

Powering the world's favorite wiki - Wikipedia

Tomasz Finc – Engineering Program Manager

Three Questions

How many of you have used
Wikipedia?

How many of you have clicked
on the edit button?

How many of you clicked save?

It all started in 2001

“Anyone else (yes, absolutely anyone else) can come along and make absolutely any changes to it that he wants to.”

- Larry Sanger

Edit Demo

“Imagine a world in which every single person on the planet is given free access to the sum of all human knowledge. That's what we're doing.”

- Jimmy Wales

And we've grown since

And we've grown since ... a lot

**5th largest website in global
web traffic**

- Comscore

But how much traffic is that really?

12,933,000,000 / month

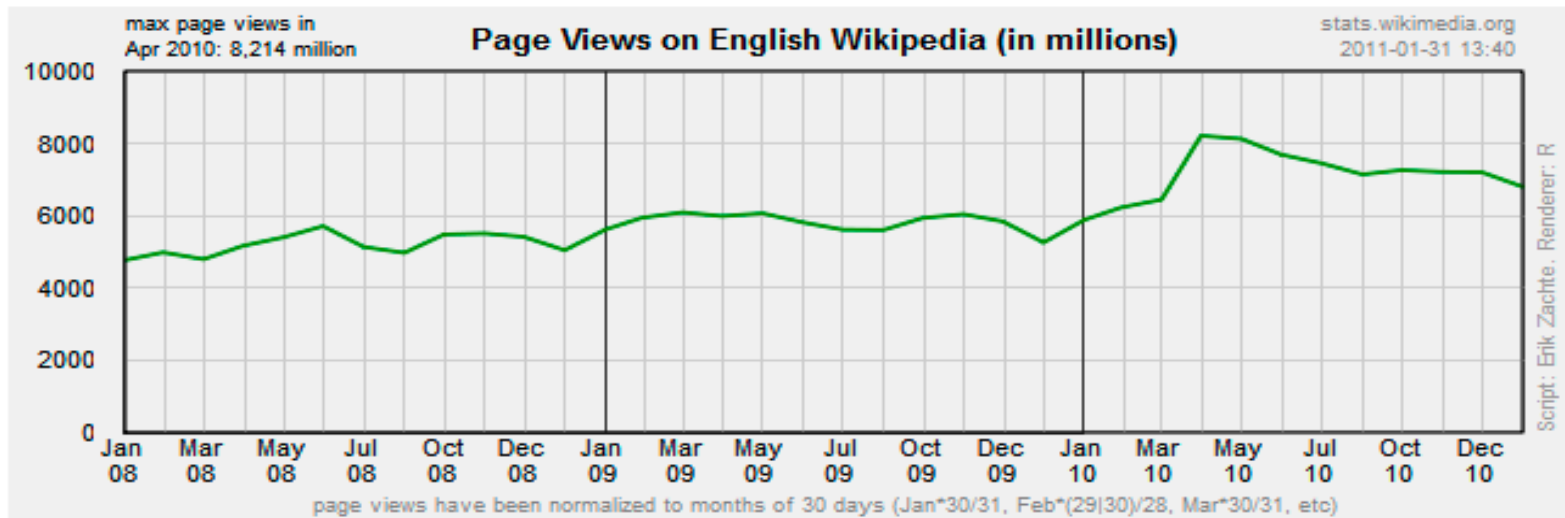

431,000,000 / day

18,000,000 / hour

299,000 / minute

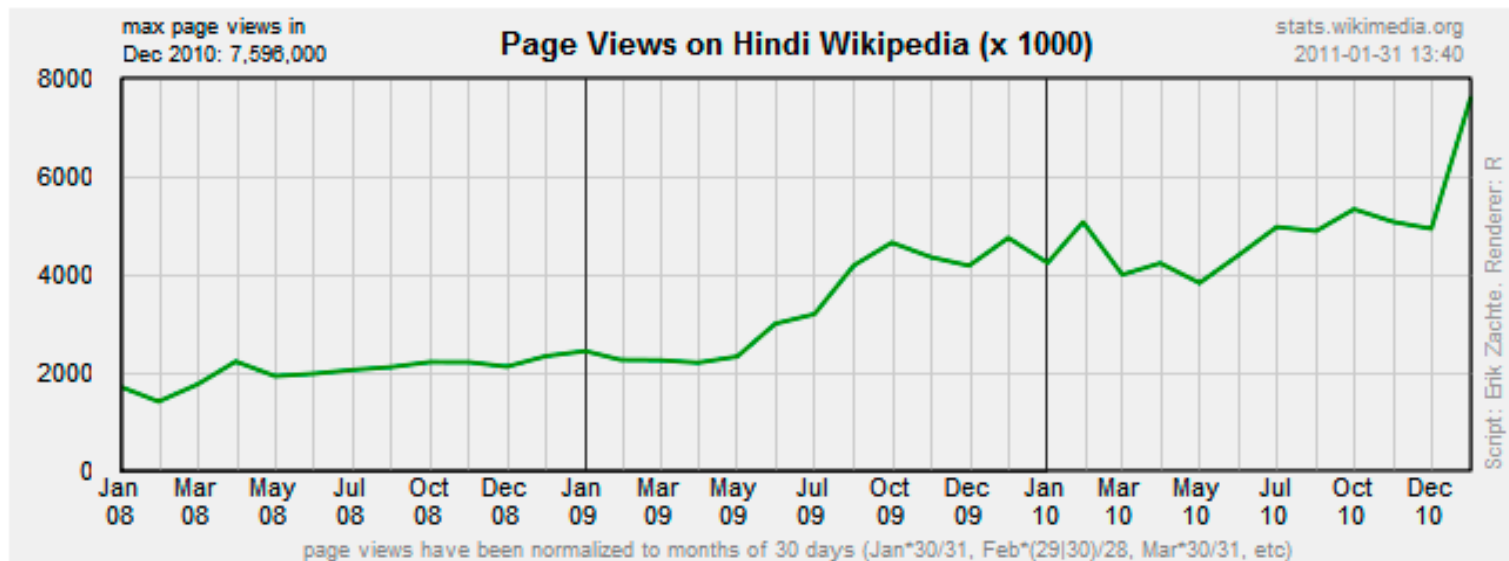

5000 / second

Source: <http://stats.wikimedia.org/EN/TablesPageViewsMonthly.htm>

page views: 7,141 million per month = 238 million per day = 9.9 million per hour = 165 thousand per minute = 2.8 thousand per second

Source stats.wikimedia.org / Published 31 January 2011

page views: 4.5 million per month = 151 thousand per day = 6.3 thousand per hour = 105 per minute = 1.7 per second

Source stats.wikimedia.org / Published 31 January 2011

But isn't Wikipedia done?

Aren't all the articles written?

Not even close

Is your home town on
Wikipedia? ... it should be

But remember, Wikipedia is an encyclopedia. No original work is done on Wikipedia and citations are required.

But how do you support it ?

- 501(C) Non Profit
- 57 Staff members
- San Francisco Based
- Volunteer supported
- Growing

“ Our mission is to empower a global volunteer community to collect and develop the world's knowledge and to make it available to everyone for free, for any purpose. We work together with a network of chapters in many different countries to achieve this goal. ”

