Abstract Data Sizes

```

c, c[i], c[i][j] are virtual array pointers
and they are also abstract data (arrays)

when sizes are considered,
view them as abstract data (arrays)

the size of a pointer type is fixed
Here, the sizes of virtual pointers are shown
i.e, the sizes of different abstract data types

```
sizeof( c)      = sizeof(int [2][3][4])
sizeof(*c)      = sizeof(int [3][4])

sizeof( c[i])   = sizeof(int [3][4])
sizeof(*c[i])   = sizeof(int [4])

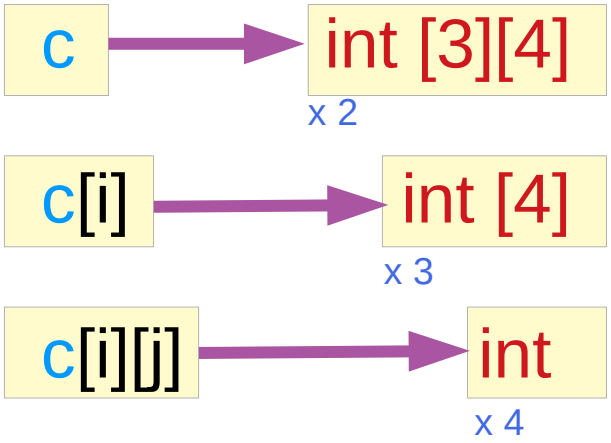
sizeof( c[i][j])= sizeof(int [4])
sizeof(*c[i][j])= sizeof(int)
```

all are sizes of arrays

Virtual array pointer sizes and abstract data sizes

```
int     c [2][3][4];
```

size of a virtual array pointer = size of the pointed abstract data type * the number of such types



sizeof(c) = sizeof(*c) * **2**

sizeof(c[i]) = sizeof(*c[i]) * **3**

sizeof(c[i][j]) = sizeof(*c[i][j]) * **4**
