an author is not necessarily unhealthful or short. It is only when literary labour is carried to an extreme transcending natural power, or complicated with harassing cares and dissipation, that it proves destructive. When we see a man of letters sink at an early age, supposing there has been no original weakness of constitution, we may be sure that there has been some of these causes at work. When, as often happens, a laborious writer like the late Mr. Britton or Mr. John Nichols goes on, with the pen in his hand every day, till he has passed eighty, then we may be equally sure there has been prudence and temperance. But the case is general. Health and longevity are connected to a certain extent with habit. And there is some sense at bottom in what a quaint friend of ours often half-jocularly declares; namely, that it would, as a rule, do invalids some good, if they were not so much sympathised with as they are, if they were allowed to know that they would be better (because more useful) members of society if they could contrive to avoid bad health; which most persons can to a certain extent do by a decent degree of self-denial, care, and due activity.

'Deep-thinking philosophers have at all times been distinguished by their great age, especially when their philosophy was occupied in the study of Nature, and afforded them the divine pleasure of discovering new and important truths. . . . The most ancient instances are to be found among the Stoics and the Pythagoreans, according to whose ideas, subduing the passions and sensibility, with the observation of strict regimen, were the most essential duties of a philosopher. We have already considered the example of a Plato and an Isocrates. Appollonius of Tyanæa, an accomplished man, endowed with extraordinary powers both of body and mind, who, by the Christians, was considered as a magician, and by the Greeks and Romans as a messenger of the gods, in his regimen a follower of Pythagoras, and a friend

to travelling, was above 100 years of age. Xenophilus, a Pythagorean also, lived 106 years. The philosopher Demonax, a man of the most severe manners and uncommon stoical apathy, lived likewise 100 years.

'Even in modern times philosophers seem to have obtained this pre-eminence, and the deepest thinkers appear in that respect to have enjoyed, in a higher degree, the fruits of their mental tranquillity. Newton, who found all his happiness and pleasure in the higher spheres, attained to the age of eighty-four. Euler, a man of incredible industry, whose works on the most abstruse subjects amount to above three hundred, approached near to the same age: and Kant, the first philosopher now alive, still shews that philosophy not only can preserve life, but that it is the most faithful companion of the greatest age, and an inexhaustible source of happiness to one's self and others.'—*Hufeland's Art of Preserving Life.*

THE DISCONTINUED 'SERVICES.'

It is a curious proof of that tendency to *continuity* which marks all public institutions in England, that the services appointed for national thanksgiving on account of the Gunpowder Plot, for national humiliation regarding the execution of Charles I., and for thanksgiving with respect to the Restoration of Charles II., should have maintained their ground as holidays till after the middle of the nineteenth century. National good sense had long ceased to believe that the Deity had inspired James I. with 'a divine spirit to interpret some dark phrases of a letter,' in order to save the kingdom from the 'utter ruin' threatened by Guy Fawkes and his associates. National good feeling had equally ceased to justify the keeping up of the remembrance of the act of a set of infuriated men, to the offence of a large class of our fellow-Christians. We had most of us become very doubtful that the blood of Charles I. was 'innocent blood,' or that he was strictly a 'martyred sovereign,' though few would now-a-days be disposed to see him punished exactly as he was for his political shortcomings and errors. Still more doubt had fallen on the blessing supposed to be involved in the 'miraculous providence' by which Charles II. was restored to his kingdom. Indeed, to say the very least, the feeling, more or less partial from the first, under which the services on these holidays had been appointed, had for generations been dead in the national heart, and their being still maintained was a pure solecism and a farce.

It was under a sense of this being the case that, at the convocation of 1857, Dr Milman, Dean of St Paul's, expressed a doubt whether we ought to command the English nation to employ in a systematic way opprobrious epithets towards Roman Catholics, and to apply divine epithets to the two Charleses. He was supported by Dr Martin, Chancellor of the diocese of Exeter. Enough transpired to shew that Convocation did not attach much value to the retention of the services. In 1858, Earl Stanhope brought the matter formally before the House of Lords. He detailed the circumstances under which the services had origi-

nated; and then moved an address to the Crown, praying that the Queen would, by royal consent, abolish the services, as being derogatory to the present age. He pointed out that, although a nest of scoundrels planned a wicked thing early in the seventeenth century, it does not follow that the Queen should command her subjects to use offensive language towards Roman Catholics in the middle of the nineteenth. He also urged that we, in the present day, have a right to think as we please about the alleged divine perfections of the sovereigns of the Stuart family. From first to last there have been differences of opinion as to the propriety of these services; many clergymen positively refused to read them; and the Dean and Chapter of Canterbury Cathedral omitted them without waiting for royal authority. It was striking to observe how general was the support which Earl Stanhope's views obtained in the House of Lords. The Archbishop of Canterbury, the Bishops of London and Oxford, the Earl of Derby, besides those who generally ranked among liberal peers, supported the address, which was forthwith carried. A similar address was passed by the House of Commons. The Queen returned answers which plainly shewed what the advisers of the Crown thought on the matter. Accordingly, on the 17th of January 1859, a royal warrant was issued, abolishing the special services for the three days named. It was immediately seen, however, that if the Acts of Parliament still remained in the Statute-book, clergymen might occasionally be embarrassed in reference to them; and, accordingly, a new Act was passed in the same year, repealing the obnoxious statutes.

Thus was a small but wholesome work done once for all. The pith of the whole subject is contained in a sensible observation made by the Archbishop of Canterbury: 'I hold it to be impossible, even if it were desirable, that we, at a distance of two or three centuries, should entertain the feelings or sympathise with the expressions which are found in these services; and it is very inexpedient that the people should be invited to offer up prayers and thanksgivings in which their hearts take no concern.'

A remark may be offered in addition, at the hazard of appearing a little paradoxical—that it might be well if a great deal of history, instead of being remembered, could be forgotten. It would be a benefit to Ireland, far beyond the Encumbered Estates Act, if nearly the whole of her history could be obliterated. The oblivion of all that Sir Archibald Alison has chronicled would be a blessing to both France and England. Happy were it for England if her war for the subjugation of America could be buried in oblivion; and happy, thrice happy, would it be for America in future, if her warlike efforts of 1861 could be in like manner forgotten. Above all, it is surely most desirable that there should be no regular celebration by any nation, sect, or party, of any special transaction, the memory of which is necessarily painful to some neighbouring state, or some other section of the same population. Let us just reflect for a moment on what would be thought of a man who, in private society,

loved to taunt a neighbour with a law-suit he had lost fifty years ago, or some criminality which had been committed by his great-grand-uncle! What better is it to remind the people of Ireland of their defeat at the Boyne, or our Catholic fellow-Christians of the guilt of the infatuated Catesby and his companions?

St Anthony and the Pigs:

Legal Prosecutions of the Lower Animals.

St Anthony has been long recognised as the patron and protector of the lower animals, and particularly of pigs. Quaint old Fuller, in his *Worthies*, says: 'St Anthony is universally known for the patron of hogs, having a pig for his page in all pictures, though for what reason is unknown, except, because being a hermit, and having a cell or hole digged in the earth, and having his general repast on roots, he and hogs did in some sort enter-common both in their diet and lodging.' Stow, in his *Survey*, mentions a curious custom prevalent in his time in the London markets: 'The officers in this city,' he says, 'did divers times take from the market people, pigs starved or otherwise unwholesome for man's sustenance; these they did slit in the ear. One of the proctors of St Anthony's Hospital tied a bell about the neck, and let it feed upon the dunghills; no one would hurt or take it up; but if any one gave it bread or other feeding, such it would know, watch for, and daily follow, whining till it had somewhat given it; whereupon was raised a proverb, such a one will follow such a one, and whine as if it were an Anthony pig.' This custom was generally observed, and to it we are indebted for the still-used proverbial simile—Like a tantony pig.

At Rome, on St Anthony's day, the religious service termed the *Benediction of Beasts* is annually performed in the church dedicated to him, near Santa Maria Maggiore. It lasts for some days; for not only every Roman, from the pontiff to the peasant, who has a horse, mule, or ass, sends his cattle to be blessed at St Anthony's shrine; but all the English send their job-horses and favourite dogs, and for the small offering of a couple of *paoli* get them sprinkled, sanctified, and placed under the immediate protection of the saint. A similar custom is observed on the same day at Madrid and many other places.

On the Continent, down to a comparatively late period, the lower animals were in all respects considered amenable to the laws. Domestic animals were tried in the common criminal courts, and their punishment on conviction was death; wild animals fell under the jurisdiction of the ecclesiastical courts, and their punishment was banishment and death by exorcism and excommunication. Nor was the latter a light punishment. We all know how St Patrick exorcised the Irish reptiles into the sea; and St Bernard, one day, by peevishly saying, 'Be thou excommunicated' to a blue-bottle fly, that annoyed him by buzzing about his ears, unwittingly destroyed the flies of a whole district. The prerogative of trying the domestic animals was

founded on the Jewish law, as laid down in Exodus xxi. 28, and other places in the Old Testament. In every instance advocates were assigned to defend the animals, and the whole proceedings, trial, sentence, and execution, were conducted with all the strictest formalities of justice. The researches of French antiquaries have brought to light the records of ninety-two processes against animals, tried in their courts from 1120 to 1740, when the last trial and execution, that of a cow, took place.

The trials of wild animals of a noxious description, as rats, locusts, caterpillars, and such like, were, as has been already mentioned, conducted in the ecclesiastical courts. The proceedings were exceedingly complicated, and, not having the sanction of the Mosaic law, were founded on the following thesis: As God cursed the serpent, David the mountains of Gilboa, and our Saviour the barren fig-tree; so, in like manner, the church had full power and authority to exorcise, anathematise, and excommunicate all animate and inanimate things. But as the lower animals, being created before man, were the elder-born and first heirs of the earth, as God blessed them and gave them 'every green herb for meat,' as they were provided for in the ark, and entitled to the privileges of the sabbath, they must ever be treated with the greatest clemency, consistent with justice.

Some learned canonists, however, disputed those propositions, alleging that authority to try and punish offences, under the law, implied a contract, quasi-contract, pact, or stipulation, between the supreme power that made and administered the law, and those subjected to it. They contended, that, the lower animals being devoid of intelligence, no such pact ever had been or could be made; and that punishments for injuries committed unintentionally and in ignorance of the law, were unjust. They questioned, also, the authority of the Church to anathematise those whom she did not undertake to baptize, and adduced the example of the Archangel Michael, who, when contending with Satan for the body of Moses, did not make a railing accusation against the 'Old Serpent,' but left it to the Lord to rebuke him. Such discussions appear like the amusing inventions of Rabelais, or Swift; but they were no jesting matter to the simple agriculturists who engaged in those litigations.

The general course of a process was as follows: The inhabitants of the district being annoyed by certain animals, the court appointed experts to survey and report upon the damage committed. An advocate was then appointed to defend the animals, and shew cause why they should not be summoned. They were then cited three several times, and not appearing, judgment was given against them by default. The court next issued a *monitoire*, warning the animals to leave the district within a certain time, under penalty of adjuration; and if they did not disappear on or before the period appointed, the exorcism was with all solemnity pronounced. This looks straightforward enough, but the delays and uncertainties of the law—ecclesiastical law especially—have long been proverbial. The courts, by every available means of delay, evaded the

last extremity of pronouncing the exorcism, probably lest the animals should neglect to pay attention to it. Indeed, it is actually recorded that, in some instances, the noxious animals, instead of 'withering off the face of the earth,' after being anathematized, became more abundant and destructive than before. This the doctors, learned in the law, attributed neither to the injustice of the sentence, nor want of power of the court, but to the malevolent antagonism of Satan, who, as in the case of Job, is at certain times permitted to tempt and annoy mankind.

A law-suit between the inhabitants of the commune of St Julien, and a coleopterous insect, now known to naturalists as the *Eynchitus aureus*, lasted for more than forty-two years. At length the inhabitants proposed to compromise the matter by giving up, in perpetuity, to the insects, a fertile part of the district for their sole use and benefit. Of course the advocate of the animals demurred to the proposition; but the court, overruling the demurrer, appointed assessors to survey the land, and, it proving to be well wooded and watered, and every way suitable for the insects, ordered the conveyance to be engrossed in due form and executed. The unfortunate people then thought they had got rid of a trouble imposed on them by their litigious fathers and grandfathers; but they were sadly mistaken. It was discovered that there had formerly been a mine or quarry of an ochreous earth, used as a pigment, in the land conveyed to the insects; and though the quarry had long since been worked out and exhausted, some one possessed an ancient right of way to it, which if exercised would be greatly to the annoyance of the new proprietors. Consequently the contract was vitiated, and the whole process commenced *de novo*. How or when it ended, the mutilation of the recording documents prevents us from knowing; but it is certain that the proceedings commenced in the year 1445, and that they had not concluded in 1487. So what with the insects, the lawyers, and the church, the poor inhabitants must have been pretty well fleeced. During the whole period of a process, religious processions and other expensive ceremonies that had to be well paid for, were strictly enjoined. Besides, no district could commence a process of this kind unless all its arrears of tithes were paid up; and this circumstance gave rise to the well-known French legal maxim—'The first step towards getting rid of locusts is the payment of tithes;' an adage that in all probability was susceptible of more meanings than one.

The summonses were served by an officer of the court, reading them at the places where the animals frequented. These citations were written out with all technical formality, and, that there might be no mistake, contained a description of the animals. Thus, in a process against rats in the diocese of Autun, the defendants were described as dirty animals in the form of rats, of a greyish colour, living in holes. This trial is famous in the annals of French law, for it was at it that Chassanee, the celebrated juriscult—the Coke of France—won his first laurels. The rats not appearing on the first citation, Chassanee, their counsel, argued that the sum-

mons was of a too local and individual character; that, as all the rats in the diocese were interested, all the rats should be summoned, in all parts of the diocese. This plea being admitted, the curate of every parish in the diocese was instructed to summon every rat for a future day. The day arriving, but no rats, Chassanee said that, as all his clients were summoned, including young and old, sick and healthy, great preparations had to be made, and certain arrangements carried into effect, and therefore he begged for an extension of time. This also being granted, another day was appointed, and no rats appearing, Chassanee objected to the legality of the summons, under certain circumstances. A summons from that court, he argued, implied full protection to the parties summoned, both on their way to it and on their return home; but his clients, the rats, though most anxious to appear in obedience to the court, did not dare to stir out of their holes on account of the number of evil-disposed cats kept by the plaintiffs. Let the latter, he continued, enter into bonds, under heavy pecuniary penalties, that their cats shall not molest my clients, and the summons will be at once obeyed. The court acknowledged the validity of this plea;

but, the plaintiffs declining to be bound over for the good behaviour of their cats, the period for the rats' attendance was adjourned *sine die*; and thus, Chassanee gaining his cause, laid the foundation of his future fame.

Though judgment was given by default, on the non-appearance of the animals summoned, yet it was considered necessary that some of them should be present when the *monitoire* was delivered. Thus, in a process against leeches, tried at Lausanne, in 1451, a number of leeches were brought into court to hear the *monitoire* read, which admonished them to leave the district in three days. The leeches, proving contumacious, did not leave, and consequently were exorcised. This exorcism differing slightly from the usual form, some canonists adversely criticised, while others defended it. The doctors of Heidelberg, then a famous seat of learning, not only gave it their entire and unanimous approbation, but imposed silence upon all impertinents that presumed to speak against it. And, though they admitted its slight deviation from the recognised formula made and provided for such purposes, yet they triumphantly appealed to its efficiency as proved by the result; the leeches,

TRIAL OF A SOW AND PIGS AT LAVEGNY.

immediately after its delivery, having died off, day by day, till they were utterly exterminated.

Among trials of individual animals for special acts of turpitude, one of the most amusing was that of a sow and her six young ones, at Lavigny, in 1457, on a charge of their having murdered and

partly eaten a child. Our artist has endeavoured to represent this scene; but we fear that his sense of the ludicrous has incapacitated him for giving it with the due solemnity. The sow was found guilty and condemned to death; but the pigs were acquitted on account of their youth, the bad example of their mother, and the absence

of direct proof as to their having been concerned in the eating of the child.

These suits against animals not unfrequently led to more serious trials of human beings, on charges of sorcery. Simple country people, finding the regular process very tedious and expensive, purchased charms and exorcisms from empirical, unlicensed exorcists, at a much cheaper rate. But, if any of the parties to this contraband traffic were discovered, death by stake and fagot was their inevitable fate—infernal sorcerers were not to presume to compete with holy church. Still there was one animal, the serpent, which, as it had been cursed at a very early period in the world's history, might be exorcised and charmed (so that it could not leave the spot where it was first seen) by any one, lay or cleric, without the slightest imputation of sorcery. The formula was simply thus:—

'By Him who created thee, I adjure thee, that thou remain in the spot where thou art, whether it be thy will to do so or otherwise; and I curse thee with the curse with which the Lord hath cursed thee.'

But if a wretched shepherd was convicted of having uttered the following nonsense, termed 'the prayer of the wolf,' he was burned at the stake:

'Come, beast of wool, thou art the lamb of humility! I will protect thee. Go to the right about, grim, grey, and greedy beasts! Wolves, she-wolves, and young wolves, ye are not to touch the flesh, which is here. Get thee behind me, Satan!'

French shepherds suffered fearfully in the olden time, through being frequently charged with sorcery; and, among the rustic population, they are still looked upon as persons who know and practise dark and forbidden arts.

Legal proceedings against animals were not confined to France. At Basle, in 1474, a cock was tried for having laid an egg. For the prosecution it was *proved* that cocks' eggs were of inestimable value for mixing in certain magical preparations; that a sorcerer would rather possess a cock's egg than be master of the philosopher's stone; and that, in pagan lands, Satan employed witches to hatch such eggs, from which proceeded animals most injurious to all of the Christian faith and race. The advocate for the defence admitted the facts of the case, but asked what evil animus had been proved against his client, what injury to man or beast had it effected? Besides, the laying of the egg was an involuntary act, and as such, not punishable by law. If the crime of sorcery were imputed, the cock was innocent; for there was no instance on record of Satan ever having made a compact with one of the brute creation. In reply, the public prosecutor alleged that, though the devil did not make compacts with brutes, he sometimes entered into them; and though the swine possessed by devils, as mentioned in Scripture, were involuntary agents, yet they, nevertheless, were punished by being caused to run down a steep place into the sea, and so perished in the waters. The pleadings in this case, even as recorded by Hammerlein, are voluminous; we only give the meagre outlines of the principal pleas; suffice it to say, the cock was condemned to death, not as a cock, but as a

sorcerer or devil in the form of a cock, and was with its egg burned at the stake, with all the due form and solemnity of a judicial punishment.

As the lower animals were anciently amenable to law in Switzerland, so, in peculiar circumstances, they could be received as witnesses. And we have been informed, by a distinguished Sardinian lawyer, that a similar law is still, or was to a very late period, recognised in Savoy. If a man's house was broken into between sunset and sunrise, and the owner of the house killed the intruder, the act was considered a justifiable homicide. But it was considered just possible that a man, who lived all alone by himself, might invite or entice a person, whom he wished to kill, to spend the evening with him, and after murdering his victim, assert that he did it in defence of his person and property, the slain man having been a burglar. So when a person was killed under such circumstances, the solitary householder was not held innocent, unless he produced a dog, a cat, or a cock that had been an inmate of the house, and witnessed the death of the person killed. The owner of the house was compelled to make his declaration of innocence on oath before one of those animals, and if it did not contradict him, he was considered guiltless; the law taking for granted, that the Deity would cause a miraculous manifestation, by a dumb animal, rather than allow a murderer to escape from justice.

In Spain and Italy the lower animals were held subject to the laws, as in France. Azpilcuenta of Navarre, a renowned Spanish canonist, asserts that rats when exorcised were ordered to depart for foreign countries, and that the obedient animals would, accordingly, march down in large bodies to the sea-coast, and thence set off by swimming in search of desert islands, where they could live and enjoy themselves, without annoyance to man. In Italy, also, processes against caterpillars and other 'small deer' were of frequent occurrence; and certain large fishes called terons, that used to break the fishermen's nets, were annually anathematised from the lakes and headlands of the north-western shores of the Mediterranean. *Apropos* of fishes, Maffei, the learned Jesuit, in his *History of India*, tells a curious story. A Portuguese ship, sailing to Brazil, fell becalmed in dangerous proximity to a large whale. The mariners, terrified by the uncouth gambols of the monster, improvised a summary process, and duly exorcised the dreaded cetacean, which, to their great relief, immediately sank to the lowest depths of ocean.

THE SHREWSBURY TRIPLE FIGHT.

On the 17th January 1667-8, there took place a piece of private war which, in its prompting causes, as well as the circumstances under which it was fought out, forms as vivid an illustration of the character of the age as could well be desired. The parties were George Villiers, Duke of Buckingham, attended by Sir Robert Holmes and Captain William Jenkins, on one side; and Francis Talbot, Earl of Shrewsbury, attended by Sir John Talbot, a gentleman of the King's

Privy Chamber, and Bernard Howard, a younger son of the Earl of Arundel, on the other.

Pepys, in reference to this 'duell,' as he terms it, says, it was all 'about my Lady Shrewsbury, at that time, and for a great while before, a mistress to the Duke of Buckingham; and so her husband challenged him, and they met; and my Lord Shrewsbury was run through the body, from the right breast through the shoulder; and Sir John Talbot all along up one of his arms; and Jenkins killed upon the place, and the rest all in a little measure wounded.' (Pepys's *Diary*, iv. 15.) A pardon under the great seal, dated on February the 5th following, was granted to all the persons concerned in this tragical affair; the result of which proved more disastrous than had at first been anticipated, for Lord Shrewsbury died in consequence of his wound, in the course of the same year.

It is reported that during the fight the Countess of Shrewsbury held her lover's horse, in the dress of a page. This lady was Anna Maria Brudenell, daughter of Robert Earl of Cardigan. She survived both her gallant and her first husband, and was married, secondly, to George Rodney Brydges, of Keynsham, in Somersetshire.

JANUARY 18.

St Peter's Chair at Rome. St Paul and Thirty-six Companions in Egypt. St Prisca, virgin and martyr, about 275. St Deicolus, abbot, 7th century. St Ulfrid, bishop and martyr, 1028.

The festival of St Peter's Chair, annually celebrated at Rome on this day, appears to be meant as an act of gratitude for the founding of the papacy. Butler tells us that it is well evidenced for a great antiquity, being adverted to in a martyrology copied in the time of St Willibrod, in 720. 'Christians,' he says, 'justly celebrate the founding of this mother church, the centre of Catholic communion, in thanksgiving to God for his mercies on his church, and to implore his future blessing.' The celebration takes place in St Peter's Church, under circumstances of the greatest solemnity and splendour. It is one of the very few *funzioni* (functions), as they are called, which are celebrated in that magnificent temple. The affair is thus described by Lady Morgan in her work, *Italy*:

'The splendidly dressed troops that line the nave of the cathedral, the variety and richness of vestments which clothe the various church and lay dignitaries, abbots, priests, canons, prelates, cardinals, doctors, dragoons, senators, and grenadiers, which march in procession, complete, as they proceed up the vast space of this wondrous temple, a spectacle nowhere to be equalled within the pale of European civilization. In the midst of swords and crossiers, of halberds and crucifixes, surrounded by banners, and bending under the glittering tiara of threefold power, appears the aged, feeble, and worn-out pope, borne aloft on men's shoulders, in a chair of crimson and gold, and environed by slaves, (for such they look,) who waft, from plumes of ostrich

feathers mounted on ivory wands, a cooling gale, to refresh his exhausted frame, too frail for the weight of such honours. All fall prostrate, as he passes up the church to a small choir and throne, temporarily erected beneath the chair of St Peter. A solemn service is then performed, hosannas arise, and royal votarists and diplomatic devotees parade the church, with guards of honour and running footmen, while English gentlemen and ladies mob and scramble, and crowd and bribe, and fight their way to the best places they can obtain.

'At the extremity of the great nave behind the altar, and mounted upon a tribune designed or ornamented by Michael Angelo, stands a sort of throne, composed of precious materials, and supported by four gigantic figures. A glory of seraphim, with groups of angels, sheds a brilliant light upon its splendours. This throne enshrines the real, plain, worm-eaten, wooden chair, on which St Peter, the prince of the apostles, is said to have pontificated; more precious than all the bronze, gold, and gems, with which it is hidden, not only from impious, but from holy eyes, and which once only, in the flight of ages, was profaned by mortal inspection.'

Her ladyship then narrates how the French, when in occupation of Rome in the days of the first Napoleon, made an examination of the chair, and found upon it the well-known confession of the Mahometan faith, '*There is but one God, and Mahomet is his prophet*;' whence it was inferred that the chair had been brought from the East in the middle ages, probably among the spoils of the Crusaders. But Lady Morgan here made a mistake, the chair with the Mahometan inscription being in reality one preserved in similar circumstances at Venice.

The saints referred to in the second article of the list for this day appear to have been a group of missionaries, who went at an early but unknown period into Egypt to propagate the faith, and there became martyrs. St Deicolus or St Deel was an Irish priest, who spent his best days in France, and whose memory is preserved in Franche-comté, where his name Deel is still frequently given in baptism.

Born.—Ch. Montesquieu, 1689; Dr. John Gillies, historian, 1747.

Died.—Archangelo Corelli, 1713; Sir Samuel Garth, 1719; J. Baskerville, 1775; Sir John Pringle, 1782.

DEATH OF CORELLI.

The melancholy end of Archangelo Corelli, founder of the Roman or ancient school of violinists, is thought to have been hastened by the unfeeling treatment which he experienced from the King of Naples, and the successes of inferior Neapolitan artists. Their fiery genius presented a curious contrast to the meek, timid, and gentle character of Corelli, so analogous to the style of his music. He had published his admirable concertos but six weeks, when he fell into a state of melancholy and chagrin, and died. He was buried in the church of Santa Maria della Rotondo, in the ancient Pantheon, where

a monument with a marble bust is erected to his memory, near that of Raphael. For many years after the decease of Corelli, a solemn service, consisting of selections from his own works, was performed in the Pantheon, on the anniversary of his funeral; and this solemnity continued so long as any of his immediate scholars survived to conduct the performance. One great point of Corelli's excellence was, the nice management of his band, their bows moving exactly together, so that at rehearsals he would immediately stop the band if he saw an irregular bow. There was little or no melody in instrumental music before Corelli's time; and though his productions have yielded to the superior genius and talents of Haydn, Mozart, Beethoven, and Cherubini, the works of Corelli are still admired for their grace and eloquence; and they have continued longer in favour in England than in the great composer's own country, or, indeed, in any other part of Europe.

BASKERVILLE, THE PRINTER.

John Baskerville, a native of Worcestershire, having acquired considerable wealth by the jappanning business at Birmingham, devoted himself to the perfection of the art of printing, more particularly in the shape of the letters. He is said to have spent six hundred pounds before he could obtain a single letter to please himself, and many thousands before he made a profit of his pursuit, which he prosecuted so ardently that he manufactured his own printing-ink, presses, moulds for casting, and all the apparatus for printing. His typography is extremely beautiful, uniting the elegance of Plautin with the clearness of the Elzevirs; in his Italic letters he stands unrivalled, such freedom and perfect symmetry being in vain to be looked for among the specimens of Aldus and Colinaeus. He was a man of eccentric tastes; he had each panel of his carriage painted with a picture of his trades. He was buried in his garden; and in 1821, his remains being accidentally disturbed, the leaden coffin was opened, and the body was found in a singular state of preservation—the shroud was perfect and very white, and a branch of laurel on the breast of the corpse was, though faded, entire.

THE PEASANT COUNTESS.

Died, on the 18th January 1797, Sarah Countess of Exeter, the heroine of a singular *mésalliance*. The story has been several times handled in both prose and verse. Tennyson tells it under the title of *The Lord of Burleigh*, relating how, under the guise of a poor landscape painter, Henry Cecil wooed a village maiden, and gained her hand; how he conducted her on a tour, seeing

'Parks with oak and chesnut shady,
Parks and ordered gardens great;
Ancient homes of lord and lady,
Built for pleasure or for state;'

until they came to a majestic mansion, where the domestics bowed before the young lover, whose wife then, for the first time, discovered his rank.

'All at once the colour flushes
Her sweet face from brow to chin:
As it were with shame she blushes,
And her spirit changed within.
Then her countenance all over
Pale again as death did prove:
But he clasped her like a lover,
And he cheered her soul with love.
So she strove against her weakness,
Though at times her spirits sank:
Shaped her heart with woman's meekness,
To all duties of her rank.
And a gentle consort made he,
And her gentle mind was such,
That she grew a noble lady,
And the people loved her much.
But a trouble weighed upon her,
And perplexed her, night and morn,
With the burden of an honour
Unto which she was not born.
Faint she grew and even fainter,
As she murmured, "Oh that he
Were once more that landscape painter,
Which did win my heart from me!"
So she drooped and drooped before him,
Fading slowly from his side;
Three fair children first she bore him,
Then before her time she died.'

The real details of this romantic story are not quite so poetical as Mr Tennyson represents, but yet form a curious anecdote of aristocratic eccentricity. It appears that Mr Henry Cecil, while his uncle held the family titles, married a lady of respectable birth, from whom, after fifteen years of wedded life, he procured a divorce. Before that event, being troubled with heavy debts, he put on a disguise, and came to live as a poor and humble man, at Bolas Common, near Hodnet, an obscure village in Shropshire. No one came to inquire after him; he had vanished from the gaze and the knowledge of all his relatives. He was known to none, and having no ostensible means of living, there were many surmises as to who and what he was. The general belief at one moment was, that he gained his bread as a highwayman. In anticipation of the divorce he paid addresses to a young lady of considerable attractions, named Taylor, who, however, being engaged, declined his hand. He lodged with a cottage labourer named Hoggins, whose daughter Sarah, a plain but honest girl, next drew the attention of the noble refugee. He succeeded, notwithstanding the equivocal nature of his circumstances, in gaining her heart and hand. It has been set forth that Mr Cecil, disgusted with the character of his fashionable wife, resolved to seek some peasant mistress who should love him for his own sake alone; but the probability is that the young noble was simply eccentric, or that a craving for sympathy in his solitary life had disposed him to take up with the first respectable woman who should come in his way. Under the name of Mr John Jones, he purchased a piece of land near Hodnet, and built a house upon it, in which he lived for some years with his peasant bride, who never all that time knew who he really was. It has been stated that he did not appear fastidious about what he did. He on one occasion gratified his father-in-law by carrying a large pig to be given as a present to a neighbouring squire. He took his turn of ser-

vice in the vestry, in which duty, having occasion to attend the Shrewsbury sessions, he was noticed by a brother magistrate, who had been his school-fellow; but it did not lead to a detection. He disappeared for a short time occasionally, in order, as is supposed, to obtain supplies of money. The marriage took place on the 3rd of October 1791, not long after the divorce of the first Mrs Henry Cecil was accomplished.

Two years after the marriage (December 27, 1793), Mr Cecil succeeded to the peerage and estates in consequence of the death of his uncle; and it became necessary that he should quit his obscurity at Hodnet. Probably the removal of the pair to Burleigh House, near Stamford, was effected under the circumstances described by the Laureate. It is also true that the peasant countess did not prove quite up to the part she had been unwittingly drawn into. Being, as it chanced, a ruddy-faced and rather robust woman,* she did not pine away in the manner described by Mr Tennyson; but after having borne her husband three children (amongst whom was the peer who succeeded), she sickened and died, January 18, 1797. The earl was afterwards created a marquis, married a third wife, the Dowager Duchess of Hamilton, and died in 1804.†

DEATH AND FUNERAL OF A SQUAW IN LONDON.

Examples of the Red Men of North America—so absurdly called Indians—have at various times visited England. The readers of the *Spectator* will remember Addison's interesting account of four kings of the nations lying between New York and Canada, who came to London in 1710, and were introduced to Queen Anne. So lately as 1835, a party of the Michigan tribe, including the chief, Muk Coonee (the Little Boar), appeared amongst us, the object being a negotiation for the sale of certain lands. Arrangements were made for their being presented to King William on the 18th of January; but the chief found on that day a very different affair on his hands. His squaw, the *Diving Mouse*, of only twenty-six years, sickened and on that day died, at the lodging which the party occupied in the Waterloo Road.

When this lady of the wild felt a mortal sickness upon her, she refused all medicine, saying if the Great Spirit intended that she should then die, he would be angry at any attempt on her part to avert the doom. The only thing she would allow to be done for her was the administration of the rite of baptism, and this was only submitted to because she was told there might consequently be more ceremony at her funeral. Loud were the wailings of the chief and his friends round the couch of the dead squaw.

When preparations were necessary for the funeral, he took a pride in making them as handsome as he could. He placed her in a richly

* Such are the accounts usually given; but in a portrait of the noble pair, by Lawrence, kept in Burleigh House, the lady appears possessed of an oval countenance, of what we would call very considerable beauty, and the reverse of rustic in style.

† Tennyson's *Poems*, 10th ed., p. 355. Notes and Queries, 1st ser., xii. 280, 355; 2nd ser., i. 437; ii. 457. Collins's *Peerage*, by Brydges, ii. 609.

ornamented coffin, with a silver plate bearing an inscription. An elaborate shroud was laid over her Indian garments; laurel leaves and a bouquet were placed on her breast; her earrings were laden with ornaments; her cheeks were painted red; and a splendid Indian shawl was thrown over all. The funeral took place at St John's churchyard, in the Waterloo Road. The clergyman read the service in the usual English form. The coffin was lowered, a white rose thrown upon it, and then the dull cold earth. Shaw Whash ('Big Sword') pronounced an oration in his native language; and then the funeral *cortège* returned to the lodgings. The chief, with much dignity, addressed to the persons assembled a few words, which were translated by his French interpreter, M. Dunord. 'For three years prior to my visit to this country,' he said, 'I rested on the bosom of my wife in love and happiness. She was everything to me; and such was my fear that illness or accident might part us in England, that I wished her to remain behind in our settlements. This she would not consent to, saying, "That I was all the world to her, and in life or death she would remain with me!" We came, and I have lost her. She who was all my earthly happiness is now under the earth; but the Great Spirit has placed her there, and my bosom is calm. I am not, I never was, a man of tears; but her loss made me shed many.'

This was not the last sorrow of poor Muk Coonee. A few days after the burial of the squaw, another of his companions was taken from him. This was 'Thunder and Lightning,' a young Indian about the same age as the squaw. He, in like manner, was baptized, and was buried in the same churchyard. It was observed that the chief had been looking anxiously around at various times during the ceremony; and it now appeared that he entertained distrust as to whether the grave of his wife had been disturbed. He had in some way marked on or near her grave his *totam*, or symbol, something which would denote the tribe and rank of the deceased, and which was intended to secure inviolable respect for the sacred spot. Some of the appearances around led the poor fellow to suspect that the grave had been tampered with. Earnest were the endeavours made to assure him that his fears were groundless, and he at length was induced to believe that the grave of the 'Diving Mouse' had not been opened.

Prussic Acid.—The peach (we gather from Dr Daubeny's *Lectures on Roman Husbandry*) was brought from Persia, and Columella alludes to the fable of its poisonous qualities. 'Could this mistake arise,' asks Dr Daubeny, 'from a knowledge of the poisonous properties of the prussic acid existing in the kernels of the peach?' It may be observed that a notion prevailed in Egypt, probably referring to the secret of the Psylli, that a citron eaten early in the morning was an antidote against all kinds of poison. Its juice, injected into the veins, would have a similar effect. Blackberries, when perfectly ripe, were eaten by the Romans, and by the Greeks were considered a preventive of gout.

JANUARY 19.

Ss Maris, Martha, Audifax, and Abachum, martyrs, 270. St Lomer, 593. St Blaithmaic, abbot in Scotland, 793. St Knut (Canutus), king of Denmark, martyr, 1036. St Wulstan, bishop of Worcester, 1095. St Henry of England, martyr in Finland, 1151.

WULSTAN, BISHOP OF WORCESTER.

St Wulstan was the last saint of the Anglo-Saxon Church, the link between the old English Church and hierarchy and the Norman. He was a monk, indeed, and an ascetic; still, his vocation lay not in the school or cloister, but among the people of the market-place and the village, and he rather dwelt on the great broad truths of the Gospel than followed them into their results. Though a thane's son, a series of unexpected circumstances brought him into the religious profession, and he became prior of a monastery at Worcester. Born at Long Itchington, in Warwickshire, and educated at the monasteries of Evesham and Peterborough, the latter one of the richest houses and the most famous schools in England, he was thoughtful above his years, and voluntarily submitted to exercises and self-denials from which other children were excused. To Wulstan, the holy monk, the proud Earl Harold once went thirty miles out of his way, to make his confession to him, and beg his prayers. He was a man of kind yet blunt and homely speech, and delighted in his devotional duties; the common people looked upon him as their friend, and he used to sit at the church door listening to complaints, redressing wrongs, helping those who were in trouble, and giving advice, spiritual and temporal. Every Sunday and great festival he preached to the people: his words seemed to be the voice of thunder, and he drew together vast crowds, wherever he had to dedicate a church. As an example of his practical preaching, it is related that, in reproving the greediness which was a common fault of that day, Wulstan confessed that a savory roast goose which was preparing for his dinner, had once so taken up his thoughts, that he could not attend to the service he was performing, but that he had punished himself for it, and given up the use of meat in consequence.

At length, in 1062, two Roman cardinals came to Worcester, with Aldred the late bishop, now Archbishop of York; they spent the whole Lent at the Cathedral monastery, where Wulstan was prior, and they were so impressed with his austere and hard-working way of life, that partly by their recommendation, as well as the popular voice at Worcester, Wulstan was elected to the vacant bishopric. He heard of this with sorrow and vexation, declaring that he would rather lose his head than be made a bishop; but he yielded to the stern rebuke of an aged hermit, and received the pastoral staff from the hands of Edward the Confessor. The Normans, when they came, thought him, like his church, old-fashioned and homely; but they admired, though

in an Englishman, his unworldly and active life, which was not that of study and thoughtful retirement, but of ministering to the common people, supplying the deficiencies of the parochial clergy, and preaching. He rode on horseback, with his retinue of clerks and monks, through his diocese, repeating the Psalter, the Litanies, and the office for the dead; his chamberlain always had a purse ready, and 'no one ever begged of Wulstan in vain.' In these progresses he came into personal contact with all his flock, high and low—with the rude crowds, beggars and serfs, craftsmen and labourers, as well as with priests and nobles. But everything gave way to his confirming children—from sunrise to sunset he would go without tasting food, blessing batch after batch of the little ones.

Wulstan was a great church builder: he took care that on each of his own manors there should be a church, and he urged other lords to follow his example. He rebuilt the cathedral of his see, and restored the old ruined church of Westbury. When his new cathedral was ready for use, the old one built by St Oswald was to be demolished; Wulstan stood in the churchyard looking on sadly and silently, but at last burst into tears at this destruction, as he said, of the work of saints, who knew not how to build fine churches, but knew how to sacrifice themselves to God, whatever roof might be over them.

Still, with a life of pastoral activity, Wulstan retained the devotional habits of the cloister. His first words on awaking were a psalm; and some homily or legend was read to him as he lay down to rest. He attended the same services as when in the monastery; and each of his manor houses had a little chapel, where he used to lock himself in to pray in spare hours.

It cannot be said of Wulstan that he was much of a respecter of persons. He had rebuked and warned the headstrong Harold, and he was not less bold before his more imperious successor. At a council in Winchester, he bluntly called upon William to restore to the see some lands which he had seized. He had to fight a stouter battle with Lanfranc, who, ambitious of deposing him for incapacity and ignorance, in a synod held before the king, called upon the bishop to deliver up his pastoral staff and ring; when, according to the legend, Wulstan drove the staff into the stone of the tomb of the Confessor, where it remained fast imbedded, notwithstanding the efforts of the Bishop of Rochester, Lanfranc, and the king himself, to remove it, which, however, Wulstan easily did, and thenceforth was reconciled to Lanfranc; and they subsequently co-operated in destroying a slave trade which had long been carried on by merchants of Bristol with Ireland.

Wulstan outlived William and Lanfranc. He passed his last Lent with more than usual solemnity, on his last Maundy washing the feet and clothes of the poor, bestowing alms and ministering the cup of 'charity;' then supplying them, as they sat at his table, with shoes and victuals; and finally reconciling penitents, and washing the feet of his brethren of the convent. On Easter-day, he again feasted with the poor.

At Whitsuntide following, being taken ill, he prepared for death, but he lingered till the first day of the new year, when he finally took to his bed. He was laid so as to have a view of the altar of a chapel, and thus he followed the psalms which were sung. On the 19th of January 1095, at midnight, he died in the eighty-seventh year of his age, and the thirty-third of his episcopate. Contrary to the usual custom, the body was laid out, arranged in the episcopal vestments and crosier, before the high altar, that the people of Worcester might look once more on their good bishop. His stone coffin is, to this day, shewn in the presbytery of the cathedral, the crypt and early Norman portions of which are the work of Wulstan.*

Born.—Nicholas Copernicus, 1472; James Watt, 1736.
Died.—Charles Earl of Dorset, 1706; William Congreve, poet, 1729; Thomas Ruddiman, grammarian, 1757; Isaac Disraeli, miscellaneous writer, 1848.

JAMES WATT.

James Watt was, as is well known, a native of the then small seaport of Greenock, on the Firth of Clyde. His grandfather was a teacher of mathematics. His father was a builder and contractor—also a merchant,—a man of superior sagacity, if not ability, prudent and benevolent. The mother of Watt was noted as a woman of fine aspect, and excellent judgment and conduct. When boatswains of ships came to the father's shop for stores, he was in the habit of throwing in an extra quantity of sail-needles and twine, with the remark, 'See, take that too; I once lost a ship for want of such articles on board.'† The young mechanic received a good elementary education at the schools of his native town. It was by the overpowering bent of his own mind that he entered life as a mathematical-instrument-maker.

When he attempted to set up in that business at Glasgow, he met with an obstruction from the corporation of Hammermen, who looked upon him as an intruder upon their privileged ground. The world might have lost Watt and his inventions through this unworthy cause, if he had not had friends among the professors of the University,—Muirhead, a relation of his mother, and Anderson, the brother of one of his dearest school-friends,—by whose influence he was furnished with a workshop within the walls of the college, and invested with the title of its instrument-maker. Anderson, a man of an advanced and liberal mind, was Professor of Natural Philosophy, and had, amongst his class apparatus, a model of Newcomen's steam-engine. He required to have it repaired, and put it into Watt's hands for the purpose. Through this trivial accident it was that the young mechanic was led to make that improvement of the steam-engine which gave a new power to civilized man, and has revolutionised the world. The model of Newcomen has very

* The writer of this article acknowledges his obligations to the *Lives of English Saints*, 1844.

† Williamson's Memorials of James Watt. 4to, 1856. p. 155.

fortunately been preserved, and is now in the Hunterian Museum at Glasgow College.

MODEL OF NEWCOMEN'S STEAM-ENGINE.

Watt's career as a mechanic, in connection with Mr Boulton, at the Soho Works, near Birmingham, was a brilliant one, and ended in raising him and his family to fortune. Yet it cannot be heard without pain, that a sixth or seventh part of his time was diverted from his proper pursuits, and devoted to mere litigation, rendered unavoidable by the incessant invasions of his patents.

He was often consulted about supposed inventions and discoveries, and his invariable rule was to recommend that a *model* should be formed and tried. This he considered as the only true test of the value of any novelty in mechanics.

CONGREVE AND VOLTAIRE.

Congreve died at his house in Surrey-street, Strand, from an internal injury received in being overturned in his chariot on a journey to Bath—after having been for several years afflicted with blindness and gout. Here he was visited by Voltaire, who had a great admiration of him as a writer. 'Congreve spoke of his works,' says Voltaire, 'as of trifles that were beneath him, and hinted to me, in our first conversation, that I should visit him on no other footing than upon that of a gentleman who led a life of plainness and simplicity. I answered, that, had he been so unfortunate as to be a mere gentleman, I should never have come to see him; and I was very

much disgusted at so unreasonable a piece of vanity.'

This is a fine rebuke.

Congreve's remains lay in state in the Jerusalem Chamber, and he was buried in Westminster Abbey, where a monument was erected to his memory by Henrietta, Duchess of Marlborough, to whom he bequeathed £10,000, the accumulation of attentive parsimony. The Duchess purchased with £7,000 of the legacy a diamond necklace. 'How much better,' says Dr Young, 'it would have been to have given the money to Mrs Bracegirdle, with whom Congreve was very intimate for years; yet still better would it have been to have left the money to his poor relations in want of it.'

ISAAC DISRAELI.

Few miscellanies have approached the popularity enjoyed by the *Curiosities of Literature*, the work by which Mr Disraeli is best known. This success may be traced to the circumstances of his life, as well as his natural abilities, favouring the production of exactly such a work. When a boy, he was sent to Amsterdam, and placed under a preceptor, who did not take the trouble to teach him anything, but turned him loose into a good library. Nothing could have been better suited to his taste, and before he was fifteen he had read the works of Voltaire and dipped into Bayle. When he was eighteen he returned to England, half mad with the sentimental philosophy of Rousseau. He declined to enter mercantile life, for which his father had intended him; he then went to Paris, and stayed there, chiefly living in the public libraries until a short time before the outbreak of the French Revolution. Shortly after his return to England he wrote a poem on the *Abuse of Satire*, levelled at Peter Pindar: it was successful, and made Disraeli's name known. In about two years, after the reading of Andrews's *Anecdotes*, Disraeli remarked that a very interesting miscellany might be drawn up by a well-read man from the library in which he lived. It was objected that such a work would be a mere compilation of dead matter, and uninteresting to the public. Disraeli thought otherwise, and set about preparing a volume from collections of the French *Ana*, the author adding as much as he was able from English literature. This volume he called *Curiosities of Literature*. Its great success induced him to publish a second volume; and after these volumes had reached a fifth edition, he added three more. He then suffered a long illness, but his literary habits were never laid aside, and as often as he was able he worked in the morning in the British Museum, and in his own library at night. He published works of great historical research, including the *Life and Reign of Charles I.* in five volumes, and the *Amenities of Literature* in three volumes; but the great aim of his life was to write a *History of English Literature*, of which the *Amenities* were to be the materials. His literary career was cut short in 1839 by a paralysis of the optic nerve. He died at the age of eighty-two, retaining to the last, his sweetness and serenity of temper and cheerfulness of mind. Shortly before, his son wrote, for a new edition of

the *Curiosities of Literature*, a memoir of the author, in which he thus happily sketched the features of his father's character:

'He was himself a complete literary character, a man who really passed his life in his library. Even marriage produced no change in these habits; he rose to enter the chamber where he lived alone with his books, and at night his lamp was ever lit within the same walls. Nothing, indeed, was more remarkable than the isolation of this prolonged existence; and it could only be accounted for by the united influences of three causes: his birth, which brought him no relations or family acquaintance; the bent of his disposition; and the circumstance of his inheriting an independent fortune, which rendered unnecessary those exertions that would have broken up his self-reliance. He disliked business, and he never required relaxation; he was absorbed in his pursuits. In London his only amusement was to ramble among booksellers; if he entered a club, it was only to go into the library. In the country, he scarcely ever left his room but to saunter in abstraction upon a terrace; muse over a chapter, or coin a sentence. He had not a single passion or prejudice; all his convictions were the result of his own studies, and were often opposed to the impressions which he had early imbibed. He not only never entered into the politics of the day, but he could never understand them. He never was connected with any particular body or set of men; comrades of school or college, or confederates in that public life which, in England, is, perhaps, the only foundation of real friendship. In the consideration of a question, his mind was quite undisturbed by traditionary preconceptions; and it was this exemption from passion and prejudice which, although his intelligence was naturally somewhat too ingenious and fanciful for the conduct of close argument, enabled him, in investigation, often to shew many of the highest attributes of the judicial mind, and particularly to sum up evidence with singular happiness and ability.'

FAC-SIMILES OF INEDITED AUTOGRAPHS.

ISABEL, QUEEN OF DENMARK.

Died at Ghent, of a broken heart, January 19, 1525, Isabel of Austria, Queen of Denmark, a 'nursing mother' of the Reformation. Isabel was the second daughter of Philip the Fair of Austria, and Juana *la Loca*, the first Queen of Spain. She was born at Brussels in 1501, and married at Malines, August 12, 1515, to Christian of Denmark, who proved little less than her murderer. When he, 'the Nero of the North,' was deposed by his infuriated subjects, she followed him into exile, soothed him and nursed him, for which her only reward was cruel neglect, and, some add, more cruel treatment, descending even to blows. The frail body which shrined the bright, loving spirit, was soon worn out; and Isabel died, as above stated, aged only twenty-four years.

It will be seen that the Queen spells her name Elizabeth, probably as more consonant with Danish ideas, for she was baptized after her grandmother, Isabel the Catholic. It is well

known that our ancestors (mistakenly) considered Elizabeth and Isabel identical. The autograph

here given is from the Cotton MSS. (Brit. Mus.) Vesp. F. III.

Elizabeth of Denmark, 2d
drawing

Scarborough Warning.—Toby Matthew, Bishop of Durham, in the postscript of a letter to the Archbishop of York, dated January 19, 1603, says: 'When I was in the midst of this discourse, I received a message from my Lord Chamberlain, that it was his Majesty's pleasure that I should preach before him on Sunday next; which *Scarborough warning* did not only perplex me, &c.' 'Scarborough warning' is alluded to in a ballad by Heywood, as referring to a summary mode of dealing with suspected thieves at that place; by Fuller, as taking its rise in a sudden surprise of Scarborough Castle by Thomas Stafford in 1557; and it is quoted in Harrington's old translation of Ariosto—

'They took them to a fort, with such small treasure,
As in to Scarborow warning they had leasure.'

There is considerable likelihood that the whole of these writers are mistaken on the subject. In the parish of Anwoth, in the stewardry of Kirkcudbright, there is a rivulet called *Skyreburn*, which usually appears as gentle and innocent as a child, being just sufficient to drive a mill; but from having its origin in a spacious bosom of the neighbouring hills, it is liable, on any ordinary fall of rain, to come down suddenly in prodigious volume and vehemence, carrying away hayricks, washings of clothes, or anything else that may be exposed on its banks. The abruptness of the danger has given rise to a proverbial expression, generally used throughout the south-west province of Scotland,—*Skyreburn warning*. It is easy to conceive that this local phrase, when heard south of the Tweed, would be mistaken for *Scarborough warning*; in which case, it would be only too easy to imagine an origin for it connected with that Yorkshire watering-place.

Shakspeare's Geographical Knowledge.—The great dramatist's unfortunate slip in representing, in his *Winter's Tale*, a shipwrecked party landing in Bohemia, has been palliated by the discovery which some one has made, that Bohemia, in the thirteenth century, had dependencies extending to the sea-coast. But the only real palliation of which the case is susceptible, lies in the history of the origin of the play. Our great bard, in this case, took his story from a novel named *Pandosto*. In doing so, for some reason which probably seemed to him good, he transposed the respective circumstances said to have taken place in Sicily and Bohemia, and, simply through advertence, failed to observe that what was suitable for an island like Sicily was unsuitable for an inland country like Bohemia.

Shakspeare did not stand alone in his defective geographical knowledge. We learn from his contemporary, Lord Herbert of Cherbury, that Luines, the Prime Minister of France, when there was a question

made about some business in Bohemia, asked whether it was an inland country, or lay upon the sea.

We ought to remember that in the beginning of the seventeenth century, from the limited intercourse and interdependence of nations, there was much less occasion for geographical knowledge than there now is, and the means of obtaining it were also infinitely less.

JANUARY 20.

ST AGNES' EVE.

St Fabian, pope, 250. St Sebastian, 288. St Euthymius, 473. St Fechin, abbot in Ireland, 664.

St Fabian is a saint of the English calendar.

Born.—Frederick, Prince of Wales, 1707, *Hanover*; Jean Jacques Barthélemy, 1716, *Cassis*.

Died.—Cardinal Bembo, 1547; Rodolph II., emperor, 1612; Charles, first Duke of Manchester, 1722; Charles VII., emperor, 1745; Sir James Fergusson, 1759; Lord Chancellor Yorke, 1770; David Garrick, 1779; John Howard, 1790.

ANNE OF AUSTRIA.

This extraordinary woman, daughter of Philip II. of Spain and queen of Louis XIII., exercised great influence upon the fortunes of France, at a critical period of its history; thus in part making good the witty saying,—that when queens reign, men govern; and that when kings govern, women eventually decide the course of events. Soon after the marriage of Anne, the administration fell into the hands of Cardinal Richelieu, who took advantage of the coldness and gravity of the queen's demeanour to inspire Louis with dislike and jealousy. Induced by him to believe that the queen was at the head of a conspiracy to get rid of him, Louis compelled her to answer the charge at the council table, when her dignity of character came to her aid; and she observed contemptuously, that 'too little was to be gained by the change to render such a design on her part probable.' Alienated from the king's affection and council, the queen remained without influence till death took away monarch and minister and left to Anne, as mother of the infant monarch (Louis XIV.), the undisputed reins of power. With great discernment, she chose for her minister, Mazarin, who was

entirely dependent upon her, and whose abilities she made use of without being in danger from his ambition. But the minister became unpopular: a successful insurrection ensued, and Anne and the court were detained for a time prisoners in the Palais Royal, by the mob. The Spanish pride of the queen was compelled to submit, and the people had their will. But a civil war soon commenced between Anne, her ministers and their adherents, on one side; and the *noblesse*, the citizens and people of Paris, on the other. The former triumphed, and hostilities were suspended; but the war again broke out: the court had secured a defender in Turenne, who triumphed over the young *noblesse* headed by the great Condé! The nobles and middle classes were never afterwards able to raise their heads, or offer resistance to the royal power up to the period of the great Revolution; so that Anne of Austria may be said to have founded absolute monarchy in France, and not the subsequent imperiousness of Louis XIV. Anne's portrait in the Vienna gallery shews her to have been of pleasing exterior. Her Spanish haughtiness and love of ceremonial were impressed by education upon the mind of her son, Louis XIV., who bears the blame and the credit of much that was his mother's. She died at the age of sixty-four.

DEATH OF GARRICK.

Garrick, who 'never had his equal as an actor, and will never have a rival,' at Christmas 1778, while on a visit to Lord Speneer, at Althorpe, had a severe fit, from which he only recovered sufficiently to enable him to return to town, where he expired on the 20th of January 1779, in his own house, in the centre of the Adelphi Terrace,* in his sixty-third year. Dr Johnson said, 'his death eclipsed the gaiety of nations.' Walpole, in the opposite extreme: 'Garrick is dead; not a public loss; for he had quitted the stage.' Garrick's remains lay in state at his house previous to their interment in Westminster Abbey, with great pomp: there were not at Lord Chatham's funeral half the noble coaches that attended Garrick's, which is attributable to a political cause. Burke was one of the mourners, and came expressly from Portsmouth to follow the great actor's remains.

SIR JOHN SOANE.

This successful architect died at his house in Lincoln's Inn Fields, surrounded by the collection of antiquities and artistic treasures which he bequeathed to the British nation, as "the Soanean Museum." He was a man of exquisite taste, but of most irritable temperament, and the tardy settlement of the above bequest to the country was to him a matter of much annoyance. His remains rest in the burial-ground of St Giles's-in-the-Fields, St Pancras, where two tall yew-trees overshadow his tomb. At his death, the trustees appointed by parliament took charge of the Museum, library, books, prints, manuscripts,

* The ceiling of the front drawing-room was painted by Antonio Zucchi, A.R.A.: the chimney-piece is said to have cost £300. Garrick died in the back drawing-room, and his widow in the same house and room in 1822.

drawings, maps, models, plans and works of art, and the house and offices; providing for the admission of amateurs and students in painting, sculpture, and architecture; and general visitors. The entire collection cost Soane upwards of £50,000.

THE FIRST PARLIAMENT.

It was a great date for England, that of the First Parliament. There had been a Council of the great landholders, secular and ecclesiastic, from Anglo-Saxon times; and it is believed by some that the Commons were at least occasionally and to some extent represented in it. But it was during a civil war, which took place in the middle of the thirteenth century, marvellously like that which marked the middle of the seventeenth, being for law against arbitrary royal power, that the first parliaments, properly so called, were assembled. Matthew of Paris, in his *Chronicle*, first uses the word in reference to a council of the barons in 1246. At length, in December 1264, when that extraordinary man, Simon de Montfort Earl of Leicester—a mediæval Cromwell—held the weak King Henry III. in his power, and was really the head of the state, a parliament was summoned, in which there should be two knights for each county, and two citizens for every borough; the first clear acknowledgment of the Commons' element in the state. This parliament met on the 20th of January 1265, in that magnificent hall at Westminster* which still survives, so interesting a monument of many of the most memorable events of English history. The representatives of the Commons sat in the same place with their noble associates, probably at the bottom of the hall, little disposed to assert a controlling voice, not joining indeed in any vote, for we hear of no such thing at first, and far of course from having any adequate sense of the important results that were to flow from their appearing there that day. There, however, they were—an admitted Power, entitled to be consulted in all great national movements, and, above all, to have a say in the matter of taxation. The summer months saw Leicester overpowered, and himself and nearly all his associates slaughtered; many changes afterwards took place in the constitutional system of the country; but the *Commons*, once allowed to play a part in these great councils, were never again left out. Strange that other European states of high civilization and intelligence should be scarcely yet arrived at a principle of popular representation, which England, in comparative barbarism, realised for herself six centuries ago!

THE COLDEST DAY IN THE CENTURY, JAN. 20, 1838.

Notwithstanding the dictum of M. Arago, that 'whatever may be the progress of the sciences, never will observers who are trustworthy and careful of their reputation, venture to foretell the state of the weather,'—this pretension received a singular support in the winter of 1838. This was the first year in which the noted Mr Murphy

* Fabyan's *Chronicle*, i. 356.

published his *Weather Almanac*; wherein his indication for the 20th day of January is 'Fair. Prob. lowest deg. of Winter temp.' By a happy chance for him, this proved to be a remarkably cold day. At sunrise, the thermometer stood at 4° below zero; at 9 a.m., +6°; at 12 (noon), +14°; at 2 p.m., 16½°; and then increased to 17°, the highest in the day; the wind veering from the east to the south.

The popular sensation of course reported that the lowest degree of temperature for the season appeared to have been reached. The supposition was proved by other signal circumstances, and particularly the effects seen in the vegetable kingdom. In all the nursery-grounds about London, the half-hardy, shrubby plants were more or less injured. Herbaceous plants alone seemed little affected, in consequence, perhaps, of the protection they received from the snowy covering of the ground.

Two things may be here remarked, as being almost unprecedented in the annals of meteorology in this country: first, the thermometer below zero for some hours; and secondly, a rapid change of nearly fifty-six degrees.—*Correspondent of the Philosophical Magazine*, 1838.

Still, there was nothing very remarkable in Murphy's indication, as the coldest day in the year is generally about this time (January 20). Nevertheless, it was a fortunate hit for the weather prophet, who is said to have cleared £3000 by that year's almanac!

It may amuse the reader to see what were the results of Murphy's predictions throughout the year 1838:

	Days.	Decidedly wrong days.
January, partly right on	23	8
February	8	20
March	11	20
April	15	15
May	12	19
June	18	12
July	10	20
August	15	15
September	15	15
October	11	20
November	14	16
December	15	16

In Haydn's *Dictionary of Dates* it is recorded: 'Perhaps the coldest day ever known in London was December 25, 1796, when the thermometer was 16° below zero;' but contemporary authority for this statement is not given.

SKATING.

This seems a fair opportunity of adverting to the winter amusement of skating, which is not only an animated and cheerful exercise, but susceptible of many demonstrations which may be called elegant. Holland, which with its extensive water surfaces affords such peculiar facilities for it, is usually looked to as the home and birth-place of skating; and we do not hear of it in England till the thirteenth century. In the former country, as has been remarked in an early page of this volume, the use of skates is in great favour; and it is even taken advantage of as a

means of travelling, market-women having been known, for a prize, to go in this manner thirty miles in two hours. Opportunities for the exercise are, in Britain, more limited. Nevertheless, wherever a piece of smooth water exists, the due freezing of its surface never fails to bring forth hordes of enterprising youth to enjoy this truly inviting sport.

Skating has had its bone age before its iron one. Fitzstephen, in his *History of London*, tells us that it was customary in the thirteenth century for the young men to fasten the leg-bones of animals under their feet by means of thongs, and slide along the ice, pushing themselves by means of an iron-shod pole. Imitating the chivalric fashion of the tournament, they would start in a career against each other, meet, use their poles for a push or a blow, when one or other was pretty sure to be hurled down, and to slide a long way in a prostrate condition, probably with some considerable hurt to his person, which we may hope was generally borne with good humour. In Moorfields and about Finsbury, specimens of these primitive skates have from time to time been exhumed, recalling the time when these were marshy fields, which in winter were resorted to by the youth of London for the amusements which Fitzstephen describes. A pair preserved in the British Museum is here delineated.

PRIMITIVE BONE SKATES.

The iron age of skating—whenever it might come—was an immense stride in advance. A pair

of iron skates, made in the best modern fashion, fitted exactly to the length of the foot, and, well fastened on, must be admitted to be an instrument satisfactorily adapted for its purpose. With unskilled skaters, who constitute the great multitude, even that simple onward movement in which they indulge, using the *inner* edge of the skates, is something to be not lightly appreciated, seeing that few movements are more exhilarating. But this is but the *walk* of the art. What may be

called the *dance* is a very different thing. The highly trained skater aims at performing a series of movements of a graceful kind, which may be looked upon with the same pleasure as we experience from seeing a fine picture. Throwing himself on the *outer* edge of his instrument, poising himself out of the perpendicular line in attitudes which set off a handsome person to uncommon advantage, he performs a series of curves within a certain limited space, cuts the figure 8,

SKATING SCENE.

the figure 3, or the circle, *worms and screws* backwards and forwards, or with a group of companions goes through what he calls waltzes and quadrilles. The calmness and serenity of these movements, the perfect self-possession evinced, the artistic grace of the whole exhibition, are sure to attract bystanders of taste, including examples of the fair,—

—‘whose bright eyes
Rain influence.’

Most such performers belong to skating clubs,—fraternities constituted for the cultivation of the art *as an art*, and to enforce proper regulations. In Edinburgh, there is one such society of old standing, whose favourite ground is Duddingston Loch, under the august shadow of Arthur's Seat. The writer recalls with pleasure skating exhibitions which he saw there in the hard winters early in the present century, when Henry Cockburn

and the philanthropist James Simpson were conspicuous amongst the most accomplished of the club for their handsome figures and great skill in the art. The scene of that loch ‘in full bearing,’ on a clear winter day, with its busy stirring multitude of sliders, skaters, and curlers, the snowy hills around glistening in the sun, the ring of the ice, the shouts of the careering youth, the rattle of the curling stones and the shouts of the players, once seen and heard, could never be forgotten.

In London, the amusements of the ice are chiefly practised upon the artificial pieces of water in the parks. On Sunday the 6th of January 1861, during an uncommonly severe frost, it was calculated that of sliders and skaters, mostly of the humbler grades of the population, there were about 6000 in St James's Park, 4000 on the Round Pond in Kensington Gardens, 25,000 in the Regent's Park, and 30,000 on the Serpentine in

Hyde Park. There was, of course, the usual proportion of heavy falls, awkward collisions, and occasional immersions, but all borne good-humouredly, and none attended with fatal consequences. During the ensuing week the same pieces of ice were crowded, not only all the day, but by night also, torches being used to illuminate the scene, which was one of the greatest animation and gaiety. On three occasions there were refreshment tents on the ice, with gay flags, variegated lamps, and occasional fire-works; and it seemed as if half London had come to look on from the neighbouring walks and drives.

In these ice-festivals, as usually presented in London, there is not much elegant skating to be seen. The attraction of the scene consists mainly in the infinite appearances of mirth and enjoyment which meet the gaze of the observer.

The same frost period occasioned a very remarkable affair of skating in Lincolnshire. Three companies of one of the Rifle Volunteer regiments of that county assembled on the Witham, below the Stamp End Loch (December 29, 1860), and had what might be called a skating parade of several hours on the river, performing various evolutions and movements in an orderly manner, and on some occasions attaining a speed of fourteen miles an hour. In that province, pervaded as it is by waters, it was thought possible that, on some special occasion, a rendezvous of the local troops might be effected with unusual expedition in this novel way.

St. Agnes's Eve.

The feast of St Agnes was formerly held as in a special degree a holiday for women. It was thought possible for a girl, on the eve of St Agnes, to obtain, by divination, a knowledge of her future husband. She might take a row of pins, and plucking them out one after another, stick them in her sleeve, singing the whilst a paternoster; and thus insure that her dreams would that night present the person in question. Or, passing into a different country from that of her ordinary residence, and taking her right-leg stocking, she might knit the left garter round it, repeating:—

‘I knit this knot, this knot I knit,
To know the thing I know not yet,
That I may see
The man that shall my husband be,
Not in his best or worst array,
But what he weareth every day;
That I to-morrow may him ken
From among all other men.’

Lying down on her back that night, with her hands under her head, the anxious maiden was led to expect that her future spouse would appear in a dream and salute her with a kiss.

On this superstition, John Keats founded his beautiful poem, *The Eve of St Agnes*, of which the essence here follows:—

‘They told her how, upon St Agnes's Eve,
Young virgins might have visions of delight,
And soft adorings from their loves receive
Upon the honey'd middle of the night,
If ceremonies due they did aright;

140

As, supperless to bed they must retire,
And couch supine their beauties, lily white;
Nor look behind, nor sideways, but require
Of Heaven with upward eyes for all that they desire.

* * * * *

‘Out went the taper as she hurried in;
Its little smoke, in pallid moonshine, died:
She closed the door, she panted, all akin
To spirits of the air, and visions wide.
No utter'd syllable, or, woe betide!
But to her heart, her heart was voluble,
Paining with eloquence her balmy side;
As though a tongueless nightingale should swell
Her throat in vain, and die, heart-stuffed, in her dell.

‘A casement high and triple arch'd there was,
All garlanded with carven imag'ries
Of fruits, and flowers, and bunches of knot grass,
And diamonded with panes of quaint device
Innumerable of stains and splendid dyes,
As are the tiger-moth's deep damask'd wings;
And in the midst, 'mong thousand heraldries,
And twilight saints, with dim emblazonings,
A shielded scutcheon blush'd with blood of queens and kings.

‘Full on this casement shone the wintry moon,
And threw warm gules on Madeline's fair breast,
As down she knelt for Heaven's grace and boon;
Rose-bloom fell on her hands, together prest,
And on her silver cross soft amethyst,
And on her hair a glory, like a saint.

* * * * *

Her vespers done,
Of all its wreathed pearls her hair she frees;
Unclasps her warmed jewels one by one;
Loosens her fragrant bodice; by degrees
Her rich attire creeps rustling to her knees:
Half-hidden, like a mermaid in sea-weed,
Pensive awhile she dreams awake, and sees,
In fancy, fair St Agnes in her bed,
But dares not look behind, or all the charm is fled.

‘Soon, trembling in her soft and chilly nest,
In sort of wakeful swoon, perplex'd she lay;
Until the popped warmth of sleep oppress'd
Her soothed limbs, and soul fatigued away;
Flown, like a thought, until the morrow day,
Blissfully haven'd both from joy and pain;
Clasp'd like a missal where swart Paynims pray;
Blinded alike from sunshine and from rain,
As though a rose should shunt, and be a bud again.

‘Stol'n to this paradise, and so entranced,
Porphyro gaz'd upon her empty dress,
And listened to her breathing.

* * * * *

He took her hollow lute,—
Tumultuous,—and, in chords that tenderest be,
He played an ancient ditty, long since mute,
In Provence call'd “La belle dame sans mercy:”
Close to her ear tonching the melody;—
Wherewith disturb'd, she utter'd a soft moan:
He ceased—she panted quick—and suddenly
Her blue affrayed eyes wide open shone:
Upon his knees he sank, pale as smooth-sculptured
stone.

‘Her eyes were open, but she still beheld,
Now wide awake, the vision of her sleep:
There was a painful change, that night expell'd
The blisses of her dream so pure and deep,
At which fair Madeline began to weep,
And moan forth witless words with many a sigh;
While still her gaze on Porphyro would keep;
Who knelt, with joined hands and piteous eye,
Fearing to move or speak, she look'd so dreamingly.

“ Ah, Porphyro !” said she, “ but even now
Thy voice was at sweet tremble in mine ear,
Made tuneable with every sweetest vow ;
And those sad eyes were spiritual and clear :
How changed thou art ! how pallid, chill, and
drear !

Give me that voice again, my Porphyro,
Those looks immortal, those complainings dear !
Oh, leave me not in this eternal woe,
For if thou diest, my love, I know not where to go.”

‘ Beyond a mortal man impassion’d far
At these voluptuous accents, he arose,
Ethereal, flush’d, and like a throbbing star,
Seen ’mid the sapphire heaven’s deep repose,
Into her dream he melted, as the rose
Blendeth its odour with the violet,—
Solution sweet : meantime the frost-wind blows,
Like Love’s alarm pattering the sharp sleet
Against the window-panes.

* * * * *

“ Hark ! ’tis an elfin-storm from faëry land,
Of haggard seeming, but a boon indeed.
Arise—arise ! the morning is at hand ;—
Let us away, my love, with happy speed.—

* * * * *

And they are gone : ay, ages long ago
These lovers fled away into the storm.’

JANUARY 21.

St Fructuosus, 259. St Agnes, virgin-martyr, 304 or
305. St Epiphanius, 497. St Vimin, or Vivian (?),
615. St Publius.

ST AGNES.

St Agnes—than whom there is no saint more
revered by the Romish church—is usually de-
scribed as a young Roman girl, who suffered
savage persecution, and finally martyrdom, under
Dioclesian. Upon the place of her supposed
death, a church was built, and may still be seen
without the walls of Rome ; another was dedicated
to her within the city. There is at Rome an
annual procession in her honour, when a lamb,
highly decorated, is led through the city. The
connection of her name with the Latin for a lamb
(*agnus*) has probably led to the association of this
animal with her memory.

Born.—Henry VII., King of England, *Pembroke Castle*,
1456 ; Thomas Lord Erskine, 1750 ; Admiral William
Smyth, 1788.

Died.—Miles Coverdale, translator of the Scriptures,
1568 ; Joseph Sealiger, 1609 ; James Quin, actor, *Bath*,
1766 ; J. H. Bernard de St Pierre, 1814 ; Dr Robert
Maenish, miscellaneous writer, 1837 ; Henry Hallam, his-
torian, 1859.

ERRONEOUS ESTIMATES OF AGES.

Partly from the crafty and astute character of
the man, partly from the tedious bad health
of his latter years, partly perhaps from our hear-
ing of him so much in the relation of a father, we
always think of Henry VII. as an elderly person.
Yet he died in the fifty-third year of his age.
There is something of the like illusion regarding
several other royal personages in English history.
For example, the deposed Henry VI. is usually
thought of as a man well up in years at the time

of his death ; but he never got beyond his
forty-sixth. His ancestor John of Gaunt, whom
(following Shakspeare) we think of as ‘ time-
honoured Lancaster,’ died at fifty-nine. At the
same period of life died James I., whom we always
represent to ourselves as an old man. The man-
ner in which historical personages are spoken of,
in respect of age, by their contemporaries, has
helped us in some measure into this illusion.
Malone remarks as follows : ‘ Our ancestors, in
their estimate of old age, appear to have estimated
somewhat differently from us, and to have con-
sidered men as old whom we should now esteem
middle-aged. With them every man who had
passed fifty seems to have been accounted an old
man. King Henry is represented as old by
Daniel, in his poem of *Rosamond*. Henry was
born in 1133, and died in 1189, at the age of
fifty-six. Robert Earl of Leicester is called an
old man by Spenser in a letter to Gabriel Harvey
in 1582, at which time Leicester was not fifty
years old ; and the French Admiral Coligny is
represented by his biographer Lord Huntington,
as a very old man, though at the time of his death
he was but fifty-three.’

LORD ERSKINE.

It is well known that Lord Erskine had experi-
enced what he considered as a ghostly visitation.
The circumstances, as related by himself, are given
in Lady Morgan’s *Book of the Boudoir*.

‘ When I was a very young man, I had been for
some time absent from Scotland. On the morning
of my arrival in Edinburgh, as I was descending
the steps of a close, or coming out from a book-
seller’s shop, I met our old family butler. He
looked greatly changed, pale, wan, and shadowy
as a ghost. “ Eh ! old boy,” I said, “ what brings
you here ?” He replied, “ To meet your honour,
and solicit your interference with my lord,
to recover a sum due to me, which the steward at
the last settlement did not pay.” Struck by his
looks and manner, I bade him follow me to the
bookseller’s, into whose shop I stepped back ; but
when I turned round to speak to him, he had
vanished.

‘ I remembered that his wife carried on some
little trade in the Old Town. I remembered even
the house and flat she occupied, which I had
often visited in my boyhood. Having made it
out, I found the old woman in widow’s mourning.
Her husband had been dead for some months,
and had told her on his death-bed, that my
father’s steward had wronged him of some
money, but that when Master Tom returned, he
would see her righted. This I promised to do,
and shortly after I fulfilled my promise. The
impression was indelible.—’*

An amusing circumstance regarding Lord
Erskine arose from his becoming possessed of a
Sussex estate, which grew nothing but stunted
birches, and was found totally irreclaimable.
That it might not be wholly a loss to him, he

* Lord Erskine was born in 1750, and entered the navy
as a midshipman at the age of fourteen : at eighteen he
transferred his services to the army, and at twenty-seven
settled in the study of that profession in which he acquired
such celebrity. He died in 1823.

commenced getting the birches converted into brooms, which were sold throughout the country. One of the broom-sellers being taken before a magistrate for acting thus without a licence, Erskine went to defend him, and contended there was a clause to meet this very case. Being asked which it was, he answered, "The *sweeping* clause, your worship, which is further fortified by a proviso, that "nothing herein contained shall prevent any proprietor of land from vending the produce thereof in any manner that to him shall seem fit."

DEATH OF LOUIS XVI.

The 21st of January will long be a memorable day in the history of France, as that on which an agonised nation, driven frantic by the threats of external enemies, threw down the bloody head of their king as a gage of defiance to all gainsayers. Innocent and amiable, but fallen upon evil times, Louis XVI. warmly engages our interest, as a victim who suffered for the evil doings of those who went before him. The story of his imprisonment and death, including the final parting with his family, is one of the saddest ever put on record.

Early on a gloomy winter morning, Paris was astir with the movements of large bodies of troops, forming a guard along the line by which the unfortunate king was conducted from his prison to the scaffold. He had made all religious preparations for death; yet is believed to have still entertained some hope of a rescue, it being understood that five hundred devoted adherents had vowed to interfere in his behalf even at the scaffold. Hence his last moments did not exhibit that serenity and meek submission which would have best become an innocent sufferer. There may, however, be room for debate as to the exact degree in which an unsubmitive spirit manifested itself. Somewhat to the surprise of our generation, it is thus described in Louis Blanc's *Histoire de la Révolution Française*, tom. viii., published in 1856:—

'At ten minutes past ten, they reached the foot of the scaffold. It had been erected in front of the Palace of the Tuileries, in the square called after Louis the Fifteenth, and near the spot where stood the statue of the most corrupt of kings—a king who died tranquilly in his bed. The condemned was three minutes descending from the carriage. Upon quitting the Temple he had refused the redingote which Cléry had offered him, and now appeared in a brown coat, white waistcoat, grey breeches, and white stockings. His hair was not disordered, nor was any change perceptible in his countenance. The Abbé Firmont was dressed in black. A large open space had been kept round the scaffold,—with cannon ranged on every side,—while beyond, as far as the eye could reach, stood an unarmed multitude gazing. . . . Descending from his carriage, Louis fixed his eyes upon the soldiers who surrounded him, and with a menacing voice cried, "Silence!" The drums ceased to beat, but at a signal from their officer, the drummers again went on. "What treason is this?" he shouted; "I am lost! I am lost!" For it was evident that up to this moment he had been

clinging to hope. The executioners now approached to take off a part of his clothes; he repulsed them fiercely, and himself removed the collar from his neck. But all the blood in his frame seemed to be turned into fire when they sought to tie his hands. "Tie my hands!" he shrieked. A struggle was inevitable:—it came. It is indisputable, says Mercier, that Louis fought with his executioners. The Abbé Edgeworth stood by, perplexed, horrified, speechless. At last, as his master seemed to look inquiringly at him, he said, "Sir, in this additional outrage I only see a last trait of the resemblance between your Majesty and the God who will give you your reward." At these words the indignation of the man gave way to the humility of the Christian, and Louis said to the executioners, "I will drain the cup to the dregs." They tied his hands, they cut off his hair, and then, leaning on the arm of his confessor, he began, with a slow tread and sunken demeanour, to mount the steps, then very steep, of the guillotine. Upon the last step, however, he seemed suddenly to rouse, and walked rapidly across to the other side of the scaffold; when, by a sign commanding silence, he exclaimed, "I die innocent of the crimes imputed to me." His face was now very red, and, according to the narrative of his confessor, his voice was so loud that it could be heard as far as the Pont-Tournant. Some other expressions were distinctly heard, "I pardon the authors of my death, and I pray Heaven that the blood you are about to shed may never be visited upon France." He was about to continue, when his voice was drowned by the renewed rolling of the drums, at a signal which, it is affirmed, was given by the comedian Dugayon, in anticipation of the orders of Santerre. "Silence! be silent!" cried Louis the Sixteenth, losing all self-control, and stamping violently with his foot. Richard, one of the executioners, then seized a pistol, and took aim at the king. It was necessary to drag him along by force. With difficulty fastened to the fatal plank, he continued to utter terrible cries, only interrupted by the fall of the knife.

THE FATE OF CAPTAIN ALLEN GARDINER.

It was a mournful spectacle that met the eyes of the crew of H.M.S. *Dido*, when, on the 21st of January, 1852, they found the remains of Captain Allen Gardiner and his hapless companions, on the dismal shore of Terra del Fuego, at the southern extremity of America. First came to light some direction, rudely written on a rock; then a boat lying on the beach at the mouth of a small river; then the unburied bodies of Gardiner and his friend Maidment; then a packet of papers and books; then the shattered remains of another boat, with part of her gear and stores, and various articles of clothing; then two more dead bodies; and lastly, the graves of the rest of the party.

Allen Gardiner was a remarkable man; one of those in whom the hardy seaman is combined with the deeply pious Christian: so strongly imbued, indeed, was he with piety, that the last years of his life were those of a missionary rather than of a sea-captain. He made many attempts

at rescuing barbarous tribes from heathendom in various parts of the world. On returning from one of his voyages, in 1849, Gardiner formed a plan for sending out a missionary ship to Terra del Fuego, in the hope of Christianizing the rude Fuegians and Patagonians. During a year or more his efforts were unavailing. First the Moravian Brethren, then the Scottish National Church, declined to enter into his views. At last, a lady at Cheltenham provided him with £700; and this, with £300 from his own private purse, formed the resources on which he acted. Unable to afford a brigantine or schooner, as he had wished, he contented himself with four open boats, which he caused to be built at Liverpool. Two of these were launches of considerable size, named by him the *Pioneer* and the *Speedwell*; the other two were small dingies, used as tenders or luggage boats. He sought and found six companions willing to share his perilous enterprise—a surgeon, a missionary, and four hardy, God-fearing Cornish boatmen. In September 1850, the ship *Ocean Queen*, bound from Liverpool to California, took out Gardiner, his companions, his boats, and six months' provisions. They were landed on the inhospitable foreign shore on the 5th of December.

From the day when the *Ocean Queen* left them to pursue her voyage round Cape Horn, the eye of no civilized man ever saw these brave sailor-missionaries alive. All that is known of them has been gathered from the papers subsequently found. Their life must have been one of continual hardship, cheered by nothing but the consciousness of a good motive. Seven men, in four open boats, went to convert barbarians, whose language they did not understand, and in a country singularly bare of food. Such was the enterprise, noble in intent, but deficient in practical foresight. They soon found the boats to be much encumbered with stores, and the *Pioneer* somewhat leaky. In several short voyages from island to island, and from shore to shore, they encountered numberless mishaps. Sometimes the natives came down to the beach and drove them away; sometimes they appeared more friendly, but robbed those whose mission they could not of course understand. During a storm both dingies were lost, with their contents; during another, the anchors and the spare timber were lost. Next, they found that all their gun-powder had been forgetfully left behind in the *Ocean Queen*, and that they had no means of shooting birds or other animals for food. Thus wore away the month of January, 1851. So far from their missionary labours having been begun, it was with them a struggle for the maintenance of their own lives. As time advanced, their dangers were increased. On the 1st of February their poor *Pioneer* was shattered during a storm; and now they had only the *Speedwell* to voyage in—a boat whose name almost mocked them in their misery. From this day their anxious eyes were turned, not to the rude Fuegians, but to the arrival of some ship from England with succour. Arrangements had been made for sending out further supplies to them; Gardiner and his companions did not know of the various mischances that retarded (till too late) the carrying out of

these plans. Some of the men became ill with the scurvy; some lived in a cavern, that the boats might become more comfortable as hospitals for the others. A few fish and fowl were caught; but nothing that required shooting. So March and April passed: and then the Antarctic winter began, adding snow and ice to their other troubles. From the middle of May they were all put on short allowance, owing to the rapid disappearance of their six months' stores. At the end of June one of the brave Cornishmen, Badcock, died, worn out with scurvy. There is an entry in Gardiner's diary, about the end of June, enumerating the articles still left; and among them were 'six mice,' concerning which he said: 'The mention of this last item in our list of provisions may startle some of our friends, should it ever reach their ears; but circumstanced as we are, we partake of them with a relish, and have already eaten several of them; they are very tender, and taste like rabbit.' A solitary penguin, a dead fox, a half-devoured fish thrown up on shore,—all were welcomed by the half-starved men.

When August arrived, the strength of all was nearly exhausted. A few garden seeds were made into a kind of gruel; and mussel-broth was served to the invalids. Captain Gardiner himself lived on mussels for a fortnight, and was then compelled to give up this diet. He was about to lie down resignedly to die, when the discovery of a kind of rock-weed gave him a little further respite. On the 23rd, Erwin the boatman died, exhausted by hunger and disease; and on the 26th another boatman, Bryant, followed him. Pearce, the remaining boatman, went nearly mad at the loss of his companions. Mr Maidment, the missionary, had just strength sufficient to dig a grave and deposit the last remains of the two poor fellows in it. He then made a pair of crutches with two sticks, on which Captain Gardiner might lean while walking a little; for these two, with their cavern and their shattered *Pioneer*, were at some little distance from the *Speedwell*; and Gardiner wished that he and the remnant of his little band, if God willed them to die on that dismal spot, should at least die in companionship. It was not to be, however; his strength failed him too soon, and he returned to the cavern. The heroic, unrepining Maidment died on the 2nd of September. Gardiner was helpless: there was no Maidment to find a bit of food for him, and he could not rise to search for it himself. Hunger on the 3rd and 4th, hunger on the 5th and 6th; no food; and only just strength enough to write a few lines on paper which he hoped might one day reach friendly hands. It is supposed that he sank into the arms of death on the evening of the 6th, but none was near to make the record; nor can we know whether the remaining two of the unfortunate band (Mr Williams the surgeon, and Pearce the boatman, who were in or near the *Speedwell*) died a little before or a little after their chief. The difference of date could not be much; for health, strength, and food were alike wanting to all.

It matters little here to notice by what cross-purposes supplies of food and other necessities failed to reach Patagonia till too late. When Captain Moorshead, in the *Dido*, touched at that

spot, (which he was permitted by the Government to do, on the earnest solicitation of Gardiner's friends,) various writings guided him from place to place, till he came to the poor shattered *Pioneer*. 'Captain Gardiner's body was lying beside the boat, which apparently he had left, and being too weak to climb into it again, had died by the side of it. We were directed to the cavern by a hand painted on the rock, with Psalm lxii. 5-8, under it.' Mr Maidment's body was found in the cavern.

Here is the last scene of the tragedy. 'Their remains,' says Captain Moorshead, speaking of the seven deceased men, 'were collected together and buried close to the spot, and the funeral service read by Lieutenant Underwood. A short inscription was placed on the rock near his own text; the colours of the boats and ships were struck half mast; and three volleys of musketry were the only tribute of respect I could pay to this lofty-minded man and his devoted companions.'

JANUARY 22.

St Vincent, martyr at Valencia, 304. St Anastasius, martyr in Assyria, 628.

ST VINCENT.

Vineent was a Spanish saint, martyred under the proconsul Dacian in the fourth century. The recital of his pious serenity and cheerfulness under unheard-of tortures, is very striking. After having been cruelly broiled over a fire, he was put into a dungeon, bound in stocks, and left without provisions. 'But God,' says Butler, 'sent his angels to comfort him, with whom he sung the praises of his protector. The gaoler, observing through the chinks the prison filled with light, and the saint walking and praising God, was converted upon the spot to the Christian faith, and afterwards baptized.' The bones of the martyr were afterwards kept with the utmost veneration, and Butler speaks of some parts of the body as being still preserved in religious houses in France.

St Vincent's Day.

It is not surprising that a saint with such a history as that of St Vincent should have made a deep impression on the popular mind, and given rise to superstitious ideas. The ancient remark on his day was couched in somewhat obscure terms: 'Vincenti festo, si sol radiet, memor esto;' merely calling us to remember if the sun shone on that day. The matter was a mystery to modern investigators of folk lore, till a gentleman residing in Guernsey, looking through some family documents of the sixteenth century, found a scrap of verse expressed in old provincial French:

'Prens garde au jour St Vincent,
Car, sy ce jour tu vois et sent
Que le soleil soiet cler et biau,
Nous érons du vin plus que l'eau.' *

* Notes and Queries, ix. 307.

Not, as might at first sight be supposed, an intimation to *bon-vivants*, that in that case there would be a greater proportion of wine than of water throughout the year, but a hint to the vine-culturing peasantry that the year would be a dry one, and favourable to the vintage. It will be found that St Vincent's is not the only day from whose weather that of the future season is prognosticated.

Born.—Francis Bacon, Lord Verulam, 1561; Sir Robert Cotton, 1570; P. Gassendi, 1592; Gotthold Lessing, 1729; George Lord Byron, *London*, 1788.

Died.—George Steevens, editor of Shakspeare, *Hampstead*, 1800; John F. Blumenbach, physiologist, 1840; Richard Westall, painter, 1850.

FRANCIS BACON.

Ours is a white-washing age, and, perhaps, to speak in all seriousness, justice and generosity alike do call for the reconsideration of some of the verdicts of the past. Bacon—whose intellectual greatness as the expositor of the inductive philosophy has always been admitted, but whose bribe-receiving as a judge has laid him open to the condemnation of Pope, as

'The wisest, greatest, meanest of mankind'—

has found a defender in these latter days in Mr Hepworth Dixon. The great fact which stares us in the face is, that Bacon, when about to be

MONUMENT TO LORD BACON.

prosecuted for bribe-receiving by the House of Lords, gave in a paper, in which he used the words: 'I confess that I am guilty of corruption, and do renounce all defence, and put myself upon the grace and mercy of your lordships.' One would think this fact, followed as it duly was by his degradation from the post of Lord Chancellor,

enough to appal the most determined white-washer. Nevertheless, Mr Dixon has come valiantly to the rescue, and really made out a wonderfully good case for his client.

His explanations chiefly come to this: the wife of the king's favourite, the Duke of Buckingham, wished to get Bacon's place for a friend of her own; and Coke, a rival and enemy of Bacon, made common cause with her grace. In the loose and bad practice of that age, when it was customary to give presents even to royalty every new-year's morning, and influence and patronage were sought in all directions by these means, it was not difficult to get up a charge against a chancellor so careless and indifferent to concealment as Bacon. He, taken at a disadvantage under sickness, at first met the twenty-two cases of alleged bribery with an indignant declaration of his innocence of all beyond failing in some instances to inform himself whether the cause was fully at an end before receiving the alleged gift. And it really did, after all, appear that only in three instances was the case still before the court at the time when the gifts were made; and in these there were circumstances fully shewing that no thought of bribery was entertained, nor any of its ordinary results experienced. Bacon, however, was soon made to see that his ruin was determined on, and unavoidable; while by yielding to the assault he might still have hopes from the king's grace. Thus was he brought to make the confession which admitted of a certain degree of guilt; in consequence of which he was expelled the House of Peers, prohibited the court, fined forty thousand pounds, and cast into the Tower. The guilt which he admitted, however, was not that of taking bribes to pervert justice, but that of allowing fees to be paid into his court at irregular times.

Mr Dixon says: 'A series of public acts in which the King and Council concurred, attested the belief in his substantial innocence. By separate and solemn acts he was freed from the Tower; his great fine was remitted; he was allowed to reside in London; he was summoned to take his seat in the House of Lords. Society reversed his sentence even more rapidly than the Crown. When the fight was over, and Lord St Albans was politically a fallen man, no contemporary who had any knowledge of affairs ever dreamt of treating him as a convicted rogue. The wise and noble loved him, and courted him more in his adversity than they had done in his days of grandeur. No one assumed that he had lost his virtue because he had lost his place. The good George Herbert held him in his heart of hearts; an affection which Bacon well repaid. John Selden professed for him unmeasurable veneration. Ben Jonson expressed, in speaking of him after he was dead, the opinion of all good scholars, and all honest men: "My conceit of his person," says Ben, "was never increased towards him by his place or honours; but I have and do reverence him for the greatness that was proper only to himself, in that he seemed to me ever by his work one of the greatest of men, and most worthy of admiration that hath been in many ages. In his adversity, I ever prayed that God would give him strength, for greatness he

could not want. Neither could I condole in a word or syllable for him, as knowing no accident could do harm to virtue, but rather help to make it manifest."'

In the dedication of his *Essays* to the Duke of Buckingham, Bacon uses this expression: 'I do conceive that the Latin volume of them, being in the universal language, may last as long as books last.'

The present writer once, at a book-sale, lighted upon a copy of the *Essays*, which bore the name of Adam Smith as its original owner. It contained a note, in what he presumes to have been the writing of Mr Smith on this passage, as follows: 'In the preface, what may by some be thought vanity, is only that laudable and innate confidence which any good man and good writer possesses.'

SIR ROBERT BRUCE COTTON, AND THE COTTONIAN LIBRARY.

The life and labours of this distinguished man present a remarkable instance of the application of the study of antiquities to matters of political importance and public benefit. Descended from an ancient family, he was born at Denton, in Huntingdonshire, and educated at Trinity College, Cambridge. Having settled in London, he there formed a society of learned men attached to antiquarian pursuits, and soon became a diligent collector of records, charters, and other instruments relating to the history of his country; a vast number of which had been dispersed among private hands at the dissolution of the monasteries. In the year 1600, we find Cotton assisting Camden in his *Britannia*; and in the same year he wrote an Abstract of the question of Precedency between England and Spain, in consequence of Queen Elizabeth having desired the thoughts of the Society already mentioned upon that point. Cotton was knighted by James I., during whose reign he was much consulted by the privy councillors and ministers of state upon difficult points relating to the constitution. He was also employed by King James to vindicate Mary Queen of Scots from the supposed misrepresentations of Buchanan and Thuanus; and he next, by order of the king, examined, with great learning, the question whether the Papists ought, by the laws of the land, to be put to death or to be imprisoned. From his intimacy with Carr, Earl of Somerset, he was suspected by the Court of having some knowledge of the circumstances of Sir Thomas Overbury's death; and he was consequently detained in the custody of an alderman of London for five months, and interdicted the use of his library. He sat in the first parliament of King Charles I., for whose honour and safety he was always zealous. In the following year, a manuscript tract, entitled *How a Prince may make himself an absolute Tyrant*, being found in Cotton's library, though unknown to him, he was once more parted from his books by way of punishment. These harassing persecutions led to his death, at Cotton House, in Westminster, May 6, 1631. His library, much increased by his son and grandson, was sold to the Crown

with Cotton House (at the west end of Westminster Hall); but in 1712, the mansion falling into decay, the library was removed to Essex House, Strand; thence, in 1730, to Ashburnham House, Westminster, where, by a fire, upwards of 200 of the MSS. were lost, burnt, or defaced; the remainder of the library was removed into the new dormitory of the Westminster School, and, with Major Edwards's bequest of 2000 printed volumes, was transferred to the British Museum. The Cottonian collection originally contained 938 volumes of Charters, Royal Letters, Foreign State Correspondence, and Ancient Registers. It was kept in cases, upon which were the heads of the Twelve Caesars; above the cases were portraits of the three Cottons, Spelman, Camden, Lambard, Speed, &c., which are now in the British Museum collection of portraits. Besides MSS. the Cottonian collection contained Saxon and English coins, and Roman and English antiquities, all now in the British Museum. Camden, Speed, Raleigh, Selden, and Bacon, all drew materials from the Cottonian library; and in our time the histories of England, by Sharon Turner and Lingard, and numerous other works, have proved its treasures unexhausted.

THE SOUTH SEA BUBBLE.

This day, in the year 1720, inaugurated the most monstrous commercial folly of modern times—the famous *South Sea Bubble*.

In the year 1711, Harley, Earl of Oxford, with the view of restoring public credit, and discharging ten millions of the floating debt, agreed with a company of merchants that they should take the debt upon themselves for a certain time, at the interest of six per cent., to provide for which, amounting to £600,000 per annum, the duties upon certain articles were rendered permanent. At the same time was granted the monopoly of trade to the South Seas, and the merchants were incorporated as the South Sea Company; and so proud was the minister of his scheme, that it was called, by his flatterers, 'the Earl of Oxford's masterpiece.' In 1717, the Company's stock of ten millions was authorised by Parliament to be increased to twelve millions, upon their advancing two millions to Government towards reducing the national debt. The name of the Company was thus kept continually before the public; and though their trade with the South American States was not profitable, they continued to flourish as a monetary corporation. Their stock was in high request; and the directors, determined to fly at high game, proposed to the Government a scheme for no less an object than the paying off the national debt; this proposition being made just on the explosion in Paris of its counterpart, the Mississippi scheme of the celebrated John Law. The first propounder of the South Sea project was Sir John Blount, who had been bred a scrivener, and was a bold and plausible speculator. The Company agreed to take upon themselves the debt, amounting to £30,981,712, at five per cent. per annum, secured until 1727, when the whole was to become redeemable at the pleasure of the Legislature, and the interest to be reduced to four per cent. Upon the 22nd of January 1720, the House of Commons,

in a committee, received the proposal with great favour; the Bank of England was, however, anxious to share in the scheme, but, after some delay, the proposal of the Company was accepted, and leave given to bring in the necessary Bill.

At this crisis an infatuation regarding the South Sea speculation began to take possession of the public mind. The Company's stock rose from 130 to 300, and continued to rise while the Bill was in progress. Mr Walpole was almost the only statesman in the House who denounced the absurdity of the measure, and warned the country of the evils that must ensue; but his admonition was entirely disregarded.

Meanwhile, the South Sea directors and their friends, and especially the chairman of the Company, Blount, employed every stratagem to raise the price of the stock. It was rumoured that Spain would, by treaty with England, grant a free trade to all her colonies, and that silver would thus be brought from Potosi, until it would be almost as plentiful as iron; also, that for our cotton and woollen goods the gold mines of Mexico were to be exhausted. The South Sea Company were to become the richest the world ever saw, and each hundred pound of their stock would produce hundreds per annum to the holder. By this means the stock was raised to near 400; it then fluctuated, and settled at 330, when the Bill was passed, though not without opposition.

Exchange Alley was the seat of the gambling fever; it was blocked up every day by crowds, as were Cornhill and Lombard-street with carriages. In the words of the ballads of the day:

'There is a gulf where thousands fell,
There all the bold adventurers came;
A narrow sound, though deep as hell,
'Change Alley is the dreadful name.'—*Swift*.

'Then stars and garters did appear
Among the meaner rabble;
To buy and sell, to see and hear
The Jews and Gentiles squabble.
The greatest ladies thither came,
And plied in chariots daily,
Or pawned their jewels for a sum
To venture in the Alley.'

On the day the Bill was passed, the shares were at 310; next day they fell to 290. Then it was rumoured that Spain, in exchange for Gibraltar and Port Mahon, would give up places on the coast of Peru; also that she would secure and enlarge the South Sea trade, so that the company might build and charter any number of ships, and pay no per-centage to any foreign power. Within five days after the Bill had become law, the directors opened their books for a subscription of a million, at the rate of £300 for every £100 capital; and this first subscription soon exceeded two millions of original stock. In a few days, the stock advanced to 340, and the subscriptions were sold for double the price of the first payment. Then the directors announced a mid-summer dividend of ten per cent. upon all subscriptions. A second subscription of a million at 400 per cent. was then opened, and in a few hours a million and a half was subscribed for.

Meanwhile, innumerable bubble companies started up under the very highest patronage.

The Prince of Wales, becoming governor of one company, is said to have cleared £40,000 by his speculations. The Duke of Bridgewater and the Duke of Chandos were among the schemers. By these deceptive projects, which numbered nearly a hundred, one million and a half sterling was won and lost by crafty knaves and covetous fools. The absurdity of the schemes was palpable: the only policy of the projectors was to raise the shares in the market, and then to sell out, leaving the bubble to burst, perhaps, next morning. One of the schemes was 'A company for carrying on an undertaking of great advantage, but nobody to know what it is: each subscriber, for £2 deposit, to be entitled to £100 per annum per share; of this precious scheme 1000 shares were taken in six hours, and the deposits paid.

In all these bubbles, persons of both sexes alike engaged; the men meeting their brokers at taverns and coffee-houses, and the ladies at the shops of milliners and haberdashers; and such was the crowd and confusion in Exchange Alley, that shares in the same bubble were sold, at the same instant, ten per cent. higher at one end of the Alley than at the other. All this time Walpole continued his gloomy warnings, and his fears were impressed upon the Government; when the King, by proclamation, declared all unlawful projects to be public nuisances, and to be prosecuted accordingly, and any broker trafficking in them to be liable to a penalty of £5000. Next, the Lords Justices dismissed all petitions for patents and charters, and dissolved all the bubble companies. Notwithstanding this condemnation, other bubbles sprang up daily, and the infatuation still continued. Attempts were made to ridicule the public out of their folly by caricature and satire. Playing-cards bore caricatures of bubble companies, with warning verses, of which a specimen is annexed, copied from a print called *The Bubbler's Medley*.

In the face of such exposures, the fluctuations of the South Sea stock grew still more alarming. On the 28th of May it was quoted at 550, and in four days it rose to 890. Then came a tremendous rush of holders to sell out; and on June 3, so few buyers appeared in the Alley, that stock fell at once from 890 to 640. By various arts of the directors to keep up the price of stock, it finally rose to 1000 per cent. It then became known that Sir John Blount, the chairman, and others, had sold out; and the stock fell throughout the month of August, and on September 2 it was quoted at 700 only.

The alarm now greatly increased. The South Sea Company met in Merchant Taylors' Hall, and endeavoured to appease the unfortunate holders of stock, but in vain: in a few days the price fell to 400. Among the victims was Gay, the poet, who, having had some South Sea stock presented to him, supposed himself to be master of £20,000. At that crisis his friends importuned him to sell, but he rejected the counsel: the profit and principal were lost, and Gay sunk under the calamity, and his life became in danger.

The ministers grew more alarmed, the directors were insulted in the streets, and riots were ap-

prehended. Despatches were sent to the king at Hanover, praying his immediate return. Walpole was implored to exercise his influence with the Bank of England, to induce them to relieve the Company by circulating a number of South Sea bonds. To this the Bank reluctantly con-

resented, but the remedy failed: the South Sea stock fell rapidly: a run commenced upon the most eminent goldsmiths and bankers, some of whom, having lent large sums upon South Sea stock, were obliged to abscond. This occasioned a great run upon the Bank, but the intervention of a holiday gave them time, and they weathered the storm. The South Sea Company were, however, wrecked, and their stock fell ultimately to 150; when the Bank, finding its efforts unavailing to stem the tide of ruin, contrived to evade the loosely-made agreement into which it had partially entered.

Public meetings were now held all over England, praying the vengeance of the Legislature upon the South Sea directors, though the nation was as culpable as the Company. The king returned, and parliament met, when Lord Molesworth went so far as to recommend that the people, having no law to punish the directors, should treat them like Roman parricides—tie them in sacks, and throw them into the Thames. Mr Walpole was more temperate, and proposed inquiry, and a scheme for the restoration of public credit, by engrafting nine millions of South Sea stock into the Bank of England, and the same into the East India Company; and this plan became law. At the same time a Bill was brought in to restrain the South Sea directors, governor, and other officers, from leaving the

kingdom for a twelvemonth; and for discovering their estates and effects, and preventing them from transporting or alienating the same. A strange confusion ensued: Mr Secretary Craggs was accused by Mr Shippen, 'downright Shippen,' of collusion in the South Sea business, when he promised to explain his conduct, and a committee of inquiry was appointed. The Lords had been as active as the Commons. The Bishop of Rochester likened the scheme to a pestilence; and Lord Stanhope said that every farthing possessed by the criminals, directors or not, ought to be confiscated, to make good the public losses. The cry out-of-doors for justice was equally loud: Mr Aislable, the Chancellor of the Exchequer, and Mr Craggs, were openly accused: five directors, including Mr Edward Gibbon, the grandfather of the celebrated historian, were ordered to the custody of the Black Rod, and the Chancellor absented himself from parliament until the charge against him had been inquired into. Meanwhile, Knight, the treasurer of the Company, taking with him the books and documents, and secrets of the directors, escaped disguised in a boat on the Thames, and was conveyed thence to Calais, in a vessel hired for the purpose. Two thousand pounds' reward was, by royal proclamation, offered for his apprehension. The doors of the House of Commons were locked, and the keys placed upon the table, and the inquiry proceeded. The South Sea directors and officers were secured; their papers were seized, and such as were Members of Parliament were expelled the House, and taken into custody. Sir John Blount was examined, but little could be drawn from him; and Lord Stanhope, in replying to a reflection made upon him by the Duke of Wharton, spoke with such vehemence that he fell into a fit, and on the next evening expired. Meanwhile, the treasurer of the Company was apprehended near Liège, and lodged in the citadel of Antwerp; but the States of Brabant refused to deliver him up to the British authorities, and ultimately he escaped from the citadel. There is an admirable caricature of this manœuvre, entitled 'The Brabant Skreen,' in which the Duchess of Kendal, from behind the screen, is supplying Knight with money, to enable him to effect his escape.

On the 10th of February, the Committee of Secrecy reported to Parliament the results of their inquiry, shewing how false and fictitious entries had been made in the books, erasures and alterations made, and leaves torn out; and some of the most important books had been destroyed altogether. The properties of many thousands of persons, amounting to many millions of money, had been thus made away with. Fictitious stock had been distributed among members of the Government, by way of bribe, to facilitate the passing of the Bill: to the Earl of Sunderland was assigned £50,000; to the Duchess of Kendal, £10,000; to Mr Secretary Craggs, £30,000. Mr Charles Stanhope, one of the Secretaries to the Treasury, had received £250,000, as the difference in the price of some stock, and the account of the Chancellor of the Exchequer shewed £794,451. He had also advised the Company to make their second subscription a

million and a half, instead of a million, without any warrant. In the third subscription his name was down for £70,000; Mr Craggs, senior, for £659,000; the Earl of Sunderland for £160,000; and C. Stanhope for £47,000. Upon this report, the practices were declared to be corrupt, infamous, and dangerous, and a Bill was brought in for the relief of the unhappy sufferers. In the examination of the accused persons, Charles Stanhope was acquitted by a majority of three only, which caused the greatest discontent through the country. Mr Chancellor Aislable was, however, the greatest criminal, and without a dissentient voice he was expelled the House, all his estate seized, and he was committed a close prisoner to the Tower of London. Next day Sir George Caswall, of a firm of jobbers who had been implicated in the business, was expelled the House, committed to the Tower, and ordered to refund £250,000. The Earl of Sunderland was acquitted, lest a verdict of guilty against him should bring a Tory ministry into power; but the country was convinced of his criminality. Mr Craggs the elder died the day before his examination was to have come on. He left a fortune of a million and a half, which was confiscated for the benefit of the sufferers by the delusion which he had mainly assisted in raising. Every director was mulcted, and two millions and fourteen thousand pounds were confiscated, each being allowed a small residue to begin the world anew. As the guilt of the directors could not be punished by any known laws of the land, a Bill of Pains and Penalties—a retro-active statute—was passed. The characters of the directors were marked with ignominy, and exorbitant securities were imposed for their appearance. To restore public credit was the object of the next measure. At the end of 1720, the South Sea capital stock amounted to £37,800,000, of which the allotted stock only amounted to £24,500,000. The remainder, £13,300,000, was the profit of the Company by the national delusion. Upwards of eight millions were divided among the proprietors and subscribers, making a dividend of about £33 6s. 8d. per cent. Upon eleven millions, lent by the Company when prices were unnaturally raised, the borrowers were to pay 10 per cent., and then be free; but it was long before public credit was thoroughly restored.

There have been many bubble companies since the South Sea project, but none of such enormity as that national delusion. In 1825, over-speculation led to a general panic; in 1836, abortive schemes had nearly led to results as disastrous; and in 1845, the grand invention of the railway led to a mania which ruined thousands of speculators. But none of these bubbles was countenanced by those to whom the government of the country was entrusted, which was the blackest enormity in the South Sea Bubble.

The powerful genius of Hogarth did not spare the South Sea scheme, as in the emblematic print here engraved, in which a group of persons riding on wooden horses, the devil cutting fortune into collops, and a man broken on the wheel, are the main incidents,—the scene being at the base of a monument of the folly of the age. Beneath are some rhymes, commencing with

'See here the causes why in London
So many men are made and undone.'

The scene in Exchange Alley has also been

excellently painted in our time by Mr E. M. Ward, R.A., with the motley throng of beaux and ladies turned gamblers, and the accessory

THE SOUTH SEA BUBBLE.—CARICATURE BY HOGARTH.

pawnbroker's shop, in a truly Hogarthian spirit. The picture is in the Vernon collection, South Kensington.

ANCIENT WIDOWS.

January 22, 1753, died at Broomlands, near Kelso, Jean Countess of Roxburgh, aged 96. No way remarkable in herself, this lady was notable in some external circumstances. She had undergone one of the longest widowhoods of which any record exists—no less than seventy-one years; for her first and only husband, Robert third Earl of Roxburgh, had been lost in the *Gloucester* frigate, in coming down to Scotland with the Duke of York, on the 7th of May 1682. She must also have been one of the last surviving persons born under the Commonwealth. Her father, the first Marquis of Tweeddale, fought at Long Marston Moor in 1644.

Singular as a widowhood of seventy-one years must be esteemed, it is not unexampled, if we are to believe a sepulchral inscription in Camberwell Church, relating to Agnes Skuner, who died in 1499, at the age of 119, having survived her husband Richard Skuner *ninety-two years!*

These instances of long-enduring widowhoods lead us by association of ideas to a noble lady who, besides surviving her husband without second nuptials during a very long time, was further noted for reaching a much more extraordinary age. Allusion is here made to the celebrated Countess of Desmond, who is usually said to have died early in the seventeenth century, after seeing a hundred and forty years. There has latterly been a disposition to look with doubt on the alleged existence of this venerable person; and the doubt has been strengthened by the discovery that an alleged portrait of her, published by Penant, proves to be in reality one of Rembrandt's mother. There is, however, very fair evidence

that such a person did live, and to a very great age. Bacon, in his *Natural History*, alludes to her as a person recently in life. 'They tell a tale,' says he, 'of the old Countess of Desmond who lived till she was seven score years old, that she did *dentire* [produce teeth] twice or thrice; casting her old teeth, and others coming in their place.' Sir Walter Raleigh, moreover, in his *History of the World*, says: 'I myself *knew* the old Countess of Desmond, of Inehiquin, in Munster, who lived in the year 1589, and many years since, who was married in Edward the Fourth's time, and held her jointure from all the Earls of Desmond since then; and that this is true all the noblemen and gentlemen in Munster can witness.*' Raleigh was in Ireland in 1589, on his homeward voyage from Portugal, and might then form the personal acquaintance of this aged lady.

We have another early reference to the Countess from Sir William Temple, who, speaking of cases of longevity, writes as follows: 'The late Robert Earl of Leicester, who was a person of great learning and observation, as well as of truth, told me several stories very extraordinary upon this subject; one of a Countess of Desmond, married out of England in Edward IV.'s time, and who lived far in King James's reign, and was counted to have died some years above a hundred and forty; at which age she came from Bristol to London, to beg some relief at Court, having long been very poor by reason of the ruin of that Irish family into which she was married.†'

Several portraits alleged to represent the old Countess of Desmond are in existence: one at Knowle in Kent; another at Bedgebury, near Cranbrook, the seat of A. J. Beresford-Hope, Esq.;

* Hist. of World, book i. chap. 5. sec. 5.

† Sir W. Temple on Health and Long Life. Works (ed. 1814), iii. 283.

and a third in the house of Mr Herbert at Mucross Abbey, Killarney. On the back of the last is the following inscription: 'Catharine Countesse of Desmonde, as she appeared at y^e court of our Sovraigne Lord King James, in this preasent A.D. 1614, and in y^e 140th yeare of her age. Thither she came from Bristol to seek relief, y^e house of Desmonde having been ruined by Attainder. She was married in the Reigne of King Edward IV., and in y^e course of her long Pilgrimage renewed her teeth twice. Her principal residence is at Inchiquin in Munster, whither she undoubtedlye proposeth (her purpose accomplished) incontinentlic to return. LAUS DEO.' Another portrait considered to be that of the old

THE OLD COUNTESS OF DESMOND.

Countess of Desmond has long been in the possession of the Knight of Kerry. It was engraved by Grogan, and published in 1806, and a transcript of it appears on this page. The existence of so many pictures of old date, all alleged to represent Lady Desmond, though some doubt may rest on them all, forms at least a corroborative evidence of her existence. It may here be remarked that the inscription on the back of the Mucross portrait is most probably a production, not of her own day, as it pretends to be, but of some later time. On a review of probabilities, with which we need not tire the reader, it seems necessary to conclude that the old Countess died in 1604, and that she never performed the journey in question to London. Most probably, the Earl of Leicester mistook her in that particular for the widow of the forfeited Garrett Earl of Desmond, of whom we shall presently have to speak.

The question as to the existence of the so-called Old Countess of Desmond was fully discussed a few years ago by various writers in the *Notes and Queries*, and finally subjected to a thorough sifting in an article in the *Quarterly*

Review,* evidently the production of one well acquainted with Irish family history. The result was a satisfactory identification of the lady with Katherine Fitzgerald, of the Fitzgeralds of Dromana, in the county of Waterford, the second wife of Thomas twelfth Earl of Desmond, who died at an advanced age in the year 1534. The family which her husband represented was one of immense possessions and influence—able to bring an array of five or six thousand men into the field; but it went to ruin in consequence of the rebellion of Garrett the sixteenth Earl in 1579. Although Countess Katherine was not the means of carrying on the line of the family, she continued in her widowhood to draw her jointure from its wealth; did so even after its forfeiture. Thus a state paper dated 1589 enumerates, among the forfeitures of the attainted Garrett, 'the castle and manor of Inchiquin, now in the hands of Katherine Fitz-John, late wife to Thomas, sometye Earl of Desmond, for terme of lyef as for her dower.' It appears that Raleigh had good reason to know the aged lady, as he received a grant out of the forfeited Desmond property, with the obligation to plant it with English families; and we find him excusing himself for the non-fulfilment of this engagement by saying, 'There remaines unto me but an old castle and demayne, which are yet in occupation of the old Countess of Desmond for her jointure.'

After all, Raleigh did lease at least two portions of the lands, one to John Cleaver, another to Robert Reve, both in 1589, for rents which were to be of a certain amount 'after the decease of the Lady Cattelyn old Countess Dowager of Desmond, widow,' as the documents shew.†

Another important contemporary reference to the old Countess is that made by the traveller Fynes Morrison, who was in Ireland from 1599 to 1603, and was, indeed, shipwrecked on the very coast where the aged lady lived. He says in his *Itinerary*: 'In our time the Countess of Desmond lived to the age of about one hundred and forty years, being able to go on foot four or five miles to the market-town, and using weekly so to do in her last years; and not many years before she died, she had all her teeth renewed.' After hearing on such good authority of her ladyship's walking powers, we may the less boggle at the tradition regarding the manner of her death, which has been preserved by the Earl of Leicester. According to him, the old lady might have drawn on the thread of life somewhat longer than she did, but for an accident. 'She must needs,' says he, 'climb a nut-tree to gather nuts; so, falling down, she hurt her thigh, which brought a fever, and that brought death.'

It is plain that, if the Countess was one hundred and forty in 1604, she must have been born in the reign of Edward IV. in 1464, and might be married in his reign, which did not terminate till 1483. It might also be that the tradition about the Countess was true, that she had danced at the English Court with the Duke of Gloucester (Richard III.), of whom it is said she used to affirm that 'he was the handsomest man in the

St Emerantia, virgin, martyr, about 304. St Clement of Ancyra, martyr, 304. St Agathangelus, 304. St Eusebius, abbot in Assyria, 4th century. Ildefonsus, archbishop of Toledo, 667. St John the Almoner, patriarch of Alexandria, about 7th century. St Raymond of Pennafort, 1275.

ST EUSEBIUS.

St Eusebius 'took nourishment only once in four days, but would not allow any of his monks to pass above two days without eating.'—*Butler*. The intervals were rather long, but, on Eusebius's part, the proportions were generous.

ST RAYMOND.

Raymond of Pennafort was a Spanish saint, who derived his fame from having been one of the earliest and most devoted of the order of St Dominick. By wonderful exertions as a missionary preacher, he restored large portions of his country to Christianity, which had previously been wholly in possession of the Moors. Towards the end of his life, having been taken by James king of Arragon to the island of Majorca, he met there with the most brilliant success in converting the pagan inhabitants, but found all his happiness blighted by the personal immorality of the king. Failing to bring him to a better life, he desired to leave the island; but this the king would not permit. He even threatened with death any one who should help the holy man to make his escape. What followed may be stated in the words of Butler. 'The saint, full of confidence in God, said to his companion, "A king of the earth endeavours to deprive us of the means of retiring; but the King of heaven will supply them." He then walked boldly to the waters, spread his cloak upon them, tied up one corner of it to a staff for a sail, and having made the sign of the cross, stepped upon it without fear, whilst his timorous companion stood trembling and wondering on the shore. On this new kind of vessel the saint was wafted with such rapidity that in six hours he reached the harbour of Barcelona, sixty leagues distant from Majorca. Those who saw him arrive in this manner met him with acclamations. But he, gathering up his cloak dry, put it on, stole through the crowd, and entered his monastery. A chapel and a tower, built on the place where he landed, have transmitted the memory of this miracle to posterity. This relation,' says our author, with all desirable gravity, 'is taken from the bull of his canonization, and the earliest historians of his life. The king became a sincere convert, and governed his conscience, and even his kingdoms, by the advice of St Raymond, from that time till the death of the saint.'

Died.—James Earl of Moray, Regent of Scotland, 1570; William Pitt, statesman, 1806; Sir Francis Burdett, political character, 1844; Archdeacon Hare, 1855.

DEATH OF MR PITT.

The last months of the life of this great statesman were embittered by a succession of defeats and reverses, such as might break the proudest or the most stoical spirit that ever swayed the destinies of a great nation. The overthrow of the new coalition which he had succeeded in forming against the French ascendancy in the latter part of 1805, is supposed to have combined with the vexation arising from the impeachment of his friend, Lord Melville, to destroy him. Nevertheless, the vigour of his intellectual faculties, and the intrepid haughtiness of his spirit, remained to appearance unaltered. But he could not conceal from the public eye the decay of his health, and the constant anxiety which gnawed at his heart. He had staked everything on a great venture. When the news came of Napoleon's defeat of the great Austrian army and the surrender of Ulm, the minister would give no credit to the rumour; when it was confirmed, he tried to bear up, but death was in his face. The news of the victory of Trafalgar, which arrived in a few days, seemed to revive him; and in two days more, when he dined on Lord Mayor's day in Guildhall, in returning thanks for his health being drunk, he said, "Let us hope that England, having saved herself by her energy, may save Europe by her example." These were the last words that he uttered in public. But Austerlitz soon completed what Ulm had begun; and the peculiar look which Pitt wore after this calamitous event, was described by Wilberforce as the *Austerlitz look*.

Early in December, Pitt retired to Bath, hoping that he might there gather strength for the coming session of Parliament. While there the news reached him of a decisive battle that had been fought and lost in Moravia, and that the coalition was dissolved. He sank under the blow. He came up from Bath by slow journeys, and on the 11th of January, 1806, reached his villa at Putney. On the 20th was to be the parliamentary dinner at the house of the First Lord of the Treasury, in Downing-street; and the cards were already issued. But the days of the great minister were numbered.

The villa is pleasantly situated upon Putney Heath, surrounded by a few acres of pleasure ground; and the minister's only chance for life was, that he should spend some months in such repose as this rural retreat afforded. His colleagues in the ministry paid him short visits, and carefully avoided conversation on politics. But his spirit was not quenched even in this extremity. His friend, the Marquess Wellesley, had, a few days before Mr Pitt's return to Putney, arrived in England, after an absence of eight years in India. He wrote to Mr Pitt, who, on the 12th of January, replied from Putney Hill, acknowledging to have received, with inexpressible pleasure, the Marquess's 'most friendly and affectionate letter, requesting to see him at the first possible moment,' adding, 'I am recovering rather slowly from a series of stomach complaints, followed by severe attacks of gout; but I believe I am now in the way of real amendment.'

This was one of the last letters Mr Pitt ever

wrote. He received the Marquess with his usual kindness and good humour; he talked cheerfully, and with an unclouded mind, and spoke in the warmest terms of commendation of the Marquess's brother, Arthur, saying, 'I never met with any military officer with whom it was so satisfactory to converse. He states every difficulty before he undertakes any service, but none after he has undertaken it.' But the Marquess saw that the hand of death was upon the minister, although the melancholy truth was not known nor believed by either his friends or his opponents.

The excitement of this interview was too much for the sick man; he fainted away, and Lord Wellesley left the house, convinced that the close was fast approaching.

Lord Wellesley having learned that an amendment hostile to Mr Pitt was to be proposed in the House of Commons, warned Lord Granville of the minister's approaching death; he received the fatal intelligence with a burst of tears, and on the first day there was no debate. It was rumoured that evening that Mr Pitt was better; but on the following morning his physicians pronounced that there were no hopes. 'The commanding faculties,' says Lord Macaulay, 'of which he had been too proud, were now beginning to fail. His old tutor and friend, the Bishop of Lincoln, informed him of his danger, and gave such religious advice and consolation as a confused and obscured mind could receive. Stories were told of devout sentiments fervently uttered by the dying man. But these stories found no credit with anybody who knew him. Wilberforce pronounced it impossible that they could be true. "Pitt," he added, "always said less than he thought on such topics." It was asserted in many after-dinner speeches, Grub-street elegies, and academic prize poems, and prize declamations, that the great minister died exclaiming, "Oh! my country!" This is a fable; but it is true that the last words which he uttered, while he knew what he said, were broken exclamations about the alarming state of public affairs. He ceased to breathe on the morning of the 23rd of January 1806, the twenty-fifth anniversary of the day on which he first took his seat in Parliament. He was in his forty-seventh year, and had been, during near nineteen years, excepting for a short interval, First Lord of the Treasury, and undisputed chief of the administration. Since parliamentary government was established in England, no English statesman had held supreme power so long. Walpole, it is true, was First Lord of the Treasury during more than twenty years; but it was not till Walpole had been some time First Lord of the Treasury that he could be properly called Prime Minister.'

With respect to the last moments of the great minister, it was told to a visitor to the house at Putney Hill, in 1817, by a person who was in the chamber a little before Mr Pitt's death, that 'it was heated to a very high and oppressive temperature; and that the deep voice of the dying minister, as he asked his valet a question, startled the visitor who had been unused to it. He died calmly, and apparently under none of those political perturbations which, at the period, were ascribed to his last moments.'

A public funeral and a monument were voted to Pitt by Parliament. The funeral took place on the 22nd of February: the corpse, having lain in state during two days in the Painted Chamber, was borne, with great pomp, to the northern transept of Westminster Abbey. A splendid train of princes, nobles, and privy councillors followed. The grave of Pitt had been made near to the spot where his great father, Lord Chatham, lay, and near also to the spot where his great rival (Fox) was soon to lie:

'The mighty chiefs sleep side by side;
Drop upon Fox's grave the tear,
'Twill trickle to his rival's bier.'—*Scott*.

Wilberforce, who carried the banner before Pitt's hearse, described the ceremony with deep feeling. As the coffin descended into the earth, he said, the eagle face of Chatham from above seemed to look down with consternation into the dark house which was receiving all that remained of so much power and glory.

OPENING OF THE FIRST ROYAL EXCHANGE.

In the sixteenth century, Antwerp had led the way in preparing a house specially for the daily assembling of merchants—what was then called a *Byrsa* or *Burse*, a term of mediæval Latin, implying expressly a purse, but more largely a place of treasure. The want of such a point of daily rendezvous was felt in London as early as the reign of Henry VIII.; but it was not till the days of his lion-hearted daughter that the idea was realised, through the exertions and liberality of the celebrated Sir Thomas Gresham, a London merchant, who had been royal agent at Antwerp, and ambassador at the minor Italian Court of Parma.

Sir Thomas met with innumerable difficulties in the preliminary arrangements for building his *Burse*. Some of the merchants preferred the old place of assembling in Lombard-street; others advocated a site between Lombard-street and Cornhill. At length we find the wardens of the twelve principal companies calling upon Gresham at his mansion in Bishopsgate-street, at eight o'clock in the morning, to make arrangements for the site. It was then settled that the houses to be removed for the site—including a 'little old house in Cornhill, inhabited by a widow, which the cytte was driven to buy' for 100 marks—should all be cleared away for the workmen 'to fall in hand with the foundation.' Thirty-eight houses—some of them cottages, a store-house, and two gardens—were demolished in order to make room for the *Burse*.

The simple manner in which the edifice was given to the citizens is not the least striking incident. On the 9th of February 1565-6, Sir Thomas Gresham, at the house of Alderman Rivers, in company with Sir William Garrard, Sir William Cheeton, Thomas Rowe, and other citizens, 'most frankly and lovingly promised' that within a month after the *Burse* should be fully finished, he would present it, in equal moieties, to the City and the Mercers' Company. In token of his sincerity, he thereupon gave his hand to Sir William Garrard, and, in the presence of his assembled friends, *drank a carouse* to his kinsman, Thomas Rowe. 'How rarely,' remarks

Mr Burgon, 'do ancient documents furnish us with such a picture of ancient manners!' The first stone of the building was laid by Gresham, June 7, 1566.

On the 23rd of January 1570-1, the building was opened by Queen Elizabeth. Stow relates

that 'the Queen's Majesty, attended with her nobility, came from her house at the Strande, called Somerset House, and entered the citie by Temple-bar, through Fleete-streete, Cheap, and so by the north side of the Burse, to Sir Thomas Gresham's in Bishopsgate-streetc, where she dined.

THE ROYAL EXCHANGE, LONDON, AS BUILT BY SIR THOMAS GRESHAM.

After dinner, her Majestie, returning through Cornhill, entered the Burse on the south side; and after that she had viewed every part thereof above the ground, especially the Pawn, which was richly furnished with all sorts of the finest wares in the city, she caused the same Burse by an herald and trumpet to be proclaimed the *Royal Exchange*, and so to be called from thenceforth, and not otherwise.'

Such is the brief account which has been transmitted to us of the event from which the Burse, as it was then called, dates its present name; by one who was probably an eye-witness of the scene he describes. The only other contemporary notice Mr Burgon has met with of this memorable passage in the annals of the metropolis occurs in the accounts of the churchwardens of St Margaret's, Westminster; where is recorded that the bell-ringers were paid 4d. 'for ringing when the Queen's Majesty went to the Burse;' and 8d. 'for ringing when the Queen's Majesty went to Sir Thomas Gresham's and came back again.'

In the Bodleian Library is a Latin play, in five acts, entitled *Byrsa Basilica*, &c., being a dramatic account of the building and opening of the Exchange, conceived in the most fantastic strain, according to the taste of the age. There is also extant a play, by Thomas Heywood, describing the building of the Burse, and referring in every page to Gresham. It is entitled, *If you know not me you know nobody: or, the Troubles of Queen Elizabeth*. 4to, 1606. In this play Heywood has followed Stow's narrative very faithfully till the queen

comes to visit Gresham, and name the Burse; but here the poet can no longer restrain his invention. Gresham purchases a pearl which no one could afford to buy, and, in imitation of Cleopatra, drinks it, reduced to powder, in a cup of wine.

'Here fifteen hundred pound at one clap goes!
Instead of sugar, Gresham drinks the pearl
Unto his queen and mistress: pledge it, lords!'

That Gresham drank a *carouse* to the queen is not unlikely, but there is no reason for believing that the royal merchant was addicted to such royal draughts as Heywood describes. The incident was probably borrowed from the history of Sir William Capel, of whom a similar story is related by Fuller, in his *Worthies*.—*Burgon's Life and Times of Sir Thomas Gresham*, vol. ii. pp. 351—354.

AN ALE-TASTER IN OLD TIMES.

It is noted in Dr Langbaine's Collections, under January 23, 1617, that John Shurle had a patent from Arthur Lake, Bishop of Bath and Wells, and Vice-Chancellor of Oxford, for the office of ale-taster [to the University] and the making and assizing of bottles of hay. The office of ale-tasting requires that he go to every ale-brewer that day they brew, according to their courses, and taste their ale; for which his ancient fee is one gallon of strong ale and two gallons of small wort, worth a penny.*

* *Reliquiæ Hearnianæ*, i. 38.

WONDERS IN THE AIR.

23rd January 1642 [1643], was published 'A great Wonder in Heaven, shewing, &c.'—a thin *brochure* now exceedingly rare. Its statement was to the effect, that on a Saturday in the by-past Christmas time, there had occurred at Keniton, in Northamptonshire, the apparition and noise of a battle in the air, a ghostly repetition of the conflict which two months before had taken place on the adjacent fields at Edgehill between the forces of the King and the Parliament. It was between twelve and one in the morning that there was 'heard, by some shepherds and other countrymen and travellers, first the sound of drums afar off, and the noise of soldiers, as it were, giving out their last groans; at which they were much amazed, and amazed stood still, till it seemed by the nearness of the noise to approach them; at which, too much affrighted, they sought to withdraw as fast as possibly they could; but then on a sudden, while they were in these cogitations, appeared in the air the same incorporeal soldiers that made those clamours, and immediately, with ensigns displayed, drums beating, muskets going off, cannons discharged, horses neighing, which also to these men were visible, the alarm or entrance to this game of death was struck up; one army, which gave the first charge, having the King's colours, and the other the Parliament's, in their head or front of the battles, and so pell-mell to it they went; the battle that appeared to [be] the King's forces seeming at first to have the best, but afterwards to be put into apparent rout. But till two or three in the morning in equal scale continued this dreadful fight, the clattering of arms, noise of cannons, cries of soldiers, so amazing and terrifying the poor men, that they could not believe they were mortal, or give credit to their ears and eyes. Run away they durst not, for fear of being made a prey to these infernal soldiers; and so they, with much fear and affright, stayed to behold the success of the business. . . . After some three hours' fight, that army which carried the King's colours withdrew, or rather appeared to fly; the other remaining, as it were, masters of the field, stayed a good space triumphing, and expressing all the signs of joy and conquest, and then, with all their drums, trumpets, ordnance, and soldiers, vanished. The poor men, glad they were gone, made with all haste to Keniton; and there knocking up Mr Wood, a justice of the peace, who called up his neighbour, Mr Marshall, the minister, they gave them an account of the whole passage, and averred it upon their oaths to be true.'

What follows is most remarkable of all. The gentlemen thus apprised of what had taken place, 'suspending their judgments till the next night about the same hour, they, with the same men, and all the substantial men of that and the neighbouring parishes, drew thither; where, about half an hour after their arrival, on Sunday, being Christmas night, appeared, in the same tumultuous warlike manner, the same two adverse armies, fighting with as much spite and spleen as formerly. . . . The next night they appeared not, nor all that week. . . . But on

the ensuing Saturday night, in the same place, and at the same hour, they were again seen with far greater tumult, fighting in the manner above mentioned for four hours, or very near, and then vanished, appearing again on Sunday night, and performing the same actions of hostility and bloodshed. . . . Successively the next Saturday and Sunday the same tumults and prodigious sights and actions were put in the state and condition they were formerly. The rumour whereof coming to his Majesty at Oxford, he immediately dispatched thither Colonel Lewis Kirke, Captain Dudley, Captain Waithman, and three other gentlemen of credit, to take the full view and notice of the said business; who, first hearing the relation of Mr Marshall and others, stayed there till Saturday night following, wherein they saw and heard the fore-mentioned prodigies, and so on Sunday, distinctly knowing divers of the apparitions by their faces, as that of Sir Edmund Varney, and others that were there slain; of which, upon oath, they made testimony to his Majesty.*

HON. CHARLES TOWNSHEND.

January 23, 1748, the Hon. Charles Townshend, writing to a friend, says, 'I cannot go to the Opera, because I have forsworn all expense which does not end in pleasing me.† If this were a rule generally followed, and the reserved means bestowed in judicious efforts for the good of others, what an improved world it would be!

Charles Townshend is one of the minor celebrities of the last century: he died in 1767, at the age of forty-two. Burke, referring some years after to his services in parliament, said he could not even then speak of Charles Townshend without some degree of sensibility. 'He was the delight and ornament of this House, and the charm of every private society which he honoured with his presence. Perhaps there never arose in this country, nor in any country, a man of more pointed and finished wit, and (where his passions were not concerned) of a more refined, exquisite and penetrating judgment.'

It was the good fortune of Charles to gain favour with a young and noble widow, the Countess of Dalkeith (daughter of John Duke of Argyll, and mother of Henry Duke of Buccleuch). Sir Walter Scott relates the following anecdote regarding this alliance: 'When he [Charles Townshend] came to Scotland [after the marriage], the tide of relations, friends, and vassals, who thronged to welcome the bride, were so negligent of her husband, as to leave him in the hall, while they hurried his lady forwards into the state apartments, until he checked their haste by exclaiming, "For Heaven's sake, gentlemen, consider I am at least Prince George of Denmark!"'‡

This union introduced Mr Townshend to the society of the then brilliant circle of Scottish literati. But, if we may depend upon the judgment of the Rev. Alexander Carlyle, these gentlemen judged his talents to be more of a showy

* Copied (with modernised spelling) from the transcript of the original *brochure*, Appendix to Lord Nugent's Life of John Hampden, ii. 468.

† Jesse's Life of George Selwyn.

‡ Quarterly Review, xxxiv. 202.

than a solid character; and 'at the end of two months,' says this shrewd observer, 'he had stayed long enough here.' Carlyle gives the following sketch of an afternoon spent with the English stranger:

'I called on him one morning at Dalkeith, when he said I had come most *à-propos*, if not engaged, for that he was going to ride to Edinburgh to make some calls: and his wife being engaged to dine with the Duchess of Gordon, he would be very glad of a small party in a tavern. I agreed, and we rode to Edinburgh together. When we drew near that city, he begged me to ride on and bespeak a small dinner at a tavern, and get a friend or two if I could to join us, as he must turn to the left to call on some people who lived in that direction. I went to town directly, and luckily found Home and Ferguson in Kincaid[the bookseller's] shop, and sent a cady* to Robertson, to ask him to meet us at the Cross Keys soon after two o'clock, who likewise came. During dinner, and for almost an hour after, Charles, who seemed to be fatigued by his morning visits, spoke not a single word, and we four went on with our kind of conversation without adverting to Mr Townshend's absence. After he had drunk a pint of claret, he seemed to awaken from his reverie, and then silenced us all with a torrent of colloquial eloquence, which was highly entertaining, for he gave us all our own ideas over again, embodied in the finest language, and delivered in the most impressive manner. When he parted from us, my friends remarked upon his excellence in this talent, in which Robertson agreed with them, without, perhaps, being conscious that he was the most able proficient in that art.†

Charles Townshend fully appears to have been one of those persons with showy and superficial talents who make an impression on all around them, but produce no permanent good results. He could move and delight men, but not improve or guide them. In some peculiar circumstances, and at certain crises, his gift of the tongue might have proved serviceable; but, usually, such powers are only calculated to create or support delusions, by making the worse appear the better reason. Public men possessed of fascinating eloquence should in general be viewed with suspicion, and carefully guarded against, for they are apt to do great mischief. To make a pulpit orator a leader in a church, or raise a clever special pleader to a place in the cabinet council, are dangerous movements. In general, the powers which have made them famous are, at the best, useless in grave and important circumstances; often, the *prestige* which these powers have given, only enables them to interfere injuriously with the course pointed out by the wise. Perilous it is for a country to have a political system in which brilliant parliamentary oratory is allowed any but a moderate sway. It might be of some service to inquire how often mere oratory has been on the side of what was just, reasonable, and for the good of a state, and how often the reverse; and whether, on the whole, the affairs of

* A street message-carrier was so called in the northern capital.

† Autobiography of Alexander Carlyle, 1860, p. 391.

nations and of individuals would not have been in a better case at this moment, if there never had existed any man capable of standing up and sawing the air, and puffing and sweating, while pouring out an ocean of exaggerated phrases calculated to work on the feelings of a multitude.

DEATH OF SIR FRANCIS BURDETT.

This event took place on the 23rd of January 1844, when Sir Thomas had attained his seventy-fourth year. The strain of political sentiment which made him the idol of the populace in the reign of George III., had long given place to strong conservatism, and he necessarily became a man of little political note in his latter years. When we remember the Gracchus-like position of Sir Francis in April 1810—ordered to the Tower for a libel on the House of Commons, and standing a siege of horse and foot in his house in Piccadilly for several days before the warrant could be executed—the story of his death reads strangely. It was the fortune of this fine old English gentleman to be united to a daughter of Mr Coutts the banker; and the pair had lived together with singular attachment and harmony for upwards of fifty years. Towards the close of 1843, Lady Burdett's state of health excited great alarm in her family. She died on the 10th of January 1844. Her death sounded her husband's knell. She who had so long been the partner and sharer of his joys and troubles, the mother of his children, the friend of his soul, being now removed, from that instant life became an insupportable burthen to him. Resolutely refusing food or nourishment of any kind, he died on the 23rd of the same month; and man and wife were buried side by side in the same vaults, at the same hour, on the same day, in the church of Ramsbury, Wilts.

MR PITT AND HIS SERVANT.