But its not just the
foundation

29 Chapters and growing

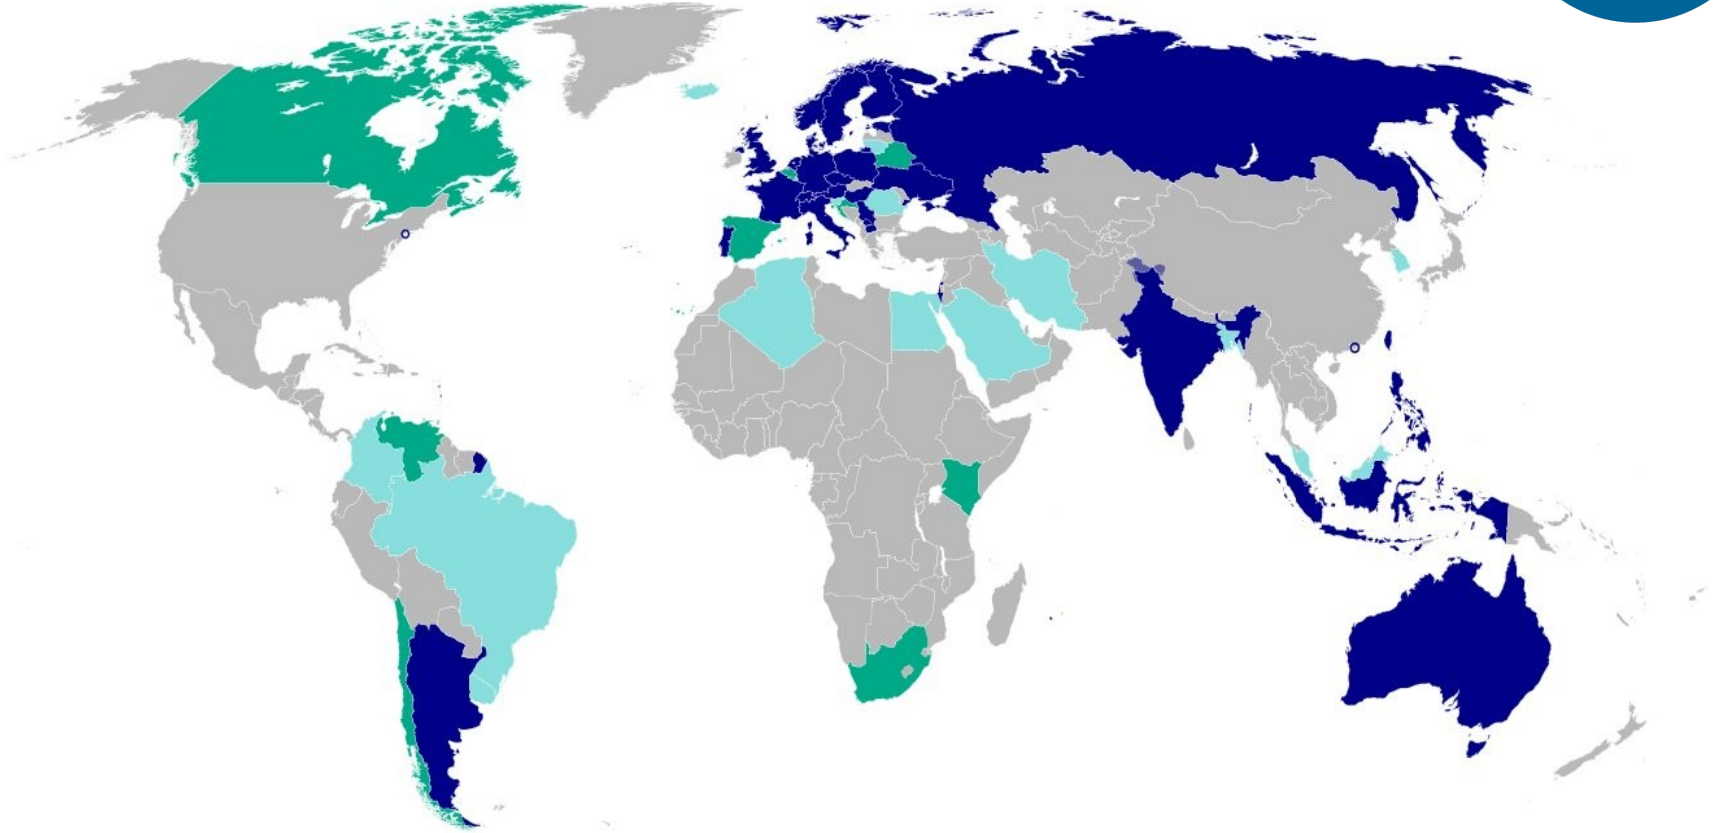

Argentina: Wikimedia Argentina
Australia: Wikimedia Australia

Taiwan: 中華民國維基媒體協會
Ukraine: Вікімедіа Україна
United Kingdom: Wikimedia UK
United States, New York City:
Wikimedia New York City

Global Movement

 - Founded

 - Planned

 - In Discussion

 - Approved

And its not just the
foundation and the chapters

Its YOU!

But how do we make this work?

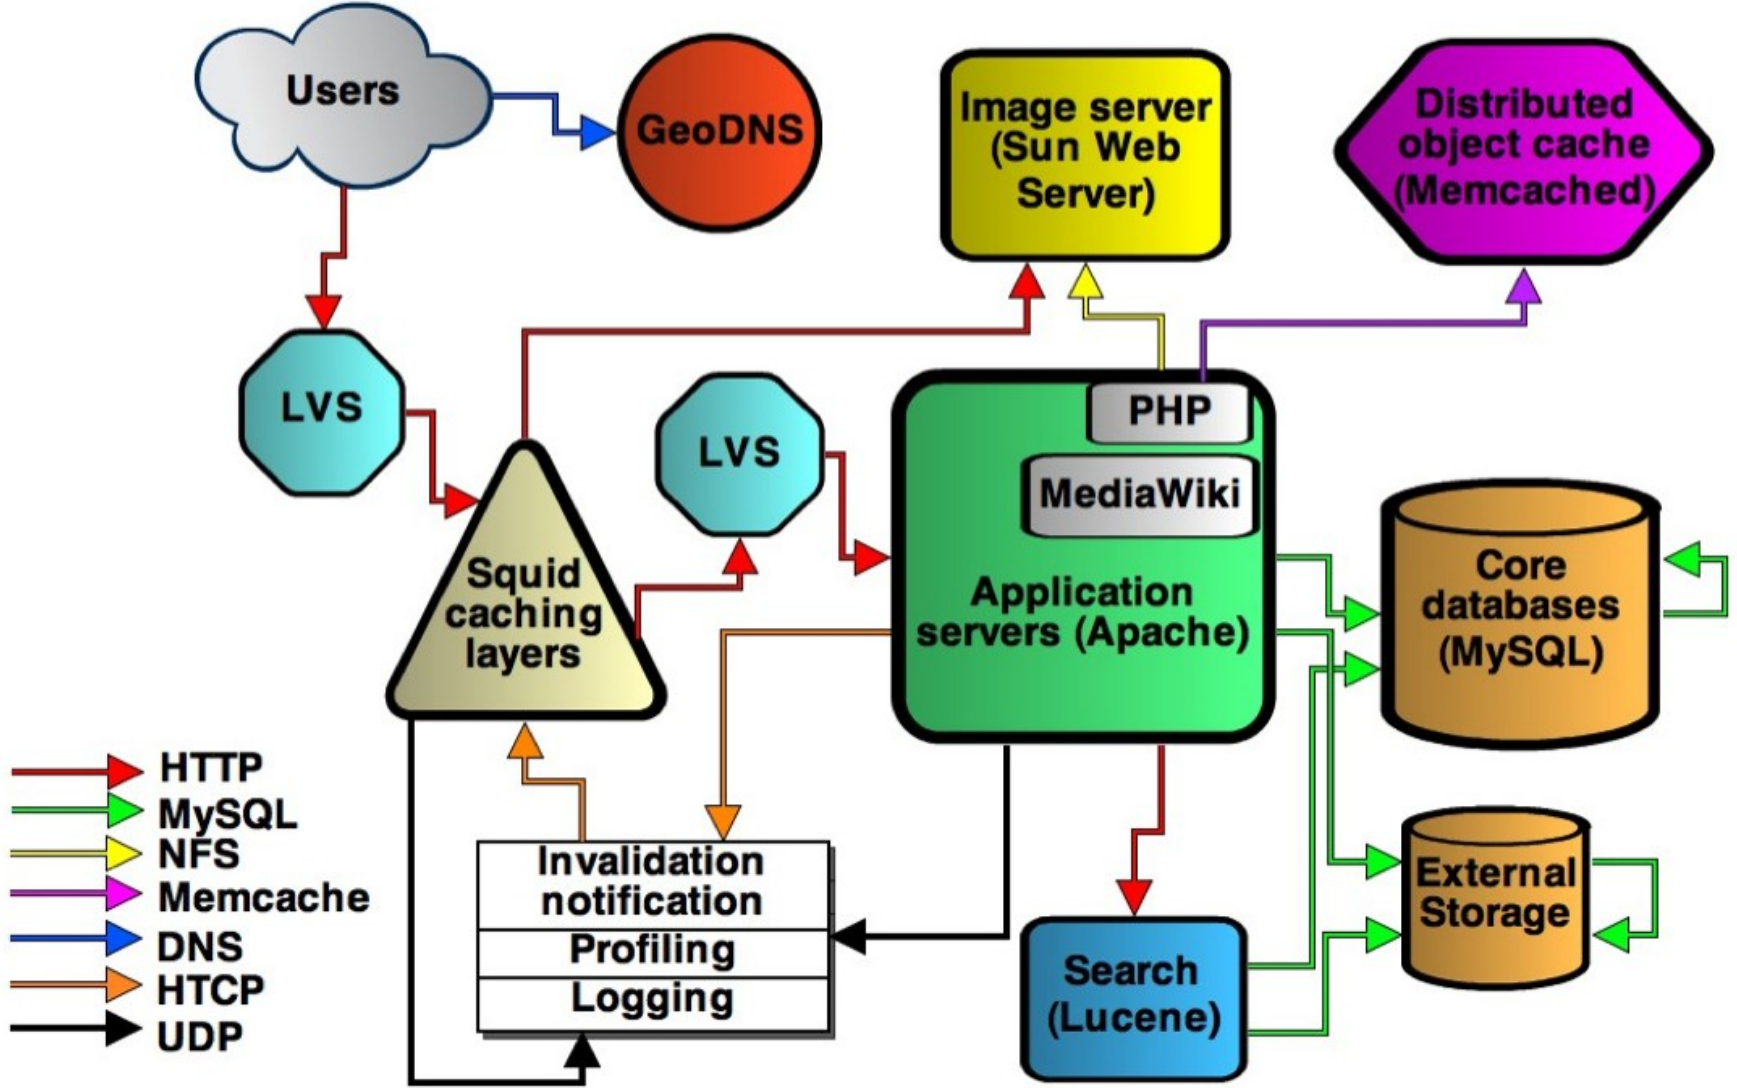

Open Source

Architecture: LAMP..

