A lawyer who represents a number of pulp and lumber companies and a millionaire camp owner, recently had an encounter with Deputy Attorney-General Ward, the outcome of which has done a great deal to change the attitude of the trespassers. After being asked to make good the damage done by poachers, the lawyer replied threateningly: "I'd like to see you get any money out of us."

The Deputy Attorney-General returned to Albany and prepared papers in a suit against the offending company. Not very long after he received a letter from the lawyer, meekly saying that the full amount of the penalties would be paid.

So great is Mr. Ward's enthusiasm in the work of protecting the forests that he makes long trips into the woods and "puts his ear to the ground" by hobnobbing with woodsmen and State protectors. While on one of these trips he ran into a case of illegal hunting, which was being tried before a country justice. The protector had found the hunter carrying a dead deer in a bag out of season. It was a clear case, but the jury, made up of natives, most of whom had poached at one time or another, returned a verdict of "not guilty." In the hearing of the defendant Mr. Wood ordered the protector to

bring suit in an adjoining county, where the case could be considered on its merits.

The hunter and his attorney had a hasty consultation, with the result that the fine of \$100 was promptly paid and the matter dropped.

## Animal Life in the Yellowstone.

YELLOWSTONE NATIONAL PARK, Sept. 12.—*Editor Forest and Stream:* Another tourist season for the Yellowstone National Park is about over. It has been the banner season so far as to the number of visitors, surpassing any year in the history of the park and taxing the carrying capacity of all kinds of transportation in and about the park. Everything outside the park for miles around that could be called a spring wagon was used during the rush. The season opened with a large number of visitors, and up to now the park is full of tourists of all kinds.

Hunting parties are beginning to come in, taking in the park going to and coming from their hunting grounds. I think some fine heads will be taken this fall. The summer has been favorable for the development of large horns, the feed good from early spring, and insects not so troublesome as usual. I know of not one forest fire in the park and none anywhere near. We have had very little smoke, too; what there was came from the west.

I think there is not quite the usual number of young antelope with the old ones. I have noticed and counted several hundred during the summer, and very seldom saw two young with a doe, and even as late as Aug. 1 I saw many without any young following. In the spring almost all the antelope left their winter range in front of Gardiner and the alfalfa patch; but about twenty concluded it was a favorable place to show themselves, and every evening came down from the nearby hills. They are quite tame for antelope, and thousands have seen them, where if they had returned to their old range for the summer not one tourist would have known what the animal looked like. Every evening hundreds of field glasses are leveled at them and not a few cameras. When the antelope reach the edge of the alfalfa field they find an irrigating ditch; this they jump and then they usually play for a few minutes, running around in circles, chasing one another for a long time. Then they start out across the field, taking a bite here and there, never eating much at any time.

Two large crops have been cut and stacked from this field, and will be used to feed the antelope and other game during the winter.

Now and then during the summer a band of mountain sheep visited the Gardiner Cañon and were seen by the tourists. Usually they do not come down so low as this in summer around here.

The number of gophers and "picket pin" squirrels and woodchucks seen along the roads out from the Mammoth Hot Springs is remarkable. Where once we used to see a great many chipmunks, we seldom see one now, and at the same time the gophers have taken their place, picking up the scattered grain along the roads and around the old camps. Further out in the park the chipmunk still holds its own. I don't know the cause of this change, of the disappearance of the chipmunk and the great increase in the number of gophers unless it is the killing off of the coyote; but that ought not to drive away the chipmunks. And that makes me think of the porcupine. What has become of the great many, we may safely say thousands, that used to be in and around the park? It was nothing to see several every day along the wagon roads and trails, and in the evenings, when they usually move about, one could see dozens. I counted over thirty one evening during an hour's slow ride along a trail south of the park. Now, for several years I have not seen even one; neither have I seen any fresh cutting or sign of their work, and this, mind you, in the same country where once they were so numerous. Talking with other guides and the scouts, they all say the same thing. I think it was some disease that carried them off, something that has about exterminated the animal from this country.

The elk are banding up and the bulls have been whistling for over two weeks. This is unusually early. Wonder if it's going to be an early winter.

I see many queer things in the way of animal actions, but don't like to tell about them. I notice that when I do the people I talk to look at me as though they doubted my word, and then I hear them say, "My, but he draws the long bow." But I must tell one incident that happened to me the other night in Gardiner. I was sleeping in my cabin with the door wide open. On my table were some sheets of "tangle-foot" fly paper and other things, letters, papers and magazines. Along about 1 A. M. I awoke, hearing considerable noise among the papers on my table and a squeaking noise, like that made by a mouse when hurt. I lay listening for a while, wondering what was the trouble. Then reaching for a match I struck it. At the flash some animal on the table made a great clatter and then remained still. I lit the lamp and looked at the table. In a corner next to a cupboard and the wall was a small hare, a cotton-tail. I stood looking at it for some time and saw that it had been stuck on the fly paper. The night was quite cool and the sticky stuff was not soft enough to get in its deadly work. At the flash of the match the frightened animal broke loose from the paper by its sudden start. I picked it up by its ears, carried it to the door and turned it loose, and told it to fly, but not play a fly again. I have had many visitors to my cabin of nights—porcupines (years ago when they were numerous), mountain rats, birds, bats and once a grouse. Fortunately, I never had a visit in this cabin from the little black and white pussy that proves so offensive.

I saw one man this summer who said he had been hurt by a bear. I asked him how. He had a bad cut on his forehead. He said he and several others were watching the bears eating slops at the Lake Outlet. A female grizzly with two cubs was not very friendly. The cubs came on toward the crowd and the old one came too. The crowd broke and ran. Some went up trees. He ran against a tree, striking his head against a dry limb. This knocked him out. His friend said the bear came within ten feet of him, then went back. When he came to his friend helped him to camp, dressed his cut, and this was the way he was hurt by a bear. T. E. H.

# NATURAL HISTORY

## The Biography of a Bear.—I.

I HAVE thought many times of writing the history of one of the most interesting and entertaining animals of my acquaintance, a cinnamon bear. It would seem that comparatively little is known of bears, for in such works upon natural history as have come under my reading bears are treated of with an indifference that suggests their having been examined through long distance telescopes—sometimes, indeed, with the small ends of those instruments directed to the objects, as if to make sure the animals were at a safe distance.

There is of certainty plenty of lore regarding dead bears that have been killed by mighty hunters before the Lord, and others. Bears really alive are exhibited, in contracted cages made of iron, chained to posts, or again, attached by means of a ring through their nostrils, to disreputable Italians or other obstacles.

This history deals with a bear who had the disadvantage of human society, but who also had considerable freedom and at times had opportunities to visit his natural haunts in the forests and mountains, and who, all things considered, proved himself worthy of an accurate biography and a dignified position in history. An authentic account of the doings of a bear will doubtless appear ridiculous to students who find biography fitted only to annals of people. But if bears could read, imagine how ridiculous they might think the tomes of history that deal only with the doings of great men.

About twenty years ago there were yet a few Indians about the old town Shasta, in northern California, at that time a town of some 1,200 people. My home was on the edge of town, the house being upon a little hill, with about thirty acres of field, orchard and vineyard surrounding it. On the further side of the grounds from the road the last remnant of a tribe of Indians native to the region had their camp or rancharia. There were two families of the Indians, numbering about a dozen individuals. They subsisted as best they might by doing drudgery for the white residents or spending the summer seasons upon hunting and foraging trips in the surrounding mountains.

One morning I saw two of the Indian boys passing, one of them carrying something very carefully in his arms, wrapped in the tanned skin of a wildcat. Curious to know what they had I called to them and they stopped at the gate. One of the boys was well grown and the other ten or twelve years of age. Both were barefoot and their torn and scant clothes suggested that they were just back from a rough trip in the mountains.

"What have you got there?" I inquired.

"Little bear," one of them replied.

"Let me see it," I requested.

There was a moment's hesitation and the younger one spoke some words to his companion, who nodded, and they came forward and unrolled the small bundle, revealing a little bunch of brown, curly hair which was very much mixed with teeth and claws, while two bright, bead-like eyes peered out in sullen fear. After staring a moment the little cub made a slight effort to escape, then covered its small head and face with its paws. It was not larger than my two fists.

"He can bite," said the elder boy. "He's cross now."

I laughed at the notion of the little creature biting, and reached into the bundle to remove its paws so that I might see more of it. Instantly, with a startling snarl for so small a thing, it seized my hand with both teeth and claws and succeeded in pinching my fingers quite noticeably, at the same time scratching a mark upon the back of my hand. I withdrew my hand promptly, perhaps abruptly.

"Yes; he's cross now," I said with assurance. "Where did you get him?"

"My father kill big bear up in the Sacramento River Mountains; its mother very large bear—maybe a thousand pounds heavy," said one of the boys.

"Do you want to sell the little bear?" I asked.

The boys looked at each other, exchanged a few words in their own language, and one of them replied saying: "Not want to sell him."

"I will give \$5 for him," I said.

Again the boys had a brief conference, both looking into the catskin at the bunch of fur and ferocity, now asleep or making believe.

"Not want to sell him," they said decisively, and they passed out of the gate on their way.

"By and by, if you want to sell him, I will give \$10," I said as they left.

They stopped and conferred, again inspecting their prize, but made no reply and soon passed out of sight in the direction of their camp. During the forenoon I saw them returning and they were carrying the same bundle carefully. They came through the gate and up to the house, and as I went to meet them the elder boy said:

"You have cow for milk for feed him. I no have milk. I will sell him."

"Yes, I have milk for him. I will give you the money."

I found a box and a small blanket, and the boys, careful to retain the wildcat skin, deposited the minute bear in the box. I counted into their hands ten silver dollars—a vast sum of money to them—yet it did not seem to please them greatly. As they left the house their thoughts were evidently of the little cub rather than with the money. The Indians have many fancies or superstitions connected with bears.

After the boys had gone and left me in possession of the cub I began to wonder what I wanted him for and what I should do with him, it still persistently kept its eyes covered with its paws, the latter being largely out of proportion to its other portions. My mother came out to see what I was occupied with, and promptly told me that we had no use for a bear. She said she wouldn't have it on the place, that there was nothing it would eat,

that it would die and that I had better take it back to the Indians with whom it belonged. Things looked dismal for the little orphan of the mountains, but in less than a week he had become the most popular member of our domestic family at the barn.

I found no difficulty in inducing Jack to drink milk; in fact, there was little difficulty in inducing him to eat almost anything. The difficulty afterward became formidable in preventing him from eating everything. I was in business in town and had but limited time at home. I fed Jack his milk in the morning and trusted to other members of the family to feed him during the day. When I inquired at night as to whether he had been fed I would learn that he had been—about a dozen times during the day—and it made little difference as to what the food was so that it was soluble, malleable or susceptible of fracture.

He made rapid growth, and soon acquired an assurance and familiarity of deportment that verged upon forwardness. Any portion of the premises or the house that he could get into he would enter without hesitation or other formality. It was often necessary to chain him in the barn when I was not at home to guide him as to social restrictions.

Like most animals with which I have had experience, I found that Jack was not to be controlled by kindness alone, but I found him singularly susceptible to the least harsh treatment, and he unmistakably evinced almost as much affection as a dog as long as he was well fed.

One day when I was feeding him I moved his pan of milk and bread and he snarled and snapped my hand, biting it slightly. Taking him by the back of the neck I got a small switch and whipped him smartly, although the smallness of the switch and the thickness of his coat prevented his being much pained. At receiving what he understood to be punishment he lay flat on the ground, covered his face with his paws and squalled like a particularly noisy child. After that, if at any time I took up a switch or whip, a flourish of it was enough to cause him to crouch low and squall lustily, not so much in fear as in intelligent protest apparently.

Jack soon hobnobbed familiarly with all the animals and fowls on the place. The poultry became accustomed to him, but he never allowed them to become too free at his meals. He had a fashion of slapping a fowl half way across the barnyard when it annoyed him, but he was never known to injure any of them. The cows and my horse seemed to fear him most, but they soon learned to treat him with indifference. This he liked sometimes to jar by standing suddenly upright and cuffing them on the side of the head. Sometimes the horse, with close calculation, tried to retaliate with his heels, but Jack's most scientific attainment was the art of being just out of reach at the critical time. The horse once got him by seizing him with his teeth, which was an unexpected attack. His lusty squall, and the rapid use of his teeth and claws caused the horse to drop him as though he were hot.

Two large dogs were Jack's chief companions. While he was very young the dogs had much the best of him, and they would make it so busy for him that he would take to the trees in the yard for peace. A locust tree, that forked about ten feet from the ground, was his favorite refuge. When the dogs made too much entertainment for him he would reach the tree in a more or less masterly retreat, climb up it to the forks, hang himself in the crotch and go to sleep with his head and heels dangling, looking like a dead one that some one had thrown up there. Often when the dogs were sound asleep on the grass he would slide down the tree—always backward—approach the dogs noiselessly, give them a lively surprise with teeth and claws and regain his perch before they got into action. At four or five months of age the bear, then weighing fifty or sixty pounds, was more than a match for the dogs in play. His tactics were altogether too scientific for them. When they charged him he would often receive them by suddenly standing upright, delivering slaps right and left that would make their ears tingle and their jaws rattle. The dogs would either give up the game shortly or begin to slobber and get angry, at which stage Jack would either go up his tree or walk off with all the swagger of a victorious pugilist.

The best of his entertainment he reserved for the unsophisticated town dogs. Dogs of various styles and patterns sometimes came into the yard, scouting about after the manner of their kind. Invariably Jack saw them first. Standing behind a tree he scrutinized them with interest. On rare occasions he saw fit to withdraw by going up his tree. Commonly he seemed to decide that a new dog wasn't very much, and he would wander out in a careless, sleepy way, ignoring the surprised dog altogether. Usually the dog would be all wonder and curiosity, sniffing and approaching, about half afraid, but insistent upon closer investigation. When his attentions became too persistent, Jack, who was all the time fully aware of every movement of the dog, would suddenly notice him and begin to shamble hurriedly away. But if the new dog thought to clinch the bluff by following it up, he ordinarily made about three jumps, to be confronted by Jack in erect posture, and the next instant the dog would receive a cuff, or a right and left that made him slobber or sent him spinning. If the dog was energetic and ambitious he would return to find that Jack was the most striking person he ever met. Just about the instant the dog expected to grasp a good mouthful of bear, he received the disappointment of his life. He usually left, however, entirely satisfied from one point of view.

Dogs are intelligent when not misled or overfed by mankind, and most of Jack's canine visitors took their reception philosophically. They would often pass on and away without lingering. At other times some of them would sit down at a little distance, and, after some consideration, go about their business elsewhere. There are confidence operators among dogs, and some of them took

their first reception playfully, with the sly intention of watching a better opportunity. Their diplomacy was hopeless, for Jack would delve one yard below their mines in cunningness. He often compromised in a good play with them, in which he was careful to be ringmaster. If a strange dog nipped him too severely, his upper lip would curl in a peculiar manner, and the dog presently realized that gentler manners were easier. With our own dogs Jack was soon upon the most confidential terms, and the three were often piled up together on the lawn asleep.

Our house was back from the road a hundred yards, the road passing over a knoll, and then down across a rocky creek. There was much traffic over the road, and many heavily laden wagons drawn by from two to twenty animals passed daily, together with pack trains, stages, carriages and so on. The bear was always first to know when anything was coming on the road. His hearing was notably acute and he might often be seen supplementing that sense with his nose lifted and sniffing. Long before wagons or animals appeared he would be on the alert, his usual tactics being to get behind a tree, stand erect and watch intently. On such occasions he manifested much intelligence. To watch him studying passengers on the road, and to note his various expressions of wonder, curiosity, doubt or assurance, it would be impossible to assert that he did not think and reason upon the impressions conveyed by his eyes and nostrils to his brain. He never became, like the dogs, indifferent to the frequent familiar sounds on the road, but the noise of wheels or voices invariably made him alert. With most dogs the first impulse is to raise an alarm at a strange sight or sound or oftentimes a scent, but the bear's actions all implied silence, caution, close observation, and readiness for retreat or concealment. Once assured as to new sights or sounds, it was amusing to see him shamble off, doubtful, disgusted, half-frightened, or satisfied and assured, drop down to sleep in indifference and confidence.

From the gate to the house there was a brick walk for about a hundred yards, and it was Jack's custom to meet all comers half way up the slope, when permitted, and escort them to the house. Strangers were usually sensitive to his advances, after he had grown formidable, and some of us had to keep an eye out for timid visitors.

### Bear and Book Agent.

An instance of Jack's method of reception was amusing. A man who might have been recognized by Sherlock Holmes as a book agent, one morning entered the gate and approached the house. He wore smoked goggles, carried the usual hand bag, and strode up the walk with the confident air of one who wishes to assure us that all the world is right and prosperous and in need of only his book. He was sallow and frail, but otherwise his demeanor, features and apparel implied that whenever he anchored in any haven, he would identify himself with temperance societies and Sunday schools. Not a wicked impulse in him. Mild, bland, soft-voiced and genteel, but persistent enough to sometimes sell a book.

Jack met the man half way, and sauntering up to him in his lumbering style of locomotion, sniffed at the hand bag. The agent looked at him through his goggles and then peered at him over them; shifted his head aslant, to get another focus, a time or two, and then, with an assured, friendly chuckle said: "Ha, fine old fellow—good dog; come along, old chap!" Laying his hand upon Jack, he walked along with him and up the steps of the porch as though he was a zoo graduate, and had trained with bears particularly. He had merely mistaken Jack for a good, safe kind of a dog. His smoked goggles, the heat and dust, and the size of the bear had deceived him. Besides, Jack felt like a big woolly dog. And so the agent rang the door-bell, while he placated the bear with soft words and gentle pats.

The door was opened by my mother, and the agent, with the promptness of his kind, said: "Madam, I have here a book that I have been assured will interest you. It—"

"I'm busy," replied my mother, "and cannot leave my cooking—"

"Ah, cooking! This book, Madam, is the Capitol Cook Book—an encyclopedia of all the recipes recognized by reliable caterers. It contains famous formulas, all the modern methods, as well as the old, tried and true triumphs of our grandmothers. Many of the recipes have long been in use in the culinary department of the White House, at Washington, indorsed by the various Presidents, from first to last. It is illustrated—"

"But," interposed my mother, "my pies will burn and—"

"Pies, Madam!" and the agent was fairly inspired with the word, "pies! Ah—there is no such authority on pies as this book. Pies are the pride and proof of pastry. The proper preparation of a prime pie is the pinnacle of—of—piety. Pies are pre-eminently the product of patience and perseverance, preserved precepts and practices. Madam, prince and pauper, priest and prelate, president and politician are partial to pie. In the Capitol Cook Book are presented paragraph upon paragraph pertinent to possibilities in pies—positively prolific. Perhaps—"

Jack was becoming impatient and inquisitive. He was trying to pry open the agent's hand bag (perchance to see if it contained pie), while my mother tried to call the eloquent and alliterative gentleman's attention to him.

"Perhaps, Madam—never mind the dog, I'm fond of dogs—perhaps, Madam, few pies have pleased as many palates as the Pierce pie. A photograph of Mrs. President Pierce prefaces the pie and pastry part of this book. President Pierce preferred pro-slavery propaganda to pie, perchance, but Mrs. President Pierce's pie promoted the President's popularity. Her pastry—particularly the pie—"

The remainder of his peroration perished, for at or near the preface to Mrs. Pierce's pie, Jack, disgusted with his failure to open the agent's grip, gave it a slap that sent

it off the porch. He then stood up and reached for the open book on pie, etc. As he stood erect he almost confronted the agent, face to face, and laid a formidable paw upon the book.

My mother saw a startled expression upon the man's face and tried to assure him that the bear was harmless—not at all dangerous.

"The b—, the Wh— What! Why the brute is a bear!"

The agent proved almost as active as he had been alliterative. With a bound he was off the porch and reaching for his grip. In doing this he dropped the Capitol Cook Book, and, in reaching for that, his smoked glasses seceded from his face. He hurriedly gathered the three several treasures, and made better time for the gate than comported with his ordinary conventional address. In his advance toward somewhere else he omitted at least three houses where he might have eulogized. In the meantime Jack had meandered off to the barn, an unmistakable sneer upon his expressive face.

RANSACKER.

[TO BE CONTINUED.]

## About Owls.

EAGLE LAKE, TICONDEROGA, N. Y., Sept. 11.—*Editor Forest and Stream:* Some time since a number of sportsmen up here in the Adirondacks were commenting on a paragraph that appeared in your journal regarding the size of the largest native American owls, and all differed from the opinion expressed in your columns that the ordinary horned owl (*Bubo virginianus*) is the largest known species. "Why," said an angler, who has hunted and fished in several parts of the world, "I saw an owl on the North Shore last week that was twice the size of any specimen of the large horned owl that I have ever seen in any museum. He was a tremendous fellow. You often hear him calling: 'Who cooks for who? Who cooks for you?' or words to that effect during the cool, damp evenings, and even into the early morning, when the song sparrows and yellow warblers usher in the coming day. I believe our friend, the owl, is a rare and almost extinct specimen of a giant bird. My daughter says that it is larger than the largest turkey she ever saw."

"When I was a boy, nearly forty years ago," said the still-hunter, "I lived on a mountain farm about ten miles east of here and a mile west of Lake Champlain. Something had been worrying our fowls at night which roosted, as the custom then was, on long poles under an open barn shed right by the roadside. We would find three or four large hens dead every morning. They had lost their heads, which had been cut off very neatly and removed from the roosts, and we could find no trace of them. One night the marauder killed a favorite Shanghai rooster, the pride of my

father's flock, and the loss of his prized bird so enraged him that he set three large fox traps near the body of the dead cock. Early next morning we were suddenly aroused from sleep by great outcries from the hen roost accompanied by a significant clanking of chains that betokened a capture of the marauder. The lantern rays disclosed an enormous owl with a foot in each of two strong fox traps. Surprised by our approach our captive gave a spring and actually flew several rods with the three heavy traps, such was the strength of his pinions. The wooden clog, however, proved too much for his strength, and he alighted upon the ground, prepared to give battle to his foes. His great eyes fairly blazed with hatred of his captors and followed their every motion with savage suspicion. Young as I was, only eight years old at the time, I strongly urged my father to kill this wild king of the night and murderer of so many of our fowls. He, however, preferred to study this great bird, the like of which he in a lifetime spent in the country had never before seen.

"He had hopes of being able to present him to the Museum of Natural History at Albany. Finally, two men came along and they agreed to take the bird home and provide a cage. We measured the wings and found them to be just six feet (72 inches) from tip to tip. I noticed the legs of the bird and some one remarked that they were as large around as my wrists, and I could see that they were. Our captive was dark brown in color, and the insides of his wings were not like those of the horned owl, but rather dark, like his outside plumage. His height was about two feet when he stood, and his weight was considerable. After much effort the owl was bound and the men tossed him into their farm wagon and drove to the Overshot, in Crown Point, N. Y., where they owned a farm. Last season my father sold a load of straw to a man who said: 'More than forty years ago I came along here early one morning and a man and boy had just caught a big owl in a trap. They finally gave him to us and we took him home to Crown Point, intending to keep him as a pet. He was larger than any owl I have ever seen, and I have spent many weeks hunting in the woods and knew all the kinds of owls usually seen. This bird was from one-third to one-half larger than the large horned owl. I remember how he tried to fight us and that he never once snapped his bill, as the horned owl does. I am sorry to say that he escaped from the coop where we kept him, and no doubt soon found his mate in the forests and swamps back of Buck Mountains.' All of which leads me to the conclusion," continued the still-hunter, "that some of the descendants of that great bird are still lingering along the shores of Eagle Lake in the town of Crown Point. Efforts are being made to get a snap shot at the owl with a camera, and in case of failure, we may have to shoot him as a specimen for the Museum of Natural History in New York, which, by the

way, does not contain a single American owl at all comparable to the bird that escaped that night more than forty years ago, and whose size and appearance are vouched for by four men, all of whom are living to-day."

PETER FLINT.

## The Fate of the Wild Pigeon.

ST. LOUIS, Mo., Sept. 14.—*Editor Forest and Stream:* In your issue of Sept. 9 Mr. Ames contributes an article on "The Fate of the Pigeons," which is excellent, and I congratulate him; also myself on being able, with the aid of the negro's story, to bring out an expression from one so well able to handle a difficult subject.

I beg to assure Mr. Ames, or any other readers of FOREST AND STREAM, who may be interested in the subject, of my best endeavors and hearty co-operation in any effort to prove conclusively that his theory, in which I for one am entirely sympathetic, is correct, and will come to be accepted, if the sportsmen and naturalists of the present generation do their duty.

Personally, my efforts along this line have been confined to inquiries made to elderly natives of the localities in which, according to our theory, might have been the scene of the cataclysm.

That success has been meager is due to both indifference on the part of the natives, and my inability to be in particular localities often enough to keep up my inquiries as I should like to do.

I regard the chances of locating a sea captain, sailor or lightkeeper, familiar with the waters of the Gulf of Mexico, who could furnish valuable information, anything but impossible at this time; and on Mr. Ames' suggestion I have written parties in touch with Gulf seamen for such information as can be had from them, and I hope at some future date to be able to furnish the readers of FOREST AND STREAM something entirely reliable, and no less interesting than earlier published articles. NOYNEK.

## Eyes that Shine in the Dark.

EVANGELINE, La., Sept. 8.—*Editor Forest and Stream:* I see in your issue of Sept. 2 an account of "eyes that shine in the dark." I was unaware of the fact that the human eye did not do so. Mine, and those of my two sisters and four children, all shine; if in the dark, and a light is brought into the room, but what I have always thought more peculiar is that the pupil dilates and contracts with changes of light, at night with only a lamp in the room the pupil is so large that only a narrow rim of the iris is visible, but turned to the sun they contract to almost pin points. Not only that, but they change with the time of day; in the morning being medium large but decreasing till about noon, then gradually getting larger till night, would be glad to know the cause.

BOB W. R. LAWTON.

# GAME BAG AND GUN

## Two Days on the Marshes.—II.

(Concluded from page 232.)

The first faint tinge of daybreak on the following morning had hardly appeared on the eastern horizon when the entire party left the house to take positions in the decoy blinds. My friend and I of course resumed our places in the trench we had occupied on the preceding day, while the others followed the road across the marsh and made their blinds in some thick clumps of reeds and marsh shrubs which dotted the plain a half mile away like so many small islands.

As soon as our decoys were put out we took our position in the pit and dawn was not far advanced when we were ready for the early flights.

"It's just past high tide," said my friend, consulting his watch, "and there will be birds on the move very shortly; in fact, they've started now, and some good ones, too, for there's a bunch of beetleheads," pointing to a flock of thirty or forty large gray and white birds which were flying about with great rapidity over the marshes.

At these words he began repeating the call notes of the blackbellied plover and I joined him to the best of my ability. The flock of beetleheads darted about in the way peculiar to their species, but they gradually approached our decoys and finally swung over them as if about to alight among them.

Just as they were on the point of throwing up their wings the flock turned in such a way it gave us a good quartering shot. My friend selected the right of the center and I the left, and we fired with such telling effect that at least a third of the birds fell to our four barrels.

"Good!" I exclaimed. "That's a starter worth having."

"Yes," replied my companion, whistling to the flock which was now circling up and down the marsh, "and we'll have another try at those which are left, for they'll come back, or I'm greatly mistaken."

And even as he spoke and almost as soon as we could slip fresh cartridges into our guns, the birds wheeled and came back to the treacherous decoys, and again they paid tribute to our marksmanship.

But very few plover escaped our second fusillade; not more than a dozen or fifteen mounting into the air and disappearing from view. We gathered up the dead and crippled birds, and on counting them found there were twenty-five blackbreasts in all stages of plumage and four golden plover which had wandered from their own flock and joined the others.

A number of gunshots were heard from across the marsh and later saw some of the gunners moving about their blinds evidently engaged in collecting their trophies.

For a while no birds drew near our stand, although we could hear them whistling high in the air. During the waiting interval I examined some of the birds we had shot and placing them side by side compared the various

plumages of the blackbellied plover with those of the golden, and found as I had often done before, they frequently resembled each other in coloration, and it is no surprise to me that the two birds are often confounded in the minds of the gunner, the young of one species being mistaken for the adult of the other.

An easy means of identifying the two species is by comparing their bills or mandibles, which in the blackbellied bird is strong,  $1\frac{3}{8}$  inches in length along the gape, while that of the golden plover is rather short and slender, being but  $1\frac{1}{2}$  inches along the gape and much slighter than the other. The legs of the blackbreast are strong and black in color while those of the other are bluish or brownish gray. The first named bird has a small rudimentary hind toe, while the golden plover has none; it is, moreover, about two inches shorter than the other.

The sun arose in an unclouded sky and the heat which resulted was so intense, life in the trench was almost insupportable. Coats and vests were discarded, but this afforded only scant relief. The heat seemed to have had an enervating effect on the birds, for none except a few of the smaller varieties seemed to be in motion.

"I can't stand this," at length said my companion. "There will be no birds flying in such heat as this, and we had better get those we have shot into the icebox at the house or we will lose them."

"I don't mind the heat. You take the birds over to the house and I'll remain here and perhaps I'll get a shot or two while you are gone."

"All right." He gathered up the plover and packed them in the basket. For a half hour or so there was an absolute dearth of birds, and the decoys, although motionless in their various positions, seemed to be gazing at me in a mocking way which was almost irritating, and if they could have uttered the words I should almost have imagined that they would have exclaimed to each other: "What fools these mortals be."

High noon had arrived and I was impatiently awaiting the return of my friend in order that I might partake of the lunch and a bottle of Milwaukee which was quietly reposing in the cool water of the creek beside the stand, when the reports of the guns of our friends across the marsh rang out and I heard them calling a flock of Eskimo curlew of considerable size which they had fired at as it was passing over their stand.

Their success evidently was poor, for the birds kept on in their course and rapidly approached my decoys in a wedge-shaped flock, their long wings sweeping the air in that indescribable rhythm peculiar to curlews. Nearer and nearer they approached, and more and more persistently did I keep up my invitations for them to come down, and so effectually did I send my summons they drew nearer, and finally came within reach.

Selecting the thicker portion of the bunch, I emptied both barrels of my own gun into it, and then seizing my

friend's I sent two more charges into the panic-stricken survivors.

Contrary to the usual custom of these curlew they would not return to my call, but darted away with astonishing rapidity and disappeared from view. Now, among all our bay birds one of my prime favorites is the curlew, for it stools freely, is of good size, and is moreover a fine table delicacy, particularly when in good condition.

That I was highly elated when I gathered up nine plump beauties goes without saying. Huge fellows they appeared when laid side by side with a half-dozen ring-necks which I had cut down shortly after my friend's departure. Carefully laying my birds in the usual niche in the pit I covered them with a layer of kelp, which I moistened thoroughly in the cool water of the creek.

"What luck?" inquired my friend, who soon appeared coming from the house. "I heard four guns and knew you must have found something worth shooting."

"See here," I replied, removing the kelp, "ain't they beauties?"

"By Jove, they are!" he exclaimed, stepping into the pit and handling the birds in a caressing manner. "You have had a rare bit of luck, and I congratulate you heartily."

The words were uttered in the sincere tones of the generous sportsman, and I knew they were an honest expression of his feelings. The afternoon dragged its slow length along, for the birds were few in number, and came to the stools singly or in very small detachments. These were mostly summer yellowlegs, grass birds and robin snipe, the curlew and plover were conspicuous by their absence, so that our entire score for the afternoon was not more than a dozen or fifteen birds.

When we returned to the house, however, at the close of the day my nine curlews, together with the others, filled the hamper as completely as did the birds we had shot on the previous day. EDWARD A. SAMUELS.

A REMARKABLE complication, which a wild boar, a motor car and red-tape have combined to produce a dispute that is little less than farcical, is now before the Bavarian courts. Frau Senger-Bettaque, the eminent Bavarian vocalist, was traveling in her motor car, when a wild boar from some neighboring coverts, charged into her machine, with fatal results to itself and much damage to the car, which was upset. The lady, who was thrown out, escaped with slight shock and some bruises. Now Frau Senger-Bettaque has received a bill for fifteen marks from the postal administration for a telegraph pole broken in the upset, and another for fifty marks from the forest authorities for the dead boar. She has countered upon her official tormentors by bringing an action for injuries to herself, for an account of a doctor, and for cost of repairs to her motor car.—*Shooting Times.*

## In New England.

BOSTON, Mass., Sept. 16.—*Editor Forest and Stream:* Last evening I had the pleasure of meeting the members of the Sportsman's Protective Association of Eastern Massachusetts at their annual meeting. Officials for the ensuing year were duly elected. The club was started a year ago and is in a very flourishing condition, having 210 names enrolled on its list of members. Mr. Charles H. Nowell, a member of the Legislature from Reading, was re-elected to the office of president, Mr. Vinton W. Mason, of Cambridge, who has served as treasurer-secretary the past year, was chosen to that office, and the same names were placed on the list of vice-presidents as last year with others added. The constitution provides for one vice-president from each city and town represented in the membership list, and of these there are twenty-five or more. Among the vice-presidents are Messrs. James A. Baxter, Reading; A. S. Aborn, Wakefield; Martin F. Holt, Wilmington; David T. Strange, Stoneham; Dr. Robert Chalmers, Woburn; N. F. Ives, Malden; Dr. F. S. Belyea, Brookline; Dr. R. H. Morris, Everett, and Dr. J. W. Bailey, of Arlington. The meetings have been held in Reading, that being the most easily accessible from the towns having the largest number of members. George M. Poland, Esq., of Wakefield, the chairman of the State Central Committee for Protection of Fish and Game, and a member of the Legislature, was chairman of the Committee of Arrangements, by which those present were amply provided with refreshments.

President Nowell, in reviewing the work of the year, alluded to the various bills before the Legislature last winter, and the fact that in appearing before the Fish and Game Committee his testimony had much greater weight as voicing the sentiments of the Association than if he had spoken simply as an individual. There was an attendance of seventy-five or more members and the meeting was a decided success.

For hunting without a license, under the alien-license law, Andrew Lozzari, of Rome, was fined \$20 and Joseph Longone, of Chelsea, \$10. The case of J. Leo for the same offense is still pending. A Providence man, for hunting woodcock and partridge, has been fined \$20.

On Thursday morning what may be called an auto hotel started from Harvard Square, Cambridge, for Sebago Lake, Me. Your readers will remember the trip of last year reported by the writer. The auto furnishes living accommodations, cuisine and all Messrs. F. M. Young, F. E. Thompson, R. A. Faye and Dr. Tuttle constitute the party. A wireless telegraphic equipment is taken along, and Mr. Thompson proposes to instal a station on the summit of some hill with the purpose of communicating with some station on the coast. They will combine fishing and hunting sport as the spirit moves.

Our brush shooters who go to Maine for partridge and woodcock are not a little surprised at the interpretation of the new bird law as expounded by the commission. In fact, they are only just beginning to find out where they are at. They are really astounded by the declaration that after Oct. 1, the time when they can expect to get full-grown partridges and before the time to find the flight-woodcock shooting, which is all that amounts to much, they must provide themselves with a \$15 license. This is a state of things they had not dreamed of. They had supposed the \$5 license would be good for bird shooting during the whole of the open season.

Those among them who wish to hunt big game are taking the matter philosophically, but not so the bird hunters. The result will be not a few who would under the former conditions go to Maine will plan to go elsewhere or content themselves with such game as may be had in our own State. This, of course, will be bad for Massachusetts birds, which will also suffer to some extent from the New Hampshire law that requires a license for bird hunting. I hear from several who have been accustomed to go to Maine or New Hampshire that they will content themselves with what birds they can get in Massachusetts covers.

It is claimed that the interpretation of the commission is not in accord with the intent of the law, and that it puts the State in the position of exacting a fee for bird shooting, which is only good at a time when there is no good shooting. As a protective measure as against non-residents, it seems to me the law as expounded should prove a success.

Since I last wrote our State has lost one of its most zealous advocates for fish and game protection by the death of George H. Palmer, Esq., of New Bedford and Fair Haven. He was one of the original members of the Executive Committee of the Massachusetts Central Committee for Protection of Fish and Game, and until prevented by ill-health never missed one of its meetings. Prior to that he had done royal work as an officer of the Southern Massachusetts Fish and Game League in the protection of the waters of Buzzard's Bay against the menhaden seiners. May Mr. Palmer's mantle rest on some one equally able and zealous. CENTRAL.

## A Bear.

KELLER, Wash., Sept. 5, 1905.—*Editor Forest and Stream:* Yesterday morning a couple of my friends went out for some grouse, they were armed with a .22 caliber rifle, and a No. 12 shotgun. They went up a branch of Copper Creek and crossed the divide, and were coming down Silver Creek. They had got seven birds, and on coming down the creek, which is dry in places, they ran a bear out of the brush. It started up the mountain near George; he shot it in the rear with the shotgun. The bear then ran back to the brush and Mr. Santee shot at it with the .22, and George fired at it as it passed. It then climbed a very big pine tree and went near the top, so near that the men thought it would break off the limbs; but it did not. George then took the .22 and shot at its neck twice, and not getting any satisfactory results, then shot at the butt of its ear. At the crack of the .22 the bear rolled out and struck the ground so hard that it broke one of its thighs. The men then dressed it and loaded it on to one of the horses and started for home, much pleased at the thought of securing a bear with a .22 long rifle cartridge. As they passed my cabin they called to me to come out and see what kind of chickens they had

killed. I complimented them on their success. They wanted to know what kind of a bear it was, and what would it weigh. I told them it was a yearling past brown bear, and would probably dress 120 pounds.

"What are you giving us?" the old gent replied.

"The weight of that bear," I said.

They thought it would weigh at least 200. They took it over to their cabin, and their women folks were very much pleased. They dressed it, and it weighed a little over 110. It was in fairly good condition, and the hide was the best I have ever seen for this time of the year. They offered me a roast; but I cannot eat bear, no matter how hungry I might be. It is prejudice I know, but I can't help it. They took what they did not keep for themselves down town and readily sold it for 10 cents a pound. They are going to have the hide mounted for a rug. Several bears have been seen around here lately, they are down gathering choke berries, which will be the last berries they harvest this season.

A few days ago I left Spokane very early in the morning, and had not passed the last house near Hangman Creek more than 100 yards, when a coyote ran across the road just ahead of the team. I put my dog, Grouse, after it; he ran the coyote into the small pines that line the road, and I heard them having a scrap. Soon Grouse came running out of the pines with the coyote right at his heels, and it ran him to within less than twenty yards of the wagon. I stopped, and then the coyote ran back and Grouse close after it. Soon out came Grouse and the coyote at his heels, and there

Large black bear trapped near the carcass of a moose upon which he had been feeding.

Photo by Guide C. L. Barker, Riley Brook, Victoria County, N. B.

was a young coyote after him as well. That morning I had put my .22 in the load, not wanting it to be in the dust. I got off and untied the load, while the dog and the coyotes were holding a mutual admiration society. The coyote had taken a stand on some rocks not more than thirty yards away, and the young one was sitting by the side of the old one. It did not take me long to get the .22. I shot the old coyote in the head and she dropped in her tracks, and the young one ran. Grouse ran to the old one and shook her, but would not hunt the young one. LEW WILMOT.

## A Magnificent Adirondack Deer.

*Editor Forest and Stream:*

It was my good fortune to be in Northville last Monday, Sept. 4, on my way out from the woods, when probably the finest specimen of deer ever secured in the Adirondacks was shipped from that town to Gloversville. The buck, a magnificent animal in perfect condition, weighed, dressed, the day after being killed, 300 pounds. His weight as he roamed the woods must have been fully 400 pounds, if not beyond that figure. In twenty years' experience deer hunting I have never witnessed his equal, and he was a marvel to the residents of Northville, who see hundreds of large deer pass through that town each year. He was killed in Benson, within ten miles of Northville, likely with a black powder rifle, as the carcass contained seven wounds, any one of which, if delivered by a high power ball, would have proved effective in stopping him. He was sold by the person securing him for \$33 and changed hands again at Gloversville, his ultimate destination to be a political barbecue to take place next month at a resort out from Gloversville. Pretty hard lines for so fine a deer!

It is the admission of guides and sportsmen alike that deer are more numerous throughout Hamilton county than in years. Last spring, while in at the West Canadas, "French Louis" Seymour, who trapped along the Indian and Moose rivers—the greatest yarding grounds in the whole Forest Preserve—informed me that the deer had wintered remarkably well and that they would be plentiful this fall, and Louis is generally given to croaking regarding the game supply. His prophecy has been realized. I saw evidence of a great many deer—and of an unusual number of fawns—while hunting.

All the popular localities are well patronized and are giving the full quota of deer. Whitaker, Mason, Lewey and Piseco lakes, and the Kunjamnk and Oregon regions are generally selected by the hunting parties. Of the more inaccessible spots, the Ralph party of Utica is at the West Canadas, while the Rev. Dr. Williamson and a companion are at Jim Sturges' camp at Whitney Lake.

Ruffed grouse are very plentiful—more so than usual—and as the woodcock have held out better in the woods than outside, good results are expected from the covers about Speculator. J. W. D.

## Romance and Truth.

MANY years ago a man named Beadle published books on Indians and other people, but principally on Indians. They were cheap, blood-curdling affairs and sold for a dime. I do not remember ever having read one, but it is not difficult to imagine the trash that was put into cold type and supplied to the American youth of that day.

Like every other reader of the FOREST AND STREAM, I too have been a close observer and diligent peruser of Cabia Blanco's articles. The sterling ring of reality pervading them necessarily appealed to his readers. I can only regret, with the thousands of subscribers to your paper, that he was not spared for another ten years. He certainly could have continued to delight your readers, for his long and venturesome life gave him a fund to draw from well-nigh inexhaustible.

Take his last bear story, finished in the current issue. To the young and ambitious hunter what a panorama of delight such a trip would open before him. Did mortal boy ever before or since enjoy such an experience? Abroad on the boundless game stored prairies, moving or camping as circumstances dictated, now hunting with the Indians, and again by themselves, the party certainly lived for months the hunting life ideal.

Who among your readers but would wish themselves boys again, could they have participated in such a hunt as Cabia Blanco described! Where can be found in books of boyish adventure a story superior to the above?

Now that his pen is stilled forever I for one can only regret that his contributions did not commence years ago. He has gone to the happy hunting grounds where, let us hope, he will live over again all the pleasant experiences gone through with during his mortal existence.

CHAS. CRISTADORO.

## Flint-locks for Relics.

AN article in a recent number of the Birmingham (England) Mail states that a factory in that city is turning out weekly about 1,200 flint-lock muskets, and that a large number of this antiquated firearm are also made at Liege, Belgium. These guns are sent to Central and East Africa for use by the natives, to whom the possession of modern firearms is denied by statute. Directing attention to this industry, Consul Halstead says: "It is known in the trade that many of these newly made weapons fall into the hands of travelers who regard them in the light of a 'find,' and a story is told of a Birmingham manufacturer having received a letter from a dealer asking him to procure some old flint-locks, for which the dealer had several customers, when the manufacturer wrote that he could not supply old muskets, but was prepared to make him any number of new ones required. These were, of course, given the appearance of age. The demand for old weapons is so great, especially in the American season, that the genuine articles would go but a little way to satisfy it."

## New York Non-Resident License.

ALBANY, Sept. 14.—*Editor Forest and Stream:* Commissioner Whipple has gone into the question of exacting a license from non-residents to hunt in this State, and has obtained quite an elaborate opinion from the Attorney-General, and he holds that it is mandatory on the part of the Commissioner to exact a license from a resident of a State or country where a license is demanded of non-residents, and notice to that effect is being sent out and blanks prepared on which to issue licenses.

The Attorney-General holds that the last paragraph in Section 89 of the Game Law, which reads "Game shall not be taken by any such non-resident, except pursuant to a license" is imperative and leaves no discretion with the Commissioner anywhere in the State. Therefore, the requirement of a license only to apply to the southern tier of counties, as I previously wrote you, will be made general. RENSSELAER.

## Camp-Fire Flickerings.

"That reminds me."

RECENTLY an excursion party came by tallyho and, accompanied by a small brass band, to one of the most beautiful Adirondack lakes. A commodious and swift steamer gave opportunity for a lake trip of some eight or ten miles and back. On the return the band was playing and the wind being strong toward the dock, was heard when three-fourths of a mile away. A young fellow with trousers half-way to his knees and other attire in keeping was sitting on the dock and exclaimed: "Gosh! What ails that gol-darned steamboat to-day?"

Query: Was the joke on him or on the band? It reminds one of the minister (known to the writer) who tells this story on himself. When a boy he resolved to learn to sing, so one Sunday morning went to the garret to practice unobserved. But, alas, the father heard and later reproved after this fashion: "Never do that again. I don't want a boy of mine up in the garret sawing boards when people are going by to church." JUVENAL.

ADIRONDACKS.

## Another 100 Sportsmen's Finds.

While pursuing a deer up a steep hillside in Nevada, away back somewhere in the "fifties," a hunter named Finney noticed some curious looking pieces of metal which the deer had loosened on the hillside. Upon examination he found the metal to be silver, and this "find" is said to have caused the rush which resulted in the up-building of the commonwealth of Nevada. C. A. VANDIVEER.

THE current edition of the *Game Laws in Brief*, sold everywhere, contains all the fish and game laws a sportsman ought to know. It is complete, accurate and up-to-date.

Keeps guns clean and rustless; bore bright; ready for use.—Adv.

## The Natural Enemies of Birds.

BY EDWARD HOWE FORBUSH.

From the "Special Report on the Decrease of Certain Birds, and its Causes, with Suggestions for Bird Protection," in the Fifty-second Annual Report of the Massachusetts State Board of Agriculture.

(Concluded from Page 212.)

### The Common Crow.

THE crow is now regarded by so many people as a useful and much-maligned bird, that it may not be out of place to present here some of the evidence against it. I have already given to this Board some of my experience with the crow, concerning its destructiveness to birds,\* and will only say here that I have repeatedly observed crows in the act of destroying the eggs and young of other birds; they are so addicted to nest-robbing that it is a wonder that any young of the smaller birds can be reared where crows are numerous, and my experience indicates that in some cases very few are actually reared in such localities. Since, in view of my own experience, I may be considered as prejudiced against the bird, I will quote mainly from new evidence secured in this inquiry. It will be impossible to present here more than a small part of the evidence received, giving it in the words of the witnesses, to avoid any possible distortion.

In a letter written by Mr. Ingalls, in 1896, he says: "I have seen the nests of many birds of several species, from the ruffed grouse to the red-eye and chipmunk, robbed before my own eyes, and have evidence of many more. Every season, late in May or early in June, the crows make a raid on the birds nesting in the shade trees along our village streets and in orchards and private grounds, systematically searching every tree, destroying nests, and eating or carrying away the eggs and young." Now, after eight years' more experience, he rates the crow as the most destructive of all the natural enemies of birds.

Here is another experience from another county: "For the past ten years, during the breeding season of the birds, from the last of May through June and July of each year, I have watched the crows eat the eggs and little birds. I have watched them start at 4 o'clock in the morning, or a little later, and hunt over the shade trees that line the streets for the eggs and young birds, even going into the trees that stand close to the buildings, where people would not think a crow would ever go. This is done, of course, before people rise; and as soon as any one stirs out they will leave, but will begin the next morning just the same. Any one can plainly see what they are up to. After the breeding season they will not visit the shade trees until the breeding season begins the next year, and then they are ready to follow them up again."

"I have many times seen crows eating robins' eggs, and have also seen them flying from nests with the young birds in their beaks. This was probably food for their own young. I often see them very early in the morning searching trees near houses where small birds have nests."

"I have seen crows come to the eaves of a house and take young robins from the nest."

"Crows are remarkably plentiful here. Have not known a nest of young birds to mature this year. Saw a crow take young out of nests right by the house."

"I have seen crows drive birds from the nest, and take and eat whatever was in it, whether young birds or eggs. There is one tall elm tree in particular on the boundaries of our place where I have watched them repeatedly attack the birds and eat the young."

"The crows visit the orchard very early in the morning, usually about sunrise, and after their visit you can find many nests without eggs, that had a full complement the day before."

"Directly back of my house is a bush pasture, in which are a few pines, cedars and birches. In the pines and cedars numerous robins build every spring; and every spring about the nesting time of the crows I see them searching through these pines and cedars for something. At no other time of year do I ever see a crow even alight in this pasture, to say nothing about visiting each tree separately, with every action indicating a search for something. One morning a few years ago I saw a crow drop into the top of a certain cedar in this pasture, and pick the eggs, one by one, from a robin's nest there and eat them. A year or so later I saw the same thing done again, although this nest was in another cedar. At another time I saw a crow visit a robin's nest in an oak tree. This nest contained young birds perhaps a week old, and despite the protests of the parent birds, they were all carried away, apparently to feed the crow's young. In a clump of pines southwest of the house a pair of crows had a nest one year, while the crows' hunting ground was to the east of the house, so that the old crows often flew over the house while passing from the hunting ground to the nest. On one of these trips a crow had in its bill a young bird, unfeathered, which I identified at the time as a young robin. While there are many nests built every year in the pasture referred to, I estimate that not one in ten ever contains young, and not half the young ever leave the nest alive, I know that at least one crow visited this pasture every day."

"Crows destroy many nests of eggs. Think them the worst enemy."

"I have seen crows attack the nests of our common birds many times, and carry off the young birds to use for feeding their own young during the nesting season. \* \* \* Both crows and red squirrels are fond of birds' eggs, and I have found the empty shells of eggs of birds near their nests many times."

"I have many times seen crows in the act of robbing birds' nests."

"I, and an absolutely trustworthy friend, have on several occasions seen crows carrying young birds away, though we have been unable to identify the victims. Last June a robin's nest near my house was despoiled by crows, and three young birds were taken; the fourth fell to the ground."

\*Report Massachusetts State Board of Agriculture, 1896, "The Crow in Massachusetts," p. 285; see also *ibid.*, 1902, p. 147.

"This bird does more damage to the farmer than almost all other birds. He deliberately kills our young song birds, out insect-eating birds. He has been seen to go through our grove of maple trees, each side of the highway, destroying the nests and young birds. Our village is well provided with shade trees, and nearly every tree is occupied by one or more birds' nests, mostly robins, with many smaller birds; and in the woods outside we always have plenty of crows. In the nesting season, early in the morning, from half-past 3 to 5, you will find plenty of crows hunting the trees for nests, and it is always a still-hunt. I make it a point to look after them at this season, and have shot quite a number of them with both eggs and young birds in their possession. One morning I shot one from my door with a young robin, two-thirds grown, in his bill. There are two or three others here that I have interested in protecting the birds, so that we manage to have some of them, and make it rather hot for the crows."

"The crows gather in quantities about the maple trees lining the highway, and fight our robins, often destroying the old bird, and then destroying the eggs or young; also the chipping sparrow. Then, again, they attack our red-winged blackbirds' nests. The crow is well aware who has the gun, and makes his visits early, about 3:30 A. M., as soon as signs of life appear. He is out when no gun is at hand. This is our greatest enemy to song birds, and a bounty ought to be placed on him."

The above statements, coming, as they do, from many sections of the State, go far to substantiate the claim made by some persons that the crow is everywhere the greatest natural enemy of the smaller birds. Professor Hodge told me that crows had repeatedly robbed robins' nests in a city lot, under his windows, coming very early in the morning, before people generally were out of bed. They are just as inveterate thieves of the eggs and young of the larger birds. Several observers speak of crows taking the eggs and young of fowls and turkeys. This is a habit so well known that it hardly need be alluded to here, except to show their taste for eggs and nestlings.

Mr. Price, at the Middlesex Fells Reservation, is raising both wild and domesticated ducks and pheasants. He says that crows took five out of seven young ducks in one day. In June about 100 mallard ducks were turned out on a small pond. Ducks lay their eggs very early in the morning, and every morning crows were seen carrying off eggs. Mr. Price says they took about fifty each week, carrying off, altogether, from 800 to 1,000 eggs during the season, taking about all the eggs laid by the ducks.

It is probable that where one instance of crows robbing nests is observed, a thousand pass unnoticed. There is only one redeeming feature in the case of the crow, and that is, that not all crows habitually rob birds' nests; for if they did, they would destroy most other birds, and in time we should have few birds but crows.

### Squirrels.

Forty-two observers regard squirrels as very injurious to birds, thus ranking them next to the crow in destructiveness, and some regard them as more vicious than the crow. Others believe that squirrels do no harm, as they have never seen them troubling birds in any way, nor seen birds manifesting any alarm at their presence. Mr. Brewster is very positive that the squirrels have never troubled the birds at his place in Cambridge, where he has watched carefully for years the habits of both birds and squirrels. Mason A. Walton, the hermit of Gloucester, says that he has several times seen red squirrels examining the nests of birds, but that they never disturbed the nests or young birds.†

There may be many good squirrels, but there certainly are some bad ones, as the literature of field natural history teems with instances of their destructiveness. To convince the reader, some new evidence is appended, collected during this inquiry.

"Red squirrels, I think, do fully as much damage as crows. For a number of years I had quite a colony of red squirrels on my premises, and protected them, as the family liked to see them around. But one morning there was a great commotion among the robins in the yard; I stepped to the door with gun in hand, expecting to find crows, but, on looking closely, found a red squirrel at the nest, from which he soon started, carrying something in his mouth. I fired at him, and he dropped to the ground, and with him a young robin with the head partly eaten; and on looking the ground over, I found two others in the same condition. Since then by observing closely I have found them despoiling the nests of robins and other birds of either the eggs or young, and shoot them on sight, as a nuisance."

"I was at work in one of my gardens when my attention was attracted by the cries of a pair of thrushes nearby. On approaching, I discovered a red squirrel sitting upon the nest, busily devouring their young. I drove the little rascal away with stones, but he returned again, and had bitten the remaining birds before I reached the nest again, it being several rods distant. The next day I found nothing left but the empty nest. The young thrushes were more than half grown, and were all destroyed, undoubtedly by this same squirrel."

"There is an apple orchard on the rear of my place, and during the summer of 1903 I was surprised to see the robins, etc., continually building new nests. They would no sooner have a nest finished and eggs laid, than they would be at work on a new one, usually in the same tree, the first one having been abandoned and the eggs missing. One day in passing through the orchard I saw some robins fluttering and scolding about one of the nests, and, being interested, tried to see the cause of the trouble. I found there was a red squirrel sitting on the edge of the nest, devouring the eggs as calmly as possible. I had noticed previously that a pair of red squirrels made their home in a hole in one of the trees, and saw that they were undoubtedly the cause of the depleted nests. I killed the squirrels, and there was no more trouble."

†"A Hermit's Wild Friends," Mason A. Walton, p. 69.

"Some five years ago I noticed that some species of birds were decreasing in a certain small piece of woodland that I look over pretty carefully, and the many ruffed nests convinced me the red squirrels were doing the mischief. I started a campaign after them, and from that time until the present have shot them on sight. During this time have caught them in the act of rifling robins' and catbirds' nests, and with fledglings in their mouths; also found egg shells around squirrels' nests on the ground. On one occasion saw a pair of robins catch a red squirrel at their nest, and with the help of others drive him from it and chase him to cover. An egg had been taken from this nest, which I found on the ground uninjured, where he evidently dropped it in flight. For some time I had another robin's egg, dropped by a red squirrel, that had been neatly punctured ready to suck."

"In the spring of 1896 my attention was first drawn to the red squirrels robbing birds' nests. In the early morning I have repeatedly seen the red squirrels going from tree to tree, hunting for birds' nests. If these nests contained young birds, they were taken out and eaten by the squirrels. The birds around our place decreased rapidly, and the squirrels increased. Catbirds, which had begun to nest around here in numbers, as the locality apparently suited them, were entirely driven off, and no longer build nests here. I think it was about four years ago that we killed off numbers of red squirrels, and the birds began then to increase."

"I have many times seen red squirrels in the act of robbing birds' nests, and this year saw a young gray apparently at the same trick."

The foregoing instances seem to establish the fact that certain squirrels at least which have acquired the habit of molesting birds are among their most dangerous enemies. Squirrels are very active, keen of sight, can climb anywhere in a tree, and it is difficult for a bird smaller than a hawk or crow to defend its nest against them. I have seen a squirrel continually attempt to reach the nest of a robin, although, being assailed from all sides by both robins and jays, it was struck and repeatedly driven back toward the ground. In courage and activity the red squirrel is superior to the gray, and is usually regarded as the greater enemy to birds. At Wareham the birds seem to regard both species with equal aversion.

Some squirrels have a habit of cracking the skulls of young birds, as they would a nut. Mr. F. H. Mosher tells me he has observed this habit at Hyde Park, Dutchess county, N. Y., and also at Dartmouth, Mass. At Hyde Park both red and gray squirrels were observed in the act. He saw the squirrels attack the young on the nests on six different occasions. The birds molested were the chipping sparrow, robin and red-eyed vireo. The squirrel cut off the head of each young bird, dropping the body to the ground, and ate out the brains from the skull. One day in the spring of 1903 he heard the cries of robins at his own place in Dartmouth. He saw a gray squirrel climbing to a robin's nest, and before he could reach the spot the squirrel had the head of a young robin in its mouth. The bird was dead when he reached it. Gray squirrels have been the culprits in each case but one that he has observed.

Mr. Brewster told me that he saw a wounded thrush pursued and overtaken by a chipmunk, that killed the bird and was eating its brains when he reached the spot. He took the bird from the squirrel, but the little animal was so eager and fearless that it would not leave, but stood up trying to reach the bird, like a dog begging for a bone.

Mr. H. H. Dewey writes from New Lenox, Berkshire county, as follows: "Last summer I had occasion to observe a nest of small yellowbirds in a willow bush near where I milked my cows. One morning, as I was milking, I heard several of the old birds making a great noise of distress, and on going near the nest I discovered a chipmunk just swallowing one of the young ones which had been hatched about three days. The chipmunk escaped, and on going to the nest I found only one of four left. I heard the cries of the old ones early the next morning, and on hurrying to the nest I saw the last young bird being swallowed whole by the chipmunk, which again made its escape. I have for a number of years been suspicious of the little animals doing great damage to either the young birds or the eggs, but have never been able to catch one in the act before."

It seems improbable that the chipmunk actually swallowed a young bird whole, but it may have stowed it away in its large cheek-pouches, for convenience in carrying it off. It is probable that only certain individuals among squirrels molest birds. Such individuals must be killed by those who would protect the birds.

### The English Sparrow.

Many people consider this the most destructive of all the natural enemies of birds, and it may be so, in and near the cities, with the possible exception of the cat. The story of how this bird was introduced here, invading the cities and villages, destroying the native birds or driving them out into the country, was told long ago.‡ Much might be added to it from my own experience and that of correspondents, but lack of space forbids. There are some localities in the country to which the sparrow has not penetrated, and it has seemed to me that it was hardly holding its own for the past few years, especially in eastern Massachusetts, where in some sections sparrows are not so numerous as in the past, and the native birds are beginning to reoccupy their old haunts. The information gained in this inquiry, however, does not confirm with this belief, for every county, except Suffolk, Dukes, Barnstable and Nantucket, sends reports of an increase of these birds. The only reports of an increase in the cities come from Fitchburg, Lowell and Waltham; all the rest come from towns, and many from the smaller and more remote villages. All this seems to indicate that, outside the larger cities, the sparrows are still increasing in numbers and extending their baleful influence.

‡"The English Sparrow in North America," Walter B. Barrows, Bulletin I., Division of Economic Ornithology and Mammalogy, United States Department of Agriculture.

## The Kennel

John Davidson.

DISPATCHES in the daily press announce the death of John Davidson, at Monroe, Mich., on Saturday of last week. He suffered a brief illness. Death was caused by heart failure consequent to a severe cold contracted at Toronto recently. He was seventy-eight years old.

Probably no man was more widely known in the canine world than was John Davidson. He was famous in both Europe and America as an all-round bench show judge and judge of cattle, a breeder and trainer of bird dogs, an expert field shot, and a writer of no mean attainments on such subjects of dog and gun as appealed to his fancy or interest.

He was a Scotchman by birth, and possessed many of the characteristics for which that race is famous—good common sense, a dry and sometimes caustic humor, the moral courage to utter his beliefs in the face of any opposition and the physical courage to stand by them as long as need be. Many there were who thought that he had violent, unreasoning prejudices against what he did not approve and which they did approve, but there is no doubt in the mind of the writer—who knew him well—that his uncompromising attitude on many subjects was due to firm conviction that he was right. His acts were always consistent with his beliefs. There was nothing artificial about him, no affectation of manner nor frills of speech.

While he was courteous of speech and manner, he preferred to eschew all evasion, or insincerity or grand stand plays in business or pleasure.

In the United States, among a large circle of admiring friends, he was known by the endearing soubriquet of "Honest" John Davidson.

His experience in field sports was broad and long. He was a practical sportsman years before the affairs of dog and gun were taken up in this country in a systematic, intelligent manner. Field trials and bench shows owe much to him. He was identified with them from their inception. He judged at the show of the Illinois State Sportsman's Association, held in Chicago, Ill., June 4, 1874, said to be the first bench show of record held in America. From that time till his demise, he was conspicuously identified with the competitive features of the canine world.

Concerning his official acts as judge, many anecdotes have been told of his sharp wit. One in particular, enjoyed by bench show devotees, has been cherished for the directness with which it closed an incident. After every breed is judged there are a few or more dissatisfied contestants, known colloquially as "disappointed exhibitors." They seek, as a rule, to interview the judge ostensibly as inquirers for information, but really to show him his error or to express their opinion of him. At such times "Honest John" would place his arms akimbo, look over the top of his nose phlegmatically and cynically at the disgruntled owner. Once on an occasion of this kind, the disappointed one concluded by saying, "Well, I don't think you know how to judge." "You don't," replied the judge dryly, "but that's your think, and it's my think that counts."

He was an excellent field shot, an accomplishment in which he took a just pride. Bad shooting on the part of others was sure to excite his derision. He fell into a joke at the field trials of the Central Field Trial Club, at Lexington, N. C., which raised a laugh against him, an event which was very rare indeed. He was acting as one of the judges. The handlers had been ordered to kill a bird, and, nevertheless, missed shot after shot. Finally, a fine point was secured in the open. The field trial party massed about, was watching with keen interest. "Honest John" ordered the dogs to be held a moment while he dismounted to show them how to kill a bird. He took the handler's gun, flushed the bird, shot at it, and missed it entirely, amid the acclamations of the delighted hundreds. He missed it, apparently—it was many years afterward that he learned that the gun was loaded with a blank cartridge. But of such incidents there were hundreds in his life, which his friends took pleasure in relating—the light, humorous portrayal of his character in contrast with the rigid and the serious. B. WATERS.

### National Beagle Club of America.

SEPT. 18.—Mr. Thomas Shallcross, of Providence, R. I., and Mr. Thomas D. Griffith, of Redland, Md., have accepted the invitation of the National Beagle Club of America to judge at its sixteenth annual field trials, to be held at Stevenson, Baltimore county, Md., during the week commencing Oct. 30.

Stevenson is in Baltimore county, Md., about twelve miles from the city of Baltimore, and is reached from the Union Station, Baltimore, on the Green Spring Branch of the Northern Central Railroad, Baltimore Division, of the Pennsylvania Railroad.

CHAS. R. STEVENSON, Sec'y.

### THE MANY-USE OIL CO., N. Y. CITY,

Will mail free sample. Thin oils not as good or sure.—Adv.

Evidence recently submitted to, and published by, Mr. C. A. Reed, editor of "American Ornithology,"\* from correspondents in different parts of the country, indicates that the sparrow is still destructive to other birds. The sparrow is largely responsible for the decrease in swallows, martins and wrens. For more than thirty years it has driven these and other birds from their former breeding places, torn down their nests and killed them and their young. The tree swallows and martins have been driven from the bird-houses. The nests of the cliff swallows have been torn down or occupied by the sparrows. The barn swallows have been driven from the buildings they formerly occupied, and because of this persecution the wrens have actually disappeared from the neighborhood of towns and villages. If the sparrow is still increasing and spreading out into the country, we may look for a continued decrease of swallows and wrens.

### Hawks.

Every one will admit that hawks kill birds. Thirty-four observers consider them seriously destructive. It is to be noted, however, that, as in the case of the fox, the chief evidence is given by gunners. Nevertheless, it is probably true that, after man, the great bird destroyer, birds are among the greatest enemies of birds. No other animals can pursue birds through the air. No others can follow them in their vast migrations, discover them so far off, or overtake and strike them so quickly. We must, then, look among rapacious birds themselves for some of the most potent checks to bird increase.

The bald eagle feeds mainly on fish, and has little effect on the numbers of other birds. The red-tailed hawk is not now generally common. The red-shouldered hawk seldom kills birds or poultry, but, living largely on field-mice, is believed to be a friend to the farmer; but the goshawk, duck hawk, Cooper hawk and sharp-shinned hawk are all bird slayers. Of these four, the Cooper and sharp-shinned hawks, being most common, are most destructive. The duck hawk kills, like the cat, for the sake of killing. It pursues its prey on the wing, rapidly overtaking swift-flying ducks. Mr. C. E. Bailey reports seeing a duck hawk overtake and strike three teal in succession, and then fly off, leaving its victims lying on the water. Fortunately, this hawk is rather rare in Massachusetts. The goshawk is here occasionally in winter, but the Cooper hawk breeds here, and is still common, locally if not generally. This bird, which is sometimes known as the partridge hawk or chicken hawk, is a feathered pirate. Swift, keen and daring, it is the terror of both birds and poultry. It is the one bird of all others to neutralize the local efforts of the bird protectionist. It is particularly obnoxious to the farmer, for, having once tasted chicken, it continues its forays until it is shot or the chickens shut up. It will sometimes kill full-grown fowls, but probably cannot carry them away. Its keen eye detects the mother bird sitting on the nest. At one swoop it snatches bird, nest, eggs and all in its powerful talons; or it spies the nestlings, and picks them up as food for its own young. Conspicuous songsters, like the brown thrasher, robin, wood thrush, rose-breasted grosbeak and scarlet tanager, are swept from their perches while in full song by this bold marauder, and borne to its ravaging brood. Even the crafty bluejay does not always escape. As one of these hawks sweeps into a clearing and strikes its prey, every bird song becomes hushed. In a moment sparrows, warblers, thrushes, titmice—all the loquacious, musical throng—find cover, or crouch motionless in their hiding places in silent terror. Grim death has been among them, and it is long before they dare resume their activities. The sharp-shinned hawk is a miniature of the Cooper hawk, although perhaps a trifle slimmer in build. It is widely known as the chicken hawk, and is strong and swift. It is nearly as dangerous to birds as its larger and stronger congener. It breeds here, feeds its young on birds, and will kill birds as large as a jay. It is often mobbed by jays, but not infrequently strikes one of its tormentors, when all the rest fly off, leaving the hawk to finish its victim.

Probably most of the birds now killed by hawks in Massachusetts are struck down by these two species. Sometimes in the fall these birds may be seen in great numbers migrating south. Mr. W. S. Perry estimates that he saw at least one thousand, mostly sharp-shinned and Cooper hawks, going south Oct. 10, 1892. He watched them flying all day. He estimates that each bird will eat on the average two small birds each day, or seven hundred each year. At that estimate, the one thousand hawks which came within the range of his vision would eat seven hundred thousand birds a year. I regard these two birds and the goshawk as the only hawks that should be shot by gunners, most others being a positive benefit, or so rare as to do little harm.

The pigeon hawk, also a bird hawk, is not common, and the sparrow hawk feeds chiefly on insects. The broad-winged hawk seldom kills birds, and the marsh hawk feeds mainly on mammals in most localities.

### The Bluejay.

The bluejay, a smaller cousin of the crow, has a similarly unsavory record, and also merits it. It attacks the eggs of birds from the size of the smallest sparrow and warbler to that of the robin. The robins, if at hand, will successfully defend their nests; but the jay will watch, and sometimes eventually appropriates the eggs in the robin's absence. The jay pays little attention to the screaming and protesting vireos, but robs their nests as unconcernedly as though the parent birds were not present. When jays have young in the nest, they sometimes watch the nests of the smaller birds very closely. Hardly is a clutch laid when it disappears, and most of the smaller birds lose at least one set of eggs. I am aware that many people find it hard to believe that such a pretty bird as the bluejay can be such a rascal; therefore, I will not ask belief for my own assertions without producing evidence to support them, for the mere fact that twenty-six observers believe the jay to be a destructive enemy of the smaller

birds may not be considered sufficient evidence on which to condemn the bird.

"Last spring I was disturbed several mornings by an outcry among the birds in the trees near the house. A pair of bluejays were on a marauding tour, and eggs were the morning's bill of fare."

"The crows and jays are destructive to the sparrows, robins and vireos that build in our orchard beside the house, where I have a good chance to see them. I believe the jays are about as bad as the crows. Several robins' nests are broken up in this way every year, and always one, and generally two or three, of each of the others."

"I have a neighbor \* \* \* who has shot one or two jays in the very act of robbing eggs from nests."

"I have seen bluejays repeatedly sitting on the edge of a nest, eating the eggs. This season I found a nest of a *Vireo solitarius*. I discovered a bluejay in the act of eating up the eggs. When I went to the nest there was only one left, and the shells of three others. I have had the same experience this year with the nest of *Dendroica virens*. I think jays torment these birds worse than any others. I am convinced that jays, during nest time, hunt for eggs with great skill and regularity."

Colonel Thayer also writes of Mr. William Brewster's experience. This Mr. Brewster has told me of personally. The methodical manner in which the jays investigated the nests of other birds day after day, and destroyed the eggs, has convinced him of their destructiveness. He says: "I do not consider that owls, hawks (except the Cooper and sharp-shinned), squirrels, weasels or even foxes do any serious harm. The bluejay does very much harm to the smaller birds by eating their eggs; and the crow is also harmful in the same way, but to a less degree according to my experience."

Mr. S. J. Harris, of East Dedham, Norfolk county, speaks of his experience with jays as follows: "Of course the old robins would fight the jays away for a while, but they would come right back again. I have known of a bluebird's nest with four or five eggs in it being robbed by jays, for I came along in time to hear the scrimmage, and, on seeing the bluejay in the bluebird's nest, with the bluebirds screaming and flying at the jay, I went and found all the eggs broken, and the jay had eaten the insides."

### Owls.

Owls certainly kill some birds, but the number they take is ordinarily so small in proportion to the noxious mammals and insects they destroy that they are believed to be among the most useful of birds. It is, however, rather amusing to hear one friend of the screech owl defending it from the charge of killing small birds, and asserting that it lives on mice and insects, while another says that it is most useful because it destroys so many English sparrows. I have known a screech owl to kill a flicker, occupy its nest and make a meal of the owner. Owls kill many mice, shrews, squirrels, rabbits and other small mammals, and a few birds. The larger species probably kill some game birds. The owls are not so destructive to birds as either hawks or crows. Were they exterminated, we should miss them sadly. The quivering wail of the screech owl at evening is one of the characteristic sounds of our orchards and woodlands; it is becoming altogether too rare in some localities. The booming hoot of the horned owl, now seldom heard, gives warning of the approach of the most dangerous owl of our woods. It kills many hares, or so-called rabbits, mice and rats, and is in this respect a friend to the farmer.

### Weasels.

Only seventeen people complain of the weasel, and much of the evidence against it is that of killing chickens. I have for years heard the statement made that weasels were very destructive to game birds. I have followed them for miles, and watched them whenever I could. I have written many letters to people who regard them as destructive, but the nearest thing to evidence against them that has come to me yet is contained in the following notes:

Mr. Thomas Allen, of Bernardston, says: "Weasels are too sly and quick in movement to be caught. The bird with small, clean-cut teeth marks in the neck or under the wing is proof of this enemy."

Mr. H. B. Bigelow, of Cohasset, writes: "Weasels kill some small birds, principally sparrows, along stone walls and hedge rows, where I have found several carcasses, principally, however, English sparrows. In Milton I saw a weasel stalk an English sparrow along a stone wall. They are said to destroy some quail."

Weasels are remarkably savage and bloodthirsty animals, but seem to feed mostly on mice, shrews and moles, for which they hunt daily. When hunting they quarter over the ground much more closely than does the fox, therefore they are more likely to stumble on the nests of birds. An animal which can kill six fowls in a night, as I have known a weasel to do, would easily kill a sitting grouse or any smaller bird which it could surprise on its nest at night.

The weasel is very brave and active. Weasels occasionally attack even human beings. There is an old story of an English girl who was found dead on a moor, her body partly eaten by a party of weasels. I was once, when a boy, attacked by ten of these creatures. They made the occasion quite interesting for me for some minutes, and by reason of their great activity all but one escaped unharmed.

Mr. John Burroughs has observed that weasels can climb trees.† This makes them much more formidable enemies to birds than they otherwise would be, but, as their vision is not particularly acute, and as they rely largely on scent, they are likely to be often at fault. Fortunately, they are not common, but I have never seen any explanation for their comparative scarcity. They have many young and few enemies, although the larger hawks and owls get some of them. They can escape the fox by climbing or hiding. Weasels are not often shot, and traps are seldom set for them, but they are often caught in traps set for other animals.

\*"Squirrels and Other Fur Bearers," John Burroughs, p. 81.

## Our Quest of the Golden Trout.

THERE is a stream afar from the haunts of men in the heart of the southern Sierras, which for several years had been to me a source of peculiar interest. Its romance was delightfully suggestive of the "Arabian Nights" of our boyhood days, and its remoteness gave it all the glamour that a fertile imagination could embellish it with.

Its pure waters were said to be the only known habitat of the golden trout, the most beautiful and most delicious of all the trout family. Their colors rivaled those of the most gorgeous denizens of the tropic seas; their flavor fitted them for the table of the gods.

Twice had I attempted to reach this mysterious stream, but, like the horsemen who chased the rolling bowl to the hill of the black rocks, I was foiled by unexpected obstacles when almost within sight of the goal. A series of heavy thunderstorms in the first and an accident that crippled my knee in the second, worked my undoing when only twenty miles away. This year I made the third attempt with Smith, the cattleman, companion of my Klamath and Broder Cabin outings, the details of which I feel inclined to lay before your readers.

Leaving Oakland on the 9:30, we arrived in Visalia at 5 P. M. The heat was excessive, the mercury standing at 116 degrees in the depot; but we found Mr. John Huntly awaiting us and were driven rapidly to the ranch, where his amiable wife welcomed us with all her old-time hospitality. Our couches that night were spread upon the cool upper verandas of the Huntly mansion, and the next day, while the boys overhauled kiacks and pack saddles, we drove to town and laid in supplies for the trip.

In order to avoid the heat, we decided to make the first drive at night. Wilfred Huntly decided to go with us, and with four saddle and pack animals, we started about 4 P. M., traveling all night without a stop, reaching Three Rivers, thirty miles east of Visalia, shortly after sunrise. But we were still in the orange belt, and the heat was almost as great as in the valley. The tantalizing presence of those cool summits only thirty miles away made us more miserable.

A good rest was imperative after the long night drive, and it was thirty-six hours later when we reached Guernegan's, tired, dusty and nearly melting with the heat. A few rods east of the house a mountain stream found its way down to the Kaweah River, over a bed of porphyry. In this the action of the water had made numerous circular pot holes of assorted sizes in the solid rock. Some of these were six feet in diameter by three or more in depth, with a few inches of fine sand in the bottom. They were as smooth as marble, and filled to the brim with the purest water that was constantly changing. Disrobing on the clean, dry ledge, we stepped at once into a natural bath that no art of man could surpass.

Guernegan had died since we were there last year, but his widow, with her son and daughter, still carried on the place, and a little later we sat down to the last table d'hôte we were destined to see for nearly a month. The elevation here was about 3,000 feet, and from this on rose rapidly until we reached Mineral King, eighteen miles away, and 8,000 feet high. We found our old camp near the soda spring unoccupied, and at once we took possession for a few days' rest. The climate here was a delightful change from the torrid valley; the temperature, about 70 degrees during the day, dropped below freezing at night. Huge snowdrifts, not over three miles away, filled the mountain ravines. In the ice-cold waters of the streams the trout were darting about, and our old friend the water ousel again appeared.

There were some twenty-five or thirty people at the resort, and just across the creek from our camp a pioneer of "the spring of '50" had pitched his tent. Mr. Bequette, evidently of French origin, but born in Missouri, was a vigorous old man, although over seventy, who had lived near Visalia more than forty years, and knew every creek and ravine in these mountains, with which he had been familiar since '64. Like most of his class, he had an inexhaustible store of anecdote of those early days, and we delighted to go over to his camp-fire in the evening while taking our post-prandial smoke, and listen to his instructive as well as entertaining conversation.

Much to my disappointment, he knew nothing about the little golden bear, vague rumors of whose existence in these parts had reached my ears many years ago; and I was reluctantly obliged to file it away with other exploded myths. He was very intelligent and well educated, and drew our attention especially to the wonderful botanical wealth of this region, pointing out to us spikenard, Solomon's seal, a straw-colored columbine which he said was unknown elsewhere, and many other plants, which are highly valued for their medicinal virtues; and yet he had never been upon a railroad car. This idiosyncrasy was doubtless due to the antipathy held by most Visalians against the S. P. R. R., although few of them had carried it to that extreme, and still Mr. Bequette was one of the mildest of men, neither vindictive nor arrogant.

Three or four days with such favorable surroundings put us in fine condition for the work before us, and the luxuriant and nutritious pasturage of the mountain meadows had fully restored our horses. Up to this point there is a county road and a tri-weekly mail, but between this and Kern River, into which flows the stream of the golden trout, there are three lofty and rugged ranges of mountains accessible only with pack animals. On the morning of July 15 we started for Farewell Gap. It was only three miles to the top, but the elevation was 3,000 feet greater, and we were over two hours getting there. The great snow of former years still lay on the eastern slope, forcing us to make a detour on to the side hill. Just below this there was the same wonderful floral display of acres of Mariposa lilies, lupines, shooting stars, columbines, etc., and from the rocks the woodchucks,

basking in the sun, took a speculative interest in the cavalcade as it filed along the narrow trail. It was noon before we came in sight of dear old Broder Cabin, the roof peeping out of its bower of silver firs. On two different occasions, it had shielded us from terrific thunderstorms when no other shelter was near, and had also been the eastern terminus of our former outings. We were glad to see it again, but it was a little off the trail, and between rolled the boisterous Little Kern, so we did not visit it.

The sagacity of this decision was revealed later, when we encountered a tremendous hill, where for a full mile the trail was so steep, tortuous and rocky that it was appropriately known as the Devil's Corkscrew. When about half way up, one of the pack saddles suddenly shifted, throwing the horse from the trail over on to his back, and smashing and demoralizing his load to such an extent that at least an hour was required to put things into shape to continue our journey; and it was 9 o'clock that night when we reached the first meadow on Coyote Creek, where we encamped.

Early the next day we reached the edge of the great cañon of the Kern River, and almost opposite, across the chasm, possibly a mile away, in an air line, a stream came tumbling by three falls down into the Kern from a height of about 1,500 feet, and we realized at once that those shimmering waters were the goal of our three years' quest. It was Whitney, or Volcano Creek, as now called, the home of the golden trout.

Descending by a steep but fairly good trail for three miles, we reached the bottom, where we found several parties encamped. There were quite a number of women and children among them, and their elaborate camps indicated that they intended staying there several weeks. One of the bough beds I noticed was encircled by a horse hair rope, probably a substitute for snake antidote.

While we were busily engaged in making camp, two men came up from the river with rods and well-filled creels. They proved to be Clinton Miller, principal of the Whittier school in Berkeley, and Fred Balaam, a business man of Exeter, both fly-fishermen of the highest FOREST AND STREAM type. We were making rather extensive preparations for a two weeks' stay, and seeing that there would probably be a dearth of fish in our camp for at least a couple of meals, they quietly opened their creels and placed five trout on our kiack lid, the smallest over three-quarters of a pound, and the largest 2½ pounds in weight.

Our camp was pitched in one of those delightful spots that nature seems to have arranged expressly for the purpose, a little grove of large trees in an angle where two pure streams join; on the third side a wild strawberry bed with many ripe berries; on the fourth, a dead tree had fallen, shattering its limbs into a hundred pieces the right length for our camp stove. Elevation, 6,000 feet; climate perfect; fishing unsurpassed, and a ten-acre meadow close by that had been fenced by the Sierra Club, where we were permitted to put our horses—what more was to be desired?

There was one peculiarity in the arboreal features of this bottom that attracted my attention. While the trees, with the exception of a few willows along the streams, were all conifers, they were mixed in the most indiscriminate manner, and it was not uncommon to see a clump of five or six in which there were no two of the same species. Our bed was made under a sequoia; our stove sat under a giant cedar, our kiacks beneath a sugar pine, and our rods rested against a bull pine, while silver balsam and red fir could be seen all about us. Of game there appeared to be practically none. A few squirrels and a flock or two of mountain quail were seen, but no grouse nor deer sign; but as it was still the close season there was little to regret.

Our first trip was to the lake, situated about a mile below our camp. As to scenery, it was a distinct disappointment; but the fact that it contained many trout of five or six pounds weight, to say nothing of a multitude of smaller ones, was a fine point in its favor. It had been formed many years ago by a landslide, which had choked the bed of the Kern, backing up the waters for nearly a mile by about half that in width. Many dead stubs were still standing, and much submerged timber made fine lurking places for the big fellows, but were not so much appreciated by the angler. In former years two old but still serviceable dugouts were in use, but careless users had left them unfastened the previous fall and they had gone over the falls with the winter freshets. One wretched unwieldy log raft was the only substitute left, and this being in use, we contented ourselves with fishing from the shore, securing over twenty fish during the afternoon, none of which, however, would weigh over a pound.

The next morning ushered in for me what proved to be the red-letter day of the trip. Zerah decided to stay in camp; Wilfred went to the lake, and with tackle secured for a steep climb, I started up the river. This section is largely indebted to the Sierra Club for its opening up; two years ago nearly a hundred of the members, led by Prof. Le Conte, of the California University, encamped here on the Kern for several weeks, and besides greatly improving some of the trails, they threw a bridge across the river about a quarter of a mile above our camp. At this date it was not considered very safe for horsemen, although horses were sometimes led over it, and it was of course perfectly safe for footmen; and from the far side of this bridge started the trail to the land of the golden trout.

In laying out the trail, no attempt had been made to follow Volcano from its junction with the Kern. A rise of nearly 2,000 feet in about a mile, within which space all the falls were located, was considered too steep for general purposes, and was avoided by going around a mountain and striking the stream at the upper fall; and

although for the most part this was very steep, it was in other respects one of the best trails I saw in that section.

No fish can ascend either of the falls, and of course none of the golden trout that we carried over can ever return. This explains the fact that no other species are found in the stream. Many of them, however, must be carried over, for they are as plenty below the upper fall as anywhere, but few are found below the second, and none below the third, from which they probably go down and are lost in the Kern.

Once actually upon the ground and gazing into the stream that for two years had evaded me like a will-o-the-wisp, I was in no hurry to joint my rod. The pleasure of anticipation is great when the realization has become a certainty, and I was determined to enjoy it to the utmost. I had heard of a beautiful meadow three or four miles up the stream, where hummingbirds and flowers made a harmonious setting for the golden beauties of the stream; and while I paused and looked into the pool below the fall, where your old correspondent Van Dyke cast his line so many years ago, I did not wet my own there. Ages ago, just how many no one will ever know, there was a deep gorge where these falls now exist; but the Sierras were still forming, and at its upper end about ten miles away a great volcano, whose crater is still in evidence, belched forth its millions of tons of lava, filling the gorge many hundreds of feet in depth, all the way to its mouth. The first eruption was of a cream color, and evidently much the largest, forming in one place about a mile above the falls a natural bridge, over which the largest wagon could be driven and which is crossed by the trail with the stream passing under it fifteen feet below.

The superimposed stratum was of a dark brick color, its disintegration supporting a growth that greatly softened the original desolation. As I advanced the gorge rapidly widened into quite a valley, with the old walls, which in some places were almost perpendicular, still well defined. The will sufficient to make a rapid stream was easy and fairly regular, the elevation about 8,000 feet, and tamaracks, which in this section are not found much below that altitude, began to appear. Here also the sage brush so universal east of the Sierras, but which I had not before observed here, was abundant. The air was so invigorating that it seemed to fill my veins with the elixir of life, and my feet spurned the soil with the elasticity of youth. Mile after mile I left behind me, still apparently as fresh as when I started. Twice I crossed the stream on fallen trees, each time seeing the golden objects of my search darting to and fro in the clear waters beneath me; but I would not tarry until about 11 o'clock I stepped out of the timber into a great meadow over 100 acres in area.

I was there at last, but even then I was reluctant to break the exquisite charm that had enthralled me ever since I had left camp, and which had been so strongly accentuated as I traversed that high plateau. Why I should feel this reluctance is inexplicable to most people, but perhaps some of your enthusiastic anglers will understand it. Perhaps a faint memory of early childhood affected me, when with beating heart I chased an exceptionally beautiful butterfly, wild to capture it as it flitted from flower to flower, and remembered my disappointment as I saw it shattered and shorn of its glory by the blow that had reduced it to possession.

Be this as it may, I leisurely made my way far into the meadow, and sitting down in the grass on the bank of the stream, carefully jointed my rod. Just below me, within reach of my lure but hidden by a bend in the stream, was a pool shaded by a clump of willows. Into this pool as deftly as possible without exposing myself I dropped my fly. A vigorous tug was the immediate result, and the next instant a gorgeous creature resembling a scarlet tanager sailed over my head and fell in the grass beyond. For several minutes I stood regarding my prize. It was certainly the most beautiful fish I had ever caught. The length was about nine inches. The lower part of the body for an inch in width was the color of fresh-drawn blood on each side, running the entire length and including the gill covers was a stripe about half as wide of the same sanguinary color, but not quite so brilliant. Underneath this stripe and faintly visible through it were five or six dark spots the size and shape of a lima bean, such as I had never seen on any trout before. The rest of the body and tail was thickly studded with the little black dots found on every species of the trout family.

Out of this pool I took seven, ranging from six to a little over ten inches in length, which is as large as any that I saw or heard of, and at the end of one and one-half hours' fishing I had twenty-eight fish, all that I cared for.

For the table they proved to be superior to the Kern trout, and the only fish that could be classed with them in that respect were those from Eagle Lake, near Mineral King. Three days later Zerah and I made another trip to that mountain meadow and returned with thirty-six golden trout, finishing our record from that stream.

The two weeks we spent upon the Kern was a season of unalloyed enjoyment. Messrs. Miller and Balaam, who were encamped near by, visited us often and proved to be the most genial of men. The thunder showers that are usually so prevalent here at this season of the year, failed to materialize, for which we were duly thankful. Trout were always abundant in camp, and were an important portion of every meal, although we seldom fished more than three or four hours a day. Of the big ones we caught, and the still bigger ones we lost—of which there were several that I still remember with regret—I cannot attempt to describe. In that pure atmosphere fish could be dried by simply drawing them and hanging them in the open air on a line; no blow flies or other insects disturbed them, and we dried about twenty to take home,

## Wall-Eyed Pike Fishing on the Susquehanna River.

WALL-EYED pike fishing is now in full blast on the Susquehanna River in Pennsylvania and will continue so until the river freezes so solidly that it will be impossible for the fisherman to get his line in the water. But the angler does not call the fish wall-eyed pike, neither does he term it pike-perch but in his love for the fish he has glorified it by the name of "salmon." In order to distinguish his favorite from the lordly fish in the northern waters of North America, he calls it "Susquehanna salmon." So firmly is the name fixed and so general is its use that if one approaches the full "salmon fisher" anywhere in the Susquehanna valley and speaks of the wall-eyed pike or pike-perch, he will not know what is meant; but speak of the "Susquehanna salmon" and his eyes light up, he becomes animated and will talk for hours on the glorious sport which the fish affords. It may seem strange to anglers elsewhere, but it is a fact that all along the Susquehanna River and its great tributaries, there are men who angle for little else than "Susquehanna salmon" and who declare that it is the greatest fish which swims. That black bass are all right in every way as a game fish and trout are just the thing for dudes and for people who like to clamber along or wade little streams in the mountains, but for game qualities, for table use and all-around excellences, there is nothing to equal the "Susquehanna salmon," otherwise known as wall-eyed pike, pike-perch,

tackle ranges from a light, stiff rod to a pole which would hold a good-sized shark. His line is from fifty to seventy-five yards long. To it he attaches a spoon about the size of a No. 3 Skinner. It is to the spoon that the fishermen pay particular attention, and opinion differs little, not as to its form, but as to the material. Some use the ordinary tin spinner painted silver or copper, and a few use the ordinary spoon; but the real earnest old-time "salmon" fishermen prefer a solid copper spoon, and that spoon is always kept shining as brightly as the interior of grandmother's apple butter pot. The three-pronged hook is removed and in its place is hung a short snood of gut, to which is fastened two small hooks, say Nos. 3 or 4. The hooks are placed about two or two and one-half inches apart. Occasionally one of the hooks is the three-pronged hook of the spoon, but the majority of anglers discourage its use because of the uncertainty whether its use is strictly lawful, Pennsylvania forbidding the use of more than three hooks. To the line about three or four feet above the spoon is fastened a sinker heavy enough to carry the line to the bottom of the river, so that when the boat is rowed the lead will bump along from rock to rock. The lamprey eel is the universal bait. The upper hook is pushed through the head of the creature and the lower hook about half way down the body. Of course, at least one swivel is also used and sometimes two in order to prevent the line from twisting, for the correct method of fishing for wall-eyed pike in the Susquehanna River is by trolling.

among these were seven of the golden trout, but their brilliant coloring gradually faded and they soon lost much of their pristine beauty.

The return trip to Mineral King was devoid of special incident, and after a day's rest there Zerach and I prepared to attempt the ascent of Sawtooth Peak that almost overshadowed our camp with its towering summit 13,000 feet above the sea. He and the judge had tried it last year, while I stayed in camp nursing a crippled knee; but they failed to get above 11,000 feet, where the two Monarch lakes are situated.

We started at 6:30, reaching the lakes at 9:30. They are close together, occupying two benches, one above the other, and are from fifteen to twenty acres each in area and perhaps thirty feet deep. Both contain trout, some of which are of several pounds' weight, but they are very rarely taken, ignoring every lure. A gang of men were throwing in a dam to conserve the water for the use of the electric power company, whose plant was 8,000 feet below. It was expected that the Kaweah River would furnish all the power required, but it was deemed advisable to provide reservoirs for exceptionally dry years, and these lakes, with several others, were being utilized. The trail up to this point was easy, having been improved by the company for the benefit of the pack mules.

We reached the summit about noon, stopping there an hour. The view, while not to be compared with that of Shasta, Hood or Ranier for grandeur and beauty, is very extensive. Mt. Whitney, forty miles to the east, is the most prominent object in sight as it towers above all

THE WALL-EYED PIKE—"SUSQUEHANNA SALMON."  
From Fisheries Industries.

others, but Goddard, Brewer, Kaweah and many others were recognized.

Like the one we were on, many of the adjacent peaks were shaped not unlike the tooth of a buzz-saw, only less high and pronounced bare storm-scarred ledges of granite. Unlike the mountains of the north, whose summits from the timber line up for thousands of feet were covered with snow, these for the most part were perfectly bare, away down in the gulches there were drifts, and from where we stood we could look down the almost perpendicular face of the tooth 2,000 feet into a lake with snow banked all around it. The only vegetation I saw was a little blue flower growing out of a crevice within fifty feet of the top. Ten lakes were visible, all small and of glacial origin. In a crevice we found two tin buckets containing many names of those who had preceded us, and adding our own we returned to camp.

Two days later we visited Eagle Lake, where Dexter and I had caught such fine trout three years ago, but the march of civilization was in evidence here also. A dam had enlarged the lake and only two fish rewarded our most diligent efforts. The next day we started for home, making the trip from Mineral King to Visalia in two and one-half days. We were thinner than when we started and bronzed to almost the tint of a well-colored merschaum pipe; but the flesh that remained was healthy and firm. Our step revived memories of the elasticity of youth, and of the lassitude that so surely follows long years of office work not a vestige remained.

With what feelings of satisfaction did we ride in under the great oaks that shade the Huntley mansion. And then with such appetites to sit down to the table abundantly laden with the substantial of life flanked by the delicious fruits and melons of Tulare, over which Madam H. herself presided with such exceeding grace was a fitting climax to our successful quest of the golden trout.

FORKED DEER.

### Carp Against Mosquitoes.

IN the Universal Fishery Journal of Germany attention is called to the fact that fish destroy many annoying insects, especially mosquitoes. In Germany the common carp, the crucian carp, and the red eye, are considered the best insect-destroying fish. The committee created to consider the mosquito plague at Eltville-on-the-Rhine asks for information whether the kinds of fish named are really destroyers of the larvæ of mosquitoes on a large scale. It should be observed how many larvæ one fish eats per day; and whether other fish are as efficient in destroying these larvæ. Above all it is important that such fish can live in stagnant and putrid waters, because in such only the mosquito larvæ develop.

THE current edition of the *Game Laws in Brief*, sold everywhere, contains all the fish and game laws a sportsman ought to know. It is complete, accurate and up-to-date.

and in the western part of Pennsylvania, "Jack salmon."

Nearly two centuries ago, according to a story told by the late Simon Cameron, an Englishman and a Jesuit priest went to one of the lakes in New York and caught a number of wall-eyed pike, put them in barrels of water, carried them laboriously to the Susquehanna River and planted them there. Whether or not this story is true it is certain that the wall-eyed pike has found a congenial home in the Susquehanna River and all its branches. In the early part of the last century they were so numerous that the writers of that time were very enthusiastic over the sport which they afforded. One author in writing of this fish about 1840, said: "There is great sport fishing in the Juniata River near Newport. Here, day by day, fishermen gather with their poles and lines and they catch the 'salmon' as fast as they can bait their hooks. The banks of the stream are brushy and overgrown with trees, and it often happens that men in pulling the fish from the water do so with such violence that the fish are caught in the branches of the trees. The fishermen are in such haste to continue their sport that they do not always take the time to clamber the trunk to secure the fish, but simply break the line, put on a new hook and bait and go on fishing. Thus it is that sometimes by the close of the day the trees overhanging the water look like Christmas trees hung with fishes."

All sorts of illegal fishing had a bad effect on the stream, so that as the years rolled on they decreased in number and "salmon" fishing on the Susquehanna became exceedingly poor. But there has been a decided change within the last few years. The State fishery authorities have been planting young "salmon" in the Susquehanna and its tributaries annually by the million. The consequence is that there are probably more wall-eyed pike in that great river to-day than any time within three-quarters of a century. In fact, it is declared, and evidently with truth, that there are more wall-eyed pike in the Susquehanna now than there are black bass. The numbers are yearly increasing.

The open season for wall-eyed pike in Pennsylvania begins on June 15, and although large numbers are caught during the summer months, it is not until the cold days, beginning with September, that the fishing is at its best. When the early morning mist hangs low on the river hiding the surrounding trees and hills and even the almost countless islands, the "salmon" fisherman sets forth to his sport. It is then that the fishing is said to be best and continues to be so until after the sun has crimsoned the sky, risen above the horizon and rolled away the heavy, damp curtains of mist. Even when old Sol is high in the heavens, the wall-eyed pike will not hesitate to leave its rocky lair at the bottom of the river and seize the rolling, wabby lamprey eel in its fierce tooth-bestrewn jaws. On lucky days the fisherman will find very frequently that by nightfall he will have from a dozen to three dozen wall-eyed pike ranging from two to five pounds each.

The Susquehanna "salmon" fisherman has his own peculiar methods of pursuing his favorite sport. His

The line having been rigged, the bait properly adjusted, the fisherman takes his seat in the stern of the boat and an oarsman rows him up and down one of the many great pools in the river where the water is from eight to twenty feet deep. He zigzags through the swifts and swirls and among the rocks, where the wall-eyed pike lie in wait for their prey. A few years ago whenever a fisherman had a strike, the boatman would immediately put all "the beef possible" into his work. He would row frantically up and down the stream with all his strength, so that the "salmon" would be hauled to the surface of the water and dragged in the shortest possible space of time, with his mouth wide open and half drowned, into the boat. But conditions have changed. The "salmon" fisher of to-day wants to enjoy to the full the fierce thump, thump, thump of the hooked fish, and so the boatman has been drilled to row to the nearest eddy, where he rests on his oars and eagerly watches the contest between the fisherman and the fish. Generally the angler wins unless the sharp teeth of the wall-eyed pike severs the snood.

The wall-eyed pike bites and fights different from almost any other species of game fish. When he is hooked he does not rush furiously toward the mouth of the river like the striped bass, neither does he rise to the surface and make numerous frantic leaps into the air, nor does he rush all over the pool as a trout would do in the mountain streams. The first intimation that the fisherman has of a strike is a terrific jerk, which bends his stiff rod nearly double in an instant, and smashes anything but the strongest line. From that time to the end of the struggle the wall-eyed pike makes a series of tremendous jerks all downward, each following the other in such rapid succession that about all the angler can do is to grasp his rod firmly, keep his thumb firmly fixed upon the reel and hold on for dear life. It seems as though the fish, having taken the bait, simply presses himself against a rock and endeavors to jerk the hook from his jaw by main strength and fury. A struggle of a good-sized wall-eyed pike will last from five to fifteen minutes actual time, the period between the jerks gradually increasing, until finally the fisherman is able to reel him sullen, but still struggling, to the side of the boat and into the net.

It seems scarcely worth while to tell any one anxious to try wall-eyed pike fishing in the Susquehanna where to go. It is good in nearly every one of the great pools in the main Susquehanna from the State line to Sunbury, and in the north and west branches from end to end and up the Juniata as far as there is water enough to hold the fish. Possibly the favorite resorts are at Peach Bottom, Fite's Eddy, Bald Friars, the pools for twenty miles above and below Harrisburg, especially at Duncannon near the mouth of the Juniata and Tunkhannock in Wyoming county, on the north branch of the Susquehanna and between Williamsport and Renovo on the west branch. From Newport on the Juniata to the mouth of that stream are all good places. To any one of them the sportsman angler can go in perfect confidence that he can find boatmen will-

ing to take him out and also supply him with all the bait he needs. I except Duncannon because there is a hot-bed of fish pirates and every stranger who visits the place is supposed to be a fish warden, and he will have a very hard time of it until he is able to convince the native that he is not one of the upholders of the fish laws. The boatmen, as a rule, vie with each other in giving the anglers employing them the best sport and the largest catches.

W. E. MEEHAN.

## Fish and Fishing.

### Then and Now.

IN one of the most interesting letters of Mr. E. A. Samuels to *FOREST AND STREAM* he mentions the fact that about forty years ago, the whole of Grand Lake Stream was offered to a gentleman of Boston, the late lamented Prouty, for the ridiculously small sum of a few hundred dollars. It seems that Mr. Prouty, who was a lover of the landlocks, endeavored to induce some of his friends to unite with him in purchasing the river, but was forced to abandon the project for the reason that, as angling privileges were everywhere free and abundant, no one thought it worth his while to spend money in buying a river. And Mr. Samuels rightly ventures the statement that if Grand Lake Stream were now on the market one would have no difficulty in obtaining subscriptions of many thousands of dollars for it. I called this statement to mind the other day when I saw the suggestion of Dr. Morris with reference to the proposed purchase and rehabilitation of some of the other rivers of Maine; but I am reminded of an even more striking instance of the wonderful increase in value of salmon waters than that cited by Mr. Samuels.

It is a fact that not very long before the offer of Grand Lake Stream was made to the late Mr. Prouty, a still more remarkable one was made by the Government of Canada to another Bostonian, Mr. Walter Brackett. Mr. Brackett had already, at that time, had considerable experience with *Salmo salar*, having for five successive seasons fished the Dennys River in Maine, of which I had something to say in *FOREST AND STREAM* quite recently. Let me break into the thread of my other story here, long enough to speak of the splendid sport which the young artist enjoyed in and about Dennysville. It was there that the brave octogenarian of to-day, who is at present giving battle royal to the salmon of the Marguerite, killed his first specimen of the fish whose pictures have made his canvasses so famous. During the five years that he fished the Dennys River he averaged twelve fish a year, from 10 to 18 pounds apiece. Then he applied to the Canadian Government for a lease of the Ristigouche River. He was informed that it had been granted to Sir Alexander McKenzie a few days before, but that he could have its four tributaries for \$100 per year, which was the price to be paid for the main river, or he could have a season license of the Cascapedia for \$50, with the privilege of a nine years' lease at \$100 per year. Mr. Brackett selected the tributaries of the Ristigouche, and did most of his fishing at the forks of the Metapedia, taking a three years' lease, dated 1869. As an instance of the sport which he enjoyed for this ridiculous figure, when even the Mic-Mac Indians were permitted to spear without restriction, it may be mentioned that in twelve days he killed thirty-nine fish, which averaged 22¾ pounds.

Mr. Brackett did not fish either the Patapedia or the Upsalquitch, but with a pair of horses towed up the main river, and also up the Kedgwick, as far as McDougall's Brook, eighty-four miles from Fraser's, the site of the present home and main club house of the Ristigouche Salmon Club at Metapedia Station. There the driver was dismissed, and four delightful weeks were spent by the angler, dropping down the stream from day to day and from one pool to another. The veteran artist has assured me, over and over again, that this was one of the most enjoyable trips of a long lifetime. The river was indescribably beautiful and there were plenty of fish.

Mr. Brackett made no attempt to obtain a renewal of his lease, for he knew that it had been promised to four Canadian gentlemen of wealth and influence—Mr. George Stephen (now Lord Mountstephen), who got the Metapedia; Sir Hugh Allan, the Upsalquitch, and Sir Sandford Fleming and Mr. C. J. Brydges, late manager of the Grand Trunk Railway, who were given the main river. They paid \$20 each per year for the control and fishing of the whole of the Ristigouche water, the annual value of which to-day probably exceeds \$50,000. It may be mentioned, too, that the fishing of the Grand Cascapedia, which was offered to Mr. Brackett for \$50 a year, now yields the Government of the Province of Quebec \$8,500 per annum for only a portion of the river.

### Some Salmon Fishing Experiences.

Before me, as I write, are some of Mr. Brackett's letters, and as I have referred above to the fact that the first salmon killed by him was taken from the Dennys River in Maine, I must not forget to say that my genial old friend, who, like myself, believes in hewing as closely as possible to the line of strict exactness in the telling of fish and fishing experiences, frankly admits that he lost his first fish, though he killed his second, third and fourth ones. From the related experiences of many of my angling friends and acquaintances, I believe it is rather the rule than the exception for the novice to lose his first fish. My own personal experience does not bear me out in this respect, but then I have always been more fortunate than I deserved to be, though I had not the good luck to be born under the constellation Pisces.

Mr. Brackett's father had been a salmon fisherman before him, having aroused the son's ambition to follow in his steps, by his tales of killing salmon with a fly in the Kennebec; and Walter himself was a proficient trout angler when he fought and lost his first salmon, having met with much success at Lake Umbagog and in other parts of Maine. It is not much wonder that even the most accomplished trout fisherman should lose some of his presence of mind in the excitement of playing his first salmon, and should find it difficult to maintain exactly the proper amount of pressure upon the fish to avoid both the giving of a slack line and the using of too much force. Some novices do remarkable things under the in-

fluence of the excitement of their first salmon, and the effect upon my own cardiac region, of the leaps of a huge, lively mass of silvery fish at the end of my line, prevents me from experiencing the slightest surprise at anything that is done under such circumstances, even though the sportsman be proof against any such trifling weakness as buck fever, for instance.

I once accompanied one of the oldest and best trout fishermen of New England upon his first expedition against the salmon. His first fish having been hooked for him by his guide, all who heard the screech of the reel ran to see the novice play the salmon. He was a prime favorite in camp and everybody was anxious that he should kill the fish, for they were rising very poorly. But no sooner had he taken the rod in his hand than it straightened as quickly as it had bowed a minute before, and the line came back minus the fly and half the casting-line. My friend had suddenly forgotten all his reading up on the subject in the pages of Wells and Forrester and the others, and all the verbal instructions which had been poured into his ears, and in the excitement of his first salmon had grasped both rod and line together in the hollow of his hand, while the fish was running, with the inevitable result that something had to give way.

Mr. Brackett does not explain in the letter before me how he came to lose his first salmon, but there are, of course, many fish lost through no fault at all of the angler. Some are poorly hooked and the hook tears out. Occasionally it happens that the fish manages to get among logs or roots or other obstructions in the water from which it is impossible to restrain him, and so fouls the line. At others he may run beyond the angler's control, where the character of the water, the absence of a canoe or some other cause prevents the fisherman from following him. In such an event, of course, if the fish proves refractory, something must break.

I have followed fish in a canoe for the greater part of a mile, and it is related of the Rev. Dr. Rainsford, that upon one occasion he was towed four miles down the Ristigouche by a large foully hooked salmon, which promised at one stage of the game to take him right out to sea.

Mr. Brackett tells of some exciting runs down rapids in birch-bark canoes, while fast to 30 or 35-pound salmon, and also to some red-letter days of splendid sport. On one of the latter he left his camp on the Ste. Marguerite at 5 o'clock in the evening to be poled to a pool four miles up the river. He killed one fish on the way and seven more at his destination, returning to camp in time to eat supper by daylight, and bringing with him eight fish of a total weight of 213 pounds.

### The Life History of Immature Salmon.

Were it not so well known that unlike the sea trout which is so often found near the estuaries of rivers, the smolt disappear at once from the realm of observation upon reaching the salt water from the streams whence they derived their birth and infant nurture, it would be more surprising than it is that scientific investigation succeeds in adding so little to our limited stock of knowledge concerning the life history of immature salmon.

English newspapers of a recent date reported the fact that Mr. W. L. Calderwood, of the Royal Society of Edinburgh, had secured a specimen of a small salmon weighing about a pound and measuring fourteen inches in length, which was evidently in a transition stage from the condition of a smolt to that of a grilse. The securing of this specimen is considered rather remarkable, for while in this state of transition, the young salmon are somewhere in salt water quite beyond the pale of ordinary observation. Mr. Calderwood is understood to regard the size and time at which this specimen was secured as tending to dissipate the idea so long held, that only three or four months were required for the growth of the fish from the smolt stage of about three ounces in weight to that of a grilse of 3 or 4 pounds.

E. T. D. CHAMBERS.

## Stocked Stream Public Waters?

*Editor Forest and Stream:*

Something has been said about the case of the Rome Fish and Game Protective Association against E. O. Worden. As this case is one of general interest to citizens and taxpayers, and of particular interest to all those interested in fish protection and propagation, it may be well to state the facts distinctly. The Rome Fish and Game Protective Association is an incorporated association, whose object it is to stock the waters of Oneida county with fish, and to see that the protective laws are enforced. One of the streams stocked by them with fish from State hatcheries is Golley Brook. Under the law, on the application of a town board, the Forest, Fish and Game Commission can close a stream to all fishing for a limited period of years. The object of this provision is to allow fish to propagate naturally, in order that the waters in which they are placed, or to which those are tributary, may be replenished. The law specifies that streams thus closed are "public inland waters." The defendant, who is an attorney, made the point that "public inland waters" are navigable waters only. On the trial, his counsel, Mr. M. H. Powers, made his argument on this point, and raised continuous objections to every question asked by Mr. C. H. Wiggins, the attorney for the Rome Association. It was shown that the original owner of the land, through which Golley Brook flows, not only agreed to the planting of fish from State hatcheries therein, but favored the protection of those fish until they could reach the lawful size. The court decided against the contention of Mr. Worden. The attorney for the Association made the point that the stream had been stocked with the consent of the original owner of the land through which it flowed, and that subsequent owners had raised no objection to the continuance of this stocking, although they were aware that it was being done. The case has been appealed. Mr. Worden also has been sued by the Forest, Fish and Game Commission for the penalty provided by law for taking trout from closed waters.

The section under which the suit was brought was enacted by the Legislature for the purpose of providing a general law under which the Commission could act, in view of the fact that each year several counties were

asking for legislation providing for the closing of streams in a similar way. The law simply states that if the owner of the land through which a stream flows shall apply to have it stocked with fish from a State hatchery, the water so stocked shall be open to public fishing. A contract is here implied, and the fairness of the proposition will be seen when it is remembered that the State hatcheries are supported by money raised by public taxation. The law does not contemplate that any water shall become public water by the planting of fish raised in the State hatchery unless the owner or his agent applies for the fish, and the application blanks furnished by the Commission state distinctly that the fish furnished are to be planted in "public waters." Fish have a distinct commercial value, and, inasmuch as no person can take public property for private use without due compensation, it follows that anybody applying for fish from a State hatchery on the blanks furnished by the Commission, with the intent to deceive is liable to an action for the value of the property which he sequesters. This fact seems to have been overlooked by those who have recently attempted to close to the public streams like the Beaverkill and the Willowemoc and others. It remains for the higher courts to decide whether or not this law is good law.

JOHN D. WHISH,

Sec'y, Forest, Fish and Game Commission.

## Musical Fishes.

OROVILLE, Cali.—*Editor Forest and Stream:* In the Northern Crown, a neat little monthly magazine published at Ukiah, in northwestern California, is an article telling something of singing fish, and while fish stories in that particular line are not altogether new, they are comparatively rare, though related as facts, and the story mentioned is given as a bona fide contribution to the piscatorial branch of natural history. Generally, people are in ignorance of the fact that any of the finny tribe are endowed with the faculty of speech, though if I mistake not, the catfish is so called from his habit of purring under certain circumstances. A couple of years ago I caught a perch in the surf off the beach of Golden Gate Park, and handling him rather roughly, was surprised to hear him murmur a protest. Surprised, yet thinking the sound might have been caused by the escape of water from his throat, even as liquid gurgles when emptied from a jug, I hit the perch another rap and he distinctly muttered another protest. And there was nobody around either who could have perpetrated a ventriloquist joke upon me. I have seen the theory offered, too, that fish are insensible to pain, but if that rap I gave the perch didn't hurt him, why did he cry out?

I believe that much more could be said in affirmation of the opinion that the sound was really caused by some kind of fish peculiar to Big River, and also to Puget Sound waters.

As a matter of fact, nearly all wild animals have notes that are not commonly known of to humans. I can attest to the song of singing mice, and there are gophers who have notes that are rare and used only on certain occasions. Birds also. My knowledge of these have made me feel friendly toward the animal stories—biographies—which have had such a run the past few years, and I have always felt that John Burroughs did Ernest Thompson Seton an injustice in throwing discredit upon the latter's fanciful tales, though they did seem a little far fetched.

I cannot mail this without quoting, as apropos, the humorous line, just now going the rounds, to the effect that while fish are unable to talk, the whale, just the same, is a great spouter.

WM. FITZMUGGINS.

The story referred to in the Northern Crown is entitled "Big River and Its Singing Fish," and was written by Eugene Jamison Cox. It is as follows:

"None of these streams, the Garcia, the Gualala, the Albion, the Noyo, Big River and others following westward to the Pacific Ocean, from the coast range of Mendocino county could appropriately be called big. They are full and roaring in winter, but in the dry season are shallow excepting deep pools and stretches until they near tidal water, within a few miles of the sea, where they assume a considerable amount of dignity. These streams, so similar in general characteristics, wind through a vast range of picturesque diversified mountains, exquisite in coloring.

"Glimpses of quiet scenery along their margins, blend with wild views of hilltops, blue distance and changing skies, into dreams of beauty, into almost audible tones of harmony. Sweet-scented azaleas, rhododendron blossoms, masses of fern, tangles of low foliage and trees, massive sequoi and exhilarating air, are always associated with these westward streams in memory. One unless tract of many trees near a river is recalled, among them several giant sequoi having enameled-looking snow-white growths of the redwood, from four to six feet in height, growing from the wet soil up around their trunks. These delicate feathery sprays seemed so unusual—freakish. They were beautiful.

"Big River from a source near Orr's Hot Springs, traverses miles to the sea. Within six miles of the sea a boom or dam of logs, constructed years ago for milling purposes, crosses the river. Seaward from the boom, the river expands and deepens and soon spreads with the waves of the bay. Standing thus at the head of the tide water the boom must now appear a monument of the river's past life and usefulness. On its wet surface, time is surely tracing its sad inscription. The railway looks down smilingly, triumphantly on the river, peacefully stretched at the foot of its decaying mossy head stone. With the slow crumbling of time and the shifting position of the logs on the river, do the fish still sing at the boom.

"Singing Fish, a noise known by that name, was several years ago and is no doubt to-day, a distinctive, strangely unique feature of the river. A peculiar sound may be heard on the river, near the hour of midnight in the month of September, near the boom. Tradition states, only near the hour of midnight only in September, near the boom.

"The cause of this noise, which seems to have existed with the years is still unknown. The noise was investigated many years ago, by naturalists from San Jose, so the writer was informed, who advanced the

Sugar Island—St. Lawrence River.

SAILING RACES.

Event No. 1—Trophy sailing race, 9 miles; limit 3½ hours; six times around ½ mile triangle. Sea smooth; wind light. Start, 3 P. M.:

Event No.	First.	Second.	Third.	Fourth.	Fifth.	Finish.
1. Mab, Geo. W. MacTaggart—						
3 16 50	3 23 56	3 52 20	4 11 25	4 29 50	4 49 00	
2. Pioneer II., Wm. J. Ladd—						
3 18 03	3 36 03	3 56 37	4 15 35	4 34 30	5 04 30	
3. Bronco, Frank C. Moore—						
3 17 38	3 35 40	3 56 00	4 15 15	4 34 30	4 55 00	
4. Bee, Herman D. Murphy—						
3 19 32	3 37 42	3 57 15	4 18 10	4 41 00	5 04 00	
5. Roc, Dan B. Goodsell—						
3 20 32	3 40 47	4 03 00	4 24 05	4 46 00	5 08 35	

Won by Geo. W. MacTaggart, time 1h. 41m.; second, Wm. J. Ladd, time 1h. 54m. 30s.

Event No. 2—Dolphin trophy race, 7½ miles; time limit 3 hours; five times around ½-mile triangle. Sea smooth; wind fresh. Start, 4:25 P. M.:

Event No.	First.	Second.	Third.	Fourth.	Finish.
1. Pioneer II., Wm. J. Ladd—					
4 48 25	5 09 05	5 29 31	5 51 56	6 17 10	
2. Bee, Herman D. Murphy—					
4 47 32	5 09 15	5 31 48	5 55 43	6 22 50	
Bronco, Frank C. Moore, withdrew.					
Mudjikeewis, Carl Moore—					
4 57 25	Withdrew.				
Chiquita, M. Ohlmeyer—					
4 53 00	5 20 25	5 57 19	6 16 49	Withdrew.	
Canuck, Wm. G. Harrison—					
4 50 50	5 16 55	5 56 53	6 18 30	Withdrew.	

Won by Wm. J. Ladd, time 1h. 52m. 10s.; second, Herman D. Murphy, time 1h. 57m. 50s.

Event No. 3—Sailing race, 6 miles; time limit 2½ hours; four times around ½-mile triangle. Sea lively; wind strong. Start, 10 A. M.:

Event No.	First.	Second.	Third.	Finish.
1. Bee, H. D. Murphy.....	10 14 00	10 27 00	10 40 45	10 55 20
2. Roc, D. B. Goodsell.....	10 15 00	10 28 15	10 43 00	10 56 25
3. H. M. Moore.....	10 18 50	10 31 00	10 45 30	11 00 20
Canuck, W. G. Harrison.....	10 22 00	10 39 00	10 50 15	Withdrew.
Mab, G. W. MacTaggart.....	10 15 39	Withdrew.		

Won by Herman D. Murphy, time 55m. 20s.; second, Dan B. Goodsell, time 56m. 25s.; third, Herbert M. Moore, time 1h. 20s. Only 65ft. sail area, cruising rig, against 105ft.—a magnificent showing.

Event No. 4—Novice sailing race, 3 miles; limit 1½ hours; twice around ½-mile triangle. Sea lively; wind strong. Start, 3:15 P. M.:

Event No.	First.	Second.	Third.	Finish.
1. Herbert M. Moore.....	3 53 46			
2. J. R. Dickson.....	4 00 22			

Winner's time, 38m. 46s.  
Event No. 5—Open canoes, sailing around Sugar Island. Sea lively; wind strong. Start, 10:33 A. M.:

Event No.	First.	Second.	Third.	Finish.
1. Frank C. Moore.....	11 05 55			
2. Geo. W. MacTaggart.....	11 06 40			
3. Geo. P. Douglass.....	11 07 35			
4. Louis C. Kretzmer.....	11 08 20			
5. R. P. Nichols.....	11 12 28			
6. C. A. Robinson.....	11 14 33			
7. W. Carmalt.....	11 18 19			

Won by Frank C. Moore, time 32m. 55s.; second, Geo. W. MacTaggart, time 33m. 40s.

Event No. 6—Open canoe sailing, 1½ miles; once around ½-mile triangle. Wind fresh; sea lively. Start, 3 P. M.:

Event No.	Elapsed.
1. Frank C. Moore.....	0 21 52
2. Geo. P. Douglass.....	0 21 55
3. C. A. Robinson.....	0 23 12
4. W. Carmalt.....	0 24 16

Won by Frank C. Moore; second, Geo. P. Douglass.

Event No. 7—Sailing race, cruising class; 85ft. sail area; for decked canoes capable of storing complete camp outfit; three times around ½-mile triangle. Sea smooth; wind fresh. Start, 2:30 P. M.

Event No.	Elapsed.
1. Canuck, Wm. G. Harrison.....	0 49 53
2. Mayflower, J. E. Plummer.....	0 50 00
3. Mudjikeewis, Carl Moore.....	0 50 00
4. Chiquita, M. Ohlmeyer.....	0 50 00

Won by Wm. G. Harrison, time, 49m. 53s.; second, J. E. Plummer.

PADDLING RACES.

Event No. 8—Trophy, 1 mile straightaway. Sea smooth. Start, 11:59 A. M.:

Event No.	Elapsed.
1. E. B. Nellis.....	0 08 55
2. G. L. Borland.....	0 08 57
3. Ed. E. Dey.....	0 09 32
4. Arthur G. Mather.....	0 09 45
5. N. I. Rouse.....	0 09 47

Event No. 9—One man, single blade; ½ mile straightaway. Start, 4:54: First, Arthur G. Mather, time 4m. 42s.; second, B. I. Rouse; third, J. R. Dickson.

Event No. 10—One man, double blade, ½ mile straightaway. Start, 4:51: First, Arthur G. Mather, time, 3m. 2s.; second, R. P. Nichols; third, J. R. Dickson.

Event No. 11—Tandem, single blades; ½ mile straightaway. Start, 10:54 A. M.: First, Arthur G. Mather and Ralph Hunter; second, B. I. Rouse and J. R. Dickson.

Event No. 12—Tandem, double blades; ½ mile straightaway. Start, 6:22:53 P. M.: First, D. S. Pratt and R. P. Nichols, time 3m. 6s.; second, J. R. Dickson and B. I. Rouse; third, Arthur G. Mather and Ralph Hunter.

Event No. 13—Mixed tandem, ¼ mile: First, Miss Gard and J. R. Dickson; second, Mrs. Parsons and B. I. Rouse; third, Mrs. Harvey and Geo. W. MacTaggart; fourth, Miss Reichert and W. G. Harrison.

TILTING.

Event No. 14—First bout: D. S. Pratt and J. R. Dickson won from M. Ohlmeyer and G. P. Douglass.

Second Bout—H. Lansing Quick and Wm. G. Harrison beat R. P. Nichols and B. I. Rouse.

Finals—H. Lansing Quick, tilter, and Wm. G. Harrison; paddler, won from J. R. Dickson, tilter, and D. S. Pratt, paddler.

Event No. 15—Special race, one man, single blade; around Sugar Island; 150lbs. of ballast to represent cruising outfit. Start and finish off headquarters. Start, 4:38:05 P. M. Island to port: First, Arthur G. Mather, time 15m. 7s.; second, J. R. Dickson; third, B. I. Rouse; fourth, D. S. Pratt.

Event No. 16—Special race, tandem, single blades; around Sugar Island; 200lbs. ballast to represent cruising outfit. Start and finish off headquarters. Island to starboard. Start, 4:45 P. M.:

Event No.	Elapsed.
1. Herman D. Murphy and Wm. J. Ladd.....	0 15 22
2. H. L. Quick and Geo. P. Douglass.....	0 15 24
3. Wm. G. Harrison and Perry D. Frazer.....	0 15 26
4. Chas. H. Parsons and Clifton Sparks.....	0 16 35

An all-cruisers' event, the most interesting in the series.

Event No. 17—Special race, decked cruisers, capable of stowing complete camp outfit; with 85ft. sail area limit; around Sugar Island. Start and finish off headquarters. Island to port. Start, 2:55 P. M.:

Event No.	Finish.
1. Wm. G. Harrison.....	3 23 00
2. Mat. Ohlmeyer.....	3 28 12
3. J. E. Plummer.....	3 31 00

Won by Wm. G. Harrison, time 28m. Judge, Geo. P. Douglass. Starter, Wm. W. Crosby. Regatta Committee—Mat. Ohlmeyer, Chairman; Wm. G. Harrison, Arthur G. Mather, Ralph Hunter.

Red Dragon C. C.

THE Red Dragon Canoe Club of Philadelphia closed its twenty-second racing season Saturday, Sept. 16. On that date the fall regatta was held on the Delaware River off the club house, Wissinoming, Pa. The day was an ideal one for water sports, and the crowd thoroughly enjoyed the races, some of which were very close and exciting.

Many guests were present from out of town clubs, including members of the Park Island Canoe Association, Yonkers Canoe Club, Beverly Y. C. and Monte Cristo Canoe Club, Delanco. The Red Dragons were pleased to have with them Baron Theodor Quasebart, of the Royal Canoe Club, Frankfort, Germany; W. A. Furman, of Trenton, N. J., Vice-Commodore of the Atlantic Division, A. C. A., and cheerful James K. Hand, of the Yonkers Canoe Club, Yonkers, N. Y. Commodore Clifton T. Mitchell did the honors in entertaining the out of town visitors at his pretty bungalow, and there were many urgent calls at the telephone.

The races were well contested, the Red Dragon C. C. men ably holding up their reputation as skillful handlers of the paddle. In the evening the prizes were presented to the fortunate winners, Mr. Edward Hemingway adding a few facetious remarks as each recipient came forth and accepted a handsome cup.

There was less of the tedious delay between races than usual owing to the manner in which the Regatta Committee—Messrs. F. W. Noyes, E. D. Hemingway, Edward K. Merrill, M. D. Wilt and Alfred Belfield—handled the affair and hustled the crews to positions.

The winners of the various races follow:  
No. 1—Club Trophy, paddling, double blades, ½ mile: Edward K. Merrill, R. D. C. C., first; Julius Schmitz, R. D. C. C., second; T. L. Hammersley, Monte Cristo, third.

No. 2—Tandem Broom Race, ¼ mile (brooms used for paddles): Merrill and Wilson, R. D. C. C., first; V. Davis and Conard, Beverly Y. C., second; Schmitz and Hammersley, R. D. C. C., third; Scott and H. Davis, R. D. C. C., fourth.

No. 3—Tandem Single Blade, ½ mile: Merrill and Wilson, R. D. C. C., first; Conard and V. Davis, Beverly, second; Hammersley and Thompkins, Monte Cristo, third.

No. 4—Mixed Tandem, Double Blade, ¼ mile: Mr. Conard and Miss Jones, Beverly Y. C., first; Mr. Merrill and Miss Longmore, R. D. C. C., second; Mr. Schmitz and Miss Powell, R. D. C. C., third; Mr. and Mrs. Park, R. D. C. C., fourth. This was the most exciting race of the day, the winners pulling out ahead by three feet at the finish.

No. 5—Tilting Tournament: H. Davis and Blummer, R. D. C. C., beat Thompkins and Hammersley, Monte Cristo; V. Davis and Haines, Beverly Y. C., beat Merrill and Wilson, R. D. C. C. Finals—Haines and V. Davis, Beverly Y. C., first, beat H. Davis and Blummer, R. D. C. C., second.

No. 6—Swimming Race, 100 yards: Owing to the well known ability of Julius Schmitz, R. D. C. C., only one contestant was willing to compete with him. "Jimmie" Longmore, known as the "human frog," surprised the assemblage by swimming a splendid race and winning by 10ft.  
W. K. PARK, Cor. R. D. C. C.

A. C. A. Amendments.

Editor Forest and Stream:

Notice is hereby given that I desire to offer for discussion and adoption if approved at the executive meeting of the A. C. A. in October next, the following amendment:

That Article 2, Section 2, Chapter 1 of the By-Laws read: "The entrance fees and dues shall be received by the treasurer, 50 per cent. for the Division and 50 per cent. for the A. C. A. treasury." The balance of the article to remain as previously adopted.

CANOEING NEWS NOTES.

Following the annual meeting of the Executive Committee of the American Canoe Association on Saturday, Oct. 14, in New York city, a dinner, complimentary to the visiting officers, executive and other committees, will be given by the Atlantic Division at the Hotel Astor, Saturday evening, Oct. 14, at 7 o'clock. A record-breaking outturn of the Division is earnestly hoped for. Circulars will be mailed each member, and details will follow in next issue. The following is the dinner committee: Messrs. H. C. Ward, chairman; P. F. Hogan, W. Carmalt, W. A. Furman, F. W. Noyes, L. C. Kretzmer, W. R. Simpson, J. K. Hand.

THE current edition of the *Game Laws in Brief*, sold everywhere, contains all the fish and game laws a sportsman ought to know. It is complete, accurate and up-to-date.

To sit four hours, in an office shaded  
By awnings striped, and not invaded.  
By sun or flies, with a faithful clerk  
To do his bidding in all—that's work.

To sit and fish, with the hot sun blist'ring  
His neck, with the glare on the water glist'ring,  
No ice—mosquitoes, canned ham to stay  
His appetite, nothing more—that's play.

THE MANY USE OIL

theory that it was very likely caused by a peculiar species of fish, lying deep under the logs. From this time the noise has been referred to as Singing Fish, however, none were ever seen. Wiser men than they, who know the river better, and who attach no serious thought to the noise, believing it to be, if understood, the result of some simple phenomenon, say it is much more reasonable to suppose the noise to be caused by insects.

"The rumor of Singing Fish lies dormant in the atmosphere of the vicinity near the river. Every now and then, purposely or by some chance conversation, the rumor floats out like a cloud, to a stranger or sojourner of the neighborhood. The fame of these fish has been extended inland. The rumor never varies—seems to have been handed down, tradition-like, assuming such substantiality as never to be doubted; yet on account of the absurdity of the name given to the noise, the rumor is smiled at queerly, and jested about as if it were a myth.

"The opportunities for an investigation are very rare. September comes but once a year, and fogless nights suitable for an expedition through perilous ways do not occur each night of that month.

"An evening in September several years ago was more than favorable for a trip far up the river. The moon dispensed a soft twilight which seemed a tender prelude to the deeper, fuller tones of a majestic symphony of moonlight earth and water advancing, streamed through and peeped over the straggling pines and oaks silhouetted on the hilltops east of town, then swung out in a flood of silver light, transfiguring the strips of land as if with magic.

"The river below, a stream of pearl, merged in an ocean of glittering waves of moonlight. There was no breath of buoy. The atmosphere was warm, intensely clear and buoyant as spirit. From under the shadow of the mill, a still pile of gloom in the moonlight, a boat pushed out to the middle of the stream for the boom. To a picnic spot, on the edge of the river, a pleasure party had rowed. Their faces could be seen around the glow of a campfire. With lugubrious song, 'Weep no more my lady,' from this party on the bank, sweetly dying with the distance, the boat still steered on up the yet shadowless middle of the river.

"Moonlight, with its glamour obscures details, rendering all objects unreal and fantastic, producing a feeling of mingled awe and admiration, an emotion often mixed with fear—it is noticeable the more remote from human habitation, the more fantastic are shapes and forms, the more profound the unreality of existing things, until one would not be in the least surprised, if a bit startled, to push against a fairy each turn of a moonbeam.

"The goddess of the moonlight realm had thrown over hills, river and sky her wand of enchantment. The hills familiar and peacefully attractive in daytime attire were now formidable, fascinating walls of blackness ranged along the river's edge, rising in most places abruptly. The moonlight on the river, how weird! The very water, highly phosphorescent illusory.

"Each dip of the oar left trailing splashes of snowy, luminous water. Only the touch of the hand, in the cool, flowing liquid could dispel an illusion; then as the hand dipped, crushes of sparkling white foam defied a reality. Soon the stream began to grow noticeably narrower. The dark hills and trees along the banks, on opposite sides, to come closer together. Long, black shadows from bank to bank streaked the water, met and mingled.

"We were in the dark. Light fog began drifting up the river. By a dim reflection of moonlight, the visage of the boom was dimly perceptible. The boat was pulled through and tied to a log, in the middle of the stream. Struggling out on logs, rafted together, floating over the water, a small party sat to investigate the noise known as Singing Fish. By the light of a match one of the party glanced at the hands of a watch, it was already midnight.

"The unnecessary caution of hush—"keep still"—was observed. There was breathless silence for what seemed a long time. Not a sound to be heard! Stillness, darkness, a reach of forest solitude hung like a pall around. Each doubtless combating unconsciously, cheerfully any dark imagery, or a possible resurrection of any old ghost story from the unused cells of his brain. A dark solitude, somewhere along the north of the river loomed up in one's mind unbidden, unceremoniously, but not being petted or encouraged took flight. It was a long, inky black, stagnant pool, hid in trees and heaps of debris, around which hung a dismal mythical story of a woman who over the loss of a husband by drowning became insane, and was not heard of for days afterward until dragged from this black pit. The thought of a bedraggled body, dripping with black inky water flitted around, vaguely somehow associated in the mind, as being something intimate in an uncanny way with Singing Fish.

"A cycle of thoughts by each was the end of stillness. A broken conversation began, the fish forgotten, when a whizzing, whirring sound from everywhere near the surface, not very loud, came as a shock and a surprise. We were the center of a large circle of low buzzing and sizzling. The sound was not in the least like an accented lullaby of frogs or the accents in the whir of insects.

"It was an unaccented monotonous low whir. Something like the cutting of saws in large mills would sound smothered deep underground. Once wound up nothing disturbed it. After listening to it some time the investigation ended. The boat drifted down the stream in damp prosaic reality. For fifty or seventy-five yards away the fish could still be heard singing. While listening to the noise, not a member of the party felt convinced as to what it really could be."

In a footnote the editor says:

"Since receiving the above MS. other facts as to the fish known as humming or singing fish, have come to us. In July and August, of the year 1888, in the Victoria arm of the Strait of Georgia or Juan De Fuca, Vancouver, British Columbia, on sultry evenings was heard the sound of the humming, or singing fish—a noise almost identical with that of the Chinese musical kite."

# YACHTING

## Astor Cup Races.

Newport, R. I.—Wednesday, Sept. 13.

THE postponed races for the Astor cups were sailed off Newport on Wednesday, Sept. 13. These races had been postponed from the cruise on account of the programme arranged for that feature being knocked out by a northeast storm. The conditions that govern these trophies given annually by Capt. John Jacob Astor are that only boats that have not been hauled out to clean since the cruise began are eligible, and so other conditions had to be framed. These were practically, all boats to be in racing trim and sail over one of the two courses off Newport. It was expected that Invader would start against Elmina and Corona in the schooner race, and that Doris would meet Mineola, Yankee, Sybarita and others in the race for single stickers. Both of these boats were entered, but it is probable that they were kept from reaching the starting line. There was thick fog off Newport right up to the morning of the race for several days, and as it was, some of the boats arrived there only just before the starting time. The Regatta Committee, Messrs. Oliver E. Cromwell, H. de B. Parsons and Franklin A. Plummer, were to have been on board the flagship *Colonia*, but a barge collided with *Colonia* just before she was to start for Newport and prevented her being on hand. Captain Astor then placed the *Nourmahal* at the disposal of the committee and that yacht was the judges' boat. There was quite a large fleet out to follow the races, and each one had a large party on board. The Vice-Commodore's yacht *Narada* was one of the most conspicuous, and among others was the *Tuscarora*, *Josephine*, *Enterprise*, *Sultana*, *Rambler*, *Oneida*, *Haida*, *Roamer*, *Eugenia*, *Emerald*, *Venetia* and *Virginia*.

The yachts that started, their owners, rating and allowances, follow:

Schooners.	Rating.	Allowance.
Elmina, F. F. Brewster.....	89 90	.....
Corona, Arthur F. Luke.....	87 86	1 54
Katrina, James B. Ford.....	58 86	43 15
Venona, Robert Olyphant.....	39 93	1 24 20
Singlemasted Vessels and Yawls.		
Sybarita, W. Gould Brokaw.....	86 31	.....
Mineola, W. Ross Proctor.....	74 79	6 41
Yankee, J. Rogers Maxwell.....	74 63	6 26
Humma, R. W. Emmons 2d.....	51 30	44 44
Mimosa III., Trenor L. Park.....	30 91	1 49 57
Nautilus, H. W. and A. G. Hanan.....	26 59	2 10 46

It will be seen by these times that the big boats had a big task on hand, and the owners of the smaller boats had been attracted by the allowance they got and were made bold by the success of the small craft during the cruise of the *New York Y. C.* The wind when the yachts reached the Brenton Reef Lightship was N. by E. It was a light breeze and all but *Mimosa* and *Nautilus*, which are pole-masted vessels, had club topsails aloft. There was a big roll on the sea and the boats pitched and tossed in lively fashion. The course selected was the Vineyard Sound and Hen and Chickens Lightships. This course was 38 miles in length. The first leg is 17 1/2 miles E.S.E., the second N. by E. 4 miles, and the third W. 3/4, N. 16 3/4 miles. This meant a reach to the first mark, and if the wind held, a beat to the second and then a reach home. Sloops were sent off first at 11:10 o'clock. Each had two minutes to get over the line, and they crossed as follows: *Mimosa III.*, 11:10:19; *Humma*, 11:10:35; *Sybarita*, 11:10:39; *Yankee*, 11:11:03; *Mineola*, 11:11:09; *Nautilus*, 11:11:52. All except *Yankee* had up reaching jibtopsails and were at the windward end of the line. *Yankee* took the leeward end and Mr. Harry L. Maxwell, who sailed the boat, had caused to be sent up a balloon-jib topsail, which, under the conditions, proved to be the best sail. The schooners followed at 11:15 and they crossed in the order: *Elmina*, 11:15:24; *Corona*, 11:15:42; *Katrina*, 11:16:17; *Venona*, 11:16:42. *Elmina*, *Corona* and *Venona* had small main topmast staysails and reaching jibtopsails, and *Katrina* had a large main topmast staysail. *Corona* was just to weather of the wake of *Elmina* and both yachts luffed high of their course until *Elmina* began to draw before they squared away. *Yankee's* balloon did well. It lifted the yacht and she pointed almost as high as those with the smaller headsails and footed faster. At 11:50 the wind freed a little and the leaders changed headsails so that soon all had balloons set. At noon *Sybarita* was off West Island, *Yankee* was to leeward of her and *Mineola* was in the wake of *Sybarita* and not far astern. *Humma* was to windward of all, but further back. Then came *Elmina*, *Corona*, *Katrina*, *Mimosa III.*, *Venona* and *Nautilus*. Then the wind lightened very much and *Yankee* found a soft spot, and all except *Mimosa* and *Nautilus* passed her, but at 12:45 it came in again from the W.N.W. and spinnakers were set to port. The times taken at the Vineyard Sound Lightship were: *Elmina*, 1:26:45; *Mineola*, 1:29:50; *Yankee*, 1:32:20; *Sybarita*, 1:33:40; *Corona*, 1:40:50; *Humma*, 1:55:15; *Katrina*, 2:00:20. The others were far astern.

The boats changed balloons for small head sails on the second leg and had a close reach on the port tack. The wind freshened, too, which rather favored the stern boats, but it did not do them much good. The times taken at the Hen and Chickens Lightship were: *Elmina*, 2:01:42; *Mineola*, 2:04:00; *Yankee*, 2:07:12; *Sybarita*, 2:09:20; *Corona*, 2:19:00; *Humma*, 2:31:00; *Katrina*, 2:38:00. It was a beat home and *Elmina* and *Mineola* took the starboard tack as soon as they passed the lightship, while the others held further in toward the shore before tacking. They had a fair tide on this leg and those holding in shore got more benefit from the tide running into the Sakonnet River. *Mineola* and *Yankee* made several short tacks, and *Yankee* made a good gain, so that these two got very close together. Captain Dennis on *Elmina* watched *Corona* carefully, and seeing that *Corona* was gaining by the in shore tack, stood in to hold her safe. The fight between *Mineola*, *Yankee* and *Sybarita* was a pretty one. Tack after tack was made by these three, and at one time it looked as if *Sybarita* had the race safely in hand, but then she lost by a shift in the wind. When two miles E. West Island *Yankee* and *Mineola* held well in toward the shore. The wind hauled more to the W. and gave *Mineola* a big advantage and a commanding windward position. *Yankee* held on her inshore tack, while the others were standing out, and shortly afterward the wind shifted again, this time to the northward and threw *Yankee* from the leeward position to the windward position. It was a great piece of luck and came at the right time. In the matter of luck *Mineola* and *Yankee* had been treated alike, but *Yankee's* luck came at the right time. *Sybarita* was outlucked throughout the race. After passing West Island, *Sybarita* drew ahead but was chased very closely by *Yankee*, while *Mineola* was dropped astern. *Sybarita* and *Yankee* made a close finish and *Sybarita* got across the finishing line first by 19s. She crossed at 4:36:54. *Yankee's* time was 4:37:13, *Mineola's* 4:38:58. *Elmina* finished at 4:56:52, *Corona* at 5:23:35, *Humma* at 5:31:22 and *Katrina* at 6:30:13. After the three leading boats had got in, the wind died down and later came in from the W. making it a beat again to the finish. The smaller boats gave up the contest when they found they had no chance to win. The summary:

Schooners.	Start.	Finish.	Elapsed.	Corrected.
Elmina.....	11 15 24	4 56 52	5 41 28	5 41 28
Corona.....	11 15 42	5 23 35	6 07 53	6 05 59
Katrina.....	11 16 17	6 30 13	7 13 56	6 30 43
Venona.....	11 16 42	Did not finish		
Sloops and Yawls.				
Sybarita.....	11 10 39	4 36 54	5 26 15	5 26 15
Yankee.....	11 11 03	4 37 13	5 26 10	5 19 29
Mineola.....	11 11 09	4 38 58	5 27 49	5 21 23
Humma.....	11 10 35	5 31 22	6 20 47	5 36 03
Mimosa III.....	11 10 19	Did not finish		
Nautilus.....	11 11 52	Did not finish		

So the cups were won by *Elmina* and *Yankee*. *Elmina* beat *Corona* 24m. 31s. and *Katrina* 49m. 15s. *Yankee* beat *Mineola* 1m. 54s., *Sybarita* 4m. 52s. and *Humma* 9m. 48s.

## Rear Commodore's Cups—Thursday, Sept. 14.

Owing to the misunderstanding, only schooners raced for Vice Commodore Henry Walters' cups. Early in the morning, *Yankee's* mainsail was changed. On *Mineola's* this was thought to mean that she would not race, and stores and fittings were put on board. The two sloops started W. to lay up as the schooners were cross-

ing the line. *Mimosa III.* failed to appear at the starting line and *Humma* and *Nautilus* were the only two out at the Lightship. Both were ready to race, but each owner waited to see if the other would start, with the result that neither went over the line.

The wind was N.N.E. and the courses selected for the Astor Cup races were chosen again, and at 10:30 o'clock, the schooners were sent off. The wind was quite strong, and only working topsails were carried, and as it was a close reach to the Vineyard Sound Lightship, all carried baby jib topsails. Before the start the maneuvering was quite pretty and *Corona* got the best of it. She crossed the line at 10:30:28 on the port tack. *Venona* was next at 10:31:02. Then came *Elmina* at 10:31:10 and *Katrina* at 10:31:27. Soon after the start the wind shifted so that they could not lay their course, and then grew lighter. *Elmina* soon picked up *Corona*, and at 11:15 after a short luffing match passed that boat to windward. The wind got much lighter, and at 11:35 *Elmina* sent up a club topsail and the others soon followed her example. Each had to make a short hitch to fetch the Lightship and the time taken as they passed were: *Elmina* 12:17:03, *Corona* 12:26:47, *Katrina* 1:11:00, *Venona* 1:44:30.

The wind then was E.N.E. making it a reach to the next mark, and it freshened again so that the yachts made good time. *Corona* gained on this leg and *Katrina* held her own. The times at this mark were: *Elmina* 12:47:15, *Corona* 12:56:12, *Katrina* 1:43:30, *Venona* 2:19:00.

Sheets were eased off to port and spinnakers set to starboard for the run home. The freshening wind greatly favored *Katrina* and enabled her to make quite a big gain. The leaders before they reached the finish had to gybe over and set spinnakers to port, while *Katrina* was able to sail on the same gybe as she started. *Elmina* finished at 3:43:23, *Corona* at 4:10:20 and *Katrina* at 4:21:00. *Venona* was not timed. The committee waited out until her allowance had expired and then went into the harbor. The summary:

	Start.	Finish.	Elapsed.	Corrected.
Elmina.....	10 31 10	3 43 23	5 12 13	5 12 13
Corona.....	10 30 28	4 10 20	5 39 52	5 37 58
Katrina.....	10 31 27	4 21 00	5 49 33	5 06 18
Venona.....	10 31 02	Not timed.		

*Katrina* won the cup, beating *Elmina* 5m.55s. and *Corona* 31m. 40s.

## National Motor Boat Carnival.

Hudson River, N. Y.—Sept. 14, 15 and 16.

First Day, Thursday, Sept. 14.

THE first of the three days' racing of the National Motor Boat Carnival commenced on Thursday, Sept. 14. Messrs. A. B. Cole, Manhasset Bay Y. C.; Allen E. Whitman, Seawanhaka Y. C.; Charles P. Tower, Larchmont Y. C., and F. W. Belknap, Manhasset Bay Y. C., were in charge of the races.

The weather conditions were eminently satisfactory for the racing of high speed motor boats. There was a brisk northerly wind, but this did not disturb the water any to speak of. The tide was running ebb.

The start for all classes was made off the foot of West Ninety-seventh street. The boats that went 30 knots covered three times a 10 nautical mile course. The boats covering 19 1/2 knots went thrice over a 6 1/2 nautical mile course.

In the class for cruising boats of over 50ft. *La Mascotte* won. These craft went over the 30 nautical mile course.

The cruising boats of 50ft. and under covered the 19 1/2 nautical mile course and *Arcadia* won handily.

*Vitesse* was given the race in the class for open launches, but later the judges reversed their decision and gave the race to *White Fox*, which boat finished first and was really entitled to the race. These boats went over the 19 1/2 knot course.

The races for the other classes took place in the afternoon. The first class to start were the boats of 39ft. and under. Out of nine entries there were but five starters, and of this number only two finished. *Dixie*, a Tams, Lemoine & Crane production, won easily, defeating *Shooting Star II.*, the only other boat to cover the course. Den, of which so much was expected, as extravagant claims regarding her speed had been made, broke down soon after the start and was unable to proceed. *Winton* started late and did not finish. *Six Shooter* turned up half an hour after her starting time and did not start. The following are the times made by *Dixie* and *Shooting Star* on the three rounds of the course:

	First.	Second.	Third.
<i>Dixie</i> .....	0 31 17	0 30 42	0 30 50
<i>Shooting Star</i> .....	0 33 03	0 33 19	0 32 05

*Veritas*, the large high speed boat designed by Mr. Henry J. Gielow, had for competitors *XPDNC* and *Skeeter*. She allowed the former 14m. 42s. and the latter 16m. 23s. *Veritas* made the best time on each round, as is shown in the following table:

	First.	Second.	Third.
<i>Veritas</i> .....	0 29 16	0 24 52	0 29 15
<i>XPDNC</i> .....	0 32 56	0 33 03	0 30 03
<i>Skeeter</i> .....	0 34 56	0 33 45	0 35 28

On the last round *XPDNC* did much better than before and she managed to win by 2m. 4s. *Veritas* covered the course in 1h. 23m, while *XPDNC* required 1h. 36m. 2s. to go the same distance. *XPDNC* won her class prize and the first leg in the National trophy. *Dixie* won the first heat in the International trophy.

In the class for high speed boats of 33ft. and under *Durno* won by 14m. 53s. *Rosland* withdrew and *Vici* was disqualified for starting ahead of the signal. The summaries follow:

Cruising Boats Over 50ft. Long—Course, 30 Nautical Miles.			
	Start.	Finish.	
<i>Cactus II.</i> , C. E. Proctor, Larchmont.....	11 08 41	1 36 21	
<i>La Mascotte</i> , F. B. Havens, New York.....	10 35 00	1 07 50	
<i>Argonaut</i> , G. Piel, Columbia.....	Did not finish.		
Cruising Boats Under 50ft.—Course 19 1/2 Nautical Miles.			
<i>Arcadia</i> , John D. Roach, Lake Champlain.....	11 35 00	1 41 58	
<i>Hazel</i> , T. S. Parvan, Cn., Philadelphia.....	11 20 00	2 07 15	
<i>Glissando</i> , F. L. Andrews, Fall River.....	11 30 07	2 15 30	
Open Launches—Course, 19 1/2 Nautical Miles.			
<i>Vitesse</i> , T. W. Dunham, Metropolitan.....	11 45 00	2 56 36	
<i>August Mietz</i> , E. W. Deming, Columbia.....	12 19 20	2 58 31	
<i>White Fox</i> , W. Ferguson, Jr., Stamford.....	Did not finish.		
<i>Traveler</i> , C. F. Muller, Columbia.....	Did not finish.		
High Speed Boats, 39.37ft. and Under—Course 30 Nautical Miles.			
	Start.	Finish.	Elapsed.
<i>Dixie</i> , E. R. Thomas, Seawanhaka.....	4 15 00	5 47 49	1 32 49
<i>Shooting Star</i> , H. A. Lozier, Jr., Man. 4.....	4 15 00	5 53 27	1 38 27
<i>Panhard II.</i> , Andrea Massenat, Col. 4.....	4 15 00	Did not finish.	
<i>Winton</i> , L. J. Speare, Boston.....	4 15 00	Did not finish.	
<i>Den</i> , J. H. Hoadley, New York.....	4 15 00	Did not finish.	
High Speed Boats, 40ft. and Over—Course, 30 Nautical Miles.			
<i>XPDNC</i> , J. Siegel, Red Bank.....	3 46 41	5 22 43	1 36 02
<i>Veritas</i> , A. Stein, Indian Harbor.....	4 01 23	5 24 47	1 23 24
<i>Skeeter</i> , E. J. Schroeder, N. Y. A. C. 3.....	4 45 00	5 28 09	1 43 09
High Speed Boats, 33ft. and Under—Course, 30 Nautical Miles.			
<i>Durno</i> , J. H. Durno, Rochester.....	3 05 49	5 14 51	2 09 02
<i>Simplex III.</i> , C. R. Mabley.....	4 07 07	5 29 44	1 22 37
<i>Vici</i> , O. Lippincott, Oceanport.....	4 07 49	Disqualified.	
<i>Rosebud</i> , W. G. Titcomb, R. I.....	4 02 45	Did not finish.	

Second Day—Friday, Sept. 15.

The long race to Poughkeepsie and return took place on Friday, Sept. 15. Out of nearly a dozen entries only four boats started. The absentees were *Skeeter*, *XPDNC*, *Den*, *Winton*, *Dixie*, *La Mascotte*, *La Sata* and *Cactus II.*

*Simplex III.* led all over the course and won easily. Her time for the 117 knots or 134 statute miles was 7h. 27m. 53s. This is hardly record time, but her showing is excellent, being much better than that made by *XPDNC* over the same course a year ago.

*Simplex III.* was first to start at 9:36:32. *Six Shooter* was next crossing at 10:09:26, *Wizard* was third away at 10:11:18. About half an hour later *Panhard II.*, the foreign entry, started but was disqualified for starting over the wrong side of the mark boat. She failed to return when recalled. *Veritas* broke her clutch and was taken in tow.

*Simplex III.* rounded the Poughkeepsie mark at 1:07, exactly

44m. ahead of *Wizard*. *Simplex III.* gained over 9m. on *Wizard* on the run up stream. *Wizard* rounded the Poughkeepsie mark at 1:51, *Six Shooter* at 2:04 and *Panhard II.* at 3:45. *Simplex III.* finished at 5:04:25 and *Wizard* came in at 6:10:10. The summary:

	Start.	Finish.	Elapsed.
<i>Simplex III.</i> , C. R. Mabley, Col. 3.....	9 36 32	5 04 25	7 27 53
<i>Wizard</i> , A. H. Dohn, Buffalo.....	10 11 18	6 10 10	7 58 52
<i>Six Shooter</i> , F. L. Smith, Detroit.....	10 09 26	Did not finish.	
<i>Panhard II.</i> , A. Massenat, Col. 4.....	10 48 05	Disqualified.	
<i>Veritas</i> , A. Stein, Indian Harbor.....	12 02 00	Disabled.	

Third Day—Saturday, Sept. 16.

An elaborate schedule was arranged for the third day, but out of 41 starters in the morning and afternoon only 26 boats finished—a pretty poor showing.

The first class to start in the morning were the cruisers over 50ft. *La Mascotte* and *Cactus II.* were the only starters, and these two craft had a match race over a 19 1/2 nautical mile course. *La Mascotte* won.

In the cruising class under 50ft., *Arcadia* won, making the best time over the 19 1/2 knot course. *Glissando*, the third starter, did not finish.

Four out of the five starters in the open launch class finished. These boats also covered the 19 1/2-knot course, and *White Fox* won.

*Simplex III.* won in the class for high speed boats under 33ft. *Colonia* broke down and got mixed up in a tow, barely missed being sunk. *Durno* got the race on time allowance.

*Veritas* failed to finish in the class for high speed boats over 40ft., and the race went to *XPDNC*. *Skeeter* was the only other starter.

*Dixie* showed herself to be a very fast craft and was easily the feature of the day. In her class were five starters. *Dixie* covered the 30 knots in 1h. 18m. 15s., which is about 24 knots an hour. *Shooting Star* was the only other boat to finish.

The first race in the afternoon was between *La Mascotte* and *Cactus II.* Neither finished.

In the next class there were two starters, *Arcadia* and *Glissando*. The former finished alone.

Of the four starters in the class for high speed boats under 33ft., *Vici* and *Durno* alone finished. *Vici* won easily.

*White Fox* again defeated her rivals in the class for open launches. *Chum*, one of the starters in this class, was in collision in the morning, but repairs were made so that she was able to start.

*XPDNC* showed the way to her two contenders in the class for high speed boats of 40ft. and over, and won. Her showing was fair and she wins the National trophy and also a challenge cup.

*Dixie* won in her class, beating *Shooting Star* again. *Panhard II.* did not finish, as usual. *Dixie* wins the International trophy, which is a challenge cup. The summaries:

### MORNING RACES.

Match Race, Cruising Boats, Over 50ft.—Course, 19 1/2 Knots.			
	Start.	Finish.	Elapsed.
<i>La Mascotte</i> , F. C. Havens.....	10 30 00	1 01 33	2 31 33
<i>Cactus II.</i> , C. E. Proctor.....	10 42 30	1 03 02	1 20 32

Cruising Boats Under 50 ft.—Course, 19 1/2 Knots.			
	Start.	Finish.	Elapsed.
<i>Hazel</i> , T. S. Parvan.....	10 40 00	Did not finish.	
<i>Arcadia</i> , John D. Roach.....	10 30 45	12 35 12	1 54 27
<i>Glissando</i> , F. L. Andrews.....	10 50 07	Did not finish.	

Open Launches—Course, 19 1/2 Knots.			
	Start.	Finish.	Elapsed.

structed of sufficient strength to pass through a race without showing a pronounced structural weakness. All boats of Division 1, Classes 1 and 2, shall be required to have at least 22in. freeboard. Boats in Division 1, Class 3, are to have at least 18in. freeboard.

Horsepower is to be determined by multiplying the area of the cylinders in square inches by the number of cylinders, multiplied by stroke of piston in inches and divided by a constant. Boats in Division 1, Class 1, have no restriction as to motor power. Boats in Division 1, Class 2, have a constant 12 for 4-stroke motors, and 9 for 2-stroke motors. The constant for boats of Class 1, Division 1, will be 10 for 4-stroke motors and 7.5 for 2-stroke motors. In Division 2, Class 1, the constant will be 18 for 4-stroke motors and 13.5 for 2-stroke motors. In Class 2 of that division the constant will be 15 for 4-stroke motors and 11.25 for 2-stroke motors, and for Division 3 the constant will be 20 for 4-stroke motors and 15 for 2-stroke motors.

The International trophy will be for boats of Division 1, Class 1. That is, they must be boats 39.37ft. over all, and there are no restrictions as to power. The British International Cup is for boats 40ft. in length, with no restrictions as to power. The National trophy is for boats 40ft. over all and above, and the Interstate trophy is for boats 33ft. over all and under.

**Tarantula—Niagara IV. Match Race.**

Long Island Sound—Friday, Sept. 15.

MR. W. K. VANDERBILT'S turbine steam yacht Tarantula and Mr. Howard Gould's steam yacht Niagara IV. met in a match race for \$5,000 a side over a 40 nautical mile course on Friday, Sept. 15, and the former won by 2m. 48s.

On the first leg of the course Tarantula beat Niagara IV. 4m. 49s. actual time, and on the second leg Niagara IV. beat Tarantula 2m. 1s. actual time. Over the entire course Tarantula beat Niagara IV. 2m. 48s. Tarantula averaged 21.24 nautical miles an hour, and the average of Niagara IV. was 20.76. In the previous race Niagara IV. averaged 21.37 and Tarantula 20.65 nautical miles an hour.

In the race between these two craft last year Niagara IV. won, so now each of the boats have one race to their credit.

The race was in charge of Messrs. Oliver E. Cromwell, H. de B. Parsons and Franklin A. Plummer, the Regatta Committee of the New York Y. C. These gentlemen were on board Mr. Howard Gould's large steam yacht Niagara.

The course was from off Crane Neck, which is just to the westward of Port Jefferson, to a mark off Herod's Shoal, which is near Bridgeport, and return, a total distance of 40 nautical miles. Each boat was allowed five minutes to reach the starting line and another minute in which to cross. If one of the boats crossed in the one minute interval her actual time was to be taken. In the event of her not doing so she was timed as crossing on the expiration of the minute.

The starting signal was given at 12:05. Tarantula was at the southerly end on the line and in the lead. In getting away both yachts were handicapped, Tarantula 3s. and Niagara IV. 14s. Heavy black smoke was pouring from the funnels of the two boats, and they were off on their long journey. Tarantula commenced at once to draw away slowly but surely. The tide was with the boats on the first leg.

Tarantula rounded the outer mark at 1:01 and Niagara IV. was timed at 1:06, just 5m. later. Niagara IV. improved her position somewhat as they neared the mark. Her increased speed was accounted for by the running up of the steam she sorely needed in order to show up at her best.

On the return the boats were bucking the tide and Niagara IV. continued to do better, but the gains were so slight that it was impossible for her to catch Tarantula before the finish line was crossed. Tarantula finished at 1:59:04 and Niagara IV. 2:02:03, just 2m. 59s. behind. The summary:

	Start.	Finish.	Elapsed.
Tarantula, W. K. Vanderbilt, Jr.	12 06 00	1 59 04	1 53 04
Niagara IV., Howard Gould	12 06 00	2 02 03	1 56 03

The actual times over each leg of the course were as follows:

	Start.	Finish.	Elapsed.
Tarantula	12 06 03	1 01 00	0 54 57
Niagara IV.	12 06 14	1 06 00	0 59 46

Tarantula averaged 21.06 nautical miles an hour and Niagara IV. averaged 20.07.

	Start.	Finish.	Elapsed.
Tarantula	1 01 00	1 59 04	0 58 04
Niagara IV.	1 06 00	2 02 03	0 56 03

On this leg Tarantula averaged 20.06 and Niagara IV. 21.11 nautical miles an hour.

**Bensonhurst Y. C.**

Gravesend Bay—Saturday, Sept. 16.

THE Bensonhurst Y. C. closed its third season of racing with the usual open handicap race on the afternoon of Saturday, Sept. 16. Allowances were figured on performances in regattas of this year. Light and heavy weather handicaps were figured out. The latter were used and the winners proved to be La Cubana, Vivian II., Ogeemah, Trouble, Bab and Colleen. Vivian II. and Ogeemah were protested respectively by La Cubana and Miss Judy on the starboard tack grounds. Should these protests be allowed victory in two classes would go to Saetta and Anona.

Twenty-six boats started. A fresh S.E. breeze was blowing. The yaws and sloops in classes P and above sailed a course from the start off Ulmer Park across the channel to Black Can Buoy No. 13, off Fort Wadsworth, thence to Can Buoy No. 7 near West Bank Light and home, a distance of 10 nautical miles. It was a reach to the first mark, a beat to the second, and a reach home, in which ballooners were carried to port.

Regular class Q sailed a 9-mile course up through the Narrows to the bell buoy at Robbins Reef, off the Staten Island Ferry slip, and home. The outward journey was a broad reach on which spinnakers were carried a greater part of the way, and the return a dead beat. Boats in old class Q went from the start off Ulmer Park to the bell buoy at Craven Shoal, then down the harbor to can buoy No. 9 and home, a distance of 9 miles. It was a reach to the first mark, windward work to the second, and another reach home. Classes R and RR and the catboats sailed twice over a triangular course from Ulmer Park to Fort Hamilton, thence to Sea Gate and home. This aggregated about 7 miles. The first leg was a reach, the second a beat and the last a reach.

As usual, the new class Q boats had a hard race of it. Just before reaching Robbins Reef on the outward journey More Trouble

lost one of her upper blocks when taking in the spinnaker and was delayed considerably thereby. Ogeemah also got into difficulties with her balloon, which got tangled up with the working jib. At the finish, Saetta was 2m. ahead of Cockatoo II., with Quest third and More Trouble fourth. Saetta was beaten out 10s. by Ogeemah on corrected time. A misunderstanding as to how the finish line should be crossed delayed her nearly half a minute and lost the race. For the handicap event the boats were divided into six divisions. The summaries follow:

	Finish.	Elapsed.	Corrected.
Lotowana, E. E. Malcom	5 09 25	2 06 25	2 06 25
La Cubana, J. H. Ives	5 16 10	2 13 10	2 05 10

Sloops, Classes P and Above—Start 3:06.			
Vivian II., S. E. Vernon	4 40 30	1 34 30	1 34 30
Tabasco, J. B. O'Donohue	4 45 45	1 39 45	1 39 45
Bobtail, E. F. Luckenbach	4 48 20	1 42 20	1 40 20
Anona, Menton Brothers	4 48 22	1 42 22	1 39 22
Lizana, D. P. Wylie	Did not finish.		
Huntress, L. H. Dyer	Did not finish.		
Squaw, E. Valentine	Did not finish.		

Sloops, Class Q—Start 3:09.			
Saetta, George H. Church	4 57 25	1 48 25	1 48 25
Cockatoo II., Hendon Chubb	4 59 25	1 50 25	1 50 25
Quest, F. J. Havens	5 00 02	1 51 02	1 49 02
More Trouble, W. H. Childs	5 01 07	1 52 07	1 51 07
Ogeemah, Alfred Maclay	5 04 45	1 55 45	1 48 15
Miss Judy, D. D. Allerton	5 06 20	1 57 20	1 55 20

Class Q, Special—Start 3:12.			
Trouble, W. A. Barstow	4 49 47	1 37 47	1 34 47
Careless, Richard Rummell	4 51 05	1 39 05	1 38 05
Wraith, Calvin Tompkins	4 52 05	1 40 05	1 38 05
Spots, R. C. Veit	5 00 47	1 48 47	1 48 47
Ianthe, H. H. Roberson	Did not finish.		

Sloops, Classes R and RR—Start 3:15.			
Bab, T. A. Hamilton	4 26 47	1 14 47	1 10 47
Beta, Snedeker and Camp	4 42 20	1 27 20	1 23 20
Chickeokee, W. J. O'Neill	Started before her signal		

Catboats—Start 3:18.			
Colleen, W. F. Remmey	4 27 10	1 09 10	1 06 10
Hester, Simon Wicks	4 36 30	1 18 30	1 18 30
Orient, C. T. Shultz	Did not finish.		

After the sailing yachts had been sent away a race was started for power dories owned by lobster fishermen on the shores of Gravesend Bay. There were six starters, and J. Snedeker proved to be the winner, beating B. Voorhees by 5s. The boats covered a 9-mile course. The racing season of the Bensonhurst Y. C. has been long, varied and very successful. The summary of the power boat race follows:

	Finish.	Elapsed.
J. Snedeker	5 01 27	1 36 27
B. Voorhees	5 01 32	1 26 32
C. Brown	5 06 38	1 31 38
N. Hanson	5 06 52	1 31 52
M. Brown	5 14 50	1 39 50
George Frank	Did not finish.	

**Jamaica Bay Y. R. A.**

Jamaica Bay, L. I.—Sunday, Sept. 17.

THE fall regatta of the Jamaica Bay Y. R. A. took place on Sunday, Sept. 17.

The class C sloops sailed over a 12-mile course and Baby Roger won, beating Marion, the second boat, by 1m. 2s.

Virginia had an easy win in the cabin cat class. There were only two starters and they went over the 10-mile course.

In the open catboat class Ariel defeated her two competitors handsly. Booze was second.

H. C. Miner had a sailover in the open class for 17ft. catboats. In the class for open catboats under 17ft. Alert won, beating Chicla by nearly 4m.

There were seven starters in the class for launches. Viking, one of the starters in this class, caught fire when near the finish line. There were five men on board, and they worked in vain to put out the flames. They were finally driven forward by the heat, but Mr. J. von Bockman knocked a butt open in the boat's bottom and she slowly filled. Viking was towed into shallow water, where she sank on the flats. None of those on board were injured. The summary:

Sloops, Class C—Start 2:49—Course, 12 Miles.			
Marion, William Penn	4 59 22	2 10 22	
Kismet, W. W. Mills	5 13 00	2 24 00	
Jennie, W. G. Gallagher	5 05 49	2 16 49	
Annie Arundel, C. Owens	5 03 40	2 14 40	
Baby Roger, George Boehm	4 58 20	2 09 20	

Cabin Cats, Class H—Start 2:59—Course, 10 Miles.			
Diana, H. A. Beyer	5 30 43	2 41 43	
Virginia, C. H. Benjamin	5 25 15	2 36 15	

Open Cats, 20ft. and Under—Start 3:03—Course, 10 Miles.			
Bill Nye, J. F. Kopf	5 23 20	2 20 20	
Ariel, W. Hewlett	5 17 41	2 14 00	
Boozie, A. Kobel	5 20 50	2 17 50	

Open Cats, 17ft.—Start 3:05—Course, 10 Miles.			
H. C. Miner, C. Miner	4 15 04	1 10 04	

Open Cats Under 17ft.—Start 3:07—Course, 10 Miles.			
Chicla, L. H. Phlug	4 22 09	1 15 09	
Alert, John Wolff	4 18 16	1 11 16	

Launches—Course, 10 Miles.			
Lottie M., W. H. Meyer	3 30 00	5 18 45	
Rockaway, J. May	3 36 54	5 23 39	
Skipper, William Seerich	3 37 26	5 15 29	
Gracie, Charles Greene	4 43 02	5 30 51	
Igniter, Bernard Metzgen	3 44 11	5 18 00	
Viking, J. von Bockman	Disabled.		
Laura G., Walter Pitt	3 57 49	5 30 43	

**THE MANY-USE OIL**

On strop and razor makes shaving a pleasure. Try it.—Adv.

**Seawanhaka Corinthian Y. C.**

Oyster Bay, Long Island Sound—Saturday, Sept. 16.

THE annual fall regatta of the Seawanhaka Corinthian Y. C. was sailed on Saturday, Sept. 16, in a light S.E. breeze. There were 33 starters, and the winners were Memory (sail over), Mimosa III., Cara Mia, Nora, Hourly, Answer, Sabrina and Notion.

The three larger classes went twice over a 7 1/4-mile triangle. The first leg was a reach, the second a run and the third a beat. Memory took a sailover in the 33ft. yawl class, as she was without a competitor. Mimosa III. won as usual in the 33ft. sloop class, defeating Regina, the second boat, easily.

There was a small number to start in the New York Y. C. class, and Cara Mia had no difficulty in disposing of her seven contenders. Mr. Wainwright now has his boat in fine form, and she is one of the most dangerous in the class. Adelaide II. got second and the rest of the bunch were left well behind.

Nora beat Busy Bee, the second boat to finish in the Raceabout class, over 3m. Hourly won easily in her class. There was a good race between Vaquero and Dorothy for second place. Answer ran away from her competitors in the 22ft. class.

Sabrina won in the 15ft. class. Fly was second. Notion got first place in the 18ft. sloop class. The summary:

Yawls, 33ft. Class—Start 1:25—Course, 15 1/4 Miles.			
Memory, H. M. Raborg	Finish.	Elapsed.	
	4 40 22	3 15 22	

Sloops, 33ft. Class—Start 1:25—Course, 15 1/4 Miles.			
Mimosa III., T. L. Park	4 17 17	2 52 17	
Nike, V. I. Cumnock	4 31 20	3 06 20	
Tito, Colgate Hoyt	4 32 27	3 07 27	
Regina, F. G. Stewart	4 28 59	3 03 59	
Mimosa I., T. M. G. Raborg	4 38 02	3 11 02	
Marguerite, W. F. Clark	4 52 32	3 27 32	

New York Y. C., 30ft. Class—Start 1:30—Course, 15 1/4 Miles.			
Cara Mia, S. Wainwright	4 09 26	2 39 26	
Adelaide II., Adeo Brothers	4 10 22	2 40 22	
Nautilus, Hanan Brothers	4 37 31	3 07 31	
Atair, Cord Meyer	4 39 07	3 09 07	
Maid of Mendoza, W. D. Guthrie	4 39 52	3 09 52	
Dahinda, W. B. Duncan, Jr.	4 39 54	3 09 54	
Ibis, Adrian Iselin III.	4 40 35	3 10 35	
Neola II., George M. Pynchon	4 42 41	3 12 41	

Raceabout Class—Start 1:35—Course, 13 1/4 Miles.			
Nora, A. Iselin 3d.	4 20 36	2 45 36	
Rascal II., S. C. Hopkins	4 28 30	2 53 30	
Invader Jr., R. M. Rainey	4 31 36	2 56 36	
Busy Bee, R. T. Wainwright	4 24 47	2 49 47	
Indian, William Gardner	4 34 05	2 59 05	
Howdy, George Mercer, Jr.	4 34 50	2 59 50	
Firefly, Guy Standing	4 42 54	3 07 54	

Larchmont, 21ft. Class—Start 1:40—Course, 13 1/4 Miles.			
Hourly, J. H. Esser	4 41 09	3 01 09	
Vaquero, William Stump	4 45 19	3 05 19	
Dorothy, L. G. Spence	4 45 29	3 05 29	

Sloops, 22ft. Class—Start 1:55—Course, 7 1/4 Miles.			
Pannonahy, F. P. Currier	3 42 34	1 52 34	
Okeo, J. A. Mahlstedt	3 42 35	1 52 35	
Heron, J. Le Boutillier	3 43 00	1 53 00	
Answer, Donald Abbott	3 35 56	1 40 56	

Sloops, 15ft. Class—Start 1:55—Course, 7 1/4 Miles.			
Fly, W. Emlen Roosevelt	3 53 06	1 58 06	
Ellys, F. R. Coudert	3 55 43	2 00 43	
Wee Wean, R. C. Cuthbert	3 53 27	2 03 27	
Imp, F. L. Landon	4 00 53	2 05 53	
Sabrina, C. W. Wetmore	3 49 01	1 54 01	
Grilse, B. G. Weeks	Did not finish.		

Sloops, 18ft. Class—Start 2:00—Course, 7 1/4 Miles.			
Notion, J. Fry	3 46 25	1 46 25	
Hamburg, M. Goldschmidt	3 59 00	1 59 00	
Emerald, H. F. Abington	4 20 34	2 20 34	

Oyster Bay, Long Island Sound—Monday, Sept. 18.

Six of the Seawanhaka 15-footers met in a club race, which took place on Monday, Sept. 18. The boats were handled by women. The wind was S.E., and it rained throughout the match. An inside course 7 1/2 miles in length, was covered. The summary:

	Start 3:10.	Finish.	Elapsed.
Chipmunk, Miss Mae Young	4 14 10	1 04 10	
Imp, Miss Agnes Landon	4 15 19	1 05 19	
Wee Wean, Mrs. G. W. Burnham	4 15 46	1 05 46	
Grilse, Mrs. Amy Richards	4 14 45	1 07 45	
Fly, Miss Margaret Roosevelt	4 17 55	1 07 55	
Aiys, Mrs. F. R. Coudert	Did not finish.		

**Newport Y. C.**

Newport, R. I., Sept. 15.

A CLUB catboat race was held by the Newport Y. C. on Friday afternoon, Sept. 15, in a good S.E. breeze. There was a good entry list of eleven boats, and the winners were Madge, Restless and Vesper II. The course was from a line in the inner harbor, around Goat Island, sailed three times around, a distance of about 17 miles. Vesper II., as usual, had everything her own way and walked away from the rest of the fleet. The summary:

First Class—Start 1:06.			
Madge, Bow	2 50 15	1 42 13	
Falconita, Kerr	2 54 05	1 45 59	
Lizzie Briggs, Briggs	2 54 04	1 48 05	
Windcloud, Booth	Did not finish.		

Second Class—Start 1:09.			
--------------------------	--	--	--

Columbia Y. C.

Chicago, Lake Michigan—Saturday, Sept. 16.

THE open regatta of the Columbia Y. C. sailed on Saturday, Sept. 16, wound up the local yachting season to all intents and purposes. The race was for the Murray Cup, to which every boat in the local clubs was eligible under time allowances. In addition, special class prizes were awarded.

Fred Price's fine sloop Vencedor won with plenty to spare, making a record trip around the Columbia Club course. The race was sailed in a series of squalls, and kept the crews busy handling canvas from start to finish. It was a spectacular race and interesting at all stages.

The victory of Vencedor gives Price possession of the cup, as the crack 52-footer had already won one leg on the cup and two victories made it the permanent possession of the owner of the successful boat.

Price's appearance at the stick of Vencedor marked his farewell to yacht racing. His resignation was accepted last night by the board of directors, and the progressive young yachtsman steps down and out from the commodoreship of the Columbia Y. C., which he has served long and faithfully. Price was deeply affected by the criticism which he received for his lack of interest in fitting Quien Sabe for the last Lipton Cup races, and the charges of disloyalty to his organization cut so deeply that he handed in his resignation shortly after the close of the series. The fact was kept quiet by the directors, but after several meetings it was decided to accept the resignation, and to-day Vencedor went to the race without her commodore's pennant at the truck.

Price has made many friends and not a few enemies during his tenure of office, but his absence will be keenly felt by both his friends and those who did not like him. He has done much for the sport, and has been a liberal supporter of yachting ever since his inception into the game. He has owned Vencedor, 52ft. sloop; Juanita, 65ft. auxiliary yawl; Yo San and Quien Sabe, Lipton Cup boats, all fine yachts and representative of the best spirit of yachting in these waters. Hereafter he will confine himself to cruising for pleasure alone. Vencedor is on the market, Yo San and Quien Sabe are already sold.

Following is the result of the Murray Cup competition to-day:

25ft. Sloops.		
	Start.	Finish.
Cyma	2 20 00	4 50 48
Mildred	2 20 00	4 51 50
20ft. Sloops.		
Anita	2 30 00	5 00 38
Cricket	2 30 00	5 00 45
21ft. Cabin Class.		
Quien Sabe	2 40 00	4 47 54
Cruisers.		
Vixen	2 30 00	4 44 43
Mawaja	2 30 00	4 54 14
Jeannette	2 30 00	5 05 31
Charlotte R.	2 30 00	5 08 00
Schooners.		
Nomad	2 40 00	5 21 53
Foam	2 40 00	5 23 05
35ft. Yawls.		
Naiad	2 40 00	4 55 28
55-Footers.		
Vencedor	2 40 00	4 09 00
Neva	2 40 00	4 50 56
30ft. Sloops.		
Columbia	2 40 00	4 35 40
La Rita	2 40 00	4 36 30
Gloria	2 40 00	4 53 58
Smuggler	2 40 00	4 56 11
Wizard	2 40 00	5 11 55
Privateer	2 40 00	5 12 53
Iris	2 40 00	5 22 01

The last race scheduled by any of the local clubs is a final match between Joe Bondy's Charlotte R. and Joe Dornheim's Jeannette. These two famous old cruisers, whose names have made much Lake Michigan yachting history in the past, are tied for a prize offered in their class. The tie will be sailed off Saturday. In addition the Columbia Y. C. has scheduled dinghy races, swimming races, an exhibition by the life saving crew and a race for the mosquito fleet inside the harbor to entertain the club members while the cruisers are fighting out on the long course.

J. M. HANDLEY.

Baltimore Y. C.

Chesapeake Bay, Md.—Saturday, Sept. 9.

THREE yachts belonging to the Baltimore Y. C. raced on Saturday, Sept. 9, for the trophy offered by Mr. Isaac E. Emerson for yachts of under 30ft., racing length.

The boats covered a course of 18½ miles. The start was made from an imaginary line between the club flagstaff and the black-spar buoy to Baltimore Y. C. barrel buoy; thence 2¼ miles N. by E. toward the Northern Central Railroad elevator, rounding the white-flag buoy; thence S.S.E. 3½ miles to Fort Carroll, leaving the fort to the N., 3½ miles S.E. to the white-flag buoy, going 2 miles S.W. before rounding the buoy; thence 4½ miles N.W., rounding Quarantine buoy, to the starting point. All buoys were left to the starboard, excepting the Baltimore Y. C. and the Quarantine buoys, which were left to port. The time limit for the race was six hours.

The Regatta Committee consisted of Messrs. Walter Archer, R. C. Cole and H. E. Crompton, and the preparatory work was given at 11:55. Five minutes later the boats were sent away. Helen was first away, followed by Spindrift. Gowan was last to start and finish.

The wind was light from the S., hardly satisfactory racing weather. Helen finished 5m. ahead of Spindrift, but lost the race on time allowance.

Mr. W. I. de Zerega sailed Spindrift. Mr. Zerega is known all along the coast as one of the cleverest amateurs in the country, and on this occasion he had Mr. Beals Wright, the tennis player, who is also a clever boatman. The other members of the crew were Dr. Dudley Williams, Mr. Arthur Hale and Mr. W. L. Trenary. In Helen were Messrs. Austin Dinning, Oscar Smith, Clarence Reynolds and A. Tripp, and in Gowan were Messrs. F. W. Robertson, C. H. Harris, J. C. Lee and L. J. Jones. The summary:

Start 12:00—Course, 18½ Miles.		
	Elapsed.	Corrected.
Helen	4 22 00	4 22 00
Spindrift	4 27 00	4 13 40
Gowan	4 51 00	4 38 24

Washington Park Y. C.

Narragansett Bay, R. I., Sept. 16.

AN open race for sloops of the 21 to 25ft. class was held by the Washington Park Y. C., Saturday afternoon, Sept. 16. It was a small event, there being but four entries, and the wind was too light and fluky to provide very good racing. There was considerable interest, however, as a new little craft, Gunfire, made her first appearance, and put up a good race, considering the light conditions, coming in only 9m. behind Micaboo in a four hour contest. The other two boats were distanced.

Measurements were not taken on the two leaders, so the corrected times could not be figured.

The summary:

Start, 3:05:30—Course, 10 Miles.		
	Finish.	Elapsed.
Micaboo, W. R. Tillinghast	6 59 55	3 54 25
Gunfire, S. Baxter	7 09 13	4 03 43
Dazzler, C. D. Reynolds	7 30 35	4 25 05
Pinafore, W. B. Frost	7 50 43	4 45 13

F. H. YOUNG.

STORIES OF SOME SEA DOGS.—A really good sea story that contains something of human interest is a rare thing in these days. In this issue of FOREST AND STREAM there will be found in the Sportsman Tourist Department a capital yarn. The title of the story is "Nip, the Sailors' Friend," and a dog is the hero. This is the second story of this kind that has appeared in these columns recently, the first appeared in the number of Aug. 12, and was entitled "How My Mongrel Dog Saved the Ship." These stories appear under the general head "Stories of Some Sea Dogs."

Boston Letter.

THE season of open racing under the rules of the Yacht Racing Association of Massachusetts has ended, and the championship winners in the different classes are known, although the final official list of percentages may not be forthcoming for some time, on account of pending protests. The association has had a good season in which the attendance was no doubt greatly increased by the addition of the Cape cat and sailing dory classes. The greatest interests was shown in the 22-ft. class, for which five new boats were built. The boats that were built for the class this year are the best looking that have been produced under the rules. Tyro, a Crowninshield creation, owned by Mr. W. H. Joyce, showed herself to be easily the best boat in the class. For a time, matters were close between her and Rube, but when Tyro had got going, there was never any question. Tyro lost nothing in the handling, being sailed by Mr. Sumner H. Foster, one of the cleverest amateurs in the bay. The three leading boats in this class are new ones.

Racing in the 18ft. class has fallen off greatly, and there is little reason to believe that there will be any great revival through the building of new boats during the coming winter. It appears that the class has been playing itself out less gradually than it grew, and that it may be a question of only a short time when it follows the knockabout and race-at-home classes in Massachusetts Bay. The general attendance of boats of this class at the open races during the past season, has not been nearly as large as in former years. The racing has been close between Hayseed, one of last season's creations by Messrs Small Bros., Bonitwo, one of this season's boats, designed by Crowninshield, and Bat, another yearling by Mr. E. A. Boardman. Hayseed was last season's champion, and she again captured the championship this year through good sailing under all conditions.

Racing in the 15ft. class was rather tame, the attendance being desultory. Most consistent in attending races was Vera II., last year's champion, designed by Messrs. Small Brothers, and she continued her good work throughout the present season, taking the championship easily. It is rarely that Vera II. is not found in first place on the summary sheet.

The adoption of the Cape cat class resulted in the entries of many of these once very popular boats, which have been out of the general racing for some seasons. The showing made by the class this year was a good one, and the winning of the championship by Marvel, owned by Mr. I. M. Whittemore, was consistent with the interest shown by the owner. There has been good sport in the class this year, but as few boats of the type are built in the vicinity of Boston, it is a question how great the future development may be. The boats are generally over sparred and smothered with canvas.

The sailing dory class is a very popular one, and there is a great field to draw from. In consequence, the races in which this class was provided for received good attendance. It is likely that, on account of the cost of construction and maintenance and the immense amount of sport offered, this class will remain popular for some time. Barbara, a Swampscott boat, has quite a lead in percentage for the championship, but the races have been close in almost every instance, there being little to choose among the boats. The following table, compiled by Secretary A. T. Bliss, of the Y. R. A. of Massachusetts, gives the percentages of all the yachts. It does not include races of the Eastern and Corinthian Y. C.'s, and may be changed by pending protests:

Class E, 22ft. Cabin Yachts.		
+Tyro, William H. Joyce	1379.7	91.9
Rube, Herbert L. Bowden	1215.8	71.5
Medric II., H. H. White	624.0	56.7
Peri II., Dr. Morton Prince	591.8	53.8
Nutmeg, A. C. Jones	340.7	52.5
Medric, George Lee	477.8	39.8
*Chewink V., Cheney and Lanning	251.8	29.6
*Urchin, John Greenough	191.4	22.4
*Clorinda, Cheney and Lanning	114.3	13.4
Class D, Cape Catboats.		
+Marvel, Ira M. Whittemore	1234.3	88.2
Hustler, H. W. Robbins	1041.0	80.1
Josephine, F. H. Smith	593.9	79.2
Stranger, Dr. F. E. Dawes	1121.0	74.7
Argestes, George H. Wilkins	399.8	49.9
*Arawak, H. R. Nickerson	254.7	33.9
Noturus, C. O. Whitney	262.8	32.8
*Dorothy III., Frank E. Crane	245.7	32.7
Goblin, R. M. Lothrop	278.6	30.9
Moodyne, Shaw Brothers	360.2	30.1
Saltair, C. C. Collins	116.6	15.5
Thelga, Louis E. Crosscup	86.4	11.5
*Ocean Eagle, T. Lane	63.6	8.5
*C. C., George H. Carey	45.6	6.8
*Tomahawk, S. W. Leighton	41.7	5.7
*Mildred, F. H. Coleman	33.3	4.4
*Nancy Hanks, George W. Lane	36.4	4.8
*Clara Lee, E. W. Emery	17.4	2.3
Class I, 18ft. Knockabouts.		
+Hayseed, Herbert L. Bowden	736.0	92.0
Bonitwo, George H. Wightman	685.1	85.0
*Bat, Adams Brothers	518.6	75.4
Hayseed II., Herbert L. Bowden	675.2	75.1
Dorchen, A. W. Finlay	812.8	73.9
Fritter, Caleb Loring	538.7	69.5
Mirage II., J. W. Olmstead	619.4	44.2
*Aladdin, George P. Keith	307.0	43.8
Nicknack, Edwin B. Holmes	234.5	33.5
*Osprey, A. R. Train	211.7	30.2
*Moslem I., John Tyler	196.4	28.5
*Boo Hoo, Reginald Boardman	160.5	23.2
*Kittiwake V., F. R. Maxwell	140.0	20.0
*Myrmidon, John Noble	137.0	19.5
*Yankee, Frank W. Atwood	121.2	17.4
*Aurora, F. L. & H. W. Pigeon	91.7	13.1
*Cuyamel, A. W. Godfrey	57.3	8.2
*Gertrude II., Hector E. Lynch	55.6	7.9
*Little Miss, B. S. Permar	34.1	4.8
*Aspinquid II., A. E. Whittemore	27.3	3.3
*Privateer II., C. E. Adams	25.0	3.1
Class T, 15-Footers.		
+Vera II., H. Lunberg	630.0	90.0
Cigarette, M. P. Prince	400.0	80.0
*Ventus II., C. Keith Pevear	180.0	51.4
*Tobasco, Jr., Harry H. Wiggin	160.0	45.8
Princess, James P. Prince	253.3	42.2
*Swallow, Harris Hammond	126.7	36.2
*Nibelung, E. G. Loring	100.0	28.5
Class X, Dories.		
+Barbara, I. J. Blaney and Wardwell	757.1	84.1
Elizabeth F., H. W. Dudley	668.8	72.0
Zaza II., Gordon Foster	609.7	67.7
*Teaser, Ralph R. Smith	293.8	65.2
Frolic II., W. G. Torrey	425.0	60.7
Bessie A., J. Samuel Hodge	337.0	48.1
Bugaboo II., H. B. Ingalls	427.6	47.5
Spray, H. T. Wing	194.1	38.8
*Nisan, D. H. Woodbury	149.6	29.9
*Crescent, Robert E. Burnett	114.3	25.3
*Pointer II., B. C. Melzard	111.8	24.8
*Spider, Ara G. Bese	100.0	22.2

*Catspaw, R. E. Melzard	63.6	14.1

\*It is assumed that a yacht shall have started in at least half as many races as any yacht in her class.  
†Championship winners.

The annual rendezvous and parade of the yachts of the Yacht Racing Association was held at Hull on Sunday, Sept. 10. There was a big attendance and the usual ideal conditions prevailed. The breeze was light, east-north-east, and the sea was smooth. Over a hundred yachts passed in review of the Association flagship off the Hull station of the Boston Y. C. They then paraded across Hull Bay and up the West Way, again passing in review of the flagship off City Point, after which they disbanded. The sight of so many yachts under sail in fairly close quarters was beautiful.

Some new classes are being talked of for next season, notably either one to rate 33 or 27ft. This class would be likely to prove a successful one. There is also talk of some building in class Q. This might mean the sudden ending of two of the present classes.

Opinion seems to be divided as to the value of the new uniform rating rule, as shown during the season just passed. Of course there has been no observation among Y. R. A. classes, for they do not use the rule. There have been races in which the yachts have raced under the rating rule. On one hand it is said that these races have resulted favorably for the adoption of the rule, and on the other, that the rule will not be accepted. It strikes me that, outside of the proof given that a big-bodied centerboard boat like Meemer stands at least an equal chance with keel yachts, nothing has been shown in the racing to warrant an assumption either way.

JOHN B. KILLEEN.

Chicago Letter.

CHICAGO, Ill., Sept. 16.—The board of trustees of the Sir Thomas Lipton Competitive cup, the premier racing trophy of Lake Michigan, have decided to make a vigorous campaign this winter to promote interest in next season's races.

The first act of the board was to appoint a special committee to have complete charge of the cup races with discretionary powers, to do anything they may deem advisable to promote the interests of the competitions for the splendid trophy. This committee is composed of Messrs. W. H. Quinlan, Chairman; DeWitt C. Cregier and E. P. Balcom. Mr. Quinlan is the present chairman of the Regatta Committee, and had charge of the Lipton cup races this season. Messrs. Balcom and Cregier had charge of the famous 1900 races which were a record event in the history of western racing.

Their first effort was the submitting to the club two amendments to the rules governing contests for the cup. The first was the abolishing of paragraph 25, which is known as the "Existing yachts clause." This provides that existing yachts, although not within the restrictions, shall be admitted to the race in the class. This rule will not affect any of the boats now owned, here eligible to race, for the cup will prevent the bringing on from the East some of the old 21-footers which formerly raced in the class, but which do not come within the scantling and lineal measurements of the present rules.

The most important change is the amendment to paragraph 26, which now reads as follows:

"Yachts contesting in races for this class shall carry a crew of not less than three and not more than five men. Every member of a yacht's crew must be a Corinthian yachtsman, and a bona fide member in good standing of the yacht club which the yacht represents."

This rule supersedes the one providing that one member of the crew of each boat shall be or may be a professional, and brings the sport into a cleaner, higher level. It reduces the chances for unpleasantness to a minimum and makes the sport what it should be, a contest among gentlemen for a gentlemen's trophy.

The committee has gone to work with a will and a spirit that promises exceedingly well. Nearly every builder and designer of prominence has been approached on the subject of designs, and it is the purpose of the committee to secure a number of designs both of keel and centerboard boats, together with specifications and prices ready to submit to would-be investors in boats.

Mr. Quinlan assured me that there are already six prospective 21-footers in view. I do not believe he is over-estimating. With such an increase in view now, and prospects for more in sight, it is easy to see that there will be something doing in the Lipton cup races next year.

Messrs. Small Brothers, builders of Yo San, formerly Little Shamrock, Mr. Lawrence Jensen, designer of La Rita, Mr. Joe Pauliot of Sandusky, builder of Pirate of Detroit, which has beaten Ste. Claire and Spray, Mr. E. J. Sackley and Mr. Otto Schoenwörk of Chicago, Messrs. Jones and LaBorde of Oshkosh, Mr. Wm. Gardner, Mr. B. B. Crowninshield, Mr. E. A. Boardman and Mr. C. D. Mower, are some of the prominent designers who have submitted designs from which to select a boat.

Not only in Chicago are the members of the committee doing the work of propaganda, but in every city where a club is located eligible to send a candidate to fight for the trophy. There are twenty-six clubs in the Great Lakes Association, and to all of these printed matter and a letter has been sent, urging participation in next summer's event. Two of the clubs outside of the Milwaukee Y. C., Detroit Country Club and local organizations have expressed an interest in the race, and chairman Quinlan has the practical promise of boats each from Cleveland and Rochester. Toledo is also anxious to get into the class, and it is more than likely that this will be another new city to send its representative here next summer.

Commodore Walker, owner of the two time winner Ste. Claire, is planning to build a new boat to come after the trophy next summer. Spray, which has been beating Ste. Claire this fall, will also be here, and a Detroit syndicate is figuring on a boat from designs by Kid Wild. In Milwaukee rumors are numerous; one of the most creditable bits of gossip being that the old syndicate which brought Milwaukee here to race for the Canada cup, is to build a boat at Oshkosh to race for the Lipton cup, and of course Messrs. Jones and LaBorde are to be the

architects and builders. This will be an interesting event indeed in these waters, as it will be the first important invasion of this firm into deep-water boat designing. The success of the Messrs Jones and LaBorde boats in inland waters has been phenomenal for years, and as builders of scows they are unapproached in the West. There is considerable curiosity to see what kind of a craft they would turn out for this class with its restricted overhangs, over all length, sail area, scantlings, etc. Those who have had a glimpse of the plans—and according to report the blue prints have been in Milwaukee for two weeks now—say that the boat is radical in many particulars and a distinct type.

To insure the proper preparation of the local boats, the committee here has secured a handsome cup to be known as the Spring Championship trophy of the 21-ft. class. This trophy will be raced for under the same conditions as the W. A. McGuire cup of 1900. One yacht to win the trophy must win three races. In 1900 the competition was most keen, three boats winning two races each before it was finally awarded. The first race for the Spring cup will be held May 26, the second May 30, the third June 2, and if more are needed, one each Saturday excepting the Saturday of the Michigan City race, the date for which has not yet been set.

J. M. HANDLEY.

## British Letter.

END OF THE RACING SEASON.—The regatta of the Royal Southampton Y. C., which took place on Aug. 23 and 24, brought the Solent racing to a close. On the first day there was a strong wind, and the starters were few in number. In the handicap for yachts exceeding 100 tons only Brynhild and Valdora sailed, the former winning by rather more than a minute. In the smaller handicap, Vendetta had virtually a sailover, as her only opponent, Rosamond, carried away some gear just after the start and gave up. In the 52ft. race all four boats started, but Moyana went ashore while leading. Britomart subsequently led throughout and won easily, beating Sonya by over 2m. Maymon gave up. On Aug. 24 the two handicap classes were amalgamated. The weather was light and fluky. Zinita was an easy winner, with Merrymaid second, and Valdora last. Brynhild also started, but gave up. In the 52ft. class Britomart and Moyana led alternately, and then the former went ashore, remaining hard and fast long enough for the other three to pass her. There was a lot of fluking, and Sonya had the lead for some time; but finally Britomart got a lift which put her into first place again, and she won, Sonya taking second prize.

The racing fleet moved on to Weymouth on the following day for the regatta of the Royal Dorset Y. C. on Aug. 26. This proved to be a stormy day, and there were many accidents to spars and gear. In the handicap class, Vendetta broke her gaff, Lorna and Rosamond had a foul in which both sustained damage and gave up, and Moyana carried away her crosstree. In the handicap, Lorna would, in all probability, have won had she gone or Rosamond's lee instead of her weather. As it was, the first prize fell to the scratch boat, Brynhild, the second going to Creole, and the third to Merrymaid. Sonya won the 52ft. match after a splendid fight with Maymon and Britomart. Moyana and Britomart finished up the season at Weymouth, as did Brynhild and Lorna.

The boisterous weather of Aug. 26 continued for two days, so that the yachts could not make the passage to Torquay, and the town regatta fixed for Aug. 28, had to be postponed until Aug. 30. On Aug. 29, the Royal Forbay Y. C. held its annual fixture, but it was poorly represented by the racing fleet. Zinita and Betty, which had not taken part in the racing at Weymouth, were on the station, fortunately, and were joined by Rosamond, the only boat to venture on the stormy passage from Weymouth, and she was rewarded by a slant of wind which gave her the first prize, Zinita taking second. The 2ft. class was unrepresented, neither Maymon nor Sonya having ventured across the West Bay. On the following day the town regatta was held. Five boats started in the handicap class, Zinita being at scratch. Rosamond was gain the winner, and Betty took second prize, Zinita getting the third. Vendetta gave up, and Merrymaid only lost third prize by 8s. Sonya and Maymon were the only representatives of the 52ft. class. The American boat led from start to finish and won easily.

The yachts finished up the season with the regatta of the Royal Dart Y. C., at Dartmouth, on Sept. 1. The weather was fine, but the wind was fluky. A good entry of seven had been received for the principal race, but of these, Vendur did not come around from Torquay, and Valdora fouled a mark at the start and gave up. Zinita had repeated bad luck throughout the race, and only finished m. ahead of Merrymaid. Betty was the winner, Merrymaid taking second prize, and Rosamond the third. In the 52ft. class, Maymon started on Sonya's weather and kept her in charge all day, beating her by rather over a minute.

HANDICAPS VERSUS CLASS RACING.—A good deal of dissatisfaction has been expressed this season by owners in the big classes about their handicaps, and this spirit of unrest has been fostered by the yachting papers, which are advocating the revival of the 65ft. class and the big class racers. Of course, there can be no doubt that class racing is the most perfect form of the sport, but it must not be forgotten that class racing was killed by the very body which ought to have protected and fostered it—that is to say, by the Yacht Racing Association. If proper cantling rules had been formed, and extra long overhangs penalized, class racing among the big boats would not have died out; but men are not going to build large and expensive boats, which are only fit for the scrap heap as soon as their racing career is over. It has been the custom this year to vaunt the qualities of the 52ft. class, and to point to them as the only really representative class. There is no doubt that the 52-footers have shown some excellent racing, but as boats they are far from perfect, both in form and construction, while the want of foresight on the part of the Yacht Racing Association to veto the use of hollow masts has been productive of almost endless trouble. Nor should it be forgotten that the big handicap boats have really provided the backbone of the racing for the last five or six seasons, and that they are individually and collectively the finest

fleet of yachts ever seen in our waters. The start of the handicap class for the German Emperor's cup at Cowes has for some years been a most majestic sight, beside which the 52ft. fleet sinks into utter insignificance, and the fine, spectacular pictures have been frequently described in glowing terms by the very papers which are now writing about the futility of handicap racing. Every true sportsman looks forward to the revival of class racing, but it must be upon a sound basis. It is rumored that the Yacht Racing Association is waking up from its long sleep, and that important reforms are in the air, among them rules for scantlings in connection with Lloyds. If Lloyds revise their rules—which at present are quite useless for racing yachts—and for which purpose they will have to call in the aid of the leading yacht designers, as their own surveyors are merely superannuated master mariners, who know nothing at all about yachts, a most important step will be gained. Probably, however, nothing will be done until the question of international rating rule has been discussed and settled, for the question of scantlings is sure to crop up then. It is high time something definite was settled, for if owners are getting tired of handicap racing and class racing is not re-established, the outlook for the future will not be very bright.

E. H. KELLY.

## YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

BOATING, a new yachting monthly, has come from the press of the Penton Publishing Company, of Cleveland, O. Although covering sport in all parts of the country, it is the announced intention of the promoters to pay especial attention to the work of fresh water sailors. The general plan and scope of the publication is well told in the following editorial comment, which appeared in the initial issue:

"Throughout the Great Lakes, the inland lakes, the large rivers, and all their tributary streams, there is a vast army of water lovers, lovers of boating, who turn to the sail, the blade, and the paddle for rest and recreation. Each may only invest a few dollars a year in his chosen pursuit, but those few dollars mean as much or more to him in health and happiness than do the millions of the average steam yacht owner.

"These smaller interests are the growing ones. It is chiefly on their account that Boating was called into being, and it is through them that we will endeavor to work out our purpose. Although we cover the entire field from tide water to tide water, the Great Lakes district must ever be first and foremost in all that we hope to accomplish in establishing a medium for the interchange of ideas among yachting men."

FOREST AND STREAM wishes Boating every possible success.

TARTAN TAKES LARCHMONT SERIES PRIZE.—At the wind up of the Larchmont Y. C.'s race week the raceabouts Tartan, owned by Mr. A. H. Pirie, and Nora, owned by Mr. O'Donnell Iselin, were tied for the series prize. In order to award the prize a sail-off was necessary, and the match took place on Monday, Sept. 18. The boats covered a 9/4 nautical mile triangle in a fair sailing breeze from the S. and E. Tartan won by 1m. 54s., and she takes the series prize. Both Tartan and Nora were designed by Messrs. Tams, Lemoine & Crane, and both were built by Mr. B. F. Wood at his yard at City Island. Tartan was built in 1903-4 and Nora in 1904-5.

## Rifle Range and Gallery.

### Ohio Rifle Notes.

THE first deer hunters' reunion ever held in Dayton, O., was given by the Dayton Sharpshooters' at their range on the Dayton Gun Club grounds, and was a perfect success. Never in the fifty years' history of the club has there been better attendance at one of their shoots, or a more general representation of the hunters and rifle clubs of the Miami Valley. The weather was delightful, although a strong wind blowing directly across the range made a difference in some of the scores. Tents were pitched between the club house and the targets. A hot dinner was served in the club house at noon.

Rifle experts of the valley who were present were: George W. Izor, Germantown, holder of six gold medals won on other ranges, and who made high total score to-day of 193 out of a possible 216. In the three offhand matches he made 127 out of a possible 144. Major A. N. Wilson, Greenville; D. W. Jones, West Milton; John F. Brown, West Baltimore; C. W. Matthews, Euphemia; J. Johnson and A. N. Clemmer, West Alexandria; M. Pence, Gratis; F. L. Burr, Richmond, Ind.; Byron Stedman, of Hawkers, a well-known and successful big game hunter. Ed. Rike made his debut as a rifle shot to-day, and took to it like a duck to water. He shot in all the matches, scoring 65 out of a possible 72 in the bench rest.

Four matches were shot, all at 100 yards. No. 1, Hunters' Reunion Match, offhand, open, plain or peep sights, on four animal targets, one shot on each target, possible 48; entrance \$1, and no re-entry. In this match there were forty-six entries. Ten money prizes were given on each target, ties to shoot off, and \$5 in gold for the highest total. The winners on each target were as follows: Bear—J. G. Welsh, 12; A. N. Wilson, 12; M. Pence, 12; G. O. Chismer, 11; M. T. Hampton, 11; G. H. Hetsler, 11; J. M. Curphey, 11; F. L. Burr, 10; G. W. Izor, 10; G. W. Sigafoos, 10. Buck—J. Boehmer, 12; M. Pence, 11; A. N. Clemmer, 11; M. T. Hampton, 10; J. G. Welsh, 10; W. H. Kerr, 10; G. W. Izor, 10; G. W. Sigafoos, 10; H. Schwind, 9; D. W. Jones, 9. Doe—F. L. Burr, 12; J. Johnson, 11; G. W. Sigafoos, 11; A. N. Clemmer, 10; W. S. Kessler, 10; J. C. Hahne, 10; M. T. Hampton, 10; J. G. Welsh, 10; G. W. Izor, 9; G. O. Chismer, 9. Boar—C. W. Matthews, 12; Kerr, 11; Johnson, 11; Izor, 11; Wilson, 10; Rhoads, 10; Hahne, 10; D. W. Shaefer, 10; Hampton, 9; H. Schwind, 9. Izor and Hampton tied on 40 for high total and divided the prize, \$5 in gold. Match No. 2 was offhand on the Massachusetts target, 4in. black with 2in. center, 3 shots, possible 36, 50 cents entry, re-entries allowed. Thirty-seven entries were made, the winners of the five prizes being in order named: G. W. Izor, 33; A. N. Clemmer, 32; G. H. Hetsler, 32; G. O. Chismer, 31; Adolph Schwind, 31. Match No. 3, novelty match on man target (body life size), perpendicular lines, 1in. center, 3 shots offhand, possible 60; 50 cents entrance, re-entries allowed; five prizes. Fifty-one entries. Winners: M. J. Schwind, 60; G. R. Decker, 59; Hetsler, 57; Chrismer, 56; A. N. Clemmer, 56. Match No. 4, bench rest, on reduced Sharpshooters' target, 6in. white center, 1/2-inch rings, 3 shots, possible 72; 50 cents entrance, re-entry allowed, five prizes. Eighty-eight entries. Winners: G. R. Decker, 70, tied with Wm. Orth and won shoot off; Wm. Orth, 70; F. L. Burr, 69; Wm. Kuntz, 67; J. Boehmer, 66. High aggregate scores for the four matches out of a possible 216: Izor, 193; Decker, 191; Clemmer, 184; M. J. Schwind, 184; Matthews, 179; J. Johnson, 178; Welsh, 171; A. Schwind, 170; M. Pence, 169; G. O. Chrismer, 167; W. S. Kessler, 157; E. D. Rike, 156.

The annual Hunters' re-union of the Twin Valley Rifle Association, was held at West Baltimore on Sept. 15. There was a large

attendance. All shooting was 100 yards offhand at animal targets; one shot on each, possible 36; 25 cents entrance, three prizes. Winners: Elk—C. W. Matthews, 11; A. Rhodes, 11; E. Hecathorne, 11. Doe—A. G. Marty, 11; Pola Jay, 10; C. W. Matthews, 9. Bear—H. C. Mundhenk, 12; the only perfect shot during the day; C. W. Matthews, 11; Lon Hinea, 11. C. W. Matthews made high aggregate score of 31 and is champion of association for a year. Three specials were shot, two of them on the lion target, four prizes in each, and one on Creedmoor target, three prizes. One shot in each match, 100 yards, off hand. Winners: No. 1—Lion, Chas. Rhodes, 12; George Mundhenk, 12; A. Rhodes, 11; Pola Jay, 11. No. 2, Lion—Pola Jay, 11; W. P. Townsend, 11; Ed. Werts, 10; Claude Weaver, 10. Creedmoor—Townsend, 12; L. Hinea, 12; E. Werts, 12. A rain storm coming up put an end to the sport.

The first shoot for the gold and diamond medal offered by Chief Milliken, of the Cincinnati police, was held on Sept. 14, forty-one officers shooting a score. The shooting was at 20 yards, 20 shots to each man. Patrolman Allen won the medal with 190 out of a possible 200. Inspector Carroll, 184; Sergeant Eichelberger, 180; Sergeant Palmer, 184; Patrolman Curless, 182. There were 820 shots fired in five hours, an average of 164 an hour. After the contest Patrolman Goff fired 20 shots, making 193. Inspector Carroll was not competing. Moore holds the medal for 60 days, when he must accept all challenges.

## Trapshooting.

### Fixtures.

- Sept. 20.—Dover, N. H., Sportsmen's Association prize shoot. D. W. Hallam, Sec'y.
- Sept. 23.—Long Island City, N. Y.—Queens County G. C. tournament. R. H. Gosman, Sec'y.
- Sept. 22-23.—Atlantic City, N. J.—Fall shooting tournament. E. M. Smith, Sec'y.
- Sept. 22-23.—Medford, Ore., tournament.
- Sept. 26.—Brooklyn, L. I.—Bergen Beach G. C. special shoot.
- Sept. 26.—Bridgeport, Conn.—Consolidated Gun Club of Connecticut ninth tournament. Dr. D. C. Y. Moore, Sec'y.
- Sept. 27-28.—Bradford, Pa., G. C. tournament.
- Sept. 28.—Edgewater, N. J.—Palisade G. C. all-day tournament.
- Sept. 29-30.—Broken Bow, Neb., G. C. tournament. F. Miller, Sec'y, Berwyn.
- Oct. 3-4.—Kansas City, Mo.—Afro-American Trapshooters' League tournament. T. H. Cohron, Sec'y.
- Oct. 3-4.—Baltimore, Md., Shooting Association tournament. J. W. Chew, Sec'y.
- Oct. 3-4.—Louisville, Ky.—Kentucky Trapshooters' League tournament, under auspices of Jefferson County G. C. Frank Pragoff, Sec'y.
- Oct. 2-3.—Hyannis, Neb., G. C. tournament. L. McCauley, Sec'y.
- Oct. 3-5.—New London, Ia., G. C., shoot; \$500 added. Dr. C. E. Cook, Sec'y.
- Oct. 4-5.—Pittsburg, Pa.—Herron Hill G. C. tournament. T. D. Bell, Sec'y.
- Oct. 6-7.—Alliance, Neb., G. C. tournament. L. A. Shawrer, Sec'y.
- Oct. 6-8.—Davenport, Ia., Cumberland G. C. tournament.
- Oct. 9-10.—Indianapolis, Ind., G. C. tournament. Wm. Armstrong, Sec'y.
- Oct. 10-11.—St. Joseph, Mo.—The Missouri and Kansas League of Trapshooters. Dr. C. B. Clapp, Sec'y.
- Oct. 11-12.—Dover, Del., G. C. tournament; open to all amateurs. W. H. Reed, Sec'y.
- Oct. 17-18.—Raleigh, N. C., G. C. tournament. R. T. Gowan, Sec'y.
- Oct. 18-19.—Ossining, N. Y., G. C. shoot, \$50 added. C. G. Blandford, Capt.
- Oct. 21.—Plainfield, N. J., G. C. merchandise shoot.

1906.

- Jan. 16-19.—Hamilton, Ont., G. C. annual winter tournament. Ralph C. Ripley, Sec'y.
- May 24-25.—Montreal, Can.—Canadian Indians' first annual tournament. Thomas A. Duff, High Scribe.

## DRIVERS AND TWISTERS.

Thomas A. Duff, High Scribe, 14 Close Ave., Toronto, informs us that May 24-25, 1906, are the dates of the first annual tournament of the Canadian Indians, to be held at Montreal, Can.

Elsewhere in our trap columns, Mr. Geo. L. Carter, Lincoln, Neb., gives concise information concerning the forthcoming Nebraska tournaments at Broken Bow, Hyannis and Alliance.

The Bound Brook, N. J., Gun Club, at their shoot on Sept. 23, have a programme of five events, each at 10 targets, and each for a loving cup; entrance 50 cents, 75 cents and \$1. Any one may shoot for targets at one cent each.

Manager Alec C. Mermod, 620 Locust street, St. Louis, writes us that "I am claiming dates of Oct. 13, 14 and 15 for the Rawlings semi-annual tournament, at targets, pigeons and sparrows. Programmes will be ready for mailing Sept. 20."

In the eleventh match of the North New Jersey Shooting League, held at Montclair, the Montclair team defeated the Morristown team by a score of 98 to 88. On Sept. 23 the Montclair club will send a team to shoot with the Dover team.

The Bergen Beach Gun Club, of Brooklyn, will hold a special shoot, rain or shine, on Sept. 26, commencing at 1 o'clock. The programme will consist of five 25-target events, \$2 entrance, and extra events at the pleasure of the contestants. Everyone welcome.

