

# TimedMediaHandler player update mockup

For video.js and mobile update

# Considerations

- Work on touch and mouse, large and small screens.
- Clicking video should usually trigger a full window zoom, like photos, along with playback. Audio stays inline.
- Keep interface clean
- Make it really, really easy to mute/unmute before playback begins.

# Future?

- Integration with media viewer's photo viewer? (For later...)
- Consider dealing with gif-like animations that play inline by default (for later...)

# On icons

- The icons in these mock ups are the inverse color desired; just cut n pasted from FontAwesome icon samples. Actual icons should be light on transparent dark background.

mei. Vix diam copiosae prodesset an, ea nisl summo per.  
Nemore invenire mel ad, dolor temporibus et usu. reque vocent.  
Cum at quidam virtute.

# Further UI bits

- Caption, source quality options might want to show lists in the player control space.
- Share and download might be better as dialogs.
- Info should link to the file page