...on steroids.

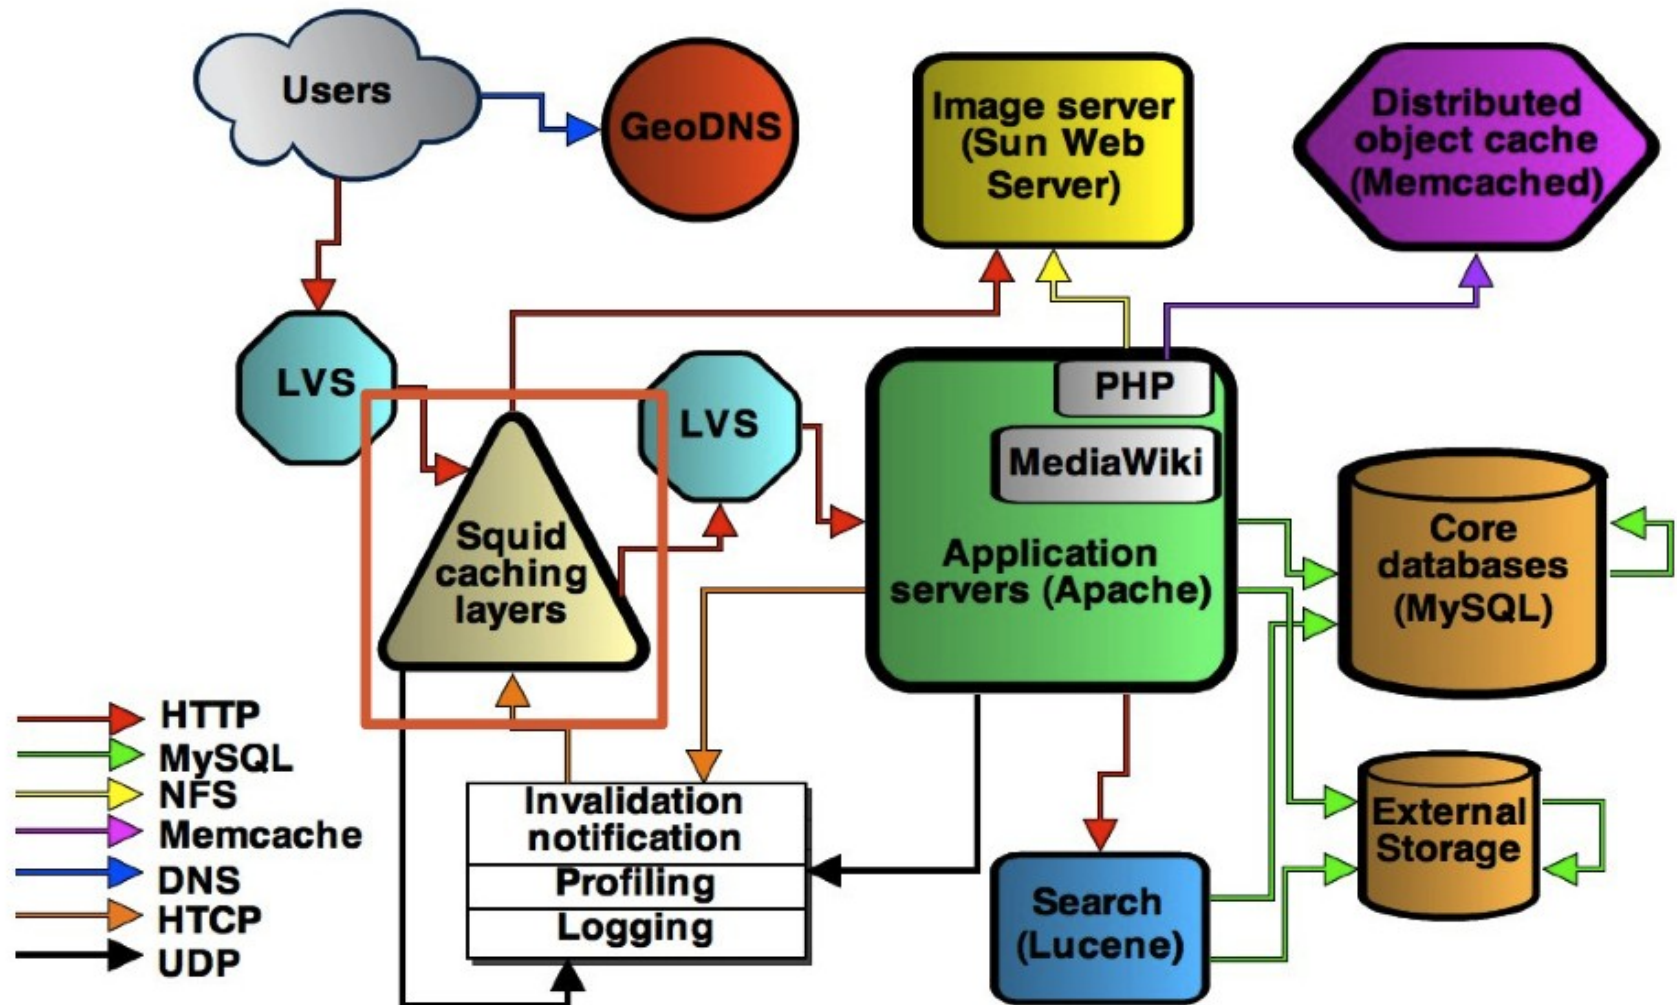

How many servers does
it take to run all of the
Wikimedia Projects?

~ 400 servers

But how can you scale your site to so many queries with so few machines?