The programme of the third grand Afro-American Handicap, to be held at Kansas City, Mo., Oct. 3-4, has ten events each day, at 10, 15, 20 and 25 targets, added money, and a liberal list of merchandise prizes. Shooting will begin at 9 o'clock. Class shooting.

The ninth and last of the series of the Consolidated Gun Club of Connecticut tournaments will be held at Bridgeport, Sept. 26, commencing at 9:30. There are twelve events, totaling 190 targets, entrance \$17.82. Dr. D. C. Y. Moore, South Manchester, is the Secretary.

Dr. O. F. Britton, for his run of 117 straight, from the 18 and 19yds. mark, at the Indianapolis Gun Club shoot, in the contest for the Dupont cup, was the recipient of some well chosen remarks by Dr. S. H. Moore, in connection with the presentation of said cup, Sept. 16, all of which is more fully set forth elsewhere in our trap columns.

At Atlantic City, N. J., Sept. 23-24, the annual fall shooting tournament of the Sea Shore Gun Club has a programme of ten events on the first day, at 15, 20 and 25 targets, entrance \$1, \$1.25 and \$1.50. On the second day, there are nine similar events. Totals, first day, 195 targets, \$12.25 entrance; second day, 180 targets, \$10.25 entrance. On second day there will be a five-man team race. Merchandise prizes and cup contests. Each day, averages, \$5 and \$3. Shooting will begin at 10 o'clock. Mr. E. M. Smith will receive guns and ammunition sent in his care, and deliver same on grounds free. Rose system, four moneys. Sliding handicap in 20-target events and merchandise contest. E. M. Smith is the Secretary.

The second grand all-day tournament of the Palisade Gun Club, to be held at Edgewater, N. J., Sept. 28, has a programme of eight 20-target events, totaling 160 targets, \$13 entrance; added money, \$51; merchandise, \$29. Events 3 to 7, optional 100-target race, entrance \$1.80, for Winchester 12-gauge brush gun, \$29. Sliding handicap. For high, low, amateur and special averages, \$17 are appropriated. Guns and ammunition, prepaid, may be forwarded to Wm. Benison, Edgewater, N. J., and will be delivered free. For further information, address A. A. Schoverling, Manager, 2 Murray street, New York.

BERNARD WATERS.

Indianapolis Gun Club.

INDIANAPOLIS, Ind., Sept. 16.—Hahn won the Peters badge. Abe Martin, who is Dr. O. F. Britton, was presented with the Dupont cup by Dr. S. H. Moore, President of the club, in a few well selected remarks.

"Dr. Britton: "The lovers of clean sport in Indianapolis have within the past week witnessed two wonderful exhibitions. Dan Patch, the great son of Joe Patchen, although he did not lower his own record, established a new track record for the Indianapolis race track. "Those who witnessed the wonderful horse with his even, honest, stride cover a mile in two minutes and one-half second, will admit that he, to use a horse phrase, 'was going some.' "Those who witnessed your wonderful score of 117 straight, at 18 and 19yds. (67 straight at 18yds., and 50 straight at 19yds.) admit that you, too, 'were going some.' "And while Dan Patch is still young and in his prime, you are 'not as young as you used to be,' but from the scores you are evidently still in your prime, and it is the sincere wish, not only of the members of the Indianapolis Gun Club, but of your friends throughout the United States (for your reputation is not limited by States, but is National) that you may continue in your prime for many years to come, and give us many more exhibitions of your wonderful skill. "We know that you have established a new amateur record for the Indianapolis Gun Club grounds, and believe that your score has never been beaten anywhere by a purely amateur shooter under similar conditions. "Those who watched your wonderful shooting, and saw you, not only 'snuff 'em out,' but in the language of that prince of good fellows, Hugh Clark, 'eat 'em up,' will bear witness that they never saw a more perfect exhibition of skill and accurate shooting. "And now, that your wonderful shooting during the series of contests for the Dupont cup has established the fact that you are not only 'the best fellow,' but also, the best shot in the Indianapolis Gun Club, I take great pleasure in behalf of the club to present you this magnificent cup, presented by the Dupont Powder Company to be competed for by the members of the Indianapolis Gun Club, and may your scores, as well as your shadow, never grow less is the wish of every member of the Indianapolis Gun Club."

Ossining Gun Club.

OSSENING, N. Y., Sept. 16.—Scores herewith were made at a regular bi-monthly shoot of the Ossining Gun Club, Sept. 16. Events 2, 4, 5 and the shoot-off were from the 20yd. mark. Event No. 2 was for the Bedell rifle, added birds handicap. Coleman made high scratch score, 23, but MacDonald's 10 added birds gave him a 25 straight. This prize must be won twice to own. Event No. 5 was the first of the series for the Weskora cup. The conditions are, distance handicap, two barrels allowed. Hyland and Blandford tied with 23 out of 25. Hyland had no success with his second barrel, while Blandford helped once. On the shoot-off Hyland scored 21, using his second barrel twice effectively to Blandford's 24, who also helped with his second barrel twice. This is a beautiful cup, costing \$35, and the members should come out in force to compete for it. It must be won three times to own.

The next shoot for the Weskora cup and Bedell rifle will be held Saturday, Sept. 30, at 2 to 5 P. M. Blandford has scored 97 out of the last 100 shot at in special competition, scoring 4 with the second barrel, 50 being from the 20yd. mark.

Raleigh Gun Club.

RALEIGH, N. C., Sept. 15.—Our club seems to be still on the ragged edge, and what few that shoot, have excuses from time to time that business keeps them away. Johnson and Gowan were the only ones out to-day. Their scores were very good for only two in a squad. Gowan shot at 62 and broke 59; Johnson shot at 63 and broke 55.

Our club will give their fifth annual tournament this year on Tuesday and Wednesday, Oct. 17 and 18. We always give our tournament during the State fair, and this year a much larger attendance is expected.

President Roosevelt will attend the fair on Thursday, 19th. This will bring out the largest attendance ever assembled in Raleigh in any one day. Our programme will be 200 targets the first day divided into ten events of 20 targets to each event; \$100 added money each day. The second day will be composed of the same programme, with the exception of a special event of 100 targets, the winner securing a handsome silver loving cup, which has been donated by the Lafin & Rand Powder Co., of Wilmington, Del. It is a beauty, and will be a fine prize for any one to carry home. This event will be handicapped according to the two days' shoot. The regular programme will be shot from 16yds. by all. Money divided per centage system—five moneys, 30, 25, 20, 15, 10.

R. T. GOWAN, Sec'y.

Nebraska Tournament.

LINCOLN, Neb.—As the dates of the Nebraska tournaments (viz., Broken Bow, Sept. 29 and 30; Hyannis, Oct. 2 and 3; Alliance, Oct. 6 and 7) approach, interest is increasing, and the indications are that we will have a large attendance at all of these shoots. In addition to the pleasure of target shooting, the boys will have three days vacation, in the best chicken shooting territory we have in Nebraska.

I have before me letters from some of the boys in the far away States of Ohio, Carolina, Virginia, West Virginia and Georgia, assuring me that they will be hand for the sport. The programme for these shoots will be as follows: At Broken Bow, 20 events with \$125 added; at Hyannis, 20 events with \$200 added; at Alliance, 21 events with \$250 added.

These towns are located on the main line of the Burlington Railroad from Missouri River to the Black Hills. Trains leave and arrive as follows: Burlington train No. 41, leaves Kansas City at 6:10 P. M.; St. Joe at 8:25 P. M.; Omaha at 11:10 P. M., and Lincoln at 1:10 A. M., arriving at Broken Bow the following morning at 7:50. This is a first-class through train. I will be pleased to furnish any further information upon application.

Brownsville Gun Club.

BROWNVILLE, Pa., Sept. 18.—The fall tournament of the Brownsville Rod and Gun Club was held in this city Sept. 14 and 15, favored with fine weather and a fair attendance. The first day Kelsey, of Pittsburg, was high gun, with 165; C. S. C., a member of the local club, second, with 163; Deniker, of Kuffs-dale, third, with 162; Fleming, of Pittsburg, fourth, with 161 out of a possible 175. Second day Atkinson, of New Castle, was high, with 161; Kelsey, second, with 157; Fleming, third, with 154; Moore, a local shooter, and Deniker tied for fourth with 152. The affable, genial gentleman, Chas. G. Grubb, of Pittsburg, representing the Peters Cartridge Co., was the only trade representative present.

Trap at Allentown.

ALLENTOWN, Pa.—The two-day shoot at the Duck Farm Hotel, held Sept. 14 and 15, had a good attendance. The professionals present were Messrs. J. A. R. Elliott, Edward L. Parvin and Luther Squier. The programme for the first day had 200 targets, and Mr. Elliott was high man with 189. Of the amateurs, Mr. Howard Schlicher was high with 182. On the second day, a programme total of 200 targets, Mr. Howard Schlicher was high for the day, breaking 182; Elliott was second with 179; Appgar, 177; Brey, 176; Kramlich, 174; Schorty, 164; Kroll, 158.

First Day.

Table with columns for Events, Targets, and Broke. Lists scores for various shooters like J A R Elliott, J Hahn, etc.

Second Day.

Hamilton Gun Club.

HAMILTON, Ont., Sept. 12.—The annual meeting of the Hamilton Gun Club (Incorporated) was held last night, and the following officers were elected: President, Dr. J. E. Overholt; Vice-President, Dr. J. W. Groves; Secretary, Ralph C. Ripley; Treasurer, John Hunter; Executive Committee—W. P. Thomson, Thos. Upton and James Crooks; Field Captain, William Wark; Official Referee, Captain Spencer.

It was decided to hold the President vs. Vice-President shoot on Nov. 18. The annual winter tournament, targets and live birds, will be held on Jan. 16, 17, 18 and 19, 1906. The \$500 guaranteed live-bird event will be a feature of the programme this year. A great programme of events is in store for all shooters.

IN NEW JERSEY.

Montclair Gun Club.

MONTCLAIR, N. J., Sept. 16.—Morris, of Morristown, paid a visit to Montclair to-day, their team shooting the eleventh match of the series of matches of the North New Jersey Shooting League. Montclair won out with a margin of 10 breaks to spare. Besides this, some six other events for handsome silver prizes were run off, Messrs. Colquitt, Cockfair, Buss, Soverel, Pierson, Tunis, Crane and Dr. Gardner being among the winners. Colquitt was the winner for the prize for general high average in events, 1 to 5. In the three-man team races, open to all clubs in the league, the Morristown club came out ahead, with Orange a close second.

On the 23d Montclair sends its team to shoot at Dover, N. J. Events: Targets: 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31 32 33 34 35 36 37 38 39 40 41 42 43 44 45 46 47 48 49 50 51 52 53 54 55 56 57 58 59 60 61 62 63 64 65 66 67 68 69 70 71 72 73 74 75 76 77 78 79 80 81 82 83 84 85 86 87 88 89 90 91 92 93 94 95 96 97 98 99 100 101 102 103 104 105 106 107 108 109 110 111 112 113 114 115 116 117 118 119 120 121 122 123 124 125 126 127 128 129 130 131 132 133 134 135 136 137 138 139 140 141 142 143 144 145 146 147 148 149 150 151 152 153 154 155 156 157 158 159 160 161 162 163 164 165 166 167 168 169 170 171 172 173 174 175 176 177 178 179 180 181 182 183 184 185 186 187 188 189 190 191 192 193 194 195 196 197 198 199 200 201 202 203 204 205 206 207 208 209 210 211 212 213 214 215 216 217 218 219 220 221 222 223 224 225 226 227 228 229 230 231 232 233 234 235 236 237 238 239 240 241 242 243 244 245 246 247 248 249 250 251 252 253 254 255 256 257 258 259 260 261 262 263 264 265 266 267 268 269 270 271 272 273 274 275 276 277 278 279 280 281 282 283 284 285 286 287 288 289 290 291 292 293 294 295 296 297 298 299 300 301 302 303 304 305 306 307 308 309 310 311 312 313 314 315 316 317 318 319 320 321 322 323 324 325 326 327 328 329 330 331 332 333 334 335 336 337 338 339 340 341 342 343 344 345 346 347 348 349 350 351 352 353 354 355 356 357 358 359 360 361 362 363 364 365 366 367 368 369 370 371 372 373 374 375 376 377 378 379 380 381 382 383 384 385 386 387 388 389 390 391 392 393 394 395 396 397 398 399 400 401 402 403 404 405 406 407 408 409 410 411 412 413 414 415 416 417 418 419 420 421 422 423 424 425 426 427 428 429 430 431 432 433 434 435 436 437 438 439 440 441 442 443 444 445 446 447 448 449 450 451 452 453 454 455 456 457 458 459 460 461 462 463 464 465 466 467 468 469 470 471 472 473 474 475 476 477 478 479 480 481 482 483 484 485 486 487 488 489 490 491 492 493 494 495 496 497 498 499 500 501 502 503 504 505 506 507 508 509 510 511 512 513 514 515 516 517 518 519 520 521 522 523 524 525 526 527 528 529 530 531 532 533 534 535 536 537 538 539 540 541 542 543 544 545 546 547 548 549 550 551 552 553 554 555 556 557 558 559 560 561 562 563 564 565 566 567 568 569 570 571 572 573 574 575 576 577 578 579 580 581 582 583 584 585 586 587 588 589 590 591 592 593 594 595 596 597 598 599 600 601 602 603 604 605 606 607 608 609 610 611 612 613 614 615 616 617 618 619 620 621 622 623 624 625 626 627 628 629 630 631 632 633 634 635 636 637 638 639 640 641 642 643 644 645 646 647 648 649 650 651 652 653 654 655 656 657 658 659 660 661 662 663 664 665 666 667 668 669 670 671 672 673 674 675 676 677 678 679 680 681 682 683 684 685 686 687 688 689 690 691 692 693 694 695 696 697 698 699 700 701 702 703 704 705 706 707 708 709 710 711 712 713 714 715 716 717 718 719 720 721 722 723 724 725 726 727 728 729 730 731 732 733 734 735 736 737 738 739 740 741 742 743 744 745 746 747 748 749 750 751 752 753 754 755 756 757 758 759 760 761 762 763 764 765 766 767 768 769 770 771 772 773 774 775 776 777 778 779 780 781 782 783 784 785 786 787 788 789 790 791 792 793 794 795 796 797 798 799 800 801 802 803 804 805 806 807 808 809 810 811 812 813 814 815 816 817 818 819 820 821 822 823 824 825 826 827 828 829 830 831 832 833 834 835 836 837 838 839 840 841 842 843 844 845 846 847 848 849 850 851 852 853 854 855 856 857 858 859 860 861 862 863 864 865 866 867 868 869 870 871 872 873 874 875 876 877 878 879 880 881 882 883 884 885 886 887 888 889 890 891 892 893 894 895 896 897 898 899 900 901 902 903 904 905 906 907 908 909 910 911 912 913 914 915 916 917 918 919 920 921 922 923 924 925 926 927 928 929 930 931 932 933 934 935 936 937 938 939 940 941 942 943 944 945 946 947 948 949 950 951 952 953 954 955 956 957 958 959 960 961 962 963 964 965 966 967 968 969 970 971 972 973 974 975 976 977 978 979 980 981 982 983 984 985 986 987 988 989 990 991 992 993 994 995 996 997 998 999 1000

EDWARD WINSLOW, Sec'y.

Rahway Gun Club.

Rahway, N. J., Sept. 16.—The scores of the shoot for the benefit of the First Baptist Church, held by the Rahway Gun Club, was a fine day's sport. It received many favorable comments on the handsome prizes presented. The ladies came out in force and had a very spirited contest for the prizes put up in the ladies' event. I have not had time to get the exact figures, but we think about \$100 will be turned into the building fund for the church. Event No. 6 was a snipe shoot. No. 7 was a special shoot for a rifle donated by the Stevens Arms & Tool Co.

### WESTERN TRAP.

#### Cincinnati Gun Club.

CINCINNATI, O.—The attendance on Sept. 16 was not up to the mark. Among the number were several occasional visitors, who will be at the tournament next week. Luther Squier got here this morning, and will be hard at work all next week in the office. Harold Money, C. O. Le Compte and Mr. Baldwin, the latter from the old Bay State, were here and shot a few, Money losing at 3 out of 75 shot at. J. J. Faran has returned from his vacation trip in Michigan. His lack of practice shows in his score. Mrs. Gambell got back from her Colorado trip, and is ready to furnish one of her famous dinners to all the shooters. That's worth going some way for. In last week's scores an injustice was done to Al Roll. An error in footing made his score 84, when it should have been 20, 19, 19, 17, 19—94. Mr. Roll a good shot, and we wish to credit him with all he makes. In the 100-target race to-day Herman, Ahlers and Le Compte were high with 89 each. Bullerdick, at practice, broke 91 out of 100. The scores, 100-target event:

Herman	89	Sundy	82
Ahlers	89	Roll	81
Le Compte	89	Faran	79
Bullerdick	85	Pfeiffer	79
Leintman	85	Uhl	69
Bohlar	84	Wolf	64
Gambell	84	Baldwin	39
Altherr	83	Lytle	28

#### Notes.

At the shoot of the Dayton Gun Club, on Sept. 15, three handicap events at 25 targets each, and an event at 25 targets were called off. In the first handicap Rike 3, Cord 3 Whitacre 9 and Le 2 tied on perfect scores of 25, including handicaps. In the second Rike (2) 23-25; Whitacre (7) 18-25; Cord (3) 21-24; Le (3) 18-21. Third—Rike (2) 23-25; Whitacre (9) 16-25; Ike (2) 21-34; Cord (3) 20-23. In the 25-target event Cord and Ike were high with 23 each; Rike, 22; Whitacre, 15. Rike was high with 90 out of 100; Cord, 86; Ike, 85; Whitacre, 65. The Rohrer's Island Gun Club, of Dayton, held their regular medal shoot on Sept. 13, and the attendance was much more satisfactory than on last shooting day. The sport began with a 10-target sweep, Oswald winning first, with 23; Rike, 21; Smyth, 1. Ed. Rike has just returned from his summer vacation and took this opportunity to try his new gun, a 16-gauge, with 26in. barrels. It is a handsome arm, and is the first to be owned in Dayton. In the medal contest, 25 targets, with handicap of extra targets, ten men took part. Three tied on 25 or better, Rike (29) 26, Miller (29) 26, Hanauer (28) 25. Oldt (28) was a close second, with 24 out of 28; Smyth (30) 23. In the first foot-off Miller dropped out, breaking 7 out of 10, the others going straight. In the second Rike made a straight score of 10 and won, Hanauer breaking 9. This is Rike's second win this season. A couple of team matches were shot, Oldt and Hanauer captains, five men on a team, 25 targets per man. The Oldt team won both matches, the first 100 to 97 and the second 99 to 1. Hodapp, of the Oldt bunch, tied with Rike, of Hanauer's team, for high gun in the two matches on 46. In the second match he missed his first target, and then went straight. Miller, in Hanauer's team, was second high with 43; Capt. Oldt, 41; Smyth, Hanauer team, and Oswald, Oldt team, 40 each. A 10-target sweep closed the sport, Rike being high with 24. James McConnell, who has been shooting recently with the Rohrer's Islanders and Dayton gun clubs, burst the barrels of his gun at the breech, a few days ago, luckily with no bad effects, and he is now waiting for new barrels from the factory. His low scores at recent shoots are explained.

#### Garfield Gun Club.

Chicago, Sept. 16.—The appended scores were made to-day on our grounds, on the occasion of the first trophy shoot of the fourth series. In the club trophy event Vietmeyer won on Class A by breaking 25 straight; Stone won Class B on 22, and Wilson on Class C on 21. In the Dupont cup event Vietmeyer and Thomas tied on 19 at 20 for Class A; Stone won Class B on 14, and Wilson won Class C on 10. In Hunter Arms Co. event Dr. Meek and McDonald tied in Class A on 18 out of 20, thrown 10 singles and 5 pairs; Stone on Class B on 16, and Wilson won Class C on 12. It rained heavily until 2 o'clock, still the attendance was fair, out twenty shooters showing up.

Events:	1	2	3	4	5	6	7
Targets:	20	20	25	10	10	10	10

No. 2, Dupont cup.  
No. 3, trophy shoot.

Dr. J. W. MEEK, Sec'y.

#### In Other Places.

It was a merry party that boarded the launch at Fremont, Ohio, for a trip down the river with a target shoot in prospect. Some good scores were made. Mr. Stull put up a box of cigars for a special prize, and it was won by Reardon. Although Vogh thought he had a "cinch," he did not break a target. The Erie, Kansas, Gun Club will give a shoot, at which a gold medal will be awarded to the highest score made at 100 targets. Twelve gunners were out at the regular shoot, Wednesday, of the Recreation Rod and Gun Club, Morganstown, W. Va. The scores made were low compared to those made three weeks previous. There were a number of ladies out to witness the shooting. The club prize was won by Coban. White won the officer's goblet. In the team shoot, Cohan's team, 42; White's, 34. Word has been received that Elmwood, Ind., Gun Club now has grounds that are being kept in fine condition. The public is invited to attend.

The Three-Barrel Gun Company is the successor to Hollenback. The company has been incorporated. The plant will be located at Moonsville, W. Va., with the head office in Wheeling. M. N. Cecil, John B. Garden, George E. House, C. W. Welty and G. O. Smith, all of Wheeling, are the incorporators. Amateurs all over the country are coming to the front fast. Last Friday Mr. Frazier, of the Hunting, W. Va., Gun Club, made 49 out of 50 and won all the powder company trophies, the next man being Dr. Sample, with 45. There is unabating zeal at Cleveland, Ohio, where the club is shooting for medals with added targets for handicaps. R. D. Gupell, of Aitken, Minn., winner of last year's handicap, was high man at the Little Fall's tournament with 94 per cent; Rhoda, second, with 87; Drago, third, with 86. Several of the new members of the Springfield, Minn., Gun Club have very much improved at the practice meets for the past summer. Here is their last score for the season at 25 targets: J. R. Schmidt 22, H. O. Schlender 20, W. Blackman 20, W. F. Mahler 19, E. Bendixon 19, W. G. Frank 18, Wm. Schmidt 15, E. Nippolt 12.

A new gun club has been organized at Canon City, Colo. Dr. F. N. Carrier, President; A. A. Parker, Secretary. September 28 and 29 there will be a shoot at Hutchinson, Kan., which will be worth the attendance of all the Sunflower shooters. Ed. O'Brein, one of the new Indians, will manage it. All the boys know Ed., and what Ed. says goes. Shoots are coming on with the October days in prospect thick and fast in the West. One of those "world-wide fame" shoots of the Cumberland Gun Club, Davenport, Iowa, will be held Oct. 6, 7 and 8. As this town is situated so as to draw from Illinois, as well as from Iowa, there will be at least one hundred shooters present, and they will shoot the programme through with the greatest amount of interest ever witnessed at a tournament. Whiting, Ind., will be the opening shoot on Oct. 1. Rockford, Ill., Gun Club has been taking things easy during the long summer months, but on Oct. 15 and 16 all shooters are invited to join with the home boys in a tournament. At Warsaw, Ill., on Oct. 11, Mr. Gash will conduct a one-day tournament. Warsaw is in Mississippi bottoms not far from Keokuk, Iowa, and besides, the next town in the South is known by the familiar name "Mallard." If the hunters are not busy testing their guns on mallards and other water fowl at this date, the shoot should be a good one.

Shoots will be so plentiful during the month of October in the southern part of Illinois that no one man can attend all of them. South Coulterville, one of the towns, has chosen Sept. 28 and 29 for their tournament. Prizes for the East Side Gun Club, Saginaw, Mich., merchandise shoot were on exhibition. They range from tables to hunting knives, and revolvers and many other useful and ornamental things. As to the shooting off of ties for the merchandise prizes at tournaments, many are decided by some form of a raffle. This does not appeal to the average shooter, as he prefers to win a prize by shooting to the luck of dice. One of the biggest of two-day tournaments is scheduled for the south part of Illinois at Centralia; two at De Soto, and two at Anna—six in all. Well, the more the better! One of the most noted events ever held by the Kenosha, Wis., Gun Club was the clambake held Thursday last on Washington Island, and some forty members and their many friends were present. After the dinner the members entertained until midnight.

The Celina, Ohio, Gun Club held their shoot Tuesday afternoon, with a membership of twenty-five present. Fred Young won the medal. Shooting interests at Canton, Ill., are lagging somewhat, as at the last meet of the North End Club there were only two present. Mr. C. D. Smith made 86 per cent, and George Pensinger 84. Monmouth, Ill., Gun Club got a few members together and held their first shoot for this season on Wednesday last. Those present had an interesting time and it may result in holding a tournament a little later. This reads like a sociable shoot: Targets one cent, all purses divided jack-rabbit system, which guarantees all a share of the purses. Come and bring your friends. Thus reads the prospectus sent out by Battle Creek, Mich. The Freeport, Ill., Gun Club held a picnic at the home of Morris Hough. We are informed that all had a very enjoyable time. Fifteen members of the Des Moines, Iowa, Gun Club shot over the traps Monday last. Owing to a very high wind scores were low. At New London, Iowa, the management figure on not less than sixty shooters for the tournament Oct. 3, 4 and 5, where the \$500 in gold is hung up.

Bisbee, Arizona, Gun Club report that only ten men came out to the last shoot. M. L. Naquin captured the cup for the day by the score of 27 out of 30. Strong wind made shooting very difficult at the Marietta, Ohio, Gun Club last Thursday. C. B. Cokefair, after shooting off five times, won the silver cup at the range of the White Flyer Club, Dayton, Ohio, on Thursday last. There was some hot competition. The Tolleston, the most famous duck shooting preserve in the

United States, owing to the many shooting scraps in which men were the targets, in Lake county, Indiana, is threatened with annihilation, as a petition for a draining system that will clear it of water is now about to be presented to the Legislature by farmers who live in the neighborhood.

The Kendallville, Ind., Limited Gun Club on last Tuesday made a good score. The shooting was varied, thus: F. G. Greenleaf, 178 out of 200; C. P. Bruck, 46 out of 50; P. G. Klinkenberg, 159 out of 200; W. H. Bowen, 43 out of 50; Lorence Ganer, 39 out of 75. According to tales from Colorado, the attraction at the shoot at Trinidad was that of drawing outlines of pictures by a fancy shot. The audience to name the picture. The enthusiasm at Colorado Springs and at Trinidad was an inspiration, even to Elmer Shaner.

The Twin City, Peoria-Pekin, Ill., Gun Club held the best shoot of the season. Dr. J. Austin Logan won the trophy, his first time out with the gang. Baker won Class A, Herman B., and Houf C medals. James A. Dawson made 18 out of 20 and was warmly congratulated. There is now a Bridge City Gun Club in Illinois, as well as in Indiana. It was lately organized at Thibes, Ill. The officers are Dr. R. B. Heller, President; Ed. Beisswinger, Vice-President; I. I. Rosenfield, Captain; Arthur Brown, Secretary, and J. A. Heller, Treasurer.

Bisbee, Arizona, shooters have gotten together a gun club that promises to rank with the best in the West. Those men who are identified with this organization are the kind who refuse to travel in second place in any particular line they may engage in. The Gilby, N. D., Gun Club have oiled their traps and put them aside for the fall and winter. They are busy hunting the prairie chicken and watching the flight of the wild duck.

The trapshooting season has closed at the traps of the East Grand Forks, Minn., Gun Club. The results show Mayor John F. Brandt has won first prize; second, J. H. McNicol. The season was a most successful one. The trophies were valuable and created much interest, and more shooting was done this year than in previous years.

Tuesday last was shooting day at Tama, Iowa. There were 150 targets on the programme. High score was made by Wm. Simmons, 135. Mr. Moundson won the medal.

Members of the Newark, Ohio, Gun Club are working industriously for the success of the tournament, Sept. 27 and 28, and are jubilant over the prospects.

Sabina, Ohio, Gun Club won the team shoot last week, score, 107; Jamestown, 100; Bowersville, 89; Bloomington, 79.

The Lead Gun Club, Central City, S. D., held a shoot, Sunday, at 50 targets, Perkins 43, Accleston 34, Van Horn 45, Bick 35, Vicilich 34, Irvin 36.

#### Springfield, Mass., Shooting Club.

THE practice shoot of this club, held on the afternoon of Sept. 9, was well attended, twenty shooters being on hand. It was a beautiful day, with scarcely any wind, and good scores were made. Snow was high gun with an average of 82 per cent. for the shoot. In the merchandise prize event, a 15-target race with a shooting jacket for prize, Paul Lathrop and E. H. Lathrop tied on 15 each. On the shoot-off at miss-and-out, Paul Lathrop won.

Shoots will be held every Saturday afternoon for the rest of the month to enable the shooters who are behind in the Peters cup contest and merchandise race, to make up the required ten shoots called for before the shooting season closes, Oct. 1. Two shooters, Snow and Kites, finished at this shoot. Added target handicap in cup contest, and in the merchandise race the shooters are divided into three classes, A, B, C, there being three merchandise prizes of equal value up, one for each class. Scores in handicap event of this shoot follow:

Weekly prize, shooting jacket, 15 targets:			
Brk. Hdp. Tot'l.		Brk. Hdp. Tot'l.	
E H Lathrop	13 3 15	Snow	12 0 12
P Lathrop	12 4 15	H P Chapin	12 0 12
E Cady	10 4 14	Buck	7 4 11
Kimball	10 4 14	Bradford	7 4 11
Parsons	10 4 14	A Mysterly	7 4 11
Downing	14 0 14	Kites	9 0 9
Hawes	10 3 13	Cheesman	9 0 9
L Mysterly	8 4 12		

Peters cup contest, 25 targets:  
Brk. Hdp. Tot'l. Kites ..... 20 0 20

Merchandise race, 25 targets, three prizes and three classes, A, B, C:  
Class A—Snow 21, Kites 16.  
Class B—E. H. Lathrop 18, Hawes 15.  
Class C—L. Mysterly, four strings, 21, 18, 13, 12; Parsons 16, P. Lathrop 15, A. Mysterly, two strings, 11, 8; Bradford 7.

MISFIRE.

The Great Western Handicap.

The latest and greatest annual Great Western Handicap event was held at Trinidad, Colo., under the auspices of the Trinidad Gun Club, Sept. 4, 5 and 6, and the story thereof is one that is pleasant to write. There had been some doubt in the minds of people outside of the city of Trinidad whether a tournament so far southwest and off the path of travel as it were, could attract a sufficiently large attendance to make it truly successful. Even some in the West were doubtful upon this point, and a visitor from the "valley" was heard to remark, "I am afraid that the attendance at Trinidad will not be what the boys expect. You ask why? Simply because to draw fifty, or more shooters there they must come from a radius of five hundred miles, which is too far to go to a shoot in these days when they are so plentiful."

Our friend was perfectly sincere in his prognostications, but as a prophet he was a bad failure, for the simple reason that his point of view is not that of the West, and he did not understand that in this country character is as broad as the reaches between cities, and the idea of distance is proportionately balanced. The boys of the Trinidad club knew they would have a great shoot and they prepared for it as fully and perfectly as it was possible to do, the result being one of the very best trapshooting tournaments ever pulled off in the shadow of the Rockies. The working force of the club consists of Messrs. J. C. Huddleson, F. M. Gooden, H. K. Hollaway, F. W. Caldwell, Eli Jeffries and Dr. Davenport, and it will ever be a source of pride and satisfaction to these gentlemen to feel that they earned and received in this achievement the cordial and unanimous indorsement and thanks of their fellow sportsmen in this and fifteen surrounding States.

Trinidad is the southernmost important business city in Colorado, and its prosperity is based not on gold or silver mining prospects, but on that infinitely more stable mining asset, coal, which surrounds the city on all sides, permeating the mountains in three or four great veins at elevations from six to nine thousand feet above sea level. The vast importance of these great fuel fields is just beginning to dawn upon the country, and this fact is bringing Trinidad to the front perhaps faster at present than any other important city in the West. It is beautifully and healthfully situated, and the men who have made it and in a measure, hold its future, are the proud scions of the good old families of Indiana, Illinois, Iowa and others of the great Central States, who in their early manhood followed the Western Star.

The tournament was held on the fair grounds, at Elk's Park, where the splendid buildings that permanently occupy the grounds were available for office use and shelter, and everything was thrown wide open for the use of the visitors on this occasion. Two blackbird traps threw the targets, and worked so successfully that there was no delay during the three days' shooting, and about seventy shooters finished the entire programme each day in time for an early supper at their hotels. Everything was patterned after Grand American Handicap style, and such an equipment in the hands of the genial Frank Cunningham, of St. Joe, Missouri, as general manager, could not fail to be right. Our old friend A. E. McKenzie, of Denver, was also there, assisting the management in various ways and extending the "glad hand" to new comers.

The programme itself was very attractive. The first and second day carried twelve events each in 15 and 20-target matches. The third day was devoted to an open "free-for-all" event at 100 targets, handicap distance 16 to 22yds., and the Denver Post trophy event, same handicap, but open to amateurs only. The club added an aggregate of \$750 in cash to the purses. This included added money in each event, besides three daily amateur and one daily professional average, and averages for the entire programme, and last, but not least, a \$100 solid gold watch as the trophy in the free-for-all event.

Except for slight daily showers, the weather was fine throughout. The background was perfect, and only occasional severe gusts of wind stood in the way of very high average scores. Under these conditions, many of the boys were disappointed in not increasing their usual scores; but this is explained in the fact that in that light atmosphere the loads carry much more compactly, giving a smaller killing circle, and the targets are seen so much more readily that a quick shot is apt to shoot even quicker than is his wont, and the necessity for absolute accuracy of aim is thus increased about 25 per cent. Several of the old-timers worked this theory out by shooting tests at stationary targets, and proved its correctness beyond question.

In mentioning the pleasant features of this meet we must not overlook the splendid dinners served by the ladies of a local fraternity in the pavilion every day at noon. The writer never partook of a better meal on a shooting ground, and it is pleasant to add that these tables were patronized to the extent of at least \$100 per day. Then, also, there was that fine product of the housekeeper's art, a glorious three-story frosted cake, which the ladies donated as a prize for the highest general average on the regular programme. This made the contest among the top-notchers very interesting, and when in the end "the man who takes the cake" proved to be that great old campaigner, W. R. Crosby, the enthusiasm was great indeed.

The cake was presented on the grounds in a neat speech by Mr. McKenzie, together with an original poem, which the writer regrets being unable to quote. Mr. Crosby replied in a few happily chosen words, and introduced Capt. Tom A. Marshall as the orator of the shooting game, when the latter made one of those heart-warming addresses which have made his voice known and sought for at all such functions, "when the shooting's done and talk's begun amid cheer and good-will to all."

In order to allow the squad going through to the coast for the Grand Western Interstate Handicap to take part in this event, the Great Western followed closely upon the Colorado Springs shoot, and Sept. 3 was designated as practice day. In this contest that old veteran of the traps, Chas. W. Budd, distinguished himself and pleased his Western friends by scoring the programme of 100 targets straight. Many other good scores were also made.

On the first programme day Harold Money, who has been in Colorado for some time and was thoroughly acclimated, led all the boys a merry race, and landed first place by scoring 196. He had a close competitor in Mr. Jos. Rohrer, one of the popular Western amateurs, who went through the day with only 5 down.

The second day Harry J. Taylor, the South Dakota amateur wonder, came around to his best form, and cleaned up the programme with only 2 lost, which led the field. And in the professional ranks W. R. Crosby paced the bunch, losing but 4.

This made the finish for general average honors very close indeed. Crosby led with 12 lost on the programme. Money, who shot a great clip throughout, came in for second with 13 down, and Fred Gilbert, whose work throughout was fine, landed a tie, with Taylor for third, while D. C. Rand, the coming young Texas amateur, found himself master of fourth place.

On Wednesday morning the free-for-all handicap was started as the opening feature. This was a very interesting race, in which the handicapping committee did good work in placing the amateurs and professionals in such positions as to make a relatively equal contest. The Trinidad boys arranged this event because, as they said, they wanted to see an old-fashioned shooting match, in which all had an equal interest at stake, and again the result justified their judgment.

When the last round was fired it was found that two amateurs, Messrs. W. A. Veach, of Nebraska, and F. M. Gooden, of the Trinidad Gun Club, and one professional, the veteran Charlie Budd, had finished with 97 each. This required a shoot-off at 20 birds. In the first string Gooden scored 17, while the other two contestants went straight. In the second string Budd lost 3, while Veach went through clean and won.

The closing event was the Denver Post trophy contest, among amateurs, which has furnished some of the most animated races at the traps that the West has seen during the past two years. Here again the crowd was given a great entertainment in the work of Geo. W. Maxwell, the one-armed wonder of the West, who stood at 15yds. and scored 98 of the 100 targets, winning without a tie. Right next to him was that popular Kansas marksman, Ed. O'Brien, who finished with 97.

And so endeth the last chapter. Summarized scores of all who finished in the various events are appended.

Table with columns: Name, First Day (Shot, Broke), Second Day (Shot, Broke), Third Day (Free, Denver, Post), Total Score.

Large table listing names and scores for various events, including Rohrer, Adams, Mackie, Lewis, Patterson, Cobb, Clapp, McDowell, Prettyman, Hartman, Huston, Cornelius, Thorp, Taylor, Marshall, Young, Budd, Riehl, Callison, G. Timberlake, D. Timberlake, King, Linderman, Bray, Maxwell, Hardy, Veach, Heikes, Crosby, Gilbert, Powers, Hirschy, Fanning, Tipton, Frederick, Andrews, Younkman, Norton, Gallup, Anderson, Curry, Hudelson, Hall, Davis, Caldwell, Radford, Fitzsimonds, Young, Colson, Davenport, Cunningham, Prudum, Sperry, Merrill, Markle, Holloway, Mumford, Hadley.

Floating Tournament and Excursion.

BEARDSTOWN, Ill., Sept. 15.—This much advertised, much talked of Central Illinois tournament took place Sept. 13 and 14, as per schedule. Think of starting to shoot at 8:30 A. M., and when you finish you are ninety miles away from the starting point, and that all day long you have been shooting at 200 targets from the traps of a moving barge.

The gun club known as that of the Iceberg, at Beardstown, Ill., secured for two days a steamboat and double deck barge, the combined capacity of which is 1,400 people. The lower deck of the barge is fitted for dancing, with a good orchestra constantly in attendance. The second deck with chairs, settees and tables, and thus the shooting is in no way interfered with on the roof. The range is the roof of the barge, on which was installed an automatic trap. This roof has a space of 30 feet wide and 100 feet long, and was ample in every way for the accommodation of shooters. As to the background, an important thing in all tournaments, it was varied, being the scenery along ninety miles of the beautiful Illinois River. This, in case of a straightaway target, was clear, being up the river, but the side targets all went against dark green trees. You will readily perceive then that the changed conditions, being new to all, do away with the necessity of any handicaps, and it must be considered any one's game until the last shot has been fired.

This was not an experiment with the club, as this was the fourth of the kind; but the previous efforts were confined to one day, with a trip down the river and return on same day. Visitors were urged to bring their wives, as the occasion was in the nature of an outing, as the river excursion was combined with trapshooting. There was not as large an attendance as was expected. Many staid at home through a misapprehension that the steamer was laid up for repairs, caused by coming in contact with a bridge pier at Pekin; but this accident was only the misplacement of a few boards on the guards, and she arrived at Beardstown docks the evening before the start.

There were several of the wives of shooters on the boat, viz., Madames Coleman, Brannan, Lewis and Cummings, and with the dance at the close of the shoot they seemed well pleased with the outing.

Everything passed off according to the programme, with the exception of the time of arrival in Peoria, the boat did not land at the foot of Main street until 9:20 P. M., too late for a trip to the pleasure resorts or theatres. This was caused by a rise in the river and by a lack of steam, the latter being caused by an inexperienced fireman.

Mr. A. L. Cummings had charge of the office, and with plenty of assistance from club members, the shoot went on without a hitch, save now and then a stop at meeting some boat or passing a town where the pellets of shot might do some harm before they dropped in the water.

The shoot was a novelty to the fishermen and residents of all the towns along the river, and the fish remained unmolested. Business for the time was suspended in the town at the time when the excursion was passing by. We passed during the day the towns of Frederick, Browning, Sharps Landing, Bath, Havana, Liverpool, Copperas Creek, Kingston and Pekin.

It was interesting to note how intently the boat was watched by the lone fishermen, as they were numerous. They were attracted by the sound of the guns and, if any of them were soldiers, must have reminded them of skirmish days.

The weather was against the shooters, a strong, changeable wind blowing all day directly in the face of the stand, and towering targets were the rule. The wind and residue straw and such from the unpacking of the targets was very disastrous to the eyes. Some good scores were made, as Riehl and Cadwallader ran above 90 per cent., as did Bert Lewis, Omer Pearu, A. D. Sperry and H. D. Drawbe; 189, 185, 183, 181, are fine scores for amateurs.

When the first squad, composed of such good men at the traps as Frank Riehl, of Alton; Ed. Scott and J. A. Groves, of Jacksonville; J. C. Ramsey, Manito, and A. D. Sperry, of Rock Island, toed the mark on top of that barge and started the game going, it was soon found that, if the flight of targets kept going at that rate for the whole day, 80 per cent. would possibly be high. There was trouble with the trap. It was breaking targets and not throwing steady and getting out of order, causing delays. It was pointed out that targets were being thrown too hard and too high, and the trap was let down. This, with proper adjustment of the carrier, made matters go smooth for the balance of the day.

Note the first event. Thirteen was high, with the exception of Cadwallader, who got 14. Some of the best ones missed five in the first event, and then came on strong and proved among the leaders at the close of the 220 shots.

Event No. 9 was 10 pairs, and this was not counted in the average. This was an interesting race, and more doubles should enter into all tournaments. Mr. Pearu proved the good shot and scored 18, taking first money, while Lewis was the only 17. There were two sixteens, and so on down to 5. In justice to the shooters it should be stated that the trap should always be elevated for doubles, which gives time to cover the second target before it gets too low.

Some queer things happened during the day, for instance, when the first twenty men shot in the eighth event, every man shooting for the money, made 14 or 13, with the exception of two, who tied on 6, and had it not been for one man in the last squad getting 12 and another 11, the six men would have won third money.

The second day was almost a repetition of the first, the wind changed and for a part of the day faced shooters, and there was some rain in the afternoon. Some of the shooters improved, while others, especially the high man for the first day, fell off badly. Riehl, with 183, won high professional for this day and for the tournament. The best shot by far was Bert Lewis, the

man from Auburn, Ill., who has the "auburn" hair. He came fast and steady, and made 190, a 95 per cent. gait, something wonderful under the conditions. He was high man for the two days over all—same thing happened at the last year's floating shoot. When the boat was about to land all present expressed themselves well pleased with the two days spent on the broad waters of the Illinois River, and promised to come again. Those present were Frank Riehl, Alton, Ill.; Ed. Scott, J. A. Groves and C. S. Magill, Jacksonville; J. C. Ramsey, Manito; A. D. Sperry, Rock Island; Fred Lord, Chicago; Fred Gibson, Kirwood; F. J. Gayer, Monmouth; T. Ruff, East St. Louis; J. H. Coleman, Beardstown; H. W. Cadwallader, Decatur; Bert Lewis, Auburn; F. L. Pfeiffer, Centralia; W. H. Viemeyer, Chicago; Omer Pearu, Ashland, Ill.; W. M. Anderson, Beardstown; R. E. Wankell, Virginia; A. L. Currie, Frederick; W. D. Drawbe, Frederick; H. Coleman and T. V. Brennan, Beardstown; Allen Davis, Virginia; Frank Rayneur, French Village; John Whitford, Augusta; C. H. Ditto, Keithsburg; J. H. Morris, Virginia, and B. Curry, Beardstown.

Sept. 13, First Day.

Table with columns: Events, Targets, and scores for various shooters on Sept. 13.

Sept. 14, Second Day.

Table with columns: Events, Targets, and scores for various shooters on Sept. 14.

Riehl, first professional; Cadwallader, second; Lord, third. Lewis, first amateur; Pearu, second, Drawbe, third; Sperry, fourth.

Bert Lewis won high average over all last year, and duplicated same this year. He has not shot much during this year, and when a man can make 190 out of 200 on a moving boat, he is a wonder.

Rochester Rod and Gun Club.

ROCHESTER, N. Y., Sept. 13.—The following scores were made today in the fifth weekly competition for the Lafin & Rand trophy, on the grounds of the Rochester Rod and Gun Club:

Table with columns: Brk. Hdp. Tot'l and scores for Coughlin, Kerchner, Brotsch, Borst.

Table with columns: Back scores and scores for Brotsch, Coughlin, Adkin, Byer.

Table with columns: Re-entry scores and scores for Donovan, Byer, Clark, Adkin, Borst, Kerchner, Brotsch, Coughlin.

Bergen Beach Gun Club.

BERGEN BEACH, Brooklyn, L. I., Sept. 12.—The weather was of the finest of early fall. It was a good day for club and shooters of the latter twenty were in attendance. Fred A. Stone, the Scarecrow Man of the Wizard of Oz, was in attendance. The scores follow:

Table with columns: Events, Targets, and scores for various shooters on Sept. 12.

PUBLISHERS' DEPARTMENT.

The Many-Use Oil at Sea Girt.

AMONG the throng visiting the National Rifle Tournament at Sea Girt, N. J., we noticed Mr. G. W. Cole, President of The Many-Use Oil Co., of New York, who was superintending the distribution of large bottles of The Many-Use Oil among the riflemen. Mr. Cole said that nearly all of the six hundred and seventy-eight members of the teams were using this oil for cleaning and lubricating and rust preventing purposes. It would seem that the practical test of the oil at this time should demonstrate its value to sportsmen, as a great deal of rain had fallen, and the sea shore air would test its rust preventing qualities. Mr. Cole said that many captains of the teams had given him recommendations of the oil and that they would continue to use it after they returned to their own shooting grounds.

# FOREST AND STREAM.

## A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1904, BY FOREST AND STREAM PUBLISHING CO.

NEW YORK, SATURDAY, SEPTEMBER 30, 1903.

VOL. LXV.—No. 14.  
No. 346 BROADWAY, NEW YORK.

TERMS, \$4 A YEAR, 10 CTS. A COPY.  
SIX MONTHS, \$2.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, \$4 per year, \$2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

### RUFFED GROUSE.

In many of the States it is now lawful to shoot ruffed grouse, and the "roar of their quick-beating pinions" and the sound of the breechloader are heard in the land. Although a large amount of tramping will be done, and a large quantity of ammunition expended, there will be no serious diminution of their numbers until after the frosts have denuded the thickets of their foliage and the wandering propensities of the birds have become satiated and they settle down to quiet life in their chosen retreats. Until this season shall arrive there will be not much of genuine sport in their pursuit, although occasionally, under favorable circumstances, there will be exceptions to the rule, when the ardent sportsman will be given a foretaste of the sport that can only be enjoyed to the full in its proper season.

A very large proportion of the grouse hunting in September and October is done by the tyro, who manages somehow to bag or drive away most of the birds that are to be found in the easy places, and just as the proper season commences he becomes disheartened at the apparent scarcity of birds and retires from the field, not more than half satisfied with his success as a sportsman, and thoroughly convinced that, so far as the pleasure of grouse hunting is concerned, a vast deal more than the truth has been told. His lack of success, and the disappointment which naturally follows, are owing mainly to a lack of knowledge of the habits and peculiarities of these shy birds, and to the fact that his experience with them has been just at the time when their habits and peculiarities could be observed to the least advantage. The weary tramping in the sweltering heat, as well as the many discomforts attending the exploration of the tangled thickets at this season of the year, also play no unimportant part in producing this result.

When the novice, lamenting the scarcity of the birds, and inveighing against their wildness, closes his campaign, the veteran girds up his loins, and, with joyful anticipations of glorious sport, seeks the well known haunts of his dearly beloved favorites, and with consummate skill and tireless patience forces from the innermost recesses of stately forest and tangled copse their brightest treasures, and wins them for his own. The preternatural wisdom—miscalled wildness—displayed by these crafty birds, affords a relish and gives a zest to their pursuit, and is to him a source of ever increasing pleasure and admiration. Not by him are the dead bodies of the victims of his skill alone taken into account while summing up the results of the day; far nobler thoughts light up the eye and inspire the smile that chases the wrinkles from his brow as in slippered ease he fondly strokes the head of the loved companion of his sports, while he reviews the incidents of the day. Again he basks in the bright sunshine of the pleasant glades and strolls among the dark shadows of the grand old woods; again, with "feasting eyes and swelling heart" he treads amid the majestic charms of the everlasting hills; again, with buoyant step and quickening pulse, he follows the wily patriarch to his most secret retreat; and as the incidents of the day thus pass in review before him, there come priceless memories of other days of rarest sport to join his newest treasures, thus crowning his restful hour with a halo of delightful recollections that he would not exchange for a kingdom. The poet who wrote of—

"Drear November's chilling blasts."

we venture to say was not a grouse hunter, for it is during that much maligned month that the adept in the sport finds the most enjoyment in ruffed grouse shooting. Were the pursuit of this magnificent bird restricted to that month, a far greater amount of sport would be realized by the new beginner as well as by the adept, and soon, with the protection thus afforded, many a former haunt of the grouse that now is desolate would teem with

countless numbers of this, "the best game bird in the world."

There are so many varying circumstances constantly arising when one is in pursuit of the ruffed grouse, that it is next to impossible to give to the beginner much advice that will be of practical benefit to him. A few hints, however, may prove of service. Birds that have been frequently disturbed by the hunter become shy and wary and are very prone to take flight as soon as they discover the least sign of danger. There is nothing that will startle them more quickly than the sound of the human voice; and one of the first lessons then is to learn to keep absolute silence, so far as the voice is concerned, when in their vicinity. Upon the other hand, the noise of approaching footsteps frequently does not seem to alarm them, provided the hunter keeps moving and does not undertake stealthily to creep upon them when they are lying to the dog.

We have always found that we could get to closer quarters when in pursuit of these wary birds by advancing boldly with even stride, and without the slightest halt, not directly toward their supposed hiding places, but in a direction that would lead them to imagine that we were to pass them by; and always taking care to go between them and the direction in which they would naturally endeavor to escape. It is also of vital importance that you at once follow up your birds and keep them moving; until, finding that they cannot evade your pursuit, they crouch and seek to escape by allowing you to pass by. You will find that a light gun and ordinary charges will prove more satisfactory than a heavy weapon and loads that cause unpleasant recoil. A tested charge in a 12-bore gun is of 3 drs. of good powder,  $\frac{3}{4}$  oz. of No. 10 shot for the first barrel, and a scant ounce of No. 8 for the other.

To bring down the hurtling grouse in his arrowy flight at three-fourths of all fair shots is an achievement of which anyone may well be proud; but far greater skill may you boast when you can "with eye of faith and finger of instinct" "cut loose" at every one that rises within shooting distance and score one-half. Words and sentences, no matter how well chosen and smoothly turned, would be powerless to give you this proficiency, nor is there any written formula by which you can learn to tell at a glance just where to place yourself while your companion flushes the bird. It is only by close and intelligent observation, and long practice, that you may know the how, the where and the when to work the different coverts upon different days, and the different times of the day; and it is alone by great perseverance and long experience, coupled with natural tact and love for the sport, that you can hope to be initiated into the mysteries, which are revealed only to masters of the craft.

We have carefully and persistently studied the habits of these royal birds for nearly forty years, and with extreme sorrow have noted their gradual decrease. We have several times within this period observed that, following a season when they had been unusually plenty, we have found their haunts comparatively deserted, and that they would then gradually increase until in a few years they would again be plenty, and perhaps remain so for a year or two, and then again unaccountably disappear. When we first noticed this, we were loath to believe that our beautiful friends had winged their last flight, but, with vague ideas of a migration to more favored retreats, where, perhaps, an ample supply of their favorite food could be found, we trustingly awaited their return. But as the seasons rolled by and we failed to find more than the natural increase of the birds which had remained, and learned that in widely separated districts in every direction the same lamentable state of affairs existed, we were sorrowfully forced to admit that our conclusions were wrong, and it has been with increasing sorrow that we have seen each recurring period of scarcity more disastrous than the preceding, and each season of comparative abundance less plentiful than before, and we greatly fear that the time is not far distant when these noble birds will become extinct.

That the pursuit of them with dog and gun, in proper season, would ever exterminate them, we cannot believe. We have seen too many of their successful tricks, and witnessed too many of their triumphant escapes from the best of dogs and the best of guns to believe anything of

the kind. There are also in nearly all localities frequented by them, many places where, owing to the inaccessible nature of their chosen retreats, they are practically secure from the most daring hunter, and in most sections these places will always preserve a stock amply sufficient to furnish the next season's supply, to say nothing of the many survivors who craftily escape the hunter's wiles, even upon the most favoring grounds. With snaring the case is entirely different; and the man who thoroughly understands their habits, in a short time will entirely exterminate them from any locality.

We may talk as we will of the numerous natural enemies of our game and of the "advance of civilization," but there is one condition which in itself is all sufficient to account for the dearth of shooting opportunity. That one thing is the multiplication by a hundredfold of the shotgun. Let the country-bred sportsman, of forty or even thirty years, consider his own home village and the conditions obtaining there when he was old enough to shoot, in comparison with those which exist to-day. In those times there were other sportsmen like himself, but in the community at large they were the exceptions. For the few guns then in action the game supply amply sufficed. To-day, were there even a corresponding stock of birds, it could not begin to go around, where the guns are so many. If one returns to-day to the home of his youth he finds many of the old covers no longer possible harbors of game; in place of the few gunners of those early years he finds a regiment of sportsmen; everyone of them intent on getting his own personal share of game—that is to say, such a share as he thinks he ought to have; and he finds in consequence that the actual supply of birds is pathetically small, and the satisfaction of shooting for the most part of a strictly reminiscent character.

Now let the individual who knows only reflect that these are the conditions prevailing as to his own home, and he and we need not look further for an explanation of the difficulties most of us find in discovering where to go for our autumn shooting. The whole situation as to shooting in the United States to-day, outside of preserves, may be summed up in three words—too many shotguns. And as the manufacture and sale and use of new thousands of guns go merrily on, the unfortunate prevailing conditions are year by year growing more aggravating. It is bound to be more and more difficult for the gunner who is not a member of a game preserving club, or an owner or renter of a game land, to find anything to shoot. Too many guns.

MUCH interest is felt as to the forthcoming appointment of a chief game and fish protector for the State of New York, to fill the place so long and so efficiently held by Major J. Warren Pond, whose resignation has been announced to take effect on Oct. 1. Among those whose names have been mentioned for the office is Mr. John B. Burnham, of Essex. Mr. Burnham has long been known to the readers of this journal as an entertaining and well informed writer on wilderness life and as a consistent and persistent advocate of game protection. He is a practical sportsman and an experienced woodsman. He has genuine interest in the game and its preservation, and were he to undertake the duties of the office that interest would be the dominating influence of his official service. Mr. Burnham's selection for the place of Chief Protector would be taken as a step in line with Commissioner Whipple's declared purpose of administering the affairs of the department with a single view to the protection of the game and the fish and the forest without fear and without favor.

In a volume soon to be issued by the Forest and Stream Publishing Company, under the title, "My Sixty Years on the Plains," Wm. T. Hamilton, popularly known as "Uncle Bill" Hamilton, has written the story of his life as trapper, trader, Indian fighter, scout and pathfinder. It is a record of heroic days and heroic deeds; and Mr. Hamilton tells the story with engaging modesty and simplicity. No more graphic delineation has ever been given of the wild life of that period beyond the frontier. The chapters are full of action and color. Charles M. Russell, the "Cowboy Artist," has contributed six spirited drawings to illustrate the book.

## THE SPORTSMAN TOURIST

### Floating Down the Mississippi.

#### Louisiana Bayous—Final Chapter.

A PIROGUE is the horse, bicycle and legs of the Louisiana "back country." It has, to the casual observer, the maximum of tippiness and minimum of comfort. It is so narrow that a cat-hipped man hangs over both gunwales as he sits in one. With just a man in, there is two inches freeboard, but when laden with a mattress, a dog and a gun the water is within half an inch of the topsides of the boat. There were scores of them in the swamp. At every house was a fleet of them, and they were of many patterns.

Young, whose acquaintance I made a few miles above Grand River on Atchafalaya, was in a plank pirogue. It was 11 feet long, 5 inches deep and 16 or 17 inches wide. He sat on the bottom on a block of wood. In the bow, the mass of pink mattress was in startling contrast with the worn shades on all sides. It was really delightful to observe the pink reflection from that homely mass of bedding. Others make their pirogues of a single billet of wood. Some take a section of "natural tree trunk" for the bottom and lay a gunwale along each side. The effect is the same—the tippiest American craft results, and in these things hundreds of men, women and children do their coming and going—crossing lakes fourteen miles wide and thirty-odd long, subject to as sudden storms as any region in the world.

Young gets his mail at Plaquemine, on the Mississippi. "Theh was fish'men come yeh, spot'in' once. Theh tole stories—I knowed of them. Everybody yeh-haway has yearn on 'em." One of this party was Fred Mather. Among the swamp people, he left an impression that will not soon be forgotten there. Mr. Mather's oral yarns were marvels in swamp ears, just as his written ones were among the best narratives of sport ever printed.

Suddenly, as we floated down stream, gunwale to gunwale, with the current, Young betrayed signs of anxiety. He asked me to pull my starboard oar, and then he wriggled his paddle in the water, and his craft darted clear of his boat.

"La Grand," he explained. "You see that lit' bayou? Hit's Little Atchafalaya—go down hit, lak I tole you—then Le Romp—lak the rest I tole you. You tell them, I set you right? You do that? Tell yo' people I set you right?"

I told him I sure would. He cut through a tiny twenty-foot bayou, or delta, a short cut into the river, while I kept to the main current and ran out into the great Louisiana swamp bayou, Grand River.

It was several times wider than the bayou I had been in for more than a hundred miles. A swamp settlement was there—Butte La Rose. Considerable land was cleared, but the opens were mere patches in a dense, encroaching wilderness. The houses were on stilts, and the occupations of the people were plainly indicated by black moss hanging on poles, and fish nets close to the water's edge. A swell rolling up stream gave me a glimpse of a fish tug just making a landing. It was a small, stern propeller boat, much weather beaten, and similar to a tiny New York Harbor craft of the same name—but probably earning four times the money.

Little Atchafalaya proved to be an awesome place. I had no sooner entered it than I was swept down stream by a rapid current into an arcade of tropic verdure. Trees overhung the place, and it was shady, though the leaves were not fully started yet. The ground had the bad appearance of land which is dry at the surface, but is still soggy from a recent inundation. From this 30-foot wide stream little tinklets of bayous branched to the right and left like artificial ditches—some of them dry, and some just beginning to flow with water which carried along leaves and twigs and had a wave of dusty water at the end as the rising flood gained a new level. It seemed as though such a narrow place must be filled with drift, as many other bayous were, but the swamp man had told me true, and though the way was only a few yards wide between ends of gathering drift at times, a couple miles of sub-arboreal passage carried me into another bayou of pretentious dimensions—the Romp. Its current was less strong than in the other bayous I had entered. A clearing was on the far side of it—a weedy, grubbing-hoe sort of farm, with a growth of palmetto ferns around it, for which a northern cottager would have given much more to have than the farmer here could have afforded to pay to get rid of them. I followed the current. It carried me close to a boat 40 feet long, 5 feet wide and having vast oars, like a cabin-boat's, swung by rawhide thongs. A man and woman were in it, and her face was the homeliest one that I ever saw. Her skin was the color of ashes and was crinkled like paper, and looked as dry; her eyes were a faded green, and her expression was that of a stupid, ugly kitten. She was a tiny woman, clothed in a single garment of thin, printed cotton, much faded and unclean. The man was a lank, unshaven, red-haired individual with saffron complexion. He recommended that I trade my skiff for his 40-foot galley, because of the large lakes I had to cross on my way to Morgan City.

Not far beyond was the winter home of R. H. Seabold, a Maryland German, who fishes the Louisiana bayous winters and goes to Maryland for the summer—he was the healthiest looking man I saw on the trip. He expected to soon go north for the summer. He had a fish box half full of fish as a result of a morning's haul of hoop nets, and the fishing business paid him so well, that he had hired a boy to help him with the work. He said that he hadn't fallen under 1,000 pounds a trip of the tug, which came every five days—say \$35 to \$50.

The time was when the fish buyers at Morgann City would give any kind of a man \$75 worth of tackle and set him up in the fishing business, with as good grub as any one ever had to eat. This was a joy to the swamp people. Some of them fished, and reaped unheard-of rewards. Some men who had never seen \$100 in a year now secured as much for a few days' work. For a time they lived extravagantly, felt the lust of greed and did things without regard to the climate. But most of the people, after a spasm of unheard-of activity, a vacation of medium hard work, felt the little tired aches in their arms, and the joys of just sitting became keener than mere loaded tables and gaudy clothing. They disposed of their fishing tackle to others and lived on the price of the sale. Then some of them went to another fish dealer, and secured a new outfit, which sold for a year's provender. In time, the fish buyers ceased giving the would-be fishers their outfit. Men like Seabold come into the swamp and work all winter, earning high wages. In the summer, the wise ones, for the sake of their ambition, travel into cooler, less vigor-sapping climate. Those who remain, see things not down in the books. It is one thing to read of the humidity in the tropics in mid-summer. The reality, even for a day, is a drag on the spirits ever after.

The air is hazy and warm. Everything seems showered with gleaming yellow in flecks and flakes. Even the horrid green creature which rolls up out of the water has a bar of bright saffron on each rough scale where the sun strikes it. The water is literally dusty with the pollen blown from flowering trees. The rowed boat plows through the water without noise, rolling the gummy film on the surface. The eyes roam the banks for high places, and the mind thinks of "resting" the "tired" arms in a sunny place. Trees seem to have grown especially that hammocks might be swung from them.

"A man from up north comes down here and thinks everybody is shif'less. He goes to work, lumbering, or fishing, or something. First along he does a plenty, but by and by he lets up. There's an awful protest 'way inside at first. That's the soul trying to spunk up the heart—'tain' no use. It jes' happens a man's drappin' an' a-drappin'. Fus' he knows, he's settin' yeah—lak I be, pretty damned comfortable. What's the use? We got chickens, cows, a garden. Everything grows. A man gets satisfied down yeah. It's in the air. Up north it ain't. I wouldn't go back to Ohio. If it's hot, you sit in the shade; if it's cold, you sit in the sun—that's all there is to hit."

A new oil derrick was going up on the Romp. Men were there hammering, sawing and chopping wood for the boiler. Beyond them, the Romp seemed suddenly to end. Green willows were growing in the obvious course, banked against which was drifted debris in semi-circular lines, in interstices of which green grass was growing, showing that the current did not pile the stuff up in awing jams as a white water stream would do. Uninstructed, this place would have been an ominous one, for the water flowed under that mass. But to the left was a little chute, a rod wide and three long. Here the water poured through, and a man in a dug-out on the point between this Devil's Pass and Big Tensas bayou, pointed the way down. Over the sunlit gold of Big Tensas swooped a thousand of our forked-tail swallows, their backs metallic blue, and their breasts were redder than robins', or white as flower petals. It really seemed to me that these birds were more delicate in their flight than when over Adirondack meadows before a summer shower. They were in a sort of circular basin, surrounded by trees, and they turned in shorter curves, and undulated and fluttered and caromed from the water—did a thousand antics, and not one insect was there, though they opened their bills in the astonishingly cavernous manner these birds have. The bird student who has not seen the migrants in the Louisiana swamps, should follow them from the Gulf to Red River at least. It would be a revelation to the lawn-observers.

There are ten bayous come into the head of Lake Mongoulois from Grand River, and eleven islands are at its north end. The lake is formed by seventeen islands. I ran into it from Big Tensas (Devil's Chute), and found myself threading my way down a shallow bay, where the current from the bayous flowed swiftly, and rippled noisily in acres of debris which had washed out of the bayous only to be stranded in the mud, the deposit of the Mississippi water. The lake was long, wide and forbidding. It looked and was mostly shallow, and there were ugly snags scattered over its surface. The shores seemed to be of trees growing up out of the water—as indeed many of them were. My map indicated that I should strike boldly across the

center of it, toward the southwest, but I hugged the shore for a mile, and then came to a fisherman's cabin-boat and house. He told me to cross the lake, as my map said I should do. I had only to go to the uttermost southeast end, he said, and I did this and ran safely into a narrow bayou, Du Chien. With neither map nor guide, the tourist would find these depths full of terror. Only one course would be open to him, and that would be following the current. But in the swamp men tell the way and describe the features, so that one knows when to turn from the broad, open way and enter the narrow arcade.

Bayou Chien, four miles long, took me to Lake Chicot, at the head of which I found two fishermen, evidently partners, but strangely contrasted. One was old, the other young, one gray and large-boned, the other black-haired and dark with lithe figure. The old man had the long, rough hands of much net pulling and line hauling. He was an acclimated northerner. The other was a Creole, remarkably suave and polished in his bearing and wearing a sprightly, skin-deep smile. They were moving camp "in the cool of the day," but they had time to show me the way down Chicot, six miles.

"Follow the Government lights," they said. The Government lights were white-washed frames from which swung lamps that regularly appointed keepers kept burning for the fish tugs, and timber floaters.

Chicot proved shallow, like Mongoulois, with the current flowing in my direction through it. I rowed with the lights, watching the sun as it sank visibly toward the horizon of dense cypress forest. The forest, as I could see, was standing in the water itself. It was a dismal place, but I couldn't get out of it that night if I tried. Why I should not camp at the head of the lake, as well as at the foot, I did not know. There were islands around Chicot—it is formed by seven—and those at the foot had people living on them. I sought the house in Steamboat Chute, dreading a night alone in that place, now that I had seen it. I picked up the three or four lights as a man watches the blaze marks on trees in a forest. Gradually the Steamboat Chute showed itself, and I ran into it, feeling better in the narrow water way, than in the wide water. The look of cypress trees growing out of the water is chilling to the unaccustomed gaze. Not even the long lines of stakes marking set lines took away the loneliness of the scene. As I ran into the chute. I caught, sight of a light across the water—the night was very close at hand.

A few rods down, I disturbed some buzzards which were at an uncanny feast, and then a white house, surrounded by a fence, rose bushes in bloom, a flower garden rich with posies, and altogether a very comfortable, home-like place, appeared. Beyond it was a forest of trees, under which the underbrush was not in the snaky thicket of uncared for land up the lake.

Three dogs of assorted sizes and colors came down to meet me, and had I been a bear they would have stopped me just as effectually as they did. The large one bellowed in front of me, and the two little ones nipped at my heels, as they jumped and barked. After a time a large, heavy set man appeared slowly, smiling softly, and in subdued tones ordered the dogs away.

He was Mr. Weaggley. His wife returned later from lighting a Government light on Grand Lake, Louisiana Swamp's largest body of fresh water, west of the Mississippi. She pounded up the chute with her oars, jumped ashore, and fairly jumped into view. She was a small, middle-aged woman, with hair of an auburn hue, and a face of determined features.

"I don't pretend to be handsome, or dressed up-to-day," she said, "just be'n tending my light. Got to get my cows in now. Here Flip! Here Jack! Rustle them cows out now!"

The noise of the cows being rustled soon ensued. Mrs. Weaggley lifted a pail from the floor as though she 'lowed to bust the bails, and she flaxed around in lively fashion, and supper was spread out on the table—the cold evening meal of the swamps, but with coffee hot and so strong that it would curdle sweet milk. It was delicious with brown sugar, however.

"When I first came to this island, in '86," Mrs. Weaggley said, "it took two weeks to clear back three rods for the house, then it took two years to get up a kitchen. We was afraid of the water at first. You see we didn't know but what 'twould come up and float us into the Gulf of Mexico some spring, but latterly we seen we had high ground, so we put up this here house, and now that the Government has took hold of the levee, she don't break like it used to do, and we don't have wet feet when we get out of bed."

"They call our island Mill Island. The foot of this lake is all islands—three islands and four chutes. The deer cross from island to island every day—have reg'lar runways. I got my rifle there. That's the gun that stands by me!"

Mrs. Weaggley is probably as accurate a shot as there is in the Louisiana Swamps. She kills squirrels at long range, and drops other game with a certainty that would be the pride of many men. One time there was trouble brewed by an unscrupulous man of the region. He tried to impose on the Weaggleys, and Mrs. Weaggley ordered him to never set foot on her island. She found him down Steamboat Chute on the island one day. He started toward her with evil intent in his eye.

Mrs. Weaggley shot him between the eyes, "Jes' a title above, if anything." Should a man in that region incur her displeasure now, he would leave the region. One man, believed to have shot her son, has moved beyond the Mississippi.

"What do you think of my dogs?" Mrs. Weaggley wanted to know. "I had a bull pup a year ago that I thought the world of. The boy there sicked him on a cottonmouth and he got bit twice. I was so mad I scarcely talked to that boy for a week."

That night a young man, more than six feet tall, came in. He was an Ohioan, but was succumbing to the charm of the swamp land. He was a timber man, and made good wages, looking up good cypress growths. He was going up Lake Chicot, but would go down Grand Lake two days later with me to Morgan City if I would wait for him. So I staid over the day with the Weaggleys.

This day in the swamp home was probably a typical one. The Ohioan left at daylight, and soon after a young man, his wife and a baby came in a pirogue. The woman wished to leave the baby with Mrs. Weaggley, so that she and her husband could go across Grand Lake, fourteen miles, to the storehouse and purchase supplies. Most cheerfully Mrs. Weaggley assented, and it was easy to see why Mrs. Weaggley was called "Old Mother" Weaggley by all the people of the swamps. Her kindness of heart and her sharp intellect give her a unique position among "her" people. She was born and bred a southern woman, and had an amount of energy beyond any that I saw on the river. Mr. Weaggley, by the way, was out of the north—a Hoosier. He was called "old" merely by way of compliment. Probably she was 40 years of age, but she was spryer than any one in the swamps, without question.

She stirred her husband into fence repairing, went sitting, cooked, fixed her Government light, got meals, worked in the garden, tended the baby and cows and axed around in a manner that was almost irritatingly out of place in such a beautiful locality for resting. Mr. Weaggley, who was not feeling well, watched her with humorous helplessness, as though realizing the uselessness of protest.

Toward night Mrs. Weaggley began to fidget about the mother of the baby. She feared perhaps the wind, which had blown all day, had made trouble for the young couple in their little boat. She sighed with relief when they appeared. The woman had samples of dress cloth, which she wanted Mrs. Weaggley to look at. The cloth was filmy stuff, no thicker than some ash window curtain—Swiss? or mull? or lawn?—Mrs. Weaggley eyed the samples. The light blues, faint pinks, the cream and saffron colors excited her disdain.

"They might do for some folks," she said later, "but they wouldn't do for me. Sometimes my calves get up cutting up. Mebbe they break through the fence like they did this morning. I takes the dogs and I cart after them calves. Now I tell you, a calf don't like the open places when you're after him! He le'ps through the bresh, and if you want that calf, you gotto follow him. I'd foller the calf. Now if I had a dress like that woman's samples there'd be pieces of it left hanging on the bresh points. By the time I had that calf winded, and cornered, I wouldn't have any dress, but I'd have the calf. Now what I want is a stuff that reaks off the stobs, and, by gracious, that's what I get—good woosterdy stuff like this skirt. I chased the calves in that this morning, and I got a skirt left, which I wouldn't had in that ball-room stuff you can see through."

A youth came in toward night, riding his pirogue like a bird. He was a blond Frenchman—"Cajun"—lineal descendant of the Acadians distributed along the coast by the English. He dropped in as he was passing and drank a cup of coffee, and talked awhile. It grew late, and he betrayed signs of uneasiness.

"I feel lak I go now," he said, "I don' lak to pass some places by the night."

Mrs. Weaggley laughed at him. "What you 'fraid of—ghosts?" She asked did I fear spirits, and, for herself, denied the existence of ghosts and such like. The young man shook his head. He new men who had seen such things.

"They say," he said, significantly, "that a man on orseback is seen down here on Mill Island."

"Pshaw!" said Mrs. Weaggley, "I've been down there all times of night and day—I'd see him if anybody could, and I never did!"

The youth was insistent. "The ha'nts guards the gold," he remarked, "I know where there is a pot of gold up Nimrod bayou, but it's guarded."

"If I knew where there was gold, I'd go get it," Mrs. Weaggley said. "I found a silver cup and a silver spoon in a caving bank one time, and I'd just like to locate a pot of some of that gold that was buried in these swamps. I'd risk digging it."

The swamps are land and water of traditions. How many murders and other crimes have been committed in its depths no one could ever know. Stolen slaves were hidden there; pirates fled to the thickets both from the Mississippi and from the Gulf of Mexico. In war times and before, treasure was hidden on some of the lands and some of it has never been dug up.

On the following morning, early, Reed and I started for Morgan City, forty miles away, more than thirty miles across the open waters of Grand Lake. The wind was due to rise and blow all day, but my skiff was launch, and Reed had more than ordinary skill with the oars. I was anxious to be headed homeward now. Mrs. Weaggley had called my attention to the mosquitoes which were just beginning to fly.

"They say them zebras are the yellow fever ones," she said, cheerfully. "The black ones carry malaria, or ever an' ager, I forget which."

We went down Steamboat Chute headed away down wide, long body of water which showed, by its yellow lines dragged out by the numerous fish lines and net poles, that the whole sheet of water was flowing toward the Gulf. Mrs. Weaggley said that all the water in the swamps is clear and blue as the Gulf in summer, or low water, but the Mississippi rise had yellowed it. One could reach bottom with the 7½ foot oar without

effort over much of this lake. Mrs. Weaggley told of two scared men who crossed the lake and were caught by a cyclone while nearly eighty rods from land. They saved themselves for a time, but at last the waves threw them into the water.

"And you know," Mrs. Weaggley said, "the water wa'n't two feet deep, and they waded ashore, dragging their pirogues behind them."

Nevertheless, the wind sweeps some big waves on water no deeper than six feet. Our trip was made against a breeze which threw the water in spray from the tops of waves so high that they were higher than my head as I sat in the stern of the boat—short, choppy waves, which were hard to row against. At times we were on the point of going ashore and camping till night, and once, when the true course was across a bay from point to point, we were compelled to run ashore and wait the passage of a flaw of dry gale. "Shore" was a cypress brake, only a couple of inches above the level of the lake water, and reached only by wading through a thin layer of water, jumping from root to fallen branch to keep from being mired when we left the boat. Here in the dirt we found deer tracks, and the trees should have been alive with squirrels, but the wind kept them under cover. About the only life we saw were the white snake hawks—the most beautiful and most graceful bird I had ever seen. They floated in the air, their swallow tails undulating, and their wings bending, tossed up and down by flaws in the wind, or by their own maneuvers and crying in their doleful fashion. They are called "gulls" in the swamps. Their aerial dance above the cypress brake and over the dead wood at the edge of the lake was a spectacle that left one of the most vivid impressions of the trip.

All day long we worked our way down the lake. We entered Six Mile Lake (foot of Grand Lake), and as night came on, followed the lights into Flat Lake, and then, by night, ran into Berwick Sound. Here was Morgan City on our left, and a railroad bridge ahead of us. We landed at an oyster boat, where I left my duffle and boat in charge of an oysterman, a round-faced, good-natured Italian.

Reed led the way to Mrs. Booth's boarding house, and there I remained a few days, getting ready for the trip home.

Morgan City has only a couple or three thousand inhabitants, but has more boats registered there than either Galveston or New Orleans. Its oyster fleet and fish markets supply much of Texas, Louisiana and up-the-valley places with their catches. The streets are laid with oyster shells, whose bright white under the sunlight is trying on the eyes, but in the evening, under the electric lights, Morgan City is a pretty place for walking. I ate oranges and oysters and other things, comporting with the surroundings for a few days, and then sped away for New Orleans, behind oil-burning locomotives, on which a fireman's life must be much pleasanter than in a coal-burner. The region, by the way, was greatly agitated by the oil question, a Standard Oil man plying me with questions about the oil derricks I had seen up in the swamps. The "wild catters," as he called them, being likely to make interesting discoveries up there. The Louisiana oil, so far as found, is thick and "asphaltic," or gummy.

The train was run on a barge and towed across the Mississippi, after passing through miles of rice plantations, and then we ran into New Orleans, the city without a hill, and in whose principal public park were signs prohibiting the shooting of birds or other things. The river was full of drift, and I looked up stream and realized for the first time how distant St. Louis was, and yet how big and unalterable was the connecting link.

I got my ticket to New York, via the steamer Proteus, first of all, and then I wandered around the city for a few hours. It was a curious place, very like book descriptions of it, except that the French quarter is always given an exaggerated place in the accounts. I found it very like other American cities I had seen, the buildings in the business part being of similar homely construction. Here and there were the "quaint" French dwellings, built of old, and among the faces seen were some very charming ones—but it was typically American, and not "southern."

I found my Uncle Anson, whom I had visited at St. Louis, in New Orleans, and passed an hour with him. Twenty-four hours after reaching the city, I boarded the Proteus, and soon the steamer cast off, and the boat went plowing down stream. It was a hundred miles and more to the passes. At first, there were plantations with great buildings on them—sugar houses—but in a few hours we were looking across wide marshes, above which loomed sails contrasting remarkably with the grasses so tall that men are lost in the wilderness of their stalks and suffer the torments of thirst and slow-dying.

I had a glimpse of the blue Gulf waters as I came on the cars from Morgan City. As we neared the passes, I had a view of the water, but it was less interesting than the marsh. We shot down the Eads channel, and then plunged boldly out into the Gulf itself. There we dropped the pilot—and away we went.

Days of beautiful experience ensued—the same old story of deep blues, of flying fish looking like blown glass, of sharks and water birds, might be told here. I saw the lights along the Florida Keys, and up the coast. When we were at a distance of only a few miles from land, the inshore shallow water-green was in delightful contrast with the deep over which we were passing. There were swirls of water far from land, and the pounding of contrary waves showed the fluid banks of the Gulf stream. There were a couple of squalls that flooded the decks with rain, and for a few hours the boat swaggered through some waves.

Finally, early in the morning, Sandy Hook was sighted, and in a very few hours I was back in my home country, so to speak. What I had seen in the seven months that elapsed between the time I left New York and returned to it has been partly described. I was well pleased to have seen so much. No one following the Mississippi would have exactly the same experiences, or meet the same people. The only time that I found anything which I expected to find was when I went into cities along the river. Even then, viewed from the cabin-boater's standpoint, what I saw was at a

different angle from that of a steamboat traveler. Had I started in a cabin-boat, instead of a skiff, the experience would have been different; so, too, would a gasoline boat have given a new view. Doubtless, the man with a couple of months of time and the inclination to take it, would find a cabin-boat vacation on the Mississippi River below Cairo an attractive and interesting experience. In a touring gasoline, the lower river and its tributaries offer as interesting and little known country as can be found anywhere.

The Mississippi has a charm all its own. When I told cabin-boaters that I probably wouldn't go down the river again, they laughed knowingly.

"That's what they mostly say, the first trip," they said. "But, shucks! Firs' a man knows, he's right back yeah again, he shore is. Lan', but this ole Yellow Gut has a power of sentiment into it, yasseh, yasseh! But 'tain't hard driftin', nosseh, hit shore ain't. A man's peaceable on the river, he ain't beholden to nobody."

RAYMOND S. SPEARS.

## Hunting Indians—and Cows.

SOON after the close of the War of the Rebellion a number of troops of the Fourth Cavalry were sent out to the different posts on the Rio Grande. Their principal business was to watch Indians, who would cross over from Mexico to steal horses. The Indians seldom destroyed ranches, that would not be good business. The men living on the ranches, if not driven off or killed, would in the course of time gather up another bunch of horses for the Indians to steal. Our troop and one other were sent to Camp Verde, Tex., which was one of the frontier posts then; about all the country west of it was still out of doors. We began hunting Indians as soon as we had got here. There were a good many settlers east of us and several small towns. Kerrville and Bandera were the nearest ones. They are probably large towns now.

The citizens were continually losing horses, and we were kept busy hunting them. The greatest drawback to our finding them was due to the fact that these men did not report their losses soon enough, and about the time we would be told of it the Indians would be safe in Mexico. There was an arrangement now under which we could follow Indians to Mexico, and the Mexican troops could follow them across to our side of the line if they wanted to do so. They generally did not, though. They ran them over to us, then quit, while we have often followed them 150 miles into Mexico. I have been as far down as that after them myself while in the Fourth Cavalry. We had no such arrangement when we first went across, and had there been any civil government in Mexico then our presence over there would have been the cause of an extended diplomatic correspondence between Mexico and Washington to explain what we were doing over there; but at this time there was no civil government in Mexico, or rather there were two so-called governments. General Juarez was at the head of one, the Emperor Maximilian had the other, and they were too busy just now trying to keep out of each other's way to pay any attention to us.

An old gentleman who had a ranch near Kerrville lost a bunch of horse and told us about it. We followed up the Indians, and crossing the Rio Grande a few hours after them, ran into their camp at night when they thought they were safe at home. We got back all the horses, the Indians making their escape on foot, all except a few that came in contact with our pistol balls; they staid where they were.

These Indians were Lipans and Kickapoos. They had originally belonged in Texas, but had emigrated to Mexico and would now come over on foot, then ride back on stolen horses, sell them to the Mexicans, and come and get more. We returned the horses to where they belonged and a short time after Mr. Crawford, their owner, paid us another visit. He had found us more Indians, but they had not taken his horses this time. He had been west of this hunting up his cattle and had seen a bunch of Indians, how many he did not know; he had not stopped long enough to count them.

About a dozen of us under command of our first lieutenant, a brevet-major, were sent out with Crawford to help him count those Indians. He led us up through Bandera Pass, a few miles south of the post, then turned west. Had he kept on west far enough we would not have needed him for a guide. Edwards county was out here, and we had been all over it lately. After going west a while he turned north again, and late in the afternoon we rode past a chain of hills. They were off to our right, and I noticed when passing one of them what looked like a small cave up in the side of the hill, twenty feet above its base. Crawford saw it, and riding over got off his horse and examined the ground. There certainly could not be Indians in that cave, I thought; not more than a dozen, anyhow. It was about two feet wide and hardly that high at the entrance. After looking at the ground, or rocks that lay on the ground rather, Crawford climbed up to the cave. The major had stopped the column, and now called out:

"What have you got there, Mr. Crawford?"

"I think there is a bar in that cave, sir."

"Let him stay in there then, and come on. I want to make camp as soon as I can now."

Crawford mounted and came over to us, and the major asked him if he had meant to crawl into that cave after a bear?

"No, sir; not all the way in. I only wanted to find out if he was thar or not."

"Well, if he had been there, you would have found it out pretty quick."

I nearly choked myself trying to keep from laughing. I rode just behind the major, and it would not do to laugh. This Mr. Crawford was a curiosity. He was about sixty years old and rode with his stirrups so short that his knees were shoved half-way up to this chin, and in riding he leaned forward in the saddle something as English hunters are represented in newspaper cuts as doing, but no fox hunter or anyone else could follow the hounds riding as he did. I could not, at least.

We were taught to ride with stirrup straps long enough to allow our legs to extend their full length, and to sit erect in the saddle. Had we leaned forward, as he did, an officer's sabre across our backs would have straight-

ened us up. Crawford carried a Henry rifle on the saddle in front of him and lugged around two Colt's pistols day and night. He slept with them on. We had to do that ourselves at times, but unless I was told to keep mine on it came off promptly when I lay down. I could get it quickly enough if I needed it.

He had been an Indian fighter all his life, or said he had, and as he found us no Indians this trip, and never made another one with us, I will have to take his word for it, but from what I saw of him afterward, if I were an Indian he would be the man I should want to follow me. I would not expect to have to fight him oftener than twice a day.

We went into camp more than half a mile beyond the cave, and as soon as our horses were staked out I went to Crawford and asked him if he would go and examine that cave with me. No, he did not care to walk that far.

"It is only half a mile," I said.

"Yes, but it is another half a mile back, and I ain't used to walking. You may go down and get that bear if you want him."

"I want him, of course, if he is there."

"Oh, he is there all right. I saw his tracks there."

I went to the major and asked permission to hunt the bear.

"Yes," he told me, "hunt him, but don't crawl into that cave after him, as Mr. Crawford was going to do."

I had no idea of doing that. I did not want bear quite so bad as that, and I don't think that Crawford had ever meant to crawl into it, either. He was not exactly a fool.

On my way to the cave I began to study plans to get him out of it if he was in it, without going in and dragging him out. I first thought to climb up there, then give a shot or two into it, but I dismissed that plan. I might kill him if I did, and would not know it. I was not going in to see. According to some authorities on bears, it takes a man and a gun half a day to kill one. Sometimes it does. I have followed one with a rifle a half day, then did not kill him. I don't know that I ever wounded him, though I shot at him often enough. And again I have killed one in less than two minutes with a pistol. It depends a good deal on where you hit the bear, how many shots it takes to kill him.

I got down in front of the cave and examined the ground for bear signs, but found none. The ground, what little there was of it that was not covered with loose rocks, was hard yellow clay—an ox team passing over it would hardly leave a sign.

Gathering up a lot of dry brush weeds and leaves I piled them in front of the cave, set them on fire, and going off a few feet to one side waited for the bear or bears to come out. I had a Spencer carbine and Colt's pistol, and thought that I could stop all the bears that might be in there. The wind drove the smoke right into the cave, the fire burned out, but no bear made his appearance. There would be no danger in going into that cave now, and I tried it, but there was too much smoke in it yet, I had to crawl out. I went back to camp and Crawford wanted to know if I had seen the bear.

"No, sir, there is none there, nor has there been any lately."

"Oh, yes, there had been"; he had seen their signs.

"You could not see a sign there with a microscope. The ground is too hard."

"There might be plenty of sign there that an old hunter could see, and you could not. You have not been in this country long."

"Yes, I know; but we have men in this troop that have been, some of them twenty years out on the frontier. I myself have been pretty well over the northwest, and have hunted with Sioux Indians. They know something about signs, don't they? We are not all tenderfeet if we were born and raised in the big cities."

"Yes, maybe so, but there has been a b'ar up thar."

"Well, as the major told you, we will let him stay up there. I can't find him."

We started again early next morning to hunt those Indians of Crawford's, and soon after breaking camp it began to rain and kept on raining all forenoon. The major went into camp as soon as he could find grass and wood. We did not need to look for water; we had all we wanted of that and some more.

The timber here was cypress, and there was a lot of blocks of it that had been cut to make shingles out of which had been left; Indians had probably interrupted the shingle-making before it had got well started. That had been some years ago, "before the war" probably, to use Crawford's favorite expression when giving the date of his numerous fights with Indians. We tried to start a cook fire with those blocks, but they were wet and would not burn, only smoke.

I got a liberal dose of this smoke, and a small dose of cypress smoke is a cure. Then I hunted up something that would burn more and smoke less, and found a lot of dead cedars, but it took hard work to get wood off them, the branches had to be broken off. We had no ax; we never carried one on a pack mule then, and there is hardly anything that can be carried on him that is needed oftener. When I had anything to do with the pack trains in after years I always carried at least one ax in a leather sling, and a spade. While riding through the rain to-day we were continually passing small bunches of cattle. They belonged to ranches away east of this, and had wandered out here.

Nearly every cow had a different brand, some had none at all. They were still tame and would let a man ride close enough to them to examine them; but farther west could be found thousands of them that we could not get within a mile of; they had been born wild. Crawford would examine every bunch we passed; he wanted to see if any of them had his brand on, he said. This was what had brought him and us here, he had seen no Indians, but wanted a cavalry escort so that he could come out here and look up his and his neighbors' cows.

These men would not think of coming out here alone. If they did they would have no trouble in seeing all the Indians they wanted.

I noticed the major watching Crawford while he was engaged in taking the census of these cows, and I knew that if Crawford did not find Indians in a day or two he would hear from the major. The major had risen from the ranks and could swear not only like the proverbial trooper, but like half a dozen of them. He dare not curse an enlisted man, and never did; he would stand a

chance of being court-martialed if he had, or else have to give the man he had cursed an apology in front of his troop. It was given to me by another officer in the presence of the colonel once, after I had reported this officer for cursing me. But the major could curse a teamster or citizen guide, and he often did, and I expected Crawford to get the full benefit of the major's experience in the line of cursing before he was a week older. When in camp, Crawford kept down among us. He would not go near the major unless he was called, and we kept him busy blowing about the Indians that he had killed. I had found out from him that he had been in the Confederate Army of Northern Virginia, Lee's Army, and I had been in the Army of the Potomac at the same time. I was the only man here who had been, so I got him started telling about the time that "we uns had fit you uns," and we put in some hours fighting the War of the Rebellion over again.

The weather cleared up this afternoon, and gave the ground a chance to dry. I had been thinking that I would have to sleep to-night seated on my saddle with my back to a tree; I often had to sleep that way. We carried no bed blanket; we were not allowed to put one on the horse; I would not put it on anyhow; I never carried anything on him I could do without; I did not want to make a pack mule out of him, then ride him. It had been good weather when we left the post, and no one had an overcoat along with him. I had a rubber coat, though few were worn then. It did not weigh much and often came in handy. In dry weather I used it to lie on at night.

Soon after dark to-night we were gathered around the fire and Crawford was giving us an extended account of the Indians he had killed "before the war," he had not got to the ones he had killed after the break-up yet. When he was about in the middle of this interesting narrative, the sentry on post outside of the horses fired a shot. We picked up our carbines and ran out to form a line out beyond the herd. Crawford had followed me with his rifle, and I thought he had fallen in line until I heard a noise behind me as I stood in line in my place on the left. Looking around I saw Crawford down on his knees here among the horses, with his hands pressed together; he was busy praying.

I wanted to tell him to postpone that prayer, and fall in here and shoot a few more Indians; but I was not in command. There was a sergeant here who ranked me, and had I begun to give orders he would soon let me know that he was here. The major had not got out here yet, he had been outside of camp somewhere when the shot was fired and came running out now, and almost fell over Crawford. What he said to Crawford need not be repeated here. His remarks would have to be principally in dashes if they were recorded. None of them could be mistaken for a prayer, though.

We mistook ourselves that there were no Indians out here now, nor had there been any here lately. The sentry had fired at a bunch of cows without challenging as he had been told to do; it was dark and he could not see them. We went back to the fire and tried to get some more Indian stories from Crawford, but I had hurt his feelings on the way in by telling him that we generally fought our Indians without the aid of a chaplain. He went to bed now.

This happened to be his last night with us. Had he remained I don't suppose he would have given us any more Indian stories. His failure to-night to get out to where he could slaughter them after both he and we had thought that there were plenty of them here, had put a large discount on the stories he had given us already.

Next morning the major gave no orders to saddle up. He seemed to be going to make a permanent camp here. But calling Crawford up he told him to go out and find those Indians or their trail or be shot. That was the gist of his remarks. I have omitted the damns.

Crawford started to find the trail. Whether he found it or not I don't know, he never came back to tell us about it. He probably found a trail that led straight home, then took it. The major waited until noon then started us home.

CABIA BLANCO.

### Suggests a Book of Cabia Blanco Stories.

PITTSBURG, Pa., Sept. 21.—*Editor Forest and Stream:* And so the "White Pony" has gone before and his tales are stopped. All that your correspondents have written of him is true; but I would add this, the old trooper's narratives are of the kind from which history is best written, truthful and graphic; they ought to help the historians who shall yet compile the history of the Great West and the North American Indian. I therefore suggest that you publish in book form the best of his stories in a popular and cheap edition, if possible, as low as \$1. I should be delighted to get a few copies for lads of my acquaintance and not forgetting my own book shelf. Could a man have a better chum on a fishing or hunting trip or his own fireside in winter than such a book? Why, the President himself would gloat over it and pass it on to his boys with avidity. Would not a reprint of his stories be the best memorial to the kindly man to whom we owe so much? T. A. F.

### More National Parks.

PADUCAH, Ky., Sept. 11.—*Editor Forest and Stream:* In your article on "National Parks" in Sept. 9 issue, why does it never occur to you to advocate National parks for the Eastern section of the country? We can't all go to the Yellowstone and Alaska. What is the matter with the White Mountain range of New Hampshire for one, the Adirondacks of New York for another, a certain wild section of Maine, Vermont and the hill region of western Massachusetts? They need not be so large as the western ranges but should be owned and controlled by the National Government, the same as a navy yard or any other United States reservation. It is foolish to talk about States doing this kind of work. EDWIN HALLAM.

THE current edition of the *Game Laws in Brief*, sold everywhere, contains all the fish and game laws a sportsman ought to know. It is complete, accurate and up-to-date.

## A Mid-Summer Revery.

THE harp-like voice of the locust. How symbolical of ripe fields, mid-summer fragrance and August skies. It conveys to one the essence, the most fruitful intimations of the noon hour, and after all is not this the year's noon, the midday of twelve months? Before the crisp autumnal harvests are reaped and gathered there comes this warm dreaming month, overflowing with milk and honey, rich and vernal yet perishable, a month that reflects only the most mild and smiling expressions, while man, as it were, stands on a smoother plain and looks toward the mountain peaks of winter with calm eyes. O perhaps the tranquillity of the season's influence allows the mind to take a moment's siesta by the wayside and forget the flux of the universe. Here is sunlight and breeze on your cheek, earth and sky, birds and flowers—poesy and beauty. What a musing contentment and revery dwells over the landscape. It behooves us to imbibe a similar equanimity and gives rise to rural meditation, as well as such deliciously natural pastimes. Ever the kine seem to be in the possession of a similar mood browsing knee-deep or leisurely resting with the sweet grasses brushing their sleek bodies. This quality of repose becomes more and more perceptible as the foliage ripens and the country is a-bloom with flowers and delectable wild fruits. One bounty succeeds another until at last a heyday of abundance is reached, and then by their lurid brilliancy the sunsets herald a coming change and presently the asters stand dry and withered while the mellowness of October dissolves into the still icy atmosphere of late autumn.

"What is it we look for in the landscape, on sunset and sunrises on the sea, and the firmament? What but a compensation for the cramp and pettiness of human performances? We bask in the day and the mind finds somewhat as great as itself. In nature all is large, massive repose."

Especially in the northern sections of New York State is August a rare, well-to-be-remembered month with warm, smoky scents issuing from the woodlands, while pastures and uplands are aglow with a maze of shimmering goldenrod. The sunlight itself seems to brood a nestle amid the grasses, to linger and caress every flower's head rising above it, and although many bird voices are silent, there is still to be heard the rich, melodious warble of the red-eyed vireo—that veritable sprite of conifer tree tops whose levity seems unimpaired by the season's advance. Or such sounds as the mellow tink-tank of cow bells, mingled with shrilling insects at sundown when the dew-laden earth drifts gratefully from twilight into a redolent mid-summer darkness, remain long after the youth of autumn is passed. And the crickets—the purring, comfortable, sociable crickets—that are undaunted by sharp, glistening October nights or biting winds, but keep up their cheerful tune almost to the verge of winter. Singularly enough, while at this season they have a warm sound, two months earlier "it is modulated shade," and serves rather to cool and refresh.

On the whole the cicadae, crickets and other singing insects are more constant and diligent in the application of their vocal powers than our feathered rhapsodists. Listen to the whispering, the uninterrupted murmur which, although swelling in volume during the day, do not die out at night, but continues under the soft star radiance, as if nature spoke in low undertones, and again greets us at the first break of day, or a faint beady jing seeming to come from the air itself can generally be detected, having a delicate ring especially suited to the mysticism of the hour. In summer this sense of the mysterious and unknown which the night brings with it, is a power more startlingly apparent and convincing than at a cold season, when the moon shines with clear, undiminished brilliancy as though icy and frosted. Now, however, the beams steal through the woods like pale luminous fingers and a quivering veil of light is hung between the tree trunks; we drift, as it were, in a perfumed dream and the moonbeams flow underfoot like an ethereal current carrying us with them. At night we feel the world and our thoughts keep gliding into misty moonlit vistas; the mind becomes for the time being like a silver-lined cloud:

"Swiftly walk o'er the western wave,  
Spirit of night!

Out of the misty eastern cave,  
Where all the long and lone daylight  
Thou wovest dreams of joy and fear,  
Which make thee terrible and dear—  
Swift be thy flight!

"Wrap thy form in a mantle  
Star-in-wrought.

Blind with thine hair the eyes of Day;  
Kiss her until she be wearied out;  
Then wander o'er city and sea and land,  
Touching all with thine opiate wand—  
Come, long sought!"

Walk under the enthralling glow of the harvest moon with the trembling, sparkling clarified zenith above and spiced atmospheric purity floating from the forest. The effect is acute and strikes upon the waking senses with such a magnetic supernal force that realism grows dim and recedes into shadows, for does not the most familiar scene undergo a complete and perfect transformation? The visible is then tuned and strung to the melody of imagination. While day is natural, night is supernatural (if I may use the word without disagreeable attachment) in that the circulating influences are quite beyond individual conception or interpretation. The pulse of time beats more slowly, and the warm throbbing silence seems to press against our cheek—night pours a mystic libation on the receptive spirit.

August in these more northern climes, as the foothills of the Adirondacks and the Adirondacks themselves, never the parched, dry or rain-famished month which often takes possession of the Hudson valley and the abouts. Seldom does a breath of lassitude enervate the warm, golden air, and the dew falls early like a cool, refreshing balm. There will be sleepy, sunlit days infinitely restful when a blue haze mantles the hills, and sprays of salmon-tinted clouds drift across the filmy pastures, and meadow sweet, Joe Pie weed, self-heal, gold rod and all the wild flowers with which this season is crowned, open to their fullest extent.

Or there will arrive a morning charged with autumnal air, burnished and radiant with distant objects brought near, and the lakes appearing like glazed mirrors or ystian tear-drops suspended in the midst of cool umageous woodlands. It is such a day that sets our adventurous instinct in motion, puts wings to our feet and like mountain climbing ambrosial. Any excursion rich leads us to some new realm of thought or enchantment, opens new fields to the vision, is memorable and fruitful, so now when I look up at Old Baldy rising majestically from a lake's shore that has been my inheritance since childhood, I experience a new sense of veneration and gratitude toward its rocky summit and the transcending view it exposes to the human eye. We are in it like plants, not only seeking nutriment from the earth, but from the elemental properties that surround it. Change is life. If the mind wraps itself in routine it withers and dries, yet a daily task or regular occupation as useful as well as essentially beneficial. The dawn must bring us something new or we quickly revert to stagnation. The value of to-day is worth more than a hundred morrows. "Cease to gnaw that crust. There is ripe fruit over your head."

In a densely wooded incline "Baldy" slopes up from the lake, its crown of smooth, glistening boulders ending up like a figurehead against the landscape and giving majesty as well as distinct individuality to its general aspect. Although comparatively low it is one of the low mountains in the neighborhood from which an extended view of the surrounding country may be obtained, the others being devoid of the admirable lookout this affords.

Years ago, before fire gained a vantage ground of the summit, it arose on a thickly timbered peak, but at the present day its oval crest of smooth slab-like rock is dotted only with young silver poplars and other saplings. The construction of the mountains throughout this region is practically the same, for when shorn by fire they present identical characteristics, as the former leaves their trees nor soil but burns down until bare rock is reached and it can go no further. It is plain to see, moreover, that the underlying formation is everywhere similar, near and far; a tumultuous sea of rock from which luxuriant vegetable growth has slowly reared and sustained itself on little more than a thin coating of its own successive decay.

In the autumn "Baldy" appears like an orange-gold dome rising against a cerulean zenith, while the base being escaped the flames that once assailed the top, is clothed with magnificent deciduous timber, which glows like a full-blown rose after a few nights of frost. The route chosen for our ascent, however, was previous to the advancement of the autumnal hosts; a serene, breathless morning with an agreeable coolness that pleasantly offset the radiant summer sun. Finding a favorable place to descend after a mile row down the lake, we struck up in the woods, and as there was no definitely marked trail or path, Wallace took the lead and our party of five fol-

lowed. Very frequently the dry beds of rain brooks were crossed, and no doubt this mountain is a fountain or torrent of waterfalls and cascades on every side after heavy showers. The forest dipped into several glades before the ascent grew more precipitous, but not until the sunlight poured in golden shafts through the birch groves on nearing the summit did we come to any steep ledges or rocks. These, however, were easily scaled and we made our way up without difficulty, climbing, it seemed, into the blue sky dome that approached us through the bower of green leaves.

Gradually as we went on between broken boulder masses there came an occasional glimpse of the expansive view that set us tingling with delightful expectation, and when at last having reached the bald, rocky surface on the summit, everyone turned to look simultaneously and in breathless anticipation. For miles to north, south, east and west stretched the unbroken forest, meeting the horizon like vernal ocean swells, while five hundred feet below the lake wound its still waters in and out of these wooded waves, glimmering with indescribable tints of blue-green. In the north, and also in the southwest, were areas where the fire demon had placed his unsightly seals, but except for these the forest was a solid sweep of undulating verdure. The spurs and ranges in the south were, perchance, the most beautiful, and a far distant peak rising like an Olympus made pale and nearly invisible by the intervening miles of atmosphere, we took to be Mt. Marcy.

Toward Raquette Lake the ridges appeared to slope down to a lower level near the center, which indicated the location of the former, although hidden from view, and as far as the eye could reach they rolled away in billowy folds until their outlines melted faintly into the horizon. Owl's Head, Pilgrim, Mt. Deception and Nigger Head lifted majestically in the east, and looking at the first touched one of our party with a longing for home, as it was a familiar friend and might be seen from his own doorstep.

South Pond nestled high among the wild, sharply defined hills to the westward, gleaming like a blue star in the afternoon sunlight and enhancing the dark lustre of the encompassing district, which was for the most part made up of a sombre coniferous growth.

In gazing over this sublime scene, this apparently limitless wilderness, one seemed to be lifted into a new outer existence, to breathe a more soul-inspiring ether from which all material fumes were banished. Moreover, it arouses our reverence to behold a landscape, so free from any mark or taint of uncouth civilization, and is not this quality or state of being which combines adoration with veneration one of the most rare and cherished sentiments that inhabits the human heart? Yet, with regard to natural phenomena, as the elements, day and night, the seasons and exalting features of the earth in general—how true are those words I once heard spoken by a lady who said: "The great trouble with Americans is their lack of reverence." Seen thus from an elevation one obtains

a better idea of the extent and magnitude of a region which, although minor in comparison with many other mountainous districts, and slowly contracting before the advance of pastoral and cultivated areas, is nevertheless untamed and unconquered as yet in its central portions—a living balm-breathing virgin solitude where the savageness of antiquity still lurks.

Fifty or sixty years ago, however, it was much more closely related to its original state than now, and when we think of the first settlers coming into an unbroken, primitive country and obtaining their sustenance from it long before this, we honor and respect the courage that such an act exemplifies. From the forest they hewed their homes, made their sugar, shot their meat and raised vegetable foods, and as I heard one of their descendants say, "were probably just as happy as they are nowadays." Furthermore, the dangers from wild animals were then of no obsolete character, and it was almost a necessity for the women to shoot and handle a rifle with the ease and dexterity of the men. They faced unflinchingly the grim expression which the wilderness turned toward them, and perchance were at last rewarded by having it relax into a smile.

As the sun waxed warmer, after having cooked and eaten our mid-day meal, we sought the shade of the eastern cliff, and here loitered on the silver-gray reindeer moss listening to the flies hum and the crackling of grasshoppers as they flew by. In a blue ribbon the inlet of the lake wound through the yellow marsh land visible below, and the melancholy yet fascinating whistle of an olive-sided flycatcher drifted to our ears—he who sits on the topmost spire of a gaunt dead tree and in his notes seems to give out the essence of delicious loneliness.

It was a revelation, a memorable experience to rest thus and look far across the rolling sea of mountains to the horizon, where clouds ranged themselves like ethereal islands row upon row against the pale azure sky, their under sides tinted a pearly-gray and their crests the purest white. But to write of the sky it seems that we would need a new vocabulary, words that would ring with profound meanings, winged words conveyed to us not by the muses but by the gods themselves.

How much a taste of deprivation quickens our hardihood and makes more alive and keen the appreciation of simple occurrences. Here on the mountain top I looked down with a dry tongue on the rippling waters of the lake, and although temporarily refreshed, yet as we descended at a later hour my thoughts anticipated the cooling draught that finally was reached. We regretted keenly not being able to remain longer in order to witness the sunset, and with difficulty tore ourselves away and returned, as it were, to earth.

The waning of summer is gradual and at first imperceptible; a slow ebbing toward the year's twilight which we feel rather than see, until at last under a radiant autumnal guise it slips from us like a wraith and is gone.

PAULINA BRANDRETH.

## NATURAL HISTORY

### The Biography of a Bear.—II.

By mid-summer, with berries, fruit and melons in abundance, Jack had grown fat, contented and complacent. His coat was of a rich brown, glossy and curly, and he had acquired pleasing traits and commonly excellent behavior.

Although he was somewhat bow-legged in front, rather piping in his rear elevation—and although his tail somewhat conveyed the impression of undue economy—he was unmistakably genuine. He was, without qualification, all bear. Thoroughbred cinnamon bear was the conspicuous conclusion reached by observation of him from any viewpoint. The most conservative people in town never questioned his pedigree.

He was kindly and intelligent of countenance, and notwithstanding the development of massive shoulders, arms and paws, he was ordinarily gentle and playful. Children of the neighborhood came and romped with him out the yard as safely as they might with dogs of the best nature. His great attraction was a sort of dignified, comical expression of countenance, while the lumbering, powerful grace of his activity was wondrous. He most enjoyably enjoyed a sense of humor, for he would do comical antics with no other possible object than to be funny. One of his clownish feats was to descend his favorite tree backward, and as his back touched the ground, which he ped away from the foot of the tree, he would turn a back somersault, alight upon his feet, jump sidewise, then standing erect do a short cake-walk that would break a negro's heart. At the conclusion of this act, quickly performed, if a dog or fowl happened near he was sure to slap it unawares. That all this was an expression of his sense of humor his countenance surely testified.

When the weather was warmest he divided his time between the barn, the porch and a pit he had excavated under a part of the house. In the very warm days he spent much of the time, arousing to activity at dark and, afterward developed, he was notably active and preternatural in the night-time.

The outer kitchen of the house opened upon a low step through a sash door. By standing upright Jack could peer through the sash into the kitchen. The kitchen was for him the most attractive part of the house. His interest was such that he usually knew all that transpired there. If anything of which he was fond was in course of cooking or of preparation (and this comprised nearly everything in the nature of food) he might be seen peering in the window or heard rattling the door. He readily learned to stand erect; turn the door-knob and enter the kitchen, and he was so persistent in doing this that the

door had to be kept locked. He would doubtless have mastered the key but that it was inside.

Back of the house a very large evergreen oak threw its branches above the roof, one of them extending over the kitchen. From the tree to the roof was a drop of several feet to the shingles. One evening when the table for dinner had been prepared, the kitchen was left vacant. Upon the table were pies, a plate of butter and other things that Jack was ordinarily delighted to watch from the window. My mother, hearing a clatter down in the kitchen, thought the girl had dropped another dish. Presently there was more clatter, and a jingle of tableware, quite unusual. Going down, she found Jack, the bear, upon the table, sitting very carelessly in the butter, with both hands in the remnant of his second pie. Being unaccustomed to dining in this fashion, he had greatly disarranged the table, but he had accomplished his primary purpose before he was ushered out, with considerable enthusiasm, and other emotion, by the household.

Investigation requiring little effort showed that Jack had entered the house through the roof and the ceiling. He had climbed the tree, dropped to the roof, dug through the shingles, dropped to the ceiling, dug again, dropped to the table below and there he dug into the pies with indomitable interest and devotion. It was a great pity that the pies were not red hot, and the table also, but Jack had possibly timed them. He was well whipped for this raid, and he knew what he was whipped for. It is doubtful, though, whether it made any difference in him. Naturally he was very good, for a bear, but I could never see that he acquired additional virtues through external application. He was doubtless too genuine to take on veneer. So we chained him up for a time.

Without much effort Jack was taught to use a rocking chair that stood in a corner of the porch. He could get into it quite conventionally, place his arms properly, sit erect, and rock himself with great urbanity of expression. He had, however, a rather uncultivated way of swinging his face from side to side, which, although it rhymed with the rocking, is not a custom in the best drawing rooms. Then, too, he experienced more or less difficulty in the management of his legs and feet, as the latter would not reach the floor and were liable to assume negligent positions and wobble in an indecorous manner. But this failing was anatomical rather than boorish, and the chair was too high for a bear of his size.

It had to be admitted that Jack was deficient in table manners. No amount of training could mend them. A whole term in a seminary boarding house for young ladies would scarcely have improved him. At his meals he was awfully raw. He ate with so much enjoyment and

appreciation that he ignored formality. Besides, his appetite was a constitutional idiosyncrasy. He couldn't help it, and he didn't try. He never could have been trusted at table in company, and he would have preferred being at it alone.

I taught him to hold a bunch of grapes while he sat in his chair, but though he held them in one hand, and picked at them in a refined manner, I could not prevent his smacking his chops, while at intervals he would scratch his stomach with the other hand. Both these faults were evidences of thankfulness and appreciation, but neither are countenanced in France—not by those of the best rank and station. When we had a watermelon luncheon together, Jack preferred his part unliced. He wanted the largest half, and when he got it, the way he made it acutely concave, with both paws, while the juice flew about, was really shocking. He almost omitted to scratch his stomach by way of approval, but when he did so, his delight was perfectly lovely. Any young lady would have said that. In finishing his melon he drank the water from the bowl of rind, promptly slapped it aside, and asked for "some more." If there was any more within his reach he got it without asking. Watermelons were to Jack the acme of attainment, a triumph of life.

The Indian boys who had brought Jack from his forest cradle sometimes passed, but although they were invited to come in, they always contented themselves with watching him awhile from the fence and then went upon their way. For some reason they had scruples about coming near, but whether these scruples were of a superstitious nature, or whether they feared I might want to return the bear to them, I could never determine. Doubtless they would have accepted the bear, but had I asked the return of the \$10 they would have been unable to comply, for money and the poor Indian do not cohere long at a time. They need not have feared the latter contingency, for I would not have sold Jack for several times the amount I paid for him, even though I was in constant anxiety as to what I should do with him after he had grown a while longer. He was becoming more and more versatile and ambitious.

An old colored man who lived in the neighborhood was a frequent visitor to see Jack. Old man Henderson, or Robertson, or Henderson Robertson—for he abided by all of these names—was a fugitive from a slave State, having come to California some time prior to the reconstructive consequences of the Civil War. Commonly the old man was called Henderson, but when I once asked him about the matter he explained:

"My name may be Henderson or hit may be Robertson—I ain't jes' suah of hit mesself. Ef I wasn't yaller

it would suah be Robertson, an' if I was white hit would be Henderson. My fathah was a distinguish'd southe'n plantah, but on account of a diffahrence of complexion he wouldn't own me. The trubble was he wouldn't sell me nuther, fur I was a vailleable nigger—so I jes' 'lowed I was a smoked Irishman an' I came to Californy 'thout his blessin'. Bless you, I didn't even go to the trubble of bringin' my ol' woman along—an' there were about seben o' her on the ol' place down yondah. The fac' is, Mastah Cholly, niggers on some o' dem ol' plantations wan't registah'd in de fambly Bible, but the names dey gave to 'em was on de oberseah's list, suah. I nevah know'd my actual name, but hit was 'low'd I was a Henderson nigger."

The old man was fascinated with the bear and would watch and play with him an hour at a time. He had no fear of Jack, and from the first fondled and talked to him as though he were a child. After watching Jack's antics one day the old man said:

"I dunno, Mastah Cholly, whether niggers regenerated to b'ar, er whether b'ar after while gits to be niggers, but dey's suah akin—dey suah is. Dat Jack thar looks all the wor' like a blue-gum nigger that I know'd ovah yondah."

"What's a blue-gum nigger, old man?"

"Well, suh, a blue-gum nigger is de wust kind of a nigger. Jes' can't do nothin' with 'em. Dey's jes' natchelly debelish. When yo' see a nigger with blue gums an' big white teeth, an' yeller eyes, an' gennehly bow-legged like dat b'ar, jes' let him erlone er tell 'im he'd better be gwine. Huh! let dat nigger gwan away. He's no good. Min' what I tell you, he's a bad nigger. Blue-gum niggers is b-a-d niggers."

"Dat b'ar," continued the old man, "is suah related to niggers. He's gwine ter steal chickens soon as he's hongry jes' a little bit—an' yo' nebber see any pusson eat watahmellens like dat onless he's a-kin to a nigger. Lawd! Lawd!—huh! w'y bless yo' chile, see dem whites o' his eyes—shoo!"

"How about 'possum, old man? Would Jack eat 'possum?"

"Whew! Jes' try him on 'possum! Dey ain't no 'possum hyar. Over yondah, O, me! 'possums an' 'simmons was a-plenty, a-plenty."

Sunday night, po' ol' 'possum,  
Monday night, po' ol' 'possum,  
Tuesday night, po' ol' 'possum,  
Ebery night, po' ol' 'possum—po' ol' 'possum.

As the old man droned these words he closed his eyes in a sort of ecstasy of mental retrospection, from which he fell asleep, while his cane dropped from his grasp and he lay back against the tree under which he had been sitting. The old man, the two dogs and Jack, the bear, were all asleep and snoring more or less harmoniously. Although he had often murmured the lines about the "po' ol' 'possum," the words given are all that I could ever catch. Whether they were part of a song or merely a soliloquy that the old man was fond of I never ascertained.

Henderson, by way of occupation, dabbled some in whitewash, but in his old age subsisted chiefly by grave digging. After digging a thousand of the "houses that

last 'til doomsday" for all manner of tenants, he himself long since took up his abode in one made by his successor.

#### Jack Visits the Johnsons.

On the further side of town lived a colored family by the name of Johnson. The family was a numerous one, consisting largely of children. The elderly members of it were notably quiet and pious as well as good, industrious people. They occupied a good-sized house on the hillside over which a large tree threw its very welcome shade in summer. Underneath the tree and about the dooryard the younger Johnsons had their playground.

One evening about dark one of the children ran into the house greatly frightened crying that the Bad Man was in the tree and had tried to grab him. Doubtless it would have been entertaining to have seen and heard the exciting skirmishes and reports of the numerous small Johnsons as they clattered into the house from the tree, each bringing more startling accounts of the bugaboo in the outer darkness. One after another of them became too frightened to go to the door until the entire dozen or more children clustered together in the innermost room, tremblingly awaiting the return of Mamma Johnson from a neighbor's house. Although several of the children were well grown, girls and boys alike were terrorized, perhaps as much by their accounts to each other of the shadowy things they had seen as by any real sight or sound they had detected.

It happened that there had been a recent revival of religious zeal in the colored community owing to the visit of a circulating preacher of the gospel. The spiritual feast had perchance left them more than commonly sensitive to supernal mysteries, more alert to infinite possibilities. According to authentic history of the case, when Mamma Johnson returned to her home the children were almost pale with terror, and the piping babble of their voices recounting the cause of it all was in no sense soothing, even to the matron. She was a woman of notable proportions but not lacking in nervous impressibility. It was commendable valor in one of her temperament to deploy upon a scouting tour in the dark shadows, but she ventured to do so. When she regained the doorstep after this sally her reappearance was no measure of consolation for the young Johnsons. According to her own admissions later, she was in a state of almost "hysterical collusion."

"Lawd forgive me!" she exclaimed, "but it was surely detrimental! I nevah was so inexplicable in mah whol' life. Whatevah was in de tree or in de heabens above was too intrinsic foh me. Lawd! Lawd! but dere was a scratchin' an' a clutchin' an' a clawin', a clinkin' o' chains, an' a contiguity o' disturbance in dat tree dat was suahly diametrical."

A messenger would have been dispatched for Papa Johnson but no one volunteered for the duty. In fact, all the Johnsons, ordinarily active and fleet of foot, were in any mood but that of the volunteer to undertake a hazardous excursion abroad. For some hours, it seemed, they kept within the locked doors and barred windows, while even their whispered conjectures were hushed by repeated disturbances overhead. Branches of the tree now and then scraped the roof, there was a clashing of metal and clinking of chains. One or two loose

bricks from the chimney clattered to the ground, and by those within it was believed the devil himself was about to come down the chimney. A dog or two from neighboring houses were now baying frantically outside, and terrified cats were scurrying about in vain effort to get into the house.

Papa Johnson arrived at his usual hour, about 10 o'clock, and was obliged to clamor loudly at his own door for admittance. After he had earnestly protested his own identity repeatedly he was admitted by his dear ones, and was almost overwhelmed with demonstrations of familial emotions. As soon as he could (as Mamma Johnson expressed it) "entertain the cause of their remonstrances, he called for light, including the barn lantern. He then got down a cast iron shotgun, that had perhaps been loaded years before, and armed with this dangerous device he, with more or less reticence, hurried slowly out to repel something that he suspected might be around, on top of his house.

He plainly heard the clanking of chains overhead, even above the clamor of dogs and the suggestions of Mamma and other Johnsons, from the doors and windows. Flashing his lantern into the dark clusters of branches he suddenly discerned eyes that glowed like balls of fire. The clanking of chains that now and then clattered on the shingles, together with the sound of creaking branches and finally animated spectral outlines, that seemed huge in the shadows above, stirred the old man's imagination to its utmost productiveness. It was with much hesitance that he at length prepared to fire upon what might be diabolic emissary, if not the devil himself. When he presented his gun he had no means of properly directing the light and he tried to hang it so that it would enable him to aim. In his nervousness the lantern dropped and of course, went out. In desperation he pointed his gun upward in the darkness, and with a tremendous flash an explosion that echoed from all directions, the ancient arm, for a wonder, was discharged.

As Mamma Johnson explained, Papa was "to exaggerate to apprehend" all the results of his cannonade. An avalanche of incidents came upon him in the instant, comprising donations from the tree and the roof, frantic yells from the dogs, the smash of the lantern and gun, and the spontaneous contributions of Johnsonian yells. In his comparatively rational account of the matter, a week after its occurrence, Mr. Johnson said that whatever it was that came down from the tree had hoofs and horns, and smelled of sulphur. It also knocked one of the dogs through the cellar door and another dog had ever since been under the house, apparently unhurt, but mentally "decomposed."

Although there was no positive proof, nothing but circumstantial implications, it is my opinion that Jack was present and somewhat identified with the disturbance of the Johnsons. On that particular night, it was ascertained, he had broken his chain, and there were tracks going and coming along the road in certain directions. In the morning, however, he was asleep in the yard and clamored for his breakfast at the regular hour with his customary enthusiasm. It would have been difficult to find a more innocent looking individual in town than he was after having had breakfast.

RANSACKER.

[TO BE CONTINUED.]

## GAME BAG AND GUN

### Hunting on the Bronx River.

SEPT. 16 being the first day of the open season for woodcock, Joe and I decided to try our luck. The details of the trip had all been arranged a week ago. We would leave home on the evening of the 15th and drive up the Bronx valley a few miles north of White Plains, where we knew there was good cover for the birds, stop over night at one of the small hotels to be found in this vicinity, and get an early start the next morning. This part of the programme we carried out to the letter, and Saturday morning at 5 o'clock we were at breakfast in the hotel above White Plains.

The report of the proprietor as to local birds was somewhat discouraging, but it did not dampen our enthusiasm in the least, so starting out with two good dogs and a lot of confidence in our ability to find any birds in the vicinity, we were happy and thrilled by that feeling of expectancy which every true sportsman feels when entering the woods. Crossing a small patch of woodland we arrived at the west bank of the Bronx River, following this a short distance we came to a flat covered with alders, which looked good for a couple of birds. Joe worked one side with his dog Pete, while I worked the other with my dog Vic. Arriving at the end of the alders we compared notes. Neither had seen a bird nor any sign for which we had carefully examined the ground. The same result followed with several other places which we worked. We then decided that the covers we were working were too wet. Pulling out of the swamp we went to some alder bushes on the edge of a meadow, which was not as wet as those we had left. Here we located two birds, and after each had made a miss on the first rise, we were steadier on the second and each had a bird. We hunted other covers until late in the afternoon, but without success. Then leaving the woods we found a small hotel where the landlady prepared for us a good dinner. We learned that we were about four miles from our starting point. After a short rest we started for home and arrived in our town about 8:30 o'clock. Before going to our homes we visited the cigar store where our fellow sportsmen congregate, and made a show down of our two birds. Game is so hard to find in this section that the reports of what you kill on your trips is not taken on faith, but must be proved by showing the game. One bird to a gun is a small bag in the eyes of those who hunt where

birds are more plentiful than here. Yet I cannot recall an outing on which I had more pleasure than this, although I have many times made much larger bags than it is possible to make to-day, I shall certainly visit this spot when the flight of the birds commences, and expect to make some good bags. One of the incidents of the trip was the report of one of the natives that a flock of wild pigeons was seen in the vicinity of Kensico last fall—about thirty birds. He was an elderly man and remembers the great flights of these birds years ago. He may have been mistaken in the birds he saw. If true, they should be protected for a number of years, then we might have some shooting near New York. AMAKASSIN.

### Massachusetts Quail.

BOSTON, Mass., Sept. 23.—*Editor Forest and Stream:* Your correspondent is in receipt of further information on the quail and grouse situation in Massachusetts.

Mr. Samuel Wooler, of Holyoke, writes that partridges are fairly numerous, quail practically extinct. "Don't forget us," he says, "next spring if you have any seed." I infer he means quail for stocking. He would favor putting the law on quail for two years. The section about Holyoke lies within the quail zone, as does the whole of Hampden county, except one town in the extreme northwestern corner. Mr. Wooler would forbid anyone carrying a gun during the close season as the only way to give the game birds a chance to increase, and he considers the opening of the season on snipe and plover so early as July 15 damaging to other game birds. He favors a gun license of \$1 a year to restock with game and pay wardens.

J. W. Hastings, town clerk of Agawam, Hampden county, bordering on Connecticut, says he has seen no quail since 1903, also that partridges are very scarce. A report from Russell, in the same county, says no quail seen, quite a few partridges.

From the town of Wilbraham is a report of poor prospects for quail, and partridges quite plentiful. The reports now in are sufficient to show that in Hampden county as a whole quail are very scarce, grouse more plentiful, probably a fair average with other years.

Mount Washington is a town in the southeastern corner of Berkshire county, from which the town clerk re-

ports no quail to speak of. He liberated five California mountain quail last spring, but so far nothing has been heard from them. Regarding grouse the report is quite favorable, as the correspondent says he has flushed good many along the highways. He suggests that a close season for a term of years might give the birds a chance then he would have the shooting season shorter.

A report from Greenwich in that part of Hampshire county included within the quail zone, is no quail, a fair number of grouse. As a means of improving the conditions the writer says, reduce the number of hunters and fishermen by keeping the members of city sportsmen clubs under better control. Apparently he has observed the ways of some so-called sportsmen not of the true type. They may have been members of city clubs.

About one-third of Hampshire county should have quail, but sufficient information is at hand to show that are none to speak of. Several towns report no quail, a few partridges the clerk of one town says there are a few but they kill them as fast as they come or grow, so they don't gain any.

Mr. William J. Cross, of Becket, deputy sheriff, and game warden, reports no quail, partridge more plentiful than for years, and lots of woodcock—a pleasing announcement of which some readers of FOREST AND STREAM will perhaps take advantage.

Reports from Great Barrington, Peru, Hinsdale, all that part of Berkshire included within the quail zone agree in the main, one only saying there are a very few quail.

If the sportsmen of these counties are to have quail in the future there is but one thing to do, viz., put out some birds from other States for breeders, and then give them a chance to multiply. I have taken special pains to get reports from the towns in the southern part of Berkshire and Hampden in the hope that they would make a bet showing than those already heard from, situated farther north, but in this I am disappointed—there is from nearly all the same sad story. Were the delineations of the quail area in our State made to-day, the four western counties would have to be excluded from the quail zone. I hope to obtain some further information before summing up the status of the game birds of Worcester and Middlesex counties, both of which have a large quail area as shown on the map of the Biological Division of the Agricultural Department at Washington.

Mr. George L. Peabody, president of the Rockland Game and Gun Club, writes that his club is taking a good deal of the work of stocking the covers with game and streams with fish with the intention of making a decided improvement in present conditions.

Mr. W. H. Hill, of Waltham, says there are fine game birds in the vicinity, but he has heard only one Bob white whistle this season. He emphasizes the need of a more effective warden service and a bounty on owls, crows, and such animals as destroy young birds and rob nests of eggs.

Dr. W. S. Burt, of Beacon, Vt., has had the good fortune to bag a good number of shore birds since the first of the month, and Mr. H. P. Andrews, of Hudson, tells me he is planning to visit Washington county, Me., early next month for a few days' bird shooting.

H. H. KIMBALL.

## Japan from a Sporting Point of View

People often ask me about the sport obtainable in Japan, and so with respect to this it may not come amiss if I explain. Hunting, such as the people of England and Ireland understand it by that term, is absolutely nonexistent in the land of the Mikado. Foxes, deer and hares are plentiful enough, but Japan's natural features and the methods of agriculture followed by its farming classes are all, and most uncompromisingly too, against it.

As to the sport of hawking in Japan I cannot write with much knowledge, for, let alone my want of experience of that sport, I have never seen it practiced there. That it is pursued occasionally, or, rather, was in the not very remote past, however, is amply borne out by the fact that quite an extensive vocabulary relating to it forms a by no means insignificant part of the language. Many of the older sportsmen, those gentlemen of old Japan, still keep hawks; more, I think, because of the atmosphere of romance and chivalry encircling the bird than for any more practical purpose. One such old friend of mine, who went in to me extensively for rock-work in his garden, used to show me a magnificent specimen of a large fishhawk, or, rather, a hawk, perched on a huge boulder of granite that projected over his ornamental waters. The effect, especially in the case of the tame carp and tortoise were driven past the boulder, was really superb. The fierce excitement of the bird and the attitudes that excitement induced in him to strike were a fruitful source of interest and inspiration to the dear old man, for, though more than ordinarily well off, he was an artist, and one who devoted his whole time and attention to the depicting of hawks and eagles alone. Seated in his little studio, the most unostentatiously rustic affair imaginable, he would study, brush and, every move of the bird, and when something particularly striking took his fancy it was immediately, with rare skill and rapidity, transferred to his canvas. The result was, as will be understood by anyone possessing the slightest knowledge of Far Eastern art, that my old friend's hawks and eagles simply lived upon his canvases, and, though I often carried off his sketches, I never saw two of them representing a hawk in exactly the same position; and yet one hears people declare that Japanese art is conventional and untrue to nature.

As to candidates for the rifle Japan possesses quite a respectable number, among them being three species of deer, the wolf, a species of stag, another of antelope, and, of course, the wild boar. It is permissible for an old Anglo-Indian to place him in the same category, the wild boar. All are, however, becoming scarce, and getting scarcer yearly, and it certainly would pay anyone to make extensive preparations for going in search of any of them, for, though the Aino, that extremely hairy aborigine of Japan, hunts them all most industriously, he will render no assistance to a stranger to do so, and as for the Japanese hunter he is the most unskillful of shikaris. And then, again, the slightest deviation by a foreigner off the beaten tracks of foreign travel in Japan is more likely than not to lead to unpleasantness for him, for suspicion of foreigners and their motives is one of the leading and worst traits in the Japanese character. Not being sportsmen or travelers in the same sense and from the same motives as the English-speaking sportsmen are, they cannot understand why anyone should devote his time in the pursuit of objects which—to them at least—bring no tangible results. To travel they have no objection, but only do so to see places of interest and to get some very definite object in view, such as for the purpose of going out of a foreign land or for the gaining of knowledge upon a special subject, but never for sport. Of the hundreds of Japanese who travel westward quite ninety per cent. do so at their Government's expense and in its interest.

As to the wild game of Japan, it is indeed that matters are as described, for the bears of the land are unique, as well from the point of view of enormous size, strength and fierceness of one species from the diminutiveness of another. The first is a true carnivorous brute, a sort of grizzly, who makes his living by killing and carrying off a fourteen-hand pony. Next to him comes a black beast very much like the sloth bear of India, and last of all a diminutive little brute much larger than a good-sized spaniel, exceedingly shy, seldom seen. The wolves of Japan are scarce, cowardly, and of little account, and found now only in the extreme northern parts of the empire. The stag is about the size of and in make and shape and habits, too, like the fallow deer of England and Scotland. The little Japanese antelope must be a very near relative indeed of the jungle bharu of India, possessing as he does the same general appearance and shy habits. The wild pig of Japan appears to be a domestic pig run wild; indeed, I have seen herds of Manchurian and Mongolian swine, great, hairy beasts, driven through the streets of Peking far wilder and fiercer breed than any wild pig I have ever seen across in Japan. The boars there are, however, of a size, but never so tall on the legs nor with such fine tusks as the jungly soar of India. To ride one of them, as we do his brother of India, would be an impossibility, for, as it would be the case in hunting, so, too, in sport, the nature of the country would be all against one attempting to do so.

As to the above mentioned and described game beasts of Japan, seals and sea otters offer chances of no end of fun to a really keen sportsman. But then he must

possess a yacht—say, a schooner from sixty to eighty tons—and not only be ready to live on it for weeks, if not months, at a stretch, but also to put up with many inconveniences in the way of decks hampered with boats and their gear. An old-time eighty-ton sealing and other hunting schooner, such a one that among the many of fifteen or twenty years ago made Yokohama its headquarters, would have carried at least eight boats, and probably more. To each boat there would have been attached a hunter and two boat pullers, as the men manning the boats were termed. With these men on board the schooner, in addition to the cook and his assistant, a possible cabin boy or extra hand, and with skipper and mate, the sleeping and living quarters were decidedly cramped. But arrived on the sealing ground, or, rather, waters, the schooner was hove to, and the boats launched first thing every morning. The result was that the men got a thorough airing, and the boat pullers more especially a considerable amount of exercise. Just how the life agreed with them was shown in the condition they returned to port after a five or six months' cruise, for, taking them as a lot, it would have been difficult to find anywhere a more bronzed and toughened lot of men.

In the early and paying days of the pelagic sealing industry the boat pullers were mostly whites—British, Americans and Scandinavians—and the hunters the same. Later on, however, as the industry became a less profitable one, Japanese boat pullers were engaged in the place of the whites, the hunters remaining as before. Unfortunately, these last and the skippers of the schooners were a somewhat lawless lot, given to raiding the rookeries or breeding places of the seals. As the breeding places were mostly situated in Russian waters, and very loosely guarded, there arose at times a good deal of trouble between the sealers and the supposed guards. Shots would be exchanged and men killed on both sides. Anxious to avoid diplomatic complications which might arise as the result of such a state of affairs, the Japanese authorities then commenced to place all sorts of obstacles in the way of Japanese subjects shipping on sealing schooners. This forced the skippers to ship Chinese, and later on Kanakas, or South Pacific Islanders, in lieu of the Japanese. But, though bigger and heavier men than the little islanders, their substitutes were far less satisfactory in every way. This, coupled with the fact that sealers went out of fashion just about this time, soon gave the pelagic sealing industry its death blow—that is, at least, so far as the whites were concerned. The Japanese, however, with little or no experience of the industry, then took it up, and, with their lower standard of living, are managing to make it pay. But even for them the day cannot be far distant when it will be completely and effectually done for as a paying venture, and in the interests of humanity the quicker that day comes the better, for, unless bagged at once, a wounded seal is seldom followed up, and simply because such a proceeding would mean the possible and probable scaring away of other seals in the vicinity of the boat. The seals are, it may here be added, always shot with small-sized buckshot, and generally so when lying asleep on the surface of the waters. Those, however, that were killed on the rookeries were rounded up and clubbed to death, the whole crew of the schooner landing for that purpose; but so well guarded are those rookeries now that this wholesale clubbing of seals is fast becoming a thing of the past.

Unlike sealing, sea otter hunting or shooting affords a considerable amount of real sport, and the dangers attending it add a no mean amount of zest to it, for, while sealing operations are carried out in mid-ocean, the sea otter has to be searched for close in shore, and, as he dearly loves a rock-bound coastline, the hunter's boat is very liable to be stove in. His habitat, so far as the Asiatic side of the Pacific is concerned, is among the Kuriles and along the coasts of Saghalien and Kamatschatka—places where the tide rips have to be seen to be appreciated. For these tide rips and the extraordinary commotion they create in the waters the hunters have to keep a sharp lookout, for a boat caught in one of them is more likely to get swamped than otherwise, and should this happen his chance of escaping a watery grave is small indeed. There are two methods of hunting the sea otter, which, it may here be added, is a remarkably wary brute, and anything from six to ten times as large as a land otter. The first method is for three hunters to work together, two, one following the other at a distance of half a mile or so, keeping close in shore, either sailing or sculling along parallel to it; and the third well out and as nearly as possible at an equal distance from them both. Upon sighting their quarry the hunters endeavor to cut him off from the shore and away from any rocks that might afford him shelter. Keeping him well between them, they fire at him from every side and every time he shows his nose above water, and as the bullets from the hunters' rifles strike the water near him the poor brute dives and dives again. His first dives are generally long and in the direction of the shore, but as he gets winded his dives become shorter and more erratic, and then the boats close in upon him and hustle him about, until he can be knocked on the head or shot without fear of damaging his skin, for a sea otter's pelt is one of the most valuable of furs. Sometimes, however, a hunter will take up his position upon a rock and lie in wait for otters to come within range of his rifle, but only so when he knows there is extra good feeding ground around. Even here, with the firm ground under him, he must be a quick and first-class rifle shot to enable him to bag his otter as it should be bagged, for while swimming about and on the move the brute affords but a very small and difficult target.—F. J. N., in London Field.

## Voices of the Night.

WATERTOWN, N. Y.—*Editor Forest and Stream:* Through the FOREST AND STREAM "Question Box" I would ask some of the readers that are posted in that line the names of birds with the clear and distinct whistle that are migrating nightly. The volume and tone would indicate bobolink or oriole, but it is a difficult matter to identify them. These return voices begin in early August and continue through September, and the number must be very great, although there is evidently a lessened number the present season.

## Some Fellows I Have Met.

### When I Had My Gun.

WHEN Hans Ohlschmidt drove his prairie schooner up the Platte River valley, some thirty years ago, and finally settled on the banks of that broad be-sandbarred stream, wild geese were so plentiful that they were a nuisance to the scattered settlers, who actually had to drive them from the fields.

This fact was made known to me on a late trip to the Platte when I met Hans, who, by way of comparison I presume, became reminiscent; my small string of white brant evidently impressing him as insignificant.

While seated on a truck at the railway station waiting for a train which was hours late, to take me home, the old German, who has lost none of the Fatherland characteristics nor improved his English greatly since he came out of the East, joined me, and we soon were talking together.

It was after I learned he was an old settler that I got him started on the subject of goose shooting, which had certainly earlier been good in the locality but was now quite indifferent, as my small bag attested.

"I presume you have shot a great many geese since you came here?" I remarked.

"Ach, Gott im Himmel," he replied, "von tausend, more as dat, fife huntered yet."

"Is that so?" said I, passing him a cigar, and he sat on the truck beside me.

"Yah," and he puffed and puffed to get a good light, "das ist recht. I kills me ein und zwanzig mit two shoots vonce."

"On the same day?" I inquired.

He looked at me in disgust, and went on with some warmth. "Vot you tink, I am shodding two days in vonce, yet? Not much, I guess not, I kills him von, two, eins, zwei, verstehst du, yes?"

"What! You mean to tell me you killed twenty-one geese with two barrels?"

"Sure, like nuddings," he replied.

I lighted up a fresh cigar and begged him to tell me all about it, and he did; and if I had got nothing but his story, and could half retell it, I would have been repaid for the trip.

Joe, it seems, was a half-breed who had been working for Hans, and while he cared nothing more for goose or duck shooting than the average Indian, he could call the birds to perfection.

Geese had been congregating on a bar near the house for days, and their continual honk and cackle as they stood by the thousand on the flat sands, was a din that Hans proposed to stop.

"Come, Joe, ve give it to dem Canadas to-day, yet." And together they left the house, Hans carrying a heavy gun, a powder horn and a bottle of No. 1 shot. They were soon digging the sand on a towhead, while the last straggling geese left the river, just after daylight, to feed in the cornfields.

"Make such a noise like de geeses ven he fly high over, but ven he light don't make it some more," were Hans' instructions to Joe as they finished the pit in which they were to hide.

Up to this point of his narrative it was extremely hard to keep from laughing at Hans' construction of very broken English, as it would have made a sadder story nearly as cheerful; and I regret that I am compelled to omit certain adjectives which, to his notion, must have added force to his remarks.

"Ve shust make a vade," Hans continued, "and by de towheadt und dot fool Joe, he step in queeksand' and try to step queek oud and fall all over in, and I must to help him. I drops mine mussiling loater in de vawter, und cetch Joe by de neck of de coat und pull like plazes yet; but he don't come oudt."

"I say to Joe, 'et is to leave your poots in de sandt, yes?'" Joe he say, "Tam de poots, you bring a pole und I climbs me like a morkey oudt." "Yah, yah," I say, und I reach him such a deadt trees, und he pooty queek pulls himself oudt.

"Den I say, 'Joe, de gun is loosed,' und he make me madt when he say, 'I give a two whoops I dondt own him,' and he gives me such a laugh like a Injun horse, you know, yes? no?"

"Vell, I look me for de gun in de vawter for more as an hour, vile Joe sits by de fire and swears yet, but I cares noddings, I find de gun und go und dry him by de fire oudt. I say to Joe und mine tog Schneider, 'Come on, poots, ve now vill lay for de geeses.'"

"Joe ese von deadt game sports, und he queek make such a teegoyts mit charcoals and sticks to look like live geeses, und I loads me mine mussiling loater for such a bear shoodings."

"Joe he make some foolishness mit me all time, und say, 'Hans, vy you don't git such a breeches loater und trow de blunderbuss in de rever?'"

"Py golly, dat make me so madt I tink I cand't shoot straight, und I say, 'I will queek show you ven I shoot de gun off,' und he queek go behindt me and say, 'Hans, look at de geeses.'"

"Ve trow Schneider by the pit in, und I say to Joe if he shall talk some more I might by mistake shoodt him, yet, yes?"

"Joe never but von time make de noise like de geeses, und de flock come und set on de sand und yust vash up und talk like vomens. Joe say, 'Vy de dunder you dondt shoot yet?'" I say in such a goose talk, 'Shut opp und wait a minute,' und I point de gun by his ear und he shuts queek up.

"More und more as dat some geeses comes by de sand bar, yet, and Joe he go crazy und pound his headt by de sand, und points his hand like a gun, but you bedt he dondt say sometings yet."

"I guess was more as tausand geeses on sand bar, und I yust rest me mine mussiling loater on sand pile and took von long aim und pull de trigger—von, two, bang! bang! und, Gott im Himmel, souch a trouble broke loose."

"I vos kicked on Schneider, und he yelps, and Joe he swear some more und rub his eyes de sand oudt. I queek got up and say, 'Joe, you now can see vy I dondt need such a breeches loater,' und I say to mine tog Schneider, 'Go fetch de geeses'; und he chases a cripple oudt of de rever und to de next county, yet."

"I say to Joe, 'Now we go home,' und ve pick up twenty-one geeses.

"Joe, he is such a hobo, anyhow, he say, 'Hans, you go home und bring de wagon yet, und I stays mid de geese.' He vas a lopster, anyhow."

Just then the train whistled and as it pulled up to the station Hans made me promise to come back in two weeks and get some Canadas, which I did; not twenty-one, however, but I did have the pleasure of some good shooting, and above all saw Hans and his wonderful "mussling loater" in action.

NOYNEK.

## Wild Rice and Wild Ducks.

NEWARK, N. J., Sept. 20.—*Editor Forest and Stream:* Inclosed you will find a clipping, which I cut out of a Newark paper. I hope you will put it in this week's FOREST AND STREAM, as it will interest a good many of your New Jersey readers.

G. D. M.

The enclosure is a report in the Newark Evening News, of Sept. 13, from Lincoln Park: Dr. Unger, of Paterson, and Artie Zeliff, of this village, were out yesterday morning in Bog-and-Vlie swamp after snipe, and in passing one of the ponds filled with wild rice flushed a flock of ducks, which had settled in there to feed. Three birds fell at the first shots fired, and the remainder of the flock flew to an adjoining pond about a quarter of a mile away. By chasing up the birds from pond to pond twelve in all were bagged before it began to rain so hard as to drive the hunters from the field.

It is unusual for ducks to come in so early in the season, but in all probability they came down in advance of the storm from further north.

Since the planting of the wild rice in the Bog-and-Vlie pond-holes, a year ago last April, the plant has done remarkably well and affords a feeding ground for vast numbers of ducks in their migrations from the Canadian wilds to the sounds and bays of North Carolina and Virginia. Last fall large bags were secured here, when none could be found anywhere else for miles around. The rice is just ripening now, and on every stalk hangs a well-filled head of rice, the wild ducks' favorite food.

The rice was brought from Minnesota and planted as an experiment. It had been tried several times before in New Jersey, but had failed every time, as the right conditions did not exist for its best development in the localities where planted. To insure success the rice must be planted in soil that is constantly covered with a few inches of water, but it must not be deep during the growing season. Land that is flooded during part of the year only will not do for its cultivation.

The prospects for all kinds of game, except quail, in the vicinity of Lincoln Park were never better than they are this fall. Snipe shooting in the swamps and lowland meadows has already begun and fine bags have been made. Now that ducks have begun to arrive the snipe and ducks will afford plenty of sport until November, when the rabbit and partridge season will open.

The quail were apparently all frozen out last winter, as none have been seen this season at all, but rabbits and partridge fared better, the former securing shelter under farmers' outbuildings and haystacks and the latter in the thick cedars on the mountain side.

The past season has been a remarkably good one for breeding on account of the dry weather when the young were very small, and those left from last year have multiplied wonderfully. The result is that rabbits and partridges were never more plentiful than they are now.

The deer that have made the vicinity of Lincoln Park their home for the last two years are still in the neighborhood, but as New Jersey law forbids that they be shot for several years to come, they can hardly be looked for as legitimate game.

## North Carolina Notes.

RALEIGH, N. C., Sept. 22.—*Editor Forest and Stream:* The outlook for what our people here call partridges, but what our northern friends call quail, is certainly very promising. The summer was a remarkably wet one, though luckily June was dry, that being the month when the young birds are apt to suffer from too much rain. As a result there are very good broods, and the youngsters looked very well indeed. I have had the opportunity of seeing a good many coveys in my rambles and also here through my farmer and sporting friends in a number of counties. There is a great deal of food for the birds, and the acreage in cow peas, which, after all, is the best food for the birds, and which really increases their size, it seems, is larger than ever before in my recollection.

Your correspondent will about Thanksgiving time give the annual rabbit hunt to his friends, Governor Glenn and the other State officers. We will repair again to the century-old home of Mr. Samuel Wilder, a few miles west of Raleigh, and we will have thirty-two dogs, all thoroughbred beagles. No guns will be used and there are a thousand acres of land to hunt over. A turkey dinner is to be, as usual, one of the features of the day, and ex-Gov. Charles B. Aycock will come up from Goldsboro to be the writer's guest for the hunt. We ought to get, and probably will, twenty-five to thirty rabbits. Last year we caught nineteen.

Most of the North Carolina fox hounds will go to the great meet of the Virginia-Carolina fox hunters' meet at the Mecklenburg Hotel, Chase City, Va., Oct. 24-28. This is to be made the largest meet ever known in the United States, or perhaps in the world, as from 750 to 1,000 dogs will be there. A good deal of attention is being paid to fox packs in North Carolina now, and this association has stimulated this.

The foxes, all of them grays, in this county have nearly been exterminated, this having been the work of the Boylan pack, which up to a few years ago the late Mr. William Boylan had kept for twenty-five years or more, numbering from forty to sixty dogs. The son of Mr. Boylan, Mr. William M. Boylan, tells me a very strange thing about the bite of dogs, this being that he has been bitten a score of times by dogs of the pack which were said to be mad, and never was affected in the least. He

firmly believes that the attack and death of persons who have been bitten was due solely to fright—that is fear of hydrophobia. He tells me of a case in which a negro was attacked by one of the hounds, which suddenly went mad. Mr. Boyland, minus clothing, dashed out of his room with a shotgun and found the man down and the dog at work on his throat and face, and had literally to blow the dog's head away in order to stop the furious beast. The man never suffered from the many bites given him. All over North Carolina is a popular belief in the mad-stone as a cure for hydrophobia, and the writer has heard of four of these stones, one of which has for twenty-five years or more been in great request. However, when persons are bitten now the rule is to take them north for Pasteur treatment, not everybody having faith in the mad-stone.

The deer hunting season has opened and reports from the east are to the effect that there are many deer in fine condition. Governor Glenn will take a hunt near Newbern early in October or early in November.

In a small way one or two experiments are in progress in breeding pheasants, but nothing extensive has yet been done, though there are great advantages since the game laws are not only stricter and more complete, but are so much better observed than ever before. The chief game warden tells me that he has had very little trouble this summer in enforcing the law. There are now forty-two under-wardens. These report that the plumage birds on the coast are more numerous than ever before. The writer observed more of such birds during a trip along the sounds in August than in many years. There are two rookeries of cormorants in this State and some pelicans have been seen along the coast during the summer.

The most encouraging thing about bird protection is the interest which the farmers are showing in it. It was thought at first they would not like the law, thinking it was a deprivation of rights which they fancied they had, but they have looked from a very sensible viewpoint, and have very heartily helped in enforcing it. The Audubon Society has sent out many thousands of leaflets which give information about the bird.

The sounds, where the ducks delight in the wild celery, notably Currituck Sound, will be better policed this season than ever before, as there will be two patrol boats in the service, while last season there was only one. Northern members of the Audubon Society continue to express a very lively interest in its work in North Carolina, which more than any other State in the South, except Florida, is engaged in the work of protecting all song, plumage and game birds.

The writer was shown this week some of the women's hats for the coming season, and found that some styles were made entirely of feathers, these being arranged on a sort of frame of canvas. The feathers were of various colors, and it was rather difficult to determine from what fowls they came. The dealers said that gallant bird, the rooster, furnished them, but the writer does not vouch for this. Very few of the women seem to mind wearing bird feathers; in fact, some of them would wear live birds, fastened by the legs, or for that matter stuck through with a hatpin, only providing that such use was fashionable. No doubt all over the country hats entirely of feathers will be seen a little later, and the authorities interested in bird protection might well now look into the establishments where such headgear is turned out and find out what kinds of feathers are used and whence they came.

FRED A. OLDS.

## The Natural Enemies of Birds.

BY EDWARD HOWE FORBUSH.

From the "Special Report on the Decrease of Certain Birds, and its Causes, with Suggestions for Bird Protection," in the Fifty-second Annual Report of the Massachusetts State Board of Agriculture.

Concluded from Page 258

### The Mink.

Minks feed along water courses, where they kill a water-fowl now and then. They also make excursions overland, killing mice, as does the weasel. At times they kill many domestic fowls and some birds. Mr. Brewster has recorded, in "Bird-lore," the almost complete destruction of a colony of bank swallows by one or more minks. Mr. H. B. Bigelow says: "Minks kill few if any quail or partridges, but a good many ducks on the marshes. I have found black ducks, evidently killed and partly eaten by them." Their fur is valuable now; they are trapped much, so they are rather rare, which is fortunate for birds and poultry.

### The Skunk.

The skunk is a sluggish and rather stupid animal, but knows enough to steal young chickens from under the mother at night. When a boy I once surprised a skunk apparently eating some grouse eggs, while the bird hovered round, afraid to come to close quarters. Wishing to interrupt the proceedings, I undertook to investigate, but was so warmly received by the undaunted animal that it was soon left in undisputed possession of its ill-gotten meal. Probably the injury done by skunks to birds has been exaggerated. While occasionally they may stumble on a nest of eggs or young birds, they are too slow to pursue and overtake any bird that is able to use its wings or legs. I have seen forty fowls roosting two and one-half feet from the ground in safety, while night after night, skunks came and ate refuse from the ground in the same coop.

Hunters, finding the nest of a game bird despoiled of its contents, are very likely to attribute it to a skunk, without sufficient evidence. Most people who have been much in the woods believe that skunks eat many birds' and turtles' eggs; but thus far I have been able to find but one man who has seen the skunk eating birds' eggs. This may be mainly because the skunk usually hunts at night; but Mr. Martin L. Sornborger writes from Haydenville that he has actually seen the skunk eating the eggs in a grouse's nest. He also says he has found the remains of young birds in the stomachs of some skunks that he has examined.

### Other Minor Enemies.

Three observers each report snakes, pheasants and

orioles as destructive to young birds. The black snake is a deadly enemy to birds, and eats the young in nests both on the ground and in trees. Other species of snakes are probably less destructive.

The introduced pheasant (*Phasianus torquatus*) is reported as killing young chickens and game birds, but the evidence against it is circumstantial, and not very strong.

Orioles are reported as tearing down the nests of other birds and destroying the eggs—a trick of which a few individuals are undoubtedly guilty.

Raccoons, being nocturnal, omnivorous and fair climbers, are probably destructive wherever they are common; but there is little evidence against them as destroyers of birds, and they are no longer numerous in many parts of this State.

\*"Squirrels and Other Fur Bearers," John Burroughs, p. 87.

## John Davidson.

JOHN DAVIDSON, for the past thirty years had been known throughout the United States and Canada as one of the best and most successful breeders of hunting dogs in this country, as well as for his connection with the bench shows of his own and other countries.

Mr. Davidson was pre-eminently a lover of the dog and of everyone who loved a dog. He was often sought to judge the leading classes of hunting dogs at the many bench shows in every section of the country, from New York to San Francisco, and from Maine to Florida, and to the perplexing and trying duties of this position he carried ability, experience and incorruptible honesty. I was ever said of "Honest John" that no man had money enough to buy his opinion or to "warp" his judgment. He was not always right, perhaps, and sometimes diplomacy would have dictated a course different from that he chose to pursue, but it remains to be said by his worst enemy, if he had one, that he was unswervingly honest.

John Davidson was born in the Highlands of Scotland and came to America when a boy, going almost at once to Monroe, Mich., where he found service with W. H. Boyd as bookkeeper in the leading hardware establishment. Afterward he was employed by Hon. Thomas C. Cole, of Monroe, to take charge of his stock farm, which was a large one, and here John found congenial occupation in the handling of the large numbers of fine horses, which were owned by Mr. Cole.

Upon the death of his employer, and the sale of the stables, Davidson followed the hunting instinct which was strong within him, and became a noted field shot and dog breaker, conducting parties south and southwest to most successful and enjoyable sport. He had always made his home near Monroe on a little farm some two miles from the city, where his kennels were and where he bred some of the most successful dogs of their day—Donald Bane, Ailsa and scores of others. From here he sent their progeny to delighted purchasers. English and Irish Setters were John's favorites, though in the earlier days he leaned toward the Blue Beltons.

John had recently returned from Toronto, Ont., where he was an exhibitor instead of a judge, and where he had some fine animals on view. He contracted a severe cold while returning from that place and was ill for a few days succeeding his return, but mending somewhat he was imprudent and exposed himself and suffered a relapse. His death was a great shock to his friends, who supposed that he was but slightly indisposed. His age was about seventy-five years. Good old John, good-bye.

FRANK HEYWOOD.

## Kansas Prairie Chickens.

TOPEKA, Kan., Sept. 21.—The best district for prairie chickens is the western part of the State—the counties Ellis, Trego, Barton and Kiowa. Ducks are everywhere though the favorite spots are at Ellinwood, on the sa marsh and at McPherson, in the McPherson basin.

Herman Crow and C. C. Houston returned yesterday from Greensburg, Kiowa county, where they found excellent prairie chicken shooting. They brought back forty-five chickens. "We killed twenty-seven chickens the last day we were there and forty-five during the three days," said Mr. Crow. "The new game law has made the open season for chickens fifteen days later than the old law, and as a result the birds are two weeks older and stronger and more wild and not so easy to kill."

There are nineteen counties in Kansas in which it is unlawful to shoot either quail or chicken at any time of year. The counties are: Hamilton, Scott, Wichita, Greeley, Smith, Sherman, Rooks, Stafford, Gray, Grant, Stanton, Haskell, Decatur, Hodgeman, Stevens, Morton, Finney, Crawford and Bourbon.

## Adirondack Elk Killed.

ONEONTA, N. Y., Sept. 18.—*Editor Forest and Stream:* At Norwich, N. Y., the 16th I got report from three gunners who opened the season on grouse and woodcock in good shape. The three killed fourteen grouse and two woodcock. They said the young grouse were very small and not worth shooting. Gray squirrels were reported quite plentiful in that section. A Mr. Aldrich, who builds a State hatchery in the Adirondacks, says that he has seen two carcasses of elk lying in the woods that had been shot down in pure wantonness by some one worthy the name of man and left to rot. What a pity that the guns used by such people could not burst and blow their heads off. A case of the hunter being hurt would be all right, too, I think.

E. H. K.

"It's strange how the mere intonation of the voice can change the entire meaning of a sentence." "Yes, but no matter what tone of voice you use there's one sentence that can never express anything but doubt." "What's that?" "When one man says another: 'Of course, you know your own business better than do.'"—Philadelphia Press.

"What is butter to-day?" asked the possible customer. "Butter is butter to-day," answered the waggish grocer, with a shrug of laughter. "Glad to hear it," said the other cheerfully; "last I got here was axle grease."—Cleveland Leader.

# SEA AND RIVER FISHING

## The Log of a Sea Angler.

White Sea Bass—A Brace of Fifty Pounders—The Leaping Shark—Digging Among the Ancients.

BY CHAS. F. HOLDER.

SAN NICHOLAS was a purple blur on the horizon; we ad run out of the wind and were rising Santa Barbara back to the east under power when the yacht ran into a most remarkable sea. It was a dead calm, and the sea, an intense blue, looked as though it had been oiled, so clean was the surface, then the yacht rose on a heavy round swell that seemed to come from nowhere, and a moment later we were riding the kind of swells I read about as a boy, seen rounding the horn by the famous navigator of the day. If I am not mistaken I have seen water over the topsail yard of a full-rigged ship when she pitched in a certain hurricane we were riding out, yet these waves did not impress me as did the big, smooth rollers that came silently along, lifting us like a chip, then sliding away to make way for another. If one of those seas had broken it would have been a sad day for us; but they did not break, and for twenty minutes we came over them, and to see one or two at regular distances coming up behind was appalling. We ran out of them as we passed the rock of Santa Barbara, twenty-five miles from Santa Catalina, and were soon on a smooth sea—a sea of turquoise. I believe if anyone should take the trouble to compare articles or chapters which I have written on the color of the ocean and its beauties it will be found that each one is the most beautiful, each possesses the most intense blue. This is an amiable weakness and applies to fishing. I often find that the last fish is the easiest, puts up the best fight, and is the finest fish in the world. I once wrote an article on angling, and when I gave it a final reading I found I had given each separate fish the credit for being the hardest fighter; and I really thought so at the time. I believe all enthusiastic anglers have a failing of this kind; it is only another kind of optimism and the indulgence does no harm.

This leads me to say that in these southern California waters the white sea bass is the game of game. If you do not know him picture in your mind's eye a plump, well conditioned weakfish; lengthen him out to five feet, extend him to the proportions that are suggestive of 50 pounds, give him the general appearance of a salmon but with a pinkish gray back, a silvery white belly, throw in some peacock blue about the head in flashes, patches and intillations; impart to this fish a certain gravity and dignity that will make five or six hundred come slowly along, divide at the boat so that you can almost hit them with an oar, and you have the fish that I saw in Cabrillo harbor as we dropped anchor.

There was a large school of sardines there and the bass were lying partly under them. Taking the dinghy I was presently in their midst. I rigged a light yellow-tail rod, using a No. 16 line, with a 7-0 hook, and cast into the school. As the line sank and disappeared I jerked it, and impaled a sardine that at once became a very lively bait. There was not much time to discuss the cruelty of this method of baiting a hook, nor did the sardine suffer long; the line straightened out, the reel sang loudly, ze-e-e high and low, now a baccarole, now a ragadood, and Johnny Daly, the shark, who was my bait man, whirled the boat around to place me face to the fish that was off somewhere in the south seas reeling off my line.

"Dy'e hear that music?" whispered Johnny behind my ear. "By the powers, it's the smartest thing; list!" Ze-e-e! Ze-e-e-e! sang the reel, and as I played on the leather pad brake it made the kind of music that starts the blood and sends it whirling through the veins.

By this time I had stopped the fish, and Johnny declared that it had three hundred feet, and it was towing us slowly by the thread straight out into the little bay with its white patches of chalk cliffs, its grim heads of tone to the north, its white island, and always the tender, splendid blue of the ocean over which on the distant edge of the world the white caps of the Sierras were ringed against the sky.

Perhaps you and I do not fish alike. I belonged to the Daly school of angling, which I cannot exactly explain; but the philosophy of it was that Johnny Daly, to quote him literally, "did not care a tinker's dam whether he ever caught a fish or not."

"It isn't for fish that ye go a-fishin'." said Johnny. Divil a bit. It's the hopin', the anticipatin', the i-x-p-e-c-t-a-t-i-o-n, the longin' and the waitin'. Sure if ye had a fish on all the time ye'd want to be paid, and there's where longin' becomes fishin'."

You can twist this Daly philosophy around to suit all kinds of situations, and I believe Daly and I must have been born under the same crab, as fishing or the catch has always been but a single factor at the game, and in his splendid sea there is always something to catch the eye.

The water is the blue you know so well, and in it float thousands of gems of the sea. There is a little crab-like creature so like a gem that some naturalist has named it *sappharina*; it is blue, red, yellow, gold and every possible color, as though some one had sprinkled the ocean with a handful of rubies, diamonds, emeralds and sapphires, and they were drifting with the tide. Then there are fairy-like forms of jellies never seen in the East, the blazing *pyrosoma*—a column of light at night, a phantom by day, and the line cuts into a veritable comet, or the dazzling *physophora* darts away—a radiant jellyfish with the gift of rapid motion.

That graceful form floating on the surface is the argonaut, and in the kelp bed hard by there are a score of forms—fishes, crabs and others—that mimic their surroundings and evade the sharpest-eyed enemy.

But all this time the fish is towing the boat, and ever

and anon comes the ze-e-e, ze-e-e-e as the reel gives tongue, like some old and melodious hound you have known. The game towed is partly across the little bay, then thinking of my thread of a line I began to reel, and away he went—ze-e-e, ze-e-e-e—always off and away, the water being too shallow for sucking, and all this towing and hauling was to reach deeper water. I began to reel and slowly brought him in, but not without many a rush, and many a struggle for supremacy. Once he dashed entirely about the boat, like a tarpon, and as I pushed the fighting he came to the surface a hundred feet away and lashed the water into foam—a sort of wild defiance—and all the time I was worn by conflicting emotions; I wanted him, yet disliked to kill so fair a fighter. But we needed food; I convinced myself of that when I saw his fair proportions, and in he came, fighting every turn of the reel, a splendid creature, that made a rush half around the boat; then I brought him up sharply and Johnny tried to break my line with his gaff. Failing in that he gaffed and I held him at the rail a moment, then lifted him in, holding him up that I might see his beauties.

Surely no fish is so beautiful, so massive, so all satisfying as the white sea bass when taken on light tackle, clearing your conscience of any suspicion of unfairness. One morning I took five such bass, each of which weighed over 50 pounds; and it is a singular fact that nearly all the white sea bass caught here weigh over 50 pounds.

This fish is by no means a common catch. Some years they appear in vast numbers and will not bite; again but few are seen and many are caught. When they are around the angler had better follow them up, as the school is always moving. The season may be said to begin in May and to last all summer, but very few are caught, and I doubt if one hundred are taken any one year with the rod at Avalon.

The bait for them is a live sardine, and when a school enters the bay of Avalon the small boy can go out and catch live bait for the anglers. I have taken them by casting with heavy flying fish, and with sardines and smelt, and doubtless a spoon could be used to advantage.

We took the big bass in shore and Johnny prepared him for cremation; as become such game a large hole was lined with flat rocks which were heated, and in this the game was placed and baked, then served on a plank by the light of the moon.

Johnny Daly was a professional shark. He caught a small oil shark and sold the oil to one firm and the fins to the Chinese. Nearly all his catch was made at the head of Catalina Harbor, where the small oil sharks came in to breed, and where their fins could be seen moving about at this time above the surface.

Johnny told me that his sharks were game, so I determined to test it, and one morning found myself with rod on the back, Johnny on hand as chummer. He baited my hook with about 6 pounds of fish, then taking it out about one hundred feet dropped it overboard while I sat down upon the sands to wait. Very soon the reel began to click, when about ten feet of line had gone out I gave the shark the butt, and up into the air went a long, slender creature, marked like a tiger and about five feet in length. It did not fling itself about, as I had seen the leaping shark of Texas, but it made a fair jump which was repeated several times, then it made a savage rush up the beach, taking my line and forcing me to run along the sands, Johnny Daly prancing after me, brandishing a long and angular gaff and calling on all the saints to witness its speed and gallant play.

With some difficulty I turned the fish, and back up the beach we went, Daly up to his knees, now dashing back filled with excitement, enthusiasm and certain artificial energies which belong to the calling. Up the beach we went, the fish bearing off hard, now almost taking me into the water, or making a dash for deeper water; but in half an hour I conquered him with the thread of a line, and Johnny gaffed him in gallant style and came out of the water a red faced sea dog, towing the beautifully marked game that was four feet long and weighed 63 pounds.

There is a prejudice against sharks, but if we could have called this fish a gray tarpon or a striped bonito it would have passed as very fair game and its good points made much of.

If the angler cares to test tackle and enjoys beach fishing where there is no necessity for wading, and where the game is played up and down the beach, Catalina Harbor is an excellent place. It is a miniature fjord, almost land-locked, surrounded by hills, its entrance guarded by a mountain which I named Torquemada in honor of the padre of old, the first one of his cloth to land on the isle of Summer. In the center of the harbor is a peculiar sand spit, a miniature Cape Cod that reaches out into the bay and has the appearance of being artificial. In former years a large herd of sea elephants lived here; but Scammond killed the last in 1850 or thereabouts.

In the afternoon we bore away down the coast, running in for water at the Torqua Spring. That is one of the standard jokes to try on a tenderfoot. I recall the light just out of Norfolk, that rises directly out of the water with no land about it. We always told the newcomer along those ducklined shores that the lightkeeper, as isolated as he was, raised all his own vegetables, as he did, with block and tackle; and so at Santa Catalina the skipper will ask if you would like to sample the Torqua Spring and will slow up at a buoy a hundred or more feet off shore in deep blue water. Here he will fish up a hose that leads to the Torqua Spring, unscrew the cap and present it to you, and you drink to the memory of Torqua, who in the legendary lore of the place, is supposed to be an Indian who made a desperate effort for freedom against the Spaniards in the long ago.

With Mexican Joe I made a few days ago an organized effort to determine the age of the large graveyard at this

town of Cabrillo. When I first saw it it was a black patch in the landscape, a mass of burnt sand, shells and debris, and has, in all probability, produced more Indian objects in stone, bone and wood than any deposit on the island, and I have mapped them all. There was a large Indian town where Avalon stands to-day, and every cañon had its village or camp site. We made a trench into the old kitchen window from the beach, and it was evident that the natives had lived and cooked over the spot for ages, so blackening the sand that it was a landmark out to sea. In a short time we struck the layers of graves and found five here before hardpan was reached; in the section which Joe worked out with the care of a sculptor, the exact position of the bodies could be seen. Around it had been placed mortars, pestles, fishhooks, beads and various household goods. The lower level contained nothing but implements of shell, stone and wood; but the upper ones had metal bell clappers, Venetian beads, old knives, pieces of copper wire and more bell clappers, showing that the lower deposit dated back prior to the time of the Spanish invasion and may have been four hundred or four thousands years old.

While we were at work some tourists came ashore and began to help themselves to the beads, which were scattered on the sands. I was thinking what I could say that would induce them to stop robbing us, when one of the women who had caved in an ancient Santa Catalina almost on my head, suddenly asked: "Mister, what did all these skeletons die of?" I assumed my most mysterious air and said: "Madam, this is confidential. I don't wish to alarm these people, but are you immune?" "No, I'm Mrs. John Daly, of Hackensack," replied the lady. "I mean are you proof against contagion?" "Where is it?" replied Mrs. Daly, growing a shade paler and almost sliding into the pit. "Do you see that dark man working at that brown skeleton? He's the professor. He's hunting for germs. All these people died of black cholera." Mrs. Daly (her name was not Daly) tossed the beads she had taken into the trench, and a few moments later the entire party left us in peace.

How long ago this island was inhabited it would be difficult to say, but I believe it was the home of tribes similar to those on the main land many thousands of years ago, and I base my opinion on a single find. It happened I was in the center of the island in a heavy rain during which a wash was formed on the slope of one of the mountains and a section made thirty feet in height. I am not a geologist nor am I an archaeologist. I only see things and form my opinions from the evidence at hand, and I was convinced that this mountain side had not been moved for thousands of years, yet in the bottom of the section amid the gravel of the ages, I found a nest of abalone shells, one four inches long, then others, packed in and selected by some child, possibly ages ago. Of all the curious things I found on this island this impressed me the most; it was the toy of a little child.

## Bass Fishing on the Ocean Pier.

THE principal amusement of the tourists at Long Beach—a coast resort on the Pacific twenty miles south of Los Angeles, Cal.—is fishing on the Long Pier, which extends several hundred feet into the Father of Oceans. A great variety of fish are caught—sardines, young mackerel, bass, yellow-tail, halibut and jewfish—one of the latter caught this winter weighing 377 pounds. A correspondent writing from there sketches the following characteristic incident:

She was a peach, a vision in a picture hat and a magenta-colored skirt of some light, fluffy material that no mere man may be expected to know the name of, and not only the young men but every grizzled old fisherman on the pier turned to take a look at her as she passed. She was squired by a dapper young fellow in a raincoat and big-checked trousers; from a lancewood pole carried by each it was plain they were on fishing bent.

He bought twenty-five cents worth of bait of "Buck" Dolger. "Buck" usually sells by the nickel's worth—and they sat down on a string piece to enjoy the sport.

"Reginald Kip Osterhaus!" she exclaimed at once, "you are not putting a dear little fish on that hook alive?"

"That's what I am doing, Pet," replied Reginald.

"You cruel, cruel thing," she said, and pouted.

"Now, Gladys, do be reasonable. We want a big fish to tell about back East, and this is the only way to catch 'em."

"O, Reggie, what funny brown bird is that diving after the bait?"

"That's a diver—hell diver we call 'em when they steal our bait," volunteered a redheaded urchin whose bare legs dangled over the edge while he watched a cotton line and clam-baited hook at the end of it. "Gee, he's got yours already."

"What shall I do, what shall I do?" screamed the girl, dancing round on her high-heeled boots.

"Play him for a sucker," said the boy. "Let him swallow it hard an' fast. There, now, reel in. Jiminy, you'll have roast duck for dinner."

A battle royal now commenced between the girl and the duck—the latter known locally to some five hundred victims as "Billy." The duck had the fish and hook down his throat and paddled desperately against the force which was robbing him of his dinner.

"Yellow-tail, yellow-tail!" some one screamed at this juncture, and in a moment the girl had an audience of about five hundred eager to see the sport.

She wound, and wound, obeying instructions of her boy mentor to the letter, and by and by it seemed as if the hook would hold this time and "Bill" be landed sure enough, but just as the duck was being lifted from the water it threw back its head, coughed up the tid-bit, and paddled off serene as a summer morning.

"He's played that game on more'n five hundred," cried the boy. "Them divers got so sassy we had to shoot about a dozen; but nobody 'd touch 'Billy.'"

Ten, fifteen minutes passed, then there came a rush, a scattering of the millions of young mackerel beneath, and Reggie's reel spun round as if a five hundred horsepower electric motor had been hitched to it.

"It's a whale, Reggie! It's a whale!" screamed the girl. "I saw him plainly."

"It's a black bass," cried the boy, "and a 250-pounder. Play him, mister, play him."

Again the cry of "Yellow-tail, yellow-tail," was raised, and the crowd surged over to watch the conflict.

The young fellow was game. Ont spun the silken line until it neared the end, when he checked it and began slowly to wind in. Slowly, foot by foot, the bass came in until feeling the shortening line it made another rush, and away would go the reel nearly to its limit, to be followed by the reeling in process again. So for half an hour, then the bass began to show signs of weakening, and the general cry was "Reel him in, reel him in."

"Where's the gaff?" cried some one as the bass drew near, showing its silvery side.

Tad Caldwell had it, and stationed himself with two or three more on the lower deck within a foot or two of the water. Now was the crucial moment. The big fellow drew near, half bottom-side up, all his strength and spirit gone, was cleverly hooked in the gills, and half a score of willing hands lifted him on to the pier—a big fellow estimated to weigh 200 pounds.

"That'll do us for to-day," said Reggie, proud and happy as a king. As for Gladys, she bent down and slipped a quarter into the freckled-faced boy's willing palm.

C. B. T.

## Where to Fish for Black Bass.

THE object of this paper is not to give a description or even a list of the numerous lakes and rivers where the black bass is found. Such a description or list would be interesting and useful; but its purpose is to present a few suggestions to help the black bass angler, ignorant of the "good spots" of a lake or river, to make an intelligent surmise of their location. Of course even the tyro knows that it makes a vast difference in catching fish where the angler drops his fly or bait.

Now, it is true that at many of our summer resorts, and winter, too, in the south, there are guides to conduct him, for a consideration, to the fishing grounds, and right good fellows most of these guides are; but there are not a few lakes and rivers where the black bass flourishes and where the angler must depend upon himself to discover his whereabouts. And then, too, even where guides are obtainable it often gives a certain zest to a day's sport to rely solely on one's own judgment as he hunts in unknown waters for the finny quarry.

But there is a sort of half-way course between having a guide and depending wholly on one's self, which it is wisdom to follow sometimes. Many years ago, when I was just getting the black bass fever, I went to a cozy little hotel on the banks of one of the most charming of the smaller lakes of New England. The first morning after my arrival I was standing at the wharf chatting with my landlord, and enjoying greatly the beautiful river upon which my eyes rested, when two gentlemen came down from the hotel with rods and landing net and bait bucket. They quickly unmoored a dainty little rowboat, and were soon gliding out upon the shimmering waves. "After bass?" I queried of mine host.

"Yes," he answered.

"Where are the good spots to fish for them?" I asked.

He smiled blandly, and with a gesture of the hand meant to be graceful, swept over the whole three or four miles of the lake's length. I made no comment, but his character, from the point of courtesy, had not risen in my estimation.

Two or three years later I was summering at another of New England's beautiful little lakes, also stocked with black bass. My landlord had been showing me about a lovely park, in which I had rented for the season one of a number of attractive cottages; and now we were seated in a rustic summer house overlooking the lake. "I have brought my fishing tackle, of course," I said to him, "and mean to land some of your bass."

"Trust you will," he said genially, "and find here, too, the recuperation you need after the arduous duties of your profession."

I thanked him and asked: "Do you know the good spots for fishing? I understand there are no guides here."

"They are scarcely required," he replied, and taking from his pocket a pencil and a letter, from which he tore a blank sheet, said, "See here, I will draw you a rough sketch of the lake, marking the chief places where the bass are usually caught." He was an excellent and rapid draughtsman, and in five minutes laid in my hand a very accurate and serviceable fishing chart of the lake.

A little boy (the story is true) had a winsome sweetheart and kept a diary, into which his mother would occasionally secretly take a peep. One day she read the following: "To-day I had the chance and kissed Mabel. Mabel's mother saw me and only laughed. My mother found it out and spanked me. What a difference in mothers!"

What a difference in landlords! And yet it must be granted that the woods are full of landlords whose delight it is to make the angler comfortable and happy, doing all in their power to assist him in quest for health and fish. And I would say anent mine host of the bland smile and sweeping gesture that I found later that he had many fine qualities, and he and I became fast friends, and are such to-day, so good friends that I think if I read these lines he will laugh heartily and send me a letter well worth the reading by guests that pester long-suffering landlords with all sorts of ill-advised questions.

Now, not infrequently black bass are found in large numbers where the angler would little suspect, be-

cause there is nothing to indicate to him the character of the bottom of the lake or river, and, further, because there are ways of fish simply past finding out. Such spots are generally discovered accidentally. One morning I was trolling with rod and line in Lake Mashapaug, Conn., and caught, at a certain place, a fish weighing close on to four pounds. The following morning I had a similar experience, with the exception of the large size of the bass. That afternoon I rowed to that spot, dropped overboard the anchor, and threw out my line baited with a lively minnow. Well, it was not long before I had a creel full of fish. That spot has proved to be as good as any on the lake for bass, though there is nothing to indicate it as such.

In casting the angler often hits upon their unexpected gathering-places, for as he casts here and there he wisely does not confine himself wholly to throwing his lure where the appearance suggests the presence of his quarry. But, as a rule, the black bass is found where the predilections of his species are quite apparent. He likes, in spring and fall, to be close to the bank. Sandbars, submerged rocks, lily-pads, old stumps and sunken trees attract him. In hot weather he prefers deeper water. He will seek, if there is a depth of eight or twelve feet of water for him, the close proximity of a shallow place where little fish congregate, preying upon any that may foolishly venture into deep water, occasionally swooping down or rather up upon the little fellows by no means safe in the shallows. When I have run out of bait I have caught, on one side of my boat, minnows with worms and, on the other, bass with the minnows thus obtained.

To troll successfully the angler needs to know comparatively little of the "good spots," as he covers large stretches of the lake or river. He should not, as a rule, fish very far from shore, unless the water is very shallow, or the temperature hot, when he must troll deeper. The caster needs to be more particular; but it is chiefly the still-fisher who must exercise discernment. This is quite evident. He does not move from place to place constantly, but, having chosen his ground, casts anchor, and must wait some time, ordinarily fifteen or twenty minutes at least, to be at all certain, if he has had no strikes, that he would better try some other locality. He should scrutinize the shore and the water. The sandbar, the submerged rock and the like mean everything to him. But in a lake or a river, where the bass are at all plentiful and when they are biting freely, he will succeed as well as the caster, and with less exertion, which by the by is generally no advantage, and he will succeed better ordinarily than the troller and more scientifically, unless the troller uses a rod.

I have been taking it for granted that the still-fisher uses a boat, which, when practicable, is the better course. But I have seen large catches made from the shore both by the still-fisher and the caster.

Almost always it is better to fish where there is a ripple. The reason for this is, probably, because then the fish cannot so easily see the angler. But now and then the glassiest surface does not seem to interfere in the least with the biting. I have made large catches where there was not a sign of a ripple. It should never be forgotten that the black bass is an altogether whimsy fellow, not over dainty perhaps in his choice of food, but freaky, now biting seemingly indiscriminately at worms, frogs, minnows, crawfish and whatnot, anon making a selection of his food without any reason, so far as the angler can discover, a little later refusing absolutely to bite at any lure he may be proffered. And this puzzling behavior does not apparently sometimes have much, if anything, to do with the conditions under which he is angled for. Where yesterday he was fairly vicious in attacks on the bait cast to him, to-day, though a like day, one will use, in vain, every device to entice him.

Still, he is well worth angling for. Few kinds of fish equal him in gameness and edibleness; and, indeed, his very whimsiness adds a charm to his capture. The successful black bass angler must know where to fish, and then he must know how to wait patiently upon the mood of the wily, wary warrior he would meet in deadly combat.

CORNELIUS W. MORROW.

## The St. Andrew's Adventures.

A DERELICT whale is the latest danger reported lurking in the middle Atlantic, directly in the course of transatlantic trade. Last Wednesday the tramp steamship St. Andrew, of the Phoenix Line, ran into a flathead whale, measuring eighty or ninety feet, and cut off ten feet of its tail. This portion of its anatomy is what a whale needs for steering apparatus, and, deprived of it, the whale that so unfortunately met the St. Andrew was left floating without ability to steer itself away, a great living carcass. The St. Andrew was not injured by the encounter, but the mutilated whale, according to the captain, will probably float there like the derelict of a ship, and prove a menace to smaller craft. The ship brought a cargo of a hundred stallions, and a lot of goats and golden pheasants, all crowded together on one deck without any sense of social distinctions. But the most interesting part of its cargo was a bird that it did not start with from the other side. It was a large and rare specimen of osprey hawk, which flew out of a fog that covered the water one day, evidently lost, and lighted on a spar. One of the men climbed up and captured it by throwing over it a canvas bag.—New York Evening Post Sept. 23.

## A Pair of Muscalonge.

MR. E. A. PETTIBONE, of Chicago, sends us, with the query "can anyone beat it," a record of two muskies caught by him on Sept. 9, weighing 40 and 45 pounds. If anyone has a one day's score to top this we would be glad to record it.

## THE MANY-USE OIL.

Coating on guns, reels and all metals; keeps rust off.—*Adv.*

## Fish and Fishing.

### Trout Fishing in Northern Quebec.

THE trout fishing season has ended very satisfactorily for anglers in the greater part of northern Quebec. The open waters, especially those of Lake Edward and the immediate vicinity, have been very much frequented by visitors from the New England States, and while no catches of extra large fish as compared with the spring fishing, have been reported, the fish have been plentiful, and, as a rule, fishermen have had good sport. The weather has not been altogether pleasant for camping out during the latter part of September, owing to the large amount of rain. There were fewer guests at the Triton, and some of the other American clubs this autumn than in former years, but at the Nonamtuim and Metabetchouan clubs both members and guests were numerous, and some excellent sport is reported. Messrs. Taylor and White, of Waterbury, Conn., and Mr. Benham and party have had very fair fishing in the vicinity of Lake Kiskisink, the trout having risen well both in Briggs' Pool and also in the outlet of the lake among the lily pads. The portion of the Metabetchouan River, which flows through the limits of the club of that name, has also afforded good fall fishing. Dr. George R. Porter and Dr. Civillon Fones, of Bridgeport, did very well on the Bostonnais waters, and Mr. Nathan D. Bill and party, of Springfield, Mass., went home a few days ago, after a delightful camping trip on the Iroquois Club limit, where Mr. Bill has a very pretty permanent camp. In addition to some very good trout fishing Mr. Bill was fortunate to get a couple of very good trophies in the shape of a moose and a caribou head. While this is certainly exceedingly good luck for one trip, yet it is by no means surprising, for it is doubtful if big game has ever been so plentiful since the building of the railway as it is at the present time in the Quebec and Lake St. John country. The work of protection inaugurated there a few years ago is now bearing excellent fruit, and the whole country from a few miles north of Quebec, right up to Lake St. John is so full of moose and caribou that specimens of one or the other, and sometimes both, are reported as having been seen by hunting parties almost every day.

Mr. Smith, of New Haven, got a good caribou head on the Nonamtuim Club limits only a few days ago, and on both the Triton and Tourill preserves, big game is reported very plentiful. Caribou have already been killed this season a few miles north of Quebec on the colonization road running from Stoneham to the vicinity of Lake Jacques Cartier, out of which body of water a number of very large brook trout have recently been taken.

Several sportsmen, who came for both the hunting and fishing, are staying around here now that the fishing is over, awaiting the fall of the leaf for better shooting. In addition to big game, partridges are fairly abundant this fall in the northern woods.

Though the "Fish and Fishing" column may not be the place to write so much about big game, my excuse must be that the sport is being now looked for by many anglers who came here before the close of the trout season to endeavor to have both shooting and fishing. To all who come to the Province of Quebec for shooting it is of interest to know that there have been some slight changes made by the new Minister of Colonization, Mines and Fisheries, the Hon. Mr. Prevost, in the regulations concerning hunting licenses. No more hunting license is issued by the day; the lowest price at which the license can be obtained, even if only for a single day, being \$25. This license, however, is good for the season. All non-residents of this Province, whether they be honorary members or guests of clubs, must provide themselves with one of these licenses before hunting here. The only exceptions are active members of clubs, duly incorporated and holding a lease of a hunting territory in this Province. They must, however, be provided with a certificate of membership signed by the president and secretary of the club, and such certificate does not confer the right to hunt outside of the territory leased by the club to which they belong.

### Ouananiche and Salmon.

The success obtained by the planting of salmon in Lake St. John, as illustrated by the taking of several adult fish during the present season both in the lake itself and also in some of its tributary waters, has encouraged Mr. Beemer, the proprietor of the Roberval hatchery, to continue the good work, and he has made application for another lot of spawn from the Government hatchery at Tadoussac. Preparations are also being made for securing a large supply of ouananiche spawn. Mr. Marcoux, the manager of the hatchery, reports a very large run of fish in the Metabetchouan River, which is entirely set apart as a nursery for spawning fish. Here upon the spawning grounds immediately below the third falls, the parent fish are easily secured and stripped in the month of October. Mr. Prevost visited the locality the other day to inspect the place and also looked very minutely into the hatchery and its furnishings. The fish still rise very freely to the fly, and quite a number of them were taken out of the water with rod and line during the day that the Minister spent there, all of them, of course, being returned to the water. One of the fish so taken was nearly 8 pounds in weight. A small salmon, some 3 pounds in weight, was among the fish so taken out of the water and immediately returned to it.

### Lake Trout and Bass.

In many Ontario waters, and also on the Quebec side of the Ottawa River, a good deal of interesting fishing is enjoyed by anglers after those of Quebec have put away their rods and lines till another season. When the trout and ouananiche fishing closes on Sept. 30, Quebecers, and even Americans who do their fishing here, seem to care for no other kind. Farther west anglers are now having a good deal of sport with the small-mouth black bass, and the lake or salmon trout, as it is popularly though improperly, termed. Hereabouts the gray forked-tail trout are very abundant, but fishermen too often think them only worth killing upon night lines or when taken in nets. It is strange that more of these people do not try the sport of trolling for the lakers with rod and line. A 20-pounder at the end of a rod and line is not to be despised. In

Temagami and neighboring waters they troll for these fish almost up to the time of the formation of ice upon the water, and though the forked-tails are much more plentiful than in the summer months, they are found in much shallower water, and are not taken, as a rule, anything like so large as when angled for in warmer weather with very much longer lines, heavily weighted.

E. T. D. CHAMBERS.

## Suspended Animation in Fishes.

ST. JOHNS, N. F., Sept. 1.—*Editor Forest and Stream:* I have recently seen letters in the FOREST AND STREAM about suspended animation in fishes, especially the case of some fish in India that were completely buried in baked or dried up mud, but in the next rainy season were found alive in the pools. The following story has been told me by a reliable man, but as I was not a witness to the act I cannot vouch for the truth or correctness of the tale as told:

The story is, that my informant went trout fishing in a well stocked lake or pond during the winter, and that he caught several fairly-sized fish. The frost was keen, and when the trout were drawn from the water through the holes in the ice, they froze solidly before life had become extinct in them. They were frozen hard when the fisher reached his home, where under the influence of the heat the ice melted, the trout became limp and actually jumped before they became dead, which they did in a few minutes in the ordinary course of nature. The theory of the narrator was that the frost, and ice supplied the necessary life-giving elements to the fish.

Another story, told by an old fishing guide: In the winter, while crossing a hook in a pond, he saw in the layers of ice caused by the overflowing of the waters, four or five trout. He cut them from their icy tomb, and after the warmer atmosphere, caused by the sun, had melted the particles of ice about them, the fish were alive. What is your opinion of the stories?

That yarn about Professor Muller domesticating whales at Salena, and of his milking them and converting the product into butter and cheese is a gem of the first water. The writer must possess a prolific lie-manufacturing brain, and his statue should be carved while he is alive.

BEOTHIC.

[We would accept both stories as true, if told, as our correspondent says they were, by persons of credibility.]

ELIZABETHTOWN, N. Y.—*Editor Forest and Stream:* In regard to suspended animation of fish allow me to give you some experience with fish after being frozen. Several times at different periods I have had fish resuscitated after being frozen hard for several hours. My first experience was with perch caught in the morning through the ice on Lake Champlain, thrown out on the ice, on which was a light snow and quickly frozen. They lay on the ice most all day, were then gathered up, thrown into a tin pail and carried a distance of ten miles. About 10 o'clock P. M. they were put into a large dishpan and water was poured over them to thaw them out. I was awakened in the night by a splashing of water, and on investigating, found several perch flopping on the floor; others were swimming around in the pan. I took several and put them in a water tank at the barn in running water and they lived several months, but did not seem to grow any larger than when caught. The average weight of the perch was about one-half pound. Several times since I have had a like experience, but only with perch and speckled trout. My theory is, that the fish must be frozen quickly after being taken from the water. If allowed to lie any length of time after being taken from the water before freezing, they will not recover, or if they are lacerated very much or lose much blood by being caught they will die.

MARTIN B. DAVIS, Guide.

## Cannibalism of Bass.

I quote from the Fox Lake representative the following instance of cannibalism on the part of black bass: "Fred Lorenz, of Milwaukee, caught 111 black bass here in less than an hour Sunday. This may sound pretty heavy but it is an actual fact. He caught a black bass that when dressed was found to have 110 little black bass about an inch long in its stomach. Talk about dogfish eating fry and spawn, it looks like bass were about as bad cannibals as any fish in the lake. It is possible that the bass swallowed her own brood of little ones to protect them from other fish, but if so she forgot to 'cough up' again and the brood was destroyed."

There is no doubt that the black bass will eat its young. Some writers say that it is the female and others that it is the male which remains on the spawning bed to protect it. It would seem, however, that in eating 110 small bass, this particular fish was acting the hog. MICROPTERUS.

## "Chained to Business."

CHERRYVALE, Kan., Sept. 21.—*Editor Forest and Stream:* I am chained to business, and have been for the space of two years, during which time it has been impossible for me to break the chain and use a gun or split bamboo. In March, 1905, I was at Halstead, on the Little Arkansas River, in this State; after my business at that point was transacted I walked down to the mill dam, to see the stage of the water, and saw about thirty men and boys of all ages and color engaged in fishing, and everyone was doing business, catching black bass and crappies, and I only had fifteen minutes till train time. Well, any lover of the rod can appreciate my regrets, as I had to leave to make that train. Again in May I was at Neosho Falls, and after business was ended, having fifteen minutes before the bus left for the train, I walked down to the dam across the Neosho River, and saw a motley crowd at work, and every last one had one or more bass, crappies or catfish. Again I leave to the fraternity to appreciate my longing and regret. I hope to find time in October and November to have a try at the bronze-backs, and if I do I surely will give my brothers of the cult a full account in the never failing favorite, FOREST AND STREAM.

W. F. RIGHTMIRE.

## The Crab Industry of Maryland.

BY WINTHROP A. ROBERTS.

From the Appendix to the Report of the Commissioner of Fisheries to the Secretary of Commerce and Labor for the year ending June 30, 1904.

MARYLAND furnishes by far a larger supply of crabs than any State in the Union, and it is not improbable that its people were the first to discover the edible qualities of this crustacean and its value as a market product. The only species taken in the commercial fisheries of the State is the blue crab (*Callinectes sapidus*), which is caught and marketed in both the hard-shell and the soft-shell condition. The fishery for soft crabs, however, is much more extensive than that for hard crabs.

### The Soft Crab Industry.

The greatest crab shipping point in the United States is Crisfield, Md., situated near the extreme lower end of Somerset county on the Little Annesmessex River, a tributary of Tangier Sound. Soft crabs are taken with three forms of apparatus—scrapes, scoop nets and small seines. A few also are taken incidentally on trot lines, together with hard crabs. The catch by seines is insignificant compared with that by scrapes and scoop nets.

The scrapes used for crabbing are similar to the oyster dredge, except that they are lighter, have no teeth on the front bar, and have a cotton instead of a chain bag. The bags originally used were three feet deep, but deeper ones were found more effective in preventing the escape of the crabs, and four feet is now the usual depth. The same apparatus is occasionally used both in dredging for oysters and scraping for crabs.

A scoop net, or dip net, as it is sometimes called, consists of a circular bow of iron, with a cotton bag from six to eight inches deep knit around it, and a handle about five feet long.

The seines are from forty to fifty feet long, and are hauled by two men. Crabs taken in scoop nets and seines are less mutilated than those caught in scrapes, and consequently command better prices.

Scrapes are used exclusively upon sailing vessels, and, like oyster dredges, are drawn over the bottom while the boat is moving under sail.

The soft-crab season extends from May 1 to Oct. 31, but a majority of the crabbers discontinue fishing in September to engage in oyster tonging. During the first two or three weeks of May they follow what is known as "mud-larking," that is, scoop-netting in marshes and along the banks of small streams, the crabs being found in the mud at this season of the year. By June 1 the crabs become more active and the season is then considered at its height. The heaviest catches are made during June and July. Scoop-netting is followed throughout the season, but little scraping is done after the middle of July, owing to the calm weather. Very often a fisherman will begin scraping early in the day, and when the wind has ceased anchor his sailboat and use his skiff for scoop-netting in shallow water. In some localities the bottom grass grows so thick that the scrape bag fills with it and prevents the crab from entering. The scoop net is then brought into service. In water less than three feet deep it is a common occurrence for the crabbers to leave their skiffs and wade out after the crabs with scoop nets.

There are six stages of a crab's life, commonly classified as follows: First, the "hard crab," or one in its natural condition; second, a "snot," or one that has just entered the shedding stage; third, a "peeler," when the old shell has begun to break; fourth, a "buster," when the new shell can be seen; fifth, the "soft crab"; sixth, a "paper-shell," or "buckram," when the new shell is beginning to harden. During hot weather it takes from two to three days for a "snot" to become a "peeler." One tide will often change a "peeler" to a "buster," and another from a "buster" to a soft crab. A few hours after shedding the crab has reached the "paper shell" stage, and within three days the hardening process is completed.

Most of the crab catch is sold on the grounds where taken, the dealers in Crisfield and Deal Island employing buy-boats for this purpose.

Every crabber has what is known as a float, a rectangular box approximately ten or fifteen feet long, four feet wide, and two feet deep, the sides and ends being constructed of laths, and the bottom of six-inch planks. Extending around the float on the outside, midway of its height, is a shelf about seven inches wide, to prevent the float from sinking. The laths on the sides and ends are placed about one-fourth inch apart, to prevent minnows or eels from getting at the crabs inside. These floats are used by the fishermen as a means of holding crabs that have entered upon the shedding process, but which have not yet reached the "peeler" or salable condition. The floats are inclosed by a fence to prevent their being washed away by strong winds, and this inclosure is commonly called a "pound."

Dealers employ men to watch their floats constantly and remove the crabs from the water immediately after the shedding process, to prevent the hardening of the shell. This sorting is done three or four times a day, the intervals being employed in packing the crabs for shipment, receiving fresh supplies, and in delivering those already packed to the express office or steamboat wharf.

A source of much loss in soft crabs is the great mortality attendant upon the shedding process. If the animal has been injured in any way, either when being caught or in the subsequent handling, or if it has been weakened by being kept too long out of water, it is often unable to withdraw from the old shell and dies. There is but small demand for the crabs which die in the floats. If they are removed and cooked within two or three hours, however, they can still be eaten, and for this purpose command a small price. A few are shipped to be used as fish-bait, but the majority are either thrown away or given to persons in the neighborhood who feed them to hogs or to impounded diamond-back terrapin. The mortality among shedding crabs is greatest during hot and sultry weather; thunder storms are said to be very destructive at times, but whether this destruction is due to the sultry weather preceding or to the electrical disturbance during the storm is a disputed point. The crabs in the floats are not fed, even though they remain there for several days. It was formerly the practice to throw in pieces of stale meat or other refuse, but, although the

crabs ate it, they died more quickly than if nothing was given them.

The work of packing crabs for shipment is begun by covering the bottom of the box to a depth of two or three inches with seaweed which has been thoroughly picked over to remove all lumps. On this soft bed the crabs are placed in a nearly vertical position and so close together that they cannot move out of place. Seaweed or moss is then placed over them to protect them, and over this is placed a layer of fine crushed ice. The other trays, after being packed in the same manner, are placed one above the other, and the lid is nailed on. The box is then ready for shipment. Some dealers, in order that their shipments may present a more attractive appearance upon reaching market, place a piece of cheesecloth immediately over the crabs and the seaweed over that. By reason of the extreme care used in packing, the crabs can be kept alive from sixty to seventy hours after leaving the water, and crabs shipped from Crisfield to Canada arrive at their destination alive and in good condition.

At present most of the crabs are shipped directly to the consumer, and the packers do not hesitate to fill the smallest order. Competition among the packers is very keen, and considerable secrecy is observed regarding the destination of shipments. When a box is ready the dealer's name and address are stenciled upon it, and a tag bearing the consignee's name and address is attached; but over the latter, so as to hide it completely, is tacked a piece of cardboard bearing the letter "W" (west) or "E" (east). This is known as a "blind tag," and is not removed until after the box is in the express car, if shipped by rail, or in Baltimore, if it goes by steamer.

While the great bulk of the catch, in fact nearly all of it, is shipped in the manner described above, a small but increasing number of soft crabs are being put up in hermetically sealed tin cans for indefinite preservation. For this purpose the prime soft crabs are boiled and put up very much the same as any other animal product. From two to twenty-four entire crabs are put into each can, the former number into a can holding about one-half pint, the latter into a one gallon can. When put up in this manner the crabs retain much of their delicious flavor and should furnish an admirable substitute for the fresh article during the winter season.

The price received by the fishermen for soft crabs, or those in the process of shedding, varies from one-half to four cents each, an average during the season being about 1½ cents. In buying, the dealer often counts three small crabs as two large ones, or two small as one large one, according to the size.

There has been no very material change in the catch of crabs throughout the region, except a slight increase due to the greater number of crabbers each year.

### The Hard Crab Industry.

Oxford and Cambridge are the most important hard-crab centers in the State, though the industry is prosecuted extensively in many other localities, including Crisfield, where, however, it is overshadowed by the more important soft-crab industry. The larger portion of the catch is made in the Choptank, Tred Avon, Wicomico, St. Michaels, Chester and Little Annesmessex rivers, and Chesapeake Bay, on the eastern shore of the State, and in Mill Creek, a tributary of the Patuxent River, on the western shore. The crabs are taken in depths of water varying from two feet in the rivers to forty feet in the open waters of Chesapeake Bay. The average depth would be about ten feet. They usually frequent muddy bottoms, but at certain seasons of the year they are found on hard bottoms, thus differing from soft crabs, which always seek grassy bottoms.

At Crisfield the fishery for hard crabs is carried on from early in April until the latter part of November. In most other localities the season is considerably shorter. The larger portion of the catch is taken between June 1 and Sept. 1, most of the fishermen discontinuing at the latter date to take up oyster tonging.

With the exception of the crabs already mentioned as being caught in oyster dredges and the few taken together with soft crabs, the entire hard-crab catch of the State is obtained with trot lines. These lines vary in length from 200 to 1,000 yards, the average being about 450 yards, and are of cotton, manila, or grass rope, the size running from one-eighth to five-eighths of an inch in diameter, but usually being about one-fourth inch. Many fishermen tar their lines, though the practice is not universal. In some localities snoods about eighteen inches in length, of fine twine, are fastened to the main line at intervals of three to four feet, the bait being placed at the ends of these snoods. Other fishermen, however, use no snoods, but make a loop in the main line, through which the bait is slipped.

The use of snoods is preferable where the water is rough, as the crabs are not so easily shaken off by the strain on the line when pulling the boat along and when the line is being lifted from the water in removing the crabs. Many fishermen advise their use under all circumstances, as with snoods swinging from the main line the crabs are able to see the bait from any direction. Trot lines are always anchored on the bottom of a stream. For this purpose grapnels or killicks weighing from five to ten pounds are used, one being placed at each end of the line, and in many cases one also in the center. A buoy, usually consisting of a small keg or some wooden object, is placed near each end of the line to locate it.

Beef tripe and eels constitute the usual bait, though calf pelts, sting rays, hog chokers, spoilt beef, and various other substitutes are sometimes used. It is likely that the use of tripe will be discontinued in the near future, owing to the fact that the steamboats have refused to transport it on account of its offensive odor, and the railroad companies will not handle it except when it is packed in tightly sealed barrels. The bait is generally used in a salted condition, and is placed on the line at intervals of three or four feet. Fishermen bait their lines about once a week, in the meanwhile replacing any bait that may have been washed away or eaten. It is usual on Saturday or Monday to remove the old bait and put on fresh. After a line has been rebaited it is placed in a cask and covered with salt to preserve the bait until it is used.

With few exceptions only one man goes in a boat. The lines are set about one-fourth to the tide, or diagonally across a stream. In fishing, the line is drawn across the

bow of the boat; a short-handled scoop net is used to transfer the crab to the boat. The lines are overhauled from ten to twenty times in the course of a day. In some localities crabbers aim to reach the fishing grounds shortly after midnight, while at others they arrive as late as three or four o'clock in the morning. The object in going early is to get a good lay. If it is a moonlight night the lines are set as soon as a lay is reached, but if it is dark the crabbers await daylight, in the meanwhile taking a nap. Crabs very seldom bite before daylight, but if they do not begin soon after, the fishermen consider it as well to return home. Very few crabs are taken between 10 o'clock in the morning and 2 o'clock in the afternoon, both on account of the heat and the difficulty in getting the catch ashore in good condition. Hard crabbers are dependent upon neither wind nor tide, but should the water be rough the crabs are liable to be shaken off before they can be caught.

Very often a male and female crab when mating are taken together on a trot line, this usually occurring when the female is entering the shedding stage. The pair are called "doublers," or "channeler and his wife." In most localities where hard crabs are taken there are one or more firms handling soft crabs—that is, those taken on trot lines as "doublers." At some places there is no sale for the female thus taken, and she is returned to the water, while in other localities she is sold along with the hard crabs at the same price. The proportion of "doublers" taken varies in different localities from one in one hundred crabs to one in ten, and they are generally taken on grassy bottoms. A "channeler," or any large male hard crab, is called a "Jimmy" or "Jim crab."

The size of a market crab varies with the season and also with the locality. Early in the season 500 will fill a sugar barrel, while later from 200 to 300 is sufficient. The average weight of a single crab is about one-third of a pound. Two were taken near Crisfield early in 1902 weighing one pound each. The smallest crabs that are ever taken in that locality are about the size of a man's fingernail. The supposition that crabs spawn in the ocean near Cape Charles would account for the fact that no smaller ones are taken.

The crabs are disposed of in different ways. Probably the largest proportion is sold to factories for the extraction of the meat. The remainder is either shipped alive by the crabbers or sold to dealers, who also ship it in a live state. In some localities where the catch is small the crabs are sold locally either alive or deviled.

At Oxford, St. Michaels, Tighman, and several neighboring localities almost the entire catch is utilized in cooking the meat which is shipped in tin buckets having perforated bottoms and holding from five to six pounds. The crab meat is prepared as follows: Immediately upon arrival at the factory the crabs are dumped into a large box, through which steam is forced from the bottom. They are steamed from twenty to forty minutes, the time varying at different factories, and according to the number cooked. After this the crabs are distributed among the pickers, some of whom, with long experience, become very expert in extracting the meat. The pickers in most cases are white women and children, though at some factories all are colored. After the meat has been extracted ice water is thrown over it and about three ounces of salt added to each twenty pounds of meat. The meat is packed in buckets after it is salted and is placed in a large ice-box and covered with ice, where it remains until shipped. After the meat has been extracted the crab shells are cleaned and a certain number are sent with every shipment of meat, to be used principally in making deviled crabs.

A factory at Oxford has been engaged during the last two seasons in grinding crab shells and disposing of the resultant product to fertilizer manufacturers for use as an ingredient. Its value as an ingredient for fertilizer is due to the nine per cent. of ammonia which it contains.

The total number of men engaged in the industry in 1901 was 5,388. Sixty-nine vessels, valued at \$24,000, were employed, 55 of these being engaged in taking crabs and 14 in transporting them. The total number of boats used was 4,082, valued at \$125,847. Including vessels, boats, apparatus, shore property and cash capital, the investment in the fishery was \$321,974. The catch was 12,910,746 soft crabs, valued at \$202,563, and 29,474,379 hard crabs valued at \$85,884.

#### Winning Scores.

Distance and Accuracy, Bait—E. R. Letterman 99 43-60 per cent.  
 Delicacy and Accuracy, Bait—O. E. Becker 99 44-60 per cent.  
 Distance and Accuracy, Fly—N. C. Heston 99 21-60 per cent.  
 Delicacy and Accuracy, Fly—H. W. Perce 100 104-120 per cent.  
 Note.—In the delicacy and accuracy, bait, Mr. O. E. Becker and Mr. E. R. Letterman tied for first, with a score of 99 44-60 per cent. Mr. Letterman being the winner in the distance and accuracy, bait, the first prize in delicacy and accuracy, bait, falls to Mr. Becker.

B. J. KELLENBERGER, Sec'y-Treas.

### Just Wants to Know.

TOLEDO, O., Sept. 17.—*Editor Forest and Stream:* I don't clame to be mutch of a skoler, but to-day after diner I picked up yure paper to read Mr. Starbuck's peece about bein up to Ontario. It was tollable hard work, for I am not very strong on the dictionary, but I about konkluded that what Mr. Starbuck went up there for was to go a-fishin. I red his peece very careful, but there is still some things about his trip that he didnt tell us, that I would like to know, and so I set them down.

1. What kind of bait was he a usin of?
2. What fer kind of fish was he a fishin for?
3. Did he ketch any?

JOB SMITH.

### A True Fish Yarn.

BEAUMARIS, Muskoka, Sept. 22.—A grandfather, grandson and friend were fishing from an anchored skiff on Muskoka Lake recently. The grandfather hooked a good-sized bass, which broke the line about eight feet from the hook, and when some fifteen or twenty yards from the skiff leaped quite a height from the water with the line still hang to it. Meanwhile the grandson hooked a fish, but through rough handling, I suspect, it broke the hook and of course escaped. The friend now hooked a fish which fouled the line with the anchor rope. On his leaning over the bow to disentangle it he exclaimed to the grandson: "What did you do that for, Harry," something having struck him on his back which he thought arose from some of Harry's pranks, but on looking round there lay the fish in the boat, which had been lost by the grandfather, the broken line still hanging from its mouth, it evidently having again leaped near and fallen into the boat. The above can be vouched for by several eye-witnesses, as another boat was anchored near and the above occurrence witnessed by its occupants. I. H. W.

### Fossilized Pathos.

G. G. GREENE, of Mankato, Minn., says a correspondent of the St. Paul Pioneer Press, has just received a remarkable prehistoric relic lately exhumed by his own hands in the Bad Lands of Dakota.

Mr. Greene is an enthusiastic antiquarian and spent his June vacation in the Bad Lands, that wonderful natural museum of the marvels of the past, and while there was fortunate enough to find this relic which has just arrived in Mankato. It consists of the perfectly petrified remains of a monstrous serpent and a prehistoric cave-dweller, twined together in a death struggle. The situation in which the relic was found leaves no doubt but that ages ago these representatives of the highest and lowest orders of animal life then existing were locked together in a life and death struggle, and while thus engaged they came near to the top of a bank of loose earth which caved with them, carrying them down into the morass beneath, together with a mass of earth and rock under which the man and serpent were buried millions of years ago.

The body of the serpent, which was about five inches in diameter at the thickest portion, is wrapped again and again around the body of the man, and its sharp, savage teeth are embedded in the left forearm of its antagonist, which the man had thrown forward with the evident intention of protecting his face, at the same time that his sinewy right arm drove a dagger of flint deep into the serpent's skull, directly between its eyes. The left hand of the man, in addition to being thrown out as a guard to his face, clutches a stone hammer, with which it would appear he had struck the serpent before he was wrapped in its folds, for the reptile's skull is somewhat indented just above its right eye. The protuberance of the skull above the eye, for its protection, is crushed down. The body of the man was naked, except for a short garment of fur about the loins, and he has a necklace of the terrible claws of some animal like the polar bear of to-day.

A touching feature of this wonderful petrification is that the last time the reptile threw one of its powerful coils around the struggling cave-dweller it inclosed within the coil, pressed firmly against the upper portion of the man's right leg, a large tuft of grass, which was held tightly in this situation and torn, roots and all from the earth, and that, imbedded in the center of the tuft and as perfectly petrified as any other portion of the relic, is a ground bird's nest, the devoted mother bird still holding her position, and two of the eggs still unbroken, showing plainly through the meshes of the upper portion of the nest and the petrified grass around it.

### A Patagonian Giant.

In "Puritios. His Pilgrimage," an account of Magellan's voyage, gives this description of a Patagonian giant: "This Giant was so big, that the head of one of our men, of a meane stature, came but to his Waste. He was of good corporature, and well made in all parts of his body, with a large Visage, painted with divers colors, but for the most part yellow. Upon his Cheekes were painted two Harts, and red Circles about his Eyes. The Hayre of his Head was coloured white, and his Apparrell was the Skinne of a Beast sowed together. This Beast (as seemed unto us) had a large head, and great eares like unto a Mule, with the body of a Cammill, and taylor of a Horse. The feet of the Giant were fouled in the said Skinne, after the manner of shoes. He had in his hand a big and short Bowe, the String whereof was made of a sinew of that Beast. He had also a Bundell of long Arrowes, made of Reedes, feathered after the manner of ours, typt with sharpe stones in the stead of Iron heads. The Captaine caused him to eat and drinke, and gave him many things, and among other, a Looking-Glasse: In the which, as soone as he saw his owne likenesse, hee was suddenly afraid, and started backe with such violence, that he overthrew two that stood nearest about him."

### THE UNIQUE MANY-USE OIL

Prevents the metallic tone on phonograph discs; 2oz. bottle 10c.

## The Kennel.

### Virginia-Carolina Fox Hunters' Association.

THE officers of the Virginia-Carolina Fox Hunters' Association are working energetically for the success of the big fox hunt, fixed to take place on Oct. 24 to 28 inclusive, at Chase City, Va. The headquarters will be the Mecklenburg Hotel.

The programme consists of a Derby and an All-Age stake.

The Derby will commence on Oct. 24, and all entries for it must be in the hands of the master of hounds at or before 5 o'clock P. M., Oct. 23. This stake is open to all fox hounds whelped on or after Jan. 1 of the year preceding the trials, and are judged on average all-round work.