Obviously a good end would be served if examples of a reasonable treatment of servants, followed by good results, were occasionally presented for the consideration of masters and mistresses. Mr Pitt, who was so able a servant of the state, was also a good master to his own domestics: that is, he did not fail to recognise good conduct in his servants, and to treat them with due consideration of their numerous duties. He was likewise very quick in the perception of qualities which recommend an individual for domestic service, of which the following is an interesting instance:

Mr Pitt once obtained a servant in a very odd way. Riding on the moors with a friend, they came up with a flock of geese, driven by a boy, with a bit of red rag at the end of a long stick. 'We must ride round,' said Mr Pitt, 'we shall never get through this immense flock.' 'Yes, but you may,' cried a sharp-looking boy, who had heard him, 'if you will only keep your horses quiet. Sh—sh—ee—ayi—ayi!' and the boy waved his stick here and there, and in a minute or two the flock opened, and, wheeling to the left and right in regular columns, made a passage through which they rode. 'That must be a clever lad,' observed Mr Pitt; 'he manœuvres his little army in a wonderful manner—a general could not do it better;' and he ordered the groom to inquire to whom he belonged. A day or two afterwards, he was sent for, and put in the stables. Next he was made an under-groom; then taken to town to wait on the

upper servants, and afterwards made a footman. One day, Mr Pitt went down to Holwood, in Kent, with Mr Dundas and three or four friends, to talk over parliamentary business: some time before the dinner-hour, the cook was seized with apoplexy, which so affected the butler and occasional valet that he fell with a fit of gout. Mr Pitt grew anxious about the dinner, when the young man whom he had advanced from gooseherd to footman, said, 'Don't, sir, send off any express for a cook; if you think proper, the maid shall cook the dinner. These are your intimate friends, and will take no notice: their servants as yet know nothing of the matter, for I thought they might be frightened to be where there is a dead man. Let me manage, and all will go well, without any alarm being spread.' He accordingly dressed Mr Pitt, saw to everything, and acquitted himself so well, that Mr Pitt soon after made him his valet; but he did not live much longer, to have his services recompensed. He was an excellent servant. Mr Pitt would sometimes order him to precede him a day or two to a place he was about to visit. 'You will excuse me, sir,' the man would reply: 'but I mustn't go; for if I do, who will attend you when you take your physic to-morrow? You will be busy, and put it off; and nobody knows how to give it but myself.' 'Well, well,' Mr Pitt would answer, 'do so, then;' and would add, 'Ah! he is very anxious about me—I must let him have his own way.'

JANUARY 24.

St Timothy, disciple of St Paul, martyr at Ephesus, 97. St Babylas, bishop of Antioch, about 250. St Macedonius of Syria, 5th century. St Cadocus or Cadoc, abbot of Wales, 6th century. St Suranus, abbot in Umbria, martyr, 7th century.

Born.—Charles Earl of Dorset, poet, 1637; Frederick the Great, 1712; Pierre A. Caron de Beaumarchais, musical composer, *Paris*, 1732.

Died.—Justice Henry Yelverton, 1650; James Ralph, political writer, 1762.

CHARLES EARL OF DORSET.

A wit among lords, a generous friend to literary men, himself a fair writer of verses, gay but not reckless, honest far above his time, so much a favourite that, do what he liked, the world never thought him in the wrong,—Dorset claims some respect even in a later and better age. His poems are merely a bunch of trifles; yet there is some heart, and also some feeling of the deeper realities of life, under the rosy badinage of his well-known ballad, *To all you ladies now at land*, professedly indited at sea the night before an engagement with the Dutch fleet, but stated to have been in reality the work of about a week:*

'When any mournful tune you hear,
That dies in every note,
As if it sighed with each man's care,
For being so remote;
Think how often love we've made
To you, when all those tunes were played.

'In justice you can not refuse
To think of our distress,
When we, for hopes of honour, lose
Our certain happiness;
All those designs are but to prove
Ourselves more worthy of your love.'

* Life by A. Chalmers, *Brit. Poets*, viii. 339
156

YOUTH OF FREDERICK THE GREAT.

Frederick II., King of Prussia, son of Frederick William I. and of Sophia Dorothea, Princess of Hanover, and surnamed the Great for his talents and successes, was, in his boyhood, treated with extreme severity, through the antagonism of his parents. His youthful tuition was rigid, its sole object being military exercises; but he received the rudiments of his education from a French lady. The taste he acquired through her means for polite literature, was strongly opposed to the system of his coarse father, who would say, 'My eldest son is a coxcomb, proud, and has a fine French spirit, that spoils all my plans.' The conduct of the old savage towards him was both harsh and cruel; it was still more so to any one to whom he was attached, or who was in any way, agreeable to the prince. A young girl, who had played on the pianoforte while the prince accompanied her on the flute, was publicly flogged by the executioner in the streets of Potsdam. The queen could not endure this injustice towards her son, and arranged that he should seek refuge in England with his maternal uncle George II. This secret plan, which was confided only to the prince's sister, and two lieutenants, his friends, was discovered by the King, who, finding that his son had already quitted the palace, sent soldiers in search of him, and he was discovered just as he was getting into a chariot to carry him to Saxony. One of the lieutenants, his companions, escaped by the fleetness of his horse; but the other was carried back to Potsdam with the prince; both being handcuffed like malefactors, and thrown into separate dungeons; and the princess, who implored the king to pardon her brother, was thrown from one of the palace windows.

The King had made up his mind that his son should die on the scaffold: 'He will always be a disobedient subject,' said he, 'and I have three other boys who are more than his equals.' His life was only saved by the intercession of the Emperor of Austria, Charles VI., through his ambassador, Count Seckendorf. Nor could the King bring his son to trial; for neither the ministers nor generals would sit in judgment upon the heir to the crown of Prussia, which so enraged the King that he sent the prince to be confined for life in a fortress at Custrin. Previously to his being conveyed to prison, the lieutenant who had been taken with him, was, by the King's order, executed upon a lofty scaffold, opposite the windows of the apartment in which the prince was confined. At Custrin, he saw no one but the governor of the fortress; books, pens, paper, and his flute, were all denied him. When he had been imprisoned a year, the resentment of his father abated; he was ordered to Berlin; and there, at a grand fête at the palace, Frederick, in a grey suit, the only one he had been permitted to wear since his disgrace, was placed behind the chair of his mother. He then grew in favour with his father, who, however, could not forgive his disinclination for military exercises, and his love of music and the fine arts; but above all his preference of foreign fashions to the plain, inelegant Prussian uniform, which the King so

liked. Yet this prince, having ascended the throne, established the military renown of Prussia, and became one of the most famous generals in history; leaving to his successor a kingdom enlarged from 2190 to 3515 German square miles, and an army of 200,000 men.

Notwithstanding his fame as a monarch, legislator, and man of letters, Frederick, according to his own account, spent the happiest years of his life, when he was a youth, in the chateau of Rheinsberg, not far from Berlin.

WEATHERCOCKS.

The invention of the vane, or weathercock, must have been of very early date. Vitruvius calls it *triton*, probably from its having in his time the form of a triton. The usual form on towers, castles, and secular buildings, was that of a banner; but on ecclesiastical edifices, it generally was a representation of the male of the barn-door fowl. According to Ducange, the cock was originally devised as an emblem of clerical vigilance, or what it ought to be. Apart from symbolism, the large tail of the cock was well adapted to turn with the wind.

Many churches have for a vane the emblem of the saints to whom they are dedicated: thus, St Peter's, Cornhill, London, is surmounted with a key, St Peter being said to keep the key of heaven. St Laurence has for a vane, a gridiron; and St Laurence, at Norwich, has the gridiron, with the holy martyr extended upon the bars. The vane upon St Mildred's Church, in the Poultry, is a gilt ship in full sail; and that of St Michael's, Queenhithe, is a ship, the hull of which will hold a bushel of grain, referring to the former traffic in corn at the hithe.

St Sepulchre's Church, Skinner-street, has four pinnacles, each with a vane, which led Howell to say: 'Unreasonable people are as hard to reconcile as the vanes of St Sepulchre's tower, which never looked all four upon one point of the heavens.'

The grasshopper of the Royal Exchange is the vane which surmounted the former Exchange. It is of copper-gilt, eleven feet long, and represents the crest of Sir Thomas Gresham, the founder of the first Exchange. But the old civic tradition that this was adopted as an heraldic symbol, from a grasshopper having saved his life when he was a poor famished boy, by attracting a person to the spot where he lay in a helpless condition,—is not supported by fact; since the letters of Sir Thomas Gresham's father, which are in the Paston collection, bear a *scal* with the grasshopper. This was likewise the sign of Gresham, placed over the door of his banking-house and goldsmith's shop, in Lombard-street: this grasshopper, which was of large size and gilt, existed entire until the year 1795, when the house, now No. 68, was rebuilt.

The dragon upon the spire of Bow Church, in Cheap-side, is another celebrated vane: it is of copper gilt, eleven feet in length, and when it was re-gilt in 1820, a young Irishman descended from the spire-point on the back of the dragon, pushing it from the cornices and scaffolds with his feet, in the presence of thousands of spectators. One of Mother Shipton's prophecies was, that when the dragon of Bow Church and the grasshopper of the Royal Exchange should meet, London streets would be deluged with blood! In 1820, both these vanes were lying together in the yard of a stonemason in Old-street-road, but, happily, the prophecy was not fulfilled.

The vane at Fotheringay Church, Northamptonshire, represents the falcon and fetherlock, the badge of the Dukes of York.

JANUARY 25.

St Juventinus and Maximinus, martyrs at Antioch, 363. St Apollo, abbot in Thebais, about 393. St Publius, abbot in Syria, 4th century. St Proiectus (or St Prix), bishop of Clermont, martyr, 674. St Poppo, abbot of Stavello, 1048.

St Paul's Day.

The festival of the Conversion of St Paul, instituted by the church in gratitude for so miraculous and so important an instance of the Divine power, 'a perfect model of a true conversion,' is mentioned in several calendars and missals of the eighth and ninth centuries. 'It was for some time kept a holiday of obligation in most churches of the West; and we read it mentioned as such in England in the council of Oxford, in 1222, in the reign of King Henry III.'—*Butler*. It is still a festival of the Anglican, as well as other churches.

The day has also a celebrity of another description, the origin of which has not yet been discovered. It has been an article of constant belief in Western Europe, during the middle ages, and even down to our own time, that the whole character of the coming year is prognosticated by the condition of the weather on this day; and this is the more singular, as the day itself was one of those to which the old prognosticators gave the character of a *dies Ægyptiacus*, or unlucky day. The special knowledge of the future, which it was believed might be derived from it, were arranged under four heads, in four monkish Latin verses, which are found very frequently in the manuscripts of the middle ages, and prevailed equally on the continent and in our own island. The following is the most correct copy of these verses that we have been able to obtain (in copies of a later date, attempts were made to improve the style of the Latin, which in some degree destroyed their quaintness):

'Clara dies Pauli bona tempora denotat anni;
Si nix vel pluvia, designat tempora cara;
Si fiant nebulae, pereunt animalia quæque;
Si fiant venti, designat prælia genti.'

Fair weather on St Paul's day thus betided a prosperous year; snow or rain betokened a dear year, and therefore an unfruitful one; clouds foreboded great mortality among cattle; and winds were to be the forerunners of war. Several old translations of these lines into verse in French and English are met with; the following is one of the English versions:

'If St Paul's day be fair and clear,
It does betide a happy year;
But if it chance to snow or rain,
Then will be dear all kind of grain;
If clouds or mists do dark the skie,
Great store of birds and beasts shall die;
And if the winds do flie aloft,
Then war shall vex the kingdom oft.'

Other days in the month of January enjoyed at different times, and in different places, a similar reputation among the old prognosticators, but none of them were anything like so generally held and believed in as the day of the Conversion of St Paul.

In the reign of Philip and Mary (1555), this day was observed in the metropolis with great processional state. In the *Chronicle of the Grey Friars of London*, we read that 'on St Paul's day there was a general procession with the children of all the schools in London, with all the clerks, curates, and parsons, and vicars, in copes, with their crosses; also the choir of St Paul's; and divers bishops in their habits, and the Bishop of London, with his pontificals and cope, bearing the sacrament under a canopy, and four prebends bearing it in their gray *amos*; and so up into Leadenhall, with the mayor and aldermen in scarlet, with their cloaks, and all the crafts in their best array; and so came down again on the other side, and so to St Paul's again. And then the king, with my lord cardinal, came to St Paul's, and heard masse, and went home again; and at night great bonfires were made through all London, for the joy of the people that were converted likewise as St Paul was converted.'

Down to about this time there was observed, in connection with St Paul's Cathedral, a custom arising from an obligation incurred by Sir William Baud in 1375, when he was permitted to enclose twenty acres of the Dean's land, in consideration of presenting the clergy of the cathedral with a fat buck and doe yearly on the days of the Conversion and Commemoration of St Paul. 'On these days, the buck and the doe were brought by one or more servants at the hour of the procession, and through the midst thereof, and offered at the high altar of St Paul's Cathedral: after which the persons that brought the buck received of the Dean and Chapter, by the hands of their Chamberlain, twelve pence sterling for their entertainment; but nothing when they brought the doe. The buck being brought to the steps of the altar, the Dean and Chapter, apparelled in copes and proper vestments, with garlands of roses on their heads, sent the body of the buck to be baked, and had the head and horns fixed on a pole before the cross, in their procession round about the church, till they issued at the west door, where the keeper that brought it blowed the death of the buck, and then the horns that were about the city answered him in like manner; for which they had each, of the Dean and Chapter, three and fourpence in money, and their dinner; and the keeper, during his stay, meat, drink, and lodging, and five shillings in money at his going away; together with a loaf of bread, having in it the picture of St Paul.*

Born.—Robert Boyle, 1627, *Lismore*; Thomas Tanner, antiquary, 1674; Paul Whitehead, 1709; Robert Burns, 1759; Sir Francis Burdett, 1770; James Hogg (the Ettrick Shepherd), poet, 1772; Benjamin Robert Haydon, painter, 1786, *Plymouth*; Daniel Maclise, artist, 1811, *Cork*.

Died.—William Shield, dramatic composer, 1829.

ROBERT BURNS.

Robert Burns, the Scottish poet, first saw the light on the 25th January 1759 in a small cottage by the wayside near the Bridge of Doon, two

* *Beauties of England*, v. 486.

miles from Ayr. A wonderful destiny was that of the peasant's babe born that day—a life of toil, imprudence, poverty, closed in early death, but to be followed by an afflatus of popular admiration and sympathy such as never before nor since attended a literary name in any country. The strains of Burns touch all hearts. He has put words together, as scarcely any writer ever did before him. His name has become a steno-graph for a whole system of national feelings and predilections. Other poets, after death, have a tablet in Westminster Abbey, and occasional

ROBERT BURNS; FROM A SILHOUETTE BY MIERS.

allusions in critical writings. But when the centenary of Burns's birth arrives, it is festively celebrated in every town in the country; nay, wherever our language is spoken—alike in Federal America, in Canada, in Victoria, in Calcutta, in Hong Kong, in Natal—there is a pouring out of grateful sentiment in honour of Burns.

BIRTH OF BURNS.

BY THOMAS MILLER.

Upon a stormy winter night
Scotland's bright star first rose in sight;
Beaming upon as wild a sky
As ever to prophetic eye
Proclaimed, that Nature had on hand
Some work to glorify the land.
Within a lonely cot of clay,
That night her great creation lay.

Coila—the nymph who round his brow
Twined the red-berried holly-bough—
Her swift-winged heralds sent abroad,
To summon to that bleak abode
All who on Genius still attend,
For good or evil to the end.

They came obedient to her call:—
The immortal infant knew them all.

Sorrow and Poverty—sad pair—
Came shivering through the wintry air:
Hope, with her calm eyes fixed on Time,
His crooked scythe hung with flakes of rime:
Fancy, who loves abroad to roam,
Flew gladly to that humble home:

Pity and Love, who, hand in hand,
Did by the sleeping infant stand :
Wit, with a harem-skarem grace,
Who smiled at Laughter's dimpled face :
Labour, who came with sturdy tread,

By high-souled Independence led :
Care, who sat noiseless on the floor ;
While Wealth stood up outside the door,
Looking with scorn on all who came,
Until he heard the voice of Fame,

COTTAGE AT ALLOWAY, THE BIRTH-PLACE OF BURNS.

And then he bowed down to the ground :—
Fame looked on Wealth with eyes profound,
Then passed in without sign or sound.

Then Coila raised her hollid brow,
And said, 'Who will this child endow ?'
Said Love, 'I'll teach him all my lore,
As it was never taught before ;
Its joys and doubts, its hopes and fears,
Smiles, kisses, sighs, delights, and tears.'

Said Pity, 'It shall be my part
To gift him with a gentle heart.'
Said Independence, 'Stout and strong
I'll make it to wage war with wrong.'
Said Wit, 'He shall have mirth and laughter,
Though all the ills of life come after.'
'Warbling her native wood-notes wild,'
Fancy but stooped and kissed the child ;
While through her fall of golden hair
Hope looked down with a smile on Care.

Said Labour, 'I will give him bread.'
'And I a stone when he is dead,'
Said Wealth, while Shame hung down her head.

'He'll need no monument,' said Fame ;
'I'll give him an immortal name ;
When obelisks in ruin fall,
Proud shall it stand above them all ;
The daisy on the mountain side
Shall ever spread it far and wide ;
Even the road-side thistle down
Shall blow abroad his high renown.'

Said Time, 'That name, while I remain,
Shall still increasing honour gain ;
Till the sun sinks to rise no more,
And my last sand falls on the shore
Of that still, dark, and unsailed sea,
Which opens on Eternity.'

Time ceased : no sound the silence stirr'd,
Save the soft notes as of a bird
Singing a low sweet plaintive song,
Which murmuring Doon seemed to prolong,
As if the mate it fain would find
Had gone and 'left a thorn' behind.

Upon the sleeping infant's face
Each changing note could Coila trace.

Then came a ditty, soft and slow,
Of Love, whose locks were white as snow.

The immortal infant heaved a sigh,
As if he knew such love must die.

That ceased : then shrieks and sounds of laughter,
That seemed to shake both roof and rafter,
Floated from where Kirk Alloway
Half buried in the darkness lay.

A mingled look of fun and fear
Did on the infant's face appear.

There was a hush : and then uprose
A strain, which had a holy close,
Such as with Cotter's psalm is blended
After the hard week's labour's ended,
And dawning brings the hallowed day.

In sleep the infant seemed to pray.

Then there was heard a martial tread,
As if some new-born Wallace led
Scotland's armed sons in Freedom's cause.

Stern looked the infant in repose.

The clang of warriors died away,
And then 'a star with lessening ray'
Above the clay-built cottage stood ;
While Ayr poured from its rolling flood
A sad heart-rending melody,
Such as Love chants to Memory,
When of departed joys he sings,
Of 'golden hours on angel wings'
Departed, to return no more.

Pity's soft tears fell on the floor,
While Hope spake low, and Love looked pale,
And Sorrow closer drew her veil.

Groans seemed to rend the infant's breast,
Till Coila whispered him to rest ;
And then, uprising, thus she spake :
'This child unto myself I take.

All hail! my own inspired Bard,
 In me thy native Muse regard! *
 Around the sleeping infant's head
 Bright trails of golden glory spread.
 'A love of right, a scorn of wrong,'
 She said, 'unto him shall belong;
 A pitying eye for gentle woman,
 Knowing "to step aside is human;"
 While love in his great heart shall be
 A living spring of poetry.
 Failings he shall have, such as all
 Were doomed to have at Adam's fall;
 But there shall spring above each vice
 Some golden flower of Paradise,
 Which shall, with its immortal glow,
 Half hide the weeds that spread below;
 So much of good, so little guile,
 As shall make angels weep and smile,
 To think how like him they might be
 If clothed in frail humanity;
 His mirth so close allied to tears,
 That when grief saddens or joy cheers,
 Like shower and shine in April weather,
 The tears and smiles shall meet together.
 A child-like heart, a god-like mind,
 Simplicity round Genius twined:
 So much like other men appear,
 That, when he's run his wild career,
 The world shall look with wide amaze,
 To see what lines of glory blaze
 Over the chequered course he passed—
 Glories that shall for ever last.

Of Highland hut and Lowland home,
 His songs shall float across the foam,
 Where Scotland's music ne'er before
 Rang o'er the far-off ocean shore.
 To shut of eve from early morn,
 They shall be carolled mid the corn,
 While maidens hang their heads aside,
 Of Hope that lived, and Love that died;
 And huntsmen on the mountains steep,
 And herdsmen in the valleys deep,
 And virgins spinning by the fire,
 Shall catch some fragment of his lyre.
 And the whole land shall all year long
 Ring back the echoes of his song.
 The world shall in its choice records
 Store up his common acts and words,
 To be through future ages spread;
 And how he looked, and what he said,
 Shall in wild wonderment be read,
 When coming centuries are dead.'

'And wear thou this,'" she solemn said,
 'And bound the holly round' his 'head;
 The polished leaves, and berries red,
 Did rustling play;
 And, like a passing thought, she fled
 In light away.' †

It is amusing to learn that Burns, when just emerging from obscurity, jocularly anticipated that his birthday would come to be noted among other remarkable events. In a letter to his early patron, Gavin Hamilton, in 1786, he says: 'For my own affairs, I am in a fair way of becoming as eminent as Thomas à Kempis, or John Bunyan; and you may expect henceforth to see my birthday inscribed among the wonderful events, in the Poor Robin and Aberdeen Almanacks, along with the Black Monday and the Battle of Bothwell-bridge.'

* 'The Vision,' by Burns. † Ibid., last verse.
 160

It is an affecting circumstance that Burns, dying in poverty, and unable to remunerate his medical attendant in the usual manner, asked the doctor's acceptance of his pair of pistols as a memorial of their friendship. Dr Maxwell, who proved a generous friend to the poor bard's surviving widow and children, retained these weapons till his death in 1834, after which they were preserved for some years by his sister. On her death, they were presented to the Society of Antiquaries of Scotland, in whose museum in Edinburgh they are now kept in an elegant coffer, but open to the inspection of the public.*

EDWARD II. OF ENGLAND.

25th January 1327, is the date of the deposition of the silly king, Edward II., whose reign of twenty years had been little else than one continual wrangle regarding the worthless royal favourites, Gaveston and Despencer. Edward is remarkable in one respect, that, weak and pusillanimous himself, he was the son of one and father of another of the most vigorous of English monarchs. Wisdom, dignity, and every manly quality had fairly leaped over this hapless generation.

There is an authentic manuscript which gives an account of the expenses of Edward II. during a part of his reign; and it contains striking evidence of his puerile character. There are repeated entries of small sums, disbursed to make good the losses which the king incurred in playing at *cross and pile*, which is neither more nor less than the pitch and toss of modern school-boys. He played at this game with the usher of his chamber, and he would borrow from his barber the money wherewith to play. He did not disdain to travel on the Thames, in a returned barge which had brought fagots to his court. There is a sum entered, as paid by the king's own hands, to James of St Albans, who had danced before his highness upon a table, and made him laugh heartily; and another was conferred on Morris Ken of the Kitchen, who, in a hunt at Windsor, made the king laugh heartily by frequently tumbling off his horse. † An elaborate history of the reign could not make us better appreciate the misfortune of the English people in being for twenty years under such a monarch.

MARRIAGE OF THE PRINCESS MARGARET OF ENGLAND.

On St Paul's day, 1502-3, there took place a marriage in the royal family of England, which has been attended with most important consequences to the welfare of the entire island. The

* At a sale of Dr Maxwell's effects in Dumfries, several pairs of pistols of an ordinary make were disposed of—for the Doctor had been a weapon-fancier to some extent—and two of these sets have since been severally set forth as Burns's pistols. One of them, which had been bought for the sum of fifteen and sixpence, fell into the hands of a modern bard, and was enshrined by him in an elegant case. See a curious paper on Burns's Pistols, by the Right Rev. Bishop Gillis, of Edinburgh, 1859.

† Antiquarian Repertory, 4 vols. 4to, vol. ii. p. 406.

Princess Margaret, eldest daughter of Henry VII., was then united at the manor of Richmond to King James IV. of Scotland, as represented by his proxy, Patrick Earl of Bothwell. It was foreseen by the English king that this union might lead to that of the two kingdoms, which had so long been at enmity with each other; and when some of his council objected, that in this event England would become a province of Scotland, he shewed his deeper wisdom by remarking that it never could be so, as the smaller would ever follow the larger kingdom.

The young Queen of Scots was at this time only thirteen years and a quarter old; nevertheless, a learned Scotsman, Walter Ogilvy, who was present at the marriage, describes her as if she had already acquired all the graces, mental as well as bodily, of mature womanhood. She was 'decens, urbana, sagax.' Beauty and modesty were united in her. She was of tall stature, had lively eyes, smooth arms, beautiful hands, golden hair, and a tongue enriched with various languages. Her complexion united the beauty of both the roses of her father and mother. Whether she walked or lay, stood or sat, or spoke, a grace attended her.

GEORGE SELWYN.

January 25, 1791, died the celebrated wit, George Selwyn, in the seventy-second year of his age.

The Earl of Carlisle, writing to George Selwyn from Trentham, Sept. 20, 1774, tells him that a man is about to be tried at the assizes in Carlisle for murder. His lordship adds, 'If you should happen to be with us at the time of the assizes, I will take care to get you a good place at the execution; and though our Tyburn may not have all the charms which that has where you was brought up and educated, yet it may be better than no Tyburn.'

Lord Carlisle here alludes to the singular taste of George Selwyn for attending executions, in order to watch the conduct of the criminal under his extraordinary circumstances; a propensity the more remarkable in him, that he was a man of the greatest benevolence and tenderness of nature, and the undisputed prince of the men of wit and humour of his day. It was perhaps to gratify the very benevolence of his nature, by giving it a hearty sensation, that he was so fond of looking upon the sufferings of evil-doers.

His friend Horace Walpole, writing in 1750, speaks of him as one 'whose passion it was to see coffins, corpses, and executions.' Walpole having spoken of one Arthur More, recently deceased, George instantly remarked the curious fact that More had had his coffin chained to that of his mistress. 'How do you know?' inquired Walpole in some surprise. 'Why,' replied Selwyn, 'I saw them the other day in a vault at St Giles's.' 'He was walking this week,' says Walpole, 'in Westminster Abbey, with Lord Abergavenny, and met the man who shews the tombs. "Oh, your servant, Mr Selwyn; I expected to have seen you here the other day, when the old Duke of Richmond's body was taken up."' George had probably been out of town when the event happened.

The trial of the unfortunate rebel lords, in 1746, proved a rich treat for Selwyn. He attended most assiduously, and went fully into the spirit of the scene. Observing a Mrs. Bethel, who had what is called a *hatchet* face, he said, 'What a shame of her to turn her face to the prisoners before they are condemned!' Going to get a tooth extracted, he told the dentist he would drop his handkerchief for the signal. Some ladies rallied him about his want of feeling in having gone to see Lord Lovat's head cut off; 'Why,' said he, 'I made amends by going to the undertaker's to see it sewn on again. And such was really the fact. He attended this last ceremony with an appearance of great solemnity, concluding the affair by calling out in the manner of the Lord Chancellor at the trial, 'My Lord Lovat, your lordship may rise!'

Henry, first Lord Holland, who, with all his faults as a statesman, possessed both wit and good nature, touched off the ruling passion of George Selwyn in the neatest manner when on his death-bed. Being informed that George had been inquiring for him, he said to his servant, 'The next time Mr Selwyn calls, show him up: if I am alive, I shall be delighted to see him; and if I am dead, he will be glad to see me.'

The story has been often told of George Selwyn, that he went to Paris, in 1756, on purpose to see the execution of Damien, for his attempt to assassinate Louis XV. 'On the day of the execution, he mingled with the crowd, in a plain undress and bob-wig; when a French nobleman, observing the deep interest he took in the scene, and imagining, from the plainness of his attire, that he must be a person in the humbler ranks of life, chose to imagine that he must infallibly be a hangman. "Eh, bien, monsieur," he said, "êtes-vous arrivé pour voir ce spectacle?"—"Oui, monsieur."—"Vous êtes bourgeois?"—"Non, non, monsieur; je n'ai pas cette honneur; je ne suis qu'un amateur."'*

HONOUR TO MAGISTRATES.

On this day, in 1821, there were read before the Society of Antiquaries, some notes by Mr John Adey Repton, on the custom which prevailed in the seventeenth century of erecting two ornamental posts beside the gates of chief magistrates. Of the examples presented by Mr Repton, one may be here copied, being the posts erected beside the door of Thomas Pettys, Mayor of Norwich in 1592. This feature of old municipal usage is often alluded to by the contemporary dramatists. Thus, in *Lingua, or a Combat of the Tongue and the five Senses for Superiority: a Pleasant Comedie*, 1607, 4to, occurs the following passage:

Communis Sensus.—Crave my counsel, tell me what manner of man is he? Can he entertain a man into his house? Can he hold his velvet cap in one hand, and veil his bonnet with the other? Knows he how to become a scarlet gown? Hath he a pair of fresh posts at his door?

Phantastes.—He's about some hasty state matters; he talks of posts, methinks.

Com. S.—Can he part a couple of dogs brawling in the street? Why, then, chuse him Mayor, &c.

* Jesse's Memoirs of George Selwyn, i. 11.

In Beaumont and Fletcher's play of *The Widow*, is the following passage:

'I'll love your door the better while I know it.
'*Widow*.—A pair of such brothers were fitter for posts without door, indeed to make a show at a new-chosen magistrate's gate, than to be used in a woman's chamber.'

MAYORAL DOOR-POSTS, NORWICH, 1592.

Similar posts were erected at the sheriff's gate, and used for the display of proclamations. In Rowley's play of *A Woman Never Vexed*, 1632, a character says:

'If e'er I live to see thee sheriff of London,
I'll gild thy posts.'

A trace of this old custom is still to be found in Edinburgh, where it is a rule that a pair of gilded lamp-posts are always erected before the door of the Lord Provost.

THE AUTHORIZED VERSION OF THE BIBLE.

(Ordered in January, 1604.)

The month of January is memorable as that of the celebrated Hampton Court Conference, held at the beginning of the reign of James I. in England (1604), for the regulation of questions of religion, agitated by the violent opposition between the High Church party and the Puritans. Among other grievances brought forward on this occasion was the unsatisfactory state of the translations of the Bible then existing; and one of the most important and lasting results was the formation of the Authorized translation of the Scriptures which still remains in use in this country, and which was ordered by King James soon after the Conference separated. The

history of the English versions of the Bible is a subject of interest to everybody.

There was no principle or doctrine in the Roman Catholic religion opposed to the translation of the Holy Scriptures. In fact, the Latin text of the Bible used by the Catholics, and known as the Vulgate, was itself only a translation; and it was translated into the languages of various countries without reluctance or hesitation. Among the Anglo-Saxons, Aldhelm is said to have translated the Psalms as early as the seventh century; and an Anglo-Saxon translation of the Psalms, partly in prose and partly in verse, is still preserved in the Imperial Library in Paris, and was printed at Oxford in 1835, under the editorial care of Mr Benjamin Thorpe. The Anglo-Saxon translation of the Gospels, which has been ascribed to the ninth century, has also been printed; and a distinguished Anglo-Saxon ecclesiastic, Alfric, towards the close of the tenth century, translated into Anglo-Saxon a great part of the Old Testament, which is still preserved in manuscript. The whole of the Scriptures are supposed to have been translated into Anglo-Norman, but detached portions only are preserved. An English harmony of the Gospels was compiled in verse in the beginning of the thirteenth century, by a man named Orm, who gave to it the title of *Ormulum*, after his own name. Several versions of the Psalms were also written in early English, but the first translation of the entire Bible into English was that which was completed in the course of the latter half of the fourteenth century, and which is known as Wycliffe's Bible, as being the work either of that reformer himself, or at least of his followers. There are two texts of this English version, differing considerably from each other—which are printed side by side in the edition in 3 vols. 4to edited by Forshall and Madden—and it must have been circulated very widely, from the great number of manuscript copies still in existence.

Though the mediæval churchmen did not object to the Scriptures being translated, they had a strong objection to the communication of them to the vulgar. In this respect the publication of translations of the Bible before and after the invention of printing, presented totally different questions. A manuscript book was very expensive, could be multiplied but slowly, and could only be possessed by the wealthy. The translations, therefore, to which we have alluded, were mostly, no doubt, made for ecclesiastics themselves, for abbesses and nuns, or for pious ladies of rank. But the Wycliffites openly professed that their object in translating the Scriptures was to communicate them to the people, and even to the lowest orders, by reading them, and causing them to be read, in the vernacular tongue. The whole mass of the Romish clergy who were opposed to reform took the alarm, horrified at the idea of imparting religious knowledge to the people, whom they wished to keep in a condition of blind subjection to themselves, with which such knowledge was quite incompatible. The first attempt to proscribe the Wycliffite translation was made in parliament in 1390, and was defeated by the influence of the Duke of

Lancaster, John of Gaunt. But in 1408, the clergy, under Archbishop Arundel, succeeded in their object: Wycliffe's and every other translation of the Scriptures into English were prohibited by an act of Convocation; and all who were known or suspected to read them were subjected to bitter persecution, which continued without intermission until the reign of Henry VIII.

The English Reformers were quick at taking advantage of the new art of printing, and they soon entered into communication with their brethren on the Continent, where only they could find a free press. In the year 1526, an English translation of the New Testament was printed, it is said, at Antwerp, and copies were surreptitiously passed into England. This translation, which is said to have been made direct from the Greek original, was the work of William Tyndal, a canon of the then new foundation of Christ Church, Oxford, who had been obliged to leave his native country on account of his religious opinions, assisted by John Fry, or Fryth, and William Roy, who were both put to death as heretics. It was the first *printed* translation of any part of the Scriptures in English. The chiefs of the Catholic party in England seem to have been much embarrassed with this book, and

they attempted to meet the difficulty by buying up all the copies and burning them; and thus created an artificial sale, which enabled Tyndal to bring out another and more correct edition. It was not till 1530, that Sir Thomas More, as Lord Chancellor, with the high ecclesiastics, issued a declaration against all English translations of the Scriptures; and that same year Tyndal printed his translation of the Pentateuch at Hamburg. He had now undertaken, with the assistance of another learned English Reformer, Miles Coverdale, a translation of the whole Bible; but in the middle of his labours he was suddenly arrested and thrown into prison by order of the Emperor, and his opinions were punished with death in 1536, the year of the first act for the dissolution of the English monasteries. In the previous year, the great work on which he had laboured with so much zeal had been completed. Miles Coverdale, who had been his assistant from the commencement, had continued the work alone after Tyndal's imprisonment; and this first English Bible was published in 1535, in a huge folio volume, believed from the character of the types to have been printed at Zurich, under the sole name of Coverdale. It was dedicated to King Henry VIII. of England.

By this time the Reformation had made such

(Being a portion of the Engraved Title of 'Cranmer's Bible.')

advances in England, that the King himself was induced to allow the Bible to be circulated in the language of the people; and early in the year 1536 the English clergy were enjoined by royal authority to place a Latin Bible and an English Bible in the choir of every church, where it could be freely read by the people. The number of copies of Coverdale's Bible was insufficient to supply such a demand; and a new English Bible was now ordered to be printed under the direction of Cranmer, on which it is believed that Coverdale was the chief person employed. Leave was obtained from the King of France to print this Bible in Paris, where the typographic art

was then carried to the greatest perfection, and the care of the printing was entrusted to Richard Grafton and Edward Whitechurch; but they were interrupted by the interference of the French clergy, who seized and burnt nearly the whole impression, and Grafton and Whitechurch were obliged to withdraw to London, where the printing was completed in the spring of 1539. This book was sometimes called Cranmer's Bible, and sometimes spoken of as the 'Great Bible.' It was to it that reference was made in the royal proclamation of the following year, which enjoined the curates and parishioners of every parish to provide themselves with the

Bible of the largest size, under a penalty of forty shillings a month as long as they remained without it. At the latter end of Henry's reign, in consequence of a change in the religious policy of the Court, a check was again put on the free reading of the Scriptures, which was of course removed on the accession of Edward VI.

The persecutions of Queen Mary's reign drove the English Reformers into exile, when a number of the more zealous of them assembled at Geneva, and, while there, employed themselves upon a new translation of the Scriptures, with annotations, to which was given a strong Calvinistic colouring, and which contained political notions of a democratic character. The New Testament was first published, and was completed in 1557: the Old Testament followed in 1560. This is generally known as the Geneva Bible, and was in favour among the Puritan party and in Scotland. Elizabeth, at the beginning of her reign, determined to have an English translation of the Bible more in accordance with her views in religious matters; and she entrusted the direction of it to Archbishop Parker, who distributed the work among a certain number of learned men.

It was published in 1568, and, from the circumstance that there was a considerable number of bishops among the translators, it is often spoken of as the Bishops' Bible.

Such was the state of things at the time of the Hampton Court Conference. There were at least four different English translations of the Bible, which had gone through numerous editions, differing very much from each other, not only verbally, but very often in the interpretation of Holy Writ, and not one of which had any absolute authority over the other. Moreover, most of these older translations, in the Old Testament at least, had been made in a great measure from the Latin vulgate, the old Romanist version. It cannot be denied that one authorized and correct version of the Bible was greatly wanted, and this seems to have been allowed by all parties. It appears, however, that the proposal originated with the Puritans, and that it was their speaker in the Conference, Dr. Reynolds, who brought the subject before the King. James had no partiality for any of the translations which then existed; he is understood to have disliked the Geneva Bible, partly on account of its rather

CHAINED BIBLE IN CUMNOR CHURCH, LEICESTERSHIRE.

low tone on his favourite 'kingeraft'; it was a flattering idea that his reign in England should be inaugurated by a translation of the Scriptures from the original Hebrew. He, accordingly, embraced the proposal with eagerness,

and drew up with his own pen the rules for translating. In the course of the year 1604, James appointed a Commission of learned men selected from the two Universities and from Westminster, consisting at first of fifty-four

individuals, but reduced subsequently to forty-seven. To each of these a portion of the Scriptures was given to translate. They began their labours in the spring of 1607, and completed them in three years; and then a select committee was appointed, consisting of two from each University, and two from Westminster, who met at Stationers' Hall, in London, to correct the work of the rest. The Bishop of Winchester (Bilson) and Dr. Myles Smith finally revised the whole, and prefixed the arguments to the several books. It is supposed that Bancroft, Bishop of London, had the chief direction of the whole work.

Thus was formed the Authorized Version of the Scriptures, which was published in 1611, and has ever since been the only English translation acknowledged by the Anglican Church. For the time at which it was written, it is truly a very wonderful work; but still it is acknowledged by modern scholars to be far from perfect. During the two centuries and a half since the time of James I., Hebrew philology and the knowledge of biblical antiquities have made great advance; and there can be no doubt that the Authorized translation of the Bible contains many errors and many mistranslations, which it would be very desirable to see corrected. Many men of great learning have therefore, from time to time, asked for a new translation, or at least a revision of the present Authorized Version. But others, while acknowledging its imperfections, hold that they are none of them of a character to interfere with the utility of the present version among the mass of the people, and they shrink from the prospect of disturbing their religious convictions and feelings, with which this version has been so long and so closely interwoven.

A copy of the Authorized Version was, as before, placed in each parish church, that it might be accessible to all; and, usually, after the fashion of the old libraries, it was chained to the place. A sketch of such a Bible, yet surviving in Cumnor Church, Leicestershire, is given in the preceding page.

JANUARY 26.

St Polycarp, bishop of Smyrna, 166. St Paula, widow, 404. St Conon, bishop of Man, about 648.

ST POLYCARP.

Polycarpus is the earliest of the Christian fathers. An unusual and peculiar interest attaches to him, as one who might have known, if he did not actually know, the evangelist John. At Smyrna, of which he was bishop, Polycarp suffered martyrdom by burning, in 167. Of his writings there remains but an epistle to the Philippians, exhorting them to maintain the purity of the faith.

ST CONON.

Conon is a Scotch saint of the seventh century. He was for some years Bishop of Man or of the Southern Isles, and his name continued to be remembered with veneration in the Highlands

till the Reformation. 'Claw for claw,' as Conon said to Satan, 'and the devil take the shortest nails,' is a proverb of the Highlanders, apparently referring to some legend of an encounter between the holy man and the great spiritual enemy of our race.

Born.—Lord George Sackville, 1716; J. B. Bernadotte, king of Sweden, 1764, *Pau*; Thomas Noon Talford, 1795.

Died.—Henry Briggess, 1630, *Oxford*; Dr E. Jenner, 1823, *Berkeley*; Francis Jeffrey, 1850, *Edinburgh*; Adam Gottlob Oehlenschläger, Danish poet, 1850.

FRANCIS JEFFREY.

The first recognised editor of the *Edinburgh Review* was a man of small and slight figure, and of handsome countenance; of fine conversational powers, and, what will surprise those who think of him only as the uncompromising critic, great goodness of heart and domestic amiability. In his latter years, when past the psalmist-appointed term of life, he grew more than ever tender of heart and amiable, praised nursery songs, patronised mediocrities, and wrote letters of almost childish gentleness of expression. It seemed to be the natural strain of his character let loose from some stern responsibility, which had made him sharp and critical through all his former life.

His critical writings had a brilliant reputation in their day. He was too much a votary of the regular old rhetorical style of poetry to be capable of truly appreciating the Lake school, or almost any others of his own contemporaries. The greatest mistake he made was as to Wordsworth, whose *Excursion* he saluted (*Edinburgh Review*, November 1814) with an article beginning, 'This will never do;' a free and easy condemnation which, now contrasted with the reputation of Wordsworth, returns a fearful revenge upon the critic.

Jeffrey, however, is not without his companions in this kind of misfortune. Home, the author of *Douglas*, could not see the merit of Burns; and Ritson, while appreciating him as a poet generally, deemed his songs a failure. 'He does not,' says the savage Joseph, 'appear to his usual advantage in song: *non omnia possumus.*'

It would be a curious task, and something like a fair revenge upon the sanguinary brotherhood of Critics, to run over their works, and select the unhappy cases in which, from prejudice or want of natural penetration, they have passed judgments and made prophecies which now appear ludicrously inappropriate. Some unlucky pronouncements by unprofessional hands may meanwhile be noted.

It was Waller who wrote of *Paradise Lost* on its first appearance: 'The old blind schoolmaster, John Milton, hath published a tedious poem on the fall of man; if its length be not considered a merit, it has no other.'

Walpole, led by political prejudice, on several occasions wrote disparagingly of Smollett. *Humphry Clinker*, which has ever been a favourite with the British public, is passed over ignominiously by the lord of Strawberry Hill, as 'a party novel written by the profligate hireling Smollett.'

We find a tolerably fair offset to the shortcomings of Whig Review criticism, in the way in which the poetry of Hunt, Shelley, and Keats was treated in the early volumes of the *Quarterly*. In the noted article on the *Endymion* of Keats (April 1818), which Byron speaks of in his couplet—

‘’Tis strange the mind, that very fiery particle,
Should let itself be snuffed out by an article’—

(which, however, was a mistake), the critic professes to have been utterly unable to read the poem, and adds: ‘The author is a copyist of Mr Hunt . . . more unintelligible, almost as rugged, twice as diffuse, and ten times more tiresome and absurd than his prototype.’

BISHOP LOW.

Died on the 26th January 1855, the Right Rev. David Low, Bishop of Ross and Argyll, in the episcopal communion of Scotland. The principal reason for noticing this prelate is the fact that he was the last surviving clergyman in Scotland, who had, in his official character, acted upon scruples in behalf of the house of Stuart. At the time of the excellent bishop’s entrance to the Church, in 1787—when he was ordained a deacon—the body to which he belonged omitted the prayer for the king and royal family from their service, being unostentatiously but firmly attached to the fortunes of the family which forfeited the British crown nearly a hundred years before; and it was not till after the death of the unfortunate Charles Edward, in January 1788, that they at length (not without some difficulty) agreed to pray for King George.

An obituary notice of Bishop Low speaks of him as follows: ‘His appearance was striking—tall, attenuated, but active—his eye sparkling with intelligence, his whole look that of a venerable French *abbé* of the old *régime*. His mind was eminently buoyant and youthful, and his memory was a fount of the most interesting historical information, especially in connection with the Cavalier or Jacobite party, to which he belonged by early association and strong religious and political predilection. Born in a district (at that time) devoted to the cause of the Stuarts, almost under the shadow of Edzell Castle, the ancient stronghold of the Lindsays in Forfarshire, and having lived much from time to time in his early years in the West Highlands, among the Stuarts of Ballachulish and Appin, he had enjoyed familiar intercourse with the veterans of 1715 and 1745, and he detailed the minutest events and adventures of those times with a freshness and a graphic force which afforded infinite delight to his younger auditors. His traditional knowledge extended even to the wars of Claverhouse and Montrose.’

Those who know of bishops and their style of living only from the examples afforded by the English Protestant Church, will hear with surprise and incredulity of what we have to tell regarding Bishop Low. This venerable man, who had never been married, dwelt in a room of the old priory of Pittenweem, on the coast of Fife, where he ministered to a congregation for which a good dining-room would have furnished

tolerably ample accommodation. He probably never had an income above a hundred a year in his life; yet of even this he spent so little, that he was able at the last to bequeath about eight thousand pounds for purposes connected with his communion. A salt herring and three or four potatoes often formed the home dinner of the Bishop of Ross and Argyll.

Even in Scotland, chiefly from the introduction of English clergymen of fortune into the episcopate, a bishop is beginning to be, typically, a tolerably well-off and comfortable-looking personage. It therefore becomes curious to recall what he, typically, was not many years ago. The writer has a perfect recollection of a visit he paid, in the year 1826, to the venerable Dr Jolly, Bishop of Moray, who was esteemed as a man of learning, as well as a most devoted officer of his church. He found the amiable prelate living at the fishing town of Fraserburgh, at the north-east corner of Aberdeenshire, where he officiated to a small congregation. The bishop, having had a little time to prepare himself for a visitor, was, by the time the writer made his call, dressed in his best suit and his Sunday wig. In a plain two-story house, such as is common in Scotch towns, having a narrow wooden stair ascending to the upper floor, which was composed of two *coomceiled* apartments, *a but and a ben*, and in one of these rooms, the beautiful old man—for he *was* beautiful—sat, in his neat old-fashioned black suit, buckled shoes, and wig as white as snow, surrounded entirely by shelves full of books, most of them of an antique and theological cast. Irenæus or Polycarp could not have lived in a style more simple. The look of the venerable prelate was full of gentleness, as if he had never had an enemy, or a difficulty, or anything else to contend with, in his life. His voice was low and sweet, and his conversation most genial and kindly, as towards the young and unimportant person whom he had admitted to his presence. The whole scene was a historical picture which the writer can never forget, or ever reflect on without pleasure. Bishop Jolly lived in a style nearly as primitive as Bishop Low; but the savings which consequently arose from his scanty income were devoted in a different way. His passion apart from the church was for books, of which he had gathered a wonderful quantity, including many that were of considerable value for their rarity.

The series of non-jurant English bishops, which began with those who refused to acknowledge William and Mary, including Sancroft, Archbishop of Canterbury, came to an end with the Rev. Mr Gordon, who died on the 19th of November 1779. There was, however, a succession of separatists, beginning with one bishop, and which did not terminate till 1805.*

SEVENTH SONS AND THEIR SEVENTH SONS.

There has been a strong favour for the number Seven, from a remote period in the world’s history. It is, of course, easy to see in what way the Mosaic narrative gave sanctity to this number in connection with the days of the week, and led

* Notes and Queries, 2nd ser., xi. 273.

to usages which influence the social life of all the countries of Europe. But a sort of mystical goodness or power has attached itself to the number in many other ways. Seven wise men, seven champions of Christendom, seven sleepers, seven-league boots, seven churches, seven ages of man, seven hills, seven senses, seven planets, seven metals, seven sisters, seven stars, seven wonders of the world,—all have had their day of favour; albeit that the number has been awkwardly interfered with by modern discoveries concerning metals, planets, stars, and wonders of the world.

Added to the above list is the group of *Seven Sons*, especially in relation to the youngest or seventh of the seven; and more especially still if this person happen to be the seventh son of a seventh son. It is now, perhaps, impossible to discover in what country, or at what time, the notion originated; but a notion there certainly is, chiefly in provincial districts, that a seventh son has something peculiar about him. For the most part, the imputed peculiarity is a healing power, a faculty of curing diseases by the touch, or by some other means.

The instances of this belief are numerous enough. There is a rare pamphlet called the *Quack Doctor's Speech*, published in the time of Charles II. The reckless Earl of Rochester delivered this speech on one occasion, when dressed in character, and mounted on a stage as a charlatan. The speech, amid much that suited that licentious age, but would be frowned down by modern society, contained an enumeration of the doctor's wonderful qualities, among which was that of being a 'seventh son of a seventh son,' and therefore clever as a curer of bodily ills. The matter is only mentioned as affording a sort of proof of the existence of a certain popular belief. In Cornwall, the peasants and the miners entertain this notion; they believe that a seventh son can cure the king's evil by the touch. The mode of proceeding usually is to stroke the part affected thrice gently, to blow upon it thrice, to repeat a form of words, and to give a perforated coin or some other object to be worn as an amulet. At Bristol, about forty years ago, there was a man who was always called 'Doctor,' simply because he was the seventh son of a seventh son. The family of the Joneses of Muddfi, in Wales, is said to have presented seven sons to each of many successive generations, of whom the seventh son always became a doctor—apparently from a conviction that he had an inherited qualification to start with. In Ireland, the seventh son of a seventh son is believed to possess prophetic as well as healing power. A few years ago, a Dublin shopkeeper, finding his errand-boy to be generally very dilatory in his duties, inquired into the cause, and found that, the boy being a seventh son of a seventh son, his services were often in requisition among the poorer neighbours, in a way that brought in a good many pieces of silver. Early in the present century, there was a man in Hampshire, the seventh son of a seventh son, who was consulted by the villagers as a doctor, and who carried about with him a collection of crutches and sticks, purporting to have once belonged to persons whom he had cured of lame-

ness. Cases are not wanting, also, in which the seventh daughter is placed upon a similar pinnacle of greatness. In Scotland, the *spae wife*, or fortune-teller, frequently announces herself as the seventh daughter of a seventh daughter, to enhance her claims to prophetic power. Even so late as 1851, an inscription was seen on a window in Plymouth, denoting that a certain doctress was 'the third seventh daughter,'—which the world was probably intended to interpret as the seventh daughter of the seventh daughter of a seventh daughter.

Sometimes this belief is mixed up with curious family legends. The *Winchester Observer*, a few years ago, gave an account of the 'Tichborne Dole,' associated with one of the very oldest Hampshire families. The legend tells that, at some remote period, a Lady Mabella, on her death-bed, besought her lord, the Tichborne of those days, to supply her with the means for bequeathing a gift or *dole* of bread to any one who should apply for it annually on the Feast of the Annunciation of the Blessed Virgin. Sir Roger promised her the proceeds of as much land as she could go over while a brand or billet of a certain size was burning: she was nearly bedridden, and nearly dying; and her avaricious lord believed that he had imposed conditions which would place within very narrow limits the area of land to be alienated. But he was mistaken. A miraculous degree of strength was given to her. She was carried by her attendants into a field, where she crawled round many goodly acres. A field of twenty-three acres, at Tichborne, to this day, bears the name of the *Crawl*. The lady, just before her death, solemnly warned her family against any departure from the terms of the dole; she predicted that the family name would become extinct, and the fortunes impoverished, if the dole were ever withdrawn. The Tichborne dole, thus established, was regarded as the occasion of an annual festival during many generations. It was usual to bake fourteen hundred loaves for the dole, of twenty-six ounces each, and to give twopence to any applicant in excess of the number that could be then served. This custom was continued till about the middle of the last century; when, under pretence of attending Tichborne Dole, vagabonds, gipsies, and idlers of every description, assembled from all quarters, pilfering throughout the neighbourhood; and at last, in 1796, on account of the complaints of the magistrates and gentry, it was discontinued. This gave great offence to many who had been accustomed to receive the dole. And now arose a revival of old traditions. The good Lady Mabella, as the legend told, had predicted that, if the dole should be withheld, the mansion would crumble to ruins; that the family name would become extinct through the failure of male heirs; and that this failure would be occasioned by a generation of seven sons being followed by a generation of seven daughters. Singularly enough, the old house partially fell down in 1803; the baronet of that day had seven sons; the eldest of these had seven daughters; and the owner of the family estates became a Doughty instead of a Tichborne. If this story be correctly told, it is certainly a

very tempting one for those who have a leaning towards the number seven.

France, as well as our own country, has a belief in the Seventh Son mystery. The *Journal de Loivet*, a French provincial newspaper, in 1854 stated that, in Orleans, if a family has seven sons and no daughter, the seventh is called a *Marcou*, is branded with a *feur-de-lis*, and is believed to possess the power of curing the king's evil. The *Marcou* breathes on the part affected, or else the patient touches the *Marcou's feur-de-lis*. In the year above-named, there was a famous *Marcou* in Orleans named Foulon; he was a cooper by trade, and was known as 'le beau *Marcou*.' Simple peasants used to come to visit him from many leagues in all directions, particularly in Passion week, when his ministrations were believed to be most efficacious. On the night of Good Friday, from midnight to sunrise, the chance of cure was supposed to be especially good, and on this account four or five hundred persons would assemble. Great disturbances hence arose; and as there was evidence, to all except the silly dupes themselves, that Foulon made use of their superstition to enrich himself, the police succeeded, but not without much opposition, in preventing these assemblages.

In some of the States of Germany there used formerly to be a custom for the reigning prince to stand sponsor to a seventh son (no daughter intervening) of any of his subjects. Whether still acted upon is doubtful; but there was an incident lately which bore on the old custom in a curious way. A West Hartlepool newspaper stated that Mr J. V. Curths, a German, residing in that busy colliery town, became, toward the close of 1857, the father of one of those prodigies—a seventh son. Probably he himself was a Saxe Gothan by birth; at any rate he wrote to the Prince Consort, reminding him of the old German custom, and soliciting the honour of his Royal Highness's sponsorship to the child. The Prince was doubtless a little puzzled by this appeal, as he often must have been by the strange applications made to him. Nevertheless, a reply was sent in the Prince's name, very complimentary to his countryman, and enclosing a substantial *souvenir* for the little child; but the newspaper paragraph is not sufficiently clear for us to be certain whether the sponsorship really was assented to, and, if so, how it was performed.

Three Wonderful Things.—Sir James Stewart, of Coltness, was accustomed to say, that after having lived fifty years, and gone through almost all the geographical and literary world, three things only had surmounted his most sanguine expectations—The Amphitheatre at Verona, the Church of St Peter's at Rome, and Mr Pitt in the House of Commons.

Smoking was formerly forbidden among schoolmasters. In the rules of the school at Chigwell, founded in 1629, it was declared that 'the master must be a man of sound religion, neither Papist nor Puritan, of a grave behaviour, and sober and honest conversation, no tippler or haunter of alehouses, and no puffer of tobacco.'

'To the good.'—We find this homely phrase in the speech of Charles I. to the House of Commons on 'The Arrest of the Five Members,' as follows: 'Whatever I have done in favour and to the good,' &c.

JANUARY 27.

St Julian, bishop, 3rd century. St John Chrysostom, archbishop, 407. St Marius, abbot, 555.

ST JOHN CHRYSOSTOM.

St John *Chrysostomus* is one of the most celebrated of the fathers of the Eastern or Greek church. He was born about the year 347, at Antioch. His father was commander of the Imperial army in Syria. He was educated for the bar, but became a convert to Christianity; and the solitary manner of living being then in great estimation, and very prevalent in Syria, he retired to a mountain not far from Antioch, where he lived some years in solitude, practising the usual austerities. He returned to the city in 381, and was ordained by Meletius, Bishop of Antioch, to the office of deacon, and to that of presbyter in 386. He became one of the most popular preachers of the age; his reputation extended throughout the Christian world; and in 398, on the death of Nectarius, he was elected Bishop of Constantinople. He was zealous and resolute in the reform of clerical abuses, and two years after his consecration, on his visitation in Asia Minor, he deposed no less than thirteen bishops of Lydia and Phrygia. His denunciations of the licentious manners of the court drew upon him the resentment of the Empress Eudoxia, who encouraged Theophilus, patriarch of Alexandria, to summon a synod at Chalcedon, in which a number of accusations were brought against Chrysostom. He was condemned, deposed, and banished to Cucusus, a place in the mountain-range of Taurus, whence, after the death of the Empress, it was determined to remove him to a desert place on the Euxine. He travelled on foot, and caught a fever, which occasioned his death at Comana, in Pontus, September 14, 407, at the age of sixty.

The works of Chrysostom are very numerous, consisting of 700 homilies and 242 epistles, as well as commentaries, orations, and treatises on points of doctrine. His life has been written by Socrates, Sozomen, Theodoret, and other early writers, and by Neander in more recent times.

The name Chrysostomus, or golden-mouthed, on account of his eloquence, was not given to him till some years after his death. Socrates and the other early writers simply call him John, or John of Constantinople.

Born.—Dr Thomas Willis, 1622, *Bodmin*; J. C. W. Mozart, 1756.

Died.—Sir William Temple, 1699; Thomas Woolston, 1733, *King's Bench Prison*; Admiral Lord Hood, 1816; Dr C. Hutton, mathematician, 1823; Rev. Dr Andrew Bell, originator of the Madras System of Juvenile Education, 1832; John James Audubon, naturalist, 1851, *New York*.

DR ANDREW BELL.

Dr Andrew Bell, being a holder of rich livings, was able, by the aid of very frugal or rather penurious habits, to realise a large fortune, all of which he devoted at his death to exemplify and perpetuate that system of juvenile education, the introduction of which, first in Madras and afterwards in England, had given him celebrity,

but of which, it need scarcely be remarked, the merits are now found to have been largely over-estimated. It is sad to reflect that, among the founders of useful institutions, several, if not many, or the greatest number, have been wretched egotists, or noted in life rather for the unfavourable aspect they bore towards their fellow-creatures, than for anything of a benevolent or genial cast. Thus Guy, the bookseller, whose money established the medical hospital bearing his name, is alleged to have made it chiefly by purchasing seamen's tickets, and a not very creditable success in the affair of the South Sea bubble. Of George Watson, founder of an hospital for the nurture of boys in Edinburgh, the papers preserved in his cabinet shew how penuriously he lived, and how rigorous beyond measure he was as a creditor. James Donaldson, who left a quarter of a million for a similar purpose, overlooked in his will all his old servants and retainers, and assigned but one or two poor annuities to those nearest him in blood. There are, of course, many instances in which benevolent intentions have solely or mainly ruled; but, certainly, many have been of the opposite complexion here indicated. Among such must be reckoned Andrew Bell, who left £120,000 Three per Cent. Consols, to found an extensive establishment for juvenile education in his native city of St Andrews. The egotism of this old gentleman, as indicated in his ordinary conversation, and in his leaving a considerable sum for the composition and publication of a memoir to glorify him, allow no room to doubt that, in the hoarding of money, and in the final disposal of what he acquired, he had purely an eye to himself.

Thomas De Quincey tells some things of a domestic nature regarding Dr Bell, which, in the case of any reasonably respectable man, one would not desire to see repeated, but which, regarding him, do not call for being put under any restriction. 'Most men,' says the Opium-eater, 'have their enemies and calumniators; Dr Bell had *his*, who happened rather indecorously to be his wife, from whom he was legally separated . . . divorced *à mensâ et thoro*. This legal separation did not prevent the lady from persecuting the unhappy doctor with everlasting letters, endorsed outside with records of her enmity and spite. Sometimes she addressed her epistles thus: "To that supreme of rogues, who looks the hang-dog that he is, Doctor (such a doctor!) Andrew Bell." Or again: "To the ape of apes, and the knave of knaves, who is recorded to have once paid a debt—but a small one, you may be sure, it was that he selected for this wonderful experiment—in fact, it was 4½d. Had it been on the other side of 6d., he must have died before he could have achieved so dreadful a sacrifice." Many others, most ingeniously varied in the style of abuse, I have heard rehearsed by Coleridge, Southey, Lloyd, &c.; and one, in particular, addressed to the doctor, when spending a summer at the cottage of Robert Newton, an old soldier, in Grasmere, presented on the back two separate adjurations, one specially addressed to Robert himself, pathetically urging him to look sharply after the rent of his lodgings; and the other more generally addressed to the unfortunate person as yet

undisclosed to the British public (and in this case turning out to be myself), who might be incautious enough to pay the postage at Amble-side. "Don't grant him an hour's credit," she urged upon the person unknown, "if I had any regard to my family." "*Cash down!*" she wrote twice over. Why the doctor submitted to these annoyances, nobody knew. Some said it was mere indolence; but others held it to be a cunning compromise with her inexorable malice. The letters were certainly open to the "public" eye; but meantime the "public" was a very narrow one: the clerks in the post-office had little time for digesting such amenities of conjugal affection; and the chance bearer of the letters to the doctor would naturally solve the mystery by supposing an *extra* portion of madness in the writer, rather than an *extra* portion of knavery in the reverend receiver.'

ROBERT BURTON.

On the 27th January 1639, there was interred in Christ Church Cathedral, Oxford, one of the most singular men of genius that England has at any time produced,—the famous Robert Burton, author of the *Anatomy of Melancholy*. Though occupying a clerical charge in his native county of Leicester, he lived chiefly in his rooms in Christ Church College, and thus became a subject of notice to Anthony Wood, who, in his *Athenæ Oxonienses*, thus speaks of him: 'He was an exact mathematician, a curious calculator of nativities, a general-read scholar, a thorough-paced philologist, and one that understood the surveying of lands well. As he was by many accounted a severe student, a devourer of authors, a melancholy and humorous person, so, by others who knew him well, a person of great honesty, plain-dealing, and charity. I have heard some of the ancients of Christ Church say, that his company was very merry, faceté, and juvenile; and no man in his time did surpass him for his ready and dexterous interlarding his common discourse among them with verses from the poets, or sentences from classical authors, which, being then all the fashion in the University, made his company more acceptable.'

The Anatomy of Melancholy was the only work which Burton produced. After the 8th edition (1676), the book seems to have fallen into neglect, till Dr Johnson's remark, that it was the only book that ever took him out of bed two hours sooner than he wished to rise, again directed attention to it. Dr Ferrier has shewn that Sterne was largely indebted to it, and other authors have been poachers on the same preserve. The work contains a vast number of quotations, nearly all Latin, combined with his own reflections on the large mass of historical and other materials which he has collected. His humour is quaint and peculiar. His melancholy resembles that of Jacques in *As you Like it*. The fine stanzas prefixed to his book, beginning—

'When I goe musing all alone,'—

exhibit the meaning which Burton attaches to

the word, which seems to be, not depression of spirits, but rather a habit of rumination, during which the feelings are cheerful or sad according to the succession of thoughts which pass through the mind.

These lines are thought to have suggested to Milton many ideas in his *Il Penseroso* :

'When I goe musing all alone,
Thinking of divers things fore-knownn,
When I would build castles in the air,
Void of sorrow and void of fear,
Pleasing myself with phantasms sweet,
Methinks the time runs very fleet :
All my joys to this are folly,
Nought so sweet as Melancholy.

'When I goe walking all alone,
Recounting what I have ill donee,
My thoughts on me then tyrannise,
Fear and sorrow me surprize;
Whether I tarry still or go,
Methinks the time moves very slow :
All my griefs to this are jolly,
Nought so sad as Melancholy.

'When to my selfe I act and smile,
With pleasing thoughts the time beguile,
By a brookside or wood so green,
Unheard, unsought for, or unseen,
A thousand pleasures doe me bless,
And crown my soul with happiness.
All my joyes besides are folly,
None so sweet as Melancholy.

'When I lie, sit, or walk alone,
I sigh, I grieve, making great monee,
In a dark grove, or irksome den,
With discontents and furies then,
A thousand miseries at once
Mine heavy heart and soul ensconce.
All my griefs to this are jolly,
None so sour as Melancholy.'

MONUMENT OF BURTON IN CHRISTCHURCH,
170

An edition of the work was published in 1849, in 8vo, with notes, in which the quotations are translated, explained, and referred to the respective works from which they have been derived.

Burton died at or very near the time which he had some years before foretold from the calculations of his own nativity, and which, says Wood, 'being exact, several of the students did not forbear to whisper among themselves, that rather than there should be a mistake in the calculation, he sent up his soul to heaven through a slip about his neck.' We have no other evidence of the truth of this than an obscure hint in the epitaph on his tomb, which was written by the author himself, a short time before his death. Over his grave, against the upper pillar of the aisle, was raised a monument, with the bust of Burton, painted to the life; and on the right-hand, is the calculation of his nativity; and under the bust is the epitaph :

'Paucis notus, paucioribus ignotus,
Hic jacet *Democritus* junior,
Cui vitam dedit et mortem
Melancholia.
Ob. 8, Id. Jan. A. C. MD. XXXIX.'

EARLY NOTICES OF COFFEE IN ENGLAND, FROM BROADSIDES IN THE LUTREL COLLECTION.

A manuscript note, written by Oldys, the celebrated antiquary, states that 'The use of coffee in England was first known in 1657. Mr Edwards, a Turkey merchant, brought from Smyrna to London one Pasqua Rosee, a Ragusan youth, who prepared this drink for him every morning. But the novelty thereof drawing too much company to him, he allowed his said servant, with another of his son-in-law, to sell it publicly, and they set up the first coffee-house in London, in St Michael's alley in Cornhill. The sign was Pasqua Rosee's own head.' Oldys is slightly in error here; Rosee commenced his coffee-house in 1652, and one Jacobs, a Jew, had established a similar undertaking at Oxford, a year or two earlier. One of Rosee's original shop or hand-bills, the only mode of advertising in those days, is now before us; and considering it to be a remarkable record of a great social innovation, we here reprint it for the amusement of the reader :

THE VERTUE OF THE COFFEE DRINK,
*First made and publickly sold in England by
Pasqua Rosee.*

The grain or berry called coffee, groweth upon little trees only in the deserts of Arabia. It is brought from thence, and drunk generally throughout all the Grand Seignour's dominions. It is a simple, innocent thing, composed into a drink, by being dried in an oven, and ground to powder, and boiled up with spring water, and about half a pint of it to be drunk fasting an hour before, and not eating an hour after, and to be taken as hot as possibly can be endured; the which will never fetch the skin off the mouth, or raise any blisters by reason of that heat.

The Turks' drink at meals and other times is usually water, and their diet consists much of fruit; the crudities whereof are very much corrected by this drink.

The quality of this drink is cold and dry; and

though it be a drier, yet it neither heats, nor inflames more than hot posset. It so incloseth the orifice of the stomach, and fortifies the heat within, that it is very good to help digestion; and therefore of great use to be taken about three or four o'clock afternoon, as well as in the morning. It much quickens the spirits, and makes the heart lightsome; it is good against sore eyes, and the better if you hold your head over it and take in the steam that way. It suppresseth fumes exceedingly, and therefore is good against the head-ache, and will very much stop any defluxion of rheums, that distil from the head upon the stomach, and so prevent and help consumptions and the cough of the lungs.

It is excellent to prevent and cure the dropsy, gout, and scurvy. It is known by experience to be better than any other drying drink for people in years, or children that have any running humours upon them, as the king's evil, &c. It is a most excellent remedy against the spleen, hypochondriac winds, and the like. It will prevent drowsiness, and make one fit for business, if one have occasion to watch, and therefore you are not to drink of it after supper, unless you intend to be watchful, for it will hinder sleep for three or four hours.

It is observed that in Turkey, where this is generally drunk, that they are not troubled with the stone, gout, dropsy, or scurvy, and that their skins are exceeding clear and white. It is neither laxative nor restraining.

Made and sold in St Michael's-alley in Cornhill, by Pasqua Rosee, at the sign of his own head.

The new beverage, as may readily be supposed, had its opponents, as well as its advocates. The following extracts from *A Broadside against Coffee*, published about the same period, informs us that Rosee's partner, the servant of Mr Edwards's son-in-law, was a coachman; while it controverts the statement that hot coffee will not burn the mouth, and ridicules the broken English of the Ragusan:

A BROADSIDE AGAINST COFFEE.

A coachman was the first (here) coffee made,
And ever since the rest drive on the trade:
'*Me no good Engalash!*' and sure enough,
He played the quack to salve his Stygian stuff;
'*Ver boon for de stomach, de cough, de phthisick,*'
And I believe him, for it looks like physic.
Coffee a crust is charred into a coal,
The smell and taste of the mock china bowl;
Where huff and puff, they labour out their lungs,
Lest, Dives-like, they should bewail their tongues.
And yet they tell ye that it will not burn,
Though on the jury blisters you return;
Whose furious heat does make the waters rise,
And still through the alembics of your eyes.
Dread and desire, you fall to 't snap by snap,
As hungry dogs do scalding porridge lap.
But to cure drunkards it has got great fame;
Posset or porridge, will 't not do the same?
Confusion hurries all into one scene,
Like Noah's ark, the cleau and the unclean.
And now, alas! the drench has credit got,
And he's no gentleman that drinks it not;
That such a dwarf should rise to such a stature!
But custom is but a remove from Nature.
A little dish and a large coffee-house,
What is it but a mountain and a mouse?

But, in spite of opposition, coffee soon became a favourite drink, and the shops, where it was sold, places of general resort.

One of the most noted was at the Sultan Morat or Amurath's head in Exchange-alley; another was 'Ward's' in Bread-street, at the sign of the Sultan Solyman's head. Tokens, to serve as small money, were issued by both of these establishments, and are here represented. Another of

the earliest houses was the Rainbow, near Temple-bar, which still flourishes, but altogether in a new style. There can be little doubt that the coffee-house, as a substitute for the beerseller's fire-side, was a movement towards refinement, as well as temperance. There appears to have been a great anxiety that the coffee-house, while open to all ranks, should be conducted under such restraints as might prevent the better class of customers from being offended. Accordingly, the following regulations, printed on large sheets of paper, were hung up in conspicuous positions on the walls:

THE RULES AND ORDERS OF THE COFFEE-HOUSE.

*Enter, sirs, freely, but first, if you please,
Peruse our civil orders, which are these.*

First, gentry, tradesmen, all are welcome hither,
And may without affront sit down together:
Pre-eminence of place none here should mind,
But take the next fit seat that he can find:
Nor need any, if finer persons come,
Rise up for to assign to them his room;
To limit men's expense, we think not fair,
But let him forfeit twelve-pence that shall swear:
He that shall any quarrel here begin,
Shall give each man a dish t' atone the sin;
And so shall he, whose compliments extend
So far to drink in coffee to his friend;
Let noise of loud disputes be quite forborne,
Nor maudlin lovers here in corners mourn,
But all be brisk, and talk, but not too much;
On sacred things, let none presume to touch,
Nor profane Scripture, nor saucily wrong
Affairs of State with an irreverent tongue:
Let mirth be innocent, and each man see
That all his jests without reflection be;

To keep the house more quiet and from blame,
 We banish hence cards, dice, and every game ;
 Nor can allow of wagers, that exceed
 Five shillings, which oftentimes do troubles breed ;
 Let all that 's lost or forfeited be spent
 In such good liquor as the house doth vent,
 And customers endeavour, to their powers,
 For to observe still, seasonable hours.
 Lastly, let each man what he calls for pay,
 And so you're welcome to come every day.

The above rules are ornamented, with an engraved representation of a coffee-house. Five persons, one of them smoking, and, evidently, from their dresses of different ranks in life, are

seated at a table, on which are small basins, without saucers, and tobacco pipes, while a waiter is engaged in serving coffee. Believing that the public will feel some interest in the seventeenth century coffee-house—the resort of Dryden, Wycherley, and the wits and poets generally—we have caused a transcript of this print to be here presented.

Immediately after their first establishment, the coffee-houses became the resort of *quidnuncs*, and the great marts for news of all kinds, true and false. A broadside song, published in 1667, thus describes the principal subjects of coffee-house conversation :

COFFEE-HOUSE, TEMP. CHARLES II.

NEWS FROM THE COFFEE-HOUSE, OR THE
 NEWSMONGERS' HALL.

You that delight in wit and mirth,
 And long to hear such news
 As come from all parts of the earth,
 Dutch, Danes, and Turks, and Jews,
 I'll send you to a rendezvous,
 Where it is smoking new ;
 Go hear it at a coffee-house,
 It cannot but be true.

There battles and sea-fights are fought,
 And bloody plots displayed ;
 They know more things than ere was thought,
 Or ever was betrayed ;
 No money in the Minting-house
 Is half so bright and new ;
 And, coming from the coffee-house,
 It cannot but be true.

Before the navies fall to work,
 They know who shall be winner ;
 They there can tell you what the Turk
 Last Sunday had to dinner ;
 Who last did cut De Ruyter's corns,
 Amongst his jovial crew ;
 Or who first gave the devil horns,
 Which cannot but be true.

* * * * *

Another swears by both his ears,
 Monsieur will cut our throats ;
 The French king will a girdle bring,
 Made of flat-bottomed boats,
 Shall compass England round about,
 Which must not be a few,
 To give our Englishmen the rout ;
 This sounds as if 'twere true.

There's nothing done in all the world,
 From monarch to the mouse,
 But every day or night 'tis hurled
 Into the coffee-house.
 What Lily, or what Booker can
 By art not bring about,
 At coffee-house you'll find a man
 Can quickly find it out.

They'll tell you there what lady-ware
 Of late is grown too light ;
 What wise man shall from favour fall,
 What fool shall be a knight ;
 They'll tell you when our failing trade
 Shall rise again and flourish,
 Or when Jack Adams shall be made
 Churchwarden of the parish.

* * * * *

They know all that is good or hurt,
 To bless ye, or to save ye ;
 There is the college, and the court,
 The country, camp, and navy ;
 So great a university,
 I think there n'er was any,
 In which you may a scholar be
 For spending of a penny.

A merchant's prentice there shall show
 You all and everything
 What hath been done, and is to do,
 'Twixt Holland and the King ;
 What articles of peace will be
 He can precisely shew ;
 What will be good for them or we
 He perfectly doth know.

* * * * *

The drinking there of chocolate
 Can make a fool a Sophy ;
 'Tis thought the Turkish Mahomet
 Was first inspired with coffee,
 By which his powers did overflow
 The land of Palestine ;
 Then let us to the coffee-house go,
 'Tis cheaper far than wine.

You shall know there what fashions are,
 How periwigs are curled ;
 And for a penny you shall hear
 All novells in the world.
 Both old and young, and great and small,
 And rich and poor, you'll see ;
 Therefore let 's to the coffee all,
 Come all away with me.

In 1675 a proclamation was issued for shutting up and suppressing all coffee-houses. The government of the day, however, found that, in making this proclamation, they had gone a step too far. So early as this period, the coffee-house had become a power in the land—as Macaulay tells us—a most important political institution, when public meetings, harangues, resolutions, and the rest of the machinery of agitation, had not come into fashion, and nothing resembling a newspaper existed. In such circumstances, the coffee-houses were the chief organs through which the public opinion of the metropolis vented itself. Consequently, on a petition of the merchants and retailers of coffee, permission was granted to keep the coffee-houses open for six months, under an admonition that the masters of them should prevent all scandalous papers, books, and libels from being read in them; and hinder every person from declaring, uttering, or divulging all manner of false and scandalous reports against government, or the ministers thereof. The absurdity of constituting every maker of a cup of coffee a censor of the press, was too great for even those days; the proclamation was laughed at, and no more was heard of the suppression of coffee-houses. Their subsequent history does not fall within our present limits, but may be referred to at another opportunity.

THE ORIGIN OF SOME WELL-KNOWN LINES.

' His angle-rod made of a sturdy oak ;
 His line a cable, which in storms ne'er broke ;
 His hook he baited with a dragon's tail,
 And sat upon a rock, and bobbed for whale.'

The origin of these somewhat famous lines seems not to be generally known. In our contemporary *Notes and Queries* (for November 30, 1861, p. 448) they are spoken of as 'Dr King's well-known quatrains upon *A Giant Angling*.' This is a mistake; at least, if Dr William King, the Oxford wit and poet, is the person meant; indeed, there seems every reason to suppose that they were composed before Dr King was born. With one or two trifling variations, they are to be found in the *Mock Romance*, a rhapsody attached to *The Loves of Hero and Leander*, a small 12mo published in London in the years 1653 and 1677; the following being the context:

' This day (a day as fair as heart could wish)
 This giant stood on shore of sea to fish:
 For angling-rod, he took a sturdy oak ;
 For line a cable, that in storm ne'er broke ;
 His hook was such as heads the end of pole,
 To pluck down house ere fire consumes it whole :

*His hook was baited with a dragon's tail,
 And then on rock he stood to bob for whale :*
 Which straight he caught, and nimbly home did
 pack,
 With ten cart-load of dinner on his back.'

Dr King, however, is not the only unsuccessful claimant of the above four lines. They are printed in the fifth volume of Dryden's *Miscellany*, and have been attributed to Daniel Kenrick, a quack physician, at Worcester. As, however, Kenrick was thirty-two years of age in 1685, it is as impossible that they can have been written by him as by Dr King. Their true origin we have given above; their authorship is, and probably always will be, unknown.

JANUARY 28.

St Agnes, virgin and martyr. St Cyril, patriarch of Alexandria, 444. Sts Thyrsus, Leucius, and Callinicus, martyrs. St John of Keomay, abbot, 6th century. St Paulinus, patriarch of Aquileia, 804. B. Charlemagne, emperor, 814. St Glastian, of Scotland, 830. St Margaret, princess of Hungary, 1271.

ST CYRIL.

St Cyrillus was educated at Alexandria, where his uncle Theophilus was patriarch, through whose influence St John Chrysostom was deposed and banished from Constantinople. On the death of Theophilus in 412, St Cyrillus was elected as his successor in the patriarchate. He is generally described as a man of revengeful disposition, and a violent persecutor of those whom he considered heretics. The story of the murder of Hypatia, the daughter of the mathematician Theon of Alexandria, has been related by Socrates, Nicephorus, and other ecclesiastical historians. Hypatia was a lady of such extraordinary ability and learning as to have been chosen to preside over the school of Platonic philosophy in Alexandria, and her lectures were attended by a crowd of students from Greece and Asia Minor. She was also greatly esteemed and treated with much respect by Orestes, the governor of Alexandria, who was a decided opponent of the patriarch. Hence the malice of Cyril, who is related to have excited a mob of fanatical monks to assault her in the street, who dragged her into a church, and there murdered her, actually tearing her body to pieces.

Cyril had a long and violent dispute with Nestorius, bishop of Constantinople, concerning the divine nature of Christ, and whether Mary was entitled to the appellation of 'Mother of God,' and other mysterious matters. Nestorius was condemned and deposed by Pope Celestine, and Cyril was appointed to carry out the sentence, for which purpose he summoned a council of sixty bishops at Ephesus; but John, patriarch of Antioch, summoned a counter-council of forty bishops, who supported Nestorius, and excommunicated Cyril. The rival patriarchs appealed to the Emperor Theodosius, who committed both Cyril and Nestorius to prison, where they remained some time under rigorous treatment. Cyril, by the influence of Pope Celestine, was liberated, and restored in 431 to his see of Alexandria, which he retained till his death in 444. His

works are numerous, mostly on difficult points of doctrine, which are rendered more obscure by a perplexed style, and the barbarous Greek in which they are written. They have been published in seven vols. folio, Greek and Latin, Paris, 1638.

Born.—Captain Maclure, Arctic voyager, 1807.

Died.—Charlemagne, 814; King Henry VIII., 1547, Windsor; Sir Francis Drake, 1596; Sir Thomas Bodley, founder of the Bodleian Library, Oxford, 1612; Peter the Great of Russia, 1725; Mrs Johnson (*Stella*), 1728, Dublin; J. B. Danville, 1782, Paris; Mademoiselle Clairon, actress, 1803; Sir William Beechey, painter, 1839; W. H. Prescott, historian, 1859.

PETER THE GREAT IN ENGLAND.

On the 28th of January 1725, died Peter I., Czar of Russia, deservedly named the Great; one of the most extraordinary men that ever appeared on the great theatre of the world, in any age or country—a being full of contradictions, yet consistent in all he did; a promoter of literature, arts, and sciences, yet without education himself. ‘He gave a polish,’ says Voltaire, ‘to his people, and was himself a savage; he taught them the art of war, of which he was himself ignorant; from the sight of a small boat on the river Moskwa he erected a powerful fleet, made himself an expert and active shipwright, sailor, pilot, and commander; he changed the manners, customs, and laws of the Russians; and lives in their memory as the father of his country.’

His taste for everything connected with ships and navigation amounted, in early life, to a passion. When he had resolved to visit the countries of Western Europe, to learn how to improve his own barbarous subjects, he went straight to Saardam, in Holland, and there, with his companions, worked in the dockyards as a common shipwright, by the name of Pieter Timmerman; he rose early, boiled his own pot, and received wages for his labour. When well advanced in the manual art, he proceeded, in January 1698, to England, to study the theory of ship-building, and the method of making draughts and laying them off in the mould-lofts. Arriving in honourable state with his companions in three English ships, which had been dispatched for him, he was kindly received by King William, but without state ceremonial, his wish being to remain in England simply as a private gentleman; accordingly, his name never once appears in the *London Gazette*, then, as now, the only official paper. A large house was hired for him and his suite, at the bottom of York-buildings, now Buckingham-street, in the Adelphi,—the last house on the east side, looking on the Thames. It contained spacious apartments, in which some of the decorations that existed at the time of the imperial visit may still be seen.* As the Czar came not in any public character, he was placed under the especial charge of the Marquis of Carmarthen, with whom he became very intimate. It is stated in a private letter, that they used to spend

* Pepys, the diarist, lived in the house opposite, the last on the west side of the street, but it has been since rebuilt.

their evenings frequently together in drinking hot pepper and brandy. Peter loved strong liquors; and we learn from one of the papers of the day, that he took a particular fancy to the *nectar ambrosia*, a new cordial which the compounder presented to his Majesty, who sent for more of it.

The Czar sojourned in England four months. In the *Postboy* it is stated that, on the day after his arrival, he went to Kensington Palace, to dine with King William and the Court; but he was all the while *incognito*. On the Saturday following, the Czar went to the opera; and on the Friday night he was present at the last of the Temple revels. On the following Sunday, he went in a hackney-coach to Kensington Palace, and returned at night to his lodgings (in Norfolk-street), where he was attended by several of the King’s servants. His movements, during the rest of the month, were a journey to Woolwich and Deptford, to see the dockyards; then to the theatre, to see the *Rival Queens; or Alexander the Great*; to St James’s, to be present at a fine ball; to Redriff, where a ship was building for him; and he was present at the launch of a man-of-war at Chatham.

The Czar was continually annoyed by the crowds in the streets of London, as he had been at Amsterdam, and he could not bear the jostling with becoming patience. As he was one day walking along the Strand with the Marquis of Carmarthen, a porter, with a load on his shoulder, rudely pushed against him, and drove him into the road. He was extremely indignant, and ready to knock the man down; but the Marquis interfering, saved the offender, only telling him that the gentleman whom he had so rudely run against was ‘the Czar.’ The porter turning round, replied with a grin, ‘Czar! we are all Czars here.’

After a month’s residence in London, the Czar and his suite removed to John Evelyn’s house, Sayes-court, close to Deptford dockyard. It had been let by Evelyn to Admiral Benbow, whose term had just expired. A doorway was broken through the boundary-wall of the dockyard, to communicate with the dwelling-house. The grounds, which were beautifully laid out and planted, had been much damaged by the Admiral; but the Czar proved a worse tenant. Evelyn’s servant wrote to him: ‘There is a house full of people *right nasty*. The Czar lies next your library, and dines in the parlour next your study. He dines at ten o’clock, and six at night; is very often at home a whole day; very often in the King’s yard, or by water, dressed in several dresses. The King is expected there this day; the best parlour is pretty clean for him to be entertained in. The King pays for all he has.’ But this was not all: Evelyn had a favourite holly-hedge, which the Czar is said to have spoiled, by trundling a wheelbarrow through it every morning, for the sake of exercise. The Czar and his retinue remained here only three weeks; but the damage done to the house and gardens was estimated at £150.

We have scarcely any evidence that the Czar ever worked in Deptford dockyard as a shipwright; he seems to have been employed in collecting in-

formation connected with naval architecture, from the Commissioner and Surveyor of the Navy, Sir Anthony Deane. Peter might be seen almost daily on the Thames, in a sailing yacht, or rowing a boat; and the King made him a present of

SAYES COURT, DEPTFORD, THE RESIDENCE OF
PETER THE GREAT.

the *Royal Transport*, with orders to change her masts, rigging, sails, &c., in any such way as the Czar might think proper for improving her sailing qualities. But his great delight was to get into a small decked boat from the dockyard, and taking Menzikoff, and three or four of his suite, to work the vessel with them, he being the helmsman; by which practice he said he should be able to teach them how to command ships when they got home. Having finished their day's work, they used to resort to a public-house in Great Tower-street, close to Tower-hill, to smoke their pipes, and drink beer and brandy. The landlord had the Czar of Muscovy's head painted and put up for a sign, which continued till the year 1808, when a person named Waxel took a fancy to the old sign, and offered the then landlord of the house to paint him a new one for it. A copy was accordingly made, which maintained its station until the house was rebuilt, when the sign was not replaced, and the name only remains.

The Czar, in passing up and down the river, was much struck with the magnificent building of Greenwich Hospital, which, until he had visited it, and seen the old pensioners, he thought to be a royal palace; and one day, when King William asked him how he liked his hospital for decayed seamen, the Czar answered, 'If I were the adviser of your Majesty, I should counsel you to remove your court to Greenwich, and convert St James's into a hospital.'

It being term-time while the Czar was in London, he was taken into Westminster Hall; he inquired who all those busy people in black gowns and flowing wigs were, and what they were about? Being answered 'They are lawyers, sir;' 'Lawyers!' said he, much astonished, 'why, I have but *two* in my whole dominions, and I believe I shall hang one of them the moment I get home.'

Two sham fights at sea were got up for the

Czar; the ships were divided into two squadrons, and every ship took her opposite, and fired three broadsides *aloft and one aloe*, without shot. On returning from Portsmouth, Peter and his party, twenty-one in all, stopped at the principal inn at Godalming, and, according to the landlord's bill, which is preserved in the Bodleian Library, there consumed, at breakfast, half a sheep, a quarter of lamb, ten pullets, twelve chickens, three quarts of brandy, six quarts of mulled wine, seven dozen of eggs, with salad in proportion: and at dinner, five ribs of beef, weighing three stone; one sheep, 56 lbs.; three-quarters of lamb, a shoulder and loin of veal boiled, eight pullets, eight rabbits, two dozen and a-half of sack, and one dozen of claret. Peter was invariably a hard-drinker, for he is known to have drunk a pint of brandy and a bottle of sherry for his morning draught; and after dinner eight bottles of sack, 'and so went to the play-house.'

The Czar had an extraordinary aversion to a crowd: at a birthday-ball at St James's, instead of joining the company, he was put into a small room, whence he could see all that passed without being himself seen. When he went to see the King in Parliament, he was placed upon the roof of the house to peep in at the window, when King and people so laughed at him that he was obliged to retire. The Czar had a favourite monkey, which sat upon the back of his chair, and one day annoyed the King by jumping upon him, while he paid Peter a visit.

Bishop Burnet accompanied the Czar to shew him the different churches in the metropolis, and to give information upon ecclesiastical matters. While residing at Deptford, Peter frequently invited Dr. Halley from the Royal Observatory, in Greenwich Park, to dine with him, and give him his opinion and advice, especially upon his plan of building a fleet. He also visited several manufactories and workshops in London, and bought a famous geographical clock of its maker, Carte, at the sign of the Dial and Crown, near Essex-street, in the Strand. The Czar was very fond of mechanism, and it is said that before he left England he could take a watch to pieces, and put it together again. The King promised Peter that there should be no impediment to his engaging and taking with him to Russia, English artificers and scientific men; and when he returned to Holland, there went with him captains of ships, pilots, surgeons, gunners, mast-makers, boat-builders, sail-makers, compass-makers, carvers, anchor-smiths, and copper-smiths; in all, nearly 500 persons. At his departure, he presented to the King a ruby, valued at £10,000, which he brought in his waistcoat-pocket, and placed in William's hand, wrapped up in a piece of brown paper!

The memory of Peter, among his countrymen, is held in the highest veneration. The magnificent equestrian statue erected by Catherine II.; the waxen figure of Peter in the museum of the Academy, founded by himself; the dress, the sword, and the hat, which he wore at the battle of Pultowa, the last pierced with a ball; the horse that he rode in that battle; the trowsers, worsted stockings, shoes, and cap, which he wore

at Saardam,—all in the same apartment; his two favourite dogs, his turning-lathe, and tools, with specimens of his workmanship; the iron bar which he forged with his own hand at Olonitz; the *Little Grand sire*, so carefully preserved as the first germ of the Russian navy; and the wooden hut in which he lived while superintending the first foundation of Petersburg:—these, and a thousand other tangible memorials, all preserved with the utmost care, speak in the most intelligible language the opinion which the Russians hold of the *Father of his Country*.

CLAIRON'S UNSEEN PERSECUTOR.

Mademoiselle Clairon, the theatrical idol of Paris in the middle of the last century, relates in her Memoirs, that in her early days she attracted the affections of a Breton gentleman, whom, as he was gloomy and despotic, she found it impossible to love. He died of chagrin on her account, without succeeding even in inducing her to come and see him in his last moments. The event was followed by a series of occurrences which, notwithstanding their mysterious nature, she relates with the appearance of perfect sincerity. First, there was every night, at eleven o'clock, a piercing cry heard in the street before her house. And, in several instances, on friends speaking of it incredulously, it took place on the instant, to the consternation of all who heard it. After an interval of some weeks, the annoyance was renewed in the form of a musket-shot, which seemed to be fired against her window, and was heard by all in her apartment, but never could be traced by the police to any living agent. Then another interval took place, after which an invisible clapping of hands followed: this was followed in its turn by a strain of fine music. Finally, after two years and a-half, this strange persecution from the invisible ceased. Madame Clairon states that she afterwards received a visit from an old lady, who had attended her lover on his death-bed, and who informed her that with his latest breath he had inveighed against the object of his unfortunate passion, and threatened to pursue her as long after his death as she had pursued him during his life, being exactly two years and a-half.

The Duchess d'Abrantes, in her Memoirs, relates how she had heard Clairon give a solemn recital of these occurrences, 'laying aside all affectation and everything that could be construed into speaking for effect.' The wonder is how, if such things happen, they should so entirely fail to obtain credence; how, if they do not happen, they should be so often related as if they did, and on what, in ordinary matters, would pass as sufficient evidence.

Clairon was a great favourite with Voltaire: it would be curious to learn what he thought of her story of the invisible persecutor. She appears to have had her full share of theatrical caprices and jealousies, under one of which she prematurely withdrew from the stage, though not without a considerable fortune. Garrick, asked what he thought of her as an actress, said she was 'too much an actress;' which gives a tolerable idea of her attitudinary style. It is said she was equally an actress off the stage, maintaining a

grand manner even before her domestics. She died at eighty-one, in full possession of her faculties.

W. H. PRESCOTT.

America has great honour in William Hickling Prescott, author of the histories of *Ferdinand and Isabella of Spain*, of *Cortez*, and of *Pizarro*, who died on the 28th of January 1859, at the age of 63. The historical writings of Prescott are among the few finished and classical productions of the kind in our age, which are worthy to rank with those of Gibbon, Hume, and others, in the last century. Fortunate in having the power of devoting himself to those studies in which it was his ambition to excel, this eminent American was just as unfortunate in the deficiency of certain requisites which one would have previously said were indispensable for such a career. He had from an early period of life lost in a great measure the use of his eyes. How he contrived by patience and the use of adroit arrangements to overcome this prodigious difficulty, is detailed by himself in a manner extremely interesting:

'Having settled,' he says, 'on a subject for a particular history, I lost no time in collecting the materials, for which I had peculiar advantages. But just before these materials arrived, my eye had experienced so severe a strain that I enjoyed no use of it again for reading for several years. It has, indeed, never since fully recovered its strength, nor have I ever ventured to use it again by candlelight. I well remember the blank despair which I felt when my literary treasures arrived from Spain, and I saw the mine of wealth lying around me which I was forbidden to explore. I determined to see what could be done with the eyes of another. I remembered that Johnson had said, in reference to Milton, that the great poet had abandoned his projected history of England, finding it scarcely possible for a man without eyes to pursue a historical work, requiring reference to various authorities. The remark piqued me to make an attempt.

'I obtained the services of a reader who knew no language but his own. I taught him to pronounce the Castilian in a manner suited, I suspect, much more to my ear than to that of a Spaniard; and we began our wearisome journey through Mariana's noble History. I cannot even now call to mind without a smile the tedious hours in which, seated under some old trees in my country residence, we pursued our slow and melancholy way over pages which afforded no glimmering of light to him, and from which the light came dimly struggling to me through a half-intelligible vocabulary. But in a few weeks the light became stronger, and I was cheered by the consciousness of my own improvement; and when we had toiled our way through seven quartos, I found I could understand the book when read about two-thirds as fast as ordinary English. My reader's office required the more patience; he had not even this result to cheer him in his labour.

'I now felt that the great difficulty could be overcome; and I obtained the services of a reader whose acquaintance with modern and ancient tongues supplied, so far as it could be supplied, the deficiency of eyesight on my part. But

though in this way I could examine various authorities, it was not easy to arrange in my mind the results of my reading, drawn from different and often contradictory accounts. To do this I dictated copious notes as I went along; and when I had read enough for a chapter—from thirty to forty and sometimes fifty pages in length—I had a mass of memoranda in my own language, which would easily bring before me at one view the fruits of my researches. Those notes were carefully read to me; and while my recent studies were fresh in my recollection, I ran over the whole of my intended chapter in my mind. This process I repeated at least half-a-dozen times, so that when I finally put my pen to paper it ran off pretty glibly, for it was an effort of memory rather than creation. This method had the advantage of saving me from the perplexity of frequently referring to the scattered passages in the originals, and it enabled me to make the corrections in my own mind which are usually made in the manuscript, and which with my mode of writing—as I shall explain—would have much embarrassed me. Yet I must admit that this method of composition, when the chapter was very long, was somewhat too heavy a strain on the memory to be altogether recommended.

Writing presented me a difficulty even greater than reading. Thierry, the famous blind historian of the Norman Conquest, advised me to cultivate dictation; but I have usually preferred a substitute that I found in a writing-case made for the blind, which I procured in London forty years since. It is a simple apparatus, often described by me for the benefit of persons whose vision is imperfect. It consists of a frame of the size of a piece of paper, traversed by brass wires as many as lines are wanted on the page, and with a sheet of carbonated paper, such as is used for getting duplicates, pasted on the reverse side. With an ivory or agate stylus the writer traces his characters between the wires on the carbonated sheet, making indelible marks, which he cannot see, on the white page below. This treadmill operation has its defects; and I have repeatedly supposed I had accomplished a good page, and was pro-

ceeding in all the glow of composition to go ahead when I found I had forgotten to insert a sheet of my writing-paper below, that my labour had been all thrown away, and that the leaf looked as blank as myself. Notwithstanding these and other whimsical distresses of the kind, I have found my writing-case my best friend in my lonely hours, and with it have written nearly all that I have sent into the world the last forty years.

'The manuscript thus written and deciphered—for it was in the nature of hieroglyphics—by my secretary was then read to me for correction, and copied off in a fair hand for the printer. All this, it may be thought, was rather a slow process, requiring the virtue of patience in all the parties concerned. But in time my eyes improved again. Before I had finished *Ferdinand and Isabella*, I could use them some hours every day. And thus they have continued till within a few years, though subject to occasional interruptions, sometimes of weeks and sometimes of months, when I could not look at a book. And this circumstance as well as habit, second nature, has led me to adhere still to my early method of composition. Of late years I have suffered not so much from inability of the eye as dimness of the vision, and the warning comes that the time is not far distant when I must rely exclusively on the eyes of another for the prosecution of my studies. Perhaps it should be received as a warning that it is time to close them altogether.'

LORD NORTH'S ADMINISTRATION.

On this day in 1770 commenced the long administration of Lord North, during which the American colonies were lost to the British crown. The fatal misjudgment and obstinacy which led to such a disastrous result can scarcely be thought of in our times with patience; and, when we think of the evils inflicted on America in the vain attempt to drag her back into subjection, a feeling of indignation at all persons in administration, and particularly the chief, is apt to take possession of the mind. Yet, strange to say, the head of the cabinet which carried on the wretched

MEDAL STRUCK IN HONOUR OF LORD NORTH.

contest, was undeniably one of the most amiable and pleasant-natured men in existence. His character is brought out in a charming manner by a daughter of the minister, who wrote in compliance with a request of Lord Brougham:

'His manners were those of a high-bred gentleman, particularly easy and natural; indeed, good

breeding was so marked a part of his character that it would have been affectation in him to have been otherwise than well-bred. With such good taste and good breeding, his raillery could not fail to be of the best sort—always amusing and never wounding. He was the least fastidious of men, possessing the happy art of extracting any good

that there was to be extracted out of anybody. He never would let his children call people *bored*; and I remember the triumphant joy of his family, when, after a tedious visit from a very prosy and empty man, he exclaimed, "Well, that man *is* an insufferable bore!" He used frequently to have large parties of foreigners and distinguished persons to dine with him at Bushy Park. He was himself the life and soul of these parties. To have seen him then, you would have said that he was there in his true element. Yet I think that he had really more enjoyment when he went into the country on a Saturday and Sunday, with only his own family, or one or two intimate friends: he then entered into all the jokes and fun of his children, was the companion and intimate friend of his elder sons and daughters, and the merry, entertaining playfellow of his little girl, who was five years younger than any of the others. To his servants he was a most kind and indulgent master: if provoked by stupidity or impertinence, a few hasty, impatient words might escape him; but I never saw him *really out of humour*. He had a drunken, stupid groom, who used to provoke him; and who from this circumstance was called by the children "the man that puts papa in a passion;" and I think he continued all his life putting papa in a passion, and being forgiven, for I believe he died in his service.*

Lord John Russell, in his *Life and Times of Charles James Fox* (1859), remarks that Lord North had borne his elevation with modesty, and shewed equanimity in his fall. "A trifling circumstance evinced his good humour. On the evening when he announced his resignation in the House of Commons [March 20, 1782], snow was falling, and the weather was bitterly cold. Lord North kept his carriage. As he was passing through the great-coat room of the House of Commons, many members (chiefly his opponents) crowded the passage. When his carriage was announced, he put one or two of his friends into it, and then making a bow to his opponents, said, "Good night, gentlemen; it is the first time I have known the advantage of being in the secret."

COMMENCEMENT OF GAS-LIGHTING.

January 28, 1807, Pall Mall was lighted with gas,—the first street of any city so illuminated. The idea of using carburetted hydrogen gas for purposes of illumination first occurred to Mr William Murdoch, a native of Ayrshire, holding a position of trust at the mines of Redruth, in Cornwall. He made his first experiments in 1792, at Redruth. Removing in 1798 to the machine-making establishment of Messrs Watt and Boulton, at Birmingham, he there followed up his

MESSRS. WATT AND BOULTON'S ESTABLISHMENT, BIRMINGHAM.

experiments, and succeeded in lighting up the buildings with gas for the celebration of the Peace of Amiens. He also fitted up the works of Philips and Lee, at Manchester, with gas-lights in 1805, and there fully proved the economical value of the scheme. Murdoch was a man

* Letter by Lady Charlotte Lindsay, youngest daughter of Lord North, written in 1839 for Lord Brougham's *Statesmen of George III.*

of sagacious and accurate understanding, worthy to be associated with his countryman Watt. A portrait of him is preserved in the hall of the Royal Society of Edinburgh.

The merit of bringing gas-light into use in London belongs to a German named Winsor, a man of an opposite type of intellect to Murdoch, yet having the virtue of perseverance. In the pamphlets issued by this person for the

promotion of gas-lighting schemes and companies, there was such extravagance, quackery, and fanaticism, as tended to retard their success. Sir Walter Scott wrote from London that there was a *madman* proposing to light London with—what do you think?—why, with smoke! Even the liberal mind of Sir Humphry Davy failed to take in the idea that gas was applicable to purposes of street or house lighting. Yet, Winsor having succeeded after all in obtaining some supporters, the long line between St James's Palace and Cockspur-street did blaze out in a burst of gas-lamps on the night in question, to the no small admiration of the public.

When we consider that gas-light has since been extended all over London, over nearly every town of above a thousand inhabitants in the empire, and pretty generally throughout the towns of both Europe and America, producing a marvellous saving in the expense of artificial light, it becomes curious to observe the great hesitation expressed in the scientific and popular literature of 1807-8-9 regarding the possibility of applying it economically to general use. The reader will readily find the expression of contemporary public opinion on the subject in a paper in the *Edinburgh Review* for January 1809, written by the present professor of Roman literature in the University of Edinburgh (Pillans).

In London, about 1810, before any company had been established, Mr Ackermann's shop, in the Strand, was regularly lighted with gas. It is said, that a lady calling there one evening, was so delighted with the beautiful white jets she saw on the counter, that she offered any money for permission to carry them home to light her drawing-room.

Gas-lighting had a ridiculous objection to contend with, worthy to be ranked with that which insisted for years, without experiment, that the wheels of steam locomotives would go on whirling without creating any forward movement. It was generally assumed that the pipes conveying gas would be hot, and apt to produce conflagrations. People used to touch them cautiously with their hands, under the belief that a careless touch would burn them. The lamp-lighters, to a man, were opposed to the new mode of lighting.

A company being formed in 1810 (the shareholders, of course, being pitied as idiots), the system was put in practice for the first time on Westminster Bridge in the last night of the year 1812. Some districts of London had gas introduced on the streets in 1814. It then gradually found its way into other cities, and finally into other countries. It is calculated that on the capital of about twenty millions laid out on gas manufactories in this country, there is an average return of 6½ per cent.—a good commentary on the objections originally made to this mode of lighting.

COURT FOOLS AND JESTERS.

In connection with the name of Henry VIII., it may not be improper to advert to a custom of which he was a noted observer,—the custom, once universally prevalent, of keeping professional fools and jesters in palaces and other great houses. It was founded upon, or at least was in

strict accordance with, a physiological principle, which may be expressed under this formula—the *Utility of Laughter*. Laughter is favourable to digestion, for by it the organs concerned in digestion get exercise, the exercise necessary for the process. And, accordingly, we usually find an ample meal more easily disposed of where merriment is going on, than a light one which has been taken in solitude, and under a sombre state of feeling.

According to the ideas of modern society, cheerful after-dinner conversation is sufficient stimulus for the digestive organs. Our forefathers, less refined, went at once to the point, and demanded a fixed and certain means of stirring up merriment; and perhaps it may be doubted if they were not nearer to a true philosophy of the matter than we are. Anyhow, the fact is, that all through the middle ages men of means and consequence did keep officers for the promotion of laughter in their households, and especially at meals. Such officers were of two kinds. One was an imperfect-witted man, or fool, whose follies were deemed to be amusing;

GROUP OF COURT FOOLS.

he wore a parti-coloured dress, including a cowl, which ended in a cock's head, and was winged with a couple of long ears; he, moreover, carried in his hand a stick called his bauble, terminating either in an inflated bladder, or some other ludicrous object, to be employed in slapping inadvertent neighbours. The other, called a jester, was a ready-witted, able, and perhaps well-educated man, possessed of those gifts of representing character, telling droll stories, and making pointed remarks, which we have seen giving distinction to a Charles Mathews, and occasionally find in a certain degree in private society. The fool was a very humble person, haunting kitchen and scullery, messing almost with the dogs, and liable, when malapert, to a whipping. The jester was comparatively a com-

panion to the sovereign or noble who engaged his services. The importance of Berdie, 'joculator' to William the Conqueror, is shewn by the fact of three towns and five caracutes in Gloucestershire having been conferred upon him.

And the names of Scogan, Will Somers, John Heywood, Pace, Tarleton, and Archie Armstrong, who were 'jesters' to a succession of Tudor and Stuart sovereigns of England, have all been sufficiently notable to be preserved. We

WILL SOMERS.

introduce a correct portraiture of Somers, jester to Henry VIII., as a very fair representative of his class. It will be admitted that he is a perfectly well-arranged and respectable-looking person. It is a curious illustration of the natural need that seems to exist in a certain state of society for the services of a fun-maker, that

Montezuma, Emperor of Mexico, was found by Cortez to have such an officer about his court.

A pleasant volume, by Dr. John Doran, entitled *The History of Court Fools*, was published in 1858, and seemed a tolerably exhaustive treatise on the subject. Nevertheless, the ingenious author has since found some additional

details, which he is pleased to communicate through these pages.

A Supplementary Chapter to the 'History of Court Fools.'

When the author of the last *History of Court Fools* wrote 'Finis' to his volume, he had not fully satisfied himself on two points,—first, the date of the existence of the earliest jester; and, secondly, whether such an individual as an official fool, or fool by right of office, was still maintained in any public court or private household. On those two points he has since arrived at a more satisfactory conclusion; and the result of his researches, on those and other points referring to the same subject, he submits to the consideration of the readers of these pages.

It can scarcely be doubted that the female official fool had precedence of the male court and household jester. When Ceres went in search of Proserpine, the Queen of Eleusis sent with her one of the merriest of her maids, named Iambe. This maid, renowned at court for her wit, frolicsome humour, power of repartee, and skill in saying smart things generally, was expressly sent with the bereaved mother to divert her sorrow by her quips and cranks, her jokes, gambols, and her laughter-compelling stories. This commission was, to the very letter, that which especially belonged to the official jester; and there is no reason to hesitate in assigning to Iambe the distinction of having been the founder of a race which is not yet extinct, and the godmother, so to speak, of satires in sharp measure which bear the name of Iambic.

With regard to existing jesters officially appointed, there are several who presume so to describe themselves, but of the genuineness or authenticity of whose pretensions much might be said, particularly in an adverse sense. It has become the fashion of clowns to travelling circuses to style themselves 'Queen's Jesters;' and there is one of these, named Wallet, whose portrait has been engraved among those of the Eminent Men of the Age, and who writes himself down as Court Jester to Queen Victoria, by her Majesty's appointment! We can only say that we should feel grateful for a sight of the Lord Chamberlain's warrant confirming this authority.

The fool by right of office must be looked for beyond the seas. The jester who figured at the Eglintoun tournament, and his brother who jokes and tumbles in the procession of Lady Godiva, may be mountebanks by profession, but they are only jesters for the nonce. The descendants of the old jesters are to be traced, however, in England as well as on the Continent. The dramatic writer, Mr Fitzball, refers to his descent from an illegitimate son of the Conqueror, who was lord of an estate called Fitz-Follie. It has been suggested that this name may have been indicative of the calling exercised at court, by the owner of the estate. It might, indeed, have reference to the King's folly; and if the original designation was Fitz-Folle, it would serve to point to the vocation of the lucky young gentleman's mother. However this may be, we have not to go far abroad for another illustration, to see how a pedigree may improve in the persons last enrolled.

It is scarcely to be supposed that Gonella, the renowned Italian jester, of several centuries back, ever thought that among the future possessors of his name would be found a Monsignore, exercising the office, not of court fool, but of papal nuncio, at Brussels.

From Italy, as from England, the professional Merry Andrew in households has passed away. There is a relic of some of them at Mantua,—the apartments assigned to the old, comic ducal dwarfs. These rooms, six in number, and little more than as many feet square, are mere white-washed cells, long since stripped of all furniture. At the end of one of them, said to have been their kitchen, there is a raised platform, on which the jocular little men used to dine.

It is a singular fact that as the female jester had precedence, in point of date of origin, of her brother in the vocation, so has she survived that brother, and still holds her own in the court of the Sultan and the households of his great pashas. When Mrs Edmund Hornby was 'In and about Stamboul,' in 1858, she, in company with other ladies, visited the harem of Kiza Pasha. The visitors accepted an invitation to a banquet, at which warm rye bread, covered with seeds, pleasant soups, smoking *pilaufs*, and pancakes swimming in honey, were among the chief dishes. The native ladies gave loose and unseemly rein to their appetites, stimulated by official female buffoons who served the dishes with accompanying jokes, the utterance of which excited the most uproarious laughter, not only from the ladies their mistresses, but also from their less witty, yet wit-appreciating, slaves. Mrs Hornby describes the chief jester as 'a wild and most extraordinary-looking woman, with an immensity of broad humour and drollery in her face.' The quality of the fun seems to have been of the coarsest; and the English ladies congratulated themselves on their lack of apprehension of jokes at which the lovely Circassian, the second wife of the Pasha, 'between the intervals of licking her fingers and spoon, and popping tit-bits on our plates, laughed so complacently, which sometimes obliged the Arabs and eunuchs at the door to dive under the arras, to conceal their uncontrollable fits of mirth.' Whether the modern female Turkish jester be the descendant or not of a long line of predecessors, we are not informed. We do know, however, that when Lady Wortley Montague paid a similar visit, at the beginning of the last century, she was only amused by indifferent dancing, and by another exhibition, of which she speaks in the free and easy style of the fine ladies of her day.

This female table-jester—and this again is a singular circumstance—was of old a personage common enough at inns on the Continent. The readers of Erasmus will remember among his *Colloquies* one entitled 'Diversorium.' In that graphic paper we are taken to an inn at Lyons. The guests are received by handsome women, young maidens, and younger girls, all of whom also wait at table and enliven the company, whose digestion they make easy by narrating joyous stories, bandying witticisms, playing give-and-take with the visitors, and shewing themselves as ready to meet a jest by a sharp reply,

as to provoke a reply by a galliard jest. The youngest of these pretty and carefully trained fools was never unequal to the task of meeting the heaviest fire of broad wit from a whole room full of revellers. These they stimulated and provoked by showers of humorous epithets and a world of pretty ways. They followed the guests to their chamber doors, laughing, jesting, and sporting; nor did they take leave of them till they had performed offices which young princesses in the *Odyssey* render to the guests of their royal sires, carrying off the linen of the travellers, dropping their foolery, and then seriously addressing themselves to the office of laundresses.

In the East, beyond the Bosphorus, there is still to be found in one and the same individual, in some families, a mixture of the domestic and the buffoon. These, however, probably resemble rather the impudent French or Spanish, and even some English *valets* of the drama, than the official jester; men whose impudent wit was tolerated, rather than solicited or expected. The male fool, by right of office, is now to be met with only in Russia. 'In St Petersburg,' says an English lady, in her *Six Years' Travels in Russia*, 'they are by no means rare.' The old Russian joke of serving up dwarfs in a pie, still pleases imperial Grand Dukes. The professional Russian fools, this lady tells us, 'wear a ridiculous dress, but dwarfs usually appear in plain clothes.'

In the recently-published *Life of Bishop Doyle*, of Kildare and Leighlin, by Mr Fitzpatrick, the author fixes on that Roman Catholic prelate as being the last person within these realms who kept a fool in his household. Dr Doyle, however, who has been dead about a score of years, was, in the case cited, simply giving shelter to a village idiot, for sufferers of which class there was no public asylum in Ireland. The poor idiot did not fill, in Dr Doyle's household, such an office as was executed in that of the late Pope Gregory XVI., by Cardinal Soglia. In the gardens of the Vatican, the illustrious men there used to pass away the long summer evening hours, by playing at blindman's buff, Soglia being always hoodwinked, and armed with a stick. It was his object to strike at those whose aim was, of course, to evade him. On one of these occasions, the holy father stooped to remove a flower-vase which stood in peril of being shattered by the Cardinal's upraised stick, which, however, descended so rapidly as to put the papal skull in danger, but that some officials present unceremoniously pulled his holiness backward. Soglia, as concoctor of fun to the Roman court, was succeeded by Monsignore Aopi, who was also the Pope's confessor. It is, moreover, added, that Gregory took great delight in the jokes of certain Capuchins, particularly when they were tipsy. So, at least, says Della Galtina, according to whom the old court-foolery was sustained with great spirit at Rome to the very last.

It must be allowed, that the legendary saints themselves afforded the Popes good authority for this sort of buffoonery. St Kened, for instance, though a weak, decrepit, and sickly little fellow, was an inveterate joker. When

the Welsh St David succeeded, by his prayers, in getting him strong and straight, it was the other saint's most favourite joke, by dint of his own prayers, to get himself bent double again! And this course went on alternately, till St David, unable to see any fun in it, gave up his task, and left the wit to his double crookedness of mind and body. The act, however, was just one which might have entered into a fool's head. In a better sort of wit, remarkable for its boldness, the religious men who hung about courts enjoyed the admiration and impunity awarded to the jesters. For example: 'What is the difference between a Scot and a sot?' asked Charles of Burgundy of Duns Scotus, as the two sat opposite each other at or after dinner. 'There is only a table between them!' answered the holy clerk, whose reply was received with unbounded applause, either for its finely small wit, or its incontrovertible truth.

Some potentates have been satisfied with less than wit; of such was the Grand Duchess Catherine of Russia, who maintained a Finnish girl on her establishment, in whose incomparable mimicry of all the great people at court her highness experienced a never-failing delight. A similar pleasure is still enjoyed by the negro king of Dahomey, concerning whom Duncan, the Life-guardsman, who travelled in Africa in 1849, states a curious circumstance. In that uncivilized monarch's dominions, it is considered highly disgraceful for a man to be guilty of drunkenness. Immunity, in this respect, is the privilege of the king's mimics and jesters only. Of these the black sovereign possesses many, and in their degradation and jollity he finds occasion for much mirth and laughter.

In England, those merry serving-men whose success was sometimes rewarded by making them lords of landed estates, were occasionally employed rather for sedative than stimulating purposes. Strutt records that it was not unusual to engage them as story-tellers to kings and princes who required to be gently talked into sleep. This office has expired, but well-qualified candidates for it survive. In our own courts, however, it was the more rattling fool who enjoyed the greater share of admiration. He spoke so boldly, when there was need for it, that honest and merry men of note, desirous to serve their royal master, borrowed the liberty, as it were, and told valuable truth under the form of an idle joke. When Richard II. was pressed by all classes of his people for reform in a government under which they were sorely oppressed, his plumed and dainty flatterers advised him to place himself at the head of his army, and destroy nobles and commons alike, who were thus unreasonable. The King was perplexed; 'but,' says John Trussell, the historian, 'there was present old Sir John Linne, a good soldier, but a shuttlebrain, of whom the King in merriment demanded, in this case, what was, as he thought, the fittest to be done. Sir Hugh swore, "Blood and wounds! let us charge home and kill every mother's son, and so we shall make quick despatch of the best friends you have in the kingdom." This giddy answer,' adds Trussell, 'more weighed with the King than if it had been spoken in

grave and sober sort; and thus it often happens, that wise counsel is more sweetly followed when it is tempered with folly; and earnest is the less offensive, if it be delivered in jest.'

Indeed, it may be said, that on such principle was founded the very institution of court fools. Even the grave Queen Elizabeth of York could thus listen to her Greenwich jester, William. It was otherwise with her husband, Henry VII., who neither kept fools himself, nor admired those maintained by the English nobility. This is little to be wondered at, if all the jesters of lords resembled him who was kept by Thomas Lord Derby. Henry VII. was the guest of the latter, soon after his Majesty had so ungratefully executed Sir William Stanley, Lord Derby's own brother! Host and guest were standing on the leads of Latham House, viewing the country. Lord Derby was close against the parapet, the King immediately behind him. The house fool observed this propinquity, and chose to suspect the King of present, or was eager to remind him of past, treachery. Drawing near to his master, he exclaimed gruffly, 'Tom, remember Will!' This fool's bolt, so swiftly shot, reached the King's conscience, and his Majesty withdrew, in undignified hurry, into the house.

Henry's son, the eighth of the name, restored the banished official to court. Of his own Sir Merrymans, none is better known to us than Will Somers, whose effigy is at Hampton Court. This good fellow's memory was perpetuated by the establishment of the 'Will Somers Tavern,' in Old Fish-street. When tavern-tokens were allowed to be issued—a permission in existence as late as the reign of Charles II.—the landlord of the above hostelry issued one, with a figure of Will Somers on it, by way of distinction.

It is to be remembered, that a time ensued when a distinction was made between a jester and a fool. A dramatist like Heywood did not disdain to be the former, mingling with gentlemen and scholars; but we see that the fool, in the days of Mary and Philip, was of a lower degree. When the illustrious two, just mentioned, visited Faversham, the Chamberlain kept a book, in which he entered moneys given to the members of the royal retinue. The entry of—'To the King's and Queen's jester—2s.,' indicates the position of the fool; two shillings was the lowest sum awarded to the lowest menial in the royal train. The keeper of the bears seems to have been a more important personage than the baser fool at Queen Elizabeth's court, where her jester, Tarleton the actor, was held in some honour. When fool and bearward followed her Majesty to Canterbury, the corporation gave liberally to her retinue; but while the bearward received an angel, or ten shillings, the fool, Walter, was put off with the odd money, which, added to the angel, just made an English mark. 'Three and fourpence' was the sum that fell to the fool.

Let it not be considered irreverent if the words 'Shakspeare' and 'jester' be combined. They naturally occur here. There are four years, 1585-89, during which nothing certain is known of Shakspeare's whereabouts. In a letter addressed by Sir Philip Sidney, from

Utrecht, 1586, to his father-in-law, Walsingham, there is a passage to this effect: 'I wrote to you a letter, by Will, my Lord of Leicester's jesting player.' In the first volume of the Shakspeare Society papers, Mr John Bruce asks, 'Who was this Will, my Lord of Leicester's jesting player?' He may have been Will Johnson, Will Sly, Will Kimpe, or, as some have thought, even the immortal William himself! This knotty point cannot be unravelled here. The circumstance serves, however, to shew that 'jesting players' followed their patrons even to the tented field.

Under our first Stuart kings, the court fools revived in dignity. They were allowed serving-men to wait upon them, and some of these were pensioned for their good services. The author of *Letters from the Mountains* states that in some Scottish families of the olden time, down to the present century, was often to be found an individual who united in himself the offices of gamekeeper and warlock or wizard, and that in the latter capacity he in some degree resembled the court or household jester. There was a stranger combination than this in the person of the famous Archie Armstrong, official fool to James I. and his son Charles. Archie was a sort of gentleman groom of the chambers to the first King, preceding him when in progress, and looking after the royal quarters. In this capacity,

ARCHIE ARMSTRONG.

Armstrong was made a free citizen of Aberdeen, and held that freedom till his death. James must have loved him, at one period; for despite his hatred of tobacco, he granted a patent to Archie for the manufacture of tobacco pipes. The fool, moreover, gained no trifling addition to his salary, in bribes administered to him for presenting petitions, even those of recusants; at

which last, however, James was not so well pleased as he was with Archie's jokes. The position of Armstrong, who was on most familiar terms with his second master, Charles, is significantly indicated by his demand, when appointed to accompany that Prince to Spain. He claimed to have the service of an attendant, the same as was awarded to the gentlemen of the royal suite. The claim caused a tumult among the gentlemen in question, and Archie was fain to go abroad in less state than he thought became him. In the gloomy days that succeeded, the fool raised laughter at court, but not such an honest laughter as used to shake the house of Charles's brother, Prince Henry, where 'sweetmeats and Coryat,' that prince of non-official jesters and coxcombs, used to finish and gladden every repast.

Although the jester was not to be found on the household list of Oliver Cromwell, there were occasions when buffoons, hired for sport, appeared at Whitehall. One of these was the marriage of the Protector's daughter, Frances, with Mr. Rich. At the festival which followed the ceremony, some of the buffoons attempted to blacken with a burnt cork the face of Sir Thomas Hillingsby, as he was dancing. The solemn old gentleman-usher to the Queen of Bohemia was so enraged at this liberty, that he drew his dagger and would have made short work with the jester's life, had not others present interfered. There was, however, very wide licence at this feast. It was there that Oliver descended to practical foolery, snatched off his son Richard's wig, and, pretending to fling it into the fire, contrived to slip it under him, and, sitting on it, affected to deplore its loss.

When Wharton, in the *True Briton*, compared two of the Chancellors of Charles II. (Nottingham and Shaftesbury), he reckoned among the superior characteristics of the former, the absence of buffoons from his household. The last man of the next reign whom one might expect to see with a fool in his suite, was the infamous Judge Jeffries. His official jester, however, attended him on his bloody circuit. The judge loved and laughed at the fool's power of wit and mimicry; and at Taunton he tossed to the buffoon the 'pardon' of a convicted victim, leaving the victim's friends to purchase it of him, if such was desired, and lay within the compass of their means!

After this, the official jester disappeared, or his calling was modified. Thus, in the early part of the last century, there was a well-known Cheshire dancing-master, named Johnson, who was hired out at parties given by the northern nobility, at which he had licence to utter or enact anything that was likely to move the guests to laughter. Johnson was familiarly known as 'Lord Flame,' the name of a character played by him, in his own extravaganza, entitled *Hurlo-thumbo*, a piece acted at the Haymarket in 1729. Johnson was among the last of the paid English jesters. The genuine *ultimus scurrarum* in this country is said to have been a retainer in the house of Mr. Bartlett, of Castlemorton, Worcestershire. The date of his death is not precisely known, but it would seem to have been in the last half of the last century. He is still spoken

of; and 'as big a fool as Jack Hafod,' at once preserves his name and indicates his quality. Since Hafod's days, we have only had fools for the nonce, in England. Such is he who struts in anniversary processions, or who is only reproduced as a memorial of the past, like the dramatic jester who figures in the gay doings at Sudeley Castle, where Mr and Mrs Dent, the occupiers of that old residence of Katherine Parr, preside at fancy balls, in the ancient mansion, in the gallant costume of Henry and his Queen.

There is not much to be added to the history of the Court Fools of France. Of one of the most renowned of these, Triboulet, the present writer saw a capital portrait, the property of Walter Savage Landor, sold at Christie's, in 1859. It is the work of Licinio, the great rival of Titian, and is worthy of either hand. Triboulet appears to have been a man of strongly-marked but 'jolly' features; just such a man, in short, as history, but not the dramatic historians, have made him.

The most extraordinary combination of two offices that ever occurred, existed at the court of Louis XVIII., in the person of Coulon, a medical man of great skill, who ultimately abandoned all practice except with respect to the King, to whom he was at once doctor and jester. When a medical student, Coulon was wont, by his powers of mimicry, to keep a whole hospital-ward in roars of laughter. On one occasion, when officiating as assistant to the great Alibert, as the latter was bandaging the swollen legs of the suffering sovereign, Coulon so exquisitely mimicked his master behind his back, that the delighted Louis retained him thenceforward near his person. For the amusement of his royal patron, Coulon gave daily imitations. If the King asked him whom he had met, the medical jester would at once assume the bearing, voice, and the features of the person he desired to represent. It mattered not at all what the sex or the quality might be, or whether the mimicked individuals were the King's friends or relations, or otherwise. In either case, the monarch was in an ecstasy of hilarity as he promptly recognised each personage thus presented to him.—'Coulon,' said the Duke of Orleans to him, one day, 'I happened to see and hear your imitation of me, yesterday. It was capital, but not quite perfect. You did not wear, as I do, a diamond pin in your cravat. Allow me to present you with mine; it will make the resemblance more striking.' 'Ah! your highness,' replied Coulon, fixing the pin in his own cravat, and putting on such a look of the prince that the latter might have thought he was standing before a mirror, 'as a poor imitator, I ought, properly, to wear only paste!'

His imitations, however, were so approximate to reality that he sat for portraits of Thiers and Molé; but Coulon's greatest triumph, in this way, was through a harder task. There was no efficient portrait extant of the deceased minister, Villèle. Gros was regretting this. 'Aye,' said Coulon, 'no likeness of him represents the profound subtlety of his character, and his evanescent expression.' As he said this, a living Villèle seemed to stand before the artist, who then and there took from this singular personage, the well-

known portrait which so truthfully represents the once famous statesman of the old Bourbon times.

The only man who ever resembled Coulon at the court of France was Dufresnoy, the poet, playwright, actor, gardener, glass manufacturer, spendthrift, wit, and beggar. Louis XIV. valued him as Louis XVIII. valued Coulon, and many dramatists of his day used to 'book' his loose, brilliant sayings, and reproduce them as original. His royal protector appointed him his honorary fool; and it must be allowed that Dufresnoy had more of the old official about him than the refined and wealthy Coulon. The earlier jester, having got into debt with his washerwoman, settled the claim by making her his wife. It was a poor joke, and his wit seems to have suffered from it. He ventured, one day, to rally the Abbé Pelligrini on the soiled look of his linen. 'Sir,' said the piqued Abbé, 'it is not everyone who has the good luck to marry his laundress!' The joker was dumb; and he stood no bad illustration of that line in Churchill, which speaks of men

'O'errun with wit and destitute of sense.'

The combination of a serious with a jesting vocation was not at all uncommon at the court of Russia. In the household of the Czarina Elizabeth, Professor Stehlin, teacher of mathematics and history to the Grand Duke, afterwards Peter II., was also buffoon to his illustrious and imbecile pupil. This, indeed, was an office shared by all the young gentlemen of the Grand Duke's household, for they jumped to his humour, and danced to his fiddling, in his wife's bed-room, at all hours of the night, in all sorts of disguises, and to the accompaniment of most undignified figures of speech. The Czarina's own fool, Aksakoff, was a mere stolid brute, who used to place mice and hedgehogs in his mistress's way, for no better reason than that the sight of those animals terrified her to death. The selfishness of this fellow is in strong contrast with the disinterested folly of poor Bluet d'Arbères, another of the few men who have joined earnestness of life with a fool's calling. At the beginning of the seventeenth century, when the plague was devastating Paris, this heroic ex-fool to the Duke of Mantua conceived the heroically-foolish idea, that the pestilence would be stayed, if he made sacrifice of his own life by way of expiation. Under this impression, he starved himself to death.

It is certain that the Hanoverian family brought no official jesters with them to England. The reason may be found in the assertion of Palmblad, that the fashion of keeping fools was going out of German courts when Ernest Augustus was Elector of Hanover. Yet this father of our George I. retained a buffoon—Burkard Kaspar Adelsburn—for two reasons; as a remnant of good old German manners, and because the fashion was dying away in France, which country he just then detested. This jester exercised great influence over the Elector; not merely in a witty, but also in a ghostly sense, for Burkard would ever and anon lecture his libertine sovereign with all the freedom and earnestness of Whitefield when belabouring a reprobate collier.

That the fashion lingered on in Germany is clear, from a letter written by Lady Featherstonehaugh, in 1753, and quoted by Lady Chat-

terton in the recently-published *Memorials of Lord Gambier*. The former lady writes from Dresden, and alludes to the court-doings of Frederick Augustus. 'In the evening,' she says, 'we were at the apartments of the Royal Family, and were much surprised at seeing an ancient custom kept up here, and in no other court besides, except that of Prussia, of keeping buffoons. There are no less than three at this court.'

Nevertheless, when the official court fool ceased to be found in palace households, some princes began to be their own fools. This, however, is a portion of a subject which cannot here be entered upon. Sufficient for this article is the 'folly' thereof. J. D.

A surprise is felt that one of the Armstrongs—that border clan remarkable only for *stouthreif*—should have ever found his way to court, even in so equivocal a position as that of the King's Jester. The traditionary story on this point has been thus reported to us. A shepherd with the carcase of a sheep on his shoulders, was tracked by the officers of justice to a cottage in the moorlands, where, however, they found no one but a vacant-looking lad, who sat rocking a cradle, apparently altogether unconscious of their object. Searching somewhat narrowly, they at length found that, instead of a baby, the carcase of the missing sheep occupied the cradle. No longer doubting that the rocker of the cradle was the delinquent, they seized and brought him to Jedburgh, where King James VI. had just arrived to hold one of his *justice aires*.

Condemned to die for his crime, Archie Armstrong—for it was he—pleaded with the king that he was a poor ignorant man—he had heard of the Bible, and wished to read it through—would his Highness please respite him till this should have been, for his soul's weal, accomplished. The good-natured monarch granted the prayer, and Archie immediately rejoined with a sly look, 'Then deil tak me an I ever read a word o't, as lang as my een are open!' James saw from this that there was humour in the man, and had him brought to court.

WINTER EVENING.

Winter

I love thee when the day is o'er,
Spite of the tempest's outward roar;
Queen of the tranquil joys that weave
The charm around the sudden eve;
The thick'ning footsteps thro' the gloom,
Telling of those we love come home;
The candles lit, the cheerful board,
The dear domestic group restored;
The fire that shows the looks of glee,
The infants standing at our knee;
The busy news, the sportive tongue,
The laugh that makes us still feel young;
The health to those we love, that now
Are far as ocean winds can blow;
The health to those who with us grew,
And still stay with us tried and true;
The wife that makes life glide away,
One long and lovely marriage day.
Then music comes till—round us creep
The infant list'ners half asleep;
And busy tongues are loud no more,
And, Winter, thy sweet eve is o'er.—*Anonymous.*

JANUARY 29.

St Sulpicius Severus, about 407. St Gildas, the Albanian or Scot, 512. St. Gildas, the Wise, or Badonicus, abbot (570?). St Francis of Sales, 1622.

ST GILDAS.

This saint, according to his legend, was the son of Can, a king of the Britons of Alcluyd or Dumbarton, and was born some time in the latter part of the fifth century. He was one of twenty-four brothers, the rest of whom were warriors, and were, with their father, usually at war with King Arthur. But Gildas, having shewn a disposition for learning, was sent to the school of the Welsh saint Illutus. He afterwards went to study in Gaul, whence he returned to Britain, and set up a school of his own in South Wales. Subsequently, at the invitation of St Bridget, he visited Ireland, where he remained a long time, and founded several monasteries. He returned to England, bringing with him a wonderful bell, which he was carrying to the Pope; and after having been reconciled with King Arthur, who had killed his eldest brother in battle, he proceeded on his journey to Rome. He went from Rome to Ravenna, and on his way home stopped at Ruys, in Brittany, which was so tempting a place for a hermit, that he determined to remain there, and he founded a monastery, of which he was himself the first abbot. The Bretons pretended that he died there, and that they possessed his relics; but, according to the Welsh legend, he returned to Wales, bringing back the wonderful bell, which was long preserved at Lancarvan, where he first took up his residence. He there became intimate with St Cadoc, and, having the same tastes, the two friends went to establish themselves as hermits in two desert islands, in the estuary of the Severn, and fixed upon those which are now known by the names of Steephalm and Flatholm, Gildas choosing the latter; and here they remained until they were driven away by the attacks of the Northern pirates. Gildas then settled at Glastonbury, where he died, and was buried in the church of St Mary.

Such is the outline of the story of St Gildas, which, in its details, is so full of inconsistencies and absurdities, that many writers have tried to solve the difficulty by supposing that there were two or several saints of the name of Gildas, whose histories have been mixed up together. They give to one the title of Gildas Badonicus, or the Historian, because, in the tracts attributed to him, he says that he was born in the year when King Arthur defeated the Saxons in the battle of Mount Badon, in Somersetshire; the other they call Gildas the Albanian or Scot, supposing that he was the one who was born at Alcluyd. The first has also been called Gildas the Wise. Gildas is known as the author, or supposed author, of a book entitled *De Excidio Britannie*, consisting of a short and barren historical sketch of the history of the struggle between the Britons and the Picts and Saxons, and of a declamatory epistle addressed to the British princes, reproaching them for their vices and misconduct, which are represented as the cause of the ruin of their country. Some

modern writers are of opinion that this book is itself a forgery, compiled in the latter half of the seventh century, amid the bitter disputes between the Anglo-Saxon and British churches; and that, in the great eagerness of the middle ages to find saints, the name was seized upon with avidity; and in different places where they wished to profit by possessing his relics, they composed legends of him, intended to justify their claim, which therefore agreed but partially with each other. Altogether, the legend of St Gildas is one of the most mysterious and controvertible in the whole Roman Calendar, and its only real interest arises from the circumstance of the existence of a book written in this island, and claiming so great an antiquity.

ST FRANCIS OF SALES.

If any one is at a loss to understand how so much of the influence which the Church of Rome lost in Europe at the Reformation was afterwards regained, let him read the Life of this remarkable man. Francis Count of Sales, near Annecy, threw rank and fortune behind his back, to devote himself to the interests of religion. His humility of spirit, his austerities, his fervid devotion, gave him distinction as a preacher at a comparatively early age. In his provostship at Geneva, his sermons were attended with extraordinary success. 'He delivered the word of God with a mixture of majesty and modesty; had a sweet voice and an animated manner; but what chiefly affected the hearts of his hearers, was the humility and unction with which he spoke from the abundance of his own heart.' He went about among the poor, treating them with a meekness and kindness which wonderfully gained upon them. To this, in a great degree, it was owing that he brought, as has been alleged, above seventy thousand of the Genevese Calvinists back to the Romish church.

Afterwards, in 1594, Francis and a cousin of his undertook a mission to Chablais, on the Lake of Geneva. On arriving at the frontiers, they sent back their horses, the more perfectly to imitate the apostles. The Catholic religion was here nearly extinct, and Francis found his task both difficult and dangerous. Nevertheless, in four years, his efforts began to have an effect, and soon after he had so gained over the people to his faith, that the Protestant forms were put down by the state. 'It is incredible,' says Butler, 'what fatigues and hardships he underwent in the course of this mission; with what devotion and tears he daily recommended the work of God; with what invincible courage he braved the greatest dangers; with what meekness and patience he bore all manner of affronts and calumnies.' St Francis de Sales died in 1622, at the age of fifty-six.

Born.—Emmanuel de Swedenborg, 1688-9; Thomas Paine, political writer, 1737; William Sharp, line-engraver, 1749, *London*.

Died.—Emperor Aurelian, 275; Bishop Sanderson, 1663; John Theophilus Fichte, philosopher, 1814, *Berlin*; George III., 1820, *Windsor*; Agnes Berry, 1852; Mrs Gore, novelist, 1861.

SWEDENBORG.

The life-history of Swedenborg is very remarkable for its complete division into two parts,

utterly alien from each other; the first fifty-five years devoted to pure science and to official business under the King of Sweden, the last twenty-eight to spiritual mysticism and the foundation of a new religion. His voluminous works on the latter class of subjects, are generally felt to be unreadable. There can, however, be no reasonable doubt (as we believe) that the author was as sincere in his descriptions of the spiritual world as he had ever been in regard to the most material of his original studies. Perhaps, after all, there is some psychological problem yet to be satisfactorily made out regarding such mystics as he, resolving all into some law at present unknown.