Optimization

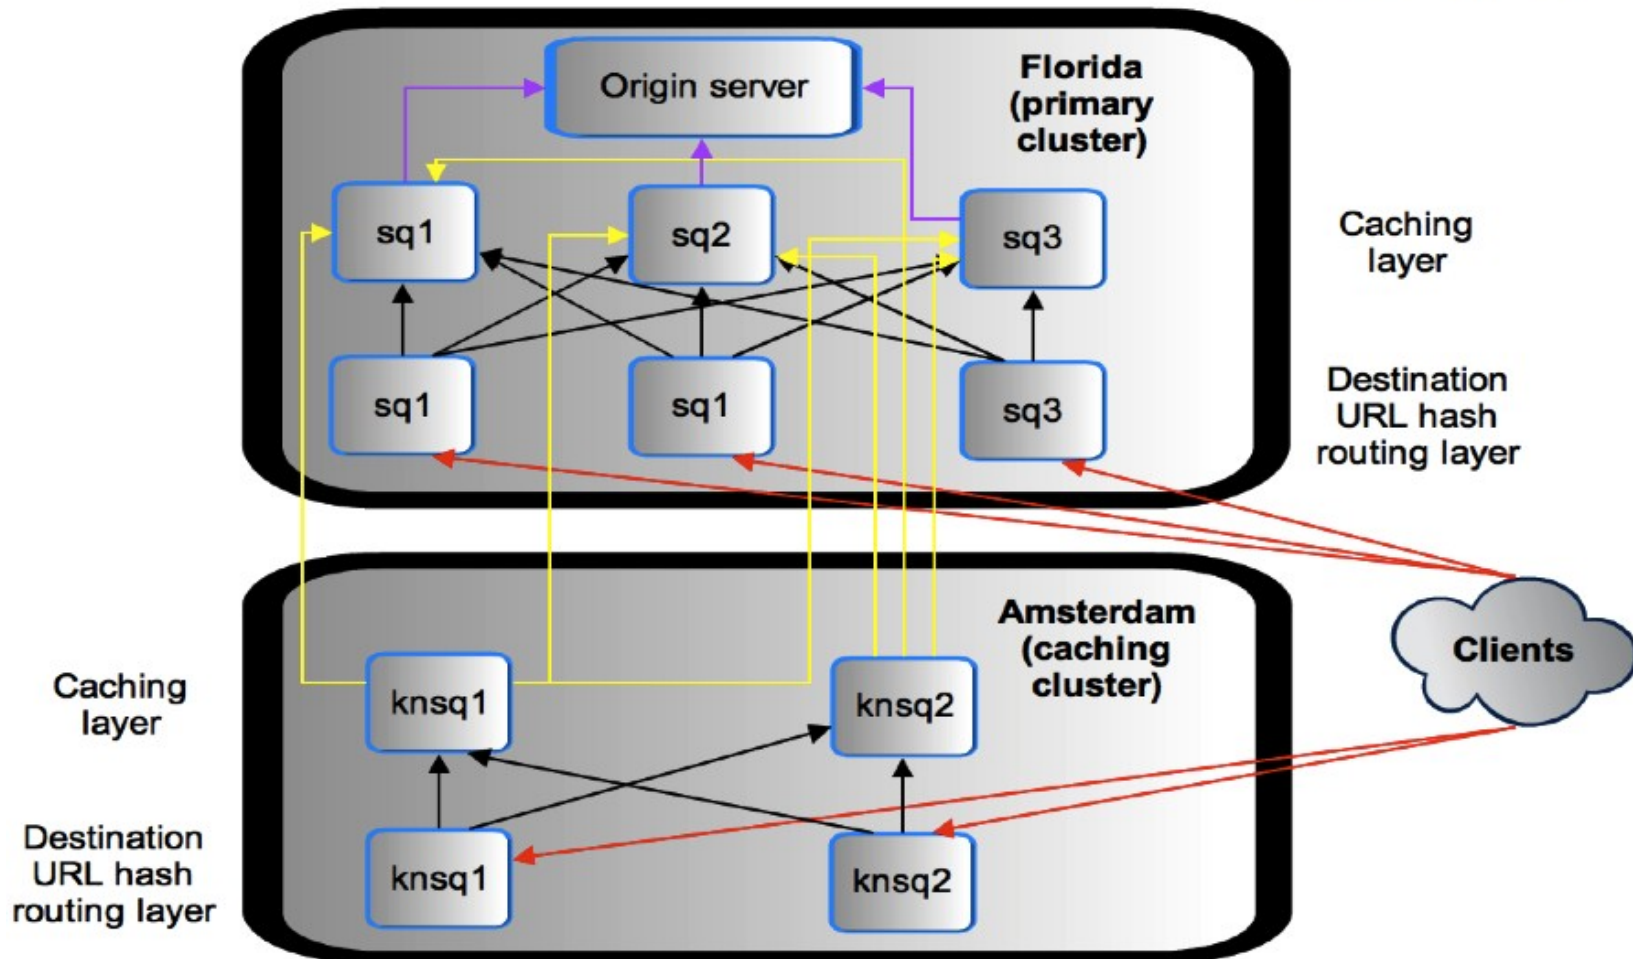

- Not doing anything inefficiently
- Aggressively profile code
- Cache, Cache, Cache

Squid Caching

- Cache reverse proxy
- ~ 100 machines
- Serves most of our traffic
- Split into multiple groups
- Hit rates: 85% for Text, 98% for Media, since the use of CARP

CARP

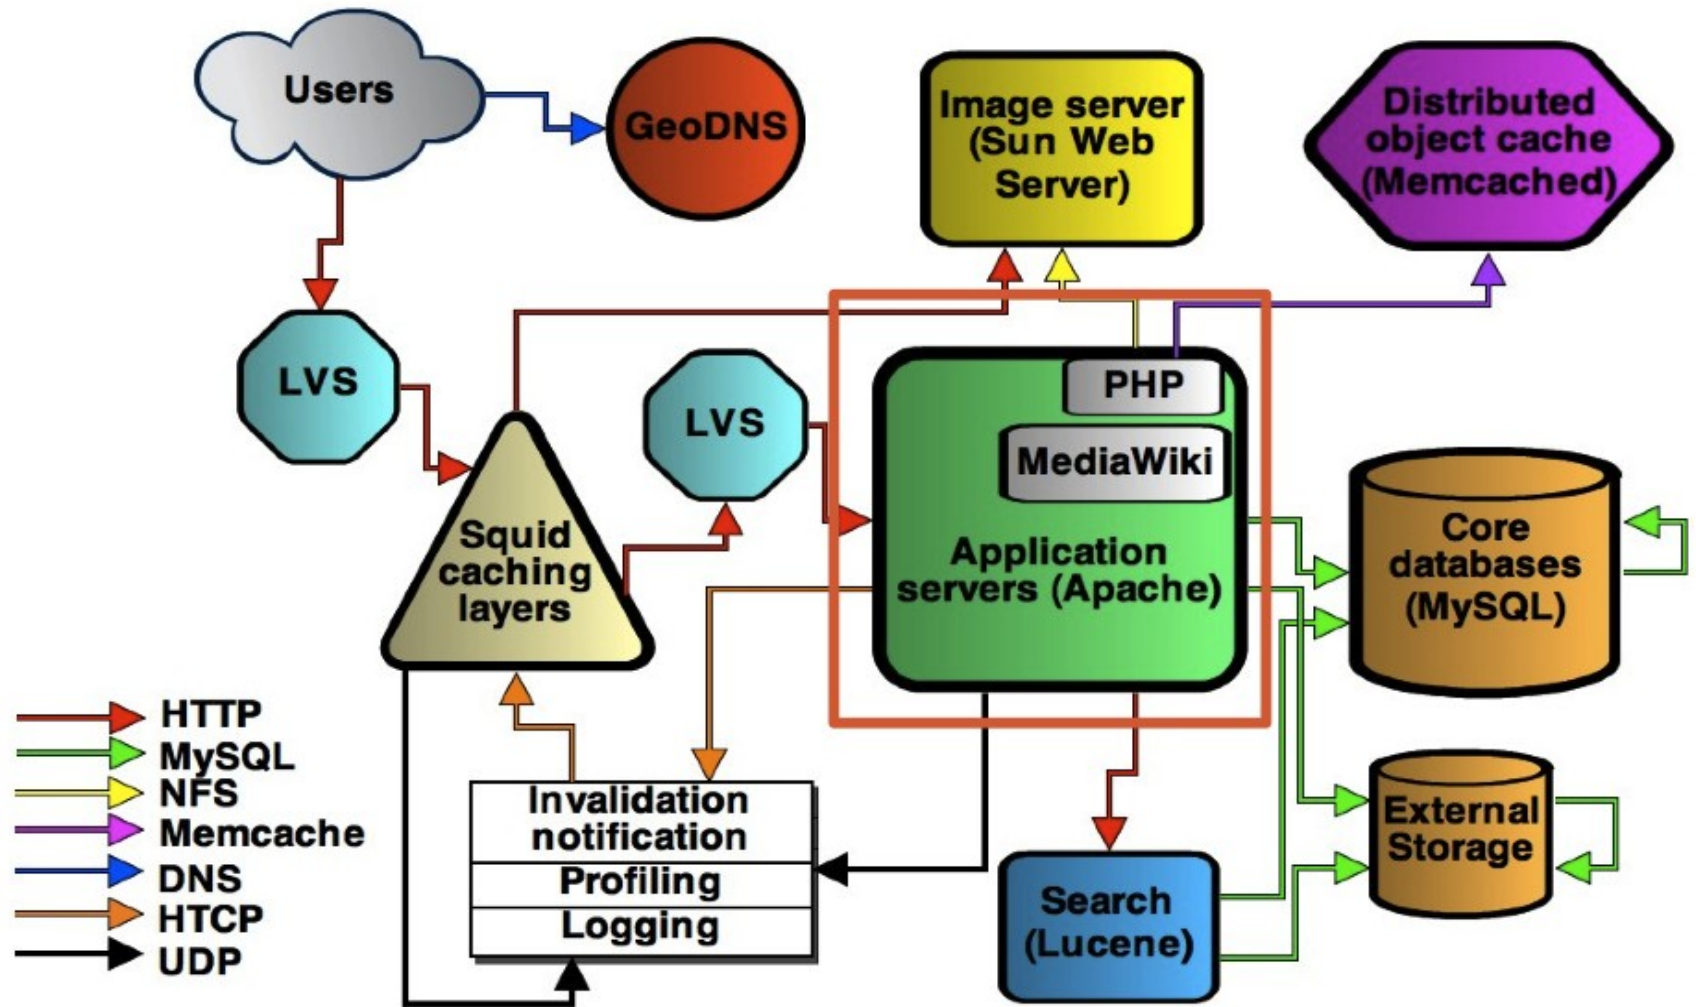

Squid Cache Invalidation

- Wiki pages are edited at an unpredictable rate
- Users should always see the latest version
- Invalidation through expiry not acceptable
- Purge implemented using multicast UDP based HTCP protocol

Varnish Caching

- Currently used for delivering static content such as javascript and css
- Will eventually replace squids
- 2-3 time more efficient than Squid