The All-Age stake is open to all fox hounds, and is governed by the following considerations:

Hunting.—By hunting shall be understood the general ranging and starting qualities of a hound.

Trailing.—Trailing shall be considered the manner in which a hound follows a trail before a fox is jumped.

Speed and Driving.—Speed and driving shall be considered rapidly of movement while actually carrying the scent, and therefore the hound doing the greater part of the leading and known to be carrying either the ground or body scent, is the speediest.

Endurance.—By endurance is meant the capacity of a hound for continuous maximum work during a number of successive hours or days.

Tonguing.—By tonguing is meant the use a hound makes of his voice after he is let loose for the day's trial.

The fox hound having highest general average shall be awarded the first prize. In computing the highest general average a first prize in any class of the All-Age stakes shall count 50, a second prize 30, and a third prize 20.

The days assigned to the All-Age trials and the general hunts will be decided upon by the officers on the night of Oct. 23. Entries for the All-Age stake and the general hunt may be made up to 5 o'clock P. M., Oct. 24, but it is earnestly desired that all hounds be in the hands of the master of hounds by 5 o'clock P. M. on Oct. 23.

The hunt last year had 150 riders and nearly 200 dogs. This year the secretary, H. B. Hartman, estimates that there will be nearly 400 riders and 250 or 300 hounds.

The officers of the Association are: President, W. T. Hughes, Chase City, Va.; Vice-Presidents, R. G. Sneed, Townsville, N. C.; Judge Allen Hanckle, Norfolk, Va.; Judge A. M. Aiken, Danville, Va.; Mr. T. E. Roberts, Chase City, Va.; Mr. W. T. Clark, Wilson, N. C.; Mr. Allen Potts, Richmond, Va.; W. T. Lipscomb, Greenville, N. C.; Dr. N. Jackson, Norfolk, Va.; Dr. J. R. Rogers, Raleigh, N. C.; Secretary, H. B. Hartman, Chase City, Va.; Treasurer, E. W. Overbey, Boydton, Va.; Master of Hounds, E. W. Overbey, Boydton, Va.; Directors—Phil L. Hunt, Townsville, N. C.; W. H. Elam, Jr., Baskerville, Va.; J. M. B. Lewis, Lynchburg, Va.; G. W. Morrow, Bullock, N. C.; E. M. Milstead, Newport News, Va.; S. P. Cooper, Henderson, N. C.; W. T. Lipscomb, Greenville, N. C.; J. Y. Wilkinson, Chase City, Va.

The prerequisites of fine sport are primarily good and convenient ground and plenty of game, both of which are provided here. This section is in Piedmont, Va., a grand, gently undulating territory in which some 18,000 acres of hunting preserves of the hotel are inclosed and protected. There are foxes in abundance, quail and deer in plenty. The roads are good, and nowhere are better mounts or better trained dogs to be found.

On March 24 to 28, after informal and impromptu advertisement of a proposed meet on short notice, the result was an assembling, at the Mecklenburg's first meet, of over a hundred mounted fox hunters with as many dogs. The sport was fine, old-time records were broken in the full enjoyment of the chase of the South. The press of Virginia and other States testified to the complete success of the initial gathering; and it is certain that we will have a return in full force of the first company, all of whom are ready and willing to declare their enthusiastic support.

With the large gathering of sportsmen and other notable personages it was but one step further to organize a permanent Association, which has been done, and it is appropriately styled the Virginia-Carolina Fox Hunters' Association, incorporated, chartered under the laws of Virginia.

A banquet and German, speech-making and toasts will be on the next programme. Membership cards with initiation fee \$2, and the annual dues \$1, paid in advance, entitles the holders to all the privileges of the hunt and banquet. Non-members will be charged \$1.50 for cards to the banquet and German. Hounds will be well cared for by the Association without cost to owners.

It is expected and proposed to have this occasion surpass all fox hunting meets in the annals of the country. Every effort will be put forth to guarantee its success and to insure comfort and enjoyment to everyone present. The field records will pass down into history and make a basis of fireside stories for the old sportsmen to the third and fourth generation.

Plenty of foxes make the sport doubly sure every day. Photographers will be on the ground to make pictures of the sport under varying conditions. These plates, like those made at the last meet, will be objects of pride to the possessors. Arrangements will be made to supply photographs to all, and these will make the best possible souvenirs of the great occasion.

Many members of the best hunting clubs in the country have already declared their purpose to attend, and are lending their assistance enthusiastically to the complete success of the undertaking.

### National Beagle Club's Trials.

THE premium list of the National Beagle Club's sixteenth annual field trials, to be held at Stevenson, Md., beginning Oct. 30, can be obtained of the secretary, Chas. R. Stevenson, Camden, N. J. The headquarters of the Club will be at Avalon Inn, Stevenson is in Baltimore county, on the Green Spring Branch of the Northern Central Railroad.

# YACHTING

## Atlantic Y. C.

Sea Gate, New York Harbor.

The final week of racing of the Atlantic Y. C. season brought four events, the most important of which proved to be the interclub match between two American Y. C. representatives and a like number from the Sea Gate organization. The visitors sent down Commodore Trenor L. Park's Mimosa III. and his first boat of the same name, which is now owned by Mr. H. M. Raborg. The Atlantic Y. C. pitted against the two Class N boats, Vivian II. and Bobtail, owned respectively by Mr. S. E. Vernon and Mr. Edgar F. Luckenbach. The home craft were soundly beaten on both days of the series, the standing on points at the end being 14-6 in favor of the visitors. Cockatoo II. gained permanent possession of the Vernon trophy during the week of sport, which ended with the annual fall regatta. Only eighteen boats started in the latter event, all of them being from local clubs. The racing proved to be spirited, the winners being Vivian II., Tabasco, Sakana, Ogeemah, Careless and Chicoker. Alpha scored a sailover.

Interclub Match, Sept. 20 and 21.

A light S. wind was blowing for the first interclub race on Wednesday. The boats went twice over a triangular course from the start off Sea Gate to Can buoy No. 13 off Fort Wadsworth, thence to buoy No. 11 and home. All marks were left on the port hand, the aggregate distance being 10 nautical miles. The first leg was a reach, the second to windward, and the third another reach. On the windward leg Vivian II. ran aground off Hoffman Island, and it was some time before she was pulled off by one of the boats plying between Sea Gate and the Battery. The visitors had every thing their own way. Boat for boat Mimosa I. beat Mimosa III. by 6m. 37s. Bobtail was beaten 13m. 15s. In figuring corrected time Vivian II. was scratch. She allowed Bobtail 7s., Mimosa III. 29s. and Mimosa I. 4m. 47s. Corrected times, however, did not affect the result as determined by the order of finishing.

Hopes of the local Corinthians were again dashed in the concluding race of the match held Thursday. The boats went twice over a triangular course, the distance aggregating 14 miles. The journey led from the start off Sea Gate to Craven Shoal bell buoy, thence to buoy No. 6, a mile and a half due E. of West Bank Light, and home. It was a close reach to the first mark, windward work to the second and another reach home. Bobtail led for three-quarters of the race, being finally passed by Mimosa III., which finished 1m. and 44s. ahead. Mimosa I., although third boat to end the race, got the winning honors on corrected time. The summaries follow:

Sloops, Class N—Start, 3:05—Wednesday, Sept. 20.			
	Finish.	Elapsed.	Corrected.
Mimosa I., H. M. Raborg.....	5 46 08	2 41 08	2 36 21
Mimosa III., T. L. Park.....	5 52 45	2 47 45	2 47 16
Bobtail, E. F. Luckenbach.....	5 59 27	2 54 27	2 54 20

While the larger boats were racing on Thursday, the four Class Q creations, which had qualified in two preliminary events, met to decide the custody of the Vernon trophy. The boats went twice over a triangle, aggregating 10 miles. It was a reach to the first mark, a run to the second and windward work home. The starters were Cockatoo II., More Trouble, Quest and Ogeemah. More Trouble led at the end of the first round followed by Cockatoo II., only 24s. away. Then came Quest and Ogeemah. The latter, which got 9m. 27s. time allowance, looked to be a sure winner at this stage of the contest. On the first leg of the second round both she and Quest, however, were held up by a tow. The race was then a fine struggle between Cockatoo II. and More Trouble. Both had a luffing match to the finish line, the first name getting there 33s. in the lead. The summary follows:

Sloops, Class Q—Start, 3:20.			
	Finish.	Elapsed.	Corrected.
Cockatoo II., H. Chubb.....	5 21 14	2 01 14	2 01 14

Quest, F. J. Havens.....	5 27 13	2 07 13	2 07 13
*Ogeemah, A. McKay.....	5 34 29	2 14 29	2 14 29

\*Corrected time of Ogeemah, 2:05:02.

Saturday, Sept. 23.

The annual regatta on Saturday brought disappointment, as it was thought a number of schooners would compete. The boats were sent away in the morning over the outside courses. There was plenty of wind for all hands. In Class N, Vivian II. scored an easy victory over Bobtail. Tabasco varied her run of hard luck in the heavy breeze and defeated Lizana by a good margin. The yawl Sakana, recently brought to Gravesend Bay by Haviland Brothers, beat Lotwana. The latter cracked her topmast on the outward journey. In Class Q, Saetta defeated More Trouble by 25s. In a special division for old Class Q boats Careless won a good victory. Chicoker beat Bab in the Manhasset Bay one-design class and Alpha got a sailover. The summaries follow:

### "Supplement to Small Yachts" Free.

To any one sending us one new subscriber to FOREST AND STREAM before Oct. 15, 1905, we will present one copy of W. P. Stephens' book "Supplement to Small Yachts." This work contains 104 pages text and 43 plates. Size 11 by 14 inches. Cloth. Price \$4. This offer does not apply to renewals.

## New York Y. C.

Glen Cove, Long Island Sound—First Day, Wednesday, Sept. 20.

In the first series race for the New York Y. C. 30-footers, sailed on Wednesday, Sept. 20, there were twelve contestants. Neola II. won the prize offered by Commodore Frederick G. Bourne. The contest, which was sailed off Glen Cove, was not a satisfactory one, and Mr. Oliver E. Cromwell, who managed the race from the steam yacht Scout, was forced to stop the boats at the end of the first round. The course selected was a windward and leeward one, 3/4 miles to a leg, to be covered twice. The starting line was off Mott's Point, thence to the striped buoy off Parsonage Point and return. At the time of the start there was a nice breeze from the S. by W.

At 2:10 the starting signal was given. It was a down the wind start, and Cara Mia got away in the lead. Dahinda was second, Alera third, and Phryne fourth. From the time the boats started the wind lightened steadily. Slow progress was made on the run, but Phryne worked into first place and rounded the leeward mark ahead of the fleet. Atera was second, almost a minute behind. Neola II. was third. The rest rounded as follows: Alera, Nautilus, Maid of Meudon, Cara Mia, Oriole, Ibis, Adelaide II., Dahinda and Carlita.

On the second leg it was a beat at first and Phryne moved along with rather more life than the others. The wind finally went to the N.W. and spinnakers were set. Neola II., together with several others, went wind hunting to the eastward, and they all found it. A rain squall broke shortly before the boats finished and a let up put Neola II. well ahead, and she crossed the line a winner. Cara Mia was second, and Dahinda third. Carlita was fourth. The summary follows:

30-Footers—Course, 7/4 Miles—Start, 2:10.			
	Finish.	Elapsed.	Corrected.
Neola II., G. M. Pyncheon.....	5 46 48	3 36 48	3 36 48

Alera, A. H. and J. W. Alker.....	6 05 06	3 55 06	3 55 06
Adelaide II., Adeo Bros.....	6 05 37	3 55 37	3 55 37
Atair, Cord Meyer.....	Did not finish.		
Maid of Meudon, W. D. Guthrie.....	Did not finish.		

Second Day, Thursday, Sept. 21.

The second race was for a cup put up by Vice-Commodore Henry Walters. Mr. Oliver E. Cromwell, of the Regatta Committee, was again in charge, and he sent the boats off at 2:10. The wind was light from the S.W., and the twelve starters went twice over a 6-mile windward and leeward course. The start was again made off Mott's Point. A buoy off Matinicock was used as the outer mark.

There was some lively work on the line, and all twelve boats crossed within a minute as named: Neola II., Ibis, Alera, Carlita, Adelaide II., Nautilus, Phryne, Dahinda, Cara Mia, Atair, Maid of Meudon and Oriole.

A few minutes after the start Alera worked into first place, and Adelaide II. was second. Adelaide II. finally passed Alera and rounded the leeward mark 20s. ahead of Atair, which boat had moved into second place. Alera was 6s. behind Atair.

On the wind Alera soon took the lead again and was never headed. She was 1m. 22s. ahead of Adelaide II. at the end of the first round. Atair was third around, followed by Cara Mia, Oriole, Phryne, Dahinda, Carlita, Nautilus, Ibis, Neola II. and Maid of Meudon.

On the second round Adelaide II. did better in the strengthening breeze, and Alera was only 20s. ahead of her at the leeward mark. Atair was 35s. behind Adelaide II. Cara Mia was fourth and Oriole fifth.

Phryne picked up on the beat to the finish and crossed in third place. Alera beat Adelaide II. 1m. 36s. The summary:

Sloops, Class P—Start, 12:30—Course, 8/4 Miles.			
	Finish.	Elapsed.	Corrected.
Alera, A. H. and J. W. Alker.....	4 50 07	2 40 07	2 40 07
Adelaide II., Adeo Bros.....	4 51 43	2 41 43	2 41 43

Maid of Meudon, W. D. Guthrie.....	4 58 42	2 48 42	2 48 42

Third Day—Friday, Sept. 22.

Nautilus won the cup offered by Rear Commodore Cornelius Vanderbilt in the race on Friday. At the time of the start at 2:35 there was a moderate breeze from the W. by N. which freshened as the day progressed. Mr. Oliver E. Cromwell, on board Scout, took up a starting line off the Week's Point buoy. The weather mark was the striped buoy on the N.E. end of Execution Reef. This windward and leeward course was covered twice, making a total distance of 14 miles.

The boats were well bunched at the start, but Nautilus crossed ahead and to windward. Ibis was next away, and Neola II. was third.

Nautilus was first around the weather mark with Ibis close astern and Phryne third. Ibis was less than a minute behind Nautilus at the end of the first round. Phryne was third and the others rounded as follows: Oriole, Cara Mia, Carlita, Atair, Adelaide II., Dahinda, Neola II., and Alera.

On the beat on the second round Ibis let Nautilus get away a little, for she made a good gain, rounding 1m. 30s. ahead. On the last leg Phryne passed Ibis and finished in second place, a little over 3m. astern of Nautilus. Dahinda was third. The summary:

30-Footers—Start, 2:35—Course, 14 Miles.			
	Finish.	Elapsed.	Corrected.
Nautilus, H. W. and A. G. Hanan.....	5 04 20	2 39 20	2 39 20

## Washington Park Y. C.

Narragansett Bay, R. I.—Saturday, Sept. 16.

A SPECIAL race for sloops of the 25ft. class was held by the Washington Park Y. C. on Saturday afternoon, Sept. 16. There were only four entries, and owing to the extremely light wind, it was a slow affair. On actual time Micaboo was the winner, coming in about 9m. ahead; but neither of the leaders had been officially measured, and with her extremely short waterline, Gunfire, a new craft, was likely to win out on time allowance. The summary. Start, 3:05:30:

	Finish.	Elapsed.
Micaboo, W. R. Tillinghast.....	6 59 55	3 54 25
Gunfire, S. Baxter.....	7 09 13	4 03 43
Dazzler, C. D. Reynolds.....	7 30 35	4 25 05
Pinafore, W. B. Frost.....	7 50 43	4 45 13

F. H. YOUNG.

### THE MANY-USE OIL

Cleans powder residue and foulness from guns; 6oz. can 25 cents.

## American Y. C.

Milton Point, Long Island Sound—Saturday, Sept. 23.

The fall regatta of the American Y. C. was sailed on Saturday, Sept. 23. It was a race for small craft, but the twenty-seven boats that started were afforded some lively racing. A strong N.W. breeze held throughout the contest.

Commodore Trenor L. Park served on the Race Committee with Mr. James MacDonough and the match was admirably handled.

Mr. Clifford Bucknam, one of the Mimosa III.'s amateur crew, sailed the boat, and he had no difficulty in disposing of Mimosa I. These boats covered on 18 1/4-mile course, as did the New York Y. C. one-design 30-footers.

Minx surprised every one by winning in the one-design class. Cara Mia was second and Alera third. Nautilus had the race well in hand, having led nearly all the way over the course, when she was headed off by a long tow. After vainly trying to get by, Mr. Addison Hanan was forced to withdraw. This unfortunate occurrence cost her the first prize.

Thelema beat Firefly only 4s. on corrected time in Class P, and Hourii won in the Larchmont one-design class. Vaquero finished the race with her mainsail badly split.

Tartan had no difficulty in winning in the raceabout class. Indian was second and Nora third. Howdy broke her boom before the start. Okee and Vishnu were the other winners.

The course was from the Scotch Capes, off Parsonage Point, Rye Neck, thence S.W. 1/4 S., 2 3/4 miles to and around the striped buoy to the northward of Execution Light, thence E. by S., 3 1/2 miles, to and around the buoy off Weeks Point, Hempstead Bay, and thence N.W. by N., 3 3/4 miles, back home, 9 3/4 miles, all told. The sloops Mimosa III., and Mimosa I., and the N. Y. Y. C. 30-footers sailed the course twice, 18 1/2 miles, and the rest of the classes once. The first and second legs were reaches and the third was to windward. The summary:

Sloops, Class N—Start, 12:30—Course, 8/4 Miles.			
	Finish.	Elapsed.	Corrected.
Mimosa III., T. L. Park.....	3 30 44	3 10 44	3 10 44

SHEPHERDESS—LINES, INBOARD PROFILE AND CABIN PLAN—DESIGNED BY B. B. CROWNINSHIELD FOR S. F. HOUSTON, 1905.

SHEPHERDESS—SAIL PLAN.

SHEPHERDESS—MIDSHIP SECTION.

### Shepherdess.

SHEPHERDESS was designed by Mr. B. B. Crowninshield for Mr. S. F. Houston, of Philadelphia, and was built by Messrs. Oxner & Story, at Essex, Mass., and launched July 25 last.

In making the design comfort and seaworthiness were considered primarily, the aim being an able cruiser capable of comfortably making a long ocean trip, and at the same time a vessel handy enough to safely navigate the small harbors and narrow channels of the New England Coast. She is equipped with a 40 horse-power New York Kerosene Oil Engine Company's motor, which has worked without a hitch, and gives her a speed of 7 1/3 miles under power alone in smooth water. The engine was first turned over at Gloucester, when she went in commission and was not stopped until she reached Portland Harbor, a run of about 70 miles.

She draws 10ft. 6in., and is fitted with a small center-board, although she works perfectly with the board up. The ballast is all inside, consisting of 40 tons of iron and lead, the iron carefully cemented into the bottom, the top of the concrete being flush with the top of the keelson, making a total deadweight of 50 tons.

The construction is heavy. The keel, stem, sternpost, deadwood, etc., of oak. Keel sided 18in., stem 9in. and sternpost 12in. The frame is double of white oak sided 5in. Planking, Georgia pine, 2 1/2in., fastened with galvanized spikes. Deck, white pine 2 1/2in. by 2 1/2in.; main beams, Georgia pine, sided and moulded 6in. There are three clamps 3in. by 10in. on each side. Other scantlings in proportion. Skylights, deck house, waterways, coamings, rail cap, etc., of teak.

Below there is a steerage and chart room, large saloon, bathroom, one double and four single staterooms, besides engine room, galley, staterooms for cap-

tain and mate and engineer and steward, and forecabin with berths for six men.

The feature of the arrangement is the deck house, over the engine room between the masts, half sunk below the deck. This contains a room 6ft. by 11ft., large enough to be used for a dining room, and commanding an interrupted view of the deck and offing. The principal dimensions are as follows:

Length—	Over all	109ft. 9 in.
	L.W.L.	82ft.
Overhang—	Forward	11ft. 9 in.
	Aft	16ft.
Breadth—	Extreme	22ft. 4 in.
	L.W.L.	22ft.
Draft—	To rabbet	10ft. 3 1/2 in.
	Extreme	10ft. 6 in.
Freeboard—	Forward	8ft. 9 in.
	Least	5ft. 1/2 in.
	Taffrail	6ft. 1 1/2 in.
Sail area—	Mainsail	2,842 sq. ft.
	Foresail	1,195 sq. ft.
	Forestaysail	523 sq. ft.
	Jib	609 sq. ft.
	Total area lower sails	5,169 sq. ft.

## Boston Letter.

WITH THE 22-FOOTERS.—It already looks as though the keen competition in the 22ft. class will be continued for another season, at least, as there is more or less talk of new boats to be built for the class during the coming winter. Mr. George Lee, who raced the old *Medric* last season, is to have a new one from designs of Mr. E. A. Boardman. She is now being built by Fenton, of Manchester. *Peri II.* was built for Mr. Lee, and after a season of good racing he exchanged her for *Medric*, which he believed to be the faster of the two, a belief which he has probably since abandoned.

Dr. Morton Prince, who went into the 22ft. class this year with *Peri II.*, is also talking of having a new one built. Dr. Prince has not yet placed his order, but it is likely that he will do so in the event of any activity shown in the building of new boats.

Mr. H. L. Bowden, who owns *Rube*, one of this season's boats, is considering a new one for next year. Mr. Bowden has been consulting Crowninshield in regard to the design, but has not yet ordered.

Mr. W. H. Joyce, whose *Tyro* took the championship this year, is satisfied to remain in the class for another season. He will build a new one if he can find anybody who wants to take a chance with *Tyro*, but will race the champion if she is not disposed of.

NEW CLASS OF OLD 25-FOOTERS.—There is at present a movement on foot to establish an association which will take care of the existing 25-footers of normal dimensions. Some of these boats have long since dropped to more than 25ft. waterline, and there might be some that never were as low as 25ft. To allow all of the boats that were intended to be 25-footers to race, it is suggested that the class which the new association will control may measure not more than 27ft. nor less than 24ft. waterline. There are more than a dozen boats that could be gotten together for such a class, the owners of which would be most anxious to race with boats of somewhere near equal length. The limit of over all length is placed at 43ft., which would bar the productions of 1903—*Sally VII.*, *Early Dawn III.* and *Great Haste*. Mr. Arthur Leary, of the South Boston Y. C., is the originator of the plan to bring the old 25ft. class to life again, and his efforts may be productive of some very good racing next season.

NEW CAPE CAT ORDERED.—Messrs. Small Brothers have received an order for a Cape cat for Messrs. Dudley and Hodge, of the Revere Y. C., which will be raced in the open events for the class next season. The owners have been very consistent racers in the sailing dory class, and in going up a class they will not part with their old loves, but will race them whenever they can. The new boat will be different in her lines from the older Cape cats. She will have moderate beam and a hull of easy form, with a moderate sail plan. The sailing of such a boat may show why an old-time cat of flat iron form, with a sail plan which properly belongs to a boat twice her length, cocks up her tail like a sheldrake and refuses to move when one tries to drive her in a heavy chance.

NEW ONE-DESIGN CLASSES.—Messrs. Small Brothers have received an order for a one-design class of 15-footers for members of the Hingham Y. C. They will be 22ft. over all and will have a moderate knockabout rig. It is expected that ten of these boats will be built. The same designers have also an order for a one-design class of racing yawls for members of the Buffalo Canoe Club. These boats will be 25ft. over all, 17ft. waterline and 8ft. breadth. They have designed a 35ft. waterline yawl for Mr. W. Mosely Swain, of Philadelphia, and have an order for a 22ft. waterline auxiliary yawl for Mr. H. F. Knight.

THIRTY-THREE RATER ORDERED.—Mr. B. B. Crowninshield has received an order for a 33-rater for a Boston yachtsman, whose name is withheld for the present. This is the first that has been heard of the proposed new class so far. It is said that the owner of the new one is not interested in the formation of any new class, but it is believed that there are several other yachtsmen who would build for the class without much inducement. This rating produces a boat of admirable length for both racing and cruising, and it is likely that if interest in the class is once started it will not soon wane.

NEW SCHOONERS TO BE BUILT.—Two new schooners, and possibly three, of 56ft. waterline, are to be built at Lawley's this winter. One of these is for Rear Commodore Alfred Douglas, of the Boston Y. C. The owner of the other schooner is not given, but there are many who believe she is for Mr. Henry A. Morss, of the Boston and Eastern yacht clubs. It is possible that the third schooner will be for Mr. George L. Batchelder, who has raced the 30-footer *Dorel* successfully for two seasons.

*Dorel* is in the market, and it is known that Mr. Batchelder wants to go to greater length.

CIGARETTE EXCEEDS CONTRACT SPEED.—The steam yacht *Cigarette*, designed by Messrs. Swasey, Raymond and Page for Mr. W. H. Alley, and built at Lawley's, was recently given a speed trial over the Government course at Provincetown. In one direction she made 20 knots an hour, but on the return brought the speed down until the average showed 18.56 knots an hour. The contract speed is 18 knots, and the builders will receive a bonus for the excess.

JOHN B. KILLEEN.

## Hazel and the Hudson River Races.

PHILADELPHIA, Pa., Sept. 22.—*Editor Forest and Stream:* In your report of the races, held on the Hudson River last week, you said that *Hazel*, in class 2, division 2, starting on Sept. 16. at 10:40 o'clock, did not finish. I beg to call your attention to the fact that *Hazel* did finish, and covered the course in 2h. 24m. 3s., official time, and further, that *Glissando* did not start. In the afternoon races *Hazel* was ready to start, but as the owner was an invalid and the excitement was telling on him, and there was but one prize in this class, which, under a fool rating of the boats entered in this class, he had no possible chance of winning anything but glory, he decided to withdraw. We covered this 6½ nautical miles on Thursday morning in 40m. 28s., and on the last lap struck a submerged barrel, injuring the wheel to such an extent that we could barely stem tide in order to cross the finish line. This injury was of such a character that on Saturday morning it took us 48m. to cover the same distance, but in all our racing we varied but 2m. to 10s. on each round, which, we think, is a record to be proud of.

The rating we speak of, on which protest was made, was the time allowance which *Arcadia* gave *Glissando* and *Hazel*. *Arcadia* being 36ft. L.W.L., with only 6ft. 7in. beam and not quite 4ft. freeboard, with 25 horsepower, while *Hazel* was 46ft. long, 10ft. 6in. beam and over 7ft. freeboard, with the same horsepower, and *Arcadia* was only penalized 15m. for the 19½ nautical miles, which we consider ridiculous. Besides, *Arcadia* was measured by National Association rules, and *Hazel* and *Glissando* were measured under a combination of the National Association and A. P. B. A. rules, which was manifestly unfair.

Kindly make a correction of this matter and give *Hazel* credit for all that is due her, as the figures show that she was doing better than 11 statute miles an hour—a most remarkable performance for a boat of her size and horsepower.

On our return here we found that *Hazel* arrived home with one blade bent nearly double.

H. E. DANTZEBECKER,  
Designer and Builder.

[We regret the error regarding *Hazel's* performances in our account of the power boat races held on the Hudson River, and we are glad of the opportunity of publishing Mr. Dantzebecker's letter.—Ed.]

## Rhode Island Notes.

AT the annual meeting of the Bristol Y. C., held the past week, Mr. Charles F. Tillinghast, owner of the famous little racing sloop *Little Rhody*, was re-elected commodore for the second term, and a new rear commodore was elected in the person of Mr. Louis L. Lorillard, Jr., of Newport. The other officers elected were as follows: Vice-Com., Russell Grinnell; Sec'y-Treas., Frank A. Ingraham; Meas., Charles H. Douglass; Aud., Dr. W. Fred Williams; Regatta Committee, Horace S. Peck, Walter S. Almy and Sumner Ball; Executive Committee, Dr. W. Fred Williams, Henry Hayes, E. I. Brownell, Wallis E. Howe and H. H. Shepard; House Committee, Edward H. Tingley, James Connery and T. Smith McKeon; Membership Committee, F. A. Ingraham, J. Winthrop De Wolf, Frederic Hayes, L. S. Hoffman and William Bradford. The annual reports showed the club to be in a prosperous condition and membership list is now the largest in the club's history, twenty-nine new names having been added during the past season. The successful ocean race held in July is to be repeated next season.

The handsome new club house of the Fall River Y. C., located at Stone Bridge, Tiverton, R. I., was formally opened Sept. 19, the members holding a public reception in the afternoon and giving a large dance in the evening. The attendance was large and the successful housewarming gave the new headquarters a start under the most auspicious conditions. The location is one of the best on the bay and very convenient, as it is only six miles from

Fall River. The new clubhouse is of pleasing design and is admirably arranged for its purposes. The extension of the club's facilities in this way has already resulted in a large increase in membership, which will undoubtedly bring an increased activity of the organization in Narragansett Bay yachting affairs. The present commodore of the club is Mr. Frank L. Andrews, owner of the cruising power boat *Glissando*, which took second place in last summer's ocean race for power boats from New York to Marblehead.

F. H. YOUNG.

## YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

SCHOONER HOOSIER AND HOUSEBOAT WATEREE SOLD.—Mr. Albert J. Morgan, of Larchmont, N. Y., has sold his schooner yacht *Hoosier* to Hon. H. G. Squiers, United States Minister to Havana, Cuba, through the brokerage department of Mr. William Gardner. This boat was built in 1902 for Col. W. R. Nelson, of Kansas City, from the molds of the Gloucester fishing schooner *Fredonia*, and is 125ft. over all, 104ft. waterline, 25ft. 2in. beam. The boat is now fitting out, and after a short cruise to the eastward will proceed to Havana. This same agency has also sold the houseboat *Waterree*, belonging to Mr. George T. Lippincott, of Atlantic City, N. J., to Capt. W. H. Wheeler, of New York.

SCHOONER SIMITAR SOLD.—Mr. George A. Suter has sold his schooner *Simitar* to Mr. Eustis L. Hopkins, of Larchmont Y. C., through the office of Mr. Stanley M. Seaman, New York city. She is a flush-deck boat designed and built by Lawley in 1899, 70ft. over all, 46ft. waterline, 15ft. beam and 8ft. draft.

KEYSTONE Y. C. OFFICERS.—At a meeting of the Keystone Y. C., held recently at Woodmere, L. I., the following officers were elected: Com., John A. Wood; Vice-Com., Charles A. Schiffmacher; Sec'y, P. B. Mott; Treas., Dr. E. C. Smith; Meas., John A. Wells; Governors, John A. Wood, C. A. Schiffmacher, John A. Wells, Dr. E. C. Smith, F. K. Walsh, Richardson Brower, W. H. Latham and P. B. Mott.

## Knickerbocker Y. C.

College Point, Long Island Sound—Saturday, Sept. 16.

THE ladies' day races of the Knickerbocker Y. C. were held on Saturday, Sept. 16. Six classes filled, and, all told, there were twenty-five starters. All the boats covered a 9-mile triangle once. The winners were *Paiute*, *Naiad*, *Shovonne*, *Iris*, No. 7 and *Katie Did*. The summary follows:

Sloops, 40ft. Class—Start, 4:25—Course, 9 Miles.		Elapsed.
	Finish.	
<i>Paiute</i> , W. Beam	5 28 33	1 03 33
<i>Gurnard</i> , L. H. Zocher	5 38 45	1 13 45
<i>Nautilus</i> , J. J. McCue	5 36 15	1 11 15
Sloops, 30ft. Class—Start, 4:25—Course, 9 Miles.		
<i>Naiad</i> , J. B. Palmer	5 32 53	1 07 53
<i>Ouaniche</i> , Rodman Sands	5 42 02	1 17 02
<i>Madeleine</i> , R. De Neufville	5 51 42	1 26 42
<i>Iris</i> , H. L. Williams	5 50 20	1 25 20
<i>Mongoose III.</i> , H. Orth	5 57 03	1 32 03
Catboats—Start, 4:30—Course, 9 Miles.		
<i>Shovonne</i> , C. J. Stelz	6 00 10	1 30 13
<i>Dorothy</i> , M. Tornow	6 03 23	1 32 20
Cruising Power Boats—Start, 4:20—Course, 9 Miles.		
<i>Iris</i> , L. C. Berrian	5 13 46	0 53 46
<i>Brunhilde</i> , F. R. Rix	5 20 30	1 00 30
<i>Hyewa</i> , A. A. Low	5 23 26	1 03 26
<i>Dolphin</i> , C. A. Diem	5 30 41	1 10 41
<i>Stump</i> , J. Sulzbach	5 35 00	1 15 00
One-Design Boats—Start, 4:15—Course, 9 Miles.		
No. 7, J. Cassidy	5 02 20	0 47 20
No. 9, J. Selzbach	5 04 21	0 49 21
No. 12, N. F. Connelly	5 04 38	0 49 38
No. 5, A. L. Kerker	5 07 07	0 52 07
No. 2, C. Coughtry	5 07 30	0 52 30
No. 13, L. A. Zocher	Disabled.	
No. 1, F. L. Kraemer	Disabled.	
No. 8, A. P. Sands	Disabled.	
Auto Boats—Start, 4:17—Course, 9 Miles.		
<i>Katie Did</i> , C. J. Stelz	4 54 47	0 37 47
<i>Nanita III.</i> , H. Stephenson	Disabled.	

## "Supplement to Small Yachts" Free.

To any one sending us one new subscriber to *FOREST AND STREAM* before Oct. 15, 1905, we will present one copy of W. P. Stephens' book "Supplement to Small Yachts." This work contains 104 pages text and 43 plates. Size 11 by 14 inches. Cloth. Price \$4. This offer does not apply to renewals.

## "Steam Yachts and Launches" Free.

To any one sending us one new subscriber to *FOREST AND STREAM* before Oct. 15, 1905, we will present one copy of C. P. Kunhardt's book, "Steam Yachts and Launches." It contains 267 pages, with plates and many illustrations. Cloth. Price \$3. This offer does not apply to renewals.

# GAS ENGINES AND LAUNCHES.

Their Principles, Types, and Management. A Complete and Practical Manual.

BY F. K. GRAIN, M. E.

Bound in cloth, with 123 pages and 20 illustrations. Sent, postpaid, for \$1.25.

THIS compact and comprehensive handbook contains all the information essential to users of the marine gasoline engines, and will be welcomed by the thousands of men now owning and running power boats. Laymen and experts will alike find the book invaluable. It treats of the various types of marine gasoline engines, points out the good in each, and tells how to run them. A knowledge of the contents of this book will help to overcome difficulties and avoid accidents. The most complete book of its kind ever published.

FOREST AND STREAM PUBLISHING CO., NEW YORK.

## Canoeing.

### Officers of A. C. A., 1905.

Commodore—C. F. Wolters, 14 Main St. East, Rochester, N. Y.  
 Secretary—H. M. Stewart, 85 Main St., East Rochester, N. Y.  
 Treasurer—F. G. Mather, 164 Fairfield Ave., Stamford, Conn.

#### ATLANTIC DIVISION.

Vice-Commodore—W. A. Furman, 846 Berkeley Ave., Trenton, N. J.  
 Rear-Commodore—F. C. Hoyt, 57 Broadway, New York.  
 Purser—C. W. Stark, 118 N. Montgomery St., Trenton, N. J.  
 Executive Committee—L. C. Kretzmer, L. C. Schepp Building, New York; E. M. Underhill, Box 262, Yonkers, N. Y.  
 Board of Governors—R. J. Wilkin, 211 Clinton St., Brooklyn, N. Y.  
 Racing Board—H. L. Quick, Yonkers, N. Y.

#### CENTRAL DIVISION.

Vice-Commodore—Lyman T. Coppins, 691 Main St., Buffalo, N. Y.  
 Rear-Commodore—Frank C. Demmler, 526 Smithfield St., Pittsburg.  
 Purser—J. C. Milson, 736 Mooney Brisbane Bldg., Buffalo, N. Y.  
 Executive Committee—F. G. Mather, 164 Fairfield Ave., Stamford, Conn.; H. W. Breitenstein, 511 Market St., Pittsburg, Pa.; Jesse J. Armstrong, Rome, N. Y.  
 Board of Governors—C. P. Forbush, Buffalo, N. Y.  
 Racing Board—Harry M. Stewart, 85 Main St., East Rochester, N. Y.

#### EASTERN DIVISION.

Vice-Commodore—D. S. Pratt, Jr., 178 Devonshire St., Boston, Mass.  
 Rear-Commodore—Wm. W. Crosby, 8 Court St., Woburn, Mass.  
 Purser—William E. Stanwood, Wellesley, Mass.  
 Executive Committee—Wm. J. Ladd, 18 Glen Road, Winchester, Mass.; F. W. Notman, Box 2344, Boston, Mass.; O. C. Cunningham, care E. Teel & Co., Medford, Mass.; Edw. B. Stearns, Box 63, Manchester, N. H.  
 Racing Board—Paul Butler, U. S. Cartridge Co., Lowell, Mass.; H. D. Murphy, alternate.

#### NORTHERN DIVISION.

Vice-Commodore—Chas. W. McLean, 303 James St., Montreal, Can.  
 Rear-Commodore—J. W. Sparrow, Toronto, Canada.  
 Purser—J. V. Nutter, Montreal, Canada.  
 Executive Committee—C. E. Britton, Gananoque, Ont.; Harry Page, Toronto, Ont.  
 Board of Governors—J. N. MacKendrick, Galt, Ont.  
 Racing Board—E. J. Minnett, Montreal, Canada.

#### WESTERN DIVISION.

Vice-Commodore—Burton D. Munhall, care of Brooks Household Art Co., Cleveland, O.  
 Rear-Commodore—Charles J. Stedman, National Lafayette Bank, Cincinnati, O.  
 Purser—George O. Hall, care of Bank of Commerce, Cleveland, O.  
 Executive Committee—Thomas P. Eckert, 31 West Court St., Cincinnati, O.; Dr. H. L. Frost, 10 Howard St., Cleveland, O.  
 Board of Governors—Henry C. Morse, Peoria, Ill.

### How to Join the A. C. A.

"Application for membership shall be made to the Treasurer, F. G. Mather, 164 Fairfield Ave., Stamford, Conn., and shall be accompanied by the recommendation of an active member and by the sum of two dollars, one dollar as entrance fee and one dollar as dues for the current year, to be refunded in case of non-election of the applicant."

### Deer as a Nuisance.

THE report from Pomfret that deer are doing much damage to late vegetables in that region is only the forerunner of much more serious complaints to come year after year, if the present law is retained on the books. The law provides a close season for deer until 1911. At the rate at which deer are increasing they will become a great nuisance and cause a considerable loss before that time. This is becoming well understood among the farmers, and the Pomfret dispatch probably has some foundation for its statement that a serious attempt will be made in the next Legislature to repeal the law protecting deer. It will be opposed by sportsmen, who looked forward anxiously to the chance of killing a deer in Connecticut, and it may be that a short open season every year, beginning considerably before the time fixed by the present statute, will meet every requirement of the case. At the best, however, Connecticut is a rather thickly-settled State for deer hunting, in view of the fact that so many hunters use the wholly unnecessary, long-range rifle. A gun which may kill at two miles is not a proper tool for a hunter in Connecticut.

It is true that the law now provides a means for farmers to recover for damage done by deer, but no such arrangement is satisfactory. This provides that if the owner or occupant of any land sustains damage by wild deer on his property he may recover. But the process is long, and although the State in the end pays the damages awarded, the town has to bear the costs of proving the claim. The land owner must notify the selectmen within twenty-four hours, if he is to recover anything. Then the chairman of the board of selectmen shall appoint two persons to determine whether the damage was done by deer and how much it is. But if it is more than \$20 they shall call in a fish and game commissioner, who shall assist in making the award. When all this has been done the town shall pay the award and the expenses within sixty days from the date of the decision, and the State will afterwards reimburse the town for what it has paid for expenses in proving the claim.

There seems to be room for improvement in the situation in more ways than one.—Hartford Times.

Forty-five thousand of the black trout hatched out at the New York Aquarium four weeks ago, from eggs supplied by the United States hatchery in the Yellowstone Park, will be shipped at once to the State hatchery at Saranac Lake, to be distributed among the lakes of the Adirondack region. The Aquarium people are especially proud of their success with this hatching, which breaks all records of State and national hatcheries for this year. Out of 50,000 eggs less than 1,000 failed, and of those hatched not one has been lost. The young trout have grown so well in their first month that most of them now exceed an inch in length. By spring they will have attained a growth of from six to seven inches, and be capable of taking care of themselves when they start out from the lakes to the tributary streams with the braking up of the ice.

As the British steamer Urcula Bright approached this harbor Tuesday morning, one of her crew, a Norwegian sailor named E. Fordfald, fell overboard while the vessel was yet some eight miles distant from the Morro. The engines were at once reversed and boats let down to rescue the unfortunate seaman, but he was never again seen. Great bubbles of blood, however, rose to the surface of the water, spreading out and staining it a deep carmine, indicating that Fordfald had fallen a prey to the ravenous sharks that infest these waters.—Havana Post, Sept. 14.

### A Large Skate Taken on Rod and Line.

It may be of interest to some of your readers to know that I recently caught a very large skate on a rod and line. The fish weighed 163 pounds net, and measured 6 feet 6 inches long and 5 feet 4 inches in width. The bait was herring, and the tackle very strong, the hook being mounted on woven wire. I was fishing in twenty fathoms of water about four miles from land off the southwest coast of Ireland. I had the greatest difficulty in landing the fish in the boat, but eventually got him up alongside, and my two boatmen each got a gaff into him, and that was the end of his seafaring days. I think this is one of the largest fish ever caught on a rod and line.—A. E. Lloyd in London Fishing Gazette.

THE life of a Colorado jurist was recently saved by the cool daring of Gen. Frank D. Baldwin, Commander of the Southwestern Military Division, who killed a grizzly bear with a hunting knife as the beast was rushing to attack the other man. Just before leaving this department for his new command, General Baldwin and a party of friends, including Judge Parker, of Trinidad, went hunting big game on the Uintah Reservation in Utah. Judge Parker ran across a huge grizzly one day, and at close quarters fired two bullets into it without touching a vital spot. The maddened beast charged upon the Judge, who fled to the nearest tree, but fell as he reached it. General Baldwin, who was close by, saw his friend's peril, and as the bear rushed upon Parker the General plunged his hunting knife into the brute's heart, and it fell dying. Judge Parker escaped with a few scratches.

## Rifle Range and Gallery.

### Fixtures.

Oct. 22.—Cincinnati, O., Rifle Association annual prize shoot.

#### Cincinnati Rifle Association.

The following scores were made in regular competition by members of this Association at Four-Mile House, Reading road, Sept. 10. Conditions, 200yds., offhand, at the 25-ring target.

Nestler was champion for the day with the fine score of 231. He was also high man on the honor target with 69 points. The annual prize shoot of this Association will take place on Oct. 22, to which all are welcome. There will be a liberal list of cash and merchandise prizes, as usual. There will be rest and off-hand shooting. At the annual election of officers the following members were elected to serve in their respective offices for the ensuing year: President, H. C. Roberts; Vice-President, J. Hofman; Treasurer, F. Freitag; Secretary, A. Drube; Captain, M. Gindele; Lieutenant, E. D. Payne. The scores:

Hasenzahl	217	214	211	211	209	Freitag	207	199	193	191	190
Payne	226	216	215	215	214	Roberts	211	207	202	202	199
Nestler	231	229	221	217	212						

## Trapshooting.

If you want your shoot to be announced here send a notice like the following:

### Fixtures.

Sept. 27-28.—Bradford, Pa., G. C. tournament.  
 Sept. 28.—Edgewater, N. J.—Palisade G. C. all-day tournament.  
 Sept. 29-30.—Broken Bow, Neb., G. C. tournament. F. Miller, Sec'y, Berwyn.  
 Oct. 3-4.—Kansas City, Mo.—Afro-American Trapshooters' League tournament. T. H. Cohron, Sec'y.  
 Oct. 3-4.—Baltimore, Md., Shooting Association tournament. J. W. Chew, Sec'y.  
 Oct. 3-4.—Louisville, Ky.—Kentucky Trapshooters' League tournament, under auspices of Jefferson County G. C. Frank Pragoff, Sec'y.  
 Oct. 2-3.—Muncie, Ind.—Magic City G. C. eighth annual tournament. F. L. Wachtel, Sec'y.  
 Oct. 2-3.—Hyannis, Neb., G. C. tournament. L. McCauley, Sec'y.  
 Oct. 3-5.—New London, Ia., G. C., shoot; \$500 added. Dr. C. E. Cook, Sec'y.  
 Oct. 4-5.—Pittsburg, Pa.—Herron Hill G. C. tournament. T. D. Bell, Sec'y.  
 Oct. 6-7.—Harrisburg, Pa., Shooting Association tournament. J. B. Springer, Sec'y.  
 Oct. 6-7.—Alliance, Neb., G. C. tournament. L. A. Shawrer, Sec'y.  
 Oct. 6-8.—Davenport, Ia., Cumberland G. C. tournament.  
 Oct. 9-10.—Indianapolis, Ind., G. C. tournament. Wm. Armstrong, Sec'y.  
 Oct. 10-11.—St. Joseph, Mo.—The Missouri and Kansas League of Trapshooters. Dr. C. B. Clapp, Sec'y.  
 Oct. 11-12.—Dover, Del., G. C. tournament; open to all amateurs. W. H. Reed, Sec'y.  
 Oct. 13-15.—St. Louis, Mo.—Rawlins semi-annual tournament No. 2, targets and live birds. Alec D. Mermod, Mgr., 620 Locust street.  
 Oct. 17-18.—Raleigh, N. C., G. C. tournament. R. T. Gowan, Sec'y.  
 Oct. 18-19.—Ossining, N. Y., G. C. shoot, \$50 added. C. G. Blandford, Capt.  
 Oct. 21.—Plainfield, N. J., G. C. merchandise shoot.

#### NORTH NEW JERSEY SHOOTING LEAGUE.

Sept. 23.—Dover at Morristown.  
 Oct. 7.—Montclair at Newton.  
 Oct. 14.—Orange at Dover.  
 Oct. 19.—Newton at Morristown.  
 Oct. 21.—Montclair at Orange.  
 Oct. 28.—Dover at Montclair.  
 Nov. 2.—Montclair at Morristown.  
 1906.  
 Jan. 16-19.—Hamilton, Ont., G. C. annual winter tournament. Ralph C. Ripley, Sec'y.  
 May 24-25.—Montreal, Can.—Canadian Indians' first annual tournament. Thomas A. Duff, High Scribe.

### DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM goes to press on TUESDAY OF EACH WEEK.

At the fall shoot of the Queens County Gun Club, Long Island City, New York, Sept. 23, Mr. George H. Piercy, of Jersey City, won the cup for high average.

The Harrisburg, Pa., Sportsman's Association informs us that they have changed their dates to Oct. 6 and 7. Live birds on first day, targets on the second day.

The thirteenth match of the North New Jersey Shooting League, held at Dover, N. J., on Sept. 23, was won by the Montclair team, the scores being: Montclair 97, Dover 94.

The programme of the Ossining, N. Y., Gun Club tournament, Oct. 18 and 19, will be sent to applicants. The next regular shoot of the club is fixed to take place on Sept. 30. C. G. Blandford is the captain.

Thirteen matches of the North New Jersey Shooting League have been held out of the twenty scheduled. The remaining are Sept. 28, Dover at Morristown; Oct. 7, Montclair at Newton; Oct. 14, Orange at Dover; Oct. 19, Newton at Morristown; Oct. 21, Montclair at Orange; Oct. 28, Dover at Montclair; Nov. 2, Montclair at Morristown.

In the Marlin event of the Magic City Gun Club, Muncie, Ind., 25 targets, the Secretary, J. L. Wachtel, writes us that scores were made as follows: Williamson 24, Bender 22, Farrell 22, Spencer 21, Johnson 20, Shennock 20, Adamson 20, Highlands 20. In the badge event the scores were: Williamson 24, Spencer 24, Bender 22, Johnson 21, Adamson 23. In the shoot-off Spencer won, 23 to 22.

The programme of the eighth fall tournament of the Magic City Gun Club, Muncie, Ind., can be obtained on application to the Secretary, F. L. Wachtel, 110 West Washington street, to whom guns and ammunition may be sent. On the first day, Oct. 2, eleven events are provided, at 15, 20 and 25 targets, \$1.50, \$2 and \$2.50 entrance. On the second day, five events at 10, 15 and 25 sparrows, are provided, a total of 75 sparrows; total of \$30 entrance. Shooting will begin at 9:30. Old-fashioned country chicken dinner free. All guns at 16yds. Shoot, rain or shine.

The Rawlins semi-annual tournament, Oct. 13-15, Alec D. Mermod, Manager, will be at targets and live birds. The first day has a programme of ten events at 15, 20 and 25 targets, entrance \$1.50, \$2 and \$2.50. On the second day there are six target events, 20 and 25 targets, and the Monte Carlo Handicap at 25 birds, \$25 entrance; handicaps 25 to 31yds.; open to the world. On the third day there are six target events; the Dupont Handicap, 50 targets, \$5 entrance, \$10 added, and the Rawlins Amateur Handicap, 20 live birds, \$10 entrance. Ship shells to Rawlins, 620 Locust street, St. Louis, Mo. Shooting begins at 9:30 o'clock.

The Interstate Association Pacific Coast Handicap, Sept. 15-17, was a success as a starter. The Preliminary Handicap had sixty-eight entries, of which forty-seven were amateurs. Mr. C. D. Hagerman, of Los Angeles, at 16yds., broke 93, thereby winning the cup and first money, \$102.20. The Pacific Coast Handicap, held on the last day, had seventy-four entries, of which fifty-one were amateurs. Messrs. Geo. Sylvester, of San Francisco, and R. H. Bungay, of Los Angeles, on 97 out of 100, from the 16yd. mark, and divided first and second moneys. In the shoot-off at 20 targets, Sylvester won, 17 to 16. An excellent report of this tournament is published elsewhere in our trap columns.

The Baltimore, Md., Shooting Association has provided an attractive programme for their tournament, Oct. 3 and 4. Each day has ten events, eight at 20, \$1.40 entrance; one at 15, \$1.30 entrance, and a merchandise handicap event, at 25 targets, \$1.50 entrance; fourteen prizes. To high amateurs, \$15, \$11, \$8 and \$5; high professional, \$5. Also to high amateur, Hunter Arms Co. gold badge. Special live-bird handicap Oct. 15, 15 live birds, \$10; open to all. The programme contains this interesting provision: "To those amateurs who shoot the entire two days' programme through and do not win their entrance, we guarantee to pay back to them in cash the difference between their winnings and entrance fee."

The first annual fall tournament of the Bergen Beach Gun Club, of Brooklyn, L. I., fixed to be held on Oct. 10, has eleven events—five at 20 targets, \$2 entrance, and six at 15 targets, \$1.30 entrance. The first five sweeps constitute a 100-target optional \$5 sweep, class shooting. Sliding handicap. Eight high gun prizes of \$2.50 each. Targets 2 cents. Shooting will begin at 10 o'clock. Added money, \$20. Manager, L. H. Schortemeier, 201 Pearl street. Shells for sale on the grounds. The programme further sets forth that, "as usual, by courtesy of Capt. Dreyer, our treasurer, the Bergen Beach Gun Club will supply lunch and refreshments gratis to contestants. A box of 50 good cigars will be given to the high professional of the day by the manager. You may shoot for targets only, providing the sweepstakes are not interfered with. To reach grounds, take Avenue N and Seventy-first street, Flatlands, Bergen Beach, or take Flatbush avenue trolley, Bergen Beach car, from Bridge entrance, City Hall, New York, direct to grounds."

BERNARD WATERS.

### North New Jersey Shooting League.

The thirteenth match of the present series of team races was run off at Dover on the 23d inst., the Montclair team shooting against the Dover team.

Conditions were not favorable to high scores, a stiff wind prevailing most of the time. Montclair won out with but 3 to the good. Scores:

Dover.		Montclair.	
Morphy	18	Perley	23
Bryan	21	Crane	17
O'Brien	19	Moffett	23
Searing	18	Bush	17
Schump	18-94	Boxall	17-97

The remaining matches of the series are Sept. 28, Dover at Morristown; Oct. 7, Montclair at Newton; Oct. 14, Orange at Dover; Oct. 19, Newton at Morristown; Oct. 21, Montclair at Orange; Oct. 28, Dover at Montclair; Nov. 2, Montclair at Morristown.

### Aetna Shooting Park.

St. Louis, Sept. 17.—Twelve shooters participated in the shooting here to-day. Frank Ford shot in his usual good form and made highest average with 93.6 per cent.; H. E. Winans was second with 86 per cent., while Miss King was third with 83.4 per cent. Mr. Baggerman was shooting a borrowed gun, and therefore did not do as well as he is capable of under normal conditions. The scores:

Shot at. Broke.		Shot at. Broke.	
Frank Ford	125 117	J. Leatners	100 81
H. E. Winans	150 129	Eggers	100 76
Miss King	115 96	Fred Schiess	175 147
Papin	100 83	Burrows	25 23
Whittaker	125 103	Brooks	65 39
W. Baggerman	75 69	Fike	25 15

WESTERN.

WESTERN TRAP.

Cincinnati Gun Club.

Sept. 23 was really an ideal day for trapshooting, but the boys have had a surfeit of sport this week and few of the regular attendants were present. Besides a 100-target race, little shooting was done. Bonser was high with 91. He has improved greatly in the past few months. In a practice event he broke 25 straight, making 116 out of 125 shot at. Bleh was second with 89, making a straight in the first event. He has not been shooting much lately, but has evidently not forgotten how. A. W. DuBray has not yet left the city for his trip to the Northwest, and to-day he did quite a little shooting. Ackley got back from his long vacation at Sault Ste Marie, and got into the game again to-day. He is looking fine, and the trip did him a lot of good. Harig called at the grounds to-day and only missed 7 out of 75. The Ackley trophy contest will start the first week in October under probably same conditions as Schuler trophy. Try a sealed handicap this time and see how it works. No chance to drop for a big handicap in this, and the uncertainty will keep up the interest.

Score, 100 targets:

	Shot at.	Broke.		Shot at.	Broke.
Bonser	100	91	DuBray	100	75
Bleh	100	89	M W Johnson	100	69
Worsterchill	100	88	Harig	75	68
Bullerick	100	85	Register	50	25
Keplinger	100	83	Benedict	50	21
Tuttle	100	75			

Notes.

The Cincinnati Gun Club members yield to the temptations of dove shooting and county fairs. As a consequence only six were on hand to shoot the weekly contest for the club medal on Sept. 20. Oswald and Kette tied on 25 or better, and in the shoot-off at 10 targets the former won 10 to 9. This makes Oswald's second win.

At the shoot of the Newark, O., Gun Club Sept. 27 and 28, the Phellis trophy will be in competition. Teams will enter from Columbus, Dayton, Springfield and several other places.

County Recorder John L. Theobald, President of the Dayton Gun Club, was operated upon for rupture in the groin, on Sept. 18. He is reported to be improving, although still very ill at his home, 917 W. 3d street. He is known to shooters far and wide, and has won a host of friends by his geniality.

The Indianola Gun Club, of Columbus, held a shoot on Sept. 15, principally to give the boys a little practice for their trip to Newark, where some of them will be on a team in the Phellis trophy contest. L. W. Cumberland will probably be one of the team. The shoot, as usual, was a damp one, difficult targets being a feature. Webster and Buchanan broke 85 per cent. of their targets and Newlove was a close second. In the merchandise event (three prizes) at 25 targets Newlove scored 23, a splendid showing under existing conditions. The Smiths and Webster tied for second on 22, H. E. Smith winning the shoot-off and second prize. Harrison took third on 21.

A few sportsmen of Cincinnati will enjoy a live-bird shoot at Rylands, Ky., on Sept. 28.

There was a good attendance at the shoot of the Columbus Gun Club, Sept. 16, and not a few straights were made. A welcome visitor was Jesse Pumphrey, a member of the old Sherman Gun Club. He broke enough targets to show that he can still point a gun straight, breaking 49 out of 60. A number of the members will visit Newark on Sept. 27-28. A 6-man team, consisting of members of this club and the Indianola Gun Club, will enter the contest for the Phellis trophy, now held by the Newark club. Messrs Rhoads, H. E. Smith, W. Webster, G. Buchanan, Harrison and J. H. Smith will probably be on the team. In the sporting goods trophy contest H. E. Smith (1), Wilcox (5), and Webster (8) made perfect scores of 50, including their handicaps as indicated. Smith was high in actual breaks with 49; Webster, second, with 46; Wilcox and Shilling broke 45 each. Fourteen men shot.

Garfield Gun Club.

Chicago, Sept. 23.—The appended scores were made on our grounds to-day on the occasion of the second shoot of the fourth series. In the club trophy event Thomas won Class A on 24; Ford and Stone tied for B on 16; no Class C man in contest. In the Dupont cup shoot following, George won in Class A on 20 straight; Ford won Class B on 16; no Class C man. In Hunter Arms Co. event, George won on 18, thrown 10 singles and 5 pairs; Horns won Class B on 17; no Class C man.

The day was an ideal one for target shooting, as far as temperature was concerned, but a wind from the rear beat the targets down quickly and sharp snap shooting was the winning card for the day.

Many of our members are away on shooting expeditions, and as a consequence attendance is not up to the standard, only sixteen shooters showing up for the occasion. Get in line, boys, only five more shoots left of the season.

Events:	1	2	3	4	5	6	7
Targets:	20	20	20	10	10	10	10
Dr Reynolds	23	17	17	8	7	10	10

No. 1 trophy event. No. 2 Hunter trophy. No. 3 Dupont cup. Dr. J. W. MEEK, Sec'y.

In Other Places.

The Winchester Gun Club, Detroit, Mich., could not hold its shoot Sept. 16, owing to a change in the shooting park. The new location is directly on the car line and thus accessible.

During a shoot lately at Detroit, Mich., Mr. Gilchrist, of Cleveland, shot a match with Jake Klein for \$50 a side. Result: Gilchrist won with a perfect score, while Klein lost but one.

Charles Twork won the silver cup at the Dearborn Gun Club shoot Detroit, Mich.

Chas. S. Humer won high average at the York, Pa., shoot with only 13 missed in 200.

It comes about with the approach of fall shooting that the noted Menominee, Mich., Gun Club will go into winter quarters and for six months not a target will be thrown.

The organization of a gun club means that some trapshooting will occur in that town. Such an organization can and should always stand for the preservation of game and the enforcement of all game and fish laws. Notice should be served through the local paper that this was the object of the organization.

Information comes that the Elwood, Ind., Gun Club will probably disband, owing to a change in its shooting park. If this large club cannot find grounds within a proper distance, it seems strange when there is so much level land in the State of Indiana. At the last shoot held by this club were twenty-five shooters present. And they have only lost their old grounds, not their enthusiasm, I hope.

Lee K. Forsyth, the old-time winner of Battle Creek, Mich., won the Southern State championship at their last meet with 22 out of 25.

The Tiffin, O., Gun Club held a shoot at the Riverview park Thursday. V. S. Crabtree and L. A. Arndt were the best.

At a meeting held Tuesday night last a gun club was formed at Geneva, Neb. C. S. Summers was elected President; W. L. Spear, Secretary; W. P. McCall, Treasurer; G. F. Skinkle, D. I. Guthrie and H. G. Porter, Board of Managers. Any shooter in the county can become a member on payment of \$2. The object is to control certain duck ponds.

New officers of the Brays Bayou Gun and Rifle Club, Houston, Texas, are: C. G. Eiseaman, President; J. Ritter, Vice-President; F. G. Platte, Secretary; H. Webber, Assistant Secretary, and H. G. Tuffler, Treasurer. There are plenty of amusements for all, even the ladies are not forgotten, and a prize will be awarded them in a bowling contest.

The hunting members of the Batavia, Ill., Gun Club will have their outing this fall at Brown's Valley, Minn.

H. Blumenshine at Washington, Ill., broke 48 out of 50 targets, his son Elmer, 44, and P. Orth 47. That's "going some."

The Chicago Heights, Ill., Gun Club holds regular weekly shoots.

The Westerville, Ohio, Gun Club has been reorganized with

the following officers: T. A. Scott, President; A. D. Riggle, Vice-President; J. C. Vincent, Secretary; C. H. Patrick, Treasurer.

The Aurora, Ill., Gun Club meet occasionally for practice. Some of the old members are as enthusiastic as the younger ones.

At a shoot held at Royalton, Minn., there was present L. Thielman and son. The father being now over sixty, still takes in most of the tournaments, and there are few who can beat him at the traps. He scored 78 per cent. shooting at 260 targets.

Parker, Marion, Ind., club member made 44 out of 50 at the last club practice shoot.

For a club that does not have a shooting ground, Watseka, Ill., can turn out a good crowd. At the last shoot held on the farm of Dick Keene there were present members, viz., Dick Keene, E. M. Keene, J. McCracken, Ed. Schuen, A. Clark, Chas. Grice, George Hamilton, and E. W. Keene. The high score was made by Geo. Roll, Blue Island, Ill., and J. T. Park, of Brooks, Ind.

The Reading, Mich., Gun Club held annual shoot Wednesday. There was plenty of good cheer for all present.

There are a number of trap and handle matches shot at live birds in Pennsylvania of late, whereat large sums of money change hands.

At St. Joseph, Mo., the old Metropolitan Gun Club is about to reorganize. A shoot was held Sunday as a starter.

They tell some "tall" stories about Charlie Spencer, the crack shooter of St. Louis, one being that he contemplates moving his family to Atlanta, Ga. He lately made a score of 189 clay targets without a skip.

Announcement is made that the Freeport, Ill., Gun Club will hold their shoots on Saturday instead of Friday.

The inter-county team shoots are very stimulating to the members of gun clubs who participate. Take the Ohio shoots, where in the competition is between Urbana, St. Paris, Springfield and De Graff; and seeing that each team has won the prize one or more times and you can surmise the interest centered in the next contests.

The contest at the Janesville, Wis., Gun Club for the powder trophy has been settled. Out of 250 targets J. H. McVicar has scored 218, and Henry Carpenter 217. Each broke 46 out of 50 at the last shoot.

Shooting against a team of expert marksmen, L. S. Dahl, B. B. Lipscomb and R. V. Rowe carried off the challenge cup at the Tacoma, Wash., shoot with a score of 69. These three having won twice, will now keep the medals. In addition the event gives the winner the title of being the championship team of western Washington. In the eyes of the followers of the traps, this makes it one of the most important events to be contested for at tournaments.

It may be well for old men to take courage and keep up their trapshooting. For instance, if your eyes grow dim, get glasses and keep shooting. E. W. Cooper made 25 straight and won the individual championship, besides making a run of 52 straight, he being the oldest member of the club. Then at Indianapolis Dr. O. F. Britton made 117 straight from 18 and 19yds. Now you all know that he has been shooting at the traps for the past thirty-five years. We trapshooters do not grow old. We lose the "good eye," but that can be remedied by a good oculist. That is what keeps Britton shooting, as he has worn glasses many years.

The stockholders of the Columbus, Ohio, Gun Club met Thursday evening last for the purpose of increasing the capital stock. This club has been very prosperous during the present season.

South Bend, Indiana, Gun Club will hold a tournament during October.

Messrs. Lederer and Reading, of Valparaiso, Ind., will hold a tournament Oct. 27 and 28. Good cash prizes are offered in both classes. Programmes may be had by addressing A. H. Reading, Valparaiso, Ind.

J. A. Groves, Jacksonville, Ill., is booming trapshooting, and will hold a tournament Oct. 24 and 25.

Shoots are coming on so fast in Illinois that it is hard for shooters to keep a line on them. Now the latest announcement comes from Rantoul, where the club will hold a two days' shoot and give \$50 for average money. Dates, Oct. 12 and 13. Send to J. D. Neal (Jack) for programmes.

Robert B. Duncan, Secretary of the Anna, Ill., Gun Club will be pleased to furnish all inquiries with programmes of their Oct. 18 and 19 shoot.

16-Bore Charges in 12-Bores.

That history is always repeating itself is curiously exemplified in some tests we have recently brought to a successful issue. Twenty years ago the shooter who desired something less unwieldy, even if less efficient, than the 12-bore was advised to use a gun of 16 or 20-bore caliber. Even now we receive several inquiries a month asking our opinion of the smaller bore guns as an alternative for the 12, and our advice generally takes the line of recommending in preference the use of a light 12-bore and lightly-charged cartridges to correspond. Nothing of a revolutionary character can be alleged against such advice. Sporting opinion has, during the past ten or fifteen years, ever tended towards the adoption of shot charges for the 12-bore which approach those formerly accepted as standard for the 16-bore. The same change of view has manifested itself in the smaller bores as well. In fact, it is mostly during the past two or three years that gunmakers and powder and ammunition manufacturers, especially the two last named, have set their faces against overloading the smaller-bore cartridges in the endeavor to produce an equality with the 12-bore that can never exist.

Granting the applicability of the analogy provided by the length of the column of shot in the ordinary 12-bore cartridge, it is but logical to admit that no proper justification has ever been put forward for overloading 16-bore and 20-bore cartridges out of all proportion to the capacity of the case to contain the charge. Difficulties of pressure and pattern are bound to arise in the presence of such conditions, and it has been found by independent practical experiments conducted in many quarters that the smaller bores are seen at their best when the attempt to level them up to the 12-bore is abandoned. In speaking of 16 and 20-bore cartridges of the nominal 2 1/2 in. length, we accordingly prefer to adopt the following as typical charges in preference to the higher values that have previously obtained:

With 42-grain powders.....	16-bore, 15/16oz.	20-bore, 13/16oz.
With 33-grain powders.....	16-bore, 7/8oz.	20-bore, 3/4oz.

Reference was made at the beginning of this article to history repeating itself. In 1879 the Field trial of 12, 16 and 20-bore guns took place under the management of the then editor, Dr. J. H. Walsh, assisted by a committee consisting of Capt. Mayo and Messrs. A. J. Lane and W. T. Mainprize. The conditions specified that the shot charge for the 12-bore should not exceed 1 1/2 oz., and for 16 and 20-bores 1 oz., the loading to be done by the competitors. This limitation of weight acted relatively with great severity on the 12-bore, which was limited to what might be regarded as a normal charge, whereas the 16-bore, to say nothing of the 20-bore, with 1 oz., was loaded proportionally to a 12-bore containing 1 1/4 oz. This, by way of introduction, will show that the trials as then made were conducted with what would to-day be regarded as overcharges in the presence of nitro powders. Quoting from the report of the trials, we find the following reference to the charges used, but unfortunately we cannot find any explicit mention of the length of case containing these charges:

"It will be seen that all the competitors used 1 1/2 oz. shot with the 12-bores, except Mr. Green, who used only 1 oz. All used 1 oz. shot with the 16-bores and 20-bores, except Mr. Green, who limited his load to 7/8 oz. in both, with 3drs. of powder in the 12-bore, and 2 1/2drs. and 2drs. respectively in the 16 and 20-bores. His success with these reduced loads is worthy of remark, and sportsmen in future will have to consider whether or no they can improve their shooting by following his example."

This reference to the charges used provides a sufficient explanation of the extract which is now given:

"When we were asked last year to test the powers of 20 and 16-bores against the standard 12, we undertook the task without the slightest idea that either one or the other could hold its own, and all that we contemplated was the arrival at the exact handicap between them. We believe that in the hands of a weak man, unable to carry weight, a 20-bore would do better at game than a 12; but that a strong man could perform as well with the "popgun" as with the 12-bore we never dreamed. Once more, however, we are shown that nothing but actual experience is to be relied on in gunnery, for in the present trial the 12-bores barely hold their own at 40yds., taking for granted that our figure of merit is conducted on sound principles, which we fully believe it to be. It is alleged that the 30in. circle just suits the small bores; but then, it also suits the sportsman, and has long been the accepted target for testing his guns. Manifestly, if a larger area is to be covered, 300 pellets will cover it better than 250; but, as we said before, the sportsman is contented with a 30in. plate, and, that being the case, the matter is now set at rest and clearly no allowance should be made at the pigeon trap for the small bore, if the weight of the gun is not to be taken into consideration."

The above long-sighted views prepare us to meet the ex-

perience of finding that, judged by actual count of pellets in the 30in. circle, there is very little to distinguish the 7/8 oz. charge from the ordinary sporting charge for a 12-bore if testing guns of appropriate boring are used. In the light of the experience of the quarter century which has elapsed since the above trials were conducted, we should feel indisposed, were we called upon to repeat the trials, to allow the 16 and 20-bore guns a disproportionately large charge as compared with the 12. Any apparent injustice involved in such a decision could be met by making separate tests with 16 and 20-bore guns having 2 3/4 in. chambers. Such guns can certainly be more readily constructed to comply with ideal conditions of balance and distribution of metal than would be possible with a 12-bore of the same weight.

That some of the conclusions derived from the 1879 trials have not been confirmed by subsequent experience may be gathered from the circumstance that the 12-bore is more popular to-day in relation to the other calibers than it has ever been before. A great part of its success may be attributed to the experience that a well-bored and perfectly balanced gun can, as ordinarily constructed, give the shooter who selects a suitable cartridge most of the advantages of the smaller calibers. The gun which will perform equally well with a range of charge varying from 7/8 oz. to 1 1/2 oz. has much in its favor. Other contributory influences which may be quoted include the circumstance that powders are standardized for the 12-bore cartridge, that gunmakers have most experience in its loading, and also that a depleted stock can more readily be renewed. A remote contingency which, in our opinion, should operate against the general adoption of the 20-bore gun is the great danger which arises should any of these cartridges get mixed with 12-bores. We have known guns which, when a 16-bore cartridge is dropped into the chamber, will pass so far forward as to allow a 12-bore to be inserted on top in the mistaken belief that the shooter has omitted to load both barrels. As but few 12-bore chambers are abnormal enough to take a 16-bore cartridge, this danger may be dismissed, but in the case of the 20-bore a correctly-sized 12-bore chamber will allow the smaller cartridge to pass as far as the cone, leaving the chamber apparently empty, and thereby ready to complete the chain of circumstances which produce a certain number of nasty accidents every year.—The Field (London).

Emil Werk.

EMIL WERK, Cincinnati, died at his hunting lodge, thirty miles north of Detroit City, Minn., at 10 o'clock on Thursday night, Sept. 21. Mr. Werk has been a sufferer for several years from Bright's disease, and was compelled to give up active business and seek health in out-door life. He was taken with the last attack only about two weeks before his death. He entertained many friends at his camp, Theodore Foucar and Fred Bader having been with him this summer and returned only a day or two before he was compelled to take to his bed. He was never happier than when surrounded by his friends, and the best to be had was none too good for them. He had a fine baritone voice and was fond of music, his favorite song being one entitled "On the Rio Grande," and his title of "Chief Rio Grande" was given him for this reason.

Mr. Werk was one of the organizers of the Cincinnati Gun Club, and was an active member until live-bird shooting was abolished in Ohio, when he ceased to visit the grounds, though still retaining his membership. He cared little for target shooting. He was also a member of the Kentucky Shooting and Fishing Club. He was a member of the Cincinnati Lodge of Elks, and belonged to a Masonic Lodge in Kansas City.

About twenty years ago he lived in Kansas City and was one of a squad of five who made the best amateur record up to that date—if indeed it has ever been beaten—for squad work, shooting at live birds, missing but one bird out of 100.

He was a member of the famous club of shooters known as the Indians, and was known as Chief Rio Grande. He was formerly a business associate of the late Chas. D. Gammon, of Chicago, a well-known sportsman, who visited him at his camp every season.

Mr. Werk had many friends among sportsmen in all parts of the country. He was one of the best sportsmen in Cincinnati, which has produced many noted for their love of field sports. He was both a hunter and an angler, and it would be difficult to name a game region or a stream in America which he had not visited. He is said to have had the largest and finest hunting and fishing outfit ever owned in Cincinnati. When he found it necessary, for business reasons, to remain in the city and leave his home in Westwood, he engaged apartments in the Hanover Building in order to have his paraphernalia with him. Although having done no active business for a number of years, he was principal proprietor of the Sportsmen's Review, in which he took great pride.

At the time of his death he was fifty-nine years old. BONASA.

Queens County Gun Club.

LONG ISLAND CITY, L. I.—The Queens County Gun Club held its fall tournament on Sept. 23. In the early part of the day a strong wind made the making of big scores a difficult matter. Later, however, the wind dropped and better shooting resulted.

The silver cup for amateur high average was captured by Mr. Geo. H. Piercy, of Jersey City. In the merchandise events, 6 to 9, the sliding handicap rule was adopted, all starting in event 6 at the 16yd. mark.

E. A. Staples was high gun in the special 100-target event with 88; G. H. Piercy was second with 81.

The trade representatives were Messrs. Hood Waters, and Harry Welles. Mr. E. W. Reynolds acted as cashier.

The scores follow:

Events:	1	2	3	4	5	6	7	8	9
Targets:	10	10	15	20	25	25	25	25	25

Interstate Pacific Coast Handicap.

SAN FRANCISCO, Cal., Sept. 18.—The initial Interstate Association Pacific Coast Handicap, under the auspices of the San Francisco Trapshooting Association, took place at the Ingleside grounds on Sept. 15, 16, and 17. This shoot will stand in the annals of Coast trapshooting history as a most successfully conducted powder burning function as, it is earnestly hoped, the precursor of the grand annual Interstate Coast trap meetings and as a most memorable occasion when the best men of the East met the best shooters of the Coast.

Now that the objects of the Interstate Association in fostering the project are fully understood—that the pilgrimage to this city of Crosby, Gilbert, Heikes, Fanning, Marshall, Hirschy, and Shaner was purely in the interest of a clean and popular sport, and practically as a mission to illustrate the conduct of a big tournament, the local and visiting shooters who participated on the firing line, and as interested spectators are unanimous and enthusiastic in their praise of the promoters of what has proven to be one of the smoothest conducted and most enjoyable tournaments ever held on the Pacific Coast.

As an object lesson in successfully conducting a target shoot, the efforts of Mr. Shaner stand out prominently as a work of art. So well appreciated was his management, that the writer was personally requested by many of our shooters to "pile on the superlatives" in giving praise to whom it was due—both to Mr. Shaner and his associates, for the "Indians" and visitors were invited, one and all, to be good fellows and typical sportsmen.

The office system and management of the grounds proceeded with the regularity of clock-work. The methods of handling entries, keeping records, posting results and distribution of purses were studied to the extent that the Shaner "system" will be in vogue at future Coast shoots. Ninety entries on the first day, mine event, a total of 150 targets per man, shot up between 9:30 A. M. and 3:15 P. M., with a lunch intermission, and everything posted and all purses paid to the winners by 3:45 P. M., while not in itself a Herculean task, was, however, an apt illustration of what executive abilities and clever management is capable of in handling the varied details of a tournament. As the first day went, so did the other two days.

The grounds were taken as they were found, and under Mr. Shaner's direction were arranged with three sets of traps, Sergeant system, two bulkheads, with expert traps, being held in reserve on the old target section of the grounds. The trapping of targets, reversible scoring boards, placed either for 16 or 20yds. squads, field clerks, etc., handling of the crowd, shooters as well as spectators, announcement of squads, events, entry of shooters, and general information bureau, in fact, every detail, all dovetailed in together each day, were methods that evoked keen admiration and close study by each shooter on the ground. Not that the Coast sportsmen are so far behind the times, for there have been many large tournaments conducted here on very good lines; but our men are alive to the acceptable results of experience and are ready to adopt any new wrinkles in their favorite sport.

As the system came under their inspection, so did the style, methods, guns, loads and general work of the All-American team of representatives who were with us. The champions were generous and painstaking in their efforts to answer or explain any and all queries, for it is a reasonable argument that men who shoot an average of 30,000 loads annually for from ten to twenty-five years, must have a fund of information that is valuable to an up-to-date shooter of however comparatively limited experience. The Easterners, with the exception of Fanning, were known more by reputation than personally to most of the shooters. Among the Coast men, consultations on every subject pertaining to the game are frequent, and here was an opportunity that was too good to be overlooked. It is safe to say that many results of those conferences will have a good effect in due course. Nobody is so perfect that he is above picking up a new idea, and per contra, who knows but what the Coast men had a wrinkle or two that was worthy of adoption or development.

Taken all in all, the deduction arrived at is simply this: that an occasion like the recent tournament is of too great a mutual benefit to be ignored, and that it is to be hoped the initial tournament will be the herald of a long series of shoots.

While the entries may have fallen below sanguine figures, the attendance can be looked upon as very good and encouraging, when it is remembered that the Coast, to a great extent, is a territory of magnificent distances, and the cost of a trip to "Friseo" is not a small item. If future Interstate shoots are as liberal in purses, we are confident that a big contingent of shooters will get hot feet for the trail to this city. As it is, there was a "good bet overlooked" by some diffident shooters. In six events out of nine on the first day the men scoring 13 saved their entrance and over—in one event the purse was double the entrance. On the second day the 13 and 17 men received more than their entrance; the 12s were in the money in one event. So it was on the third day.

In the Preliminary and Pacific Coast handicaps, a net purse of \$1,377 was annexed by the high guns. The Preliminary Handicap had forty-seven (one post) amateur entries and twenty-one manufacturers' representatives, making a total of sixty-eight entries; ten moneys, \$102.20, \$83.60, \$65, \$51.10, \$46.45, \$37.15, \$23.20, \$23.20, \$16.25, and \$16.25—a total of \$464.50. C. D. Hagerman, of Los Angeles, at 16yds., broke 93 and carried the handsome Interstate cup to the orange belt and took charge of first money, in order to defray incidental expenses on his way south. W. H. Varian, at 16yds., broke 92 and won second money. C. M. Powers (19yds.), M. O. Feudner, of San Francisco (19), E. Klevesahl, of San Francisco (16), with 91 each, divided third, fourth and fifth purses. Pop Carr, of Monterey, the dean of the Coast trapshooting fraternity, at 14yds., broke 90 for sixth money. W. J. Golcher, of San Francisco, 17yds., and G. N. Gibson, of Williams, 16yds., with 89 each, were in line for division of seventh and eighth moneys. E. A. Schultz, of San Francisco, 18yds., and C. C. Nauman, 16yds., each with 88 breaks, split the balance of the purse.

The Pacific Coast Handicap on the last day had fifty-one (six post) amateur entries, and twenty-three manufacturers' representatives, making a total of seventy-four entries. The net purse was \$812.50; thirteen moneys, \$146.25, \$146.25, \$93.40, \$93.40, \$54.80, \$54.80, \$54.80, \$22.70, \$22.70, \$22.70, \$22.70, \$22.70.

Geo. Sylvester, of San Francisco, and R. H. Bungay, of Los Angeles, both tied on 91 at 16yds. They divided first and second moneys. Sylvester won by a target in the tie shoot-off, 17 to 16 out of 20. Del Cooper, of Bellingham, Wash., 18yds., and Fred Schultz, of San Francisco, 16yds., with 91 each, came in for third and fourth moneys. The 90-men were Ed. Schultz (19yds.), H. P. Jacobsen, of San Francisco (15yds.), Varian (18yds.), and Mills (16yds.). Next in the purse distribution were the boys in the 89 hole: E. L. Foster, of San Francisco (18yds.), Nauman (18yds.), Frank M. Newbert, of Sacramento (17yds.), A. J. Webb (18yds.), and L. E. Walker, of Woodland (17yds.).

The minor events were accentuated with the following good purses:

First Day: Event 1, 15s \$7; 14s, \$3.90; 13s, \$1.55. Event 2, 15s, \$12.65; 14s, \$7.05; 13s, \$2.80. Event 3, 20s, \$14.75; 19s, \$11.05; 18s, \$6.15; 17s, \$2.45. Event 4, 15s, \$9.95; 14s, \$5.55; 13s, \$2.20. Event 5, 15s, \$14.75; 14s, \$8.20; 13s, \$3.25. Event 6, 20s, \$10.55; 19s, \$7.90; 18s, \$4.40; 17s, \$1.75. Event 7, 15s, \$6.20; 14s, \$2.45; 13s, \$1.35; Event 8, 15s, \$7.90; 14s, \$4.40; 13s, \$1.75. Event 9, 20s, \$12.70; 19s, \$9.50; 18s, \$5.30; 17s, \$2.10. Second Day: Event 1, 15s, \$11.60; 14s, \$6.45; 13s, \$2.55. Event 2, 14s, \$6.35; 13s, \$3.55; 12s, \$1.40. Event 3, 20s, \$13.20; 19s, \$9.90; 18s, \$5.50; 17s, \$2.20. Third Day: Event 1, 15s, \$7.75; 14s, \$4.20; 13s, \$1.65. Event 2, 15s, \$7.45; 14s, \$4.15; 13s, \$1.65. Event 3, 20s, \$10.05; 19s, \$7.50; 18s, \$4.20; 17s, \$1.65.

A perusal of the foregoing demonstrates what was voted by all at the grounds as the most liberal purse distribution ever placed before Coast shooters. More entries would have meant more moneys; hence we repeat, there was a good bet overlooked.

It is claimed by competent critics that the Pacific Coast Handicap had a more auspicious beginning than had the initial Interstate Association shoot. If general opinion is any criterion, the next Coast Handicap will be a record-breaker.

The weather during the shoot was generally favorable, and of a variety. On Friday a light fog made a background in which the targets were silhouetted against a leaden sky and were easily found. On Saturday the weather was warmer, with a brisk westerly wind at times. On Sunday the day was much warmer, but without any wind. On the whole the weather conditions were good.

The attendance of spectators was large; on the closing day there was an audience of over 1,500, with the fair sex in pleasing and noticeable numbers.

The handling of the grounds and arrangements for the accommodation of shooters and visitors alike was excellent. The Association's 50ft. marquee was supplemented by a dozen or more smaller tents.

Among the trade representatives present were C. A. Haight, E. E. Drake, W. S. Wattle, A. Muller, W. H. Seavers, F. L. Carter, E. E. McVeagh, J. S. French, Eick Reed, Louis Williams, Chas. Porter, C. D. Plank, D. W. King, Jr., J. S. Fanning, Fred Gilbert, Tom Marshall, Rolla O. Heikes, W. R. Crosby, H. C.

Hirschy, W. P. Markle, F. M. Lyon, J. E. Vaughan, Phil B. Bekeart and many others.

The trade were a congenial congregation, and did much to lend a pleasant coloring of harmony in the general progress of the shoot.

The San Francisco Trapshooting Association is also entitled to a just share of complimentary notice for its share in the general good working management of the tournament. Ed. Donohue, president; C. A. Haight, treasurer, and A. M. Shields, secretary, being particularly enthusiastic in making everybody at home.

The reception committee was composed of W. S. Wattle, J. J. Sweeney, Capt. Thos. L. Lewis, Frank Turner, A. M. Shields, C. A. Haight, G. W. Gibson, Emil Holling, E. E. Drake, Edgar L. Forster, Mr. Kaplan and W. J. Golcher, to whom all credit must be given for looking after the shooters' and guests' convenience and comfort.

The cashier's office was under the immediate direction of Mr. H. C. Hirschy, who has few equals in this line of work, his assistants being Mr. H. P. Jacobsen, Mr. Geo. E. Oliver, Mr. Sam Wattson, Mr. J. J. Sweeney, and Mr. Stevens.

Several pleasant incidents during the shoot were the formal introduction on the last day to a large concourse of sportsmen and visitors by Clarence A. Haight, of Captain Thos. Marshall, who in turn, in a felicitous and apt manner, introduced his colleagues.

Mr. Shaner, on behalf of the Interstate Association, presented the two handicap cups to the respective winners, in fitting and eloquent terms. The speakers during their remarks explained the objects of the Interstate Association in sending the Eastern sportsmen to the Coast—a seed that will take well in Coast soil and germinate eventually into a healthy tree.

Among the amateurs the first day, Mr. M. O. Feudner was in first place with 140 out of a possible 150; Mr. Del Cooper was second with 138, and Mr. E. L. Forster third with 136. Among the manufacturers' representatives, Mr. W. R. Crosby was first with 148; Mr. Fred Gilbert second with 146, and Mr. R. O. Heikes third with 143.

Among the amateurs the second day Mr. Del Cooper and Mr. L. E. Walker were in first place with 47 out of a possible 50; Messrs. C. M. Powers, E. Schultz and C. D. Hagerman were tie for second place with 46, and Messrs. M. O. Feudner, L. Hawxhurst, E. L. Forster, R. W. Bungay and J. A. Gibson third with 44. Among the manufacturers' representatives, Mr. W. R. Crosby was first with 145 out of a possible 150; Mr. Fred Gilbert and Mr. R. O. Heikes were a tie for second with 143, and Mr. Chas. Plank was third with 141.

Among the amateurs the third day, Mr. C. M. Powers was in first place with 48 out of a possible 50; Mr. G. E. Sylvester was second with 47, and Mr. E. L. Forster and Dell Cooper were a tie for third with 46. Among the manufacturers' representatives, Mr. Fred Gilbert was in first place with a score of 145 out of a possible 150; Mr. R. O. Heikes was second with 143, and Mr. Chas. Plank third with 142.

For general average among the amateurs, Mr. Dell Cooper was in first place with a score of 231 out of a possible 250; Mr. M. O. Feudner was second with 229, and Mr. E. L. Forster and Mr. C. M. Powers were a tie for third with 226. For general average among the manufacturers' representatives, Mr. Fred Gilbert and Mr. W. R. Crosby were a tie for first place with a score of 434 out of a possible 450; Mr. R. O. Heikes was second with 429, and Mr. J. S. Fanning third with 415.

Among the spectators were many notable personages during the several days of shooting. General Shafter, the hero of Santiago, deemed the tournament interesting enough to drop in twice. The General expressed his strong admiration of the skill shown by numerous shooters, and had many words of praise for the sport as a clean and agreeable recreation.

Among the out-of-town shooters participating were: E. L. Deibert, Ontario; G. A. Johnson, Chico; J. S. Enyart, and E. Hafer, Medford, Oregon; F. J. Ruhstahler and Frank M. Newbert, Sacramento; R. F. White and J. W. Giblin, Marysville; Dr. H. C. McClenahan, Belmont; Dr. A. M. Barker, San Jose; L. E. Walker, Woodland; Ed. Tissel, Davis; E. C. Gibson, Marysville; J. A. Gibson, Nordhoff; Chas. Carr, Monterey; C. D. Hagerman, Hip Justins, Chas. Van Valkenburg, R. H. Bungay, Jim Matfield, S. R. Smith and Guy Lovelace, of Los Angeles; F. B. Mills, Santa Ana; Del Cooper, Bellingham, Wash.; W. H. Varian, Pacific Grove; G. W. Smith, Bellingham, Wash.; C. D. Fish, E. A. Hodapp, Martinez; W. B. Lowery, J. B. McCutcheon, Healdsburg; G. W. Gibson, Williams; N. Hansen, Hercules; F. W. Hesse, Jr., Santa Rosa; C. A. Whelan, Hollister; A. L. Holdswell and Mr. Ickes, Fresno; J. V. O'Hara, M. A. Clarke, Vallejo; L. S. Mayfield, Napa; T. A. Work, Monterey.

Cincinnati Tournament.

MONDAY, Sept. 18, preliminary day at the Cincinnati Gun Club's annual tournament, was very hot and partly cloudy. A strong wind blew all day, which, though affecting the flight of the targets a trifle, did not seem to bother the shooters, judging by the scores made.

In the forenoon a team match was shot at 100 targets per man, the scores being: Henderson 94, Phellis 91; total, 185. Gambell 83, Money 86; total 169.

The regular programme for the day was started at 1 o'clock, and consisted of four 25-target events, \$2 entrance (optional), money divided 40, 30, 20 and 10 per cent, open to amateurs only. There were fifty-one entries, W. Henderson being high gun with 97. In his first 80 targets he missed but 1. During the day he broke 191 out of 200. Foord, Reid and Hatcher were second with 96 each. Not a hitch occurred during the day, Supt. Gambell having the traps in perfect working order and an experienced force of men.

The feature of the day was the shooting of Miss F. Altherr, a young lady member of the club, who broke 73 out of 75, going straight in the last 25. Miss Altherr is 17 years old, a very graceful shooter and gives promise of becoming a second Annie Oakley in the use of the shotgun.

Among the early arrivals were the following: J. T. Haines and F. W. Hayes, Vicksburg, Miss.; R. L. Pierce, Wytheville, Va.; Ed. Brady, Newbern, Tenn.; W. M. Foord, Wilmington, Del.; J. A. Barnett, Columbus Grove, O.; Lou Fisher, Buckeye Lake, O.; A. M. Hatcher, Bristol, Tenn.; A. W. Kirby, Greenville, O.; Woolfolk Henderson, Lexington, Ky.; A. W. Westcott, Leesburg, Fla.; R. G. Wheeler, Boston, Mass.; L. Bullard, West Baden, Ind. Among the well known professional experts were: F. Riehl, H. Money, C. W. Budd, C. W. Phellis, L. J. Squier, C. O. Le Compte, D. D. Gross and H. N. Kirby. The local men turned out in good numbers and made good scores, Gambell heading the list with 92. At the time of closing the office thirty entries had been received for the first day's programme. A number of shooters arrived late, and the list of entries will be swelled in the morning. The scores:

The tournament was an unqualified success. The tournament committee, Messrs. R. H. West, Chas. F. Dreihls, E. B. Barker, L. J. Squier and Arthur Gambell, put in much time in preparing the details and arranging an attractive programme of sport, and the result should be gratifying to them.

As was fully announced and explained in the sportsmen's journals before the shoot, the club returned to the amateurs, in a special purse, their losses during the tournament. This idea was advocated by L. J. Squier, and the result has proved that he knows what the amateur wants, for every one present had a good word to say, and those who failed to win in the purses were more than pleased to be called to the cashier's office and handed awad.

The programme consisted of ten 20-target events on each day, \$2 entrance in each, and \$1 extra each day, making a total entrance of \$21 per day. An optional sweep of \$1 was run in each event, this purse was divided 40, 30, 20, 10 per cent. class shooting. Less than thirty entries 50, 30, 20, 10 per cent. Regular events divided Rose system, 5, 3, 2, 1. Average money each day, \$50, divided 10, 9, 8, 7, 6, 5 and 5 high guns; \$50 general average money, same division. The special purse for those shooting in all the regular events and not winning their entrance was divided pro rata. The losses were figured on the regular entrance \$63.

Twenty-two men shot through the programme and lost money. The special purse paid them 90 per cent. of the amount. Figuring the entrance at \$20 a day, the special purse paid back full entrance fee. The purses paid well, Wheeler getting 96.90; Altkire, \$95.40; Rhoads, \$94.80; Henderson, \$92.20; Raven, \$77.95; Foord, \$77.50; Barker, \$73.80; Brady, \$69.55.

The office was in charge of Luther J. Squier and F. Dreihls, assisted by Chas. F. Dreihls, and the work was, as a matter of course, done promptly, and all winners paid very soon after the last event was finished.

With the exception of the rain on Tuesday, nothing happened to delay the shooting, John Brannagel, Supt. Gambell's assistant, had charge of the field force, and their work was well done.

At No. 1 set, Henry Goodman was referee and scorer; Frank Mills, squad hustler; Peter Gould, puller; Shepman, Gill and Housel, trappers.

No. 2 set, Ben Hutchinson, referee and scorer; Walter Dobert, squad hustler; J. Jewett, puller; Hogar, Sawing and Vercamp, trappers.

No. 3 set, Len Shepard, referee and scorer; Lutie Gambell, squad hustler; W. Hightower, puller; Schwab, Highkemper and Thorp, trappers.

During the three days 38,000 targets were thrown. The following trade representatives were present: L. J. Squier, C. W. Phellis, Chas. F. Dreihls, J. T. Skelly, C. O. Le Compte, Dale Bumstead, Chas. W. Budd, Frank Riehl, R. B. McNeill, Harold Money, J. R. Taylor, Ralph L. Trimble, A. M. Ruter, Harry Kirby, L. H. Reid, D. D. Gross, Terry Davenport, Ed. Stuart, Phil. Orr, Jean Bell, Henry Vietmeyer, W. L. Garber, J. S. McBrean.

Monday, Practice Day.

Table with columns: Shot at, Broke, Shot at, Broke. Lists names and scores for various shooters.

Table with columns: Name, Score. Lists names like Mike Peters, K 85, Barker, Buller, etc.

Sept. 19, First Day.

The first day of the tournament was uncomfortably hot, and cloudy. A gale of wind caused the targets to take all kinds of unexpected angles, and many of the shooters dropped way below their scores of Monday. The attendance was much larger than on the previous day. Much interest was manifested in the shooting of Miss Altherr, a crowd always standing at the ropes when she was at the score.

Everything was running smoothly and part of the shooters had finished the last event, when, shortly after 3 o'clock, it began to rain, soon increasing in violence, and forcing every one to cover. The shooting was delayed until nearly 5 o'clock, and was not finished until almost dark. A beautiful arched rainbow above the grounds gave promise of pleasant weather for Wednesday. Sixty-three shooters entered in the various events, fifty-three shooting through. W. A. Watkins was high amateur and also high gun for the day, with 187. Other leading amateurs were: S. Rhoads 184, Bibbee 182, E. Brady 180, Wheeler 179, Hunter and Pohlar 178 each, Shattuck and Randall 175 each, Barker 174.

F. C. Riehl was high professional with 184, C. W. Budd 182, Harold Money 179, Skelly 178, C. W. Phellis and L. H. Reid 177 each, R. Trimble and D. D. Gross 174 each.

H. E. Smith, of Columbus, had the misfortune to burst his gun, but luckily escaped injury, except in his score, as he finished out with a strange gun. The scores:

Large table with columns: Name, Score. Lists names and scores for various shooters.

Sept. 20, Second Day.

Wednesday, Sept. 20, was an ideal day for shooting, bright sun light and a cool, crisp air. In spite of a strong wind, the scores were an improvement on the first day in almost every case. Several of the shooters left on Tuesday night, but enough new ones arrived to make up, and a little more, sixty-four taking part and fifty-four shooting through. Straight 20s were quite plentifully sprinkled through the score sheets, and L. H. Reid went down the line in the last three events with perfect scores, the first time during the tournament.

Table with columns: Name, Score. Lists names and scores for various shooters.

Table with columns: Name, Score. Lists names and scores for various shooters.

Bound Brook Gun Club.

BOUND BROOK, N. J., Sept. 23.—Four events of the programme of the Bound Brook Gun Club were finished. Owing to insufficient entries the rest were not shot off.

Table with columns: Name, Score. Lists names and scores for various shooters.

The crowd in attendance was much larger than on Tuesday, many being attracted by the shooting of Miss Altherr, the only lady contestant present. She bettered her score of the first day a little, finishing the programme with a straight 20. High amateurs for the day were W. M. Foord, Wilmington, Del., with 183; Frank Alkire, Frank See and E. Barker, 182 each; L. Ballard, of West Baden, Ind., 181; W. Henderson, Lexington, Ky., 180; T. H. Parry, Indianapolis, 179; Pierce, Hatcher, Wheeler, Dr. Britton, J. W. Hayes and Edwards, 178 each. R. Trimble was high professional and high gun for the day with 185; Harold Money and C. W. Budd, 183 each; C. W. Phellis and L. H. Reid, 182 each; K. 86, fourth with 179; J. T. Skelly, 173, and C. Dreihls, 172. The scores:

Table of scores for various shooters including Alkire, See, Barker, Ballard, Henderson, Parry, Pierce, Hatcher, Wheeler, Dr. Britton, J. W. Hayes, Edwards, Money, Budd, Phellis, Reid, Dreihls, etc.

Sept. 21, Third Day.

As is usually the case, there was a slight decrease in the number of shooters, two days being about all many of the amateurs care to shoot through. The crowd of spectators was, if anything, larger than on either of the previous days, and the interest was maintained up to firing of the last shot. Fifty-four shooters were on hand, forty-eight shooting through.

The weather was the best of the week, being clear and comfortable, and not wind enough to bother the shooters. The scores improved quite a little in consequence. Miss Altherr, who has been the drawing attraction of this tournament, fell off a trifle, the strain of such a long contest being a little too hard for her. The programme was finished about 3:30, and by 4:30 the good-byes had been said and the visiting shooters were gone. High gun honors for the day were divided by F. Alkire and Raven, with 187 each, the best score made during the shoot. Other high amateurs were: Henderson, second, 186; Wheeler, 183; Pierce and Rhoads, 180 each; Davenport, 179; Hatcher and Fisher, 178 each; Foord, Dick, Bullerdick and Barnett, 177 each; Gambell, Shattuck and J. W. Hayes, 175.

Of the professionals, Le Compte and K 86 tied for first on 183; Skelly, 182; Budd, Trimble and Phellis, 180 each; Money, 179; Dreihls, 178; Vietmeyer, 174.

Amateur high average for the three days: Wheeler and Rhoads, 540 each; Henderson, 538; Alkire, 534; Raven, 532; Foord, 530; Barker and Brady, 529 each.

The handsome silver cup given by the Dupont Powder Co., to the winner of high amateur average was won by Rhoads, after shooting off the tie with Wheeler at 50 targets.

High professional average: Budd, 545; Money, 541, Phellis and Trimble, 539; Skelly, 533; Reid and Riehl, 532. The scores:

Table of scores for various shooters including Alkire, See, Barker, Ballard, Henderson, Parry, Pierce, Hatcher, Wheeler, Dr. Britton, J. W. Hayes, Edwards, Money, Budd, Phellis, Reid, Dreihls, etc.

Kirby, Shattuck, Hatcher, Ballard, K 86, Pierce, Fisher, Pohlar, J. W. Hayes, C. Dreihls, D. D. Gross, Dick, Edwards, Foltz, Barnett, Bibbee, Gambell, Le Compte, Herman, Pfeiffer, Faran, Vietmeyer, Davenport, H. E. Smith, Roll, Ahlers, Nolder, Shattuck, Ketter, Hobson, Carr, Dial, Hake, Payne, Money, Budd, Riehl, Le Compte, Trimble, Phellis, Reid, Skelly, Gross, North, K 86, Vietmeyer, Davenport, Dreihls, Peters, Willie, Kramer, Du Bray, Hunt, etc.

Owen Sound Gun Club.

THE first annual tournament of the Owen Sound, Ontario, Can., Gun Club was held on their grounds at Royston Park, on Thursday and Friday, Sept. 7 and 8. Owing to the delay in getting out the programmes, there were not as many present as was expected.

Mr. Forest H. Conover, representative in Canada for a powder company, assisted the club in the management of the shoot, and his long and varied experience in trapshooting and everything in connection with it did much to help the shoot along without delay. Every one present expressed himself as well pleased, and promised, if given a little more notice next year, to bring five times as many shooters.

Each day to high average winners the club gave \$50, divided \$15, \$12, \$10, \$8 and \$5.

On the first day the eighth event was a merchandise shoot. High gun took his choice, and so on down as long as they lasted. The average cash winners for the first day, shooting at 205 targets each, were: First, G. M. Dunk, broke 189, \$15; second, G. B. Smith, 182, \$12; third, H. A. Mallory, 171, \$10; fourth and fifth, W. M. Morrison and C. E. Cantelon, 167, \$6.50 each.

On the second day, Friday, Sept. 8, the eighteenth event was for the championship of northern Ontario, 25 targets. A magnificent trophy was presented by the Dupont Powder Co. In this event Mr. Chas. E. Harris, of Owen Sound, and Mr. C. E. Cantelon, of Clinton, tied at 24 each. In the attempt to break the tie, each broke 23, and in the final shoot-off Mr. Harris broke 24 and Mr. Cantelon 23.

The Owen Sound Gun Club is a young organization, and we feel very proud to think that Mr. Harris, who commenced shooting last spring, should capture so fine a trophy, emblematic of the championship of the north.

The average cash winners for the second day, each shooting at 205 targets, were: First, G. M. Dunk, Toronto, broke 187, \$15; second, W. A. Smith, Kingville, 179, \$12; third, G. B. Smith, Cryton, 169, \$10; fourth, C. E. Cantelon, Clinton, 167, \$8; fifth, H. A. Mallory, Drayton, 166, \$5.

Following are the scores for both days:

Table of scores for various shooters including Targets, Events, W. Lewis, Jas Harrison, W. M. Morrison, Jas Oatt, F. H. Conover, G. M. Dunk, H. A. Mallory, C. E. Cantelon, G. B. Smith, W. Huether, J. Hartman, C. E. Harris, etc.

Second Day.

Table of scores for various shooters including Events, Targets, W. Lewis, Jas Harrison, W. M. Morrison, C. E. Harris, F. H. Conover, G. M. Dunk, H. A. Mallory, C. E. Cantelon, W. A. Smith, G. B. Smith, W. Huether, P. Doersam, J. Hinsperger, Dr Cook, J. Hartman, etc.

Rochester Rod and Gun Club.

ROCHESTER, N. Y., Sept. 20.—The following are the scores made to-day on the Rochester Rod and Gun Club grounds in the sixth contest for the Lafin & Rand trophy:

Table of scores for various shooters including Adkin, Clark, Rickman, Back scores, Re-entry scores, etc.

Dover Sportsmen's Association.

DOVER, N. H.—There were thirty shooters who participated. Five prizes of \$5 each were provided. First prize, \$5, was won by Mr. Gus E. Greiff, of New York. Irving and Wentworth divided the second \$5. Beard won the third \$5, and Hallam the fourth \$5. Mr. Greiff broke 172 out of 180, a shade over 95.5 per cent. Mayor Reed and his brother Elmer, of Manchester, made excellent scores and completely won the good will of all present. Four years as chief executive of a politically hostile city is something to be proud of. Elmer can outshoot the mayor and anybody else in New Hampshire. Ex-Mayor Martin, of Concord, shot a consistent run of scores, and at times was absolutely brilliant. He must always be reckoned with when shotguns are trumps. Climax (Ed. Burns) and Rule, of Lowell, Mass., drew general attention by their steadiness and genuine good-fellowship. Though they did passing well yesterday, both are capable of better work. Wheeler and Darton, of Maine, won their spurs long time ago. Among the locals, N. C. Wentworth and his 10-gauge took the highest mark.

From Concord came Martin and Lawson; from Manchester, Elmer Read, Eugene Read, C. A. Allen, S. L. Greer, and A. J. Reed; Spofford, of Amesbury, Mass.—rare sportsman—was in good form. John Drew came over from Berwick; Major Derritt, of Madbury, was an interested observer, and Dr. Gerrish, of Exeter, was on hand.

Under the great tent and along the observation benches were found Mrs. Mitchell, Stevens, Smart, Fisher, Corson, Drew, N. C. Wentworth, Blake, Lombard, Halliday, White, McShane, and Misses Roberts and Sowerby. This bunch of ladies divided the attention of the shooters, for under their care was the good and substantial free lunch. Sam Meserve did not forget his old associates, emphasizing the fact by his contribution.

The following statement of scores is correct in detail and aggregate, and all right relatively, but not in order or altogether in accord with blackboard representation:

Table of scores for various shooters including Events, Targets, Wheeler, Darton, Corson, Jason, Erving, Blake, Lombard, N. Wentworth, Stevens, White, Drew, F. Wentworth, Hallam, Beard, Durgin, Rule, Chimax, Mayor Read, Elmer Read, Ex-Mayor Martin, Allen, Green, Lawson, A. G. Rud, Parkhurst, Greiff, Lewis, Gerrish, Smart, Fisher, etc.

Hoopston Tournament.

HOOPSTON, Ill., Sept. 20.—Yesterday was not the most suitable day that could be chosen for holding a target tournament. There were threatening clouds, and for most of the day the wind was strong, coming from behind the traps with a quartering slant.

The club members and their friends to the extent of twenty had assembled, and each had made arrangements to burn up 200 shells. The shoot was started a little late, say 10 A. M.

Not all were present at the start, so that those who came at noon were permitted to shoot up. These had the best of the deal, as by the middle of the afternoon the wind became moderate.

The grounds used were a part of the old fair grounds, which, while facing east with a clear background, were very good.

Three traps, Sergeant system, were the order of trapping. Of course, there was some trouble breaking in the scorers and trappers and in getting pulls adjusted, yet nearly 4,000 targets were thrown, which is a very good showing for a town where there are few shooters capable of taking part in a tournament.

Those most directly interested in the shoot were W. B. Hanger, Ed. Erickson, J. A. Seekatz and W. Bell. Mr. Bell is a well-known expert rifle shot, and at times makes very good scores with the shotgun. Mr. Seekatz was trying a newly refinished gun, and did not make his usual scores.

The traveling men were fairly well represented, especially when the shoot was not advertised more than ten days previous. They were Messrs. H. W. Cadwallader, Decatur; W. D. Stannard, and Tramp Irwin, of Chicago. Tramp was requested to get busy and use the pencil instead of the gun, so he was duly installed as cashier and all-round overseer. When not taking in cash he was adjusting the traps or keeping the squads in line.

Mr. Stannard was high for the professionals, and Cadwallader second.

A. P. Smith, the good shot of Milford, was high over all with 190, beating Stannard by one target. Smith takes these streaks now and then, and it is hard to head him off. Mr. Barkley, of Chicago, was a good second with 13 misses, and Mr. Winesberg was close up. The snappiest man on the grounds was Happy Heoligan. Scores:

Table of scores for various shooters including Events, Targets, Cadwallader, Ragle, A. J. Rock, C. Lamme, Rupert, Stannard, Hoolligan, Barkley, Winesberg, Ferris, Park, Willis, Seekatz, Hanger, Erickson, Leigh, Arie, Smith, Blessing, Miller, Herbert, etc.

Here is a good-fellowship story that is going the rounds: Give a man a 10-cent cigar and he will beam all over and love you for six hours; offer him the 10 cents with which to buy it for himself and he will throw it in your face. Give a man a pass to a show and he will call you a good fellow in all the languages at his disposal; offer him the money to buy a ticket and he will call you a fool. Ask a man to your home to take "pot luck" and he will jump at the chance; give him \$2 and tell him to get a good meal at a cafe with your compliments and he will knock you down. The dollar is mighty, but it isn't warm. Nothing chills hospitality and good fellowship more than a touch of cold metal.—Emporia Gazette.

SIDE LIGHTS OF TRADE.

In their advertisement this week the Lafin & Rand Powder Co. announce the issuance of their 1906 calendar in December to those who send information concerning the brand of powder they shoot and ten cents.

PUBLISHERS' DEPARTMENT.

To the sportsman who contemplates a visit to the Far East, and who will need the most ample and perfect accommodations afloat, the information in our advertising columns concerning a large steam launch and a large houseboat, designed expressly for shooting and fishing in the Sunderbunds, will be of special interest.

THE MANY-USE OIL

Preserves new blue finish on guns. Test it. Tell your friends.

# FOREST AND STREAM.

## A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1904, BY FOREST AND STREAM PUBLISHING CO.

NEW YORK, SATURDAY, OCTOBER 7, 1903.

VOL. LXV.—No. 15  
No. 346 BROADWAY, NEW YORK.

TERMS, \$4 A YEAR, 10 CTS. A COPY.  
SIX MONTHS, \$2.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, \$4 per year, \$2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

### THE TELESCOPIC SIGHT.

THE action of the Zettler Rifle Club this year, in withdrawing its interdiction in respect to the use of telescopic sights in its competitions, is a commendable move in the direction of sense and general progress. It also is just as a matter of equity.

The Zettler Rifle Club permitted the use of the telescopic sight at their indoor championship, held in March of this year, and also permitted its use at their thirty-first festival and tournament, held at Union Hill, N. J., last week, thus letting down all the bars which had been set by them against it during many years past. The inherent merit of it, and the force of public opinion were no small factors in establishing its recognition. Its worth and expediency had long since been thoroughly proven, both in gallery and afield. However, with the indorsement of the great Zettler Rifle Club, its general adoption will be materially hastened.

The precedent, coming from such an authoritative source, will doubtlessly be recognized as good by all other live clubs of importance and progress. The possible dissenting club laggards remaining, still hide-bound by habit and prejudice, will in due time be forced by the inroads of progress to recognize its value or take their place in the ruck.

The present age is prone to think for itself, and to treat with scant consideration such notions as are founded on personal idiosyncrasy or emotional prejudice. Material worth and sound reason are the approved tests. From that source comes progress.

In club quarters in past years, the prejudice against the use of the telescopic sight was a serious detrimental obstacle to the sport of rifle shooting. Yet it had no sound reason to support it.

When it is considered that perfect vision is an extremely rare sense, the defect in relation to skillful rifle shooting is self-evident. There are two essentials in successful rifle shooting, namely, steady holding and accurate aiming. For steady holding, in competition, all kinds of adjuncts short of a fixed artificial rest have been permitted and are allowable, thus there is the palm rest, the Swiss butt plate, the set trigger, the special extended grip, etc., but, notwithstanding that inconsistency, the best aids to clear vision have heretofore been uncompromisingly opposed. The deplorable result has been that many men, having the infirmity of imperfect vision, yet enthusiastic in matters of rifle shooting; were arbitrarily barred from competition when denied the best aids to sighting. It is true that a man could wear spectacles, but such are relatively imperfect for rifle sighting, and some, made for special defects of the eye, are worse than useless. Thus, while all aids to comfortable and steady holding were encouraged to the limit, aids to clear vision were unreasonably opposed and barred.

In the large cities, from the dwellers of which rifle competition draws its chief support, injured and imperfect vision is the commonest of physical infirmities. Of those riflemen who work, a large percentage are office men. If one of them indulges in rifle shooting, and can see clearly with the naked eye, from bad light and constant straining when at work, in a few years his powers of vision are impaired, and then perforce, under the old ruling, he must quit rifle shooting because some other fellow whose eyes are good at the time, has a notion that a telescopic sight is all wrong, but that a palm rest, set triggers, etc., are all right. Thus in the past, at the age when the average man was physically at his best and had acquired commendable knowledge of the theory and practice of rifle shooting, if any serious infirmity of vision intervened, he had no alternative other than to withdraw from competition, and there being then no rivalry, there was no incentive to practice. With the abandonment of the legislation against telescopic sights in competition, the

elderly rifleman, the man of imperfect vision, the man of sound vision who wishes to see better, can all join in competition, making a contest of skill among all instead of a contest within the relatively narrow limits of those whose eyes are, for the time being, sound.

### CHANGED BIRD WAYS.

AMONG the familiar examples of the changes in the habits of birds which have resulted from association with mankind are those of the chimney swift, or popularly named chimney "swallow," which formerly nested in hollows of trees and now in all settled regions uses the chimneys of houses; and the barn and eaves swallows, the former originally nesting in caves and now building on the beams and rafters of barns; and the latter, once a cliff-dweller, now attaching its curious mud tenement under the shelter of the eaves of barns and dwellings. In a series of interesting notes in the October Auk on the changes in the habits of birds, Mr. George F. Breninger records having observed in Mexico the old and the new way of swallow nesting. In the ancient town of Tuxpan he found numerous instances of barn swallows nesting in the living rooms; and in the unsettled portion of the State of Chihuahua, a hundred miles back from the railroad, on one of the large haciendas—a region devoid of the time-honored adobes—barn swallows still nested on the rocks.

Mr. Breninger notes other changes in the nesting habits due to the removal of large timber. There is, for example, the Lucy's warbler, which normally nests in natural cavities in the trunks of trees, most commonly in the mesquite; but in the vicinity of Tucson, where the larger trees have been cut away, the warblers have in some instances had recourse to building their nests in the abandoned nests of other species, in one case in the hole in a bank of earth, and most curious of all among the small limbs of a mesquite tree.

In timbered countries the flickers cut holes in the trunks of trees for their nests. In some sections where the large trees have been removed and the flickers have no longer such nesting sites, they have taken to the telegraph poles. "Along the railroad between Benson and Bisbee, Ariz.," writes Mr. Breninger, "the telegraph poles and fence posts show evidence of the work of woodpeckers, all by the Texan woodpecker. Throughout this region trees are few, and the woodpeckers are forced to use anything that is dead and large enough to permit of a nesting cavity being excavated in it. Dead stalks of the century plant are often used. About Phoenix, Ariz., this woodpecker is common, timber suited to their needs is still in abundance, and the poles along the railroads and elsewhere are untouched. In some parts of Mexico the work of woodpeckers on telegraph poles has reached the stage of a nuisance, and a source of much outlay of money to keep the line in repair. Over a piece of road running between San Luis Potosi and Tampico the nuisance has become so great that the management threatened to dip the poles in a solution of creosote."

### FISHING LIMITS.

THE question of what is to be considered a legitimate amount of fish or game to be taken by the sportsman is in these days less than formerly open to speculation and argument, because in most States where the fishing and shooting are recognized as assets to be preserved, the permissible take is specified in the law. In most cases the limits are so generous that no right-thinking person need quarrel with them; nor on the other hand, may critics carp if he shall insist on availing himself of all the privilege the law allows him. The time will come probably, and at no distant day, when such limitations by law will be universal. A common objection urged against these bag limits is that as they are designed to govern the sportsman when he is afield, and for the most part aloof from the observations of his fellows, the law cannot be enforced because its violation cannot be detected. This is true only in part. A gunner may have opportunity unobserved and undetected to shoot a dozen birds when the law says he may shoot only ten; but granting that he does this, he is not likely to exhibit his unlawful kill or to make boast of it. He is on the contrary, likely to take good care that his law violation shall not become known; and here we find a repressive influence of the statute which is in itself powerful and effective.

The law puts the ban of unsportsmanship on killing beyond the limit, and in all places where sportsmen gather and exchange notes the moral force of the law holds sway.

Where no law obtains, the point is one to be determined by the individual conscience or its absence; and the conditions making up the problem are so extremely diverse that it is only the man on the ground and cognizant of all of them who may intelligently decide. So much depends. When fish are abundant and fishermen are few, local conditions all tend to a maintenance of the stock and no greatly increased drain on the supply threatens, one is justified in taking fish to a limit far in excess of what the same individual would consider reasonable or permit himself to reach in other places. This is not to say that an entirely different, and perhaps very greatly reduced, limitation may not appear a right one to another person a thousand miles or so away from the scene of action. The estimate of this remote critic is probably based on other conditions, those with which he is familiar in regions of a less abundant supply; and they may for this reason be greatly mistaken. That he may not be absolutely correct in his estimate of what is right and what is wrong in the wilderness is however something which never occurs to him. He is cock-sure that he knows it all. And straightaway he rushes into type to denounce and scold and deride.

### A TYPICAL ASSOCIATION.

We have before us the amended rules and by-laws of the Fenton Game Preserve Association, an institution which is so typical of the shooting and fishing of the times that it is worthy of note.

The club holds lease of hunting and fishing privileges on a tract of 45,000 acres in the Adirondacks, with headquarters at Number Four. The preserve is posted, and outsiders are rigidly excluded. The membership is limited to one hundred, and the annual dues are \$10. The Association licenses a limited number of guides, who by payment of \$5, become members of the Association, for the year; no other guides than those so licensed may be employed on the preserve. In fishing and hunting the members are required to abide by the State game and fish laws, which restrict the taking of deer to two in a season, and put a limit also on grouse and woodcock. A club rule forbids a member's taking more than fifteen pounds of trout in a week, or more than forty pounds in a season; and it is forbidden to retain trout of less than seven inches in length. All fish or game taken by a guide must be charged to the account of his employer, so that the member's allowance shall not be exceeded. Ladies and minor sons belonging to the families of members are entitled to the privileges of the Association, but it is provided that the whole amount of trout taken or game killed by all the members of a family shall not exceed the amount allowed for an individual member. The secretary provides printed blanks on which the members record and report the fish taken. The Association stocks the several streams with trout as necessity requires, and certain waters are set apart from fishing for such terms as the executive committee may provide. Permits to hunt and fish are issued to persons introduced by members, the fee for such a permit is \$5, or \$4 for a fishing permit only, good for July and August; fishing permits may also be issued to guests of members at \$1 per day.

The government of the Association is vested in a board of five directors, who act in the capacity of an executive committee; one member of the board retiring each year and being succeeded by one newly elected. Any infraction of a rule or by-law subjects the offender to a penalty of forfeiture of rights for one year; if a member while under suspension hunts or fishes on the preserve, he is to be deemed guilty of trespass.

This Fenton plan of preserving a territory, stocking it, harboring the supply, and using the stock in such a manner as to insure a permanent supply in keeping with the demands made upon it from season to season, is coming to be the approved system in this country, as it has been for generations in Europe. It is a demonstration of the way in which the average shooter and the average angler must in time get their hunting and fishing opportunities. He is wise who, recognizing the trend of events, looks around for a club of which he may enjoy the benefits as a member.

## THE SPORTSMAN TOURIST

### The Uneasy Club Goes Through Fire

WITH the approach of fall the Uneasy Club, true to traditions and its name, "gets busy." Each member, a self-appointed committee on promotion and ways and means, may be found "rubbering" about gun stores and railroad offices in quest of rates and quotations on shells by the case in feverish anticipation.

"Why don't you fellows take a private car?" asked a certain passenger agent.

"What for?" asked Bill.

"Oh, just to be luxurious and take it easy," replied the agent.

"What! the Uneasy Club taking things easy? Not on your life. We'd walk if we had time."

"I see," replied the agent. "Advocates of the simple life."

Little did the passenger agent dream that his suggestion would be the cause of smashing an arbitrary rate, or how well he guessed that we were advocates of simplicity in a way.

In ten minutes a telegram to George, who was in Omaha, was on the wires to this effect: "Get rates to C. on car emigrant movables. If less than passenger rate for party, engage team and driver. Wire answer."

His reply reading, "Splendid idea, \$43. Come on" was received in less than an hour.

The following day found the party in Omaha outfitting, and on the next morning they drove to the depot with the "emigrant movables," consisting of four members of the Uneasy Club, the driver and team, three dogs, shell cases, grub boxes, gun cases and trunks, two folding boats and a tent.

On account of the writer's personal appearance, which presumably suggested the proverbial farmer, he was delegated to do business with the agent, who was evidently impressed. He agreed, however, to forward our "private car" (which was numbered instead of named, and posted with the information that it was "38 feet inside, air brake, C. & B. coupler, capacity 40,000 pounds") at 2 o'clock on a train of empty stock cars bound for C. direct, on a fast schedule.

When in answer to the question as to "who would be in charge of the live stock?" I replied "Myself and boys." It dawned on me that if the "boys," a part of whom I had figured as live stock, should be inspected, our "private car" would likely be more exclusive than we had planned; but the agent was a busy man, and fortunately we were not closely inspected.

We hurried the loading and then went to a good dinner, the last we should have, with modern conveniences, for a month; boarded our car and were soon on the way as happy as any millionaire ever could be in his palace on wheels.

With the exception of a dog fight no incident occurred to mar a pleasant (but somewhat rough) trip. We arrived at our destination ready for an outing and a hunt we shall never forget, as a few of the following incidents related will show.

By way of introducing the reader to what we consider the greatest ducking ground on the continent, let it be known that a thousand miles from St. Louis, and half that distance from Omaha, the Uneasy Club may be found almost any October, where, nestled among the sandy buttes or rolling hills are to be found hundreds of lakes and thousands of waterfowl. To a person unfamiliar with camp life or fired-shooting, this territory, where one may travel for days and never see a tree, might be considered God forsaken; but with us who have learned to love it, even with its drawbacks and terrors, our feeling can be compared only with the sailor's love for the boundless sea.

At an altitude of between 3,000 and 4,000 feet the air is so pure and invigorating that an outing of a month, as we usually take it, puts life into us for the other eleven, barring the fever that seizes us before the next October.

With anticipated pleasures and no thought of the perils in store for us, we pulled out of C. soon after sunrise and were slowly winding our way through the sandy trails to the north. Perched on the overturned wagon, with a tent-pole and about a square yard of canvas attached, George began to make the situation humorous when he waved his banner and shouted, "Victory!"

Bob sat on the pole and laughed just as he did once, when we were kicked out of the boat on the St. Francis into the ice water, and now that the situation was reversed, and we were nearly roasted, his mirth and George's nerve in proclaiming victory, were more than Burt and Bill could stand.

"What was it General Sherman said war was?" Bill inquired.

"Same as a prairie fire," answered Burt.

"Well, this is h—," remarked Bill, stroking his face where a full beard had been, but was now about the consistency of the proverbial singed cat, even to the odor.

The above picture may not appeal to the hunters of the East or South as possible or probable, but we warn you, when you make a trip overland in the sand hills, do not disregard the possibilities of a western prairie fire, which, if you have seen, you must admit is the grandest and most terrifying thing imaginable.

Without the loss of dignity or a dislike to "butt in," you

may well ask a native driver what he would do in case of a fire, and he would likely tell you as one did us, that he would "start a fire and follow it." Simple, yes; and reassuring, too, after you have ridden miles and miles through nothing but dry grass and shuddered at the thought of the possibilities of a conflagration.

Up to this time we had never encountered a prairie fire, though we had seen one from a safe place to windward while on our way from camp to town several years before, when nearly a hundred square miles of grass burned off in a remarkably short space of time, and only stopped when it reached the banks of the Niobrara, many miles south of where it had started.

No doubt the reader has met the party who nearly ruined our sport; one of those crowds of would-be "sports," with borrowed guns, new hunting coats, the kind that rattle, and whose supply of whiskey usually equals in weight that of the shells. They carelessly started the fire, which luckily stopped at the spread of Hay Creek and the adjoining lake, where we were to camp.

We had driven over twenty miles from the railroad and had unloaded our camp stuff. Bob and Bill with the driver had taken the team to a ranch well two miles distant, where they filled the water casks and were on their way back to camp. They had made about half the distance on the return trip when the driver remarked that "something must be doing," as the ducks were massing in Big Alkali ahead of them, and as he spoke he turned and glanced back with a look of alarm. Being in a small ravine or draw at the time, he swung his team to the left and headed for the highest point in the locality instead of keeping the trail. It was apparent, on reaching the summit of the hill, that they were in the path of a prairie fire.

"Hang on and don't fall out," shouted the driver, lashing his team into a dead run, with his passengers holding on to the kegs, which were dancing about as they rattled and bumped along, the driver still yelling and whipping his team into a runaway.

Smoke could now be seen on three sides of the flying team. On account of the peculiar lay of the land the now terror-stricken hunters had no time to put into execution the scheme of firing ahead and following the fire. Their only chance was to run for camp, and if they arrived in time, take to the water.

On they rushed and back of them reared the flames, preceded by a bunch of stampeded cattle, bellowing, snorting and fairly tearing up the trail in their mad rush for the creek.

A hundred yards from camp was a small towhead, and as the team flew up to it or by it the driver jerked the runaway horses sharply to the left, which was too much for the wagon, and over it went, spilling the passengers and water casks in confusion into the sandy trail, which, fortunately, was not hard. In the up-sct. the off horse went down in a tangle of harness, its mate plunging wildly, trying to pull the whole wreck to the creek.

Bob sat on the head of the prostrate animal while Bill clung to the bridle of its frightened mate, the driver rushing in behind the team, and in danger of being kicked, succeeded in pulling the double tree pir. and unhooking one tug; then with an urgent kick to the fallen horse and a slap and a yell at the other they flew through the smoke, which was now stifling and blinding, as it swept around the hill.

Along with the frightened jack rabbits, skunks and a pair of slinking coyotes, which seemed the only creatures not panic-stricken but looking for other trouble than the fire, the hunters dashed after the flying team and the cattle, which had joined them—all were floundering through the bull rushes trying to reach open water.

The heavy roar and crackle of the fire as it pitched and rolled over the last hill was terrifying to every living thing, as it meant certain death to those caught in its consuming flame. Thoroughly blinded and choking the party of hunters, having abandoned guns, supplies, and, in fact, everything but the desire to beat death in the race with the fire, a scorching wave of flame enveloping them, fell face down in the water not a second too soon. With the sizzle of exposed hair and beards and the smarting of many burns they disappeared under water, where they remained as long as possible.

Heads popped up finally to catch a breath only to find the smoke so thick they could neither see nor breathe, and Bill, losing his balance, fell forward into a mass of tangled reeds and nearly drowned in regaining a footing.

Gradually the smoke lifted and the men were permitted, after rubbing their eyes nearly out, to look upon a strange sight. Out in the open water stood the team and the cattle, the horses with rat-tails and missing manes. On a muskrat house a little to the right were the pair of coyotes sitting on their haunches, quietly but suspiciously watching the fire victims.

George, in terror, was backing around throwing shells at a skunk which was swimming entirely too close to him for comfort. A jack rabbit that had floundered up had caught its forefeet in the pocket of Bill's hunting coat and kicked and struggled to climb out of the water. Its ears laid back on its neck, drenched, still frightened, it was anything but the fleet animal it is pictured. Taking the animal by the ears Bill raised him out of the water, intending to throw him toward the bank, at the same time remarking: "Get out of the road and let some-

body swim that can"; and as he gave the jack a mighty swing it slipped and struck Burt full in the chest, knocking him "down and out," at least he went out of sight under water for the second time.

It was then that Bob started to laugh, and George, who seemed to be a shining mark for all disagreeable things, set up a yell, "Look out for the snake!" and began a hasty retreat for shore, all of his companions following him. On reaching shore we found the canvas of the tent, which was about to be raised when the fire came, burned up completely except for the piece George had waved, on a scorched pole. Otherwise our supplies, packed in boxes, were not badly damaged. Why a can of gasoline which was among the supplies did not explode and ruin the whole outfit is still a mystery.

Knowing that the papers would report the prairie fire, it was decided to send the driver to Anson's ranch at once to wire and telephone that our party had not perished, and at the same time to secure a tent.

Having rounded up the horses and untangled the wreck of harness, which happened, however, not to be beyond repair, the driver was soon on his way over the blackened trail to the ranch.

George had been shedding his wet clothing, until, with a disregard for appearances, we all did the same, and were rivaling the Iggarote in costume. The comparison to those dog-eating savages was complete when George pulled from the grub box a sausage nearly two feet long and asked, "Will anybody have some dog?"

An hour or more was spent lounging in the warm sunshine and sand. It had been decided not to do any hunting until camp had been made ship-shape. This could not be completed until the return of the wagon with a tent or something for a shelter. Wishing, however, to take a look at Big Alkali, a large open lake, where all the ducks from the fire-swept smaller ponds seemed to have swarmed ahead of the fire, we were soon climbing the large hill just across the creek from our camp, carrying field-glasses and a small rifle. When we reached the crest, which commanded a good view of the surrounding country, a sight never to be forgotten lay before us. In the open water of this lake, which is a half-mile wide and a mile in length, and along the south and east shore to nearly the middle of the lake, the water was simply completely covered with ducks, while hundreds in the air were wheeling about for an opening in which to light.

The view through the glasses of this vast throng of wildfowl is simply indescribable. Thousands, perhaps millions of birds were seen at a glance; it held us almost spell-bound.

On the near shore, which was a sandy beach, were hundreds of waders, yellow-legs and "teeters" by the drove, and many more uncommon birds such as avocets, willets, curlew and herons, great and small.

The members of the Uneasy Club have hunted, as a party or individually, from the lakes and marshes along the St. Lawrence, on Long Island Sound and the Jersey coast to the foothills of the Rocky Mountains, and from Manitoba into Old Mexico; but up to this time, in the year 1904, never had they seen so beautiful a sight, from a sportsman's viewpoint.

Not content with watching the birds idly ride the waves, we must see them rise, so with an automatic rifle, half a dozen shells were fired into the mass of birds, which were between a quarter and a half-mile away. The elevation of the gun must have been nearly right, for in a second or two after the "spitt, spitt" of the exploding shells, an island seemed to rise from the lake with a thundering roar that could be heard for miles. Not a third of the birds rose, however, and from time to time others would be startled and again the thunder of waving wings and splashing water would roll from one side of the valley to the other.

Seated on the crest of the hill we seemed satisfied to gaze by the hour at this unusual show of game, as the ducks rose or settled back into the water. It was late in the afternoon when the birds, hungry, no doubt, seemed to be leaving in small flocks for some of the rice-covered marshes, which abound in the locality, to feed.

As the sun sank behind the western hills amid golden-crimson clouds of glorious sight to the music of whistling wings of the mallards far over head, or the whirring rush and roar of a bunch of teal as they skimmed the brow of the hill on their way to supper, we started back to camp. By way of a good night a coyote howled from a distant hill, and a pair of blue herons, situated against the crimson sky, fanned their great wings and squeaked as we began the descent to camp and to supper. Indeed we had enjoyed a glorious day's sport with scarcely the fring of a gun.

That evening, while we were lounging about camp, plans were laid for the next day, when we expected to have good sport, as it was no question of birds, for we had seen them.

The conversation, however, led up to an argument about the duck supply. One was of the opinion that there were as many ducks at present as there were earlier. Another referred him to conditions prevailing in the Mississippi and Missouri valleys which could in no way be compared to a period of twenty-five years earlier, when ducks were everywhere. Then the member who had studied the matter, but who was not inclined to

decide the question or to say that rational shooting would cause the ducks ever to become extinct, gave a long dissertation.

He knew this, however, that ducks were to be found if the hunter went to them, and in large numbers, as observations made that day attested. In all the earlier history of the West and particularly of this which was a part of what was then known as the Great American Desert, he was unable to find recorded that ducks were even numerous in the locality. The great river valleys mentioned as being alive with wildfowl twenty-five years earlier have undergone gradually a physical change that is almost beyond belief. Where then stood thousands of acres of virgin forest, with its attractive mast, the same number of acres of corn are found now. The marshes, hundreds of them, have been drained. The prairie ponds that were once scattered all through the north central part of the country have disappeared, and the few remaining natural marshes are trampled by cattle and rooted by swine, and the bottoms are continually plowed by the prolific carp until it is little wonder a self-respecting flock of waterfowl is seldom if ever seen there.

Did he believe in game protection? Certainly, and to the extent of making it comprehensive, too. Little use is there in restraining the gunner if you continually ditch every slough or lake and cut out the forest. These are things to be considered as well as the persistent shooter who is dead sure, sooner or later, to overshoot the limit and be registered as a "game hog" number so and so by some crank too narrow to judge a sportsman or a pot hunter. Show me a hunter who bags ducks at less than a dollar apiece and I will show you an artist, an expert, who will hardly be influenced by sentiment. For if you analyze him, you will likely find he has thousands of birds to his credit (at \$1 per) and is after a partial settlement.

"In my opinion the birds have shifted to the West, where conditions are more nearly normal, and can still be found plentiful if sportsmen will stand the expense, time and trouble."

At this point the speaker discovered that his audience was sound asleep, and he proceeded to "douse the glim" and join them.

Next morning we started to make camp permanent, and after a good breakfast set about digging away the sand on one side of a towhead until we had a space large enough for the team to stand in; and with some willows and a couple of tent poles rigged up with the aid of pieces of canvas and rice stalks quite a decent shelter for the horses. With the Sibley tent brought from Anson's well staked we proceeded to bank the walls with dry sand, digging a trench around it a foot deep.

The sheet-iron heater, which makes these tents about as comfortable as one could wish, even in severe weather, was next set up, and with a little more arranging of the beds and supplies, we had completed the finest camp we had ever built. What pleased us not a little was that we were no longer in danger of the dreaded fire, and had the assurance when returning tired from a hard day's hunt of a comfortable resting place, even in this wilderness of grassy sand hills.

Everything in order, we hitched up the team and were just ready to start on a hunt when a horseman appeared coming over the hill. We delayed starting until he should pass or make known his business, as it was our custom to leave camp unguarded for a whole day quite often. As the rider neared us we could see he was an Indian, wearing one of Uncle Sam's regulation blue overcoats and the usual brown hat with the brim drooping front and back, his hair hanging in a braid behind either ear. The coming of an Indian to our camp was unusual, as in all previous trips we had never but once encountered Indians. He rode directly to us and made his business known with no delay, handing Bill a folded paper and at the same time laying his carbine, which he drew from the holster, across the pommel of his army saddle ready for action. Not a word passed but the usual Indian "How" by way of salutation.

The paper, which proved to be a message from the Agency, read as follows:

"To the party of hunters camped on Hoy Creek, north of Big Alkali Lake: You are hereby notified to at once leave the reservation. The bearer of this message, a member of the Indian police, has orders to escort you to the boundary, between your camp and C., or to arrest you if you refuse to vacate. — Indian Agent."

There was no mistaking the tone of the message, but as we held a permit from this same agent, we were inclined to know why we were to be put off the reservation before we had really arrived and settled.

"Why does the agent send this message?" inquired Bill, who has a peculiar faculty for handling Indians.

"White man start grass fire; no have pass to Indians' land," answered the Indian.

"We did not start the fire, and we hold a permit to hunt on this reservation," exclaimed Bill, rather warmly, pulling the paper from his coat, which was still legible in spite of the soaking it had the day before, and handing it to the Indian.

He seemed to regard it as genuine, though hardly able to read, and he was evidently disappointed.

We then explained that we were caught by the fire at that point and had no great trouble in convincing him that the fire came from further up than our camp.

"When you come here?" he asked.

"Half hour before fire," answered Bill.

Without delay he replaced the carbine in its case and grunted, "Uh, much damn fool up creek," and digging his heels into the ribs of his pony, away he flew to locate the "sports," who had gone in the day before our arrival without permit or a regard for certain formalities which must be observed even in this unsettled grassy waste.

After the departure of the "police" we were not long in arriving at the slough end of Big Alkali, and having placed fifty decoys, which bobbed and drifted in the breeze, we took our stations.

It was here that the excitement of some grand mallard shooting held us for the greater part of the afternoon, which contributed to the putting out of mind every care

or thought of business, civilization or anything in fact but the glorious sport of duck shooting.

With light winds and bright skies we were permitted to "strain" our guns at flocks of high-flying mallards, which needed "leading" from six to ten feet in order to get results. Occasionally a strong-flying greenhead would fall with broken wing, fighting every inch of its rapid descent, striking the water with a crash and a splash of silvery spray.

"Soak him, Lanie," some one shouts; and you finish him with the other barrel. Then with a leap the retriever, which has been watching every move, swims out and fetches the great bird. Or again, shot through the neck, stone dead in the air, the bird falls like a meteor so close to your boat that the great splash drenches you, and your companion down the slough yells, "Good eyes, old boy."

If such pictures, which are rarely painted, are not interesting enough, let the reader sit with one of us a moment while an immense flock of canvasbacks whirl out of the heavens pell-mell for the decoys, while every shooter is crouching rigid, knowing that if no mistake is made the reward for a well placed shot will be one or perhaps two of the "kings of the air" and the duck family.

On they come, cutting the air with their trim, strong wings, and as they "rubber" at the decoys every shooter's heart pounds with excitement; they wheel and arch their wings, feet extended ready to resist the contact with the water, their chestnut colored heads glistening in the sunlight as they stretch their long necks low toward the water.

Who could wait another second unless to let the birds actually light? Not we. We fire into them, and again as they tower, frightened, until out of reach of the deadly guns, and we quickly load and finish the wounded, when five still or kicking bodies lay floating among the decoys.

We had not killed nearly the limit allowed by law, the day was not a typical duck day, being far too bright and warm, but we had used many shells, and our shoulders were beginning to feel the effects of them. So when some one suggested, "Sufficient for the day is the sport thereof," we pushed our boats back to shore where the wagon awaited us.

Whoever sat down to a better supper or had a better appetite than we that evening? Indeed, if broiled jack snipe, baked potatoes, celery, cornbread and molasses and coffee were not enough to satisfy us it was complete when afterward we lighted our pipes and gathered about the heater, which roared as it consumed the corn-cob fuel. Amid the wreaths of smoke we sat and talked, and George, the sage of Honey Creek, coined a phrase as he rolled up in his blanket and remarked: "A toiler dies once every day—a dreamer or a duck shooter never." And in two minutes he was dead to the world, but still chasing snakes and skunks in his slumbers.

When we awoke in the morning it was to find the north wind driving snow and sleet—an ideal duck day. We moved down to the boats to the music of the wind as it moaned, flute-like, in the gun barrels, and the sleet rattled on our mackintoshes. How the ducks were flying. Great flocks just arriving from the north would pitch into the marsh unmindful of cracking guns, determined to light regardless of peril.

Bob and Bill, who had drifted far down the large marsh keeping the boat under cover as much as possible, had some splendid shooting, as the mass of dead ducks in the boat could testify.

About 10 o'clock, when more than a mile below camp, they were attracted by continual yelling from a point still farther down the slough and decided to investigate. Pulling around a point of flags and rice they discovered standing in the open water up to their armpits two hunters, who, when they saw the boat, began calling for help. Hastily pulling up to them they found they were friends from Omaha who were staying at Anson's, and who were not known to be in the country. They were nearly frozen and in no humor to even explain matters. Their one desire was to get out of the cold water, and as the boat drifted up one of them lost no time in scrambling into it, and in doing so shipped a large amount of water.

Bob was doubtful if our boat would carry the whole party, but it was cruel to leave them there a moment longer, so with a little coaching and a little more care than his companion had used in boarding, the second victim finally succeeded in getting in, the rescuing boat sinking down to the gunwales.

Just as the oars were about to be used, the oarsman seemed to "catch a crab," as the blade popped out of the water and seemed to be glancing off of something. It was discovered that the metal (non-sinkable) boat that had swamped had decided, its load relieved, to come off the bottom and return to the surface. With the catching of the crab and a particularly large wave which struck the rescuing boat at about the same time and shipping another small "sea," down it went as gently as a fish, and four men were standing up to their necks in the ice water.

The look of despair on the faces of the rescued and the alarm of the rescuers must indeed have been pathetic. No man could wade to shore; the bottoms of these lakes are of mud the consistency of quicksand.

There lay "Old Ironsides," which had caused the trouble, behaving like a submarine, the deck over the air chambers fore and aft a little above the surface. Something must be done, and quickly, too, for two of the party had been in the water nearly an hour, so drawing up the metal boat we started with our hats to bail her out, which was slow work. Bob was known to smile as the boat gradually rose, had he dared laugh at that time, as he did later and does to this day, the rest would certainly have finished him up and left him there.

With the water out of her the metal craft rode the waves like a duck, and soon two of the party and the guns were sailing shoreward in it as fast as oars and a chilly oarsman could pull it. Then back for another load, and finally with the chain of the sunken boat attached they dragged her off the bottom and slowly to shore. Then laying the guns on the ground together with the heavy drenched clothing—they never stopped to recover nearly a hundred ducks that had drifted away from the

two boats—they raced for camp, which was a good two miles.

With the heater about to burst with fuel, and a quart of Old Crow where it would do the most good, we decided that Bob had a perfect right to laugh. We also commended him when he determined that he would have that bag of ducks which had drifted away. He was soon on the way with the driver and team to bring back the deserted guns and clothing.

Would this sort of thing go on for a month? Surely, with situations and all equally interesting interspersed with days of loafing, card playing, feasting and sleeping until when finally camp is struck and our "private car" is switched out and attached to a stock train, we bowl homeward, bruised, burned, tanned, hungry continually, happy, and in a few months are uneasy to be back again to the land of the Indian, with its lakes and hills, purest of air, game in abundance, and a charm for the sportsman that cannot be described.

BILL.

## My First Camp.

YEAR after year, from the time I was big enough to handle an air rifle and a six-foot fishing pole, the desire to "rough it," to live in the woods in a tent, began to grow on me. And year after year that desire was nourished by an anticipation many times to be blasted by the upsetting of my plans. All through the winter I collected catalogues from the many sportsman's supply houses and looked them through and through, planning and dreaming as I sat before the glowing hearth, of camp life never yet realized. I could see the group gathered around the crackling flames of the yarn-breeding camp-fire, its blaze reflecting in their faces, giving a cast of romance to the whole scene; the tent in its whiteness contrasting with the black shadows that lurked in the surrounding forest, and the uncertain reflection of the unlit sky on the silent lake. It was almost realization as thoughts developed and surroundings fell away. But the bed hour came and that trash—the catalogues—must be put away and carefully, too, or some time it would add fuel to the hearth fire which so stimulated my wide-awake dreams.

Books on camping and camp life, by those who have enjoyed its freedom and met its hardships, added greatly to my desire. Unfortunately my health was not good, and although such an outing might have proved beneficial, my parents considered the experiment a very risky one, and my school chums camped without me. Public school days passed and the long summer vacation narrowed down to a short two weeks. From bad to worse I enlisted in the drug business with the idea of mastering the profession, and even my winter evenings' dreams had to be given up for long wearisome hours behind the counter. I felt caged in forever. Three years' with scarce a vacation followed, a day now and then, but no chance to put in practice my ideas. At last, in August, 1904, I grew desperate and went so far as to give up my position in order to have two weeks' outing. I was well acquainted with the many little lakes of the country in which I was then staying, and chose for my purposes a quiet retreat on the eastern shore of Lake Wildwood, a pretty little sheet of water situated near the top of the Hamburg Mountains in northern New Jersey. The lake is too small to suit most campers, and "society," which some seek even in remote parts, is at that place an unknown feature.

Before starting it was necessary to devote almost a week to getting ready an outfit and finding a companion. Most of my friends had been away on their outing and those who had not were already tired of camp life. It might be enjoyed with a paid cook and an expensive outfit, but they had fought over the questions who should cook to-day, whose turn was it to get the water, who came next in line among the dishwashers, and other important and non-important matters. They had feasted one day and starved the next. Sometimes each was obliged to search the larder for himself when meal time came. "Yes," said they, "it sounds all very well, but when one has wasted several vacations trying to enjoy himself in a camp of 'scrappy' fellows he becomes quite satisfied with less freedom in order to get more true rest." At last a friend much younger than myself and equally inexperienced in the ways of the woods, heard that I wished a mate and expressed to me his desire to go along. He had always been anxious to tent, so having known him for some time as a generous, willing fellow I was only too glad to close a bargain with him at once.

All was settled that we were to start on Tuesday, the 16th. A ten by twelve tent had been borrowed—not a very favorable looking shelter, but shelter nevertheless. A small rowboat and a fourteen-foot canvas canoe, which I had just finished, were to furnish us means of navigation on the lake. We selected what few kitchen utensils we thought we could get along with and purchased provisions to last us two weeks. We found a small cot not in use that we thought would be all the bed necessary, so added it with several blankets to our outfit and we were ready to start.

It was a rough looking load that started up the mountain in the sultry heat of an August mid-day sun. The load was light enough but remarkably shapeless. Each article seemed to rest on a single point and jog and twist violently at the least irregularity in the road. My companion and myself trudged on behind all up that toilsome climb, watching through the thick dust lest any of our baggage fall out behind. It is well we did watch, too, for suit-case, pot and ax took turns in seeking a quiet resting place in the road. The gallon of kerosene became so troublesome that we were obliged to carry it to save other articles from ruin, and the butter, in the extreme heat, grew so anxious to run that we turned it loose along the road side.

Three hours of climb interrupted by frequent halts in order to rest the team and tighten the stay ropes had been accomplished before we drew rein on the eastern shore of Lake Wildwood. There in a clear spot surrounded by evergreens and oaks intermixed we proceeded to unload. The situation proved ideal. A broad slab of rock made a very desirable entrance to the tent and led down a few rods to where it projected a short distance into the lake, making a very attractive and convenient natural landing. Here we launched the boat in the cool waters, longing ourselves for a refreshing dip, but immediately returning

to pitch the tent and get camp in order before night came on. Things turned out in much better condition than we had expected they would after so long a churn. Some of the eggs were ready to scramble and the rice in the confusion of the journey must have thought there was a wedding among the knives and forks for it had scattered itself in their box in great confusion. Our tent was minus stakes and pins through somebody's carelessness, and we were inclined to think hard thoughts toward those who had last used the outfit but reconsidered and taking it as a joke, set about to cut what we needed from the material about us. It was indeed surprising how easily things went together. By the time the sun rested on the western hill and cast its golden rays across the rippled lake and up to our very tent door, the camp was in good order and we stood aside looking with pride on the result of our first attempt.

It was after seven when we sat down to eat our first meal. The smoked eggs and dust-scummed coffee seemed delicious to our ravenous appetites, and we began to doubt whether sufficient food had been brought. Present comfort on this occasion, however, received more consideration than future need, for we ate all we could with decency and then felt reluctant in leaving so refreshing a repast.

"Early to bed" was our motto that night. The dishes had been given a lick and a promise of better treatment in the future and stowed away in their box. Then to stow ourselves away. Had we known beforehand the experience of that night we might both have remained ignorant of the life in the woods. When two come to make themselves comfortable where there is scarce room for one, trouble begins. The narrow wide spaced slats of the cot cut our ribs miserably, and we had not material enough to overcome this. One side would tire and a signal would be given to turn, for if one tried to accomplish the act alone, he or the other would have been forced out. An hour of tossing about was enough. We lit the lantern and sat down to have a council of war. The remainder of the night was passed by rolling up in blankets and lying on the tent floor. This was fully as hard, but the hardness was equally distributed instead of in streaks. On the following morning after breakfast we set about to cut from the pines material for a mattress. Now, if we had had a rubber cover to throw over these green boughs, the bed would have been very comfortable, for the effect of the slats was overcome. But that night toward midnight a cold damp chill rose through the double blanket and I awoke with a sensation similar to what I might have experienced had I during my sleep been transported to cold storage. My partner, who had chosen to sleep in the hammock slung in the pines a few rods from the tent, had some time before abandoned so weird a shelter and was lying sound asleep on the floor. Stiff limbed I crawled out to make a light, stumbling over him and awakening him as I did so. We did not satisfactorily solve the bed question all the time we were at Wildwood, but concluded that a folding cot each and plenty of blankets were essential to comfortable nights.

In the food line we attempted nothing more complicated than rice pudding and pancakes. Our neighbors across the lake were very thoughtful and on several occasions sent us pies and cookies that would tempt any appetite, let alone that of a camper. One Saturday night two visitors put in their appearance, bringing with them a basketful of table delicacies and a good-sized chicken, destitute of head and feathers but otherwise complete, being the chief article. (How we slept that night is a puzzler.) After an 8 o'clock breakfast the following morning my partner in camp and one of the newcomers suddenly and without notice disappeared. Beside all the camp chores to be done there were preparations to be made for the dinner. I was not a little provoked at the situation, but visitor No. 2 was a hustler, and in a short time all the breakfast work had been done and our heads got together over the chicken. We had both witnessed the "drawing act" from a distance but lacked practical knowledge of just how to begin. Somewhere inside we had heard there was a gland which, if broken, would spoil the whole stew—that we must look out for at all hazards. How ridiculous we must have looked, our sleeves rolled to the elbow, one holding on for dear life while the other, with a wave-edged bread knife, studied and worked attentively.

During all the time we were busy about camp, the visitor and myself were planning some means of provoking the jealousy of the two who had deserted us at so critical a time of day. We had determined to carry the fifty-pound canoe a distance of one mile to a pretty and secluded little lake, seldom visited except by the mountaineers, and named by them Mud Pond. The sign, "Gone on a canoe trip to Mud Pond—Chicken dinner in camp at 2 P. M.," was hurriedly written and pinned on the flap of the tent and all haste was made to get off before we should be discovered. No time of departure was stated lest they return soon after the start and overtake us. Paddles and cushions were carried down to the rock landing, where the craft lay basking in the warm sun of the beautiful morning. Neither of us had ever carried or helped to carry a canoe any distance, but we were sure that what others had done we could do. Books treat lightly of long carries even when considerable duffel is included, and the way is in the bed of a shallow stream or over an imaginary trail through a dense growth of underbrush that makes progress almost impossible. Our course was over an old wood road still in fair condition and remarkably free from hills for a mountain road. After several clumsy moves the canoe was hoisted to our shoulders and we proceeded. Both were on the same side of the boat and before many steps had been taken we were obliged to halt and try a different arrangement. One on either side worked much better. Soon the twenty-five pounds seemed to be approaching the hundreds, and the sharp keel of the canoe cut through the cushions unmercifully, so that a halt was suggested and unanimously carried. The next pause was made at the half-way cross road. Neither had complained but our shoulders were feeling raw to the bone and our backs ached severely. Two or three more periods of endurance and two or three more rests, then we struck through the underbrush that borders the pond and emerged on the peculiar shore of our destination.

Mud Pond is well named, for in the upper end of this body of water there is a deposit of light mud varying in

depth from five to ten, perhaps even twenty feet in depth. This when brought to the surface has a sickening malarial odor and appears alive with odd-shaped insects. Even though it was the latter part of August we plucked a good-sized bunch of beautiful water lilies that day. The contrast of the pure white growing out of that filthy muck was forcibly impressive. Now and then we came near puncturing our canoe on sharp rocks which lay hidden in the deposit, for the water is quite shallow where the lilies grow, so shallow indeed that at times we seemed to be floating on the ooze. Numerous schools of catfish darted here and there, and leeches fully six inches in length zigzagged their way through the water. The lower end of the lake is quite clear and the eastern shore is a beach of sand dotted with many huge boulders. We spent two hours studying the peculiarities of the place and then pointed our prow toward where the home trail approaches the margin. There is not one good landing place along the whole shore. The sand beach is firm enough but just beyond is a swamp, making an approach from that side very difficult. We struck out for camp with both feet wet and muddy. The carry back was a repetition of sore shoulders and lame backs, but the distance seemed much shorter this time and the task far more pleasant. When two-thirds of the way home our course was altered and we turned into a surveyor's trail to Wildwood, which cut off a hard portion of the trip and gave us a refreshing paddle into camp at the finish.

The air at the mountains was delightful. Two more favorable weeks could not have fallen to the lot of campers out. Fishing in the lake was not as lively as we had hoped to find it, but there was a mountain full of interest to the nature lover, and when so disposed one could sit by the hour and watch the ways of the inhabitants of the woods.

Many were the discomforts of those two weeks, but the rest, freedom and experience of the inspiring life fully atone, and the camper who learns to camp grows to know and love the woods, and when far from their poetical environments looks back with a smile even upon the hardest of the hardships.

A. L.

## Nutting Days.

THE transition of summer into autumn is often almost imperceptible. September days are as much like August ones as twin chestnuts in the burr. There is as yet no hint of chill in the soft, hazy air. The bumble bees hold high revel in the clover blooms on the fresh rowen. The woods show a front of unbroken green, for the torch which shall so soon set their ranks aglow has not yet touched them. True, the darkness descends earlier, the cricket chirps dimly, and the wind rises and moans o' nights in the pines, but we do not heed their warning when the days are packed so full of summer joys. At last, old Boreas grows tired of the long-continued reign of the zephyrs. He marshals his forces and sends them brawling and blustering over the land. For a day and a night, his raiders sweep hill and plain. They try every door and fastening, and tug at the anchorings of the boats on the bay. They toss the arms of the giant oak and whirl the dark mane of the lofty pine. Many a brave ship goes down before their charges. Other forces lend their aid to the winds. The air is murky and dim. The rain descends from the heavy skies. It is not the copious downpour of the summer showers, but a cold, persistent drizzle that penetrates to the marrow of our bones. The chill creeps into the house and sends the cattle cowering to the barns for shelter. Finally, the sun breaks through the clouds and floods the earth with his cheery light. Now we see that the change has come. The farewell-summer blooms by every road side. The days of the sere, the yellow leaf have stolen upon us unawares.

But autumn has its compensations for all that it takes from us. One day, you learn (it may be the sight of the venter roasting the plump, glossy nuts over his pail of coals) that chestnuts are ripe. Then memory leads you back to the old farm and the chestnut grove on the hill. Your thoughts follow a boy with a brown spaniel at his heels. He knows the grove and has watched its fruit with an eager eye. He does not intend that the squirrels shall have his share. Breakfast is a mere formality to the boy in nutting time. He swallows a few mouthfuls, then bolts for the door. Outside, he examines the old shotgun that he so carefully loaded the night before, then hurries across the frosty stubble with Gip, barking and frisking about him. He scolds her, tells her she will scare away all the squirrels. Little does Gip care for squirrels. It is pure joy to follow Master that shines out of her brown eyes and sets her stubby tail wagging. Soon the gun speaks out on the hill, and a limp, bleeding form tumbles out of a tree. How proud the boy feels as he bags his first squirrel!

When game fails, he gathers the nuts that are beginning to drop from the opening burrs. He swings himself into one of the great trees and stamps and shakes the boughs until the chestnuts fall in a merry rain. Other boys come, for it is a holiday, and the grove rings with their happy voices. When the sun sinks behind the hills, they all go home with caps full, pockets full, sacks full, some to eat, and some to store away for winter feasting.

What fun the boy had, now you think of it! How close and stuffy the office seems as you recall the wind-swept hillside! Why not go up to the old farm and retaste those early joys? By Jove, the very thing! Let clients be hanged! You are off for the country for a real holiday—one of those seasons that drops the burden of care from a man's shoulders and makes him young again. In your burst of enthusiasm, you tell your partner of your plan, and he eyes you coldly as though he had doubts of your sanity. The poor wight! he was brought up in the city by a maiden aunt and knows nothing of a boy's good times on the farm.

Brother George stares, too, when you appear, for your visits at the farm have not been as frequent as they should be. The whole family welcomes you, especially your pretty nieces when they learn that you have come up from town for the express purpose of

going nutting with them. In the morning, you are off early for the grove. Strange that you should forget how rough and steep the hill is! The young folks race lightly up the path and you toil slowly behind, wishing vainly that you had brought a pair of easy shoes. When you reach the top of the hill, you are puffing like a grampus and are glad to rest a bit in the shade.

Can these be the same trees that you used to shin up in your boyhood days? That feat is impossible now for one of your girth and dignity. You contrive to thrash off a few nuts from the lower branches, but the stick is too short and the labor exhausting. Then you find the very tree that you used to scramble into as nimbly as a squirrel. It looks easy still, suppose you try it. You catch hold of a bending limb and draw yourself up with a supreme effort.

C-r-a-a-c-k—thud! that was a nasty fall. You gather yourself up and limp painfully away. No more gymnastics for you! A small boy is circling about in the distance, plainly bursting for the chance, so you beckon to him and pay him to climb up and shake off the nuts.

That night you sit down in your room and reckon up the damages:

Item—One sprained ankle.

Item—One nervous system severely shaken up.

Item—One pair of new trousers badly rent.

Item—One lot of cherished illusions damaged.

You muse a while over the mutability of all things earthly and your reflections run somewhat in this fashion: "As a man thinketh in his heart, so is he," say the scriptures. That applies to the old fellow who wished to relive his boyhood pleasures. Some things he must forego. No more racing barefoot over the sod, nor happy games under the spreading boughs. They belong to the irretrievable past. In future, since he is fat and forty, he will perform all athletic feats by proxy. But let him hold fast to his love for green fields and chestnut groves as he holds to faith and honor. Let him keep, too, the heart of a boy with its enthusiasms and gayety, its high hopes and unspoiled ideals. It may be a saving grace for him yet—who knows?

M. E. COLEGROVE.

## Trails of the Pathfinders.—XXXIV.

George Frederick Ruxton—Mexico and the Rocky Mountains.

SOMETIME about 1840 George Frederick Ruxton, a young Englishman, was serving in Canada as an officer in a British regiment. In 1837, when only seventeen years of age, he had left Sandhurst to enlist as a volunteer in the service of Spain, where he served with gallantry and distinction in the civil wars and received from Queen Isabella II. the cross of the first class of the Order of St. Fernando. The monotony of garrison duty in Canada soon palled on one who had taken part in more stirring scenes, and before long he resigned his commission in his regiment, and sought new fields of adventure.

He was a man fond of action and eager to see new things. His earliest project was to cross Africa, and this he attempted. It was only an attempt, for the point at which they began their journey was one without water, and without inhabitants; and it was only by the assistance of some of the natives that the lives of Ruxton and his companion were saved.

He next turned toward Mexico as a field for adventure, and has painted a fascinating picture, both of life there at the time of the Mexican war and of life in the mountains to the north. The two small volumes of his writings are now out of print, but they are well worth reading by those who desire to learn of the early history of a country that is now well known, and which within fifty years has changed from a region without population to one which is a teeming hive of industry.

In Ruxton's "Adventures in Mexico and the Rocky Mountains" is a singularly vivid account of the author's journeyings from England, by way of the Madeira Islands, Barbadoes and others of the Antilles, to Cuba, and so to Vera Cruz, more fully called the rich City of the True Cross; or as often, and quite aptly—from the plague of yellow fever which so constantly ravaged it—the City of the Dead. From Vera Cruz he traveled north, passing through Mexico, whose coast was then blockaded by the Gringos of North America, then through the country ravaged by marauding Indians, and at last leaving Chihuahua and crossing by way of El Paso into New Mexico he reached what is now the South-western United States. Through this country he passed—in winter—north through the mountains, meeting the trappers and mountaineers of those days and the Indians as well, crossed the plains, and finally reached St. Louis, and from there passed east to New York.

Although Ruxton was untrained in literature he was a keen observer, and presented his narrative in most attractive form. He saw the salient characteristics of the places, and the people among whom he was thrown, and commented on them most interestingly. He gives us a peculiarly vivid picture of Mexico as it was during its early days of stress and strain, or from the time of its independence, for within the last twenty-five years there had been not far from 250 revolutions. This state of things, as is well known, continued for a dozen years after the Mexican War, or until the great Indian, Juarez, became ruler of the country and put down lawlessness and revolution with a strong hand. Since his day Mexico has been fortunate in its rulers.

Just after Ruxton reached Vera Cruz, General Santa Anna, ex-president of Mexico, reached the city, having been summoned to return after his expulsion of a year before. Santa Anna was received with some form and ceremony, but with no applause; and before he had been long ashore was cross-examined by a representative of the people in very positive fashion, and submitted most meekly to the inquisition.

It is hardly to be supposed that Ruxton, who had been a British soldier, would be blind to the extraordinary appearance and absolute lack of discipline of the Mexican troops, and his description of the soldiers, their equipment, and the preparations for the reception of Santa Anna is interesting. "The crack regiment of the Mexican army—Elonze the 11th—which happened to be in garrison at the time, cut most prodigious capers in the

Oct. 7, 1905.]

eat plaza several times a day, *disciplinando*—drilling or the occasion. Nothing can, by any possibility, be conceived more unlike a soldier than a Mexican *militar*. The regular army is composed entirely of Indians—wretched looking pigmies, whose grenadiers are five feet high. Vera Cruz being a show place, and jealous of its glory, generally contrives to put decent clothing, by subscription, on the regiment detailed to garrison the town; otherwise clothing is not considered indispensable to the Mexican soldier. The muskets of the infantry are (that is, if they have any) condemned Tower muskets, turned out of the British service years before. I have seen them carrying firelocks without locks, and others with locks without hammers, the lighted end of a cigar being used as a match to ignite the powder in the pan. Discipline they have none. Courage a Mexican does not possess, but still they have that brutish indifference to death, which could be turned to account if they were well led and officered by men of courage and spirit."

Toward the end of the rainy season Ruxton, with a *rozo*, started for the north. He traveled on horseback, and his way was made difficult by the condition of the roads, which were heavy from rain, and by the presence in the country of troops on their way to the war, which made the accommodations, bad at best, still worse.

Concerning the City of Mexico and its inhabitants of the better class he speaks with some enthusiasm, but the hotels were villainous, the city unsafe for strangers after night, and, at that time, a blonde man—a *guero*—was constantly taken for a Texan or a Yankee, and was subject to attack by any of the people.

In the City of Mexico Ruxton purchased horses from a Yankee horse dealer named Smith, and set out with a pack train for the farther north. His account of his travels, the difficulties of the way, the inns at which he stopped and the cities that he passed through are extremely interesting. Of the manufacture of the national drink, *pulque*, the favorite beverage of the Mexicans, he says: "The *maguery*, American aloe—*Agavá americana*—is cultivated over an extent of country embracing 50,000 square miles. In the City of Mexico alone the consumption of *pulque* amounts to the enormous quantity of 11,000,000 of gallons per annum, and a considerable revenue from its sale is derived by Government. The plant attains maturity in a period varying from eight to fourteen years, when it flowers, and it is during the stage of inflorescence only that the saccharine juice is extracted. The central stem which incloses the incipient flower is then cut off near the bottom, and a cavity or basin is discovered, over which the surrounding leaves are drawn close and tied. Into this reservoir the juice distils, which otherwise would have risen to nourish and support the flower. It is removed three or four times during the twenty-four hours, yielding a quantity of liquor varying from a quart to a gallon and a half.

"The juice is extracted by means of a siphon made of a species of gourd called *acofote*, one end of which is placed in the liquor, the other in the mouth of a person, who by suction draws up the fluid into the pipe and deposits it in the bowls he has with him for the purpose. It is then placed in earthen jars and a little old *pulque*—*madre de pulque*—is added, when it soon ferments, and is immediately ready for use. The fermentation occupies two or three days, and when it ceases the *pulque* is in fine order.

"Old *pulque* has a slightly unpleasant odor which heathens have likened to the smell of putrid meat, but when fresh is brisk and sparkling, and the most cooling, refreshing and delicious drink that ever was invented for a thirsty mortal; and when gliding down the dust-dried throat of a way-worn traveler who feels the grateful liquor distilling through his veins, is indeed the '*licor divino*,' which Mexicans assert is preferred by the angels in heaven to ruby wine."

Wherever Ruxton passed his fair hair and complexion and his excellent arms were subjects of wonder; the first to the women and children, the second to the men. His double-barreled rifles seem especially to have impressed the men.

As he passed further and further north he heard more and more concerning the raids of the Indians, and at the ranch of La Punta, where he stopped to witness the sport of tailing the bull, he heard from one of the inhabitants an account of the raid of the previous year, in which a number of peones were killed and some women and children carried away to the north. He says: "The ranchero's wife described to me the whole scene, and bitterly accused the men of cowardice in not defending the place. This woman, with two grown daughters and several smaller children, fled from the rancho before the Indians approached and concealed themselves under a wooden bridge which crossed a stream near at hand. Here they remained for some hours, half dead with terror. Presently some Indians approached their place of concealment; a young chief stood on the bridge and spoke some words to the others. All this time he had his piercing eyes bent upon their hiding place, and had no doubt discovered them, but concealed his satisfaction under an appearance of indifference. He played with his victims. In broken Spanish they heard him express his hope 'that he would be able to discover where the women were concealed—that he wanted a Mexican wife and some scalps.' Suddenly he jumped from the bridge and thrust his lance under it with a savage whoop; the blade pierced the woman's arm and she shrieked with pain. One by one they were drawn from their retreat.

"*Dios de mi alma!*—what a moment was this!—said the poor creature. Her children were surrounded by the savages, brandishing their tomahawks, and she thought their last hour was come. But they all escaped with life, and returned to find their houses plundered and the corpses of friends and relations strewn the ground.

"*Ay de mí!*—what a day was this! '*Y los hombres*,' she continued, '*qui no son hombres!*'—And the men—who are not men—where were they? '*Escondidos como los ratones*'—hidden in holes like the rats. '*Mire!*' she said, suddenly, and with great excitement; 'look at these two hundred men, well mounted and armed, who are now so brave and fierce, running after the poor bulls; if twenty Indians were to make their appearance where would they be? *Vaya! vaya!*' she exclaimed, '*son cobardes*'—they are cowards, all of them.

"The daughter, who sat at her mother's feet during the

recital, as the scenes of the day were recalled to her memory, buried her face in her mother's lap and wept with excitement.

"To return to the toros. In a large corral, at one of which was a little building, erected for the accommodation of the lady spectators, were inclosed upwards of a hundred bulls. Round the corral were the horsemen, all dressed in the picturesque Mexican costume, examining the animals as they were driven to and fro in the inclosure, in order to make them wild for the sport—*alzar el corage*. The ranchero himself, and his sons, were riding among them, armed with long lances, separating from the herd, and driving into another inclosure, the most active bulls. When all was ready, the bars were withdrawn from the entrance of the corral, and a bull driven out, who, seeing the wide level plain before him, dashed off at the top of his speed. With a shout the horsemen pursued the flying animal, who, hearing the uproar behind him, redoubled his speed. Each urges his horse to the utmost, and strives to take the lead and be first to reach the bull. In such a crowd, of course, first-rate horsemanship is required to avoid accidents and secure a safe lead. For some minutes the troop ran on in a compact mass—a sheet could have covered the lot. Enveloped in a cloud of dust, nothing could be seen but the bull, some hundred yards ahead, and the rolling cloud. Presently, with a shout, a horseman emerged from the front rank; the women cried '*Viva!*' as, passing close to the stage, he was recognized to be the son of the ranchera, a boy of twelve years of age, sitting his horse like a bird, and swaying from side to side as the bull doubled, and the cloud of dust concealed the animal from his view. '*Viva Pepito! viva!*' shouted his mother, as she waved her *rebozo* to encourage the boy; and the little fellow stuck his spurs into his horse and doubled down to his work manfully. But now two others are running neck and neck with him, and the race for the lead and the first throw is most exciting. The men shout, the women wave their *rebosos* and cry out their names: '*Alza Bernardo—por mi amor, Juan Maria—Viva Pepito!*' they scream in intense excitement. The boy at length loses the lead to a tall, fine-looking Mexican, mounted on a fleet and powerful roan stallion, who gradually but surely forges ahead. At this moment the sharp eyes of little Pepe observed the bull to turn at an angle from his former course, which movement was hidden by the dust from the leading horseman. In an instant the boy took advantage of it, and, wheeling his horse at a right angle from his original course, cut off the bull. Shouts and vivas rent the air at sight of this skillful maneuver, and the boy, urging his horse with whip and spur, ranged up to the left quarter of the bull, bending down to seize the tail, and secure it under his right leg, for the purpose of throwing the animal to the ground. But here Pepe's strength failed him in a feat which requires great power of muscle, and in endeavoring to perform it he was jerked out of his saddle and fell violently to the ground, stunned and senseless. At least a dozen horsemen were now striving hard for the post of honor, but the roan distanced them all, and its rider, stronger than Pepe, dashed up to the bull, threw his right leg over the tail, which he had seized in his right hand, and, wheeling his horse suddenly outwards, upset the bull in the midst of his career, and the huge animal rolled over and over in the dust, bellowing with pain and fright."

Pushing northward through Mexico, Ruxton passed into a country with fewer and fewer inhabitants. It was the borderland of the Republic, where the Indians, constantly raiding, were killing people, burning villages, and driving off stock. The author's adventures were frequent. He was shot at by his *moso*, or servant, who desired to possess his property. He met wagon trains coming from Santa Fe, owned and manned by Americans. He lost his animals, was often close to Indians, yet escaped without fighting them; assisted in the rescue of a number of American teamsters, who had endeavored to strike across the country to reach the United States, and many of whom had perished from hunger and thirst, and finally, while on this good errand, was robbed of all his property by thieves, in the little village where he had left it. His journal of travel is pleasantly interspersed with traditions of the country and accounts of local adventures of the time.

Reaching Chihuahua he found the shops stocked with goods brought from the United States by way of Santa Fe, it being profitable to drive the wagon trains south as far as Chihuahua, rather than to sell their loads in Santa Fe. This Santa Fe trade, always subject to great risks from attacks by Indians and other dangers of the road, was made still more difficult from the extraordinary customs duties laid by the Mexican officials, who, without reference to the nature of the goods carried, assessed a duty of \$500 on each wagon, no matter what its size or its contents.

"Of Chihuahua, as it was in those days, Ruxton writes with enthusiasm: "In the Sierras and mountains," he says, "are found two species of bears—the common black, or American bear, and the grizzly bear of the Rocky Mountains. The last are the most numerous, and are abundant in the Sierras, in the neighborhood of Chihuahua. The *carnero cimarron*—the big-horn or Rocky Mountain sheep—is also common on the Cordillera. Elk, black-tailed deer, *cola-prieta* (a large species of the fallow deer), the common red deer of America, and antelope, abound on all the plains and sierras. Of smaller game, peccaries (*javalí*), also called *cojamete*, hares and rabbits are everywhere numerous; and beavers are still found in the Gila, the Pecos, the Del Norte and their tributary streams. Of birds—the *faisan*, commonly called *paisano*, a species of pheasant; the quail, or rather a bird between a quail and a partridge, is abundant; while every variety of snipe and plover is found on the plains, not forgetting the *gruya*, of the crane kind, whose meat is excellent. There are also two varieties of wolf—the white, or mountain wolf; and the coyote, or small wolf of the plains, whose long continued and melancholy howl is an invariable adjunct to a Mexican night encampment."

At the time that the author passed through Chihuahua that province was in a state of more or less excitement, expecting the advance of the "Americanos" from New Mexico. That province had been occupied by the United

States forces (Santa Fe having been entered Aug. 18, 1846, by Gen. S. W. Kearney), and following the troops was a caravan of 200 traders' wagons bound for Chihuahua. Ruxton was traveling northward, directly toward the American troops, and bore dispatches for the American commander; he was therefore treated with extreme courtesy in Chihuahua and went on his way. He has something to say about the Mexican troops stationed here at Chihuahua, whom Colonel Doniphan, two or three months later, with 900 volunteers defeated with a loss of 300 killed and as many wounded, capturing the city of Chihuahua, and without the loss himself of a single man in the campaign. As a matter of fact, one man was killed on the United States side while the Mexican losses were given as 320 killed, 560 wounded and seventy-two prisoners.

It was in November that the author bade adieu to Chihuahua and set out for Santa Fe. Though the country through which he journeyed was infested with Indians, yet now and then a Mexican village was passed, occupied by people who were poor both in pocket and in spirit, and satisfied merely to live. When the Rio Grande, which in old times was commonly called the Del Norte, was passed, Ruxton was in what is now the United States. It was then Mexican territory, however, and at El Paso there were Mexican troops, and also a few American prisoners. From here, for some distance northward, Indian sign was constantly seen, chiefly of Apaches, who made it their business and their pleasure to ravage the region.

On the Rio Grande, a few days' journey beyond El Paso, a surveying party under the command of Lieutenant Alert, of the United States Engineers, was met with, and near him was camped a great part of the traders' caravan which was on its way to Chihuahua. The scene here must have been one of interest. The wagons were corralled, making a fort, from which Indians or Mexicans could be defied, and the large and wild looking Missourians formed a striking contrast to the tiny Mexicans, with which the author had so long been mingling. The American troops in this and neighboring camps were volunteers, each one of whom thought himself quite as good as his commanding officers, and anything like discipline was unknown. Ruxton was greatly impressed by this, and commented freely on it, declaring that "The American can never be made a soldier; his constitution will not bear the restraint of discipline; neither will his very mistaken notions about liberty allow him to subject himself to its necessary control."

No doubt the troops which conquered Mexico were a good deal of a mob, and won their victories in a great measure by the force of individual courage, and through the timidity and still greater lack of organization of the troops opposed to them. On the other hand, Ruxton seems to have felt much admiration for the officers in command of the regular army. He speaks of West Point, and declares that the military education received there is one "by which they acquire a practical as well as theoretical knowledge of the science of war"; and that, "as a class, they are probably more distinguished for military knowledge than the officers of any European army; uniting with this a high chivalrous feeling and a most conspicuous gallantry they have all the essentials of the officer and soldier."

Ruxton spent some time hunting about this camp. One day he had a shot at a large panther which he did not kill, and later he found a turkey roost. After a short delay here he started northward again. One of his servants had deserted him some time before, and now he sent the other back to Mexico, because he was already suffering from the severity of the climate. The author's animals had now been traveling so long together that they required little or no attention in driving. Of course the operation of packing for a single man was slow and difficult. Continuing northward he reached Santa Fe, where, however, he did not stop long.

It was now winter, and the weather cold and snowy, but the intrepid traveler had no notion of waiting for more genial days. He has much to say about the Indians in the neighborhood and especially of the *Pueblos*, whose stone villages and peculiar methods of life greatly interested him. He found the Mexicans of New Mexico no more attractive than those with whom he had had to do further to the southward, but seems to have felt a certain respect, if not admiration, for the Canadian and American trappers who had married among these people. Some of these men advised him strongly against making the effort to reach Fort Leavenworth at this season of the year, but he kept on. The journey was difficult, however. His animals, natives of the low country, and of the tropics, were unused to mountain travel; each frozen stream that they came to was a cause of delay. The work of getting them on was very laborious, and every two or three days Ruxton froze his hands. He was now approaching the country of the Utes, who at that time were constantly raiding the settlements of northern New Mexico, killing the Mexicans and taking their horses. His purpose was to strike the Arkansas River near its headwaters, and to reach the Bayou Salado, an old rendezvous for trappers, and a great game country. The cold of the mountain country grew more and more bitter, and the constant winds made it almost impossible for the men to keep from freezing. Indeed, sometimes the cold was so severe that Ruxton found it necessary to put blankets on his animals to keep them from perishing. For days at a time snow, wind and cold were so severe that it was impossible for the author to shoot game near to him, as he could not bend his stiffened fingers without a long preliminary effort.

During a part of his journey from Red River north he had been constantly followed by a large gray wolf, which evidently kept with him for the remains of the animals killed, and for bits of food left around camp.

At length the Huerfano River was passed and a little later the Greenhorn, where a camp of one white trapper and two or three French-Canadians were living. A few days later the Arkansas was reached and then the trading post known as the Pueblo. Here Ruxton became a guest of John Hawkins, a well known mountaineer of the time, and here he spent the remainder of the winter hunting on the Fontaine-qui-bouille and in the Bayou Salado.

GEORGE BIRD GRINNELL.

[TO BE CONCLUDED.]

# NATURAL HISTORY

## The Biography of a Bear.—III

JACK had been allowed to wander freely about the place, and until the report of the Johnson disturbance reached me, I did not know that he ever left our own grounds. Shortly after this I ascertained that he had been making nocturnal expeditions about town, and from time to time I began to receive reports of his doings from various quarters. As he seemed to be always about the barn, house or orchard, I could not believe him guilty of having visited so many localities, and thought the reports exaggerated.

The several streets of Shasta were irregular parallel terraces skirting the spur of a mountain. As the slope was steep, the houses upon the upper sides of the streets were in most cases built into the hill, so that one could walk from an upper street out upon the roofs of the buildings fronting on the street below. The main business street was chiefly lined with a compact row of brick buildings that extended back into excavations in the hill. For the main part these buildings were compactly crowded together, a single wall often being the partition common to two owners. The roofs of a score or so of the buildings presented, from the street above, the appearance of a level floor of tin surrounded with fire walls and broken here and there with skylights and ventilators.

It developed that Jack made a practice of prowling over these roofs by night and was thus the cause of many burglar alarms and vague reports of mysterious disturbances. After his experience on the Johnson premises he evidently deemed it expedient to exercise caution, and he was soon so familiar with his nightly haunts that he appeared to be as ubiquitous in regions aloft as the ghost of King Hamlet was in the cellarage. Not content with prowling over the roofs of the stores and places of business, he sometimes made tours of dwellings and entered the houses.

Night watchmen and alarmed proprietors were frequently aroused and clambered over and about the flat roofs and fire walls with lanterns and the usual burglar chasing accoutrements. But it was only after many exciting alarms and midnight explorations, when some of them caught sight of the shadowy outlines of Jack, that they were more or less assured that the prowler was that distinguished bear of mine. I was notified and eventually warned that my bear might get into trouble.

Although no harm could be charged to him, for he did no damage of any but trivial consequence, when Jack began to invade dwellings in the quiet summer nights, the plot thickened. A number of worthy people were aroused in "the dead waste and middle of the night" by noisy dogs, terrified cats, bawling cows and snorting horses. Pots and pans in various kitchens, chairs upon porches, barrels, tubs and such movables were frequently overturned and tumbled about, sometimes distributed in a promiscuous manner. The clatter of pots and pans in his domicile aroused Mr. William Dunn, and when he went in night-costume to investigate he confronted Jack emerging from a pantry. Both parties to the meeting were astonished, but Jack, with notable decision and temerity left the Dunn residence through a window with great promptitude and velocity. Fences and ordinary barricades were entirely ignored by him in emergencies. The town dogs seemed either resigned to Jack's advent, or they had no instructions bringing bears within their department of household service. They awaited more explicit instructions with all the resignation of certain public officials, serenely content to give forth a few barks and avoided committing themselves further; or they hunted retreats known best to themselves.

These incidents made it judicious to try and keep Jack within neutral boundaries. By day he was not disposed to leave the yard or orchard, but I began to practice chaining him up after dark each night, although it always seemed a great indignity to one of his kindly disposition and intelligence. He protested against it at first, but soon learned to submit with remarkable resignation. He seemed to realize after a little time that it was one of the unavoidable disadvantages of a home in town. Perhaps he had reasoned out that community interests involve individual concession, a maxim that is somewhat hazy in its bearing upon modern instances in some centers.

### Jack Goes to the Mountains.

In the latter days of August my friend Enochs and myself decided upon a trip to the western slopes of the Sierras, in the region of Mt. Lassen, or Lassen's Butte. I had been over the intended route and knew many attractions connected with it. It was a long road, rough enough in parts, but it led to trout streams, deer ranges, tall timber and icy summits—where the August nights were frosty. It was a region offering many contrasts to hot houses and town life and many advantages over incessant business drudgery. It was a region where any man of observation, not utterly lost in sordid degeneracy, might get a view of the world to breed rebellion in his blood against many things in modern centralization—sometimes called civilization by those addicted to it. A region deadly to egoism, immutable as fate. An altitude from which there is a different perspective. A region of other comparatives and reversed examples, where a man not too far gone may realize his value, his insignificance, his liberties and his limitation.

There are mountains there with lakes near their summits, and lakes with forests in their depths. There are cañons that echo in derision the rare disturbance of human voice, or the sound of man's engines of industry or destruction. There is chaos of dethroned mountains, seas of rock from upheavals, shattered and powdered by storm and avalanche, melted in volcanic fires and flung

broadcast for a hundred miles. Forests and streams have tried for centuries—for the thousand years—and they have merely covered over a portion of the havoc and ruin wrought by forces now lying dead and silent. No man knows about such gigantic matters as to when or how or why. The glistening pebbles, polished by ancient and vanished rivers, and seas, are imbedded in adamantine conglomerate. Time is an insignificant word; place is an uncertain condition; individuality, or any other material combination, is casual and unstable. The very mountains have crumbled, and no man knoweth that they will not do it again. When they resume business of that kind I shall lose interest in them myself.

Enochs at that time was something of a tenderfoot. He was scarcely weaned from implicit reliance upon civilization—really had faith in it. He believed that no region was complete or worth while until it was divided into polling districts, farms, or laid off in town lots with franchises on the market. He confused the building of cities and towns, the cultivation of the soil, the building of ships and railways—the advance of civilization, as he called it—public improvement—he confused all this into meaning a sort of reclamation of the earth's surface. He thought a town a pillar of the universe and a politician or a policeman a symptom of social organization and humanity. Everything west of Ohio, where he had taught school, was to him in its incipency. He reformed, however, with notable alacrity. A year or two later, after a sojourn in Arizona and New Mexico, he went to the other extreme, was known to keep riotous company and periodically "shoot up" quiet old Shasta town with a .45 caliber revolver.

But at the time of which I write he was a tenderfoot and it devolved upon me to arrange for our trip and engineer its progress. I secured a team and wagon, a supply of provisions, camp necessities, or rather camp conveniences, such as a tent, cooking implements, etc., and engaged a half-blood Indian to go along with us. We had decided to start in the evening and travel by night, as the weather was torrid and the roads dusty. Accordingly everything was in readiness one evening, the wagon loaded with our supplies and Enochs and Dick on board. My saddle horse was brought, followed by our two dogs, and all was seemingly ready when I told the boys to wait, that I had forgotten something. Going to the barn I unfastened Jack and took him out to the wagon.

"What you going to do with that bear?" exclaimed Enochs.

"Going to take him along," said I.

"Is he going to ride in the wagon or on the horse?"

"Oh! he's going in the wagon."

"The devil he is! Well, then, I'll get out. What do you take me for anyhow—think I affiliate with bears as well as with Californians? No blasted bear is going to chew me!"

Enochs was about half earnest, but in the meantime, with a little encouragement, Jack had climbed into the wagon and I fastened his chain so that he couldn't get into the wheels. Hay had been placed so that he had a comfortable nest in the bottom of the wagon between our boxes and bales. Dick knew the plan, and he started up the team, while Enochs was yet protesting. Three or four days later we were a happy family, Jack, Dick, Enochs and myself, dining together and sleeping in the same shakedown, each in his own blankets, though Dick usually shared his with the bear. Dick drove the team and I mounted my horse and we were off, followed by various suggestions and donations of advice from some of our friends who had gathered to see us line up. Most of them had something to say as to how we might dispose of Jack in some more or less effective manner. But Jack was all right. As soon as he became accustomed to the motion of the wagon and could sit on the hay without holding, he had solved the theory of mobility by the expenditure of other than personal energy. He realized its advantageous economy. He was not much concerned as to the direction we took and seemed in no way curious as to his destination. If he became restless, a few crackers or other small contributions soothed him.

Leaving Shasta at dusk, we passed over the winding road up and down the hills in generally an eastward direction. The white, dusty road was easily followed, even before the moon rose, and in the course of an hour we ferried the Sacramento River near the town of Redding—at that time a newly laid out railroad town, largely made up of tents and saloons. As we crossed on the ferryboat, an old-style flatboat, or scow, operated by cable and windlass contrivance, the surface of the river shimmered in the moonlight like quicksilver. The boat made no sound but the little purling commotion in its wake and a slight creaking of pulleys as the current carried us over. As we crossed, the shimmering surface of the water was broken several times by the rising of large fish, presumably sturgeon. These fish were formerly numerous in the upper Sacramento, and I have seen them taken weighing from 700 to 1,000 pounds, and I know some good true lore regarding them. This lore is so interesting that I would like to tell it, but I cannot afford to have my reputation identified with that branch of natural history, as it is popularly esteemed. Ever since the adventure of Jonah and his whale, narratives concerning fish have been disparaged and the compilers of them regarded from diagonal perspective. Of course, this isn't right, but it is fascinating. Hence it is irremediable.

The Sacramento at this ferry is about 500 yards in width, but we were landed in about ten minutes after the man reversed his wheel and swung the boat from the bank. While the boat was being made fast at the landing, the ferryman, who seemed to be half asleep, ob-

served Jack in the wagon. The bear's chain allowed him to reach the end-gate at the back and he was standing up as we drove off the boat. The ferryman was curious, but too sleepy to ask questions, so he walked up and pushed his head forward over the end-gate. Jack dextrously and promptly slapped his hat off, and perhaps tweaked his ear slightly, displaying as he did so a brawny arm and shoulder. The man was dazed by the apparition and the slight jolt he was favored with.

He recovered his hat, with some little show of animation, and as I tendered him toll he remarked with considerable respiration, "Hi say, mister, whatinell's that bloody beast you 'ave there, hannyyow?"

Before I could reply, Enochs, who had seen and heard, shouted back: "'Ee's the lost Charlie Ross. 'Ee's dangerous."

"He looks as dizzy," said Enochs, "as the darkey who was queered at the railroad station. Dressed in his finest and carrying a carpet-bag he reached the ticket window somewhat out of breath. He wanted to know when the 6 o'clock train lef' foh Whiteville, how much a ticket cos' and other information. The agent stamped his ticket but, after searching his clothes apprehensively, the colored gentleman failed to find his money. As he put down his carpet-bag to feel for his treasure, a crook picked up the bag promptly and walked off with it. After much delay the darkey could produce no money, and he was stopping traffic in a busy time. In his agitation he stood half stupefied blocking the line. The ticket agent, prepared for emergencies, apparently, let down a rubber spider that was suspended from above somewhere. The spider was as large as an egg, painted in startling colors and worked its dangling legs fearfully. Slapping the spider away the darkey reached desperately for his carpet-bag. It was not there. He was now nearly frantic and attracting attention and remarks from a crowd.

"Whah is my carpet-satchet?" he yelled. "Whah is it? Whah am I? Who am I? W'y dis heah place 's no mo' fit foh 'adeepo' in spite eh hell!"

Enochs could tell some stiff anecdotes for an Ohio pedagogue, and they helped to ease the monotony of some miles of the road.

After leaving the river the road passed over a scope of dry rolling country, gravelly soil, chiefly timbered with white oak and thickets of shrub. Houses were long distances apart. Now and then we passed open ground where we saw jack-rabbits by hundreds loping about in the moonlight, looking as if they had no object in life whatever. Occasionally one of the dogs rushed a rabbit from the roadside, but he did so merely as a diversion. At such times the rabbits manifested little surprise but took some interest in things by trying to coax the dogs out for a hopeless chase. But our two dogs had learned more than the wisdom comprised in "try, try again" lingo. They had tried again until they had decided to wait for advice of more value. They preferred something more lucrative—something that might sometime be rounded up. They would rather chase something they could catch even if it was a bear and couldn't be used after they did catch it.

We passed through the sleeping village, Millville, without seeing anything to disturb the placidity of that town—not even a lighted window. But it was in the small hours of the night. We followed a little valley for three or four miles and then climbed several hundred feet to a hilly plateau. About dawn we reached Basin Hollow, a depression in the hills comprising several thousand acres mostly under cultivation or fenced for pasture. Houses were far apart.

As the east began to color faintly with approaching dawn we reached a large barn standing just off the road. It was half full of hay, a good portion of which was "foxtail," an infernal grass full of minute banderillas, fishhooks and spears. We found out that these things not only tortured the horses that tried to eat the hay, but they got into our blankets, bedding and clothing. During the remainder of that year, I believe, we devoted more or less of our lifetime to getting them out of our clothes, our beds and our dispositions. Jack got his wool full of them as soon as he got out of the wagon. We were all tired and sleepy, having traveled about thirty-five miles since dusk of the night before. We decided to stop at the barn for rest and a sleep. Jack had behaved well, but he was becoming restless, so I released him and he climbed out to investigate the barn at his leisure, while we unharnessed, fed the horse and made our beds on the foxtail and hay. We then chained the bear to a manger and were soon asleep.

I had slept but a few moments—a dozen snores or so—when I was aroused by the growling of the dogs. The stable door on the far side of the barn opened, and Jack, alert as usual, was standing erect and looking over the crib of the manger, which was made of logs and poles. Suddenly he gave a series of his startling squalls—sounds he only made in anticipation of a whipping. As he squalled he peered over the crib in fright. At the moment a farmer appeared in a large hat with a whip in his hand. As he heard the squall and looked up to be confronted by Jack's open countenance his face was a wonderful display of unmistakable astonishment.

"Well! I'll be dad-swizzled!" he ejaculated, as he made unfaltering strides for the door.

"He's not dangerous—he's only a tame cub." I called out hastily. "He's chained. Is this Blodgett's barn?"

"Well—er—well, all right. Yes, I'm Blodgett."

I explained the situation sleepily, telling Mr. Blodgett we would stop at his house, which was a mile further along, and settle for our hay and lodging. He replied, "All right," and I again lay down.

"What's the matter?" drowsily asked Dick.

"Nothing but that bear," grunted Enochs, as we all became dormant.

## The Gulls of No Man's Land.

MR. W. H. BROWNSON, of the Maine Ornithological Society, made an expedition in the last of August to Matinicus Island, the great sea bird breeding grounds off the Maine coast. The story of what was found is told in the Portland Advertiser, from which the following paragraphs are taken:

We started off to find Captain Mark Young, the well-known warden in the employ of the National Audubon Society, who takes excellent care of all the immense number of sea birds in the cluster of islands. Now Captain Young's aid was really necessary if we expected to see the most interesting things which here abound. He owns a dory, he is a seaman of long experience, he knows all the best landing places on the rocky islands, he is moreover the sole proprietor of No Man's Land, which boasts of the densest colony of herring gulls on the Maine coast. There may be more birds on Great Duck Island, off Mount Desert, but they are not so thickly gathered in a limited area. Dropping his work, without a moment's delay, Captain Young announced himself ready for the row over to the gull colony, and thus we set out in his dory for what proved to be the greatest sight in the bird line that had ever fallen to my lot. On Two Bush Island, which lay directly in our path, a big flock of gulls arose from a jutting ledge and I exclaimed at the unusual number, but my companions smiled quietly and remarked that we had not yet begun to see gulls. Thus we approached No Man's Land and I soon felt well repaid for my visit, even if not another bird should be seen while we remained.

Young gulls and old gulls were everywhere. This island is some twelve acres in extent and it did not seem that there was a square yard of it which did not hold one or more birds. One side of the island is sparsely covered with turf and the other is given up to a growth of stunted black spruce trees. Gulls, white and dark, roosted on every rock, covering also all the grassland. Up in the trees big white birds had alighted on the bare branches, one above the other, forming a series of terraces of living and glistening forms. As we drew near we saw several of the great black-backed gulls sitting with the others, merely visitors it seemed, for these big fellows had bred further north and were now coming south to spend the winter on the outer shores along the coast. Captain Young steered for Rumguzzle Cove, the elegant name applied to a wonderful natural inlet, a depression of the high rocky formation of the island, nearly cutting it in two. Here it is related a drunken crew from the West Indies was wrecked and drowned, while a big cask of rum went ashore on the rocks and landed high and dry in this cove, where it was afterward rescued by the neighboring fishermen. The place served our purpose now, but it was no easy task to get out of the boat on the ledges without getting wet. It could not have been done without the aid of so skillful a boatman as Captain Young.

Now the wonder of the scene opened before us. We were right in the midst of the gulls, which shrieked and barked over our heads, eyed us with suspicion from the cliffs on either hand, and fled in our pathway up to the highest point of the island. The young gulls were there in thousands, being easily recognized by their brown plumage, while the adult birds were a glossy white. Captain Young put the difference before us in his pithy way, when he remarked, "You see the dark ones—well, sir, every one of them was an egg this spring." Now we began to thread our way among the gulls up the steep cleft in the rocks and our real experience began. Young gulls, hardly able to fly, fled before us and tumbled down among the rocks with much weak flapping of wings. Picking themselves up they perched at a safe distance and regarded us with no look of favor. Over our heads swarmed more than a thousand adult gulls, every white beak sending forth a discordant cry. On our left there was another thousand and on our right as many more, perched on the ledges, on the grass, and in the tops of the spruce trees. Down at our feet, in the water, was a bunch of birds that must have numbered over a thousand, and as many more in sight in the water on the other side of the island. Besides these the farther ends of the rocks were still covered with gulls out of observation and as yet resting easily, though as we progressed over the island they constantly rose over us in a threatening cloud.

"How many gulls are there on the island?" I asked Captain Young and he replied confidently, "Well, sir, we estimate them at 10,000." This was surprising and I looked around me with a critical eye. But I could not contradict him, for that seemed to be a fair computation. I counted a section of the swimming flocks and judged that there were two or three thousand in the water, while the birds were as thick over our heads as a swarm of mosquitoes. There may be no more than six thousand birds, and there may be as many as twelve thousand; no one can say, for it is impossible to count them. Captain Young's estimate of ten thousand therefore, will have to stand undisputed, at least until more accurate information can be obtained. We saw not a single nest, but plenty of places where they had been built. Captain Young says the birds tear their nests to pieces as soon as they are done with them, but they are nothing but a collection of sticks and soft material placed on the ledges and grass ground and doubtless the young birds, during their growth, scatter what is of no further use to them. On the islands further east gulls often build their nests in trees, but we saw none of that kind here.

There is no breeding place for herring gulls nearer to Portland, and doubtless many of the gulls seen around Portland Harbor, spring and fall, belong at No Man's Land and to Captain Young, who fondly claims ownership of them all, no matter where they are found. And the way he protects them is good to behold. Mind you, he owns the island on which they breed, and he is the warden selected by Mr. Dutcher, of the Audubon Society, to see that they are not molested. Armed with this authority and being proprietor of their nesting ground, he has an immense advantage over the lawless hunter of eggs or pearly plumage. His big sign on

the most conspicuous part of the island warns off any intruder, in language that cannot be misunderstood. Woe to the gunner who disregards that warning, for the strong hand of the law is likely to lay hold of him.

## Enemies of Bird Life.

Editor Forest and Stream:

I have carefully read Mr. Forbush's articles on "Natural Enemies of Birds," and think in every case his statements are correct. From personal observation, I can verify all he states about the destructiveness of crows and squirrels. I have seen where crows have destroyed hundreds of eggs of the night heron, where in a colony of from fifty to seventy-five nests containing from two to five eggs apiece, not one was left, and in another near by of about one hundred nests, more than half had been robbed, and I saw the crows in the act of taking eggs from the others. The only good I ever knew a crow to do was once to rob another crow's nest. I found one of the eggs, which had been carried quite a long ways, and the hole in the side showed plainly that it was the work of crows.

I have seen squirrels robbing nests, and have known one to take four young robins nearly large enough to fly from the nest, which was in a tall elm in a large city.

All Mr. Forbush says of foxes is true. I know that they kill a great many ruffed grouse as well as a great deal of poultry, but I think they kill very few small birds; in fact, I believe they do the birds more good than harm, for they kill a great many squirrels and chipmunks, and these would destroy a great many more birds than do the foxes. Besides this, no one seems to notice the good they do in killing so many cats. Our woods are infested by half-wild cats, which live largely on birds and among them kill a great many woodcock and ruffed grouse. Just let a fox find one of these cats, and his only chance of escape is by climbing a tree. Probably there are few things which a fox likes better for a meal than a house cat. They rarely eat the heads, and I have known the heads of three cats to be found at one time under a barn where a fox had eaten them. A guide of unquestioned truthfulness tells of once seeing a fox chasing a house cat, and of another which he saw walking the top of a fence with the hindquarters of two cats in his mouth.

I often wonder why hawks and owls are written of as the friends of the farmers, and the same persons speak of the damage done by foxes and weasels. If this were reversed it would be much nearer the truth, as my observation goes. I have seen hundreds of hawks, but I have never seen one either catch or eat a mouse, a mole or rat. I have carefully dissected scores of owls of eight different species, and many hawks of nine species, and have never seen any evidence of one of them having ever eaten mouse, mole or rat, except muskrat, while of the many sharp-shinned hawks I have killed I have rarely killed one which had not just destroyed some small bird, usually some species of warbler, and I have found the crop of a broad-winged hawk, which is said to be harmless, full of the bones of small birds; evidently taken from the nest. My opinion is that one fox will kill more mice and moles than all the hawks and owls in a township.

As to weasels, I have heard of their killing fowl, but in traveling the woods for sixty years, and for some thirty winters having been in the woods nearly half the days from December to April, I have never seen any evidence of weasel troubling grouse or birds of any kind, though I have twice seen them have mice or moles which they had just killed.

One weasel will kill out the mice from a camp or the rats and mice from farm buildings quicker than any ten cats can do it. When a weasel enters farm buildings he usually pays his whole attention to the mice and rats, and as he can follow rats into any place they can get into, he soon cleans out the premises, and very rarely molests any kind of fowl. Yet when he is known to do so much good the hand of every farmer is against him.

All that Mr. Forbush tells of bluejays is true; but he has omitted to speak of his near relative, the Canada jay, which is a greater rascal than he is. I know no bird or animal to compare him to for cunning, rascality and greed. He can find nests which neither a crow nor a bluejay would ever think of finding, and he gets all there is, because if he cannot eat all the young ones at once he will carry them away and hide them for future need.

Besides English sparrows, cuckoos, blackbirds, skunks, raccoons, minks, sable, fisher, mice and snakes, birds have another enemy which destroys a great many young birds and sometimes the eggs just hatching. I have seen nests of ground sparrows when all the young were being eaten by small red ants, and several times where all the young of both robins and cedarbirds had been killed by large black ants. The ants came in such numbers that probably the parents were unable to protect the young. It seems a wonder that any birds are left when they have so many enemies among birds and animals, not to mention the small boy with air gun and sling shot, who is responsible for the death of great numbers.

MANLY HARDY.

## A Freak Fox.

A MOUNTED freak fox, owned by L. R. Nelson, of Winchester, N. H., killed in January of this year, resembles the cross, silver and woods gray fox, but is not like any of them; it has the large black spot on fore shoulder about six inches square, like the cross fox; and chest, belly, tail and under parts of sides are black with silver tipped; the sides and hips are black under the prominent gray. The only red on it is down the spine from kidneys to tail. The tail is tipped with white, the ears are four inches long. The fox stands 17½ inches high and weighed 12¾ pounds. It has been pronounced by the best judges of fur to be altogether different from the wood gray or the cross fox. The hair is longer and coarser than any of them.

## THE WORLD RENOWNED MANY-USE OIL.

Is the only sure rust preventive on guns in any weather.—Adv.

## Moccasin and Minnows.

GALENA, Mo.—Fish Lake Slough is a narrow neck connecting Fish Lake with the Ohio River one mile above Shawneetown, the oldest city in Illinois, since the site of Kaskaskia has been eaten away by the current. While sauntering along the shady banks one warm summer afternoon Harry, Louis and myself observed that thousands of bass had congregated and were feeding in the overflow waters of this slough, which had been backed up by the river. The fish were continually coming to the surface in their chase after minnows. A water moccasin was lying partly on a floating clapboard with his tail resting upon a small snag. He was feasting upon minnows that founced out of the water when they were pursued by the bass, and alighted upon the clapboard. For half an hour we watched this exhibition with interest. Several times the bass came up underneath the board, turning it over and throwing the snake off. The moccasin seemed to be in no wise discouraged or "rattled," but would deliberately readjust himself and proceed as before.

I recently read a statement that many rough fish have been frozen into the ice and ground near shore, but that the wary bass are never so caught unless the entire body of water freezes to the bottom. I have seen tons of fine bass frozen and killed near the edge of Fish Lake, in fourteen-inch ice, when a short distance further from shore the water was ten feet deep.

The bass fishing in James and White rivers is excellent for about nine months in the year, as a rule. These are mountain streams, fed by many springs, and are beautifully clear and as swift in most places as a mill race, with now and then an eddy or a hole with a comparatively still water. The fish are both large and small-mouth, and fighters not to be compared with those hooked in lakes and sluggish streams, and relatively as superior in their edible qualities. The climate is free from malaria and deliciously invigorating.

L. F. T.

## Care of Captives.

THE Civil Service Board of New York city recently examined twelve men who desired places as animal keepers and attendants in the Zoo. Some of the questions and the answers that some of the applicants made were these:

Question—On what are deer fed in captivity?

Answer—They are fed during captivity on whatever you can get that agrees with them at the time they are in captivity.

Question—What is a bird?

Answer—A bird is an animal with wings.

Question—An animal?

Answer—Well, a creature with wings and feathers.

Question—On what is a boa constrictor fed?

Answer—A boa constrictor is fed on worms as often as twice a day.

Another Answer—A boa constrictor is fed on potatoes, cabbage and food which will agree with him. He is fed as often as four times a day, or according to his health.

Question—What is the common fatal disease among monkeys?

Answer—The fatal disease among monkeys is fleas.

Question—Name three birds of prey in the United States.

Answer—The fox, the wild cat, and the bear.

## Animal Importers Petition.

IMPORTERS of animals and birds of this city, says the New York Times, have begun an agitation through Collector Stranahan and the Department of the Treasury to abolish the practice of collecting a fee of \$5 for every bird or animal importation on account of expert examination.

In 1900 a law was passed to prevent the importation of undesirable birds and animals, and the Secretary of Agriculture received authority to devise rules for carrying out the law.

The rules provide that no birds or animals shall be imported except upon a permit from the Department of Agriculture stating in detail what kind of animals or birds they are. After the customs officials have examined the importations on arrival they compare the lists on the permit with the importations, to see if the birds or beasts are actually as described.

Because customs officials are not naturalists, experts are called in and allowed to charge a fee for examining the importations. This custom the importers wish to have abolished.

## Camp Surgery.

NEW YORK, Sept. 30.—Editor Forest and Stream: IN FOREST AND STREAM for Sept. 23 I find an excellent article by Senex on camp surgery, but he runs straight into giving a bit of advice that would be dangerous. After describing well the usefulness of boric acid as a wound dressing, he advises its employment in a case of punctured wound made by a rusty nail, for the purpose of preventing lockjaw. The bacteria of lockjaw live in the soil and seem to be particularly fond of the region of iron that is becoming oxidized. Boric acid is a very weak antiseptic and one that is of little service against this particular bacterium. The bacteria of lockjaw imprisoned in a punctured wound and covered by boric acid, according to the directions, would be likely to become virulent at once. Nature destroys these bacteria by pouring out blood serum, which is germicidal for a few hours only. The surgeon helps by opening up the wound freely and adding strong antiseptics which supplement the germicidal action of blood serum. A punctured wound made by a rusty nail is therefore not to be plugged with a weak antiseptic, and dammed with a firm compress.

# GAME BAG AND GUN

## Then and Now.

BY DR. WM. M. BYRAM.

WHEN forest nuts were falling with the frost,  
And sere October's brush had touched the wood  
With magic colors of her myriad hues,  
With dog and gun I strolled one autumn day,  
To where, in boyhood's hours forever past—  
That "golden age" of all men's memory—  
I knew so well the haunts of wildfowl once.

For years I had been in an active world,  
The ceaseless grind of life, with little rest,  
And so had come once more where, as a boy,  
I watched the gorgeous mallard's steady flight.

All day I walked in thoughtful solitude.  
The change, of years impressed at every glance,  
The stream was there, but only by the verge  
Rose trees, where once a great old forest stood.  
At length I came upon the one-time marsh,  
Where oft the thunder of a thousand wings  
Had echoed through the forest where it stood.  
I looked long on a field of stunted grain—  
In hopeless memory of other days.

All day I noted little of game life—  
A few short lines of birds, high up in air,  
On rapid wing were beating toward the south;  
From off a hickory a red squirrel leaped  
Among the leaves and scampered to his den;  
Once, far in open field a hawk was perched,  
As if he now slept after midday meal,  
While from a wooded hill a quail's low call  
Was faintly sounding to his scattered mates.

As I returned at eve with heavy step,  
And scarcely fired a shot within the wood,  
I read the lesson well of men's great greed  
For blood of all the life of wood and stream.  
Like our dark brothers of primeval days,  
The game is swiftly passing from the earth.

## A Woman in New Brunswick.

WE left Tilton, N. H., one bright September day to take our long-planned moose hunt in New Brunswick. We started from Boston at night, taking a sleeper for St. John, arriving next day at noon. We spent a very pleasant afternoon in driving about the city and seeing all the points of interest. We left St. John that night at 7:30, arriving at Bathurst at 2:22 A. M., this being the end of our railway journey. We found our genial guide, Mr. W. H. Allen, of Penniac, N. B., waiting to welcome us to the land of the moose and to see that we were safely started on the first twelve miles of the trip to camp. We had a comfortable carriage and arrived at the end of the settlement just as it was coming daylight. Here we had breakfast and changed our clothes for hunting suits, put on long-legged leather boots, warranted waterproof, which meant the water got in and could not get out; took our places on the "tote" wagon and began the all day's ride over twenty-four of the worst miles of road we ever had the bad luck to be jolted on. However, we reached Camp Caribou after dark and found the cook waiting for us with plenty of baked beans, and they did taste good. Soon the air mattresses were inflated and we were sleeping as only one can after eighteen hours of open air exercise.

In the morning we were able to see what kind of a place we were in, as it had been too dark at night to see anything but trees. The camp faced the river and was situated on a high bank, so the outlook up the river was very fine. There were two small lakes above and two below us which were the headwaters of the Tetegouche River. The first day we went up the lakes in a canoe and I saw my first wild moose; he was a young bull, but we wanted larger game, so watched him for some time and then quietly paddled away leaving him still there feeding. The second day we saw a fine deer on the shore of the lake at a distance of 140 yards. I fired from the bottom of the canoe and much to the guide's astonishment killed him with one shot, so we were supplied with fresh meat and found it fine eating.

After this we hunted several days before we saw anything but tracks. The next thing we saw was a calf moose feeding on the shore of the lake, but there seemed to be no old ones with him. A few days later we saw another calf and got very close to him. He was a pretty shaggy fellow, about the size of a Shetland pony. He did not see us and fed up very close, at last he got the scent and trotted quickly away. We made various trips to other ponds and bogs, and on coming back would usually find fresh moose tracks on our boat landing.

On the eighth day we went to one of the upper lakes and the guide gave his persuasive call on the birch-bark horn and away off on the hill we heard a faint sound. We waited, listening intently, and at last heard the sound of antlers on the trees. "It is a bull moose," whispered the guide, "don't move." Soon we could hear the great creature crashing over fallen trees and through the underbrush. When nearly down to the edge of the lake he stopped; that was a moment of suspense. Would he come out in sight or would he detect the fraud and steal away? Presently, however, he came on again and we could see his great head and antlers through the trees. How large he looked as he leisurely walked out into the lake looking for the cow he hoped to find there. Noiselessly as a phantom the canoe slowly drew a little nearer and turned into position. Now we are to know whether the much dreaded buck fever will set the nerves jumping and the rifle sights dancing; or whether the bull is ours. It was my first moose. He was 150 yards across the lake,

but the Mannlicher bullet went straight to the fore shoulder, broke the bone, went back and was found in the hind quarter. It was a deadly shot, but we gave him a few more to finish him, and not let him suffer. He fell in the water on a sandy beach, so we dragged him partly out and dressed him. He was a fine fellow, beautifully colored, and had perfectly symmetrical antlers. We took his picture as he lay in the lake. While we were dressing him we heard another moose walking in the bushes, but he did not come out in sight.

I had shot my first moose in the great forest of New Brunswick, and best of all had made a clean shot and had not had "buck fever." Now it was Mr. Moses' time; and although we worked hard, no answering grunt was heard to the guide's plaintive notes until next to the last day in camp, then toward sunset we heard the much wished for sound, every minute coming nearer and nearer, until at last he was close at hand. We waited anxiously until he should come out into the lake. As soon as he could see him Mr. Moses gave him two shots in rapid succession. The huge animal, terrified, turned and ran into the woods. The guide thought best not to follow him, as they often run miles when badly wounded, so we went back to camp to wait until morning. We were out early the next morning, and on going to the place found tracks but no blood. We followed only a short distance, however, before we found him stretched out calm and peaceful, beautiful to look upon, his antlers perfect in size and color. He had been hit with a .30-30, which went nearly through him lengthwise, and had died within a short time after being shot.

The peaceful days and quiet nights had passed quickly, our hunt was over. We had our two moose and a deer and an immeasurable amount of good health stored up for the future. Never before had we lived on the "fat of the land" as on this trip—fresh vegetables, trout from the river, wild cranberries, blueberries and raspberries, all sorts of good things in cans, plenty of bacon and ham, besides all the fine moose and deer steak we could eat. Our guide was a thorough woodsman and one of the few men who think of everything and think nothing too hard for the pleasure and comfort of his party. The evenings in camp were passed in hearing story after story of the hunter's life and his many exciting adventures. It was with real regret we said good-by as the train came rushing in that was to take us back again to the busy everyday world.