A letter written by the celebrated philosopher Kant, in 1764, and which is published in his Works, gives the following curious details regarding Swedenborg, of whose possession of an extraordinary gift he considers it an indubitable proof. 'In the year 1756,' says he [the true date, however, was 1759], 'when M. de Swedenborg, towards the end of February, on Saturday, at 4 o'clock p.m., arrived at Gottenburg from England, Mr William Costel invited him to his house, together with a party of fifteen persons. About 6 o'clock, M. de Swedenborg went out, and after a short interval returned to the company quite pale and alarmed. He said that a dangerous fire had broken out in Stockholm at the Suderhalm (Stockholm is about 300 miles from Gottenburg), and that it was spreading very fast. He was restless and went out often: he said that the house of one of his friends, whom he named, was already in ashes, and that his own was in danger. At 8 o'clock, after he had been out again, he joyfully exclaimed, "Thank God! the fire is extinguished the third door from my house." This news occasioned great commotion through the whole city, and particularly amongst the company in which he was. It was announced to the Governor the same evening. On the Sunday morning, Swedenborg was sent for by the Governor, who questioned him concerning the disaster. Swedenborg described the fire precisely, how it had begun, in what manner it had ceased, and how long it had continued. . . . On the Monday evening, a messenger arrived at Gottenburg, who was dispatched during the time of the fire. In the letters brought by him, the fire was described precisely in the manner stated by Swedenborg. On Tuesday morning, the royal courier arrived at the Governor's with the melancholy intelligence of the fire, of the loss it had occasioned, and of the houses it had damaged and ruined, not in the least differing from that which Swedenborg had given immediately after it had ceased, for the fire was extinguished at 8 o'clock.'

Kant adds: 'What can be brought forward against the authenticity of this occurrence? My friend, who wrote this to me, has not only examined the circumstances of this extraordinary case at Stockholm, but also about two months ago, at Gottenburg, where he is acquainted with the most respectable houses, and where he could obtain the most complete and authentic information.'

GEORGE III.

The death of George III. on this day in the year 1820, was an event of no political consequence, as for ten years he had been secluded under mental eclipse. But his people reflected with a feeling of not unkindly interest on his singularly long reign—so long it was that few remembered any other—on his venerable age—eighty-two—his irreproachable character as a family man—and the many remarkable things which had fallen out in his time. Amiable people of little reflection viewed him as 'the good old King,' the supporter of safe principles in church and state, the friend of religion and virtue. Others of keener intelligence pointed to the vast amount of disaster which had been brought upon the country, mainly through his wrong judgment and obstinacy—the American colonies lost, a fatal interference with the concerns of France in 1793, an endangerment of the peace of the country through a persistent rejection of the claim for Catholic emancipation. To these people the rule of George III. appeared to have been unhappy from the beginning. He had never ceased to struggle for an increase of the kingly authority. He could endure no minister who would not be subservient to him. Any officer who voted against his favourite ministers in parliament, he marked in a black-list which he kept, and either dismissed him at once or stopped his promotion. A particular cohort amounting to fifteen or twenty in the House of Commons, were recognised as 'the King's Friends,' from the readiness they shewed to do his bidding and act for his interest on all occasions; and this unconstitutional arrangement was calmly submitted to. A great deal of what was amiss in the king's system of government might be traced to mis-education under a bad mother, who continually dinned into his ear, 'George, be a king!' and preceptors who were disaffected to Revolution principles. Like other weak men, he could not understand a conscientious dissent from his own opinion. He argued thus:—'I think so and so, and I am conscientious in thinking so: *ergo*, any other opinion must be unconscientious.' It is perfectly certain, accordingly, that he looked upon Mr Fox, and the Whigs generally, as base and profligate men—his son included in the number; and adhered to the policy which cost him America under a perfect conviction that only worthless people could sympathise with the claims of the disaffected colonists. It is, on the other hand, remarkable of the king, that whenever resistance reached the point where it became clearly dangerous, he gave way. After he had conceded peace and independence to America, there was something heroic in his reception of Mr Adams, the first ambassador of the new republic, when he said that, though he had been the last man in England to resolve on the pacification, he should also be the last to seek to break it. The mistaken policy which inflicted such wretchedness on the patriots in America, is in some measure redeemed by his grateful generosity to the loyalists. It was found after his death, that he had, all through the war, kept a private register, in which he entered the name of

any one who suffered for his loyalty to Great Britain, and full particulars regarding him, that he might, as far as possible, afford him compensation. One is struck by the *English* character of King George—English in his doggedness and his prejudices, but equally English in his conscientiousness and his frankness. It is strange to reflect on the evils incurred by the United Kingdom through the accident of her wrong-headed ruler being a virtuous man. Had that latter particular been reversed, such huge political aberrations would have been impossible.

Mr Thackeray, in his Lectures on the Four Georges, touches on the last days of the third with a pathos rarely reached in modern literature. The passage is a gem of exquisite beauty. 'I have,' says he, 'seen his picture as it was taken at this time, hanging in the apartment of his daughter, the Landgravine of Hesse Hombourg—amidst books and Windsor furniture, and a hundred fond reminiscences of her English home. The poor old father is represented in a purple gown, his snowy beard falling over his breast—the star of his famous Order still idly shining on it. He was not only sightless: he became utterly deaf. All light, all reason, all sound of human voices, all the pleasures of this world of God, were taken from him. Some slight lucid moments he had; in one of which, the queen, desiring to see him, found him singing a hymn, and accompanying himself on the harpsichord. When he had finished, he knelt down and prayed aloud for her, and then for his family, and then for the nation, concluding with a prayer for himself, that it might please God to avert his heavy calamity from him, but, if not, to give him resignation to submit. He then burst into tears, and his reason again fled.

'What preacher need moralise on this story; what words save the simplest are requisite to tell it? It is too terrible for tears. The thought of such a misery smites me down in submission before the Ruler of kings and men, the Monarch supreme over empires and republics, the inscrutable Dispenser of life, death, happiness, victory. "O brothers," I said to those who heard me first in America—"O brothers! speaking the same dear mother tongue—O comrades, enemies no more, let us take a mournful hand together as we stand by this royal corpse, and call a truce to battle! Low he lies to whom the proudest used to kneel once, and who was cast lower than the poorest: dead, whom millions prayed for in vain. Driven off his throne; buffeted by rude hands, with his children in revolt; the darling of his old age killed before him untimely; our Lear hangs over her breathless lips and cries, "Cordelia, Cordelia, stay a little!"

"Vex not his ghost—oh! let him pass—he hates him,

That would upon the rack of this tough world
Stretch him out longer!"

Hush! Strife and Quarrel, over the solemn grave. Sound, trumpets, a mournful march! Fall, dark curtain, upon his pageant, his pride, his grief, his awful tragedy!

JANUARY 30.

St Barsimæus, bishop and martyr, 2nd century. St Martina, virgin and martyr, 3rd century. St Aldegondes, virgin and abbess, 660. St Bathildes, queen of France, 680.

Born.—Charles Rollin, 1661, *Paris*; Walter Savage Landor, 1775; Charles Lord Metcalfe, 1785.

Died.—William Chillingworth, 1644; King Charles I., 1649; Dr John Robison, mechanical philosopher, 1805.

LORD METCALFE.

Charles Metcalfe—raised at the close of a long official life to the dignity of a peer of the realm—was a notable example of that kind of Englishman, of whom Wellington was the type,—modest, steady, well-intending, faithful to his country and to his employers; in a word, the devotee of duty. A great part of his life was spent in India—some years were given to Jamaica—finally, he took the government of Canada. There, when enjoying at fifty-nine the announcement of his peerage, he was beset by a cruel disease. His biographer Mr Kaye tells us—'One correspondent recommended Mesmerism, which had cured Miss Martineau; another, Hydropathy, at the "pure springs of Malvern;" a third, an application of the common dock-leaf; a fourth, an infusion of couch grass; a fifth, the baths of Doeherte, near Vienna; a sixth, the volcanic hot springs of Karlsbad; a seventh, a wonderful plaster, made of rose-leaves, olive oil, and turnip juice; an eighth, a plaster and powder in which some part of a young frog was a principal ingredient; a ninth, a mixture of copperas and vinegar; a tenth, an application of pure ox-gall; an eleventh, a mixture of Florence oil and red precipitate; whilst a twelfth was certain of the good effects of Homeopathy, which had cured the well-known "Charlotte Elizabeth." Besides these varied remedies, many men and women, with infallible recipes or certain modes of treatment, were recommended to him by themselves and others. Learned Italian professors, mysterious American women, erudite Germans, and obscure Irish quacks—all had cured cancers of twenty years' standing, and all were pressing, or pressed forward, to operate on Lord Metcalfe.'

The epitaph written upon Lord Metcalfe by Lord Macaulay gives his worthy career and something of his character in words that could not be surpassed:

'Near this stone is laid Charles Theophilus, first and last Lord Metcalfe, a statesman tried in many high posts and difficult conjunctures, and found equal to all. The three greatest dependencies of the British crown were successively entrusted to his care. In India his fortitude, his wisdom, his probity, and his moderation are held in honourable remembrance by men of many races, languages, and religions. In Jamaica, still convulsed by a social revolution, he calmed the evil passions which long-suffering had engendered in one class, and long domination in another. In Canada, not yet recovered from the calamities of civil war, he reconciled contending factions to each other and to the mother coun-

try. Public esteem was the just reward of his public virtue; but those only who enjoyed the privilege of his friendship could appreciate the whole worth of his gentle and noble nature. Costly monuments in Asiatic and American cities attest the gratitude of nations which he ruled; this tablet records the sorrow and the pride with which his memory is cherished by private affection. He was born the 30th day of January 1785. He died the 5th day of September 1846.

EXECUTION OF CHARLES I.

Though the anniversary of the execution of Charles I. is very justly no longer celebrated with religious ceremonies in England, one can scarcely on any occasion allow the day to pass without a feeling of pathetic interest in the subject. The meek behaviour of the King in his latter days, his tender interviews with his little children when parting with them for ever, the insults he bore so well, his calmness at the last on the scaffold, combine to make us think leniently of his arbitrary rule, his high-handed proceedings with

Nonconformists, and even his falseness towards the various opposing parties he had to deal with. When we further take into account the piety of his meditations as exhibited in the *Eikon Basilike*, we can scarcely wonder that a very large proportion of the people of England, of his own generation, regarded him as a kind of martyr, and cherished his memory with the most affectionate regard. Of the highly inexpedient nature of the action, it is of no use to speak, as its consequences in causing retaliation and creating a reaction for arbitrary rule, are only too notorious.

Charles was put to death upon a scaffold raised in front of the Banqueting House, Whitehall. There is reason to believe that he was conducted to this sad stage through a window, from which the frame had been taken out, at the north extremity of the building near the gate. It was not so much elevated above the street, but that he could hear people weeping and praying for him below. A view of the dismal scene was taken at the time, engraved, and published in Holland, and of this a transcript is here presented.

EXECUTION OF CHARLES I.

The scaffold, as is well known, was graced that day by two executioners in masks; and as to the one who used the axe a question has arisen, who was he? The public seems to have been kept in ignorance on this point at the time; had it been otherwise, he could not have long escaped the daggers of the royalists. Immediately after the Restoration, the Government made an effort to discover the masked headsman; but we do not learn that they ever succeeded. William Lilly, the famous astrologer, having dropped a hint that he knew something on the subject, was examined before a parliamentary committee at that time, and gave the following information:

'The next Sunday but one after Charles the First was beheaded, Robert Spavin, Secretary unto Lieutenant-General Cromwell, invited himself to dine with me, and brought Anthony Peirson and several others along with him to dinner. Their principal discourse all dinner-time was only, who it was that beheaded the King. One said it was the common hangman; another, Hugh

Peters; others were nominated, but none concluded. Robert Spavin, so soon as dinner was done, took me to the south window. Saith he, "These are all mistaken; they have not named the man that did the fact: it was Lieutenant-Colonel Joyce. I was in the room when he fitted himself for the work—stood behind him when he did it—when done went in again with him. There's no man knows this but my master (viz. Cromwell), Commissary Ireton, and myself." "Doth not Mr Rushworth know it?" said I. "No, he doth not," saith Spavin. The same thing Spavin since had often related to me when we were alone. Mr Prynne did, with much civility, make a report hereof in the house.*

Nevertheless, the probability is that the King's head was in reality cut off by the ordinary executioner, Richard Brandon. When, after the Restoration, an attempt was made to fix the guilt on one William Hulett, the following evidence was given

* Lilly's History of his Life and Times, ed. 1715, p. 89.

in his defence, and there is much reason to believe that it states the truth. 'When my Lord Capell, Duke Hamilton, and the Earl of Holland, were beheaded in the Palace Yard, Westminster [soon after the King], my Lord Capell asked the common hangman, "Did you cut off my master's head?" "Yes," saith he. "Where is the instrument that did it?" He then brought the axe. "Is this the same axe? are you sure?" said my lord. "Yes, my lord," saith the hangman; "I am very

sure it is the same." My Lord Capell took the axe and kissed it, and gave him five pieces of gold. *I heard him say*, "Sirrah, wert thou not afraid?" Saith the hangman, "They made me cut it off, and I had thirty pounds for my pains."

We have engraved two of the relics associated with this solemn event in our history. First is the Bible believed to have been used by Charles, just previous to his death, and which the King is said to have presented to Bishop Juxon, though

KING CHARLES I.'S BIBLE.

this circumstance is not mentioned in any contemporaneous account of the execution. The only notice of such a volume, as a dying gift, appears to be that recorded by Sir Thomas Herbert, in his narrative, which forms a part of *The Memoirs of the last Two Years of the Reign of that unparalleled Prince, of ever-blessed memory, King Charles I.*; London, 1702, p. 129, in the following passage:—'The King thereupon gave him his hand to kiss, having the day before been graciously pleased, under his royal hand, to give him a certificate, that the said Mr Herbert was not imposed upon him, but by his Majesty made choice of to attend him in his bedchamber, and had served him with faithfulness and loyal affection. His Majesty also delivered him his Bible, in the margin whereof he had, with his own hand, written many annotations and quotations, and charged him to give it to the Prince so soon as he returned.' That this might be the book above represented is rendered extremely probable, on the assumption that the King would be naturally anxious that his son should possess that very copy of the Scriptures which had been provided for himself when he was Prince of Wales. It will be observed that the cover of the Bible is decorated with the badge of the Principality within the Garter, surmounted by a royal coronet (in silver gilt), enclosed by an embroidered border;

the initial P. being apparently altered to an R., and the badges of the Rose and Thistle upon a ground of blue velvet: the book was, therefore, bound between the death of Prince Henry, in 1612, and the accession of Charles to the throne in 1625, when such a coronet would be no longer used by him. If the Bible here represented be that referred to by Herbert, the circumstance of Bishop Juxon becoming the possessor of it might be accounted for by supposing that it was placed in his hands to be transmitted to Charles II., with the George of the Order of the Garter belonging to the late King, well known to have been given to that prelate upon the scaffold. The Bible was, when Mr Roach Smith wrote the above details in his *Collectanea Antiqua*, in the possession of James Skene, Esq. of Rubislaw.*

Next is engraved the silver clock-watch, which had long been used by King Charles, and was given by him to Sir Thomas Herbert, on the morning of his execution. The face is beautifully engraved; and the back and rim are elaborately chased, and pierced with foliage and scroll-work. It has descended as an heir-loom to William Townley Mitford, Esq.; and from its undoubted

* Mr. Skene, the last survivor of the six friends to whom Sir Walter Scott dedicated the respective cantoes of *Marmion*, now (1862) resides in Oxford.

genuineness must be considered as one of the most interesting relics of the monarch.

The body of the unfortunate King was embalmed immediately after the execution, and taken to Windsor to be interred. A small

group of his friends, including his relative the Duke of Richmond, was permitted by Parliament to conduct a funeral which should not cost above five hundred pounds. Disdaining an ordinary grave, which had been dug for the King in the

KING CHARLES I.'S WATCH.

floor of the chapel, they found a vault in the centre of the quire, containing two coffins, believed to be those of Henry VIII. and his queen Jane Seymour; and there his coffin was placed, with no ceremony beyond the tears of the mourners, the Funeral Service being then under prohibition. The words 'King Charles, 1648,' inscribed on the outside of the outer wooden coffin, alone marked the remains of the unfortunate monarch. These sad rites were paid at three in the afternoon of the 19th of February, three weeks after the execution.

The coffin of King Charles was seen in the reign of William III., on the vault being opened to receive one of the Princess Anne's children. It remained unobserved, forgotten, and a matter of doubt for upwards of a century thereafter, till, in 1813, the vault had once more to be opened for the funeral of the Duchess of Brunswick. On the 1st of April, the day after the interment of that princess, the Prince Regent, the Duke of Cumberland, the Dean of Windsor, Sir Harry Halford, and two other gentlemen assembled at the vault, while a search was made for the remains of King Charles. The leaden coffin, with the inscription, was soon found, and partially opened, when the body of the decapitated king was found tolerably entire and in good condition, amidst the gums and resins which had been employed in preserving it. 'At length the whole face was disengaged from its covering. The complexion of the skin of it was dark and discoloured. The forehead and temples had lost little or nothing of their muscular substance; the cartilage of the nose was gone; but the left eye, in the first moment of exposure, was open and full, though it vanished almost immediately: and the pointed

beard, so characteristic of the reign of King Charles, was perfect. The shape of the face was a long oval; many of the teeth remained. When the head had been entirely disengaged from the attachments which confined it, it was found to be loose, and without any difficulty was taken up and held to view. The back part of the scalp was perfect, and had a remarkably fresh appearance; the pores of the skin being more distinct, as they usually are when soaked in moisture; and the tendons and filaments of the neck were of considerable substance and firmness. The hair was thick at the back part of the head, and, in appearance, nearly black. . . . On holding up the head to examine the place of separation from the body, the muscles of the neck had evidently retracted themselves considerably; and the fourth cervical vertebra was found to be cut through its substance, transversely, leaving the surfaces of the divided portions perfectly smooth and even.'*

The first Lord Holland used to relate, with some pleasantry, a usage of his father, Sir Stephen Fox, which proves the superstitious veneration in which the Tories held the memory of Charles I. During the whole of the 30th of January, *the wainscot of the house used to be hung with black*, and no meal of any sort was allowed till after midnight. This attempt at rendering the day melancholy by fasting had a directly contrary effect on the children; for the housekeeper, apprehensive that they might suffer from so long an abstinence from food, used to give the little folks clandestinely as many comfits and sweetmeats as they could eat, and Sir Stephen's in-

* Sir Henry Halford's Account of what appeared on opening the coffin of King Charles I., &c. 1813.

tended feast was looked to by the younger part of the family as a holiday and diversion.—*Correspondence of C. J. Fox, edited by Earl Russell.*

There is a story told regarding a Miss Russell, great-grand-daughter of Oliver Cromwell, who was waiting-woman to the Princess Amelia, daughter of George II., to the effect that, while engaged in her duty one 30th of January, the Prince of Wales came into the room, and sportively said, 'For shame, Miss Russell! why have you not been at church, humbling yourself with weepings and wailings for the sins on this day committed by your ancestor?' To which Miss Russell answered, 'Sir, for a descendant of the great Oliver Cromwell, it is humiliation sufficient to be employed, as I am, in pinning up the tail of your sister!'—*Rede's Anecdotes, 1799.*

The Calves'-Head Club.

The *Gentleman's Magazine* for 1735, vol. v., p. 105, under the date of January 30, gives the following piece of intelligence:—'Some young noblemen and gentlemen met at a tavern in Suffolk Street [Charing Cross], called themselves the Calves'-Head Club, dressed up a calf's head in a napkin, and after some huzzas threw it into a bonfire, and dipt napkins in their red wine and waved them out at window. The mob had strong beer given them, and for a time hallooed as well as the best, but taking disgust at some healths proposed, grew so outrageous that they broke all the windows, and forced themselves into the house; but the guards being sent for, prevented further mischief.' The *Weekly Chronicle*, of February 1, 1735, states that the

THE CALVES'-HEAD CLUB.

damage was estimated at 'some hundred pounds,' and that 'the guards were posted all night in the street, for the security of the neighbourhood.' Horace Walpole says the mob destroyed part of the house. Sir William (called Hellfire) Stanhope was one of the mem-

bers. This riotous occurrence was the occasion of some verses in *The Grub Street Journal*, of which the following lines may be quoted as throwing some additional light on the scene :

' Strange times! when noble peers, secure from riot,
Can't keep Noll's annual festival in quiet,
Through sashes broke, dirt, stones, and brands
thrown at 'em,
Which, if not scand- was brand- alum magnatum.
Forced to run down to vaults for safer quarters,
And in coal-holes their ribbons hide and garters.'

The manner in which Noll's (Oliver Cromwell's) 'annual festival' is here alluded to, seems to shew that the bonfire, with the calf's-head and other accompaniments, had been exhibited in previous years. In confirmation of this fact, there exists a print entitled *The True Effigies of the Members of the Calves'-Head Club, held on the 30th of January 1734, in Suffolk Street, in the County of Middlesex*; being the year before the riotous occurrence above related. This print, as will be observed in the copy above given, shews a bonfire in the centre of the foreground, with the mob; in the background, a house with three windows, the central window exhibiting two men, one of whom is about to throw the calf's-head into the bonfire below. The window on the right shews three persons drinking healths, that on the left two other persons, one of whom wears a mask, and has an axe in his hand.

It is a singular fact that a political club of this revolutionary character should have been in existence at so late a period as the eighth year of the reign of George II. We find no mention of it for many years preceding this time, and after the riot it was probably broken up.

The first notice that we find of this strange club is in a small quarto tract of twenty-two pages, which has been reprinted in the *Harleian Miscellany*. It is entitled *The Secret History of the Calves'-Head Club; or, the Republican unmask'd. Wherein is fully shewn the Religion of the Calves'-Head Heroes, in their Anniversary Thanksgiving Songs on the 30th of January, by them called Anthems, for the Years 1693, 1694, 1695, 1696, 1697. Now published to demonstrate the restless implacable Spirit of a certain Party still amongst us, who are never to be satisfied until the present Establishment in Church and State is subverted.* The Second Edition. London, 1703.

The *Secret History*, which occupies less than half of the twenty-two pages, is vague and unsatisfactory, and the five songs or anthems are entirely devoid of literary or any other merit. As Queen Anne commenced her reign in March 1702, and the second edition of this tract is dated 1703, it may be presumed that the first edition was published at the beginning of the Queen's reign. The author states, that 'after the Restoration the eyes of the Government being upon the whole party, they were obliged to meet with a great deal of precaution, but now they meet almost in a public manner, and apprehend nothing.' Yet all the evidence which he produces concerning their meetings is hearsay. He had never himself been present at the club. He states, that 'happening in the late reign to be in company of a certain active Whig,' the said Whig

informed him that he knew most of the members of the club, and had been often invited to their meetings, but had never attended: 'that Milton and other creatures of the Commonwealth had instituted this club (as he was informed) in opposition to Bishop Juxon, Dr Sanderson, Dr Hammond, and other divines of the Church of England, who met privately every 30th of January, and though it was under the time of the usurpation had compiled a private form of service of the day, not much different from what we now find in the Liturgy.' From this statement it appears that the author's friend, though a Whig, had no personal knowledge of the club. The slanderous rumour about Milton may be passed over as unworthy of notice, this untrustworthy tract being the only authority for it.

But the author of the *Secret History* has more evidence to produce. 'By another gentleman, who, about eight years ago, went, out of mere curiosity, to their club, and has since furnished me with the following papers [the songs or anthems], I was informed that it was kept in no fixed house, but that they removed as they saw convenient; that the place they met in when he was with them was in a blind alley about Moorfields; that the company wholly consisted of Independents and Anabaptists (I am glad, for the honour of the Presbyterians, to set down this remark); that the famous Jerry White, formerly chaplain to Oliver Cromwell (who, no doubt of it, came to sanctify with his pious exhortations the ribaldry of the day), said grace; that, after the cloth was removed, the anniversary anthem, as they impiously called it, was sung, and a calf's skull filled with wine, or other liquor, and then a brimmer, went round to the pious memory of those worthy patriots who had killed the tyrant, and delivered the country from his arbitrary sway.' Such is the story told in the edition of 1703; but in the edition of 1713, after the word Moorfields, the narrative is continued as follows:—'where an axe was hung up in the club-room, and was revered as a principal symbol in this diabolical sacrament. Their bill of fare was a large dish of calves'-heads, dressed several ways, by which they represented the king, and his friends who had suffered in his cause; a large pike with a small one in his mouth, as an emblem of tyranny; a large cod's head, by which they pretended to represent the person of the king singly; a boar's head, with an apple in its mouth, to represent the king. . . . After the repast was over, one of their elders presented an *Ikon Basilike*, which was with great solemnity burned upon the table, whilst the anthems were singing. After this, another produced Milton's *Defensio Populi Anglicani*, upon which all laid their hands, and made a protestation, in form of an oath, for ever to stand by and maintain the same. The company wholly consisted of Anabaptists,' &c.

As a specimen of the verses, the following stanzas may be quoted from the anthem for 1696, in reference to Charles I. :—

' This monarch wore a peaked beard,
And seemed a doughty hero,
A Dioclesian innocent,
And merciful as Nero.

- 'The Church's darling implement,
And scourge of all the people,
He swore he'd make each mother's son
Adore their idol steeple ;
- 'But they, perceiving his designs,
Grew plaguy shy and jealous,
And timely chopt his calf's head off,
And sent him to his fellows.'

This tract appears to have excited the curiosity of the public in no small degree ; for it passed, with many augmentations as valueless as the original trash, through no less than nine editions. The fifth edition, published in 1705, contains three additional songs, and is further augmented by 'Reflections' on each of the eight songs, and by 'A Vindication of the Royal Martyr Charles the First, wherein are laid open the Republicans' Mysteries of Rebellion, written in the time of the Usurpation by the celebrated Mr Butler, author of *Hudibras* ; with a Character of a Presbyterian, by Sir John Denham, Knight.' To a certainty the author of *Hudibras* never wrote anything so stupid as this 'Vindication,' nor the author of *Cooper's Hill* the dull verses here ascribed to him.

The sixth edition is a reprint of the fifth, but has an engraving representing the members of the club seated at a table furnished with dishes such as are described in the extract above quoted, and with the axe hung up against the wainscot. A man in a priest's dress is saying grace, and four other persons are seated near him, two on each side ; two others seem by their dress to be men of rank. A black personage, with horns on his head, is looking in at the door from behind ; and a female figure, with snakes among her hair, probably representing Rebellion, is looking out from under the table.

The eighth edition, published in 1713, contains seven engravings, including the one just described, and the text is augmented to 224 pages. The additional matter consists of the following articles :—'An Appendix to the Secret History of the Calf's Head Club ;' 'Remarkable Accidents and Transactions at the Calf's Head Club, by way of Continuation of the Secret History thereof ;'—these 'Accidents' extend over the years 1708-12, and consist of narratives apparently got up for the purpose of exciting the public and selling the book ; 'Select Observations of the Whigs ;' 'Policy and Conduct in and out of Power.' Lowndes mentions another edition published in 1716.

Hearnce tells us that on the 30th January 1706-7, some young men in All Souls' College, Oxford, dined together at twelve o'clock, and amused themselves with cutting off the heads of a number of woodcocks, 'in contempt of the memory of the blessed martyr.' They had tried to get calves'-heads, but the cook refused to dress them.*

MEMORIALS OF CHARLES I.

It is pleasanter to contemplate the feelings of tenderness and veneration than those of contempt and anger. We experience a relief in turning from the coarse doings of the Calves'-Head Club,

* Reliquie Hearnianæ, i. 121.

to look on the affectionate grief of those who, on however fallacious grounds, mourned for the royal martyr. It is understood that there were seven mourning rings distributed among the more intimate friends of the unfortunate king, and one of them was latterly in the possession of Horace Walpole at Strawberry Hill, being a gift to him from Lady Murray Elliott. The stone presents the profile of the king in miniature. On the obverse of this, within, is a death's head, surmounting a crown, with a flank of glory above ; flanked by the words, GLORIA—VANITAS ; while round the interior runs the legend, *Gloria Ang. Emigravit, Ja. the 30, 1648.*

There are also extant several examples of a small silver case or locket, in the form of a heart, which may be presumed each to have been suspended near the heart of some devoted and tearful loyalist. In the example here presented, there is an engraved profile head of the king within, opposite to which, on the inside of the lid, is incised, 'Prepared be to follow me, C.R.' On one of the exterior sides is a heart stuck through with arrows, and the legend, 'I live and dy in

loyaltye.' On the other exterior side is an eye dropping tears, surmounted by 'Quis temperet a lacrymis, January 30, 1648.' Other examples of this mourning locket have slight variations in the ornaments and legends.

CONVIVIAL CLUBS IN LANCASHIRE.

What is a club ? A voluntary association of persons for a common object, and contributing equally to a common purse. The etymology of the word is a puzzle. Some derive it from the Anglo-Saxon *cleofan*, to cleave, *q. d.* the members 'stick together ;' but this seems a little far-

fetched. Others consider it as from the Welsh verb *clapiaw*, to form into a lump; or to join together for a common end. Whencesoever our name for it, the institution is ancient; it was known among the ancient Greeks, every member contributing his share of the expenses. They had even their benefit-clubs, with a common chest, and monthly payments for the benefit of members in distress. Our Anglo-Saxon forefathers had like confederations, only they called them *gylds* or *guilds*, from *gyldan*, to pay, to contribute a share. Religious guilds were succeeded by trade guilds and benevolent guilds, which were a sort of sick and burial clubs, some of which still survive. The club convivial, in essence if not in name, has always been a cherished institution amongst us. We need only name the Mermaid, of the time of Shakspeare, Ben Jonson, and their fellows. It would be an interesting inquiry to trace the succession of such clubs, in the metropolis alone, from the days of Elizabeth to those of Anne; the clubs of the latter period being so delightfully pictured to us by Addison, Steele, and others of their members. From the coffee-house clubs of the time of Charles II., including the King's Head or Green Ribbon Club of the Shaftesbury clique,—it would be curious to trace the gradual development of the London clubs, into their present palatial homes at the West-end. But our task is a much more limited one. We wish to perpetuate a few of the fast-fading features of some of these institutions in a northern shire,—clubs in which what Carlyle terms the 'nexus' was a love of what was called 'good eating and drinking, and good fellowship.'

What its inhabitants designate 'the good old town' of Liverpool might naturally be expected, as the great seaport of Lancashire, to stand pre-eminent in its convivial clubs. But we must confess we have been unable to find any very distinct vestiges, or even indications, of such institutions having once enjoyed there 'a local habitation and a name.' To deny to the inhabitants of Liverpool, the social character and convivial habits out of which such clubs naturally spring, would be to do them a great injustice. But the only peep we get into their habits in the latter half of the 18th century, is that afforded by some published *Letters to the Earl of Cork*, written by Samuel Derrick, Esq., then Master of the Ceremonies at Bath, after a visit to Liverpool in 1767. After describing the fortnightly assemblies, 'to dance and play cards;' the performances at the one theatre which then sufficed; the good and cheap entertainment provided for at Liverpool's three inns, where 'for tenpence a man dines elegantly at an ordinary consisting of a dozen dishes,'—Mr Derrick lauds the private hospitality which he enjoyed, and the good fellowship he saw: 'If by accident one man's stock of ale runs short, he has only to send his pitcher to his neighbour to have it filled.' He celebrates the good ale of Mr Thomas Mears, of Paradise-street, a merchant in the Portuguese trade, 'whose malt was bought at Derby, his hops in Kent, and his water brought by express order from Lisbon.' 'It was, indeed,' says Derrick, 'an excellent

liquor.' He speaks of the tables of the merchants as being plentifully furnished with viands well served up, and adds that, 'of their excellent rum they consumed large quantities in punch, when the West India fleet came in mostly with limes,' which he praises as being 'very cooling, and affording a delicious flavour.*' Still, these are the tipplings around the private 'mahogany,' if such a material were then used for the festive board; and Mr Derrick nowhere narrates a visit to a club. Indeed, the only relic of such an assemblage is to be found in a confederation which existed in Liverpool for some time about the middle of the 18th century.

Its title was 'The Society of Bucks.' It seems to have been principally convivial, though to some slight extent of a political complexion. On Monday, 4th June 1759, they advertise a celebration of the birthday of George Prince of Wales, (afterwards George III.) On Wednesday, July 25, their anniversary meeting is held 'by the command of the grand,'—(a phrase borrowed from the Freemasons)—dinner on the table at two o'clock. On August 3, they command a play at the theatre; and on the 8th February 1760, the Society is recorded as 'having generously subscribed £70 towards clothing our brave troops abroad, and the relief of the widows and orphans of those who fell nobly in their country's and liberty's cause. This is the second laudable subscription made by them, as they had some time since remitted 50 guineas to the Marine Society.'

From an early period in the 18th century, the amusements of the inhabitants of Manchester consisted of cards, balls, theatrical performances, and concerts. About 1720 a wealthy lady named Madam Drake, who kept one of the three or four private carriages then existing in the town, refused to conform to the new-fashioned beverages of tea and coffee; so that, whenever she made an afternoon's visit, her friends presented her with that to which she had been accustomed,—a tankard of ale and a pipe of tobacco! The usual entertainment at gentlemen's houses at that period included wet and dry sweetmeats, different sorts of cake and gingerbread, apples, or other fruits of the season, and a variety of home-made wines, the manufacture of which was a great point with all good housewives. They made an essential part of all feasts, and were brought forth when the London or Bristol dealers came down to settle their accounts with the Manchester manufacturers, and to give orders. A young manufacturer about this time, having a valuable customer to sup with him, sent to the tavern for a pint of foreign wine, which next morning furnished a subject for the sarcastic remarks of all his neighbours. About this period there was an evening club of the most opulent manufacturers, at which the expenses of each person were fixed at 4½d.; viz., 4d. for ale, and a halfpenny for tobacco. At a much later period, however, sixpennyworth of punch, and a pipe or two, were esteemed fully sufficient for the evening's tavern amusement of the principal inhabitants. After describing a common public-house in which a

* Derrick's Letters from Chester, Liverpool, &c.

large number of respectable Manchester tradesmen met every day after dinner,—the rule being to call for six-pennyworth of punch, the amusement to drink and smoke and discuss the news of the town, it being high 'change at six o'clock and the evening's sitting peremptorily terminated at 8 p.m.,—the writer we are quoting adds, 'To a stranger it is very extraordinary, that merchants of the first fortunes quit the elegant drawing-room, to sit in a small, dark dungeon, for this house cannot with propriety be called by a better name—but such is the force of long-established custom!'^{*}

The club which originated at the house just described has some features sufficiently curious to be noted as a picture of the time. A man named John Shaw, who had served in the army as a dragoon, having lost his wife and four or five children, solaced himself by opening a public-house in the Old Shambles, Manchester; in conducting which he was ably supported by a sturdy woman servant of middle age, whose only known name was 'Molly.' John Shaw, having been much abroad, had acquired a knack of brewing punch, then a favourite beverage; and from this attraction, his house soon began to be frequented by the principal merchants and manufacturers of the town, and to be known as 'John Shaw's Punch-house.' Sign it had none. As Dr Aikin says in 1795 that Shaw had then kept the house more than fifty years, we have here an institution dating prior to the memorable '45. Having made a comfortable competence, John Shaw, who was a lover of early hours, and, probably from his military training, a martinet in discipline, instituted the singular rule of closing his house to customers at eight o'clock in the evening. As soon as the clock struck the hour, John walked into the one public room of the house, and in a loud voice and imperative tone, proclaimed 'Eight o'clock, gentlemen; eight o'clock.' After this no entreaties for more liquor, however urgent or suppliant, could prevail over the inexorable landlord. If the announcement of the hour did not at once produce the desired effect, John had two modes of summary ejection. He would call to Molly to bring his horsewhip, and crack it in the ears and near the persons of his guests; and should this fail, Molly was ordered to bring her pail, with which she speedily flooded the floor, and drove the guests out wet-shod. On one occasion of a county election, when Colonel Stanley was returned, the gentleman took some friends to John Shaw's to give them a treat. At eight o'clock John came into the room and loudly announced the hour as usual. Colonel Stanley said he hoped Mr Shaw would not press the matter on that occasion, as it was a special one, but would allow him and his friends to take another bowl of punch. John's characteristic reply was:—'Colonel Stanley, you are a law-maker, and should not be a law-breaker; and if you and your friends do not leave the room in five minutes, you will find your shoes full of water.' Within that time the old servant, Molly, came in with mop and bucket, and the representative for Lancashire and his friends retired

^{*} Dr Aikin's Description of the Country from thirty to forty miles round Manchester.

in dismay before this prototype of Dame Partington. After this eight o'clock law was established. John Shaw's was more than ever resorted to. Some of the elderly gentlemen, of regular habits, and perhaps of more leisure than their juniors, used to meet there at four o'clock in the afternoon, which they called 'watering time,' to spend each his sixpence, and then go home to tea with their wives and families about five o'clock. But from seven to eight o'clock in the evening was the hour of high 'change at John Shaw's; for then all the frequenters of the house had had tea, had finished the labours of the day, closed their mills, warehouses, places of business, and were free to enjoy a social hour. Tradition says that the punch brewed by John Shaw was something very delicious. In mixing it, he used a long-shanked silver table-spoon, like a modern gravy-spoon; which, for convenience, he carried in a side pocket, like that in which a carpenter carries his two-foot rule. Punch was usually served in small bowls (that is, less than the 'crown bowls' of later days) of two sizes and prices; a shilling bowl being termed 'a P of punch,'—'a Q of punch' denoting a sixpenny bowl. The origin of these slang names is unknown. Can it have any reference to the old saying—'Mind your P's and Q's?' If a gentleman came alone and found none to join him, he called for 'a Q.' If two or more joined, they called for 'a P;' but seldom more was spent than about 6d. per head. Though eccentric and austere, John won the respect and esteem of his customers, by his strict integrity and steadfast adherence to his rules.

For his excellent regulation as to the hour of closing, he is said to have frequently received the thanks of the ladies of Manchester, whose male friends were thus induced to return home early and sober. At length this nightly meeting of friends and acquaintances at John Shaw's grew into an organised club, of a convivial character, bearing his name. Its objects were not political; yet, John and his guests being all of the same political party, there was sufficient unanimity among them to preserve harmony and concord. John's roof sheltered none but stout, thorough-going Tories of the old school, genuine 'Church and King' men; nay, even 'rank Jacobites.' If perchance, from ignorance of the character of the house, any unhappy Whig, any unfortunate partisan of the house of Hanover, any known member of a dissenting conventicle, strayed into John Shaw's, he found himself in a worse position than that of a solitary wasp in a beehive. If he had the temerity to utter a political opinion, he speedily found 'the house too hot to hold him,' and was forthwith put forth into the street. When the club was duly formed, a President was elected; and there being some contest about a Vice-President, John Shaw summarily abolished that office, and the club had perforce to exist without its 'Vice.' The war played the mischief with John's inimitable brew; limes became scarce; lemons were substituted; at length of these too, and of the old pine-apple rum of Jamaica, the supplies were so frequently cut off by French privateers, that a few years before John Shaw's death, the innovation of 'grog' in

place of punch struck a heavy blow at the old man's heart. Even autoerats must die, and at length, on the 26th January 1796, John Shaw was gathered to his fathers, at the ripe old age of eighty-three, having ruled his house upwards of fifty-eight years; namely, from the year 1738. But though John Shaw ceased to rule, the club still lived and flourished. His successor in the house carried on the same 'early closing movement,' with the aid of the same old servant Molly. At length the house was pulled down, and the club was very migratory for some years. It finally settled down in 1852, in the Spread Eagle Hotel, Corporation-street, where it still prospers and flourishes. From the records of the club, which commenced in 1822 and extend to the present time, it appears that its government consists of a President, a Vice-President, a Recorder [*i. e.* Secretary], a Doctor [generally some medical resident of 'the right sort'], and a Poet Laureate: these are termed 'the staff;' its number of members fluctuates between thirty and fifty, and it still meets in the evenings, its sittings closing, as of old, at curfew. Its presidents have included several octogenarians; but we do not venture to say whether such longevity is due to its punch or its early hours. Its present president, Edmund Buckley, Esq., was formerly (1841-47) M.P. for Newcastle-under-Lyme; he has been a member of the club for nearly forty years, and he must be approaching the patriarchal age of some of his predecessors. In 1834, John Shaw's absorbed into its venerable bosom another club of similar character, entitled 'The Sociable Club.' The club possesses amongst its relics oil paintings of John Shaw and his maid Molly, and of several presidents of past years. A few years ago, a singular old China punch-bowl, which had been the property of John Shaw himself, was restored to the club as its rightful property, by the descendant of a trustee. It is a barrel-shaped vessel, suspended as on a stillage, with a metal tap at one end, whence to draw the liquor; which it received through a large opening or bung-hole. Besides assembling every evening, winter and summer, between five and eight o'clock, a few of the members dine together every Saturday at 2 p.m.; and they have still an annual dinner, when old friends and members drink old wine, toast old toasts, tell old stories, or 'fight their battles o'er again.' Such is John Shaw's club—nearly a century and a quarter old, in the year of grace 1862.

From a punch-drinking club we turn to a dining club. About the year 1806 a few Manchester gentlemen were in the habit of dining together, as at an ordinary, at what was called 'Old Froggatt's,' the Unicorn Inn, Church-street, High-street. They chiefly consisted of young Manchester merchants and tradesmen, just commencing business and keen in its pursuit, with some of their country customers. They rushed into the house, about one o'clock, ate a fourpenny pie, drank a glass of ale, and rushed off again to 'change and to business. At length it began to be thought that they might just as well dine off a joint; and this was arranged with host and hostess, each diner pay-

ing a penny for cooking and twopence for catering and providing. The meal, however, continued to be performed with wonderful dispatch, and one of the traditionary stories of the society is that, a member one day, coming five minutes behind the hour, and casting a hasty glance through the window as he approached, said disappointedly to a friend, 'I need not go in—all their necks are up!' As soon as dinner was over, Old Froggatt was accustomed to bring in the dinner bill, in somewhat primitive fashion. Instead of the elegant, engraved form of more modern times, setting forth how many 'ports,' 'sherries,' 'brandies,' 'gins,' and 'cigars,' had been swallowed or consumed,—Froggatt's record was in humble chalk, marked upon the loose, unhinged lid of that useful ark in old cookery, the salt-box. A practical joke perpetrated one day on this cretaceous account, and more fitted foreears of fifty years ago than those now existing, led to a practice which is still kept up of giving as the first toast after every Tuesday's dinner at the club, 'The Salt-box lid,'—a cabala which usually causes great perplexity to the uninitiated guest. About Christmas 1810, these gentlemen agreed to form themselves into a regular club. Having to dine in a hurry and hastily to return to business, the whole thing had much the character of every one scrambling for what he could get; and the late Mr Jonathan Peel, a cousin of the first Sir Robert, and one of its earliest members, gave it in joke the name of the 'Scramble Club,' which was felt to be so appropriate, that it was at once adopted for the club's title, and it has borne the name ever since. The chief rule of the club was, that every member should spend sixpence in drink for the good of the house; and the law was specially levelled against those 'sober-sides' who would otherwise have sneaked off with a good dinner, washed down with no stronger potations than could be supplied by the pump of the Unicorn. The club had its staff of officers, its records and its register; but alack! incautiously left within the reach of servants, the first volume of the archives of the ancient and loyal Scramblers served the ignoble purpose of lighting the fires of an inn. We are at once reminded of the great Alexandrian library, whose MS. treasures fed the baths of the city with fuel for more than eight months! The club grew till the Unicorn could no longer accommodate its members; and after various 'fittings' from house to house, it finally folded its wings and alighted under the hospitable roof of the Clarence Hotel, Spring-gardens; where it still, 'nobly daring, dines,' and where the diners are too good to be scrambled over. Amongst the regalia of the club are some portraits of its founder and early presidents, a very elaborately carved snuff-box, &c. The members dine together yearly in grand anniversary. Amongst the laws and customs of the club, was a system of forfeit, or fines. Thus if any member removed to another house, or married, or became a father, or won a prize at a horse-race, he was mulcted in one, two, or more bottles of wine, for the benefit of the club. Again, there were odd rules (with fines for infraction) as to not taking the chair, or leaving it to ring a bell, or asking a stranger to ring

it, or allowing a stranger to pay anything. These delinquencies were formally brought before the club, as charges, and if proved, a fine of a bottle or more followed; if not proved, the member bringing the charge forfeited a bottle of wine. There were various other regulations, all tending to the practical joking called 'trotting,' and of course resulting in fines of wine.

Leaving the Scramble Club to go on dining, as it has done for more than half a century, we come next to a convivial club in another of the ancient towns of Lancashire—'Proud Preston.' It seems that from the year 1771 down to 1841, a period of seventy years, that town boasted its 'Oyster and Parched Pea Club.*' In its early stages the number of its members was limited to a dozen of the leading inhabitants; but, like John Shaw's Club, they were all of the same political party, and they are said to have now and then honoured a Jacobite toast with a bumper. It possesses records for the year 1773, from which we learn that its president was styled 'the Speaker.' Amongst its staff of officers was one named 'Oystericus,' whose duty it was to order and look after the oysters, which then came 'by fleet' from London; a Secretary, an Auditor, a Deputy Auditor, and a Poet Laureate, or 'Rhymesmith,' as he was generally termed. Among other officers of later creation, were the 'Cellarius,' who had to provide 'port of first quality,' the Chaplain, the Surgeon-general, the Master of the *Rolls* (to look to the provision of bread and butter), the 'Swig-Master,' whose title expresses his duty, Clerk of the *Peas*, a Minstrel, a Master of the Jewels, a Physician-in-Ordinary, &c. Among the Rules and Articles of the club, were 'That a barrel of oysters be provided every Monday night during the winter season, at the equal expense of the members; to be opened exactly at half-past seven o'clock.' The bill was to be called for each night at ten o'clock, each member present to pay an equal share. 'Every member, on having a son born, shall pay a gallon—for a daughter half a gallon—of port, to his brethren of the club, within a month of the birth of such child, at any public-house he shall choose.' Amongst the archives of the club is the following curious entry, which is *not* in a lady's hand:—

'The ladies of the Toughy [? Toffy] Club were rather disappointed at not receiving, by the hands of the respectable messenger, despatched by the still more respectable members, of the Oyster Club, a few oysters. They are just sitting down, after the fatigues of the evening, and take the liberty of reminding the worthy members of the Oyster Club, that oysters were *not made for man alone*. The ladies have sent to the venerable president a small quantity of sweets [? pieces of Everton toffy] to be distributed, as he in his wisdom shall think fit.

'Monday Evening.'

It does not appear what was the result of this pathetic appeal and sweet gift to the venerable president of the masculine society. In 1795 the club was threatened with a difficulty, owing, as stated by 'Mr Oystericus,' to the day of the wagon-laden with oysters—leaving London

* We derive our information as to this club from the *Preston Chronicle*.

having been changed. Sometimes, owing to a long frost, or other accident, no oysters arrived, and then the club must have solaced itself with 'parched peas' and 'particular port.' Amongst the regalia of the club was a silver snuff-box, in the lid of which was set a piece of oak, part of the quarter-deck of Nelson's ship *Victory*. On one occasion the master of the jewel-office, having neglected to replenish this box with snuff, was fined a bottle of wine. At another time (November 1816), the Clerk of the *Peas* was reprimanded for neglect of duty, there being no peas supplied to the club. The Rhymesmith's poetical effusions must provoke a laugh by local allusion; but they are scarcely good enough to record here, at least at length. A few of the best lines may be given, as a sample of the barrel:—

'A something monastic appears amongst oysters,
For gregarious they live, yet they sleep in their
cloisters;

'Tis observed too, that oysters, when placed in their
barrel,

Will never presume with their stations to quarrel.

* * * * *

'From this let us learn what an oyster can tell us,
And we all shall be better and happier fellows.
Acquiesce in your stations, whenever you've got
'em;

Be not proud at the top, nor repine at the bottom,
But happiest they in the middle who live,
And have something to lend, and to spend, and to
give.'

'The Bard would fain exchange, alack!
For precious gold, his crown of laurel;
His sackbut for a butt of sack,
His vocal shell for oyster barrel.'

Three lines for an ode in 1806:—

'Nelson has made the seas our own,
Then gulp your well-fed oysters down,
And give the French the shell.'

Such were and are some of the Convivial Clubs of Lancashire in the last or present century. Doubtless, similar institutions have existed, and may still exist, in other counties of England. If so, let some of their Secretaries, Recorders, or Rhymesmiths tell in turn their tale. J. H.

Old Lady's Pharmacopœia a Hundred Years Ago.
—Mrs Delany writes in January 1758: 'Does Mary cough in the night? Two or three snails boiled in her barley-water or tea-water, or whatever she drinks, might be of great service to her; taken in time, they have done *wonderful cures*. She must know nothing of it. They give no manner of taste. It would be best nobody should know it but yourself, and I should imagine *six or eight* boiled in a quart of water and strained off and put into a bottle, would be a good way, adding a spoonful or two of that to *every liquid* she takes. They must be fresh done every two or three days, otherwise they grow too thick.'

The Laconic.—In 1773, Mr Fox, when a Lord of the Treasury, voted against his chief, Lord North; accordingly, on the next evening, while seated on the ministerial bench in the House of Commons, Fox received from the hands of one of the doorkeepers the following laconic note: 'Sir,—His Majesty has thought proper to order a new Commission of the Treasury, in which I do not perceive the name of Charles James Fox.—NORTH.'

Born.—Ben Jonson, 1574, *Westminster*.

Died.—Prince Charles Edward Stuart, 1788; Clara Clairon, 1803, *Paris*.

CHARLES EDWARD STUART.

This unfortunate prince, so noted for his romantic effort to recover a forfeited crown in 1745, and the last person of the Stuart family who maintained any pretensions to it, expired at his house in Florence, at the age of sixty-eight. (It is alleged that, in reality, he died on the 30th of January, but that his friends disguised a fact which would have been thought additionally ominous for the house of Stuart.) The course of

Charles Edward for many years after the *Forty-five* was eccentric; latterly it became discreditable, in consequence of sottishness, which not only made his friends and attached servants desert him, but caused even his wife to quit his house, to which she would never return. All that can be said in extenuation is, that he had been a greatly disappointed man: *magnis incidit ausis*. There is, however, a more specific and effective excuse for his bad habits; they had been acquired in the course of his extraordinary adventures while skulking for five months in the Highlands. The use of whisky and brandy in that country was in those days unremitting, when the element could be had; and Charles's physical sufferings from hunger, exposure, and fatigue, made him but too eager to take the cup when it was offered to him. Of this fact there are several unmistakable illustrations in a work quoted below—such as this, for example: Charles, arriving at a hovel belonging to Lochiel, 'took,' says the eye-witness, narrator of the incident, 'a hearty dram, which he pretty often called for there-

CHARLES EDWARD STUART.

after, to drink his friends' healths.' 'I have learned,' he said on another occasion, 'to take a hearty dram, while in the Highlands.*'

We often hear of the long perseverance of a certain cast of features, or of some special features in families; and of the truth of the remark there is no lack of illustrations. The portraits of our own royal family furnish in themselves a very clear example of resemblance continued through a series of generations. The most observable

* Fourth edition of R. Chambers's *History of the Rebellion of 1745-6*. 1845.

peculiarity may be said to consist of a fulness in the lower part of the cheek. It can be traced back not only to the first monarch of the family of Brunswick Lunenburg, but to his mother, the Electress Sophia of Hanover; which shews that it did not come from the paternal line of the family, but more probably from the house of Stuart, of which the Electress was an immediate descendant, being grand-daughter to King James I. No attempt, as far as the writer is aware, has ever been made to trace this physiognomy farther back than the Electress Sophia; and certainly in

her mother Elizabeth, the Electress Palatine of Rhine, and in Elizabeth's father, King James, we do not find any such peculiarity prominently brought out.

There is, nevertheless, reason to believe that common points of physiognomy in the Stuart and Hanover families can be traced to a generation prior to the sovereign last-mentioned, who is the common ancestor. The writer, at least, must own that he has been very much struck by the resemblance borne by the recent portraits of our present amiable sovereign to one representing Prince Charles Edward in his later years. Our means of representing the two countenances are limited; yet even in the above wood engraving the parity is too clear not to be generally acknowledged. The fulness of cheek is palpable in both portraits; the form of the mouth is the same in both; and the general aspect, when some allowances are made for difference of age and sex, is identical. It is four generations back from the Prince, and eight from the Queen, to King James—two centuries and a half have elapsed since the births of the two children from whom the subjects of the two portraits are respectively descended: yet there is a likeness exceeding what is found in half the cases of brother and sister. The peculiarity, however, is apparent also in a portrait of Mary of Scotland, taken in her latter years; and it may further be remarked that between the youthful portraits of Prince Charles Edward and those of the Prince of Wales now coming into circulation, a very striking resemblance exists. Thus the perseverance of physiognomy may be said to extend over *three centuries and eleven generations*. Most of her Majesty's loyal and affectionate subjects will probably feel that the matter is not without some interest, as reminding them of the connection between the present royal family and that ancient one which it superseded, and as telling us emphatically that Possessor and Pretender are now happily **ONE**.

THE LIGHTING OF THE BEACONS.

During the threats of invasion from France in 1803-4, the spirit of the people for national defence was wound up to a high pitch of enthusiasm. On the evening of the 31st of January 1804, a beacon at Hume Castle in Berwickshire was lighted in consequence of a mistake, and, other beacons following the example, the volunteers throughout nearly all the southern counties of Scotland were in arms before next morning, and pouring fast to their respective places of rendezvous. It was held to be a most creditable example of earnest and devoted patriotism, and undoubtedly served to create a general feeling of confidence in the self-defensive powers of the island.

Some particulars of this affair have been set down by Sir Walter Scott, who had opportunities of observing what happened on the occasion. 'The men of Liddesdale,' says he, 'the most remote point to the westward which the alarm reached, were so much afraid of being late in the field, that they put in requisition all the horses they could find; and when they had thus made a forced march out of their own county, they turned their borrowed steeds loose to find their

way back through the hills, and they all got back safe to their own stables. Another remarkable circumstance was, the general cry of the inhabitants of the smaller towns for arms, that they might go along with their companions. The Selkirkshire yeomanry made a remarkable march; for although some of the individuals lived at twenty and thirty miles' distance from the place where they mustered, they were nevertheless embodied and in order in so short a period, that they were at Dalkeith, which was their alarm-post, about one o'clock on the day succeeding the first signal, with men and horses in good order, though the roads were in a bad state, and many of the troopers must have ridden forty or fifty miles without drawing bridle.

'The account of the ready patriotism displayed by the country on this occasion, warmed the hearts of Scottishmen in every corner of the world. It reached [in India] the ears of the well-known Dr Leyden, whose enthusiastic love of Scotland, and of his own district of Teviotdale, formed a distinguished part of his character. The account, which was read to him when on a sick-bed, stated (very truly) that the different corps, on arriving at their alarm-posts, announced themselves by their music playing the tunes peculiar to their own districts, many of which have been gathering-signals for centuries. It was particularly remembered, that the Liddesdale men, before mentioned, entered Kelso playing the lively tune—

O wha dare meddle wi' me!
And wha dare meddle wi' me!
My name it is little Jock Elliot,
And wha dare meddle wi' me!

The patient was so delighted with this display of ancient Border spirit, that he sprung up in his bed, and began to sing the old song with such vehemence of action and voice, that his attendants, ignorant of the cause of excitation, concluded that the fever had taken possession of his brain; and it was only the entry of another Borderer, Sir John Malcolm, and the explanation which he was well qualified to give, that prevented them from resorting to means of medical coercion.'

A local newspaper of February 3, 1860, chronicled a festive meeting which had taken place four days before at the village of St Boswells in Roxburghshire, and gave the following curious details *à-propos*: 'On the memorable night in 1804, when the blazing beacons on the Scottish hills told the false tale of a French invasion, a party of volunteers were enjoying themselves in a licensed toll-house at Ancrum Bridge, Roxburghshire. They rushed out on hearing that the beacon was lit on the Eildons, and, in their hurry to march to the appointed rendezvous, forgot to settle the reckoning with their host of the toll-house. When the alarm had subsided, and the volunteers had returned to their homes, they remembered the bill was still to pay, but the difficulty of assembling the whole party retarded the settlement till the anniversary of the day of the false alarm, the 31st January, drew near. They considered this a proper occasion to meet and clear off the old score, and it was then determined to hold an annual meeting

by way of commemorating the lighting of the beacons. The toll-keeper removed first to Newtown, and then to St Boswells, but the party followed him, and the festival is still held in the Buccleuch Arms' Inn, St Boswells, though none of the members of the original party of 1804 remain to take part in it.'

PERSEVERING PHYSIOGNOMIES.

The remarkable case of resemblance of distant relatives given under the title 'Charles Edward Stuart' could be supported by many others.

Dr Fosbroke, in his valuable historical work entitled *The Berkeley Manuscripts*, gives some interesting anecdotes of Dr Jenner, and, amongst others, makes the following statement: 'A lady whom Dr Jenner met at John Julins Angerstein's, remarked how strongly Dr Jenner's physiognomy resembled that of her own ancestor, Judge Jenner, of a family of the name seated in Essex. It is presumed that a branch of this line migrated from Essex into Gloucestershire, where, in the parish of Standish, they have been found for two centuries.*'

The thick under-lip of the imperial family of Austria is often alluded to. It is alleged to have been derived through a female from the princely Polish family of Jagellon. However this may be, we have at least good evidence that the remark is of old date; for Burton, in his *Anatomy of Melancholy*, says, '*The Austrian lip*, and those Indians' flat noses, are propagated.'

In the *Notes and Queries* of March 13, 1852, a writer signing VOKAROS presented the following statement: 'To trace a family likeness for a century is not at all uncommon. Any one who knows the face of the present Duke of Manchester, will see a strong family likeness to his great ancestor through six generations, the Earl of Manchester of the Commonwealth, as engraved in Lodge's Portraits. The following instance is more remarkable. Elizabeth Harvey was Abbess of Elstow in 1501. From her brother Thomas is descended, in a direct line, the present Marquis of Bristol. If any one will lay the portrait of Lord Bristol, in Mr Gage Rokewode's *Thingoe Hundred*, by the side of the sepulchral brass of the Abbess of Elstow, figured in Fisher's *Bedfordshire Antiquities*, he cannot but be struck by the strong likeness between the two faces. This is valuable evidence on the disputed point whether portraits were attempted in sepulchral brasses.' A writer in a subsequent number, signing 'H. H.,' considered this 'a strong demand on credulity,' and alleged that the Abbess's brass gives the same features as are generally found on brasses of the period, implying that likeness was not then attempted on sepulchral monuments. Yet, on the specific alleged fact of the resemblance between the abbess and the marquis, 'H. H.' gave no contradiction; and the fact, if truly stated by Vokaros, is certainly not unworthy of attention.

The writer is tempted to add an anecdote which he has related elsewhere. In the summer of 1826, as he was walking with a friend in the neighbourhood of the town of Kirkcudbright, a carriage passed, containing a middle-aged gentleman, in whose burly figure and vigorous physiognomy he thought he observed a resemblance to the ordinary portraits of Sir William Wallace. The friend to whom he instantly remarked the circumstance, said, 'It is curious that you should have thought so, for that gentleman is General Dunlop, whose mother [Burns's correspondent] was a Wallace of Craige, a family claiming to be descended from a brother of the Scottish hero!' As the circumstance makes a rather 'strong demand upon credulity,' the writer, besides averring

* Berkeley Manuscripts, &c., 4to. 1821. P. 220.

that he states no more than truth, may remark that possibly the ordinary portrait of Wallace has been derived from some intermediate member of the Craige-Wallace family, though probably one not later than the beginning of the seventeenth century. Of the improbability of any portrait of Wallace having ever been painted, and of the anachronisms of the dress and armour, he is, of course, well aware.

In regard to the question of hereditary physiognomy, it might be supposed that, unless where a family keeps within its own bounds, as that of Jacob has done, we are not to expect a perseverance of features through more than a very few generations, seeing that the ancestry of every human being increases enormously in number at each step in the retrogression, so as to leave a man but little chance of deriving any feature from (say) any particular great-great-great-grandfather. On the other hand, it is to be considered that there *is* a chance, however small, and it may be only in those few instances that the transmission of likeness is remarked. It is in favour of this view that we so often find a family feature or trait of countenance re-emerging after one or two generations, or coming out unexpectedly in some lateral offshoot. The writer could point to an instance where the beauty of a married woman has passed over her own children to reappear with characteristic form and complexion in her grandchildren. He knows very intimately a young lady who, in countenance, in port, and in a peculiar form of the feet, is precisely a revival of a *great grandmother*, whom he also knew intimately. He could also point to an instance where a woman of deep olive complexion and elegant oriental figure, the inheritor, perhaps, of the style of some remote ancestress, has given birth to children of the same brown, sanguineous type as her own brothers and sisters; the whole constitutional system being thus shewn as liable to sinkings and re-emergences. In the case of Queen Victoria and Prince Charles, it is probably re-emergence of type that is chiefly concerned; and the parity may accordingly be considered as in a great degree accidental.

There are some curious circumstances regarding family likenesses, not much, if at all, hitherto noticed, but which have a value in connection with this question. One is, that a family characteristic, or a resemblance to a brother, uncle, grandfather, or other relative, may not have appeared throughout life, but will emerge into view after death. The same result is occasionally observed when a person is labouring under the effects of a severe illness. We may presume that the mask which has hitherto concealed or smothered up the resemblance, is removed either by emaciation or by the subsidence of some hitherto predominant expression. Another fact equally or even more remarkable, is, that an artist painting A.'s portrait will fail to give a true likeness, but produce a face strikingly like B.'s,—a brother or cousin,—a person whom he never saw. The writer was once shewn a small half-length portrait, and asked if he could say who was the person represented. He instantly mentioned Mr Gilbert Burns, the poet's brother, whom he had slightly known a few years before. He was then told that the picture had been painted from the poet's own countenance by an artist named Taylor, who never obtained any reputation. This artist had certainly never seen Gilbert Burns. Gilbert and Robert were, moreover, well known to have been of different types, the one taking from the mother, the other from the father. The curious consideration arising from this class of facts is, that the same *variation* or *transition*, which nature makes in producing a second child of one set of parents, appears to be made in the mysterious recesses of the plastic mind of the artist.

— Then came old February, sitting
 In an old wagon, for he could not ride,
 Drawn of two fishes for the season fitting,
 Which through the flood before did softly slide
 And swim away; yet had he by his side
 His plough and harness fit to till the ground,
 And tools to prune the trees, before the pride
 Of hasting prime did make them bourgeon wide.

SPENSER.

(DESCRIPTIVE.)

FEBRUARY comes in like a sturdy maiden, with a tinge of the red, hard winter apple on her healthy cheek, and as she strives against the wind, wraps her russet-coloured cloak well about her, while with bent head, she keeps throwing back the long hair that blows about her face, and though at times half blinded by the sleet and snow,

still continues her course courageously. Sometimes she seems to shrink, and while we watch her progress, half afraid that she will be blown back again into the dreary waste of Winter, we see that her course is still forward, that she never takes a backward step, but keeps journeying along slowly, and drawing nearer, at every stride, to the Land of Flowers. Between the uplifted curtaining of clouds, that lets in a broad burst of golden sunlight, the skylark hovers like a dark speck, and cheers her with his brief sweet song, while the mellow-voiced blackbird and the speckle-breasted thrush make music

among the opening blossoms of the blackthorn, to gladden her way; and she sees faint flushings of early buds here and there, which tell her the long miles of hedgerows will soon be green.

Now there is a stir of life in the long silent fields, a jingling of horse-gear, and the low wavelike murmur of the plough-share, as it cuts through the yielding earth, from the furrows of which there comes a refreshing smell, while those dusky foragers, the rooks, follow close upon the ploughman's heels. Towards the end of the month the tall elm-trees resound with their loud 'cawing' in the early morning, and the nests they are busy building shew darker every day through the leafless branches, until Spring comes and hides them beneath a covering of foliage. Even in smoky cities, in the dawn of the lengthening days, the noisy sparrows come out from under the blackened eaves, and, as they shake the soot from off their wings, give utterance to the delight they feel in notes that sound like the grating jar of a knife-grinder's dry wheel. Now and then the pretty goldfinch breaks out with its short song, then goes peeping about as if wondering why the young green groundsel is so long before putting forth its dull golden flowers. The early warbling of the yellow-hammer is half drowned by the clamorous jackdaws that now congregate about the grey church steeples. Then Winter, who seems to have been asleep, shews his cloudy form once more above the bare hill-tops, from whence he scatters his snow-flakes; while the timid birds cease their song, and again shelter in the still naked hedgerows, seeming to marvel to themselves why he has returned again, after the little daisy buds had begun to thrust their round green heads above the earth, announcing his departure. But his long delay prevents not the willow from shooting out its silvery catkins, nor the graceful hazel from unfurling its pendulous tassels; while the elder, as if bidding defiance to Winter, covers its stems with broad buds of green.

The long-tailed field-mouse begins to blink at intervals, and nibble at the stores he hoarded up in autumn; then peeping out and seeing the snow lie among the young violet leaves, at the foot of the oak amid whose roots he has made his nest, he coils himself up again after his repast, and enjoys a little more sleep. Amid the wide-spreading branches over his head, the raven has begun to build; and as he returns with the lock of wool he has rent from the back of some sickly sheep to line his nest, he disturbs the little slumberer below by his harsh, loud croaking. That ominous sound sends the affrighted lambs off with a scamper to their full-uddered dams, while the raven looks down upon them with hungry eye, as if hoping that some one will soon cease its pitiful bleating, and fall a sacrifice to his horny beak. But the silver-frilled daisies will soon star the ground where the lambs now race against each other, and the great band of summer-birds will come from over the sunny sea, and their sweet piping be heard in place of the ominous croaking of the raven.

The mild days of February cause the beautifully-formed squirrel to wake out of his short winter sleep, and feed on his hoarded nuts; and

he may now be seen balanced by his hind legs and bushy tail, washing his face, on some bare bough near his dray or nest, though at the first sound of the voices of the boys who come to hunt him, he is off, and springs from tree to tree with the agility of a bird. It is only when the trees are naked that the squirrel can be hunted, for it is difficult to catch a glimpse of him when 'the leaves are green and long;' and it is an old country saying, when anything unlikely to be found is lost, that 'you might as well hunt a squirrel when the leaves are out.' Country boys may still be seen hiding at the corner of some out-building, or behind some low wall or fence, with a string in their hands attached to the stick that supports the sieve, under which they have scattered a few crumbs, or a little corn, to tempt the birds, which become more shy every day, as insect-food is now more plentiful. With what eager eyes the boys watch, and what a joyous shout they raise, as the sieve falls over some feathered prisoner! But there is still ten chances to one in favour of the bird escaping when they place their hands under the half-lifted sieve in the hope of laying hold of it. The long dark nights are still cold to the poor shepherds, who are compelled to be out on the windy hills and downs, attending to the ewes and lambs, for thousands would be lost at this season were it not for their watchful care. In some of the large farmhouses, the lambs that are ailing, or have lost their dams, may be seen lying before the fire in severe weather; and a strange expression—as it seemed to us—beamed from their gentle eyes, as they looked around, bleating for something they had lost; and as they licked our hands, we felt that we should make but poor butchers. And there they lie sheltered, while out-of-doors the wind still roars, and the bare trees toss about their naked arms like maniacs, shaking down the last few withered leaves in which some of the insects have folded up their eggs. Strange power! which we feel, but see not; which drives the fallen leaves before it, like routed armies; and ships, whose thunder shakes cities, it tosses about the deep like floating sea-weeds, and is guided by Him 'who gathereth the winds in His fists.'

'February fill-dyke' was the name given to this wet slushy month by our forefathers, for when the snow melted, the rivers overflowed, the dykes brimmed over, and long leagues of land were under water, which have been drained within the last century; though miles of marshes are still flooded almost every winter, the deep silt left, enriching future harvests. It has a strange appearance to look over a wide stretch of country, where only the tops of the hedgerows or a tree or two are here and there visible. All the old familiar roads that led along pleasant streams to far-away thorp or grange in summer, are buried beneath the far-spreading waters. And in those hedges water-rats, weasels, field-mice, and many another seldom-seen animal, find harbourage until the waters subside: we have there found the little harvest-mouse, that when full grown is no bigger than a large bee, shivering in the bleak hedgerow.

And in those reedy fens and lonesome marshes

where the bittern now booms, and the heron stands alone for hours watching the water, while the tufted plover wails above its head, the wild-fowl shooter glides along noiseless as a ghost in his punt, pulling it on by clutching the overhanging reeds, for the sound of a paddle would startle the whole flock, and he would never come within shot but for this guarded silence. He bears the beating rain and the hard blowing winds of February without a murmur, for he knows the full-fed mallard—feathered like the richest green velvet—and the luscious teal will be his reward, if he perseveres and is patient. In the midnight moonlight, and the grey dawn of morning, he is out on those silent waters, when the weather almost freezes his very blood, and he can scarcely feel the trigger that he draws; while the edges of frosted water-flags which he clutches, to pull his punt along, seem to cut like swords. To us there has seemed to be at such times 'a Spirit brooding on the waters,' a Presence felt more in those solitudes than ever falls upon the heart amid the busy hum of crowded cities, which has caused us to exclaim unawares, 'God is here!'

Butterflies that have found a hiding-place somewhere during winter again appear, and begin to lay their eggs on the opening buds, which when in full leaf will supply food for the future caterpillars. Amongst these may now be found the new-laid eggs of the peacock and painted-lady butterflies, on the small buds of young nettles, though the plants are only just above ground. Everybody who has a garden now begins to make some little stir in it, when the weather is fine, for the sweet air that now blows abroad mellows and sweetens the newly-dug earth, and gives to it quite a refreshing smell. And all who have had experience, know that to let the ground lie fallow a few weeks after it is trenched, is equal to giving it an extra coating of manure, such virtue is there in the air to which it lies exposed. Hard clods that were difficult to break with the spade when first dug up, will, after lying exposed to the sun and frost, crumble at a touch like a ball of sand. It is pleasant, too, to see the little children pottering about the gardens, unconscious that, while they think they are helping, they are in the way of the workmen; to see them poking about with their tiny spades or pointed sticks, and hear their joyous shouts, when they see the first crocus in flower, or find beneath the decaying weeds the upright leaves of the hyacinth. Even the very smallest child, that has but been able to walk a few weeks, can sit down beside a puddle and help to make 'dirt-pies,' while its little frock slips off its white shoulders, and as some helping sister tries to pull it on again, she leaves the marks of her dirty fingers on the little one's neck. But a fire kindled to burn the great heap of weeds which Winter has withered and dried, is their chief delight. What little bare sturdy legs come toddling up, the cold red arms bearing another tiny load which they throw upon the fire, and what a clapping of hands there is, as the devouring flame leaps up and licks in the additional fuel which cracks again as the February wind blows the sparks about in starry showers! Pleasant is it also to watch them beside the village brook, after the icy chains of Winter

are unloosened, floating their sticks and bits of wood which they call boats—all our island children are fond of water—while their watchful mothers are sewing and gossiping at the open cottage doors, round which the twined honeysuckles are now beginning to make a show of leaves. All along beside the stream the elder-trees are showing their emerald buds, while a silvery light falls on the downy catkins of the willows, which the country children call palm; while lower down we see the dark green of the great marsh-marigolds, which ere long will be in flower, and make a golden light in the clear brook, in which the leaves are now mirrored. Happy children! they feel the increasing warmth, and find enjoyment in the lengthening of the days, for they can now play out-of-doors an hour or more longer than they could a month or two ago, when they were bundled off to bed soon after dark, 'to keep them,' as their mothers say, 'out of mischief.' Sometimes, while digging in February, the gardener will turn up a ball of earth as large as a moderate-sized apple; this when broken open will be found to contain the grub of the large stag-beetle in a torpid state. When uncoiled, it is found to be four inches in length. About July it comes out a perfect insect—the largest we have in Britain. Some naturalists assert that it remains underground in a larva state for five or six years, but this has not been proved satisfactorily. Many a meal do the birds now gather from the winter greens that remain in the gardens, and unless the first crop of early peas is protected, all the shoots will sometimes be picked off in a morning or two, as soon as they have grown a couple of inches above ground. The wild wood-pigeons are great gatherers of turnip-tops, and it is nothing unusual in the country to empty their maws, after the birds are shot, and wash and dress the tender green shoots found therein. No finer dish of greens can be placed on the table, for the birds swallow none but the young eye-shoots. Larks will at this season sometimes unroof a portion of a corn-stack, to get at the well-filled sheaves. No wonder farmers shoot them; for where they have pulled the thatch off the stack, the wet gets in, finds its way down to the very foundation, and rots every sheaf it falls through. We can never know wholly, what birds find to feed upon at this season of the year; when the earth is sometimes frozen so hard, that it rings under the spade like iron, or when the snow lies knee-deep on the ground. We startle them from under the sheltering hedges; they spring up from the lowly moss, which remains green all through the winter; we see them pecking about the bark, and decayed hollow of trees; we make our way through the gorse bushes, and they are there: amid withered grass, and weeds, and fallen leaves, where lie millions of seeds, which the autumn winds scattered, we find them busy foraging; yet what they find to feed upon in many of these places, is still to us a mystery. We know that at this season they pass the greater portion of their time in sleep,—another proof of the great Creator's providence,—so do not require so much food as when busy building, and breeding, in spring and summer. They burrow in the snow through little openings hardly visible to

human eyes, beneath hedges and bushes, and there they find warmth and food. From the corn-house, stable, or cart-shed, the blackbird comes rushing out with a sound that startles us, as we enter; for there he finds something to feed upon: while the little robin will even peck at the window frame if you have been in the habit of feeding him. On the plum-tree, before the window at which we are now writing, a robin has taken his stand every day throughout the winter, eyeing us at our desk, as he waited for his accustomed crumbs. When the door was opened and all still, he would hop into the kitchen, and there we have found him perched on the dresser, nor did we ever attempt to capture him. If strangers came down the garden-walk, he never flew further away than the privet-hedge, until he was fed. Generally, as the day drew to a close, he mounted his favourite plum-tree, as if to sing us a parting song. We generally threw his food under a thorny, low-growing japonica, which no cat could penetrate, although we have often seen our own Browney giring and swearing and switching his tail, while the bird was safely feeding within a yard of him.

Primroses are now abundant, no matter how severe the Winter may have been. Amid the din and jar of the busy streets of London, the pleasant cry of 'Come buy my pretty primroses' falls cheerfully on the ear, at the close of February. It may be on account of its early appearance, that we fancy there is no yellow flower so delightful to look upon as the delicately-coloured primrose; for the deep golden hue of the celandine and buttercup is glaring when compared with it. There is a beauty, too, in the form of its heart-shaped petals, also in the foliage. Examined by an imaginative eye, the leaves when laid down look like a pleasant green land, full of little hills and hollows, such as we fancy insects—invisible to the naked glance—must delight in wandering over. Such a world Bloomfield pictured as he watched an insect climb up a plantain leaf, and fancied what an immense plain the foot or two of short grass it overlooked must appear in the eye of a little traveller, who had climbed a summit of six inches. In the country they speak of things happening at 'primrose-time': he died or she was married 'about primrose-time'; for so do they mark the season that lies between the white ridge of Winter, and the pale green border of Spring. Then it is a flower as old and common as our English daisies, and long before the time of Alfred must have gladdened the eyes of Saxon children by its early appearance, as it does the children of the present day. The common coltsfoot has been in flower several weeks, and its leaves are now beginning to appear, for the foliage rarely shews itself on this singular plant until the bloom begins to fade. The black hellebore is also in bloom, and, on account of its resemblance to the queen of summer, is called the Christmas-rose, as it often flowers at that season. It is a pretty ornament on the brow of Winter, whether its deep cup is white or pale pink, and in sheltered situations remains a long time in flower.

Every way there are now signs that the reign of Winter is nearly over: even when he dozes he can

no longer enjoy his long sleep, for the snow melts from under him almost as fast as it falls, and he feels the rounded buds breaking out beneath him. The flush of golden light thrown from the primroses, as they catch the sunshine, causes him to rub his dazed eyes, and the singing of the unloosened meadow-runnels falls with a strange sound on his cold, deadened ear. He knows that Spring is hiding somewhere near at hand, and that all Nature is waiting to break out into flower and song, when he has taken his departure.

A great change has taken place almost unseen. We cannot recall the day when the buds first caught our eye—tiny green dots which are now opening into leaves that are covering the lilac-trees. We are amazed to see the hawthorn hedge, which a week or two ago we passed unnoticed, now bursting out into the pale green flush of Spring—the most beautiful of all green hues. We feel the increasing power of the sun; and windows which have been closed, and rendered airtight to keep out the cold, are now thrown open to let in the refreshing breeze, which is shaking out the sweet buds, and the blessed sunshine—the gold of heaven—which God in His goodness showers alike upon the good and the evil.

(HISTORICAL.)

February was one of the two months (January being the other) introduced into the Roman Calendar by Numa Pompilius, when he extended the year to twelve of these periods. Its name arose from the practice of religious expiation and purification which took place among the Romans at the beginning of this month (*Februare*, to expiate, to purify). It has been on the whole an ill-used month, perhaps in consequence of its noted want (in the northern hemisphere) of what is pleasant and agreeable to the human senses. Numa let fall upon it the doom which was unavoidable for some one of the months, of having, three out of four times, a day less than even those which were to consist of thirty days. That is to say, he arranged that it should have only twenty-nine days, excepting in leap years; when, by the intercalation of a day between the 23rd and 24th, it was to have thirty. No great occasion here for complaint. But when Augustus chose to add a thirty-first day to August, that the month named from him might not lack in the dignity enjoyed by six other months of the year, he took it from February, which could least spare it, thus reducing it to twenty-eight in all ordinary years. In our own parliamentary arrangement for the reformation of the calendar, it being necessary to drop a day out of each century excepting those of which the ordinal number could be divided by four, it again fell to the lot of February to be the sufferer. It was deprived of its 29th day for all such years, and so it befell in the year 1800, and will in 1900, 2100, 2200, &c.

Verstegan informs us that, among our Saxon ancestors, the month got the name of *Sprout-kale*, from the fact, rather conspicuous in gardening, of the sprouting of cabbage at this ungenial season. The name of Sol-monatt was afterwards conferred upon it, in consequence of the return of the luminary of day from the low course in

the heavens which for some time he had been running. 'The common emblematical representation of February is, a man in a sky-coloured dress, bearing in his hand the astronomical sign Pisces.'—*Brady*.

CHARACTERISTICS OF FEBRUARY.

The average temperature of January, which is the lowest of the year, is but slightly advanced in February; say from 40° to 41° Fahrenheit. Nevertheless, while frosts often take place during the month, February is certainly more characterised by rain than by snow, and our unpleasant sensations during its progress do not so much arise from a strictly low temperature, as from the harsh damp feeling which its airs impart. Usually, indeed, the cold is intermitted by soft vernal periods of three or four days, during which the snow-drop and crocus are enabled to present themselves above ground. Gloomy, chilly, rainy days are a prominent feature of the month, tending, as has been observed, to a flooding of the country; and we all feel how appropriate it is that the two signs of the zodiac connected with the month—Aquarius and Pisces—should be of such watery associations. Here, again, however, we are liable to a fallacy, in imagining that February is the most rainy of the months. Its average depth of fall, 4·21 inches, is, in reality, equalled by three other months, January, August, and September, and exceeded by October, November, and December, as shewn by a rain-gauge kept for thirty years in the Isle of Bute.

At London, the sun is above the horizon on the

1st of February from 7h. 42m. to 4h. 47m., in all 9h. 5m. At the last day of the month, the sun is above the horizon 10h. 45m.

PROVERBS REGARDING FEBRUARY.

The tendency of this month to wet and its uncertain temperature, as hovering between Winter and Spring, are expressed proverbially:

'February fill the dyke [ditch]
Either with the black or white:'

i. e. either with rain or snow. Popular wisdom, however, recognises an advantage in its adhering to the wintry character, the above rhyme having occasionally added to it,

'If it be white, it's the better to like;'

while other rhymes support the same view. Thus, in Ray's collection of English proverbs, we have:

'The Welshman would rather see his dam on her bier,
Than see a fair Februeer;'

and from the Scotch collections:

'A' the months o' the year
Curse a fair Februeer.'

The Norman peasant pronounces virtually to the same purpose:

'Février qui donne neige,
Bel été nous pleige.'

Connected evidently with this general idea about February, is the observation regarding Candlemas Day, to be adverted to in its place.

First of February.

St Ignatius, bishop of Antioch, martyr, 107. St Rionius, priest and martyr, 250. St Kinnia, virgin of Ireland, 5th century. St Bridget (or Bride), patroness of Ireland, 523. St Sigebert II., King of Austrasia, 656.

ST IGNATIUS.

Ignatius occupies an important place in the history of Christianity, as an immediate disciple and successor of the apostles. As bishop of Antioch, in which position he acted for forty years, he is admitted to have been a perfect model of virtue and pious zeal. Under the Emperor Trajan, this holy man was sent to Rome to be devoured by wild beasts—a martyrdom to which he submitted with the usual resignation and joy. What was left of the feeble old man was carefully brought back to Antioch, and preserved for the veneration of the faithful. There are, however, more important relics of the martyr in four epistles, a translation of which was published by Archbishop Wake, in 1693.

ST BRIDGET, OR ST BRIDE.

St Bridget was a native of Ireland, and has the honour to share with St Patrick the distinction of exercising the spiritual patronage of that island. She was a daughter of one of the princes of Ulster, and was born at Fochard, in that province, soon after the first conversion of Ireland to the Christian faith. As she grew up she became remarkable for her piety, and having taken the monastic vow, she was the first nun in Ireland, and has ever since been revered by the Irish Romanists as the mother of nunneries in that country. She built her first cell under a large oak, which had perhaps been the site of pagan worship in earlier times, and from whence it was named Kil-dara, or the cell of the oak. Round this first Irish nunnery eventually arose the city of Kildare. The date at which St Bridget founded her cell is said to have been about the year 585. After having astonished the

Catholic world by a number of extraordinary miracles, which are duly chronicled in her legends, she died, and was buried at Downpatrick, the church of which boasted also of possessing the bodies of the saints Patrick and Columba. Giraldus Cambrensis has recorded how, in 1185, soon after the conquest of Ulster by John de Courci, the bodies of the three saints were found, lying side by side, in a triple vault, St Patrick occupying the place in the middle, and how they were all three translated into the cathedral. This event appears to have created a great sensation at the time, and was commemorated in the following Latin distich, which is frequently quoted in the old monastic chronicles :

'In burgo Dunno tumulo tumulantur in uno
Brigida, Patricius, atque Columba pius.'

For some cause or other Bridget was a popular saint in England and Scotland, where she was better known by the corrupted or abbreviated name of St Bride, and under this name a number of churches were dedicated to her. We need only mention St Bride's Church in Fleet-street, London.

Adjoining to St Bride's Churchyard, Fleet-street, is an ancient well dedicated to the saint, and commonly called Bride's Well. A palace erected near by took the name of Bridewell. This being given by Edward VI. to the city of London as a workhouse for the poor and a house of correction, the name became associated in the popular mind with houses having the same purpose in view. Hence it has arisen that the pure and innocent Bridget—the first of Irish nuns—is now inextricably connected in our ordinary national parlance with a class of beings of the most opposite description.

Born.—Tiberius Hemsterhuys, 1685, Groningen; Edward Coke, Lord Chief Justice, 1551-2, Mileham; John Phillip Kemble, actor, 1757, Prescot.

Died.—Pope Alexander VIII., 1691; Charles Duke of Shrewsbury, 1717; Sir Hew Dalrymple, President of the Court of Session, 1737; William Aiton, botanist, 1793, Kew; Dr John Lemprière (*Classical Dictionary*), 1793; Edward Donovan, naturalist, 1837; Mary Woolstoncraft Shelley (*née* Godwin), novelist, 1851.

THE DUKE OF SHREWSBURY.

The fortunes of this distinguished nobleman present a remarkable instance of the attainment of the highest honours of rank and state, but limited to his own individual enjoyment of such distinctions. He was the elder son of the eleventh Earl of Shrewsbury, who died of a wound received in his duel with George Villiers, second Duke of Buckingham, at Barnes, as described at page 129. He was born in the year of the Restoration, and had Charles the Second for his godfather. In 1694, he was created Marquis of Alton and Duke of Shrewsbury, and installed a Knight of the Garter. His grace was a prominent statesman in the reigns of William and Mary, Queen Anne, and George I., and filled some of the highest official situations. He had quitted the Church of Rome and become a Protestant in 1679, and by his steady adherence to the Protestant cause had incurred the displeasure of

James II. He was one of the seven who, in June 1688, joined the celebrated association, inviting over the Prince of Orange. At the demise of Queen Anne (who delivered to him the Treasurer's staff on her death-bed), the Duke of Shrewsbury was, at the same time, Lord Lieutenant of Ireland, Lord High Treasurer of Great Britain, and Lord Chamberlain,—a circumstance, says Sir Bernard Burke, (*Peerage and Baronetage*, edit. 1862,) previously unparalleled in our history. His grace, on that occasion, secured the Hanoverian accession, by at once signing the order for proclaiming George I. The Duke married the daughter of the Marquis of Pallotti, but died without issue, when the dukedom and marquise expired, and the earldom, &c., reverted to his cousin.

THE TWO PRINCES OF ANAMABOE.

In the London season of 1749, two black princes of Anamaboe were in fashion at all the assemblies. Their story is very much like that of Oroonoko, and is briefly this: A Moorish king, who had entertained, with great hospitality, a British captain trafficking on the coast of Africa, reposed such confidence in him as to intrust him with his son, about eighteen years of age, and another sprightly youth, to be brought to England and educated in the European manners. The captain received them, and basely sold them for slaves. He shortly after died; the ship coming to England, the officers related the whole affair; upon which the Government sent to pay their ransom, and they were brought to England, and put under the care of the Earl of Halifax, then at the head of the Board of Trade, who had them clothed and educated. They were afterwards received in the higher circles, and introduced to the King (George II.) on the 1st of February. In this year they appeared at Covent Garden Theatre, to see the tragedy of *Oroonoko*, where they were received with a loud clap of applause, which they returned with 'a genteel bow.' The tender interview between Imoinda and Oroonoko so affected the Prince, that he was obliged to retire at the end of the fourth act. His companion remained, but wept all the time so bitterly, that it affected the audience more than the play.

WILLIAM AITON AND THE 'HORTUS KEWENSIS.'

In the neatly kept churchyard of Kew, in Surrey, rest the remains of William Aiton, 'late gardener to his Majesty at Kew,' a reputation which he largely extended by the publication of the famed Catalogue of Plants in the royal gardens, entitled the *Hortus Kewensis*. He had been superintendent of the gardens from their first establishment; and in honour of his professional abilities and private worth, at his funeral the pall was supported by Sir Joseph Banks, the Rev D. Goodenough, Dr Pitcairne, Mr Dundas (of Richmond), and Zoffany, the painter.

THE BELL ROCK LIGHTHOUSE.

For more than half a century has this noble structure braved the storms of the German Ocean without any of its masonry being dis-

placed. It was first lighted on the 1st of February 1811.

The Inch Cape Rock, Scape Rock, as it is termed in the oldest charts,* or Bell Rock, lies on

THE BELL ROCK LIGHTHOUSE.

the coast about twenty-four miles east of Dundee harbour, in the track of all vessels making for the estuaries of the Friths of Forth and Tay, from a foreign voyage. It was, from a very remote period, the scene of numerous shipwrecks. The top of the rock being visible at low water, one of the abbots of Aberbrothock attached to it a framework and a bell, which, being rung by the waves, warned mariners to avoid the fatal reef. A tradition respecting this bell has been embodied by Dr Southey in his ballad of 'Ralph the Rover.' A notorious pirate of this name is said to have cut the bell from the framework, 'to plague the Abbot of Aberbrothock,' and some time after he is said to have received the just punishment of his wickedness, by being shipwrecked on the spot.

The necessity of erecting a lighthouse upon this rock was painfully shewn in the year 1799, when about seventy vessels were wrecked on the coast of Scotland in a terrific storm. This calamity drew the attention of the Commissioners of the Northern Lighthouses to the Inch Scape, and Mr Robert Stevenson, the scientific engineer of the Lighthouse Board, erected the present edifice from his own designs, between the years 1807 and 1811. The rock being bare only during short daily intervals, the work necessarily became very troublesome, as well as in some degree critical. All the stones were shaped and prepared at

* Inch Scaup appears to be the true old name of the rock, implying something at once an island and a bed of shell-fish.

Arbroath; and the several courses having been dove-tailed, and cemented together by joggles of stone and oaken trenails, the whole building, when erected upon the rock and properly fixed and cramped, was constituted into one solid mass, which seems likely to defy the elements for centuries. The light-room is of cast-iron, and the entire height of the pillar is 115 feet. The cost was £60,000. In the arrangements, the primitive contrivance of the bell has not been forgotten: during stormy and foggy weather, the machinery which causes the reflectors to revolve, is made to ring two large bells, each weighing about 12 cwt., in order to warn the seaman of his danger when too nearly approaching the rock.

When Sir Walter Scott visited this lighthouse in 1815, he wrote in the album kept there the following lines:

PHAROS LOQUITUR.

'Far on the bosom of the deep,
O'er these wild shelves my watch I keep;
A ruddy gem of changeful light,
Bound on the dusky brow of Night;
The seaman bids my lustre hail,
And scorns to strike his tim'rous sail.'

A work precisely similar to the erection of the Bell Rock Lighthouse—the formation of a lighthouse on the rock called Skerryvore, in the Hebrides—was executed between 1835 and 1844, by Alan Stevenson, son of Robert, under circumstances of even greater difficulty and peril: such are among the works which give great engineers a kind of parallel place in our pacific age to that of the mythic heroes of a primitive one. Of each work, an elaborate detail has been published by their respective chiefs.

A curious circumstance connected with the building of the Inch Scape Lighthouse is mentioned in a late work: 'One horse, the property of James Craw, a labourer in Arbroath, is believed to have drawn the entire materials of the building. This animal latterly became a pensioner of the Lighthouse Commissioners, and was sent by them to graze on the island of Inchkeith, where it died of old age in 1813. Dr John Barclay, the celebrated anatomist, had its bones collected and arranged in his museum, which he bequeathed at his death to the Royal College of Surgeons [Edinburgh], and in their museum the skeleton of the *Bell Rock horse* may yet be seen.*'

The way Shrews were Tamed long ago.

'Madam,' said Dr Johnson, in a conversation with Mrs Knowles, 'we have different modes of restraining evil: stocks for the men, a *ducking-stool for women*, and a pound for beasts.' On other occasions, the great lexicographer speaks very complacently of the famous remedy for curing shrews, so much approved by our forefathers, but, fortunately, already a little out of fashion in the worthy Doctor's time. One of the last instances on record in which the ducking-stool is mentioned as an instrument of justice, is in the *London Evening Post* of April 27, 1745. 'Last week,' says the journal, 'a woman that

* Jervise's Memorials of Angus and the Mearns. 4to. 1861, p. 175.

keeps the Queen's Head ale-house at Kingston, in Surrey, was ordered by the court to be ducked for scolding, and was accordingly placed in the chair, and ducked in the river Thames, under Kingston bridge, in the presence of 2,000 or 3,000 people.'

According to verbal tradition, the punishment of the ducking-stool was inflicted at Kingston and other places up to the beginning of the present century. However, the 'stool' was but rarely used at this period; though it was very extensively employed in the sixteenth and seventeenth centuries.

M. Misson, an intelligent Frenchman, who travelled in England about the year 1700, gives the following interesting description of the ducking-stool. 'This method,' he says, 'of punishing scolding women is funny enough. They fasten an arm-chair to the end of two strong beams, twelve or fifteen feet long, and parallel to each other. The chair hangs upon a sort of axle, on which it plays freely, so as always to remain in the horizontal position. The scold being well fastened in her chair, the two beams are then placed, as near to the centre as possible, across a post on the water-side; and being lifted up behind, the chair, of course, drops into the cold element.

The ducking is repeated according to the degree of shrewishness possessed by the patient, and

DUCKING STOOL, AS PRACTISED AT BROADWATER, NEAR LEOMINSTER.

generally has the effect of cooling her immoderate heat, at least for a time.' An illustration exactly answering to this description is given as the frontispiece of an old chap-book, entitled *Strange and Wonderful Relation of the Old Woman who was drowned at Ratcliff Highway, a fortnight ago.*

DUCKING-CHAIR AT A VILLAGE WELL.

Apparently, in the case of this aged person, the administrators of the punishment had given a dip too much; and, of course, in such rough proceedings, a safe measure must have been difficult to

hit. A second illustration, which has been furnished by a gentleman well acquainted with English village life, represents the apparatus as erected close to a watering trough, into which

the patient, of course, was let down by the cross-tree, from which the seat depended. Presuming this to be the place whither the females of the village resorted for supplies of water for domestic purposes, we must see that the site was appropriate; for, somehow, places where water is obtained, are often the scene of very fiery displays. To make the fountain of the evil the means of the punishment was in accordance with the fitness of things. It is but natural to suppose that before any scold was dipped, the community must have suffered a good deal at her hands. When at length the hour of retribution arrived, we can imagine the people to have been in a state

of no small excitement. Labour would be deserted. All the world would be out of doors. The administrators would appear in young eyes to have something of a heroic bearing. Men would shout; women would look timidly from doors; dogs would yelp. The recalcitrations of the peccant dame, her *crescendo* screamings and invectives, the final smotherment of her cries in the cold but not cooling element, must have furnished a scene for a Hogarth or a Wilkie. Failing such illustrations, the reader will accept one from Clarke's *History of Ipswich*, in which a good deal of what is characteristic of such scenes is displayed. It is impossible to view

the picture with perfect gravity; and yet modern humanity, it must be admitted, cannot quite sanction the idea of employing such means of correction for one of the weaker, if not always the gentler sex.

Mr Cole, the antiquary, writing about 1780, says: 'In my time, when I was a boy and lived with my grandfather in the great corner house at the bridge-foot, next to Magdalen College, Cambridge, and rebuilt since by my uncle, Joseph Cock, I remember to have seen a woman ducked for scolding. The chair hung by a pulley fastened to a beam about the middle of the bridge; and the woman having been fastened in the chair, she was let under water three times successively, and then taken out. The bridge was then of timber,

before the present stone bridge of one arch was built. The ducking-stool was constantly hanging in its place, and on the back panel of it was an engraving representing devils laying hold of scolds. Some time after, a new chair was erected in the place of the old one, having the same device carved on it, and well painted and ornamented.' That the cold water cure had a wholesome effect upon the tongues of not a few of the fair sex is agreed on by all old writers who mention the subject, poets as well as prosaists. John Gay, in his *Pastorals*, expresses himself very decisively on this point:

'I'll speed me to the pond, where the high stool
On the long plank hangs o'er the muddy pool:
That stool, the dread of every scolding quean.'

The term *Cucking-stool* is sometimes used interchangeably for ducking-stool, the resemblance of the names having apparently led to an idea that they meant the same thing. In reality, the cucking-stool was a seat of a kind which delicacy forbids us particularly to describe, used for the exposure of flagitious females at their own doors or in some other public place, as a means of putting upon them the last degree of ignominy. In Scotland, an ale-wife who exhibited bad drink to the public was put upon the *Cock stule*, and the ale, like such relics of John Girder's feast as were totally uneatable (see *Bride of Lammermoor*), was given to 'the pure folk.' In Leicester, in 1457, a scold was put upon the cuck-stool before her own door, and then carried to the four gates of the town. The practice seems a strange example of the taste of our ancestors; yet in connection with the fact, it is worthy of being kept in mind, that among the ceremonies formerly attending the installation of the Pope, was the public placing of him in a similar chair, called the *Sedes Stercoraria*, with a view to remind him that he was after all but a mortal man.

In Lysons's *Environ of London*, there is an account for the making of a cucking-stool for Kingston-upon-Thames; it is dated 1572, and is as follows:

	£	s.	d.
The making of the cucking-stool . . .	0	8	0
Iron-work for the same	0	3	0
Timber for the same	0	7	6
Three brasses for the same, and three wheels	0	4	10
	<hr/>		
	£1	3	4

This rather expensive cucking-stool must have been in very frequent use in the good town of Kingston; for in the old account books there are numerous entries of money paid for its repairs. In fact, Kingston seems to have enjoyed quite a pre-eminence in the matter of shrews, to judge by the amount of money laid out in their taming. Shrewsbury itself lags far behind in the cold-water cure; for, as stated in the *History of Shropshire*, it was only in the year 1669 that an order was issued by the corporation of the town, that 'a ducking-stool be erected for the punishment of scolds.'

The ducking-stool, the oldest known remedy for evil tongues—so old, indeed, that it is mentioned in the Doomsday Survey, in the account of the city of Chester—was superseded to a certain extent, in the seventeenth century and later, by another piece of machinery, called the *Branks*. The branks was homœopathic rather than hydro-pathic; and connoisseurs were enthusiastic in asserting that it possessed great advantages over the ducking-stool. Old Dr Plot, in his *History of Staffordshire*, informs his readers that 'they have an artifice at Newcastle-under-Lyne and Walsall, for correcting of scolds, which it does so effectually, that I look upon it as much to be preferred to the cucking-stool, which not only endangers the health of the party, but also gives the tongue liberty 'twixt every dip, to neither of which this is at all liable: it being such a bridle for the tongue as not only quite deprives them of speech, but brings shame for the trans-

gression and humility thereupon, before 'tis taken off: which being put upon the offender by order of the magistrate, and fastened with a padlock behind, she is led round the town by an officer, to her shame, nor is it taken off till after the party begins to shew all external signes imaginable of humiliation and amendment.' The warm-hearted Doctor gives a representation of a pair of branks, as seen in various cities of Staffordshire about the year 1680. 'The instruments look formidable

SCOLD'S BRIDLE OR BRANK.

enough, consisting of hoops of metal passed round the neck and head, opening by means of hinges at the sides, and closed by a staple with a padlock at the back; a plate within the hoop projecting inwards pressed upon the tongue, and formed an effectual gag. We must take it upon the assurance of so learned a man as Dr Plot, who was keeper of the Ashmolean Museum, and Professor of Chemistry at Oxford, and who dedicated his work to King James II., that the brank was a very harmless instrument, and 'much to be preferred to the cucking-stool.'

That the brank, or 'scold's bridle,' is of much more modern origin than the ducking-stool, there seems little doubt. The latter was certainly in use among our Saxon forefathers, whereas no example of the brank has been noticed of greater antiquity than that preserved in the church of Walton-on-Thames, Surrey, which bears the date 1633, with the distich:

'Chester presents Walton with a bridle,
To curb women's tongues that talk so idle.'

Tradition alleges that the instrument was given for the use of the parish by a neighbouring gentleman, of the name of Chester, who lost an estate through the indiscreet babbling of a mischievous woman to an uncle, from whom he had considerable expectations. This Walton bridle—which may still be seen in the vestry of the parish church—is a far less terrible-looking engine than Dr Plot's. It is made of thin iron, and so contrived as to pass over and round the head, where the whole clasps together, and is fastened at the back of the neck by a small padlock. The bridle-bit, as it is called, is a flat piece of iron, about two inches long and one inch broad, which goes into the mouth, and keeps down the tongue by its pressure, while an aperture in front admits the nose.

There are still numerous specimens of branks preserved in different private and public antiquarian collections throughout England. There was, until lately, a brank in the old Chesterfield poor-house, Derbyshire; and there is still one at the Guildhall, Lichfield; one at Hamstall-Ridware, Staffordshire; one at Walsall, near Wolverhampton; and one at Holme, Lancashire. There was one in the town-hall at Leicester, now in private hands in that town. A brank which is recorded in 1623 as existing at Macclesfield, and is still seen in the town-hall,

has been actually used, as stated by a writer in the *Archæological Journal* of September 1856, within the memory of an aged official of the municipal authorities in that town. In Scotland, likewise, there are sundry specimens of gossips' bridles still extant; and it seems, from various notices, that its use was quite as frequent formerly in the northern kingdom as south of the Tweed. Pennant, in his *Tour in Scotland*, in 1772, records its use at Langholm, in Dumfriesshire, where the local magistrates had, it appears, their little piece of machinery in constant readiness for any emergency. Dr Wilson, in his *Prehistoric Annals of Scotland*, mentions the brank as a Scottish instrument of ecclesiastical punishment, for the coercion of scolds and slanderous gossips. The use of the apparatus occurs in the Burgh Records of Glasgow as early as 1574, when two quarrelsome females were bound to keep the peace, or, on further offending, 'to be brankit.' In the records of the Kirk Session at Stirling, for 1600, 'the brankes' are mentioned as the punishment for a shrew. In St Mary's church, at St Andrew's, a memorable specimen still exists, known as the 'Bishop's brank,' sketched and noticed in the Abbotsford edition of *The Monastery*.

Ducking-stools and branks, however, with all their terrors, seem to have been insufficient to frighten the shrews of former days out of their bad propensities. In addition to them the terrors of the Ecclesiastical Courts were held over their heads, as seen, among others, in the records of the diocese of London, which contain numerous entries of punishments awarded to scolds. The same in the provinces. In 1614, dame Margaret, wife of John Bache, of Chaddesley, was prosecuted at the sessions as a 'comon skould, and a sower of strife amongste her neyghbours, and hath bynn presented for a skoulde at the leete holden for the manour of Chadsley, and for misbehaving her tonge towards her mother-in-law, at a visytacion at Bromsgrove, and was *excommunicated* therefore.' The excommunication appears to have had little effect in these and other cases; for only a few years after the date above recorded, the magistrates of the town of Kidderminster, not far from Chadsley, voted the purchase of 'a bridle for scolds.' Whether the 'bridle' was ever more popular than the 'stoole' is an open question; but, at any rate, both carried it, in the majority of instances, over the thunder of the Church. The thing called excommunication somehow never did thrive in England—not even for the taming of shrews.*

WILL OF A SMALL FARMER OF THE THIRTEENTH CENTURY.

From an inventory of the effects of Reginald Labbe, a small farmer, who died in 1293, we obtain a curious view of the circumstances of an individual of the agricultural class, at that early period.

* Notices regarding the Ducking-Stool and Branks are scattered throughout *Notes and Queries*. There are also some papers on the subject in the *Archæologia* and *Gentleman's Magazine*. The most exhaustive treatment of it is to be found in a paper by Mr Llewellynn Jewitt, in his very pleasing antiquarian miscellany entitled *The Reliquary*.

Reginald Labbe died worth chattels of the value of thirty-three shillings and eight pence, leaving no ready money. His goods comprised a cow and calf, two sheep and three lambs, three hens, a bushel and a half of wheat, a seam of barley, a seam and a half of fodder, a seam of 'dragge' or mixed grain, and one halfpenny worth of salt. His wardrobe consisted of a tabard, tunic, and hood; and his 'household stuffe' seems to have been limited to a bolster, a rug, two sheets, a brass dish, and a tripod or trivet, the ordinary cooking apparatus of those times. Possessing no ready money, his bequests were made in kind. A sheep worth ten pence is left to the high altar of 'Neweton,' perhaps Newton-Valence, near Alton, Hants; and another of the same value to the altar and fabric fund of 'Eakewode,' possibly Oakwood, near Dorking, Surrey. His widow Ida received a moiety of the testator's cow, which was valued at five shillings, and Thomas Fitz-Norreys was a co-partner in its calf, to the extent of a fourth. It is worthy of note, that the expenditure of the executors upon the funeral, the 'month's-mind,' and in proving the will of Reginald Labbe, consumed something more than a third of all he left behind him, being in the proportion of 11s. 9d. to 33s. 8d. Some of the items are singular. One penny was paid for digging his grave, twopence for tolling the bell, sixpence for making his will, and eightpence for proving it, 'with the counsel of clerks;' in other words, under legal advice. We may safely multiply these sums by fifteen, perhaps by twenty, to arrive at the value of money in the thirteenth *ls* compared with the nineteenth century; and by this process we shall find that the lawyer or clerk who prepared the will received a fee not greatly disproportioned to the modern charge for such professional assistance. The mourners bidden to the funeral, some of whom, probably, bore Reginald's body to its resting-place, were refreshed with bread and cheese and beer to the amount of six shillings: the same homely fare at the 'month's-mind' cost the estate two shillings and eightpence. The scribe who prepared this account for the executors was remunerated with threepence, a large sum having regard to the amount of labour.

The document is in Latin, from which Mr. Hudson Turner prepared the preceding abstract.

FEBRUARY 2.

The Purification of the Virgin, commonly called
Candlemass Day.

St. Lawrence, Archbishop of Canterbury, 619.

Born.—Bishop W. Thomas, 1613, *Bristol*; William Borlase, D.D., 1696, *Cornwall*; John Nichols, 1744, *Islington*.

Died.—Sir Owen Tudor, 1461; Baldassarre Castiglione, 1529; Giovanni di Palestrina, 1594; Archbishop John Sharp, 1714; Pope Clement XIII., 1769; Francis Hayman, painter, 1776; James Stuart, 1788; Dr Olinthus G. Gregory, mathematician, 1841.

DR BORLASE, THE CORNISH ANTIQUARY.

This accomplished gentleman was born at Pendeen, in the parish of St Just, in Cornwall, where his family had been settled from the reign of King William Rufus. He was vicar of St Just, and rector of Ludgvan; and by collecting mineral fossils in the rich copper-works of the latter parish,

he was encouraged to investigate the natural history of his native county. Its numerous monuments of remote antiquity, which had till then been nearly neglected, next led him to study the religion and customs of the ancient Britons. He wrote a *Natural History of Cornwall*, as well as illustrated its Antiquities, historical and monumental, and he contributed many curiosities to the Ashmolean Museum. He was equally attentive to his pastoral duties; he greatly improved the high roads of St Just, which were more numerous than in any parish in Cornwall. He was the friend of Pope, whom he furnished with the greater part of his materials for forming his grotto at Twickenham. Pope acknowledged the gift, in a letter to Dr Borlase, in which he says, 'I am much obliged to you for your valuable collection of Cornish diamonds. I have placed them where they may best represent yourself, in a shade, but shining.'

Over one of the arches of the entries to Pope's grotto—which in reality was a passage to his garden under the adjacent public road—is fixed, among other notable objects, a large ammonite; over a corresponding arch, balancing this object, is the cast of the fossil. One feels it to be a curious circumstance that the great poet should have thus become familiar with an example of the huge cephalopoda of the primitive world, long before any one knew that singular history which geology now assigns them. It must be matter of conjecture whether Pope got his ammonite and its cast from Dr Borlase or some other naturalist.

Candlemass.

From a very early, indeed unknown date in the Christian history, the 2nd of February has been held as the festival of the Purification of the Virgin, and it is still a holiday of the Church of England. From the coincidence of the time with that of the *Februation* or purification of the people in pagan Rome, some consider this as a Christian festival engrafted upon a heathen one, in order to take advantage of the established habits of the people; but the idea is at least open to a good deal of doubt. The popular name Candlemass is derived from the ceremony which the Church of Rome dictates to be observed on this day; namely, a blessing of candles by the clergy, and a distribution of them amongst the people, by whom they are afterwards carried lighted in solemn procession. The more important observances were of course given up in England at the Reformation; but it was still, about the close of the eighteenth century, customary in some places to light up churches with candles on this day.

At Rome, the Pope every year officiates at this festival in the beautiful chapel of the Quirinal. When he has blessed the candles, he distributes them with his own hand amongst those in the church, each of whom, going singly up to him, kneels to receive it. The cardinals go first; then follow the bishops, canons, priors, abbots, priests, &c., down to the sacristans and meanest officers of the church. According to Lady Morgan, who witnessed the ceremony in 1820—'When the last of these has gotten his candle, the poor conser-

vatori, the representatives of the Roman senate and people, receive theirs. This ceremony over, the candles are lighted, the Pope is mounted in his chair and carried in procession, with hymns chanting, round the ante-chapel; the throne is stripped of its splendid hangings; the Pope and cardinals take off their gold and crimson dresses, put on their usual robes, and the usual mass of the morning is sung.' Lady Morgan mentions that similar ceremonies take place in all the parish churches of Rome on this day.

It appears that in England, in Catholic times, a meaning was attached to the size of the candles, and the manner in which they burned during the procession; that, moreover, the reserved parts of the candles were deemed to possess a strong supernatural virtue:

'This done, each man his candle lights,
Where chiefest seemeth he,
Whose taper greatest may be seen;
And fortunate to be,
Whose candle burneth clear and bright:
A wondrous force and might
Doth in these candles lie, which if
At any time they light,
They sure believe that neither storm
Nor tempest doth abide,
Nor thunder in the skies be heard,
Nor any devil's spide,
Nor fearful sprites that walk by night,
Nor hurts of frost or hail,' &c. *

The festival, at whatever date it took its rise, has been designed to commemorate the churching or purification of Mary; and the candle-bearing is understood to refer to what Simeon said when he took the infant Jesus in his arms, and declared that he was a *light to lighten the Gentiles*. Thus literally to adopt and build upon metaphorical expressions, was a characteristic procedure of the middle ages. Apparently, in consequence of the celebration of Mary's purification by candle-bearing, it became customary for women to carry candles with them, when, after recovery from child-birth, they went to be, as it was called, *churched*. A remarkable allusion to this custom occurs in English history. William the Conqueror, become, in his elder days, fat and unwieldy, was confined a considerable time by a sickness. 'Methinks,' said his enemy the King of France, 'the King of England lies long in childbed.' This being reported to William, he said, 'When I am churched, there shall be a thousand lights in France!' And he was as good as his word; for, as soon as he recovered, he made an inroad into the French territory, which he wasted wherever he went with fire and sword.

At the Reformation, the ceremonials of Candlemass day were not reduced all at once. Henry VIII. proclaimed in 1539: 'On Candlemass day it shall be declared, that the bearing of candles is done in memory of Christ, the spiritual light, whom Simeon did prophesy, as it is read in the church that day.' It is curious to find it noticed as a custom down to the time of Charles II., that when lights were brought in at nightfall, people would say—'God send us the light of

* Barnaby Googe's Translation of Naogeorgus, in the *Popish Kingdom*. Ellis's Edition of Brand's *Popular Antiquities*.

heaven!' The amiable Herbert, who notices the custom, defends it as not superstitious. Somewhat before this time, we find Herrick alluding to the customs of Candlemass eve: it appears that the plants put up in houses at Christmas were now removed.

'Down with the rosemary and bays,
Down with the mistletoe;
Instead of holly now upraise
The greener box for show.

The holly hitherto did sway,
Let box now domineer,
Until the dancing Easter day
Or Easter's eve appear.

The youthful box, which now hath grace
Your houses to renew,
Grown old, surrender must his place
Unto the crisped yew.

When yew is out, then birch comes in,
And many flowers beside,
Both of a fresh and fragrant kin',
To honour Whitsuntide.

Green rushes then, and sweetest bents,
With cooler oaken boughs,
Come in for comely ornaments,
To re-adorn the house.

Thus times do shift; each thing in turn does hold;
New things succeed, as former things grow old.'

The same poet elsewhere recommends very particular care in the thorough removal of the Christmas garnishings on this eve:

'That so the superstitious find
No one least branch left there behind;
For look, how many leaves there be
Neglected there, maids, trust to me,
So many goblins you shall see.'

He also alludes to the reservation of part of the candles or torches, as calculated to have the effect of protecting from mischief:

'Kindle the Christmas brand, and then
Till sunset let it burn,
Which quenched, then lay it up again,
Till Christmas next return.

Part must be kept, wherewith to tend
The Christmas log next year;
And where 'tis safely kept, the fiend
Can do no mischief there.'

There is a curious custom of old standing in Scotland, in connection with Candlemass day. On that day it is, or lately was, an universal practice in that part of the island, for the children attending school to make small presents of money to their teachers. The master sits at his desk or table, exchanging for the moment his usual authoritative look for one of bland civility, and each child goes up in turn and lays his offering down before him, the sum being generally proportioned to the abilities of the parents. Sixpence and a shilling are the most common sums in most schools; but some give half and whole crowns, and even more. The boy and girl who give most are respectively styled King and Queen. The children, being then dismissed for a holiday, proceed along the streets in a confused procession, carrying the King and Queen in state,

exalted upon that seat formed of crossed hands which, probably from this circumstance, is called the *King's Chair*. In some schools, it used to be customary for the teacher, on the conclusion of the offerings, to make a bowl of punch and regale each urchin with a glass to drink the King and Queen's health, and a biscuit. The latter part of the day was usually devoted to what was called the *Candlemass bleeze*, or blaze, namely, the conflagration of any piece of furze which might exist in their neighbourhood, or, were that wanting, of an artificial bonfire.

Another old popular custom in Scotland on Candlemass day was to hold a foot-ball match, the east end of a town against the west, the unmarried men against the married, or one parish against another. The Candlemass Ba', as it was called, brought the whole community out in a state of high excitement. On one occasion, not long ago, when the sport took place in Jedburgh, the contending parties, after a struggle of two hours in the streets, transferred the contention to the bed of the river Jed, and there fought it out amidst a scene of fearful splash and dabblement, to the infinite amusement of a multitude looking on from the bridge.

Considering the importance attached to Candlemass day for so many ages, it is scarcely surprising that there is a universal superstition throughout Christendom, that good weather on this day indicates a long continuance of winter and a bad crop, and that its being foul is, on the contrary, a good omen. Sir Thomas Browne, in his *Vulgar Errors*, quotes a Latin distich expressive of this idea:

'Si sol splendescat Maria purificante,
Major erit glacies post festum quam fuit ante;'

which may be considered as well translated in the popular Scottish rhyme:

'If Candlemass day be dry and fair,
The half o' winter's to come and mair;
If Candlemass day be wet and foul,
The half o' winter's gane at Yule.

In Germany there are two proverbial expressions on this subject: 1. The shepherd would rather see the wolf enter his stable on Candlemass day than the sun; 2. The badger peeps out of his hole on Candlemass day, and when he finds snow, walks abroad; but if he sees the sun shining, he draws back into his hole. It is not improbable that these notions, like the festival of Candlemass itself, are derived from pagan times, and have existed since the very infancy of our race. So at least we may conjecture, from a curious passage in Martin's *Description of the Western Islands*. On Candlemass day, according to this author, the Hebrideans observe the following curious custom:—'The mistress and servants of each family take a sheaf of oats and dress it up in women's apparel, put it in a large basket, and lay a wooden club by it, and this they call Brüd's Bed; and then the mistress and servants cry three times, "Brüd is come; Brüd is welcome!" This they do just before going to bed, and when they rise in the morning they look among the ashes, expecting to see the impression of Brüd's club there; which, if they do, they reckon it a true presage of a good crop and prosperous year, and the contrary they take as an ill omen.'

THE PURIFICATION FLOWER.

Our ancestors connected certain plants with certain saints, on account of their coming into blossom about the time of the occurrence of those saints' days. Thus the snowdrop was called the *Purification Flower* (also the Fair Maid of February), from its blossoming about Candlemass; the crocus was dedicated to St Valentine; the daisy to St Margaret (hence called by the French *La belle Marguerite*); the Crown Imperial to St Edward, king of the West Saxons, whose day is the 18th of March; the Cardamine, or Lady's Smock, to the Virgin, its white flowers appearing about Lady-day. The St John's Wort was connected, as its name expresses, with the blessed St John. The roses of summer were said to fade about St Mary Magdalen's Day.* There were also the Lent Lily or Daffodil, the Pasque-flower or Anemone, Herb Trinity, Herb Christopher, St Barnaby's Thistle, Canterbury Bell (in honour of St Augustine of England), Herb St Robert, and Mary Wort.

COINS CUT INTO HALVES AND QUARTERS.

The discovery of Silver Pennies cut into halves and quarters, though not uncommon in England, is apt to be overlooked by numismatists. In the great find of coins which took place at Cuerdede, in Lancashire, in 1840, were several pennies of Alfred and Edward the Elder so divided. The same was the case with coins of Edward the Confessor, found at Thwaite, in Suffolk; and with those of William the Conqueror, discovered at Benworth, in Hampshire, in 1833. On the latter discovery, Mr Hawkins has remarked that the halves and quarters were probably issued from the mints in that form, as the whole collection had evidently been in circulation. The great find of silver pennies (mostly of Henry II.) at Worcester, in 1854, comprised a half coin of Eustace, Count of Boulogne, and about thirteen halves and as many quarters of Henry's pennies. The collections in the British Museum contain specimens of divided coins of nearly every monarch from Alfred to Henry III., with whose reign they cease. The practice of dividing the coins no doubt arose from the scarcity of small change, which was in part remedied under the reign of Edward I. by the coinage of halfpence and farthings.—*A. W. Franks; Archaeologia*, vol. xxxviii. part 1.

FEBRUARY 3.

St Blaize, bishop of Sebaste, 316. St Auscharius, archbishop of Hamburg and Bremen, 865. St Wereburge, patroness of Chester, 699. St Margaret of England, 12th century.

ST WEREBURGE.

Wereburge was one of the earlier and more celebrated of the Anglo-Saxon saints, and was not only contemporary with the beginning of Christianity in Mercia, but was closely mixed up with the first movement for the establishment of nunneries in England. Her father, Wulfhere, king of the Mercians, though nominally a Christian, was not a zealous professor, but, under the influence of his queen, all his children were

* 2nd Notes and Queries, vii. 312.

earnest and devout believers. These children were three princes, — Wulfhad, Rufinus, and Keured,—and one daughter, Wereburge. The princess displayed an extraordinary sanctity from her earliest years, and, though her great beauty drew round her many suitors, she declared her resolution to live a virgin consecrated to Christ. Among those who thus sought her in marriage was the son of the king of the West Saxons; but she incurred greater danger from a noble named Werbode, a favourite in her father's court, who was influenced, probably, by ambition as much as by love. At this time there are said to have been already five bishops' sees in Mercia,—Chester, Lichfield, Worcester, Lincoln, and Dorchester; and to that of Lichfield, which was nearest to the favourite residence of King Wulfhere, near Stone, in Staffordshire, St Chad (Ceadda) had recently been appointed. It appears that Chad had an oratory in the solitude of the forest, where he spent much of his time; and that Wulfhere's two sons Wulfhad and Rufinus, while following their favourite diversion, discovered him there. The legend, which is not quite consistent, represents them as having been pagans down to that time, and as being converted by Chad's conversation.

Werbode, also, is said to have been a perverse pagan, and, according to the legend, his influence had led Wulfhere to apostatise from Christianity. The king approved of Werbode as a husband for Wereburge, but he was stoutly opposed by the queen and the two young princes; and the royal favourite, believing that the two latter were the main obstacles to his success, and having obtained information of their private visits to St Chad, maligned them to their father, and obtained an order from King Wulfhere for putting them to death. This barbarous act was no sooner accomplished, than Werbode was poisoned by an evil spirit, and died raving mad; while King Wulfhere, overcome with deep repentance, returned to Christianity, and became renowned for his piety.

Wereburge now, with her father's consent, became a nun, and entered the monastery of Ely, which had been but recently founded, and which was then governed by her cousin Etheldrida. As a nun of Ely, Wereburge soon became celebrated for her piety, and, according to the legend, her sanctity was made manifest by numerous miracles. Ethelred, Wulfhere's brother, succeeded him on the throne of the Mercians in 675; and one of his first cares was to call his niece Wereburge from Ely, and entrust to her care the establishment of nunneries in Mercia. Within a very short time, assisted by his munificence, she founded religious houses for nuns at Trentham and Hanbury (near Tutbury), in Staffordshire, and at Wedon in Northamptonshire, of all which she was superior at the same time. She died at Trentham, on the 3rd of February, 699, having declared her will that her body should be buried at Hanbury; when the people of Trentham attempted to detain it by force, those of Hanbury were aided by a miracle in obtaining possession of it, and carried it for interment to their church. Years afterwards, when the Danes ravaged this part of the

island, the body of St Wereburge was carried for safety from Hanbury to Chester, and deposited in the abbey church there (now the cathedral), of which she henceforth became the patroness.

Such is the history of St Wereburge as we gather it partly from tolerably authentic history, but more largely from the legend. The latter was set forth in English verse early in the sixteenth century, by a monk of Chester named Henry Bradshaw, whose book was printed in a black-letter volume, now very rare, by Pynson, in 1521.* Bradshaw's verses are too dull to be worth quotation as specimens of old English poetry, and the posthumous miracles he relates are certainly not worth repeating. There is one, however, which gives us such a curious picture of the proceedings of the citizens when a mediæval town was on fire, and bears also such curious points of resemblance to the description of the confusion in London at the great fire of 1666, that, as shewing how little progress had been made during the period between the time of Henry Bradshaw and the reign of Charles II., we are tempted to give some verses from it. Some houses had accidentally taken fire while the inhabitants were at their devotions in the churches:

' This fearefull fire encreased more and more,
Piteously wastyng hous, chambre, and hall.
The citizens were redy their cité to succour,
Shewed all their diligence and labour continuall;
Some cried for water, and some for hookes dyd call;
Some used other engins by crafte and policy;
Some pulled downe howses afore the fire truly.

' Other that were impotent mekely gan praye
Our blessed Lorde on them to have pité.
Women and children cried, "Out and waile away!"
Beholdyng the daunger and perill of the cité.
Prestes made hast divine service to supplé [complete],
Redy for to succour their neyghbours in distres
(As charité required), and helpe their hevynes.

' The fire contynued without any cossyng,
Fervently flamyng ever contynuall,
From place to place mervaylously rennyng [running],
As it were tynder consuming toure and wall.
The citezens sadly laboured in vayne all;
By the policie of man was founde no remedy
To cesse [stop] the fire so fervent and myghty.

* * * * *

' Many riall [royal] places fell adowne that day,
Riche marchauntes houses brought to distruction;
Churches and chapels went to great decay.
That tyme was brent [burnt] the more [greater] part
of the towne;
And to this present day is a famous opinion
Howe a mighty church, a mynstre of saynt
Michaell,
That season was brent and to ruyne fell.'

The citizens, finding themselves powerless to put out the fire, addressed their prayers to St Wereburge, and the monks then brought out her shrine, and carried it in procession through the flaming streets. This, it was believed, stopped the progress of the conflagration.

* It may be well to state that this curious poem has been reprinted by the Chetham Society.

Born.—Henry Cromwell (N. S.), 1627.

JOHN OF GAUNT.

Edward the Third's fourth son, John, born at Ghent, or, as it was then spelt, Gaunt, during his father's expedition to Flanders, in February 1340, and called from that circumstance, John of Gaunt, has obtained a greater name amongst celebrated princes than his own merits would perhaps justify, probably in some measure from his inheriting the popularity of his elder and greater brother, the Black Prince. John, when two years old, was created Earl of Richmond. After the death of the great warrior, Henry Duke of Lancaster, in 1360, John of Gaunt, who had married his daughter the princess Blanche, was raised by his father, King Edward, to that dukedom. In the adventurous expedition which the Black Prince made into Spain in 1367, his brother John accompanied him. Two years later, accompanying the Black Prince on a march which he made through France to the English possessions in the south, John took the command of the army, on his brother being obliged by the state of his health to return to England. Immediately afterwards John of Gaunt married the Spanish princess Constance, eldest daughter of Don Pedro, whom he had first seen at Bordeaux in 1367; and, as her father had been murdered by his rival, the usurper Don Erique, the Duke of Lancaster assumed in his wife's right the title of King of Castile and Leon. In the continuous wars with France which followed, John of Gaunt was a brave but not a successful commander, and they were put an end to by the truce of 1374.

The Black Prince died on the 8th of June 1376, two years after this peace. Since his return to England, he had espoused the popular cause against his father's government, and thus became a greater favourite than ever with the nation. His brother of Lancaster, on the contrary, was unpopular, and supported the abuses of the court. After his death, John of Gaunt became all powerful in the parliament, and high in favour with his father the king; but in his hostility to the opposition which had been supported by the Black Prince, he quarrelled violently with the Church, and especially with William of Wickham, Bishop of Winchester, whom he persecuted with inveterate hatred. It is believed that the Duke's hostility to the bishops was the main cause of the support he gave to John Wycliffe, the great Church reformer, by which he certainly did good service to the English Reformation in its first beginning, and gained popularity among the Lollards. But even here he proceeded with the intemperance which especially marked his character. The prelates, provoked by the encouragement thus openly given to innovators in Church doctrines and government, cited Wycliffe to appear in St Paul's Church, before Courtenay, Bishop of London, to answer for his opinions. He came there on the 19th of February 1377, supported by the Duke

of Lancaster and the Lord Henry Percy, Marshal of England, in person, with a formidable array of knights. The bishop was highly offended by this bold advocacy of men who came there to be tried as heretics, and high words passed between him and the Duke, who is said to have threatened 'to pull down the pride of him, and of all the bishops of England,' and to have talked of dragging him out of the church by the hair of his head. A great crowd of citizens, who were present, shewed an inclination to take part with the bishop, and, further irritated by some proceedings in parliament which threatened their municipal rights, they rose tumultuously next morning, and rushing first to the house of the Marshal, broke into it, and committed various acts of violence. Not, however, finding Lord Henry Percy there, they hastened to the Savoy, the palace of the Duke of Lancaster, where 'a priest chancing to meete them, asked of some, what that busines meant. Whereunto he was answered, that they went to take the Duke and the Lord Percy, that they might be compelled to deliver to them Sir Peter de la More, whome they unjustly kept in prison. The priest sayde that Peter de la More was a traytour to the king, and was worthe to be hanged. With which words they all cryed, "This is Percy! this is the traytour of England! his speech bewrayeth him, though hee bee disguised in apparel." Then ranne they all upon him, striving who should give him his deaths wound, and after they had wounded him, they caryed him to prison, where he dyed.' The Bishop of London now arrived and appeased the rioters, but not till the great courtiers against whom their wrath had been excited were in great terror. The Duke and the Lord Henry Percy happened to be dining with a Flemish merchant named John of Yprès; 'but the Londoners knew it not, for they thought that he and the duke had bene at the Savoy, and therefore with all hast posted thither. But one of the dukes knights seeing these things, in great haste came to the place where the duke was, and, after that he had knocked and could not get in, hee sayd to Haverland the porter, "If thou love my lord and thy life, open the gate!" with which wordes hee got entrey, and with great feare hee telles the duke that without the gate were infinite numbers of armed men, and, unlesse hee tooke great heede, that day should bee his last. With which words, when the duke heard them, he leapt so hastily from his oysters, that he hurt both his legges against the fourme. Wine was offered to his oysters, but hee would not drinke for haste. Hee fledde with his fellow Syr Henry Percy, no manne following them, and, entring the Thamys, never stinted rowing untill they came to a house neere the manor of Kenington (besides Lambeth), where at that tyme the princesse was, with the young prince, before whom he made his complaint.' The Londoners were summoned before the King, who effected a reconciliation between them and the Duke; but, old Stow adds in his quaint manner, 'in the meane space some men ceased not to make rymes in reproch of the duke, and to fasten them in divers places of the city, whereby the greater fury of the people might be kindled, the

dukes fame blotted, and his name had in detestation.'

This was one of the last public audiences given by King Edward III., who died on the 21st of June following. At the beginning of the following reign, the hostile feeling between the Londoners and John of Gaunt continued, but his power had greatly declined, and for a while he took little part in public business. In Wat Tyler's rebellion, when the insurgents had obtained possession of London, they proclaimed the Duke of Lancaster as one of the arch-traitors, and burnt his palace of the Savoy to the ground. John of Gaunt was at this time in Scotland, employed in a diplomatic mission. He had not long returned from a hostile expedition to France, the ill success of which had increased his unpopularity. From this time forward the Duke was involved in frequent quarrels with his nephew the young king, and they became more and more difficult to reconcile, until at last Richard was glad to get rid of him by allowing him to carry an army of ten thousand men to Spain in order to recover by force the kingdom of Castile. He landed at Corunna in the month of July 1385, and marched through Galicia into Portugal, where the King of Portugal not only joined him with an army, but married Philippa, John of Gaunt's eldest daughter by his first wife. He was at first successful against the Spaniards, but eventually having lost the greater part of his troops by famine and disease, he was obliged to make his retreat into Guienne, and was glad to conclude a treaty with the *de facto* King of Castile, by which John of Gaunt abandoned all his claim to the throne of Castile and Leon, in consideration of a large sum of money, and of the marriage of Henry Prince of the Asturias, the heir of Castile, with his daughter by his second wife. On the return of the Duke of Lancaster from the Continent, he appears to have become suddenly popular, perhaps on account of his hostility to his nephew's favourites. He had been always accused of aiming at the English crown, and of a design to supplant the young King Richard; and it is said that he incurred Richard's final displeasure, by pressing the king too urgently to acknowledge his son Henry of Bolingbroke, heir to the throne. From this time John of Gaunt lived retired from court until his death, which occurred at Ely House, in Holborn, on the 3rd of February 1399. It is hardly necessary to add, that within a few weeks afterwards his son became King of England, as Henry IV.

BEAU NASH.

This extraordinary man, to whose amenities the city of Bath owes so much, was born at Swansea, in 1673; educated at Carmarthen School, and thence sent to Jesus College, Oxford, where his college life was mostly marked by his assiduity in intrigue. He next purchased for himself a pair of colours in the army, which, however, he soon quitted. He then entered himself at the Temple, to study for the law, but led so gay a town life without any visible means of supporting it, that his companions suspected him of being a highwayman.

Disgusted at these suspicions, Nash retired to Bath, then one of the poorest and meanest cities in England. It had its public amusements for the company who flocked there to drink the Bath waters, consisting chiefly of a band of musicians, who played under some fine old trees, called the Grove. In 1704, Nash was appointed 'master of the ceremonies,' and immediately removed the music to the Pump-room. His laws were so strictly enforced that he was styled 'King of Bath:' no rank would protect the offender, nor dignity of station condone a breach of the laws. Nash desired the Duchess of Queensberry, who appeared at a dress ball in an apron of point-lace, said to be worth 500 guineas, to take it off, which she did, at the same time desiring his acceptance of it; and when the Princess Amelia requested to have one dance more after 11 o'clock, Nash replied that the laws of Bath, like those of Lyceurgus, were unalterable. Gaming ran high at Bath, and frequently led to disputes and resort to the sword, then generally worn by well-dressed men. Swords were, therefore, prohibited by Nash in the public rooms; still, they were worn in the streets, when Nash, in consequence of a duel fought by torchlight, by two notorious gamblers, made the law absolute, 'That no swords should, on any account, be worn in Bath.' He also wrote certain 'Rules, by general consent determined,' to be observed at all public places of amusement: these he concluded as follows:—

'N.B.—Several men of no character, old women, and young ones of questionable reputation, are great authors of lies in this place, being of the sect of levellers.'

Nash was a sleeping partner in one of the principal gambling-houses in Bath; consequently, his life was chequered with vicissitudes. In 1732, he possessed six fine black coach-horses, which were so well matched and paced so well in full trot, that it appeared as if one horse drew the carriage. He kept a coachman, postilion, two footmen in livery, a gentleman out of livery, and a running footman. Many instances of Nash's benevolence are recorded. He gave away his money freely. A broken gambler, observing him one day win two hundred guineas at picquet, and put the money into his pocket with indifference, exclaimed, 'How happy that money would make me!' Nash, overhearing this, placed the money in his hand, saying, 'Go, then, and be happy!'

Of Nash's gambling life some expiatory anecdotes are related. The Earl of T——, when a young man, being fond of play, was desirous to have 'the King of Bath' for his opponent, for whom, however, he was no match. Nash, after winning from him several trifling stakes, resolved to attempt his cure. Accordingly, he engaged his lordship one evening to a serious amount; and having first won all his ready money then the title-deeds of his estates, and finally the very watch in his pocket and the rings on his fingers, Nash read him a lecture on the flagrant impropriety of attempting to make money by gambling, when poverty could only be pleaded in justification of such conduct. He then returned him all his winnings, at the same time exacting from him a promise that he would never play again. Not less generously did Nash be-

have to an Oxford student, who had come to spend the long vacation at Bath. This greenhorn, who also affected to be a gambler, was lucky enough to win a large sum of money from Nash, and after the game was ended was invited by him to supper. 'Perhaps,' said Nash, 'you think I have asked you for the purpose of securing my revenge; but I can assure you that my sole motive in requesting your company is to set you on your guard, and to entreat you to be warned by my experience, and to shun play as you would the devil. This is strange advice for one like me to give; but I feel for your youth and inexperience, and am convinced that if you do not stop where you now are, you will infallibly be ruined.' Nash was right. A few nights afterwards, having lost his entire fortune at the gaming table, the young man blew his brains out!

The Corporation of Bath so highly respected Nash, that the Chamber voted a marble statue of him, which was erected in the Pump-room, between the busts of Newton and Pope; this gave rise to a stinging epigram by Lord Chesterfield, concluding with these lines:

'The statue placed these busts between
Gives satire all its strength;
Wisdom and Wit are little seen,
But Folly at full length.'

Except a few months annually passed in superintending the amusements at Tunbridge, Nash lived at Bath until his health was worn out; and after one of Nature's serious warnings, he expired at his house in St John's-place, on the 3rd of February, 1761, aged eighty-seven years. He was buried in the Abbey Church with great ceremony: a solemn hymn was sung by the charity-school children, three clergymen preceded the coffin, the pall was supported by aldermen, and the Masters of the Assembly Rooms followed as chief mourners; while the streets were filled and the housetops covered with spectators, anxious to witness the respect paid to the venerable founder of the prosperity of the city of Bath.

SURRENDER OF HUME CASTLE.

Under the date February 3, 1651, we have, in Whitlocke's *Memorials*, intelligence of the siege of Hume Castle in Berwickshire, by Colonel Fenwick, an officer of Cromwell's army. This seat of a once powerful family occupied a commanding position at the western extremity of the great plain of the Merse. On its being summoned by Colonel Fenwick to surrender to Cromwell (who had recently beaten the Scots at Dunbar and overrun nearly the whole of Scotland south of the Forth), the governor answered, 'That he knew not Cromwell, and for his castle it was built upon a rock.' Four days later, there was intelligence in London, that Colonel Fenwick was playing with his guns upon Hume Castle, and that the governor sent this letter to him:

'I William of the Wastle
Am now in my castle,
And awe the dogs in the town
Shand garre me gang down.'

So Whitlocke prints or misprints the governor's brave answer, which in reality was only a somewhat confused version of a rhyme used by boys in one of their games. This sport, as practised to the present day in Scotland, is as follows. One of the party takes his station upon a large stone, heap of sand, rubbish, or any other materials, with a handkerchief in his hand, and cries out, as a defiance to his companions :

I Willie Wastle
Stand in my castle,
And a' the dogs in the town
'll no ding Willie Wastle down.

They assail him, trying to drive him from his position, while he endeavours to repel them with the handkerchief. Any one who succeeds in driving him off, takes the vacated position, and seeks to maintain it in the same manner; and so on. The quaint act of the governor in adopting this defiance against the Cromwellian officer, has been the means of certifying to us that the antiquity of the boy's game is not less than two centuries.