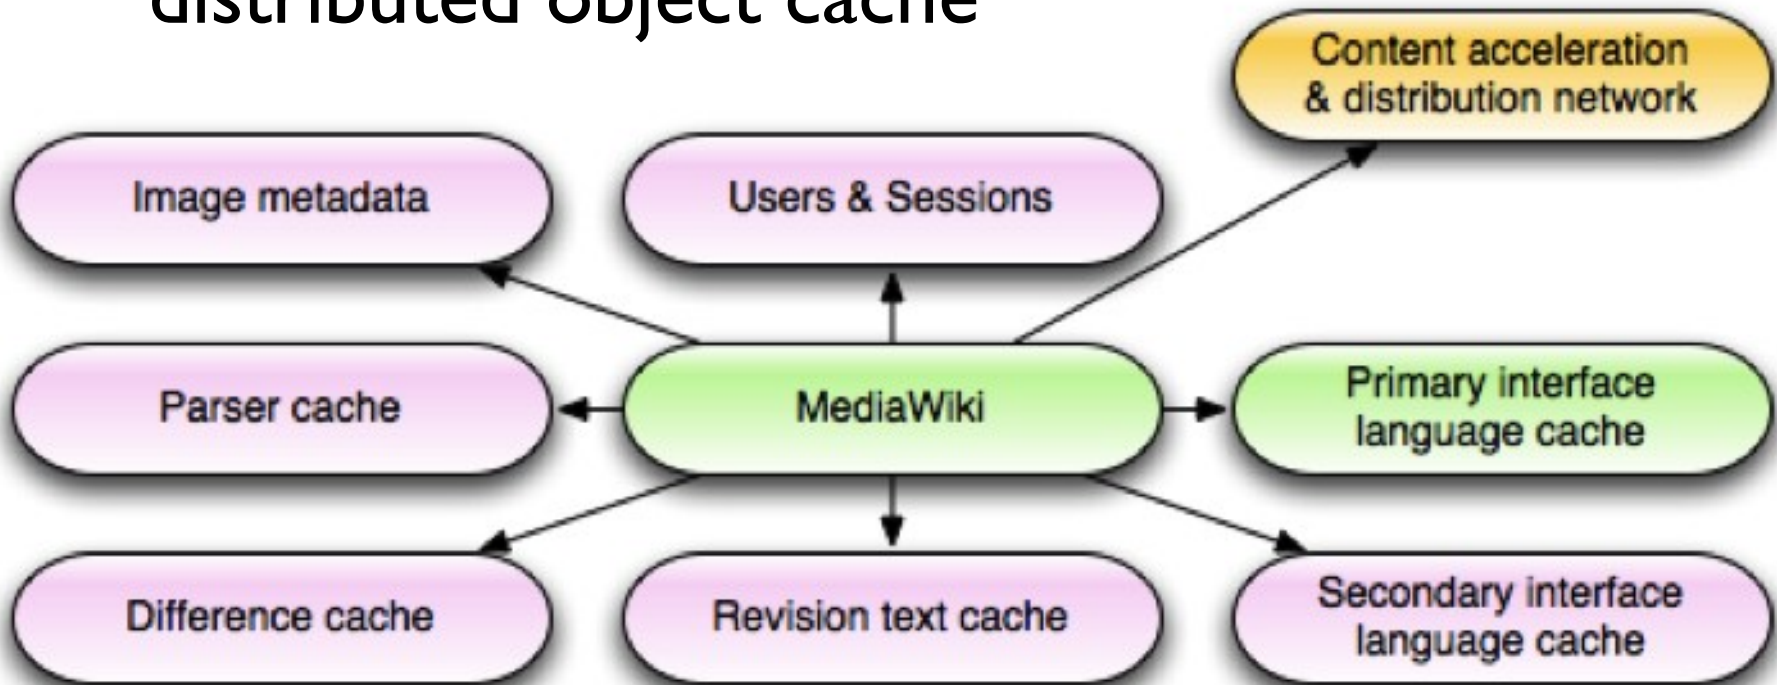

- Extension Framework
- Translated into 300+ languages
- Lightweight Wiki Markup
- Extensible API
- Rich content support
- High level of customization
- And much more ...

MediaWiki Caching

- Caches are everywhere
- Most of the data is cached in Memcache, a distributed object cache

But what happens when I
click save ... ?

So how does an edit work?

