Outline

- 1 Systems of Linear Equations
 - Solving systems of linear equations

Outline

- 1 Systems of Linear Equations
 - Solving systems of linear equations

System of a Linear Equations

A System of Linear Equations

is a collection of m equations in the variable quantities $x_1, x_2, x_3, \dots, x_n$ of the form,

$$\begin{aligned}a_{11}x_1 + a_{12}x_2 + a_{13}x_3 + \cdots + a_{1n}x_n &= b_1 \\a_{21}x_1 + a_{22}x_2 + a_{23}x_3 + \cdots + a_{2n}x_n &= b_2 \\a_{31}x_1 + a_{32}x_2 + a_{33}x_3 + \cdots + a_{3n}x_n &= b_3 \\&\vdots \\&\vdots \\a_{m1}x_1 + a_{m2}x_2 + a_{m3}x_3 + \cdots + a_{mn}x_n &= b_m\end{aligned}$$

where the values of a_{ij} , x_j , and b_i , ($1 \leq i \leq m$, $1 \leq j \leq n$), are from the set of complex numbers, \mathbb{C} .

Solution of a System of a Linear Equations

A Solution of a System of Linear Equations

is an ordered list of n complex numbers, $s_1, s_2, s_3, \dots, s_n$ for n variables, $x_1, x_2, x_3, \dots, x_n$, such that

if we substitute

s_1 for x_1 ,

s_2 for x_2 ,

s_3 for x_3 ,

\dots ,

s_n for x_n ,

then all m equations are true simultaneously, i.e.,

for every equation of the system

the left side will equal to the right side

Solution Set of a System of a Linear Equations

The solution set of a System of Linear Equations

is the set which contains every solution to the system, and nothing more.

Three types of a solution set

- $$\begin{array}{rcl} 2x_1 & +3x_2 & = 3 \\ x_1 & -x_2 & = 4 \end{array}$$
 a single solution
- $$\begin{array}{rcl} 2x_1 & +3x_2 & = 3 \\ 4x_1 & +6x_2 & = 6 \end{array}$$
 infinitely many solutions
- $$\begin{array}{rcl} 2x_1 & +3x_2 & = 3 \\ 4x_1 & +6x_2 & = 10 \end{array}$$
 no solution

Equivalent Systems

Equivalent Systems

Two systems of linear equations are **equivalent** if their **solution sets** are equal.

Equation Operations

Equation Operations

Given a system of linear equations, the following three operations will transform the system into a different one, and each operation is known as an **equation operation**.

- 1 **swap** the locations of two equations in the list of equations.
- 2 **multiply** each term of an equation by a nonzero quantity.
- 3 **multiply** each term of one equation by some quantity, and **add** these terms to a second equation, on both sides of the equality. leave the first equation the same after this operation, but **replace** the second equation by the new one.

Equation Operations Preserve Solution Sets

Equation Operations

If we apply one of the three **equation operations** to a system of linear equations, then the original system and the transformed system are **equivalent**.

Three Equations and One Solution

solve the following by a sequence of equation operations

$$\begin{array}{rclcrcl} x_1 & +2x_2 & +2x_3 & = & 4 \\ x_1 & +3x_2 & +3x_3 & = & 5 \\ 2x_1 & +6x_2 & +5x_3 & = & 6 \end{array}$$

① $-1 \cdot eq1 + eq2 \rightarrow eq2$
 $-1 \cdot (1, 2, 2, 4) + (1, 3, 3, 5) \rightarrow (0, 1, 1, 1)$

$$\begin{array}{rclcrcl} x_1 & +2x_2 & +2x_3 & = & 4 \\ 0x_1 & +1x_2 & +1x_3 & = & 1 \\ 2x_1 & +6x_2 & +5x_3 & = & 6 \end{array}$$

② $-2 \cdot eq1 + eq3 \rightarrow eq3$
 $-2 \cdot (1, 2, 2, 4) + (2, 6, 5, 6) \rightarrow (0, 2, 1, -2)$

$$\begin{array}{rclcrcl} x_1 & +2x_2 & +2x_3 & = & 4 \\ 0x_1 & +1x_2 & +1x_3 & = & 1 \\ 0x_1 & +2x_2 & +1x_3 & = & -2 \end{array}$$