The governor—whose name we learn from another source to have been Thomas Cockburn—appears to have made a resistance in conformity with his answer to the English commander; and it is not till three days after, that Whitlocke records the great execution which the mortar pieces had done against Hume Castle. The shot had made great breaches and spoilt many rich goods, and Fenwick was preparing for a storm, when the governor beat a parley. 'Fenwick refused to treat unless they would presently surrender upon quarter for life; which they did; and Fenwick appointed some officers to look to the equal sharing of the goods among his soldiers; only the governor's lady had liberty to carry out some of her goods and bedding.*

The rhyme of Willie Wastle was used later in the century with reference to another public event. Mr William Veitch, a zealous Presbyterian clergyman who had been persecuted under the Stuarts, but after the Revolution became a prominent minister under the new establishment, is stated to have preached one day at Linton in Roxburghshire, when it pleased him to make allusion to the late episcopal frame of church government. 'Our bishops,' he said, 'had for a long time thought themselves very secure, like

Willie, Willie Wastle,
I am in my castle;
A' the dogs in the town
Dare not ding me down.

Yea, but there is a doggie in heaven that has dung them all down.†

St Blaize's Day.

St. Blasius is generally represented as bishop of Sebaste in Armenia, and as having suffered martyrdom in the persecution of Licinius in 316. The fact of iron *combs* having been used in tear-

* Whitlocke's Memorials, p. 463.

† Scots Presbyterian Eloquence Displayed.

ing the flesh of the martyr appears the sole reason for his having been adopted by the wool-combers as their patron saint. The large flourishing communities engaged in this business in Bradford and other English towns, are accustomed to hold a septennial jubilee on the 3rd of February, in honour of Jason of the Golden Fleece and St Blaize; and, not many years ago, this fête was conducted with considerable state and ceremony. First went the masters on horseback, each bearing a white sliver; then the masters' sons on horseback; then their colours; after which came the apprentices, on horseback, in their uniforms. Persons representing the king and queen, the royal family, and their guards and attendants, followed. Jason, with his golden fleece and proper attendants, next appeared. Then came BISHOP BLAIZE in full canonicals, followed by shepherds and shepherdesses, wool-combers, dyers, and other appropriate figures, some wearing *wool wigs*. At the celebration in 1825, before the procession started, it was addressed by Richard Fawcett, Esq., in the following lines suitable to the occasion :

'Hail to the day, whose kind auspicious rays
Deigned first to smile on famous Bishop Blaize !
To the great author of our combing trade,
This day's devoted, and due honour's paid ;
To him whose fame through Britain's isle resounds,
To him whose goodness to the poor abounds ;
Long shall his name in British annals shine,
And grateful ages offer at his shrine !
By this our trade are thousands daily fed,
By it supplied with means to earn their bread.
In various forms our trade its work imparts,
In different methods and by different arts ;
Preserves from starving, indigents distressed,
As combers, spinners, weavers, and the rest.
We boast no gems, or costly garments vain,
Borrowed from India, or the coast of Spain ;
Our native soil with wool our trade supplies,
While foreign countries envy us the prize.
No foreign broil our common good annoys,
Our country's product all our art employs ;
Our fleecy flocks abound in every vale,
Our bleating lambs proclaim the joyful tale.
So let not Spain with us attempt to vie,
Nor India's wealth pretend to soar so high ;
Nor Jason pride him in his Colchian spoil,
By hardships gained and enterprising toil,
Since Britons all with ease attain the prize,
And every hill resounds with golden cries.
To celebrate our founder's great renown,
Our shepherd and our shepherdess we crown ;
For England's commerce, and for George's sway,
Each loyal subject give a loud HUZZA.
HUZZA ! '*

A significant remark is dropped by the local historian of these fine doings, that they were most apt to be entered upon when trade was flourishing.

There was also a general popular observance of St Blaize's day in England. Apparently for no better reason than the sound of the venerated prelate's name, it was customary to light fires on this day, or evening, on hill-tops or other conspicuous places. Perhaps the Scotch custom of the *Candlemass Bleeze*, already adverted to, was only St Blaize's fire transferred back to his eve. So determinedly anxious were the country

* *Leeds Mercury*, Feb. 5, 1825.

people for the celebration by a blaze, that they would sacrifice articles of some importance to make one. Country women went about during the day in an idle merry humour, making good cheer; and if they found a neighbour spinning, they thought themselves justified in making a conflagration of the distaff.

In the simple days when England was Catholic, it was believed that, by a charm in name of St Blaize, a thorn could be extracted from the flesh, or a bone from the throat. It was only necessary to hold the patient, and say, 'Blaize, the martyr and servant of Jesus Christ, commands thee [in the case of a bone in the throat] to pass up or down; [in the case of a thorn] to come forth;' and the command was instantly effectual.

The Wedding Ring.

Mystic significance has, from the earliest period, been associated with the ring. In its circular continuity it was accepted as a type of eternity, and hence of the stability of affection. The Greek and Roman rings are often inscribed with sentences typical of this feeling. *May you live long* is engraved on one published by Caylus; *I bring good fortune to the wearer*, was another usual inscription; sometimes a stone was inserted in the ring, upon which was engraved an intaglio, representing a hand pulling the lobe of an ear, with the one word *Remember* above it. Others have the wish *Live happy*, or *I give this love pledge*. They were lavishly displayed by the early nations; but, except as an indication of gentility or wealth, they appear to have been little valued until Greek sentimentalism gave them a deeper significance. As a gift of love, or a sign of betrothal, they came into ancient use. The Jews make the ring a most important feature of the betrothal in the marriage ceremony. They were sometimes of large size, and much elaboration of

workmanship, as in the specimen here engraved, selected from the curious collection of rings formed by the late Lord Londesborough. It is beautifully wrought of gold filigree, and richly enamelled. Upon it are the words *Joy be with you*, in Hebrew characters. According to the Jewish law, it is necessary that this ring be of a certain value; it is therefore examined and certified by the officiating Rabbi and chief officers of the synagogue, when it is received from the bridegroom; whose absolute property it must be, and not obtained on credit or by gift. When this is properly certified, the ring is returned to him, and he places it on the bride's finger, calling attention to the fact that she is, by means of this ring, consecrated to him; and so completely binding is this action that, should the marriage not be further consecrated, no other could be contracted by either party without a legal divorce.

In the middle ages, solemn betrothal by means of the ring often preceded matrimony, and was sometimes adopted between lovers who were about to separate for long periods. Chaucer, in his *Troilus and Cresside*, describes the heroine as giving her lover a ring, upon which a love-motto was engraved, and receiving one from him in return. Shakespeare has more than one allusion to the custom, which is absolutely enacted in his *Two Gentlemen of Verona*, when Julia gives Proteus a ring, saying, 'Keep you this remembrance for thy Julia's sake;' and he replies, 'Why, then, we'll make exchange; here, take you this.' The invention of the *gimmel* or linked ring gave still greater force and significance to the custom. Made with a double and sometimes a triple link, which turned upon a pivot, it could shut up into one solid ring. This will be better understood by our second cut, which represents one of these rings. It is shewn first as it appears when closed; to the sides of

each outer hoop a small hand is attached, each fitting into the other, as the hoops are brought together, and enclosing a heart affixed to the central notched ring. It was customary to break these rings asunder at the betrothal, which was ratified in a solemn manner over the Holy Bible, and sometimes in the presence of a witness, when the man and the woman broke away the upper and lower rings from the central one, which the witness retained; when the marriage contract was fulfilled at the altar, the three portions of the ring were again united, and the ring used in the ceremony.

The fourth finger of the left hand has from long usage been consecrated to the wedding ring, from an ancient belief that from this finger a nerve went direct to the heart. So completely was this fanciful piece of physiology confided in by the Greeks and Romans, that their physicians term this the medical or healing finger, and used it to stir their mixtures, from a notion that nothing noxious could communicate with it, without its giving immediate warning by a palpitation of the heart. This superstition is retained in full force in some country places in England, particularly in Somersetshire, where all the fingers of the hand are thought to be injurious except the ring-finger, which is thought to have the power of curing any sore or wound which is stroked by it. That a sanatory power is imparted to the wedding ring, is believed by the

peasantry, both in England and Ireland, who fancy any growth like a wart on the skin may be removed by rubbing a wedding ring upon them.

The clasped hands adopted on the gimmel rings became a frequent emblem on the solid wedding ring. The Londesborough collection furnishes us with a peculiarly curious example of the Shaksperian era; throwing a side light upon a passage in the great dramatist's *Twelfth Night*,

where Malvolio, breaking open the letter purporting to be in his mistress's handwriting, says: 'By your leave, wax. Soft!—and the impresure her Lucrece, with which she uses to seal.' The bust of Lucretia, with her hand directing the fatal dagger, appears on the face of this ring; at the back are two clasped hands; the whole being enriched by niello engraving.

This fashion of ring is still in constant use in that curious local community of fishermen inhabiting the Claddagh at Galway on the western coast. They number with their families between five and six thousand, and are particularly exclusive in their tastes and habits, rarely intermarrying with other than their own people. The wedding ring is an heir-loom in the family; it is regularly transferred from the mother to the daughter who is first married, and so passes to her descendants. Many of them still worn there are very old, and show traces of still older design, like that in our cut, whose prototype may have been made in the Elizabethan era. The hands in this instance support a crowned heart, typical of the married state.

Within the hoop of the ring, it was customary, from the middle of the sixteenth to the close of the seventeenth century, to inscribe a motto or 'posy,' consisting frequently of a very simple sentiment in commonplace rhyme. The following are specimens:

'Our contract
Was Heaven's act.'

'In thee, my choice,
I do rejoice.'

'God above
Encrease our love.'

The engraving exhibits one of these 'posy-rings,' of the simplest form, such as would be in ordinary use in the early part of the seventeenth century. The posy was always on the flat inner side of the ring. Shakespeare has alluded more than once in contemptuous terms to these rhyming effusions. In the *Merchant of Venice*, Act v., sc. 1, when Portia asks Gratiano the reason of his quarrel with Nerissa, he answers:

'About a hoop of gold, a paltry ring
That she did give me; whose posy was,
For all the world, like Cutler's poetry
Upon a knife, *Love me, and leave me not.*'

Hamlet asks at the conclusion of the triple lines of rhyme uttered by the players at the commencement of their tragedy—'Is this a prologue, or the posy of a ring?' Yet the composition of such posies exercised the wits of superior men occasionally, and they were sometimes terse and epigrammatic. In 1624, a small collection of them was printed with the quaint title, *Love's Garland, or posies for Rings, Handkerchiefs, and Gloves; and such pretty tokens, that lovers send their loves*. It is curious that the second of the posies given above, and which was copied from a ring of the time of the publication of this volume, is given with a very slight variation in the series. The custom of placing the heart on the ring is also alluded to in the following posy:

'My heart and I,
Until I dye.'

The joined hands is also notified in another:

'Not two, but one
Till life be gone.'

One of the most complete jingles is the following:

'Desire,
Like fire,
Doth still aspire.'

Of a more meritorious kind, are the following specimens from a manuscript of the same period:

'Constancy and heaven are round,
And in this the Emblem's found.'

'Weave me out, Love shall not waste,
Love beyond Tyme still is plac'd.'

'Weave this text, and when you looke
Upon your finger, swear by th' booke.'

Lilly, in his address to the ladies, prefixed to the second part of his *Euphues*, 1597, hopes they will be favourable to his work, 'writing their judgments as you do the Posies in your rings, which are always next to the finger, not to be seene of him that holdeth you by the hand, and yet knowne by you that weare them on your hands.'

The Rev Giles Moore notes in his *Journal*, 1673-4 (Sussex Archæological Collections, vol. i.), 'I bought for Ann Brett a gold ring, this being the posy: "When this you see, remember me."'

One of the most whimsical of these inscriptions was used by Dr John Thomas, Bishop of Lincoln in 1753, who had been married three times; on his fourth marriage he placed as a motto on the wedding ring:

'If I survive,
I'll make them five!'

'My Lady Rochford,' writes Horace Walpole, 'desired me t'other day to give her a motto for a ruby ring,' proving the late continuance of the custom. The most modern form of sentimental or significant ring was ingeniously constructed

by French jewellers in the early part of the present century, and afterwards adopted by English ones, in which a motto was formed by the arrangement of stones around the hoop; the initial letter of the name of each stone forming words, when combined; as in the following examples:

R uby.	L apis Lazuli.
E merald.	O pal.
G arnet.	V erde antique.
A methyst.	E merald.
R uby.	M alachite.
D iamond.	E merald.

AN ODD FUNERAL IN THE TIME OF THE COMMONWEALTH.

Dugdale has preserved for us an account of the funeral of the wife of a gentleman, of good means, but cynical temper, during the Commonwealth. The gentleman was Mr Fisher Dilke, Registrar of Shustoke; his wife was sister of Sir Peter Wentworth, one of the regicide judges. 'She was a frequenter of conventicles; and dying before her husband, he first stripped his barn-wall to make her a coffin; then bargained with the clerk for a groat to make a grave in the churchyard, to save eightpence by one in the church. This done, he speaketh about eight of his neighbours to meet at his house, for bearers; for whom he provided three twopenny cakes and a bottle of claret [this treat would cost 2s. at the utmost]. And some being come, he read a chapter in Job to them till all were then ready; when, having distributed the cake and wine among them, they took up the corpse, he following them to the grave. Then, putting himself in the parson's place, (none being there,) the corpse being laid in the grave, and a spade of mould cast thereon, he said, "Ashes to ashes, dust to dust;" adding, "Lord, now lettest thou thy servant depart in peace, for mine eyes have seen thy salvation;" and so returned home.*

FEBRUARY 4.

St Phileas and Philoromus, martyrs in Egypt, *circ.* 309. St Isidore of Pelusium, 449. St Modan, abbot in Scotland, 7th century. St Rembert, archbishop of Bremen, 888. St Gilbert, abbot in England, 1190. St Andrew Corsini, bishop, 1373. St Jane (or Joan), queen of France, 1505. St Joseph of Leonissa, 1612.

Born.—George Lillo, dramatist, 1693, *Moorgate*.

Died.—Lucius Septimus Severus, 211, *York*; Egbert (*of England*), 836; John Rogers, burnt at *Smithfield*, 1555; Giambattista Porta, natural philosopher, inventor of the camera obscura, 1615, *Naples*; George Abbot, archbishop of Canterbury, 1648; Rev. Robert Blair, poet, 1746; Louis, Duke of Orleans, 1752; Charles de la Condamine, astronomer, 1774; John Hamilton Mortimer, historical painter, 1779, *Aylesbury*.

THE EMPEROR SEVERUS.

Several of the Roman emperors had visited Britain, but Severus was the only one who came to die in this distant island. Britain had then been a Roman province full a hundred years, and as such had become peaceable and prosperous, for even the Caledonians in the North had ceased to

be troublesome, and Roman roads, with accompanying towns, had been carried up to the borders of the wild highlands. A still greater proof of the prosperous state of this province is found in the circumstance that its governors could interfere actively in the affairs of the Continent, raise formidable rebellions, and even contend for the empire. Such was the case when, in A.D. 193, the imperial throne became an object of dispute between three competitors,—Severus, Pescennius Niger, and Albinus; the last being governor of Britain. Albinus marched with the legions of Britain, and soon made himself master of Gaul; but Severus, to equal courage and great military skill, joined an amount of craft and treachery which soon gave him the superiority over both his rivals. Having defeated and slain Niger, he reached Rome with his troops in 196, and hastening to Gaul, fought the great battle of Lyons on the 19th of February 197, in which Albinus also perished. Severus, thus left master of the empire, had his attention soon called to the state of Britain.

It appears that during these events the Caledonians had again become formidable, partly through some great ethnological change which was going on in the North, partly it is conjectured through an immigration on a large scale of foreign tribes, perhaps from the North of Europe. Virius Lupus, the new proprator or governor of Britain appointed by Severus, found himself unable effectually to repress their turbulency; and he was obliged, in the year 208, to write to the Emperor for assistance. Severus displayed in this last act of his life all the qualities which had raised him to power. He determined to assist his proprator in person; and although it was already late in the year, he collected his army, took with him his two sons, Caracalla and Geta, and, arriving in Britain in an incredibly short space of time, fixed his court at the city then called Eburacum, but now York, which was the station of the sixth legion. The Northern tribes, astonished at the rapidity of his movements, sent envoys to ask for peace, but in vain; and the vigorous old soldier, who was in his sixty-third year and crippled with painful disease, placed himself at the head of his army, marched directly into the wilds of the North, in spite of obstacles in overcoming which no less than fifty thousand of his men are said to have perished, and never stopped till he reached the extreme northern coast of Scotland, where he is said to have observed the parallax of the sun, and the comparative length of the days and nights. During this arduous campaign, the Emperor was often carried in a litter, which he was unable to leave for several successive days, but everything yielded before his stern and inflexible will. To add to his sufferings, his son Caracalla, who accompanied him while Geta remained in the south, grieved him by his unfilial conduct, and not only entered into culpable intrigues against him, but actually on one occasion attempted his life.

After having thus reduced the Caledonians and Mæata, as the two great tribes who then shared North Britain were called, Severus returned in triumph to Eburacum, or York,—it is supposed towards the end of the year 209; but he had not

* Life of Sir William Dugdale, 4to, p. 106.

been there long before news arrived that the Caledonians and Mæatæ, false to their oaths, had risen again and invaded the Roman province. Without delay he gave orders for reassembling the army, and, declaring in a quotation from Homer that he would this time entirely extirpate the faithless barbarians, prepared to place himself again at its head. He was at this moment in such a state of exhaustion that he was unable even to walk, and during his absence from the troops Caracalla recommenced his intrigues, and persuaded them to choose him for their emperor. When Severus was informed of this act of rebellion, all his energies were roused, and, mounting the tribunal, caused all who had taken part in it to appear before him, and addressing them fiercely said, 'Soldiers, it is not the feet, but the head which discharges the duties of a general.' At the same moment he gave the order to march against the enemy; but the effort was too much for him, and they had not proceeded far before his disease assumed so dangerous a character, that they were obliged to carry him back to Eburacum, where he died on the 4th of February 211. His body was consumed in a funeral pile in the city where he died, and it has been said that the great tumulus still remaining at York was raised over the spot as a monument. His ashes were gathered into an urn of alabaster, and carried to Rome.

FATE OF LA CONDAMINE.

The leading incidents of the life of this eminent philosopher entitle him to be considered as a *martyr of science*. A native of Paris, upon leaving college he entered the army, and shewed great intrepidity in the siege of Rosas. Upon his return to Paris, he entered the Academy of Sciences, as assistant chemist. When the Academy were arranging for a voyage to the equator, for measuring an arc of the meridian, with a view more accurately to determine the dimensions and figure of the earth, La Condamine was fascinated by the project. 'The very desire,' says Condorcet, 'of being connected with so perilous an undertaking, made him an astronomer.' His proposals having been accepted by the Academy, in 1735, in company of M.M. Bouguer and Godin, he proceeded to Peru; on reaching which the natives suspected the philosophers of being either heretics or sorcerers, come in search of new gold mines: the surgeon to the expedition was assassinated; the people were excited against them; and the country was difficult and dangerous. Bouguer and La Condamine and the Spanish Commissioners quarrelled, and conducted their operations separately; but the results did not differ from their average by a five-thousandth part of the whole, in the length of a degree of the meridian. They encountered great fatigues and hardships, until their return in 1743; when La Condamine published an account of his voyage up the Amazon, and his travels in South America. His determination of the figure of the earth, conjointly with Bouguer, appeared later. Among his other scientific labours was his proposition to adopt the length of the seconds pendulum as an invariable unit of measure. On the 4th of February 1774, he died while voluntarily undergoing an experimental operation for the

removal of a malady contracted in Peru. Always occupied, he appears to have needed time to feel his misfortunes; and, notwithstanding his sufferings, he appears never to have been unhappy; his wit and amiability of temper made him many friends, and his humour was generally successful in blunting the attacks of enmity.

A ROYAL SPEECH BY CANDLELIGHT.

The opening-day of the Session of Parliament in 1836 (February 4), was unusually gloomy, which, added to an imperfection in the sight of King William IV., and the darkness of the House, rendered it impossible for his Majesty to read the royal speech with facility. Most patiently and good-naturedly did he struggle with the task, often hesitating, sometimes mistaking, and at others correcting himself. On one occasion, he stuck altogether, and after two or three ineffectual efforts to make out the word, he was obliged to give it up; when, turning to Lord Melbourne, who stood on his right hand, and looking him most significantly in the face, he said in a tone sufficiently loud to be audible in all parts of the House, 'Eh! what is it?' Lord Melbourne having whispered the obstructing word, the King proceeded to toil through the speech; but by the time he got to about the middle, the librarian brought him two wax-lights, on which he suddenly paused; then raising his head, and looking at the Lords and Commons, he addressed them, on the spur of the moment, in a perfectly distinct voice, and without the least embarrassment or the mistake of a single word, in these terms:

'My Lords and Gentlemen,—

'I have hitherto not been able, from want of light, to read this speech in the way its importance deserves; but as lights are now brought me, I will read it again from the commencement, and in a way which, I trust, will command your attention.'

The King then again, though evidently fatigued by the difficulty of reading in the first instance, began at the beginning, and read through the speech in a manner which would have done credit to any professor of elocution.

Early Lending Library.—In the reign of Henry IV. was built a library in Durham College (now Trinity College), Oxford, for the large collection of books of Richard of Bury, said to consist of more volumes than all the bishops of England had then in their possession. Richard had bestowed certain portions of his valuable library upon a company of scholars residing in a Hall at Oxford; and he drew up 'A provident arrangement by which books may be lent to strangers,' meaning students of Oxford not belonging to that Hall. The custody of the books was deputed to five of the scholars, of which three, and in no case fewer, could lend any books for inspection and use only; but for copying and transcribing, they did not allow any book to pass without the walls of the house. And when any scholar, whether secular or religious, was qualified for the favour, and demanded the loan of a book, the keepers, provided they had a duplicate of the book, might lend it to him, taking a security exceeding in value the book lent. The reader may smile at the caution; but we have known some possessors of books in our own day to adopt similar rules.

FEBRUARY 5.

St Agatha, virgin martyr, patroness of Malta, 251. The martyrs of Pontus, 304. St Abramius, bishop of Arbela, martyr, 348. St Avitus, archbishop of Vienne, 525. St Alice (or Adelaide), abbess at Cologne, 1015. The twenty-six martyrs of Japan, 1697.

Born.—Bishop Thomas Tanner, 1674 (N. S.), *Market Lavington*; Rev. Dr John Lingard, historian, 1771, *Winchester*; Sir Robert Peel, Bart., statesman, 1788, *Bury, Lancashire*; Dr John Lindley, botanist, 1799, *Catton*.

Died.—Marcus Cato, B.C. 46, *Utica*; James Meyer, Flemish scholar, 1552; Adrian Reland, Orientalist and scholar, 1718, *Utrecht*; James, Earl Stanhope, political character, 1721, *Chevening*; Dr William Cullen, 1790, *Kirkcubright*; Lewis Galvani, discoverer of galvanism, 1799, *Bologna*; Thomas Banks, sculptor, 1805; General Paoli, Corsican patriot, 1807.

DEATH OF THE FIRST EARL STANHOPE.

This eminent person carried arms under King William in Flanders; and his Majesty was so struck with his spirit and talent that he gave him a captain's commission in the Foot Guards, with the rank of lieutenant-colonel, he being then in his 21st year. He also served under the Duke of Schomberg and the Earl of Peterborough; and subsequently distinguished himself as Commander-in-chief of the British forces in Spain. At the close of his military career, he became an active Whig leader in Parliament; took office under Sunderland, and was soon after raised to the peerage. His death was very sudden. He was of constitutionally warm and sensitive temper, with the impetuous bearing of the camp, which he had never altogether shaken off. In the course of the discussion on the South Sea Company's affairs, which so unhappily involved some of the leading members of the Government, the Duke of Wharton (Feb. 4, 1721) made some severe remarks in the House of Lords, comparing the conduct of ministers to that of Sejanus, who had made the reign of Tiberius hateful to the old Romans. Stanhope, in rising to reply, spoke with such vehemence in vindication of himself and his colleagues, that he burst a blood-vessel, and died the next day. 'May it be eternally remembered,' says the *British Merchant*, 'to the honour of Earl Stanhope, that he died poorer in the King's service than he came into it. Walsingham, the great Walsingham, died poor; but the great Stanhope lived in the time of South Sea temptations.'

GENERAL PAOLI AND DR JOHNSON.

When, in 1769, this patriotic General, the Garibaldi of his age, was overpowered in defending Corsica against the French, he sought refuge in England, where he obtained a pension of £1200 a year, and resided until 1789. Boswell, who had travelled in Corsica, anticipated introducing him to Johnson; 'for what an idea,' says he, in his account of the island, 'may we not form of an interview between such a scholar and philosopher as Mr Johnson, and such a legislator and general as Paoli!' Accordingly, upon his arrival in England, he was presented to Johnson by Boswell, who tells us, they met with a manly case,

mutually conscious of their own abilities, and the abilities of each other. 'The General spoke Italian, and Dr Johnson English, and understood one another very well, with a little interpretation from me, in which I compared myself to an isthmus, which joins two great continents.' Johnson said, 'General Paoli had the loftiest port of any man he had ever seen.'

Paoli lived in good style, and with him, Johnson says, in one of his letters to Mrs Thrale, 'I love to dine.' Six months before his death, June 25, 1784, the great Samuel was entertained by Paoli at his house in Upper Seymour-street, Portman-square. 'There was a variety of dishes much to his (Johnson's) taste, of all of which he seemed to me to eat so much, that I was afraid he might be hurt by it; and I whispered to the General my fear, and begged he might not press him. "Alas!" said the General, "see how very ill he looks; he can live but a very short time. Would you refuse any slight gratifications to a man under sentence of death? There is a humane custom in Italy, by which persons in that melancholy situation are indulged with having whatever they like to eat and drink, even with expensive delicacies."

On the breaking out of the French Revolution, it was thought that Paoli, by the influence of his name with his countrymen, might assist in preserving their loyalty against the machinations of the liberals. Repairing to Paris, he was graciously received by Louis XVI., and appointed Lieutenant-General of the island. The Revolutionists were at first too much for him; but, on the war breaking out between England and France, he, with the aid of the English, drove the French garrisons out of the island. On departing soon after, he strongly recommended his countrymen to persist in allegiance to the British crown. He then returned to England, where he died February 5, 1807. A monument, with his bust by Flaxman, was raised to his memory in Westminster Abbey.

THE BELL-SAVAGE INN—BANKS'S HORSE.

On the 5th February, in the 31st year of Henry VI., John French gave to his mother for her life 'all that tenement or inn, with its appurtenances, called *Savage's Inn*, otherwise called the *Bell on the Hoop*, in the parish of St Bridget, in Fleet-street, London, to have and to hold, without impeachment of waste.* From this piece of authentic history we become assured of the fallacy of a great number of conjectures that have been indulged in regarding the origin of the name 'Bell and Savage,' or 'Bell-Savage,' which was for ages familiarly applied to a well-known, but now extinct inn, on Ludgate-hill. The inn had belonged to a person named Savage. Its pristine sign was a bell, perched, as was customary, upon a hoop. 'Bell Savage Inn' was evidently a mass made up in the public mind, in the course of time, out of these two distinct elements.

Moth, in *Love's Labour Lost*, wishing to prove how simple is a certain problem in arithmetic, says, 'The dancing horse will tell you.' This is believed to be an allusion to a horse called

* Archæologia, xviii. 198.

Morocco, or Marocco, which had been trained to do certain extraordinary tricks, and was publicly exhibited in Shakspeare's time by its master, a Scotchman named Banks. The animal made his appearance before the citizens

of London, in the yard of the Belle Savage Inn, the audience as usual occupying the galleries which surrounded the court in the centre of the building, as is partially delineated in the annexed copy of a contemporary wood-print, which illus-

THE WONDERFUL HORSE OF AN. 1595.

trates a brochure published in 1595, under the name of '*Maroccus Exstaticus: or Bankes Bay Horse in a Traunce; a Discourse set downe in a merry dialogue between Bankes and his Beast intitled to Mine Host of the Belsauage and all his honest guests.*' Morocco was then a young nag of a chestnut or bay colour, of moderate size. The tricks which the animal performed do not seem to us now-a-days very wonderful; but such matters were then comparatively rare, and hence they were regarded with infinite astonishment. The creature was trained to erect itself and leap about on its hind legs. We are gravely told that it could dance *the Canaries*. A glove being thrown down, its master would command it to take it to some particular person: for example, to the gentleman in the large ruff, or the lady with the green mantle; and this order it would correctly execute. Some coins being put into the glove, it would tell how many they were by raps with its foot. It could, in like manner, tell the numbers on the upper face of a pair of dice. As an example of comic performances, it would be desired to single out the gentleman who was the greatest slave of the fair sex; and this it was sure to do satisfactorily enough. In reality, as is now well known, these feats depend upon a simple training to obey a

certain signal, as the call of the word *Up*. Almost any young horse of tolerable intelligence could be trained to do such feats in little more than a month.

Morocco was taken by its master to be exhibited in Scotland in 1596, and there it was thought to be animated by a spirit. In 1600, its master astonished London by making it override the vane of St Paul's Cathedral. We find in the *Jest-books* of the time, that, while this performance was going on in presence of an enormous crowd, a serving-man came to his master walking about in the middle aisle, and entreated him to come out and see the spectacle. 'Away, you fool!' answered the gentleman; 'what need I go so far to see a horse on the top, when I can see so many asses at the bottom!' Banks also exhibited his horse in France, and there, by way of stimulating popular curiosity, professed to believe that the animal really was a spirit in equine form. This, however, had very nearly led to unpleasant consequences, in raising an alarm that there was something diabolic in the case. Banks very dexterously saved himself for this once by causing the horse to select a man from a crowd with a cross on his hat, and pay homage to the sacred emblem, calling on all to observe that nothing satanic could have been in-

duced to perform such an act of reverence. Owing, perhaps, to this incident, a rumour afterwards prevailed that Banks and his curtal [nag] were burned as subjects of the Black Power of the World at Rome, by order of the Pope. But more authentic notices shew Banks as surviving in King Charles's time, in the capacity of a jolly vintner in Cheapside.*

It may at the same time be remarked that there would have been nothing decidedly extraordinary in the horse being committed with its master to a fiery purgation. 'In a little book entitled *Le Diable Bossu*, Nancy, 1708, 18mo, there is an obscure allusion to an English horse whose master had taught him to know the cards, and which was burned alive at Lisbon in 1707; and Mr Granger, in his *Biographical History of England* (vol. iii., p. 164, edit. 1779), has informed us that, within his remembrance, a horse which had been taught to perform several tricks was, with his owner, put into the Inquisition.'—*Douce's Illustrations of Shakspeare*, i. 214.

THE BATTLE OF PLASSEY.

The 5th of February 1757 is noted as the date of the battle which may be said to have decided that the English should be the masters of India. Surajah Dowlah, the youthful Viceroy or Nabob of Bengal, had overpowered the British factory at Calcutta, and committed the monstrous cruelty of shutting up a hundred and forty-six English in the famous Black Hole, where, before morning, all but twenty-three had perished miserably. Against him came from Madras the 'heaven-born soldier' Robert Clive, with about three thousand troops, of which only a third were English, together with a fleet under Admiral Watson. Aided by a conspiracy in the Nabob's camp in favour of Meer Jaffier, and using many artifices and tricks which seemed to him justified by the practices of the enemy, Clive at length found himself at Cossimbuzar, a few miles from Plassey, where lay Surajah Dowlah with sixty thousand men. He had to consider that, if he crossed the intermediate river and failed in his attack, himself and his troops would be utterly lost. A council of war advised him against advancing. Yet, inspired by his wonderful genius, he determined on the bolder course. The Bengalese army advanced upon him with an appearance of power which would have appalled most men; but the first cannonade from the English threw it into confusion. It fled; Surajah descended into obscurity; and the English found India open to them. One hardly knows whether to be most astonished at the courage of Clive, or at the perfidious arts (extending in one instance to deliberate forgery) to which he at the same time descended in order to out-manceuvre a too powerful enemy. The conduct of the English general is defended by his biographer Sir John Malcolm, but condemned by Lord Macaulay, who remarks that the maxim 'Honesty is the best policy' is even more true of states than of individuals, in as far as states

* See Halliwell's *Shakspeare*, notes to *Love's Labour Lost*, for a great assemblage of curious notices regarding Banks and Morocco; also Chambers's *Domestic Annals of Scotland*, under April 1596.

are longer-lived, and adds, 'It is possible to mention men who have owed great worldly prosperity to breaches of private faith; but we doubt whether it is possible to mention a state which has on the whole been a gainer by a breach of public faith.'

Insignificant as was the English force employed on this occasion, we must consider the encounter as, from its consequences, one of the great battles of the world.

FEBRUARY 6.

St Dorothy, virgin martyr, 304. St Mel, bishop of Ardagh, 488. St Vedast, bishop of Arras, 539. St Barsanuphius, of Palestine, 6th century. St Amandus, 675.

Born.—Antoine Arnauld, French theologian, 1612, Paris; Anne, Queen of England, 1665, *St James's*; Augustine Calmet, 1672.

Died.—Jacques Amyot, Great Almoner of France, 1593; Charles II., King of England, 1685, *Whitehall*; Pope Clement XII., 1740; Dr Joseph Priestley, chemist and electrician, 1804, *Pennsylvania*.

DEATH OF CHARLES THE SECOND.

The winter of 1684-5 had been spent by the Court at Whitehall, amid the gaities common to the season. Evelyn could never forget 'the inexpressible luxury and profaneness, gaming, and all dissoluteness, and, as it were, a total forgetfulness of God (it being Sunday evening)' which he was witness of; 'the King sitting and toying with his concubines, Portsmouth, Cleveland, Mazarine, &c., a French boy singing love-songs in that glorious gallery, whilst about twenty of the great courtiers and other dissolute persons were at basset, round a large table, a bank of at least £2000 in gold before them; upon which two gentlemen who were with me made strange reflections. Six days after, all was in the dust.' Burnet tells us that the King 'ate little all that day, and came to Lady Portsmouth, his favourite mistress, at night, and called for a porringer of spoon meat. Being made too strong for his stomach, he ate little, and had a restless night.' Another account states that the revels extended over Sunday night until the next morning, when at eight o'clock the King swooned away in his chair, and was seized with a fit of apoplexy; and, according to Evelyn, had not Dr King, who was accidentally present, and had a lancet in his pocket, bled his Majesty, 'he would certainly have died that moment, which might have been of direful consequence, there being nobody else present with the King, save his doctor and one more. It was a mark of extraordinary dexterity, resolution, and presence of mind in the doctor, to let him bleed in the very paroxysm, without staying the coming of other physicians, which regularly should have been done, and for want of which he must have a regular pardon, as they tell me.' The Privy Council, however, approved of what he had done, and ordered him £1000, but which was never paid him. This saved the King for the instant; but next morning he had another fit, and the phy-

sicians told the Duke of York that his majesty was not likely to live through the day.

Then took place a scene, revealing the hypocrisy of a lifetime; that is, shewing that Charles, while professing Protestantism, had all along been, as far as he was any thing, a Catholic. 'The Duke,' says Burnet, 'ordered Huddleston, the priest, who had mainly contributed to the saving of Charles at Worcester, to be brought to the lodgings under the bed-chamber. When Huddleston was told what was to be done, he was in great confusion, for he had not brought the host. He went, however, to another priest, who lived in the court, who gave him the pix, with an host in it. Everything being prepared, the Duke whispered the King in the ear; upon that the King ordered that all who were in the bedchamber should withdraw, except the Earls of Bath and Feversham; and the door was double-locked. The company was kept out half an hour; only Lord Feversham opened the door once, and called for a glass of water. Cardinal Howard told Bishop Burnet that, in the absence of the company, Huddleston, according to the account he sent to Rome, made the King go through some acts of contrition, and, after obtaining such a confession as he was then able to give, he gave him absolution. The consecrated wafer stuck in the King's throat, and that was the reason of calling for a glass of water. Charles told Huddleston that he had saved his life twice, first his body, then his soul.'

'When the company were admitted, they found the King had undergone a marvellous alteration. Bishop Ken then vigorously applied himself to the awaking of the King's conscience, and pronounced many short ejaculations and prayers, of which, however, the King seemed to take no notice, and returned no answer. He pressed the King six or seven times to receive the sacrament; but the King always declined, saying he was very weak. But Ken pronounced over him absolution of his sins. * * * The King suffered much inwardly, and said he was burnt up within. He said once that he hoped he should climb up to heaven's gates, which was the only word savouring of religion that he used.'

During the night Charles earnestly recommended the Duchess of Portsmouth and her boy to the care of James; 'and do not,' he good-naturedly added, 'let poor Nelly starve.' The Queen sent excuses for her absence, saying she was too much disordered to resume her post by the couch, and implored pardon. 'She ask my pardon, poor woman!' cried Charles; 'I ask hers, with all my heart.'

'The morning light began to peep through the windows of Whitehall, and Charles desired the attendants to pull aside the curtains, that he might once more look at the day. He remembered that it was time to wind up a clock which stood near his bed. These little circumstances were long remembered, because they proved beyond dispute that, when he declared himself a Roman Catholic, he was in full possession of his faculties. He apologised to those who stood round him all night for the trouble which he had caused. He had been, he said, a most unconscionable time dying, but he hoped they would excuse it.

This was the last glimpse of that exquisite urbanity so often found potent to charm away the resentment of a justly incensed nation. Soon after dawn the speech of the dying man failed. Before ten his senses were gone. Great numbers had repaired to the churches at the hour of morning service. When the prayer for the King was read, loud groans and sobs shewed how deeply his people felt for him. At noon, on Friday, the 6th of February, he passed away without a struggle.*

It was the belief of many at the time that Charles II. was poisoned. It was common then and in the preceding age to attribute the sudden death of any great man to poison; but, in Charles's case, the suspicions are not without authority. Sheffield, Duke of Buckingham, says: 'The most knowing and the most deserving of all his physicians did not only believe him poisoned, but thought himself so too, not long after, for having declared his opinion a little too boldly.'† Bishop Patrick strengthens the supposition from the testimony of Sir Thomas Mellington, who sat with the King for three days, and never went to bed for three nights.‡ Lord Chesterfield, the grandson of the Earl of Chesterfield who was with Charles at his death, states positively that the King was poisoned.§ The Duchess of Portsmouth, when in England in 1699, is said to have told Lord Chancellor Cowper that Charles II. was poisoned at her house by one of her footmen in a dish of chocolate; and Fox had heard a somewhat similar report from the family of his mother, who was grand-daughter to the Duchess.

This historical evidence is, however, invalidated by more recent investigation. On examining King Charles's head, a copious effusion of lymph was found in the ventricles and at the base of the cranium; from which Sir Henry Hallford was disposed to think that the King might have been still further bled with advantage. It is quite evident from Sir Henry's account, that Charles II. died of apoplexy—the only too probable consequence of his excesses—and consequently that his indifference to the solicitations of those about him, on religious matters, can only, with charity, be attributed to the effects of his disease.||

A WONDERFUL CHILD.

The annals of precocity present no more remarkable instance than the brief career of Christian Heinecker, born at Lubeck, February 6, 1721. At the age of ten months he could speak and repeat every word which was said to him: when twelve months old, he knew by heart the principal events narrated in the Pentateuch: in his second year he learned the greater part of the history of the Bible, both of the Old and New Testaments: in his third year he could reply to most questions on universal history and geography, and in the same year he learned to speak Latin and French: in his fourth year he employed himself in the study of religion and the

‡ Bishop Patrick's Autobiography.

§ Letters to his Son.

|| Paper read to the College of Physicians, by Sir Henry Hallford, in 1835.

history of the church, and he was able not only to repeat what he had read, but also to reason upon it, and express his own judgment. The King of Denmark wishing to see this wonderful child, he was taken to Copenhagen, there examined before the court, and proclaimed to be a wonder. On his return home, he learned to write, but, his constitution being weak, he shortly after fell ill; he died on the 27th of June 1725, without, it is said, shewing much uneasiness at the approach of death. This account of him by his teacher is confirmed by many respectable contemporary authorities. Martini published a dissertation at Lubeck, in which he attempted to account for the circumstances of the child's early development of intellect.

It cannot be too generally known that extreme precocity like this is of the nature of disease and a subject for the gravest care. In a precocious child, the exercise of the intellect, whether in lessons or otherwise, should be discouraged and controlled, not, as it too often is, stimulated, if there be any sincere desire that the child should live.

THE TWO UNKNOWN SISTERS—A CORNISH
LEGEND.

I.

It is from Nectan's sainted steep
The foamy waters flash and leap :
It is where shrinking wild flowers grow,
They lave the nymph that dwells below !

II.

But wherefore, in this far off dell,
The reliques of a human cell ?
Where the sad stream, and lonely wind,
Bring man no tidings of his kind !

III.

Long years ago, the old man said,
'Twas told him by his grandsire dead,
One day two ancient sisters came,
None there could tell their race or name !

IV.

Their speech was not in Cornish phrase,
Their garb had marks of loftier days ;
Slight food they took from hands of men,
They wither'd slowly in that glen !

V.

One died !—the other's shrunken eye
Gush'd, till the fount of tears was dry ;
A wild and wasting thought had she,
'I shall have none to weep for me !'

VI.

They found her, silent, at the last,
Bent, in the shape wherein she pass'd ;
Where her lone seat long used to stand,
Her head upon her shrivell'd hand !

VII.

Did fancy give this legend birth,
The grandame's tale for winter hearth ?
Or some dead bard by Nectan's stream,
People these banks with such a dream ?

VIII.

We know not : but it suits the scene,
To think such wild things here have been,
What spot more meet could grief or sin
Choose at the last to wither in !

R. S. HAWKER.

FEBRUARY 7.

St Theodorus (Stratilates), martyred at Heraclea, 319.
St Augulus, bishop of London, martyr, 4th century.
St Tressain, of Ireland, 6th century. St Richard, king of
the West Saxons, *circ.* 722. St Romualdo, founder of
the order of Camaldoli, 1027.

ST ROMUALDO.

Romualdo was impelled to a religious life by seeing his father in a fit of passion commit manslaughter. Assuming the order of St Benedict, he was soon scandalised by the licentious lives generally led by his brethren, and to their reformation he zealously devoted himself. The result was his forming a sub-order, styled from the place of its first settlement, the *Camaldolesi*, who, in their asceticism and habits of solemn and silent contemplation, remind us of the early Egyptian anchorites. St Romualdo, who died at an advanced age in 1027, was consequently held in great veneration, and Dante has placed him in his *Paradiso*, 'among the spirits of men contemplative.'

Born.—Rev. Sir Henry Moncrieff, D.D., 1750; Charles Dickens, novelist, 1812.

Died.—James Earl of Moray (the Bonny), murdered 1592; Dr Bedell, bishop of Kilmore, 1642; Anne Radcliffe, novelist, 1823, *Pimlico*; Henry Neele, poet, 1828, *London*; M. Bourrienne, formerly Secretary to Napoleon Bonaparte, died in a madhouse at *Caen, Normandy*, 1834.

MRS RADCLIFFE'S ROMANCES.

This admirable writer had, in her youth, the benefit of the society of Mr Bentley, the well-known man of letters and taste in the arts, and of Mr Wedgwood, the able chemist; and she became thus early introduced to Mrs Montague, Mrs Piozzi, and the Athenian Stuart. Her maiden name was Ward, and she acquired that which made her so famous by marrying Mr William Radcliffe, a graduate at Oxford and a student at law, afterwards proprietor and editor of the *English Chronicle*. Her first work was a romance styled *The Castles of Athlin and Dunbayne*; her second, which appeared in 1790, *The Sicilian Romance*, of which Sir Walter Scott, then a novel reader of no ordinary appetite, says: 'The scenes were inartificially connected, and the characters hastily sketched, without any attempt at individual distinction; being cast in the mould of ardent lovers, tyrannical parents, with domestic ruffians, guards, and others, who had wept or stormed through the chapters of romance, without much alteration in their family habits or features, for a quarter of a century before Mrs Radcliffe's time.' Nevertheless, 'the praise may be claimed for Mrs Radcliffe, of having been the first to introduce into her prose fictions a beautiful and fanciful tone of natural description and impressive narrative, which had hitherto been exclusively applied to poetry.'

The Romance of the Forest, which appeared in 1791, placed the author at once in that rank and pre-eminence in her own particular style of composition, which she ever after maintained. Next year, after visiting the scenery of the

Rhine, Mrs Radcliffe is supposed to have written her *Mysteries of Udolpho*, or, at least, corrected it, after the journey. For the *Mysteries*, Mrs Radcliffe received the then unprecedented sum of £500; for her next production, the *Italian*, £800. This was the last work published in her lifetime. This silence was unexplained: it was said that, in consequence of brooding over the terrors which she had depicted, her reason had been overturned, and that the author of the *Mysteries of Udolpho* only existed as the melancholy inmate of a private madhouse; but there was not the slightest foundation for this unpleasing rumour.

Of the author of the *Mysteries of Udolpho*, the unknown author of the *Pursuits of Literature* spoke as 'a mighty magician, bred and surrounded by the Florentine muses in their secret solitary caverns, amid the paler shrines of Gothic superstition, and in all the dreariness of enchantment.' Dr Joseph Warton, the head master of Winchester School, then at a very advanced period of life, told Robinson, the publisher, that, happening to take up the *Mysteries of Udolpho*, he was so fascinated that he could not go to bed until he had finished it, and that he actually sat up a great part of the night for that purpose. Mr

Sheridan and Mr Fox also spoke of the *Mysteries* with high praise.

The great notoriety attained by Mrs Radcliffe's romances in her lifetime, made her the subject of continually recurring rumours of the most absurd and groundless character. One was to the effect that, having visited the fine old Gothic mansion of Haddon Hall, she insisted on remaining a night there, in the course of which she was inspired with all that enthusiasm for hidden passages and mouldering walls which marks her writings. The truth is, that the lady never saw Haddon Hall.

Mrs Radcliffe died in Stafford-row, Pimlico, February 7, 1823, in her fifty-ninth year; and was buried in the vault of the chapel, in the Bayswater-road, belonging to the parish of St George, Hanover-square.

THE GREAT BED OF WARE.

When Sir Toby Belch (*Twelfth Night*, Act iii., scene 2) wickedly urges Aguecheek to pen a challenge to his supposed rival, he tells him to put as many lies in a sheet as will lie in it, 'although the sheet were big enough for the bed of Ware in England.' The enormous bed here

THE GREAT BED OF WARE.

alluded to was a wonder of the age of Shakspeare, and it still exists in Ware. It is a square of 10 feet 9 inches, 7 feet 6 inches in height, very elegantly carved, and altogether a fine piece of

antique furniture. It is believed to be not older than Elizabeth's reign. It has for ages been an inn wonder, visited by multitudes, and described by many travellers. There are strange stories of

people engaging it to lie in, twelve at a time, by way of putting its enormous capacity for accommodation to the proof. It was long ago customary for a company, on seeing it, to drink from a can of beer a toast appropriate to it. In the same room, there hung a pair of horns, upon which all new-comers were sworn, as at Highgate.

THE PORTLAND VASE.

In one of the small rooms of the old British Museum (Montague House), there had been exhibited, for many years, that celebrated production of ceramic art—the Portland Vase; when, on the 7th of February 1845, this beautiful work was wantonly dashed to pieces by one of the visitors to the Museum, named William Lloyd.

The Portland Vase was found about the year 1560, in a sarcophagus in a sepulchre under the Monte del Grano, two miles and a half from Rome. It was deposited in the palace of the Barberini family until 1770, when it was purchased by Byres, the antiquary, who subsequently sold it to Sir William Hamilton. From Sir William it was bought for 1800 guineas, by the Duchess of Portland; and at the sale of her Grace's property, after her decease, the Vase was bought in by the Portland family for £1029. The Vase is 9½ inches high, and 7¼ inches in diameter, and has two handles. Four authors of note considered it to be stone, but all differing as to the *kind* of stone: Breval regarded it as chalcedony; Bartoli, sardonyx; Count Tetzi, amethyst; and De la Chausse, agate. In reality it is composed of glass, ornamented with white opaque figures, upon a dark-blue semi-transparent ground; the whole having been originally covered with white enamel, out of which the figures have been cut after the manner of a cameo. The glass foot is thought to have been cemented on, after bones or ashes had been placed in the vase. This mode of its manufacture was discovered by examination of the fractured pieces, after the breaking of the vase in 1845; a drawing of the pieces is preserved in the British Museum.

The subject of the figures is involved in mystery; for as much difference of opinion exists respecting it as formerly did regarding the materials of the vase. The seven figures, each five inches high, are said by some to illustrate the fable of Thaddeus and Theseus; Bartoli supposed the group to represent Proserpine and Pluto; Count Tetzi, that it had reference to the birth of Alexander Severus, whose cinerary urn it is thought to be; whilst the late Mr Thomas Windus, F.S.A., considered the design as representing a lady of quality consulting Galen, who at length discovered her sickness to be love for a celebrated rope-dancer.

The vase was engraved by Cipriani and Bartolozzi, in 1786. Copies of it were executed by Wedgwood at fifty guineas each; the model having cost 500 guineas. Sir Joseph Banks and Sir Joshua Reynolds bore testimony to the excellent execution of these copies, which were chased by a steel rifle, after the bas-relief had been wholly or partially fired. One of these copies may be seen in the British Museum.

The person who so wantonly broke the origi-

nal vase was sentenced to pay a fine, or to undergo imprisonment; and the sum was paid by a gentleman, anonymously. The pieces, being gathered up, were afterwards put together by Mr Doubleday, so perfectly, that a blemish can scarcely be detected; and the restored Vase is now kept in the Medal-room of the Museum.

FEBRUARY 8.

St Paul, bishop of Verdun, 631. St Cuthman of England, 8th century. St Stephen of Grandmont, 1124. St John of Matha, founder of the Order of Trinitarians, 1213.

Born.—St Proclus, patriarch of Constantinople, 412; Mary I., Queen of England, 1516, *Greenwich*; William Earl of Pembroke, 1580; Samuel Butler, author of *Hudibras*, 1612, *Strensham*; Peter Daniel Huet, bishop of Avranches, 1630; Charles Henault, *littérateur*, 1685, *Caen*; John Andrew De Luc, Genesive philosopher, 1727.

Died.—Mary Queen of Scotland, beheaded at Fotheringay, 1586-7; Richard Pendrell, who aided in the escape of Charles II., 1671, *St. Giles's, London*; Dr George Sewel, historian of the Quakers, 1727, *Hampstead*; Aaron Hill, poet, 1750, *Strand*.

EXECUTION OF MARY QUEEN OF SCOTS.

The judicial murder of Mary Queen of Scots—whose life, according to the Earl of Kent, would have been the death of our religion, and whose death was calculated to be its preservation—was performed at Fotheringay Castle, on the 8th of February 1586-7. The minute accounts of the scene, which are too familiar to be here repeated, exhibit a religious dignity, resignation, and apparent serenity of conscience, that tend greatly to counteract the popular impressions regarding the guilt of the Scottish queen. One is at a loss to believe that one who had not lived well could die so well.

Heretofore, the strange conduct of Elizabeth regarding her unfortunate cousin, has not tended to exculpate her from the guilt of authorising the Fotheringay tragedy. But it now begins to appear that she really did not give the final order for the act, but that the whole affair was managed without her consent by Burleigh, Walsingham, and Davison, the signature to the warrant being forged at Walsingham's command by his secretary Thomas Harrison;* so that the queen's conduct to these men afterwards was not hypocritical, as hitherto believed. The act was so far of an occult and skulking nature, that a fortnight and a day elapsed before King James, while hunting at Calder, was certified of it. It put him into 'a very great displeasure and grief,' as it well might, and he 'much lamented and mourned for her many days.†

AARON HILL.

This extraordinary person—a small poet and great projector—died on the 8th of February 1750, 'in the very minute of the earthquake,' says

* See Strickland's *Lives of the Queens of Scotland*, vii. 465.

† Patrick Anderson's *History of Scotland*, MS.

Davies, 'the shock of which, though speechless, he appeared to feel.' Aaron Hill was of good family, fortune, and connexions, born February 10, 1685, in a house upon the site of Beaufort-buildings, in the Strand. He was for a short time at Westminster School: when fifteen years of age, he made a voyage to Constantinople, purposely to pay a visit to his relative Lord Paget, ambassador there, and who sent him, with a clerical tutor, to travel through Egypt and Palestine, and great part of the East; he subsequently travelled in Europe, with Sir William Wentworth, for two or three years. In 1709 he published his first poem, *Camillus*, in honour of the Earl of Peterborough, who made him his secretary. He next wrote eight books of an epic poem, *Gideon*, but did not complete it. He then produced for Drury-lane Theatre his first tragedy of *Elfrida*, and was next appointed manager of the Italian Opera-house in the Haymarket, and wrote *Rinaldo*, being the libretto of the first opera that Handel composed after he came to England. For a poem in praise of the Czar Peter, he was rewarded with a gold medal. He appears to have been such a person as Swift loved to ridicule—a projector, trying various schemes, and succeeding in none. We now find him patenting an oil as sweet as that of olives, from beech-masts; next organising a company for raising plantations in Georgia; afterwards clearing the woods in the Highlands of Scotland, to furnish timber for the navy, and making potash to rival that brought from Russia. These several schemes failed. All this time he was writing turgid, declamatory tragedies, or translating plays from the French theatre: his greatest success was a translation of Voltaire's *Zara*, in which Mrs T. Cibber, the excellent tragic actress, made her first appearance on the stage. He was intimate with Bolingbroke and Pope. The latter, falling into a misunderstanding with Hill, classed him with the flying fishes, 'who now

and then rise upon their fins, and fly out of the profound; but their wings are soon dry, and they drop down to the bottom.' Hill rejoined by an epigram, and Pope marked him out for a place in the *Dunciad*; a violent controversy ensued, in which Hill appeared to no advantage; he threatened Pope with vengeance, which led the little bard of Twickenham for some time to carry loaded pistols, and to be accompanied by his big, faithful Danish dog, Bounce.

Hill lost all his property by his schemes; but he for literary fame confidently appealed to posterity:

'Yet while from life my setting prospects fly,
Fain would my mind's weak offspring shun to die;
Fain would their hope some light through time explore,
The name's kind passport when the man's no more.'

It is, however, a fact worthy of the consideration of the literary class, that Aaron Hill worked much for fame, and in his lifetime enjoyed a share of it; yet, of all the writings which he issued and which had their day, there is but one little piece—an epigram—which can be said to have survived to our time:

'Tender-handed stroke a nettle,
And it stings you for your pains;
Grasp it like a man of mettle,
And it soft as silk remains.

'Tis the same with common natures,
Use them kindly, they rebel;
But be rough as nutmeg-graters,
And the rogues obey you well.'

SEDANS.

Evelyn, writing at Naples on the 8th February 1645, describes the gay appearance of the city and its inhabitants, adding, 'The streets are full of gallants on horseback, in coaches and sedans,' which last articles, he tells us, were 'from hence brought first into England by Sir Sanders Duncomb.' It would appear that Sir Sanders introduced this convenience into England in 1634,

LADY CARRIED IN A SEDAN, TEMP. GEO. II.

and, obtaining a patent for it from the king, prepared forty or fifty examples for public use. | It is thus, in regard to its starting in England, very nearly contemporaneous with the hackney-

coach, which dates from 1625. Not inconsistent, however, with this statement of the general use of sedans, may be another given on good authority, that *one* such convenience had previously been used by the favourite Buckingham, much to the disgust of the people, who exclaimed that he was employing his fellow-creatures to do the service of beasts.

In any community where elegant life was cultivated, the SEDAN was sure of favour, being a very handy and pleasant means of getting carried from one's home either to a private or a public entertainment. In the first three quarters of the eighteenth century, when the style of dress was highly refined, and the least derangement to the hair of either lady or gentleman was fatal, the sedan was at its zenith of usefulness. Then was the gentleman, with his silk clothes and nicely arranged toupee and curls, as fain to take advantage of this careful casing as he went from house to house, as any of the softer sex. The nobility, and other wealthy persons, used to keep their own sedans, and have them very handsomely decorated. They stood in the lobby of the town-mansion, ready to be used when required. It must have been a fine sight to see several gilt sedans passing along, with a set of ladies and gentlemen of one family, through the west-end streets of London, attended by link-boys, and being one by one ushered into some luxurious mansion, where company was received for the evening. When the whole party had been duly delivered, the link-boys thrust their flambeaux into the trumpet-like extinguishers which flourished at each aristocratic door-cheek in the metropolis, and withdrew till the appointed time when their services were required for returning home.

In Edinburgh, in the middle of the eighteenth century, there were far more sedans in use than coaches. The sedan was better suited for the steep streets and narrow lanes of the Scottish capital, besides being better fitted in all circumstances for transporting a finely dressed lady or gentleman in a cleanly and composed condition. The public sedans of that city were for the most part in the hands of Highlanders, whose uncouth jargon and irritability amidst the confusions of a dissolving party, or a dismissed theatre, used to be highly amusing. Now, there is no such thing in Edinburgh, any more than in London, as a private sedan; and within the last few years the use of public ones has nearly, if not entirely ceased.

EARTHQUAKES IN ENGLAND.

The last earthquake of any considerable violence in England occurred on the 8th of February 1750. Such commotions are not so infrequent in our island as many suppose; but it must be admitted that they are generally innocuous or nearly so. Even in that notoriously mobile district about Comrie in Perthshire,—where during the winter of 1839-40 they had a hundred and forty earthquakes, being at the rate of about a shock a day at an average,—they seldom do much harm. Still, seeing that movements capable of throwing down buildings do at rare intervals take place, it might be well to avoid the raising of public structures,

as church towers and obelisks, beyond a moderate elevation. Perhaps it will yet be found that the Victoria Tower at Westminster is liable to some danger from this cause.

According to Mrs Somerville (*Physical Geography*, ed. 1858), there have been 255 earthquakes put on record in England, most of them slight and only felt in certain districts. The notices of such events given by our chronicles are generally meagre, little to purpose, of no scientific value, and more calculated to raise curiosity than to gratify it. Still, they are better than nothing.

In 1101 all England was terrified 'with a horrid spectacle, for all the buildings were lifted up and then again settled as before.*' In 1133 many houses were overthrown, and flames issued from rifts in the earth, which defied all attempts to quench them. On the Monday in the week before Easter in 1185, 'chanced a sore earthquake through all the parts of this land, such a one as the like had not been heard of in England, since the beginning of the world; for stones that lay couched fast in the earth were removed out of their places, houses were overthrown, and the great church of Lincoln rent from the top downwards.' (Holinshed.) The next earthquake of any moment occurred on St Valentine's Eve in 1247, and did considerable damage in the metropolis: this was preceded by a curious phenomenon—for three months prior to the shock the sea ceased to ebb and flow on the English coast, or the flow at least was not perceptible; the earthquake was followed by a season of such foul weather that the spring was a second winter. On the 12th of September 1275, St Michael's Church, Glastonbury, was destroyed by an earthquake. John Harding, in his metrical chronicle for 1361, records

'On St Mary's Day

The great wind and earthquake marvellous,
That greatly gan the people all affraye,
So dreadful was it then, and perilous.'

Twenty years afterwards another was experienced, of which Fabyan, while omitting all particulars, says, 'The like thereof was never seen in England before that day nor since;' but the very next year (1382) Harding writes:

'The earthquake was, that time I saw,
That castles, walls, towers, and steeples fyll,
Houses, and trees, and crags from the hill.'

This happened on the 21st of May, and was followed three days afterwards by a 'watershake,' when the ships in the harbours were driven against each other with great violence.

About six o'clock on the evening of the 17th of February 1571, the earth near Kinaston, Herefordshire, began to open; 'and a hill, called Marclay Hill, with a rock under it, made at first a mighty bellowing noise, which was heard afar off, and then lifted up itself a great height and began to travel, carrying along with it the trees that grew upon it, the sheepfolds and flocks of sheep abiding thereon at the same time. In the place from whence it removed, it left a gaping distance 40 feet wide, and 80 ells long,—the whole field was almost 20 acres. Passing along, it overthrew

* William of Malmesbury.

a chapel standing in the way, removed a yew-tree growing in the churchyard from the west to the east; with the like violence it thrust before it highways, houses and trees, made tilled ground pasture, and again turned pasture into tillage.' (Burton's *General History of Earthquakes*.) Three years later, in the same month, York, Worcester, Gloucester, Bristol, Hereford, and some less important towns, felt the shock of an earthquake, which so alarmed the good people of Norton, who were at evening prayer, that they fled from the chapel, fearing the dead were about to rise from their graves; but this was nothing to the excitement created in London by a similar event which took place on the evening of Easter Wednesday (April 6), 1580. The great clock bell at Westminster struck at the shock, and the bells of the various churches were set jangling; the people rushed out of the theatres in consternation, and the gentlemen of the Temple, leaving their supper, ran out of the hall with their knives in their hands. Part of the Temple Church was cast down, some stones fell from St Paul's, and two apprentices were killed at Christ Church by the fall of a stone during sermon-time. This earthquake was felt pretty generally throughout the kingdom, and was the cause of much damage in Kent, where many castles and other buildings were injured; and at Dover, a portion of a cliff fell, carrying with it part of the castle wall. So alarmed were all classes, that Queen Elizabeth thought it advisable to cause a form of prayer to be used by all householders with their whole family, every evening before going to bed. About a century after, according to the compilers of chronologies, Lyme Regis was nearly destroyed by an earthquake; but the historian of Dorsetshire makes no allusion to such an event. On the 8th of September 1692, the merchants were driven from Change and the people from their houses by a shock, and the streets of London were thronged with a panic-stricken crowd, some swooning, some aghast with wonder and amazement. This earthquake was felt in most of the home counties. Evelyn, writing from Sayes Court to Bishop Tenison, says, 'As to our late earthquake here, I do not find it has left any considerable marks, but at Mins, it is said, it has made some demolitions. I happened to be at my brother's at Wotton, in Surrey, when the shaking was, and at dinner with much company; yet none of us at table were sensible of any motion. But the maid who was then making my bed, and another servant in a garret above her, felt it plainly; and so did my wife's laundrymaid here at Deptford, and generally, wherever they were above in the upper floors, they felt the trembling most sensibly. In London, and particularly in Dover-street, they were greatly affrighted.' Although the earthquake did little damage, it sufficed to set afloat sundry speculations as to the approaching end of the world, and frightened the authorities into ordering a strict enforcement of the laws against swearing, drunkenness, and debauchery.

The year 1750 is, however, the year *par excellence* of English earthquakes. It opened with most unseasonable weather, the heat being, according to Walpole, 'beyond what was ever known in any other country;' and on the 8th of

February a pretty smart shock was experienced, followed exactly a month afterwards by a second and severer one, when the bells of the church clocks struck against the chiming-hammers, dogs howled, and fish jumped high out of the water. The lord of Strawberry Hill, in a letter to Sir Horace Mann, draws a lively picture of the effect created by the event, and we cannot do better than borrow his narration:

"Portents and prodigies are grown so frequent,
That they have lost their name."

'My text is not literally true; but as far as earthquakes go towards lowering the price of wonderful commodities, to be sure we are overstocked. We have had a second, much more violent than the first; and you must not be surprised if, by next post, you hear of a burning mountain springing up in Smithfield. In the night between Wednesday and Thursday last, the earth had a shivering fit between one and two; but so slight that, if no more had followed, I don't believe it would have been noticed. I had been awake, and had scarce dozed again,—on a sudden I felt my bolster lift my head. I thought somebody was getting from under my bed, but soon found it was a strong earthquake that lasted nearly half a minute, with a violent vibration and great roaring. I got up and found people running into the streets, but saw no mischief done. There has been some; two old houses flung down, several chimnies, and much earthenware. The bells rang in several houses. Admiral Knowles, who has lived long in Jamaica, and felt seven there, says this was more violent than any of them. The wise say, that if we have not rain soon we shall certainly have more. Several people are going out of town, for it has nowhere reached above ten miles from London: they say they are not frightened, but that it is such fine weather, "Lord, one can't help going into the country!" The only visible effect it has had was in the Ridotto, at which, being the following morning, there were but 400 people. A parson who came into White's the morning after earthquake the first, and heard bets laid on whether it was an earthquake or the blowing up of powder mills, went away exceedingly scandalised, and said, "I protest they are such an impious set of people, that I believe, if the last trumpet was to sound, they would bet puppet-show against judgment!" The excitement grew intense: following the example of Bishops Secker and Sherlock, the clergy showered down sermons and exhortations, and a country quack sold pills "as good against an earthquake." A crazy Life-guardsmen predicted a third and more fatal earthquake at the end of four weeks after the second, and a frantic terror prevailed among all classes as the time drew near. On the evening preceding the 5th of April, the roads out of London were crowded with vehicles, spite of an advertisement in the papers threatening the publication "of an exact list of all the nobility and gentry who have left or shall leave this place through fear of another earthquake." "Earthquake gowns"—warm gowns to wear while sitting out of doors all night—were in great request with women. Many people sat in coaches all

night in Hyde Park, passing away the time with the aid of cards and candles; and Walpole asks his correspondent, 'What will you think of Lady Catherine Pelham, Lady Frances Arundel, and Lord and Lady Galway, who go this evening to an inn ten miles out of town, where they are to play brag till four o'clock in the morning, and then come back, I suppose, to look for the bones of their husbands and families under the rubbish?' However, the soldier proved a false prophet, and expiated his folly in the madhouse. On the 18th of March in this year an earthquake was felt at Portsmouth, Southampton, and the Isle of Wight. In April, Cheshire, Flintshire, and Yorkshire were startled in like manner: this was followed by an earthquake in Dorsetshire in May, by another in Somersetshire in July, and in Lincolnshire in August, the catalogue being completed on the 30th of September by an earthquake extending through the counties of Suffolk, Leicester, and Northampton.

The great earthquake which destroyed Lisbon in 1755, agitated the waters of the three kingdoms, and even affected the fish-pond of Peerless Pool, in the City-road, London; but it produced no damage. Since then several shocks have been experienced here from time to time, but unattended with any circumstances calling for notice; the last one recorded being a slight earthquake felt in the north-western counties of England on the 9th of November 1852.

Died.—Agnes Sorel, 1450, *Memel*; Bishop Hooper, burnt at *Gloucester*, 1555; Dr Rowland Taylor, burnt at *Hadleigh*, 1555; David Rizzio, 1566; Henry Lord Darnley, murdered, 1567; Dr John Gregory, author of *A Father's Legacy to his Daughters*, 1773, *Edinburgh*; Dr William Boyce, 1779; Benjamin Martin, philosophical writer, 1782; Nevil Maskelyne, astronomer-royal, 1811, *Flamstead House*.

DANIEL BERNOUILLI, THE EMINENT MATHEMATICIAN.

This eminent man, one of a family which is known in the history of mathematics by the services of eight of its members, was the second son of John Bernouilli, and was born at *Grönigen*, February 9, 1700. His father, though highly famous as a mathematician, was jealous of his own son: it is related that, one day, he proposed to Daniel, then a youth, a little problem to try his strength; the boy took it with him, solved it, and came back, expecting some praise from his father. 'You ought to have done it on the spot,' was all the observation made, and with a tone and gesture which his son remembered to the

latest day of his life. That Daniel in mature life was not deficient in ready power is proved by the following anecdote. Koenig, another great mathematician, dining with him one day, mentioned a difficult problem which had long baffled him; but he added with some pride, 'I accomplished it at last.' Bernouilli said little at the moment, but went on attending to his guests, and before they rose from table he had solved the problem in his mind.

The elder Bernouilli, John, was succeeded in the Academy of Sciences by Daniel, at whose death, in 1782, his brother John succeeded him. Thus for ninety years the Academy never wanted a Bernouilli in its list of members. Daniel spent a great part of his life in Basle, where he was held in such esteem that it was part of the education of every child to learn to take off the hat to him. The fact of so peculiar a talent passing from father to son, and spreading into so many branches, is very noteworthy; and it will be found that the subject is followed out in a paper a page onward.

THE EXPERIMENT AT SCHIEHALLION.

Dr Maskelyne, the astronomer-royal, amongst many investigations in astronomy and general physics, distinguished himself in a special manner by one which had for its object directly to ascertain the attraction of mountains, and remotely the mean density of the earth. The scene of this great labour was the mountain Schiehallion, in Perthshire. Arriving there in the latter part of June 1774, the philosopher and his assistant, Mr Burrow, had a station prepared for themselves half way up the south side of the hill; afterwards another on the north side. It is a long bare mountain of 3,500 feet in elevation, in the midst of a country purely Alpine, and subject to the dreariest climatal influences. Three weeks elapsed before the learned investigator got a clear day for the ascertainment of a meridian line wherein to place his astronomical quadrant. Amidst the greatest difficulties—for the season was the worst seen for several years—he was just enabled, before November, to fix approximately the declination which the plumb-line made from the perpendicular on the respective sides of the mountain, being 5' 8; whence it was afterwards deduced by Dr Charles Hutton, that, if the rock of the hill be taken as that of freestone, or 2.5 of water, the earth's density will be 4.5 of the same measure (subsequently corrected by Professor Playfair into 4.867).

The writer of this notice has often amused himself by reflecting on what would be the feelings of the English philosopher, fresh from the Greenwich Observatory, and Crane-court, Fleet-street, on finding himself in a wilderness, whence, but thirty years before, there had poured down a host of half-naked barbarians upon the plains of his native country, and where there had recently died an old Highland chief and bard (Robertson, of Struan) who had been out with both Dundee and Marr. What, also, would be the conception of his enterprise, his instruments, his measurements and surveyings, adopted by the Clan Donnochie, of the Moor of Rannoch? What would they think when they were told that

a man had come to Schiehallion to weigh it,—nay, to weigh the earth? Maskelyne tells us, however, in his paper in the *Philosophical Transactions*, that Sir Robert Menzies, the chief gentleman near Schiehallion, paid him many hospitable attentions, and that he received visits from Wilson, Reid, and Anderson, professors in Glasgow, and from various other men of science, throughout the autumn—'so great a noise had the attempt of this uncommon experiment made in the country, and so many friends did it meet with interested in the success of it.'

The mountain Schiehallion was adopted for the experiment, because it was a lofty and narrow one, whereof the longer axis lay nearly east and west, thus giving a small difference of latitude between the two stations in proportion to the bulk of the mass lying between. Maskelyne himself, and even his geological friend and visitor Playfair, might have felt some additional interest in the affair, if they had known that the mountain had been shaped for their purpose by the great ice-flow of the glacial period, the marks of whose passage can be clearly traced along its sides and ridge, up to nearly the summit.

MURDER OF DAVID RIZZIO—PERMANENCY OF BLOOD-STAINS.

On the evening of the 9th February 1565-6, David Rizzio, the Italian secretary of Mary of Scotland, was murdered in Holyrood Palace, by certain Protestant leaders of her court, with the assistance of her husband, Lord Darnley. The poor foreigner was torn from her side as she sat at supper, and dragged through her apartments to the outer door, where he was left on the floor for the night, dead with fifty-six wounds, each conspirator having been forced to give a stab, in order that all might be equally involved in guilt and consequent danger. The queen, who was then pregnant of her son (James I. of England), deeply resented the outrage: indeed, there is reason to believe that it affected her so as to become the turning-point of her life, giving her in the first place a strong sense of the unworthiness of her husband, who perished little more than a year after.

The floor at the outer door of the queen's apartments presents a large irregular dark mark, which the exhibitor of the palace states to be the blood of the unfortunate Rizzio. Most strangers hear with a smile of a blood-stain lasting three centuries, and Sir Walter Scott himself has made it the subject of a jocular passage in one of his tales,* representing a Cockney traveller as trying to efface it with the patent scouring drops which it was his mission to introduce into use in Scotland. The scene between him and the old lady guardian of the palace is very amusing; but it may be remarked of Scott, that he entertained some beliefs in his secret bosom which his worldly wisdom and sense of the ludicrous led him occasionally to treat comically or with an appearance of scepticism. In another of his novels—the *Abbot*—he alludes with a feeling of awe and horror to the Rizzio blood-stain; and in

* Introduction to *Chronicles of the Canongate*.

his *Tales of a Grandfather*, he deliberately states that the floor at the head of the stair still bears visible marks of the blood of the unhappy victim. Joking apart, there is no necessity for disbelieving in the Holyrood blood-mark. There is even some probability in its favour. In the first place, the floor is very ancient, manifestly much more so than the late floor of the neighbouring gallery, which dated from the reign of Charles II. It is in all likelihood the very floor which Mary and her courtiers trod. In the second place, we know that the stain has been shewn there since a time long antecedent to that extreme modern curiosity regarding historical matters which might have induced an imposture; for it is alluded to by the son of Evelyn as being shewn in 1722. Finally, it is matter of experiment, and fully established, that wood not of the hardest kind (and it may be added, stone of a porous nature) takes on a permanent stain from blood, the oxide of iron contained in it sinking deep into the fibre, and proving indelible to all ordinary means of washing. Of course, if the wearing of a blood-stained floor by the tread of feet were to be carried beyond the depth to which the blood had sunk, the stain would be obliterated. But it happens in the case of the Holyrood mark, that the two blotches of which it consisted are out of the line over which feet would chiefly pass in coming into or leaving the room. Indeed, that line appears to pass through and divide the stain,—a circumstance in no small degree favourable to its genuineness.

Alleged examples of blood-stains of old standing both upon wood and stone are reported from many places. We give a few extracted from the *Notes and Queries*. Amidst the horrors of the French Revolution, eighty priests were massacred in the chapel of the convent of the Carmelites at Paris. The stains of blood are still to be seen on the walls and floor. 'At Cothelc, a mansion on the banks of the Tamar, the marks are still visible of the blood spilt by the lord of the manor, when, for supposed treachery, he slew the warder of the drawbridge.' 'About fifty years ago, there was a dance at Kirton-in-Lindsey: during the evening a young girl broke a blood-vessel and expired in the room. I have been told that the marks of her blood are still to be seen. At the same town, about twenty years ago, an old man and his sister were murdered in an extremely brutal manner, and their cottage floor was deluged with blood, the stains of which are believed yet to remain.'

TALENTS—FROM WHICH PARENT USUALLY DERIVED?

There is a prevalent, but nowhere well-argued idea, that talents are usually, if not always, derived from the mother. One could wish that a notion so complimentary to the amiable sex were true; but it scarcely is so.

There are, certainly, some striking instances of mother-derived abilities; none more so than that presented by the man perhaps the most distinguished for general abilities in our age—Henry Lord Brougham, whose mother, a niece of Principal Robertson, was a woman of the finest intel-

lectual properties, while the father was of but ordinary gifts. Of like notableness is the case of Sir Walter Scott; the mother sagacious in an extraordinary measure, the father a plain good man, and no more. But look, on the other hand, at two other able men of the last and present epochs, Lord Macaulay and Robert Burns. In their cases, the phenomenon was precisely the converse: that is, clever father, ordinary mother.

It is only too easy to point to instances of father and son standing as noted for talent, while we hear nothing of the mother. Binities like Bernardo and Torquato Tasso, John and Daniel Bernouilli, William and John Herschel, James and John Stuart Mill, Chatham and William Pitt, George and Robert Stephenson, Carlo and Horace Vernet, abound in our biographical dictionaries. Another fact, connected less pointedly with the subject, but in itself of some value, is also pretty clearly shewn in these compilations; namely, how often a man of eminence in the world of thought and taste is the son of a man who was engaged in some humble capacity connected with the departments in which his son excelled:—Mozart, for instance, the son of a capell-meister; James Watt, the son of a teacher of mathematics.

There are, however, instances of the descent of superior mental qualities through a greater number of generations than two, with a presumable transmission from the father to the son, while mothers are unheard of. The amiable Patrick Fraser Tytler, who wrote the best history of Scotland extant, was son to the accomplished Alexander Fraser Tytler (commonly styled Lord Woodhouselee), who wrote several books of good repute, and was, in turn, the son of William Tytler, author of the *Enquiry into the Evidence against Mary Queen of Scots*. The late Professor William Gregory, a man of the highest scientific accomplishments, was the son of Dr James Gregory, a professor of distinguished ability, author of the well-known *Conspectus Medicinæ*, who was the son of Dr John Gregory, author of the *Father's Legacy to his Daughters*, and other works; whose father, an eminent Aberdeen professor, was the son of James Gregory, right eminent as a mathematician, and the inventor of the reflecting telescope. It is, however, to be remarked that the talents of this last gentleman, and of his scarcely less distinguished brother David, are supposed to have been inherited from their mother, who was the daughter of an ingenious, busy-brained man of some local celebrity.

Not less remarkable is the series of the Sheridans. It seems to have started as a line of able men with Dr Thomas Sheridan, of Dublin, the friend of Swift; who was the son of another Dr Thomas Sheridan, and the nephew of a Bishop of Kilmore. Next came Mr Thomas Sheridan, of elocution-teaching memory, a man of lively talents; next the famed Richard Brinsley; next Thomas Sheridan, in whom there were brilliant abilities, though through unfortunate circumstances they never came to any effective demonstration. Among the children of this last, we find Lady Dufferin and the Hon Mrs Norton, both brilliant women; and from Lady Dufferin, again, comes a son, Lord Dufferin,

whose Arctic yacht voyage has given his name the stamp of talent at a very early age. Of the five Sheridans, who stand here in succession, we hear of but one (Richard) whose mother has left any fame for abilities.

With these facts before us, and it would be easy to multiply them, it must plainly appear that the inheritance of talent from a mother is not a rule. At the utmost, it is a fact only possible, or which has an equal chance of occurring with its opposite. Most probably, people are led to make a rule of it by the propensity to paradox, or by reason of their remarking mother-descended talent as something unexpected, while they overlook the instances of the contrary phenomenon.

Let us speculate as we may, there are mysteries about the rise of uncommon abilities that we shall probably never penetrate. Whence should have come the singular genius of a Lawrence—son to a simple inn-keeping pair on the Bath-road? Whence the not less wonderful gifts of a Wilkie—child of a plain Scotch minister and his wife—the mother so commonplace that, hearing how David was so much admired, she expressed surprise at their never saying anything of George—a respectable young grocer, who, being of goodly looks, had more pleased a mother's eye? Whence should the marvellous thought-power of Shakspeare have been derived—his parents being, to all appearance, undistinguished from thousands of other Stratfordians who never had sons or daughters different from the multitude?

Shrove Tuesday.

Shrove Tuesday derives its name from the ancient practice, in the Church of Rome, of confessing sins, and being *shrived* or *shrove*, i.e. obtaining absolution, on this day. Being the day prior to the beginning of Lent, it may occur on any one between the 2nd of February and the 8th of March. In Scotland, it is called Fasten's E'en, but is little regarded in that Presbyterian country. The character of the day as a popular festival is mirthful: it is a season of carnival-like jollity and drollery—'Welcome, merry Shrovetide!' truly sings Master Silence.

The merriment began, strictly speaking, the day before, being what was called *Collop Monday*, from the practice of eating collops of salted meat and eggs on that day. Then did the boys begin their Shrovetide perambulations in quest of little treats which their senior neighbours used to have in store for them—singing:

'Shrovetide is nigh at hand,
And I be come a shroving;
Pray, dame, something,
An apple or a dumpling.'

When Shrove Tuesday dawned, the bells were set a ringing, and everybody abandoned himself to amusement and good humour. All through the day, there was a preparing and devouring of pancakes, as if some profoundly important religious principle were involved in it. The pancake and Shrove Tuesday are inextricably associated in the popular mind and in old

literature. Before being eaten, there was always a great deal of contention among the eaters, to see which could most adroitly toss them in the pan.

Shakspeare makes his clown in *All's Well that Ends Well* speak of something being 'as fit as a pancake for Shrove Tuesday.' It will be recollected that the parishioners of the Vicar of Wakefield 'religiously ate pancakes at Shrove-tide.' Hear also our quaint old friend, the Water Poet—'Shrove Tuesday, at whose entrance in the morning all the whole kingdom is in quiet, but by that time the clock strikes eleven, which (by the help of a knavish sexton) is commonly before nine, there is a bell rung called Pancake Bell, the sound whereof makes thousands of people distracted, and forgetful either of manners or humanity. Then there is a thing called wheaten flour, which the cooks do mingle with water, eggs, spice, and other tragical, magical enchantments, and then they put it by little and little into a frying-pan of boiling suet, where it makes a confused dismal hissing (like the Lernian snakes in the reeds of Acheron), until at last, by the skill of the cook, it is transformed into the form of a flip-jack, called a pancake, which ominous incantation the ignorant people do devour very greedily.'

It was customary to present the first pancake to the greatest slut or lie-a-bed of the party, 'which commonly falls to the dog's share at last, for no one will own it their due.' Some allusion is probably made to the latter custom in a couplet placed opposite Shrove Tuesday in *Poor Robin's Almanack* for 1677:

'Pancakes are eat by greedy gut,
And Hob and Madge run for the slut.'

In the time of Elizabeth, it was a practice at Eton for the cook to fasten a pancake to a crow (the ancient equivalent of the knocker) upon the school door.

At Westminster School, the following custom is observed to this day:—At 11 o'clock a.m. a verger of the Abbey, in his gown, bearing a silver bâton, emerges from the college kitchen, followed by the cook of the school, in his white apron, jacket, and cap, and carrying a pancake. On arriving at the school-room door, he announces himself, 'The cook;' and having entered the school-room, he advances to the bar which separates the upper school from the lower one, twirls the pancake in the pan, and then tosses it over the bar into the upper school, among a crowd of boys, who scramble for the pancake; and he who gets it unbroken, and

THROWING THE PANCAKE ON SHROVE TUESDAY IN WESTMINSTER SCHOOL.

carries it to the deanery, demands the honorarium of a guinea (sometimes two guineas), from the Abbey funds, though the custom is not mentioned

in the Abbey statutes: the cook also receives two guineas for his performance.

Among the revels which marked the day, foot-

ball seems in most places to have been conspicuous. The London apprentices enjoyed it in Finsbury Fields. At Teddington, it was conducted with such animation that careful householders had to protect their windows with hurdles and bushes. There is perhaps no part of the United Kingdom where this Shrovetide sport is kept up with so much energy as at the village of Scone, near Perth, in Scotland. The men of the parish assemble at the cross, the married on one side and the bachelors on the other; a ball is thrown up, and they play from two o'clock till sunset. A person who witnessed the sport in the latter part of the last century, thus describes it: 'The game was this: he who at any time got the ball into his hands, ran with it till overtaken by one of the opposite party; and then, if he could shake himself loose from those on the opposite side who seized him, he ran on; if not, he threw the ball from him, unless it was wrested from him by the other party, but no party was allowed to kick it. The object of the married men was to *hang* it, that is, to put it three times into a small hole on the moor, which was the *dool*, or limit, on the one hand: that of the bachelors was to *drown* it, or dip it three times in a deep place in the river, the limit on the other: the party who could effect either of these objects won the game; if neither one, the ball was cut into equal parts at sunset. In the course of the play, there was usually some violence between the parties; but it is a proverb in this part of the country, that "A' is fair at the ba' o' Scone."

Taylor, the Water Poet, alludes to the custom of a fellow carrying about 'an ensign made of a piece of a baker's mawkin fixed upon a broom-staff,' and making orations of nonsense to the people. Perhaps this custom may have been of a similar nature and design to one practised in France on Ash Wednesday. The people there 'carry an effigy, similar to our Guy Fawkes, round the adjacent villages, and collect money for his funeral, as this day, according to their creed, is the burial of good living. After sundry absurd mummeries, the corpse is deposited in the earth.* In the latter part of the last century, a curious custom of a similar nature still survived in Kent. A group of girls engaged themselves at one part of a village in burning an uncouth image, which they called a *holly boy*, and which they had stolen from the boys; while the boys were to be found in another part of the village burning a like effigy, which they called the *wy girl*, and which they had stolen from the girls; the ceremony being in both cases accompanied by loud huzzas.† These are fashions, we humbly opine, smacking of a very early and probably pagan origin. At Bromfield, in Cumberland, there used to be a still more remarkable custom. The scholars of the free school of that parish assumed a right, from old use and wont, to *bar out the master*, and keep him out for three days. During the period of this expulsion, the doors were strongly barricaded within; and the boys, who defended it like a besieged city, were armed in general with guns made of the hollow

* *Morning Chronicle*, March 10, 1791.

† *Gentleman's Magazine*, 1779.

twigs of the elder, or bore-tree. The master, meanwhile, made various efforts, by force and stratagem, to regain his lost authority. If he succeeded, heavy tasks were imposed, and the business of the school was resumed and submitted to; but it more commonly happened that all his efforts were unavailing. In this case, after three days' siege, terms of capitulation were proposed by the master and accepted by the boys. The terms always included permission to enjoy a full allowance of Shrovetide sports.*

In days not very long gone by, the inhumane sport of *throwing at cocks* was practised at Shrovetide, and nowhere was it more certain to be seen than at the grammar-schools. The poor animal was tied to a stake by a short cord, and the unthinking men and boys who were to throw at it, took their station at the distance of about twenty yards. Where the cock belonged to some one disposed to make it a matter of business, twopence was paid for three *shies* at it, the missile used being a broomstick. The sport was continued till the poor creature was killed outright by the blows. Such tumult and outrage attended this inhuman sport a century ago, that, according to a writer in the *Gentleman's Magazine*, it was sometimes dangerous to be near the place where it was practised. Hens were also the subjects of popular amusement at this festival. It was customary in Cornwall to take any one which had not laid eggs before Shrove-Tuesday, and lay it on a barn-floor to be thrashed to death. A man hit at her with a flail; and if he succeeded in killing her therewith, he got her for his pains. It was customary for a fellow to get a hen tied to his back, with some horse-bells hung beside it. A number of other fellows, blindfolded, with boughs in their hands, followed him by the sound of the bells, endeavouring to get a stroke at the bird. This gave occasion to much merriment, for sometimes the man was hit instead of the hen, and sometimes the assailants hit each other instead of either. At the conclusion, the hen was boiled with bacon, and added to the usual pancake feast. Cock-fights were also common on this day. Strange to say, they were in many instances the sanctioned sport of public schools, the master receiving on the occasion a small tax from the boys under the name of a *cock-penny*. Perhaps this last practice took its rise in the circumstance of the master supplying the cocks, which seems to have been the custom in some places in a remote age. Such cock-fights regularly took place on Fasten's E'en in many parts of Scotland till the middle of the eighteenth century, the master presiding at the battle, and enjoying the perquisite of all the runaway cocks, which were technically called *fugies*. Nay, so late as 1790, the minister of Applecross, in Ross-shire, in the account of his parish, states the schoolmaster's income as composed of two hundred merks, with 1s. 6d. and 2s. 6d. per quarter from each scholar, and the *cock-fight dues*, which are equal to one quarter's payment for each scholar.†

The other Shrovetide observances were chiefly

* Hutchinson's History of Cumberland.

† Cock-fighting is now legally a misdemeanour, and punishable by penalty.

of a local nature. The old plays make us aware of a licence which the London apprentices took on this occasion to assail houses of dubious repute, and cart the unfortunate inmates through the city. This seems to have been done partly under favour of a privilege which the common people assumed at this time of breaking down doors for sport, and of which we have perhaps some remains, in a practice which still exists in some remote districts, of throwing broken crockery and other rubbish at doors. In Dorsetshire and Wiltshire, if not in other counties, the latter practice is called *Lent Crocking*. The boys go round in small parties, headed by a leader, 'who goes up and knocks at the door, leaving his followers behind him, armed with a good stock of potsherds—the collected relics of the washing-pans, jugs, dishes, and plates, that have become the victims of concussion in the hands of unlucky or careless housewives for the past year. When the door is opened, the hero,—who is perhaps a farmer's boy, with a pair of black eyes sparkling under the tattered brim of his brown milking-hat,—hangs down his head, and, with one corner of his mouth turned up into an irrepressible smile, pronounces the following lines :

A-shrovin, a-shrovin,
I be come a-shrovin ;
A piece of bread, a piece of cheese,
A bit of your fat bacon,
Or a dish of dough-nuts,
All of your own makin !

A-shrovin, a-shrovin,
I be come a-shrovin,
Nice meat in a pie,
My mouth is very dry !
I wish a wuz zoo well-a-wet
I'de zing the louder for a nut !

Chorus—A-shrovin, a-shrovin,
We be come a-shrovin !

Sometimes he gets a bit of bread and cheese, and at some houses he is told to be gone ; in which latter case, he calls up his followers to send their missiles in a rattling broadside against the door. It is rather remarkable that, in Prussia, and perhaps other parts of central Europe, the throwing of broken crockery at doors is a regular practice at marriages. Lord Malmesbury, who in 1791 married a princess of that country as proxy for the Duke of York, tells us, that the morning after the ceremonial, a great heap of such rubbish was found at her royal highness's door.

OLD GRAMMAR-SCHOOL CUSTOMS.

Mr R. W. Blencowe, in editing certain extracts from the journal of Walter Gale, schoolmaster at Mayfield, in the *Sussex Archaeological Collections*, tells us that the salary of the Mayfield schoolmaster was only £16 a-year, which was subsequently increased by the bequest of a house and garden, which let for £18 a-year. There were none of those perquisites so common in old grammar-schools, by which the scanty fortunes of the masters were increased, and the boys instructed in the humanities, as in the Middle School at Manchester, where the master provided the cocks, for which he was liberally paid, and which were to be buried up to their necks

to be shied at by the boys on Shrove Tuesday, and at the feast of St Nicholas, as at Wyke, near Ashford. No Mr Graham had bequeathed a silver bell to Mayfield, as he had done to the school at Wreay in 1661, to be fought for annually, when two of the boys, who had been chosen as captains, and who were followed by their partisans, distinguished by blue and red ribbons, marched in procession to the village-green, where each produced his cocks ; and when the fight was won, the bell was suspended to the hat of the victor, to be transmitted from one successful captain to another. There were no potation pence, when there were deep drinkings, sometimes for the benefit of the clerk of the parish, when it was called clerk's ale, and more often for the schoolmaster, and in the words of some old statutes, 'for the solace of the neighbourhood : ' potations which Agnes Mellers, avowess, the widow of a wealthy bellfounder of Nottingham, endeavoured, in some degree, to restrain when she founded the grammar-school in that town in 1513, by declaring that the schoolmaster and usher of her school should not make use of any potations, cock-fightings, or drinkings, with his or their wives, hostess, or hostesses, *more than twice a year*. There were no 'delectations' for the scholars, such as the barring out of the schoolmaster, which Sir John Deane, who founded the grammar-school at Wilton, near Northbeach, to prevent all quarrels between the teacher and the taught, determined should take place only twice a year, a week before Christmas and Easter, 'as the custom was in other great schools.' No unhappy ram was provided by the butcher, as used to be the case at Eton in days long gone by, to be pursued and knocked on the head by the boys, till on one occasion, the poor animal, being sorely pressed, swam across the Thames, and, reeling into the market-place at Windsor, followed by its persecutors, did such mischief, that this sport was stopped, and instead thereof it was hamstrung, after the speech on Election Saturday, and clubbed to death. None of these humanising influences were at work at Mayfield : there was not even the customary charge of 5s. to each boy for rods.

No such rules as those in force at the free grammar-school at Cuckfield prevailed at Mayfield. They were not taught 'on every working day one of the eight pearls of reason, with the word according to the same, that is to say, *Nomen* with *Amo*, *Pronomen* with *Amor*, to be said by heart ; nor as being a modern and a thoroughly Protestant school, were they called upon before breakfast each Friday to listen to a little piece of the Pater Noster, or Ave Maria, the Credo, or the verses of the Mariners, or the Ten Commandments, or the Five Evils, or some other proper saying in Latin meet for babies.' Still less, as in the case of the grammar-school at Stockport, did any founder will 'that some cunning priest, with all his scholars, should, on Wednesday and Friday of every week, come to the church to the grave where the bodies of his father and mother lay buried, and there say the psalm of *De Profundis*, after the Salisbury use, and pray especially for his soul, and for the souls of his father and mother, and for all Christian souls.' Neither did the trustees, that they might sow the seeds of ambition in the minds of the scholars, ordain, as was done at Tunbridge and at Lewisham, 'that the best scholars and the best writers should wear some pretty garland on their heads, with silver pens well fastened thereunto, and thus walk to church and back again for at least a month.' A ceremony which in these days would infallibly secure for them all sorts of scuffings, and probably a broken head.*

* The above mention of *silver pens* would seem to carry the use of metal pens back to a period long antecedent to the date generally attributed.

It is deemed appropriate to append hereunto a memorial of one of the ancient grammar-school customs, more honoured in the breach than the observance, but which nevertheless still retains a certain hold. It is the stool or altar of punishment which was formerly in use at the Free School of Lichfield—the school at which Addison, Ashmole, Garrick, Johnson, and Wollaston received their education. When our artist visited this venerable temple of learning a few

years ago, there was a head-master receiving a good salary, *but no scholars*. The flogging-horse, here delineated, stood in the lower room, covered with dust.

Lent—Ash Wednesday.

It is an ancient custom of the Christian church to hold as a period of fasting and solemnity the forty days preceding Easter, in commemoration of the miraculous abstinence of Jesus when under temptation. From *lengten-tide*, a Saxon term for spring (as being the time of the lengthening of the day), came the familiar word for this period—LENT. Originally, the period began on what is now the first Sunday in Lent; but, it being found that, when Sundays, as improper for fasting, were omitted, there remained only thirty-six days, the period was made by Pope Gregory to commence four days earlier; namely, on what has since been called Ash Wednesday. This name was derived from the notable ceremony of

240

the day in the Romish church. It being thought proper to remind the faithful, at commencement of the great penitential season, that they were but dust and ashes, the priests took a quantity of ashes, blessed them, and sprinkled them with holy water. The worshipper then approaching in sackcloth, the priest took up some of the ashes on the end of his fingers, and made with them the mark of the cross on the worshipper's forehead, saying, '*Memento, homo, quia cinis es, et in pulverem reverteris*' (Remember, man, that you are of ashes, and into dust will return). The ashes used were commonly made of the palms consecrated on the Palm Sunday of the previous year. In England, soon after the Reformation, the use of ashes was discontinued, as 'a vain show,' and Ash Wednesday thence became only a day of marked solemnity, with a memorial of its original character in a reading of the curses denounced against impenitent sinners.

The popular observances on Ash Wednesday are not of much account. The cocks being now dispatched, a thin scare-crow-like figure or puppet was set up, and shied at with sticks, in imitation of one of the sports of the preceding day. The figure was called a *Jack-a-lent*, a term which is often met with in old literature, as expressive of a small and insignificant person. Beaumont and Fletcher, in one of their plays, make a character say—

'If I forfeit,
Make me a Jack o' Lent and break my shins
For untagged points and counters.'

Boys used to go about *clacking* at doors, to get eggs or bits of bacon wherewith to make up a feast among themselves; and when refused, would stop the keyhole with dirt, and depart with a rhymed denunciation. In some parts of Germany, the young men gathered the girls into a cart, and drove them into a river or pool, and there 'washed them favouredly,'—a process which shews that abstinence from merriment was not there held as one of the proprieties of the day.

Among the ancient customs of this country which have sunk into disuse, was a singularly absurd one, continued even to so late a period as the reign of George I. During the Lenten season, an officer denominated the *King's Cock Crower* crowed the hour each night, within the precincts of the Palace, instead of proclaiming it in the ordinary manner of watchmen.* On the first *Ash Wednesday* after the accession of the House of Hanover, as the Prince of Wales, afterwards George II., sat down to supper, this officer abruptly entered the apartment, and according to accustomed usage, proclaimed in a sound resembling the shrill pipe of a cock, that it was "past ten o'clock." Taken by surprise, and imperfectly acquainted with the English language, the astonished prince naturally mistook the tremulation of the assumed crow, as some mockery intended to insult him, and instantly rose to resent the affront: nor was it without difficulty that the interpreter explained the nature of the custom, and satisfied him, that a

* In Debreit's *Imperial Calendar* for the year 1822, in the list of persons holding appointments in the Lord Steward's department of the Royal Household, occurs the 'Cock and Cryer at Scotland-yard.'

compliment was designed, according to the court etiquette of the time. From that period we find no further account of the exertion of the imitative powers of this important officer; but the court has been left to the voice of reason and conscience, to remind them of their errors, and not to that of the cock, whose clarion called back Peter to repentance, which this fantastical and silly ceremony was meant to typify.—*Brady*.

ISAAC VOSSIUS: A STRANGE CANON.

This eccentric Dutch scholar, a son of Gerard Vossius, a still more learned man, died on the 10th of February, 1688-9, in Windsor Castle, where Charles II. had assigned him apartments fifteen years previously, when he came to England from Holland, and the king made him a canon of Windsor. Never did a man undertake the clerical office who was more unfit for it. Although a canon of Windsor, he did not believe in the divine origin of the Christian religion, and he treated religious matters with contempt, although in all other things he was exceedingly credulous. Charles, on one occasion, said, 'This learned divine is a strange man; he will believe anything except the Bible.' When he attended divine service in the chapel at Windsor, it is said that he used to read Ovid's *Ars Amandi* instead of the prayer-book. He knew all the European languages, without being able to speak one of them correctly. He was familiar with the manners and customs of the ancients, but profoundly ignorant of the world and the affairs of ordinary life. On his death-bed he refused the sacrament, and was only prevailed upon to take it by the remark of one of his colleagues, that if he would not do it for the love of God, he ought to do it for the honour of the chapter to which he belonged.

Vossius took an odd delight in having his hair combed in a measured or rhythmical manner. He would have it done by barbers or other persons skilled in the rules of prosody. A Latin treatise on rhythm, published by him at Oxford in 1673, contains this curious passage: 'Many people take delight in the rubbing of their limbs, and the combing of their hair; but these exercises would delight much more, if the servants at the baths, and of the barbers, were so skilful in this art, that they could express any measure with their fingers. I remember that more than once I have fallen into the hands of men of this sort, who could imitate any measure of songs in combing the hair; so as sometimes to express very intelligibly iambs, trochees, dactyles, &c., from whence there arose to me no small delight.'

RIOT AT OXFORD ON ST SCHOLASTICA'S DAY.

On the 10th of February 1354, in the reign of Edward III., a dire conflict took place between the students of the University of Oxford and the citizens. The contest continued three days. On the second evening, the townsmen called into their assistance the country people; and thus reinforced, completely overpowered the scholars, of whom numbers were killed and wounded. The citizens were, consequently, debarred the rites and consolations of the church; their privileges were greatly narrowed; they were heavily fined; and an annual penance for ever was enjoined that on each anniversary of St Scholastica, the mayor and sixty-two citizens attend at St Mary's Church, where the Litany should be read at the altar, and an oblation of one penny made by each man.

HISTORY OF THE UMBRELLA.

The designation of this useful contrivance (from *umbra*, shade) indicates the earliest of its twofold uses. Johnson describes it as 'a screen used in hot countries to keep off the sun, and in others to bear off the rain;' and Kersey, many years before (1708), had described it as 'a kind of broad fan or screen, commonly used by women to shelter them from rain; also, a wooden frame, covered with cloth, to keep off the sun from a window.' Phillips, in his *New World of Words*, edit. 1720, describes the umbrella as 'now commonly used by women to shelter them from rain.'

As a shade from the sun, the umbrella is of great antiquity. We see it in the sculptures and paintings of Egypt, and Sir Gardner Wilkinson has engraved a delineation of an Ethiopian princess, travelling in her chariot through Upper Egypt to Thebes, wherein the car is furnished with a kind of umbrella fixed to a tall staff rising from the centre, and in its arrangement closely resembling the chaise umbrella of the present time. The recent discoveries at Nineveh shew that the umbrella (or parasol) 'was generally carried over the king in time of peace, and even in war. In shape,' says Layard, 'it resembled very closely those now in common use, but it is always seen open in the sculptures. It was edged with tassels, and was usually adorned at the top by a flower or some other ornament. On the later bas-reliefs, a long piece of linen or silk, falling from one side, like a curtain, appears to screen the king completely from the sun. The parasol was reserved exclusively for the monarch, and is never represented as borne over any other person. On several bas-reliefs from Persepolis, the king is represented under an umbrella, which a female slave holds over his head.'

From the very limited use of the parasol in Asia and Africa, it seems to have passed, both as a distinction and a luxury, into Greece and Rome. The *Skiadeion*, or day-shade of the Greeks, was carried over the head of the effigy of Bacchus; and the daughters of the aliens at Athens were required to bear parasols over the heads of the maidens of the city at the great festival of the Panathenea. We see also the parasol figured in the hands of a princess on the Hamilton vases in

the British Museum. At Rome, when the veil could not be spread over the roof of the theatre, it was the custom for females and effeminate men to defend themselves from the sun with the *umbrella* or *umbraculum* of the period; and this covering appears to have been formed of skin or leather, capable of being raised or lowered, as circumstances might require.

Although the use of the umbrella was thus early introduced into Italy, and had probably been continued there as a vestige of ancient Roman manners, yet so late as 1608, Thomas Coryat notices the invention in such terms as to indicate that it was not commonly known in his own country. After describing the fans of the Italians, he adds: 'Many of them do carry other fine things, of a far greater price, that will cost at least a ducat (5s. 6d.), which they commonly call, in the Italian tongue, *umbrellaes*; that is, things that minister shadow unto them, for shelter against the scorching heat of the sun. These are made of leather, something answerable to the form of a little canopy, and hooped in the inside with divers little wooden hoops, that extend the *umbrella* into a pretty large compass. They are used especially by *horsemen*, who carry them in their hands when they ride, fastening the end of the handle upon one of their thighs; and they impart so long a shadow unto them, that it keepeth the heat of the sun from the upper part of their bodies.' It is probable that a similar contrivance existed, at the same period, in Spain and Portugal, whence it was taken to the New World. Defoe, it will be remembered, makes Robinson Crusoe describe that he had seen umbrellas employed in the Brazils, and that he had constructed his own umbrella in imitation of them. 'I covered it with skins,' he adds, 'the hair outwards, so that it cast off the rain like a penthouse, and kept off the sun so effectually, that I could walk out in the hottest of the weather with greater advantage than I could before in the coolest.' In commemoration of this ingenious production, one species of the old heavy umbrellas was called 'The Robinson.'

The umbrella was used in England as a luxurious sun-shade early in the seventeenth century. Ben Jonson mentions it by name in a comedy produced in 1616; and it occurs in Beaumont and Fletcher's *Rule a Wife and Have a Wife*, where Altea says:

'Are you at ease? Now is your heart at rest?
Now you have got a shadow, an umbrella,
To keep the scorching world's opinion
From your fair credit.'

In those days, as we may infer from a passage in Drayton, the umbrella was composed exteriorly of feathers, in imitation of the plumage of water-birds. Afterwards, oiled silk was the ordinary material. In the reign of Queen Anne, the umbrella appears to have been in common use in London as a screen from rain, but only for the weaker sex. Swift in the *Tatler*, October 17, 1710, says, in 'The City Shower:'

'The tuck'd up seamstress walks with hasty strides,
While streams run down her oiled umbrella's sides.'

Gray speaks of it in his *Trivia*; or, *the Art of Walking the Streets of London*:

'Good housewives all the winter's rage despise,
Defended by the riding-hood's disguise:
Or underneath th' umbrella's oily shed,
Safe through the wet on clinking pattens tread.
Let Persian dames th' umbrella's ribs display,
To guard their beauties from the sunny ray;
Or sweating slaves support the shady load,
When Eastern monarchs shew their state abroad:
Britain in winter only knows its aid,
To guard from chilly showers the walking maid.'

This passage, which points to the use of the umbrella exclusively by women, is confirmed by another passage in the *Trivia*, wherein the surtout is recommended for men to keep out 'the drenching shower:'

'By various names, in various countries known,
Yet held in all the true surtout alone,
Be thine of kersey firm, though small the cost;
Then brave unwet the rain, unhill'd the frost.'

At Woburn Abbey is a full-length portrait of the beautiful Duchess of Bedford, painted about 1730, representing the lady as attended by a black servant, who holds an open umbrella to shade her. Of about the same period is the sketch engraved on the next page, being the vignette to a song of Aaron Hill's, entitled *The Generous Repulse*, and set to a tolerable air by Carey:

'Thy vain pursuit, fond youth, give o'er.
What more, alas! can Flavia do?
Thy worth I own, thy fate deplore,
All are not happy that are true.

* * * * *

'But if revenge can ease thy pain,
I'll soothe the ills I cannot cure,
Tell thee I drag a hopeless chain,
And all that I inflict endure.'

Flavia, as will be observed, administers this poorish consolation, seated on a flowery bank, and keeping off the sunshine with a long-stalked umbrella, or what we should now call a parasol, while the 'fond youth' reclines bare-headed by her side.

The eighteenth century was half elapsed before the umbrella had even begun to be used in England by both sexes, as we now see it used. In 1752, Lieutenant-Colonel (afterwards General) Wolfe, writing from Paris, says: 'The people here use umbrellas in hot weather to defend them from the sun, and something of the same kind to save them from the snow and rain. I wonder a practice so useful is not introduced in England.' Just about that time, a gentleman did exercise the moral courage to use an umbrella in the streets of London. He was the noted Jonas Hanway, newly returned from Persia, and in delicate health, by which, of course, his using such a convenience was justified both to himself and the considerate part of the public. 'A parapluie,' we are told, 'defended Mr Hanway's face and wig.' For a time, no others than the dainty beings then called Macaronies ventured to carry an umbrella. Any one doing so was sure to be hailed by the mob as 'a mincing Frenchman.' One John Macdonald, a footman, who has favoured the public with his memoirs, found as late as 1770, that, on appearing with a fine silk umbrella which he had brought from Spain, he was saluted with the cry of 'Frenchman, why don't you get a coach?' It appears, however, as if there had pre-

viously been a kind of transition period, during which an umbrella was kept at a coffee-house, liable to be used by gentlemen on special occasions by night, though still regarded as the resource of effeminacy. In the *Female Tatler* of December 12, 1709, there occurs the following announcement: 'The young gentleman belonging to the Custom House, who, in the fear of rain, borrowed the umbrella at Will's coffee-house, in

Cornhill, of the mistress, is hereby advertised that to be dry from head to foot on the like occasion, he shall be welcome to the maid's pattens.' It is a rather early fact in the history of the general use of umbrellas, that in 1758, when Dr Shebbeare was placed in the pillory, a servant stood beside him with an umbrella to protect him from the weather, physical and moral, which was raging around him.

'THE GENEROUS REPULSE.'

Much of the clamour which was raised against the general use of the umbrella originated with the chairmen and hackney-coachmen, who, of course, regarded rainy weather as a thing especially designed for their advantage, and from which the public were entitled to no other protection than what their vehicles could afford.

In all the large towns of the empire, a memory is preserved of the courageous citizen who first carried an umbrella. In Edinburgh, it was a popular physician named Spens. In the *Statistical Account of Glasgow*, by Dr Cleland, it is related that, about the year 1781, or 1782, the late Mr John Jameson, surgeon, brought with him an umbrella, on his return from Paris, which was the first seen in the city, and attracted universal attention. This umbrella was made of heavy wax-cloth, with cane ribs, and was a ponderous article. Cowper mentions the umbrella twice in his *Task*, published in 1784.

The early specimens of the English umbrella made of oiled silk, were, when wet, exceed-

ingly difficult to open or to close; the stick and furniture were heavy and inconvenient, and the article generally very expensive; though an umbrella manufacturer in Cheapside, in 1787, advertised pocket and portable umbrellas superior to any kind ever imported or manufactured in this kingdom; and 'all kinds of common umbrellas prepared in a particular way, that will never stick together.' The substitution of silk and gingham for the oiled silk, however, remedied the above objection.

The umbrella was originally formed and carried in a fashion the reverse of what now obtains. It had a ring at top, by which it was usually carried on the finger when furled (and by which also it could be hung up within doors), the wooden handle terminating in a rounded point to rest on the ground. The writer remembers umbrellas of this kind being in use among old ladies so lately as 1810. About thirty years ago, there was living in Taunton, a lady who recollected when there were but two umbrellas in

that town; one belonged to a clergyman, who, on proceeding to his duties on Sunday, hung up the umbrella in the church porch, where it attracted the gaze and admiration of the townspeople coming to church.

ANECDOTE PRESERVED BY DUGDALE.

The laboriously industrious antiquary, Sir William Dugdale, to whom we owe a large proportion of what has been preserved of the ecclesiastical antiquities of England, died at the ripe age of eighty-six. His son, Sir John Dugdale, preserved from his conversation some brief anecdotes, and among the rest a merry tale regarding the Scotch covenanting minister, Patrick Gillespie. This esteemed leader having fallen into a grievous sin, the whole of his party felt extremely scandalised, and 'nothing less would serve them than to hold a solemn convention, for seeking the Lord (as their term was) to know of him wherefore he allowed this holy brother to fall under the power of Satan. That a speedy solution might be given them, each of them by turn vigorously wrestled with God, till (as they pretended) he had solved their question; viz. that this fall of their preacher was not for any fault of his own, but for the sins of his parish laid upon him. Whereupon the convention gave judgment that the parish should be fined for public satisfaction, as was accordingly done.'—*Life of Dugdale*, 4to, 1827, p. 60, note.

FEBRUARY 11.

Saints Saturninus, Dativus, and others, martyrs of Africa, 304. St Severinus, 507. St Theodora, empress, 867. (In the Anglo-Romish calendar) Cædmon, about 680.

CÆDMON.

Cædmon is the most ancient English poet whose name is known. He lived in Northumbria, near the monastery which was then called Streanes-halch, but which has since been known by the name of Whitby. The name of its abbess, Hilda, is known to every one acquainted with Northern legend and poetry.

It was a favourite custom of the Anglo-Saxons to meet together at drinking-parties, and there, in the midst of their mirth, the harp was moved round, and each in his turn was expected to sing or chant some poem to the instrument—and these, as we may gather from the story, were often the composition of the singer, for the art of composing poetry seems to have been very extensively cultivated among our Saxon forefathers. Now the education of Cædmon, who was apparently the son of a small landholder, had been so much neglected that he had been unable either to compose, or to repeat or sing; and when on these occasions he saw the harp approach him, he felt so overwhelmed with shame that he rose from his seat and went home. An important part of the wealth of an Anglo-Saxon landholder at this time—the events of which we are speaking occurred in the latter half of the seventh century—consisted in cattle, and it was the duty of the sons or retainers of the family to guard them at night; for this could not be done by the agricultural serfs, as none but a freeman was allowed to bear arms. Now it happened on one of the occasions when Cædmon thus slunk from the fes-

tive beer-party (*gebeorscipe*) in disgrace, that it was his turn to guard the cattle, and proceeding from the hall to his post, he laid himself down there with a feeling of vexation and despondency, and immediately fell asleep. In his slumber a stranger appeared to him, and, addressing him by his name, said, 'Cædmon, sing me something.' Cædmon answered, 'I know nothing to sing, or I should not have left the hall to come here so soon.' 'Nay,' said the stranger, 'but thou hast something to sing!' 'What must I sing?' said Cædmon. 'Sing the Creation,' was the reply. Cædmon immediately began to sing verses 'which he had never heard before,' and which are given in Anglo-Saxon in some of the old manuscripts. When he awoke, he was not only able to repeat the lines which he had composed in his dream, but he went on at will in the most excellent poetry. In the morning he presented himself before the reeve, or bailiff, of Whitby, and informed him of his miraculous gift of poetry, and the reeve took him to the abbess Hilda. Hilda and a number of high and pious ecclesiastics listened to his story, and witnessed his performance, after which they read to him a short portion of the Scripture in Anglo-Saxon, and he went home, and on his return next morning he repeated it in Anglo-Saxon verse, excelling in beauty everything they had heard before. Such a heaven-born poet was a prize not to be thrown away, and Cædmon yielded to Hilda's earnest solicitations, and became a monk of her house—for the early Anglo-Saxon nunneries contained monks and nuns in the same establishment. He was here employed by the pious abbess in translating into Anglo-Saxon verse the whole of the sacred history. Bede gives an affecting account of Cædmon's death, which took place about the year 680. He was regarded as a saint by the Anglo-Saxon Church, and his death is placed in the Anglo-Romish Calendar on the 11th of February, but there is no known authority for fixing it on that day.

Cædmon is, indeed, only known even by name through his story, as told by the historian Bede, who was almost his contemporary, or at least lived only a generation later, and it would have been perhaps no more thought of than other legends, but for a rather curious circumstance. The celebrated Archbishop Usher became possessed of an early manuscript of Anglo-Saxon poetry, which he afterwards gave to Junius, a distinguished Anglo-Saxon scholar, and it proved to be a paraphrase in Anglo-Saxon verse of some parts of the Scripture history, bearing so many points of resemblance to the works of Cædmon, as described by Bede, that Junius did not hesitate to print it under Cædmon's name (at Amsterdam, in 1655). One excellent edition, with an English translation, has since been printed by Mr Benjamin Thorpe. The original MS. is now among Junius's manuscripts in the Bodleian library, at Oxford. The earlier part of this poetry, containing the history of the Creation and of the fall of man, is much more poetical than the rest, and may very probably be the same which, in Anglo-Saxon times, was ascribed to Cædmon, though it bears no name in the manuscript. The story of the temptation and

fall is told with great dramatic effect, and in some circumstances bears such close resemblance to Milton's *Paradise Lost*, that it has been supposed that the latter poet must have been acquainted with the poetry of Cædmon, though the latter was printed by Junius in a very unreadable form, and without any translation.

Born.—The Princess Elizabeth (of York), 1466; Mary Queen of England, 1516, *Westminster*; Bernard de Bovier de Fontenelle, *littérateur*, 1657, *Rouen*.

Died.—The Emperor Heraclius, 641; Elizabeth Plantagenet, of York, 1502; René Descartes, French philosopher, 1650, *Stockholm*; William Shenstone, poet, 1763, *Hales Owen*; Macvey Napier, editor of the *Encyclopædia Britannica*, 1847.

PREMATURE DEATH OF DESCARTES.

The death of this eminent philosopher was indirectly brought about by the means which he had taken to escape from the persecution of his enemies. After completing his travels, he determined to devote his attention exclusively to philosophical and mathematical inquiries, with the ambition of renovating the whole circle of the sciences. At the age of thirty-three he sold a portion of his patrimony, and retired into Holland, where he remained eight years so completely aloof from the distractions of the world, that his very place of residence was unknown, though he preserved an intercourse of letters with many friends in France. Meanwhile with the increase of his fame arose a spirit of controversy against his writings. Shrinking from the hostility of the church, he gladly accepted an invitation of Christina, Queen of Sweden, by whom he was treated with the greatest distinction, and was relieved from the observance of any of the humiliating usages so generally exacted by sovereigns of those times from all whom they admitted into their presence. The queen, however, probably from the love of differing from every one else, chose to pursue her studies with Descartes at five o'clock in the morning; and as his health was peculiarly delicate, the rigour of the climate, and the unseasonable hour, brought on a pulmonary disease, of which he very soon died, being then only in the fifty-fourth year of his age. The queen wished to inter him with great honour in Sweden; but the French ambassador interposed, and his remains were conveyed for sepulture amongst his countrymen in Paris. Thus fell one of the greatest men of his age, a victim to the absurd caprice of the royal patron who had afforded him shelter from the persecutions of the church.

Probably, no man has given a greater impulse to mathematical and philosophical inquiry than Descartes. He was the first who successfully applied algebra to geometry; he pointed out the important law of the sines; in an age in which optical instruments were extremely imperfect, he discovered the changes to which light is subjected in the eye by the crystalline lens; and he directed attention to the consequences resulting from the weight of the atmosphere. He was not only the greatest geometrician of the age, but by the clearness and admirable precision of his style, he became one of the founders of French prose. In his laborious experiments upon the animal frame,

he recognised Harvey's researches on the circulation of the blood, and made it the basis of the physiological part of his work on Man. He is the author of what is emphatically called Modern Philosophy; his name has revived in some measure of late years, chiefly owing, among ourselves, to Dugald Stewart, and in France to the disposition of the philosophers to cast away their idols of the eighteenth century.

SHENSTONE'S QUATRAIN.

Shenstone has furnished an inn-window quatrain which is oftener heard from the lips of our generation than any of his dulcet pastoral verses:

'Whoe'er has travelled life's dull round,
Where'er his stages may have been,
Must sigh to think he still has found
His warmest welcome at an inn.'

Dr Percy, who more than once visited 'the wailing poet of the *Leasowes*,' told Miss Hawkins that he always thought Shenstone and found him a man unhappy in his temper. In his taste for rural pleasures he was finical to a ludicrous degree of excess. In the purchase of a cow, he regarded nothing but the spots on her hide; if they were beautiful, all other requisites were disregarded. His man-servant, whose office it was to shew his grounds, had made a grotto, which Shenstone approved. This was always made the test of the visitor's judgment: if he admired William's grotto, his master thought him worth accompanying round the place, and, on a signal from the man, appeared; but if it was passed with little notice, he kept out of the way.

PERUQUIERS' PETITION.

On the 11th of February, 1765, a petition was presented to King George III., by the master peruke-makers of the metropolis, setting forth the distresses of themselves and an incredible number of others dependent on them, from the almost universal decline of their trade, in consequence of gentlemen so generally beginning to wear their own hair. What business remained to their profession was, they said, nearly altogether taken from them by French artists. They had a further ground of complaint in their being obliged to work on Sunday, which they would much rather have spent in their religious duties, 'learning to fear God and honour the king [a bit of flattery].' Under these circumstances, the distressed peruke-makers prayed his majesty for means of relief. The king—though he must have scarcely been able to maintain his gravity—returned a gracious answer. But the public, albeit but little converted from the old views regarding the need of protection to industry, had the sense to see the ludicrous side of the petition, and some one quickly regaled them by publishing a petition from the *Body Carpenters*, imploring his majesty to wear a wooden leg, and to enjoin all his servants to appear in the royal presence with the same graceful decoration.*

POLITICAL WINDOW-BREAKING.

The foolish excesses in which the politicians of the last century occasionally indulged, were

* *Gentleman's Magazine*, 1765, p. 95.

strangely exemplified upon the acquittal of Admiral Keppel, February 11, 1779, after a trial of thirty days, on charges of misconduct and incapacity exhibited against him by Sir Hugh Palliser. In the evening, a courier brought to London the news of Keppel's acquittal, couched in the most honourable terms for him, and most ignominious to his antagonist. Public feeling was much excited in favour of Keppel. Palliser himself was fain to make his escape out of Portsmouth (where the trial took place), at five in the morning, in a hired post-chaise, to avoid insults and outrage from the mob, and sheltered himself in the Admiralty. The news spread rapidly through London, and by eleven at night most houses were illuminated, both in London and Westminster. Guns were discharged by the servants of some of the great lords in the Opposition, and squibs and crackers thrown plentifully by the populace. The ministers, and some of the Scots, were sullen, and would not exhibit lights; yet the mob was far more temperate than usual, the Opposition having taken no pains to inflame them, nor even to furnish them with any *cri de guerre*. Late at night, as the people grew drunk, an empty house in Pall Mall, recently inhabited by Sir Hugh Palliser, and still supposed to belong to him, was attacked; the windows were broken, and at last, though some guards had been sent for, the mob forced their way into it, and demolished whatever remained. The windows of Lord Mulgrave and Captain Hood were likewise broken, and some others accidentally that were not illuminated. It happened at three in the morning that Charles Fox, Lord Derby, and his brother, Major Stanley, and two or three other young men of quality, having been drinking at Almack's till that late hour, suddenly thought of making the tour of the streets, and were joined by the Duke of Ancaster, who was very drunk, and, what shewed that it was no premeditated scheme, the latter was a courtier, and had actually been breaking windows. Finding the mob before Palliser's house, some of the young lords said, 'Why don't you break Lord George Germaine's windows?' The populace had been so little tutored, that they asked who he was, and receiving some further encouragement, they quickly proceeded to break Lord George's windows. The mischief pleasing the juvenile leaders, they marched to the Admiralty, forced the gates, and demolished Palliser's and Lord Lilburne's windows. Lord Sandwich, exceedingly terrified, escaped through the garden with his mistress, Miss Reay, to the Horse Guards, and there betrayed a most manifest panic. The rioters then proceeded to Lord North's, who got out on to the top of his house; but the alarm being now given, the Guards arrived, and prevented any further mischief.—*Walpole's Last Journals*, vol. ii., pp. 342—344.

SUSSEX SMUGGLERS.

The coast of Sussex appears to have been greatly frequented by smugglers in the middle of the last century, and their affrays with Custom-house officers were at that time very desperate. In the year 1749, there was sent to Chichester a special commission, with Sir Michael Forster as president, to try seven smugglers for the murder of two Custom-house officers; an act

perpetrated under circumstances of atrocity too horrible to be related. They were convicted, and, with the exception of one who died the night before the execution, they were all executed and hanged in chains, in different parts of Sussex. The state of public feeling regarding these culprits made it necessary that a company of foot-guards and a troop of horse should attend to prevent all chances of rescue. Seven more were tried and convicted at the following assizes at East Grinstead, for highway robbery and for the barbarous murder of a poor fellow named Hawkins, who was suspected of giving information against them, and who was literally flogged to death. Six of them were executed. Most of them belonged to a celebrated set called the Hawkhurst gang, who were the terror of the counties of Kent and Sussex. Three more were tried at the Old Bailey, also with sixty others, who had broken open the Custom-house at Poole, and taken away a quantity of tobacco, which had been seized and deposited there. They were executed at Tyburn. A place called Whitesmith was celebrated as a nest of smugglers long after this time; and about 1817, one of the outstanding debts in the overseers' books was due to a well-known smuggler of Whitesmith, for 'two gallons of gin to be drunk in the vestry.'

There were places of deposit for the smuggled goods, most ingeniously contrived, in various parts of Sussex. Among others, it is said, was the manorial pond at Fulmer, under which there was dug a cavern, which could hold 100 tubs of spirits: it was covered with planks, carefully strewed over with mould, and this remained undiscovered for many years.

In the churchyard at Patcham is an inscription on a monument, now nearly illegible, to this effect:

'Sacred to the memory of

DANIEL SCALES,

who was unfortunately shot, on Tuesday evening,
Nov. 7, 1796.

'Alas! swift flew the fatal lead,

Which pierced through the young man's head.

He instant fell, resigned his breath,

And closed his languid eyes in death.

And you who to this stone draw near,

Oh! pray let fall the pitying tear,

From this sad instance may we all

Prepare to meet Jehovah's call.'

The real story of his death is this: Daniel Scales was a desperate smuggler, and one night he, with many more, was coming from Brighton, heavily laden, when the Excise officers and soldiers fell in with them. The smugglers fled in all directions; a riding officer, as such persons were called, met this man, and called upon him to surrender his booty, which he refused to do. The officer knew that 'he was too good a man for him, for they had tried it out before; so he shot Daniel through the head.'

A COWED AMBASSADOR.

In a grave work by Archbishop Parker, entitled *The Defence of Priestes Marriages*, &c., there occurs unexpectedly an amusing anecdote.* 'It chanced that there came a French ambassador to the king's highness, King Henry the Eighth, with letters, I trow, from the French king, not long before that sent to him from the holy father of Rome. This ambassador, sitting at the council-table, began to set up a stout countenance with a weak brain, and carped English exceedingly fast; which he thought should have been his only sufficient commendation of them all that were at the table, that he could speak so readily.

* In the present extract a modern orthography is assumed.

The matter of his talk was universal; but the substance was much noting the *gluttony of Englishmen*, which devoured so much victual in the land; partly magnifying the great utility of the French tongue, which he noted to be almost throughout the world frequented. And in his conference he marvelled of divers noblemen that were present, for that they could not keep him talk, or yet so much as understand him to perceive his great wit.

Among the number of the lords, there sat the old honourable Captain, the Lord Earl of Shrewsbury, looking at his meat, and gave neither ear nor countenance to this *folie* man, but gave others leave to talk, and sat as he might, shaking his head and hands in his palsy, which was testimony enough whether he were not in his days a warrior lying abroad in the field, to take air of the ground. This French ambassador was offended with him, and said, "What an honour it were for yonder nobleman, if he could speak the French tongue! Surely it is a great lack to his nobility." One of the lords that kept him talk, asking leave of this *mounsire* to report part of the communication to the Lord Shrewsbury, made report thereof, yet in his most courteous manner, with [as] easy and favourable rehearsal as might touch a truth.

When he heard it, where before his head, by the great age, was almost grovelling on the table, he roused himself up in such wise, that he appeared in length of body as much as he was thought ever in all his life before. And, knitting his brows, he laid his hand on his dagger, and set his countenance in such sort, that the French *hardie* ambassador turned colour wonderfully. "Saith the French [fellow] so?" saith he; "marry, tell the French dog again, by sweet St Cuthbert, If I knew that I had but one pestilent French word in all my body, I would take my dagger and dig it out, before I rose from the table. And tell that tawny [varlet] again, howsoever he hath been hunger-starved himself at home in France, that if we should not eat our beasts, and make victual of them as fast as we do, they would so increase beyond measure, that they would make victual of us, and eat us up!"

When these words were reported again to the French guest, he spoiled no more victual at the dinner after that, but drank wondrous oft . . . his eyes were never off him [the Earl of Shrewsbury] all that dinner while after.'

FEBRUARY 12.

St Eulalia, virgin of Barcelona, martyr, about 305. St Meletius, patriarch of Antioch, 381. St Benedict, of Anian, abbot, 821. St Anthony Cauleas, patriarch of Constantinople, 896.

Born.—Gabriel Naudé, *littérateur*, 1600, *Paris*; Bishop (John) Pearson, 1613, *Snoring*; Dr Cotton Mather (writer on Witchcraft), 1663, *Boston, N. A.*; Elias de Crebillon, French romancist, 1707, *Paris*; Edward Forbes, naturalist, 1815, *Douglas, Isle of Man*.

Died.—Bishop David ap Owen, 1512; Lady Jane Grey, beheaded, 1555, *Tower*; Sir Nicholas Throckmorton, chief butler of England, *temp.* Elizabeth, 1571; George Heriot, founder of 'Heriot's Hospital,' 1624; Gabriel Brotier, editor of *Tacitus*, 1789, *Paris*; Lazaro Spallanzani, naturalist, 1799, *Paris*; Immanuel Kant, philosopher, 1804; Sir Astley Cooper, surgeon, 1841.

SIR NICHOLAS THROCKMORTON.

Sir Nicholas Throckmorton, the head of the

ancient Warwickshire family, after which our well-known London street is named, filled several offices of state, but led a troubled life. He was sewer to Henry VIII., in which capacity it was his duty to attend the

'marshall'd feast,
Serv'd up in hall with sewer and seneschal.'

He also headed a troop in the armament against France which Henry VIII. commanded in person. After the king's death, he attached himself to the Queen-dowager Katherine Parr, and to the Princess Elizabeth. He next distinguished himself in Scotland, under the Protector Somerset, by whom he was sent to London with the news of the victory of Pinkie. Afterwards created a knight, and appointed to a place in the Privy Chamber, he was admitted to great intimacy by Edward VI. Having witnessed the death of the boy king at Greenwich, in 1553, he came immediately to London, and dispatched Mary's goldsmith to announce to her the king's demise. On the 2nd of February 1554, Sir Nicholas was arrested and committed to the Tower, on the well-founded charge of being concerned in the rebellion of Sir Thomas Wyatt. He was tried at Guildhall, and his case was thought to be hopeless; but having undertaken to conduct his own defence, he did it with such adroitness, promptness of reply, and coolness of argument, intermixed with retorts, spirited, fearless, and reiterated, in answer to the partial remarks of the Lord Chief Justice, and followed up by an impassioned appeal to the jury, that, in defiance of the threats of the Chief Justice and the Attorney-General,—in defiance too of the proverb on the subject,—he obtained a verdict of acquittal. He was directed to be discharged, but was remanded, and kept in prison till January 18, 1555. Nearly all the jury were fined and imprisoned for their independent verdict.

Sir Nicholas afterwards served in Queen Mary's army, under the Earl of Pembroke; but he devoted himself chiefly to the Princess Elizabeth, whom he privately visited at Hatfield. When Queen Mary died, he was admitted to see her corpse, and, as Elizabeth had requested, took from her finger the wedding-ring which had been given to her by Philip, and delivered it to Elizabeth. By this Protestant queen he was appointed to high offices, and sent on a special embassy to Edinburgh to remonstrate with Mary Queen of Scots, against her intended marriage with Darnley. When Mary was imprisoned at Lochleven, Throckmorton was commissioned by Elizabeth to negotiate with the rebel lords for her release.

A few years later we find Throckmorton sent to the Tower on a well-founded charge of intriguing for a marriage between the Scottish queen and the Duke of Norfolk. He was not kept long in confinement, but never regained the confidence of Elizabeth; and his distress of mind is thought to have hastened his death, which took place, February 12, 1571, at the house of the Earl of Leicester,—not, it is also said, without suspicion of poison. There is a monument to his memory, a recumbent figure in the church of St Catherine Cree, in Leadenhall-street.

Sir Francis Walsingham, in a letter to the Earl of Leicester, on Throckmorton's death, says of him, that 'for counsel in peace and for conduct in war, he hath not left of like sufficiency, that I know.' Camden says, he was 'a man of large experience, piercing judgment, and singular prudence; but he died very luckily for himself and his family, his life and estate being in great danger by reason of his turbulent spirit.' He was the court favourite of three sovereigns, but fell by his love of intrigue.

The late Sir Henry Halford used to relate that he had seen a prescription in which a *portion of the human skull* was ordered, in powder, for Sir Nicholas Throckmorton. It was dug out of the ruins of a house in Duke-street, Westminster, which had belonged to Oliver Cromwell's apothecary.

ASSASSINATION OF MR THYNNE IN PALL MALL.

As the visitor to Westminster Abbey passes through the south aisle of the choir, he can scarcely fail to notice sculptured upon one of the most prominent monuments a frightful scene of assassination, which was perpetrated in one of

SCULPTURE ON THYNNE'S MONUMENT IN WESTMINSTER ABBEY.

the most public streets of the metropolis, late in the reign of Charles the Second. The victim of this atrocity was Thomas Thynne, Esq., who had a short time before succeeded in carrying off the youthful widow of Lord Ogle. The handsome Count Köningsmark, who had been rejected by the lady, was tempted by disappointed passion to plot, if not to perpetrate, this barbarous revenge upon his rival.

Thomas Thynne, of Longleat, in Wiltshire, was descended from an ancient family, and from his large income was called 'Tom of Ten Thousand.' He had been a friend of the Duke of York, afterwards James II.; but having quarrelled with his royal highness, Thynne had latterly attached himself with great zeal to the Whig or Opposition party, and had become an intimate associate of their head, the Duke of Monmouth. At Longleat, where he lived in a style of magnificence, Thynne was often visited by Monmouth; and he is the Issachar of Dryden's glowing description of the Duke's progresses, in the *Absalom and Achitophel*:

248

'From east to west his glories he displays,
And, like the sun, the Promised Land surveys.
Fame runs before him, as the morning star,
And shouts of joy salute him from afar;
Each house receives him as a guardian god,
And consecrates the place of his abode.
But hospitable treats did most commend
Wise Issachar, his wealthy western friend.'

It was on the night of Sunday, the 12th of February 1681-2, that the west end of London was startled by the news that Thynne had been shot while passing in his coach along Pall Mall. King Charles, sitting at Whitehall, might almost have heard the report of the assassin's musketoon; and so might Dryden, sitting in his favourite front room, on the ground-floor of his house on the south side of Gerrard-street, also hardly more than a couple of furlongs distant. The murderers escaped. Thynne survived his mortal wound only a few hours, during which the Duke of Monmouth sat by the bedside of his dying friend.

An active search, conducted by Sir John Reresby and the Duke of Monmouth, resulted in the speedy apprehension of the three inferior instruments in this murder, including one Boroski, a Pole, who had fired the fatal shot. The instigator of the murder, Count Köningsmark, was apprehended a week after the commission of the murder. A few days later, the four men were brought to the bar at the Old Bailey, to be arraigned and tried—Boroski, Vratz, and Stern, as principals in the murder, and Count Köningsmark as accessory before the fact. At the trial, the evidence, and indeed their own confession, clearly proved the fact of Boroski shooting Thynne, and Vratz and Stern being present assisting him. With respect to Köningsmark, besides the testimony of his accomplices, the other evidence shewed him living concealed in a humble lodging, and holding communication with the murderers, before and almost at the time of the fact. He had also fled immediately after the offence was committed. To this it was answered by Köningsmark, that the men accused were his followers and servants, and that of necessity he frequently communicated with them, but never about this murder; that when he arrived in London, he was seized with a distemper, which obliged him to live privately till he was cured; and finally, that he never saw, or had any quarrel with, Mr Thynne. This defence, though morally a weak one, was strengthened by the absence of any legal proof to connect the Count with the assassination, and by the favourable summing-up of Chief Justice Pemberton, who seemed determined to save him. The three principals were found guilty, and Köningsmark was acquitted.

Reresby, in his *Memoirs*, tells us how a Mr Foubert, who kept an academy in London, where he had for a pupil a younger Count Köningsmark—apparently brother to the murderer—came and offered him a large bribe to interfere in the course of justice; which bribe he instantly rejected, because he did not believe that any one was the better for money acquired in such a way.

The convicted prisoners were hanged at the

place of the murder, in Pall Mall, on the 10th of March following; and Boroski was afterwards suspended in chains, a little beyond Mile-end Town. Evelyn records in his *Diary*, under the 10th March: 'This day was executed Colonel Vratz and some of his accomplices, for the execrable murder of Mr Thynne, set on by the principal Köningsmark; he went to execution like an undaunted hero, as one that had done a friendly office for that base coward,—Count Köningsmark, who had hopes to marry his [Mr Thynne's] widow, the rich Lady Ogle, and was acquitted by a corrupt jury, and so got away. Vratz told a friend of mine, who accompanied him to the gallows, and gave him some advice, that he did not value dying a rush, and hoped and believed God would deal with him like a gentleman.'

Count Köningsmark, after he had paid his fees, and got out of the hands of the officers of justice at the Old Bailey, made a quick retreat from England. According to the *Amsterdam Historical Dictionary*, he went to Germany to visit his estates, in 1683; was wounded at the siege of Cambray, which happened that same year; he afterwards went with his regiment to Spain, where he distinguished himself on several occasions; and finally, in 1686, he accompanied his uncle, Otto William, to the Morea, where he was present at the battle of Argas, and so overheated himself, that he was seized with a pleurisy, which carried him off. Such, at the early age of twenty-seven, was the end of Köningsmark, within little more than four years after the tragedy of his supposed victim Thynne, and his own narrow escape from the gibbet, to which he had been the cause of consigning his three associates or instruments.