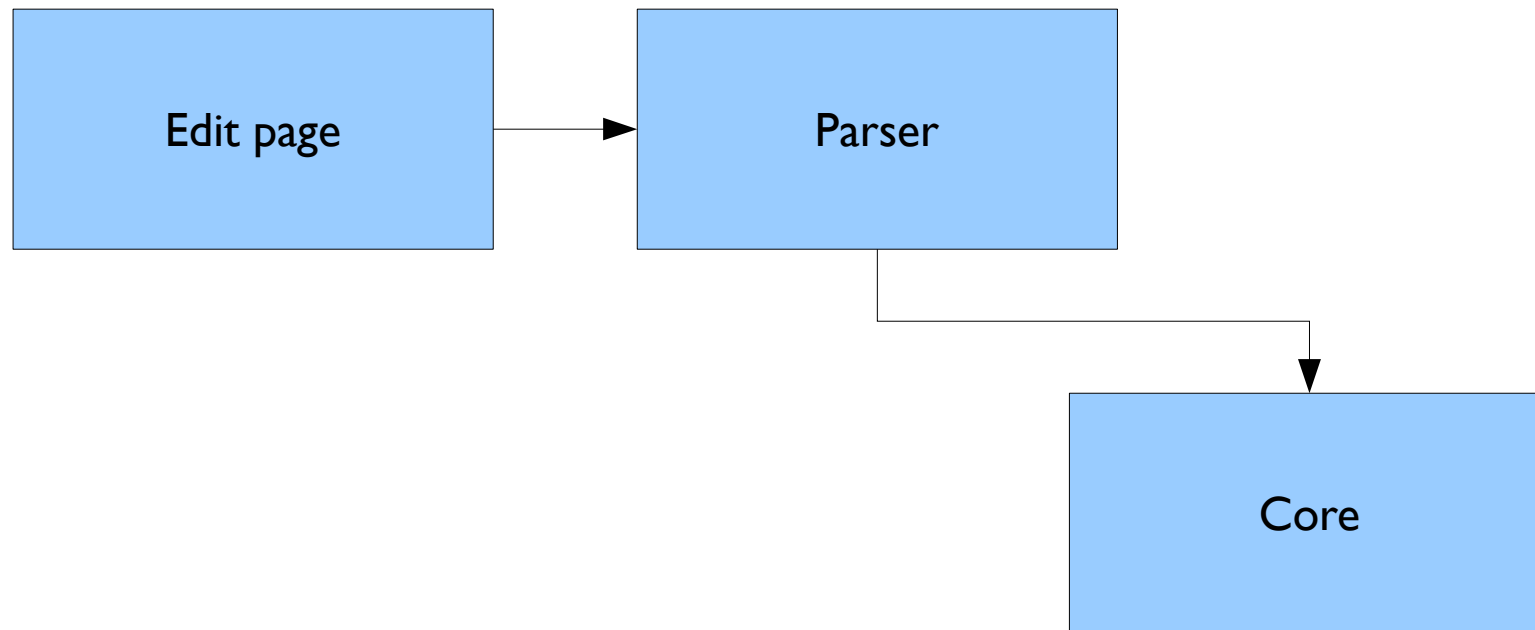

Edit page

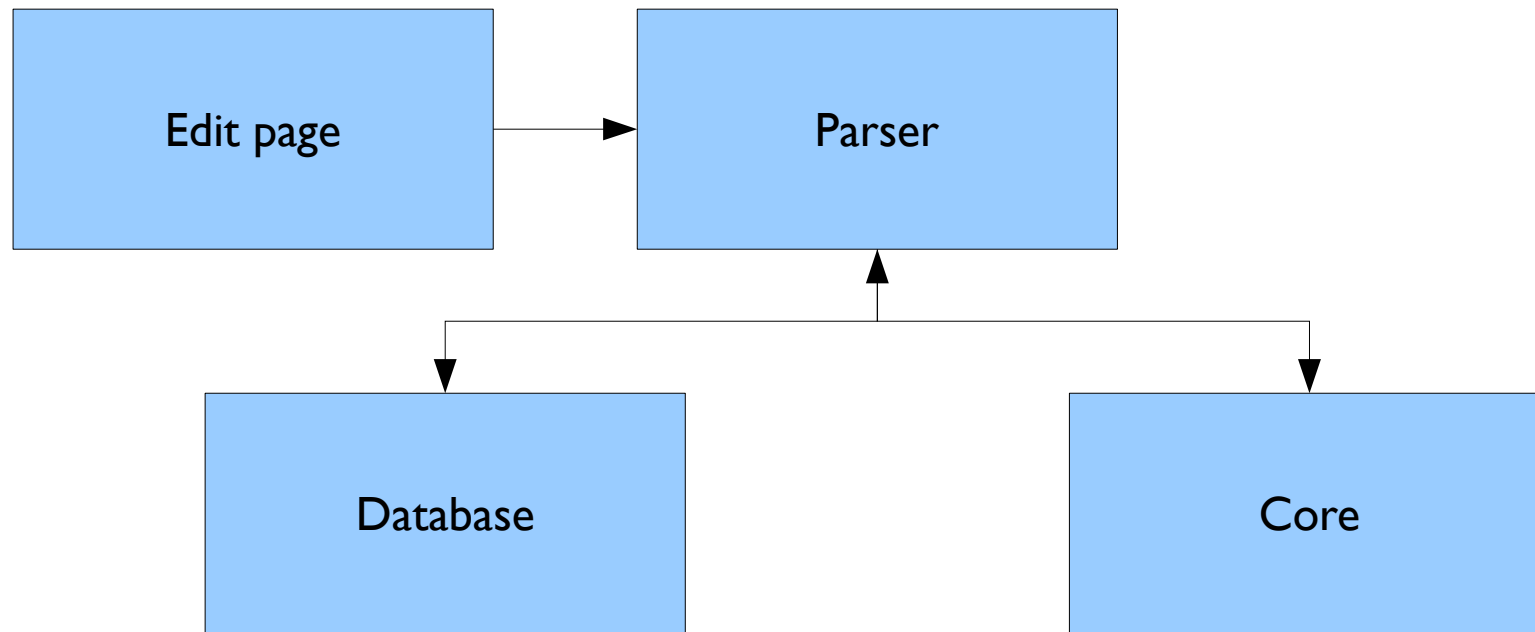

So how does an edit work?

So how does an edit work?

So how does an edit work?

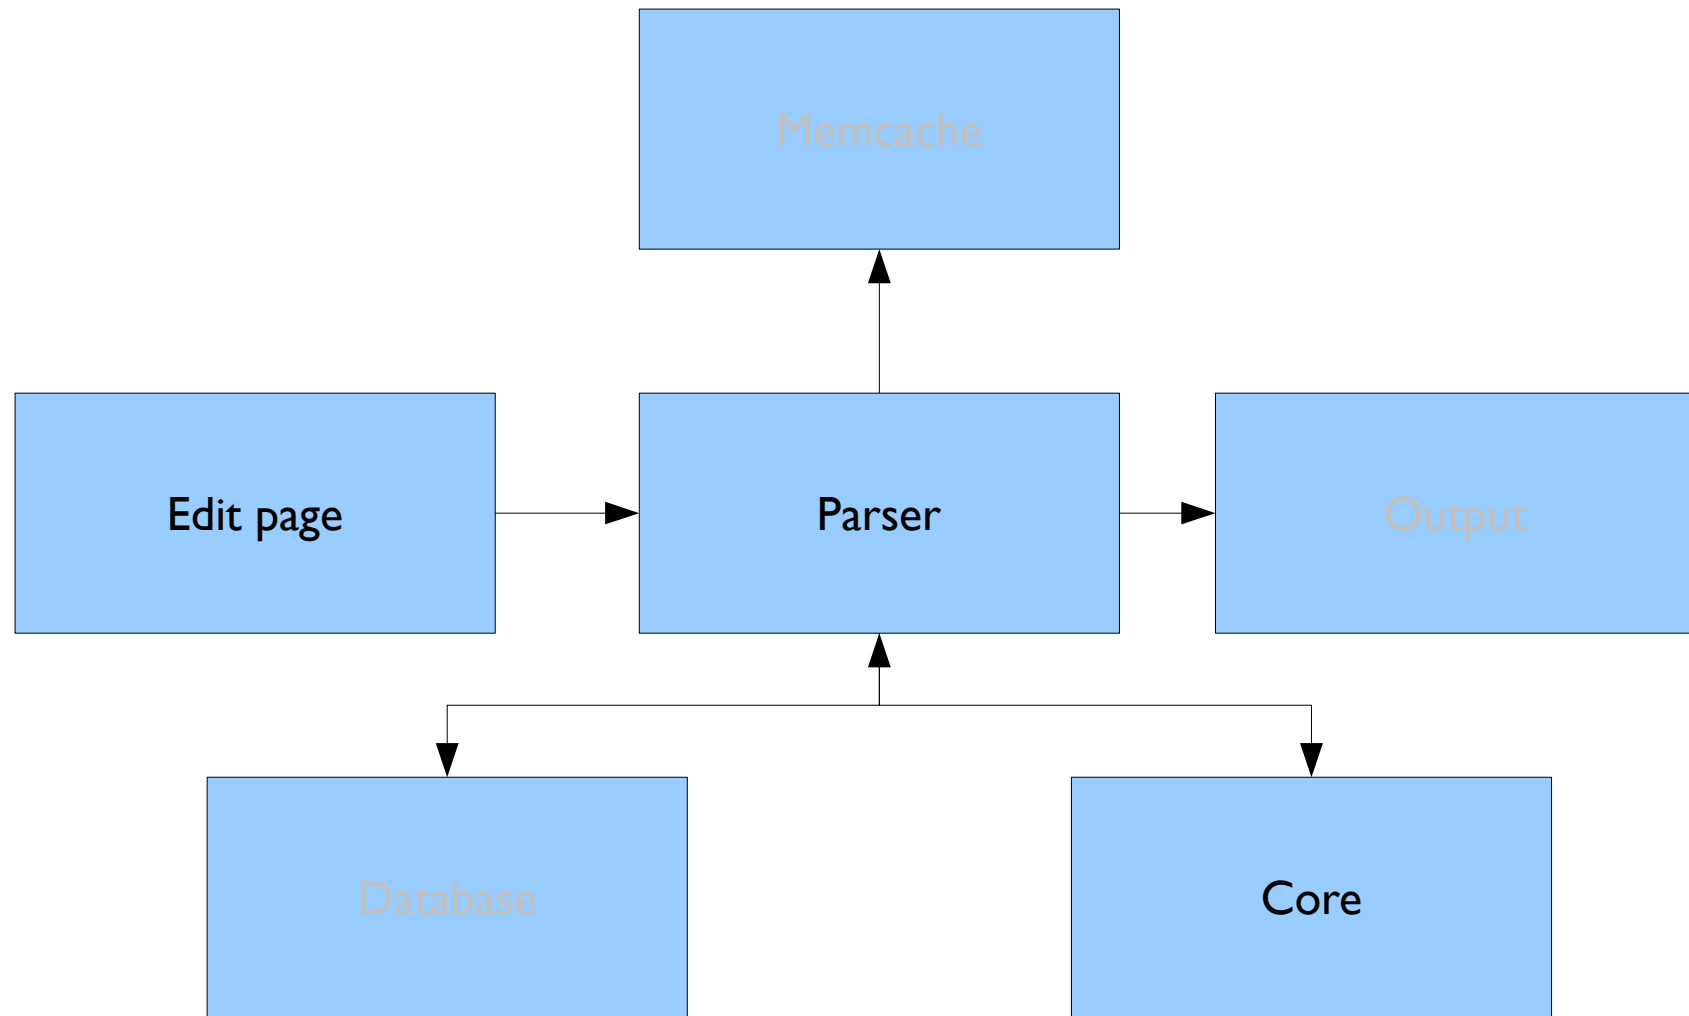

So how does an edit work?

