Expected Value

Suppose random variable X can take value x_1 with probability p_1 , value x_2 with probability p_2 , and so on, up to value x_k with probability p_k .

Then the expectation of this random variable X is defined as

$$E[X] = x_1p_1 + x_2p_2 + \cdots + x_kp_k.$$

Since all probabilities p_i add up to one ($p_1 + p_2 + \cdots + p_k = 1$), the expected value can be viewed as the weighted average, with p_i 's being the weights:

$$E[X] = \frac{x_1p_1 + x_2p_2 + \cdots + x_kp_k}{1} = \frac{x_1p_1 + x_2p_2 + \cdots + x_kp_k}{p_1 + p_2 + \cdots + p_k}.$$

Arithmetic Mean

2 elements $\{a, b\}$

$$A = \frac{(a+b)}{2}$$

3 elements $\{a, b, c\}$

$$A = \frac{(a+b+c)}{3}$$

n elements $\{a_1, a_2, \dots, a_n\}$

$$A = \frac{(a_1 + a_2 + \dots + a_n)}{n} = \frac{1}{n} \sum_{i=1}^n a_i$$

Arithmetic Mean - Example

same length

$$(2 + 4) = (3 + 3) = 2 \cdot 3 = 2 \cdot A$$

Arithmetic Mean: $A = 3$

same length

$$(2 + 4 + 6) = (4 + 4 + 4) = 3 \cdot 4 = 3 \cdot A$$

Arithmetic Mean: $A = 4$

Geometric Mean

2 elements $\{a, b\}$

$$G = \sqrt{a \cdot b} \quad (a > 0, b > 0)$$

3 elements $\{a, b, c\}$

$$G = \sqrt[3]{a \cdot b \cdot c} \quad (a > 0, b > 0, c > 0)$$

n elements $\{a_1, a_2, \dots, a_n\}$

$$G = \sqrt[n]{a_1 \cdot a_2 \cdots a_n} = \left(\prod_{i=1}^n a_i \right)^{\frac{1}{n}} \quad (a_i > 0)$$

Geometric Mean - Example

same area

$$(2 \cdot 8) = (4 \cdot 4) = 4^2 = G^2$$

Geometric Mean: $G = 4$

same volume

$$(2 \cdot 4 \cdot 8) = (4 \cdot 4 \cdot 4) = 4^3 = G^3$$

Geometric Mean: $G = 4$

Harmonic Mean

2 elements (a, b)

$$H = \frac{2}{\left(\frac{1}{a} + \frac{1}{b}\right)} = \frac{2ab}{a+b}$$

3 elements (a, b, c)

$$H = \frac{3}{\left(\frac{1}{a} + \frac{1}{b} + \frac{1}{c}\right)} = \frac{3abc}{ab+bc+ca}$$

n elements (a_1, a_2, \dots, a_n)

$$H = \frac{n}{\left(\frac{1}{a_1} + \frac{1}{a_2} + \dots + \frac{1}{a_n}\right)} = \frac{n}{\sum_{i=1}^n \frac{1}{a_i}}$$

Harmonic Mean

same distance = D

Average Speed

$$= \frac{(\text{total distance})}{(\text{total time})}$$

$$= \frac{2 \cdot D}{\frac{D}{60} + \frac{D}{40}} = \frac{2 \cdot 60 \cdot 40}{60 + 40} = 48 \text{ km/hr}$$

Harmonic Mean: H = 48

same duration = T

Average Speed

$$= \frac{(\text{total distance})}{(\text{total time})}$$

$$= \frac{60 \cdot T + 40 \cdot T}{2T} = 50 \text{ km/hr}$$

Arithmetic Mean: A = 50