MABEL P. MOSES.

## West Virginia Past and Present.

HU. MAXWELL has been making an exploration of the wilderness regions of West Virginia, once famous for their supply of game and fish. Of the discouraging conditions now existing he writes in the Morgantown Chronicle:

The professional hunter's occupation passed away in West Virginia long ago, and the amateur sportsman's is following in the same path. Our development is destroying the retreats where game and fish found their last refuge; and the unsportsmanlike conduct of many of the amateurs who go out to hunt and fish is contributing much to destroy what little still remains.

The practical extinction of the wild creatures of woods and streams was impressed upon my attention during my two weeks' trip among the mountains of this State. During a journey of 342 miles, a large part of it on foot through the wildernesses and over the mountains, in the wildest part of West Virginia, I saw not one trace of deer or bear, not one pheasant, no wild turkeys, except a brood which had been domesticated; no quail, only one gray squirrel, two snipes, not one rabbit, or duck, or wild pigeon. It may thus be inferred that game is no longer plentiful.

Fish were no less scarce. A small number of very small trout was all. They were so small that no fisherman with self-respect would spend much time looking for them.

On Gladly Fork of Cheat River, which was once the realization of all the hopes and aspirations of the trout fisherman, not one remains, so far as I could see or hear. I met again at Gladly a small crowd that I had seen in Grafton on my way to the mountains. They had reached Gladly one day ahead of me, having gone over from Elkins on the Coal and Iron railroad. When I met them they were on the back track toward home. They explained briefly and with extreme disgust that they had been lured upon a fool's journey, and that the last trout had died of suffocation in the stream which was once clear and pure, but now choked and foul with the refuse from the forest, which is disappearing beneath the lumberman's ax.

I made no effort to catch fish there. One glance at the surroundings convinced me that it was useless. As well might one try to catch trout in the vats of a tannery. But instead of taking my back track at the first rebuff, I shouldered my pack and struck deeper into the mountains in search of streams still unpolluted by the bark, leaves and sawdust of the lumberman and his sawmills.

Six or seven miles beyond, and on the other side of a mountain 3,700 feet high, I came to Laurel Fork, another tributary of Cheat River. The lumberman has not touched this stream, except near its mouth. It flows through a wilderness as wild as it was when Columbus discovered America. Here, if anywhere, trout ought to be found. I knew that they once existed, for I fished in that stream on the day that I was twenty-one years old. Of course, that was a long time ago, but it is not quite ancient history, and my memory is sufficiently clear to remember it distinctly. On that September day the stream was alive with trout. Little branches, with scarcely enough water to conceal a fish, were filled, and one hour's work was sufficient to satisfy any fisherman possessing the true instincts of the amateur who always knows when he has

caught enough, and is willing to leave some for the next man.

A great change has taken place. Laurel Fork has been fished to death. I found evidences of this in the deserted camps with the ground littered with empty meat tins, showing that the fishermen had been there by the week. After trying my luck a part of two days, with nothing to show for it except two or three weak nibbles, I concluded that I had no further business on Laurel Fork, and I pulled out for new fields.

A few days afterward I was telling a citizen of my discouraging experience on Laurel Fork, when he proceeded to tell me how different it used to be on that stream. He said that he and two others had killed a deer and caught 900 trout on Laurel Fork in one afternoon. That is a sample of what has taken place. It explains what has become of the trout which once swarmed in that stream. They have been wantonly destroyed by human hogs, whose dull instincts permit them to catch 900 trout in one afternoon. No wonder the trout have disappeared. What any man would want with 300 trout (each of the three men's share) is past finding out.

This is not the first case that has come under my observation in West Virginia of the inexcusable and wanton destruction of trout. A few years ago I went fishing on Burgoo and Leatherwood creeks, in Webster county, and not meeting with the success I expected, some of the mountaineers proceeded to regale me with accounts of how they used to catch trout on those streams. They said they had often caught more than they could carry home and "threw them away." I suggested that all over and above what they wanted for themselves should have been left alive.

"Oh," was the reply, "if we did not catch them somebody else would, and we might as well have the fun as anybody."

Senseless and useless destruction of the wild creatures of streams, or forest, or air, never appealed to me as a civilized kind of fun. But I am convinced that it is only so-called civilized people who indulge in that species of destruction. I have spent a good deal of time with Indian hunters and fishermen in the West, and they can set examples that will put to shame many a white sportsman with destructive impulses. The Indian hunter kills only what game or fish he can use. He never ceases to express contempt for the white man's wantonness in killing game that he cannot use, or catching fish after he has enough. I once obtained useful lessons on this subject while among the Indians in the mountains of British Columbia. The head streams of the Frazer River were so filled with fish that a man could catch a wagonload in a day. Yet the Indians wasted none, and were quick to rebuke any tendency on my part to do so. It is the same way with hunting. The Indians often remonstrate with white hunters for killing more game than they need. When these remonstrances have proved in vain, as they usually do, I have known the Indians to go stealthily ahead of the white hunters, and endeavor to drive the game away.

But this is digression, although if the white man can learn lessons from savages, I see no reason why he should not do so.

Meeting with no success on Laurel Fork, I crossed the Alleghany Mountains to Big Run, in Pendleton county fifteen miles further. That was a famous trout stream once. It is lifeless now. One glance at its banks was enough for me, and I did not unwind my fish lines.

That region was once the finest range for deer in the State. Old hunters tell me that it used to be the common thing to see several deer every time a person passed along the paths through the woods, and it was difficult to follow the tracks of a single deer because tracks of others were too numerous. That was when timber covered the country. The deer has gone the way of all the earth. The forests have also gone. Over tracts of hundreds of acres hardly so much as a stump remains. Fire destroyed everything. The hunter has no business there, and the sooner he gets out of sight of the desolate hills with their unbroken expanses of fern, and nothing else, the better he will feel.

Southwest of this district lies what is still called "the hunting ground." The people yet call it by that name, but it is a misnomer now. While passing through the miles of fern, growing on the hard soil of the hills, I saw nothing more pretentious than a ground squirrel. The country is still unsettled. That is, a house is seen only once in several miles. I believe I walked eight or nine miles without passing a house. If the torch had not been applied to the forest, I doubt not that it would still be a good place to hunt deer.

Along the North Fork River I heard of fish, but I saw none. I did not try to catch any, because I was discouraged. I saw a company of ten from Pittsburg who had gone to the North Fork to fish. They had been successful to the extent of catching one small eel when I saw them, which was the second day of their endeavor. They were hopeful, however, and were confident that their luck would change with the clearing of the weather. They had been fishing in the rain.

High water prevented me from trying in Seneca Creek. The last time I had been there, which was a good while ago, trout ten or twelve inches long could be caught in abundance, and sometimes they were caught as large as eighteen inches. On the occasion of my present trip I was told that no trout of any kind can be caught in Seneca until the headwaters are reached; and of late the lumbermen have invaded the headwaters, and that means that Seneca Creek will soon not have a fish in it.

Leaving the waters of the upper Potomac I crossed two ranges of mountains, the Alleghanies and Canaan Mountain, a distance of about twenty miles, and reached the headwaters of Black Fork of Cheat River, in the famous valley of Canaan, which was at one time the paradise of

the hunter and the fisherman. When I first became acquainted with that region, in 1876, it was an unbroken wilderness covering an area of 100 square miles, with only two or three houses in the whole region. It was a famous hunting ground. The northern end of it was called Canada, the southern end Canaan. It has a rather firm place in my memory from the fact that the first camping out I ever did was in the northern end of this region, when I was fifteen years old. The expedition was of several days' duration. It is something which I deem worth mentioning that a boy who was with me on that occasion, in 1876, afterward became the discoverer of Chilcoot Pass, in Alaska, the highway to the Klondyke, through which the railroad was afterward built.

The Canaan valley was for two or three generations the most famous hunting ground in West Virginia. The last elk killed in the State was shot there in 1856. When I first knew the region, deer, bears and panthers were plentiful, although I never bothered them and they never bothered me.

When I visited the valley a few weeks ago the country was transformed. Instead of being a wilderness, it is a series of fine meadows, thickly dotted with farmhouses. A splendid highway runs down the valley. I entered the southern end and followed the road to Black Fork, four or five miles distant. The stream is crossed by a steel bridge. The last time I was there I crawled across on a cherry-log. The banks of the stream were then dense masses of brush. In some places they are that way yet, but the stream is different. The lumberman has done his work, with the usual result. At the point where the bridge crosses, the bed of the creek was filled with several hundred sawlogs, ready to float to Davis on the next flood. The current was never strong, and it is now so sluggish that movement is scarcely visible.

This was once the finest trout fishing, but is not so now. I found a camp of fishers on the bank of the stream, consisting of about a dozen persons, men and women. They had a wagon and horses. They seemed to be satisfied with their success, although they had caught only one fish, a trout as long as a lead pencil. They had it on exhibition, and pointed to it with unconcealed pride, and with hilarious laughter. I suppose the campers were summer visitors from some city, as they seemed unused to country ways. The young ladies were making awkward but commendable efforts to ride the horses bareback up and down the road. I am quite sure they would not know how to use sidesaddles.

I was impressed with the view these campers took of fishing. They found more satisfaction with that one trout, than the three porcine bipeds previously mentioned found with the 900 which they caught and wasted. The hunter or fisherman who has the true instincts finds his pleasure in the wild, free life of the forest, in the pure air, in the romance of the woods or the beauty of river and brook, and not in the mere number of his catches.

I passed on down the Canaan valley, and saw nothing but burned woods, outside the fields that had been cleared. The streams were choked with trash in which fish could not live. Passing out of Canaan valley, and some six or eight miles after crossing Backbone Mountain, I found a stream in which I had caught many a trout in years gone by. I tried it again with very poor success. Only a few small trout could be found. It was another case of a stream that had been fished to death. I was told that unprincipled persons had killed practically all the fish in the stream with dynamite. A man who is mean enough to dynamite trout is fit for treason. Yet I am told that it has frequently been done.

I had now reached the waters of Horseshoe Run, in Tucker county. I followed that stream to its mouth and came to Cheat River, some twenty-five miles south of Rowlesburg. I made a boat and started down the river. That stream was once as good bass fishing as could be found in the State, and there were plenty of catfish and wall-eyed pike. I was told that fish are still plentiful, but the water is so foul that the fish are tainted and are unfit for use. The tanneries at Davis and Parsons, and the paper mills, discharge into the river, and the water is basely contaminated. The fish survive, but they are unfit for any respectable fisherman's line. Further down the stream they are said not to be so bad. I floated down the river eleven miles, but I made no effort to catch anything. The black and reeking water turned my thoughts from the subject of catching fish.

Taken all in all, my expedition through the most secluded and rugged part of the State convinced me that fish and wild game are practically things of the past, and I had doubts whether game laws and game wardens would ever again be needed in this part of the State. But while talking of the matter with L. E. Friend, the Morgantown photographer, he gave reason for taking a brighter view of the situation. He had just returned from his old home in Garret county, Md., and told me that since the lumbermen have ceased operations there the streams have cleared their channels of offal from the sawmills, and fish are once more plentiful. It was necessary to stock some of the creeks where the fish had become extinct. When the lumberman finishes his labors in West Virginia, perhaps our creeks can be made tenable again. But that is in the far future, because our forests will last a long time.

### Protector Pond.

THIS letter from Mr. Nelson O. Tiffany, president of the Erie County Society for the Study and Protection of Song Birds, Fish and Game, reflects, we take it, the feeling of sportsmen and protective associations through the State as to the service Major Pond has rendered as chief game and fish protector:

"BUFFALO, N. Y., Aug. 24, 1905.—Major J. Warren Pond, Chief Game Protector, Albany, N. Y.: My Dear Major—I was delighted to receive yours of the 22d, and to realize that you are still with the Department. I saw a statement that you had resigned, and I regretted exceedingly that the Department was to lose your ability and experience.

"You have filled the position, I am sure, to the satisfaction of all who are seeking to enforce the protection laws. I trust that the newspaper report that you have resigned is not correct, and am, sincerely yours,

"NELSON O. TIFFANY."

## A New Brunswick Moose.

Editor *Forest and Stream*:

Some of your readers may be interested in what has come under the observation of one who has just returned from a hunting expedition in the woods of New Brunswick, Canada.

For this trip the point of leaving the railway was Doaktown, a station on the Canadian Eastern, and the hunting region in the vicinity of Meswall Pond, some fifteen miles to the southwest. This pond, including its marshy shores, may be a mile in length and a half-mile wide. It is so shallow that moose can walk about in almost the whole area, and has a flat surrounding country. Some five or six miles to the south is the Cains River, with an almost trailless forest intervening, while in all directions it is surrounded by thickly wooded country for considerable distance. Camp was made near one end of the lake under the direction of Thomas Weaver, guide, and Miles Maroney, cook. We got things into shape during the afternoon of the 14th—the day before the opening of the season. Following this moose were seen in the early morning and late afternoon of almost every day feeding in the waters and about the shore, usually, however, at points most distant from our camp, but with the aid of a good field glass could be, in most instances, quite clearly observed. In nearly all cases those seen would prove to be cows or calves. For the first four days but two bulls were seen. One was approached to within some 200 yards, but as the head carried small horns (the animal being smaller than the average cow) he was allowed to go his way in safety.

No moose were encountered in still-hunting in the woods. Upon the fifth morning, before the light was good, I saw a bull with what appeared to be a fair head. He was approached to within what afterward turned out to be 225 yards, and I concluded to take my chances, I firing as he presented a side view. The only effect of this shot was a startled jump that turned him head toward me; my second shot following quickly he reared on his hind legs, turning and making off with full side view exposed; with my third shot he stopped short, his rear legs giving way, head going up and then pitching over on his side. So far as I or my guide could see not a motion was made, even with his feet, and when we reached the point he was found "stone dead." The head proved to be rather disappointing, the spread being only a trifle over forty inches; measured around the curve of the horns, however, the distance was over sixty inches. The shape of horn was not wholly characteristic of the moose. The gun used was a .35 caliber Winchester. My guide being in a good position to observe, insisted that the moose had been struck only by the last shot, and in the position which he lay, the result of this was the only one that appeared, it being one squarely through the body from side to side, well back of the shoulders. When removing the hide a bullet from which the jacket had been stripped, was found back of the hip, lodged against the skin. As the skinning proceeded it was found that this bullet had entered the side of the neck a foot or more in front of the shoulder on the side opposite from where found, it having traversed diagonally almost the longest possible course through the length of the body. Anyone who has observed the tremendous tearing effect of these heavy, high velocity mushrooming bullets, will understand about what sort of state of affairs was found when the carcass was opened; it seemed as though the interior had been all torn in shreds. Death must have speedily followed, although the animal would probably have gone considerable distance. The cross bullet passed through the heart, (an unusually large organ in the moose) and in this instance at least, death followed immediately. Wounds to other internal organs than the heart, in animals of a strenuous nature, do not appear to produce such a shocking effect in the bone or muscular system. Two years ago, in the Maine woods, while alone, I shot a deer as he was going from me; without the least sign of a stagger, and with one bound he went into the brush and out of sight. Searching, I found a blood trail which I marked, and then went back to camp. Returning an hour or so later with my guide, we trailed for about 100 yards, where we found the deer dead. Apparently he had traveled until he had dropped in this position. It was found that the ball (from this same .35 caliber rifle) had entered the flank and passed out in front of the shoulder on the opposite side, the trail of the bullet being almost exactly as in the case of the moose, and the effect even worse because in the body of a smaller animal.

With the moose taken, my attention to this species of game was filled, and we made our search for caribou. Still, moose were seen about the pond without searching effort on our part, and I had further opportunities of observing their action. In this pond, if there had been a growth of lilies, they had entirely disappeared, but much of the bottom was covered with a growth of short grass-like vegetation, and this appeared to afford the attraction for moose. I had previously supposed that when feeding in water they seized hold of what was attractive to them, and after withdrawing their heads from the water, proceeded with masticating what they had gathered. From my observation at this pond I am satisfied that with their heads down in the water they graze and masticate in the same manner that cattle do, for example, when at pasture, withdrawing their heads only to take new breath. They would keep their heads down, often entirely submerged, from forty-five seconds to one minute, and after a brief interval out, return to their under-water feeding. When alert, and with the air still, it is surprising how far they can detect a slight sound of the human voice, and with what speed so large and heavy an animal can trot away over the marshy ground that is so yielding that it is almost impossible for a human being to pass over at all. Upon one morning I saw fourteen moose, all in sight at one time, from one position of observation. I do not, however, think there was a single bull among them. On the evening of a later day of my stay, I saw in the pond a moose with the sort of a head I had hoped to get. From his position and the direction of the wind it would have been an easy matter to have approached to within about 200 yards. Aided by a field glass we watched for a half an hour, during which period he remained feeding at almost the same spot. As he would put his head down in the water my guide remarked there appeared to be room enough between his horns to paddle a canoe. This

was one of the cases where I regretted my having been so "quick on the trigger." In traversing the region for miles about this pond, moose signs were plentifully seen everywhere, and almost equally so those of deer. By the calendar the season was at hand when bulls should have come to call, but we were not able to get any response save on the first night which was before the opening of the season, and was the only cold, frosty night during our stay in the woods. Mr. Weaver attributed this inability to get response to the out-of-season warm weather, accompanied as it was by so much wind and rain. There was only one cow call heard, and that on our last night in camp.

No success attended my hunting for caribou, though fairly fresh signs were seen. The caribou grounds were situated so that it required a walk of five or six miles to reach them. This ten or twelve miles' walk through forest trails of itself constitutes not a small part of a day's work, leaving only the middle and unfavorable portion of the day for hunting. We should have moved our camp into the caribou region after disposing of the moose.

Digressing from my subject to that of gun caliber, and adding my quota to the mass of conflicting opinions given, would say that long ago I carried the .38-56. With the advent of the high power, small caliber sporting, I carried a .30-30 Winchester carbine. For the past four seasons I have had the .35, and for large game pin my faith to this arm, though I usually take my .30 caliber with me into camp where I can. I believe that the .35 caliber has superior stopping powers to any other rifle, other than possibly the .405. Its 24-inch barrel with the weight well concentrated about the breech, makes it an arm that can be carried easily in thick woods and quickly gotten into position. With mine I have never, so far as I know, given a deer a wound and have him escape; save in the instance here noted, everyone has been stopped short with one shot. Where one wants the .30 caliber I am strongly inclined to the carbine. So far as my observation goes, the penetration and accuracy of this does not differ materially from that of the full length rifle, while its light weight and shortness makes it much handier. I have all my rifles fitted with Lyman sights. To me these appear superior for every kind of shooting, and particularly so for quick work at a moving object.

In coming out of the woods I was favored with a sight that is not often the privilege of the sportsman hunter. A wagon having come in the evening before, we broke camp with the first light of day, in a drizzling rain. With the loading of the equipage my guide and self started on foot ahead. We had gone some three miles, and I had just a few minutes before shot the head from a partridge that appeared in the road. The woods being rather free from underbrush, I had walked rather faster and was something like 100 yards in advance of my guide, when my eyes fell on a large bull moose not more than seventy-five yards away, and a little to one side of the trail, he standing looking at me. I, of course, stopped short, when this fellow commenced advancing directly toward me. He would advance a few steps, stop, shake his head and utter those fierce grunts. The guide (Weaver) coming up in no way deterred this advance, which was continued until he was not more than twenty-five or thirty yards distant. Mr. Weaver, by shouting and throwing sticks, stopped his advancing farther, and he turned and went off into the woods, showing, however, no particular hurry in doing so. I wanted the opportunity of shooting and was in hopes that he would "charge," giving me justification. He was rather a large fellow with a spread of horns apparently of nearly sixty inches. One can readily understand that he presented a formidable appearance in his advancing maneuvers. Mr. Weaver tells me that in his thirty years' experience as woodsman and guide, he never but once before saw a moose act in this manner, although he had frequently heard of their doing so. Had I been free to take a moose I would have shot him on first seeing him, and thus been deprived of the sight that followed, which in itself was worth a trip into the woods.

While I did not succeed in getting a caribou I feel that the hunt was a success, and that my guide did all that could be done. I also wish to acknowledge obligations for courtesies to Mr. George E. Weather, the Superior School teacher of Doaktown, who is, besides, an ardent sportsman. Also to Mr. Daniel Doak, who has leased privileges about the pond. All parties I met in New Brunswick expressed kindly interest and appeared to welcome visiting sportsmen. They all, residents and guides, so far as I had conversation with them, express disapproval of the act increasing the license fee from \$30 to \$50.

NEW JERSEY, Sept. 30.

E. GRAVES.

### Tennessee Game.

SPORTSMEN generally will be much pleased to learn that owing to the effectiveness of the game law of 1903 Tennessee has more quail than for many years. The season opens Nov. 1, and as the prospects for fine quail shooting are splendid, many sportsmen from other States will probably avail themselves of the opportunities for sport, particularly as the Tennessee game laws are exceedingly liberal to non-residents, the license fee being only \$10 for the whole State, and the shooter is not limited as to the amount or kind of game he takes home with him. Reelfoot Lake, in Obion and Lake counties, is perhaps the finest ducking preserve in this country. It is not owned or controlled by any club, and visiting sportsmen can be supplied with boats, decoys and guides at very moderate rates.

The lake can be easily reached by vehicle, either from Obion or Union City, Tenn., from both places hacks run regularly. Parties coming by way of Memphis should stop off at Obion, all others at Union City. W. E. Pratt keeps the hotel at Samberg, on the lake, and P. C. Ward at Walnut Log. Both supply guides and boats. The State warden at Nashville, Tenn., issues all licenses, and his department will furnish any particular information desired.

### THE MANY-USE OIL

Cleans out smokeless powder; keeps bore bright and ready for use.

—Adv.

## Long Tails and Short Ones.

This story, by the late Francis Francis, is here reprinted from the "Sporting Sketches" as a graphic picture of one phase of sport in Great Britain. It is characterized throughout by the heartiness, sprightliness and sentiment which marked Mr. Francis' outdoor sketches.

Who does not recollect his first pheasant? I don't mean the first he bags, but the first he shoots at, because nine times in ten he contrives to score a miss, or he bags half of a tail feather, or something of that sort. To an unaccustomed gunner, or one who has previously only seen small game, the rise of an old cock pheasant is something prodigious. He shines so, he makes such a row, and vanishes from your gaze so speedily as you look after him, that it produces very much the effect which it did upon old Briggs when he flushed one for the first time, namely, a sort of sensation as if an ornithological Catherine-wheel had combusted almost under his nose. The ordinary observer, who sees pheasants get up and fly away, wonders how you could possibly miss such a great big lumbering bird as that; but put the ordinary observer in a corner where the trees are pretty close, or in a narrow ride with a five or six years' growth on it, and with a lot of strong, wild, rocketing pheasants processing to and fro overhead and around, and he will wonder no longer, unless he changes round, and begins to wonder how you can hit him. There is one great thing to remember in pheasant shooting, and that is to hold far enough forward, and that is the difficulty. A pheasant well on the wing goes a tremendous pace, and unless you pitch the gun a foot or two or more, according to distance and pace, in front, you will be exactly that distance behind the bird when the shot reaches his distance. Of course, the further the bird is off, and the faster he is going, the further in front must you pitch your gun to get on him; and it is the instinctive calculation of eye and hand in this particular that makes the good pheasant shot. It is astonishing, sometimes, how dead a bird will come over when you have pointed as you thought perhaps almost too far in front. You may kill any number of birds hand running flying away from you, unless they are rising at the same time, as they mostly are, when you must shoot high; but aiming across or over it is another pair of boots.

I shot one the other day. I am ashamed to say that he was something like sixty yards off; but it was rather an experiment. He was harking back and coming down the middle of the wood well above the hazels forty miles an hour, and apparently had dodged all the guns. I was standing on an open, high bit, and could see well over the bushes. My gun shoots very close and hard, and I determined to try for him; and I pitched the gun about four feet or so in front of him. I thought at the time it was too far, but he came over as dead as a stone, and left quite a cloud of feathers in the air.

"Who shot that pheasant?" cried a voice just under the feathers. It was my host on whose head I had dropped the bird.

"I did," I called out.

"Deuce of a long shot, wasn't it?"

"Rather. Is he dead?" I asked.

"Dead as a stone. That gun of yours must be a tearer. Hare to the right!" Bang! bang! and over went a brace of somethings, for my friend is a tearer, too, and when he pitches lead does it to some purpose usually.

Cover shooting under any circumstances, is more or less dangerous, and no matter how careful your shots may be, shots will glance; and you never know exactly where everybody is, and when it comes to ground game—unless it is going back—it is always more or less dangerous shooting, more particularly if you happen in your company to have a careless or over-eager shot. Some men are simply frightful in this way, and will be cutting the twigs about your ears, and the sensation of hearing the "whish" of shot and the shower of twigs just over your head is anything but good for one's nerves, and the wonder is that so few serious accidents yearly happen.

There is an old story—of how a shot of this sort was served out. He had very nearly peppered his next neighbor several times, and had been warned pretty forcibly. Indeed, on the last occasion, the victim had used strong language, and avowed that if his friend did it again he would "warm him" in return. Once again the shot came hurtling around his head.

"Who shot then?" he called out.

"I did," said his friend.

"Where are you?"

"Here!"

"Where? I can't see you. Hold up your hand."

Up went the hand. "Bang!"

"Oh! you've shot me in the hand."

"Told you I would," growled the injured man. "D'ye think I'm going to let you shoot at me all day without having a turn at you? Not exactly."

I don't know whether the story is true, but it is *ben trovato*, if it isn't, and I always tell it when I find a fellow shooting all over the shop, as if there was no one else within a mile or two. Unless I know that the way is quite clear I never shoot at ground game. I don't like shaves, and I don't like standing back a yard or two in the bushes for a man to pot a rabbit in the ride in my direction. It may be clever, but it is deuced unsatisfactory. Let the beast go; you'll have him another day.

I never shot but one man in my life, and he was a bricklayer, and earned it. We had some pigeons in a private field out at Clapham when I was a youngster. There was a high wall around a good part of it. There happened to be some houses building in the neighborhood, and two bricklayers climbed up and looked over our wall, leaning on it to see the sport. They were warned again and again that they were in a very dangerous place, and informed that they were trespassing; but they chose to stop. A bird got up and skewed round to the left. My friend missed it, and I wiped his eye and the bricklayer's arm at the same time. I did not see him at the moment, and thought they had gone. It happened that there was a road some distance off on the other side of the wall, and it was just within the hundred yards. The result was a summons to

Union street, and old Hall, the magistrate, adjudicated. He heard the case.

"Let me see the bullet," he said, and three No. 6 shots, which had been picked out of the man's arm, were handed in.

"Well! well! well!" he said, "that wouldn't hurt much."

I thought to myself, "Old gentleman, if you'd give me a running shot at fifty yards I think I could convince you to the contrary!"

We had to arrange with that son of labor at the rate of half a sovereign per shot, and then his mate, who hadn't been shot, wanted compensation too—which, of course, we declined; and accordingly he went back to the worthy magistrate and asked for a summons.

"But," said the magistrate, "you weren't shot!"

"No; but I might have been! Sure, didn't I run the same risk, and haven't I lost the day's work coming here?"

"Go away, man, and don't waste my time talking!" and the irate Hibernian was handed down, to his intense disgust. He couldn't understand it at all; and then that miserable old Morning Herald, I remember—which very properly died for its sins years ago—had a wretched quasi-funny article about three Cockney sportsmen who, etc., etc. The Cockney sportsmen was a great and all-pervading institution in those days. Thanks be, he's quite dead—and very much buried, too.

I don't care much about a regular slaughtering day with a spare gun and a loader. If I can shoot fifty or sixty cartridges it is good enough for me, and if I can account for two-thirds of them I am satisfied that I have done better than usual; and if a cock or two intervenes it spices the day. But an incessant fusillade with lots of hot corners, and a pile of dead to collect every now and then is rather too much of it. Enough is as good as a feast; and one gets stagnated with a surfeit. I am afraid in this respect, however, that I shall find few persons to be of my opinion. The mania for killing, when once it is set a going, grows by what it feeds on; and though there is a line beyond which sport declines into mere butchery, where that line precisely is to be drawn depends upon a great variety of views; indeed, as regards pheasant shooters, I fear it would be "As many men as many minds."

"Telegram, sir," said my servant, as I stood rod in hand on the bank of the Thames, trying, for lack of better amusement, to beguile the wily dace in the latter end of cheery October. Summer had been late, and though a few frosts early in October had gilded the leaves, and scattered some, a week or two's fine weather had made things pleasant and brisk again.

"Now," said Raymond, as we drove up to a very snug cottage, with every convenience adjacent, "if that blackguard Fipps is only out of the way—and he ought to be, as it's Snigswig market day—we shall have a perfect day."

"Who's Fipps?" I asked.

"The poachingest cuss in this country; he's a farmer who rents about three hundred acres, that run in and out with our coverts in a way that is simply infernal. He won't let us the shooting, having a sort of spite against my landlord, and I do believe he shoots nearly as much in his three hundred as we do in our three thousand. There's no having him anyhow. He won't be friendly; he won't do anything but shoot—and, d—n him! he can shoot some—and he has a familiar demon in the shape of a rat-tailed, mute-hunting, ragged-haired spaniel, half Clumber, half Norfolk, with a touch of Scotch terrier and a wiper of retriever in him, that's a worse poacher than himself. That dog, sir, that dog is a sort of Snarley-yow or dog-fiend, he is diabolic; no game has a chance with him. The pair of 'em are enough to give a fellow the horrors. Why, I'm something'd but he made me pay him £10 compensation last year for damage to his buckwheat, because I was weak enough to put a hatch of squeaker pheasants down in Chizzel Copse near his beastly 'nine acres,' every blessed head of which he shot in that very buckwheat, planted there for that purpose," and Raymond looked at me with the air of a desperately injured individual, and I confess that he had reason.

"But why did you pay?" I asked; "it was a gross swindle."

"Why? Because I didn't want the expense and worry of a law-suit, with the certainty of having a jury of his friends at Snigswig against me as a consequence. In this free and enlightened country, sir, any blackguard may bring an action against you, with the certainty of finding thirteen other blackguards to back him, particularly in a game case. The man who breeds pheasants and spends no end of money in the country, which the country would very soon miss if he didn't, deserves no mercy. He's a bloated game preserver—sit on him, scrunch him, pickle him! However, let's hope that Snigswig market will be busy to-day, and the tobacco and gin-and-water extra attractive afterward."

At this moment up came Johnson, the head keeper, with his terrier at his heels. "Well, Johnson, what are we to do to-day?"

"Well, sir, there's a decent sprinklin' of burds, and the tame ones is werry fine and farrard. Hares there's a goodish few, and rabbits midlin'. The leaf's 'ardly enough off for Chickweed Oaks and the thick part o' Timwillows; but I dessay we shan't do that bad on the whole; and if that 'ere Fipps don't turn up, why—"

"Oh, he won't turn up to-day. It's Snigswig market, and he don't know we're goin' to shoot, for I only made up my own mind yesterday afternoon."

But Johnson shook his head doubtfully. "He be at market I knows, 'cos I seed 'nn goo, and he dwoan't know as yet that you be goin' to shoot."

"As yet! What do you mean?"

"Well, that 'ere little imp o' Rackstraw's see you drive up, and I see him a-talkin' to Joe the higgler just arter, and he'll be sure to be for Snigswig; and it's much to me if Fipps don't get the office afore noon."

Raymond's countenance perceptibly darkened.

"Imp of Rackstraw's! ah!" and he pondered. "By the way, I think a little schooling would improve that young gentleman. My friend Clippings is on your school board; I'll give him a hint to look up Rack-

straw's imp, and we'll see if we can't get him some other occupation;" and he performed a graceful wink to Johnson, who beamed all over, and grinned huge approval of the suggestion.

"However, let's be off; Captain Charles and Mr. Mouser are waiting for us at the cross-road; so we'll start."

Ten or twelve minutes brought us to the cross-road, where two gunners were idling against a gate, smoking the matutinal weed. Captain Charles was a very good fellow home from Indian on sick leave, who could do many things better than most—thrash a cad, turn over a rocket, nurse a break well on the green cloth, go across country like an angel with wings (as little Mouser, his admirer, said), speak three languages, give most amateurs a bisque at tennis, and could sing a good song—and write one, too, for that matter. Mouser was a good little chap; everybody said so; and for once, what everybody said was true, though it isn't always by any means. He stuttered slightly, and wore an eyeglass.

"We'll take this 'ere spinney and hedgerow first. Mr. F. and Cap'n Charles, take each corner of the spinney there; Muster Raymond and Muster Frederick, take that 'edgerow down; Muster Mouser, take the middle of the spinney, please. One o' you beaters"—to ten or a dozen stick men of the usual stamp—"goo either side of Muster Mouser; the rest on ye glang on to tha' 'ood an' wait there."

All this was duly arranged without fuss, noise, or confusion, and this argued well for sport, as nothing is so provoking and so likely to spoil sport as bad generalship and inefficient drilling in this respect. I walked to my corner, slipping in a brace of gastight greens as I went; Captain Charles walked to his corner; little Mouser to the further end with his beaters; while the Buses went down the hedgerow with Johnson and his terrier Rat. This hedgerow, like all the hedgerows in these parts, was a good thick one, some thirty or forty feet deep, and pretty close at bottom, with trees at intervals. There was always a stray pheasant or two in these rows, with now and then a brace or two of partridges, an odd hare or two, and a few rabbits. It was pretty work; indeed, good hedgerow shooting is as pretty as any I know—real jam. Now a rabbit pops out and in again, as the terrier or spaniel threads the runs and bustles them up; then a hare makes a dash for the open, only to be rolled over and over with a charge of No. 6 in her poll; anon a cock preasant, glittering in the sunshine, rises with prodigious emphasis for the last time in his mundane career; or a brace of cunning old birds, whose brood has gone astray somehow by reason of cats or other vermin, skim out toward the distant mangold they are never destined to reach.

Meantime I have ensconced myself behind an Irish yew bush, on either side of which I can command the spinney. Now I hear Mouser coming down from the far end, and the "tap, tap" of the beaters. A pigeon comes whistling through the treetops. They always come first—wary dogs; and, as he can't see me, I double him up neatly. Then Mouser speaks. "Bang!" A bunny come to grief, I take it. "Mark!"—bang!—"mark forward!" I hear the flutter of wings, and the next minute Captain Charles is heard from. There is a crash in the bushes, and no more flutter of wings. "First longtail!" "mark!" bang! and Mouser evidently scores one. "Mark farrard to the right!" and a pheasant comes rocketing over the larches. I am not quite as good at a rocketer as at some other things, and don't pitch quite far enough forward with the first; but the second fetches him, and down he comes like a bean bag. "Hare farrard to the right!" Bang! bang! Jerusalem! Mouser missed him. "Hare farrard!" I peep round the corner and see puss coming down the hedge like an express train with a kick in it. I wait quietly until she is within thirty yards, when just as I finger the trigger she pops short into the plantation again. "Hare to the left!" I shout, and the next moment Captain Charles speaks again. And so the fun goes on for a few minutes longer, the tapping and rustling coming closer, till I see little Mouser pushing aside the bushes in a bit of thick close at hand. A rabbit or two have been added to the score, and the spinney had produced three pheasants, a hare and four rabbits, and the pigeon. Meantime our friends at the hedgerow have not been idle, and, with the assistance of Johnson and Rat, the dog, have bagged a brace of pheasants, an old cock partridge, three rabbits, and a hare. Not so bad for a beginning, especially as nothing to speak of has got away. Then we go on to Timwillows, a low scrubby cover, with a withy bed adjoining, and standing round the withy bed at judicious intervals (for it is too thick to shoot in), we wait the beaters.

"Please shoot all the rabbits you can, gents, as the tenant complains o' their barkin' the sets. I says as it's rats; he says 'taint." And here with the assistance of Rat, the dog, a goodish many rabbits are bustled about, and seven or eight come to grief; and another brace of pheasants fall a neat right and left to Raymond, who shoots very prettily.

Muster F., whispers Johnson, "I see a dom'd old brindled cat a bit back; ef you sees'n, sir, give him a dose, please, and say nothing to no one." Five minutes afterward I did sight that cat, and she saw me, but just a shade too late, for the No. 6 had chawed her up righteously. I pointed over my shoulder pussywards to Johnson, who bored in under the wands, shoved grimalkin into a convenient hole, covered her with sods, and batted her down. "Many a young pheasant and patridge he've had, a old divel; and hadn't he some teeth and claws! I'll gie ye a tip for that, Muster F. Look 'ere, sir," drawing me close and whispering a great secret, "I see a cock yes-rday up in the no'th end o' Baskerville Copse. Only you an' Muster Raymond knows on't. It'll want two guns to sarcumwent him, if he's there; so do you look out, and he'll do the same."

"A cock, Johnson! What, so early as this! Never; you must have been mistaken."

"Not me!" said Johnson; "he were bred here. There were two on 'em; but I 'specs that 'ere blamed Fipps 'a got one on 'em."

Then we shot another little wood, and scored a few

more hits and misses each, all in the usual way, and then we came upon a cart standing in a ride, and therefrom was produced snowy napery, a cold round of beef, half a Stilton and some jars and bottles, and the next half hour passed pleasantly enough.

What a jovial, jolly lunch it was! how joke and jest flew round, bounding and rebounding from one to the other, like tennis balls from a racket! We ate our beef, and in sooth mirth furnished the mustard, as we lolled about in every attitude of careless abandonment amid the feathery bracken, literally *sub tegmine fagi*. And how lovely the woods were, too, with their gold and russet leaves rich with the first touch of the Frost King's paint brush! Beech and oak and graceful larch, opening out vistas and peeps through the varied foliage in all directions—now down a long green ride, across which one almost expected to see a herd of deer go bounding; now through a little forest glade, down into a tangled dingle with a sparkling brooklet at the bottom; now away through a natural tunnel of verdure of nature's own devising, with its peep of blue sky at the far end, and alternate slants of sunshine and shade breaking through upon the ferns and glorious heather beneath. Rarely have I set eye upon a lovelier scene than surrounded our merry luncheon party.

"No Fipps, as yet, Johnson! I expect he's nailed for the day at Snigswig. Fipp and Fippeny is about the size of it," but Johnson shook his head doubtfully. Fipps was not a subject to joke on; for Fipps was no joke to poor Johnson, who would have been happy to homicide Fipps if he could have found any decent excuse for it.

Lunch over, and the ten minutes allowed for refreshment tobacco-wise being consumed, we took in fresh cartridges and made tracks.

"Where next, Johnson?" "Bas'ville Copse, sir. I sent Jem on with the net to stop heverythink back as we can, 'cause that's Fipp's t'other side. Muster F. and you'll take the houtside along 'tween the ride and bank, and please don't go'n send nothin' you can't 'elp to Fipps, and please don't 'e set foot on his land, Muster F., or he'll summons 'e for sartin."

For some time all went well. There was plenty of stuff, etc., of one sort and another, and we bagged a fair share, little going Fippsward; but I had the cock in my mind, and was looking out sharp for him. Five minutes after crossing a gully, we struggled on to a bank, where stood some hollies. Tap—tap—rustle. "Mark cock!" shrieked Johnson. Bang—bang! "Missed, by the Lord!" "Mark cock!" yelled Raymond. Then I glimpsed him through the tree tops—bang! "Missed him, by George!" Another glimpse—bang! "Missed him clean, by Jingo! O Lor! O Lor!" and the first cock of the season, and I might have been a par. in the papers, too. "Mark cock!" I shouted. Bang!—a solitary barrel, and *outside the covert!* What could that portend? I rushed to the hedge and looked out, and there was an ugly beast, in a brown velvet shooting coat, and drab gaiters to the knee, with a dishevelled, ragged, diabolic-looking spaniel at his heels, picking up our cock, as I live and sin.

"Fipps the poacher, by all that's wonderful!" I exclaimed.

"Fipps and his dorg, by all that's damnable!" groaned Johnson over my shoulder, paraphrasing Sir Peter Teazle in the screen scene.

"Thank ye, sir," said Fipps with a grin and mock politeness, as he pocketed the coveted prize. "You ain't got no more o' them as you wants my help with, has yer? No; I spec's I've 'ad the lot now. Mornin', Muster Johnson. Pity's ye 'adn't let me know's you was goin' to shoot to-day, I mout 'a' helped yet a lot more. Howsomever, better late than never, as you says."

"You be ——!" said Johnson, sullenly.

"Thank ye, but not afore you, sir; not afore you. You always was civil, and I'm obligated; but I wouldn't come afore my betters if I knows it."

Here Raymond broke in. "You poaching black-guard; if you'll only come this side of the ditch, I'll give you such a jacketing as you haven't had for one while."

"Will 'ee, now! I've a darn good mind to take 'ee at ye'r word. Howsomever, we'll talk about that another day. Meanwhiles you hain't got no more o' them ten-pun notes to spare, have you? Don't want to spekilate in buckwheat? No? Well, never mind, then; but don't let me sp'ile your sport, sir; pray go on," and he turned away, having chaffed us all around, and had all the best of it, too, as Raymond was forced to admit.

Whether it was the excitement or what, I don't know; but neither Raymond nor I could shoot a bit after that. Several birds and a hare or two went Fippsward, and every now and then that single barrel spoke out like a warning trumpet, and carried dismay beneath our waistcoats. We shot quick and fired all our barrels, and wasted no end of cartridges. We tried to be deliberate, and shot slow. All wouldn't do; we were either behind or before, and rarely between. Fipps got a regular bumper, and scored all the honors. Exasperation could no further go, and Fipps was cursed after the fashion employed by the cardinal in the "Jack-daw of Rheims"; but, like the audience there, he didn't seem "a penny the worse."

The others did pretty well, and we finished off with a decent bag enough—twenty-one brace of pheasants, a leash of birds, a dozen hares, a score and a half of bunnies, half a dozen wood pigeons, and a jay which I potted for fly-making requisites.

Having had a pretty good day, I stood and delivered to the tune of half a sov. to our friend Johnson. I had a sort of rule in this department: when we kill fifty or sixty head, I think 5s. enough for the keeper; when we progress toward one hundred head I make it 10s.; two hundred and over, £1, and that I never exceed under any circumstances, and I think those who do are very foolish for their pains.

About a month after, Raymond came into my place. I hadn't seen him for some days. He had a green shade on, and appeared to have been in the wars, which wasn't so remarkable then as it would be nowadays.

"What's the matter, old man?"

"The oddest thing. That fellow Fipps, you know, came up to town the other day. He called at my

chambers. 'Look here, Muster Bush,' said he; 'you said t'other day as you'd give me a jacketing. No man never said that to me, sir, gentle nor simple, as I didn't give him a chance to do it. Ef 'twas bounce, you've only to say so, and I begs your pardon for intrudin' on ye. Ef 'tain't, and ye means it, here I be, and if you can jacket me, darned if I don't let ye the shootin' if ye'll give me a walk now and then.' I said nothing. I knew I'd a tough customer to deal with, and resolved to be cautious, and it was well I did. I got up, and took off my coat and waistcoat, and so did he; we shoved the table and chairs in a corner, shook hands, and at it we went. You know that I'm pretty good at it—above the average, I may say—but, if I hadn't been a wee bit cleverer and more cautious than he was, he'd have thrashed me hollow; but after as hot a twenty-five minutes as ever I had in my life, and when I was as near pumped as need be, he cied a go—'not,' as he said, 'but what he could have stood another round or two, but he was satisfied that I was the best man.' Blessed if I was, though; but all's well that ends well. Then we shook hands again, washed ourselves, drank doch-an-dhurris, and parted with mutual good will. He lets me his shooting for £20 a year, and a walk with us now and then, and it's worth a hundred to us. Rum chap, you know, but not half as bad as we thought him. Things look so different from different sides of the hedge. He told me the story of his row with my landlord, and I confess he hadn't been quite well treated. He shoots with us next Wednesday. Come down and meet him."

I did; and I often met Fipps afterward. Not half a bad fellow either—a right good shot, a capital sportsman, and worth twenty keepers. As for the diabolical dog, Budge by name, we quite adore him. He's the funniest, cleverest, best-natured dog I ever saw, and that's saying a lot. Raymond lost his pocketbook one day in a thick copse, with lots of notes and papers of importance in it. We looked for it for hours; then we thought of Budge, and Budge found it like a detective. I beg pardon, I should have said unlike a detective. Fipps is devoted, and he'll just as often walk and beat for us as shoot. He likes the fun royally. He had some money left him lately, and is in easy case. Johnson and he became sworn brothers; never were such friends and allies. When the young pheasants are on, there is not an ant's nest far or near that Fipps doesn't know of, and if the birds were his own bairns he couldn't take more interest in them. As for poachers, Fipps tackled the worst and biggest one—Bullying Ben, as he was called at Snigswig Market—one day, and thrashed him within an inch of his life, and promised him some more if he ever caught him about our place again. Master Rackstraw was looked after by the school board, and, as he didn't like it, he ran away to sea, and (as all such characters are) was no doubt wrecked, eaten by savages, and made a tract and an awful example of, so there was an end of him. And higgler Joe was unfortunate, most unfortunate; he moved to Portland, having taken a long contract there, which he couldn't throw up, to break stone or something of that sort—I'm afraid the contract doesn't pay so well as higgling and fencing. And all the rest of us are very well, thank you.

## Forest Reserves in Idaho.

AN unusually interesting correspondence relating to the general forest policy of the Government has just been published as Bulletin No. 67, of the Forest Service, entitled "Forest Reserves in Idaho." The major part of this correspondence, which deals specifically with forest reserve questions in Idaho, consists of letters from Senator W. B. Heyburn, of Idaho, to the President; the replies of the President; letters from Mr. Gifford Pinchot, forester of the U. S. Department of Agriculture; and a letter on the Federal forest reserve policy, with special reference to Idaho, by Senator Fred Dubois.

The discussion of the forest reserve situation in Idaho, which is very fully developed in the letters, and the thorough explanation of the Federal forest policy in general, which has never before been so clearly and emphatically defined, lend to this bulletin exceptional and more than merely local interest.

Senator Heyburn, in several of his letters, makes warm protest against the proclamation of certain forest reserves in Idaho. His colleague, Senator Dubois, on the contrary, enthusiastically recommends their establishment, and declares that "to-day the forest reserves are administered \* \* \* for the sole purpose of conferring the greatest benefit on the communities in which the respective reserves are situated."

One of the most striking passages of Senator Dubois' letter is that in which he asserts that the Federal administration is now in fullest harmony with the desires of disinterested citizens throughout the West. He declares that he never at any time opposed the policy himself, though at first, with colleagues from the Rocky Mountain region, he "contended against the methods which were used in creating, maintaining and controlling the reserves." "During the time when the forest reserves were first created," he writes, "reserves were created without sufficient safeguards to protect stock raisers, miners, lumbermen, agriculturists, and people of our section generally. The fight of the Western men was constant and united. Our demands were set forth in numerous speeches, and finally were acceded to. The policy which controls the creation of forest reserves to-day and their administration is substantially the policy which the representatives of the Western States in Congress have contended for, and is substantially what the West, through its representatives, contended for."

The President, in one of his letters, replies vigorously to the protests of Senator Heyburn. The following sentence occurs:

"The Government policy in establishing national forest reserves has been in effect for some time; its good results are already evident; it is a policy emphatically in the interests of the people as a whole, and especially the people of the West; I believe they cordially approve it; and I do not intend to abandon it."

The specific withdrawals in Idaho which Senator Heyburn opposed, and which Senator Dubois recommended, now established as reserves or as additions to reserves, are as follows: Henrys Lake, Sawtooth, Payette, Squaw Creek Division of the Weiser, Cassia, and additions to the Yellowstone and the Bitter Root.

Appended to the correspondence is a report of Special Agent Schwartz, of the General Land Office, based on "certain examinations of the Shoshone Forest Reserve temporary withdrawal, in Idaho."

In the discussion of the advisability of withdrawing certain lands for forest reserves, it was objected that forest reserves discouraged settlement and worked hardships for those who had acquired claims within the areas affected. According to the report of Special Agent Schwartz, about 90 per cent. of the claims which he examined have never been resided on by their claimants, as is required by law. It would appear, furthermore, that a considerable number of the claimants are railroad employees and others whose interests in their claims seem very indirect. On the whole, the report goes to show that the claims examined are in a large number of cases not legitimately held.

## Looking Forward.

### Two Lessons Suitable for a Primer of the Near Future.

Editor *Forest and Stream*:

This is the picture of an ax. We seldom, if ever, see a thing of that kind now, but years ago, when the face of our country was covered with a heavy growth of grand old trees, the ax was a common tool, and the settler then used it to cut down the trees and to hew and notch the logs for his lonely cabin, and also to clear up the land. But now, as the trees are all gone, except perhaps a very few small, scrubby, crooked and misshapen ones, there is no more use for the ax, so it has been thrown aside and is very seldom seen.

Instead of the ax the settler, to clear up his land at the present time, uses a brush hook or a stump-puller.

This is the picture of a muzzle-loader squirrel rifle. We never see any of them now, but it was the only firearm that the first settler had. When food became scarce in his cabin he would take his long trusty rifle and go out into the grand old forest or off on the prairie and soon bring home all the game that was needed for his family, for at that time game was very plenty nearly everywhere in our country.

But the noble old woods are gone and the game is gone, too, and the people in lieu of shooting game with the muzzle-loading rifles now use breech-loading magazine rifles to shoot at standing targets, and scatter guns of a similar make to shoot at things made of clay and thrown by a machine called a trap; and the gunners of the present day sometimes change that kind of sport for the very exciting one of shooting at a species of bird called the English sparrow. So much for the passing of our grand old forests, and of our once more than bountiful supply of game.

### A Duck Hunter's Luck.

"If there is one thing of which I have absolutely no knowledge it is hunting and fishing," remarked John S. Inglis. "I never caught a fish or killed a bird in my life, and I suppose I never will. I couldn't tell you the difference between a striped bass and a mallard duck, unless it came in on a platter. But I have a friend who is a sportsman. You never saw such a keen sportsman in your life. He has a big room full of guns and fishing tackle, and all kinds of sporting paraphernalia. He used to worry the life out of me with his persistent invitations to go hunting and fishing. Finally I agreed to go duck hunting with him. He provided all the regalia. Among other things he ordered a lot of shells from a downtown gun store, and I was to go up and get the shells and pack them in my grip. I got the package from the gun store, and we went to Alviso. We were proceeding up a slough in a small boat in the cool of the early morning when we ran into a million ducks.

"Open that package of shells," yelled my friend. "I opened the package. It contained twenty-five pounds of assorted fish hooks. I haven't been duck hunting since."—San Francisco Chronicle.

It is not commonly accepted that the wildcat is so vicious as to attack human beings, and this section has lately furnished the cat that proves the exception to the rule. Albert Dennis, a guard at the Varn Turpentine Company's convict camp, was, Wednesday night, attacked by a monster cat in Gillette Creek, not more than a mile from the camp, and had he not used unusual presence of mind, would most likely have been torn in pieces. The young man was returning to his quarters at a rather late hour from an evening pleasantly spent with his parents three miles distant, and upon reaching the swamp of the creek, was literally held at bay by the cat, which held the pass to the bridge beyond, and refused to move when advanced upon by Mr. Dennis. The young man was armed only with a clasp knife and with his weapon he waded into the brute, kicking him over first. The cat sprang quickly upon him and succeeded in doing the young man's Sunday clothes considerable damage before his throat was cut. Mr. Dennis has killed several cats in his time, but says this one is the biggest he has ever seen. It is said that the female cat is especially vicious during the period of nursing, and the one in question was seen to be carrying young.—Tampa (Fla.) Tribune.

# SEA AND RIVER FISHING

## A Mountain Stream.

EVEN in the valley where it flows through beaver flats and meadows the Big Thompson Creek shows its mountain breeding. It rushes headlong over its winding speed-way, tripping over every stone; but all its disasters are evidenced by musical gurgles that go to swell the general melody of the stream. All sound which does not originate with the stream itself is so enveloped by this music that it has no penetrativeness. One may shout with little result. The fisherman who seeks to know the mysteries of the creek is sealed alone with his thoughts, fairly encompassed with the noise of rushing and falling water. Both in the valley and the upper cañon the creek is the heart of all action. In the icy waters of the stream itself is found the most active expression of mountain life, which is trout; and along the banks live and dive and have their cautious being the mink of costly brown and the less attractive musquash; while in the marshy flats are many evidences of beaver. In the dry ravines the long-tailed mice busy themselves in the hot afternoons, and in the groves of quivering aspens which wind with the stream, no creature is more certainly to be seen than the familiar cotton-tail sitting timidly still, in the "leafy light and shadow." Upon the higher ground, under the ragged boulders which sentinel the valley, many a groundhog family suns itself at the base of its miniature precipice; and almost everywhere about there dwells an active population of chipmunks—bright little chaps that may be taught to feed from the hand, but which have very little spare time for ceremony. A strayed jack rabbit may occasionally be met with or a prairie coyote on his bee-line trip from one county to another.

Beyond the lesser boulders are scraggly cliffs clothed scantily with small brush and sage and studded with many a dead pine trunk; or difficult slopes hardly wooded with groves of sturdy spruce and hemlock, with a sparkling of those gentler pines which lift silver-lined palms to the sky. In the carpets of green moss of various shades which lie so snugly against the mountains of the main range that projects itself massively against the sky-line, there are deer and bobcats and bear, for in reality these mosses are jungles of pine. In the desolate and barren heights above timber-line, where hard packed snow has leases in perpetuity of all deep caverns with north openings, whence it gleams as blotches and rivulets of white for miles away, are the stamping grounds of the wary mountain sheep.

It is from these wild heights and secret haunts the stream comes, fuming and fretting and lashing itself into a fury between granite walls and leaping to seeming destruction or more composedly but not less energetically eating itself into a softer bank—a habit which teaches trees and bushes to stand deferentially with their roots back out of the way.

The power which the Big Thompson exhibits in narrow places is never absent, though sometimes concealed. In the beaver flats in the meadow, the creek, apparently confused by the number of pathways open to it, divides itself into numerous streams, each of which must find its way through a wilderness of bushes as best it can to a common meeting place below. It is in this region the industrious beaver have made use of the various brooks to create marshy ponds for their purpose and in the sloughs which lie between the several branches as they here divide one may wander about in hip boots, and find a way of escape only after a bad wetting. Here, it is true, there is one branch among them all that represents more than the others the original stream. This cuts itself a deep and narrow channel through soggy soil and flows with an attitude of calm that the stream seldom assumes. By peering down between the fringes of grass on either bank, which would arch and hide the channel completely if they could, one may observe trout "hanging" in the water, like Lamb's pike in the fish pond near the "Orangerie." But they have an aristocracy of their own and are so well fed that an artificial fly is an imposition upon the face of it, and they will not rise. At least that was one day's experience. How swiftly the bit of feather and metal floated down, indicating an unsuspected force of current. A false step through that deceptive grass shelter would give one's foot a force like Stockton's negative gravity. Looking carefully one may note that although the water flows without noise, nevertheless it sucks through that part of the marsh with somewhat the force of an ocean undertow, and from below comes a sound of merriment where this stream again reaches a rocky bed.

To know by personal observation the upper mysteries of the Big Thompson one must start early with Alpenstock in hand and trout basket full of luncheon. Thus equipped a companion and I set out when the day was young, our path winding at first through thick aspen groves wherein the morning air was cool and invigorating, and the ground just damp enough from the night's shower to fill the nostrils with the best fragrance of the woods. The running water in the creek tinkled pleasantly in our ears, seeming to tell of a day's journey done before sun-up. At times as we progressed, our path led quite down to the creek's side by the edge of a deep pool where the water made a sudden pause before taking its next series of frantic leaps. Ah, for the chance to make one cast with a royal-coachman! One would fillip the very rim of that circle of boiling white foam where the water, pouring down from above, falls into the basin with a deep plunge. Or else one would permit the fly to be carried in the falling water with a brief whisk below the surface. Behind that fall your biggest trout lies, watching eagerly for his food, which is commonly washed down to him in that steady pour, and one may trust his eye despite the confusion and his quickness and the force of the water. But this temptation we had

anticipated, by leaving our fishing outfits at camp, well knowing the probability and the danger of meeting darkness above timberline. We paused seldom—once to clamber out into mid-stream, where the stream had temporarily lost itself among giant boulders—but climbed gingerly up the sterile cañon, keeping as close to our stream as practicable, which meant to cling at times to bushes and the roots of trees on a steep descent, to cross the cataract on fallen pines and to imprison ourselves with persistent frequency behind the rotting tree trunks which choked much of the forest. We watched with what reckless adeptness our creek leaped over distances that for us represented long and arduous labor, and we welcomed with pleasure the discovery, on one side, of a path over which hunters had evidently packed their burros, and which the feet of prospectors had worn to some distinctness. By noon we began to cross feed brooks and to discover that our creek was indeed a stream of parts.

We rested and ate our luncheon where streams from two sources flowed together, and where a tiny diverted rivulet furnished us with the purest of drinking water. Here the dark corners of the wood invited furtive glances. What solitude! Down the ravine and up the side of the mountain opposite every separate pine tree pointed solemnly and accurately upward, a spire. Here there were no song birds whatever, nor other small life of the woods. A small gray squirrel had peaked at us from the other side of a spruce trunk, but that had been an hour back. Not even the chatter of a chipmunk modified the monotony of the roar of the running water. Suddenly we heard a harsh cry, which, as it sounded in our ears, was the embodiment of a thousand scarcely admitted apprehensions, but presently we knew its source, for a hawk flew from a nearby spire to one more distant, again voicing the petulance of his kind.

In her search for pleasanter things in that region my companion's eye suddenly lighted with pleasure and her lips involuntarily framed an exclamation. Following the direction of her finger I saw above us, hanging their gayly decked heads like vain narcissus over a brook, some blue Columbines, the Colorado State flower. We climbed and plucked them greedily, and, discovering others, continued our depredations. Other odd and curious blossoms greeted us as we proceeded, but in that wild and silent region, where every dark cavity in the rocks was a spur to the imagination, we saw nothing so reassuring as those flower-faces outlined against the dark granite.

A little more of climbing and a true secret of the creek's life was revealed to us. We had discovered and inspected a rough shelter which a gang of prospectors had evidently set up for themselves but which they had deserted for the time being, though not for long, for a rubber coat was hanging from a nail and some cooking utensils were scattered about where they had been recently used, and we were treading our way expectantly down a pathway when, at a sudden turn, there came to view a little mountain lake of perhaps an acre or two in extent that was well worth admiration. Not a ripple disturbed its mirror-like surface. It lay like a mammoth drop of mountain dew, pure, cold, clear, reflecting the precipitous shore opposite. This lake was one of the creek's natural reservoirs and the water's only real resting place on earth.

While feasting our eyes on the marvel, we noted with dismay that drops were beginning to mar the smooth surface of the lake. Glancing up we perceived that a great black cloud, sailing low enough to hide a nearby peak, had already sent its advance guards over us and was itself fast approaching, leaking as it came. Very soon, at the awful explosion of a thunderbolt made on the spot, the shower was upon us. It was somewhat awe-inspiring to see how dexterous echo caught the thunder bombs and tossed them in dim inuendo down the valley. But mountain showers are usually not of long duration and we were soon able to leave the shelter of the big tree trunks we had chosen and to turn our faces again upward. Up, up, up, we climbed until the trees became few and stunted, and bald rocks were everywhere in evidence. Over these we clambered and were able to dip our drinking cup at last one of the very fountains of our stream—into the icy pool at the edge of a bank of melting snow. Above the white bank, in a crevice among the rocks, grew a single bunch of sturdy moss, and above that bare rocks were piled in the form of the half of a great amphitheater with here and there, in the August sun, a blotch of old snow like a white-haired spectator. Across an impassable ravine near at hand the highest peak in our vicinity towered yet a little way above us—dangerous, icy and unclimbable.

Satisfied with having traced our stream to its source, and since the afternoon was more advanced, we started without much delay upon the return journey. The slippery log crossings, the peril of which our enthusiasm had minimized on the upward trip, had a hazardous appearance when we viewed them again and knew that necessity this time commanded. Steep and narrow paths gained an added aspect of danger when one looked down instead of up. Nevertheless, we accomplished the long, ragged downward trip in much shorter time than it had taken to ascend. Yet the sun had disappeared in gallant farewell behind the mountains and the blue vapors of evening had filled the valley when we reached camp, where we were greeted by the familiar chatter of the magpies in a nearby grove, received the salutations of friends and sniffed the appetizing odor of the evening meal. MILTON MARKS.

## The Log of a Sea Angler.

"María Better Than Nothing"—The Lost Woman of San Nicolas—The Isle of Winds.

BY CHARLES F. HOLDER, AUTHOR OF "THE ADVENTURES OF TORQUA," ETC.

THE climate of southern California is a puzzle to many who think they know it well. Thousands of tourists come to the coast every winter to escape the rigors of the season in the East; they remain until April or May, and return to their homes in the East believing that the southern Californians roast, so to speak, during the hot months. How can it be otherwise? If the winter is warm the summer must be hot. Again, the palms and other semi-tropic plants tell the story of a tropical climate. Yet these tourists have all seen the country in what is considered the disagreeable season by the natives or the "old 'niners."

Ask a southern Californian which part of the year he likes best and he will tell you that the winter is the most beautiful season, as the land is a garden, clothed in greens, but for comfort give him the summer, which along there is rarely really hot.

I shall arouse criticism when I say that, to my mind, southern California is a delightful summer resort, far more delightful than any resort on the Atlantic coast. It is now Aug. 21, and the average temperature in my study in Pasadena all summer has been 75 degrees with the doors open, 70 degrees with the doors closed. There has not been a night, so far, but what one or two blankets were not needed, and a hot day, in the Eastern sense, along there from San Diego to San Francisco, is almost unknown. Hot days there are in the inland towns; at times some are very hot; but there are localities, like the San Gabriel, Los Angeles and others twenty miles inland where the summer climate, compared to that of any region in New England or the Middle States, is almost perfect.

I have one fault to find with the summer climate, as a rule: it is too cool to sit out of doors evenings. It is too cool for duck and the typical summer clothing of the East; and if anyone is fond of mosquitoes he will be disappointed; we have none.

I mention this as the peculiar climate forced itself upon my attention twenty years ago, when I first came to California for health. I found that I gained in summer and held my own in winter; but what struck me as the most remarkable feature was that I could appoint a day for an outing a month ahead and be absolutely sure that the weather would be clear and beautiful; and from April or May to November there is a succession of clear, delightful days, without (with very rare exceptions) a storm, thunder shower, squall or gale of any kind.

There appeared to be one exception to this. Out from Santa Catalina, ninety miles by the log, lies the island of San Nicolas, one of the channel islands, yet so wind-swept that the wind gods themselves seem to have taken possession and are blowing the island into the sea.

Three or four times I endeavored to reach the place on a large yacht, but as many times we were blown back, or made so uncomfortable that we sailed for Catalina Harbor, and one night rode out the gale in the outer channel, early in the morning going back under a close-reefed foresail.

I do not intend to say that the wind was dangerous, but we were out for pleasure and a certain amount of comfort, and not wind-jammers in any sense. We wished to reach San Nicolas in weather that would permit us to land, and one afternoon we made it in a stiff breeze, and rounded up in the pseudo lee—one of the most disagreeable places I have ever found myself.

The island was about seven miles in length, and near the northern end rose in hills or mountains perhaps 1,500 feet or more in height; about which hovered a long attenuated lead-colored cloud, indicating that half a gale was blowing.

The anchorage was to the south of a long sand spit upon which the surf beat heavily, coming from two directions, around each end of the island; and as we dropped anchor I saw that a current was running along there about six miles an hour—a current that evidently ran in one direction for a while, or until it became weary, then shifted about and ran in the opposite, or stopped short. There was something uncanny about the place, and as the night came on and we made everything snug, the wind rose and played on the rigging strange notes, twanged them in weird chords until a wail of sounds seemed to fill the very air. I am not superstitious, but I crawled on deck four or five times that night just to listen to the strangest of all winds I had ever met, and I have known many, high and low, fierce and strong. Early in the morning we made the attempt to land on a beach with a heavy sea running, a strong undertow, and a fringe of deadly kelp that coiled and lashed the seas like snakes.

It was an ominous outlook as we held the boat on the waves, watching for an opportunity to run in, and when we did, I was in light swimming costume, ready for anything. The swell was coming from behind us and from the south, and met forming a cross sea which went hissing in upon a steep and dangerous beach; but there is a time to beach a boat, and we waited for it, and shot in on the crest of a wave. As we struck, and the undertow began, we leaped over and held her hard, then when the next wave came, by the best of luck we were carried well up the beach and left high and dry, wondering how we had accomplished it, the waves were so high, the shore so impossible.

I have landed on some weird and desolate places. I lived on a key in the Gulf of Mexico—thirteen acres in extent—for nearly six years and might be considered a

Keens boots and leather soft and waterproof; 2oz. bottle 10 cents. —Adv.

expert on islands; but San Nicolas carried off the palm for ultra desolation.

The eternal wind appeared to be blowing it into the sea. I did not see the wind gods and furies, but felt their breath; they were there morning, noon and night, tearing, receding, tossing that stricken island into the air, and heaving its soil and sand out into the moaning sea.

There was a single inhabitant, a Basque herder, who came down—a Robinson Crusoe. He wore a straw sombrero lashed under his chin, carried an old-fashioned muzzle-loading rifle over his shoulder, and was followed by two gaunt and hungry-looking dogs. He objected to our looking for Indian implements, as it made the wind blow—that was the curse of the island, the wind, and it came from the spirits of the ancient natives whose bodies were uncovered and whose graves were robbed. He showed us his shanty down on the rocks, its roof covered with big stones to prevent it from being blown into the sea.

Near at hand was a sea-lion rookery from which came the wild barking of the animals, blending with the roar of the wind and creating a pandemonium of sounds.

This man was a sheep herder and his duties were to walk up the island every day and see that the sheep were not blown away and that they found fodder. The island was to all intents and purposes a desert. We climbed up from the beach, passing through wind-worn cañons, reaching the mesa, where a scene of desolation stretched away to the north and west, not a plant or bush in sight, nothing but a level plain covered with small stones about the size of peas, which the Basque said were picked up by the wind and blown through the air like sand. On the northwest end of the island was one of the largest shell mounds known on this coast; it is a mile long, and eight or ten feet high, and from one end to the other displays evidences of human occupation. Shells of the abalone are strewn about by the score. Now the wind whirls the sand from a score of skeletons and implements, and an hour later buries them again; and all along there I found evidences of human occupation. In fact, San Nicolas is the only island of this interesting group about which anything really definite is known regarding the inhabitants.

The objects found resemble those of the other islands, and tons of loot have been carried away year after year. For a long time it was the custom of certain fishermen to spend the winter here digging for relics of the aborigines. The wind was their aid, as it uncovered one place to-day and covered it to-morrow.

There was a fascination in the quest, and as I followed along the edge of the mesa, that was everywhere broken down into little cañons through which the wind had swept for centuries, cutting and carving out the friable sandstone, I found various objects suggestive of the lost people who once lived here. Near a little mound some angler had sat, and from an abalone shell had fashioned a fish hook, a really beautiful object. There was the tool which he used—a cigar-like object—to bore a hole in the pearly shell which was then broken and a rude fish hook formed, with the barb upon the outside. Not far away I found a number of curious wedge-shaped articles; my companion picked up the fisherman's pipe, and shells were found, their holes stopped with asphaltum, showing that they were used as drinking cups. The most interesting place was a mound from which the sand was blown, displaying a mass of skeletons, mortars, pestles, abalone shells, and bones of fishes. One might imagine that a battle had been fought here and the sand had covered the evidences of slaughter; but the natives buried their dead in the mounds, and all the mortars, pestles, spear heads, hooks, clubs and beads of the dead man were placed with him in the sand; hence, it is necessary to rob the dead to obtain them, the bodies being buried in tiers, one upon another. But the sand uncovers them, and a few years ago it was only necessary to walk along the mound and pick up the objects.

Among the interesting articles found here are what might be called jewel cases. They were formed of two abalone (*haliotis*) shells, placed face to face and sealed up with asphaltum: in the interior beads or curiously-shaped stones were deposited, the cave or box so formed being buried in the grave.

I fancy these were the possessions of women, and the shell-beads, their gems and trinkets. There was a fascination in finding such an object, and shaking it to listen to the jangle within. One might well imagine that this pearly box contained pearls, black and white, and it was an interesting test of one's curiosity to see how long the impulse to open the jewel-case could be resisted. When one could withstand the strain no longer and broke it open what were the gains? A little ear-ring, formed of the pearly shell of the haliotis, a few beads cut out of shells, another flat and beautiful, and a square piece with perforations on the sides, the diamonds, rubies and heirlooms of some San Nicolas maiden.

Fine steatite pipes have been found here, spears of flint, stone clubs several feet in length—the insignia of some island chief; and if all the material that has been taken from this island in the past twenty years could be collected, it would fill a large museum. The best of the material has been taken, but the shifting sands doubtless still conceal deposits of implements in stone, bone and shell, telling the story of those islanders that have passed on over the long divide.

There can be little doubt but that San Nicolas was well worded in years gone by, but the sand has the upper hand now, and is sweeping over the land and leaping into the sea. The cliffs are cut and worn by the wind into fanciful shapes, and in a few centuries a shoal perhaps will mark the spot where once stood a large and populous island. An interesting romance has associated itself with the place. Sixty years ago there were still a large number of natives living here. They subsisted on shells and fish, and were the remains of a large and vigorous race that peopled all these islands two or three hundred years ago. About fifty years ago the priests at the mission of Santa Barbara decided to bring them to the mission; a vessel was sent to the island for this purpose, and all were taken aboard. As she was about to sail one of the women cried out that her child had been forgotten. In the meantime a gale had sprung up and the vessel was blown off shore and could not return, so the woman leaped into the sea and swam back, while the vessel disappeared. It was the intention of the crew to

return, but after the natives had been landed at Santa Barbara the vessel was wrecked and in time the woman was forgotten. Twenty years after a new priest came to the mission, and hearing the story determined to see if the woman still lived. Securing a small craft called the "Maria Better Than Nothing," he sailed for San Nicolas. In the interim the island had been visited by other hunters and Russians, but none of them ever saw the woman. The "Maria, etc.," anchored off Corral Harbor, a small indentation in the rocks, and the men began their search over the sandy waste, but without success. They fired guns, left signs which would have attracted anyone's attention, but all to no purpose, and they were about to give up the search when one day in a deep cañon they found the remains of a seal, so fresh that it was evident that it had been killed by a human being not many hours before. The men then began a more careful investigation. They formed a line across the island at certain distances, and marched on over the sands, in this way covering every acre. Suddenly one of the party shouted a signal; the line converged and they found the lost woman of San Nicolas. She was sitting at the entrance of a small hut made of whale ribs covered with bird skins, and presented a singular appearance, being dressed in a robe made from the skins of shags—a costume so peculiar that it was later sent to the Pope and placed in the Vatican museum.

The woman was sitting on the ground cutting up a seal that she had trapped, and rose when the man came up and greeted them with a quiet courtesy, as though she had parted from them but the day before. In the party were Indians, but none could understand the peculiar jargon of the lost woman. By signs she gave them to understand that she knew they had been hunting for her and had concealed herself when they approached. She went with them to Santa Barbara, but never learned to speak English, and died after several months of civilization, having been christened and named for the vessel that rescued her, "Maria Better Than Nothing." Before she died she told her rescuers by signs that the wild dogs had killed her child, and that she had seen other hunters visit the island, but had never made herself known.

To appreciate this story one should land at San Nicolas when the wind is blowing and the air is filled with sand and pebbles; yet, despite the terrors of the situation, this sand and wind-swept place once supported a large and vigorous population, which suggests that the fishing is of the best. Great bands of yellow-tails and sea bass swam up the shore and rushed into Corral Harbor; and in the kelp beds I took numbers of large rock bass which bore a striking resemblance to the black bass.

About the island were vast flocks of sea birds, especially cormorants, which gathered in flocks in the indentations of the shore and held what must have been a "bird convention"; swimming in long lines, making strange noises, and dividing up a reform again and again.

As wild and desolate as was this place, it had a certain fascination. The very conflict between the wind and the island, the fury of the seas as they swept in, the wild cries of the sea lions, the menacing cloud-banners which streamed from the mountain tops, all formed a picture that could not fail to make a profound impression on the human mind. As we shook out the foresail and fell away I saw the strange figure of the Basque, his old rifle over his shoulder, his sombrero bound tightly beneath his chin, gazing at us, then he turned and disappeared over the shifting sand dunes of this isle of winds.

## Difference of Objective.

### One Hour's Journey from New York City.

THE fishing season now drawing to a close has been a very successful one at the Great Kills, S. I., as to the number of fish taken. The fish have, however, been small, weighing three-quarters of a pound, with an occasional fish that would weigh a pound. I am speaking of weakfish, for aside from about a week last June, when a few snappers put in at the Kills, we have had no other kind in numbers. "Fish-butchers" who look for numbers rather than sport or size have been in clover the past summer, taking from 150 to 250 of these small fry in a day's outing; and catches for two men to a boat have been quite common at from 40 to 70 fish.

To the older fishermen, who have made their headquarters at the Great Kills for the past fifteen or twenty years, the continued decrease in the size of the weakfish taken each successive season has been very pronounced, and a three-pound fish from the Kills is considered a curiosity. A certain few of our little band of fishermen can remember that four-pound fish were quite common in years (I am sorry to say) now past, with an occasional weakfish touching the scales at six pounds. I am speaking of the Kills, not Raritan Bay at large.

It is not my purpose to attempt to give any reason for the decrease in the size of the weakfish, it is sufficient to know that it is so, and painfully noticeable to such of us as have made our fisherman's home for the past fifteen years at the Kills.

Some inquiries of our fishing friends and our tackle dealers, to whom we have told the story of catching this tomcod in size of weakfish, give us as a remedy an objective on the Great South Bay, where they assured us the fish were larger. Thus it happens that we make up a small party, say good-bye to the Great Kills for a day, and are off by midnight train for Freeport, L. I. An hour is consumed in the journey, and we are at the dock, where the captain of the launch we are to fish from awaits our arrival. A faint moon lights up the crookedest creek that man ever navigated, else to our minds we had been lost in its many turnings. However, the Captain knew his course, and we are soon anchored on the fishing grounds.

It is not daybreak, nor is it quite high water, yet we are anxious to get to work in case the unexpected should happen, so over go the lines with very tempting bait. We have to wait for daybreak and the turn of the tide before the first sign of fish life is noticeable; but it was worth waiting for. The first fish weighed 4 pounds and 2 ounces, which was the smallest of the

eleven weakfish taken, our largest fish weighing exactly 7 pounds. To the above must be added five blackfish and five fluke of no mean size, that were taken during the day's outing, and would have been excellent sport to the "pot-hunter" could he have caught them with hand line and "plumbob" sinker tackle.

Our catch, cleaned and laid out on the deck of the launch, was a feast for those three pair of hungry eyes from the Kills, who had been hunting the little fellows all summer.

We have been over the grounds twice since, but with not such good success, owing, we were told, to the lateness of the season. Even so, there was more pleasure to us in taking the few fish we got than all the little ones caught in the Kills during the summer. From my viewpoint, the possibilities of large fish of all kinds are to be expected from such waters, or my experience at salt-water fishing for the past twenty years may be set down as no account. Thus it is that a difference of locality within about the same time of journey from the city produces such different results as to the size of the fish taken.

It is nearly time to pack away our traps for the season of 1905, our only regret in saying good-bye to them being, that we had not been induced earlier in the season to give the Great South Bay a trial.

OSCAR.

## Fish in the Pulpit.

PRESIDENT CLEVELAND attended a Presbyterian church, in the old residence part of the city, which had been somewhat sidetracked by the northwest movement of population. It revived during his administrations so far as numbers were concerned, although church trustees invariably assert that the tourists who go to see a President prove an unprofitable line of traffic, by comparison with steady pew-holders. Dr. Talmage served this church in the latter half of President Cleveland's second administration without salary; the publication of his sermons in the newspapers throughout the country was the main line of his influence and effort, and the place of actual sermon delivery was comparatively unimportant. It simply afforded a date-line.

There was at times a noticeable disposition on the part of Dr. Talmage to "jolly" his distinguished parishioner from the pulpit, which everybody who knows Mr. Cleveland cannot doubt was highly distasteful to him. For example, in a Thanksgiving sermon one year, when Mr. Cleveland was present after a summer at Buzzard's Bay, in which the newspapers had pictured him as constantly fishing, Dr. Talmage proceeded to tell of the abundance with which the earth yielded her increase, in this broad land. He told of the wheat of Dakota, the corn of Kansas, the cotton of South Carolina, the fruits of California, all in eloquent phrase, bringing his period to a climax in "the fish of Buzzard's Bay," as if that were America's great source of supply, recognized as such in the commercial world, like the banks of Newfoundland. A smile played over the countenances of the congregation as it contrasted the alert-minded sermonizer and the sedate pew-holder.

On another occasion, the first Sunday of Mr. Cleveland's return from Buzzard's Bay, the venerable Dr. Sunderland, in this same church, took for his text, "And they cast forth their nets," or words to that effect, in the gospel narrative of the miracle of the multitude of fishes. Dr. Sunderland was too serious-minded to see the slightest suggestion of humor in the discussion for forty-five minutes of the spiritual aspects of large-sized successes in catching fish, but the careful analysis with which the lessons of the art were elaborated, could not but impress his hearers as more realistic than he had perhaps intended.—Washington Correspondence New York Evening Post.

## Unclaimed Salmon Streams.

NEW YORK, Sept. 30.—Editor *Forest and Stream*: IN FOREST AND STREAM for Sept. 23 Mr. Chambers refers to my suggestion anent the taking up of old Maine salmon streams, and you may be interested to know that I did not receive a single letter in answer to my offer to tell about six streams now containing salmon, and so situated that the streams could be made valuable salmon property, at the same time that the mills and timber on the streams would pay the interest at least on the investment. At about the same time that I wrote FOREST AND STREAM on this subject I sent 100 letters to sportsmen of my acquaintance telling them of a tract of 2,000 acres of forest land near New York that could be bought up for small money, and that was likely to be cut up and destroyed on the development of new rapid transit plans. Not a man bought an acre. Some of the land that was then offered at \$100 per acre less than a year ago cannot be bought now at twenty times that amount. I got a large tract myself, and wanted friends to get in on the ground floor. Some of them are now writing me that they will go out there this year or next and see about buying. It is too late, and the same thing will happen with the salmon streams. ROBERT T. MORRIS.

## An Island Sinking.

RECENT news from Heligoland, according to the London Standard, speaks of further encroachments by the sea on Heligoland in the North Sea. Since the island was ceded to Germany, in 1890, in exchange for Zanzibar, it has lost a considerable area, not alone through the collapse of the sandy cliffs which surround its shores, but also through a definite sinking on its south side. Engineers have been at work since the cession in a continuous endeavor to safeguard the island from demolition, and considerable work has been performed in filling crevices in the rocks, while breakwaters have been built to break the force of the sea. It has been found, however, that the very sea floor on which these are constructed is without stability, and it is believed that the work can only serve to delay the encroachment of the sea on the friable cliffs. It has now a circumference of a little less than three miles, as against three and three-quarters in 1890. The island has little importance and is known chiefly as a watering place. Its population numbers about 2,000, and the natives of Heligoland are creditably known among the North Sea and Baltic pilots.

# YACHTING

## Manhasset Bay Y. C.

Port Washington, Long Island Sound—Saturday, Sept. 30.  
 The Manhasset Bay Y. C. fall regatta, sailed on Saturday, Sept. 30, wound up the racing on Long Island Sound.  
 The fixture brought out thirty-one starters, a remarkably good showing for an event sailed so late in the season. Colonel Frederick G. Hill managed the race from Commodore Alker's steam yacht Florence. The winners were Mimosa I., Thelema, Cara Mia, Firefly, Tartan, Paumonak, Vaquero, and Sweetheart.  
 Owing to the light wind, the start was postponed half an hour, and it was 1:30 when the first signal was given. The start was off the red and black buoy to the north and east of Execution Light. The little catboats Sweetheart and Joke covered a 7-mile triangle. All boats in the other seven classes covered once the following course: From the starting line, N.E. by E., 3.75 miles, to and around buoy A, off Parsonage Point; thence S. 3.25 miles, to and around black buoy EL, near Week's Point, in Hempstead Bay; thence W.N.W., 3.50 miles to and around the stakeboat at the starting line. Distance 10½ nautical miles.  
 The wind was S.W., and the first leg was a reach, the second a run and the third a beat.  
 The two Mimosas were the only starters in Class N. The wind was too light for the new Herreshoff boat to do much, and she was unable to save her time over the older craft. On corrected time Mimosa I. won by 8m. 34s.  
 In the special 27ft. class, Thelema beat Firefly 23s.  
 Cara Mia went into first place soon after the start in the New York one-design 30ft. class, and she was never headed. She beat Neola II., the second boat, 1m. 58s. Phryne was third, 2m. 15s. behind Cara Mia, and Nautilus was fourth.  
 In the regular 27ft. class, Mr. Guy Standing brought his entry, Firefly, in 6m. 14s. ahead of Rascal.  
 The invincible Tartan won easily in the raceabout class. She beat Rascal II. 1m. 4s., and Indian 6m. 51s.  
 Paumonak won by a good margin from Okee in the 22ft. class. Vaquero won in the Larchmont 21ft. Class. Dorothy was the only other boat to finish in the class, and she came in 5m. 26s. behind the winner. Captain Jim Summer's catboat Sweetheart defeated her only competitor in her class by nearly 5m.  
 There were two starters in the Manhasset one-design class, but both finished too late to be timed. The summary:

Sloops—Class N—33-footers—Start, 1:40—Course, 10½ Miles.	Finish.	Elapsed.
Mimosa I., G. M. T. Raborg.....	4 24 41	2 44 41
Mimosa III., T. L. Park.....	4 37 35	2 57 35
Corrected time, Mimosa III. 2:53.15.		
Match Race—27ft. Sloops—Start, 1:40—Course, 10½ Miles.		
Firefly, G. P. Granbery.....	5 26 05	3 46 05
Thelema, A. E. Black.....	5 25 42	3 45 42
New York 30-footers—Start, 1:45—Course, 10½ Miles.		
Alera, A. H. & J. W. Alker.....	4 47 14	3 02 14
Atair, Cord Meyer.....	4 49 20	3 04 20
Adelaide II., Adece Bros.....	4 48 40	3 03 40
Neola II., George M. Pynchon.....	4 43 12	2 58 12
Cara Mia, S. Wainwright.....	4 41 14	2 56 14
Nautilus, A. G. & H. W. Hanan.....	4 46 22	3 01 27

Sweetheart, J. C. Summers.....	4 55 56	2 40 56
Joke, C. C. Converse.....	5 14 45	2 59 45
Corrected time, Joke 2:45.45.		

## Bensonhurst Y. C.

Gravesend Bay—Thursday, Sept. 30.  
 RACES in divisions B and C of the Bensonhurst Y. C. handicap regatta on Sept. 16 were resailed on the afternoon of Saturday, Sept. 30, over courses in the Lower Harbor. This was done because the starters in the first-named division had rounded the wrong buoy in the original contest, and because there was a misunderstanding as to the direction of the finish in the other. The result of the latter race was close, Saetta losing to Ogeemah by 10s. after leaving her course to cross the line in the direction of the start. The winners of the resailed race were Vivian II., which scored like honors in the initial struggle, and Cockatoo II.  
 In the handicaps arranged, Vivian II. as scratch boat, allowed Anona 6m. and Lizana 3m., and in the other division More Trouble and Cockatoo II. were on scratch, allowing Saetta 1m. and Ogeemah 9m. for a 12-mile course. Only one round was covered because of a failing breeze, and half handicaps were in order.  
 The boats went to windward and return from the start, off Ulmer Park, to the bell buoy off West Bank Light. Vivian II. had no difficulty in winning her division honors, beating Lizana by 18m. 32s. corrected time. More Trouble led the Class Q boats at the end of the outward journey, but was passed by Cockatoo II. on the run home. The wind was so light at the finish that Ogeemah did not have way enough on to stem the tide, so withdrew. The results in the class showed that the handicaps were well conceived.  
 In the evening the Bensonhurst Y. C. held a "hauling out" dinner, at which one hundred sat down. The affair was successful. It developed during the evening that the Crescent A. C., which is to build in Class RR next year, may ask for representation in the Yacht Racing Association of Gravesend Bay. The summaries of the last race of 1905 follow:

Sloops—Classes P and Above—Start, 3:03.	Finish.	Elapsed.	Corrected.
Vivian II., S. E. Vernon.....	4 50 10	1 47 10	1 47 10
Lizana, D. S. Wylie.....	5 10 12	2 07 12	2 05 42
Anona, Menton Bros.....	.....	.....	Did not finish.
Sloops—Class Q—Start, 3:06.			
Cockatoo II., H. Chubb.....	5 07 15	2 01 15	2 01 15
Saetta, G. H. Church.....	5 15 05	2 09 05	2 12 35
More Trouble, W. H. Childs.....	5 18 00	2 12 00	2 12 00
Ogeemah, A. MacKay.....	.....	.....	Did not finish.

### "Supplement to Small Yachts" Free.

To any one sending us one new subscriber to FOREST AND STREAM before Oct. 15, 1905, we will present one copy of W. P. Stephens' book "Supplement to Small Yachts." This work contains 104 pages text and 43 plates. Size 11 by 14 inches. Cloth. Price \$4. This offer does not apply to renewals.

## New York Y. C.

Glen Cove, Long Island—Thursday, Sept. 28.  
 CARA MIA finished first in the race between seven of the New York Y. C. one-design 30-footers, sailed on Thursday, Sept. 28, and secured the cup offered by Mr. C. L. F. Robinson. Adelaide II. finished second and also received a cup put up by the donor of the first prize.  
 Commodore Alker, of the Manhasset Bay Y. C., placed his steam yacht Florence at the disposal of Mr. Oliver E. Cromwell, Chairman of the Regatta Committee, who managed the match.  
 There was a good sailing breeze from the N.W., and the boats went twice over a 6-mile windward and leeward course. The start was made at the buoy off Mott's Point, and the windward mark was the buoy off the N.E. end of Execution.  
 Neola II. nicely berthed, was first away, and she was followed by Nautilus, Cara Mia, Dahinda, Phryne, Adelaide II., and Alera. All but Alera held under the shore out of the tide, and gained thereby. Alera went off on her own hook and encountered the strong tide running out in the Sound, and suffered accordingly.  
 Cara Mia worked into first place and led around the weather mark. Neola II. was next and Nautilus was third.  
 On the spinnaker run back Neola II. regained first place, and was ahead at the end of the first round. Dahinda was third; then came Nautilus, Adelaide II., Phryne and Alera.  
 Cara Mia's owner seemed to get the most out of his boat on the windward work, and soon took the lead. Neola II. held her place until the run back to the finish, when she was passed by Adelaide II., which boat beat her out 10s. Cara Mia won by 1m. 42s. The summary, start 2:10:

	Finish.	Elapsed.
Cara Mia, S. Wainwright.....	4 25 46	2 15 46
Neola II., G. M. Pynchon.....	4 27 38	2 17 38
Nautilus, H. W. & A. G. Hanan.....	4 29 12	2 19 12
Phryne, H. L. Maxwell.....	4 29 10	2 19 10
Adelaide II., Adece Bros.....	4 27 28	2 17 28
Alera, A. H. & J. W. Alker.....	4 33 43	2 23 43
Dahinda, W. B. Duncan, Jr.....	4 33 16	2 23 16

### Friday, Sept. 29.

The last race for the 30-footers to be given by the New York Y. C. took place on Friday, Sept. 29. Dahinda got first, winning the prize offered by Vice-Commodore Henry Walters. It was a fluky day, and Mr. Oliver E. Cromwell stopped the boats after they had covered three legs of the course.  
 The course was from Mott's Point to Parsonage Point and return, to be covered twice. When five starters were sent away at 2:10 the wind was S.E., making it a run to the first mark. The wind shifted to the S.W.W. soon after the start, and later veered to the S.S.W. and almost petered out entirely.  
 It was a down-the-wind start, and the five boats got away well bunched, with spinnakers set. Dahinda, always smart in running, took the lead and continued to drop her four competitors.  
 Almost from start to finish it was a case of almost constant shifting sail and trimming sheets. Those in the boats were kept guessing as to what quarter the wind would next come from, and altogether it was a tiresome and tedious affair.  
 While on the third leg the wind had let up to such an extent that the boats were timed as finishing at the Parsonage Point mark. Dahinda beat Cara Mia 52s. Nautilus was third, 3m. 34s. behind Dahinda. The summary, start, 2:10:

	Finish.	Elapsed.
Dahinda, W. B. Duncan, Jr.....	4 50 35	2 40 35
Cara Mia, S. Wainwright.....	4 51 27	2 41 27
Nautilus, H. W. & A. G. Hanan.....	4 54 09	2 44 09
Alera, A. H. & J. W. Alker.....	4 57 01	2 47 01
Adelaide II., Adece Bros.....	4 57 51	2 47 51

## Newport Y. C.

### Subscription Race—Sunday, Sept. 24.

THE Newport Y. C. held a special race for catboats Sept. 24, for prizes offered by subscription at a meeting of the club held during the previous week. It was a heavy-weather race, there being a half gale from the S.W., and of the eight starters only six finished. Helen, which was regarded as a sure winner, broke down and had to withdraw. She was more than 5m. ahead at the time, and her withdrawal left a clear field to Vesper II., which boat beat Indian by the narrow margin of 34s.  
 The start was made in Brenton's Cove, and the course was to the spar buoy off Gould Island and return, a distance of about 8 miles. This gave a run out and a beat back against wind and tide. The boats kept well together on the run out, but when they hauled on the wind for the beat back there was a battle for place, and Helen soon pulled ahead. When she broke down she had returned as far as the Training Station and had established a safe lead. The summary, start, 10:41:

	Finish.	Corrected.
Vesper II. ....	12 40 00	1 59 00
Indian .....	12 42 34	1 59 34
Falconita .....	12 44 15	2 00 15
Madge .....	12 46 00	2 03 00
Vesper I. ....	12 52 05	2 09 05
Windcloud .....	12 54 00	2 10 00
Helen .....	.....	Did not finish.
Nannie .....	.....	Did not finish.

F. H. YOUNG.

## Atlantic Y. C.

### Sea Gate, New York Harbor—Thursday, Sept. 28.

IN order to determine the winner of the Havens cup for Class Q boats, the Atlantic Y. C. held a post-season event on the afternoon of Thursday, Sept. 28, over courses in the Lower Harbor. The winner proved to be Saetta, which finished a 1½-mile course 2½s. ahead of More Trouble. Cockatoo II. was 3m. 41s. away. As Saetta had previously scored two legs on the trophy, victory brought permanent possession of the same.  
 The boats went twice over a triangular course from Sea Gate to the bell buoy on the end of Craven Shoal, thence to the bell buoy just to the northward of West Bank Light, and home, leaving the turning buoys to port. The breeze held steady from the W. throughout the event. The first leg was a beat and the other two reaches. More Trouble invariably picked up on the reaches, but lost to Saetta on the windward work. The summary follows:

Sloops—Class Q—Start, 3:05.	Finish.	Elapsed.
Saetta, G. H. Church.....	5 35 50	2 30 50
More Trouble, W. H. Childs.....	5 36 11	2 31 11
Cockatoo II., H. Chubb.....	5 39 52	2 34 52

JAMAICA BAY Y. C. PLANS.—The Jamaica Bay Y. C. is considering a proposition to build a bulkhead around its club house off Holland's Station, and forming a basin for the yachts. The plan shown consists of twin cribs, each 25ft. wide, filled in with stones and sand pumped from the channel, forming a basin 257 by 200ft., with "L" extensions facing the channel to break the force of the wind, and prevent eddies from the intruding tides. An opening 100ft. wide will be left for yachts to enter. This latter arrangement is expected to overcome troubles experienced in making landings at the float, as at present the strong tides in the channel make landings hazardous. The basin will also make a safe anchorage for the yachts in storms. There will also be a marine railway at one end, where boats can be hauled out for repairs, or where they can be taken out of the water and placed in winter quarters on the cribs.

## British Letter.

THE RATING RULE.—Now that the racing season is over the evergreen question of the rating rule has cropped up again in the yachting papers, chiefly in the way of letters from correspondents who are interested either practically or theoretically in the matter. Our present Y. R. A. rule holds good until the end of 1907, and it is undoubtedly the best rule, so far, that has been evolved, although designers seem to have been slow to take the fullest advantage of its good qualities, as has been clearly shown this year in the 52ft. class. It has been the custom to say that racing in this class has been closer than ever before, and that there was not much to choose between the four boats, but the table of winners shows this to be fallacious, and there is no doubt that Britomart and Sonya, as racers, are comparative failures. If boats cannot be got into racing trim by the end of the season there must be something radically wrong with them, and there is something radically wrong with both of these boats. Sonya, although a beautifully roomy and comfortable boat down below, is too big-bodied, and Britomart is overdone in the way of reserve buoyancy and overhangs. Maymon comes out head of the list of the year, but she owes her place in some measure to good luck, and I am still convinced that the oldest boat, Moyana, is the pick of the quartette, for it seems certain that, had she been as well served by fortune as Maymon, she would have been easily first, so far as first prizes are concerned. One hopeful sign about the present rule is that it encourages a fair amount of body, and a 52-footer has sufficient head room to make living on board a comfort. Mr. Butler did not live on board of Maymon because he happens to be a wealthy man and has a large steam yacht, but Mrs. Turner-Farley and her daughter made Sonya their home during the racing season, and the owners of Moyana and Britomart did the same with their boats. A brief summary of their performances may be of interest here:

	Maymon.	Moyana.	Britomart.	Sonya.
Starts .....	36	35	31	27
Finishes .....	34	30	26	20
Firsts .....	13	12	6	6
Seconds .....	11	8	10	7

The present rating rule has two more years to run, so that even should an international rating rule be brought in it would not come in force here until Jan. 1, 1908. It is therefore doubtful whether any steps will be taken to enforce scantling restrictions until that date, as if that were done the present fleet of 52-footers and the 65-footer Zinita would be at once disqualified. It speaks volumes for the wonderful way these boats are built, to say that Moyana, Britomart and Sonya are all as fair now as when they were launched. Maymon has shown signs of structural weakness, though not to any great extent. Mylne, like his teacher, the late G. L. Watson, believes in composite construction, and there is no doubt that these boats stand more strain and keep their shape better than any others, even when the construction is of the lightest description.

The expense of light construction, however, and its drawbacks, when it comes to selling a boat, have proved too much for most owners, and been the death blow to the big classes, and hollow masts are another bogey which will have to go. In a letter to the Field of Sept. 9, Mr. Stothert reiterated what Sir James Pender stated in a letter to the Yachtsman of some weeks ago, viz., that owners would not build in the big rating classes until the Y. R. A. had placed some wholesome restrictions on flimsy construction. This will be done beyond doubt, but whether it will be now or in two years' time is a matter of doubt. The rating rule itself seems to be quite satisfactory for boats of 52ft. rating and upward. Something must always be sacrificed to speed, and big-bodied boats will never be a success under the present rule. At the same time it is possible to have a successful 52-footer with 6ft. of head room, and on such a boat one can live with comfort.

E. H. KELLY.

NEOLA SOLD.—Mr. George M. Pynchon has sold his sloop Neola to Mr. J. Berre King. The boat will be raced by Mr. King's son, Mr. Edward D. King. Neola was built by the Townsend & Downey Company at Shooters' Island from designs by Mr. William Gardner. She is built of bronze and is the sister ship to Weetamoe.

PROTESTS WITHDRAWN.—The protests filed with the New York Y. C. Regatta Committee by the owners of the 70-footers Yankee and Mineola after the race on July 8 for the Glen Cove Cups, have been withdrawn.

RECENT SALES.—The following sales have been made through the office of Mr. Stanley M. Seaman: Auxiliary yawl Friartuck, by Mr. W. J. Brodie, of Cleveland, O., to Mr. Bernard Bloch, of Philadelphia, Pa. She is 46ft. over all, 32ft. waterline, 12ft. breadth and equipped with an eight horsepower Toquet engine. The yacht is now in Philadelphia and will be used for cruising on the Delaware River and Chesapeake Bay. Sloop Corneta has been sold by Mr. Eustis L. Hopkins, Larchmont Y. C., to Mr. George E. Darling, of the Rhode Island Y. C. She was designed by Crowninshield and built in 1899, 46ft. over all, 30ft. waterline, 12ft. beam and 7ft. draft.

### "Steam Yachts and Launches" Free.

To any one sending us one new subscriber to FOREST AND STREAM before Oct. 15, 1905, we will present one copy of C. P. Kunhardt's book, "Steam Yachts and Launches." It contains 267 pages, with plates and many illustrations. Cloth. Price \$3. This offer does not apply to renewals.

## Two Nights on Faulkner Island.

ABOUT 100 miles east of New York, and just off the Connecticut coast, lie three small islands five miles from the main land. Faulkner Island, the largest of the three, having on it a light station showing a revolving white light and a fog horn as well, for use in thick weather. This island is about one mile in length and quite narrow, running north and south. West of this island, a mile or more, are two smaller ones—Goose Island, and a few rods south of this one Stony Island, this last one being merely a bunch of rocks.

The three islands form a serious menace to navigation, as they are directly in the path of vessels bound through Long Island Sound. However much sailors may dread this locality they serve one good purpose at least, for near and around those barnacled rocks and reefs are countless numbers of blackfish and sea bass. It was early in the summer of 1904 and the beginning of the fishing season. Blackfish had struck in and were biting well whenever the weather conditions were so that fishing was possible. Our bait we had kept for a week waiting for good weather, and now, while the tide came late, it seemed like a smooth time. Of course we always had to make an almanac and try to have the weather fulfill our expectations. This particular afternoon the clouds were supposed to break away, the wind come in from the south and west just at night, dying down to a calm at sundown. We came as near as the Government Weather Bureau does sometimes, and went entirely wrong in our calculation.

Our boat was a twenty-foot auxiliary launch having for power a three horsepower gasolene engine with a short mast and a lug sail, for emergencies. The sail was hauled up on the mast with the gaff dropped down and lashed with it. A broad, able boat, staunch and comfortable. The party consisted of Gus, a young college boy whose knowledge of seamanship was, to say the least, very limited, but whose good humor and enthusiasm made amends for all he was lacking in that line. Bishop, a young son of mine, in his teens, and inheriting from his paternal ancestor a strong love for the water, and the gentle art of angling, and myself.

We had all the necessary gear, plenty of bait and lunch, and expected to bring home some fish. We left the dock at noon. The sea was smooth and the sky clearing, with every indication of moderate weather. The wind was easterly and very light. Running out of the harbor and clear of all the rocks the swell became heavier, while the wind freshened a trifle, but nothing to be alarmed at or that would interfere with our afternoon's sport. We were bound for Stony Island, and our course was to the leeward, or west side of Goose Island. Here we found Katrina anchored under the island looking for the same fish we were after. We kept on to the extreme south end of Stony Island and anchored in the shoal water. It was the most exposed place to fish about the island, but the best fishing ground. The swell here was quite heavy and we had some trouble to get our anchor to hold. It stuck at last, however, and we lay, rolling and pitching, with our stern not more than two or three rods from the rocks. It was too rough to fish to any advantage, but we hung on, taking a fish now and then, and hoping the wind would let go and give us a better chance at them.

Along in the middle of the afternoon it died away some and the sun came out. Katrina still lay west of the island fishing in the smooth water while Faulkner's Island, with the sun shining on the white tower of the lighthouse, showed plain to the eastward. Gus had just landed with some ceremony a blackfish that would do to fry in a pinch when Bishop suddenly called, "Look at the fog!" pointing down to the southeast. There to the windward of Faulkner was the thickest kind of a fog bank rolling rapidly down on us. As it neared the lighthouse we saw a puff of steam from the fog horn and heard the dull roar of the horn, showing that Captain P. was wide awake. Then the fog covered the island like a blanket. As it rapidly neared us the whitecaps on the water under it showed that there was a strong breeze coming along with it. We were in a very exposed position calling for quick work.

"Get in your lines, boys, and you, Bishop, get that anchor as quick as you can," I called, making for the engine and getting it ready to start. I turned on the gasolene, snapped the switch over, and waited for a word from the boys.

"Anchor is up and down," he called.

"Break it out," I answered, a quick roll of the balance wheel of the engine, a spiteful bark of the machine, and

we are heading out to sea, while the whirling propeller churned the water into foam under the stern of our little boat.

It takes good judgment to always do the right thing on the water, and as we gathered headway and drew away from the rocks I wondered what was the best thing to do. It must be one of three things. Go back to the lee of Goose Island and anchor, start for the north shore and home, or try and get to Faulkner Island.

The fog was now very near us, night was coming on, and the breeze was freshening every minute. Something must be decided on right away. It was five miles to the mainland, in the thickest kind of going, and with the chance of not striking the harbor entrance. If we went back of the island and anchored we were liable to have to spend the night in our boat, so taking all things into consideration we headed for the lighthouse. We could see nothing, but the island was a mile long and a broad mark to shoot at. I knew by the wind and the scend of the sea about where to head, so we laid our course and let her go. It brought the wind almost directly ahead, so that we were taking the waves bow on. The seas grew heavier and soon the water was flying the whole length of the boat. Spray would strike the busy little engine amidships and hissing turn to steam, leaving a white coating of salt on the cylinder head.

The engine was putting in full time all this while, never missing a stroke. We had to do some bailing at one time but soon the water grew smoother. The hoarse tones of the fog horn, that had at first sounded at a distance now became clearer, and more of a whistle. The sound also seemed to come from up in the air. All this indicated that we were close up under the land.

"Now watch out sharp, you two boys," I called. "We don't want to run the island down, and we should be close to it by this time."

"There is the boathouse right ahead," calls Gus, and sure enough, we had struck it right on the dot, with Captain P. on the dock apparently waiting for us. We were all glad to slip into the still water back of the little wharf.

"Did you get wet?" asked the captain, taking our line. "I did not see you until you were almost in. It must be rough crossing the reef. You can't get home to-night, so come up to the house and we will have some supper. You can moor your boat afterward."

We were very glad to accept the kind offer, and all hands of us went up to the house with him. As we gained the high ground where the house stood we had a much better idea of the weather than down in the shelter of the bank. The fog was still rolling in white sheets over the water; the wind, that had been increasing steadily ever since we had left the island, was sending in the big combers and dashing them into sheets of snowy spray on the rocks at the foot of the bank, while from a building near us at short regular intervals came the roar of the big horn.

Very welcome was the light and warmth of the cosy kitchen presided over by the captain's amiable wife and small daughter. The good woman insisted that we take our shoes and coats off and get dry and warm before we had our supper. The two boys reminded me of a couple of wet chickens. When we entered the house they said very little nor did they act hilarious in the least. They gradually thawed out, however, and by the time supper was ready our young college boy was all fixed for a good time. At the table he fired a few mild jokes at Bishop and myself about matters and things in general which we tried to return with interest. The rest of the family looked at first as though they hardly knew what kind of a boy they had for a guest. Then the madam's face expanded in a broad grin, her husband, too, saw the joke, and the little girl tittered until she choked and had to leave the table. The supper was delightful; everything on the table tasted good, and we all ate with relish. Then Gus insisted that he should wipe the dishes, and between him, the little girl and Bishop I expect that the madam thought there was a good deal going on. They only broke one cup and cracked a plate.

"Well, boys," remarked Captain P., "we must go down and swing the boat up for the night." So down to the dock we went, ran out additional lines and put our boat in order for the night. The fog had lifted somewhat, but the wind still blew a gale and it was raining.

We were all tired and went to bed early. Not to sleep, mind you, but just to bed. I had a bed to myself while the two boys were to sleep in another, both beds being in the same room. We did not need a phonograph in that room that we should have had to wind occasionally, while the two boys were apparently wound up for the

night and talked and talked and talked. Outside in the wild blackness of the night the bright rays of light from the white tower gave warning to storm-tossed mariners of hidden danger in their path. The rattle of the blinds, the beating of the rain against the east windows and the dull crash of the surf on the rocks below became at last a dull monotone and we slept.

Throughout the night the storm continued, when "Come on, boys, breakfast is ready," came the call of the captain up the stairway and we crawled from our snug beds and into our clothes. We came down to find breakfast on the table and waiting for us.

"I don't think you will get home to-day," said the madam, pouring our coffee for us.

"Well, remarked her husband, "you might be in a worse place."

It struck me as I glanced out of the window at the stormy water that we could not well be in a better one. It still blew a gale, and was raining hard. No vessels were in sight, except a little down-east fishing schooner running dead before the wind wing and wing, her sails reefed down and her black hull now high on the curl of a sea, then sinking behind a big roller nothing would show but her masts.

"You can't drown those fellows," remarked the captain, glancing at her from the window. "They go when anything does; they are built to stay outdoors."

"Say, Gus," said Bishop, "we are built to stay indoors to-day the way things look. What are we going to do to help you any, captain? Can't we do something to earn our board?"

"No, not that I know of," he replied. "I am going to clean the engine in the fog house this morning. You can come out with me. Go out to the shop and amuse yourselves or stay here by the fire just as you please."

I went to the fog house, while the boys went out to a small shop where the keeper made his lobster pots and did what tinkering was needed about the island. In the fog house were two duplicate kerosene engines that operated the big horn. The assistant keeper was already hard at work on the one used the night before. Both were kept in the finest order and ready for use at any time. The extra machine being for use in case of a breakdown. All this meant lots of work, the burner having in this case to be taken apart and cleaned. Very entertaining was the captain as he told me of the lonely nights spent by the assistant and himself in this place. A lonely spot it must be with the noise of the machinery and the fierce blast of the horn, once a minute, as long as the fog or snowy weather lasts. Of course the work was divided between the two men, one having the watch until 12 one night and the other from that time until morning and reversing the order the next night, one being awake and on duty all of the twenty-four hours.

Along the middle of the forenoon I went down to the shop and found the boys making a windmill. They had found a box of new tin plate and a pair of tin shears, and were hard at work. This mechanical device was in running order and nailed to a fencepost when the dinner bell rang.

The dinner went right to the spot. We were all of us hungry and the big dish of pork stew tasted as good as anything ever did to us. Two plates apiece before we began to think of stopping. And the pie! I told Mrs. P. to start with to cut the boys' pieces small, as I knew they had eaten enough, and if there was any danger of anyone overeating I preferred to take the risk myself. The boys demurred some at this and the pie was divided equally. After dinner the rain had nearly cleared, although the wind blew as hard as ever. Gus wanted to make a kite, so at it he went. They had found a ball of twine in the shop but had no material for the tail. Mrs. P. looked them up something that they could use and back they went to the shop. With paper, sticks and some paste he really did make something that he called a kite; anyway it would fly, and fly it those two boys did, way out the whole length of the twine. Finally tiring of holding the string Bishop hitched it to a small log and set it adrift. This took a good part of the afternoon, and with fussing with the boat and talking it was night before we knew it.

The wind had let go some but the Sound was very rough, so that we would have to put in another night on the island. The young men didn't seem to want to talk so much to-night but turned over and went to sleep.

The morning dawned clear and bright with just a moderate breeze. The sea was still quite rough but nothing to what it had been, being more of a long, regular swell. After breakfast we made the boat ready, bade our kind host and his family good-by and started for the north shore. Not until we ran out from the shelter of the

# GAS ENGINES AND LAUNCHES.

Their Principles, Types, and Management. A Complete and Practical Manual.

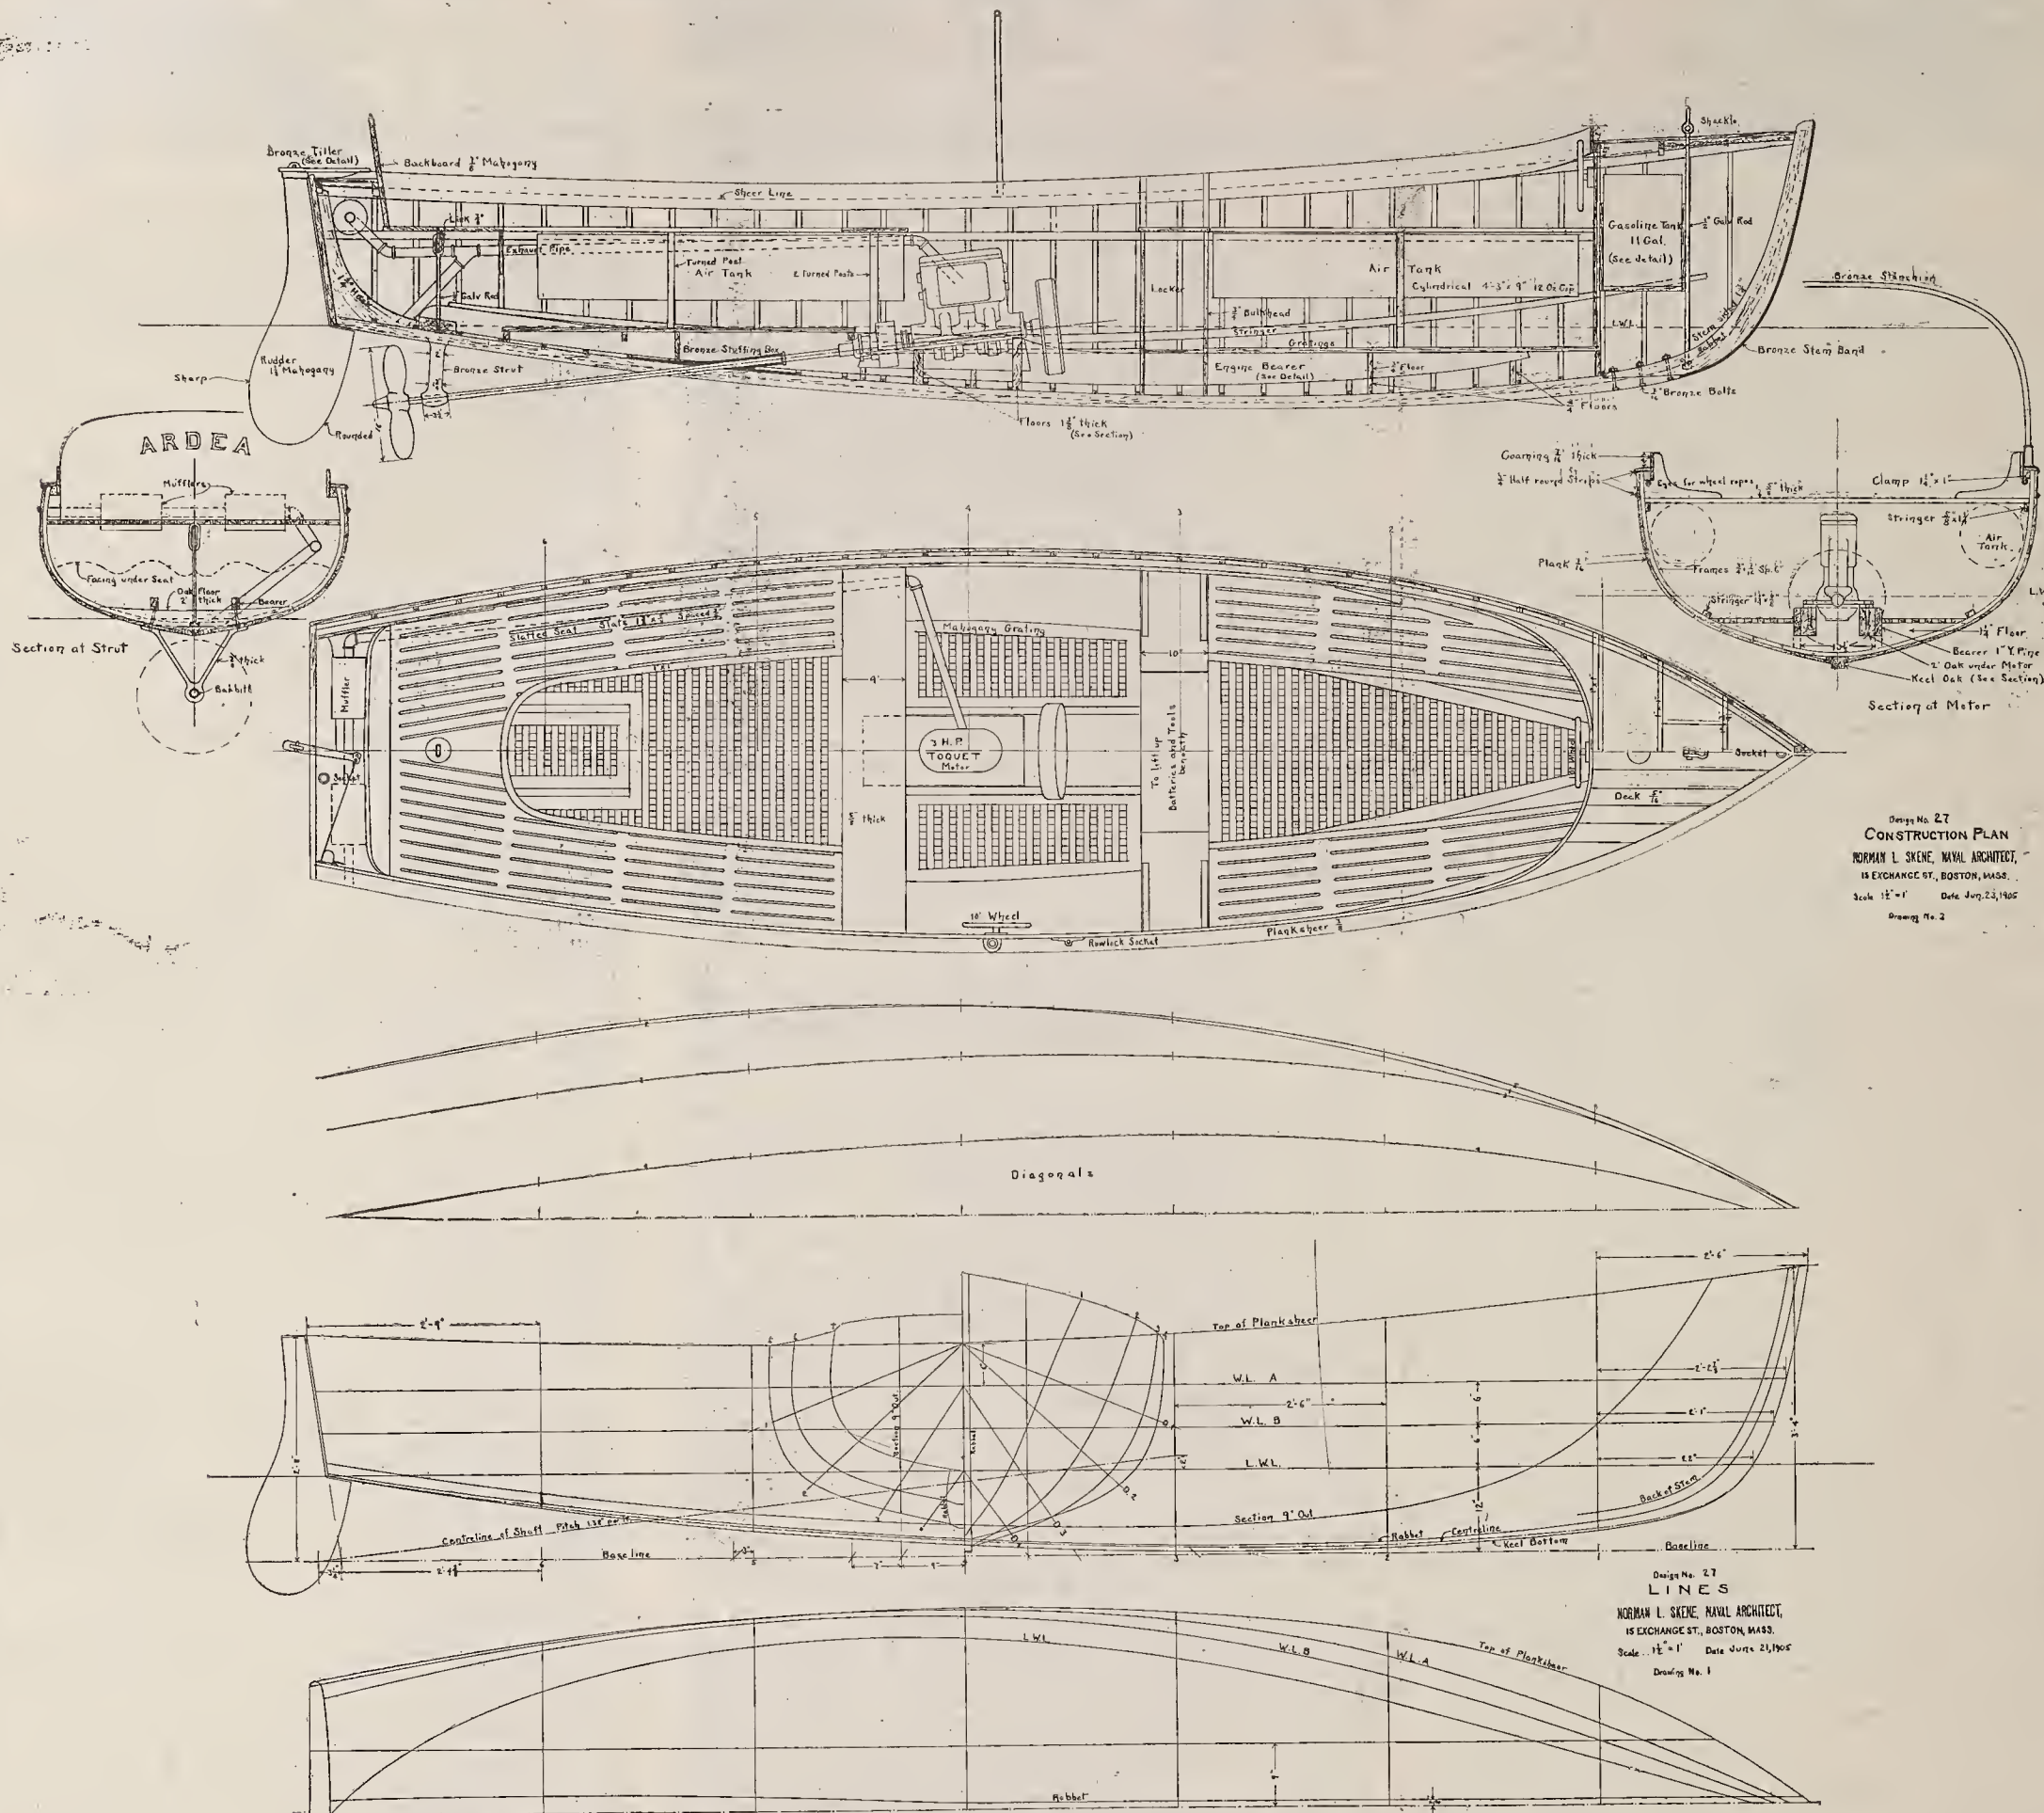

BY F. K. GRAIN, M. E.

Bound in cloth, with 123 pages and 20 illustrations. Sent, postpaid, for \$1.25.

THIS compact and comprehensive handbook contains all the information essential to users of the marine gasolene engines, and will be welcomed by the thousands of men now owning and running power boats. Laymen and experts will alike find the book invaluable. It treats of the various types of marine gasolene engines, points out the good in each, and tells how to run them. A knowledge of the contents of this book will help to overcome difficulties and avoid accidents. The most complete book of its kind ever published.

FOREST AND STREAM PUBLISHING CO., NEW YORK.

YACHT TENDER—DESIGNED BY NORMAN L. SKENE—LINES AND CONSTRUCTION PLAN.

island did we realize the size of the waves. The little launch would rise and fall on the long swell, now high in the air, and then down until nothing was to be seen but the watery hills around her and the blue sky overhead. However, all went well and after a nice run we tied up at the dock alongside Katrina. We learned afterward that the boys that were out at the island with us in her had seen the fog bank and left for home, setting their course by compass. They had to stop to reef and balloon the jib on the way in. When they made land first it was way to the westward of the harbor, but after once catching sight of it they could feel their way in all right, and found and piloted into the safety of the harbor another bewildered boatman who was mixed up by the thick weather. Taking it all in all we were glad that we did not try to get home.

E. M. SEETE.

GUILFORD, Conn.

Rhode Island Notes.

WORK AT HERRESHOFFS.—Mr. E. D. Morgan was a recent visitor at the Herreshoff shops and he came ostensibly in the interest of a new class of boats to be built there the coming winter. A new steam yacht that is under construction at the Herreshoff shops is being pushed along as if the room were likely to be needed soon for the building of a craft of more than ordinary importance.

In regard to a proposed new class of 60ft. racing sloops talked of for several weeks past, there is considerable speculation as to whether the craft will be of all wood or composite construction. Of this new class it is said that there will be orders for six and possibly eight boats.

One of the prospective new Herreshoff productions the coming winter may be an 80ft. waterline schooner, which a Mr. Clark, of Philadelphia, is contemplating having built to replace his Irolita, a fast sloop built for him at Bristol a few years ago. Irolita is now at Bristol stripped and ready for hauling out.

Mr. August Belmont, of New York, is to have a new steam yacht, and he was at the Herreshoff shops a few days ago with Mr. J. Van Rensselaer Kennedy in regard to the order for the new boat, the plans for which have not yet been fully developed.

F. H. YOUNG.

"Supplement to Small Yachts" Free.

To any one sending us one new subscriber to FOREST AND STREAM before Oct. 15, 1905, we will present one copy of W. P. Stephens' book "Supplement to Small Yachts." This work contains 104 pages text and 43 plates. Size 11 by 14 inches. Cloth. Price \$4. This offer does not apply to renewals.

Design for a Yacht Tender.

THE accompanying plans of the power launch were made by Mr. Norman L. Skene. The boat was built for Mr. Clarkson Cowl, vice-commodore of the Manhasset Bay Y. C., who used the boat as a tender to his steam yacht Ardea.

The owner wanted a high-sided, able boat, as light as consistent with requisite strength. The launch has full deck lines and a liberal flare, which makes her very dry. A spray hood of the melon type keeps those on board dry when the water is rough.

Power is furnished by a three horsepower Toquet engine, which drives the boat at a speed of 7 miles an hour. The exhaust is piped for discharge either above or below the waterline. The cooling water is to be turned into the exhaust when running.

The planking is of cedar, and the top strake, coaming, deck seats and gratings are of mahogany.

The dimensions are as follows:

Length—	Over all	17ft. 9in.
	L.W.L.	16ft. 10in.
Overhang—	Forward	8in.
	Aft	3in.
Breadth—	Extreme	4ft. 9in.
	At L.W.L.	4ft. 1in.
Draft—	Extreme	1ft. 7in.
Freeboard—	Forward	2ft. 4in.
	Least	1ft. 6in.
	Aft	1ft. 10in.

Boston Letter.

RULES FOR 22-FOOTERS STAND.—A meeting of the association governing the 22-footers was held on Sept. 27, at which it was voted to let the rules of the class stand for another year. Some talk had been made in regard to racing the class under the new uniform rating rule, but the sentiment of the majority was that the new rule is still an unknown quantity and that it would be better to race under the existing rules until more definite data might be obtained in regard to the new rule. In the event of 22-footers racing under the new rule, it is likely that they would have to receive special classification, for their form and general dimensions would put them at such high ratings that they would

be severely handicapped in classes in which they would rate regularly. It is also likely that there would be some discussion in the event of the 22-footers being rated in one special class, for they would not all come into the limits of the same class under the rating rule, some of them rating over 33ft. and some under. So it is probably for the best interest of all to have them race together under the same restrictions and classification they have raced under until such time as necessary changes may discontinue the class. At the meeting of Sept. 27 it was voted to allow an increase of 75ft. for balloon jibs and to prohibit pot leading. The latter rule was made for purposes of economy, it being considered that frequent pot leadings are unnecessary. With the assurance that the class will remain unchanged for another year at least, it is expected that several new boats will be built. The new boat for Mr. George Lee is already under construction.

RAMONA FOR THE JUNK HEAP.—The schooner Ramona, owned by Mr. W. N. Wilbur, of Philadelphia, and used by him at Marblehead as a houseboat, has been sold through the agency of Mr. B. B. Crowninshield to O'Connor Bros., dealers in metals, who will break her up. She is now lying on the flats off South Boston. The firm which purchased Ramona is the same which secured Puritan at a remarkably low figure early in the summer. The price paid for Ramona was not announced, but it is believed to have been less than \$4,000. It is reported that her cabin fittings, which are in beautifully carved oak, originally cost about \$25,000. Mr. Wilbur retained the cabin fittings, skylights and companionways. There is said to be enough metal in her ballast and fastenings to give the new owners a handsome return upon their investment. Ramona was originally called Resolute and was built by David Carll at City Island in 1871 from designs of Mr. A. Cary Smith and was then a centerboard boat. She was altered to a keel boat in 1878 and was further altered and lengthened, by Poillon in 1887. She is 133ft. over all, 110ft. 9in. waterline, 25ft. breadth and 12ft. 6in. draft. Her tonnage is 127.04.

NEW BINNEY DESIGNS.—Mr. Arthur Binney has an order for an auxiliary schooner of 80ft. waterline to be used for cruising along the New England coast. He also has orders for a 40ft. auxiliary yawl, two speed launches of the Hupa type, a 60ft. cruiser and several smaller power boats.

BARRACUDA SOLD.—The 30ft. waterline sloop Barracuda, built at Lawley's in 1903 for Mr. Dudley N. Hartt, has been sold through the agency of Mr. E. A. Boardman to Mr. H. H. Walker, of the Corinthian Y. C. Barracuda is a fine cruiser of wholesome type.

Rifle Range and Gallery.

Greenville Hunters' Association.

THE twenty-fifth annual reunion and picnic of the Greenville, O., Hunters' Association was held at the range, near Greenville, and was a record-breaker in numbers, enthusiasm, sport and scores made. In fact, it was the greatest success in the history of the club. Every detail had been carefully looked after, and the programme, as arranged, was about perfect. As an evidence of their appreciation of the good time given them, the members unanimously re-elected the old officers: Major A. N. Wilson, President; John F. Beaver, Vice-President; Henry Hetzler, Treasurer; Frank Smith, Secretary. The first match was at 200yds., offhand, 3 shots, possible 36, entrance 50 cents, five moneys. E. J. Harman was first with 25; Katsenberger 23, second; H. Smith, 22, third; T. E. Garreth, fourth, 22; A. W. Kirby, fifth, 22. The second match was 200yds., rest, 3 shots, possible 36, same entrance and division. After shooting off ties, the prizes were won in order following: W. E. Pearson 29, G. R. Decker 28, A. N. Wilson 28, F. L. Burr 27, Wm. F. Jay 26. Other high scores were: C. W. Matthews and J. A. Vore, 26 each; D. W. Jones, Jas. McGriff, C. W. Sander and F. Smith, 25 each. In the animal target contests ninety-five members took part, and only center shots were good for the prizes. There were fifty men shooting off ties, as "Uncle" Joe Wilson said, "Nothing like it ever before on this range." Animal targets, bear, doe, moose, and buck, 100yds., offhand, one shot on each, center counts 10, possible 40. Eight merchandise prizes on each target. Following are the winners with scores made given in order after shooting off ties. On the bear target the 9s did not have a look in. On the doe, three 9s had a chance. The same on the moose; but on the buck only 10s were good:

Bear.—D. W. Jones 10, C. C. Pitman 10, A. N. Clemmer 10, J. G. Knick 10, Geo. Sigafos 10, W. E. Pearson 10, W. S. Kessler 10, G. O. Shivadecker 10. Doe.—G. R. Decker 10, Hiram Lawrence 10, M. T. Hampton 10, T. H. Parks 10, J. G. Knicks 10, Charles Barnhart 3, J. A. Stevens 9, Wm. Lutz 9. Moose.—Pola Jay 10, T. E. Garreth 10, C. Grant 10, W. E. Pearson 10, C. Knick 10, F. Smith 9, A. W. Kirby 9, C. W. Matthews 9. Buck.—A. D. Hartman 10, Chas. Culbertson 10, C. Appenzeller 10, H. Hetzler 10, E. Culbertson 10, S. Locke 10, F. P. Teaford 10, F. G. Wiley 10. Match No. 4, 100yds., offhand, 3 shots, possible 36, Massachusetts target; eighty-seven shooters; after shooting off ties the following were winners of the five money prizes: Hiram Lawrence 34, C. W. Matthews 34, A. W. Kirby 34, Geo. W. Izor 33, M. T. Hampton 33. Others were: A. N. Clemmer 33, Robt. Logan 33, L. S. Conaroe 33, C. W. Sander 33, G. R. Decker 33, H. Smith 33. Match No. 5 was on Massachusetts target, 100yds., offhand, 2 shots, possible 24, entrance 25 cents, five moneys. After ties were shot off the following took the prizes in order given: A. W. Kirby 24, Ed Wertz 24, Wm. Lutz 24, H. Lawrence 23, Robt. Logan 23. Other high scores were: G. W. Izor 23, C. W. Matthews 23, A. N. Clemmer 23, C. W. Sander 23, M. T. Hampton 22, J. Katzenberger 22, W. P. Townsend 22, L. S. Conaroe 22, D. W. Jones 22, G. R. Decker 22, A. D. Hartman 22. Following are the aggregate scores made in the three offhand, 100yd. matches, 9 shots, possible 100: G. W. Izor, C. W. Matthews, 89 each; A. N. Clemmer, G. R. Decker, Robt. Logan, 88 each; D. W. Jones, H. Lawrence, 87 each; L. S. Conaroe, 86; J. Katzenberger, C. W. Sander, 85 each; W. P. Townsend, H. Hetzler, 82 each; H. Smith, 81; M. H. Kerr, A. D. Hartman, 78 each; P. Rinehart, G. Brotherton, 75 each; W. F. Jay, 73; Wm. Lutz, 72; Dr. L. N. Trent, 71; M. Houseman, 70. A meeting of the members of the Greenville Offhand Rifle Club was held on Sept. 29 for the purpose of reorganizing and transacting other business. The treasurer, Geo. W. Sigafos, read his report for the past three years, which was approved. Among the new members admitted were: Ed Beachler, Geo. Katzenberger, Wm. Lutz, Chas. R. Kemble and Rollin Waggoner. The following officers were elected: A. N. Wilson, President; E. Culbertson, Vice-President; W. F. Smith, Secretary; Joe C. Katzenberger, Treasurer; Geo. W. Sigafos, Captain; Range Committee, A. N. Wilson and G. W. Studebaker. The affairs of the club are in good condition, and the chances of getting new members are encouraging. The club's range is one of the best in this part of Ohio and Indiana. The reunion this year was the greatest success ever scored by the club.

The Zettler Festival.

THE thirty-first annual shooting festival of the Zettler Rifle Club, of New York city, was held on the 200yd. ranges in Union Hill Shooting Park, Union Hill, N. J., Sept. 27 and 28. There were several reasons why the attendance of expert riflemen from all the nearby States was so good, but among them were the facts that the weather was perfect for rifle shooting, the prizes hung up by the club numerous and valuable, and all restrictions had been removed from rifles that could be used—meaning that only one remained by which all who entered must shoot, offhand. The fine large shooting pavilion of the Plattdeutsche Volkstest Verein, which owns the large park lying on the western slope of the heights at Union Hill, was comfortably filled from 10 o'clock in the morning until the last shot was fired at 6 P. M. each day. It was a gathering such as may be seen there during any important shoot held in summer, but with the addition of a number of the best shots of several nearby States, and from all of New York city's environs, Springfield, Mass., alone being represented by Harry Pope, Fred Ross and F. L. and Owen Smith. The Zettler Club's grand old man, Ferdinand Fabarius, who is in his eighty-sixth year, put in an appearance early, and showed that he is still hale and hearty by carrying his own rifle and shooting kit. But on the afternoon of the second day, after he had made a better score than some of the young men on the honor target, he met with an accident which sadly disturbed his nerves and put an end to his shooting for the day. On firing a shot from his favorite rifle, which is lighter than those with which he won countless trophies and prizes during his three-score years of rifle practice, the action cracked across both sides, the shell flew over his shoulder, and he stood with the stock in his right hand and the barrel in his left, startled and a bit stunned, but fortunately unhurt. The lock was not injured, nor was the barrel affected. Thereupon some waggish member hung the barrel and stock beside the cashier's desk and labeled it thus: "Fabarius' take-down rifle, model 1906," which tickled the old gentleman immensely, as he is not only somewhat of an inventor, but fond of a joke as well. High power rifles could not be used, the butts not being strong enough for their hard bullets; but several contestants shot smokeless powder; among them Richard Gute, who was high man in the bullseye match, second on the honor target, and fourth on the ring target. This was the first big outdoor shoot of any club of this city in which telescopic sights were admitted, and there were quite a number of telescopes used. Among the experts we noticed telescopes on the rifles of Fred Ross, Harry Pope, Owen Smith, Richard Gute, Arthur Hubalek, F. L. Smith, Henry D. Muller and several others, while Emil Berckmann and Michael Dorrier used them a part of the time. It is conceded by many local riflemen that this shoot will be used as a precedent by other clubs, which will remove all restrictions from magnifying sights in tournaments of the future. Finally, too much praise cannot be accorded this old club, its officers and members, for the friendly rivalry and the good fellowship it has fostered during its thirty-one years of activity. The summary of the various matches follows: Target of honor, 3 shots, possible 75 points, open only to members, for prizes given by judges and members, and \$150 offered by the club, and divided into twenty cash prizes, ranging from \$20 down to \$4:

Table with 2 columns: Name and Score. Wm. Hayes 69, W A Hicks 58, R Gute 67, Owen Smith 57, A Begerow 66, F C Ross 57, R Busse 66, Aug Kronsberg 57, Geo Schlicht 66, Geo Ludwig 56, H M Pope 65, H Koster 56, Geo Purkess 65, Geo Zimmermann 55, A Hubalek 64, T H Keller 53, M Dorrier 64, Philip Smith 49, Gus Zimmermann 63, Geo Hecking 47, B Zettler 63, F Fabarius 46, W A Tewes 62, Louis Flach 44, Emil Berckmann 60, H C Zettler 43, Louis Maurer 60, H D Muller 43, H Fenwirth 60, I H Brower 37, Geo Bernius 59, R Bernius 17, L P Hansen 58.

Canoing.

Officers of A. C. A., 1906.

(Assumed office Oct. 1, 1905.) Commodore—H. Lansing Quick, Youkers, N. Y. Secretary—William W. Crosby, Brighton Mills, Passaic, N. J. Treasurer—Frederic G. Mather, 164 Fairfield Ave., Stamford, Conn. ATLANTIC DIVISION. Vice-Commodore—Woolsey Carmalt, 82 Beaver St., New York. Rear-Commodore—Matthias Ohlmeyer, Francis H. Leggett & Co., 128 Franklin St., New York. Purser—Henry S. McKeag, 13 White St., New York. Executive Committee—William A. Furman, 846 Berkeley Ave., Trenton, N. J.; Louis C. Kretzmer, Schopp Building, New York; Clifton T. Mitchell, 46 E. Sedgwick St., Germantown, Pa. Board of Governors—Robert J. Wilkin, 211 Clinton St., Brooklyn. Racing Board—H. Lansing Quick, Youkers, N. Y.

CENTRAL DIVISION.

Vice-Commodore—Henry R. Ford, 45 N. Division St., Buffalo, N. Y. Rear-Commodore—Edward H. Demmler, 526 Smithfield St., Pittsburgh, Pa. Purser—B. Irving Rouse, 981 Lake Ave., Rochester, N. Y. Executive Committee—John S. Wright, 519 West Ave., Rochester, N. Y.; Lyman T. Coppins, 691 Main St., Buffalo, N. Y.; Jesse J. Armstrong, Rome, N. Y. Board of Governors—Charles P. Forbush, Buffalo, N. Y. Racing Board—Harry M. Stewart, 85 Main St., E. Rochester, N. Y.

EASTERN DIVISION.

Vice-Commodore—Frederick W. Notman, P. O. Box 2344, Boston, Mass. Rear-Commodore—Frank S. Chase, Manchester, N. H. Purser—H. M. S. Aiken, 45 Milk St., Boston, Mass. Executive Committee—Daniel S. Pratt, Jr., 178 Devonshire St., Boston, Mass.; Arthur G. Mather, 84 South St., Medford, Mass.; H. L. Backus, 472 Lowell St., Lawrence, Mass. Racing Board—Paul Butler, U. S. Cartridge Co., Lowell, Mass.; Herman D. Murphy, alternate.

NORTHERN DIVISION.

Vice-Commodore—J. McDonald Mowat, Kingston, Ont., Canada. Rear-Commodore—James W. Sparrow, Toronto, Canada. Purser—Russell H. Britton, Gananoque, Ont., Canada. Executive Committee—Charles E. Britton, Gananoque, Ont., Canada. Board of Governors—John N. MacKendrick, Galt, Ont., Canada. Racing Board—J. McDonald Mowat, Kingston, Ont., Canada.

WESTERN DIVISION.

Vice-Commodore—John A. Berkey, St. Paul, Minn. Rear-Commodore—George H. Gardner, 149 Kennard St., Cleveland, O. Purser—Wade Hampton Yardley, 49 Pioneer Press Bldg., St. Paul, Minn. Executive Committee—Lucien Walsin, The Baldwin Co., 142 W. Fourth St., Cincinnati, O.; Augustus W. Friese, The Journal, Chicago, Ill. Board of Governors—Henry C. Morse, Peoria, Ill. Racing Board—Frank B. Huntington, 90 Sheboygan St., Fand-du-Lac, Wis.

A. C. A. Dinner.

THE Atlantic Division of the American Canoe Association having been honored by the selection from its territory of the officers for 1906, Commodore H. Lansing Quick and Secretary William W. Crosby, a complimentary dinner will be given by the members of said division to the visiting officers and the several committees at the St. Denis Hotel, Broadway and Eleventh street, on Saturday evening, Oct. 14, at 7 o'clock, following the annual meeting of the Executive Committee of the A. C. A., to be held at the St. Denis earlier the same day. Circulars containing full information have been sent by the undersigned committee to all members of the Atlantic Division, and this notice is published for general information and for the benefit of any of the division who may, by change of address or other reasons, have failed to receive the circulars. Copies may be had on application to the chairman. As this is the twenty-fifth gathering of the Association on like occasions, it is hoped by the committee that the dinner may be a rousing success. All applications for places at the dinner should be made to the chairman at once. H. C. Ward, chairman, 73 Maiden Lane, New York; W. Carmalt, W. A. Furman, L. C. Kretzmer, J. K. Hand, P. F. Hogan, W. R. Simpson, F. W. Noyes, committee.

Ring target, three shots, best three tickets to count for the first five prizes, best two tickets for next five, and single tickets for the balance; no limit to number of entries, but only one prize could be won by each contestant. The possible for 3 shots was 75 points. The prizes ranged from \$50 down to \$1, twenty-one in all, and four premiums. The summary:

Table with 2 columns: Name and Score. Three tickets, possible 225 points: H M Pope 214, \$50, R Gute 208, 25; Owen Smith 213, 40, L P Hansen 208, 20; A Hubalek 210, 30. Two tickets, possible 150 points: Michael Dorrier 138, \$15, Wm Hayes 137, 8; C A Niemeyer 137, 12, W A Tewes 135, 7; F C Ross 137, 10, R Busse 135, 6.

Table with 2 columns: Name and Score. Single tickets, possible 75 points: Aug Begerow 69, \$5, Geo Schlicht 67, \$2; F L Smith 69, 4, Barney Zettler 67, 2; G Hoffmann 68, 4, H Fenwirth 66, 1; C W Leonard 67, 3, W A Hicks 65, 1; Robt Hesse 67, 3, Louis Flach 65, 1; P F Schmitt 67, 2. Premiums: Best five tickets—H. M. Pope, 354, \$10; second best five, Owen Smith, 352, \$8; third, Richard Gute, \$4; fourth, Arthur Hubalek, \$2.

Bullseye target, 10 shot tickets, best single shot by measurement to count; open to all comers; eighteen cash prizes:

Table with 2 columns: Name and Score. Degrees. Prizes. R Gute 4 1/2, \$20, T H Keller 43, \$3; Geo Schlicht 7 1/2, 15, Louis Flach 45 1/2, 3; F L Smith 15 1/2, 12, M Sabocher 51, 3; H M Pope 16, 10, Louis Maurer 60, 2; Michael Dorrier 18, 8, Chas Meyer 61, 2; Gus Zimmermann 20, 6, Geo Hoffmann 63 1/2, 2; A Hubalek 20 1/2, 5, W R Olmstead 64, 1; Aug Kronsberg 24, 4, Wm Hayes 66, 1; F C Ross 37 1/2, 4, Aug Begerow 68 1/2, 1.

Premiums: For the most bullseyes during the shoot, F. C. Ross, 60, \$12; second, H. M. Pope, 50, \$8; third, Arthur Hubalek, 40, \$6; fourth, George Schlicht, 32, \$4; fifth, Louis Flach and Gus Zimmermann, tied on 28 and divided \$2.

Ladies target of honor, open only to the wives, sisters and friends of members; 3-shot scores, with .22cal. rifles, at 200ft., possible 75 points.

Table with 2 columns: Name and Score. Miss Katie Zimmermann 69, Miss Lina Hansen 53; Miss Lina Eusner 67, Miss Anna Zettler 50; Miss Nellie Hart 66, Mrs Gus Zimmermann 47; Miss Millie Zimmermann 66, Mrs B Schmitt 46; Miss Bertha Ludwig 64, Miss Helene Engelholm 39; Miss Anna Ludwig 64, Mrs Filsen 38; Mrs Bernius 63, Mrs Fischer 36; Mrs Barney Zettler 62, Mrs Louis Flach 30; Mrs H Fenwirth 62, Mrs Geo Schlicht 30; Mrs Laut 55, Mrs Zettler 29; Mrs Hubalek 55, Mrs Hern 20.

Judges' target, 3 shots, open to judges only, for two trophies: John Faclamm 60, Mr. Buchroeder 57. Zettler trophy, 3 shots, for a trophy given by Zettler Bros.: Owen Smith 71.

Cincinnati Rifle Association.

CINCINNATI, O.—The following scores were made in regular competition by members of this Association at Four-Mile House, Reading Road, Sept. 24. Conditions, 200yds., offhand, at the Standard American target. Payne was champion for the day with the good score of 89. He was also high man on the honor target with 28 points. This was the day set for the semi-annual 100-shot individual championship match. It was won by Mr. Nestler with the good score of 823. There were but few entries, however, and interest was consequently lacking. We were honored by a visit by Mr. Rohrer, who is one of Lexington's, Ky., sharpshooters. He has recently supplied himself with a complete muzzleloading outfit of the Stevens-Pope make, and when he gets broke in he will doubtless make somebody hump. The day was an ideal one, but no one seemed to be in fine fettle, no 90s being made. Our new member, Mr. John Case, did very well for a beginner in the art of shooting, and we hope to see him reach the top of the ladder ere long. The scores:

Table with 2 columns: Name and Score. Nestler 79 85 83 83 87 78 84 82 80 82—823; Payne 80 84 82 86 72 89 80 84 77 78—812; Roberts 69 84 85 83 78 82 76 84 72 68—781; Freitag 73 76 83 82 81 71 77 80 69 74—766; Hofer 55 62 76 65 84 87 73 75 ...; Case 54 79 68 65 53 70 51 ...; Hofman 77 65 82 81 86 75 ...

Providence, R. I., Revolver Club.

SOME excellent scores have been made the past month by our members. The outdoor season is practically closed for most of us whose Saturday half-holidays are ended, but a few fortunates manage to puncture the targets and keep the range open.

Walter H. Freeman with a .38 Colt, officers' model revolver, in shooting a 50-shot string, made a run of eleven consecutive 10s at 50yds. on the Standard target, which shows the capabilities of man and gun. And Wm. Almy, with a gun of the same model, has to his credit the past week a run of nine 10s, which is fine work.

We are looking forward now to the proposed plans for fall and winter shooting. We have outgrown the quarters we occupied last winter in the old armory, with its limited facilities and once a week opportunity to practice, and are planning to inclose a portion of our present range at Cranston, giving us three ranges for 20yd. revolver and pistol and 25yd. rifle work. It is proposed to light with acetylene gas, and with a stove to keep the snug shooting house warm, anticipate many pleasant gatherings this winter. The proposed range will be at members' disposal any evening, and 50yd. practice can be indulged in any pleasant day. The following scores have recently been recorded:

Revolver and pistol, 50yds.: Walter H. Freeman 89, 88, 87, 91 91; 82, 86, 88; Wm. Almy 91, 86, 86, 86, 84, 83, 83, 83, 86, 85, 83; E. C. 80, 87, 89, 90, 86, 83, 88, 86; B. Norman 87, 75, 83, 83, 86; W. C. Pixley 78, 86, 71, 72, 76, 74; Wm. F. Eddy 78, 74, 79, 78, 90, 80, 74, 77, 86, 80; A. C. Hurlburt 74, 75, 77, 84, 76, 76; Fred Lebrich 73, 71, 70, 74; Arno Argus 65; H. D. Merritt 63.

\*Club record. Rifle, 25yds., German ring target: W. Bert Gardiner 238, 241, 237, 238, 239, 236, 242, 241, 235, 241; 237, 241, 242, 246, 242, 236, 237, 231, 237; L. A. Jordan 229, 236; Wm. Almy 236, 231, 223; A. B. Coulters 236, 223; C. L. Beach 226, 220.

Revolver, 50yds., military count: Wm. Almy 49, 48, 48, 47, 48; A. C. Hurlburt 45, 46, 46, 47, 46; Wm. F. Eddy 45, 46, 45, 45, 45, 49.

Revolver and Pistol, 20yds.: Wm. Almy 72, 78, 78, 82, 84; A. C. Hurlburt 77; W. Bert Gardiner 72, 81, 80, 79, 75, 77, 79, 84, 84, 77, 81, 88, 84, 80, 79, 81, 84.

Rifle, 50yds., Standard target: Miss Powell (rest) 87; Sterry K. Luther (scope) 83, 85; B. Norman 78; H. Powell 73, 76, 76; Wm. Almy 69, 73; R. Powell 69, W. B. Gardiner 72, 76, 87, 84, 79, 84.

Rifle, 50yds., German ring target: H. Powell 217, B. Norman 215, Wm. Almy 211. A. C. HURLBURT, Sec'y.

Rifle Notes.

We are informed that the Malcolm Rifle Telescope Mfg. Co., which was established in Syracuse, N. Y., in 1857 by Wm. Malcolm, and conducted there by him up to the time of his death, has been purchased by parties of Auburn, N. Y., and will be carried on up to the same high standards as heretofore.

Lieutenant-Governor Bruce, of New York, says a small headstone in a cemetery in the western part of the State is pointed out to visitors as one of the sights over the grave of a widower, who, while not lacking in love for the departed one, was penurious to a degree. He ordered a small stone because it was cheap, and ordered the mason to engrave on it this inscription: "Sarah Hackett, Aged Ninety Years. Lord, She Was Thine." The stonemason said there was too much inscription for so small a surface, but was told to go ahead and "squeeze it on somehow." Here is the inscription as "squeezed": "Sarah Hackett; Aged Ninety Years. Lord, She Was Thin."

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM goes to press on TUESDAY OF EACH WEEK.

The next regular shoot of the Ossining, N. Y., Gun Club will be held on Oct. 14.

The Preble County Gun Club, Eaton, O., will hold an all-day shoot on Oct. 18.

The Bound Brook, N. J., Gun Club has fixed upon Oct. 14 for a prize shoot.

The Palisade Gun Club, Edgewater, N. J., contemplates the holding of a fall tournament on Nov. 23.

On Oct. 7, the Montclair, N. J., Gun Club team will visit at Newton, and contest in the fifteenth match of the North New Jersey Shooting League.

The Crescent Athletic Club trapshooting season will begin on Oct. 14. The policy in respect to prizes will be on the same liberal and artistic lines which have heretofore prevailed with the shooting committee.

Thirteen events constitute the programme of the Shrewsbury, Pa., Gun Club tournament, to be held on Oct. 19. Totals are 200 targets, \$12.90 entrance, class shooting. High averages, first, \$3; second, \$2; low average, \$1. Competition begins at 10 o'clock.

Interesting team matches at targets or sparrows have been arranged between the Corner Rod and Gun Club of Muncie, Ind., and the best material of the Lagrange and Wasepi trapshooters, for a purse of \$500. The first match will probably be held at Muncie; the second at Wasepi.

On Sept. 25, at Muncie, Mr. H. M. Clark, of Wabash, defeated Mr. Max Witzengreuter, of Fort Wayne, in a contest at 100 sparrows, 25yds. rise, 50yds. boundary. The scores were: Clark 94, Witz 92. Mr. G. G. Williamson, of Muncie, acted as referee. A return match is contemplated in two weeks from date of this match.

Three special events, the Westchester county individual championship, the team contest, Poughkeepsie vs. Ossining, and the five-man inter-county team championship, are on the programme of the Ossining, N. Y., Gun Club fall tournament, Oct. 18-19. Aded money, \$75. Sweepstakes each day, seven at 20 targets, \$1.40 entrance, and one at 25 targets, \$1.50 entrance. A sliding handicap, class shooting will govern on the first day; Rose system and scratch. Event No. 8 on first day, 25 targets, is a special distance handicap, merchandise prizes. Charles G. Blandford is Financial Secretary and Captain.

The fall tournament of the Indianapolis, Ind., Gun Club, Oct. 9 and 10, has a programme of ten 20-target events each day, \$2 entrance, class shooting. The English Hotel cup will be a matter of contest. Competition is amateur. Handicaps, 14 to 19yds. Ship guns and shells to the Indianapolis Gun Club, 121 W. Washington street, or 116 N. Pennsylvania street, express prepaid. High average money for professionals and amateurs. The Secretary, Wm. Armstrong, writes us as follows: "I wish to extend to the sportsmen who are traveling either for business or pleasure and who have a few hours of leisure time to spend in our city, to come and enjoy the pleasure of shooting on our grounds. They are always welcome. All standard shells and loads for sale at the club house any day in the week, except Sunday. Our regular practice day is Saturday afternoon. You will note time table for cars to our grounds on back cover of programme. Our telephone number is new phone 5934. All the prominent hotels are located within two blocks of the terminal station."

BERNARD WATERS.

Newark Gun Club Tournament.

THE Newark, O., Gun Club held a tournament on Sept. 27 and 28 which was quite successful, though not so well attended as had been hoped for. The weather on both days was all that could be desired, and E. S. Browne, who had charge of the affair, did everything possible to make things pleasant for the visitors. From a number of quiet hints which were thrown out by various shooters, we are of the opinion he succeeded. The shooting began at 9:30 A. M. each day, and was over a Leggett trap, which gave good satisfaction.

The trade was represented by L. J. Squier, R. L. Trimble, D. D. Gross, John R. Taylor and R. B. McNeil. The office was in charge of J. R. Taylor as cashier, and he was assisted by R. B. McNeil. Needless to say things went smoothly here.

The programme consisted of four events at 15 and seven at 20 targets each day; total entrance, \$20 per day; money divided 40, 30, 20 and 10 per cent. The high average money, \$65, was divided \$30, \$20, \$10 and \$5.

On the first day thirty-five shooters took part. Johnson was high with 182; Trimble second with 181; Hatcher and Alkire third with 179.

On the second day forty men were present, and twenty-seven went through. King was high with 189; Snow second with 183; Hulshizer and Squier third with 181 each.

For the two days King won high average and took first money as well as the silver loving cup, given by Ladin & Rand for high amateur. Hatcher was second, 358; Johnson 356, Alkire 350. High professional average was taken by Trimble, 360.

On the afternoon of the last day the match for the Phellis trophy was shot, the Indianola Gun Club, of Columbus, having challenged. Events 7, 8 and 9 of the programme constituted this match. Three teams were entered, the challenger, one from Marietta and one from Newark. The home team won by 4 targets and Webster and Rhoads, of the Indianola team, were high with 48 each. Hulshizer, of Newark, and Speary, of Marietta second with 47 each. The scores:

Phellis trophy match, six-man teams, 50 targets: Newark Team, Indianola Team, Columbus. King 48, Rhoads 48, Hulshizer 47, Webster 48, Fisher 45, Buchanan 44, Keefe 45, H E Smith 43, Orr 44, Cumberland 43, Murphy 41-270, Harrison 40-266. Speary 47, Jones 41, Nelson 46, Decker 39, Trapp 44, Schlicher 38-255.

Table with 3 columns: Name, Shot at, Broke. Rows include King, Trimble, Hatcher, Johnson, Alkire, Cumberland, Snow, Orr, Trapp, Hulshizer, Fisher, Smith, J. L. Schlitz, Keefe, Nelson, C. J. Schlitz, Squier, Bottenfield, Moore, Schlicher, S. Burrell, Jones, Gross, Kieft, Webster, Speary, Decker, Shattuck, Bibbee, Karnehm, H. E. Smith, Wells, Fishingier, Murphy, B. Burrell, Schatter, North, Rhoads, Buchanan, Frank Winze, Harrison, Dial, Bell, Cherry, Meredith, J. H. Wentz, Bricker, Tabler, Swick, Brown.

The Indians' Memorial to Emil Werk.

Look onward! From the stricken lodge, Where earthly sorrow bides, Triumphant, o'er the shining trail, The warrior spirit rides.

ONCE for every God-given spirit upon earth comes the fleet runner with his message of a soul's release from this transitory career—heavy and sad tidings to those that remain, because in every life there is so much of nobility and worth, of which only those nearest and dearest are aware. But in this message that Emil Werk, Chief Rio Grande, abides with us no more, there comes the sense of sorrow and personal loss—of a shining light gone out forever, not to a few, but to many hearts in many States throughout the land.

In the tribal wigwam of the Indians there is one more vacant place, while the artist strives with utmost fidelity to inscribe a tablet for the gallery of fame that will truly reflect the nobility of character, the greatness of mind and genial temperament of him whom it has pleased the Manitou to call thus early to the Happy Hunting Grounds. We valued him for his counsel in annual conclave and in sundry temporary camps upon the daily trail; cherished him for his true friendship that never failed in any emergency, and loved him as a brother for his own great love of nature and of all mankind, and those indefinable qualities of sportsmanship which he everywhere manifested by action, deed, word and song, and which endeared him alike to all.

Taking comfort in the faith and promise of the great Book of Nature, whose profound philosophy he so dearly loved, we extend to his family and relatives in their yet deeper sorrow, our sincere sympathy and condolence; and in witness thereof affix hereto the seal of The Indians, this thirtieth day of September, 1905.

FRANK C. RIEHL, Chief Scribe. TOM A. MARSHALL, High Chief.

Indianapolis Gun Club.

INDIANAPOLIS, Ind., Sept. 30.—Mr. Moller won the Peters badge. Mr. Smoke was high gun. The weather was cloudy and rainy.

Table with 2 columns: Name, Score. Rows include Hunter, Parry, Sayles, Smoke, Moore, Sothern, Finley, M. Morris, Green, Hicc, Smith, Johns, Moller, Long, E Z Pash.

Monongahela League Tournament.

MORGANTOWN, W. Va., Sept. 26.—The Monongahela Valley Sportsmen's League of West Virginia held its sixth and seventh regular tournaments of the season at Fairmont, W. Va., on Labor Day, Sept. 4 and at Grafton, W. Va., on Sept. 25, with a fair attendance at both places.

The light and weather conditions were rather poor at both shoots, as evidenced by the almost universally low scores made.

The trade was represented by Mr. H. H. Stevens and Mr. Ed. H. Taylor, to both of whom the League is indebted for valuable assistance.

Winners at Fairmont were: Expert high average, H. H. Stevens, 85.14 per cent.; amateur high average, W. A. Wiedebusch, Fairmont Gun Club, 90.86 per cent.; amateur second high average, G. A. Long, Mannington Gun Club, 85.14 per cent.

The League team race, five men, 25 targets per man, for the Peters silver loving cup, emblematic of the League team championship, was won for the month by the Fairmont team with a score of 104.

The Ladin & Rand silver loving cup, emblematic of the League individual championship, was won by W. A. Wiedebusch, of the Fairmont Club, with a score of 17 out of 20.

Winners at Grafton were: Expert high average, H. H. Stevens, 90.29 per cent.; amateur high average, W. A. Wiedebusch, Fairmont Gun Club, 88. per cent.; amateur second high average, John Merrifield, Fairmont Gun Club, 85.14 per cent.

The League team race, five men, 25 targets per man, for the Peters loving cup, emblematic of the League team championship, was won for the month by the Fairmont team with a score of 95.

The Ladin & Rand silver loving cup, emblematic of the League individual championship, was won by W. A. Wiedebusch, of the Fairmont Club, with a score of 17 out of 20.

Tabulated scores follow:

Table with 2 columns: Name, Score. Rows include W A Wiedebusch, G A Long, T A Neill, John Phillips, Stevens, Nichols, J R Miller, Jacobs, Musgrove, Lilly, Merrifield, Heckman, Warden, J C Long, Fitch, Colpitts, Amos, Stuck, Taylor, Barthlow, Carnahan, Leachman, Garden, Jones, South, Dowley, Donally, Kinney, Deussenberry, F C Wiedebusch, Doonan, G E Miller, Rice, Simon, Dunnigan, Coogle.

Team race for Peters cup: Fairmont Gun Club, Grafton R. and G. Club. W A Wiedebusch 25, Warden 21, Lilly 17, Stuck 16, Neill 22, Musgrove 19, Phillips 22, Doonan 13, Coogle 18-104, Leachman 15-84.

Recreation R. and G. Club. Barthlow 19, Jacobs 20, Deussenberry 11, Christy 14-79.

League individual championship race, 20 targets per man: W A Wiedebusch 17, Jacobs 12.

At Grafton: Shot at, Broke. Stevens 175, 158, W A Wiedebusch 175, 164, Merrifield 175, 149, Taylor 175, 135, Phillips 175, 133, Lilly 175, 133, Jones 175, 129, Musgrove 175, 128, Warden 175, 127, Stuck 175, 117, J C Long 175, 124, Jacobs 175, 109, Doonan 175, 107.

Team race for Peters cup: Fairmont Gun Club, Morgantown Gun Club. Wiedebusch 22, Dugan 18, Merrifield 17, Dunnigan 19, Taylor 20, Helfast 16, Phillips 20, Carnahan 23, Lilly 16-95, G A Long 17-93.

Grafton Rod and Gun Club. Warden 18, Stuck 12, Musgrove 19, Walker 17-83.

League individual championship race, 20 targets per man: W A Wiedebusch 17, Musgrove 11.

ELMER F. JACOBS, Sec'y-Treas. M. V. S. League.

Springfield, Mass., Shooting Club.

THE practice shoot of this club, held on the afternoon of Sept. 23, was well attended, twenty shooters being on hand. It was a beautiful day for shooting, and some good scores were made. Gus Greiff, of New York city, was the guest of the club, and shot in all events, averaging 90 per cent. for the shoot. Gus had his line of guns with him, and beauties they are.

Now that the bird season is rapidly approaching, the boys are getting out more to the practice shoots, in order to be in good trim for next month. Hawes and E. H. Lathrop finished in Class B in merchandise race; also Jordan in Class A. This leaves one shooter, Anthony Mistry, in Class C with one shoot to make up at next shoot, after which all those completing the ten shoots called for will be finished.

Scores in merchandise race follow: Jordan (A), four strings, 23, 22, 22, 21; E. H. Lathrop (B), two strings, 18, 17; Hawes (B), 22; Anthony Mistry (C), 16.

Scores in regular events follow:

Table with 2 columns: Name, Score. Rows include Targets, Bradford, Greiff, Kites, P Lathrop, Arnold, Horace Chapin, Douglass, Parsons, L Mistry, E H Lathrop, Frary, Gridley, James Chapin, Brown, Hawes, Le Noir, Dr McNair, H P Chapin, Chafee, A Mistry.

An automobilist who was touring through the country saw, walking ahead of him, a man followed by a dog. As the machine drew near them the dog started suddenly to cross the road; he was hit by the car and killed immediately. The motorist stopped his machine and approached the owner.

"I'm very sorry, my man, that this has happened," he said. "Will five dollars fix it?" "Oh, yes," said the man, "five dollars will fix it, I guess." Pocketing the money as the car disappeared in the distance, he looked down at the dead animal.

"I wonder whose dog it was?" he said.—Harper's Weekly.

### WESTERN TRAP.

#### Chicago Merchandise Shoot.

CHICAGO, Ill., Sept. 24.—Yesterday was the second of a series of shoots held by the Chicago Gun Club on their grounds at 79th and Vincennes road. The weather was good, the attendance fair, while the targets were a trifle fast, as they generally are at this particular ground. It was here that W. D. Stannard started to shoot in 1893, and the records will show that he won in many hot contests. He became so proficient that he now has a position on the road for one of the smokeless powder companies. The grounds are level and the background is open, making shooting here a pleasure. The same is easy of access, being the shortest ride of any club in the city from the business center. Mr. Lacher is the attentive-obliging secretary, and the members are ever ready to welcome strangers. This season's prizes were so arranged that there would be cash and many other merchandise prizes for each Saturday. On this occasion there was cash and some wet goods.

Stannard showed up well and made 95 out of the 100. The shoot was a handicap affair, same appearing on the score herewith. Mr. Engstrom, from the 18yd. line, shot very even, and surprised himself the way he held out in the last string. Mr. Barkley, from the longest peg, 19yds., came close on his heels, as he fell down in one string only. Mr. Gardner was going fast, and in the third string tied Mr. Engstrom, only to fall away in his last 25 and land third. All were much pleased with the outing and hope to repeat same. Scores:

Events:	1	2	3	4	Shot at.	Broke.
Targets:	25	25	25	25	100	81
Lacher, 16.....	21	21	18	21	100	74

#### Cincinnati Gun Club.

Cincinnati.—The club shoot on Sept. 30 had a small attendance, only nine entering the 100-target race. Herman was high with 93. Keplinger and Ahlers tied for second on 92. Tuttle broke 44 out of his first 50 and then stepped back to the 24yd. mark. The distance was a little too great, and he broke only 34 in his last 50. The Ackley trophy contest will begin on Oct. 7. The conditions will probably be similar to those of the other trophies shot for this year. Captain did good work, breaking 62 out of 75. The day was cloudy and threatening, but calm. Scores:

One hundred-target race:	Score
Herman.....	93
Peters.....	84
Ahlers.....	92
Falk.....	81
Keplinger.....	92
Tuttle.....	78
Faran.....	81
Andrews.....	61

Match, 50 targets, two low men pay for targets: Herman 47, Ahlers 46, Peters 44, Faran 39.

Members of the Cincinnati Gun Club went to Rylands, Ky., on Sept. 28, as guests of the Kentucky Hunting and Fishing Club. Rylands is about fifteen miles from Cincinnati on the Central Kentucky Railroad. A handsome club house has been erected and many of the members have built handsome cottages in which they live during the summer. The shooting grounds cannot be excelled by any in the country. Sixteen shooters took part in the two events, and nearly one hundred spectators watched the sport. The day was hot, without a breath of wind. The birds were all good ones, strong and fast fliers, the use of the second barrel being needed in most cases. Even at that, 12 were scored dead out. Morris and Pfeiffer went straight in the 15-bird event, and Du Bray killed 10 straight in the first event.

Event No. 1, 10 live birds, \$5 entrance, money divided 35, 30, 20 and 15 per cent.:

Du Bray, 30.....	10	Boeh, 27.....	7

#### Garfield Gun Club.

Chicago, Ill., Sept. 30.—The appended scores were made on our grounds to-day on the occasion of the third trophy shoot of the fourth series. In the club trophy event Thomas, Smedes and McDonald tied for Class A on 21. Gould won Class B on 18. No C men in. In Dupont cup event, George and McDonald tied for Class A on 19 out of 20, Stone won B on 15. No C men in contest.

In Hunter Arms Co. event, 10 singles and 5 pairs, McDonald won Class A on 18, Gould won B on 16. No C men in contest.

Attendance was fair, considering open game season and a steady rain almost all afternoon, seventeen shooters putting in appearance.

After the regular events were shot off several miss-and-out events were indulged in, which furnished considerable amusement.

#### Notes.

The Rohrer's Island Gun Club, of Dayton, held their regular medal shoot on Sept. 27. Six members were present. President Gus A. Hodapp won the medal after shooting off a tie with Will E. Kette. The former broke 31 out of 33 and the latter 25 out of 31 in the main event. This makes the fourth time he has won the medal, and his chances to become the final winner are good. The finish of the series promises to be a hot one.

The Columbus Gun Club had an ideal day for shooting on Sept. 25. Mr. Munger, the well-known handler from Clyde, O., was present and accounted for 90 out of 100. He handles a gun as well as he does dogs. He has a string of twenty-one setters and pointers for the trials at Washington C. H. this month. In the shoot for the Sporting Goods trophy, Bassell, 11, and Ward, 4, tied on a full score of 50, including their handicaps, the former breaking 40 and the latter 47, which was high gun in actual breaks. On Sept. 27 several new shooters were at the grounds, among them F. H. Lindenberg, who has not shot before for seven years. He has not quite forgotten how, but went straight in a 10-target event and finished with 37 out of 50.

The Welfare Gun Club, of Dayton, entertained members of the Springfield Gun Club and their wives on Sept. 23, a shoot being a part of the programme. In a team contest the visitors defeated the home team by 1 target, 249 to 248. Good scores were the rule. Henderson, of Springfield, was high gun with 47. Other members of the team were: Neer 43, Snyder 42, Foley 41, Poole 40, Miller 36. On the Welfare team Ride led with 46, Heikes, Jr., 44, Rayburn 42, Craig 41, Watkins 38, Carr 37. The visitors arrived shortly before noon and were entertained at the N. C. R. factory, lunching at the Welfare Club. In the afternoon the men enjoyed themselves at the traps. In the practice events Carr was high with 46 out of 50. The monthly handicap shoot of the Preble County Gun Club, Eaton, O., was held on Sept. 28. The main events were for the county trophy, 50 targets, added target handicap, and club medal, 25 targets. C. H. Leisk won both events, the former by a total score of 53, including handicap of 8; J. Achey was second with a total of 52, handicap 9. W. R. Clark made a straight score of 50 in this match, and Less Reid 47, neither were contesting for the trophy. In the medal shoot Leisk and Achey tied on 23 each, the former winning the shoot-off, 21 to 20. On Wednesday, Oct. 18, the club will hold an all-day tournament, open to all, 150 targets, entrance \$7.50, three moneys in each event, divided 40, 30 and 20 per cent.

#### In Other Places.

Not content with the Limited Gun Club and the Indianapolis, the good shooters of the G. A. H. have formed another club, called Duesseldorfer Gun Club. At the first shoot Roper led with 42 out of 50. The officers are: Robert Roper, President; L. T. Nash, Vice-President; John Kopper, Secretary; E. Linton, Treasurer. M. M. Scott is manager of the grounds, which are situated south of the city.

Three Michigan gun clubs held a shoot last Thursday. Out of 120 targets, Owasso made 99, Laingsburg 44 and St. Charles 80. The Owasso scores were: Jack Rosevear 19, O. L. Sprague 17, B. S. Gaylord 17, J. J. Peacock 16, W. S. Beebe 15, R. J. Beeher 15. Laingsburg held the trophy last year.

The contest that developed a lot of fun was that of the squirrel shooters in the old settlers' shooting match at Hillsboro, Ill. All contestants were over fifty years, and were limited to the old-fashioned muzzleloading rifles. Howard Longwell won on a string of 14 in.

Down in Texas they shoot for many a trophy, and as there are many clubs, the shoots come often. Now reports come from Weatherford that the Rand & McNally trophy was won by H. W. Kuteran. Will some one ask Mr. Skelly, of Wilmington, Del., what he knows about such trophies as Rand & McNally?

Duck hunting reported good at Hartsel, Colo., in South Park county. What ye think? Killing ducks at an altitude of 7,500ft. Each hunter was rewarded with from twelve to twenty ducks each. Blair Harvey won the shoot at Bucyrus, O., Sunday last, with 16 out of 25.

The first shoot held by the Manistique, Mich., Gun Club was well attended, but scores were low. The wind blew strong.

The shoot held at St. Paris, O., Oct. 4, will probably be the last for this season.

Here appears to be a new trap for throwing targets, as it is reported that the Rich Hill, Mo., Gun Club has purchased a McCray trap.

The Webb City, Mo., Gun Club is holding regular shoots for a silver cup.

The trapshooters of southern Illinois will have the privilege of shooting twenty-one consecutive days during October. One of these shoots will be held at Virden, the 17th and 18th. James Landes and W. P. Riffey will be the managers.

E. Hubbey spent last week at El Paso, Texas., shooting targets and live birds with the gun club.

Kent Johnson was high man at the Kenton, O., shoot, with 171 out of 180. Le Compte 170, Losh 165, Ralph Trimble 162.

Pearl Kyle won the honors at Erie, Kans., with 32 out of 35 targets during the shoot held there Monday last.

A few members of the Great Bend, Kans., Gun Club met on trophy day.

What would the Gilberts and Crosbys of the present day say to a shoot that came off at Shamokin, Pa., wherein each contestant had \$100 in the pot, and shooting at 11 pigeons, each killed 5. Besides this, there were several hundred spectators.

J. W. Russell made high score at the Muskogee, Ind. Ter., Gun Club semi-weekly, getting 46 out of 50.

Ed Rike has been out with the Hunters' reunion, and the reports are that Dayton, O., may have another rifle shooter. Now, come to think of it, Ed. should be able to hold a rifle up or to hold it down.

The Minnequa Rod and Gun Club, Pueblo, Colo., has leased the exclusive fishing and hunting privileges on the lakes and reserves and grounds surrounding them on Pueblo county, and they announce that all trespassers and poachers will be prosecuted.

Saturday last, O. R. Moore, of Anderson, Ind., won the single match at the shooting park, 51 out of 70. T. N. Stillwell won the double event with 19 out of 20.

The Colfax shooters were defeated by the older members of the Bloomington, Ill., Club in a team shoot. With ten men on a side, at 25 targets each, Bloomington scored 207 to Colfax's 191. The Colfax boys are made of the proper grit, and will soon invite the Bloomington boys to their town, to try their new trap.

Squirrel shooting was too tempting on last Thursday for the members of the Morgantown, W. Va., Gun Club to make a showing at the traps. Only five members turned out to shoot "mud pies," and Cobun won the cup. At the end of the season each man having held it for a month will contest for its final possession.

W. E. Stuart, R. M. Garrett, Jr., A. C. Thomas and Josh Lockwood, of Keystonc, Pa., were visitors at the Eckman Gun Club tournament.

It seems early to learn of deer being killed, but James D. Amazon, of the Paradise Gun Club, New Orleans, has credit for bagging a four-pronged buck on Tuesday last.

There was a team shoot at Lexington, Ky., that proved a hot one, as the scores were so very even. Lexington won over Louisville, with 443 to 440—not a large score, when there were 600 targets shot at by each team; but then there were twelve men on a side, and some of them did not break over 28 out of 50.

And now comes the Marietta, Ind. Ter., Gun Club with the announcement that it has reorganized, and that the members have subscribed \$3,000 for the making of a large fish pond.

This is the way to get up a shoot and be assured of having a good time. Notice was sent out by officers of the Woodmere Gun Club, Detroit, Mich., to meet Sunday with their wives at Quandt's place. From there take a trolley ride to Wm. Schonfeld's, where there would be a live-bird and target shoot, while on the side there will be plenty of music and refreshments.

The members of the Kingdom Gun Club, Fulton, Mo., are now ready for their names to appear in print, as the following scores were made last Tuesday: R. A. Moore 47 out of 50; W. B. Harris, 50, 75; B. Payne 22, 25; Dr. H. A. Bragg 34, 50, and N. B. McKee, 15, 25.

There is a coming champion lady shooter hailing from Cincinnati, O. At the last tournament held there, Miss Frances Atherr made the very good score of 85 out of 100, while on the preliminary day she surprised all by breaking 73 out of 75. Say, boys, she is reported to be just "sweet sixteen." I would be pleased to hear of lady shooters being encouraged to take part at least in home club practice events.

Reports have it that the team work of the Eastern squad in their shoot at San Francisco was a revelation to all. Their skill was noted in the way they centered the targets—not only were the targets broken, but they went up in a cloud of dust.

The St. Charles, Mo., Gun Club now and then come to the front and try their shooting ability with Warrenton. These genial souls met Thursday evening last and elected officers. Mr. Henry Barklage was selected for his dignity as president. Mr. Lawrence Schoenberg will serve as Scribe and keep the records. He has been also charged with duly keeping the exchequer. A practice shoot will be held each Thursday.

There will be a one-day tournament held at Colfax, Ill., to which all the shooters in Central Ill., are invited. That all who attend may be sure of a good time and fair play, it will only be necessary to note that Tramp Irwin will be manager.

The good news comes from Elwood, Ill., that a gun club has been organized there. It is reported that W. Tramp Irwin has been seen tramping in that vicinity.

The Spokane, Wash., Rod and Gun Club is now on the boom. The club has extended an invitation to the big six shooters who are now on the Coast, to assist them in opening the season in November. It is proposed to hold a tournament also on Thanksgiving Day, then to continue shooting throughout the winter. The big six may not be understood, but they are the world's best—Crosby, Gilbert, Hirschey, Marshall, Heikes and Fanning.

Several of the Des Moines, Ia., trapshooters spent last Tuesday at Brooklyn. Mr. Fred Whitney presided in the office.

Wm. Pool, president of the Springfield, O., Gun Club, has accepted an invitation to meet with the Cash Register team, Dayton, O., and hold a club contest.

Five members of the Newark, O., Gun Club were out at the club grounds Thursday last for the purpose of testing the new trap lately installed.

Seven of the Tucson, Ariz., Gun Club met Sunday last. Weber won high, as he has been accustomed to. He made 67 out of 60, while Thompson broke 51. The members are becoming more and more expert all the while with the targets, and will be able to send a strong shooting team to Phoenix for the territorial shoot.

The weather was ideal when the members of the Marietta, O., team met for practice the last time, previous to the team shoot. They appear to get busy when there is a silver cup in sight.

It will seem strange to many, but it is reported that at Zanesville, O., the trapshooters met last Tuesday for the first shoot of the season. A strong wind was blowing, though. Moore made a splendid score of 90 out of 100. This was very encouraging for the first shoot. Warner made 81 out of 100; Edmunston 59, 75; Wiles 57, 75, Smith 75, 100; Reasoner 37, 50; Bostwick 18, 25.

The merchants of Clinton, Ind., have donated prizes, and a shoot was held Sept. 27 by the members of the newly organized gun club.

The shoot at Stratford, Ont., was not a complete success as to number present, but good scores were made, especially by the visitors.

A general canvass was made among the sportsmen of Chambers,

burg, Pa., and there was an unanimous agreement not to shoot any quail this season, owing to the scarcity.

Dr. Harsley is now the proud possessor of the gun club badge at Dunkirk, Ind. He was one of those fellows who had to be coaxed to shoot, and old-time shooters will remember these sweeps where the fellow who came in by coaxing won out in the end.

It is given out by many of the members that he will have to break more targets next time in order to win.

R. J. Andrews, August Sarcander, C. M. Smith and George Burt were the Fort Collins, Colorado, trapshooters who lately took part in the big tournaments.

The Deadwood, S. D., shooters are not all dead. Members of the Lead Club shot at 25 targets, thus: Powell 22, Perkins 22, Franz 21, Beck 19, Irwin 16.

The Muskrats.

WEST PULLMAN, Ill., Sept. 26.—The fall tournament, supplemented with a fish fry, was held at Gardner's Park, Sunday, the 24th, wherein the genial members of the Muskrat Gun Club were hosts.

It should be apparent to all that there is no better place to hold a tournament than in a park or fair grounds where there are plenty of good buildings and all the accommodations of shade, seats, water, refreshments and of course a good place to set traps and an open background.

When we arrived at Gardner's Park, we found all these things and even more, a good lot of Muskrats to look after every detail and make all feel at home. These grounds are so well fitted for tournaments, that the wonder is that more are not held by the park management.

The traps are set upon the brow of a hill and the targets are thrown out into a space that causes many a good shot to miss. The traps are set Sergeant system.

The programme consisted of ten 20 target events. The best shots of the city turned out. The trade had four representatives, Sternberg, Lord, Stannard and Vietmeyer. The other good ones were: Flewilling, Rupel, Engstrom, Barkley, Kinney, Garritt, Webber, Gardner, Winesberg, Barribal, Tuple, Harriman and F. P. Stannard.

The money was in four equal parts, with \$10 for average money with the added attraction of a merchandise prize for a wind up. All this was well looked after by C. Bellman, Secretary, whose address is Pullman.

It was regretted by all that the old time good shot, George Kleinman, was not present. But Sunday is the day that keeps George busy with the duties of game warden and fish commissioner.

Stannard was high professional with 181, and Barkley high for amateurs with 188. Kinney was next with 185 and Webber close up with 182.

All present partook of the fish fry with a relish, and voted the park management their thanks. There were a number of ladies present, and they with their visitors who came in the afternoon added to the pleasure of the outing. Scores:

Table with columns for Events, Targets, and names of shooters with their scores.

Clark-Witzengreuter.

MUNCIE, Ind., Sept. 25.—For something like a year the "Nothing doing" sign has been hanging out in this Hoosier state in the game of live bird shooting. It remained for old Ft. Wayne to break the ice, which they did most effectually on Sept. 24. A match race at one hundred English sparrows per man between Max Witzengreuter of Ft. Wayne and Hugh M. Clark of Wabash (where the river comes from) was the chief attraction.

The birds were shot from five traps at a rise of 25 yards and a fifty yard boundary; no birds being retrieved. Once shot at, did a bird touch the ground inside the boundary, he was scored dead. Under a previous agreement, birds lighting on the boundary fence were also scored dead. In one instance this latter rule saved a bird for Mr. Clark.

The traps were placed on the peeled surface of the base ball diamond, the score facing the east. The background was largely dark and while the weather was delightful, the shooting conditions were difficult indeed and the scores in the main race correspondingly excellent. Witz had not shot a sparrow for some seven or eight years previously. The race was started at 1:30 and was shot in strings of 25 birds with a ten minutes intermission between strings, which allowed the contestants to rest a bit, and gave a short interval for the members of the committee on irrigation present to absorb a little of the liquid that is dew on the grass in Milwaukee. Each shooter shot his birds down in alternating strings of five birds.

The sparrows were furnished by W. T. Hill, Indianapolis, Ind., who is generally known among this state's shooters as "Sparrow Bill." That the birds were a splendid lot is evidenced by the fact that in his shipment of 425 birds, but three died and not one of those trapped refused to fly. Mr. Hill furnishes the shipping crates for the birds and also supplies them with ample food and water for any given trip.

The scores which follow will show that each contestant was indeed "going some", and at the conclusion of the race both men were heartily congratulated by their many friends present.

At the finish of the race Mr. Clark was challenged in behalf of Mr. Witz, for the return match, and named two weeks from that date as the time and the same grounds as the place.

For the Witz-Clark race, G. G. Williamson of Muncie, acted as referee. Messrs. Ed. Wiegman and Harry Kinerck of Ft. Wayne officiated respectively as puller and at the blackboard. The last legislature of this state legislated against the use of the common domestic pigeon for trapshooting, which accounts for the use of sparrows in this race.

Preliminary to the big event, two sweepstakes at respectively 10 and 15 sparrows were shot. In the first race, Clark and Rundell tied for first. Witz and Sowles tied for second place and Williamson won third. In the fifteen bird race, Williamson won first, Clark and Witz, tied for second and Rundell won third alone.

After the big race had been shot, Sam. R. Miner, of Ft. Wayne, who, in addition to being a thoroughly good fellow, is the accredited best in his bailiwick as a shooter of yellow-legged chickens from a pigeon trap, and Mr. Stout shot a ten sparrow race; Mr. Stout winning.

The shoot was held on the grounds of the Corner Rod & Gun Club. Nos. 10 and 11 were the sizes of the shot used by the majority of the shooters.

The scores in the various events were as follows:

Table with columns for Match race, 100 birds—First twenty-five, Second twenty-five, Third twenty-five, Fourth twenty-five, and names of shooters with their scores.

Event No. 1—Ten birds, sweepstakes:

Table with columns for names of shooters and their scores for Event No. 1.

Event No. 2—Fifteen birds, sweepstakes:

Table with columns for names of shooters and their scores for Event No. 2.

Third event—Ten-bird match race:

Table with columns for names of shooters and their scores for the third event.

A team composed of the best shots from Lagrange and Wasepi, Mich., also issued a challenge to a team of ten men from the Corner Club for a team shooting match at the Corner Club, at a date to be decided upon later, with the provision that the Corner Club at once accept the challenge. The match is to be for either sparrows or targets and for a purse of \$500. The second match will probably be shot at Wasepi. The details for the first meeting will be made in the near future by the managers of the teams. G. G. WILLIAMSON.

Herndon Gun Club.

HERNDON, Pa., Sept. 27.—The Herndon, Pa., Gun Club of Herndon, Pa., held a most successful shoot Sept. 19, with fifty-two entries. The conditions were good, and the club is receiving many compliments from the visiting shooters at the able way in which the shooting was conducted. Five professionals were in attendance as follows: Edward Banks, J. M. Hawkins, Sim Glover, Frank E. Butler and Neaf Appgar. J. M. Hawkins made high professional average, 129 out of 135. M. P. Derk made high amateur average, 123 out of 135.

This, however, was our first attempt in holding a tournament, and it proved to be a grand success.

Large table with columns for Events, Targets, and names of shooters with their scores for the Herndon Gun Club event.

Cincinnati Gun Club Tournament.

ST. BERNARD, O., Sept. 29.—A few remarks relating to the tournament held in Cincinnati last week may prove of interest to the trapshooters of the country, and we will thank you very much if you will give the following statement prominence in your valuable paper.

The shoot was hardly up to expectations in attendance, though a large crowd was not expected, for various reasons. However, there were enough on hand to make a very enjoyable time for those who did attend.

The committee did all they promised, and a great deal more than any one else dreamed of.

Forty-five contestants shot through the programme, twenty-two of whom failed to win their entrance; their combined losses amounted to \$401.45.

There was paid out average money \$200, making a total of \$601.45 paid to the amateurs who shot through the three days. This amount, \$601.45, was the entire profit of the tournament, made on 37,870 targets trapped, programme and locker rent.

The entrance for the three days was \$63, and every one of the twenty-two amateurs who failed to win this amount was paid a sum sufficient to cover his losses, not only getting his entrance, but also getting his targets free.

The smallest amount paid back was \$1.85; the largest was \$40.50. In a nutshell: You could win good money if you shot well; but, no matter how poorly you shot, you couldn't lose.

The events paid exceptionally well, both in the Rose system and the optional sweeps. One amateur who lost \$1.85 in the regular events, pulled down \$30 above his entrance in the optional. When the \$1.85 was handed back to him it took some time to convince him that he was entitled to it.

The office force, composed of Luther Squier, Fred and Charlie Dreihls, are entitled to a great deal of praise for their efficient work in the office. Events were paid before shooters left the grounds each evening, and the last day they were paid average money and all before the last event was finished. This seemingly impossible feat was accomplished by having the experts, who were not shooting for the money, shoot in the last squads.

It is safe to say that all who were here will come next year and bring some one with them.

TOURNAMENT COMMITTEE, by Arthur Gambell.

Mr. Laybor—We traveling men are everything on organizing. Miss Niederman (vaguely)—Yes? Mr. Laybor—Yes, I wonder what the public would think of our union. Miss Niederman—Oh, Mr. Laybor, this is so sudden.—Philadelphia Public Ledger.

THE MANY-USE OIL

Protects cold, frosty, wet guns from rust. No substitute as sure. —Adv.

Palisade Gun Club.

EDGEWATER, N. J., Sept. 28.—Twenty-one contestants took part in the shoot of the Palisade Gun Club to-day.

The first event was scratch, after which all were governed by the sliding handicap, which in the table below are designated by H. The scores:

Table with columns for Events, Targets, and names of shooters with their scores for the Palisade Gun Club event.

IN NEW JERSEY.

Montclair Gun Club.

MONTCLAIR, N. J., Sept. 30.—The seventh monthly contest for the club trophy (a large sterling silver loving cup) was run off to-day, Mr. F. W. Moffett being the winner. This is a handicap event, 50 targets, to be shot for on the last Saturday of the month for twelve months, the man winning the greatest number of times getting the cup. Up to the present the winners whose names have been engraved on the cup are: January, P. H. Cockfair; February, Edward Winslow; March, Henry F. Holloway; April, George W. Boxall; May, Allen F. Connett; June, Henry F. Holloway.

On Oct. 7 the Montclair team visit Newton, N. J., to shoot the fifteenth match of the North New Jersey Shooting League.

Scores Sept. 30, 1905:

Table with columns for Events, Targets, and names of shooters with their scores for the Montclair Gun Club event.

Handicaps, as indicated, apply in event 5 only as added targets. EDWARD WINSLOW, Sec'y.

Raleigh Gun Club.

RALEIGH, N. C., Sept. 28.—To-day's shoot was of unusual interest to several of our regular members, it being the day set apart to shoot a 100-bird race for the Hunter Arms Co. silver loving cup, donated by them to be shot for weekly. The one winning it to-day will have to shoot it off next week with Mr. Johnson under the same conditions, he having won it more times than any one else at our weekly shoots. If Mr. Johnson loses it next week he will have one more chance on account of winning it last season. It is more than probable that he will win it, as he is the best shot in our club. Webb won yesterday from 17yds., while Johnson shot from 19yds.

Table with columns for Targets, and names of shooters with their scores for the Raleigh Gun Club event.

The weather conditions were good for a nice record, but the trap worked so bad that it was difficult to get a good target out of five or six calls. This kind of work is very trying on a shooter and soon worries him out. R. T. GOWAN, Sec'y.

Rochester Rod and Gun Club.

ROCHESTER, N. Y., Sept. 27.—The following are the scores made in the seventh contest for the Laffin & Rand trophy, on the grounds of the Rochester Rod and Gun Club to-day:

Table with columns for Brk. Hdp. Tot'l. and names of shooters with their scores for the Rochester Rod and Gun Club event.

Back scores: Brotsch 16 7 23, Bonbright 23 2 25, Bonbright 24 2 26, Stewart 24 1 25. \*Wins point on cup.

Ossining Gun Club.

OSSINING, N. Y., Sept. 30.—The scores appended were made at a practice shoot of the Ossining Gun Club to-day. Events 3 to 7 inclusive, were shot from the 20yd. mark.

Event 2 was for the Bedell rifle. Coleman won from scratch with the good score of 23. There was no competition for the Weskora cup, as there must be five shooters to make a contest. The next regular shoot will be held on Oct. 14. Scores:

Table with columns for Events, Targets, and names of shooters with their scores for the Ossining Gun Club event.

C. G. B.

"I suppose he clasped you in his arms when the canoe upset?" "No; quite the opposite." "Quite the opposite?" "Yes; the canoe upset when he clasped me in his arms."—Houston Post.

"Congratulate me, Herr Meyer! The gentleman to whom I am engaged has inherited 100,000 marks!" "Indeed? Lucky fellow! Why, now he doesn't need to marry you!"—Heitere Welt.

Rich Uncle—Well, Anabel, have you named the baby for me? Young Wife—No, Uncle James, but we have come as near to it as we can. We call her Jemima.—Chicago Tribune.

Patient—I've no fear of death, doctor, but the thought of possibly being buried alive is dreadful! Doctor—Have no fear on that score, sir! That'll never happen to any of my patients!—La Sourire.

PUBLISHERS' DEPARTMENT.

The Dunlap Hats.

THE name of Dunlap & Co. is among those of the oldest and best-known business houses of New York and many other cities where it has branches. The hats made by the firm are of the highest grade, and one finds them most satisfactory in fit, style and wear.

## RETALIATORY LAWS.

THE scheme of taxing a non-resident sportsman is now practically in operation through the country. The States which do not exact the payment of a license fee are the exception. Some of the laws are so complicated that an atlas or a post office official guide is necessary to unravel the questions which come up. In Tennessee, for example, one must know what county he is intending to shoot in before he can tell what license fee he will be called on to pay. The law previously to the amendments of this year demanded a non-resident license fee equivalent to the fee exacted in the State from which the visiting sportsman came. The last Legislature changed this by making the fee an uniform one of \$10; but excepted from the act thirty-two counties, as to which the old law holds good. What a visiting sportsman must pay for the privilege of his Tennessee quail shooting, whether \$10 or \$25, will depend on where he hails from. And there are men with souls so dead as to deny their citizenship when they can gain \$10 by doing it; coming from one State where the fee is high, they will give as their home State another where the fee is low. If they can do it successfully, they will even claim to live in the State they have come into for shooting. There are men—they are so few that the census enumerators do not think it worth while to number them—who are honest all the way through, all the time, in all places and in all things. Many fall down when it comes to swearing off personal taxes, passing foreign trinkets through the custom house, or taking out a non-resident shooting license when it may be evaded. Especially is this the case when the license law is of a retaliatory nature, like that of Tennessee as to certain counties, or that of New York. By the way, we would like to have some one learned in the law give an opinion on this question—whether a law which charges one man \$10 for a shooting privilege and another man \$25 for the same privilege is a law which will hold water.

## MORE NATIONAL PARKS.

THE rapidity with which the country is settling up, the progress made in the work of irrigating arid lands, and the efforts being successfully made to develop seeds of cereals and other plants which shall germinate and grow with a minimum of moisture, all point to a rapid increase in the population of portions of the West which hitherto have supported few inhabitants. With this increase of population will come more business, more towns and more hurry of the money-getting multitude. And with this hurry and this eagerness for wealth will walk hand in hand a forgetfulness of the needs of the human mind and body for recreation and rest.

Over thirty years ago Congress set apart as a public park and pleasure ground for the benefit of the whole people the Yellowstone National Park, an area nearly as large as the State of Connecticut. The wisdom of this action has never been questioned, while hundreds of thousands of our people have applauded it. To this park there are now flocking annually multitudes of people, of which last season's list numbered 25,000. These were all sorts and conditions of men, from the sturdy farmer who drove his family hundreds of miles across dusty prairies or over winding mountain roads to taste the joys of a few days or weeks' rest in the Yellowstone, to the idle nobleman of the old world who killed the time that hung so heavy on his hands by a run across an ocean and half a continent to see the geysers spout, to be awe-struck at the Falls and Cañon, or to contemplate the beauties of the Yellowstone Lake. It has often been said that the Park is visited each year by more people from Europe than from the United States—a statement, which, if true, carries with it something of shame for Americans. This year, with nearly twice the number of visitors that the Park has ever had before, the proportion of foreigners has been greatly lowered, and Americans have made a better showing for themselves.

In the United States there are still many millions of acres of wild land unavailable for utilitarian purposes. Down vast stretches of rough mountains, sparsely timbered, or whose timber is so far from a market that it is unavailable, rush mountain torrents which have their sources in snow-capped rock shoulders, in smooth green alpine meadows or on sky-piercing peaks. There are

narrow cañons, rocky valleys, blue lakes, fields of permanent snow and ice; beauties which mingle those of Switzerland with those of Italy and Austria, but which are unknown to any considerable portion of our people. These are places that will produce a dollar for no one, but which, if rightly used, will yield to Americans stores of health and enjoyment that dollars can never buy.

A few weeks ago we called attention to the need for the establishment of National Parks on the same plan of the Yellowstone Park in sections of Montana, Arizona and Colorado. The wonderful region in northern Montana, covering the main divide of the Rocky Mountains between the Blackfeet agency and Lake Macdonald, the White River Plateau in Colorado, and the Grand Cañon of the Colorado River, ought to be set aside at once as National Parks. Such action can be taken at present without any cost to the Government, and these parks when established will soon become known, will be delightful resorts for the public, and will incidentally become great game and fish preserves.

There is a strong public feeling calling for the establishment of National Parks in certain localities in the East. In the White Mountain region of New Hampshire and in the proposed Appalachian Park in the South, of which we have heard so much. On these matters Congress should act without delay. Here, however, the land is in the hands of private owners, and an appropriation would be required. We are told that this is an era of economy, but it would be a true economy to establish these parks at once. On the other hand, the authorization of the suggested parks in the West need cost nothing at present, since it may be taken for granted that for a time the forest-service would care for them.

## CONNECTICUT DEER.

THE deer situation is becoming serious in Connecticut. The original supply of wild deer having been exterminated, certain sentimentalists and sportsmen are bent on restoring the animals to their old-time haunts; and to that end they have caused a law to be enacted forbidding the killing of any deer prior to the year 1911. With the fecundity characteristic of the species, the deer are multiplying at a rate which the agriculturists—and now the manufacturers—view with alarm. The deer is a predatory animal, and the farmers have been forehanded enough to look out that they shall be repaid for the corn and cabbage and turnips which the deer may destroy. A law to meet the case provides that when a land owner shall have sustained damage to his crops by deprecatory deer he shall, within twenty-four hours, report his loss to the chairman of the board of selectmen, who shall appoint two disinterested persons to estimate the damage, if it shall be not in excess of \$20; or if it be more than \$20, the appraisers shall call in one of the fish and game commissioners. The amount of the damage and the expense of estimating it shall be paid by the town within sixty days, and the town in turn collects from the State. Agriculture is the basis of our wealth, and the farmer must be secured in the product of his industry. But Connecticut ranks high as a manufacturing State, and this source of wealth also is menaced by the rampant deer. On Friday of last week a deer invaded the city of Derby, in its mad rushes through the streets excited the humans and the dogs to such a degree that they followed en masse, for all the world like the children of Hamelin after the Pied Piper; and finally crashed through a glass window of the Osborne & Creesman factory, dashed around the machines, throwing the girls into a panic and bringing work to a standstill; and finally making its exit through an airshaft. If the Connecticut deer are to play such pranks as this, one need not be a prophet, nor the son of a prophet, to prognosticate the disastrous results of the law which protects them until 1911.

MR. RAYMOND S. SPEARS to-day renews his accusation that vast tracts of Adirondack public lands have been given over to private control. The subject is a complicated one, as we have said, but every transaction named by Mr. Spears should have the light thrown upon it, and if State officials have been remiss or worse in guarding the public's interests, a way should be sought to recover for the State what belongs to it. The charges made by Mr. Spears are the result of careful and intelligent study of the situation. They demand explanation.

## COW CREEK.

IN his vivacious and veracious biography of his pet bear, Ransacker, writing from the Shasta Mountains, improves the occasion to quarrel with our prosaic and matter-of-fact progenitors who applied geographical names uninspired by fancy and devoid of music and poetry. The particular object of his criticism is the California stream called Cow Creek. It does sound commonplace, but there may, after all, have been poetry in the circumstances of its naming if we only knew what they were. Here, perhaps, in the early days—for California is a land of romance—some famished prospector may have killed the cow elk, which saved his life. Or in later years, it may have been that a city sportsman, lost and bewildered; and about to give up in despair, here heard the welcome note of a cowbell and followed the sound and the cow to the ranch and supper. Another plausible theory—for this California country has long had its cattle on a thousand hills—is that the stream was owned by some rich cattleman to whom the word cow was particularly pleasing because standing for his wealth. If these suggested explanations are fanciful, so let them be accounted; but none the less, if Ransacker will delve into the lore of his local place names, he may find a story here which will make Cow Creek, North Cow Creek, Old Cow Creek and South Cow Creek as music to his ears.

Texas has a Cowhouse Creek, Virginia a Cowpasture River, and Maine and Montana have each a Cow Island, the one in Montana, in the Missouri River, having taken its name from the buffalo found there; the French called it Ile de Vache. Surely Ransacker would not obliterate from the map of the buffalo-abandoned Montana of to-day even so homely a place name when thus reminiscent of the old conditions in which it had its origin. Nor would he do away with another and better known "cow" name, that Cowpens, in South Carolina, originally nothing more distinguished than a corral for cattle, but afterward made famous and a household word by the victory of Greene in revolutionary days.

If, however, Ransacker shall persist in his antipathy to Cow Creek, he may appeal to the Legislature for relief in a change of name. The people of Pittsfield and Barnstead, N. H., took this course recently to rid their super-sensitive ears of the harsh sound of "Shaw's Pond." It was too prosaic and common for them, so they went to Concord and got the Legislature to rename it Lily Lake. That, to be sure, is much prettier, and it goes without saying that a community which was formerly "shy" on spring poets has since the more favorable conditions were supplied by the change developed an unsuspected talent for rhyming, much to the delight of the editors of the home papers, who are suspected of having prompted the change of "Shaw" to "Lily" for their own selfish ends.

WE are all grumblers and much given to bemoaning our various limitations, and the hard luck, which we are apt to say, meets us on every hand. Most of us, being slaves of circumstances and obliged to earn our living, have little of that freedom and independence which we long for, and which we believe would make our shooting and fishing trips—now so often failures, so far as tangible results go—full of the joy which comes with success. Such are our imaginings, but it may be doubted if they have much foundation in fact; we might have no better luck if we were millionaires or lords or dukes or princes. Here, for example, is the tale of a member of the English royal family who has just visited the new world for his fall hunt. Prince Louis of Battenberg went to Halifax, N. S., and started out to kill a moose. He went into the woods under most favorable auspices, hunted with more or less faithfulness, after a while was attacked by the gout and was then brought out to Halifax with much difficulty. He got no moose, and the sole trophy of his hunt was a miserable porcupine.

AN interesting article upon the subject of how fishes find their way in the water appears in another part of this week's issue from our occasional correspondent, Mr. J. Parker Whitney, whose observations concerning fishing and shooting have extended over a long period. His articles on taking salmon in the sea, published in our columns several years ago, attracted a world-wide interest, as a feature before unknown as illustrated by Mr. Whitney.

## THE SPORTSMAN TOURIST

### Charles McConnell's Black Foxes.

THE deputy sheriff slackened the strap of his pack and rested against a stump. "Charlie McConnell isn't at home, and he ain't going to be at home in this county for some time," he remarked, as he lit his pipe. "Charlie lit out of these parts four years since, taking with him the good wishes of the entire community and the curse of Peter Sinclair, and four hundred dollars of good and lawful money of Canada which Peter had lifted from other people, and he lifted from Peter."

We were five miles from McConnell's camp. The hour was high noon, the mercury stood at 85 in the shade, and I concluded that it would be more profitable to learn the story of Mr. McConnell's migration than to pursue our way over the trail which led to his shanty.

We were in the woods after a gang of roughs who made a business of setting moose snares. We had failed to locate them so far, and it was our intention to pass the night at Charlie McConnell's shanty.

In his younger days, Mr. McConnell had worn the Queen's uniform in the capacity of a gunner. He had acquainted me with that fact; but I imagine that no one else in the country knew it, for deserters from the imperial service are not, as a rule, inclined to communicate to ordinary civilians the fact that they are "wanted" at Halifax.

The sheriff continued, as he puffed at an exceedingly foul and refractory briar: "You don't know Peter Sinclair. Then you ain't missed anything unless it's the being able to say you know the meanest man in all Canada. Charlie had his faults, so have we all; but Peter would assay ten ounces to the ton in pure meanness and cussedness, while poor old Charlie was as white as they make them. You see, he came here from no one knows where, with nothing but an elegant little rifle and some clothes. He bought the lot his shanty stands on for \$40, and he built the camp himself. First of all, there was only himself, a dog, and a yearling calf. Then he increased his belongings until he had six head of cattle, and two of the best hounds any man ever ran after. Them hounds was dandies. Many a run I've had after foxes, raccoons and cats with them going ahead, and poor little Charlie puffing like a steam engine anywhere from half a mile to a mile behind them. All the same, he managed to come in at the death of no end of game, and for all he sold so much fur, I could swear it was all fairly trapped, and none of it strychnined."

"Peter kept store about twenty miles the other side of Charlie's place. He failed with his pockets full two years ago and skipped across the line. He was the greatest man to quote Scripture I ever heard. I guess he knew the whole Bible by heart. It took an able man to get ahead of him on a business deal. He was into all kinds of things, lumber, mines, brickyards, and so on. He kept the post office, and one of his girls ran the telegraph. They say he used to open letters and read them if he thought they had any news in them it would come in handy to know. If he'd lived handy to the sea, he would have gone into smuggling, or I miss my guess. Charlie used to go out to his place every six weeks or so and trade his pelts for groceries. Peter had a dead cinch on the country trade before the new railway came through, and between giving fourteen ounces to the pound and six-pints to the gallon, he raked up quite a little bit of money."

"Charlie had it pretty hard for the first few years he was out in the woods; but in time he got on his feet. The lumber people liked him, he used to go cook on the drives, and the company paid him to keep an eye on the shanties and stores in the summer. Then he used to sell moose meat to the crews in winter, and in the fall he used to guide Yankees. He took a boy out of the poor house, and they lived out here for a good many years; the boy enlisted and went to South Africa the year Charlie moved away. It doesn't cost a man an everlasting fortune to live when he has no family, raises all his vegetables, shoots most of his meat and has nearly all his clothes given him. There's a wild meadow below the cabin, where we'll get a duck or two to-night, and that gave him all the hay he needed for his stock. He had about three acres of prime land cleared and fenced round his cabin, and that grew potatoes and vegetables enough to feed him and his stock, and he always had plenty left over to sell to the lumbermen. Of course, Charlie lived too far away from the road to truck any produce out—that is in the spring or fall. He used to take a little hay and potatoes out when it came sledding."

"People used to say that it was easier pulling wire nails out of a hardwood plank with your fingers than getting cash out of Peter Sinclair. Charlie and he used to have it hot and heavy sometimes, but Charlie always managed to get some ready money."

"I forget whether it was in the spring of '91 or '92 that mink went up to famine price. They were low in the fall, and Charlie held on to his catch, expecting a rise. He came out in the spring—he had been cooking in a lumber camp all winter—and he brought eighteen fine fall mink skins out with him, not a shot hole in the whole lot, and half a dozen spring ones. Peter was sitting in the little room off the store he called his office, with his ledger in front of him and a big Bible open along side of it. Charlie dumped his pack of skins on the counter, and one of the Sinclair girls told her father he had come in with some fur. Peter walks out, and begins to sort the pelts over."

"These here mushrats is worth twenty cents as prices are now," says he. "These cats ain't worth mo'n a dollar, and the foxes are worth two dollars each, 'cepting that one that's been 'crusted' lated in the season; he's worth a dollar. Now about these minks. Mink was 'way up until the first of the month; then they dropped, and I be blessed if I know what to give for them now. Here's the last dispatch I had, 'Buy no more mink unless extra prime, for more than one-fifty.' Tell you what I'll do, I'll give you one-twenty-five for the lot, in trade, and if I get more for them I'll pay you the difference in cash, and if I lose, you pay me."

"Lands sakes, man," says Charlie, "mink was worth two dollars last fall, and I kept these fellows over, hoping for a rise."

"They were worth two-fifty in February, and three weeks ago they were worth two-twenty-five, but they have been dropping ever since, and that is the best I can do for you."

"Finally, after a lot of dickering, Peter agreed to pay Charlie thirty dollars cash for the twenty-four pelts and five dollars' worth of groceries. If he got more for the skins in Halifax Charlie was to have the balance, and if he lost, he was to make the loss good."

"That was a bad spring for the lumbermen. The water fell away and left ten million of lumber high and dry up the river. The driving camps were full of grub, and the company hired Charlie to keep an eye on things. He put in a good spring, going from one camp to another, with his day's pay coming in regular, plenty of grub and nothing to do. Early in May he went down to the dam on Crooked Brook and found two strangers in the camp. They were mighty civil fellows, out on a fishing trip, and they gave him a very pleasant time. He camped with them two days, and the second evening they were together two mink came out of the dam and started fishing right in full view of the camp. "There's two five dollar bills three weeks ago," says one of the men, pointing to the minks."

"How's that?" says Charlie. "Mink are away down this year."

"Mink away down!" says the other man. "I paid out six thousand dollars for mink alone last month. The lowest I paid was two-fifty for small spring mink, and the best skin I got cost me nine dollars. I've been in the fur business for nearly thirty years, and I only remember mink being as high twice before."

"You told me your name was Bushell. Do you belong to Tobin & Bushell, of Halifax?" says Charlie. "I don't know the firm myself, but I sell my fur to Peter Sinclair, who does a pile of business with that firm."

"To cut a long story short, Charlie found out that Peter sold all his fur to Tobin & Bushell, and that the lot of mink he had traded to Peter for thirty-five dollars, had fetched a hundred and twenty-five in Halifax."

"When Charlie got out to Peter's again he tackled him about the deal, mentioning no names, only asking him for a statement of account. Peter told him a lot of stuff and paid him two dollars more in cash and gave him some tobacco and stuff to make up five dollars more. Charlie took the stuff and walked off without saying anything. He sold very little fur to Peter after that. Maybe he'd take in a bear skin or a bundle of moose hides once in a while, but his best fur he shipped to Halifax direct. Peter growled about this, but he couldn't prevent it."

"It was some five years after the deal in mink skins that Charlie found a fox den, and dug the young foxes out. He said nothing about it to any one, but he had them tame round his house for some time. That fall word was brought out to Peter Sinclair that there were two black foxes in the woods back of Chalmers Grant, not more than five miles from Charlie's place. He asked Charlie about it when he came out, and he told him that he had seen one of them two days before and that it was a clear black."

"I didn't shoot it," says Charlie, "for two reasons. First, the fur is poor in early October, and secondly, I'm going to catch him alive—if it's a he one—and try to breed him to a little bitch fox I've got at home." Peter said that no living man could catch a black fox alive, and that he would give ten dollars to see one."

"You wait until next March, when the foxes are dogging, and I'll let you see one right in this store, unless some one brings the hide in before I can catch him. I mean to breed foxes like that fellow down in Maine that I read of in the papers."

"Not more than a week after this, one of the black foxes came out in broad daylight and killed two geese, and half a dozen chickens for old Deacon Prendergast, of Chalmers Grant. The Deacon, his wife and her sister saw him. They hadn't any gun in the house, and the Deacon was too blind to shoot straight if they had one. When the snow came several people tried to get those foxes with hounds, but they seemed to have gone away. They killed a pile of common red foxes, and one or two patch foxes in the district, but never a black fox showed his nose."