SIR ASTLEY PASTON COOPER, BART., SERJEANT-SURGEON TO THE QUEEN.

This eminent practitioner and excellent man was the fourth son of the rector of Great Yarmouth, in Norfolk; and was born at Brooke, in that county, August 23, 1768. His mother sprung from the ancient family of the Pastons, and was the authoress of a novel, entitled *The Exemplary Mother*. He was chiefly educated by his father, a sound scholar. An accidental circumstance is said to have influenced his future career: when a boy, he saw a lad fall from a cart, and tear his thigh in such a manner as to wound the femoral artery. Young Cooper immediately took his handkerchief, and applied it round the thigh so tightly, as to control the bleeding until further assistance could be procured. At the age of fifteen, he was placed with a surgeon and apothecary at Yarmouth; he next came to London, and was apprenticed to his uncle, one of the surgeons of Guy's Hospital; but, in a few months, was transferred, by his own desire, to Mr Cline, the eminent surgeon of St Thomas's Hospital. Here his zeal and application were incessant; and he laid the foundation of his fame and fortune by giving a course of lectures on the principles and practice of surgery, which had previously only formed part of the anatomical course. His class of students rose to 400, by far

the largest number ever known in London. He made no attempt at oratory, but was plain and practical in his details, and very successful in his illustrations; while he carefully avoided the introduction of controversial subjects connected with physiological science. In 1792, he visited Paris, and made himself master of the theory and practice of French surgery. In the same year, he commenced practice in London: when at its zenith, his annual receipt of fees far exceeded that of any other member of the profession: in one year he received £21,000; and for many years after, his annual receipt was £15,000 and upwards. His success in practice, it is supposed, consisted chiefly in his knowing how and when to operate; yet, on an important occasion, his courage had nearly forsaken him. In 1821, George the Fourth having a small tumour in the scalp, an operation for its removal was resolved upon, and Cooper was selected to perform it. On the day appointed, he waited upon his majesty. Lord Liverpool and other cabinet ministers occupied a room adjoining that in which the king was. A short time before the operation was commenced, Cooper was observed to be pale and nervous, when Lord Liverpool, taking hold of his hand, said, 'You ought to recollect that this operation either makes or ruins you. Courage, Cooper!'—and he was so impressed with this timely rebuke that every appearance of anxiety vanished from his countenance, and he performed the operation with his wonted coolness and dexterity. In the course of a few months after this, he received from the king a baronetcy, with remainder, in default of male issue, to his nephew Astley Paston Cooper, who in due time succeeded to the title.

Sir Astley Cooper had long retired from practice, when he died, February 12, 1841, in his seventy-third year, bequeathing a large fortune. His extensive practice had small beginnings: in the first year, his income was but £5 5s.; the second, £26; the third, £64; the fourth, £96; the fifth, £100; the sixth, £200; the seventh, £400; the eighth, £610. He received some very large fees, among which was that of a thousand guineas thrown at him in his nightcap by a patient whom he had cut for the stone; an anecdote which he told with no small degree of animation, on retiring from a patient upon whom he had just performed the same operation, and who had likewise, in his agony, flung his cap at the surgeon, but *without* the cheque which gave so much force to the original incident. Probably, no surgeon of ancient or modern times enjoyed a greater share of reputation during his life than fell to the lot of Sir Astley. The old and new world alike rung with his fame. On one occasion, his signature was received as a passport among the mountains of Biscay by the wild followers of Don Carlos. A young English surgeon, seeking for employment, was carried as a prisoner before Zumalacarregrui, who demanded what testimonials he had of his calling or his qualifications. Our countryman presented his diploma of the College of Surgeons; and the name of Astley Cooper, which was attached to it, no sooner struck the eye of the Carlist leader, than he at once received his prisoner

with friendship, and appointed him as a surgeon in his army.

Sir Astley Cooper, by his unwearied assiduity in the dissecting-room, produced some of the most important contributions to modern surgery, which he published without regard to profit. His influence on the surgery of the day was great: 'He gave operations a scientific character, and divested them in a great degree of their terrors, by performing them unostentatiously, simply, confidently, and cheerfully, and thereby inspiring the patient with hope of relief, where previously resignation under misfortune had too often been all that could be expected from the sufferer.'—*Sir John Forbes*.

THE DINTON HERMIT.

A letter of Hearne, the antiquary, dated February 12, 1712-13,* gives an account of an extraordinary object preserved in the Ashmolean Museum under the name of the *Buckinghamshire Shoe*. The corresponding shoe for the other foot is preserved at Dinton Hall, near Aylesbury. Each of these shoes is not merely composed of patches, like a beggar's cloak, but it presents a load of such patches, layer above layer, to the amount, it is believed, of many hundreds of individual pieces. The shoes were made and worn by an eccentric man named John Bigg, not without parts or education, who was for some time clerk to the regicide Judge Mayne; but, after the ruin of his master's cause at the Restoration, grew morbid, retired from the world, and lived like a hermit in a hut or cave, near his former master's house of Dinton, only adjourning in summer to the woods near Kimble. Bigg was little over thirty at the time of his retirement, and he lived to 1696, when he must have been sixty-seven. A portrait engraved in Lipscomb's *Buckinghamshire†* presents us a handsome, composed-looking man, dressed in clothes and shoes all alike composed of small patches, the head being covered by a sort of stiff hood, terminating in two divergent peaks, and composed in like manner with the rest of the dress, while two (leather?) bottles hang at the girdle, and a third is carried in the left hand. Bigg lived upon charity, but never asked anything excepting leather; and when he got any of that article, his amusement was to patch it upon his already overlaid shoes. People, knowing his tastes, brought him food, likewise ale and milk. The last article he carried in one of his bottles; in the other two he carried strong and small ale. The man was perfectly inoffensive, and conduct so extraordinary is only to be accounted for in his case by supposing a slight aberration of the intellect, the consequence perhaps of disappointed hopes.

COMPLETION OF THE REVOLUTION OF 1688.

The 12th of February is the memorable anniversary of the perfecting of the Revolution of 1688. James II. having, with his family, withdrawn in terror to France, a convention called by the Prince of Orange met on the 22nd of

* *Reliquiæ Hearnianæ*, i. 281.

† The portrait of Bigg is also engraved in Kirby's *Wonderful Museum*, vol. v.

January 1688-9, and proceeded under his protection to deliberate on the settlement of the kingdom. To find that James had abdicated was an easy matter; how to dispose of the vacant throne was not so easy. There was a large party for a regency; others were disposed to accept the Princess of Orange, the eldest daughter of the ex-king, as their sovereign. It was not till after much debating, and a threat of the Prince to go back to Holland and leave them to settle their own affairs, that the convention at length, on the 12th of February, adopted the resolution, 'That William and Mary, Prince and Princess of Orange, be declared King and Queen of England, France, and Ireland, and the dominions thereunto belonging.' The crown was next day formally offered to them in the Banqueting Room, at Whitehall, and accepted; and the Revolution was complete.

Mary had arrived in London so recently as the 11th, by which time it was tolerably certain that she and her husband were to be nominated to a joint sovereignty. However glad she might naturally be at her husband's successful expedition, however excited by the prospect of being a regnant queen of England, the crisis was one calculated to awaken sober feelings. She was displacing a father; her husband was extruding an uncle. 'It was believed,' says the contemporary Evelyn, 'that both, especially the Princess, would have shewed some seeming reluctance of assuming her father's crown, and made some apology, testifying by her regret that he should by his mismanagement necessitate the nation to so extraordinary a proceeding; which would have shewn very handsomely to the world. . . . Nothing of all this appeared. She came into Whitehall, laughing and jolly, as to a wedding, so as to seem quite transported. She rose early the next morning, and in her undress, as was reported, before her women were up, went about from room to room to see the convenience of Whitehall; lay in the same bed where the late queen lay; and, within a night or two, sat down to play at basset, as the queen her predecessor used to do. She smiled upon and talked to everybody. . . . This carriage was censured by many.' It outraged even Dr Burnet, the new queen's chaplain.

It now appears that Mary acted under orders from her husband, who wished to give a check to those who desired to see his wife made sole monarch and deemed her ill-used, because he was associated with her. Lord Macaulay even makes it out to be a fine case of self-devotion on the part of the queen. To betray levity regarding an unfortunate father in order to please a triumphant husband, was a strange piece of self-devotion. For a husband to ask his wife to do so was not very wise, as fully appeared from the disgust which it excited. There cannot truly be said to have been either taste, judgment, or good feeling, on either side in the case. As the one drawback to the felicity of this great event was a consideration of the relationship of the new sovereigns to the old, it would have been much better policy for them to make a feeling for King James prominent in their conduct, even though it bore no place in their hearts.

THE RESURRECTIONISTS.

The name of Sir Astley Cooper recalls a traffic in the recent existence of which amongst us young men of our time might hesitate to believe. It is indeed a startling chapter in the history of civilization which is supplied by the methods formerly resorted to by anatomical teachers, for the purpose of obtaining subjects for dissection. From the year 1800 until the alteration of the law in 1832, the Resurrectionists, or 'Body-snatchers,' were almost the only sources of this supply: they were persons generally of the worst character, if we except the watchmen of that time, who were set to guard the burial-grounds, all of whom received a regular percentage on the sum obtained by the Resurrectionists. The public were for many years aware of churchyards being robbed; it was known to be effected with wonderful rapidity and dexterity; but the *modus* was never fathomed by the public, and, curiously enough, no accidental circumstance occurred to furnish the explanation; even the members of the medical profession, with very few exceptions, were kept in ignorance of it, so careful were the Resurrectionists to remove all traces of their mode of working after the completion of their task. It was generally supposed that the body-snatcher, in exhuming a body, first proceeded, as a novice would have done, to remove all the earth with which the grave had been recently filled; and having at length arrived at the coffin, that he then, with proper implements, forced off the lid, and so removed the body. This would have occupied considerable time, and rendered the body-snatchers proportionately more liable to detection. To avoid this, they only cleared away the earth above the head of the coffin, taking care to leave that which covered the other end as far as possible undisturbed. As soon as about one-third of the coffin was thus exposed, they forced a very strong crowbar, made of a peculiar form for the purpose, between the end of the coffin and the lid, which latter, by using the lever as one of the first order, they generally pressed up, without much difficulty. It usually happened, at this stage of the proceedings, that the superincumbent weight of the earth on the other portion of the coffin-lid caused it to be snapped across at a distance of about one-third of its length from the end. As soon as this had been effected, the body was drawn out, the death-gear removed from it, and replaced in the coffin, and finally the body was tied up and placed in its receptacle, to be conveyed to its destination. By this means, in the case of a shallow grave of loose earth, free from stones, the Resurrectionist would remove a body in a quarter of an hour. Silence was essential for the safety of the Resurrectionists; and in gravelly soils they had a peculiar mode of flinging out the earth, in order to prevent the rattling of the stones against the iron spade.

As soon as the body was raised, it was generally placed in a sack, and then carried to a hackney-coach or spring-cart, usually the latter. When bodies were sent from the country to the metropolis, they were generally packed in hat-crates, or in the casks in which hardware are sent. Sometimes the subject, instead of being deposited in a sack, was laid on a large square green baize cloth, the four corners of which were tied together, so as to inclose the body. It was not directly conveyed to any dissecting-room, but was generally deposited in some half-built house, or other convenient building, until the following day. The body-snatcher would then, dressed as a porter, swing the load over his shoulders, and often, even in broad daylight, carry it to its place of destination through the most crowded streets of

the metropolis. At other times, the students would receive the bodies at their own houses, and convey them in a hackney-coach to the dissecting-rooms, the coachman being well paid for his job. Sometimes the driver was exorbitant in his demands, and was somewhat ingenious in enforcing them: a pupil who was conveying a body by coach to his hospital was astonished by finding himself in front of the Bow-street police-office, when the coachman, tapping at the front window, said to the affrighted youth, 'Sir, my fare to so-and-so is a guinea, unless you wish to be put down here.' The reply, without any hesitation, was, 'Quite right, my man; drive on.'

At the commencement of a new session at the hospitals, the leading Resurrectionists might be seen looking out for lecturers; and 'fifty pounds down, and nine guineas a body,' was often acceded to; the former being the opening fee from each school promised an exclusive supply. The competition for subjects, which the exhumators pretended to get up between the different schools, sometimes raised the prices so exorbitantly as to leave scarcely any remuneration for the lecturers. In some cases twenty pounds have been given for a single subject, in healthy seasons.

The competition occasionally led to revolting scenes of riot. Mr Bransby Cooper, in his *Life of Sir Astley Cooper*, relates that two Resurrectionists, having gained access to a private burial-ground near Holywell Mount by bribing the gravedigger, sometimes brought away six bodies in one night. Two other exhumators, hearing of this prosperity, threatened to expose the gravedigger if he did not admit them to share his plunder; but he was beforehand with them, and pointed them out to a public-house full of labourers, as body-snatchers come to bribe him to let them steal from his ground, when the whole crowd rushed after the Resurrectionists, who narrowly escaped their vengeance. They ran to a police-office, and, in a loud voice, told the sitting magistrate if he sent officers to Holywell Mount burial-ground they would find every grave robbed of its dead; the gravedigger having sold them to the body-snatchers. The indignant people rushed to the burial-ground, broke open the gates, dug up the graves, and finding in them empty coffins, seized the gravedigger, threw him into one of the deepest excavations, began shovelling the earth over him, and would have buried him alive, but for the activity of the constables. The mob then went to his house, broke every article of his furniture, seized his wife and children, and dragged them through a stagnant pool in the neighbourhood.

Such outrages as these, and the general indignation which arose from them, having interrupted the supply of bodies, other stratagems were resorted to. The Resurrectionists, by associating with the lower class of undertakers, obtained possession of the bodies of the poor which were taken to their establishments several days before interment, and often a clergyman read the funeral service over a coffin filled with brick-bats, or other substitute for the stolen body.

The bodies of suicides were sometimes stolen from the charge of persons appointed to sit up with them; or they were obtained from poor-houses and infirmaries by the Resurrectionists pretending relationship with the deceased, and claiming the bodies for burial. By this means, one Patrick got a number of subjects, chiefly from St Giles's workhouse, his wife being employed, under various disguises, to own the bodies. At other times, the body-snatchers would destroy the tombs, vaults, and expensive coffins of the wealthy, to obtain their prey; and their exactious, villany, and insolence grew intolerable. The sale of a drunken man in a sack, as a subject, to Mr Brookes the anatomist, is a well-known incident.

Nevertheless, so useful were the services of the regular Resurrectionists, that when they got into trouble, the surgeons made great exertions in their favour, and advanced large sums of money to keep them out of gaol, or support them during imprisonment. Sir Astley Cooper expended hundreds of pounds for this purpose: a single liberation has been known to cost £160; and an anatomical teacher has paid £5 as a weekly allowance, continued for two years, to a Resurrectionist confined in prison.

A leading Resurrectionist once received £144 for twelve subjects in one evening, out of which he had to pay his underlings £5 each. These high prices not infrequently led persons, while alive, to offer to sell their bodies for dissection after death; but very rarely did any surgeon accede to such a proposal, since the law did not recognise any right of property in a dead body. Among the papers left by Sir Astley Cooper was found the following: 'Sir, I have been informed you are in the habit of purchasing bodys, and allowing the person a sum weekly. Knowing a poor woman that is desirous of doing so, I have taken the liberty of calling to know the truth. I remain, your humble servant, * * *.' Sir Astley Cooper's answer (copied on the back of the application) was brief: 'The *truth* is, that you deserve to be hanged for making such an unfeeling offer.—A. C.'

The graves were not always disturbed to obtain possession of the entire body, for the *teeth* alone, at one time, offered tempting remuneration. Mr Cooper relates an instance of a Resurrectionist feigning to look out a burial-place for his poor wife, and thus obtaining access to the vault of a meeting-house, the trap-door of which he unbolted, so that at night he let himself down into the vault, and secured the front teeth of the whole congregation, by which he cleared £60.

For nearly thirty years had this nefarious traffic flourished, when a Select Committee of the House of Commons was appointed to investigate the matter. In reply to the following question: 'Does the state of the law actually prevent the teachers of anatomy from obtaining the body of any person, which, in consequence of some peculiarity of structure, they may be particularly desirous of procuring?' Sir Astley Cooper stated: 'The law does not prevent our obtaining the body of an individual if we think proper; for there is no person, let his situation in life be what it may, whom, if I were disposed to dissect, I could not obtain.' In reply to another question, Sir Astley Cooper said, 'The law only enhances the price, and does not prevent the exhumation: nobody is secured by the law, it only adds to the price of the subject.'

The profession had for many years been anxious to devise some plan to prevent the exhumation of bodies; but it was thought too hazardous to attempt the enactment of laws on the subject, in consequence of the necessary publicity of the discussions upon them. The horrible murders committed at Edinburgh, under the system of *Burking*, and exposed in the year 1828, at last rendered it peremptorily necessary for the Government to establish some means of legalizing dissection, under restrictions regulated by the ministers of the Crown. An inspector was appointed, to whom the certificate of the death of the individual, and the circumstances under which he died, were to be submitted before the body could be dissected, and then only in the schools in which anatomizing was licensed by the Government; and this new system has much raised the characters of those who are teaching anatomy, as well as the science itself, in the estimation of the public.

The Resurrectionists mostly came to bad ends. There were but few *regulars*; the others being composed of Spitalfields weavers, or thieves, who found

the disguise of this occupation convenient for carrying on their own peculiar avocations. One was tried, and received sentence of death, for robbing the Edinburgh mail, but was pardoned upon the intercession of the Archdukes John and Lewis, who were much interested by finding the criminal at work in his cell, articulating the bones of a horse; he left the country, and was never after heard of. Another Resurrectionist, after a long and active career, withdrew from it in 1817, and occupied himself principally in obtaining and disposing of teeth. As a licensed sutler, in the Peninsula and France, he had drawn the teeth of those who had fallen in battle, and had plundered the slain: with the produce of these adventures, he built a large hotel at Margate, but his previous occupation being disclosed, his house was avoided, and disposed of at a very heavy loss: he was subsequently tried, and imprisoned for obtaining money under false pretences, and was ultimately found dead in a public-house near Tower-hill. It is credibly reported of one body-snatcher, that, at his death, he left nearly £6000 to his family. One, being captured, was tried and found guilty of stealing the clothes in which the bodies were buried, and was transported for seven years. A man who was long superintendent to the dissecting-room at St Thomas's Hospital, was dismissed for receiving and paying for bodies sent to his employer, and re-selling them at an advanced price, in Edinburgh; he then turned Resurrectionist, was detected and imprisoned, and died in a state of raving madness.

FEBRUARY 13.

St Polyeuctus, martyr at Melitine, 250. St Martinianus, hermit, of Athens, *circ.* 4th century. St Medomnoc (or Dominic), bishop of Ossory, 6th century. St Stephen, abbot in Italy, 6th century. St Licinius, bishop of Augers, 618. St Gregory II. (Pope), 631. Roger, abbot of Elan in Champagne, *circ.* 1175. St Catherine de Ricci, virgin, 1589.

Born.—Alexander Wedderburn, Earl of Rosslyn, 1733, *Chesterhall*; David Allan, Scottish painter, 1744, *Alloa*; Charles Maurice de Talleyrand-Perigord, diplomatist, 1754.

Died.—Catherine Howard, beheaded, 1543, *Tower*; Benvenuto Cellini, Florentine sculptor, 1576; Elizabeth (of Bohemia), 1662, *Leicester House*; Dr Cotton Mather, 1723, *Boston, N. A.*; Dr Samuel Croxall, fabulist, 1752; Charles Count de Vergennes, French diplomatist, 1787, *Versailles*; the Duke de Berri, assassinated, 1820, *Paris*; Henry Hunt, political character, 1835; Sharon Turner, historian, 1847.

St Valentine's Eve.

At Norwich, St Valentine's eve appears to be still kept as a time for a general giving and receiving of gifts. It is a lively and stirring scene. 'The streets swarm with carriers, and baskets laden with treasures; bang, bang, bang go the knockers, and away rushes the banger, depositing first upon the door-step some packages from the basket of stores—again and again at intervals, at every door to which a missive is addressed, is the same repeated, till the baskets are empty. Anonymously, St Valentine presents his gifts, labelled only with "St Valentine's love," and "Good morrow, Valentine." Then within the

houses of destination, the screams, the shouts, the rushings to catch the bang-bangs,—the flushed faces, sparkling eyes, rushing feet to pick up the fairy-gifts—inscriptions to be interpreted, mysteries to be unravelled, hoaxes to be found out—great hampers, heavy and ticketed—"With care, this side upwards," to be unpacked, out of which jump live little boys with St Valentine's love to the little ladies fair,—the sham bang-bangs, that bring nothing but noise and fun—the mock parcels that vanish from the door-step by invisible strings when the door opens—monster parcels that dwindle to thread papers denuded of their multiplied envelopes, with fitting mottoes, all tending to the final consummation of good counsel, "Happy is he who expects nothing, and he will not be disappointed." It is a glorious night; marvel not that we would perpetuate so joyous a festivity.—*Madders's Rambles in an Old City (Norwich)*.

FEBRUARY 14.

St Valentine, priest and martyr, *circ.* 270. St Abrames, bishop of Carres, 422. St Maro, abbot in Syria, 433. St Auxentius, hermit, of Bithynia, *circ.* 470. St Conran, bishop of Orkney, 7th century.

Born.—Camille, Duke de Tallard, 1652, *Dauphiné*; Archdeacon Waterland, eminent theologian, 1683, *Waseley*.

Died.—Pope Innocent I., 417; Richard II., King of England, murdered, 1400; Lord Chancellor Talbot, 1737; Captain James Cook, killed at *Owhyhee*, 1779; Sir William Blackstone, author of the *Commentaries on the Laws of England*, 1780, *Wallingford*.

CAPTAIN COOK.

The career of James Cook—son of a farm-servant*—originally a cabin-boy and common sailor, rising to command and to be the successful conductor of three great naval expeditions for discovery in seas heretofore untraversed, presents an example of conduct rarely matched; and it is not wonderful that scarcely the name of any Englishman is held in greater respect.

It was on a second visit to the Sandwich Islands in the Pacific Ocean, that Cook's life was abruptly ended by an unfortunate collision with the natives, February 14, 1779, when he had just turned his fiftieth year.

The squabble which led to this sad event arose from a miserable cause, the theft of a pair of tongs and a chisel by a native on board one of the ships. One now-a-days hears with surprise that the sailors, pursuing this man towards the shore, fired at him. All might have been ended amicably if an English officer had not attempted to seize the boat of another native, by way of

* The father of Captain Cook, named likewise James, was a native of Ednam parish in Berwickshire, and the father of James Cook (grandfather of the navigator) was an elder of that parish in 1692, when Thomas Thomson, father of the poet of the *Seasons*, was its minister. These particulars are given with documentary evidence in Johnston's *Botany of the Eastern Borders*, 1853 (p. 177).

guarantee that the thief would be given up. These high-handed proceedings naturally created a hostile feeling, and during the night an English boat was taken away. Cook went ashore at seven o'clock on a Sunday morning, to secure the person of the king, as a means of obtaining justice, and before eight he was a dead man on the beach, with the natives over his body cutting it to pieces.

Cook was a man of extraordinary natural sagacity, fortitude, and integrity. He was extremely kind-hearted; yet, as often happens with such persons, somewhat hasty and irritable. He was very modest and unassuming; not forward in discourse, yet always affable. In personal respects, he was chiefly remarkable for a tall and vigorous frame of body; his head is described as small, but in his portraits the forehead seems a large expanse, and what the phrenologists call the 'knowing organs' are well advanced. He had one peculiarity of great consequence to him: in the most critical circumstances, when he had given all proper directions, he could take sleep with perfect calmness. His death through the paltry squabble just described, was the more remarkable, as his benevolence of disposition led him in general to look mildly on the depredations of the natives.

Cook's widow, *née* Elizabeth Batts, who had been married to him in 1762, survived him fifty-six years, dying in 1835.

LADY SARAH LENNOX.

Lady Sarah Lennox—born 14th February 1745—is an interesting figure of a subordinate class in modern English history. Her father, the second Duke of Richmond of his creation (grandson of King Charles II.), had made, in early life, not exactly a romantic marriage, but a marriage which was followed by romantic circumstances. The bride was Lady Sarah Cadogan, daughter of Marlborough's favourite general.

Their union was a bargain to cancel a gambling debt between the parents, and the young Lord March was brought from college, the lady from the nursery, for the ceremony. The bride was amazed and silent, but the bridegroom exclaimed—"Surely you are not going to marry me to that dowdy?" Married he was, however, and his tutor instantly carried him off to the Continent Three years afterwards, Lord March returned from his travels an accomplished gentleman, but having such a disagreeable recollection of his wife that he avoided home, and repaired on the first night of his arrival to the theatre. There he saw a lady of so fine an appearance that he asked who she was. "The reigning toast, the beautiful Lady March." He hastened to claim her, and they lived together so affectionately, that, one year after his decease in 1750, she died of grief.*

Lady Sarah, one of the numerous children of this loving pair, grew up an extraordinary beauty. Of this we get some testimony from the great domestic chronicler of the last century,

* Life of Sir Charles James Napier, by Sir W. Napier, i. 2.

Horace Walpole, who had occasion, in January 1761, to write to his friend George Montagu, regarding some private theatricals which he had witnessed at Holland House. By what appears to us a strange taste, the play selected to be performed by children and very young ladies was *Jane Shore*; Lady Sarah Lennox enacting the heroine, while the boy, afterwards eminent as Charles James Fox, was Hastings. Walpole praises the acting of the performers, but particularly that of Lady Sarah, which he admits to have been full of nature and simplicity. 'Lady Sarah,' he says, 'was more beautiful than you can conceive . . . in white, with her hair about her ears, and on the ground, no Magdalen by Correggio was half so lovely and expressive.*'

The charms of this lovely creature had already made an impression on the heart of George III., then newly come to the throne at two and twenty. There seems no reason to doubt that the young monarch formed the design of raising his lovely cousin (for such she was) to the throne. The idea was of course eagerly embraced by her ladyship's relations, and particularly by her eldest sister's husband, Mr Fox, who held the office of Paymaster of the Forces, and was anxious to strengthen the party to which he belonged. Any such project was, on the other hand, calculated extremely to offend the King's mother, the Princess of Wales, who, for the support of her power over her son, was desirous that his future wife should be beholden to herself for her brilliant position. Early in the winter 1760-1, the King took an opportunity of speaking to Lady Sarah's cousin, Lady Susan Strangeways, expressing a hope at the drawing-room, that her ladyship was not soon to leave town. She said she should. 'But,' said the King, 'you will return in summer for the coronation.' Lady Susan answered that she did not know—she hoped so. 'But,' said the King again, 'they talk of a wedding. There have been many proposals; but I think an English match would do better than a foreign one. Pray tell Lady Sarah Lennox I say so.' Here was a sufficiently broad hint to inflame the hopes of a family, and to raise the head of a blooming girl of sixteen to the fifth heavens.

It happened, however, that Lady Sarah had already allowed her heart to be pre-occupied, having formed a girlish attachment for the young Lord Newbottle, grandson of the Marquis of Lothian. She did not therefore enter into the views of her family with all the alacrity which they desired. According to a narrative of Mr Grenville, 'She went the next drawing-room to St James's, and stated to the King, in as few words as she could, the inconveniences and difficulties in which such a step would involve him. He said, that was his business: he would stand them all: his part was taken, he wished to hear hers was likewise.'

'In this state it continued, whilst she, by advice of her friends, broke off with Lord Newbottle,† very reluctantly on her part. She went

* Walpole's Letters.

† He must have been William John, who became fifth Marquis of Lothian, and died in 1815, at the age of eighty.

into the country for a few days; and by a fall from her horse broke her leg. The absence which this occasioned gave time and opportunities for her enemies to work; they instilled jealousy into the King's mind upon the subject of Lord Newbottle, telling him that Lady Sarah still continued her intercourse with him, and immediately the marriage with the Princess of Strelitz was set on foot; and, at Lady Sarah's return from the country, she found herself deprived of her crown and her lover Lord Newbottle, who complained as much of her as she did of the King. While this was in agitation, Lady Sarah used to meet the King in his rides early in the morning, driving a little chaise with Lady Susan Strangeways; and once it is said that, wanting to speak to him, she went dressed like a servant-maid, and stood amongst the crowd in the Guard-room, to say a few words to him as he passed by.* Walpole also relates that Lady Sarah would sometimes appear as a haymaker in the park at Holland House, in order to attract the attention of the King as he rode past;† but the opportunity was lost. The habit of obedience to his mother's will carried the day, and he allowed an emissary to go on a mission to obtain a bride for him in the Protestant courts of Germany.

It is believed that Lady Sarah was allowed to have hopes till the very day when the young sovereign announced to his council that he had resolved on wedding the Princess Charlotte of Mecklenburg Strelitz. She felt ill-used, and her friends were all greatly displeased. With the King she remained an object of virtuous admiration,—perhaps also of pity. He wished to soften the disappointment by endeavouring to get her established in a high position near his wife; but the impropriety of such a course was obvious, and it was not persisted in.

Lady Sarah, however, was asked by the King to take a place among the ten unmarried daughters of dukes and earls who held up the train of his queen at the coronation; and this office, which we cannot help thinking in the circumstances derogatory, she consented to perform. It is said that, in the sober, duty-compelled mind of the sovereign, there always was a softness towards the object of his youthful attachment. Walpole relates that he blushed at his wedding service, when allusion was made to Abraham and Sarah.

Lady Sarah Lennox in 1764 made a marriage which proved that ambition was not a ruling principle in her nature, her husband being 'a clergyman's son,' Sir Thomas Charles Bunbury, Bart. Her subsequent life was in some respects infelicitous, her marriage being dissolved by Act of Parliament in 1776. By a subsequent marriage to the Hon. Major-General George Napier, she became the mother of a set of remarkable men, including the late Sir Charles James Napier, the conqueror of Scinde, and Lieut-General Sir William Napier, the historian of the Peninsular War. Her ladyship died at the age of eighty-two, in 1826, believed to be the last surviving great grand-daughter of Charles II.

St Valentine's Day.

VALENTINE'S DAY is now almost everywhere a much degenerated festival, the only observance of any note consisting merely of the sending of jocular anonymous letters to parties whom one wishes to *quiz*, and this confined very much to the humbler classes. The approach of the day is now heralded by the appearance in the print-sellers' shop windows of vast numbers of missives calculated for use on this occasion, each generally consisting of a single sheet of post paper, on the first page of which is seen some ridiculous coloured caricature of the male or female figure, with a few burlesque verses below. More rarely, the print is of a sentimental kind, such as a view of Hymen's altar, with a pair undergoing initiation into wedded happiness before it, while Cupid flutters above, and hearts transfixed with his darts decorate the corners. Maid-servants and young fellows interchange such epistles with each other on the 14th of February, no doubt conceiving that the joke is amazingly good; and, generally, the newspapers do not fail to record that the London postmen delivered so many hundred thousand more letters on that day than they do in general. Such is nearly the whole extent of the observances now peculiar to St Valentine's Day.

At no remote period it was very different. Ridiculous letters were unknown; and, if letters of any kind were sent, they contained only a courteous profession of attachment from some young man to some young maiden, honeyed with a few compliments to her various perfections, and expressive of a hope that his love might meet with return. But the true proper ceremony of St Valentine's Day was the drawing of a kind of lottery, followed by ceremonies not much unlike what is generally called the game of forfeits. Misson, a learned traveller, of the early part of the last century, gives apparently a correct account of the principal ceremonial of the day. 'On the eve of St Valentine's Day,' he says, 'the young folks in England and Scotland, by a very ancient custom, celebrate a little festival. An equal number of maids and bachelors get together; each writes their true or some feigned name upon separate billets, which they roll up, and draw by way of lots, the maids taking the men's billets, and the men the maids'; so that each of the young men lights upon a girl that he calls his *valentine*, and each of the girls upon a young man whom she calls hers. By this means each has two valentines; but the man sticks faster to the valentine that has fallen to him than to the valentine to whom he is fallen. Fortune having thus divided the company into so many couples, the valentines give balls and treats to their mistresses, wear their billets several days upon their bosoms or sleeves, and this little sport often ends in love.'

In that curious record of domestic life in England in the reign of Charles II., *Pepys's Diary*, we find some notable illustrations of this old custom. It appears that married and single were then alike liable to be chosen as a valen-

ST VALENTINE'S LETTER-SHOWER.

tine, and that a present was invariably and necessarily given to the choosing party. Mr Pepys enters in his diary, on Valentine's Day, 1667: 'This morning came up to my wife's bedside (I being up dressing myself) little Will Mercer to be her valentine, and brought her name written upon blue paper in gold letters, done by himself, very pretty; and we were both well pleased with it.'

But I am also this year my wife's valentine, and it will cost me £5; but that I must have laid out if we had not been valentines.' Two days after, he adds: 'I find that Mrs Pierce's little girl is my valentine, she having drawn me: which I was not sorry for, it easing me of something more that I must have given to others. But here I do first observe the fashion of drawing mottoes as well as names, so that Pierce, who drew my wife, did draw also a motto, and this girl drew another for me. What mine was, I forget; but my wife's was "Most courteous and most fair," which, as it may be used, or an anagram upon each name, might be very pretty.' Noticing, soon afterwards, the jewels of the celebrated Miss Stuart, who became Duchess of Richmond, he says: 'The Duke of York, being once her valentine, did give her a jewel of about £800; and my Lord Mandeville, her valentine this year, a ring of about £300.' These presents were undoubtedly given in order to *relieve* the obligation under which the being drawn as valentines had placed the donors. In February 1668, Pepys notes as follows—'This evening my wife did with great pleasure shew me her stock of jewels, increased by the ring she hath made lately, as my valentine's gift this year, a Turkey-stone set with diamonds. With this, and what she had, she reckons that she hath above one hundred and fifty pounds' worth of jewels of one kind or other; and I am glad of it, for it is fit the wretch should have something to content herself with.' The reader will understand wretch to be used as a term of endearment.

Notwithstanding the practice of *relieving*, there seems to have been a disposition to believe that the person drawn as a valentine had some considerable likelihood of becoming the associate of the party in wedlock. At least, we may suppose that this idea would be gladly and easily arrived at, where the party so drawn was at all eligible from other considerations. There was, it appears, a prevalent notion amongst the common people, that this was the day on which the birds selected their mates. They seem to have imagined that an influence was inherent in the day, which rendered in some degree binding the lot or chance by which any youth or maid was now led to fix his attention on a person of the opposite sex. It was supposed, for instance, that the first unmarried person of the other sex whom one met on St Valentine's morning in walking abroad, was a destined wife or a destined husband. Thus Gay makes a rural dame remark—

'Last Valentine, the day when birds of kind
Their paramours with mutual chirpings find,
I early rose just at the break of day,
Before the sun had chased the stars away:
A-field I went, amid the morning dew,
To milk my kine (for so should housewives do).
Thee first I spied—and the first swain we see,
In spite of Fortune shall our true love be.'

A forward Miss in the *Connoisseur*, a series of essays published in 1754-6, thus adverts to other notions with respect to the day: 'Last Friday was Valentine's Day, and the night before, I got five bay-leaves, and pinned four of them to the four corners of my pillow, and the fifth to the middle; and then, if I dreamt of my sweetheart, Betty said we should be married before the year

was out. But to make it more sure, I boiled an egg hard, and took out the yolk, and filled it with salt; and when I went to bed, ate it, shell and all, without speaking or drinking after it. We also wrote our lovers' names upon bits of paper, and rolled them up in clay, and put them into water; and the first that rose up was to be our valentine. Would you think it?—Mr Blossom was my man. I lay a-bed and shut my eyes all the morning, till he came to our house; for I would not have seen another man before him for all the world.'

St Valentine's Day is alluded to by Shakspeare and by Chaucer, and also by the poet Lydgate (who died in 1440). One of the earliest known writers of valentines, or poetical amorous addresses for this day, was Charles Duke of Orleans, who was taken at the battle of Agincourt. Drayton, a poet of Shakspeare's time, full of great but almost unknown beauties, wrote thus charmingly

TO HIS VALENTINE.

'Muse, bid the morn awake,
Sad winter now declines,
Each bird doth choose a mate,
This day's St Valentine's:
For that good bishop's sake
Get up, and let us see,
What beauty it shall be
That fortune us assigns.

But lo! in happy hour,
The place wherein she lies,
In yonder climbing tower
Gilt by the glittering rise;
Oh, Jove! that in a shower,
As once that thunderer did,
When he in drops lay hid,
That I could her surprise!

Her canopy I'll draw,
With spangled plumes bedight,
No mortal ever saw
So ravishing a sight;
That it the gods might awe,
And powerfully transpierce
The globy universe,
Out-shooting every light.

My lips I'll softly lay
Upon her heavenly cheek,
Dyed like the dawning day,
As polish'd ivory sleek:
And in her ear I'll say,
"Oh thou bright morning-star!
'Tis I that come so far,
My valentine to seek."

Each little bird, this tide,
Doth choose her loved peer,
Which constantly abide
In wedlock all the year,
As nature is their guide:
So may we two be true
This year, nor change for new,
As turtles coupled were.

Let's laugh at them that choose
Their valentines by lot;
To wear their names that use,
Whom idly they have got.
Such poor choice we refuse,
Saint Valentine befriend;
We thus this morn may spend,
Else, Muse, awake her not.'

Donne, another poet of the same age, remarkable for rich though scattered beauties, writes an epithalamium on the marriage of the Princess Elizabeth to Frederick Count Palatine of the Rhine—the marriage which gave the present royal family to the throne—and which took place on St Valentine's Day, 1614. The opening is fine—

'Hail, Bishop Valentine! whose day this is;
All the air is thy diocese,
And all the chirping choristers
And other birds are thy parishioners:
Thou marryest every year
The lyric lark and the grave whispering dove;
The sparrow that neglects his life for love,
The household bird with the red stomach;
Thou mak'st the blackbird speed as soon
As doth the goldfinch or the halcyon—
This day more cheerfully than ever shine,
This day which might inflame thyself, old Valen-
tine!'

The origin of these peculiar observances of St Valentine's Day is a subject of some obscurity. The saint himself, who was a priest of Rome, martyred in the third century,* seems to have had nothing to do with the matter, beyond the accident of his day being used for the purpose. Mr Douce, in his *Illustrations of Shakspeare*, says: 'It was the practice in ancient Rome, during a great part of the month of February, to celebrate the Lupercalia, which were feasts in honour of Pan and Juno, whence the latter deity was named Februata, Februialis, and Februlla. On this occasion, amidst a variety of ceremonies, the names of young women were put into a box, from which they were drawn by the men as chance directed. The pastors of the early Christian church, who, by every possible means, endeavoured to eradicate the vestiges of pagan superstitions, and chiefly by some commutations of their forms, substituted, in the present instance, the names of particular saints instead of those of the women; and as the festival of the Lupercalia had commenced about the middle of February, they appear to have chosen St Valentine's Day for celebrating the new feast, because it occurred nearly at the same time. This is, in part, the opinion of a learned and rational compiler of the *Lives of the Saints*, the Rev. Alban Butler. It should seem, however, that it was utterly impossible to extirpate altogether any ceremony to which the common people had been much accustomed—a fact which it were easy to prove in tracing the origin of various other popular superstitions. And, accordingly, the outline of the ancient ceremonies was preserved, but modified by some adaptation to the Christian system. It is reasonable to suppose, that the above practice of choosing mates would gradually become reciprocal in the sexes, and that all persons so chosen would be called Valentines, from the day on which the ceremony took place.'

* Valentine met a sad death, being first beaten with clubs and then beheaded. The greater part of his remains are preserved in the church of St Praxedes at Rome, where a gate (now the Porta del Popolo) was formerly named from him *Porta Valentini*.

FEBRUARY 15.

Saints Faustinus and Jovita, martyrs at Brescia, about 121. St Sigefride of York, apostle in Sweden, 1002.

Born.—Galileo Galilei, astronomer, 1564, *Pisa*; Louis XV. (of *France*), 1710.

Died.—Oswy (of *Northumbria*), 670; John Philips, poet, 1708, *Hereford*; Anthony Earl of Shaftesbury, author of *Characteristics*, 1713, *Naples*; Bishop Atterbury, 1732; John Hadley, inventor of the sextant, 1744; Charles Andrew Vanloo, historical painter, 1765.

PHILIPS, THE CIDER POET.

John Philips, the artificial poet who parodied the style of Milton in the *Splendid Shilling*, is better known by his poem upon *Cider*, 'which continued long to be read as an imitation of Virgil's *Georgics*, which needed not shun the presence of the original.' Johnson was told by Miller, the eminent gardener and botanist, that there were many books written on cider in prose which do not contain so much truth as Philips's poem. 'The precepts which it contains,' adds Johnson, 'are exact and just; and it is, therefore, at once a book of entertainment and science.' It is in blank verse, and an echo of the numbers of *Paradise Lost*. 'In the disposition of his matter, so as to intersperse precepts relating to the culture of trees, with sentiments more generally alluring, and in easy and graceful transitions from one subject to another, he has very diligently imitated his master; but he unhappily pleased himself with blank verse, and supposed that the numbers of Milton, which impress the mind with veneration, combined as they are with subjects of inconceivable grandeur, could be sustained by images which at most can only rise to eloquence. Contending angels may shake the regions of heaven in blank verse; but the flow of equal measures, and the embellishment of rhyme, must recommend to our attention the art of engrafting, and decide the merit of the "redstreak" and "pearmain."'—*Johnson*.

Philips was cut off by consumption, when he had just completed his thirty-second year. He was buried in the cathedral of Hereford; and Sir Simon Harcourt, afterwards Lord Chancellor, gave him a monument in Westminster Abbey, which bears a long inscription, in flowing Latinity, said by Johnson to be the composition of Bishop Atterbury, though commonly attributed to Dr Freind.

EXTRAORDINARY MARRIAGES.

Among the many remarkable marriages on record, none are more curious than those in which the bridegroom has proved to be of the same sex as the bride. Last century there lived a woman who dressed in male attire, and was constantly going about captivating her sisters, and marrying them! On the 5th of July 1777, she was tried at a criminal court in London for thus disguising herself, and it was proved that at various times she had been married to three women, and 'defrauded them of their money and their clothes.' The fair deceiver was required by the justices to give the daughters of the citizens an opportunity of making themselves acquainted with her features

by standing in the pillory at Cheapside: and after going through this ordeal, she was imprisoned for six months. In 1773 a woman went courting a woman, dressed as a man, and was very favourably received. The lady to whom these not very delicate attentions were paid was much older than the lover, but she was possessed of about a hundred pounds, and this was the attraction to her adventurous friend. But the intended treachery was discovered; and, as the original chronicler of the story says, 'the old lady proved too knowing.' A more extraordinary case than either of these was that of two women who lived together by mutual consent as man and wife for six-and-thirty years. They kept a public-house at Poplar, and the 'wife,' when on her death-bed, for the first time told her relatives the fact concerning her marriage. The writer in the *Gentleman's Magazine* (1776) who records the circumstances, states that 'both had been crossed in love when young, and had chosen this method to avoid further importunities.' It seems, however, that the truth was suspected, for the 'husband' subsequently charged a man with extorting money from her under the threat of disclosing the secret, and for this offence he was sentenced to stand three times in the pillory, and to undergo four years' imprisonment.

It is usually considered a noteworthy circumstance for a man or woman to have been married three times, but of old this number would have been thought little of. St Jerome mentions a widow that married her twenty-second husband, who in his turn had been married to twenty wives—surely an experienced couple! A woman named Elizabeth Masi, who died at Florence in 1768, had been married to seven husbands, all of whom she outlived. She married the last of the seven at the age of 70. When on her death-bed she recalled the good and bad points in each of her husbands, and having impartially weighed them in the balance, she singled out her fifth spouse as the favourite, and desired that her remains might be interred near his. The death of a soldier is recorded in 1784 who had had five wives; and his widow, aged 90, wept over the grave of her fourth husband. The writer who mentioned these facts naïvely added: 'The said soldier was much attached to the marriage state.' There is an account of a gentleman who had been married to four wives, and who lived to be 115 years old. When he died he left twenty-three 'children' alive and well, some of the said children being from three to four score. A gentleman died at Bordeaux in 1772, who had been married sixteen times.

In July 1768 a couple were living in Essex who had been married eighty-one years, the husband being 107, and the wife 103 years of age. At the church of St Clement Danes, in 1772, a woman of 85 was married to her sixth husband.

Instances are by no means rare of affectionate attachment existing between man and wife over a period longer than is ordinarily allotted to human life. In the middle of the last century a farmer of Nottingham died in his 107th year. Three days afterwards his wife died also, aged 97. They had lived happily together upwards of eighty years. About the same time a yeoman of

Coal-pit Heath, Gloucestershire, died in his 104th year. The day after his funeral his wife expired at the age of 115; they had been married eighty-one years.

The announcements of marriages published in the *Gentleman's Magazine* during the greater part of last century included a very precise statement of the portions brought by the brides. Here are a few of such notices:

'Mr N. Tillotson, an eminent preacher among the people called Quakers, and a relative of Archbishop Tillotson, to Miss —, with £7000.'

'Mr P. Bowen to Miss Nicholls, of Queenhithe, with £10,000.'

'Sir George C. to the widow Jones, with £1000 a-year, besides ready money.'

The following announcement follows the notice of a marriage in the *Gentleman's Magazine* for November 1774:—'They at the same time ordered the sexton to make a grave for the interment of the lady's father, then dead.' This was unusual; but a stranger scene took place at St Dunstan's church on one occasion, during the performance of the marriage ceremony. The bridegroom was a carpenter, and he followed the service devoutly enough until the words occurred, 'With this ring I thee wed.' He repeated these, and then shaking his fist at the bride added, 'And with this fist I'll break thy head.' The clergyman refused to proceed, but, says the account, 'the fellow declared he meant no harm,' and the confiding bride 'believed he did but jest,' whereupon the service was completed. A still more unpleasant affair for the lady once happened. A young couple went to get married, but found on their arrival at church that they had not money to pay the customary fees. The clergyman not being inclined to give credit, the bridegroom went out to get the required sum, while the lady waited in the vestry. During his walk the lover changed his mind, and never returned to the church. The young girl waited two hours for him, and then departed, —'Scot free,' dryly remarks one narrator. A bridegroom was once arrested at the church door on the charge of having left a wife and family chargeable to another parish, 'to the great grief and shame of the intended bride.'

In Scotland, in the year 1749, there was married the 'noted bachelor, W. Hamilton.' He was so deformed that he was utterly unable to walk. The chronicler draws a startling portrait of the man: 'His legs were drawn up to his ears, his arms were twisted backwards, and almost every member was out of joint.' Added to these peculiarities, he was eighty years of age, and was obliged to be carried to church on men's shoulders. Nevertheless, his bride was fair, and only twenty years of age! A wedding once took place in Berkshire under remarkable circumstances: the bridegroom was of the mature age of eighty-five, the bride eighty-three, and the bridesmaids each upwards of seventy—neither of these damsels having been married. Six grand-daughters of the bridegroom strewed flowers before the 'happy couple,' and four grandsons of the bride sung an epithalamium composed by the parish clerk on the occasion. On the 5th February, in the eighteenth year

of Elizabeth (corresponding to 1576), Thomas Filsby, a deaf man, was married in St Martin's parish, Leicester. Seeing that, on account of his natural infirmity, he could not, for his part, observe the order of the form of marriage, some peculiarities were introduced into the ceremony, with the approbation of the Bishop of Lincoln, the commissary Dr Chippendale, and the Mayor of Leicester. 'The said Thomas, for expressing of his mind, instead of words, of his own accord used these signs: first he embraced her [the bride, Ursula Russet] with his arms; took her by the hand and put a ring on her finger; and laid his hand upon his heart, and held up his hands towards heaven; and, to shew his continuance to dwell with her to his life's end, he did it by closing his eyes with his hands, and digging the earth with his feet, and pulling as though he would ring a bell, with other signs approved.* At the more recent marriage of a deaf and dumb young man at Greenock, the only singularity was in the company. The bridegroom, his three sisters, and two young men with them were all deaf and dumb. There is a case mentioned in Dodsley's *Annual Register* of an ostler at a tavern in Spilsby who walked with his intended wife all the way to Gretna Green to get married—240 miles.

Some of the most remarkable marriages that have ever taken place are those in which the brides came to the altar partly, or in many cases entirely, divested of clothing. It was formerly a common notion that if a man married a woman *en chemisette* he was not liable for her debts; and in *Notes and Queries* there is an account by a clergyman of the celebration of such a marriage some few years ago. He tells us that, as nothing was said in the rubric about the woman's dress, he did not think it right to refuse to perform the marriage service. At Whitehaven a wedding was celebrated under the same circumstances, and there are several other instances on record.

A curious example of compulsory marriage once took place in Clerkenwell. A blind woman, forty years of age, conceived a strong affection for a young man who worked in a house near to her own, and whose 'hammering' she could hear early and late. Having formed an acquaintance with him, she gave him a silver watch and other presents, and lent him £10 to assist him in his business. The recipient of these favours waited on the lady to thank her, and intimated that he was about to leave London. This was by no means what the blind woman wanted, and as she was determined not to lose the person whose industrial habits had so charmed her, she had him arrested for the debt of £10 and thrown into prison. While in confinement she visited him, and offered to forgive him the debt, on condition that he married her. Placed in this strait, the young man chose what he deemed the least of the two evils, and married his 'benefactress,' as the writer in the *Gentleman's Magazine* calls her. The men who arrested him gave the bride away at the altar. In 1767 a young blacksmith of Bedford was paying his addresses to a maiden, and upon calling to see her one evening

* From the parish register, quoted in *Notes and Queries*, 2nd ser., iv. 489.

was asked by her mother, what was the use of marrying a girl without money? Would it not be better for him to take a wife who could bring £500? The blacksmith thought it would, and said he should be 'eternally obliged' to his adviser if she could introduce him to such a prize. 'I am the person, then,' said the mother of his betrothed, and we are told that 'the bargain was struck immediately.' Upon the return of the girl, she found her lover and parent on exceedingly good terms with each other, and they were subsequently married. The bride was sixty-four years of age, and the bridegroom eighteen. This disparity of years is comparatively trifling. A doctor of eighty was married to a young woman of twenty-eight; a blacksmith of ninety (at Worcester, 1768) to a girl of fifteen; a gentleman of Berkshire, aged seventy-six, to a girl whom his *third* wife had brought up. The husband had children living 'thrice the age' of his fourth wife. At Hill farm, in Berkshire, a blind woman of ninety years was married to her ploughman, aged twenty; a gentleman of Worcester, upwards of eighty-five, to a girl of eighteen; a soldier of ninety-five, 'who had served in King William's wars, and had a ball in his nose,' to a girl of fifteen. In 1769 a woman of Rotherhithe, aged seventy, was married to a young man aged twenty-three—just half a century difference between their ages. A girl of sixteen married a gentleman of ninety-four—but he had £50,000.

TIME-CANDLES.

In the Life of Alfred the Great, by Asserius, we read that, before the invention of clocks, Alfred caused six tapers to be made for his daily use; each taper, containing twelve pennyweights of wax, was twelve inches long, and of proportionate breadth. The whole length was divided into twelve parts, or inches, of which three would burn for one hour, so that each taper would be consumed in four hours; and the six tapers, being lighted one after the other, lasted for twenty-four hours. But the wind blowing through the windows and doors, and chinks of the walls of the chapel, or through the cloth of his tent, in which they were burning, wasted these tapers, and, consequently, they burnt with no regularity: he therefore designed a lantern made of ox or cow horn, cut into thin plates, in which he inclosed the tapers; and thus protecting them from the wind, the period of their burning became a matter of certainty.

This is an amusing and oft-quoted story, but, like many other old stories, it lacks authenticity. The work of Asser, there is reason to believe, is not genuine. See the arguments in Wright's *Biog. Brit. Lit.* vol. i. pp. 408—412. It moreover appears that some of the institutions popularly ascribed to Alfred, existed before his time.—*Kemble's Saxons in England.*

Still, there is nothing very questionable in this mode of Alfred's to measure time; and, possibly, it may have suggested an 'improvement,' which was patented so recently as 1859, and which consists in making marks on the side or around the sides of candles either by indentation or colouring at intervals, and equal distances apart, according to the size of the candle, to indicate the time by the burning of the candle. The marks are to consist of hours, half-hours, and if necessary quarter-hours, the distance to be determined by the kind of candle used; the mark or other announcement may be made either in the process of manufacture or after.

THE GREAT TUN OF HEIDELBERG.

In a large under room, in the castle or palace of the Princes Palatine of the Rhine at Heidelberg, the eccentric traveller Thomas Coryat found this vast vessel, in its original form, of which he has given a picture representing himself as perched on its top,

THE GREAT TUN OF HEIDELBERG.

with a glass of its contents in his hands. To him it appeared the greatest wonder he had seen in his travels, fully entitled to rank with those seven wonders of the world of which ancient authors inform us.

Its construction was begun in the year 1589 and finished in 1591, one Michael Warner being the principal fabricator. It was composed of beams twenty-seven feet long, and had a diameter of eighteen feet. The iron hoops were eleven thousand pounds in weight. The cost was eleven score and eighteen pounds sterling. It could hold a hundred and thirty-two fuders of wine, a fuder being equal to four English hogsheads, and the value of the Rhenish contained in it when Coryat visited Heidelberg (1608) was close upon two thousand pounds.

'When the cellarer,' says Coryat, 'draweth wine out of the vessel, he ascendeth two several degrees of wooden stairs made in the form of a ladder, and so goeth up to the top; about the middle whereof there is a bung-hole or venting orifice, into the which he conveyeth a pretty instrument of some foot and a half long, made in the form of a spout, wherewith he draweth up the wine and so poureth it after a pretty manner into a glass.' The traveller advises visitors to beware lest they be inveigled to drink more than is good for them.*

Murray's *Handbook of the Rhine* represents the present tun as made in 1751, as thirty-six feet long and twenty-four in height, and as capable of containing 800 hogsheads, or 233,200 bottles. It has been disused since 1769.

FEBRUARY 16.

St Onesimus, disciple of St Paul, martyr, 95. Saints Elias, Jeremy, Isaias, Samuel, and Daniel, Egyptian martyrs, 309. St Juliana, virgin martyr at Nicomedia, about 309. St Tanco (or Tatto), of Scotland, bishop, martyr at Verdun, about 815. St Gregory X. (Pope), 1276.

Born.—Philip Melancthon, reformer, 1497, *Bretten*; Gaspard de Coligny, Admiral of France, and Protestant leader, 1516, *Chatillon*; Archbishop (John) Sharp, 1644, *Bradford*; Baron Trenck, 1726.

Died.—Alphonso III. (of *Portugal*), 1279; Archbishop Henry Deane, 1502, *Canterbury*; John Stöffler, German astronomer, 1531; Dr Richard Mead, virtuoso, 1754, *St Pancras*; Peter Macquer, French chemist, 1784, *Paris*; Giovan Batista Casti, Italian poet, 1803, *Paris*; Lindley Murray, grammarian, 1826; Dr Kane, American Arctic explorer, 1857, *Havana*.

BARON TRENCK.

The career of this extraordinary man presents several remarkable instances of the fatal influence of vanity and ungovernable passion upon a life which, at the outset, was brilliant with good fortune.

Born February 16, 1726, of parents belonging to the most ancient and wealthy houses in East Prussia, the young Baron distinguished himself in his thirteenth year, at his University; one year later he wounded and disarmed in a duel one of the most celebrated swordsmen of Königsberg; and in his sixteenth year, Frederick (after-

wards the Great) appointed him a cadet, and soon afterwards the King gave him a cornetcy in his body-guard, then the most splendid and gallant regiment in Europe. Trenck was a great favourite at court; but about two years afterwards an imprudent attachment was formed between him and the Princess Amelie, which had a fatal influence upon his fortunes. During the war between Prussia and Austria, Trenck, being detected in a correspondence with the enemy, was sent prisoner to the fortification of Glatz. It was at the same time ascertained that large sums of money had been remitted to him by the princess. From that time must be dated Frederick's intense and obdurate hatred of Trenck. Making his escape by bribery, he went to Russia, where he was appointed captain of a troop of hussars: he was in high favour with the empress, and acquired considerable wealth through the legacy of a Russian princess; but the Prussian ambassador left nothing undone to injure him, in accordance, as he pretended, with instructions from the King, his master. In 1748, Trenck returned to Prussia, to visit his family, and at Dantzic he was arrested by a party of hussars, and taken prisoner to Berlin: he was at first treated well, but his intemperate conduct led to his being sent to Magdeburg, and confined in a cell underground, and almost without light: his sufferings may be read in his own memoirs. After two soldiers had suffered death for conniving at his attempts to escape, and other plots

* Coryat's *Crudities*, ed. 1776, ii. 351.

were discovered, a prison was built on purpose for him, in which he was chained to the walls with fetters of fifty-six pounds weight. Here he remained four years, when Frederick consented to his release upon condition of his leaving the kingdom. He went first to Vienna, where he was again arrested on account of his violent language against Frederick; but he was soon set free, and advised to retire. He settled at Aix-la-Chapelle, married, and commenced business as a wine-merchant, but did not prosper, and became bankrupt. He next wrote articles of a democratic tendency for several periodical publications; and in 1787, after the death of Frederick the Great, he published his memoirs, for the copyright of which he received a very large sum. The work was translated into almost all the European languages; the ladies at Paris, Berlin, and Vienna, wore rings, necklaces, bonnets, and dresses à la *Trenck*, and he was made the hero of seven pieces on the French stage. He subsequently commenced a weekly journal at Aix-la-Chapelle, under the title of *L'Ami des Hommes*, in which he advocated the new French doctrines. In 1792, he went to Paris, joined a Jacobin club, and was afterwards a zealous adherent of the Mountain party, which, nevertheless, betrayed and accused him, and he was thrown into prison. He would, however, have escaped by the fall of Robespierre, had it not been for his restlessness. 'He was,' said Du Roure, 'the greatest liar I ever knew. To that, his favourite propensity, he owed his fate. Our hope of escape in the prison was to remain unnoticed by the gaoler, and wait events. Upon the least complaint, the order from the authorities was à la mort, sometimes without the ceremony of a trial. The prisoners were numerous, and for some days a rumour had been circulated among them, and continually kept up, as if with fresh information, that the Prussians were marching upon Paris, carrying all before them. We knew of nothing certain that went on outside the prison walls, and were not without hopes that this intelligence was correct. Still, we were puzzled to discover how such information could be promulgated amongst us, as it thus was, early every morning, with some new addition. This prevalent topic of conversation, it seems, had, with its daily additions, reached the ears of the gaoler, who caused the gates of the prison to be closed to ingress or egress until the day was far advanced, in order to try whether any fresh news thus circulated came from without, or was concocted within the walls. Trenck that morning circulated some additional particulars about the Prussians' vicinity to Paris, which were traced to him through those to whom he had communicated them, with the addition, that his information was certain, for he had just received it, which was impossible. He was thus caught in circulating false rumours, complained of by the gaoler, and lost his head by the guillotine, near the Barrière du Trône, on the 26th of July 1794. On the scaffold, and in his sixty-ninth year, he gave proof of his ungovernable passions. He harangued the crowd, and when his head was on the block, his vehemence was such, that the executioner had to hold him by his silver locks to meet the fatal stroke. He was buried, with

the other victims of that sanguinary period, in a spot of ground not more than thirty feet square, in the corner of the garden of the canonesses of St Augustine, near the ancient village of Picpus, now inclosed in the Faubourg Antoine.'

Baron Trenck was a man of considerable literary talents, and was fully as familiar with English as with French literature. In person he was stout and thick-set, his countenance by no means prepossessing, from a disease which had disfigured it; and he was slovenly in his dress.

DR MEAD AND HIS MUSEUM.

Foremost among the medical men of the last century, for his professional skill, his amiable manners, and princely munificence, ranks Dr Richard Mead, who was consulted beside the death-bed of Queen Anne, and became physician to George II. He was born at Stepney, near London, in 1675; and after studying in continental schools, and taking the degree of Doctor of Medicine at Padua, he settled at his native village, and there established his reputation. Among his early services were his researches in experimental physiology, for which no small degree of courage was necessary. He handled vipers, provoked them, and encouraged them to seize hold of hard bodies, on which he imagined that he could collect their venom in all its force. Having obtained the matter, he conveyed it into the veins of living animals, mixed it with human blood, and even ventured to taste it, in order to establish the utility of sucking the wounds inflicted by serpents.

Mead was instrumental in promoting inoculation for the small-pox: the Prince of Wales desired him, in 1721, to superintend the inoculation of some condemned criminals, intending afterwards to encourage the practice by employing it in his own family; the experiment amply succeeded, and the individuals on whom it was made recovered their liberty. When the terrible plague ravaged Marseilles, and its contagious origin was discredited, Dr Mead, after a careful examination of the subject, declared the plague to be a contagious distemper, and a quarantine was enjoined; and he proposed a system of Medical Police, in a tract of which seven editions were sold in one year. Through Dr Mead's influence, Sutton's invention for expelling the foul and corrupted air from ships was tried, and its simplicity and efficacy proved; a model of Sutton's machine made in copper was deposited in the museum of the Royal Society, and the ships of his Majesty's navy were provided with it. The fact that, in each of these cases, Mead's results have been superseded by more recent discoveries, does not in the least detract from his merit. What he effected was, for his time, wonderful.

Mead was fast approaching the summit of his fortune, when his great protector, Radcliffe, died, and Mead moved into his house in Bloomsbury-square. After the most brilliant career of professional and literary reputation, of personal honour, of wealth, and of notoriety, which ever fell in combination to the lot of any medical man in any age or country, Mead took to the bed

from which he was to rise no more, on the 11th of February, and expired on the 16th of the same month, 1754. His death was unaccompanied by any visible signs of pain.

In practice, Dr Mead was without a rival; his receipts averaging, for several years, between six and seven thousand pounds, an enormous sum in relation to the value of money at that period. He daily sat in Batson's coffee-house, in Cornhill, and at Tom's, in Russell-street, Covent-garden, to inspect written, or receive oral, statements from the apothecaries, prescribing without seeing the patient, for a half-guinea fee. He gave advice gratuitously, not merely to the indigent, but also to the clergy, and all men of learning.

Dr Mead had removed into Great Ormond-street, Queen-square, several years before his death: the house is No. 49, corner of Powis-place; behind his house was a good garden, in which he built a gallery and museum. There Mead gave *conversazioni*, which were the first meetings of the kind. He possessed a rare taste for collecting; but his books, his statues, his medals, were not to amuse only his own leisure: the humble student, the unrecommended foreigner, the poor inquirer, derived almost as much enjoyment from these treasures as their owner; and he constantly kept in his pay several scholars and artists, who laboured, at his expense, for the benefit of the public. His correspondence extended to all the principal literati of Europe, who consulted him, and sent him many curious presents. At his table might be seen the most eminent men of the age. Pope was a ready guest, and the delicate poet was always sure to be regaled with his favourite dish of *sweetbreads*. Politics formed no bar of separation: the celebrated physicians, Garth, Arbuthnot, and Freind, were not the less his intimate associates because they were Tories. When Freind was sent to the Tower for some supposed political offence, Mead frequently visited him, and attended his patients in his absence; from Sir Robert Walpole he procured his liberation, and then presented him with a large sum, being the fees which he had received from his brother practitioner's clients. He also persuaded the wealthy citizen, Guy, to bequeath his fortune towards the noble hospital which bears his name.

Although Mead's receipts were so considerable, and two large fortunes were bequeathed to him, his benevolence, public spirit, and splendid mode of living, prevented him from leaving great wealth to his family. He whose mansion was a sort of open house for men of genius and talent, who kept a second table for his humbler dependents, and who was driven to his country house, near Windsor, by six horses, was not likely to amass wealth; but he did better: he acted according to his own conviction, that what he had gained from the public could not be more worthily bestowed than in the advancement of the public mind; and he truly fulfilled the inscription which he had chosen for his motto: 'Non sibi, sed toti.*'

After Dr Mead's death, the sale of his library and museum realized between fifteen and sixteen

thousand pounds, his pictures alone producing £3400. The printed catalogue of the library contains 6592 separate numbers; Oriental, Greek, and Latin manuscripts forming no inconsiderable part: the greater portion of the library he bequeathed to the College of Physicians. The collection included prints and drawings, coins and medals, marble statues of Greek philosophers and Roman emperors; bronzes, gems, intaglios, Etruscan and other vases; marble busts of Shakspeare, Milton, and Pope, by Scheemakers; statues of Hygeia and Antinous; a celebrated bronze head of Homer; and an iron cabinet (once Queen Elizabeth's), full of coins, among which was a medal, with Oliver Cromwell's head in profile; legend 'The Lord of Hosts,' the word at Dunbar, 1650; on the reverse, the Parliament sitting.

Of so worthy a man as Dr Mead memorials are interesting: in the College of Physicians is a fine bust of him, by Roubiliac; and here is his portrait, and the gold-headed cane which he received from Radcliffe, and which was afterwards carried by Askew, Pitcairn, and Matthew Baillie. Among the pictures at the Foundling Hospital is Dr Mead's portrait, by Allan Ramsay; and in the nave of Westminster Abbey is a monument to our worthy physician.

Dr Mead was a clever person, but Dr Woodward had the better of him in wit: when they fought a duel under the gate of Gresham College, Woodward's foot slipped, and he fell. 'Take your life!' exclaimed Mead. 'Anything but *your physic*,' replied Woodward. The quarrel arose from a difference of opinion on medical subjects.

LINDLEY MURRAY.

As many spoke of Robin Hood who never shot with his bow, so many hear of Lindley Murray who know nothing of him but that he composed a book of English grammar. He was an American—native of Pennsylvania—and realized a competency at New York, partly as a barrister and partly as a merchant. The necessities of health obliged him to remove to England, where he spent the last forty years of his protracted life at Holdgate, near York, a feeble invalid, but resigned and happy. Besides his well-known *Grammar*, he wrote a book on *The Power of Religion on the Mind*. He was a man of mild and temperate nature, entirely beloved by all connected with him. In a series of autobiographical letters, he gives a statement as to the moderation of his desires, well worthy of being brought under general notice.

'My views and wishes with regard to property were, in every period of my life, contained within a very moderate compass. I was early persuaded that, though "a competence is vital to content," I ought not to annex to that term the idea of much property. I determined that when I should acquire enough to enable me to maintain and provide for my family in a respectable and moderate manner, and this according to real and rational, not imaginary and fantastic wants, and a little to share for the necessities of others, I would decline the pursuits of property, and devote a great part of my time, in some way

* Pettigrew's *Lives of British Physicians*.

or other, to the benefit of my fellow-creatures, within the sphere of my abilities to serve them. I perceived that the desire of great possessions generally expands with the gradual acquisition and full attainment of them; and I imagined that charity and a generous application do not sufficiently correspond with the increase of property. I thought, too, that procuring great wealth has a tendency to produce an elated independence of mind, little connected with that humility which is the ground of all our virtues; that a busy and anxious pursuit of it often excludes views and reflections of infinite importance, and leaves but little time to acquire that treasure which would make us rich indeed. . . . I was persuaded that a truly sincere mind could be at no loss to discern the just limits between a safe and competent portion and a dangerous profusion of the good things of life. These views of the subject I reduced to practice; and terminated my mercantile concerns when I had acquired a moderate competency.'

DR KANE.

There are not many American names that have made a more purely satisfactory impression on European minds than that of Elisha Kent Kane. Born in 1822, and educated as a surgeon, he spent all his youthful years in adventurous explorations, first in the Philippine Islands, afterwards in India, then in Africa: he next took a bold and prominent part in the war which his countrymen waged against Mexico; finally, he accompanied the expedition which American generosity (chiefly represented by Mr Grinnell) sent in search of Sir John Franklin. All this was over, and Kane had become the historian of the expedition, before he had passed thirty. Another Arctic exploration being determined on, Kane was appointed as its commander, and started on his voyage in May 1853. With indefatigable perseverance he carried his vessel, the *Advance*, into Smith's Sound, to a point at latitude 78° 43' N., where the thermometer in February was so low as 70° *minus* Fahrenheit. Further progress in the vessel being impossible, Kane took to a boat, and made further explorations of a most remarkable kind, finally discovering an iceless sea north of 80° N. The sufferings of the whole party in these movements were extreme; but they became insignificant in comparison with those of a return which was necessitated in open boats to the most northerly Danish Greenland settlement, and which occupied eighty-four days. Immense credit was due to Kane for the skill and energy which enabled him to bring back his people with scarcely diminished numbers through such unheard-of difficulties and perils. The able and highly illustrated book, in which he subsequently detailed this heroic enterprise, and described the new regions he had explored, must remain an enduring monument to his memory. It is alleged that, after all he had suffered, his constitution was not seriously injured. Yet the melancholy fact is that this extraordinary man sunk into the grave the year after his book was published.

CASTI AND THE GIULI TRE.

February 16, 1803, died, at above eighty years of age, the Italian poet, Giovan Batista Casti, known chiefly by his clever comic poem the *Animali Parlanti*, which our Mr Stewart Rose has partially translated under the name of the *Court of Beasts*. He was in early life a priest at Montefiascone, in the States of the Church, but afterwards became the *protégé* in succession of the Grand Duke of Tuscany and the Emperor of Germany (Joseph II.), and was only recognised as a gay and free-thoughted court poet. He spent his latter years in ease at Paris. He was generally known as the *Abate Casti*, in reference to his early connexion with the Church, though towards the close of his life he dropped the title, and was desirous that it should be forgotten.

Casti displayed the remarkable ingenuity and resources of his mind in a poetical work which stands quite unique in point of subject in the literature of all nations. It appeared in 1762 (being his first work, though published when he was upwards of forty) under the title of the *Tre Giuli*, and consisted of two hundred sonnets descriptive of the troubles which the author was pleased to represent himself as having incurred in consequence of borrowing three giuli which he was never able to repay. A giulio (Julius), worth about a groat English, is a small silver coin first struck by Julius II. and called after him.

Captain Montagu Montagu published a translation of this remarkable book in 1826, and a second edition in 1841. Mr Leigh Hunt, in the *Liberal*, published in 1822, had drawn the attention of English readers to the poem, and given an English version of several of the sonnets. It could hardly be that Mr Hunt should fail to be struck with the humour and grace of Casti, and indeed the *Tre Giuli* seems to have made upon him an extraordinary impression.

'The fertility of fancy and learned allusion,' he writes, 'with which the author has written his 200 sonnets on a man's coming to him every day and asking him for Tre Giuli is inferior only to what Butler or Marvell might have made of it. The very recurrence of the words becomes a good joke. Let statesmen say what they will of "the principle of reiteration," the principles of imagination and continuation are the intense things in this our mortal state: as the perpetual accompaniment and exaggeration of one image is the worst thing in sorrow, so it is the merriest thing in a piece of wit.' 'The Giuli Tre are henceforth among our standing jokes—among our lares and penates of pleasantry.' 'Nobody that we have met with in Italy could resist the mention of them. The priest did not pretend it. The ladies were glad they could find something to approve in a poet of so erroneous a reputation. The man of the world laughed as merrily as he could. The patriot was happy to relax his mustachios. Even the bookseller of whom we bought them laughed with a real laugh, evidently not the mercenary and meretricious grin with which he laughs at the customer instead of the book, when he has the luck to get rid of some heavy facetiousness by a chance sale—not "the bought smile—

Loveless, joyless, unendeared,
Casual fruition."

It should be mentioned, however, that one great source of drollery in the original is lost in the translation. It has been elegantly said that work of this kind is like pouring a perfume from one vessel into another, which, if it be ever so carefully done, must result in a certain loss of fragrance by evaporation in the transfusion. But, in addition to this, the *Tre Giuli* is written in a style which is without an English equivalent; its *vers tronchi*, or truncated verses, have the final word in every line accented on the last

syllable, which has an effect extremely ludicrous in Italian. The style of verse is only employed in burlesque or humorous subjects; it is mock-heroic, and possesses, to Italian ears, a drollery in sound quite apart from, and in addition to, the humour of the sense of the verse.

The *Tre Giuli* is a kind of small-debts epic. It is in poetry what Paganini's fantasia on one string was in music. It is a literary *tour de force*. The 'pay me' of the creditor Chrysophilus comes beating through the verse in all sorts of places, just as the injunction 'Forward' tolls incessantly throughout the story of the *Wandering Jew*. A poem essentially of one idea is yet made to possess the most infinite variety; the story is without beginning, or middle, or end, and yet is full of interest. We know what is coming, and are constantly expecting it, and yet we are somehow surprised when it does come. The insatiable dun never appears at quite the time or place at which we had been looking for him. Just as the legerdemainist twists a sheet of paper into all manner of forms, or makes a piece of mouey shew itself to us in all sorts of places, so does the idea of this poem change and twist, and appear and disappear. The *Tre Giuli* are now a lump of metal in our hands. Now they are hammered out into a tissue sheet that seems to cover the whole globe.

And as in all the superior kinds of burlesque there is a touch of seriousness and real feeling—for truth and nature enhance even travestie—so in the *Tre Giuli*, in spite of the triviality and humorousness of the subject, our interest and sympathies are excited in an extraordinary degree by the earnestness and persistence, almost the pathos of the narrator. His agony seems now and then so real, that we are tempted to forget how ridiculous is the cause of it. He so impresses us with his want of three groats, that we feel for him quite as much as though he were crying for three kingdoms. His need for so small a matter is so urgent, that both become endowed with colossal proportions, and the farcical subject by its serious treatment becomes lifted up to tragic importance. As in a kaleidoscope the slightest turn of the tube gives the same pieces of glass quite a different character, owing to their new combination, so does this one want of *Tre Giuli* shift itself in the poet's hands into an endless variety of presentments. Now he defies his creditor, now he cajoles him, now point blank he refuses to pay him, now he puts him off with promises, he sues to him, he abuses him, expostulates, insults, entreats, flatters, runs from him. The debt is now near, now far; it will be settled immediately, to-morrow, the day after—now never—not till doomsday—not even then; it is now large, now small, now laughably trivial, now of a fearful importance. The poet steps his three coins in verse, and they come out endowed with the attributes of fairy money, and we can conceive their being capable of anything, and its being possible to do anything with them.

Let others, says Casti in an early sonnet, celebrate the deeds and wars of *Enëas*, the feats of kings, battles, love, beauty. 'This,' (to quote Captain Montagu's translation) :

'This is the subject matter of my lay :
Chrysophilus, one time, three groats me lent,
And for them asked me a hundred times a day.
He kept on asking, and I would not pay,
And this importunate dun 'tis my intent
Herein in various fashion to display.'

And so on, reiterating in the third sonnet :

'Hence, dreams or fables, hence! whoever quotes:
Meanwhile the Muse relates in artless tone
The genuine story of the triple groats.'

Or to take Mr Leigh Hunt's rendering of the lines :

'Ye dreams and fables keep aloof, I pray :
While thus my Muse keeps spinning as she goes
The genuine history of the *Giuli Tre*.'

The poet states that, just as the beating of a steel upon a flint produces a stream of sparks, so the repeated entreaties of his creditor, beating upon his breast, have awoken the dormant seeds of song, and compelled him to make the three groats the theme of his lyre, while he hopes that at least the charm of novelty may attach to his efforts. His dun, he vows, has no right to wonder that to all his applications for the amount of the loan he receives the same unvarying answer; for, he argues ingeniously :

'As one, who constantly shall sound a flat
Upon the hautboy or the organ, may
Expect the instrument to utter what
Will be the note that answers to flat A :
Thus every time my creditor this way
One similar question makes me undergo,
He hears one similar tone in answering notes ;
Yet still I don't repay him his three groats ;
And should he ask me a hundred times a day,
He'd hear a hundred times the selfsame "No."'

He next proceeds rather to insult and defy his creditor, deprecates all charity from him, vows he may go hang himself, but still he won't get back his mouey! Yet, after this burst of courage and confidence, he sinks into a very complaining mood.

'Those triple groats still haunt my mind, and balk
My heart continually of joy and rest.
His hateful likeness, who has ever been
The troubler of my peace and evil star,
Is always in my eyes.'

The shadow of the relentless dun haunts him worse than Asmodens. Any one in search of Chrysophilus is bid to look for his debtor; it is simply impossible that the creditor can be far from him. Now he contemplates travelling to the moon, and covets 'a residence aloft.'

'Yet should I fear that travelling through the air
Thou'dst come one day to find me out up there !'

— I nothing doubt
That, should he chance to learn my hiding-place,
In Calicut or Chiua tho' I were,
He'd straight post horses take and find me out !'

More calmly, then, he reflects that Chrysophilus must be drawn to him by the power of gravitation, 'or by centripetal cohesion's laws,' or a natural affinity, or by attraction. Next he asks why he may not, like Orestes, be at last in a measure forgiven by the Fates. Suddenly, as he is about to quit the town secretly, his creditor appears behind him, offering to accompany him upon his journey. Chrysophilus himself is one day seen booted, spurred, and horsed,—he is going a journey. The poet does not wish him harm; but oh! if he should be taken prisoner by the Turks, or made Grand Vizier or Mufti, and never come back! Never! Let him have a prosperous voyage, and, that completed, may there be a perpetual hurricane to prevent him ever returning. His creditor gone, he experienced all the feelings of a city long invested, and the siege raised at last. His joy is boundless, but there comes a letter by the post. Chrysophilus, the relentless, writes :

'Get me the three groats ready,—do not miss,—
As soon as possible, for I shall be
By Sunday or Monday at latest, unremiss,
On horse or foot—dead or alive—with thee !'

He finds the letter like one of those papers impregnated with arsenic—

'Whoever reads, or even opens, dies.'

He compares himself to a truant schoolboy suddenly caught by his preceptor; to king Priam finding the Greek horse open, and the enemy in Troy. He becomes a moral teacher. 'Ah! never run in debt,' he says; then prudently qualifies his precept:

'But to your sorrow,

If so compelled, take care that first ye see
What natured man he is from whom ye borrow.'

He complains that, whereas he was wont to be stoically indifferent to all misfortune, he is now made miserable by this contemptible debt—just as a lion that has conquered panthers and tigers finds it agony to endure the sting of a gadfly. His debt is an evil, but his creditor is a greater one; he condemns the latter, not the former so much. The application and the refusal have now got to be matters of rote, performed without volition. The creditor comes with a parrot-cry for his money. The debtor answers with a parrot-cry that he has not got it, and derides the creditor for being, after all, merely a 'dunning automaton.'

'The whispering breeze, that speaks in softest breath,
The verdant hill, the cool, umbrageous vale,
The bird that spreads his pinions to the gale,
The brook that jets with bounding leap beneath,
And makes sweet music in its noisy fall,—
The dance and song of laughter-loving youth
At times, oh Dun! with calm delights these soothe
My mind, till *thou* comest back to chase them all.'

Leigh Hunt has happily rendered the 35th sonnet—

'No: none are happy in this best of spheres.
Lo! when a child we tremble at a look;
Our freshest age is withered o'er a book;
The fine arts bite us, and great characters.

Then we go boiling with our youthful peers,
In love and hate; in riot and rebuke;
By hook misfortune has us, or by crook,
And griefs and gouts come thickening with our years.

In fine, we've *debts*; and, when we've debts, no ray
Of hope remains to warm us to repose.
Thus has my own life passed from day to day;
And now, by way of climax, though not close,
The fatal debit of the *Giuli Tre*
Fills up the solemn measure of my woes.'

Heartily the poet wishes he were a child again,—to know nothing of duns and debts; or a bird, that he might fly off, out of the reach of his creditor; or that, like Gyges, he had a ring that could render him invisible at pleasure. He next congratulates himself that he is unmarried and childless, dreading that if he had children they would be of little comfort to him, for they would certainly grow up to resemble his creditor, and would dun accordingly. Then he entreats the dun not to forget that, after all, dunning is of little use; it cannot fill the creditor's purse. He expresses his regret that there is not, as amongst the Jews, a custom of periodically extinguishing debt, which he denounces as a

—'heartache of the keenest kind,

To which no other pain can be compared;
An inward rack that night and day doth grind.'

All pleasures now pall upon him; his liability haunts his imagination everywhere; he is dunned by the echo of his own voice; compares his debt to perpetual motion; implores oblivion to set his cares at rest; condemns sleep because it augments his ills, by giving him dreams—for he dreams of his debt, just as a sailor dreams of storms; sighs for a keg of Lethe; laments the good times, when duns, and writs, and bailiffs were not; contemplates the agony the thought of his debt will be to him in his old age, and believes

that his dun gets wind of him a mile off or more! Next he reflects that his debt is not really much in itself, but is made to appear considerable by the insufferable importunity of his dun, just as a slight pimple, from being scratched and irritated, becomes a serious sore. He begins to suspect that the climate in which he lives in some way produces hard creditors, just as 'diversities of clime' resulted in the luxuriousness of the Persian and the Assyrian, the savageness of the Thracian, the mendacity of the Greeks, the courage of the Romans. He buys a ticket in a lottery, as a means of paying his debt, but he draws a blank. He suspects the Evil One of informing the dun as to the whereabouts of the debtor. Now he is declaring that the dun must be ubiquitous; now that he is as frightful to him as the hangman to the condemned felon; he can cure himself, he says, of all disease but that of debt; thinks that money and blood have some extraordinary affinity, and that, as there are times when, according to Galen and Hippocrates, patients should not be bled, so on certain days debtors should not be asked for money. In allusion to the story of words frozen at the pole, the poet holds that if he were there with his creditor, and a thaw were to occur, the only words they would hear would be a cry for the Three Groats.

'The devious comet that on high careers
With sanguine splendour girt, athwart the night,
Ne'er gave the bigot crowd so much affright,
From dread of war—plague—famine—when it nears,
As oft it makes me palpitate with fears;
When unexpectedly upon my sight
The Dun, whose presence is to me the plight
And harbinger of future ill, appears.'

For the return of the comets may be calculated, but none can be sure of the advent of the creditor. Now and then Chrysophilus is very pleasant in manner; puts questions upon, and discusses, all sorts of indifferent topics—then suddenly asks for his money.

'Thus sometimes playing with a mouse, ere nip,
The cat will on her helpless victim smile,
Until, at length, she gives the fatal grip.'

The poet now arrives at the conclusion that Platonic love must be about as difficult a thing as the payment of his debt. Next he wishes he had found the philosopher's stone, so as to be able to pay his debt.

'To get the triple groats' true ore,
I'd study chymic properties—which found,
I'd break the pot, nor think about them more.'

He imagines there were no duns in Mahomet's time, as he has left no instruction in the Koran as to the cursing of duns. He declares that his language should be called the Tongue of no. Wishes his creditor had king Midas's gold-transmuting attribute, and then he might perhaps give up his claim for the three groats. The quadrature of the circle may be discovered, he says, but never any money in his pockets. He sighs for Cicero's eloquence, who paid his creditors with words, not money. Accompanying a lover of the antique to explore the statues of the Campidoglio, he recognises in one of the figures a resemblance to his dun—

'Which with an inward terror did me strike;
Then like a thief, that flies the sheriff's men,
Down stairs I ran as quick as I could tread it,
And while I live I'll ne'er go there again.'

Further on we gather particulars of the loan—

'This is the fatal spot, sir! where one day
Chrysophilus lent three groats—'twas there
He drew his purse, and opening it with care,
Told out the money, warning to repay.

It wa'n't a step beyond the place or ere
He 'gan already asking me to pay,
And from that time tormenting me this way,
The stingy dun has followed everywhere.

The spot is baleful, sir, and we must purge
With logs of wood hewn by the moon's cold rays,
Now make a magic fire, and round its verge
Keep turning barefoot—twice and thrice then cry,
(With lustral water sprinkling o'er the blaze,)
"Get out of this; hence, evil spirit, fly!"

He laments the primeval age when *mine* and *thine* were synonymous; when a community of goods prevailed, and money was undiscovered. His debt has jaundiced his whole life. Wont to find pleasure in contemplating 'the golden hair, neat foot, and lovely face,' of his Nisa, the charm is lost to him now. He gazes into her beauteous countenance, but by the strangest metamorphosis he finds it suddenly change—his Nisa becomes his Chrysophilus. In the 200th sonnet we find Apollo rebuking the poet for wasting his time on such a trivial subject. The poet ceases, in obedience to his divine protector, not because he has nothing more to say about his debt—not because he has paid it. He bids good night for ever to his dun and the three groats. The curtain that rose discovering the poet a debtor, appears to descend leaving him in the same plight. Certainly, Chrysophilus never got his money.

It may further be noted, as of interest in the history of Casti, that among his dramatic compositions for the court opera at Vienna, was *Il Re Teodoro in Venezia*, which, owing chiefly perhaps to the music of Paisello, had a great success on the Continent at the time of its production. Another work, *La Grotto di Trofonio*, was produced, with alterations, at Drury Lane, in 1791. It was Casti, too, who versified the *Figaro* of Beaumarchais, for the music of Mozart, in 1786.

FEBRUARY 17.

Saints Theodulus and Julian, martyrs in Palestine, 309. St Flavian, archbishop of Constantinople, martyr in Lydia, 449. St Loman, or Luman, first bishop of Trim, 5th century. St Fintan, abbot in Leinster, 6th century. St Silvin, of Auchy, bishop, 718.

Born.—Francis Duke of Guise, French warrior, 1519; Horace Benedict de Saussure, Genevese traveller, 1740; John Pinkerton, historian and antiquary, 1758, *Edinburgh*.

Died.—Michael Angelo Buonarrotti, painter, sculptor, architect, and engineer, 1563-4; Giordano Bruno, Neapolitan philosopher, burnt at *Rome*, 1600; Jean Baptiste Poquelin Molière, 1673, *Paris*; Antoine Galland, translator of the *Arabian Nights' Entertainments*, 1715; John Martin, historical painter, 1854; John Braham, singer and composer, 1856, *London*.

MOLIÈRE.

France, having Molière for one of her sons, may be said to have given birth to the greatest purely comic writer of modern times. Born the son of a humble valet-de-chambre and *tapissier* in Paris, in 1620, this singular genius pressed through all the trammels and difficulties of his situation, to education and the exercise of that dramatic art in which he was to attain such excellence. The theatre was new in the French capital, and he at once raised it to glory. His *Etourdi*, his *Pre-*

cieuses Ridicules, his *Menteur*, his *Tartuffe*,* his *Femmes Savantes*, what a brilliant series they constitute! The list is closed by the *Malade Imaginaire*, which came before the world when the poor author was sick in earnest; dying indeed of a chest complaint, accompanied by spitting of blood. On the third night of the representation, he was advised not to play; but he resolved to make the effort, and it cost him his life. He was carried home dying to his house in the Rue Richelieu, and there soon breathed his last, choked with a gush of blood, in the arms of two stranger priests who happened to lodge in the same house.

It was maliciously reported by prejudiced people that Molière had expired when in the act of counterfeiting death in his *rôle* on the stage, and this made it the more difficult to obtain for him the Christian burial usually denied to players. His widow flew to the king, exclaiming against the priesthood, but was glad to make very humble representations to the Archbishop of Paris, and to stretch a point regarding Molière's wish for religious consolations, in order to have the remains of her husband treated decently. On its being shewn that he had received the sacrament at the preceding Easter, the archbishop was pleased to permit that this glory of France should be inhumed without any pomp, with two priests only, and with no church solemnities. The Revolutionists, more just, transferred the remains of the great comedian from the little chapel where they were first deposited to the Museum of French Monuments.

M. GALLAND.

The English people, who for generations have enjoyed that most attractive book, the *Arabian Nights' Entertainments*, know in general very little of its origin. The western world received it from the hands of a French savant of the seventeenth century, who obtained it in its original form during a residence in the East.

* 'The history of *Tartuffe* is a curious example of the impediments so frequently thrown in the way of genius. The whole of the play was not publicly performed until after a severe struggle with the bigots of Paris, the first three acts only having been produced at Versailles on the 12th of May 1664, but not the complete play until 1669. It took five years to convince the religiously-affected that an attack on the immoral pretender to religious fervour was not an attack on religion. It may easily be supposed that a character so symbolical of cant and duplicity, under whatever creed it might choose to cloak itself, would soon be transferred to other countries, and consequently we find it transplanted to our own theatre as early as 1670, by a comedian of the name of Medbourne, a Roman Catholic, who in his adaptation chose to make the *Tartuffe* a French Huguenot, thereby gratifying his own religious prejudices, and more closely satirizing the English puritan of the time. Ozell, a dramatic writer, known only to literary antiquaries and the readers of the *Dunciad*, also translated it, with the rest of Molière's dramatic works; but the chief introducer and adapter of this celebrated play to the English stage was Colley Cibber, who, in 1718, under the name of the *Non-Juror*, produced and wrote the principal part of what is now known as *The Hypocrite*, Isaac Bickerstaffe doing little more than adding the coarse character of *Mawworm* for Weston, the chief low comedian of his time.'—*Anonymous*.

Antoine Galland, born of poor parents in 1646, shewed such talents in early life that he not only obtained a finished education, but received an appointment as *attaché* to the French embassy at Constantinople while still a young man. He devoted himself to Oriental travel, the collection of Oriental literature, and the study of Eastern authors. His learning was as prodigious in amount as its subjects were for that age extraordinary; but of all his laborious works little memory survives, while his light task of translating the *Mille et Une Nuits* has ensured him a kind of immortality.

In the first editions of this work, the translator preserved the whole of the repetitions respecting Schecherezade and her vigilant sister; which the quick-witted French found insufferably tedious. It was resolved by some young men that they would try to make Galland feel how stupid were these endless awakenings. Coming in the middle of a cold January night to his house in the Faubourg St Jacques, they began to cry vehemently for M. Galland. He speedily appeared upon the balcony, dressed only in his *robe de chambre* and night-cap, and in great anger at this inopportune disturbance. 'Have I the honour,' said one of the youths, 'to speak to Monsieur Galland—the celebrated Monsieur Galland—the learned translator of the *Mille et Une Nuits*?' 'I am he, at your service, gentlemen,' cried the savant, shivering from top to toe. 'Ah then, Monsieur Galland, if you are not

asleep, I pray you, while the day is about to break, that you will tell us one of those pleasant stories which you so well know.' The hint was taken, and the tiresome formula of the wakening of the sultaness was suppressed in all but the first few *nuits*.

DE SAUSSURE'S ASCENT OF MONT BLANC.

M. de Saussure was a Geneva professor, who distinguished himself in the latter part of the eighteenth century by his researches in the natural history of the Alps. His investigations were embodied in a laborious work, entitled *Voyage dans les Alpes*, which yet bears an honoured place in European libraries. Previous to De Saussure's time, there had been scarcely any such bold idea entertained as that the summit of Mont Blanc could be reached by human foot. Under his prompting, a few guides made the attempt on three several occasions, but without success. The great difficulty lay in the necessity of undergoing the whole exertion required within the time between two indulgences in repose, for there was no place where, in ascending or descending, the shelter necessary for sleep could be obtained. The case might well appear the more hopeless, when the extraordinary courage and powers of exertion and endurance that belong to the Alpine guides were considered: if they generally regarded the enterprise as impossible, who might attempt it?

Nevertheless, a new and favourable route

DE SAUSSURE ASCENDING MONT BLANC.

having been discovered, and a hut for shelter during an intermediate night having been prepared, M. de Saussure attempted an ascent in September 1785. Having spent a night at the hut, the party set out next morning with great confidence to ascend the remaining thousand toises along the ridge called the *Aiguille du Gouté*; and they had advanced a considerable way when the depth of the fresh-fallen snow proved an insurmountable barrier.

A second attempt was made by De Saussure in June 1786; and, though it failed, it led to the discovery, by a guide named Jacques Balmat, of a preferable route, which proved to be the only one at all practicable. Unfortunately, De Saussure, who, from his persevering efforts, deserved to be the Conqueror of Mont Blanc, was anticipated in the honour by a gentleman named Paccard, to whom Balmat imparted his secret, and who, under Balmat's guidance, gained the summit of the mountain in August of the last-named year.

It was not till August 1787, and after a second successful attempt by Balmat, in company with two other guides, that De Saussure finally accomplished his object. On this occasion, he had a tent carried, in which he might take a night's rest at whatever place should prove suitable; and all his other preparations were of the most careful kind. The accompanying illustration, which is from his own work, exhibits the persevering philosopher calmly ascending along the icy track, with his *cortège* of guides, and certain men carrying his tent, his scientific instruments, and other articles. It will be observed that the modern expedient of tying the members of the party together had not then been adopted; but some of them held by each other's alpenstocks, as is still the fashion. De Saussure spent the first night on the top of a comparatively small mountain called the *Côte*, near Chamouni; the second was passed in an excavation in the snow on what was called the second plateau, with the tent for a covering. On the third day, the party set out at an early hour, undauntedly climbing a snow or ice slope at an angle of thirty-nine degrees, and at eleven o'clock gained the summit, after suffering incredible inconvenience from the heat and the rarity of the air. To give an idea of the latter difficulty, it is only necessary to mention that De Saussure, by his barometer, found the column of the atmosphere above him represented by *sixteen inches and one line*.

'My first looks,' says he, 'were directed on Chamouni, where I knew my wife and her two sisters were, their eyes fixed to a telescope, following all our steps with an uneasiness too great, without doubt, but not less distressing to them. I felt a very pleasing and consoling sentiment when I saw the flag which they had promised to hoist the moment they observed me at the summit, when their apprehensions would be at least suspended.'

All Europe rang with the news of De Saussure's ascent of Mont Blanc and his observations on the mountain; and it was long before he found many followers. Now scarcely a season passes but some enterprising Englishman performs this once almost fabulous feat.

JOHN BRAHAM.

It is hardly conceivable that this famous vocalist died so recently as 1856, for one occasionally meets with his figure in favourite characters as the frontispiece of plays dating in the eighteenth century. There is scarcely anybody so old as to remember when Braham was a new figure on the stage. In reality, he did appear there so long ago as 1785, when, however, he was only eleven years of age. He was of Hebrew parentage, was a worthy and respected man, and joined to the wonderful powers of his voice a very fair gift of musical composition. The large gains he made in his own proper walk he lost, as so many have done, by going out of it into another—that of a theatre-proprietor. But his latter days were passed in comfort, under the fostering care of his daughter, the Countess Waldegrave.

MYSTIC MEMORY.

In February 1828, Sir Walter Scott was breaking himself down by over-hard literary work, and had really fallen to some extent out of health. On the 17th he enters in his Diary, that, on the preceding day at dinner, although in company with two or three beloved old friends, he was strangely haunted by what he would call 'the sense of pre-existence'; namely, a confused idea that nothing that passed was said for the first time—that the same topics had been discussed, and the same persons had stated the same opinions on them. The sensation, he adds, 'was so strong as to resemble what is called a *mirage* in the desert, or a caleure on board of ship, when lakes are seen in the desert, and sylvan landscapes in the sea. . . . There was a vile sense of want of reality in all that I did and said.'

This experience of Scott is one which has often been felt, and often commented on by authors, by Scott himself amongst others. In his novel of *Guy Mannering*, he represents his hero Bertram as returning to what was, unknown to him, his native castle, after an absence from childhood, and thus musing on his sensations: 'Why is it that some scenes awaken thoughts which belong, as it were, to dreams of early and shadowy recollection, such as my old Brahmin Moonshie would have ascribed to a state of previous existence? How often do we find ourselves in society which we have never before met, and yet feel impressed with a mysterious and ill-defined consciousness that neither the scene, the speakers, nor the subject are entirely new; nay, feel as if we could anticipate that part of the conversation which has not yet taken place.' Warren and Bulwer Lytton make similar remarks in their novels, and Tennyson adverts to the sensation in a beautiful sonnet:

'As when with downcast eyes we muse and brood,
And ebb into a former life, or seem
To lapse far back in a confused dream
To states of mystical similitude;
If one but speaks, or hems, or stirs his chair,
Ever the wonder waxeth more and more,
So that we say, All this hath been before.
All this *hath* been, I know not when or where;
So, friend, when first I looked upon your face,
Our thoughts gave answer each to each, so true

Opposed mirrors each reflecting each—

Although I knew not in what time or place,
Methought that I had often met with you,
And each had lived in the other's mind and speech.'

Theological writers have taken up this strange state of feeling as an evidence that our mental part has actually had an existence before our present bodily life, souls being, so to speak, created from the beginning, and attached to bodies at the moment of mortal birth. Glanvil and Henry More wrote to this effect in the seventeenth century; and in 1762, the Rev Capel Berrow published a work entitled *A Pre-existent Lapse of Human Souls demonstrated*. More recently, we find Southey declaring: 'I have a strong and lively faith in a state of continued consciousness from this stage of existence, and that we shall recover *the consciousness of some lower stages through which we may previously have passed* seems to me not improbable.' Wordsworth, too, founds on this notion in that fine poem where he says—

'Our birth is but a sleep and a forgetting;
The soul that rises in us, our life's star,
Has had elsewhere its setting,
And cometh from afar.'

With all respect for the doctrine of a previous existence, it appears to us that the sensation in question is no sort of proof of it; for it is clearly absurd to suppose that four or five people who had once lived before, and been acquainted with each other, had by chance got together again, and in precisely the same circumstances as on the former occasion. The notion, indeed, cannot for a moment be seriously maintained. We must leave it aside, as a mere poetical whimsy.

In a curious book, published in 1844 by Dr Wigan, under the title of *The Duality of the Mind*, an attempt is made to account for the phenomenon in a different way. Dr Wigan was of opinion that the two hemispheres of the brain had each its distinct power and action, and that each often acts singly. Before adverting to this theory of the illusion in question, let us hear a remarkably well described case which he brings forward as part of his own experience:

'The strongest example of this delusion I ever recollect in my own person was on the occasion of the funeral of the Princess Charlotte. The circumstances connected with that event formed in every respect a most extraordinary psychological curiosity, and afforded an instructive view of the moral feelings pervading a whole nation, and shewing themselves without restraint or disguise. There is, perhaps, no example in history of so intense and so universal a sympathy, for almost every conceivable misfortune to one party is a source of joy, satisfaction, or advantage to another. . . . One mighty all-absorbing grief possessed the nation, aggravated in each individual by the sympathy of his neighbour, till the whole people became infected with an amiable insanity, and incapable of estimating the real extent of their loss. No one under five-and-thirty or forty years of age can form a conception of the universal paroxysm of grief which then superseded every other feeling.

I had obtained permission to be present on the occasion of the funeral, as one of the lord

chamberlain's staff. Several disturbed nights previous to that ceremony, and the almost total privation of rest on the night immediately preceding it, had put my mind into a state of hysterical irritability, which was still further increased by grief and by exhaustion from want of food; for between breakfast and the hour of interment at midnight, such was the confusion in the town of Windsor, that no expenditure of money could procure refreshment.

'I had been standing four hours, and on taking my place by the side of the coffin, in St George's chapel, was only prevented from fainting by the interest of the scene. All that our truncated ceremonies could bestow of pomp was there, and the exquisite music produced a sort of hallucination. Suddenly after the pathetic *Miserere* of Mozart, the music ceased, and there was an absolute silence. The coffin, placed on a kind of altar covered with black cloth (united to the black cloth which covered the pavement), sank down so slowly through the floor, that it was only in measuring its progress by some brilliant object beyond it that any motion could be perceived. I had fallen into a sort of torpid reverie, when I was recalled to consciousness by a paroxysm of violent grief on the part of the bereaved husband, as his eye suddenly caught the coffin sinking into its black grave, formed by the inverted covering of the altar. In an instant I felt not merely an *impression*, but a *conviction* that I had seen the whole scene before on some former occasion, and had heard even the very words addressed to myself by Sir George Naylor.'

Dr Wigan thinks he finds a sufficient explanation of this state of mind in the theory of a double brain. 'The persuasion of the same being a repetition,' says he, 'comes on when the attention has been roused by some accidental circumstance, and we become, as the phrase is, wide awake. I believe the explanation to be this: only one brain has been used in the immediately preceding part of the scene: the other brain has been asleep, or in an analogous state nearly approaching it. When the attention of both brains is roused to the topic, there is the same vague consciousness that the ideas have passed through the mind before, which takes place on re-perusing the page we had read while thinking on some other subject. The ideas *have* passed through the brain before: and as there was not sufficient consciousness to fix them in the memory without a renewal, we have no means of knowing the length of time that had elapsed between the *faint* impression received by the single brain, and the *distinct* impression received by the double brain. It may seem to have been many years.' It is a plausible idea; but we have no proof that a single hemisphere of the brain has this distinct action; the analogy of the eyes is against it, for there we never find one eye conscious or active, and the other not. Moreover, this theory does not, as will be seen, explain all the facts; and hence, if for no other reason, it must be set aside.

The latest theory on the subject is one started by a person giving the signature 'F' in the *Notes and Queries* (February 14, 1857). This person

thinks that the cases on record are not to be explained otherwise than as cases of fore-knowledge. 'That under certain conditions,' says he, 'the human mind is capable of foreseeing the future, more or less distinctly, is hardly to be questioned. May we not suppose that, in dreams or waking reveries, we sometimes anticipate what will befall us, and that this impression, forgotten in the interval, is revived by the actual occurrence of the event foreseen?' He goes on to remark that in the *Confessions* of Rousseau there is a remarkable passage which appears to support this theory. This singular man, in his youth, taking a solitary walk, fell into a reverie, in which he clearly foresaw 'the happiest day of his life,' which occurred seven or eight years afterwards. 'I saw myself,' says Jean Jacques, 'as in an ecstasy, transported into that happy time and occasion, where my heart, possessing all the happiness possible, enjoyed it with inexpressible raptures, without thinking of anything sensual. I do not remember being ever thrown into the future with more force, or of an illusion so complete as I then experienced; and that which has struck me most in the recollection of that reverie, now that it has been realized, is to have found objects so exactly as I had imagined them. If ever a dream of man awake had the air of a prophetic vision, that was assuredly such.' Rousseau tells how his reverie was realized at a *fête champêtre*, in the company of Madame de Warens, at a place which he had not previously seen. 'The condition of mind in which I found myself, all that we said and did that day, all the objects which struck me, recalled to me a kind of dream which I had at Annecy seven or eight years before, and of which I have given an account in its place. The relations were so striking, that in thinking of them I could not refrain from tears.' 'F' remarks that 'if Rousseau, on the second of these occasions, had forgotten the previous one, save a faint remembrance of the ideas which he then conceived, it is evident that this would have been a case of the kind under consideration.'

Mr Elihu Rich, another correspondent of the useful little periodical above quoted, and who has more than once or twice experienced 'the mysterious sense of having been surrounded at some previous time by precisely the same circumstances, and taken a share in the same conversation,' favours this theory of explanation, and presents us with a curious illustration. 'A gentleman,' says he, 'of high intellectual attainments, now deceased, told me that he had dreamed of being in a strange city, so vividly that he remembered the streets, houses, and public buildings as distinctly as those of any place he ever visited. A few weeks afterwards he was startled by seeing the city of which he had dreamed. The likeness was perfect, except that one additional church appeared in the picture. He was so struck by the circumstance that he spoke to the exhibitor, assuming for the purpose the air of a traveller acquainted with the place. He was informed that the church was a recent erection.'

To the same purport is an experience of a remarkable nature which Mr John Pavin Phillips, of Haverfordwest, relates as having occurred to

himself, in which a second reverie appears to have presented a renewal of a former one. 'About four years ago,' says he, 'I suffered severely from derangement of the stomach, and upon one occasion, after passing a restless and disturbed night, I came down to breakfast in the morning, experiencing a sense of general discomfort and uneasiness. I was seated at the breakfast-table with some members of my family, when suddenly the room and objects around me vanished away, and I found myself, without surprise, in the street of a foreign city. Never having been abroad, I imagined it to have been a foreign city from the peculiar character of the architecture. The street was very wide, and on either side of the roadway there was a foot pavement elevated above the street to a considerable height. The houses had pointed gables and casemented windows overhanging the street. The roadway presented a gentle acclivity; and at the end of the street there was a road crossing it at right angles, backed by a green slope, which rose to the eminence of a hill, and was crowned by more houses, over which soared a lofty tower, either of a church or some other ecclesiastical building. As I gazed on the scene before me I was impressed with an overwhelming conviction that I had looked upon it before, and that its features were perfectly familiar to me; I even seemed almost to remember the name of the place, and whilst I was making an effort to do so a crowd of people appeared to be advancing in an orderly manner up the street. As it came nearer it resolved itself into a quaint procession of persons in what we should call fancy dresses, or perhaps more like one of the guild festivals which we read of as being held in some of the old continental cities. As the procession came abreast of the spot where I was standing I mounted on the pavement to let it go by, and as it filed past me, with its banners and gay paraphernalia flashing in the sunlight, the irresistible conviction again came over me that I had seen this same procession before, and in the very street through which it was now passing. Again I almost recollected the name of the concourse and its occasion; but whilst endeavouring to stimulate my memory to perform its function, the effort dispelled the vision, and I found myself, as before, seated at my breakfast-table, cup in hand. My exclamation of astonishment attracted the notice of one of the members of my family, who inquired "what I had been staring at?" Upon my relating what I have imperfectly described, some surprise was manifested, as the vision, which appeared to me to embrace a period of considerable duration, must have been almost instantaneous. The city, with its landscape, is indelibly fixed in my memory, but the sense of previous familiarity with it has never again been renewed. The "spirit of man within him" is indeed a mystery; and those who have witnessed the progress of a case of catalepsy cannot but have been impressed with the conviction that there are dormant faculties belonging to the human mind, which, like the rudimentary wings said to be contained within the skin of the caterpillar, are only to be developed in a higher sphere of being.*

In the same work the Rev. Mr W. L. Nichols,

* *Notes and Queries*, 2nd ser., iii. 132.

of Bath, adduces a still more remarkable case from a memoir of Mr William Hone, who, as is well-known, was during the greater part of his life a disbeliever of all but physical facts. He had been worn down to a low condition of vitality by a course of exertion of much the same character as that which gave Scott an experience of the mystic memory. Being called, in the course of business, to a particular part of London, with which he was unacquainted, he had noticed to himself, as he walked along, that he had never been there before. 'I was shewn,' he says, 'into a room to wait. On looking round, everything appeared perfectly familiar to me; I seemed to *recognise* every object. I said to myself, "What is this? I was never here before, and yet I have seen all this; and, if so, there is a very peculiar knot in the shutter."' He opened the shutter, and found the knot! 'Now then,' thought he, 'here is something I cannot explain on my principles; there must be some power beyond matter.' This consideration led Mr Hone to reflect further on the wonderful relations of man to the Unseen, and the ultimate result was his becoming an earnestly religious man.

Mr Nichols endeavours to shew the case might be explained by Dr Wigan's theory of a double brain; but it is manifestly beyond that theory to account for the preconception of the knot in the shutter, or the extraneous church in the visioned city. These explanations failing, we are in a manner compelled to think of clairvoyance or the prophetic faculty, because no other explanation is left. On this assumption, an experience of mystic memory might be supposed to arise from a previous dream, or it may be a day reverie, perhaps one of only an instant's duration and very recent occurrence, in which the assemblage of objects and transactions was *foreseen*:—it appears as the recollection of a more or less forgotten vision.

FEBRUARY 18.

St Simeon, or Simon, bishop of Jerusalem, martyr, 116. Saints Leo and Paragorius, martyrs, 3rd century.

Born.—Mary I., Queen of England, 1516, *Greenwich*; Isaac Casaubon, scholar, 1559, *Geneva*; James Cassini, astronomer, 1677, *Paris*; Alexander Volta, discoverer of *Voltaism*, 1745, *Como*; David Bogue, eminent Independent divine, 1750, *Dowlan, near Eyemouth, Berwickshire*; Charles Lamb, essayist, 1775, *London*.

Died.—Pope Gregory V., 999; George Duke of Clarence, murdered, 1478; Martin Luther, Protestant Reformer, *Wittenberg*, 1546; Sir Richard Baker, chronicler, 1645, *Fleet Prison*; John Louis de Balzac, *littérateur*, 1654, *Angoulême*; Dr Thomas Hyde, Orientalist, 1702, *Hamburg*; John Ernest Count Bernstorff, Hanoverian minister, 1772, *Hamburg*; Sir Jeffry Wyatville, architect (Windsor Castle restoration), 1840, *Windsor*; Baron von Biela, astronomer, 1856.

GEORGE DUKE OF CLARENCE—WAS HE DROWNED IN MALMSEY?

Among the old historic traditions of the Tower of London is the story that George Duke of

Clarence, brother of Edward the Fourth, who met his death on February 18, 1478, was, by order of his other brother, Richard Duke of Gloucester, drowned in a butt of Malmsey wine in the above prison. It is said that, being condemned to die, the Duke's partiality for Malmsey led him to select this strange mode of quitting life. There is considerable confusion in the narratives: first, Sir Thomas More insinuates that Gloucester's efforts to save Clarence were feeble; next, Lord Bacon accuses him of contriving his brother's death; and Shakspeare characterizes him as the associate of the murderers; while Sandford makes him the actual murderer. It is conjectured that Clarence was sentenced to be poisoned, and that the fatal drug may have been conveyed to him in 'malvoisie,' or Malmsey, then a favourite wine. The scene of the murder is disputed: by some it is said to have been a room in the Bowyer Tower; but Mrs Hutchinson, the daughter of Sir Allan Apsley, Lieutenant of the Tower, and herself born in it, and therefore well acquainted with the traditions of the building, states that the drowning took place in a chamber in the Bloody Tower.

The only contemporary, or nearly contemporary authorities for the story, are Fabyan and Comines: now, Fabyan was an Englishman, and a Londoner, and had no doubt about it whatever. 'The Duke of Clarence,' he says, 'was secretly put to death, and drowned in a butt of malmsey within the Tower;' and Comines considered the authority good, otherwise he would scarcely have mentioned it in the way he has done.

FUNERAL GARLANDS.

Among the many customs which have been handed down to us from early times, but which have now, unfortunately, become obsolete, one of the most beautiful, simple, and most poetically symbolic, was that of carrying garlands before the corpses of unmarried females on their way to the grave, and then hanging up the garland in the church as a memento of the departed one. This sweetly pretty custom was in former ages observed in most parts of the kingdom, but in Derbyshire—that land of wild and beautiful scenery, where remnants of old customs, of popular beliefs and superstitions, and of the sports and habits of past generations linger in plenty about its mountains and its dales, its farms, its old halls, and its humbler homesteads—its observance has, perhaps, been continued to a much later period than in any other district. Indeed, in some of the Peak villages the garland has been carried even within memory of their more aged inhabitants.

Flowers have ever been an emblem of purity, and even in the primitive Christian church it was usual to place them, formed into wreaths or crowns, at the heads of deceased virgins. In every age, indeed, true virginity has been honoured in its purity by flowers pure as itself, and fresh from the hands of their Maker.

The same feeling which tempts the bride to adorn her beautiful tresses with a wreath of orange blossoms for her nuptials—which gives rise to the offering of a bouquet of flowers, and to the custom

of strewing the pathway she is to tread on her way to the altar—has been the origin of the custom of adorning the corpse, the coffin, and the grave of the virgin with the same frail but lovely and appropriate emblems. The same feeling which calls virginity itself 'a flower,' is that which places flowers in the hair of the bride, in the hands or around the face of the corpse, and in the garlands at the grave.

In early ages, doubtless, the funeral garlands were composed of real flowers, but this gradually gave way to those composed of hoops and paper intermixed with ribands, which were much more durable, and had a better appearance when suspended in the churches. The custom has been referred to by many of the old writers, and Shakspeare himself alludes to it when he says, (*Hamlet*, Act v. scene 1.) 'Yet here she is allowed her virgin *crants*'—'crants' signifying 'garlands.'

Old John Marston, in 1605, wrote in his *Dutch Courtezan*, 'I was afraid, i' faith, that I should ha' seene a *garland on this beautie's hearse*;' and a ballad of a later date runs thus:

'But since I'm resolved to die for my dear,
I'll chuse six young virgins my coffin to bear;
And all those young virgins I now do chuse,
Instead of green ribbands, green ribbands, green
ribbands,
Instead of green ribbands, a *garland* shall wear;
And when in the church in my grave I lie deep,
Let all those fine garlands, fine garlands, fine gar-
lands,
Let all those fine *garlands hang over my feet*.
And when any of my sex behold the sight,
They may see I've been constant, been constant,
They may see I've been constant to my heart's
delight.'

William Sampson, in 1636, thus alludes to this charming custom, in his lines on the death of Miss E. Tevery:—

'Why did the *Lilly*, *Paunce*, and *Violet* weepe,
The *Marigold* ere sun-set in did creepe?
At whose reflexion she sn'd for to rise
And at his way-gate to close up her eies.
Why were the beaten waies with flowers strowne,
And set with needy *Lazar's*, hanging downe
Their mournful heades? why did the Pulpit mourne,
As if prepared for some Funerall urne?
And yet the *Temple* was with *garlands hung*,
Of sweet-smelling Flowers, which might belong
Unto some bridall! Noe! heaven knows the cause,
'Twas otherwise decreed in Nature's Lawes;
Those smelling sweetes with which our sense was
fed,
Were for the *buriall of a maiden*, dead;
Which made an *Autumne* just in the mid-spring,
And all things contrary their births to bring;
Herbs, *Plants*, and *Flowers* contrariouly grew,
Because they now received not Nature's dew;
The needy beggars hung their heads for thee,
Thou matchlesse map of maiden modesty,
From whose faire handes they had an almmr's pay,
As often as they met thee every day.
The sacred *Temple*, where thy holy fires
Of incense was pow'rd on, in chaste desires
Was thus prepar'd, and deck'd on every side
To welcome thee, as her sole soveraigne Bride;
Whose goodness was inimitable, whose vertues
shone,
Like to the sun in his bright *Horizon* :

The Maiden Vestalls, that with wat'ry eies,
Bore thee to th' Church for *Vesta's* sacrificz,
Were all in white! carracts of innocence
Prefiguring thy greater eminence.
So great thy losse, that with watery eie,
They offer teares still to thy virgin shrine;
And if that teares, sighes, or praies could save
thee,

What would not they expresse now to have thee?
Sacred divinity allows of no such wish,
Therefore, emparadic'd soule, rest thou in blisse.'

Gay, in his poems, has more than allusion to the custom. He says:—

'To her sweet memory flow'ry garlands strung
On her now empty seat aloft were hung.'

Of the garlands themselves but few examples remain, but they may still be seen in some of the churches of Derbyshire. It is curious that, although allusions to the custom are not unfrequent, no representation of a garland had ever been engraved until within the last few months, when some examples were given in *The Reliquary* quarterly journal.* Two of these engravings we are now enabled to reproduce.

The first engraving shows five garlands as they at present exist in the north aisle of Ashford-in-the-Water Church, and the second exhibits on a larger scale a particular garland, one of eight which formerly existed in Matlock Church, but are now preserved in a local museum. They are thus described in *The Reliquary*:—

'The garlands are each composed of two hoops of wood, with bands crossing each other at right angles, and attached to the hoops; thus forming a kind of open arched crown. The hoops and bands are all of wood, wrapped round with white paper, and at the top is a loop for suspension. The hoops and bands of the smaller one, as shewn in the accompanying woodcut, are decorated with paper flowers and rosettes, and at the top is a flower formed of hearts, and having somewhat the appearance of that of the *Clarkia pulchella*. From between the rosettes of the upper hoop, a paper riband, gimped on the edges, and ornamented by diamonds cut out with scissors, hangs down to below the lower band, to which they are not attached.

'In another example, the hoops and bands are decorated with paper flowers, or rosettes, intermixed with bunches of narrow slips, or shreds of paper; and at the top is a bunch of the same, over paper folded like a fan. Originally, the flowers have been formed, some of plain, and others of folded or crimped paper; and others again of both; and in some parts the paper has been afterwards coloured red or blue, thus producing a somewhat gay appearance. From the centre of the top are suspended a pair of gloves, cut out of white paper, and a kerchief or collar, also of paper, gimped on the edges and carefully folded. In most instances the name of the female in whose honour these garlands were prepared was written on the collar, gloves, or handkerchief. On this under notice no name occurs, but its date is probably of the latter part of last century. Through age the colours on the paper have nearly disappeared.

* Edited by Llewellynn Jewitt, F.S.A. London: John Russell Smith. Vol. i. p. 7.

'The garlands at Ashford-in-the-Water, although in general character resembling the others we have described, differ from them in detail. They are not so profusely ornamented with rosettes, bear no bunches of shreds of paper, and

have no "pinked" or cut ribands. Each garland contains a single glove, and a kerchief or collar. On the collar or kerchief of each has been written a verse of poetry, and the name, age, and date of death of the virgin in whose

FUNERAL GARLANDS, ASHFORD-IN-THE-WATER CHURCH.

honour they were prepared. Owing to age, the decay of the paper, and the fading of the ink, the writing on most of them is obliterated. On one, however, the date of April 12th, 1747, occurs;

died at the age of twenty-one. On another of a later date, we succeeded with considerable difficulty in deciphering the following lines:—

“ Be always ready, no time delay,
 I in my youth was called away,
 Great grief to those that's left behind,
 But I hope I'm great joy to find.
 Ann Swindel,
 Aged 22 years,
 Dec. 9th, 1798.”

FUNERAL GARLAND, MATLOCK CHURCH.

The form of garland of course varied in different localities, but the same general design prevailed wherever the custom was observed. In some of the metropolitan churches the garland, instead of being composed of real flowers, or of paper ones, was frequently composed of wire formed into filagree work resembling flowers and leaves, ornaments of gum, wax, and of dyed horn, and other materials, and sometimes had a gay, instead of a simple and pure appearance. A garland of this time has thus been described in the *Antiquarian Repertory*:

'These garlands at the funerals of the deceased were carried solemnly before the corpse by two maids, and afterwards hung up in some conspicuous place within the church, and they were made in the following manner, viz.:—the lower rim or circlet was a broad hoop of wood,

there has also on this one been six lines of poetry, now perfectly illegible, and the name of the female appears to have been Ann Howard, who

whereunto was fixed at the sides thereof two other hoops, crossing each other at the top at right angles, which formed the upper part, being about one-third longer than the width. These hoops were wholly covered with artificial flowers of paper, dyed horn, and silk, and more or less beautiful, according to the skill or ingenuity of the performer. In the vacancy inside, from the top, hung white paper cut in form of gloves, whereon was written deceased's name, age, &c., together with long slips of various coloured paper, or ribands; these were many times intermixed with gilded or painted shells of blown eggs, as farther ornaments, or it may be as emblems of bubbles, or the bitterness of this life; while other garlands had only a solitary hour-glass hanging therein, as a more significant symbol of mortality.'

Of garlands, and the funeral rites generally of a virgin, a most interesting account is to be found in a very scarce little book entitled *The Virgin's Pattern*, which describes the funeral of a lady at Hackney, named Perwich: 'The hearse, covered with velvet, was carried by six servant maidens of the family, all in white. The sheet was held up by six of those gentlewomen in the school that had most acquaintance with her, in mourning habit, with white scarfs and gloves. A rich costly garland of gum-work adorned with banners and 'scutcheons, was borne immediately before the hearse, by two proper young ladies that entirely loved her. Her father and mother, with other near relations and their children, followed next the hearse in due order, all in mourning: the kindred next to them; after whom came the whole school of gentlewomen, and then persons of chief rank from the neighbourhood and from the city of London, all in white gloves; both men, women, children, and servants having been first served with wine. The hearse having been set down, with the garland upon it, the Rev. Dr Spurstow preached her funeral sermon. This done, the coffin, anointed with rich odours, was put down into the grave, in the middle alley of the said (Hackney) church.'

In a singular old book entitled *Comical Pilgrim's Pilgrimage*, the author says: 'When a virgin dies, a garland made of all sorts of flowers and sweet herbs, is carried by a young woman on her head, before the coffin, from which hang down two black ribands, signifying our mortal state, and two white, as an emblem of purity and innocence. The ends thereof are held by four young maids, before whom a basket full of herbs and flowers is supported by two other maids, who strew them along the streets to the place of burial; then, after the deceased, follow all her relations and acquaintance.'

In some districts the garlands were only allowed to remain suspended in the church for a twelvemonth after the burial of the young woman. In others the garland was buried in the same grave with her. In Derbyshire, however, they appear to have remained hung up on the arches or on the beams of the roof, until they have either decayed away or been removed by order of some one whose love of change was greater than his veneration for these simple memorials of the dead.

In 1662, an inquiry in the diocese of Ely was made as follows: 'Are any garlands and other ordinary funeral ensigns suffered to hang where they hinder the prospect, or until they grow foul and dusty, withered and rotten?' At Heanor, not many years ago, a number of these interesting relics, which had hung there for years, were removed at a general church-cleaning which took place on the coming in of a new incumbent, and at many other places they have been as ruthlessly destroyed. At Llandoverly the garlands and gloves hang a year in the church, and are then taken down, and on each anniversary of the death of the virgin the grave is by some friend decorated with flowers, and a pair of white gloves is laid upon it. These gloves are taken away by the nearest relative who visits the grave that day.

Beautifully and touchingly has Anna Seward sung:

'Now the low beams with paper garlands hung,
In memory of some village youth or maid,
Draw the soft tear, from thrill'd remembrance sprung;
How oft my childhood marked that tribute paid!
The gloves suspended by the garland's side,
White as its snowy flowers with ribands tied.
Dear village! long these wreaths funereal spread,
Simple memorial of the early dead!'

and it is much to be hoped that wherever any of these 'simple memorials of the early dead' exist, they may long escape the hand of the spoliator, and be allowed to remain where the loving hands and the sorrowing hearts of the mourners, generations past, had placed them.

FUNERAL FEAST OF SIR JOHN PASTON.

In 1466 died in London, Sir John Paston, the head of the wealthy family whose correspondence, known as the *Paston Letters*, presents so many pictures of the life of the English gentry of that age. The body of Sir John was conveyed, for interment, to the Priory of Bromholm, in the parish of Barton, a little village on the north-east coast, and within sight of the sea. A curious roll of accounts of the expenses of the funeral is preserved, from which we gather that for the feast, during three continuous days, one man was occupied in flaying beasts; and provision was made of thirteen barrels of beer, twenty-seven barrels of ale, one barrel of beer of the greatest assize, and a runlet of red wine of fifteen gallons. All these, however, copious as they seem, proved inadequate to the demand; for the account goes on to state that five coombs of malt at one time, and ten at another, were brewed up expressly for the occasion. Meat, too, was in proportion to the liquor; the country round about must have been swept of geese, chickens, capons, and such small gear, all which, with thirteen hundred eggs, thirty gallons of milk, and eight of cream, forty-one pigs, forty calves, and ten 'nete,' slain and devoured, give a fearful picture of the scene of festivity within the priory walls. Amongst such provisions, the article of bread bears nearly the same proportion as in Falstaff's bill of fare. On the other hand, the torches, the many pounds weight of wax to burn over the grave, and the separate candle of enormous stature and girth, form prodigious items. No less than £20 was changed from gold into smaller coin that it might be showered amongst the attendant throng; and twenty-six marks in copper had been used for the same object in London, before the pro-

cession began to move. A barber was occupied five days in smartening up the monks for the ceremony; and 'the reke of the torches at the dirge' was so great that the glazier had to remove two panes to permit the fumes to escape.

FEBRUARY 19.

St Barbatu, bishop of Benevento, 684.

Born.—Nicolaus Copernicus, astronomer, 1473, *Thorn, in Prussia*; Henry Frederick Prince of Wales, 1594, *Stirling Castle*; Admiral Lord Rodney, 1718, *Walton-on-Thames*; Richard Cumberland, dramatist, 1732, *Cambridge*; Sir Roderick I. Murchison, geologist, 1792, *Taradale, Ross-shire*.

Died.—Dec. Albinus (Emperor), killed, 198, *Rhone River*; Erasmus Reinhold, astronomer, 1553, *Thuringen*; Lucilio Vanini, 1619, burnt as an atheist, at *Toulouse*; Sir Henry Savile, mathematician, 1622, *Eton College*; Francis de Sauvages, nosologist, 1767, *Montpelier*; Elizabeth Carter, classical scholar, 1806, *London*; Bernard Barton, poet, 1849; Sir William Napier, military historian, 1860.

HENRY PRINCE OF WALES.

It is blessed to die in promise, rather than after all the blots and mischances of performance. We naturally credit the young dead with much which might never have been realized. Nevertheless, in the early death of Henry Prince of Wales there is no room to doubt that the national bewailment was just. All accounts concur in representing him as a youth of bright talents, most generous dispositions, and the noblest aspirations. At sixteen, he had the figure, the proportions, and the sentiments of a full-grown man. With the love of study which belonged to his father, he possessed what his father entirely

wanted, a love of manly military exercises. In riding, in archery, in the use of arms, he was

without a superior. He studied ship-building and the whole art of war with as much zeal as if he had had no taste for elegant learning. When, at Christmas 1609, the romantic spectacle called his *Barriers* was presented in the Banqueting House at Whitehall,—when he and six other youths met each in succession eight others, at pike and sword play,—all clad in the beautiful armour of the period,—Henry was remarked, to the surprise of all, to have given and received thirty-two pushes of pike and about three hundred and sixty strokes of sword, in one evening.

It was in the midst of active study and exercise, and while the nation was becoming fully aware of the promise he gave as their future ruler, that this accomplished prince was seized with a fever, the consequence, apparently, of the too violent fatigues to which he occasionally subjected himself. What immediately affected him to a fatal illness, seems to have been his playing at tennis one evening without his coat. In the simple act of stripping off and laying aside that coat, was involved an incalculable change of the current of English history; for, had Henry survived and reigned, the country would probably have escaped a civil war—and who can say, in that event, how much our national destinies might have been changed, for good or evil? During the twelve days of the prince's illness, the public mind was wrought up to a pitch of intense anxiety regarding him; and when, on one occasion, he was thought to have yielded up the ghost, the cry of grief went out from St James's Palace into the street, and was there repeated and spread by the sympathising multitude. All that the medical skill of that age could do was done to save so valuable a life, including some applications that sound strangely in our ears: for example, pigeons applied to the head, and a split cock to the feet. Sir Walter Raleigh sent from his prison in the Tower a 'quintessence' which he believed to be of wonderful power; and it did give the prince the only approach to a restoring perspiration which he had had. But all was in vain. Henry died on the 6th of November 1612, when three months less than nineteen years of age. As a historical event, his death ranks with a very small class in which deceased royalty has been mourned by the nation's heart; the deaths of the Princess Charlotte and of the Prince Consort Albert being almost the only other instances.

The national admiration of this young prince is shewn in some quaint lines, hitherto inedited, in the Bupleigh MSS.:

'Loe! where he shineth yonder,
A fixed star in heaven;
Whose motion heere came under
None of your planets seaven.
If that the moone should tender
The sunne her love, and marry,
They both would not engender
Soe great a star as Harry.'—1617.

SIR WILLIAM NAPIER.

The public was for some years startled from time to time by the publication of letters signed William Napier, speaking passionately and un-

measuredly on some subject, generally military : it came to be recognised as a *Napierian* style of writing. The writer of these fiery missives was one of the worthiest and ablest of men, the younger brother of the eminent commander Sir Charles James Napier, and *par excellence* the historian of the Peninsular War. William Napier, born in 1785, commanded a regiment (the 43rd) all through that war, and was well fitted to be its annalist. His work, begun in 1828, and finished in six volumes, is a masterpiece of detailed history. Passages of it are said to have been recounted round the watch-fires and told in the trenches before Sebastopol, and never without warming the soldier's heart, firing his mind, and nerving his arm. Sir William also wrote *The Conquest of Scinde*, and a *Life of his brother Charles*, both of them valuable books. He will not be the least memorable of the extraordinary brood of sons which Sarah Lennox, after some other singular passages of life, was fated to bring into the world.

THE DREAM OF THE GOOD KING GONTRAN.

The late Hugh Miller, in his interesting work, *My Schools and Schoolmasters*, when speaking of a cousin named George, says :—

‘Some of his Highland stories were very curious. He communicated to me, for example, beside the broken tower, a tradition illustrative of the Celtic theory of dreaming, of which I have since often thought. Two young men had been spending the early portion of a warm summer day in exactly such a scene as that in which he communicated the anecdote. There was an ancient ruin beside them, separated, however, from the mossy bank on which they sat by a slender runnel, across which there lay, immediately over a miniature cascade, a few withered grass-stalks. Overcome by the heat of the day, one of the young men fell asleep ; his companion watched drowsily beside him, when all at once the watcher was aroused to attention by seeing a little, indistinct form, scarce larger than a humble-bee, issue from the mouth of the sleeping man, and, leaping upon the moss, move downwards to the runnel, which it crossed along the withered grass-stalks, and then disappeared amid the interstices of the ruin. Alarmed by what he saw, the watcher hastily shook his companion by the shoulder, and awoke him ; though, with all his haste, the little, cloud-like creature, still more rapid in its movements, issued from the interstice into which it had gone, and, flying across the runnel, instead of creeping along the grass-stalks and over the sward, as before, it re-entered the mouth of the sleeper, just as he was in the act of awakening. “What is the matter with you ?” said the watcher, greatly alarmed ; “what ails you ?” “Nothing ails me,” replied the other, “but you have robbed me of a most delightful dream. I dreamed I was walking through a fine rich country, and came at length to the shores of a noble river ; and, just where the clear water went thundering down a precipice, there was a bridge all of silver, which I crossed ; and then, entering a noble palace on the opposite side, I saw great heaps of gold and jewels ; and I was

just going to load myself with treasure, when you rudely awoke me, and I lost all.”

The above story is by no means uncommon in the Highlands, and the writer has frequently heard it related by an old native of Ross-shire—who firmly believed it—as an indisputable evidence of the immortality of the soul, the ‘little indistinct form’ being assumedly the soul of the man, in full life, sense, and motion, while his body was wrapped in the death-like torpor of sleep. And he further stated that in the Highlands, under peculiar circumstances, the little form has been seen leaving the mouths of certain persons at the last gasp of life.

It is a curious fact that a similar legend, having, however, a much more practical conclusion, is related of Gontran the Good, king of Burgundy, who lived, reigned, and died so far back as the sixth century. One day, Gontran, wearied with the chase, and attended but by one faithful squire, laid himself down to rest near a small rivulet, and soon fell asleep. The squire, while carefully guarding his royal master, with great astonishment perceived a small beast (*bestion*) emerge from the king's mouth, and proceed to the bank of the rivulet, where it ran up and down for some time, seemingly wishing to cross the water, but unable to do so. Thereupon the squire, determined to see the end of the adventure, drew his sword, and laid it over the stream from bank to bank. The little animal seeing this improvised bridge, ran over it, and speedily disappeared in a small hole, at the foot of a hill on the opposite side. After remaining there for a very short period, it returned along the sword, and into the king's mouth. Soon after, Gontran, awakening, said that he had just had a most extraordinary dream, in which he thought that he had crossed a foaming torrent on a bridge of polished steel, and entered a subterranean palace full of gold and jewels. The squire then relating what he had seen, the king, on his return to his palace, summoned all the learned men in Burgundy, and having stated the whole occurrence, demanded of them the immediate interpretation thereof. For once in the world's history, the opinion of the savans was unanimous ; they declared there could be no reasonable doubt on the matter. A large treasure was concealed under the hill, and, its existence being by a special miracle disclosed to the king, he alone was destined to be its possessor. Gontran immediately set a great number of men to work, the hill was undermined, and the treasure discovered. Receiving this treasure as an especial gift of Providence, Gontran devoted the principal part of it to purposes of charity and religion. He founded hospitals for the poor, and ecclesiastical edifices for the clergy ; he made extensive roads through his kingdom, that the poor might be the better enabled to perform pilgrimages ; and covered the shrine of St Marcel, at Châlons-sur-Saone, with a thick layer of beaten gold. Still further to commemorate the wonderful event, the King ordered that the hill should ever after be termed *Mont-Trésor*, the name which it bears at the present day.

Claud Paradin, in his *Symbola Heroica*, has

recorded the wonderful dream of Gontran, by the accompanying engraving and the motto:

'SIC SOPOR IRRUPTIT.'

'SO SLEEP CAME UPON HIM.'

FEBRUARY 20.

Saints Tyrannio, Zenobius, and others, martyrs in Phœnicia, about 310. St Sadoth, bishop of Seleucia and Ctesiphon, with 128 companions, martyrs, 342. St Eleutherius, bishop of Tournay, martyr, 522. St Mildred, virgin abbess in Thanet, 7th century. St Eucherius, bishop of Orleans, 743. St Ulrick, of England, 1154.

Born.—François-Marie Arouet de Voltaire, poet, dramatist, historical and philosophical writer, 1694, *Chate-nay*; David Garrick, actor and dramatist, 1716, *Hereford*; Charles Dalloway, 1763, *Bristol*.

Died.—Archbishop Arundel, 1413-14, *Canterbury*; Sir Nicholas Bacon, Lord Keeper, 1579, *York House, Strand*; Dorothy Sidney, Countess of Sunderland, 1684, *Brington*; Mrs Elizabeth Rowe, philanthropic-religious writer, 1737; Charles III. (of *Savoy*), 1773; Joseph II. (Emperor), 1790; Dr John Moore, novelist, 1802, *Richmond*; Richard Gough, antiquary, 1809, *Wormley*; Andreas Hofer, Tyrolese patriot, shot by the French, 1810; Joseph Hume, statesman, 1855.

JOSEPH HUME.

The name of Joseph Hume has become so inseparably associated with his long-continued exertions to check extravagance in the use of public money, that most persons will hear with a feeling of surprise that he was in reality disposed to a liberal use of the state funds wherever a good object was to be served, and especially if that object involved the advancement of knowledge among the people. The Earl of Ellesmere, in his address to the Geographical Society, in 1855, bore strong testimony to the help which Mr Hume had given in promoting the claim of that body for assistance towards giving it a better place of meeting, and enabling it to throw open to the public the use of its 'instruments of research and instruction.' The present writer can add a grateful testimony, in regard to the Scottish Society of Antiquaries. That body, being a few years ago hardly rich enough to keep a person to shew its valuable

museum, a proposal was made that it should hand its collection over to the state, who might then keep it open for the instruction and gratification of the public at its own expense. Mr Hume became satisfied that the proposal was an honest one, calculated to prove serviceable to the public; and the Society had no such friend and advocate as he in getting the transaction with the Treasury effected. The result has been such as fully to justify the zeal he shewed on the occasion.

Mr Hume was a native of Montrose, made his way through poverty to the education of a physician, and, realizing some wealth in India, devoted himself from about the age of forty to political life. As a member of Parliament, it was the sole study of this remarkable man to protect and advance the interests of the public; he specially applied himself, in the earlier part of his career, to the advocacy of an economical use of the public purse. He met with torrents of abuse and ridicule from those interested in opposite objects, and he encountered many disappointments; but nothing ever daunted or disheartened him. Within an hour of a parliamentary defeat, he would be engaged in merry play with his children, having entirely cast away all sense of mortification. The perfect single-heartedness and honesty of Joseph Hume in time gained upon his greatest enemies, and he died in the enjoyment of the respect of all classes of politicians.

