New Snapdragon Junglewood White ON FRONT COVER

The single floret which is shown on our front cover, in addition to typical spikes, is reproduced actual life size so that you may judge the quality of this splendid new variety.

"SNAPS" For Greenhouse Forcing

Snapdragon being one of the leading Florist Greenhouse crops, we have followed very closely the development of the Winter Flowering or Forcing type and offer the following approved varieties.

From observations made of the Greenhouse Snapdragons herein listed, we wish to make the following recommendations of popular sorts in regard to early flowering winter varieties, intermediate and late flowering spring varieties. Each type is good under certain conditions. Early types planted in the south, with more light, will set buds earlier and not make suitable spikes but for winter flowering during the dark days in our latitude early types should be used, and for after "Mums" and spring blooming use the intermediate and late varieties. First sowings are usually made between June 10th and July 10th and selection of varieties according to locality and climatic conditions.

The soil for growing snapdragons should be porous and well drained. Raised benches are preferable to ground beds and especially for winter crop. High nutrition, especially nitrogen, and high moisture combined during the dark days should be avoided as the results will be soft growth and off-colored shattery flowers

For after "Mums" and spring crop, when later and stronger growing varieties are planted, ground beds may be used to better advantage for with the lengthening days and higher temperatures come better growing conditions. Early varieties usually are planted 7x8 in. and later and heavier sorts 8x8 in.

The Early Whites include the new **Junglewood White** originated by the Junglewood Greenhouses of Mount Morrison, Colorado and is illustrated in color on the cover of this list with **single floret shown in natural size**. At its debut at a meeting of the New York Florist Club last winter it was awarded a silver medal. Sample blooms sent us early in January had clear white flower spikes measuring 20 to 22 inches on heavy stiff stems.

Koester's White and **White Wonder Improved** are the earliest pure whites, the latter being slightly heavier. **Margaret** is an ivory white of fine spike, having same type growth as **Mary Ellen** pink but with closer set florets. **Feist's White** is a clear white, a true sport of **Cheviot Maid** pink and should find favor with ones who grow the latter. Next in earliness is **Schlegel's White**, followed by **Peace**, a pure paper white, larger than **White Wonder** with close set florets. **Lucky Strike**, the old favorite, is still grown by many for early, midseason and late but being heavier in growth it does not produce as much in winter. **Lucky Strike Improved** is not as heavy but slightly earlier and a decided improvement. **Early Westover's White** is an early selection of this late sort. **Marion White**, **Schaffroth White**, are fine for after "Mums" or spring blooming.

In the early Pinks, **Christmas Cheer** is unquestionably the finest rose pink. **Better Times** is a beautiful deep rose. **Mary Ellen** and **Maryland Pink** are two fine pastel pinks, the latter having a slightly closer set spike. These four are all first-cross hybrids from known parentage, excellent early varieties and croppers. **Yoders No. 33** is a fine early light pink of **Mary Ellen** type. **Rose Pink Cheviot** is superseded by **Christmas Cheer**.

In the next, or intermediate type, the most popular are **Cheviot Maid Reselected**, **Rose Queen** and **Gilbert Pink Supreme**. **Cheviot Supreme Appleblossom**, **La France** and **Daybreak** fit in here. This group can be planted for winter flowering but the early sorts are more productive in our latitude during dark winter days.

For after "Mums" **Peggy Schumann** is a fine salmon rose with heavy stems and fine spikes. **Schaffroth Pink** is another. **Marie Louise** and **St. Louis** are fine light pinks. **America**, **Terry's Surprise** and **New Cincinnati** fit in here.

The new Canadian variety **Delworth's Supreme**, a selection of **Cheviot Maid** comes well recommended.

In the Bronzes, the earliest are **Sunlight** and **Sun Tan**, the first being a little lighter in color. **Afterglow**, which is slightly later, is the most popular having a heavier spike and deeper coloring. **Bronze Christmas Cheer**, not as early as its name would imply, later and of heavier growth and spike, as is **Talisman**, the nearest all-double, is an early bloomer and retail novelty. For after "Mums" and spring are **Glorious**, a dark **Afterglow**, and **Kirkwood Beauty**. **Ideal Improved**, with its contrasting white throat, comes in this group.

In the Yellows, the earliest are **Ceylon Court Dark Selection**, **Yellow Wonder**, which does not make any too large a spike, and **Goldie** which resembles a shorter **Ceylon Court**. **Schlegel's Yellow** not as dark in color, comes next in blooming, followed by **Ethel** the most popular yellow on the market for winter and spring. **Carol Jean** is in season with **Ethel**, larger flower and a shade lighter, but is coming more in demand. To follow "Mums" for spring flowering are **Yellow Peggy**, another **Schumann** introduction, with good stem and spike and **Coates' Yellow Perfection**, **Klondyke Supreme**, and **Sunray** in the lilac or lavender, **Windmill Lilac** is the earliest. **Bertha Baur**, **Ball** and **Schumann Lavender** are later and to be planted only after "Mums" as probably all in this class should. **Schumann Lavender** is by far the most popular for stem and spike.

Velvet Supreme is taller and later and supersedes **Christmas Red** for after "Mums."

Due to greatly increased costs we regret that we cannot make group prices or quantity discounts on Snapdragons.

Varieties preceded by a star (*) are best for early winter flowering.

Varieties followed by (X) are sold in 1/2 trade pkts. at 60c each.