"Charlie didn't go cook that year. He stayed round home, and hunted and trapped all winter. Peter used to laugh at him about letting the black fox go; but Charlie took it all in good part, and he sold old Peter considerable fur, taking care to get something like the just price for it."

"It would be along about the middle of March—I think it was the third Friday—that Charlie came out to Peter's with his sled and dagon. [A dagon is an ox

trained to work alone in harness.] He had a big box on the sled. It was after sundown, and the lamp was lit in Peter's store. Charlie walks in, and says he, 'You owe me ten dollars, Mr. Sinclair, I've got the black fox alive.'

"Lands sakes," says Peter, "where is he?"

"Right in that box," says Charlie. "Wait one moment and I'll fetch him in for you and the crowd to see."

"He fetched the box in, and inside it was the blackest fox you ever saw. The box was all lined with tin, so he couldn't gnaw out, and the slats were also covered with tin. Every time any one would go near him, he would show them long white teeth of his and snap them like an otter trap."

"Now," says Charlie, "you wait a minute and I'll show you the bait I caught him with." And he goes out to the sled and fetches in the prettiest little bitch fox you ever saw. She was fat and sleek, and she had a collar on like a dog. Charlie reached for a cracker, and she begged for it, and rolled over at the word of command."

"I ris that little devil and trained her myself—her and her sister," says Charlie. "I ketches four red foxes on the sister, and I was afraid I was going to have the same luck with this one; but I happened to be in luck, and she's good for a litter of 'patches,' if what they say is right. It's a mighty easy thing to catch foxes if you only know how, and when I found him and her [pointing to the black fox] in the pen together this morning I felt more than good."

"Gentlemen," says Peter, "I promised this man ten dollars if he would bring that black fox alive into this store. I'm a man whose word is as good as his bond, and here's the ten dollars I promised you, Mr. McConnell. It's a long tramp from your place to here, and you'd better go to the house, and Agatha will give you some supper, and you can have a bed if you are too tired to go home to-night."

"Charlie thanked him kindly and went in, and Agatha Sinclair, who was a nice girl for all she came from such a father, set to work to get his supper ready, while her sister Annie, went to the telegraph instrument (which was in the sitting room) and began to send a dispatch. Charlie asked her to send one for him as soon as she was through with the first one, and he got her to write it, saying that he had poor learning and she could write it better than he could. It ran like this:

"To Manager of Fox Farm, Pirate Island, Me.: What price for live black fox and mate? Mate red, both un-hurt. Will ship C. O. D."

"Annie rattled away at the instrument, while Charlie ate his supper, and little Vixen, the fox bitch, sat beside his chair waving her bushy tail and begging for scraps. After supper Peter came in and offered Charlie a glass of rum, saying he only kept it in the house for medicine, but he thought it might do him good after his long tramp."

"The way that telegraph instrument was worked that night was a caution, I can tell you. It was past 9 when Charlie got his answer:

"Two hundred the best we can do on the pair. Ship at once."

"He said nothing and started for the kitchen where he had left his moccasins. While he was putting them on Peter comes in and says to him: 'Mr. McConnell, my daughter tells me you had an answer to your dispatch, and it wasn't at all to your liking. Now she said mo'n she had any right to, seein as she's not allowed to tell what goes over the wires, but if I can help you out anyway let me know, and I'll do so.'

"Charlie told him that the price offered was too low altogether, that he would sooner knock the black fox on the head and take his chance on Vixen's pups coming 'patches,' than sell at that price. I have a letter in my pocket from a Frenchman who's going into the fox business on Anticosti, and he offers me \$500 for a pure black, and \$350 for a silver-gray," says he, and he pulls the letter out of his pocket and hands it to Peter. To cut a long story short, Peter paid him \$400 in cash for the black fellow, leaving him the little bitch fox."

"It would be about a week later that the high sheriff came to my place early in the morning and told me he had papers he wished me to serve on Charlie McConnell, back of Chalmers Grant. The sheriff knew Peter as well as I did, so our fees were secured. I hitched up and drove as far as I could, and walked the rest of the way. Charlie was cutting wood just outside his shanty when I came in sight. He never offered to run, he just walked to meet me and asked if I had papers for him. 'The case of Peter Sinclair versus Charles McConnell.' 'I thought it would be the queen versus me, I only wish it had been. Say, you put those papers back in your pocket and come in and have some dinner, and I'll walk out to the road with you and go down to the corner and see Peter. If we settle the case I'll pay you your fees and mileage, same as if you served the papers, and if we don't you can serve them on me all the same.'

"I went in and had dinner, and we walked out to the road afterward. It was near dark when we got to Peter's store at the cross-roads. The store was full of loafers, but Charlie never minded a bit. When Peter saw us he came out of his office like a snarling yellow cur dog coming through a fence after a team. His thin red hair and sandy whiskers stuck right out like the fur on a wildcat when the dogs have him 'treed,' and every yellow tooth in his head showing. He'd forgotten his Scripture for once in his life, and the swearing he did was something

legant. When he was through with the first of it Charlie told him that he had come in to settle up the case with him, and he would prefer to do the talking in private, not before a shopful of men. Peter wouldn't listen to this at first, but finally he consented to go inside, and talk the thing over. Annie was at the telegraph instrument when we went in, and she never let on that she saw Charlie. I can't go to bother you with the details of the case, but Peter's story was that Charlie had sold him a dyed fox, not a true black one. He had a dispatch from the fox farm in Maine, which he showed me, and it bore him out all right. When he'd done reading it Charlie said nothing, he just began to tap on the table with his jack-knife, 'ticky tack, tack, tack, tack' like an instrument when a dispatch is going over the line. He hadn't been doing this for a minute when Annie Sinclair jumped up with her pretty face as red as fire. 'Father,' says she, 'that man has called me a fool and you a rogue,' says she, 'and I ain't going to sit here and be insulted.'

"Peter tried to turn white, but he turned green instead. Do you mean to tell me you can work the telegraph?" says he.

"Work the telegraph?" says Charlie. "Why, I was working one when this girl of yours was a five-year-old kid. I heard every word that went over the wires while I stayed here, how you sent word on that you had a black fox to sell, and the answer was that they would pay \$800 for it if in good condition. Then when I sent my dispatch this girl never transmitted it; she just wired back that the price was too low. Then she called up the head office and asked for extra time, as the line was wanted for important business. Then she sends my message to Canso, saying there was no hurry about it, and writes the answer herself, and then she gets word that he company would go one thousand if the animal was O. K. I've got my dispatch offering me \$200 for the pair, and when it comes into court, along with the other ones, the Western Union will make things lively for you and your daughter. I don't admit that there was anything wrong with the fox, but I can prove that there's something mighty wrong with this office, and if you're minded to take these civil paper back and make the case a criminal one I'll be willing to have it tried before any jury you can scare up in Annapolis county."

"Says Peter, 'Give me them papers back. This man has bitten me once, but he'll never do so again. I ain't a going to have my daughter pulled into court on the word of a worthless loafer, even if the devil has taught him to run a telegraph instrument.'

"I gave the papers back and Peter paid me my fees and mileage, he also wrote me out a statement that the case was settled out of court. Charlie and I went out, and drove down to the tavern at Hunt's Brook, and put in the night there. In the morning Charlie paid both our bills and offered me the fees over again, but I told him that anyone who could get away from Peter Sinclair had no right to pay twice over for doing so. What beats me is how any man who knows how to run a telegraph could be content to stay in the woods, like Charlie did. He cleared for the States a few days later, and I hear he's doing well in Denver, and I hope he is, for he's a decent little man, even if he lifted old Peter Sinclair.

"I did not deem it necessary or advisable to tell the sheriff that Charlie McConnell had confided his reasons for settling 'back of Chalmers Grant' to me, nor did I divulge the fact that I had donated a couple of drachms of nitrate of silver to him, 'to make hair-dye.' I had first made Mr. McConnell's acquaintance when he was acting as telegrapher and signalman at Herring Cove, near Halifax. I lent him the money to buy his bit of land back of Chalmers Grant, and in return for this he had initiated me into the ways of the woods, and given me much information as to the life the Canadian leads who enlists in the Imperial forces with the mistaken idea that soldiering is 'sodgering.' I obtained the gentleman's address in Denver, and in reply to my letter he was kind enough to tell me his side of the 'black fox' story. Omitting perfectly personal news, his letter ran as follows:

"You want to know how I got ahead of Peter Sinclair on the fox racket? It was this way. Two years or so before that he skinned me out of nearly \$100 on a deal in minks. I lay low until I found a fox den; then I dug the pups out and brought them up tame. There were three dogs and two bitches, and along in the early fall I blackened two of the dogs up, using the stuff you showed me how to make, and turned them down near Chalmers Grant. Of course, they raised Cain with the minks and things near, and several people saw them, but as soon as the late fall came they shed their coats and turned red, just like they were before.

"The two bitch pups and the other dog I kept. When the spring came and the foxes were dogging I took and dyed him black, and if I say so myself, only an expert could have told he wasn't genuine. The fox farm people were crazy to get hold of a black dog-fox, and I wrote them, and they said they would pay anywhere from \$500 to \$1,000 for one. I dropped Peter a hint of this, and he caught on, and wrote them—the rest you know as well as I do."

Two wrongs do not make a right, and the fact that Peter Sinclair swindled Charlie McConnell on a deal in minks might not justify the proceedings being reversed when it came to a deal in foxes, but I have always had a sympathy with the "under dog," and in this particular instance I was rejoiced to hear that the would-be biter had been most severely bitten.

EDMUND F. L. JENNER.

### Striped Bass in the Hudson.

OSSING, N. Y., Oct. 7.—*Editor Forest and Stream:* The season is now on here for striped bass. There has been some very fair fishing during the last few weeks, most of the fish being caught on the Croton Point and Northwest Point reefs. The best catches have been made by Capt. "Jack" Aitchison and his parties trolling with spinner and sand worms. This morning a Mr. Rothschild, who was with him, caught several beauties, one of which weighed 11 pounds 12 ounces. Shortly after catching the large one they hooked on to what must have been the daddy of them all, for he broke an eight-strand snell and got away.

C. G. B.

## Forest and Stream Medicine Chest.

EARLY in the present year a suggestion of the writer brought to the FOREST AND STREAM a number of contributions from a number of medical and surgical members of its family, namely, Messrs. Robert T. Morris, Edward French, Lewis H. Rose, J. E. Bulkeley and last but not least, the anonymous writer of last week, upon the subject of sickness and accident in camp, how to care for the same and the means and appliances needful therefor. It is safe to say that never before has the subject been so ably presented to lay readers of a secular paper. And as the articles appeared from time to time it seemed to me that I might with propriety venture to acknowledge the personal benefit of the information thus imparted, as well as to give some account of the medicine chest which I have had made and stocked from the lists and directions given. The lists given so nearly agreed as to disclose to the layman that the science of medicine in so far as it relates to the treatment of common ailments has become greatly simplified and compacted of late years, and that minor surgery has become almost wholly a matter of cleanliness, surgically speaking, and of natural reparative procedure. And inasmuch as the camper is liable to meet with sickness and accidents in places without the reach of professional aid, it is possible, because of this comparative simplicity and compactness of means and appliances to provide him with a medicine chest and instructions for its use sufficient for almost any medical or surgical emergency. Such provision may serve to tide over matters to a recovery and, perhaps, save life.

The instances in which the respective lists differed were found to be in minor particulars, such, for instance, as the preference of one gentleman for chloranodyne, and of another for Squibb's cholera mixture; and matters of similar import. One gentleman told of the Steinhoffer bandage and the Esmarch suspenders, the latter used by the soldiers of the German army, and both articles "made in Germany." When I asked the large surgical supply house man, who made my medicine chest, about these articles it was a poser for him; he had never heard of them. It is a wonder that the American soldier has not at least procured the Esmarch suspenders from his cousin German, for they would seem to be an article of double value. Another writer rather deprecated placing the hypodermic syringe and its concomitants in the hands of laymen, remarking that not one case of snake bite in ten thousand is fatal—to grown and healthy men. It may be remarked in this connection that the next week's issue of FOREST AND STREAM gave the account of the death, within an hour of being bitten by a rattler, of the curator of the Los Angeles Zoological Garden. Other gentlemen advised its being included, and I did so in the chest in question. I have noticed often that the kind of trouble you don't have is the kind you are prepared for, and I don't want any snake bites. As for its use, I admit it requires careful study and very careful handling, but it is not nearly so dangerous as a heart that wants to stop beating. The very first trip of the new medicine chest furnished some very significant though not very exciting arguments in favor of the hypodermic equipment, of which I will speak later on.

The complete list, without any duplicates or alternative remedies, includes more than thirty articles or kinds of articles, and the question of the size of the chest was the first problem to be solved. This was solved or resolved in favor of a chest large enough to contain substantial supplies of the various medicines, accordingly most of them are in the original packages or bottles, an added advantage of this being that the labels are printed, as well as the doses and formula. The case, therefore, was made about ten inches in length, six inches wide and five inches high, made of hard wood and exceedingly strong, with stiff compartments for each bottle, leather lined, and bound and covered with black grain leather having a leather handle and a strong clasp and lock and key, as it is not the sort of thing for children and fools to get into. It will be seen that it can fall out of a wagon and not have anything within it break. Within it is a separate pocketbook case containing the instruments, needles and silks. The nitrate of silver is in a hard rubber tube, and the boracic acid powder in a hard rubber bottle with a screw off cap on each end, one end revealing a pepper-box shaker. The corrosive sublimate tablets are in a blue bottle, plainly marked and labeled "poison." I have not yet done so, but it is my intention to prepare and have printed a pamphlet containing the FOREST AND STREAM articles of the gentlemen above mentioned, and a list of the contents of the chest, careful directions for the snake-bite treatment, etc., to go in the chest. Oh, yes, it cost me something. I think I hear some one say "how much?" So I will anticipate the question. Sixteen dollars in money, and about a dozen visits to the man. (The retail price of the medicine alone would be about \$10, to say nothing of the instruments and case.) But I felt well repaid for my trouble and expense when I started off with the children on a camping trip with the chest in the trunk and the feeling that I was prepared for trouble. And we came within about ten inches of trouble, too. We were going in a "pisen snake" country, to a beautiful river, one of the best in the world for small-mouth black bass fly-fishing. The children rode off from the railroad with Mrs. A. in the first wagon, and Mr. A. and I followed on the other wagon with the camp things. He is a great walker and soon jumped out and started ahead of me, following the first wagon closely. Two miles down in the hills a rattlesnake lay coiled within, as I say, ten inches of the wheel track. The mules passed it without being struck. It did not rattle. Then Mr. A. walked past it in the wagon track and it neither rattled nor struck at him. He said it could have reached him, too. As he passed it that something which makes a fellow look at a snake drew his eye around to his right and he saw it. He struck it with a rock, and then it rattled, but it was disabled. He smashed its head the first throw. It was still trying to rattle when he threw it into the hind end of our wagon. It had eight rattles, was about four feet long and as thick in the middle as a man's wrist is wide. It was in a brand new skin and brightly marked, save at its tail, where it was a velvety black. I do not remember to have noticed the black marking at the tail before.

Three days after that he and I were making an out-house near the tents when he turned over a log within ten feet thereof and jumped back and exclaimed: "Here's

another snake!" This time it was a copperhead, the copper markings of which were very dark, like old copper, possibly because he lived under that old log in the day time. I shudder yet to think of the children going out there about dusk, the time when copperheads begin to stir. We each got a long stick and when I said I was ready A. pulled the log off him, as he had run under it again, and we killed him, or rather A. did so, for my blow landed on a rock and did no execution. A day or so after that I was reading in the hammock, and the children were under the dining room awning, where Mrs. Morgan, the camp cook, whom we had procured in the neighborhood, exclaimed: "There goes a bug that is as poisonous as any rattlesnake. It's a rattlesnake ant. They kill cattle when they sting them. Killed a good many after that dry year, and the way we know it around here is, one of them bit a cow in the foot, down the river here about a couple of miles, and its leg swelled up and it finally died, and when they looked where the swelling started they found one of them. Its stinger wouldn't come out, and so it stayed there and died along with the cow."

Now a rattlesnake ant was a new one on me, so I went around the tent to where they were and asked to see it, and Mrs. Morgan told me it had run under a leaf, which she pointed out to me. I found it to be an insect about the length of a bumble bee, but not quite so stockily built, being more like a wasp or an ant, having no wings, but being a fast runner, marked with bars of orange or gold, like a bumblebee. I caught it and it repeatedly tried to sting my knife-blade, with a stinger that is at least a half inch in length, disclosing on its point each time it thrust a tiny globule of amber colored fluid. Mrs. M. remarked that it could stick its "hypodermic needle" into soft wood so far it couldn't pull it out. I do not know what it is, as I say, but I conclude it is the king bee of all the venomous insects in this country, judging from the length of its stinger and the looks of that tiny globule of amber colored liquid. I inclose it herewith, and it may be that the wise man at the FOREST AND STREAM office can tell us more about it.

But I fear this article is becoming too toxic. Too redolent of unpleasant things. Nevertheless I cannot resist adding that one night I woke up, doubtless because of a strong odor of polecat which pervaded the tent, and which I soon found had awakened the children also, as well as those in the other tent. I remembered that A. had a coach candle on a stake just outside his tent flap, and at my suggestion he set it aflame. We didn't want any polecats loafing around there, and thought we would try the lighted candle as a sort of gentle persuader—the only kind of persuasion it is worth while to institute under such circumstances. It worked like a charm, almost immediately we could perceive a diminution of the presence of polecat, and when we dropped off to sleep again it was not discernible at all. *Verb. sap.*

As a matter of fact, the only real uses of the contents of the medicine chest were, as one of the medical gentlemen predicted, in cases of mosquito bites and juvenile sour stomachs, which were promptly relieved by the oxide and resorcin and the soda mints, for both of which the children give the gentlemen thanks. We ran some safe rapids, to the delight of the children, had a delightful swim each day at 4 o'clock—and then, before A. and I began to "run the river" and fly-fish in earnest, a sad happening at home called my regretful and tearful little girls and myself back; but it is a beautiful river, and it is fine to record that A. ran it twice and caught 110 small-mouth black bass, a decent proportion of which were returned unhurt, landing three doubles, having his rods bent in all sorts of shapes, and coming home ready to acknowledge that I was right when I promised him he would see the prettiest river he ever threw a fly over.

GEORGE KENNEDY.

## Looting the Woods.

*Editor Forest and Stream:*

Reading Raymond S. Spears on floating down the Mississippi, reminds me that the great river is indeed great. Mr. Spears' tales of experiences on the mighty waterway come to us here on the banks of that same stream as stories of a remote land and of a strange people. One can scarcely conceive that the waters that carried him on his voyage in that far land are the same waters that pass our door every day. Yet, follow the tortuously crooked line down across the map, and we find it really continuous to the very same places where Mr. Spears exploited.

We remember, too, that we have river people here as well as in the far-renowned Southland; but how different is the lumber jack of the North Woods from the shanty boatman and fisherman of the south end of this great artery of nature. Petty thieving is little known in the land of the lumber jack. Miscellaneous property left lying about loose is seldom missed when called for. A branded saw log may lie neglected on the river bank till it rots; it will not be touched by any but the proper parties. But when it comes to maverick or a standing tree, all is changed. Stealing timber off State lands is a business almost as legitimate as banking, provided it is done on large enough scale. Many a haughty millionaire owes his rise to getting in right on public timber lands, and in very, very many cases a Government official was the means of getting in right. The State Government is very modest where it catches a large operator helping himself to State timber, which it does on rare occasions when outsiders interfere. It very politely asks the trespassers to pay the value of the timber taken, there is an argument, and the offender is allowed to settle at what he thinks he has got. Think of it, you toiling bank burglars! If you only had a pull like this! Nor has the general Government been the least bit stingy in helping to get away with booty. For twenty-five years it has been pouring money into the upper wilderness to build reservoirs, dredge channels and otherwise facilitate the work of bringing out the spoils.

I think Mr. Spears could find no parallel, though, to the case of the settlers along the upper river. He tells of millions expended by the Government in building levees and improving waterways to protect the plantations along the river from floods. Here the order is

just reversed; the millions are expended in building dams to hold back the water during winter and early spring, when there can be no flood, and when no great damage would be done if there were; and turning it loose in late spring and early summer, when the tendency is toward flood and when the growing crop can easily be destroyed. This year the Government flood lasted all summer. The reason for this was that several years ago the largest lake, Mimebegashish, was drained off to rebuild the dam. When the dam was rebuilt, it took several years to fill it again. This spring the job was completed and the great guns were all loaded to the muzzle. On top of this came heavy rains and the consequence was that even the lumbermen got a shade too much water, while the settler simply let all hold go and floated out. Other settlers not flooded, to the number of two thousand, were cut off from the railroad for two months, except as they went by boat.

The reservoirs hold enough to keep the river bank-full for four months, while the rain has added as much more. The Army engineers who have matters in charge argue that the reservoirs have nothing to do with the floods; but I don't think there is a reader of *FOREST AND STREAM* but knows that holding water back six months must double the flow for the next six. Before the white man came, with his greed, the lakes were always at a low stage at the beginning of a wet season. When the river had risen a foot, there was several hundred square miles of lake surface that had risen a foot. By the time the wet season was past the lakes were several feet higher than at the beginning, and kept the river at an even flow for many months without stress at any time. The War Department fills the space in advance, and then when the stress comes, opens wide the gates to let the loot of the forest pass. Even if they did not let loose a drop of their advance store, they have usurped the space nature had provided.

People representing \$60,000 of losses by this year's flood joined in laying the case before the army engineers sent here to examine into the matter. They did not ask that the reservoirs be discontinued; they simply asked for a reasonable regulation, with improved waterway, to meet the changed conditions. They might as well have tied their request to a stone and thrown it in a well as far as the results are concerned; the loot of the wilderness is too great for the welfare of two or three hundred cabin builders to interfere with it, even for an instant. That floods will one day be controlled by means of reservoirs and improved waterways, there can be no doubt; but so far in this country, controlling the floods is only the excuse, the loot of the wilds is the power behind the throne, and that power is wielded in a way that is rather disastrous to other interests.

E. P. JACQUES.

ARTKIN, Minn.

## Adirondack State Lands.

Editor *Forest and Stream*:

On Feb. 6, 1883, the following law was passed: "An Act to prohibit the sales of land belonging to the State (of New York) in the counties of Clinton, Essex, Franklin, Fulton, Hamilton, Herkimer, Lewis, Saratoga, St. Lawrence and Warren.

"The people of the State of New York, represented in Senate and Assembly, do enact as follows:

"Section 1. Hereafter and from the passage of this act no sales shall be made of lands belonging to the State situated in the counties of Clinton, Essex, Franklin, Fulton, Hamilton, Herkimer, Lewis, Saratoga, St. Lawrence and Warren."

An exception was afterward made in favor of Clinton county State lands bought for prison purposes, and another exception in favor of the canal lands, which would apply perhaps to a little of the land the control of which seems to have passed out of the hands of the State since the sale of the land in the counties mentioned was forbidden.

I make the assertion that since that law was passed the Adirondack forest preserve has lost more than 117,050.61 1-3 acres of land which belonged to the people but which is now squatted upon by individuals, lumber companies, clubs and "private park makers." This is to say, that since the sale of State land by the State officials was forbidden, more than 182.8 square miles of land have been lost to the people of the State.

I realize that it is not enough to make the mere assertion but that I must prove it beyond doubt. The proof is found in two State documents which anyone can get. The map of the Adirondack region, issued by the Forest, Fish and Game Commission, shows the land which the State now claims in the Adirondacks. The red ink marks the State land. The plain white paper, the land alleged to be "private," or owned by corporations, individuals, etc. In Verplank Colvin's report on the progress of the survey of State lands, issued according to a law passed on June 2, 1883, is found a complete list of State lands in the counties of the Adirondack region. This list was compiled from the deeds, conveyances, land titles and other documents found in the comptroller's office four months after the passage of the act forbidding the sale of State lands, and this list was rectified to the tax sales of 1881, presumably so that none of the lands sold for taxes and bought by the State could be taken away from the State by their redemption under the two-year law.

Of about 573,000 acres of land owned in the Adirondacks by the State in 1883 the sale of any of which was forbidden, 117,050 acres have since slipped out of the State's hands. More than one-fifth of the land which the State "reserved" has gone into the hands of whom? By what means? With the connivance of whom? That a large portion of this land was taken contrary to law, and is now held in spite of the manner in which it was taken. I think any man will believe when he reads the list of lands given in this article. The list that I am about to make is of lands which anyone can locate on the map in a half minute. Any man, having the Adirondack State map spread out before him, may follow the list from lot to lot. He should mark each lot.

If anything will indicate fraud it is the location of the lands, control of which has been taken from the State by fair means or foul. (In justice to a small few, it should be stated that they own their lands because the courts have declared their claims to be better than the State's—but this does not affect the general total in square miles

to any great extent.) Let the location of these lands be observed carefully. On one of Rockefeller's preserves (De Bar), on the Webb preserve, the William C. Whitney preserve and numerous others, on Lake Placid, around Long Lake, near the Tupper Lakes, near Fulton Chain, on Plumadore Lake, along the roads, on streams, in the heart of the forests, around the outskirts of villages; in fact, in every conceivable sort of Adirondack place, State lands have been wiped off the map to the extent of 182.8 square miles. This would make a strip of land more than a mile wide from end to end of Long Island. It would make a strip of land sixteen rods wide across the continent. Its value, at the prevailing market rate in the Adirondacks, would not be far from \$1,000,000, more, rather than less.

The list which I give makes no account of State lands which have apparently been purchased by the State. I made the list by taking the Forest Commission's map for 1905, and finding on it every tract of land mentioned in Colvin's report. If the map showed "red" or State land, I went on to the next. If it showed the tract formerly claimed by the State to be white or private, I noted the land on paper, its tract, township, or other number, the number of acres, according to the report, etc. In some cases, as around Morehouse Lake, in central Hamilton county, where parts of the State land lots have been taken, I made a moderate estimate of the amount taken from each lot, and added the totals into the sum total. Having gone over the map, land list in hand, and located the lost lands, I went over the whole list again seeking possible errors. Here is the list:

In Essex county, Essex Tract, Henry's survey, town of Keene, all of lot 228 and part of lot 128, land to the amount of 103 acres has gone from State control. Jay tract, town of Wilmington, parts of lots 5 and 57, all of lot 6, a loss of 558 acres. North River Head tract, towns of North Hudson and Elizabethtown, lots 13, 22, 23, 84, 104 and part of 83, 1,040 acres. Old Military tract, Thorn's survey, Township 1, town of Keene, lot 115, 102 acres. Richard's survey, town of Wilmington, lot 13, 64 acres. Township 11, towns of North Elba and St. Armand. Lots 117, 291 (Lake Placid), 317, 333, 600 acres. Township 12, town of North Elba, lot 35, 1,440 acres. Thorn's survey, township 12, lot 57, 160 acres. Also 2,400 square feet near the forks of the road at Lake Placid. Paradox tract, Ticonderoga town, lot 24, 100 acres. Roaring Brook tract, town of Keene, lots 14, 15, 50, 51, all gone, and parts of lots 48, 52, 59, all told 1,490 acres.

Totten & Crossfield's purchase, Township 14, N.  $\frac{1}{2}$ , S.E.  $\frac{1}{4}$ , Minerva town, lot 32 (on Hudson River), 160 acres.

In Franklin county, McComb's purchase, Great tract 1, township 12, town of Duane. This list of lost lots is a very significant one. William Rockefeller, the Forest Commission in its report for 1902 says, has a park called "De Bar Mountain Park" in townships 12 and 15. It is in Duane town. The lots are Nos. 10, 17, 25 (sub 3), 26, 33, 34, 35, 42, 43, 46, 47, 48, 50, 54, 55 and 56, in all 8,496 acres in the same region where Rockefeller claims 11,675 acres of land. Lots 46, 47 and 54 take in practically all of De Bar Mountain, and lot 48 all of De Bar Pond, from which Rockefeller names his preserve. The State at one time had claims in forty-three lots in this vicinity—townships 12 and 15—which claims are not made now by the State map, as has been and shall be seen. In township 14 were other claims, on lots 8, 11, 13, 14, 15, 16, 17, 18, 19, 20, 23, 24, 25, 27, 28, 29, 34, 35, 41, 42, 45, 46, 47, 48, 51, 52, 54, 55, 57, 58, 61, 62, 64, 66, 69, 70, 71, 72, 81, 82, 84, 90, 92, 96, 99, 101, 103, 104. In a few instances the claim took in all of the lot, but in most of them only part, as lot 23, N.  $\frac{1}{4}$ , 29 N. 1-3, 42 N. 2-5, etc. The smallest claim was for thirty-three acres and the largest for 169 acres. This is in the Rice Mountain country, and Wolf Pond and Quebec Brook are involved. In township 14 the State has lost 3,885.41 2-3 acres of land. In township 15, lots 1, 2, 3, 4, 5, 7, 8, 9, 10, 12, 13, 14, 15 and 16 have been wiped off the State map. In the N.E.  $\frac{1}{4}$  and in the S.W.  $\frac{1}{4}$ , lots 4, 5, 6, 33, 51, 52, 53, 61, 62, 63, 71 and 72. These lands, in private control, make the "preserving" of Rice Pond not too difficult. In township 15, towns of Duane and Brighton, the public have lost 7,516 acres of land—this is the De Bar Park region just mentioned.

In township 18, the State claimed lots 2, 12, 56, 57, 66, 97, and parts of 49 and 78, which it does not claim now. This loses 2,212 acres to the public.

In township 20 the State owned 30,010 acres out of 30,650 acres. The Upper Saranac Association, according to the Forest Commission's report for 1902, has 2,751 acres in that township, a net loss to the public of 2,101 acres. The lost land is at the foot of Upper Saranac Lake, and includes ponds, islands and other things convenient for private park camp sites.

Out of township 25, on the shores of Big Tupper Lake, and in that vicinity, where no State land is claimed now, 2,399 2-3 acres at one time belonged to the State, and now if the public hunts there it is because of the good nature of the present claimants.

In the Old Military Tract, Franklin county, in township 8, town of Belmont, the State has relinquished its claim to lots 65 and 66 (Ragged Lake) and parts of lots 86 and 87, once preserved to the public's health, pleasure and profit; 2,080 acres of land have been lost here.

In township 9, Belmont town, lots 28, 99, 127, 147, 150, 152, 171, 174, 214, 228, 241, 242, 246, 263, 264, 279, 283, 296, 329, 331, 355 and 358, once the property of the State, are no longer claimed. This makes the preservation to private individuals of Plumadore, Glass and other ponds and Trout River possible. In this instance the public loses 3,788.56 acres. It also loses the use of parts of lots 30, 97, 102, 173, 176, 177, 182, 184, 186, 191, 206, 213, 225, 249, 278, 316, 339, 350, 356 and 357—a total of 1,723 acres, and a grand total of 5,511.50 acres in township 9.

In township 10, parts of lots 22, 23, 335, 359 and all of lots 185, 186, 187, 189, 213, 214, 215, 218, 219, 221, 222, 224, 227, 228, 252, 253, 254, 255, 266, 268, 269, 292, 295, 296, 307, 308, 309, 310, 311, 331, 333, 349, 350 and 351—a total of 10,060 acres—are closed to the free use of the public. The public's share in Loon Lake, Square Pond, Lake Kushaqua and other portions of fishing as well as hunting territory have been taken away by some means or other.

In Fulton county, not far north of the Mohawk River, and not in the central Adirondack region, but in a wild, wooded and fine fish and game country, much land has fallen out of the public's possession. In Chase's patent, in the towns of Bleeker and Mayfield, lots 53, 71, 72, 73,

74, 75, 77, 78, 81, 83 and 115 and parts of lots 37, 44, 48, 70, 111 and 116 the State claims no land, though it owned 1,405 acres there twenty years ago, and the sale of land in the Adirondacks since then has been illegal.

In the Glen, Bleeker and Lansing patent, towns of Bleeker, Mayfield, Caroga and Stratford one finds that the State claim is held back from lots 25 (sub 2), 34 (sub 4), 35, 41 (sub 6), 41 (sub 10), 45 (sub 4), 52 (subs 3 and 7), 59 (sub 1), 82 (part), 90 (part of sub 1) which means the loss of 1,497.66 2-3 acres to public use.

From the Jerseyfield patent, 200 acres in the town of Stratford (part of lot 61) formerly State land, is now claimed as private property.

In Hamilton county one finds further significant absences of claims by the State for certain land tracts. Hamilton county is the "forest county of the State." If State lands should have been retained anywhere those in Hamilton county ought to have been kept inviolate. All State land in this county should have been kept for the public, and lumber men, land hogs and park makers should, long since, have been held back, lest they overreach their rights and rob the public of that which was meant for the pleasure of mankind.

In the Arthurboro patent, lots 93, 88 and 89 (600 acres in the town of Morehouse) are not claimed on the State map, which closes Pine Lake. In the 8,000-acre tract, same town, parts of lots 8, 9, 11, 26 and all of lots 10, 22, 23, 24 and 25—1,400 acres—are not now regarded by Albany as public domain. Lots 24, 25, 26 and 8, 9, 10 and 11 are on and around Morehouse Lake, now claimed to be the private property of a club.

In Benson township, in the towns of Wells and Benson, lots 64 (part), 117 (part) and 331, a matter of 275 acres, are gone.

In Bergen's purchase, on the west side of the Sacandaga River, 250 acres appear to be missing from the State's claims.

The curious piece of land, the gore between township 1, Totten & Crossfield's purchase, and Bergen's purchase, and the Oxbow tract, called Jones' gore on the modern map, is not claimed now, although the State used to claim lots 2, 3, 4, 5, 6, 7, 8, 9, 14 and 15—1,617.9 acres.

The Lewis (Morgan) Small tract, lot 2—100 acres—is also out of the public's care apparently.

From township 9, Moose River tract, town of Arietta (lot 120), 78 acres of State land has "gone somewhere." From the Oxbow tract, lot 214 (Sheriff Lake), and lot 280 are no longer claimed. This is a matter of 403 acres, or, say, the size of a hundred city blocks, or more.

Other lands missing are: Totten & Crossfield's purchase in Township 1, town of Lake Pleasant, the Spier & Brown lot, 400 acres. In township 3, parts of lots 49, 50, 75, that is 222.5 acres. From township 6, town of Arietta, lot 37, or 200 acres. From the Elm Lake road tract, in Lake Pleasant town, lots 12, 16, 17, 18, 19, 20—another 300 acres. Township 22, lots 26, 27, 28, 39, 47, 50—820 acres, or considerably over a square mile of land. From township 33, in the heart of the wild country, lots 5, 19, 29, 30, 43, 44, 45, 48, 49, 52, 53, and 54, a matter of 960 acres. In township 35, from the Northeast Fourth, 2,765 acres of land. This is the Forked Lake township.

From township 37 the State's claim to lots 48, 50, 52, 54, 56, 58 and 100, that is 1,140 acres, is gone, and this is within a day's hunt of Bog Lake Railroad station. In township 40 the region is practically all State land, according to the map, but the shores of the lake are lined with camps, boarding houses and hotels, all of whom claim more or less land, and when the ragged woodsman wishes to put up his little brush shelter thereabouts he must be prepared to receive frowns from the summer people. It will be remembered that the railroad was sneaked across State land to Raquette Lake by a subterfuge over an alleged public highway, which does not now exist, it is said by those who have looked at the rails.

Lot 30, township 50—sixty acres—of fine camp site on Long Lake, isn't State land any more.

The northern part of Herkimer county is like most of Hamilton county, a splendid wilderness, which is growing more and more ragged owing to the swift and relentless work of the pulp and lumbermen. These figures will show how much the State lands have shrunk in that region of late years—not counting any State lands that may have been sold to the State.

In the Jerseyfield patent (southern part of the county) lot 79, town of Ohio, has passed out of the State's possession, "Sold," the secretary of the Forest Commission wrote to me. This has happened within two years, and a hundred acres have gone into the clutches of wood alcohol makers.

From the Moose River tract, township 3, lots 76, 77, 88, 89, 90, 100, 101, 102, 112, 113, 114, 124, 125, 126, 136 and 137 have been wiped off the State map—sixteen lots of 160 acres—2,524 acres—each in a rectangle three lots wide and five long, crossed by a fine trout stream, no part of which is three miles south of Fourth Lake, of the Fulton Chain. Fancy the feelings of a man, a mere member of the public, when he is thrown off this land by the collar.

In Lewis county, towns of Grieg and Lyonsdale, on the Brantingham tract, lots 118, 208, 312 are gone. Lot 118 is on Brantingham Lake; 380 acres.

In Saratoga county, from the Glen and Yates patent, lot 48, 105 acres, has been taken. From the Glen and forty-four others' patent, lots 6 (town of Day), 59, 60, 65, (town of Edinburgh)—just a thousand acres. From the Sanders patent, the west half of lot 12, lots 38 and 39, and small lots 1, 2, 3—307 acres.

In St. Lawrence county, McComb's purchase, Great tract II, township 7, "S. P. t." or southern part, the land lost to the State amounts to 9,092 acres. In the northern part, land from the lots 1, 2, 3, 4, 5 and 6 appears to have been rearranged to suit people who wanted a single large block of land containing the valuable lakes found there. In this township is found a block of 2,100 acres of State land. It is in the southwest portion of the township, and, judging from the map, in the worst part of the township. As shown by the map, and by the Colvin report, the State has exchanged 10,464 acres for 2,100 acres—a net loss of 8,364 to the public.

In township 2, Great tract II, the southwest  $\frac{1}{4}$  is gone—1,885 acres, and in township 4 about 1,115 acres have apparently been "sold."

It may be that these lands, which are in the Cranberry Lake country, were sold under authority given by the law, chapter 470, which gives the State Land Commissioners permission to sell canal lands. The "mortgage lands," few in number and acreage, could also be sold before the

constitutional amendment according to this law. In Warren county no State land is claimed along the shores of Brant Lake, although lots 107 and 141, Brant Lake tract, both on this lake, were claimed by the State at one time. Their land area was only 100 acres, but quite a large number of citizens could find camping room on 100 acres. From the Dartmouth patent, in the town of Stony Creek, lot 5—175 acres. From Totten & Crossfield's purchase, township 14, S.W. ¼ (Conklin and others' tract, now Leggett's survey) lots 1, 2, 3, 4, 5, 7, 9, 11, 12, 16, 18, 19, 26 and 27—2,045 acres. In township 24, lots 33 and 38, have been taken by somebody—170 acres more.

These lands were "old-time holdings" of the State. They had been coming and going as to ownership, but had, apparently, finally settled into the hands of the State which claimed them in 1883, all of them having been "State land" previous to 1881. In 1881 there was a tax sale, and from purchases in this sale more land was added to the State possessions. A list of them was made out in a separate appendix from the one just quoted. These tax-sale lands, after the redemption period of two years, seemed to be the State's "forever after." Nevertheless I find that in the list of lands secured at this tax sale there are thousands of acres which have slipped out of the State's possession regardless of the State's law forbidding the sale of preserve lands.

The reader will be obliged to go all over the map again if he wishes to follow my hunt for these lost State lands. If the trail grows tedious, and the pack straps of figures, townships, counties, tracts and purchases cut deep, let it be remembered that on the readers of this article depends whether the State will come into possession of such lands as have been taken illegally. For every time we consider a lot figure, it means anywhere from a hundred to thousands of dollars' worth of land, from the use of which a long-suffering, frequently-defrauded and foolishly patient public may have been defrauded by sheer robbery.

By the tax sale of 1881 the State received in Essex county, Essex tract, Henry survey, towns of Jay and Keene, lots 142, 168 and 181—496 acres—which it lost again. From the North River Head tract, town of North Hudson, lot 83—80 acres—has gone glimmering.

The Old Military tract, townships 1 and 2, lot 51—416 acres. In township 12, Thorn's survey, town of North Elba, western half of lot 120—eighty acres.

In town 14, Totten & Crossfield's purchase, town of Minerva, lots 62, 102 and 103—568 acres.

In township 27, lot 35—160 acres.

In Franklin county, from the gore east of township 9, Old Military tract, in the town of Belmont, lot 9—122 acres.

From McComb's purchase, Great tract 1, township 12, the public has lost lot 9, and parts of lots 12, 25—1,242 acres.

From township 13, S. ½ and N.E. ¼ (in the Rice Mountain country, once more), in lots 11, 12, 14, 16, 36, 44, 59, 72, 74 and 108—353.98 1-3 acres.

In township 15, N.E. ¼, lots 4 and 11—814 acres. In the N.W. ¼, lots 4, 7, 14 and 16—562 acres.

In Old Military tract, township 8, in Belmont town, shows the loss to the public of lot 85 on Ragged Lake, and lot 87 (E. ½) close to Indian Pond—710 acres.

In township 9 (towns of Franklin and Belmont), the tax sale lands of 1881, lots 102, 186, 191, 206 (Tanner's, now Plumadore Pond), 213 (near Inman Station), 255, 274, 295, 305, 342, 346, 350 and 356—1,251.10 acres.

In Fulton county, in the towns of Bleecker and Mayfield, from Chase's patent, lots 41, 42, 44, 56, 69, 101, 103—475 acres.

In Herkimer county, Jerseyfield patent, the towns of Ohio and Salisbury, lots 40, 49 and 57—a matter of 736.72 acres.

In the Noblesborough patent, New Survey, lot 20 and Old Survey lots 97 and 99. This is 600 acres more in a hard-wood, deer country, where the lumbermen have been recently slashing the timber away.

From Remsenburg patent, lot 12, N. ½—250 acres.

Once more considering Hamilton county, Benson township, town of Benson, lots 226, 227—320 acres. Totten & Crossfield's purchase, township 1, lots 10 and 12—225 acres. In township 2, Jones' map, lots 10 and 11—310 acres. Township 7, town of Lake Pleasant, lots 8, 9 and 10—300 acres.

Of township 19 (town of Indian Lake), N.E. ¼, shows 1,021 acres, and the N.W. ¼ shows 5,660 acres wiped off the State's claims—this is in the Blue Mountain lake country.

Township 22 shows lots 8, 9, 64 as no longer State land—361 acres.

Then, in township 34, is found an astonishing loss to the State. The State there owned a claim for 13,575 acres in township 34. If one must believe the map the State issues now, the State hasn't saved a rod in it—and Blue Mountain Lake, Eagle Lake, Utowana Lake, Stephen Pond, Cascade Pond, Rock Pond, Deep Pond and Crystal Lake are in that township. It's a private preserve now, at least most of it, and if the public comes across the line on to this tract of land it does so at its own peril—it's liable to arrest, fines, imprisonment, not to say the gibes and jeers of hired watchmen and club members.

From township 38, is gone State claims for certain lands, thus described: N.E. corner, 250 acres and 190 acres, being lots 6, 7, 26, 38, 43, 49, 55 and 56. The land so described would be reached most conveniently from the railroad station at Nehasane. But if one did go in he would incur the results of the activity of the guardians of Nehasane Park, which was founded by Dr. William Seward Webb. The State claims in township 38 amounted to 2160 acres, and those acres are scattered through Sergeant's tract, as any one can verify by looking at the map—right in the center of Nehasane Park.

In township 50, lot 47—70 acres.

In Saratoga county, Kayaderosseras patent, 24th allotment, Great lot III, lot 2, sub 2—90 acres. Sander's lot 8, subs 6 and 8—146 acres.

In St. Lawrence county, McComb's purchase, Great tract III, township 3, middle third of Harrison tract, lot 8, subs 6 and 8—146 acres.

In Brodie tract, township II, town of Pitcairn, lots 128 and 178—171.41 acres.

In Lewis county, Brantingham tract, lots 6 and 93—315 acres.

In tract 4, McComb's purchase, lots 337, 338, 906, 988, 991, and 992—1,174 acres.

Last of all, in Warren county, are these claims that are no longer made; Dartmouth patent, Great tract, range 4, lots 8 and 9; Small tract, range 3, lot 3—413.5 acres. In the gore between townships 29 and 31, Totten and Crossfield's purchase, lot 11—109 acres. In Hyde township, lot 73, sub 3, and lot 74, sub 4—196 acres.

Finally, Totten and Crossfield's purchase, S. W. 1/5 Leggett survey, lots 8 and 10 (262 acres) have gone from the State control.

Why was this land allowed to go out of the possession of the State Comptroller, if it has gone out of his hands? And who can doubt that the land is largely gone from the State when lumbermen slash over it, and the watchers of private preserves hurl the public from its vicinity? And if the present claimants of the land have titles to it, where did they get them, how did they get them and who did they pay for them?

I was told recently that one man, formerly chief clerk in the Comptroller's office, had the honesty, courage and manhood to stand between the sneaking, land-hungry pack and the State land titles. He was W. H. Sanger, who lives at about 30 Neptune avenue, New Rochelle. He was chief clerk, but he didn't last long.

I have just received a statement by Commissioner Whipple, of the Forest, Fish and Game Commission, in which he says he is going to make inquiries about the Old Hatter place, lot 79, Remsenburg patent, and about the Ampersand Lake lands. He says further:

"I do not believe Mr. Spear (sic) wishes to apply the statement, 'Well, you know what money will do in politics,' was the pessimistic answer to this department, or to me personally. If he, or any other man believes he can get a tree or a foot of State land by political maneuvering or money consideration, let him try it."

Mr. Whipple says that he will begin action to recover the Hatter lot for the State.

I am not making a campaign against any one personally, but I propose to do what I can to let people know the things which examination will disclose in regard to the Adirondack region, and the manner in which it is handled. I think Mr. Whipple wants to do the right thing, and he has one of the best chances in the State to assist a long suffering public to its rights.

RAYMOND S. SPEARS.

LITTLE FALLS, New York.

P. S.—The very latest scheme to take away a few thousand acres of State land, and put it to private use is shown in this clipping:

BIG DAM AT PISECO LAKE.

"A Piseco correspondent writes: 'The big dam on the outlet of Piseco Lake, so long talked about, is according to latest reports, an assured fact and will when built, make of Piseco a lake nearly twenty miles long, extending to Arietta. The distance from Gloversville to Arietta is about twenty-two miles and with a small steamer on the lake the trip from the railroad to Piseco will be materially shortened and will also be a much easier trip than now. Work on the dam, we understand, will begin very early in the spring.'—From the Journal and Courier, Little Falls.

This dam is going to be put up to preserve water for power companies at Glens Falls. It will be on State land probably, but it will certainly flood several thousand acres of State forest land. Hasn't the public got pull enough at Albany to preserve the Adirondacks for the people?"

R. S. S.

Charles Fenton.

CHARLES FENTON, one of the most widely known men of northern New York, passed away very suddenly at Lake Placid, Friday night, where he and his wife were stopping en route on a trip through the Adirondack region.

Mr. Fenton and his wife climbed Whiteface Mountain in the morning and lunched on the summit. As they were descending about 5 o'clock in the afternoon, two miles from the base of the mountain, he stumbled and fell exhausted. He and his wife were alone at the time. Mrs. Fenton hurried to the lake, where she sent out a summons for help. Without waiting for this assistance to come, she climbed back to where her husband had fallen and found him dead.

Charles Fenton was the son of Orrin Fenton, who settled in Number Four in 1826, one of the first of those indomitable pioneers who attacked the northern forests, and was born at Number Four June 15, 1829. He received his early education at the old log school house built by the settlers, afterward completing his studies at Lowville Academy. After leaving the academy he assisted his father on their forest farm, engaging with the other pioneers in the constant struggle with the wilderness and the rigors of the northern climate. During the next few years Mr. Fenton engaged in lumbering and also frequently guided parties of his friends through the then untracked forest.

But as the years went by, one by one the settlers gave up the terrific struggle with the forest. The soil was poor, the summers short, the winters long, and the markets far distant over roads impassable through the greater part of the year. Twenty-five years after the settlement at Number Four was begun only three families remained, among these was that of Orrin Fenton. For many years his home on the shores of Beaver Lake was open for the accommodation of hunters and pleasure seekers in the wilderness. But at last he, too, left the forest, and the person to whom he sold his house kept the place a few years. In 1872 Charles Fenton purchased the property, and enlarged and improved the resort until at the present time it is one of the most noted hotels in the Adirondack region. For fifty years Mr. Fenton was identified with all public enterprises in the town of Watson. He was postmaster at Number Four for twenty years, and through his influence a daily mail was established in 1881. Several years ago Mr. Fenton made over his Number Four property and valuable farm property in Watson to his children, and settled down to enjoy his remaining years in the forest which he loved so well. He was a man of sterling integrity, as honest and true as the eternal rocks of his forest home. One of the kindest and gentlest natures, he endeared himself to all "with perfect faith in God and man a-shining from his eyes."

Many who read this article will remember his kindly face, his unfailing good humor and unbounded hospitality. He will be mourned in all quarters of the country by a host of friends as one of nature's noblemen, a thorough sportsman and a kindly, gentle man.

At the time of his death Mr. Fenton was president of the Fenton Game Preserve Association, located at Number Four. This Association controls a park of 45,000 acres in the vicinity of Number Four.—Lowville (N. Y.) Journal and Republican, Sept. 28.

Justice Barker.

BOSTON, Mass., Oct. 4.—Editor Forest and Stream: Hon. James Madison Barker, Justice of the Supreme Judicial Court of Massachusetts, was found dead from heart disease in his bed yesterday morning. He had held court the day before, and his death was sudden and probably painless. An honest, fearless man, an upright and painstaking judge, whose opinions were held in the highest respect by the bar, he has been duly honored by the press of this commonwealth.

It is fitting, however, that FOREST AND STREAM should take notice of his death, for Judge Barker was a leading sportsman of the State. He was particularly fond of woodcock shooting. A splendid shot himself he always gave "the other fellow" the first chance, and no man was more interested than he in proper legislation and proper enforcement of all laws for protecting our fish and game.

He was born in Pittsfield, Berkshire county, where he always made his home, in 1839, was appointed Justice of the Superior Court in 1882 and Justice of the Supreme Court in 1891. He was always an out-door man.

Every one who knew him mourns his loss, and none more than those who were his companions in the fields and woods.

JAMES RUSSELL REED.

Of Judge Barker's taste for outdoor life and sports, the Springfield Republican writes: "Judge Barker was fond of outdoor life, and loved to fish and hunt. He had promoted the shooting club, with headquarters and a small preserve in the hill town of Windsor, located not far from where Senator Crane has built his summer outing place. He knew the Berkshire haunts of the trout and birds as not many men in the county did. He rarely missed being in the woods each week of the autumn, and his winter excursions to the South were for quail shooting in the Carolinas. The revival of life in the open which country clubs have brought of late years was welcomed and fostered by Judge Barker, who found the Pittsfield organization a great resource. He was a charter member and one of the house committee at his death. Almost literally the work of his hands was the beautiful road which was run through the 300 acres owned by the club. To golf he was an early and devoted victim, playing in the spring while the ground was still frozen, through the summer when the thermometer reached into the 80s, and in the fall when the foliage was in its glory. Snow alone drove him from the links. When the club bought its beautiful and heavily wooded property, Judge Barker assisted in thinning out the trees and shrubbery. He welcomed the suggestion that a road be opened through the property to connect with a road on the east, and took the burden of the work upon himself. Nearly every afternoon for an entire summer Judge Barker and a small boy were in the woods, the judge cutting down trees and small growth, the boy being along for company and to report any accident that might possibly overtake him. Over a mile of road was thus cut through the property, and the justice would return to the club house with hardened hands and tired muscles and declare that the exercise took the cobwebs out of his brain and gave mental vigor for the solution of cases which came up for his opinion."

A Mouse in a Trap.

A MOUSE began to make a disturbance in the paper back of my desk the other night just as my wife and I settled down after supper to read. He was a new arrival from some neighboring barn. They have found a way into my study up through the sheathing of the sliding door. Mrs. A. is very tender-hearted with all living things except such small deer as interfere with her house-keeping. These she persecutes relentlessly. Her mousetrap was forthcoming at once, and baited with a little cheese, was slid under the desk. It is one of these diabolical contrivances which smash a wire loop downward on the victim.

It was only a few moments till we heard its vicious click. Immediately afterward I heard distinctly a series of rapid aspirated squeaks which made me hustle the trap out in haste to relieve the sufferer. Knowing how deadly the trap is, I was surprised at hearing any sound. I was even more so when I saw that the little victim had been caught by the descending striker square across the back on the lungs. Its heart was still fluttering, but it seemed to me impossible for it to have drawn breath enough to make any sound whatever. Then I remembered that the squeaks were more like barks of fright than screams of pain. Somewhat wonderingly, therefore, I set the trap again, to see if there was a companion. Within five minutes it nailed another. There was no sound this time except that of the trap. Both were immature females. What I wish to know is, did No. 2 bark when No. 1 was caught? Do mice ever exhibit fright and surprise by whistling or barking?

AZTEC.

It Will Interest Them.

To Each Reader: If you find in the FOREST AND STREAM news or discussions of interest, your friends and acquaintances who are fond of out-door life will probably also enjoy reading it. If you think of any who would do so, and care to send them coin cards, which, when returned with a nominal sum, will entitle them to one short-time "trial trip," we shall be glad to send you, without cost, coin cards for such distribution, upon receiving from you a postal card request. Or, the following blank may be sent:

# NATURAL HISTORY

## Man vs. Nature

### And Other Random Notes.

"THE proper study of mankind is man," sang the poet Pope, and from a worldly point of view this is true enough, but we would have expected a larger view from a poet. If Pope had said, the proper study of mankind is nature, it would have been more worthy of him. But then, to be sure, the rhyme would have been lost, and that with poets is no trifling matter. With some modern ones, indeed, it is all important. (By the way, there appears to be no rhyme for nature. Perhaps it is because it is unique.)

However, the study of man—be it said without misanthropy—is attended with much pain and disillusionment, while that of nature rarely brings aught but joy and satisfaction. It is a pity this is not more generally understood. Perhaps not one in every thousand of our population ever tries to cultivate an acquaintance with nature. To do so they think would be a sign of sentimental weakness, and anyhow "there is no money in it!"

I was returning a book on ornithology to the library a short time ago. "I suppose," said the young lady attendant with a slightly ironic smile, "you read this in the park?"

"No," I answered, "I read it at home, but it transported me to the park."

"Really? Isn't the park lovely? I was there last Sunday morning. But it was awful lonesome, somehow. Why is it, I wonder, more people don't go to it on Sunday morning?"

I ventured to suggest that perhaps it was because they preferred to study the birds and flowers on their neighbors' hats at church. At this the young lady cast a look of reproach at me, and no doubt privately adjudged me a perfect cynic. This reminds me, I was in the park the other evening with a friend. Although so late in the season the air was almost sultry, and we found it more comfortable to sit down than to walk. Strange to say, there was not a katy-did to be heard. I think katy prefers a "snappy" atmosphere in which to play her castanets. But at all events she has been very quiet this fall, although last year she made the woods resound. My friend and I were discussing this and other kindred themes when we saw two boys approach, one with a lantern and the other with a tin pail. They left the walk presently and bending over the grass began to search about. Every now and then the boy with the lantern would pick up something and throw it into the pail.

"What in the world are they gathering?" I said to my friend. "It cannot be nuts, for it is too early." We got up and went over to the searchers.

"What are you gathering, boys?" I asked, full of curiosity.

"Worms" (or more strictly "woims"), said the chap with the lantern.

And as he said so he yanked a big wriggler out of the ground and dumped it into the pail. Then he went moving along with his lantern, scrutinizing the ground.

"How do you see them?" I asked, for I applied my eyes in vain.

"See dat feller—see 'im shine," quoth the searcher.

But I declare I could not (which reminded me sadly how much sharper eye a boy has than a man).

"How long does it take you to fill the pail?" I inquired then.

"Oh, I don't know 't night," was the answer, "but if it was rainin' we'd fill it quick enough, all right."

"And the worms," I said; "do you use them yourselves?"

"No, fadder does; he goes fishin' for eels off the piers."

My friend and I were astonished. Here was a method of gathering bait that we had never before heard of. It appeared to me so vastly more scientific than the old method of digging that I determined to send an account of it to FOREST AND STREAM.

The leaves are now beginning to turn rapidly, though many of them have not fallen, September having been remarkably free from wind storms. Anyone who would feast his eyes could not do better than visit the Bronx woods during one of these golden October days. I think those woods offer a greater variety of color than any around New York. This may be my imagination, but at any rate, they are beautiful, and the river which flows through them (reminding one here and there of one of Cooper's or Longfellow's romantic Indian-haunted streams) adds not a little to their beauty. Talking of leaves, if the visitor is curious after gazing at those on the trees he will visit the Botanical Museum and there behold their prototypes in stone—fossils, whose age compared with the leaves on the trees is as a day to a hundred thousand years.

From the Bronx woods it is but a step to the Zoo, and the temptation to take this is nearly always irresistible. For there is always something new or something to be learned in the Zoo. The last time I was there, as I stood before the big flying cage, I was the witness of a striking scene.

It was the feeding hour, and a basin of fish scraps had been placed for the cranes. A couple of these were regaling themselves when along comes a little jungle cock (*Gallus bandiva*) and his mistress. He was evidently moved by a desire to sample what was in the basin, for without a word of warning, so to speak, he made a drive at the larger of the two cranes. The big bird showed resentment, turning around savagely, but the midget "rooster" shot out his head, ruffed his neck feathers and valiantly stood his ground. Then ensued a remarkable fight. The crane tried to spear his antagonist with his formidable bill, but the other was too quick, dodging skillfully, and before the crane could recover for another drive the bantam had sprung at him, hitting him viciously in the breast with his spurs. The end came in a

minute. The crane set up a pitiful squawking and then incontinently turned and fled. The victor, after sampling the contents of the dish (needless to say the other crane made no objection), and not finding them to his taste went strutting about until he came to where the condor was making his evening meal. Without a moment's hesitation he marched right under the monarch's nose, pecked at the raw meat, and then disdainfully marched off. Like Captain Kedgick, I could only "stand and admire" at this unexampled pluck and impudence.

Among the interesting new arrivals in the bird house are some bleeding heart pigeons. One cannot gaze at the coloration which has given this bird its name without receiving a painful shock. But how to account for the coloration? It is too absolutely like a real wound—a terrible dagger wound—to be merely fortuitous. There must be some strange history of evolution back of it, and while speculating vainly on this we feel vaguely as if we were in the shadow of some ancient tragedy so cruel that it will not down.

NEW YORK, October, 1905.

FRANCIS MOONAN.

## The Biography of a Bear.—IV.

I BELIEVE some sage scribe has written to the effect that man likes mystification, amusement and consolation rather than instruction. If it is not so written I would have it here set down. Mankind will read and ponder over such books as the Bible, Milton, Bunyan and Swedenborg, and so on, while he will shy at the solid wisdom more directly applied by Darwin, Voltaire, Robert G. Ingersoll, the encyclopedias and Mark Twain.

No; man is not fond of wisdom unless it be such as he can use to temporary advantage in commercial and social transactions. If he really was honorably disposed toward the pallid goddess he would break away from towns and cities and avoid the politic convocations of his elders and approved good masters. Without his liking for the mysterious and the humorous, his favorite hobbies—church, state and social travesties would disappear. Probably he would become only semi-gregarious and scatter like deer and bears. It is true, these animals sometimes convene, but they establish no permanent places of congregation. Their only science is that of living. They have no sense of humor until they come in collision with mankind and become perverted.

These humorous capers of man are threatening him. They have caused trouble in the past. His very gregariousness and continuity is fatal to his prolonged existence. Already his counsellors intimate chloroform as an admirable quietus for those reaching maturity, or comparative maturity—a ready means for curdling rebellious blood and infected tissue. Concentrated energy, reacting upon itself in a kind of friction and erosion, in such popular refuges as Paris, London and New York, shakes the fabric of imaginary human supremacy until the world totters. This is a condition of affairs that I am not wholly responsible for. I would not admit it if I was. If I did I cannot see that it would be of any advantage to speak of, for some capitalist would get a patent over my caveat before I could get shares on the market. It wouldn't pay.

However, when the bear, Dick, Enochs and myself awoke and got out of the foxtail hay in Blodgett's barn, about noon, we were comparatively miserable. The place was almost ready to catch fire from the sun, which blazed away at Basin Hollow as though that little cup in the bald hills was its favorite focus. Hot, dry, dusty, full of "stickers" from the hay, and hungry, we were almost annoyed, surely irritated. Even Jack was out of line, and sat looking at us with an expression of disappointment. I at once took off his collar and chain and let him loose while we prepared some breakfast, details of which I kindly omit.

When Jack was released he went on a tour of inspection about that old barn. After a little we heard a good deal of commotion and other disturbances. From somewhere about Jack had ousted about a thousand hogs, a flock of several hundred tame turkeys, some horses, cattle and probably other things. I failed here to get a record for my phonographic purposes, and my apparatus for collecting moving pictures had not yet arrived. This was a loss to the public—if not an irreparable loss it is only because the public is unimaginative and entirely ignorant of things of which it has no knowledge.

A large assortment of the hogs, after circling the barn and making infernal noises, all headed in toward center and commenced a series of porcine evolutions that were absolutely enervating. They were mainly old sows and pigs and boars, and if they were not the wild article, the degree of domesticity they had reached was not conspicuous. For variety of noise and terrifying poses of ferocity perhaps no congregation of animals on earth could compare with them, except in the jungles of Wall Street. Mixed in with them was a horde of turkeys, mostly gobblers, wearing their whiskers rather low down for tenderness, either anatomic or otherwise. Beyond, and all gathering to the common center, which was us, came bellowing cattle of all degrees of size and temperament, nursing up their fury for whatever they should find in our vicinity. From all over Basin Hollow things like these were to be seen coming our way, squealing, bellowing, twisting their tails and tossing hoofs, heads and horns. The undulating field was alive with them.

Jack had never before found any hogs, turkeys or cattle of the range brand. In the first moments of his discovery he was delighted and curious. In a few moments he was affrighted, and only acting curiously. At the charge of about sixty-six old sows and a swarming host of hogs of other gender and caliber, turkeys gobbling, and cattle coming rapidly to the fore, he began a retreat that was notable for its close application of tactics that lead to exclusion, where there is any. His notion of

safety, under the circumstances, after being flanked and forced to dance the Highland fling around the wagon, was to come to us, bringing the army of the enemy upon our works. Our outer ramparts and defenses were in a ruinous state of neglect, and we found it expedient to get up high, as high up as possible, with a unanimity that was distinctly noticeable—if not spontaneous. After some desperate reverses we severally, and by different methods, succeeded in reaching the summit of the hay, but it was so flimsy and unstable, not nearly as high as it had seemed—that we reached for the beams and rafters of the barn as offering more positive fixity and elevation.

In the art gymnastic Jack was pre-eminent. He went up an upright pole, grasped a dangling rope and swarmed up that to a tie beam in about two instants and a fraction. Getting to that perch he sat up on it with dignity and complacency, while he watched our slower but anxious efforts. He seemed to be puzzled as to what we were trying to do, and as to why we didn't do it. Although the places of vantage we at last attained were not luxurious we were not as particular as common. We didn't get up for comfort exclusively, more for altitude, and we had a much better and safer chance to appreciate the entertainment offered us by a circus, full of variety.

After a little Enochs, who was the most ponderous member of our acrobatical contingent, shifting about astride a square timber at a considerable elevation, a perch that was not as easy as a rounder one (like the beam I had), said:

"Say, Dick, can you reach me my rifle?"

"Not from here," replied Dick, apprehensively.

"What do you want to do with it?" I questioned.

"Do with it! Do? I want to do that bear up there. I'll spoil that grin of his!"

Under the conditions prevalent at that time, and coming from Enochs, this declaration was rather cheerful. Dick laughed until it was with difficulty that he clung to salvation. From the open sides and ends of the barn we had a fairly good view of the main features of the performance going on in the arena below and around us. Cattle, hogs, turkeys and our own horses were now doing indescribable evolutions and creating a resounding uproar. The hills echoed it back with remarkable phonetic variety of tone and distortion. My saddle horse, Billy, seemed to be a star performer, and after kicking a few hogs with a talent that was praiseworthy, he was prancing about in alternate charge and retreat with a formidable steer. Animals had gathered from all quarters of the field until I think we had a round-up of about all of Mr. Blodgett's live stock, together with all those astray in the vicinity from neighboring ranches.

Perhaps no animal so arouses and terrifies hogs, cattle, horses and mules as does a bear. In this instance the entire animal population of the range had rushed with common impulse to the barn, when the hogs and turkeys sounded the alarm, but as some of them began to scent bear they showed symptoms of dismay. Hogs began to collect their forces into separate clans, and old sows with their squealing litters could be seen breaking ranks. Soon, the pigs in advance, with the old ones covering the retreat, they began to scurry away from there with a haste that increased as they gained distance. We could see them making black lines over the yellow hills for more than a mile, and they were still reaching out far beyond. The cattle retired more slowly, but by the time we saw fit to get down into the barnyard they had departed, the herd headed by an old bull that had decided to go away somewhere. I do not believe the barn was ever after as popular with hogs of that generation as it had been, and doubtless the cattle viewed it for some time with suspicion. Whatever had become of the turkeys was a problem. When we thought to look for them they had entirely disappeared.

As we descended from the elevated places Enochs became tangled with a projecting nail, and in an endeavor to clear for action he dropped from his beam a little prematurely, leaving a portion of his shirt aloft—a white flag of truce. In his descent he went head first into the hay like a harpoon—a rather thick one. When he came to surface I offered consolation by saying gently, "Who am I! Whah am I? W'y, this place is no mo' fit for a deepo' in spite of—" etc. Although he was no student of Shakespeare he exclaimed with passable energy:

"Tho' it be not now, yet it will come."

"What will?"

"R-r-r-retribution! And I feel as though I will have a good deal to do with it. That bear 'll hear something drap. Look at him!"

Jack wasn't doing a thing out of the way, but was solemnly climbing into the wagon and then stood waiting for us to move on. After taking a series of observations from the corners of the barn, trees and fence posts he had decided that he wanted a change of scene. He was tired of the monotony there, where there had been no disturbance for some moments.

When we stopped at Blodgett's house he asked us inquisitively what the matter had been over at the barn. He had seen or heard commotion there, although it was a mile away. We evaded details. I merely said:

"You have a fine lot of hogs, Mr. Blodgett. About a thousand of them isn't there?"

"No, oh my, no; only about a hundred and fifty."

"A lot of fine turkeys, too."

"Yes. My wife says they flew clear over to Sharons' a while ago. Don't know what scared them. They must have flown a mile and a half or further."

Even if I did know the cause of the turkey flight, I reflected that I was not sure of it, so I saw no policy in recalling Mr. Blodgett's attention to him. After customary parley we set out upon our way to higher ground. The road shimmered like a steam boiler with radiating waves of heat. Grasshoppers and locusts buzzed in our ears their everlasting accompaniment to blistering tempera-

ture. The sun poured upon us like fire close overhead, dust filtered over us and into us until we looked like displaced fragments of the road itself.

Leaving Basin Hollow our road ascended to comparatively level table land that extended for some miles, following the valley of Cow Creek—that is to say, Old Cow Creek. There are North Cow Creek, Old Cow Creek and South Cow Creek—perhaps more of them somewhere. These three streams would be rivers if they were not so rapid and their waters had a chance to loiter a little between wider banks. They come rushing from the snows of the western slopes of the Sierra Nevadas—cold, clear and silvery, to contribute to the Sacramento. I have no reverence whatever for people who gave such names to such streams; they are not entitled to any. They would not know what it was if they had it. California, and America for that matter, is full of natural grandeur disfigured upon maps and in our literature by names that disgrace human expression, oral, printed and pictured. The very nomenclature of a region is often morally, spiritually and everlastingly corrupt and derogatory. It is all right to call towns what you like, they deserve it generally, but the more appreciative barbarians should be permitted to christen natural features of the land. They usually evince some culture and taste. Where names are scarce, streams, mountains, valleys, etc., might be numbered, or distinguished by signs or hieroglyphics. Anything would be an improvement upon cows. Go over a list of names upon any map and then try to feel sentimental or patriotic.

My country 'tis of thee,  
Sweet land of Liberty—  
Of thee I sing;  
But of the names I hear and see  
For half thy majesty—  
Oh, dinky ding!

This upper valley, and for many miles north and south, the land is strewn with fragments of lava rock. The soil is so full of it that it is in the main adapted to little but grazing. The roads crossing this lava belt are a continuous jolt. On our route we got across in five or six miles and reached the bridge over Cow Creek late in the afternoon. The clear, cold, foaming and roaring stream refreshed us to look at it. We drove aside into the shade of a mighty oak, still green, although a hundred profane campers from time to time had built their pot fires against its trunk—burning it almost through. This is a popular and despicable custom.

Jack was panting and somewhat irritable, as were we all. I let him free and we all stopped for a rest. After a little the water became too much of a temptation for us, and finding a swirling eddy with sandy bottom we all stripped, except Jack, and went in for a swim. Jack had nothing to strip and was the first in. It was the largest body of water he had ever had a chance at, and he went into it like an amphibian. He swam well, and so rapidly that none of us could avoid him in the water. When he swam to one of us we had to steer him about so as to avoid his claws, for they were sharp to the bare skin, and he was likely to scratch us unintentionally in his maneuvers. His tail, of course, was a fairly good rudder—when we could get hold of it in time. He was greatly delighted, and it was with considerable reluctance that he came out, some time after we did. When he finally came lunging and cavorting up the bank he proceeded to dry himself by chasing and being chased with the dogs in wide circles. There was more variation to his antics than to those of the dogs, for he could climb up trees, slide down them, and overturn boulders. He investigated the bridge from end to end and from top to bottom. This way of gamboling after his swim was the cause of excitement the next day.

While we were resting at the bridge a man came along driving a team of four mules attached to a load of lumber from a mill above us some miles. Jack was loitering at the roadside near, and when the wagon came along the man watched him awhile, drew up, and asked pleasantly: "Howdy do? Is that your bear?"

We said it was, and he was about to say something else when the lead mules deciphered Jack or scented him. Immediately they began to stick their ears out at various acute angles and move about restlessly. Then the wheelers began to get nervous. The team next decided that they would either turn and go back or branch off to one side, regardless of the fact that a wagonload of lumber could not follow at that place. The driver had all he could do to manage them, but he managed to keep them lined up in the road. The mules then decided that the next best thing was to go ahead, and they began to snort, he-haw and twist their tails, but they took that load up the hill from the bridge with a display of enthusiasm that was excellent. They acted as though they were afraid Jack would steal the lumber. As far as we could see them they were rushing it along to a place of safety, with much anxiety. Mules have no confidence in bears, not any.

I once made a journey on horseback from Trinity Center to Shasta, and had a big, dark-complexioned mule in tow. My horse was a good one, and the mule was a splendid mule, but very deliberate in his movements. When I rode at a trot the mule insisted on walking, and when I slowed down to a walk he got sleepy. He kept a steady strain on the halter strap, and to ease matters I made it fast to the horn of my saddle. The road was over Trinity Mountain, at the time a great region for deer and bears. I frequently saw bunches of deer, and shortly after crossing Trinity River saw a black bear cross the road just ahead of me and go into a little gully or ravine below the road.

I presumed that both my horse and the mule had seen the bear as he had got out of the road but a few yards ahead of us. Not seeing him come out of the gully, when I reached it I yelled, just to see how he would strike out. He was apparently startled and lunged out of the ravine with a crash and a snort, ejaculating something like, "Whosh," and I think he went away, but I did not see him do it. All I saw for the next few minutes was the rear elevation and equipment of that dark and hitherto reluctant mule. I never knew a thing to change its disposition and abandon its character so suddenly. He set off at a run with my horse and me in tow, reversing our order of march entirely. I had to whip up to keep him from taking the saddle away from us. As the lead strap was fast I had no choice but to go right along, and did

do it, until the mule's spasmodic impulse carried him beyond his motive power, then he fell down. The strap stood the strain and the jolt nearly threw my horse. It shifted me over on to his neck, but I dismounted in a more voluntary manner the rest of the way.

Both myself and my horse were dazed, and so was the mule. His neck was broken. It took him at least ten minutes to recover himself. He got up, shook himself, looked at me in a vacant, deprecatory manner, tried to remark he-haw, but only coughed. He limbered up little by little, but seemed to have lost his memory, and had forgotten about his hurry. From there to Shasta he led up much better, not from any apparent desire to oblige me, but from a vague, instinctive anxiety to get somewhere further along and finish dying. If anything causes a mule to take interest in rapid transit it is a bear, but he reposes neither faith nor confidence in one, not any.

Jack had climbed into the wagon and seemed to think we might as well move on, and we did so. From the crossing of the stream (in the headwaters of which we caught all the trout we needed later on) we steadily ascended the mountain. The white oak timber began to be mixed with black oaks, then with straggling pines which grew more and more plentiful and symmetrical as we advanced. We had planned to reach another point some miles along, but when we reached the Daly place we decided to stop for the night. It was almost dark, and here was another barn full of hay—new timothy hay this time without foxtail predominate. We got permission at the house of Mr. Daly and camped at the barn, wondering what Jack might do to stir things up at this point. Those who have not, after a trip like ours, slept in a stack of sweet timothy hay in the cool, braising air of Sierra pineries have missed something. RANSACKER.

### Suspended Animation.

Editor Forest and Stream:

Any and everything that appears in the columns of FOREST AND STREAM referring to the subject of "Suspended Animation in Fishes" gives me considerable pleasure.

Many years ago it was my amusement to go into the kitchen, when frozen smelts or frost fish were sent to the house, and, taking some from the package, put them into a large receptacle filled with hydrant water to see them swim, and they did swim. I have tried to tell this story, I presume, a hundred times, and I have been practically laughed into silence.

The perch mentioned by Mr. Davis in the current number of the paper evidently received the same treatment, being frozen immediately after being taken from the water. Mr. Davis' story is even stronger than any I ever attempted to tell, because my frost fish, although they, undoubtedly, did swim in front of my eyes, received short shrift and were soon in the frying pan, so that I could not say whether they would have lived half an hour or an hour had they been given the opportunity. In other words, I could not say whether their return to life was spasmodic and only a temporary matter. Mr. Davis goes on to say that he put these resuscitated perch in running water and they lived several months.

I presume that many of the readers of FOREST AND STREAM will think that Mr. Davis is drawing a long bow in making this statement, but, as far as I am concerned, I believe every word of it. Everything of this kind that I read makes me feel that I am vindicated on the question of "Suspended Animation in Fishes." Whether this suspension of life is a matter of weeks, months or years I am not prepared to say. It might be a grave question as to whether a perch frozen and kept in cold storage for several years would swim off into deep water if placed in a lake during the leafy month of June, but the fact stands that fish taken from the water in the middle of winter and quickly frozen will come to life again and live out their allotted time if put back into the water within some, unknown to me, stated period. As far as I am concerned there is absolutely no argument on this question. CHAS. CRISTADORO.

### Dog-Wolf Cross.

NEW YORK, Oct. 10.—Editor Forest and Stream: The remarks in FOREST AND STREAM about the parti-colored fox remind me of something that I saw in Montana a couple of weeks ago. I was smoking my pipe in the cabin of an old-timer who lives on Muddy Creek in southeastern Montana, when I happened to look out of the window and saw an animal pass by that for a moment I took to be a red wolf.

I said to the old man: "What have you got out there?" and he replied, "Yes, I am glad you spoke about that; I wanted you to see them pups." Then while we walked out of doors, he told me that he had had a litter of six pups half gray wolf and half ordinary domestic dog, and that he had two of these puppies still about the house, the other four having been given away.

The wolf-like animal, with four or five other dogs, was standing near a wagon close to the house, and when called galloped cheerfully to us, wagging its tail and twisting its body and thrust its nose into the hand of each of us, seeming to enjoy the pats and caresses that it received. In color it was reddish, somewhat the color of the summer coat of a deer, yet hardly so bright; there was more of a brown in it. The inner surfaces of the ears were blackish or dark brown, as was the end of the tail. On the tail the hair lay parallel to the skin and did not stand out as it does on the brush of a fox or the tail of wolf or coyote. On the other hand, the shape of the creature was that of a gray wolf, which it also equalled in size. The mother, which stood not far off, was a common enough looking mongrel, perhaps a cross between a setter and a collie. Her ears were small, coat long and her tail was carried curled up over the back. She was white with a patch or two of brown.

Rowland told me that the other pup, which we could not find, exactly resembled a gray wolf in size and color. It was much less tame than the one I saw. These pups are great thieves and things have to be kept out of their way or they will steal them. They cannot bark. Sometimes they appear to try to do so, and break out into a regular wolf howl.

My host of that day is a real old-timer and one of the few that are left. As a boy he accompanied Gen. Stansbury's expedition for the surveying of the Great Salt Lake, became fascinated by the Western life, married a Cheyenne Indian girl, trapped, traded, hunted, scouted, fought Indians and guided troops; and now, at the age of about 74, is passing his declining years among the foothills of Montana's mountains. He tells some fascinating stories of adventure in the early days of the Old West. G. B. G.

### Fox-Dog Cross.

WASHINGTON, D. C., Oct. 7.—The trouble with Mr. Nelson's freak fox, mentioned in FOREST AND STREAM of Oct. 7, is that there is too much collie dog in it. A similar case of miscegenation may be seen at Highlands, N. C., at the hotel, except that the basic animal is wolf instead of fox. CHARLES HALLOCK.

### Ruffed Grouse Vagaries.

THE New York Sun of Saturday, Oct. 7, contains the following note:

"I. W. England, of 127 Aycrigg avenue, Passaic, president of the Passaic Metal Ware Company, was awakened at about 4:30 o'clock Friday morning by something which struck the blind of his bedroom window. The noise was not repeated, and Mr. England went to sleep again. At breakfast a maid said she had found a dead chicken outside the dining room window.

"Mr. England went out to look at it and discovered it was a full grown partridge, still warm and, with the exception of a twisted beak, without a mark which would indicate the cause of its death.

"It's a very remarkable thing," said Mr. England yesterday. "There isn't a partridge farm within sixty miles of Passaic, and the nearest woods are at Carlton Hills, about two miles away. The partridge is about as shy a game bird as you can find, and what this one means by dying on my lawn practically in the middle of Passaic beats me. I presume he was blinded by the peculiar half light that precedes the dawn and crashed against my window and broke his neck."

To every gunner October is known as the month in which the grouse and quail of the Eastern and the Middle States indulge in extraordinary wanderings, are constantly found in unexpected places and very frequently destroy themselves by flying against buildings or fences or through windows into houses. Old numbers of FOREST AND STREAM are full of records of cases of this kind, which have taken place in Pennsylvania, Massachusetts, Connecticut, New York and elsewhere. The last case of this kind which came under our notice was one where a ruffed grouse flew against a wire netting of about an inch and a half mesh stretched above a fence to confine poultry. The bird flew with such violence as to kill itself and to knock a handful of feathers from its breast. Among the correspondents who within the last two or three years have contributed accounts of such self-killing of ruffed grouse, are Messrs. E. H. Kniskern, J. L. Davison and M. Chill.

While quail also suffer at the "crazy" season and are found in unexpected places, they do not wander nearly so much as do the grouse, nor do they often, so far as my experience goes, kill themselves by flying against buildings. At the same time, we have known a case where a quail flew into an open window in October and was captured in the room. October seems to be the month in which the gallinaceous birds of the Eastern States shift from their summer to their winter quarters.

### The Hemlock and the Rising Sun.

It is always a delight to a lover of nature to learn a new truth about her ways. To people of a certain turn of mind it is a double pleasure when the thing learned may at some time be of use.

Two years ago I spent considerable time at a lumber camp in the Adirondacks. Since the "boss of the crew" knew I was interested in facts about the woods he often told me things of which I had never heard or read. One day, while we were going the rounds to see how the men were getting along "skidding" the logs, he pointed down the side hill and said: "Do you see the tops of those hemlocks, how they all point to the east?" I looked down the slope where we could see a dozen or more lofty hemlocks. Sure enough, the topmost part of the trunks, which tapered into a slender stem, pointed with finger-like accuracy to the east. The lumberman said that nearly all hemlock trees pointed in the direction of the rising sun, but he was unable to tell me why. I have been in the woods a great deal since that time, and the rule is found to be true. The reason for this peculiarity of the hemlock cannot be explained by saying the winds have made them grow thus, for the prevailing winds in the Adirondacks are from the northwest. Whatever the reason, it is something worth knowing, especially if one travels at all in the woods and is in the habit of leaving his compass in camp. E. A. SPEARS.

### The Linnaean Society of New York.

A MEETING will be held on Tuesday evening, Oct. 24, at the American Museum of Natural History, Seventy-seventh street and Eighth avenue, at 8:15 P. M. E. B. Southwick, Ph.D., "Some Winter Tales: being the experiences of Animals in the season of frost and snow," illustrated by lantern slides. C. G. ABBOTT, Sec'y.

### Fate of a Bronx Buffalo.

LADY, one of the buffalo acquired from the William C. Whitney herd, which had been for several years one of the attractions of the Bronx Zoological Park, was killed the other day by a piece of wire which she had swallowed. It is supposed that the wire came from a bale of hay.

THE WORLD RENOWNED MANY-USE OIL.  
The best gun oil made. It never gums, nor separates in cold weather.

# GAME BAG AND GUN

## Caribou Hunting in Newfoundland

OUR hunting party, consisting of Senator S. K. Warnick, Henry E. Greene and the writer, of Amsterdam, N. Y., and Allan I. Smith, of Philadelphia, left Montreal Aug. 28, over the Intercolonial Railway. Our destination was Newfoundland and our object to hunt the woodland caribou, for which that island is famed. Our route took us through the provinces of Quebec, New Brunswick, Nova Scotia and Cape Breton Island, to North Sydney, a distance of 988 miles. The Intercolonial is owned and operated by the Canadian Government. It has a smooth road bed and its trains are well appointed and make good time. At North Sydney we boarded the fast steamer Bruce, and soon were rolling on the arm of the sea, 103 miles wide, which separates Newfoundland from Cape Breton Island.

As we approached Newfoundland early the next morning it presented a cold and forbidding aspect, with its bleak, rocky bluffs and scant vegetation. The boat docked at Port-aux-Basque about 8 A. M. On the wharf the train was waiting, and after we had run the gauntlet of the custom house officials, and procured our hunting licenses, we started for Spruce Brook, 118 miles distant.

The Reid Newfoundland Railroad is a unique institution, and is run on the easy-going plan in force in the good old days of our grandfathers. It is a narrow-gauge road, with primitive rolling stock and no roadbed to speak of. The trains, which run tri-weekly across the island to St. John's, the capital, will stop anywhere to pick up or drop passengers, and time is no object. The average speed is sixteen miles an hour. At every stop the passengers got off and picked red raspberries, which grew abundantly along the track. And there was no danger of getting left, for it was easy to catch the train after it had started.

The region which the railroad traverses, like all the rest of the island except the sea coast, is practically a total wilderness, abounding in brooks and rivers teeming with brook trout, which will rise to almost any lure.

The little train started out bravely enough and had gone about fifty miles when an accident occurred to vary the monotony of the journey. The locomotive broke down, and a delay of five hours resulted. A cut was made in the telegraph line and another engine ordered from a point seventy miles distant. The delay was taken as a matter of course by most of the passengers, who proceeded to pass the time as agreeably as possible. However, there was one irate passenger, who summoned the conductor and made some rather pointed remarks about the railroad and its service, which he characterized as "the worst ever." The conductor, getting huffy, asked him why he didn't get off and walk if he didn't like the railroad. "I would," replied the irate passenger, "but they don't expect me till the train arrives."

Two of our party got out rods and flies, and caught a nice string of brook trout in a small stream not more than fifty yards from the stalled train. We had the fish cooked and served on the dining car, along with our dinner, to which they made a very acceptable addition.

Meanwhile the locomotive which had been telegraphed for was hurrying to our assistance, but in its anxiety to reach us it hurried too much, for it jumped the track three miles from where we lay, and had to be jacked back on the rails. One of the passengers, walking to the scene of the wreck, saw two bears, but had no gun with which to try a shot at them.

Late in the afternoon the engine arrived, and the train resumed its delayed journey. The direction was northerly, at times skirting the coast, and again working back into the wilderness through dense forests and desolate, moss-covered barrens.

Stations were few and far between, and for the most part consisted of one or two huts, where the section gang of the railroad lives. A more unsettled country would be hard to find, and to us it gave every indication of being a sportsmen's paradise.

The train finally arrived at Spruce Brook in a pouring rain, eight hours late, according to the time table; but we were informed that in that country a train is considered on time if it arrives the same day it is due.

Spruce Brook consists solely of a commodious and comfortable two and one-half story cottage, called the Log Cabin, and conducted as a sportsmen's hotel by Mr. Charles E. Dodd, an agreeable and entertaining English gentleman. Through Mr. Dodd we had made arrangements by letter for guides, provisions and camping outfit for our caribou hunting trip, on which we were to start the next morning.

We were soon registered and seated in easy chairs around the log fire roaring in the huge fireplace, and the storm without was forgotten. Dinner was served shortly. There were four courses, the *pièce de résistance* being a large and delicious salmon, freshly caught in Harry's River, nearby.

Toward the conclusion of the meal, Mr. Dodd offered to bet that he could produce a live caribou right there in the dining room. He was promptly taken up by the Senator. Mr. Dodd stepped out, and in a minute or two returned leading a pet caribou fawn named Carrie.

Early the next morning we were awakened by the violent bleatings of Carrie, and as our imprecations failed to stop the racket, we hastily organized a quartet and struck up "Good Morning, Carrie." One verse with chorus, was enough to quiet the beast.

The mixed freight and passenger train which was to convey us sixty-five miles further along the line to the foot of Grand Lake, was only two hours late, much to our surprise. The distance was covered in about

five hours, and we reached Grand Lake about 3 P. M. Here our four guides, cook and helper met us. They are all residents of St. George's Bay, and are of French descent, with a trace of Indian blood. They had preceded us the day before with tents, provisions and three dories.

We stopped long enough to "bile the kettle" and then loaded the dories, embarked and rowed up the lake eight or ten miles against a strong head wind. Camp for the night was made on a point in a sheltered piece of woods. The tents were quickly pitched, bough beds made, fires started, and the fragrant odors of frying ham and boiling coffee pervaded the atmosphere. As the shadows lengthened a feeling of peace and contentment crept over us. The only sounds were the lapping of the waters of the lake on the pebbly beach and the whispering of the wind in the tall spruce and pines. We were in very truth in the heart of the wilderness, and were once more experiencing the delights of camp life.

Grand Lake is a beautiful body of water about sixty miles long and four or five miles wide. At the top of the wooded hills, which rise sheer from the lake, are extensive barrens, where the caribou are to be found in large numbers. It is the largest lake in Newfoundland. The upper half is bisected by a large island, partly wooded and partly barrens.

We were astir early next morning, having had a good night's sleep. After a hearty breakfast we struck camp and continued the thirty-mile row to the Narrows, about half way up the lake, and near the lower end of the island. There was a heavy fog, which turned to rain. The monotony of our voyage was varied by coming upon a flock of black ducks. We opened fire with rifles, and managed to knock one over. We ate him next day, and he was delicious. Some sheldrakes and loons also were bombarded, but without result.

In the afternoon we reached our destination and made camp in a heavy rain. However, our discomforts were soon forgotten at the sight of a caribou swimming across the lake to the island. We were in the game country at last.

Next morning three of the guides, each carrying a pack, made the four-mile trip back from the lake up the wooded ridge to the barrens, cutting out and blazing a trail as they went along. Meanwhile we remained at camp and occupied ourselves with trout fishing and watching for caribou swimming in the lake. We saw eight in all. One of them was a large stag with a good set of antlers. We fired at him at long range, but he kept right on going, and disappeared in the woods. Toward evening the three guides returned, having left the packs at our next camping place on the edge of the barrens.

The next day was bright and sunny. The entire outfit hit the trail and journeyed to the barrens, the scene of our hunting operations. After a hurried lunch, we shouldered rifles, and, spreading out, climbed a neighboring ridge, where we might use our binoculars to advantage in spying out the game. Our licenses permitted each of us to kill three stag caribou, and it was our purpose to get those having the largest and best heads, which could be mounted and preserved as trophies of the hunt.

My guide, Paul Benoit, a powerful young six-footer, with an eagle eye, soon spied a stag. With the aid of the glasses we found that he had a large set of antlers, which were still in the velvet. The wind was favorable for the stalk. The animal was feeding behind a hedge of brush, which prevented him from seeing us as we crept up to within close range. One .33 Winchester bullet through the forward shoulder brought him down. After securing a good photograph of him where he fell, we skinned out the head and cut off a hindquarter, as there was no fresh meat in camp. That night we ate our first caribou steak. It is of a fine flavor, resembling the meat of our red deer, but of a little coarser grain.

Meanwhile Smith (he of sleepy old Philadelphia) had been putting in a busy afternoon. He and his guide, from their point of vantage, saw a doe feeding at some distance. Deciding that she was a good subject for a photograph, Smith prepared the ever-ready kodak for action. The stalk was successful, and a snap shot was secured before Miss Caribou, now thoroughly alarmed, made off, only touching the high places in her haste.

But Smith's fun was not yet over. A goodly stag was sighted and bagged, after an exciting bombardment. The head was very pretty, with an even, symmetrical set of horns. The Senator and Greene saw a number of does that afternoon, but no stags.

After a bountiful and appetizing supper, with venison featured on the menu, we turned in early, thoroughly tired, after a rather strenuous day, and were soon asleep.

But we were not destined to enjoy our night's rest. About half past eleven one of us awakened to find the front end of our tent a mass of flames, which were sweeping back in our direction. The wind had blown a spark from the camp-fire on to the tent, which was an oiled affair, very inflammable. We were in considerable danger, but all managed to get out unscathed except Greene, who was badly burned about the face and arms by a blazing piece of canvas, which fell on him as he was rushing from the tent.

Our shouts aroused the guides, who quickly ran over, pulled down what was left of the tent, and stamped out the flames. Fortunately our belongings escaped serious damage. The guides kindly gave up their tents to us, and next day made a shelter for themselves out of some pieces left from the burned tent.

A heavy fog enveloped the barrens next morning, and hunting was out of the question. The heads of the

caribou shot the previous day were skinned out and the hides scraped and salted. Toward noon the fog lifted, and we at once started out in quest of game. Evidently the shooting of the day before had driven the caribou back into the barrens to the east, and we saw nothing but a few does. We had not been out more than three hours when the fog once more came drifting along, and there was nothing for us to do but to return to camp. A council of war was held, and it was decided to move back next day into the barrens eastward, in the direction of Red Indian Lake.

Early next morning, Sept. 4, the cook and his assistant were sent down to the lake to get some flour which we had cached at the last camping place. Upon their return we ate a hasty lunch, packed up and were off before noon. The trail we followed was a well-worn path, made and used by caribou probably for ages. In all our walking on the barrens we used these caribou trails, which traverse the country in every direction, forming an interminable network. They make traveling comparatively easy, except where they cross the numerous marshes, or pass through patches of tangled brush and scrub woods. The barrens are by no means level, but on the contrary, are rolling and hilly, and in places mountainous. Lakes, ponds and brooks are numerous.

Leaving camp, we crossed a low ridge, descended a gradual slope and forded a small stream. Thus far we had seen no deer, but now we discovered a stag right in our line of march. Greene and his guide made a short detour through a piece of woods, and got within easy range, while the rest of the party halted and watched the stalk through binoculars. One well-aimed shot through the neck and the caribou bit the dust—or, rather, the moss. The head was quickly skinned out and shouldered. We had advanced about a mile further when another stag interfered with our progress. It was the Senator's turn. He wormed his way along on hands and knees to within about 250 yards of his quarry, and brought him down with one good shot from his trusty .30-40 Winchester.

We saw several large flocks of wild geese, but could never get within range. A little further on, we made camp in a patch of stunted trees. We were now in a splendid caribou country, and were eager to get down to business. Our prospects seemed good, for we could see three does feeding on a nearby ridge as we sat in camp. The cook speedily prepared a lunch of enormous thick flapjacks, which were regular sinkers. However, we suffered no ill-effects from a hearty meal of them, and before long we had separated, each with his guide, and were ascending the ridges to the east.

Paul and I had climbed about two miles, when right ahead we made out a band of five caribou, three stags and two does. As I was trying to determine whether there were any good heads among them, Paul whispered, "See the big one on the left?" Turning the glasses in that direction, I saw a large, light-colored stag rubbing his antlers on the ground. Evidently he was just getting rid of the velvet which covers the horns until fall.

At that distance we could not clearly distinguish whether or not the horns were a good set, but they appeared to be large. Running low, dodging behind bushes and skulking along, we crossed two small valleys and managed to draw near enough to see that our quarry had a large and fine set of antlers. He was the kind of game we were after. But the next thing was to get near enough for a shot. This was not so easy, for the stag saw us and started off. We chased after him, keeping out of sight as much as possible. Suddenly the animal veered to the left, affording a broadside shot at about 200 yards. The bullet passed through his body, and he fell, after running about a hundred yards. We had some difficulty in finding him, as he had run from view over a rise of ground, and dropped in a dense clump of bushes. His antlers were long and symmetrical, with twenty-eight points. We estimated the weight of the carcass at about 450 pounds.

While skinning out the head and a hindquarter, a second stag made his appearance. He did not have a specially good head, and while debating whether or not we had better try for him, he saw us and made off. Then, when it was too late, we decided that we wanted him, and started on what proved to be a hopeless stern chase. We must have run half a mile before I finally opened fire at about 400 yards, but the bullets had no effect except to hurry the caribou, and he vanished over the ridge. We then returned to camp, on the way picking up the head and meat of our slain stag.

The other members of the party meanwhile also had been enjoying excellent sport. The Senator saw a very large white stag with magnificent antlers, but while stalking him scared up a smaller stag, which put the larger animal to flight. He shot four times at the former, each time failing to hit the mark, and then found that the rear sight of his rifle was elevated several notches. Smith shot a fusillade at a large stag and missed. Later in the day he saw a band of nine, but was unable to get near enough for a shot.

During the afternoon Greene saw a total of fifteen caribou, including two small stags. While nearing camp just before dark, he sighted a large stag 200 yards away. It was a difficult mark in the poor light, but out of the seven shots fired, six took effect, and Greene brought into a camp a splendid head, with long, branching antlers, somewhat resembling those of an elk.

The next morning the sun rose bright and clear. A brisk east wind made conditions favorable for hunting. Lunches were put up and we were off early for a full day on the barrens.

Paul and I climbed the eastward slope for six or seven miles, but were surprised and disappointed at the

scarcity of game, as compared with the large number of animals we had seen in that same region the day before. Apparently the shooting on all sides had driven the deer further into the barrens. We finally turned back, discouraged, and circled so as to take a different route to camp. After going about a mile, we saw a light colored stag feeding at some distance. The cover was good and the wind right, so we had no difficulty in stalking and shooting him at easy range. He had a large head, and was unusually white. It was always easy to distinguish the stags from the does, the former being light colored, while the latter are of a seal brown, with white belly and legs. I had now killed the three stags allowed by law, and my hunting was at an end, so we returned to camp. A little later Smith and the guide put in an appearance with a fine large head. The Senator was still to be heard from. Just before dark, he hove in sight, followed by his guide, whose shoulders were adorned with a massive caribou head, while a large jack rabbit was slung from the end of the Senator's rifle. They reported a hard tramp of fifteen miles, but felt amply repaid for their exertions. They related that during their lunch diversion was afforded in the shape of a doe with a large bump of curiosity, which stood nearby, and with unabated interest watched them eat. The caribou has this trait of character to an abnormal extent. On one occasion, while the entire party was on the march, a yearling came within fifty feet, and took to its heels only when one of the guides threw a stone at it.

The next day, Sept. 7, must be put down as the most disagreeable of our trip, for a heavy rain set in and continued all day, while we sat huddled in our small tent, which was not entirely waterproof. But it was far harder on the guides, who had little or no shelter and could only keep warm by hugging the roaring fire which they kept going.

As if to atone for the bad weather, the following day was perfect, without a cloud in the sky and little or no wind. But the time had come to begin the homeward journey. One of our bags of provisions had not been put off the train at Grand Lake, but had been carried through. Consequently our supply of grub, with the exception of venison, was getting low. The five miles back to our former camping place on the edge of the barrens were covered in good time, and the Senator and Smith hunted there the balance of the day in a vain effort to get another good head. Next day we returned to the lake and journeyed by dory to Grand Lake station, a favorable wind aiding the rowers.

The mixed train was due that night, and we intended to take it to Spruce Brook, but we had further proof of the eccentricities of Newfoundland railroading when the telegraph operator at the lonely station informed us that the train had been cancelled. This meant a wait of two days until the express should come along.

However, we had some good trout fishing in the outlet of the lake, and the time passed pleasantly. We recovered the missing bag of provisions, and so had plenty to eat. On Monday afternoon the express duly arrived and conveyed us to Spruce Brook.

Mr. Dodd's Log Cabin is well known to sportsmen, both hunters and anglers, and it has sheltered many men of prominence. Among the names to be found on the register is that of the Hon. Elihu Root, who last September had a very successful caribou hunting trip in the same region which we invaded. Mr. Root returned this summer with his son for the salmon fishing which is to be enjoyed in that vicinity.

However, we would advise those who contemplate a hunting trip to that section of Newfoundland to go to St. George's Bay. There is a good hotel there, and tents, provisions and reliable guides can be obtained in the village. By hiring the guides direct the middleman's profit is saved, and the hunter is sure of having what he likes in the way of grub, and plenty of it.

The caribou heads were boxed and forwarded by express to a taxidermist at Vanceboro, Me. We also sent the feet, which are to be made into ink wells, match safes and gun racks.

On Wednesday, when we boarded the tri-weekly express, it was only two and one-half hours late, and we were confident that we would make good connections right through to Montreal. But we should have learned by that time not to put our faith in the Reid Newfoundland Railroad, for the engine broke down about half way to Port-aux-Basque, and two hours were lost in making repairs.

At 2 A. M. the steamer Bruce left Port-aux-Basque in a pouring rain and a gale of wind. The sea was far from resembling a mill pond that night, and most of the passengers looked pale and shaky when they landed at North Sydney, B. C., about 10 A. M., to find that they had missed the Montreal connection. We managed to get as far as Truro, N. S., that night, and the next morning boarded the Intercolonial's Ocean Limited and reached Montreal without further mishap.

GARDINER KLINE.

AMSTERDAM, N. Y., Oct. 2.

### The Delaware Game Outlook.

WILMINGTON, Del., Oct. 5.—*Editor Forest and Stream:* As you know, the enforcement of the game laws in Delaware are peculiar, being given over entirely to the Delaware Game Protective Association, each member of which Association is made a warden, so that we have to look out for law-breakers.

The prospect for quail throughout the lower counties of the State is good this year. A great many birds are reported. We are expecting quite an influx of non-residents when the shooting season opens Nov. 15, but as our law prohibits taking quail out of the State for any purpose, only sportsmen who come here for the pleasure of shooting are likely to visit us, as they will not be allowed to take any game out.

We have had teal duck here for a month, and a few mallard and black ducks have appeared in the marshes near Wilmington. Black ducks generally nest around Leipsic Marsh, but I have had no report from them this year.

There was an unusually large number of railbirds on the Delaware River early in September, but I was out rail-shooting on Tuesday and found them far from plentiful.

J. D. BUSH.

## In Maine Woods.

BANGOR, Me., Oct. 6.—*Editor Forest and Stream:* The season for hunting big game in Maine has been open but four days and part of the fifth, and up to date there has been an alarming amount of accidental shootings in consequence of the heedlessness of those shot, or the carelessness of some others who showed criminal negligence in the use of firearms. At this writing there have been reported six shooting accidents in the State, two of which have resulted fatally, one other of which may result in loss of life, while yet another may have very serious results in the crippling of the victim.

To be sure, not all of them, in fact, few of them, are of the mistaken-for-a-deer class of accidents, and one occurred a week ago to-day, on the last Friday in September, yet as all of them took place in the hunting regions, and were intimately associated with hunting, they may properly be classed together. In at least two cases, the victims were mistaken for comrades for deer, and contrary to the too-frequent fatality attending such mistakes, neither of these men was killed by the blunder, although one is in a critical condition.

Ralph L. Todd, of Newport, while traveling over a tote road beyond Penadumcook Lake with some companions, was fatally shot by the rifle of his friend, who stumbled in the rear of a tote team, and his rifle struck the wheel with such force as to break the hammer, the ball entering the body of his camp mate walking just behind. The wounded man died the next night in the hospital in Bangor.

John Glidden and his 16-year old son, while carrying two canoes across a carry near their home in Burlington, rested their guns against a stump on the carry. While the two were returning across the carry to get a second load the boy passed too near the stump, the loaded rifle was knocked down or slipped, and in its fall was discharged, the bullet fatally wounding the young fellow in the head, so that he died the same night.

Near Caribou two brothers were hunting, when Lee Smith mistook his brother for a deer and put a bullet through his shoulder. The injured man may recover, although his condition is reported as serious.

Near Wytotitlock Lorenzo Weir was hunting, and the circumstances would seem very similar to those in the Todd accident, a comrade's rifle, carried behind the victim, being accidentally discharged as they were traveling through the woods, the bullet passing through his hip.

At Great Pond, one of the Belgrade lakes, Linnie N. Morrill, a well-known guide of that vicinity, after practicing target shooting with his rifle, stood it against a tree. Later it slipped, or was jarred from its position, and the discharge drove the ball through the young man's knee, and will make him lame for life, if no worse results occur.

In Chapman plantation, two young fellows, George Grey and Joe Leavitt, were out together, and the rifle carried by one went off, the bullet passing through the fleshy part of the other's thigh. He, fortunately, will recover without serious injury.

Thus, in nearly every instance, there was a very evident carelessness, without which no untoward incident would have marred the happy trips of ambitious hunters to the woods, or ended the lives of useful members of Maine communities. While small, if any, blame is to be attached to some of those who did the several shootings above, yet it is a fact, that if loaded rifles are not placed where a slip or a kick or a jar will cause their discharge, no one can be hurt by them, and if the rule never to carry a weapon in front of, or behind, in the vicinity of any human being when it is loaded is made universal, there will be less loss of life in the Maine woods. No man is able to know when he will stumble on a stone, or step into an unexpected hole, and if his gun or rifle has no ammunition in the barrel, it cannot harm him or others. That "eternal vigilance is the price of safety" is as true of the woods of Maine, and especially between members of the same party while hunting, as it can be of the soldiery of armies drawn up in array against each other, where they know there are opponents just waiting to pick them off. In the one case one knows where the enemy is and may avoid him—in the other he is an unknown and oft-unexpected quantity, and should be watched for with even greater care; while on the part of the man with the gun personally, he should see to it that his gun is always in a safe condition, that untoward circumstances may not cause its premature discharge, and death or misery to himself or some comrade.

Every train through this city brings sportsmen from the cities and towns west of Bangor, as well as non-resident hunters, who are bound for the many comfortable log cabin resorts of the north, or will canoe and tent in the very haunts of the big deer and moose. Many will have their expected moose trophies all picked out before the 15th, and on that morning, if obedient to the law, will slip out at dawn to round him up and bring him down, if they can still locate the monarch. It is sincerely to be hoped that hunters will be sportsmen enough to permit to live and develop, the hundreds of big moose with small antlers now roaming the woods, and which if left to grow, will in a very few years furnish magnificent sport for the sportsmen who come after them. There are plenty of nice heads, even if there are but few of the best to be found by the hunter (for few reach the top notch of perfection, even among moose) in the Maine woods to-day, and a proper application of time and energy, in the right localities, is certain to result in a fine specimen.

The bringing out of moose heads that are ugly, hideous and to say the least imperfect, with perhaps only one horn, and that none too attractive, usually malformed and unsightly, should be discouraged by sportsmen and guides alike, and the man who will kill a giant of the forest, bearing a set of antlers in which neither he nor any one else can take any proper pride, ought not to have the chance to say, as many of them do: "Well, I wanted a moose bad, and to tell the truth, hated to kill this fellow, but 'twas my last chance to kill a moose, and I just up and let him have it." If the moose isn't a desirable specimen, let him have another chance to grow good horns—he's certainly worth some sportsmanlike sacrifice, or he isn't worth the years of protection the laws have accorded him.

HERBERT W. ROWE.

## Bears in Pennsylvania.

WILLIAMSPORT, Pa., Oct. 10.—*Editor Forest and Stream:* And after all it was the much-maligned Pennsylvania Legislature, boss-ridden and graft-tainted as alleged, that listened to his tale of woe and enacted a "closed season" for bear. At its recent session it was enacted, "It shall be unlawful to kill, take or capture any bear, of any description, save only from the first day of October to the first day of March next following. Each and every person who shall kill, take or capture any bear, contrary to the provisions of this act, shall be liable, on conviction, to a penalty of \$50 for each bear or cub taken, killed or captured contrary to the provisions of this section." So for six good round months Bruin may hike hither and yon unmolested in search of the succulent ant hill, huckleberry and blackberry, picking up an occasional woolly lamb or squealing shoat. To my benighted way of thinking, this is but giving "br'er bar" only the "square deal"; but there are, I am sorry to record it, small souls who call it a "whitewash." However, it bears out the contention of those of us who have been bear defenders, that Bruin's intentions are good, even though his attentions be not so desirable. Of course, my friend, the grazier who recently lost half a dozen lambs—there could be no mistaking the evidence as to the culprit—is not so enthusiastic over a closed season for bear. But right here the law steps in and says, "and to kill a bear, of any description, when in the act of inflicting injury to either the person or property of any individual in this Commonwealth, or upon proof made by affidavit of one or more persons that the bear in question has, in any manner injured or damaged the person or property of any individual in this State." Therein lies the rub; catch him with the goods or answer to the game warden—it's harder than to prove an alibi, don't you see?

But, howbeit, as yet there comes no report of a bear bagged in this neck o' the woods, though the season opened Oct. 1. Bruin seems a little shy over his newly acquired importance, and kept pretty much out of sight during the past summer, although "bear signs" are not unseen when traveling over his habitat. Bear traps, bear pens, etc., are now things of the past in Pennsylvania, and as the taking of a likely bear dog into the woods is pretty sure to involve one in the mazes of the deer law, and few they are who go for bear alone, *U. americanus* seems destined to grow fat and sassy and multiply greatly.

The new game laws are quite restrictive, in most cases shortening the open season and limiting the number to be taken of a kind daily, or during the season. Deer can only be taken from Nov. 15 to Dec. 1, and but a single one to the man, while the use of buckshot or of a gun emitting more than one pellet is forbidden. Deer have certainly been on the increase for a number of years past, and the new law should be of considerable value in conserving the existing herds. Dogs pursuing deer are declared nuisances, per se, and may be killed by any one, while game wardens may kill dogs known to make a practice of deer chasing.

Squirrels came in on the 1st inst., and proved to be scarcer than for several years past. Ruffed grouse, which will be seasonable on the 15th inst., are to be seen in goodly numbers, in spite of the wet and cold spring and summer. Quail are practically extinct in Central Pennsylvania, owing to the great depth of the snow during the past two winters.

The late bass fishing has been good, although irregularly so, owing to the frequent small floods in the streams.

WILLIAM WALTERS CHAMPION.

## North Dakota Notes.

GALESBURG, N. D., Oct. 5.—*Editor Forest and Stream:* Having seen nothing from North Dakota in your paper lately, and remembering the FOREST AND STREAM call, report your luck, I may say that the chicken shooting this year in this State has been poor. We had a very wet, late and cold spring, and many nests of eggs were chilled and spoiled. I have been out several times and found the birds very much scattered and very few young birds among them. The largest bag I have made in one day was twelve birds, and I am high gun in town at that. I hunted hard all day to get even so many, and I have a meat dog, too. But ducks, gentlemen, hush. I have been here over twenty years and I never before saw local ducks so numerous. The reason is not far to seek, for every low place and marshy slough has been bank full all summer. They are not hunted till the season opens, the game law being quite well observed, consequently they have stopped here on their way north, and finding the conditions to their liking, have remained and bred in large numbers. I see many bunches on the wing every day. Not many have been shot, though, for they are not very tame, and the sloughs are hard to hunt in.

I noticed a few weeks ago a complaint from one of your correspondents in California about the damage done out there by the poisonous fumes of the ore smelters. I inclose a clipping taken from the Minneapolis Tribune of Oct. 5, showing how the farmers of Montana get square with the gentlemen of the poison gases. Let the California farmers go and do likewise, and good luck to them. I say hang a man who tramples on other people's rights and defaces beautiful country at the same time, and hang him high enough so his co-partners in such business will be glad to quit and no longer poison the land with gas nor the waters with sawdust and sludge.

I also inclose a clipping from the Minneapolis, Minn., Tribune showing the kind of wolves they catch in that village. This wolf evidently belonged to the genus "hobo," not "lobo," as some writers call him, for he came into town in a box car in regular hobo fashion.

JOSEPH P. WHITEMORE.

BUTTE, Mont., Oct. 5.—Three more big smoke suits, in which the damages aggregate \$1,500,000, were filed by the Kirk & Clinton Company against the Anaconda Copper Company and the Washoe Copper Company. Ten smaller suits are now pending in the State and Federal courts and other suits are promised. The amount of damages already alleged aggregate more than \$2,000,000.

Suit for an injunction has already been begun and seeks to close the Washoe smelters, the largest in the world,

and the main plant of the Amalgamated Company. The principal suit is that filed in Deer Lodge county. Fourteen plaintiffs are named in the complaint, and the facts concerning the building and remodeling of the Washoe smelter in 1902 and 1903 are recited. Then follows a general allegation of damages from the sulphurous and poisonous smoke and fumes from the big stack to property, real and personal, in what is styled as the smoke zone in the Deer Lodge valley, comprising an aggregate of 100 square miles.

The complaint states that many of the farmers and ranchers in Deer Lodge valley, including some of the plaintiffs, settled in the valley and built up homes as early as 1860; that all who came to the valley prospered, and that vegetation of all kinds, live stock and the like, prospered until the coming of the smelter and the emission of poisonous fumes from its stack began. Then came a change.

It is asserted that vegetation of all kinds is killed by the sulphurous fumes; that live stock running on the range in the valley is extinct, and that the once fertile and prosperous valley is being made desolate by the poisonous fumes from the big stack. One hundred farmers are involved in the suits.

Another wolf was caught in Minneapolis Sunday. Eugene Jefferies, of 147 North Ninth street, brought the carcass of a large male wolf to the city hall yesterday afternoon and secured the bounty of \$7.50. The animal was caught on the St. Louis tracks near Holden street. Jefferies spied it prowling among a lot of freight cars. He secured an ax and stunned the animal. Taking it to his home he put it in the cellar. The cool air of the place revived the animal and it became so fierce in its endeavors to escape that the capturer had to kill it. It evidently came to town in one of the freight cars, and is the second wolf caught in the city limits within ten days.

### In Massachusetts and Maine.

BOSTON, Oct. 7.—*Editor Forest and Stream:* The conventions of the political parties in Boston this week have brought to the "Hub" several thousand men from all over the State, and your correspondent has received calls from several. One of these that I was especially glad to see, was Dr. C. N. Raymond, of Rehoboth. When the State Association extended an invitation to various clubs to meet in convention to discuss matters pertaining to fish and game in 1898, Dr. Raymond represented the Farmers' Club of his town, of which he is president. His club was the first of the kind to respond by sending a delegate. At a subsequent convention in 1899 he was again sent as a delegate, and with him came Mr. Wm. R. Randall, of Providence, president of a club composed of members from that city (fifty or more), who have fishing and hunting privileges and a club house in Rehoboth. Mr. Randall at that time became a life member of the Massachusetts Fish and Game Protective Association. The doctor still retains his great interest in the protection of game and fish.

Another friend, with whom I passed a pleasant hour, was Mr. Charles Clark Munn, of Springfield, the well-known author of "Uncle Terry," "The Hermit," and other stories, illustrative of country, seashore and woods life. Mr. Munn rehearsed some of his personal experiences in fishing and hunting in Massachusetts and Maine, which threw sidelights on how things are done, and revealed methods of guides and fishermen that are known only to the practical sportsman. I was especially interested in facts he gave me concerning the marketing of short lobsters in certain shore places he has visited.

Mr. Andrews, of Hudson, tells me one of his neighbors recently found a lot of snares set for partridges. The idea that there is no snaring must be abandoned.

A report from Dr. Woodward, of Middleborough, is to the effect that hunters in his section are not finding as many birds as were expected—this has reference more especially to ruffed grouse. Mr. Thomas, of the same town, speaks encouragingly in reference to quail. In his tramp about South Sandwich, ex-president Reed has seen a few partridges, and says he knows of several coveys of quail. He is confident that the Cape district will have some quail for the sportsmen when the season opens (Nov. 1), and that there is no imminent danger of their extermination in that part of the State. It is well known that quail have been more numerous there than in any other portion of Massachusetts.

Hon. Salem D. Charles has always been an enthusiastic hunter of birds, as well as foxes, and is a frequent visitor to towns in the central part of the State. He reports finding quail all gone, and only a fair number of grouse. He declares the time is coming when there must be a close period of two years on partridges, and then a bag limit of three per day and fifteen in a season.

It is seldom that one finds a practical sportsman an advocate for a close time of a series of years. One of the objections advanced against that plan is, that if at the end of the closed period there is a large increase of birds in the covers, that fact becomes known to hunters outside the closed area, and they rush in and in a short time clean them all up, so the gain is only temporary.

Mr. De Pass, statistician of the Boston Chamber of Commerce, suggests a close period of two years on quail. While such a restriction would be observed by conscientious, law-abiding hunters to the advantage of quail preservation, these same men would put more time into grouse hunting to the disadvantage of that bird—one species would be favored at the expense of the other. Unhappily it must be acknowledged that there are many gunners (we will not call them sportsmen) who, when they get into a region removed from observation, pay little heed to game laws. To them close time is a bonanza.

In Massachusetts during October, it is feared, not a few quail will find their way into the bags of such men. There are not a few among the sportsmen of the Bay State who would have been better pleased with a change prohibiting the killing of ruffed grouse and woodcock, as well as quail, during October, and some would have gone so far as to close the covers against bird shooting for the entire open season this year. Much will depend upon the good behavior of the hunters this season, and the number of birds left over at the end of November.

There is a determined attitude among men interested in perpetuating bird-life in our State, and public sentiment in favor of bird protection is gaining strength every year. Mr. De Pass tells me he can see an improvement in the neighborhood of Watertown, where he resides, as regards the number of foreigners in the woods. Heretofore he has seen several every day—this season he has seen none. He attributes this to the alien-license law. This is refreshing, and I hope it is the forerunner of many similar reports from other sections.

Commissioner Brackett has just celebrated his eighty-seventh birthday quietly at his home in Winchester. Dr. Field and Commissioner Delano are expected to return in a few days from their trip to the British provinces. During their absence Deputy Burney, of Lynn, has been passing much of his time in the office of the Commissioners.

Several Boston gunners have been getting some birds at Swan Neck, Martha's Vineyard.

Mr. Hopkinson, of Reading, is going this week to his camp in Wellfleet, and he tells me a friend got a nice bunch of snipe on the meadows in Tewksbury last week.

Chairman Poland, of the Central Committee, got a few birds last Monday not far from his home in Wakefield, and he tells me the gunners are getting quite a lot of teal on Lake Quannapowet.

Mr. Burroughs writes from Hyannisport, that something drove a quail off his lot and left twelve eggs half hatched. He puts the question whether a bird-dog would do that. Will you be kind enough to give your opinion on the subject?

Efforts are being made to form a fish and game association by local sportsmen in Claremont, N. H., the leader in the movement being Mr. E. H. King.

E. J. Burlingame, Esq., of Cumberland Hill, R. I., who is president of the protective association there, has caused the arrest of several foreigners for shooting robins.

Mr. E. C. Fitch, president of the Waltham Watch Company, has recently returned from a 546-mile tour by auto through Maine and into Canada. His party went prepared for fishing and hunting and for comfortable living without being compelled to rely on hotel accommodations. From Portland they went to Mattawamkeag and Patten. They first pitched their tents at Masardis. They journeyed thence through Ashland and the French settlements about Eagle Lake. They forded the St. John River, going through Edmunston, thence to Notre Dame du Lac, and spent several days in camp at Bic, on the lower St. Lawrence, during which they secured a fine caribou. They made the return trip by train.

The conductor on a Boston & Albany train reports seeing three deer, which leaped out from the woods near South Barre just ahead of the engine, and keeping in the middle of the road bed raced the train a distance of three miles. Near Coldbrook station Constable Webster, standing on the depot platform, saw the deer, one after another, make the leap from the iron bridge into the Ware River from a height of not less than twenty-five feet.

Many Massachusetts hunters were on the qui vive to kill deer on the opening of the season in Maine Oct. 2. The receipts at Bangor on Friday, Oct. 6, were thirty-seven deer. L. P. Richardson, of Pepperell, Mass., got two in the Sunkhare region, near Oldtown. George L. Osborn, of Boston, secured a doe in Washington county. G. H. Lewis and C. P. Morris, of Boston, got good bucks. H. M. Rowell, of Worcester, W. A. Harden, of Hudson, and W. H. Bell, of Beverly, got two each.

There is a long list of native hunters from Portland, Bangor, Houlton and half a dozen other Maine cities and towns who brought out deer—probably equaling the total brought by non-residents. It was reported that fifty men of Houlton were to take to the woods for deer on the first day of the season.

On the point of starting for the woods from Boston are H. M. Davis and wife, and B. F. Shattuck and wife, of Boston, who are to make the trip in an automobile to Jo. Mary. Allen McAdams and E. E. Pettee are off for the Allegash.

E. L. Baldwin, of Winchester, and F. E. Heller, of S. S. Pierce & Co., H. W. Priest, of Beach Bluff, will have as companion A. H. Shaw, of Bath, Me.

A. W. Hooper goes to Ashland and L. Dana Chapman to Square Lake.

Mr. Herbert Lawton, of Boston, has just returned from a three weeks' fishing trip to the Nipigon waters, and shows in the window of Daniel Stoddard & Co., Washington street, three beautiful mounted brook trout he took on this trip, weighing respectively 6¼, 6½ and 7 pounds.

H. H. KIMBALL.

### How Fishes Find their Way in the Water.

THIS subject has been one of much discussion without resulting in any definite conclusion to many.

One opinion given is that fish are directed by an observation of bottom ground, or other land guides, by depth of water, its temperature, etc. Temperature undoubtedly has a bearing on the subject, as fish seek and occupy zones most to their liking, of which a prominent illustration is shown by the Gulf Stream, inhabited by a class of fish which are not found outside of it, excepting in corresponding temperature.

All fish are cold-blooded, yet the cetacean family, comprising the whale, orca, porpoise, seal and kindred, avoid warm temperatures and invade the most frigid regions. But the seeking by the anadromous families of their appropriate spawning localities when scattered about in the depths of the sea and the directness of their efforts has been a subject of surprise.

A conclusion generally arrived at is that fishes are directed by instinct; by that mysterious inward impulse which unreasoning blindly directs its possessor for the preservation of its kind. True enough in the respect of propagation in the necessitated element of fresh water, which nature impels a seeking for it at the appropriate season.

The question arises, how does the fish find its way to the fresh water stream, as instanced by those which unerringly arrive at the locality where their young lives commenced. We will admit *a priori*, that fishes do find their way in the water. It is my opinion that fishes find their way through the water by explainable methods, as readily as humanity does in a forest where prominent objects direct the way.

The sense of smell or a sense analogous to that is very strongly developed in fishes, especially in the *Salmo* family, with which I have had more experience than with any other. In the *Salmo* family and with many others there is a prominent line mark extending on the body from the head to the tail, which, when examined closely, exhibits a cellular structure apart from the adjoining body. What bearing this feature has upon the possessor is conjectured, but may comprise a sense of communication which has not been estimated. There are probably other senses in creation which we do not know of, independent of the human category of five, which have a bearing little understood.

In the absence of a strictly appropriate designation I will call scent, as the element of perceptiveness which enables fishes to find their way in the water, and I will present my views in support of that theory from such observations as I have experienced.

All fishermen have noted the rapid way trout have in expelling the artificial fly if not hooked, and the attractive way bait-fishing has of drawing trout from a distance if followed in one place, the odor of which moving by slow currents reaches the perceptive organs of fish. Beyond this there is a condition of body which imparts to other fishes, and likewise attracts, which is inexplicable to our ordinary senses. That which is indicated by the members of a school of fish in keeping together, though often widely separated beyond any possibility of being aided by vision, conspicuous with porpoises, orcas, sword and flying fish and an endless variety of other fishes. Whales upon a uniform feeding route will be widely separated, and it is a well known fact, that the harpooning of a whale belonging to a school will be almost immediately communicated to the other members, separated half a dozen miles apart, as observed by whalers.

An eminent naturalist, Matthias Dunn, describes the

lateral line as consisting in its cells of jelly or mucus, having patches of sensitive hairs here and there, as electrical implements pure and simple, inclosing the whole body of the fish, and that these cells are of the same character as those in the electric or stinging ray. That the fish brain is a magnet polarized by the influence of the peculiar structure of the lateral line, constituting a new sense which he designates as the electric dermal, which, he thinks, aids the migrating fish directly to its destination for spawning grounds or other localities. The latter conclusion may perhaps be of some doubt, though it may under natural laws guide the fish in response to magnetic effect from the rocks, sands and other elements.

Stahr, the naturalist, considers that the sense of hearing is imparted by the influence of the lateral line.

Fishermen have observed the feeding activity of salmon and trout before the commencement of a storm, the coming event being communicated probably through the lateral line. This activity may be the result of electric stimulus, or a provision of nature, in communicating by wireless telegraphy the necessity of obtaining food or depth shelter before the effect of combating elements. That fishes have a limited memory there can be but little doubt.

Seth Green related in his hatchery experience of a pet 2-pound trout in one of his hatchery pools, which, being so tame as to take food from his hand, but would dart wildly away if he approached with a fly-rod, although it gave no attention to a walking-stick waved out over the water. This resulted from Mr. Green having once caught the trout on a fly-rod with a barbless hook. Contrary to this instance of memory I have often caught trout which had but a short time before escaped by the breaking off of the fly, or the leader, with the evidence of the previous hooking visible from the imbedded fly, and perhaps with a dangling remnant of a leader. I have

many times caught trout which had been hooked before.

I remember a few years ago of a visiting friend, George A. Hull, who fastened to a good-sized trout between 4 and 5 pounds in weight, which broke away after being played for some moments when about to be netted, carrying off the hook and half of his leader. He estimated the trout at a somewhat heavier weight than it proved to be, and came in disappointed. In less than a quarter of an hour afterward I had this identical trout on my fly which it had taken, and brought him successfully to net, verified by the indisputable evidence of the particular lost fly and parted leader. This did not show much memory, and would shade the theory of Dr. Dunn that the primitive memory of anadromous fishes directed them to the particular stream of their early life, directed by the dermal sense in its magnet polarization as the needle guides the mariner to point of destination.

Your accomplished and interesting correspondent, A. H. Gouraud, in one of his articles published in your paper last year, concerning the movements of shad to the Connecticut River from Long Island Sound, approaching the mouth of the river from the east, but did not reach the mouth by a direct course from the waters of the Sound, as the discharge from the river pursued a westerly course in its current, making a loop, so to say, and the shad took their course up the current of the river waters, thereby occasioning a distance of a score of miles more than would be required if the shad had gone direct. This loop course in the Sound had been clearly defined by the net fishermen. This would indicate that the current of the river was the guide for the shad to follow. Your correspondent also adds: "This fluvial characteristic may be due to distinctive mineral particles which retain in solution far out at sea, may be revealed to the delicate perceptiveness of the fish, and so guide it from the deep to its bourn."

I would add to the mineral particles also the vegetable, an important element, distinctly, and noticeable by fish. It is the following of these elements that guides the fish, which may to an extent have an educated perception as well as of taste. I have frequently found whole fresh-water clams up to two inches and over in length in the stomachs of trout, which are apparently easily digested, having been scooped up from an appetizing eagerness from the scent of the open clam. Also clay and earth balls in large trout, as large as ordinary marbles, which have been taken in during the stirring up of the water bottom in ground feeding.

It is doubtful if salmon depart far in the sea from the estuaries of their native streams, not beyond the reach of its diffused water, which they readily follow up on approach of their propagating period from three to four years after their exit, as the salmon are not extensive travelers, as indicated by the results of seining, and upon the Pacific coast it is evident that they seldom depart more than a hundred miles from their streams, or that their principal habitats are at a greater depth than from 100 to 150 fathoms. I could give pretty conclusive evidence of this from the observation I have made in this respect.

The Pacific salmon have their respective streams, and at their season of streams ascending are generally distinct from any of the other several varieties, although not entirely so, being accompanied occasionally by derelicts from a kindred family.

I should consider it very improbable that a young salmon conveyed from one of the St. Lawrence tributaries to an European stream would ever find its way back to its native stream, as its connecting link would be lost, and should doubt the efficacy of its magnetic dermal sense to direct it there. It is possible that a salmon by its delicate perceptiveness may distinguish the diluted odor of its natal tributary in the general flow of its fresh-water stream, else why should its ascending course be sustained short of its objective point? It is not likely that any distinct memory of its early association in the tributary where the first year of its life was passed, and perhaps two years, though the familiar flow of its water may be detected, and appeal to its motive in pushing on.

Thomas Tod Stoddart, an English author fisherman, relates that while fishing on a stream with spawn-bait during the day, that at the close he caught several black-bellied trout not frequenting the stream, excepting in a muddy bottomed pond connecting, situated between two and three miles below, which had undoubtedly been attracted to follow up the stream by the odor of the spawn-bait.

My friend, Walter M. Brackett, the veteran salmon fisherman and distinguished fish painter, with whom for nearly half a century I have compared fishing notes, is as strongly convinced as I am of the extraordinarily acute sense of smell possessed by the *Salmo* family, and relates in his own experience at his own Canadian salmon stream, where he has never used any attraction other than a fly, of noting large numbers of salmon and trout as having been attracted and drawn up from considerable distances down stream, from a quantity of spawn being attached to the stern of a canoe fastened at the river bank above.

In my experience with trout in the Rangeley Lakes, extending over many years, I have found that trout are divided up in various groups quite distinctly, and that such groups occupy certain localities apart from others during the greater part of the year. I speedily observed this early in my visitations during the winter, when for eight or ten years I made regular trips for fishing through the ice. This sport, then allowable, may not be considered as of high form by skilled fishermen, but was of much relief and delight to me then, closely occupied in business, and its auxiliary enjoyments of skating, sledging, snow-shoeing and roughing was no small part of such excursions. In these two weeks' outings, accompanied by a few friends, it was our habit to divide up, taking separate localities for setting lines with live bait. These localities would be a mile or two apart. At the close of the day as the different catches were laid out at camp and weighed, the distinctiveness of the groups were very apparent, so much so, that if mixed up they could readily be separated again. The different groups would vary in size and weight according to length, and very perceptibly in colors. The excess of weight from one locality would vary largely from the minimum group. One locality I have in view, where the trout were always of a more brilliant hue than elsewhere, and averaged from 1 to 3 pounds. The most opposite locality was

where the trout were long and very dark, and so sinuous that one of sixteen inches in length would weigh scarcely over a pound. I remember of catching one at this locality which was the longest trout I ever saw, thirty inches, which weighed but 6½ pounds, while from a photograph before me is a trout which weighed 11 pounds, and measured but twenty-eight inches in length, and another of 9¼ pounds measuring twenty-seven inches.

After the ice disappears in the spring, and at the spawning season, these habitating trout leave their localities more or less, but by no means lose their reckoning.

Trout, if removed from their habitats and dropped in any parts of the lake, will speedily return home; of this I have had abundant evidence. This is especially evinced during the spawning season, when trout taken away from a spawning bed will return with celerity. A particularly thin and slabby milter weighing about 2 pounds I purposely experimented with, by carrying him off into the lake a mile before liberating him from the towing car, and caught him at the first place again that evening. I liberated him the second time fully three miles away and found him the following morning at the old stand. One winter, while coming into camp, but three miles away, and stopping for lunch by the shore near a spawning bed well known to me for its handsome and plump trout, more beautiful than any in the lake that I have known of, and which until the lake was raised some ten or twelve feet, were annually there, I caught half a dozen trout from this place and brought them alive to camp in a box of water drawn on a hand sled; their escape that night from a sunken car at camp three miles distant was accidental from a loose slat; the next day I visited the first place, which I yearly was in the habit of doing; it was in the latter part of December, and there was some six inches of blue ice with a few inches of snow above it. It will be observed that some families of trout inhabit the spawning beds into January, and others commence spawning as early even as August, and possibly earlier. The water at this spawning bed was scarcely three feet deep below the ice where some feeble springs emitted a slight current; the bed was bright with white pebbles and sand, and a short time after opening a hole through the ice I watched the beautiful trout below returning after the disturbance, reclining upon a blanket with my head covered over by another, so I could readily observe the life below.

Trout, however much disturbed at a spawning bed, and however thoroughly driven away, will in a few moments return again. I recognized three of the trout which had escaped the night before, which had returned in the night, fully three miles beneath the ice and snow; they were distinctly marked in the following manner: The day before, when we halted for lunch, I had no tackle; Mr. Lawson Valentine, of New York, found he had in his valise half a dozen small hooks attached to light guts with red silk. With twine for line and meat for bait, the six trout were caught, no hooks were lost, but three broke off by the weak guts after the trout were on the ice, by their flopping about, and were left in the mouths of the trout to be after disengaged. I recaptured two of these trout without difficulty.

One may wonder at the quick return of these trout beneath the ice in the dark of the night, but it was comparatively simple. The general movements of the *Salmo* family occur in the night as in ascending streams, however tortuous or difficult, lying by in the daytime. Their feeding also is done principally after dark, when they are more daring and predatory, and they do not assume their full night vigor in the dusky twilight, nor by moonlight, but in the darker hours, when their boldness is conspicuous, and will take the fly of sombre color in preference to one of white. I have wondered with their night adaptiveness of sight how little their day shyness is indicated, when I have frequently had them in pursuit of small fish, dash up within hand reach on flat rocks or the sandy beach where I have been sitting.

The lake water appears uniform as does the sea to the casual observer, but there is a varying quality, and many currents in both. These qualities are not apparent to our coarser senses excepting in a very ordinary way, but the respiratory organs of the fish, the gills, etc., may be keenly sensitive to conditions of temperature and water admixtures, even as our sense of smell detects the faint odor of smoke in the country fields or forest. The different qualities of water in this lake of six miles in length which I am now looking out upon, are quite apparent to my taste, and I have often remarked the odor in drinking water from the sheltered coves, arising from vegetable matter; also in that taken from a forty or fifty-foot depth.

Every stream or rivulet which empties into the lake has a distinctive taste, apart from the others, stamped and impregnated with the quality of the ground and foliage through which it makes way.

The ice indicates perceptible to the eye the prominent instances in this respect; currents imperceptible to the eye are constantly moving in various directions, and are the directing signboards for the fish.

The trout liberated from the car mentioned striking out into the lake followed the currents familiar to them in their flowing to their accustomed haunts without difficulty.

Fishing frequently on the Pacific California coast in 1892, off the Santa Cruz, Monterey and Carmillo bays, where I made forty excursions with fresh fish bait in the months of July and August, I caught some hundreds of salmon by trolling with a light steel rod and 600 feet of line. I observed the following features: That as schools of salmon comprising many thousands came in from deep water following up the anchovies, sardines and squid, which came in for spawning, they would at certain periods, mostly all, disappear to be followed after a lull by other schools. I observed that the salmon would disappear a few days after a rise of water from either the San Joaquin and Sacramento rivers, emptying in the Bay of San Francisco, giving abundant salmon for the seining and canning works upon the banks of the latter. By the San Francisco papers the noting of the salmon arrivals would be four or five days after their disappearance from the Monterey waters.

The Japanese current known as the *Kuro Siwo*, the great current stream from the Yellow Sea, corresponding with the American Gulf Stream, pursues its way across the Pacific Ocean to the California coast, regulating the climate from California to Alaska as does the American Gulf Stream that of England, France and Iceland, pursues its way north some 300 or 400 miles west of Cali-

fornia until it reaches the long extending loop of the Aleutian Islands, which ends but a few hundred miles from the Asiatic coast. This loop of islands diverts the Japanese current inland and the stream curves in its route until it proceeds south along the Washington, Oregon and California coasts, and the remarkable feature is presented of two mighty streams but slightly apart, proceeding in opposite directions in greater volume than all the combined land rivers of the world could exhibit if united in one body.

The speed of this mighty current south opposite the outlet of the Bay of San Francisco is estimated at between thirty and forty miles per day of twenty-four hours. In this current pours the brackish and roiled waters of the bay.

The fresh water combining with the salt is quickly detected by the salmon a hundred miles below, and a general exodus of the salmon takes place, leaving but a few stragglers remaining.

In three or four days after their departure the canners on the Sacramento River are abundantly supplied by seiners.

Shortly afterward a fresh school came in which departed as those before after a few days following a fresh rise of the river waters, and appeared as in the first instance a few days after their departure at the usual seining localities. These instances occurring several times during my fishing period plainly indicated to me the result of the river freshets. No mistake could occur in the identity of the particular schools in disappearing from the Monterey waters and appearing at the Sacramento River, as the same class of salmon known as the King or Chinook, although inhabiting the Columbia River several hundred miles north of the Bay of San Francisco, average about 22 pounds in weight, while those of the Sacramento and San Joaquin rivers average almost exactly 17 pounds, as shown by the average weights taken at each locality.

No salmon-ascending rivers existing between the two mentioned points would clearly indicate the identity of the Monterey and Sacramento River class. So on the salmon of the Pacific coast go to their spawning grounds never to return to the refreshing sea again, or if by chance a few should be able to, their bruised condition and totally impaired digestive organs result in but a brief existence. No authentic instance is known of a river salmon's survival on the Pacific coast. If any had been taken they would show their identity by their disfigured appearance, which has never been observed.

In the banner year of 1902 15,000,000 salmon were canned on the coast; yet no serious diminution in numbers has occurred, nor have the results of conducted hatcheries shown great success, despite the general opinion to the contrary. Therefore the great mass of salmon regularly taken may be assumed to be the progeny of those who sacrificed their lives for successors.

That electrical elements are prominent features in the denizens of the sea and fresh water bodies, is clearly apparent and of undoubted efficient service, and may be a part of that element I have designated as scent, as a general sense which gives perceptiveness of fresh water in the sea, or of minerals and earth in solution from magnetic qualities. This electric quality, or whatever we may choose to call it, we observe in freshly-caught fish which curl up and break in cooking, giving a feature not apparent when fish have been kept a day or two.

Eels display this element prominently, and also the bullhead or horn pout. The marine mammals may receive large benefits from it in their long passages in the sea.

I am reminded of an account related to me by an English friend of a pet seal owned by some one he knew, who kept a lighthouse on the coast of England, which, captured when a cub, was domesticated with the family, being fed and allowed the range of the kitchen on the ground floor, to which the seal had ready access. This seal would make its way daily down to the water and pass many hours in the element, securing more or less food, but always returned to its place in the kitchen at night. Blindness finally came on with age to the seal, but it continued its journeys to the sea but returned home as regularly as before. Complete blindness finally came to the seal, and fully fed by the household, its visit to the sea became less frequent. As old age came on, it caused annoyance by its peculiar cry for food, and lessened ability to get about, so much so that the family accounted it something of a nuisance, and not wishing to kill it, arranged with a fisherman to carry it well off some twenty miles away and drop it in the sea, expecting it would naturally die in that element. But it appeared the second day after at its accustomed place. Another effort was made to get rid of it by arranging with a sailing vessel to take it several hundred miles out at sea and then drop it in. This was done, and a number of days passed away without the seal. Six or seven days after, during the night, the kitchen maid, who slept adjoining the kitchen entrance, fancied she heard the plaintive call of the seal at the kitchen door, but being of a superstitious cast, and believing the call was from the Banshee or bad spirit, covered her head beneath the bed clothes. In the morning the emaciated body of the lifeless seal was found at the kitchen door. The story may be authentic or not, but I do not consider its truthfulness to have been impossible.

The vegetable growth in the water, kelp, etc., and currents were familiar to the seal, and sight would have been of little aid to it compared with following the perceptions of its other senses.

Some naturalists have expressed the belief that fishes find their way to their spawning rivers or desired localities in a direct course by the pointing of instinct, and that alone. This conclusion does not seem to be well evidenced or satisfactory.

J. PARKER WHITNEY.

### Medicine in the Woods.

A FIRM of London chemists have devised a convenient way of putting up medicines in gelatine lamels. These lamels consist of thin, pliable sheets, subdivided into squares, each square containing an exact quantity of the medicine with which the sheet is impregnated. With a pair of scissors or a knife the required dose can be cut off.

### THE MANY-USE OIL

This famous reel oil never gums. Substitutes will fail you.—Adv.

## The Blue Crab.

BY W. P. HAY, M.S., PROFESSOR OF BIOLOGY, HOWARD UNIVERSITY.

(Appendix to the Report of the Commissioner of Fisheries.)

THE following report embodies the results of two summers' work (1902 and 1903) in the crab-producing region bordering Chesapeake Bay. The information was gathered incidentally in connection with a thorough study of the diamond-back terrapin, and on that account is by no means as complete as could be desired. Many of the theories advanced by the fishermen and packers regarding the blue crab have not yet been subjected to close examination, although every opportunity has been taken for this purpose. In some cases the reports secured were so contradictory that it is not deemed safe to express an opinion concerning them. Quite a number of facts, however, have been brought to light, and they are here presented in the hope that they may prove valuable to those engaged in the fishery or to those whose duty it is to secure the enactment of laws to regulate and prolong it.

### Distribution and Habitat.

The natural range of the blue crab is from Massachusetts Bay to some as yet undetermined point on the east coast of South America. On the coast of the United States it is common from Cape Cod to the southern extremity of Texas, and throughout the greater portion of this long coast line it is very abundant. Its favorite habitat is in the waters of some bay or at the mouth of a river, and it seems to prefer shallow water to that of much depth. Consequently, such bodies of water as Delaware Bay, Chesapeake Bay, and the protected channels along the coasts of Virginia and other South Atlantic and Gulf States, fairly swarm with these creatures. Chesapeake Bay is especially favorable and has long been famous, not only for the great number of crabs which it produces, but also for their large size and exceptionally fine flavor.

Although the blue crab is essentially an inhabitant of salt water, it is frequently found in water that is only slightly brackish or even apparently quite fresh. Specimens have been recorded from the Hudson River as far north as Newburg, and on creditable authority I have learned of the presence of an occasional individual in the Potomac River and the Eastern Branch opposite the city of Washington. At Crisfield, Md., and at other points along both the eastern and western shores of Chesapeake Bay, I have frequently observed the blue crab in ponds and ditches, often at a distance of a mile or two from the bay and in water that was nearly fresh.

### Power of Movement.

Either in the water or on land the blue crab is an animal of great activity and has considerable power of endurance. Progression through the water is effected by means of a sculling motion of the broad, oar-like posterior legs, and under ordinary conditions is slow, the effort of the animal being apparently only to keep itself afloat while it is borne along by the current. Under these conditions the movement is either backward or sidewise. The shell is held with the posterior portion uppermost, the legs are brought together above the back and strike backward and downward at the rate of from twenty to forty strokes per minute. When alarmed, however, the animal strikes out with great vigor and rapidity, moving its paddles too swiftly for the eye to follow; it moves through the water almost as rapidly as a fish and quickly sinks below the surface. When on the bottom and undisturbed, the crab may be seen to walk slowly about on the tips of the second, third and fourth pairs of legs, the large pincers being held either extended or folded close under the shell and the paddles either raised and resting against the back of the shell or assisting the movement by slow sculling strokes. In such cases the movement is in any direction—forward, backward or sidewise—although the usual direction is sidewise. If the animal becomes alarmed it moves away by a combination of the walking and swimming motions and often disappears like a flash. In fact, so rapid is the movement that it is almost impossible to see how it is accomplished. It is too steady and uniform to be a series of leaps, and the animal seems too far above the bottom to be running upon it; yet all the legs are in motion except the large first pair. Of the latter, the one on the side toward which the animal is moving is held straight out sidewise, while the other is folded under the shell.

### Method of Concealment.

The coloration of the crab is such as to harmonize very perfectly with the surroundings, and the animal attempts very little concealment if there are other objects on the bottom. Often, however, a clear, sandy bottom or some oozy pond will be found to be almost alive with crabs which have buried themselves until only their eyes and the antennæ are exposed. In thus hiding, the crab goes nearly vertically backward into the bottom and then, by a few movements, turns slightly, so that the shell rests at an angle of about 45 degrees. The material above settles down and effaces all traces of the entrance. It usually happens that the bottom affected by the crab is firm enough to render this operation somewhat slow, and it rarely attempts to escape pursuit in such a way. It seems probable that concealment is usually adopted as an ambush from which a sudden attack can be made on some passing fish.

In certain places, notably shallow ponds and streams which become nearly dry at low tide, the crab may be observed to dig rather large conical holes, apparently as reservoirs, and to take up its position in the deepest part. The work of making such an excavation often requires two or three hours, usually commencing soon after the tide has begun to ebb strongly and continuing until the edge of the excavation is nearly exposed above the water. The animal works from some suitable point, carrying away load after load of material clasped between the large claw and the lower surface of the front of the shell. It loosens up the surface with the tips of its second, third and fourth pairs of legs, grasps all it can carry and then moves off a few inches in the direction of the side which bears the load and deposits it so that it will not roll back. Thus the hole is gradually deepened and the surrounding circle built up and widened until it has a breadth of about a foot, with a depth of perhaps six inches. The crab then

settles itself into the sand or mud at the bottom of the hole and waits until the rising tide offers an opportunity to move about again.

The blue crab has very seldom been seen to come out on land voluntarily, although it is able to sustain life for several hours when removed from the water. In low, swampy situations I have occasionally seen an individual moving about in the dense grass or hanging to the grass just above the water, and in Miss Rathbun's paper, "The Genus *Callinectes*," there is a description by Mr. Willard Nye, Jr., of the migration of a large number of crabs from a small pond to the ocean over a beach 400 feet wide. They had been imprisoned in the shallow water and were forced by cold weather to make the excursion to deeper places.

During the molting periods the crab will always hide itself, if possible, under some submerged timber, rock, or bunch of grass. Here it will remain quietly until after its shell has been shed and the new shell has hardened.

The color of the crab is more or less variable, and it is believed by the fishermen that the animal is able to change its hue slightly to approximate the color of its surroundings. Light grayish-green individuals are said to be taken on sandy bottoms, while the dark olive-green are said to be found among the grass. This theory, however, is not very well borne out by crabs held in captivity in the live boxes, for there they retain their original colors, and even after they have cast their shells exhibit quite as much variety as before.

### Food.

The blue crab's food is of a varied character, but the animal is pre-eminently a scavenger and a cannibal. In the shallow waters of ponds and small tidal streams it preys to a certain extent upon small fish, which it stalks with some cunning and seizes by a quick movement of its large claws. In such situations, too, I have sometimes observed it nibbling at the tender shoots of eel grass or other aquatic vegetation, or picking at the decayed wood of some sunken log. Its favorite food, however, is the flesh of some dead and putrid animal, to obtain which it will travel a considerable distance from its hiding place. A piece of stale meat or a rotten fish will attract the crabs for several yards around, and they will swarm over the morsel until it is entirely devoured. The offal from stables and water closets which project over the water furnishes the crabs with many a meal, and in such spots numbers of the animals may be observed lying in wait for food.

Wherever crabs are abundant they constitute a source of great annoyance to fishermen, for they are adepts at stealing bait from the hooks, and will return time and again after having been drawn to the surface of the water and apparently frightened away.

An injured crab, if thrown into the water, will be speedily set upon by its associates and torn to pieces. Even one that is uninjured, if small or in the soft-shelled condition, is likely to be captured and eaten by stronger individuals.

In eating a bit of food the crab first grasps it in the large claws and pushes it back under the front of the shell, where it is seized between the tips of the second pair of legs and pushed forward and upward to a point where it can pass between the third maxillipeds to the jaws. These strong organs masticate the food while the other mouth-parts prevent the escape of the smaller particles. It is then swallowed and the complicated set of teeth in the stomach reduce it to a thin fluid mass before it is allowed to pass into the intestine.

Digestion in the crab seems to be a rapid process, for the food disappears so quickly from the stomach that this organ is usually found to be perfectly empty within a few minutes after having received a full meal. It is a common idea among the fishermen that food is not retained in the crab's stomach at all, but this I have disproved by numerous dissections.

### Reproduction.

The sexes of the crab are separate, and reproduction is effected by means of eggs, which are laid by the female after copulation.

Crabs may be found pairing at almost any time during warm weather, but there seem to be five or six periods between early June and the beginning of cold weather, when the act is at its height. During these times mated crabs, "doubblers," as they are called by the fishermen, are found in considerable numbers, either lying on the bottom in shallow water or swimming at the surface. It appears that the male crab is able to distinguish the female which is about to shed her shell, and having found such a one, seizes her and carries her about with him, sometimes for a day or two, until the shedding of her shell is imminent. He then places her in some sheltered place and stands guard over her ready to repel the advances of any other male. At this time the female invariably is of the virgin form, and copulation has not taken place. When she sheds her shell, however, she has passed into the ovigerous form, the broad semi-circular abdomen of her new condition having been withdrawn from the shell of the narrow triangular abdomen of the virgin form. She is now ready for copulation, and is immediately approached again by her mate. When the female is ready to produce her eggs for this act it seems that she seeks the ocean or the mouth of some large bay. In Chesapeake Bay mating crabs are abundant at least as far north as Annapolis, but a crab with eggs is very seldom found there. On the other hand, at Cape Charles City, Va., at Hampton, Va., and neighboring points, egg-bearing females are far more abundant than either males or virgin females during the latter part of summer, but apparently do not often come into shallow water.

The eggs of a crab are very minute, about one-one hundredths of an inch in diameter, and they are very numerous, it having been estimated that a single female may produce as many as 3,000,000. As soon as the eggs are laid they adhere to the fringes of hairs on the swimmerets and form a mass which is nearly a third as large as the female's body. They are carried about thus until they hatch, when the young, after clinging to the mother for a short time, loosen their hold and begin a free existence.

### Molting.

In practically all the lower animals whose bodies are incased in a tough unyielding covering, extension in size

and any change of form occurs not gradually and continuously, but suddenly and at intervals, and is always preceded by the casting off of the confining skin or shell, a process known as molting or ecdysis.

As the crab approaches the shedding period it begins to show its condition by various external "signs," which are well known to the fishermen and are of great importance to them. The first indication is a narrow white line which appears just within the thin margin of the last two joints of the posterior pair of legs. This line is so narrow and so obscured as to be barely visible, but it is immediately detected by the expert, and the individual bearing it is classed as a "fat crab," or more vulgarly as a "snot." Within three or four days the white line gives way to an equally narrow and obscure red line, and a set of fine white wrinkles makes its appearance on the blue skin between the wrist (carpus) and the upper arm (meros). Such a crab is known as a "peeler," and may be confidently expected to cast its shell within a few hours. As the time progresses the marks become more and more evident, and a reddish color (especially in virgin females) begins to appear at the margins of the segments of the abdomen. Then, on the under surface of the carapace, extending from the neighborhood of the mouth around the sides and backward to the posterior margin, there appears a narrow fracture, so that the whole upper surface of the shell can be raised up from the back like a lid, to expose the soft body beneath. Such a crab is termed a "shedder" or a "buster." At this time the animal usually lies motionless, but if disturbed is still capable of movement, and may crawl or swim slowly away. It is incapable of showing any great muscular force, however, and can inflict only an insignificant pinch with its claws.

The actual casting of the shell is now a matter of only a few minutes; a quarter of an hour will usually suffice, though the operation may be prolonged to three or four times that period if the crab is disturbed or if it is suffering from some recent injury. In the latter case it is often unable to complete the process and dies. By convulsive, throbbing movements the hinder pair of legs begin to be withdrawn from their encasement and are finally freed. Meanwhile, the other legs have been started out and the body has begun to protrude more and more from the shell. At last everything is out except the front of the body and the large claws, but the latter, on account of the great discrepancy between their size and that of the narrow articulations through which they must be withdrawn, require some further effort before they can be freed. The thing would hardly be possible at all were it not for the fact that on the upper surface of the large segment of the arm (meros) a broad triangular surface of the shell becomes loosened and rises up like a flap to make way for the crowded tissues within. Some of the hard shell of the other lower (proximal) segments also seems to become softened and elastic, so that by a steady pull the great pincers are finally drawn through. Thus the crab has backed out of its shell and meanwhile it has grown, for if it is caught and measured it will be found to be considerably larger than it was before.

The skin is soft and the animal looks and feels flabby and helpless. The back is wrinkled, and the "horns," or large lateral spines, are curled curiously forward. Within a few minutes, however, the body fills out, the horns straighten, and the growth at this interval is complete. The crab is now known as a "soft-shell," and from the æsthetic standpoint is at the height of its glory, for all the brilliant coloration of the various parts is undimmed by any of the shell deposits, the soft integument seeming to bear the bright pigments at the very surface.

Under natural conditions the crab usually selects some place of concealment in which to pass the period of shedding, and probably does not leave it until the new shell has hardened, but it is by no means helpless, even immediately after ecdysis has occurred. On the tips of legs which seem too soft to support any weight whatever it can walk away, or, if forced to make the effort, can swim. The new shell hardens quickly. Within twelve hours it becomes parchment-like and the crab is called a "buckler," "buckram," or a "bucklum"; in two or three days it is as hard as ever and once more starts out in search of food.\*

### Autotomy.

Autotomy, or the automatic throwing off of the appendages, is very characteristically shown in the blue crab and is of frequent occurrence. Very often if a large individual, in the hard-shelled condition, is captured and held by one leg it will snap the limb off and make its escape. Likewise, if one of the legs is injured toward the tip the entire member will be dropped off. The breakage always occurs at the same point—across one of the segments near the base of the leg—and is a provision of nature to prevent the animal from bleeding to death. It is practiced ordinarily only by the hard-shelled crabs; an injury to a soft-shelled individual usually causes death. Under other conditions, however—notably, a sudden lowering of temperature—the act has been observed, and in one of the early attempts to procure soft crabs for market, by confining the hard crabs in an inclosure until they had shed their shells, severe cold weather reduced the entire catch to a lot of legless bodies ("buffaloes," they are called by the fishermen).

Autotomy seems to be limited to the legs, for, so far as I have been able to determine, none of the other appendages are ever thrown off, although if they are forcibly removed they will be regenerated.

Regeneration of the parts cast off usually follows autotomy, but, according to the researches of several biologists, will not take place indefinitely. Three or four times seems to be the limit. The process of regeneration is quite rapid. At the first molt after a limb has been cast off, provided that the injury does not occur immediately before a molt, the new limb appears as a small bud in which all the missing segments may be found, coiled in an elongate spiral. At the next molt the segments straighten out and the new limb, except for its smaller size, looks like the one which was cast off. Another molt, possibly two, will be sufficient to restore the limb to its full size.

\*It is believed by the fishermen that the molting of the crabs is influenced largely by the moon and the tides, but the evidence to support this theory is very contradictory.

## Fishing Tackle Shop Talk.

LLOYD J. TOOLEY'S great casting with half-ounce weight at the tournament held recently in Chicago has proved what the writer long ago claimed in these columns—that guides and tops on fishing rods are often so large that instead of being an advantage they are a positive detriment to long-distance casting. The writer, after a great deal of experimenting, has arrived at the conclusion that a rod should have four guides if 6 feet long, and three guides if 5½ feet long or less, the minimum length being 5 feet; and that both the guides and the top should be 5-16 inch caliber—no more and no less. This conclusion is based on the following arrangement of guides and top: An agate first guide, preferably .25 inches from the reel and not less than 20 inches; the guide raised well off the rod; German silver single-ring guides, the ring quite thick and of perfectly round wire, raised in the same manner as the agate guide and equally strong; and an agate top held by two wires, ending in a taper tube, with the agate offset enough to insure the free running of the line through guides and top without touching the tip during delivery. This for casting with half-ounce rubber frogs or weights under tournament conditions.

Now let us see what Mr. Tooley used in his great work, making the best single cast on record, 194 feet 8 inches, and averaging 176<sup>2</sup>/<sub>100</sub> feet in five consecutive casts on the grass, he standing on the ground level. His rod is 4 feet 10 inches long, made in two pieces, consisting of a 16-inch butt fitted with a double hand-grasp and the Kalamazoo style finger trigger or hook, so placed that it would fit the second finger of the right hand; and a tip 42 inches long, the material of the rod being split-bamboo, six-strip. This rod is equipped with three agate guides and an agate top. The first guide is ¼-inch caliber and is ⅜ inch above the raised rod; the second guide has a caliber of 3-16 inch and is raised 5-16 inch; the third guide, caliber ¼ inch, is raised ¼ inch; the top, caliber ⅜ inch, is raised ¼ inch above the plane of the tip.

While the writer's deductions and those of Mr. Tooley do not agree, both prove, if anything, that the immense guides seen on many of the so-called Kalamazoo style casting rods are not necessary for long distance bait-casting, while Mr. Tooley's high scores in the Kalamazoo delicacy and accuracy events seem to show that his rod is equally adapted to fine and long-range work. But the writer's conclusions were based on the use of metal guides, only the first guide and top being agate, whereas Mr. Tooley employs agate exclusively. In this there is an immense advantage, since smaller guides can safely be used; but the writer proceeded on the theory that very few anglers care to expend from \$5 to \$10 on guides and tops alone, when by using agate first guide and top they can reduce the wear on the line materially. For everything but tournament use such guides are good enough. It seems, therefore, that 5-16 inch is the proper caliber for such fittings, for if the caliber is decreased toward the top there is too much danger of the line sticking to the metal guides and the top. Nothing apparently can be gained by going above this caliber, Mr. Tooley claiming the reverse applies; and the writer has indeed found this to be true with reference to large metal guides, his experiments including a great deal of casting with a rod 4 feet 11½ inches in length, and others of 5, 5½, 6 and 6 feet 2 inches.

Before going further, it should be said that the reel used by Mr. Tooley was not specially made for tournament use, but was taken from the manufacturer's regular stock, was used by him in all his recent fishing, and sells at a popular price at tackle stores throughout the country. The spool is long, as it should be for long-distance casting, and to be under perfect control.

The writer regrets that he does not know what line was used, but without doubt it was H size, and of hard braided silk, since it is claimed by many experts that they can do better casting with this size than with the regular tournament lines, and this seems to apply where one casts on the grass and the line is always dry. It also applies to very hard lines used in casting on the water; but an H line that will swell when thoroughly soaked is not so good as the tournament size. If one could spool the line evenly the smallest size would be superior without doubt; but one cannot do this with a quadruple multiplier without devoting a great deal of time to it, and the consequence is that wherever there is an opening between the coils the line will be pulled under, and this alone causes overrunning very often, particularly with fine lines. Too much cannot be said in relation to the proper line for certain casting, and one who wishes to do good practice work with the modern rod and free reel may blame either one of these when the fault is properly found in the line. Therefore, the line must be of the best. The reel will give good service, if it is mechanically perfect, whether it cost \$5 or \$50; and if the rod is of the right sort and the guides adapted to the work, then the caster must lay failures to personal errors. One may cast for an hour at some mark without getting a backlash; but if he will make five casts for accuracy at each of four marks placed 50, 60, 70 and 80 feet distant, then five casts for distance, he will find that a single backlash will cut down his score badly, and it is just such practice as this which shows how thoroughly he is prepared to risk twenty-five casts and not spoil the total by a fluke. He will find it discouraging; should he go into a tournament to make good scores at 50, 60, and 70 feet, then fall down and have some twenty or thirty points demerit tacked on his score as a penalty for losing control of the reel.

It may be argued that tournament and fishing conditions differ, and that there is no real advantage in casting 40 or 50 yards in fishing. While it is true that one does not always find it an advantage to cast long distances, the practice one obtains with the tournament rod enables him to master his tackle in fishing, whether he casts 10 yards or 50, and this practice is invaluable to any angler. Then there are times without number when one finds it an advantage to cast very long distances, and one who can do this will never regret the possession of the skill. At the same time casting practice should include delicacy and accuracy, as well as

distance, since one does not often have occasion to merely comb the widest possible portion of fish water by long casts when well directed casts, be they long or short, will prove more fruitful in the long run.

While one can use a short tournament rod for both casting and trolling with success, the longer rod requires more skill, and is the more sportsmanlike without doubt; but it would be difficult to find a more satisfactory weapon than the little light rods that come under the modern term "short bait-casting rods." A 6-ounce rod 6 feet long or a trifle more, nicely balanced and not thicker than 15-32 inch at the winding check, seems to the writer to be well within the present-day trend toward lighter weapons for sport in forest and stream; and if the fish is given a fair chance to escape and not yanked up to the boat in the shortest possible time, the angler will enjoy the sport fully as much as he formerly did with 9 or 10-foot rods of much greater weight. The little 60 and 80 yard free reels lack great power. They are not to be regarded as winches with which to haul heavy fish out of the wet in the twinkling of an eye, nor are the short rods intended to be used as derricks, although they are somewhat stiffer than longer rods of the old days. Employed properly, however, one can enjoy the best of sport with them, and it may be a long time ere they lose popularity.

Some good things are being shown by manufacturers and inventors now, at the beginning of the selling season for tackle for next year's use. Among these the writer has been shown a line dryer which is no larger than a business envelope, a trifle more than ½ inch thick, weighs about 7 ounces and has no loose parts. It was shown that in one minute this device could be clamped on the rod, the hook, with sinker, cork or what not; in fact, attached to an eye made for the purpose, the line caught over two arms and the winding begun. Sixty yards of line can be wound on it singly, or 120 yards if double. The rod may be put away in the tent while the line dries, and in this shape the hooks are held securely to the dryer. In the morning the rod is taken out, the line reeled off the dryer and the latter detached, all without interfering with any attachments on line or rod. A simple arrangement prevents the line from twisting while it is being wound on the device.

Another device that is being perfected, but which I am not at liberty to describe at present, is intended to prevent the line on the reel from overrunning. It is a very simple but positively effective device, and if put on the market will save the beginner a lot of trouble, since he can use it with a free-running multiplier, yet all backlash is prevented.

E. J. Mills, who cast 120 feet with the fly at Chicago, has shown me a couple of the weights used in the bait-casting events there. With them a good many anglers may already be familiar, but for the benefit of those who are not, it may be said the ½-ounce weight is made of hardwood with a brass eye at the rear end and a section of lead at the nose, this held in place with a round-head steel screw. The length over all is a trifle more than 2 inches, and the diameter perhaps ½ inch. The device is in the form of a rather thick, short cigar, or, more properly, a torpedo. The "bow end" has just enough lead to carry the weight smoothly through the air. The ¼-ounce weight is very little smaller, but of the same form and construction.

Compared with the soft rubber frogs used in the tournaments at Madison Square Garden, an expert bait-caster ought to double the length of his casts, using these weights. But the frogs will not hurt spectators in the event of a line breaking during a cast, whereas one of the weights might cause severe injury, and such as these will hardly be likely to find favor here. Besides, it requires skill of no mean order to cast a rubber frog 143 feet 8 inches, as R. C. Leonard did last spring at the Garden, where the conditions are more trying than obtain outdoors; and if any contestant breaks Mr. Leonard's record, it will be something to be proud of.

The writer recently had the pleasure of trying a rod fitted with guides of a new design—and which, by the way, are raised somewhat like Mr. Tooley's guides, referred to above. But they are part of a complete set, which will include an agate first guide, two or three hard metal guides, and an agate top, and are not yet perfected, although they seem to be a great improvement over some of the existing types.

PERRY D. FRAZER.

## The Mississagua River Country.

In response to inquiries, Mr. L. O. Armstrong, of Montreal, writes of the Mississagua River region:

The nearest hotel is at Biscotasing. The best map may be had of the Crown Lands Department, Toronto; Geological Survey Department, Ottawa, Canada. Guides' addresses are: Wm. Harris, Jr., Day Mills, Ont.; Hudson Bay Company, Biscotasing, Ont.; J. J. Huston, Thessalon, Ont.; John Reid, Desbarats, Ont. Mr. Harris will contract for parties of not less than three in number, to supply canoes, tents, guides (one to each person), provisions, etc., in fact, everything but blankets and personal belongings, for \$6 per head per day. The other guides generally charge for independent parties \$3 per day and \$2.50 for assistants. The Canadian Pacific Railway has the best cedar canvas-covered canoes stored at Biscotasing, which they sell to sportsmen and tourists at cost price, \$40 each, paddles \$1.50 each extra.

## The St. Marguerite.

PHILADELPHIA, Pa., Oct. 6.—*Editor Forest and Stream:* In FOREST AND STREAM of Sept. 9 I note that your valued contributor, Mr. Chambers, in summing up the season's salmon fishing refers to certain rivers that proved good and others poor. Among the latter he includes the Ste. Marguerite as giving its fishermen poor sport. If this is the fact, I have in anticipation cause for great rejoicing. W. A. Macleod, of Boston, and myself are now sole owners of the upper portion of the Southwest branch of this river, having purchased it last spring from W. D. Winsor, of this city. This had previously been owned by David Blanchard, of Boston, and adjoins the waters so long

fished by our genial friend, Walter Brackett. Although this purchase was not consummated until July, thus losing a week or ten days' of best fishing, I think my record there was quite sufficient to satisfy the most exacting fisherman.

I arrived at our camp Wilmac with my son July 5 and commenced fishing on the next day, remaining on the stream about two weeks. During this time our total catch was sixteen salmon, weighing on an average 22¼ pounds, the largest 36 pounds. Mr. Macleod followed me and caught a large number, but the average weight was not quite as high.

Of course Mr. Chambers could not have known of our (to us) good luck, or he could not have included the Ste. Marguerite in his list of poor rivers. While there I heard there was an unusual run of large fish early in the season, and I know the members of the Ste. Marguerite Club, who are located on the Northwest branch, had remarkable fishing for a few days.

In writing this I realize that this is not of particular interest to anyone but ourselves. However, inasmuch as you asked your readers to "report their luck," I think this record is such as to feel proud of, and very hard to beat.

H. O. WILBUR.

## The Maine Salmon Preserve.

*Editor Forest and Stream:*

Here is testimony regarding the value of the Dennys River, in Maine, which cannot be gainsaid. It is one of the five rivers included in Dr. R. T. Morris' proposed segregation for appreciative anglers. The writer, Walter Brackett, who has a record and reputation, was on his salmon river, the Ste. Marguerite, at the time of writing. He was then in his seventy-sixth year. His elder brother, Ed. A. Brackett, of Winchester, Mass., who was reappointed State Fish Commissioner by the Governor last fall, is eighty-five years old, and has published two volumes of original poems and miscellaneous matter within the past two years. These are remarkable instances of vigorous longevity.

CHARLES HALLOCK.

"SAGUENAY COUNTY, Province Quebec, July 28, 1899.—*My Dear Friend Hallock:* I was much surprised to know that you were at Dennysville for the season. Pray what called you to my old stamping ground, where I have killed as many as fourteen salmon in a short season, but not where there were any slabs or sawdust? The place where I killed nearly all my fish is about a mile and one-half from the village, and a third of a mile above the site of an old mill, at the upper end of a long stretch of still water. I also used to get a few fish both above and below the falls near where the bridge on the Machias road passes. Mrs. Brackett is very well, as is also my son Arthur. As for myself, I am as well as I was thirty years ago. Seventy-six the 14th of last month, and able to kill a dozen salmon per day, if an opportunity should offer. I shall be home by the middle of September, and shall hope to see you when you pass through Boston.

"With the kindest regard, and wishing you all possible blessings, I am, as of old, your sincere friend,

"WALTER M. BRACKETT."

## Cannibalism of Bass.

*Editor Forest and Stream:*

Attempts innumerable have been made to raise black bass by the usual methods employed in raising trout, wall-eyed pike, etc., in a fish hatchery, but failure has invariably resulted. The idea of propagating bass in a hatchery has not yet been given up. As I understand it, the method employed is to remove the large fish the moment the young fry are able to swim. In this way the diminutive fish are given a chance for their life, and being protected until they are of sufficient size to be turned loose with safety into a stream or lake. The purposes of a fish hatchery are, practically, carried out by this method, although the primary details are entirely different from those in connection with the hatching of trout.

The finding of a hundred little bass in the gullet of a grown bass, as referred to by *Micropterus*, leads one to believe that the life of a bass fry was anything but one long sweet song.

When one considers the cannibalistic tendencies of bass, and trout for that matter, it is a wonder that we have any trout or bass fishing at all. Yet, on the other hand, if it were not for just these tendencies and practices on the part of our game fishes, it would be a case of going into a stream when you wanted trout or bass and throwing them out with a pitchfork.

CHAS. CRISTADORO.

## Fishing Notes.

SAYRE, Pa., Oct. 6.—Susquehanna River fishing conditions have been far from satisfactory for the greater part of the season, and while there have been a few really good days of bass and pike fishing, the season for the most part has been what the market reporter would describe as only "fair to middling."

Frequent rains have kept the river in an unsatisfactory condition except at brief intervals. Oct. 3, on the Chemung River, three men in a boat (magic combination!) caught eighteen black bass, the largest of which weighed 3½ pounds, and the smallest 2½ pounds. This was really the finest creel of bass seen on the streets of Sayre this season.

As a matter of fact, local anglers tell me that the Chemung in this locality has furnished better fishing than the Susquehanna this season, although fortunes may be retrieved on the Susquehanna during the next few weeks, if the present run of fine weather continues, for now, of all days of the year, yellow bass, alias pike-perch, alias Susquehanna salmon, are biting most freely. Above Sayre, say from two to six miles, are some delightfully pictured waters that yield enormous yellow bass, whose fighting qualities are above reproach and whose strength test the strongest tackle.

M. CHILL.

## Susquehanna Bass Fishing.

OWEGO, N. Y., Oct. 2.—*Editor Forest and Stream:* The fishing for black bass has never been as good in the Susquehanna River as it is at present. Large catches are universal.

W. L. H.

# YACHTING

## The Provincetown Hoodoo.

BY WILLIAM LAMBERT BARNARD.

We're not true Christians,  
So 'alf the parsons tell,  
We're silly, superstitious;  
But I know bloomin' well,  
That when from East to West direct  
Through all the seas you sail,  
You'll see a lot of queerer things  
Than Jonah and the whale.

—The Limejuicer's Philosophy.

This is a true story.

When one thus prefaces his narrative you have a right to be as skeptical as prosaic experience and lack of imagination may warrant. Nevertheless, my story is a plain, unvarnished statement of facts. They may owe their correlation and sequence to nothing more substantial than coincidence. But that is for you to decide. I cannot.

It is true that long experience on the water and association with men of the sea may have wrought in me a certain respect for the standard superstitions of their calling. I admit that I believe it unlucky to begin a voyage on a Friday, or the 13th of the month. Experience has convinced me of that. Every time that I have started on a cruise on such a date I have been pursued by bad weather, foul winds, accidents and mishaps of every description. Why, I once—you know Mr. Kipling's apology. But prior to the summer of 1901 I had never placed any confidence whatever in the hoodoo superstition. I won't say that I do now, that is, not fully.

So much, by way of introduction, to convince you of my intention to relate the following facts with utmost candor and exact truthfulness. I have witnesses to bear me out in every statement, and I would willingly submit herewith a sworn affidavit that what I am about to relate is "the truth, the whole truth, and nothing but the truth." To present such an affidavit before my word has been challenged would be more likely, however, to excite your incredulity than to induce your acceptance of my story.

I first visited Provincetown in July, 1901, when cruising on a friend's knockabout, Oewah. Going ashore that Alfred might telephone his wife (have you ever noticed how married fellows cruise—from telephone to telephone, ringing up their better halves to shout, "I am all right, kiss Lottie, good-by") we found that we must wait some time for him to get a clear wire. In order that I might see all that was "doing" on Provincetown's main thoroughfare, generally thronged with a kaleidoscopic throng of summer boarders, native Cape Codders and "Gees," I took up a position on the front steps of the shop—perhaps "store" is the more common word on the Cape. I was not aware that anyone had approached me, but suddenly felt a light touch on my shoulder and heard, in a small boy's voice, "Say, Jack, you're a nice fellow."

I could but admit the soft impeachment.

"Say, Jack," continued the freckled-faced, stubby-nosed youngster, again stroking my shoulder, "Say, Jack, you're a nice feller; gimme a cent."

I told the flatterer that I had nothing less than a dime. He wriggled a bit, shuffled the dust with his bare feet and, with an air that Caesar might have assumed when he crossed the Rubicon, said decisively: "Say, Jack, you're a nice feller. If you hain't got a cent, gimme the dime."

I hesitated, was about to yield, when suddenly the door of a store across the way flew open and a man called to me in alarm: "Hi there, that kid's the town hoodoo. If he teches ye he'll put a spell on ye, sure!"

"Say, Jack, I ain't no hoodoo. Folks only say I am," wailed the urchin. I—well I had fled to the depths of the store. Not that I believed in a hoodoo, but I—well just because the doctors tell you that spinal meningitis is not contagious you do not make it a point to consort with the victims of that disease.

But mark the course of events. When we returned to our dinghy the ebbing tide had left her high and dry on the flats back of the New Central Hotel. Taking off our shoes and stockings we dragged the boat down over the mud and waded out with her until there was water enough to float her. In so doing I stepped on a broken bottle and cut my foot to the bone. That night I had an attack of asthma, a thing I had escaped for two years and had never before suffered from when on the water. The next morning fog delayed our departure. We accordingly dined ashore at Captain Smith's hotel, where I swallowed a fish bone and had the most severe choking fit that I had ever experienced.

When we did reach Newport, Alfred, instead of the extra trousers for which he had telegraphed, received a pair intended for a boy of five years. Alfred is over six feet and weighs about two hundred.

But, levity aside—throughout the remainder of our cruise we experienced nothing but fogs with either a gale or dead calm. Added to these mutual troubles I had more asthma and another choking fit.

So much for experience No. 1.

I did not see Provincetown again for two years. But in 1903 I undertook to take a racing eighteen-foot knockabout from Boston to Bristol. On such a small boat, and one without a cabin, it was necessary to eat ashore as often as possible. So at Provincetown my companion and I sought the New Central Hotel. After a hearty meal we took possession of arm chairs on the hotel piazza and watched "the procession." I was telling Chandler about the hoodoo and laughing with him. He thought me quite a romancer.

Of a sudden I felt a light touch on my shoulder and heard, in a small boy's voice, "Say, Jack, you're a nice feller."

Chandler's chair came down on all fours with a bang. There at my elbow was the self-same youth as before, unchanged, save by the addition of a few inches in stature, a few more freckles, long trousers and a pair of shoes.

Let me say here that it was apparently impossible for anyone to have approached us unobserved, for the piazza was railed, was some two feet above the street level, and we were sitting with our chairs tilted against the building. Yet there he was, and on the same quest.

"Say, Jack, you're a nice feller; gimme a cent."

"Now, look here, boy," said I, "you put a hoodoo on me once, so don't touch me again and—get out!"

But he only smiled mournfully, stroked my shoulder again and began: "Say, Jack, I ain't no hoodoo. Folks—"

Determined to show no fear of a mere superstition I picked him up, politely (there is such a thing as hurried politeness) lifted him over the rail and dropped him.

I have heard all manner of men swear, but that youngster—well, he was not artistic, but he was certainly voluble and forceful.

On the way back to the boat I was glad that Mr. Horne's thoughtfulness in providing a float for visiting yachtmen had removed all possibility of treading with bare feet upon broken glass.

The next morning we made a really remarkable run, as far as Nausett, where, without warning, the wind switched around, headed us off and blew great guns out of a clear sky. We fought our way down to Monomoy, but had to anchor and spend the night on the shoals in a sea that necessitated the use of oil to keep the Ayaya from being swamped. Daylight brought no better conditions and we were reluctantly compelled to retreat to Provincetown. We reached there after having had but one meal, thirty minutes' sleep and wet clothes most of the time in forty-eight hours. Arriving there, Chandler left me. He had "promised his parents," he apologized, he was awfully sorry to miss the fun, but—he left.

A long and tedious search ashore, during which I kept one hand on my sheath knife, secured a splendid man to finish out the trip with me. We had a beat to Monomoy in a double reef breeze, but rounded the point at dusk and were congratulating ourselves that we would soon make Hyannis, when the wind backed to southeast and at once blew a gale. We had to anchor and take it. I have written the reasons before, so will content myself with the bald statement that it blew sixty miles an hour all night; we were, pray remember, in a light-built racing craft with a flat bow. I was washed overboard but did get back without injury—no thanks to the hoodoo.

In the morning we ran into Hyannis. After a day there we started again only to break our centerboard whip, which, as her centerboard did not come above the rabbit line, caused more delay, and repairs being impossible we finished the trip with Ayaya in a semi-disabled condition. We arrived at Bristol too late to deliver the boat to the Herreshoff yard that night, but in time for Mr. Herreshoff to mistake me for a thief and treat me like one.

I then for the first time told Sparks, my man from Provincetown, of the hoodoo, describing his appearance. "What, that kid?" he queried. "Why, that's Peleg Nye's boy. Of course if he touched you that accounts for everything. When I get home I'll kill him this time for sure."

Now, he knew the boy and whereof he spoke.

So much for experience No. 2.

In June of the following year, 1904, my wife and I visited Provincetown on our boat, Sassoon. Observe that her name is composed of seven letters and a double "o." This, according to a yachting superstition, is a very lucky combination. Those of you who recall the exploits of the Papoose, Baboon, Gosssoon, Rooster, Tunipoo, Harpoon, Dragoon, Lookout and Outlook will appreciate the force of this superstition.

On going ashore I determined to keep my "weather eye peeled," as they say. A few hours passed off serenely. Then, while reading the inscription on the Pilgrim Monument in front of the town hall, I heard a familiar voice addressed to my wife, "Say, lady, you're a nice lady." (I had neither seen nor heard anyone approach us, and my wife subsequently informed me that the first knowledge she had of the stranger's presence was when he suddenly spoke.)

I looked up hurriedly, gave one gasp, seized Mrs. Barnard's arm and started on a run for the wharf. Naturally enough, my wife was very much surprised and startled.

"Did he touch you?" I asked.

"He? Who?"

"The hoodoo; that boy."

"That poor little chap. No. What's the matter?"

"Nothing. But we're going to go on board at once and sail at daybreak."

Which we did, and had no misfortunes thereafter.

It may have been due to the Sassoon's lucky name, it may have been because that boy did not touch either of us; it may be that he is not a hoodoo or possibly there is no such thing. But the only time I went to Provincetown and escaped immediate trouble thereafter was the only time I escaped being touched by my freckled-faced, stubby-nosed tormentor.

Were I facetious, like Mark Twain, I would tell you that if you doubted my word you could go to Provincetown and see the New Central Hotel and the Pilgrim Monument. Being serious, however, I can only refer skeptics to the "Cruise of Oewah" in the March, 1902, issue of the National Sportsman; "Hull to Bristol" in FOREST AND STREAM, Volume 62, Nos. 1 and 2, and "Little Trips Around Boston," in FOREST AND STREAM, Volume 63, No. 26, or, if you wish to see a statement of all the facts supported by an affidavit, you can doubtless find my report before the twenty-fourth annual meeting of the

American Society of Psychic and Legendary Research, in the bound volumes of that Society's reports, if you can find a set.

As I said at the beginning, I can only chronicle the facts, I cannot explain them. Can you?

## Tacking Ship Off Shore.

(From FOREST AND STREAM, Jan. 23, 1890.)

The weather-leech of the topsail shivers,  
The bowlines strain, and the lee shrouds slacken,  
The braces are taut, the lithe boom quivers,  
And the waves with the coming squall cloud blacken.

Open one point on the weather bow,  
Is the light house tall on Fire Island Head,  
There's a shadow of doubt on the captain's brow,  
And the pilot watches the heaving lead.

I stand at the wheel, and with eager eye  
To sea and to sky and to shore I gaze,  
Till the muttered order of "Full and by!"  
Is suddenly changed for "Full for stays!"

The ship bends lower before the breeze,  
As her broadside fair to the blast she lays;  
And she swifter springs to the rising seas,  
As the pilot calls, "Stand by for stays!"

It is "Silence all!" as each in his place,  
With gathered coil in his hardened hands,  
By tack and bowline, by sheet and brace,  
Waiting the watchword impatient stands.

And the light on Fire Island Head draws near,  
As, trumpet-winged, the pilot's shout  
From his post on the bowsprit's heel I hear,  
With the welcome call of "Ready! About!"

No time to spare! It is touch and go;  
And the captain growls, "Down helm! Hard down!"  
As my weight on the whirling spokes I throw,  
While heaven grows black with the storm cloud's frown.

Hight o'er the knighthoods flies the spray,  
As we meet the shock of the plunging sea;  
And my shoulder stiff to the wheel I lay,  
As I answer, "Aye, aye, sir! Ha-r-r-d a-lee!"

With the swerving leap of a startled steed,  
The ship flies fast in the eye of the wind,  
The dangerous shoals on the lee recede,  
And the headland white we have left behind.

The topsails flutter, the jibs collapse,  
And belly and tug at the groaning cleats;  
The spanker slats, and the mainsail flaps;  
And thunders the order, "Tacks and sheets!"

'Mid the rattle of blocks and the tramp of the crew,  
Hisses the rain of the rushing squall;  
The sails are aback from clew to clew,  
And now is the moment for "Mainsail haul!"

And the heavy yards, like a baby's toy,  
By fifty strong arms are swiftly swung;  
She holds her way, and I look with joy  
For the first white spray o'er the bulwarks flung.

"Let go and haul!" 'Twas the last command,  
And the headsails fill to the blasts once more;  
Astern and to leeward lies the land,  
With its breakers white on the shingly shore.

What matters the rain, or the reef, or the squall?  
I steady the helm for the open sea;  
The first mate clamors, "Belay, there, all!"  
And the captain's breath once more comes free.

And so off shore let the good ship fly;  
Little care I how the gusts may blow,  
In my fo'castle bunk, in a jacket dry,  
Eight bells have struck, and my watch is below.

WALTER MITCHELL (born in Nantucket, Mass., 1826).

## Tabloid Journalism.

"We haven't an inch of room. Everything must be kept down," declared the managing editor, who was a staid and elderly personage.

Next day he sent for one of the sporting reporters. "Here," said the editor, handing a copy of the paper to the reporter, who had supplied reports of yacht races and horse races which had been held at a certain place out of town, "what do you mean by this?"

The reporter read the paragraph indicated by the editor, and then asked:

"What's the matter with it?"  
"What's the matter with it?" snapped the editor. "You say yacht races were sailed here in the forenoon, and that the horse races were held in the afternoon over the same course. Don't you see anything the matter with that?"

"Oh!" said the reporter. "Well, you know you ordered everything to be kept down, so there wasn't room to explain that the horse races were held on the beach when the tide went out."—New York Evening Globe.

RECENT SALES OF YACHTS.—The steam yacht Nerita has been sold by the estate of the late William E. Cox to Col. S. J. Murphy, Jr., of Detroit, Mich., through the brokerage department of Mr. William Gardner. This boat is 143ft. over all, 120ft. waterline, 18ft. 4in. breadth. The sale of the bronze cutter yacht Neola, as mentioned last week, by Mr. George M. Pynchon to Mr. J. Berre King, and the 40ft. gasolene launch Hornet, belonging to Mr. Richard T. Wainwright, of Rye, N. Y., to Mr. Maurice Coster, of New York, were also arranged through this same agency.

**Boston Letter.**

**RATING RULE PROPOSED FOR Y. R. A.**—The annual meeting of the Yacht Racing Association of Massachusetts will be held on Thursday evening, Oct. 19, at which several important amendments to the racing rules will be proposed. The most important of the new measures is the proposed adoption of classes under the new uniform rule of rating. The classes suggested for adoption are from M, of 33ft. to 40ft. rating, to Class R, which rates under 18ft. The new rule has already been adopted by the Eastern Y. C. and the Corinthian Y. C., and the Boston Y. C. sailed two of its handicap classes under the rule during the season that has just passed. If the measure proposed in the Y. R. A. of Massachusetts is adopted at the annual meeting, it will mean the general adoption of the uniform rule throughout Massachusetts Bay, as about all the clubs hold their open races under Y. R. A. rules. It is expected that there will be considerable discussion over the adoption of the proposed classes.

It is also proposed to adopt the rules and classification of the American Power Boat Association, a matter that has been seriously considered by those in the Association since early spring. There are many who believe that the control of the general power boat racing by the Y. R. A. will insure greater attendance at open events, and will aid greatly in developing racing among power craft in the Bay.

Amendments relating to the restrictions of 15-footers and to the method of obtaining sail area are proposed. It is also proposed to drop the 30ft. cabin class and the 21ft. restricted class.

**CAPE CATBOAT ASSOCIATION.**—There is no doubt of the earnestness of those who have been interested in the revival of the once popular catboat, and who have been interested in the recently formed association for the development of the type. At a meeting of the Cape Catboat Association, held in Quincy on Oct. 2, a very complete set of restrictions were adopted for the future building and racing of the class, which are likely to go a long way toward assuring long life to the racing of catboats. Those interested were aware that a set of general restrictions on principal measurements would not be sufficient, but as there was not enough time when the Association was formed, the boats were allowed to race during the past season, under the best rules that could be devised at the time. The new restrictions just adopted are intended to cover everything and to encourage the building of new boats, it has also been voted that the restrictions adopted are to hold good for three years without amendment, unless some serious defect is discovered in them. The general restrictions follow:

1. A Cape catboat belonging to this Association shall be a seaworthy cruising and racing yacht, of centerboard type, strongly constructed, properly ballasted with fixed ballast, having good freeboard and substantial cabin trunk, with suitable cabin accommodations for cruising. No boat shall be admitted having a full, blunt bow, square sides, double rudders, bilge or leeboards, reverse curves in the fore-and-aft center line, or any other unusual features, and all boats admitted to the Association from this date must conform to the following specifications:
2. The over all length shall be not less than 22ft. nor more than 27ft., and the waterline length shall not exceed 25ft.
3. The total amount of the overhangs shall not exceed 20 per cent. of the length of the load waterline.
4. The racing length shall be the length of the load waterline plus one-third of all overhangs.
5. The minimum freeboard shall not be less than 7/8in. for every foot of waterline length. The minimum freeboard at the bow shall not be less than 1 3/4in. for every foot of load waterline length.
6. The forward side of the mast shall not be more than one foot aft the forward end of the waterline.
7. All ballast shall be below the cabin and cockpit floors or the transoms, and shall not be moved during races.
8. The topside of the cabin floor shall be below the load waterline not less than 1/2in. for every foot of load waterline length; for a space including the centerboard casing, the floor shall be not less than 3ft. wide and 5ft. long for boats under 24ft. waterline.
9. The minimum head room, in the clear, under the cabin trunk beams, over the cabin floor for the space required, shall be not less than 2 1/2in. for every foot of load waterline length.
10. There shall be a substantial partition at the after end of the cabin, two lockers, and two transoms of

suitable size to form a bed; cushions for each transom, one blanket for each member of the crew, receptacle for two gallons of water, one anchor and suitable cable, two life preservers, compass, lantern or lamp, lead and line, pump, fog horn, boathook and bucket. The fittings shall be on board in all races of the Association when the boat is measured.

11. The crew shall consist of not more than one person to every 4ft. of waterline length. The full number of crew the owner elects to carry shall be on board when the boat is measured.

12. Working sails only shall be used, to consist of mainsail and jib.

13. There shall be no reverse curve in the fore-and-aft center line of the boat; that is, the keel and keelson shall have a fair sweep from stem to sternboard.

All allowances shall be figured by the Herreshoff table.

Complete scantling tables are provided, giving required size of every part, and the wood to be used. This provides for strong, but not clumsy, construction. The materials chiefly specified are oak and hard pine, or their equivalent in strength.

Existing boats are eligible to the class, provided they conform to the rules regarding over all length and overhangs, and to the spirit of the rules in the judgment of the measurer and executive committee of the Association.

Two new boats have already been ordered for the class. Besides the one for Messrs. Dudley & Hodge, before mentioned in this column, Messrs. Small Brothers have received an order for a boat for Mr. A. L. Lincoln, of the Hingham Y. C. Mr. Lincoln sought to enter the former champion 21-footer Harriet last spring, but it was considered that she did not conform to the spirit of the rules. He has since sold Harriet to Mr. John Early, a Harvard student, who will race her in Pleasant Bay.

**NEW AUXILIARY SCHOONER.**—An auxiliary schooner is being built by Mr. John Bishop, of Gloucester, for Mr. J. Fred Brown, of the Boston Y. C., who has been well known as a racing yachtsman for many years, but who forsook the racing ranks in 1901 for his cruising sloop Mariette, in which he has since sailed each season. The new schooner will be of the Gloucester type, 85ft. over all and 65ft. waterline. She will be equipped with a 50 horsepower engine. She is being built on the lines of the fishing schooner Priscilla, which Mr. Brown owns.

**NEW SKENE DESIGNS.**—Mr. Norman L. Skene has an order for a high speed launch for Mr. Herbert Austin, of Boston, which will be built at Lawley's. She will be 32ft. long and 5ft. 10in. breadth, and will be equipped with an engine of 25 horsepower. Mr. Skene also has an order for a cruising cabin launch for Mr. A. J. Kellar, of Buffalo. She will be 26ft. long and 6ft. 9in. breadth.

**POWER BOAT FOR ROCHESTER.**—Messrs. Small Brothers have an order for a 65ft. twin-screw power yacht for Commodore Pritchard, of the Rochester Y. C. This boat will have a fan-tail stern and clipper bow. She will be flush decked, with the exception of a pilot house, and will be fitted with two pole masts.

**NEW ONE-DESIGN CLASS FOR DUXBURY.**—Members of the Duxbury Y. C. are to have a new one-design class of 15-footers. These boats will be something like the Y. R. A. 15-footers, but will not be so powerful and will have less sail area. **JOHN B. KILLEN.**

**The Canada Cup Challenge.**

*Editor Forest and Stream:*

Whether the Rochester Y. C. will accept or reject the challenge of the Royal Canadian Y. C. to contest next year for the Canada cup, won in August by Iroquois in the match with Temeraire, is, strictly speaking, a question to be decided by the members of the local club, and in which it would ill become an outsider, not to say a landsman, to offer an unsolicited opinion. Nevertheless, there can be little doubt that if the sentiment of the sport-loving people of this city, and even the people who would not confess to a weakness for sport, were to have any weight in deciding the question, it would be overwhelmingly in favor of answering the challenge in the affirmative.

The writer is not aware that acceptance of the challenge would entail the expense and labor of building a new boat to defend the cup. There does not seem to be any reason why the winner should be under any such obligation; for they may well say to the challenger, "Defeat our present boat, and we will try again with a new one." Assuming then that Iroquois is eligible to enter another series of races for the cup, would it be creditable to the Rochester Y. C. to decline granting

the wish of the northmen for a chance next year? The cup was retained this year by a victory won under circumstances that might give color to the suspicion that denial of a race next August was inspired by fear of the result. Neither the Rochester Y. C., nor the community which the organization may be said to represent, can afford to rest for two years under such an imputation. In fact, there should not be any hesitation in advising the Dominion sportsmen that they would be welcome to another meeting off the harbor of Genesee as soon as they get their new boat in the water. They are the ones who will have to build, try out and go through all the worry of providing a challenger. If the Canadian designers and builders have learned anything now about the August winds and waters of the south side of Lake Ontario, they are entitled to a chance to demonstrate their increase in wisdom, and reap the reward—if they can. Unless the terms under which the cup was offered call for the holder to build a new boat every time a challenge is received, there would be no excuse for giving such a check to yachting on the lakes as would result from refusal to meet the Canadians next year. It would be more to the credit of Rochester sportsmen to engage in a match where they were sure of defeat, than to decline giving the Toronto men a chance at the silverware in 1906. No one with any red blood in his veins can sail from this side into a harbor on the Canada shore without hauling down his colors, until the challenge to sail for the Canada cup is accepted. Nor should there be any understanding, either expressed or implied, that the most skillful skipper in the Dominion must not hold the helm. The races are supposed to be for the purpose of demonstrating the capacity of the respective people as builders and sailors. In this keen encounter of maritime wits, of our hyperborean neighbors can handle the toy better than our young sailormen, the latter cannot learn the fact too soon, and put themselves to mending. Possession of the cup is not of overwhelming importance in any event; but it is very important that it be held no longer than can be done with honor.

Evidently the time must come when neither side can improve the speed of its boats, for perfection will have been attained. We may have reached that point now, and if so, all that remains to keep up interest in the international contest is to determine which side happens for the time to have the sharper skipper and crew. In such a comparison Uncle Sam's boys have usually given a good account of themselves, and there is no reason to fear that the breed is degenerating.

GENESEE.

**NEW YORK Y. C. MEETING.**—The fifth general meeting of the New York Y. C. was held at the club house, West Forty-fourth street, New York city, on Thursday evening, Oct. 5. Commodore Frederick G. Bowne presided and Mr. Oliver E. Cromwell acted in place of Secretary George A. Cormack, who is cruising in foreign waters on the steam yacht North Star with Cornelius Vanderbilt. The reports of the several committees and officers were read. Forty new members were elected, and three more that had been suspended were reinstated. Commodore Bowne appointed a committee to revise the racing rules. The following Nominating Committee was unanimously elected: Lewis Cass Ledyard, J. Pierpont Morgan, W. Butler Duncan, Jr.; Philip Schuyler, Seymour L. Husted, Jr., Robert J. Doremus, G. C. Clark, E. D. Clark, F. L. Rodewald and F. H. Von Stade.

\*\*\*

**AUXILIARY SCHOONER WHIM LAUNCHED.**—There was launched from the yard of the Gas Engine & Power Co. and Charles L. Seabury & Co., Cons., Morris Heights, N. Y., on Tuesday, Oct. 10, the new auxiliary schooner yacht designed and built by the above firm for Mrs. T. B. McGregor, of Mamaroneck, N. Y. The boat, which was intended for southern cruising, is of shallow draft. She is 90ft. over all, 65ft. waterline, 21ft. breadth and 3ft. draft. Whim, for such is the boat's name, is of wooden construction. She is equipped with a 28 horsepower, 4-cylinder Speedway engine. Her complement of boats consists of a 12ft. dinghy, a 21ft. cutter and an 18ft. power tender. The yacht will leave for Florida in a few days.

**GAS ENGINES AND LAUNCHES.**

**Their Principles, Types, and Management. A Complete and Practical Manual.**

BY F. K. GRAIN, M. E.

Bound in cloth, with 123 pages and 20 illustrations. Sent, postpaid, for \$1.25.

**T**HIS compact and comprehensive handbook contains all the information essential to users of the marine gasoline engines, and will be welcomed by the thousands of men now owning and running power boats. Laymen and experts will alike find the book invaluable. It treats of the various types of marine gasoline engines, points out the good in each, and tells how to run them. A knowledge of the contents of this book will help to overcome difficulties and avoid accidents. The most complete book of its kind ever published.

FOREST AND STREAM PUBLISHING CO., NEW YORK.

LINES, OUTBOARD PROFILE AND DECK PLAN OF POWER TENDER DESIGNED AND BUILT BY STEARNS & MCKAY FOR THE EASTERN Y. C.

**Power Tender for Eastern Y. C.**

We publish herewith the plans of a very serviceable and trim looking little launch designed and built by Messrs. Stearns & McKay, of the Marblehead Yacht Yard, for the Eastern Y. C. at Marblehead.

The launch is intended primarily for the use of the Regatta Committee and to be hoisted on the davits of the committee steamer during cruises, etc. High speed was by no means the purpose for which the boat was intended, but she has shown a good gait considering the easy model, strength of hull and weight of engine. She is planked with 3/8-in. cedar finished bright, with mahogany deck.

The dimensions are as follows:

Length—	Over all	.....22ft.
	L.W.L.	..... 2ft. 5in.
Overhang—	Forward	..... 3in.
	Aft	..... 4in.
Breadth—	Extreme	..... 4ft. 6in.
	L.W.L.	..... 3ft. 9in.
Draft—	To rabbet	..... 9 in.
	Extreme	..... 10 1/2 in.
Freeboard—	Forward	..... 2ft. 2 1/2 in.
	Least	..... 1ft. 5in.
	Aft	..... 1ft. 7in.

All communications for FOREST AND STREAM must be directed to Forest and Stream Pub. Co., New York, to receive attention. We have no other office.

**THE MANY-USE OIL**

Prevents rust-on hot, cold, wet or dry guns. Thin oils will not.

**Canoeing.**

**Officers of A. C. A., 1906.**

(Assumed office Oct. 1, 1905.)

Commodore—H. Lansing Quick, Yonkers, N. Y.  
 Secretary—William W. Crosby, Brighton Mills, Passaic, N. J.  
 Treasurer—Frederic G. Mather, 164 Fairfield Ave., Stamford, Conn.

**ATLANTIC DIVISION.**

Vice-Commodore—Woolsey Carmalt, 82 Beaver St., New York.  
 Rear-Commodore—Matthias Ohlmeyer, Francis H. Leggett & Co., 128 Franklin St., New York.  
 Purser—Henry S. McKeag, 13 White St., New York.  
 Executive Committee—William A. Furman, 846 Berkeley Ave., Trenton, N. J.; Louis C. Kretzmer, Schepp Building, New York; Clifton T. Mitchell, 46 E. Sedgwick St., Germantown, Pa.  
 Board of Governors—Robert J. Wilkin, 211 Clinton St., Brooklyn.  
 Racing Board—H. Lansing Quick, Yonkers, N. Y.

**CENTRAL DIVISION.**

Vice-Commodore—Henry R. Ford, 45 N. Division St., Buffalo, N.Y.  
 Rear-Commodore—Edward H. Demmler, 526 Smithfield St., Pittsburgh, Pa.  
 Purser—B. Irving Rouse, 981 Lake Ave., Rochester, N. Y.  
 Executive Committee—John S. Wright, 519 West Ave., Rochester, N. Y.; Lyman T. Coppins, 691 Main St., Buffalo, N. Y.; Jesse J. Armstrong, Rome, N. Y.  
 Board of Governors—Charles P. Forbush, Buffalo, N. Y.  
 Racing Board—Harry M. Stewart, 85 Main St., E. Rochester, N.Y.

**EASTERN DIVISION.**

Vice-Commodore—H. M. S. Aiken, 45 Milk St., Boston, Mass.  
 Rear-Commodore—Frank S. Chase, Manchester, N. H.  
 Purser—Edgar Ward, 112 Highland St., West Newton, Mass.  
 Executive Committee—Daniel S. Pratt, Jr., 178 Devonshire St., Boston, Mass.; Arthur G. Mather, 84 South St., Medford, Mass.; H. L. Backus, 472 Lowell St., Lawrence, Mass.  
 Racing Board—Paul Butler, U. S. Cartridge Co., Lowell, Mass.; Herman D. Murphy, alternate.

**NORTHERN DIVISION.**

Vice-Commodore—J. McDonald Mowat, Kingston, Ont., Canada.  
 Rear-Commodore—James W. Sparrow, Toronto, Canada.  
 Purser—Russell H. Britton, Gananoque, Ont., Canada.  
 Executive Committee—Charles E. Britton, Gananoque, Ont., Canada.  
 Board of Governors—John N. MacKendrick, Galt, Ont., Canada.  
 Racing Board—J. McDonald Mowat, Kingston, Ont., Canada.

**WESTERN DIVISION.**

Vice-Commodore—John A. Berkey, St. Paul, Minn.  
 Rear-Commodore—George H. Gardner, 149 Kennard St., Cleveland, O.  
 Purser—Wade Hampton Yardley, 49 Pioneer Press Bldg., St. Paul, Minn.  
 Executive Committee—Lucien Walsin, The Baldwin Co., 142 W. Fourth St., Cincinnati, O.; Augustus W. Friese, The Journal, Chicago, Ill.  
 Board of Governors—Henry C. Morse, Peoria, Ill.  
 Racing Board—Frank B. Huntington, 90 Sheboygan St., Fand-du-Lac, Wis.

**How to Join the A. C. A.**

"Application for membership shall be made to the Treasurer, F. G. Mather, 164 Fairfield Ave., Stamford, Conn., and shall be accompanied by the recommendation of an active member and by the sum of two dollars, one dollar as entrance fee and one dollar as dues for the current year, to be refunded in case of non-election of the applicant."

**A. C. A. Amendments.**

IN accordance with Article XII. of the constitution, the following amendments will be offered at the next meeting of the Executive Committee of the American Canoe Association, in order to facilitate the revision of the constitution:

Article III., Membership.—To read as follows: "Any gentleman over the age of eighteen may become a member of this Association fourteen days after his application has been announced in one of the official organs of the Association by the treasurer and approved as provided in the constitution."

Article IV., Sec. 2, line 3: Strike out "practical canoeists only are eligible."

Article V., Sec. 2: After the paragraph beginning "The commodore shall be chosen from, etc.," insert "Note—The turns of the several divisions for holding the camp shall be as follows: Central, 1905; Northern, 1906; Atlantic, 1907; Eastern, 1908; Western, 1909." After the word "qualify" at the end of the paragraph beginning "The vice and rear commodores and purser shall be elected," add "unless in the judgment of the commodore and the Board of Governors it shall seem

advisable that there be a change of officers, in which event the commodore may appoint new officers."

Article VII., line 5: To read "Appoint for the annual camp a committee to have charge of the ladies' camp," striking out "A general meet, an associate member from each district with one active member-at-large as."

Article VIII., line 3: Strike out "And prior to Feb. 1" and add "and shall" before the word "appoint."

Article IX., Sec. 2, line 6: After the word "Division" insert "less expense incurred for collection of dues, mailing of notices, etc."

By-LAWS.—Chapter I., Sec. 2, Paragraph 3: Strike out the word "Treasurer" in the second line and insert in its place "President of the Board of Governors."

JOHN S. WRIGHT,  
C. F. WOLTERS.

**Western Division Officers.**

At a special meeting of the Western Division of the American Canoe Association, held on Sugar Island, St. Lawrence River, Aug. 14, the following officers were elected: Vice-Commodore, John A. Berkey, 734 Dayton avenue, St. Paul, Minn.; Rear Commodore, Lucien Wulsin, 142 West Fourth street, Cincinnati, O.; Purser, Wade H. Yardley, 40 Pioneer Press Building, St. Paul, Minn.; Executive Committee, George W. Gardner, 149 Kennard street, Cleveland, O.; A. W. Friese, 24 Sentinel Building, Milwaukee, Wis.; Board of Governors, Henry C. Morse, 1009 N. Jefferson avenue, Peoria, Ill.

**A. C. A. Executive Meet.**

COMMODORE H. LANSING QUICK has called a meeting of the A. C. A. Executive Board to be held at 10 A. M., at the St. Denis Hotel, Eleventh street and Broadway, New York city, on Saturday, Oct. 14.

**Rifle Range and Gallery.**

**Fixtures.**

Oct. 22.—Cincinnati, O., Rifle Association annual prize shoot.

**Telescope Sights.**

Editor Forest and Stream:

The editorial in FOREST AND STREAM of Oct. 7 on this subject has been commented on freely and favorably by the riflemen of New York city. And in view of the fact that there is an important shoot to be held in the near future—the 100-shot match for the championship of New York city and vicinity, in Greenville Shooting Park, on Election Day—a few comments may not be out of place at this time.

The expert riflemen of the indoor and outdoor ranges in and about this city have so long been accustomed to using vernier rear sights and rather coarse pinhead front sights in shaded hoods that they dislike to discard these for anything so radically different as the telescope. This is particularly true of men past middle age, and a glance round the shooting house at any important shoot will show how many of those present are on the shady side of life. They are in the habit of purchasing a rifle which they and their friends believe is best adapted to their individual tastes; then having it improved in stock or barrel until it seems as nearly perfect as possible, after which they make few changes, and none at all without due deliberation. This is commendable, since the rifle shooter who is always changing and experimenting, seldom wins high honors in important shoots. But the younger men argue that the change from plain to magnifying sights need be no more of an experiment than having new reading glasses made when the old ones will no longer serve. One by one the older men are being convinced that they are not getting as high scores as they can hold for, and they are having telescope sights fitted to their rifles. This brings us to the point we wish to make.

In the editorial referred to, there is this statement: "There are two essentials in successful rifle shooting, namely, steady holding and accurate aiming." Very true. But shooters of the old school must practice entirely different methods when they use the telescope, or at least that is the best way to describe it. With the plain sights there are men who believe they can at times hold the front sight perfectly still for a sufficient time to press the hair trigger, but when these men practice with the telescope they find, to their astonishment, that there is never a single instant in which they can hold the crosshairs on the center of the bullseye. Wedded to the old habit of holding until they see (as they believe) that the front sight rests motionless on or under the bullseye, they tire themselves and wobble more and more until, in sheer desperation, they bang away anyhow, get a shot out of the bullseye, perhaps, and feel discouraged. The sooner they convince themselves that they must practice a different sort of aiming, the sooner will their scores show improvement. Proof of this may be found by any one who will place a telescope-sighted rifle on a table, hold it as steadily as possible, and try to keep the crosshairs fixed on the center of the bullseye. No matter how solid the rifle is on the rest, the least pulsation of one's arms will keep the crosshairs in motion, but whereas the variations while shooting at rest may not be more than a half inch on the target, in offhand shooting they may be sufficient to land the bullet two feet off the center.

The remedy is to practice a sort of snaphooting. It will be noticed that riflemen accustomed to aim and fire rapidly make the best shots with the telescope-sighted rifles. Glasses of low power are best of all for men long accustomed to peep sights, since the object is merely to magnify the target slightly, so that one can aim at its center instead of at the bullseye in a general way. A power of three diameters, or four at most, will give far better results than five or six power, for the low power glass will not magnify one's error so much, and he can come nearer to "holding on the center." The crosshairs, if rather coarse, will aid him in regaining confidence in his holding powers, and the rest is merely a matter of practice. Much of this can be had at home by placing a very small target in the strong light of a window and aiming at it until one notices improvement; but Barney Zettler, who knows riflemen thoroughly, says that if they practice on the indoor ranges during the winter with telescope sights, they will improve rapidly, since the indoor bullseyes are relatively larger, vibration is noticed less, and by the time for outdoor shooting, next season, they will be in trim to shoot in their old-time form. Barney's advice is always good. He advocates a power of three diameters.

PERRY D. FRAZER.

**The Election Day Match.**

THE annual 100-shot championship match will be held this year, as usual, on Election Day, which falls on Nov. 7. The scene will be the 200yd. ranges in Armbruster's shooting park, Greenville, N. J. The details are not yet complete, but there will be several prizes, and the match will be open to any rifleman who cares to enter. The fee is nominal, and after the expenses for markers have been paid, the balance will be divided pro rata among the winners. Visitors can take any of the Pennsylvania ferries to Jersey City, then a trolley car to within two blocks of the park, where a substantial meal can be had at noon or after the match is finished.

**The Zettler Indoor Season.**

THE indoor shooting season of the Zettler Rifle Club will begin Oct. 17 with the weekly club shoot at its ranges, 159 West Twenty-third street, this city. Thereafter club shoots will be held every Tuesday throughout the winter months. The programme and prize list will be ready for distribution this week.

The Lady Zettler Rifle Club will hold its first shoot of the indoor season Saturday night, Oct. 17, and again on the 28th, or twice every month throughout the winter. This organization has a goodly list of members, and it is noticeable that a good many young women are taking an increased interest in its matches.

**At Walnut Hill.**

WALNUT HILL, Mass., Oct. 7.—A number of visitors were present to-day at the weekly shoot of the Massachusetts Rifle Association. There was a variable wind and a good light.

Oct. 14 the annual competition for the N. R. A. medal will be held. The match is open to members only. Distances 200, 300 and 500yds., military rifles. The scores:

Members' offhand match:

R L Dale.....	9 9 9 9 10 9 9 9 9 9-91
O M Jewell.....	10 8 9 8 9 8 7 10 9 7-85

**Ohio Rifle Notes.**

The Dayton Sharpshooters had a fine day on Oct. 5 for their regular monthly cup shoot, a light breeze tempering the heat of the sun, and making very comfortable conditions in the shooting shed. All matches were at 200yds., muzzle rest, on the Sharpshooters' target; center value 24; 12-inch bull, 1/2 in. circles. Some time was taken up in sighting shots, and then a few practice shots were fired, three each, possible 72 points. G. W. Sander was high, 19, 22, 23-64. John Bochner 17, 22, 21-60, and Adolph Schwind 18, 21, 21-60. J. F. Beaver and Gus H. Sander 53 each, and H. K. Schwind 51. There were ten entries in a sweep, 25 cents entrance, two moneys, three shots, possible 72. Gus H. Sander took first with 23, 22, 19-64; John Bochner second with 14, 20, 23-57; A. Schwind 17, 20, 18-55. The cup shoot was five shots; possible 120. John Beaver won last month, but lost by 2 points to-day to A. Schwind, who scored 18, 22, 23, 20, 21-104. Beaver 20, 18, 23, 22, 19-102. Gus H. Sander 21, 24, 24, 15, 17-101. J. Bochner 14, 24, 18, 22, 22-100. H. K. Schwind 99, C. W. Sander 18, J. Rappold 97, G. R. Decker 95, B. Mescher 75, W. Kernan 71. This makes the third time this year that Adolph has won the cup, but not consecutively, and the cup therefore remains the property of the club, to be shot for next year. In the four years that this cup has been in competition, Adolph Schwind and John F. Beaver has each won it eight times. Mr. Beaver's aggregate score is 36 points ahead of Mr. Schwind's. The date for the forty-second annual King shoot will be announced soon. This is the club's greatest event of the year for members and guests. There will be the King shoot and cup contest for members, and offhand and rest contests at 100 and 200yds. for cash prizes, open to all.