TWO POET FELONS.

On the 20th of February 1749, the vulgar death of felons was suffered at Tyburn by two men different in some respects from ordinary criminals, Usher Gahagan and Terence Conner, both of them natives of Ireland. They were young men of respectable connexions and excellent education; they had even shewn what might be called promising talents. Gahagan, on coming to London, offered to translate Pope's *Essay on Man* into Latin for the booksellers, and, from anything that appears, he would have performed the task in a manner above mediocrity. There was, however, a moral deficiency in both of these young men. Falling into vicious courses, and failing to supply themselves with money by honest means, they were drawn by a fellow-countryman named Coffey into a practice of filing the coin of the realm, a crime then considered as high treason. For a time, the business prospered, but the usual detection came. It came in a rather singular manner. A teller in the Bank of England, who had observed them frequently drawing coin from the bank, became suspicious of them, and communicated his suspicions to the governors. Under direction from these gentlemen, he, on the next occasion, asked the guilty trio to drink wine with him in the evening at the Crown Tavern, near Cripplegate. As had been calculated upon, the wine and familiar discourse opened the hearts of the men, and Gahagan imparted to the teller the secret of their life, and concluded by pressing him to become a confederate in their plans. Their apprehension followed, and, on Coffey's evidence, the two others were found guilty and condemned to death.

Just at that time, the young Prince George

(afterwards George III.) and his younger brother Edward had appeared in the characters of Cato and Juba, in a boy-acted play at court. Poor Gahagan sent a poetical address to the young prince, hoping for some intercession in his behalf. It was as well expressed and as well rhymed as most poetry of that age. After some of the usual compliments, he proceeded thus :

' Roused with the thought and impotently vain,
I now would launch into a nobler strain ;
But see ! the captive muse forbids the lays,
Unfit to stretch the merit I would praise.
Such at whose heels no galling shackles ring,
May raise the voice, and boldly touch the string ;
Cramped hand and foot while I in gaol must stay,
Dreading each hour the execution day ;
Pent up in den, opprobrious alms to crave,
No Delphic cell, ye gods, nor sybil's cave ;
Nor will my Pegasus obey the rod,
With massy iron barbarously shod,' &c.

Conner in like verse claimed the intercession of the Duchess of Queensberry, describing in piteous terms the hard usage and meagre fare now meted out to him, and entreating that she, who had been the protectress of Gay, would not calmly see another poet hanged. All was in vain.

WARWICK LANE.

Few of the thoroughfares of old London have undergone such mutations of fortune as may be traced in Warwick-lane, once the site of the house of the famed Beauchamps, Earls of Warwick, afterwards distinguished by including in its precincts the College of Physicians, now solely remarkable for an abundance of those private shambles which are still permitted to disgrace the English metropolis.

In the coroners' rolls of five centuries ago, we read of mortal accidents which befel youths in attempting to steal apples in the neighbouring orchards of Paternoster-row and Ivy-lane, then periodically redolent of fruit-blossoms.

Warwick Inn, as the ancient house was called, was, in the 28th of Henry VI. (about 1450) possessed by Cecily, Duchess of Warwick. Eight years later, when the greater estates of the realm were called up to London, Richard Neville, Earl of Warwick, the *King-maker*, 'came with 600 men, all in red jackets, embroidered with ragged staves before and behind, and was lodged in Warwick-lane ; in whose house there was oftentimes six oxen eaten at a breakfast, and every tavern was full of his meat ; for he that had any acquaintance in that house, might have there so much of sodden and roast meat as he could prick and carry on a long dagger.'

The Great Fire swept away the Warwick-lane of Stow's time ; and when it was rebuilt, there was placed upon the house at its north-west end, a bas-relief of Guy, Earl of Warwick, in memory of the princely owners of the inn, with the date '1668' upon it. This memorial-stone, which was renewed in 1817, by J. Deykes, architect, is a counterpart of the figure in the chapel of St Mary Magdalen, in Guy's Cliff, near Warwick.

The College of Physicians, built by Wren to replace a previous fabric burnt down in the Great Fire, may still be seen on the west side of the lane, but sunk into the condition of a butcher's shop. Though in a confined situation, it seems to have formerly been considered an impressive structure, the exterior being thus described in Garth's witty satire of the *Dispensary* :

' Not far from that most celebrated place,*
Where angry Justice shews her awful face,
Where little villains must submit to fate,
That great ones may enjoy the world in state,
There stands a dome majestic to the sight,
And sumptuous arches bear its awful height ;
A golden globe, placed high with artful skill,
Seems to the distant sight a gilded pill.'

This simile is a happy one ; though Mr Elmes, Wren's biographer, ingeniously suggests that the gilt globe was perhaps intended to intimate the universality of the healing art. Here the physicians met until the year 1825, when they removed to their newly-built College in Pall Mall East. The interior of the edifice in Warwick-lane was convenient and sumptuous ; and one of the minute accounts tells us that in the garrets were dried the herbs for the use of the Dispensary. The College buildings were next let to the Equitable Loan (or Pawnbroking) Company ; next to Messrs. Tylor, braziers, and as a meat-market : oddly enough, on the left of the entrance portico, beneath a bell-handle there remains the inscription 'Mr Lawrence, Surgeon,' along with the words 'Night Bell,' recalling the days when the house belonged to a learned institution.

We must, however, take a glance at the statues of Charles II. and Sir John Cutler, within the court ; especially as the latter assists to expose an act of public meanness. It appears by the College books

BELL INN, WARWICK LANE.

that, in 1674, Sir John Cutler promised to bear the expense of a specified part of the new building : the

* Newgate.

committee thanked him, and in 1680, statues of the King and Sir John were voted by the members: nine years afterwards, when the College was completed, it was resolved to borrow money of Sir John, to discharge the College debt; what the sum was is not specified; it appears, however, that in 1699, Sir John's executors made a demand on the College for £7,000, supposed to include money actually lent, money pretended to be given, and interest on both. The executors accepted £2,000, and dropped their claim for the other five. The statue was allowed to stand; but the inscription, 'Omnis Cutleri cedat Labor Amphitheatro,' was very properly obliterated.

In the Lane are two old galleried inns, which carry us back to the broad-wheeled travelling wagons of our forefathers. About midway, on the east side, is the Bell Inn, where the pious Archbishop Leighton ended his earthly pilgrimage, according to his wish, which Bishop Burnet states him to have thus expressed in the same peaceful and moderate spirit, as that by which, in the troublous times of the Commonwealth, Leighton won the affections of even the most rigid Presbyterians. 'He used often to say, that, if he were to choose a place to die in, it should be an inn; it looking like a pilgrim's going home, to whom this world was all as an inn, and who was weary of the noise and confusion in it. He added that the officious tenderness and care of friends was an entanglement to a dying man; and that the unconcerned attendance of those that could be procured in such a place would give less disturbance. And he obtained what he desired; for he died [1684] at the Bell Inn, in Warwick-lane.' — *Burnet's Own Times.*

Dr Fall, who was well acquainted with Leighton, after a glowing eulogy on his holy life and 'heavenly converse,' proceeds, 'Such a life, we may easily persuade ourselves, must make the thought of death not only tolerable, but desirable. Accordingly, it had this noble effect upon him. In a paper left under his own hand, (since lost,) he bespeaks that day in a most glorious and triumphant manner; his expressions seem rapturous and ecstatic, as though his wishes and desires had anticipated the real and solemn celebration of his nuptials with the Lamb of God. . . . He sometimes expressed his desire of not being troublesome to his friends at his death; and God gratified to the full his modest humble choice; he dying at an inn in his sleep.'

Somewhat lower in the Lane is the street leading to Newgate-market, which Gay has thus signalized:

'Shall the large mutton smoke upon your boards?
Such Newgate's copious market best affords.'

Trivia, book ii.

Before the Great Fire, this market was kept in Newgate-street, where there was a market-house formed,

and a middle row of sheds, which afterwards were converted into houses, and inhabited by butchers, tripe-sellers, &c. The stalls in the open street grew dangerous, and were accordingly removed into the open space between Newgate-street and Paternoster-row, formerly the orchards already mentioned; and here were the houses of the Prebends of St Paul's, overgrown with ivy; whence Ivy-lane takes its name, although amidst the turmoil of the market, with the massive dome of St Paul's on one side, and that of

OXFORD ARMS INN, WARWICK LANE.

the old College of Physicians on the other, it is hard to associate the place with the domain of a nymph so lovely as Pomona.

The other galleried inn of Warwick-lane is the Oxford Arms, within a recess on the west side, and nearly adjoining to the residentiary houses of St Paul's in Amen-corner. It is one of the best specimens of the old London inns remaining in the metropolis. As you advance you observe a red brick pedimented façade of the time of Charles II., beneath which you enter the inn-yard, which has, on three of its sides, two stories of

balustraded wooden galleries, with exterior staircases leading to the chambers on each floor; the fourth side being occupied by stabling, built against part of old London wall. The house was an inn with the sign of the Oxford Arms before the Great Fire, as appears by the following advertisement in the *London Gazette* for March, 1672-3, No. 762:—'These are to give notice, that Edward Bartlett, Oxford carrier, hath removed his inn, in London, from the *Swan*, at Holborn-bridge, to the *Oxford Arms*, in Warwick-lane, where he did inn before the Fire; his coaches and wagons going forth on their usual days,—Mondays, Wednesdays, and Fridays. He hath also a hearse, with all things convenient, to carry a corpse to any part of England.' The *Oxford Arms* was not part of the Earl of Warwick's property, but belonged to the Dean and Chapter of St Paul's, who hold it to this day. From the inn premises is a door opening into one of the back yards of the residential houses, and it is stated that, during the riots of 1780, this passage facilitated the escape of certain Roman Catholics, who then frequented the Oxford Arms, on their being attacked by the mob; for which reason, as is said, by a clause inserted in the Oxford Arms lease, that door is forbidden to be closed up. This inn appears to have been longer frequented by carriers, wagoners, and stage-coaches, than the Bell Inn, on the east side of the Lane; for in the list in Delaune's *Present State of London*, 1690, the Oxford Arms occurs frequently, but mention is not made of the Bell Inn.

'At the Oxford Arms, in Warwick-lane,' lived John Roberts, the bookseller, from whose shop issued the majority of the squibs and libels on Pope.

In Warwick-square, about midway on the west side of the Lane, was the early office of the *Public Ledger* newspaper, in which Goldsmith wrote his *Citizen of the World*, at two guineas per week; and here succeeded to a share in the property John Crowder, who, by diligent habits, rose to be alderman of the ward (Farringdon Within), and Lord Mayor in 1829-30. The *London Packet* (evening paper) was also Crowder's property. The *Independent Whig* was likewise localized in the square; and at the south-west corner was the printing-office of the inflexible John Wheble, who befriended John Britton, when cellarman to a wine-merchant, and set him to write the *Beauties of Wiltshire*. Wheble was, in 1771, apprehended for abusing the House of Commons, in his *Middlesex Journal*, but was discharged by Wilkes; of a better complexion was his *County Chronicle*, and the *Sporting Magazine*, which he commenced with John Harris, the bookseller. In this dull square, also, was the office of Mr Wilde, solicitor, the father of Lord Chancellor Truro, who here mounted the office-stool *en route* to the Woolsack.

Happy Accidents.—In 1684, a poor boy, apprenticed to a weaver at his native village of Wickwar, in Gloucestershire, in carrying, according to custom on a certain day in the year, a dish called 'whitepot' to the baker's, let it fall and broke it, and fearing to face his mistress, ran away to London, where he prospered, and, remembering his native village, founded the schools there which bear his name. At Monmouth, tradition relates that one William Jones left that place to become a shopboy to a London merchant, in the time of James I., and, by his good conduct, rose first to the counting-house, and then to a partnership in the concern; and having realized a large fortune, came back in the disguise of a pauper, first to his native place, Newland, in Gloucestershire, from whence, having been ill received there, he betook himself to Monmouth, and meeting with kindness among his old friends, he bestowed £9,000 in founding a free grammar-school.

FEBRUARY 21.

Saints Daniel, priest, and Verda, virgin, martyrs, 344. St Severianus, bishop of Scythopolis, martyr, about 452. Blessed Pepin of Landen, mayor of the palace, 640. Saints German, abbot, and Randaut, martyrs, about 666.

Born.—Pierre du Bosc, 1623, *Bayeux*; Mrs Anne Grant, author of *Letters from the Mountains*, 1755, *Glasgow*.

Died.—Caius Cæsar Agrippa, A.D. 4; James I. (of Scotland), murdered, 1437, *Perth*; Pope Julius II., 1513; Henry Grey, duke of Suffolk, beheaded, 1555; Robert Southwell, poet, executed at *Tyburn*, 1595; Secretary John Thurloe, 1668, *Lincoln's-inn*; Benedict de Spinoza, philosopher, 1677; Pope Benedict XIII., 1730; Eugène de Beauharnois, Duke of Leuchtenberg, 1824, *Munich*; Rev. Robert Hall, Baptist preacher, 1831, *Bristol*; Charles Rossi, R.A., sculptor, 1839.

POPE JULIUS II.

Julius de la Rovere, who ascended the papal throne in 1503, under the title of Julius II., is one of the most famous of all the Popes. He was the founder of the church of St Peter at Rome; but his most remarkable acts were of a warlike character. During his papacy of ten years, he was continually engaged in war, first, against the Venetians, to recover the Romagna, in which affair he was assisted by the French and Germans; afterwards with the Germans against the French, in order to get these dangerous friends driven out of Italy. It was not till he had formed what he called 'a holy league,' in which he united to himself Spain, England, Venice, and the Swiss, that he succeeded in his object. In this war, he assumed all the characters and duties of a military commander, and few have exceeded him in spirit and resolution. As examples of the far-reaching policy of the man, he sent a splendid sword of state to the King of Scotland (James IV.); it still exists among the Scottish regalia, exhibiting the armorial bearings of Pope Julius. In the great chest at Reikiavik cathedral in Iceland, are robes which he sent to the bishop of that remote island.

Julius struck a medal to commemorate the great events of his reign; it represented him in pontificals, with the tiara on his head, and a whip in his hand, chasing the French, and trampling the shield of France under his feet. When Michael Angelo was making a statue of the pope, he said to him, 'Holy Father, shall I place a book in your hand?' 'No,' answered his Holiness, 'a sword rather—I know better how to handle it.' He was indeed much more of a soldier than an ecclesiastic, in any recognised sense of the term. He was the first pope who allowed his beard to grow, in order to inspire the greater respect among the faithful; a fashion in which he was followed by Charles V. and other kings, and which spread through the courtiers to the people.

THE CAMERONIANS—EPIGRAM BY BURNS.

In the churchyard of the parish of Balmaghie, in the stewartry of Kirkcudbright, are the grave-stones of three persons who fell victims to the

boot-and-saddle mission sent into Scotland under the last Stuarts. One of these rude monuments bears the following inscription :

'Here lyes David Halliday, portioner of Mairfield, who was shot upon the 21st of February 1685, and David Halliday, once in Glengape, who was likewise shot upon the 11th of July 1685, for their adherence to the principles of Scotland's Covenanted Reformation.

'Beneath This Stone Two David Hallidays
Do Lie, Whose Souls Now Sing Their Master's
praise.

To know If Curious Passengers desire,
For What, By Whom, And How They Did Expire ;
They Did Oppose This Nation's Perjury,
Nor Could They Join With Lordly Prelacy.
Indulging Favours From Christ's Enemies
Quenched Not Their Zeal. This Monument Then
cries,

These Were The Causes, Not To Be Forgot,
Why They By Lag So Wickedly Were Shot ;
One Name, One Cause, One Grave, One Heaven,
Do Tie

Their Souls To That One God Eternally.'

The reverend gentleman who first printed this epitaph in his parochial contribution to the Statistical Account of Scotland (1794), made upon it the unlucky remark—'The author of which no doubt supposed himself to have been writing poetry'—unlucky when we consider the respect due to the earnestness of these men in a frame of religious opinion which they thought right, and for which they had surrendered life. Burns, who got the Statistical Account out of the subscription library of Dumfries, experienced the just feeling of the occasion, and rebuked the writer for his levity in a quatrain, which he inscribed on the margin, where it is still clearly to be traced :

'The Solemn League and Covenant
Now brings a smile—now brings a tear—
But sacred Freedom too was theirs ;
If thou'rt a slave, indulge thy sneer.'

It will perhaps be learned with some surprise that a remnant of those Cameronians who felt unsatisfied with the Presbyterian settlement at the Revolution, still exists in Scotland. Numbering about seven hundred persons, scattered chiefly throughout the south-west provinces of Scotland, they continue to decline taking the oath of allegiance to the reigning monarch, or to accept of any public office, holding that monarch and people have broken their pledge or covenant, by which they were bound in 1644 to extirpate popery, prelacy, and other errors. Holding out their testimony on this subject, they abstain from even exercising the elective franchise, alleging that to do so would be to sanction the aforesaid breach of covenant, to which they trace all the evils that befall the land. In May 1861, when this Reformed Presbytery met in Edinburgh, a trying question came before them ; there were young men in their body who felt anxious to join in the volunteer movement ; some had even done it. There were also some members who had exercised the elective franchise. To pursue a contemporary record : 'A lengthened discussion took place as to what should be done, and numerous reverend members urged the modification of the

testimony, as regards the assumed identity of the representative and the voter, and as regards the interpretation of the oath of allegiance. Highly patriotic and almost loyal views were expressed on the Volunteer question, and warm expressions of admiration and love for Her Majesty were uttered, and of willingness to defend her person and protect the soil from invasion, so far as their service could be given apart from rendering fealty to the constitution. Another party in the Synod denounced the proposal to modify the testimony, as a backsliding and defection from the testimony. It was ultimately resolved, by 30 to 11, to appoint a committee to inquire into the soundness of the views contained in the testimony on the points mooted, and to relieve kirk sessions from the obligation to expel members who entertained doubts and difficulties on these matters, but meantime to recommend members of the Church to abstain from voting at elections. No similar recommendation having been made as to holding aloof from the Volunteer movement, it may be presumed that that point has been conceded.'

THE FOLK-LORE OF PLAYING CARDS.

The long disputed questions respecting the period of the invention of playing-cards, and whether they were first used for purposes of divination or gambling, do not fall within the prescribed limits of this paper. Its object is simply to disclose—probably for the first time in print—the method or system of divination by playing-cards, constantly employed and implicitly depended upon, by many thousands of our fellow-countrymen and women at the present day. The smallest village in England contains at least one 'card-cutter,' a person who pretends to presage future events by studying the accidental combinations of a pack of cards. In London, the name of these fortune-tellers is legion, some of greater, some of lesser repute and pretensions : some willing to draw the curtains of destiny for a sixpence, others unapproachable except by a previously paid fee of from one to three guineas. And it must not be supposed that all of those persons are deliberate cheats ; the majority of them 'believe in the cards' as firmly as the silly simpletons who employ and pay them. Moreover, besides those who make their livelihood by 'card-cutting,' there are numbers of others, who, possessing a smattering of the art, daily refer to the paste-board oracles, to learn their fate and guide their conduct. And when a ticklish point arises, one of those cronies will consult another, and then, if the two cannot pierce the mysterious combination, they will call in a professed mistress of the art, to throw a gleam of light on the darkness of the future. In short, there are very few individuals among the lower classes in England who do not know something respecting the cards in their divinatory aspect, even if it be no more than to distinguish the lucky from the unlucky ones ; and it is quite common to hear a person's complexion described as being of a heart, or club colour. For these reasons, the writer—for the first time as he believes—has applied the

well-known term folk-lore to this system of divination by playing cards, so extensively known and so continually practised in the British dominions.

The art of cartomancy, or divination by playing-cards, dates from an early period of their obscure history. In the museum of Nantes there is a painting, said to be by Van Eyck, representing Philippe le Bon, Archduke of Austria, and subsequently King of Spain, consulting a fortune-teller by cards. This picture, of which a transcript is here given, cannot be of a later date than the fifteenth century. When the art was introduced into England is unknown; probably, however, the earliest printed notice of it in this country is the following curious story, extracted from Rowland's *Judicial Astrology*

Condemned: 'Cuffe, an excellent Grecian, and secretary to the Earl of Essex, was told, twenty years before his death, that he should come to an untimely end, at which Cuffe laughed, and in a scornful manner intreated the soothsayer to shew him in what manner he should come to his end, who condescended to him, and calling for cards, intreated Cuffe to draw out of the pack any three which pleased him. He did so, and drew three knaves, and laid them on the table by the wizard's direction, who then told him, if he desired to see the sum of his bad fortune, to take up those cards. Cuffe, as he was prescribed, took up the first card, and looking on it, he saw the portraiture of himself *cap-à-pie*, having men encompassing him with bills and halberds. Then he took up the second, and there he saw the judge

THE ARCHDUKE OF AUSTRIA CONSULTING A FORTUNE-TELLER.

that sat upon him; and taking up the last card, he saw Tyburn, the place of his execution, and the hangman, at which he laughed heartily. But many years after, being condemned, he remembered and declared this prediction.'

The earliest work on cartomancy was written or compiled by one Francesco Marcolini, and printed at Venice in 1540. There are many modern French, Italian, and German works on the subject; but, as far as the writer's knowledge extends, there is not an English one. The system of cartomancy, as laid down in those works, is very different from that used in England, both as regards the individual interpretations of the cards, and the general method of reading or deciphering their combinations. The English system, however, is used in all British settlements over the globe, and has no doubt been carried thither by soldiers' wives, who, as is well known to the initiated, have ever been considered peculiarly skilful practitioners of the art. In-

deed, it is to a soldier's wife that this present exposition of the art is to be attributed. Many years ago the exigencies of a military life, and the ravages of a pestilential epidemic, caused the writer, then a puny but not very young child, to be left for many months in charge of a private soldier's wife, at an out-station in a distant land. The poor woman, though childless herself, proved worthy of the confidence that was placed in her. She was too ignorant to teach her charge to read, yet she taught him the only accomplishment she possessed,—the art of 'cutting cards,' as she termed it; the word cartomancy, in all probability, she had never heard. And though it has not fallen to the writer's lot to practise the art professionally, yet he has not forgotten it, as the following interpretations of the cards will testify.

DIAMONDS.

King. A man of very fair complexion; quick to anger, but soon appeased.

Queen. A very fair woman, fond of gaiety, and a coquette.
Knave. A selfish and deceitful relative; fair and false.
Ten. Money. Success in honourable business.
Nine. A roving disposition, combined with honourable and successful adventure in foreign lands.
Eight. A happy prudent marriage, though rather late in life.
Seven. Satire. Scandal. Unpleasant business matters.
Six. Marriage early in life, succeeded by widowhood.
Five. Unexpected news, generally of a good kind.
Four. An unfaithful friend. A secret betrayed.
Trey. Domestic troubles, quarrels and unhappiness.
Deuce. A clandestine engagement. A card of caution.
Ace. A wedding ring. An offer of marriage.

HEARTS.

King. A fair, but not very fair, complexioned man; good natured, but rather obstinate, and, when angered, not easily appeased.
Queen. A woman of the same complexion as the king; faithful, prudent, and affectionate.
Knave. An unselfish relative. A sincere friend.
Ten. Health and happiness, with many children.
Nine. Wealth. High position in society. The wish-card.
Eight. Fine clothes. Pleasure. Mixing in good society. Going to balls, theatres, &c.
Seven. Many good friends.
Six. Honourable courtship.
Five. A present.
Four. Domestic troubles caused by jealousy.
Trey. Poverty, shame and sorrow, caused by imprudence. A card of caution.
Deuce. Success in life, position in society, and a happy marriage, attained by virtuous discretion.
Ace. The house of the person consulting the decrees of fate.

SPADES.

King. A man of very dark complexion, ambitious and unscrupulous.
Queen. A very dark complexioned woman, of malicious disposition. A widow.
Knave. A lawyer. A person to be shunned.
Ten. Disgrace; crime; imprisonment. Death on the scaffold. A card of caution.
Nine. Grief; ruin; sickness; death.
Eight. Great danger from imprudence. A card of caution.
Seven. Unexpected poverty caused by the death of a relative. A lean sorrow.
Six. A child. To the unmarried a card of caution.
Five. Great danger from giving way to bad temper. A card of caution.
Four. Sickness.
Trey. A journey by land. Tears.
Deuce. A removal.
Ace. Death; malice; a duel; a general misfortune.

CLUBS.

King. A dark complexioned man, though not so dark as the king of spades; upright, true, and affectionate.
Queen. A woman of the same complexion, agreeable, genteel, and witty.
Knave. A sincere, but rather hasty-tempered friend.
Ten. Unexpected wealth, through the death of a relative. A fat sorrow.

Nine. Danger caused by drunkenness. A card of caution.
Eight. Danger from covetousness. A card of caution.
Seven. A prison. Danger arising from the opposite sex. A card of caution.
Six. Competence by hard-working industry.
Five. A happy, though not wealthy marriage.
Four. Danger of misfortunes caused by inconstancy, or capricious temper. A card of caution.
Trey. Quarrels. Or in reference to time may signify three years, three months, three weeks, or three days. It also denotes that a person will be married more than once.
Deuce. Vexation, disappointment.
Ace. A letter.

The foregoing is merely the alphabet of the art; the letters, as it were, of the sentences formed by the various combinations of the cards. A general idea only can be given here of the manner in which those prophetic sentences are formed. The person who desires to explore the hidden mysteries of fate is represented, if a male by the king, if a female by the queen, of the suit which accords with his or her complexion. If a married woman consults the cards, the king of her own suit, or complexion, represents her husband; but with single women, the lover, either in *esse* or *posse*, is represented by his own colour; and all cards, when representing persons, lose their own normal significations. There are exceptions, however, to these general rules. A man, no matter what his complexion, if he wear uniform, even if he be the negro cymbal-player in a regimental band, can be represented by the king of diamonds:—note, the dress of policemen and volunteers is not considered as uniform. On the other hand, a widow, even if she be an albiness, can be represented only by the queen of spades.

The ace of hearts always denoting the house of the person consulting the decrees of fate, some general rules are applicable to it. Thus the ace of clubs signifying a letter, its position, either before or after the ace of hearts, shews whether the letter is to be sent to or from the house. The ace of diamonds, when close to the ace of hearts, foretells a wedding in the house; but the ace of spades betokens sickness and death.

The knaves represent the thoughts of their respective kings and queens, and consequently the thoughts of the persons whom those kings and queens represent, in accordance with their complexions. For instance, a young lady of a rather but not decidedly dark complexion, represented by the queen of clubs, when consulting the cards, may be shocked to find her fair lover (the king of diamonds) flirting with a wealthy widow (the queen of spades, attended by the ten of diamonds), but will be reassured by finding his thoughts (the knave of diamonds) in combination with a letter (ace of clubs), a wedding ring (ace of diamonds), and her house (the ace of hearts); clearly signifying that, though he is actually flirting with the rich widow, he is, nevertheless, thinking of sending a letter, with an offer of marriage, to the young lady herself. And look, where are her own thoughts, represented by the knave of clubs; they are far away with the old lover, that dark man (king of spades) who, as is plainly shewn by his being

attended by the nine of diamonds, is prospering at the Australian diggings or elsewhere. Let us shuffle the cards once more, and see if the dark man, at the distant diggings, ever thinks of his old flame, the club-complexioned young lady in England. No! he does not. Here are his thoughts (the knave of spades) directed to this fair, but rather gay and coquettish woman (the queen of diamonds); they are separated but by a few hearts, one of them, the sixth (honourable courtship), shewing the excellent understanding that exists between them. Count, now, from the six of hearts to the ninth card from it, and lo! it is a wedding ring (the ace of diamonds); they will be married before the expiration of a twelvemonth.

The general mode of manipulating the cards, when fortune-telling, is very simple. The person, who is desirous to know the future, after shuffling the cards *ad libitum*, cuts the pack into three parts. The seer, then, taking up these parts, lays the cards out, one by one, face upwards, upon the table, sometimes in a circular form, but oftener in rows consisting of nine cards in each row. Nine is the mystical number. Every nine consecutive cards form a separate combination, complete in itself; yet, like a word in a sentence, no more than a fractional part of the grand scroll of fate. Again, every card, something like the octaves in music, is *en rapport* with the ninth card from it; and these ninth cards form other complete combinations of nines, yet parts of the general whole. The nine of hearts is termed the 'wish-card.' After the general fortune has been told, a separate and different manipulation is performed, to learn if the pryer into futurity will obtain a particular wish; and, from the position of the wish-card in the pack, the required answer is deduced.

In conclusion, a few words must be said on the professional fortune-tellers. That they are, generally speaking, wilful impostors is perhaps true. Yet, paradoxical though it may appear, the writer feels bound to assert that those 'card-cutters' whose practice lies among the lowest classes of society, really do a great deal of good. Few know what the lowest classes in our large towns suffer when assailed by mental affliction. They are, in most instances, utterly destitute of the consolations of religion, and incapable of sustained thought. Accustomed to live from hand to mouth, their whole existence is bound up in the present, and they have no idea of the healing effects of time. Their ill-regulated passions brook no self-denial, and a predominant element of self rules their confused minds. They know of no future, they think no other human being ever suffered as they do. As they term it themselves, 'they are upset.' They perceive no resource, no other remedy than a leap from the nearest bridge, or a dose of arsenic from the first chemist's shop. Haply some friend or neighbour, one who has already suffered and been relieved, takes the wretched creature to a fortune-teller. The seeress at once perceives that her client is in distress, and, shrewdly guessing the cause, pretends that she sees it all in the cards. Having thus asserted her superior intelli-

gence, she affords her sympathy and consolation, and points to hope and a happy future; blessed hope! though in the form of a greasy playing card. The sufferer, if not cured, is relieved. The lacerated wounds, if not healed, are at least dressed; and, in all probability, a suicide or a murder is prevented. Scenes of this character occur every day in the meaner parts of London.

Unlike the witches of the olden time, the fortune-tellers are generally esteemed and respected in the districts in which they live and practise. And, besides that which has already been stated, it will not be difficult to discover sufficient reasons for this respect and esteem. The most ignorant and depraved have ever a lurking respect for morality and virtue; and the fortune-tellers are shrewd enough to know and act upon this feeling. They always take care to point out what they term 'the cards of caution,' and impressively warn their clients from falling into the dangers those cards foreshadow, but do not positively foretell, for the dangers may be avoided by prudence and circumspection. By referring to the preceding significations of the cards, it will be seen that there are cards of caution against dangers arising from drunkenness, covetousness, inconstancy, caprice, evil temper, illicit love, clandestine engagements, &c. Consequently the fortune-tellers are the moralists, as well as the consolers of the lower classes. They supply a want that society either cannot or will not do. If the great gulf which exists between rich and poor cannot be filled up, it would be well to try if, by any process of moral engineering, it could be bridged over.

FEBRUARY 22.

Saints Thalasia and Limneus, 5th century. St Baradat, 5th century. St Margaret, of Cortona, 1297.

Born.—Dr Richard Price, statist, 1723, *Tynton*; George Washington, President of the United States, 1731, *Bridge's Creek, Virginia*; Charles Duke of Richmond, 1735; Rev. Gilbert Wakefield, classical scholar, 1756, *Nottingham*.

Died.—David II. (of Scotland), 1371, *Edinburgh Castle*; Frederick I. (of Tuscany), 1609; Frederick Ruysch, anatomist, 1639, *The Hague*; James Barry, painter, 1806, *Marlybone*; Smithson Tennant, chemist, 1815, *Boulogne*; Dr Adam Ferguson, historian, 1816, *St Andrew's*; Rev. Sydney Smith, wit and *littérateur*, 1845, *St George's, Hanover-square*.

GEORGE WASHINGTON.

'George Washington, without the genius of Julius Cæsar or Napoleon Bonaparte, has a far purer fame, as his ambition was of a higher and holier nature. Instead of seeking to raise his own name, or seize supreme power, he devoted his whole talents, military and civil, to the establishment of the independence and the perpetuity of the liberties of his own country. In modern history no man has done such great things without the soil of selfishness or the stain of a grovelling ambition. Cæsar, Cromwell, Napoleon attained a higher elevation, but the love of

dominion was the spur that drove them on. John Hampden, William Russell, Algernon Sydney, may have had motives as pure, and an ambition as sustained; but they fell. To George Washington alone in modern times has it been given to accomplish a wonderful revolution, and yet to remain to all future times the theme of a people's gratitude, and an example of virtuous and beneficent power.—*Earl Russell: Life and Times of Charles James Fox.*

The pre-eminence here accorded to Washington will meet with universal approval. He clearly and unchallengeably stands out as the purest great man in universal history. While America feels a just pride in having given him birth, it is something for England to know that his ancestors lived for generations upon her soil. His great-grandfather emigrated about 1657, having previously lived in Northamptonshire. The Washingtons were a family of some account. Their history has been traced by the Rev. J. N. Simpkinson, rector of Brington, near Northampton, with tolerable clearness, in a volume

entitled *The Washingtons*, published in 1860, but more concisely in a speech which he delivered at a meeting of American citizens in London, on Washington's birthday, two years later:

'The Washingtons,' he says, 'were a Northern family, who lived some time in Durham, and also in Lancashire. It was from Lancashire that they came to Northamptonshire. It is a pleasure to me to be able to point out what induced them to come to Northamptonshire. The uncle of the first Lawrence Washington was Sir Thomas Kitson, one of the great merchants who, in the time of Henry VII. and Henry VIII., developed the wool trade of the country. That wool trade depended mainly on the growth of wool, and the creation of sheep farms in the midland counties. I have no doubt, therefore, that the reason why Lawrence Washington settled in Northamptonshire, leaving his own profession, which was that of a barrister, was that he might superintend his uncle's transactions with the sheep-proprietors in that county. Lawrence Washington soon became Mayor of

GEORGE WASHINGTON.

Northampton, and at the time of the dissolution of the monasteries, being identified with the cause of civil and religious liberty, he gained a grant of some monastic lands. Sulgrave was granted to him. It will be interesting to point out the connexion which existed between him and my parish of Brington. In that parish is situated Althorp, the seat of the Spencers. The Lady Spencer of that day was herself a Kitson, daughter of Washington's uncle, and the Spencers

were great promoters of the sheep-farming movement. Thus, then, there was a very plain connexion between the Washingtons and the Spencers. The rector of the parish at that time was Dr Layton, who was Lord Cromwell's prime commissioner for the dissolution of monasteries. Therefore we see another cause why the lands of Sulgrave were granted to Lawrence Washington. For three generations they remained at Sulgrave, taking rank among the nobility and

gentry of the county. At the end of three generations their fortunes failed. They were obliged to sell Sulgrave, and they then retired to our parish of Brington, being, as it were, under the wing of the Spencer family. . . . From this depression the Washingtons recovered by a singular marriage. The eldest son of the family had married the half-sister of George Villiers, Duke of Buckingham, which at this time was not an alliance above the pretensions of the Washingtons. They rose again into great prosperity. . . . About the emigrant I am not able to discover much: except that he, above all others of the family, continued to be on intimate terms with the Spencers down to the very eve of the civil war; that he was knighted by James I. in 1623; and that we possess in our county not only the tomb of his father, but that of the wife of his youth, who lies buried at Islip-on-the-Nen. When the civil war broke out, the Washingtons took the side of the King. . . . You all know the name of Sir Henry Washington, who led the storming party at Bristol, and defended Worcester. We have it, on the contemporary authority of Lloyd, that this Colonel Washington was so well known for his bravery, that it became a proverb in the army when a difficulty arose: "Away with it, quoth Washington." The emigrant who left England in 1657, I leave to be traced by historians on the other side of the Atlantic.'

In Brington Church are two sepulchral stones, one dated 1616 over the grave of the father of the emigrant, in which his arms appear impaled with those of his wife; the other covering the remains of the uncle of the same person, and presenting on a brass the simple family shield, with the extraneous crescent appropriate to a younger brother. Of the latter a transcript is here given, that the reader may be enabled to ex-

ercise a judgment in the question which has been raised as to the origin of the American flag. It is supposed that the stars and stripes which figure in that national blazon were taken from the shield of the illustrious general, as a compliment no more than due to him. In favour of this idea it is to be remarked that the stripes of the Washingtons are alternate gules and white, as are those of the national flag; the stars in

chief, moreover, have the parallel peculiarity of being five-pointed, six points being more common.

The scene at the parting of Washington with his officers at the conclusion of the war of Independence, is feelingly described by Mr Irving: 'In the course of a few days Washington prepared to depart for Annapolis, where Congress was assembling, with the intention of asking leave to resign his command. A barge was in waiting about noon on the 4th of December at Whitehall ferry, to convey him across the Hudson to Paulus Hook. The principal officers of the army assembled at Fraunces' tavern in the neighbourhood of the ferry, to take a final leave of him. On entering the room, and finding himself surrounded by his old companions in arms, who had shared with him so many scenes of hardship, difficulty, and danger, his agitated feelings overcame his usual self-command. Filling a glass of wine, and turning upon them his benignant but saddened countenance, "With a heart full of love and gratitude," said he, "I now take leave of you, most devoutly wishing that your latter days may be as prosperous and happy as your former ones have been glorious and honourable." Having drunk this farewell benediction, he added with emotion, "I cannot come to each of you to take my leave, but I shall be obliged if each of you will come and take me by the hand." General Knox, who was the nearest, was the first to advance. Washington, affected even to tears, grasped his hand and gave him a brother's embrace. In the same affectionate manner he took leave severally of the rest. Not a word was spoken. The deep feeling and manly tenderness of these veterans in the parting moment could not find utterance in words. Silent and solemn they followed their loved commander as he left the room, passed through a corps of light infantry, and proceeded on foot to Whitehall ferry. Having entered the barge, he turned to them, took off his hat, and waved a silent adieu. They replied in the same manner, and having watched the barge until the intervening point of the battery shut it from sight, returned still solemn and silent to the place where they had assembled.'

THE REV. SYDNEY SMITH.

The witty canon of St Paul's (he did not like to be so termed) expired on the 22nd of February 1845, in his seventy-fourth year, at his house, No. 56, Green-street, Grosvenor-square. He died of water on the chest, consequent upon disease of the heart. He bore his sufferings with calmness and resignation. The last person he saw was his brother Bobus, who survived him but a few days,—literally fulfilling the petition in a letter written by Sydney two-and-thirty years before, 'to take care of himself, and wait for him.' He adds: 'We shall both be a brown infragant powder in thirty or forty years. Let us contrive to last out for the same time, or nearly the same time.' His daughter, Lady Holland, thus touchingly relates an incident of his last days:

'My father died in peace with himself and with all the world; anxious to the last to promote the comfort and happiness of others. He

sent messages of kindness and forgiveness to the few he thought had injured him. Almost his last act was bestowing a small living of £120 per annum on a poor, worthy, and friendless clergyman, who had lived a long life of struggle with poverty on £40 per annum. Full of happi-

REV. SYDNEY SMITH.

ness and gratitude, he entreated he might be allowed to see my father; but the latter so dreaded any agitation, that he most unwillingly consented, saying, "Then he must not thank me; I am too weak to bear it." He entered—my father gave him a few words of advice—the clergyman silently pressed his hand, and blessed his death-bed. Surely, such blessings are not given in vain.'

Of all the estimates which have been written of the genius and character of the Rev. Sydney Smith, none exceeds in truthful illustration that which Earl Russell has given in the *Memoirs, &c., of Thomas Moore*: 'His (Sydney Smith's) great delight was to produce a succession of ludicrous images: these followed each other with a rapidity that scarcely left time to laugh; he himself laughing louder, and with more enjoyment than any one. This electric contact of mirth came and went with the occasion; it cannot be repeated or reproduced. Anything would give occasion to it. For instance, having seen in the newspapers that Sir Æneas Mackintosh was come to town, he drew such a ludicrous caricature of Sir Æneas and Lady Dido, for the amusement of their namesake, that Sir James Mackintosh rolled on the floor in fits of laughter, and Sydney Smith, striding across him, exclaimed "Ruat Justitia." His powers of fun were, at the same time, united with the strongest and most practical common sense. So that, while he laughed away seriousness at one minute, he destroyed in the next some rooted prejudice which had braved for a thousand years the battle of reason and the breeze of ridicule. The *Letters of Peter Plymley* bear the greatest likeness to his conversation;

the description of Mr Isaac Hawkins Brown dancing at the court of Naples, in a volcano coat, with lava buttons, and the comparison of Mr Canning to a large blue-bottle fly, with its parasites, most resemble the pictures he raised up in social conversation. It may be averred for certain, that in this style he has never been equalled, and I do not suppose he will ever be surpassed.'

'Sydney,' says Moore, 'is, in his way, inimicable; and as a conversational wit, beats all the men I have ever met. Curran's fancy went much higher, but also much lower. Sydney, in his gayest flights, though boisterous, is never vulgar.'

It was for the first time learned, from his daughter's book, in what poverty Sydney Smith spent many years of his life, first in London, afterwards at a Yorkshire parsonage. It was not, however, that painful kind of poverty which struggles to keep up appearances. He wholly repudiated appearances, confessed poverty, and only strove, by self-denial, frugality, and every active and economic device, to secure as much comfort for his family as could be legitimately theirs. In perfect conformity with this conduct, was that most amusing anecdote of his preparations to receive a great lady—paper lanterns on the evergreens, and a couple of jack-asses with antlers tied on to represent deer in the adjacent paddock. He delighted thus to mock aristocratic pretensions. The writer has heard (he believes) an inedited anecdote of him, with regard to an over-flourishing family *annonce* in a newspaper, which would have made him out to be a man of high grade in society. 'We are not great people at all,' said he, 'we are common honest people—people that pay our bills.' In the like spirit was his answer to a proposing county historian, who inquired for the Smythe arms—'The Smythes never had any arms, but have always sealed their letters with their thumbs.' Even when a little gleam of prosperity enabled him at last to think that his family wanted a carriage, observe the philosophy of his procedure: 'After diligent search, I discovered in the back settlements of a York coachmaker an ancient green chariot, supposed to have been the earliest invention of the kind. I brought it home in triumph to my admiring family. Being somewhat dilapidated, the village tailor lined it, the village blacksmith repaired it; nay, (but for Mrs. Sydney's earnest entreaties,) we believe the village painter would have exercised his genius upon the exterior; it escaped this danger, however, and the result was wonderful. Each year added to its charms, it grew younger and younger; a new wheel, a new spring; I christened it the "Immortal;" it was known all over the neighbourhood; the village boys cheered it, and the village dogs barked at it; but "*Faber mææ fortunæ*" was my motto, and we had no false shame.'

FRENCH DESCENT IN WALES.

This day is memorable as being that on which, in the year 1797, the last invasion by an enemy was made on the shores of the island of Great Britain. At ten o'clock in the morning, three ships of war and a lugger were seen to pass 'the

Bishops'—a group of rocks off St David's Head in Pembrokeshire. The ships sailed under English colours; but the gentleman by whom they were discovered had been a sailor in his youth, and readily recognised them as French men-of-war with troops on board. He at once despatched one of his domestics to alarm the inhabitants of St David's, while he himself watched the enemy's motions along the coast towards Fishguard. At this latter town the fort was about to fire a salute to the British flag, when the English colours were struck on board the fleet, and the French ensign hoisted instead. Then the true character of the ships was known, and the utmost alarm prevailed. Messengers were despatched in all directions to give notice of a hostile invasion; the numbers of the enemy were fearfully exaggerated; vehicles of all kinds were employed in transporting articles of value into the interior. The inhabitants of St David's mustered in considerable numbers; the lead of the cathedral roof was distributed to six blacksmiths and cast into bullets; all the powder to be obtained was divided amongst those who possessed fire-arms; and then the whole body marched to meet the enemy. On the 23rd, several thousand persons, armed with muskets, swords, pistols, straightened scythes on poles, and almost every description of offensive weapon that could be obtained, had assembled. The enemy, meanwhile, whose force consisted of 600 regular troops and 800 convicts and sweepings of the French prisons, had effected a landing unopposed at Pencaer, near Fishguard. About noon on the following day the ships that had brought them sailed unexpectedly, and thus the troops were cut off from all means of retreat. Towards evening all the British forces that could be collected, consisting of the Castlemartin yeomanry cavalry, the Cardiganshire militia, two companies of fencible infantry, and some seamen and artillery, under the command of Lord Cawdor, arrived on the scene, and formed in battle array on the road near Fishguard. Shortly afterwards, however, two officers were sent by the French commander (Tate) with an offer to surrender, on the condition that they should be sent back to Brest by the British Government. The British commander replied that an immediate and unconditional surrender was the only terms he should allow, and that unless the enemy capitulated by two o'clock, and delivered up their arms, he would attack them with 10,000 men. The 10,000 men existed, for available purposes, only in the speech of the worthy commander; but the French general did not seem disposed to be very inquisitive, and the capitulation was then signed. On the morning of the 25th the enemy accordingly laid down their arms, and were marched under escort to various prisons at Pembroke, Haverfordwest, Milford, and Carmarthen. Five hundred were confined in one jail at Pembroke; of these one hundred succeeded in making their escape through a subterranean passage, 180 feet long, which they had dug in the earth at a depth of three feet below the surface.

Many wonderful stories are told in reference to this invasion. What follows is related in *Tales and Traditions of Tenby*: 'A tall, stout, masculine-looking female, named Jemima Nicho-

las, took a pitchfork, and boldly marched towards Pencaer to meet the foe; as she approached, she saw twelve Frenchmen in a field; she at once advanced towards them, and either by dint of her courage, or rhetoric, she had the good fortune to conduct them to, and confine them in, the guard-house at Fishguard.' . . . 'It is asserted that Merddin the prophet foretold that, when the French should land here, they would drink of the waters of Finon Crib, and would cut down a hazel or nut tree that grew on the side of Finon Well, along with a white-thorn. The French drank of that water, and cut down the trees as prophesied. We must also give our readers an account of Enoch Lake's dream and vision. About thirty years before the French invasion, this man lived near the spot where they landed. One night, he dreamed that the French were landing on Carreg Gwasted Point; he told his wife, and the impression was so strong, that he arose, and went to see what was going on, when he distinctly saw the French troops land, and heard their brass drums. This he told his wife and many others, who would not believe him till it had really happened.'

FAMILIAR NAMES.

In the hearty familiarity of old English manners, it was customary to call all intimates and friends by the popular abbreviations of their Christian names. It may be, therefore, considered as a proof at once of the popularity of poets and the love of poetry, that every one who gained any celebrity was almost invariably called Tom, Dick, Harry, &c. Heywood in his curious work, the *Hierarchy of Blessed Angels*, complains of this as an indignity to the worshippers of the Muse.

'Our modern poets to that end are driven,
Those names are curtailed which they first had given,
And, as we wished to have their memories drowned,
We scarcely can afford them half their sound.
Greene, who had in both academies ta'en
Degree of Master, yet could never gain
To be called more than Robin; who, had he
Profest aught but the muse, served and been free
After a seven years' prenticeship, might have,
With credit too, gone Robert to his grave.
Marlowe, renowned for his rare art and wit,
Could ne'er attain beyond the name of Kit;
Although his *Hero and Leander* did
Merit addition rather. Famous Kid
Was called but Tom. Tom Watson, though he
wrote
Able to make Apollo's self to dote
Upon his muse, for all that he could strive,
Yet never could to his full name arrive.
Tom Nash, in his time of no small esteem,
Could not a second syllable redeem;
Excellent Beaumont, in the foremost rank
Of th' rarest wits, was never more than Frank.
Mellifluous Shakespeare, whose enchanting quill
Commanded mirth or passion, was but Will.
And famous Jonson, though his learned pen
Be dipt in Castaly, is still but Ben.
Fletcher and Webster, of that learned pack
None of the mean'st, yet neither was but Jack.
Decker's but Tom, nor May, nor Middleton,
And here's now but Jack Ford that once was John.

Soon after, however, he takes the proper view of the subject, and attributes the custom to its right cause.

‘I, for my part,

Think others what they please, accept that heart
That courts my love in most familiar phrase ;
And that it takes not from my pains or praise,
If any one to me so bluntly come ;
I hold he loves me best that calls me Tom.’

FEBRUARY 23.

St Serenus, a gardener, martyr, 307. St Boisil, prior of Melross, 664. St Milburge, virgin, abbess in Shropshire, 7th century. Dositheus, monk of Palestine. Peter Damian, cardinal, 1072.

Born.—Samuel Pepys, diarist, Secretary to the Admiralty, 1632, *Brampton* (or *London*) ; William Mason, poet, 1725, *Hull* ; Prince Henry Benedict Stuart, Cardinal York, 1725.

Died.—Pope Eugenius IV., 1447 ; Sir Thomas Wyatt, beheaded, 1555, *Tower* ; Stanislaus I. (of Poland), 1766 ; Sir Joshua Reynolds, painter, 1792, *Leicester-square* ; Dr Joseph Warton, Professor of Poetry, Oxon, 1800, *Wickham, Hants* ; Joanna Baillie, poet and dramatist, 1851, *Hampstead*.

DEATH OF SIR JOSHUA REYNOLDS.

For some time previous to his decease this great painter felt that his end was approaching. The failure of his powers is touchingly recorded. In July 1789, when Sir Joshua had nearly finished the portrait of Lady Beauchamp (the last female portrait he ever painted), his eyesight was so affected that he found it difficult to proceed. He laid down his pencil, and sat a while in mute consideration. In his pocket-book is this note of the calamity: ‘Monday, the 13th of July,—prevented by my eye beginning to be obscured.’ He soon totally lost it, and then violently apprehended that the other was going too. This was not the case ; but the dread of what might happen if he used it much, entirely deterred him from either painting, writing, or reading : he amused himself by sometimes cleaning or mending a picture, for his ruling passion still continued in force, and he enjoyed his pictures as much as ever. His health was perfect, and his spirits were good ; he enjoyed company in a quiet way, and loved a game at cards as well as ever.

Sir Joshua’s niece, Miss Palmer, speaks, in March 1790, of his still painting ; another authority dates his entire cessation from work in November 1791 : ‘His last male portrait was that of Charles James Fox ; and when the final touches were given to this picture, the hand of Reynolds fell to rise no more.’

Sir Joshua now became much depressed in spirits ; a tumour and inflammation above the eye that had perished could not be dispersed, and he dreaded that the other eye might be affected. He grew melancholy and sorrowfully silent. A concealed malady was sapping his life and spirits. Mr Burke tells us that the great painter’s ‘illness was long, but borne with a mild and cheerful fortitude, without the least mixture of anything irritable or querulous, agreeable to the placid and even tenor of his whole life. He

had, from the beginning of his malady, a distinct view of his dissolution, which he contemplated with an entire composure, that nothing but the innocence, integrity, and usefulness of his life, and an unaffected submission to the will of Providence, could bestow.’

‘I have been fortunate,’ said Reynolds, ‘in long good health and constant success, and I ought not to complain. I know that all things on earth must have an end.’ With these simple words of resignation, Sir Joshua expired, without any visible symptoms of pain, at his house in Leicester-square, on the night of February 23, 1792, in the sixty-ninth year of his age.

Next day his body was opened by Mr Hunter, the eminent surgeon, when his liver was found to have become preternaturally enlarged, from about five pounds to nearly eleven pounds. It was also somewhat scirrhus. The optic nerve of the left eye was quite shrunk, and more flimsy than it ought to have been ; the other,

STAIRCASE IN SIR JOSHUA REYNOLDS'S HOUSE,
LEICESTER-SQUARE.

which Sir Joshua was so apprehensive of losing, was not affected. In his brain was found more water than is usual with men of his age. Malone tells us that Reynolds had long enjoyed such constant health, looked so young, and was so active, that he thought, though sixty-nine years old, he was as likely to live eight or ten years longer as any of his younger friends.

The remains of the illustrious painter, after lying in state in the great room of the Royal Academy at Somerset House, were interred, with much ceremony, in St Paul's Cathedral, in a grave in the south aisle of the crypt ; in the nave above is a marble portrait-statue of England's finest painter, Reynolds, by her best sculptor, Flaxman. At the close of the funeral,

Mr Burke, who was one of Sir Joshua's executors, attempted to thank the members of the Royal Academy for the respect shewn to the remains of their late President; but the orator's feelings could only find vent in tears—he could not utter a word. A memorial print, engraved by Bartolozzi, was presented to each of the gentlemen attending the funeral.

'Sir Joshua Reynolds,' says Burke, 'was on very many accounts one of the most memorable men of his time. He was the first Englishman who added the praise of the elegant arts to the other glories of his country. In taste, in grace, in facility, in happy invention, in the richness and harmony of colouring, he was equal to the greatest inventors of the renowned ages. . . . He had too much merit not to excite some jealousy, too much innocence to provoke any enmity. The loss of no man of his time can be felt with more sincere, general, and unmixed sorrow.'

CATO-STREET CONSPIRACY.

The popular discontents following the close of the great war—after efflorescing in radicalism, Manchester meetings, street oratory, Cobbett's *Registers*, &c.—came to a sort of head in the early part of 1820. A combination of mean men was then formed, with a view to the effecting a revolution by means of sanguinary violence. The chief man concerned was one named Arthur Thistlewood, who had been a soldier, who had been involved in a trial for sedition, but acquitted, and who had afterwards suffered a year's imprisonment for sending a challenge to the minister, Lord Sidmouth. He was a desperate man, animated by a spirit of revenge which overpowered reason. It seemed to him not impossible, by some such stroke as that contemplated in the Gunpowder Treason, to create a national confusion out of which a better government might be evoked; and he found a number of extreme radicals, of like fortunes with himself, to join in his enterprise. In all such movements of the common sort of people, there are always some whose virtue does not enable them to resist bribery. The Government never remained unacquainted with the conspiracies formed against it.

Months before the development of the plot, it was fully known to the ministers, who, according to the wretched policy which necessity suggested to them, employed spies named Oliver and Edwards to stimulate its authors, so as to make them clearly amenable to the law. Thistlewood and a group of associates went on meeting in some den in Gray's Inn-lane, arranging their plans, unconscious of the traitors in their midst. Their main design was to assassinate the ministers, each in his own house; but, at length learning that there was to be a cabinet dinner at the house of Earl Harrowby, President of the Council, in Grosvenor-square, on the 23rd of February, they resolved to wait for it, Thistlewood remarking with savage glee, 'It will be a rare haul to murder them all together.'

It was arranged that some of the conspirators should watch Lord Harrowby's house; one was to call and deliver a dispatch-box at the door;

the others were then to rush in, and having secured the servants, they were to assassinate the ministers as they sat at dinner; bringing away as special trophies, the heads of Lord Sidmouth and Lord Castlereagh, in two bags provided for the purpose! They were then to set fire to the cavalry barracks; and the Bank of England and the Tower of London were to be taken by the people, who, it was hoped, would rise upon the spread of the news. It can scarcely be believed that such a scheme should have been seriously planned in the metropolis only forty years since; yet such was the fact.

With a view to the attack in Grosvenor-square, their place of meeting was a loft over a stable in Cato-street, near the Edgware-road. Here the conspirators having mustered to the number of twenty-four, took the precaution of placing one as a sentinel below, whilst they prepared for their dreadful work. Meanwhile, the ministers, fully apprised of what was going on, did not arrive at Lord Harrowby's: the Archbishop of York, who lived next door, happened to give a dinner-party at the same hour as that appointed at Lord Harrowby's, and the arrival of carriages at the Archbishop's deceived those of the conspirators who were on the watch in the square, and they did not discover their mistake until it was too late to give warning to their comrades assembled in Cato-street. Here, while the traitors were arming themselves by the light of one or two candles, a party of Bow-street officers, mounting by a ladder, forcibly entered the loft: the foremost of them, in attempting to seize Thistlewood, was run by him through the body, and instantly fell; the lights were extinguished, a few shots were exchanged, and Thistlewood and some of his companions escaped through a window at the back of the premises: nine were taken that evening, with their arms and ammunition; and the intelligence was conveyed to the ministers, who had met at Lord Liverpool's, at Westminster, to await the result. A reward of £1,000 was immediately offered for the apprehension of Thistlewood, and he was captured next morning, while in bed, at the house of a friend in Little Moor-fields.

The conspirators were sent to the Tower, the last persons imprisoned in that fortress. On the 20th of April, Thistlewood was condemned to death after three days' trial; and on May 1, he and his four principal accomplices,—Ings, Brunt, Tidd, and Davidson, who had been severally tried and convicted,—were hanged at the Old Bailey. The remaining six pleaded guilty; one received a pardon, and five were transported for life. To efface recollection of the conspiracy, Cato-street has been re-named Homer-street.

SCENT-BALLS AND POMANDERS.

Among the minor objects of personal use which appear, from an inventory, to have belonged to Margaret de Bohun, daughter of Humphrey de Bohun, Earl of Hereford and Essex, slain at the battle of Boroughbridge, March 16, 1321, is a 'pomme de aumbre,' or scent-ball, in the composition of which ambergris probably formed a principal ingredient. We here learn also that a nutmeg was occasionally used for

the like purpose; it was set in silver, decorated with stones and pearls, and was evidently an object rare and highly prized. Amongst the valuable effects of Henry V., according to the inventory taken A.D. 1423, are enumerated a musk-ball of gold, weighing eleven ounces, and another of silver gilt. At a later period, the pomander was very commonly worn as the pendant of a lady's girdle. A receipt for compounding it may be found in the *Treasury of Commodious Conceits*, 1586.

The orange appears to have been used as a pomander soon after its introduction into England. Cavendish describes Cardinal Wolsey entering a crowded chamber 'holding in his hand a very fair orange, whereof the meat or substance within was taken out, and filled up again with the part of a sponge, wherein was vinegar and other confections against the pestilent airs; the which he most commonly smelt unto, passing among the press, or else he was pestered with many suitors.'

Sir Thomas Gresham, in his celebrated portrait by Sir Antonio More, holds in his left hand a small object resembling an orange, but which is a *pomander*. This sometimes consisted of a dried Seville orange, stuffed with cloves and other spices; and being esteemed a fashionable preservative against infection, it frequently occurs in old portraits, either suspended to the girdle or held in the hand. In the eighteenth century, the signification of this object had become so far forgotten, that, instead of pomanders, *bond fide* oranges were introduced into portraits, a practice which Goldsmith has happily satirized in his *Vicar of Wakefield*, where seven of the Flam-bourghs are drawn with seven oranges, &c.

When the pomander was made of silver, it was

A SILVER POMANDER.

perforated with holes, to let out the scent. Hence the origin of the *vinagrette* of our day.

The earliest mention of *coral* is that which occurs in the inventory of Alianore de Bohun, namely, the paternoster of coral, with gilded *gawdeer* (the larger beads), which belonged to Margaret de Bohun, and the three branches of coral which Alianore possessed. The above use of coral explains its being worn, in later times, as an amulet, or defence against infection.

MR FOX; AN OLD ENGLISH NURSERY STORY.

In Shakspeare's *Much Ado About Nothing*, Benedict (Act I., Sc. 1) alludes to 'the old tale—it is not so, nor 'twas not so, but indeed God forbid it should be so.' It is believed by his laborious commentator, Mr Halliwell, that Shakspeare here had in his recollection a simple English nursery story which he had probably heard in his infancy at Stratford, and of which some memory still survives. The story is given by the

learned commentator as follows: 'Once upon a time there was a young lady, called Lady Mary, who had two brothers. One summer they all went to a country seat of theirs, which they had not before visited. Among the other gentry in the neighbourhood who came to see them, was a Mr Fox, a bachelor, with whom they, particularly the young lady, were much pleased. He used often to dine with them, and frequently invited Lady Mary to come and see his house. One day that her brothers were absent elsewhere, and she had nothing better to do, she determined to go thither; and accordingly set out unattended. When she arrived at the house, and knocked at the door, no one answered. At length she opened it and went in; over the portal of the hall was written, "Be bold, be bold—but not too bold, lest that your heart's blood should run cold." She opened it; it was full of skeletons and tubs full of blood. She retreated in haste, and coming down stairs she saw Mr Fox advancing towards the house with a drawn sword in one hand, while with the other he dragged along a young lady by her hair. Lady Mary had just time to slip down, and hide herself under the stairs, before Mr Fox and his victim arrived at the foot of them. As he pulled the young lady upstairs, she caught hold of one of the banisters with her hand, on which was a rich bracelet. Mr Fox cut it off with his sword: the hand and bracelet fell into Lady Mary's lap, who then contrived to escape unobserved, and got home safe to her brothers' house. After a few days, Mr Fox came to dine with them as usual. After dinner, when the guests began to amuse each other with extraordinary anecdotes, Lady Mary at length said she would relate to them a remarkable dream she had lately had. "I dreamt," said she, "that as you, Mr Fox, had often invited me to go to your house, I would go there one morning. When I came to the house I knocked, but no one answered. When I opened the door, over the hall was written, "Be bold, be bold—but not too bold." But," said she, turning to Mr Fox, and smiling, "it is not so, nor it was not so." Then she pursued the rest of the story, concluding at every turn with "It is not so, nor it was not so," till she came to the room full of dead bodies, when Mr Fox took up the burden of the tale, and said, "It is not so, nor it was not so; and God forbid it should be so," which he continues to repeat at every subsequent turn of the dreadful story, till she came to the circumstance of the cutting off the young lady's hand, when, upon his saying as usual, "It is not so, nor it was not so; and God forbid it should be so," Lady Mary retorts, "But it is so, and it was so, and here's the hand I have to show;" at the same time producing the bracelet from her lap; whereupon the guests drew their swords, and cut Mr Fox into a thousand pieces.'

It is worthy of notice that the mysterious inscription seen by the lady in Mr Fox's house is identical with that represented by Spenser (*Faerie Queen*, III. xi. 54), as beheld by Britomart in

'——— the house of Busyrane,
Where Love's spoyles are exprest.'

It occurs in the following stanza:

'And as she lookt about she did behold
How over that same dore was likewise writ,
Be bold, be bold, and everywhere *Be bold*;
That much she mus'd, yet could not construe it
By any ridling skill or commune wit.
At last she spyde at that rowme's upper end
Another yron dore, on which was writ,
Be not too bold; whereto, though she did bend
Her earnest mind, yet wist not what it might intend.

It cannot be said that there is much in the story of Mr Fox; but it is curious to find it a matter of fami-

liar knowledge to two writers like Shakspeare and Spenser; and we learn from their allusions that, rude and simple as it is, it has existed for about three centuries, if not more.

FEBRUARY 24.

St Matthias, the Apostle, *Colchis*. Saints Montanus, Lucius, Flavian, Julian, Victoricus, Primolus, Rhenus, and Donatian, martyrs at Carthage, 259. St Pretextatus, archbishop of Rouen, martyr, about 585. St Lethard, bishop of Senlis, 596, *Canterbury*. St Ethelbert, first Christian king of England, 616. Robert of Arrissel, 111.

Born.—John Picus, Count of Mirandola, 1463; Charles V. (of Spain), 1500, *Ghent*; George Frederick Handel, musical composer, 1684, *Halle*; James Quin, actor, 1693, *Covent-garden*; Robert Lord Clive, conqueror of Bengal, 1726; Charles Lamb, humorous essayist, 1775, *London*; Robert Lord Gifford, Master of the Rolls, 1779.

Died.—Richard de la Pole, Francis Duke of Lorraine, and General de la Tremouille, killed at *Pavia*, 1525; Francis Duke of Guise, assassinated, 1563; James Earl of Derwentwater, beheaded, 1716; Joseph (of Portugal), 1771; Charles Buonaparte, 1785; Hon. Henry Cavendish, amateur chemist, 1810; John Keats, poet, 1821, *Rome*; Thomas Coutts, banker, 1822; John VI. (of Portugal), 1826.

MEMORIALS OF HANDEL.

George Frederick Handel, although a native of Germany (born at Halle, in Saxony, on the 24th of February, 1684), from having passed nearly the whole of his life in England, and produced in it all his great works, is almost claimed by us as an Englishman. When a child, he sacrificed his play-hours, and sometimes even his meals, to his passion for music, which was so successfully cultivated, that, when only ten years of age, he composed a set of sonatas, not without their value as pieces of music.

At the outset of his professional life in 1703, he had nearly been lost to the world. It was at Hamburg that he got embroiled with Mattheson, an able musician, who violently assaulted him. A duel ensued, and nothing but a *score*, buttoned under Handel's coat, on which his antagonist's weapon broke, saved a life that was to prove of incalculable value. Handel was never married: the charms of his music impressed many beauties and singers in his favour; but he shewed no disposition to avail himself of their partialities. His thoughts were nearly all absorbed by his art, and a high sense of moral propriety distinctly marked his conduct through life.

Handel, as a composer, was great in every style. In sacred music, especially of the choral kind, he throws at an immeasurable distance all who preceded and followed him.

Handel first arrived in London in 1710, and was soon honoured by the notice of Queen Anne. Aaron Hill was then manager of the opera, and his *Rinaldo* was set to music by Handel, and produced in March, 1711. At the peace of Utrecht, he composed for that event a *Te Deum* and *Jubilate*; and a pension of £200 was the reward of this service. In 1714, when the Elector of Hanover was placed on the British

throne, Handel, not having kept his promise to return to Hanover, durst not present himself at court: but he got over the difficulty by a pleasant stratagem: his friend, Baron Kilmansegge, contrived that he should meet the King, during a royal excursion on the Thames, with a band of wind instruments, playing the charming *Water Music*, written for the occasion; the composer was received again into favour, his pension was doubled; and many years after, when appointed to teach the Princesses, Queen Caroline, consort of George II., added another £200, making altogether £600 per annum, no small income a century ago.

Next he became chapel-master to the Duke of Chandos, at Canons, and there he produced most of his concertos, sonatas, lessons, and organ fugues; besides his *Acis and Galatea*, for which Gay wrote the poetry. Then he carried out the conversion of the Italian Theatre into an Academy of Music; he was engaged as manager, and produced fifteen new operas; but the Italians virulently opposed 'the German intruder;' the cabal became insupportable, and the great composer and able manager retired with a loss of £10,000 and broken health. He next attempted operas at Covent Garden Theatre, but this speculation proved equally unfortunate. He next gave Lent oratorios, but with no better success; even his sublimest work, *The Messiah*, was ill attended and received in the metropolis, when first produced in 1741. These failures were caused by the hostility of the nobility, notwithstanding the patronage of the Royal family. He then took refuge in Ireland, where he began by performing *The Messiah* for the benefit of the city prison. He returned to London in 1742, renewed his oratorios at Covent Garden Theatre, and henceforth was uniformly successful; and he continued his oratorios with great profit nearly to the last day of his life.

Handel died on a Good Friday (according to his own wish), April 13, 1759, and was buried in Westminster Abbey. Late in life he was afflicted with blindness; but he continued to perform and even composed pieces, and assisted at one of his oratorios only a week before his death.

Handel will long be remembered for his munificent aid to the Foundling Hospital in London. In 1749, he gave a performance of his own compositions, by which the charity realized five hundred guineas, and every subsequent year he superintended the performance of *The Messiah* in the Foundling Hospital Chapel, which netted altogether £7,000; he also presented an organ, and bequeathed to the charity a fair copy of the score and parts of the oratorio of *The Messiah*.

The memory of Handel has been preserved by a series of performances of his works under the roof which covers his dust. At a century from his birth, in 1784, was given the first *Commemoration*, zealously patronised by George III., who was so fond of music that he was accustomed to write out the programmes of his own concerts. Handel's 'Abbey Commemoration' was repeated annually till 1791; these performances benefiting different metropolitan charities to the amount of £50,000. In 1834, took place another Comme-

moration in the Abbey. Festivals of Handel's music have since been given by the Sacred Harmonic Society, and in the Crystal Palace at Sydenham, upon a very grand scale.

We possess in England many memorials of the genius and character of this excellent man. Roubiliac's first and last works in this country were his statue of Handel, for Vauxhall Gardens, and his monumental statue of the great composer in Poet's Corner, Westminster Abbey. His autographs are highly treasured: in the Queen's library are the original MSS. of nearly all Handel's works, filling eighty-two folio volumes; and his MS. scores and letters are preserved in the board-room of the Foundling Hospital. Portraits of Handel are numerous: he was painted by Thornhill, Kyte, Denner, Wolfand, Hudson, and Grafoni. The portrait by Denner was in Handel's own possession, and is most trustworthy, though Walpole describes Hudson's portrait as 'honest similitude'; it is at Gopsal, the seat of Earl Howe. The statue of Handel from Vauxhall is now in the possession of the Sacred Harmonic Society; and a cast of Handel's features, taken after death by Roubiliac for the Abbey statue, is carefully preserved, as are a few impressions from the mould. A harpsichord and book-case, which once belonged to the great composer, are also treasured as relics. He lived many years in the house No. 57, on the south side of Brook-street, four doors from Bond-street, and here he gave rehearsals of his oratorios.

Handel was fond of society, enjoyed his pipe over a cup of coffee, and was a lively wit in

conversation. He was very fond of Mrs Cibber, at whose house, on Sunday evenings, he often met Quin, the comedian. One evening Handel, having delighted the company by playing on the harpsichord, took his leave. After he was gone, Quin was asked by Mrs Cibber whether he did not think Mr Handel had a charming hand? 'A hand, madam! you mistake, it is a foot.' 'Poh! poh!' said she, 'has he not a fine finger?' 'Toes, madam!' In fact, his hand was so fat, that the knuckles, which usually appear convex, were, like those of a child, dented or dimpled in; however, his touch was so smooth, that his fingers seemed to grow to the keys. They were so curved and compact when he played, that no motion, and scarcely the fingers themselves, could be perceived. In performing on the organ, his command of the instrument was amazing, as was the fulness of his harmony, and the grandeur and dignity of his style. He wore an enormous white wig, and when things went well at the oratorios, it had a certain nod or vibration, which denoted his pleasure and satisfaction. Without this signal, nice observers were certain that he was out of humour. At the close of an air, the voice with which he used to cry out 'Chorus!' was formidable indeed. Handel died possessed of £20,000, which, with the exception of £10,000 to the fund for decayed musicians, he chiefly bequeathed to his relations on the Continent.

MRS MIDNIGHT'S ANIMAL COMEDIANS.

'The town,' as Beau Tibbs would say, was regaled, in 1753, with a new pleasure, under the

BALLET OF DOGS AND MONKEYS :

On the left, below, a monkey cavalier on dog-back.

Midnight's Animal Comedians

A MONKEY TOWN BESIEGED BY DOGS.

appellation of Mrs Midnight's Animal Comedians. With incredible labour and patience, a number of dogs and monkeys had been trained to go through certain scenic representations, which were generally acknowledged to be a marvellously good imitation of the doings of human actors. The performance took place in a small theatre, which was fitted up with appropriate scenery, decorations, &c., and was, we believe, well attended. A representation of the stage as it appeared from the pit, is reproduced on the preceding page from a contemporary print, in which, however, there are compartments exhibiting other performances by the animal comedians.

Taking these compartments as evidence on the subject, we find that there was a *Monkeys' Entertainment*, two of these animals being seated in full dress at a table with wine and cake, while another of the same species attended with a plate under his arm. Two dogs, accoutred like soldiers, shewed their agility by jumping over a succession of bundles of sticks. Three personated Harlequin, Pero (?), and Columbine, the last attired in a prodigious hoop. Two monkeys, in cloaks and cocked hats, were exercised upon the backs of a couple of dogs. Another monkey, mounted on dog-back, went through a series of quasi-equestrian performances, mounting and dismounting with the greatest propriety. There was also a grand *Ballet Dance* of dogs and monkeys in the formal dresses of the period, powdered hair, &c., and of this we have caused a copy to be prepared (p. 293). In the original a 'lady' has just been brought in in a sedan. Certainly, however, the principal performance was a *Siege*, of which also a copy here appears. The stage in this instance presented the exterior of a fortified town. Monkeys manned the walls, and fired at a multitude of canine besiegers. The army of dogs, under their brave commanders, came forward with unflinching courage, and, a couple of ladders being planted, they mounted the ramparts with the greatest agility, and entered the city sword in hand, disregarding such casualties as the fall of two or three of the storming party into the ditch.

The simial defenders, as we may suppose, gave a determined resistance; but all was in vain against canine courage, and soon the flag of the assailants waved upon the battlements. When the smoke cleared away, the besieged and besiegers were observed in friendly union on the top of the fore-wall, taking off their hats to the tune of *God save the King*, and humbly saluting the audience. Tradition intimates to us that Mrs Midnight's Animal Comedians were for a season in great favour in London; yet, strange to say, there is no notice of them in the *Gentleman's Magazine*, or any other chronicle of the time which we have been able to consult.

FISH AND FISH PIES IN LENT.

The strictness with which our ancestors observed Lent and fast-days led to a prodigious consumption of fish by all classes; and great quantities are entered in ancient household accounts as having been bought for family use. In the 31st year of the reign of Edward III., the following sums were paid from the Exchequer for fish supplied to the royal household:

Fifty marks for five lasts (9,000) red herrings, twelve pounds for two lasts of white herrings, six pounds for two barrels of sturgeon, twenty-one pounds five shillings for 1300 stock-fish, thirteen shillings and ninepence for eighty-nine congers, and twenty marks for 320 mulwells.

The cooks had many ways of preparing the fish. Herring-pies were considered as delicacies even by royalty. The town of Yarmouth, by ancient charter, was bound to send a hundred herrings, baked in twenty-four pies or pasties, annually to the king; and Eustace de Corson, Thomas de Berkedich, and Robert de Withen, in the reign of Edward I., held thirty acres by tenure of supplying twenty-four pasties of fresh herrings, for the king's use, on their first coming into season.

Lampreys were the favourite dish of the mediæval epicures; they were always considered a great delicacy. So great was the demand for this fish in the reign of King John, as to have induced that monarch to issue a royal licence to one Sampson, to go to Nantes to purchase lampreys for the use of the Countess of Blois. The same king issued a mandate to the sheriffs of Gloucester (that city being famous for producing lampreys), forbidding them, on their first coming in, to be sold for more than two shillings a piece. In the reign of Edward III., they were sometimes sold for eightpence or tenpence a piece, and they often produced a much higher price. In 1341, Walter Dastyn, sheriff of Gloucester, received the sum of £12, 5s. 8d. for forty-four lampreys supplied for the king's use.* The corporation of Gloucester presented to the sovereign every Christmas, as a token of their loyalty, a lamprey-pie, which was sometimes a costly gift, as lampreys at that season could scarcely be procured at a guinea a piece. (See *Fish, how to choose, how to dress*. Printed at Launceston.) The Severn is noted from its lampreys, and Gloucester noted for its peculiar mode of stewing them; indeed, a Gloucester lamprey will almost excuse the royal excess of Henry I., who died at Rouen, of an illness brought on by eating too freely of this choice fish, after a day spent in hunting.

In addition to these favourite dishes, the choice 'vianders' of the fourteenth century paid epicurean prices for delicious morsels of the whale, the porpoise, the grampus, and the sea-wolf. These animals, being then considered as fish, were held as allowable food in Lent: it is lamentable to think how much sin they thus occasioned among our forefathers, before they were discovered to be mammalian. The flesh of the porpoise was cooked in various ways: a manuscript in the British Museum contains a receipt for making 'puddynge of porpoise' (Harl. MSS., No. 279); and we find it served at table as late as the time of Henry VIII., and in the north to a later period.

Use of Militia Drilling and Tactics.—Gibbon, who at one part of his life was a captain in the Hampshire regiment of militia, remained ever after sensible of a benefit from it. He says, 'It made me an Englishman and a soldier. In this peaceful service I imbibed the rudiments of the language and science of tactics, which opened a new field of study and observation. The discipline and evolutions of a modern battalion gave me a clearer notion of the phalanx and the legion; and the captain of the Hampshire grenadiers (the reader may smile) has not been useless to the historian of the Roman empire.'—*Miscellaneous Works*, vol. i., p. 136.

* Parker's *Domestic Architecture in England*, 14th cent., p. 131.

FEBRUARY 25.

St Victorinus, and six companions, martyrs, 284. St Casarius, physician of Constantinople, 369. St Walburge, virgin, of England, 779. St Tarasius, patriarch of Constantinople, 806.

Born.—Germain de Saint Foix, 1703, Rennes.

Died.—William Lilly, master of St Paul's School, London, 1523; Robert Earl of Essex, beheaded, 1600; Count Wallenstein, commander, assassinated, 1634, Eger; Frederick I. (of Prussia), 1713; Sir Christopher Wren, architect, 1723, St James's; Dr William Buchan, 1805, St Pancras; George Don, naturalist, 1856.

WILLIAM LILY, THE GRAMMARIAN.

This famous schoolmaster, the friend of Erasmus and Sir Thomas More, was born at Odiham, Hants, about 1468; he was educated at Oxford University, and then travelled to the East, to acquire a knowledge of the Greek language. On his return to England he set up a private grammar-school, and was the first teacher of Greek in the metropolis. In 1512, Dean Colet, who had just founded St Paul's School, appointed Lily the first master. In the following year he produced his *Grammar*, which has probably passed through more editions than any work of its kind, and is used to this day in St Paul's School; the English rudiments were written by Colet, and the preface to the first edition by Cardinal Wolsey; the Latin syntax chiefly by Erasmus; and the remainder by Lily; the book being thus the joint production of four of the greatest scholars of the age. Lily held the mastership of St Paul's School for nearly twelve years; he died of the plague in London, and was buried in the north churchyard of St Paul's, within bow-shot of the school to whose early celebrity he had so essentially contributed.

COUNT WALLENSTEIN.

There is scarcely a personage in history of more awe-striking character than Count Wallenstein, the commander of the Emperor's armies in that struggle with Protestantism, the Thirty Years' War.

Born of high rank in 1583, Wallenstein found himself at forty chief of the imperial armies, and the possessor of immense wealth. Concentrating a powerful mind on one object, the gratification of his ambition, he attained it to a remarkable degree, and was for some time beyond doubt the greatest subject in Europe. In managing troops by a merciless discipline, in making rapid marches, in the fiery energy of his attacks upon the enemy, he was unrivalled. In but one battle, that of Lutzen, where he met the Protestant army under Gustavus of Sweden, was he unsuccessful.

The personality and habits of the man have been strikingly described by Michiels in his *History of the Austrian Government*. 'Wallenstein's immense riches, his profound reserve, and theatrical manners, were the principal means he employed to exalt the imagination of the masses. He always appeared in public surrounded by extraordinary pomp, and allowed all those attached to his house to share in his luxury. His officers

lived sumptuously at his table, where never less than one hundred dishes were served. As he rewarded with excessive liberality, not only the multitude but the greatest personages were dazzled by this Asiatic splendour. Six gates gave entrance to his palace at Prague, to make room for which he had pulled down one hundred houses. Similar châteaux were erected by his orders on all his numerous estates. Twenty-four chamberlains, sprung from the most noble families, disputed the honour of serving him, and some sent back the golden key, emblem of their grade, to the Emperor, in order that they might wait on Wallenstein. He educated sixty pages, dressed in blue velvet and gold, to whom he gave the first masters; fifty trabants guarded his ante-chamber night and day; six barons and the same number of chevaliers were constantly within call to bear his orders. His *maitre-d'hôtel* was a person of distinction. A thousand persons usually formed his household, and about one thousand horses filled his stables, where they fed from marble mangers. When he set out on his travels, a hundred carriages, drawn by four or six horses, conveyed his servants and baggage; sixty carriages and fifty led horses carried the people of his suite; ten trumpeters with silver bugles preceded the procession. The richness of his liveries, the pomp of his equipages, and the decoration of his apartments, were in harmony with all the rest. In a hall of his palace at Prague he had himself painted in a triumphal car, with a wreath of laurels round his head, and a star above him.

Wallenstein's appearance was enough in itself to inspire fear and respect. His tall thin figure, his haughty attitude, the stern expression of his pale face, his wide forehead, that seemed formed to command, his black hair, close-shorn and harsh, his little dark eyes, in which the flame of authority shone, his haughty and suspicious look, his thick moustaches and tufted beard, produced, at the first glance, a startling sensation. His usual dress consisted of a justaucorps of elk skin, covered by a white doublet and cloak; round his neck he wore a Spanish ruff; in his hat fluttered a large red plume, while scarlet pantaloons and boots of Cordova leather, carefully padded on account of the gout, completed his ordinary attire. While his army devoted itself to pleasure, the deepest silence reigned around the general. He could not endure the rumbling of carts, loud conversations, or even simple sounds. One of his chamberlains was hanged for waking him without orders, and an officer secretly put to death because his spurs had clanked when he came to the general. His servants glided about the rooms like phantoms, and a dozen patrols incessantly moved round his tent or palace to maintain perpetual tranquillity. Chains were also stretched across the streets, in order to guard him against any sound. Wallenstein was ever absorbed in himself, ever engaged with his plans and designs. He was never seen to smile, and his pride rendered him inaccessible to sensual pleasures. His only fanaticism was ambition. This strange chief meditated and acted incessantly, only taking counsel of himself, and disdaining strange advice

and inspirations. When he gave any orders or explanations, he could not bear to be looked at curiously; when he crossed the camp, the soldiers were obliged to pretend that they did not see him. Yet they experienced an involuntary shudder when they saw him pass like a supernatural being. There was something about him mysterious, solemn, and awe-inspiring. He walked alone, surrounded by this magic influence, like a saddening halo.'

The end of Wallenstein was such as might have been anticipated. Becoming too formidable for a subject, he was denounced to the Emperor by Piccolomini, who obtained a commission to take the great general dead or alive. On the 25th of February 1634, he was assailed in the Castle of Eger by a band, in which were included one Gordon, a Scotsman, and one Butler, an Irishman, and fell under a single stroke of a partizan, dying in proud silence, as he had lived.

DEATH OF SIR CHRISTOPHER WREN.

Wren's long and useful life, although protracted by activity and temperance much beyond the usual term of man's existence, was brought to a close by an accident. After his dismissal from the office of Surveyor-General, he occupied a town residence in St James's-street, Piccadilly, and continued to superintend the repairs of Westminster Abbey. He also rented from the Crown a house at Hampton Court, where he often retired, and there he passed the greater part of the last five years of his life in study and contemplation. On his last journey from Hampton Court to London, he contracted a cold, which accelerated his death. The good old man had, in his latter days, accustomed himself to sleep a short time after his dinner, and on the 25th of February 1723, his servant, thinking his master had slept longer than usual, went into his room, and found him dead in his chair. He was in his ninety-first year.

The funeral of Wren was attended by an assemblage of honourable and distinguished personages, from his house in St James's-street to St Paul's Cathedral, where his remains were deposited in the crypt, adjoining to others of his family, in the recess of the south-eastern window, under the choir. His grave is covered with a black marble slab, with a short inscription in English; and on the western jamb of the window recess is a handsome tablet, with a Latin inscription written by the architect's son, Christopher, in which are the words, 'Lector, si monumentum quæris, circumspeice,' which instruction, to 'look around,' has led to the conclusion that the tablet was intended for the body of the cathedral, where the public might read it. It is understood that the malice of the commissioners for rebuilding St Paul's pursued Wren beyond the grave, and condemned the explanatory epitaph to the crypt, where it could be read but by comparatively few persons. Many years afterwards, Mr Robert Mylne, architect, had a copy of the inscription placed over the marble screen to the choir, which has since been removed.

Wren adorned London with no fewer than forty public buildings, but was the worst paid architect of whom we have any record: his

annual salary as architect of St Paul's was £200; and his pay for rebuilding the churches in the city was only £100 a year.

DR BUCHAN AND HIS 'DOMESTIC MEDICINE.'

Who has not heard of Buchan's *Domestic Medicine*, the medical Mentor, 'the guide, philosopher, and friend' of past generations, and scarcely yet superseded by Graham and Macaulay? This book, bearing on its title-page the epigraph, 'The knowledge of a disease is half its cure,' a sort of temptation to the reading of medical books in general, first appeared in 1769: it speedily obtained popularity by the plain and familiar style in which it is written; and no less than nineteen editions of the book, amounting to 80,000 copies, were sold during the author's life-time.

Dr Buchan, who was born in Roxburghshire, in 1729, long enjoyed a good London practice as a physician. He lived many years at the house of his son, Dr Alexander Buchan, No. 6, Percy-street, Bedford-square; and there he died, at the age of seventy-six: he was buried in the west cloister of Westminster Abbey church.

It was Buchan's practice to see patients at the Chapter Coffee-house, in Paternoster-row, where he usually might be found in 'the *Wittenagemot*,' a box in the north-east corner of the coffee-room. Though he was a high Tory, he heard the political discussions of the place with good humour, and commonly acted as a moderator, an office for which his fine physiognomy, and his venerable white hairs, highly qualified him. His son belonged to the same club or set, and though somewhat dogmatical, added to the variety and intelligence of the discussions, which, from the mixture of the company, were as various as the contents of a newspaper.

Of this same *Wittenagemot* Dr George Fordyce and Dr Gower were also members; and it was very amusing to hear them in familiar chat with Dr Buchan. On subjects of medicine they seldom agreed, and when such were started, they generally laughed at one another's opinions. They liberally patronised Chapter punch, which always bore a high reputation in London. If any one complained of being indisposed, Buchan would exclaim, 'Now, let me prescribe for you. Here, John or Isaac, bring a glass of punch for Mr —, unless he likes brandy-and-water better. Take that, sir, and I'll warrant you'll soon be well—you're a peg too low, you want stimulus; and if one glass won't do, call for a second.'

The *Domestic Medicine* was written in Sheffield; and James Montgomery, in his *Memoirs*, relates the following particulars of the author: 'I remember seeing the old gentleman when I first went to London. He was of venerable aspect, neat in his dress, his hair tied behind with a large black ribbon, and a gold-headed cane in his hand, quite realizing my idea of an Esculapian dignitary.' Montgomery acknowledges that he never spoke to the Doctor, as he was quite out of his reach; but he looked upon him with respect, as a man who had published a *book*. In one of the Scottish editions of Buchan, there was an astounding misprint, in which a

prescription containing *one hundred ounces of laudanum*, instead of that number of drops, is recommended.'

In no other science does Pope's maxim that 'a little learning is a dangerous thing' hold so strongly as in medicine; for those who read medical works, professing to be popular, are almost certain to suppose themselves affected with every disease about which they read. They forthwith take alarm at the probable consequences, and having some lurking suspicion that they may have mistaken the symptoms, they follow the prescriptions laid down in their book in secret, lest they should bring themselves into open ridicule. Goethe shrewdly remarks: 'He who studies his body too much becomes diseased—his mind, becomes mad;' and there is an old Italian epitaph which, with a little amendment, would run thus: 'I was well—I wished to be better—*read medical books*—took medicine—and died.'

INVASION PANIC.

Towards the close of February 1744, the threatened invasion of England by the French, accompanied by the young Pretender, caused a general alarm throughout the kingdom, and all Roman Catholics were prohibited from appearing within ten miles of London. We had then three ships in the Downs; but the landing was expected to be in Essex or Suffolk. Walpole writes from the House of Commons, February 16th: 'We have come nearer to a crisis than I expected! After the various reports about the Brest squadron, it has proved that they are sixteen ships of the line off Torbay; in all probability to draw our fleet from Dunkirk, where they have two men-of-war, and sixteen large Indiamen to transport eight thousand foot and two thousand horse which are there in the town. There has been some difficulty to persuade the people of the imminence of our danger; but yesterday the King sent a message to both Houses to acquaint us that he has certain information of the young Pretender being in France, and of the designed invasion from thence, in concert with the disaffected here.' Immediately addresses were moved to assure the King of standing by him with lives and fortunes. All the troops were sent for, in the greatest haste, to London; and an express to Holland to demand six thousand men. On the 23rd, Walpole writes: 'There is no doubt of the invasion: the young Pretender is at Calais, and the Count de Saxe is to command the embarkation. Sir John Norris was to sail yesterday to Dunkirk, to try to burn their transports; we are in the utmost expectation of the news. The Brest squadron was yesterday on the coast of Sussex.' On the 25th of February, the English Channel fleet under Sir John Norris came within a league of the Brest squadron. Walpole says the coasts were covered with people to see the engagement; but at seven in the evening the wind changed, and the French fleet escaped. A violent storm shattered and wrecked the transports, and the expedition was glad to put back to Dunkirk. The dread of the invasion was then at an end.

With regard to 'the disaffected' mentioned

in the King's message, Mr. P. Yorke notes in his *Parliamentary Journal*: '1744, February 13. Talking upon this subject with Horace Walpole, he told me confidently that Admiral Matthews intercepted last summer a felucca in her passage from Toulon to Genoa, on board of which were found several papers of great consequence, relating to a French invasion in concert with the Jacobites; one of them particularly was in the style of an invitation from several of the nobility and gentry of England to the Pretender. These papers, he thought, had not been sufficiently looked into, and were not laid before the cabinet council until the night before the message was sent to both Houses.' The invasion designed in 1744 did not take place, but in the next year the young Pretender, as is well known, came with only seven men, and nearly overturned the government.

TIME—DAY—AND NIGHT.

By GEOFFREY WHITNEY, 1589.

Two horses free, a third doth swiftly chase,
The one is white, the other black of hue;
None bridles have for to restrain their pace,
And thus they both the other still pursue;
And never cease continual course to make,
Until at length the first they overtake.

The foremost horse that runs so fast away,
It is our time, while here our race we run;
The black and white presenteth night and day,
Who after haste, until the goal be won;
And leave us not, but follow from our birth,
Until we yield, and turn again to earth.

FEBRUARY 26.

St Alexander, patriarch of Alexandria, 326. St Parphyrius, bishop of Gaza, 420. St Victor, of Champagne, 7th century.

Born.—Anthony Cooper, Earl of Shaftesbury, 1671 *Essex House*; Rev. James Hervey, author of *Meditations*, 1714, *Hardingstone*; François J. D. Arago, natural philosopher, 1786; Victor Hugo, fictitious writer, 1802.

Died.—Manfred (of Tarento), killed, 1266; Robert Fabian, chronicler, 1513, *Cornhill*; Sir Nicholas Crispe, Guinea trader, 1665, *Hammersmith*; Thomas D'Urfey, wit and poet, 1723, *St James's*; Maximilian (of Bavaria), 1726, *Munich*; Joseph Tartin , musical composer, 1770, *Padua*; Dr Alexander Geddes, theologian, 1802, *Paddington*; John Philip Kemble, actor, 1823, *Lausanne*; Dr William Kitchiner, *litt rateur*, 1827, *St Pancras*; Sir William Allan, R.A., painter, 1850; Thomas Moore, lyric poet, 1852; Thomas Tooke, author of the *History of Prices*, &c., 1858, *London*.

ECCENTRICITIES OF DR KITCHINER.

Eccentricity in cookery-books is by no means peculiar to our time. We have all read of the oddities of Mrs Glasse's instructions; and most olden cookery-books savour of such humour, not to mention as oddities the receipts for doing out-of-the-way things, such as 'How to Roast a Pound of Butter,' which we find in the *Art of Cookery*, by a lady, 1748. To the humour of Dr Kitchiner in this way we doubtless owe a very good book—his *Cook's Oracle*, in which the instructions are given with so much come-and-read-me pleasantry

and gossiping anecdote as to win the dullest reader. But Kitchiner was not a mere book-making cook: he practised what he taught, and he had ample means for the purpose. From his father, a coal-merchant in an extensive way of business in the Strand, he had inherited a fortune of £60,000 or £70,000, which was more than sufficient to enable him to work out his ideal of life.* His heart overflowed with benevolence and good humour, and no man better understood the art of making his friends happy. He shewed equal tact in his books: his *Cook's Oracle* is full of common-sense practice; and lest his reader should stray into excess, he wrote *The Art of Invigorating and Prolonging Life*, and a more useful book in times when railways were not—*The Traveller's Oracle*, and *Horse and Carriage Keeper's Guide*. With his ample fortune, Kitchiner was still an economist, and wrote a *Housekeeper's Ledger*, and a coaxing volume entitled *The Pleasures of Making a Will*. He also wrote on astronomy, telescopes, and spectacles. In music he was a proficient; and in 1820, at the coronation of George IV., he published a collection of the *National Songs of Great Britain*, a folio volume, with a splendid dedication plate to His Majesty. Next he edited *The Sea Songs of Charles Dibdin*. But, merrily and wisely as Kitchiner professed to live, he had scarcely reached his fiftieth year when he was taken from the circle of friends. At this time he resided at No. 43, Warren-street, Fitzroy-square. On the 26th of February he joined a large dinner-party given by Mr Braham, the celebrated singer: he had been in high spirits, and had enjoyed the company to a later hour than his usually early habits allowed. Mathews was present, and rehearsed a portion of a new comic entertainment, which induced Kitchiner to amuse the party with some of his whimsical reasons for inventing odd things, and giving them odd names. He returned home, was suddenly taken ill, and in an hour he was no more!

Though always an epicure, and fond of experiments in cookery, and exceedingly particular in the choice of his viands, and in their mode of preparation for the table, Kitchiner was regular, and even abstemious, in his general habits. His dinners were cooked according to his own method; he dined at five; supper was

* The Doctor's father was a Roman Catholic, and in the riots of 1780, Beaufort-buildings, in the Strand, were filled with soldiers to protect Kitchiner's coal-wharf in the rear of the buildings by the river-side.

served at half-past nine; and at eleven he retired. Every Tuesday evening he gave a *conversazione*, at which he delighted to bring together professors and amateurs of the sciences and the polite arts. For the regulation of the party the Doctor had a placard over his drawing-room chimney-piece, inscribed 'Come at seven, go at eleven.' It is said that George Colman the younger, being introduced to Kitchiner on one of his evenings, and reading this admonition, found an opportunity to insert in the placard after 'go' the pronoun 'it,' which, it must be admitted, materially

WILLIAM KITCHINER, M.D.

altered the reading. In these social meetings, when the Doctor's servant gave the signal for supper, those who objected to take other than tea or coffee departed; and those who remained descended to the dining-room, to partake of his friendly fare. A cold joint, a lobster salad, and some little *entremets*, usually formed the summer repast; in winter some nicely-cooked hot dishes were set upon the board, with wine, *liqueurs*, and ales from a well-stocked cellar. Such

were the orderly habits at these evening parties, that, 'on the stroke of eleven,' hats, umbrellas, &c., were brought in, and the Doctor attended his guests to the street-door, where, first looking at the stars, he would give them a cordial shake of the hand, and a hearty 'good night,' as they severally departed.

Kitchiner's public dinners, as they may be termed, were things of more pomp, ceremony, and etiquette: they were announced by notes of invitation, as follows:—

'Dear Sir,—The honour of your company is requested, to dine with the Committee of Taste, on Wednesday next, the 10th instant.

'The specimens will be placed on the table at five o'clock precisely, when the business of the day will immediately commence.

'I have the honour to be

'Your most obedient Servant,

'W. KITCHINER, Sec.

'August, 1825,

'43, Warren-street, Fitzroy-square.

'At the last general meeting, it was unanimously resolved—that

'1st. An invitation to ETA BETA PI must be answered in writing, as soon as possible after it is received—within twenty-four hours at latest,—reckoning from that at which it was dated; otherwise the secretary will have the profound regret to feel that the invitation has been definitely declined.

'2nd. The secretary having represented that the perfection of the several preparations is so exquisitely evanescent that the delay of *one minute*, after the arrival at the meridian of conjunction, will render them no longer worthy of men of taste:

'Therefore, to ensure the punctual attendance of those illustrious gastrophilists who, on this occasion, are invited to join this high tribunal of taste—for their own pleasure, and the benefit of their country—it is irrevocably resolved—"That the janitor be ordered not to admit any visitor, of whatever eminence of appetite, after the hour at which the secretary shall have announced that the specimens are ready."

'By Order of the Committee,

'W. KITCHINER, Sec.'

At the last party given by the Doctor on the 20th February, as the first three that were bidden entered his drawing-room, he received them seated at his grand pianoforte, with 'See the Conquering Hero comes!' accompanying the air by placing his feet on the pedals, with a peal on the kettle-drums beneath the instrument. Alas, the conquering hero was not far off!

The accompanying whole-length portrait of Dr Kitchiner has been engraved from a well-executed mezzotint—a private plate—'painted and engraved by C. Turner, engraver in ordinary to His Majesty.' The skin of the stuffed tiger on the floor of the room was brought from Africa by Major Denham, and presented by him to his friend Kitchiner.

SUSPENSION OF CASH PAYMENTS IN 1797.

In the great war which England commenced against France in 1793, the first four years saw

two hundred millions added to the national debt, without any material advantage being gained: on the contrary, France had become more formidable than at first, had made great acquisitions, and was now less disposed to peace than ever. So much coin had left the country for the payment of troops abroad, and as subsidies to allies, that the Bank during 1796 began to feel a difficulty in satisfying the demands made upon it. At the close of the year, the people began to hoard coin, and to make a run upon the country banks. These applied to the Bank of England for help, and the consequence was, that a run upon it commenced in the latter part of February 1797. This great establishment could only keep itself afloat by paying in sixpences. Notwithstanding the sound state of its ultimate resources, its immediate insolvency was expected,—an event the consequences of which must have been dreadful. In that exigency, the Government stepped in with an order in council (February 26), authorizing the notes of the bank as a legal tender, until such time as proper remedies could be provided.

This suspension of cash payments by the Bank of England—a virtual insolvency—was attended by the usual effect of raising the nominal prices of all articles; and, of course, it deranged reckonings between creditors and debtors. It was believed, however, to be an absolutely indispensable step, and the Conservative party always regarded it as the salvation of the country. A return to cash payments was from the first promised and expected to take place in a few months; but, as is well known, King Paper reigned for twenty-two years. During most of that time, a guinea bought twenty-seven shillings worth of articles. It was just one of the dire features of the case that even a return to what should never have been departed from, could not be effected without a new evil; for of course, whereas creditors were in the first instance put to a disadvantage, debtors were so now. The public debt was considered as enhanced a third by the act of Sir Robert Peel for the resumption of cash payments, and all private obligations rose in the same proportion.

On a review of English history during the last few years of the eighteenth century, one gets an idea that there was little sound judgment and much recklessness in the conduct of public affairs; but the spirit of the people was unconquerable, and to that a very poor set of administrators were indebted for eventual successes which they did not deserve.

NELSON AND THE SPANISH ADMIRAL'S SWORD.

In the council-chamber of the Guildhall, Norwich, is a glass case containing a sword, along with a letter shewing how the weapon came there. When, in the midst of unexampled national distress, and an almost general mutiny of the sailors, the English fleet under Sir John Jervis engaged and beat the much superior fleet of Spain off Cape St Vincent, February 14, 1797, Captain Nelson, in his ship the *Captain*, seventy-four, disabled several vessels, and received the surrender of one, the *San Josef*, from its com-

mander, after having boarded it. [This unfortunate officer soon after died of his wounds.] It would appear that, a few days after the action, Nelson bethought him of a proper place to which to assign the keeping of the sword of the Spanish commander, and he determined on sending it to the chief town of his native county. This symbol of victory accordingly came to the Mayor of Norwich, accompanied by a letter which is here exactly transcribed :

Irresistible, off Lisbon,
Feb. 26th, 1797.

SIR,

Having the good fortune on the most glorious 14th February to become possessed of the sword of the Spanish Rear Admiral Don Xavier Francesco Wintheysen in the way sett forth in the paper transmitted herewith

And being Born in the County of Norfolk, I beg leave to present the sword to the City of Norwich in order to its being preserved as a memento of this event, and of my affection for my native County.

I have the honor to Be,

Sir,

your most Obedient
servant,

HORATIO NELSON.

To the Mayor of
Norwich.

SPANISH COMMANDER'S SWORD,
PRESENTED BY NELSON TO NORWICH.

CHURCH BELLS.

Large bells in England are mentioned by Bede as early as A.D. 670. A complete peal, however, does not occur till nearly 200 years later, when Turketul, abbot of Croyland, in Lincolnshire, presented his abbey with a great bell, which was called Guthlac, and afterwards added six others, named Pega, Bega, Bettelin, Bartholomew, Tatwin, and Turketul. At this early period, and for some centuries later, bell-founding, like other scientific crafts, was carried on by the monks. Dunstan, who was a skilful artificer, is recorded by Ingulph as having presented bells to the western churches. When in after times bell-founding became a regular trade, some founders were itinerant, travelling from place to place, and stopping where they found business; but the majority had settled works in large towns. Among other places London, Gloucester, Salis-

bury, Bury St Edmunds, Norwich, and Colchester have been the seats of eminent foundries.

Bells were anciently consecrated, before they were raised to their places, each being dedicated to some divine personage, saint, or martyr. The ringing of such bells was considered efficacious in dispersing storms, and evil spirits were supposed to be unable to endure their sound. Hence the custom of ringing the 'passing bell' when any one was *in articulo mortis*, in order to scare away fiends who might otherwise molest the departing spirit, and also to secure the prayers of such pious folk as might chance to be within hearing. An old woman once related to the writer, how, after the death of a wicked squire, his spirit came and *sat upon the bell*, so that all the ringers together could not toll it. The bell-cots, so common on the gable-ends of our old churches, in former times contained each a 'Sancte' bell, so called from its being rung at the elevation of the host; one may be seen, still hanging in its place, at Over, Cambridgeshire.

It is scarcely probable that any bells now remain in this country of date prior to the 14th or at most the 13th century, and of the most ancient of these the age can only be ascertained approximately, the custom of inserting the date in the inscription (which each bell almost invariably bears) not having obtained until late in the 16th century.

The very old bells expand more gradually from crown to rim than the modern ones, which splay out somewhat abruptly towards the mouth. It may be added that the former are almost invariably of excellent tone, and as a rule far superior to those cast now-a-days. There is a popular idea that this is in consequence of the older founders adding silver to their bell-metal; but recent experiments have shewn that the presence of silver spoils instead of improving the tone, in direct proportion to the quantity employed.

A cockney is usually defined as a person born within hearing of Bow bells; Stow, however, who died early in 1605, nowhere mentions this notion, so that it is probably of more recent origin. The Bow bell used to be rung regularly at nine o'clock at night; and by will dated 1472, one John Donne, Mercer, left two tenements with appurtenances, to the maintenance of Bow bell. 'This bell being usually rung somewhat late, as seemed to the young men prentices and other in Cheape, they made and set up a rhyme against the clerk, as followeth :

' Clarke of the Bow bell with the yellow locks,
For thy late ringing thy head shall have knocks.'

Whereunto the clerk replying, wrote—

' Children of Cheape, hold you all still,
For you shall have the Bow bell rung at your will.*'

One of the finest bits of word-painting in Shakespeare occurs in the mention of a bell, where King John, addressing Hubert, says

' If the midnight bell
Did with his iron tongue and brazen mouth
Sound one unto the drowsy race of night.'

Here 'brazen' implies not merely that particular mixture of copper and calamine, called brass,

* Stow's *Survey of London*.

but in a broader sense, any metal which is compounded with copper. This acceptation of the term is noticed by Johnson, and in confirmation occurs the fact that the name of *Brasyer* was borne of old by an eminent family of east-country bell-founders; being, like Bowyer, Miller, Webber, &c. &c., a trade-name, *i.e.* derived from the occupation of the bearer.

The inscriptions on the oldest bells are in the Lombardic and black-letter characters, the former probably the more ancient; the black-letter was superseded by the ordinary Roman capitals, towards the close of the sixteenth century. Even later, however, than this, some founders employed a sort of imitation of the old Lombardic. The following are genuine Lombardic inscriptions:

SALVET NVNDA ADAM QVI CVNCTA CREAVIT ET ADAM *

RAC CAMPANELLA COLITUR RATERINA PUELLA

SANCT ANDREU IS QI NAOE

The next ten are transcripts of black-letter inscriptions.

- 'Sum Rosa Pulsata Mundi Raterina Vocata.'
- 'Est Michi Collatum, Ihe istud nomen amatum.'
- 'Plebs ois plaudit ut me tam sepius audit.'
- 'Stella Maria Maris Succurre Pissime Nobis.'
- 'Virginis Egregie Vocor Campana Marie.'
- 'Xps Perpetue Det Nobis Gaudia Vitae.'

* Salvete nunc Adam qui cuncta creavit et Adam.

- 'Me Melior here, non est Campana sub ere.'
- 'In Multis annis resonat Campana Johannis.'
- 'Fac Margareta Nobis Hec Munera Peta.'
- 'Tandem Resono Michael.'

The commonest black-letter inscription is a simple invocation, as 'Ave Maria,' or 'Sancte _____, ora pro nobis.' After the Reformation these invocations of course disappeared, and founders then more frequently placed their names on the bells, with usually some rhyme or senti-

ANCIENT BELL FOUNDRY STAMPS.

ment, which, as some of the following specimens will prove, is often sad doggrel:—

‘This bell was broake and cast againe, as plainly doth appeare,

John Draper made me in 1618, wich tyme chvrch-wardens were

Edward Dixon for the one, whoe stode close to his tacklin,

And he that was his partner there was Alexander Jacklin.’

‘Of all the bells in Benet I am the best,
And yet for my casting the parish paid lest.’

‘Repent, I say, be not too late,
Thyself al times redy make.’

‘I value not who doth me sec,
For Thomas Bilbie casted me ;
All tho my voice it is but small
I will be heard among you all.’

‘My sound is good, which that you hear,
Young Bilbie * made me sound so clear.’

‘My treble voice your hearts rejoyce.’

‘Let us all sound out,
He keep my place no doubt.’

‘Hethatwilpvrchashonorsgaynemvstancient
lathers [sic] stillmayntayne.’

Four bells at Graveley, Cambridgeshire, are thus inscribed:—

‘*Treble.* God of his marce heareth us all,

2. Whenupon that we do call.

3. O priese the Lord thearefore I say,

Tenor. I sound vnto the living when the sove doth part way.’

The older founders, as we have seen, seldom placed their names on their bells; yet the black-letter and later Lombardic inscriptions are often accompanied by their *Foundry-stamps*, or trade marks, some specimens of which are engraved above:

(1) Occurs on two bells at Brent-Tor, Devon, and elsewhere; the three vessels so like coffee-pots are founders’ lave-pots. (2) Is supposed to be the stamp of a London foundry; it may be seen on four bells at St Bartholomew’s, Smithfield. (3) Is the stamp of a Bury St Edmund’s foundry; the gun and bullet indicate that H. S. was also a gun-founder. (6) Is the mark of Stephen Tonni, who founded at Bury about 1570. The crown and arrows are typical of the martyrdom of St Edmund.

During the Civil War, many church bells were melted down and cast into cannon. Not quite so honourable was the end of four large bells which once hung in a clockier or clock-tower in St Paul’s Cathedral, which tower was pulled down by Sir Miles Partridge in the reign of Henry VIII., and the common speech then was that ‘he did set a hundred pounds upon a cast of dice against it, and so won the said clockier and bells of the King, and then causing the bells to be broken as they hung, the rest was pulled down.’†

* These Bilbies were great west-country founders. One of them is said to have committed suicide because he could not get Cullompton bells in tune.

† Stow’s *Survey of London*.

THE SILENT TOWER OF BOTTREAUx.*

The church at Boscastle, in Cornwall, has no bells, while the neighbouring tower of Tintagel contains a fine peal of six; it is said that a peal of bells for Boscastle was once cast at a foundry on the Continent, and that the vessel which was bringing them went down within sight of the church tower. The Cornish folk have a legend on this subject, which has been embodied in the following stanzas by Mr Hawker:

Tintagel bells ring o’er the tide,
The boy leans on his vessel’s side,
He hears that sound, and dreams of home
Soothe the wild orphan of the foam.

‘Come to thy God in time,’
Thus saith their pealing chime;
‘Youth, manhood, old age past,
Come to thy God at last.’

But why are Bottreaux’s echoes still?
Her tower stands proudly on the hill,
Yet the strange chough that home hath found,
The lamb lies sleeping on the ground.

‘Come to thy God in time,’
Should be her answering chime;
‘Come to thy God at last,’
Should echo on the blast.

The ship rode down with courses free,
The daughter of a distant sea,
Her sheet was loose, her anchor stored,
The merry Bottreaux bells on board.

‘Come to thy God in time,’
Rung out Tintagel chime;
‘Youth, manhood, old age past,
Come to thy God at last.’

The pilot heard his native bells
Hang on the breeze in fitful spells.

‘Thank God,’ with reverent brow, he cried,
‘We make the shore with evening’s tide.’

‘Come to thy God in time,’
It was his marriage chime;
‘Youth, manhood, old age past,
Come to thy God at last.’

‘Thank God, thou whining knave, on land,
But thank at sea the steersman’s hand,’

The captain’s voice above the gale,
‘Thank the good ship and ready sail.’

‘Come to thy God in time,’
Sad grew the boding chime;
‘Come to thy God at last,’
Boomed heavy on the blast.

Up rose that sea, as if it heard
The Mighty Master’s signal word.

What thrills the captain’s whitening lip?
The death-groans of his sinking ship.

‘Come to thy God in time,’
Swung deep the funeral chime,
‘Grace, mercy, kindness, past—
Come to thy God at last.’

Long did the rescued pilot tell,
When grey hairs o’er his forehead fell,
While those around would hear and weep,
That fearful judgment of the deep.

‘Come to thy God in time,’
He read his native chime;
‘Youth, manhood, old age past,
Come to thy God at last.’

* Bottreaux is the old name for Boscastle.

Still, when the storm of Bottreaux's waves
Is waking in his weedy caves,
Those bells, that sullen surges hide,
Peal their deep tones beneath the tide.
'Come to thy God in time,'
Thus saith the ocean chime;
'Storm, whirlwind, billow past,
Come to thy God at last.'

THE ROOKS AND NEW STYLE.

The 26th of February, N.S., corresponds to the day which used to be assigned for the rooks beginning to search for materials for their nests, namely, the twelfth day after Candlemas, O.S.

The Rev. Dr Waugh used to relate that, on his return from the first year's session at the University of Edinburgh, his father's gardener undertook to give him a few lessons in natural history. Among other things, he told him that the 'craws' (rooks) always began building twelve days after Candlemas. Wishful to shew off his learning, young Waugh asked the old man if the craws counted by the old or by the new style, just then introduced by Act of Parliament. Turning upon the young student a look of contempt, the old gardener said—'Young man, craws care naething for acts of parliament.'

FEBRUARY 27.

St Nestor, bishop in Pamphylia, martyr, 250. Saints Julian, Chronion, and Besas, martyrs, 3rd century. St Thalilaüs, 5th century. St Leander, bishop of Seville, 596. St Galmier, of Lyons, about 650. St Alnoth, of England, martyr, about 7th century.

Born.—George Morley, bishop of Winchester, 1597, *Cheapside*; John David Michaelis, Orientalist, 1717, *Halle*; James Robinson Planché, *littérateur*, 1796, *London*; Lord William George Frederick Bentinck, 1802; Henry W. Longfellow, poet, 1807.

Died.—The Emperor Geta, murdered, 212; Philip Nye, Nonconformist, 1673, *London*; John Evelyn, diarist, 1706, *Wotton*; Dr John Arbuthnot, 1735, *Cork-street, London*; Sir John B. Warren, G.C.B., 1822; William Woolnoth, engraver, 1837.

JOHN EVELYN, THE DIARIST.

This excellent man,—the perfect model of an English gentleman of the seventeenth century, and known as 'Sylva Evelyn,' from his work with that title, on *Forest Trees*—was born of an ancient and honourable family, at Wotton House, in Surrey, on the 31st of October 1620. At four years old, he was taught to read by one Frier, in the church porch, at Wotton. He next learnt Latin in a school at Lewes, in Sussex; his father proposed sending him to Eton, but was deterred from doing so by the report of the severe discipline in that school. He completed his education at Balliol College, Oxford; and in 1640 was entered at the Middle Temple, London, but soon relinquished what he calls 'the unpolished study' of the law. Having stored his mind with travel and study, he entered on a long career of active, useful, and honourable employment. He was not, however, without some share in the intrigues connected with the Restoration of Charles the Second, after which he was often at court. On the foundation of the Royal Society,

in 1662, he was appointed one of the fellows, and a member of the council. Among the various official duties to which he was appointed, was the commissionership for building Greenwich Hospital, the first stone of which edifice he laid on the 30th of June 1696.

But the delight of Evelyn was in the pursuits of rural economy. He was the great improver of English gardening, and first laid out his gardens at Sayes Court, Deptford, which he let to the Czar Peter the Great, who damaged them to the extent of £150 in three weeks. Evelyn then retired to his paternal home at Wotton, 'sweetly environed with delicious streams and venerable woods,' the latter valued at £100,000. His love of planting, and the want of timber for the navy, led him to write his *Sylva; a Discourse on Forest Trees*, the first book printed by order of the Royal Society; it led to the planting of many millions of forest trees, and is one of the very few books in the world which completely effect what they were designed to do. Another valuable work by Evelyn is his *Diary, or Kalendarium*, a most interesting picture of the time in which he lived, and the manuscript of which was accidentally saved from being used as waste paper. Evelyn's *Diary* is, however, an after compilation: unlike Pepys's *Diary*, which is an unstudied record from day to day.

John Evelyn died in his 86th year, at his town house, called *The Head*, in Dover-street, Piccadilly, on the 27th of February 1705-6: his remains rest in a raised coffin-shaped tomb in Wotton Church, where also is interred his estimable wife, the daughter of Sir Richard Browne.

THE FIRST RUSSIAN EMBASSY TO ENGLAND.

February 27, 1557-8, the first Russian embassy arrived in the neighbourhood of London. It came in rather remarkable circumstances. The Russian Emperor, Ivan Vasilivich, thought the time had now arrived when his country ought to enter upon formal commercial relations with England. He therefore charged a noble named Osep Napea to proceed thither with a goodly company, and bearing suitable presents for 'the famous and excellent princes, Philip and Mary, King and Queen of England.' It appears that among the gifts were a number of the skins of the sable, with the tecth, ears, and claws of the animal preserved, four living sables, with chains and collars, 'thirty luzarnes rich and beautiful,' six great skins such as the emperor himself wore, and a great jer-falcon, with a silver drum used for a lure to it in hawking.

The expedition sailed in several English vessels from the port of St Nicolas, in Russia, but was very unfortunate in the voyage. Several vessels being thrown away, or forced to seek shelter on the coast of Norway, one called the *Edward Bonaventure*, containing the ambassador, arrived with difficulty, after a four months' voyage, on the east coast of Aberdeenshire, in Scotland, along with a smaller vessel, called her pink. There they were driven ashore by a violent storm, near Kinnaird Head, when a boat containing the grand pilot, with the ambassador and

seven other Russian gentlemen, making for land in the dark, was overwhelmed and beaten on the rocks: thus the pilot and several of the Russians and mariners were drowned, and only the ambassador himself and two or three others were saved. The ship became a total wreck, and such of her valuable goods as came on shore, including the gifts to the English monarchs, were pillaged by the rude people of the coast; but the ambassador and his small company were speedily received under care of the gentry of the district, and treated with the greatest kindness.

Stow relates in his *Chronicle*—'As soon as it was known to the company in London of the loss of their pilot, men, goods, and ships, the merchants obtained the Queen's letters to the Lady Dowager of Scotland [Mary of Lorraine, widow of James V., and Regent of the kingdom], for the gentle entertainment of the said ambassador with his train, and restitution of his goods, and also addressed two gentlemen, Mr Laurence Hassey, Doctor of the Civil Law, and George Gilpin, with money and other requisites, into Scotland, to comfort him and his there, and also to conduct him into England.'

We learn from a contemporary Scottish writer, Bishop Lesley, that the ambassador and his friends were brought to Edinburgh, and there entertained handsomely by the Queen Regent for some time; after which they set out for Berwick, attended by Lord Hume on the part of the Queen, and accompanied by the two English gentlemen who had come for their succour, besides 500 gentlemen of Scotland on horseback. Arriving within twelve miles of London on the 27th February 1557-8, the Russian ambassador was there received in formal style by eighty merchants, in goodly apparel, and with chains of gold, all mounted on horseback, by whom he was conducted to a merchant's house, four miles from the city, and there honourably lodged. 'Next day,' says Stow, 'he was, by the merchant adventurers for Russia, to the number of 140 persons, and so many or more servants in one livery, conducted towards the city of London, where by the way he had not only the hunting of the fox, &c., but also, by the Queen's Majesty's commandment was received by the Viscount Montague; he, being accompanied by divers lusty knights, esquires, gentlemen, and yeomen, to the number of 300 horses, led him to the north parts of the city of London, where, by four merchants richly apparelled, was presented to him a fair, richly-trapped horse, together with a footcloth of crimson velvet, enriched with gold laces; whereupon the ambassador mounted, riding toward Smithfield bars, the Lord Mayor, accompanied with the aldermen in scarlet, did receive him, and so riding through the city of London, between the Lord Mayor and Viscount Montague, a great number of merchants and notable persons riding before, was conducted to his lodgings in Fenchurch-street, &c. &c.

'At his first entrance into his chamber, there was presented unto him on the Queen's behalf, for a gift and present, one rich piece of cloth of tissue, a piece of cloth of gold, another piece of cloth of gold raised with crimson velvet, a piece

of crimson velvet in grain, a piece of purple velvet, a piece of damask purpled, a piece of crimson damask; which he thankfully accepted.'

It was not till the 25th of March, exactly a twelvemonth after his taking leave of his master, that he came before the English court. Being conducted by water to Westminster, he was there honourably received by six lords, who conducted him into a chamber, where he was saluted by the Lord Chancellor, the Treasurer, Privy Seal, the Admiral, the Bishop of Ely, and other counsellors. Then he was brought into the presence of the King and Queen, 'sitting under a stately cloth of honour,' and permitted to make his oration, and deliver his letters. Two days after, the Bishop of Ely and Sir William Peter, chief secretary, came to his lodging and concluded the commercial treaty which was desired by his master.

On the 3rd of May, having received sundry rich gifts for the Muscovian Emperor, including the singular one of a pair of lions, male and female, Osep Napea departed from the Thames in four goodly ships full of English merchandise. 'It is to be remarked,' says Stow, 'that during the whole abode of the said ambassador in England, the company of merchants did frankly give to him and his all manner of costs and charges in victuals, riding from Scotland to London, during his abode there, and until setting of sail aboard of ship.'

FEBRUARY 28.

Martyrs who died of the great pestilence in Alexandria, 261-3. St Romanus, about 460, and St Lupicinus, abbots, 479. St Proterius, patriarch of Alexandria, martyr, 557.

Born.—Michael de Montaigne, essayist, 1533, *Perigord*; Henry Stubbe, 'the most noted Latinist and Grecian of his age,' 1631, *Partney*; Dr Daniel Solander, naturalist, 1736, *Nordland, Sweden*.

Died.—Humphrey, Duke of Gloucester, murdered, 1447, *St Albans*; George Buchanan, historian, 1582, *Edinburgh*; Christian IV. (of Denmark), 1646; Edward Moore, dramatist, 1757; Dr Richard Grey, 1771.

MRS SUSAN CROMWELL.

On the 28th of February 1834, died, at the age of ninety, Mrs Susan Cromwell, youngest daughter of Thomas Cromwell, Esq., the great-grandson of the Protector. She was the last of the Protector's descendants who bore his name. The father of this lady, whose grandfather, Henry Cromwell, had been Lord Lieutenant of Ireland, spent his life in the modest business of a grocer on Snow-hill; he was, however, a man of exemplary worth, fit to have adorned a higher station. His father, who was a major in King William's army, had been born in Dublin Castle during his father's lieutenancy.

It may be remarked that the family of the Lord Protector Oliver Cromwell was one of good account, his uncle and godfather, Sir Oliver Cromwell, possessing estates in Huntingdonshire alone which were afterwards worth £30,000

a-year. The Protector's mother, by an odd chance, was named Stewart; but it is altogether imaginary that she bore any traceable relationship to the royal family. The race was originally Welsh, and bore the name of Williams; but the great-grandfather of the Protector changed it to Cromwell, in compliance with a wish of Henry VIII., taking that particular name in honour of his relation, Thomas Cromwell, Earl of Essex.

INSTITUTION OF THE ORDER OF ST PATRICK.

On the 28th of February 1783, George III. signed at St James's the statutes constituting the Order of St Patrick. The forming of this order of knighthood was prompted by the recent appearances of a national Irish spirit which would no longer sit patiently under neglect and misgovernment. It was thought by the new cabinet of Lord Shelburne a good policy to seek to conciliate the principal peers of Ireland by conferring marks of distinction upon them. The whole arrangements were after the model of those of the Order of the Garter. Besides the King as 'Sovereign,' there were a Grand Master, and fifteen Companions (since extended to twenty-two), besides a Chancellor, a Registrar, a Secretary, a Genealogist, an Usher, and a King-at-Arms, a Prelate being afterwards added. The first companions elected were the Prince Edward (afterwards Duke of Kent, father of Queen Victoria), the Duke of Leinster, and thirteen Earls of Ireland, amongst whom was the Earl of Mornington, afterwards Marquis Wellesley, eldest brother of the Duke of Wellington. Proper dresses and insignia were ordered for the knights and officers, and the hall of Dublin Castle, under the new name of ST PATRICK'S HALL, was assigned as their place of meeting. It was designed, of course, as a concession to the national feelings, that the order was named from St Patrick, the tutelary saint of Ireland, and that the cross of St Patrick (a red saltire), and a golden harp, the ancient Irish ensign, together with the national badge, the shamrock or trefoil, to which the saint had given celebrity, were made its principal symbols.

It will surprise no one, not even amongst the people of the sister island itself, and probably it will amuse many, that a few anomalous circumstances attended the formation of the order of St Patrick. First, the saint's 'day' was not chosen for the institution of the order, and is not celebrated by them. Second, the Grand Master, though entitled to preside in absence of the sovereign, is not necessarily a member of the order. Further, the secretary has no duties (though he draws fees); the letters patent of foundation are not known to exist (no one can tell if they ever passed the great seal either of England or Ireland); and there are no arrangements for degradation or expulsion.*

ODDITIES OF FAMILY HISTORY.

Human life and its relations have certain tolerably well-marked bounds, which, however, are sometimes overpassed in a surprising manner.

One of the most ancient observations regarding

* Nicholas's *History of the Orders of Knighthood of the British Empire*, iv. 3-92.

human life, and one yet found acceptable to our sense of truth, is that a life passed healthily, and unexposed to disastrous accident, will probably extend to seventy years. Another is that there are usually just about three generations in a century. And hence it arises that one generation is usually approaching the grave when the third onward is coming into existence:—in other words, a man is usually well through his life when his son's children are entering it, or a man's son is usually near the tomb about a hundred years after his own birth,—a century rounding the mortal span of two generations and seeing a third arrived at the connubial period.

It is well known, nevertheless, that some men live much beyond seventy years, and that more than three generations are occasionally seen in life at one time.

Dr Plot, in his *Natural History of Staffordshire*, 1686, gives many instances of centenarians of his time, and of persons who got to a few years beyond the hundred,—how far well authenticated we cannot tell. He goes on to state the case of 'old Mary Cooper of King's Bromley in this county, not long since dead, who lived to be a *beldam*, that is, to see the sixth generation, and could say the same I have,' says he, 'heard reported of another, viz. "Rise up, daughter, and go to thy daughter, for thy daughter's daughter hath a daughter;" whose eldest daughter Elizabeth, now living, is like to do the same, there being a female of the fifth generation near marriageable when I was there. Which is much the same that Zuingerus reports of a noble matron of the family of Dolburges, in the archbishopric of Mentz, who could thus speak to her daughter:

"(1) Mater ait (2) natae, Dic (3) natae, Filia, (4) natam Ut moveat, (5) natae flangere (6) filiolum."

That is, the mother said to her daughter, daughter bid thy daughter tell her daughter, that her daughter's daughter cries.'

He adduces, as a proof how far this case is from being difficult of belief, that a Lady Child of Shropshire, being married at twelve, had her first baby before she was complete thirteen, and this being repeated in the second generation, Lady Child found herself a grandmother at twenty-seven! At the same rate, she might have been a *beldam* at sixty-six; and had she reached 120, as has been done by others, it was possible that nine generations might have existed together!

Not much less surprising than these cases is one which Horace Walpole states in a letter dated 1785 to his friend Horace Mann: 'There is a circumstance,' he says, 'which makes me think myself an antediluvian. I have literally seen seven descents in one family. . . . I was school-fellow of the two last Earls of Waldegrave, and used to go to play with them in the holidays, when I was about twelve years old. They lived with their grandmother, natural daughter of James II. One evening when I was there, came in her mother Mrs Godfrey, that king's mistress, ancient in truth, and so superannuated, that she scarce seemed to know where she was. I saw her another time in her chair in St James's Park, and have a perfect idea of her face, which was pale, round, and sleek. Begin with her; then

count her daughter, Lady Waldegrave; then the latter's son the ambassador; his daughter Lady Harriet Beard; her daughter, the present Countess Dowager of Powis, and her daughter Lady Clive; there are six, and the seventh now lies in of a son, and might have done so six or seven years ago, had she married at fourteen. When one has beheld such a pedigree, one may say, "And yet I am not sixty-seven!"

While two generations, moreover, are usually disposed of in one hundred years, there are many instances of their extending over a much longer space of time. In our late article on the connection of distant ages by the lives of individuals, the case of James Horrox was cited, in which the father was born in 1657, and the son died in 1844, being eighty-seven years beyond the century. Benjamin Franklin, who died in 1790, was the grandson of a man who had been born in the sixteenth century, during the reign of Elizabeth, three generations thus extending over nearly two centuries. The connubial period of most men is eminently between twenty-eight and forty; but if men delay marriage to seventy, or undertake second or third nuptials at that age with young women—both of them events which sometimes happen—it must arise, as a matter of course, that not a century, but a century and a half, or even more, will become the bounds of two generations. The following instance speaks for itself. 'Wednesday last,' says the *Edinburgh Courant* of May 3, 1766, 'the lady of Sir William Nicolson, of Glenbervy, was safely delivered of a daughter. What is very singular, Sir William is at present ninety-two years of age, and has a daughter alive of his first marriage, aged sixty-six. He married his present lady when he was eighty-two, by whom he has now had six children.' If the infant here mentioned had survived to ninety-two also, she might have said at her death, in 1858, 'My father was born a hundred and eighty-four years ago, in the reign of Charles II.'

There are also average bounds to the number of descendants which a man or a woman may reckon before the close of life. To see three, four, or five children, and three or four times the number of grandchildren, are normal experiences. Some pairs, however, as is well known, go much beyond three, four, or five. Some marry a second, or even a third time, and thus considerably extend the number of the immediate progeny. In these cases, of course, the number of grandchildren is likely to be greatly extended. Particular examples are on record, that are certainly calculated to excite a good deal of surprise. Thus we learn from a French scientific work that the wife of a baker at Paris produced one-and-twenty children—at only seven births, moreover, and in the space of seven years! Boyle tells of a French advocate of the sixteenth century who had forty-five children. He is, by-the-by, spoken of as a great water-drinker—'aquæ Tiraquellus amator.' We learn regarding Catherine Leighton, a lady of the time of Queen Elizabeth, that she married in succession husbands named Wygmore, Lymmer, Collard, and Dodge, and had children by all four; but we do not learn how many.

Thomas Urquhart of Cromarty and his wife Helen Abernethy—the grandparents of that singular genius Sir Thomas Urquhart, the translator of *Rabelais*—are stated to have had thirty-six children, twenty-five of them sons, and they lived to see the whole of this numerous progeny well provided for. 'The sons were men of great reputation, partly on account of their father's, and partly for their own personal merits. The daughters were married in families not only equal to their quality, but of large, plentiful estates, and they were all of them (as their mother had been) very fruitful in their issue.' Thomas Urquhart, who lived in the early part of the sixteenth century, built for himself a lofty, many-turreted castle, with sundry picturesque and elegant features, which Hugh Miller has well described in his account of Cromarty, but which was unfortunately taken down in 1772. It was also remembered of this many-childed laird, that he used to keep fifty servants. The entire population of Cromarty Castle must therefore have been considerable. Notwithstanding the great expense thus incurred, the worthy laird died free of debt, and transmitted the family property unimpaired to his posterity.

As to number of descendants, two cases in the annals of English domestic life come out very strongly. First, there was Mrs Honeywood of

MARY HONEYWOOD, AGED NINETY-THREE.

Charing, in Kent, who died on the 10th of May 1620, aged ninety-three, having had sixteen children, a hundred and fourteen grandchildren, two hundred and twenty-eight great-grandchildren, and nine great-great-grandchildren. Dr Michael Honeywood, dean of Lincoln, who died in 1681, at the age of eighty-five, was one of the

grandchildren.* The second instance was even more wonderful. It represents Lady Temple of Stow, as dying in 1656, having given birth to four sons and nine daughters, and lived to see *seven hundred descendants*.

In as far as life itself goes in some instances considerably beyond an average or a rule, so does it happen that men occasionally hold office or practise a profession for an abnormally long time. Hearne takes notice of a clergyman, named Blower, who died in 1643, vicar of White-Waltham, which office he had held for sixty-seven years, though it was not his first cure. 'It was said he never preached but one sermon in his life, which was before Queen Elizabeth. Going after this discourse to pay his reverence to her Majesty, he first called her My Royal Queen, and afterwards My Noble Queen; upon which Elizabeth smartly said, "What! am I ten groats worse than I was?" Blower was so mortified by this good-natured joke, that he vowed to stick to the homilies for the future.†

The late Earl of Aberdeen had enjoyed the honours of his family for the extraordinary period of sixty years,—a fact not unexampled, however, in the Scottish peerage, as Alexander, ninth Earl of Caithness, who died in 1765, had been peer for an equal time, and Alexander, fourth Duke of Gordon, was duke for seventy-five years, namely from 1752 to 1827. It is perhaps even more remarkable that for the Gordon dukedom, granted in 1684, there were but four possessors in a hundred and forty-three years, and for the Aberdeen earldom, granted in 1682, there were but four possessors in a hundred and seventy-eight years! In connection with these particulars, we may advert to the long reign of Louis XIV. of France—seventy-two years.

Odd matrimonial connections are not infrequent. For example, a man will marry the niece of his son's wife. Even to marry a grandmother, though both ridiculous and illegal, is not unexampled (the female, however, being not a blood relation).

'Dr Bowles, doctor of divinity, married the daughter of Dr Samford, doctor of physic, and, *vice versâ*, Dr Samford the daughter of Dr

* In the *Topographer and Genealogist*, edited by John Gough Nichols (1846), vol. i., is given an enumeration of the progeny of Mary Honeywood, shewing how eleven of her children had each a considerable family, three as many as eleven, one twelve, and two thirteen, children; the eldest grandchild having twenty, &c. The Dean of Lincoln, one of the grandsons, used to relate that he was present at a dinner given by the old lady to a family party of two hundred of her descendants. She died in 1620, aged ninety-three, having outlived her marriage seventy-seven years.

† Hearne found, in the register of White-Waltham, the figure of the key of the west door of the church, which Blower had there delineated, in accordance with a custom which had in view to prevent any alteration being made in the key. Formerly, the bishop of the diocese used to deliver the keys of a church in a formal manner to the ostiarii, or doorkeepers, the deacons at the same time delivering the doors; latterly the minister performed these formalities, always taking a sketch of the keys in the parish registers, so that, in case of their being lost or unwarrantably altered, they might have them restored.—*Leland's Itinerary*, v. 153.

Bowles; whereupon the two women might say, These are our fathers, our sons, and our husbands.'—*Arch. Usher's MSS. Collections*, quoted in *Reliquiæ Hearnianæ*, i. 124.

The rule in matrimonial life where no quarrel has taken place is to continue living together. Yet we know that in this respect there are strange eccentricities. From the biography of our almost divine Shakspeare, it has been inferred that, on going to push his fortune in London, he left his Anne Hathaway (who was eight years his senior) at Stratford, where she remained during the sixteen or seventeen years which he spent as a player and play-writer in the metropolis; and it also appears that, by and by returning there as a man of gentlemanly means, he resumed living with Mrs Shakspeare, as if no sort of alienation had ever taken place between them. There is even a more curious, and, as it happens, a more clear case, than this, in the biography of the celebrated painter, George Romney. He, it will be remembered, was of peasant birth in Lancashire. In 1762, after being wedded for eight years to a virtuous young woman, he quitted his home in the north to try his fortune as an artist in London, leaving his wife behind him. There was no quarrel—he supplied her with ample means of support for herself and her two children out of the large income he realized by his profession; but it was not till *thirty-seven years had passed*, namely, in 1799, when he was sixty-five, and broken in health, that the truant husband returned home to resume living with his spouse. It is creditable to the lady, that she was as kind to her husband as if he had never left her; and Romney, for the three or four years of the remainder of his life, was as happy in her society as ill health would permit. It is a mystery which none of the great painter's biographers, though one of them was his son, have been able to clear up.

LINES ON THE GRAVE OF JACKSON THE PUGILIST,

In the West London and Westminster Cemetery.

'Stay, Traveller,' the Roman record said,
To mark the classic dust beneath it laid;
'Stay, Traveller,' this brief memorial cries,
And read the moral with attentive eyes:
Hast thou a lion's heart, a giant's strength,
Exult not, for these gifts must yield at length;
Do health and symmetry adorn thy frame,
The mouldering bones below possessed the same;
Docs love, does friendship, every step attend,
This man ne'er made a foe, nor lost a friend;
But death full soon dissolves all human ties,
And, his last combat o'er, here Jackson lies.

THE RACE-HORSE ECLIPSE.

On the 28th of February 1789, died at Canons, in Middlesex, the celebrated Horse Eclipse, at the advanced age of twenty-five. The animal had received his name from being born during an eclipse, and it became curiously significant and appropriate when, in mature life, he was found to surpass all contemporary horses in speed. He was bred by the Duke of Cumberland, younger brother of George III., and afterwards became the property of Dennis O'Kelly, Esq., a gentleman of large fortune, who died in December

1787, bequeathing this favourite horse and another, along with all his brood mares, to his brother Philip, in whose possession the subject of this memoir came to his end. For many years, Eclipse lived in retirement from the turf, but in another way a source of large income to his master, at Clay Hill, near Epsom, whither many curious strangers resorted to see him. They used to learn with surprise,—for the practice was not common then, as it is now,—that the life of Eclipse was insured for some thousands of pounds. When, after the death of Dennis O'Kelly, it became necessary to remove Eclipse to Canons, the poor beast was so worn out that a carriage had to be constructed to carry him. The secret of his immense success in racing was revealed after death in the unusual size of his heart, which weighed thirteen pounds.

FEBRUARY 29.

St Oswald, bishop of Worcester, and archbishop of York, 992.

ST OSWALD.