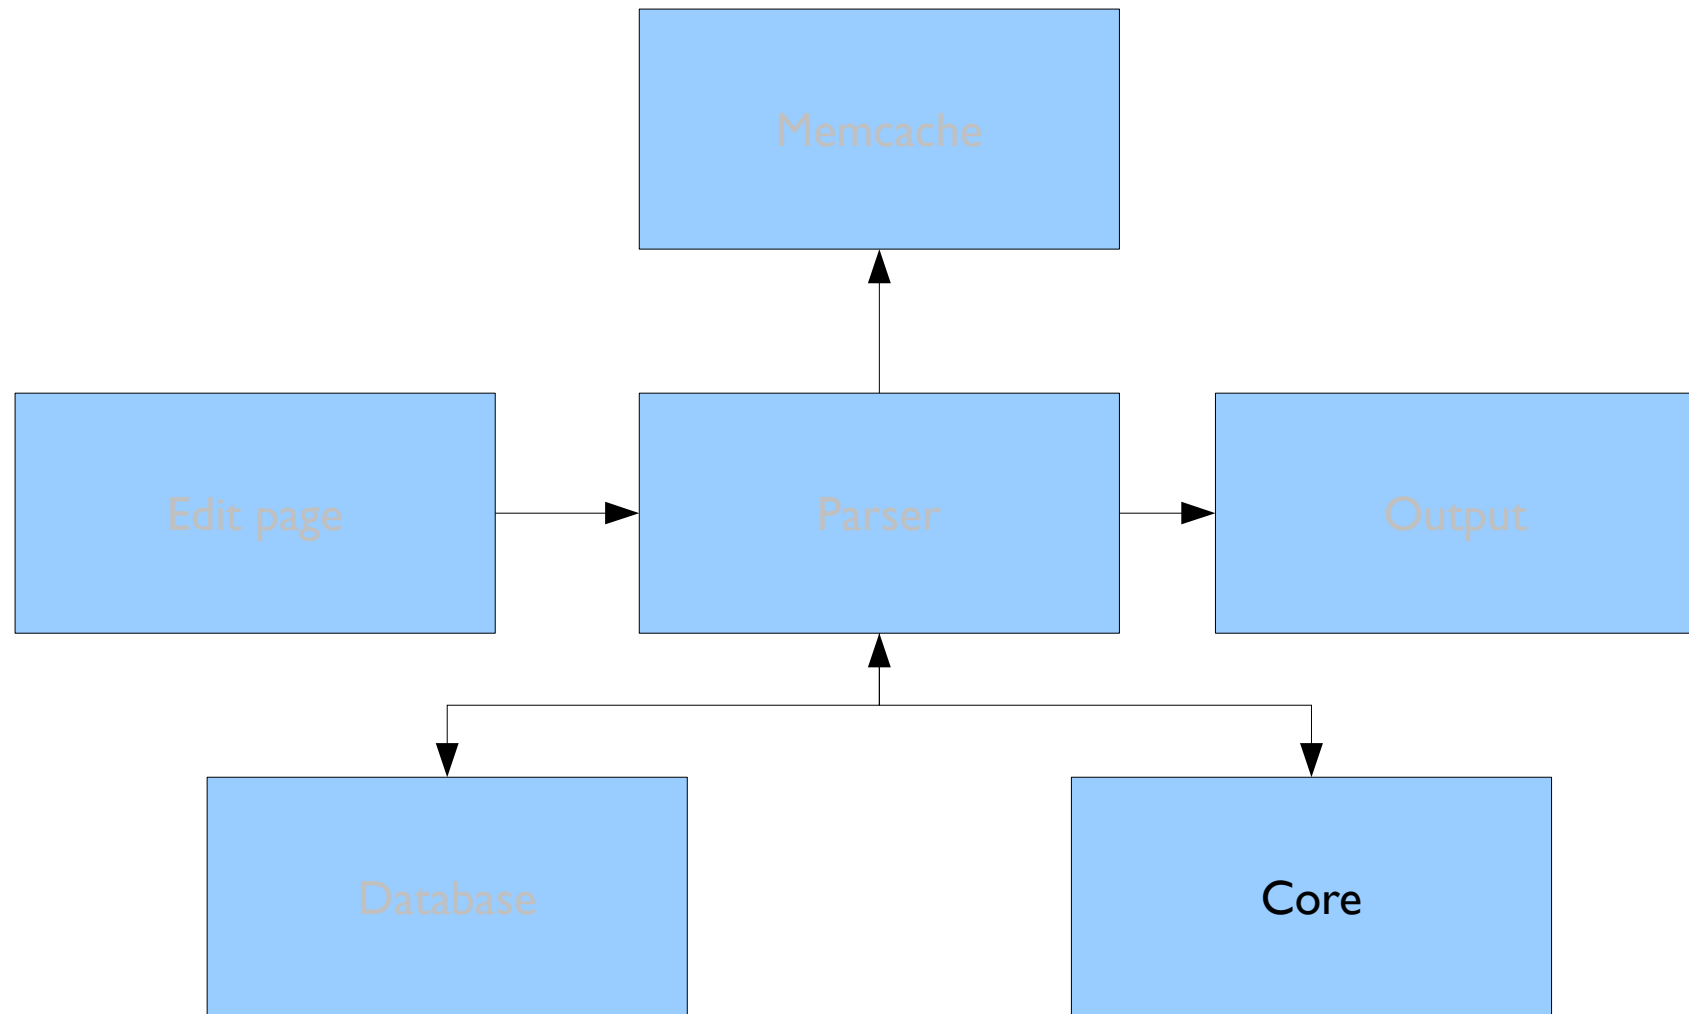

So how does an edit work?

So how does an edit work?

So how does an edit work?

MediaWiki Core

- Page
- Revision
- Archive
- Text
- User
- Logging
- Recent changes
- IP Block
- Watch lists
- Users/Groups
- Image
- File Archive
- Page links
- Category
- Redirect
-