**Trapshooting.**

**Fixtures.**

- Oct. 11-12.—Dover, Del., G. C. tournament; open to all amateurs. W. H. Reed, Sec'y.
- Oct. 13-15.—St. Louis, Mo.—Rawlins semi-annual tournament No. 2, targets and live birds. Alec D. Mermod, Mgr., 620 Locust street.
- Oct. 14.—Bound Brook, N. J., G. C. prize shoot.
- Oct. 17-18.—Raleigh, N. C., G. C. tournament. R. T. Gowan, Sec'y.
- Oct. 18-19.—Ossining, N. Y., G. C. shoot, \$50 added. C. G. Blandford, Capt.
- Oct. 19.—Shrewsbury, Pa., G. C. shoot. W. H. Myers, Sec'y.
- Oct. 21.—Plainfield, N. J., G. C. merchandise shoot.
- Oct. 26.—Edgewater N. J.—Palisade G. C. shoot. A. A. Schoverling, Sec'y.

**NORTH NEW JERSEY SHOOTING LEAGUE.**

- Oct. 14.—Orange at Dover.
- Oct. 19.—Newton at Morristown.
- Oct. 21.—Montclair at Orange.
- Oct. 28.—Dover at Montclair.
- Nov. 2.—Montclair at Morristown. 1906.
- Jan. 16-19.—Hamilton, Ont., G. C. annual winter tournament. Ralph C. Ripley, Sec'y.
- May 24-25.—Montreal, Can.—Canadian Indians' first annual tournament. Thomas A. Duff, High Scribe.

**DRIVERS AND TWISTERS.**

Mr. A. Vance, Capron, Ill., informs us that he will hold a one-day live-bird shoot at Sharon, Wis., on Oct. 31.

The Montclair team defeated the Newton team on the grounds of the latter, Oct. 7. The scores were 109 and 104.

Mr. J. B. Haywood won the club prize at the Hillside Club shoot on the Chestnut Hill, Pa., grounds, Oct. 7.

The Kentucky championship, held at Louisville, Ky., was won by Mr. Alfred Clay, of Paris, Ky., a famous trapshot of the Clay family. He scored 24 out of 25.

After an absence of some weeks on business, Mr. Frank Lawrence, of the Winchester Repeating Arms Co., sojourned in New York a few days of this week.

A correspondent informs us that 2,000 spectators witnessed Miss Annie Oakley's (Mrs. Frank Butler's) exhibition of fancy shooting on Oct. 7, at Newton, N. J.

At the shoot of the Media, Pa., Gun Club, on Oct. 7, Mr. J. E. Copple was high man in every event, scoring a total of 112 out of 125 targets, nearly a 90 per cent. performance.

At the weekly shoot of the Meadow Springs Gun Club, Philadelphia, last Saturday, Mr. Andrew Moore won the club prize. Mr. Chadbourne was high with 80 in the 100-target event.

Eight members of the Emerald Gun Club participated in a shoot on Oct. 4, for the combined months of March, April, May and June, 10 birds for each month, a total of 40 for the shoot.

The cup contest of the Springfield, Mass., Shooting Club, finished Sept. 30, was won by Mr. W. H. Snow with a total of 215 out of 250 shot at. Mr. C. L. Kites was second with 189. The cup series had ten events, each at 25 targets. The club closed their practice season on Sept. 30.

Oct. 14, Ossining, N. Y., Gun Club members will get busy. Those who are shooters are invited to participate, in view of the tournament, Oct. 18 and 19. Dr. W. L. Gardiner, Orange, N. J., has donated a "snake ring," set with diamond, for the special event on the first day, in a 50-target handicap.

At the two days' shoot of the Scranton, Pa., Gun Club last week, Mr. J. Mowell Hawkins, of Baltimore, won the silver coffee set, the prize for high average. He broke 367 out of 400 targets. Mr. Sim Glover, of New York, was second with 357. Mr. Gus E. Greiff, was third, and Mr. Neaf Appgar was fourth.

On Oct. 6, Mr. J. J. Fleming, of Newark, N. J., was victor in the contest for the Laffin & Rand trophy emblematic of the inanimate target championship of New Jersey, defeating the holder, Mr. F. C. Bissett, by a score of 42 out of 36. The contest took place at Waverly, under the auspices of the Forester Gun Club.

Four loving cups and two beautiful gold medals are attractive prizes of the programme arranged by the managers of the Bound Brook, N. J., Gun Club for their handicap shoot, Oct. 14. There are only a total of 60 targets in the events, and a \$5 prize for amateur average is provided. Practice will begin at 1 o'clock. F. K. Stelle is the Secretary.

The famous experts, Mr. Edward Johnson, of Atlantic City, N. J., and Frederick Coleman, of Philadelphia, shot a match at the former place, on the Pleasure Bay grounds on Saturday of last week. The conditions were 100 targets, \$100 a side. Mr. Johnson won by the score of 96 to 80. A large crowd of spectators witnessed the contest.

Messrs. John Schoffley and Stephen Kurtz have agreed to shoot a match at 21 pigeons, Oct. 27, on the Mahanoy City, Pa., Athletic grounds. Conditions, \$150 a side, 15 birds, 21yds. rise, Schuylkill county rules. Also at Mahanoy City, Oct. 28, Messrs. W. Fox and M. Dempsey have agreed to shoot a match at 19 birds, for \$200 a side. Odd kind of game, but nervy.

The programme of the Palisade Gun Club shoot, fixed to be held on Oct. 26, at Edgewater, N. J., has four events, three at 20 targets, Rose system, \$2 entrance, and one at 100 targets, \$7 entrance, \$20 added, high guns. Optional entrance \$1.50 for a \$25 kodak in the 100-target race. Cash average prizes. Sliding handicap. Guns, etc., marked in owner's name, express prepaid, care W. Benison, Edgewater, will be delivered free on grounds.

The Plainfield, N. J., Gun Club announces a silver and sweepstake shoot, to be held on Oct. 21. The programme consists of ten events, six of which are at 10, one at 15, two at 20, and one at 25 targets. Entrance, 50 cents and \$1. Totals, 140 targets, \$7 entrance. Shooting will begin at 10:30. High amateur averages, \$3 and \$2. Lunch served free to shooters. Ship guns and shells prepaid to Harry Drier. H. P. Vasseller is the Secretary.

The generous donation of \$500 gold, added to the New London, Ia., Gun Club tournament, Oct. 3 to 5, drew only fifteen amateurs. As this club is one of the most popular in the West, the small attendance with such generous provision for the winners, is astonishing. Perhaps the loose money of an insurance company's treasury would be large enough to honor with notice, if added.

The fifth annual tournament of the Raleigh, N. C., Gun Club, to be held on Oct. 17 and 18, has a programme of ten 20-target events, \$10 added to each, \$2 entrance each day, with a special 100-target event on the second day for the Laffin & Rand cup. The grounds will be open for practice on Oct. 16. Class shooting. Guns and ammunition, prepaid and marked in owner's name, care of R. T. Gowan, Raleigh, N. C., will be delivered on the grounds free.

For their shoot on Oct. 14, the Rahway, N. J., Gun Club provides a programme of five events, the third of which is a three-man amateur team race, 50 targets, for the Dupont inter-city championship cup. The other events are at 15 and 20 targets, \$1 entrance. Silver prizes will be rewards. Ladies' contest, with "soaring eagle," will be repeated by request. Shooting will commence at 11 o'clock. The shoot is to assist in providing necessities needed in the coming winter, for the Children's Home.

The event of the second day at the tournament of the Baltimore, Md., Shooting Association, Oct. 3-4, was the run of 128 from the 20yd. mark, made by the famous expert, Mr. J. Mowell Hawkins, of Baltimore. He broke 172 out of 175, and broke 25 straight in a merchandise event, a total of 197 out of 200 for the day, a 98.5 per cent. gait. He also was high for the two days. Mr. E. H. Storr and Harvey McMurchy were second in the two days' high average. The leading amateurs were Messrs. German, Foord and Dupont.

At the three-day shoot of the New London, Ia., Gun Club, Mr. W. R. Crosby made a short run, only 271; that is, short compared to some prior runs made by him. In the Indians, of which he is an honored member, he is known as Chief Kinnikinnick, because of his violent dislike of tobacco and tobacco chewers. He also made high average, 592, for the three days; Mr. J. L. D. Morrison was second, with 578; W. Stannard was third, with 566. Of the amateurs, Mr. J. W. Garrett was first, with 577; Messrs. Barkley, of Chicago, and Hoon, of Iowa, were tied for second on 559. Mr. Garrett made a run of 142 on the first day.

BERNARD WATERS.

**Ossining Gun Club.**

OSSINING, N. Y., Oct. 7.—Next Saturday, 14th inst., will be the regular practice day of the Ossining Gun Club. Members who wish to qualify for the team shoot, to be held on the 19th, should get out for some practice. Any non-members who expect to attend the tournament on the 18th and 19th are cordially invited to come up on the 14th and try the grounds. Dr. W. L. Gardner, of East Orange, N. J., has very generously donated a \$50 diamond snake ring, to be shot for on the first day of the tournament in a special 50-bird handicap, 14 to 22yds., open to all. This should prove quite a drawing card. As the programme calls for but 165 targets, these 50 extra birds can be easily run in. Come up and shoot through both days and stay over, for the hotel accommodations are good and there will be plenty doing.

C. G. BLANDFORD, Capt.

Medford Gun Club.

MEDFORD, Oregon.—The first annual tournament of the Medford Gun Club was held Sept. 22 and 23, with fifty shooters present.

The programme consisted of 200 targets each day, and 20,000 were trapped. The weather conditions were perfect, and the early predictions that good scores would be made were fulfilled.

The shoot was held beneath a grove of massive oaks, which, with tents dotted here and there and tables loaded with fruit and eatables of all kinds, made a very attractive ground for the smashing of mud saucers.

Besides many local shooters and manufacturers' agents, we had with us the old reliables—W. F. Crosby, of O'Fallon, Ill.; Fred Gilbert, of Spirit Lake, Ia.; Rollo Heikes, of Dayton, Ohio; H. C. Hirschy, of Minneapolis, Minn.; J. S. Fanning, of New York.

Thos. Marshall, of Keithsburg, Ill., all professionals of the first caliber, and C. M. Powers, of Decatur, Ill., and C. D. Plank, Colo., the clever amateurs.

Crosby won the high average in the professional class by breaking 394 out of 400, and was presented with a beautiful mounted Mongolian pheasant for doing the trick. He also made runs of 126 and 101 without a miss.

Gilbert came next, with 392, and made runs of 118 and 154. The latter is within three birds of the Pacific Coast record, which was made at San Francisco by Mr. Crosby in the Interstate tournament.

Heiks was next in line, only missing 10 and made a run of 117 without a miss. Fanning created a separation with 381; Marshall with 356, and Hirschy with 361.

C. M. Powers shot in his usual good form, only missing 14. C. D. Plank shot well the first day, and retired on the second on account of illness.

First general average for amateurs was won by C. M. Powers, of Decatur, Ill.; second by M. O. Feudner, of San Francisco, and third by Mr. W. H. Varien, of Pacific Grove, Cal.

The lady shooters shot well, first general average going to Mrs. Young, of Portland; second, to Mrs. Snyder, of the same city, and third, to Mrs. Holmes, of Salem.

Miss Hazel Enyart, after breaking the first target she ever shot at, retired with 100 per cent, beating Crosby for high average; besides, she has the honor of having killed the bear which was served to the shooters at Hotel Nash, with mountain trout also on the bill of fare.

Special mention should be made of the ladies of the "Booster Club" for the clever manner in which they entertained the shooters, and if our readers do not believe what the programme said, "that they would be made to go some," ask Marshall, Gilbert, Powers and a few more who were duly initiated.

The "Hoo Hoo Squad" must not be overlooked, as they went through a very difficult drill to the great amusement of all present. The shoot ended at an early hour on the second day, and for the benefit of many spectators who arrived a little late Messrs. Marshall, Heikes, Hirschy, Gilbert and Powers, shot an exhibition match of 50 birds each, Mr. Powers making a clean score.

F. L. Carter and W. A. Hillis gave an exhibition of fancy rifle shooting, which was interesting and greatly enjoyed by all. A number of shooters from Medford, Ashland and other points also participated and displayed excellent marksmanship. A few of them did nearly as well as some of the professionals. They will be heard from in future tournaments.

Most of the shooters left in a special car Saturday evening for Portland and other northwest cities, en route home.

Sept. 22, First Day.

Table with columns for Event, Targets, and names of shooters with their scores for the first day of the tournament.

Sept. 23, Second Day.

The totals of those who shot through the two-days' programme, 400 targets, are as follows:

Large table listing names of shooters and their total scores over the two-day tournament.

Trap Around Reading.

READING, Pa., Oct. 4.—The annual fall target tournament of the St. Lawrence Gun Club, held to-day on the club's grounds, located at Jacksonwald, a suburb of this city, was a success, although the crowd of shooters present was not as large as had been expected by the tournament committee.

Mahanoy City, Pa., Oct. 5.—Wm. Fox, of Morea, and Michael Dempsey, of Pottsville, have been matched to shoot at 19 birds on Oct. 28, in Mahanoy City Park for \$200 a side.

Bellefonte, Pa., Oct. 1905.—The Bellefonte Gun Club was permanently organized here this evening with the following officers: President, John L. Kaisely; Vice-President, Dr. J. J. Kilpatrick; Secretary and Treasurer, John J. Bower, Trustees, John J. Bower, Henry C. Quigley and R. Russell Blair.

Lebanon, Pa., Oct. 2.—The Keystone Gun Club, of this city, defeated the Middletown Gun Club in the first of a series of three 10-men team matches at targets by the score of 441 to 388.

Jefferson County Gun Club.

LOUISVILLE, Ky.—The Jefferson County Gun Club annual tournament, Oct. 3 and 4, had events as follows: Ten birds, handicap rise, three high guns:

Table showing distance and score for various shooters in the Jefferson County tournament.

Kentucky Handicap, 20 birds, four high guns: Alf Clay, C E Walker, Dr Duncan, T H Clay, C O Le Compte, W F Booker, Jr.

Kentucky championship, 25 birds, four moneys, class shooting, all stand at 28yds.: C B Semple, T H Clay, Frank Bedford, Alf Clay, Dr Bob, Dr Duncan, E Jones, W F Booker, Jr.

Seven birds, handicap rise, three high guns: R Dwyer, R L Trimble, Alf Clay, C E Walker, Semple, Le Compte, Riehl, Watson.

Springfield, Mass., Shooting Club.

WE held our last practice shoot of the season on the afternoon of Sept. 30, which was fairly well attended. It was a beautiful day for shooting, but the scores ran lower than usual.

We have been running a cup contest and merchandise race through the season, which was finished at this shoot. These contests have drawn out the shooters at our practice shoots and created much interest in the sport.

Table with columns for Events, Targets, and names of shooters with their scores for the Springfield tournament.

Indianapolis Gun Club.

INDIANAPOLIS, Ind., Oct. 7.—Short won the Peters badge. Visitors were Messrs. C. O. Le Compte and Silas Traut, of Franklin, Ind. Weather conditions were ideal, sunshine and no wind.

Table with columns for Events, Targets, and names of shooters with their scores for the Indianapolis tournament.

North New Jersey Shooting League.

Oct. 7.—Team race, Montclair vs. Newton: Newton Gun Club vs. Montclair Gun Club. Von Lengerke, Brickner, Cahrs, Coe, Woodward vs. Perley, Moffett, Allan, Bush, Wallace.

The fifteenth match in the present series was shot off at Newton to-day in the presence of some seven or eight hundred spectators. Some twelve members of the Montclair Club made the visit to the Newton Club, going the fifty miles in automobiles over the good roads of northern New Jersey.

Considerable interest centered on the team race, as up to today the Newton Club had not been beaten. The Montclair Club shot in very good form, with the exception of Moffett, who appeared to be quite nervous at the start.

Emerald Gun Club.

Oct. 4.—The weather was delightful. There was a straightaway wind. The birds were all good fliers—not one sitter, or "no bird." Both distance and point handicaps governed.

Table with columns for names of shooters and their scores for the Emerald Gun Club tournament.

THE ONLY MANY-USE OIL

Cleans powder residue and foulness from guns; 2oz. bottle 10c. -Adv.

# U. S. Government Ammunition Test.

Accuracy test of Krag-Jorgensen .30-Caliber Cartridges held at Springfield Armory by order of the Ordnance Department, United States Army.

**TESTED**—Ammunition of all the American Manufacturers.

## WESTERN TRAP.

### Danforth Gun Club Tournament.

DANFORTH, Ill., Oct. 4.—One of the first of the Illinois tournaments for this month was held to-day at this place. This is one of this season's clubs, and though the shooters did not get together until after noon, the traps were kept going from 1 to 6 P. M. As will be seen by the scores, some of those present did not shoot well, but that was no fault of the traps or the grounds. The club engaged the well-known W. "Tramp" Irwin to look after details. Enough said! The traps were as well set as though 10,000 targets were to be thrown in a day. All the details of bookkeeping, squad sheets, hustling same, referee and scorer, were all there and soon onto their job.

However, one thing was neglected, and that was in the loaded shells. Not a sufficient quantity nor a properly loaded shell was on the ground. The best shell was three drams, one and one-eighth shot, while others contained two and three-fourths drams with one and one eighth of soft eights. We all live and learn, so when the next shoot is held, there will be a sufficient supply of regulation target loads. They know better by this time.

The weather was fine, and some of the scores good. Mr. Rietz was high man, and he was shooting an automatic pumper. His score of 20 straight was a good one. The officers of the club are workers, and they worked so hard that they were the poorest shots on the ground.

There was present and not shooting, the trade representatives Ward Burton and Tramp Irwin. Others present, were: H. Rosa'eus, George Rietz, of Gilman; Jack Neal, Rantoul; Wm. Burnes, Askum A. Ferris and G. H. Clark, Crescent City. The Danforth boys were E. R. Elits, O. Creamer, T. Gerdes, A. T. Barnes, H. Gerdes, John Sathoff, John Ahrens and T. Gerdes. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	Shot at.	Broke.

### N w London Tournament.

NEW LONDON, Ia., Oct. 6.—The trapshooters of Iowa, Missouri and Illinois do not half appreciate what Dr. Cook has done for them. Now, think of a \$500 gold donation, and then only fifteen shooters present. This money, as well as other added features, such as watches, watch fobs and such like, were put up by Dr. Cook individually, and there should have been at least seventy-five shooters present. The Doctor has held these shoots with these same liberal donations for several years past, and the reputation for fair dealing and a good time generally has long been established, hence there must have been something wrong with the time of year, for even John Burmeister and Guy Burnside were absent, something heretofore unknown, as they were regular winners of some one of the handicaps.

Besides the opportunity to win enough cash to pay expenses, there is always social functions and amusements galore—one of the diversions this year being a game of baseball; shooters against a regular nine which had been beaten but twice this season. This proved to be the most laughable farce ever presented on an Iowa diamond. Outside of a local pitcher and catcher, the shooters and positions were: Barber, first base; Morrison, second; French, third; Barkley, shortstop; Kohler, right field; M. Thompson, center field; R. Thompson, left field. John Garrett, umpire. Bill Crosby, chief roofer; Stannard, Lord and Kinney substitutes.

Five innings were played, and the score was 4 to 0 in favor of the shooters. The umpire came near being mobbed even by the winners for "rotten" decisions. There were sore throats and tired limbs when the night came on, but such fun will probably never again come to pass upon Iowa soil.

The weather was of the very best—warm, bright, no wind—and most of the scores made were good.

The dates were Oct. 3, 4 and 5.

On preliminary day Garrett ran 96, 98, 98; Stannard 96; Budd 96; French 90; Cook 90, 91; Hoon 98, 98; Morrison 100; Barber 97. Messrs. Garrett and Hoon each won a watch, and Barber two watch fobs.

The traveling men turned out well, there being seven present. Budd shot one day only, being somewhat on the indisposed list; but the others went through. Crosby came all the way from Spokane, Wash., and did not lose his eye on the journey, as he lost but 8 for the two days, and made a run of 271. Don Morrison was present and made a very fine showing, but came second. Wm. Stannard was third with 566.

In the amateurs, Garrett set the pace too hard for others to follow, beating out Barber, the champion, by 6 targets. Barkley, the Chicago boy, and Hoon, of the Iowa, tied on third. Garrett made a run of 142 on the preliminary day; on Tuesday, 145, and on Wednesday, 62. Thursday Mr. Kahler was 54.

At the close of the shoot nearly all the shooters moved on to Davenport, where another three-days' shoot was to take place. Scores:

	1st day.	2d day.	3d day.	Total.
Garrett	195	192	190	577
Barber	191	187	193	571
R. Thompson	188	185	183	557
Barkley	188	186	185	559
M. Thompson	186	182	151	519
Hoon	186	184	189	559

Knüssel	184	175	171	530
Kline	183	178	179	540
Kinney	182	174	165	521

Dr Cook	172	170	183	525
Miner	188	..	..	..
Hagerman	170	..	..	..
Professionals.				
Crosby	199	195	198	592
Morrison	192	194	192	578
Stannard	190	189	187	566
Vietmeyer	183	171	177	531
Elliott	184	177	173	534
Lord	176	172	169	517
Budd	187	..	..	..

Crosby's run of 221 for one day and 50 the following day, made 271 straight.

### At Granville.

Granville, Ill., Sept. 30.—There is a good club here, considering the age and the size of the town, and as some of the members are good shots and often attend other shoots, the tournaments held here are usually well attended; but this time the visitors were limited. The shoot was not advertised in the sporting journals, and the printed programmes were only sent out a few days in advance. Scores:

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.
H Fletcher	10	15	15	15	20	10	15	15	15	20	150	124

L Schneider	..	..	7	10	14	8	12	14	10	15	125	90

### Cincinnati Gun Club.

Oct. 7 was an ideal fall day, and those at the grounds enjoyed the sport to the full. In the 100-target race, Herman was high with 94; Maynard was a close second with 91. Morris Kaufman, trade representative from 'way down South, was a visitor, stopping over here on his way to Indianapolis. He landed third place with 88. In the practice events he went one better, breaking 89. Bleh shot a score in the cup race, and just missed getting in with the two leaders. He broke 23 straight and then dropped the next target, finishing with 24.

The Ackley trophy series will begin on Oct. 13. On Oct. 20 the first shoot in the series for the Powell & Clements cup will take place. These trophies will be shot for alternate weeks. The handicap committee will meet on the 8th and decide on rules and handicap. It is likely that a distance handicap will be used. Ackley was at the grounds to-day and shot a few at practice, but was obliged to stop, as he is suffering from asthma.

Maynard has returned from his trip to Winnipeg. So much had fallen in that section of country that it was simply impossible to get around, and he had no sport with the chickens, as he had anticipated.

It is something unusual not to see Gambell at the score as often as he gets a chance, but to-day he was resting up and only shot at 15 targets. The scores:

	Shot at.	Broke.		Shot at.	Broke.
Herman	100	94	Pickles	100	70
Maynard	100	91	Bonsor	100	60
Kaufman	100	88	Captain	75	59
Keplinger	100	84	Bullerdick	75	53
Ahlers	100	84	Osterfeld	50	45
Bleh	100	84	Boch	50	34
Tuttle	100	72			

### Ohio Notes.

The Columbus, O., Gun Club had a splendid day for their weekly shoot on Sept. 30, and twenty members were present and took part in the programme, which consisted of nine events at 10, three at 15 and four at 25 targets. In the first 50 shot at in events of 10 targets each, Togo and Winters broke 44 each; Holden and Harrison 42 each; Lacey and Bossell 41 each. Togo was high for the day with 149 out of 180, 82.2 per cent.; Harrison broke 113 out of 130, 86.9 per cent.; Holden 111 out of 145, 76.5 per cent. The boys were not a bit disheartened by their defeat at Newark, and will likely have another try for the Phellis trophy.

The interest in the weekly shoot of the Welfare Gun Club, Dayton, on Sept. 30, was increased by a friendly team match, Watkins and Breen captains, and five men on a side. Rike and Storm shot at 50 targets each, the former breaking 47 and the latter 20, which divided between the teams made Watkins' total 217 to Breen's 226. Watkins made high score of 47. Smith, of Breen's team, second, 45. In the practice events, Rike was high with 89 out of 95. Carr 62 out of 70. The Welfare Club is offering attractive programmes at its Saturday shoots, and Dayton shooters are beginning to take advantage of the chance for an interesting afternoon of sport. One programme consisted of five 20-target events with \$5 added money in the second and fourth events, entrance 1 1/2 cent per target; 1/2 cent for target being divided between the two low men shooting in all events. Other money divided 50, 30 and 20 per cent.

There was good sport on the Dayton Gun Club grounds on Sept. 29, the principal event being a match between Less Reid and Wm. R. Clark of the New Paris Gun Club, and W. E. Lindemuth and Zenas A. Craig, of the home club. The first event was at 25 targets, Craig and Reid breaking 22 each; Clark 20, Carr 17, Whitacre 16, A. Keller 12. In another event, Bailey broke 21, Carr 16, Keller 15, and Monbeck 9. In the third, Carr broke 24, and Craig 22. Then came the team match, H. M. Carr referee. The four men have been shooting about the same gait, a little over 90 per cent.; but in this match they beat their record in all but one case. Clark led the bunch with 96, his partner breaking 94, making the team total 190. Lindemuth accounted for 92, but Craig shot away out of form and broke only 80, making the team total 172, losing the match by 18 targets. At the end of the first round the score was 49 to 41 in favor of the visitors. In the

second round they increased their lead to 12, the score being 95 to 83. At the end of the third round they had added another one to the lead, 141 to 128, and in the last round they got 5 more. Clark made the long run of the match, breaking his last 42 targets straight. Reid made a run of 37 and Lindemuth one of 32. Just before dark a final sweep at 25 targets was shot, Craig, Reid and Carr breaking 24 each; Clark 22, Keller 19.

The medal shoot of the Rohrer's Island Gun Club, Dayton, which should have taken place on Oct. 4 was postponed one week, as a large number of the members started on that day for Bing Island, on St. Mary's reservoir, near Montezuma, for a few days' duck shooting and fishing. Among the party were President Gus A. Hodapp, vice-President Wm. C. Oldt, Secretary Will E. Kette, Treasurer Chas. F. Miller, Trustees Phil. Hanauer, Chas. Smyth, Harry Oswald and Horace Lockwood, and members John Schaefer, J. L. Sapp and Ed. Cain. The party will occupy the Bing Island Club house, and have the use of boats, decoys, etc. The contest between Hodapp, Oldt, Miller and Cain for possession of the medal will be returned on the next regular shooting day with redoubled vigor. There are four more days on which the remaining six shoots of the series may be held, and it is intended to pull off three of these on the first pleasant Wednesday. This will make a programme which will attract members and friends, as refreshments will be served in the lavish manner usual with this club.

There was a goodly attendance of sportsmen on the grounds of the Phoenix Gun Club, St. Paris, to take part in the tournament held on Oct. 4. The programme included eight events at 15 and two at 20 targets, with a total entrance of \$16. Four moneys in each event, 40, 30, 20 and 10 per cent., and three high average moneys. The shooters faced a rolling, green meadow, with an almost clear sky background. Wm. H. Batdorf and Jeff Karnehm managed the shoot, and had everything in running order at 10 o'clock, when the sport began. Among the out-of-town shooters present were M. E. Lindemuth, W. A. Watkins, H. M. Carr and Ike Brandenberg, of Dayton. E. W. Holding, of Urbana; Judge Miller, Wm. Poole, Chas. Henderson and D. Snyder, of Springfield; R. Neer, of New Moorefield; J. Weber and Geo. Keistler, of Celina; W. R. Chamberlain and J. N. Smith, of Columbus; W. J. Fishinger, of Hilliards; Alf. Hill, of West Liberty; D. D. Gross, of W. Jefferson. A good dinner was served in a large tent, where shooters and spectators were comfortably accommodated. In addition to the programme events, the district team trophy and individual championship cup were shot for. The latter, a handsome silver cup, is shot for each month at 50 targets, and is emblematic of the championship of seven counties. At the first contest in April, the cup was won by Karnehm. In a subsequent contest, Losh tied with Holding, the latter winning the shoot-off. Holding won the next four contests, and was again the victor to-day, scoring 49 out of 50. The team contest is for five-man teams for the championship of the same county, 50 targets per man. Three teams were entered to-day: Urbana—Holding, Bailey, Winder, Poysell and Muzzy—scored a total of 210 and won. Springfield—Poole, Miller, Henderson, Snyder and Neer—201. St. Paris—Batdorf, Karnehm, Losh, Balentine and Brubaker—197. The win to-day was the third for Urbana, and unless tied by Springfield at the next shoot, which will be the last of the series of eight contests, the cup will become the property of the Urbana Gun Club. In April, August and October the Urbana team won. Springfield won in May and July. De Groff won in June, and St. Paris in September. The next shoot will be held at Urbana. Eighteen men shot the entire programme. High average money was won by M. E. Lindemuth, 145; J. Karnehm 144, W. A. Watkins 142, Geo. Keistler and Chas. Henderson were fourth, just out of the race, with 141 each, and J. H. Smith, 140, H. M. Carr 139, W. F. Losh and Alf. Hill 136 each. I. Brandenberg 135, W. R. Chamberlain 134, D. D. Gross and D. Snyder 133 each, W. J. Fishinger and J. Brubaker 131 each, Wm. Poole 124, W. H. Batdorf 116, and J. Weber 115. The club has a large shooting shed, which offers ample protection from the weather, and shoots will be held twice a month throughout the winter. The secretary has office room in the club house, close to the shed, with windows on the four sides. The club is a new one, but their first tournament, given this year, was very successful, and they are in the game to stay. The members all take an active interest in the sport.

### Team Match at Camp Dennison.

The Madisonville, O., Gun Club, issued a challenge to the trap-shooting members of the Superior Hunting and Fishing Club, to shoot a six-man team match, and as a result there was a gathering at the latter's camp on the little Miami River, at Camp Dennison, on Oct. 6. The match was perhaps as much to bring the boys together socially as to make an exhibition of marksmanship, and this object was fully achieved, as the visitors were entertained in a royal manner, about everything good in the way of solid or liquid refreshments was theirs, and was most thoroughly enjoyed. The match was to have been at 100 targets per man, but as the visitors found themselves shy on shells, it was cut down to 85 targets each, the Superiors winning quite easily, 312 to 292. Steinkorb, of the Madisonville aggregation, was high man with 72, and Dan Pohlar, of Superior, second, with 70. Dan is also one of the good shots of the Cincinnati Club, and can generally do better than this. A heavy wind blowing in the shooters' faces and a hard background were responsible for some of the misses. Steinkorb started off at a rattling gait, breaking the first 27 straight, but after that he began to drop a few. The misses were well distributed, so that no long runs were made. Henninger was next with 23 straight. Uhl has done better work than he did to-day, but the duties of host, which suit him down to the ground, interfered with his shooting. Patten will make a good one. The targets were hard, and he got a bit worried. The visitors as well as the members all have a good word to say for the chef, Squire. He's a good one, and knows how to get up a camp dinner and how to serve it. The scores:

Superior Camp Team.				Madisonville Team.			
Targets:	30	30	25	Targets:	30	30	25
Pohlar	24	26	20-70	Steinkorb	28	22	22-72
Pfeiffer	27	20	17-64	Henninger	22	23	18-68
Gambell	21	23	16-60	Patten	14	16	17-47
Uhl	19	16	18-53	Aufdehar	14	13	14-41
Lockwood	10	16	13-39	Pritchard	8	17	12-37
Deiters	7	10	9-26	Stewart	10	9	8-27
	108	111	93-312		96	105	91-292

Garfield Gun Club.

Chicago, Oct. 7.—The following scores were made on our grounds to-day on the occasion of the fourth trophy shoot of the fourth series. In club trophy event, McDonald, Dr. Reynolds and W. Einfeldt tied in Class A on 24. Stone won in Class B on 22. No Class C man in contest.

In the Dupont cup shoot, which followed, Dr. Meek, Dr. Reynolds and John Wolff tied in Class A on 19 out of 20. Gould and Stone tied in Class B on 16 out of 20. No Class C man in shoot.

In the Hunter Arms Co. trophy event, W. Einfeldt won in Class A on 18 out of 20, thrown 10 singles and 5 pairs. Stone won in Class B on 16. No Class C man in contest.

After these events were finished several miss-and-out events were shot, and proved quite interesting.

Mr. and Mrs. W. A. Davis visited the club, and both shot and made excellent scores. Mrs. John Wolff is just learning to shoot, and will soon be coming to the front.

Events: 1 2 3 4 5 6. Targets: 10 10 10 10 10 10. Dr Meek 8 9 10 16 20 19. Thomas 6 7 6 17 22 18. Gould 4 3 6 13 17 15. McDonald 9 9 4 16 24 15. Stone 8 8 13 16 22 15. T Smedes 7 9 0 14 23 17. Dr Reynolds 10 10 10 17 24 19. George 8 7 11 16 21 18.

No. 3 was miss-and-out. No. 4 was Hunter Arms Co. trophy. No. 5 was the trophy event. No. 6 was Dupont cup.

In Other Places.

The St. Thomas, Ont., shooters have registered as follows: L. D. Melles, James Morgan, C. A. Hammond, Thomas Hynd, A. Baker, E. W. Ransey, H. E. Simpson, Wm. Hibbert, George M. Fulton, Gus. Clark, A. J. Seaton, Capt. James McDougal, Tom Brocon, Wm. Wills, Oscar Allen, S. Price, Dr. F. Guest and Capt. R. J. Miller.

Invitations have been issued to all the prominent shooters of the great west to attend the fall tournament of the Indianapolis Gun Club, which takes place Oct. 9 and 10.

The Lead, S. D., Gun Club has held the last shoot for the season which will count on the trophy.

Some time ago notice was given that the Indianapolis Shooting Association had been enjoined from shooting on their grounds. The good news is now heralded that this rifle club will unite with the gun club, and that a rifle range will be added to this most perfect shooting park. It seems that the members of the Indianapolis Gun Club are favorable, and that stock will be sold and the range erected at the earliest possible date.

At the regular shoot of the Riverdale Gun Club, Toronto, Can., Mr. Hooney, from scratch, won the spoon with 22 out of 25; Hiron made 21; Bredannaz, 19; Edkins, 17; Baker, 20.

Emil Berg and Chris. Jansen, of Davenport, Ia., will attend the tournament to be held on Nov. 5 at Milwaukee.

Here is another new club at Mediapolis, Ia., and it will hold shoots on Friday.

Pincoming, Gladwin and other Michigan gun clubs have combined to hold a big tournament.

A. E. Andrews carried away the prizes at the gun club, South Haven, Mich., last Friday, with the medium score of 17 out of 25.

Reports came from the Indian Territory that, owing to there being no game laws, parties were shooting quail, only thing in the quail's favor being that many of them were too small to offer sport, and that the rank vegetation made the shooter weary. Quail are very plentiful, and those who have the good sense to follow them in December will be amply repaid for the waiting.

There was a corn festival and a carnival held at Dumont, Ia., Oct. 4 and 5, at which the old-time sports engaged in rifle shooting, as well as wing shots. Let the old ones be boys again—nothing so wholesome.

Shooting parks, or rather duck preserves, come high in California. A club is forming at Los Angeles, and an option has been secured on 458 acres, watered by two artesian wells, the modest price being \$50,000.

The attendance was not large at the last Thebes, Ill., Gun Club shoot, held Friday.

The York Haven Gun Club, York, Pa., will hold a tournament just as soon as their new grounds are accessible.

So anxious were the Paris, Texas, shooters to test their skill on live birds, that they started in to shoot at the early hour of 8:30 A. M.

The Manistique Rod and Gun Club will hold a tournament early in October.

The annual meeting of the Stanley Gun Club, Toronto, Can., resulted in a selection of J. H. Thompson for President; G. W. MacGill, Vice-President; T. A. Duff, Secretary; A. E. Atkins, G. M. Dank, W. Eby, R. Fleming and E. Hiron, Executive Committee. A captain will be selected later.

The Junction Gun Club, Toronto, Can., report that their automatic trap is now working fine, and that it throws as fast as five men could shoot.

Mr. McKenzie, of the Denver Post, who donated the beautiful trophy that has caused so much interest in shooting circles, was lately a visitor at Perry, Oklahoma.

The Hill Rod and Gun Club, Chester, Pa., is already making extensive preparations for a shoot to be held on Thanksgiving Day.

Officers of the Redlands, Cal., Blue Rock Gun Club are, Mont P. Chubb, President; Charles Hersee, Vice-President; P. A. Mudge, Secretary. There are now twenty-five members.

Muscatine is situated just on the bank of the Mississippi River, just on the border and thus in the great shooting State of Iowa. This accounts for the boom there in trapshooting. Wednesday last there was a number of target matches pulled off.

Some members of the St. Augustine, Fla., Gun Club were out last Thursday for some practice. Strange as it may seem, this was the first meet of the season.

The first shoot of the Salt Lake, Utah, Gun Club at 50 targets: Green 27, Boyle 21, Snyder 19, Putman 3.

One of the most interesting matches shot at the grounds of the Eagle Grove, Ia., Gun Club was that of a three-cornered race, 100 targets each. Wm. Mitchell made 89, Bert Fisher 81 and A. L. Yearons 75. Others tried the same race, viz., Mountford 79, Watkins 70, Middleton 60, Carleton 50, Brown 40, Crone 40 and Haskins 40.

Marquette, Mich., Gun Club held a shoot last Friday for 1905. There was a match at 50 targets between five members to decide the final scores, Jennison 38, Elliott 35, Jenks 33, Janes 31, Humes 22.

Dr. Walters has made the highest percentage in points in Massillon, O., Gun Club. His gain is 15 points. Taylor has gained 12; Dr. Reed, 10; Dr. Reed, Sr., 9.

The Lake Charles, La., shoot was well attended. Shooting at 100 targets, C. B. Spooner 79, D. C. Williamson 78, J. W. Gardner 78, W. H. Simmons 68, J. H. Mathew 57. At 75 targets, P. Barbee 72, F. Gunn 22, A. Gossett 44, Wasey 44.

Wednesday last the members of the Baton Rouge, La., Gun Club held an interesting shoot. The per cents. made were: R. P. Raymond 83, F. Kleinpeter 84, H. Von Phul 84, C. D. Raymond 82, W. McCausland 82, A. Kleinpeter 80, B. Powell 73, C. C. Parish 72, W. C. Whittaker 66, H. L. Fuqua 61.

Chas. Morton won the honors at the Topeka, Kan., Gun Club Friday with 21 out of 25. John Klenihan made 20.

Few members of the Elwood, Ind., Gun Club met for the last time at their grounds last Friday. At 50 targets, Lansberry 43, Palmer 40, Livingston 39, Hughes 38, DeVority 28.

W. J. Smith made high score at the Freeport, Ill., shoot last Saturday, it being 56 out of 80. W. Wadington made 52.

Members of the Carroll, Ia., Gun Club participated in a shoot Wednesday in honor of Mr. Wadington, who was a visitor.

Some of the Seattle, Wash., Gun Club showed up well at their practice shoot. Edward Ellis was best; he had two perfect scores and 14 out of 15 and 19 out of 20.

The Santa Rosa, Cal., Gun Club have a team composed of R. Slusser, C. Talmadge, W. Morrow, W. E. Edmunds, James Munroe, and W. F. Hesse, Jr.

Some new members were present at the last shoot of the Massillon, O., Gun Club last Friday. The wind blew strongly, and the targets escaped quite regularly.

Steve Kurtz, the coming shot of Schuylkill county, Pa., will shoot a match with John Shadell, of Frackville, for \$150 a side, at Mahanoy City, Pa.

At the weekly shoot of the Wilkes-Barre, Pa., Gun Club for a trophy, Saturday, at 25 targets, Albert Blaze was high man.

You will hear from the Rantoul, Ill., shoot, which comes off Oct. 12 and 13. This was said not to be a money-making scheme, the idea being to get together a bunch of shooters and have a good time.

It is getting to be fashionable to have all the gun clubs in each town consolidated. There is now flourishing a consolidated club at Finlay, O.

That Portland, Ore., shoot, where all angles and styles of

shooting were indulged in, kept the professionals guessing all the while.

At the second annual tournament of the Kinsman, O., Gun Club, on Monday last, J. K. Allen and Joe Seaburn were high scores. A dark day and a stiff breeze prevented a good score being made.

Baltimore Shooting Association.

BALTIMORE, Md.—The Baltimore Shooting Association twelfth annual tournament, Oct. 3 and 4, was a success. In the two days 15,000 targets were thrown. The weather was pleasant.

There were eight programme events on the first day—eight at 20 targets, one at 15 targets, and a merchandise handicap, targets added, at 25 targets, high guns. There were fourteen merchandise prizes, in value from a \$1 gun cleaner, to a silver pitcher valued at \$10.

Oct. 3, First Day.

High averages on the first day, professional, were: J. Mowell Hawkins, Baltimore, first, 161 out of 175; second, Emory H. Storr, Baltimore, 157. Amateurs, first, Lester German, Aberdeen, Md., and Wm. Foord, Wilmington, Del., tied on 153; second, Dr. H. E. Lupus, 157. Scores:

Events: 1 2 3 4 5 6 7 8 9. Targets: 15 20 20 20 20 20 20 20 20. Lupus 12 18 18 18 16 18 19 17 153. Elderkin 8 14 17 18 16 10 13 10 120. Malone 13 14 12 13 16 19 16 18 20 141. Event No. 10 was merchandise, and did not count in the averages.

Oct. 4, Seco d Day.

Forty-four shooters participated. Mr. J. Mowell Hawkins made the extraordinary run of 128 from the 28yd. mark, and scored 172 out of 175; with the merchandise event, at 25 targets, he totaled 197 out of 200, a 98.5 per cent. performance. Messrs. Emory H. Storr and Harvey McMurphy, of Fulton, N. Y., tied for second on 157 out of 175. Messrs. Wm. Foord and Lester German tied on 162. Dr. W. C. Barr, of Washington, third, on 160. High professionals for the two days were Messrs. Hawkins, Storr and McMurphy. The leading amateurs were Messrs. German, Foord and Dupont.

In the merchandise event, handicap allowance, there were fifteen prizes, first prize being a silver tea set.

Events: 1 2 3 4 5 6 7 8 9. Targets: 15 20 20 20 20 20 20 20 20. Lupus 13 17 20 17 16 18 18 19 15 153. Moxley 14 17 19 17 19 15 19 11 19 150. Elderkin 9 11 11 12 18 14 14 15 16 120. Event No. 10 was the merchandise contest.

Rochester Rod and Gun Club.

ROCHESTER, N. Y., Oct. 6.—At the shoot of the Rochester Rod and Gun Club to-day, the appended scores were made in the eighth contest for the Laffin & Rand trophy. The high wind kept the scores down:

Score. Hdp. Tot'l. Clark 21 3 24. Stoddard 18 4 22. \*Weller 22 4 26. Back Scores: \*A Sterling 19 8 27. \*A Sterling 18 8 26. \*A Sterling 20 8 28. \*A Sterling 18 8 26. A Sterling 13 8 21. Hinkson 18 4 22. \*Hinkson 22 4 26. \*Hinkson 22 4 26. Re-Entry Scores: \*Stoddard 23 4 27. Stoddard-Withdrew. Stoddard-Withdrew. Stoddard-Withdrew. Stoddard-Withdrew.

\*Wins point on cup.

Paskamansett Gun Club.

THE third tournament of the Paskamansett Gun Club was held on Sept. 30 on the club grounds, situated on the Slocum Road. The programme consisted of a team shoot, a handicap match, shooting for merchandise prize and sweepstakes shooting.

Among those present were Gilbert M. Wheellet, J. A. R. Elliott, T. B. Thompson, J. Neaudu, J. Audett, Fall River; L. Labert, Providence; W. B. Cattledge, C. P. Keeler, Attleboro.

Two teams were entered—the Newport and the Paskamansett club teams. The event was won by the Newport team by the score of 211 to 189 made by the home club. The Newport team is considered a crack squad, and the score shows good shooting by the members of the home team.

Newport. Wm Hughes 45. Wm Dring 37. Wm Bowler 46. E W Thomas 42. John Powell 41-211. Paskamansett. G A Eggers 46. E T Bullard 41. O P Austin 38. A J Andrews 28. M Shield 36-189.

The first merchandise prize, a silver brush, was won by George A. Eggers, who broke 47 at the 16yds. mark. The second prize, a box of cigars, went to T. R. Scott, of the Brown & Sharp Club, Providence, who made a score of 46 at 19yds. William Bowler, of Newport, at 20yds, and E. C. Griffith, of Pascoag, R. I., at 21yds., were tied for third place, with a score of 44. William Hughes, of Newport, at 21yds., and A. J. Andrew, of the local club, at 16yds., were tied for fourth place with a score of 41. Both ties were shot off later in the afternoon. It took 50 birds to reach a decision between Griffith and Bowler, Griffith winning, while Hughes won his tie. Fifth prize, a picture, went to Eugene E. Reed, Mayor of Manchester, N. H., at 19yds., with a score of 40. Sixth prize, a box of cigars, was won by S. B. Hibbard, of Boston, at 18yds., with a score of 39.

The handicap prize, a silver flask for the first 50 birds, was won by C. Letendre, of Fall River.

The high average of the day for amateurs was 159 by E. C. Griffith, who got a prize of a toilet set. Second prize, \$2.50, was won by William Bowler, whose score was 158.

The high score of the day was 160, made by Mr. Elliott. The scores:

Events: 1 2 3 4 5 6 7 8 9 10. Targets: 15 15 20 15 15 20 15 20 25. Elliott 14 13 18 14 15 19 13 17 24 160. Hibbard 12 12 16 13 12 18 13 12 23 155. Wm Hughes 13 14 20 15 13 16 12 17 23 155. C Hughes 12 11 15 11 12 17 13 11 20 146. E E Reed 10 15 16 14 12 19 13 9 18 20 146. Thomas 13 13 17 13 13 16 12 13 21 144. Wheeler 13 13 15 12 14 18 15 12 21 149. Dring 14 13 16 10 11 16 12 11 20 136. Powell 15 10 17 11 13 17 11 10 22 138. E C Griffith 15 13 18 13 15 18 14 13 23 159. G A Eggers 11 11 12 13 14 19 13 14 20 152. Wm Bowler 13 14 16 12 15 19 13 14 25 158. Bullard 12 10 20 7 14 20 14 14 21 146. Austin 11 14 15 11 12 15 9 9 18 130. Shield 9 5 11 10 10 16 7 10 14 108. Andrew 9 12 11 8 7 13 13 13 15 118. C P Keeler 13 12 13 11 7 19 13 10 13 20 131. Cattledge 10 10 12 9 12 13 11 13 13 113. C Letendre 13 13 12 14 18 10 13 14 20 145. Lambert 11 12 18 13 14 15 12 11 22 142. Scott 12 14 16 11 10 14 12 20 23 146. Wm H Hand, Jr. 10 12 12 12 12 12 12 12 12 112. Knowles 9 16 11 9 11 12 13 10 10 112. Plummer 7 3 11 6 6 6 6 6 6 66. J B Neaudu 11 11 11 9 14 16 16 16 16 111. J Audet 9 12 11 9 13 13 13 13 13 99. Potter 19 19 19 19 19 19 19 19 19 171.

The next shoot of the club will be held Wednesday, Oct. 11, starting at 2:30, for Laffin & Rand cup.

Philadelphia Trapshooters' League.

THE League series has been arranged for competition in the following order:

Oct. 14.—Highland at Florists, Merchantville at Media, Lansdale at S. S. White, North Camden at Meadow Springs, Clearview at Narberth.

Oct. 28.—Media at Highland, Merchantville at Florists, S. S. White at North Camden, Meadow Springs at Clearview, Narberth at Lansdale.

Nov. 11.—S. S. White at Florists, Lansdale at North Camden, Highland at Clearview, Narberth at Merchantville, Meadow Springs at Media.

Nov. 25.—Media at Narberth, North Camden at Highland, Clearview at S. S. White, Merchantville at Lansdale, Florists at Meadow Springs.

Dec. 9.—North Camden at Merchantville, Lansdale at Clearview, Highland at Meadow Springs, Narberth at Florists, S. S. White at Media.

Dec. 23.—Media at Lansdale, S. S. White at Meadow Springs, Merchantville at Highland, Florists at Clearview, Narberth at North Camden.

Jan. 6.—Lansdale at Florists, North Camden at Media, Highland at S. S. White, Clearview at Merchantville, Meadow Springs at Narberth.

Jan. 20.—Florists at North Camden, Narberth at Highland, S. S. White at Merchantville, Media at Clearview, Lansdale at Meadow Springs.

Feb. 3.—Narberth at S. S. White, Merchantville at Meadow Springs, North Camden at Clearview, Lansdale at Highland, Media at Florists.

Feb. 17.—Florists at Highland, Media at Merchantville, S. S. White at Lansdale, Meadow Springs at North Camden, Narberth at Clearview.

March 3.—Highland at Media, Florists at Merchantville, North Camden at S. S. White, Clearview at Meadow Springs, Lansdale at Narberth.

March 17.—Florists at S. S. White, North Camden at Lansdale, Media at Meadow Springs, Clearview at Highland, Merchantville at Narberth.

March 31.—Narberth at Media, Highland at North Camden, Lansdale at Merchantville, Meadow Springs at Florists, S. S. White at Clearview.

April 14.—Merchantville at North Camden, Clearview at Lansdale, Meadow Springs at Highland, Florists at Narberth, Media at S. S. White.

April 28.—Lansdale at Media, Highland at Merchantville, Clearview at Florists, Meadow Springs at S. S. White, North Camden at Narberth.

May 12.—Florists at Lansdale, Media at North Camden, S. S. White at Highland, Merchantville at Clearview, Narberth at Meadow Springs.

May 26.—North Camden at Florists, Highland at Narberth, Clearview at Media, Merchantville at S. S. White, Meadow Springs at Lansdale.

Fleming-Bissett.

WAVERLY, N. J., Oct. 6.—A bright clear day was favorable for the contest for the Laffin & Rand trophy emblematic of the individual inanimate target championship of New Jersey. A stiff 7 o'clock wind prevailed. The contestants were Mr. J. J. Fleming (challenger) and Mr. F. C. Bissett, who has held it since winning it in open competition last June at the State shoot. This is the first match for it.

Mr. Fleming won by a score of 42 to 36. The match was shot under the auspices of the Forester Gun Club, of which Mr. Fleming is a member.

SIDE LIGHTS OF TRADE.

The G. W. Cole Company, 141 Broadway, New York, inform us that, on application, they will send free a generous sample of their famous "3 in One," and also that, on application, a generous quantity of samples of that oil will be sent to gun clubs for the use of members. The multiplicity of uses to which "3 in One" can be applied is fully described in a circular, which the company will send to any applicant.

THE MANY-USE OIL

Prevents pitting and leading; keeps bore bright and ready for use. —Adv.

THE ORIGINAL MANY-USE OIL

In 6oz. can for gunners' use 25 cents; 2oz. bottle 10 cents.—Adv.

SIX MONTHS, \$2.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, \$4 per year, \$2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

**The object of this journal will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natura objects.**

Announcement in first number of FOREST AND STREAM, Aug. 14, 1873.

### OCTOBER.

A BRILLIANT October sun shines warm from a cloudless sky. The gray haze that envelopes all the landscape, softening and blending its distant features, does not temper the heat. From the hill tops the broad prospect is warm, too, with color. Damp meadows are vividly green; pines, cedars and spruces are black; hard maples and hickories yellow; oaks are turning crimson, while all along the fence rows the sumach flames, and tongues of even darker red—the Virginia creeper—climb to the very apex of some cone-shaped cedar. To every country lover the scene is familiar, and as dear as familiar.

Cultivated fields are dotted with shocks of yellow corn, stubbles are gray with ragweed. Among the green foliage of the orchard shine brilliant fruit globes, and now and then the intense quiet is broken by the thud of a falling apple striking the soft ground. Fences and hedge rows and stubbles and weed fields and swamps are alive with a multitude of birds. Each step startles from their foraging ground a horde of gray, seed-eating sparrows of many species, that by easy stages are taking their way across the land, prompt at the first suggestion of cold weather to hasten their southward journey. They are everywhere, close about the house, in front door yard and flower garden and kitchen garden. Among them is the white-throated sparrow, handsome in his livery of brown and yellow and white, and even the blue snowbird, soberly clad like a most respectable divine. These are birds that winter in the north and do not seem to belong with us yet. From one wood lot to another small groups of crows fan their way with cheerful cawings; robins are busy over lawns and wherever the ground is damp, searching for the worms that still lie close to the surface; flycatchers and warblers and a multitude of other birds, bright plumaged or sombre in color, are busy about their various tasks.

Though it is mid October, the frosts have not yet come. Garden flowers are still in bloom; pansies, geraniums, heliotropes, dahlias have the beauty of summer. Yet, although the air is so warm the ripened leaves in wood and swamp are letting go their hold on the trees and slowly falling to earth. They are not dry and harsh, as they will be later when cold weather shall have come, but rustle softly under the foot as one pushes through them—a pleasant sound. Perhaps it is because there has been no frost that the swamp maples, usually the first trees to change their color—and for a time the most brilliant—are this year paler than usual. Some of them, though losing their leaves, are white rather than red, while others seem to approach their usual brilliant crimson. Of yellows there is a multitude of shades, the pale birch, the beech a little stronger, the hickory still brighter, and the sassafras wonderful for its orange, a color so vivid that if backed by hickories or birches, the sassafras shines against their yellows like a sun in a smoky sky.

The leaves keep dropping down; on the ground they lie thickly, the stretches of open water in the brook are covered with them, white and red and yellow, and the ripples where the water finds its way among the stones seem choked with jewels.

From the edges of the woods the gray squirrels have ventured out toward the opening, for what purpose who can tell? Perhaps they are looking for the chestnuts that have long been gathered, or perhaps a hickory tree is dropping its nuts in the pasture lot. The chipmunks, as always, are busy; one can see them running along the

walls and the rails of the fences; shy and keeping on the other side of cover if you are moving, yet curious and bold and venturing up to some high point from which they can see well, if you stand perfectly still.

Down in the swamp there are as yet no signs of the woodcock. Frosts are needed to bring them on, but when they come, here is abundant food for them. If we push up to the higher ground, perhaps somewhere not far away, a grouse may rise almost on silent wing, and dart away through the forest, veering this way and that to dodge the tree stems before him, yet still keeping a straight course and in full view perhaps for sixty yards. There is a sight to stir the blood of the New England gunner—fair view of a splendid and beautiful game bird. To the nature lover such a sight amply repays the fatigue of a day's tramp under a warm sun. To the field shooter it means joy and hope, for it is a promise of what is to come.

### THE CARP CURSE.

It happens that just as we have put into type Mr. Alex. Starbuck's arraignment of the carp as a pest threatening our inland waters, there comes to hand a report from Consul General Holloway, of Halifax, which says: "Whitfish and salmon trout in Canadian waters are almost extinct. In the fresh waters, where they are not yet extinct, the German carp, imported years ago, and breeding about fifteen times as fast as whitefish, are destroying the remainder."

The carp menace is by no means confined to the United States. In the Great Lakes it is in the very nature of the case a matter of international concern. And it is a concern which every year is becoming more serious as the fish multiplies in its old haunts and finds a way into new waters. "I may not live to see the day when the carp will be the monarch of all our waters," writes Mr. Starbuck, at the age of eighty, "but one need not be much younger than I am to realize this great tragedy of our lakes and rivers." Many of us have seen it already in waters with which we are familiar, where the carp has driven out and supplanted the native fish, far superior to it in all that counts for excellence. With respect to many of the lakes and rivers of North America the introduction of the foreign carp has been one of the gigantic blunders of fish transplanting. The carp is here—and it is here to stay. To extirpate it from connecting water courses is something which may safely be counted as beyond the ingenuity of man.

The carp has been a subject of discussion for several years in Illinois, where it has found active champions as well as those to denounce it; and here its supremacy, won at the expense of the native fish, is well illustrated. The Illinois River, which is about 400 miles long, and has 172 rivers and creeks as tributaries, and seventy-one rivers and creeks which are wholly within the State, and Fox Lake, which is one of the headwaters of the river, are crowded with these "scavengers of the waters," which will soon, by sheer force of numbers, drive out all other species. From Fox Lake, which has been famous as a breeding ground of game fish, more than 40,000 pounds of carp have been taken in an effort to clear it of this undesirable fish. The work was useless. The carp is there. It is there to stay.

If a lake or pond be so small that it may be completely drained—as has been done with some of the New Jersey lakes near New York—it is practicable to draw the water off and pitchfork out the fish. But with waters too large to treat in this way—with the Great Lakes—no remedy is suggested.

While with respect to so many scores of carp-infested ponds and lakes and streams the only thing left is to be content with the coarse fish which has taken the place of native species, it is not too late to protect from the curse waters which have not yet been invaded. There are in some States—as there should be everywhere—laws forbidding the introduction of fish into public waters without the sanction of the commissioners of fisheries; and to prevent the accidental stocking of waters with carp there are laws forbidding the use of carp minnows for bait.

Mr. Starbuck's paper should have careful reading. It has to do with a subject of incalculable importance to the fishing resources, opportunities and industries of the country. Discussion of the carp question should be encour-

aged to the end that the public may be educated as to the true character of the fish and what its coming into new waters will mean.

### ITALY AFIELD.

THE flooding sunlight of these serene October days is the golden flood of the sun of Italy, and the blue of the sky is that same bewitching blue which arches above the Mediterranean. Yielding to the seductive call of the suburbs the exiled child of Italy straps on his gun, loads his pockets with ammunition, and sallies (or sneaks) out into the fields and thickets near the cities to shoot song-birds in this glorious land of freedom as he has been wont to do in his native Italy. At Fort Lee, in New Jersey, opposite New York, last Sunday, the game warden took in three enthusiastic sportsmen of the Latin race, who, in court, gave the names of Clemente Terosti, Salvatore Cusotro and Francisco Surati. They had between them a dozen robins, which had fallen to their ardent pursuit. A Hackensack justice fined them \$25 each for hunting in the State without a license and \$40 each for having slaughtered robins. The men astonished the court by producing the amounts of their fines in bills, paid up promptly and without ado, and took the ferry for home. They were not the only aliens who figured in the Monday newspaper reports of Sunday shooting. A Brooklyn song bird shooter, who gave the name of Thomas Simonetti, was taken in by the police for having shot a robin, a woodpecker and a wren. The Italian laborers on the Jerome Park Reservoir are incorrigible song bird shooters, and last week a protesting resident, on whose grounds a band of Italian shooters was trespassing in pursuit of robins, was menaced by the murderous gang with personal assault. These incidents, which are typical of a long catalogue of like outrages, all point straight to the necessity of a law to forbid the carrying of shotguns by unnaturalized foreigners. Other States have adopted this system; New York conditions demand it.

THE fishing trespass suit of Rockefeller vs. LaMora is already famous and promises to take its place among the important cases which have to do with the development of the private fishing and hunting preserve in this country. Mr. Raymond S. Spears, who gives in another column to-day a summary of the progress of the case as carried through the several courts to the Court of Appeals, tells us that he has endeavored to write an unbiased and unprejudiced statement of the affair. It was perhaps inevitable that getting the story in part from LaMora's counsel, his version should have a slight color of sympathy with the native Adirondack view of the matter. It is to be said, however, that many of the points brought out have not before been clearly explained. The case, as here described, is not one of simple trespass. As to the contention that the planting of fish by the State in the waters in dispute gave to others than the owner any right to enter upon the land for the purpose of fishing, that is an argument which has been considered more than once by us; and it is one upon which a decision by the higher courts is much to be desired.

COMMISSIONER H. G. THOMAS, of Vermont, takes up the challenge of a critic of the Vermont non-resident shooting license law and replies to the criticism by citing decisions of the courts upholding the principle of such a statute. In brief, the argument usually advanced to justify the non-resident discrimination is this, that the State owns the game, and as the owner may prescribe regulations for its taking, even to the extreme of forbidding its killing at any time or in any manner. Clearly then, the argument runs, the State may restrict the privilege wholly to its own citizens, or it may extend to others permission to shoot on any terms it elects. The principle is pretty well established; and proposals to test the constitutionality of the non-resident system are not heard so frequently now nor so confidently as in earlier years, when such laws were novel. But, to repeat a suggestion made here last week, is there reason to believe that such a law as that of New York, which prescribes reprisals for non-residents varying in amount and determined by the residence of the visitor, is likely to hold if put to the test of constitutionality?

## THE SPORTSMAN TOURIST

### In Trapping Days.

THIS is a chapter of life in the Wild West, the old West of the trapper, trader and Indian fighter, as it is pictured in the story of "Sixty Years on the Plains," by William T. Hamilton.\* Mr. Hamilton, popularly and affectionately known as "Uncle Bill" Hamilton, is now enjoying a serene old age at his home in Columbus, Mont. He is a survivor of a picturesque type of men who had a large and important part in the making of the West. The story is here told by one who was one of the actors in it, and it is told with a modesty as to the narrator's own personal part which is as winning as it is admirable. The expedition here described is one of the first in which Hamilton joined, its date being in the early '40s.

PERKINS was selected as leader. The party was made up of twenty trappers. A council was held on the 16th of September and it was decided to explore Salt Lake, Weber, Bear, and Malade rivers, and other streams, as circumstances and amount of furs should warrant.

The next day we started, a wild and motley-looking outfit I thought. The Indians all crowded up to shake us by the hand and to warn us to look out for the Blackfeet.

Nothing of interest took place until we reached Weber River, which rises in the Wahsatch Mountains and empties into Salt Lake. We followed the river down, passing through the cañon, and came in sight of the Great Salt Lake Valley, spread out in all its primitive grandeur. I said to Perkins, "Here is a scene fit to be viewed by the gods." Perkins and the other men laughed, saying, "Bill is becoming poetical." It was no longer "Boy." "Bill" had taken its place.

Perkins wanted to visit a stream south of where Salt Lake City now stands, and on our way there we camped at the hot springs, noted before, taking a plunge or bath before the Mormons ever heard of that country. We also examined the Blackfoot fort on the bench overlooking the springs.

The next morning some Utah Indians called on us and wanted us to pay for being in their country. Such a thing could not be thought of for a moment. These Indians spoke the Shoshone tongue, which many of our men understood. They were also very fair sign-talkers. When informed that they would receive no pay, their chief, who was called Old Bear—and bear he was by his looks, for a more surly looking savage was never seen—ordered us to leave immediately. He had with him some thirty warriors, who had a few flint-lock guns, bows and arrows, lances, knives, and tomahawks. They were thus fairly well armed, but by no means equal to our party.

Perkins, who was an expert in dealing with turbulent and insulting Indians, having great patience, tried by every means to pacify them and make friends, but without success. He made the Indians keep back from our outfit, and then they would spit at us and make signs meaning "dogs," which we all understood. I expected every minute to see the fight commence. We were prepared at every point, and our arms were in prime condition.

Perkins cautioned the men to have patience, for many of them were becoming nervous at the insults from the Indians. Trappers would not brook insults from any one, and as I saw these men grow more and more angry and bite their lips I thought it commendable in them to curb their feelings. All this time Perkins was trying his best to make peace. He filled his pipe, lit it, and offered it to the chief, who refused with contempt, saying, "Big Chief never smokes with white dogs."

Perkins' patience was now exhausted, and he told the chief in pretty plain language to get out. When the Indians saw our men prepare for action by standing in open order and bringing their guns down to bear on them, they mounted their ponies; and casting all kinds of insults at us, both in signs and in spoken language, they departed, going south, the very route that we wanted to take.

After they had disappeared we held a council, and Perkins thought that we would have to give up going any further south, as their village was located somewhere in that direction. We were not afraid of the Indians, but we wanted to collect furs and would have no opportunity to do this without being greatly annoyed.

As things stood it was a certainty that the Indians would follow us, and that a fight could not be avoided. We concluded to take the back track, a thing that trappers seldom do, except under extreme conditions such as those just related.

The reader may be interested in knowing just how a company of twenty trappers divided the work in the business of collecting furs among hostile Indians.

In the first place, everything was held in common, which means that the value of all furs trapped was equally divided. All men could not trap, for a picket had to be constantly on duty. A guard remained with the horses during the day. During the night the horses were corralled. One man had to take care of camp.

\*MY SIXTY YEARS ON THE PLAINS. Trapping, Trading, and Indian Fighting. By W. T. Hamilton ("Bill Hamilton"). With six full-page illustrations by Charles M. Russell. New York. Forest and Stream Publishing Co. Price, \$1.50.

and generally two men acted as skinnners and caretakers of all the furs brought in. The remainder set traps, and all kept a sharp lookout for Indians. No shooting was allowed while setting traps, as a shot signified Indians, at which signal all were on the alert.

A general rule that was followed by all mountain men was to strap stay-chains or trace-chains to the horses' fetlocks. It was impossible for them to stampede with such a fixing. When trappers lost their horses they were obliged to go to some rendezvous and restock, as furs could not be collected without horses.

We camped in a strong position on a sharp bend in the Weber River, where the banks were steep and the waters deep, so that in case of an attack the Indians could not approach from the river side. Perkins thought that the Indians would undoubtedly hold a council in their village and concoct some plan whereby they could capture those "white dogs" and get all their horses. All this we understood, but as I have said before, they calculated without their host, as the sequel will show.

Beaver signs were plentiful here, and after camp was made the men went out and set traps. At supper all hands were in camp.

We passed many jokes that evening, "Silver Tip" taking the lead, for he was by long odds the most humorous and comical member of the party.

Personally I was engaged in making a close study of all our men, particularly the new ones, and I came to the conclusion that they were a noble-looking body of men. With high foreheads and with calm and fearless eyes, their demeanor was that of gentlemen. I had read of Daniel Boone and Simon Kenton, and in my mind I began to make comparisons, wondering whether Boone or Kenton were any nobler looking than these men.

Then I thought of Leonidas and his handful of men repelling Xerxes and his immense Persian army. Could they be any braver or of finer metal than these trappers? As such thoughts passed through my mind, I came to the conclusion that the American nation might well feel proud of her mountaineers, who fearlessly explored the unknown wilderness, encountering and overcoming untold difficulties and dangers by the mere force of their own indomitable will-power and courage.

The true mountain men have never received the credit which they justly merited for their part in bringing this unknown country to light.

We only put up one ten-skin lodge for our effects, sleeping outside with arms in hand. Two guards were put on duty, to be relieved at midnight.

Perkins said that it was customary for the Utahs to attack just before daylight. It is at this time that Indians expect to find whites fast asleep.

A little before day two or three wolf howls were heard by the guards, who immediately notified Perkins, and he soon had all the men up. Our packs were placed in a semi-circle as a breastwork, and twenty of our best horses were saddled and tied in a thicket, to protect them as much as possible from Indian bullets and arrows. About the only protection the Indians would have in approaching camp was the sage-brush which stood on the flat.

We had a fairly well-fortified position, and it stood us well in hand to have it so. The Indians, knowing our number, would attack us seven or eight to one, and perhaps more.

Trappers in those days were obliged always to contend against overwhelming numbers; but they never hesitated, and it was always a fight to win, for defeat meant death.

The first wolf howls were soon followed by others, coming from points nearer and in a semi-circle. Indians are expert in imitating the cries of wolves or coyotes, and it is very hard to distinguish them from the cries of the real animals. On the other hand, even after years of practice, few whites can successfully imitate these animals. The hooting of the owl is frequently used as an Indian signal in attacking camps. All these signals are carefully studied by trappers and scouts, who are rarely deceived.

The Indians must have located our camp from the mountains, which were at no great distance, as our one lodge was set up in a cotton wood grove, which concealed it.

We had not long to wait before the attack commenced. Just at break of day the signals ceased, and the trappers knew that the crisis was at hand.

The Indians crept to within one hundred yards of camp before they gave the war-whoop. Then they came madly charging, fully one hundred in number.

The trappers had their rifles in hand and their pistols out of their scabbards ready for instant use after the rifles were discharged.

We let them get within fifty yards before delivering a shot, and at the discharge of the rifles many fell. Three of our men were armed with double-barreled shotguns, loaded with a half-ounce ball and five buck-shot, deadly weapons at close quarters. These were now discharged and the Indians halted. Immediately the trappers began with their six-shooters, one in each hand, for as a result of long and constant practice they could shoot equally well with either. Every condition of his life obliged the trapper to be expert in the use of firearms.

At receiving so many shots from twenty men the

Indians became panic-stricken. They had not calculated on the trappers having two pistols each—twelve shots apiece after the rifles were discharged. They had expected to exterminate us before we could reload our rifles.

The Indians retreated, assisting many of their wounded. Perkins had hard work to keep the men from charging, for our fighting blood was up. Had we charged, we would have lost several men, for the sage-brush was alive with Indians.

Several in our party received slight wounds, but none that were serious. An arrow went through my fur cap.

It was now getting daylight, and several wounded Indians lying close to our breastwork began shooting arrows at us, but our men soon quieted them.

When the sun was about two hours high, the Indians sent a messenger with a rag tied to a stick. Perkins met him outside. He said the Indians wished to make peace and that they had lost their chief, Old Bear, as well as many of their bravest warriors.

This was merely a sham. All they wanted was to save their slain from being scalped.

Perkins told the Indian to remain outside until he held council with his men. He was quite a diplomat, and made a strong speech to the effect that it would be best to make peace. It would certainly be to our advantage in collecting furs. The Indians had received a repulse which they had not expected. They would now return to their village, taking their dead and wounded, and mourn for many days. This would give us time to trap the Malade River and other streams before they got through mourning.

A vote was taken and resulted in seven wanting to continue the fight and thirteen declaring for peace. We did not fear the Indians, but we wanted to collect furs, not to fight. Perkins told the Indian to go back and bring five of his comrades to our camp.

In the meantime we cooked breakfast, keeping a sharp lookout all the while, for under no conditions do trappers trust Indians after a fight. We did not have long to wait for the six Indians, who came up looking crestfallen at their failure. Perkins smoked with them and gave them some tobacco. He then told them that if they molested us any more or stole any of our horses he and his men would wipe out their village.

"Big talk," Docket said; "twenty men wiping out six hundred."

However, they appeared mighty glad to get possession of their dead and they made signals to other Indians to bring ponies, and they soon had the dead lashed to the ponies and departed. I counted thirty-two, which rather surprised us, as we had thought the execution very much greater. Had they attacked camp a half-hour later, in the same manner, their loss would have been doubled.

The next year we learned that many of the wounded had died, and that the Utahs declared that they had lost many of their best warriors. This tribe had frequently robbed small parties of trappers, many times killing them, and this was the first severe lesson that they had ever received. After this occurrence they invariably gave the well-organized bodies of trappers the "go by."

If any reader of this should doubt the fighting quality of the trapper, let him go among any tribe of Indians to-day and ask them what they think of it. They will invariably answer that it "costs too much blood to fight trappers."

This band was of the same Indians that gave the Mormons so much trouble a few years later.

### The Fisher.

(From the German of Göthe.)

The water rushed, the water swelled,  
A Fisher sat beside:  
Cool to the heart his rod he held,  
And calmly watched the tide,  
Till fast, with many a circling wreath,  
He marked the waves unclose,  
And beauteous from the deeps beneath  
A syren nymph uprose.

She sang to him, she spake to him—  
"Why thus my watery brood  
With lies of human stratagem  
To these death-heats delude?  
Oh, couldst thou see how happy live  
The little fish below,  
Thyself beneath the flood wouldst dive,  
And bliss for ever know."

"Doth not the dear Sun bathe him here?  
The sweet Moon bathe her, too?  
Rise not their faces doubly fair,  
Wave-breathing to the view?  
Doth not this deeper heaven thee charm—  
This moistly-glorious blue?  
Doth not thine own reflected form,  
Amid th' eternal dew?"

The waters rushed, the waters swelled,  
They kissed his naked feet;  
A wondrous charm his heart impelled  
Some Unknown Love to greet:  
She sang to him, she spake to him,  
Half plunged he from the shore,  
Half drew she him to sea-caves dim,  
The Fisher rose no more.

—E. F., in Fishing Gazette.

## Trails of the Pathfinders.—XXXIV.

(Concluded from page 289.)

Ruxton had many hunting adventures, and some narrow escapes from Indian fighting. Much of what he writes of this period has to do with the animals of the region, for at that time the country swarmed with game. The rapidity with which wolves will devour an animal is well known to those familiar with the olden time, but we may quote what our author has to say about it:

"The sagacity of wolves is almost incredible. They will remain around a hunting camp and follow the hunters the whole day, in bands of three and four, at less than a hundred yards distance, stopping when they stop, and sitting down quietly when game is killed, rushing to devour the offal when the hunter retires, and then following until another feed is offered them. If a deer or antelope is wounded, they immediately pursue it, and not infrequently pull the animal down in time for the hunter to come up and secure it from their ravenous clutches. However, they appear to know at once the nature of the wound, for if but slightly touched, they never exert themselves to follow a deer, chasing those only which have received a mortal blow.

"I one day killed an old buck which was so poor that I left the carcass on the ground untouched. Six coyotes, or small prairie wolves, were my attendants that day, and of course before I had left the deer twenty paces, had commenced their work of destruction. Certainly not ten minutes after, I looked back and saw the same six loping after me, one of them not twenty yards behind me, with his nose and face all besmeared with blood and his belly swelled almost to bursting. Thinking it scarcely possible that they could have devoured the whole deer in so short a space. I had the curiosity to return, and to my astonishment, found actually nothing left but a pile of bones and hair, the flesh being stripped from them as clean as if scraped with a knife. Half an hour after I killed a large blacktail deer, and as it was also in miserable condition, I took merely the fleeces (as the meat on the back and ribs is called), leaving four-fifths of the animal untouched. I then retired a short distance, and sitting down on a rock, lighted my pipe and watched the operations of the wolves. They sat perfectly still until I had withdrawn some three-score yards, when they scampered, with a flourish of their tails, straight to the deer. Then commenced such a tugging and snarling and biting, all squealing and swallowing at the same moment. A skirmish of tails and flying hair was seen for five minutes, when the last of them, with slouching tail and evidently ashamed of himself, withdrew, and nothing remained on the ground but a well-picked skeleton. By sunset, when I returned to camp, they had swallowed as much as three entire deer."

Although Ruxton was no longer traveling, he was not yet free from danger from storms, and an extraordinary night passed in a snowstorm followed the loss of his animals on a hunting trip. Horses and mules had disappeared one morning, and he and his companion had set out to find them. This they succeeded in doing, and when they overtook the animals, shortly after noon, he says, "I found them quietly feeding—and they suffered me to catch them without difficulty. As we were now within twenty miles of the fort, Morgan (his companion), who had had enough of it, determined to return, and I agreed to go back with the animals to the cache and bring in the meat and packs. I accordingly tied the blanket on a mule's back, and leading the horse, trotted back at once to the grove of cottonwoods where we had before encamped. The sky had been gradually overcast with leaden-colored clouds, until, when near sunset, it was one huge inky mass of rolling darkness. The wind had suddenly lulled, and an unnatural calm, which so surely heralds a storm in these tempestuous regions, succeeded. The ravens were winging their way toward the shelter of the timber, and the coyote was seen trotting quickly to cover, conscious of the coming storm.

"The black, threatening clouds seemed gradually to descend until they kissed the earth, and already the distant mountains were hidden to their very bases. A hollow murmuring swept through the bottom, but as yet not a branch was stirred by wind; and the huge cottonwoods, with their leafless limbs, loomed like a line of ghosts through the heavy gloom. Knowing but too well what was coming, I turned my animals toward the timber, which was about two miles distant. With pointed ears, and actually trembling with fright, they were as eager as myself to reach the shelter; but, before we had proceeded a third of the distance, with a deafening roar the tempest broke upon us. The clouds opened and drove right in our faces a storm of freezing sleet, which froze upon us as it fell. The first squall of wind carried away my cap, and the enormous hailstones beating on my unprotected head and face almost stunned me. In an instant my hunting shirt was soaked, and as instantly frozen hard, and my horse was a mass of icicles. Jumping off my mule—for to ride was impossible—I tore off the saddle blanket and covered my head. The animals, blinded with the sleet, and their eyes actually coated with ice, turned their sterns to the storm, and, blown before it, made for the open prairie. All my exertions to drive them to the shelter of the timber were useless. It was impossible to face the hurricane, which now brought with it clouds of driving snow; and perfect darkness soon set in. Still, the animals kept on, and I determined not to leave them, following, or, rather, being blown, after them. My blanket, frozen stiff like a board, required all the strength of my numbed fingers to prevent its being blown away, and although it was no protection against the intense cold, I knew it would in some degree shelter me at night from the snow. In half an hour the ground was covered on the bare prairie to the depth of two feet, and through this I floundered for a long time before the animals stopped. The prairie was as bare as a lake; but one little tuft of greasewood bushes presented itself, and here, turning from the storm, they suddenly stopped and remained perfectly still. In vain I again attempted to turn them toward the direction of the timber; huddled together, they would not move an inch; and, exhausted myself, and seeing nothing before

me but, as I thought, certain death, I sank down immediately behind them, and covering my head with the blanket, crouched like a ball in the snow. I would have started myself for the timber, but it was pitchy dark, the wind drove clouds of frozen snow into my face, and the animals had so turned about in the prairie that it was impossible to know the direction to take; and although I had a compass with me, my hands were so frozen that I was perfectly unable, after repeated attempts, to unscrew the box and consult it. Even had I reached the timber, my situation would have been scarcely improved, for the trees were scattered wide about over a narrow space, and consequently afforded but little shelter; and if even I had succeeded in getting firewood—by no means an easy matter at any time, and still more difficult now that the ground was covered with three feet of snow—I was utterly unable to use my flint and steel to procure a light, since my fingers were like pieces of stone, and entirely without feeling.

"The way the wind roared over the prairie that night—how the snow drove before it, covering me and the poor animals partly—and how I lay there, feeling the very blood freezing in my veins, and my bones petrifying with the icy blasts which seemed to penetrate them—how for hours I remained with my head on my knees and the snow pressing it down like a weight of lead, expecting every instant to drop into a sleep from which I knew it was impossible I should ever awake—how every now and then the mules would groan aloud and fall down upon the snow, and then again struggle on their legs—how all night long the piercing howl of the wolves was borne upon the wind, which never for an instant abated its violence during the night—I would not attempt to describe. I have passed many nights alone in the wilderness and in a solitary camp—have listened to the roarings of the wind and the howling of wolves, and felt the rain or snow beating upon me with perfect unconcern; but this night threw all my former experiences into the shade, and is marked with the blackest of stones in the memoranda of my journeyings.

"Once, late in the night, by keeping my hands buried in the breast of my hunting shirt, I succeeded in restoring sufficient feeling into them to enable me to strike a light. Luckily my pipe, which was made out of a huge piece of cottonwood bark, and capable of containing at least twelve ordinary pipefuls, was filled with tobacco to the brim; and this I do believe kept me alive during the night, for I smoked and smoked until the pipe itself caught fire and burned completely to the stem.

"I was just sinking into a dreamy stupor, when the mules began to shake themselves and sneeze and snort, which hailing as a good sign, and that they were still alive, I attempted to lift my head and take a view of the weather. When with great difficulty I raised my head, all appeared dark as pitch, and it did not at first occur to me that I was buried deep in snow; but when I thrust my arm above me, a hole was thus made, through which I saw the stars shining in the sky and the clouds fast clearing away. Making a sudden attempt to straighten my almost petrified back and limbs, I rose, but, unable to stand, fell forward in the snow, frightening the animals, which immediately started away. When I gained my legs I found that day was just breaking, a long gray line of light appearing over the belt of timber on the creek, and the clouds gradually rising from the east, and allowing the stars to peep from patches of blue sky. Following the animals as soon as I gained the use of my limbs, and taking a last look at the perfect cave from which I had just risen, I found them in the timber, and singular enough under the very tree where we had cached our meat. However, I was unable to ascend the tree in my present state, and my frost-bitten fingers refused to perform their offices; so that I jumped upon my horse, and followed by the mules, galloped back to the Arkansa, which I reached in the evening, half dead with hunger and cold.

"The hunters had given me up for lost, as such a night even the 'oldest inhabitant' had never witnessed. My late companion had reached the Arkansa, and was safely housed before it broke, blessing his lucky stars that he had not gone back with me."

It was at this time that the news of the Pueblo Indian rising in the valley of Taos took place, and that Governor Charles Bent and other white men had been killed. The account of the fight at the house of Turley is given in detail, and is interesting as coming through Ruxton direct from Albert, one of the three survivors: "The massacre of Turley and his people, and the destruction of his mill, were not consummated without considerable loss to the barbarous and cowardly assailants. There were in the house at the time of the attack eight white men, including Americans, French Canadians, and one or two Englishmen, with plenty of arms and ammunition. Turley had been warned of the intended insurrection, but had treated the report with indifference and neglect, until one morning a man named Otterbees, in the employ of Turley, and who had been despatched to Santa Fe with several mule loads of whisky a few days before, made his appearance at the gate on horseback, and hastily informing the inmates of the mill that the New Mexicans had risen and massacred Governor Bent and other Americans, galloped off. Even then Turley felt assured that he would not be molested, but at the solicitations of his men, agreed to close the gate of the yard, round which were the buildings of a mill and distillery, and make preparations for defense.

"A few hours after, a large crowd of Mexicans and Pueblo Indians made their appearance, all armed with guns and bows and arrows, and advancing with a white flag, summoned Turley to surrender his house and the Americans in it, guaranteeing that his own life should be saved, but that every other American in the valley of Taos had to be destroyed; that the Governor and all the Americans at Fernandez and the rancho had been killed, and that not one was to be left alive in all New Mexico.

"To this summons, Turley answered that he would never surrender his house nor his men, and that, if they wanted it or them, they must take them."

"The enemy then drew off, and after a short consultation, commenced the attack. The first day they numbered about five hundred, but the crowd was hourly

augmented by the arrival of parties of Indians from the more distant pueblos, and of New Mexicans from Fernandez, La Cañada and other places.

"The building lay at the foot of a gradual slope in the sicra, which was covered with cedar bushes. In front ran the stream of the Arroyo Hondo, about twenty yards from one side of the square, and on the other side was broken ground, which rose abruptly and formed the bank of the ravine. In rear, and behind the still-house, was some garden ground inclosed by a small fence, and into which a small wicket gate opened from the corral.

"As soon as the attack was determined upon, the assailants broke, and scattering, concealed themselves under the cover of the rocks and bushes which surrounded the house.

"From these they kept up an incessant fire upon every exposed portion of the building, where they saw the Americans preparing for defense.

"They, on their parts, were not idle; not a man but was an old mountaineer, and each had his trusty rifle, with good store of ammunition. Wherever one of the assailants exposed a hand's breadth of his person, there whistled a ball from an unerring barrel. The windows had been blockaded, loop holes being left to fire through, and through these a lively fire was maintained. Already several of the enemy had bitten the dust, and parties were constantly seen bearing off the wounded up the banks of the Cañada. Darkness came on, and during the night a continual fire was kept up on the mill, while its defenders, reserving their ammunition, kept their posts with stern and silent determination. The night was spent in running balls, cutting patches and completing the defenses of the building. In the morning the fight was renewed, and it was found that the Mexicans had effected a lodgment in a part of the stables, which were separated from the other portions of the buildings, and between which was an open space of a few feet. The assailants during the night had sought to break down the wall and thus enter the main building, but the strength of the adobes and logs of which it was composed, resisted effectually all their attempts.

"Those in the stable seemed anxious to regain the outside, for their position was unavailable as a means of annoyance to the besieged, and several had darted across the narrow space which divided it from the other part of the building and which slightly projected, and behind which they were out of the line of fire. As soon, however, as the attention of the defenders was called to this point, the first man who attempted to cross, and who happened to be a Pueblo chief, was dropped on the instant and fell dead in the center of the intervening space. It appeared an object to recover the body, for an Indian immediately dashed out to the fallen chief and attempted to drag him within the cover of the wall. The rifle which covered the spot again poured forth its deadly contents, and the Indian, springing into the air, fell over the body of his chief, struck to the heart. Another and another met with a similar fate, and at least three rushed at once to the spot, and seizing the body by the legs and head, had already lifted it from the ground, when three puffs of smoke blew from the barricaded window, followed by the sharp cracks of as many rifles, and the three daring Indians added their number to the pile of corpses which now covered the body of the dead chief.

"As yet the besieged had met with no casualties; but after the fall of the seven Indians in the manner above described, the whole body of assailants, with a shout of rage, poured in a rattling volley, and two of the defenders of the mill fell mortally wounded. One, shot through the loins, suffered great agony, and was removed to the still-house, where he was laid upon a large pile of grain, as being the softest bed to be found.

"In the middle of the day the assailants renewed the attack more fiercely than before, their baffled attempts adding to their furious rage. The little garrison bravely stood to the defense of the mill, never throwing away a shot, but firing coolly, and only when a fair mark was presented to their unerring aim. Their ammunition, however, was fast failing, and to add to the danger of their situation, the enemy set fire to the mill, which blazed fiercely and threatened destruction to the whole building. Twice they succeeded in overcoming the flames, and taking advantage of their being thus occupied, the Mexicans and Indians charged into the corral, which was full of hogs and sheep, and vented their cowardly rage upon the animals, spearing and shooting all that came in their way. No sooner, however, were the flames extinguished in one place than they broke out more fiercely in another; and as a successful defense was perfectly hopeless, and the numbers of the assailants increased every moment, a council of war was held by the survivors of the little garrison, when it was determined, as soon as night approached, that every one should attempt to escape as best he might, and in the meantime the defense of the mill was to be continued.

"Just at dusk, Albert and another man ran to the wicket gate, which opened into a kind of inclosed space, and in which was a number of armed Mexicans. They both rushed out at the same moment, discharging their rifles full in the faces of the crowd. Albert, in the confusion, threw himself under the fence, whence he saw his companion shot down immediately, and heard his cries for mercy, mingled with shrieks of pain and anguish, as the cowards pierced him with knives and lances. Lying without motion under the fence, as soon as it was quite dark he crept over the logs and ran up to the mountain, traveled day and night, and scarcely stopping or resting, reached the Greenhorn, almost dead with hunger and fatigue. Turley himself succeeded in escaping from the mill and in reaching the mountain unseen. Here he met a Mexican, mounted on a horse, who had been a most intimate friend of the unfortunate man for many years. To this man Turley offered his watch (which was treble its worth) for the use of his horse, but was refused. The inhuman wretch, however, affected pity and commiseration for the fugitive, and advised him to go to a certain place, where he would bring or send him assistance; but on reaching the mill, which was now a mass of fire, he immediately informed the Mexicans of his place of concealment, whither a large party instantly proceeded and shot him to death.

"Two others escaped and reached Santa Fe in safety. The mill and Turley's house were sacked and gutted, and all his hard-earned savings, which were considerable, and concealed in gold about the house, were discovered, and of course seized upon by the victorious Mexicans.

"The Indians, however, met a few days after with a severe retribution. The troops marched out of Santa Fe, attacked their pueblo, and leveled it to the ground, killing many hundreds of its defenders and taking many prisoners, most of whom were hanged."

The man Otterbees, or Otterby, was a Mexican, or half Mexican, well known in the West from 1840 to 1850. His Cheyenne wife, now about eighty-six years old, still resides in Oklahoma, where also he has a son, a half-breed, of good intelligence.

At this time the fur of the beaver had been supplanted by other and cheaper materials, so that beaver fur, which formerly brought \$8 a pound, now brought but \$1. For this reason, many, if not most, of the trappers, had for the time being ceased their work, and many of them had settled down on farms in the mountains, where, though professing to farm, they raised little from the ground except corn, but subsisted almost entirely on the game, which was so enormously abundant. The author has much to say about the trappers and their ways of life, and much also about the Arapaho Indians, camps of whom were in the vicinity of the fort through much of the winter. He made many solitary hunting trips away from the fort, and of one of these, to the head of the Fontaine-qui-bouille, he paints a pleasing picture:

"Never was there such a paradise for hunters as this lone and solitary spot. The shelving prairie, at the bottom of which the springs are situated, is entirely surrounded by rugged mountains, and containing perhaps two or three acres of excellent grass, affords a safe pasture to their animals, which would hardly care to wander from such feeding, and the salitrose rocks they love so well to lick. Immediately overhead Pike's Peak, at an elevation of 12,000 feet above the level of the sea, towers high into the clouds, while from the fountain, like a granitic amphitheatre, ridge after ridge, clothed with pine and cedar, rises and meets the stupendous mass of mountains, well called 'Rocky,' which stretches far away north and southward, their gigantic peaks being visible above the strata of clouds which hide their rugged bases.

"This first day the sun shone out bright and warm, and not a breath of wind ruffled the evergreen foliage of the cedar groves. Gay-plumaged birds were twittering

in the shrubs, and ravens and magpies were chattering overhead, attracted by the meat I had hung upon a tree; the mules, having quickly filled themselves, were lying round the spring, basking lazily in the sun; and myself, seated on a pack, and pipe in mouth, with rifle ready at my side, indolently enjoyed the rays, which reverberated (*sic*) from the white rock on which I was lying, were deliciously warm and soothing. A piece of rock, detached from the mountainside and tumbling noisily down, caused me to look up in the direction whence it came. Half a dozen big-horns, or Rocky Mountain sheep, perched on the pinnacle of a rock, were gazing wonderingly upon the prairie, where the mules were rolling enveloped in clouds of dust. The enormous horns of the mountain sheep appeared so disproportionately heavy, that I every moment expected to see them lose their balance and topple over the giddy height. My motions frightened them, and jumping from rock to rock, they quickly disappeared up the steepest part of the mountain. At the same moment a herd of blacktail deer crossed the corner of the glade within rifle shot of me, but, fearing the vicinity of Indians, I refrained from firing before I had reconnoitred the vicinity for signs of their recent presence.

"Immediately over me, on the left bank of the stream, and high above the springs, was a small plateau, one of many which are seen on the mountainsides. Three buffalo bulls were here quietly feeding, and remained the whole afternoon undisturbed. I saw from the sign that they had very recently drunk at the springs, and that the little prairie where my animals were feeding was a frequent resort of solitary bulls."

In pleasant discursive fashion, the author tells of buffalo and bears, and mountain sheep; and mentions among other things, concerning this species, that several attempts have been made to secure the young of mountain sheep and transport them to the States. None of these, however, have been successful. Old Bill Williams even took with him into the mountains a troop of milch goats, by which to bring up the young sheep, but, though capturing a number of lambs, he did not succeed in reaching the frontier with a single one.

He reports also the superstition of the Canadian trappers concerning the caragieu, which we know as the wolverine, and tells of a reported battle which an old Canadian trapper said that he had had with one of these animals, and which lasted upward of two hours, during which he fired a pouchful of balls into the animal's body, which spat them out as fast as they were shot in. Two days later, in company with the same man, the author, in looking over a ridge, saw a wolver-

ine, and shot at it, as it was running off, without effect. For this he was derided by the Canadian, who declared that if he had shot fifty balls at the caragieu it would not have cared at all.

One night, when camped on the Platte, the author woke up, and looking out of his blanket, saw sitting before the fire a huge gray wolf, his eyes closed and his head nodding in sheer drowsiness.

The last day of April, Ruxton set out to cross the plains for Fort Leavenworth, intending to return to England. Soon afterward they reached Bent's Fort, and a little later were joined by a number of Fremont men, and by Kit Carson, who were returning from California. They passed a Cheyenne camp, and before very long were well out on the plains, and in the buffalo country. Concerning the abundance of these animals Ruxton tells the same extraordinary stories that old-timers relate. He hunted buffalo both by "approaching and by running; and tried many experiments with the great beasts. One night the camp was almost run down by a vast herd of buffalo, but all hands being aroused, they managed by firing their guns and making all the noise they could, to split the herd, so that the two branches passed around instead of over them."

At length the party approached Council Grove, a more humid country, where the eastern timber was found, which, to Ruxton, and to the Missourians of the party, looked like old friends.

Some little time was spent at Fort Leavenworth where the change from the free life of prairie and mountain was found by Ruxton to be very unpleasant. But he suffered still more when he reached St. Louis, as he was obliged to assume the confining garb of civilization and above all, to put his feet into shoes.

Ruxton's journey from St. Louis to New York was uneventful, and in July he left for England, which he reached in the middle of August, 1847.

It was after this that he wrote a series of sketches entitled "Life in the Far West," which were afterward published in Blackwood's Magazine, and finally book form in England and America. These sketches purport to give the adventures of a trapper, La Bonne, during fifteen years' wandering in the mountains, a set forth trapper and mountain life of the day. The show throughout the greatest familiarity with the old time life. The author's effort to imitate the dialect spoken by the trappers, makes the conversation not always easy to read; but they are most interesting faithful pictures of life in the mountains between 18 and 1840—at the end of the days of the beaver.

GEORGE BIRD GRINNELL.

## NATURAL HISTORY

### The Biography of a Bear.—V.

NOTWITHSTANDING many disadvantages, California and the Pacific States are being socially and politically organized. Here and there, as my friend Enochs might have asserted, there are unmistakable indications of civilization—but these symptoms are somewhat promiscuous and intangible. While the word "civilized" is in itself somewhat overlaid with incongruity, in its application to the Far West it is considerably strained.

For about fifty years—or, say, since the Anglo-Saxon began to abolish the Spanish padres and the natives of the Pacific slope—the coast, and particularly the territory comprising California, has been a sort of hunting ground for vandals of all degrees of enlightenment and depravity. Adventurers surged into this region from all parts of the world, when the discovery of gold was announced, and they came with about every ambition and desire but those most laudable in human endeavor.

There have been tomes of sentimental prevarication written, printed and believed in by the unsophisticated, about the noble pioneer, the heroic fighters of Indians, the honest miners and the giants of the West. I subscribe to hardy pioneers, Indian killers, avaricious miners—and here and there to a Western giant who strove against overwhelming circumstances and disadvantages—but I balk there. Material evidences and immaterial traditions do not amalgamate. The world knows it, and California cannot afford to waste time deceiving herself—cannot afford to be antagonistic to her real resources. She has lauded herself by singing her own praises, pitched to false tunes, until she is hoarse—her song is only sweet to the singer.

The plain truth is that California is becoming civilized in spite of a vandal population. In spite of the hordes of transient, uncouth, greedy and avaricious ruffians that have left her ravaged and scarred and betrayed, to the extent of their abilities. Her real history is imperishably recorded and there is blood and crime enough upon the pages. Her conquest is not a theme for heroic eulogism and unadulterated glorification. She should be content to speak softly, and tread lightly the path to reformation and reclamation. She is not.

From a thousand commanding summits of the Sierras one may scan the wondrous panorama comprehending a vast portion of California and the coast. Mountains, mountains—great prolific valleys and uplands, a maze of water courses, torrents, streams and rivers and lakes—all as clear and pure as any in the world, wherever they remain undisturbed and uncontaminated by the most destructive operations known—lumbering and mining operations. Let anyone, who has traveled over the regions he surveys from the summits of the Sierras, ponder upon these things. Let him consider what there is and what there might have been—what there doubtless will be. Let him tell us what there is in these regions that is sufficient apology for the white man's intrusion upon and occupation of them. Aside from two or three unavoidably commercial centers there is, in a terse and popular expression of the period, nit.

The principal achievements of the white man in this Pacific realm comprise wagon roads, railroads, a few hundred towns and two or three cities. Many of the wagon roads have been killing horses, mules, men and other burdened beasts, prematurely, for fifty years. These roads are not as well kept in their way as were the trails formerly used by the Indians. The road fund of every county government is a large item in the distribution of public money, but it is a problem beyond solution why so little is accomplished with it. The roads, in the main, are as badly laid off, as rocky and dusty, and as unmolested by real improvement as cattle trails. If some of the old horses of California and Nevada should come upon a good stretch of road they would either collapse with ecstasy or drop dead with apprehension and distrust.

The railroads of the coast—properly the railroad—is not an unmitigated nuisance, as has been frequently asserted. Although it brings with it many undesirable things it takes them sometimes away again, possibly because it has a way of collecting everything it can reach. It charges all the "traffic will bear," or a little more, by way of apology for not keeping itself in a decent or safe state of repair. It argues that its rates are so high it cannot get enough business to keep itself in order, and that if its rates are reduced it would not be able to handle the increased traffic. Its minor employees live in hope, having in the main no other apparent object in doing it; while its higher officials and manipulators prosper according to the fluctuations of products from the mines, lumber, live stock, harvests, etc., whatever there is they take with picturesque avidity. The roads were built, operated, financed and scuttled with a science that is historically unique. The most pathetic thing in connection with their manipulation has been, and is, the complacency and pusillanimity with which a fully cognizant people submit to the tyranny of brigands.

In the matter of towns California is a wonder. About 80 per cent. of her population lives or abides in the towns. These towns are fairly well equipped, according to popular sentiment. In the State's capital, where about 30,000 people sojourn quietly, and where about 10,000 more go and stay until run in—or run out—by the police, there were, in 1891, 444 saloons and places of business where whisky and beer could be purchased in any quantity, besides some stores that dealt in other staples. There were many churches, places of entertainment and amusement, but there was no clash between them and the former industries. Sacramento is a comparatively placid town.

San Francisco is a still more important western center, of which the world hears more or less misrepresentation. It is what might be designated an impetuous city in several of its tendencies. In its city hall I heard one of its former mayors declare it (the hall) the "dearest" spot in the world—and no one protested of a very large audience. The city hall of San Francisco is a monument to commemorate lack of political integrity and predominant corporate Iscariotism. Its very foundations were stuffed with rubbish and its turrets crumble in dusty tribute to

rotten contracts. Several of the principal streets are densely populated and paved considerably with cobblestones. A large portion of its inhabitants are engaged in traveling upon ferryboats between the city proper and Oakland, Shell Mound, Alameda and the races; or rail and trolley to the parks, the ocean, Ingleside and the Chutes. The Chutes is a kind of zoological inferno for caged animals, incubator babes and other unfortunate tourists. These adjuncts are tributary to the railroad which are owned more or less in common by several persons. During the late war in the Philippines the city transacted considerable business with the Federal Government, with about the average amount of harmless necessary scandal. Newspapers are among its exports and some of them are notably versatile and adaptive. In all, the city is a culminating point for Western enterprise.

Many of these developments may be seen or conjectured from the elevations of the coast, but the contemplative observer wonders why the interior of California is not more dispersedly occupied. Some of the ranches have many square miles of territory under fence, and the soil is cultivated here and there by the less influential of the people. There are some farm and country houses; but the better class and more pretentious dwellings cluster a few points, whence no especial advantages ensue. The rocky coasts on the southern coast, cactus wates in southern California, and the sand hills about Bodega Bay, are infested with most of the population. They are addicted to high architecture, steeples and roof gardens, or subterranean excavation—preferring perpendicular methods of lateral expansion.

A fortuitous earthquake may some time shake up some of these central meccas and disseminate them promiscuously. This could occur only at some expense, but would be quite generally advantageous. California is expansive enough to accommodate a disintegrated town or two.

The mines and mineral products of the State have been and are a detriment to local utility and value, and handicap more rational development. The energy, blood and treasure that have been expended in excavations and digging holes in the rock, which are in the main of no possible value, not even as a feature of "improvement" or development, might have embellished the State with marble palaces. Millions of money and armies of men have been used in exploring California mines. The product seems chiefly to have gone glimmering, or back to China. The State has little to show.

At the present time primitive methods of destruction mining have been partially suspended, and the principal operators of that industry are now smelting such poisonous matter as they dig out. The smelter, as a means of destruction, is the climax of supernatural ingenuity. In general use it would devastate the world in about the same space of time that an universal conflagration would and cause much more suffering and nausea. With considerable government encouragement two or three corporations are reducing northern California, at the present time, to a few tons of copper and by-products. The cop-

## The Quails of the United States.

BY SYLVESTER D. JUDD, ASSISTANT, BIOLOGICAL SURVEY.

(Bureau of Biological Survey—Bulletin No. 26).

## Introduction.

THE quails of the United States, because of their interesting habits and marvelous diversity of form and color, are a notably attractive group. All are handsome birds, but the most striking and beautiful species live in the Southwest and on the Pacific coast. Seven species occur within our borders, but only one in the Eastern States. The others are widely distributed from Texas to California and Oregon. Their range was, and still is, continuous along the entire southern border of the country from the Atlantic to the Pacific; but there is an irregular belt along the northern border and a large area in the interior, comprising the Great Plains, the northern three-fourths of the Great Basin, and the Rocky Mountains, in which they appear to have been originally wanting.

With few exceptions our quails welcome the extension of agriculture, and the added food supply in farmed areas results in an increase of their numbers. This is equally true of the bobwhite of the East, and of some of the desert species of the West. So fully does the bobwhite appreciate the advantages of the farm that its range has increased with the extension of the cultivated area, especially west of the Mississippi.

The quails, because of their cheerful habits, their beauty, and their value as food, are usually welcome on the farm; but their real value to agriculture is not yet generally understood. The investigations of the Biological Survey show that these birds, with rare exceptions, are not only harmless, but that usually they are very useful to agriculture. This is particularly true of the bobwhite, which constantly feeds on injurious weed seeds and insects, and thus renders valuable service to the farmer. In return for this good service it is but fair that these birds should be treated with friendly care and interest.

The well-known bobwhite is the only quail indigenous to the Eastern United States, where it ranges from southern New England to Florida and Texas; but owing to climatic influences the birds of Florida and of Texas differ enough to be distinguished as geographic races. Wherever it occurs, however, the bobwhite has the same call, and varies but little in habits. A closely related bird, the masked bobwhite, inhabited southern Arizona until within a few years. Owing to dry seasons and the overstocking of its home with cattle, this bird is now supposed to be extinct within our borders; but some probably exist in parts of Sonora, Mexico.

Although bobwhites are handsome birds, yet they are the plainest quail in the United States except the "cotton top" or scaled quail of the desert of southern Texas and Arizona. The latter is slaty bluish on the upper parts, which are ornamented with large scale-like markings, and has a whitish crest.

The most bizarre and curious of all is the Mearns quail of the high, broken plains and mountain slopes of southwestern Texas, southern New Mexico and Arizona. It is short and round bodied, like a little guinea hen, and this superficial likeness is increased by brilliant, round, white spots ornamenting the dark sides. It is the gentlest of all the quails and is so unsuspecting that when a person encounters one it often walks unconcernedly about or stands looking curiously at the newcomer, when it is not infrequently killed with a stick or stone, a characteristic which, among the people where it lives, has earned for it the name of "Fool Quail."

The Gambel quail is a habitant of the southwestern desert region where it ranges the brushy foothills and the valleys along water courses. It is a beautiful bird, the head handsomely marked and adorned with a jet-black recurving crest, and the flanks bright chestnut, brilliantly streaked with white. This quail, one of the most conspicuous and pleasing forms of desert life, is numerous wherever it can find sufficient food and water. For ages it has claimed many a remote watering place as its own, but it welcomes the settler and finds additional shelter and food in his irrigated fields. Under the new conditions its numbers increase and it repays the favors received by becoming semi-domesticated. Its presence adds a touch of bright color and animation to the dreary surroundings of many a lonely desert ranch.

The California valley quail belongs entirely to the Pacific coast, and probably is the most beautiful of the smaller gallinaceous birds of the world. It resembles the Gambel quail in its recurving black crest and general appearance, but exceeds that bird in the richness of its colors and markings. It is abundant in most parts of California.

The California mountain quail, the largest and one of the handsomest of this group, inhabits the wooded mountains of the Pacific coast, and bears a superficial resemblance to the red-legged partridge of Europe. Like the Mearns quail, its haunts are usually more remote from cultivated lands than are those of the other species.

The services to agriculture of the western quails, while in most cases appreciable, are far less valuable than those of bobwhite, mainly because the birds are much less insectivorous. Moreover, the California valley quail sometimes damages the grape crop.

The value of a single game bird is of course small, and it is from this narrow point of view that its relation to the community is usually considered. When, however, the value of any important species is worked out the result is surprising. It has been conclusively demonstrated that in Virginia and North Carolina alone the common quail annually destroys many tons of noxious insects and weed seeds. The great value of this service must be apparent to all who appreciate the never-ending warfare between the farmer and his hydra-headed enemies, the insects and weeds. The food value also of the quail is great, and the health and pleasure derived from their pursuit has resulted in the investment of millions of dollars. When it is generally understood that by judicious effort the numbers of these useful birds may be greatly increased, with a proportionate benefit to all concerned, it is hoped that efforts to this end will not be long delayed.

## The Bobwhite.

*(Colinus virginianus).\**

The bobwhite is one of the most widely distributed and popular game birds of the United States, but in many places it is suffering ruthless extermination. Sportsmen, farmers, legislators, and ornithologists, as well as the friends of birds in general, should interest themselves in the problem of its preservation. In the Northern, Western, and Middle States it is commonly known as "quail," in the Southern States as "partridge." This tends to confusion, since in New England and northern New York the name "partridge" is commonly applied to the ruffed grouse. Both names were brought to America by English colonists from their Old World homes, where they are applied to species not originally inhabiting this continent. The name "bobwhite" is from the familiar call note of the bird.

In some of its characteristics bobwhite differs strikingly from other members of the family. For example, the crest—a well-developed adornment of several closely related American quails—in bobwhite is invisible except when the bird is excited.

The common bobwhite ranges more or less generally over the eastern half of the United States and southern Ontario, except in the colder, mountainous parts, from southern Maine to northern Florida, and west to South Dakota, Nebraska, Kansas and Texas. In addition, colonies have been introduced and found to thrive in various localities in Colorado, New Mexico, Utah, Idaho, California, Oregon, Washington, and the island of Jamaica. South of the home of the typical bird, just outlined, bobwhites have a wide range, occupying Florida, western and southern Texas, Cuba, and a large part of Mexico, and extending even beyond the border of Guatemala. Owing chiefly to climatic influences the southern birds differ more or less from the northern ones. The masked bobwhite (*Colinus ridgwayi*), a closely related but separated species, once lived in extreme southern Arizona and the adjoining part of Sonora, but now it is probably extinct within our borders. With this exception all of the bobwhites from Canada to Guatemala and Cuba, according to E. W. Nelson, belong to a single species modified by environment into a considerable number of forms, some of which are strikingly different from the birds of the United States. The Florida bobwhite, which is peculiar to the peninsula of Florida, is smaller and darker than the northern bird. The Texas bobwhite of western Texas and northeastern Mexico is about the same size as the northern one, but is paler and has a light rufous collar below the black band and bordering the white throat patch. The Salvin bobwhite from the southern border of Mexico is very unlike the common bird of the United States, most of the head, neck and breast being plain black and the rest of the underparts plain rufous.

The present account is limited to the bobwhites of the United States, including the Texas and Florida forms. The writer's field work in this connection has been principally in New Jersey, Virginia and Maryland—on a farm at Marshall Hall, Md., which is directly across the Potomac from Mount Vernon.

## Call Notes.

In the field the nuptial call note of the cockbird is an infallible guide to its identity. This familiar challenge, sounding to the sportsman like "bob white," "bob-bob-white," and to the farmer like "more wet" or "no more wet," is by no means the only note of the species during the breeding season. It was the good fortune of the writer during the last week of June, 1902, to hear the nesting note and other calls. Again and again the cock left his distant perch, where he had been whistling "bob white," and, still calling, approached the nest on the bank of a little sluggish briery run between open fields. When within fifty yards of his mate he uttered the rally note, so thrilling to the sportsman in the fall, "ka-loi-kee," which the hen often answered with a single clear whistle. Then followed a series of queer responsive "caterwaulings," more unbirdlike than those of the yellow-breasted chat, suggesting now the call of a cat to its kittens, now scolding of a caged gray squirrel, now the alarming notes of a mother grouse blended with the strident cry of the guinea hen. As a finale sometimes came a loud rasping noise, not unlike the effort of a broken-voiced whip-poor-will. The favorite calling stations were rail fences at a height from 5 to 10 feet, and the limbs of trees along fence rows. One bird whistled in a tulip tree at least 35 feet from the ground. H. H. Miller reports that April 25, 1903, was the earliest date of nuptial notes at Sandy Springs, Md. After the breeding season the bird discontinues this characteristic call. During August 19-21, 1902, it was heard only on one occasion at Marshall Hall, where the birds are numerous, and ceased after a dozen repetitions. Edward A. Preble, of the Biological Survey, has recorded the "bob-white" call at Wilmington, Mass., as late as October 20.

The notes of the bobwhite in fall and winter have been described by many writers. The following quotation from Mr. Sandys gives an admirable description of the call notes of a covey that has been scattered by the sportsman and is trying to reassemble for the night, a notation so accurate as instantly to recall the notes to one who has heard them: "Over the brow of a hill comes the low, tender call of the hen to her youngsters, 'ka-loi-kee, ka-loi-kee,' and perhaps, from the broomsedge beside the observer comes the loud vibrant answer, 'whoil-kee.'" This call is usually sounded in the late afternoon, but December 31, 1901, at Woodbridge, Va., a scattered flock was heard calling persistently in the morning.

On one occasion the writer watched a bobwhite whistling from a fence rail to feet away. At such close range the whistle lost all its melody and became a nasal shriek which was almost painful to the ear. It was repeated on an average five or six times a minute and consisted of either two or three notes, of which the first was so low as to be inaudible a hundred yards away, and the last was strikingly louder. The mode of

\*The name is used here in its broad sense to cover the typical bird of the Eastern States, *Colinus virginianus*, and the two subspecies, the Florida bob white (*C. v. floridanus*) and the Texas bob white (*C. v. texanus*).

per is sent abroad in exchange for tools, dynamite, Italians, Cornishmen, denim clothing and beer for the miners. The workmen get some food, such as it is, as to other things they are not captious; they are notably placable and otherwise dormant. The railroad is benefited as it chips off something from everything, both going and coming.

As I said heretofore, these things may be discerned from elevations.

As our party ascended to the timbered lands, between two of the Cow Creeks, we were glad to tumble out of the wagon and sleep in the timothy hay at Daly's ranch. Here we were in the edge of the singing conifers. For fifteen or twenty miles we would pass through a region little affected by what my friend Enochs was inclined to call improvement, or development. It had not yet become practical or profitable to shred this forest into planks, shingles, toothpicks and matches. No mines had been discovered and the habitations of men were few and far between. Since then a post office has been established near Daly's, which implies sawmills and other civilizing influences and illusions.

Jack was as weary and sleepy as the rest of us, and he was soon snoring in the hay in a passably aristocratic tone, comparatively—after Enochs and Dick got at it. As for me, I infer from the fact that I could hear the others most of the time, that I do not snore.

Nevertheless, it was about 10 o'clock the next morning when we came out of that bed in the hay. If absolute obliviousness is sound sleep, we had had it. If we had a haddock we would have had a fish. That last assortment of words is a positive instance of verbal debility. Had had had affected me so that I have forgotten whatever it was that, if I had had it—might have been of service. Had had—what a miserable, enaciated combination to convey intelligence with. Had had, bedad! I have known it to occur elsewhere.

I say it was 10 o'clock, and the sun had been up half an hour—high up. Although there was a fine, meadow valley here, that was almost resistless, the sun and the heat kept us from exploring it. It stretched away like a wide lane of bright green velvet into the deeper greens and shadows of the verging forest. Quails were calling in their troops of foragers after the morning's raid. The gray squirrels were yet barking fussily before basking themselves to their tall pines for the heat of the day. We had discovered deer tracks the evening before and we wanted to, but it was too hot. There is altitude between the humid valleys, and the cooler atmosphere of the mountains, where the sun has terrific force. There is a midway zone where the atmosphere is free of moisture, smoke and humidity, and the thin, pure air offers no screen between the celestial fire from the sun and the hot surface of the ground. It beats down mercilessly, but if there is the shade of a single tree it is a refuge and more cooling than a thick roof in the valley.

Jack, having gained experience in regard to ranches, was more cautious in his tours. He was content at Daly's to remain near us, after scaring a season's growth from a dish-faced calf, some cats and two or three of the dogs belonging at the ranch. All these animals were inquisitive and their curiosity was a little more than satisfied, judging from their actions. Jack did nothing whatever but sit up or stand and greet his visitors with dignity and encouragement, but they were all unaccustomed to high life and they shied, made one or two evolutions evincing reticence—and then they went away with unhesitating alacrity. The calf went over a few fences, through one or two, and then up a tree, I think; the cats—well, the cats scattered and then sneaked assiduously, while the dogs merely left for the house to tell Daly; not finding him there they struck out for tall timber with such ability as they had with them.

Once more we were upon the road and for the first hour or two the sun almost cooked us between shades. We were still climbing, and in places where the grades were steep or rocky Enochs grumbled and spluttered. At such times I encouraged him as much as I could, for he did it well and was more or less diverting. Besides, he was a tenderfoot. Some of his allusions to hot sun, the road, to Jack and the company generally evinced originality and genius, but they were not pious enough for my unsullied note-book.

We were all feeling debilitated and partly cooked after a few hours, when a track was discerned in the dust where a rattlesnake had crossed the road. Having some whisky along for snake bites we immediately stopped, got it out and tried it as a preventive at rather long range. We escaped the snake track, which I estimated was about a week old, but Enochs and Dick both insisted that it was not made longer than four or five days, and so we took a little more. We escaped the snake, but I soon had a terrific headache. My experience has been that whisky or other stimulants are a bad thing to have in the sun—very little if any better than snakes.

Eventually we entered tall, dense timber. It was very tall and very dense, seldom penetrated by the sun. It was almost equal to a cold cellar, after the hot blaze upon the grades. Our wagon now began to wake echoes that clattered away further and further into the forest. Our voices were multiplied infinitely, and when I rode at a little distance from the wagon and we complimented or otherwise disparaged each other, Jack or the horses' echoes sent back such a profusion of sounds that we got dizzy; of course, the whisky might have contributed, but the echoes were the main factor. In some places it was no use. When we said anything it was twisted by the echoes into idiotic chatter. Some of our observations would not stand the transposition very well; in fact, they were bad enough without interference from diagonal acoustics.

RANSACKER.

[TO BE CONTINUED.]

## Ruffed Grouse Vagaries.

GLEN EYRE, Pa., Oct. 14.—*Editor Forest and Stream:* I notice in last week's number the ruffed grouse vagaries. We had a case here early in the month. One flew through a window, cutting off his head, the body striking the opposite wall. The reflection of the sky on the pane probably led him to go through. The fear of game warden or powdered glass did not keep him from his proper grave. SHOHOLA.

delivery was peculiar; sitting in a normal, erect position the bird emitted the first note, then depressing the tip of the bill almost to touch its breast, with a motion as though hiccupping, it gave the second, then throwing back its head and pointing its bill skyward it uttered the explosive, far-reaching third note.

#### Breeding Habits.

The nesting time of bobwhite in each section of the bird's range is usually limited to a fairly well-defined period, but varies considerably in the time of beginning, the difference being partly seasonal and partly regional. About Washington, D. C., the coveys usually break up the first part of May, one covey being seen in 1899 as late as May 9. In 1902 the first nest with eggs was found at Marshall Hall on May 29, and the first downy chicks on July 6. Between the end of June and last of August seven pairs of birds were found there which had recently mated or were incubating. This was shown by the fact that the cock birds were flushed thirty-six times and the hens only four times. During the same season five nests were found between July 15 and 19 at Sandy Spring, Md., less than 20 miles away. One of these nests contained 24 eggs. Even larger clutches are recorded, and one nest found at Woodstock, Ohio, is reported to have contained 42 eggs.\* Such large clutches probably are the product of more than one bird. In 1903 nesting appeared to be later than in 1902, as the first eggs found were discovered July 10. The farmers at Marshall Hall say that they usually find the first downy chicks during wheat harvest, usually the last week of June. A number of broods of chicks were seen about Marshall Hall from July to September.

The newly hatched young have chocolate-streaked heads, and resemble small black and red bantam chicks. Whenever these newly hatched chicks remain motionless their protective coloration renders them invisible unless one makes a most careful search.

From information at hand it appears that the main breeding season for bobwhite in the Northern States, including the country about Washington, D. C., is during May, June, and the first half of July. Florida birds begin to breed regularly the first of April (though some are much earlier), and continue nesting till well into June. Texas birds nest mainly in April and May, but some nest as late as September. Throughout its range some of the birds breed earlier and others later than the main body of the species, and the occurrence of second or even third broods may lengthen the season. Robert Ridgway found a clutch of freshly deposited eggs in southern Illinois on Oct. 16, and H. C. Munger found another set in Missouri in January, the parent being afterwards found frozen on the nest. Authentic records from various parts of its range show that bobwhite has been known to breed, at least occasionally, somewhere in its range every month of the year except December. This seems to prove that under certain circumstances bobwhite, like the domestic hen, will lay a clutch of eggs at any time of year.

The occasional presence with the female of young of two or three sizes appears to show that at least two broods are sometimes raised in a season, but we lack definite information on this subject. Major Bendire gives twenty-four days as the period of incubation. The male is reported as sometimes assisting in this duty.

[TO BE CONCLUDED.]

## Bird Reservations.

### Authority of the President to Create Them from Public Lands Unquestioned.

THE widespread and rapidly increasing interest in bird protection, and especially that feature of the national movement relating to reservations for the protection of birds, is responsible for the numerous inquiries being made as to the authority for the creation of reservations of this character.

It should be noted, in the beginning, that the bird reservation as established by executive order, is a reservation of public land for a public use. It differs from the military, lighthouse, reindeer or any other of the numerous reservations created by the President no more than any one of these differs from each of the others. Each reserve was created for a specific public purpose, and the inquiry which will satisfy anyone of them will satisfy all.

On June 17, 1890, the Assistant Attorney-General, on request, submitted to the Secretary of the Interior, an exhaustive opinion as to the right of the President to issue such orders or proclamations. This opinion was asked pursuant to a request from President Harrison, who desired to "be informed under what 'statute' it is proposed to make certain reservations in Alaska," in conformity to recommendations of the then Governor of that Territory. In his said opinion the Assistant Attorney-General said in part:

The lands of Alaska are part of the public domain, and as such are subject to the supervision of the President, as other public lands. But the right of the President to put public lands in reservation so that all questions in reference to them might be properly considered, or as the exigencies of the public service demand, or to aid in the execution of a proposed statute, has always been maintained by the courts. Withdrawals were made for the Dubuque & Pacific, and the Burlington & Missouri River Railroad grants on May 10, 1856, though the act was not passed until the 15th of that month. So in many other cases.

In the matter of the withdrawal for the Southern Pacific Railroad grant, which the Secretary of the Interior had made upon a line which the company had no authority to adopt, and the validity of which was challenged by certain settlers, Attorney-General Devens said (16, Op., 80): "Even if it be conceded that the acts of the Secretaries in this respect were erroneous in law, the consequence does not follow which is contended for on behalf of the adverse claimants to the land. They were in fact withdrawn by competent authority, and were thus placed in a state of reservation. \* \* \*

"In *Grisar vs. McDowell* (6 Wall., 363, p. 380), the plaintiff claimed title to a tract from the city of San Francisco, the defendant claimed possession as an officer of the United States, on the ground that the tract had been reserved by the President for military purposes."

The opinion of the court is too long to quote in full, but it held that "from an early period in the history of the Government it has been the practice of the President to order, from time to time, as the exigencies of the public service required, parcels of land belonging to the

United States to be reserved from sale and set apart for public uses. The authority of the President in this respect is recognized in numerous acts of Congress."

Several of these acts of Congress are cited, in the opinion of the court, and quoted by the Attorney-General who goes on further quoting the court in *Wolsey vs. Chapin* (101 U. S., 755, p. 768) with reference to a withdrawal of disputed lands until differences were settled either by Congress or judicial decision, in favor of the legality of the withdrawal and against the proposed entryman, the local land office being instructed to withhold the lands.

To a like effect the case of *Wolcott vs. Des Moines Co.* (5 Wall., 681) is referred to by the Assistant Attorney-General, who then states that the ordinary method adopted for creating military and Indian reservations consists of a simple indorsement made by the President upon the recommendation of the Secretary of War or the Secretary of the Interior. Another style of withdrawal, in the form of proclamations made by President Arthur, was referred to with the statement that:

The line between the use of these two methods is not well marked. Perhaps the only distinction is that the proclamation is more formal. Certainly it does not depend on the amount involved or the nature of the reservation. In this case, the Executive order would be a competent method, as is evidenced by the constant practice in similar cases.

The Assistant Attorney-General discussed the proposed Alaskan reservations seriatim, concluding as follows:

I see no reason why the remaining reservations recommended by the Governor should not be made. Accordingly I herewith submit a draft of an Executive order based on the views herein expressed, following the description given by the Commission's reports forwarded by the Governor, although some of these descriptions seem to be vague and uncertain.

It may be said in conclusion that the draft of the Executive order noted above was approved by the Secretary of the Interior, and the same was issued by President Harrison, June 21, 1890, or four days only after the opinion was signed. The practice of the President since that time has not been changed; indeed, as indicated by the Assistant Attorney-General, that practice has been uniform since the beginning of the Government, and it is not likely to be changed. Reservations of public land for public uses, whether to preserve the birds for the people or to erect lighthouses for their ships, will probably continue as long as the high office of President is occupied by men as courageous and broadly patriotic as President Roosevelt, who has cheerfully subscribed his name to the orders establishing the three bird reservations created during the past two and a half years.

FRANK BOND.

### The Aquatic Proclivities of the Skunk.

SAYRE, Pa.—Mr. A. P. La Plant, a local Susquehanna River frequenter, and a typical latter-day Nessmuk, is convinced past a shadow of a doubt that the fragrant and melancholy skunk is a proficient swimmer. The other evening while Adonijah was paddling his trusty canoe over the moon-swept waters of the Susquehanna and hobnobbing with queer goblins and other strange creatures of the country, his attention was attracted to a white and black vested animal swimming directly toward his boat, and presently the strange and uncanny visitor poked his wet nose up over the edge of the craft, and with sundry rappings of his paws manifested his evident inclination to come aboard. Adonijah sat motionless with a strange, creepy feeling tingling under the roots of his sparse locks, and his curiosity fully aroused. However, after fussing about the boat for a time the animal turned and swam leisurely to the shore, where, after one or two ineffectual attempts, it landed, rested a moment, shook the water from its hairy coat, sniffed the cool air of the night with apparent enjoyment and then meditatively jogged across the marshy wastes in diligent quest of a late supper. And Adonijah, the fearless voyager up and down the Susquehanna for many years, assures us that he is more than ever convinced that the skunk is an ingenious little beast well able to survive the vicissitudes incident to a precarious existence on both land and water.

M. CHILL.

### Mammals and Summer Birds of Western N. C.

LAST summer Mr. Harry C. Oberholser, of the Department of Agriculture, published a brief list of the mammals and summer birds of western North Carolina for the use of students in the Biltmore Forest School, Biltmore, N. C. The list is without notes, yet it possesses considerable interest for the student. The mammals included in it number fifty-seven, counting the American elk (*C. canadensis*) and the buffalo (*B. bison*); species which have long been extinct in North Carolina, and of which no specimens exist on private lands in the State. The squirrel family is represented by seven species, the beaver is still found, while the mice and jumping mice have sixteen representatives. There is but one hare, the cotton-tail. Of the two cats, the panther has been taken in recent years; the gray wolf probably still exists, though very rarely.

The summer birds number 136. The only duck found in summer is the woodduck, but the duck hawk and golden eagle are found, as is also the American woodcock. Among the high mountains of western North Carolina, many birds breed which we are accustomed to think of as northern species; such are a number of the warblers, the blue snowbird, the pine siskin and the crossbill.

It is understood that this list of Mr. Oberholser's is merely the forerunner of an annotated list soon to appear, which will be looked for with interest by many readers.

### How Fast do Birds Fly?

WILLIAM W. MURPHY, a locomotive engineer on the Burlington's fast express between Hannibal and St. Joseph, has been making observations on the speed of various birds and insects. Many birds, he says, make a practice of flying beside or in front of his engine, and when the weather is clear and there is no wind he opens the throttle and races with them.

He finds that the chicken hawk and a crow can make twenty-five miles an hour. A turkey buzzard flies at the rate of twenty-one miles an hour. The pigeon is one of the fastest birds in the United States. It makes a speed of forty-six miles an hour with ease. When chased by

a eagle it can beat the Burlington's St. Louis express. The wild duck is traveling at the rate of forty-four miles an hour while the hunter is pumping the contents of a repeating gun at it. The blackbird, robin, dove and other small birds travel at a speed of thirty-eight miles an hour. The hummingbird can and does excel a speed of a mile a minute. Murphy says that a hummingbee the other day flew in and out of his cab window while he was going at the rate of sixty-three miles an hour. The performance lasted while the engine traveled a half mile.—St. Joseph News.

### Deer Liver.

TROY, N. Y., Oct. 13.—*Editor Forest and Stream:* In a conversation, held lately by the writer with an Adirondack guide, the subject of the edibility of deers' livers was discussed. He told me that in very many of the deer livers that he had cut during his guiding years, he had found encysted in them a flat leech, sometimes two or more together, in a pocket, frequently several pockets in each liver. They were flat, fully half-inch wide, and from one to two inches long. As the gall bladder is absent in a deer, I am wondering if the presence of the leeches is necessary for the health of the animal.

W. B.

[Flukes, so-called, are common parasites of many animals, and the liver fluke is one of the most common. These are trematode worms, which have a complicated life history. The eggs are laid in the final host, are hatched after leaving him, and the larval forms sometimes inhabit several hosts before reaching their final resting place. Man is the final host for no less than five species of these worms, and there are many animals that shelter a greater number.]

The presence of the worms in the deer's liver is not essential to the animal's health. The deer would be better off without them, just as a dog would be better off without fleas, notwithstanding the dictum of the amiable David Harum.]

### The Wild Pigeon.

TAPACHULA, Chipas, Mex., Sep. 27.—*Editor Forest and Stream:* I note with interest the article by Noynek on the disappearance of the wild pigeon. The black fog and norther in Texas would not account for all of the pigeons in the United States. How about the enormous flocks that used to pass down through North Carolina, did they also disappear in the Gulf of Mexico—if so, from what cause?

When a boy, I lived up in the Blue Ridge Mountains of North Carolina, and in the year 1869-70 millions of these birds used to pass south, and I cannot remember ever seeing these birds on return north—did they take another route?

GUATEMALA.

### Boric Acid in Camp Surgery.

WHEN I sent that little item about boric acid in camp surgery, published in No. 247, I had no idea of stating anything unorthodox, or unscientific, or that would do harm. I judged from my own extensive experience, and also on advice of our family physician, that it was a good article to use on cuts and wounds.

A member of my family stepped on a rusty nail protruding through an upturned board. It went through the shoe deeply into the foot. The wound was at once bathed in a saturated solution of boric acid crystals, which form, my druggist tells me, is stronger than the powdered article. The puncture was then filled with the powder, bound with gauze bandage, shoe put on and worn right along. There was but little inflammation, and in six days pain and soreness gone, wound healed. As there was no soil around this particular rusty nail, may be there were no bacteria on it; hence no lockjaw. These germs are said to live in soil.

A friend of mine, going down cellar stepped on an oxidized piece of metal sticking through a board, probably an ancient nail. He would not use boric acid, but put on a piece of fat bacon until the summoned surgeon came to give it scientific treatment. His foot swelled up until it looked like a case of gout. He could not put his foot to the floor. He suffered dreadful pain, and came near losing his life, for six weeks, with a visit from the surgeon daily at \$3 per. He had no lockjaw, but finally got well. Maybe, as the lockjaw bacteria live in the soil, and there was none on this board, they were absent in this case.

As a fellow is not likely to step on a rusty nail while tramping through the woods or fields, or wading streams away from home, I will still carry my ounce box of powdered boric acid and roll of antiseptic gauze bandage. I often get cut and scratched while crowding through our western barbed-wire fences, or get cut with some kind of an edged tool, or run a sliver into my flesh, or get wounded in some other way.

As I am not scientific, nor a chemist, nor educated in medical arts, I wish Dr. Morris would tell us what, from a medical viewpoint, is the proper thing to do at once when a rusty nail chanced to penetrate our anatomy probably miles away from a surgeon—an emergency case, which might result in lockjaw, unless scientifically treated.

SENEX.

PASSENGERS on a morning electric car from Northampton to Easthampton yesterday were interested in a glimpse of a pursuit by officers of the law in the woods at Meadow Park. A man carrying a gun was observed running on the track several rods ahead of the car, and throwing into the bushes as he ran what appeared to be dead squirrels. At about the same time there emerged from the woods behind the car two men, who were said to be Officers Cook and McEvoy, of Easthampton. The hunter (if such he was) left the track just before he reached the junction of the track and highway and plunged into the bushes. He had so much the start that the officers apparently had no chance of taking their quarry.—Springfield Republican, Sept. 25.

# GAME BAG AND GUN

## After Caribou in Quebec.

Editor Forest and Stream:

Seventy miles below the quaint and beautiful city of Quebec, on the north bank of the St. Lawrence, is the little town of St. Paul. The steamer lands at a long wharf built into the river, and thence one drives over a hill several hundred feet high by steep ascent and descent to the head of the bay three miles distant and the picturesque town, also called Baie St. Paul. The little houses built close to each other and standing direct on the street lines with their steep roofs, curving outward the eaves, were not more surprising to us than the fact that only a French dialect was heard, and that few words of new English, and they but little. The village is located in the midst of a pretty valley perhaps two miles wide, flanked on either side by high hills. Our conveyance was a buckboard similar to those used in the dironacks, and we were soon started with our guide on the thirty-mile ride along the old Chicoutimi road to the point whence I was to hit the trail. After a one-mile drive, we reached the village of St. Urbain, here we lunched. We were much interested in the narrow, well-fenced mile-long farms, giving the effect of a platted landscape, with the little bent roofed houses and the ever-present great clay bake ovens near the houses, these ovens sometimes having a rude covering and sometimes having none. We slowly climbed up the valley and early in the afternoon approached the higher Laurentian peaks, their summits often being of bare and rugged granite like our higher Adirondack peaks. We walked one steep ascent of two miles to a pass between two tremendous mountains, and thence through a forest of spruce and fir through a very rough country to our destination, arriving late in the day. My barometer showed that we were 2,300 feet above the level of the St. Lawrence.

Mrs. W. and the boy were to remain at the little inn to fish and shoot grouse, while I went on in after caribou. As the waters run off too abruptly to float logs, the distance being too great to haul, no logging has ever been done in this territory, and there are no logging roads or tote roads. The trails are too rough for a horse, and tents, clothing, foodstuffs, everything had to be packed in. Next morning early I was off with three men who packed with tumplines passed over the forehead, as is their custom, and they did wonderfully well. Often the mountain tops are treeless, but otherwise the country is covered with spruce and fir, except where it has been burned over; in such places it is either barren or covered with a small growth of birch.

We pitched camp on the edge of a barren about half a mile from a lake about a mile long and from 100 to 200 yards wide. In the meantime I was endeavoring to get hold of enough French to understand the men, and very fortunately had been thoughtful enough to put a pocket dictionary in my kit. It is surprising how a little vocabulary of nouns and adjectives with a few verbs will enable one to converse, signs and pantomime playing an important part. My frequent reference to the dictionary, with some show of annoyance that I could not recall the correct word, amused my men greatly; and many a hunting experience was told or acted out to the enjoyment of all.

On the afternoon of the second day a young bull caribou with fair antlers came into the head of the lake to feed on the lily-pads. We could not get nearer than 200 yards, and the guide thought it was even further and doubted whether I could be certain of killing the caribou. I told him I could kill the animal if he could get him. The shores being very muddy, I feared it would be a difficult task to get him out. Resting my Mauser on the branches of a little spruce, I shot the stag through the heart. He reared, went over on his side and his struggles were soon ended. Being between us and the sun, his antlers looked very dark, and yet I was surprised and disappointed to find that they were in the velvet. However, we had plenty of fresh meat in camp (I sent some out to Mrs. W. and Wendell, and my license permitted me to shoot another caribou, which I resolved should be with *un beau panache*).

We visited various lakes and frequently found the waters had been raised by beaver, so that no food was left for the caribou, much to the guide's disgust. At one such lake we saw three beaver, one of which would frequently smite the water with his tail, go under a moment and then continue swimming toward us, until finally he lay upon the water not more than six or eight paces distant and looked at the intruders. He was not disturbed by our talking or moving about, but after I had thrown several sticks at him he at last gave the water a particularly vicious slap and went back to his house.

Several days later we were on the summit of a high mountain whence we could see several lakes and the little meadows adjoining them. I discovered three caribou on one of these meadows, and we slid down the moss-covered mountainside through the forest to the edge of the meadow, where I carefully inspected, measured and discussed the antlers of the unsuspecting stag. While they were not the noble ones I longed for, I thought it better to take what was offered, and the even justified the decision, for we saw no better afterward. He was feeding on the marsh grass perhaps 90 yards away, and at my first shot staggered a few steps forward, while the cow and calf walked nervously about. To make short work of it, I shot him again, and as he began to struggle the cow and calf ran away from him, disregarding us. He was soon down and we found that the bullets had struck within a half inch of each other. His head now hangs in my den.

On another morning with a crystal-like atmosphere at about 11 o'clock we observed a moose about a half a mile distant in a lake and down wind. He was feeding in an arm of the lake not over 100 yards wide. We proceeded to the opposite shore, forest-covered, and he getting our wind became uneasy and decided that the danger was on his side and that he better cross over. He had rather light antlers of 40 to 50-inch spread, and as I did not care for such I told the guide I would not shoot. The water was deep, and as he swam across, I took my camera and went down to the bank. When he got within ten yards I stepped out from behind a bush, pointed my camera at him and snapped. How he did churn the water as he turned about, and how he lifted himself out of the water as we shouted and laughed at his return, and how noble he looked as he stepped out on the other shore and stood looking at us a few moments before trotting away into the woods. I felt that that day was well spent.

Moose are very scarce in that region, but under the protection now given will, no doubt, increase rapidly. Small game of all kinds is scarce, owing, I think, to the great altitude and severe winters. I missed the porcupine, so common in New Brunswick. I saw but two or three red squirrels in all my wanderings, no rabbit sign, and but very few grouse. When we got meat in camp the whisky-jacks turned up as usual.

Caribou are fairly plentiful, but large heads here as elsewhere are not so numerous. One's chances of getting a good head are much improved by waiting until the snow comes, when the caribou leave the forests and go out upon the barrens and herd together more. Then one can go upon the hills, search the country with the glass and pick out a desirable head. At any rate one sees grand mountains, lovely streams and lakes, and a beautiful country clothed with virgin forests.

M. F. WESTOVER.

## Non-Resident Laws.

STOWE, VT., Oct. 14.—*Editor Forest and Stream:* I have a clipping from some Vermont paper, quoting "a deer hunter" of Granville, N. Y., which appears in the New York World and reads as follows:

"Vermont's last Legislature passed a law demanding that all non-residents should pay a license fee of \$15 before they could hunt deer in the State. In my view of the case this law is not constitutional, and I think it would be wise for non-residents to make a test case. There are so many of these little oppressive State restrictions imposed upon people that it is fully time that they were tested and overthrown if not in accordance with the United States Constitution.

"The clause which I deem to be violated is Article IV, Section 2, which reads as follows: 'The citizens of each State shall be entitled to all privileges and immunities of citizens in the several States.' Therefore is not tax levied on a non-resident, not on a resident, a plain violation of this provision? Deer hunters, unite and test this outrageous law."

For the benefit of the gentleman of New York State and others who make a plea that the taxing of a non-resident to hunt deer in Vermont during the open season is unconstitutional, and asking hunters to make a test case, I quote from Bulletin No. 19, Biological Survey, U. S. Department of Agriculture, as to the Supreme Court of New Jersey in 1886 and another case by the United States Circuit Court of the northern district of Illinois in 1899. In the former case (Allen vs. Wyckoff, 48 N. J. Law Rep. 90; 2 Atl. 659), Allen was arrested and fined \$50 for violating the act for the protection of game and fish approved April 4, 1878, which imposed greater restrictions and severer penalties upon non-residents of the State than upon residents. The case was appealed to the Supreme Court of New Jersey, which held that the act in question was not in violation of the fourteenth amendment of the Constitution of the United States, prohibiting any State from making any law which shall abridge the privileges of citizens of the United States or deny to any person the equal protection of the laws; and furthermore, that the statute was valid in its application to a non-resident killing game on the property of persons who have formed an association under the laws of the State for the protection of game on their property.

In the Illinois case, the validity of the non-resident license was directly decided. Frank Eberle, a citizen of Iowa, and a member of the Crystal Lake Club, an Illinois corporation authorized to acquire and own real estate in Illinois for use as a game and fish preserve, was arrested when hunting on the lands of the club. He was charged with hunting without a license in violation of the State law requiring a license of \$10 from non-residents, passed in 1899 subsequent to the incorporation of the club. At the trial the defendant was adjudged guilty of violation of the statute and was sentenced to pay a fine of \$25 and costs and stand committed until the fine was paid. An unsuccessful application was made to the United States Circuit Court for a writ of habeas corpus.

In denying the writ, the court held: "The sovereign ownership of wild game is in the State, in trust for the benefit of its citizens; and a statute requiring the payment of a license by a non-resident for the privilege of hunting such game within the State is a police regulation within the power of the State, and not in violation of Article IV., Section 2, of the Federal Constitution, or of Section 1 of the fourteenth amendment, although such fee is not required of residents of the State; nor is the validity of such regulation as to a particular individual, who is a non-resident of the State, affected by the fact that he is a

stockholder in a corporation of the State which owns lands maintained as a game preserve."

The Supreme Court of the United States has upheld the public ownership of game and has quoted with approval the decision of the Supreme Court of California (ex parte Maire) to the effect that:

"The wild game within a State belongs to the people in the collective sovereign capacity. It is not the subject of private ownership, except in so far as the people may elect to make it so; and they may, if they see fit, absolutely prohibit the taking of it, or traffic and commerce in it, if it be deemed necessary for the protection or preservation of the public good. (Geer vs. Connecticut, 161 U. S. 529.)"

The same court has, moreover, decided, in the case of McCready vs. Virginia (94 U. S. 248), that a State may pass laws discriminating against non-residents, by upholding, in 1877, a statute of Virginia (act of 1846) which absolutely prohibited non-residents from planting oysters in the waters within the limits of the State.

If I am not mistaken, forty-one States and Territories exact a license from non-resident sportsmen.

H. G. THOMAS,

Commissioner of Fisheries and Game, Stowe, Vt.

## The Realms of Sport.

SEPTEMBER strikes a triumphant note of color that finds an echo in the pomp and glory of the northern forests. Alas! the hectic flush that illumines the face of nature is but the sad precursor of decay and death; the frail and evanescent beauties of the autumn woods fade away like the figment of a dream before the gloom and shadow of approaching winter. October, in the Far North, is ushered in with freezing gales that mercilessly sweep through the aisles of the forest and with shrieks of demoniac glee strip the maples of their scarlet raiment to carpet the forest floor with their fading glories. Presently furies of snow whiten the mountain peaks and settle on the ridges; the snow-clad evergreens contrast charmingly with the flaming remnants of color that bedeck the woodlands; such effects are often the despair of the artist and a source of ceaseless delight to the refined sportsman and lover of nature.

As if at a given signal, the skirmishers of winter swoop down from the frozen heights and take possession of the marsh and upland, sweet wild flowers wilt and die in the frosty clearings, the breeze sighs mournfully through the leafless branches of the maple, but the oak keeps up a brave fight with the destroyer, and grudgingly parts with its leafy covering. An icy film forms on the edges of the pools overnight. The delicate blue-wing takes the hint and fades away from pond and meadow. The quavering whistle of the bay birds finds a mournful echo in the sportsman's heart as he ruefully gazes on the vanishing wisps that stream past unmindful of his call. The squeak of the English snipe grows beautifully less as winter tightens its grip on the bog. The faithful pointer quatters his ground industriously, but is seldom rewarded by a whiff; he often draws blank and comes to heel despondent. This delectable tid-bit of the meadow, along with the teal and woodcock, has fled from the frosty advances of winter, leaving an aching void as the joys of upland sport go glimmering. The greater yellowleg still dots the freezing flats and haunts the spring holes of the bog reluctant to depart, but their shrill cry fails to turn the sportsman.

Now he's out for nobler quarry. The brier-scarred pointer whimperingly protests as he sees his much-loved master march forth with his decoys to battle with the elements, the booming of guns over marsh and bay announcing that the fight is on. As the season wears on apace the survivors learn by bitter experience to ware the points at morning and evening when flying to and from their feeding grounds and anchor far out in the blue expanse. Here the sailboat lies in wait to round up the swimming raft of ducks and steer them within reach of the masked battery. The legions of wildfowl that pour in from the freezing north close up death's gaps and swell the mighty chorus that merges with the voices of the wind and waves. The merciless pounding they receive all along the line develops a wariness and cunning that brings upon the passing flocks the maledictions of the hidden sportsman, as they sweep by in tantalizing array, gauging the distance to a nicety. Occasionally their calculations go up in the air, as oblivious of decoys, alive or dead, and flying like bullets they swing far outside in fancied security, until the roar of the 8-bore splits the air and a leaden hail hurtles through their ranks, doubling up the leaders. Great is the rejoicing in the blind, if they prove to be canvasbacks. This species, unless badly cut up with shot, can elude the best dog that swims. Enemies creep out in the most unlikely places, corn shocks burst out in flame and smoke, batteries deluge the demoralized flocks, strewing the bay with the dead and cripples, but all devices for their destruction pale before the deadly swivel, now tabooed, that used to plow a bloody furrow through great rafts of wildfowl, this diabolical relic of the lawless past did incalculable mischief among the choicer ducks, before it was retired by the strong arm of the law. Those days of outlawry have passed, and along with them the wealth of canvasbacks that used to haunt that paradise of the wildfowler, Chesapeake Bay. The 16-bore that often is powerful enough to stop the fleeing grouse would be accounted a mere plaything by the hardy baymen—heavy 10s and 12s, with occasional larger bores, are required to man the batteries and blinds; 2 ounces of 1s or 3s, backed by heavy charges of smokeless, often fail to pierce the feathered coats of mail, as the coveted quartering shot is not always available.

When all other legitimate means fail, live decoys can often be banked on to lure the feathered prey within

reach of the deadly choke; perchance their siren notes are heard by that glorious band of Canadas, whose filmy wedge is barely discernible amid the driving mist. Their tremulous reply mellowed by the distance, fires the sportsman's blood, every nerve thrills with expectancy, he hugs his trusty 10-bore in silent ecstasy. Again that wild, weird chant emanates from the moving triangle, rising and falling in jangled harmony as they voice their hopes and fears, vociferous cries of pleading comradeship arise from the artful decoys as they wistfully watch their dreamy drift. Aslant the rosy dawn the first faint flush of sunlight flecks the waving cohort. As they wheel with beautiful precision and head in, an ominous silence pervades the ranks of the oncomers, as like an aerial bolt they cleave their way on whistling pinions; they are almost within touch of the rejoicing frauds before a vague sense of danger checks their oncoming rush and sends a tremor of alarm shivering down the line; their brave array crumples up as they swing outward in full retreat, pursued by the dulcet refrains of their false friends, whose coaxing blandishments flout dark suspicion and eventually brings them circling back. On they come with outstretched necks. Lowering their flight in anticipation they hover above the decoys. At that precise instant the innocent-looking sandbar vomits death among the unsuspecting geese, the choicest of the flock go down before the pitiless rain of shot, the survivors beat the air with frenzied strokes in their efforts to climb out and scatter in wild dismay to sadly reform their broken wedge far away o'er the waters of the deep blue bay.

The end of all things is now in sight, the sun swings low in its orbit, the cold grows more intense, the pools that fleck the frozen marsh give back an icy stare, ice of ominous thickness encroaches on bay and river, the croak of the mallard sounds like a dirge as flock after flock wend their way southward, leaving their northern admirers disconsolate; wild geese and ducks, wary and suspicious to the last degree, still brave the pitiless blasts that sweep over the freezing surface of the bay and work around the air holes, their depleted ranks occasionally reinforced by stragglers from above.

At this stage of the game many sportsmen, unable or unwilling to stand the racket, retire to the snug quarters of the club leaving a husky band of sportsmen to fight it out with the rear guard. These hardy men reckon nothing of exposure for hours in batteries and blinds amid the howling of wintry gales, the clash of icy waves, waiting and watching for the elusive brant, often risking life and health in the pursuit of wary laggards and cripples. The occasional toll they take from passing flocks helps keep the interest alive.

The season is flickering, threatening to vanish in a flurry of snow. As if to emphasize the situation, a mighty host of honkers appear upon the northern horizon, a sure precursor of winter's dread approach. Sadly the knights of the choke-bore gaze upon the baseless triangle that drifts athwart the evening sky, and fain would accompany them in their flight to regions where ice and snow are rarely seen. The hoarse clamor that emanates from the flying wedge, filtering down from frosty heights, vibrates upon the twilight atmosphere, glorious, sweet and solemn. Longingly they watch the vanishing cohort until they fade away amid the gathering shades of night, then turn away to take up the burden of politics, business and social duties that have been remorselessly sidetracked during the all too brief shooting season.

The fortunate few that can strike a balance between business and sport propose to join forces with the Southerners in the warm welcome they are extending to the new arrivals at Currituck and other points down the line. The sportsman who descends upon the Southern shooting grounds will find it warm in more senses than one, unless he carefully studies the situation. Good shooting can often be secured on posted lands by the use of diplomacy or greenbacks. But all this will avail you not when you are up against Arkansas and Louisiana. Arkansas has virtually confiscated the club property of St. Louis and Memphis sportsmen, the courts uphold them in the whole transaction from A to Z, so there you are. Georgia, South Carolina and others demand licenses from outsiders.

Dogs and guides are uncertain quantities. Barring certain well known hostilities, the further South you travel the more dubious is the prospect. Liveries will sometimes furnish a rig, guide included, at a moderate rate, but without the well broken pointer or setter little can be accomplished with quail, the standard game bird of the South, as the time has long gone by when game overran the plantations and woodlands. Snipe can often be picked up in an informal way, but to hunt ducks successfully in marshy places a good retriever is almost indispensable.

Canvasbacks and other choice ducks are persecuted from morning to evening by market gunners. The wild turkey and deer are fast disappearing from the settlements. This necessitates the use of teams and camping outfits to reach the best grounds. As a rule, game is very scarce near towns and hamlets, wild turkeys are only found in sparsely settled regions. Game in many parts of the South is decreasing at an alarming rate.

The choke-bore and rifle ought to be retired in the Gulf States after the first week in February, leaving the visitor to amuse himself during the remainder of the season in casting the fly for black bass or battling with gigantic tarpon. North Carolina leads off with a galaxy of attractions that decoys many a disciple of Walton and Nimrod across the border to taste the delights of trout fishing and hunting in the Sapphire country, whose lakes and mountains hold much that is dear to the heart of the sportsman and lover of nature. As winter invades the mountains, Nimrod gracefully descends to the lowlands to dally with the quail and snipe.

[TO BE CONTINUED.]

### Currituck Game.

CURRITUCK, N. C., Oct. 9.—*Editor Forest and Stream:* Wild ducks for some reason are very scarce up to the present. It has been unusually warm, but the crop of food is a poor one, which, I think, is the principal reason. On the other hand, we have more quail than I have ever seen here. I think there are two broods in every family. We have had good bay bird shooting; yellowlegs and dowitchers have been here in abundance. MORE ANON.

### A COATING OF MANY-USE OIL.

Keeps guns clean and rustless; bore bright; ready for use.—A. J.

## Scotch Grouse Moors.

From the London Daily Express.

THE true sportsmen who can really shoot and who love sport for sport's sake are being to an extent supplanted by the rich men who rent large moors because it is fashionable to do so. Often they have had neither time nor inclination to learn to shoot well, and adopt any means whereby their bags may be well filled. On the "glorious 12th" they usually have the assistance of their guests or the gamekeepers, so that they may make a respectable show in the columns of the local press. But when their reputation is assured and the special guests are gone they are thrown on their own resources and must do their best to give their keepers something to carry across the moors.

These amateurs do not get much satisfaction among the grouse. They are strong on the wing this year, and not easily brought down. I know of one moor on which a party of seven fired about 60 rounds the other day before a feather fluttered earthward, and another on which two city youngsters spent a long forenoon and afternoon among hundreds of birds and had to return to the lodge with only one between them.

The grouse may be too flighty, but they have the deer or the roe. Their choice invariably abides with the latter. The roe has a slim body, about the size of that of a big hare, and it stands slightly higher than a collie dog. Sometimes you see one that looks like a rabbit on stilts. It is a quiet, inoffensive, half-tame animal. Unlike the deer, it is not easily scared. The sportsman who is on its track may make as much noise as he likes, and he will not scare it so long as he keeps out of sight.

If he sits long enough among the bracken he is sure sooner or later to stumble against one. And, better still, if he sets out the beaters he will have them running past him in half-dozens.

Against the shy, pretty roe the "sportsmen" who cannot shoot like sportsmen use dum-dum and explosive bullets. A charge sufficient to kill a cat or a rabbit would bowl over a roe, but the city man cannot afford to risk a miss at 20 yards. He must kill at any price.

On a certain Highland moor some days ago a gallant party had to their credit about half a dozen roes. One was bowled over at a distance of 15 yards. An explosive bullet struck it right amidships and carried away the greater portion of the lower part of its body. Another had been struck by two explosive bullets. The first had decapitated the animal and the second had reduced its hinder part to a pulp. In the entire collection there was not a skin that could be preserved.

It is a bad thing for the moors when sportsmen of this kind are let loose upon them. They are the indirect means of causing a scarcity of grouse. When they return home the keepers have to undertake the work of thinning down the coveys so that the birds may not exterminate their race like the Kilkenny cats. Young male birds outnumber the young females by about three to one, and in the springtime the bachelors in grouse land begin to fight innumerable duels to the death.

It is necessary therefore that the gamekeepers should shoot as many male birds as possible. But when the moors are left freely stocked the gamekeepers are practically unable or not numerous enough to cope with the task, and large numbers of guests are invited to take part in the sport. These guests may be, and usually are, good marksmen, but few of them are able to tell a male from a female bird at sight. The consequence is that the cure is often not little better than the disease, and the females are left in a hopeless minority, being less strong on the wing than the males.

Another reason for the growing scarcity of good birds is the prevalence of disease. Here again the modern sportsman is the indirect cause of the loss of birds. The grouse feed on young heather, and to insure them getting the proper food large tracts of moor must be burned when the year is young. In the old days a 30-acre moor fire was no uncommon spectacle, and young heather was thus allowed to grow in abundance. The young birds flourished, and were found in respectable strength over wide areas. But a different arrangement now obtains.

Instead of having large tracts of heather destroyed, the keepers set fire to long, street-like patches, so that the birds may be encouraged to feed and nest in the narrow drives. When the glorious 12th comes round, the sportsmen simply operate along the moor roads shaped by the burning operations, and slaughter the birds in hundreds.

The arrangement may be an economical one, but it cuts both ways. The majority of the birds may find lodgment among the new heather, but as they are not as intelligent as human beings, they cannot be prevented from picking at the old heather. As a matter of fact, many coveys do feed on old heather, which breeds disease, and once disease becomes rampant, it spreads rapidly and kills more birds than the sportsmen do.

Still another cause of the growing scarcity of grouse, due also to the commercial spirit which pervades sport, is the rapid growth of bracken. All over the Highlands north and west, from Perthshire to Sutherlandshire, complaints are heard of its slow but sure conquest of the hills.

The agriculturists and sheep farmers used to keep down the bracken, but when the deer forests became fashionable the bracken assumed the role of the monarch of the glen. And the older the forests the more plentiful is the bracken.

In these deer forests the old pests of Scotland are increasing in great numbers. Wild cats, eagles, foxes, adders, etc., flourish free from disturbance by their natural enemy—man. The owners and lessees of deer forests are aware of this fact and do not object to the increase of these wild animals, because they keep down grouse and ground game, which disturb and warn the deer when the stalking season is in full swing. But the sheep farmers suffer much loss from the ravages of the foxes, which, when birds and hares seek pastures new, give much trouble by worrying and devouring sheep and lambs.

The decay of old-fashioned sport is doing much injury to the Highlands of Scotland. Artificial conditions have been created to make it easy for the holiday-maker to boast of record bags. But nature is taking her revenge, and the day is coming when the country will pay the penalty for the empty glens and the bracken-conquered hills, which will, as years go on, yield less sport than ever.

## In New England.

BOSTON, Mass., Oct. 14.—*Editor Forest and Stream:* A communication received this week from East Pepperell informed me of a "side-hunt" to occur on Monday and Tuesday of the present week. Two captains had been chosen, each of whom was to choose his men. The writer says "more than fifty men and boys will go to the slaughter." This was a great surprise to me, for I had supposed the day of such hunts had gone by. A quarter of a century ago they were not uncommon in certain sections. As your readers know, it is customary on such occasions for the party beaten in the final count to pay for a supper. The gentleman who sent me the letter is a land owner and was anxious to know if he had a right to protect the game on his premises. Such affairs merit unqualified condemnation. They are calculated to do great damage to decent, legitimate sport. Hunters in that neighborhood must expect the owners will post their land. They are not to be blamed for doing so, and might reasonably be blamed if they did not. A member of our Legislature told me last winter that a hunter in his section boasted of killing eighty-three grouse last fall. It is time for sportsmen to learn to practice some self-denial and to be satisfied with reasonable bags of game, to leave some birds "for the other fellow."

The town clerk of a township in the western part of the State, who has himself served as a game warden, writes me this week that on Oct. 1 four pot hunters started in with their guns and have hunted from daylight until dark, every available minute. These men are boasting that there is no game warden sharp enough to catch them, and that they can dispose of their birds in a way to defy the sharpest of detectives. This writer says further, that there is a warden not far away whose private business is of such a character that he dare not arrest a hunter for breaking the law. More surprising still, he says that while serving as deputy warden he was informed by one of the force sent from Boston, that it would not be well to disturb those wishing to hunt on Sunday, as such a course was becoming unpopular with the commission. I have given the statements of the writer in substance as furnished me over his signature. I forbear to give his name, although not requested to withhold it. The writer takes it for granted that the Bay State readers of FOREST AND STREAM desire to know as much as possible about conditions as they now exist. It is hardly necessary to add the writer of the above declares that the game laws in his section are not well observed.

Another correspondent, a zealous worker for game protection, declares his belief that the only real benefit the sportsmen have derived from the work of the State Commission was the putting out of business the market fishermen and market gunners. He says the prohibition of the taking of trout less than six inches long from streams that never contained a fish of that length is on a par with making the open season for woodcock shooting after the last woodcock has reached the South. He then draws the conclusion that matters pertaining to the protection of game and fish should be regulated by those who know something of their nature and habits, and that a knowledge of shell-fish and crustaceans does not fit the case. The writer of the above did not request that his name be withheld.

As regards the observance of the fish and game laws of eighteen different towns in Berkshire county heard from, the report from twelve is "yes," three report "fair," one yes except by Italians, the others make an exception as regards the laws on trout fishing, which, they declare, are not well observed.

Judge Tenney, of Williamstown, and Mr. Sayles, of Adams, emphasize the need of more warden service. C. S. Galusha, of Windsor, wants officers to enforce the Sunday law. Deputy Cross, of Becket, wants officers to have the right to search without a warrant, and Mr. Van Huyck says improve the search law, which he considers a dead letter, so far as the protection of game is concerned. Since the above was written your correspondent has received further information that the side-hunt was deferred till Monday and Tuesday of next week, and that a warden has arrived on the scene. My informer promises to write again after the hunt is over.

A report has just come in from Mr. Sweetman, of Bedford, Middlesex county, in which he says this is the first season he recalls since his childhood that the sweet cadence of Bob White has not been heard by him in his rambles afield. He saw one bunch of ruffed grouse this summer while out fishing. He regrets that there is no warden in his vicinity who enters into game protection from the true sportsman's point of view. He says we must run to earth the Italian slaughterers, make it a capital offense for anyone firing upon a warden, give dynamiters ten years at hard labor, prohibit the sale of quail, also the killing of quail, grouse, woodcock, black and wood ducks for at least three years, and give the birds a chance to breed before it is too late.

Mr. Wheeler, of Concord, takes great interest in plant and bird life, his avocation being that of a florist. He has heard very few quail this season, and says grouse are scarce. He also complains of Italians, who constitute the bulk of the law-breakers. He favors a close season of two years on game birds, including snipe, and would have no sale of game birds in the State, except in the hunting season.

Several letters from towns in Worcester county have come since my last letter, all of which pronounce quail scarce, or very scarce. A paid deputy from Framingham says there is a great deal of Sunday shooting in his neighborhood, but before an officer gets near the offenders they are off at a double quick pace. He is doing his best to round them up. A sportsman just in from Foxborough says there were a lot of gunners in the woods of that section last Sunday. He proposes getting an appointment as a warden and get on their trail.

Monday an Italian who was brought before Judge y at Abington for shooting robins on Sunday, alth claiming that he was ignorant of the law, was \$20, the judge declaring that he had not only viol the Sunday law but the alien license law as well, as ad not secured naturalization papers.

Henry, of Wayland, and B. Amireault, of Sudbury, e put into court at South Framingham for Sunday ing by Deputy J. L. Mills, of Ayer. Henry's case placed on file while Amireault was fined \$10.

Commissioner Wentworth appeared before Judge es, at Plaiston, N. H., against A. G. Whittier, of ton, N. H., who was arrested by Constable Tucker killing a deer. The judge imposed a fine of \$100.

ne of the prominent summer residents of Cohasset been summoned to appear in court to answer to the ge of using a power boat in pursuit of wildfowl. It eported that one day this week he shot sixty-seven

eer hunting in Maine is in full blast, and Wednesday e record day of the present season in receipts at gor, the footing being forty-six for the day.

mong those bringing out deer were Messrs. F. E. and y Kelly, T. H. Bride, J. E. Parmenter, A. D. Rogers, D. Sullivan, W. B. Sawyer and F. F. Taft, of Boston; 7. Hiscox, of Worcester, and F. M. Arnold, of Haver- besides Maine hunters from Rockland, Harland, bou, Houlton, Bangor and several other cities and ns of the Pine Tree State.

is reported very dry in the woods. There has been a t exodus this week from Boston, hunters going in to eprepared for the moose hunting, which will be legal Oct. 15. H. H. KIMBALL.

### In the Maine Game Country.

ANGOR, Me., Oct. 13.—*Editor Forest and Stream:* The game season, thus far, has scarcely been up to the rd of the corresponding fortnight of 1904. Yet the tions have been exceedingly difficult for good sport, ng to the lateness of the falling of the leaves, which n to have held on remarkably well, and to the great ness of those which have already fallen. As one guide eessed it to the writer, the "only way to hunt now is rush off a likely place large enough to permit one to e a little without noise, sit down there and spend the e, or until such time as a deer comes to you. Still- ing in any other way is absolutely out of the ques-." That his judgment was sound is proved by the t run of game through this city for the two weeks of open season.

et there is an abundance of game, large and small, oughout the hunting regions, according to those who e come down thus far. In but a single instance has e writer seen anyone disappointed with the supply of e, and they could find neither deer nor grouse in the ion they hunted, although a hunter who came from alst identically the same region twenty-four hours ahead them, reported an abundance of all kinds of game e.

shore gunning, which was rather poor the earlier part he month, appears to be picking up, and large bags are g secured by gunners in the favorite places for the rt. In Merrymeeting Bay and along the coast adjacent that popular gunning region, the fowl are reported idedly numerous, and the sport will be at its height e remaining two weeks of the month. The birds are orted large and fat.

The awful list of accidents of the first week seems to have had small influence upon others in a cautionary way, although to be perfectly honest, the accidents reported have been among those who are naturally unlikely to see the daily papers and other publications that are continually urging caution upon those who have the handling of firearms. So far as known no proceedings have been instituted against those who have apparently "carelessly or negligently shot at or wounded a human being," although the chairman of the Fish and Game Commission, in an interview with a reporter in this city the present week, characterized the shootings as the results of carelessness.

Perhaps the warmest praise which the lawmakers of this State have received in many years from visiting sportsmen is being pronounced by the latter as they pass through this city on their way to the woods. One and all, so far as heard from—and your correspondent has talked with a goodly number—they declare their delight that the hunter is to be permitted to take home some partridges on his return, the new law permitting a total of ten of each variety of game bird to accompany the sportsman's big game shipment. According to reports there is, this season, a positive abundance of the birds, which means that the sportsman who gets no big game may at least have something to show for his outing in the well stocked woods of Maine. Whether the grouse will stand the probable drain of ten to a person for export or not remains to be proven. As a matter of justice to the non-resident, who is paying for what protection the game of all kinds gets, one cannot but hope the supply shall prove equal to the demand.

HERBERT W. ROWE.

### Game in Pennsylvania.

SAYRE, Pa., Oct. 6.—Across the low lands and up the face of the hill country the illuminating touch of a great artist is discernible. Early October has never displayed prettier colors in nature's show window than now. The soft, warm tints of yellow, orange and vermilion lend a gentle variety to the landscape to be observed at no other season of the year. And over all the charm of the mellow, restful autumn days broods above the land, making life out of doors something good to be lived for.

The squirrel season opened Oct. 1, which fell on Sunday. Monday morning a small army of gunners was early astir, but so far as learned, the wily grays were found to be scarce. And reports later received serve to confirm the first day's verdict, namely, that the crop of gray squirrels is limited, so far as this section of country is concerned. Across the line, in New York, where the season opened a fortnight in advance of the Pennsylvania season, squirrels are found quite plentiful in some sections and exceedingly scarce in other sections. The Pennsylvania law provides that no gunner shall shoot more than six squirrels per day, which is expected to materially safeguard the supply for future seasons. The woodcock season opened Oct. 1, and while the birds are far less numerous than they were a few years ago, reports nevertheless come to hand that a good many fine, strong birds may be picked up in the swamps and bog lands hereabouts. The elimination of the July shooting clause from the law covering woodcock is sure to benefit the race of longbills.

It is almost impossible to locate a really extended woodcock cover in this part of Pennsylvania, the shooting territory being confined to stray bits of wet land out of which the birds arise singly, and rarely ever as in the old days. The law provides that one may kill only ten woodcock in a day, twenty in a week and fifty in a season.

This provision, in connection with the limitation of the season in which the birds may be shot, and a closed market against the sale of the game, will work beneficially in

behalf of this vanishing migrant, and while we cannot hope to see a return of the good old shooting conditions we may nevertheless expect to see a day of better things in the days to come.

Advices from those who have been much afield are to the effect that ruffed grouse are, if anything, more plentiful than last season. And this statement applies to southern New York counties quite as accurately as to northern Pennsylvania. Rabbits are everywhere abundant, and when the chill winds of November echo across the hills, bunny will be ready for the race of his life. M. CHILL.

### Squirrels in Maine Woods.

FREEDOM, Me.—Chapter 397, of the private and special laws of Knox county, Me., provides that "Whoever, within the limits of Knox county, kills or has in his possession, except alive, any gray, red squirrels or chipmunk, forfeits \$5 for each of said animals so killed or had in possession, to be recovered on complaint."

It is a pity there are not more such laws, and that where they are found they are not carried out better. Hunters in general seem to think that when they fail to find larger game to occupy their attention there is no hurt in "practicing up" on the innocent little creatures skipping fearlessly about them. This practice may not be a crime, except where the law forbids it, and yet it is not right. Take these little animals out of the woods and how the very hunter who is helping to exterminate them would long for their signs of life. The desolate stillness of the forest would be oppressive. W. R. S.

### Canadian Camp.

HARRY V. RADFORD, Secretary of the Canadian Camp, announces that the third semi-annual dinner of that organization will be given at the Hotel Astor, New York, on the evening of Tuesday, Nov. 14. The Rev. Dr. Wilton Merle Smith will be the toastmaster, and, as usual, the speakers will include a number of very distinguished sportsmen.

The present officers of the camp are: President, G. Lenox Curtis, M.D., New York; First Vice-President, Ernest Thompson Seton, New York; Second Vice-President, Henry Van Dyck, D.D., Princeton, N. J.; Third Vice-President, Hon. Grover Cleveland, Princeton, N. J.; Secretary, Harry V. Radford, New York; Assistant Secretary, C. C. Chatfield, New York.

### Pennsylvania Quail.

PHILADELPHIA, Pa.—*Editor Forest and Stream:* Last spring it was the feeling of sportsmen in this vicinity that the hard winter of 1904-5 had about used up the quail in this part of the country, but a walk among the farms about thirty-five miles north of here discloses a different condition. In two farms, aggregating 400 acres, I found three coveys of strong, full-grown birds containing twelve birds, fifteen birds and seventeen birds respectively, and I was advised of two more coveys within a mile, one of which contained twenty-one birds.

If this condition exists generally throughout eastern Pennsylvania we should have some good shooting in November. THORNTON.

### There is on'y One "Brief."

THERE is only one complete, up-to-date, accurate, reliable, recognized authority on the Game and Fish Laws of this country (which includes Canada), and that is the *Game Laws in Brief*. It is sold by sporting goods dealers everywhere, and is mailed by Forest and Stream Publishing Co. for 25 cents.

### THE FAMOUS MANY-USE OIL

Polishes the stock, cleans foulness from gun barrels.—Adv.

### Fish and Fishing.

#### The Late Autumn Trout Fishing.

AFTER a long spell of very bad weather, which made anything but pleasant for anglers in the northern oods, the three last days of September brought an eeable change of temperature, and a consequent sh to the accessible trout waters, of those end-of-the-ason fishermen who had been kept at home by the in and mist and sleet of the previous week or ten ys. The extent of the change in temperature may e judged of from the fact that on the 27th of Sep- mber, some of the Quebec anglers, with whom I mped and fished in the Lake St. John country, for- d by express to their friends in town, a box con- ining freshly caught trout, packed entirely in snow, hile on the afternoon of the 30th we had the windows e car open when traveling back to Quebec, in order et in the fresh balmy air. Fully two inches of snow d ninety miles north of Quebec, on the early morning ept. 27, and during the two following nights there ere quite sharp frosts. These were succeeded by ight sunny days, and though there was not sufficient pple on the water to make the fly-fishing what it ough have been, yet the trout rose very well, off and on, om early morning to late at night.

#### The Iroquois Club Limits.

Though I have passed by the waters of the Iroquois sh and game club scores of times, I never fished any of them until last month, having generally gone further n to Lake St. John or to some of the many other- ub limits of the district. The sport to be had on the roquois reserve is equal to that offered by any other

club in the district. The club limits border upon those of both the Triton and the Stadacona clubs. The waters are close to the railway track, and all trains stop for the accommodation of members and their friends, when- ever signalled so to do. The portages are short, and the lakes not as large as some of those leased by other clubs, which I consider rather an advantage, be- cause it is not so difficult to locate the feeding places of the fish. Most of the lakes are surrounded and hemmed in by beautifully wooded mountains, and while there is quite a luxurious club house at the railway sta- tion, a number of comfortable camps have been con- structed on the shores of the principal lakes.

There is river as well as lake fishing on the Iroquois reserve. The sport is excellent, both in the discharge of Lake Gowen and also in the Batiscan River, which bounds the territory of the club toward the east. The outlet of Lake Gowen is an exceedingly pretty stream, which it is quite a treat to wade and fish. Trout are abundant in all the rapids, and they also rose very freely in the end of September, in shallow portions of the lake toward the outlet.

A portage of a little more than a mile brings one from Lake Gowen to Rickaby rapids on the Batiscan River, near which Mr. Nathan Bill, of Springfield, has built himself a splendid camp, in which he spends a good part of the summer with his family. These rapids are too heavy to be waded, but splendid sport is al- most always to be had in them by fishermen who are content to cast over a portion of the river among the rocks from the shore. Most of the members of our party hooked and killed two trout at a time upon more than one occasion. The roar of the rapids and the entrancing beauty of the view add very much to the enjoyment of the sport. On the occasion of our recent visit, several partridges flew and walked about us while

we fished, and the fresh tracks of large moose were seen on all the portages.

#### Found in a Trout's Stomach.

In the camp at Lake Gowen I was shown a large cod hook, which was found only a winter or two ago in the stomach of a brook trout taken out of the lake. It was recovered during the winter season. Some of the members of the club were caribou hunting in January. Being short of fresh food, they cut a hole in the icy covering of Lake Gowen and set a night line. In the morning it was found that the hook had dis- appeared. The same thing occurred during the follow- ing night. A big fish had undoubtedly carried off both bait and hook. For the next night a cod hook fastened upon a wire was baited and placed at the end of the line. Next morning this hook had similarly disap- peared. A few nights later, another hole was cut in the ice, quite a long distance from the other, and nearer to the center of the lake, upon which a similar hook was used. In the morning a 7½-pound trout was taken upon the line. The guide, who was cleaning the fish for breakfast, suddenly gave a cry of pain. He had run into his hand the large cod hook in the belly of the fish, which he had hitherto unnoticed, concealed as it was in the cavity containing the intestines. It was a similar hook to that upon which the fish had been caught, and was undoubtedly that which had been lost a few nights previously. We did not catch any fish even nearly as large as that above referred to, but some of our party, including both Mr. John S. Thom and Mr. Chas. Shaw, of Quebec, took them over three pounds each in weight. It is really wonderful how the big fish lived and attempted to feed with so enormous a hook in his inside. The stomachs of some trout

would doubtless show as remarkable collections of curiosities as the ordinary magpie's nest.

Mr. T. H. Norris killed many very large trout on some of the Stadacona lakes, close to the Iroquois territory, during the last week of September, while the prime minister of the province of Quebec, the Hon. Mr. Gouin, killed one weighing nearly five pounds in one of the lakes of the Laurentides Fish and Game Club.

#### The Flies that Were Successful.

We found on the waters of the Iroquois preserve—and other fishermen on neighboring lakes and streams experienced the same thing this autumn—that the fish did not, as a rule, take the *Parmachenee-Belle* as well as usual. In the spring and early summer it is the one favorite fly in these northern waters. Much more successful lures were the scarlet-ibis, the Montreal, the fiery-brown and the red-hackle. At night the Lake-George and white-moth proved good killers.

The woods were looking their best during the period of our stay in them, the red and yellow tints of the autumnal foliage seeming at times in the brilliant sunlight like an exaggerated bit of nature's September loveliness. It would certainly be so believed by those who had never seen it for themselves, if the gorgeousness of the coloring that we saw could only be faithfully reproduced on paper or canvas.

E. T. D. CHAMBERS.

### The Dominating Carp.

EVANSTON, Ill., Sept. 7.—*Editor Forest and Stream:* When our Federal Government distributed to all parts of the United States the progeny of 345 carp which it brought from Germany in 1877, it was exercising the paternal duties which it possessed to an eminent degree. It had in view a great economic measure, a distinctive virtue at all times. It desired to furnish the entire nation, and in particular the very poor, with a cheap and edible fish, and hence the strenuous efforts it has put forth for success in this particular propagation.

This was exceedingly meritorious, but if there had been some discrimination in the transplanting of this fish, such as saving our Great Lakes of pure water from its incursion, as well as some of our rivers of the same nature, there would doubtless have been more toleration of the rapidly multiplying carp.

It has, however, transpired that this suggestive measure has not been successfully carried out, and therefore an almost complete destruction of the fresh-water fishes is threatened as well as the passing away of the pleasures of rod and reel. A resumé of the generous transplanting of the carp in almost every section of the country practically manifests that that fast multiplying fish, which in derision as well as in fact, is called the scavenger of the waters, will through sheer force of its numbers crowd out in a decade or two all our gameful and toothsome fishes.

All our great fresh-water lakes, except Lake Superior, are now giving manifold signs of an overabundance of this undesirable fish. That exceptional lake above mentioned will soon be sharing the same fate, provided there is ample supply of food for this advancing and destroying tribe. The St. Mary's River, which debouches from this great reservoir of pure water, has an abundant supply of water or river grass and wild rice, upon which this fish in part feeds, and it is there in very generous numbers. We can hardly realize that the United States Fish Commission planted this coarse fish in these the greatest connecting bodies of fresh water in the world to innocently add the *coup de grace* to the few surviving whitefish and trout. What an appalling tragedy of the waters is this foreshadowed in the destruction of the gameful and highly toothsome fish which now make the Great Lakes their habitat? Are we to substitute this scavenger of the lakes for the delicious table fish that now fairly makes our salivaries dance with ecstatic delight? Heaven forbid it! We might tolerate it in other waters less pure, but the Great Lakes, the pride of America, to be thus sullied, never.

I am not alone in this denunciation, for an alarming cry comes from Canada, as will be seen in the subjoined extract taken from the *Toronto Mail and Express* of Aug. 26. It enunciates that:

"Mr. Harris rightly classes with the witless introduction of the Canada thistle and the English sparrow to this country the introduction of the German carp to the Great Lakes. This fish might be well described as the scavenger of the waters. It feeds on refuse, and is about the poorest substitute for whitefish, trout, and pickerel that can be imagined. Any mud puddle will suit a carp. Before 1890 it was practically unknown to American waters, in 1904 not less than 20,000,000 pounds of carp were taken from Lake Erie, which must be considered a carp lake, as is Lake St. Clair. It took just five years to destroy in Lake Huron the finest yellow pickerel fishery in the world. From Ottawa there was no protest. The people did not know what was going on. There was no outcry. In silence the tragedy of the Great Lakes was perpetrated.

"The carp is scarce in Ontario yet, but soon these pigs among fish will be guzzling where once the salmon swarmed. Then we shall have plenty of cheap, coarse, fish food for awhile. Canadians, of course, will not care to eat it, and so it will be sent to the sweat-shop population of New York, and other large American cities. The story will be finished, and our lakes become a pasture ground for the foreign-born element of the United States."

Again Mr. Frank Jack, a prominent and influential citizen of Peoria, as well as an expert and keenly observing sportsman, writes me on request for information concerning the carp, saying:

"The Illinois River, within fifty to seventy miles of Peoria, is the noted carp stream of this country, and the shipments from Peoria and a couple of other points are wonderful. These shipments mostly go to New York and, it is said, that the carp are there served on the tables of the leading hotels—probably under some other name. The commercial fishermen use large seines half a mile to a mile long, and there have been catches

at different times of 50 tons at a haul. Frequently they build stockades out in the river and pen them in as they would cattle, and there keep them until ready for shipments, which are made mostly in car loads. Very few of these fish are eaten here, being considered too coarse for any cultured palate. Until four or five years ago we had fine bass and perch fishing here—much better than I saw this summer in Ontario. Now the carp keeps the water muddy and have driven out all other fish, and are credited by many as destroying their spawn.

"One undeniable advantage of this fish is its remarkable reproductiveness. Just think of fifty tons of carp at one haul of the seine. This alone is manifest evidence that not other fish could so multiply, and it has been

THE SCALE CARP.  
Photograph from Nature.

going on for years. It would be well, however, to remind you that no other river in the United States, with the single exception of the Columbia, in Oregon, furnishes as many fish. Havana, in Mason county, is the largest market for fish there is on the Illinois, there being 2,000,000 pounds shipped last year from that place, carp of course being in the ascendancy. The carp was placed in the Illinois by the United States Fish Commission fifteen years ago, and, according to authentic reports, have so rapidly increased as to threaten the life tenures of all other fishes there."

In this respect they are like the English sparrow, they monopolize the territory, and the other fish are driven out. And that also will be the result wherever the German carp is transplanted. When I consider that the noted fishing waters in the Great Lakes, where I have had so many days of unalloyed enjoyment with

Look in the market baskets of our working classes and you will see therein the choicest cuts of meat, and fish that is a perfect delight to the gastrics. Why then all this fanfare of trumpets, and beating of drums to force this coarse-fibered fish of repulsive savor upon us as a blessing? Shall our whitefish, trout, black bass, maskinongé, pike, perch, pickerel, etc., be eliminated from our lakes and rivers of pure water that the unregenerate carp may roam at his sweet will and take on his lordly proportions, and swagger as the king of the waters as he turns its purity into seas of turbidness?

The Fish and Game Commission of the United States are officials of high standing and great ability, and have accomplished a great work in propagating and transplanting fishes of superior quality throughout the country. I here simply call attention to one of many instances, where they have won grand triumphs, and

THE LEATHER CARP.  
From "Fishing Industries."

the rod and reel, are soon to become pastures for the carp, it saddens me beyond all expression. I must regretfully admit that the carp will not in this case make his sudden exit, for he possesses to an eminent degree all the qualifications that will enable him to retain his present position and finally make him monarch of all he surveys. He is exceedingly hardy and very pugnacious, will live in waters where other fish die, and, with his years of longevity and rapid growth, will assuredly dominate unless immediate measures are taken to avert it, as the strength of the two opposing forces will soon develop that fact in the Illinois.

They have threshed this question over and over again in the "American Fisheries Society," of which I am proud to be a member, and it appears that the scavenger fish has now a majority, or a tolerant majority, in that board. In a late discussion on this all-important question one of the members said: "I am stating the cold, hard fact, when I saw that the Legislature of Pennsylvania has practically declared the carp an outlaw by prohibiting the planting of it any longer in our waters." On the other hand, a member from Michigan said: "I think the carp was sent here as a blessing to the poor. The carp is here to stay, and all the barrels of money we can open will not destroy them. I like them and am going to keep on eating them."

I have seen certain parties immediately after an election eat crow, but they did not like it one bit, so with the carp.

In regard to the adhesive persistence of the carp, I will simply repeat that if it is here to stay there will be

that is in the planting of the shad in the Pacific Ocean, and it has been such an eminent success that you can now purchase shad as cheap in California as you can in New York.

If there had been some discrimination in the transplanting of the carp in our Great Lakes of pure water, such as we have mentioned, there would have doubtless been more toleration of the rapid multiplying fish. The Game and Fish Commission of Illinois made a similar admission in their report of 1904, when it says that, "The carp are detrimental to clear lakes and rivers, but they get into them and we are doing the very best we can to relieve the situation in that respect;" and that is what we justly claim.

One of the great culinary triumphs of the greedy carp was in the eating of all the wild rice beds in Lake Huron and thereby driving all the wild ducks away. This yellow peril of the fresh waters will not stop at this gastronomic feat, for it will perform many others that will throw that one completely in the shade and so startle its advocates as doubtless to revolutionize them. Its daily menu, when the market is well stocked, consists of vegetation, worms and larvæ of aquatic insects which it turns up from the mud with its classic nose, the refuse of the kitchen, slaughter house and brewery, and many other nauseating things which would not look well in print, and also prove offensive to those who declare they like them and will continue to eat them despite all adverse criticism.

As a passing incident of the multiplicity of carp already in our Great Lakes of pure water, I will simply

state that I strolled down one beautiful September morning, while at Evanston, to one of the many piers that have disfigured Lake Michigan's picturesque shore. Here I observed a number of anglers having great sport in taking the toothsome perch. I finally saw one of them land a four-pound carp with a worm-baited hook. On inquiring from the carp-taking angler as to their abundance here, he stated that the lake was full of them, and that in the Calumet, a tributary, they were so numerous that you could almost cross the river on their backs. A little extravagant this, but it tells the story of the ever-increasing and advancing carp. An additional fact of a similar character came to me this summer while at Sea Gull on the St. Mary in pursuit of the gamy black bass. Here I caught several baby carp in my minnow trap. Again the dynamite blasting of the rocky bottom was going on there, frequently bringing some goodly carp to the surface. At other places the same results ensue. It is therefore evident that those Great Lakes of pure water will soon be foraging fields, so to speak, for this vast multitude of cheap food fish which goes plowing through the waters like a destroying army carrying and destroying everything before it.

As we have introduced this all-important subject, it would not be amiss to give in connection with it a piscatorial detail of the carp in its European habitats. We glean from the Government reports, which are highly interesting, as well as valuable, that the carp is alleged to have been imported into England in the year 1504. In Austria, which possesses the most extensive carp fisheries in Europe, the culture of the carp can be traced as far back as the year 1227. The Emperor Charles IV., of Germany, by granting sundry privileges, favored the establishment of ponds in his dominions, and the monks were especially assiduous in the culture of fish in ponds. As early as the first half of the fourteenth century, Bohemia had its first large carp pond, and the culture of this fish progressed in that country, as also in Poland, and that district which now comprises German Austria; also in upper Lusatia, Saxony, Silesia and Bavaria. A celebrated establishment for carp culture, with large extensive ponds, was located, as early as the fourteenth century, near the town of Wittengau, in Bohemia, Austria. The first beginning of it may be traced to the year 1367. At that time the lords of Rosenberg called into existence and maintained for centuries these establishments on a scale so extensive that to this day they are the admiration of the visitor, the main parts having survived, while the race of the Rosenbergs has long been extinct.

The artificial ponds of the Manor of Wittengau comprise an area of no less than 20,000 acres. The proceeds amounted to about 500,000 pounds of carp per annum. The ponds of the Princess of Schwarzenberg are probably the largest and the most extensive of the kind on the globe. They are usually situated in some undulating country, lowland country, where small valleys have been closed by gigantic dams for the purpose of forming reservoirs. There are also many hundreds of other ponds, but none of them covering more than a few acres, but almost every large farm possesses at least one of them.

The carp are divided into three chief groups, viz., the "scale carp," the "mirror carp" and the "leather carp." These fishes are partial to stagnant water, or such as have a not too swift current with a loamy, muddy bottom and deep places covered with vegetation. It inhabits now most of the larger and smaller rivers of Europe, particularly the Elbe, Weser, Rhine, Danube, Po, Rhone, Garonne, Loire, then the Bavarian and Swiss lakes, the Lake of Constance, etc.; even salt water seems to agree with it very well. They have been taken in the Black Sea, where its weight often amounts to from fifteen to twenty pounds. It is also found in the Caspian Sea in great numbers, and is known there by the name of "Sassan."

The carp does not grow in the winter. Warmth alone seems to exercise a favorable influence upon it and to promote growth. It only grows in the months of May, June, July and August, and does not appear to continue doing so in September. It is a most startling fact that the carp, though it does not take any food during its winter sleep in its natural retreat, does not diminish in weight. The abundance of eggs in the carp is very great, and it is this circumstance which will explain its extraordinary increase in the natural waters. A fish weighing from four to five pounds contains, on an average, 400,000 to 500,000 eggs. Some statements figure still higher.

The growth of a carp differs, according as the fish inhabits cold or warm water, a river, lake, or pond, finding plentiful food therein, or being fed. An additional factor is the quality of the soil, whether muddy or stony. In cold water, or such as has a stony ground, the carp will not progress favorably. For this reason, the statements concerning the normal size attained in a certain given time differ widely.

The normal weight which a carp may attain to in three years, whether it be a scale carp, mirror carp, or leather carp, is an average of from 3 to 3½ pounds; and that of one which has lived two summers, consequently is eighteen months old, will weigh 2¾ to 3¼ pounds the year following.

Carp may reach a very advanced age, as specimens are to be found in Austria over 140 years old. The increase in length only continues up to a certain age, but its circumference will increase up to its thirty-fifth year. Some common carp in the southern part of Europe—in the lowlands of Hungary, Servia, Croatia, Wallachia, as also in Moldavia and the Bukowina—which weighed from 30 to 40 pounds and more, measuring nearly 3½ feet in length by 2¾ feet in circumference. Old men, whose credibility and truthfulness could not be doubted, gave detailed accounts of the capture of this species of fish in former years, giants, which weighed from 50 to 60 pounds, and which they had seen themselves. During the Crimean War in 1853 a French engineer officer, stationed at Widden, on the Danube, in Turkey, killed a carp by a bullet shot, some distance below the city; this fish weighed 67 pounds. The structure of this fish indicated to a certainty that its age could be no more than twenty-four years at the most. It is a well-known fact that two large carp, weighing from 42 to 55 pounds, were taken several years ago on one

of the Grand Duke of Oldenburg's domains in northern Germany. They had been kept in some particularly favorable water, productive of plentiful food, and had been used as breeding fishes. These two specimens might, from their size, be calculated to be comparatively very aged fishes; it was proved that they were only fifteen years old. If we may credit the chronicles kept centuries ago by old families, and especially by the monks, who had taken possession of all the best localities along the banks of the beautiful blue Danube, then still greater giants had been caught, and that in the waters of the Danube itself. A chronicle of the Monastery of Molk, in Austria, refers to a carp weighing 78 pounds, which had been captured on Ascension Day in 1520. Another record speaks of a carp which had been taken in the third decennium of the present century in the Lake of Zug, in Switzerland, and which weighed 90 pounds. These giants are certainly only wonderful exceptions, and have become celebrated through the scarcity of such occurrences, but still these facts are encouraging illustrations that it is possible for such large specimens to grow up in favorable waters. All the countries where these large fishes have been found, and which are situated between the Black, the North, and the Baltic seas, are pretty nearly such as have a late spring and a long, cold winter. Near Widden the Danube has been frozen frequently. There the carp passes from five to seven months in its winter sleep, during which it does not grow.

If this fish thrives so well in countries which have such a very cold winter, where the rivers have not enough food for them, how much more would they thrive in the waters of this country, with their great riches of food? But if we take into account the rivers of the mild south and southwest of the United States, what remarkable success may be expected for this fish in those regions?

Our waters, both north and south, which are rich in vegetable and other food, have already shown their generous adaptability for the very rapid increase of this ignoble and coarse-grained fish, which bids fair to be dominant in this country. "It is here to stay," and much to our sorrow, for it means the entire disappearance of all other fishes. Time, the old common arbitrator, whose tooth is ever gnawing out the cold, hard facts, will soon give emphatic evidence of the verity of the above enunciation.

ALEX. STARBUCK.

## Some Legal Aspects of the Case of Rockefeller vs LaMora.

It was reported recently that the Appellate Division of the Supreme Court of New York had finally settled the case of William Rockefeller against Oliver LaMora by refusing to permit the attorneys for the defense to carry the matter to the Court of Appeals on questions of law raised by the attorneys for the defense. The report was untrue, for the Appellate Division has granted the permission necessary to carry this case to the final court.

The fact of the matter is, the attorneys for the defense won in the most recent of the legal skirmishes in the four-year-old case, which has aroused so much interest among sportsmen and woodsmen on both sides of the game preserve posted lines. On the result of this case depends the future of the Adirondack private preserves, and, to some extent, the rights of hunters and fishermen to the game and fish which are found in the Adirondack region. Briefly, the situation is this:

William Rockefeller established a "private preserve" in townships 16 and 17 in the town of Santa Clara, Franklin county, N. Y., which surrounded the village of Brandon. Gradually the preserver secured all but twelve or thirteen lots in this village, these lots being owned by Oliver LaMora, "Black Joe" Peryea and others. The hunting ground of the village was posted and the residents found themselves cut off from what they considered their deer, fish and birds. Fear of the law and of the man of great wealth dismayed them, and for a time they took great pains not to interfere with the preserve, but gradually venturesome spirits sneaked into the forest and caught fish or shot deer. They grew bold with success, and, finally, after LaMora became boldest of all, he was called upon to answer the charge of trespass under the common law. He went to Saranac Lake, and on advice of W. J. Saunders, his attorney, LaMora paid the nominal damages for trespass, committed three times—18 cents and \$1.50 costs.

"You can't afford to fight the case," Saunders said to the woodsman, "and if you pay now it'll be the cheapest way out of the matter."

The money was paid, but before LaMora got out of town he was served with papers charging him with the violation of the so-called Private Park law by catching trout, the trespasses for which he had paid damages amounting to eighteen cents, being cited in this case. It was asked by the attorneys for Mr. Rockefeller that \$55 damages and costs be awarded the owner under the park law on the charge of committing trespass by catching trout out of the Middle Branch of the St. Regis River.

"This is putting a man in jeopardy twice for the same crime—this is punishing a man twice for the same act. This is unconstitutional," said Attorney Saunders. "We'll fight it."

This was four years ago, and Saunders has made good his word of "fighting the case." He won the case before the justice of peace, and Rockefeller appealed to the county court, and a jury turned him down. The Appellate Division of the Supreme Court sent the case back for a new trial; the jury again found for the defense; the Appellate Division sent it back for another trial. The county judge directed the jury to find for the plaintiff, and the case was taken to the Appellate Division by the defense. The Appellate Division justices affirmed the jury's unwilling verdict, and LaMora's attorney found himself face to face with eighteen cents damages and \$790.31 costs, but by no means at the end of his rope.

In its opinion on the case as first handed down, the Appellate Division ignored the people's right to the wild game, fish and birds, laying stress on the fact that Rockefeller had "spent vast sums of money" in making the private preserve. This is not the least interesting feature of the case. In other opinions which were handed down the

expense to which Mr. Rockefeller had been put also figures, but in the last opinion the right of the public to its own game, fish and birds was at last granted. In all the opinions the Justices of the Appellate Division all concurred.

As the Justices of the Appellate Division had all concurred in the last finding of the county court, it was necessary to get the permission of this court to carry the matter before the Court of Appeals on questions of law. If this permission had not been given Saunders' fight would have ended as far as this case was concerned. He must argue the matter before the Appellate Division, so he prepared his brief.

I was at Dickinson Center on the day that the canard reached that place saying the Appellate Division had refused to grant permission to carry the case to the Court of Appeals. It seemed as though four years of legal campaign had been lost and the junior member of the law firm of Saunders & Saunders (Leslie Saunders) was correspondingly blue, but not saying anything until word was received from Attorney Fiero, of Albany, who argued the matter of taking the case to the Court of Appeals before the Appellate Division for LaMora.

Fiero read in a New York paper that LaMora's case had been lost, but to make sure he telephoned over to the clerk of the court and found that the New York paper was wrong. The Appellate Division did not refuse permission to take the case to the Court of Appeals, but granted it in spite of the arguments which Rockefeller's attorneys were able to make.

The points on which the case will be taken to the Court of Appeals are of vivid personal interest to sportsmen, woodsmen and all others who visit the Adirondack and Catskill regions. This case is unquestionably the greatest case involving game preserves ever tried in America, and on its final result hangs the fate of the efforts to establish "parks" in Adirondack wild land after the English "farm and preserve" system. In the Adirondacks the preserves are engaged in lumbering, while in England agriculture, etc., is followed.

The case has reached a point where the old soldier LaMora sinks into comparative insignificance. The real defendant in the matter is the public. Rockefeller is not trying to defend himself from aggressions on his rights, but he is suing a man who followed a public highway to a stream of water to which the public has as much right as to the air they breathe, and caught trout which Rockefeller did not plant, but some of which the State did plant, and the rest of which were propagated naturally, and under circumstances, and in waters which made them unquestionably public property.

The broad, undeniable principle for which Saunders has been fighting is this: Time and again the courts, legislatures and juries have held that wild game, wild fish and wild birds belong to the people. If Rockefeller finally wins this case he, a private individual, will receive from Oliver LaMora exemplary damages because LaMora caught public trout out of public waters reached from a public highway. The suit is not for trespass under the common law; it is for damages under the Private Park law, so-called. And it is held by the defense that this Private Park law is unconstitutional because it takes public property from the people and puts it into the possession of private individuals without the consent of the required two-thirds vote of the Legislature and the vote of the people.

It is a principle, long established in law and custom, and now admitted by the Appellate Division that wild game, wild fish and wild birds belong to the public. The robin, which sings in the maples of a private lawn is owned as much by the laborer digging the drainage ditch as by the man he works for. The trout, flashing in waters of the rifts of a natural stream, is owned by any man, woman or child who takes it. And the wild deer, whether it is upon a preserve thrice posted by a man or association of men, or upon the State's forest lands, is as much the property of the sportsman who belongs to no club, and owns no preserve, as it does to the holder of the titles to the lands. The courts have held this to be so repeatedly, but William Rockefeller's case against Oliver LaMora is a fight to break down this oft-repeated principle.

The case has got far beyond a mere justice's court suit between a land holder and a poacher. It is now a question of how much a man of vast wealth and tremendous influence can take from the public. An association to which Mr. Rockefeller belongs claims thousands of acres of land in DeBar Mountain Park, so-called, which only a few years ago was claimed by the State. It remains to be seen whether Mr. Rockefeller can get the very birds of the air, and the fish of the waters, and the mammals of the land into his possession, as he has gotten the lands.

The points made in the brief, backed by numerous cases which were cited, are as follows:

"First, the court erred in holding that a common law action for trespass is involved in this case. It cannot be said that this action is a common law action for a penalty on the Private Park Statute.

"This is an action to recover a penalty for disturbing and capturing fish, the property of the people, which the people, including the defendant, had a right to capture at the time defendant did take them, and they became his property upon capture and retention." The cases of Hill vs. Bishop, Tremain vs. Richardson, Rosin vs. Lidgerwood Mfg. Co., People vs. Hall, etc., were cited.

"Plaintiff has no right of action under the Private Park Statute. He has no right of action for the value of the fish caught by defendant, as he did not own them. They were the property of the people of this State. Plaintiff had no greater property right in those fish than had the defendant. All rights of property of the plaintiff and of the other people of the State, except the defendant, in and to the fish caught by defendant ceased the moment defendant caught them."

"The exclusive right of fishery depends solely upon the right to stand upon the soil, and the only remedy the owner of the soil has against another for fishing in waters passing over his land is an action for trespass on the land."

Numerous cases are cited in support of these contentions.

Point 2: "The court erred in not granting defendant's motion for a non-suit, since the plaintiff did not have the

exclusive right of fishery in the waters as an entirety in which defendant fished, as contemplated by the Private Park law. The waters in question were not private within the meaning of the statute.

"In order that the plaintiff park any of the waters of the Middle Branch of the St. Regis River he must have the exclusive right of fishery in all the waters of this river. This he did not have."

"The Middle Branch of the St. Regis River neither rose nor emptied nor ended on plaintiff's alleged private park. It ran across it. Plaintiff did not own this stream nor did he own more than a parcel of land about and underneath it."

Point 3: "The court erred in not granting defendant's motion for a non-suit since the plaintiff did not own the fish in the Middle Branch of the St. Regis River, which would be necessary in order to recover the exemplary damages sued for. The defendant had as great a property right in such fish as did the plaintiff. They were the property of the people of this State before their capture by defendant, and the waters containing them could not be made into a private park. Plaintiff neither alleged nor proved actual damages sustained. Therefore exemplary damages cannot be awarded him."

"The fish disturbed and caught by the defendant in the Middle Branch of the St. Regis River during the open season of 1902, mentioned in the complaint, were, prior to their capture, the property of the people of the State."

"The game and fish within the boundaries of the State belong to the people in their unorganized capacity, and may be taken by any citizen, without fee or license, at any time during the open season."

Point 4: "The court erred in its interpretation of the Private Park law. As interpreted by the county court, it is unconstitutional and void and no action can be maintained thereon."

"The Private Park law, as interpreted by the county court, is unconstitutional and void in that a person catching fish in the close season in waters, the Middle Branch of the St. Regis River, e. g., and on the land of plaintiff, in question, may be twice convicted of a crime for the same disturbing and catching of fish. He may be convicted of a crime under said section 203, and also be convicted of a crime under section 69 of the Forest, Fish and Game law. He may also be compelled to pay two penalties, one under each of the above sections, the one to an individual and the other to the State. This would be putting twice in jeopardy for the same offense, in violation of section 6, article I. of the State Constitution. The statute, as construed by said court, would appropriate public property (the people's fish and game) for private purposes in violation of section 20, article III., of the State Constitution, the law not showing the consent of two-thirds of all the members elected to each branch of the Legislature."

Point 5: "The court erred in not granting the defendant's motion for a non-suit since the proof of user of the lands and waters in question as a private park for the purposes of propagating and protecting fish, birds and game, or either fish, birds or game is wholly inadequate within the true intent and meaning of the statute. Plaintiff did not propagate fish."

"The plaintiff has not propagated fish in the waters or game upon the lands. This was necessary in order to form a private park. The public declaration published by him declaring that plaintiff devoted the lands and waters to the propagating and protection of fish, birds and game is false, as to 'fish,' and as to 'birds' and as to 'game.' The nature of the St. Regis River is such that the idea of propagating and protecting fish therein is entirely out of question, as the plaintiff must have control of the beds and banks of the whole stream in order to do this. Either the whole or none can be private and so parked."

"The defendant contends that the statute contemplates propagation of fish where the parking is for a fish park, and that the notices posted and published shall declare that such waters will be used as a private park for the purpose of propagating fish. The statute does not imply that the people's property may be taken by a private person, and natural propagation continue for the sole benefit of such private person, and that such private person be thereby given the benefit of a penalty and the power to declare the taking of public fish, the property of all the public, without his consent, a crime."

Point 6: "The court erred in not granting defendant's motion for a non-suit since flowing waters are public property; fish, whether propagated by natural means or by the State, are public property; it is the duty of the Forest, Fish and Game Commission of this State to propagate and distribute fish and keep up the supply thereof in the public waters of this State; whether such waters were stocked by the State prior or subsequent to April 17, 1896, no action upon the Private Park law can be maintained for fishing in them; many streams, including the Middle Branch of St. Regis River, and waters on plaintiff's lands, had been duly stocked by the State before plaintiff's attempted parking, therefore, this action on the statute cannot be maintained."

"It is provided by section 212 of the Forest, Fish and Game law—being of the Private Park law as amended by chapter 319 of laws of 1896—that no action can be maintained on the statute for fishing in waters duly stocked by the State. The waters in question in which defendant fished had been duly stocked by the State before the plaintiff's attempted parking of them."

Point 8: "The court erred in not granting defendant's motion for a non-suit, since the plaintiff cannot maintain this action in his name."

"An action for unlawfully capturing fish—the people's property—cannot be maintained only in the name of the people of the State. The defendant's right to and property in the fish in question, before capture, was co-equal with plaintiff's right to and property right in said fish. Therefore, neither can nor should be allowed to maintain an action against the other for the disturbing or taking of said fish."

Point 8: "The court erred in holding that the defendant committed a trespass upon plaintiff's lands and in directing a verdict for such trespasses. The defendant traveled and fished in the highways and roads thereon only. These roads or highways are expressly excepted from the plaintiff's alleged private park."

"The evidence shows that the roads used by defendant have been physically defined and apparent on plaintiff's

land and in constant and uninterrupted use by the public for more than thirty years. They were public highways."

Point 9: "The court erred in permitting Fred Knapp to testify, under objection and exception, that he saw defendant on plaintiff's private park. This was inadmissible under the pleadings."

"The plaintiff was not entitled to this class of evidence since he failed to negative in his complaint that the waters included in plaintiff's private park had, prior to the alleged formation of said park, been stocked with fish by the State and at its expense."

Point 10: "The court erred in not striking out the testimony of Eugene Flanders, on motion of defendant, in regard to English deer being let loose on plaintiff's lands."

"This testimony is clearly hearsay and incompetent."

Point 11: "The court erred in not striking out the testimony of Eugene Flanders, on motion of defendant, in regard to the alleged increase of fish and game on plaintiff's lands."

"The testimony of the witness shows that he had no knowledge on the subject."

Point 12: "The court erred in directing the jury that they find a verdict for the plaintiff and against the defendant; and further, that it be for \$25 for each offense. It was for the jury to say how much their verdict would be."

In conclusion the defense stated that the fish in a private park must be private, in the sense that they have been reared in private waters as cattle are reared in pastures. It was claimed that the watchers "hired to protect the fish, game and birds from the public" "are employed and act to accomplish an illegal purpose, such employment being against public policy and in violation of one of the three great primary rights out of which all the rights of all American citizens sprang, viz., the right of property, i. e., the right to acquire property by lawful means" meaning catch fish and kill game.

"Plaintiff has failed to create an artificial stream, pond or lake, or to acquire the same not stocked with the people's property, and to stock them with trout propagated by artificial means, and to build a hatchery for the artificial propagation of fish, and to stock said water with them. He has published a notice in a newspaper for four weeks, and posted cloth notices around his land at a slight expense, all of which is necessary but wholly insufficient for the creation of a private park."

On the points of law raised in this brief, the Appellate Division consented that the defense in the case of Rockefeller vs. LaMora take the matter to the Court of Appeals. This consent having been granted, the next step is the one before the highest court in the State, by which it will be decided whether or no Rockefeller has the right to exact a penalty from people who catch trout from streams on his lands. If Mr. Rockefeller wins, the cause of private parks will receive an aid, without which they cannot exist. And at the same time the people will be deprived of their rights in the fish, game and birds on more than 700,000 acres of Adirondack forest lands. The LaMora case is not an action for mere trespass; it is one to secure a penalty for trout caught, and those trout are public property, according to laws and opinions reaching back to the days of old England.

RAYMOND S. SPEARS.

## The Taming of Fish.

THAT fish may be tamed like animals or birds has recently been shown by a Swiss physician who contributes to a recent number of the Appenzeller Zeitung an interesting and curious narrative reprinted in the Illustrirte Zeitung (Leipzig). He says:

"I have never yet heard nor read that any one has tried to tame fish in water; and I was therefore desiring not a little to test the eventual possibility of doing so, when a very favorable opportunity was offered me. I was taking baths for my health in a private bathing house on the Lake of Lungano. At the north and south sides of the building there live in a heap of stones a family of loaches (*Cavedini*), consisting of about six different spawnings—altogether perhaps 100 or 150 fishes. The loaches (the largest of which might be about as long as a full-grown brook-trout) used often to swim over into the bath house, but would flee when I entered the water. I then sat down (at the time when the warmth of the water permitted doing so) a whole hour, up to my neck in the water, supporting my hands on my knees and holding in each a piece of bread as big as my fist, so that it was thoroughly soaked in the water. A like procedure I repeated in the evening and so on the following days, each forenoon and each evening."

"At first the loaches would have absolutely nothing do with the toothsome morsel placed at their disposal, but anxiously avoided the living statue in the water, which probably was not quite as immovable as the marble ones in the museums. Soon, however, several members of the youngest spawning ventured, with the most extreme caution, to take a nibble at the bread, quickly starting back if my hands moved even a millimeter. Gradually came representatives also of the second youngest generation, and so by degrees from day to day ever older and larger specimens, till finally all alike became tame and whirred and circled round me as soon as I stepped into the water. With true curiosity the whole company would make a dash at the bread that I brought with me. I could move my body and hands as I pleased, could lift both hands with bread and fishes like a shot out of water, and plunge them in again; all this did not disturb them. They would come into my hands, glide through my fingers, and let me stroke them on the head, the back and the sides, the big ones as well as those of medium size and the little ones."

"When one day I had myself photographed with my protégés, it was found that the color of the fishes differed too little from that of the water for a sharp picture to be given. We therefore brought two large white sheets to spread on the bottom of the lake. Our fear that the fishes might be frightened away by the operation proved groundless. They romped so around the white sheets that we had much trouble to lay them down and weight them with stones, without pressing

to death some of the fishes. Four different instantaneous views then succeeded admirably. I am glad to have proved by my experiments that even fish in water are tamable."—Translation made for The Literary Digest.

## Lost a Bit by Half a Fish.

TWO FRIENDS of mine had gone to a small Wisconsin lake for a few days' outing, and the first day out they made an unusually successful catch. They quit at 1 o'clock, and at that time Edwards had landed twenty-four nice ones. On the way back to the camp he twitted Adams, his companion, on his failure to equal that record.

"Tell you what I'll do," Adams finally responded, desperately. "I'll bet you a bottle of wine that you and the guide together don't catch as many as that by the same hour to-morrow."

"Pshaw, that's easy; the bet's on," and so it was agreed.

"The next morning they were out early, Adams taking one boat and Edwards and the guide going in the other. They remained close together, and careful tally was kept on the finny prizes as they were brought to the surface. Finally only half an hour remained, and Edwards had twenty-three fish—one short of the required number.

"Guess I'll drink on you, old man," Adams called out tauntingly, when only five minutes of the time was left and Edwards had failed to get even a nibble.

"I guess you won't; I've got a bite now," was the excited rejoinder, and Edwards began reeling in his line.

"Dum it; he got away," he ejaculated a moment later when the line suddenly slackened.

"Well, it's me that has the bite," exclaimed Adams, and he began pulling on his line. But the fish was off in an instant.

"Hold on; here he is again!" This time it was Edwards who was doing the talking.

"And so the seesaw continued until only a minute of the time remained, when finally they reeled in their lines and found that each had secured the same fish. A bass had swallowed Adams' hook, and in trying to get away had run afoul of Edwards' line and was firmly caught in the gills.

"Each claimed the bass, Adams asserting it was his property because it had swallowed his hook, and Edwards being equally firm in the belief that his gill hold was the one which should count. It finally became necessary to leave the question to arbitration, and the referee ruled that the prize should be divided.

"This was how it happened that Edwards lost the wager by half a fish."—Milwaukee Sentinel.

## Old Man Bassford's Reel.

I RARELY go down the street but some one buttonholes me to hastily recite some fishing or hunting experience. I ran into old man Bassford the other day near his office and nothing would do but I must step in and hear of a curious experience.

"Over a year ago," said he, "I in some way jammed and sprung askew the handle of one of my reels. I laid it aside thinking to have it fixed some day. Last night I woke up dreaming about that reel and found that I could not get the thought out of my head. I could see the crooked and skewed handle and it annoyed me and made me so restless that it looked as if I would kick and thrash around until daylight."

"The reel was in a tin box in my dressing room, where I keep my truck, and the notion seizing me I jumped out of bed, went into the dressing room and lighted the gas. I found screwdriver, hammer and file, improvised an anvil out of an ax head, took the reel from the box and began operations. It was 1 o'clock in the morning. Well, I of course made noise, and I guess awoke everybody in the house."

"I know I kept up a fusillade of replies to the queries hurled at me through the closed bedroom door. One of my boys wanted to go for the doctor. I told him to go, but he went back to bed. Another one wanted to know if I was not going crazy, and so it went. But I kept on filing and hammering. I found a washer and in time by pounding and filing I got that into shape and fitted it in place. And when the job was done and the handle on and the reel looking ship-shape and proper, once more I looked at the hands of the clock pointing to 3, drew a long breath, put out the light and crawled back into bed. There were no more crooked reel handles to annoy me and I slept through uninterruptedly until 7 o'clock."

"At the breakfast table I told the grown-up boys and girls that a loss of a little sleep cut no figure with them, that when they were young they had kept me awake many a night at 2, 3 and 4 in the morning and turn about being fair play I thought if I could get four hours sleep at the expense of an hour or so of wakefulness I was entitled to it. One thing is certain, if I had not straightened out that crooked reel-handle I would have enjoyed a condition of insomnia for the rest of the night. The mending of that reel handle certainly did the business."