Oswald was an Anglo-Saxon prelate who was rewarded with the honour of canonization for the zeal with which he had assisted Dunstan and Odo in revolutionizing the Anglo-Saxon church, and substituting the strict monachism of the Benedictines for the old genial married clergy; or, in other words, reducing the Church of England to a complete subjection to Rome. Oswald was Odo's nephew, and was, like him, descended from Danish parents, and having at an early age distinguished himself by his progress in learning, was called to Canterbury by his uncle, Archbishop Odo, who made him a canon of the Old Minster there. He had already, however, begun to display his passion for monachism, and became so dissatisfied with the manners of the married clergy of Canterbury, that he left England to enter the abbey of Fleury in France, which was then celebrated for the severity of its discipline; yet even there Oswald became celebrated for the strictness of his life. Archbishop Odo died in 961, and, as he felt his health declining, he sent for his nephew, who arrived only in time to hear of his death. He returned to Fleury, but was finally persuaded to come back to England with his kinsman Oskitel, Archbishop of York, who was on his way from Rome with his pallium. On their arrival in England they found Dunstan just elected to the see of Canterbury; and that celebrated prelate, fearful that the see of Worcester, which he had previously held, should fall into the hands of a bishop not sufficiently devoted to the cause of monachism, persuaded Oswald to accept it. The new bishop, in fact, found plenty to do at Worcester, for Dunstan himself had not been able to dislodge the married canons from the church, and they offered an equally resolute resistance to his successor. Having struggled for some time in vain, Oswald gave up the contest, left the church and the canons, and built a new church and monastery near it, within the same churchyard, which he dedicated to the Virgin Mary; he also established there a colony of monks from Fleury. The people, we are told, attended sometimes one church and some-

times the other at will, until, gained over by the superior holiness which Oswald's clergy appeared to display, they gradually deserted the old church, and the married canons found themselves obliged to yield.

In 972, Oswald was, through Dunstan's interest, raised to the archbishopric of York, and Dunstan, fearing for the interests of monachism in Mercia, where Oswald had still made no great progress, insisted on his retaining the bishopric of Worcester along with the archiepiscopacy. The triumph of Dunstan's craftiness as well as talents in the conference at Calne, in 978, finally turned the scale against the old Anglo-Saxon clergy; and soon after that event Oswald succeeded in turning the clergy (who, according to the phraseology of the old writers of his party, 'preferred their wives to the church') from most of the principal churches in the diocese of Worcester, and substituting monks in their places. In 986, Oswald founded the important abbey of Ramsey, on land which he had obtained from the gift of Earl Aylwin; and he here established a school, which became one of the most celebrated seats of learning in England during the latter part of the tenth century, under the direction of the learned Abbo, one of the foreign monks whom Oswald had brought hither from Fleury. Oswald's favourite residence appears to have been at Worcester, where his humility and charity were celebrated. It was only towards the close of his life that he finally triumphed over the secular clergy of the old church of St Peter, and from that time his new church of St Mary superseded it and became the cathedral of the diocese. He was present to consecrate the church of Ramsey on the 8th of November 991, and, after some stay there, returned to Worcester, where, in the middle of his duties, he was seized with a disease which carried him off very suddenly, and he was buried in his church of St Mary. Oswald died on the day before the kalends of March, that is, on the last day of the previous month; and he is the only saint who takes his place in the calendar for that day.

Born.—Edward Cave, printer, 1692, *Newton, Warwick*; Gioacchino Rossini, 1792, *Pesaro*.

Died.—St Barbas, bishop of Benevento, 684; Archbishop John Whitgift, 1603-4, *Croydon*; John Landseer, engraver, 1852.

ARCHBISHOP WHITGIFT.—HIS HOSPITAL AT CROYDON.

Whitgift, 'one of the worthiest men that ever the English hierarchy did enjoy,' was the third primate of the Protestant Church of England after the Reformation, in the reign of Queen Elizabeth, upon whose death the Archbishop was afraid lest King James should make alterations in the government and Liturgy of the church; and his death was accelerated by this anxiety. He took a prominent part in explaining and defending before the King the doctrines and practices of the church, and was at the head of the Commission appointed for printing a uniform translation of the Bible, but he did not live to assist in its execution. He caught cold while sailing to Fulham in his barge; and on the

following Sunday, after a long interview with the King, was seized with a fit, which ended in an attack of palsy and loss of speech. The King visited him at Lambeth, and told him that he 'would pray for his life; and if he could obtain it, he should think it one of the greatest temporal blessings that could be given him in this kingdom.' He died on the 29th of February, in the seventy-third year of his age, and was buried in the parish church of Croydon, on the second day after his death; his funeral was solemnized on the 27th of March, in a manner suitable to the splendour in which he had lived.

The Archbishop always took a lively interest in the management of public charities, and he left several instances of his munificence. He built and endowed, entirely from his own revenues, a hospital, free-school, and chapel, at Croydon, which he completed during his own lifetime. He commenced building the hospital on the 14th of February 1596, and finished it within three years. It is a brick edifice, in the Elizabethan style, at the entrance of the town from London: over the entrance are the armorial bearings of the see of Canterbury, and this inscription: 'QVI DAT PAVPERI NON INDIGEBIT.' The original yearly revenue was only £185,4s. 2d.; but, by improved rents and sundry benefactions, it now exceeds £2000 per annum. Each poor brother and sister is to receive £5 per annum, besides wood, corn, and other provisions. Amongst the crimes to be punished by expulsion, are 'obstinate heresy, sorcery, any kind of charmynge, or witchcraft.' In the chapel is a portrait of the Archbishop, painted on board; and an outline delineation of Death, as a skeleton and gravedigger. Among the documents are the patent granted to the founder, with a drawing of Queen Elizabeth, on vellum; and on the Archbishop's deed of foundation is a drawing of himself, very beautifully executed. In the hall, where the brethren dine together three times yearly, is a folio Bible, in black letter, with wooden covers, mounted with brass; it has Cranmer's prefaces, and was printed in 1596. Here also, formerly, were three ancient wooden goblets, one of which was inscribed:

'What, sirrah! hold thy peace!
Thirst satisfied, cease.'

END OF 'LA BELLE JENNINGS.'

29th February, 1730, in a small private nunnery of Poor Clares, in King-street, Dublin, an aged lady was found in the morning, fallen out of bed, stiff with cold, and beyond recovery. The person who died in this obscure and miserable manner had once been the very prime lady of the land, the mistress of Dublin Castle, where she had received a monarch as her guest. At an early period of her life, she had been one of the loveliest figures in the gay and luxurious court of Charles II. She was, in short, the person celebrated as *La Belle Jennings*, and latterly the wife of that Duke of Tyrconnel who nearly recovered Ireland for King James II. She entered life soon after the Restoration, as maid of honour to the Duchess of York, and in that position had conducted herself with a pro-

priety all the more commendable that it was in her time and place almost unique. As wife of the Duke of Tyrconnel, during his rule in Dublin in 1689-90, her conduct appears to have been as dignified, as it had formerly been pure. It is presented in a striking light in Mrs Jameson's account of what happened after the battle of the Boyne—'where fifteen Talbots of Tyrconnel's family were slain, and he himself fought like a hero of romance.' 'After that memorable defeat,' says our authoress, 'King James and Tyrconnel reached Dublin on the evening of the same day. The Duchess, who had been left in the Castle, had passed four-and-twenty hours in all the agonies of suspense; but when the worst was known, she showed that the spirit and strength of mind which distinguished her in her early days was not all extinguished. When the King and her husband arrived as fugitives from the lost battle, on which her fortunes and her hopes had depended, harassed, faint, and so covered with mud, that their persons could scarcely be distinguished, she, hearing of their plight, assembled all her household in state, dressed herself richly, and received the fugitive King and his dispirited friends with all the splendour of court etiquette. Advancing to the head of the grand staircase with all her attendants, she knelt on one knee, congratulated him on his safety, and invited him to a banquet, respectfully inquiring what refreshment he would be pleased to take at the moment. James answered sadly that he had but little stomach for supper, considering the sorry breakfast he had made that morning. She, however, led the way to a banquet already prepared; and did the honours with as much self-possession and dignity as Lady Macbeth, though racked at the moment with equal terror and anxiety.*'

JOHN DUNS SCOTUS.

It is a pity that such obscurity rests on the personal history of this light of the middle ages. He was an innovator upon the stereotyped ideas of his age, and got accordingly a dubious reputation among formalists. If he had been solely the author of the following sentence—'Authority springs from reason, not reason from authority—true reason needs not be confirmed by any authority'—it would have been worth while for Scotland to contend for the honour of having given him birth.

School Exercise.—In several old grammar-schools there was a liberal rule that the boys should have an hour from three till four for their drinkings. Sometimes the schoolmaster, for want of occupation, employed himself oddly enough. One day a visitor to the school of ——— observing some deep-coloured stains upon the oaken floor, inquired the cause. He was told that they were occasioned by the leakage of a butt of Madeira, which the master of the grammar school, who had grown lusty, not having had for some time any scholar who might afford him the opportunity of taking exercise, employed himself upon a rainy day in rolling up and down the schoolroom for the purpose of ripening the wine, and keeping himself in good condition.

* *Memoirs of the Beauties of the Court of Charles II.*, vol. ii. p. 223.

— Sturdy March, with brows full sternly bent,
 And armed strongly, rode upon a ram,
 The same which over Hellespontus swam,
 Yet in his hand a spade he also bent
 And in a bag all sorts of weeds, y same
 Which on the earth he strewed as he went,
 And filled her womb with fruitful hope of nourishment.

SPENSER.

(DESCRIPTIVE.)

MARCH

is the first month of Spring. He is Nature's

Old Forester, going through the woods and dotting the trees with green, to mark out the spots where the future leaves are to

be hung. The sun throws a golden glory over the eastern hills, as the village-clock from the ivy-covered tower tolls six, gilding the

hands and the figures that were scarcely visible two hours later a few weeks ago.

The streams now hurry along with a rapid motion, as if they had no time to dally with, and play round the impeding pebbles, but were eager to rush along the green meadow-lands, to tell the flowers it is time to awaken. We hear the cottagers greeting each other with kind 'Good morning,' across the paled garden-fences in the sunrise, and talking about the healthy look of the up-coming peas, and the promise in a few days of a dish of early spinach. Under the old oak, surrounded with rustic seats, they congregate on the village-green, in the mild March evenings,

and talk about the forward spring, and how they have battled through the long hard winter, and, looking towards the green churchyard, speak in low voices of those who have been borne thither to sleep out their long sleep since 'last primrose-time,' and they thank God that they are still alive and well, and are grateful for the fine weather 'it has pleased Him to send them at last.'

Now rustic figures move across the landscape, and give a picturesque life to the scenery. You see the ploughboy returning from his labour, seated sideways on one of his horses, humming a line or two of some love-lorn ditty, and when his memory fails to supply the words, whistling the remainder of the tune. The butcher-boy rattles merrily by in his blue-coat, throwing a saucy word to every one he passes; and if he thinks at all of the pretty lambs that are bleating in his cart, it is only about how much they will weigh when they are killed. The old woman moves slowly along in her red cloak, with basket on arm, on her way to supply her customers with new-laid eggs. So the figures move over the brown winding roads between the budding hedges in red, blue, and grey, such as a painter loves to seize upon to give light, and colour, to his landscape. A few weeks ago those roads seemed uninhabited.

The early-yearned lambs have now become strong, and may be seen playing with one another, their chief amusement being that of racing, as if they knew what heavy weights their little legs will have to bear when their feeders begin to lay as much mutton on their backs as they can well walk under—so enjoy the lightness of their young lean days. There is no cry so childlike as that of a lamb that has lost its dam, and how eagerly it sets off at the first bleat the ewe gives: in an instant it recognises that sound from all the rest, while to our ears that of the whole flock sounds alike. Dumb animals we may call them, but all of them have a language which they understand; they give utterance to their feelings of joy, love, and pain, and when in distress call for help, and, as we have witnessed, hurry to the aid of one another. The osier-peelers are now busy at work in the osier-holts; it is almost the first out-of-door employment the poor-people find in spring, and very pleasant it is to see the white-peeled willows lying about to dry on the young grass, though it is cold work by a windy river side for the poor women and children on a bleak March day. As soon as the sap rises, the bark-peelers commence stripping the trees in the woods, and we know but few country smells that equal the aroma of the piled-up bark. But the trees have a strange ghastly look after they are stripped—unless they are at once removed—standing like bleached skeletons when the foliage hangs on the surrounding branches. The rumbling wagon is a pretty sight moving through the wood, between openings of the trees, piled high with bark, where wheel never passes, excepting on such occasions, or when the timber is removed. The great ground-bee, that seems to have no hive, goes blundering by, then alights on some green patch of grass in the underwood, though what he finds there to feed upon is a puzzle to you, even

if you kneel down beside him, as we have done, and watch ever so narrowly.

How beautiful the cloud and sunshine seem chasing each other over the tender grass! You see the patch of daisies shadowed for a few moments, then the sunshine sweeps over them, and all their silver frills seem suddenly touched with gold, which the wind sets in motion. Our forefathers well named this month 'March many-weather,' and said that 'it came in like a lion, and went out like a lamb,' for it is made up of sunshine and cloud, shower and storm, often causing the horn-fisted ploughman to beat his hands across his chest in the morning to warm them, and before noon compelling him to throw off his smock-frock and sleeved waistcoat, and wipe the perspiration from his forehead with his shirt sleeve, as he stands between the plough-stilts at the end of the newly-made furrow. Still we can now plant our 'foot upon nine daisies,' and not until that can be done do the old-fashioned country people believe that spring is really come. We have seen a grey-haired grandsire do this, and smile as he called to his old dame to count the daisies, and see that his foot fairly covered the proper number.

Ants now begin to run across our paths, and sometimes during a walk in the country you may chance to stumble upon the nest of the wood-ant. At a first glance it looks like a large heap of litter, where dead leaves and short withered grass have been thrown lightly down upon the earth; perhaps at the moment there is no sign of life about it, beyond a straggler or two at the base of the mound. Thrust in the point of your stick, and all the ground will be alive in a moment; nothing but a mass of moving ants will be seen where you have probed. Nor will it do to stay too long, for they will be under your trousers and up your boots, and you will soon feel as if scores of red-hot needles were run into you, for they wound sharply. If you want the clean skeleton of a mouse, bird, or any other small animal, throw it on the nest of the wood-ant, and on the following day you will find every bone as bare and clean as if it had been scraped. Snakes may now be seen basking in some sunny spot, generally near a water-course, for they are beautiful swimmers and fond of water. They have slept away the winter under the dead leaves, or among the roots, and in the holes of trees, or wherever they could find shelter. In ponds and ditches may also be seen thousands of round-headed long-tailed tadpoles, which, if not devoured, will soon become nimble young frogs, when they have a little better chance of escaping the jaws of fishes and wildfowl, for no end of birds, fishes, reptiles, and quadrupeds feed on them. Only a few weeks ago the frogs were in a torpid state, and sunk like stones beneath the mud. Since then they left those black spots, which may be seen floating in a jellied mass on the water, and soon from this spawn the myriads of lively tadpoles we now see sprang into life. Experienced gardeners never drive frogs out of their grounds, as they are great destroyers of slugs, which seem to be their favourite food. Amongst the tadpoles the water-rat may now be seen swimming about and nibbling at some leaf,

or overhanging blade of grass, his tail acting as a rudder, by which he can steer himself into any little nook, wheresoever he may take a fancy to go. If you are near enough, you will see his rich silky hair covered with bright silver-like bubbles as they sink into the water, and he is a most graceful swimmer. The entrance to his nest is generally under the water; throw a stone and he will dive down in a moment, and when he has passed the watery basement, he at once ascends his warm dry nest, in which, on one occasion, a gallon of potatoes was found, that he had hoarded up to last him through the winter. Pleasant is it on a fine March day to stand on some rustic bridge—it may be only a plank thrown across the stream—and watch the fishes as they glide by, or pause and turn in the water, or to see the great pike basking near the surface, as if asleep in the sunshine. Occasionally a bird will dart out from the sedge, or leave off tugging at the head of the tall bulrush, and hasten away between the willows, that seem to give a silvery shiver, every time the breeze turns up the underpart of their leaves to the light. In solitary places, by deep watercourses, the solemn plunge of the otter may sometimes be heard, as he darts in after his prey, or you may start him from the bank where he is feeding on the fish he has captured.

Violets, which Shakspeare says are 'sweeter than the lids of Juno's eyes,' impregnate the March winds with their fragrance, and it is amazing what a distance the perfume is borne on the air from the spot where they grow; and, but for thus betraying themselves, the places where they nestle together would not always be found. Though called the wood-violet, it is oftener found on sunny embankments, under the shelter of a hedge, than in the woods; a wood-side bank that faces the south may often be seen diapered with both violets and primroses. Though it is commonly called the 'blue violet,' it approaches nearer to purple in colour. The scented autumn violets are blue. No lady selecting a violet-coloured dress would choose a blue. The 'dark-velvet' is a name given to it by our old poets, who also call it 'wine-coloured;' others call the hue 'watchet,' which is blue. But let it be compared with the blue-bell, beside which it is often found, and it will appear purple in contrast. Through the frequent mention made of it by Shakspeare, it must have been one of his favourite flowers; and as it still grows abundantly in the neighbourhood of Stratford-on-Avon, it may perhaps yet be found scenting the March air, and standing in the very same spots by which he paused to look at it. Like the rose, it retains its fragrance long after the flower is dead. The perfume of violets and the song of the blackcap are delights which may often be enjoyed together while walking out at this season of the year, for the blackcap, whose song is only equalled by that of the nightingale, is one of the earliest birds that arrives. Though he is a droll-looking little fellow in his black wig, which seems too big for his head, yet, listen to him! and if you have never heard him before, you will hear such music as you would hardly think such an organ as a bird's throat could make. There is one

silvery shake which no other bird can compass: it sinks down to the very lowest sound music is capable of making, and yet is as distinct as the low ring of a silver bell. The nightingale has no such note: for there is an unapproachable depth in its low sweetness. While singing, its throat is wonderfully distended, and the whole of its little body shivers with delight. Later in the season, it often builds its compact nest amid the sheltering leaves of the ivy, in which it lays four or five eggs, which are fancifully dashed with darker spots of a similar hue.

Daisies, one of the earliest known of our old English flowers that still retains its Saxon name, are now in bloom. It was called the day's-eye, and the eye-of-day, as far back as we have any records of our history. 'It is such a wanderer,' says a quaint old writer, 'that it must have been one of the first flowers that strayed and grew outside the garden of Eden.' Poets have delighted to call them 'stars of the earth,' and Chaucer describes a green valley 'with daisies powdered over,' and great was his love for this beautiful flower. He tells us how he rose early in the morning, and went out again in the evening, to see the day's-eye open and shut, and that he often lay down on his side to watch it unfold. But beautiful as its silver rim looks, streaked sometimes with red, 'as if grown in the blood of our old battle-fields,' says the above-quoted writer, still it is a perfect compound flower, as one of those little yellow florets which form its 'golden boss' or crown will show, when carefully examined. Whatever may be said of Linnæus, Chaucer was the first who discovered that the daisy slept, for he tells us how he went out,

'To see this flower, how it *will go to rest,*
For fear of night, so hateth it the darkness.'

He also calls the opening of the daisy 'its resurrection,' so that nearly five centuries ago the sleep of plants was familiar to the Father of English Poetry. Now the nests of the blackbird and thrush may be seen in the hedges, before the leaves are fully out, for they are our earliest builders, as well as the first to awaken Winter with their songs. As if to prepare better for the cold, to which their young are exposed, through being hatched so soon as they are, they both plaster their nests inside with mud, until they are as smooth as a basin. They begin singing at the first break of dawn, and may be heard again as the day closes. We have frequently heard them before three in the morning in summer. The blackbird is called 'golden bill' by country people, and the 'ouzel cock' of our old ballad poetry. It is not easy to tell males from females during the first year, but in the second year the male has the 'golden bill.' If undisturbed, the blackbird will build for many seasons in the same spot, often only repairing its old nest. No young birds are more easily reared, as they will eat almost anything. Both the nests and eggs of the thrush and blackbird are much alike.

Sometimes, while peeping about to discover these rounded nests, we catch sight of the germander-speedwell, one of the most beautiful of our March flowers, bearing such a blue as is

only at times seen on the changing sky; we know no blue flower that can be compared with it. The ivy-leaved veronica may also now be found, though it is a very small flower, and must be sought for very near the ground. Now and then, but not always, we have found the graceful wood-anemone in flower in March, and very pleasant it is to come unawares upon a bed of these pretty plants in bloom, they shew such a play of shifting colours when stirred by the wind, now turning their reddish-purple outside to the light, then waving back again, and showing the rich white-grey inside the petals, as if white and purple lilacs were mixed, and blowing together. The leaves, too, are very beautifully cut; and as the flower has no proper calyx, the pendulous cup droops gracefully, 'hanging its head aside,' like Shakspeare's beautiful Barbara. If—through the slightest breeze setting its drooping bells in motion—the old Greeks called it the wind flower, it was happily named, for we see it stirring when there is scarce more life in the air than

‘——— On a summer's day
Robs not one light seed from the feathered grass.’

The wheat-ear, which country children say, 'some bird blackened its eye for going away,' now makes its appearance, and is readily known by the black mark which runs from the ear to the base of the bill. Its notes are very low and sweet, for it seems too fat to strain itself, and we have no doubt could sing much louder if it pleased. It is considered so delicious a morsel, that epicures have named it the British ortolan, and is so fat it can scarcely fly when wheat is ripe. Along with it comes the pretty willow-wren, which is easily known by being yellow underneath, and through the light colour of its legs. It lives entirely on insects, never touching either bloom or fruit like the bullfinch, and is of great value in our gardens, when at this season such numbers of insects attack the blossoms. But one of the most curious of our early comers is the little wryneck, so called because he is always twisting his neck about. When boys, we only knew it by the name of the willow-bite, as it always lays its eggs in a hole in a tree, without ever troubling itself to make a nest. When we put our hand in to feel for the eggs, if the bird was there it hissed like a snake, and many a boy have we seen whip his fingers out when he heard that alarming sound, quicker than ever he put them in, believing that a snake was concealed in the hole. It is a famous destroyer of ants, which it takes up so rapidly on its glutinous tongue, that no human eye can follow the motion, for the ants seem impelled forward by some secret power, as one writer observes: 'as if drawn by a magnet.' This bird can both hop and walk, though it does not step out so soldier-like as the beautiful wagtail. Sometimes, while listening to the singing birds in spring, you will find all their voices hushed in a moment, and unless you are familiar with country objects, will be at a loss to divine the cause. Though you may not have heard it, some bird has raised a sudden cry of alarm, which causes them all to rush into the hedges and bushes for safety. That bird had

seen the hovering hawk, and knew that, in another moment or so, he would drop down sudden as a thunderbolt on the first victim that he fixed his far-seeing eyes upon; and his rush is like the speed of thought. But he always remains nearly motionless in the air before he strikes, and this the birds seem to know, and their sight must be keen to see him so high up as he generally is before he strikes. In the hedges they are safe, as there is no room there for the spread of his wings; and if he misses his quarry, he never makes a second dart at it. Sometimes the hawk catches a Tartar, as the one did that pounced upon and carried off a weasel, which, when high in the air, ate into the hawk's side, causing him to come down dead as a stone, when the weasel, who retained his hold of the hawk, ran off, not appearing to be the least injured after his unexpected elevation.

What a change have the March winds produced in the roads; they are now as hard as they were during the winter frost. But there was no cloud of dry dust then as there is now. When our forefathers repeated the old proverb which says, 'A peck of March dust is worth a king's ransom,' did they mean, we wonder, that its value lay in loosening and drying the earth, and making it fitter to till? In the old gardening books a dry day in March is always recommended for putting seed into the ground.

To one who does not mind a noise there is great amusement to be found now in living near a rookery, for there is always something or another going on in that great airy city overhead, if it only be, as Washington Irving says, 'quarrelling for a corner of the blanket' while in their nests. They are nearly all thieves, and think nothing of stealing the foundation from one another's houses during the building season. When some incorrigible blackguard cannot be beaten into order, they all unite and drive him away; neck and crop do they bundle him out. Let him only shew so much as his beak in the rookery again after his ejection, and the whole police force are out and at him in a moment. No peace will he ever have there any more during that season, though perhaps he may make it up again with them during the next winter in the woods. We like to hear them cawing from the windy high elm-trees, which have been a rookery for centuries, and which overhang some old hall grey with the moss and lichen of forgotten years. The sound they make seems to give a quiet dreamy air to the whole landscape, and we look upon such a spot as an ancient English home, standing in a land of peace.

(HISTORICAL.)

We derive the present name of this month from the Romans, among whom it was at an early period the first month of the year, as it continued to be in several countries to a comparatively late period, the legal year beginning even in England on the 25th of March, till the change of the style in 1752. For commencing the year with this month there seems a sufficient reason in the fact of its being the first season, after the *dead* of the year, in which

decided symptoms of a renewal of growth take place. And for the Romans to dedicate their first month to Mars, and call it *Martius*, seems equally natural, considering the importance they attached to war, and the use they made of it.

Among our Saxon forefathers, the month bore the name of *Lenet-monat*,—that is, length-month, —in reference to the lengthening of the day at this season,—the origin also of the term Lent.

'The month,' says Brady, 'is portrayed as a man of a tawny colour and fierce aspect, with a helmet on his head—so far typical of Mars—while, appropriate to the season, he is represented leaning on a spade, holding almond blossoms and scions in his left hand, with a basket of seeds on his arm, and in his right hand the sign Aries, or the Ram, which the sun enters on the 20th of this month, thereby denoting the augmented power of the sun's rays, which in ancient hieroglyphics were expressed by the horns of animals.

CHARACTERISTICS OF MARCH.

March is noted as a dry month. Its dust is looked for, and becomes a subject of congratulation, on account of the importance of dry weather at this time for sowing and planting. The idea has been embodied in proverbs, as 'A peck of March dust is worth a king's ransom,' and 'A dry March never begs its bread.' Blustering winds usually prevail more or less throughout a considerable part of the month, but mostly in the earlier portion. Hence, the month appears to change its character as it goes on; the remark is, 'It comes in like a lion, and goes out like a lamb.' The mean temperature of the month for London is stated at 43·9°; for Perth, in Scotland, at 43°; but, occasionally, winter reappears in all its fierceness. At London the sun rises on the first day at 6·34; on the last at 5·35, being an extension of upwards of an hour.

First of March.

St David, archbishop of Caerleon, patron of Wales, 544. St Albinus, of Angers, 549. St Swibert, or Swibert, of Northumberland, bishop, 713. St Monan, of Scotland, martyr, 374.

St David.

DAVID, popularly termed the titular saint of Wales, is said to have been the son of a prince of Cardiganshire of the ancient regal line of Cunedda Wledig; some, also, state that he was the son of Xanthus, son of Ceredig, lord of Ceredigion, and Non, daughter of Gynyr of Caergawh, Pembrokeshire. St David has been invested by his legendary biographers with extravagant decoration. According to their accounts, he had not merely the power of working miracles from the moment of his birth, but the same preternatural faculty is ascribed to him while he was yet unborn! An angel is said to have been his constant attendant on his first appearance on earth, to minister to his wants, and contribute to his edification and *relaxation*; the Bath waters became warm and salubrious through his agency; he healed complaints and re-animated the dead; whenever he preached, a snow-white dove sat upon his shoulder! Among other things,—as pulpits were not in fashion in those times,—the earth on which he preached was raised from its level, and became a hill; from whence his voice was heard to the best advantage. Among these popular legends, the pretended life of St David, in Welsh, in the Cotton MSS. (D. xxii.), is the most remarkable for its spurious embellishments. His pedigree is here deduced from the Virgin Mary, of whom it makes him the lineal eighteenth descendant! But leaving the region of

fiction, there is no doubt that the valuable services of St David to the British church entitle him to a very distinguished position in its early annals. He is numbered in the *Triads* with Teilo and Catwg as one of the 'three canonized saints of Britain.' Giraldus terms him 'a mirror and pattern to all, instructing both by word and example, excellent in his preaching, but still more so in his works. He was a doctrine to all, a guide to the religious, a life to the poor, a support to orphans, a protection to widows, a father to the fatherless, a rule to monks, and a model to teachers; becoming all to all, that so he might gain all to God.'

To this, his moral character, St David added a high character for theological learning; and two productions, a *Book of Homilies*, and a *Treatise against the Pelagians*, have been ascribed to him.

St David received his early education at Menevia, (derived from Main-aw, 'a narrow water,' frith or strait), named afterwards Ty Ddewi, 'David's House,' answering to the present St David's, which was a seminary of learning and nursery of saints. At this place, some years after, he founded a convent in the Vale of Rhos. The discipline which St David enjoined in this monastic retreat is represented as of the most rigorous nature. After the Synod at Brevy, in 519, Dubricius, or Dyvrig, Archbishop of Caerleon, and consequently Primate of Wales, resigned his see to St David, who removed the archiepiscopal residence to Menevia, the present St David's, where he died about the year 544, after having attained a very advanced age. The saint was buried in the cathedral, and a monument raised to his memory. It is of simple construction, the ornaments consisting of one row of four quatrefoil openings upon a plain tomb.

St David appears to have had more superstitious honours paid to him in England than in his native country. Thus, before the Reformation, the following collect was read in the old church of Sarum on the 1st of March:—'Oh God, who by thy angel didst foretel thy blessed Confessor St David, thirty years before he was born, grant unto us, we beseech thee, that celebrating his memory, we may, by his intercession, attain to joys everlasting.'

Inscription for a monument in the Vale of Ewias.

'Here was it, stranger, that the Patron Saint
Of Cambria passed his age of penitence,
A solitary man; and here he made
His hermitage, the roots his food, his drink
Of Hodney's mountain stream. Perchance thy
youth

Has read, with eager wonder, how the knight
Of Wales, in Ormandine's enchanted bower,
Slept the long sleep: and if that in thy veins
Flow the pure blood of Britain, sure that blood
Hath flowed with quicker impulse at the tale
Of DAVID's deeds, when thro' the press of war
His gallant comrades followed his green crest
To conquest. Stranger! Hatterill's mountain
heights

And this fair vale of Ewias, and the stream
Of Hodney, to thine after-thoughts will rise
More grateful, thus associate with the name
Of David, and the deeds of other days.'—SOUTHEY.

Born.—Dr John Pell, mathematician, 1610, *Southwick*; Caroline, of England, 1683; Dr David Bogue, Scottish missionary, 1750, *Halldown*; Sir Samuel Romilly, lawyer and politician, 1757, *Marylebone*.

Died.—Francis Rabelais, French romancist, 1553; Anne, Queen of England, 1619, *Hampton Court*; Matthias, Emperor of Germany, 1619; Sir Thomas Herbert, 1682, *York*; Leopold II., Emperor of Germany, 1792, *Prague*; Manuel Johnson, astronomer, 1859, *Oxford*.

RABELAIS.

Francis Rabelais, the son of an apothecary, was born at Chinon, a town of Touraine, in 1483. Brimming over with sport and humour, by a strange perversity it was decided to make the boy a monk, and Rabelais entered the order of Franciscans. His gaiety proved more than they could endure, and he was transferred to the easier fraternity of the Benedictines; but his high spirits were too much for these likewise, and he escaped to Montpellier, where he studied medicine, took a doctor's degree, and practised with such success, that he was invited to the court at Paris. In the train of an ambassador he went to Rome in 1536, and received absolution from the Pope for his violation of monastic vows. On his return to France he was appointed curé of Meudon, and died in 1553, aged 70.

Wit was the distinction of Rabelais. He was learned, and he had seen much of the world; and for the pedantry of scholars, the cant of priests, and the folly of kings, he had a quick eye and a light-hearted contempt. It was an age of deadly intolerance: to dissent from the church was to burn at the stake, and to criticise governors was mutilation or death on the scaffold. Rabelais had not earnestness for a martyr, but the contempt and fun that stirred within him demanded utterance, and donning the fool's cap and bells, he published the romance of Gargantua and Pantagruel. Gargantua was a giant who lived several centuries and begot a son, Pantagruel, as big and wonderful as himself. Beneath his tongue an army took shelter from the rain, and in his mouth and throat were populous cities. Under the mask of their adventures Rabelais contrived to speak his mind concerning kings, priests, and scholars, just as Swift, following his example, did in *Gulliver's Travels*. He was accused of heresy and irreligion, but Francis I. read and enjoyed the story of Gargantua and Pantagruel, and said he could see no harm in it. Calvin at one time thought he had found in Rabelais a Protestant, and was prepared to number him among his disciples, but gravely censuring him for his profane jesting, Rabelais, in revenge, made Panurge, one of the characters in his romance, discourse in Calvinistic phrases. The obscenity which is inwrought in almost every page of Rabelais prevents his enjoyment by modern readers, although his coarseness gave no offence to the generation for which he wrote. Coleridge, whose opinion is worth having, says: 'Beyond a doubt Rabelais was among the deepest, as well as boldest, thinkers of his age. His buffoonery was not merely Brutus's rough stick, which contained a rod of gold: it was necessary as an amulet against the monks and legates.

Never was there a more plausible, and seldom, I am persuaded, a less appropriate line, than the thousand times quoted

“Rabelais laughing in his easy chair,”

of Mr Pope. The caricature of his filth and zanyism show how fully he both knew and felt the danger in which he stood. . . . I class Rabelais with the great creative minds of the world, Shakspeare, Dante, Cervantes, &c.’

LABORIOUS ASTRONOMICAL OBSERVATIONS.

Mr Manuel Johnson was for many years ‘the Radcliffe observer’ at the noble observatory at Oxford, built by the munificence of Dr Radcliffe. Mr Johnson was a devoted and disinterested worker, and allowed nothing to interfere with the regular duties of the observatory. Night after night, with not more than a rare periodical break of a week or two, he was at the same task, steadily travelling through the region of the circumpolar heavens which he had marked out for his observation, to which latterly were added the important labours connected with the heliometer. Taking the Groombridge Catalogue as his foundation, he re-observed all the stars—more than 4000—included in that catalogue, and added 1500 other stars not found in Groombridge. The meridian instruments of the Radcliffe observatory were, for several years, almost wholly employed for this work, and volumes 40—53 of the *Radcliffe Observatory* are filled with observations and special catalogues, all designed for ultimate collection into a large catalogue of circumpolar stars, of which some sheets had already passed through the press at the time of Mr Johnson’s death.

There is surely something affecting in the contemplation of a life devoted with such unslackening zeal to a task of such a nature as this—calculated to prove serviceable, but under such circumstances that the individual worker could never derive any benefit from it.

WILLIAM CAXTON.

On the 1st of March 1468-69, William Caxton began, at the city of Bruges, to translate the *Recueil of the Histories of Troy* from the French, at the command of Margaret, Duchess of Burgundy, sister of the English King Edward IV. The work was finished on the 19th of September 1471, and formally presented to the Duchess. It was a noted literary undertaking, and by a very notable person. Caxton, a native of the Weald of Kent, supposed to have been born about 1422, and brought up as a mercer in London, had for several years occupied the eminent position of *Governor of the English in Bruges*, there being at that time many of our countrymen following merchandize in the capital of the Duchy of Burgundy, insomuch, that they required a governor of their own for the maintenance of order among them, for the preservation of their privileges, and for various diplomatic purposes. (It seems to have been a position like that of Conservator of the Scots Privileges at Campvere, which was kept in force down to the last century.) Caxton was a well-educated man,

wealthy, and of great application. It could only be the impulse of his own tastes which led him to take up the pen of an author, and translate the *Recueil of Histories*. The step, however, once taken, seems to have led to a complete change in the current of his life.

The book being finished was multiplied in the way then customary, by manuscript, and sold at a good price. Books, dear as they necessarily were in the fifteenth century, were in good and increasing demand, for the intellect of Europe was getting into an activity it had never known before. The *Recueil* was a remarkable and popular book, and we can imagine an author of such a practical turn of mind as the Governor of the English in Bruges feeling a little impatience at the slow means of producing copies which the pen of the copyist supplied. Well, there was an art beginning at that time to be practised for the multiplication of books by printing from blocks and

CAXTON'S HOUSE.

moveable types. It had been obscurely attempted by one Coster at Haarlem before the year 1440; afterwards it was brought to a tolerable efficiency at Mentz, in Germany, by three men named Fust, Guttenberg, and Schœffer; these men had even produced an edition of the Latin Bible, which scarcely could be distinguished from the finest manuscript. Just about this time, one Colard Mansion was beginning or professing to introduce this somewhat mysterious art into Bruges. It could scarcely fail to catch the attention of so enterprising a man as Caxton, even if he had not a book of his own to be printed.

An arrangement was made between Caxton and Mansion, whereby the former furnished money, and the latter set up a printing office,

of which the first or at least a very early emanation was an impression of *The Recuyell of the Histories of Troye*. This was a most remarkable tome, for it was the first English book that ever was printed:—the first of so many!

The second was a translation by Caxton from a French moral treatise, entitled *The Game and Playe of the Chesse*, which was finished on the

last day of March 1474, and printed under his care, most probably at Bruges, though some consider it as the first issue of his press after he had removed to England. To convey some idea of the style of typography in these early days of the art, we present a fac-simile of a passage of the *Game and Playe of the Chesse*, being the dedication to the unfortunate Duke of Clarence.

TO the right noble/riht excellent & vertuous prince
George duc of Clarence Erie of warwyk andr of
Salisbury/ grete Chamberlaph of Englonde & leutenant
of Irelande oldest broder of kynge Edward; by the grace
of god; kynge of England; andr of fraunce / your most
humble seruant william Caxton amonge other of your
seruantes sendes vnto your peas . helthe . joye andr victo-
rye vpon your Enempes /

How it came about we do not know, although it is not difficult to surmise. Caxton is soon after found to have returned to his own country, and commenced business as a printer and publisher, being for certain the first who practised the typographic art in this island. He was wealthy; he had been in a high employment; it looks to us as a descent, that such a man, past fifty years of age, should have gone into such a business, for certainly it was no more dignified then than it is now. We can only suppose that Caxton had all along had strong literary tastes—had prudentially kept them in check while realising an independence, and now felt at liberty to indulge his natural bent, while yet pleasing himself with the idea that he was usefully and not unprofitably occupied. Whatever his motives might be, there we find him practising typography, and also selling books, in a house called the Almonry (i.e. alms-distributing house), near the western door of Westminster Abbey,* and this from about 1476 till 1491, when he died, about seventy years of age. His publications were for their time meritorious, and in some instances he was author as well as printer. They include *Dictes and Sayings*, 1477; *Chronicles of England*, 1480; *Mirror of the World*, 1481; [Gower's] *Confessio Amantis*,

* The house in which Caxton is said to have lived stood on the north side of the Almonry, with its back against that of a house on the south side of Tothill-street. Bagford describes this house as of brick, with the sign of the King's Head; it fell down in November 1845, before the removal of the other dwellings in the Almonry, to form the new Victoria-street. A beam of wood was sawed from the materials of this house, and from it were made a chess board and two sets of chessmen, as appropriate memorials of Caxton's *Game and Playe of the Chesse*. Caxton's House was a three-storied house, with a bold gable, and a gallery running along the upper story. It is said that wooden types were found on clearing away the materials of the house; its precise site was immediately adjoining the spot now occupied by the principal entrance to the Westminster Palace Hotel.

1483; *Æsop*, 1484; *King Arthur*, 1485, &c. An advertisement of one of his productions is extremely quaint and simple: 'If it ples any man spirital or temporel to bye any pyes [piece] of two and three comemoraciōs of salisbury vse enpryntid after the forme of this presēt lettre whiche ben wel and truly correct, late hym come to westmonester in to the almonesrye at the reed pale, and he shall have them good chepe.'*

COMMENCEMENT OF THE 'SPECTATOR.'

On the 1st of March 1711, appeared the first number of the *Spectator*, the most popular work that England had up to that time produced,—alike the recreation of the learned, the busy, and the idle. This work was printed daily in the same form, and at the same price, as the *Tatler*, and supported by the same able contributors, but was, altogether, a work of far more elevated pretensions than its predecessor. The *Tatler* and the *Spectator* were the first attempts made in England, or any other country, to instruct and amuse unlearned readers by short papers, appearing at stated intervals, and sold at a cheap rate. The object of the writers was 'to bring philosophy out of closets and libraries, schools and colleges, to dwell in clubs, and assemblies, at tea-tables and at coffee-houses.'

The *Spectator* was planned by Addison in concert with Sir Richard Steele, and its success was chiefly owing to the matchless pen of the former. Addison's papers are designated by the letters C.L.I.O., which some have supposed he adopted as composing the name of the muse Clio; but Mr Nichols thinks, rather as being the initials of the places where the papers were written, Chelsea, London, Islington, and the Office. This supposition is strengthened by transposing the letters (for there is no absolute

* *Life and Typography of William Caxton*, compiled from original sources, by William Blades. 4to, vol. i., 1861.

rule by which their order should be fixed) into the Latin word *loci*, or 'at the place' where he might have resided. The publication of the *Spectator* continued regularly to the close of the seventh volume; after an interval of about eighteen months, the eighth volume commenced and terminated December 20, 1714.

The notion of a club in which the *Spectator* is formed, not only gave the work a dramatic air, but a sort of unity to the conduct of it; as it tied together the several papers into what may be called one work, by the reference they all have to the same common design.

The origin of some of the numbers of the *Spectator* is not a little curious, and shews with what talent the contributors of the essays converted the most trifling subjects into articles of interest. No. 71, which contains 'the epistle of an enamoured footman in the country to his mistress,' and signed 'James,' originated in the following circumstance. In the year 1711, James Hirst lived as servant with the Hon. Edward Wortley. It happened one day, that in delivering a letter to his master, he, by mistake, gave him one which he had written to his sweetheart, and kept back Mr Wortley's. He soon discovered his error, and immediately hurried to his master in order to retrieve it, but it happened to be the first that presented itself, and before his return, Mr Wortley had perused the enamoured footman's love story. James entreated to have it returned; 'No,' said Mr Wortley, 'No, James; you shall be a great man; this letter shall appear in the *Spectator*.' It was accordingly communicated to Sir Richard Steele, and published in James's own words, 'Dear Betty,' &c.

THE VICTORIA CROSS.

The 1st of March 1857, is one among many days associated with the bestowal of the Victoria Cross upon heroic soldiers and sailors. The affair is in itself a trifle; yet it involves a principle of some importance. England cannot be said to be altogether happy in her modes of rewarding merit. The friendless and the unobtrusive are apt to be pushed aside, and to be supplanted by those who can call boldness and influence to their aid. Such at any rate has been the case in the army and navy; the humble soldiers and sailors have always received their full share of hard knocks, while the officers have carried off the honours and rewards. The nation has often felt and said that this was wrong; and the authorities of the War Office have judiciously yielded to the public sentiment in this among many other matters. It was in the middle of the Crimean war that the War Office undertook to 'consider' the subject; but a period of many months passed before the 'consideration' led to any results. At length on the 8th of February 1856, the *London Gazette* announced that Her Majesty had under her Royal Sign Manual been pleased to institute a new naval and military decoration entitled the 'Victoria Cross.' Unlike any other decoration recognised in our army and navy, this order is to be conferred *for valour only*—irrespective of rank or station; and the recipient becomes also entitled

to a pension of £10 a year for life. The Victoria Cross is a simple affair as a work of art. It consists of a bronze Maltese cross with the royal crest in the centre, and underneath it a scroll bearing the words 'FOR VALOUR'; it is suspended by a red ribbon if worn on the breast of a soldier, and by a blue ribbon if worn by a sailor. Trifling as it is, however, the men highly prize it, for hitherto it has been honestly bestowed. The reader will call to mind that remarkable ceremony in the summer of 1857, when the Queen bestowed the Victoria Cross, with her own hand, on sixty-one noble fellows in Hyde-park. Of those thus honoured, twenty-five were commissioned officers, fifteen were warrant and non-commissioned officers, and the remaining twenty-one were private soldiers and common seamen. In every instance there was a distinct recognition in the *Official Gazette* of the specific act of valour for which the cross was bestowed—whether arising out of the Crimean, the Chinese, or the Indian wars—in order to afford proof that merit, not favour, won the reward. Here we are told that Joseph Trewwas, seaman, 'cut the hawser of the floating-bridge in the Straits of Genitchi under a heavy fire of musketry;' on which occasion he was wounded. 'The late gallant Captain Sir William Peel,' we are told, 'took up a live shell that fell among some powder cases; the fuse was still burning, and the shell burst as he threw it over the parapet.' Here is an incident which warms one's blood while we read it: 'In the charge of the Light Cavalry Brigade at Balaklava, Trumpet-Major Crawford's horse fell and dismounted him, and he lost his sword; he was attacked by two Cossacks, when private Samuel Parkes (whose horse had been shot) saved his life by placing himself between them and the Trumpet-Major, and drove them away by his sword. In the attempt to follow the Light Cavalry Brigade in the retreat, they were attacked by six Russians, whom Parkes kept at bay, and retired slowly fighting, and defending the Trumpet-Major for some time.' In spite of the wretched official English of this description (in which 'he' and 'his,' 'they' and 'whose' are hopelessly wandering to find their proper verbs), we cannot fail to take a liking for the gallant trooper Parkes. Then there was Serjeant-Major Henry, of the Artillery, who at the terrible battle of Inkermann, 'defended the guns of his battery until he had received twelve bayonet wounds.' During the siege of Sebastopol, a rifle-pit was occupied by two Russians, who annoyed our troops by their fire, whereupon 'Private M'Gregor, of the Rifles, crossed the open space under fire, and taking cover under a rock, dislodged them, and occupied the pit.' In India some of the Victoria Crosses were given to the gallant fellows by their commanding officers, in the Queen's name; and when those officers were men of tact and good feeling, they contrived to enhance the value of the reward by a few well-chosen remarks. Thus, Brigadier Stidste, in giving Crosses to two men of the 52nd Foot, pointed out to them the difference between the Order of the Bath and the Order of Valour, adding, in reference to the latter, 'I only wish I had it myself.'

The Emblem of Wales.

Various reasons are assigned by the Welsh for wearing the leek on St David's Day. Some affirm it to be in memory of a great victory obtained over the Saxons. It is said that, during the conflict, the Welshmen, by order of St David, put leeks into their hats to distinguish themselves from their enemies. To quote the *Cambria* of Rolt, 1759 :

——— 'Tradition's tale
 Recounting tells how famed Menevia's priest
 Marshall'd his Britons, and the Saxon host
 Discomfited ; how the green leek his bands
 Distinguished, since by Britons annual woru,
 Commemorates their tutelary saint.'

In the *Diverting Post*, 1705, we have the following lines :

'Why, on St David's Day, do Welshmen seek
 To beautify their hat with verdant leek
 Of nauseous smell? For honour 'tis, hur say,
 "Dulce et decorum est pro patria"—
 Right, Sir, to die or fight it is, I think,
 But how is't Dulce, when you for it stink?'

Shakspeare makes the wearing of the leek to have originated at the battle of Cressy. In the play of *Henry V.* Fluellin, addressing the monarch, says :

'Your grandfather, of famous memory, an't please your Majesty, and your great uncle, Edward the Black Prince of Wales, as I have read in the chronicles, fought a most prave pattle here in France.
 'King. They did, Fluelliu!

'Fluellin. Your Majesty says very true; if your Majesty is remembered of it, the Welshman did goot service in a garden where leeks did grow; wearing leeks in their Monmouth caps, which your Majesty knows to this hour is an honourable padge of the service; and I do believe your Majesty takes no scorn to wear leek upon St Tavy's Day.'

The observance of St David's Day was long countenanced by royalty. Even sparing Henry VII. could disburse two pounds among Welshmen on their saint's anniversary; and among the Household Expenses of the princess Mary for 1544, is an entry of a gift of fifteen shillings to the Yeomen of the King's Guard for bringing a leek to Her Grace on St David's Day. Misson, alluding to the custom of wearing the leek, records that His Majesty William III. was complaisant enough to bear his Welsh subjects company, and two years later we find the following paragraph in *The Flying Post* (1699): 'Yesterday, being St David's Day, the King, according to custom, wore a leek in honour of the Ancient Britons, the same being presented to him by the sergeant-porter, whose place it is, and for which he claims the clothes His Majesty wore that day; the courtiers in imitation of His Majesty wore leeks also.'

We cannot say now as Hierome Porter said in 1632, 'that it is sufficient theme for a jealous Welshman to ground a quarrel against him that doth not honour his cap' with the leek on St David's Day; our modern head-dress is too ill-adapted for such verdant decorations to allow of their being worn, even if the national sentiment was as vigorous as ever; but gilt leeks are still carried in procession by the Welsh branches of

Friendly Societies, and the national badge may be seen decorating the mantelpiece in Welsh houses on the anniversary of the patron saint of the principality.

Whatever may be the conflicting opinions on the origin of wearing the leek in Wales, it is certain that this vegetable appears to have been a favourite dish with Welshmen as far back as we can trace their history. In Caxton's *Description of Wales*, speaking of the Maners and Rytes of the Welshmen, he says :

'They have gruell to potage,
 And Leekes kynde to companage.'

As also :

'Atte meete, and after eke,
 Her solace is salt and Leeke.'

Worlidge mentions the love of the Welsh for this alliaceous food. 'I have seen the greater part of a garden there stored with leeks, and part of the remainder with onions and garlic.' Owen in his *Cambrian Biography*, 1803, observes that the symbol of the leek, attributed to St David, probably originated from the custom of Cymhortha, when the farmers, assisting each other in ploughing, brought their leeks to aid the common repast.

Perhaps the English, if not the Welsh reader will pardon us for expressing our inclination to believe that the custom had no romantic origin whatever, but merely sprung up in allusion to the prominence of the leek in the *cuisine* of the Welsh people.

MARCH 2.

St Simplicius, Pope, buried 483. Martyrs under the Lombards, 6th century. St Joavan, or Joevin, bishop in Armorica, 6th century. St Marnan, of Scotland, 620. St Ceadda, or Chad, bishop of Lichfield, 673. St Charles the Good, Earl of Flanders, martyr, 1124.

ST CEADDA, OR CHAD.

St Chad is regarded as the missionary who introduced Christianity among the East Saxons. He was educated at the monastery of Lindisfarne, or Holy Island, of which he became the bishop. He exercised at the same time the like jurisdiction over the extensive diocese of Mercia, first fixing that see at Lichfield, so called from the great number of martyrs slain and buried there, under Maximianus Herudeus; the name signifying the field of carcases.* Bede assures us that St Chad zealously devoted himself to all the laborious functions of his charge, visiting his diocese on foot, preaching the gospel, and seeking out the poorest and most abandoned persons in the meanest cottages and in the fields, that he might instruct them. When old age compelled him to retire, he settled with seven or eight monks near Lichfield. Tradition described him as greatly affected by storms; he

* Such is the tradition; but according to Dr. Harwood, the name refers to the marshy nature of the surrounding country, the Saxon word *lych* signifying a marsh.

called thunder 'the voice of God,' regarding it as designed to call men to repentance, and lower their self-sufficiency. On these occasions, he would go into the church, and continue in prayer until the storm had abated; it is related that seven days before his death, a monk named Arvinus, who was outside the building in which he lay, heard a sound as of heavenly music attendant upon a company of angels, who visited the saint to forewarn him of his end.

Upon his canonization, St Chad became the patron saint of medicinal springs. His bones were removed from Stow, where he died, to the site of Lichfield cathedral, about the year 700, and were inclosed in a rich shrine, which, being resorted to by multitudes of pilgrims, caused the gradual rise of the city of Lichfield from a small village. The whole place is rich with memorials of the good St Chad; there is a small church dedicated to him, being erected on the site of St Mary's church, which he built, and hard by which he was buried. It is related that the saint's tomb here had a hole in it, through which the pilgrims used to take out portions of the dust, which, mixed with holy water, they gave to men and animals to drink.

The history of the cathedral has this romantic episode: In 1643, the Royalists, under the Earl of Chesterfield, fortified the close. They were attacked by the Parliamentary troops under Lord Brooke, of whom it is told that, on approaching the city, he prayed, if his cause was unjust, he might presently be cut off: whereupon he was killed by a brace of bullets from a musket, or wall piece, discharged by a deaf and dumb gentleman named Dyott, from the middle tower of the church, and fell at a spot now marked by an inscription:

'Twas levelled when fanatic Brooke
The fair cathedral stormed and took;
But thanks to heaven and good St Chad,
A guerdon meet the spoiler had!'

Marmion, vi. 36.

This occurring on the 2nd of March, the anniversary of St Chad, was looked upon by the Royalists as a signal interference of Providence.

On the east side of the town is St Chad's Well, which Leland describes as 'a spring of pure water, with a stone in the bottom of it, on which, some say, St Chad was wont, naked, to stand in the water and pray; at this stone St Chad had his oratory in the time of Wulfere, King of the Mercians.' Sir John Floyer, the celebrated physician, of Lichfield,* who, in 1702, published a curious essay *To Prove Cold Bathing both Safe and Useful*, describes St Chad as 'one of the first converters of our nation, who used immersion in the baptism of the Saxons. And the well near Stow, which may bear his name, was probably his baptistery, it being deep enough for immersion, and conveniently seated near the church; and that has the reputation of curing sore eyes, &c., as most holy wells in England do, which got that name from the baptizing the first Christians in them, and to the memory of the holy bishops

* It was by the advice of Sir John Floyer that Dr Johnson was taken to London, to be touched for the King's evil by Queen Anne.

who baptized in them they were commonly dedicated, and called by their name.' Sir John gives a table of diseases for which St Chad's bath is efficacious, 'with some directions to the common people;' and he finds diseases for nearly every letter in the alphabet. A small temple-like edifice has been erected over the well, in memory of St Chad. Sir John Floyer, it should be added, set up a sort of rival bath, the water of which he shews to be the coldest in the neighbourhood, the success of which he foretells when he has 'prevailed over the prejudices of the common people, who usually despise all cheap and common remedies, which have ordinarily the greatest effects.'

In London we possessed a *St Chad's Well*, on the east side of the Gray's Inn-road, near King's Cross, in Fifteen-foot lane. Here a tenement was, about a century ago, called St Chad's Well-house, from the medicinal spring there, which was strongly recommended by the medical faculty of the day. It long remained one of the favourite spas of the metropolis, with Bagnigge Wells, and the spring which gave name to Spa-fields. Two of these spas have almost gone out of recollection; but St Chad's remained to our time, with its neat garden, and economical medicine at a half-penny per glass. Old Joseph Munden, the comedian, when he resided at Kentish Town, was for many years in the habit of visiting St Chad's three times a-week, and drinking its waters; as did the judge, Sir Allan Chambre, when he lived at Prospect-house, Highgate. Mr Alexander Mensall, who, for fifty years, kept the Gordon House Academy at Kentish Town, used to walk, with his pupils, once a week, to St Chad's, to drink its waters, as a means of 'keeping the doctor out of the house.' In 1825, Mr Hone wrote, 'The miraculous water is aperient, and was some years ago quaffed by the bilious, and other invalids, who flocked thither in crowds. . . . A few years, and it will be with its water, as with the water of St Pancras Well, which is inclosed in the garden of a private house, near old St Pancras churchyard.'

London is, however, still more extensively associated with St Chad, through its excellent citizen Sir Hugh Myddelton; for the New River takes its rise from Chad's Well springs, situated in the meadows, about midway between Hertford and Ware; and when this water reached the north of London, it there gave name to Chadwell-street.

Born.—D. Junius Juvenal, Latin poet, A.D. circ. 40, *Aquinum*; Sir Thomas Bodley (Bodleian Library), 1544, *Exeter*; William Murray, Earl of Mansfield, Lord Chief Justice, 1705, *Pexth*; Suctet, Duke of Albuera, 1772, *Lyons*; Hugh Edward Strickland, naturalist, 1811, *Righton, York*.

Died.—Pope Pelagius I, 560; Lothaire III., of France, 986, poisoned, *Compiègne*; Robert Abbot, Bishop of Salisbury, 1618; Cardinal Bouillon, 1715, *Rome*; Francesco Bianchini, mathematician, 1729, *Rome*; Solomon Gessner, painter and poet, 1788, *Zurich*; John Wesley, founder of Methodism, 1791, *London*; Horace Walpole, Earl of Orford, 1797, *Berkeley-square*; Francis, fifth Duke of Bedford, 1802, *Woburn Abbey*; Francis II., Emperor of Austria, 1835; W. H. M. Olbers, astronomer, 1840; Giambattista Rubini, singer, 1854.

SIR THOMAS BODLEY.

Among the great men who adorn the reign of the virgin queen, not one of the least dignified figures is that of Sir Thomas Bodley, founder of the public library at Oxford.

Bodley, in consequence of his father being unable to live in England during the reign of Mary, commenced his education at Geneva, and on returning home at fourteen was already a good scholar. Entering afterwards at Magdalen College, Oxford, he became in succession a fellow of Merton, and the orator of the University. At a mature age, he travelled on the Continent, chiefly that he might acquire the modern languages; then, returning to his college, he devoted himself to the study of history and politics. In 1583, he was made gentleman usher to Queen Elizabeth; and in 1585 he married a rich widow of Bristol. From soon after this date until 1597, Bodley was employed by Queen Elizabeth in several embassies and commissions, and he resided nearly five years in Holland. It need scarcely be remarked how largely this continental education, travel, and experience must have qualified Bodley for the noble task which he had set himself—the restoration of the public library of the University of Oxford.

Bodley, having succeeded in all his negotiations for his royal mistress, obtained his final recall in 1597, when, finding his advancement at court obstructed by the jealousies and intrigues of great men, he retired from it, and all public business. In the same year he set about founding anew the public library, by offering to restore the buildings in which had been deposited the books and manuscripts left by Humphrey, the good Duke of Gloucester, all of which had been destroyed or dispersed before the year 1555, the room continuing empty until restored by Sir Thomas Bodley. His offer being gladly accepted, he settled a fund for the purchase of books, and the maintenance of proper officers, and commenced his undertaking by presenting a large collection of books purchased on the Continent, and valued at £10,000. Other collections and contributions followed, to such an amount that the old building was no longer sufficient to contain them, when Sir Thomas Bodley proposed to enlarge the edifice; and, his liberal example being followed, the University was enabled to add three other sides, forming the quadrangle and rooms for the schools, &c. He did not, however, live to see the whole completed. This illustrious person died in 1612.

The Bodleian Library was first opened to the public on the 8th of November 1602. Sir Thomas, then lately knighted, was declared the founder; and in 1605, Lord Buckhurst, Earl of Dorset, and Chancellor of the University, placed his bust in the library. An annual speech in praise of Sir Thomas Bodley was founded in 1681, and is delivered on the visitation-day of the library, November the 8th.

Casaubon visited the Bodleian Library very shortly after the completion of the first building, in 1606. 'None of the colleges,' he writes, 'attracted me so much as the Bodleian Library, a work rather for a king than a private man. It

is certain that Bodley, living or dead, must have expended 200,000 livres on that building. The ground-plot is the figure of the letter T. The part which represents the perpendicular stem was formerly built by some prince, and is very handsome; the rest was added by Bodley with no less magnificence. . . . The upper story is the library itself, very well built, and fitted with an immense quantity of books. Do not imagine that such plenty of manuscripts can be found here as in the Royal Library (of Paris); there are not a few manuscripts in England, but nothing to what the King possesses. But the number of books is wonderful, and increasing every year; for Bodley has bequeathed a considerable revenue for that purpose. As long as I remained at Oxford I passed whole days in the Library; for books cannot be taken out, but the library is open to all scholars for seven or eight hours every day. You might always see, therefore, many of these greedily enjoying the banquet prepared for them, which gave me no small pleasure.'

As you enter the library you are struck by an excellent portrait of the founder, by Cornelius Jansen; and by its side and opposite, those of the first principal librarians. There are also other portraits of much interest, particularly that of Junius, the famous Teutonic scholar, by Vandyck; of Selden, an exquisite painting by Mytens; and of Humphrey Wanley, some time under-librarian here. The ceiling is painted with the arms of the University, and those of Bodley. The books in this part of the library retain still their ancient classified arrangement, according to Bodley's will.

It would require a volume to enumerate the many important additions in books and manuscripts, made to this library by its numerous benefactors. The famous library of more than 200 Greek manuscripts, formed by Giacomo Baroccio, a Venetian nobleman, was added in 1627, by will of Herbert, Earl of Pembroke, then Chancellor of the University. In 1633, nearly the same number of manuscripts, chiefly Latin and English, were given by Sir Kenelm Digby. Both these collections are supposed to have been presented at the instigation of Archbishop Laud, who succeeded the Earl as Chancellor, and who himself enriched the library with more than 1300 manuscripts in the Oriental and European tongues. The Selden Library, of more than 8000 volumes of printed books and manuscripts, was next deposited here by Selden's executors. In the two succeeding centuries we find among the benefactors Junius, Marshall, Hyde, Lord Crewe, Tanner, Bishop of St Asaph, Rawlinson, Browne Willis, Thomas Hearne, and Godwin. Among the subsequent additions were the collections of early plays and English poetry, by Malone; and of topography by Gough. To these, prompted by a similar feeling of princely munificence, the late Mr Francis Douce added his tastefully collected library of printed books and manuscripts, coins and medals, prints and drawings, the result of years of patient and untiring research.

The funds of the library are kept up by small fees paid by members of the University at their

matriculation, and by a trifling annual contribution from all as soon as they shall have taken their B.A. degree. This, with legacies bequeathed to it, independent of the University chest, has enabled the library, from time to time, to increase its treasures. The collections of manuscripts of D'Orville; Clarke, the celebrated traveller; the Abbate Canonici of Venice; the printed books and manuscripts of the Oppenheimer family, comprising the finest library of Rabbinical literature ever got together, have, by these means, been purchased. A large addition of books is also made annually by new publications sent to the library, under the Act of Parliament for securing copyright.

HORACE WALPOLE.

A person to whom the second stratum of modern history is so much indebted as Horace Walpole, could not well be overlooked in the present work. Born just within the verge of aristocratic rank—third son of the great minister Sir Robert Walpole, who was ennobled as Earl of Orford—and living through a century of unimportant events and little men—the subject of this notice devoted talents of no mean order to comparatively trifling pursuits, and yet with the

effect of conferring an obligation on the world. His works on royal and noble authors and on artists are valuable books; his letters, in which he has chronicled all the curious and memorable affairs, both public and private, during sixty years, are of inestimable value as a general picture of the time, though perhaps we are disposed to rest too securely on them for details of fact. It is vain to hanker on the essential effeminacy and frivolity of Horace Walpole, or even to express our fears that he did not possess much heart. Take him for what he is, and what he did for us, and does any one not feel that we could well have spared a better man?

Horace had twenty-eight years of parliamentary life, without acquiring any distinction as a politician. He professed strenuous Whig opinions, but in his heart was without popular sympathies. His historical works shew that he was capable of considerable literary efforts. Being, however, a well-endowed sinecurist, and a member of the highest aristocratic circles, he had no motive for any great exertion of his faculties. It literally became the leading business of this extraordinary man to make up a house of curiosities. His great 'work' was *Strawberry Hill*. He had purchased this little mansion as a mere cottage in 1747, and

STRAWBERRY HILL, GRAND GALLERY.

for the remaining fifty years of his life he was constantly adding to it, decorating it, and increasing the number of the pictures, old china, and other objects of *virtu* which he had assembled in it. The pride of his life—old bachelor as he was—was to see pretty duchesses and countesses wandering through its corridors and basking on its little terrace. There is one redeeming trait in the fantastic aristocrat. When he succeeded in old age to the family titles, he could hardly be induced to act the peer's part, and still signed with his ordinary name, or as 'Uncle of the late Earl of Orford.' The love of books and articles of taste was at least sufficient to overpower in his mind the glitter of the star.

The glories of Strawberry Hill came to an end in 1842, when the whole of the pictures and curiosities which it contained were dispersed by a twenty-four days' sale, through the agency of the renowned auctioneer, George Robins. On that occasion, a vast multitude of people flocked to the house to see it, and for the chance of picking up some of its multifarious contents. The general style of the mansion was too unsubstantial and trashy to give much satisfaction. Yet it was found to contain a Great Staircase, highly decorated, an Armoury, a room called the Star-chamber, a Gallery, and some other apartments. All were as full as they could hold of pictures, armour, articles of bijouterie, china, and other curiosities. One room was devoted to portraits by Holbein. In another was the hat of Cardinal Wolsey, together with a clock which had been presented by King Henry VIII. as a morning gift to Anne Bullen. The dagger of King Henry VIII. and a mourning ring for Charles I., vied with the armour of Francis I. in attracting attention. One article of great elegance was a silver bell, which had been formed

PAPAL CURSING BELL FOR ANIMALS.

by Benvenuto Cellini, for Pope Clement VII., with a rich display of carvings on the exterior, representing serpents, flies, grasshoppers, and other insects, the purpose of the bell having been to serve in a papal cursing of these animals, when they on one occasion became so troublesome as to demand that mode of castigation. Another curious article, suggestive of the beliefs of a past age, was the *shew-stone* of Dr Dee, a piece of polished cannel coal, which had been

used by that celebrated mystic as a mirror in which to see spirits. The general style of Strawberry Hill was what passed in Walpole's days as Gothic. However really deficient it might be in correctness, or inferior in taste, the effect of the interior of the Great Gallery was interesting. Conspicuous in this room was a portrait of Lady Falkland in white by Van Somer, which suggested to Walpole the incident of the figure walking out of its picture frame in his tale of the *Castle of Otranto*.

Strawberry Hill, if in its nature capable of being preserved, would have been the best memorial of Horace Walpole. This failing, we find his next best monument in the collective edition of his letters, as arranged and illustrated by Mr Peter Cunningham. Allowing for the distortions of whim and caprice, and perhaps some perversions of truth through prejudice and spleen, this work is an inestimable record of the era it represents. Its prominent characteristic is garrulity. In the language of the *Edinburgh Review* (Dec. 1818): 'Walpole was, indeed, a garrulous *old* man nearly all his days; and, luckily for his gossiping propensities, he was on familiar terms with the gay world, and set down as a man of genius by the Princess Amelia, George Selwyn, Mr Chute, and all persons of the like talents and importance. His descriptions of court dresses, court revels, and court beauties, are in the highest style of perfection,—sprightly, fantastic, and elegant: and the zeal with which he hunts after an old portrait or a piece of broken glass, is ten times more entertaining than if it were lavished on a worthier object. He is indeed the very prince of gossips,—and it is impossible to question his supremacy, when he floats us along in a stream of bright talk, or shoots with us the rapids of polite conversation. He delights in the small squabbles of great politicians and the puns of George Selwyn,—enjoys to madness the strife of loo with half a dozen bitter old women of quality,—revels in a world of chests, cabinets, commodes, tables, boxes, turrets, stands, old printing, and old china,—and indeed lets us loose at once amongst all the frippery and folly of the last two centuries with an ease and a courtesy equally amazing and delightful. His mind, as well as his house, was piled up with Dresden china, and illuminated through painted glass; and we look upon his heart to have been little better than a case full of enamels, painted eggs, ambers, lapis-lazuli, cameos, vases, and rock crystals. This may in some degree account for his odd and quaint manner of thinking, and his utter poverty of feeling. He could not get a plain thought out of that cabinet of curiosities, his mind;—and he had no room for feeling,—no place to plant it in, or leisure to cultivate it. He was at all times the slave of elegant trifles; and could no more screw himself up into a decided and solid personage, than he could divest himself of petty jealousies and miniature animosities. In one word, everything about him was in little; and the smaller the object, and the less its importance, the higher did his estimation and his praises of it ascend. He piled up trifles to a colossal height—and made a pyramid of nothings "most marvellous to see."

THE FIFTH DUKE OF BEDFORD AND BLOOMSBURY HOUSE.

On the 2nd of March 1802, died Francis, fifth Duke of Bedford, unmarried, at the age of thirty-seven, deeply lamented on account of his amiable character and the enlightened liberality with which he had dispensed the princely fortunes of his family. In his tenure of the honours and estates of the house of Bedford, we find but one incident with which we are disposed to find fault, or at which we might express regret, the taking down of that family mansion in Bloomsbury-square which had been the residence of the patriot lord, and toward which he had thrown a look of sorrow on passing to the scaffold in Lincoln's Inn Fields. That house should have been kept up by the race of Russell as long as two bricks of it would hold together.

This mansion, which was taken down in 1800, had been built in the reign of Charles II. for Thomas Wriothesley, Earl of Southampton, and it came into the Bedford family by the marriage of the patriot Lord Russell to the admirable daughter of the Earl, Lady Rachel. It occupied the whole north side of the square, with gardens extending behind towards what is now the City-road, the site of Russell-square, and of many handsome streets besides. There was something not easily to be accounted for in the manner in which the house and its contents were disposed of. The whole were set up to auction (May 7, 1800). A casual dropper-in bought the whole of the furniture and pictures, including Thornhill's copies of the cartoons (now in the Royal Academy), for the sum of £6,000. In *Dodsley's Annual Register*, 1800, the gallery is described as the only room of consequence in the mansion. This was fitted up by the fourth Duke of Bedford, who placed in it the copies of the cartoons by Thornhill, at the sale of whose collection they had been bought by the Duke for £200. The prices fetched by some of the pictures at the Bloomsbury House sale, by Mr Christie, appear very small: as, St John preaching in the Wilderness, by Raphael, 95 guineas; an Italian Villa, by Gainsborough, 90 guineas; four paintings of a Battle, by Cassinovi, which cost the Duke £1,000, were sold for 60 guineas; a fine Landscape, by Cuypp, 200 guineas; two beautiful bronze figures, Venus and Antinous, 20 guineas, and Venus couchant, from the antique, 20 guineas. Among the pictures was the Duel between Lord Mohun and the Duke of Hamilton, in Hyde Park. The celebrated statue of Apollo, which stood in the hall of Bedford House, was removed to Woburn: it originally cost 1000 guineas.

The week after, there were sold the double rows of lime-trees in the garden, and the ancient stem of the light and graceful acacia which stood in the court before the house, and which Walpole commends in his *Essay on Landscape Gardening*. The house was immediately pulled down; and, says the *Annual Register*, 'the site of a new square, of nearly the same dimensions as Lincoln's Inn Fields, and to be called Russell-square, has been laid out.'

The Bedford property in Bloomsbury has realized enormous sums: for example, New

Oxford-street, occupying the site of the *Rookery* of St Giles, was made at a cost of £290,227 4s. 10d., of which £113,963 was paid to the Duke of Bedford alone, for freehold purchases.

HORACE WALPOLE ON BALLOONS.

On March 2, 1784, Blanchard, the aëronaut, made his first ascent from Paris, in a hydrogen balloon, to which he added wings and a rudder, proved on trial to be useless.

This was a busy year in ballooning; and among those who took interest in the novelty was Horace Walpole, who, in a letter of Jan. 13, thus speculates upon the chances of turning aërostation to account: 'You see the Airgonauts have passed the Rubicon. By their own account they were exactly birds; they flew through the air; perched on the top of a tree, some passengers climbed up, and took them in their nest. The smugglers, I suppose, will be the first that will improve upon the plan. However, if the project be ever brought to perfection, (though I apprehend it will be addled, like the ship that was to live under water and never came up again,) it will have a different fate from other discoveries, whose inventors are not known. In this age all that is done (as well as what is never done) is so faithfully recorded, that every improvement will be registered chronologically. Mr Blanchard's *Trip to Calais* puts me in mind of Dryden's *Indian Emperor*:

“What divine monsters, O ye gods, are these,
That float in air, and fly upon the seas?”

Dryden little thought that he was prophetically describing something more exactly than ships as conceived by Mexicans. If there is no air-sickness, and I were to go to Paris again, I would prefer a balloon to the packet-boat, and had as lief roost in an oak as sleep in a French inn, though I were to caw for my breakfast like the young ravens.'

In the autumn of the same year, Walpole is writing a letter at Strawberry Hill, when his servants call him away to see a balloon; he supposes Blanchard's, that was to be let off at Chelsea in the morning. He is writing to a friend, Mr Conway, and thus continues: 'I saw the balloon from the common field before the window of my round tower. It appeared about a third of the size of the moon, or less, when setting, something above the tops of the trees on the level horizon. It was then descending; and after rising and declining a little, it sunk slowly behind the trees, I should think about or beyond Sunbury, at five minutes after one.' This ascent leads Walpole to say, 't'other night I diverted myself with a sort of meditation on future *airgona-tion*, supposing it will not only be perfected, but will depose navigation. I did not finish it, because I am not skilled, like the gentleman that used to write political ship-news, in that style which I wanted to perfect my essay; but in the prelude I observed how ignorant the ancients were in supposing Icarus melted the wax of his wings by too near access to the sun, whereas he would have been frozen to death before he made the first port on that road. Next I discovered an alliance between

Bishop Wilkins's art of flying and his plan of universal language; the latter of which he, no doubt, calculated to prevent the want of an interpreter when he should arrive at the moon.

'But I chiefly amused myself with ideas of the change that would be made in the world by the substitution of balloons for ships. I supposed our seaports to become *deserted villages*; and Salisbury Plain, Newmarket Heath, (another canvass for alteration of ideas,) and all downs (but *the Downs*), arising into dockyards for aerial vessels. Such a field would be ample in furnishing new speculations. But to come to my ship-news:

'The good balloon, *Dædalus*, Captain Wingate, will fly in a few days for China; he will stop at the Monument to take in passengers.

'Arrived on Brand-sands, the *Vulture*, Captain Nabob; the *Tortoise* snow, from Lapland; the *Pet-en-l'air*, from Versailles; the *Dreadnought*, from Mount Etna, Sir W. Hamilton commander; the *Tympany*, *Montgolfier*. Foundered in a hurricane, the *Bird of Paradise*, from Mount Ararat; the *Bubble*, *Sheldon*, took fire, and was burnt to her gallery; and the *Phœnix* is to be cut down to a second-rate.'

'In these days Old Sarum will again be a town, and have houses in it. There will be fights in the air with wind-guns, and bows and arrows; and there will be prodigious increase of land for tillage, especially in France, by breaking up all public roads as useless.'

In December he writes: 'This enormous capital (London), that must have some occupation, is most innocently amused with those philosophic playthings, air-balloons. But, as half-a-million of people that impassion themselves for any object are always more childish than children, the good souls of London are much fonder of the *airnauts* than of the toys themselves. Lunardi, the Neapolitan secretary, is said to have bought three or four thousand pounds in the stocks, by exhibiting his person, his balloon, and his dog and cat, at the "Pantheon," for a shilling each visitor. Blanchard, a Frenchman, is his rival, and I expect that they will soon have an air-fight in the clouds, like a stork and a kite.'

Since Walpole's time there have been changes in the value of public roads and the serviceableness of sea-ports, but from causes apart from aerial navigation,—in which art literally no progress has been made since the year 1784.

ESCAPE OF LOUIS PHILIPPE TO ENGLAND, 1848.

It was on the 2nd of March 1848, that Louis Philippe, King of the French, after a career of vicissitude, perhaps unexampled in modern times, finally left France, and sought a sheltering place in England. The particulars of the King's escape form an episode of singular interest in the life of the dethroned monarch, and are related in the *Quarterly Review* for March 1850, being further confirmed to the Editor of the *Book of Days* by one of the principal agents engaged in the transaction.

Our engraving represents the summer-house on the Côte de Grâce at Honfleur, in which King

Louis Philippe and Queen Marie-Amélie were concealed previous to their departure for England.

'Every one who has sailed in front of Honfleur, must have remarked a little chapel situated on the top of the wooded hill that overhangs the town. It was dedicated to the piety of the sailors of ancient days to Notre Dame de Grâce, as was a similar one on the opposite shore. From it, Mr de Perthuis' cottage is commonly called La Grâce; and we can easily imagine the satisfaction of the Royal guests at finding themselves under the shelter of a friendly roof with a name of such good omen.

'On Thursday, the 2nd of March (1848), just at daybreak, the inmates of La Grâce were startled by the arrival of a stranger, who, however, turned out to be Mr Jones, the English Vice-Consul at Havre, with a message from the Consul, Mr Featherstonhaugh, announcing that the *Express* steam-packet had returned, and was placed entirely at the King's disposal, and that Mr Jones would concert with his Majesty the means of embarkation. He also brought news, if possible, more welcome—a letter from Mr Besson, announcing that the Duke de Nemours, his little daughter, the Princess Marguerite, and the Princess Clementine, with her husband and children, were safe in England. This double good news reanimated the whole party, who were just before very much exhausted both in body and mind. But the main difficulty still remained; how they were to get to the *Express*?

'Escape became urgent; for not only had the Procureur de la République of the district hastened to Trouville with his gendarmes to seize the stranger (who, luckily, had left it some hours), but, having ascertained that the stranger was the King, and that Mr de Perthuis was in his company, that functionary concluded that his Majesty was at La Grâce, and a domiciliary visit to the Pavilion was subsequently made.

'The evening packet (from Havre to Honfleur) brought back Mr Besson and Mr Jones, with the result of the council held on the other side of the water, which was, that the whole party should instantly quit La Grâce, and, taking advantage of the dusk of the evening, embark in the same

packet by which these gentlemen had arrived, for a passage to Havre, where there were but a few steps to be walked between leaving the Honfleur boat and getting on board the *Express*. The Queen was still to be Madame Lebrun; but the King, with an English passport, had become Mr William Smith. Not a moment was to be lost. The King, disguised as before, with the addition of a coarse great-coat, passed, with M.M. de Rumigny and Thuret, through one line of streets; Madame Le Brun, leaning on her *nephew's* arm, by another. There was a great crowd on the quay of Honfleur, and several gendarmes; but Mr Smith soon recognised Mr Jones, the Vice-Consul, and, after a pretty loud salutation in English (which few Mr Smiths speak better), took his arm, and stepped on board the packet, where he sat down immediately on board one of the passengers' benches. Madame Le Brun took a seat on the other side. The vessel, the *Courier*, happened to be one that the King had employed the summer before at Tréport. M. Lamartine, who mistakes even the place, and all the circumstances of this embarkation, embroiders it with a statement that the King was recognised by the crew, who, with the honour and generosity inherent in all Frenchmen, would not betray him. We are satisfied that there are very few seamen who would have betrayed him; but the fact is, that he was not recognised; and, when the steward went about to collect the fares and some gratuity for the band, Mr Smith shook his head, as if understanding no French, and his friend Mr Jones paid for both. On landing at the quay of Havre, amidst a crowd of people and the *crieurs* of the several hotels was Mr Featherstonhaugh, who, addressing Mr Smith as his *uncle*, whom he was delighted to see, conducted him a few paces further on, into the *Express*, lying at the quay, with her steam up; Madame Le Brun following.'

MARCH 3.

St Marinus and Asterius, martyrs in Palestine, about 272. Saints Emeterius and Chelidonius, martyrs in Spain. St Winwaloe, abbot in Armorica, about 529. St Lamalisse, of Scotland, 7th century. St Cunegundes, empress, 1040.

Born.—Gisbert Voet, Leyden theologian, 1589; Edmund Waller, poet, 1605, *Coleshill*; Sir William Davenant, poet laureate, 1606, bapt. *Oxford*; Thomas Otway, dramatic poet, 1651, *Trotten, Sussex*; William Godwin, novelist, 1756, *Wisbeach*; W. C. Macready, tragedian, 1793, *London*.

Died.—Sir Nicholas Carew, beheaded, 1539, *Aligate*; John Frederick, the Magnanimous, of Saxony, 1554; John Sturm, Lutheran teacher, 1589; George Herbert, poet, rector of *Bemerton*, 1633; Robert Hooke, philosopher, 1703; Camillo, Duke de Tullard, French Marshal, 1728; Rev. Dr William Stukeley, antiquary, 1765, *East Ham*; Dr William Hunter, 1783, *London*; Robert Adam, architect, 1792; Copley Fielding, landscape painter, 1855.

WALLER, DAVENANT, AND OTWAY.

This day is the anniversary of the birth of three English poets: Edmund Waller, in 1605; Sir William Davenant, in 1606; and Thomas Otway, in 1651.

Waller was the descendant of an ancient and honourable family in Buckinghamshire, and his mother was the sister of the patriot, John Hampden. He was educated at Eton, subsequently took his degree at King's College, Cambridge, and was sent to Parliament at the age of seventeen, as representative of the family borough of Agmondesham, having even then obtained considerable reputation as a poet. He was twice married; between the death of the first, and his union with the second, the more valuable productions of his muse were given to the world. He had become the suitor of the Lady Dorothea Sydney, daughter of the Earl of Leicester, whom he immortalized as *Sacharissa*, a name, 'formed,' as he used to say, 'pleasantly,' from *sacharum*, sugar. Yet he describes her as haughty and scornful. Sacharissa and her lover met long after the spring of life had passed, and on her asking him, 'When he would write such fine verses upon her again?' the poet ungallantly replied, 'Madam, when you are as young again.' As a politician, he was fickle and unsteady. The affair called his Plot, which terminated in his securing his own safety by appearing against his associates, has condemned his name to infamy. During the Commonwealth, he panegyricised Cromwell, but from no sincere conviction. The act, however, is almost redeemed by the wit of his reply to Charles II., with reference to the verses, that poets usually succeed best in fiction. He died in London in the autumn of 1688. Waller is described as possessing rare personal advantages, exceedingly eloquent, and as one of the most witty and gallant men of his time; so much so, that, according to Clarendon, 'his company was acceptable where his spirit was odious.' The first edition of his poems was printed in 1645. Prefixed to it was a whimsical address, purporting to be 'from the Printer to the Reader,' assigning as a reason for their publication, that surreptitious copies had found their way into the world, ill set forth under his name—so ill that he might justly disown them.

As a specimen of Waller's 'smoothness,' (which was the admiration of Pope), we give one of his lyrical poems, well-known, but which can never be met with anywhere without giving pleasure:

'Go, lovely Rose,
Tell her that wastes her time and me,
That now she knows,
When I resemble her to thee,
How sweet and fair she seems to be.

Tell her that's young,
And shuns to have her graces spied,
That hadst thou sprung
In deserts, where no men abide,
Thou must have uncommended died.

Small is the worth
Of beauty from the light retired:
Bid her come forth,
Suffer herself to be desired,
And not blush so to be admired.

Then die, that she
The common fate of all things rare
May read in thee:
How small a part of time they share,
That are so wondrous sweet and fair.'

In the churchyard of Beaconsfield, near the place of his birth, Waller lies buried beneath a handsome monument of white marble.

Davenant, aptly designated by Leigh Hunt, 'as the restorer of the stage in his time, and the last of the deep-working poetical intellects of the age that followed that of Elizabeth,' was the son of an innkeeper at Oxford. His mother was 'a very beautiful woman, of a good wit and conversation,' and as Shakspeare had frequented 'The Crown' in his journeys from Warwickshire to London, scandal assigned other motives than those of friendship to the interest he early manifested to the youth, his namesake and godson. Davenant succeeded to the laureateship on the death of Ben Jonson. He was a great favourite with the Earl of Newcastle, who appointed him lieutenant-general of his ordnance.

In the civil war he obtained credit as a soldier, and was knighted by Charles I. at the siege of Gloucester. On the decline of the king's affairs, his life was saved, it is said, chiefly by the interference of Milton; and it is believed that the intercession of Davenant afterwards mainly contributed to preserve Milton from the scaffold when matters changed in England. After the Restoration, Davenant obtained a patent for the representation of dramatic pieces at the Duke's Theatre, in Lincoln's Inn Fields, and the house was opened with a new play of his own, entitled the *Siege of Rhodes*, in which he introduced a variety of beautiful scenery and machinery.

He wrote, in all, about twenty-five dramatic pieces. He died in 1668, and was interred in Westminster Abbey.

The only poem by Davenant, if we except his dramas, and a few minor addresses, is *Gondibert*, which he unfortunately left unfinished. Opinions differ greatly on the merits of this production; but it is generally acknowledged to be 'without the charm of reality, and cold and abstracted; yet full of chivalrous grandeur, noble thoughts, harmonious diction, and displays an accurate knowledge of human nature, and a deep spirit of philosophy.'

As a sample of Sir William Davenant's muse, we give the following song:

- 'The lark now leaves his wat'ry nest,
And climbing, shakes his dewy wings;
He takes this window for the east;
And to implore your light, he sings,
Awake, awake, the morn will never rise,
Till she can dress her beauty at your eyes.
- 'The merchant bows unto the seaman's star,
The ploughman from the sun his season takes;
But still the lover wonders what they are,
Who look for day before his mistress wakes.
Awake, awake, break through your veils of lawn,
Then draw your curtains, and begin the dawn.'

Otway was not more remarkable for moving the tender passions, than for the variety of fortune to which he himself was subjected. Born the son of a clergyman, he was educated for the church, but on quitting Oxford, and coming to London, he became an actor, but performed with indifferent success. Otway was more valued for the sprightliness of his conversation and wit, which procured him the friendship of the Earl of Plymouth, who obtained for him a

cornet's commission in the troops which then served in Flanders. Otway was always in necessitous circumstances, and particularly so on his return from abroad. He had recourse to writing for the stage, and this was the only employment that nature seems to have fitted him for. Leigh Hunt terms Otway 'the poet of sensual pathos; for, affecting as he sometimes is, he knows no way to the heart but through the senses.' In comedy, he has been considered too licentious, which, however, was no great objection to those who lived in the profligate days of Charles II.; but in tragedy 'where he does not intend to be sublime, but confines himself to his own element, the pathetic, no writer can produce more powerful effects than his.'

But although Otway possessed, in so eminent a degree, the rare talent of writing to the heart, he was not favourably regarded by some of his contemporary poets, nor was he always successful in his dramatic compositions. After experiencing many reverses of fortune in regard to his circumstances, but generally changing for the worse, he died April 13, 1685, at a public-house on Tower-hill, whither he had retired to avoid the pressure of his creditors. The horrible story of his having been choked by attempting too eagerly to swallow a piece of bread, of which he had been some time in want, has been successfully controverted.

Besides ten plays, Otway composed some miscellaneous poems, and wrote several translations. The beauty and delicacy of Otway's imagery will be seen in the following example:

'You took her up a little tender flower,
Just sprouted on a bank, which the next frost
Had nipt, and with a careful, loving hand,
Transplanted her into your own fair garden,
Where the sun always shines. There long she
flourished;
Grew sweet to sense, and lovely to the eye;
Till at the last a cruel spoiler came,
Cropped this fair rose, and rifled all its sweetness,
Then threw it like a loathsome weed away.'

GEORGE HERBERT.

Through Izaak Walton the personal memory of George Herbert has been preserved. He was born on the 3rd of April 1593, in Montgomery Castle, Wales, being the fifth brother of Lord Herbert of Cherbury. He was educated at Trinity College, Cambridge, and in 1619 was chosen orator for the University. In those days King James used to go hunting about Newmarket and Royston, and was frequently invited to Cambridge, where Herbert, as orator, had to receive him. The King was so charmed by Herbert's fine speeches that he gave him a sinecure of £120 a-year, with hopes of yet better things. Lord Bacon, whom Walton happily designates 'the great secretary of Nature,' made Herbert's acquaintance at Cambridge, and so estimated his powers, that he submitted some writings to his criticism and revision. With the death of King James, in 1625, ended all Herbert's cherished hopes of promotion at court. After some severe struggles with his ambition, he resolved to take sacred orders, and in 1626 he

was appointed prebend of Layton Ecclesia, a village in Hunts. Plagued with ague, he removed in 1630 to the healthier parsonage of Bemerton, a mile from Salisbury, where he died in 1632, at the early age of thirty-nine.

Herbert's fame rests on a posthumous publication. When dying, he handed a manuscript to a friend, saying, 'Sir, I pray deliver this little book to my dear brother Farrer, and tell him he shall find in it a picture of the many spiritual conflicts that have passed betwixt God and my soul. Desire him to read it, and then, if he can think it may turn to the advantage of any poor dejected soul, let it be made public; if not, let him burn it.' The little book was *The Temple, or Sacred Poems and Private Ejaculations*. Mr Farrer had it printed at Cambridge in 1633, and it at once rose into high popularity. Walton, writing in 1670, says that 20,000 copies had been sold, a large number for the seventeenth century. Herbert's imagination found its joy and exercise in the services and rites of the Church of England; what Nature was to Wordsworth, the Prayer-book was to him; and until Keble wrote, he was *par spécialité* the ecclesiastical poet. Our enjoyment of his verses is greatly marred through his free use of quaint conceits and fantastic imagery, by which his pious and often profound thoughts are obscured rather than illustrated. Herbert had a passion for music, and composed many of his hymns, that he might sing them to his lute and viol.

DR STUKELEY, THE ANTIQUARY, AND HIS SPECULATIONS.

This writer on Roman and British antiquities, the next distinguished investigator after Strype, died at the rectory-house of St George the Martyr, Queen-square, London.

He was born at Holbeach, in Lincolnshire, in 1687, and completed his education at Benet College, Cambridge. Here, natural science was his favourite pursuit, and with his friend and fellow-collegian, Stephen Hales, he used to ramble over Gogmagog Hills and the bogs of Cherry Hunt Moor, gathering simples; they also studied together anatomy and chemistry, and performed many curious dissections and experiments. After practising for a time as a physician, first at Boston, then in London, finally at Grantham, Stukeley relinquished medicine, and took orders. At first he obtained good preferments in Lincolnshire, but in 1747, being presented to the rectory of St George the Martyr, in Queen-square, he once more settled in the metropolis, where, and at Kentish-town, he spent the rest of his life. Stukeley obtained this living from the Duke of Montague, with whom he had become acquainted some years before, when they were associated as founders of the Egyptian Society. It is curious to us now-a-days to hear Stukeley thus describing his first lodging, at one Mrs Machin's, Ormond-street. 'On one side of my lodgings we have a *beau* street, and those sorts of entertainments it affords, and in my study backwards I have a fine view to Hampstead, and the rural scene of haymakers, &c. Next door I have the beautiful sight of Lord

Powis's house, the most regular piece of architecture of any house in London, and a sharp fresh air, so that I enjoy a perfect *rus in urbe*.' He next lived in Queen-square, the north side of which 'was left open,' it is said, for the sake of the beautiful landscape view.

Stukeley's first antiquarian work was an account of the celebrated *Arthur's Oven*, in Scotland; next, his *Itinerarium Curiosum*, of which the second volume, or *Centuria*, is of all Stukeley's works the most sought after. He next published two works on Abury and Stonehenge, and he was the first to investigate the tumuli of that neighbourhood. He carefully studied the form and arrangement of Abury, and his engravings and restorations of Stonehenge are valuable; he regarded this work as a temple of the British Druids; but, in both cases, his essays are full of fanciful and irrelevant speculation, which, John Britton tells us, for many years so harassed and distressed him, that he was 'often tempted to relinquish the pursuit [of antiquities], in despair of ever arriving at anything like proof, or rational evidence.'

In 1757, Stukeley printed his account of the work of Richard of Cirencester, *De Situ Britannia*, from the MS. sent to him as having been recently discovered at Copenhagen, by Charles Julius Bertram. The *Itinerary* contains eighteen journeys, which Richard says he compiled from certain fragments by a Roman general, from Ptolemy, and other authors; he mentions 176 stations (while Antoninus has only 113), some of them considerably north of the wall of Severus. The credit and fidelity of Richard have been doubted, but wherever the subject has admitted of local investigation, the result has been favourable to his authenticity. Gibbon says of him, that 'he shews a genuine knowledge of antiquity very extraordinary for a monk of the fourteenth century.'

In 1758, Stukeley published his *Account of the Medallie History of Marcus Aurelius Valerius Carausius, Emperor of Britain*, of which work Gibbon somewhat ungratefully says, 'I have used his materials, and rejected most of his fanciful conjectures.' It was this lively and licentious fancy which brought the ingenuity and learning which he really possessed into discredit. He undoubtedly described much that was curious and valuable, and which would probably have been lost but for his record of it. But his theories were his bane. Among his Stonehenge speculations, he laments the loss of a tablet of tin found there in the time of Henry VIII., inscribed with strange characters, which Sammes thought to be Punic, but Stukeley himself Irish. He adds: 'No doubt but what it was a memorial of the founders, wrote by the Druids, and had it been preserved till now, would have been an invaluable curiosity.'

Horace Walpole, adverting to the earthquake speculations of 1750, tells us: 'One Stukeley, a parson, has accounted for it, and I think prettily, by electricity—but that is the fashionable cause, and everything is resolved into electrical appearances, as formerly everything was accounted for by Des Cartes's vortices and Sir Isaac's gravitation.'

Regarding Stukeley's Lincolnshire life there is some pleasant gossip in Thompson's *History of Boston*, gleaned from letters and diaries, and affording some glimpses of the social life of that period.

In London, as he tells us, he frequented no levees, but 'took a vast deal of solitude,' and, instead of running from the Royal Society to the Antiquaries, retreated every night at six o'clock to his contemplative pipe. 'I love solitude in London,' he writes, 'and the beauty of living there is, that we can mix in company and solitude in just proportion; whilst in the country we have nothing else but solitude?'

Dr Stukeley was buried at East Ham, in Essex, where, by his own particular desire, there is no monument to denote his resting-place. He appears to have been a single-hearted, good man, who, after some experience of public life, found that 'home was most agreeable.'

In the library of the Gentlemen's Society at Spalding are preserved several of Stukeley's letters, in one of which he strenuously maintains the opinion that Britain was originally settled by Brute or Brito, the descendant of Æneas and Lavinia. 'In confidence of the truth of this descent from Æneas,' says Stukeley, 'I have endeavoured to unravel his pedigree through all the labyrinths of Grecian fable up to Noah, wherein one way or other is comprehended some part at least of all the famous men and kingdoms of Greece, Italy, and Egypt, where there is any mutual relation by marriage or descent; and this will be particularly useful to me in reading the classics.'

The only geological opinion to be found in these letters is the following: 'At Edmondthorp, in Leicestershire, I saw some huge and perfect scallop-shells, antediluvian, in the stone. You know Leicestershire consists of a red stone, brimful of the petrified shells of the old world, especially all round the bottom of the great cliff, which generally bounds Lincolnshire and that county. 'Tis easy to conceive that when the whole face of the county was an ocean, this cliff of ours, which begins at Hambledon, in Rutlandshire, and ends at Lincoln, stopped these shells from rolling down with the declining waters of the cataclysm into the sea, and so left them incrustated in the stone. I know this is the case all along the bottom of the cliff.'

THE MERRY UNDERTAKERS.

One of the favourite bequests of our ancestors in the time preceding the Reformation, was for the purpose of keeping up an annual visit to the tomb of the testator, attended by a feast. This 'commemoration guttle,' as Dr Fosbroke calls it,* probably took its rise in the Pagan institution of anniversaries, but it was less spiritual and elegant. Mr Douce tells us that one of the meetings taking place at an inn, where the sign was the arms of a nobleman, one having asked a clergyman present to translate the motto, '*Virtus post funera vivit*,' he made answer, '*Virtus*, a parish clerk, *vivit*, lives well, *post funera*, at funeral feasts.'

* History of Gloucester, 4to, 1819, p. 350.

THE MERRY UNDERTAKERS.

The joyous private behaviour of those whose business it is to take part in funeral pageantry has supplied material of humorous description to authors, from Richard Steele down to Charles Dickens. These officials necessarily put on looks of grave concern with their mourning habiliments; and, after all, having a part to act, is it not well that they act it? How should we regard them if, instead of an outward solemnity, they presented faces of merriment, or even of indifference? Still, in an official assumption of woe, there is something which we cannot view in other than a ludicrous light.

In the last quarter of the eighteenth century, there flourished, at the corner of the lane leading from the Wandsworth-road to Battersea-bridge, a tavern, cleft the Falcon, kept by one Robert Death, a man whose figure is said to have ill comported with his name, seeing that it displayed the highest appearances of jollity and good condition. A merry-hearted artist, named John Nixon, passing this house one day, found an undertaker's company regaling themselves at *Death's Door*. Having just discharged their duty to a rich nabob in a neighbouring cemetery, they had, the first time for three or four hours, found an opportunity of refreshing exhausted nature; and well did they ply the joyful work before them. The artist, tickled at a festivity among such characters in such a place, sketched them on the spot, and his sketch was soon after published, accompanied with a cantata from another hand, of no great merit, in which Sable, the foreman of the company, is represented as singing as follows, to the tune of 'I've kissed and I've prattled with fifty fair maids:'

'Dukes, lords, have I buried, and squires of fame,
And people of every degree;
But of all the fine jobs that came in my way,
A fun'ral like this for me.
This is the job
That fills the bob,
O! the burying a nabob for me!

Unfeather the hearse, put the pall in the bag,
Give the horses some oats and some hay;
Drink our next merry meeting and quackery's increase,
With three times three and huzza, &c.'

Death has now submitted to his mighty name-sake, and the very place where the merry undertakers regaled themselves can scarce be distinguished among the spreading streets which now occupy this part of the environs of the metropolis.

St Dunstan.—Walter Gale, the Sussex school-master, records that in 1749, 'there was at Mayfield a pair of tongs, which the inhabitants affirmed, and many believed, to be that with which St Dunstan, Archbishop of Canterbury, who had his residence at a fine ancient dome in this town, pinched the devil by the nose when, in the form of a handsome maid, he tempted him.' What made it more terrible to this sightly tempter was, that the tongs happened to be red-hot, the pair being one that St Dunstan made use of at his forge, for it seems that the Archbishop was a blacksmith as well as a saint.

Lord Bute.—Some idea of the unpopularity of this minister may be gathered from his brother, Mr Stuart Mackenzie, being described as a very amiable man, to whom no objection was ever raised beyond his relationship to Lord Bute.

MARCH 4.

St Lucius, pope and martyr, 253. St Adrian, bishop of St Andrew's, martyr in Scotland, 874. St Casimir, Prince of Poland, 1482.

Born.—Don Pedro, of Portugal, 1394; James Earl Waldegrave, 1715; Lord Chancellor Somers, 1652, Worcester.

Died.—Saladin, 1193, *Damascus*; Bernard Gilpin, rector of *Houghton-le-Spring*, 1583; Matthias Hoe, 1645, *Dresden*; J. Vanderlinden, 1664, *Leyden*; John Anstis, Garter King-at-Arms, 1744; the Rev. Thomas Seward, 1790, *Lichfield*; Thomas Rickman, architect, 1841, *Birmingham*; Charles Leopold Von Buch, German geologist, 1853.

SALADIN.

The famous sultan of Egypt and Syria, who overthrew the short-lived Latin kingdom of Jerusalem, and successfully bore the brunt of the third crusade, was very much a soldier of fortune after the type of the modern Mehemet Ali. It was in the course of a career of conquest, beginning with Egypt and going on to Syria, that he fought Guy de Lusignan, King of Jerusalem, at Tiberias, in 1187, and obtained possession of that city. Then did Philip Augustus of France and Richard I. of England deem themselves called upon by Christian duty to fly to the rescue of the holy sepulchre. The energies of this third crusade were concentrated on a two years' siege of Acre, which they took, notwithstanding the efforts of Saladin for its rescue; but they vainly endeavoured to force a way to Jerusalem, and were finally obliged to rest satisfied with leaving the Christians in possession of a strip of the coast between Tyre and Jaffa.

In this contest between Europeans and Asiatics, there was a wonderful display of valour on both sides; but the struggle is mainly interesting to us through the magnanimity of Saladin. The lion-hearted King of England, being one day on the point of being taken prisoner, was saved from that fate by the generosity of a Norman gentleman, Guillaume de Préau, who called out, 'I am the king,' in a voice expressive of a wish to secure good treatment. Guillaume was instantly surrounded and taken, and he was quickly brought before Saladin, who at once knew that he was not Richard. On the stratagem being explained, the Sultan could only praise him for the self-devotion he had displayed.

On entering Jerusalem, after a successful battle, the people surrounded him, clamouring for their fathers, brothers, and sons whom he had taken prisoners. He could not resist this sad spectacle, but at once ordered the prisoners to be released.

Having established good laws in his territories, he was determined that they should be executed without respect of persons. His own nephew being cited in judgment, he compelled him to appear. Nay, a merchant venturing to accuse Saladin himself of some wrong, and the *cadí* having come to the sultan to ask what should be done, 'That which is just,' answered he. He went to the court, pleaded his own cause, and so far from punishing the plaintiff, thanked and

rewarded him for shewing so much confidence in his integrity.

Though Saladin was a usurper, with the stain of ingratitude to his early masters, there must have been splendid qualities in a man who, born a Khoord in a moderate rank of life, raised himself to be the ruler of Egypt, Arabia, Syria, Mesopotamia, and the finest tracts of Asia Minor, all in the course of a life of fifty-seven years.

He left his vast territories amongst his seventeen sons; but their rule was everywhere of short duration.

BERNARD GILPIN, HIS HOSPITALITY AND PREACHING.

This good man, born in Westmoreland in 1517, and by his mother related to Cuthbert Tunstall, the enlightened Bishop of Durham, through that prelate was appointed to the valuable rectory of Houghton-le-Spring. This was in the reign of Mary, a dangerous time for one of such Protestant tendencies as he. Entering at once upon his duties, he did not hesitate to preach the doctrines of the Reformation, and was accordingly very soon accused to Bishop Bonner. Gilpin obeyed the summons of the un pitying prelate, and, fully expecting to suffer at the stake, before setting out he said to his house-steward, 'Give me a long garment, that I may die with decency.' As he journeyed with the ministers of the bishop, he is said to have broken his leg, which, delaying his journey, saved his life, Mary dying in the interval. Gilpin then returned in joy and peace to his parishioners at Houghton. Queen Elizabeth offered him the bishopric of Carlisle, which he declined; and he continued to his death the rector of Houghton. He visited the ruder parts of Northumberland, where the people subsisted mostly on plunder, fearlessly holding forth to them the commands and sanctions of Christianity, and thus did much to change the character of the county. From these useful services he was often called the *Northern Apostle*.

Houghton, being then, as now, a rich benefice, yielded Gilpin an ample income. His hospitality resembled that of the primitive bishops: every fortnight, forty bushels of corn, twenty bushels of malt, and a whole ox, besides other provisions, were consumed in the rectory-house, which was open to all travellers. With equal zeal and assiduity, he settled differences among his parishioners, provided instruction for the young, and prayed by the bedsides of the sick and poor.

THOMAS RICKMAN.

To Thomas Rickman belongs the merit of discriminating and classifying the styles resulting from progressive changes in the Gothic architecture of the middle ages, as clearly as to William Smith belongs the honour of first classifying strata by their respective shells. It must ever be felt as a curious and anomalous circumstance, that the genius who did us this service, and who ultimately gained celebrity by the vast number of Gothic churches which he built in

England, was by birth and up-bringing a member of the Society of Friends, whose principle it is to attach no consequence whatever to the forms of 'steeple-houses.'

'DEMANDS JOYOUS.'

How our ancestors managed to pass the long winter evenings in the olden time, has never been satisfactorily explained. They had no new books, indeed few books of any kind, to read or talk about. Newspapers were unknown; a wandering beggar, minstrel, or pedler circulated the very small amount of news that was to be told. The innumerable subjects of interest that form our ordinary topics of conversation were then utterly unknown. So we can only conclude that our ancestors, like some semi-savage tribes at the present day, passed their spare hours in relating often-told stories, and exercised their wits in asking each other puzzling questions or riddles. Many copies of what we would now term riddle-books, are found in both the French and English collections of old manuscripts, and some were printed at an early period. One of these, entitled *Demands Joyous*, which may be rendered *Amusing Questions*, was printed in English by Wynkyn de Worde, in 1511. From this work, of which one copy only is said to be extant, we cull a few 'demands,' with their responses, for the amusement of the reader; the greater part of them being too strongly impregnated with indecency and profanity to be presentable here:

Dem. What bare the best burden that ever was borne?

Res. The ass that carried our Lady, when she fled with our Lord into Egypt.

Dem. What became of that ass?

Res. Adam's mother ate her.

Dem. Who was Adam's mother?

Res. The earth.

Dem. How many calves' tails would it take to reach from the earth to the sky?

Res. No more than one, if it be long enough.

Dem. What is the distance from the surface of the sea to the deepest part thereof?

Res. Only a stone's throw.

Dem. When Antichrist appears in the world, what will be the hardest thing for him to understand?

Res. A hand-barrow, for of that he shall not know which end ought to go foremost.

Dem. What is it that never was and never will be?

Res. A mouse's nest in a cat's ear.

Dem. Why do men make an oven in a town?

Res. Because they cannot make a town in an oven.

Dem. How may a man discern a cow in a flock of sheep?

Res. By his eyesight.

Dem. Why doth a cow lie down?

Res. Because it cannot sit.

Dem. What is it that never freezeeth?

Res. Boiling water.

Dem. Which was first, the hen or the egg?

Res. The hen, at the creation.

Dem. How many straws go to a goose's nest?

Res. Not one, for straws not having feet cannot go anywhere.

Dem. Who killed the fourth part of all the people in the world?

Res. Cain when he killed Abel.

Dem. What is it that is a builder, and yet not a

man, doeth what no man can do, and yet serveth both God and man ?

Res. A bec.

Dem. What man getteth his living backwards ?

Res. A ropemaker.

Dem. How would you say two paternosters, when you know God made but one paternoster ?

Res. Say one twice over.

Dem. Which are the most profitable saints of the church ?

Res. Those painted on the glass windows, for they keep the wind from wasting the candles.

Dem. Who were the persons that made all, and sold all, that bought all and lost all ?

Res. A smith made an awl and sold it to a shoemaker, who lost it.

Dem. Why doth a dog turn round three times before he lieth down ?

Res. Because he knoweth not his bed's head from the foot thereof.

Dem. What is the worst bestowed charity that one can give ?

Res. Alms to a blind man ; for he would be glad to see the person hanged that gave it to him.

Dem. What is the age of a field-mouse ?

Res. A year. And the age of a hedgehog is three times that of a mouse, and the life of a dog is three times that of a hedgehog, and the life of a horse is three times that of a dog, and the life of a man is three times that of a horse, and the life of a goose is three times that of a man, and the life of a swan is three times that of a goose, and the life of a swallow three times that of a swan, and the life of an eagle three times that of a swallow, and the life of a serpent three times that of an eagle, and the life of a raven is three times that of a serpent, and the life of a hart is three times that of a raven, and an oak groweth five hundred years, and fadeth five hundred years.

MARCH 5.

Saints Adrian and Eubulus, of Palestine, martyrs, 309. St Kieran, of Ireland, bishop, 4th century. St Roger, a Franciscan, 1236.

Born.—John Collins, F.R.S., accountant, 1624, *Wood-eaton* ; Dr George Stanhope, Dean of Canterbury, 1660, *Hartshorne*.

Died.—Odoacer, King of Italy, A.D. 493 ; Alphonso II. (of Portugal), 1223, *Alcobaça* ; Antonio Allegri Correggio, painter, 1534, *Correggio* ; Henri I., Prince of Condé, 1588 ; Pope Clement VIII., 1605 ; James Duke of Hamilton, 1649, beheaded, *Old Palace Yard* ; Arthur, Lord Capell, beheaded, 1649 ; Henry Earl of Holland, beheaded, 1649 ; Bishop Beveridge, 1708 ; the Rev. Dr Philip Francis, 1773, *Bath* ; Dr Thomas Arne, musical composer, 1778 ; the Marquis de la Place, philosopher, 1827 ; Alexander Volta (*Voltaism*), 1827, *Como* ; Dr Lant Carpenter, miscellaneous writer, 1840 ; M. J. B. Orfila, physician and chemist, 1853.

DR ARNE, THE MUSICAL COMPOSER.

Dr Thomas Augustine Arne, with whose lank features we are familiar through the characteristic portrait of him by Bartolozzi, was the son of an upholsterer, in King-street, Covent-garden, at whose house were lodged the Indian kings, mentioned in the *Spectator* as visiting England in the reign of Queen Anne. Young Arne was educated at Eton, and intended for the profession

of the law ; but progress in that or any other such pursuit was impossible. Every energy of the young man's mind was absorbed in music. The father having positively forbidden him this study, he secreted a spinnet in his room, and, muffling the strings, practised in the night, while the rest of the family were asleep. It is also related that the youth would steal in the disguise of a livery into the servants' gallery of the opera-house. Nevertheless, he served a three years' clerkship to the law. In the meantime, he took lessons on the violin of Festing, under whom he made rapid progress, of which his father had no suspicion, till going to a concert one evening, he was astonished to see his son playing the first fiddle most skilfully. The elder Arne now gave up resistance, and consented to his son teaching his sister, Mrs Cibber, to sing ; and for her he set Addison's opera of *Rosamond*. In 1738, the young musician established his reputation by his *Comus*, which he composed in the back parlour of a house in Craven-buildings, Wych-street. The melody of Arne at this time, and of his Vauxhall-gardens songs afterwards, forms an era in English music, and was long the standard of perfection at our theatres and public gardens. But the work which has most contributed to his fame is his *Artaxerxes*, translated from Metastasio's *Artacerces*, which with the talents of Tenducci, Peretti, and Arne's pupil, Miss Brent, had very great success : he sold the copyright for sixty guineas, then considered a large sum for such a property. Its general melody has been analysed as neither Italian nor English, but an agreeable mixture of Italian, English, and Scots. His music for the dramatic songs of Shakspeare attained great popularity, which it still enjoys. Of his song of 'Rule, Britannia,' it may be said that it would have preserved and endeared his name with the English nation throughout all time, though he had never composed another. Altogether, he arranged for the stage upwards of thirty musical pieces. He died March 5, 1778, and was buried in the church of St Paul, Covent-garden. He was a singular instance of that predestinate taste, which is to be accounted for only by peculiar organization, the existence of which, among other less splendid instances, has been since confirmed by Crotch, Himmel, and Mozart. Arne's was, indeed, the pure and unbought love of the art, generated by the pleasurable perception of sweet sounds.

THE FIRST LOCOMOTIVE IN THE BRITANNIA TUBE.

It must have been an anxious day for the late Robert Stephenson when he first sent a locomotive engine through the wonderful Britannia tubular bridge over the Menai Straits,—an anxious day, but probably not a distrustful one ; for he, like all our great engineers, knew his own strength, and relied on the soundness of the principles which had guided him.

Assuredly it was no small difficulty which he had been called upon to overcome. While the Chester and Holyhead Railway was being constructed, Stephenson pondered how it should cross the Menai. Telford's beautiful suspension

bridge being deemed too slight for the purpose, he planned a tube or hollow girder, through which a train might pass as through a tunnel. To make such a tunnel of sheet iron, stiff enough to resist any tendency to bending, was a formidable task. The Menai Strait, at the point selected for the crossing, is about eleven hundred feet wide at high water; in the middle is a rock called the Britannia rock, rising a few feet above high water level. Stephenson resolved to erect a pier of masonry on the rock, so as to break the span of the strait into two portions. To ensure manageable dimensions, it was determined that there should be two tubes, one for the up and one for the down trains. A masonry tower was to support the Caernarvon end of the tubes, and another to support the Anglesea end. There would thus therefore be four separate tubes, forming two when joined end to end.

Mighty were the engineering agencies brought to bear upon the work, and long was the period during which the operations continued. Should the tube be of cast iron or wrought? Should the cross section be square, circular, or oval? Before these questions could be properly answered, the skill of Stephenson, Fairbairn, Hodgkinson, and other eminent engineers was taxed to the utmost, and the company spent a large sum of money in preliminary experiments. Years rolled on; and it was not until 1850, that the trains could cross the bridge that was commenced in 1845. There was the Britannia Tower to build, a large mass of masonry higher than the Monument near London-bridge, and containing twenty thousand tons of stone. There were the Caernarvon and Anglesea Towers to construct, on nearly as massive a scale. There were the vast abutments further inland; for which Mr Thomas, whose carvings in stone at the new Houses of Parliament display so much skill, was employed to sculpture four lions *couchant* twenty-five feet long, majestic in their colossal repose. But the tubes were the most important achievement; each tube is a hollow trunk varying from twenty-five to thirty feet in height, and about fifteen feet wide. The top and bottom are cellular, to insure increased strength. All parts alike, sides and cells, are formed of very thick sheet or plate iron, strengthened with angle-irons, and riveted. Never, perhaps, was there such another job of riveting as this; more than *two million* rivets were driven red hot into holes punched in the plates! Four gigantic tubes were thus built up piece by piece, on platforms ranged along the Caernarvon shore.

Probably the greatest *lift*, in a mechanical sense, ever effected, was the lifting of these tubes—each of which weighed nearly two thousand tons, and had to be raised a clear height of one hundred feet. Each tube was removed from its platform to eight floating pontoons, and was towed upon them to its place between the towers. Then, by a most extraordinary combination of chains, pulleys, hydraulic-machines, and steam-power, each tube was steadily raised inch by inch, until at length it reached its proper elevation, where suitable supports for its ends were provided. The Menai Strait had never before known such a holiday as that which marked the day selected for

raising the first of the tubes. Engineers of eminence came from all parts of the United Kingdom, and from foreign countries, to mark critically Stephenson's great achievements; directors and shareholders came to witness a work on which so many hundred thousand pounds of their capital had been expended; while curiosity-seekers, congregating from the neighbouring counties, swelled the number of those who lined both sides of the strait. Amid the busy hum of preparations, and movements which could be understood only by those versed in engineering science, one figure was above or apart from all others—it was Robert Stephenson, directing and controlling the work of vast bodies of mechanics and labourers. It was a long day, a day of eighteen hours' continuous work, to raise each tube to its height of a hundred feet. Many may guess, but none can know, the feelings that agitated the mind of the great engineer on this day. Perhaps 'agitate' is not the proper word, he was too self-possessed to be agitated; but the ordeal must nevertheless have been a terrible one—seeing that a mishap might bring the whole enterprise to ruin.

And when, many months afterwards, the tubes were properly adjusted end to end, and a continuous tunnel made, the passage of the first locomotive through it was another great event to be recorded in the history of the mighty Britannia-bridge. Each portion of tube had shewn itself firm and stiff enough to bear bravely the lifting process; but would the tubes, as a continuous tunnel, bear the rush and pressure, the rattle and vibration, of a ponderous locomotive? The 5th of March 1850, was the day selected for practically solving this problem; and the solution bore out in every way the calculations of the engineer. Three locomotives, of the heaviest character known to the narrow gauge, were chained end to end. They were decked with the flags of all nations. Robert Stephenson acted as driver of the leading locomotive, and other men of science stood or sat wherever it was most convenient. This weight of ninety tons was driven to the centre of one of the tubes, where it was allowed to remain stationary, with its full dead weight, for a few minutes; and the same took place on the return trip. Then a coal-train of three hundred tons was driven through, and then another train of two hundred tons was allowed to rest with all its weight, for two hours, in the centre of the tube. The plates and rivets bore the test triumphantly; and thus was completed a modern wonder of the world.*

* We are not aware whether Mr Stephenson, before his death, rectified his views concerning the relative claims of himself and Mr W. Fairbairn, concerning the tubular principle for bridges. In the elaborate researches carried on in 1845, Mr Fairbairn was the principal experimentalist; but when the reports came to be made public, it appeared that Mr Stephenson spoke of himself as the originator of the main idea, realized under his own eye by the aid of Messrs Fairbairn and Hodgkinson; whereas Mr Fairbairn has always contended and supported his argument in full in his engineering works, that *he* was the veritable inventor of the most important feature in the bridge.

MARCH 6.

St Fridolin, abbot, 538. St Baldred, of Scotland, about 608. Saints Kyneburge, Kyneswide, and Tibba, 7th century. St Chrodegang, bishop of Metz, 766. St Cadroe, about 975. Colette, virgin and abbess, 1447.

Born.—Michael Angelo Buonarroti, painter, sculptor, and architect, 1474, *Chiusi*; Francesco Guicciardini, diplomatist, 1482, *Florence*; Bishop Francis Atterbury, 1662, *Milton*; Vice-Admiral Sir Charles Napier, 1786, *Merchistoun*.

Died.—Roger Lord Grey de Ruthyn, 1352; Sir John Hawkwood, first English general, 1393, *Florence*; Zachary Ursinus, German divine, 1583, *Neustadt*; Philip, third Earl of Leicester, 1693; Lord Chief Justice Sir John Holt, 1710, *Redgrave*; Philip, first Earl of Hardwicke, Lord Chancellor, 1764, *Wimpole*; G. T. F. Raynal, philosophical historian, 1796, *Passy*; the Rev. Dr Samuel Parr, 1825, *Hatton*; George Mickle Kemp, architect (Scott Monument), *Edinburgh*; Professor Heeren, history and antiquities; Benjamin Travers, surgeon, 1858.

BISHOP ATTERBURY.

In Atterbury we find one of the numerous shipwrecks of history. Learned, able, eloquent, the Bishop of Rochester lost all through hasty, incorrect thinking, and an impetuous and arrogant temper. He had convinced himself that the exiled Stuart princes might be restored to the throne by the simple process of bringing up the next heir as a Protestant, failing to see that the contingency on which he rested was unattainable. One, after all, admires the courage which prompted the fiery prelate, at the death of Queen Anne, to offer to go out in his lawn sleeves and proclaim the son of James II., which would have been a directly treasonable act; we must also admit that, though he doubtless was guilty of treason in favour of the Stuarts, the bill by which he lost his position and was condemned to exile (1723), proceeded on imperfect evidence, and was a dangerous kind of measure. To consider Atterbury as afterwards attached to the service of the so-called Pretender,—wasting bright faculties on the petty intrigues of a mock court, and gradually undergoing the stern correction of Fact and Truth for the illusory political visions to which he had sacrificed so much,—is a reflection not without its pathos, or its lesson. Atterbury ultimately felt the full weight of the desolation which he had brought upon himself. He died at Paris, on the 15th of February 1732.

A specimen of the dexterous wit of Atterbury in debate is related in connection with the history of the Occasional Conformity and Schism Bills, December 1718. On that occasion, Lord Coningsby rebuked the Bishop for having, the day before, assumed the character of a prophet. 'In Scripture,' said this simple peer, 'I find a prophet very like him, namely Balaam, who, like the right reverend lord, drove so very furiously, that the ass he rode upon was constrained to open his mouth and reprove him.'

The luckless lord having sat down, the bishop rose with a demure and humble look, and having thanked his lordship for taking so much notice of

him, went on to say that 'the application of Balaam to him, though severe, was certainly very happy, the terms prophet and priest being often promiscuously used. There wanted, however, the application of the ass; and it seemed as if his lordship, being the only person who had reprov'd him, must needs take that character upon himself.' From that day, Lord Coningsby was commonly recognised by the appellation of 'Atterbury's Pad.'

G. M. KEMP.

The beauty of the monument to Sir Walter Scott at Edinburgh becomes the more impressive when we reflect that its designer was a man but recently emerged at the time from the position of a working carpenter. It is a Gothic structure, about 185 feet high, with exquisite details, mostly taken from Melrose Abbey. Kemp's was one of a number of competing plans, given in with the names of the designers in sealed envelopes; so that nothing could be more genuine than the testimony thus paid to his extraordinary genius. In his earlier days as a working carpenter, Kemp adopted the plan of travelling from one great continental dom-kirk or cathedral to another, supporting himself by his handicraft while studying the architecture of the building. It was wonderful how much knowledge he thus acquired, as it were at his own hand, in the course of a few years. He never obtained any more regular education for his eventual profession. Kemp was a man of modest, almost timid demeanour, very unlike one designed to push his way in the world. After becoming a person of note, as entrusted with the construction of Scotland's monument to the most gifted of her sons, he used to relate, as a curious circumstance, the only connexion he had ever had with Scott in life. Travelling toilsomely one hot day between Peebles and Selkirk, with his tools over his back, he was overtaken by a carriage containing a grey-haired gentleman, whom he did not know. The gentleman, observing him, stopped the carriage, and desired the coachman to invite the wayfaring lad to a seat on the box. He thus became the subject of a characteristic piece of benevolence to the illustrious man with whose name he was afterwards to meet on so different a level.

Most sad to relate, while the monument was in the progress of construction, the life of the architect was cut short by accident, he having fallen into a canal one dark evening, in the course of his homeward walk.

MIDLINT, OR MOTHERING SUNDAY.

In the year 1864, the 6th of March is the fourth Sunday in Lent, commonly called Midlent Sunday. Another popular name for the day is Mothering Sunday, from an ancient observance connected with it.

The harshness and general painfulness of life in old times must have been much relieved by certain simple and affectionate customs which modern people have learned to dispense with. Amongst these was a practice of going to see parents, and especially the female one, on the mid Sunday of Lent, taking for them some little

present, such as a cake or a trinket. A youth engaged in this amiable act of duty was said to go *a-mothering*, and thence the day itself came to be called Mothering Sunday. One can readily imagine how, after a stripling or maiden had gone to service, or launched in independent housekeeping, the old bonds of filial love would be brightened by this pleasant annual visit, signalled, as custom demanded it should be, by the excitement attending some novel and perhaps surprising gift. There was also a cheering and peculiar festivity appropriate to the day, the prominent dish being *furmety*—which we have to interpret as wheat grains boiled in sweet milk, sugared and spiced. In the northern parts of England, and in Scotland, there seems to have been a greater leaning to steeped pease fried in butter, with pepper and salt. Pancakes so composed passed by the name of *carlings*; and so conspicuous was this article, that from it Carling Sunday became a local name for the day.

'Tid, Mid, and Misera,
Carling, Palm, Pase-egg day,'

remains in the north of England as an enumeration of the Sundays of Lent, the first three terms probably taken from words in obsolete services for the respective days, and the fourth being the name of Midlent Sunday from the cakes by which it was distinguished.

Herrick, in a canzonet addressed to Dianeme, says—

'I'll to thee a *simnel* bring,
'Gainst thou go a-mothering ;
So that, when she blesses thee,
Half that blessing thou'lt give me.'

He here obviously alludes to the sweet cake which the young person brought to the female parent as a gift; but it would appear that the term '*simnel*' was in reality applicable to cakes which were in use all through the time of Lent. We are favoured by an antiquarian friend with the following general account of

Simnel Cakes.

It is an old custom in Shropshire and Herefordshire, and especially at Shrewsbury, to make during Lent and Easter, and also at Christmas, a sort of rich and expensive cakes, which are called *Simnel Cakes*. They are raised cakes, the crust of which is made of fine flour and water, with sufficient saffron to give it a deep yellow colour, and the interior is filled with the materials of a

very rich plum-cake, with plenty of candied lemon peel, and other good things. They are made up very stiff, tied up in a cloth, and boiled for several hours, after which they are brushed over with egg, and then baked. When ready for sale the crust is as hard as if made of wood, a circumstance which has given rise to various stories of the manner in which they have at times been treated by persons to whom they were sent as presents, and who had never seen one before, one ordering his *simnel* to be boiled to soften it, and a lady taking hers for a footstool. They are made of different sizes, and, as may be supposed from the ingredients, are rather expensive, some large ones selling for as much as half-a-guinea, or even, we believe, a guinea, while smaller ones may be had for half-a-crown. Their form, which as well as the ornamentation is nearly uniform, will be best understood by the accompanying engraving, representing large and small cakes as now on sale in Shrewsbury.

The usage of these cakes is evidently one of great antiquity. It appears from one of the epigrams of the poet Herrick, that at the beginning of the seventeenth century it was the custom at Gloucester for young people to carry *simnells* as presents to their mothers on Midlent Sunday (or Mothering Sunday).

It appears also from some other writers of this age, that these *simnells*, like the modern ones, were boiled as well as baked. The name is found in early English and also in very old French, and it appears in mediæval Latin under the form *simanellus* or *siminellus*. It is considered to be derived from the Latin *simila*, fine flour, and is usually interpreted as meaning the finest quality of white bread made in the middle ages. It is evidently used, however, by the mediæval writers in the sense of a cake, which they called in Latin of that time *artocopus*, which is constantly explained by *simnel* in the Latin-English vocabularies. In three of these, printed in Mr Wright's *Volume of Vocabularies*, all belonging to the fifteenth century, we have '*Hic artocopus, anglice symnelle*,' '*Hic artocopus, a symnylle*,' and '*Hic artocopus, anglice a symnella*;' and in the latter place it is further explained by a contemporary pen-and-ink drawing in the margin, representing the *simnel* as seen from above and sideways, of which we give below a fac-simile. It is quite evident that it is a rude representation of a cake exactly like those still made in Shropshire. The ornamental border, which is clearly identical with that of the modern cake, is, perhaps, what

the authorities quoted by Ducange v. *simila*, mean when they spoke of the cake as being *foliata*. In the *Dictionarius* of John de Garlande, compiled at Paris in the thirteenth century, the word *simineus* or *simnells*, is used as the equivalent to the Latin *placentæ*, which are described as cakes exposed in the windows of the hucksters to sell to the scholars of the University and others. We learn from Ducange that it was usual in early times to

SIMNEL CAKES.

mark the simnels with a figure of Christ or of the Virgin Mary, which would seem to shew that they had a religious signification. We know that the Anglo-Saxon, and indeed the German race in general, were in the habit of eating consecrated cakes at their religious festivals. Our hot cross buns at Easter are only the cakes which the pagan Saxons ate in honour of their goddess Eastre, and from which the Christian clergy, who were unable to prevent people from eating, sought to expel the paganism by marking them with the cross.

It is curious that the use of these cakes should have been preserved so long in this locality, and still more curious are the tales which have arisen to explain the meaning of the name, which had been long forgotten. Some pretend that the father of Lambert Simnel, the well-known pretender in the reign of Henry VII., was a baker, and the first maker of simnels, and that in consequence of the celebrity he gained by the acts of his son, his cakes have retained his name. There is another story current in Shropshire, which is much more picturesque, and which we tell as nearly as possible in the words in which it was related to us. Long ago there lived an honest old couple, boasting the names of Simon and Nelly, but their surnames are not known. It was their custom at Easter to gather their children about them, and thus meet together once a year under the old homestead. The fasting season of Lent was just ending, but they had still left some of the unleavened dough which had been from time to time converted into bread during the forty days. Nelly was a careful woman, and it grieved her to waste anything, so she suggested that they should use the remains of the Lenten dough for the basis of a cake to regale the assembled family. Simon readily agreed to the proposal, and further reminded his partner that there were still some remains of their Christmas plum pudding hoarded up in the cupboard, and that this might form the interior, and be an agreeable surprise to the young people when they had made their way through the less tasty crust. So far, all things went on harmoniously; but when the cake was made, a subject of violent discord arose, Sim insisting that it should be boiled, while Nell no less obstinately contended that it should be baked. The dispute ran from words to blows, for Nell, not choosing to let her province in the household be thus interfered with, jumped up, and threw the stool she was sitting on at Sim, who on his part seized a besom, and applied it with right good will to the head and shoulders of his spouse. She now seized the broom, and the battle became so warm, that it might have had a very serious result, had not Nell proposed as a compromise that the cake should be boiled first, and afterwards baked. This Sim acceded to, for he had no wish for further acquaintance with the heavy end of the broom. Accordingly, the big pot was set on the fire, and the stool broken up and thrown on to boil it, whilst the besom and broom furnished fuel for the oven. Some eggs, which had been broken in the scuffle, were used to coat the outside of the pudding when boiled, which gave it the shining gloss it possesses as a cake. This new and remarkable production

in the art of confectionery became known by the name of the cake of Simon and Nelly, but soon only the first half of each name was alone preserved and joined together, and it has ever since been known as the cake of Sim-Nel, or Simnel!

TRADITION AND TRUTH.

The value of popular tradition as evidence in antiquarian inquiries cannot be disputed, though in every instance it should be received with the greatest caution. A few instances of traditions, existing from a very remote period and verified in our own days, are worthy of notice.

On the northern coast of the Firth of Forth, near to the town of Largo, in Fifeshire, there has existed from time immemorial an eminence known by the name of Norie's Law. And the popular tradition respecting this spot, has ever been that a great warrior, the leader of a mighty army, was buried there, clad in the silver armour he wore during his lifetime. Norie's Law is evidently artificial, and there can be no wonder that the neighbouring country people should suppose that a great chief had been buried underneath it, for the interment of warrior chieftains under artificial mounds, near the sea, is as ancient as Homer. Hector, speaking of one whom he intended to slay in single combat, says:

‘ The long-haired Greeks
To him, upon the shores of Hellespont,
A mound shall heap; that those in after times,
Who sail along the darksome sea, shall say,
This is the monument of one long since
Borne to his grave, by mighty Hector slain.’

Our Anglo-Saxon ancestors buried their warrior leaders in the same manner. The foregoing quotation seems almost parodied in the dying words of the Saxon Beowulf:

‘ Command the famous in war
To make a mound,
Bright after the funeral fire,
Upon the nose of the promontory;
Which shall, for a memorial
To my people, rise high aloft,
On Heonesness;
That the sea-sailors
May afterwards call it
Beowulf's Barrow,
When the Brentings,
Over the darkness of the flood,
Shall sail afar.’

So it was only natural for the rustic population to say that a chief was buried under Norie's Law. Agricultural progress has, in late years, thrown over hundreds of burial barrows, exposing mortuary remains, and there are few labourers in England or Scotland who would not say, on being pointed out a barrow, that a great man, at some distant period, had been interred beneath it. But silver armour, with one single exception, has never been found in barrows; and as Norie's Law is actually the barrow in which silver accoutrements were found, the tradition of the people was fully verified. For only by tradition, and that from a very distant period, could they have known that the person interred at Norie's Law was buried with silver armour.

It appears that, about the year 1819, a man in

humble life and very moderate circumstances, residing near Largo, was—greatly to the surprise of his neighbours—observed to have suddenly become passing rich for one of his position and opportunities. A silversmith, in the adjacent town of Cupar, had about the same time been offered a considerable quantity of curious antique silver for sale; part of which he purchased, but a larger part was taken to Edinburgh, and disposed of there. Contemporary with these events, a modern excavation was discovered in Norie's Law, so it did not require a witch to surmise that a case of treasure-trove had recently occurred. The late General Durham, then owner of the estate, was thus led to make inquiries, and soon discovered that the individual alluded to, induced by the ancient tradition, had made an excavation in the Law, and found a considerable quantity of silver, which he had disposed of as previously noticed. But influenced, as some say, by a feeling of a conscientious, others of a superstitious character, he did not take all the silver he discovered, but left a large quantity in the Law. Besides, as this ingenious individual conducted his explorations at night, it was supposed that he might have overlooked part of the original deposit. Acting in accordance with this intelligence, General Durham caused the Law to be carefully explored, and found in it several lozenge-shaped plates of silver, that undoubtedly had been the scales of a coat of mail, besides a silver shield and sword ornaments, and the mounting of a helmet in the same metal. Many of these are still preserved at Largo House, affording indisputable evidence of the very long perseverance and consistency which may characterise popular tradition.

Our next illustration is from Ireland, and it happened about the commencement of the last century. At Ballyshannon, says Bishop Gibson, in his edition of Camden's *Britannia*, were two pieces of gold discovered by a method very remarkable. The Bishop of Derry being at dinner, there came in an old Irish harper, and sang an ancient song to his harp. His lordship, not understanding Irish, was at a loss to know the meaning of the song; but upon inquiry, he found the substance of it to be this, that in such a place, naming the very spot, a man of gigantic stature lay buried; and that over his breast and back were plates of pure gold, and on his fingers rings of gold so large that an ordinary man might creep through them. The place was so exactly described, that two persons there present were tempted to go in quest of the golden prize which the harper's song had pointed out to them. After they had dug for some time, they found two thin pieces of gold, circular, and more than two inches in diameter. This discovery encouraged them to seek next morning for the remainder, but they could find nothing more. In all probability they were not the first inquisitive persons whom the harper's song had sent to the same spot.

Since the ancient poetry of Ireland has become an object of learned research, the very song of the harper has been identified and printed, though it was simply traditional when sung before the Bishop. It is called *Moirá Borb*; and

the verse, which more particularly suggested the remarkable discovery, has been translated thus:—

'In earth, beside the loud cascade,
The son of Sora's king we laid;
And on each finger placed a ring
Of gold, by mandate of our King.'

The 'loud cascade' was the well-known waterfall at Ballyshannon, now known as 'the Salmon-leap.'

Another instance of a similar description occurred in Wales. Near Mold, in Flintshire, there had existed from time immemorial a burial mound or barrow, named by the Welsh peasantry *Bryn-yr-ellylon*, the Hill of the Fairies. In 1827, a woman returning late from market, one night, was extremely frightened by seeing, as she solemnly averred, a spectral skeleton standing on this mound and clothed in a vestment of gold, which shone like the noon-day sun. Six years afterwards, the barrow, being cleared away for agricultural purposes, was found to contain urns and burnt bones, the usual contents of such places. But besides these, there was a most unusual object found, namely, a complete skeleton, round the breast of which was a corslet of pure gold, embossed with ornaments representing nail heads and lines. This unique relic of antiquity is now in the British Museum; and, if we are to confine ourselves to a natural explanation, it seems but reasonable to surmise that the vision was the consequence of a lingering remembrance of a tradition, which the woman had heard in early life, of golden ornaments buried in the goblin hill.

CANTERBURY PILGRIM-SIGNS.

The Thames, like the Tiber, has been the conservator of many minor objects of antiquity, very useful in aiding us to obtain a more correct knowledge of the habits and manners of those who in former times dwelt upon its banks. Whenever digging or dredging disturbs the bed of the river, some antique is sure to be exhumed. The largest amount of discovery took place when old London-bridge was removed, but other causes have led to the finding of much that is curious. Among these varied objects not the least interesting are a variety of small figures cast in lead, which prove to be the 'signs' worn by the pilgrims returned from visiting the shrine of St Thomas-à-Becket at Canterbury, and who wore them in their hats, or as brooches upon some portion of their dress, in token of their successful journey.

The custom of wearing these brooches is noted by Giraldus Cambrensis as early as the twelfth century. That ecclesiastic returned from a continental journey by way of Canterbury, and stayed some days to visit Becket's shrine; on his arrival in London he had an interview with the Bishop of Winchester, and he tells us that the Bishop, seeing him and his companions with signs of St Thomas hanging about their necks, remarked that he perceived they had just come from Canterbury. Erasmus, in his colloquy on pilgrimages, notes that pilgrims are 'covered on every side with images of tin and lead.' The

cruel and superstitious Louis XI. of France, customarily wore such signs stuck around his hat. The anonymous author of the Supplement to Chaucer's *Canterbury Tales*, described that famed party of pilgrims upon their arrival at the archiepiscopal city, and says:

'Then, as manner and custom is, *signs* there they bought,
For men or contré should know whom they had sought.

Each man set his silver in such thing as he liked,
And in the meanwhile, the matter had y-piked
His bosom full of Canterbury brooches.'

The rest of the party, we are afterwards told,
'Set their *signs* upon their heads, and some upon their cap.'

They were a considerable source of revenue to the clergy who officiated at celebrated shrines, and have been found abroad in great numbers, bearing the figures of saints to whom it was customary to do honour by pilgrimages in the middle ages. The shells worn by the older pilgrims to Compostella, may have originated

the practice; which still survives in Catholic countries, under the form of the medallions, sold on saints' days, which have touched sacred relics, or been consecrated by ecclesiastics.

