Argument

Boolean Algebra

In **mathematics** and **mathematical logic**, **Boolean algebra** is the branch of **algebra** in which the values of the **variables** are the **truth values** *true* and *false*, usually denoted 1 and 0 respectively. Instead of **elementary algebra** where the values of the variables are numbers, and the prime operations are addition and multiplication, the main operations of Boolean algebra are the **conjunction** *and* denoted as \wedge , the **disjunction** *or* denoted as \vee , and the **negation** *not* denoted as \neg . It is thus a formalism for describing logical relations in the same way that ordinary algebra describes numeric relations.

Operators

x	y	$x \wedge y$	$x \vee y$	x	$\neg x$
0	0	0	0	0	1
1	0	0	1	1	0
0	1	0	1		
1	1	1	1		

x	y	$x \rightarrow y$	$x \oplus y$	$x \equiv y$
0	0	1	0	1
1	0	0	1	0
0	1	1	1	0
1	1	1	0	1

https://en.wikipedia.org/wiki/Boolean_algebra

Laws (1)

Associativity of \vee :

$$x \vee (y \vee z) = (x \vee y) \vee z$$

$$x+(y+z) = (x+y)+z$$

Associativity of \wedge :

$$x \wedge (y \wedge z) = (x \wedge y) \wedge z$$

$$x(yz) = (xy)z$$

Commutativity of \vee :

$$x \vee y = y \vee x$$

$$x+y = y+x$$

Commutativity of \wedge :

$$x \wedge y = y \wedge x$$

$$xy = yx$$

Distributivity of \wedge over \vee :

$$x \wedge (y \vee z) = (x \wedge y) \vee (x \wedge z)$$

$$x(y+z) = xy + xz$$

Identity for \vee :

$$x \vee 0 = x$$

$$x+0=x$$

Identity for \wedge :

$$x \wedge 1 = x$$

$$x*1=x$$

Annihilator for \wedge :

$$x \wedge 0 = 0$$

$$x*0=0$$

https://en.wikipedia.org/wiki/Boolean_algebra

Laws (2)

Annihilator for \vee :	$x \vee 1 = 1$	$x+1=1$
Idempotence of \vee :	$x \vee x = x$	$x+x=x$
Idempotence of \wedge :	$x \wedge x = x$	$x*x=x$
Absorption 1:	$x \wedge (x \vee y) = x$	$x(x+y)=x$
Absorption 2:	$x \vee (x \wedge y) = x$	$x+xy=x$
Distributivity of \vee over \wedge :	$x \vee (y \wedge z) = (x \vee y) \wedge (x \vee z)$	$x+yz=(x+y)(x+z)$

Complementation 1	$x \wedge \neg x = 0$	$x\bar{x} = 0$
Complementation 2	$x \vee \neg x = 1$	$x+\bar{x} = 1$

De Morgan 1	$\neg x \wedge \neg y = \neg(x \vee y)$	$\bar{x}\bar{y} = \overline{(x+y)}$
De Morgan 2	$\neg x \vee \neg y = \neg(x \wedge y)$	$\bar{x}+\bar{y} = \overline{(xy)}$

Digital Logic Gates

Digital logic is the application of the Boolean algebra of 0 and 1 to electronic hardware consisting of **logic gates** connected to form a **circuit diagram**. Each gate implements a Boolean operation, and is depicted schematically by a shape indicating the operation. The shapes associated with the gates for conjunction (AND-gates), disjunction (OR-gates), and complement (inverters) are as follows.^[17]

The lines on the left of each gate represent input wires or *ports*. The value of the input is represented by a voltage on the lead. For so-called "active-high" logic, 0 is represented by a voltage close to zero or "ground", while 1 is represented by a voltage close to the supply voltage; active-low reverses this. The line on the right of each gate represents the output port, which normally follows the same voltage conventions as the input ports.

CMOS Logic Gates

<https://en.wikipedia.org/wiki/CMOS>

Identity and Null Element Theorem

$$x \cdot 0 = 0$$

$$x \cdot 1 = x$$

$$x + 0 = x$$

$$x + 1 = 1$$

$$x \oplus 0 = x$$

$$x \oplus 1 = \bar{x}$$

https://en.wikiversity.org/wiki/Discrete_Mathematics_in_plain_view#Algorithms

Distributive

$$x \cdot (y + z) = x \cdot y + x \cdot z \quad \neq x \cdot y + z$$

This parenthesis **cannot** be deleted

$$x + (y \cdot z) = (x + y) \cdot (x + z) \quad = x + y \cdot z$$

This parenthesis **can** be deleted

Operator precedence : $\cdot > +$

https://en.wikiversity.org/wiki/Discrete_Mathematics_in_plain_view#Algorithms

Inclusion

$$x \cdot (x + y) = x$$

$$\begin{aligned}x \cdot (x + y) &= x \cdot x + x \cdot y \\ &= x + x \cdot y \\ &= x \cdot (1 + y) \\ &= x\end{aligned}$$

$$x + xy = x$$

$$\begin{aligned}x + xy &= x \cdot 1 + x \cdot y \\ &= x \cdot (1 + y) \\ &= x\end{aligned}$$

https://en.wikiversity.org/wiki/Discrete_Mathematics_in_plain_view#Algorithms

Inclusion

$$x \cdot (x + y) = x$$

$$\begin{aligned}x \cdot (x + y) &= x \cdot x + x \cdot y \\ &= x + x \cdot y \\ &= x \cdot (1 + y) \\ &= x\end{aligned}$$

$$x + xy = x$$

$$\begin{aligned}x + xy &= x \cdot 1 + x \cdot y \\ &= x \cdot (1 + y) \\ &= x\end{aligned}$$

https://en.wikiversity.org/wiki/Discrete_Mathematics_in_plain_view#Algorithms

Eliminate

$$x \cdot (\bar{x} + y) = x y$$

$$\begin{aligned}x \cdot (\bar{x} + y) &= x \cdot \bar{x} + x \cdot y \\ &= 0 + x \cdot y \\ &= x \cdot y\end{aligned}$$

$$x + \bar{x}y = x + y$$

$$\begin{aligned}x + \bar{x}y &= (x + \bar{x}) \cdot (x + y) \\ &= 1 \cdot (x + y) \\ &= x + y\end{aligned}$$