CHARLES CRISTADORO.

## Here is Something New.

NEW YORK, Oct. 7.—Editor *Forest and Stream*: A friend told me this one as an actual happening: He was trolling this summer for big-mouth bass in a northern lake. He had a strike and played it for a bass, for it went up in the air. Then it sounded, and he found then his hook was caught on something. The boat was backed to the spot and the obstacle slowly lifted to the surface. It proved to be a waterlogged branch, and his hook was fast in it, and entirely separate and apart from the fish. But with the branch, and hanging on to it by his teeth, came the bass, so deeply engrossed, that the net was put under him, and the branch lifted from the water and shaken before he let go his hold and dropped back into the net.

My informant has heretofore borne an enviable reputation for veracity, and I know that the only bait he uses is what he puts on his hook. Moreover, I heard him tell the story twice, and the second time he neither doubled the size of the fish nor stated that it swore at him as it came up with the branch. And yet it would seem that it must have been powerful mad to try to get even with the hook by gnawing wood in that way. E. G. B.

# YACHTING

## A Little Cruise in a Little Boat.

BY N. N. WEST.

NEXT to sailing a boat in summer the writer's greatest pleasure is not to own one in winter. Along in the latter part of February, when winter seems to be too long, there comes to right-minded people a longing to be once more holding the tiller and hauling the sheet, and while at this time of year in our latitude this is not possible to those who follow the sea in small yachts, the longing is much gratified by taking trips along the shore and frequenting the boat builders' shops. And if, perchance, one is looking for a boat to buy there is an added charm to the trips. Hence the writer's liking to be without a boat at this time of year. Under these conditions he starts as far eastward as practical and gradually works west, so that before the season opens every boat on the market near the home port has been seen.

From the foregoing it will be seen that his friends have grounds to think he is never satisfied with what he has acquired and is of a changeable disposition. Once, while at a married friend's house, the host remarked it would not be advisable for the writer to marry. "For," said he, "when you buy a boat you look her all over and even then you afterward find out she is not just the shape you want, so think what a poor chance you would have in getting a girl to suit. You'll be wanting to sell this boat soon and get one of the modern overhanging sterns. You'd be just as changeable about a girl. You'll be getting a new boat soon, saying her stern don't quite suit me." His wife, who was reading, looked up and said: "What, the girl's?" And the host brought out the Scotch.

There seemed to be a scarcity of desirable second-hand boats during the winter and spring of 1901, and when May came the writer had found nothing he liked. On his last trip, which landed him at the jumping off place between Brooklyn and Coney Island, he found a boat builder who had a big two-story sort of a houseboat for a shop. Poking around upstairs he found the prettiest little craft he had ever seen. She was a canoe yawl, built of mahogany and polished like a piano. Her sails were brand new and white as a bride's lingerie. It was a case of love at first sight. She was a little small for cruising on the Sound, but many a man has fallen in love with a girl for her beauty rather than for her qualities as a help mate; and while the writer realizes that the happiness of such marriages seldom lasts, and though he found she had a record and was mighty fast, she was so pretty that he felt he could not do without her. She had been twice divorced, or had had two owners, but the writer is inclined to think it had been the man's fault, for she has proved herself to be to him most faithful, and after three seasons he is more than ever in love with her. During one of the autumn gales in 1902 she was the only boat in the harbor that did not go ashore, and she rode out the great storm in September, 1903, when so many boats were wrecked that could have carried her on davits. We have sailed together in December and few things have ever impressed the writer so much as coming into the harbor those winter evenings with the nearby shores dark and purple and the red afterglow in the west.

She is called Wanderer, a name that suits her, for what we like best is to slip off by ourselves and roam alone, to glide quietly into harbor at dusk and drift out silently with the light early air, to disappear in the morning mists.

She was built by Turk, on the Thames, England, is all mahogany, except timbers of oak, copper fastened, bronze fittings—including little shackles, some of them not an inch long, that are a delight. The cockpit floor is gratings of mahogany and pine, and there is a lancewood strip set in the cockpit rail. She has the reputation in the home port of having come across the ocean under her own sail, a delusion the writer is sorry to here dispel.

A more specific description of her would give her length as 18ft., plumb-stemmed, breadth 4ft. 6in., and draft, with board up, about 1ft. She carries a 150-pound centerboard and 300 pounds cast lead inside ballast. She is rigged cat-yawl and the gaffs hoist parallel to the masts. She is all decked over except for a cockpit 4ft. 6in. on deck, extending under decks to bulkheads 6ft. 4in. apart, which gives plenty of length to sleep on the floor. There are large lockers forward on each side of the centerboard trunk, extending to the stem, reached by hatches through the deck and small doors in the cockpit bulkhead. There is another locker aft with water-tight hatch. There is a tent that goes over the main boom, making a snug little cabin with 4ft. head room. There are flexible oak battens about 14in. long, spaced 12in. apart, sewed across the tent at right angles to the boom. When the tent is set up these form a crown at the center and give much more room than an ordinary "A" tent of the same size.

Her cruising outfit consists of one light folding anchor, one 25-pound anchor, cables for each, pair of folding spoon oars with row-locks, riding light and cabin lamp, one quart can of kerosene, one pint can of alcohol, coffee pot, frying pan, small tin pail, large pail, knives, forks and spoons, two cups, wooden plates, one gallon and one half gallon water bottles, wicker covered; two small cans with screw tops for coffee and sugar, dish towels and mop, compass, fog horn, charts, cushions (one of cork for a life preserver), ice-box and alcohol lamp. There is a mahogany box in which are stowed all the cooking utensils and the supplies not needed to be kept on ice. The lid of the box when opened serves as a table. All these things are kept in charge of the boat builder at the home port, who looks after Wanderer, and by notifying him a short time in advance he has them all on board, so that the writer has only to get the provisions and wearing apparel.

It might seem that there was not room enough in so small a boat for such a large outfit in addition to a suitcase of personal effects, but the two forward compartments have great stowage capacity. In the port one are kept the anchors, cables, spare rope and stuff that would not be injured by hard knocks. The starboard locker contains the cushions, tent when stowed, suit-case and water bottles. The provision box is on the forward end of the cockpit on the port side, and to keep the trim while sailing the ice-box is at the after end on the starboard side. The large pail is stowed in the aft compartment and holds the riding light, oil and alcohol cans and keeps them from slopping over the boat.

The writer has tried all kinds of oil stoves, including the ordinary type and the blue-flame varieties, and various patent fuels besides, but for a small boat prefers an alcohol lamp. It gives an exceedingly hot flame and does not blacken everything put over it to heat. This keeps the cooking utensils free from soot and does away with the dirtiest and most objectionable part of the dishwashing. It combines the good qualities of simplicity and heating power of the ordinary and blue-flame kerosene stoves, and has none of their objections, and by using wood alcohol the cost of the fuel is very small. There is a French lamp on the market which is excellent, but what the writer has found most satisfactory is to get two of the little lamps, or stoves, that may be bought at any drug store or hardware store and fasten the lamps about 8in. apart on a piece of wood 12in. long, 5in. wide and 3/4-in. thick. This gives a good two-burner stove with greater stability than the separate ones would have, but, of course, does not stow quite so compactly. When only a couple of things are to be cooked each meal one lamp is sufficient, and, of course, the number may be increased if desired.

It is the regret of the writer that during the season of 1903 business prevented him from being far from the office, and consequently the following cruise was limited to nearby waters so well known as to make the trip perhaps too commonplace to be interesting, and it is written more to show the pleasure that may be had from just being afloat and the possibilities of cruising comfortably in the smallest kind of a sailing craft rather than for unusual events that happen on unknown waters; and if this should be the means of even one person's finding half the pleasure the writer has experienced it has not been written in vain.

On Saturday, Sept. 12, 1903, with the season fast drawing to a close, the writer swore that even if business should go on the rocks and be wrecked he would have a cruise even if he had to take along a wireless telegraphic outfit to keep in touch with the office; and with this praiseworthy oath and a suit-case containing a change of clothes, bathing suit, toilet articles and a supply of tobacco and cigars he boarded the 10 A. M. train at the Grand Central Station, New York, for Mamaroneck, where Wanderer was lying.

On reaching there he took a carriage and started after supplies. As the comfort of cruising depends to a considerable extent on the success of the galley, a list of the provisions is given, which is typical of those he provides for a three days' trip: Six eggs, small package Quaker oats, two small loaves of bread, one-half pound butter, four chops, small piece of bacon, six potatoes, one can soup, one jar preserved peaches, two one pint jars of milk, one pound plain cake, three muskmelons, twenty pounds ice, one pound ground coffee, small quantities of sugar, pepper and salt. This provides for three breakfasts of fruit, oatmeal, eggs and coffee; two dinners of soup, chops with bacon, potatoes and cake. Fish is counted on being caught for one dinner, or if this fails, as with the monks in the song, one meal is had at one of the many club houses along the Sound. For lunch, if eaten when laid to or under way, no attempt is made at cooking and consists of bread and milk, preserved peaches and cake; or if at anchor some of the soup left over from the previous dinner is reheated. It should never be left in the tin after the can is opened but should be kept in china or glass, and for this purpose the writer takes along a small preserve jar. In addition to the above supplies there is taken a pint of whisky and a small jar of extract of beef. The whisky with water adds a cheer and completeness to the dinner and reduces the danger of sickness from drinking the different waters obtained with each new supply. And on cool days a whisky toddy before lunch is most comfortable. On one cruise the writer was taken seriously ill and has never ceased to be thankful for having some of the beef extract, and now never attempts a cruise without it. His sickness was caused by taking a friend along to whom whisky was so abhorrent that it was left behind, and the continual change of drinking water caused most serious results. Supplies, such as kerosene, alcohol, etc., are generally kept with the cruising outfit in charge of the boat builder.

For those cruising in small craft it will generally be found most satisfactory to take at least one meal a day on shore, but the writer likes to provide enough so as to feel when he gets aboard that he is independent of the land for some days to come, and enjoys cooking his own meals, which is a labor to so many, and it is surprising to see how easy it becomes with a little practice.

The boat builder's dock was reached at 12 o'clock and Wanderer was lying alongside with the cruising outfit aboard. The sun shone brightly on her varnished decks and sides, and she gave a glad nod of welcome as her master appeared, and as he stood looking down on her she never seemed prettier or more inviting. He was proud and pleased with her and was glad that there were others to admire her. There was a small party of men and girls who had been taking advantage of the high tide to swim off the dock, and were lounging round before going home to lunch.

There was with the party a little boy about five years old, dressed in a kilt and socks. He was a bright little chap, and the girl found him good company.

"Raise your kilt," she said to him, "and let me see your cunning little limbs."

The child obediently did so, and then, still holding up his kilt and looking full at her said: "Now let's see yours."

This was too good to go unheard and has since found its way in various forms into the newspapers, but it so amused the writer that he cannot help mentioning it here.

The reader will not be surprised under the circumstances that it took more than the usual time to get the provisions stowed, and it was 1:30 before Wanderer was under way.

Hempstead Harbor was chosen for the first port. The wind was blowing S.S.W. and the course is S.S.E., magnetic, as are all the courses given. Made two tacks till off Larchmont and then, headed for Hempstead, close hauled on the starboard tack. Had a light lunch while beating down to Larchmont. When perhaps a mile off the New York shore sighted the yawl Pawtuxent coming out from Echo Bay, also bound for Hempstead. Pawtuxent is a semi-centerboard boat about 20ft. on the water and has considerable speed for a cruising boat. But Wanderer, feeling the excitement of race, laid down to her work nobly and rounded up to anchor off the Sea Cliff Y. C. just ahead of the larger and much more powerful yawl. The owner of Pawtuxent is a friend of the writer's and an invitation was received to dine at the club house, but did not want to give up the pleasure of having the first dinner out on board. Afterward went on board the larger boat and had a game of cards in her roomy cabin.

It was a beautiful evening, the wind had gone down, and it was warm for that time of year. After the cards the party came up on deck and sat for some time enjoying the night, loath to turn in or leave it, realizing that there would not be many more such evenings this season. Nor could there have been a finer place to enjoy it, as Hempstead Harbor, with its hills coming down close to the shore, is one of the attractive places along the Sound.

Wanderer has no tender, as she may be rowed herself, but when the tent is set it is not possible, and to avoid taking it down her captain came over and went back in Pawtuxent's dinghy.

Sunday morning was misty with a very light breeze from the S., and was mild and pleasant. Had a swim, then breakfast, and about 10 o'clock, after washing the few dishes and putting things to rights, sailed slowly out of the harbor in company with Pawtuxent bound for Manhasset Harbor. In the light breeze and smooth sea Wanderer was more than a match for Pawtuxent.

The tide was running flood, so that when out of the harbor the two boats made fair progress in spite of the little wind. The course laid was N.W. by N. till off Prospect Point, giving the yawl's best point of sailing with the wind on the quarter. There was a bit of a chop caused by the tide running round the point, and Pawtuxent took the lead. The yachts were then close hauled on the port tack and off Hart Island went about to starboard. The wind freshened somewhat along about 12 o'clock, so that good speed was made coming into the harbor. Could not quite clear Plum Point, so had to take a short hitch and then had a beam wind till anchors were dropped off the Manhasset Bay Y. C. house. We had thought we might go ashore there for lunch, but the place presented so neat and attractive an appearance with well dressed men and women on the piazza that we decided we were too tough a looking crowd to land there.

The writer had been praising his aluminum frying pan and alcohol lamp the evening before, and the benefits of a whisky toddy, and as this was a good chance to show them to an appreciative crowd he went aboard the larger boat and made toddy and cooked chops and bacon for all hands. It was voted that the cooking outfit was only excelled by the chops and that the chops were only excelled by the toddy.

After lunch lounged around and smoked, washed dishes and got under way. The wind had freshened considerably and was blowing a whole sail breeze.

Parted company with Pawtuxent, which was bound for New Rochelle, while Wanderer was headed west for East Chester Bay. With the wind abeam there was a little too much for full sail, but instead of going to the trouble of reefing the mizzen was eased broad off to starboard, just so it would not flap, practically making only the mainsail effective. While this is, of course, a most un-seamanlike dodge, it is such a handy way to shorten sail that the writer often does it under the given conditions.

Anchored near the highway bridge across the upper end of the harbor about 4:30. The reaction from office work and the day on the water in sun and wind had a lazy effect, so put up the tent, got out the cushions and took life easy reading and smoking. While the harbor itself is not specially attractive it commands a fine view across the Sound and the writer never tires of watching the passing boats in the distance.

A returning fisherman supplied a fish for dinner, and in addition had soup, potatoes, cake and whisky and water. Turned in early after washing dishes and making snug for the night.

Next morning, after a swim and a breakfast of muskmelon, oatmeal, eggs and coffee, went ashore and renewed the ice and water supply. Called up the office on the telephone at a road house and found everything satisfactory, so went aboard and set sail about 10, having first bought some clams for bait from a man who keeps boats to let near the bridge.

Sailed up to Larchmont, eating a light lunch while under way, and anchored on the Hen and Chickens reef to fish. Caught a few rockfish and a good black one. These were cleaned and put on ice.

Made Rye Neck late in the afternoon and anchored just off the American Y. C. The club has a very attractive house on the end of the point, but is handicapped by a shallow harbor. During the evening there was a constant hum of automobiles and their lights flashing through the trees made a picturesque scene.

After dinner read the "Cruise of the Cachalot," a mighty good story. The writer always likes to have a few sea tales aboard when cruising, as they never appeal to one so much as when read on one's own boat.

Tuesday morning, after the usual swim and breakfast, took a short sail out of the harbor and then landed on Hen Island. Made a fire, and when there was a good bed of coals wrapped the fish caught the day before in damp newspapers, having previously seasoned them, and then covered them with the hot ashes. The writer has yet to find a person who, having eaten a fish properly cooked this way, does not consider that eating is, after all, one of the chief pleasures of life.

After lunch and its supplement, tobacco, went up to Mamaroneck and telephoned the office. Regretted to find it was necessary to be there the next day, so left Wanderer at her moorings and went back to the city. This was a most fortunate thing for the writer, as on the next day, Wednesday, Sept. 16, occurred the great storm, and had he been caught out in it this cruise would probably never have been written.

The storm continued very heavy on Thursday, clearing Friday, and that afternoon the writer went back to Mamaroneck to see if there was any Wanderer left. The harbor gave evidence of the violence of the storm, and a number of boats had been damaged or gone ashore, but Wanderer was at her mooring as bright as ever.

After getting a new supply of provisions it was too late to make another harbor, so stayed there for the night.

Saturday morning was a most perfect day, warm and bright, but with only a light breeze. What there was of it was from the E., and as Greenwich was the destination, it was a beat at the start. It kept shifting to the S., however, so that by afternoon the desired course N. E. could be laid.

There was one of the Larchmont Y. C.'s races that afternoon, the turning stake boat being anchored in the middle of the Sound off Manursing Island. She was a big, high-sided, open boat, sharp at both ends and looked as if she could ride out any storm. She presented a queer and lonely look out there so far from land with apparently no one on board, but on coming closer noticed there was a man on board who was taking things easy lying down.

Was off Port Chester about 4 o'clock and had the good fortune to see the finish of one of the most interesting steam yacht races held on the Sound this season. Regretted being a little too far off to get a good picture of the Norman, as she crossed the line a winner amid the tooting of the whistles of the yachts gathered round the finish.

Anchored in Greenwich Harbor about 6 o'clock. Went ashore that evening to see a friend who is most highly esteemed as being the introducer to the writer of the whisky toddy.

Sunday was another bright day with half a gale from E.N.E. and heavy sea. It was too rough outside for a small boat so kept inside the protection of Greenwich Point. The yawl Peggy passed at some distance headed for Oyster Bay and could be seen taking green water up to her main mast.

Sailed past the wreck of the little steamboat Spring, which had gone on the rocks a short distance from E. C. Benedict's house during the previous Wednesday storm. The harbor men were doing a fine business rowing people out to see her, as a wreck is an unusual thing at the western end of the Sound.

Went up to Riverside and anchored in the lee of a rocky point for lunch. The introducer of the whisky toddy and his wife came along in their Chesapeake Bay canoe and we had lunch together. There was an autumn chill in the air and it felt good to get out of the wind, and the warm sun made things very comfortable.

The wind began to moderate so decided to try for Mamaroneck, taking leave of the Chesapeake Bay canoe. Kept near shore, passing inside of the Captain Islands, and was well protected from the sea till off Manursing Island. From there to Rye Point was exposed water, but the wind kept going down though the seas were still running pretty high. Wanderer climbed over them in great shape and this was one of the most enjoyable parts of the trip. On coming into the harbor it was almost calm, a marked contrast to the heavy wind earlier in the day and symbolic of the long rest and peace to come after the day's work. Wanderer crept up to her moorings in the evening dusk and the cruise was ended.

## British Letter.

FIFTY-TWO-FOOTERS AND 20 RATERS.—A rather warm discussion has been going on in the London Yachtsman concerning the respective merits of the present day 52ft. raters and the 20-raters of ten years back. The controversy was started by a well-meant and perfectly correct remark made in the report of the Royal Dorset Y. C. regatta at Weymouth to the effect that in the development of the 52ft. class yacht racing had fallen on better times. Exception was taken to this statement by Mr. G. H. Ward Humphreys, the owner of the old Herreshoff 20-rater Niagara, now called Japonica, who most ingeniously pointed out that his boat had sailed the same course as the 52-footers—a distance of 26 miles—and only taken 5min. longer than the winning 52-footer. Mr. Ward Humphreys, therefore, said on the strength of this one race that there had been no improvement in speed. He proceeded to lay down that the 52-footers are much more expensive than the 20-raters, much larger, and that they are so tender as not to be able to stand up to their canvas unless provided with hollow spars. To sum up, he comes to the conclusion that the present rule has not produced a superior type of boat to that of a decade back, but an inferior one in almost every respect. Mr. Ward Humphreys, although a clever adapter of arguments, is not a practical yachtsman, and his statements have all been well met and refuted by a correspondent who sees clearly the fallacious ground on which they have been built. No practical yachtsman would dream of comparing the relative speeds of two yachts on the strength of one performance in which the boats were in different classes, starting at different times. Then, again, the day was one peculiarly suited to Niagara—a fresh wind and smooth water over most of the course—just the sort of thing to suit a plate and bulb boat. In moderate or light winds, which is the general rule in racing, the new boats would simply lose the old one. As regards expense, that is another absolute fallacy. It is true, that the modern boat costs £2,500, as compared with £2,000, but she is half as large again. The Thames tonnage of the 52-footers is about 45, that of Niagara only 30, so that the modern boat for her size is considerably cheaper.

The difference in accommodation is still more strongly marked. Niagara has about 4ft. 6in. head room while the modern boats have all close on 6ft., and Sonya has a trifle more. Niagara may suit Mr. Ward Humphreys, but she would not suit many people for cruising purposes, and she is a bad type of boat for present requirements. The present Y. R. A. rule has certainly brought out a far better boat and one which, if substantially built, will sell for a cruiser when her racing days are over. In the days when Niagara, Audrey and Inyoni were racing together it was impossible to live on board of such shallow-bodied craft. All four of the modern 52-footers are habitable; in fact, as I stated in a previous letter, the owners of three of them lived on board all the summer. What the present rule has done is to produce a larger boat, but, so far, no complaints have been received on that score, probably because there is so much more value for the money in them.

Has the present rating rule been made the most of? There appears to have been too much similarity between most of the yachts which have been built under the existing rule. There is a widespread belief that the rule encourages body at the expense of draft, and that the boats suffer from want of stability; yet, Magdalen, the first and probably the best boat built under it, was beautifully stiff, and so is Sonya. There seems no doubt that great improvement can be effected by more judicious use of the different factors. Sonya is the nearest approach to the type of boat the rule was intended to produce, and it is notorious that now and again she developed surprising speed and outsailed the other three on all points. If she could do that the speed must be there—she certainly had plenty of stability—and it would appear as though her failure was chiefly due to want of trim. Britomart was a bit of a freak and the rule condemned her. It has still two years to run and it is to be hoped that designers will do their best to get the utmost they can out of it, for it is quite on the cards that it may be renewed.

E. H. KELLY.

NORTH STAR ARRIVES.—North Star, the steam yacht owned by Rear Commodore Cornelius Vanderbilt, New York Y. C., arrived at Newport from England on Saturday, Oct. 14. Mr. Vanderbilt crossed in the vessel and his guests were Secretary George A. Cormack, New York Y. C., and Messrs. Keck and Crane. Bad weather was encountered on the voyage.

## Betty.

### A Shallow Draft Cruising Schooner.

NOWADAYS there is a very considerable demand for both power and sail yachts, suitable for use in southern waters. The enthusiastic American yachtsman, who wishes to spend the better part of the year on the water, now sends his yacht South after the season in the North is over and uses her there during the winter.

British yachtsmen have long been able to keep their yessels afloat all the year and use them almost without interruption by sending them to the Mediterranean. Americans have been slower in taking advantage of the possibilities of southern cruising which their own coast affords, but of late there has been a marked change in this regard, and every year we find more men spending their winters in Florida and West Indian waters.

Many of the yachts, however, that are perfectly adapted for use in the North are wholly impractical for southern cruising, owing to their great draft. The deep-draft British vessel is just as suitable for use in the Mediterranean as she is in home waters. Not so with the American yacht, except in rare instances, and for this reason it is necessary to have a boat designed and built for the particular requirements met with in the South. A number of gentlemen have had yachts and houseboats built for use in the South and keep them there the year around. Each fall they are put in commission and prepared for the coming of the owner.

The season in the South has not up to this time been a long one, mainly because the stay of the fashionable people was limited, but this condition is gradually undergoing a change, as a more substantial class of sportsmen are finding their way there, and these men are looking for recreation and sport and not social conventionalities. Each year will find the sportsman making longer stays, and it will extend over a period of months rather than weeks.

The shallow-draft, flush-deck, cruising schooner Betty, the plans of which boat we publish this week, was designed by Messrs. Tams, Lemoine & Crane for Mr. C. L. F. Robinson, New York Y. C. Betty was designed for use in Florida waters, and the designers have rounded up what would seem very unwieldy dimensions in the way of breadth and draft into a very able and well turned little ship.

The ends are not long, but are well balanced, and the clipper stem is a pleasant relief from the spoon bows now found on all modern racing and cruising yachts of this size.

The pole masts suggest a snug, easily handled rig, and the row of port holes on either side are placed well up from the waterline, which insures better ventilation in the cabins below. The deck being flush, gives ample room for handling the vessel when under way, and affords a deal of room for deck chairs, etc., when at anchor. The cockpit is very roomy and unusually deep.

Betty being for use in the torrid climate, the question of ventilation below was of prime importance, and the designers have been most successful in this regard. There is 6ft. 6in. headroom under beams fore and aft.

A deck house 5ft. wide and 11ft. long extends from the forward end of the cockpit to a point about over the center of the saloon. This house does not weaken the vessel's construction any, as the deck beams are not cut, except in the toilet and steerage. In the sides and ends are oblong windows which can be opened, and they ventilate the toilet and saloon perfectly.

The companionway is on the starboard side, and it leads to a steerage 4ft. 2in. by 4ft. 4in. The steerage will be used as a chart room and a storage place for guns, rods, etc. The toilet room, which is on the port side, is reached from the steerage. This room is 3ft. 9in. by 4ft. 4in. Beside the patent closet, there is a linen locker and a medicine cabinet.

Forward of steerage is the saloon, 10ft. 2in. long, which extends the width of the vessel. There is 10ft. 6in. floor room between the buffets. On either side are wide transoms, the one on the port side returning around on the after bulkhead. In the corner thus made is placed a swing table. Back of the transoms are shelves, and at the forward end of the cabin on either side are buffets 2ft. 9in. wide. On the top of these buffets are shelves 2ft. wide, and back of these are lockers for the cabin china and glass. Underneath are draws and lockers for silver, wines, linen, etc. Two port holes are placed on each side opposite one another. These give cross ventilation.

From the forward saloon bulkhead the centerboard trunk extends for a distance of 15ft., dividing the boat in halves.

# GAS ENGINES AND LAUNCHES.

Their Principles, Types, and Management. A Complete and Practical Manual.

BY F. K. GRAIN, M. E.

Bound in cloth, with 123 pages and 20 illustrations. Sent, postpaid, for \$1.25.

**T**HIS compact and comprehensive handbook contains all the information essential to users of the marine gasoline engines, and will be welcomed by the thousands of men now owning and running power boats. Laymen and experts will alike find the book invaluable. It treats of the various types of marine gasoline engines, points out the good in each, and tells how to run them. A knowledge of the contents of this book will help to overcome difficulties and avoid accidents. The most complete book of its kind ever published.

FOREST AND STREAM PUBLISHING CO., NEW YORK.

On the starboard side is the owner's room, 10ft. long, with a berth 3ft. wide. Forward of the berth is a clothes press, 3ft. 6in. long. On the other side of the cabin is a set wash basin, bureau and seat. Overhead is a skylight 3ft. square, and there is a port hole in the side over the berth.

Forward of the owner's room is another cabin 8ft. long. This room is fitted up quite the same as the owner's room, except that the fixtures are on a slightly smaller scale. This cabin also has a 3ft. skylight and a port hole in the side.

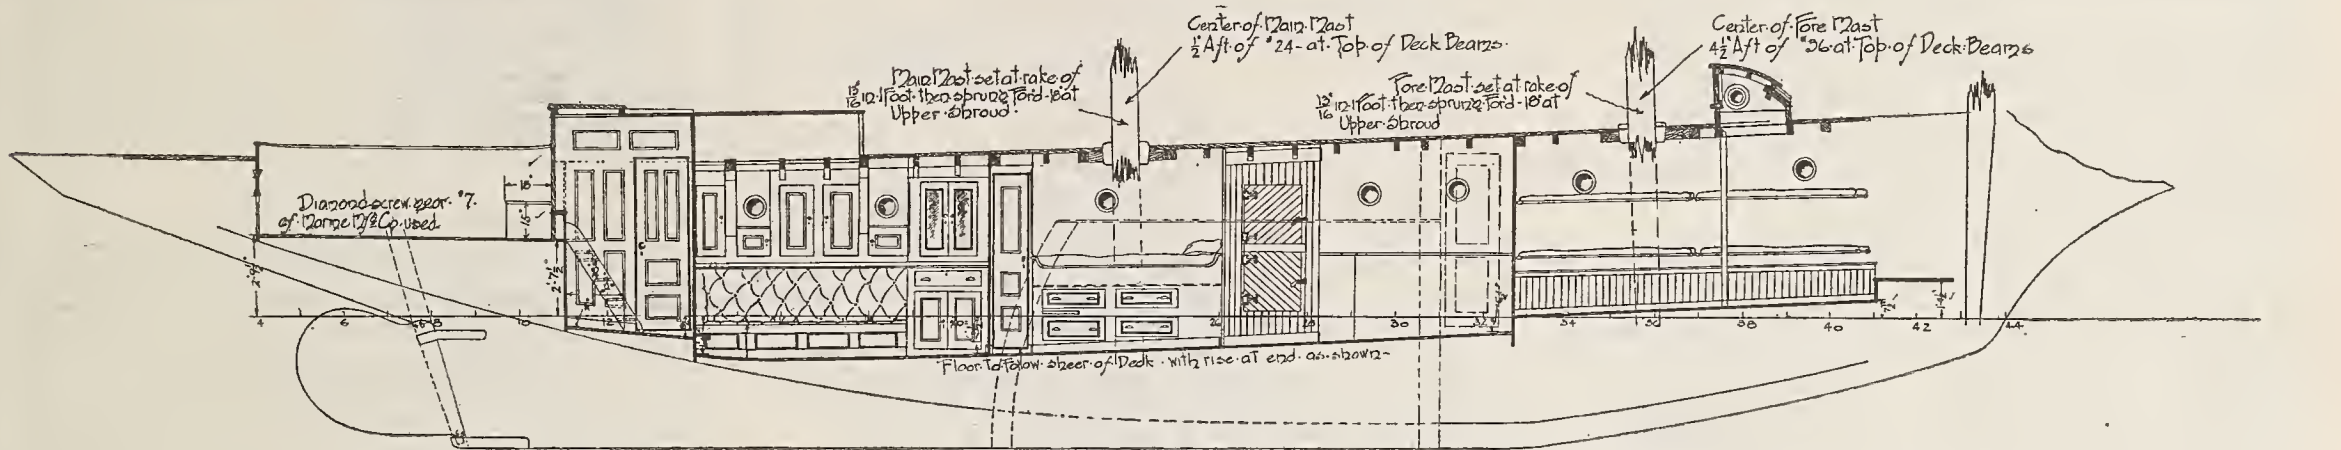

On the port side of the centerboard trunk there is a passage which extends from the saloon to the galley. On the port side of the passage is a stateroom 8ft. long. In addition to a wide berth, there is a bureau, wardrobe and wash basin. There is a port hole over the berth, and a skylight is placed over the partition dividing the cabin and passage in a way that lights and ventilates both.

The galley is 6ft. 6in. long and is fitted up with dressers, folding table, lockers, sink and range. At the after end of the galley there is an ice-box 3ft. 3in. deep. A hatch over it enables the ice-box to be filled from the deck. The cook has a good roomy galley, which is well aired, there being, beside the skylight, two port holes in the side.

The forecabin is fitted with six pipe berths, and under these are transoms 21in. wide. A place is partitioned off for the captain, which amounts to a stateroom. As Mr. Robinson is in command of his own vessel, no captain will be carried, but the space set aside for the captain will be occupied by a mate. In the mate's room there is a bureau and a wash basin, and it is separated from the forecabin by a curtain. A port hole gives light and air. The forecabin has three port holes, one to starboard and two to port. There is a patent closet and a wash basin for the crew, and under the transoms there is storage space for their dunnage. Just for-

BETTY—SAIL PLAN—DESIGNED BY TAMS, LEMOINE & CRANE FOR C. L. F. ROBINSON, 1905.

BETTY—INBOARD PROFILE AND CABIN PLAN—DESIGNED BY TAMS, LEMOINE & CRANE FOR C. L. F. ROBINSON, 1905.

ward of the foremast is the fore hatch and an iron ladder leads to the forecabin below.

The crew will consist of a mate, steward, cook and three hands.

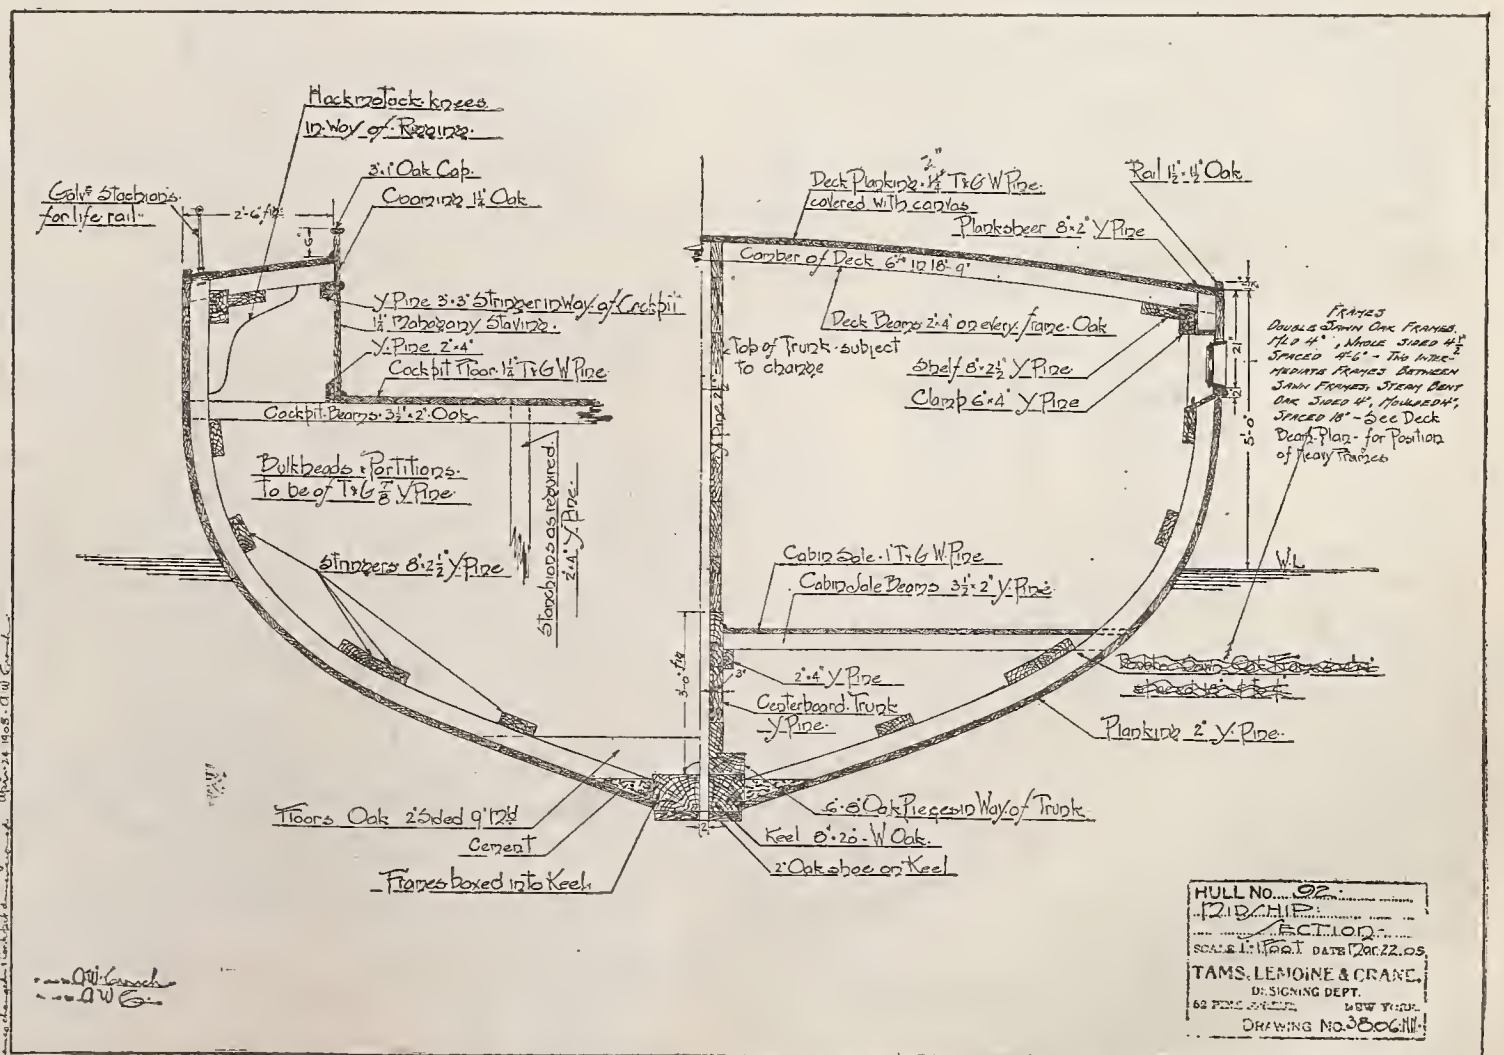

On all his cruises Mr. Robinson will be accompanied by a large and powerful launch, which is capable of towing Betty in case of an accident or calm weather. The launch will also be used as an express boat, going to and from the yacht to the nearest port, securing ice, provisions, mail, etc.

Betty was built in a most thorough and substantial manner this spring and summer by A. C. Brown, of Tottenville, S. I. The midship section shows the construction of the vessel clearly.

The dimensions are as follows:

Length—	
Over all	79ft.
L.W.L.	55ft. 3in.
Overhang—	
Forward	10ft. 3in.
Aft	13ft. 6in.
Breadth—	
Extreme	19ft. 2in.
L.W.L.	17ft. 8in.
Draft—	
Extreme	4ft. 6in.
Board down	11ft.
Freeboard—	
Forward	7ft. 6in.
Least	5ft.
Aft	5ft. 4in.
Foreside of foremast aft of l.w.l.	11ft. 9in.
Foreside of mainmast aft of l.w.l.	29ft. 6in.

STEAM YACHT ARROW SOLD.—Mr. Charles R. Flint has sold his high speed steam yacht, Arrow, to Mr. Edward F. Whitney through the agency of Messrs. Tams, Lemoine & Crane.

BETTY—MIDSHIP SECTION—Designed by Tams, Lemoine & Crane for C. L. F. Robinson, 1905.

## Boston Letter.

**RATING CLASS FOR CAPE COD.**—Members of the Wianno Y. C. are promoting a class of small racers, which will be built to by the summer residents of Wianno, Osterville and nearby Cape Cod places. It is not intended to have the boats from one set of plans, three Boston designers having been consulted in regard to the lines. It is believed now that the boats will be built to rate in Class R, under 18ft. This would give a boat of about 21ft. waterline, with good accommodations for both afternoon sailing and for cruising. If this class is built there will be an opportunity of settling a much mooted question of whether or not the uniform rule will apply consistently to boats of 18ft. rating or less.

**ONE-DESIGN CLASS FOR QUINCY BAY.**—Meetings of the Quincy and Wollaston yacht clubs were held Saturday night to consider plans of a one-design class of 15-footers to be built for the two clubs from lines of Messrs. Small Bros. The design submitted is that which has been accepted by the new Hingham Y. C., which will race the boats next season. It has been practically decided that twelve boats will be built by the two Quincy clubs, and in this case there will be the prospect of some hot inter-club racing in Quincy Bay and Hingham Bay next season. The boats will appeal to those who desire plenty of racing in boats whose cost is not prohibitive. These boats will have knockabout rigs, of small area, and will be in type something between the sailing dory and the conventional knockabout, the cost to build being about \$175 each. They are 22ft. over all, 15ft. waterline, 6ft. 6in. breadth and 1ft. 3in. draft.

**NEW LAUNCH BY SMALL BROS.**—Messrs. Small Bros. are designing a new launch for Mr. Richard Hutchinson, owner of Highball, one of the competitors in the long distance power boat race the past season. The new boat will be essentially a cruiser, having a hunting cabin, the topsides being carried up to form the trunk, in turtle back fashion. As there will be considerable boat a bridge has been arranged across the cockpit, over the engine space, from which the boat will be controlled. She will be 39ft. 4in. over all, 33ft. waterline and 9ft. 10in. breadth. There will be 6ft. of headroom under the cabin trunk. Mr. Hutchinson has considered naming her Davy Jones.

**TUNA SOLD.**—The 86ft. power yacht Tuna has been sold by Mr. W. B. Smith Whaley, of the Boston Y. C., to Mr. John J. Ingalls, of Port Inglis, Fla. She is now at Murray & Tregurtha's having alterations effected, among which will be the reducing of draft for use in Florida waters. Tuna was built by Murray & Tregurtha in 1903 and has made cruises in southern waters. She is a staunch craft with good accommodations for cruising.

**SCHOONER FOR H. A. MORSS ORDERED.**—Vice-Commodore H. A. Morss, of the Corinthian Y. C., who is also a member of the Boston and Eastern yacht clubs, has placed an order with Lawley for a 56ft. waterline schooner to be built from plans of Messrs. Tams, Lemoine & Crane. The boat will be built under the new uniform rating rule and will be of good substantial type for cruising alongshore and for long-distance racing. The deck, rails, companionways and skylights will be of teak. She will have a moderate sail plan and will have fine accommodations below decks.

**TWENTY-TWO FOOTER FOR LARCHMONT.**—Mr. B. B. Crowninshield has received an order for a 22ft. waterline cruiser to be used at Larchmont. This boat will conform in design to the new uniform rule, but will not be figured at the top of any of the rating classes, coming midway between the top limits of Class Q and Class R. She will be 33ft. 6in. over all, 22ft. waterline, 9ft. extreme breadth and 5ft. 3in. draft. She will carry 600 sq. ft. of sail. There will be 4ft. 6in. headroom in the cabin. It is expected that she will be built at Marblehead.

**Y. R. A. MEETING.**—It is expected that there will be considerable discussion at the annual meeting of the Y. R. A. of Massachusetts on Thursday evening, chiefly upon the proposition to adopt the new uniform rating rule and classes up to and including Class M. Opinion regarding the value of adoption is by no means unanimous, and it is likely that strong opposition will be offered. It is likely that the chief objection will be in regard to the absence of scantling restrictions in the new rule. The Y. R. A. classes have had scantling restrictions for years and the racing men have come to regard them as a protection. The matter of displacement would have some natural bearing on scantlings, depending upon the sense of the designer in desiring to turn out a boat that would last a reasonable length of time, but it may be that the racing men will want something that is more direct and binding.

JOHN B. KILLEEN.

## Starboard and Port.

WE find the following in the New York Sunday Sun of Oct. 15: "Why is the right hand side of a ship called starboard and the left hand side port?—H. H. C.' Starboard offers little difficulty to the investigator. In early forms of modern English it is recognizable without special philologic training as 'steere-board,' the side on which the steering was done when the rudder had not become fixed in its pintles on the sternpost and the helmsman governed his ship by a sweep or paddle over the right hand quarter. Its correlative, larboard, has been a puzzle to generations of delvers after the roots of words and the solution is no nearer now than when they first began their research. Its similarity to starboard called for a nicety of pronunciation that was too much to ask of a mate conning a ship with her lee rail under, and the confusion in sound gave rise to disaster. For this reason the word 'port' was suggested, adapting to this new use an obsolete steering direction. Official recognition was given to port by George Bancroft as Secretary of the Navy by an order dated Feb. 18, 1846, in which he ordered the substitution of port for larboard."

As a rust preventive at Sea Girt, N. J., Camp.—Adv.

## YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

**MOTOR BOATS WANTED.**—Consul-General Schuyler, of Bangkok, reports an opening in Siam for steam launches, motor boats, etc. He writes: "The city of Bangkok has more launches plying upon its waters than any other city in the Orient. These launches are for the most part heavy, clumsy, Chinese-built teakwood boats, fitted with old-fashioned steam engines burning wood. There is undoubtedly a great future here for the light motor launch of American make, which ought to be introduced without delay. Motors using kerosene (petrol) would be the best type, as that can be obtained all over the country, while engines using gasoline can only be employed near Bangkok. Manufacturers of launches and engines are requested to send catalogues of motor launches and boats for distribution and for use in the catalogue library of this consulate-general, such catalogues to include details of fittings, separate motors without boats, terms of sale, and prices."

\* \* \*

**HEMPSTEAD BAY Y. C.**—At a meeting of the Hempstead Bay Y. C., held recently, the following officers were elected: Com., Floyd Weekes; Vice-Com., I. R. De Nyse; Rear Com., R. H. Mayland; Sec., E. J. Mortimer; Treas., C. R. Lush; Meas., William E. Clowes. Board of Governors—I. N. Carman, I. W. Williams, John A. White and Joseph Rollins. Regatta Committee—DeWitt C. Titus, George W. Weekes and I. W. Williams. House Committee—Alanson Abrams, Ernest C. Mincke and James Dean. Auditing Committee—B. R. Carman, S. L. Pettit and H. S. Gray. Membership Committee—George W. Weekes, I. N. Carman and L. C. Smith. Fleet Capt., I. N. Carman.

\* \* \*

**NEW FIRM OF DESIGNERS.**—Messrs. C. Sherman Hoyt and Montgomery H. Clark have formed the partnership of Hoyt & Clark for the purpose of carrying on a business as designers of all classes of yachts with offices at 17 Battery place, New York city.

Mr. Hoyt is entering the designing field after the completion of the course in naval architecture, at Glasgow University, and a very extended experience in yacht racing. His practical experience in designing has been gained in a number of well known ship yards, both here and abroad, notably, the Clyde Bank firm of John Brown & Co., the Eastern Shipbuilding Co., and the Townsend & Downey Shipbuilding Co.

Mr. Clark has been in the designing business in New York for the past three years, first under the name of Liljegren & Clark and later under his own name.

The firm will also do a brokerage business.

## The Provincetown Hoodoo.

Editor Forest and Stream:

Mr. Barnard's yarn about "The Provincetown Hoodoo," like all of his stories, is very interesting, but he seems to have some misgivings about its being accepted by the readers of FOREST AND STREAM as fact. I can testify to its truthfulness, however, as I encountered the same youth in Provincetown last year, and he afforded us considerable amusement. We happened to be there over the Fourth in Escape, and he aroused our sympathy by telling us a hard luck story, and that he was without the wherewithal to celebrate the day. Possibly our contribution of "two bits" was enough to break the spell.

J. D. SPARKMAN.

Purser—Wade Hampton Yardley, 49 Pioneer Press Bldg., St. Paul, Minn.  
Executive Committee—Lucien Walsin, The Baldwin Co., 142 W. Fourth St., Cincinnati, O.; Augustus W. Friese, The Journal, Chicago, Ill.  
Board of Governors—Henry C. Morse, Peoria, Ill.  
Racing Board—Frank B. Huntington, 90 Sheboygan St., Fond-du-Lac, Wis.

## The Kennel.

## Points and Flushes.

It has been recently noticed that there has been a considerable increase of dog stealing in France, and an investigation into the circumstance has disclosed the growth of a new industry. The dog stealers, it now appears, no longer sell their prizes, but, after a little feeding, dispose of them to friendly butchers, who then purvey them to the public as meat, the hind legs, in particular, of young dogs doing duty as "house lamb." It would be interesting to learn whether this branch of dog stealing has extended to England. We all know that the foreign restaurants are supposed to be free buyers of tom-cats for the manufacture of jugged hare.—Shooting Times.

## Rifle Range and Gallery.

## Fixtures.

Oct. 22.—Cincinnati, O., Rifle Association annual prize shoot.  
Nov. 7.—Greenville, N. J.—One hundred shot championship match.

## Telescopic Sights.

MILES CITY, Mont., Oct. 8.—Editor Forest and Stream: Will you pardon one who is merely an old-time hunter with the rifle, and in no sense a target shooter, for commenting on your recent interesting editorial "The Telescopic Sight." I have never shot at a target on a regular rifle range, but during many years of big-game hunting and of Indian wars in the West, I carried a rifle daily, and used it constantly in the procuring of food, or in self-defense.

I have never used a telescopic sight, and have seen but few rifles fitted with them, but I remember distinctly the first one that I ever saw, shown me many years ago in Denver by Gove—then a celebrated gunsmith of that town—and his enthusiastic comments on the usefulness of the sight in hunting antelope on the plains east of Denver. I presume that Gove is no longer living, but there must be many of your old readers who will remember him and his old shop on the banks of the South Platte River.

In the editorial to which I refer you say, "There are two essentials in successful rifle shooting, namely, steady holding and accurate aiming." Is this entirely true? Accurate aiming is unquestionably essential, but can the same be said of steady holding. We are all of us disposed to think that in shooting at any mark the sight should pause for an appreciable time upon the point shot at; but in a number of cases which have come under my notice nothing of this sort seemed to be required. I recall at least two men who were afflicted with some nervous trouble, which kept their hands moving and jerking constantly, who were yet about as good shots as I have ever seen. That is to say, in shooting at ordinary distances—or what in the old hunting days of the West we called ordinary distances—say from 50 to 125yds., they could place their bullets together, shot after shot, in a space no larger than the heart of an antelope or a deer. Of course, this may be very different from shooting at the long distances which I understand are now in vogue. In like manner most men when shooting at a running animal made no pause on the target.

These men pulled the trigger when they saw that the sight was just about to cover the target. Their rifles might be constantly in motion, but they were so familiar with their sights and with the action of the rifle that they knew just when to pull the trigger so as to drive a bullet straight to the mark. In the same way in shooting at standing game in old times, it was my practice to raise the sight and pull the trigger just before the sight fell on the point I wished the ball to reach.

With due deference, therefore, to your remarks just quoted, I should be disposed to say that in itself steady holding is not important. Certainly I feel that it is not for the distances at which we used to shoot at game in the good old times when there was game to be shot at. On the other hand, I ought to say that it is a dozen years since I have hunted, and it may well be that new discoveries have been made in rifle shooting, as no doubt new methods have come up, so that my opinion, drawn from the experience of years ago may be quite without value to-day.

YELLOWSTONE.

## Ohio Rifle Notes.

At the monthly meeting of the Dayton Sharpshooters it was determined to celebrate John F. Beaver's seventy-ninth anniversary, Thursday, Oct. 26, by holding an all-day rifle tournament on their range, to which all riflemen of the valley are invited. The programme will include free-for-all matches, offhand, and at rest, for cash prizes, open to everybody. The society king shoot, muzzle rest, merchandise prizes, is open to members only. The regular monthly cup shoot, the last of the season, open to members only. Neither of these contests will interfere with the free-for-all programme, as there are plenty of targets to keep everyone busy. All contests will be at 200yds.

After a rest of several months, the Euphemia Rifle Club, opened their medal contest on Oct. 9. Chas. W. Matthews won the medal with a score of 47 out of a possible 48. He followed up this victory by winning two 20-shot contests. Mr. Matthews is probably the best posted man in the valley in the mechanism of a rifle as well as the handling of the weapon. The fact that he has held the championship medals of all the clubs time after time marks him as a man whose knowledge of the rifle is not all theoretical. The shooting was all at 100yds., offhand, and was done in a very strong cross wind. Matthews was challenged for a 20-shot match by T. Parks and E. R. Keslering. Five events of four shots each, possible 48, aggregate 240. Matthews won with 42, 44, 42, 43, 46—217; Parks 40, 43, 43, 40, 41—207; Keslering 39, 38, 39, 39, 41—196. Parks challenged the winner for another match, with the same result, although he improved on his previous score by 4 points, and Matthews fell down 1. Matthews scored 43, 42, 45, 42, 44—216; Parks 44, 41, 46, 36, 44—211. In both of the closing offhand contests of last winter Matthews won and has held the championship since. His scores were: Feb 15: 39, 41, 46, 46, 48—220. Feb. 22: 39, 41, 48, 46, 46—220. Members of the club will attend the shoot in Dayton on the 26th, to be held in honor of J. F. Beaver's seventy-ninth anniversary.

Many of the riflemen of the Miami valley have gone or will start soon for their annual trips after big game. David Aukenny, U. S. Foutz, Theo. and John Crander, Amos Zehring and Frank Vandever, of Germantown, started on Oct. 17 for Aroostook county, Me., where they will hunt for several weeks. Their camp will be near Masardis.

Dr. and Mrs. D. W. Greene, of Dayton, are in New Brunswick, with E. C. Harley and Frank Canby on a deer hunting trip.

Claude Weaver and Lawrence Fry, of Arcanum, left on Oct. 15 for a month's hunt in the Temagami region of Canada, where moose, bear and deer abound. They will make their permanent camp in the wilderness far north of the frontier settlements, and will be lost to civilization until the hunt is over.

W. H. Orth, Perry Brown and Jonas Leatherman are in their permanent camp on the north shore of Lake Superior, about fifty miles from Port Arthur, and will remain until about the first of November. A letter received from them says they have found game of all kinds very abundant.

Dr. G. A. Hoeblatt and George Kalter, of Dayton, and Dr. George Brown, of Phillipsburg, have gone to Maine for a three weeks' moose and deer hunt.

The Greenville Offhand Rifle Club will hold regular shoots on every Friday afternoon. The shooting will be at 200yds.

## THIS UNIQUE MANY-USE OIL

Cleans grime and smoke from face and hands; 6oz. can, 25 cents. —Adv.

Independent New York Schuetzen Corps.

THE last shoot in this club's outdoor series was held Oct. 6, on the ranges in Union Hill Park, New Jersey, under favorable weather conditions and with a good attendance of members and their friends.

Providence, R. I., Revolver Club.

We are still doing some shooting on our outdoor range Saturday afternoons, although the number of members who have the half holiday now is limited.

Plans for an indoor range are in progress, and interest is booming. Prospects good for some new members. The following scores were recorded on the 14th: Revolver and pistol, 50yds.: Wm. Almy, .38 Officer's model, 91, 88, 88; Wm. F. Eddy, .38 military, 73, 74, 72, 75, 76; A. C. Hurlburt, .38 Officer's model, 82, 85.

Cincinnati Rifle Association.

THE following scores were made in regular competition by members of this Association at Four-Mile House, Reading road, Oct. 8. Conditions, 200yds., offhand, at the Standard target.

Payne .....89 87 85 83 83 Freitag .....84 77 74 73 72 Hasenzahl .....88 86 84 84 80 Case .....80 75 59 48 Nestler .....88 81 81 78 77 Bruns .....79 74 73 73 70 Roberts .....83 83 79 78 76 Drube .....78

Rifle Notes.

A new rapid-fire gun has recently been invented by an ingenious Dane by the name of Rexer. The gun has been called from its originator. The Rexer is, in reality, a large musket. In size it is rather small for a gun.

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

- Oct. 18.—Eaton, O., G. C. Oct. 18-19.—Ossining, N. Y., G. C. shoot, \$50 added. C. G. Blandford, Capt. Oct. 19.—Shrewsbury, Pa., G. C. shoot. W. H. Myers, Sec'y.

NORTH NEW JERSEY SHOOTING LEAGUE.

- Oct. 19.—Newton at Morristown. Oct. 21.—Montclair at Orange. Oct. 28.—Dover at Montclair. Nov. 2.—Montclair at Morristown.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM goes to press on TUESDAY OF EACH WEEK.

The Indianapolis, Ind., Gun Club will hold the amateur sparrow championship of the United States on Oct. 24.

The sixteenth match of the North New Jersey League series is between teams of the Montclair and Mountainside gun clubs, on the grounds of the latter, Oct. 21.

Teams of the Keystone Gun Club, of Lebanon, Pa., and the Middletown Gun Club, twelve men on a side, contested on Saturday of last week. The scores were: Keystone 502, Middletown 457. Each man shot at 50 targets.

The Marshalltown, Ia., Gun Club has fixed on Oct. 25 and 26 for a two days' tournament. Class shooting, 40, 30 and 20 per cent. will govern the division of the moneys. Average money, \$50. E. G. Wallace is the Secretary.

The tournaments at Broken Bow, Hyannis and Alliance, situated in a choice part of the chicken country of Nebraska, were enjoyable gatherings to the shooters present. The visitors, as indicated by the reports, were entertained with all the lavish hospitality bestowed on visiting princes.

The Crescent Athletic Club began their fall and winter season on the grounds of their country house at Bay Ridge, L. I., on Saturday of last week. Delightful weather favored this opening shoot. The monthly cup shoots will begin on the first Saturday in November. Mr. T. W. Stake will place in competition a Sauer gun for a series of shoots.

Capt. C. G. Blandford informs us that "On Thursday night, Oct. 12, the Ossining Gun Club held a 'Dutch' supper at the Weskora Hotel. There were fifty members and guests present. The affair was a success in every way, but the scores in the bowling team matches proved that men could be good shots and at the same time notoriously bad bowlers."

At the tournament of the Indianapolis, Ind., Gun Club, Oct. 9 and 10, the English Hotel cup was won by Mr. A. S. Flynn, of Wabash, with the excellent score of 97 out of 100. High professional average for the two days was made by Mr. L. H. Reid, with 392 out of 400, a 98 per cent. performance for the two days. Of the amateurs, Mr. Flynn was high with 376.

In the Philadelphia League series last Saturday, the team of the Highland Gun Club defeated the Florists, at Wissinoming, by a score of 220 to 185. The Florists were short two men, and were credited with a score of 12 for each absentee. Clearview defeated Narberth on the grounds of the former, 192 to 185. The S. S. Whites defeated the Lansdales, 191 to 183. Meadow Springs defeated North Camden, 198 to 163; the latter had two absentees. Media defeated Merchantville, 208 to 190.

The material improvement in the skill of the Crescent Athletic Club shooters is manifested in the October handicap allowances determined by the handicap committee. There are four members, Messrs. Ed. Banks, H. M. Brigham, L. M. Palmer, Jr., J. S. S. Remson, who are scratch competitors, and several others have such small allowances that they are but a narrow remove from scratch. There are seventy-six shooters on the handicap list, of whom several are new in the club's competition. All scores, other than practice, during the season will be counted in the averages. If a shooter withdraws from an event, the targets not shot at therein will be scored as lost. Orders for prizes must be used within sixty days. Ten per cent. of the entrance will be deducted for trapping expenses, etc.

Concerning the amateur sparrow championship of the United States, to be held by the Indianapolis Gun Club, the following invitation has been sent out to shooters by Secretary Wm Armstrong: "You are cordially invited to attend the contest for the amateur championship at sparrows, and the Albert Leiber live bird trophy, emblematic of the amateur championship of the State of Indiana, to be contested for by residents of Indiana only. Contest will consist of four 25-bird events; \$10 entrance for each event; total \$40. Ten entries or under will be divided into three moneys, 50, 30 and 20 per cent. Over ten entries, four moneys, 40, 30, 20 and 10 per cent. Hill's sparrow rules to govern. Referee's decision final. Please notify us upon receipt of this programme of the possibility of your attendance to enable us to provide a sufficient number of sparrows."

The renowned and popular trapshooter Mr. Hood Waters, of Baltimore, Md., has succumbed to the charms of a lovely woman, and was married in Richmond, Va., on Oct. 11. This event will evoke the heartfelt wishes of his hosts of friends for life-long happiness. The following excerpt descriptive of the wedding is from the American: "Much interest is felt in Baltimore society in the wedding of Mrs. Margaret Baer Davis, of New York city, to Mr. Hood Waters, of Baltimore. The ceremony was performed in the green drawing room of the Jefferson Hotel, Richmond, Va., at 6 P. M. on Wednesday last, the Rev. Dr. George M. Spooner, of Broad Street Methodist Church, and Rev. Dr. W. E. Evans, of Monumental Episcopal Church, Richmond, Va., officiating. Mrs. Davis is an authoress and a contributor to many of the leading American magazines, who has been carrying on her literary work in New York city, though she is of Southern birth, and nearly connected with many of the leading families of the South. Mr. Waters is the son of the late Rev. Zadoc Magruder Waters of Carroll county, a member of the well-known Waters family of Montgomery county, and on the maternal side descended from the Woods, Howard and Norths, of Maryland. He belongs to several of the athletic and sporting clubs of Baltimore. The drawing room decorations at the Jefferson were in palms and roses. Jar-della's orchestra played the wedding chorus from "Lohengrin,"

and during the marriage service Rubinstein's 'Thou Art Like Unto a Flower.' The celebration was very quiet, in accordance with the wish of Mrs. Davis, and without attendants. The bride was exquisitely gowned in an imported Parisian creation of pink lavender Florentine silk, made en princesse, embroidered in orchids and trimmed in point lace. She wore a Gainsborough hat of lavender chiffon, velvet and tulle, with willow plumes, and carried a magnificent coronation bouquet of purple orchids. Mr. and Mrs. Waters left on the 8:05 train the same evening for the North, and will spend the month of November in New York, and later will make their home at 1526 Harlem avenue. Among the wedding guests were Dr. and Mrs. G. M. D. Canbrell, of Little Rock, Ark.; Mr. Charles Atwell Fricker, of Americus, Ga., relatives of the bride; Capt. Frank De Witt Ramsey, of Washington, D. C.; Miss Waters, of Baltimore, sister of the groom; Mr. and Mrs. Franklin Stearns, Miss Daisy Dickinson and Miss Margaret Stringfellow, of Richmond."

BERNARD WATERS.

Crescent Athletic Club.

BAY RIDGE, L. I., Oct. 14.—The Crescent Athletic Club's trap-shooting season for 1905-6 commenced to-day. Three special prizes were objects of competition. One was donated by Mr. E. H. Lott, one by E. W. Snyder and one by a powder firm. The totals of the highest three scores made by a member in the month will decide the competition. Dr. J. J. Keyes and Mr. W. W. Marshall tied for the Snyder trophy. Mr. O. C. Grinnell was high in the Mullerite trophy. Mr. H. Brigham, scratch, and Mr. Marshall with 10 allowance, tied on 47 for the Lott trophy. Scores:

Trophy shoot, 15 targets, handicap: T. W. Stake 15, W. W. Marshall 15, O. C. Grinnell, Jr., 14, A. G. Southworth 12, E. H. Lott 11, F. C. Raynor 11. Shoot-off, same conditions: Marshall 13, Stake 11. Trophy shoot, 15 targets: Southworth 14, Raynor 14, Dr. J. J. Keyes 14, W. C. Damron 13, E. H. Lott 13, Grinnell 12, Stake 11, H. B. Vanderveer 10. Shoot-off, same conditions: Dr. Keyes 14, F. C. Raynor 12, A. G. Southworth 10. Shoot for Snyder trophy, 25 targets: Dr. Keyes 25, Marshall 25, Southworth 24, Stake 24, H. M. Brigham 23, E. H. Lott 23, Raynor 22, Grinnell 22, Damron 18, Dr. O'Brien 17, Vanderveer 12. Shoot for Mullerite trophy, 15 targets: Grinnell 25, Keyes 22, Brigham 22, Marshall 21, Damron 20, Raynor 19, O'Brien 19, Vanderveer 9. Shoot for Lott trophy, 50 targets: Brigham 47, Marshall 47, Keyes 43, Damron 43, Grinnell 42, Southworth 36, Vanderveer 21. Trophy shoot, 15 targets: Southworth 12, Keyes 12, Marshall 12, Grinnell 11, Damron 7. Shoot-off, same conditions: Marshall 15, Keyes 12, Southworth 11. Trophy shoot, 15 targets, handicap: Grinnell 14, Keyes 14, Damron 14, O'Brien 12, Raynor 12, Lott 11, Southworth 10, Marshall 10, Vanderveer 8. Shoot-off, same conditions: Keyes 15, Damron 15, Grinnell 14. Shoot-off, same conditions: Damron 12, Keyes 10. The October handicap allowances, determined for the Crescent shooters by the committee are as follows:

Ossining Gun Club.

OSSINING, Oct. 14.—The scores below were made at the regular shoot of the Ossining Gun Club to-day. Event No. 3 was for the Bedell rifle. There were only three entries for it, MacDonald scoring 24 out of 25, with 10 added birds to shoot at, got another win, which gives him the prize. Nos. 5 and 6 were shot gun below elbow:

WESTERN TRAP.

Cincinnati Gun Club.

Oct. 14 was a very pretty fall day, but for some reason the attendance was not what it should have been.

Gambell expects to take a couple of squads to the Columbus Gun Club tournament on Oct. 26-27.

The first shoot for the Clement trophy will take place on Oct. 21. Members may shoot their scores on any one of three days in the week beginning with Friday.

In the practice events Maynard shot at 165 targets and broke 132. Ahlers at 160 and broke 131.

Table with 2 columns: Name and Score. Lists names like Maynard, Roll, Faran, Tuttle, Keplinger, Uhl, Pfeiffer, French and their respective scores.

Ohio Notes.

Most of the members of the Dayton Gun Club have given up target shooting to indulge in the more exciting sport of squirrel and duck shooting.

Fourteen members took part in the regular shoot of the Welfare Gun Club, of Dayton, on Oct. 7, the first five events being at 20 targets each.

The Columbus, O., Gun Club will hold a two days' tournament on Oct. 26 and 27 as a dedication of their new club house and grounds.

On Oct. 11 eight members of the Rohrer's Island Gun Club gathered at the grounds for the regular weekly contest in the medal series.

His nearest competitors were Oswald and Mack, who each broke 23, the former shooting at 21 and the latter at 25.

Less Reid, of New Paris, has made a good record this season, so far. He has shot at 7,000 targets and has been credited with 97 per cent.

The Eaton Gun Club holds a tournament on Oct. 18. Programme of 150 targets, \$7.50 entrance, three moneys in each event, 40, 30 and 20 per cent.

Charles Urban and a party of Dayton sportsmen returned from a hunting trip in Miami county and reported fair sport.

Joe Hohm, of the Rohrer's Island Gun Club, and his brother had good sport near Alpha, and they could show some game, squirrels and doves, to their friends when they got back.

Charles Smyth, C. F. Miller and Theodore Cook, Dayton, spent a few days at the Bing Club house, St. Mary's reservoir, and then went to Lewistown reservoir, where they had some good bass fishing before returning home.

Messrs. Smyth and Cook put in Oct. 10 on John Miller's farm in Madison Township, and got a big bag of squirrels and doves.

At Rantoul.

Rantoul, Ill., Oct. 13.—During the last two days the shooting has been continuous down in Jack Neal's pasture, where he has an old magatrap set up.

The trap was set in a low place, and the targets were thrown south and against a hillside. This sloping background and a strong cross wind, together with the sunshine, caused everybody to show much below their average.

Even Charley Spencer had several "bad half hours." The trade was well represented by Chas. Spencer, W. D. Stannard, Geo. Steenberg, W. H. Vietmeyer and L. H. Fitzsimmons.

Oct. 11, First Day.

Table with 2 columns: Name and Score. Lists names like Steenberg, Vietmeyer, Spencer, Fitzsimmons, S Bannard, Barkley, Arle, Holderman, Neal, Stoner, Van Gundy, Rupert, Haws, Leary, McDermand, Park, Irle, Kahler and their respective scores.

Table with 2 columns: Name and Score. Lists names like Meyers, Kinney, Hauger, Hitchens and their respective scores.

Oct. 12, Second Day.

Table with 2 columns: Name and Score. Lists names like Events, Targets, Steenberg, Kinney, Barkley, Holderman, Neal, Fitzsimmons, Leary, Reitz, Willis, Haws, Spencer, Hefly, Arle, Walton, Rupert, Stannard, Kellar, Stoner, Van Gundy, Vietmeyer, Irle, Miller, Park, Kahler, Rosaleus, Hager, Campbell, W Malloy, E Malloy and their respective scores.

Fifty targets, handicap, high guns: Rupert (19) 45, Van Gundy (18) 42, Barkley (20) 41, Leary (19) 41, Rietz (18) 40, Irle (18) 40, Arle (19) 37, Walton (17) 36, Stoner (19) 35, Kinney (20) 33, Kellar (19) 33, Rosaleus (18) 32, Haws (16) 30, E. Malloy (17) 27.

Garfield Gun Club.

Chicago, Oct. 14.—The following scores were made on our grounds to-day on the occasion of the fifth trophy shoot of the fourth series.

In the club trophy event Dr. Reynolds won in Class A on 24, Stone and Horns tied in Class B on 15. No Class C man shooting.

In the Hunter Arms Co. event, Thomas won in Class A on 18 out of 20, thrown as 10 singles and 5 pairs. Ford won in Class B on 14.

The day was a bad one for target shooting, there being a strong head wind, which caused the flight of the targets to be extremely erratic, and Dr. Reynolds was the only one who seemed to be able to locate them with any regularity.

Table with 2 columns: Name and Score. Lists names like Events, Targets, Thomas, Dr Reynolds, Stone, McDonald, Horns, T Smedcs, Dr Meek, Morrell, Plunket and their respective scores.

No. 1 was Dupont cup. No. 2 was trophy contest. No. 3 was Hunter Arms trophy.

IN NEW JERSEY.

Montclair Gun Club.

MONTCLAIR, N. J., Oct. 14.—Some sixteen members were present to-day at the regular weekly shoot. The special event for the day was the October shoot for the Daly gun.

Event No. 1 was for practice only. Event No. 2, for three silver prizes, was won by Messrs. Howard, Bush and Moffett in the order named. Event No. 3, 50 targets, handicaps added, for the Daly gun, was won by Mr. Howard, who broke 47; this with his handicap of 2 giving him the score of 49.

On next Saturday the club visit the Mountainside Gun Club, of Orange, to shoot the sixteenth team race of the North Jersey League.

Table with 2 columns: Name and Score. Lists names like Events, Targets, Boxall, Allan, Moffett, Cockefair, Batten, Bush, Holloway, Hartshorne and their respective scores.

Handicaps indicated, apply in event 3 only as added targets.

Bound Brook Gun Club.

BOUND BROOK, N. J., Oct. 14.—Nine entered the programme of the Bound Brook Gun Club shoot, on Oct. 14, for the handsome prizes given by the gun club.

The first four events were for cups and were won as follows: Bissett first, Crow second, Waring third and Slater fourth.

Mr. Bissett won the \$5 gold piece for the amateur high average, and Mr. H. H. Stevens won the silver fob for the professional average.

The club cup was won by Dr. J. B. Pardoe, after shooting out Stelle in the shoot-off of the tie.

The Hunter Arms medal was left undecided, as it was too dark to shoot off the tie. This will perhaps be decided before or at the next club shoot.

Table with 2 columns: Name and Score. Lists names like Targets, Waring, Woodward, Crow, W Slater, Pardoe and their respective scores.

Club race for cup, 25 targets: Hdp. Brk. Tot'l. Pardoe 2 24 25 Stelle 4 22 25

Shoot-off for cup, 25 targets: Pardoe 2 22 24 Stelle 4 19 23

Hunter Arms medal, 20 targets: Stelle 5 14 19 Pardoe 3 16 19

At Rantoul. Targets: 10 10 10 10 10 T1. Waring 6 7 6 5 5-29 Butler 7 8 10 9 7 9-50

Tietjens Shoot.

Oct. 12.—The shoot held at Tietjen's Hotel, Woodridge, N. J., was a handicap competition, sweepstakes and prizes. The traps were changed to throw high and low.

In the four-man team race Dr. Sergeant's (Carl Von Lengerke's) team won; the scores were as follows:

Table with 2 columns: Name and Score. Lists names like Pape, Heisenbuttle, Strobel, Fichtel, Sweepstakes, Events, Targets, L Sitzer, H Pape, C Bendig, R Stroebel, E Schmede, S Fichtel and their respective scores.

Delaware State Shoot.

THE Delaware State shoot was held at Dover, Del., Oct. 11 and 12. This was the second of the Delaware Trapshooters' League. Of the amateurs, Mr. Wm. Foord, of Wilmington, was high average with 170 out of 180, tying with Mr. J. M. Hawkins, an expert professional.

Oct. 11, First Day.

A stiff wind, blowing across the traps, taxed the skill of the shooters, and a drizzling rain most of the day was a source of discomfort. The programme was shot through by twenty-five out of the thirty-seven contestants. There were twelve events, each at 15 targets. Scores:

Table with 2 columns: Name and Score. Lists names like Events, Targets, W M Foord, L German, McKelvey, Richardson, Reed, Cleaver, Kirk, Terry, Stout, Bissett, Roser, C Maris, Steele, Vandenburg, J Evans, Armstrong, Pluke, C H Simon, L Evans, E Maris, Edwards, L R B, L J Squier, J M Hawkins, F E Butler, S Glover, Melchoir, J A R Elliott, E Banks, E H Storr, E E Dupont, Gehman, Crawford, Salisbury, Kenny, Walker, Gunby and their respective scores.

Oct. 12, Second Day.

The special event of to-day was the individual State championship. Mr. Alden B. Richardson was the holder of the title, and there were present two formidable ex-champions, who had in recent months also held and lost the title in close contests, namely, Messrs. Edward Banks and Wm. Foord.

The scores of the other contestants were: McKelvey 85, Richardson 85, Reed 85, McHugh 83, Melchoir 79, E. E. du Pont 78, Terry 76, Edmundson 76, Simon 75, Springer 74, C. Maris 74, Kirk 71, J. Evans 71, Edwards 71, Raven 66.

The high averages for the day were: First, Mr. E. H. Storr, Baltimore, 137 out of 150; second, Mr. J. M. Hawkins, Baltimore, 135; third was a tie on 133 between Messrs. W. M. Foord, F. C. Bissett and Sim Glover.

The five-man team championship was won by team No. 1 of the Dover club, with a score of 199 out of a possible 250.

The weather conditions were much better than those of the previous day. Forty-nine participated in the programme. The scores:

Table with 2 columns: Name and Score. Lists names like Events, Targets, Foord, German, McKelvey, Richardson, Reed, Cleaver, Kirk, Terry, Bissett, Roser, Edmundson, C Maris, F Maris, McHugh, Godwin, Grubb, Hartlove, Squier, Hawkins, Butler, Glover, Skelly, Elliott, Banks, E H Storr, E E du Pont, Melchoir, Buck, Raven, Huber, Simon, J Evans, L Evans, Cornog, Edwards, Miller, Springer, Ewing, Harrington, Fleming, Allee, Holliday, Miffin, Fluke, Crawford, Walker, McArdle, Massey and their respective scores.

These scores were made in the team championship race:

Table with 2 columns: Name and Score. Lists names like Wawasett No. 1, Wawasett No. 2, Foord, McKelvey, Buck, Raven, Miller, Dover No. 1, Dover No. 2, Reed, Terry, J Evans, C Maris, Richardson, Wilmington, Blue Ball, Hartlove, Springer, McHugh, McArdle, Godwin and their respective scores.

An Epitaph.

He was not so mean sometimes as he was others.

### Davenport Tournament.

DAVENPORT, Ia., Oct. 9.—Your readers will call to mind that two years ago the Cumberland Gun Club held a tournament at Davenport which was known as the merchandise shoot, one of the most successful shoots held during the year. The attendance was large, the interest never lagged from the firing of the first gun until the close of the third day. There were prizes for all, and several won more than they could carry.

Oct. 6, 7 and 8 were the days set apart for the 1905 merchandise shoot, and while it was not quite as successful as the 1903 shoot, it was a corker, as on the third day there were seventy-two shooters who took part. The same array of prizes were offered, but there were circumstances that caused the shooters to drop out after one day's trial; others stayed two days, and only a few shot all the three days.

The grounds used this year were not on top of the hill, facing north and adjoining the Schutzen Park, but at the Suburban Park, a summer resort on the banks of the Mississippi River. At first glance the outlook seemed good, but when the shooters got busy, all were surprised at the misses scored. Many of these were accounted for by the background, which was a sloping field. Then the backstops were too high, which permitted a target to get far out before being seen. The sun shone in the shooter's face and caused a reflection on the gun barrels, as the targets faced south by east. The flight of the targets was undoubtedly higher than most of the contestants could estimate.

One of the great sights was the large tent with its 400 prizes that had been donated for the patrons of the club.

The club is fortunate in having the same experienced men who have run the club's affairs, and are posted in all the ins and outs of these merchandise affairs for several years, viz., Henry Eggers, president; W. F. Kray, secretary, and C. Thode, treasurer.

The manner of running these shoots is to charge all the regular entrance fee, then divide the money 40, 30, 20, 10 per cent. Those shooting in first or second place get money only; then for the following nine or ten places there is a merchandise prize; so that every one had a chance on some prize. The only place that there was luck was in the drawing to settle the ties—there was no shooting off.

The wind blew strongly in front of the traps, and the targets seemed uneven the first day; some were fast, some slow, others high, and yet again very low.

There were sixty-four shooters who took part during the day, half of whom shot through the 185 targets.

The traveling men were out in force: H. Vietmeyer, L. H. Fitzsimmons, Dave Elliott, Wm. Stannard, W. H. Cadwallader and Fred H. Lord.

With one or two exceptions, all were dissatisfied with their scores. John Garrett was at his best, and he missed 12. He was followed by Barber with 170 broke. Then Barkley, 169, and Kohler 166. Stannard made 169, Cadwallader 165, Fitzsimmons 161. Scores:

### Oct. 7, Second Day.

Arriving on the ground at 9 A. M., the sun was shining brightly and the wind was blowing hard crossways to the shooters' stand. Thus the prospects were that targets would not be easy for this day. Garrett fell away to 165, and Barber went to the front with 174, Barkley 167, Sperry 160.

Cadwallader was well to the front on this day, and led the "profeesh" with 168, to Stannard's 160.

It was noticed that some of those who shot the first day were absent the second. They were for the most part those who had shot three days at New London, and they were tired out with their previous three days' grind. This is another proof that shoots closely following each other are not as well patronized as those that are two weeks or more apart. Scores:

Indianapolis Gun Club.

INDIANAPOLIS, Ind.—The fall tournament of the Indianapolis Gun Club, held Oct. 9 and 10, was conspicuous for skillful competition. The English Hotel cup was a special feature. At the end of the first day's shooting, Dr. Britton and Mr. A. S. Flynn were a tie for it, but on the second day, Mr. Gus Moller pulled into the lead, and won the cup with the excellent score of 37 out of 100. In the professional general average Mr. L. H. Reid was high with 392 out of 400. Mr. A. S. Flynn was high amateur with 376 out of 400; second, Ed. Rike, 370; third, Mr. S. H. Moore, 368. The manufacturers' agents in attendance were Messrs. Viemeyer, Le Compte, Heikes, Kaufman, Trimble, Stewart and Budd, and they shot from the 16yd. mark.

Oct. 9, First Day.

Table with columns: Events, Targets, Names (Moller, Le Compte, Harcourt, Short, King, Gregory, Voris, Tripp, Smoke, Flynn, Vietmeyer, Kaufman, Trimble, Moore, Stewart, Fisher, Parry, Clark, Britton, Carr, Budd, Hlabich, Armstrong, Wile, Hoover, Wildwhite, Trout, Morris, Malone, Reed, Rike, Michaelis, Haslam, Smith, Long), Shot at, Broke.

Oct. 10, Second Day.

Table with columns: Events, Targets, Names (Budd, Le Compte, Trimble, Reid, Kaufman, Stewart, Moore, Carr, Heikes, Trout, Gregory, Flynn, Smoke, Britton, Rike, Voris, Moller, Malone, Sutton, Parry, Fisher, Michaelis, Binyon, Clark, Smith, Morris), Shot at, Broke.

Oct. 14.—Filey won the Peters badge. Attendance light; weather clear. Bell's money sheets used at fall tournaments were the best we have ever had at a tournament. Events: Targets: 1 2 3 4 5 6 7 8 9 10. Names: Parry, Anderson, M Morris, T Morris, Southern, Dark, Finley.

Broken Bow-Hyannis-Alliance Tournaments.

LINCOLN, Neb., Oct. 9.—The three tournaments given by the gun clubs at Broken Bow, Hyannis and Alliance, Neb., were completed on the evening of the 7th, and it was the unanimous decision of those present that it was one of the most enjoyable events in their shooting career. The attendance of amateurs was a little disappointing, and four of the six target days were very windy, but no trifle of that character was permitted to mar the pleasure or dampen the enthusiasm of any one. The business men and citizens in each of these towns were always ready to shower attendance upon their guests, and the boys were made to feel so much at home that no restraint was noticeable at any minute during the ten days the party was together.

The majority of the party arrived at Broken Bow on Sept. 27 and 28, and after securing their hunting licenses, a few of the boys took to the field after prairie chicken, and were liberally rewarded. The first morning of the tournament, Sept. 29, opened fair and bright, but a hard wind from the south bore the targets down and caused many a one to duck the load of the shooter and escape "only dusted."

On this day we had with us C. A. Young, Springfield, O.; W. H. Heer, Concordia, Kans.; C. B. Adams, Rockwell City, Ia., and A. H. Hardy, demonstrating the virtues of shells and guns; also the genial missionary M. F. Sharp, of Buffalo, N. Y., who has a faculty of making himself so useful and agreeable around a tournament that he is always welcome in Nebraska.

On the second day the additions to the party were Walter Huff of Macon, Ga.; Harold Money, of Colorado Springs, and George L. Lyons, all the way from Durham, N. C. Mr. Lyons, in addition to racing every day for high honors, proved to be one of the jolly boys of the party, and certainly made good. It was on this day that the first excitement originated, when Walter Huff broke a suspender trying to get through a fence to head off a covey of prairie chickens which happened to fly over the ground a little out of range. The birds dropped into a field a half mile distant, and shooting was delayed long enough to allow Walter to score his first prairie chicken, which, by the way, was the first he had ever seen, so his enthusiasm was justified. On his return to the grounds he secured a nice sharp-tail, and both birds were taken in charge by State game warden Carter and sent to the University of Nebraska at Lincoln, where they were nicely mounted by Mr. H. M. Swenk, and are now on their way to take a place in the den of their owner at Macon, Ga. Early on the morning of the first day, the party left Broken Bow for Hyannis, and scarcely were out of the city limits, when a bunch of twenty prairie chickens flushed along the roadside and settled in a cornfield a few rods distant. As they arose in easy gun shot of the train, the boys all gave voice, and Charlie Young tried to give us an imitation of his new pump gun in operation. From this on to Seneca either ducks or chickens were flying continually, and as each bunch would arise, enthusiasm increased until the coach in which we traveled was practically deserted, except for a noisy, jolly and good-natured crowd of shooters.

Arriving at Hyannis at 11:30, we were met at the train by about two hundred people (a number equal to at two-thirds of the population of the town), and were escorted to a nearby building, where refreshments were served, and our money was not good. After a nice dinner of grouse, with other delicacies to match, the boys were seen to scamper in every direction in quest of game. In the evening about fifty chickens and a number of ducks were

delivered to Landlord Hosman, which were served during our stay.

An amusing incident was the arrest of State game warden Carter by Sheriff Budd Moran, charged with two offenses against the good people of the town, namely, singing on the street just at sundown, and spitting upon the sidewalk. The warden pleaded not guilty and set up as a defense that he could not sing, and that there was not enough sidewalk in town to spit upon. Needless to say Mayor Nichols found defendant guilty, but a visit to the Ed. Martz's hostelry with the men folks and a box of apples for the ladies on the gun club grounds settled the fine, and the town was ours. The next two days, Oct. 2 and 3, were devoted to the 20-target event programme, with \$10 added to each event.

Weather conditions were good, and scores were correspondingly high. We were met here by C. D. Plank, of Denver, and Harry Gayhart, of Hot Springs, S. D. After the programme was finished on each day, we were highly entertained by the cattle men of the community, who had brought in several outlaw horses, and offered prizes to the cowboys to ride them, which they did in most cases; but twice we saw them bite the dust. There were also contests of riding, roping, etc., which were indulged in by both ladies and gentlemen, all of which were very interesting to those who were making their first trip in the West.

During the evening the boys were the guests of the Gun Club members at a very pretty ball at the Opera House, which was so well conducted and up-to-date that it would do credit to a city many times the size of Hyannis. At all of these entertainments our money was worthless.

Wednesday and Thursday, Oct. 4 and 5, were the days set apart for a trip in the hills, and early in the morning about sixteen members of the party started out as the guests of Mr. Gentry, at his splendid ranch, and of John Finan, on the Abbott ranch.

The two ranches were situated about five miles apart, and the party was divided and in charge of A. H. Hardy and Game Warden Carter, guided by Bud Bowers and Bob Hayward, with Duke and Cussing, as fine a brace of dogs as ever pointed grouse. We spent a pleasant time at the ranches, and at noon of the second day we rounded up at the Abbott ranch, where Chris Gottlieb, accompanied by Mrs. Malm, the lady in charge of the ranch commissary, had one of Gottlieb's famous grouse stews ready, and we partook as only hungry hunters can. About two hundred and fifty ducks and grouse had fallen to our guns, which was considered a sufficient bag for gentlemen, and we prepared for the trip into town to make arrangements for the next two days at Alliance. Saddle horses had been furnished by Sheriff Moran and our good friend Mr. Bohart, and after all this our money was still counterfeit.

On the morning of Oct. 6 the boys left for Alliance with a warm spot in every heart for Hyannis. Arriving at Alliance, we again found the extended hand and an open house. At the club grounds, everything was in readiness, having been looked after by Lou Shawyer and Fred Allen, with Fred Whitney, of Des Moines in the office.

In the evening a programme and ball was furnished by the business men for our entertainment, and was thoroughly enjoyed. The second day's programme was finished early in the afternoon, and after the last grouse supper of birds which the boys had carried from Hyannis, the boys made an earnest appeal to the promoters of these shoots to repeat next year, and caught the outgoing trains, some for their homes, some to Hot Springs, S. D., to spend Sunday, some to the Sheridan, Wyo., tournament, and others to St. Joseph.

The only bad effects noticed from the outing was with our old friend Chris, Gottlieb, who said he had eaten so many grouse that he had an almost irresistible desire to stay a week longer and go out and sleep in the grass.

We will not give the scores in detail, but will give the scores of the three high professionals and the three high amateurs at each of the tournaments.

Table with columns: Professionals at Broken Bow (W H Heer, C A Young, C B Adams), Amateurs (S A Huntley, H G Taylor, D D Bray), Professionals at Hyannis (W H Heer, Chris Gottlieb, Walter Huff), Amateurs (H G Taylor, S A Huntley, Geo L Lyons), Professionals at Alliance (W H Heer, Walter Huff, Harold Money), Amateurs (Geo L Lyons, H G Taylor, Geo Maxwell).

The programme at Alliance on the last day consisted of 150 targets in the regular events, and the merchants' cup at 50 targets, handicaps from 16 to 20yds. In the race Geo. W. Maxwell, the gentleman from Holstein, who has no use for but one arm in a shooting match, won on a score of 47 from 19yds.

CORRESPONDENT.

Colfax Gun Club.

COLFAX, Ill., Oct. 10.—All night last night the rain fell, so did the temperature, and this morning a steady rain poured down. It was indeed a "damper" on the ardor of the members of the Colfax Gun Club, for this day a team race with Bloomington and a regular tournament were to be held.

Part of the Bloomington team showed up, but about half of their number failed to connect, thus the team race was off.

The rain having ceased at 11 A. M., the shooting was started with fifteen shooters in the first event. The wind was strong, the sky and background were dark. Uneven target flights caused the scores to fall much below the average of many of the contestants.

There were present J. T. Park, Brooks, Ind.; H. Blumershine, Washington, Ill.; A. Ferris, Crescent City, Ill.; Dr. McDermund, Bloomington; A. Steenberg, Chicago, and the good shots of the home club.

The grounds are furnished with an up-to-date automatic trap. The management was under the supervision of W. "Tramp" Irwin, while the refereeing and scoring was in capable hands.

Mr. Ward Burton was present in the interest of a cartridge company, as was Mr. Tramp Irwin. Scores:

Table with columns: Events, Targets, Names (H Blumershine, Ferris, Steenberg, McDonald, J T Park, N Blumershine, Morgan, Hurst, J Wood, C Ward, J Pratt, Bradford, F Corpe, Phillip, Smith, Conklin), Shot at, Broke.

Joe Park, of Brook, Ind., won high average, with H. Bloomershine, Washington, Ill., second, and A. Ferris, Crescent City, Ill., third. Mr. Steenberg was high professional.

Eagle Rod and Gun Club.

SCRANTON, Pa., Oct. 10.—The following sportsmen made a visit to the Eagle Rod and Gun Club's grounds, near Scranton a few days ago and had a little shoot. Among them the following scores were made:

Table with columns: Events, Targets, Names (Henry Reif, W J Smith, W H Langdon, W J Irving, J D Mason), Shot at, Broke.

Miss-and-out event: Gus E. Greiff 17, W. Anneman 16, Irving B. Storck, Sec'y.

Herron Hill Gun Club.

PITTSBURG, Pa., Oct. 5.—The fall tournament of the Herron Hill Gun Club, which closed here to-day, was, with the exception of the State shoot, held in May, probably the best ever held in this vicinity. The weather conditions were ideal for outdoor sport, being clear and warm.

Of the fifty-seven shooters who faced the traps, forty-five of them shot the entire programme of 400 shots, which shows that the system of guaranteeing the weaker shots their money back is the only way to hold them during the entire programme. This plan of adding money was used at Wilmington, Del., in the spring and last month at Cincinnati, O., and both shoots were well attended from start to finish. It was the intention of the Herron Hill Gun Club to refund the poor shots the entire amount of their losses without deducting the cost of targets; but their winnings were so small that it was found impossible to do so. Some idea may be gained of the amount lost when it is figured that the ten low guns drew but \$106.55, an average of \$10.65 per man, with an entrance of \$40. The nineteen shooters who failed to win their entrance drew but \$320.65 at a cost of \$760 entrance.

Those who shot over 90 per cent. were fairly well rewarded, the largest winnings being as follows: Kelsey, \$44.70; L. E. Mallory, Jr., \$39.50; J. Martin, \$38.90; J. T. Atkinson, \$24.60; C. C. Smith, \$17.75. These figures, however, include the amounts won in the 100-bird high gun race, which were as follows: Kelsey, \$23.10; L. E. Mallory, Jr., \$16.80; J. Martin, \$16.80; J. T. Atkinson, \$6.80; C. C. Smith, \$5.25.

The trade was represented by Messrs. Luther J. Squier, H. H. Stevens, J. A. R. Elliott, Chas. Penfield, O. S. Stull, Chas. G. Grubb, J. C. Garland, L. Z. Lawrence and J. R. Hull. The programme was started promptly at 9:30 Wednesday morning, and although a stop of one hour was made for lunch, all events were finished by 4 P. M.

Two Blackbird traps were used, which worked nicely, and 10,440 targets were trapped during the day. The second day's events were finished at 4:30 P. M., as several delays were caused by the breaking of both traps. During the two days 20,380 targets were scored. L. B. Fleming, who managed the shoot, wishes to thank Messrs. Grubb, Stevens, Squier, Penfield, Stull and Garland for their untiring efforts, which kept things moving rapidly at all times; also the shooters, as they were prompt at the score and seldom delayed their squads.

Last, but not least is our sincere thanks to Kelsey (G. E. Painter), who so kindly placed his elegant steam yacht at the disposal of the shooters, and took them to and from the shooting grounds each day in record-breaking time.

The Herron Hill Gun Club feel much gratified at the success of the tournament, as it brought out a number of shooters who had never before attended a shoot other than on their club grounds. Aside from this, nearly every contestant shot through the entire programme, which is very seldom seen at a target tournament.

High average for the two days was made by that clever shot from Bradford, Pa., Mr. L. E. Mallory, Jr., who broke 377 out of 400 targets, which is an excellent performance, considering the hard background on these grounds.

Mr. G. E. Painter (Kelsey) was a close second with 376, and H. H. Stevens landed third with 374, which gave him first general average among the experts. J. T. Atkinson was third among the amateurs with 370, and J. A. R. Elliott won second expert average with 365 out of 400.

The scores follow:

Table with columns: First Day, Second Day, Total, Shot at, Broke, Money. Names: L E Mallory, Kelsey, H H Stevens, J T Atkinson, J A R Elliott, J Martin, C C Smith, A H King, L Z Lawrence, Clifford, Raven, R S Deniker, Piercy, L B Fleming, D W Baker, Dr C J Jessup, L J Squier, G L Moore, H W Hoey, W Hale, E W Kelley, F E Mallory, K J West, J R Hull, C S C, J A Stoops, J H Ellsworth, C H Miller, Garland, T F Collins, Anderson, Lane, U B S, Sargent, R R Mallory, W W Andrews, Jas McGlashan, Worster, H W Rauh, W T Daugherty, Cclman, Doc Smith, Bolsinger, W R Thompson, J T C, G Thompson, Pontefract, Stull, Schuyler, Scanlan, J Stewart, Johnston, North, Packer, Watson.

Scores in 100-target race: Kelsey, Clifford, L E Mallory, C J Jessup, Martin, Moore, Raven, Geo H Pie, King, J H Ellsworth, Atkinson, Anderson, Baker, Pontefract, C C Smith, E W Kelley, H W Hoey, R J West, L B Fleming, Schuyler, F E Mallory.

On strop and razor makes shaving a pleasure. Try it.—Adv.

PUBLISHERS' DEPARTMENT.

JAMESTOWN, N. Y., Aug. 3, 1905. Forest and Stream, New York: Gentlemen—Yours of 29th at hand. We have been well pleased with the results from our advertisement in your journal. We started a new business, and it is doing splendidly, and we appreciate the good work that you did for us. However, we do not think that it would be to our interest to continue our ad., as almost all who will want our goods this season will have ordered soon. Another spring we will no doubt want to avail ourselves of your excellent advertising journal.

Respectfully yours, THE NATIONAL WATERPROOF BOOT CO., (O. C. Frisbee, G. M.).

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1904, BY FOREST AND STREAM PUBLISHING CO.

ISSUES, \$4 A YEAR, 10 CTS. A COPY. }  
SIX MONTHS, \$2. }

NEW YORK, SATURDAY, OCTOBER 28, 1903.

VOL. LXV.—No. 18  
No. 346 BROADWAY, NEW YORK.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be received. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, \$4 per year, \$2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

The object of this journal will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

Announcement in first number of FOREST AND STREAM, Aug. 14, 1873.

## BIRDS AND THE COTTON CROP.

THE Department of Agriculture has undertaken the study of birds in the South and their relation to the cotton boll weevil. This insect is one of the most destructive pests in the country to-day; its ravages in Texas have caused enormous losses and the weevil is steadily spreading and covering a wider territory. The investigation is to determine what effect the birds have as its destroyers. The study has been made by Mr. Vernon Bailey, chief field naturalist of the Biological Survey, and a preliminary report has just been issued. It is a report of progress, for the investigation has not yet been carried to a point where the services of the birds as allies of man may fully be summed up. But enough has been known to prove that these services are extremely valuable. The fact is pointed out that for twelve years since the introduction of the weevil has made steady progress in its spread over the cotton producing area in spite of the birds; and there is no ground then to assume that birds are ever likely to exterminate the insect. It is true, nevertheless, that the investigation has shown that birds have had a very important influence in checking the weevil, to such an extent indeed that the conclusion is readily reached that if it were not for the birds no cotton whatever could be produced in the infected areas. Moreover, it is reasonable to believe that when the services of the birds shall be more fully recognized and in consequence more efficient protection shall be given to them, the increased avian supply will, in corresponding ratio, prove more effective in reducing the weevil.

Among the birds found to be destructive of the boll weevil the first place is given to the titlark or pipit, of which at the time of his visit in November Mr. Bailey found flocks of 100 to 500 constantly in the cotton fields, picking food as they ran or walked over the ground. Of eight individuals killed for examination of their stomachs, six were found to contain remains of boll weevils. Following the birds only two meals a day, at this rate they would consume 125 per cent. of their own numbers of weevils. The titlarks winter in Texas in immense numbers and the aggregate of their useful work must be of tremendous magnitude.

Those usefulness in varying degree was demonstrated include the Carolina wren, the western meadow lark and the Florida meadow lark, the common dove, the red-winged blackbird, the western savanna sparrow and the white-coated sparrow, the brown thrasher and the Texas bobwhite. The investigation of the quail was made in the autumnal season, when the birds were feeding almost exclusively on ripened weed seeds; but quail are known to feed largely on insects in the summer, and Mr. Bailey concludes that later in the season, especially during the winter and spring months, after the weevils have left the cotton, the quail scratch them up from under the leaves and rubbish.

Other birds which are named in the report as giving useful co-operation in the weevil warfare are the shore birds, in particular the killdeer plover, which is known to eat the insects and frequents the cotton fields at all seasons. The same statement applies to other plover, the bland plover or Bartram's sandpiper being one of the most insectivorous of all species. Formerly it was found in immense numbers on Texas prairies, but market hunting has almost exterminated it. The bird is known as papabotte in Louisiana, and is one of the choicest birds in the New Orleans market.

It is suggestive that here in this cotton boll weevil

study should be developed another illustration of the folly with which we have gone on for years tolerating the destruction of game for market; and demonstrating anew the wisdom and utility of the Platform Plank, that the sale of game should be forbidden at all seasons.

## NEBRASKA'S GREAT TREE PLANTER.

TO-DAY, Oct. 28, a fitting honor to a public benefactor will be paid, when at Nebraska City, Neb., a monument will be dedicated to the memory of J. Sterling Morton, the founder of Arbor Day. A Nebraska pioneer, having taken up a homestead in 1854, a highly successful farmer and man of affairs, Secretary of Agriculture under Cleveland, Mr. Morton is most widely known and most gratefully remembered as an advocate of tree planting and forest preservation. No other man of his generation, nor of any other generation in this country, has had such an influence in this field of tree planting as he. "Plant trees" was his lifelong motto. These words were engraved on his stationery, emblazoned on the panels of his carriage, proclaimed by him in season and out of season, preached and practiced. The memorial stands in a grove of trees on the Morton farm, which he himself planted and in which, it is said, he took more pride than in any other achievement of his life. The monument has been provided by the Arbor Day Memorial Association, which was organized after Mr. Morton's death in 1902; and the purpose of the memorial is to be first "a perpetual reminder of Mr. Morton to his fellow-townsmen and their children and grand-children, as an example of integrity and patriotic citizenship for them to imitate, to commemorate his public services, particularly in founding of Arbor Day, and to recognize his record as a pioneer of the West."

The design, by Rudolph Evans, of this city, is a life-like portrait statue in bronze, the accessories being a bough of a tree, a plowshare, and a woodsprite caressing a young tree. The characterization chiselled in the marble on one side is, "Pioneer, Statesman, Scholar, Tree Planter," and on the other side "Father of Arbor Day," and the motto "Plant Trees."

## THE CALIFORNIA ELK.

READERS of early books of California history remember that at the inpouring of Americans into that State fifty years ago, the elk were very abundant. Especially were they numerous in the San Joaquin and Sacramento valleys and in the tule marshes which bordered many of the rivers and lakes of the flat country.

Over the greater part of this region the elk have long been exterminated, but on the extensive cattle ranch owned by Miller and Lux there has always been a small herd, protected by the proprietors, and this herd has come to number about two hundred. A few years ago, through the efforts of Dr. Merriam, Chief of the Biological Survey of the Department of Agriculture, Messrs. Miller and Lux presented these elk to the United States Government, and after a time a pasture was constructed for them in the Sequoia National Park. In November, 1904, efforts were made to round up the elk and drive them into a corral, so that they could be caught, boxed and shipped to their new home. The drive, though carefully planned and taken part in by good riders, was a failure. The elk refused to be driven, broke back through the line of riders and escaped to the foothills of the Temple Mountains. During the drive the cowmen roped a number of elk, most of which died. Their skins and skulls were preserved and were the first specimens of this animal which had come into the hands of a scientific man in recent times. On these specimens is based a new species of elk, *Cervus nannodes*, described last February by Dr. Merriam, and then spoken of in FOREST AND STREAM.

As our dispatches show another drive was held this year and twenty-three specimens were captured, of which twenty lived to be transferred to the quarters prepared for them on Kaweah River, in the Sequoia National Park. Here it may be hoped that they will do well. The tule elk is very much smaller than any of the other elk known from America, is shorter legged, much paler in color, and has more white on the ears. It is thought to be more nearly related to the elk of the Rocky Mountains than to either of the Pacific coast species.

## ALIENS AND GUNS.

THE killing of song birds by foreigners, which is a nuisance of such large proportions in the vicinity of towns and cities, may be suppressed at least in so far as unnaturalized foreigners are implicated simply by enforcing that section of the penal code which forbids aliens to carry arms. This is section 409, which reads as follows: "No person not a citizen of the United States shall have or carry firearms or dangerous weapons in any public place at any time."

The Forest, Fish and Game Commission has printed this in bold type on a linen poster, together with an announcement that "under this law the slaughter of song and insectivorous birds, which has been carried to such an alarming extent by non-citizens, may be stopped almost wholly. It is the duty of all good citizens to report violations of this law to the police or to the civil authorities and to see that offenders are summarily punished."

This poster will be supplied free of cost on application to the Forest, Fish and Game Commission, Albany, N. Y. It should be very extensively displayed in all districts where Italians and other aliens now invade the highways and fields in pursuit of song birds.

The Commissioners might do well to put out polyglot posters, giving the law in English and Italian, for it is to be assumed that the song bird potters are not familiar with the English tongue. Five song bird killers, captured last Sunday near Bronx Park, in the upper part of the city, were of Italian extraction, as their names indicate—Parelo, Amodeo, Comoneto and Gaetano. In their possession were found twenty-nine robins, two indigo birds, five thrushes, a grosbeak and a catbird; and evidence seemed to show that they had regaled themselves on several other birds, cooking them over a fire kindled in the woods.

THAT is an ingenious piece of figuring in the paragraph on "Bobwhite as an ally of the farmer" in another column, which leads to the conclusion that in Virginia and North Carolina the quail consumes 1,341 tons of weed seeds between Sept. 1 and April 30, and 340 tons of insects in the period from June 1 to Aug. 31. This is presenting the bird in an unfamiliar light. We esteem the quail as a game bird, but its economic value is not so well understood nor so highly appreciated as it should be. This study of the life history of the quail ought to have the widest possible currency. When the relation of game birds as well as of other birds to agriculture shall come to be within common knowledge, we may look for a distinctly changed and improved attitude on the part of land owners.

We recorded at the time of its occurrence the death of Guy M. Bradley, the Florida warden of the National Association of Audubon Societies, who was murdered while making arrest of an egret hunter at Oyster Key, Fla., last July. Mr. Bradley was a martyr to the cause of bird protection, and it is fitting that recognition of his services and lamentable death should take the substantial form of provision for his widow and two young children. The movement set on foot to provide a pension for the family must appeal widely, and the response should be prompt and generous. Contributions may be sent to Mr. William Dutcher, President of the National Association of Audubon Societies, No. 525 Manhattan avenue, New York city.

DEER are so plentiful in Long Island that they invade the highways and narrowly escape death by the automobiles which speed noiselessly around the curves in the road. When Mr. R. B. Roosevelt, on his way from the Vanderbilt City races last week, ran into a herd of eight deer near the Vanderbilt estate at Oakdale, a buck sprang from the path of the vehicle with such force as to drive its head through the wire fence, where it was held immovable, unable to go either forward or backward. The deer supply in this part of the island is so great as in many ways to be a nuisance; and the residents are looking forward with no satisfaction whatever to the occasion which is scheduled for Nov. 8, when an army of deer hunters will be on hand for the opening day's sport.

## THE SPORTSMAN TOURIST

### Stories of Some Sea Dogs.

#### III.—Zero, a Hero of the North.

I UNWILLINGLY spent the winter of 1851 in the Arctic Ocean on board the brig *Swallow*, a little craft that had gone up there for trading and to secure as many walrus tusks as was possible to obtain. I was the supercargo and ice-pilot, the latter position being due to the fact that I had been in these waters the previous year on a New Bedford whaler in quest of the famous bowhead whale and the big bone they yielded. When, in my opinion, the time came for us to up anchor and leave these waters the captain was deaf to my entreaties to depart, and the result was that we were frozen in for the long dreary Arctic winter. Fortunately, we were lying in a snug little bay in St. Lawrence Island in about 63 degrees North latitude and longitude 170 East.

The island at that time belonged to Russia and was much frequented by Yankee whalers, who did a rushing business in catches, but at the time we were nipped all of the whaling fleet had sailed southward. On my previous voyage I had become acquainted with several Eskimo families, who were constantly visiting us, and when I piloted the *Swallow* to a comparatively safe anchorage, which was to be our winter quarters, my old native friends came on board in goodly numbers, and I especially was greeted with many expressions of pleasure, and it was not long before I had made arrangements with several families to remain by the brig for the winter, promising them comfortable quarters, plenty of food and a far better time than if they went off to their own winter resort. We now felt assured that if the vessel was so unfortunate as to be crushed in the ice we could rely upon these faithful men of the Far North to be of valuable assistance to us through the long winter night, and being to the manor born, they would be able perhaps to save us from perishing amid the ice and snows of that little island.

Our crew consisted of some forty all told, the Eskimos numbered twenty-two, including several little children, and eighteen native dogs, the latter a rather unruly, tough lot and always hungry; in fact, never satisfied, no matter how often fed. One of the dogs attracted my attention, and it seemed to me that he in return took a fancy to me; at any rate, it was only a few days before we became friends and constant companions in my journeys between the brig and the shore, where we had begun to store our provisions in case the brig was destroyed by the ice. I christened him Zero, an appropriate name for the surroundings. I thought, but his nature was the exact opposite of his new name, for he was affectionate, intelligent, apt to learn my words of command, and it was not long before his devotion and good fellowship were most marked. We soon became inseparable and he often slept in my stateroom, which was warmer than the main cabin. It was not long before he began to ignore his canine companions and had little to do with them. My heart went out to that dog as never did it to one of his species. When I first met Zero he was a heathen dog, an unchristian, uncivilized fellow that knew not my language or my manners; in fact, he was an unclean dog, but how changed he became in a few days, for he had been washed, combed and brushed and was now a presentable being, full of that tenderness we find in the trained house dog at home.

One fine day along in the latter part of September Zero and I went out for a stroll among the snow hummocks and in quest of any game that might give me a chance to bag it. I carried an old-fashioned musket loaded with a ball and about an ounce of buckshot; slung over my shoulder was a copper powder flask, and in a sealskin bag were some percussion caps and the necessary wadding, and strapped on Zero's back was some luncheon for us both. We did not carry water, for if thirsty we could moisten our mouths by eating snow.

We had jogged along for about two miles when a snow squall overtook us and we halted and took shelter behind a large hummock until the squall had passed. Just as we were starting I noticed that Zero had scented something, for he would look steadily and intently off to seaward and then look at me as much as if to say, "Can't you smell something?" And again he would look up at me almost saying, "Don't you know that there is a bear hereabouts, I do?" Presently around the hummock came the head of a big lump of a polar bear, who evidently had not yet discovered our position. Off came my fur mittens and putting a fresh cap on the nipple of the gun and jarring the powder in my gun well, I was ready for the bear. Zero showed his delight by wagging his tail and jumping up and down as if to say, "Now, old fellow, you will get it."

We were not more than fifty feet from the bear when he discovered us and evidently he was more surprised than we were. We were dead to leeward of him, and up to this time the wind had been so fresh our scent had not reached him, but now that he had seen us he hesitated for a moment, evidently querying as to what he should do. My mind was made up, and no matter what the brute contemplated I was ready for him, for I felt that being a good shot and with my old musket to do its duty I did not fear for the results being in my favor. All that I feared was that Zero might take it into his head to rush at the bear and interfere with my aim. This was my first hunt with the dog, and I did not know how

he would act under the circumstances. I bade him keep still, and he seemed to understand my command. I never shall forget how he looked at me and then at the bear as much as to say, "Now, what are you going to do? Why don't you fire? What are you waiting for?" Yet, he seemed to have full confidence in me, and perhaps in the musket, for he had seen many the time what firearms could do. I was walking slowly up to the bear, who alternately was on all fours, then on his haunches, and when I was within about fifteen feet of the fellow, and when he was showing me the finest set of bear's teeth I ever saw, I took deliberate aim and sent the handful of assorted lead into that blood-red mouth. The huge creature gave a mighty lunge toward us, fell over on his side and after a series of terrific struggles lay quiet, as if dead. Zero was wild with excitement and wanted to rush at the monster, but I checked him, for I had read that bears could do the possum act at times with serious results; so I loaded my old trusty and sat down to make sure that my prize was "done dead."

Now, the question arose how was I to get tidings to the brig that I had shot a bear and that I needed assistance to transport it to the ship where it would be gladly welcomed, for we had not had any fresh meat for a long time. I did not dare to leave the bear while I went to the vessel for help lest some other bear should come and spoil my day's hunting trip. I had neither pencil nor paper on which to write a message to my shipmates, so I resolved to test Zero's intelligence as a messenger. He was intently watching the carcass when I called him to me, and patting him on the head said: "Now, Zero"—pointing in the direction of the vessel—"you go as fast as you can to the brig and tell them I have killed a big bear and to send a sledge here quick." Then he went up to the bear and I cut a piece off its ear and putting the piece in Zero's mouth said, "Now go." He looked at me for an instant then started off at full speed. That dog knew just what I wanted and it would be pretty hard to convince me that he did not know what I actually said.

It did not take him long to reach the brig and the natives understood the message Zero brought telling the crew that I had shot a big bear—the ear told that part of the story. It was not many minutes before a dozen natives and a half dozen of my shipmates were on their way with two dog sledge teams and hurrying to my assistance. Long before they were in sight Zero came bounding over the snow, and rushing up to me licked my face and said, as plain as a dog can say, "They are coming with the dogs and sledges to carry back the dead bear." The party arrived in good season, and, loading my prize on the sledge, we started to the brig, and as there was a spare sledge my shipmates insisted that I get on and ride back to the vessel in state. I agreed provided that Zero might share the ride and honors with me; and we both then had our first sledge ride on St. Lawrence Island. The bear weighed about 800 pounds and kept us in fresh meat for several days.

Zero was the first canine I ever owned or claimed as my exclusive property on a ship. I had shipmates with dogs before, but they were always the "captain's dog," and they were all expected to remain aft, and were not allowed to become too familiar with the foremast hands, and while I loved dogs it was only on rare occasions that I could gratify my pleasure to pet or caress them. But my Eskimo dog was "mine own," and, to tell the truth, I was a bit jealous when anyone else presumed to pet him. Our love for each other was genuine, while his devotion to me was something beyond my description. Always present, but never obtrusive, he seemed to divine my very thoughts, and what amazed me most was that from an untutored animal, among surroundings not at all ennobling, he became in a very brief period the personification of all that was noble and endearing in a dumb creature. Oh, how many times I wished that he was endowed with the gift of human speech, for to have been able to converse with him would have been happiness indeed. Yet we seemed to understand each other, aye better than many of my shipmates understood me. I was often taunted by them for my love for "that dog." But why should I not love him? He never lied to me, nor stole from me, nor maligned me. He was true as steel, and in many ways, especially in touring around the snow-clad island, his knowledge of trails, his scent of game, or of danger was far superior to mine. I had but to follow Zero and I was safe. Ever kind and gentle as a companion, in the presence of an animal enemy he was a demon incarnate.

In one of my hunting trips I fell over a cliff and was badly stunned by the fall. When I awoke to consciousness some hours afterward I found myself neatly covered with snow that he had blanketed me with, and cuddled up beside me was faithful Zero giving out to me the warmth of his body. But for his almost human intelligence and his prompt action I should have perished that night and the story of my Arctic dog would never have been written for these pages. Can you wonder that I loved that dumb animal? After that mishap, and when we went off on a hunt I harnessed him to a little light sledge that I made. It carried a fur sleeping bag, a couple of blankets, a pair of single-barreled pistols—there were no revolvers in those days—and a couple of days' provisions for us. Zero was very proud of his sledge outfit, and I often thought he wondered why I did not take a ride on it; but I had resolved that I never would, unless it was absolutely necessary. This outfit often came in very handy when we were "caught out." All

we had to do was to select a sheltered place, go into camp, open up the sleeping bag and Zero and I would pass the time as comfortably as two "bugs in a rug." I slept soundly feeling assured that if we were discovered by any prowling animals my trusty companion would give ample warning, so that I could properly deal with the intruder. We were never disturbed but once, and then finding that the watchman was on duty he cleared out before I could get a shot at it.

The time came when Zero was to be the pet and hero of the little brig. The chief mate with three of the crew one day took it into their heads to go gunning. I suggested that as the weather looked threatening they had better wait a day or two, but go they would and go they did. About four hours after they left the vessel a terrific storm set in, and all hands began to worry about the hunters, and even the natives on board expressed their doubts of the party reaching the wreck of the old whaler *Richmond*, of Cold Spring, that had gone on the beach the year before about two miles to the northward of where we were anchored in the ice. If they reached her it would be all well, for they would be well sheltered and have plenty of fire wood to keep warm. It would have been madness to send out a relief party in such a storm, so all we could do was to wait and worry, until the storm abated somewhat. For one I spent a wretched night thinking of what might befall my shipmates, for they were totally unprepared for such a storm, and besides had had no experience, as I had had, in sheltering themselves under such circumstances.

The hours wore heavily away and it seemed as if the storm would never abate. About 9 o'clock next morning I called for a volunteer rescue party from among the crew, and selecting a few of the natives and two dog teams we started out with heavy hearts but dogged determination to find our imperiled shipmates. We were bountifully equipped with sleeping bags, furs, provisions and some needed stimulants. I pinned my faith largely upon Zero to lead us to the trail of the lost ones. He seemed to realize fully the object of our mission and displayed much anxiety when we first began to prepare for the expedition and was very impatient to be off. When I harnessed him up his joy knew no bounds.

When at last we started the wind had moderated a little, but the snow was still falling and it was pretty cold. We laid our course for the wrecked ship, steering by compass, for each party was provided with a small boat compass. Of course we did not expect to find any trail on that route, for the snow that had been falling all the night and part of the day before had blotted that out and we must trust to "blind luck," so far as the white men were concerned, and trust to the Eskimos who were the leaders of the three parties. Zero and I made up the fourth. After struggling through the snow drifts for nearly three hours, some of the men were for returning to the brig and giving up the quest until the weather moderated, but by alternate pleadings and threats I urged them forward. Our crew men were suffering terribly, but I asked them what would they think if they were lost and we made no effort to save them. That seemed to appeal to them and they plodded on; betimes cursing the mate for starting out for a hunt when he had been warned of the coming storm. The party as a whole were fast becoming demoralized and the cold was telling upon them, and I began to fear that my attempt at rescuing the mate was to end in a failure and that our four shipmates would never see the brig again. All at once Zero stopped for a moment, and with a peculiar bark started off at right angles to the course we had been going. I felt certain that he had picked up a scent, and telling the boys to follow me we started after the dog, who was now some distance in advance of us. I fired off my musket, the signal for the other parties to come to us. We could hear Zero barking like mad and presently saw him come running back, and as he reached us we knew by his actions he had found at least some of the lost ones. We redoubled our speed and in about twenty minutes we were under the lee of a big hummock where Zero stood barking as I never had heard him bark before. Here we found, in a bunch, our shipmates, all badly frozen and two of them unconscious.

We at once gave each a good rubbing down with snow, gave them a drink of brandy and bundled them into the sleeping bags, piled the furs over them and started on our backward journey. It was too late and too far to attempt to reach the brig that night, and our party were too exhausted to attempt it, so I ordered all hands to the wreck where we could be sure of shelter, a good fire and a night's rest. I sent a small party ahead to kindle a fire, and as we approached the wreck we could smell the smoke, which was the forerunner of a cheerful warmth in store for us. Arrived we set to work to get our rescued shipmates into shape and succeeded, and, after a frugal morning meal, we wended our way back to the brig with the glad tidings that our mission had been successful. It was then that the skill of Zero as a trail hunter, as the saviour of the four men was told, and that he was caressed, fondled and even kissed; he was an idol and a hero. Then no one ever questioned my love for my Arctic dog.

When we got out of the ice in the late spring we sailed for Honolulu, and on the passage my faithful, yes my beloved friend sickened, and despite all we could do for him passed away quietly, his head pillowed in my lap. That death scene comes up to me as I write this, and my eyes are dimmed, aye wet, and I am not a bit ashamed

FREE TRADERS.

One of the drawings by Charles M. Russell for "Sixty Years on the Plains." Here enlarged from the size in which it appears in the book.

### Sixty Years a Trapper.\*

AWAY out in Montana, on the flanks of the Rocky Mountains, lives the only survivor known to us of the old race of free trappers, the men who perhaps more than any other class contributed to make this country what it is to-day. This man is "Uncle" Bill Hamilton, born in 1825, on the plains in 1842, trapper, Indian fighter, sign talker, scout and guide so long as there were fur, wild Indians, buffalo, Indian fighting, and a country not all cut up by roads and fences, as it is to-day. It seems curious to think of a man still living who was contemporary with old Bill Williams, Jim Baker, Carson, Bridger and a dozen other men whose names, until within a few years, were household words throughout the West. In the hurry of immigration and of business these men have been largely forgotten, and have ceased to be talked about by the dwellers in that vast region which lies west of the Missouri. Their names still live in the simple books which tell the history of the early West, but their personalities are remembered by but few.

W. T. Hamilton is one of these men. He is eighty-three years old, and from the time that he was twenty, has spent his whole life on the plains and in the mountains of the West. He was a skilled trapper, is an authority on Indian manners and customs, and has long been acknowledged to be the most expert sign talker on the plains. He still makes a trip each year into the mountains, and sets his traps with the same skill as in the days before California was known.

For many years Mr. Hamilton's friends and acquaintances have been urging him to set down in order the story of a life which runs back into a past which now seems so distant, and at last he has done so, in a volume just issued, entitled "My Sixty Years on the Plains." As may be imagined, it is a story of adventure. The trappers of those days were heroes, and

no man had a place in the camp of trappers unless he was ready to do a man's work.

William T. Hamilton was born in Scotland in the year 1825, but reached New Orleans when less than three years old and spent his early years in St. Louis. His failing health induced his father to make arrangements with a party of eight free trappers, led by Bill Williams and Perkins, by which the son should spend a year in the mountains, the son William having an interest in the outfit to the extent of one-third. Leaving Independence, Mo., in March, the party had been out only five days when they encountered Indians, and from that time on, except on the rare occasions when traders were met, or at the trappers' winter rendezvous, Indians were almost the only human beings seen by the party.

The first red men with whom they had friendly intercourse was a village of Cheyennes under the chief White Antelope. The chief's son, Swift Runner, who was about Hamilton's age, took a great fancy to him. For a buffalo chase the chief's son furnished Hamilton a good running horse, and here Hamilton had his first experience with buffalo.

Of the ride he says: "There was yelling and shooting in every direction; and many riderless ponies were mixed in with the buffalo, with Indians after them, reckless if they in turn were dismounted as their friends had been, by the ponies stepping into prairie dog or badger holes. Many an Indian has come to grief by having an arm or leg broken in this way. Ponies are sure-footed, but in a run such as this one, where over a thousand buffalo are tearing at full speed over the prairie, a dust is created which makes it impossible for the ponies to see the holes, hence the mishaps, which are very common."

Of the Cheyennes he says: "The Cheyennes were and are to-day a proud and brave people. Their domestic habits were commendable and could be followed to advantage by many white families." When Hamilton parted with the Cheyennes, his young friend Swift Runner presented to him the pony that he had ridden in the chase, and for many years afterward this was Hamilton's favorite war horse.

In those days there was intense rivalry between the various fur companies and traders, all of whom wished to secure the furs taken by the free trappers, the most skillful men of the mountains. Interesting and amusing accounts are given of the keen trading between two classes of men, each striving to outdo the other. Meantime, the trappers were constantly meeting Indians, Sioux, Crows, Shoshones, Pawnees and Blackfeet. The tales of Indian skirmishes and Indian battles are modestly related and are most interesting. One can im-

agine what happened quite as much from what is left unsaid as from what is told.

Most interesting and suggestive are the frequent matter-of-course references to the constant alertness of the trappers, and to the precaution constantly taken to avoid being surprised. No step looking toward safety was ever omitted. Each man knew what he should do, and did it. In fact, among a group of men of this type—picked men, the most skillful of their craft—the taking of precautions becomes a habit, and we do not wonder that, in their fighting with the Indians or in the difficult situations in which they so often found themselves, such men were almost always successful.

Before he had been long on the plains, Hamilton had become a good sign talker, and this skill, together with his youth, greatly excited the curiosity of the Indians. When they met the Shoshones the women continually asked him questions as to where he had come from and what tribe he had been raised with, evidently finding it difficult to believe that this was his first experience on the plains.

A party of the Blackfeet that had attempted to steal the horses of Williams' party and had been defeated, had killed two of five trappers the day before, and the plunder taken from the two had been recaptured by Williams' party. This was returned to the three living men, who were a Frenchman, a Scotchman and a Kentuckian. A comment on these men is interesting to the reader of oldtime volumes of plains travels: "I found the Scotchman and the Kentuckian well educated men. The latter presented me with a copy of Shakespeare, and an ancient and modern history, which he had in the pack. We had an abundance of reading matter with us—old mountain men were all great readers. It was always amusing to me to hear people from the East speak of mountaineers as semi-barbarians, when as a general rule they were the peers of the Easterners in general knowledge."

In those days the Blackfeet were the scourge of the trapper, and many of his conflicts were with some one of the divisions of this then powerful tribe. But there were other Indians, as yet ignorant of the white man and his power, who threatened the trappers, demanded pay from them for passing through the country, and generally made themselves disagreeable. Occasionally the trappers came in conflict with these, and owing to their careful system of camping, standing guard, and watching their property, they were always victorious. Besides the long rifles which they used so effectively, each trapper carried a pair of the then new Colt's revolvers, and besides this, they had in their camp, for use at short range, several double-barreled shotguns, which, with the traditional load of buck and ball, were

\*My Sixty Years on the Plains. Trapping, Trading and Indian Fighting. By W. T. Hamilton ("Bill Hamilton"). Edited by E. T. Sieber. With eight full-page illustrations by Charles M. Russell. New York, Forest and Stream Publishing Co., 1905. Price, \$1.50.

always sufficient to turn a hesitating into a fleeing enemy.

Three years passed, and then Williams' business took him into the Southwest, while Hamilton remained in the North with Perkins and a number of his fellows. Yet he did not lose sight of Williams, who, in after years sent him a manuscript containing the history of Williams' life among the Pueblo, Navajo and Apache—a manuscript of the utmost value—which was destroyed by fire at the burning of the Crow agency in 1873. As time passed, Hamilton's trapping extended further and further to the West, and at last the gold excitement which invaded the trappers' camp, led him and a number of his companions to start for California, determined to turn their rifle barrels into crow-bars. Not long after they had reached California, the Indians there began to murder miners, and the trappers, who still wore their buckskin clothing and so were noticeable people, were urged to assist in punishing the murderers. Here they rendered effective service and the killing of the miners soon ceased.

Besides the adventure with which Mr. Hamilton's book abounds, it is particularly interesting for the light it throws on the daily life of the trapper; how he set his traps, cared for his furs, packed them, and disposed of them; how he hunted, looked after his horse, resisted injustice, defended himself and revenged injuries. This book, which has just come off the press, is not less interesting than the old volumes of sixty or seventy years ago, which are now long out of print, and which the man interested in the West seeks for in old book-stores and pays large prices for. It has the same flavor of antiquity with these books, for in fact, it describes a country and scenes and incidents that can never be seen again, that are as much a part of the past as is the landing of Columbus. The volume, written by a Montanian, is one in which all Montana men, and indeed all Western men, may feel a just pride. It is illustrated by six sketches by C. M. Russell, the "cowboy artist"—most striking and effective pictures. Mr. Russell, as is well known, has for many years made a most careful study of Indians and Indian life, and these pictures are not only beautiful artistically, but are absolutely true to the old life.

It is many years since a book has appeared that is so interesting to the student of the early West, or to the hunter and traveler in western America out of doors. We believe that the volume will have a remarkable success.

## In Trapping Days.

From Wm. T. Hamilton's "Sixty Years on the Plains."

We finished our trapping in this section without being molested further, and then moved to Bear River. At this camp we came in contact with the Bannocks, whose chief was named Pocatello. It was he who fought Connor and his California volunteers in 1862. The result of the fight was that the Bannocks were simply annihilated. Pocatello escaped by swimming down the Bear River with the thermometer at 38 degrees below zero, unusually cold for that country.

These Bannocks made annual visits to the plains after buffalo, and were expert in the making of pemmican. They were also adept in collecting fine furs, more expert than any other tribe I have ever known.

It was now October and furs were beginning to get prime. We trapped Bear River and Malade River with good success; and then crossed Goose Creek Mountains and trapped Goose Creek and Raft River.

Here we met some Pah Utes, a branch of the Shoshones, but the Shoshones do not affiliate with them. They were a primitive race, making fire by friction between two sticks. We visited their village, as I wanted to see how they conducted their domestic affairs. They could not be compared to Sioux, Cheyennes, or Shoshones, for they were filthy in habits. Their cooking utensils were primitive in construction. For spoons they used the hoofs of elk and the horns of mountain sheep. They are credited with manufacturing pottery, but I visited many lodges and saw none. They had a few kettles, which appeared to me all they desired. Their arms consisted of bows and arrows and a few indifferent flint-lock guns. Many arrows were pointed with flint, which they poisoned by dipping the point in liver which had previously been poisoned with rattlesnake venom. I have heard that they extracted a poison from roots, but this I very much doubt.

They collect quantities of berries, and for meats they have deer, antelope, mountain sheep, jack rabbits and ground squirrels. The last two are evidently their favorite food, for I noticed large numbers of them hung up in the village. They hunt squirrels with blunt-pointed arrows. They are great beggars and thieves, and we caught them trying to steal our horses.

The streams were now beginning to freeze up, and we started for the Brown's Hole rendezvous, arriving there the latter part of November.

Several traders had come from the States with supplies, and there was quite a rivalry among them for our furs. Bovey & Company were the most liberal buyers, and we sold them the entire lot.

Besides the trappers there were at the rendezvous many Indians—Shoshones, Utes and a few lodges of Navajos—who came to exchange their pelts for whatever they stood in need of. Take it all in all, it was just such a crowd as would delight the student were he studying the characteristics of the mountaineer and the Indian. The days were given to horse racing, foot racing, shooting matches; and in the evening were heard the music of voice and drum and the sound of dancing. There was also an abundance of reading matter for those inclined in that direction.

Perkins had a fly-tent put up and made a counter out of dry goods boxes, and then said:

"Now, young man, you take charge of the store. You are the best sign-talker in the camp and can out-trade me. Besides, the Indians and trappers are all fond of you."

I was the youngest man in the camp and full of the Old Nick, the men would say, for I was continually playing some prank.

On Jan. 20 a fearful storm began, which raged for six days, scattering most of the horses in the hills, and made

both trappers and Indians uneasy, as Blackfeet, Bloods, or Piegiens were often in this section at this time of the year. These tribes are winter Indians, and storms and severe weather do not affect them in the least.

On the seventh day the storm abated, and about seventy-five trappers and Indians started out to gather stock. All our horses except six were missing. Among the six was my Runner, and mounting him I joined one of the parties composed of twenty whites and five Indians.

At Cedar Creek we struck fresh tracks of a large number of horses making due east to a comparatively level country. The Indians said to me in signs, "Blackfeet." We traveled at half speed for the next twelve miles and came to a ridge, from the summit of which we could see some Indians driving horses about one and a half miles away.

A draw to our right led toward the spot, so we turned up and at a rapid pace followed it to its head without being discovered by the Blackfeet.

When we reached the head of the draw, a Shoshone dismounted and crept to the brow of the hill and discovered the Blackfeet going over a hill beyond. Watching until they disappeared behind the hill, he signalled and we hurried forward to the next ridge.

From this ridge we could plainly see them and counted eleven. They had just halted to change horses, and when they caught sight of us they hurried to remount.

Our horses were the swiftest and we soon overtook them. They had no possible chance of escaping, and getting rattled they separated, which was just what we wanted them to do. Had they stayed together and fought they might have done some damage. As it was, they became panic-stricken at our sudden appearance. Here was a practical illustration of the efficiency of pistol practice at stumps. The trappers did not for a moment hesitate to charge the scattered Blackfeet; but each one selected his man and passed at full speed, delivering pistol shots at from twenty to forty feet distant.

Almost every shot brought down an Indian, who in the meanwhile attempted to fight with his arrows. In less than three minutes there were eleven dead Indians.

There was one Blackfoot mounted on a pinto pony who was leading the others, and as my Runner was the swiftest horse in our outfit the men yelled, "Bill, catch that pinto with that devil of yours."

The Indian at this time was 200 yards distant, and I headed for him, and it was a grand race for a quarter of a mile.

I then spoke to my pony, "Catch him." He needed no whip nor spur, and I never saw him do better. When within fifty feet the Indian wheeled and let fly an arrow, Runner would spring to the right or left by pressure of my knee and the arrow flew harmlessly by. Before the Blackfoot could fit another arrow to the string I was close to him and had sent him to join his companions.

We let the Shoshones do the hair-lifting, but we appropriated the plunder, which consisted of pipes, tobacco and pemmican. The pemmican was pounced upon by all, as we were good and hungry. "Silver Tip" had received a glancing arrow in the ribs, but it was only a slight wound.

The trappers and Indians gave me the pinto pony, and it was a good one; it was very fast and had originally belonged to the Utes.

We then started for camp, having recovered 115 head of horses and mules.

The five Indians rode through their village with the scalps tied on coup-sticks, and there was great rejoicing. They had had no hand whatever in killing the Blackfeet, but that did not matter. They recounted their bravery in recapturing the ponies and taking each one a Blackfoot scalp. We came in for no praise whatever from the women, as they considered that we were only assisting their brave young warriors. The dancing and feasting over this affair lasted for several days.

The Utes, on hearing of my catching the pinto pony, crowded around to see my Runner, and after looking him all over challenged me to a race. I was to ride against the owner of the pinto. Of course I accepted and the bet was made, I on my part putting up a mule. The trappers and Shoshones all backed me and put up blankets, robes and ponies. The track was selected, the word was given, and off we started.

Up to within 100 feet of the finish we raced neck and neck, but I was holding my horse in and the little imp was mad. When I finally gave him his head, he distanced the Ute by twenty feet, much to his disgust. When Indians lose they give up gracefully, and no exception was made in this case.

It was now time to lay in a supply of dejeuner and pemmican for spring, and about thirty trappers went to North Park and secured all the buffalo required. This kept all the outfits busy for some time.

## The Roasting of the Uneasy Club.

THE story of the race of the Uneasy Club with the Nebraska prairie fire calls up memories of the Illinois and Iowa prairies when things were wild and raw.

While the whole FOREST AND STREAM family rejoices to learn of their success in the mad race, there was really no occasion for them to bestir themselves so strenuously. Their guide or teamster should have understood the situation better, if he was a resident of the prairie country.

Of course, there are lots of us, who can vociferate, "I told you so!" now that the race is finished, and my own reason for rising up to "make a few remarks" is the wish to share with my brothers who may yet be entered for a similar race, the knowledge gained on the prairies fifty years ago. In days long gone, when the prairie was yet untrodden save by wild and savage feet, a prairie fire was often the grandest sight to be seen by mortal eyes. I have read the fine print of my mother's hymn book on a dark and cloudy night by the light of a prairie fire two miles distant; and I have seen a fire run over the prairies of northern Illinois and cover a mile of ground faster than could the best horse on earth.

In the year 1853 two men, Day and Lewin, were renters of the farm of Lew Tuttle, at Macedonia, Pottawattamie county, Iowa, on the west side of the West Nishnabotna River; when Tuttle's farm was the farthest one north on the river for a stretch of twenty miles.

Tuttle, himself also lived on the farm with his family. Late in the fall, when the grass had dried to tinder, a terrific gale came down from the north one Sunday morning, and the danger of prairie fire being ever present in the mind of the pioneer, the two renters walked up over the crest of the hill to the northward to take a look at things. Far away up the river a dense cloud of smoke was rising, and as it drifted off to the eastward they saw the timber of Big Grove, on the east side of the river, eight miles above them, plainly between them and the smoke, showing the fire to be at least eight miles distant. The buildings on the cultivated land of the farm were safe, but in the timber along the river were hundreds of rails and fence posts, split, piled and dried in readiness for fencing the rest of the farm, and if the fire passed the narrow neck of wild grass land at the north end of the farm between the river and a plot of forty acres of freshly broken prairie land, the fencing would quickly go up in smoke.

The idea of cross-firing this hundred yard strip of grass occurred to them, but the gale blew so terrifically they doubted their ability to stop the fire, once it was started. Day was a very swift runner, and he now ran back toward the house in search of Tuttle to help in the cross-firing. Half way across the farm of 160 acres he met Tuttle and another man hurrying toward the fire, and together they raced back over the hill.

Before they reached the gap, the fire had passed Lewin was found in the middle of the forty-acre field of breaking (freshly plowed prairie land) with his eyes bulging out "like peeled onions," and he averred that the fire came on sailing over the tops of the prairie grass, overlapping a hundred yards at a leap, with a speed no animal could equal.

The lower half of the grass stems, though perfectly dry, were unburned, the fire taking only the leaves and tops of the grass, and the gale whipping the fire out instantly, the first billow of flame flashed by.

In passing Big Grove the same fire caught two Indian boys who were on the prairie hunting, without matches. They ran for the river and were overtaken in the river bottom a short distance from the river. One of them with rare good judgment, seeing the race was hopeless, quickly selected a small plot of the shortest grass, wrapped his woolen blanket around his head and threw himself flat upon his face. Though fearfully burned he lived through the awful ordeal, and recovered completely. The other, overtaken by the flame, threw his gun one way and his powder horn the other, staggered on a few steps and fell, quickly burning to death. The shreds of his exploded powder horn were found a short distance behind him.

Ordinarily the prairie fire was a very innocent affair, the grass being often burned earlier in the season and when the wind was lighter; but once in a while came a fire that instantly became a matter of life or death to all living creatures in its path.

The question how to light a match and set a fire in such a gale is the all-important one in such an extremity, and no ordinary method will succeed. There is just one right way to do this. Snatch a handful of the finest, driest grass blades, sit down flat on the ground with your back to the wind and your feet apart, jam your cap or hat down between your legs close to your body, bend your body forward and hold your arms by your side. Hold the wisp of grass over the open hat and scratch a match on your pants on the inside of your leg, drawing the match toward you and into the hat as it ignites—the match, not the hat—and as the grass catches fire slip it out of the hat and into the grass close to you. Sit quiet till sure the standing grass is well on fire, jump to your feet, and as the tiny spear of flames spreads on like an arrow for ten or twenty seconds, step over the tiny back fire and run down the rapidly widening blackness, and as the pursuing wall of flame races by a hundred yards or more distant on each side of you, hold your breath as long as possible till the heat passes by.

Had their terrified driver done this trick, and the uneasy sportsmen in camp gone a few rods to leeward and duplicated it, moving their traps quickly to the burnt ground, instead of the awful race with death which ensued, the lively experiences of the next few minutes would have been simply intensely interesting to all concerned, and a pleasure to remember to-day.

KETTLE FALLS, Washington.

ORIN BELKNAP.

## Halloween.

THIS happened in my pedagogic days. Fresh from college and bubbling over with life, by some fatuous lapse upon the part of the trustees of a certain venerable New England academy I had been installed as mental and spiritual instructor and guide to as gallant a crowd of young rogues as ever graced Minerva's temple—which was much like striking a spark into tinder. One bright October morning there lounged into my room, with indolent, happy-go-lucky gait and grin of boundless good nature, one Aldrich, a black-eyed rascal who attended the academy as day student from the neighboring hills, and into my ear drawled this magic formula: "Amos G. is comin' up from State Line Friday night with his 'coon dawgs. His'n are the best dawgs about here. If you'n Lord want some fun you better come up to our house 'long about 6 or 7 o'clock."

In that year the happy ordering of things brought Halloween and a full moon together on a Friday night, the schoolboy's brief night of freedom, and upon my table lay a dainty billet inviting me to a Halloween party at the house of a gentle little lady of the village. I confess a base act. A plea of engagement for that evening and an implied regret were the unworthy answer to the kind note, and I like to remember that when it was known that I just went 'coon hunting that night, I was placed according to my deserts in the fair one's just mind, and no subsequent good conduct has redeemed me, even to this day.

Bursting with the joy of freedom from work, and filled with the tippie of cool October air, a rollicking company of three or four set out in the dusk of evening for the rendezvous. Across the brown meadow of the valley bottom, with its black stream, up through the gravelly moraines, clad in odorous pines, and into the

higher hills beyond, hills of ancient rock, lately gorgeous in their autumn glory, we came into the heights of twilight, and back of us the western sky lay in a flood of tender rose deepening into a blaze of crimson at the horizon—the departing glory of an accomplished miracle—an October day. Beyond the dark summits of the nearer hills arose in deepest purple the far off ridges of Berkshire, a tale of uncounted ages in their long, graceful sweeps lying against that splendor of color. The breathless hush of evening fell upon us all as we turned to our course, and here, behold! just over the Brimfield Hills hung our Hunter's Moon, a great disk of burnished silver in an azure field.

True to her New England traditions, Mrs. Aldrich had prepared for us heaps of hot, brown-crust biscuits with honey, doughnuts, apple pie, cheese, hot tea and cider—all of which make for New England character—and those being the halcyon days when we were so unwise as to eat what we liked, we laid to and accomplished marvels. And then came Amos with the dogs.

What shall I say of those dogs? My friends know that my ignorance of dog-lore is colossal. One was reddish with coarse, stiff hair and the other was black and white. They were of medium size, if there is such a thing, and, inasmuch as Amos did not seek to impress upon me that they were descended from the celebrated champion So-and-so, after the manner of dog men, I guess the animals must be classed as just dog. But they had their good points, as may appear later, and were as keen and full of life as the youngsters I had with me. Amos and the friend who came with him I cannot describe. What matter their antecedents so long as they were filled with the spirit and felt deeply the stirring call of October? They were men of the rocky soil and woods and hills, with an instinct for runways and cover, and a keen eye for woodland track and sign. Is any class of men more contented and happy?

Halloween—night of mysteries, mellow with legend and rite of our heathen ancestors! A flood of silver light filled space and made a strange world out of the varied landscape. There were deep black shadows full of mystery bred of the powers of mischief, and the half tones of doubtful security, but mostly the bright moonlit reaches where fays and elves danced in fairy circles or played at hide-and-seek among the shocks of corn. We could hear the faint rustle of their gauzy garments against the dry leaves when no breeze stirred. We could catch the glister of their jeweled robes in the frosty air. The play was going on all about us as we made our way down the enchanted lane leading to the pasture, a field of corn in the shock on either side.

Half-way down the lane there was an end of the merry jests and frolic, and partly eaten apples were cast away, for here the straining dogs were turned loose and we waited the whim of Dame Fortune. Both dogs at once mounted the wall on the right, eagerly sniffing back and forth, and then were lost to sight for a few moments on the other side. We heard them beating about the shocks, scurrying up and down, and soon, as with a definite purpose, both appeared again upon the wall ahead of us, crossed the lane and the opposite wall and were lost to sight and hearing in the twinkling of an eye. Anxiously as gamblers watch the turn of the fateful wheel we stood harking toward the steep wood that lay across the shallow valley, hearts beating wildly and blood surging into our straining ears. Amos alone seemed undisturbed. He calmly chewed his cud and expectorated with regularity and precision. The wait was not long. Soon through the still, cold air came the eager barking of both dogs, and our throbbing hearts leaped into our throats. "They've got him!" shouted Lord, and after a moment of exasperating deliberation Amos reckoned they had. It was enough.

Ah! the joyous riot of it! With a wild shout all hands clambered over the stone wall and raced pell-mell across the cornfield, even Amos losing his grip upon himself. We tumbled over the stake-and-rider fence beyond, galloped across the sloping meadow, leaped the low wall on the further side and were at once floundering in the shallow brushy bog. Splashing in the half-frozen mud, often knee deep in water, ripping through the thorny growth of roses and blackberry vines, tripping over tussocks and hummocks, by sheer rush of young brawn we won the other side and swarmed up the steep wooded slope beyond; and there, on the further side of the wall that we had followed up the hill, was one dog barking madly and furiously scratching at the trunk of a young chestnut tree. The other dog was busy further up the hill. Our disheveled band was soon gathered, scratched and torn and bruised and wet, breathless but eager still, and Amos collected himself. He looked the tree over. There was naught that I could see but a bunch of dried leaves well toward the top. He bade me watch that clump of leaves while he went up to see what the other dog had, so I perched upon the wall and proceeded to get my breath and quiet my nerves. I heard the sounds of excitement above me where the others had gathered about a great oak. From the excited calls and the confusion of snapping twigs and rustling leaves I knew that they were searching the dim tops. Finally the voice of Amos brought quiet and a disposition of forces, and after a brief suspense came the echoing report of his gun. Instantly there was a wild melée of boys and dogs for half a minute, then the warning voice of Amos again and a dull thud of some hard body against a tree trunk. The clamor subsided and I knew it was all over. The oak was abandoned and the crowd descended upon my perch.

My cluster of leaves had not stirred in all the disturbance, but Amos was in command. He distributed us about the tree and disposed the dogs to advantage, loaded his gun and fired at that bunch of dead leaves. The phantom at once materialized into a whirling dark mass that came screeching down through the branches of the tree and landed with a dull thump upon the ground. And then, my stars! there was a lot of trouble right off. For undiluted scrap I commend a 'coon and Amos' red dog. Those two "critters," observing none of the conventions of the situation, just took a "grab holt" of each other and became a nebulous mass of snapping, snarling, screeching, biting gray and red paws and heads and tails and hair, and in a whirlwind of dry sticks and leaves went rolling down the steep slope. It took my breath away. I never in my life saw things happen so fast. And in a moment that whole crowd of men and boys, with a

wild whoop, went racing down after them, slipping and sprawling and shouting, Amos in the lead, giving vent to unseemly speech. "Oh, where was my pedagogic decorum! I was not the last one down, but Amos was the first to reach the log that had checked the whirlwind. With quick eye and sure grasp he made a sudden dive into the struggling mass and, shaking off the dog, with a full, strong sweep, he bumped the 'coon's head against a maple and there was quiet.

Flushed and tumbled and hot with the lust of the chase we took account of stock. There were no lives lost or limbs broken among the seven human animals—and that was a wonder. The dogs also were in fine fettle. The red one had but a few slight cratches, and I cannot understand how in that fury of scratching and biting there was anything whatever left of either dog or 'coon more than remained of the Kilkenny cats. Gathering lost hats and caps and repairing as well as might be with a stray pin or two the torn garments of greatest importance, it seemed eminently fitting to seek refreshment, and the nearest refreshment was stored in the doughnut jar and cider barrel at the house. Thither then we marched in proud triumph.

In honor of the genius of the New England kitchen we made our sacrifice of doughnuts—delicious breeders of awful indigestion, fatal as the Siren's sweet song; and of the clear amber fluid—blood of rosy-cheeked apples, returning the warmth of the summer sun and the fragrance of balmy southwinds, tintured with the breath of orchard blossoms—we poured out a libation to Pomona and drank to the great god Pan. Then off again for another turn, through Titania's Lane and into the pasture. The path was an old cart road leading along the side of a hill into a narrowing valley and a wooded glen beyond.

How like a conjurer delving into the mysteries of an unseen world is a hunting dog in the field, how keenly alive to a world of sensation utterly beyond our human experience. Our two friends searched from every rock and log its secret, and their busy noses drew from each clump of bushes the story of its visitors of that night. With wagging tails and sniffs and whinnings they gave signs of their pleasure, and at last a business air of decision gave assurance that their search was not without reward. They were off up the path in a tremendous hurry and out of sight. As the moon rose higher the clear night became brighter and the frosty air had a delightful tingle against our hot cheeks. The wait was short this time and the call urgent. Like a troop of Fauns and Satyrs, or the motley crew of Circe's ill-starred son, we went stringing through the moon-flecked wood. A faulting of the aged rock made a sheer cliff on our right, and at the foot of a black hemlock that sprang from the top of the cliff and overhung we found the dogs.

There was no doubt that they had something up that tree. What it was no one could say, for all was black as blackest night in the thick ramage. The adventure just suited Lord. I never yet saw the situation of untried hazard that would daunt this lad. His coat was off in a second and his shoes in two more, and, seizing the short gun from Amos, he was in the black tangle before we could distribute ourselves. With one dog Amos and I went below the ledge and the others gathered at the top. To the accompaniment of much gratuitous advice and befogging counsel from all below, Lord worked his way through the dense branches. We could hear his grunts and deep pantings with the snapping of twigs and small branches. Progress was slow, but suddenly we heard: "Hi there, you little rip!" and he shouted down to us: "Here he is." I nearly put my hand on his head. He was here in a crotch of the tree watching me. Look out! He has run out on a limb and I am going to fire!" There was a second only of silence and then the blaze and resounding report of the gun. Right between me and the open sky a great black mass came whirling down. I could have caught it in my arms without moving, but fearing the 'coon would think I was the red dog and do violence to my already reduced raiment, I side-stepped and he reached the ground unchecked. The dog was upon him without delay, and so was Amos, who lost no time in finding the varmint's hind legs and swinging him hard against a near tree. In place of the bump there was a soft, wet, swishy sound and we were both spattered all over with blood. Lord had held his gun so near the 'coon that he had blown his head completely off.

Just beyond, outside the wood, was the road. It seemed hardly decent to exterminate the race of sportive 'coons that night. In her kindly mood Dame Fortune had smiled broadly upon us, and it is never wise to press the good lady too closely in such a mood. And Amos was far from his fireside. So we declared the hunt over.

In our strenuous occupation, and in the dark of the woods we had not noticed how wonderfully light the night had become. Stepping from the shade into the moonlight it was as though we passed suddenly through gates of pearl from a world of riotous red life into a strange silvery land of dreams and fancy. Hardly a star could be seen in the bright heavens, but over all the silver light poured in radiant glory. Every tree and hill, every hedge and fence and the buildings of each farmstead that dotted the long stretch of valley below us stood clear and cold in the strange light. Three men making across a hillside pasture a mile away we saw distinctly, and in the stiffened mud by a wet crossing, where the cows drink at a tiny watercourse, were the fresh tracks of some foraging 'coon daintily impressed and like nothing so much as the imprint of a baby's rosy foot. The ethereal beauty of it all laid a gentle finger upon our flushed spirits. The fairies' dance was over; the great god Pan was dead. Even my irrepressible boys felt the holiness of the moment. It laid hold on the imagination and made each of us deeply sensitive to the unspeakable charm of a perfect touch. On such a night, over such hills, perhaps, the shepherds of old watched the wondrous star, their flocks lying about them in the bright moonlight. In the stillness and the bright splendor lay the mystic spell of the brooding East. As from some "Pisgah, that is over against Jericho," we caught for the once a glimpse of the unknown land, tasted a beauty never to be lost, gazed from heights rarely to be scaled. One might almost hear "the angel Israfil, whose heartstrings are a lute."

It was the warm glow and ruddy light of the kitchen that recalled us, and soon we were strolling home, down through the woods where murmured the voices of the

night, across the misty meadows and up into the silent village. Then came:

"Tired nature's sweet restorer—balmy sleep."

So is Halloween a magic word to me. It calls back the years of riotous young blood. It paints again the autumn glory of those Monson hills. It means a Hunter's Moon and dogs and 'coons—keen-eyed, fun-loving little busy-bodies that can fight like Fuzzy-Wuzzy. But more than all, and best of all, I like to dream of that perfect night, of the transcendent glory of my never-to-be-forgotten Eve of Allhallowmas.

## Camp Surgery.

MEMBERS of the medical profession usually avoid discussion of technical points in the lay press, as it subjects them to criticism from their colleagues, and very properly. When Senex described a dangerous method for treating a punctured wound, however, it seemed to me best to say a word, and this as usual has made it necessary to say more, for in FOREST AND STREAM for Oct. 21 Senex asks what one really should do when he has received a penetrating wound made by a rusty nail, "miles away from the surgeon—an emergency case, which might result in lockjaw unless scientifically treated." The things to do would be: (1) Pass a sharp knife blade through the fire for a moment in order to destroy bacteria that are on the blade. (2) Make a free cut down to the bottom of the puncture, and instruct the patient to swear while this is being done. The reasons for the procedure are because the free incision allows blood serum to escape freely. Blood serum is destructive to bacteria, so long as it is being thrown out freely, but after being dammed for a few hours it changes character, and then becomes what we call a "culture medium" for bacteria, aiding their development. If the patient swears while the cut is being made, it relieves nervous tension which otherwise would find demonstration in untoward muscular motions. (3) If one happens to have a phial of carbolic acid in the camp kit, swab the entire cut with pure carbolic acid, and half a minute later neutralize the carbolic acid with alcohol, or some alcoholic beverage. (The latter may be taken along for the purpose. An old mountaineer told me that whisky was a sure cure for rattlesnake bite, if one used it in the right way, and the right way was to "always have it in ye jest before ye're bit.") The rationale of procedure depends upon the immediate and complete germicidal influence of carbolic acid. It would go beyond the point of usefulness if its action were not checked before tissues are damaged, but alcohol neutralizes carbolic acid as quickly as water puts out fire. The same treatment of swabbing with pure carbolic acid and then neutralizing it in about half a minute with alcohol will cut short any attack of superficial erysipelas that might begin while one was in the woods. Carbolic acid is, however, a dangerously powerful remedy for a layman to handle. We see much damage done by it here in the city, where people step into the drug store and buy it on its reputation as a germicide. The druggist thinks that the buyer only wants it to commit suicide with, and does not realize that it may be used for anointing the wounds of some innocent child.

(4) After the punctured wound has been freely opened, and bacteria destroyed by an active germicide, the patient is then pretty well protected against further infection by the flow of blood serum, but at this point the boric acid of Senex would come into play. It is a very harmless antiseptic, and the wound can now be filled with it, and an absorbent dressing of some sort applied. The necessity for the absorbent dressing is because absorbent materials take away from the wound the blood serum which would soon become a culture medium, and they spread and dry it so that bacteria cannot grow in that field. The bacteria that like to get into the field are of many sorts. There would be no further danger from the lockjaw bacteria after the primary sterilization. Boric acid would aid the absorbent dressings by its destructive or at least inhibiting effect upon bacteria which did get into the field.

Powdered dry dead wood makes a good absorbent dressing, but a safer dressing would be made by boiling a piece of an old coat or shirt for four hours in strong soda solution. The soda saponifies gum resins in cotton and linen fibre, and as soon as saponified they become soluble and leave the fibre. The boiling destroys all bacteria, and the fibre freed from gum resins becomes extremely absorbent.

(5) The bacteria of lockjaw do not grow in all soils. In some localities, as on the eastern end of Long Island for instance, they are very abundant. If one has received a punctured wound in some locality where the tetanus bacteria thrive, and if the wound has not been treated in the best way, he should make all speed to get to some point where the physician can employ antitoxin on the very first appearance of symptoms of lockjaw. It is then a manageable disease. We all have to meet bacterial invasion hourly, and nature has equipped us for the battle against different bacteria. When any one bacterium has gained headway, a special agent against that bacterium is manufactured especially in the blood-making organs. We make use of that fact by growing the bacterium in some other animal, and then taking the fortified blood serum and injecting it into anyone who is not making the antitoxin rapidly enough himself. In that way we get ahead of the lockjaw bacterium, by keeping on hand a stock of special antitoxin collected for the purpose.

Allow me to say to Senex that his article was extremely well written for a layman, as well as it would have been written by many physicians, and I wished only to correct the one dangerous bit of advice. In these days of advanced medical knowledge not even the physician can feel at home in many subjects. In any sort of difficult or obscure case we may have to employ several specialists ourselves before giving an opinion, and with physicians as with lawyers, one feels well equipped if he simply knows who knows. Just as investment has become a science, so it has become a science for the physician of to-day to know who knows, and the day of cheap, kindly medical service has passed.

# NATURAL HISTORY

## Compass Trees, Feathered Worms and Mudchucks. W

THE rule that the slender tips of hemlocks point to the rising sun holds good, not only in the Adirondacks, as Mr. E. A. Spears has remarked, but here, too, in the Great Smoky Mountains. I agree with Mr. Spears that prevailing winds have nothing to do with this phenomenon. Wherever the situation admits direct sunlight all day, a large majority (say nine out of ten) of our hemlocks incline their tips toward the east or southeast, generally a little south of east, and this is regardless of whether the trees are exposed to the full force of prevailing winds or are sheltered from them. On steep westerly mountain sides, and in deep, narrow gulches shaded by steep mountains on the east, this rule is not reliable, because the morning sun is shut out. I am informed that pines and spruces also have a tendency to point their indexes toward the rising sun.

Hemlocks reach their fullest development here in the mountains of western North Carolina, where they abound along the water courses, up to about 3,500 feet, sometimes higher. Trees three or four feet thick and from 100 to 125 feet high are common in my neighborhood, and occasionally even larger specimens are seen. There are no sawmills nor tanneries in our vicinity (alas! there soon will be), and the native mountaineers make almost no use of the hemlocks. In the clearings one sees scores of these giants standing dead and naked, having been girdled but not felled. The bark of these is gathered, as it falls off, by the women and children, to be used for cooking fuel, as it makes excellent coals. The wood is allowed to rot (unless the settler has a cookstove), as it pops too violently to be safe in an open fire-place. However, here and there a big hemlock is found that disobeys a general law of its kind by being straight-grained instead of splitting spirally, and such are used for clapboards. It surprised me, when I first came here, last year, to see hemlock clapboards five or six feet long, six or eight inches wide, thin as a shingle, and not a bit winding. One of my neighbors has recently inclosed a ten-acre field with a fence of hemlock palings, all split with a froe.

Our mountaineers call this tree the "spruce pine." The word hemlock, to them, means the tall plant *leucothoe*, which grows rankly along the creeks wherever there is a road or trail. This *leucothoe* is poisonous to cattle. In the autumn its leaves turn to a splendid bronze that lasts all winter. Children gather the branches, along with galax, and sell them to shippers, who send them north for Christmas decorations—some of these go even to London, I am told.

Have you ever seen chestnut wood that burns well when green? I never did until recently. On the backbone of the Smokies, up to the balsam zone (which begins at about 6,000 feet, hereabouts), all deciduous trees are of exceptionally dry, hard and tough nature; beech takes fire like birch, and even green chestnut burns readily, though with a great splutter. Yet the climate of the Smokies, taking it the year through, is the wettest in the United States, save along western Florida and the north-west Pacific coast.

Speaking of tree names, I used to wonder what gave the blackjack oak so meaningless a name, until one day I ran across a passage in an old pamphlet that suggests an explanation. In 1791, Lieut.-Col. (afterward the notorious General) James Wilkinson was sent on an expedition against L'Anguille and the Indians on the Wabash. In his report to Governor St. Clair (dated "Frankfort-on-Kentucky, Aug. 24, 1791") Wilkinson describes a part of his march in the following terms:

"The whole part of the country, from the Wabash to the margin of Eel River, being a continued thicket of brambles, blackjacks, weeds, and shrubs of different kinds, it was impossible for me to get a satisfactory view." A little farther in the narrative he says: "I found this town scattered along Eel River for full three miles, on an uneven scrubby oak barren, intersected alternately by bogs almost impassable, and impervious thickets of plumb, hazel and blackjackets."

The term blackjack is quite appropriate to a tree the bark of which is as dark as the black oak's. Blackjack is apparently a mere abbreviation, to save breath. The fact that Wilkinson used both terms within a page or two of each other seems to show that the name was then in transition to its modern curtailed form.

Changing the subject from trees to insects, and things in general, I note that my old friend George Kennedy has found a "rattlesnake ant" that stings knife-blades and (didn't he say?) leaves the stinger in. And it is sure pizen, too! Verily, a fellow sometimes does see strange things in Missouri, when he hasn't got a gun. I used to see 'em myself, when I lived there; though I have no personal acquaintance with this particular varmint. Now, I am far from demurring to anything that George may claim for his bug. I don't doubt in the least that he saw it experiment hypodermically with the knife-blade, and that its injection was properly toxic. What I want to know is, what became of the knife? I am making special researches in the line of "snake-master yarbs" (of which, more anon), and wish to learn if Kennedy used one in this emergency; or did he stick the knife in a live chicken? or did he pow-wow? or fall back on that sixteen-dollar medico-surgical kit? By the way, George, please mail me a copy of your pamphlet when you get it out. I find these things very interesting.

But, speaking of seeing things, North Carolina sees Missouri and goes her one better in the small deer line. We haven't a rattlesnake ant, but we have a worm that wears feathers, and they are its own growth of feathers,

too; besides which it is a pizen worm, whose bite swells people up in a few seconds, like snakebite. You need not take my word for this, for I haven't seen the monster; but the Asheville correspondent of the Chicago Tribune has this to say about it in a recent issue:

### WORM HAS A COAT OF FEATHERS.

IT HAS A POISONOUS BITE, TOO, AS MANY NORTH CAROLINIANS CAN TESTIFY.

ASHEVILLE, N. C.—A feathered worm has made its appearance in different parts of the State, and a number of people have been made ill by its bite.

The insect is not unlike a white earth worm, but has a covering of brown down similar to that of a young bird. Its bite is so poisonous that in a few seconds after receiving the wound the victim swells enormously and displays symptoms not unlike those of snake bite.

The worm feeds on maple trees and rose bushes. Its presence on the latter accounts for the number of women victims. No one is able to classify the insect. Several specimens are being prepared for shipment to Washington for examination to establish its identity.

Wonder what would be the result from burbanking this North Carolina wum with the Missouri sting-bug. Wouldn't it be a corker?

My personal explorations in the domain of invertebrate zoology have yielded nothing noteworthy of late, unless it be a fishworm two feet long that I picked up on the summit of Siler's Bald, nearly 6,000 feet above sea level. This worm, aside from its unconventional length, and its color, which was almost white, looked to my unscientific eyes just like an ordinary earthworm. The natives say that these big worms are common on the high mountains hereabouts, but are never seen elsewhere. Like all other well conducted worms, these live in the ground. They do not wear feathers nor stingers; but I won't say that they couldn't if they wanted to.

By the way, do all of you people know how to cook a mudchuck? If not, your education has been neglected.

The other day Uncle Bob Flowers came over from Bone Valley, chasing after a wild cow. I headed off the cow, Bob roped her, and then I invited him in. Just then John Cook came along down the trail toting a five-foot muzzle-loader and a big woodchuck.

"Uncle Bob," I inquired, "did you ever eat a woodchuck?"

"Reckon I don't know what them is."

"Groundhog?"

"O la! dozens of 'em; but I never done heered that name afore—some of our folks calls 'em mudchucks. The red ones hain't good, but the gray ones! man, they'd jes make your mouth water!"

"How do you cook them?"

"Cut the leetle red kernels out from under their fore legs; then bile 'em, fust—all the strong is left in the water—then pepper 'em, and sage 'em, and put 'em in a pan, and bake 'em to a nice rich brown, and—then I don't want nobody there but me!"

Well, I must stop writing, and bake some bread for tomorrow. At daylight I start on a bear hunt that may last a week. Will range from Thunderhead to Clingman Dome, and over the abutting ridges from Killpecker to the Welch Divide, or possibly to the headwaters of the Okona Lufty, where the Qualla Cherokee reserve begins. Will still-hunt two or three days and then join a party on the summit of Siler's Bald, and hunt with the best pack of bear dogs in North Carolina, the Plott hounds from Waynesville, and Little John Cable's three powerful half-breeds, the former great trailers, the latter the most valiant fighters that I have ever known. What do you think of a young dog that, tackling his first bear, bites it back of the fore leg, through hair and hide, clear through into the "holler," leaving a hole through which you could run your hand and grasp the bear's heart? I have seen that. The dog was badly mauled in the doing of it, but he helped fight and tree another bear the next night.

The still-hunting, however, is more to my taste. It is not all of hunting to hunt. Wish some of you foresters and streamers were with me. It is lonesome here.

HORACE KEPHART.

MEDLIN, N. C., Oct. 16.

## Queer Doings of the Grouse.

SAYRE, Pa., Oct. 21.—*Editor Forest and Stream:* Speaking of crazy grouse in October reminds me that as for what I see of them when the season opens they seem so crazy to get away that a brick house would hardly stop their flight. But the fact remains, nevertheless, that they do some strange things. Sayre is situated between two rivers with mountains on each side of the town, the nearest three-fourths of a mile, the other two and one-half miles; the rivers are between the mountains and the town. In October, 1891, a ruffed grouse flew through the dining room window of George Carroll, living in the center of the town, at about 6:45 A. M. The direction from the mountain is east and west. The window was in the south of the house. In October, 1903, a grouse flew through the cellar window of Dr. A. E. Murry, at 11:30 A. M. This bird came direct from the east side of the Susquehanna River and was seen for some distance before it took its fatal plunge through the window.

## The Biography of a Bear.—VI

ONE of our objective points was a stopping place on the road called Summit Spring, where an old pioneer, Henry Jones, had established a summer home and cleared several acres, seeding them to timothy. His hay was readily disposed of to a transitory class of people known as Oregon emigrants—they were in the main people who found it cheaper or more to their fancy to live upon the road than elsewhere. I would like to say some things about them, but will let it go unless they come across the firing line of this history.

Henry Jones happened to be my grandfather, although he sometimes looked at me as though he were at a loss to account for or realize it. He was undemonstrative generally, and he could readily adapt himself to good fortune without display of excitement. I never knew him to boast about it. He accepted me and some of his other relatives with a modesty that might easily have been construed as verging upon indifference, or resignation. People's ancestors are sometimes reticent in advanced age. After long enjoyment of a blessing many of us take it without manifesting much enthusiasm.

Henry Jones had been among and of the first settlers of Ohio, Illinois, Indiana and Iowa—and finally of California. As soon as civilization became a little intense in a place he always moved further West—as long as the West held out. He sojourned in western territory, chiefly in Illinois, long enough to rear a family of seven children, but meanwhile made three trips across the continent to California with ox teams, each time being the guide and captain of his train. His first trip to California was close in the tracks of the pathfinders—Carson and Fremont—and he had known and affiliated with both of them. In 1849 he had established a trading post at Lower Springs, a place first selected for the site for the town of Shasta, but that town was eventually centered two miles west.

What the old gentleman did not know about pioneer life and the emergencies and difficulties of the border is not of much consequence. With the ax and the rifle he was as good a man as ever blazed a trail, built a log house or defended a post on the American frontier. In council as well as in camp he was a leader, and one of the main props and advisers of many settlements and towns. He maintained his trading post and store near Shasta from 1849 or 1850 until 1872. He sold many a cargo of flour for from \$20 to \$50 per barrel, potatoes at a dollar apiece in gold dust, and all other articles of food and necessity at proportionate prices, and yet he never accumulated to himself more than a few thousand dollars—not half as much as a corner cigar store will clear in a few weeks under our improved system of commercialism. If one of our modern cashiers could have his opportunities he would own the earth, or be in cahoot with Mr. Rockefeller. And then he would reach for heaven.

Henry Jones at the age of seventy and later was felling timber, clearing and cultivating his mountain ranch, his ambitions centered in his homestead of a few acres in a forest in the Shasta Mountains. But for many years, in connection with his trading post, he repaired and made guns and perfected several mechanical inventions of importance. In his time arms of all descriptions, from the flintlock blunderbuss to repeating magazine rifles, were in use. In his shop at Lower Springs, near Shasta, he had at one time a collection that would be of historic value had it been preserved until now. When a boy of twelve I remember examining with awe and wonder the battered and scarred flintlocks, the later "yagers" with nipple and percussion "hat" fulminators, cast-iron muskets that I could not lift, pepper-box revolvers with six or seven cast-iron barrels that revolved, Colt's revolvers with cap and round ball and of all degrees of development. There were also the later Springfield muskets and other army guns, some of which used cartridges that came packed in wooden blocks and the powder encasement of which was a kind of parchment that had to be bitten off before the charge was put into the muzzle of the gun and rammed home with an iron ramrod.

There were old bayonets and swords, fowling pieces inlaid with engraved gold and silver and with finely engraved ribs and mountings. There were broken odds and ends of all sorts, boxes filled with curious bullets, bullet molds, percussion caps, cartridges of curious foreign make, powder horns and chargers, dismantled gun-sights, locks, stocks and barrels. There were horse pistols, the muzzles of which looked like the entrances to tunnels underground, only more disparaging. Some of these weapons were almost large enough in the bore to have offered a place of refuge if their owners had got in a tight place outside of them. Some of the horse pistols were merely sawed-off rifles. There were short pocket derringers in which one could see the ball, which looked as though it would come out with considerable impetuosity, whether you wanted it or not.

Perhaps the most interesting things in the collection were the heavy long barreled, round ball, muzzle-loading rifles, on some of which the stock extended to the muzzle, while many of them had the heavy, octagonal barrels of soft metal commonly used in the West from 1850 to 1870, or later. Some of them were battered and broken, and all their parts worn smooth with long usage. They were mended with wire, screwed plates, with wooden pins, with buckskin strings. What a history might have been woven from these things—every one of which had crossed the continent and many of them other continents and oceans—by the antiquarian or student fitted to weave it. How they might picture the western half of America if they could speak of the incidents of forest, mountain, field and flood. What tragedies and triumphs of conquest and defeat and despair! What a death-roll of destruction was implied in their very ruin and junk! The men who could tell about them are dead—many of them

in their full pride of strength—and with their boots on. Those who lived through the era of which these relics are reminiscent were often the men who had learned the value of reticence, the significance of silence. They left it to their followers and their posterity to be garrulous, and some of us can do it; but the few men now living who could say something are too old and feeble. I can detect the silver hairs about my own temples, and feel somewhat antique at this period.

My grandfather sometimes related incidents of history of the frontier in its expansion from Ohio to California, but he was nearly always too busily engaged to say much of the thousand events with which he had been identified. Aside from a few anecdotes connected with his meetings with Carson and Fremont, and a few notable Californians, he confined his narratives to prosaic accounts of the weary trips across the plains, the desert and the mountains, to side-hunts for buffalo, antelope, deer, bears and sometimes Indians; and of later events in the mines. He had taken a part in some skirmishes with the Indians, but his accounts of these greatly modified the romantic pictures in the story books and of most frontier literature. What a pity it is that so few of us can confer with and listen to the words of our grandparents after we have reached an age of understanding or rationality.

The grandfather of seventy or eighty may speak of things of interest to the man of fifty or sixty, but the average young man of twenty or even of thirty gleans so much from the present, or thinks he does, he has no storage capacity for antique materials. He faces the front and does not live in the past—not he. His attitude is a good one, but his pioneer ancestors had to watch and comprehend their surroundings, to keep an eye on the trails over which they had passed as well as upon the untried forward and flanking vistas. They did not consider every blaze upon every tree altogether trustworthy. They had learned by collisions in which they were personally concerned that every hollow in the hills is not a profitable or judicious rendezvous. The young man of to-day is full of information that he has mistaken for wisdom and sometimes for discretion. That is one of the reasons why I am permitting myself to advance in years with some glee.

My grandfather to the last would rather tell a humorous hunting story than dwell upon his serious experiences and important adventures. At seventy he could hit an inch bullseye with the rifle at fifty or seventy-five yards, or line bees to their knothole in the tallest tree; he could walk fifty miles, and, if necessary, repeat it the next day; he would walk where he might have ridden, or for the very work of it. Splitting rails, posts or shingles was to him recreation and diversion, while the use of a cross-cut timber saw was one of his vices. I could never understand his peculiar tastes in such matters; I am positive he did not inherit them from my side of the family. I have done some of those things, but I do not allow them to influence me any more than necessary—not if I can help it. I would rather never see a cross-cut saw than to come into close communion with one, for when I do I speak without reserve or contemplation. Alongside of a cross-cut saw, a flail or a treadmill is one of the most fascinating methods of suicide. It makes no difference which end of a cross-cut saw you become attached to, you at once feel sad, then utterly despondent. If the other fellow behind the log on the other end of it says: "Say, if you're going to ride, don't drag your feet," then you feel really depressed. Of course riding a cross-cut saw is not dissipation when indulged moderately, unless the other fellow is riding it, but then it is positively criminal, a direct attack with a deadly weapon. I could never see anything fascinating within 100 feet of a cross-cut saw—no matter which end you measured from. They are made in Philadelphia and shipped away from there immediately.

Men will do almost anything for money, even in Philadelphia, but popular indignation and cross-cut saws go hand to hand—the brotherly-love people should know that. I did once see a saw—but I cannot afford to continue with the subject. If mankind had not wasted so much time and vitality with rusty sheet-iron saws, hand-saws, wood-saws, see-saws, old saws, proverbs, religion and politics, he might now show some proof of his evolution along Darwinian lines, he might produce an example with which to establish the first proposition, namely—that evolution is ascendant, progressive expansion. But the saw, the sawfish, the sawbuck and the sawyer are all indicative of quadrumanous declension—that is a most singular and choice epithet—it is the best I can do with which to embody my conclusion in this matter. If that does not serve, and I am again impelled to take up this topic I shall look up the inventor of saws and see whether there is virtue in a whipsaw.

About 5 o'clock our caravan arrived at Summit Spring (Jones') and the little group of log houses. We were covered with dust, floundering in it; why, we were full of it. Enochs shouted to me in an effort to ask something, and he looked like a roman candle shooting saffron colored powder, and smoke and red mud. When Dick jumped off the wagon it was like a cartload of ashes being dumped in a yard, while he remained smoking like the chimney to a brick kiln. Our team, originally a black and a gray, were now accurately matched in color—smoked buckskin—while Jack and the dogs were moving examples in reality—real estate. Possibly there is a point there, somewhere, but I fail to detect it, so let it pass. We were the most harmonious combination of color extant, but we viewed ourselves at a disadvantage, as our eyes had embankments or bulwarks surrounding them, over which we peered to get such glimpses as we could. After we had shaken ourselves, coughed, sneezed and otherwise replaced some of the road as best we could, we took off our hats and shook the remainder of it over the rockiest places near us.

The first thing to attract our notice was a log, about fifty feet in length, that had been hollowed out with the ax and was set upon trestles for a water trough. To it other smaller troughs, likewise hewn from smaller trees, conveyed water from the spring, and the big log was brimming over. It was coated with moss of emerald green, while the flashing silvery water wetted the moss from one end of the great log to the other. The setting sun, that managed to sift a few of his last rays through the forest, made it look like some fallen pillar from some mighty temple—a jeweled fragment of stupendous mag-

nificence. When we drove up to it our horses plunged their noses and faces into the water up to their eyes, and then they very promptly took them out again, champing their bits, snorting, and shaking their heads; and they restrained a good portion of their eagerness.

The trouble was that the water of the spring is nearly ice cold at all times, standing constantly at a temperature of two to three degrees above freezing. Horses can only take it a little at a time, warming that little in the process before they can trust it implicitly and let it into their inner sanctum, or whatever it is they do let it into. Men are at the same disadvantage and we, as eager as the horses, were forced to adopt the same process, and even then it made our teeth ache in all their weak places and fairly benumbed our lips and mouth as we dipped into it.

As soon as Jack got out of the wagon he made for that log full of liquid frigidty. We watched, to note the astonishment and contraction that he would display when he got at it, but we were it, not Jack. He got upon the trough astride of the water, lapped a little and the next instant he was in it, entirely submerging himself, diving and plunging from one end of it to the other, and back and forth, sending up flashing showers and streamers of the fluid silver. It seemed to be the best thing he had ever found, and he wouldn't even shiver a little for our benefit. After he got out of it with a glance of compassion in our direction, he got back in again, and had some more.

The spot was like a deep cleft in the mighty forest. Upon every hand stood towering pines and firs that shut off all distant perspective, all horizon, and left only a little strip of sky straight up overhead. A man could get about as comprehensive a view from the bottom of a well, if he was interested in the heavens exclusively, but a forest like that is not without interest to a close observer. The largest and tallest tree near by was a dead sugar pine, a tree that had doubtless died of old age. It had been dead for twenty years but still towered to the sky, holding up great white arms broken and bereft of bark. It was a giant of its tribe, between eight and ten feet in diameter, and yet solid at its base, though the bark, five or six inches in thickness, hung from it in strips and patches. Much of the body of the tree was bare and smooth, and bleached by weather and sun until it was white. The forks of branching boughs were at intervals filled with wreckage from the top, fragments of bark, twigs, the abandoned nests of squirrels and birds, and trash.

When Jack had enough of the water he clambered out, ran up the road, and chased about by himself, the dogs being too exhausted to take part in his gambols. The more he ran about, the more filled with excitement and delight he seemed, until he apparently went crazy. He selected the gnarled and giant pine, and up its dangerous trunk he went, with all the momentum he could generate. For the first forty or fifty feet the tree was almost bare of bark and branches, and he went up that far like a jumping jack upon its stick. Then he reached crumbling branches and loose bark that gave way at his touch; fragments of branches fell crashing to the ground, while great slabs of bark gave way and came swishing and thundering to the earth, sending upward clouds of dust. As we watched in dismay all else was forgotten, as we expected each instant to see Jack come down with the next slab of bark, like a man from a treacherous scaffold upon some steeple, but he postponed the culmination. Up, up he clambered, clutching at what seemed to us to be sure destruction; slab after slab, and branch after branch came swishing from aloft to the ground, but Jack still ascended.

"He's done for," exclaimed Enochs, "now he's coming! No, he's got another hold; here he—no, he's staving it off a minute—now then watch! That was a close call!"

Again and again the very patch of bark, or the treacherous branch to which he had clung, slid away and downward with a crash, but the bear was always just an instant ahead of fate as he reached yet another precarious hold overhead. Why he persisted in ascending was a puzzle. Several times he reached temporary safety on larger snags that held under his weight, but he would leave them to hasten his destruction. There was no other explanation for it—he must be insane.

At last he had reached the last snag upon the dizzy, disintegrating tree top, that was large enough to offer him a perch, and there he sat, fully 250 feet from the ground. He looked in size and outline like an owl, scarcely larger. Our cries and excited voices and movements had called out Mr. Jones, and after comprehending the situation he said:

"He's in about the worst place he could get. I do not see how he got there or how he can get down. I never saw a bear up as high as that. If he starts down the loose bark will give way with him. You may save his skin, mebbe, but I'm not sure of that, nuther."

Here were four of us, but if there had been a thousand I could have suggested no means of rescue for poor Jack. I could conceive of no device known to man that would be of service. It was almost dark, and in a few moments thereafter he was invisible. Bark and fragments fell at intervals, but we neither saw nor heard anything more. We turned away feeling singularly helpless and useless.

A few rods distant below the road there was a saucer-shaped depression, of several acres in extent, containing large trees that had carpeted the ground with leaves and needles from pines, making a favorite camping place. Here we parked our wagon, unharnessed the horses and made our camp. We were almost exhausted, famished, ravenously hungry. Dick soon had a fire burning, our box of provisions out of the wagon, and he was preparing some slices of bacon that made us wild with anticipation.

"If Jack smells this bacon cooking," said Dick, "he'll try to come down, and it'll be all day with him. It's too bad, ain't it? I'd most as soon fall from that tree myself." And he meant it.

"He's a gone bear," said Enochs, "but if you fellows are in no hurry we—we can wait awhile; we can eat some bread and crackers. Give the cuss a chance. If he smells the bacon broiling he'll lose what little sense he has left."

That was about the sincerest expression of sympathy or tenderness I ever heard from Enochs. As if feeling that he had betrayed real fondness for Jack he hastily added a proposal to "shoot him out of the tree" if I would stand

under and catch him, so as to "save the meat," but it was a transparent ruse, he was as anxious and gloomy as I was. At every sound of bark falling from the tree one or the other of us went to see if Jack had let go; and at one time I found Enochs groping about its trunk, feeling of all dark objects. He pretended that he was hunting wood, but we had plenty of wood much nearer the fire.

By 8 or 9 o'clock we could withstand our hunger no longer, and cooked the bacon and boiled our coffee, waiting meanwhile and listening for the sounds of the last operation in which Jack would be actively engaged. We thought the odor of the bacon would bring him, and so end our anxiety; but we finished supper without hearing anything drop of sufficient weight to console us, or relieve our suspense.

After numerous trips to the tree, we fixed our fire for the night, having meantime to get into our coats, as we were shivering with cold—a great change from our condition three or four hours earlier. We lay down upon our blankets and watched the lights and shadows from our fire dance upon the giants of the forest surrounding us, listening to the voices of the night that only accentuated the silence, the fire flickered lower, lower and we were asleep.

I do not know what time it was, but it was somewhere about midnight when something awoke me by clutching my hair from behind. I reached up and back and grasped, in the darkness, the hairy paw of a bear. It closed upon my hand with the firm rigidity of muscular development that I well knew. I was not startled, not even scared, and, as Jack poked his cold nose into my cheek I made no resistance, but I did get up quickly to give him his supper, which he devoured with wonderful promptitude and dexterity, even for him. Dick and Enochs got up, too, no slight effort under the circumstances, and we had our customary romp and laugh over Jack's antics with the two dogs and ourselves.

When we again turned in, this time for the night and some hours after, Dick and Jack slept side by side, both their heads upon one pillow. Both of them snored with considerable abandon. But it was all right.

RANSACKER.

[TO BE CONTINUED.]

## The Rattlesnake's Bite.

A SAN FRANCISCO dispatch of Oct. 16 reports that Robert R. Roberts, one of the election commissioners of San Francisco, while on his wedding trip to Little Geysers, Napa county, was bitten by a rattlesnake while out hunting Sunday afternoon. Mr. Roberts shot a large rattlesnake with a shotgun, blowing the snake into three pieces. He took up a stick and with it picked up the head of the snake. The head moved suddenly and struck him in the hand with its poisonous fangs. Mr. Roberts' hand immediately swelled up to a large size. Remedies were applied to counteract the effect of the poison, and the injured man was brought to Salistoga Monday, but in spite of medical assistance Mr. Roberts died this morning.

LOS ANGELES, Cal., Oct. 11.—The tragic death of Robert Roberts, of San Francisco, who was bitten by a rattlesnake last Sunday, brings to me a vivid recollection of the misadventure I had with a big rattler in Riverside county in 1903, an account of which was printed in the Christmas number of FOREST AND STREAM that year.

My hunting companion, Mr. Collier, of Corona, shot the snake in two. Only a shred of skin joined the pieces. The section to which the head was attached was only a few inches in length, yet enough muscles remained for the snake to strike at us viciously. Unable to reach his enemies the rattler turned and struck its own body three times.

The California quail season opens next week, and several acquaintances have taken my advice and are providing themselves with small hypodermic cases and a supply of permanganate of potassium and strychnia tablets. The tablets may be taken internally, but there is a possibility of one's throat swelling so that it might be impossible to swallow a short time after being bitten by a rattlesnake.

There are not a great number of venomous snakes in this vicinity, but I shall never go afield again without taking these precautions.

FRANK E. WOLFE.

## Birds and Bird Enemies.

RALEIGH, N. C., Oct. 11.—Editor *Forest and Stream*: I read with interest the articles on enemies of bird life, now running in FOREST AND STREAM, and would like to add the inclosed clipping as evidence of guilt on part of the squirrel:

"This seems strange, but it is true; he did not hatch him, but snatched him. This is how it happened. Some small boys were passing through the lovely lawn of Mr. William Grimes' residence on Halifax street, yesterday morning, and heard the wail of William, Jr.'s—known by his playmates as 'Bill Grimes'—pet chicken, and on investigating found that one of the many squirrels that feast on the nuts on the trees in the grove had changed his diet and had concluded to try chicken. His squirrelship pounced upon William's pet and hied away to his nest in the tree, the chicken vainly protesting in the meantime. 'Bill' is catching sandfiddlers down at Wrightsville Beach and has not yet heard of his loss."

It would be very unfortunate for squirrels in general to get the chicken habit, for they would certainly have trouble with Mr. Coon. I would advise them to keep hands off the chicken. A few pair of squirrels were placed in the capitol square four or five years ago have increased until they overrun the city, and would spread over the suburbs but for a few people who see nothing in any bird or animal but so much meat. Some shoot every squirrel that comes in their yard. Our last Legislature changed the open season for squirrels to equal the quail season, as many quail were killed before the season opened for them by pretended squirrel hunters, and even yet I often hear the rapid shots of quail shooting, followed by much shouting here! here! here! the shooters trying to give the impression they are rabbit shooting with hounds.

I first learned that a squirrel required flesh as food in this way. My brother had a pet mockingbird, and one

morning while arranging food and water for his bird before going off to school, he thought it would be a good plan to give the captive the freedom of the room, where my squirrel ran at large, his cage door being open always. Placing the cage in the room he propped open the door and ran off to school, thinking to himself what a nice time the bird and squirrel would have playing together. The squirrel certainly did enjoy the company of the bird, judging from how little he left but feathers; only the feet and bill remained. He also profited in another way by this experience, for I gave him his freedom shortly afterward. Squirrels do not destroy bird life to any extent, though, as they require meat only at intervals and not as a regular diet.

As for the crow, he is the most destructive enemy of our birds, for he can reach any nest except in a small hollow tree, or other excavated nest, and does not hesitate to snatch eggs from under a sitting bird, as can be observed. In the eastern part of North Carolina the crows can be seen robbing the nest of the egret, gull and other coast birds, and as the crows are numberless in that section and flocks are seen everywhere, they must destroy thousands of the eggs and young.

I had a peculiar experience with a pair of nesting blackbirds the past summer that cannot be explained either as instinct or chance. I will send it to you soon. They, very clearly to me, worked a trick and so well did they act that I was drawn from their nest, which was in plain sight, and easily reached to an old one some distance away. The clipping about the martins is quite true. I hope some one had foresight enough to photograph this wonderful flight of birds. If I can get a photograph I will send it to you.

I regretted to hear of the death of Cabia Blanco. I looked forward to his articles each week and was disappointed if the paper did not have something of his. I expect to clip out all those I have and put them in a scrap book.

Ed. L. BAILEY.

#### A PLAGUE OF MARTINS.

A Wilmington, N. C., correspondent of the Raleigh News and Observer says: Ten of the citizens of Wrightsville Sound and Dr. Ed. Barnes, of Tarboro, who is spending the summer there, were arraigned before Justices of Peace George Harris and G. W. Westbrook on the charge of violation of the game laws of the State by the wholesale shooting of field martins, which had literally taken possession of the grove in front of Capt. John H. Hanby's Ocean View Hotel and cottage property at that resort. The indictment was brought by County Game Warden Freeman, and each of the defendants submitted and was fined \$5 and costs. The fines were afterward remitted at the suggestion of the game warden, who confessed that the martins had collected in such unusually large numbers as to do damage to the grove and make themselves a nuisance in front of the hotel property. Captain Hanby, proprietor of the hotel, complained that the plague of martins not only damaged the grove by swarming in the trees in such numbers that they broke off the branches but that his guests actually threatened to leave his house because of the nuisance. The martins collected in the grove in such dense swarms as to almost obscure the sun when they arose from the tree tops, hundreds of people having gone to the Sound to witness the phenomenon. When Captain Hanby gave carte blanche to the gunners to shoot them it is estimated that over 11,000 were killed in one day.

### A Curious Turtle.

TWO DAYS before we left Squam Lake, N. H., where we had a camp cottage for the summer, my wife, my youngest son and daughter and I rowed down the lake nearly to its southwestern extremity.

At one place there is a small island not far from the shore. In the mid-channel between this island and the shore, on a large boulder projecting two or three feet above the water and exposing a surface six or eight feet long, we saw three turtles, or more properly, I suppose, "painted tortoise," basking in the warm sun. We conceived the idea of seeing how near we could approach them before they would take alarm and slip into the water.

Two of them, only about half as large as the third, showed the usual wariness of the species, and after craning their necks a little as we silently circled nearer and nearer the rock, took their plunge while we were yet half a dozen rods or so away. The third, who occupied the highest position on the rock, maintained his place, though moving his head in his effort to watch us.

We at once saw that his back presented a remarkable appearance, being apparently covered with a number of thin, dry, flesh-colored membranes, which curled up from it in a curious fashion.

Enjoining silence, I rowed around the rock as noiselessly as possible, coming nearer and nearer to it, every member of the party intently watching the queer phenomenon.

The movements of the animal's head and neck indicated his alarm, but he seemed unwilling to stir till the last moment. To all of us came at once the notion that it was afflicted with some disease or feebleness which made it unable or unwilling to stir.

Nearer we came till we were within six or eight feet of the creature and could see with the utmost distinctness the strange growth or structure on its back. It seemed as though each of the more central plates on the back of its shell were shedding a thin epidermis, of the texture of the dry skin which a snake periodically throws off, and that in each case the sides of this thin covering of the plate had curled upward till more than half of it were free, but the whole were retained by an undetached middle part. There seemed to be nearly, or quite, a half dozen of these membranes on each side of the animal's back. "Sort of butterflies' wings," my little daughter afterward called them.

While the attention of the rest of us was riveted on the creature my wife also caught sight of one of these membranes, or scales, which had become entirely detached and had fallen upon the water and lay floating with its edges turned up, resembling in every respect those upon the tortoise.

She tried her best to call attention to it without making movement or noise which would hasten the lunge which it was evident the animal would soon make, and which a moment later it did make, when we were near enough to have touched it with an oar. It went straight to the bottom and lay beside the rock, just discernible in eight or ten feet of water.

Having no implement but an oar we could do nothing to recover it, but my attention being at once called to the floating scale, I saw it just as the waves which our sudden movements caused engulfed it, and I tried in vain to recover it with my oar as it slowly sank and seemed to almost dissolve in the water. We then interestedly compared notes with minuteness, finding that our observations agreed in all details.

Now, if I have described what is a common, or even if an infrequent still a well known phenomenon, kindly drop this account into your waste basket, with only such pity as you can spare for my ignorance, but if it describes something unusual please give it space and invite explanation.

To me, as to every other country-bred boy, no sight can be more familiar than that of a row of "turtles" sunning themselves on a log or rock, and their clumsy but quick plunge on my too near approach. But I have never seen one "arrayed" as was the one I have described, nor one permitting anything like so near approach, nor can I by inquiry find anyone else who has done so.

An eminent biologist tells me that it is his conviction that the plates of the shell of a "turtle" or tortoise have no such epidermis which could curl up in the fashion that we saw. Was our turtle, then, wearing "borrowed feathers," and if so from whom, or what, did he borrow them, and how did he affix them in that regular fashion? All we know or can say about the matter is that four of us saw at very close quarters, and for several minutes, what I have set forth. Will some one explain it?

C. H. AMES.

[Probably this was a case of diseased condition of the shell.]

### Canine Crosses.

RIVERSIDE FARM, BYRON, Ill., Oct. 12.—*Editor Forest and Stream:* The note of Charles Hallock on "Fox-Dog Cross" in FOREST AND STREAM of Oct. 14, was of great interest to the writer who wishes that he knew how to prevent Mr. Hallock's shadow from growing less. His name can never die, but some day, may it be far distant, we all will have to bid Charles Hallock good-by.

In the same issue of the paper G. B. G.'s "Dog-Wolf Cross" was reminiscent to the writer of the following: More than a decade ago Ed. McNeal lived in the tenement house of Charles Follett, three miles south of Byron, directly on Red River, and worked for Mr. Follett. One April day, far back from the river, near an old straw stack, he shot a bitch wolf, and found her litter—part dogs, part wolves—in the stack. G. B. G.'s description of the cross-bred wolves is fine, and while the McNeal litter were prairie and his timber wolves, the description fits them to a dot. Mr. McNeal was paid the full bounty on the whole litter by the county clerk. There were certain ones in the county who kicked at the clerk's action, but the county clerk of Ogle county was right, and his action stamped him as being no common man as well as something of a naturalist on his own account.

Patrick Burke, the father of Judge Burke, of Chicago, owned a fine farm four miles north of Byron, where the great attorney was born, who owns the farm to this day. Prairie wolf-dog miscegenation occurred on the farm, the sire in this case being a collie dog, the dam a prairie wolf. Mr. Burke kept one of the dog pups. To all appearances he was a collie dog, but smarter, and fully as affectionate, so far as Mr. Burke was concerned, who taught him many pleasing tricks, and with whom he lived most happily under my observation for many years.

Jack! Who was Jack? Oh, he was a noted Byron dog who but recently yielded up the canine ghost. He was a cur dog-gray fox cross, and was given, as a pup, to the little daughter of Harry Harding, with whom he grew up and who, from his standpoint, was his only friend. Jack grew up to be a short-haired, grizzled gray; medium-sized, cock-eared dog with an eye of unusual brilliance and the swinging restless movements of a wild animal. His cry was the gasping bark of a fox. Did a hen cackle? That egg was his. Did Harry forget to feed him? He slipped out into a hazel patch and gobbled a rabbit or two—one to eat and one for sport, you know. Did anyone come near little Daisy? Their old friend the doctor sits here to write that they had the time of their lives in getting off without a bite. They are both dead. Who shall say that the dog-fox Jack is not with his little mistress in the pleasant land of the hereafter? *Quien sabe?*

DR. A. J. WOODCOCK.

### Turkey Buzzard Near Buffalo, N. Y.

THE Buffalo Evening News of Oct. 16 prints the following item:

"While hunting from an automobile near Clarence Center yesterday, Fred Jehle, a poultry dealer on Chipewa Market, shot a strange bird that has aroused much curiosity, as no one has been able to identify it. Mr. Jehle has shown the prize to many of his friends who are versed in western New York game, and they have guessed at anything from a wild turkey to an eagle, but no one will say positively what it is. The bird measures over six feet from tip to tip and weighs only about six pounds. The feathers of the wings are fully a foot in length and are dark colored. The head is bare of feathers, and in this respect resembles a bald eagle, but is said to differ from this bird in many other particulars. Mr. Jehle was accompanied by Christian Muegel and Edward Meyer."

Our correspondent, Flintstone, who calls our attention to this occurrence, says that Mr. James Savage identified the bird as a turkey buzzard, very rare so far north as Buffalo, but in the plains region passing still further north, "to the Saskatchewan." The late George A. Boardman recorded one specimen taken near St. Croix, Me. It has frequently been recorded from southern New England.

## Forest Reserves in Colorado.

THE upheaval of mountain land forming western Colorado constitutes the great watershed of the Middle West. The topography of this central elevated region makes it a factor of great economic value. Its mountains are the sources of such important streams as the Colorado, the Rio-Grande, the Arkansas, and the North and the South Platte, which, with their numerous tributaries, supply, to a large extent, the drainage systems upon which the surrounding States and Territories depend. Striking evidence of the far-reaching influence of these natural mountain reservoirs is seen in the fact that the United States Reclamation Service has recently selected various reservoir sites on the Grand and Yampah rivers, in Colorado, for the storage of water in connection with irrigation projects for the reclamation of extensive areas in southern California, Nevada and Arizona.

The Government, in its work of preserving natural reservoirs, as forming a necessary part of its irrigation projects, has recently extended its protection over a considerable portion of this mountainous area by the establishment of a number of forest reserves, for the purpose of conserving and regulating the stream flow of the region, and eventually insuring a greater flow in certain of the streams.

This means that the forest cover on the tops and slopes of these rugged mountains is to be protected, and used only so far as the preservation of stream flow and a permanent supply of forest products will allow. The mountains will now be constantly patrolled, at Government expense, to prevent the further occurrence of devastating fires. This alone will confer an inestimable blessing upon all depending upon this region for wood or water.

The tracts reserved are at too great an altitude to admit of agricultural lands being included to any great extent. They consist mainly of rough, mountain areas, practically worthless except for their timber, water, forage, and mining wealth. Withholding rugged areas of this kind from settlement will not interfere with the purposes of the State, because such lands are unsuited to the purposes of the homeseeker. As their administration by the Government will, however, eventually make possible the settlement and development of other lands, both in Colorado and elsewhere, these otherwise waste areas will now be made to contribute directly toward building up prosperous homes in large sections of the country.

The State of Colorado, in particular, will derive much benefit, because its irrigation possibilities are so great. The fact that when the reclamation work of the Government was undertaken only about three per cent. of the entire land surface of Colorado was included in what might be termed improved lands, and that about two-thirds of that amount had been irrigated, led the Reclamation Service to devote special attention to the feasibility of reclaiming lands in Colorado. As a result, various projects are now under consideration which will render cultivable for the first time extensive areas throughout the western portion of the State. One of them, the Uncompahgre Valley project, is already well under way. When it is completed, sufficient land will be reclaimable to furnish homes for at least 1,200 families in the Uncompahgre Valley.

The progress which has already been made upon these various projects leaves no room to doubt that the relation which the Government is establishing, in Colorado, between the mountain sides and the valley lands, is one which means the agricultural development of large sections of the State.

While the forest cover on these mountains will be made to play this important role in the irrigation movement, it is no part of the Government's policy to withdraw the reserved lands from general use. On the contrary, it should be understood that the reserve will be open to all persons for all legitimate purposes. The timber, water, pasture, mineral, and other resources will continue to be for the use of the people, the reserves having been established for the purpose of benefiting, in every way possible, all the communities which are in any wise dependent upon them.

### Capturing Wild Elk for Sequoia Park.

BAKERSFIELD, Cal., Oct. 17.—As a result of the second day's drive of the herd of wild elk, which for several years have made their feeding grounds at the Miller and Lux ranch at Buttonwillow, thirty miles south of this city, twenty-three perfect specimens were captured with the lariat yesterday, and of these twenty lived to be transferred to the Government reserve, Sequoia Park. At least 175 animals are still at large. The task of transferring the herd is to be abandoned for the present.

The elk in question, as will be remembered, are the only survivors of the California elk of old times (*Cervus nannodes*, Merriam) and were some years ago presented to the United States Government by Messrs. Miller and Lux. The attempts made to capture them last year were unsuccessful.

### A Plucky Woman.

A DISPATCH to the Record-Herald from Monument, Col., says that Mrs. C. B. Wilson, wife of the station agent at that place, accidentally shot her husband while hunting yesterday. He dropped to the ground insensible, but the plucky woman, although weighing less than 115 pounds, carried the man, who weighs 155 pounds, a quarter of a mile up the mountainside to the tracks of the Denver & Rio Grande Railroad. She then signalled a fast freight, which stopped and took the injured man aboard.

### A Winter Hunting Camp.

DURING the coming winter, a multitude of gunners will go South to spend a longer or shorter time. Each one naturally wants to go where he can get plenty of good shooting at moderate expense. All who contemplate such a trip will be interested in the advertisement of Mr. H. H. Powell, located on the Seaboard Air Line, at Cheraw, S. C., which appears on another page, and which tells very fully what Mr. Powell has to offer in the direction of good and varied sport and comfortable living. Among the attractions of this place are wide and well stocked territory, comfortable housing for individuals or families, and competent guides who know the shooting grounds.

# GAME BAG AND GUN

## Sunset in the Blind.

By the grassy edge of a shallow pool,  
Where shore birds wade and rest;  
Yonder the roaring surf on the beach  
And billows' silvery crest;  
A pile of eel grass, sticks and hay,  
A rough board placed behind,  
A haven of rest for the weary man,  
The sportsman's blind.

Decoys are planted out before  
Where shadows come and go;  
The sun sinks lower in the west,  
The clouds begin to glow.  
The heron's croak, the curlew's wail  
Come drifting down the wind;  
Ah, who once there will e'er forget  
The sportsman's blind?

WHISTLER.

## In New England.

BOSTON, Mass., Oct. 21.—*Editor Forest and Stream:* A report from Dr. Raymond, of Rehoboth, just at hand says both quail and partridges have nearly disappeared in spite of the fact that some were liberated by the Anawan Club last year. A few have been seen. He says the laws are generally well observed.

Mr. Gilmore writes from Lenox that the Sunday law is constantly violated. He is also told on good authority that gunners are shooting pheasants and deer. The law against the sale of woodcock and ruffed grouse is fairly well observed, owing mainly to the co-operation of the residents, though, of course, there are exceptions. There was some shooting by "sooners" before the opening of the season. The local club, he informs me, has employed a warden for three years without any assistance from the State, and no warden from outside comes into the place. Under these circumstances, he thinks, it is no more than fair that the State should give them a paid deputy.

The town of Coleraine, Franklin county, bordering on Vermont, like all other towns in that county, lays without the quail zone, nevertheless, Mr. Russell, of the local club, writes that the hunters are after quail some at the present time. This, of course, is a surprise. Mr. Russell has been active in the cause of game protection for many years.

Letters have come in from two more towns of Worcester county. Mr. Colby, of Barre, writes that both quail and ruffed grouse are very scarce. A letter from Princeton reports no quail and few partridges. It may be that these informants may find more birds later in the season.

Mr. C. A. Taft, of Whitinsville, on the occasion of a recent call, said that he was surprised to read in the writer's reports so many expressions favorable to a close season for a period of years. He very justly remarked that the opinions of men who are not practical sportsmen are entitled to less weight than the views of those who are such. This position seems to me sound, and the object of your correspondent in presenting to the readers of FOREST AND STREAM the views of those men who have sent them in is to let the sportsmen know, as far as possible, what people think should be done to increase the number of our game birds, or, at any rate, to prevent their ultimate extermination. It is not strange that men who have not made an exhaustive study of the underlying principles of protection nor had an opportunity to learn from years of experience in the covers in pursuit of game, should say we must first of all prevent the killing, whether by foxes, cats, skunks, etc., or by the man with a gun. But it should not be forgotten that a close period is no remedy for the destruction of the elements nor that of the natural enemies of game.

Had the years 1901-2 been closed to quail shooting in New England, more birds would probably have died from starvation in the winter of 1903, but no more been left alive in the spring of that year, and those sportsmen who derived needed recreation by hunting birds in 1901-2 would have been deprived of their favorite pastime, and to no purpose.

I know of no one who by long experience and intelligent observation is more competent to state the valid objections to long periods of close time than Mr. Taft, and if he should see fit to present his views to your readers I am sure they would be read with a great deal of interest, and I hope he will do so.

Mr. Taft has recently returned from his camp at Shaw Pond, near Flagstaff. He was accompanied by Mr. William Taft and Mr. Hazeltine, of Whitinsville. They had guides and secured a deer apiece and a good number of partridges. The abundance of game and the delightful weather made the outing one of rare pleasure.

Mr. A. B. F. Kinney, of Worcester, recently passed through Boston on his return from what he describes as a restful trip to Deer Island (Moosehead Lake), Me. He was in camp two weeks and says, "I shot all I wanted to." He did not stay for a moose, feeling that he already had his share of them. He expresses the opinion from his observation that moose are increasing in Maine. He says summer campers are killing more deer than the sportsmen, and should be prohibited from taking a rifle into the woods with them.

At Chatham there is still some shooting of winter yellowlegs and bull peep, although the shore bird shooting is near the end for this season. Frank Eldridge, of the steamer Lexington, on Tuesday secured about 100 birds, mostly bulls, at North Beach. At the upper end of Chatham Beach, formerly a good place for shore birds, it is now grassed over and makes a capital place for black ducks. The flight of seafoam is somewhat backward on

account, it is thought, of the moderate weather that has prevailed this month. Mr. Sewall, of Waltham, and a friend have got good bags at the Beach the past week, and hunters using the blinds at East Harwich are having good shooting. A party of fifteen young men from Cape towns in camp at Sandy Neck, off Barnstable, are getting a good number of coot. Coot are bedding in off Monomoy, and great sport is looked for there in a few days.

At Morris Island there is excellent fox hunting. Barney Taylor and his brother captured three fine ones in a couple of hours while making a detour of the island.

Mr. George Westinghouse, of Lenox, has received several wild deer from Montana the past week to place in a deer preserve he is establishing on a portion of his Erskine Park estate in that town.

If one has plenty of money he may get quite an assortment of game birds now in the Boston market. There are rice and railbirds from Virginia, beetle-head plover and yellowlegs from the Cape in limited numbers, and very choice black and mallard ducks, to say nothing of the Scotch grouse and black cock.

Commissioners Field and Delano have returned from their trip to Newfoundland and other Maritime Provinces. During their absence they had an opportunity to learn something of the feelings and opinions of the Newfoundlanders on the fishery question. Your correspondent has not yet had an opportunity to interview them as yet, but hopes to very soon.

L. W. Morrison, of Braintree, has been fined \$33 for having twenty-two short lobsters.

Hundreds of sportsmen are reported in the region about Lake Winnipisseogee, where the season is now at its best. An Andover hunter got a nine-point buck which dressed 165 pounds. Mr. S. Smith, of Meredith, captured a fine deer in the vicinity of Red Hill, in Moultonborough. Dr. W. P. Hough and L. B. Woodman recently returned from a trip of ten days in the neighborhood of Stewartstown, bringing out three deer. But the most valuable quarry was that of Mr. Peverly, a well known trapper of Northfield, who secured a silver-gray fox in a trap he had set in Canterbury. This species of fox is very rare and the pelt brings a large price. About one a year in New Hampshire is the usual catch.

A strange wild animal has of late been frightening people in Derry, N. H., and Mr. J. M. Hood, of Melrose, who has seen it, expresses the opinion that it is a genuine South American puma. At any rate, whatever it is, the people are in hopes it will fall to the gun of some Nimrod before long.

It is reported that Lyndborough Mountains, in Hillsborough county, are infested with wildcats, three of which were shot this week by Mr. Doliver, of that town. Mr. Doliver says he would not care to have a scrap with either of them if cornered.

Mr. Barry, of Temple, writes that he would be glad to sell the fourteen deer that have been feeding in his clover field all the fall, and would throw in a few rabbits in the bargain. Some Massachusetts gunners have been getting fine bags of ruffed grouse in southern New Hampshire.

Shipments of deer at Bangor on Tuesday numbered fifty-one, on Wednesday the receipts were fifty-eight, on Thursday sixty-three. On Tuesday, the second day of the open season, eight moose were brought into Bangor. One of these was secured by E. B. Reed, of Boston. From Masardis Messrs. C. Corliss and L. E. Griffin brought out deer. W. W. Sprague brought one from Brownville.

Bostonians who came out Wednesday with deer were J. H. Hanson, C. H. Rollins, Dr. C. A. Pratt and F. W. Reynolds. Messrs. R. L. Hornby and H. H. Shumway, of Boston, and W. Smith and D. B. Clark, of Springfield, Mass., secured deer. The latest reports are that deer are coming down from the woods in surprising numbers. On the afternoon express from Greenville there were brought twenty-seven deer.

Two members of the State Association, Messrs. Clark and Royce, have recently returned from a very successful trip to New Brunswick, but I must defer particulars till my next writing.

CENTRAL.

## Sport in Newfoundland.

### With a Black Fly Recipe.

ST. JOHN'S, Newfoundland, Oct. 13.—*Editor Forest and Stream:* The fishing season is now over, and the sports have taken to their guns. This has been a record season for fish and fishermen. Visiting sportsmen, principally American anglers, came in larger numbers this year than ever. All the visitors, with one or two exceptions, enjoyed prime sport. One gentleman vented his grievances in FOREST AND STREAM. He complained of the flies, and the tenor of his letter showed that he unduly irritated himself. He said that even if the fish had been more plentiful and the flies less troublesome he would not have stopped longer, no matter what the inducements offered. An angler who is not philosopher enough to keep cool when the flies are troublesome and busy ought to stay in the city in the hot weather. Flies are a nuisance, but surely no angler expects to go into the virgin wilderness in July or August without meeting flies. Some anglers exaggerate the torments of these little pests and excite themselves. If an angler could only take the flies as a part of the day's work and keep cool, the flies would not be half as troublesome. My own experience last season proved this. An old woodsman told me long ago that the best thing to do when the flies were very bad was to "keep cool"; "keep your hair on." "Don't get excited, as that cuts no ice with nippers," and I think this is very good advice. I would give, for the benefit of future anglers, two receipts that I have proved to be golden.

One, for use in the day, is composed of sweet or olive oil and carbolic acid in the same proportion as the famous silver standard—sixteen to one. Sixteen parts oil and one carbolic acid. This mixed well in about a half pint bottle will last for four or five days. The angler can carry a small vest-pocket phial and fill it every morning, and this much will do him for the day. Rubbed on the head, face, neck and hands, it retains its odor till the oil evaporates. It is harmless, and the oil preserves the skin from serious sunburn, and prevents it from breaking. I have found it one of the most pleasant of fly mixtures, and one that the flies dislike heartily.

When the flies are troublesome in camp and one can't sleep without being badly bitten, then they prove to be a veritable nuisance. This year we tried what we call "Scott's patent," and I can recommend it unreservedly as the best remedy I have ever used. When we retired for the night we first laced the front of our camp to keep out wanderers, then lit a candle, got the top of a meat tin, bent it double, so it would hold a spoonful or two of powder, stuck it into a piece of a stick, held it over the candle, poured into it a couple of spoonfuls of Keating's insect powder (a can of which can be had for a few cents), held the receptacle till it became red hot and the powder burned. This caused a smoke that, while it was not disagreeable to us, simply mesmerized and paralyzed the mosquitoes that lined the camp in myriads, and rendered them perfectly harmless during the whole night. We proved the efficacy of this every night for nine nights, and I was so pleased with it that I resolved to tell FOREST AND STREAM, so that your numerous readers will reap the benefit another season. There is no doubt about the efficacy of this recipe, because we proved it under the most trying circumstances.

Large as the number of visitors was this season, it promises to be much larger next year. Already several parties have arranged to come along for the salmon and sea trout fishing, and have engaged rooms along the railway line. And there is room enough and fish in plenty for all. There are thousands of lakes, ponds and rivers on the island, and they all contain fish. There are no restrictions whatever; no license fee, and anglers can fish anywhere. And all agree that a man (with or without his family) can live cheaper for a month or so in Newfoundland and get more sport than anywhere else yet discovered. The visitors one and all with whom your correspondent came in contact were enraptured with the climate and scenery.

Many of your readers will regret to hear that Mr. H. A. Morine, general passenger agent for the Reid Newfoundland Railway Co., has resigned that position and gone into a more remunerative position in the city. Mr. Morine proved himself to be a courteous and obliging official while in office, and many American visitors will miss him next season. Mr. W. J. Hamilton has now been appointed, so that prospective visitors needing information should write to him or Mr. Willie B. Reid, vice-president Reid Newfoundland Co. As all the officials have orders from headquarters to be courteous and obliging to visitors, and as all the railway men are noted for their kindness to strangers, visitors can get all the information needed either on arrival here or by writing to addresses given above.