The first specimen of these Canterbury brooches we engrave, and which appears to be a work of the fourteenth century, has a full length of St Thomas in pontificals in the act of giving the pastoral benediction. The pin which was used to attach it to the person, will be perceived behind the figure; it seems best fitted to be secured to, and stand upright upon, the hat or cap of the pilgrim. Our second specimen takes the ordinary form of a brooch, and has in the centre the head only of Becket; upon the rim are inscribed the words *Caput Thome*. The skull of the saint was made a separate exhibition in the reign of Edward III., and so continued until the days of Henry VIII. The monks of Canterbury thus made

the most of their saint, by exhibiting his shrine at one part of the cathedral, his skull at another, and the point of the sword of Richard Brito, which fractured it, in a third place. The wealth of the church naturally became great, and no richer prize fell into the rapacious hands of the Royal suppressor of monasteries than Canterbury.

These signs were worn, not only as indications of pilgrimage performed, but as charms or protections against accidents in the journey; and it would appear that the horses of the pilgrims were supplied with small bells inscribed with the

words *Campana Thome*, and of which also we give a specimen. All these curious little articles have been found at various times in the Thames,

and are valuable illustrative records, not only of the most popular of the English pilgrimages, but of the immortal poem of Geoffrey Chaucer, who has done so much toward giving it an undying celebrity.

MARCH 7.

Saints Perpetua and Felicitas, martyrs at Carthage, 203. St Paul the Simple, anchorite, about 330. St Thomas of Aquino, Doctor of the Church and Confessor, 1274.

Born.—Sir John Fortescue Aland, 1670; Antonio Sanchez, 1699.

Died.—Antoninus Pius, Roman Emperor, 162, *Lorium*; William Longsword, first Earl of Salisbury, 1226; Pope Innocent XIII., 1724; Bishop Thomas Wilson, 1755, *Isle of Man*; Blanchard, aéronaut, 1809; Admiral Lord Collingwood, 1810.

BISHOP WILSON.

The benign and saintly Thomas Wilson was born at Burton, in Cheshire, on the 20th of December 1663. He was educated at Trinity College, Dublin, whither most of the young gentlemen of Lancashire and Cheshire were at that time sent. In 1692, the Earl of Derby chose him for his domestic chaplain, and tutor to his son, Lord Strange, and in 1697 appointed him to the bishopric of Sodor and Man, then in the gift of the Derby family. The episcopal revenue was only £300 a-year, and he found his palace in ruins, the house having been uninhabited for eight years. The people of the island were ignorant and very poor; but the bishop at once took measures to improve their condition. He taught them to work, to plant, dig, and drain, and make roads; he opened schools, chapels, and libraries; he had studied medicine, and was able to cure the sick. Nearly all that Oberlin did in the Ban-de-la-Roche, Wilson anticipated in the Isle of Man. His whole income, after providing for the modest needs of his household, he expended in alms and improvements. It was said that 'he kept beggars from every door in Man but his own.' He published several devotional works and sermons, which are to this day widely read and admired. Queen Anne offered him an English bishopric, which he declined; George I.

repeated the offer, with the same result. Queen Caroline was very anxious to keep him in London, and one day, when she had several prelates with her, she said, pointing to Wilson, 'See, here, my lords, is a bishop who does not come for translation.' 'No, indeed, and please your Majesty,' said Wilson, 'I will not leave my wife in my old age because she is poor.' Cardinal Fleury wanted much to see him, and invited him to France, saying he believed that they were the two oldest and poorest bishops in Europe, and he obtained an order from the government that no French privateer should ravage the Isle of Man. Wilson's goodness, like Oberlin's, overcame all differences of creed. Catholics and Dissenters came to hear him preach, and Quakers visited at his palace. He died at the age of ninety-three, and in the fifty-eighth year of his tenure of the office of bishop.

LORD COLLINGWOOD.

The personal history of this great naval commander furnishes a remarkable example of everything sacrificed to duty. He might be said to have lived and died at sea. The case becomes the more remarkable, when we know that Collingwood, beneath the panoply of the hero, cherished the finest domestic and social feelings. Born at Newcastle-on Tyne in 1750, he was sent to sea as a midshipman at the age of eleven. After twenty-five years' uninterrupted service, he returned to Northumberland, making, as he says, acquaintance with his own family, to whom he had hitherto been, as it were, a stranger. In 1793, the war with the French Republic called him away from a young wife and two infant daughters, whom he most tenderly loved, though he was never permitted to have much of their society. He bore a conspicuous part in Lord Howe's victory, June 1, 1794, and in Jervis's victory off Cape St Vincent in 1797. In 1799, he was raised to the rank of Rear-Admiral. The peace of Amiens, for which he had long prayed, restored him to his wife and children for a few months in 1802, but the renewed war called him to sea in the spring of 1803, and he never more returned to his happy home. This constant service made him frequently lament that he was hardly known to his own children; and the anxieties and wear and tear incidental to it, shortened his valuable life. Passing over many less brilliant, but still very important services, Collingwood was second in command in the battle of Trafalgar. His ship, the *Royal Sovereign*, was the first to attack and break the enemy's line; and upon Nelson's death, Collingwood finished the victory, and continued in command of the fleet. He was now raised to the peerage. After a long and wearying blockade, during which, for nearly three years, he hardly ever set foot on shore, he sailed up the Mediterranean, where his position involved him in difficult political transactions; at length, completely worn out in body, but with a spirit intent on his duties to the last, Collingwood died at sea, on board the *Ville de Paris*, near Port Mahon, on the 7th of March 1810.

Nelson had a greater affection for Lord Collingwood than for any other officer in the

service. In command he was firm, but mild, most considerate of the comfort and health of his men: the sailors called him father. He was a scientific seaman and naval tactician; of strong enlightened mind, considering the circumstances of his life; the official letters and dispatches of this sailor, who had been at sea from his childhood, are admirable, even in point of style; and his letters to his wife on the education of his daughters are full of good sense and feeling. The people of Newcastle, reasonably proud of so excellent a fellow-townsmen as Lord Collingwood, have erected, by public subscription, a portrait statue of him in their town, and one of its leading streets bears his honoured name.

MOLLY MOGG.

On the 7th March 1766, died Mrs Mary Mogg, of the Rose Tavern, Wokingham, who had been, forty years before, the subject of a droll ballad by Gay, in association (as is believed) with Pope and Swift. This ballad almost immediately found its way into print, through the medium of *Mist's Journal* of August 27, 1726, prefaced with a notice stating that 'it was writ by two or three men of wit (who have diverted the public both in prose and verse), upon the occasion of their lying at a certain inn at Wokingham where the daughter of that house was remarkably pretty, and whose name is Molly Mogg.'

MOLLY MOGG.

The schoolboy delights in a play-day,
The schoolmaster's joy is to flog;
The milkmaid's delight is in May-day,
But mine is in sweet Molly Mogg.

Will-a-wisp leads the traveller a-gadding,
Through ditch and through quagmire and bog;
No light can e'er set me a-padding,
But the eyes of my sweet Molly Mogg.

For guineas in other men's breeches
Your gamblers will palm and will cog;
But I envy them none of their riches,
So I palm my sweet Molly Mogg.

The hart that's half-wounded is ranging,
It here and there leaps like a frog;
But my heart can never be changing,
It's so fixed on my sweet Molly Mogg.

I know that by wits 'tis recited,
That women at best are a clog;
But I'm not so easily frightened
From loving my sweet Molly Mogg.

A letter when I am inditing,
Comes Cupid and gives me a jog;
And I fill all my paper with writing,
Of nothing but sweet Molly Mogg.

I feel I'm in love to distraction,
My senses are lost in a fog;
And in nothing can find satisfaction,
But in thoughts of my sweet Molly Mogg.

If I would not give up the three Graces,
I wish I were hauged like a dog,
And at court all the drawing-room faces,
For a glance at my sweet Molly Mogg.

For those faces want nature and spirit,
And seem as cut out of a log;
Juno, Venus, and Pallas's merit
Unite in my sweet Molly Mogg.

Were Virgil alive with his Phillis,
And writing another Eclogue,
Both his Phillis and fair Amaryllis
He'd give for my sweet Molly Mogg.

When she smiles on each guest like her liquor,
Then jealousy sets me a-gog;
To be sure, she's a bit for the Vicar,
And so I shall lose Molly Mogg.

It appears that the ballad—perhaps to the surprise of its authors—attained instant popularity. Molly and the Rose at Wokingham became matter of public interest, and literary historians have not since disdained to inquire into the origin of the verses. We learn that Swift was at this time on a visit to Pope at Twickenham, while preparing for the publication of his *Travels of Lemuel Gulliver*; that Gay joined his two brother bards, and that the tuneful trio were occasionally at the Rose in the course of their excursions that summer. The landlord, John Mogg, had two fair daughters, Molly and Sally, of whom Sally was in reality the cruel beauty referred to in the ballad; but 'the wits were too far gone to distinguish, and so the honour, if honour it be, has clung to Molly, who, after all, died a spinster at the age of sixty-six.' The inn had in these latter days its *Pope's Room*, and its chair called *Pope's Chair*, and there was an inscription on a pane of glass said to have been written by Pope. The house, however, is now transformed into a mercer's shop.*

UNDER THE SNOW.

It is a well-ascertained fact that snow affords a comparatively warm garment in intensely cold weather. This is difficult for non-scientific persons to understand; but it is based on the circumstance that snow, on account of its loose flocculent nature, conducts heat slowly. Accordingly, under this covering, exactly as under a thick woollen garment, the natural heat of the body is not dissipated rapidly, but retained.

Instances are abundant to shew that snow really protects substances from cold of great intensity. Farmers and gardeners well know this; and, knowing it, they duly value a good honest fall of snow on their fields and gardens in winter. There are not the same tests to apply in reference to the human body; nevertheless, the fact is equally undeniable. The newspapers every winter record examples. Thus the Yorkshire papers contained an account, in 1858, of a snow storm at or near Market Weighton, in which a woman had a remarkable experience of the value of a snow garment. On the 7th of March she was overtaken by the storm on the neighbouring moors, and was gradually snowed up, being unable to move either forward or backward. Thus she remained forty-three hours. Cold as she of course was, the snow nevertheless prevented the cold from assuming a benumbing tendency; and she was able to the last to keep a breathing place about her head. On the second day after, a man crossing the moor saw a woman's bonnet on the snow; he soon found that there was a living woman beneath the bonnet; and a course of judicious treatment restored her to health.

* See *Notes and Queries*, 2nd ser. viii. 84, 129, 172.

The remarkable case of Elizabeth Woodcock is still more striking. In the winter of 1799 she was returning on horseback from Cambridge to her home in a neighbouring village; and having dismounted for a few minutes, the horse ran away from her. At seven o'clock on a winter evening she sat down under a thicket, cold, tired, and disheartened. Snow came on; she was too weak to rise, and the consequence was that by the morning the snow had heaped up around her to a height of two feet above her head as she sat. She had strength enough to thrust a twig, with her handkerchief at the top of it, through the snow, to serve as a signal, and to admit a little daylight. Torpor supervened; and she knew little more of what passed around her. Night succeeded day, and day again broke, but there she remained, motionless and foodless. Not senseless, however, for she could hear church bells and village sounds—nay, even the voice and conversation of some of her neighbours. Four whole days she thus remained—one single pinch of snuff being her only substitute for food during the time, and this, she found to her sorrow, had lost its pungency. On the fifth day a thaw commenced, and then she suffered greatly, but still without being able to extricate herself. It was not until the eighth day that the handkerchief was espied by a villager, who, with many others, had long been seeking for her. Stooping down he said, 'Are you there, Elizabeth Woodcock?' She had strength enough to reply faintly, 'Dear John Stittle, I know your voice. For God's sake, help me out!' She died half a year afterwards, through mismanagement of frost-bitten toes; but it was fully admitted that no one, unless cased in snow, could have lived out those eight days and nights in such a place without food.

Similar in principle was the incident narrated by Hearne, the antiquary, in the last century, in a letter addressed to Mr Charry, of Shottesbrooke. In the severe winter of 1708-9, a poor woman, near Yeovil, in Somersetshire, having been to Chard, to sell some of her home-spun yarn, was returning home, when, falling ill by the wayside, she requested to be allowed to sit by the fire in a cottage. This being unfeelingly refused, she lay down under a hedge in the open air, being too weak to proceed farther. Snow soon came on. A neighbour passed by, and helped for a few minutes to guide her steps; but her strength soon failed her, and *he*, in like manner, left her to her fate. Once more laid prostrate, she became gradually covered with the snow. Day after day passed, for a whole week, during which time her friends made search and inquiry for her in every direction. The only person who could give information was the man who had abandoned her, after her failure in the attempt to walk; and he remained silent, lest his conduct should bring reproaches on him. There then occurred one of those strange sleep-revelations which, explain them how we may, are continually reported as playing a part in the economy of human life. A poor woman dreamed that the missing person lay under a hedge in a particular spot denoted. The neighbours, roused by the narration she gave, sallied forth with sticks,

which they thrust through the snow in various places. One of them thought he heard a groan; he thrust again in a particular spot, when a feeble voice cried out, 'Oh, for God's sake, don't kill me!' The poor, imprisoned wayfarer was taken out, to the astonishment of all. 'She was found,' says the writer of the letter, 'to have taken great part of her upper garment for sustenance; but how she could have digested a textile fabric of wool or flax is not easy to understand. She surprised her neighbours by the assertion that she had lain very warm, and had slept most part of the time. One of her legs lay just under a bush, and was not quite covered with snow; this became in consequence frost-bitten, but not too far for recovery. Her spirits revived, and she was able shortly to resume her ordinary duties.'

In these two last-named instances the person was a full week under the snow blanket; and the covering evidently prevented the natural warmth of the body from being abstracted to so great a degree as to be fatal.

MARCH 8.

Saints Apollonius, Philemon, and others, martyrs of Egypt, about 311. St Senan, Bishop in Ireland, about 544. St Psalmoid, or Saumay, of Ireland, about 589. St Felix, Bishop of Dunwich, 646. St Julian, Archbishop of Toledo, 690. St Rosa, virgin of Viterbo, buried 1252. St Duthak, Bishop of Ross, 1253. St John of God, founder of the Order of Charity, 1550.

Born.—St John of God, 1495; Dr John Campbell, historical writer, 1708, *Edinburgh*; Dr John Fothergill (Quaker), 1712, *Carr-end*; William Roscoe, miscellaneous writer, 1753, *Liverpool*; Austin H. Layard, M.P., explorer of the antiquities of Nineveh, 1817, *Paris*.

Died.—King William III., of England, 1702, *Kensington*; Bishop John Hough, 1743; Thomas Blackwell, LL.D., classical scholar, 1757, *Edinburgh*; Sir William Chambers, R.A., architect, 1796; Francis Duke of Bridgewater (canal navigation), 1803, *St James's*; W. Sawrey Gilpin, landscape painter, 1807, *Brompton*; Joseph Jekyll, F.R.S., noted wit, 1837, *London*; Karl Johann (Bernadotte), King of Sweden, 1844.

SIR WILLIAM CHAMBERS.

In our day, which is distinguished by an unprecedentedly high culture of architecture, the attainments of Sir William Chambers, the great English architect of the eighteenth century, are apt to be set down as mediocre. There must, nevertheless, have been some considerable gifts in possession of the man who could design such a noble pile as Somerset House.

Chambers was born at Stockholm (1726), the son of a Scotchman who had gone there to prosecute some claims of debt for warlike stores which he had furnished to Charles XII. Educated in England, he started in life as supercargo in a mercantile ship trading with China. In that country he busied himself in taking sketches of the peculiar buildings of the country, and thus laid the foundations of a taste which clung to him in his subsequent professional career. He was afterwards able to study architecture both in Italy and France. His command

of the pencil seems to have been the main means of his advancement. It recommended him to the Earl of Bute as a teacher of architectural drawing to the young Prince George, afterwards George III. Having thus secured an opening into important fields of professional exertion, his energetic character and assiduity did all the rest; and Chambers reigned for thirty years the acknowledged architectural chief of his day, received a Swedish order of knighthood, and retired from business with a handsome fortune.

It was in 1775, that Sir William, as Comptroller of his Majesty's works, proceeded to the great work of his life, the reconstruction of Somerset House. He is admitted to have shewn in the internal arrangements of this great quadrangle all desirable taste and skill, while the exterior is the perfection of masonry. Many of the ornamental details were copied from models executed at Rome, under Chambers's direction: the sculptors employed were Carlini, Wilton, Geracci, Nollekens, and Bacon. Telford, the engineer, when he came to London, in 1782, was employed on the quadrangle. Chambers received £2,000 a-year during the erection of Somerset House; it cost more than half a million of money; but it is one of the noblest structures in the metropolis, and, in some respects, superior to any; the street-front and vestibule have always been much admired. After Somerset House, Chambers's most successful designs are the Marquis of Abercorn's mansion at Duddingstone near Edinburgh; and Milton Abbey, in Dorsetshire, which he built in the Gothic style for Lord Dorchester.

Sir William Chambers also designed the royal state coach, which has now been used by our sovereigns for a century. Walpole describes it as a beautiful object, though crowded with improprieties; its palm-trees denote the architect's predilection for oriental objects. The bill was £8,000, but being taxed, was reduced nearly £500.

JOSEPH JEKYLL.

The wit of Mr Jekyll has given him a traditional fame superior to, and which will probably be more lasting than, that which some worthy men derive from solid works. He was, however, the author of several books, one of them of an antiquarian nature (on the monuments in the Temple Church), and he had attained, some time before his death, the senior position both among the King's Counsel and the Benchers. He reached the age of eighty-five. His *bon mots* were for a long course of years the delight of the bar of London, and of the brilliant society to which his powers of conversation gave him access. An obituary notice states that they would fill volumes. It is nevertheless probable that now, at the distance of a quarter of a century, it would be difficult to gather as many pleasantries of Mr Jekyll as would fill a page of the present work.

A general remark with regard to *bon mots* may here be properly appended—namely, that they are extremely apt to be reproduced. It is not necessarily that jokers are plagiarists, but that the relations of things, out of which *bon mots*

spring are of limited number and liable to recur. It is therefore not without good cause that the determined joker utters his well-known malediction—"Perish those who have said all our good things before us!"

There is an old French collection of *bon mots*, called the *Nain Jaune* (Yellow Dwarf), in which some of the most noted of English jokes will be found anticipated. For example, the recommendation of Dr Johnson to the lady author who sent him a manuscript poem, and told him she had other irons in the fire—"I advise you to put the poem with the irons." Of this the prototype appears as follows: "M. N—, que la ciel a donné du malheureux talent d'écrire, sans penser, tous les mois, un volume, consultait le très franc et le très malin P., sur un ouvrage nouveau dont il menace le public—"Parlez-moi franchement," lui disait-il, "car si cela ne vaut rien, j'ai d'autres fers au feu."—"Dans ce cas," lui répondit P., "je vous conseille de mettre votre manuscrit où vous avez mis vos fers."

As another example, though rather in the class of comic occurrences than criticisms—Mrs Piozzi, in her *Autobiography*, relates that her mother Mrs Salusbury used to narrate the following circumstance in connection with the name of Lord Harry Pawlett. A lady, to whom that nobleman had paid attentions, and whom Mrs Salusbury knew, requested of his lordship that he would procure for her a couple of monkeys of a particular kind, from the East Indies. 'Lord Harry, happy to oblige her, wrote immediately, depending on the best services of a distant friend, whom he had essentially served. Writing a bad hand, however, and spelling what he wrote with more haste than correctness, he charged the gentleman to send him over two monkeys; but the word being written *too*, and all the characters of one height (100), what was Lord Harry Pawlett's dismay, when a letter came to hand with the news, that he would receive fifty monkeys by such a ship, and fifty more by the next conveyance, making up the hundred, according to his lordship's commands!'

We rather think there is a counterpart to this story, in which a Virginia planter is represented as writing to his factor in England to send him over *two* virtuous young women; in consequence of which, through a misapprehension of the characters forming the word *two*, the factor sent him fifty examples of the sex, with a promise of fifty more as soon as the number of volunteers for Virginia could be made up.

Whether this be the case or not, it appears that the joke about the monkeys is a hundred years older than the time of Mrs Salusbury and Lord Harry Pawlett. In a letter dated the 19th of January 1635-6, Sir Edward Verney, Knight Marshal to Charles I., wrote to his son, Ralph Verney, from London, as follows: * 'To requite your news of your fish, I will tell you as good a tale from hence, and as true. A merchant of London that writ to a factor of his beyond sea, desired him by the next ship to send him 2 or 3 apes. He forgot the *r*, and then it was 203 apes. His factor sent him four score, and says he shall have

* Communicated by John Bruce to *Notes and Queries*, April 26, 1862.

the rest by the next ship, conceiving the merchant had sent for two hundred and three apes. If yourself or friends will buy any to breed on, you could never have had such choice as now.'

THE BOWYER BIBLE.

About ninety years ago, a poor youth was walking through Newgate-street listlessly looking into the shops, and lamenting his own poverty. His fancy was taken by a portrait in one of the windows; and something within him said that *he* too, perchance, might be able to paint portraits, and to earn a living thereby. He went home, procured paints, brushes, and a bit of broken looking-glass, and painted a small portrait of himself. It was a success, in his eyes, and apparently in the eyes of others; for he gradually got employment as a miniature painter, and numbered among his sitters such great personages as George III. and Queen Charlotte. One Sunday, when the poor King was too far gone in his mental malady to sit to portrait-painters, the artist drew *on his thumb nail* a portrait of the King, which he afterwards transferred on the same scale to ivory; the Prince Regent liked the miniature so well, that he at once purchased it at the price named by the artist—a hundred guineas.

The person here treated of was William Bowyer, whose name is now little known or thought of as that of a regular artist. Perhaps he found that he was really deficient in the higher powers of art, and that it would be wise for him to turn his attention to other fields of labour. Be this as it may, he became a printer, and gradually realized a competency in that trade. The Stationers' Company, to this day, have the management of a small endowment which he established for the benefit of poor working printers. The most remarkable work printed by him was an Edition of *Hume's History of England*, so costly that only a few copies could be disposed of.

William Bowyer is now chiefly remembered in connexion with one particular copy of the Bible. Macklin ventured on the most costly edition of the Bible ever issued from the press; and Bowyer, possessing one copy of this work, devoted the leisure of nearly thirty years to illustrating it. He procured from every part of Europe engravings, etchings, and original drawings, relating to biblical subjects; and these, to the number of *seven thousand*, he interlaved with his Bible. From Michael Angelo and Raffaello to Reynolds and West, every artist whose Scripture subjects had been engraved was brought into requisition. Bowyer having only his own taste to please, gave a very wide scope to the meaning of the words 'scriptural' and 'biblical;' inasmuch that he included plates of natural history that *might* possibly illustrate the cosmogony of the Bible. The collection included the best Scripture atlases. Its most original features were two hundred drawings by Lautherbourg. Thus he went on, step by step, until his Bible expanded to forty-five folio volumes, including examples from nearly 600 different engravers.

This extraordinary work seems to have occupied Mr Bowyer from about 1798 to 1824. The work, with costly binding, and an oak cabinet to

contain all the forty-five volumes, is said to have cost him *four thousand guineas*. He insured it in the Albion Fire Office for £3,000. After his death, a lottery was got up for the benefit of his daughter, Mrs Parkes, with this Bible as the sole prize. One Mr Saxon, a Somersetshire farmer, won the prize. It is just possible that, as in the famous case of the family picture of the Vicar of Wakefield, the dimensions were not found compatible with domestic convenience; for the work has changed hands several times. At Messrs Puttick and Simpson's a few years ago, it became the property of Mr Moreland of Manchester; after which it passed into the hands of Mr Albinson of Bolton. In the early part of March 1856, there was a seven days' sale of the extensive library of the last-named gentleman; and among the lots the chief was the celebrated Bowyer Bible. The biddings began at £400, and the lot was ultimately knocked down at £550 to Mr Robert Heywood of Bolton. Ponderous as such a work must be for any private library, it would nevertheless be a pity that so unique a collection should ever be broken up and scattered.

LIFE-SAVING DOGS.

We owe to two principles which have been ably illustrated by modern naturalists—namely, the educability of animals, and the transmission of the acquired gifts to new generations—that the young pointer, without ever having seen a field of game, is no sooner introduced to one than it *points*, as its father and mother did before it. To this also we owe the even more interesting speciality of certain varieties of the canine species, that they unpromptedly engage in the business of saving human life in situations of danger. We have all heard of the dogs of St Bernard, which for ages have been devoted to the special duty of rescuing travellers who may be lost in Alpine snows. Early in the present century, one of these noble creatures was decorated with a medal, in reward for having saved the lives of no less than twenty-two snow-bound travellers. Sad to say, it lost its own life in the winter of 1816. A Piedmontese courier, after resting for a while at the Hospice during a terrible snow storm, was earnestly desirous of proceeding that same night to the village of St Pierre, on the Italian side of the mountain. The monks, after endeavouring in vain to dissuade him, lent him the aid of two guides and two dogs, including the one bearing the medal. The courier's family knowing of his intended return, and anxious for his safety, ascended part of the way to meet him; and thus it happened that the whole were nearly together when an avalanche broke away from the mountain pinnacle, and buried human beings and dogs together. So keen is the sense of smell possessed by these dogs, that though a perishing man lie beneath a snow drift to a depth of several feet, they will detect the spot, scrape away the snow with their feet, make a howling that can be heard at a great distance, and exert themselves to the utmost in his behalf. An anecdote is told of one of the dogs that found a child whose mother had just been destroyed by an avalanche; the child, alive

and unhurt, was in some way induced to get upon the dog's back, and was safely conveyed to the Hospice.

Of the aptitude of the Newfoundland dog to take to the water, and courageously help drowning or endangered persons, the instances are abundant. We will cite only two. A Mr William Phillips, while bathing at Portsmouth, ventured out too far, and was in imminent peril. Two boatmen, instead of starting off to assist him, selfishly strove to make a hard bargain with some of the bystanders, who urged them. While the parley was going on, a Newfoundland dog, seeing the danger, plunged into the water, and saved the struggling swimmer. It is pleasantly told that Mr Phillips, in gratitude for his deliverance, bought the dog from his owner, a butcher, and thereafter gave an annual festival, at which the dog was assigned the place of honour, with a good ration of beefsteaks. He had a picture of the dog painted by Morland, and engraved by Bartolozzi; and on all his table-linen he had this picture worked in the tissue, with the motto, '*Virum extuli mari.*'

The other anecdote is of more recent date. On the 8th of March 1834, two little boys were playing on the banks of the Grosvenor Canal at Pimlico (lately filled up to make the Victoria and Crystal Palace Railway). The younger of the two, in his gambols, fell into the water; the elder, about nine years of age, plunged in with the hope of saving him. Both sank, and their lives were greatly imperilled. It happened that at that critical moment Mr Ryan, an actor at Astley's Amphitheatre, was passing, with a fine Newfoundland dog, which, under the name of *Hero*, was wont to take part in some of the performances. A bystander threw a pebble into the water, to shew the spot where the two poor boys were immersed. The dog plunged in and brought up the elder one; the clothes were rent, and the boy sank again; but the dog, making a second attempt, succeeded in bringing him to the shore, and afterwards his brother. Mr Horncroft, the father of the children, gave a dinner that evening, at which *Hero* was a specially invited guest; and his gambols with the two boys whom he had saved, shewed how he appreciated the joyousness of the meeting.

Some years ago, it was resolved at Paris to take advantage of the gifts of the Newfoundland dog, for a general purpose resembling the practice at St Bernard. Ten select dogs were brought to the French capital, and appointed as savers of human life in the river Seine. They were first exercised in drawing stuffed figures of men and children from the water, and in time they acquired such skill and facility in their business, as to prove eminently serviceable.

Bequests of Worsteds Beds.—Bequests of beds with worsted hangings frequently occur in the middle ages. The Countess of Northampton, in 1356, bequeathed to her daughter the Countess of Arundel 'a bed of red worsted embroidered.' Lady Despeneer, in 1409, gave her daughter Philippa 'a bed of red worsted, with all the furniture appertaining thereto.' Lady Elizabeth Andrews, in 1474, gave to William Wyndsores 'a red bed of worsted, with all the hangings.'—*Testamenta Vetusta.*

MARCH 9.

St Pacian, Bishop of Barcelona, 4th century. St Gregory, of Nyssa, bishop, 400. St Frances, widow, of Rome, foundress of the Collatines, 1440. St Catherine, of Bologna, virgin, 1463.

Born.—Lewis Gonzaga (*St Aloysius*), 1568; Dr Joseph Franz Gall, founder of phrenology, 1757, *Tiefenbrunn, Suabia*; William Cobbett, political writer, 1762, *Farnham*.

Died.—Sultan Bajazet I., *Antioch*; David Rizzio, 1566, murdered, *Holyrood*; William Warner, poet, 1609, *Amwell*; Francis Beaumont, dramatist, 1616; Cardinal Jules Mazarine, 1661, *Vincennes*; Bishop Joseph Wilcocks, 1756; John Calas, broken on the wheel, 1762, *Toulouse*; William Guthrie, historical and geographical writer, 1771, *London*; Dr Samuel Jebb, 1772, *Derbyshire*; Dr Edward Daniel Clarke, traveller, 1822, *Pall Mall*; Anna Lctitia Barbauld, writer of books for the young, 1825, *Stoke Newington*; Miss Linwood, artist in needlework, 1845; Professor Oersted, Danish natural philosopher, 1851.

WILLIAM COBBETT.

Were we asked to name the Englishman who most nearly answers to the typical John Bull

which Leech delights to draw in *Punch*, we should pause between William Hogarth and William Cobbett, and likely say—Cobbett. His bluff speech, his hearty and unreasonable likes and dislikes, his hatred of craft and injustice, his tenderness, his roughness, his swift anger and gruff pity, his pugnacity, his pride, his broad assurance that his ways are the only right ways, his contempt for abstractions, his exaltation of the solidities over the elegancies of life, these and a score of other characteristics identify William Cobbett with John Bull.

Cobbett was, in his origin, purely an English peasant. He was born in a cottage-like dwelling on the south side of the village of Farnham, in Surrey. Since the Cobbetts left it, about 1780, it has been used as a public-house under the name of the 'Jolly Farmer,'—noted, as we understand, for its home-brewed ale and beer, the produce of the Farnham hops. Behind it is a little garden and steep sand-rock, to which Cobbett makes allusion in his writings. 'From my infancy,' says he,—'from the age of six years, when I climbed up the side of a steep sand-rock, and there scooped me out a plot of four feet square to make me a garden, and the soil for which I carried up in the bosom of my little blue

WILLIAM COBBETT.

smock frock (a hunting shirt), I have never lost one particle of my passion for these healthy and rational, and heart-charming pursuits.'

Cobbett, having a hard-working, frugal man for his father, was allowed no leisure and little education in his boyhood. 'I do not remember,' he says, 'the time when I did not earn my own living. My first occupation was driving the small birds from the turnip-seed, and the rooks from the

pease. When I first trudged a-field, with my wooden bottle and my satchel slung over my shoulders, I was hardly able to climb the gates and stiles; and at the close of the day, to reach home was a task of infinite difficulty. My next employment was weeding wheat, and leading a single horse at harrowing barley. Hoeing pease followed; and hence I arrived at the honour of joining the reapers in harvest, driving the team,

and holding the plough. We were all of us strong and laborious; and my father used to boast, that he had four boys, the eldest of whom was but fifteen years old, who did as much work as any three men in the parish of Farnham. Honest pride and happy days!

The father, nevertheless, contrived, by his own exertions in the evening, to teach his sons to read and write. The subject of this memoir in time advanced to a place in the garden of Waverley Abbey, afterwards to one in Kew Garden, where George III. took some notice of him, and where he would lie reading Swift's *Tale of a Tub* in the evening light. In 1780, he went to Chatham and enlisted as a foot-soldier, and immediately after his regiment was shipped off to Nova Scotia, and thence moved to New Brunswick. He was not long in the army ere he was promoted over the heads of thirty sergeants to the rank of sergeant-major, and without exciting any envy. His steadiness and his usefulness were so marked, that all the men recognised it as a mere matter of course that Cobbett should be set over them. He helped to keep the accounts of the regiment, for which he got extra pay. He rose at four every morning, and was a marvel of order and industry. 'Never,' he writes, 'did any man or thing wait one moment for me. If I had to mount guard at ten, I was ready at nine.' His leisure he diligently applied to study. He learnt grammar when his pay was sixpence a-day. 'The edge of my berth, or that of my guard-bed,' he tells us, 'was my seat to study in; my knapsack was my book-case; a bit of board lying on my lap was my writing table. I had no money to buy candle or oil; in winter time it was rarely I could get any light but that of the fire, and only my turn even of that. To buy a pen, or a sheet of paper, I was compelled to forego some portion of food, though in a state of half starvation. I had no moment to call my own, and I had to read and write amidst the talking, laughing, singing, whistling, and brawling of at least half a score of the most thoughtless men.' That was at the outset, for he soon rose above these miseries, and began to save money. While in New Brunswick he met the girl who became his wife. He first saw her in company for about an hour one evening. Shortly afterwards, in the dead of winter, when the snow lay several feet thick on the ground, he chanced in his walk at break of day to pass the house of her parents. It was hardly light, but there was she out in the cold, scrubbing a washing tub. That action made her mistress of Cobbett's heart for ever. No sooner was he out of hearing, than he exclaimed, 'That's the girl for me!' She was the daughter of a sergeant of artillery, and then only thirteen. To his intense chagrin, the artillery was ordered to England, and she had to go with her father. Cobbett by this time had managed to save 150 guineas, the produce of extra work. Considering that Woolwich, to which his sweetheart was bound, was a gay place, and that she there might find many suitors, who, moved by her beauty, might tempt her by their wealth, and, unwilling that she should hurt herself with hard work, he sent her all his precious guineas, and prayed that

she would use them freely, for he could get plenty more; to buy good clothes, and live in pleasant lodgings, and be as happy as she could until he was able to join her. Four long years elapsed before they met. Cobbett, when he reached England, found her a maid-of-all-work, at £5 a-year. On their meeting, without saying a word about it, she placed in his hands his parcel of 150 guineas unbroken. He obtained his discharge from the army, and married the brave and thrifty woman. She made him an admirable wife; never was he tired of speaking her praises, and whatever comfort and success he afterwards enjoyed, it was his delight to ascribe to her care and to her inspiration. At this time he brought a charge of peculation against four officers of the regiment to which he had belonged. A court-martial was assembled, witnesses were summoned, but Cobbett was not forthcoming. He had fled to France, and for his conduct no fair explanation was ever given. From France he sailed to New York in 1792, and settled in Philadelphia. Shunned and persecuted in England, Dr Priestley sought a home in Pennsylvania in 1794. Cobbett attacked him in '*Observations on the Emigration of a Martyr to the Cause of Liberty*, by Peter Porcupine.' The pamphlet took amazingly, and Cobbett followed it up with a long series of others discussing public affairs in a violent anti-democratic strain. He drew upon himself several prosecutions for libel, and to escape the penalties he returned to England in 1800, and tried to establish *The Porcupine*, a daily Tory newspaper, in London. It failed after running a few months, and then he started his famous *Weekly Register*, which he continued without interruption for upwards of thirty-three years. The *Register* at first advocated Toryism, but it soon veered round to that Radicalism with which its name became synonymous. The unbridled invective in which Cobbett indulged kept actions for libel continually buzzing about his ears. The most serious of these occurred in 1810, and resulted in his imprisonment for two years and a fine of £1,000 to the King. In 1817, he revisited America, posting copy regularly for his *Register*; and he returned in 1819, bearing with him the bones of Thomas Paine. Again he tried a daily newspaper in London, but he was only able to keep it going for two months. He wished to get into Parliament, and unsuccessfully contested Coventry in 1820, and Preston in 1826; but in 1832 he was returned for Oldham. His parliamentary career was comparatively a failure. He was too precipitate and dogmatic for that arena. The late hours sapped his health, and he died after a short illness, on the 18th of June 1835, aged seventy-three. The *Weekly Register*, whilst it alone might stand for the sole business of an ordinary life, represented merely a fraction of Cobbett's activity. He farmed, he travelled, he saw much society, and wrote books and pamphlets innumerable. His *Register* was denounced as 'two-penny trash.' He thereon issued a series of political papers entitled *Two-penny Trash*, which sold by the hundred thousand. His industry, early rising, and methodical habits enabled him to get through an amount of work incredible to ordinary men. He wrote easily,

but spared no pains to write well; his terse, fluent, and forcible style has won the praise of the best critics. He had no abstruse thoughts to communicate; he knew what he wanted to say, and had the art of saying it in words which anybody who could read might comprehend. Few could match him at hard hitting in plain words, or in the manufacture of graphic nicknames. Dearly did he enjoy fighting, and a plague, a terror, and a horror he was to many of his adversaries. Jeremy Bentham said of him: 'He is a man filled with *odium humani generis*. His malevolence and lying are beyond anything.' Many others spoke of him with equal bitterness, but years have toned off these animosities, and the perusal of his fiercest sayings now only excites amusement. Cobbett's character is at last understood as it could scarcely be in the midst of the passions which his wild words provoked. It is clearly seen that his understanding was wholly subordinate to his feelings; that his feelings were of enormous strength; and that his understanding, though of great capacity, had a very limited range. His feelings were kindly, and they were firmly interwoven with the poor and hard-working people of England. Whatever men or measures Cobbett thought likely to give Englishmen plenty of meat and drink, good raiment and lodging, he praised; and whatever did not directly offer these blessings he denounced as impostures. Doctrine more than this he had not, and would hear of none. Thus it was that he came to ridicule all arts and studies which did not bear on their face the promise of physical comfort. Shakspeare, Milton, the British Museum, Antiquaries, Philanthropists, and Political Economists, all served in turn as butts for the arrows of his contempt. Of the craft of the demagogue he had little; he made enemies in the most wanton and impolitic manner; and thoughts of self-interest seldom barred for an instant the outflow of his feelings. Fickle and inconsistent as were those feelings, intellectually considered, in them Cobbett wrote himself out at large. From his multitudinous and diffuse writings a most entertaining volume of readings might be selected. His love of rural life and rural scenes is expressed in many bits of composition which a poet might envy; and his trenchant criticisms of public men and affairs, and his grotesque opinions, whilst they would prove what power can live in simple English words, would give the truest picture of him who holds high rank among the great forces which agitated England in the years anterior to the Reform Bill.

DEATH OF CARDINAL MAZARIN.

Mazarin, an Italian by birth, and a pupil of Richelieu, but inferior to his master, was the minister of the Regency during the minority of Louis XIV. He was more successful at the close of his career in his treaties of peace than he had been in his wars and former negotiations. In February 1661, he had concluded at Vincennes a third and last treaty with Charles, duke of Lorraine, by which Strasburg, Phalsburg, Stenai, and other places were given up to France. A

fatal malady had seized on the Cardinal whilst engaged in the conferences of the treaty, and, worn by mental agony, he brought it home with him to the Louvre. He consulted Grenaud, the great physician, who told him that he had two months to live. This sad assurance troubled the Cardinal greatly; his pecuniary wealth, his valuables and pictures, were immense. He was fond of hoarding, and his love of pictures was as strong as his love of power—perhaps even stronger. Soon after his physician had told him how short a time he had to live, Brienne perceived the Cardinal in night-cap and dressing-gown tottering along his gallery, pointing to his pictures, and exclaiming, 'Must I quit all these?' He saw Brienne, and seized him: 'Look!' he exclaimed, 'look at that Correggio! this Venus of Titian! that incomparable Deluge of Caracci! Ah! my friend, I must quit all these! Farewell, dear pictures, that I loved so dearly, and that cost me so much!' His friend surprised him slumbering in his chair at another time, murmuring, 'Grenaud has said it! Grenaud has said it!' A few days before his death, he caused himself to be dressed, shaved, rouged, and painted, 'so that he never looked so fresh and vermilion' in his life. In this state he was carried in his chair to the promenade, where his envious courtiers cruelly rallied him with ironical compliments on his appearance. Cards were the amusement of his death-bed, his hand being held by others; and they were only interrupted by the visit of the Papal Nuncio, who came to give the Cardinal that plenary indulgence to which the prelates of the Sacred College are officially entitled.

MRS BARBAULD.

Anna Letitia Aiken, by marriage Mrs Barbauld, spent most of her long life of eighty-two years in the business of teaching and in writing for the young. Of dissenting parentage and connexions, and liberal tendencies of mind, she was qualified to confer honour on any denomination or sect she might belong to by her consummate worth, amiableness, and judgment. She was at all times an active writer, and her writings both in prose and verse display many admirable qualities; nevertheless, the public now knows little about them, her name being chiefly kept in remembrance by her contributions to the well-known children's book, mainly of her brother's composition, the *Evenings at Home*.

Amongst Mrs Barbauld's miscellaneous pieces, there is an essay *Against Inconsistency in our Expectations*, which has had the singular honour of being reprinted for private distribution by more than one person, on account of its remarkable lessons of wisdom which it is calculated to convey. She starts with the idea that 'most of the unhappiness of the world arises rather from disappointed desires than from positive evil.' It becomes consequently of the first importance to know the laws of nature, both in matter and in mind, that we may reach to equity and moderation in our claims upon Providence. 'Men of merit and integrity,' she remarks, 'often censure the dispositions of Providence for suffering characters they desire to run away with advan-

tages which, they yet know, are purchased by such means as a high and noble spirit could never submit to. If you refuse to pay the price, why expect the purchase?' This may be called the key-note of the whole piece.

Say that a man has set his heart on being rich. Well, by patient toil, and unflagging attention to the minutest articles of expense and profit, he may attain riches. It is done every day. But let not this person also expect to enjoy 'the pleasures of leisure, of a vacant mind, of a free, unsuspecting temper.' He must learn to do hard things, to have at the utmost a homespun sort of honesty, to be in a great measure a drudge. 'I cannot submit to all this.' Very good, be above it; only do not repine that you are not rich.

How strange to see an illiterate fellow attaining to wealth and social importance, while a profound scholar remains poor and of little account! If, however, you have chosen the riches of knowledge, be content with them. The other person has paid health, conscience, liberty for *his* wealth. Will you envy him his bargain? 'You are a modest man—you love quiet and independence, and have a delicacy and reserve in your temper, which renders it impossible for you to elbow your way in the world and be the hero of your own merits. Be content then with a modest retirement, with the esteem of your intimate friends, with the praises of a blameless heart, and a delicate, ingenuous spirit; but resign the splendid distinctions of the world to those who can better scramble for them.'

The essayist remarks that men of genius are of all others most inclined to make unreasonable claims. 'As their relish for enjoyment,' says she, 'is strong, their views large and comprehensive, and they feel themselves lifted above the common bulk of mankind, they are apt to slight that natural reward of praise and admiration which is ever largely paid to distinguished abilities; and to expect to be called forth to public notice and favour: without considering that their talents are commonly unfit for active life; that their eccentricity and turn for speculation disqualifies them for the business of the world, which is best carried on by men of moderate genius; and that society is not obliged to reward any one who is not useful to it. The poets have been a very unreasonable race, and have often complained loudly of the neglect of genius and the ingratitude of the age. The tender and pensive Cowley, and the elegant Shenstone, had their minds tinctured by this discontent; and even the sublime melancholy of Young was too much owing to the stings of disappointed ambition.'

MISS LINWOOD'S EXHIBITION OF NEEDLEWORK.

For nearly half a century, in old Savile House, on the north side of Leicester-square, was exhibited the gallery of pictures in needlework which Miss Mary Linwood, of Leicester, executed through her long life. She worked her first picture when thirteen years old, and the last piece when seventy-eight; beyond which her life was extended twelve years. Genius, virtue, and

unparalleled industry had, for nearly three-quarters of a century, rendered her residence an honour to Leicester. As mistress of a boarding-school, her activity continued to her last year. In 1844, during her annual visit to her Exhibition in London, she was taken ill, and conveyed in an invalid carriage to Leicester, where her health rallied for a time, but a severe attack of influenza terminated her life in her ninetieth year. By her death, many poor families missed the hand of succour, her benevolent disposition and ample means having led her to minister greatly to the necessities of the poor and destitute in her neighbourhood.

No needlework, either of ancient or modern times, (says Mr Lambert,) has ever surpassed the productions of Miss Linwood. So early as 1785, these pictures had acquired such celebrity as to attract the attention of the Royal Family, to whom they were shewn at Windsor Castle. Thence they were taken to the metropolis, and shewn privately to the nobility at the Pantheon, Oxford-street; in 1798, they were first exhibited publicly at the Hanover-square Rooms; whence they were removed to Leicester-square.

The pictures were executed with fine crewels, dyed under Miss Linwood's own superintendance, and worked on a thick tammy woven expressly for her use: they were entirely drawn and embroidered by herself, no background or other important parts being put in by a less skilful hand—the only assistance she received, if such it may be called, was in the threading of her needles.

The pictures appear to have been cleverly *set* for picturesque effect. The principal room, a fine gallery, was hung with scarlet cloth, trimmed with gold; and at the end was a throne and canopy of satin and silver. A long dark passage led to a prison cell, in which was Northcote's *Lady Jane Grey Visited by the Abbot and Keeper of the Tower at Night*; the scenic illusion being complete. Next was a cottage, with casement and hatch-door, and within it Gainsborough's cottage children, standing by the fire, with chimney-piece and furniture complete. Near to this was a den, with lionesses; and further on, through a cavern aperture was a brilliant sea-view and picturesque shore. The large picture by Carlo Dolci had appropriated to it an entire room. The large saloons of Savile House were well adapted for these exhibition purposes, by insuring distance and effect.

The collection ultimately consisted of sixty-four pictures, most of them of large or gallery size, and copied from paintings by great masters. The gem of the collection, *Salvator Mundi*, after Carlo Dolci, for which 3,000 guineas had been refused, was bequeathed by Miss Linwood to her Majesty Queen Victoria.

In the year after Miss Linwood's death, the pictures were sold by auction, by Christie and Manson; and the prices they fetched denoted a strange fall in the money-value of these curious works. *The Judgment on Cain*, which had occupied ten years working, brought but £64 ls.; *Jephtha's Rash Vow*, after Opie, sixteen guineas; two pictures from Gainsborough, *The Shepherd Boy*, £17 6s. 6d., and *The Ass and Children*, £23 2s. *The*

Farmer's Stable, after Morland, brought £32 11s. A portrait of Miss Linwood, after a crayon picture by Russell, R.A., brought eighteen guineas;

and *A Woodman in a Storm*, by Gainsborough, £33 1s. 6d. Barker's *Woodman* brought £29 8s.; *The Girl and Kitten*, by Sir Joshua Reynolds,

MISS LINWOOD'S EXHIBITION OF NEEDLEWORK.

£10 15s.; and *Lady Jane Grey*, by Northcote, £24 13s. In the Scripture-room, *The Nativity*, by Carlo Maratti, was sold for £21; *Dead Christ*, L. Caracci, fourteen guineas; but *The Madonna della Sedia*, after Raffaello, was bought in at £38 17s. A few other pictures were reserved; and those sold did not realize more than £1,000.

OLD LONDON SHOPS.

Business in the olden time was conducted in a far more open way than among ourselves. Advertising in print was an art undiscovered. A dealer advertised by word of mouth from an open shop, proclaiming the qualities of his wares, and inviting passengers to come and buy them. The principal street of a large town thus became a scene of noisy confusion. The little we know of the ancient state of the chief London thoroughfares, shews this to have been their peculiarity. In the south of Europe we may still see something of the aspect which the business streets of old London must have presented in the middle ages; but the eastern towns, such as Constanti-

nople or Cairo, more completely retain these leading characteristics, in ill-paved streets, crowded markets, open shops disconnected with dwelling-houses, and localities sacred to particular trades. The back streets of Naples still possess similar arrangements, which must have existed there unchanged for centuries. The shops are vaulted cells in the lower story of the houses, and are closed at night by heavy doors secured by iron bars and massive padlocks. In the drawings preserved in mediæval manuscripts we see such shops delineated. Our first cut, copied from one of the best of these pictures, executed about 1490, represents the side of a street apparently devoted to a confraternity of mercers, who exhibit hats, shoes, stockings, scarfs, and other articles in front of their respective places of business; each taking their position at the counter which projects on the pathway, and from whence they addressed wayfarers when they wanted a customer. Lydgate, the monk of Bury, in his curious poem called *London Laek-penny*, has described the London shops as he saw them at the close of the fourteenth century:

‘Where Flemings to me began to cry,
 ‘Master, what will you cheapen or buy?
 Fine felt hats, or speetaeles to read;
 Lay down your silver and here you may speed.’”

He afterwards describes the streets crowded with

peripatetic traders. ‘Hot peascods’ one began to cry, and others strawberries and cherries, while ‘one bade me come near and buy some spice;’ but he passes on to Cheapside, then the grand centre of trade, and named from the great market or *cheap* established there from very early time :

‘Then to the Cheap my steps were drawn,
 Where much people I there saw stand;
 One offered me velvet, silk, and lawn,
 “Here is Paris thread, the finest in the land !”’

Tempting as all offers were, his lack of money brought him safely through the throng :

‘Then went I forth by London stone,
 Throughout all Canwyke-street;
 Drapers much cloth me offered anon,
 Then comes me one, eried, “Hot sheepes feet !”’

Among the crowd another cried ‘Mackerell!’ and he was again hailed by a shopkeeper, and invited to buy a hood. The *Liber Albus*, a century before Lydgate, describes these shops, which consisted of open rooms closed at night by shutters, the tenants being enjoined to keep the space before their shops free of dirt, nor were they to sweep it before those of other people. At that time paving was unknown, open channels drained the streets in the centre, and a few rough stones might be placed in some favoured spots; but mud and mire, or dust and ruts, were the most usual condition of the streets. On state occasions, such as the entry of a sovereign, or the passage to Westminster of a coronation procession from the Tower, the streets were levelled, ruts and gulleys filled in, and the road new gravelled; but these attentions were seldom bestowed, and the streets,

of course, soon lapsed into their normal condition of filthy neglect.

The old dramatists, whose works often preserve unique and valuable records of ancient usages, incidentally allude to these old shops; thus in Middleton’s comedy, *The Roaring Girl*, 1611, Moll Cutpurse, from whom the play is named, refuses to stay with some jovial companions: ‘I cannot stay now, faith: I am going to buy a shag-ruff: the shop will be shut in presently.’ One of the scenes of this play occurs before a series of these open shops of city traders, and is thus described: ‘The three shops open in a rank [like those in our cut]: the first an apothecary’s shop; the next a feather shop; the third a sempster’s shop;’ from the last the passengers are saluted with ‘Gentlemen, what is’t you lack? what is’t you buy? see fine bands and ruffs, fine lawns, fine cambricks: what is’t you lack, gentlemen? what is’t you buy?’ This cry for custom is often contemptuously alluded to as a characteristic of a city trader; and in the capital old comedy *Eastward Hoe*, the rakish apprentice Quick-silver asks his sober fellow-apprentice, ‘What! wilt thou cry, what is’t ye lack? stand with a bare pate, and a drooping nose, under a wooden penthouse.’ This dialogue takes place in the shop of their master, ‘Touchstone, a honest goldsmith in the city;’ its uncomfortable character, and the exposure of the shopkeeper to all weathers, is fully confirmed by the glimpses of street scenery we obtain in old topographic prints. Faithorne’s view of Fish-street and the Monument represents a goldsmith’s open shop with its wooden pent-

house; it appears little better than a shed, with a few shelves to hold the stock; and a counter, behind which the master is ensconced. It shews that no change for the better as regarded the comfort of shopkeepers was made by the Great Fire of London.

With the Revolution came a government well-defined in the Bill of Rights, and a consequent additional security to trade and commerce. Traders increased, and London enlarged itself; yet local government continued lax and bad; streets were unpaved, ill-lighted, and dangerous at night. Shops were still rude in construction, open to wind and weather, and most uncomfortable to both salesman and buyer. A candle stuck in a lantern swung in the night breezes, and gave a dim glare over the goods. The wooden penthouse, which imperfectly protected the wares from drifts of rain, was succeeded by a curved projection of lath and plaster. Our third cut, from a print dated 1736, will clearly exhibit this,

as well as the painted sign (a greyhound) over the door; the shop front is furnished with an open railing, which encloses the articles exposed for

sale; in this instance, fruit is the vendible commodity, and oranges in baskets appear piled under the window. The lantern ready for lighting hangs on one side.

The custom of noting inns by signs, was succeeded by similarly distinguishing the houses of traders; consequently in the seventeenth century sign-painting flourished, and the practice of the 'art' of a sign-painter was the most profitable branch of the fine arts left open to Englishmen. The houses in London not being numbered, a tradesman could only be known by such means; hence every house in great leading thoroughfares displayed its sign; and the ingenuity of traders was taxed for new and characteristic devices by which their shops might be distinguished. The sign was often engraved as a 'heading' to the shop-bill; and many whimsical and curious combinations occurred from the custom of an apprentice or partner in a well-known house adopting its sign in addition to a new device of his own. These signs were sometimes stuck on posts, as we see them in country inns, between the foot and carriage way. In narrow streets they were slung across the road. More generally they projected over the footpath, supported by ironwork which was wrought in an elaborate, ornamental style. A young tradesman made his first and chiefest outlay in a new sign, which was conspicuously painted and gilt, surrounded by a heavy, richly carved, and painted frame, and then suspended from massive decorative ironwork. Cheapside was still the coveted locality for business, and the old views of that favoured locality are generally curious from the delineation of the line of shops, and crowd of signs, that are presented on both sides the way. From a view of Bow Church and neighbourhood published by Bowles in 1751, we select the two examples of shops engraved below. The two modes of suspending the signs are those generally in vogue. In one instance the shop is enclosed by glazed windows; in the other it is open. The latter is a pastrycook's; a cake on a stand occu-

pies the centre of the bracketed counter, which is protected by a double row of glazing above. Still the whole is far from weatherproof, and a

heavy drifting rain must have been a serious inconvenience when it happened, not to speak of the absolute damage it must have done. The mercers, hatters, and shoemakers made their places of business distinguished by throwing out poles, such as we see at the shops of country barbers, at an angle from the shop-front over the foot-path, hanging rows of stockings, or lines of hats, &c., upon them. When a shower came, these could at once be hauled in, and saved from damage; but the signs swung and grated in the breeze, or collected water in the storm, which descended on the unlucky pedestrian, for whom no umbrella had, as yet, been invented. The spouts from the houses, too, were ingeniously contrived to condense and pour forth a volume of water which wavered in the wind, and made the place of its fall totally uncertain; a few rough semi-globular stones formed a rude pavement in places; but it was often in bad condition, for each householder was allowed to do what he pleased in this way, and sometimes he solved the difficulty of doubling that was best by doing nothing at all. The pedestrian was protected from carriages by a line of posts, as seen in our cut; but he was constantly liable to be thrust in the gutter, or driven into a doorway or shop, by the sedan-chairs that crowded the streets, and which were thoroughly hated by all but the wealthy who used them, and those who profited by their use. 'The art of walking the streets of London' was therefore an art, necessary of acquirement by study, and Gay's poem, which bears the title, is an amusing picture of all the difficulties which beset pedestrianism when the wits of Queen Anne's reign rambled from tavern to tavern, to gather news or enjoy social converse.

These ponderous signs, with their massive iron frameworks, as they grew old, grew dangerous; they would rot and fall, and when this did not occur, they 'made night hideous' by the shrieks and groans of the rusty hinges on which they swung. They impeded sight and ventilation in narrow

streets, and sometimes hung inconveniently low for vehicles. At last they were doomed by Act of Parliament, and in 1762 ordered to be removed, or, if used, to be placed flat against the fronts of the houses. They had increased so enormously that every tradesman had one, each trying to hide and outvie his neighbour by the size or colour of his own, until it became a tedious task to discover the shop wanted. Gay, in his 'Trivia,' notes how—

—'Oft the peasant, with inquiring face,
Bewildered, trudges on from place to place;
He dwells on every sign with stupid gaze,
Enters the narrow alley's doubtful maze,
Tries every winding court and street in vain,
And doubles o'er his weary steps again.'

In addition to swinging painted sign-boards, it was sometimes the habit with the rich and ambitious trader to engage the services of the wood-carver to decorate his house with figures or emblems, the figures being those of some animal or thing adopted for his sign, as the stag seen over one of the doors in the cut of the Cheapside shops; or else representations, modelled and coloured 'after life,' of pounds of candles, rolls of tobacco, cheeses, &c. &c.

There existed in St Martin's-lane, twenty years ago, a fine example of a better-class Lon-

don shop, of which we here give a wood-cut. It had survived through many changes in all its essential features. The richly carved private door-case told of the well-to-do trader who had erected it. The shop was an Italian warehouse; and the window was curiously constructed, carrying out the traditional form of the old open shop with its projecting stall on brackets, and its slight window above, but effecting a compromise for security and comfort by enclosing the whole in a sort of glass box; above which the trade of the occupant was shewn more distinctly in the small oil-barrels placed upon it, as well as by the models of candles which hung in bunches from the canopy above. The whole of this framework was of timber richly carved throughout with

foliated ornament, and was unique as a surviving example of the better class shops of the last century.

It was in the early part of the reign of George I. that shops began to be closed in with sash-windows, allowing them to be open in fine weather, but giving the chance of closing them in winter and during rain. Addison alludes to it in the *Tatler*, as if it was a somewhat absurd luxury. 'Private shops,' says he, 'stand upon Corinthian pillars, and whole rows of tin pots show themselves, in order to their sale, through a sash window.' A great improvement of the most economic and simple kind succeeded the old and expensive signs. This was numbering houses in a street. The first street so numbered was New Burlington-street, in June 1764. The fashion spread eastward, and the houses in Lincoln's-inn-fields were the next series thus distinguished. The old traders who stuck pertinaciously to their signs, affixed them flat to their walls, and a few thus preserved rot in obscurity in some of our lonely old streets; one of the earliest and most curious is 'The Doublet,' in Thames-street, which seems to have originated in the days of Elizabeth, and to have been painted and repainted from time to time, till it is now scarcely distinguishable. The once-famed inn, used by Shakspeare, 'The Bell,' in Great Carter-lane, is no longer an inn; but its sign, a bell, boldly sculptured in high relief, and rich in decoration, is still on its front. Other sculptured signs remain on city houses, but units now represent the hundreds that once existed. At the corner of Union-street, Southwark, where it opens on the Blackfriars-road, is a well-executed old sign; a gilt model, life-size, representing a dog licking an overturned cooking-pot. It is curious that this very sign is mentioned in that strange old poem, 'Cock Lorell's Boat' (published by Wynkyn de Worde, in the early part of the reign of Henry VIII.): one of the passengers is described as dwelling

'at the Sygne of the dogges hed in the pot.'

In Holywell-street, Strand, is the last remain-

ing shop sign *in situ*, being a boldly-sculptured half-moon, gilt, and exhibiting the old conventional face in the centre. Some twenty years ago it was a mercer's shop, and the bills made out for customers were 'adorned with a picture' of this sign. It is now a bookseller's, and the lower part of the windows have been altered into the older form of open shop. A court beside it leads into the great thoroughfare; and the corner-post is decorated with a boldly-carved lion's head and paws, acting as a corbel to support a still older house beside it. This street altogether is a good, and now an almost unique specimen of those which once were the usual style of London business localities, crowded, tortuous, and ill-ventilated, having shops closely and inconveniently packed, but which custom had made familiar and inoffensive to all; while the old traders, who delighted in 'old styles,' looked on improvements with absolute horror, as 'a new-fashioned way' to bankruptcy.

A FORTUNE-TELLER OF THE LAST CENTURY.

Early in the year 1789, died in the Charter-house, Isaac Tarrat, a man of some literary merit, who had actually practised the arts of a fortune-teller. Originally a linendraper in the city, and a thriving one, he had from various causes proved ultimately unsuccessful, and at seventy knew not how to obtain his bread. One who had contributed, as he had done, to the *Ladies' Diary* and the *Gentleman's Magazine*, would have now been at no loss to live by the press; it was different in those days, and Tarrat was reduced to become a fortune-teller. In a mean street near the Middlesex Hospital, there was an obscure shop kept by an elderly woman, who had long made a livelihood by means of an oracle maintained on the premises. It became the office of Mr. Tarrat to sit in an upper room, in a fur cap, a white beard, and a flowing worsted damask night-gown, and tell the fortunes of all who might apply. The woman sat in the front shop, receiving the company, and taking their money. 'The Doctor' was engaged in this duty at a shilling a day and his food. He admitted that his mistress treated him kindly, always giving him a small bowl of punch after supper; there was no great discomfort in his situation, beyond the constant distress of mind he suffered from reflecting on the infamous character of his occupation. He had occasion to remark with surprise that many of his customers were of less mean and illiterate appearance than might be expected. At length, having scraped together a small amount of cash, Tarrat gave up his place—and he did so just in time, as his successor had not been a month in office when he was taken up as an impostor. Poor Tarrat afterwards found a retreat in the Charter-house, and there contrived to make the thread of life spin out to eighty-eight.

The Profession of a Conjurer, a hundred years ago, was by no means uncommon, nor does it seem to have been thought a discreditable one. A person named Hassell was in full practice as a cunning man in the neighbourhood of Tunbridge Wells, very recently. One of the best known of his craft (in Sussex), was a man of the name of Sanders, of Heathfield, who died about 1807. He was a respectable man, and at one time in easy circumstances, but he neglected all earthly concerns for astrological pursuits, and, it is said, died in a workhouse.

MARCH 10.

The Forty Martyrs of St Sebaste, 320. St Mac-kessog (or Kessog), Bishop in Scotland, 560. St Droctovæus, Abbot, about 580.

Born.—Bishop Duppa, 1598-9, *Lewisham*; Marcellus Malpighi, microscopic anatomist, 1628, *Bologna*; Professor Playfair (Natural Philosophy), *Beuie*, 1748; William Etty, R.A., painter, 1787, *York*; E. H. Baily, R.A., sculptor, 1788, *Bristol*.

Died.—Heliogabalus (Emperor), beheaded, A.D. 222; Pope Benedict III., 858; Ladislaus III. of Poland, 1333; Thomas Lord Seymour, of Sudley, beheaded, 1549; William Paulet, first Marquis of Winchester, 1572, *Basing*; Sir Hugh Myddleton, engineer (*New River*), 1636; Sir John Denham, poet, 1668; John, Earl of Bute, (prime minister, 1762-3,) *South Audley-street, London*, 1792; Benjamin West, painter, P.R.A., 1820; John VI., King of Portugal, 1826.

GOOD BISHOP DUPPA.

As you ascend Richmond Hill, by the roadside, near the Terrace, you see an old pile of red brick which testifies the benevolence of a good Bishop, who lived in troublous times, but ended his days in peace, one of his latest works being the erection and endowment of the above edifice. The following inscription is on a stone tablet, over the outer entrance:—*Votiva Tabula*, I will pay my vows which I made to God in my trouble.' It was founded by Dr Brian Duppa, towards the close of his life. He had been chaplain to Charles I., and tutor to his children, the Prince of Wales and Duke of York. After the decapitation of his royal master, he retired to Richmond, where he led a solitary life until the Restoration; soon after which he was made Bishop of Winchester, and Lord-almoner. He died at Richmond, in 1662; having been visited, when on his death-bed, by Charles II., a few hours only before he expired. In the previous year the good bishop had founded the above almshouse, endowing it for ten poor women, unmarried, and of the age of fifty years and upwards; for whose support he settled the rentals of certain properties in the county. The almswomen are elected by the minister and vestry of Richmond; and are each allowed £1 monthly, and a further £1 at Midsummer and Christmas; together with a gown of substantial cloth, called *Bishop's blue*, every other year. They have each, also, a Christmas dinner of a barn-door fowl and a pound of bacon, secured to them by the lease of a farm at Shepperton.

REVERSES OF THE PAULETS.

The first Marquis of Winchester was one of those members of the peerage who stand out as prominent persons in the national history, giving direction to public affairs, exercising vast influence, acquiring great accumulations of honours and wealth, and leaving families to dwindle behind them in splendid insignificance. Born about 1475, the son of a small Somersetshire gentleman, William Paulet or Powlett (for the name is spelt both ways) devoted himself to court life, and in time prospered so well that he

became successively Comptroller and Treasurer of the Household to King Henry VIII. Under the boy king who succeeded, he rose to be Lord Treasurer, the highest office in the state, being then over seventy years of age. Under the same reign he was ennobled, and finally made Marquis of Winchester. It has never been said that he possessed masterly abilities; he is only presented to us as a man of great policy and sagacity. When the death of the young king raised a dynastic difficulty, old Powlett saw that the popular sentiment would not ratify the pretensions of Lady Jane Grey, and, throwing himself into the opposite scale, he was the chief instrument in preserving the crown for Mary. Through that bloody reign, he continued to be Lord Treasurer. When Elizabeth and Protestantism succeeded, he still contrived to keep his place. In fact, this astute old man maintained uninterrupted prosperity down to his death in 1571-2, when he was ninety-seven, enormously wealthy, and had upwards of a hundred descendants. It might well excite surprise that a statesman should have kept high place from Edward's reign, *through Mary's*, into Elizabeth's; and the question was one day put to him, how it was that he did so. He answered that 'he was born of the willow, not of the oak.' He seems to have been remarkable for pithy sayings. One is recorded—'That there was always the best justice when the court was absent from London.'

The old Marquis amused himself in his latter years by building a superb house at Basing, in Hants; it is said to have been more like a palace than a nobleman's mansion. But we hear no more of the cautious wisdom which founded the greatness of the family. We hear of the third marquis writing poetry and giving away large estates among four illegitimate sons; of the fourth impoverishing himself by a magnificent entertainment to Queen Elizabeth; and of the fifth taking the losing side in the Civil War. After all, the conduct of this last lord was not the least creditable part of the family history. On the breaking out of that great national strife, Lord Winchester fortified Basing House for the king, enclosing about fourteen acres within the exterior ramparts. A large garrison, well provisioned, enabled him not merely to defy a powerful besieging force, but to make upon it many deadly sallies. He wrote on every window of the house the words, *Aimez loyauté*, which have since continued to be the motto of the family crest. He swore to maintain his position so long as a single stone of his mansion remained. It was not till after a siege of two years (October 1645), that the investing army succeeded in their object. The house, in which the captors found valuables amounting to £300,000, was burnt to the ground. The Marquis survived to 1674, and his loyal faith and courage were acknowledged in an epitaph by Dryden.

A curious particular in the subsequent history of the family is the marriage, by its representative Charles Duke of Bolton, of Lavinia Fenton, the actress, remarkable for having first performed *Polly Peachum* in the Beggar's Opera. To this subject we shall have occasion to make reference on a future occasion (*see April 11*).

HONEYCOMBS IN TIMBER.

Among the many interesting facts concerning bees which attract the attention not only of naturalists, but of other persons acquainted with country life, is the existence of honeycombs in timber. The little workers select their dwellings in accordance with instincts which are yet but little understood; penetrating through or into solid substances by means apparently very inadequate to the work to be done. M. Réaumur proposed the name of *carpenter-bees* to denote those which work in wood, to distinguish them from the *mason-bees* that work in stone, and the *mining-bees* that work underground. Mr Rennie (*Insect Architecture*) says, 'We have frequently witnessed the operations of these ingenious little workers, who are particularly partial to posts, palings, and the wood-work of houses which has become soft by beginning to decay. Wood actually decayed, or affected by dry rot, they seem to reject as unfit for their purpose; but they make no objections to any hole previously drilled, provided it be not too large.' It is always, so far as is known, a female bee that thus engages in carpentry. Mr Rennie describes one which he saw actually at work. She chiselled a place in a piece of wood, for the nest, with her jaws; she gnawed the wood, little bits at a time, and flew away to deposit each separate fragment at a distance. When the hole was thus made, she set out on repeated journeys to bring pollen and clay; she visited every flower near at hand fitted to yield pollen, and brought home a load of it on her thighs; and alternated these journeys with others which resulted in bringing back little pellets of clay. After several days' labour, she had brought in pollen enough to serve as food for the future generation, and clay enough to close up the door of her dwelling. Several days afterwards, Mr Rennie cut open the wooden post in which these operations had been going on. He found a nest of six cells; the wood formed the lateral walls, but the cells were separated one from another by clay partitions no thicker than cardboard. The wood was worked as smooth as if it had been chiselled by a joiner.

Such instances are of repeated occurrence, more or less varied in detail. Thus, on the 10th of March 1858, some workmen employed by Mr Brumfit, of Preston, while sawing up a large solid log of baywood, twenty feet long by two feet square, discovered a cavity in it about eight feet long, containing a full-formed honeycomb. Many carpenter-bees dig perpendicular galleries of great depth in upright posts and palings. Réaumur describes a particular kind, called by him the violet carpenter-bee (on account of the beautiful colour of the wings), which usually selects an upright piece of wood, into which she bores obliquely for about an inch, and then, changing the direction, works perpendicularly for twelve or fifteen inches, and half an inch in breadth. She sometimes scoops out three or four such channels in one piece of wood. Each channel is then partitioned into cells about an inch in depth; the partitions being made in a singular way from the sawdust or rather gnawings of the wood. The depositing of the eggs, the storing of them with pollen, and the building up of the partitions, proceed in regular order, thus. The bee first deposits an egg at the bottom of the excavation; then covers it with a thick layer of paste made of pollen and honey; and then makes over or upon this a wooden cover, by arranging concentric rings of little chips or gnawings, till she has formed a hard flooring about as thick as a crown-piece, exhibiting (from its mode of construction) concentric rings like those of a tree, and cemented by glue of her own making. She deposits an egg on this flooring or partition, then another layer of soft food for another of her children, and

then builds another partition—and so on, for a series of perhaps ten or twelve in height. Few things are more wonderful in their way than this; for the little worker has no tools but two sharp teeth to help her; she bores a tunnel ten or twelve times her own length quite smooth at the side; and makes ten or twelve floors to her house by a beautiful kind of joinery. This labour occupies several weeks. The egg first deposited develops into a grub, a pupa, and a perfect bee earlier than the others; and the mother makes a side door out of the bottom cell for the elder children to work their way out when old enough; they can penetrate the partitions between the cells, but not the hard wood of a piece of timber.

THE BROWNIE BEE.

(A Cornish Croon.)

I.

Behold those winged images!
Bound for their evening bowers;
They are the nation of the bees,
Born from the breath of flowers!
Strange people they! A mystic race,
In life and food and dwelling-place!

II.

They first were seen on earth, 'tis said,
When the rose breathes in spring:
Men thought her blushing bosom shed
These children of the wing:
But lo! their hosts went down the wind,
Filled with the thoughts of God's own mind!

III.

They built them houses made with hands,
And there, alone, they dwell;
No man to this day understands
The mystery of their cell:
Your cunning sages cannot see
The deep foundations of the bee!

IV.

Low in the violet's breast of blue
For treasured food they sink;
They know the flowers that hold the dew
For their small race to drink:
They glide—King Solomon might gaze
With wonder on their awful ways!

V.

And once—it is a grandame's tale,
Yet filled with secret lore—
There dwelt within a woodland vale,
Fast by old Cornwall's shore,
An ancient woman, worn and bent,
Fallen Nature's mournful monument.

VI.

A home had they—the clustering race,
Beside her garden-wall;
All blossoms breathed around the place,
And sunbeams fain would fall;
The lily loved that combe the best,
Of all the valleys of the west!

VII.

But so it was that on a day,
When summer built her bowers,
The waxen wanderers ceased to play
Around the cottage flowers:
No hum was heard; no wing would roam;
They dwelt within their cloistered home!

VIII.

This lasted long—no tongue could tell
Their pastime or their toil!

What binds the soldier to his cell,
Who should divide the spoil?
It lasted long—it fain would last,
Till Autumn rustled on the blast!

IX.

Then sternly went that woman old,
She sought the chancel floor:
And there, with purpose bad and bold,
Knelt down amid the poor:
She took, she hid, the blessed bread,
Which is, what Jesu master said!

X.

She bare it to her distant home,
She laid it by the hive,—
To lure the wanderers forth to roam,
That so her store might thrive:
'Twas a wild wish, a thought unblest,
Some cruel legend of the west!

XI.

But lo! at morning-tide, a sign!
For wondering eyes to trace;
They found, above that bread, a shrine
Reared by the harmless race:
They brought their walls from bud and flower,
They built bright roof and beamy tower!

XII.

Was it a dream? or did they hear
Float from those golden cells,
A sound, as of some psalter near,
Or soft and silvery bells?
A low, sweet psalm, that grieved within,
In mournful memory of the sin!

XIII.

Was it a dream? 'tis sweet no less,
Set not the vision free;—
Long let the lingering legend bless,
The nation of the bee!
So shall they bear upon their wings,
A parable of sacred things!

XIV.

So shall they teach, when men blaspheme,
Or sacrament or shrine,
That humbler things may fondly dream
Of mysteries divine:
And holier hearts than his may beat,
Beneath the bold blasphemer's feet!

R. S. H.

Open air Preaching is sometimes heard from a great distance. It must of course depend much on the character of the speaker's voice, but also to a considerable extent on conditions of the surface and on the hygrometric state of the atmosphere. Mrs Oliphant, in her *Life of the Rev. Edward Irving*, states that he had been on some occasions clearly heard at the distance of half a mile. It has been alleged, however, that Black John Russell of Kilmarmock, celebrated by Burns in no gracious terms, was heard, though not perhaps intelligibly, at the distance of a full mile. It would appear that even this is not the utmost stretch of the phenomenon. A correspondent of *Jameson's Journal*, in 1828, states that, being at the west end of Dumferline, he overheard part of a sermon then delivering at a tent at Cairneyhill by Dr Black: he did not miss a word, 'though the distance must be something about two miles:' the preacher has, perhaps, seldom been surpassed for distinct speaking and a clear voice: 'and the wind, which was steady and moderate, came in the direction of the sound.'

MARCH 11.

St Constantine, of Scotland, martyr, 6th century. St Sophronius, Patriarch of Jerusalem, 639. St Engus, the Culdee, bishop in Ireland, 824. St Eulogius, of Cordova, 859.

Born.—Torquato Tasso, Italian poet, 1544, *Sorrento*; John Peter Niceron, French biographer, 1685, *Paris*; William Huskisson, statesman, 1770, *Birch Moreton Court, Worcestershire*.

Died.—John Toland, miscellaneous writer, 1722, *Putney*; Hannah Cowley, dramatic writer, 1809, *Tiverton*.

THE WITCHES OF BELVOIR.

On the 11th of March 1618-19, two women named Margaret and Philippa Flower, were burnt at Lincoln for the alleged crime of witchcraft. With their mother, Joan Flower, they had been confidential servants of the Earl and Countess of Rutland, at Belvoir Castle. Dissatisfaction with their employers seems to have gradually seduced these three women into the practice of hidden arts in order to obtain revenge. According to their own confession, they had entered into communion with familiar spirits, by which they were assisted in their wicked designs. Joan Flower, the mother, had hers in the bodily form of a cat, which she called *Rutterkin*. They used to get the hair of a member of the family and burn it; they would steal one of his gloves and plunge it in boiling water, or rub it on the back of *Rutterkin*, in order to effect bodily harm to its owner. They would also use frightful imprecations of wrath and malice towards the objects of their hatred. In these ways they were believed to have accomplished the death of Lord

Ross, the Earl of Rutland's son, besides inflicting frightful sicknesses upon other members of the family.

It was long before the earl and countess, who were an amiable couple, suspected any harm in these servants, although we are told that for some years there was a manifest change in the countenance of the mother, a diabolic expression being assumed. At length, at Christmas, 1618, the noble pair became convinced that they were the victims of a hellish plot, and the three women were apprehended, taken to Lincoln jail, and examined. The mother loudly protested innocence, and, calling for bread and butter, wished it might choke her if she were guilty of the offences laid to her charge. Immediately, taking a piece into her mouth, she fell down dead, probably, as we may allowably conjecture, overpowered by consciousness of the contrariety between these protestations and the guilty design which she had entertained in her mind.

Margaret Flower, on being examined, acknowledged that she had stolen the glove of the young heir of the family, and given it to her mother, who stroked *Rutterkin* with it, dipped it in hot water, and pricked it; whereupon Lord Ross fell ill and suffered extremely. In order to prevent Lord and Lady Rutland from having any more children, they had taken some feathers from their bed, and a pair of gloves, which they boiled in water, mingled with a little blood. In all these particulars, Philippa corroborated her sister. Both women admitted that they had familiar spirits, which came and sucked them at various parts of their bodies; and they also described visions of devils in various forms which they had had from time to time.

Associated with the Flowers in their horrible

THE THREE WITCHES OF BELVOIR.

practices were three other women, of the like grade in life,—Anne Baker, of Bottesford; Joan Willimot, of Goodby; and Ellen Greene, of Stathorne, all in the county of Leicester, whose confessions were to much the same purpose. Each had her own familiar spirits to assist in working out her malignant designs against her neighbours. That of Joan Willimot was called *Pretty*. It had been blown into her mouth by her master, William Berry, in the form of a fairy, and immediately after came forth again and stood on the floor in the shape of a woman, to whom she forthwith promised that her soul should be enlisted in the infernal service. On one occasion, at Joan Flower's house, she saw two spirits, one like an owl, the other like a rat, one of which sucked her under the ear. This woman, however, protested that, for her part, she only employed her spirit in inquiring after the health of persons whom she had undertaken to cure.

Greene confessed to having had a meeting with Willimot in the woods, when the latter called two spirits into their company, one like a kitten, the other like a mole, which, on her being left alone, mounted on her shoulders and sucked her under the ears. She had then sent them to bewitch a man and woman who had reviled her, and who, accordingly, died within a fortnight. Anne Baker seems to have been more of a visionary than any of the rest. She once saw a hand, and heard a voice from the air; she had been visited with a flash of fire; all of them ordinary occurrences in the annals of hallucination. She also had a spirit, but, as she alleged, a beneficent one, in the form of a white dog. From the frontispiece of a contemporary pamphlet giving an account of this group of witches, we transfer a homely picture of Baker, Willimot, and Greene, attended each by her familiar spirit. The entire publication is reprinted in Nichols's *Leicestershire*.

The examinations of these wretched women were taken by magistrates of rank and credit, and when the judges came to Lincoln the two surviving Flowers were duly tried, and on their own confessions condemned to death by the Chief Justice of the Common Pleas, Sir Henry Hobbart.

THE FIRST DAILY PAPER.

The British journal entitled to this description was *The Daily Courant*, commenced on the 11th of March 1702, by 'E. Mallet, against the Ditch at Fleet Bridge,' a site, we presume, very near that of the present *Times*' office. It was a single page of two columns, and professed solely to give foreign news, the editor or publisher further assuring his readers that he would not take upon himself to give any comments of his own, 'supposing other people to have sense enough to make reflections for themselves.' The *Daily Courant* very soon passed into the hands of Samuel Buckley, 'at the sign of the Dolphin in Little Britain,'—a publisher of some literary attainments, who afterwards became the printer of the *Spectator*, and pursued on the whole a useful and respectable career. As a curious

trait of the practices of the government of George I., we have Buckley entered in a list of persons laid before a Secretary of State (1724), as 'Buckley, Amen-corner, the worthy printer of the *Gazette*—well-affected;' i.e. well-affected to the Hanover succession, a point of immense consequence at that epoch.

The *Daily Courant* was in 1735 absorbed in the *Daily Gazetteer*.*

THE LUDDITES.

'Who makes the quartern-loaf and Luddites rise?'

JAMES SMITH.

March 11th, 1811, is a black-letter day in the annals of Nottinghamshire. It witnessed the commencement of a series of riots which, extending over a period of five years, have, perhaps, no parallel in the history of a civilized country for the skill and secrecy with which they were managed, and the amount of wanton mischief they inflicted. The hosiery trade, which employed a large part of the population, had been for some time previously in a very depressed state. This naturally brought with it a reduction in the price of labour. During the month of February 1811, numerous bands of distressed framework-knitters were employed to sweep the streets for a paltry sum, to keep the men employed, and to prevent mischief. But by the 11th of March their patience was exhausted; and flocking to the market-place from town and country, they resolved to take vengeance on those employers who had reduced their wages. The timely appearance of the military prevented any violence in the town, but at night no fewer than sixty-three frames were broken at Arnold, a village four miles north of Nottingham. During the succeeding three weeks 200 other stocking frames were smashed by midnight bands of distressed and deluded workmen, who were so bound together by illegal oaths, and so completely disguised, that very few of them could be brought to justice. These depredators assumed the name of *Luddites*; said to have been derived from a youth named *Ludlam*, who, when his father, a framework-knitter in Leicestershire, ordered him to 'square his needles,' took his hammer and beat them into a heap. Their plan of operation was to assemble in parties of from six to sixty, as circumstances required, under a leader styled *General* or *Ned Ludd*, all disguised, and armed, some with swords, pistols, or firelocks, others with hammers and axes. They then proceeded to the scene of destruction. Those with swords and firearms were placed as a guard outside, while the others broke into the house and demolished the frames, after which they reassembled at a short distance. The leader then called over his men, who answered not to names, but to certain numbers; if all were there, and their work for the night finished, a pistol was fired, and they then departed to their homes, removing the black handkerchiefs which had covered their faces. In consequence of the continuance of these daring outrages, a large military force was brought into the neighbourhood, and two of the London police magistrates, with several other officers, came down

* Andrews's *History of British Journalism*. 2 vols. 1859.

to Nottingham, to assist the civil power in attempting to discover the ringleaders; a *secret committee* was also formed, and supplied with a large sum of money for the purpose of obtaining private information; but in spite of this vigilance, and in contempt of a Royal Proclamation, the offenders continued their devastations with redoubled violence, as the following instances will shew. On Sunday night, November 10th, a party of Luddites proceeded to the village of Bulwell, to destroy the frames of Mr Hollingworth, who, in anticipation of their visit, had procured the assistance of three or four friends, who with fire-arms resolved to protect the property. Many shots were fired, and one of the assailants, John Westley, of Arnold, was mortally wounded, which so enraged the mob that they soon forced an entrance: the little garrison fled, and the rioters not only destroyed the frames, but every article of furniture in the house. On the succeeding day they seized and broke a wagon-load of frames near Arnold; and on the Wednesday following proceeded to Sutton-in-Ashfield, where they destroyed thirty-seven frames; after which they were dispersed by the military, who took a number of prisoners, four of whom were fully committed for trial. During the following week only one frame was destroyed, but several *stacks were burned*, most probably, as was supposed, by the Luddites, in revenge against the owners, who, as members of the yeoman cavalry, were active in suppressing the riots. On Sunday night, the 24th of November, thirty-four frames were demolished at Basford, and eleven more the following day. On December the 6th, the magistrates published an edict, which ordered all persons in the disturbed districts to remain in their houses after ten o'clock at night, and all public-houses to be closed at the same hour. Notwithstanding this proclamation, and a great civil and military force, thirty-six frames were broken in the villages around Nottingham within the six following days. A Royal Proclamation was then issued, offering £50 reward for the apprehension of any of the offenders; but this only excited the men to further deeds of daring. They now began to plunder the farmhouses both of money and provisions, declaring that they 'would not starve whilst there was plenty in the land.' In the month of January 1812, the frame-breaking continued with unabated violence. On the 30th of this month, in the three parishes of Nottingham, no fewer than 4,348 families, numbering 15,350 individuals, or nearly half the population, were relieved out of the poor rates. A large subscription was now raised to offer more liberal rewards against the perpetrators of these daring outrages; and at the March assize seven of them were sentenced to transportation. In this month, also, an Act of Parliament was passed, making it *death to break a stocking or a lace frame*. In April, a Mr Trentham, a considerable manufacturer, was shot by two ruffians while standing at his own door. Happily the wound did not prove mortal; but the offenders were never brought to justice, though a reward of £600 was offered for their apprehension. This evil and destructive spirit continued to manifest itself from time to time till

October 1816, when it finally ceased. Upwards of a thousand stocking frames and a number of lace machines were destroyed by it in the county of Nottingham alone, and at times it spread into the neighbouring counties of Leicester, Derby, and York, and even as far as Lancaster. Its votaries discovered at last that they were injuring themselves as much or more than their employers, as the mischief they perpetrated had to be made good out of the county rate.

BITING THE THUMB.

In *Romeo and Juliet* the servants of Capulet and Montague commence a quarrel by one biting his thumb, apparently as an insult to the others. And the commentators, considering the act of biting the thumb as an insulting gesture, quote the following passage from Decker's *Dead Term* in support of that opinion:—'What swearing is there' (says Decker, describing the groups that daily frequented the walks of St Paul's Church), 'what shouldering, what jostling, what jeering, what biting of thumbs to beget quarrels!' Sir Walter Scott, referring to this subject in a note to the *Lay of the Last Minstrel*, says:—'To bite the thumb or the glove seems not to have been considered, upon the Border, as a gesture of contempt, though so used by Shakspeare, but as a pledge of mortal revenge. It is yet remembered that a young gentleman of Teviotdale, on the morning after a hard drinking bout, observed that he had bitten his glove. He instantly demanded of his companions with whom he had quarrelled? and learning that he had had words with one of the party, insisted on instant satisfaction, asserting that, though he remembered nothing of the dispute, yet he never would have bitten his glove without he had received some unpardonable insult. He fell in the duel, which was fought near Selkirk in 1721 [1707].'

It is very probable that the commentators are mistaken, and the act of biting the thumb was not so much a gesture of insulting contempt as a threat—a solemn promise that, at a time and place more convenient, the sword should act as the arbitrator of the quarrel; and, consequently, a direct challenge, which, by the code of honour of the period, the other party was bound to accept. The whole history of a quarrel seems to be detailed in the graphic quotation from Decker. We almost see the ruffling swash-bucklers strutting up and down St Paul's-walk, full of braggadocio, and 'new-turned oaths.' At first they shoulder, as if by accident; at the next turn they jostle; fiery expostulation is answered by jeering, and then, but not till then, the thumb is bitten, expressive of dire revenge at a convenient opportunity, for fight they dare not within the precincts of the cathedral church. A curious illustration of this subject will be found in the following extract from evidence given at a court-martial held on a sergeant of Sir James Montgomery's regiment, in 1642. It may be necessary to state that, though the regiment was nominally raised in Ireland, all the officers and men were Scotch by birth, or the immediate descendants of Scottish settlers in Ulster. Sergeant Kyle was accused of killing Lieutenant

Baird; and one of the witnesses deposed as follows:—

The witness and James McCulloch going to drink together a little after nightfall on the twenty-second of February, the said lieutenant and sergeant ran into the room where they were drinking, and the sergeant being first there, offered the chair he sat on to the lieutenant, but the lieutenant refused it, and sat upon the end of a chest. Afterwards, the lieutenant and sergeant fell a-jeering one another, upon which the sergeant told the lieutenant that if he would try him, he would find him a man, if he had aught to say to him. Also, Sergeant Kyle threw down his glove, saying there is my glove, lieutenant, unto which the lieutenant said nothing. Afterwards, many ill words were (exchanged) between them, and the lieutenant threatening him (the said sergeant), the sergeant told him that he would defend himself, and take no disgrace at his hands, but that he was not his equal, he being his inferior in place, he being a lieutenant and the said Kyle a sergeant. Afterwards the sergeant threw down his glove a second time, and the lieutenant not having a glove, demanded James McCulloch his glove to throw to the sergeant, who would not give him his glove; upon that, the lieutenant held up his thumb licking on it with his tongue, and saying, 'There is my parole for it.' Afterwards, Sergeant Kyle went to the lieutenant's ear, and asked him, 'When?' The lieutenant answered, 'Presently.' Upon that Sergeant Kyle went out, and the lieutenant followed with his sword drawn under his arm, and being a space distant from the house said, 'Where is the villain now?' 'Here I am for you,' said Kyle, and so they struck fiercely one at another.

Licking of the thumb—and why not biting?—is a most ancient form of giving a solemn pledge or promise, and has remained to a late period in Scotland as a legalized form of undertaking, or bargain. Erskine, in his *Institutes*, says it was 'a symbol anciently used in proof that a sale was perfected; which continues to this day in bargains of lesser importance among the lower ranks of the people—the parties licking and joining of thumbs; and decrees are yet extant, sustaining sales upon "*summonses of thumb-licking*," upon this, "That the parties had licked thumbs at finishing the bargain."

Proverbs and snatches of Scottish song may be cited as illustrative of this ancient custom; and in the parts of Ulster where the inhabitants are of Scottish descent, it is still a common saying, when two persons have a community of opinion on any subject, 'We may lick thooms up' that.'

Jamieson, in his *Scottish Dictionary*, remarks

—'This custom, though now apparently credulous and childish, bears indubitable marks of

THE INTERIOR OF OLD ST PAUL'S.

great antiquity. Tacitus, in his *Annals*, states that it existed among the Iberians; and Thre alludes to it as a custom among the Goths. I am well assured by a gentleman, who has long resided in India, that the Moors, when concluding a bargain, do it, in the very same manner as the vulgar in Scotland, by licking their thumbs.'

According to Ducange, in the mediæval period the thumb pressed on the wax was recognised as a seal to the most important documents, and secretaries detected in forging or falsifying documents were condemned to have their thumbs cut off. The same author gives an account of a northern princess who had entered a convent and became a nun. Subsequently, circumstances occurred which rendered it an important point of high policy that she should be married, and a dispensation was obtained from Rome, abrogating her conventual vow, for that purpose. The lady, however, obstinately refused to leave her convent, and marry the husband which state policy had provided for her, so arrangements were made for marrying her by force. But the nun, placing her right thumb on the blade of a sword, swore that she would never marry, and as an oath of this solemn character could not be broken, she was allowed to remain in her convent. Hence it appears that a vow made with the thumb on a sword blade was considered more binding than that on taking the veil; and that, though the Pope could grant a dispensation for the latter,

he could not or would not give one for the former.

Something of the same kind prevailed among the Romans; and the Latin word *polliceri*—to promise, to engage—has by many been considered to be derived from *pollex*—*pollicis*, the thumb.

THE BUTCHERS' SERENADE.

Hogarth, in his delineation of the Marriage of the Industrious Apprentice to his master's daughter, takes occasion to introduce a set of butchers coming forward with marrowbones and cleavers, and roughly pushing aside those who doubtless considered themselves as the legitimate musicians. We are thus favoured with a memorial of what might be called one of the old institutions of the London vulgar—one just about to expire, and which has, in reality, become obsolete in the greater part of the metropolis. The custom in question was one essentially connected with marriage. The performers were the

butchers' men,—'the bonny boys that wear the sleeves of blue.' A set of these lads, having duly accomplished themselves for the purpose, made a point of attending in front of a house containing a marriage party, with their cleavers, and each provided with a marrowbone, wherewith to perform a sort of rude serenade, of course with the expectation of a fee in requital of their music. Sometimes, the group would consist of four, the cleaver of each ground to the production of a certain note; but a full band—one entitled to the highest grade of reward—would be not less than eight, producing a complete octave; and, where there was a fair skill, this series of notes would have all the fine effect of a peal of bells. When this serenade happened in the evening, the men would be dressed neatly in clean blue aprons, each with a portentous wedding favour of white paper in his breast or hat. It was wonderful with what quickness and certainty, under the

THE BUTCHERS' SERENADE.

enticing presentiment of beer, the serenaders got wind of a coming marriage, and with what tenacity of purpose they would go on with their performance until the expected crown or half-crown was forthcoming. The men of Clare Market were reputed to be the best performers, and their *guerdon* was always on the highest scale accordingly. A merry rough affair it was; troublesome somewhat to the police, and not always relished by the party for whose honour it

was designed; and sometimes, when a musical band came upon the ground at the same time, or a set of boys would please to interfere with pebbles rattling in tin canisters, thus throwing a sort of burlesque on the performance, a few blows would be interchanged. Yet the Marrowbone-and-Cleaver epithalamium seldom failed to diffuse a good humour throughout the neighbourhood; and one cannot but regret that it is rapidly passing among the things that were.

MARCH 12.

St Maximilian of Numidia, martyr, 296. St Paul of Cornwall, bishop of Leon, about 573. St Gregory the Great, Pope, 604.

ST GREGORY THE GREAT.

There have been Popes of every shade of human character. Gregory the Great is one distinguished by modesty, disinterestedness, and sincere religious zeal, tempered by a toleration which could only spring from pure benevolence. The son of a Roman senator, with high mental gifts, and all the accomplishments of his age, he was drawn forward into prominent positions, but always against his will. He would have fain continued to be an obscure monk or a missionary, but his qualities were such that at length even the popedom was thrust upon him (on the death of Pelagius II. in 590). On this occasion he wrote to the sister of the Emperor, 'Appearing to be outwardly exalted, I am really fallen. My endeavours were to banish corporeal objects from my mind, that I might spiritually behold heavenly joys. . . . I am come into the depths of the sea, and the tempest hath drowned me.'

The writings of Pope Gregory, which fill four folio volumes, are said to be very admirable. The English King Alfred showed his appreciation of one treatise by translating it. In exercising the functions of his high station, Gregory exhibited great mildness and forbearance. He eagerly sought to convert the heathen, and to bring heretics back to the faith; but he never would sanction the adoption of any harsh measures for these purposes. One day—before he attained the papal chair—walking through the market in Rome, he was struck by the beauty of a group of young persons exposed to be sold as slaves. In answer to his inquiry of who they were, and whence they came, he was told they were *Angli*, from the heathen island of Britain. 'Verily, *Angeli*,' he said, punning on the name; 'how lamentable that the prince of darkness should be the master of a country containing such a beautiful people! How sad that, with so fair an outside, there should be nothing of God's grace within!' His wish was immediately to set out as a missionary to England, and it was with difficulty he was prevented. The incident, however, led to a mission being ere long sent to our then benighted country, which thus owed its first reception of Christian light to Gregory.

Almsgiving, in such Protestant countries as England, is denounced as not so much a lessening of human suffering as a means of engendering and extending pauperism. Gregory had no such fears to stay his bountiful hand. With him to relieve the poor was the first of Christian graces. He devoted a large proportion of his revenue and a vast amount of personal care to this object. He in a manner took the entire charge of the poor upon his own hands. 'He relieved their necessities with so much sweetness and affability, as to spare them the confusion of receiving alms; the old men among them he, out of deference, called his fathers. He often entertained several

of them at his own table. He kept by him an exact catalogue of the poor, called by the ancients *matriculæ*; and he liberally provided for the necessities of each. In the beginning of every month he distributed to all the poor corn, wine, pulse, cheese, fish, flesh, and oil; he appointed officers for every street, to send every day necessaries to all the needy sick; before he ate, he always sent off meats from his own table to some poor persons.' There may be some bad moral results from this wholesale system of relief for poverty, but certainly the motives which prompted it must be acknowledged to have been highly amiable.

Gregory was a weakly man, often suffering from bad health, and he did not get beyond the age of sixty-four. We owe to him a phrase which has become a sort of formula for the popes—'Servant of the servants of God.' His name, which is the same as *Vigilantius* or *Watchman*, became, from veneration for him, a favourite one; we find it borne, amongst others, by a Scottish prince of the eighth century, the reputed progenitor of the clan M'Gregor. It is curious to think of this formidable band of Highland outlaws of the seventeenth century as thus connected by a chain of historical circumstances with the gentle and saintly Gregory, who first caused the lamp of Christianity to be planted in England.

Born.—Godfrey Bidloo, anatomist, 1649, *Amsterdam*; John Thomas Desaguliers, philosophical writer, 1683, *Rochelle*; Bishop G. Berkeley, philosopher, 1684, *Kilcorin*, *Kilkenny*; John Frederick Daniell, chemist and meteorologist, 1790, *Essex-street, Strand*.

Died.—Cæsar Borgia, killed, 1508, *Castle of Viana*; Alexander Piccolomini, Italian miscellaneous writer, 1578, *Siena*; Ludovick Muggleton, sectarian (Muggletonians), 1697; the Rev. Dr George Gregory, editor of the *New Annual Register*, 1808, *West Ham*; Rev. R. Polwhele, topographer and poet, 1838.

BISHOP BERKELEY.

Dr George Berkeley, better known as Bishop Berkeley, the mathematician and ideal philosopher, graduated at Trinity College, Dublin, which he entered as a pensioner at the early age of fifteen. Very different opinions prevailed about him at College; those who knew little of him took him for a fool, while those who were most intimate with him considered him a prodigy of learning. His most intimate friends were the best judges in this case, for before he reached his twenty-third year he competed for and obtained a fellowship. Within the next three years he published his *Theory of Vision*, a work of remarkable sagacity, and the first of its kind. Its object may be roughly stated to be an attempt, and a successful one, to trace the boundary line between our ideas of sight and touch. He supposed that if a man born blind could be enabled to see, it would be impossible for him to recognise any object by sight which he had previously known by touch, and that such a person would have no idea of the relative distance of objects. This supposition was confirmed in a very surprising manner in the year 1728, eighteen years after the publica-

tion of Mr Berkeley's book by a young man who was born blind and couched by Mr Cheseldon. He said that all objects seemed to touch his eyes; he was unable to distinguish the *dog* from the *cat* by sight, and was so sorely puzzled between his newly-acquired sense and that of touch that he asked which was the *lying* sense. In the next year Berkeley published his *Principles of Human Knowledge*, in which he set forth his celebrated system of *immaterialism*, attempting to prove that the common notion of the existence of matter is false, and that such things as bricks and mortar, chairs and tables, are nonentities, except as ideas in the mind. A further defence of this system, in *Three Dialogues between Hylas and Philonous*, established his reputation as a writer, and his company was sought even where his opinions were rejected. Through Dean Swift he was introduced to the celebrated Earl of Peterborough, whom he accompanied to Italy in the capacity of chaplain.

His first piece of preferment was the deanery of Derry. And no sooner was he settled in this than he conceived and carried out to the utmost of his power a project which entitles him to the admiration of posterity. It was nothing less than a scheme for the conversion of the savage Americans to Christianity. He proposed to erect a college in Bermuda as a missionary school, to resign his deanery, worth £1,100 a year, and to go out himself as its first president, on the stipend of £100 a year. His plan was approved by parliament, and he set out, taking with him three other noble and kindred spirits. For seven years Sir R. Walpole delayed him with various excuses, and at last gave him to understand that the promised grant would not be paid till it suited 'public convenience,' thus rendering the whole scheme abortive.

In 1733, he was appointed to the bishopric of Cloyne. The rest of his life was devoted to the earnest discharge of his episcopal duties and the further prosecution of his studies. His custom was to rise between three and four o'clock, summon his family to a music lesson, and spend the rest of the morning in study. In this part of his life, he published *The Analyst*, which was followed by several other works, among which was a letter to the Roman Catholics of his diocese, entitled *A Word to the Wise*, for which in the *Dublin Journal* of November 18, 1749, they returned 'their sincere and hearty thanks to the worthy author, assuring him that they are determined to comply with every particular recommended in his address to the utmost of their power.'

Suffering a good deal from a nervous colic towards the end of his life, and finding relief from tar-water, he wrote a treatise on its virtues, which, with its sequel, *Further Thoughts on Tar-water*, was his last work for the press.* He died at Oxford, suddenly, in the midst of his family, on Sunday evening, January 14, 1753, while listening to a sermon of Dr Sherlock's which Mrs Berkeley was reading to him. He was interred in Christ Church, Oxford.

* For a fuller account of the work on tar-water, see under January 14.

LUDOVICK MUGGLETON.

A time of extraordinary religious fervour is sure to produce its monsters, even as the hot mud of the Nile was fabled to do by Lucretius. Several arose amidst the dreadful sectarian contentings of the period of the civil war, and scarcely any more preposterous than Ludovick Muggleton, who is said to have been a working tailor, wholly devoid of education. About 1651, when this man was between forty and fifty years of age, he and a brother in trade, named Reeves, announced themselves as the two last witnesses of God that would ever be appointed on earth; professed a prophetic gift, and pretended to have been invested with an exclusive power over the gates of heaven and hell. When Reeves died, Muggleton continued to set himself forth in this character, affecting to bless those who respectfully listened to him, and cursing all who scoffed at him, assuming, in short, to have the final destiny of man, woman, and child entirely in his own hand. By ravings in speech and print, he acquired a considerable number of followers, chiefly women, and became at length such a nuisance, that the public authorities resolved, if possible, to put him down. His trial at the Old Bailey, January 17, 1677, ended in his being sentenced to stand in the pillory on three days in three several parts of London, and to pay a fine of £500, or be kept in jail in failure of payment. His books were at the same time ordered to be publicly burnt. All this severity Muggleton outlived twenty years, dying at length at the age of ninety, and leaving a sect behind him, called from him Muggletonians.

It would serve to little good purpose to go farther into the history of this wretched fanatic. One anecdote, however, may be related of him. It happened on a day, when Muggleton was in his cursing mood, that he very energetically devoted to the infernal deities a gentleman who had given him some cause of offence. The gentleman immediately drew his sword, and placing its point at the cursing prophet's breast, demanded that the anathemas just pronounced should be reversed upon pain of instant death. Muggleton, who had no relish for a martyrdom of this kind, assumed his blessing capacity, and gave the fiery gentleman the fullest satisfaction.

There is no mention of Muggletonians in the official report of the census of 1851, though it included about a dozen small sects, under various uncouth denominations. As late as 1846, some of Muggleton's incomprehensible rhapsodies were reprinted and published, it is sincerely to be hoped for the last time.

THE TRAFFIC OF WOMEN'S HAIR.

As a rule, the women of England do not sell their hair. There is, however, in England, a large and regular demand for this article, to make those supposititious adornments which one sees in every hair-dresser's window. It is stated that a hundred thousand pounds' weight of human hair is required to supply the demand of the English market. It is mainly brought from the continent, where women of the humbler rank

may be said to cherish their hair with a view to selling it for money. Light hair comes mostly from Belgium and Germany, dark from France and Italy. There is a Dutch company, the agents of which make annual visits to the towns and villages of Germany, buying the tresses of poor women. In France the trade is mostly in the hands of agents, sent out by large firms at Paris. These agents, going chiefly to the Breton villages, take with them a supply of silks, laces, ribbons, haberdashery, and cheap jewellery, which they barter with the peasant women and girls for their tresses. Mr Trollope, while travelling in Brittany, saw much of this singular hair-cropping going on; as the women in that province all wear close-fitting caps, the difference between the cropped and the uncropped was not so perceptible as it otherwise would have been. The general price is said to vary from about one franc to five francs for a head of hair half a pound to a pound in weight; but choice specimens occasionally command more than their weight in silver, owing to the eager competition of buyers to obtain them.

In England, something of this kind is going on in country villages, but not (it is supposed) to any great extent. A feeling of womanly pride rebels against it. Occasionally, however, evidence peeps out to show that poor Englishwomen know that there is a market for such a commodity. One instance of a ludicrous kind occurred at a metropolitan police-court some years ago. On March 12th, 1825, the court was thronged by a number of poor women, who seemed excited and uncomfortable, and who whispered among themselves as to who should be the spokeswoman to tell the tale which all evidently desired should be told. At length one of them, with a manner half ashamed, told the magistrate that one Thomas Rushton, a barber, called at her poor abode one day, and asked politely to look at her hair. Whether she guessed his errand, is not clear; but she took off her cap at his bidding. He professed to be in raptures with the beauty of her hair, and offered her a guinea for it. Being in straitened circumstances she accepted the offer. The rogue at once took out his scissors, and cut off the whole of her hair. 'See, your worship,' said she, 'what he has done.' His worship *did* see, and found that there were only little stumps of hair left like pig's bristles. The fellow put her hair in his hat, put the hat on his head, and ran off without giving her a single coin. All the other women in the court had been defrauded of their tresses in a similar way, and probably all on the same day—for the rogue could not afford to wait until the exploit got wind. The poor women declared that they had been rendered quite miserable when they came to show their husbands their cropped heads—which may well be imagined.

It may be added that, about a hundred years ago, when false hair was perhaps more in use than it is now, a woman residing in a Scotch burgh used to get a guinea from time to time for her tresses, which were of a bright golden hue.

MARCH 13.

St Euphrasia, virgin, 410. St Mochoemoc, abbot in Ireland, 655. St Gerald, bishop in Ireland, 732. St Theophanes, abbot, 818. St Nicephorus, patriarch of Constantinople, 828. St Kennocha, virgin in Scotland, 1007.

Born.—Esther Johnson (Swift's *Stella*), 1681, *Sheen, Surrey*; Dr Joseph Priestley, philosophical writer, 1733, *Field-head*; Joseph II. (of Germany), 1741; Charles, Earl Grey, statesman, 1764, *Howick*.

Died.—Belisarius, general, 565, *Constantinople*; Cardinal d'Ossat, 1604, *Rome*; Bartholo, Legate, burned, 1614; Richard Cowley, actor, 1618, *Shoreditch*; John Gregory, scholar, 1646; Jean de la Fontaine, French poet, 1695; Peter Mignard, French painter, 1695; Nicolas Boileau, French poet, 1711; Archbishop Herring, 1757, *Croydon*; Sophia Lee, novelist, 1824; J. F. Daniell, chemist and meteorologist, 1845; Regina Maria Roche, novelist, (*Children of the Abbey*), 1845; Sir T. N. Talfourd, dramatist and lawyer, 1854; Richard, Lord Braybrooke, editor of *Pepys's Diary*, 1858.

BELISARIUS.

Belisarius is one of those historical names which, from accidental circumstances, are more impressed on our memories than some of greater importance. As not unfrequently happens, the circumstance which has most enlisted our sympathies with it proves on investigation to be a mere fiction. The picture of the aged hero, deprived of his eyes, and reduced to beggary by the ingratitude of his imperial master, and seeking individual charity in the memorable words, *Date obolum Belisario*, is familiar to every school-boy as a touching example of the inconstancy of fortune. Yet it is a story inconsistent with the facts of history, invented apparently several centuries after the period at which it was supposed to have occurred, and first mentioned by John Tzetzes, a Greek writer of no authority, who lived in the twelfth century.

The origin of Belisarius is doubtful, but he has been conjectured to have been a Teuton, and to have been at least bred in his youth among the Goths. We find him first serving as a barbarian recruit among the private guards of Justinian, before he ascended the imperial throne, and, after that event, which took place in A.D. 527, he was raised to a military command, and soon displayed qualities as a warrior and a man which give him a rank among the most celebrated names of antiquity. His great services to the Empire commenced with the arduous campaign in 529, in which he protected it against the invasions of the Persians. He returned to Constantinople to save the Emperor from the consequences of a great and dangerous insurrection in the capital. In 533, he received the command of an expedition against the Vandals, who had made themselves masters of Carthage and Africa, and by his marvellous skill and constancy, as well as by his moderation and policy, he restored that province to the Empire. In the command of his army he had to contend with troops who, as well as their officers, were demoralized and turbulent, and in reducing them to discipline and obedience he

performed a more difficult task than even that of conquering the enemy. The consequence was that the officers who served under Belisarius indulged their jealousy and personal hostility by writing to Constantinople, disparaging his exploits, and privately accusing him of a design to usurp the kingdom of Africa. Justinian himself was jealous of his benefactor, and indirectly recalled him to the Court, where, however, his presence silenced envy, if it did not overcome it, and he obtained the honours of a triumph, the first which had yet been given in the city of Constantinople. It was adorned by the presence of Gelimer, the captive king of the Vandals of Africa; and immediately afterwards Belisarius was declared consul for the following year.

Belisarius was soon called upon to march at the head of the Roman armies against the Goths of Italy, where new victories and new conquests attended him, and Italy also was restored to the Imperial crown. During this war, Rome was besieged by the Goths, and only saved from them by the conduct of the great imperial commander. The glory of Belisarius was now at its height, and, though the praise of the court was faint and hollow, he was beloved by the soldiers, and almost adored by the people, whose prosperity he had secured. After another brief expedition against the Persians, Belisarius fell under the displeasure of the empress, the infamous Theodora, and was disgraced, and even in danger of his life. He only escaped by submission, and again left Constantinople to take the command of an Italian war. The Gothic king Totilas had again invaded that province, and was threatening Rome. Unsupported and unsupplied with troops and the necessaries of war, Belisarius was obliged to remain an idle spectator of the progress of the Goths, until, in A.D. 546, they laid siege to Rome, and proceeded to reduce it by famine. Before any succour could arrive, the imperial city was surrendered to the barbarians, and the king of the Goths became its master. It was, however, preserved from entire destruction by the remonstrances of Belisarius, who recovered possession of it in the following year, and repaired its walls and defences. But treachery at home continued to counteract the efforts of the general in the provinces, and, after struggling gloriously against innumerable and insurmountable difficulties, Belisarius was finally recalled to Constantinople in the year 548. After his departure, the Goths again became victorious, and the following year Rome was again taken by Totilas.

The last exploit of Belisarius saved Constantinople from the fury of the Bulgarians, who had invaded Macedonia and Thrace, and appeared within sight of the capital. Now an aged veteran, he attacked them with a small number of troops hastily collected, and inflicted on them a signal defeat; but Justinian was guided by treacherous councils, and prevented his general from following up the success. On his return, he was welcomed with acclamations by the inhabitants of Constantinople; but even this appears to have been imputed to him as a crime, and the emperor received him coldly, and treated him with neglect. This, which occurred in 559,

was his last victory; two years afterwards, an occasion was taken to accuse Belisarius of complicity in a conspiracy against the life of the emperor. He presented himself before the imperial council with a conscious innocence which could not be gainsayed; but Justinian had prejudged his guilt; his life was spared as a favour, but his wealth was seized, and he was confined a prisoner in his own palace. After he had been thus confined a few months, his entire innocence was acknowledged, and he was restored to his liberty and fortune; but he only survived about eight months, and died on the 13th of March, 565. The emperor immediately confiscated his treasures, restoring only a small portion to his wife Antonina.

JOHN GREGORY.

'This miracle of his age for critical and curious learning,' as Anthony Wood describes him, was born at Amersham, in Buckinghamshire, on the 10th November, 1607, and baptized at the parish church on the 15th of the same month. He was the son of John and Winifred Gregory, who were, says Fuller, 'honest though mean (poor), yet rich enough to derive unto him the hereditary infirmity of the gout.' Having been found a boy of talent, he was probably educated and sent to Oxford at the expense of some member of the Drake family, for in 1624 we find him at Christ Church in the capacity of servitor to Sir William Drake, where 'he and his master,' says Wood, 'were placed under the tuition of the learned Mr George Morley, afterwards Bishop of Winchester.' Young Gregory was an indefatigable student, devoting no less than 'sixteen out of every four-and-twenty hours' to the pursuit of learning. This almost incredible application he continued for years; and when, in 1631, he took the degree of Master of Arts, he astonished his examiners with the amount of his learning. Dr Duppa, the Dean of Christ's Church, struck with Gregory's erudition, took him under his especial patronage, and gave him a minor canonry in his cathedral; subsequently, on becoming Bishop of Chichester, he appointed Gregory his domestic chaplain, and conferred on him a prebend in his cathedral; and, on being translated to the see of Salisbury, he also gave him a stall in that cathedral. Wood's account of Gregory's acquirements is too curious to be given in any but his own words. 'He attained,' says this biographer, 'to a learned elegance in English, Latin, and Greek, and to an exact skill in Hebrew, Syriac, Chaldee, Arabic, Ethiopic, &c. He was also well versed in philosophy, had a curious faculty in astronomy, geometry, and arithmetic, and a familiar acquaintance with the Jewish Rabbins, Ancient Fathers, modern critics, commentators, and what not.' His works, which are still extant,* though scarce, corroborate

* His works were—1. *Notes on the View of the Civil and Ecclesiastical Law by Sir Thomas Ridley, Knt.*

These notes, which evinced great learning, indefatigable investigation, and critical acumen, were published when he was only twenty-six, and passed through several editions.

2. *Notes and Observations on some passages of Scriptures.* This work also passed through several editions.

the above account; yet while he necessarily brings forth his learning in discussing abstruse questions, he makes no display of it, and Fuller, after stating that he was 'an exquisite linguist and general scholar,' adds, 'his modesty setting the greater lustre on his learning.' Nor does he appear to have taken any active part in the contentions of his day. His works are confined to learned and scientific subjects, and scarcely manifest a bias to any party. Yet neither his modesty, nor humble birth, nor his profound learning, nor his quiet inoffensive habits could save him from the animosity that was then rampant in the two contending parties. He was deprived of all his preferments, and reduced to destitution—without a home, and without the means of procuring one. His case was but a common one in those days of national strife and bloodshed.

At length he found a place of refuge—a miserable one it was, at 'an obscure alehouse standing on the green at Kidlington, near Oxford, and kept by a man named Sutton.' Gregory, in the days of his prosperity, had taken Sutton's son into his service; had treated him with kindness and benevolence; had improved his education, and endeavoured to advance his condition in life. What became of the boy is not known, but Gregory's kindness to him had reached the father's heart, and now Sutton, with meritorious gratitude, offered Gregory an asylum and a home. Here the learned prebendary lingered out the last years of his life, tormented with gout, and in all his afflictions subject to the noise and discomfort of a village alehouse. He died on the 13th of March, 1646, and his friends, who during his life were either unwilling or

afraid to alleviate his sufferings, contributed towards his funeral expenses, and gave him honourable burial in the choir of Christ Church cathedral. Many and extravagantly eulogistic were the elegies which now appeared in praise of his erudition, his humility, and his piety.

DANIELL AND METEOROLOGY FORTY YEARS AGO.

Professor Daniell died in a moment, in the Council-room of the Royal Society, immediately after concluding some remarks on a scientific subject, the day after he had completed his fifty-fifth year. He was one of the most accomplished men of science of his day, distinguished as a professor of chemistry, and as a writer of treatises on chemistry and electricity, but is perhaps most notable to us as one of the first in our country to attempt philosophical authorship on meteorological subjects.

This science is now cultivated assiduously, under favour of the British Association and the Board of Trade, and has observers contributing to its results in all parts of the world; but in 1823, when Mr Daniell published his *Meteorological Essays*, it was in a most rudimentary state.

Mr Daniell owned in this volume his obligations to the works of preceding workers—the foundation-stones, as he called them, of the science,—but in an especial manner to Mr (afterwards Dr) Dalton, who had recently explained the constitution of the mixed gases. He had been enabled to arrive at the conclusion that there are, as it were, two distinct atmospheres surrounding the earth—the air, and the suspended vapour—whose relations to heat are different, and whose

Daniell

3. *Eight learned Tracts*, published after his death under the title of *Gregorii Posthuma*, with a short account of the Author's Life set before them, written by his dearest friend John Gurgany (Son of Hugh Gurgany, Priest), sometimes a Servitor of Christ Church, afterwards Chaplain of Merton College; dedicated to Edward Bysshe, Clar. King of Arms, a Patron not only to the Author, but to Gurgany in the time of their afflictions.

conditions of equilibrium are incompatible with each other. Owing to the antagonisms of these two fluids, a continual movement is kept up, tending to the most important results. After tracing the phenomena, the philosopher, in a devout strain, which was characteristic of him, proceeded to say: 'In tracing the harmonious results of such discordant operations, it is im-

possible not to pause to offer up a humble tribute of admiration of the designs of a beneficent Providence, thus imperfectly developed in a department of creation where they have been supposed to be most obscure. By an invisible, but ever-active agency, the waters of the deep are raised into the air, whence their distribution follows, as it were, by measure and weight, in proportion to the beneficial effects which they are calculated to produce. By gradual, but almost insensible expansions, the equiposed currents of the atmosphere are disturbed, the stormy winds arise, and the waves of the sea are lifted up; and that stagnation of air and water is prevented which would be fatal to animal existence. But the force which operates is calculated and proportioned; the very agent which causes the disturbance bears with it its own check; and the storm, as it vents its force, is itself setting the bounds of its own fury.'

When we consider the activity now shown in the prosecution of meteorology, it will appear scarcely credible that, so lately as the date of Mr Daniell's book, there were no authorized instruments for observation in this department but those at the Royal Society's apartments in London, which had long been in such a state that no dependence whatever could be placed upon them. The barometer had been filled without any care to remove the moisture from the glass, and in taking the observations no correction was ever applied for the alteration of level in the mercury of the cistern, or for the change of density in the metal from variations of temperature. With respect to the thermometers, no care had been taken to secure correct graduation. The Society had never possessed a vane; it learned the course of the winds from a neighbouring weathercock. The rain-gauge, the elevation of which was stated with ostentatious precision, was placed immediately below a chimney, in the centre of one of the smokiest parts of London, and it was part of the duty of the Society's clerk ever and anon to pass a wire up the funnel to clear it of soot. To complain, after this, that the water was left to collect for weeks and months before it was measured, 'would,' says Mr Daniell, 'be comparatively insignificant criticism.'

DISCOVERY OF THE PLANET URANUS.

The astronomical labours of the self-taught genius William Herschel at Slough, under shadow of the patronage of George III., and his addition of a first-class planet to the short list which had remained unextended from the earliest ages, were amongst the matters of familiar interest which formed conversation in the days of our fathers.

It was on the evening of the 13th of March, 1781, that the patient German, while examining some small stars in the constellation Gemini, marked one that was new to him; he applied different telescopes to it in turn, and found the results different from those observable with fixed stars. Was it a comet? He watched it night after night, with a view of solving this question; and he soon found that the body was moving among the stars. He continued his observations

till the 19th of April, when he communicated to the Royal Society an account of all he had yet ascertained concerning the strange visitor. The attention of astronomers both at home and abroad was excited; and calculations were made to determine the orbit of the supposed comet. None of these calculations, however, accorded with the observed motion; and there arose a further question, 'Is it a planet?' This question set the computers again at work; and they soon agreed that a new planet really had been discovered in the heavens. It was at first supposed that the orbit was circular; but Laplace, in 1783, demonstrated that, as in the case of all the other planets, it is elliptical. It then became duly recognised as the outermost of the members of the solar system, and so remained until the recent days when the planet Neptune was discovered. The discoverer, wishing to pay a compliment to the monarch who so liberally supported him, gave the name of the *Georgium Sidus*, or Georgian Star, to the new planet; other English astronomers, wishing to compliment the discoverer himself, suggested the name of *Herschel*; but Continental astronomers proposed that the old mythological system should be followed; and this plan was adopted, the name *Uranus*, suggested by Bode, being now accepted by all the scientific world as a designation for the seventh planet.

WEATHER NOTIONS.

Amongst weather notions one of the most prevalent is that which represents the moon as exercising a great influence. It is supposed that upon the time of day at which the moon changes depends the character of the weather during the whole of the ensuing month; and we usually hear the venerable name of Sir William Herschel adduced as authorising this notion. Foster, in his *Perennial Calendar*, transfers from the *European Magazine* what he calls an excellent table of the prospective weather, founded on 'a philosophical consideration of the attraction of the sun and moon in their several positions respecting the earth.' Modern science in reality rejects all these ideas as vain delusions; witness the following letter written by the late ingenious professor of astronomy in the university of Glasgow, in answer to a gentleman who wrote to him, making inquiries upon this subject.

'Observatory, July 5, 1856.—Dear Sir, I am in receipt of your letter regarding the supposed influence of the moon on the weather. You are altogether correct. *No relation exists between these classes of phenomena.* The question has been tested and decided over and over again by the discussion of long and reliable meteorological tables; nor do I know any other positive way of testing any such point. I confess I cannot account for the origin of the prevalent belief. J. P. NICHOL.'

Admiral Fitzroy, through the publications authorized by the Board of Trade, has stated such of the observations of common weather wisdom as may be depended upon.

The old remark about a ruddy evening and a grey morning (alluded to in the gospel of Matthew) as indicating good weather, meets full approval; as also that a red sky in the morning foretells bad weather, or much rain, if not wind. The Admiral adds, that a high dawn denotes wind, and a low dawn fair weather. When clouds have a soft and delicate

appearance, fair weather may be looked for; when they are hard and ragged, wind is to be expected.

'Misty clouds forming or hanging on heights show wind and rain coming, if they remain or descend. If they rise or disperse, the weather will improve, or become fine.

'When sea-birds fly out early and far to seaward, moderate wind and fair weather may be expected. When they hang about the land or over it, sometimes flying inland, expect a strong wind, with stormy weather. When birds of long flight, such as swallows, hang about home, and fly low, rain or wind may be expected; also when pigs carry straw to their sties, and when smoke from chimneys does not ascend readily.

'Dew is an indication of fine weather; so is fog. Remarkable clearness of atmosphere near the horizon, distant objects, such as hills unusually visible or raised by refraction; what is called a *good hearing day*; may be mentioned among signs of wet, if not wind, to be expected.'

SIGNS OF FOUL WEATHER.

By Dr Erasmus Darwin.

The hollow winds begin to blow;
 The clouds look black, the glass is low;
 The soot falls down, the spaniels sleep;
 And spiders from their cobwebs peep.
 Last night the sun went pale to bed;
 The moon in halos hid her head.
 The boding shepherd heaves a sigh,
 For, see, a rainbow spans the sky.
 The walls are damp, the ditches smell,
 Clos'd is the pink-ey'd pimpernel.
 Hark! how the chairs and tables crack,
 Old Betty's joints are on the rack:
 Her corns with shooting pains torment her,
 And to her bed untimely sent her.
 Loud quack the ducks, the sea fowl cry,
 The distant hills are looking nigh.
 How restless are the snorting swine!
 The busy flies disturb the kine.
 Low o'er the grass the swallow wings,
 The cricket, too, how sharp he sings!
 Puss on the hearth, with velvet paws,
 Sits wiping o'er her whisker'd jaws.
 The smoke from chimneys right ascends,
 Then spreading, back to earth it bends.
 The wind unsteady veers around,
 Or setting in the South is found.
 Through the clear stream the fishes rise,
 And nimbly catch the incautious flies.
 The glow worms num'rous, clear and bright,
 Illum'd the dewy hill last night.
 At dusk the squalid toad was seen,
 Like quadruped, stalk o'er the green.
 The whirling wind the dust obeys,
 And in the rapid eddy plays.
 The frog has chang'd his yellow vest,
 And in a russet coat is drest.
 The sky is green, the air is still,
 The mellow blackbird's voice is shrill.
 The dog, so alter'd in his taste,
 Quits mutton-bones, on grass to feast.
 Behold the rooks, how odd their flight,
 They imitate the gliding kite,
 And seem precipitate to fall,
 As if they felt the piercing ball.
 The tender colts on back do lie,
 Nor heed the traveller passing by.
 In fiery red the sun doth rise,
 Then wades through clouds to mount the skies.
 'Twill surely rain, we see't with sorrow,
 No working in the fields to-morrow.

MARCH 14.

St Acepimas, bishop in Assyria, Joseph, and Aithilahas, martyrs, 380. St Boniface, bishop of Ross, in Scotland, 630. St Maud, Queen of Germany, 968.

Died.—John, Earl of Bedford, 1555; Simon Morin, burned, 1663; Marshal-General Wade, 1751; Admiral John Byng, shot at Portsmouth, 1757; William Melnoth, accomplished scholar, 1799, Bath; Daines Barrington, antiquary, lawyer, and naturalist, 1800, Temple; Frederick Theophilus Klopstock, German poet, 1803, Ottensen; George Papworth, architect and engineer, 1855.

JOHN RUSSELL, FIRST EARL OF BEDFORD.

The importance of the noble house of Bedford during the last three centuries may be traced to the admirable personal qualities of a mere private gentleman—a Mr Russell—in connection with a happy fortuitous occurrence. The gentleman here referred to was the eldest, or only son of James Russell of Berwick, a manor-place in the county of Dorset, about a mile from the seacoast. He was, however, born at Kingston-Russell in the same county, where the elder branch of the family had resided from the time of the Conquest. At an early age he was sent abroad to travel, and to acquire a knowledge of the continental languages. He returned in 1506 an accomplished gentleman, and a good linguist, and took up his residence with his father at Berwick. Shortly after his arrival a violent tempest arose, and on the next morning, 11th January, 1506, three foreign vessels appeared on the Dorset coast making their way for the port of Weymouth. Information being given to the Governor, Sir Thomas Trenchard, he repaired to the coast with a body of men prepared to meet the vessels whether belonging to friends or foes. On reaching the harbour they were found to be part of a convoy under the command of Philip, Archduke of Austria, and only son of Maximilian I., Emperor of Germany.

This young prince had just married Johanna, daughter of Ferdinand and Isabella, King and Queen of Castile and Arragon, and was on his way to Spain when overtaken by the storm which had separated the vessel in which he was sailing and two others from the rest of the convoy, and had forced them to take shelter in Weymouth Harbour.

Sir Thomas Trenchard immediately conducted the Archduke to his own castle, and sent messengers to apprise the King, Henry the Seventh, of his arrival. While waiting for the King's reply, Sir Thomas invited his cousin and neighbour, young Mr Russell of Berwick, to act as interpreter and converse with the Archduke on topics connected with his own country, through which Mr Russell had lately travelled. "It is an ill wind," says Fuller, referring to this incident, "that blows nobody profit:" so this accident (of the storm) proved the foundation of Mr Russell's preferment. For the Archduke was so delighted with his varied knowledge and courteous bearing, that, on deciding to proceed at once to Windsor, he requested Mr Russell to accompany him, and

when they arrived there, he recommended him so highly to the King's notice, that he granted him an immediate interview. Henry was extremely struck with Mr Russell's conversation and appearance: 'for,' says Lloyd, 'he had a moving beauty that waited on his whole body, a comportment unaffected, and such a comeliness in his mien, as exacted a liking, if not a love, from all that saw him; the whole set off with a person of a middle stature, neither tall to a formidableness, nor short to a contempt, straight and proportioned, vigorous and active, with pure blood and spirits flowing in his youthful veins.' Mr Russell was forthwith appointed a gentleman of the Privy Chamber.

Three years afterwards, Henry VIII. ascended the throne, and was not slow to perceive Mr Russell's great and varied talents. He employed him in important posts of trust and difficulty, and found him an able and faithful diplomatist on every occasion. Consequently he rewarded him with immense grants of lands,—chiefly from the dissolved monasteries,—and loaded him with honours. He was knighted; was installed into the Order of the Garter, and was raised to the peerage as Baron Russell of Chenies. He was made Marshal of Marshalsea; Controller of the King's Household; a Privy Councillor; Lord Warden of the Stannaries in the counties of Devon and Cornwall; President of these counties and of those of Dorset and Somerset; Lord Privy-Seal; Lord Admiral of England and Ireland; and Captain-General of the Vanguard in the Army. Lastly, the King, on his death-bed, appointed Lord Russell, who was then his Lord Privy-Seal, to be one of the counsellors to his son, Prince Edward. On Edward VI. ascending the throne, Lord Russell still retained his position and influence at Court. On the day of the coronation he was Lord High Steward of England for the occasion, and soon afterwards employed by the young Protestant king to promote the objects of the Reformation, which he did so effectually that, as a reward, he was created Earl of Bedford, and endowed with the rich abbey of Woburn, which soon afterwards became, as it still continues to be, the principal seat of the family.

On the accession of the Catholic Mary, though Lord Russell had so zealously promoted the Reformation, and shared so largely in the property of the suppressed monasteries, yet he was almost immediately received into the royal favour, and re-appointed Lord Privy-Seal. Within the same year he was one of the noblemen commissioned to escort Philip from Spain to become the Queen's husband, and to give away her Majesty at the celebration of her marriage. This was his last public act. And it is remarkable that as Philip, the Archduke of Austria, first introduced him to Court, so that Duke's grandson, Philip of Spain, was the cause of his last attendance there. It was more remarkable that he was able to pursue a steady upward course through those great national convulsions which shook alike the altar and the throne; and to give satisfaction to four successive sovereigns, each differing widely from the other in age, in disposition, and in policy. From the wary

Henry VII., and his capricious and arbitrary son; from the Protestant Edward and the Romanist Mary, he equally received unmistakable evidences of favour and approbation. But the most remarkable, and the most gratifying fact of all is, that he appears to have preserved an integrity of character through the whole of his extraordinary and perilous career.

There is nothing in his correspondence, or in any early notice of him that betrays the character of a time-serving courtier. The true cause of his continuing in favour doubtless lay in his natural urbanity, his fidelity, and, perhaps, especially in that skill and experience in diplomacy which made his services so valuable, if not essential, to the reigning sovereign.

He died, 'full of years as of honours,' on the 14th of March, 1555, and was buried at Chenies, in Bucks, the manor of which he had acquired by his marriage. The countess, who survived him only three years, built for his remains a large vault and sepulchral chapel adjoining the parish church; and a magnificent altar tomb, bearing their effigies in life-size, was erected to commemorate them by their eldest son, Francis, second Earl of Bedford. The chapel, which has ever since been the family burial-place, now contains a fine series of monuments, all of a costly description, ranging from the date of the Earl's death to the present century; and the vault below contains between fifty and sixty members of the Russell family or their alliances. The last deposited in it was the seventh Duke of Bedford, who died 14th May, 1861.*

The Earl of Bedford, when simply Sir John Russell, was frequently sent abroad both on friendly and hostile expeditions, and had many narrow escapes of life. On one occasion, after riding by night and day through rough and circuitous roads to avoid detachments of the enemy, he came to a small town, and rested at an obscure inn, where he thought he might with safety refresh himself and his horse. But before he could begin the repast which had been prepared for him, he was informed that a body of the enemy, who were in pursuit of him, were approaching the town. He sprang on his horse, and without tasting food, rode off at full speed, and only just succeeded in leaving the town at one end while his pursuers entered it at the other.

On another occasion the hotel in which he was staying was suddenly surrounded by a body of men who were commissioned to take him alive and send him a captive to France. From this danger he was rescued by Thomas Cromwell, who passed himself off to the authorities as a Neapolitan acquaintance of Russell's, and promised that if they would give him access to him, he would induce him to yield himself up to them without resistance. This adventure was introduced into a tragedy entitled *The Life and Death of Thomas, Lord Cromwell*, which is supposed to have been written by Heywood, in the reign of Elizabeth; and from which the following is a brief extract:

* See Wiffen's *Memoirs of the House of Russell*, vol. i.; Dugdale's *Baronetage*, vol. ii.; Hutchin's *History of Dorset*, vol. ii.; Collins' *Peerage*, vol. i.

'Bonoma. A Room in an Hotel divided by a curtain. Enter Sir John Russell and the Host.

Russell. Am I betrayed? Was Russell born to die
By such base slaves, in such a place as this?
Have I escaped so many times in France,
So many battles have I overpassed,
And made the French scour when they heard my
name,

And am I now betrayed unto my death?
Some of their hearts' blood first shall pay for it.

Host. They do desire, my lord, to speak with you.

Russell. The traitors do desire to have my blood;
But by my birth, my honour, and my name,
By all my hopes, my life shall cost them dear!
Open the door! I'll venture out upon them;
And if I must die, then I'll die with honour.

Host. Alas, my lord, that is a desperate course;—
They have begirt you round about the house:
Their meaning is, to take you prisoner,
And to send your body unto France.

Russell. First shall the ocean be as dry as sand,
Before alive they send me unto France.
I'll have my body first bored like a sieve,
And die as Hector 'gainst the Myrmidons,
Ere France shall boast Russell's their prisoner!
Perfidious France! that 'gainst the law of arms
Hast thus betrayed thine enemy to death:
But, be assured, my blood shall be revenged
Upon the best lives that remain in France.'

Cromwell, under the guise of a Neapolitan, enters with his servant, dismisses the Host, reveals himself to Russell as the son of his Farrier at Putney; says he is come to rescue him, and persuades him to exchange garments with his servant. The exchange effected, Russell says:

'How dost thou like us, Cromwell? Is it well?

Cromwell. O excellent! Hodge, how dost thou feel thyself?

Hodge. How do I feel myself? Why, as a nobleman should do. O, how I feel honour come creeping on! My nobility is wonderful melancholy. Is it not most gentlemanlike to be melancholy?

Russell. Ay, Hodge. Now go sit down in my study, and take state upon thee.

Hodge. I warrant you, my lord; let me alone to take state upon me.'

Cromwell and Sir John Russell pass through the soldiers unmolested, and reach Mantua in safety, from whence Sir John proceeded to England without further interruption. He recommended Cromwell to Wolsey, and thus was the cause of his subsequent greatness.

MARSHAL WADE.

Field-Marshal George Wade died at the age of eighty, possessed of above £100,000. In the course of a military life of fifty-eight years, his most remarkable, though not his highest service was the command of the forces in Scotland in 1724, and subsequent years, during which he superintended the construction of those roads which led to the gradual civilization of the Highlands.

'Had you seen those roads before they were made,
You'd have lifted up your hands and blessed General Wade.'

sung an Irish ensign in quarters at Fort William, referring in reality to the tracks which had previously existed on the same lines, and

which are roads in all respects but that of being made, i. e. regularly constructed; and, doubtless, it was a work for which the general deserved infinite benedictions. Wade had also much to do in counteracting and doing away with the Jacobite predilections of the Highland clans; in which kind of business it is admitted that he acted a humane and liberal part. He did not so much force, as reason the people out of their prejudices.

The general commenced his Highland roads in 1726, employing five hundred soldiers in the work, at sixpence a-day of extra pay, and it was well advanced in the three ensuing years. He himself employed, in his surveys, an English coach, which was everywhere, even at Inverness, the first vehicle of the kind ever seen; and great was the wonder which it excited among the people, who invariably took off their bonnets to the driver, as supposing him the greatest personage connected with it. When the men had any extra hard work, the general slaughtered an ox and gave them a feast, with something liquid wherewith to drink the king's health. On completing the great line by Drumochter, in September 1729, he held high festival with his *highwaymen*, as he called them, at a spot near Dalnaspidal, opposite the opening of Loch Garry, along with a number of officers and gentlemen, six oxen and four ankers of brandy being consumed on the occasion.*

Walpole relates that General Wade was at a low gaming house, and had a very fine snuff-box, which on a sudden he missed. Everybody denied having taken it, and he insisted on searching the company. He did; there remained only one man who stood behind him, and refused to be searched unless the general would go into another room alone with him. There the man told him that he was born a gentleman, was reduced, and lived by what little bets he could pick up there, and by fragments which the waiters sometimes gave him. 'At this moment I have half a fowl in my pocket. I was afraid of being exposed. Here it is! Now, sir, you may search me.' Wade was so affected, that he gave the man a hundred pounds; and 'immediately the genius of generosity, whose province is almost a sinecure, was very glad of the opportunity of making him find his own snuff-box, or another very like it, in his own pocket again.'

DEATH OF ADMIRAL BYNG.

The execution of Admiral Byng for not doing the utmost with his fleet for the relief of Port Mahon, in May 1756, was one of the events of the last century which made the greatest impression on the popular mind. The account of his death in Voltaire's *Candide*, is an exquisite bit of French epigrammatic writing:

'Talking thus, we approached Portsmouth. A multitude of people covered the shore, looking attentively at a stout gentleman who was on his knees with his eyes bandaged, on the quarter-deck of one of the vessels of the fleet. Four soldiers, placed in front of him, put each three balls in his head, in the most peaceable manner,

* *Domestic Annals of Scotland*, by R. Chambers, iii. 526, 561.