CALENDULA VAUGHAN'S IMPROVED SENSATION

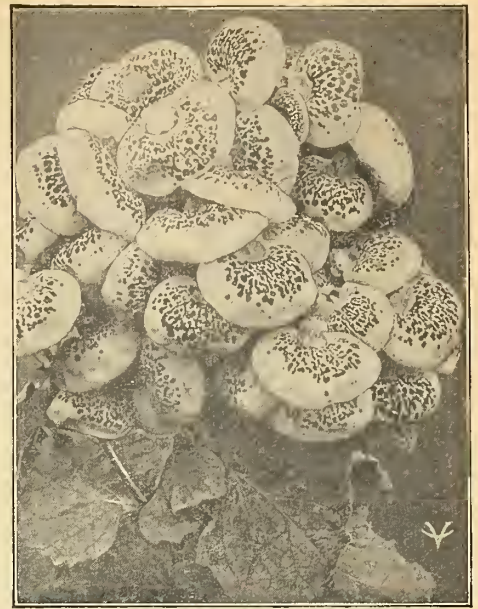

CALCEOLARIA Hybrida Grand. Triumph

Vaughan's Calceolaria

These Make Wonderful Plants for Easter or Mother's Day

For Calceolarias, use a mixture of loam, leaf-mold and sharp sand. This mixture is suitable both for the seed pans and the pots into which the seedlings, when ready, should be planted. Perfect drainage is important. Calceolaria seed being very fine the seeding should be done with great care and it is suggested that one use a sheet of white paper on which a tablespoon of white sand is distributed. Then shake the seed on top of this sand and mix thoroughly. Then, sprinkle this mixture on the soil of the seed pan, dusting surface with a little fine sand, cover with a sheet of glass and place in the shade. For moisture, immerse the pans in water. As the seedlings come up lift them carefully when quite small and prick them off into a flat allowing two inches square for each plant. It is important that the leaves of one plant should never be allowed to overlap those of another or decay will probably result. When established in pots shift them into the larger size. At the last shift give them some manure water, not too strong, about once a week.

VEGETABLES FOR SUMMER PLANTING

Every florist who has available land should grow vegetables for the market this summer, for two reasons:

He will get top market prices, and he will be contributing an essential service to the war effort, and qualifying his business for important priority ratings.

If you have a location for a roadside market near your plant, your vegetables can be sold at retail, together with any flowers which you may have in surplus.

Following are varieties which we recommend for summer sowings:

Many shortages exist in vegetable seed supply, and whether this year's crops will correct them no one can tell. In addition to labor scarcity, unfavorable weather conditions may cause poor crops.

We recommend sowing perennial seeds in spring. Seed germinates better in the cool weather than in the heat of mid-summer, and the long growing season produces larger plants that winter over more successfully.

ANCHUSA Italica Dropmore Variety

ALYSSUM Saxatile Compactum

ANTHEMIS

Seeds of Biennials and Hardy Perennials

Perennials fill a large and interesting place in the operations of an up-to-date florist establishment. Some are as easily raised as annuals; quite a few may be forced; others make fine pot plants; and many furnish splendid cutting material. The rock garden requirements absorb all the low-growing varieties and the florist with his eye to the future will devote considerable space to perennials of all kinds. They require little heat, if any, and not much care.

SEED GERMINATES SLOWLY AND IRREGULARLY

of the following varieties and seed bed should be prepared where it will be undisturbed for a year or more.

Aconitum, Anemone, Clematis, Delphinium Cardinale, Delphinium Nudicaule, Dictamnus, Dielytra, Iris, Phlox Decussata, Primulas Trollius and nearly all Alpines.

Bulbs for Mid-Summer and Early Fall

White Calla

(Aethiopica) Ready in September

Callas being natives of swampy regions grow to best advantage where there is an abundance of moisture, and are therefore very difficult to handle in the curing. Some growers practice **premature cutting off the tops, expose bulbs to the sun, in order to make early shipment.**

Our stock is **thoroughly cured in the ground and dried carefully** before they are packed. This means **later delivery** but better results can be obtained from such bulbs.

We caution forcers of Callas to water this stock sparingly after planting because Calla bulbs store up considerable moisture.

YAMTOX

A new insecticide that promises to replace Rotenone in the control of some insects. Yamtox is a concentration of the active principles of the Yam Bean (*Pachyrhizus erosus*). The Yam Bean affects many insects in much the same manner as Rotenone and seems to be the nearest approach to it. It has been used for centuries in the control of pests on vegetables in some parts of China. In Yamtox the toxic effects of the bean are extracted to make them as available as possible. They are further strengthened by chemicals of proven toxicity. Especially recommended for the control of Plant Lice, Red Spider, Thrip, Cyclamen Mite, Cabbage Worms, and most other insects that are controlled by Rotenone. It is very mild upon Plant Growth and safe to use even on most tender plants. Price per gallon, \$12.00; case of 6/1 gallon cans, \$11.00 per gallon; 30 gal. drum, \$270.00.

STIMROOT

An improved rooting compound which has been developed after extensive testing by a well known research organization. It contains several different hormone-like chemicals in sufficient quantities to produce root stimulation in the hard type of cuttings, and still is safe to use on the softer, more easily injured plants. Also contains a fungicide that helps retard the development of many kinds of fungi that contribute to the rot of cuttings while in the cutting bench. It is so formulated that a small amount of dust will effect a complete and even coating on each cutting. In this way a pound of dust will go further. Price, 1/4 oz. packet retails at 25c, per dozen \$1.80; 2 oz. retails at \$1.00, per dozen \$7.20; 1 lb. retails at \$5.00; each \$3.25; six for \$18.00.