The shooting season for grouse opened Sept. 20. Fearing the grouse would become extinct, there was a close season for one whole year. While some good bags were reported, sportsmen say that we should have two more years close season in order to give them a chance to be nearly as plentiful as they were. Another great drawback is that the snipe shooting season opens Sept. 1, and grouse shooters say that the snipe shooters played havoc with the partridge and that very few full coveys were to be found when they got on the grounds on Sept. 15. Further, some "cute" sportsmen shot over the barrens on Sundays and got ahead of the legitimate shooters. Some of these Sunday sports have been caught, and they have paid so dearly for their day's work that they will scarcely trouble it again. The police are out after others and expect to rake in several other Sunday men during the next few days. If they succeed, it is probable that the Sunday men will buy their birds in future, as they will come much cheaper.

Judge Prowse, than whom we have no better informed or keener all-round sportsman, writing of our group in an interesting essay in the Newfoundland Quarterly for October, says: "The correct description is the willow grouse (*Tetrao saliceti*). He is a distinguished member of the great family of the *Tetraonidae*, all northern birds; they range from the capercaillie or cock of the woods, weighing 17 pounds—an inhabitant of northern Sweden and Lapland—to the little Rocky Mountain grouse of less than one pound. The willow grouse weighs from 23 to 27 ounces, while the rock grouse, or American ptarmigan (*Tetrao lagopus rupestris*) is smaller than its congener and rarely exceeds 20 ounces. The habitat of the rock grouse is high mountains. In Newfoundland it is only found on the south and west of the island." He suggests that Scotch grouse and black cock should be introduced into the country, and they probably will before long.

We quote from the paper on grouse shooting by Judge Prowse in the Newfoundland Quarterly this description of a sport in which many Americans have participated:

The journey down to the barrens, whether by road or rail, is always pleasant. You are out for a holiday, there is a freedom from all restraint; care and anxiety and all earthy troubles and worries are for the time banished far away. The fresh sparkling water, the

sweet breath of the pine wood, the fresh breezy air are all delightful, and above all there is the joyous anticipation of good sport on the morrow. Every now and then there are kindly greetings on the road; you meet your old friends of former trips—"What about the birds, Mick?" "Well, you see," says he, "I'm tuk up with the vyage, and so I don't be follying the country, but the bys that's be after the cows seed a few scattered coveys about the Burnt Hills and the Look Out. I don't be thinking they're powerful plenty at all." Your informant is probably a shooter himself, and this pessimistic report is a dodge to keep a few birds for his own gun. "By and by you meet another more genial and inventive livier, and with an air of simple candor and veracity he says: "How be the birds?" "Well, I never heard tell on the like: Jim Malone cum across the country from beyant tudder day, may be a week ago last Sunday, he had nara dog, he never stepped off the pat and begob he put ten fine coveys to wing." I knew one gifted artist in mendacity who promised an exalted personage royal sport. "Come out to me, Sir William, and I'll show you thirteen fine coveys." The reality, after a hard day's tramp, materialized into one solitary old cock. However, all things come to an end, and by night-fall you have reached your destination—either a camp in the woods, or your headquarter at a fisherman's house.

It is worth while to make the journey for such a kindly welcome. All the village has foregathered in your honor—the old man and the boys are soon puffing away with your tobacco, the guns are always a special object of attraction, and all the queer odds and ends of tinned provisions are turned over and examined. In the meantime the mistress and the girls are busy about your supper.

A wise man you go early to bed, and don't take too much of the "craytur." There is no need to rouse you in the early morn, you are off before dawn; the dread of some keener sportsman cutting you off lends wings to your movements, and before sunrise you are climbing the hills. We breast the long ascent; it takes it out of us a bit. We stay a moment to draw breath; the sun is just touching the eastern hills with a soft roseate light; below us lies the bay with its brown-sailed fishing boats and its purple islands. Through the pure air for miles away we can see the gleam of white houses, behind the dark pine woods, the fir-clad hills, the broad open moors, interspersed with verdant marshes in the long distance, seem as bright and green as the new mown meadows. The wild far-stretching moorland that lies before us has a beauty of its own. Everywhere there are wild flowers and low berry-bearing shrubs with clear bright purling streams and endless lakes; much of the open country is stern, wild and bare, but it has a weird beauty of its own, and the clear exhilarating atmosphere braces you like a subtle tonic.

Before we commence our day's sport, let me say one word about your Newfoundland guide. In his old canvas jacket and patched moleskin trousers, your Terra Novian fisherman is not so picturesque a figure as the Scotch gillie in the garb of old Gæl; but for keenness of sight, for knowledge of birds and their habits, for accuracy in marking where the coveys pitch, for endurance and walking powers, and above all, for courtesy and kindly manners, I will back him against the best of the bra Highlanders that ever drank the mountain dew, or scratched himself in the early dawn. If you make a bad miss he will always find an excuse for you—"Sure, they're as wild as hawks; the devil wouldn't kill the like of 'em."

I remember one day five birds rose, two crossed as I fired, and both came down. My companion killed right and left, and I finished off the fifth bird with my second barrel. The whole thing was a pure fluke, but our guide turned to two old fishermen who were cruising the hills—"Dat's the way, Paddy," said he, "they're doing it all day."

All the English and American sportsmen who have visited Newfoundland—Selous, Millais, Pritchard the novelist, and Vanderbilt the millionaire, speak in the highest terms of the never-failing cheerfulness, their patient endurance of fatigue, the remarkable knowledge of all woodcraft and habits of the caribou shown by their Newfoundland guides. All unanimously declare that no better companions, for the woods and wild sport, can be found anywhere. And now—

"Together let us beat this ample field,  
Try what the open—what the covert yields."

Out range the dogs, away they go, with a rushing gallop right and left across the wind, by and by you notice Grouse is on a hot scent, Don and Ranger take it up, and you get excited and nervously finger your gun, you work the ground carefully all over, but it ends in a fiasco. The birds have lain there all night, and at early dawn they have flown to the feeding ground. On go the dogs again. Presently you notice Grouse begins to draw. He has the birds this time all right. As you mount the next low hill you see him just below, his lashing tail has become stiff, and with head outstretched and rigid body he slowly moves along, until at last he stands as motionless as if carved in stone. Ranger and Don, as they mount the ridge, suddenly catch sight of Grouse, and at once you see them also transformed into statuesque canines backing their companion.

Slowly you saunter up to Grouse. Mick—your man with the Celtic temperament—may be excited, but if you are a genuine sportsman you will keep cool. You have broken in your dogs; you know them well, and you know, too, that if you get flurried they will soon copy your example.

As you approach Grouse, slowly and cautiously he moves ahead. While you have been walking up to him the birds have also moved on, not far, but still further off than the old dog considers the correct thing. You look about you, wondering where on earth are the birds? When, whirr! there is a startling sound, and a dozen brown birds are in the air scudding away; with your right barrel you pick off the old cock, and with your left down goes another, shot through the back he lies with wings outstretched. Mick declares, "Begob, it was a great shot," but you know in your heart that it was plain and easy, and that you would be the veriest

duffer if you had missed them. All the same your sportman's vanity admits the soft impeachment—"Not bad, Mick." The remaining birds have taken refuge in a big tuck—a lot of stunted spruces on the hillside leading down to the brook. They are scattered and lie close. This is the prettiest shooting of all, and one and by one you work them all out, getting every variety of shot; and if you are in good form you will bag nearly the whole covey.

On you go over the barrens, meeting birds more or less—singly and in coveys—and by the brooks an odd snipe. Presently, about 11 o'clock, you look about for a place to boil the kettle.

This is the most delightful time of all for Mick. The amount of "tay" a good hearty Newfoundlander will swallow is something incredible. He won't eat so much meat, unless you force it on him; but after you have done, he loves to refill the pot and go at it again.

The knowing shooter takes a good long time over his lunch. In the middle of the day is the worst time for the birds, while the late afternoon and evening are the best. On the return tramp all the scattered coveys will be found in their old haunts. By this time you will be a bit stiff and tired, and probably good shot as you undoubtedly may be, you will miss an occasional chance; but you have had a good day's sport, a good tramp, and you will enjoy your supper as if you had earned it.

A good day's grouse shooting in Newfoundland affords as fine a sport as there is in the world. This, at least, is the opinion of Admiral Sir W. R. Kennedy—the best all-round sportsman in the British Navy.

The habitat of the rock grouse is high mountains. In Newfoundland it is only found on the south and west of the island. Both species are spread over Hudson Bay, Labrador, and the Arctic regions of North America. The Scotch grouse has been naturalized in Sweden. It seems to me desirable that an attempt should be made to introduce both the black cock and the grouse into this country; more efforts should also be made to re-introduce the moose. The funds obtained from deer and licenses for sporting dogs might very well be set apart for the laudable purpose of preserving our rivers, and stocking valuable game birds on our wild lands.

The native grouse is being rapidly thinned out; I know many places from whence it has entirely disappeared. An effort has been made to prevent the extinction of one of the most valuable game birds in the world, by stopping all shooting for one year and putting back the opening season until October. We shall see this year how it has worked. Grouse being mainly a ground bird can be easily decimated.

In the August Cornhill, 1905, I discussed the question of grouse disease, and proposed, as a remedy, to mate the home birds with our hardier and stronger breed. Mr. Reginald I. Smith, K.C., the editor, intends to try the experiment. To be successful it will have to be carried out on a large scale.

## Big Game in Quebec.

MONTREAL, Oct. 15.—*Editor Forest and Stream:* "Report Your Luck to FOREST AND STREAM." Well, then, here goes our luck. There were two of us, Frank R. and I, and when we left Montreal for our trip we had a rather faint idea where we were going to. Somebody had told us such and such a place was good for deer and partridge, and we took their word and went in that direction. We went by Grand Trunk Railway to Lennoxville, got there at midnight and slept in the waiting room till 5 the next morning, then we took the Canadian Pacific Railway to Cookshire; there we found that the "guy" who was to drive us to our camp did not show up, and no one else in the town would take us, so we bundled ourselves into the cars again over the Michigan Central Railroad to Sawyerville, six miles away, and got a team there at a ruinous price, to take us. Then away we started on our thirty-five-mile drive. It took us over seven hours to get within five miles of our camp, and lo, and behold, we found that the remaining five miles were impassable for the team. The old lumber road had not been used for five years, and windfalls blocked the road every few yards, and after chopping through a few we came across a large elm and gave the job up; so we bundled out the stuff and let the team go. As it was getting dark, we concluded to wait till morning before we dared to tackle the trail; so we made a sort of lean-to and all went to sleep.

Next morning at 7 we started to pack the stuff, each carrying about sixty pounds tied over our backs in bags and left the remainder for another portage, and then, gun in hand, away we piked. Tell you what, that five miles was the worst I ever struck. The pack ropes nearly strangled us, and if we sat down for a rest it was a job to get up again, and every short distance we would run foul of a windfall, and you'd get your body over the log and have the pack on the other side, and would have a regular tug-of-war getting it over, and then it would come with a run and knock us down. We flushed partridges all along the trail but were too heart miserable to even look at them, much less shoot. Then we struck a bog and our waterproof leather boots did their duty manfully by leaking like sieves. Then we struck two steep mountains, and the Lord only knows what not in the misery line. After four hours of plugging we struck the camp. The camp, I say, but what a shack it was. It was an old lumber camp built about fifteen years ago and not used for over five years. We were told we would find it in good shape, but alas! half the roof was down, the flooring was all gone, the door was off, the stove lay in a corner all smashed to bits; numerous empty bottles lying around told the tale of a big drunk, a fight, and then a rough house. Well, well, it was raining and we were tired out for fair, so cursing our luck we got a fire going, boiled some coffee and fried some bacon, and I made some flapjacks and we dug right in.

After dinner we set to work to repair the camp a bit, and with the aid of an ax and some nails, and taking some logs from the stable, we succeeded in making things look a little better. Then supper and then to bed, 6:30. Oh, but we were tired out. We arranged the cedar boughs in the upper bunk, crawled up, then under the blankets—clothes, boots and all on—and were asleep in

a few minutes. But alas! like most lumber camps, it was infested with fleas, and we more than caught it. But we went to sleep again and were awakened about 12 by Frank's dog giving tongue, so evidently something was prowling around, likely a bear or bobcat.

The next morning we made another portage and packed the remainder of our stuff, hiding the boxes in the brush. Our loads this time were not so bad, or else we were used to it and did not feel it so badly. Frank carried a bag full tied around his neck and shoulders. I carried a grip with 300 shotgun and 150 rifle shells in it, strapped to my shoulders; and then we had the numerous pockets of our hunting coats packed with all sorts of things (by the way, these hunting coats were a godsend to us, and the amount of game and stuff a fellow can carry in one of them is marvellous). Then, rifles in hand, we piked. We came across about a dozen partridges along the road, but as our scatter guns were at camp we only got one with the rifles. Well, we did not find this trip nearly so bad as the last one, but were glad enough when we struck camp. We were somewhat surprised to see a man there smoking and quite at home. He told us he was out "gumming" for spruce gum and was on his way to the Van Dyke camps, in New Hampshire, a few miles away. In him we struck a Klondyke. He knew every foot of the country and goes out "gumming" every fall, carrying a blanket, ax and grub across his back and rifle in hand. He makes trips for a week or ten days, and then back to his so-called farm (300 acres—two cleared, rest brush) and then off again. Some days he gathers as much as five pounds of gum, and, at \$1 a pound, it pays. Well, we had dinner, he cooked it, and we got him to promise to stay with us the three weeks without paying him a cent, only feeding him. "Bill" looked down upon shot-guns and would only use a rifle; he had a .40-72.

The following morning we went on a partridge hunt, and Frank and I did some awful mugging at first, and "Bill" ridiculed the idea of wing-shooting, claiming that it was only by chance a bird was killed on the wing. Well, the first day we only got five birds and missed about twenty-five. Frank ran across two deer and let drive at them with buckshot, but it seemingly only hastened their speed. I had a shot at a fox at fifty yards, but failed to get him.

The next day we struck for an old clearing about three miles away. We all carried rifles and got two partridges on the way. At the clearing we lay down behind stumps and still-hunted, and after an hour or so Frank got a pot at a fine big buck with his .44-40 carbine, and down went his flag. We chased him for a mile but he got away from us, and we concluded that the .44-40 is not nearly powerful enough to stop a deer unless struck in a very vital spot. "Bill" fired at a doe on the way back, but did not connect. The next day we went after partridge again, and steadied down in our shooting and got about half our birds, bringing in about fifteen between us. "Bill" had gone off in another direction to interview a deadfall that he had set some months back, and did not show up till long after dark, and reported having had a running shot at a bear and that the deadfall was down.

Next day we went back to the clearing and each of us got a crack at a deer. Mine was a running shot at 300 yards at which I pumped five .38-55 in vain. "Bill" had nothing in his rifle and snapped three times at his, and by the time he fished some shells out of his clothes the deer was gone. Frank struck his between the eyes and it dropped in its tracks. It was a three-year-old doe and weighed about 100 pounds dressed. We had a hard job getting it back to camp. Then we had fresh meat for a change.

The next couple of days we hunted partridge and averaged about ten or twelve a day between us. Our camp was within twenty-five yards of a brook, and every morning we saw fresh signs of deer there, and one morning we saw the marks of a moose and heard him calling during the day. We tried to call him but it did not work. On the following day I got a squint at him as I was sitting down near the old clearing; he was about 400 yards away and was just at the edge of the bush. I crawled on my stomach to get nearer, but he must have winded me, as when I raised my head he was nowhere to be seen. I kicked myself that I did not let fly at him at first.

Thus we spent our time. The last week was the best of all, as we got four deer between us. I got my two in one afternoon. I was lying behind a stump waiting for a "pot" at the clearing and went into a doze; I awoke with a start and there were a buck and a doe calmly nibbling at the grass not 100 yards away. Two shots from my .38-55 and one dropped in its tracks, the other one (the buck) with flag down went flying for the bush, and after running about 200 yards dropped dead. The first one was shot right through the heart, but it was torn up terribly inside. Frank got his buck one-quarter mile from camp, walked right on top of him, and with "Bill's" rifle in his hands, one shot did the trick. "Bill" shot a doe on his way to the deadfall and carried it to camp all by himself. We did not get a bear but saw traces of many. I saw one one day with my shotgun in hand, and only having No. 6 shot, let him go, which he lost no time in doing.

Our three weeks were up and we were a little tired of it, and then we had the terrible job of packing those three deer and all the rest of the stuff, including about 100 partridge, over the five miles. We expected to do it all in one day, but alas! it took us a day and a half, but we had plenty of time, as the team was to meet us the following evening, and we had six hours to spare, and it proved to be more too, as the team was five hours late. Here we parted with "Bill" with promises to return next season. Then away we go home, getting into Montreal Oct. 13, looking like two hobos.

NOTES.—I have come to the conclusion that no light leather boot can be made waterproof. We used lumberman's larigans with a small sole and heel, and while they were very easy and comfortable, they let in water like a sieve. Second, I am through with small caliber rifles for deer shooting. Frank's .44-40, though seemingly a big caliber, was not nearly powerful enough to stop a deer unless hit in a very vital spot, and he lost three or four deer which, if hit with a .40-72, would have been dead meat. I used a .38-55, but am going to get a .40-72—I had to laugh at your editorial about shooting partridge

with No. 10 shot. We used 3/4 Dupont, 1/4 No. 6 chilled, and found it small enough. Half the time three-fourths of the charge goes into trees and slash, the bird getting very little of it. Most birds are killed within thirty yards, but it takes a terrible lot of killing to kill Canadian partridge. We both used Winchester pump guns, full-choked, and they worked like a charm. No cylinder bore for me. Trap shooting is no practice for these birds at all. It is a case of snap shooting all the time, and repeatedly I have killed a bird with gun at hip; had to do it or get no shot. ELLIOTT JOHNSON, JR.

BY SYLVESTER D. JUDD, ASSISTANT, BIOLOGICAL SURVEY.

(Continued from page 880)

**General Habits of the B. Bobwhite.**

THE habits of bobwhite, like those of many other birds, vary considerably, and the following, observed by E. W. Nelson, is a case in point. In 1875 the Wabash bottoms near Mount Carmel, Ill., were covered with a magnificent forest, quite tropical in the size and luxuriant growth of trees and other vegetation. Scattered here and there through the forest were small clearings planted to corn. Bobwhites were found about all of these clearings, and the males were commonly heard calling from the tops of tall trees in the edge of the bordering forest, and on more than one occasion were stalked and shot in the midst of the woods from tree tops more than 100 feet from the ground. When flushed in the cornfields the coveys dashed away into the forest, where they took refuge in the tree tops, thence sending forth their rallying call notes.

There appears to be a tendency among bobwhites, at least in some regions, to a local migration. In certain sections, as in Virginia and Maryland, they commonly leave their summer homes on the approach of winter and congregate near the larger watercourses. In an old number of the American Sportsman Lewis refers to this fall movement, and says: "At this period the birds are said to be running or traveling, and will not lie to a dog; and to pursue is lost time, as it will be found utterly impossible to keep up with them, no matter with what speed you attempt it."

The habits of the bobwhite during the hunting season are well known. The birds move about most actively and feed in the early morning and late afternoon. The best shooting is to be had the hour before sunset, in the places where the birds have decided to spend the night. They roost on the ground, forming a solid ring with tails in and heads out. In Virginia and Maryland the roosting places are almost never in the woods, though in Mecklenburg county, Va., the writer has found them in grassy, briery little clearings among pine woods. At Marshall Hall the birds were found roosting in the edges of woodland, orchards, patches of ragweed in wheat stubble, cornfields, truck plats, broomsedge, dewberry and blackberry tangles, pastures and fence corners. In Massachusetts Edward A. Preble found no roosts in the open fields, but found them among scrub oaks and in tall pine forests. Bobwhites habitually use a roosting ground again and again. A covey of a dozen, found the middle of November, 1899, at Marshall Hall, resorted to a corner of a peach orchard for eight consecutive nights, and during December, 1902, a covey of fifteen on the Roanoke River bottom used a narrow strip of cocklebur, ragweed and smartweed for ten consecutive nights. It is interesting to note that, although quail seek the woods for shelter from enemies during the day, they generally regard the open as safer at night.

It is the general opinion that with the oncoming of winter the bobwhite is found less often in the open fields, where withered herbaceous plants afford but scant protection from enemies, than in dense bushy briery coverts and woods.

In Maryland and Virginia the scattered and depleted coveys after the shooting season evidently unite into large bevy. Their favorite resort in severe weather is a bank with southern exposure and suitable food supply. At Marshall Hall during one of the heaviest snowfalls of the season, when the Potomac was frozen over and the thermometer near zero, a covey was always to be found on the southeast side of a steep bank bordering a large swamp. Here the birds found food and warmth, for the rays of the sun fell on this slope so directly that even when the snow elsewhere lay from three to six inches deep it was here melted or remained only in patches. It was noticeable that when snow was on the ground the birds ventured only a few rods from cover, a fact that apparently indicated their appreciation of danger from the numerous hawks and foxes. At Kinsale, Va., the writer found bobwhites crossing open fields when there was an inch or two of snow, though for the most part they kept close to cover. In April and May the birds again venture out into the open, and they breed when vegetation is sufficiently grown to conceal the nests.

At Marshall Hall little oval pits in dry soil, in which quail had been dusting, were found in various situations, usually under cover of weeds and bushes about the fields. Dusting is a part of the toilet of all gallinaceous and many other birds, and may also be a protection against vermin.

**B. Bobwhite as an Ally of the Farmer.**

In summing up the relations of the bobwhite to agriculture it will be well to emphasize certain facts developed by our investigation of its food habits. In the first place, careful observations at Marshall Hall, where the acreage under cultivation is large and the bobwhite abundant, and less extended investigations elsewhere afford no evidence that the species does appreciable injury to crops of grain or fruit. Further, its habit of destroying weed seeds is of much economic importance. For instance, it is reasonable to assume that in the States of Virginia and North Carolina, from Sept. 1 to April 30, the season when the largest proportion of weed seed is consumed by birds, there are four bobwhites to each square mile of land, or 354,820 in the two States. The crop of each bird holds half an ounce of seeds and is filled twice a day. Since at each of the two daily meals weed seeds

constitute at least half the contents of the crop, or a quarter of an ounce, a half ounce daily is consumed by each bird. On this basis the total consumption of weed seeds by bobwhites from Sept. 1 to April 30 in Virginia and North Carolina amounts to 1,341 tons. It is to be remembered also that if it were not for foxes, hawks and trespassing pot hunters the birds would be more abundant and their services correspondingly greater. Insects form about one-third of the bobwhite's diet from June 1 to Aug. 31; and a calculation similar to the one employed above shows that 340 tons of insects are destroyed during this period.

Among the insects consumed by the bird are such very harmful pests as the Rocky Mountain locust, the chinch bug, the Colorado potato beetle, the Mexican cotton boll weevil, cutworms, the two cotton worms, and the army worm. The highly insectivorous chicks cause a proportionally greater destruction of insects than the adult birds. Further, while many other useful birds confine themselves to the woodland or swamp, or merely scout along waterways, hedges and fence rows, the bobwhite feeds directly among field crops. In the South it is found in cotton fields; in the North it delights in the ragweed-grown wheat stubble; in the West its favorite feeding ground is cornfields, and it often spends the night there instead of flying to cover, as do most birds. The facility with which it passes from field to field, either on foot or on the wing, distributes its services to an unusual degree.

**Bobwhite as an Asset of the Farm.**

Every land owner should realize the value of the bobwhite, and should demand from sportsmen a fair price for the birds killed on his property. With proper management some farms of from 500 to 1,000 acres would probably yield a better revenue from bobwhites than from poultry. Many farms in North Carolina derive a regular income from this source. This is obtained by leasing the shooting right to wealthy sportsmen, who, in localities where birds are abundant, willingly pay considerable sums for the privilege. This is probably the most profitable use to which certain poor lands in the South can be put. In some places in Maryland, Virginia and North Carolina the sportsman often pays the land owner from five to twenty-five cents for every bird shot. In other places the farmer or his boy is hired as guide to locate the quail. In addition the sportsman pays liberally for his board and otherwise adds to the farmer's income. Wideawake farmers appreciate the fact that the genuine sportsman pays well for his sport and should discriminate between him and the market hunter. Millions of dollars can be realized by the proper management of the quail crop of the United States. The time is perhaps not far distant when land owners will protect their game birds from foxes, injurious hawks and human poachers as diligently as they now do their poultry. The sooner the farmer realizes the value of the bobwhite and the fact that the market hunter is a bird exterminator, profiting at the land owner's expense, the better will be his chance of an income from his crop of quail.

**Bobwhite as Article of Food.**

Perhaps no game is more generally known and liked than quail. The flesh of the bobwhite is juicy, tender, delicately flavored, easily digested and nutritious. It is well adapted to the needs of invalids. To the farmer's table, where fresh meat is often not obtainable, this bird furnishes a welcome supply. No game is so much sought for in market, and countless numbers are sold every year. The writer knows of a single dealer in Washington who in 1902 sold 100,000 quail. Yet the supply is far short of the demand, and the price is constantly rising. In connection with the present price, which is \$3 to \$5 a dozen, it is interesting to recall Audubon's statement that in 1810 these birds could be bought for twelve cents a dozen, and in 1831 for fifty cents. Then they were on the tables of rich and poor alike.

**Bobwhite as an Object of Sport.**

Edwyn Sandys says of the bobwhite: "He truly is the king of his race; and not alone that, for, in the opinion of hosts of enthusiastic sportsmen, he is the best bird that flies." The well known author, T. S. Van Dyke, says: "Dear little bobwhite has brought more rest to the business-wearied soul, more new life to tired humanity than nearly all other American game combined." The pursuit of many kinds of game is possible only in the distant wilderness, where traveling is difficult and the exposure incident to the sport may be dangerous to health; but the pursuit of the bobwhite belongs to open, accessible country, and is not too severe for men accustomed to a sedentary life. To thousands of such men quail hunting is the yearly means of restoration, and results in a direct benefit to the community, though one not readily computed in money value. At the conservative estimate, between 300,000 and 400,000 sportsmen go out from cities every fall to hunt bobwhite, which means a large expenditure of money, much of which goes to farmers who hold shooting land. Such revenue is timely, for it comes when farm work yields small returns and employment is welcome. Where non-resident licenses are required, with fee of from \$5 to \$25, the State also derives a direct income from the sport.

The bobwhite deservedly stands at the head of American game birds, because it lies so well to the dog, and when flushed springs from the earth like an arrow, demanding a quick eye and a trained touch on the trigger to bring it to bag. When, at the advance of the hunter, the covey explodes like a bomb, his skill is sharply tested if he would bring one of the whirring, meteor-like projectiles to the ground. Birds of a scattered covey are hard to find. Good authorities say that when they alight they remain quiet and compress their feathers to the body, with the result of withholding the scent. Many sportsmen, therefore, before hunting a scattered covey, give them time to run about and leave scent.

Paradoxical as it may seem, sportsmen exert a powerful influence for the protection of bobwhite. Many individuals and clubs own or lease large tracts, where they maintain the birds and shoot only the surplus. These enthusiasts assist in the enforcement of game laws, restock depleted covers, and provide food for the birds in times of scarcity. Certain clubs are organized for the purpose of holding field trials, the object of which is to test the

ability of competing dogs to find and point birds. As retrieving is not required, the birds are not shot. One of the best known patrons of field trials recently told the writer that he had not killed a bobwhite in ten years. A number of clubs control each a preserve of from 5,000 to 20,000 acres, on which no shooting is allowed—or, if permitted, is carefully regulated—and suitable measures are taken for protecting birds and facilitating their propagation. These trials are held in a score or more of States, and in some of the larger contests more than a hundred dogs are entered. Some owners of field-trial dogs have preserves of their own, stocked with hundreds of pairs of bobwhites. Thousands of live birds for the above purposes are in demand at high prices. If the bobwhite could be domesticated and reared in captivity for sale, the enterprise would doubtless be very profitable. From these facts it is evident that the sport of hunting bobwhite contributes to the health and happiness of thousands of men, and that in various ways it can be made to add to the prosperity of farmers and others interested.

**Aesthetic Value of Bobwhite.**

Much money has been spent, and well spent, merely for the enjoyment of the beauty and companionship of birds. For the protection of gulls and terns along the Atlantic coast thousands of dollars have been expended at the instance of bird lovers, in whose eyes these delicate and graceful creatures are the crowning attractions of marine landscape. In like manner the admirers of bobwhite derive aesthetic pleasure from his presence. To pastoral inland scenes—woodlots in a green mist of young leaves, summer grass fields and bushy pastures, brown stubble and skeleton cornfields—the bobwhite adds a distinctive charm—homely, but none the less attractive. As the bird calls from the fence post or runs fearlessly across the road, the stroller can but admire its trim, alert figure and tasteful color pattern of black, white and brown, set off with delicate tints of blue-gray. Its mellow whistle seems a proffer of good-fellowship, investing even a solitude with cheer, while the plaintive covey-call heard in the growing darkness to summon a scattered flock to the nightly resting place is one of the tenderest of evening sounds. Because of such traits the bird has made many friends, some of whom spend time and money to insure its undisturbed presence in their neighborhood.

**Decrease of Bobwhite.**

Every few years, on the recurrence of unusually severe winters with heavy snows which cover the food supply, great numbers of bobwhites perish, and sometimes in the northern part of its range the bird becomes almost extinct. This unnecessary loss of life could be largely prevented if land owners and others interested would scatter a little grain in suitable places. This is done in some localities, as at Sandy Spring, Md., where H. H. Miller drives over the snow-covered country, scattering grain for the starving quail. The practice is worthy of general adoption. It is necessary only while the ground is snow-bound, and especially after sleet storms.

The bobwhite has taken kindly to civilization and has followed the plow of the settler into new sections, so that with the advance of the farming area in the West, and especially in the Northwest, its range has been much extended.

There is little doubt, however, that, while the bobwhite is a fairly hardy and prolific species, its numbers are decreasing in much, if not all, of its range, where not specially protected. In the early fifties Lewis reported sixty-one birds killed in a day to a single muzzle-loader, and mentions 900 birds trapped on one estate in a season. Within the last few years the scarcity of bobwhites has been so notable that several projected field trials have been abandoned for lack of birds on which to try the dogs.

Severe winters, as already noted, are an occasional cause for a great decrease in the number of the birds, though they increase rapidly with a few succeeding good seasons. In sections where the birds are still common unlimited slaughter is often indulged in by thoughtless hunters. Recent instances of such slaughter are on record, and the following may be cited: A bag of 175 birds to three guns in eight hours in the fall of 1902 at Tiffin, O., another of 300 birds to a single gun in a day and a half in the fall of 1902, in Marshall county, Ky., and still another of 292 birds to three guns in a day in South Carolina during the same season. The value of this bird, both to the farmer and the sportsman, renders the question of its maintenance and increase one of much importance. So assiduously is the bobwhite sought by sportsmen and market hunters that intelligent and concerted efforts are needed even to maintain its present numbers.

[TO BE CONTINUED.]

**British Columbia Game.**

VANCOUVER, B. C., Oct. 14.—*Editor Forest and Stream:* We have had a good many Americans over for the hunting this year, and are pleased to welcome them, as they are nearly all good sportsmen, pay our license fee without grumbling, and are observing of our game laws.

Big game in the Cassiar district has been very good this year, caribou being unusually plentiful. As far as I can learn everybody who has been up there has been successful in getting good specimens of goat, caribou, Stonei sheep and bear, while those who have really laid themselves out to hunt them have also got moose.

The hunting parties in the Bridge River and Chilcoteen countries have not had such good luck as usual. This has been owing to the depredations of a number of Chilcoteen Indians and also on account of several so-called fishing parties starting before the beginning of the season, and not only breaking our laws but also acting in an unsportsmanlike manner to the other parties who respected the close season. Both Indians and whites will be well looked after in future, and anybody violating the laws will be prosecuted without mercy.

A. BRYAN WILLIAMS,  
Prov. Game and Forest Warden.

**THE MANY-USE OIL**

Six-ounce can, 25 cents. Safe and Handy for Gunners' use.—Advt.

\*Bureau of Biological Survey, Bulletin No. 26.

## Pickerel Fishing in Pennsylvania Mountain Lakes.

THOUSANDS of years ago a vast sheet of ice came down from the north and swept into Pennsylvania, burying nearly the whole northern half to a depth, it is believed, from four to five miles. Ancient valleys of great size were blotted out; huge mountains had their caps destroyed, and were ground into small hills; new valleys were created, and new mountains built. Streams were diverted from their natural course and new channels cut out.

This terrific convulsion of nature was particularly severe in northeastern Pennsylvania, in the section now known as Wayne, Susquehanna, Pike, Monroe, Luzerne, Lackawanna and Wyoming counties. To-day there is scarcely a vestige of the ancient land visible. Most of the hills and mountains which thickly dot the entire area of the counties named are modern excrescences, built by the tremendous force of the huge mer-de-glacé, which swept into Pennsylvania during what is known as the Ice Age.

Huge tongues of ice, or properly speaking, glaciers, left long ridges of loose rocks, sometimes two and three hundred feet high, at their discharging points. These ridges or terminal moraines were sometimes thrown across a valley, down which a stream of water flowed, and the dams thus built by nature resulted in natural lakes of various sizes. In other instances, after the Ice Age passed away and the rocks comprising many of the moraines settled in places, forming depressions in their sides, some from ninety to one hundred or more feet in depth. Water from higher levels trickled through and bubbled up in the form of springs, and there was created another form of natural lakes called kettle holes.

Kettle hole lakes are more enduring than lakes formed by the damming of a stream. The latter are usually shallow and rapidly filled by mud carried by the inflowing streams, while the former are more enduring since there are no deposits save from the surrounding shores. In the eight or ten northeastern counties of Pennsylvania there are to-day at least five hundred lakes from fifty to four hundred acres each. A few centuries ago there were probably three times that many; most of them were inlet lakes, and some were as large nearly as Lake George in New York State. The number has been reduced through their having been filled up by the washings from the inlet streams and neighboring hills, and others are disappearing.

Water birds eagerly sought these sun-kissed mountain liquid gems and carried with them on their feathers and feet the eggs of many fishes, and so the stocking of the lakes began. Later, Indians brought from New York and elsewhere pickerel and other food fishes and thus added to the stock. Hence, in time the mountain lakes of northeastern Pennsylvania became literally alive with pickerel, catfish, yellow perch and roach (commonly called shiners). Also the ubiquitous eel, which, unaided, wiggled its way up mountain streams and through wet grass to the lakes.

Pennsylvania's mountain lakes became a paradise when anglers appeared. Unfortunately, fish hogs found them likewise ideal for their unholy purpose. They journeyed into the wilderness to the mountain lakes during the summer, carrying with them set lines, gill nets, seines and other diabolically ingenious methods for destroying fish, and bore away with them countless spoil. When winter came and the lakes became ice-bound, they returned, and cutting thousands of holes through the ice and by means of tip-ups caught thousands more pickerel and called it sport. They hid them rejoicing to the nearest town and sold the fish for sufficient to cover expenses, and then went home to boast of their prowess as mighty fishermen.

Farmers, fathers and sons, living adjacent to the lakes, used much the same devices as the "fish hogs," and under the more homely title of "fishin'" aided and abetted the "fish hogs" in their slaughter of the fish. For several years they were able to keep their pickle barrels and smoke houses full of pickerel for winter use. Hence it is not surprising that when the year 1900 arrived fishing in many of the northeastern lakes of Pennsylvania during the summer was of a negative character. It was fair fishing only in the winter, when the pickerel which remained rushed to the bait dangled before them through holes cut in the ice. At this critical point the State authorities interfered. Lax fish laws were repealed in favor of more stringent measures. The heavy hand of the law was laid on persons who used more than one tip-up. Set-lines and nets were prohibited in all the interior lakes, and better than all, the laws were reasonably enforced. Within five years the pickerel fishing in most of the mountain lakes of northeastern Pennsylvania has been restored almost to its pristine glory.

There is a curious division of sentiment among fishermen in Pennsylvania regarding the pickerel. Many anglers condemn it as an inferior game fish. On the other hand, there is a large number of fishermen who care quite as much for pickerel fishing as black bass, and who regard the flesh as delicious eating. This last body of anglers is increasing rapidly in numbers year by year along with a growing sentiment in favor of the State giving the greatest attention to indigenous rather than to introduced fishes.

Angling for pickerel in the mountain lakes or northeastern Pennsylvania is surrounded by all the superlative charms which are demanded by the most exacting sportsman. At an average altitude of from 1,800 to 2,000 feet above the level of the sea the air is pure and bracing. Nestled on the side of an ancient moraine or in a shallow valley near the summit of modern moun-

tains, the waters are surrounded by tree-clothed hills or mountain caps; the air is redolent with the resin of pines, or fragrance of fern and grass and flowers; there is the mighty, noisy stillness of the forest or the calm quiet of mountain farm land; there are clear, pure, sparkling and also undefiled bodies of water, many thickly dotted with water lilies, with white petals and yellow crowns, with a delicate penetrating scent.

Along the edges of the water lilies, six or eight feet distant, a man rows a boat in the early morning or late afternoon. Another man sits in the stern holding a stiff rod, from the tip of which, stretching away fifty to seventy-five feet, is a long, dark-colored line. The boat is rowed slowly. The oars are dipped carefully and silently into the water. Presently crossing a small cove, there is a sudden stretching of the slightly bellied line, followed instantly by a sharp, stern jerk on the rod, which doubles up to nearly a half circle. A cry from the fisherman, and the boatman instantly ceases rowing, holds his oar steadily in the water and leans forward, eagerly watching the fight which is now going on between the fisherman and the unseen object at the far end of the line. In a minute or two there is a sudden break in the water fifty to seventy-five feet away, and a long, thin, green-sided fish, with white belly, leaps frantically in the air, curving himself like a bow as he descends again to the depths. Now reeling in, now giving line, but always keeping the long, steady thread taut, the angler plays his fish for perhaps three or four minutes until, worn out with its struggles, the prey is reeled to the side of the boat, a landing net slipped deftly between the surface of the water, and a pickerel weighing anywhere from two to six pounds is lifted deftly aboard, where it lies quietly without a quiver of its fins, while the triumphant angler relieves from the fierce, sharp-toothed jaws, a tripod hook and a metallic spoon. The rowing is resumed, the spoon cast forth again, and the hunt for another victim begins.

For perhaps five minutes the captured pickerel lies quietly as though reflecting. It does not appear by the fierce light which glows from its eyes, by the ugly curve of its jaws, that it realizes that it has been conquered. Angry surprise at the unwarranted insolence of any one daring to disturb him in its natural element, seems to be a dominant thought. Presently a hot anger seems to sweep across the fish, the fins begin to work convulsively, the jaws begin to snap and the eyes take on a fiercer light. Quick undulations stir the body, and the fish begins to leap about the boat from side to side and from end to end, until the angler and the boatman, filled with excitement and apprehension lest they lose their prey, hold in their respective occupations and give themselves up to subduing their violent victim. One or the other, perchance, in the struggle which ensues gets his fingers too near the snapping jaws, then a sharp howl of pain rends the quiet air, and the unlucky man a moment later may be seen to be painfully nursing and sucking a badly lacerated and bleeding finger. Hence it is that the really careful angler who knows all about the pickerel will, as soon as the creature is boated, either kill it or immediately put it away in the cool recess to be found under the stern seat.

One objection which has been urged against the pickerel, and which has caused it to be designated as an inferior game fish, is the fact of this terrible uproar which it creates some time after it has been boated. It has been stated time and time again that the pickerel makes a harder fight after it has been placed in the basket or thrown to the bottom of the boat than it did upon the line while in the water. But such a charge is never made by a man who has had his rod broken or line parted by the first wild rush of a five or six pound pickerel. It is he who affirms strenuously and with picturesque language that of all the fish which swim, the hardest fighter, the most dangerous fish to handle and most tender mouthed, is the chain pickerel of the Pennsylvania lakes. It is the rod-fisherman who uses a single hook, a float and small sinker and a live bait, who most loves the pickerel and who holds it in highest esteem as a game fish. He anchors off the lily pads, thrusts his hook beneath the dorsal fin of a four or five-inch shiner or a three-inch yellow perch, casts it overboard, sets his rod and waits for a bite.

His float or cork is from four to six feet above the bait. On this the fisherman's eyes are intently fixed. Presently the float begins to wobble in a quickened manner, and then suddenly disappears beneath the surface.

A nervous fisherman who knows the ways of pickerel and who smokes, will then, in spite of an almost overwhelming desire to yank, seize not his rod, but his pipe, fill it with tobacco, draw forth a match, strike it, light up, and begin to puff with sharp, quick in-drawings of the breath, ceaselessly watching anxiously the float, which all this time is gyrating wildly several inches, beneath the water, while there is a slack line above.

Suddenly the float comes to the surface and rests without motion. Then it is that the angler, his nerve steadied by the soothing nicotine, takes his rod in his hands, full of eager anticipation, for the critical moment has arrived. Hardly has he done so when the float again with a frantic rush disappears, the slack line above straightens out, the tip of the rod goes down and the fight is on. For several minutes the contest rages, the angler giving and taking line, until exhausted, the pickerel is drawn to the side of the boat and landed. Generally there is a great gash along the side of the jaw, torn by the hook in the frantic struggle of the fish to free itself.

It is rare indeed that when the fish is landed the hook does not drop out of the jaw of its own accord.

It is then that the fisherman plumes himself, and if he has a companion, boasts loudly of the skill which he has displayed in landing his prey. To some extent he has a right to boast, for should he have made a single mistake, should he have slackened the line for an instant, the hook would have dropped from the opening in the jaw, and another fisherman would have had a chance another day.

There is another type of pickerel fisherman. He, like the troller, has a boatman. He may use a trolling spoon, he may use instead a single hook to which is attached an impaled shiner or perch, or even a piece of pork cut in the form of a fish. Instead of rowing along the lily pads, or instead of anchoring his boat while fishing, his boatman takes him among the scented lilies. Standing at the stern, he casts his spoon or his bait in the openings and draws it with quick motion toward him or sidewise, until a rush of one of the freshwater pirates gives him his chance at the sport.

When winter arrives and the lakes are covered with from one to three feet of ice, the ice fisherman goes forth. Under the present law of the Commonwealth of Pennsylvania, the fisherman cuts one hole through the ice near the summer line of lily pads. He has with him two sticks, one a short piece of hickory the thickness of his thumb. This is to rest across the hole in the ice. This stick is thrown across the hole to hold the other stick, which is generally shaped like a fish. The hole through which the hickory stick is passed is near what would be the gills of the living fish. To the nose is fastened a four-foot line, to which is attached a single hook. To this is fastened a fluttering scarlet or white rag. The hook is baited with a shiner and dropped into the water, and the angler waits. Presently the nose of the wooden fish goes down, the tail is elevated and the gayly colored rag flutters in the air. The fisherman steps forward, gets the line in his hand and pulls out the astonished and angry pickerel, unhooks him and drops it on the ice, where in a few minutes it freezes hard.

Within the last two or three years a summer angler in the lakes of northeastern Pennsylvania may average a dozen or a dozen and a half pickerel in a day's fishing easily. The trollers usually have the largest scores. The fish average from two and a half to six pounds, and are unusually rich in coloring. The species—and there is only one in these lakes—is the chain pickerel, scientifically known as *Esox fasciatus*. Only one lake in northeastern Pennsylvania contains maskinongé, and that is Lake Ariel in Wayne county, and this great member of the pike family is scarce in that body of water.

W. E. MEEHAN.

## Pennsylvania Hatchery Work.

THE gathering of trout eggs is now occupying most of the time of the superintendents and spawn-takers connected with the Department of Fisheries of Pennsylvania. Rearing of trout in Pennsylvania has assumed vast proportions. Already very nearly 1,000,000 eggs have been taken and it is estimated that the take this year will reach about 4,000,000, of which about one-half will be taken from fish reared in the State hatcheries, the other will be gifts from several private and commercial hatcheries.

Among those who have promised their surplus eggs are: W. S. Little, of Coudersport; Col. Harry Trexler, of Allentown; the Blooming Grove Park Association, Glen Eyre; the Penn Forest Brook Trout Company, of Mauch Chunk, and the Weissport Brook Trout Company, of Weissport. To accommodate all this expected great supply, outside nursery troughs have been built in several of the hatcheries, and the capacity of some of the buildings increased. Six million eggs will be taken care of at Corry, 6,000,000 at Bellefonte and between 2,000,000 and 3,000,000 at Wayne.

A hatching house for lake trout with a capacity of nearly 10,000,000 eggs has been built at the new Erie Auxiliary at Union City, thus increasing the capacity for eggs of this fish to nearly 30,000,000.

The Department of Fisheries on Thursday, Oct. 19, received the deeds for the hatchery site at Conneautville, in Crawford county, at the foot of Conneaut Lake, the new property which was donated by citizens of Crawford county, and authorized at the last session of the Legislature, over twenty-five acres, and is designed for the rearing of fish other than trout. This hatchery will be known as Crawford Station No. 7. Two new hatchery sites will probably be located before spring, making a total of nine, an increase of six since the establishment of the Department of Fisheries three years ago.

Fish Commissioner Meehan has designed a new jar for hatching fish. It is a combination of the McDonald and Downing Improved. It has the bottom and sides of the McDonald and the top of the Downing Improved. It has a foot similar to the Downing Improved, except there is no stem.

A novelty in hatching houses is in operation at the Wayne hatchery. It is a combination of trough and battery. The latter being arranged along one side of the house with a capacity for 500 jars. The water supply for the jars comes from the creek, while the water supply for the trout troughs comes from the spring.

Mr. J. P. Brower, assistant in charge of the Torresdale Hatchery, has resigned his position to accept a place on the Thousand Islands. Mr. W. H. Safford, who was first assistant at the Bellefonte hatchery, has been appointed superintendent of the Torresdale station temporarily, the regular station to which he has been assigned being the Crawford station, on which work will not begin until spring.

Reports from all over Pennsylvania indicate a sudden reappearance of black bass in large numbers. More fish of this species have been seen and caught in Pennsylvania

waters this year than for more than five years back. The increase is attributed by persons making reports to the great reduction in number of giggers and netters through the enforcement of the fish laws. All other forms of fishing also reported to be better than for years past.

W. E. MEEHAN,  
Commissioner of Fisheries.

## Fish and Fishing.

### The "Salmon" of the Upper Ottawa Lakes.

A FRIEND writes me about a fishing trip recently made by him to one of the lakes near Eaganville, in the Ottawa district of Canada, and says that he was led to go there by the reports of the splendid salmon fishing to be had thereabouts. I know very well that salmon fishing is advertised in some of the waters in that part of the country, and that there are many good catches made there of beautiful game fishes that are known as salmon to the people of the locality. These fishes are no more, however, like *Salmo salar*, or the salmon of the sea and coastal streams than this latter mentioned fish is like a rainbow trout. The matter is entirely one of names; and of all the difficulties that the ordinary angler-naturalist has to contend with, none are at times more perplexing than those arising from the confusion caused by local nomenclature in the identification and classification of fishes. The mystification and muddle resulting therefrom was the subject some time ago of a very interesting paper on "The Vernacular Names of Fishes," by the learned Prof. E. E. Prince, Dominion Commissioner of Fisheries. The fish that my friend caught the other day in Lake Clear were specimens of the *namaycush* or great gray or lake trout, and his guides classed them as salmon. In portions of the country along the Mississippi River, where the pike-perch is found, it is dignified by the name of jack salmon, while in parts of Pennsylvania it is known as the Susquehanna salmon. In parts of Maine the ouananiche is locally known as salmon. So that the guides at the Rideau and other Ottawa lakes are far from being the only sinners in this respect. It is well known that black bass are called trout in some of the Southern States, and the confusion caused by the misapplication of the terms pickerel and pike is often experienced by anglers.

But to return to the *namaycush*, or so-called salmon, recently caught by my friend a few miles from Eaganville, which is reached about eighty miles from Ottawa by the Canada Atlantic Railway. I am told that the fishing there has not been quite so good this autumn as usual, because of the very unusually fine and warm weather which has prevailed. That of the early part of October was really as fine as the first half of September usually is. The big lake trout consequently remained down in their summer deep-water habitat, though a few were tempted by deep-water trolling, and if the attempt had been made a fortnight later, I have no doubt that these big fish could have been had in much shallower water. My informant killed two in one afternoon that weighed 7 pounds and 5½ respectively. I cannot help thinking what rare sport it must be trolling in the month of October for these *namaycush* in lakes like Temagami and Lady Evelyn, when the fish move up from the great depths of the lakes into comparatively shallow water, as the heat grows less oppressive.

### The Salmon and Trout of Hudson Bay.

The Dominion steamer Arctic, which has been absent for the last year in the Arctic regions, enabling the mounted police to establish more northerly posts and customs offices, has returned to Quebec, where Major Moodie forwarded his reports of observations in the Far North. He reports brook trout plentiful in all the waters on the west side of Hudson Bay, and declares that in one place the natives were catching them up to 7 and 8 pounds each. In the direction of Hudson Straits, a good harbor, called Prefontaine Bay, after the Canadian Minister of Marine and Fisheries, was found forty miles to the west of Cape Westenholme, where a police depot was established, which will be one of the Dominion's most northerly outposts. This harbor abounds with salmon to such an extent that one cast of a net filled two barrels for the expedition. The fish weighed from 7 to 8 pounds each. The major offers no opinion as to the exact classification of this fish, but its size would seem to indicate that it is more likely to be the *Salmo hearnei* of Richardson, or the *immaculatus* or *hudsonicus* of Storer and Gunther respectively—commonly known as sea trout in Trinity Bay and elsewhere on the north shore of the Gulf—and as *stagnalis* in Greenland, than the well known *Salmo salar*. There is evidently much more to be learned of the *Salmonidae* of the Arctic regions than many of us imagine who have never had the opportunities for observation possessed by Franklin, Richardson, Hearn, Back, Hallock and a few others.

### The Lake St. John Salmon.

I have had very little difficulty in tracing up satisfactory evidence of the taking of quite a number of salmon in Lake St. John waters during the past summer. Isolated cases of the capture of supposed salmon by anglers have been reported for the last three or four years, but never before this season have so many or such large specimens of the fish been taken there. One salmon of 15 pounds was caught in a net in Lake St. John itself. One of 18 pounds was caught by a boy in the Peribonca River, and, strange to say, was caught with bait. Of course there is nothing unusual in the taking of *Salmo salar* with bait in Scotch, Irish and English waters, and it seems strange at first sight that the same fish should not oftener be similarly taken on this side of the water. Nevertheless the fact remains that it very seldom is so taken; so seldom, in fact, that it is popularly supposed that it is not possible to do so. Of course, the British rivers are all of them very short as compared with ours, and while some American salmon may be several days in brackish water before reaching their river, it is not much more than a step, so to say, for a British fish to pass from the sea into fresh water, and he may well be still on the feed for a few hours, or even days, after his arrival in the river.

It is a very pretty problem, too, whether the big sal-

mon caught in Lake St. John waters ever went to sea at all. It is now seven years since the first of these salmon were planted in Lake St. John, and since that time, not only the first year's plant, but also the second and even the third, may well have attained the size mentioned if they went down to the sea as smolts and returned again as grilse. If they remained in Lake St. John throughout the year it is a question whether they would ever have grown to be 18 pounds in weight, although there are not wanting those who believe that the salmon formerly found in Lake Ontario, remained there all the year round. There is certainly an abundance of food for the fish, in the shape of smelt and other white fish in Lake St. John; so that providing the salmon remain there, it is not surprising that they should be taken with bait, as they must eat to live, whether they go down to the sea for the purpose, or spend both winter and summer in the lake.

A large number of smaller salmon have been taken during the season in these waters on the fly. Near the head of the Grand Discharge in Lake St. John, and also in the pools of the Metabetchouan, quite a number were hooked, and while all which were recognized as salmon when caught were at once returned to the water uninjured, on account of their immature size, several were killed by visiting anglers who were not aware of what they had captured, so slight is the difference in the appearance of the 2 and 3-pound salmon and a ouananiche of similar size.

The success, so far, of the salmon plant in Lake St. John, gives promise of such excellent results in the near future that it has been decided to hatch out no ouananiche this winter in the Roberval hatchery, but to utilize the institution to its utmost capacity—or at least, so far as the eggs can be obtained—to the hatching of salmon.

This can the more reasonably be done, since there has already been a very noticeable increase in the ouananiche supply in the Grand Discharge since the hatchery went into operation.

The season just closed did not end very well for ouananiche fishermen, because of the extreme dryness of the months of July and August. When September came round the water in Lake St. John was unprecedentedly low; so much so in fact that the steamer could no longer reach the wharf at the Grand Discharge. The fish could be seen in enormous quantities but would not rise.

E. T. D. CHAMBERS.

### An Angler's Watch.

OUR old-time sponsor, Mr. Charles Hallock, begs to acknowledge through the columns of FOREST AND STREAM the receipt of a beautiful timekeeper from Mr. George E. Hart, superintendent of the Waterbury Watch Company. It is a unique specimen of a watch, and really constitutes one of a series of original designs which this enthusiastic salmon fisher has been pleased to devise and present from time to time to prominent anglers who are familiar with Canadian streams. One went, of course, to President Roosevelt, bearing the enameled picture of a Western ranch, another to ex-Governor Russell, of Massachusetts, with the picture of a camp scene on the case; a third to Walter M. Brackett, the artist, with the appropriate figure of a salmon; another to Mr. E. T. D. Chambers, the design being a ouananiche; and one or two others to other well known anglers. But Mr. Hallock's is quite as suggestive, and perhaps even more unique, for its insignia is a couple of gaudy trout flies done in enamel and tied to silkworm gut lengths, which are so disposed as to form the outline of a heart. The ideas are all original, with the superintendent, and apply to members of the craft only, none being made for the trade.

Mr. Hart was one of the first subscribers to FOREST AND STREAM in 1873, and has kept up a long-distance acquaintance with Mr. Hallock at intervals ever since. In presenting this watch to Mr. Hallock's notice and admiration, he has seen fit to introduce the gift by an authenticated recital of old-time reminiscences, which include a two and one-half hours' tussle with a 31½-pound salmon. During its perusal Mr. Hallock claims to have wound the watch twice, intimating thereby that one good turn deserves another, if not more. As a return compliment it was his delight to present Mr. Hart with a sixteen-inch photograph of Bartlett's, at the outlet of Saranac Lake, in the Adirondacks, as it appeared forty years ago before the fire. Mr. Hart having been intimate with the place and the people of the vicinity at that period.

### Hair Lines.

BLENKHORN, who wrote of hair lines in our issue of Sept. 16, is requested to send his address to this office.

## The Kennel.

### The Transmission of Acquirements

Darwin—"Animals and Plants Under Domestication." G. Archdall Reid, M.B., F.R.S.E.—"The Principles of Heredity."

IN resuming this subject, it may be well to recapitulate the difference between an inborn trait and an acquired character. Inborn traits are those which take their origin in the germ cell. Thus arms, legs, eyes, ears, etc., are all inborn. An acquired character (technically termed modification) is an alteration impressed on an inborn character by influences acting on that character after it has developed from the germ. Thus, a hand is inborn, but if it be altered in any way, as by use or injury, the alteration is an acquirement.

Maternal impressions and telegony (the impress supposed to be left by a former mate) are supposed to supply evidence in favor of the transmissibility of acquirements. A pregnant female sees a deformity or something else which powerfully impresses her. Her child when born is thought to reproduce the deformity. Thus a Kerry cow chased by a bulldog is said to have borne a calf extremely like her persecutor. Telegony is a phenomenon of much the same order. A mother who has borne offspring to one sire, is supposed to so

influence offspring borne to subsequent sires; that the latter reproduce the peculiarities of her first mate; thus a white woman who has borne a child to a negro is supposed ever after to have dark children to white men; a mare who has borne a foal to a quagga, is said to have borne subsequently striped offspring to a thoroughbred horse. In the one case, the mother's mind is thought to be impressed, in the other her body. Both hypotheses furnish examples of the amazing looseness of thought which occasionally prevails in biological writing. Neither the transmission of maternal impressions nor telegony has stood the test of accurate observation; they are popular superstitions. But if they were proved to be true, even then the transmission of acquirements would not have been proved, for by that we mean that the precise thing the parent acquired, or something very like it, is transmitted to offspring; but a mother who gets a mental impression does not transmit that impression to her child; on the contrary, the child is supposed to develop something quite different, a deformity. So also if a white mother of a half-breed bear dark children to a white father, she would not transmit anything she acquired, for intercourse with a negro does not make her black.

The effects of various diseases are supposed to supply evidence of the transmission of acquirements. Gout is mentioned as a case. The sins of the father are thought to be visited on his children. Here, predisposition, tendency, an inborn trait, is confused with disease, an acquirement. Some men are so constituted that under fit conditions they tend to develop gout; the children inherit the inborn trait, the predisposition, and under like conditions tend in turn to develop the same disease. But there is no evidence that parental high living influences in the slightest degree the liability of the child to gout, nor even that generations of high living tend to produce gouty predisposition in a self-indulgent race. The children of poor Irish peasants, when removed from their normally miserable surroundings into a more comfortable environment, are as liable to gout as the scions of the British aristocracy. In fact, judging by the analogy of other diseases, it is probable that, were gout very prevalent, and a considerable cause of death or serious disablement, the race that was most afflicted by it, would, by the weeding out of the unfit, become in time the most resistant to it, the least liable under given conditions to contract it. The supporters of the transmission of acquirements contend that the effects of use and disuse, which are acquired by every individual during thousands of years, and which may profoundly affect the whole body, tend ultimately to become organized into inborn characters; the word organized being a vague word used to indicate a particular and inexplicable change in the germ plasm. Thus hares are supposed to have become swift because their ancestors practiced swift running. The giraffe is supposed to have a long neck because its ancestors stretched upward for food. The elephant is supposed to have a short neck and long proboscis because its ancestors stretched their upper lips rather than their necks. Similarly the snake is supposed to have lost its limbs through the transmitted effect of disease.

But modifications acquired as a result of use and disuse are clearly never transmitted. Thus an infant's limb never attains to the adult standard except in response to stimulation similar to that which developed the parent's limb. The same is true of all other structures which in the parent underwent development as a result of use. These, like the limbs, do not develop in the infant except as a result of similar causes. Plainly, then, that which is transmitted to the infant is not the modification, but only the power of acquiring the modification under similar circumstances. Were use acquirements transmitted, a child, for example, would grow into the possession of full adult size and power in the total absence of all exercise. We know that it cannot do so.

Acquired immunity from disease has been instanced as an acquirement capable of hereditary transmission. It is not so. Acquired immunity against any disease depends essentially on a gradual habituation to its toxins or poisons and increased power of resistance to them. Evolution by the agency of natural selection is undoubtedly the true doctrine. There is no evidence that any race has undergone degeneration through the action of any disease, nor that the acquirement of immunity during any number of generations has resulted in an evolution of inborn immunity. On the contrary, every race that has been exposed to a death-dealing disease is resistant to that particular disease precisely in proportion to its past experience of it. When the disease is one against which immunity cannot be acquired, the race has undergone an evolution of inborn immunity; thus Europeans, who have suffered severely from tuberculosis for thousands of years, resist infection by it, or when infected, recover from it more easily than African negroes, who have suffered less, and much more easily than American Indians, who until lately had no experience of the disease. When the disease is one against which immunity can be acquired, the race has undergone an evolution of the power of acquiring immunity, never of inborn immunity; thus English children, whose race has long been afflicted by measles and whooping cough, contract those maladies as easily as Polynesians, to whom they were familiarized only during the last century. But, whereas, as a rule, English children recover readily, Polynesians perish in great numbers. When the disease is not of a fatal kind, no effect on the race can be observed. Thus Polynesians are infected as easily and recover as easily, but not more nor less easily than Englishmen from chicken-pox. Man's evolution against malaria is more striking and conspicuous than that occasioned by any other disease, and that for two reasons. First, because in many districts infected by its microbes, it is so prevalent and virulent that no man resident in them escapes infection, unless he is immune, nor death unless he is resistant. The elimination of the unfit, therefore, has been thorough, and presumably it has been very prolonged, since in such districts the inhabitants, however much they have warred among themselves, have dwelt secure, protected by their deadly climate from the fate that has befallen so many aboriginal tribes—extermination by immigrant hordes. Those races that have had

extended and disastrous experience of malaria are much more resistant than those who have had little or no experience of it.

Man's evolution against tuberculosis is not less marked than his evolution against malaria. In malaria the poison is more virulent. Within twenty-four hours of entering an infected country a stranger may be stricken. Ships, navigated by men of a race which has undergone no evolution against the disease, may have the whole crew stricken on entering a malarious port, while the natives around maintain their health. In tuberculosis the poison is weaker. There is a long continued struggle against the attacks of its germ, which is shorter in the men of a race to which the disease is strange, than in those of a race to which it is familiar. Among the races which are least resistant to malaria is our own; on the other hand our race is the most resistant to tuberculosis. The sufferings from malaria of our compatriots in India and the west coast of Africa are well known. It is a fact, too, that of 9,000 negroes imported by the Dutch Government into Ceylon and used as soldiers, scarcely a trace of their descendants remains. The British Government subsequently imported 3,000 or 4,000 negroes into Ceylon, and of these in ten years' time there were left just 440, including the male descendants. Of the rest, they had all perished from tuberculosis, and in a country where the disease is not nearly so prevalent as in England. We speak of the fatal climate of the west coast of Africa, but we are usually unaware that our own climate is nearly, if not quite, as fatal to the native inhabitants of much the greater part of the world, and that therefore our race, which is able to persist under such adverse conditions, has undergone evolution in relation to tuberculosis fully equal to the evolution against malaria undergone by the West Africans.

Dr. W. Geo. Creswell, a well-known investigator of the diseases of birds, writes: "Immunity against any given disease may be regarded as individually acquired or as locally hereditary. Acquired immunity exists generally in connection with those diseases which by some as yet imperfectly understood action of their poisons on the tissues, through the medium of the bloom serum, actually guard the individual who has had one attack from having another for a greater or less period of time, this period varying somewhat indefinitely, according to the idiosyncrasies of the disease and the individual alike. Thus, for a short time, one attack of pneumonia confers immunity against another. Smallpox and its modification (vaccinated) confer immunity, if not actually for life still for a considerable number of years. Measles, scarlet fever, etc., are again examples of diseases which give immunity

against themselves to the individual who has had the good fortune to survive the first attack. Advantage has been taken of the natural law involved in the above, and immunity against certain diseases is now, with more or less success, being sought for by means of inoculation with serum obtained from animals that have been themselves inoculated with the attenuated virus of the diseases as they originally exist. But this acquired immunity, however produced, is only partial in its benefits; like all other characteristics acquired during life, and not inborn, it is not transmissible to posterity. But, while this acquired individual immunity protects only isolated individuals, it is quite otherwise with social and therefore hereditary immunity. Again, we must look to the human races for examples, selecting those that, as far as the facts connected with them are concerned, are indubitably established and accepted. The negro of the West Coast is immune against yellow fever; compared with his white brother, the negro of any part of Africa is impervious to malaria; on the other hand, the white man, when exposed to these diseases, not only almost immediately contracts them, but generally finds them fatal to him. In like manner the European living in countries where the tubercle bacillus is abundant is so comparatively immune against its resultant disease, that only about one out of every ten deaths from all causes is due to it; and, moreover, most of the cases are very chronic in their course, thus showing the amount of resistive power the inhabitant of these countries has attained to with respect to this particular disease. Before the advent of Europeans in the islands of the Pacific, tuberculosis was an unknown quantity, and so it remained so long as the only visitors were the careless, though healthy, buccaners and traders of the earlier days. But, no sooner did the more fragile and occasionally consumptive missionary set his foot upon them, the student of history will learn, that while the missionary often got robust and well from his open-air life, his unfortunate flock, infected by the comparatively small number of bacilli, disseminated from the single focus of infection afforded by their pastor, died of consumption wholesale. The same fate awaits nearly every negro, and indeed every ape, that visits this country to reside in it. Take again the inborn hereditary craving for alcohol, without regarding that variety which is due to habit caused by the special environment of the individual, and is therefore properly regarded as an individually acquired characteristic to be dealt with as it is, by education and public opinion. Here we find whole countries, such as Spain and Portugal, comparatively immune against the disease of inborn drunkenness. A certain amount of immunity, though less in

degree, is found among those central African tribes who have been accustomed to brew and drink periodically palm beer, but other savages inhabiting America, Australia and Polynesia, who have never manufactured alcohol, delight in it so intensely, that, given the opportunity, they drink to their own extinction, and so are shown to possess no immunity at all. The Kaffir, finding on the veldt a dead and putrified ox, rejoices greatly, calls his friends and relations together, and gorges the revolting stuff. The only result is they sleep the sleep of repletion, and wake up happy and contented, and ready for their usual occupations. On the other hand, let a clean-feeding Englishman eat the veriest trifle of tainted meat or fruit, and his doctor quickly has on his hands a case of septic enteritis. This racial immunity is purchased at the expense of long contact with whatever disease against which the immunity is being slowly obtained; in other words, it is an outcome and example of that universal law of natural selection and survival of the fittest, which has been so fully and ably interpreted for us by the greatest of modern philosophers.

Take the case of yellow fever, where complete immunity has been obtained. Here through ages and eons of ages, the negroes have been continuously exposed to the attacks of the special bacteria of this disease, those showing the least power of resistance being the first to be swept away and destroyed, and thus being removed from the chance of propagating a progeny with the like weakness of resistance. On the other hand, the survivors, in obedience to the natural law, that like tends to produce like, would beget a progeny containing a certain proportion of individuals with an inherited greater or less power of resistance. This progeny, being in its turn weeded out by the destructive fever, and the same process of elimination of the most unfit being carried on during every successive generations, the result has very gradually, but none the less surely, come about that there are no longer left any members of the community that are susceptible to the disease, and that the race as a body is now hereditarily immune against it. And exactly the same result would happen in the case of white men did we but send out sufficient numbers in the first place to make a fair start, and then give them time to work out their own salvation. The same process will in course of time render our race of dogs immune against distemper, and so acute of hearing as to be an impossible prey for the motorist; though the fact that this happy consummation may be effected in the year of grace 4000 may be but poor consolation to one who mourns the present loss of his friend from one or the other of those lethal causes.—Our Dogs.

# YACHTING

## Tainui's 1903 Cruise.

BY JAMES W. COMMEFORD, JR.

It was July 25, 2:15 P. M., that the little schooner Tainui of the National Yacht and Skiff Club, of Toronto, was cast loose from her moorings and headed east, her destination being the Thousand Islands.

Tainui is of a build that is generally termed a "Mackinac," but is in reality a schooner. She is 24ft. 6in. over all, 23ft. 6in. waterline, 8ft. breadth; a chunky, full-bodied boat, sharp fore and aft, built of 3/4in. cedar planking, 1in. by 1 1/4in. bent oak ribs, 6in. centers, flat floors, and draws 18in. with board up and 5ft. with it down. The centerboard is of 1/2in. steel and weighs about 300 pounds; a movable iron shoe of 400 pounds, which extends from stem to stern with an opening to receive the centerboard, has 600 pounds of iron and in addition there is lead inside ballast.

Tainui carries 514 sq. ft. of canvas, 210 sq. ft. of mainsail, 198 sq. ft. in foresail and 106 in jib.

The foremast is stepped well up in the bow. The mainmast is just aft of the cabin trunk. She has a 9ft. bowsprit. The foremast has a pair of 3/4in. shrouds, a forestay of the same, while the mainmast carries a double set of the same diameter. All are set up with deadeyes and landyards.

Tainui's cabin trunk is movable, which can be taken off in a few minutes. Two movable seats put in and she is ready to seat about thirty people. With cabin trunk on there is 4ft. headroom and is divided up as follows: A 9ft. cabin trunk, 5ft. forward deck, with 3ft. headroom closed off by two doors and used to store luggage. A 7ft. cockpit and 3ft. decked in at stern and fitted with lockers.

So much for the craft, now for the crew: The skipper, J. W. Commeford, Jr., of the National Yacht and Skiff Club, of Toronto. He is the owner of Tainui. The mate, L. E. Marsh, also of the National Yacht and Skiff Club, has sailed with him for a number of years. The crew, George Hunt, of Galt, Ont., and Chas. Miller, of Toronto, were greenhorns, but soon got their hand in.

The lake: Lake Ontario's length is 190 miles, breadth 52 miles, area 7,330 miles, maximum depth 500ft., height above sea level 240ft.

Now for the trip which was to last two weeks and arrive back in Toronto in time for the Canada cup races. Irondequoit, of the Rochester Y. C., the challenger, and Strathcona, of the Royal Canadian Y. C., Toronto, the defender.

A fierce northwester had raged for three days, and Lake Ontario never for a moment lost the dull, ominous, bottle-green glitter it invariably assumes when it is goaded by a storm. Overhead the storm spume raced across the sky. Innocent-looking clouds they were, but the way they chased each other down the

blue field warned the weatherwise. Toronto Bay was whipped into foam by the gale, and after each lull the squalls from the different slips marked out vivid streaks across the bay. Black stretches of angry water relieved by numberless whitecaps which the wind lifted right from the shore and carried in ever-increasing size out into the open water. A half mile out the seas were running 6ft. high. The skipper had been busy all morning getting aboard the numberless little things needed on such a cruise. The wind was in his favor, and he wanted an early start. The mate and George came down at noon and at 1 o'clock all baggage and stores were aboard, but Charlie was still missing. The Skipper mumbled something about lost time, change of wind, etc. It was 1:45 before the missing link showed up. Canvas was raised, and we slipped our moorings at 2:15. The wind was aft and we started off wing and wing. With the booms well peaked up and the gaffs ahead of the mast, we headed down the bay to the eastern piers.

On entering, the foresail was gybed to port, and Tainui felt the full force of the wind; down she went to the cabin, and all climbed to the weather rail. Outside we again gybed and headed E. on the port tack, with the wind over the quarter, and shot along at a merry gait with the crew on the weather rail. Kew Beach, Munro Park, Scarborough Heights were soon left behind. It became very chilly, and we soon had on our light coats. The wind began to peter out by sundown and Charlie prepared our first hot meal. We had Frenchman's Bay abeam, and Whitby Harbor Light on our port bow. At 8 P. M. the wind began to shift and came in hot puffs from the S.W. The foresail was lowered and a reef put in and raised away, and in less than fifteen minutes the mainsail also had a reef, and Tainui bowled along at a 5-knot clip. Oshawa Light was now picked up. The stick was handed over to the mate and the skipper went below to have a snooze, as we intended to take advantage of the fresh breeze.

It was all new to Charlie and George, and they decided to keep watch with the mate, but in less than an hour they were both rolled up in their coats asleep in the cockpit. At 11:30 the Skipper was called and, after shaking out the reefs in the foresail, the crew went below. At 12:30 Charlie was called to help shake the reefs from the mainsail. The wind had become light and a heavy roll made things uncomfortable, at least Charlie thought so, his sleep was over. Darlington Light was soon sighted and the Skipper headed for it, and at 2 A. M., called all hands to lower canvas and make fast. We ran up the river a way to escape the roll from the lake. Day's run 45 miles. All turned in but not to sleep. Mosquitoes were there in swarms. All hands smoked. Mosquito netting was put over the hatch, but it was no use, and at daylight canvas was raised, and although there was not much wind, Tainui was headed for the lake.

July 26, Sunday.—A swim, and then breakfast. We felt like ourselves again, and with the wind light from the N.W., we again headed E. At 9 A. M., the wind hauled a bit N. and abeam and began to blow. Hot puffs hit us from off shore. The foresail was soon gathered in, and we made Port Hope at 10:15 A. M. All hands spruced up and went up town to church. At 2 P. M., after tucking away a meal under our waist bands, we left the harbor and headed E., under reefed fore and full mainsail and jib, and when off Gull Rock Lighthouse, which stands a half mile out from shore and three miles E. of Port Hope, a big skiff from Cobourg challenged us. The reefs were cast out of the foresail, the dinghy hauled on deck and we took a fall out of her. It was about even up after four miles of it, and she turned tail and headed back to Cobourg. We kept hard at it, keeping in near shore and saluting the cottages as we swept by. At Colborne we found that a storm had wrecked the end of the wharf, which extends out into the open, and the light and fog bell had gone. We soon sighted Presque Isle, which looks at a distance like a large island, on account of the low sandy beach that connects it with the mainland. At 6:15 in a good lump of sea we rounded the lighthouse and tacked up the narrow buoyed channel. In the bay we met Wave Crest, a large schooner yacht of the Rochester Y. C. Raising our board, we cut the channel range lights and buoys and slid across to the mouth of the Murray Canal. The wind lightened considerably, but as we then had it free we made fair progress. The Skipper hunted out a horn and kept it going until the bridgeman at the first swing bridge saw us and gave a clear passage. At the second bridge is the toll office and we had to round up and sign the necessary papers. The tolls had just been abolished by the Canadian Government, to last for two years on trial. Again the horn came into use, but the bridgemen were asleep, for we had to again round up in that narrow channel, landing this time upon a boom, splitting a plank in our dinghy. In a few minutes the red light of the bridge began to disappear, and when the white light was clear, the Skipper again laid her off down the channel. We had no trouble at the next two bridges, and at 9:30 P. M., were through the canal, which is 6 miles long, and tied up at 12 o'clock at Point, a pleasure resort at the entrance to the Bay of Quinte, and all turned in to a much needed rest. Day's run 55 miles.

The Bay of Quinte is long, narrow and shallow. Sometimes you are sailing in a channel 1/4-mile wide, then it opens up to 2 and 3 miles, and is buoyed all the way. Sometimes you are sailing on an even keel, then, without a moment's warning, a puff from between the gulleys puts you down to the rail. Always keep your weather-eye open in the Bay of Quinte.

July 27, Monday.—All hands up early and in for a swim, and were soon joined by the cottagers. After a ramble through the park we turned in to prepare

breakfast. Left at 10 A. M., for Trenton, 4 miles down the bay. Wind light and baffling, causing the sheets of the foresail in gybing to catch Charlie, who was sitting on the cabin, around the neck and all but yank him overboard. At noon we tied up at Trenton and found the steam yacht Tesby, of the N. Y. & S. C., there. It was his first trip in the Bay of Quinte, and after getting information from the Skipper, he pulled out for Belleville. At 1 P. M., after replenishing our larder we, too, headed down the bay, wind freshening and abeam. A mile down we met a sloop, Maggie L., and he gave us a race, beating us 200ft. at Belleville Bridge. The Skipper was to have called in at Belleville and meet the Tesby, but inside the bridge we met a large Mackinac and got after him and just managed to pass him at Massassage Park, 4 miles from Belleville. We kept going, and at Telegraph Island Light, which stands in mid channel, the wind headed us off. It was necessary to make a couple of short tacks until off Deseronto. Here we took a chance and crossed behind Forrester's Island, the summer home of Dr. Oronhyatekha, the head of that big order. We struck several times but did no damage. The wind dropped very light at sunset. We were then in what is called the reach opposite Deseronto, the bay here being only half a mile in width. The banks rise straight up out of the water. Great care must be exercised here, as the wind is always changeable when off shore, and if blowing up or down channel is a bad place to do much windward work in. It took us from sunset until after midnight to make Glenore, 10 miles. Here we found Vereda, Mr. Wm. Peuchin's cutter of the Royal Canadian Y. C., and after an impromptu race—to stretch our limbs—we turned in. Day's run 30 miles.

July 28, Tuesday.—Five A. M., all hands up early and decide to do some fishing. As a result had a fish fry on the dock. Breakfast over, we started with our camera for a trip to the lake on the mountain of which Glenore boasts.

This lake is certainly worth seeing. It is over 200ft. above the bay, and it is claimed is fed by Lake Erie or Huron by a subterranean passage. A large pipe leads from it down the mountain side to a water wheel which runs a large mill. We returned to the boat at 9:30, and at 10:10 A. M. left with a good breeze off S. W., which freshened to half a gale by noon; but as our sheets were well eased, we stuck to all our canvas and made Kingston at 4 P. M., and laid up for the night. Run 37 miles. In the evening took the cars and saw the city, turning in at 11 P. M. We set the alarm clock for 4 A. M., intending to get out early.

July 29, Wednesday.—Alarm clock not needed. A severe thunder storm was raging. The rain came down in torrents and a gale was blowing from the S. W. The seas were washing over the decks and at 8 A. M., the Skipper went up-town to procure a chart of the islands, as the chart of Lake Ontario ends at Kingston. The mate and the crew in the meantime were putting things in readiness to start. On the return of the skipper he found that an excursion to have left for the Islands, but had to be postponed, and those who had ventured out were eagerly waiting to see Tainui start. Small bets were made that we would not leave, or that if we did, would come back in a hurry. Two reefs had been put in the mainsail, two in the foresail and one in the jib. "You pack of lobsters, you don't intend to go out in that do you?" said a grizzled old fisherman. We had no time to reply, for the lines had been cast off and with a cheer we shot out of the slip. "Bang!" and Tainui rose on top of a large comber and plunged into the next. Down she went to the cabin trunk and we all climbed out. It was a close fetch and every time she drove into a sea the wind would blow the spray over us. "Stand by to go about," came the order, "hard alee," and the mate let go the jib, Charlie the foresail, and Tainui came about on the port tack, and before she gathered way, was down to the trunk and the water poured into the cockpit. There was a snap and a jerk—one of the mainshrouds had parted under the strain. "Go about!" yelled the Skipper, and Tainui was put on the starboard tack again to save the mast. "Get in the foresail and set the back stays!" came the order. The mate went forward and in the next plunge was nearly washed overboard. The foresail was taken in without further mishap and the stays set taught. The Skipper now laid her off a point and set his course down the channel. In ten minutes more we eased our sheets, and with the wind over the quarter, clipped off 10 miles an hour. The reefed foresail was again set, but it was too much for her. The topping lifts were set up and the foresail slouched. This worked admirably. After rounding Ten-Mile Light we met Cleopatra, Mr.

George Gooderham's splendid steam yacht, homeward bound. He gave us a clear passage and a salute to which we responded. After twenty minutes of good hard pounding to windward the channel again changed, making it a free run, and in half an hour we were opposite Clayton, N. Y. Picking out a sheltered dock, we rounded up and made fast at 1 P. M. Run 25 miles.

We threw our canvas loosely over the spars, and as it had stopped raining, we hauled our damp things out on the dock, cooked a meal, after which we went up-town to hunt up a ship chandler to get a new shroud for the mainmast, but were unsuccessful. We replenished our larder, and at 5:30 hoisted away all canvas and ran 5 miles to Thousand Island Park. We didn't know the channel, but took a chance. Just off the Park we landed good and hard, but did no damage.

July 30, Thursday.—In the morning we tried a little fishing, but they were not biting, and at 2 P. M., we reefed and tacked across to Murray Hill, 3 miles N. W. Murray Hill did not come up to expectations, so we jaunted on 7 miles to Gananoque. It was another thrash to windward, and in making a short cut through the island, struck our centerboard, and again narrowly escaped a big reef. We met a skiff, whose owner piloted us safely into the proper channel, and at 6:30 dropped our anchor at Gananoque. Ten miles.

July 31, Friday.—Left at 7 A. M., with wind fresh and ahead, a double reef put in foresail and a single reef in the mainsail. The squalls kept us busy until we passed the Spectacle and Red Horse Rock lights. Here it commenced to lighten. We caught a trading sloop. Tacking up light, we shook out the reefs. It was a close haul, but soon the wind shifted and we got it abeam until 5 miles out of the penitentiary city, where we got it dead over the bows. The Skipper amused himself daubing the ironwork with aluminum paint. The crew were asleep in the cabin. The mate did not notice a white barrel buoy, and landed the hooker on a shoal. The centerboard rose up and smote the cabin roof. The Skipper dropped the paint on the deck and nearly fell overboard in his excitement. Charlie made for the cockpit and George, who was to starboard, found the centerboard had formed a barrier across the cabin and he was prisoner, but got out of it by crawling through the forward cabin. The board was pinned up and we backed down off the shoal again. No damage.

The Skipper now took the helm and explained the following to the mate and the crew, which may be handy to others: "In approaching channels from seaward red buoys marked with even numbers will be found on the starboard side of the channel and must be left on the starboard in passing in. Black buoys with odd numbers will be found on the port side of the channel and must be left on the port side in passing in. Buoys with red and black horizontal stripes will be found on obstructions with channel ways on either side of them, and may be left on either hand. Buoys painted with black and white perpendicular stripes will be found in mid-channel and must be passed close to avoid danger." After discussion on this lesson, all except the man at the helm, set to work with gasoline to wash the aluminum paint off the deck. We then beat into Kingston in a lively wind and sea. She was rail awash the last 3 miles, arriving at 2 P. M. Eighteen miles.

The papers had published an account of our leaving port in the storm of a few days before, and as the news spread around the docks that we were again in port, we soon had many visitors, who kept us busy answering questions. How much ballast? How much does she draw, etc.? We slipped off our sea-going togs and slid up-town, and after a visit to the knight of the razor, felt a good deal better, and after purchasing our provisions and a new steel shroud to replace the one carried away a few days before, turned in early.

Aug. 1, Saturday.—Got up at 5:30 and hoisted all canvas on Tainui to take advantage of the morning wind. Called at Kingston Y. C. and registered. Again set off, the wind over the quarter and light. Met with and raced a big trading schooner and were hard on his heels at the Three Brother Islands, and would have passed him easily, only we were sailing with slouch mainsail. The Skipper was aloft splicing our new main shroud. When we got settled away, the schooner was soon caught and passed and then set out to catch a big trading sloop. She was hull down when we sighted her, but we caught and passed her off Glenore after a 10-mile thrash. From Glenore to Deseronto the wind, owing to a change in the channel, became a quarter breeze and the sloop chased us hard. Made Deseronto at 8 P. M.

[TO BE CONCLUDED.]

## Boston Letter.

Y. R. A. OF MASSACHUSETTS ADOPTS RATING RULE.—At the annual fall meeting of the Yacht Racing Association of Massachusetts, held in Young's Hotel on Thursday evening, Oct. 19, it was voted to adopt classes M, N, P, Q and R under the uniform rule of rating. There was some discussion upon the merits of the rule, and that time-worn theory of letting some other fellow try it first was brought forward, but the opposition to adoption was not nearly as strong as might have been expected in an organization that looks askance at anything that may appear to be a radical departure.

Mr. Louis M. Clark was there to champion the rule, but his remarks were not very extended, he preferring to answer any questions that might be asked rather than to give an extended general talk upon ground that has already been considerably covered. Mr. Clark cited the record of the 30-footer Meemer, as an example of how the rule would apply to big-bodied, shoal draft boats, and also spoke of the manner in which class Q had shown to greater advantage than the old knockabouts and raceabouts in New York waters. Mr. Clark's strongest point was to the effect that the rule was not that of any particular club, but was devised by Mr. N. G. Herreshoff, a man who had been more successful in evading rules by taking advantage of weak points than any other designer living, and that Mr. Herreshoff formulated this rule as one which he believed could not be evaded.

Vice-President Sumner H. Foster, who presided, spoke in favor of adoption, stating that it was by no means necessary to give up the present restricted classes, and that the new rule would not in any way interfere with racing them. He contended that the more general the adoption and application of the rule the quicker its defects might be ascertained and remedied, and that if the new rule is the best one that can be devised it is the one that is wanted for the classes of Massachusetts Bay.

Secretary A. T. Bliss spoke in favor of adoption along the same lines, stating that the best way of finding out what might be done with the rule would be to adopt it and apply it.

The adoption of classes under the new rule up to 40ft. rating by the Yacht Racing Association of Massachusetts has great significance, for it is this association that controls most of the racing in Massachusetts Bay. The effect of this attitude upon clubs of which the Association is composed is likely to be very great. Many of these clubs do not have special class rules, but are guided by the rules and classification of the Y. R. A. of Massachusetts. So, it would appear that the adoption of classes under the new uniform rule by an organization with so much power, would mean a general acceptance of the rule throughout the bay. It must be remembered, however, that the adoption by the Y. R. A. of Massachusetts is not to the exclusion of the popular restricted classes, for the present at least. It is simply adopted by the Association as one of the possible good things that it is bound to give those clubs which support it, and the rest will be up to the clubs giving open races, and to the yachtsmen who may build new boats.

If yachtsmen build in all of the classes there will be some advance in the size of the boats that may race under Y. R. A. rules, notably those of more than 30ft. waterline, which are recognized by the Eastern Y. C. This would give the Marblehead club an opportunity of closer affiliation with the strongest racing organization in the bay, even to membership in the organization, in the interest of a common cause. It is obvious that the privilege of competition for Y. R. A. championships among classes of over 30ft. waterline in Eastern Y. C. open events, might be a help toward greater attendance at those races.

A. P. B. A. RULES ADOPTED.—At this meeting of the Yacht Racing Association it was also voted to adopt the rules and classification of the American Power Boat Association. There was no opposition to this measure, as the feeling has been more or less general that the control of open power boat racing by the Yacht Racing Association would be productive of greater attendance at open events and therefore of immense value in developing power boating in Massachusetts Bay. In this measure there is also an opportunity for clubs not at present affiliated with the Y. R. A. of Massachusetts to unite with it in a common cause. Power boating has been agitated in Massachusetts waters by many clubs, the most active being the Eastern Y. C., but the attendance at these events has been scattering, and in many cases discouraging. It is believed that, with a Y. R. A. championship in each power boat class for a season's work, interest will become more general and that good attendance may be had at all open events.

# GAS ENGINES AND LAUNCHES.

Their Principles, Types, and Management. A Complete and Practical Manual.

BY F. K. GRAIN, M. E.

Bound in cloth, with 123 pages and 20 illustrations. Sent, postpaid, for \$1.25.

THIS compact and comprehensive handbook contains all the information essential to users of the marine gasoline engines, and will be welcomed by the thousands of men now owning and running power boats. Laymen and experts will alike find the book invaluable. It treats of the various types of marine gasoline engines, points out the good in each, and tells how to run them. A knowledge of the contents of this book will help to overcome difficulties and avoid accidents. The most complete book of its kind ever published.

FOREST AND STREAM PUBLISHING CO., NEW YORK.

ARIADNE—LINES AND CONSTRUCTION PLANS—DESIGNED BY NORMAN L. SKENE FOR HERBERT AUSTIN, 1905.

**Ariadne.**

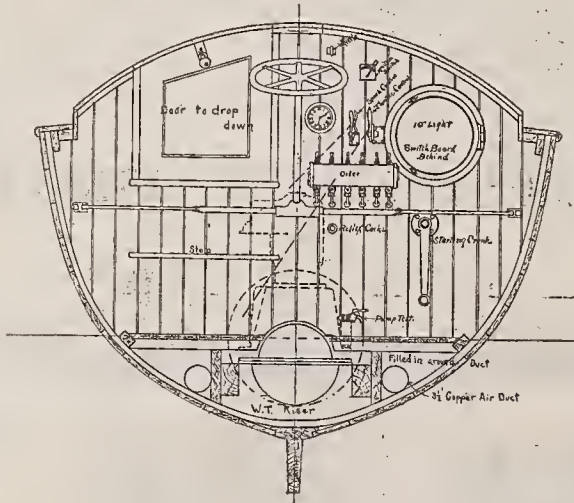

**A 32-ft. Waterline Open Launch.**

ARIADNE, whose plans appear in this issue, was designed by Mr. Norman L. Skene, of Boston, for Mr. Herbert Austin, of that city, and is now being built by the George Lawley & Son Corporation, of South Boston. The owner's requirements were for a fast, modern open launch with safety and comfort the primary considerations. No expense has been spared to attain these ends. The lines show a hull adapted to rough water, one with liberal freeboard, plenty of flare forward, and a stern which will not run under when backing in a seaway. The engine, which is a 25 horsepower, four-cylinder Jager, is located forward in a compartment which is practically water tight and air tight with the exception of the means

vent foundering in case of collision or piercing of the hull from any cause, either forward or aft of the bulkhead. The other tank is way aft and is set in a copper drip pan. Both tanks are thus completely isolated from the rest of the boat.

The boat is built in the best manner throughout. Planking, decks, coaming and interior finish are all Spanish-cedar. The scantlings are quite light but heavy enough for reasonable durability. A speed of 14 real miles is expected. Ariadne is of the following dimensions:

Length—	Over all	32ft.
	L.W.L.	30ft.
Overhang—	Forward	1ft. 4in.
	Aft	8in.
Breadth—	Extreme	5ft. 11in.
	L.W.L.	5ft.
Draft—	Extreme	2ft. 1 1/4in.
	To rabbet	1ft. 2in.
Freeboard—	Forward	3ft. 2 1/2in.
	Aft (least)	2ft.

ARIADNE—SECTION.

provided for ventilation. The engine compartment is thoroughly ventilated by air passing in through two ventilators in the deck and out under the floor through two copper pipes leading into the compartment under the after deck. Thence the air passes out through vents in the deck. All possible gases and odors are thus driven from both compartments.

The engine is controlled entirely from the bulkhead at forward end of cockpit, making it unnecessary to open up the engine compartment except for occasional inspection. On this bulkhead are located starting crank, spark switch, multiple oiler, spark shifter, throttle, water-test cock, revolution counter, clock and steering wheel. The reverse lever is close at hand and electrical equipment is located behind a glass door in bulkhead. The boat is equipped with electric lights for signals on bulkhead and in engine room run from storage battery and dynamo. It is also fitted with an air whistle and an auxiliary rotary bilge pump.

There are two tanks for gasoline holding 30 gallons each. The forward one is in a water-tight compartment forward of a bronze bulkhead. This bulkhead will pre-

vented foundering in case of collision or piercing of the hull from any cause, either forward or aft of the bulkhead. The other tank is way aft and is set in a copper drip pan. Both tanks are thus completely isolated from the rest of the boat.

STEAM YACHT NAUTILUS BURNED.—While in winter quarters at Little Hay Harbor, Fisher's Island, the steam yacht Nautilus was burned on Oct. 19. Nautilus was owned by Mr. G. B. Linderman and her home port was Stonington, Conn. She was designed and built in 1899 by Mr. F. W. Offeldt, in Brooklyn. Nautilus was 60ft. waterline, 7 1/2ft. over all, 11ft. breadth and 3ft. 9in. draft.

POWER BOAT FOR F. W. EDWARDS.—Messrs. A. Cary Smith & Ferris have completed the plans of a cruising power boat for Mr. F. W. Edwards, of Bayonne, N. J. She is 67ft. over all, 61ft. waterline, 10ft. 4in. breadth and 2ft. 4in. draft. The boat and the engine will be built by the owner during the coming winter.

THE PASSING OF CLASSES C AND S.—Another measure enacted at the Y. R. A. meeting was the vote to abolish class C, 30-footers and class S, 21-footers. Only one new boat has ever been built for class S, and she was compelled to go into handicap racing to get any classification. The three 30-footers, Chewink IV., Sauquoit and Wasaka, raced as a class during the season of 1904, but no racing as the original class was indulged in during the season of 1905; so, class C practically passed out as a yearling. Mr. T. K. Lothrop, owner of Sauquoit, was present at the meeting, and when his opinion was called for he stated that there appeared to be no further use for the class, and that he was in favor of abolishing it.

BOSTON Y. C. MEETING.—The autumn meeting of the Boston Y. C. will be held at the Rowe's Wharf club house on Wednesday evening, Oct. 25, at which several important amendments will be proposed.

JOHN B. KILLEEN.

**YACHTING NEWS NOTES.**

For advertising relating to this department see pages ii and iii.

COMMITTEE ON REVISION OF RACING RULES.—Commodore Frederick G. Bourne, New York Y. C., has appointed a committee of seven to revise the racing rules of the club, which are badly in need of revision. This committee will also confer with other important clubs in an endeavor to secure uniformity in racing rules. The committee is a particularly good one and five of the seven gentlemen are well known as owners of boats that have been seen in the racing during the last few years. The committee is composed of the following: Messrs. Trenor L. Park, Charles Lane Poor, Henry F. Lippett, J. Rogers Maxwell, W. Butler Duncan, Jr., Oliver E. Cromwell and H. deB. Parsons.

POWER YACHT NOKOMIS SOLD.—The power yacht Nokomis was sold by Mr. W. S. Van Clief, of Staten Island, to Rev. J. R. Bourgeois, of Rhode Island Y. C., through the office of Mr. Stanley M. Seaman. She was designed and built in 1903 by the Marine Construction Company. She is 75ft. over all, 14ft. breadth and 3ft. draft and fitted with two 20 horsepower Standard engines, giving her a speed of 12 miles an hour. The same agency sold the auxiliary yawl Kittiwink for Mr. M. W. Torrey, of Manhasset Y. C., to Mr. R. H. Johnson. The yacht was delivered in Philadelphia, Pa., last week, from where she will be shipped on a barge to Cardenas, Cuba, where her new owner has a winter home. She is 32ft. over all, 23ft. waterline, 10ft. breadth and 3ft. draft. She was built in 1901 from designs of Mr. C. D. Mower by S. C. Wicks & Co., Patchogue, N. Y. She is equipped with a 5 horsepower Palmer engine.

**"Supplement to Small Yachts" Free.**

To any one sending us one new subscriber to FOREST AND STREAM before Nov. 15, 1905, we will present one copy of W. P. Stephens' book "Supplement to Small Yachts." This work contains 104 pages text and 43 plates. Size 11 by 14 inches. Cloth. Price \$4. This offer does not apply to renewals.

Smith, Arlington, N. J., by L. V. Dorland; Nelson O. Ward, South Orange, N. J., by W. Andreas; Robert T. Badgley, N. Y. City, by H. C. Ward; David H. Lenox, N. Y. City, by H. C. Ward; W. A. Green, Trenton, N. J., by W. A. Furman.

**Rifle Range and Gallery.**

**Fixtures.**

Nov. 7.—Greenville, N. J.—One hundred shot championship match.

**Zettler Rifle Club.**

The winter gallery season was opened at headquarters, 159 West Twenty-third street, New York city, Oct. 17, and shoots will be held every Tuesday night until April 17, next, with the exception of March 12-17 inclusive, the dates for the annual 100-shot Indoor Championship match. For the season the club has offered \$301 in cash prizes, open to members only, who can fire five 10-shot scores each shooting night with any .22 caliber rifle taking short cartridges, on the 25-ring target with 2in. bullseye, no practice shots allowed. Of the prize purse, \$150 will be divided pro rata on the total rings and \$115 for premiums, but in order to come in for any of the ring money a member must shoot at least 75 scores during the season. A member who is absent from a regular meeting may shoot his scores for that day at the next regular meeting. The premiums will be divided as follows:

For the best fifty 10-shot scores, \$15, \$12, \$10, \$9, \$8; best thirty-five scores, \$7, \$6, and three of \$5; best twenty-five scores, three of \$4 and two of \$3; best fifteen scores, five \$3 prizes. For the greatest number of rings the Zettler Bros. will give \$10 in gold; second, \$5; third, \$3, and fourth, \$2, these given by the club.

The member making the best bullseye each day will receive \$1. On the opening day William A. Tewes, the club's secretary, made the highest score, 1,231 points, shooting at 75ft. offhand. The weather was so warm that the attendance was not large. The next shoot will be held Oct. 31. The total scores:

*W. A. Tewes.....	244	248	245	248	246	1231

**The Election Day Championship Match.**

The twelfth annual 100-shot match for the championship of New York city and vicinity will be held on Election Day, Nov. 7, in Armbruster's shooting park, Greenville, N. J., under the auspices of the Zettler Rifle Club. The targets will be open for practice at 8 o'clock in the morning, but the match will be started promptly at 9, and will continue until finished, with an intermission of an hour at noon. Ten practice shots will be allowed each competitor, and one who arrives late will also be accorded this privilege.

The conditions will be, 100 shots per man on the 3/4in. 25-ring target, at 200yds. offhand; open to all comers; any rifle, sights and ammunition save high power cartridges. This admits magnifying sights of all sorts. The entrance fee will be \$5 per man. A forfeit of \$2 must be sent to the Zettler Bros., 159 West Twenty-third street, New York city, or to F. Hecking, at the same address, on or before Nov. 4, by each intending competitor. Blanks for this purpose will be mailed to all who ask for them. After the expense for targets and dinner for the contestants is deducted, the balance of the entrance money will be divided pro rata according to the number of rings shot by those who finish their scores. The famous old trophy, with its bars bearing the names of Fred C. Ross (six times), Michael Dorrier (three bars), Dr. W. G. Hudson and Harry M. Payne will go to the winner for this year, whose name will appear on the twelfth bar. The trophy is the gift of the veteran rifleman, William Hayes, of Newark. Another trophy is offered the winner by T. H. Keller, while the man who makes the best 10-shot score will receive the Armbruster trophy. Two prizes cannot be taken by one man. F. Hecking is chairman of the committee of fifteen riflemen who have the arrangements in their charge.

**Ohio Rifle Notes.**

The Greenville Offhand Rifle Club has begun its regular shoots for the winter season, and meets on every Friday afternoon. On Oct. 13 a few of the members shot their score for the club medal, 10 shots at 200yds., possible 120. A. W. Kirby headed the list with 102; A. N. Wilson, 86; Geo. Sigafos, 78; Geo. Katzenberger, 51. An hour was spent in practice shooting and the sport was kept up until dark.

The Jackson Township Rifle Club held their regular medal shoot on Oct. 14. All shooting was offhand at 100yds., 4 shots in the medal match, possible 48. Jesse Johnson, of W. Alexandria, won the medal and first money with 45; Clemmer, Leshner and Izor tied on 44, and in the shoot-off the two first-named won second and third moneys respectively; 1. Stiver, 39, and Chas. Busch 37. In the 20-shot match, five events of 4 shots each, possible 48, possible aggregate 240, J. Johnson was first with 228, and made the only perfect 4-shot score of 48, which was made during the day. Leshner won second money with 220; Clemmer, 219; Izor, 214; Stiver, 207; Busch, 187.

The October medal shoot of the Somers Township Rifle Club was held at Camden. L. Platt won the medal with 47 out of a possible 48; C. W. Matthews, a close second, with 46; D. C. Conarrol and Oliver Parker 45 each; Albert Campbell 41; Tony Price, 36. The closing match was five events of 4 shots each, possible 240. Matthews won with the good score of 226; Campbell and Conarrol 213 each; Platt 211. In the last event Campbell made a perfect score of 48. All shooting was offhand, 100yds. The officers of the club are Wm. Orr, President; Albert Campbell, Secretary and Treasurer.

**Lady Zettler Rifle Club.**

The meeting announced for Oct. 14 was postponed. The ladies will meet on the 28th instead, to arrange for their winter season shoot.

**Trapshooting.**

**Fixtures.**

Oct. 25.—Dayton, O.—Rohrer's Island G. C. tournament.  
Oct. 25-26.—Marshalltown, Ia., G. C. E. G. Wallace, Sec'y.  
Oct. 26.—Edgewater N. J.—Palisade G. C. shoot. A. A. Schoverling, Sec'y.  
Oct. 26-27.—Columbus, O., G. C. tournament.  
Nov. 16.—Bound Brook, N. J., G. C., all-day shoot. F. K. Stelle, Sec'y.  
Nov. 23.—Edgewater, N. J.—Palisade G. C. A. A. Schoverling, Sec'y.

**NORTH NEW JERSEY SHOOTING LEAGUE.**

Oct. 28.—Dover at Montclair.  
Nov. 2.—Montclair at Morristown.  
1906.  
Jan. 16-19.—Hamilton, Ont., G. C. annual winter tournament. Ralph C. Ripley, Sec'y.  
May 24-25.—Montreal, Can.—Canadian Indians' first annual tournament. Thomas A. Duff, High Scribe.

**DRIVERS AND TWISTERS.**

The Sheepshead Bay, L. I., Gun Club will hold a shoot on Nov. 7.

The Bound Brook, N. J., Gun Club claim Nov. 16 as a date for an all-day shoot.

A feature of the Columbus, O., shoot will be the team contest for the Phellis trophy.

Mr. Silas W. Trout, of Franklin, Ind., won the English Hotel cup, in a contest with Mr. Moller, recently, by a score of 94 to 81.

At a meeting of the North River Gun Club, of Edgewater, N. J., held last week, Mrs. George H. Piercy and Miss C. L. C. Horneck were made honorary members.

On Wednesday of this week, Mr. Frank Lawrence, of the Winchester Repeating Arms Co., started on a protracted tour of the West. This able missionary seems to have busy moments as a continuous performance.

At the weekly competition of the Baltimore, Md., Shooting Association, on Saturday of last week, Mr. J. H. Moxley was high gun, with a total of 107 out of a total of 125. Saturday of this week closes the summer and fall programme.

Mr. Paul R. Litzke, a representative of the Peters Cartridge Co., in Arkansas, is coming forth quite strong as a trap shot. In two sweepstakes at live birds, 10 and 15, he scored a total of 21, at Pine Bluff, Ark., and was high man in the average.

Admiral Jack S. Fanning, who as a man behind the gun has made powders famous, was a brief visitor in the gun district early this week. He was the same imperturbable hero of many conflicts, taking defeat and victory with dignity and humility.

In a contest held recently for the J. T. Loyd Co. challenge medal, at Pine Bluff, Arkansas, Mr. J. M. Pemberton defeated J. T. Loyd in a contest at 25 pigeons. The contestants tied on 22 out of the 25, and in a shoot-off at 5 birds, Pemberton killed straight and won.

Col. C. H. Mowry, the able editor of the Sporting Goods Gazette, Syracuse, N. Y., was a visitor in the sporting goods district in New York this week. The years do not impair his constant *suaviter in modo, fortiter in re*, as becomes one of the up-State rulers of Greater New York.

Capt. C. G. Blandford is entitled to a great deal of credit for his steady perseverance in promoting the cause of his club competition in particular, and trapshooting in general. Many captains have quit without manifesting a fraction of his energy and talent. His efforts should be better supported.

Mr. Geo. E. Call, of Northport, L. I., one of the active trapshooters, deer hunters and quail shooters about New York, has been quite successful in the competition of the Brunswick Foxhound Club, held Oct. 9-12, at Barre, Mass. In the Derby, his Loud and Rye won first and second, defeating twenty-two contestants.

The Jackson Park Gun Club, of Paterson, N. J., has become active again. Recently a team shooting league was formed at that city, in which competition many of the contiguous clubs of Bergen and Passaic counties will participate. That is the kind of competition which infuses smartness and rivalry in trapshooting circles.

At the Rawlins tournament, held at St. Louis, Mo., Oct. 13-15, Mr. Harold Money won the Dupont handicap at 50 targets; the Monte Carlo handicap at live birds, scoring 24 out of 25; was high in the sparrow shoot by scoring 19 out of 20; made high general average and many friends. Mr. Alec Mermod was high amateur for the three days.

Mr. W. G. Hearne, the winner of the Scarecrow cup at the Grand American Handicap, at Indianapolis, Ind., this year, was a visitor in New York this week, and comported himself in a manner so modest that no one could suspect he was the winner of high professional average at said Grand American Handicap, of which the Scarecrow cup was an emblem.

The Montclair team defeated the Mountainside team of East Orange, in the eighteenth match of the North Jersey Shooting League, at Orange, N. J., Oct. 21. The contest resulted in a tie, Montclair won in the shoot-off. A high wind interfered with high scores. The next contest of the league series will take place between Montclair and Dover.

The Shooting Times states that, "An interesting test of a swallow's speed was made recently by an Antwerp pigeon fancier. Having captured a swallow from a nest under the eave of his house, he sent it to Compiegne, where it was put in the pigeon loft. It was released with the pigeons at 7:05 o'clock, and reached its nest at 8:22, which showed a speed equal to 128 1/4 miles an hour. The top speed made by the pigeons showed only 35 1/2 miles an hour."

The Breeder and Sportsman, of Oct. 14, states: "Welcome the coming and speed the parting. fliers is in the mind's eye of the shotgun fraternity, for with to-morrow's dawn there will be a change from inanimate to animate targets, and so, vale the trap season of 1905, which has been a good one, and in relation thereto, more anon." By my halidom, yep!

A close race for the State championship was that, Oct. 21, between the two renowned trapshooters, Messrs. James T. Skelly and W. M. Foord, both of Wilmington, Del. The debate at arms took place on the grounds of the Wawaset Gun Club, and the scores at 100 targets were, Foord 91, Skelly 90. Foord seems to have a certain championship insistence.

Mr. J. A. R. Elliott, of the Winchester Repeating Arms Co., who has devised a preventive of deafness, was a distinguished visitor in New York this week. His special device as an aid to shooting by closing up the ears, intensifies the focus of the eyes, and unless the gun suffers from aberration, a smashed target results from a shot. To those who write him, he will reveal the secret.

In the second race at 100 English sparrows for the State championship, held on the grounds of the Corner Rod and Gun Club, Fort Wayne, Ind., last week, Mr. Max Witzgreuter, of Fort Wayne, defeated Mr. Hugh M. Clark, of Wabash, 92 to 88. In the contest, two weeks previously shot, Mr. Clark was the winner by the score of 94 to 92. The third race was to be held early this week.

The Ossining, N. Y., Gun Club team, Oct. 19, was victor in the final contest for the handsome trophy, a punch bowl presented by Col. Franklin Brandreth. This was a win by default, the Poughkeepsie team being synchronously perdue in the tall grass. Each club had two wins to its credit prior to the final contest. The eight men made a team average of 84.5 per cent., an excellent performance.

Press despatches narrate that at "Mahanoy City, Pa., Oct. 21, Steve Kurtz won his fifteenth match and increased his cash winnings to \$1,500 by defeating John Shadel, of Frackville, in a live-bird match. Kurtz killed 9 out of 12, while Shadel got 6. There was a big crowd present and the betting was brisk. Kurtz is only 20 years old." His victory without doubt was due to the Mikado and the virtue of his ancestors.

At the tournament of the Rising Sun, Md., Gun Club, Oct. 18 and 19, high average for the two days was made by the champion of Delaware, Mr. W. M. Foord, with a score of 341 out of 370. Mr. A. Somers, of Delta, Pa., was second with 335. Mr. L. S. German, of Aberdeen, Md., was second with 333. The championship of Cecil county, 10 singles and 20 pairs, was won by Mr. H. R. England, after a tie with Mr. J. McCush.

Mr. Hood Waters and his bride sojourned in New York a few days last week, this city being in the itinerary of their honeymoon. It was our fortunate privilege to meet the happy couple through a few fleeting moments, and our impression was that Mrs. Waters felt that Mr. Waters did not consider his true worth, and that Mr. Waters was in a state of imperturbable happiness as he gazed at Mrs. Waters. Long life, good health, happiness and prosperity to them.

Mr. D. St. Clair, in a nonchalant manner, romped away with the Winchester trophy, at the shoot of the S. S. White Gun Club, on the grounds of the Keystone Shooting League, at Holmesburg Junction, Pa., Oct. 21. The event at 100 targets was divided into six parts at 10, 15, 20 and 25 targets. Mr. St. Clair defeated seventeen contestants with a score of 80 out of 100. Cantrell and Newcomb were reasonably close on his trail with totals of 74. A few of the shooters were something short of their usual good form.

Mr. F. C. Bissett, of South River, N. J., has challenged Mr. John J. Fleming, of Newark, N. J., for the "E.C." trophy, which represents the individual championship of the State of New Jersey at targets. Mr. Bissett recently defended his title to the cup on the grounds of the Forester Gun Club, Newark, N. J., his opponent being Mr. Fleming, who succeeded in taking the cup from him. Mr. Bissett has now challenged Mr. Fleming, and the race is to be shot on the grounds of the Bound Brook Gun Club, Bound Brook, N. J., on Nov. 16. A special programme will be arranged for an all-day shoot.

The Carteret Gun Club, of Garden City, L. I., begins their fall and winter contests, on Oct. 28, at 1 o'clock. The first programme provides several special events, besides three events at 10 targets, and one at 10 pairs, \$5 entrance to each. There also will be the cup event at 20 targets, \$10 entrance. This programme rivals in gameness some of the events in the coal regions, where a shooter does not hesitate to contest in a match at three birds, \$90 entrance, high gun to take all. The Chapin cup will be an object of competition on alternate Saturdays, and when won three times by one contestant it becomes his mural belonging. As no one won this cup three times last year, it reverted to this year's club competition. The competition is exclusive.

BERNARD WATERS.

**New York Athletic Club.**

The New York Athletic Club shoot, Oct. 21, was as follows: Event 1, handicap allowance, 25 targets: G. Greiff (0) 17, W. H. Hibbard (8) 25, G. A. Mahlstedt (10) 12, L. Huntington (2) 20, F. Vilmar (9) 12, J. D. Calhoun (2) 19, E. Huggins (8) 20.  
Event 2, 25 targets, handicap allowance, was as follows: Huggins (8) 19, Greiff (5) 21, Hibbard (5) 19, Huntington (2) 22, Vilmar (12) 15, Calhoun (2) 16, Mahlstedt (12) 14.  
Event 3, club shoot, handicap: S. Scott (2) 19, J. Borland (4) 21, G. Greiff (0) 22, Hibbard (5) 26, Calhoun (0) 12, Brown (8) 25, Huggins (8) 22, Huntington (0) 18, Mahlstedt (0) 6.  
No. 4, handicap: Scott (2) 21, Borland (4) 20, Greiff (0) 21, Hibbard (5) 16, Brown (8) 25, Huggins (3) 19, Huntington (3) 19, Mahlstedt (0) 5, Calhoun (4) 19.  
Event 5, handicap, 25 targets: Scott (2) 21, Borland (4) 20, Greiff (0) 21, Brown (4) 23, Hibbard (5) 19, Huggins (8) 18; Huntington (3) 19.  
Event 6, 25 targets: Scott (2) 23, Borland (4) 17, Greiff (0) 19, Brown (8) 25, Vilmar (0) 9, Huggins (0) 13.  
Event 7, 25 targets: Scott 19, Greiff 22, Huggins 15.  
Event 8, 25 targets: Scott 23, Greiff 22, Huggins 14.  
No. 9: Scott 22, Greiff 21.

**Aetna Shctng Park.**

St. Louis, Mo., Oct. 15.—A new club trap has been installed at this popular shooting resort recently, and the Mound City Powder Burners will hold a two days' shoot here Nov. 11 and 12. The wind was blowing hard to-day, which, with the threatening clouds, accounts for light attendance. H. E. Winans, the East Alton trade representative, was with us to-day and demonstrated the merits of his goods in a convincing manner. Here are the scores: Winans 150, 131; Hull 112, 81; Papin 100, 71; Cunningham 75, 46; Sandberg 25, 19; Edwards 25, 13.

Rawlings Tournament.

St. Louis, Oct. 17.—As advertised, hard targets were thrown, and a very good quality of pigeons trapped. The conditions would have been hard enough without the wind, but as there was a very strong southeasterly wind, the targets were very difficult, and the pigeons very fast, so that high scores were beyond reach.

Harold Money finished with first general average for the three days; Alec Mermod first amateur average; Joe O'Neil second. Mr. Money also won the Dupont handicap at 50 targets, the Monte Carlo handicap at live birds, with a score of 24 out of 25, and finished high in the sparrow shoot with 19 out of 20. This gentlemanly representative certainly had things his own way. Alec Mermod won the extra live-bird sweep with a straight score of 20. Jas. Groves, of Jacksonville, Ill., won the Rawlings amateur handicap with a straight score of 20.

Numerous miss-and-outs at both pigeons and sparrows were indulged in, and while the programme was short and the attendance small, guns were cracking from the start in the morning until it was too dark to shoot.

Purses paid very well to those who shot in the first flight, which pleased the shooters who stayed for the entire programme. There were only a few who objected to the fast targets, and these left at the end of the first day. Those who stayed for the finish enjoyed this thoroughly, and expressed their satisfaction at the fast birds.

Oct. 13, First Day.

Table with columns: Events, Targets, Money, Spencer, Mermod, Gottlieb, Kaufman, Huff, Young, Riehl, Felger, Cox, Huntley, O'Neil, Robinson. Rows show scores for various events and targets.

Oct. 14, Second Day.

Monte Carlo Handicap, 25 birds, \$25 entrance, division of purse, \$20, 30, 20. Harold Money won this event with the very good score of 24, and carried off the handsome fob which went with the first money. The wind was very choppy, which made the shooting very difficult.

Table with columns: Money, O'Neil, Mermod, Clayton, Powers, Robinson, Riehl, Felger, Amberg, Cabanne. Rows show scores for various events and targets.

Handicap, 15 birds, 50, 30 and 20 per cent. This was an extra event, which was captured by Alec Mermod with a straight score.

Table with columns: Powers, Clayton, O'Neil, Robinson, Money, Felger, Mermod, Cox, Markle, Riehl. Rows show scores for various events and targets.

Table with columns: Money, O'Neil, Mermod, Clayton, Powers, Felger, Robinson, Sperry, Fisher, Scott. Rows show scores for various events and targets.

Oct. 15, Third Day—Live Birds.

Rawlings Amateur Handicap, 20 birds, \$15 entrance. Mr. Groves won this event very handsily with a straight score. A fob charm similar to the one put up for the Monte Carlo Handicap was carried off by Mr. Groves, who is a prominent shooter from Jacksonville, Ill. His clever work with a "pump" was admired by all.

Event No. 7 was the Dupont Handicap, and did not count for average. Harold Money was high for the three days, besides winning all the main events on the Dupont Handicap at targets, the Monte Carlo Handicap at live birds and the sparrow shoot. Alec Mermod was high amateur for the three days.

Table with columns: Events, Targets, Powers, Clayton, Mermod, Gottlieb, Kaufman, Tipton, O'Neil, Groves, Fisher, Chaudet, Riehl. Rows show scores for various events and targets.

Jackson Park Gun Club.

PATERSON, N. J., Oct. 21.—Trapshooting at Jackson Park grounds was given a decided boost yesterday. The opening of the Saturday afternoon fall and winter shooting was got in motion at about 2:30 P. M., and was kept going at a good pace until dark, with the exception of a few slight delays caused by the magautrap cutting up some of its pranks, breaking several targets at a time and then running along smoothly for a time and then releasing the magazine and allowing a dozen targets to be thrown into the air at once, to the delight of the spectators and the disgust of the management, who will, at the earliest opportunity, replace the machine with a new one of the same make, or install one of a different make to avoid any of the mentioned delays in the future.

The management to-day presented a new feature at the grounds in the shape of a printed programme for the afternoon shooting which was greatly appreciated by the different contestants, and was mailed to the different clubs and individual shooters around Passaic and Bergen county, and at a glance could tell just what was coming next as to number of targets, cost, etc., and when they were done shooting, could tell exactly what they had to pay to the cashier without inquiring of that official.

The different clubs were well represented and shot through most of the programme, which could not be quite finished before dark, on account of the bad behavior of the magautrap. The Mount Pleasant Club was represented by the following: Tom Dunkerly, F. S. Van Houten, H. Van Houten, who took second prize after shoot-off, miss-and-out, in the prize event, No. 3.

North Side was on hand with Capt. W. Banta, Al. Howard and Veenstra. Banta and Howard tied for first prize, with Capt. Lenone, of the home club. Banta won the shoot-off. Dunkerly won shoot-off for third prize with Kussmaul and F. J. Van Houten with 23 each. Oradell Club was represented by F. H. Tewes, who shot throughout and was well pleased with his afternoon's outing.

The other shooters were members of the home club, every one averaging good scores in all events. No. 5 was at 5 pairs, each

shooter shooting at 2 birds in the air at once. Banta's gun failed to act on second round and he withdrew.

There was much enthusiasm at this shoot over the prospects of much livelier work at the different club grounds through the formation last Wednesday night at Garry Hopper's store of a team shooting league, at which meeting the Oradell Club, North Side, and Jackson Park Club were represented by committees. The Mount Pleasant and Richfield clubs have entered application for committee representation at the next meeting, which will be held at Hopper's store, Oct. 30, at which meeting all arrangements will be completed, such as to electing permanent officers, appointing committees on the arranging of dates and of getting prizes, and such other duties as the committees call for.

The team shooting will most likely start on Saturday, Nov. 4, at the club's grounds, selecting No. 1 date, and to each succeeding club grounds, selecting their respective dates, until each club grounds have been visited; and this arrangement will continue throughout the season. At the end, the club that wins the most contests will be declared the champion of Passaic and Bergen counties at team shooting. The committee will most likely provide prizes for every team entering in this contest, as well as individual prizes for best averages on each team. The idea in forming this league was to promote shooting in general at the different club grounds and to assure a larger attendance at the different club shoots.

Where at the present time five to ten members go to a shoot, when the teams visit a ground it is assured at least of twenty-five or thirty shooters, outside of its own members, which will be more attractive than at present.

The team shooting will occur on every other Saturday, leaving the off Saturday for home shooting, and for those who don't care for the team contest. Any shooter wishing to accompany the teams to home or visiting grounds are always welcome. The more the merrier.

Scores of the Jackson Park Club shoot follow:

Table with columns: Events, Targets, Clickner, Morgan, Van Horn, Lenone, H Sindle, Dunkerly, F Sindle, Allen, Howard. Rows show scores for various events and targets.

No. 5, 5 pairs; H, handicap allowance.

WM. DUTCHER.

Magic City Tournament.

MUNCIE, Ind., Oct. 14.—The annual fall tournament of the Magic City Gun Club, of this city, had the lightest attendance that has ever fallen to the lot of one of our shoots. No less than four tournaments for the same week in our part of this State being more than the shooting interests could properly care for.

The first day's programme was at targets, and the second day's events were at English sparrows. The trade interests were looked after by C. O. Le Compte, D. D. Gross and Geo. Little. J. W. Farrell, of the local club, won first average over all for the first day, making the good score of 186 out of 200 targets. In the second day's shooting Ed. Voris, of Crawfordsville, Ind., led the parade, closely followed by Dr. S. H. Moore, Indianapolis, Ind.

As is customary with this club, the participants were entertained at the noon hour at a nearby residence with a chicken dinner. All made topnotch scores in this event. The scores follow:

Table with columns: Shot at, Broke, J W Farrell, O Le Compte, D D Gross, C L Bender, L L Spencer, J R Johnson, Joe Smiley, H Bridgeman, H A Shumack. Rows show scores for various events and targets.

Scores at English sparrows:

Table with columns: Events, Sparrows, Voris, Dr Moore, Farrell, Witz, Gross, Rundell. Rows show scores for various events and targets.

The second race at 100 English sparrows between Hugh M. Clark, Wabash, Ind., and Max Witzgreuter, Fort Wayne, Ind., resulted in a win for Witz. Witz scored 92 birds of his allowance of 100, while Clark sent 88 where all English sparrows ought to go. It will be recalled that in the former race two weeks previously, Clark was the winner, scoring 94 against 92. A third race was immediately arranged for, to be shot, as were these, on the grounds of the Corner Rod and Gun Club at Fort Wayne, Ind.

The third race will be shot Oct. 22. The day was an ideal one for shooting, and the light was better than on the first occasion. The birds were a good lot, and the shooting was witnessed by a crowd of some six hundred people.

Table with columns: Witz, Clark. Rows show scores for various events and targets.

G. G. WILLIAMSON.

Rising Sun Tournament.

RISING SUN, Md.—The two days' tournament of the Rising Sun Gun Club was managed by Messrs. H. Linn Worthington, of Rising Sun, and Luther J. Squier, of Wilmington. Mr. W. M. Ford, of Wilmington, champion of Delaware, made high average for the two days, 341 out of 370. Second high average, 335, was made by Mr. A. Somers, of Delta, Pa. Third, 333, was made by Mr. Lester S. German, of Aberdeen, Md.

On the first day Mr. A. Somers made high average, 166 out of 180; Mr. L. S. German was second with 163; Mr. W. M. Ford was third with 159. On the second day, the high averages were: First, Ford, 182 out of 190; second, German, 170; third, a tie between Messrs. J. A. McKelvey, of Wilmington, and A. Somers, on 169. One cent was deducted from each target thrown, and the purse so made paid 70 per cent. of the losses of those who shot through the programme and failed to win their entrance.

On the last day the championship of Cecil county was an interesting feature. The conditions were 10 singles and 20 pairs. Messrs. H. R. England, of Rising Sun, and J. McCush, of Coloma, tied on 24. In the shoot-off at 10 singles and 5 pairs, England won by the score of 17 to 13. The scores follow:

Table with columns: First Day, Second Day, Total, Foord, Scmers, German, McKelvey, Stephens, England, Squier, Alexander, C Kirk, Gifford, Edmanson, Rigdon, Keen, J E Kirk, Foster, Roberson, Terry, Mordecai, Cecil Kirk, McCush, McGovern, Jackson, Kiale, Armour, Nicke. Rows show scores for various events and targets.

THE ONLY MANY-USE OIL

It oils gun locks, revolvers, reels, cylinders, valves. Just right. -Adv.

Braintree Gun Club.

THE Braintree Gun Club held a very successful prize shoot on its grounds at Braintree, Mass., Saturday afternoon, Oct. 14. White won the high average prize, breaking 88 out of 100. In the handicap, 50 bird match, Brown won the first prize, breaking 48 with a handicap of 2 birds, making a total of 50. Jordan won the second prize, breaking 43 with a handicap of 6, making a total of 49. Muldoon won third prize, breaking 38 with a handicap of 10. Total 48.

The other events: Fifteen targets: White 14; Frank, Baker, Worthing 13; Hibbard and Jordan 12; Brown 11; Wilder 10.

Ten targets: White, Norton, Hibbard, Carson, 9; Frank, Baker, Jordan, 8; Brown 7; Worthing, Reynolds 6.

Five targets: Worthing 13; Hibbard, Jordan, Baker, 12; Brown, Muldoon 11; Frank, Wilder 10.

Four targets: Frank, Brown, Baker, Carson, Hibbard, 9; Muldoon, Starrett, 8; Worthing, Jordan 6.

Three targets: Brown 15; White 14; Frank, Kirkwood, Baker, Muldoon, Carson, Hibbard 13; Worthing, Jordan, Macomber 12; Wilder, Starrett, Reynolds 11.

Two targets: Macomber, Brown, Frank, 10; White, Kirkwood, Jordan, 9; Norton, Dow 7.

One target: Muldoon, Jordan, Wilder 14; White, Kirkwood, Frank, Brown, Hibbard 13; Baker, Reynolds 12.

Five targets: White, Brown, 10; Starrett 9; Frank, Jordan, Hibbard 8; Reynolds, Wilder, Kirkwood 7.

Four targets: Brown, Hibbard, 13; Frank, Kirkwood, Carson 12.

Three targets: Kirkwood, Jordan, 10; Frank 8, Brown 7.

Two targets: Frank 15; Kirkwood, Brown, Jordan 13; White, Wilder and Carson 12.

One target: Jordan 9, Frank, Wilder and Hibbard and White 7; Norton 6.

The percentage of targets broken: White 88, Frank and Brown 85, Baker 84, Jordan 80, Hibbard 77, Kirkwood 76, Worthing 75, Starrett 74, Wilder 70, Reynolds 70.

Indianapolis Gun Club.

INDIANAPOLIS, Ind., Oct. 21.—Moller won the Peters badge. The contest for the English Hotel cup was won by Silas W. Trout, of Franklin, Ind., defeating Moller by the following score: Trout 22 25 23 24—94 Moller 16 23 19 23—81

Both contestants are members of the Indianapolis Gun Club. The weather was clear and cold.

Table with columns: Events, Targets, Mike, Parry, Moore, Hunter, Silas W Trout, Everts, T J Trout, F Trout, Southern, Habich, Armstrong, Moller, Finley, Frazier, Harvey, Hice, Robinson, Nelson, Hose, Smoke, Hoffner. Rows show scores for various events and targets.

North New Jersey Shooting League.

MONTCLAIR, N. J., Oct. 21.—The eighteenth match of the series of team races of the North Jersey Shooting League was run off to-day at Orange, the Montclair team being pitted against that of the Mountinside Gun Club, of Orange.

The match resulted in a tie, both teams breaking 86 birds. The tie was shot off at 10 targets per man, and resulted in giving the match to Montclair, with a score of 41 against 37 for their opponents.

The low scores were owing to a very high wind prevailing during the earlier part of the contest. The next team race will occur at Montclair on the 28th—Dover against Montclair.

Table with columns: Montclair, Mountinside, of Orange, Allan, Howard, Bush, Crane, Batten, Shoot-off of tie, Allan, Howard, Bush, Crane, Batten. Rows show scores for various events and targets.

Rochester Rod and Gun Club.

ROCHESTER, N. Y., Oct. 18.—The tenth contest for the Lafin & Rand trophy series, started on Aug. 16, was shot to-day. The competition is close, and an interesting finish is forecast for Nov. 1. The scores:

Table with columns: Brk. Hdp. Tot'l, \*Stoddard, Rickman, Back Scores, Borst, Stoddard, Re-entry scores, Rickman, Rickman, Rickman, \*Rickman, Stoddard, Stoddard, \*Wins point for cup.

Class Division.

THAT prejudice against the colored people is strong by men from the South, was demonstrated by a shooter, who walked in a lunch room on East Forty-second street, New York, the other day to save time and appease his hunger.

This man was from Maryland, with a record of 100 straight, and a smile that wins the hearts of all the fair sex, was ushered by an energetic waitress to a rear table and offered a chair back of a large negro man, who was eating Boston baked beans. The shooter, in positive and audible tones, said, "I will not sit here!" The waitress evidently understood the situation, and with ready tact asked him to take a seat across the room. By that time his "Southern blood" was thoroughly aroused, and with "fire" in his eye he left the restaurant. Bravo, "Infallible," your loyalty to Dixie won the applause of A GEORGIA CRACKER.

Baltimore Shooting Association.

BALTIMORE, Md., Oct. 21.—The summer and fall series of the Baltimore Shooting Association closes on Saturday of this week. The shoot to-day resulted as follows:

Table with columns: Events, Targets, Woodyear, Haighy, Bowen, Mears, Moxley. Rows show scores for various events and targets.

### WESTERN TRAP.

#### Cincinnati Gun Club.

The attendance on Oct. 21 was not large, the day being quite chilly. Some of the members were away on shooting trips. Thirteen members shot their scores in the first contest of the series for the Clements trophy. Williams was high gun with 48 from the 17yd. mark. Faran was second with 46, and Maynard third with 45. The conditions of this trophy are sixteen 50-target events, shot every other week, in two strings of 25 each, distance handicap, 16, 18 and 20yds.

The committee fixes the mark for the first event, and take the first four scores at that mark for an average, changing the handicap after every fourth shoot, according to the following scale: Under 80 per cent., at 16yds.; 80 to 84 per cent., at 18yds.; 86 per cent. or over at 20yds. Members must compete in twelve contests to be eligible. The average is determined by the scores of all the events in which a member takes part. An optional sweep is provided, 10 cents in each event, the purse being divided at the close of the series, 50, 30 and 20 per cent. To be eligible for this purse, members must post entrance in every event in which they participate. Several members shot their score in the Ackley trophy series on the 16th, making the following scores: Bleh, 44, Bonser 43, Dick 40, Brown 39, Miles 31, Gambell 33.

Herman starts for Duck Island the coming week, to join the party already there. Ahlers is making his plans for a quail hunt in Illinois next month. The boys are to make an effort to annex the Phellis trophy at the Columbus shoot on the 26th and 27th. Clements trophy shoot, 50-targets, distance handicap:

Williams, 17.....	23 25-48	Ahlers, 18 .....	21 19-40
Faran, 16 .....	24 22-46	Block, 16 .....	20 20-40
Maynard, 17 .....	24 21-45	Herman, 18 .....	18 21-39
Harg, 19 .....	20 24-44	Randall, 16 .....	20 19-39
Altherr, 16 .....	23 21-44	Register, 16 .....	17 21-38
Pohlar, 18 .....	20 23-43	Keplinger, 16 .....	20 18-38
Bullerdick, 16 .....	21 21-42		

Team match, 50 targets:

Maynard .....	25 22-47	Faran .....	23 22-45
Ahlers .....	22 25-47	Keplinger .....	21 21-42
Bullerdick .....	20 20-40	Williams .....	21 21-42
Herman .....	20 19-39	Gambell .....	18 22-40
	87 86-173		83 86-169

#### Ohio Notes.

The Preble County Gun Club, of Eaton, entertained their Dayton, O., visitors on Oct. 18 in good style. The rain caused a small attendance, and the tournament programme was cut out; a four-man team match at 100 targets per man was fixed up in its place. The scores made were very fine. Clark of the Eaton team, went straight, Less N. Reid 94, D. M. Swihart 82, Dr. W. H. Bucke 89; total 365. Dayton team—M. E. Lindenmuth 93, H. M. Carr 90, J. Achey 88, Ike Brandenburg 86; total 357. Clark and Reid shot another 100-target match, tying on 95. Clark's score for the 200 was 195, and included a run of 181; he missed his 182d target. His best previous record was 89 straight. Clark is certainly doing magnificent work. Reid broke 189 out of 200. Carr 167 out of 175.

The Greenville Gun Club held a special handicap shoot for merchandise prizes on Oct. 19. Eight members took part in the sport, which consisted of three 15-target events with four prizes in each event. The winners were, in order given: Hartzell, McCaughey, Lambert and Kirby in the first event. Wolf, Lambert, Hartzell and McCaughey in the second event. McCaughey, Wolf, Eidson and Lambert in the third event. The club has lost one of its most active members, Cooper Ayers having just moved with his family to Duluth, Minn.

Seth Hobby, who lives near Sidney, and a friend are reported to have killed seventy-two ducks at the Lewistown Reservoir in one day. Perhaps if the game warden should see Mr. Hobby he could explain how it happened that they exceeded the limit of twenty-five ducks each, which the law allows to be killed in one day, by 22 birds. Hunters should be careful to keep their stories within legal limits.

The Cleveland Gun Club's regular shoot on Oct. 14 was poorly attended, a single squad only taking part in the sport. In the shoot for the Greater Cleveland amateur championship trophy of northern Ohio, at 100 targets, C. E. Doolittle was victorious with 89. Latham 87, Sheldon 81, MacMeans 82, Hopkins 77. This is the fourth successive win for Doolittle. He was also high gun for the day, with 134 out of 150. Sheldon and Latham second with 127 each. MacMeans 121, Hopkins 112. Two years ago Doolittle began to shoot at the traps and has rapidly come to the front until he is now, without question, one of the best amateur shots in northern Ohio.

Quite a bunch of members were at the grounds of the Dayton Gun Club on Oct. 14, among them Pop Heikes, who has returned from his trip to the West. Seven 25-target events were shot. H. M. Carr was high with 132 out of 150, Ed. Rike 111. Rolla Heikes 107 out of 125. Z. A. Craig 78, Ike 76, and A. Keller 54 out of 100. Horace Heikes 44 out of 75. Owens 16, and L. Whitacre 24 out of 50. The scores were hardly up to the usual mark. H. M. Carr did the best work, breaking 90 out of his last 100. Shooting at 16 pairs, Rolla Heikes broke 23. Ed. Rike broke 16 targets out of 12 pairs, and Horace Heikes, 17 out of 15 pairs.

The Hamilton has closed its shooting season, the result being that Wm. Link was awarded the trophy, valued at \$100, his aggregate score for the season being 452; Jones, 437; Smith, 437; E. D. C., 422.

A party of thirty-five hunters left Dayton on Oct. 17 for a big game hunt in northern Maine. Their headquarters will be near Staceyville, and they will be gone a month. The Dayton members of the party include H. C. and Chas. E. Hossafous and Louis Groneweg. From Arcanum were Claude Weaver, N. E. Wild, Mart Weisenbarger, Lorin Fry and Jas. C. Heeck, and from Pittsburg, east of Arcanum were Wm. Breidenbach, Harin

Hagen, Gottlieb Reisley and others. The party was divided into five or six smaller parties, each fully equipped with tents and supplies for camping. Jacob Brown, Samuel Lack, and Andersen Brown, of Arcanum, have been in the woods since Oct. 9. They report fine weather and plenty of game.

It is likely that the next Legislature will amend the present game law on quail by prohibiting the shooting of this bird for several years. Col. Thomas Paxton, a member of the Fish and Game Commission, is said to be in favor of the proposed amendment.

It is reported that Pelee Island, Lake Erie, is to be turned into a game preserve, and that owners of the land are giving options to a syndicate for that purpose. The woods are full of black squirrels, rabbits are abundant, and there are a few quail, the latter being from the original stock planted there by Dayton sportsmen some years ago. The Pelee marshes afford splendid duck shooting each fall and spring. Cincinnati anglers and sportsmen will be interested in this rumor, as it is a favorite resort and is visited every season by members of the famous Pelee Island Club, one of the prominent fishing clubs of the city.

Dr. and Mrs. D. W. Greene and Messrs. Frank Canby and E. C. Harley, of Dayton, have returned home from their hunting trip in the New Brunswick woods. They left the railroad at Boiestown, fifty miles from their camping place, making the balance of the journey by wagon, horseback and on foot, spending one night in camp at Rocky Brook. Soon after their arrival Dr. Greene killed the largest moose he ever secured, his wife being with him at the time. Mr. Canby got a moose and a Canada lynx, and Mr. Harley a moose and a black bear, weighing nearly 375 pounds. Mr. J. R. King, who was with the party, remained at the camp. He had killed a moose and a caribou.

Rain prevented the regular shoot of the Rohrer's Island Gun Club on Oct. 18, and again on Thursday, the 19th a downpour forced a postponement, and the remaining four contests in the medal and prize series will be shot on the 25th, when there will be a grand struggle.

#### Madisonville vs. Superior.

THE return match between teams of the Madisonville, O., Gun Club and Superior Hunting and Fishing Club was pulled off after a fashion on Oct. 18. The heavy downpour of rain prevented any possibility of shooting at 100 targets per man, and the number was cut down to 35.

As the Madisonville Club had made all preparations for entertaining their guests, the Superior boys made up their minds to go, rain or shine, and showed up at Stienkorb's about noon, where they all sat down to a fine dinner, prepared by Mrs. Stienkorb and her two daughters. The time until 3:30 was passed in various ways, and then, as the rain had nearly ceased, the boys went to the grounds and were soon at work. The shooting was kept up as long as it was possible to see a target. Gambell was high gun with 30. Pohlar, of the Superiors, tied for second, with Settle, of Madisonville, on 27. Lockwood and Deiters are improving in their work. Henninger had a strange gun, and his score shows that it did not fit. The background is not of the best and had an effect on the scores. Bill Settle was anxious for a match with almost anybody, but the rain prevented. Some other time he'll get a chance. Some day next month the teams propose to select a pleasant day and shoot at a whole 100 per man in order to decide the best team. The scores:

Madisonville Team.		Superior Team.	
Stienkorb .....	14 10-24	Gambell .....	16 14-30
Settle .....	15 12-27	Pohlar .....	15 12-27
Aufderhas .....	12 7-19	Pfeiffer .....	14 12-26
Patton .....	9 10-19	Uhl .....	13 11-24
Pritchard .....	10 8-18	Lockwood .....	10 13-23
Henninger .....	12 5-17	Deiters .....	10 11-21
	72 52-124		78 73-151

#### Garfield Gun Club.

Chicago, Oct. 21.—The appended scores were made on our grounds to-day on the occasion of the sixth trophy shoot of the fourth series.

In the club medal shoot John Wolff won Class A on 23, Stone won Class B on 24, Mrs. John Wolff won Class C on 13. In the Dupont cup shoot, John Wolff, Dr. Reynolds and Thomas tied in Class A on 17 out of 20. Ford Class B on 17 and Herr won Class C on 12.

In Hunter Arms Co. event Thomas won in Class A on 19 out of 20, thrown as 10 singles and 5 pairs. Stone, Horns and Hibbard tied in Class B on 17 and Herr won Class C on 19.

Mr. and Mrs. W. A. Davis visited us and both shot well. They both applied for membership, making twenty applicants on the waiting list. Only one more shoot of the season, so come out to the last chance.

Events:	1	2	3	Events:	1	2	3
Targets:	25	20	20	Targets:	25	20	20
McDonald .....	21	12	15	Ford .....	19	17	13
Stone .....	24	15	17	J Wolff .....	23	17	13
Dr Meek .....	19	16	18	Mrs Wolff .....	13	5	..
Horns .....	15	16	17	Herr .....	12	19	..
Dr Reynolds .....	21	17	16	Davis .....	20	6	..
T Smedes .....	21	14	16	Mrs Davis .....	14	..	..

Hibbard .....	21	8	18				

No. 1 was the trophy event. No. 2 was the Dupont cup event. No. 3 was Hunter trophy. Dr. J. W. MEEK, Sec'y.

#### In Other Places.

At Paducah, Ky., where so many big tournaments have been held, the announcement is made that the club has held its last practice shoot for the season. There will be a series of shoots, having a limit of 100 targets, opened up for the winter.

The club at Leonard, Ill., with the big name of Thunderpumper, held a tournament last Tuesday, in which R. Keene, of Watscka, was high with 134 out of 150. C. H. Clark, of Crescent City,

second, 130; H. Rosaleus, of Gilman, was next with 118. Bert Ward, M. E. Hunt, John Humphrey, Ed. Wilson, Wm. Grob, George Beehler and Charles Phillipps were present, coming from Gilman.

There was a fine shoot at Hutchinson, Kans., owing to the fact that Ed. O'Brien and Mr. Arnold were managers. It is announced that the tournament will be an annual affair.

The Capital City Gun Club, Little Rock, Ark., holds shoots regularly, and any visitors who happen to be in the city are very cordially invited to shoot with the club.

Nine new members were added to the Tucson, Ariz., Gun Club at their last meeting. It was decided to remain on the old ground, and to spend \$200 on the ground and to hold shoots on Sunday mornings. The new members are D. C. A. Schrader, John Etchels, E. W. Graves, W. N. Wilson, W. Price, Amos O. Keefe, Thos. Conlon, George Schofield and John Reilly.

The Harvard Gun Club, San Antonio, Tex., is holding regular shoots, and some of the members are of the opinion that as shooters are tiring of shooting doves, that there will be a large turnout at the traps.

McCracken and Burns were high at the Recreation Gun Club, Cleveland, O. They scored 28 out of 30 from the 30yd. mark.

Brayton, Ia., shooters that go abroad to shoot are George Fredrickson, Jens P. Johl, Ingraard Birk, John C. Larsen, Chris Hoegh and Walter Nelsen. They lately went to Elk Horn and assisted at a tournament.

The El Paso, Tex., Gun Club occasionally hold practice events. At a late shoot Mr. Rand made 99 out of 100, which shows that he does not really need any practice. Shelton made 83, Farnham 26 out of 50, Williams 69 out of 75. There will be a team shoot with Deeming, and W. J. Rand, W. H. Shelton, J. F. Williams, Lee Burdick, G. L. Hitt, C. Buliver, Dr. E. H. Stevenson, Dr. W. N. Vilas and Stafford Campbell.

Members of the Algona, Wis., Gun Club met Saturday evening for the purpose of enjoying a fine lunch, but through a misunderstanding of some kind it failed to appear, much to the disappointment of the hungry crowd that congregated.

There is prospect of a gun club being formed at Carbondale, Pa. The local sportsmen are becoming very enthusiastic.

The Ohio Valley Shooting Association, of Parkersburg, W. Va., is engaging in practice shoots, preparatory to a tournament that will be held this month.

Many members of the Manor, Pa., Rod and Gun Club spent two weeks in an outing near Everette.

Strange as it may seem, the report is that a gun club at Manistique, Mich., with sixty-five members was organized last spring, and held their first shoot last week. Just to help the thing along there was a strong northwest wind blowing.

The Hamilton, Canada, Gun Club will hold the president's supper shoot Nov. 18, and the annual winter tournament will take place Jan. 16, 17, 18 and 19. The members propose to keep in practice by shooting through all of October, November and December.

The Lansing, Mich., Gun Club held a practice shoot at Waverly Park, Friday last.

Lovers of shotgun shooting, at Fayette, Colo., will soon have an opportunity to engage in the pleasant practice. A gun club is to be formed by local sportsmen.

The regular shoot at Bisbee, Ariz., resulted in M. L. Noquin winning the cup.

Shooters will be glad to note that a tournament will be held at Huntsville, Mo. J. E. Forbes is the secretary.

The following gentlemen have charge of the shoot at Quincy, Ill.: C. Vandenberg, H. A. Geise, J. Griffin, C. Walker, and J. F. Zimmerman.

A few members of the Corner Rod and Gun Club, Fort Wayne, Ind., met last Sunday and shot for the Fleming medal.

A local writer at Butte, Mont., has this to say of Tom Marshall and his Indians: "While the tribe to which these Indians belong is known the world over as dangerous men behind the gun, at times they are perfectly harmless, and they are not to be feared. They are fairly law-abiding, and if the temptations are not too strong, there will be no trouble wherever they may congregate."

The Magic City Gun Club, Muncie, Ind., will make a second effort to hold a tournament. Notice of dates will be given later.

The Salem, O., Gun Club has added a rifle range to the shooting park, and there will hereafter be weekly shoots for riflemen.

Our Canadian brethren are not deprived of live-bird shooting. At the regular shoot of the Woodstock, Ont., Gun Club at 5 live birds, Welford killed 1, Brind 5, Miller 4, Pyne 5, Thompson 4, Wright 4.

Members of the Tannhauser Gun Club, of St. Louis, visited Belleville, Ill., and the Swansea Gun Club entertained them with a shoot and a supper.

Many gun clubs hold shoots for the purpose of making a donation to charity. A shoot of this kind was lately held by the Medina, O., Club, for the benefit of the library.

T. Hubby won the North Texas Gun Club shoot, 370 out of 390. Day and Miller second with 355. In the amateur class Atchison was first, 335; Meeks, second, 334.

Kimballton, Ia., has a gun club. There is nothing wrong with the Swedes, if you look at the following names. Last Saturday H. J. Elmer Rasmussen was first, Martin Esbeck second, C. D. Petersen third, Martin Frederickson fourth, Rasmus Hedegaard fifth, Walter Olsen sixth, Lars Christofferson seventh, Lars Jensen eighth, George Faaborg ninth, Joe Larsen tenth, Mr. Kryger eleventh, Julius Hanson twelfth.

Target shooting is becoming quite popular at Lilly Lake, Ill. The McHenry Gun Club held a tournament there Oct. 15, and there will be another one held Oct. 22. As a matter of interest to all who attend, there will be a big game and fish dinner given by the proprietor of the hotel.

A large number of the members of the Marion, Ind., Gun Club met last Thursday at the park south of town and shot for the cup. There will be but four more shoots. H. V. Lee is now in the lead, while W. A. Brown and Charles Barley are tied for the powder trophy.

In the live-bird shoot at Paris, Tex., Hubby made a straight score, Miller lost one, Wade lost two. Of the amateurs Atchison, Worden, Wingo and Spears were first, Ellison second, Tucker, Lome and Starnes third.

King made 90 out of 100 in a shoot at Newark, O.; Tabler 66, Burrell 76, Meredith 65, Kufer 77, Brown 71, Bricker 83.

Teal duck shooting is reported good in the bayous of Louisiana. Members of the Pine Bluff, Ark., Gun Club were out Thursday afternoon. Some good shooting was done by Joe Cromwell, Tandy Brewer, Hardin Cromwell, J. P. Baker, George Clements, W. T. Simpson and Eugene Arnold.

Each week reports come from New Mexico that great interest is being taken in the big territory tournament which comes off early in December.

Among the professionals at Evansville, Ind., shoot, Spencer was high, 192 out of 200; Riehl 181, Driehls 177, Le Compte 177, Otis Felger, Grand Rapids, Mich., 189; Wm. Huddy, Evansville, Ind., 175; Tom Collins, Carmalton, Ind., 172.

Every month, the secretary of the Le Mars, Ia., Gun Club moves away and another has to be elected. The new secretary is John Ellenbecker.

The Rich Hill, Mo., Gun Club held a shoot last Thursday. Out of 175 targets, J. D. Thomas made 170, George D. Mackey 168, W. A. Smith 167, Chas McClure 151, O. M. McCrea 141, Chas. Troutillat 151.

At the first shoot held by the Douglas, Ariz., Gun Club, at Lincoln Park, Sunday last, the scores were: F. S. Douglas 71, W. Reno 87, H. W. Reno 74, A. Otto 83, J. L. Brown 50, Smith 48. The interest in the movement seems to be acute, and there is no doubt of the success of the club in the future.

The weekly shoot at Bayfield, Wis., resulted in Oscar Anderson holding championship.

The Gambier, O., Gun Club held a shoot Friday. At 50 targets Webster broke 43, Prof. Reeves 43, Dial 42, Landerbaugh 37. The club intends to shoot weekly on Wednesdays.

At the Mishawake, Ind., tournament, Chas. Spencer made 395 out of 400, Reed 378, Steenberg 359. W. N. Wise, of Indianapolis, won the cup donated by the businessmen, getting 378. All present report that they were well treated by the home club.

At the Crawfordsville, Ind., shoot, Chas. Spencer made 214 out of 215, beating all previous records on the grounds. Dr. Britton was there in good form, and he made 201; Wise made 200. This is one of the very best shooting grounds in the West.

Seldom does a new gun club start off with as many members as the new Joliet, Ill., Club. If there is a continued addition to the club it will outrival any of the Chicago clubs.

Members of the Mankato, Minn., Gun Club lately went hunting. They entrusted the commissary to Mr. Benedict, and as he was crossing the lake, he upset the boat, and all went to the bottom. Mr. B. came out with a good ducking, but the bottled goods that would have warmed him up a bit were in the mud.

F. E. Britt, of the Mankato, Minn., Gun Club, won the club trophy for this season. The same was purchased by C. H. Saulpaugh, and is said to be a beauty.

In order to get into good practice for the fall duck shooting, a gun club has been organized at Troy, Kans., having eighteen members. Regular weekly shoots will be held.

The shoot at Peru, Ind., was declared off, and the same will be scheduled later.

J. J. Lealand holds the medal in the Houghton, Mich., Gun Club. Regular shoots will be held by this club each Sunday morning. This club will be willing to take on a team shoot with the Atlantic Club.

The new officers of the Rocklin Gun Club, Sacramento, Cal., are: Harry Selfridge, President; Glen Craven, Vice-President; B. N. Schriber, Secretary. The club is in a prosperous condition financially.

There was a variety of prizes at the tournament held by the Rockford, Ill., Amateur Gun Club on Oct. 15-16. There was a Lefevre gun, a diamond badge, loving cup, and gold medal.

The Winona Rod and Gun Club, Chicago, has incorporated. Frank Haroka, Chas. W. Deitrich, W. Robert H. Friberg, are the incorporators.

Mr. Link won the season's medal, offered by the Hamilton, O., Gun Club. This club is preparing for a tournament, to be held soon.

The Kane Gun Club, Bradford, Pa., has challenged the Oil City Club for a shoot. The conditions and the number to compose the team remain unsettled.

At Hillsboro, Ill., Oct. 15, there was a shoot held at which prizes were donated by the merchants, and all the proceeds of the shoot were given to the hospital fund.

Not many months ago it was almost a necessity for a shooter to take his shells with him to a shoot, but at the present age of the world, this is not necessary, as the management of all tournaments has shells on the ground for sale.

The following statement will show the standing of the members of the Baton Rouge, La., Gun Club, after shooting at 200 to 350 targets: R. P. Raymond 88, C. D. Raymond 85, H. M. Von Phiel 84, B. Powell 82, A. Kleinpeter 81, Wm. McCousland 81, C. C. Parish 76, McE. Jackson 70, F. Kleinpeter 70, W. C. Whitaker 66, H. L. Fuqua 66, S. J. Powell 65, E. Cazenuss 64, J. Brown 38.

After months of rest the Euphemia Club held its first contest at Dayton last Monday. Chas. W. Matthews won the medal.

The Marshalltown, Ia., Gun Club still retain the team medal, having defeated Grinnell for a second time this year. The shoot held last week was no walkaway, as their margin was only 4 targets.

The Rice Lake Gun Club, Little Falls, Minn., held their election for this year. The new officers are: President, H. Landahl; Vice-President, Alvah Ashcroft; Treasurer, J. K. Martin; Secretary, W. T. Tourtellot. A new club house will be erected.

Charlie Budd, the well-known Iowa trapshot, made 97 out of his first 100 shots at the Indianapolis Gun Club shoot.

The Ohio Valley Shooting Association has a few enthusiasts yet in their club. Saturday afternoon there were ten members present, and J. F. Mallory was high man.

William Farrell and Goley Williamson were the managers of the Muncie, Ind., tournament.

Duck hunting is reported as being very good on the Columbia River, in Oregon, and many hunters have returned to Portland with the allotted number.

Members of the El Paso, Tex., Gun Club, at a meeting held for the purpose, severely condemned those who shoot game out of season. They did not pass by the restaurant and hotel keepers who buy the game. The determination was so great that the club offered \$10 each for convictions under the game law.

The Detroit, Mich., Gun Club held a shoot Oct. 15, at the Seven-Mile House.

At a practice shoot held by the Marietta, O., Gun Club some fair scores were made. At 100 targets, Decker broke 85, Speary 82, Schlicher 81, Jones 80, Bailly 70. At 70, Tropp 54, Stewart 52, Riddle 51, Stewart 34, Le Croix 13, Cugle 14.

Eight gasoline launches were seen about the marshes near Appieton, Wis., the occupants being after ducks. Such wantonness is putting honest duck shooters to the bad.

Mr. Barger, of Adair, Iowa, won a cup last Tuesday by breaking 139 out of 140. And thus do the amateurs even up in many instances with the best of the professionals. At the shoot there were present from Audubon, E. S. Van Gorder, Dr. Brooks, F. H. Adams, H. W. Wilson, Fred Vermilya, R. L. Talbott, E. M. Johnson and Cooney Petty.

A target tournament was held at Easton, Kans., Friday last which was well attended. At 110 targets Dougherty broke 103, Thomas Highfield 100, Joe Hall 100, Chas. Meyers 86, Otto Van Gasbeck 65, M. O'Neal 76, Frank Tyson 76, Smith 60, Reese 70, Thomas Woods 50, R. Shove 65.

Such a gathering of Swedes seldom ever met to try the scatter gun as met at Audubon, Ia., last Wednesday. The clubs at Oak Hill, Elk Horn and Kimballton, each composed of ten Swedes, met and the honors went to Oak Hill, with 418 to Elk Horn's 402.

Anaconda, Mont., Gun Club did not hold their shoot last week, as the members were out looking for ducks.

The Martinsville, Ind., Gun Club held their first shoot last Friday. The members are enthusiasts, and are pleased with their cup.

The new officers of the Great Bend, Kans., Gun Club, are: President, Ben McMullen; Vice-President, L. F. Wilson; Secretary, Ed. Chapman; Treasurer, T. S. Mayhew.

The Newark Gun Club is winning honors over the entire State, not only for the superiority of prize shots and its unrivaled team, but for the reputation the club has attained as a bunch of good fellows.

After many years, the Abilene, Kans., shooters have come to life, and opened up with a live-bird shoot. At 12 birds, Estes killed 11, Sherman 11, Thayer 10, Sauer 9, Conklin 8, Eicholtz 7, Loyd 5.

The members of the Jefferson County Club, at Louisville, Ky., will hold a live-bird shoot on Oct. 28.

The most remarkable trapshooter for his age is Murray Baker, the small boy, whose records are phenomenal. He is but twelve years old, and has shot but little, yet he has made 72 out of 75 and 25 straight. It is claimed that he made 47 out of 50 the first time he tried the game. He was born near Nashville, Tenn., and now lives at Martin, Tenn. This young man's career should be watched.

When the shooters of Illinois have finished husking corn, they are invited to meet at Marseilles, Ill., on Nov. 23 and 29, and there engage in a target tournament. Mr. R. F. Loring and

Max Knuessel will on this occasion be assisted by Messrs. W. H. Viemeyer, Fred Lord, W. Tramp Irwin, L. H. Fitzsimmons and George Steenberg. Two cents will be charged for targets, but one cent will be set aside and form a pot that will go to the shooters in average money. There will possibly be ten divisions.

Pigeons at Pine Bluff.

LITTLE ROCK, Ark.—The first live-bird shoot that has been held since last January in the State took place at Pine Bluff, Oct. 11, under the management of J. T. Lloyd. The programme provided for two sweeps, a 10 and a 15-bird event, and in addition there was also to be an individual contest at 25 pigeons between J. T. Lloyd, challenger, and John M. Pemberton, holder, for the possession of the J. T. Lloyd Co. challenge medal. This contest was shot about noon, and proved to be a spirited one, and it required an extra string of 5 birds to decide the winner. Pemberton got off badly, missing his first, and at the end of the first 10 birds was 3 birds to the bad, as Lloyd was shooting in splendid form, killing his first 12 birds straight. His 13th and 15th got away and also his 25th, which was as hard a bird as ever left the trap. In the meantime Pemberton had struck his stride and refused to miss any more, so that the match resulted in a tie with 22 for each contestant. The tie was immediately shot off at 5 birds, and here Lloyd lost out on his second bird, a towerer, that he hit too far back and it fell over the dead line. Thus Pemberton retains possession of the medal, and in addition to this, he also holds the Peters Cartridge Co. trophy, emblematic of the live-bird championship of the State, and at one time he also held the individual flying target championship trophy, being the only shooter who has ever achieved this distinction in the State.

The pigeons were a splendid lot, and a strong wind aided them materially, so that it took quick and accurate work to stop them within bounds.

Seventeen shooters participated in the sweeps, and Paul R. Litzke showed to the best advantage in these with a total of 21 kills out of 25. C. D. Conrey finished second with 20, while Boysen and Wells were third.

The weather was ideal, and the sport was very much enjoyed by all who participated. Mr. Leroy Bennett acted as referee, and W. P. Imon as trap-puller. Interstate rules governed.

The next shoot will be held at Stuttgart within the next month or six weeks. At this there will probably be a trophy to shoot for. The following are the scores made in the two sweeps on the programme, the first being at 10 and the second at 15 birds. Every one shot from the 30yd. mark.

Table with 2 columns: Name and Score. Includes P R Litzke, C D Conrey, E Boysen, J E Wells, Dr Williams, A L Morgan, J T Lloyd, J P Baker, A L Wilson, H Cromwell, R W Larkan, J F Perrin, G Clements, J A Galvin, J Cromwell, J M Pemberton, W P Bird.

Lloyd-Pemberton.

Individual match between J. T. Lloyd, challenger and John M. Pemberton, holder, for the J. T. Lloyd challenge trophy, 25 birds per man, 30yds. rise:

Table showing scores for J T Lloyd and J M Pemberton in an individual match.

Shoot-off of tie: 5 1 3 2 2 3 2 1 3 2

J T Lloyd..... 2 \* 2 2 2 - 4 J M Pemberton.... 2 2 2 2 2 - 5

Ossining Gun Club.

OSSINING, N. Y.—The fall clay bird tournament of the Ossining Gun Club, held Oct. 18-19, was quite successful, though the attendance was not nearly as large as the management of the club expected. On the 18th there were twenty-four shooters, and on the 19th twenty-five faced the traps.

First Day, Oct. 18.

The day started with a fine, drizzling rain, which will give some of our friends, who were to come, a chance for an excuse. The main event to-day was a 25-bird handicap, 14 to 20yds. H. H. Stevens, 19yds., A. Bedell, 18yds., and G. B. Hubbell, standing at the 18yd. mark, tied with 24 out of 25 and divided first, a \$20 gold piece given by Col. F. Brandreth. The second prize, a fine chafing dish, given by Supervisor R. T. Dennis, was won by Samuel R. MacDonald, of Yonkers, after a spirited shoot-off with J. A. R. Elliott and Ray Hendricks, of Rye, N. Y. The scores on shoot-off were: MacDonald 24, Elliott 23, Hendricks 22. In the third class of ties five had negotiated 22. The prize, a stop-watch, given by C. G. Blandford, was won on a third tie and shoot-off between Dr. Stever and H. Manchester, of Pascoag, R. I., by the latter with strings of 23, 22, 23. Neaf Apgar proved too much for the three others, who tied him with 21, so he took Parker Bros.' metal-lined cigar box home with him.

There was to have been a big extra handicap for a diamond ring, which Dr. W. L. Gardner, of East Orange, N. J., had promised to bring up. Believing the Doctor to be a man of his word, we advertised the event in all the sporting papers, and the "bunch" had some long-range shells in pickle for that diamond ring, but the ring and Dr. Gardner never came, nor a line explaining its non-appearance. The club offered to "make good" and buy a ring, but the shooters would not have it. J. A. R. Elliott was first high professional for the day, with Sim Glover second. Ray Hendricks, of Rye, was first high amateur and C. G. Blandford second.

Over 3,400 targets were thrown out of one Leggett trap between 10:45 and 2:30, and every one had a chance to get dinner between times. All events to-day were sliding handicaps. Starting at 16yds., the shooters handicapped themselves by the number they broke in each 20-bird event. In the scores it can be ascertained where each shooter stood by examining his score in the preceding event. No. 8 does not count in general averages.

Table with 2 columns: Name and Score. Includes J A R Elliott, S Glover, R Hendricks, H H Stevens, H Welles, G E Greiff, C G Blandford, H L Manchester, N Apgar, D Stever, O H Brown, G B Hubbell, R N Nichol, G E Sutton, H Waters, I T Washburn, D Brandreth, A Bedell, W Coleman, S MacDonald, A Aitchison, E McDonald, A Harris.

Second Day, Oct. 19.

The weather conditions were all that could be wished for to-day, and a good, big turnout was confidently expected. Ossining members had visited several clubs which had promised a delegation, but on counting up at the end of the day, there were but twenty-five all told.

J. B. Sanders, of Albany, was the only member of the Poughkeepsie Gun Club team to show up. We do not know whether it

was a case of "cold feet" or lack of co-operation on the part of the members of the Poughkeepsie Club. At any rate the Poughkeepsie Club had two months' notice, that if it failed this third time to bring a team of eight that the Ossining team would shoot and claim the cup, which they did with the following scores: Ray Hendricks 23, A. Bedell 24, G. B. Hubbell 20, J. Hyland 20, W. Coleman 19, C. G. Blandford 23, Wm. Fisher 22, N. Tuttle 18; total 169 out of 200; or 84.5 per cent. This was the deciding match, as each club had two wins to its credit. This cup, or punch bowl rather, is a handsome trophy, and was given to the club for competition by the president, Col. Franklin Brandreth.

Events Nos. 3 to 7 inclusive comprised a 100-target match for a fine cup, presented by Town Clerk Gaylord B. Hubbell. It represented the championship of Westchester county, and was won by Wm. H. Coleman, of Ossining, who made the fine score of 96 out of 100.

Sim Glover made a run of 100 straight in this series and D. Stever, who also was not eligible, broke 98. Though the targets were not thrown over 45yds., this was remarkable shooting.

We want to say right here that we are deeply grateful to the trade for the fine support they gave us. Harry Welles was with us on the first day, but J. A. R. Elliott, Gus Greiff, Hood Waters, H. H. Stevens, Neaf Apgar, Sim Glover and R. H. Nichol shot through both days, and were, as they always are, genial, courteous and always "on the job."

There was a lot of good-natured bantering between them on the merits of their particular goods, but they are personally most friendly. Mr. George R. Ginn rendered valuable assistance in the office, and gave the usual victim a chance to shoot without much bother. Mr. Heath also helped us out, refereeing. Nine is a trade representation to be proud of. To-day all stood at 16yds., Rose system. Glover was high professional to-day with 100. Elliott was second with 158. Stever was high amateur with 156. Manchester second, with 155.

Table with 2 columns: Name and Score. Includes Events, Targets, Greiff, Manchester, Elliott, Blandford, Stever, Waters, Hendricks, Stevens, Betti, Sutton, Hubbell, Apgar, Glover, Nichol, J B Sanders, J Hyland, Coleman, D Brandreth, Bedell, E L Martin, Dr Dunn, R Gorham, W Smith, W Fisher, N Tuttle.

A five-man team race was shot after the programme between Mt. Kisco and Ossining, with the following result:

Table with 2 columns: Name and Score. Includes Betti, Sutton, Dunn, Martin, Gorham, Mt. Kisco, Ossining, Bedell, Coleman, Hyland, Blandford, Fisher.

Table with 2 columns: Name and Score. Includes Professional, Amateurs, J A R Elliott, Sim Glover, Gus Greiff, H H Stevens, N Apgar, R Nichol, H Waters, D Stever, H Manchester, R Hendricks, C G Blandford, G B Hubbell, A Betti, G E Sutton.

Crescent Athletic Club.

BAY RIDGE, N. Y., Oct. 21.—Dr. J. J. Keyes led in the winning list, having annexed three events to his personal belongings. A stiff wind added to the difficulties of eliminating goose eggs from the scores. The second contest for the Snyder trophy was won by Mr. O. C. Grinnell, and Mr. A. G. Southworth won the second contest for the Lott cup. Dr. Keyes won the second contest for the Mullerite trophy, and two trophy shoots. The scores:

Trophy shoot, 15 targets: C. E. Foster 14, F. C. Raynor 13, L. C. Hopkins 12, O. C. Grinnell, Jr., 11, W. Snyder 8, W. W. Marshall 7, J. N. Teeter 7.

Snyder trophy, 25 targets: O. C. Grinnell 22, C. E. T. Foster 22, A. G. Southworth 21, L. C. Hopkins 21, W. C. Damron 21, Dr. Keyes 21, F. C. Raynor 19, W. W. Marshall 16, N. Teeter 11. Mullerite trophy, 25 targets: Dr. Keyes 24, A. G. Southworth 23, O. C. Grinnell 23, F. C. Raynor 23, C. E. T. Foster 20, W. C. Damron 20, W. W. Marshall 18.

Lott trophy, 50 targets: A. G. Southworth 44, O. C. Grinnell, Jr., 36, Dr. Keyes 35, W. W. Marshall 33, W. C. Damron 30.

Trophy shoot, 15 targets: E. W. Snyder 14, L. C. Hopkins 14, W. W. Marshall 13, Dr. Keyes 13, A. G. Southworth 11, F. C. Raynor 11, C. E. Foster 11, O. C. Grinnell, Jr., 10, W. C. Damron 10, J. N. Teeter 8. Shoot-off—E. W. Snyder 14, L. C. Hopkins 12.

Trophy shoot, 15 targets: O. C. Grinnell, Jr., 13, W. C. Damron 13, Dr. Keyes 13, A. G. Southworth 11, C. E. Foster 10, L. C. Hopkins 10, W. W. Marshall 9, E. W. Snyder 9. Shoot-off—Dr. Keyes 14, O. C. Grinnell, Jr., 12, W. C. Damron 8.

Trophy shoot, 15 targets: C. E. Foster 12, Dr. Keyes 12, E. W. Snyder 11, W. C. Damron 11, O. C. Grinnell, Jr., 10, A. G. Southworth 9, L. C. Hopkins 8. Shoot-off, same conditions—Dr. Keyes 12, C. E. Foster 11.

Trophy shoot, 15 targets—L. C. Hopkins 14, A. G. Southworth 12, Dr. Keyes 12, W. C. Damron 12, O. C. Grinnell, Jr., 11, C. E. Foster 11.

Trophy shoot, 15 targets: A. G. Southworth 14, O. C. Grinnell, Jr., 13, L. C. Hopkins 10, C. E. Foster 10.

Sheepshead Bay Gun Club.

SHEEPSHEAD BAY, Oct. 19.—Shorty shot a 20-gauge Parker. Dr. Goubeaud won the club medal on the shoot-off. Montanus, Shorty and McKane withdrew from the club contest, but shot along. Bergen, Stutzele and F. Schoverling shot along as guests. The day was fair, with no wind, and cloudy. The club will hold a special prize shoot on Nov. 7, Election Day.

Table with 2 columns: Name and Score. Includes Events, Targets, Shorty, Montanus, McKane, F Schoverling, Brown, Gewert, Williamson, Shorty, extra, Fransiola, Dr Goubeaud, Charles, Allen, P Suss.

PUBLISHERS' DEPARTMENT.

Devotees to the sport of ice boating are now overhauling their old craft or are constructing new ones. There will appear in our yachting columns probably in our next issue a design for a lateen rigged ice boat with 140 sq. ft. of sail. This boat has been specially designed to meet the demands of those who want to build an easily handled, inexpensive boat. It is important, both on account of comfort and safety that only the best material and fittings be put into ice boats. Intending purchasers will do well to consult this firm before buying elsewhere. Mr. Percy Ashley, who is an expert on ice boats and who is designing the lateen rigged boat for FOREST AND STREAM, considers Merriman products the best on the market.

# FOREST AND STREAM.

## A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1904, BY FOREST AND STREAM PUBLISHING CO.

NEW YORK, SATURDAY, NOVEMBER 4, 1905.

VOL. LXV.—No. 19.  
No. 346 BROADWAY, NEW YORK.

TERMS, \$4 A YEAR, 10 CTS. A COPY.  
SIX MONTHS, \$2.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, \$4 per year, \$2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

No person not a citizen of the United States shall have or carry firearms or dangerous weapons in any public place at any time.—New York Penal Code, Section 400.

### NORTH CAROLINA SEA BIRDS.

FAR down on the North Carolina coast, south of Cape Hatteras and separated from the mainland by the broad stretches of Pamlico Sound, lies Ocracoke Island. It is a narrow strip of land, about ten miles long, south of Ocracoke Inlet. Wind-swept and storm-beaten, the crashing surges of the broad Atlantic pound unceasingly on its shifting outer beach. For untold centuries this has been a wonderful place for the breeding of sea birds. During the summer months clouds of white terns of several species hovered over it, the black skimmer plowed the waters all about it, laughing gulls reared their young here, while oyster catchers and beach birds of many sorts raced along its shores and drew a fat subsistence from the marine life tossed up by the waves.

But a change came years ago. When the cruel fashion of using bird plumage for millinery purposes came into vogue, when gulls and terns adorned each woman's hat, the plume hunters discovered Ocracoke Island and there began their savage work. During a dozen years prior to 1897 it is believed that there were not less than half a million birds killed on this island for millinery purposes. Nor did this represent the whole destruction. For many years it had been the practice of the fishermen and the coastwise people of Pamlico Sound to visit this island at certain seasons and to load their boats with birds' eggs, which they used for food and sold to the neighboring population. In 1896 the birds had become so few that it no longer paid either to kill them or to fit out an expedition to the island for the purpose of robbing the nests; so for a few years the birds had a little rest. Yet even so there were small settlements so near to the island that people would go there to get a boatload of eggs.

About three years ago the Audubon Society began its protective work on the North Carolina coast, and since then has been steadily at work. Now, wherever there is a rookery of birds the wardens visit the island every day, and those who wish to rob the nests or to destroy the birds having learned of the Society's vigilance give the islands a wide berth.

Among the species found on Ocracoke Island are the royal tern, Wilson's tern, Forster's tern, and the least tern—a species that a few years ago people said was almost extinct. Besides these the black skimmers breed there, and last year a very few laughing gulls had nests there. Oyster catchers are abundant.

For the past three years Mr. T. Gilbert Pearson, secretary of the North Carolina Audubon Society, has given directions to the wardens to keep as careful an account as possible of the birds reared on the island, and the increase in their number is something astonishing. He reports that in the year 1903 there were hatched and reared there 1,700 birds. The next year the number was 1,000 greater, while in this year of 1905 there were no less than 6,700 birds raised there. During the first year of observation but six eggs of the least tern were counted; the second year there were about seventy eggs, and the third about 650.

Hardly less astonishing than this, but quite different, is the fact that within the last two years brown pelicans have made their appearance. These have come in two flocks, which in 1905 increased to about seventy-five each. They do not breed but appear to be unmated birds which are spending the summer here.

News such as this is delightful to the nature lover, but not to him alone. The fishermen of the coast are greatly interested in the increase of the birds, for, as they start out to their fishing, they often see near or far a white

cloud of birds hovering over the sea, darting down to the surface and then rising up again, and they know that there where these white wings are thus spread there will be work for them to do.

### THE APPALACHIAN FOREST RESERVE.

It is not necessary at this date to speak of the enthusiasm which President Roosevelt feels for the natural things of this country, its game, its forests and its wonders. He has been writing and speaking on these subjects for 10, these many years, and always to a good purpose. Perhaps, however, he never made a more effective plea to the country for the wise handling of forests than in an address made at Raleigh, N. C., during his recent tour.

For a number of years past efforts have been made to induce Congress to appropriate money for the purchase of the Southern Appalachian Forest Reserve, and many intelligent men North and South have worked hard to have this done. But, as a whole, the people of the South have not yet shown in this matter the interest that they should feel in it. Now, however, signs are not wanting to indicate that the South is beginning to understand what the forests mean to it, just as New England understands, and is showing, what her forests mean to her.

The President says: "If the Eastern States are wise then from the Bay of Fundy to the Gulf we will see within the next few years a policy set on foot similar to that so fortunately carried out in the high Sierras of the West by the National Government. All the higher Appalachians should be reserved, either by the States or by the Nation. I much prefer that they should be under National control, but it is a mere truism to say that they will not be reserved, either by the States or by the Nation, unless you people of the South show a strong interest therein."

These words, in his strong argument for the establishment of these forest reserves in the East touch the heart of the whole matter. These forests should be protected, but this will not be done unless the people make it evident that they wish it done. That such reserves as the White Mountain, and the Southern Appalachian Forest Reserves should be in control of the National Government goes without saying. After such control has been assumed the different States may fitly supplement the work done by the National reserves by setting aside other smaller reserves, which will increase the value of the greater ones and which will provide more and more breathing spots—more and more bits of untouched nature—for the benefit of our people.

In the countries of the Mediterranean and in China, the United States has before it object lessons of what ruin absolute deforestation will surely work in any region. Here, in America, within the last fifteen years much wonderfully good work has been done in protecting our forests, but much more remains to be done. In many localities the West is fairly well protected, but the East remains without anything like adequate protection; and the residents of the Atlantic seaboard will be wise if they shall listen to the stirring eloquence of President Roosevelt and shall insist on Congressional action looking to the protection of such forests as remain.

### THE NEW YORK POST OFFICE.

COMPLAINTS of the loss of copies of the FOREST AND STREAM passing through the mails often come, and as is quite natural, the blame for this bad service is often laid to carelessness in the mailing department of the paper. Occasionally, such blame may be justified by the facts, but in the very great majority of cases the fault lies not with us but with the New York Post Office. But before this blame shall be loaded on the shoulders of the post office authorities, it must be remembered that for many years the postal force in this city has been wholly inadequate to do the work thrown upon it. It lacks room, it lacks facilities and it lacks labor; and the responsibility for this condition of things is not to be put on the postmaster of New York nor on his employees, nor indeed on the Postmaster-General's department, but on Congress, which, in absolute disregard of evidence many times brought before it, declines to appropriate money for a greater force in the post office and for facilities for

handling the mail which shall meet the requirements of modern times and of a great population.

Here in the post office of the greatest city of the Union—almost the greatest city of the world—overworked men tug and strain in the cramped cellars of the building, striving to handle the vast accumulations of mail that are thrown upon them during every hour of every day. In the sorting rooms, men are crowded together so close that they have not room to throw freely the letters that they are expected to sort. On the streets the carriers go about carrying on their backs loads far too heavy for any but a giant to stagger under. Congress has seemed to think that if it gave additional force to the New York Post Office it would be benefiting New York, but has forgotten that the letters sent and received by the population of New York go out to the country at large, and that if New York's postal service is not well performed, the residents of the country at large are injured just as much as are the residents of New York.

Arrangements have at last been made for establishing up town at great railroad terminals large substations which shall have facilities for handling great quantities of up town mail, and which shall thus relieve the general post office of New York from much of its burden. It will be years, however, before such stations will be in working operation, and in the meantime the country at large and New York will continue to suffer from the clogged conditions which have long prevailed and which now prevail in the post office. The matter is one which Congress alone has power to remedy, and whether Congress will remedy it or not depends in large measure on the constituents of the various Congressmen scattered all over the land. It ought to be understood by the public at large—and some of the newspapers in their desperation are trying to make their readers understand it—that it is Congress which is responsible for the poor service of the New York Post Office, and that while Congress has made the delivery of letters vastly easier in many places by the establishment of a rural free delivery service, it is nevertheless holding back for hours and for days much of the mail which goes into the New York Post Office, and is causing the absolute loss of considerable quantities of mail matter through an inadequate force of clerks and through the cramped quarters in which that force works.

It is commonly believed by the general public that a Government employe has an easy job and gets his wages for a small return in labor, but this cannot be said of the employes of the New York Post Office. If ever a set of men worked hard they do, and there are those who think that a year or two of service in the New York Post Office ought to free a man from the pains of purgatory, if not from all prospect of going to a place commonly reputed to be much more uncomfortable.

WHILE duck shooting over the rice fields of Nanking, China, the other day, Rear Admiral Train fired a shot which has been heard around the world. The object aimed at was a duck, but what was hit was a Chinese woman; and the Americans on a sudden found themselves in the center of an infuriated mob of villagers, who, the cable reports, knocked down the Admiral and held his son as a hostage. A company of marines went to the rescue and brought off the unfortunate sportsmen. Naval officers in Washington say, in comment on the incident, that such shooting accidents are of not infrequent occurrence at the Chinese naval stations, where British and Americans are given to shooting over the rice fields, to which great numbers of ducks and other game are attracted; but the casualties are usually compromised by the payment of money, nor is the Chinaman prone to be exorbitant in his demands. One officer recalls shooting a Chinese baby on its mother's back, in extenuation of which mishap he paid to the parents fifty Mexican dollars, and thereafter found it difficult to avoid wounding the many thrifty Chinamen who would gladly have been punctured for profit. Mrs. Amelia Edwards once related a similar experience which befel her party on the Nile, when an Egyptian baby was accidentally wounded by a snipe shooter's gun, and the (parental) wound was healed with silver. The transaction was so satisfactory from the native point of view that further shooting in the vicinity was out of the question because of the Egyptian babies lying in wait to intercept the shot.

## THE SPORTSMAN TOURIST

### How I Found the Indians.

Editor Forest and Stream:

About the middle of March, 1870, our cavalry troop was sent out from Fort Richardson, Texas, to scout for a few weeks through the country west of that and look for Indians. I found there the Indians.

We had with us as a guest an English tourist, who was anxious to see all this country; he saw some of it before we returned. When I saw him ready to start I thought that about a week of this trip would be all he would need of it; but he roughed it with the rest of us and I never heard him complain. He messed with the Captain, a brevet-major, the only officer we had with us. When he was in the field the captain lived exactly as we did; he carried no canned goods, but ate what we did—bacon and bread, black coffee and bean soup and what game we could kill; buffalo were still very plentiful. The Captain carried no canvas, but slept as we did under the saddle blanket. This would be no picnic, looking at it from an English point of view, I thought.

We had been out a week when one afternoon we went into camp on a small creek that ran north and south, and across it to the west about a mile and a half away a low butte stood out on the prairie, and beyond it a mile still to the west was a rather high roll in the prairie that ran north and south. Before we had taken our saddles off, the Captain told me to ride over to the butte, stake my horse out at it; then stop on top of the butte until sundown and keep a good lookout for Indians. "We have seen no signs of them as yet," he said, "but this is about where I expect to see them, if we see them at all."

I started, and found the ground between the camp and the butte to be badly cut up with narrow ravines, which the water in the wet season had made on its way to the creek; and in getting to the foot of the butte I found another ravine here. It seemed to head at this ridge west of me and run straight to the creek. Crossing it, I staked out my horse here, leaving on the saddle and bridle. I rode with a snaffle bit that would not prevent the horse to graze; I might need him in a hurry.

I had a short heavy Marlin rifle, that I carried instead of the Spencers we were armed with. Climbing up on the butte, I found a flat place of about two acres that had a high coat of last year's dry grass on it. I could lie down in it and not be seen.

There was not a breath of air stirring, and the afternoon was warm for this time in the year. I had been lying here about half an hour watching that ridge—it would be on it that I would first see the Indians if I saw any—when a buck and a doe climbed up the butte and began to graze not 100 yards from where I lay. They never noticed me at all. I had hard work to keep from shooting the buck; but dared not fire a shot here, for it would notify any Indians who might be in the country just where I was. So raising my head above the grass I spoke to the deer. They gave me one frightened look, then left in about two jumps. I lay for another hour; then just after I had looked at my watch to note the time passing, I gave the ridge another look, and saw a man on a pony ride up on top of it from behind it and stop. In a moment another man joined him, then a third one, and they kept on coming until there were five of them. They sat on their ponies there, and seemed to be watching our camp, which was in plain sight over two miles away. Crawling through the grass and hugging the ground, I made my way to the edge of the butte, then slid down it in a hurry, got my rope tied to the saddle, and mounted; and now I was struck with an idea. The Major wanted Indians, but there were not enough of them here to bother the troop with, I would fight these myself. With this rifle of mine and the horse I had under me, I did not think it a big contract to shoot the whole of them or try to. I got my horse down in the ravine, then rode up it. I meant to keep in it if it headed up at the ridge, as I thought it did; then when I had got close enough turn the rifle loose. I had gone up the ravine 600 yards or more and had left the butte away behind me, when I noticed that the ravine ahead of me was about running out. If I kept on I would soon have to ride out in plain sight of the Indians. They were still where I had first seen them. I could still see them; but they evidently had not seen me yet.

I turned now, and going back at a gallop passed the butte, then kept on down in the ravine to where it entered the small timber that fringes the bank of the creek, then got into the timber and kept on to camp; but before I had got there I had to ride out into the open again in order to cross a ravine that I could not cross at the creek.

Going into camp I found every one at supper, or dinner rather—we only ate twice a day when on the march this way. I told the Captain I had his Indians out here waiting for him.

"Are you sure now that they are Indians, and not buffalo?" he asked. "You remember that stampede we had after the buffalo last fall?"

"Yes, sir; but I did not send you after the buffalo. I know an Indian when I see one." This was a slap at the sergeant, who had sent him after the buffalo.

The Indians were not in sight from here, but picking

up his field glass he and I went up on higher ground and I pointed the Indians out to him. He just leveled his glass at them then called out, "Saddle up, and pack up! Do it in a hurry now!"

The saddles were on in a hurry, the men having to leave the rest of their dinner here on the grass. Then leaving the pack train to follow up, we started.

I told the Captain that the column could not take the route I had taken, the ground was too much broken, so he bore off to the left through a lot of chaparral on our side of the creek, going through at as fast a gallop as the bushes would let us. Then after going a mile we turned to the right, and after crossing the creek, he put us on front into line and we went to the ridge at a fast gallop; but the Indians had left.

It was nearly dark, but a few of us scouted to the front but could see nothing of the Indians. Then going back to the nearest point on the creek, we went into camp again for the night, the Major saying that he would hunt up those fellows to-morrow; he knew now where to look for them.

The men were in a bad humor. They had lost half of their supper. I had lost all of mine or thought I had; but the Major sent orders down for the cook to get me mine right away; and while I was eating it the men kept up their growling—they knew what was going to happen when they saw me leave camp to-day. I never was sent anywhere but I found Indians, or their trail, or some other blanked thing. Why did I not fire a shot at the Indians when I saw them, then let them go to Hades and not get the troop out after them? We have not lost any Indians; we lost our supper all right though.

I let them keep at this for a while, then said, "That will do now. Adjourn this debate and hunt your saddles for the night. I don't want to have to hunt a rope and a tree for any of you. I found those Indians because I was sent to find them, and had I not found them when I did they would have found you to-night, and you would have lost part of your horses, if you have not lost any Indians." This settled it, I could run one of those men up to the nearest tree, tie him up to it by the wrists, then report it to the Major when I had got ready to do it. I was senior corporal then, but did far less of this tying up than any non-com. we had did, and these men would obey me far quicker than they would some of the others who were continually tying them up for any thing or nothing.

Next morning, while we remained in camp here, the Major sent a sergeant and detail over to examine the place where the Indians had been. They came back in an hour and reported that there must have been at least thirty Indians there, judging from the trail they had made when leaving, and the men brought back an old broken rawhide lariat and a worn-out pistol holster. These the Indians had thrown away; but the sergeant had a new butcher knife and its sheath that had been lost by some of them. The troop going over now started to follow the trail, but after a few miles it ran out, the Indians having split up. They were going in every direction now except toward us. This was done to prevent us from following them; we might have followed any single pony track of course, but it would not lead us anywhere.

We scouted through that country for the next few days, but did not find their camp, although as their chief told me years after this, the camp was only forty miles away.

I thought at the time that these Indians were the Cohattie Comanches. They were about the only Indians that ran loose at all times then, and these had never been on a reservation and did not go on one until two years after this, when this troop of ours shot about one-half of them and drove the rest on a reservation.

Several years after this, when I had become well acquainted with the Comanches and was living with them part of the time, I told the Cohattie chief about this affair, and asked him if he knew anything about it. Yes, he knew all about it. It was he who had been there. He had about thirty of his men out hunting, when one of his scouts saw us going into camp, and riding back to him told him of it. Calling in his men, he brought them behind that ridge, meaning to stop there until after dark, then jump our camp and run off our horses, if he could do nothing else.

"If you had jumped that camp, you would have found a hornets' nest in it," I told him. "We had men enough there to eat you up."

"You had about fifty men," he replied. "I counted you before I left, while you were mounting; and if I had had as many of my men there as you had I would have waited for you behind that ridge, then let you do the charging. But when I saw you start and knew that I had been seen out there, I left. My camp was only two sleeps away, and you might find and destroy it."

When we did destroy it the chief was away on another hunt, that is what saved him.

I told the chief where I had been when I first saw him, and asked him if he had seen me while I was fooling around that ravine trying to get a shot at him. No, the first he saw of me was when I rode out into the open near my camp. Then he waited to see if I had seen him, and seeing us get ready to leave, he concluded I had seen him. So he left then; he could not surprise us now and had not men enough to fight us.

CABIA BLANCO.

### On Climbing Mountains.

THE tragic death of Mr. Chas. Fenton, recorded in a recent number of FOREST AND STREAM suggests a few thoughts.

It is very extraordinary that a man of Mr. Fenton's age (he was seventy-six) should have attempted climbing Whiteface. I am acquainted with that mountain, and while the trail may be said to be good, it is long and steep. It is probable that Mr. Fenton in a moment of reminiscent exuberance undertook the feat which resulted in his death. The obvious moral is, that in men of mature or advanced years such exuberances are to be sternly dealt with.

Now, mountain climbing is the hardest sort of hard work. It puts a tremendous strain upon the heart. Unless you are experienced, before you have got over the foothills you will be tempted to turn back. For you will find your heart thumping in a most alarming fashion. If you are not quite sure that the organ is sound, you ought to turn back. If it is sound, and you are young, you ought to go on, for there is great exhilaration in store for you.

Mountain climbers are never tired of dwelling upon the moment when they reached the summit. It is indeed a moment of exquisite sensations, but it is brief. When you have taken in the view and rested a while, you will say to yourself that after all you would not want to live there. It would be too lonesome—too isolated. (Let us, by the way, pity those poor mortals who have reached the summits of fame.)

*Facilis descensus Averno* it has been written, and so it may be said that coming down a mountain is a very different thing from going up. Yet it is not without its labor and risks. (It was coming down, indeed, that Mr. Fenton met his death.) The constant bending of the knees, being contrary to habit, is not a little irksome, and then if you don't watch out you are in constant danger of stumbling. And if you do on a steep grade it may go ill with you. But, however, the heart is at rest and that makes all the difference in the world. If the moment when one reaches the summit is one of extraordinary gratification, the moment of reaching the base is not without its gratification either. We feel that we are safe at last, and while this may be a prosaic sentiment, I am apt to think that the greatest hero is not unmoved by it.

It is very amusing to observe the climbing ardor which some of the new arrivals at a mountain resort exhibit. There is the stout man who will take a car if he has only to go a block and a half in the city, he will ask airily, "How high is so and so?" He is told a matter of three or four thousand feet. "Pooh! is that all?" he exclaims. "I guess I'll manage that all right, all right." Or there is his equally stout lady, who regards the mountain patronizingly, while she bedecks her alpenstock with ribbons, and dreams complacently of jumping from crag to crag like a young gazelle. Or there is the frail youth with the cigarette heart, who speaks as if he were going to make the summit in a couple of bounds. Or there is the pale consumptive school teacher, who says she has come to the mountains, and she is just going to get on top of that hill, and don't you forget it! Or there is—but wherefore extend the list? We all know them—at least all of us who have been to the Catskills or Adirondacks. Well, they make their essays and then—then our amusement is apt to be mixed with pity or commiseration, if indeed we have not to mourn a tragedy.

For those who are in fit condition, mountain climbing is to be highly commended. It hardens the muscles and expands the lungs and gives an agility which nothing else will. But of course we must go to the Rockies, or the Andes, or the Alps for real mountain climbing. Compared to this, the climbing of peaks in the Catskills or Adirondacks is mere child's play. The perusal of the books of Conway or Fitzgerald will often make one's breath come short, so full are they of thrilling situations. Now 'tis scaling an almost perpendicular rock; again 'tis creeping over a glacier at an angle of forty-five degrees. Now 'tis tumbling into a snow-covered crevasse; again 'tis hanging over a precipice by the eyelids. But these hazards only seem to whet the appetite for more of the same kind, and our adventurer, after he has conquered Mt. Hope, say, will pine to be at Aconcagua.

It seems that the enthusiasm of mountain climbing, when once contracted, can never be wholly gotten rid of. The case of Mr. Fenton is one in point. But it behooves men of mature or advanced years to restrain their enthusiasm. Some enthuse about love, and others about mountain climbing. The former, though rugged and slippery and arduous enough, is far less so than the latter. Let all concerned take warning by poor Mr. Fenton. A safe rule for any man past forty-five will be to stick to the level.

FRANK MOONAN.

NEW YORK, October, 1905.

### National Park Game.

GARDINER, Mont., Oct. 26.—I counted 450 antelope in front of town on the alfalfa field. The little creatures are getting quite indifferent to what is going on in town. There are anywhere from fifty to 250 mule deer at Fort Yellowstone, and a few white-tails. Not enough snow to bring down the sheep yet. It is worth a trip here for anyone who has the time.

E. H.

## Shooting Tigers in Java.

In the early '40s I was a foremast hand on a whaler which had been several months out from home, and we were sadly in need of fresh provisions and water, and it was time that the crew had a run on shore, for we had not set our feet on land since leaving New Bedford, five months before. Our quest for whales had been without anticipated success; we only had taken a hundred-barrel sperm whale during that time, and that off the Cape of Good Hope. We had thoroughly scoured the Indian Ocean, and leisurely cruised along the coast of the Island of Sumatra without success, and at last we pointed our prow for the Straits of Sunda, bound to Anjer Point in the Island of Java, a snug little roadstead much visited in those days by whalers and merchant vessels bound from the East Indies to the United States and Europe. It was a quaint old place, populated for the most part by Malays, some of them peaceful enough when on shore, but when cruising in the Straits in their swift-sailing proas, pirates of the most pronounced and desperate type. Then there were a fair representation of the native Javanese, a few Europeans, and a garrison of Afro-Dutch soldiers who garrisoned the settlement, and were quartered in a small fort, whose guns commanded principally the settlement and its land approaches; but as a defense from the sea it counted for nil, for a little sloop-of-war of twenty guns could have taken it in ten minutes.

Anjer was celebrated in those days, and especially among seafarers as having within its precincts the largest banyan tree in the world, its diameter, counting its root branches, being between three and four hundred feet. In its branches was the lookout station of the port, and beneath its foliage and amid its countless root branches the people gathered for shade from the intense rays of the tropic sun, and to gossip. It was beneath this grand old banyan tree that I saw my first real live tiger, and here I shot my first wild animal. I had come on shore with the starboard watch that morning for a gunning expedition, every man being provided with an old-fashioned musket carrying an ounce ball, a powder flask, a bunch of oakum for wadding and a tin box of percussion caps. But a bevy of pretty native girls, coupled with a plentitude of alluring beverages and lots of luscious fruits, broke up that hunting party as planned. Bob, a shipmate of mine, and I were disgusted with the rest of the "liberty men," and resolved we would explore the town and see the sights. After a long stroll we brought up at the banyan tree for a rest.

At the time of our visit to Anjer a severe drought was prevailing in that part of the island, and water was very scarce in town. The water supply came from some distance back in the country and was brought into town by means of an open conduit or "aqueduct," which led the water into a small circular reservoir near the big tree. Bob and I were tired out with our long tramp in the hot sun, and lay down for a nap. I was in a sound sleep, when I was aroused by my companion, who was shaking me roughly, sung out, "Get up, Jack; here's a big tiger!" And sure enough, with her forepaws resting on the side of the conduit facing us was a good-sized animal quietly lapping up her fill of water, evidently regardless of our close proximity to her. Bob was for running away, but I persuaded him to stand by me while I tried a shot. I felt pretty certain of doing the business, for I was counted the crack shot of the ship, and if the old gun did its duty, I was sure of the game. I put on a fresh cap, and with Bob ready to give me his gun in case I missed, we walked up slowly to the tiger, which did not seem to mind it a bit. When within about twenty feet of the fellow I stopped, and taking deliberate aim, fired. How that old gun did kick! But the tiger kicked worse and longer. The report of my gun startled the garrison, and some twenty black soldiers came running on the double quick to where Bob and I stood. By this time we were close up to the conduit, and peering over we saw that I had not lost my good name as a dead shot. The long and short of this story is that the Governor claimed the skin of the tigress, for it was a mother that I had killed, and her little cub fell to me as a trophy of my first game in the Island of Java. I received a few dollars bounty, and numberless congratulations upon my good marksmanship and pluck. I took the little cub on board the ship, determined to be its foster father to the best of my ability, but it became too vicious as it grew up, and was shot lest it do some mischief.

This incident was destined not to be my last tiger hunt in Java. After filling up our lockers with potatoes, yams, coconuts, fruits of all kinds and the pens and coops with pigs and chickens, and not being able to fill up our casks with fresh water, we sailed for New River, a day's sail from Anjer, which we had been informed, abounded in limpid streams emptying into the river. On the trip we experienced one of the most terrific electrical storms any of us had ever encountered. It was beyond the power of description. However, we came out of it unscathed, and arrived at our destination. It was the most weird, uncanny place we ever saw. A narrow, sluggish stream, with banks bordered with virgin forests, and no sign of human habitation; the trees were full of birds and monkeys, and they kept up an incessant racket that was new and novel to us, and when night came, howls, snarls, growls, and screeches abounded till the very air was aquiver with the animal din. A nice place to get water, thought we. But the morning brought relief to our ears, and in its turn the silence was painful, it was so deathly. When daylight came—and it comes all at once in the tropics—a boat was sent on shore to see how the land lay. My record as a good shot caused me to be ordered into the boat as the lookout man and sharpshooter. A short pull brought us to a fine pebbly beach, fringed by soil that showed the slightest footprints. Within a few yards of where our boat landed we found a beautiful rivulet, running crystal waters in abundance, and by its side we saw the footprints of animals of all sizes, but what they were we could only conjecture, though we could well understand that the din of the previous night had proceeded from this "watering place." Not long after our return to the ship, the water casks "becketed and rafted," were being towed to the springside, and

we worked well and quickly in filling the casks, keeping the meanwhile a good lookout for a visit from animals.

Two days were spent in watering ship, and on the morning of the third day the captain concluded he would make an excursion a few miles up the river. Accordingly his boat was fitted out with some provisions, a gun for each man was put in the boat, with plenty of ammunition, and he taking his rifle, which by the way was the only weapon of its kind on board. The wind was fair, and we set sail and proceeded up the river at a good pace, enjoying the new and novel scenery. The captain was in excellent humor and interested us very much with yarns of his voyages and adventures, and the time passed rapidly and very pleasantly all the forenoon. We ate our lunch, and took in sail and began our return journey, estimating that we had gone up the river about fifteen miles. The wind was now dead ahead, and we out oars for a fifteen-mile pull, a mere trifle for well-seasoned whalers. Bending to the ash, we made the boat spin along at a lively gait, and were some five miles away from the turning point, when suddenly the captain exclaimed, "Great heavens! look at that tiger!" And sure enough, lying well out on an overhanging branch of a tree, under which we must pass, lay a magnificent tiger, evidently watching its chance to spring into our boat. To say that the captain was "gallied," conveys but a faint idea of his mental condition, and as for my shipmates, they were a sight to behold. Perhaps my experience at Anjer a few days previous had fitted me to be self-possessed, and perhaps confident of my skill with a gun, and while the captain was in such a funk, I said, "Captain, let me have your rifle and I feel sure that I can knock that fellow off his perch."

I will confess that the situation was an embarrassing one to those that for the first time were placed in such an awkward position.

The captain handed me the rifle, and in an instant I drew a bead and fired, just as the captain was saying, "Now, Jack, don't miss him." I will confess I felt a bit shaky myself, for I knew that if I missed him the chances were that when he made his spring, it meant that he would land in our little frail boat, and that would be the end of the boat, the captain and the boat's crew. But the bullet went to the mark. Like an arrow from a bow the beautiful creature shot through the air, and we felt the wind of his form as he passed only a few inches over our heads, and with a fearful splash went below the surface of the waters. It was a terrible moment of suspense to all of us, but the instant he struck the water, the captain regained his power of speech and roared like a lion: "Now, pull, boys; pull for God's sake, boys; pull, let's get out of this infernal hole."

We did pull, better perhaps than we ever did on going on to a whale, and the gait we made in going back to the ship held the record for the rest of the voyage. In due course we reached the ship, our boat was hoisted up and the boat's crew told their shipmates how Jack had shot the tiger which but for him would have torn them to bits. The following day the captain gave me two new flannel overshirts and ten pounds of tobacco, and so long as I remained in the good old ship, I remained the champion shot, either with musket or the captain's rifle.

Sometimes when the captain would get excited in pulling for a fleeing whale, he exclaimed, "Pull, there's a tiger up that tree!"

B. S. OSBON.

## In Self-Defense.

THE start was made on Sept. 13 last in a driving rain storm, our party consisting of the guide, Norris Manderville, of North Renous, Park Holts, the cook, and the writer. At Colpaugh, the last house of the settlement, two physicians from Philadelphia, Messrs. H. and D., joined us with their outfit. The first night was passed in an old abandoned lumber camp, not too comfortable but dry. The next day brought us to Long Lake Brook, where our Philadelphia friends remained. The third day we finally landed at our destination, the lake of the north branch of the Renous. Some moose tracks had been seen on our trip, but no game excepting one deer, which quickly sought safety in the thick brush.

The first morning in camp, after fixing up things and making everything clean and tidy, I was fortunate in meeting a small deer, which added at once fresh meat to our larder. This, with an abundance of trout, which could be taken at any time with the fly from the nearby Renous River, and occasionally a partridge made our fare really sumptuous. A plentiful supply of provisions, groceries, etc., had been taken from Fredericton. A most agreeable addition proved to be the high-bush cranberries, which were plentiful.

When leaving for the trip Mrs. P. had charged me not to bring home any more big moose heads; she wanted no more. I assented, however, with the proviso that I would kill a moose only in self-defense. I had in mind an occurrence which happened a year before when a large moose rather boldly challenged me at a time when I had no rifle, and, although I had already killed my moose, the animal did provoke me sufficiently to shoot him had I been armed. Moose being the principal game of that part of New Brunswick in which I was, my aim was to have them be the aggressor.

The calling of my guide did not prove successful, no doubt owing to the warm weather; we hardly got any answer. Norris therefore concluded he would cruise about to find where the large moose were; he knew they were there, as he had seen a number last fall. He proposed, therefore, to cruise in different directions and try to locate them, after which I was to join him.

In the meantime I decided to do some moose calling on my own hook, trying the lake in the morning (this being the most convenient to our camp) and a little barren about a mile and a half from the camp in the afternoon. I heard several indifferent answers at both places, but was more successful in calling cows, which occasionally came so near that we had to frighten them away; one cow in particular at the head of the lake proved rather annoying. My call had a vigorous answer and a bull was making straight for us when a cow in a nearby cove, which I had seen before locating for my call, went to meet the swain and made off with him to our utter disgust.

On Friday morning Norris returned, disappointed, as he had practically no answers from large moose. He would try that evening another lake about two and one-half miles to the northwest of us, and if not successful proposed that we should take our back tracks about eight miles to a lake on the ridge. At 4 o'clock that afternoon the cook and myself started out to our little barren, where I had called previously, and had the good luck to shoot a caribou, which, although a large animal, did not have a specially large set of horns; but the guide wanted it, he told me to shoot a caribou for him, as he wanted the hide for snow shoes. The meat from this animal which we did not use fresh was smoked, air dried and taken to the settlement. At about 6 o'clock two answers came, one to the northwest appeared to be a large bull. Very soon after the answer we heard quite an argument, evidently with the old lady, who would not let him go. Doubtless she finally prevailed and we heard no more of him. Another answer from the east from a high ridge in back of our camp was rather slow in coming. When darkness came on, so that I could no longer see the sight of my rifle, I decided to return to camp, hoping to meet the moose on the way back. After crossing the Renous River, which was very noisy, jumping from rock to rock, we found that the moose was much nearer than anticipated. It being quite dark in the river bottom I tried to get as near to the place where he was likely to cross as possible. In five minutes the game showed at the edge of the river bank. As he descended, while continually grunting, I could only see his light-colored antlers, which appeared to be of quite a respectable size, the darkness prevented seeing his black colored body. Just as he was crossing the trail which I was following close on the river bank, I fired at where I supposed his body to be. Instantly the moose made a half turn and a great jump toward me. He landed within three feet of me. While he was jumping I had fired again. The enormous animal landed so close to me that his great light-colored legs and horns appeared to be at least ten feet above me. The next instant as he moved forward I leaned up against his side with my left hand to ward him off. The moment he had passed I fired again, although evidently he was more staggering than running. This last shot caused him to fall instantly against a small pine tree which the cook had used as a shelter when he saw the close approach of the animal. The whole affair had taken less time than it takes to read it. After seeing that our game was dead the cook and I returned to camp. I do not believe the bull wanted to attack me, the fearful shock of the .35 Winchester turned him around, he struggled forward to get away and happened to come my way. Arrived in camp, I needed something to quiet my nerves, the prescription read something like "Canadian Club." A good supper and a pipe made us content with the world.

The next morning at 6:30 our guide appeared at the camp. He had heard the shooting and inquired the result. After telling him the story he seemed to doubt that the moose had really been as near as I described it to him. I proposed to go down and use the tape line which Norris had brought with him to satisfy him on this point. The result was that we found that the moose was seventeen feet away when I first shot. His first jump was fourteen feet. He had a fearful wound in his side. The second bullet had penetrated his breast and cut the jugular vein, while the third had struck and broken his spine. The total distance from the first shot to where he lay was thirty feet. A slight curve in the trail where I stood probably saved me from being run over, as the moose had taken a straight line, grazing me while passing within two feet, at the place where I pressed against his side with my left hand trying to ward him off. The antlers, although not very large, were quite symmetrical and had a spread of about fifty inches, with twenty points. This was as near to shooting a moose in self-defense as I ever came. I had a good excuse to bring home another head.

Saturday was spent in skinning and cleaning the head and scalp.

On Sunday I proposed to visit my friend, Mr. Carl Rungius, the artist, who was spending some time in a camp, at which I had hunted the previous fall and which was situated nine miles to the southeast of us. The start was made at 9 o'clock in the morning. At about 11 we reached a bear house and, strange as it may appear, as we reached one end at the same instant at the opposite side, a bear showed his head out of the brush, not over thirty yards away. Taking quickly two steps aside gave me a good view of his forequarters. A ball in his right shoulder knocked him clean over. When we reached him he had in his fangs a small pine tree, but was stone dead. Such a meeting at this time of the year was great luck. There were many signs of bear, but as they are very shy they are hardly ever seen; in fact, my guide said that he had never met one before. We dragged the bear into the bear house and proceeded on our way. We found Mr. Rungius at home; a quick lunch was cooked, the usual refreshments served, experiences and stories were exchanged. Mr. Rungius had shot, so far, only a caribou; he was now trying for a moose. He had had several answers but had not yet seen a sufficiently large spread of horns to tempt him to shoot. I examined the fine collection of sketches which the artist had made of this most romantic and charming corner of Canada's wilderness, after which we turned our way home. We met two moose shortly after, a cow and a calf. A few partridges were shot for supper and I reached camp about 5 o'clock, after a little saunter of altogether eighteen miles. The guide arrived about half an hour later, bringing with him the skin of the bear.

On Monday we visited a lumber camp which had been started that morning some distance above the lakes. It was quite interesting to see the young fellows cutting wood and preparing it for the camp in a business-like way, and the progress which they made with their axes alone in a few hours was really remarkable.

The time had now come for my returning. Thinking that the team might come sooner than expected I took an early stroll to meet them. After leaving camp I soon heard some moose and on stealing near I saw a calf, a cow and a fair-sized bull playing around. I had an opportunity to watch them, sitting still on a log for about ten to fifteen minutes. As the team did not show up I returned again to camp for dinner. In the afternoon I went over the same ground and was about in the same locality as where I had seen the moose in the morning, when a

deer showed its shapely form in the underbrush in the distance. After following it for a few minutes an opportunity presented itself for a shot which brought the game down. The buck was dead when I reached him. I dragged the carcass to the tote road and had the team take him to camp when it passed by later. I now had the legal allowance of game—one moose, one caribou and two deer, the first time this happened to me in my many visits to the New Brunswick woods. The addition of the bear certainly made me quite contented.

On the trip from the woods to the settlement we met our Philadelphia friends. Dr. H. had secured a fine moose head, the brow antlers each having four large points, while Dr. D. had a rather smaller head. He seemed to be very happy, particularly as he had shot it in his drawers, the explanation being that his trousers were so noisy that he found it necessary to drop them in order to be able to successfully stalk the moose.

On the way back I shot a few more partridge, as I was intent upon taking a few home with me, together with some choice bits of the last deer shot.

I was back in New York on Sept. 29, and had spent alone in the woods (sixteen days, including the going in and returning) one of the pleasantest of the many hunts that I have had in New Brunswick. Most of the narratives that we hear about this province are about moose hunting, but from my experience it can readily be seen that there are not only moose but a number of other game animals, caribou, deer and bear. I saw altogether on this trip thirty-six moose, four caribou, three deer and one bear. It is likely there was another bear with the one I shot, as we saw the brush move after my shot, which I believe was caused by a second bear, but I did not get sight of it.

One evening on returning down the lake we heard, apparently not far away, a cry resembling somewhat a steam calliope, the beginning sounded something like the combined efforts of half a dozen loons, while the ending seemed equal to the best efforts of two dozen tomcats. The guide could not tell what it was that made this unearthly wail, which was repeated three times. P.

## A Bit of Camp Surgery.

Editor *Forest and Stream*:

Several years ago Will Light, Fred Jones, Ollin Light and I were hunting deer from a lean-to camp up Moose River way. It snowed as we walked in, and our camp that night was as uncomfortable as breezes, insufficient covering and an obstinate fire could make it.

The fire was made of soft maple and yellow birch, and away down between the crevices of the six or eight inch logs we could see the red glow of warmth; but there was no chance of feeling it until the wood had been dried out and began to blaze.

"I'm going to have a fire," Will Light said, and with that he took the ax and went kindling hunting in the night. He found a dry stub, pried off a chunk and came back to the camp, where, by the uncertain flickering of the firelight, he began to chop up the dry kindlings. We heard the ax racking down through the wood three or four times, and Fred shouted, "Don't cut yourself!" A few more blows followed, and then there was a sort of thump, followed by an exclamation. "I've cut myself!" the kindling maker exclaimed.

"Dod rat it!" cried Fred, "Didn't I tell you to be careful how you handled a man's tools!"

Light had been teaching Fred and the rest of us woodcraft for fifteen years, more or less. He swore some at Fred and limped around into the lean-to, where we could see him.

In the middle of the instep of his left foot was a slit where the ax had buried its blade. The cut was more than three inches long and an inch deep, baring the bones, and we could see the white toe cord, which the razor edge had just missed splitting.

"Get me some balsam!" Will asked Fred, and Fred, taking a candle, went to a nearby balsam tree (*Abies balsamea*) and began to gather the soft balsam gum which is found in the tiny blisters with which the bark is covered. He pierced a blister at the lower edge with his penknife and pressed the thick fluid out on a lard can cover. In a few minutes he had a good tablespoonful.

In the meantime I got out my ditty bag, an oilcloth pocket with a flap and half a dozen cloth leaves full of needles and thread. From this Light selected a three-cornered straight needle and some white thread. I didn't have the curved surgeon's needles. Then he calmly sewed up the cut, very much as he would have sewed a rip in his coat.

Perhaps a dozen stitches were taken, and the wound was drawn shut. Having sewed it up, Light smeared the cut over with balsam. Then he wrapped it with a piece of white undershirt, put on several pairs of woolen socks and went to bed, while Fred stirred up the fire.

On the following day Light looked out on a wilderness a foot deep with soft, fluffy snow. For the first time in at least six years he had come into the woods and found a "good tracking snow." Now he was crippled. His foot swelled up and sore. He was the most melancholy looking woodsman I ever saw, but Light never did squeal, however hard hit he was. He rebathed the cut with balsam at intervals during the day, and when the rest of us came in that night we found as fine a hot supper as one could wish. We told him we hoped he'd monkey with axes every time we hunted with him again, and he replied in kind.

On the following day he went up the hill a few rods, but the cut was too painful. The third day he went out and killed a fine buck, and thereafter he hunted with the rest of us. When we went out he carried a back load of venison, and went about his work as usual at home.

He didn't catch cold, although he repeatedly got his feet wet in snow-hidden streamlets, and slept in a camp open to the wind. The lips of the wound closed firmly together, and in a few days he drew the cotton thread stitches, having a foot as well as ever. The balsam has saved many a woodsman much pain and trouble due to bad cuts. It is also used as a "kidney clarifier," whatever that may mean. A few drops constitute a dose which regulates the kidneys, especially when they have been disordered by whisky, as log and hunting camp kidneys are prone to be disordered at intervals.

## The Biography of a Bear.—VII.

With an Exposition of the Influence of Altitude upon Human Vigor.

How Jack had descended from his dizzy perch somewhere about midnight was and is a mystery. He had done so without sustaining any injury—not so much as a scratch. The only theory we could form to account for his safety was that somehow he had rigged a parachute from some of the old branches, or that he had utilized a slab of bark as an aeroplane. During the remainder of our travels, however, he was not known to exercise his surplus energy in such lofty evolutions, although he became each day more active and restless, as did we all.