Page Schema

There are lots more sub components

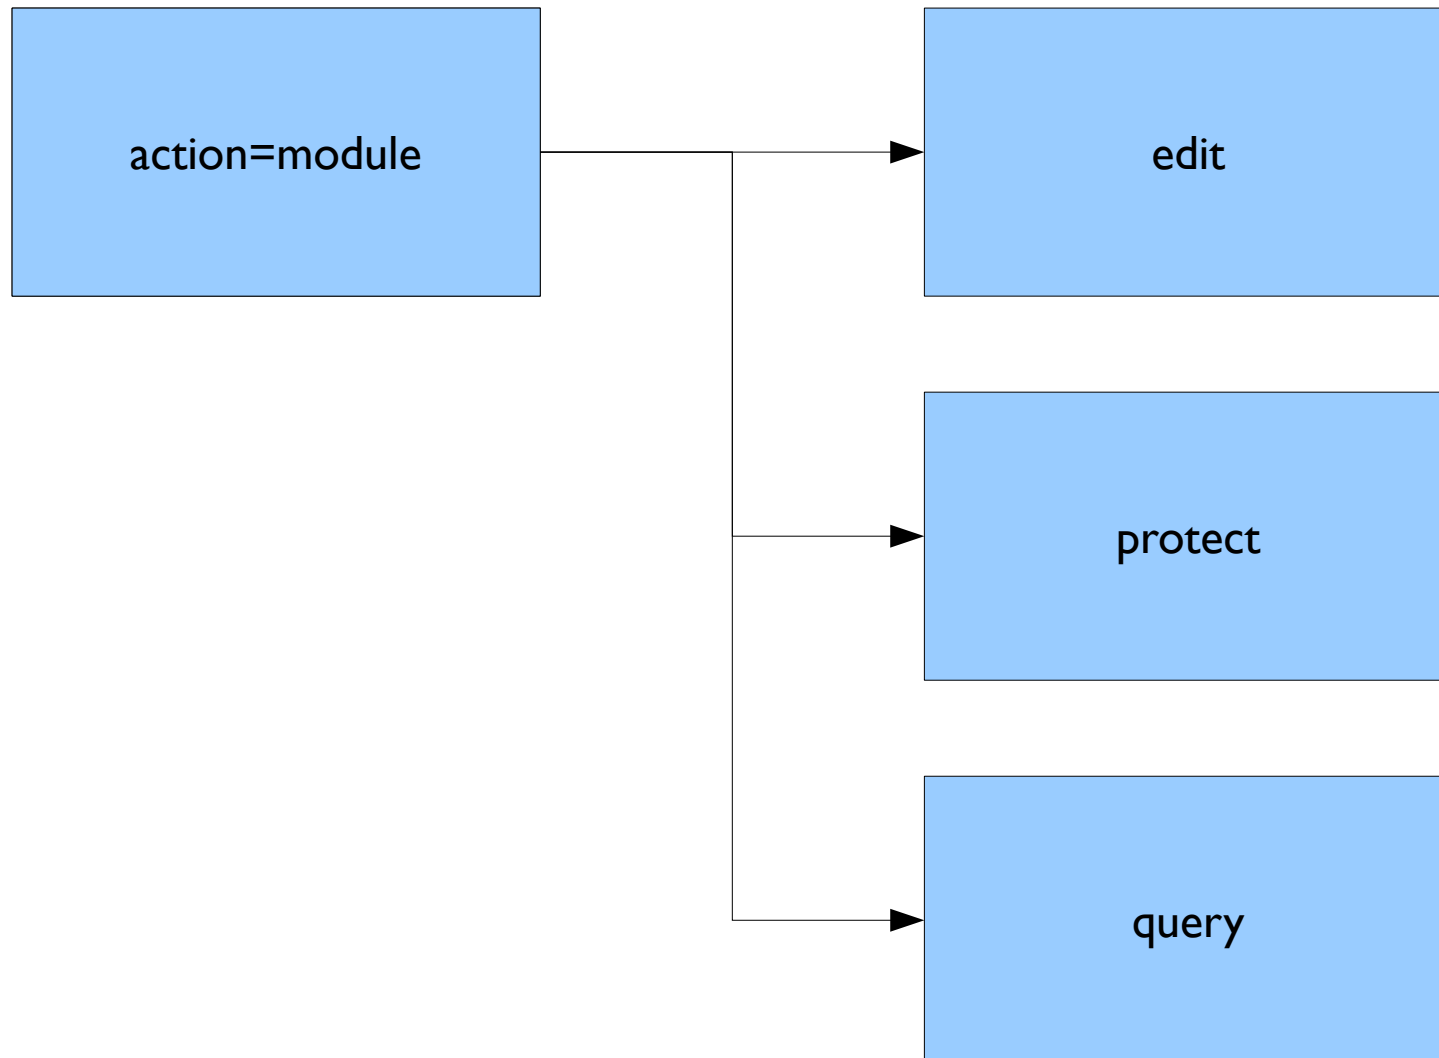

**But what if I want to script an
addition to Wikipedia?**

API

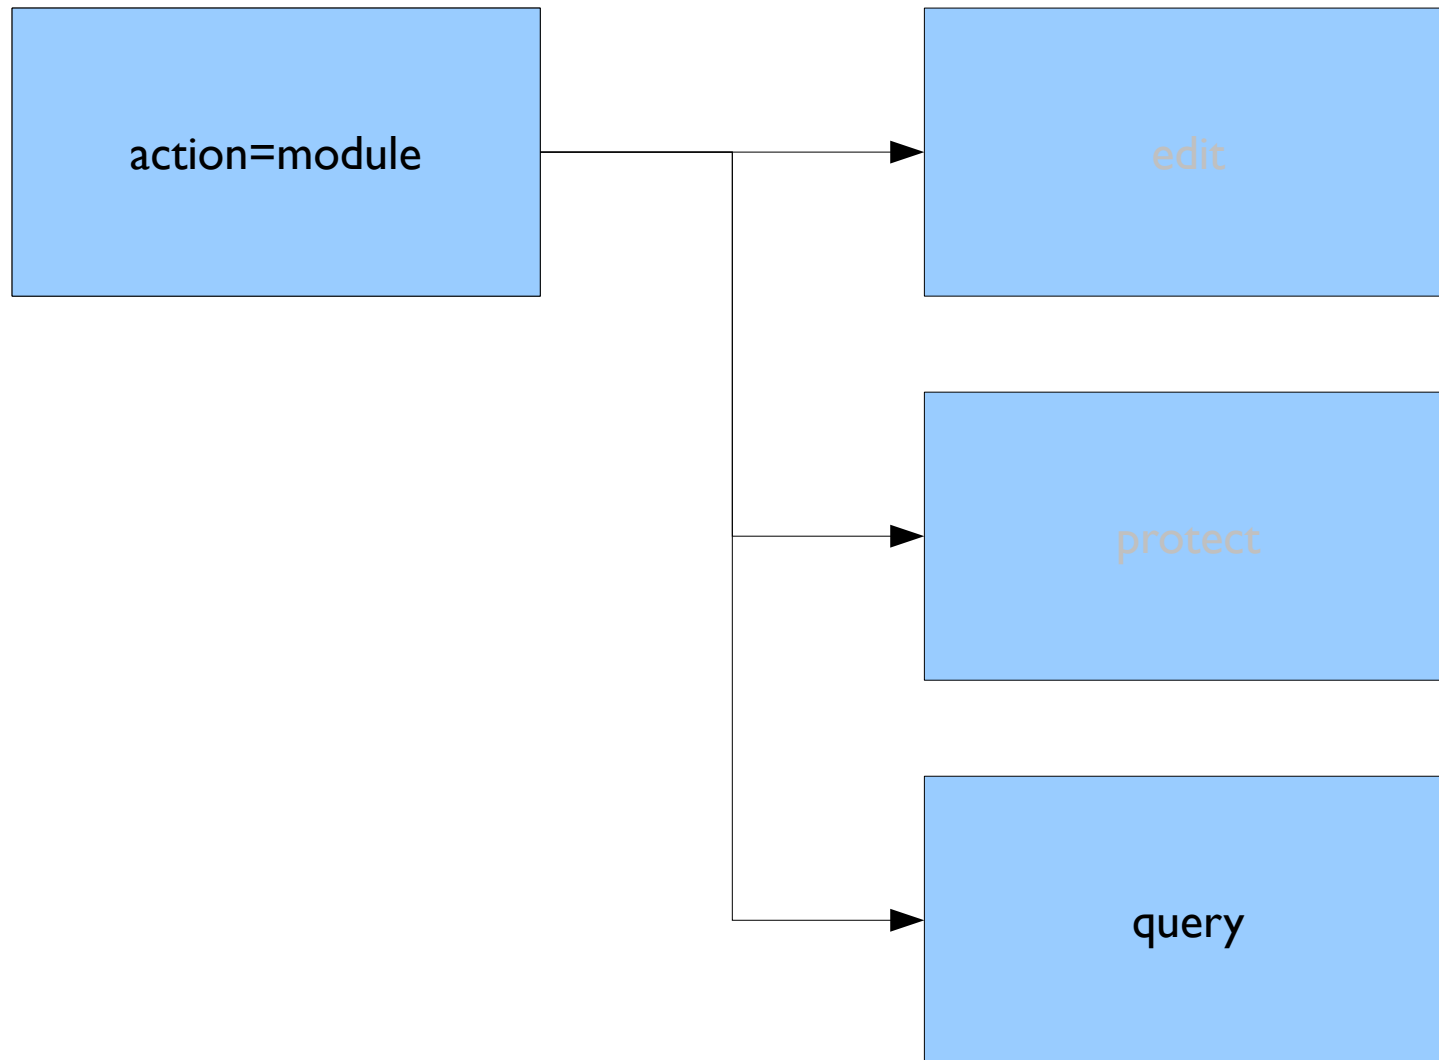

action=module

API

API

action = query

- Properties
 - Revisions, links, templates, revision content
- List
 - Lists of pages that are .. links, image usage, categories
- Meta
 - Everything else
- 30+ sub modules

That's great but what about if
I want to add media ?

Source: lolcats.com

Upload Module

- action = upload
- Source
 - Url
 - File
 - Previous failed upload
- Target filename

**But what if the API doesn't have a
feature that I want?**

Extending the API

- Extend ApiBase class
- Register it with \$wgAPIModules
- Core modules that can be overwritten
 - APIGetAllowedParams
 - APIGetParamDescription
 - APIAfterExecute

Example

```
23 // Extension credits that will show up on Special:Version
24 $wgExtensionCredits['other'][] = array(
25     'path' => __FILE__,
26     'name' => 'ApiSVGProxy',
27     'author' => 'Roan Kattouw',
28     'url' => 'http://www.mediawiki.org/wiki/Extension:ApiSVGProxy',
29     'version' => '1.0',
30     'descriptionmsg' => 'apisvgproxy-desc',
31 );
32
33 // Set up the new special page
34 $dir = dirname( __FILE__ ) . '/';
35 $wgAutoloadClasses['ApiSVGProxy'] = $dir . 'ApiSVGProxy.body.php';
36 $wgAPIModules['svgproxy'] = 'ApiSVGProxy';
37
38 $wgExtensionMessagesFiles['ApiSVGProxy'] = dirname( __FILE__ ) . '/ApiSVGProxy.i18n.php';
```

ApiSVGProxy.php

```
30 public function execute() {
31     $params = $this->extractRequestParams();
32     $title = Title::newFromText( $params['file'] );
33     $file = wfFindFile( $title );
34
35     // Verify that the file exists and is an SVG file
36     if ( !$file ) {
37         $this->dieUsage( 'The specified file does not exist',
38             'nosuchfile', 404 );
39     }
40     ....
```

ApiSVGProxy.body.php

Example

```
65 public function getAllowedParams() {
66     return array(
67         'file' => null,
68     );
69 }
70
71 public function getParamDescription() {
72     return array(
73         'file' => 'Name of the file to proxy (including File: prefix)',
74     );
75 }
76
77 public function getDescription() {
78     return array(
79         'Proxy an SVG file from a (possibly remote) repository.',
80         'The file must have the .svg extension and the image/svg+xml MIME type.',
81         'If not, this module will return a 403 response. If the file doesn\'t exist,',
82         'a 404 response will be returned. If fetching the file failed, a 500 response',
83         'will be returned.',
84     );
85 }
86
87 public function getVersion() {
88     return __CLASS__ . ': $Id: ApiSVGProxy.body.php 64584 2010-04-03 23:09:39Z siebrand $';
89 }
90 }
```

Come help us ...

**What are the challenges
facing Wikipedia in India?**

Challenges

- Input
- Rendering
- Search

Input Methods

- Transliteration
- InScript keyboard support
- Floating keyboard

Rendering

- Better font support across distributions
- Real time delivery of fonts
- Multi script issues

Search

**Great solutions but none of them
are open**

Further Discussion Topics

- Wikimedia Mobile – Saturday
@ 1:30 in room 704
- Wikimedia Offline tools – Come
find me directly

In closing

- Wikipedia is still growing
- It's a challenge to keep up with the growth
- We need your help to support the growth
